AARON. [See HÄREN.]  

ABB ( rá - z. Äbb - m), water; metaphorically, salt, splendor, freshness. — River. The word is often used either at the beginning or at the end, in the composition of geographical names. — [Comp. MÄ.]  

Ab-er dyur, font of immortality. (Barbier de Meynard, Description de l’Egypte, 172, note 2.) — Ab-darqur, a supply of water, a reservoir in which water is always kept fresh (J. Desclaux, Poêle, p. 100).  

Ab-darqur, a servant whose business it is to prepare drinks (J. Desclaux, loc. cit., p. 100); an official who gives the prince water to drink or to wash with (Ch. Schefe, Statistische Nachrichten, p. 142, note 1).  

CLA. (CL. HUAC.)  

AB, or Ak, the name of the fifth or eleventh month respectively in the calendars of the Jews, Syrians, &c. In its Syro-Roman use the month Ab corresponds to the sixth month (Akheres) of the Turkish Mêsîfe (i.e. the financial and civil year), that is to say the month of August in the Julian calendar. [See TB(ÆC.)] (E. MAHLER.)  

ABA (ābā, ābān), the name of a kind of dress worn by the Arabs. Native lexicographers generally give to ābā the value of a collective name, of which ābā or ābāy is (both forms are old) would be the form of unity. Ābā, however, has already been used by classic writers with the meaning of unity, and the word has thus subsisted in the dialects of Mesopotamia, of Arabian and even of Egypt. It is also in the form of ābā that the Turks have borrowed it, though they discard the initial guttural (āb). On the other hand, ābāy is the word now generally employed when speaking of the extremely diaphanous dress described in the next paragraphs.  

1. Syro-Arabic ābāy is a short, full blouse, reaching a little below the knee, with an opening at the top for the head, and a gap at each side for the arms; this is the ābā of the Bedouins of Syria, of Arabia, and of Iraq. It has no sleeves. It is made of a coarse, thick woolen material, a woven camel’s or goat’s hair; it is either of a single color, generally varying from light to very dark brown, or in stripes of alternate brown and white. Sometimes, but very seldom, it is made of cloth, or silk, and decorated with embroidery; then it is the gala dress of the rich. In certain parts this ābāy is the ordinary dress not only of the men but also of the women.  

2. Egyptian ābāy: the old Beduin ābā has undergone some transformations in Egypt; there this dress comes down to the feet, and has sleeves, but has kept the alternate stripes of light and dark brown of the primitive ābāy.  

3. Maghrib ābāy: in Eastern Algeria the name ābāy is sometimes given to a dress with very short sleeves, made of a thick material, square in shape; with a hood resembling very much the Moroccan ġillâba or ḡillâba. In the West of Algeria the ābāy is a white blouse of linen, of cotton, or, more rarely, of wool, or silk, which is worn over the shirt and under the hemâa, or the ġillâba. It falls midway down the leg and has no sleeves; sometimes shoulder-plates come the half-way down the upper arm. Finally, in the West of Algeria the word ābāy is still used for a dress of the women; over her chemise a woman wears an ābāy of cambric, of silk, or even of velvet. It is a long flowing sleeveless dress with a deeply hollowed-out opening behind and long slits at the sides under the arms. This front ābāy is covered by another of embroidered tulle, of the same shape and with the same openings.

W. Lane’s Modern Egyptians (3rd ed.), pp. 38, 41.  

W. MARÇAIL.  

ABABDE (Abâbde), a highland people chiefly nomadic in their habits, dispersed between the Nile and the Red Sea, who extend north as far as the latitude of Asyut and south to the tropics and even further in the valley of the Nile. An invertebrate antipathy separates the Abâbde from their northern neighbours, the Ma‘âra, and from their southern neighbours, the Biharrys. To this antipathy is added, with regard to the former their descent and, to the latter, their language. Their name appears to be derived from that of an ancestor, Abâbde, who has disappeared from history, but whose name survives in that of certain places: Bir Abâbde and Wâli Abâbde, the latter of which debouches into the Nile valley opposite Edfû. They number from thirty to forty thousand souls. They are distinguished very clearly by their anthropological characteristics as much from the pure Arabs as from the inhabitants of the interior of Africa. Kühnanger describes them in the following terms: dolichocephal, orthognathous, with an oval face, large glowing eyes, nose straight, a little short and broad, hair smooth and jet black but not woolly, skin dark brown.
ving on black, the expression of the face completely European (Caucasian), body remarkable for its beauty of form. They are thus distinguished from the Arabs less by their structure and hair than by the color of their skin and by the shape of their heads. Anthropologically they are nearly the same, the Manchus, the Gobust and the 'Abhids; nevertheless, in their social condition they have given rise to many divergencies of a secondary nature. The greater part of the 'Abhids lead a very unsavory nomadic life in the mountains; their domestic animals are camels, goats and sheep, with: the addition in the Nile valley of pigeons and poultry: they have no horses. Instead of the Bedouin tent of strongly woven hair, they only inhabit miserable huts covered with matting or tags, rarely a sort of green; some of them are content for shelter with natural caves, thus justifying the name of Tropilodites which the ancients gave them (comp. Schweinert, p. 285; Kiirzinger, p. 353). Those who inhabit the shores of the Red Sea are now still for the most part the real fisherpeople of former ages. Being without men and beasts, they content themselves with what the sea throws up to them or what it allows them to catch easily. In the Nile valley, where they have formed a great number of small colonies between Kenz (Gene) and Assuan, especially in the vicinity of Duma, of Esfai, and in Lejtta (Legatta), some of them devote themselves to agriculture. The principal resource of the rest is not to get their durra, consequently their bread, is trading, or the presents they receive from travellers. Owing to their situation and the poverty of their country, they have for centuries learned to open track for themselves as band-drivers and caravan guides. In this respect their activity has sometimes expanded greatly in three principal directions: firstly on the road from Ka'far to Ashkal (Alhidd), between Bia Elmesa and Shukin, which was much frequented in the Middle Ages and which took from thirteen to seventeen days; secondly on the road, more and more frequented in modern times, from Kenz to al-Kosur, which takes from four to five days; thirdly by routes connecting Egypt, Nubia, the Upper Nile and Abyssinia. Being honest and decide they have gained the confidence of the Egyptian government, which has lately supplied them with the route from Konzo to Abu Hamid also, which traverses the territory of the Bisharyey, who obstinately refuse to submit. Without any doubt the fact that the 'Abhids now speak mostly Aralas is a consequence of their long established practice of acting as guides and camel-drivers. Except for a little among themselves in intimate intercourse, they no longer use their old Humalic tongue, which closely approaches the re-Evran'ey; sometimes, in order that they may not be understood by strangers, they mix Arabic expressions with their own language, which explains why a sweet conventional language of the 'Abhids has been maintained. If the collective name of the people is Alhida, the names of the principal groups of tribes are: Ashhab (Oghabab), Meleki, Nomer, Shatwar - are essentially Harthic in form.

The material culture of the 'Abhids is, as has already been said, still very primitive. As amongst the nomadic Arabs, their furniture is limited to kitchen-pots, leather baskets, a few dishes, some mats, ropes, heartstring, knives and fire stones; their kitchen utensils small; to a certain extent the stone age; often bend-mills, with which their grain is ground, are improvised, on the spot: if necessary, from two flat stones. Their food is milk, dates, barba, fruit, vegetables, occasionally game, poultry and, next the Red Sea fish. Their flocks and herds in the summertime graze the scanty herbage there, while towards the Red Sea they often browse the leaves of the shrub. They make a certain amount of money also from the sale of charcoal, sunma and other medicinal plants, and gum-arabic. At Kosur and in its environs, they make a little as water-carriers and by other inferior employments. The scant of the inhabitants of the desert in following up tracks is very famous, and for this reason they are employed even in criminal researches.

Naturally the 'Abhida dress in conformity with the climate and their social status. The children often go quite naked; the men wear a loin-cloth, the women, for decency, a belt made of strips of leather (rakh), and to protect themselves from the cold, a blue chemise or even a cloak. In the matter of ornament they know scarcely any but things made of flower-spots or of brass, and zirrho. The boys and men, like the Bisharyey, take in their great coat with the sleeves so large that they coat with butter or grease, and which they bend, plait and fasten in diverse manners (Kiirzinger, p. 247). Sometimes, they go barefoot, sometimes they wear sandals. Their arms, which seem to me more for adornment than for use, are a knife, spear and sword, rarely a shield and never a rifle.

The chiefs of the clans and of the tribes are addressed to a khan, the head of all the 'Abhids, who is personally responsible to the Egyptian government for the maintenance of peace and security. As a matter of fact, since the time of Mutasemmed 'Al, the country has been quiet and intercommunication sure, the more so in that it is a great advantage to the 'Abhids that the caravan routes for which they furnish the escort should be well frequented. The radical change in the state of things, due to the influence of Muhammed 'Ali Pasha, fully explains the contradictory reports about the number of the 'Abhids. Descriptions earlier than on shaly alter the year 1800 depict them as being, like the Bisharyey formerly and the Bisharyey now, a plundering, predatory, cruel and treacherous people. Nowadays we are told the contrary, for they are allowed as being incapable, discrete, peaceful and absolutely reliable. It is a complete transformation which could only have been carried out by such a state as that of the Nasser-Egypt, whose work extends as far as into Arabia, Syria and the Sudan.

The faith of the 'Abhids is Islam, adapted, however, to the nature of the country and its population. The confession of faith is the only one of the so-called 'Billers of Islam' which stands fast. The women are veiled: the children are circumscribed. Veneration of the Saints is widely spread especially in the neighborhood of the Red Sea, before the mountain of the Patron Saint is perhaps blended with ancient pagan ideas. They set the flesh of many animals that are for the strict Mussulman. From the Islamic practices they have borrowed polygamy, facility of divorce and marriage at an early age. On the contrary, they
have remained untouched by the belief in the djinn, which causes so much trouble to the soul of many an Arab. In their intercourse between the sexes they do not observe any greater severity than the nomadic Arabs. Like their nomad cousins, they love to have funances during their festivals. In the case of a death the ordinary lamentations are indulged in, and generally stones are thrown upon the grave.

Little is known of the past of the 'Abadheb. They are a people without a history, whose domicile and conditions of life have remained almost the same for thousands of years. We believe we are right in identifying them with the Rema'im, of whom mention has often been made, since the time of Theodores and later, in the Christian epoch. Arab geographers unite the 'Abadheb with their southern neighbors under the name of Beja. Quatremère has written a work on the information given by Makriti and other Arabs. The trade-route of the Middle Ages which we mentioned above, going from Kus to 'Ailhab and connecting Egypt and the Maghrib with Tripoli, 'Ain and Sa'din, crossed the southern portion of the territory of the 'Abadheb on the sea route between the Berenice and Phoenicia, and then went along the territory of the Badarys. On this account and because of the rich mines situated in the territory of 'Atlik, the Arabs became acquainted with the Beja. European accounts begin with that of Wansleb, and since then, they have been completed and corrected progressively, first in the eighteenth century by Bruce, then by the scholars in Napoleon's expedition, and finally by travellers under the protection of the New Egyptians. Many of them believed they could identify the name of the 'Abadheb with that of the Gebusi mentioned by Pline (Hist. Nat., vi. 79), but that appears to be inadmissible. We can with more certainty recognize in the 'Abadheb the Troglydites and Ithethophagi of the ancient geographers.

(VOLENS.)

ABAD (P. — PRIL, 6066, from a hypothetical 6-qe'd), a Persian adjective signifying "nourishing," "speaking of a tract of land, and, subsequently, "inhabited, cultivated," opposed to "deerset," after that it is used as a substantive conveying the idea of the composition of the names of a great number of places, such as Rukhétid, and of towns, especially in India; Ahmadabad, Haldacabad (Hyderabad), etc. (Cf. HAJAT.)

ABAD (b.), a theological term signifying an eternity which is without end, but without beginning. [Comp. AYAL.]
in their footsteps; the Ashites carefully point out in their books what they call his innovations.

Mussulmans are required to officiate as Imam when they have the necessary strength and knowledge to do so; it is not necessary that the Imam should be a Kurlaite; it is enough if he be virtuous and plans and rules in conformity with the Koran and the Sunna; if they deviate from them they must be deposed.

The Koran is the word of God, created by Him. God could not be seen in Paul and Jesus and in his punishment; in the other world are both eternal; Hell will not be destroyed any more than will Paradise.

God pardons venial sins; but grievous sins cannot be pardoned unless they are blotted out by repentance.

It is the duty of every Mussulman to enjoin the Good and reprove the Evil as far as he is able.

All Mussulmans are strictly compelled to acknowledge their solidarity which they express by word and action, but the Moslem who acts contrary to the precepts of the religious law loses all claim on the friendship of his co-religionists and should be treated as an enemy until he performs the act of repentance. There is a kind of excommunication which has grave religious and civil consequences.

The Ashites of Algeria affect a great austerity in morals, at least in the himma of the Mebi, where they cannot get away from the tyrannical supervision of the Tewbi. In the towns of the Algerian Tell, where they congregate for the purposes of commerce, the practice is not always in accordance with the theory.

It must, however, be admitted that generally they keep their beliefs very jealously. Except for the exigencies of their very brisk commerce, they do not mix with orthodox Mussulmans; their marriages with the latter are rare exceptions and are depreciated by the whole community. This partition, be it due to preservation or to dissensions, has divided them into a homogeneous and compact group, which is very clearly distinguishable by its behavior, characteristic and tendencies amidst the orthodox Arabs or Berbers of Northern Africa.

Biography: R. Basset, La Zenana du Mebi, de Oumga et de l'Oued Eltie; idem, Les souvenirs du Djebel Defloua; A. de Motylini, Les lvees de la vie ashadite; idem, L'asiatique et l'ocidental (Recueil de Memoires et de Textes publis au Congres des Orientalistes etc., pp. 409 et sqq. (A. de Motylini).
plied himself also to the same kind of work with other writers, particularly Persian and Hindustani, e.g. Suvv Alarif, Suivy, Anuragh, K. Alarif, K. Bilewuarq, Anu, K. Alarif, K. Binshak, and K. Alarif. Besides this he wrote a cosmogonic poem entitled Duaq-ul-faia, a work on the wis-

dom (alim) of the Hindustani, and another on fasting and meditation; these works are all lost. Like almost every Arab poet he wrote panegyrical elegies and satires. With regard to the former, there can be cited a panegyrical of the "Abbas-

ides, in which he argues against the pretensions of the "Abbas to the succession, and an elegy which is still extant, on the Haram. The former brought him into favor with the caliph Hisham al-Rashid, who rewarded him with 20,000 dirhems. In his satires he attacked his contemporary poets and the celebrated grammarians Abu 'Uthama. Many members of his family, his son Humayd for instance, also distinguished themselves by their poetic skill.

(M. Th. Houtema.)

**ABAN** & **OTHMAK** b. **A'IMAN, governor of the third caliph. His mother was called Umm bint Dhuibb b. 'A'um al-Dawalayn. Aban accompanied 'Abd al-Aziz at the battle of the Camel in Dzumal in 136 (November 656); on the battle terminating otherwise than was expected, he was one of the first to run away. On the whole, he does not seem to have been of any political importance. The caliph 'Abd al-Malik b. Marwan appointed him as governor of Medina. He occupied this position for seven years; he was then dismissed and his place was taken by Hisham b. Isma'il. Aban owes his celebrity not so much to his activity as official at the service of the Umayyads as to his wonderful knowledge of Muslim tradition. In this respect he was held in great esteem, and his Ma'muni (a biography of Muhammad) perhaps the oldest literary production on that subject. He was struck with apoplexy and died a year later at Medina in 105 (713-714) according to the report, at any rate during the reign of Yazid b. Aban-al-Malik.

**Bibliography:** Thu. Sa’d, v. 113 et seq.; Nawawi (ed. Wustenf.), pp. 135 et seq.

(R. V. Zettersten.)

**ABANUS** (various: a-habun, a-habun, a-habun and a-habun), ebony. This word is derived from the Greek habenos (comp. also the Hebrew hadon, the old Egyptian haden, which passed to the Aramaic (habon) and from there to the Persian, Arabic, Turkish and other languages. Although ebony had been already well known in the old days by the Semites, who imported it from India and Ethiopia, it was very little used at the early times of Islam, on account of its rarity and the scanty requirements of artistic goods. Absolute faith must not be given to the story according to which, when the so-called Mosuge of Omayyad was being built at Jerusalem under the Omayyad caliph 'Abd al-Malik, the venerable rock was enclosed with a pail of ebony. It is certain that this wood had been already used under the caliphs together with ivory in the manufacture of chess-men and dice in mosaic of the sort very often used later with great skill on furniture, doors, latice work and wall-cove; many examples of them may be seen at the Arab museum of Cairo.

In literature abnur is not spoken of as a rich wood, but as a medicine. As early as the ninth century the Persians and Arabs knew it as such from the translations of Dioscorides and Galen; it was considered to be a useful astringent for phlegmous inflammation and chronic catarrh of the eyes; it was also taken internally in the form of a powder for the bowels and stomach, and it is still dusted over burns. — According to Dioscorides, Abyssinian ebony was generally considered to be more efficacious than Indian. To the former were ascribed the properties which at the present time are only found in the wood of the Diospyros and Male kinds of the East Indies, of the Indian Archipelago, of Madagascar, and of St. Mauritius; i.e. an intense black and a fineness of grain which almost makes it impossible to distinguish the fibre. The African species of ebony which the Arabs prefer, are nowadays rigidly held in little estimation; and particularly the ebony tree of Abyssinia (hadjan habban) which according to Brehm (Reise in Nordafrika) is rather a shrub than a tree; its wood which is of an inferior quality, but fits for use, dries up and rots for want of being used.

**Bibliography:** Abu Ma'shar Musallah, Kith al-Abnuya (ed. Schilgenmann); Ibn al-Balbar, al-Djam (Bullay, 1291); translated by L. Leclerc, in Notion et Extrême des Mammus. de la Hö. Bib. Nat., xxii. 1; Kaswini (ed. Wustenf.), i. (J. HELL.)

**ABAQOBAQI,** or Baraqab, a district of the Babylonian department of the Tigris, a tract of land along the western frontier of Awha (Khitussa), between Wasit on the north and Basra on the south; see Streck, Babylonien nach dem Arab. Geogr. (Leiden, 1896), i. 15, 19. The name of this country is derived from that of the Sogdian king Khwadhi b. Kish (Kobad), reigned from 483 to 531 A.D.; at any rate the first part of the name, as Abu and not Abu (nor Aba), as the Arab geographers give it, comp. Nöldke, Geogr. der Perser u. Araber zur Zeit der Sassaniden (Leiden, 1879), p. 146, note 2. The Persian abor or ur, "a cloud" is often seen at the beginning of the names of places in Persia. Some authors assert that Abarqob was also the name of that district which Arr adjoining is situated, but that appears to spring from a mistake.

(M. Streck.)

**ABAQI,** a town in Persia, north of Ispahan, about halfway between that town and Vezz, Another form of the name is Abarqob; the abbreviation Barqob (also Warqob) is often met with. In the Middle Ages the population of Abarqob was about the third of that of Ispahan; comp. P. Schwarz, Von ein Mittelalter nach dem arabis. Geogr. (Leipzig, 1866), i. 172 et seq., and G. le Strange, The Land of the Eastern Caliphate (Cambridge, 1905), pp. 284 et seq., 294-297. It still exists under the name of Abargh.; see A. de Bade in the Journ. of the Roy. Geogr. Soc. (London), 1843, p. 78; and H. L. Wells, in Proceed. of the Roy. Geogr. Soc. (London), 1883, p. 16.

(M. Streck.)

**ABARZL** (Amar al-Din Aba Sa'id Nafar al-Asyak, poet and minister to Sa'd b. Zengi, the sibyl of Fars, native of Abarz, a canton of this province (Latt. Alf Bog, Arif-Kote, p. 8), now Abarz, north of Shiraz (Hajabbi Mirza Hasan
ABASAZ, Turkish name for the Abases [see ARSIK], given as a surname to many prisoners in Ottoman history who descended from those people.

1. Abaza Paša,taken prisoner to many persons in the rebel Ebagulah, whose treasurer he was, was brought before Mustafa-Paša and only had his life spared through the intercession of Khallī, agia of the Janissaries, who, having become Ḥabibīye in the common council of a gallery, and conferred upon him the government of Marash when he was promoted to the dignity of grand vizier. Later he became governor of Erzrum and planned to destroy the Janissaries; those in his province lodged a complaint against him; he was deposed, but refused to obey the orders of the Porte (1532 = 1623); he levied taxes and raised troops on the pretext of arranging the death of the sultan Othman II, married with Angora and Smyrna, and took Brusa, but did not succeed in seizing the citadel. In 1533 (1624), the grand vizier (Hafs Paša) defeated him in a battle near Kasroby, at the bridge across the Kars-ı, owing to the defection of Tajrīn Paša and the Turkomans. Alâzā took refuge at Erzurum, of which he succeeded in having himself made governor on condition that he should admit a guard of Janissaries into the fortress. In 1536 (1627), suspecting that the expedition against Abiskas was in reality directed against himself, he massacred a great number of the Janissaries belonging to the army. His old master, Khallī besieged Erzurum in vain and was obliged to retreat because of the snow (1537 = 1627). In the following year, the Boorian Khoşru Paša, having been made grand vizier, again besieged him and forced him to capitulate after a fortnight's siege; the rebel was granted his position, and the government of Bashaw. There he again persecuted the Janissaries. As the Janissaries, was deposed and went to Belgrade, where, on a hill to the south of the town he erected Abaza Kŭihlik. Then he was sent to Wilhān and commanded the troops who invaded Poland (1633). Being honored with the confidence of Murād IV, he accompanied him to Adrianople when preparations were being made for a new campaign against Poland; but his success excited envy; reports, having been cleverly disseminated, estranged the sultan, who had him executed (29th Safar 1044 = 24th August 1634).

Bibliography: Hammer-Purgstall, Gesch. der Osman. Reiches, iv. 569, 582; vi. 40, 85, 173 et seq., 189 et seq.; Muṣṭafa-Efendi, Nātāt ir-waṣṣāf, ii. 48, 82; Ewvanı Efendi, Travels, i. 119 et seq.

2. Abaza, Ḥabīb, had been given the command of the Turkomans of Asia Minor as a reward for his capture of the rebel Hūdār Oghlu. Having been dismissed for no reason, he revolted in his turn, held the country between Geranıe and Butovo, defeated the old bandit Kārīm Oghlu who had been sent to fight against him, and, unlimited on condition that he should have the title of vizier of the Turkomans; later, as the result of complaints lodged against him, he was imprisoned in the Seven Towers and was only released by the intervention of Behayl, the position of Shāhīz al-Jalāl (1662 = 1652); his friend conferred on him the sanadāj of Ohnī. When Iḥṣāṣ Paša, who was also one of the Abas nation, was made grand vizier by Muḥammad IV, he sent for him. At his execution he remained faithful to him; returned to Asia Minor with the remainder of his troops and regained the office of vazīr of the Turkomans (1045 = 1635). He settled at Aleppo and committed such ravages in Syria that the Djūz wanted to have him banished from the empire; the grand vizier, Sulaimān-Paša, however, confirmed him in his position of governor and entrusted the defenses of the Dardinellses to him. In 1066 (1656) he was sent to Djițar Bekr as governor. Two years later he rebelled, put himself at the head of a considerable army under the pretext of demanding the dismissal of Muḥammad Kūmrul, at that time grand vizier, and threatened Brusa. In the neighborhood of Hīghia he completely defeated Muḥada Paša, who had been sent against him (15th Rain 1060 = 11th December 1655); but he fell into a trap which had been set for him; left Aintab for Aleppo to make terms for his submission and was consequently assassinated there.

Bibliography: Hammer-Purgstall, Gesch. der Osman. Reiches, vi. 284, 560 et seq., 583, 575, 634, 631, vi. 35 et seq., 57 et seq.
seeing himself abandoned by the Ottoman troops, he fled and was commissioned to defend Mohilva, which he was unable to accomplish. At the battle of Kaghul (1st Aug. 1776), he commanded the right wing; when the defeat of the Turks took place. Not knowing his real name or the kingdom of Sintilistan, he was dismissed after having squandered the money given to him for the purpose of raising troops, and was exiled to Kuntundal. At the time of the conquest of the Cima and the flight of Selim-Gazi he refused to land the few troops he was bringing up and returned to Simitpe; he was decapitated (1185 = 1771).

ABB. [See Add.]

ABBAD b. Zayd, governor, nephew of the caliph, Muhammad IV, whose uncle made him governor of Sidjiliman and he occupied the position for seven years. He undertook expeditions against the East and conquered Kandahar. Asad b. Mu'awiya, on succeeding his father, dismissed him in 61 (1086-87), and in his place appointed his brother Salu b. Zayd as governor of Sidjiliman and Kandahar.

ABBADANI, twisted rush work, deriving its name from 'Abbadan, although it is made in other places, e.g., Excelsior. See A. W. Coreman, Culture and civilization of the Chaldeans, ii. 208.

AL-ABBADI. The following persons are known under this nisba:

1. 'Ali b. 'Abd al-Mu'min b. Ahmad b. Muhammad b. Ahmad b. Abi 'Abd Allah, 'Abbad al-Abbadi, often called 'Al-khujj 'Athamani, celebrated Shafiite jurist, born in 725 (1325) at Haur and died there in Shawwal 485 (1096). He undertook three travels and wrote several works, the titles of which are enumerated by Ibn Khallikhan.

Bibliography: Ibn Khallikhan (ed. Wustene), No. 558; Wustene, Schrift. p. 204; Brockhams, Gesch. d. arab. Litter., i. 386.

2. Kufr al-Abbadi, Abu Mansur al-Mu'azzam b. 'Abd al-'Abbadi (as called from his birthplace), Sami 'Abd, in the daily newspaper, Murjan, born in 492 (1096) and died in May 477 (1153). He studied at Nisabur, than came to Baghdad, where his oratorical talent won him the favor of the caliph, who entrusted him with diplomatic missions.

Bibliography: Ibn Khallikhan, No. 733.
delivery of a hundred loads of silk, was not of long duration, for he took from the Ottomans Bagdad and the sacred Sh'ite towns of Kerbelah and Najaf or Mehdiyah 'All (1054 = 1645). Maula and Dylis Bekr; Georgia was occupied by his troops. In another direction, with the support of the East Indian Company, which lent him the co-operation of an English fleet, he took the island of Java from the Dutch. Going onwards from the Portuguese; in place of this old factory he substituted Gunart to which he gave the name of Bendiri 'Abbas (the port of 'Abbas) which it bears to this day.

His part in the internal administration of his empire was not less important than that which he played abroad. He built roads, namely the highway which traversed Muzanderan, bridges, palaces and caravanserais; among the remarkable works carried out in his reign, special mention is made of the monumental buildings at Isphahan: the Great Mosque, the palace of Chihil-sutun (forty columns), the Car-bagh (four gardens) and the great bridge of Zende-rud, and in Muzanderan the palace of Djalma-namah at Farahabad, that of Sefer (or Sept) -shah between Sird and Asfarabad, etc. He established the security of intercommunication by the road with his brigandages. He caused the Iranian population of Djalma, a town on the Araxes, to be removed to Isphahan, and this population built there a quarter which bears the name of Djalma. He was favorable to foreign monastic establishments such as that of the Carmelites at Isphahan. Desirous of establishing relations with the European powers, he welcomed two English gentlemen, Sir Anthony and Robert Sherley, who had come to his court as simple travellers; he made use of their cooperation to touch his troops discipline and artillery drill; he entrusted to Sir Anthony, in company with Hasan Bei, a diplomatic mission, having for its object the uniting of Europe in a league against the Ottomans. A Roman gentleman, Pietro della Valle, was also employed and accompanied him to the siege of Gomul.

Despite the great qualities that he possessed, he was yet cruel: at the beginning of his reign he did not hesitate to have Murshid Kuli Khan, to whom he owed his elevation, put to death (974 = 1568), and later he had his eldest son Safi Mirza, whose popularity he feared, assassinated. He gave the order for the massacre of the population of Sughlim, which had become too numerous for the liking of its governor; this order through chance circumstances was not carried out.

'ABBAS II, son of Safi Mirza (Shah Safi) and great-grandson of 'Abbas I, was born in 1643 (1633), died in 1677 (1666) at Damascus, and was buried at Kumm. He ascended the throne of Persia at the age of ten (1652 = 1642), he saw a reaction of religious intolerance introduced against the Shi'is in his name and encouraged by the example of his predecessors, but the severe measures adopted by his ministers were unable to put a stop to it. 'Abbas II, as he grew older, returned to the drunken habits of his ancestors. He retook Kadhansh and received as guests the Qizbeg chiefs, who had been driven out by the revolutions. He sent back Tahmiras Khan, prince of Georgia, who had made war upon him, safe from harm (1670 = 1660). Worn out by debauchery, he was only thirty-four years of age when he died. It appears that he was a poet, and a verse of his composition is quoted.

Bibliography: Rijs Kuli Khan, Mudafiin-al-Fayyadh, i, 401; Nawrat al-Safat al-Najatie, viii. 193 et seq. (Cl. Huart).

'ABBAS III, Safavid prince, was born in 1145 (1732) and died at Isphahan in 1149 (1736). He was prince of Tabriz until the conquest of Shushtar after the conquest had destroyed Tahmasp by stratagem and had exiled him to Khoshdan (1145 = 1732). He was then a child of eight months. During his reign, Nadir besieged Bagdad and took Georgia and Armenia (1147 = 1734). On his premature death, Nadir seized the opportunity of assuming the title of Shah himself.

'ABBAS I, viceroy of Egypt (1848—1854), born in 1816 at Djidja, where his father Husain Pasha, son of Muhammad Ali, had stayed to take part in the campaign of Ibrahim Pasha against the Wahhabis. 'Abbas was his grandfather's favorite, although the beginning of that absolutism of character which he later showed so strongly could already be seen in his childhood.

Having been at a very early age entrusted with important offices, he behaved as a full-blooded despot of the best Oriental type. Ibrahim Pasha died in 1848, after a long illness, eight months before Muhammad Ali, who had fallen into idleness. The Porte recognised 'Abbas as the successor of Ibrahim, but, seeing how young and inexperienced the new viceroy was, wanted to take the opportunity to strengthen the supremacy of the sultan over him in Egypt. The English wished that he should construct a railway between the Nile and the Red Sea; 'Abbas was favorable to this project, but this was a formal violation of the traté of 1841, which stipulated that the hereditary pasha of Egypt was bound to ask the consent of the Porte in all important affairs. On the 4th September 1851, a severe note of the Porte reminded him of his obligations and he was forced to yield. Moreover the Porte required of him that he should enforce in Egypt the fundamental state-laws of the Ottoman empire (katibet), and a commission was appointed to formulate the modifications which might be necessary in Egypt for that purpose. The work of this commission having proved futile, the sultan, in 1852, sent the clever Fath Efendi, who obtained permission from 'Abbas that the
order with regard to the enforcement of the ta'zīyat in Egypt should be read in public. He was rewarded for his compliance and financial support by being granted, first for seven years and later for life, the right of having condemned murderers executed, that of exacting statutory legacies, the control over the Muhammadan diocesan and diocesan, the suspicions and despotic. Abas had already treated with great cruelty. The diplomatic victory of the Porte had therefore been a mere formality. During the Crimean war, Abas acted loyally towards the sultan, at whose disposal he placed 15,000 men and the Egyptian fleet.

As to the internal government of Egypt, Abas acted as a narrow-minded and stupid fanatic. He gave up the costly experiment of his two predecessors to introduce European civilization into his country, only it was not from any economical motive, but purely out of hate of the Franks and his hostility to culture. He became more and more suspicious and hard-hearted and he retired to the castle of Benha. As such, he possessed in the desert not far from Cairo. Then he died suddenly in July 1854, having been possibly bullied by his uncle Said Pasha, fourth son of Muhammad Ali, succeeded him.

(A. O. E. S. T.)

ABBAS II (1854–1855), whose reign, in Egypt, son of Tawfiq Bel (Pasha) and of his wife, Emine Hanum, was born on the 4th of May 1829. (18th July 1874) in the palace of Nasser Tekke at Alexandria. He received a good education, semi-Oriental and semi-European. In 1852 his father, who had become viceregal in 1852, was accused of sending him with his brother Muhammad Ali (born 1829–1875) to Puteaux, but gave up the project from political motives and chose the Theresianum of Vienna. The two brothers there received a sound education suited to their position.

The father died suddenly on the 7th January 1854, and on the following day Abas was named of by the Porte as his successor. He arrived at Cairo a few days later. The firm of the Porte for his inauguration, dated the 27th Shawwal 1339 (27th March 1854), was solemnly read at Cairo on the 14th of April. The tenor of this firm was, however, the exchange of notes between Sir Evelyn Baring (later Lord Cromer), who represented the English government, and the Egyptian government. Abas, influenced by counsellors, several of whom were not Egyptian, took up a political attitude hostile to England without taking into account the situation brought about by the events of 1852, nor of the agglutination of the internal policies of the country which had for several years been firmly and persistently carried on by Lord Cromer. Continual friction was the result. In the month of April, Sir Garnett, secretary of the Egyptian troops, had to retire and was replaced by H. Kitchener. The new "national" feeling showed itself in various ways: by the newspapers, by the charitable societies, by the preference shown to the Arab and tongue, and by the parsimony of language. The latter, after the accession of Abas, the antagonism between him and the power which occupied the country burst out with violence.

Abas desired to replace the slyly President of the Council, Mustafa Pasha Fahmi, by Fakhri Pasha, a cultured man, but a pure chisel Turk. Lord Cromer rejected the latter and insisted upon being consulted on every appointment that might be made. The quarrel became bitter towards the middle of January 1853 that it almost came to mobilitating the army of occupation. It did not, however, reach so far: on the 18th January, the Riyad (Riyas) Pasha ministry was accepted by the parties; an unsuitable adviser of Abas, the Swiss Rouiller Bel, was given leave to depart and finally dismissed, and the English army of occupation was re-enforced. The courtiers were also left for a long time on various points, on the administration, on the press, and on education. Abas went to Stamboul in July, hoping to secure the support of the Porte, but returned without having obtained what he desired. The Egyptian petition to the sultan was labor vain. Among the manifestations of the press of the A'asi party of that period, the radical Caines and the letters of the Satyr al 'Amiri and of the "Tawila" Shams al-Hazan which were published in The Times are worthy of mention. The quarrel gradually lost its bitterness. After 1854, Abas has been in the habit of going on a journey to Europe every year, usually to Switzerland, France and England.

One must not conclude from the check which Abas suffered in his first phase into politics that he is a man without gifts and talent, for he has learned too much by being in contact with Europe to fall back into the oriental-narrow-mindedness; he is a sincere Musulman, but sets the spirit of the religion above the form. He has literary taste and speaks Turkish, Arabic, French, German and English. He enjoys life in the country and in the desert immensely, and loves beautiful horses and costly camels, which he attracts to his stables. He would certainly be a man who could be useful work for the intellectual and social progress of his people, if the political situation in which he lives did not condemn him to inaction.

(K. VOLKERS.)

ABBAS, lord of the city of al-Ra'i, and an influential emir under the last Seljukids, put to death in 543 (1147) by order of Sultan Mas'ud. As a youth of the emir Dijawar, he had governed al-Ra'i in his master's name; after having been assassinated by the Ismailites, Abas took possession of the town in 536 (1139) and, to avenge Dijawar, he made a war of extermination against the Ismailites, of whom it is said he killed a hundred thousand. He became, with Banabeh [p. 7] and Abd al-Rahman Taghavir (p. 7), one of the most powerful emirs of the Seljukid empire, against whom even the sultan could make no head. At last he got rid of Taghavir, whom he caused to be assassinated, and then summoned Abbas to come to him and had him put to death.

AL-ABBAS. 1. ABD AL-MUTALLAB, son-named ABD-AL-FADIL, uncle of Muhammad. He was only three or, according to Ibn Hajar, two years older than the latter. He was a merchant and, differing in this very much from his brothers Abd al-Talib and 'Abd Allah, he made a large fortune; he lent money at interest and possessed a garden at Ta'if, according to Ibn Hisân (p. 925) and
Tabari († 1354), he took in his commerce travels the way to the capital of the ancient kings. He did therefore well and, as it is reported, that right of supplying drink to pilgrims was conferred upon him; it is said that he put dried raisins from his garden at Tiff in Zayuna water. One must not, however, trust implicitly to the traditions current about him; for the partisans of the 'Abbasides have in the course of time invented many legends in his honour. The traditions agree in representing him as opposed to the religious movement initiated by Muhammad, as long as he lived at Mecca. But he did not belong, however, to the implacable adversaries of the Prophet, and, when Abi Talib died and he thereby became the protector of his nephew, it is not impossible, though by no means certain, that he defended his cause in the Assembly of 'Ababa as tradition has it. An awkward fact is that he fought in the ranks of the Meccans at Badr and was taken prisoner. But to extend this story too far was pretended that he had been forced by the Meccans to take part in this campaign against his will. Further, the story was embellished with different traits in his likeness: e.g., it was said that he was taken prisoner by the help of an angel and that Muhammad could not sleep from thinking that his uncle was in chains. Ibn Hasma uses the conventional method of passing over the story of his ransom in silence. It is further certain that having paid his ransom he returned to Mecca; but tradition explains this by pretending that he had really accepted Islam, but from motives of pecuniary nature kept temporarily his conversion secret; tradition even goes so far as to say that he wished not to settle at Medina and only remained at Mecca on the solicitation of Muhammad. In order not to remain quite intransitive, he not only protected there the followers of the Prophet but also, acting as a spy, revealed to his nephew the plans of campaign of his fellow-citizens, which is imputed to him as a great merit. As a matter of fact it is not only possible but quite probable that this man, being discreet and very indifferent to the religious side of the question, looked with increasing sympathy at the rapid development of his nephew's power, and in his heart felt disposed to make common cause with it. In the meantime, however, he was not afraid to say in reality manifest joy when they came in secret to tell him of the taking of Khaybar. When Muhammad visited Mecca in the year 7 (628-29), 'Abdās gave him his sister-in-law Ma'muna as wife. The following year, when Muhammad marched upon Mecca, 'Abdās threw off all disguise and joined him before his arrival in front of the town; but the story that he then took Abi Sufyan under his protection is apocryphal. At Mecca Muhammad confirmed him in his right to supply pilgrims with drink. In the battle of Hunain he kept at the Prophet's side, who was beholden to the power of his uncle's voice for the happy turn of the fight took. According to Wāfīl, he contributed from his purse to the fritting out of the great campaign against the Byzantines; he also took part in washing the Prophet's body. There is very little mention made of him after this. As Abi Bakr, As-mān, Fatimah, when she went to Abi Bakr to claim her part of inheritance. He had his share in the great endowments of 'Omar. In the reign of this caliph, he made a present of his house for the purpose of enlarging the Mosque of Medina. But the story that he obtained rain during a severe drought through prayer must be considered to be an 'Abbaside legend. Considering how old he was at that time, it is very doubtful whether he was present in the Arab army sent to the Jordan; but, it is said, he dissuaded 'Omar from going to Persia to the theatre of war against the Persians. It is said that he frantically endeavoured to make all accept his advice not to come any share in the demolition of 'Umar's successor. He died at Medina in the year 32 (652-53) or, according to others, in the year 34 at the age of 88. The 'Abbasides despised from his son 'Abd Allah [† 79].

**ABBAS**

**ABBAS** is, Axis. Futuha, his full name Ab dangers. Abou Kich, Keen Al-Din, Abou l-Fadl, Abou A. Ali Al-Futuha. Tabbia, Mawla b. Abi-Sunajie, a descendant of the well known princes house of the Banu Radda [9 v.] of Northern Africa. He seems to have been born shortly before 900. At the age of 58, in that year he was still a youngling. His father, Abu Al-Futuha, was then in prison, and was banished in 900 to Alexandria, where his wife Balla and the little Abou accompanied him. After Abu Al-Futuha's death his widow married Abi b. Sallar, commander of Alexandria and of Butania, one of the most powerful lords of the Fatimid empire, which was then on the way towards dissolution. When, in 944 (1149-1150), the caliph al-Ma'mun b. Al-Hakim appointed the emir Ibn Masi in the position of vizier, which had for some time been vacant, Ibn Sallar revolted, marched upon Cairo at the head of his troops and forced the vizir to invest him with the vizierate. It is during these troubles that Abbas appeared for the first time on the political scene; he took the side of his step-father and was entrusted by him with the pursuit of Ibn Masi who had been flight. Afterwards, however, coming to Syria, whilst still on Hisjav's side at Bilbo, he considered it wiser to cede his strength to no purpose in defending an advancing post which could not be saved, and decided to commence his step-father and seize the vizierate. It is probable that in this he submitted to the influence of the Syrian enmity, Usama b. Mankhul, who accompanied him. Usama has left a circumstantial story of this situation as well as of the later years of his life. Since Abi Al-Futuha did not in the least attempt to extenuate the double part he played in this affair—believed in a time of treason's fascination, intrigues; perhaps he even represents himself a little too strongly as the supporter and
head of what took place. Anyway, the result was that Nāyā, 'Abbās's son, returned secretly to Cairo, obtained the consent of the caliph, who idealised him, and assassinated Ibn Sallār on the 6th Muḍarrīm 548 (3rd April 1153). 'Abbās returned as fast as he could and took possession of the viceroy, whilst Askalon, being strictly invested, fell into the hands of the Franks on the 27th Jumādā I 548 (20th August 1153). 'Abbās did not enjoy the position he had won for long. As the caliph wished to have preferred his favorite Nāyā for viceroy, the latter seemed to have thought of assassinating his father, and, on the other hand, 'Abbās would seem to have been invited against Nāyā. The historical accounts possess only reflect these psychological facts in a very indistinct manner. At any rate, Ushāna acted as a conciliator, seeing that he must have been uncomfortable between two fires. He succeeded in bringing the father and son together in a common act, and they resolved to kill the caliph rather than risk being the victims of his machinations. Nāyā forced the caliph to his house and assassinated him on the last day of Muḍarrīm 549 (16th April 1154). Thereupon 'Abbās changed the nearest male relations of the caliph with this country; they were left in Limassol, and the misfortune of al-Shāfi'ī was placed upon the throne under the name of al-Fā 'īb-n-Nāyā Allah. These proceedings stirred up the court and the people; a message was sent to Tāhā b. Ruzzī, a highly valiant leader, who was then to the south of Cairo. 'Abbās, abdorhed on all hands, could not hold out and fled into Syria with Nāyā and Ushāna. The Franks, having been warned, surprised them near al-Ma'arrūs and 'Abbās was killed (25th Rābi' I 549, i.e. June 1154).

'ABBĀS b. AL-'ABBĀS (See the above).

'ABBĀS b. 'ABDĀL-ГHAΣΑWĪ, general and governor of note of the 'Abbāsād caliphate towards the end of the third century of the Hāgira (about 900), known principally for his defeat suffered by him at the hands of the Karthagina, for his captivity and for his release. He was born in the country of Zagān, being the governor of Yamanā and Balṣam, he was sent by the caliph al-Ma'rūf, against the celebrated Karthina general, Abu Ṣafī al-Dīnmāfīnī, by whom, after a singular battle, he was taken prisoner at the end of Ragha' 287 (end of July 900). All the other prisoners were executed; he alone was spared to carry a message to the caliph. M. J. de Goeze (Mémoire sur les Car-
AL-ABBAS b. al-Mu'Alla, contender to the throne under al-Mu'tamid. His father, the caliph al-Mu'tamid, appointed him in 313 (828-829) as governor of Manopotamia and the neighboring frontier district, and he then showed great bravery in fighting the Byzantines. On the death of al-Mu'tamid in 348 (953), his brother, Abi Iskandar Muhammed al-Mu'tamid b. 'Uthman, by choice of the deceased, ascended the throne of the 'Abbassids. The army, which al-Mu'tamid had collected against the Greeks, proclaimed, however, al-'Abbās caliph, although he himself was not in the last disposition to compound with the wishes of his troops and took the oath of fealty to his uncle. After that, he went back to his army and succeeded in appeasing its discontent. Then the caliph, in order to strengthen his position, took many measures of precaution; he had the fortress of Ta'wa'in (Tyana) razed, stopped the war against the Byzantines and dismissed the army. Later, having organized some Turkish regiments in his garrison, he leased them with this so far as to disperse the Arab troops who had shown themselves sufficiently ill-disposed ever since the death of al-Mu'tamid.

Ujair b. Abdasa, an Arab general in the service of al-Mu'tamid utilized this discontent for the purpose of organizing a conspiracy, the object of which was to assassinate the caliph and put al-'Abbās on the throne. The latter allowed himself to be persuaded, but the plot was discovered, and the conspirators paid for their attempt with their lives. Al-'Abbās died in prison at Mosul shortly in 323 (838).

(K. V. Zettekstein)

AL-ABBAS b. Mirdas b. Abi 'Amir, surnamed Abu l-'Abbās, Salamitine poet, contemporary of Muhammad. His father Mirdas having later married Khawālah, the celebrated poet of the same tribe, 'Abbās was often called her son, but this is certainly a mistake. His family was in possession of the idol Trimaq. This gave rise to a number of fabulous stories about the conversion of 'Abbās, but without doubt he, like the rest of his tribe, was a Musulman, and that is how he tried to comply with the solicitations of the Prophet. This took place in the year 8 (629-630); at the most, 'Abbās paid homage to the Prophet some time before the mass of the Salamitines. It is said that whilst he was still a pagum he abstained from wine. The very material motives of his conversion showed themselves after the taking of Mecca, in which 'Abbās took part with a troop of heavy cavalry. He was among the numbers given vary from 700 to 1000, and the submission of the Hawazins after the battle of Hunain, when the booty was used to recompense the men with softed hearts. 'Abbās, as a neophyte, received his share, but was discontented with it, and he composed some sarcastic verses, by which he succeeded in increasing what fell to him. He seems to have retired later into the desert to live with his own people as is at least stated that he did not settle either at Mecca or Mervin. He—his son Djulhuma are spoken of as traditionists. He was still living in the time of 'Ummay 1. Although no collection of his poetry has been preserved for us, several of them have survived in 'Abbās as also in Ibn Hiāthah's biography of the Prophet; many of these give accounts of the battle of Hunain, in which, as has been said, 'Abbās had taken part. Comp. also Abi Tamīna's Hamūlat.

AL-ABBAS b. Mūhammad b. Abi 'Abd Allah, brother of the caliph Abu 'Abd Allah and Abi Dī' at-al-Mu'āqil. 'Abbās helped to reinstate Mūsā in 350 (766), and three years later was appointed by Mūsā as governor of Manopotamia and the neighboring frontier district. He was dismissed in 355 (772); that does not prevent his name from figuring frequently in the history of the times which followed immediately, however little important his political part may have been. He especially and often distinguished himself in the wars against the Byzantines. In 379 (775), he was the second in command of the troops, which the caliph al-Marwān mustered for an expedition against Asia Minor, and it was with great success that he acquitted himself of the charge committed to him.

(K. V. Zettekstein)

AL-ABBAS b. al-Walid, Umayyad general, son of the caliph Walid I. 'Abbās owed his celebrity principally to the energetic part he took in the continual struggles of the Umayyads with the Byzantines. With regard to the details, the Arab and Byzantine sources do not, certainly, always agree. In the early part of the reign of Walid I, he and his uncle, Muslum b. 'Ali b. al-Malik, seized Tarāμ, the most important fortress of Cappadocia. The Musulmans had begun to be discouraged and 'Abbās had to display the greatest energy to succeed in stopping the fugitives and renewing the battle. The Greeks were forced to retire into the town which was immediately invested and had to surrender after a long siege. Arab historians give Ψαβενος 88 (May 767) as the date of the fall of the fortress, but the Byzantines put it two years later. In spite of that, to the following period, the Arab chronicles mention many military expeditions undertaken by the two Umayyad generals, sometimes conjointly, sometimes by one independently of the other. The most salient facts, however, are the taking of Seestopol in Cilicia by 'Abbās, and of Amazia in Pontus by Muslum in 372 (773). In the following year, 'Abbās seized Antioch in Thrace. He submitted to support Muslum faithfully in the subsequent latter. When, after the death of 'Omar II, in 101 (720), Yazid b. al-Muqālibah, the governor of 'Irak, mounted a dangerous insurrection, first 'Abbās alone and then Muslum also were sent against him. Yazid was killed in a battle against the caliph's troops in 102 (720), and tranquility was soon afterwards established. In the reign of Walid II, Yazid b. al-Walid, the brother of 'Abbās, who desired the throne, refused to be shaken by his remonstrances, and 'Abbās found himself forced to acknowledge him. Later he was thrown into prison by the last Umayyad caliph, Marwān II; he died in 135 (750) in prison at
**ABBÁS BENFÁDI, eldest son of Bahá’í**

Ali Sháh, born in Újjúh, Kúfa (1309-1310), died in the small market-town of Nawí, in 1333. On his mother’s side he was grandson of Fat’á Khan Khán Khájír. He was the father of the hero of the Battle of Najaf, a famous episode in the history of the Mamluk period. He was a great admirer of the hero’s work, and he used his influence to secure his release from prison.

**ABBÁS MIRZÁ, eldest son of Fátíma Sháh**

**Al-ABBÁS, name of different places:**

1. Capital of a county (núhýa) of the same name, with 2059 inhabitans (1844) with its twenty-five dependancies in Lower Egypt, situated on the banks of the Nile, adjoining the province of Sháhya, district of Sabáya.
ABBASIDES (Abbasids), the name of different dynasties: 1. Caliphs of Bagdad, the most celebrated dynasty of Islam, descended from the uncle of the Prophet, Al-'Abbas b. Abi al-Mukhallal b. Hashim. His descendants multiplied under the first four caliphs and under the Umayyads in the countries taken by the Arabs, and their relationship to the Prophet won them high consideration everywhere. They had many partisans, especially in Khorasan, the Persian province, where they had much influence at the present time. By degrees the idea of upsetting the Umayyads and of placing their own family on the throne matured among the 'Abbasids. They found themselves backed in this design by the descendants of the caliphs Al-Walid b. 'Abd al-Malik b. 'Abd al-Malik b. 'Abbas, who for their part considered themselves to have the right to the caliphate and who had won over many great adherents, particularly in the eastern portions of the empire. The 'Abbasids showed great skill in uniting to themselves the support of the 'Abbas b. 'Abd al-Malik b. 'Abbas, the great-grandson of 'Abbas, was the one who made active preparations for the final fall of the Umayyad dynasty. After his death between 124 and 126 (732—744), his son Harun al-Rashid was recognized as chief of the 'Abbasids, who made themselves more and more formidable. The revolt, so long prepared, broke out in the month of Ramadhan 129 (June 747) in Khorasan, and rapidly became serious. The caliph's troops were beaten and, as fortune continued to be against the Umayyad arms, the 'Abbasids began little by little to throw off their mask and to show their aims openly. Harun, it is true, was taken prisoner in 136 (748) by Marwan II, but his two brothers Abu al-Abbas and Abu al-Mansur took his place at the head of the 'Abbasid party, and, after Kifia had surrendered to the insurgents, Abu l-'Abbas caused himself to be proclaimed caliph in the year 132 (749). In spite of his bravery, Marwan was defeated on the banks of the Ghezer in July 132 (January 750); he attempted to fly towards Egypt, but the enemy overtook him and inflicted a second defeat upon him, after which he was killed in the same year. Abu 'Abbas, who gave himself the surname of al-Saffah, the Bloody, carried out the extermination of the Umayyads without pity. He could not, however, stop one of them, Abu al-Rahman b. Musa, from sapping and tempting Spain, where he founded another Umayyad kingdom at Cordova.

Abu al-Saffah's brother and successor, Abu al-Mansur al-Mansur, who ruled Bagdad his residence, thus moving the centre of gravity of the empire more to the east. The advent of a new dynasty exercised a
very great influence on the development of the sciences and peaceful progress in most parts of the world, however, signs of decay began to show themselves; and, more and more, the impotency of maintaining the integrity of such a vast empire as that of the Abbasid caliphate became evident. Already in 172 (793), Abū Ishaq, a descendant of Abū Bakr, had founded an independent 'Abd al-Muttalib dynasty in Morocco. Troubles also broke out in Kairouan, and, because Rabi' ibn al-Ash'ash re-established order, the caliph, Harun al-Rashid was, in 184 (800), obliged to give him the government as a hereditary fief subject to an annual tribute. Shortly afterwards, the province of Khorasan also made itself independent; in 207 (822), its governor, the enigmatic Tahir ibn Hājār al-Varmazanī, denied the authority of the caliph. After that, Abū ʿUmar b. Ṭallūs, who had been governor of Egypt since 234 (848), showed that he had little concern for the authority at Baghdad and extended his power even to Surmiani, Syria. It is true that the Tāhānī dynasty lasted hardly more than thirty years in power, but, in the course of the following century, Egypt at least not from the power of the 'Abbasid caliphate.

Moreover, the caliph al-Maʿmūn (218–227 = 833–843) took the final step of creating an army composed principally of Turkish mercenaries. These foreign troops became more and more arrogant, so much so that in 295 (908) the caliph al-Muqtadil was forced to give the title of ṣāhid al-dāwār to the captain of the guard, the amir Muḥammad, and, under that title, to entrust him with almost unrestricted civil and military power. Even more dangerous to the religion, the caliph was threatened when the Fatimids entered upon the scene. In 334 (945) they fell under the sway of the byzantine, and, a century later, under that of the Seljuqs (347 = 1055). When the power of these Turkish sultans disappeared, the 'Abbasid caliphate had time to revive: their power, however, no longer went beyond Baghdad and the country immediately surrounding it. Finally, Baghdad was conquered by the Mongols under Hulagu (656 = 1258), and the last caliph, al-Mustasim, was killed. Some of the 'Abbasid caliphs, nevertheless, managed to escape, and the Mamluk sultan of Egypt, Baybars, made one last attempt at caliphate at Cairo, under the name of al-Mustansir. The caliphs of Cairo, however, had nothing more than a purely clerical dignity, the only vestige they retained of their vast power possessed by the old caliphate. The city of Cairo was the right of inheritance of these Mamluk sultans, who considered such a continuation as a satire. When, in 923 (1517), the Turkish sultan Selim I overthrew the Mamluks, he took the last 'Abbasid caliph, al-Mustansir, to Constantinople and compelled him to resign all his authority, both civil and religious, in his favor, after which he allowed him to return to Egypt, where he died in 945 (1538).

The following is a list of the 'Abbasid caliphs of Baghdad:

(London, 1899); Müller, Der Islam in Morgen und Abendland; Stanley Lane-Poole, The Mahommedan Dynasties; G. van Vloten, Die geschicht des 'Abbasid in Chorasan (K. V. Zettersten). 2. Sometimes the name 'Abbasid is given to the Sahadis of Persia, from 'Alīb ibn abi Talib (993 = 1587) to 'Abbas ibn (1149 = 1736), which, however, deserves no consideration. Comp. Sāfinat and the special articles on the different sovereigns.

Let us, however, notice the fact that the princes of Wadi in the Sudan, who have reigned there since about 1450, claimed descent from Sāḥib b. Abū Bakr, 'Abd Allah b. Abī Mūsā, whereas Wadi is also called Dālān Sahil, Nachitgai (Sahara sudan Sudan, ll. 271) traces this family to a certain Yame, who settled with his people at Dhuba, to the north-east of Wadi, and who, like his ancestors, the Qaṭīf of Shend, in the valley of the Nile, north of Khorain, gave himself out as a descendant of the 'Abbasid. Yame's son, Abū al-Kurrum, founded a Musulman community; in 1455 he made an end to the supremacy of the pagan Tungur [Comp. Kader].

AL-ABBASIYA, name of two towns in Northern Africa:

1. A town generally designated under the name of Tifoula, the ruins of which still exist four kilometres to the south of Barbara, in the department of Constantine, at an elevation of 460 metres (about 1500 feet), on the unworthy plateau which separates the Wadı Barbara from the Wadı Bātın. It was a flourishing town known as Timbuktu in the time of the Romans but was destroyed by the Vandals; it was restored by the Byzant-
ties, who built a castle there the ruins of which may yet be seen. According to tradition, it was conquered by Mīrād b. Nasir, and played an important part in the first period of the Arab rule. This fortress was called al-'Abbāsīya, but to the present day it is known as al-Manṣūrīya, or al-Manṣūrī, not long before he was besieged there by the Aḥlabīs, whose principal chiefs were Abd al-Rahmān, the Rostomide Imam of Tāhāt, Abd Ḥamīd al-Sūfīrātī (al-Sūfīrātī), the Imam of the Khālidīyya of Tāhāt, and Abd Ḥusayn, the Imam of the ṢufīrātīKhālidīyya of Tāhāt. Abd Ḥusayn was assassinated in the year 743, and called it ʿAbbāsīya (Belshāfut, ed. de Goeje, p. 233) in honor of the ʿAbbāsids caliph, al-Manṣūr. It was not long before he was besieged there by the Aḥlabīs, whose principal chiefs were Abd al-Rahmān, the Rostomide Imam of Tāhāt, Abd Ḥamīd al-Sūfīrātī (al-Sūfīrātī), the Imam of the Khālidīyya of Tāhāt, and Abd Ḥusayn, the Imam of the ṢufīrātīKhālidīyya of Tāhāt. The dioces of the last allowed ʿOmar, who paid him 400,000 dirhems (or 40,000 dinars), to retire to Kairawān, where he had succumbed (Iṣkāḥ al-Ḫiḍāya 154 = November-December 771). Tobas, which soon assumed its old name, remained the capital of Hadīm (Ḫudām), an advanced post against the Berbers, who were always in a state of revolt at the end of the 9th century it was the residence of a governor. The inhabitants, some of Arabian origin, others a mixture of Libyans and Berbers, were often at war with each other, the former supported by the Aḥlabīs of Tāhāt and Siṭīf, the latter by the population of Biskra. The Byzantine castle of Tobas, preserved by the Mussulmans, had become the palace of the governor and the residence of his officials. The town still had five gates in the 11th century of the Christian era: Bāb Ṭaḥīṭān, Bāb al-Pabī, Bāb Tāhāt, Bāb al-Djaddh and Bāb Kattānin; it was the last town to be met with going from Kairawān to Siḏi-Mājūs, and the land in its neighborhood, irrigated by the Wāṭīr Kāsā, was the most fertile. It passed successively under the dominion of the Aḥlabīs and of the Ṣufīrātīs, and suffered during the revolt of ʿAbd Yaʿqūb, "The Man on the Awa." It was, however, prosperous at the time of the invasion of the Bani Ḥilīl. Then al-Jafārī only speaks of it as a pretty town situated in the midst of well watered gardens. Its decay steadily increased and its importance passed to Māliḥ and Mouṣāla. From this, judging from the silence of historians, that its desolation was permanent dated from the 13th, perhaps from the 14th century of the Christian era. Recent excavations have brought to light, besides relics of the Roman and Byzantine epoch, ancient specimens of Berber art, like those which the ruins of esdræaton, to the south of Wargha, offer us.

A second town of the same name, built in 184 = 500 (according to Ibn Ḥadhīrī, in 185 = 805), by Ibn Ḥadhīrī, al-Aghlabī, was also known as ʿAṣf al-Kadīm and ʿAṣf al-Ayyābī. It was situated two or three miles south of Kairawān, on land belonging to the Bani Ṭalḥīt. It was here that Ḥadhīrī gave audience to Charlemagne's ambassador, who came to ask for the

relics of St. Cyprian. It contained baths, fountains, a cathedral mosque, the cylindrical tower of which was built of bricks and ornamented with seven sets of columns; on one above the other. It had many gates, amongst others, Bāb al-Rahmān, Bāb al-Ḥusayn, Ghallour, Bāb al-ṣīrī, Bāb al-ṣīrī, Bāb Balād, and Bāb al-ṣīrī on the west. In the town there was a square called Māḍīn, and, in the neighborhood, the palace of Rūṣīf. The Aḥlabīs resided there from the time of ʿIrāsh b. al-Aghlab to that of ʿIrāsh b. Almān, who founded Raṣīdīn in 266 (876), and settled there with all his troops and his bride. It was not long before ʿAbbāsīya fell to ruin and completely disappeared.

ABB (A.), slave, servile.

6. Islām and Slavery in General.

It is known that Islām has kept up the ancient Arabian institution of slavery, the legality of which the old Biblical world admitted. The Mussulman's religion, allows him to appropriate to his own use the means of any country, which is neither subject to nor align with the Islamic empire, and the slave-trade has for long been an important business for the Mussulman countries. A male slave is generally called in Arabic ʿAbd (plur. "abīd") or masūlā, a female slave amū or dilwīya.

Prisoners of war, including women and children, taken in the wars of the Prophet against the Arab tribes, were, unless ransom, reduced to slavery, according to the ancient Arab custom. Thus in the campaign against the Banū 'l-Mugāfli, a very considerable number of women fell into the hands of the Mussulmans. Some of them was Qawwāna bint ʿAmīr, who formed part of the booty of Ittāl b. Kaisy. She belonged to a distinguished family, and therefore knew that her ransom would be paid. This agreed with her to set her free for nine or ten ounces of gold; when that had been arranged she went to the Prophet and implored his aid. She was very beautiful, and the Prophet, who was subjugated by her charms, paid her ransom and demanded her in marriage. This induced the Mussulmans to set free the other women who had fallen into their hands; for, said they, it is not fitting that the women of a tribe to which our master has become allied should be our slaves.

In Arabia slaves were also obtained by purchase or by brigandage. For example, Zaid, one of Muḥammad's slaves — the first who embraced Islam, — came from the noble tribe of the Banū Kāz. One day his mother, wishing to pay a visit to her tribe, took Zaid, who was still an infant, with her. Some horsemen surprised them and Zaid fell into their hands. They put him up for sale at ʿUkaz, where he was bought by Khalīfa, who presented him to his husband after his marriage with Muḥammad. Zaid's father appeared inseparable when he knew of the loss of his son. After some time, some Kāzīs saw Zaid at Mecca, and told his father they had discovered
him, and he at once hurried to Mecca. "Give him his liberty for the ransom we will pay," said he to the Prophet; but Zaid declared that he preferred to remain with Muhammad.

There were at that time many Arabs amongst the slaves. But even earlier, in the time of paganism, slaves were kept, some black others white, who had been brought from Africa and the northern countries (comp. G. Jacob, Alltrab, Beduinah, 2nd ed., p. 137); Antara, Mas'ahlah, verse 276, ed. Arnold; p. 152, the caliph Umayr. It is said, was the first to lay down the principle that an Arab could not be a slave, even though purchased for money or a prisoner of war, only foreigners could be reduced to slavery (comp. A. von Kremer, Culturgeisch des Orients unter den Chalifen, L. 104). In any case canonic law forbids the Musul- men to make his co-religionist slaves. Parents are therefore not allowed to sell their children (comp., however, E. W. Lane, Modern Egypt, i. ch. vii: Domestic life; the lower orders), and a creditor may not sell his Musulman debtor into slavery, as Roman law permitted. If, however, slaves adopt the Mohammedan faith later — and they mostly do so — they remain in servitude.

During the mixing of the Arabs with foreign populations, the slave trade played an important part, for black as well as white slaves were annually imported in thousands into the Muslim empire. Great numbers of Turkish slaves from Central Asia (Turkistan, Ferghana, etc.) came annually to the bazaars of Baghdad, where they were sold to rich people and more especially to the Court. But just as the farthest East had to pay its human tribute to Baghdad, so had the provinces lying in the farthest West of the empire: Africa and the Maghrib (Mauritania) ... From the interior of Africa, Sudan proper, a considerable export trade in slaves was carried on with the coast towns of the Mediterranean, which were under Arabian dominion. Many white slaves also came from Frankish and Greek countries. From Spain and from Italian tributary states, especially from the ravines, the slave trade was considerable, and in the 8th century the Venetians possessed their own slave market: in Rome, which was only abolished in 748 by Pope Zacharias (A. von Kremer, loc. cit., l. 234; ii. 152-153).

In recent times Meccas became the centre of the slave trade through political circumstances. The slaves were mostly obtained from Africa and the Can- cussus, "Circassia, male and female," says C. Smouk Harghajte, (Mekha, ii. 11 et seq.), come via Constantinople; owing to high prices ..., their number is small, they are nearly sold in the open market at Mecca. Much more important, both for trade and for the composition of the population of Mecca, are the African slaves .... Incredible as it was in former times, it is true now that the slave market of Mecca ... occasionally receives small supplies of slaves from British India, and the Dutch East-Indies. ... I saw many young slaves from Hindustan ... I could not ascertain whether they had been kidnapped or sold by their parents not from what region they came. On the slave trade of the People of the Book in Singapore that the slave on concubinage, with Chinese female slaves, in C. Smouk Harghajte, Ein Arabischer Brief vom arabischen Sklavenhandel in Singapour, in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, s. 395-402.

During my stay in Mecca", says this author (loc. cit., p. 401), I noticed that Chinese female slaves were not seldom imported into the Holy City from Singapore.

A. LEGAL POSITION OF SLAVES ACCORDING TO THE TERMS OF THE CANONICAL LAW. CONCUBINAGE AND MARRIAGE.

Theoretically slaves have no legal rights whatever, according to Mohammedan law they are merely things, the property of their owner. The latter can alienate them as he likes, by sale, by dowry, or in other ways. In the eyes of the law they are incapable of making any enactment; can therefore neither alienate, nor undertake responsibilities, nor make wills, and therefore cannot be guardians or testamentary executors; what they earn belongs to their master. Neither can a slave appear as witness in a court of Justice. He can, however, at the order of his master (e.g., as shop-assistant) make contracts concerning property and accept liabilities (he is then mas'dinn ada'na, as he is styled in the Muslim law books).

Between slaves and their masters, according to the terms of the law, marriage is impossible and only concubinage is permitted, but in all other cases even for free blacks and whites, marriage was not considered as legal. Slaves may marry with the consent of their masters. According to most jurists, slaves may have only two wives (slaves or free women), but according to the Maliks they may have four like free Mohammadians. The slave, like the freeman, is obliged to give a dowry and must work for it. The dowry due to female slaves, however, belongs to their owner; if a female slave marries, she cannot acquire property. The slave may only repudiate his wife twice. When he repudiates her for the first time, he may, if her waiting term is not terminated, demand her back again; but if he repudiates her a second time, the divorce cannot be annulled. The waiting term (idda) for female slaves is the same as for free women with the following difference: if a female slave is married by her husband by death, she must observe a waiting time of 2 months and 5 days only, and if she loses him through any other cause, it is of 2 years only, instead of 3 years.

The children of a married female slave belong to her master. If a slave may also according to the law construct a marriage with the female slave of another master. The serious part of this is that the children of such marriages become the slaves of the mother's master. For this reason marriage between a free- man and a female slave is, according to most jurists, permissible only under the following conditions: 1) that he is not yet married; 2) that he does not possess the required dowry for a free woman; 3) that he may be exposed to the danger of impotence if he remains a celibate; 4) that the female slave is a Mohammadan (comp. Koran, iv. 29-30). Only the Harunis permit such marriages also with a Jewish or Christian slave and do not insist on the 2nd and 3rd stipulations. That female slaves are married by freemen is "a case that happens more frequently than might be expected" (Mekha, ii. 136).

If a master by virtue of his right of ownership begets a child of his slave, the child belongs to his father's class and is therefore free. This principle was first laid down in Istan. Amongst the
ancient Arabs the rule was *portus sequitor iterum*. The best known case is probably that of the poet 'Antarn; he was originally a slave, his mother being an Abyssinian slave. It was only later in life that his father gave him his freedom. In the strictest sense of Islam, the true Arabian mind was shocked at the idea that slaves should bear "their own masters", i.e., free children, and that even caliphs could be descended from slaves (see J. Wallisheim, *Die Ehe bei den alten Arabern*, in *Nüchr. d. Kgl. Gesellsch. d. Wissenschaft zu Göttingen*, Phil.-hist. Kl., 1895, p. 440; A. von Kremer, loc. cit., ii. 116; G. Jacob, loc. cit., pen. 213; Alghaib, vii. 149; comp. J. L. Borchhardt, *Notes on the Beduine and Wahabies*, London, 1831, i. 182). The slave, who has born her master a child, is called *umma wa'adat*, i.e., "mother of [his] child." On the death of her master she recovers her freedom. On this account a master can neither sell nor enslave his *umma wa'adat*.

The master may have sexual relations only with his Mohammedan, Christian or Jewish slaves, not with unbelievers, and according to the Shafi'ite school, the modern Christians and Jews are to be placed in the same category as other unbelievers, with whom cohabitation is absolutely forbidden on account of their *forced* books of revelation.

Anybody who has obtained a female slave by purchase or in any other way may not *cohabit* with her before he has ascertained that she is not pregnant, so that an *adultery* arises concerning the paternity of the child. In Arabic this is called *ista'lib* (i.e., waiting or examination as to whether the uterus of the slave is free). To this end the law assigns a certain period of probation. If the slave is pregnant, the master must of course wait until she delivers.

5. *Liberation* (*fard*) and *Patronage* (*wala*).

The liberation of slaves is looked upon in Islam as a good work (*fard*), and gives right to a reward in the other world. He who sets free a Muslim slave, shall be freed from the fires of Hell*, Muhammad is said to have declared.

Naturally only the legal owner of a slave can set him free. If, however, a slave is the common property of several persons and one of the latter gives him his freedom, the slave becomes entirely free if his liberator is able to pay the co-owners the value of part due to them; otherwise the slave is only partly free. Such a slave is called *Muqaddas* or more literally, "a divided one."

The *umma wa'adat*, as already mentioned, becomes free on the death of her master. Anybody also who becomes the property of his nearest relative becomes *free*. According to the Shafi'ite school, only the direct relatives in descending or ascending line of the owner can become free in this way; according to the Malikites, also his brothers and sisters, and according to the Hanafis, who stand in such relationship to the owner that marriage between them would be illegal, i.e., every *Afifa*(marriage).

If anyone says to his slave: "When I die you shall be free," this is called *saddir* liberation. According to most jurisconsults (Hanafites and Malikites), the owner cannot recall the *saddir* and the slave (i.e., the *Muqaddas*) is un aflame.

According to the Shafi'ites, the owner may cancel the *saddir* as any other instanlatory disposition, e.g., by selling the *Muqaddas*, the *saddir* being thereby annulled. In any case all are unanimous that on the death of the owner, the *saddir* is to be considered as a testamentary enactment. If therefore the value of the *Muqaddas* exceeds one third of the value of the estate, only a part of the *Muqaddas* becomes free and the rest of him remains a slave.

The *wala* is a form of buying oneself free, which Islam has received from the old Arabian custom (comp. above the case of Shu'ayriya and Kurrain, xxiv. 33). It is a contractual liberation, and a sine qua non of it is that the slave pays his owner a certain equivalent for his freedom, according to the Shafi'ite opinion, at least 2 or 3 installments. This contract cannot be canceled by the owner (waqf), but the slave (muqaddas) alone can annul it if he wishes. The owner must allow the slave to obtain property, whilst the slave binds himself to pay the price agreed upon. The *muqaddas* is un aflame. On payment of the last installment he is free.

It is praiseworthy to help the slave in his efforts to obtain freedom, and accordingly to the Shafi'ite school, the owner should grant the *muqaddas* the reduction of the purchase price of his freedom. A portion of the poor-rates (*taghri*) is to be specially set aside for the *muqaddas*. If a slave asks for the *wala*, it is pious to furnish the owner to grant it, but not obligatory (as many of the older jurists assert in Islam aslanted).

The slave is called *gibon*, if he or she is neither *muqaddas*, nor *muqaddas*, nor *umma wa'adat*, nor *umma wa'adat*, but entirely unfree. A legal consequence of every liberation is the *clientship* or *patronage* (*wala*). The freed slave is the client of the liberator; if he dies without heirs, his patron inherits his estate, or if the latter be dead, then the latter's male heirs (e.g., his father) inherit him. On the death of the patron, his patronage is transferred to his *upokrit*, and besides the right of inheritance it gives his holder certain other prerogatives. The patron is *brial attorney* (i.e., asks for the freed female slave) and he receives the blood-money if the freed slave is murdered etc.

"Honor God and be kind.... even to your slaves", says the Koran (xxv. 40), and according to many impartial testinomies, the treatment of slaves is in general, in spite of their lack of legal rights in Islam, is not bad. Comp. E. W. Lane, *The Thousand and one Nights* (note 73 to chap. I. On slaves): "The Prophet strongly enjoined the duty of kindness to slaves. Feed your enemies, said he, with food of that which ye eat, and clothe them with such clothing as ye wear, and command them not to do that which they are unable. These precepts are generally attended to, either entirely, or in a great degree. The owner may cohabit with any of his female slaves... If he has not married her to another man, the condition of many concubine slaves is happy... These and all other slaves of either sex are generally treated with kindness... Their services are commonly light... The general assertions of travellers in the East are satisfactory
...evidence in favor of the humane conduct of most Muslims to their slaves."

"Public opinion on Muslim slavery," says C. Snouck Hurgronje (Ueber meine Reise nach Meckha, in the Verhandl. d. Gesell. für Erdk. an Berlin, siv (1887), 150 et seq.), "in Europe has been led astray by confusing American and Oriental conditions; on this account the English regulations for the prevention of the slave trade have been wrongly applauded. As soon as the African tribes are capable of estimating the value of life and liberty, enslavement will come to an end. And it is a blessing for most of them that they are made slaves. Nearly all slaves, whom, in the form of an essay, I invited to go back to their homes only accepted on the stipulation that I would bring them back to Mecca again. They are received into the family of their masters and, after a few years' servitude, are received into society as freemen generally; they are even convinced that slavery has made men of them. ..." Taken all in all, as an avowed thing of the community, the slave-propaganda is distasteful to me."

"The concubines, especially Abyssinian ones," says Snouck Hurgronje (Ueber meine Reise, loc. cit.), "are for several reasons more highly esteemed by the Mecceans than their free wives; the relation is completely recognized by both religion and custom."

Comp. the same writer's Mecca, ii. 136 et seq.: "As mother of one or more Mecceans she [the woman mulât] belongs to society in Mecca practically as a free member, although her servitude continues nominally. Theoretically [her] children are in every way equal to those born of a free mother; as a fact they are more often favored by the father than neglected by him. In general it may be said that in every well-to-do family sons of both classes of mothers, free women and slaves, are represented; neither in appearance, nor in their mutual behavior can the stranger remark the difference."

Concerning the position of the slave as craftsman, laborer, servant, etc., see Mecca, ii. 11 et seq. In general their lot is not a happy one; their food is ample. After their liberation the laborers seek work as heridors, water-carriers, etc.; they generally prefer the guardianship of the owner to go on, especially when their owner allows them to marry. Domestic servants are almost regularly freed at the age of 20, one reason being that their occupation brings them into daily contact with free women and female slaves. The well-to-do owners also feel obliged, if possible, to give his faithful servant a home of his own, and the liberation of a slave in itself is considered to be a good work; the family tie remains as strong as before."

"Hardly any office or position whatever is unattainable for the freed slave; they compete on an equal standing with the free-born, and the results show that they are not the least equipped for the strife, for amongst the most influential citizens, proprietors of house property and of business, they have many representatives" (loc. cit., ii. 13-14).
pilgrimage in the year 35. When Ali was obliged to accept arbitration, he wanted to make 'Abd Allah his representative, but his own followers rejected the proposal. Nevertheless he accompanied Ali Mūṣaffa, and was in Dāmit al-Damādī with him. When Ali lost Egypt, he consigned him with words of friendship. Concerning his further doings, reports differ very greatly. But one fact is confirmed on all sides, viz. that he took a large sum of money (some say 6 million dirhems) from the state treasury of Buyya and then left the town. But, whereas several authorities, as for instance al-Mālikī, al-Nūr al-Dīn, and Belkhayr, think this incident happened before the assassination of 'Ali, others, as Abū Umayrā and al-Zahiri, place it during Hasam's caliphate, and represent it as being much more reprehensible. Since, according to their version, 'Abd Allah went over to Mu'āwiyah, and got the latter to secure the stolen sum for him as a reward for his treachery, at the same time it is true that this perjury is ascribed to 'Abd Allah's brother 'Uthamn al-Aswad, Nāšā and Harān, and Yāḥyā; yet it can hardly be doubted but that this is later distortion of the facts made in order to whitewash the celebrated member of the Abbadide family and that 'Abd Allah really betrayed his cousin. The fact that after al-Haamid's abolition he recognized the rule of the godless Umayyad could not be denied even by the Abbadides historians. In order to palliate to a certain extent the undeniable fact that he was a renegade, al-Mālikī makes him protest in company with the four candidates for the caliphate, against Mu'āwiyah's efforts to secure the sovereignty for his son Yazid, but this is certainly a merely harmless fiction. After Mu'āwiyah's death he quietly did homage to Yazid on perceiving that the latter had a majority on his side. He died in 68/689, or according to some, in the year 69 or 70.

'Abd Allah does not owe his fame to his political activity, which is but touched upon by his biographers, but to his greatly admired knowledge of profane and sacred traditions, of jurisprudence and commenting the Korān. He is celebrated as the Doctor (Rabbih) of the Community (Hūṣūl al-ummā), and is called the 'sea'; the traditions contain the most exaggerated accounts of his infallible scholarship and of the interest the Prophet took in this infant prodigy. Criticism has, however, come to a different conclusion and has exposed him as a conscientious liar, whose forgeries quite correspond to his cunning political tricks. A partial justification for him might no doubt be found in the possibility that several of the traditions, which go under his name, may have been forged upon him by latter forgers. Amidst his traditions which refer to his own times or to the immediately preceding period, there are to be found the most baseless inventions; as, for instance, the dream of his aunt 'Ālika (Hun Hāshān, ed. Wāṣṭeṣān, pp. 428 et seq.), the collapse of the ideal at Muḥammad's bidding (ibid., pp. 824 et seq.), the participation of Bīla in the council of the Kūnālīs (ibid., p. 324), etc. He did not, however, confine himself to relating occasional traditions and to answering the questions put to him; he welded his tales into a great system which took into account the creation; the history of mankind, and the pre-Islamic times. For this purpose, since he could not possibly invent everything, he made use of information supplied to him by some Jewish converts to Islam, especially that supplied by a South Arabian Jew, Kūth b. Mātir, but he so disguised the matter that only obtained till it agreed with the Korān and Islamic ideas. An altogether other thing he sketched a theory of the rise and development of ancient Arabian idolatry, in which the suggestions of the Korān and all sorts of Biblical and other reminiscences are most brazenly mingled. Only in those rare cases, where there is absolutely no reason to suspect lying, may his traditions be used for historical research.

'ABD ALLAH & 'ABD ALLAH [See al-Maybūdī]

'ABD ALLAH & 'ABD AL-KĀDIR (Malay pronunciation 'Abdur'Allah bin 'Abdur'Rahman), survived Mu'āwiyah, a.o. teacher of languages, was born in 796. In Malacca, where his grandfather, the son of Shaikh 'Abd al-Kādir, who came originally from Yemen, had settled. At an early age 'Abd Allah received lessons in Malay from his father, who is said to have been an expert Malay scholar, and endeavored to make himself fully master of this language by reading Malay writings and by associating with educated Malays. As he learned foreign languages and continually came to contact with Europeans, as for instance, Farquhar, Raffles, and the missionaries Milne, Morrison and Thomson, his culture increased rapidly.

Shortly after the founding of Singapore (1819), he established himself in that town and earned his living in many different ways. He acted as an interpreter, gave lessons in Malay, wrote letters, and assisted the American missionaries North, Kesbury and others in translating mission-books and school-books.

'Abd Allah must be ranked amongst the best Malay writers of the 19th century, and his works are an undeniable testimonies of his extraordinary range of knowledge (for a Malay) and his culture. It is to be regretted that he did not always pay attention to style and that his language is often lacking in purity, both defects which are to be ascribed to his intercourse with Europeans.

His principal book is the so-called Rihāyat 'Abd Allah, an autobiography, in which he also mentions politically important personages, as Farquhar and Raffles (who was his secretary he was), and emphasizes the advantage of a European administration over an Indian one, even though he at the same time sharply criticizes the administrative measures of the English and Dutch. A
full extract from this work is to be found in the
"Abd Allah" von Achmud c. (1854); fragments
are given in Nieuwen's "Anthologie" and the
Malaysia Literature, ill. by Mearisinge. In Singa-
apore the whole work has been repeatedly litho-
graphed and printed; by H. C. Klinkert as "Bio-
graphie von Abd Allah" (Leiden, 1882).

In 1858 was published at Singapore under the
title of "Buku Ali Kinta Pelayaran Abd Allah
uevo Singapura ke-Kelantan," a description of a
journey to the Malay States on the east coast of
the Peninsula of Malaya, giving most important
information in every department of knowledge
concerning them; a second edition appeared in
1852 (reprinted several times since then). Pe-
appeal in Leyden brought out a printed edition
in 1855, and H. C. Klinkert, a lithographed one
in 1889. Dussurier translated this traveller's diary
into French (Paris, 1850); an abridged translation
was made by De Hollandier (Oost, Jan. 1851).

Abd Allah translated from Tamil the collection of
Indian Fables known under the name of "Panti
Pandu," into Malay under the title of "Bijehat
Pandi Pandurn." Besides the Singapore editions
there is a translation by H. N. Coehlow of the
"Bijehat Pandu," lvi. by Meursinge, 1860, whilst
H. C. Klinkert furnished a translation of it into
Dutch in 1871.

Of his remaining and less important writings
only his "Journey to Mecca" may be mentioned; the
narrative concludes with the description of Mecca
shortly after his arrival at Mecca, "Abd Allah
died in 1854." This work was published at Singa-
apore and also at Leyden by Klinkert, who also
published a translation of it in the "Bijehat Pandu"
of the Kominkhoi Institute.

Abd Allah edited the Malay Chronicles of
"Singa- Melayu" (Singapore), of which a new
edition was made in 1884 in Leyden, under the
supervision of H. C. Klinkert.

(VAN OPHYSEN.)

"ABD ALLAH." Abd al-Malik b. Mar-
wan, son of the caliph. Abd al-Malik b. Marwan
is described as a statesman rather than a military
leader, perhaps somewhat earlier, as his son is said to have
been 27 years old in the year 857 (704). He grew
up in Damascus and accompanied his father in several
campaigns. We first meet him as an independent
general in the year 81 (700-701), in one of the usual raids against the Eastern Romans. Then in the year 82 (701-702), he was sent with Muhammad b. Marwan to help al-Mut'abl against al-Abd Allah and played a part in the negotiations of al-Hajjaj. Thereupon he again led expedi-
tions against the Eastern Romans, and in the year 84 (703-704) conquered al-Ma'arqah, which he
converted into a military camp. After the death of
his uncle Abd al-A'far b. Marwan, he was
appointed governor of Egypt in the year 857 (704).
On the 11th of Dhu al-Hijjah he made his entry into
Fustat. He was to wipe out all traces of "Abd al-
A'far, and therefore changed all the officials.
His administration is described in traditional
manuscripts, as successful and embellished public
monies. The only really important achievement
of his rule was the introduction of the Arabic lan-
guage into the Diwan of the capital. His admin-
istration gave offence in Damascus; in the year
88 (706-707) he made there a passing visit, and in 90
(708-709) he was definitely recalled. He departed
to Syria with many presents, but they were taken
from him in the province of the Jordan by order of
the caliph. Thereupon he disappeared from the
political arena. Only Ya'qub b. al-Dhahab has the
information that he was executed on the instructions
coming to power. He is said to have been hanged by
al-Salih in the year 122 (749-750) in Hira.

"ABD ALLAH." Abd al-Muttalib, Mu-
hammed's father. Tradition has handed down but
little concerning him, and this little consists of
worthless legends. Al-Kalbi gives the 24th year
of Abûthairun's reign as the year of his birth.
That he was the finest of Khawilites is self evi-
dent. The well-known story of his father's vow to
sacrifice one son if he had two was the occasion
of 'Abd Allah on whom the lot had fallen, makes
"Abd Allah the youngest son notwithstanding the
fact that his brother Abdur was but little older than
Muhammad. In the same way the account of his
marriage with A'mina (p. v.) has been en-
bellished by legend. That Muhammad became an
orphan early in life is, according to Koel'tn, zcitii. 6,
certain, but opinions differ as to whether "Abd
Allah died before the birth of his son or shortly
after it. Possibly the former opinion is based on a
dogmatic theory (comp. Bahrini's utterance, in Tabart,
i. 1124, "it is not seemly that his father he still
alive"). He is said to have sickened and died
during a business trip in Medina, and his
grave is shown in the courtyard of a certain Nabi-
hia. According to a wide spread statement, he
died at the age of twenty-five.

"ABD ALLAH." Abd al-Zahir. [See Ibn
Abd al-Zahir.]

"ABD ALLAH." Abd al-A'far, founder of
the dynasty of the Abbasides (p. v.), in Badajoz,
with the surname of al-Manṣūr, reigned until about
422 (1031). He belonged to the Becher family of
the Banu Aqās and is therefore called Ibn al-
Aqās, for the name of his father was Muhammad
b. Maslam.

"ABD ALLAH." Abd al-Mashhur. [See Ibn
al-Baytrik.]

"ABD ALLAH" (Abd. Paris) b. 'Abd
al-Manṣūr b. Muhammed Shatibi al-Mahdi, pro-
claimed 'Abdi al-Walid bi-llah, governor of Mar-
akeh (Morocco), was proclaimed sultan in this
town on Friday, 25 Rabi' I. 1012 (5 Sept. 1603),
s. a few days after the death of his father and the
proclamation of his brother Zaidan by the inhab-
itsants of Fez.
Immediately after he was proclaimed, the new sultan of Morocco was forced to fight against his brother, who contested the supreme authority. The 'auml;an of Fez, having been won over to the party of Mansur Zaidan, dictated by a jutla (judicial decision) that Abi Firas 'Abd Allah had been illegally proclaimed, it is because the legitimate sultan had been already proclaimed, and secondly because the rights of a son of a slave (Abd Allah's mother was a freed slave of Al-Mansur) are not equal to those of a son of a free woman. War immediately broke out and the two sultans marched against each other.

The sultan Al-Mansur had had three sons. The eldest, Muhammad Shalik, brother of Abi Firas 'Abd Allah by the same mother, had been entrusted with the government of Fez. But, regarding his old father's partiality for Zaidan, he revolted and attempted to seize the sultan. Al- Mansur immediately left his capital, Morocco, went to Fez, succeeded in seizing the rebel and sent him to Morocco as a prisoner. He was still there in confinement at the time the following events took place.

Muhammad Shalik was adored by his troops. Abi Firas was persuaded to pardon him and put him in command of an army corps. This was done on condition that Muhammad Shalik should give himself up to Abi Firas again after the battle.

When the two hostile armies met on the banks of the L'um al-Kabir, half of Zaidan's soldiers left him in the lurch and joined Muhammad Shalik. The defeated Zaidan in vain tried to reach Fez and fortify himself there, and was obliged to flee and take refuge with the Turks at Jadida. Muhammad Shalik, for his part, sent back to Abi Firas the regiments entrusted to him, and he added them, as prisoners, the sultans and khalif of Fez, who had brought about the elevation of Zaidan; but did not return to give himself up again to his brother.

Abi Firas had to accept matters as they stood. The only manner in which he could mark his displeasure was to send back the sultans and khalif of Fez, fully pardoned and loaded with presents. The sultans fled on the way.

The two brothers were not long in beginning to fight for the possession of Morocco. Their armies met, according to some, at Aslal, according to others, at Mass al-Rammil. Abi Firas 'Abd Allah was defeated and had to flee towards Sla (1025 = 1666). The army of Muhammad Shalik, being mistress of Morocco, committed such atrocities that the people revolted and proclaimed Zaidan, who was ransoming in the neighborhood, as their sovereign.

This proclamation caused the reconciliation of Abi Firas and Muhammad, who first retreated to Fez and then to Kays al-Kabir, pursued by Zaidan's Turkish khalif, Musafir Pacha. Muhammad Shalik then went to Spain to implore the aid of Philip III, whilst Abi Firas and 'Abd Allah, the son of Muhammad Shalik, tried to hold the country against Zaidan by the side of Taza (1027 = 1668). With the help of some Berber contingents they delivered an attack near Fez. The death of the khalif Musafir Pacha in the battle, followed by the rout of Zaidan's troops, enabled Abi Firas and his nephew to seize the town (Rabi' II 1018 = July 1609). But Abi Firas did not enjoy the fruits of their joint victory for long. A plot of the 'ulama' of the Sherifs to proclaim him sovereign at the expense of Muhammad Shalik was discovered by his nephew. The latter resolved to prevent it and, accompanied by his khalif, Hasan Abi Duhair, went by night to Abi Firas' bed-chamber. He heard a whisper and a scarp of surrounded by his wives. 'Abd Allah, b. Muhammad Shalik sent the women out and strangled his uncle, who fought to the last gasp and tried to strike him with his feet (Lqumad I 1018 = August 1609).

'Abd Allah was a religious and erudite man. He had inaugurated his rule by building a mosque at Morocco near the tomb of the saint 'Abu'l-'Abbás al-Saffi. In front of this mosque he built a library, which he filled with rare books and valuable registers. He hoped by so doing to obtain the assistance of the saint in the affairs of his government.

(Al. Cour.)

'ABD ALLAH, b. 'Ali, uncle of the caliph Abu l-'Abbás al-Saffi and Abu Duffer al-Mansur. 'Abd Allah was one of the most active participants in the battle of the 'Abbasid caliphs against the last Umayyad caliph, Marwan II. He was commander-in-chief in the decisive battle at the Greater Zab, where Marwan lost his crown, and when the latter took to flight, 'Abd Allah pursued him, soon after conquer Damascus and marched on to Palestine, where he had the fugitive caliph pursued to Egypt. Even more implausibly than his brother 'Abdu'llah b. 'Ali did 'Abd Allah wage war on the Umayyads, who were still alive, and shrank from no method to wipe out root and branch. During his stay in Palestine, he had seventy of them murdered at one blow. Such cruelties naturally caused ill-will against the new ruler, and a dangerous rebellion in Syria broke out under the leadership of Abu Muhammad, a descendant of Mu'awiyah I, and Abu al- Ward b. al-Kawthar, the governor of Kinnair. The rebels at first inflicted a defeat on the 'Abbasid troops, but were beaten by 'Abd al-Malik in 750 at Marj al-Akhram. As governor of Syria, 'Abd Allah soon threatened the safety of the new dynasty. After the death of Abu l-'Abbás, of which according to others at the end of his reign, he made claims to the caliphate, which he could base not only on his age, but also on his important services in the war against the Umayyads. Moreover he had at his disposal a considerable army, which in reality he was to lead against the Byzantines. When he learned that the powerful governor of Khurásan, Abu Muslim, had died for the caliph al-Ma'mun, he gathered 70000 Khorassanians in his army, because he knew that they would never fight against Abu Muslim, and with his remaining troops proceeded against the latter. He was, however, in Lqumad II 1157 (Nov. 754) defeated at Nasiria and had to flee to his brother Sulaiman, the governor of Egypt. After a couple of years, the latter was dismissed, and 'Abd
Allah was arrested by order of the caliph al-Manṣūr. He remained some 7 years in prison, then in the year 147 (764) he was taken into a house that had been purposely underminded; it fell down on him and buried him under the ruins. At his death he is said to have been 52 years of age.

(K. V. ZETTKESTÄN)

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, governor of Baṣra, was born at Mecca in the year 4 (626). He was a Khurṣī́dite and a cousin of `Othman b. `Affān. `Abbād Allah is principally known as the conqueror of a great part of Persia; when, in the year 29 (649-650), `Othman gave him the government of Baṣra, `Abbād Allah went towards Khurāsān and brought it, as well as Sīrjūstān and many other places, under the rule of the Arabs. Nīshābūr and Sārakhs capitulated, and Merv obtained peace on condition of paying an annual tribute of two million dirhems. In the year 30 (656-657), `Abbād Allah was one of the first to respond to the appeal of `Abd al-Malik to avenge the death of `Othman. He helped `Abd al-Malik with money and came to her march towards Baṣra. After `Abd al-Malik's forces were defeated by Harūn, `Abbād Allah took refuge with `Abdullah b. Bū Mahfūz, who took him to Damascus. He lived there till 41 (661-662), when Mu'āwiya reinstated him in the government of Baṣra. But, finding him too lenient towards criminals, Mu'āwiya dismissed him in 44 (664-665). Since then he seems to have lived in retirement until his death at Mecca in 59 (678-679).

`Abbād Allah was also renowned on account of his numerous public works: he planted date palms, dug wells at al-Nihāj and Khaybat, and made two canals at Baṣra and the canal of al-Mulla, a Relationist; he transmitted a tradition from the Prophet himself.

Bibliography: Tabārī, i. 2802; ii. 1457; Ibn Sa'd, v. 50 et seq.; Behāshfī (ed. d. Goeze), pp. 315 et seq.; Ibn al-Mārail, Usd al-Ghāʾib, ii. 191 et seq. (M. S. SIEBER.)

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, a. Aṣāfī, see al-Yaffī, R.}

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, barī. See Ibn Barī.}

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, Dāʾfārī, a. Abī Jālīs, nephew of the caliph `Abd al-Malik. `Abbād Allah's father had gone over to Ikhshīd very early, and took part in the emigration of the first believers to Abyssinia, where, according to the common belief, `Abbād Allah was born. On his mother's side he was a brother of Muṣṭafā b. Abī Bakr, the mother's name was `Ammā, the name `Ummās al-Khaṭṭānīyya. Some years after the father returned to Medina taking his son with him, `Abbād Allah became known chiefly on account of his great generosity, and received the honorific surname of Bahār al-Dhīlīd, "the Ocean of Generosity." He appears to have played no very important part in politics, although his name crops up from time to time in history during `Alī's time and that following. When Mu'āwiya tried to throw suspicion on Kaš b. Sa'd, the villainous governor of Egypt, to damage him in `Alī's eyes, `Abbād Allah advised the removal of Kaš; `Abbād Allah himself to be persuaded and took the careful step to replace him by Muḥammad b. Abī Bakr, who in a very short time brought the whole of Egypt into the greatest confusion. This took place in the year 36 (656-657). When in the year 60 (680), after}

Yazīd's succession, the Shī'ites in Kūfa summoned Ḥusain b. `Alī to proceed to that city to save himself proclaimed caliph, `Abbād Allah among other advocates to disannul him from this dangerous enterprise, but without success. The date of `Abbād Allah's death is generally given as 95 (699-700) and the place Medina, but according to others, he did not die before the year 94 or 95. Besides, 87 or 90 is also given as the year of his death.

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, see also Ibn Sa'd, v. 62 et seq.}

\textbf{`ABBĀD ALLĀH \textdagger} \textdaggertext{, Hamdūn b. Hāmidūn, called Abū 'l-Hajjāj, of the tribe of Taghlib, was appointed governor of al-Mansūl (Mossul) by the caliph al-Muqtadī in the year 293 (905), in which place he had to fight against the host-loving Kurds. He took no part in the conspiracy to proclaim Ibn al-Mu’tazz, a. caliph instead of al-Mukhtar, in which his brother Ḥusain played a leading part; he was indeed, on the failure of this enterprise, entrusted with the task of capturing his fugitive brother, in which he was successful. When he was dismissed from his office in the year 301 (913-914), he rose against the caliph. As he submitted to Mu’āwiya, a. was sent against him, he was pardoned by al-Mukhtar and presented with a state dress; more than this, he was reinstated as governor of al-Mansūl. It is, however, true that, when his brother Ḥusain again rebelled in the year 303 (915-916) and was taken prisoner, he was arrested together with all his family. Set free in 305 (917-918), he was in 308 (920) entrusted with guarding the road to Khurāsān and was again governor of al-Mansūl, whether he, however, sent his son Ḥasan as his representative. The latter became his successor. After many wars (to which we owed his famous Abū 'l-Hajjāj, the "father of lighting") with the Karathunians, with Ḥasan b. Abī 'l-Muqaffa, a. and others, he met his death in the year 317 (929), when the revolution, which he and others, disannulled with al-Mukhtar's rule, had instigated to proclaim al-Kalbūsí caliph. This in turn was put an end after some initial success to the project of the Handānis (9-12).}

led the pilgrimage, the latter's suspicions were aroused, because they did not appear with the other Hashimides to greet him, and his suspicions fell more especially on Muhammad. After his accession al-Manṣūr tried to sound the Hashimides as to Muhammad's real opinions, but they spoke only good of him and endeavored to excuse his absence. Only al-Ḥasan b. Zaid advised the caliph to beware of this dangerous 'Allide. In order to remove all doubts, al-Manṣūr ordered 'Oqba b. Salm to get into 'Abd Allāh's confidence by means of presents and forged letters from Khurāsān, the moral centre of 'Allide propaganda. At first 'Abd Allāh was very cautious, but finally fell into the trap, and when 'Oqba asked him for an answer for his supposed companion in Khurāsān, he did indeed refuse to give one in writing, but asked him to inform them by word of mouth that he greeted them and that his two sons would rise up in the near future. As soon as 'Oqba had in this manner convinced himself of the rebellious intentions of the 'Allides, he at once informed the caliph, and when the latter in the year 170 (783) again made a pilgrimage, he invited 'Abd Allāh to come to him, and asked him if he could really count on his fidelity. 'Abd Allāh assured him of his honorable sentiments; but shortly after the caliph suddenly appeared, he understood that he had been betrayed and took refuge in entertainments. Al-Manṣūr, however, had him arrested. 'Abd Allāh's relative shared his fate, but the caliph was not able to seize his two sons. When he again came to Medina in the year 144 (762) after having accomplished another pilgrimage, he took the prisoners with him to Babylon, and soon afterwards 'Abd Allāh died there in prison at the age of 75. According to current accounts, he was murdered by al-Manṣūr's orders.

Bibliography: Tahāf, ii. 1358 et seq.; ibid. iii. 143 et seq.; Ibo al-ʿAllāh (ed. Tomāb., v. 172 et seq.); Well, Ḥadīth. d. Chātifen, ii. 40 et seq. (K. V. Zettersten.)

'ABD ALLĀH b. ṬĀRAY (ABAYY) b. MUḤARRRĪ AL-TĀMMI. The chronicles of the African Abūdītes, which are so valuable with respect to the history of Khārijism, are very sparing in details about this person. He has given his name to the branch of the Wahhabīs, who opposed the arbitration between Ṭim and Muḥmar, and who have developed principally in the Maghrib, where they still exist [see AL-MMUṬĪ]. He is mentioned as having been a member of the Jamāah of the doctrines of the 2nd half of the 1st century of the Hegira.

He maintained many controversies with the Khārijites, who gave themselves up to the worst excesses and exaggerated the primitive doctrines of the Muḥammadians; and, following the suggestion of Dājr b. Zāhīr, rallied round him the Wahhabīs, who wished to remain within the limits of common sense and the Sunna.

Abādīt chronicles say that 'Abd Allāh b. Ṭāray took no part in the rebellions of the Khārijites against the Caliphate but lived in simplicity. Al-Barrāḍī in his Kitāb al-Ḥayawān gives in extenso a very dignified letter on religious polemics, which he sent to 'Abd al-ʿAllāh b. Marwīn (comp. Sachau, Mitchell, d. Senac, für Orient. Sprach., ii. 283 pp. 12 et seq.), who gives a German translation of two letters by 'Abd Allāh (in reply to a missive, which this prince had sent him by a certain Sāmīh b. Aṣim.)
According to Shamshînâ (Allāh al-Sayyid, p. 177), 'Abd Allāh b. ibēṣ was one of the Massúmuhs who went to Meccâ to defend that town against Mu'āwīya b. Yūsuf (q.v.). In 646 (683-684). [For bibliography, see A. Shamshâni.]

'ABD ALLĀH b. Ḳir fís (I). b. As-Sukhdān Āṣim, second Aghlabide emir (797-812) died on the 6th Dhu 'l-Ḥijdāda 207 (July 817). In his father's reign, he commanded the troops that defeated Tripoli against the Aghlabite Berbers, who were led by the Rostemide emir 'Abd al-Walid ibn Kūthayr and made a treaty with him. (M. G. D.)

'ABD ALLĀH (Muhammad) b. Ḳir fís II. b. Aḥmed Abū ʿ十三届, tenth Aghlabide emir. He was entrusted with many emirs by his father; he was also in 280 (893) massacred by his ġārd of Bilāsā; in 284 (897) he fought the Tūbānīs; in 286 (899) he made a campaign at Bīlāsā; finally, in 287 (900) he was named governor of Sicily, where he took possession of Palérimum and Reggio. Ḳir fís recalled him in 286 (896) and restored his favor in 287 (897-288 March). He was assassinated on the 28th of Shābān 290 (July 903). P. on account of the order of his son Ziyādād. 'Abd Allāh. After his accession he appears to have affected the conduct of an ascetic, although not at all going over to the party of the Ḥanafīs. [For bibliography, see Aḥmadibak.]

'ABD ALLĀH b. Iskandar b. Shāhīnâ, the greatest prince of this dynasty, died 490(1633-1634). The lion's year was 1533-1534. This account is probably more accurate, given the year of the cycle of the Armakian in Miyânān, on an island between the two arms of the Zarafshan. The father (Iskandar Kūth, grandfather (Jalâl Beg) and great-grandfather (Kahbud Muḥammad, son of Abū ʿ十三届; s. d.), of these rules of genius are all described as very ordinary, almost stupid men. Jalâl Beg (d. 935 = 1528-29) had died at the distribution of 918 (1512-1513) received Karmān and Miyānān. When Iskandar was born in 950 (1547), his father was the lord of Armakian; later, probably after the death of one of his brothers, he emigrated to Karmān. There 'Abd Allāh first proved his power as a ruler in 950 (1551); the country had been attacked by Nawrūz Ahmād Kūth of Tangkend and 'Abd al-Laṭf Kūth of Sīrakand; Iskandar had fled across the Amīr; 'Abd Allāh assumed his father's duties and successfully repulsed the attack. In the following years 'Abd Allāh tried to extend his possessions westwards in the direction of Bakhšāb and south-eastwards in the direction of Karmān and Shāhīnâ at first, without permanent success; in 956 (1555-1556), he was even obliged to evacuate the lands inherited by his father and flee to Maimān. In the same year (Dhu l-Ka'da = September-October 950), there died his powerful enemy Nawrūz Ahmād Kūth, khan of the Orient and lord of Tangkend since 950 (1552). 'Abd Allāh immediately asserted his supremacy in Karmān and Shāhīnâ, and in 956 (1556), occupied Bakhšāb, since that time his capital. There he had his weak-minded father proclaimed in 968 (1560-1561) khan of all the Orient, in order to rule himself in the latter's name. Only in 997 (1583) after the death of his father did he accept the vacant throne. After severe fighting against inauspiciously styled supporter of the ruling house he subjugated Bakhšāb in 982 (1573-1574), Tangkend in 985 (1576 in Rābīʿ I 6 June 1578), Taṣkhend and the remaining country north of the Sīr in 990 (1583-1585) and Fergāna in 991 (1584). 'Abd Allāh also made a campaign, besides the above-named conquests, in the first half of the year 990 (spring 1582) in the steppe as far as Ulūgh Tūr ṣk. As early as the year 990 (1582-1583) a stubborn insurrection was suppressed in Taṣkhend, and the enemy pursued far into the steppe. The ancient castles of Beshahīnâ, Shīkān and Shahrān, all in the east of the basin of the Kūth, especially the last one first in 993 (1590-1591) and then, after an insurrection, reconquered in 994 (1595-1596). An expedition to East Turkistan only resulted in the laying waste of the provinces of Kūthār and Yārūn. 'Abd Allāh's last years were darkened by a quarrel with his son 'Abd al-Mu'in, who ruled in Būh in the end of 990-991 (autumn 1582-1583) in the name of his father. As 'Abd Allāh had been his real ruler under Iskandar, he wanted in the same way to occupy the same position with regard to his father now growing old. 'Abd Allāh would, however, not hear of any diminution of his power, and only, the mediation of the clergy prevented an open breach between father and son, and compelled 'Abd al-Mu'in to yield. On hearing of the estranged relations between father and son, the nomads who had penetrated into the region of Taṣkhend, and had defeated both Tangkend and Taṣkhend and Samarkand abandoned them. At the very beginning of a positive expedition against this enemy 'Abd Allāh was overthrown by death in Samarkand (end of the "hun year") 1006 = beginning of 1598).

'Abd al-Mu'in was murdered but 6 months later by his subjects. The conquests in Khorāsān and Khurasān were lost, and in the Orient his country was overwhelmed by the hands of another dynasty. Of greater permanence were the results of 'Abd Allāh's work in home affairs; the administration, especially the coinage system, was remodelled by him, many public works (bridges, caravanserai, water, etc.) were completed. Even at the present day the people ascribe all such monuments either to Timūr or to 'Abd Allāh. [For bibliography, see Aḥmadibak.]

'Bibliography: The life of this ruler up to the year 990 (1587-1588) is described in detail by his biographer Ḳahdani Shāhīnâ. Many information (especially about the last few years) is given by 'Abd Allāh's Persian contemporary Iskandar Munshī, in his Ālā' al-'Alā' al-Ābāt (biography of Shah 'Abdu'l Tāhir, 1687). Extracts from both works are in Wälzinov-Zernov, Sīnā und Semyonesien, II, (in the Tsündi wost. Handbuch der Geschichte, s. v. German trad. Leipzij, 1867), and before that in his Monitārākhāshī al-'Ābāt (history of Shah 'Abdu'l Tāhir, 1687). See also my extracts from the little known Rāhul al-Marāt in Maḥmūd b. Wilāy Aḥmadī, tr. in the 'Aštār al-Marāt, comp. Ethb, India Office cat., No. 575. The information given by Vartapet, Geshg. Bākhshābāt, and by Howorth, Hist. of the Musul., ii, div. Z, who follows him, is to be accepted with great caution. (W. Barthold)
"ABD ALLAH b. MAIMUN, well-known sectarian, died about 265 (874-875) and was originally from Akház. His father Ma'mun practiced as an ascetic on that place, under his name Ma'mun al-Kaddali. In that district there were a number of ascetics who lived by the beekeepers. But the asceticism of a man was not important in the eyes of the beekeepers, for he was followed in the name of an 'Alide who had not yet made a public appearance, no doubt from the beginning with the ambitious desire to put himself in the latter's place. Even a branch of the 'Alides, the descendents of 'Akhil b. Abd al-Tahir, appears to have joined him, for he was received by them in Bagh after his activity in 'Askar Murkan, whence he had gone, had for some reason or other come to an end. Thence, no doubt under compulsion, he later went to Salamis in Syria, where after his death the agitation was continued by his descendents, till finally the whole movement culminated in the uprising of the Fātimides [q. v.]. "Abd Allah and his successors worked through secret missionaries, who systematically endeavored to excite the scepticism of the faithful, and thereby were able to direct their attention to the "Lord of the Time" (Sajjād al-Zamān) who was soon to make his public appearance. He is also said to have given himself air of supernatural knowledge by diverse tricks, especially by using carrier pigeons, but as a matter of fact we know nothing with certainty as to his methods of propaganda. To his most zealous proselytizers belonged Ma'mun b. al-Husain, usually called Dindan (or Zaidan), and the Karmats, after whom the Karmaths (see Karmats) were named, and a certain Hebbu, who endeavored to defend the opinions of the sect in different writings which have not been preserved. Varying statements are made concerning the descendents of "Abd Allah [comp. FATIMIDS]."

"ABD ALLAH b. MAIMUN. [See above]

"ABD ALLAH b. MU'AWIYA, 'Abd Allah rebel. After the death of Abd al-Hamid, a grandson of 'Ali, claims were laid to the imamate from several quarters. Some asserted that Abd al-Hamid had formally transferred his rights to the dignity to Imam to the Abbasides Mu'min b. 'Ali. Others thought he had spoken in favor of 'Abd Allah b. 'Amr b. 'Kālid; and wanted to receive the imamate. As he, however, did not come up to the expectations of his followers, they turned from him and declared 'Abd Allah b. Mu'ayyia, a great-grandson of 'Ali's brother Dī'ân, to be the rightful Imam. The latter asserted that both the godhead and the prophethood were united in his person, because the spirit of God had been transferred from one to the other and had finally come to him. In accordance with this his followers believed in the messianic quality and destiny the resurrection in Maharram 117 (Oct. 744). "Abd Allah revolted in Kufa where many joined him. He gained especially many followers amongst the Zaidites [q. v.]. The latter captured the citadel and expelled the prefect. In a short time, however, 'Abd Allah b. Omar b. 'Abd al-Azh, the governor of Iraq, made an end to his dealings. When it came to fighting, the ever unreliable Khānūn deserted; only the Zaidites fought bravely for him and continued the battle. 'Abd Allah was granted an unimpeded retreat. From Kufa he proceeded at first to Mādāla and then to Medina. His power was in no way broken. From Kufa and from other places numbers of people poured in to him and he soon succeeded in winning over several important points in Persia. After he had resided for some time in Isfahān, he went to Iskāh. The descendents of 'Ali had from before been honored as the rightful heirs to the imamate especially in the eastern provinces of the empire. It was therefore easy for him to extend his rule over a great part of Medina, Khurāsān, Fārā and Kairuān. The Kāridjītes, who had fought against Marwān 11 on the Tigris, withdrew into 'Abd Allah's domain, and other opponents of the caliph also joined him. In the end, however, his power was not able to hold out. 'Abd al-Rahim, one of Marwān's generals, who had been entrusted with the pursuit of the Kāridjītes, made a raid into 'Abd Allah's domains and brought his rule to a sudden end. In the year 120 (740-741) 'Abd Allah was defeated at Mārwa al-Salāha and forced to
flee to Khotha, where Abd teachers, the well-known general of the Ambas, had him executed. After his death, some of his followers, called al-Qahtani, continued to maintain that he was alive and would return; on the other hand, others, the so-called Harithites, believed his spirit had entered Ishbili, ibn al-Dahghah al-Ansari.

**ABD ALLAH b. MUHAMMED**, Umayyad prince in Spain. Abd Allah, who succeeded the throne of Cordova after the sudden death of his brother al-Mutawakkil in 788), has been characterized as "one of the most repellent phenomena in the whole history of Islam," in truth his twenty-four years of power were a most unhappy period for the subject. In order to secure his life and his throne against his dangerous and suspicious tyant, he treated his nearest relations in the most cruel manner possible. His brother and successor al-Mutawakkil was according to all appearances poisoned by Abd Allah's influence. His brother al-Kasim met with a similar fate. His third brother al-Qahtani was put to death on a trumped-up charge, and Abd Allah employed the same methods to get rid of his own sons Muhammed and Muwaffak. He had them both executed on a mere suspicion. Whilst such horrors were happening in Abd Allah's presence, the country was divided by different parties, who fought each other, and at last the Caliph possessed little more than the capital and its environs.

Abd Allah's most dangerous rival was the Spanish popular hero 'Omar b. Hafsit. Even at the beginning of his reign Abd Allah was obliged to offer him peace and to confirm his governorship of the provinces over which he ruled. The treaty of peace was, however, soon broken. When the Christians of Cordova became weary of Abd Allah's tyrannical rule, they broke out of the town, and after they had succeeded in capturing the fortress of Polei, the present Aguilar, they turned to 'Omar and begged him to join them. The latter, at once appeared at Polei, but was defeated by Abd Allah's troops in 778 (891). After a war lasting several years with varying success, 'Omar became a Christian, which, however, only rendered his position worse. In the year 787 (900) he made an alliance with Ibrahim, the chief of the Banu Hujajjij in Seville. Thereupon Abd Allah had indeed to be satisfied with a treaty of peace, but as early as 803 (923) hostilities again broke out. After 'Omar and Ibrahim had separated, Abd Allah succeeded in winning several battles, and at his death in Safar 300 (Oct. 912) the war had already entered into a quieter stage. Abd Allah's grandson, Abd al-Rahman b. Muhammed, became his successor, who, having had homage paid to him before his death.

**ABD ALLAH b. MUHAMMED**, the second important shiek of Mecca of the family of the 'Ababida, succeeded his father as shiek in 1274 (1858) and held his dignity peacefully enough till his death in 1294 (1877). The opening of the Suez Canal, which took place during his time of office, greatly facilitated the work of the Turks in enforcing their sovereign rights. Several measures which were brought out or prepared under Abd Allah's government gave proof of this: Djeida, Mecca and Tilif were connected by telegraph with the outer world, Turkish administrative offices were installed in these towns, as well as in Medina, whilst the reconnaissance of Yemen (1872) completely established the Turkish rule in Arabia.

Although Abd Allah was no less in love than his other brothers to lose his office for enriching himself, yet he knew how to win the affection of the population of the Hijaz. His amiable, dignified conduct and tact in dealing with Bedouins and toward folk, as well as with the representatives of the Shammar sovereigns are to the present day praised as being unexceeded.

Bibliography: C. Souchac Hucquoy, Milla, i. 1877; Souchac Hucquoy, Abd Allah, b. Muhammad, successor of the Mahdi in the Sudan. Abd Allah b. Muhammed al-Ta'ish, the notorious Khalifa and successor of the Sudanese Mahdi Muhammed Ahmad [q. v.], was born, it seems, in the middle of the forties of the 19th century. He was a native of the South-West Darfur and belonged to the tribe of the Arab-Sudaneese Baggara (Baghara), more particularly to the Djalal and then again to the group of the Arabi from Sura. His father Muhammed al-Fakih left his home in the seventh century with his whole family with the intention to emigrate to Mecca, but died on the way at Dar Dijma. Then Abd Allah went to the Djarra to Muhammed Ahmad who had then not yet publicly appeared as the Mahdi, and was received into his [Tarika [q. v.]. He soon became the Mahdi's right-hand man and seems to have inspired him with many things, e.g. with his journey to Kordofan, where he prepared beforehand the elevation of the latter. He took part in August 1884 in the bloody fight between the Mahdi and Muhammed Abd Sa'ud on the island of Ali, and soon after followed his nomination as Khalifa. He is called the 'first of the four caliphs', 'Abi Belkry al-Sadiq', which title was solemnly confirmed in a later proclamation between the capture of al-Ushaiq and that of Kharitan. 'He belongs to me and I belong to him', say the Mahdi in this edict. For the rest, his history is that of the Mahdi, as he always accompanied the latter and was present during the victorious campaign of the Mahdiyya [q. v. till the capture of Kharitan 26th Jan. 1885]. Some months later (22nd June) the Mahdi died suddenly, and naturally Abd Allah assumed the reins of government. The Mahdiyya proper was buried together with the Mahdi; the religious enthusiasm had to be replaced by a severe and cruel absolute government. To this end the Khalifa, who was a stranger in the region round Kharitan, needed the help of his fellow-tribemen, and his interior policy was therefore directed to bring the tribes of the Western Sudan (Kordofan, Darfur) wilily-nilly to Sultan Demir, and on the other hand to remove the tribes of the Nilo region to distant outposts. Without any moral restraint, his rule was one of terror, of which eye-witnesses, such as Slatin, Ohmwiler, Neufeld and others, give most dreadful details.
"ABD ALLAH b. Murcf", one of the leaders of the insurrection against the caliph Yazid I, and later governor of the opposing caliph 'Abd Allah b. al-Zubair. On account of the increasing dissention with the Umayyad rule after the accession of Yazid I, 'Abd Allah intended to leave Medina, but was persuaded by 'Abd Allah b. 'Omar (q.v.) to remain in the town. When the inhabitants of Medina shortly afterwards revolted against the new caliph, they gave the government to 'Abd Allah b. Hamza (q.v.), however, he hesitated and was put to death. ‘Abd Allah also named as one of the leaders of the insurrection. In 683 (August 683) the decisive battle between the troops of the caliph and the Madinan rebels took place on the Hurr. Ibn Murcf participated in the flight, escaped the general destruction and fled to Mecca to 'Abd Allah b. al-Zubair, who appointed him governor of Kufa. In the year 668 (685) he was, however, expelled by the ambitious Muhammad b. Abi Taleb, and went first to Taif and then to Mecca where he fought for Ibn al-Zubair. He there met with his death in the year 73 (690), shortly before Ibn al-Zubair.

"ABD ALLAH b. 'Omar I. 'ABD ALLAH, oldest son of the caliph 'Omar II. In the year 126 (744) 'Abd Allah was appointed governor of the Iraq by Yazid III, but in consequence of the discontent of the Syrian chiefs, was sent to Damascus. He revolted against the new governor and was killed in July 745.

"ABD ALLAH b. 'Omar II. 'ABD ALLAH b. al-Khattab, eldest son of the caliph 'Omar I, and one of the most respected of all Muhammad's companions, generally called Ibn 'Omar. 'Abd Allah was born several years before the Hijra, his mother's name was Zainab bint Mas'ud. He became a com-

"ABD ALLAH b. 'Omar II. 'ABD ALLAH b. al-Mukatta, oldest son of the caliph 'Omar I, and one of the most respected of all Muhammad's companions, generally called Ibn 'Omar. 'Abd Allah was born several years before the Hijra, his mother's name was Zainab bint Mas'ud. He became a com-
vers., to Islam in his boyhood at the same time as his father. At the battle of Bedr and Uhad he was kept in the background by Muhammad, because he was still too young, but he took part in the campaign in the Ditch and fought in all the battles of the Prophet. Subsequently also his name is often mentioned in connection with military expeditions. First of all he followed Kâlid b. al-Walid in the latter's expedition against the rebellious tribes in the interior Arabia, in the time of Abd. Bâkî's reign, then he took part in the battle of Nakhtwe, the date of which is usually given as 21 (642). He was further amongst the Medina reinforcements, which 'Uthmân sent to 'Abd Allâh b. Sa'd b. Abi Sâlih, his governor in Egypt, to subjugate the rest of North Africa, and soon afterwards, in the year 30 (650-651) — he marched to Tâlid under the command to Sa'd b. al-'As, again, in the year 49 (609) Ibn 'Abî 'Amir took part in an expedition against the Byzantines, which was undertaken by Sa'd b. Mu'âwiyya. As to home politics, 'Abd Allâh took up a strictly neutral position amongst the different parties which fought for supremacy. When 'Umar on his death-bed appointed, from amongst Muhammad's most tried companions, six trustworthy men to elect a new ruler, his son 'Abd Allâh was nominated as candidate. In the year 37 (658) the latter was present at the court of arbitration that was appointed to settle the dispute between 'Ali and Mu'âwiyya, without, however, himself making any claim to the caliphate. He was indeed one of the candidates proposed by Abû Masûl al-Ash'ari, but was not considered suitable. After 'Uthmân's death, 'Ali had requisitioned Ibn 'Abî 'Amir to do homage to him, a thing the latter energetically refused to do, declaring he would only pay homage to him when all Muslims would do so. Later on Mu'âwiyya received the same answer when he demanded homage for his son Sa'd b. Abi Sâlih. When, however, the latter ascended the throne, 'Omar made no difficulties, but at once took the oath of allegiance. 'Abd Allâh b. 'Omar was personally a religious man, who was everywhere held in great esteem on account of his modest and unassuming character. He is moreover esteemed as one of the most trustworthy authorities on the earlier history of Islam, and with reason, because his intimate intercourse with Muhammad, and many other influential men of that period, he had acquired an exact knowledge of all the important facts of that period. His traditions were handled down to posterity by his sons and other disciples. 'Abd Allâh b. 'Omar died at Mocé in the year 73 (beginning of 693), after the pilgrimage, at the age of 84 according to general report.

Bibliography: Ibn Sa'd, ill. ii., part 1.,190; Ibn Hishâm (ed. Wüstenfeld), I. 437. 675; Tabarî, I. 1460. 1610 et seq.; Aghânî, al. 801; sv. 379; Wall, Mohammed der Prophet, p. 379. — note: (From the translation of K. V. Zettersten.)

‘ABD ALLÎH b. RAJhid. [See Ibn Sa'd, ii., part 1., 190.]

‘ABD ALLÎH b. Rawâyah, z Khattâb-gilîte, belonging to the most esteemed clan of the Banû 'I-Hâshîth. At the second 'Alâ'ah battle, which was fought in March 622, 'Abd Allâh was one of the 12 trustworthy men, whom the already converted Musulmân came to the Prophet's wish had chosen. When Muhammad had emigrated to Medina, 'Abd Allâh proved himself to be one of the most energetic and upright champions of his cause. Muhammad appears to have thought a great deal of him, and often entrusted him with honourable missions. After the battle of Bedr in the year 623, in which the Musulmân were victorious, 'Abd Allâh together with Zâ'îd b. Hârîjûh had to hasten to Medina to bring the tidings of victory. During the so-called, second campaign against 'Bedr', at the beginning of 625, 'Abd Allâh remained behind in Medina as lieutenant-cum-commander. When in 627, at the commencement of the siege of Medina, the fidelity of the Banû Kuraizah, his allies, was suspected, the Prophet sent 'Abd Allâh together with three other influential Musulmân to find out the real sentiments of his allies. After 'Adhâb had been conquered in the year 628 and its territory divided, Muhammad sent there 'Abd Allâh as amir. On sending the Mu'ta expedition in the year 629, 'Abd Allâh was appointed by the Prophet as second lieutenant-commander-in-chief of the army, and when his superiors had both fallen, he sought and met his death as they had done fighting for the Faith.

Besides his military talents 'Abd Allâh possessed other qualities. A refined taste, a love for the beautiful, to his master; he belonged to the few pre-Islamic men who could write, and was for this reason, together with other faithful followers, chosen as secretary to the Prophet. Muhammad appears to have esteemed him very highly more especially on account of his poetical gifts. In the Kitâb al-Aghânî it is expressly stated that the Prophet considered his poems equal to those of his favorite poets Hâshim b. Hilâl and Kâlid b. Mâlik. It is characteristic of 'Abd Allâh's literary tendency that he abused the Korântâbes for their unbelief, whilst the other two poets always reproached them with their evil deeds. Only about 50 verses of his have been preserved and they are for the most part to be found in Ibn Hishâm.

Bibliography: Ibn Sa'd, ill. ii., part 1., 190; Ibn Hishâm (ed. Wüstenfeld), I. 437. 675; Tabarî, I. 1460. 1610 et seq.; Aghânî, al. 801; sv. 379; Wall, Mohammed der Prophet, p. 379. — note: (From the translation of K. V. Zettersten.)
seldom and by comparison with the all-pervading sunlight. He also introduced the doctrine that every Prophet was appointed a 'plenipotentary' (Qur'an 24:31) and that Muhammad's seat was 'All'; whence he deduced the duty of every believer to stand up for 'All's rights with word and deed. 'Abd Allah is said to have therefore employed missionaries for the propagation of these ideas. He was amongst those who in Shawwal 35 (April 636) marched from Egypt to Medina, and afterwards he accompanied the caliph 'All; whom he, however, deserted with his excessive vengefulness, so that the latter banished him to al-Madā'in. We know nothing concerning the manner nor the date of his death. If he survived the master's murder it is quite possible that he afterwards altered his doctrine of the return of Muhammad, making it more in harmony with the views of the extreme Shi'ites.

'ABBAD ALLAH b. Sa'id, Muslim statesman and general, a Syrian. 'Abd Allah b. Sa'id b. 'Abd Sa'id al-Amri belonged to the clan of 'Amir b. Lu'ayiyat of Kūraib and was as foster brother of the subsequent caliph Othman a chief partisan of the Umayyads. He was less a soldier than a financier. The judgements of historians on his character vary greatly. His name is connected in many ways with the beginnings of Islam. First he is mentioned as one of Muhammad's scribes; he is supposed to have unerringly altered the revelation, at least he boasted of doing so after his apostasy from Islam, whereby he incurred the hate of the Prophet. For this reason the latter desired to have him executed after the capture of Mecca, but Othman obtained, though with difficulty, the Prophet's pardon. This story becomes afterwards (p. 361). 'Abd Allah later on showed himself grateful to Othman for his rescue by agitating for the latter's election as caliph. He belongs to the Hidjarli companions who took part in the conquest of Egypt under 'Amr b. al-As at Qasr (q.v.) and appears to have governed Upper Egypt independently under 'Omar, after the latter's quarrel with 'Amr. It is impossible exactly to fix the date when he was appointed governor of the whole of Egypt; according to Ibn Taghirinfi, as early as the year 25 (645-646), and therefore before the revolt of Alexander under Mannai. As he was not able to suppress this rising, 'Amr was recalled, who, however, immediately after his victory had to hand back the crown to 'Abd Allah. Othman desired to ratify 'Abd Allah's appointment as financial prefect and 'Amr's as military governor, but the latter declined. 'Abd Allah now succeeded in considerably increasing the state revenues of Egypt, much to the satisfaction of the caliphs. Although his principal aim was the administration of the finances, he also became renowned as a general. 'Abd Allah regulated the relations between the Maanulmuns and the Nabians and supported Mu'awiyah's expedition against Cyprus, whom he himself undertook several expeditions against Roman Africa, the first probably in the year 25 (645-646), the most important and most successful certainly in the year 27 (647-648). He subdued the district of Carthage to Islam. His most important military performance was the naval battle of Dhib al-Suwaidi, equal in importance to the battle of Yarmuk [q.v.], in which the Roman fleet was completely destroyed. This battle took place in the year 31 (657-658), hardly later, as is given by some sources. Soon afterwards al-Jund, the empire there commenced uprisings against Othman. 'Abd Allah appears as the principal champion of the regime represented by the caliph. He endeavored to warn the caliph and even left Egypt in order to support him. His lieutenant al-Salih b. Hisham was expelled by the Egyptian revolutionary party under Muhammad b. Hudhayfa and 'Abd Allah himself was forbidden to return to Egypt. On the frontier 'Abd Allah learned of the murder of the caliph, and fled to Mu'awiyah. Shortly before the latter's departure to Siffin, he died in Askalan or Ramla (in 36 or 37 = 656-657 or 657-658). His supposed participation in the battle of Siffin and his late death in the year 57 (676-677) is not connected with the numberless myths connected with the battle of Siffin.

'ABBAD ALLAH b. Salim, a Jew from Medina, originally called al-Husain and belonged to the Banu Kahfeh. Muhammad gave him the name of 'Abd Allah when he embraced Islam. This conversion is said to have taken place immediately after Muhammad's arrival at Medina, but according to others, when Muhammad was still in Mecca. Another account states that Johannes received Islam in the year 8 (629-630) is worthy of more evidence — though Mohammedan critics think it badly accredited, — for his name is sought in vain in the battles which Muhammad had to wage in Medina. The few unimportant mentions in the Meccan may well have been inserted in order to remove the glaring contradiction with the generally accepted tradition. He was with 'Omar in Dhisya and Jerusalem, and after 'Othman's death he remained faithful to Mu'awiyah also. He died in 43 (665-666). In Muslim tradition he has become the typical representative of that group of Jewish scribes which honored truth and admitted that Muhammad was the Prophet predicted in the Torah (Torah), whom they protected from the
intrigues of their co-religionists. The questions which 'Abd Allah is made to ask Muhammad and which only a prophet could answer, are the contours of the Hadith, which tradition works successively on, and the story of Bulukîyâ, which 'Abd Allah puts into his mouth, mostly have their origin in Jewish sources; if they do not really come from 'Abd Allah himself, they certainly come from Jewish renegade circles. Whilst his contemporaries often reproached him with his Jewish origin, later on traditions were circulated, in which Muhammad assures him of his maturing Fatâmiyyâ, or in which the Prophet and celebrated companions give him high praise. Certain verses of the Korâân are also said to refer to him. The questions which he asked Muhammad were subsequently enlarged to whole books, and in the same manner several other works were founded on him, which are partly based on what he related in the Hadith. Together with his sons Muhammad and 'Abd Allah, 'Abd Allâm and Anas b. Mâlik handed down his traditions. Tâhâr put in his Chronicle more especially Biblical accounts taken from 'Abd Allah.

'Abd Allah b. Tâhâr

[See Intro. 248d]

'Abd Allah b. Surâdî

[See Intro. 248d]

'Abd Allah is Tâhâr, statesman, general and poet, born about 132 (758) and died in 230 (844). 'Abd Allah's father 'Abd Allah b. al-Ḥusayn had already rendered the caliph al-Mahdi great services, and 'Abd Allah himself soon won the favor of the great caliph: not only for his father's sake, but also on account of his personal merits. In 206 (821-822) he was appointed governor of the regions between al-Râṣîf and Egypt, and at the same time received the supreme command in the battle against one of al-Abdî's followers named Naṣr b. Sâbitah, who first made his appearance in the neighborhood of Halâlî (Aleppo), and in a short time extended his sway over a large district. It is true that Tâhâr had already checked the further spread of this movement. Naṣr's campaign in Syria only took place in the year 209 (830), when he had to surrender to 'Abd Allah. When the latter had put an end to Naṣr's doings, he was made of him in Egypt. There as early as 209 (830-831) a great number of Spanish fugitives had landed, and shortly afterwards brought that province, which was already in a tottering state, into a still greater confusion. In the year 210 (832-833) 'Abd Allah went to Egypt by order of the caliph, and quickly succeeded in restoring order there. After establishing there a deputy, governor, he returned as early as the year 211, or according to other authorities, not before the following year to Iraq. While he tarried at Dijmâ, he once raised an army in order to help the governor of Alhâfarîyyâ against the ascender Bîthâk and his followers, he was made governor of Khurâtân, in succession to his brother Tâhâr, who died in 213 (838-839). Like the other Tâhâtîs, 'Abd Allah ruled in this province according to the maxims of government recommended to him by his father Tâhâr [9. v.], in the famous writings which have been preserved by many authors. He ruled almost as an independent prince, although he formally acknowledged the sovereignty of the caliph, and as genialissimo commanded the latter's troops. As often as he came to Baghdad, he resided in the magnificent palace built by his father on the right bank of the Tigris (Le Strange, Bagdad, pp. 78 et seq.). At the beginning of the year 213, some tribesmen of the Banû Helal, who had gone over to the Banû Qays, attacked al-Abdî, Muhammad b. al-Kâsîm, appeared as pretender to the throne, but was overcome by the troops of 'Abd Allah b. Tâhâr, surrendered to the latter and was sent by him to the caliph. This happened in the year 219 (834). Two years later a much more dangerous mutiny broke out in Tâhâtîn which belonged to the governmentship of Khurâtân under the rule of 'Abd Allah. Through the intrigues of the Turkish general Aflâbî, who was envious of the great power of the Tâhâtîs, the ispahan Muhammad b. Kârîm al-Tâhâtîn was induced to rebel against the caliph. But when troops assembled from all sides against him, he was betrayed by his own people and rendered harmless by 'Abd Allah. In his boldly and statesmanlike behavior 'Abd Allah united will and qualities. He was also celebrated for his poetical and musical abilities and the compiler of the Ĥuânî, Abu Ta'âmûr, found in him a be-devolent patron. That he was not insensible to the favor of the table is clearly to be inferred: from the fact that an excellent sort of Egyptian melon has been named after him 'Abd-Allâm; in general the greatest luxury reigned in his palace. According to the usual account, 'Abd Allah b. Tâhâr died Monday, the 17th Kali' l. 230 (November 844) at the age of 48. Yet by some his death has been fixed as early as the year 228. This account of his end passes as incorrect, yet the week day seems to pronounce in favor of it (comp. Wustenföld's Tabellen). His son was confirmed as his successor by the caliph al-Wâthîk.

(K. V. Zetterstøm.)
ABD ALLAH b. THAWR, usually called  Abd Fadlak, a Kharṣjit of the Banū Kinā, was killed during the year 72. He is known as the first Muslim general to lead the Muslims to victory over the Byzantines in the year 72 (693). He led his troops against the Byzantine forces led by Heraclius, defeating them in the Battle of the Yarmuk. Abd al-Malik later died as a result of this battle.

**Bibliography:**

**ABD ALLAH b. THAWR** is, also called Ibn Sallā, after his mother, chief of the Kharṣjīt. Before the coming of Muhammad to Medina, 'Abd Allah had dominion over Awa and Kharṣjit; the only case, says Ibn Ḥishām, in which these two tribes united under a common chief.

After the coming of Muhammad, 'Abd Allah was offered the crown of the throne of Islam, in order not to be entirely cut off from the country of his birth. At his own request, he was made a chief, and exercised his office with great success, and his name is still popular in the country of the Kharijites.

**Bibliography:**
Abd al-Malik, Kāmil, p. 8. When, in the year 624, the prophet proceeded against the Banū Kinā, the allies of 'Abd Allah, and a year later the Banū Najdī, also allied with the Kharijites, 'Abd Allah dared not undertake anything serious on their behalf. Only when, after a long siege, they were constrained to yield to Muhammad, did he interpose and oblige the latter to spare at least the life of the besieged. In the council of war before the battle of Uhud in 625, 'Abd Allah was himself of the opinion, reasonable in itself, that they should remain quietly in the town and allow the enemy to come up thither; this was also the opinion of the Prophet, who, however, determined, but only on account of the urging of his men, to march against the enemy. Whether on the following day, 'Abd Allah actually first marched out with the army and then, when half-way, turned back with 300 men, as Ibn Ḥishām assures us, or whether he had remained behind from the first, as appears from Korān, iii. 160, is doubtful; one thing is sure, he did not fight with the rest at Uhud. With regard to 'Abd Allah, Muhammad showed most admirable self-restraint and kept this mutually cautious war-scenario going on until the last moment.

On the march to Tabuk 'Abd Allah is said to have again played the same part. Nevertheless the Prophet, when his rival died shortly after the return from this same expedition, had sufficient self-control to pray over his tomb and to pay him every honor due to an eminent ally.

**ABD ALLAH b. WAHR AL-RISHII,** a Kharṣjit, bore the surname of the `Man with the calamities' (al-Idāb), because he had received calamities from his many protrusions. 'Abd Allah belonged to the prominent men amongst the first Kharijites, so that he was known to be an obstinate follower, when they had separated from 'Ali (37-668). He fell in the same year (May-June 638) in the bloody battle of Nahawand, **Bibliography:** Mubarak, Kāmil, p. 558 et seq.; Tabari, i. 536 et seq.; Ibnawari (ed. Gause and Rosen), pp. 215 et seq.; Thuqā‘ah, Die religiöse-politischen Oppositionspartien, pp. 776 et seq.; M. H. Hoetemaa.

**ABD ALLAH b. YASIR AL-RISHII,** founder of the Almoravides (al-μωρακيد). He owed his wish to his son Tin Imran, who belonged to the Ljaris or Kūsa tribe, dwelling on the boundaries of the Meroe of to-day and the Sahara. 'Abd Allah was indicated by al-Abbās, a pupil of Alī b. Ḥuseyn b. Ḥuseyn, to the Chief of a colony of the Ljamiī in the south of the Western Sahara, who wished to convert these people to Islam, as a man capable of fulfilling the mission. Accordingly he went to the Ljamiī, and began his missionary work. Great difficulties seemed to have stopped him at the very beginning. The obstacles determined him to take refuge with some companions on an island in the Senegal, where they founded a sort of ascetic community styled the Monimal-worshippers (helītā). They took from there their name of nūrāl-sīr, whence the word 'almorakīd. Thus their renown having spread and their number having been increased by numerous adoptions, they soon formed as formidable power, in the extent of being able afterwards to reduce by force the tribes of the Ljamiī and received them so badly at first. 'Abd Allah became the head of the religious community, which was above all distinguished by its severe, ascetic rules; it appeared at the same time to be the commencement of the Holy War. 'Abd Allah soon hurled his nūrāl-sīr against the idolatrous tribes of the Ljamiī and other Sahābiya, and the sword converted those who had resisted the Apostolate. Though remaining the religious head of the Sahābiya, 'Abd Allah left the command of them to a native chief chosen from amongst them: the first was Yaḥyā b. Ibrāhīm, the tribe of the Ljamiī; then Yaḥyā b. Ḥusain b. 'Umar al-Ljamiī. 'Abd Allah, having the power of the Imam, the direction of the Holy War, and the receipt of canonical taxes, and sometimes inflicted deserved corporal punishment on the emir, 'Abd Allah's seal, however, appears to have been more lively than his religious instruction was extended. From this point his history becomes part of the early history of the Almoravides. It is sufficient here to recall that they conquered the Maghreb of Sūfiyān in 407-408 (1054-1055); the date is uncertain. Almost immediately afterward they seized Aswālāt, a town belonging to the Negro kingdom of Ghanī. Then about 449 (1057-1058), 'Abd Allah brought them to his native country; Darr, Sāa, the Maghribian kingdom of Aghmat, then the principal southern town in Morocco with Naufis fell into their hands; and the Almoravide empire was founded. Everywhere 'Abd Allah strove to make prevail, the strict rules of piety, which he had instituted among the Almoravides and which up to our own epoch have not ceased to flourish among the tribes of the Sahara Mannitā. About 451 (1059) he gave battle to the Berbers of the Atlantic coast (Tlemême).
in the course of which he met his death in a place called by the authors Kartha or Karthaft, where he was buried. A chapel was built there, which was still much frequented in the time of al-Bakri. The true personality of Abd Allah is difficult to fix three centuries; the name of his native village and his family and music and in the orthodox literature gives him falsely the appearance of a magician.

(R. Doutre.)

ʿAbd Allāh b. al-Zubair, a Korishite general, who contested the caliphate of the Umayyads for nine years, was born at Medina in the year 1 (622) or, according to al-Wâkidjî, 20 months after the Hijra (sh. 2 = Feb. 624), killed in a battle against al-Hajjâj, near Mecca, on the 17th Jumâda I 73 (4th Oct. 692); compare, however, Wesseling, Das arabische Reich und seine Seiner, p. 122. Besides the fact that his father, al-Zubair, belonged to one of the noblest families of Kûfa and was on his mother Sa'dyya's side a cousin of the Prophet, 'Abd Allah himself was through his mother Aunâ' the grandson of Abû Bekr and consequently nephew to 'Ali. According to some Mussulman authors, 'Abd Allah was the first child born at Medina in Kûfa.

When barely seventeen, 'Abd Allah was present with his father at the battle of al-Yarmûk (14 = 635). Three years later he was with his father in the army of Amr b. al-As, who made himself master of Egypt. He played a leading part in the conquest of Ifriqiya, and in an engagement between him and the patriarch Gregory killed the latter (29 = 649-650). The following year he was with Sa'd b. al-As in the expedition against Khosrâwan, and in the same year was one of the theologians appointed by 'Othân to write down the Korânc. On the day of the battle of 'Uhrâ' (18 Dhu-l-Hijjah 3 = Nov. 633) 'Abd Allah was one of the most valiant defenders of 'Othân. At the battle of the Camel (19 Dhu-l-Hijjah II 76 = Dec. 656) he had the command of his aunt 'Afra's infantry.

During the reign of Mu'âwiya b. Amr Sa'dyya 'Abd Allah conceded his ambition for the caliphate, only when Mu'awiyah requested him to acknowledge his son Yazid as heir presumptive, he refused. On the death of Mu'âwiya (60 = 686) 'Abd Allah declared openly against Yazid and refused to take the oath of allegiance. Being informed that Yazid had ordered his head to be cut off, 'Abd Allah escaped at night, and set out with al-Husain for Mecca. By Yazid's orders, Amr b. al-Zubair, a brother of 'Abd Allah and hostile to him, was sent at the head of an army against 'Abd Allah. But the latter defied his brother's forces, 'Amr was taken prisoner and died under the sword.

'Abd Allah, however, alarmed by the rivalry of al-Husain, treacherously advised him to undertake his journey towards Kûfa, which was sure to be fatal for him. Directly the news of al-Husain's death reached Mecca, 'Abd Allah himself proclaimed caliph by the inhabitants of that town and assumed the title of amir al-M Unternehmen (61 = 686-687). The people of Me-
came from Aleppo. He was made a share of the rebels, who were led by Sultan Ahmed III on the throne of Turkey (9th Rabi II 1115 = 22 Aug 1739), filled many positions in the Financial Service, and was entrusted with the subjugation of Kossoβ, which had revolted in Egypt in 1126 (1714); comp. Râghi Effendi, Târîkh, ii, 94, Constantinople, 1853), and he sent his head to the Porte. He was the son-in-law of two grand viziers, Corbin Ali Paşa and İbrahim Paşa; he was governor of several provinces, and, amongst others, Nissa, where he was governor three times. When Selîd Murad and Pasha became grand vizier he succeeded him as grand chamberlain and retained his office until his nomination as grand vizier (1150 = 1737). After the check received at the conference of Nemiwâr, he requested, as his predecessor had already done, the mediation of France with Cardinal Fleury; but he was dismissed the very day after his return from the army (26th Shabbe 1150 = 19 Dec. 1737) and replaced by Yaqub Muhammed Paşa. He was the father of Muhammed Paşa Mahsûr Zade, who concluded the peace of Kismirde.

'ABD ALLAH SARI. [See SARÎ 'ABD ALLAH.]

'ABD AL-'AZIZ b. 'ABD AL-SÂMîN SÂNCHEZ, Abu-I-Hajân, grandson of the great Al-mamur al-Maṣûrî. 'Abd al-'Aziz became prince of Valencia and Murcia in the year 430 (1041) when Zuhair, the prince of Almeria, had died, he took possession of the latter's principality. Through this action, however, he came at loggerheads with Muhammad, the prince of Dénia, and therefore in the year 431 he installed his brother-in-law Abûl-Ahâm, who soon made himself independent [see SUMÂRD]. 'Abd al-'Aziz, who, like his grandfather, also bore the surname of al-Maṣûrî, continued to rule in Valencia till 453 (1065) [comp. SUMÂRD].

'ABD AL-'AZîZ b. Abu DULÂJ, a governor. 'Abd al-'Azîz was son of an officer, Abu Dulâj, who had served under the caliph Abu al-'Amin and then retired to Karadj, a town-between lypâhân and Hambâdî, where as chief of his clan he occupied an independent position. In the year 255 (866) 'Abd al-'Azîz, who had joined al-MusTa'în's party during the struggle for the throne, was entrusted by Yâsîf, the governor of Perisan Istâ', with the administration of that province. When the following year al-Mu'ta'îs conferred the same governorship on Mîhâ b. Bâqâ, 'Abd al-'Azîz refused to leave his post, but was defeated by Mîhâ's general Mâdîfîn first in the neighborhood of al-Kašânî, then at Karadj, and had to take to flight. Nevertheless he succeeded in re-establishing his authority in Karadj. 'Abd al-'Azîz died in the year 260 (875-876).

'ABD AL-'AZîZ b. ABU DURÜD, a dignitary. 'Abd al-'Azîz was a student of the Bâbî liyyah (Mâsîh), born about 1150 (1717), died in the month of Râghîb 1225 (August-September 1808). He left in the Mašî a well merited reputation for his piety. He devoted his life to the composition of many works on theology and jurisprudence.

His chief work is the Kitâb al-awd al-fahrî, autographed at Cairo in 1205 (1887-1888). This treatise, conceived on the plan of the Minhâj of Khattî, but written in a less concise style, is a complete statement of Abûdîl's principal doctrines and the most reliable authorities of Oman, Zâbîl, Djebel Nijâla, Djerba and the Mašî. The Kitâb al-awd, which is the code now used by the Abûdîtes of Southern Algeria, consists of two volumes each of which is divided into 42 books. It was the basis of the studies published by M. Zays on this subject (Legislation musulîmî, son origine, ses sources, son principe, son ensemble, Paris, 1886, and Le mariage et sa dissolution dans la législation musulîmîe, in the Revue africaine de législation et de juridiction, Algiers 1887-1888). Other of his works, al-Nâîr, is a religious, grammatical and literary commentary on the Kâfîma, with the aid of Abu Na'sh Fâh b. Nîlî al-Mâlîshî (Cairo, 1306). A note at the end shows that 'Abd al-'Azîz finished this work in 1299 (1794).

Amongst the works of 'Abd al-'Azîz not yet published the Kitâb al-mâlim al-dîdî must be mentioned as ranking first; in it the principles of Islaam are set forth in a scientific manner, in conformity with the doctrines of the Abûdî sect. The Following other treatises by the same author are mentioned in a notice appearing at the end of a MS. of the Kitâb al-awd:

Dub, Instrans ft. mo'âjî al-abrahîmî, al-fâtîh, abridgment of the Minhâjî; al-Wârid al-kâsîmî ft. rîyîd 'alâhî, 'Iltîf al-qâsîr âsandî, an epitome of the Kâsîmî; al-Mîhâhî, an abridgment of the Kitâb al-kâsîmî, and of the book known as Alí musâûrî; an abridgment of Hotîshîrî tâfî, traditions; al-Aw'sîtî al-mâliûnî ft. ilâm 'alâhî, an abridgment of Musa al-Abînî. (ed. MOTYLDINSKI.)

'ABD AL-'AZîZ b. Abâ HAMîD b. ABU MAMâR, Abî Lâlî al-Mârîk, an Umayyad general. 'Abd al-'Azîz was a faithful partisan of his cousin Yâsîf III and one of his most eminent assistants. Already in al-Walît's reign he helped Yâsîf, who headed the malcontents, to enlist troops against the caliph, and when they had succeeded in getting together an army in Damascus, 'Abd al-'Azîz received the supreme command and marched against al-Walît. Yâsîf's brother Abînuwâ, who was about to go to the caliph's assistance, was attacked and forced to pay hommage to Yâsîf. Soon after, 'Abd al-'Azîz stormed the castle of Baljûkîr, whither al-Walît had withdrawn, and belauded the caliph. This was in the year 1126 (744). Now Yâsîf was proclaimed caliph; the inhabitants of Himmî (Emesa), however, energetically refused to do hommage to the usurper and marched against Damascus. Yâsîf sent two army divisions against them, and whilst the rebels were fighting with one division, 'Abd al-'Azîz advanced with the other and decided the combat, whereupon the rising was suppressed. In the same year Yâsîf died after having settled the succession on his brother Bâshîm and after him on 'Abd al-'Azîz. The inhabitants of Himmî, however, again refused to do hommage to the new ruler, who for that matter was hastily recognized.
outside the capital. At Ismail's orders Abd al-
'Aziz therefore began to lay siege to the town, but withdrew when the then governor of Ar-
menia and Adharbaydja, Marwân b. Mahmed, ad-
vanced. His new gates to the town, the fol-
lowers of the late caliph were defeated in Safar
1277 (Nov. 1234) at Ar-Rajj, and Marwân had
himself proclaimed caliph in Damascus.
As has already been stated, the new caliph, Abd al-
'Aziz b. al-
Hajjâli was murdered by the man blistered by al-
Walîl II.

ABD AL-ÁZÌZ. — AL-ÁSÁX, the present
sultan of Morocco, born on the 18th of Rabî' II
1208 (18th February 1893), son of Lâlîa Rokhiya, who
was bought as a slave for the sultan in<br><br>
Cairo. The little 'Abd al-'Azîz, whilst yet a child,
accompanied his father in most of his expeditions.
As he grew up he soon manifested, as usual for
an orthodox, a taste for images and drawing. He
was always extremely rebellious against studies of
the Korân, his education was partly entrusted to
Abd al-Mâjîf, the chamberlain (3âlî) known as
Bâ Ahmed, who, in strict sympathy with Lâlîa Rokhiya,
kept him under a close guardianship. On the death of Mâlîk Naasuni on the 8th of June
1894, Bâ Ahmed, in spite of the opposition of
the grand vizier, who favored the candidature of
Mâlîk Naasuni, the brother of 'Abd al-'Azîz,
succeeded in placing the latter on the throne.
A little later Bâ Ahmed had Hajjâl b. Mâjîf
Djîuli, the grand vizier, imprisoned and took his
place as grand vizier. A great revolt of the
Rhâbân marked the commencement of the new reign.
'Abd al-'Azîz, however, remained very much of
a child and took no part in the government.
Bâ Ahmed was omnipotent. In truth 'Abd al-
'Azîz appeared to be the puppet in politics and it
should not be truly said that Bâ Ahmed had usurped
the power of his sovereign. Bâ Ahmed's health,
which for a long time had been impaired by the
strain due to being the sultan's favorite, was
completely broken at the beginning of 1900;
but in spite of that he continued to spend every
day at the Palace and only took to his bed at
the very end after a few days' illness; he died on
the 15th of May 1900. His cousin al-Hâjî Mûkhtâr
succeeded him as grand vizier; he was a very learned man with a great reputation but
utterly unfitted for the life of intrigues that the
high officials of the Mâkhsûn need lead; the power
was really in the hands of al-Mâhdi al-Mâbebbî
(of the Mannâla), formerly a madâkhil (man-at-
arms), the creature of Bâ Ahmed, whom the latter,
on his death-bed had specially recommended to
the sultan. Al-Mâbebbî, who was an uneducated
upstart, displayed, however, both tact and energy
later. On the outbreak of the struggle between
him and al-Hâjî Mûkhtâr, the sultan, who was
even less able to retire from his many questions,
asked of al-Mâbebbî, who well knew how to incite
the sultan's propensities for sport, plays, and
diversions generally. He met with valuable co-
operation in an Englishman called Maclean, who
had been long with the Mâkhsûn as military in-
structor to the Moroccan Infantry. Sir Harry Maclean
was at the same time the intermediary of the
Mâkhsûn, in its intercourse with European mer-
schants. Billiards, tennis, cycling, photography, and
fire-works became the ordinary amusements of
the sultan. Many Europeans had the entrance to
the sultan's palace and joined in his amusements,
one of them a Frenchman, Veyre, has since pub-
lished a book on his life (Dans le secrét du sultan, Paris, 1905). He appears there as a man
of curious spirit, not very broad-minded, but after
all, exempt from fanaticism and as favorable to
the cause of civilization as is possible for a
sultan. In April 1901 al-Hâjî was deposed;
al-Mâbebbî was unable to claim his position;
he had Fâsidâl Bâari appointed in his place,
who immediately did what he could to ruin him.
He succeeded in sending him on a mission to
England and Germany, whilst 'Abd al-Karîn b. Sili-
mân, Minister of Foreign Affairs, went to France.
During his absence he was intrigued against,
and was obliged to return suddenly in order to
save his head; he succeeded in doing this with
an address which imposed upon his enemies. But
the sultan's amusements, which had been de-
ounced as irreverent by the Ulûms, had deeply
irritated the population, principally that of the
towns and above all that of Fes. The party opposed
to al-Mâbebbî pressed the sultan to
leave Marrâkûsh, where he had resided for many
years, to go to Fes, in which he was to be supported by the powerful party of Mussulman
scholars to checkmate the Minister of War. The
sultan started about the end of 1901, and after
remaining for a long time at Rabât entered Fes.
Not only did 'Abd al-'Azîz offend his adminis-
trated by the very methodos, amusements,
that he dictated himself, but he was also to call
forth their protestations on account of the ten-
dency to reform which he showed. He attempted
in fact, or at least he was credited with attempt-
ing, to alter the system of the enslave which
is called the tarzî, and fiscal reform was the
first that he wished to try. Taxes, according to
the new rules, would be collected by specially
appointed collectors instead of by the šâ'îds. This
reform displeased both the šâ'îds and the popu-
lace; it could not be enforced and for many
years, to the present time in fact, the tribes of
Morocco have paid no duty, neither the new nor
the old. The tarzî ended in making 'Abd al-
'Azîz unpopular and was one of the causes to
revolt of which Bir Idrîs made use. This
man, whose real name was Djalîl b. Idrîs al-
Zâlidâni al-Yâsîfi, came into public notice in
the district of Wad Inmann in the summer of 1902;
he passed himself off as the brother of 'Abd al-
'Azîz, Mâlîk Naasuni, formerly Khâlîs of Marrâ-
kûsh, afterwards in disgrace and imprisoned at
Mequines (Miknás), but still very popular. His
expression was that he was to replace 'Abd al-
'Azîz as a Sheriff who was not compounded with the Christians, and he had no pretensions — ostentatiously at least — to secure the throne for himself. Several co-
nunions sent out against him in 1902 having
mis-
carried, he succeeded in advancing with rather
important contingents to within two leagues of
Fes. Having been refused, he retreated to Tarà;
al-Mâbebbî, who showed great energy in the
course of this affair, was commanded to pursue
him, with the order not to return without bringing
as his prisoner the Rogâl, the agitators in Morocco, from one Djall b. Roqâl
(of the Rogâl), who rebelled in 1862. — Al-
Muebbbi succeeded in entering Tars, he wrote to the sultan to join him there and the latter stated to do so; but his route having been again cut off, he could not join his minister and so returned to Fez. The Regal had fled to the East: al-Muebbbi's exhausted column with difficulty succeeded in returning to Fez. Having fallen into disgrace, al-Muebbbi avoided a worse fate by making the pilgrimage to Mecca. It is common history how, on his return from this pilgrimage in 1906, he was definitely dismissed and replaced by Muhammad Geblis; the friendship of England enabled him to escape prison and the confiscation of his goods and he returned to Tangiers. As for the Regal, he continued to remain encamped in the enemy's country in the East and the Kif with varying fortunes, and he still remains there now (April 1906). The reign of 'Abd al-'Aziz is also notable for the famous Algerian affair [q.v.]. (E. Doucet.)

*ABD AL-'AZIZ* (Abu'l-Aziz) b. MAHMUD, a TURKISH SULTAN. 'Abd al-'Aziz, the second son of Mahmud II, was born in 1836, and on the 24th June 1861 ascended the Ottoman throne. At first he renounced a considerable part of his civil list, promised to content himself with one wife and reduced all household expenses, but soon his licentious nature broke out all the more violently. His reign was indeed marked by foreign wars, but on the other hand it was not by year sore tried by troubles at home. Montenegro rose to fight for its freedom, but was defeated and had to submit unconditionally (1862). Roumania continued to the treaty of Paris elected a Hellenic king as Prince (1865) and made its appearance as an independent State. In Servia national feeling was increased at the presence of Turkish troops; in 1867 the Turks had an important and tedious negotiations to vacate the citadel of Belgrade and the other fortresses. As early as 1866 the Cretans had demanded from the sultan radical changes in the administration of the island, and when this was not granted had insisted on being annexed to the kingdom of Greece. The indefatigable grand vizier Mehmed Emin 'Ali Pasha went himself to Crete to introduce the most liberal reforms. But in spite of their pitiful failure in the battle-field the insurgents refused to come to terms, Greece also prepared for war. In 1867 King George married a Russian princess and then the Czar demanded categorically the European Powers the union of the Cretans with their kinsmen on the continent. Nevertheless the Porte disdained presented an ultimatum to the Athens Cabinet and the powers urged both parties to keep calm. Crete was saved for Turkey and this was the only renowned success of Turkish policy under 'Abd al-'Aziz. In 1867 and 1868, thanks to the financial distress of the Porte, Egypt became practically, if not formally separated from the Ottoman empire, the dynasty ruling there acquired the right of direct succession to the throne and the governor was elevated to the rank of Khedive.

In Oct. 1870 through Russia's declaration that she no longer considered herself bound by the prohibition to pass the Dardanelles, the Oriental question was again brought up in its entirety. The supple Russian ambassador in Constantinople, Constant Ignatieff, was henceforth the centre for stirring up discontent amongst the subjects of the Porte—Slavs, Albanese, and even Arabs and Egyptians. Meanwhile the government of the spendthrift 'Abd al-'Aziz got further and further into difficulties, so that in October 1875 it had to declare the State bankrupt. Through Russian influence unexampled disorders had already broken out in Hercegovina and Bosnia in July 1875. Reform which the Porte earnestly took in hand were wrecked by the religious hatred of Christians and Musalmans. In 1876 the Bulgarians entered the lists and demanded a semi-sovereign kingdom, and in May the whole country rose in open rebellion.

Under the impression of these events a widespread agitation amongst the theologians took place in Constantinople on the 10th May 1876, which brought about an immediate change of ministry. Shortly afterwards the murmur of the sultan kindled a conspiracy, at the head of which was Midhat Pasha, the life and soul of the reforms, and in second command the energetic Minister of War, Hussein 'Abd Pasha, at the Old Turk. On the 30th May the sultan was forcibly dethroned and murdered on the 4th June by order of the conspirators, who feared a revolution in public opinion.

Angelegenheiten im Zeitalien des Pariser und des Berliner Friedens* (Berlin, 1892). (K. Schramm.)

*ABD AL-'AZIZ* b. MA'RUJ, son of CA'HIL Pasha (1835-1869), appointed governor of Egypt by his father, and after 'Abd al-Malik had ascended the throne, the latter confirmed the appointment. During his twenty years' sojourn in Egypt, 'Abd al-'Aziz proved himself a good ruler who really had the welfare of his province at heart. When in the year 69 (1859) Abd al-Malik, after the assassination of the rebellious governor 'Amr b. Sa'id, was going to have the latter's relatives executed also, 'Abd al-'Aziz interceded for them and persuaded the incensed caliph to spare their lives. Towards the end of his life 'Abd al-'Aziz suffered from the ill-will of his brother 'Abd al-Malik. Marward, and appointed him the latter's successor, but 'Abd al-Malik wished to secure the throne for his two sons al-Walid and Sulaiman, and therefore cherished the project of depositing his brother from the governorship and excluding him from the succession to the throne, when in the year 85 (1774) news suddenly reached Damascus that 'Abd al-'Aziz was dead.

*ABD AL-'AZIZ* b. MUHAMMED b. SALIM, a Wahhâbi ruler in Central Arabia (1765-1803). 'Abd al-'Aziz was born in 1721, and on the 14th Oct. 1803, during a service in the Mosque of Darâya was stabbed by a fanatical Shi'ite, who was enraged at the looting and destruction of the Shi'ite sanctuary in Kerbela by the Wahhâbiyyahs (1801). During his reign the domain of the Wahhâbiyyahs was extended far over the frontiers of Central Arabia (Najd), but it was not 'Abd al-'Aziz himself who played the most important
port in bringing this about, but his son Sa'd, who had been his co-regent since 1787. [For details see Sadi and Waniherst, under which the bibliography is also to be found.]

(M. T. Houtsmul)

ABD AL-AZIZ b. MUSA b. NUCAIR, a governor. When his father, the famous conqueror of Spain, left this country in the year 95 (715), he resumed his rule as governor and married the widow of the Gothic king Roderick, named by the Arabic Eulogia, Alu (Eulogia), or Umayya, after her son. According to al-Wakili and other Arab chroniclers, it was the arrogance of this woman which caused the Arab troops to murder him in the year 97 (717) in the monastery of Santa Rufina near Seville, to-day known as the Convento Capuchinos, formerly Convento de Santa Juana y Rufina before the Puerta de Cordoba. Others assert that they had received their orders from the Umayyad caliph Sulaiman.

ABD AL-AZIZ b. AL-WALID, son of Caliph al-Walid I. Under the generalship of his uncle Mullah b. Abd al-Malik, in 91 (709-710), Abd al-Aziz made the campaign against the Byzantines, and it is also said to have taken part in the battles against the same enemy. In 96 (714-715) his father endeavored to exclude from the succession Sulaiman b. Abd al-Malik, who had already been appointed as his successor, in Abd al-Aziz's favor; the effort proved fruitless though. After Sulaiman's death in Dajjâl (95 = 717), Abd al-Aziz was on the point of coming forward as pretender to the throne, but when he learnt that 'Omar had already been proclaimed caliph, he went to him and took the oath of allegiance.

ABD AL-AZIZ EFENDI KARA ÇELEBİ ZADE, kâdî‘i and historian of the Ottoman empire, the son of Hüsam. He was appointed Istanbul kâdî-i sâhib by the sultan Murad IV (1643 = 1653), and then deprived of his office in the same year on account of a famine which he had not remedied; he was put on board a boat to be transported to Prince Island, but was saved by the intervention of the vizier, Râzî, and was banished to Cyprus (Hüseyn Kesîf, ed. Filigia, v. 235). It was on this occasion that he wrote his poem Gulsan-i a’râf. By his intrigues he succeeded in obtaining the title of honorary muftî (9th Ramazân 1059 = 14th Sept. 1649), he was deprived of his position as kâdî‘i (8th Shawwâl = 15th Oct.), then, through the influence of the Sultans-Wâlids, he was made muftî in the place of Bahâyyâr (11th Djamâd I 1061 = 25th May 1651). He was arrested by mutin- nous bodyguard at their head, in connection with the alteration of the coinage, but succeeded in disarming the crowd; he was again deprived of office after the assassination of the sultans Kösem and later exiled to Chios, where he died on the 6th Rabî’ II. 1068 (11th Jan. 1658). He wrote a treatise on Muslim law which is a new edition of Ibn Naṣîr’s al-Najâh wa-l-manâ‘ir (Hüseyn Kesîf, i. 312), which he dedicated to the sultan Muhammad; Rumišt al-âdab (Bâlîk, 1248 = 1833), a general history up to the year 1058 = 1648 (Hüseyn Kesîf, iii. 494); Sultanîmân (Bâlîk, 1248), a history of the sultan Suleyman (Hüseyn Kesîf, ii. 145); a chronicle of events from the deposition of Hüseyn to the 18th of Safar 1067 (25th Nov. 1657). Being arrogant and fanatical with deprived morals he made many enemies by his malignant jealousy.

Bibliography: Hammed-Purgstall, Gesch. des Osman. Reiches, see index. (Ch. Huart)

ABD AL-DJABBAR b. ABD AL-RÂJÎM AN-ÂZIZ, a governor. Abd al-Djabbar, who had already taken part in the battles against the partisans of the Umayyads, was according to the same account appointed governor of Khawarij in 144 (757-758) by Caliph al-Mansur, but there he soon made himself known through his cruelty. In the following year, however, the caliph grew suspicious of him, and after some correspondence, in which al-Mansur and his governor each tried to outwit the other, the caliph sent an expedition against Abd al-Djabbar under his son Muhammad al-Mahdi. When al-Mahdi's general, Kharizm, b. Khazna, approached, the inhabitants of Merv al-Rûh revolted and took Abd al-Djabbar prisoner, whereupon he was taken to the caliph and executed after suffering terrible tortures.

ABD AL-DJALIL ABD L-MADHÂBI. [See ABD-AL-MUDÂBI.]

ABD AL-FATTÂH FUMANI, Persian historian, lived probably in the 16th and 17th centuries. Having entered the government service at Gilan (Ch. Schefen, Gesch. d. Staat., ii. 93), he was entrusted with the supervision of the accounts by the vizier of this place, Behâd-kâl, about 1018 = 1609-1610, and was then sent by Admiral Shah-i ‘Arâf. He wrote, in Persia, the Tab‘ih Gilân, a history of Gilan from 923 (1517) to 1038 (1628), which has been published by B. Dorn.

ABD AL-GHÂFAR b. ABD AL-KARIM. [See ABD-AL-RAZÂMIN.]

ABD AL-GHÂFAR AL-ÂKHAJAR. [See ABD-AL-AKHÂRIS.]

ABD AL-GHANI AL-NÂ‘ÂMULV, a mystic and very voluminous writer, born on the 5th Dhu’l-Hijjah 1050 (19th March 1641). Having lost his father at an early age, he entered the Sûfî order of the Kâdiriyya and of the Naqshabandîyya; and studied for seven years in Damascus, in his house in the vicinity of the Umayyad Mosque, the mystical works of Ibn ‘Arabi and ‘Abî al-Din al-Tijânî. At the age of 25 he made his first journey to Baghdad and stayed there some time. In his manhood, as he had already gained a certain
reputation as a mystic, he made several circular journeys, especially in his native country, in order to get into connection with men holding similar views so that they might help him, and also to visit as many holy sepulchres and other places of pilgrimage as possible. In this manner in the year 1192 (1685) he came to Lebanon, in 1191 to Jerusalem and Hauran, in 1196 to Syria and Egypt, and the Hijaz. In 1192 (1700) he went to Tabarinus. In 1194 (1703) he again settled in Damascus at the Sullayri and died on the 24th Shaban 1143 (3rd March 1731).

'Abd al-Ghani's literary importance lies in our opinion principally based on his books of travel, al-Hašbāh wa-maš'ūdūt yī ḥabab at-shābb wa-miṣr wa-l-hafsā (comp. Flügel, in the Zeitzeich., d. Deutsch. Morgens., Gelehr., xxx., 639 et seq. v. Krems). In the Slawh Büchern der phil.-hist. Classe der Kais. Akademie d. Wissensch., v. 319 et seq. 2, al-Hašbāh al-umāniyya fi ḥarāb al-ḥaṣābiyya, a journey from Damascus to Jerusalem and back, from the 17th Djamād I till 1st Shaban 1141 (29th March till 10th May 1700), finished on the 9th Džumāt al-Hijja 1141 (14th September); comp. v. Krems, loc. cit., p. 310; Gildemeister, in the Zeitzeich., d. Deutsch. Morgens., Gelehr., xxxvi., 385 et seq.). 3. Hallat al-ṭūlah al-bahāriyya fi ṣabāt ḥabab at-shābb wa-miṣr wa-l-hafsā (1744) was not his intention to work to give descriptions of existing conditions, but what appeared of most importance to him was, besides his own edifying experiences, information concerning the legendary history of holy places; he obtained such information more especially out of al-Ulūmi and al-Harawi. Nevertheless his accounts furnish us with a few positive dates for historical topography of Syria. The real centre of his literary energy lay, however, in mysticism, which he endeavoured to advance in commentaries to the works of earlier Sufis and in innumerable writings from his own pen. He also several times took part in the discussions which his contemporaries carried on question of practical religious life. Thus in 1696 (1685) he wrote a defence of the Mustawli-Derwische (comp. Amshurst, Pers. d. Nächsten- und Vaterlands. d.attributes. d. Heile, Wilh. von Hetten, Nö. 528); Catalog. W. d. oriental. Nö. 120) further, he endeavoured to justify the dancing and music of the Derwische (Amshurst, loc. cit., Nö. 4, 335, 522; Ehrard, 2. u. u. welche-die und nach unsern Wissens, li. 125), as well as their use of tobacco. He was also a poet and wrote not only the old Cašidi forms but also the popular Muwaššali (comp. Hartmann, Muwaššali, p. 6). The first part of his Diwan is printed with the title of Diwan al-ḥašbāh wa-maš'ūdūt yī ḥabab al-ḥaṣābiyya (Rütt, 1746; Cairo, 1752, 1306). His poem in praise of the Prophet with a detailed commentary on the mystical symbols, entitled: Naṣḥat al-ṭūlah al-umāniyya al-ḥaṣābiyya fi maḥl al-ṭūlah al-nasirīyya, was published in 1299. In the East he is, however, still most popular as the author of a work on dreams entitled Tuḥfat al-ṭūlah fi ṣabāt al-hašābiyya, in 2 cols. (Cairo, 1747, 1295; 1296, 1296, 1346, 1336, in magh. d. Dr. Strick, 1863). He also applied himself to the pseudo-science of prophecy, and wrote two pamphlets on the events to be expected under the rule of the Ottomans up to the years 1159 (1746) and 1284 (1687); dr. Slane, Catalogue des mss. anglois et de la Bibl. Nat., Nö. 1620 et seq.). Biographies of 'Abd al-Ghani are to be found in Marzidi, Siṣh al-ulom (Bilb., 1291-1301). II, 50-58; Dajjani, li. Allāh i al-tābi, (Cairo, 1297). 3. 154-157. A list of his writings in the year 1165 (1663) is given by Flügel, in the Zeitzeich., d. Deutsch. Morgens., Gelehr., xxxi., 694 et seq., another by Pancake, Die mus. Handschriften, 1336; Gercke, Nö. 1860; concerning the writings still extant see Brockelmann, Litter., II, 125 et seq. (Brockelmann)
to the Meḥāʾī, or Ḏawʾ Ḫusain Allāh Ar-Raʾīsī. One year later, Ābd al-Ḥākīm threatened the neighborhood of Fes. The Almohades, the Rūḥānī, and the Masmāʿ, group of the Band Ḥakīb, who had broken away from Ābd al-Ḥākīm out of jealousy, went to meet him. The battle on the banks of the Sāfī, some miles from Taṭārānūn, cost Ābd al-Ḥākīm and his eldest son, Širku, their lives. But the Marinides swore not to bury them without taking revenge. The Rūḥānī and their allies were beaten and pitiful in great numbers, the remainder fled (641 = 1242). Ābd al-Ḥākīm, and his son were buried in a Sāfī, and were taken later to the tombs of the Marinides at Fes. His second son, Šarhān, was clered by the Marinides as his successor.

Ābd al-Ḥākīm, an accomplished soldier, was also, according to the Muslim annals, a devout; he visited the altars of the saints pointed out to him, and fasted often. His holiness was such, says the legend, that sick persons who could touch the hem of his garment or his turban were cured. He was a true ascetic, contracting strictly with the Almohodes, persecutors of the Mamluks and religious men, such as Ālim Mūmīn of Tlemcen (d. 599 = 1197-1198), whose fame or religious influence annoyed them.

ĀBD AL-ḤAKM B. SATR B. DIʿĀB B. TURK

Ābd al-Ḥākīm b. Satr b. Diʿāb b. Turk, a Persian historian, born 958 (1551), died 1052 (1642), Ābd al-Ḥākīm in 996 (1588) visited the Hijaz to study there the traditions. Of his many writings the following may be quoted: Persian commentaries to the Arabic collections of traditions Mashhur al-maṣūḥāt wa Safar al-muṣūḥāt (Tunis, 1858), ed. by G. Fagman, in Revue Africaine, xxxvii. 215; al-Kairawānī, al-Mawṣūl al-aḥbāb fī ṣaḥīḥ al-ṣafar wa ṣuḥāb (Tunis, 1858), pp. 116-119; Ahmed al-Sulṭānī, Risāl al-ṣināfī (Carthage, 1304), li. 2-5; al-Zarkashī, Liwa al-Qattāl (Tunis, 1828), li. 14 et seq.; Fagman’s translation (Constantine, 1893), pp. 22 et seq. (A. Courn.)

ĀBD AL-ḤAKK MĀMĪD I

Ābd al-Ḥakīm, a modern and still living Turkish statesman and poet, born at Rebēk (Constantinople), on the 5th Feb. 1852. His father, the well-known historian Khāir Allāh Einfardī was Turkish ambassador at Teheran; his grandfather Ābd al-Ḥakīm, physician in ordinary to the sultans Meḥāʾī and Ābd al-Muḥammad, founded the Faculty of Medicine in Constantinople. Ābd al-Ḥakīm received his education in Constantinople and Paris and began his official career as secretary to the Turkish embassy in Teheran, then returned to the capital and, after filling several important offices in the government, was made secretary of the embassy at Paris (1875-1880). In the years following he was consul in Greece, Russia and British India (Bombay) till 1885, when he was appointed first secretary of the embassy in London. But with one short interval, 1895-1897, when he was pensionary at the Hague, he has since remained in London. He has already been appointed second and then first counselor to the legation. Ābd al-Ḥakīm is the founder of the modern Turkish school of poetry. Whilst Shināfī in his Musālākat (Selected poems), which form the starting-point of modern Turkish literature, was the first to publish Occidental poetry in Turkish translations, Ābd al-Ḥakīm was the first to write Turkish poems on European models. Of epoch-making importance is his poem Safīr (The Lambda), published in 1196 (1879), by which he freed Turkish poetry from the spell of Persian influence and established it on its own basis. His works are still difficult to obtain, having been printed almost only. During the last 20 years nothing has been published by him. The following works, mostly poetry—lyrical and dramatic—have been published: Miḥjārī (The Sikh (Lord’s Gate)), Sabr wa-ṭaṣāmil (Patience and perseverance), Maḥfīz (The Maiden (thoughtful)), Daʾūda-i Hindū (The Indian girl), Nizār, Nizārīn (both proper names), Safīr (The Lambda), Tusing, ʿAbd Ṭāhir, (both proper names), Muḥājir (The Emigrant), Ḥudūjī, (The Bridal chamber), Tarīk (proper name), Bistī yahud Divān-e-fīl (The Twain—i.e., Paris—yv My Fellow), Ola, (Death), Rumārā, (The door (To Thay), Ber sefīlīn hasb hāl (Story of an unhappy woman). The following poems which were said to be in preparation, have never appeared: Ibn Mūsā, Sekhānī, Šīrāzī, Liwāt, Ḳāṣīr, Ghāzvīnī, Mīr-ʿAbd, Ḳāṣīr al-khīr. Of Ābd al-Ḥakīm’s followers in literature the most important is Ezām (b. 1825).

new ruler was to subjugate the province which had revolted in consequence of the failure of the so-called Kafir Rebellion, and his sons were the virtual masters of the country. The Egyptian Mahdi had proved himself incapable of mastering the country, and his son, the prophet of the Fatimids, thus acquired the province in which he was regarded as the successor of the Prophet. The new governor of the province was the famous Ahmad Beis el-Djarrat in 1776.

A short time thereafter Turkey was to measure its strength against Irak. Karim Khan, the most powerful of the Persian princes, had annexed the Ottoman province. The caliph's army was attacked by the Persians at Karkh (December 1776), and driven back to Mosul (Mosul), with considerable losses. Began, too, remained in the power of that experienced general, Karim.

The plans of the European governments became more dangerous still to Turkey. Peace with Russia had hardly been concluded when Austria at one blow seized Bukovina. The Porte was helpless and finally renounced all claims to the lost province by treaty (May 1777).

From the beginning of the Porte unwisely set the Powers in movement against the reviled Peace of Kuch-Katranje, not only because it demanded from Russia most extensive modifications. The Christians, however, supported in every way the Tartar Khan, whom Russia had appointed, and who was a Philo-European, and as the grand vizier continued to resist, she entered Fereka which is the key to the Crimea (December 1776). Finally war was averted by Turkey's recognition of the Russo-Turkish Khan (March 1779). A revolt against her protege gave Catharine in the spring of 1783 an excuse for annexing the Black Sea and the whole of Tartary. Abd el-Hamid submitted to this by the decree of the 8th January 1784.

Matters seemed to be taking a peaceful turn, when in 1784 all the khans and tribes of Christian and Mohammedan faith in the Causcasus took up arms against the Russian Khan, the prince of Persia. This feud so rich in deeds of valor was stirred up by both parties and finally, as Russia insisted on settling the affair alone, brought about a declaration of war by the Porte and the great struggle which engulfed the whole East. The attack by which the Turks immediately surprised the hero of this war, Suvoroff, the general in command at Kinsburn, was repulsed with little trouble. The sultan's position became still more pitiful when Emperor Joseph II, who had already invaded Servia, declared war in February 1778. Even Hassan Fada, the Imam of Iskak as he was called, saw his entire fleet destroyed in the Liman off the Crimean shore (June and July 1778). It was fortunate for Turkey that at least little Sweden overran Russia and that Austria, although fairly successful in Besarabia, cut no very brilliant figure in either Servia or Siebenbriicken. The great event of the war was the incomparable feat of arms of Suvoroff's, the storming of Odovuk (December 1778): 10,000 Turks and inestimable booty covered the ramparts. Besarabia was thus as good as lost to the sultan. In 1789 no further collision had taken place, when in April 7th Abd el-Hamid died from apoplexy.

The portrait which contemporaries sketched of the sultan is not exactly flattering; physically clumsy, mentally undeveloped, he possessed neither discernment nor determination. He was unable either to take advantage of the promising national and religious movement in the Caucasus, or to use with success the means that his army and army could afford him.

'ABD AL-AMID II, the present sovereign ruler in the Ottoman empire, son of Sultan 'Abd al-Majid, born the 4th Shawwal 1258 (21st Sept. 1842), was thirty-three when the ministers, having deposed his brother, Murad V, called him to the throne of 'Othman (18th Shawwal 1253 = 31st Aug. 1870). For particulars about the principal events in his reign, the insurrection in Bosnia and Herzegovina, the war with Servia and Montenegro, then with Russia, etc., see special articles.

'Abd el-Hamid II has continued the work of reform (tasawwur): during his reign legislation has been perfected by the compilation of the Medjell, or civil code, by the appointment of public prosecutors empowered to proceed, in the name of the State, against minor and serious crimes (taken from the French system), and by the codification and amalgamation of numerous laws. At the same time he raised the credit of the empire by constituting an international administration, representing the interest of the headholders, i.e. the owners of shares of the foreign debt, and authorized to receive the revenues of the State (indirect taxes) such as the salt tax, duty on spirits, etc., which were granted to the tobacco tax, over which it had control at first, was later entrusted to a participatory administration. The establishment of numerous primary Musulman schools, the making of a network of roads, unhappily not yet finished, the building of bridges, and the concession of certain railways (in Europe, to join the lines from Constantinople and Salonica with the European system, the line from Monastir and the junction between Salonica; in Asia, the Merina-Adana line, the Angora line, the Konia line, with extensions towards Bagdad and the Persian Gulf, the Mecca line, finished as far as Mecca, and the Jaffa line to Jerusalem; a cog-wheel tramway from Beyrut to Damascus) and imports (Salonica and Beyrut) show the desire and firm resolution of the sovereign to maintain, in face of a thousand difficulties, the progress begun by his predecessors and to continue their work.

Duruy (Paris, 1881), pp. 557 et seq.; Dutt's k, translated from the Turkish by Nicolson; Midhat Eflimi, Tabelle des Sultanen (Constantinople, 1894-1895), translated by A. von Drygalski, in Samior's annuaire of L'Europe (Berlin, 1880); Gioacumetti, Mémoria (Constantinople, 1824 = 1827); All Nighti, Paghin, Memoires (Paris, 1878), in Turkish.

(Ch. Huart.)

'ABD AL-HAMID LAKHNI, a Persian historian, died 1065 (1653), author of the Pad-
ABD AL-AL-AMIR appears to have attended. In 521 (1127), on the advice of the Sufi Yusuf al-Hamadani (440–535 = 1052–1140) he began to preach in public, at first in a small audience, which gradually increased, till he took a chair in the oratory at the Ahsan gate of Bagdad, and owing to the constant increase of his hearers, he found it necessary to go outside the gate. There a炫if was built for him, and in 528 (1134–1135) by public subscription the school of Mahaniyin al-Madarij (presumably then dead or retired) was enlarged by taking in the space occupied by the neighboring buildings, and 'Abd al-Kadir was installed in its head. The nature of his courses was probably similar to those of Djamal al-Din al-Djasewit which are so vividly described by Ibn Djuhain. On Friday mornings and Monday evenings 'Abd al-Kadir preached in his school, on Sunday mornings in his monastery. Of his numerous pupils many were afterwards famous as saints, while some (like the biographer, Samani) acquired distinction of another sort. His sermons are said to have effected the conversion of many Jews and Christians to Islam, and as of some Muslims to the higher life. Presently, often in the form of verse, were sent him from the numerous regions whether his fame penetrated: one day's such receipts often amounted to more than one dinar. These enabled him to keep open house for aspirants. Legal questions were addressed to him from all parts, and these he is said to have answered impromptu. Caliphs and viziers are supposed to have figured among his clients.

'Abd al-Kadir's works are all religious in character, and largely consist of reports of his sermons or addresses; the following are known:

1. Al-Qura'un fi-batil part' al-azzab, a ritual and ethical treatise (Cairo, 1288).

2. Al-Fath al-rahmaniyya, 62 sermons preached in the years 545-546 (1150-1152) with appendix (Cairo, 1302). MSS. sometimes bear the title Sittat al-musafir.

3. Partih al-khass, 78 sermons on various subjects, compiled by the sheikh's son 'Abd al-Ra'izzah, followed by his dying injunctions, his sermons on the father's and mother's side, proof of his connection with Abu Bekr and Omer, his creed, and some of his poems, (in the margin of al-Shatani's Rudbar al-a'rur, Cairo, 1204).

5. Usulis al-khatif (mentioned by Hajjul Kha'ita), a collection of sermons of which the first bears the same date as 59 and the last the same as 57 of N. 2; perhaps it is another title for the same work.

7. Yama'ha al-khatim (mentioned by Hajjul Khala'fa).

9. 'Abd al-Kadir is named in the A' rawir and other biographical works (MS. 624 in the India Office Catalogue is an imperfect copy of this work, and Persian writers speak of them generally as Mafjuzal-Ha'dir). In these works 'Abd al-Kadir figures as a capable theologian, and an earnest, sincere, and eloquent preacher. Many a sermon is introduced
list of persons who heard him say 'My foot is on the neck of every saint' and he is similarly made out to have claimed the possession of seventy gates of knowledge, each one of them broader than the distance between heaven and earth, &c. Late followers of 'Abd al-Kādir (such as the author of the Persian treatise Malekšā'in al-kadiriya, MS. Brit. Mus. Or. 243) while endeavoring to restrict the universality of the first of these sayings, try to show that 'Abd al-Kādir was justified in uttering them. In Damāri (i. 320) only find it in evidence of 'Abd al-Kādir's dignity. Sayings of this sort do not seem to be found in the genuine works of the sheikh (though there are parallels to them in the poems ascribed to him), and are probably due to the enthusiasm of his followers. With them his fame has in some places nearly displaced that of the Prophet Muhammed, and he is regularly styled the Sultan of the Saints, nor is his name ever uttered without the following epithets: Abū al-'Alā', Abī al-'Alā', Abū Allāh, Abī Allāh, Nūr Allāh, Khālīf Allāh, Sīf Allāh, Fīrūz Allāh, Firdawī Allāh, Yūsūfī Allāh, Ghanī Allāh, Abū-ṣāliḥ al-Aṣ'ā. (See 'Alā'ī, supra). The growth of the legend was probably aided by his many sons, of whom eleven are mentioned in the Bahā'f al-nawāri as following in their father's steps: Ta'ī (d. 573 = 1177-1178 in Egypt), 'Abd Allāh (d. 599 = 1193 in Baghdad), Sāliḥ bin Ta'ī (d. 592 = 1196 in Wazīr), 'Abd al-Wālī (d. 593 = 1197 in Baghdad), Yahyā (d. 605 = 1206 in Baghdad), 'Abd al-Razzāk (d. 604 = 1205 in Baghdad), 'Abd al-Rahmah (d. 594 = 1194 in Bagdad), Mūsā (d. 618 = 1221 in Damascus), 'Abd al-'Alī (d. 616 = 1217 in Damasc), 'Abd al-'Ali (exiled to Qāhirah, a village of Sīdīqā, d. 612 = 1216-1216), 'Abd al-Khalīm (d. 597 = 1192), and 'Abd al-Dā'im (d. 575 = 1179-1180). Some authorities add a few more names. Of these 'Abd al-Wālī inherited his father's schools, in which he was succeeded by his son 'Abd al-Sulfān (548-611 = 1153-1215) who was followed by his cousin Abū Sulfān, &c. Son of 'Abd al-Razzāk (564-651 = 1168-1256) to whom we owe the hagiographies of Nāyir the family of 'Abd al-Kādir were temporarily called from Bagdad. Some of them perished when Bagdad was taken by the Mongols, but the headquarters of the society (except for the brief internal mention) have always been in that city.

Bibliography: A list of biographies of 'Abd al-Kādir is given by Ahkwāt, Persian. d. evub. Handicar, Nos. 10072-92, of these the following have been published: al-Shajani, ufr. Baghdad (Cairo, 1304), Muhammad ibn Yahyā Tāfāsīf, Khālid ibn Aḥmad al-Qāhirī (Cairo, 1303); Muhammad ibn al-Dīn̄, Nasīḥat al-ṭabāk (Fes, 1309), translated by Wehr, in Mem. of the Roy. As. Soc., 1903. Further, qāsim al-nāṣirī ascribed to Ibn Ḥujjā (not in Ahkwāt's list), edited by D. Ross (Calcutta, 1905). Probably the best extant biography is that in Dāhibeh's Tāfāsīf al-ṭabāk, largely based on Ibn al-Najjār (published in Mem. of the Roy. As. Soc., 1907, pp. 267 et seq). Shāhīd Sāfīdī is said to have recently written the biography of 'Abd al-Kādir. Modern European writers dealing with 'Abd al-Kādir, Modern European writers dealing with 'Abd al-Kādir and the Kadhirs are: L. Rinn, Morava et Khoum (Paris, 1884); A. Le Chatelier, Conférence du Maître à la Mecque (Paris, 1887); Depont et Coppolani, Conférence religieuse sur l'aslamé (Algiers, 1897); Curte de Vivien, Gesani (Paris, 1902).
"A'BD AL-KĀDIR. 43

A'BD AL-KĀDIR B. MUBAYYID AL-HĀVARI, the Emir, born in 1823 (1858) near al-Muṣṣala (Mascara). His family was one of the most influential in the Hāvī tribe, which, after having resided for a longtime in Morocco, removed and established itself in the 18th century in the beylic of Oran. In addition to the prestige derived by this family from its princely source was added the reputation for boldness gained by Mubayyid b. Mahmod b. Muhṣir, the grandfather of A'bd al-Kādir, who was a hero in the fight for the independence of Algiers from the Turks. His famous son, A'bd al-Kādir, then, grew up in a religious environment. Without neglecting his training in arms and athletics, in which he soon excelled, he applied himself especially to examine the sciences of reason and revelation. Like his father he became a lāzīr and theologian, and he always was so even when circumstances made him a warrior and head of the State. Having been sent by his father to Oran, he came back with the sentiment of the military and political weaknesses of the Turks. His father, who was a great hero of the beylic of Oran, was killed by the anatoletes in the north of the province, was arrested by order of Hasan Bey. He succeeded, however, in obtaining permission to leave Algeria and went to Arabia, taking with him A'bd al-Kādir, who spent two years (1827-1829) in Asia.

On his return to Africa in 1829, A'bd al-Kādir and his father presented at first to live in retirement. But the events consequent upon the taking of Algiers by the French furnished them with the opportunity of putting themselves at the head of the tribes and of posing as the irreconcilable adversaries of the Turks. Thus was it that A'bd al-Kādir having stopped his father from giving help to Hasan, the bey of Oran, the latter was obliged to tender his submission to France. Mubayyid-ull-Din, although he declined the honor of being the supreme chief of his compatriots, took the command of the troops who were fighting with the French garrison of Oran. In the course of the campaign Mubayyid-ull-Din showed so much courage and aroused the admiration of his compatriots by his skill on horse-back and his coolness. Therefore, when Mubayyid-ull-Din declined to accept the title of sultan for the second time, he was easily able to persuade the tribes to recognize A'bd al-Kādir as their leader, and the latter was proclaimed sultan on the 21st Nov. 1832. However, in deference to the Shari'at of Fez, whose unfriendliness he was afraid to excite, he refused to make use of this title and contented himself with that of emir.

A'bd al-Kādir's political life may be divided into three periods: 1. From the date on which he was proclaimed sultan in the Tafile treaty (30th May 1837). 2. From this treaty to the breaking of peace (20th Nov. 1839). 3. From the recommencement of hostilities with France to his voluntary surrender (23rd Dec. 1847).

I. In the first period A'bd al-Kādir strove to bring the whole western beylic under submission. Having taken Mascara his capital, he proclaimed Al-Hijr War through the whole province. At first he was unfortunate, for he had at one and the same time to fight the French and to subdue his Musulman rivals. He succeeded, however, in seizing Thémenc, but could not get the better of the Turks, who were occupying the citadel, the "Mesghawat." His position became more advantageous through the convention, called by historians the "Desmichalt treaty" (30th Feb. 1834), which, being drawn up ambiguously with considerable differences between the French and the Arabic text, was entirely to the benefit of A'bd al-Kādir. In reality, he obtained the possession of the entire beylic of Oran with the exception of Oran itself, Arzen (Arzoun) and Mostaganem. He was authorized to appoint consuls in these towns as well as in Algiers and to provide himself with arms and ammunition of war. Thus with the consent of France A'bd al-Kādir became the legitimate ruler of all the Western Mussulmans. The alliance with France also helped him to triumph over his Musulman enemies, who had risen against him on account of the convention he had just concluded with the French. He at once lodged himself with subduing all parts of the country where the French were not yet established, and, despite the protestations of Governor-General Drouet d'Erthen, he took possession of Médéa and Leghway, where he left garrisons and placed lieutenants. Being recalled to the province of Oran by the defection of the Smulas and Donclas, who had just gone over to the French, A'bd al-Kādir commenced hostilities against General Trézel, who refused to give up the rebels, and the victory of McMach (26th July 1835). This victory drove the French government to act with energy and A'bd al-Kādir saw his capital, Mascara, invaded by a French column under Marshal Clary. His position was at one moment very precarious: — repulsed by the Turks who were enclosed in the "Mesghawat" at Thémenc, he was defeated by General Rugaud on the banks of the Sika. But, thanks to his diplomatic abilities, A'bd al-Kādir managed to get General Rugaud to sign (30th May 1837) the Tafile treaty, which extended the dominion of A'bd al-Kādir in Algeria even further than the Desmichalt treaty. It granted him, without any concession on his part, nearly the whole of the beylic of Oran, a considerable portion of that of Algiers, and the entire beylic of Tifnit, making together as much as two thirds of Algeria.

II. The two years which followed the Tafile treaty were employed by A'bd al-Kādir in strengthening his authority. The tribes of Tifnit having refused to pay him taxes, he defeated them on two occasions and forced them to submit. Despite the clauses of the treaty, which kept the eastern province under the influence of France, he placed lieutenants in Mejzara and the Zigha as well as in Laghway. The Marchion, Muhammameh Teyjāf, who was very influential in the Sahara, was the only one who tried to resist him. The emir went in person to attack the Amir of Ain-Mahdist, the residence of his opponent, and after a siege of five months (11th June-17th Nov. 1838) succeeded in taking it. The capitulation of this place, to which the Turks had never penetrated, showed the native chiefs that not one amongst them was in a position to refuse to obey A'bd al-Kādir.

Having thus created a Mussulman state by diplomacy and was A'bd al-Kādir attempted to organize it by substituting relative order in place of the anarchy which reigned in Algeria after the overthrow of the Turkish government (see ALGIERIA).

He placed himself especially with the formation of an army capable of resisting the Christians. He added to the contingents furnished by the tribes, who were brave enough but undisciplined,
a regular army comprising infantry, cavalry and artillery, composed of soldiers enrolled as volunteers and paid by the paycock. The instruction of these soldiers was confided to Tunisian and Tripolitan soldiers, and also to deserters from the French army. Abd al-Kadir drew up regulations as to uniform, food, pay, hierarchy, promotion, discipline and the decorations of the soldiers. To supply them with necessaries of life he established silos of grain; he organized manufactories of arms; and had fortresses repaired or built, as much to guarantee the country against invasion by the Christians as to keep the tribes in submission.

III. Abd al-Kadir and the French could not agree about the interpretation of certain obscure clauses in the Tafuna treaty. Marshal Valéry opened negotiations with Abd al-Kadir for the purpose of modifying the convention of 1835, but they came to nothing. Soon the expedition of the "Portes-de-Fer" in the course of which a French army, led by Marshal Valéry and Duke d'Orléans, passed through the whole province of Constantine from East to West, was taken by the emir to be a violation of the Tafuna treaty. He declared at Médès a Holy War and began hostilities by ordering his lieutenant Ben Salem to invade Médès, where the forces were sacked and the settlers massacred (20th Nov. 1839).

From that time it was a fight to the death between the emir and France. From 1841 Abd al-Kadir lost many fortified positions, but it was in 1842 that the insurmountable blow was given to his power by Marshal Dagorn, who took all his fortresses one after the other. Thus he lost Boghr, Tarek, Tagleenat, Mar 或 and the valley of the Chelif. He still held out in the West, but the occupation of Timmene and of the district of Nedroma obliged him to fall back towards the South. In the following year he received an insurmountable blow; a part of his army [see the article] was taken by surprise by Duke d'Ammaie at Tagline on the 26th of May 1843. Closed in by the French columns and abandoned by most of his partisans, he was forced to take refuge in Morocco.

However, he did not yet allow that he was beaten. Through intrigue he brought about a rupture between France and Morocco, in the hope that by means of this diversion he might again have the best of it. But the Sherif's army was defeated by General Legrand at the battle of laly (12th Aug. 1844), and by the treaty of Tangiers (10th Sept. 1844) the sultan undertook to render Abd al-Kadir harmless. This clause was not observed, and the emir remained cantonned near the Algerian frontier, watching events. He took advantage of the insurrectionary movements which took place in 1846 to reorganize his forces and made a bold excursion into the land of the Kabyles. But, being pursued by the French columns without any respite, he had to beat a retreat and regain Morocco. Finally Abd al-Kadir, in compliance with the repeated injunctions of France, decided to send a strong army against him. "Abd al-Kadir, who was at the end of his resources, offered his submission to General Lamoricière on condition that he should be permitted to retire with his family to Alexandria or to St. Jean d'Acce. This request was received favorably and the emir delivered himself up to the French on the 23rd December 1847.

Circumstances delayed the fulfillment of this promise. The emir had been taken across to Toulon, whence he should have embarked for the East. He was still in Fort Lemaigre when the revolution of February 1848 broke out. The Provisional Government did not think it right to ratify the promises made by Lamoricière and Duke d'Ammaie, and Abd al-Kadir remained in France in captivity. He was confined at Vaux and then at Ambérieu, the 10th Nov. 1848, and remained there until the 16th Sept. 1854, when Louis Napoleon went in person to announce to him his enlargement. After a short stay in Paris he went to Constantinople and to Brussel, where he resided from 1853 to 1855; then, on account of the earthquake which destroyed this town, he went with the authorization of the Turkish and French governments, to settle at Damascus. In this town he led a retired life, dividing his time between study, religious exercises and the education of his children. In 1860 when the insurgents threatened to massacre the Christian population, Abd al-Kadir with the co-operation of Algerian emigrants released the French consul and saved nearly 1500 persons. The French government recommended this conduct by giving Abd al-Kadir the Grand Cross of the Legion of Honor. In all circumstances besides this the emir most scrupulously observed his promises to France. In 1870 he disavowed the intrigues of one of his sons; in 1871 he openly censured the fomenters of disorder, who were using his name and his zeal to stir up rebellion among the peoples of the East. When the revolt broke out he wrote, without success though, to the insurgents to induce them to lay down their arms. He died at Damascus in 1883.

Belonging by birth to the religious aristocracy, "Abd al-Kadir was above all a convinced believer. His faith was ardent; his mystic enthusiasm excited the admiration of his co-religionists, and even struck the few Europeans, who had the opportunity of approaching him. More a theologian than a warrior, knowing the Koran and religious literature from end to end, he made free use of spiritual weapons, adopted texts to serve his ends and fought his enemies with eloquence as much with words as with arms. But he was also clever enough to make use of a fanaticism, the sincerity of which we ought not to doubt, for his personal ambition. He was a Mussulman in his faults as much as in his good qualities; without doubt loyal but having recourse unscrupulously to perfidiosity and artifice to assure the success of his cause, which he confused with that of Islam; just from an Oriental point of view; generous and humane, but bloody and merciless when he deemed it necessary to exterminate his enemies. In short he was a true descendant of the Maghribine empire founders in the Middle Ages, of "Abi al-Mu'min for example, rather than a reformer impressed with Western ideas."

"Abd al-Kadir attached much importance to intellectual culture, and wrote poetry of different kinds himself. During his residence in Brussel he wrote a philosophical treatise called Dikrwa 'azal wa-karim al-ghibla. In the first part of this work the author criticizes the character and nature of Philosophy and Religion; in the second he reviews the history of the nations that have shown a marked taste for science. According to M. Morand, "Abd al-Kadir also wrote an Autobiography..."
and a treatise called *De la fidélité des mar- 
mans à l'obéir, leurs traits d'alliance et 
dures during his captivity in Abohe.

*ABD AL-KADIR & OSMAN AL-BAKHITI, 
a well-known philologist, born in 1890 (1881) at 
Bagdad, studied for a year in Damascus and then 
at the Asurah Mosque in Cairo, where he 
studied under the guidance of his teacher. 
In 1885 (1874) he returned to 
Damascus and there made the acquaintance of 
A. of ..., Kupeli, who took him 
under his protection. As he could not stand the northern 
climate, he soon went back to Cairo. Later on 
he again tried his luck in Damascus, but caught 
a disease of the eye and arrived at Cairo almost 
blind. He died there in 1903 (1882).

*Abd el-Kadir's chief work is a commentary 
on the collections of works in the commentary 
of al-Astari (d. 868 = 1277) on the *Kabha, 
the text-book of syntax by Ibn al-Hajj (d. 868 = 
1249). This super-commentary is entitled *Kala 
idiel abd al-said mos-uqib ibn al-Is sanitized (4 vols., 
1302). In it he made use of many 
logenical and literary works, which are 
no longer extant, and gives long extracts of them. 
He was also an excellent Persian scholar and 
In 1657 (1647) compiled a dictionary to *Firdaws 
and also a commentary to the poem of Shabiti (q. 
V.). Comp. *Abd al-Muhtadi *Baghdad, Lexicon 
Sulaiman, ed. C. Salzmann, St. Petersburg, 1893.

Academia di Lince, Rome, 1887); Muhabbi, *Khanistan al-Asir, II. 451-454; Breckelmann, 
*Gr. u. arab. Litter. II. 1986.

(HOECKELMANN.)

*ABD AL-KAIS (but very rarely *Abd 
Kais; in *Pellos *Avanwani, i. e. "servant of 
the god") Kais, the name of a North *Arab 
tribe, which dwelt in Bahrain; also a 
mans's name. — The *nasa from it is 
*Abd, more rarely *Abba; a derived verb *Abba. 
The pedigree of *Abd al-Kais, the founder of 
the tribe called after him, is stated as follows: 
*Abd el-Kais b. *Abd el-Kais b. *Abd el-Kais b. 
*Kais. The most important branches of the *Bani 
*Tabellen, A.), were the Laks and the *Kas, which 
last consisted of the two groups, *Shams and 
*Lahib; the latter appears indeed as the representa- 
tive of Bahrain. The *Bani *Nahas and *Lahib had 
its parts but a loose connection with the main 
body of the *Bani *Abd al-Kais. By the side of 
the *Abdites there lived in Bahrain numerous 
*Tarabites and Bekrites (the *Abdite Duna are 
also called *Waha), and here and there *Kindites 
also. They shared the place al-Tunam with *Abdites 
and *Hamites. Many places were lost by the 
*Abdites, Persians settled amongst the *Abd al- 
Kais especially at the time of the Persian over- 
manship. A portion of the foreign working-class 
population, which partly established itself in Bahrain 
in the early days, were absorbed in the *Abd al- 
Kais. Nevertheless the population of Bahrain was 
proportionately *Abdite, and the *Abdites dwelt 
on the coast as well as in the houses of the inte- 
rior. To the west the entirely uninhabited 
desert south of Bahrain formed the frontier of their 
province, but there were *Abdites also on the other 
side in *Oman. Here dwelt a part of the *Nakrites, 
whose most numerous and respected branch, howev- 
er, remained in Bahrain. Further there were *Abdites 
and *Awakites in *Oman. A number of *Nakrites lived 
even in *Yemen. To the north were the 
Tanimites.

The following were *Abdite settlements in 
Bahrain: *al-Ahmar (subsequently capital of the 
*Kuwaitis), *Alhwa, *Bahrain, *Dara (or *Dahr), 
*Hafara, al-Iljar, *Dawlah (a strong place), 
*Hajar (an important place inhabited by the 
*Kuwaitis), al-Iljar, *Kaffah (a province with a 
capital of the same name, inhabited and popu-
leed. The town inhabited by the *Hafara, with 
its island lying in front of it is a little to the 
north-west of the island of Bahrain; it became an 
important place of operation for the *Kuwaitis, 
*Kuwait, *Hafara B., (in the far South), *Musharit 
(a strong castle near *Hajar), al-Nahja, 
*Hafara, *Hafara (close to *Musharit), *Shair, 
*Sulaiman, *Ukayd, of the vicinity of *Kaffah). — *Kaffah (see above), 
was situated in the *Yemen, no doubt the present 
*Taim.

*Abdite rivers of Bahrain were: *Ainah (also 
amen of a district; the poet *Meshad *Ainah is 
called after it), *Kuwa, *Majjilim (or *Al-Ain; 
designated as *sawh, and of such abundant water 
supply that the fortress-mount of *Musharit 
could be fed from it), *Shafa (in the province of the 
*Amirah whose possession it was, however, 
contested).

Outside of Arabia there were in pre-Mohammed- 
tan times *Abdite settlements, at least *Shafar is 
said to have brought *Abdites into Persia. 
It may be stated with certainty that *Tawwaj 
(also called *Tawwaj) first received *Abdite settlers 
in *Oman's time. In this hot but palm 
planted town and province in the sea-coast 
region of *Fars there lived numerous *Labdt. *Abdites 
were further traceable in *Bahr (Dilites), *Kuwa (in 
considerable number, with their own mosque), 
*Mashad (Labdita), *Ishahah (amongst the rare *Arabs 
in that place) and *Maya. In the days of *Alu as 
*Abdites there were about 4000 *Abdites among the 
*Yemenite *Qurash tribes of *Khazair.

Historical. The early inhabitants who were driven 
down out of Bahrain by the *Abdites are said to have been 
the *Yiabites. When later on *Al-Harid b. *Amr, 
the grandfather of the poet *Mura's *F-Kais, made 
himself the king of the *Nizar tribes at their own 
request, he is said to have sent his son *Abd 
Allah in the *Abdites. As the *Abdites dwelt near
ABD AL-KAIS — ABDEL-KARIM

the frontier of the territory of the Lakhmids of Oman, both peaceful and warlike relations ensued, e.g., with 'Amr b. Hind, Sallāh b. Hind, al-No'mān b. al-Mundhir. Like the other Bani Arab, the 'Abdites also ravaged the Persian coast. For this reason the Sassanids always endeavored for their part to have, if possible, one or their trusted friends made Shāhīd of the 'Abdites. Shāhīd II scourged their band pithlessly on a search to Bahrain, the city of Husayn was laid in ruins and the tribe had only found refuge in the desert, which were impracticable for the Persians. Therupon it is true Shāhīd started to re-settle Husayn with 'Abdites. The accounts of the 'Abdites' connection with Muhammad in the first year of his flight, or according to others even before the flight, are merely tendentious inventions. It was not before the year 8 (630), after Muhammad had reached Kūfiya, that Islam firmly took root amongst the 'Abdites. Muhammad in that year, some say as early as the year 6 (628), sent 'Alī to al-Mundhir b. Sawa, who, together with a part of the inhabitants of Husayn embraced Islam. Then followed Muhammad's customary treaty with the tribe and the embassy of the tribe to Muhammad. Shortly after the Prophet, al-Mundhir b. Sawa died. When news of this the Bahrain-Bekrites took part in the general espousal of Arabia, there was great agitation amongst the 'Abdites, but the influential 'Abdite al-Dhārī, who at once stepped into the breach, succeeded in keeping the tribe true to Islam and at least neutral in the war which was breaking out. After his death it is true the rebellious splints got the upperhand, his people were besieged in two places but delivered by the general al-'Ali, who had hurried up at 'Abd Bekr's command. The 'Abdites of 'Umar remained faithful and gave no assistance at a critical moment. 'Abdites took part in the reconquest of Oman, Musul, and Yemen. Al-'Ali remained commander-in-chief of the 'Abdites under 'Omar also. There were 'Abdites in the army which undertook the conquest of Fārs with Bahrān as leaders; members of this tribe are also mentioned as being present at the battle of Buwād (14 = 635). In 'Alī's war against al-Zubair no doubt for the most part they stood by 'Alī, although a few fought for al-Zubair. We also find them on Alī's side at the battle of Soffa (37 = 657) against Mu'āwiyah. In the Khāribīn war they were on the Government's side, just as they were in Alī's days and in the Umayyad period, e.g., in the battle of Dālib (65 = 683-685), and so also the Nefīdi agitation in Bahrain and Fārs was opposed by the 'Abdites. This did not prevent them from being hostile to al-Hajjāj. In the 13th Hijrah period, they took an active part in the great revolt of the slaves which broke out in Iskā in the year 255 (809) and was headed by an 'Abdite, who styled himself a descendant of Caliph 'Alī. The Karmathians were seen Karmathians was also carried on with the help of the 'Abdites and in it they played for the last time an important role in history.

No details are known concerning their religion during the pre-Muslim epoch. There were at that time also Zoroastrians, Aramaeans and Jews amongst them. Bīrāb b. al-Bard is mentioned as a Christian and highly respected personage, whose pious Jīdī, Christian 'Kāsī is also said to have found followers among them, al-Dhārī, who was one of the ambassadors of the 'Abdites to Muhammad in the year 8 (630), was also a Christian. It is supposed that the partisanship which caused so much worry things took its rise among the 'Abdites.

As a linguistic peculiarity is mentioned the fact that the word for 'wattles', which was otherwise dawr and has been handed down in especial in Kūfī, Till, was pronounced dāru by the Jinnites and dawr by the 'Abdites. It is also the name of an 'Abdite minor tribe. A kind ofleak (called birrāk, also wa'd, wa'dm), which was said to spout the color of the teeth, passed for a favorite national dish.

'Abd al-'Umūd Ma'mar b. al-Muhammad, who is said to have been versed in the history of the Arabian tribes, wrote Nīkāh al-Muhārīr, 'Abd al-Ka'īs; 'Allān al-Shāhīd wrote Muhārīr Abī al-Ka'īs. The former probably, the latter certainly contained for the most part calumnies. Further al-Madīnī wrote Nikāh al-Muhārīr, Abī al-Ka'īs. All of these three works have been lost. (REYNOLDS

ABD AL-KARIM B. ADJARBAW [See also ADJARBAW]

ABD AL-KARIM B. BHURJAN, a Persian historian, wrote in 1233 (1818) a short summary of the geographical relations of Central Asian countries (Afghanistan, Bukhara, Khiva, Khokand, and Russia and Caucasus), and of historical events in those countries from 1160 (accession of Ahmed Shah Durrani [q.v.]) till his own time. 'Abd al-Karim had already left his native country in 1222 (1807-1808) and accompanied him as an envoy to Constantinople; he remained there till his death, which took place after 1246 (1830), and wrote his book for the master of ceremonies 'Arīf Bī. (See also ABBĀS)

ABD AL-KARIM B. IBRAHIM AL-DAL, celebrated Musalman mystic from Dīl in the district of Bagdad, born about 757 (1365-1366); the date of his death is uncertain (811 = 1406-1407 = 1417). No exact data concerning his life have been handed down to us; in his works he mentions as his shīkh Sharaf al-Dīn 'Imād b. Ibrahim al-Dhawī, with whom he lived in Zābīl, at the same time he gives the following dates: 790 (1323-1324), 799 (1326-1327), 1243 (1401-1403). 'Abd al-Karim followed the mystic ideals of Mūshīl-Dīn b. 'Arabī (see also 'ARĀBĪ), whose works he commented, but whom he now and then contradicts in some details. Of his numerous works (see list in Breulmann, Gesch. d. arabisch. Literatur, ii, 205, his al-Da'wil al-istikbāl fi mafrūd al-muṣlibīl 'Abūl-Qāsim [Cairo, 1301, 1304, 1316; Ashary, 2 parts]) has been printed. He himself borrowed from Ibn 'Arabī the idea and the name of the "perfect man", who as a microcosmos of a higher order reflected not only the powers of nature but also the divine powers as in a mirror (think of the physico-theological of Philo); he endeavors (in the 60th chapter) to elogize Muhammad as such an ideal man. The soil of the remainder of huma-
ABD AL-KARIM — ABD AL-MADIJID.

ABD AL-KARIM, a Persian historian, died in 1198 (1784). Abd al-Karim entered Nadir Shah’s service in 1751 (1733-1735) and accompanied this prince on his march from Delhi to Kashiin. From there he travelled to Moslem and returned to India by sea. He is the author of a history of Nadir Shah written in Persian. He was given the title of Nadjah Abd al-Karim (A Cashmirian), Memoirs of a travel from Hindostan to Persia, while accompanying Nadir Shah, transl. from the Persian by P. Gladwin (London, 1793); Voyage de l’Inde à I Le Maroc, trad. par Langlès (Paris, 1797).

ABD AL-KARIM MUNSHI. [See MUNSHI, ABD AL-KARIM.]

ABD AL-KARIM NADIR PASHA, a Turkish general, born at Cäphan in East Rumelia. In 1787 he was victorious over the Servians, and in the Russian-Turkish war he had the supreme command of the Turkish army of the Danube, but was dismissed for not being able to prevent the passage of the Russians across the Danube, and exiled to Rhodes where he died in 1800 (1853).

ABD AL-LATIF. Comp. works on the Servo-Turkish and Russo-Turkish wars.

ABD AL-LATIF KASTAMIILL. [See KASTAMIILL, ABD AL-LATIF.]

ABD AL-LATIF (Mawfifik al-Din Abul Muhammed). b. Yosef b. Muhammed b. ‘Ali al-Baghdadi, also called IBN AL-LATIF, one of the versatile Arab scholars and prolific writers, born at Baghdad in 557 (1162), died there in 629 (1231). In Baghdad he studied grammar, Fihâ, tradition, etc., and was induced by a Maghribî, who had come to the city of the caliphs, to devote himself to philosophy, natural and secret sciences in which his great application enabled him to master. In 585 (1190) he went to al-Mawjûl (Mosul) and thence to Syria and Egypt, where he was held in great esteem by Safi‘ al-Dîn and his successors, and where he acquainted with the most celebrated men, e. g. Imâm al-Dîn, al-Kâjî b. Fâdîl, Moses Maimônides, and many others. In 604 (1207) he was again in Damascus, but after some time he went to Arzâdja via Aleppo and sojourned for a length of time at the court of Prince ‘Abî al-Dîn Dawud Shah, who was a great enthusiast for natural sciences. When, however, this prince ascended the throne, he quarreled with the Seljûk Khâqân, who put him prisoner and annexed his lands. Thereupon (in 626 = 1228) ‘Abî al-Latîf returned via Aleppo to his native town of Baghdad, where he soon afterwards died. His numerous writings cover almost the whole domain of the knowledge of those days. In Europe he became known principally by a short description of Egypt (translated into Latin, German and French). Comp. S. de Sacy, Relation de l’Égypte par Abd al-Latif (Paris, 1810).

Bibliography: Tha Ali Usâlî’s, ii. 207—215. [For the most part autobiography, especially published by J. Moussley, Oxford, 1805.]

AL-MADIJID, Turkish sultan, born on the 12th Shâbân 1238 (23rd April 1823), eldest son of Mahmûd II., whom he succeeded on the 25th Râbi‘ I 1255 (8th July 1839). The first thing he did was to order the suspension of hostilities against Muhammad ‘Ali Pasha of Egypt, who had just won the victory of Neby; but the high-Admiral refused to comply with the order and led his fleet into the port of Alexandria. He ordered the proclamation of the Khâji sherif of Gulkîshn (26th Shâbân = 3rd Nov.), an imperial edict which confirmed, maintained and extended the work of reform (fâsultâ‘). Thanks to his efforts the Porte entered into the quadruple alliance, which deprived Muhammad ‘Ali of the frufts of all his victories (15th Dhîdahû I 1256 = 15th July 1839). Serious troubles in Lebanon (1244 = 1844) and the rising of Wali‘ al-Leckir (1245 = 1845) which ended in the simultaneous occupation of both provinces by the Russian and the Turks (Batum-Limass convention, 1265 = 1849) were conspicuous events in his reign before the question of the Holy-Places brought about the Crimean war. Qasim Pasha defended Widda by an advanced position on the left bank of the Danube; but in Asia the Turks were defeated at Akhtabûkk and their fleet was burned at Sinope by Admiral Nakšîmov (1st Safar 1270 = 2nd Nov. 1853). Selim Pasha after being at first captured was surrended in Kazan, and the Russians laid siege to Silistria (1270 = 1854) and then withdrew, after six intellectual assaults; on France and England taking part in the war, the Russians were obliged to evacuate the principalities. In the following year Sevastopol fell (25th Dhîdahû Hîdajûs 1271 = 10th Sept. 1855) for which the taking of Kar was no compensation; peace was signed at Paris (23rd Râdzîb 1272 = 30th March 1856); the integrity of Turkey was acknowledged; the Straits were closed against warships; the Russian protectorate over the principalities was abolished; Servia, Moldavia and Wallachia were made independent states under the suzerainty of the Ottoman empire; and in addition this international document made Turkey, emphatically join the European contest.

A short time before the treaty of Paris ‘Abd al-Madjid had promulgated the Khafiff Asmâ’iûs (10th Dhîdahû II 1312 = 18th Feb. 1856), which recognized the civil equality of all his subjects, established a new assessment of taxes and threw open the military service to those who were not Mussulmans. Unfortunately the liberal inclinations of the sovereign clashed with a powerful reactionary party. Massacres took place at Qâbda (5th Dhîdahû Hîdajûs 1327 = 15th July 1858) and at Lebanon (Shawwâl 1327 = May 1860); Field Pasha was sent as Commissioner Extraordinary to the
latter province, where the French troops had just disembarked. Abd al-Majid, a worthy successor of his father, a humane and well-meaning prince, lacked the strength necessary for overcoming obstacles, whilst his extravagances wasted the treasury. He died on the 15th Dhu'l-Hijja 1277 (25th June 1861), and was succeeded by his brother Abd al-Aziz.

'ABD AL-MALID — 'ABD ALLAH. [See Ibn 'Abdun.]

'ABD AL-MALIK b. Abi al-As'as. [See Ibn Hisham.]

'ABD AL-MALIK b. 'Abd Allah. [See Ibn Hisham.]

'ABD AL-MALIK b. 'Abd Allah b. Nafea. [Abd Allah ibn 'Abd Rahman, successor of 'Abd al-Rahman b. 'Abd Allah [q. v.] as governor of Spain. It was not on account of his crimes and forays but for political reasons that in 116 (end of 734) he was forced to abdicate his position, in favor of 'Abd al-Rahman b. al-Hasan. When, however, the latter in 123 (741) fell dangerously ill during an uprising of the Berbers in Africa, he found himself obliged to restore 'Abd al-Malik to his former post. Meanwhile the troops sent against the Berbers by Caliph Hisham under the command of 'Abd Allah b. Uqba were dispersed, a part of them under 'Abd Allah b. Bide fled to Cesar. From this place Bide sent to 'Abd al-Malik to ask him if he might sail over to Spain. At first 'Abd al-Malik refused to hear anything of such a plan, but when the Berbers began to give trouble in Spain also, he was obliged, willy-nilly, to put up with the assistance of Bide's troops. As soon as the Berber danger was over, 'Abd al-Malik did indeed insist on these troops again leaving Spain. Bide, however, would have none of this, and hostilities broke out. 'Abd al-Malik was defeated, captured and killed (123 = 741). He was then 90 years old.

'ABD AL-MALIK b. 'Abd al-Mu'min. Two Amorites bore this name together with the surname of al-Mas'afir.

1. 'Abd al-Malik, the son of the famous Almoravid, had already in his father's lifetime the title of Tahir (since 991), and after the latter's death in 992 (1002) became his successor. His short reign (till 999 = 1008) was a happy one for his people.

2. 'Abd al-Malik b. 'Abd al-Azez al-Maghribi. 'Abd al-Rahman, grandson of Almoravid, reigned after his father in Valencia (455–457 = 1061–1065). He was hard-pressed by Ferdinand I, king of Castile and Leon, and was finally taken prisoner by his father-in-law al-Ma'mun of Toledo, when the latter annexed Valencia to his own dominions (457 = 1065). [Comp. 'Abd al-Malik.]

(C. F. Seybold)

'ABD AL-MALIK b. Marwan, Umayyad caliph. According to general report he was born in the year 26 (646–647). His father was Caliph Marwan I, his mother's name was 'Aisha bint Mu'awiyah. As a boy of ten he was an eyewitness of the storming of the palace of Othman, and at the age of 16 he was appointed President of the Diwan of Mekhna by Caliph Mu'awiyah. Here he remained till the outbreak of the rebellion against Mu'awiyah's son, Yazid, in 63 (680). When the Umayyads were expelled by the rebels, 'Abd al-Malik had to leave the town with his father. On the way they met the Syrian army under Muslim b. 'Oqba, and turned back with him. 'Abd al-Malik having previously given Muslim exact information concerning the position of the town and our details. Then the battle on the Hurm took place and ended with the complete defeat of the Medinns. After the assumption of his father, 'Abd al-Malik ascended the throne in Ramadhan 65 (April 685), but from the very beginning he had great difficulties to combat. In Mecca 'Abd Allah b. al-Zubair had himself long since proclaimed caliph, and was at least nominally recognized in a great part of the empire. In the West the Byzantines gave the caliph trouble, and in addition to this there were several dangerous risings in different provinces. Nevertheless 'Abd al-Malik showed himself quite equal to the enterprising task, and after wars lasting for several years, he at last succeeded in again uniting the Musulman empire under one sceptre. In Kufa, which at that time still obeyed the rival caliph Ibn al-Zubair, a dangerous disturber of the peace named al-Makhzam b. Abi Ubaid had appeared before 'Abd al-Malik assumed the reins of government. By all manner of intrigue he managed to form a party amongst the 'Aliides, which preached revenge for the assassination of al-Husain. In the year 66 (686) Ibn al-Zubair's troops were defeated in Kufa and his governor 'Abd Allah b. Mu'awiya expelled so that al-Makhzam could now easily seize himself master of the capital and of the whole province. In the following year his general Ikhtiham b. Malik al-Ashkar succeeded in inflicting a severe defeat on the army that 'Abd al-Malik sent against him. That was, however, the end of al-Makhzam's successes. 'Ubayd, a brother of 'Abd Allah b. al-Zubair and the latter's governor in Basra, united with the tried commander al-Mahallab b. Abi Safira and marched against him, and in Ramadhan 67 (April 687) a decisive battle took place at Harat, in which al-Makhzam was defeated and killed. Now the issue was between 'Ubayd and the caliph. In 69 (688–689) 'Abd al-Malik set out from Damascus to march against 'Ubayd, but was soon obliged to return, because Amr b. Sa'd b. al-As'as had stirred up a dangerous revolt in the capital. 'Ubayd blockaded himself in the residence, but when the caliph appeared before the gates, he nevertheless soon let himself be persuaded to capitulate after having been promised his life and liberty. Notwithstanding this, the illness of 'Abd al-Malik soon afterwards had him seized and he was generally reported to have executed him with his own hand. When order had been restored in Damascus the caliph started for the second time (70 (690) against 'Ubayd, but returned without having achieved anything. In the following year a new campaign was undertaken. The two armies met in the neighborhood of Maskin on the Lesser Tigris, and in the same year 'Ubayd here met his death after a desperate battle. 'Abd al-Malik received the homage of the inhabitants of Trag.
and then returned to the capital. He had now his hands free to fight against his dangerous rival 'Abd Allah b. al-Zubair and was able to send an army to Mecca. The command was transferred to the energetic al-Hajjaj b. Youssef. The latter invested the town, and after a siege of several months 'Abd Allah was killed in 73 (692) and Mecca fell into the hands of al-Hajjaj, who was restored to his former position of the Hejaz Order. He had, however, not been restored everywhere. In Central Arabia the Nadjdkal had long been committing excesses, but in the long run were unable to hold their ground. Much more dangerous was another Khāristic sect, the so-called Azra'ikites, who preached the Holy War against all heterodoxies without exception and committed terrible atrocities in the Persian provinces. In vain did al-Muhallab endeavor to suppress these cruel fanatics, and it was only when the sect was put down that he succeeded after hard fighting in breaking the power of the sectarians, and in 78 (697) the two generals were finally able to cherish the hope that they had rendered the dangerous rebels harmless. But a couple of years later fresh trouble broke out. After the suppression of the Khāristic sects the general 'Abd al-Rahmān b. Muhammad b. al-Aswāth was appointed governor of Ṣidjān, where he succeeded in winning several important victories against the warlike neighboring nations. As however al-Hajjaj, who combined with his duties in Kūfa the control of the eastern provinces, was dissatisfied with 'Abd al-Rahmān's performances and required still greater feats of him and his troops, 'Abd al-Rahmān in 81 (700-701) revolted against the tyrannical governor and soon afterward fled himself proclaimed caliph. When in the same year he had defeated at Tustar the army sent against him, his power grew to such an extent that 'Abd al-Malik had to content himself with a rebellious subject, but the negotiations fell through. After lengthy preparations a decisive battle took place at Dair al-Djamāldj in Djamāldj (12 July 702) when 'Abd al-Rahmān was defeated and had to take to flight. — During the first few years of 'Abd al-Malik's reign, the Byzantines also gave him much trouble. It is true that in this matter also all the details are not sufficiently clear, but it is at least certain that the caliph had to conclude a dearly-bought peace and had at the same time to engage himself to pay a considerable tribute. On account of a quarrel concerning etiquette, the peace was soon after declared by the Byzantine emperor as null. Hostilities again blazed out and lasted with but little interruption during the whole of 'Abd al-Malik's reign. His brother Mahyamid especially developed the campaign. The war generally was carried on partly in Asia Minor, partly in Armenia, and although the Muslims suffered severe losses, yet they became more and more dangerous to the Byzantine empire. After 'Abd al-Malik's death, the enchanted war was continued by his son and successor al-Walid. The far West also resounded with the clash of arms. After Ibn al-Zubair's death, 'Abd al-Malik sent Hassan b. al-Numan at the head of an army against Africa. This subjugated the united Greeks and Berbers, and at the same time appointed him governor of the province. This duty Hassan performed with great success, and when he left Africa, the conquests were continued by his successor Misbāh b. Naşr, and the caliph's rule was firmly established. In spite of these continual wars against foes abroad and at home, 'Abd al-Malik found time to look after the peaceful development of his empire. He was specially endeavored by means of reforms, which touched the whole community, to blend the diverse elements, of which the population of the Caliphate consisted. To this end the numerous officials of other confessions were expelled from the State service and replaced by Arabian officials. In the end, however, it proved difficult to keep to this principle, because there was a lack of suitable candidates amongst the Musulmans, Arabic was introduced as the official language for the future, and the most important measures were the reform of the coinage. Up to 'Abd al-Malik's time Byzantine and Persian money circulated in the Caliphate, a fact which gave rise to numerous evils. 'Abd al-Malik first of all regulated the monetary system and had gold and silver coins struck with an Arabian impression. It is not quite certain when this important reform was undertaken. In any case it must be placed shortly after the defeat of the rival caliph Ibn al-Zubair. Finally he abolished the postal facilities with which the rival of 'Abd al-Malik's standard of the second half of the 8th century was marked from this time.
an end to his reign by a peace which was disadvantageous to the Samnides (344 = 955-956).

As the colons proved, this peace was conditional on the recognition of the caliph al-Maqṣūr. Little is known of the conditions ruling in the country under 'Abd al-Malik; whether the youthful monarch desired the peace bestowed on him by al-Mukaddam (pp. 337 et seq.), cannot be judged from the scanty information we possess. The actual possession of the frontier was in the hands of the Turkish Protomæ, who came into existence under Nāṣr; very significant is the assassination of the governor of Khorasan, Bekr b. Malik, in Bukhāra before the gates of the palace. 'Abd al-Malik's early death is said to have been caused by a fall from his horse while playing polo; his son Nāṣr was according to al-Mukaddam recognized as ruler of the space of but a single day.

2. 'Abd al-Malik (Abu 'l-Fawādī) b. Muhammad b. Nūr b. Marīq, successor to his brother Marīq b. Nūr, who was dethroned on the 11th Safar 398 (14th Feb. 999). Having been defeated at Meṣr on the 27th Dhu al-Qa‘dā (10th May) by Muhammad the Ghurid; 'Abd al-Malik had to abandon Khorasan to his opponent and retire to Bukhāra. In the autumn of the same year he was attacked by 'Iyāq Nāṣr in his last possessions, the endeavor to organize a national war against the approaching enemy failed; the Government's appeal, which was read from the pulpit, was received with complete indifferenciness of the population; the leaders of theTurkic body-guard deserted to the enemy. On Monday, the 10th Dhu-l-Ka‘dā 399 (23rd October 999) the 'Umayyad entered Bukhāra without striking a single blow and had 'Abd al-Malik with the other members of the dynasty taken tojugand.  

'Abd al-Malik is a cousin of the caliph 'Abu'l-Abd al-Salāb and 'Abd al-Raḥim al-Maṣūr. In Harūn al-Rašīd's reign 'Abd al-Malik undertook several expeditions against the Byzantines. Such campaigns took place under his command in the years 174 (795-796) and 181 (797-798), according to some authorities also in 177 (793-794), and others state that in the latter year not 'Abd al-Malik himself, but his son 'Abd al-Raḥim held the command. Besides this he was governor of Medina for some time and he also filled the same post in Egypt. In the end, however, he could not escape the suspicion of the caliph. In 187 (803) he was deprived of his liberty on insufficient grounds and had to remain in prison till Harūn's death in the year 193 (809). The latter's successor al-Amin set him free again and in 196 (811-812) appointed him 

governor of Syria and Mesopotamia. 'Abd al-Malik proceeded to al-Raṣṣā, fell ill soon after and died there in the same year. A few years later the caliph al-Ma'mūn is said to have had his grave desecrated, because 'Abd al-Malik had during the war between al-Amin and al-Ma'mūn sworn he would never do homage to him.

'Abd al-Malik b. Ziyūth. (See Ibn Ruhr.)

'Abd al-Mu'min b. Ali, a Zanjān chief and founder of the Almoravid dynasty, born towards the end of 487 = 1094 (other dates are also given) in a village, a day's journey from Thlemcen. In accordance with a custom which exists to this day, 'Abd al-Mu'min studied the Korān in his village and afterwards went to Thlemcen to complete his studies. The chronicles vie with one another in praising his physical and moral qualities and the height of his intelligence. His attractive appearance, his open countenance, the brevity of his views and the width of his judgment immediately struck the Mahdī ibn Tūnsart on his return from the East, and the religious reformer, who laid the foundation of the Almoravid empire at once made him his disciple and constant companion. 'Abd al-Mu'min was always able to efface his own personality before that of the Mahdī, to whom he lent the invaluable support of a limitless devotion accompanied by an honest and enlightened disposition, tried courage and lively character. When the Mahdī retired to Tin Mallul, he lived there a saintly life, spreading his time between fasting and prayer, and left the care of governing the Almoravid community and the struggle with the Almoravides almost entirely in the hands of 'Abd al-Mu'min.

According to al-Marākūshī, 'Abd al-Mu'min was in 517 (1125) for the first time endowed with the title of 'Antīr al-Mu'minīn, which the Mahdī conferred upon him when he put him at the head of an expedition against Marsūkū. From this moment he was looked upon as the generalissimo of the Almohad army. Until the death of the Mahdī, 'Abd al-Mu'min was the recipient of every sort of kindness and consideration from the latter, who often ordered him to preside in his place at Friday's solemn prayer.

It is quite evident that 'Abd al-Mu'min was formally chosen by Ibn Tūnsart to be his successor a few days before his death the Mahdī said: 'We have chosen the one among you who is to be your chief, after having tried him in all circumstances and times for initiative and executive power; we have scrutinized his thoughts and their manifestation and have always seen that his faith is firm and his conduct prudent, whereas I hope that I have made no mistake. We mean 'Abd al-Mu'min; listen to him and obey him so long as he listens to and obeys your Master, if he changes, swerves from his duty or hesitates, the Almohades have the blessing from God, that the Lord Almighty should give the power to whom he will amongst his servants! (Comp. René Africain, xxxvi. 274.)

In spite of the very decided wish of the majority of the grandees of the two assemblies (that of the
Ten and (that of the Fifty), to follow the instructions of the Mahdi, it was necessary to make the Almohade community accept them. 'Abd al-Mu'min was in the eyes of these people, all Maghribi Berbers, a foreigner, on which account they were able to raise objections to submitting to his authority.

Thanks to the skill and devotion of many members of the Council of Ten, amongst whom must be particularly mentioned the Shiekht Abū ʿAbd Allāh ʿOmar, the revered chief of the Hīyatīs, the Maghribīs were ready about two years after the death of the Mahdi, to pay homage to 'Abd al-Mu'min. It was only then that the news of the death of the Mahdi, which had till then been kept secret, was published, and 'Abd al-Mu'min was proclaimed as the Mahdi's successor (524 = 1120 or 526 = 1122).

Having thus become the supreme head of the Almohades, 'Abd al-Mu'min kept the assemblies instituted by the Mahdi; [see Almohades]; he was inspired by their advice and made them approve of his projects and actions. For many years 'Abd al-Mu'min continued the policy followed in the Mahdi's time, which consisted in preventing the Almoravides from entering the mountains of Tin Makkul and Magmūda, by harassing them with guerillas in the plain. When the time came to take the offensive, he led his warriors to the conquest of the Almohade province. He began by subduing the southern provinces of what is now Morocco; then, returning north, he undertook a gigantic expedition, which lasted about seven years and finished in 541 (1146-1147) at the capture of Marrakush.

Before the success of 'Abd al-Mu'min, Tashfin b. 'All, the Almoravide sovereign, had decided to shake off his Aghdrn, he had left his capital, Marrakush, to march against his foe. But Tashfin's son, Tlemcen, where he had taken refuge and was able to hold the Almohades in check, to Oran, where he was accidentally killed. Thus Tlemcen and Oran fell successively under the power of the Almohades (539 = 1144-1145). Then it was Fez's turn (540). On this occasion 'Abd al-Mu'min is reported to have said to those who asked that the rumparts of the town, a great part of which had been destroyed, should be repaired: "We have no need of surrounding walls; our rumparts are our swords and our justice."

These words give a very good summary of the policy of this great conqueror. In 542 (1146-1147) ʿAbd al-Mu'min seized Gharīb, Tangiers and Marrakush, the famous capital founded by Yasuf b. Tashfin. According to Ibn Khallikān, the taking of Marrakush only took place after eleven months of siege, in the beginning of 542 (1147). The Almoravide throne was then occupied by a child, Jalīl b. 'All, grandson of the founder of the Almoravide empire and who, in spite of his years, was pitilessly executed by order of the Almohade caliph.

During this time Spain was the scene of a general revolt of the Andalusian Muslems (los aguerren) against the Almohades. On the solicitation of the leaders of the revolt 'Abd al-Mu'min sent them an army, commanded by Barzā. For some years 'Abd al-Mu'min's power inclined to this side; little, by little, by a series of victories, he established his authority there. The Baezmois Isles alone remained in the hands of the last representatives of the Almoravide empire, the Banū Ghaṭīyya, until the reign of 'Abd al-Mu'min's third successor, the caliph al-Nasr (comp. A. B. Besey, Borne Ghaṭīyya, Paris, 1903).

As soon as his authority was firmly established to the furthest end of the Maghrib and all the revolts suppressed and matters in Spain progressing to his utmost desire, 'Abd al-Mu'min undertook his first expedition into Idrīsī (540-547 = 1145-1152) and by the capture of Bugac (Balgac) and of al-Kāfa swept away the kingdom of the Banū Hammād; he made an Almohade province of it, and put one of his sons at the head of it.

In consequence of the conquests made by Roger II, king of Sicily, on the coasts of Idrīsī and Tripoli, 'Abd al-Mu'min left his capital in 554 (1159), putting Shahīb Abū ʿAbd Allāh ʿOmar in his place at the head of the government, and marched rapidly upon Eastern Idrīsī, which he completely subdued before he returned to his capital (555 = 1160).

In 556 (1161) he went to Spain to examine the state of the country. In 557 he prepared a great expedition against Spain, where the Mur Hawai had risen against the Almohades. It was in the same year that he brought a strong body of his confederates, the Kīsīrīs, to Marrakush to act as his bodyguard. 'Abd al-Mu'min at first (550 = 1154) chose his son ʿAbd al-Mu'min as his successor. But, having fallen ill just as he was concentrating his troops to go to Spain, he annulled that decision by an official deed which was published throughout the empire; it was then, without doubt, that he chose the Sāyiḍ Abū Yaʿṣīr Yūsuf, another of his sons, as presumptive heir to the Almohade throne. 'Abd al-Mu'min died at Salāt a few weeks before Christmas (562 = 1163). His body was taken to Tin Makkul where it was buried by the side of the tomb of the Mahdi.

The long reign of 'Abd al-Mu'min was glorious and the first caliph of the Almohade empire had realized all his hopes and had founded the empire, of which the Mahdi had dreamed. He had destroyed the Almoravide government in Africa and Spain and had extended the boundaries of his empire as far as Gabes. Only in the Baezmois Isles was there an Almohade sovereign.

'Abd al-Mu'min founded many towns and restored a great number of them; besides he fitted up and required several sea-ports to shelter his fleet. He was the first Muslem sovereign to ordain a kind of cadastre for the purpose of making regulations with respect to property and taxes. The towns and provinces of his empire were placed under the control of governors chosen generally either from members of his own family or from that of Shāhīb Abū ʿAbd Allāh Yūsuf; such appointments in this immense empire were read in the name of the Mahdi or Caliph instead of that of the 'Abd al-Mu'min.

Bibliography: See Almohades; R. Basset, Documentos geográficos (Paris, 1898), p. 31, note 2; idem, Nombres et les Tozars (Paris, 1903), pp. 30 et seq., 92 et seq. (A. B. Besey.)

'Abd al-Muṭṭalib, the first of the dynasty of Mecca, of the powerful House family of the Ummayyids of which in power for about 200 years. He was the son of Ghīlīs, who was exiled from the Hijāz after the defeat of the Wālī Akbat. In 1243 (1827) he took upon the duties of of the last
the first time, but was shortly afterwards at the orders of the Egyptian viceroy Muhammad 'Ali replaced by Muhammad b. Awn of the 'Abdallāh family. He spent the whole of his long life (he only died in 1886) in endeavoring to wrest the power from the 'Abdallāhs that were favored both by Muhammad 'Ali and later by the Turkish government. He tried to bring this about partly by open fighting, partly by intrigues and bribing Turkish dignitaries, for which he being repeatedly under honorable confinement in Constantinople afforded him good opportunities.

It was only in 1267 (1851) that he succeeded in causing out his adversary thanks to the influence of the grand vizier, who was on his side. As, however, he could not get on with any of Turkey's representatives in Arabia, he was again removed from office in 1272 (1856). After six months of continuous fighting he yielded to superior force, and set off for Constantinople for the second time.

After the noble sherif Hussein had fallen by an assassin's hand, 'Abd al-Muqtalī returned for the third time (1297 = 1880) as Grand-Sherif, but again he endeavored in vain to enforce the Turkish wills to respect the mediaeval tradition of the authority of the sherifts. Othman Pasha succeeded in deceiving him by surprise in 1299 (1882), and thereafter he lived quietly under strict surveillance in his country house to the east of Mecca. The lower orders feared and respected him as the inflexible representative of the undaunted tyranny of former times.

SNUCK HURGRONJE.

'abd al-muqtilī b. hashim, the prophet's grandfather. The only tradition concerning him, which is perhaps of historical value, is that which relates how he was looked for after his grandson after the death of his son 'Abd Allah [q.v.]

All other stories about him are Meccan or Medinan fictions. His real name is said to have been Shaibā. It is told of his mother, Salma, who belonged to the Banū Nadjarī in Medina, that she had stipulated with her father 'Abdul Hādī that she should give birth to her child in Medina. When the child had shortly after while travelling, and Shaibā grew up in Medina till he was recognized by the family and brought to Mecca by his uncle al-Muqtalī, whence he received the name 'Abd al-Muqtalī, i.e. Muqtalī's servant. Another uncle of Shaibā's, Nawfal, wished to withhold his inheritance from him, but was compelled by Shaibā's relatives on his mother's side to give it up [comp. further ÅMS for those Medinan tendencies fictions]. Advised by a vision, he excavated the chains up Zamzam spring and, in spite of the opposition of the Korsites, was able to make good his ownership. He consequently possessed the privilege of giving drink of the pilgrims. In the Abaθa legend [comp. Abraham] he is the sheikh of the Korsites and as their ambassador was treated with great respect by Abraham. [As to the story of his vow to sacrifice a son, see 'abdallah b. 'abd al-muqtalī.]

Still more extravagant legends about him are to be found in Yaktabul Huṣayna, ii, 8 et seq.; he has even become a religious reformer who introduces many customs accepted in the Korān and hadith. — Abuθ-Hārith is given as his kunya.

Remarkably enough al-Muqtalī in the Muḥriqī (Paris, iv, 121) gives amongst the Meccan tribes the Baniθ-Saθirī b. 'Abd al-Muqtalī as being subordinate to the Banū Hāshim and the Banū Muqtalī, whilst, according to the common genealogy a branch of the Hashimites, are coordinate with the Banū-Muqtalī. Sprenger has on this account set it down as questionable whether 'Abd al-Muqtalī is not possibly a mythical person. The second part of the name without doubt designates an old Arabian divinity.

'abd al-raḥīm b. 'all. [See 'abd al-raḥīm fābul.]

'abd al-raḥīm b. muhammad. [See ibn murātā.]

'abd al-raḥīm khān khanī. khānī, known to his contemporaries as Khan Mirzā, was the son of the emperor Akbar's first prime minister, Bairam Khatān, and belonged to the Bāhrī tribe of Black Sheep Turkomans. His mother was a daughter of Lūmāl Khan Mewāti, whose elder daughter the emperor Humayūn had married from motives of policy. He was born in Lahore on the 14th Safar 804 (16th Dec. 1556) and died at the age of 71, in 1298 (1881) in Dihlī, where his tomb still stands near that of Shāikh Nīnān al-Dīn Awlāwī. His chief wife was Mām Bānī, sister of Mirzā Aẓīr Kūkā, at least one of his sons was by a mother of an Umarkot family. He survived his four sons; one of his daughters married Prince Dārūsī and one of his grand-daughters, Prince Khurrām (Shāh Djiābān). 'Abd al-Rahim became one of the most distinguished men of his time, both in arms and letters. He was four when his father was murdered and thereafter was brought up by the emperor and Mirzā. In 980 (1572) he, being then a youth of sixteth, accompanied Akbar to Gūjrat and there had assigned to him, under the tutelage of Sāliḥ Ḍiyū, of Hārā, the district of Patān, within which his father had been murdered.

In Rāhī II 981 (August 1573) he was one of the small party who made with Akbar a historic journey of great rapidity to Gūjrat and he shared the command of the centre in the battle of Sarnāī, which destroyed the power of the rebel Khālīf-Mirzā. He is described by Nīnān al-Dīn Awlāwī in the Ṭabāθā-s akbarī, as being at this time a young man of great parts and promise. In 984 (1576) he was made governor of Gūjrat under the guidance of Vissīr Khan Harāwī; in 986 (1578) he was appointed satrāy and three years later, wāliī to Prince Salma who was then 18 years old. In 991 (1585) he was deputed to put down Shāh Muṣṭafā Gūjratī and, at this time, Nīnān al-Dīn Awlāwī was Addākī of the province and partner and chronicler of the Mirzā's army of arms. On the 3rd Muharram 992 (16th Jan. 1584) when he was 28 years old, he won the battle of Sārāī and followed this by that of Nādīūt; the
A few successes completely breaking down the opposition of the Sherifian. He was himself made khān-i khānān in recognition of his victories.

He next obtained leave to serve under the emperor against Mirzâ Muhammad's Shâh, but later returned to Gujjar. In 1556 (1558) he was welcomed with much honor to Cordova and in the following year, presented to the emperor his Persian translation of the Shâhnameh and also was appointed to the vazîrât and made governor of Ispâyân. In 1599 (1591) he was appointed governor of Multan and Bhakkar and sent to annex Sind from Dżânî Beg Argâzhi. With him was džâhâl Muhammad Muhsîn, the father of Nâṣir-ud-Dîn Ahmad. On the 26th Muharram 1269 (21st November 1551) he defeated Dżânî Beg and having made conditions of which one was the marriage of his son, Shâh Nawâz (1562), to a daughter of the defeated Argâzhi, he returned to Cordova.

His services were now directed to the Dukhan, and, with short breaks of absence, continued so directed for nearly thirty years. He was first associated with Prince Murâd, but without effective cooperation. In Djânîlâdî I (April 1597) he won one of the great battles of Albâr's reign, driving the heavily outnumbered forces under Shâhâh Khân of Khâlifâ I to flight.

In 1597 (1599) he, with Prince Dânyal, who had married his daughter, Dżânî Begam, went again to the Dukhan. The campaign was mainly fought against Ahmed Nagar and the heroic Câd Bîb. Under the emperor Džâhâl-Ordâ, he served with Prince Khurram in 1615 (1616) again in the Dukhan. Abdu'l-Rahmân was proficient in Arabic and Persian, in Turk and in Hindî, writing all with ease and fluency. He was a poet with a profound knowledge of Rûmî, the magnificent friend of Abî Dżâhâl, and a great connoisseur of Matârâb, which he often practiced and for which he was suspected by his father's enemies.

Bibliography: 'Abd al-Rahmân, the name of five Spanish Umayyads:

1. 'Abd al-Rahmân I b. Mu'allîyâh b. Hâshâm escaped from the slaughter which the 'Abâhidâs in 730 perpetrated on his family, and after long wanderings in North Africa came to Spain, where in 756 he founded the independent Emirate (subsequently also Sultanate) of the Umayyads at Cordova. By his statesmanlike cunning and restless energy, which with all his determinate strength of character yet for the most part never degenerated into the too often useless cruelty and blind revengefulness of the Arabs, 'Abd al-Rahmân became master of the complicated situation. This came to pass, however, only after infinite difficulties with the help of his protégâs and — although he himself was a North Arabian — of the South Arabian opposition party of the Yemenites. He put aside the weak emirs Fîsâfîn, who was not intelligent enough to adapt himself to the new states of affairs, and also the latter's energetic general and brave soldier Sowmîl, in spite of the fact that he had always been loyal. Subsequently he was able by means of a strong and just administration and a safe home and foreign policy, but especially by raising a standing army, mostly of Berber mercenary, to hold in check the rivalry of the proud Arabian aristocracy and the longings of the democracy for independence of the Berbers. With good reason does his ‘Abâhidâs adversary in Baghdad, the powerful al-Mansîr, call him the Falcon of Khorân. — 'Abd al-Rahmân successfully crossed swords with Charles I in the Spanish north-eastern marches, so that the great emir of Cordova proved himself equal the two greatest rulers of that time, the great king of the Franks and the ‘Abâhidâs caliph. He reigned from 135 to 172 (756—788). — 'Abd al-Rahmân was also the founder of the Great Mosque of Cordova.

2. 'Abd al-Rahmân II b. al-Jârâm, the fourth Umayyad emir of Cordova (320—335 = 932—948). In spite of continual wars with the Christians and revolts at home, he was a zealous patron of all arts and sciences.

3. 'Abd al-Rahmân III b. Muhammed b. 'Abd Allah, the eighth Umayyad of Cordova (395—433 = 907—961). 'Abd al-Rahmân III was the first Spanish Umayyad to bear the name Khu’îsî al-Nâşir (the Saviour-Caliph). He had good claim to this name: he put an end to the eternal civil war between Arabs, Spaniards and Berbers in Andalusia, protected the frontiers against Leon, Castile and Navarre, founded the magnificent residence of al-Zahra at Cordova, commanded the West of the Mediterranean with his navy and exercised a sovereign influence over North Africa. Art and science found in him a discerning patron and trade a benevolent protector. Arabic Spain became under him and his successors the most civilized and best governed country of the Middle Ages.

5. 'Abd al-Rahmân V b. al-Mustâzîhîn, also a great-grandson of 'Abd al-Rahmân III, caliph of Cordova in 414 (1023). [Comp. Umayyads.]

Bibliography: Boszor, Historia de Muhammad d'Espagne, i. 295 et seq.; ii. 65 et seq., 319 et seq.; iii. 336 et seq. [B. C. P. Seybold.]

'Abd al-Rahmân K. 'Abd Allah al-Ghazî, a governor of Spain, first temporarily in 103 (728), then from 112 to 114 (730—732). After defeating Duke Eudo of Aquitaine at Toulouse, he penetrated far into France, but was together with the greater part of his army unillustrated by Charles Martel in Ramjân (October: 732) between Tours and Poitiers. The battle-field is called by the Arabs Badâl al-Shubah, the Pavement of the Martyrs (pavement = paved Roman road) or briefly al-Balâs.

Bibliography: al-Dubbî (ed. Coden: et Rihela), No. 1021. Mâkhânin, i. 145; ii. 97; Weü, Gesch. d. Chaliften, i. 646. (C. F. Seybold.)

'Abd al-Rahmân K. Abû Bekr Abû ‘Abd Allah, son of the first caliph. His Mother, Umm Kâmil, was also that of Khâja. His original name is said to have been 'Abd al-Kâfîn, which was changed to 'Abd al-Rahmân on his conversion, which took place very late, for he fought side by side with the Meccans at Bedr.
Korin, ari. 16. is therefore said to refer to him. He accompanied his father in the battle of the Camel and was later on with Abū b. al-ʿĀṣ when the latter marched against his brother, Muḥammad b. Abī Bakr, the governor of Egypt, but Abī al-Rahmān was not able to save the latter's life. Afterwards he was, with Ḥusayn b. ʿĀṭī, Abī Lālā b. ʿOmar, and Abū ʿĀṣ al-Zuṣairī, considered the head of the Medina opposition, which refused to pay homage to Yūsuf b. Mahsūs. He died in 55 (673); according to a few less trustworthy accounts, he died 2 or even 3 years later.

(M. Th. Houttmann)

**Abū al-Rahmān b. ʿĀṭī.** [See Ibn al-Dairah.]

**Abū al-Rahmān b. ʿĀṭī.** A. Abū, a Kornigste of the family of Zuhair, originally called Abū ʿAmir (or Abū al-Kaḥā). He was early converted to Islam, took part in both the Hijzah to Abys-

P.S. In the battle of Badr as well as at the other battles. He was the leader of the troops which Muhammad sent against Dūmat al-Ďuʿaydah, and after the conquest of this oasis he married the daughter of the defeated prince. He belonged to the tribe of Ṭurayy, according to Musulman tradi-

That he had acquired a considerable fortune in trade, and his authority was correspondingly great. After ʿOmar’s death, he was one of the six, who had to elect a new caliph. Renouncing all claims for himself, he voted for ʿOthmān. He died in the year 31 (652).

(M. Th. Houttmann)

**Abū al-Rahmān b. Ḥabīb b. Abī ʿUbayd b. ʿEesa b. Naʿīf Abī ʿUbayd, governor of Ifrīkia, died in 137 (755). When his father, whom he had in his youth accompanied on raids in Sicily and other places, had fallen in the Berber revolt (442 = 740), Abū al-Rahmān fled to Spain, but afterwards returned to Africa and rebelled in Tunis in 136 (744) against the Umayyads. The Umayyad governor Ḥānjālī b. Ṣafwān treacherously quitted Kairuān, and since the ʿAbbāsid uprising was in progress, it was not a very difficult task for Abū al-Rahmān to seize the reins of government: and to keep them; the ʿAbbāsid were coming enough at first to confirm him in his government. Then when the caliph al-Maḥṣūr threatened to enforce his sovereignty, Abū al-Rahmān, who was continually making war against Sicily and Sardinia, and the Berbers, renounced all allegiance to him. Through wishing to settle his succession, he was said to have ordered the execution of his two brothers Ilīs and Abī al-Wāṭrī, who soon afterwards murdered him.

(M. Th. Houttmann)

**Abū al-Rahmān b. Ḥabīb, emperor of Morocco, born in 1378. Abū al-Rahmān was the son of Mūsā Ḥabīb, governor of Maghūd, brother of the sultan Mūsā Sallāman. His uncle nominated him on two occasions as his successor. On the death of Mūsā Sallāman on the 4th Rādīd 1328 (24 Nov. 1843), Abū al-Rahmān had little difficulty in having himself proclaimed sultan. The Sheikhs banded together to resist his ascension, and were speedily overawed by his predecessor, two claimants, Ibrāhīm b. Yūsuf and Sulṭānī, his own cousin, who was proclaimed sultan by the people of Tafīlet, submitted almost immediately. Morocco remained not less disturbed and the sultan had to spend the first years of his reign in repressing rebellions that broke out all over the country. The Zemmīr, who had revolted, were vanquished, and their chief, Muḥammad b. ʿAbd al-ʿAzīz, was imprisoned at Maghūd in 1340 (1823). Some years later the Wādīyā are, who were on terms with the sultan had arrested three of their kings, shut themselves up in Fās al-Dīrādī and underwent a six months' siege there. Being victorious, thanks to his negro guard, Abū al-Rahmān rode to the Wādīyā at Mārkūkāt, Rabīb, and Cassabank (1247 = 1831). In 1244 (1828) the Sheikhs took up arms against the governor of Mārkūkāt, but were cut to pieces by the sultan himself in a seven days' battle. In 1250 (1835-1839) the Mumbīl Slīl, Muḥammad b. Ṣalīḥī, made himself master of Fās and maintained his position there for some time. On being obliged to capitulate, he was exiled to Tafīlet and twenty-six of his partisans were immured alive. At the end of Abū al-Rahmān's reign fresh insurrections broke out at Tafīlet (1273 = 1858-1857) and amongst the Zemmīr, to the south of Mīlīna, against whom the sultan led an expedition in person (1276 = 1859).

In spite of the difficulties with which he found himself confronted in the interior of Morocco, Mūsā Abū al-Rahmān, adhering to the policy begun by Mūsā Ḥabīb [q. v.], attempted to extend his kingdom at the expense of his eastern neighbors. He commenced by supporting the Trikiliyya enemies of the Turks of Algiers, then he tried to take advantage of the fall of the Turkish State in 1856. After the capitulation of Algiers he sent his nephew Mūsā al-ʿĀli to invade the province of Tlemcen. But his designs were frustrated by the opposition of France. The occupation of Oran and Marsa el-Kebir by French troops in 1831, and the diplomatic representations of the French government forced him to abandon his schemes of conquest. He nevertheless continued his intrigues in the West and even in the centre of Algeria. Being forced, in consequence of Count Menou’s mission to Tangiers to recall his representatives, whom he had established at Mīlīna and Mefīda, and to abandon his claims to the province of Oran, he still kept in touch with the malcontents of the West. In spite of his promises of neutrality given to a French envoy, Colonel Laroe, in 1816, he encouraged Abū al- Ḥabīr. When, as a result of the campaigns of 1841, 1842 and 1843, the emir was driven from all the positions occupied by him in Algeria, Abū al-Rahmān allowed him to
take refuge in Morocco. Soon, at his instigation, he entered into open conflict with France. Being unsupported by England, upon whom they believed they could rely, the Moroccans were defeated. Begauda's troops occupied Wadida (Uda), and dispersed the Moroccan army at the battle of Ily (14th August 1844) whilst Prince de Josville's fleet bombarded Tangiers (5th Aug.) and Mogador (19th Aug.).

The treaty of Tangiers (10th Sept. 1844), signed by Abd el-Rahman, promised to abandon the cause of the emir and to imprison him if he would succeed in seizing him. Another convention of the 18th March 1845, settled the boundary between Algeria and Morocco. Morocco kept the lower stream of the Muhl and, in the Sahara, the oasis of Figiag and Twal.

In consequence of these events relations between France and Morocco became cordial again. The Sultan decided in 1847 to have nothing more to do with 'Abd el-Khidir, compelled him to leave Moroccan territory and thus forced him to give himself up to General Lamartine (see 'Abd al-Ahad). Claims presented on the occasion of acts of violence committed against Frenchmen or French protectés at Tangiers, Mogador and on the Rif coast were listened to. It was necessary however to bomb the port of Salé (Saléh), the inhabitants of which had pillaged a French ship in 1854. Similar acts of violence forced the French to evoke the same European hostilities, which gave rise also to naval demonstrations. The English blockaded the ports of Morocco in 1828; the Austrians camoufled the entrance to the river of Tetuan and bombarded Azilda in 1829, but attempted to land at Larache without success. The assassination of the head of the municipality of Ceuta, Don Jose Valverde, and the murder of Dourah, the Spanish consular agent, raised very strong protestations from Spain.

Despite these manifestations of hostility to foreigners Morocco became more accessible to European commerce. Sweden and Morocco ceased to pay tribute for the protection of their ships from piracy. The treaty of commerce and amity entered into by France and Mülki Mahammed in 1857 was renewed in 1825. England after having, in 1824, renewed the treaty of 1801, negotiated in 1853 a convention, which was changed into a treaty of commerce in 1856. The advantages conceded to the English by this treaty (the abolition of monopolies in importation — the limiting of the duty on imports to 10%) were afterwards granted to the other European nations. But at the same time a reactionary movement against foreigners made itself felt. After 1842 the consuls could only hold communication with the Makhras through the Fasa of Tangiers; troubles arose on account of the exportation of woods. The population complained, as the historian al-Sallawi testifies, of the raising of the price of commodities, which, it was attributed to the measures taken in favor of the Christians and to the progress of their influence in the empire of the Shah.

In spite of these reservations, the same historian nevertheless considers 'Abd al-Rahman as one of the most remarkable sovereigns of Morocco. He was, he writes, a second Mülki Isma'il and restored the dying dynasty to life.* He complimented him on having freed himself from the influence of the viziers and of having directed his government personally. He praises his activity, piety, humanity and his aversion to the shedding of blood. Finally he points out his taste in building (the restoration of the port of Tangiers - the adornments and repairs of the masques at Fes, Marrakouch and Salé - the building of the Bé Hassan, Marrakech, al-Wassouj mosque at Marrakouch - the planting of the Aghal park near this capital, etc.). 'Abd al-Rahman died on the 29th Muharram 1276 (6th September 1859).

Bibliography: Ahmad el-Salawi, Kitab al-niksh (Cairo, 1312), iv. 172-210; Godard, Description et hist. du Maroc (Paris, 1860), ii. 585-629; Rouard de Cord, Traites entre la France et le Maroc (Paris, 1850); Pellissier de Raymond, Annales algériens (Paris, 1854).

'ABD AL-RAHMAN HUSSEIN ZAIK, Sharif al-Islam, son of Yusef Khadja Hussein (died 1655 = 1645): born in 1603 (1595-1596), khalif at Aleppo (1620 = 1620), at Constantinople (1643 = 1643), khalif at Cairo (1639), then at Anath and in Rome (1639), in Constantinople (1653 = 1653), then at Anath (1654), at Saray (1654), then at Anath (1654), at Saray (1654), then in Egypt (1655 = 1655), in place of Abd al-Salih Mahammed. During the troubles of Dumbada 1666 (April 1666), known as the events of the Fasisun (Faris wak al-din), having seen Ksar 'Abd al-Hamid conquered by the insurgent Siptah (Hammer-pugatulk, Hist. de l'Empire ottoman, x. 370; Jouanno and Van Gaver, Turquie, p. 260; Tièche, Mem. des, ii. 559), he tendered his resignation to save the sultan Mahammed IV and at his request was made khalif at Jerusalem, then at Anath and at Cissar, near Cairo; he died in Dumbada 1681 (Oct.-Nov. 1670). He was clever in wrestling; his writing in the calligraphic style was remarkable.

'ABD AL-RAHMAN bin mA'ARRAJ. [See below.

'ABD AL-RAHMAN bin AL-KASIM. [See below.

'ABD AL-RAHMAN KHALIL, Al-Wakil, the Bar Khalil of the Syrian chroniclers, seemed to have inherited the ascendancy and military faculties of his father, "The Sword of God." When barely 16, he commanded a division at the battle of al-Yarmuk, and later at Siffin, where he distinguished himself by the side of Mu'awiya. He figures also at the head of the principal expeditions in Anatolia. The memory of his father, who died and was buried at Jerusalem (Eman), and the government of this important province to which Mu'awiya had appointed him, had given him a preponderant influence in the district. His name was mentioned by the Arab authors of Syria as a possible successor of Mu'awiya.

Having become conspicuous, the caliph ordered his Christian physician, Ibn Uthay, to rid him of this future rival of his son Yazid, promising him as a recompense, the management of the finances of Hims. The following seems to be proved in these assertions: first, the appointment of Ibn Uthay — contested by Wallhausen (Das arab. Reich und sein Stund, p. 85) — immediately after the death of 'Abd al-Rahman (46 = 665-667); then the assassination of the Christian vizier by a Mahdists, probably the nephew of 'Abd al-Rahman, urged thereto by the insinuations of the people of Medina. The other details
appear to us to be intentions, especially the intervention of Mu'awiyah, which is sometimes quoted to prove that this prince made use of poison. We admit, however, that relations between him and 'Abd al-Rahman were certainly strained and that the distress with which the growing popularity of the son of Hisham inspired him was real. The autodafe of the bishop of Hing, which, according to Theophanes (p. 532), took place at this time, is mentioned by the chronicler (p. 882) adducing that the bishop was burned by the Musulmans — is connected with three events, thus making up for the deficiency due to the silence on this point in the works of the Byzantine chroniclers and the Arab annalists. We think that the sudden death of 'Abd al-Rahman immediately after his return as a conqueror from Antioch, followed at once by the appointment of a Christian official, and the emotions, true or false, laid to the charge of the latter, must have caused a lively commotion in Baghdad. A Makhdumite took advantage of the general discontent to assassinate Ibn Uthai, under the pretext of avenging his relative. It is very probable that a rising of the populace took place on behalf of the family of the great Khalid, a rising in which the bishop lost his life. If we admit the authenticity of Lequien's inference, this local outbreak of fanaticism was one of the rare acts of intolerance belonging to the reign of Mu'awiyah.

\section*{'ABD AL-RAHMÂN b. AL-MANŞÜR MUHAMMAD, the last Amiríde of Cordova. After the premature death of his brother 'Abd al-Mallik b. Al-Mansur (q. v.), he became in the year 399 (1008) imperial administrator (Hâjûjî) in place of the son Al-Aziz for the Unayzí eh pretend-eh caliph, Hisham II. He was born about 376 (986) of a Christian princess, the daughter of a certain Sancho, for which reason he is also sometimes called Sanchoi, i.e. little Sancho. On account of his origin he was but little loved by the Musulmans, and they impute any evil deeds to him: he is said to have poisoned his brother; to have been addicted to drink, etc. He offended them most deeply, however, by having induced the caliph Hisham to proclaim him his successor to the throne. When therefore in the same year (399 = beginning of 1009) he undertook a campaign against Alfonso V of Leon, there broke out in the capital, Cordova, a revolt under the leadership of the Unayzí Muhammad b. Hisham al-Mahdi. On hearing the news 'Abd al-Rahman immediately started to return home, but was abandoned by his troops on the way back and killed by al-Mahdi's orders (4th Rajab, 399 = 4th March 1009).

\section*{'ABD AL-RAHMÂN b. MUHAMMAD b. AL-MAZARI, a Kilitfe general, who revolted against al-Hâjîjâdîb. Being descended from the old kings of Kinda, 'Abd al-Rahman was at first the recipient of much kindness from al-Hâjîjâdîb, who went so far as to marry his son Muhammad to 'Abd al-Rahman's sister. In 76 (693-694) al-Hâjîjâdîb sent him with an army to defend Madâin against Qays Ibn Mas'ud. In 80 (699) after the defeat of 'Uqba Ibn Alîhâl b. Abi Bakr by Ruthül (or Zunbul), comp. Wellhausen, \textit{Das arab. Reich und sein Staat}, p. 144 note 1, \textit{Kultur der Araber}, pp. 378 et seq., says 'Abd al-Rahman the lieutenant of Siddiqi and the command of an army magnificently equipped, and known for that reason as \textit{The Army of Peacocks}, to make war against Ruthül. 'Abd al-Rahman's campaigns were replete with successes, but al-Hâjîjâdîb nevertheless sent him rough letters blaming his conduct. Urged by his soldiers, he openly revolted and declared war against al-Hâjîjâdîb (81 = 700). Before setting out for Iraq 'Abd al-Rahman concluded a treaty of alliance with Ruthül, who pledged himself to help him in case of need and to afford him a place of refuge in his country. In the beginning 'Abd al-Rahman was victorious, but presently, at the battle of al-Zawiya, his army was routed. He fled to Kiffa, where the caliph 'Abd al-Mallik sent his son, 'Abd Allah and his brother Muhammad to negotiate with him, even proposing the recall of al-Hâjîjâdîb. 'Abd al-Rahman did not accept the offers of the caliph and thus declared himself as his enemy. The battle of Dair al-Qamar (Shâhîn) 84 = Sept. 701, comp. Pâris, \textit{Histoire de l'Islam} (3rd ed.), p. 186, note 3) was disastrous for 'Abd al-Rahman, and that of Maskin completed his downfall. He fled towards Siddiqi and on his arrival at Ruthül the prefect, 'Yûsuf b. Himyân, loaded him with chains, intending to give him up to al-Hâjîjâdîb, but Ruthül, true to his promise, came to free him and took him to his own country. Once more, however, at the instigation of his army 'Abd al-Rahman returned to Ruthül to try his luck against al-Hâjîjâdîb, but he soon repented of himself. Finally Ruthül yielded, to the grieves and especially to the threats of al-Hâjîjâdîb, gave 'Abd al-Rahman up to the emir of the latter. When 'Abd al-Rahman reached al-Rukkhâsh, he threw himself from the top of the tower and was killed (85 = 704; comp. Pâris, loc. cit., p. 225, note 2). The chronology of the events is not quite certain; comp. Wellhausen, \textit{Ibid.}, pp. 150 et seq.

\section*{'ABD AL-RAHMÂN b. ROSTEM, founder of the new Tabet and head of an Abuâsî dynasty, which held its own ground in Central Maghrib from 639 to 770, and from 770 to 908. 'Abd al-Rahman was of Persian descent; according to the chronicles of the Abuâsî dynasty he was the son of Roštum b. Borhum (comp. Yakub, \textit{Manzûm}), i. 815), of Shâhîn b. Babekh Dîlî-Allâh. This genealogy, which is evidently incorrect and mutilated, is given by the historians to establish the fact that 'Abd al-Rahman was of royal stock and was descended from the dynasty of the Sâshânids. 'Abd al-Rahman was born in Iraq, his father, Roštum, having taken him with his mother on a
pilgrimage, died at Mecca. 'Abd al-Rahman, being yet a child, accompanied his mother, who had married a pilgrim from the Maghrib, and was brought up at Kairouan.

He became one of the five missionaries who spread the Abuidite doctrine in the Maghrib during a course of study under 'Abd 'Ulbida Muslim b. Abd Karim at Kairouan.

When 'Abd al-Khattab, the first Imam of the Abuidites, had taken Kairouan from the Wāridjītī barbarians, he confided the government of this place and of several parts of Ifriqiya to 'Abd al-Rahman (Sa'afar 141 = June 755), but in Du'maddīt (July) of the same year Ibn al-Ashārah took Kairouan from him. 'Abd al-Rahman accompanied by his son Abd al-Wahhab and his retainers fled to Central Maghrib, and, after evading the pursuit of Ibn al-Ashārah, founded the town of Tābi't, the present Taglient, at the foot of Djerid Djoul (or Knoll). The new city grew space, its population was supplied by Abuidite emigrants from Ifriqiya and Djerid Neffan.

When the Abuidites of Tābi't thought themselves strong enough, they raised 'Abd al-Rahman to the Imāmate (160 or 162 = 775 or 776). Arab chroniclers say that 'Abd al-Rahman had in 134, led a strong contingent of Abuidites from Tābi't to 'Omdur, where an immense concourse of Berbers was besieging 'Omar b. Hazmānī.

'Abd al-Rahman's reign seems to have been fairly, peaceable. He upheld himself with a simplicity, which recall of Caliph 'Omar, to make justice prevail in his country. The Abuidite communities of the East recognized the validity of his Imāmate and sent several embassies to him to bring him money and presents. It is said that he died, being then very old, in 168 (784). His son 'Abd al-Wahhab succeeded him.

[A. Le Motteuil].

'Abd al-Rahman al-Ṣūfī (his full name is Abū 'Utbah Bishār b. Abū Ṣūfī al-Ḳaṭf), one of the most eminent astronomers and astrologers of the Arabs, born at Ra's in December 903 and died in May 965. He was a friend, teacher, and astrologer of the Byzantine 'Abd al-Dawla, who proudly boasted of three of his teachers: in grammar, Abū 'Ali al-Farsī al-Masri; in the knowledge of astronomical tables, Abū 'Ali al-Jallān; and in the knowledge of the positions and movements of the fixed stars, 'Abd al-Rahman al-Ṣūfī. He wrote: 1. Kitāb al-ḥaṣb al-ḥaṣbī (or also al-Sawwar al-ṣawwar) manawwar (The Book of the fixed stars, illustrated with the figures of the great Arab astronomers) manawwar al-ḥaṣb (The Book of the notice and positions of radiation) — this last word is an astrological technical expression); 3. Muḥāa al-fī ṣīḥ al-ḥaṣbān (Introduction into the judgment, etc., by aid of the stars); 4. Kitāb al-ṣīḥ al-ṭarīqī (A Treatise on the astrolabes). No. 1 is to be found in Arabic in Berlin, Paris, Oxford, London (British Museum, India Office), St. Petersburg (Institut des Langues Orientales), Constantinople (Aja Sofia, in Persian);

a French translation was published by Schillerup: Description des étoiles fixes par 'Abd al-Rahman al-Ṣūfī (St. Petersburg, 1874); the text and translation of the introduction was published by Caesar von Furtwängler in the Notices et extraits, vii. 236 et seqq. The title of No. 3 is probably faulty; al-Tadhkira has no meaning, and Alm-Faraj has only Māfīṣū al-abdhīrī. It is probably not a portion of No. 3. It still London (India Office, Madrid (Escorial), No. 4 is found in Paris, Constantinople (Aja Sofia), St. Petersburg (Institut des Langues Orientales). His son Abū 'Ali b. Abū Ṣūfī al-Ṣūfī wrote an Ṣīḥ al-ṭarīqī on the fixed stars, also illustrated with figures, preserved in Paris, Munich, Gottha, Bologna (Marigli), Cairo.

'Abd al-Rahman b. 'Abd al-Rahman, an influential Turkish emir during the period of the Seljuk supremacy. His father was one of the emirs of Sultan Barqiyār and held the town of Khallūhīn [q. v.] in fee. 'Abd al-Rahman himself was in 1142 appointed by Sultan Mas'ād major-domo (hādijī hāshī) with the surname of Fakhr al-Dīn. When in 1145 Bushireh and Abūda rebelled against the sultan, he was able to restore peace by allying himself with these men, by having the administration of Abharibāl and Arūn transferred to himself, and by keeping a check over the sultan almost as if he were a prisoner. In 1150 the latter found his position insupportable and gave one of his trusted servants secret orders to get him out of the way when occasion offered; in 1146-1147 'Abd al-Rahman was murdered treacherously near Gandja (Elisabethpol).

[M. Th. Houstema].

'Abd al-Rahman (Abūnī-Bahīra) KHĀN, emir of Afghanistan (1844-1901), was perhaps the most remarkable ruler of an independent Musulman state in the present day. His life may be conveniently dealt with under the following four heads: 1. Childhood and youth, up to the death of Emir Dost Muhammad (1844-1863); 2. The period of civil wars (1863-1869); 3. Emirate (1869-1880); 4. Reign as emir (1880-1901).

1. Abd al-Rahman was the son of Afzal, the eldest of the two sons of Dost Muhammad after Akbar Khan's death in 1856 (1849). Dost Muhammad had five sons by a wife of the Bāmzai Popalzai clan, whom he preferred to those by a wife drawn from the Shār's Bangārī of Karram. Of these five sons Shāh 'Ali was the eldest surviving at his father's death, and the sons of the second wife, Afzal and 'Aqā, though older than Shāh 'Ali, were set aside. This is an important point, as it ex-
places the position of the rival brothers at Dost Muhammad's death. Abd al-Rahman himself has consistently maintained that in questions of succession the position of the mother is unimportant, and that primogeniture should be the rule if possible, and that Dost Muhammad's own mother was a Khirat-bek, and not an Afghani. He considered that Sherr Ali injured his own prospects by opposing the claim of his own son, Abd al-Rahman, to the throne, but he was authorized to those views in arranging for the succession of Halib-Ali to his own throne, although Muhammad Omar was the son of a mother of higher rank. Abd al-Rahman was born about the year 1844, shortly after Dost Muhammad had recovered his kingdom, and spent his early years in Kandahar. After 1850 his father Afsjal was absent in Afghan Turkestan as governor of Balkh. Abd al-Rahman joined his father when he was nine years old, and spent the next ten years in Turkistan, his own autobiography is the principal authority for the events of these years. He relates that he did not learn easily to read and write, being devoted to outdoor exercises, and when he was about 13 years old he had apparently forgotten anything he had learnt, for on receiving a private letter from the daughter of his uncle Aq'am, he was ashamed at being unable to read it. He prayed for enlightenment, and in the night saw in a vision a holy man who told him to rise and write. This he did, and in the morning he found himself able to recall what he had learnt, and very soon he was able to read and write. Pashino (1876), however, says that he could read and write but little, and no doubt it was always a labor to him, only overcome by his strong will. His military education was more thorough and more congenial to him. His first instructor was his father, an Englishman named Campbell, who was taken prisoner at Kandahar in 1850 (1854) in Sherr Ali's attempt of that year. When the Persian war followed, Captain Afsjal (Afghan War, 1874, i. 131) calls him an Indo-Briton, and appears to have been a brave and able man. He had become a Mussalman, was known as Sherr Muhammad Khan, and was now commanding Afsjal's troops in Turkistan. Abd al-Rahman expresses great admiration for him, and was under his tuition for three years. At the end of this period the capricious Afsjal allowed himself to be influenced against his son by "Abd al-Rahman a distant relation, and threw him into prison for a year. He was then pardoned and restored to favor, and, Sherr Muhammad Khan having just died, was made general in his place. His uncle Aq'am came to Turkestan as commander-in-chief about this time, and Abd al-Rahman was under his orders, but in spite of his youth it seems to have taken a real part in the operations which extended Dost Muhammad's power through Kandahar, Bokhara, and Derawak, and all the territory south of the Oxus up to the Pamir. The first war was against Mir Attarik of Khatoum, who refused to admit the emir's authority. He was defeated and took refuge in Badakhshan. He instigated a rising in Andarab and obtained assistance from the Mir of Kohat, who was a feudatory of Bokhara, and from the Mira of Badakhshan. Abd al-Rahman was besieged in Tullaghkhan, but emerged successfully from his difficulties. His father, however, ordered him to retire on Ghianbd on which he did successfully. Peace was made, evidently against his will, and he was as he says for a year occupied in the organization of the army at Tullaghkhan. After this war broke out again, and continued in a desultory manner till the death of the emir Dost Muhammad after the capture of Herat in 1863, when 'Abd al-Rahman was nineteen years old. He was then at Kandahar in Katcha in, his father was at Tullaghkhan, and Aq'am was the emir when he died, but quickly fled as Sherr Ali was too powerful at Herat to be opposed. Abd al-Rahman was for a time in a dangerous position as the Kandahar chiefs were roused by the news of the great emir's death, but he won a decisive victory at Narin and succeeded in maintaining his authority. These troubled years of fighting and intrigue developed his strong character, and prepared him for the part he was to play in the internecine struggle of the next few years.

II Sherr Ali succeeded Dost Muhammad as emir, without immediate opposition, but Afsjal and Aq'am began at once to intrigue against him. Open war soon burst out: Aq'am was defeated by Raffi Khan, Sherr Ali's general, and took refuge in British India. Afsjal then took an attempt, and contrary to 'Abd al-Rahman's advice, gave back Katcha to Mir Attarik in order to secure his neutrality. He was defeated by Raffi Khan at Baljagh in the Hindu-Kush mountains, and was shortly afterwards imprisoned treacherously by Sherr Ali. 'Abd al-Rahman then took his uncle, but he himself shortly before proposed to his father to imprison Sherr Ali in a similar manner, but that he refused to avail himself of the opportunity. 'Abd al-Rahman evidently despised his father for what he considered a foolish scruple, and points out that Sherr Ali was not hampered by any such fantastic ideas of honor. 'Abd al-Rahman then fled across the Oxus, and took refuge with the emir of Bokhara who received him unwillingly. When the Russians took Tagh Khan and the emir left Bokhara for Samarqand 'Abd al-Rahman opened up communications with his uncle Aq'am who was at Rawalpindi, but made his escape and met him at Baljagh. Uncle and nephew collected some forces, and made a bold dash at Kahl, taking advantage of the absence of Sherr Ali at Kandahar where he had been engaged in war with his own whole brothers. He had been successful, but had lost his eldest son, and had alienated Raffi Khan his best general, who came over to 'Abd al-Rahman. Kahl was taken without difficulty and 'Abd al-Rahman then marched against Sherr Ali, defeated him at Sattabad, and took Ghazni, releasing his father who was confined there. Afsjal now became emir (his coins struck at Kahl are dated 1385), but Sherr Ali retained possession of Kandahar and Herat, and Faiz Muhammad the governor of Balkh, who had at first helped 'Abd al-Rahman, now declared for Sherr Ali. 'Abd al-Rahman, who was a man of strong character rather than Afsjal, was cruel and tyrannical, while Afsjal had lost all energy and became an idler and drunkard. The treacherous assassination of Raffi Khan, to whom so much of their success had been due, led to great unpopularity, and it was only the ability and determination of 'Abd al-Rahman which upheld their throne for a time. The defeat of Sherr Ali at Khilit (Pilina) in Jan. 1867, and the subsequent capture of Kandahar were mainly due to him, and after this he fol-
ABD AL-RAHMAN.

headed Shahr 'All into Turkistan and defeated him and Fudj Muhammad in the Panjshir Valley. Fudj Muhammad was killed in this action. 'Abd al-Rahman returned to Kabul, and in the hope of succeeding his father he did not enter Kabul until October 1867, but found it advisable to support his uncle who succeeded. He was not however trusted, and was compelled to leave an army to Balik against the Aimaq tribes. His troops suffered greatly from the cold, and for the time he was successful, and prevented all opposition with the utmost severity. The whole garrison of Nimsak, 2500 men, was massacred. Akta and Mainana in the west of the province were also taken. Shahr 'All still held possession of Herat and his son Ya'qub now recovered Kandahar. Shahr 'All joined him, and their army advanced up the Turan valley towards Ghansai. A'lam left Kandahar to meet them, and his favorite Ima'm Khan against which 'Abd al-Rahman had vainly warned him, treacherously asked Kandahar in his absence, and made it over to Shahr 'All. A'lam was joined by 'Abd al-Rahman near Ghansai but they were overthrown at Zama Khan, and forced to take to flight with a few followers only.

III. Shahr 'All was now (at the end of 1868) established as emir over the whole of Afghanistan, and retained the position until 1879. After the defeat of Zama Khan by Ahmad Shah Durrani, some time led a wandering life of great hardship. He describes his adventures in detail with spirit and humor, and it is not too much to say that this part of his memoir bears comparison with the celebrated autobiography of the emperor Bittar. He met his uncle at a place called Mainana in the translation (1. 164), evidently not the Mainana of Turkistan, but some village near Ghansai, and thence they found their way to the Waziri country on the Indus frontier. Subsequently they went through Zob and Peshin, and by way of Chaghai to Pakolak on the Helmand River, and so into Sistan. They then entered Persia territory and went by way of Birdjand to Meejed. There 'Abd al-Rahman left his uncle as the Shahr's guest. He was ill at that time and died shortly afterwards at Shahrud. He left a son named Ibrahimi, who was yet to be a cause of trouble. 'Abd al-Rahman travelled over the Karm-Kum desert, enduring great hardships by the way, to Khwai, which was still independent although 'Abd al-Rahman, with his usual foresight, warned the Khan that he could not maintain his independence for long and advised him to come to terms with Russia, - advice which was not followed. Ultimately he arrived at Sarakand, and after a interview with the Russian governor went on to Tashkend, where he was received by Gen. Kaufmann, the Governor-General. He asked for assistance against Shahr 'All. This was refused him but he was given an allowance for his maintenance at Sarakand, where he continued to live for the next eleven years. He waited quietly for his opportunity, which did not arrive as soon as he had hoped. Shahr 'All had met Lord Mayo the viceroy of India in 1869, and very exaggerated reports were circulated in Central Asia as to the results of the meeting, but his friendship with the English did not last long, and he showed greater friendliness towards Russia. This did not improve 'Abd al-Rahman's position, and perhaps rendered him more willing to accept English help when the occasion arrived. So he remained until the year 1880 when the events following the British invasion of Afghanistan and the flight and death of Shahr 'All led to the revival of his hopes.

IV. The history of the war of 1879-80 will be dealt with elsewhere [see Afghan War]. It is sufficient to note here that the failure of Ya'qub and his removal to India left the throne vacant, and that an offer was made to 'Abd al-Rahman by Sir Lepel Griffin on behalf of the British Government to recognize him as emir of the whole country with the exception of the Kandahar province, which it was proposed to maintain as a separate state. 'Abd al-Rahman accepted the offer with some reservations, and was soon justified in his action from his own point of view. Ayliff, the second surviving son of Shahr 'All invaded Kandahar from his base at Herat, and won the battle of Maiwand. This led to Gen. Roberts march from Kabul to Kandahar where he defeated Ayliff on the 1st Sept. 1880. The English Government then gave up the scheme for a separate state of Kandahar, and 'Abd al-Rahman received possession of it in April 1881. Ayliff, however, was able to collect another army, and again invaded Kandahar, but was finally defeated by 'Abd al-Rahman in Sept. 1881. He fled into Persia, and 'Abd al-Rahman for the next twenty years ruled a united Afghanistan. During this period his external boundary was to some extent modified: (1) by the action of the Anglo-Russian boundary Commissions of 1883 and 1895 regulating the extreme northwestern and northeastern frontiers; (2) by the regulation of the British and Afghan spheres in the disputed land occupied by unsubdued hill-tribes, under the Durand treaty of 1893; and (3) by the annexation of Khorasan in 1896.

The first of these events is generally known as the Pendjeh dispute. The boundary of Afghan Turkistan to the N.W. was imperfectly defined by the Anglo-Russian agreement of 1873, and after the annexation of the Murw Oasis by Russia it became necessary to lay down a more definite line. A joint commission was appointed for this purpose, but before any delimitation could be made some fighting took place between the Russians under Alligkow and the British under Spansi-Diu, in which the latter suffered severely. At the time of the collision 'Abd al-Rahman was at Rawalpindi in British India, where he was received by the viceroy Lord Dufferin. The action of the Russians was much resented, and at one time it seemed possible that the incident might lead to war between England and Russia, but 'Abd al-Rahman was not willing that it should be regarded as a casus belli, and did not insist on the inclusion of the Sarh Turkomen in Afghanistan. He accepted the line finally laid down by the commission; which left Pendjeh to the Russians, while Dhu'l-Fikar which they had also occupied was returned to Afghanistan. Nevertheless he was much displeased at the methods followed, and always considered that he had not received fair treatment, but he did not allow his feelings to divert him from the main object of his policy which was to maintain the independence of Afghanistan, and he clearly perceived that a war between England and Russia would not contribute to this result.
Secondly, the arrangements as regards the independent tribes were not altogether to his taste. He regarded the inclusion of the province of Zhobi in British Baluchistan as an infringement of his rights, although none of his predecessors had held the country, and he also resented the extension of the Bolan railway to Carmen. He agreed to a demarcation being made under the treaty of 1893 (the Durand treaty), but the actual demarcation made in 1895-96 displeased him, and his general Ghulam Haidar effectively prevented the boundary from being carried, as had been agreed, through the territory of Mahmand.

It is generally believed that in his dissatisfaction he gave some encouragement to the Mullahs who organized the outposts along the frontiers in 1897 on the Toof, among the Mohmands and Afridis, and in Swat, but he avoided an actual rupture with the British Government.

Finally, he took immediate advantage of the recognition of Kâhiroon as within his boundaries, and in the course of 1896 he thoroughly conquered and annexed this hitherto independent and pagan province, and the occupation of its inhabitants to Islam has been proceeding ever since. The above were the principal events affecting the outer fringe of the country, but Abd al-Rahman had also to grapple with several internal difficulties, which will now be noticed.

The Ghilzai rebellion. This large and important tribe broke into rebellion in 1886 instigated by the chiefs and Mullahs who found that the emir's severe and repressive system interfered with their trade. Many, of the emir's supporters - such as ‘Aqmat Allah Khan, were connected with Shâr Ali's family and intrigued with Aiyût. ‘Aqmat Allah was arrested in 1882, but the actual outbreak did not take place till the autumn of 1886. One of the principal rebels was the Mullah ‘Abd al-Kurim, son of the notorious Mughli ‘Ali of whom the emir nicknamed Mughli ‘Ali, i.e. "mouse of the world" instead of "musk of the world". The Tarakki, Andlar and Hotak clans took part in the conspiracy, to the detriment of the country. The Ghilzais who formed part of the Herat garrison also sustained, and attempts were made to communicate with Aiyût. The general Taimûr Shâh a Ghilzai who was deputy commander-in-chief took part in the rebellion. After severe fighting it was put down chiefly through the efforts of Ghulam Haidar Toof, afterwards commander-in-chief. Taimûr Shâh was taken prisoner and sentenced to death by the emir's orders. Aiyût's attempt at invasion was a failure. He went to Gen. Mackenzie, the British consul-general at Kâhiroon, and surrendered himself, and was taken to India where he has since lived as a state prisoner.

Ishâk's rebellion. Ishâk son of the emir Ajan was employed as vicereign of Turkistan in 1880, but was never loyal to 'Abd al-Rahman, and soon began to intrigue against him, making use especially of the sect of Nâshâh-Dervishes, of which he was a member. In 1888 when 'Abd al-Rahman had set up a purely Sunni government, and a number of his death was counselled, Ishâk thought his time was come, and proclaimed himself emir, striking up a new name bearing the legend 'Struck at Kâhiroon 1302', although in fact he never had possession of Kâhiroon, and the coins were minted at Balkh. Sultan Muhammad Khan, in his translation of the emir's Memora (I. 257) states that he had himself been a ra'is of Ishâk, with the legend 'Ishâk aminul-Mohammad ibn Ibtâhâd Khan. He rebukes this as blasphemy although it should have been clear to him that he had not read it correctly. No Mussulman coin has ever borne such a legend. The correct reading is Muhammad Ibtâhâd aminul-Mohammad ibnul-Muhammad ibnul-Muhammad ibnul-Dowlat Khan. Gen. Ghulâm Haidar was sent with a strong force from Kâhir on. Abd Allah Khan cooperated with Balkh. The united forces met Ishâk's army at Ghâni-Gak near Tâj-kungân. For some time the issue was doubtful, and Ishâk's defeat at the hand of the Mohmands and Afridis, and the Swat, was a crushing blow. The Afghan forces had stood firm throughout, and defeated Ishâk who fled and took refuge with the Russians at Kerki. They detained him as a kind of state prisoner at Samarqand. After this 'Abd al-Rahman himself visited Turkistan leaving Habîb Allah's regent at Kâhir on, and ejected the inhabitants with extreme severity, so much so as to lead Lord Lansdowne the vicereign of India to send him a formal remonstrance, which as 'Abd al-Rahman records he was unable to comply with. He also suppressed a rising in Badakhshan.

In December of the same year (1888) he had a narrow escape from assassination. A soldier died at his side while he was reviewing his troops, but missed. 'Abd al-Rahman attributes his escape to a charm written on his arm which he had worn on his arm since childhood.

The Hazara tribes. The Hazara tribes of the mountains west of Kâhir on, of Mongolian descent, Persian in language and Shí'ite by creed have never loved the Afghans, and begun to give trouble about the time of Ishâk's rebellion. In 1891 and 1892 serious fighting took place and the victorious Ghulâm Haidar was ordered to advance into Hazaristan from Turkistan. The outbreak was put down and the emir took severe measures. Since then the country has been quiet, in accordance with the natural disposition of its sturdy, good-natured and hardworking people. No such excessive severity as had marked the suppression of the Turkistan revolt seem to have been employed on this occasion.

In dealing with unruly tribes, whether Pathans, Hazaras or Uzbek, 'Abd al-Rahman acted according to the traditional Oriental rule. Any means of ensuring submission are considered lawful and proper, and in some cases the utmost severity and cruel cruelty was used. He considered that his people could be governed in no other way, and was thoroughly persuaded that he had Divine Sanction for all his acts. His methods, however, excited violent hatred among the more independent tribes, who saw their leaders killed, their villages destroyed, and whole clans driven from their homes and their pastures, or transplanted wholesale to some distant part of the country. In general, however, where there was no actual rebellion, justice was done, and an amount of peace and order, to which it had long been a stranger, was gradually established throughout the country. 'Abd al-Rahman was a sincere but not a bigoted Sunni. He encouraged Mullahs and religious enthusiasts up to a certain point, and
would make use of them to gain his own ends, but he never allowed them to take the lead, and was not under their influence, as his successor is believed to be. In his Memoirs he insists again and again on the folly of fighting and war between Sunnites and Shīʿites, and he seems to have been on the whole just in his dealings with the Shīʿa Hazaras. Nor does the conquist and conquest of the heathens of Kafiristan seem to have been accompanied by religious persecution. His remark regarding the feuds between the Persians and Turkomans is characteristic. He says: 'The Persians and Turkomans are enemies although they are both Moslems, yet their priests being servants of the Devil instruct them to kill and sell each other'. Though these two races call themselves Moslems, they treat each other as heathens through ignorance. Thus the unbelievers triumph over the faithful, because the latter are disinclined. The fault is not in Islam, it is we who are full of faults'. Great efforts were made by the emir to improve the condition of his country by the promotion of trade and manufactures. His methods were not always those best calculated to succeed, the heavy transit duties being a severe tax on traffic, but on the whole there was no doubt that Afghanistan made a great advance in prosperity during his reign.

Military organisation received much attention and the manufacture of arms and ammunition was organised under the direction of English experts such as S. Pyne and A. Martin, and others. The main spring of Ḥāfīz Šāh's policy was his determination to preserve the independence of Afghanistan from his powerful European neighbours, and his keen intellect made it clear to him that in order to effect this object it was necessary to remain on good terms with both England and Russia; with England to which he was bound by treaties and through which his relations with the rest of the world were conducted, and with his near northern neighbor Russia. This intention carried out consistently, and though often disapproved at the action of both powers he always succeeded in avoiding a rupture; while clinging tenaciously to everything he believed to be his by right. His character can be best studied in the frank self-revelation of his autobiography, one of the most remarkable and attractive works ever produced by an Oriental monarch.

'Abd al-Rahmān suffered for many years from gout, and towards the end of his life this was complicated by the appearance of Bright's disease. On the 1st Oct., 1902, he died from the immediate effect of a paralytic stroke, after declaring Ḥāfīz Šāh his eldest surviving son to be his successor. Ḥāfīz Šāh and Naṣir Šāh are the sons of Bihīl Golīx, a girl of Wāghān whom he married at Samarkand. Bihīl Hāfīz whom he married afterwards is a member of his own tribe, and his son Muḥammad Šahtān was at one time the emir's favorite. But whatever his preferences it was to this matter he declared his wish to resign the throne, and designated the eldest son as heir to the throne.

was written after he had finished his commentary on the Mandate of al-Harawi in order to explain the Shi'i technical terms which occur but are inadequately explained in that work, and also in his commentary on the Fāṭḥ al-Miʿām of Ibn Ṭanī (Cairo, 1300) and in his Taʾwīl al-ʿārafiʿ. According to Hāshīja Khilīfa (ii, 142) the Taʾwīl of Abd al-Razzāk extends to Sara xxviii only, yet Berlin MS. No. 872 covers the entire section, but apparently in abridged form. Riḍwān ʿAbd al-Razzāk is still extant on predestination and free will, first translated into French, (Jesuit. Rev. As. 1873; revised edition 1875), then the text published by St. Gayard (1879); it will be dealt with in detail below. The treatise seems to have excited attention, for Hāshīja Khilīfa (iii, 452) gives three answers to it by Ibn Kamāl Pādān Tābībī Zadeh and Bāb Khilīfa Shīfāryahu. A commentary on the Ṭibāʾa poem of Ibn al-Fārūq (Cairo, 1410) his work as yet unpublished. It: Riḍwān ʿAbd al-Razzāk, in the idea of an eternal Being; Riḍwān al-Kumārīya, on the tradition. Hāshīya answer by All to the question of Kullān b. Ziyād ʿAbd al-Razzāk (comp. the Berlin MS. No. 3562; Hāshīja Khilīfa, iv. 67; Jevon, As. 14, 83); a commentary on the Manuscript of Hāshīja Khilīfa (v. 387) adds Miyād ʿAbd al-Razzāk. For MS. reference will suffice to Brocklmann, Gesch. der arab. Literatur, ii. 103, 204 et seq., 345); the Gotha cat. No. 76, 2, and Palmer's Trinity College Cat. p. 146.

It will already be tolerably clear what Abd al-Razzāk's interests and positions were. He was a Shi'i of the school of Ibn Arabī, the great theologian of the Shi'i school, which is in fact the same as the Western Arabic type, though with touches of independence, and he gave much labor to defence and exposition of his master's doctrines. In the three great divisions of Muslim theology, the ascension of tradition (naṣiḥ), of revelation (faṣl), and of the universality of the mystic (naṣīḥ), he took his place with the third. It may be significant that his name never indicates to what legal school he adhered. Like many mystics, he may have regarded such matters as beneath notice, or he may, like Ibn Arabī, have been a beloved Zāhirī in law, as he was evidently a Bātinī in theology. The last is plain through the title itself of his exposition of the Korān, naṣīḥ, not faṣl, and is shown in detail in his Iṣlāḥ al-ʿārafiʿ and his treatise al-ṣudūr. In the last we have the normal combination of the Aristotlean universe, the Neo-Platonic metaphysics and theology and the Korānic mythology of Muḥammad. These all appear, too, in Ibn Arabī, but perhaps Abd al-Razzāk is more anxious to keep the last element prominent, and to proclaim thus his essential orthodoxy. Certainly, he strives to avoid the absolute merging of the individual, and the consequent salvation of Ibn Arabī and to lay a possible basis for individual responsibility, for freedom and rewards and punishments hereafter. His method is as follows. In order to bring out clearly the forces leading to any event and the close interweaving of all causes and effects to make up the great organism of the universe, he begins with a description of the universe on the Shi'i scheme. It is the Neo-Platonic chain, Above is God, the One, the Alone; from him proceeds, by a dynamic emanation, the Universal Reason (al-dīn al-ʿawwal), called also the Primary or Universal Spirit (al-dīn al-ʿawwal) and the Highest Knowledge (al-dīn al-ʿawwal). This is a spiritual substance and the first of the properties which the divine essence implies. From it two other substances are produced, one spiritual (ʿalāʾī) which is the substance of the world of the Universal Reason, considered as apart from God and inhabited by particular intelligences, somewhat as fractions of the Universal Reason, which are the angels of revealed religion; the other is physical, being the Universal Soul (nalā). Finally come the material elements with their natural forces and laws. In the Universal Reason are the types of all things, as universals, and this Reason, with its types, is known directly by God. God's omnipotence (ḥikrīya) is manifested through these angels or Intelligences, and their world is therefore called the World of Power (al-dīn al-ʿawwal). But they also, in their perfection, repair the imperfections of other beings. Their world, therefore, is called the World of Repairing (al-dīn al-ḥādīya). Some, however, take the other sense of the root ḥādīya and render it, the World of Constraint, because they conceive other beings tending towards perfection. This world is also called the Mother of the Book (umm al-kutb; Korān. xli. 39, xlii. 3), from it comes all knowledge of divine mysteries, it is above all fetters of time and change. The world of the Universal Soul, on the other hand, called the World of Ruling (al-dīn al-maḥlūla), is a step nearer the particular, material world. The types which exist in the Universal Reason become in it general conceptions, and there are further, more determined, limited, brought near to what we know, by being engendered on the individual reasonable souls, which are the souls of the heavenly bodies, corresponding to the angelic Intelligences, the fractions of the Universal Reason. This world, from its likeness to the human imagination, is called the Imagination of the World (ḫayāl al-dīn) and the Nearer Heaven (al-ḥādiya al-dīnīyya). From it it first all beings in order to appear in the World of Sense (al-dīn al-fāsiḥ), it secretes and directs everything, measuring out matter and assigning causes. The heavenly bodies, then, have reasonable souls just like our own, these are the imaginative faculties of the particulars reasonable souls, into which the Universal Soul divides. On their changes all change in this world below depends (comp. al-Jazārī's scheme, in Jevon. of Arab. Orient. Soc., xx. 110 et seq.).

Further, this constitution of the universe corresponds to man's body, macrocosm to microcosm. Just as the brain is the seat of man's ruling spirit, so the Universal Spirit or Reason is seated in the throne (urūd) above the sphere of the fixed stars. The seventh heaven, the sphere of the sun, which vivifies all, is the seat of the Universal Soul, in man this is the heart, wherein is his particular, reasonable soul. So the fourth sphere is like the breast, and the sun like the physical heart. The individual soul of the sun corresponds to the animal spirit in the heart, which is the source of human life.

Next, as to the place of predestination in this scheme, for that there are three words, ḫāṣaʿ, ḫāṣaʿ and ṭalīya. ḫāṣaʿ means the existence of the universal types of all things in the world of the Universal Reason. ḫāṣaʿ is the arrival in the world of the Universal Soul of the types of
existing things, after being individualized in order to be adapted to nature, these are joined to their causes, produced by them, and appear at their fixed times. 'I'ma is, broadly, Providence and covers both of the above, just as they contain everything that is actual. It is the divine knowledge, embracing everything as it is, universally and absolutely. It is not in any place, for God's knowledge, in His essence, is nothing else than the presence of His essence before His essence, which is essentially one and goes with all the qualities which inheres in Him. Further, while the essence (hādī') of 'I'ma is part of the 'I'ma of God, its entelechy (kāmil) is in the world of the Universal Reason. The Universal Soul is sometimes called the Preserved Tablet (al-ṭurūb al-mawâshih), for on it are preserved inalterable all the general conceptions which are on their way to the individual heavenly souls.

It is the world, then, of nādir, of the Soul, which sets everything in motion. This is by the yearning of the reasonable souls of the heavenly bodies towards their spiritual source, the Universal Reason. They try to assimilate themselves to this, to universalize themselves, step by step, they mount up, and with each advance they receive a new outpouring from that source, drawing them on further. With each movement, they draw from them as influence upon matter according as it is adapted to receive it, and thus there is a series of changes in the material world, corresponding to those in the world of the Soul. Those changes may be either absolute, of creation and destruction, or, between those extremes, simply of condition. The duration of existence constitutes the Kūrānic 'āfīṣ, and all these are fixed by 'I'ma.

Finally, this exegesis of Kūrān, Ill. 1-6 will show how 'Abd al-Razzāk applied Scripture. By the Mount and by a Book Inscribed in a Parchment Outspread, and by the Frequented House, and by the Raised Roof, and by the Flowing Sea. The Frequented House is the Spirit of the fourth sphere, that of the sun. Therefore Jesus, the Spirit of God, has been placed there, whose miracle is the raising of the dead. The Mount is the 'arč, the seat of the Universal Reason. The Book Inscribed is the 'āfīṣ, which is in that Reason, and the Parchment Outspread is the Reason itself. The Raised Roof is the nearest heaven, where are the individual celestial souls; it is mentioned immediately after the Frequented House, because from this heaven the forms descend on the earth, and from the Frequented House comes the breath of the Spirit, by the combination of which the creation of animated beings is achieved. The Flowing Sea is the sea of primary matter which spreads everywhere and is filled with forms.

Now, then, is such a scheme related to predestination and free will? It is highly complicated, consisting of a remote first cause and an infinite intermingling and crossing, nearer, more secondary causes, it is possible to look at these last only, and so to assign absolute creative and deciding power to our own wills. Or to look only at the first cause and become fatalists. We must preserve the balance and hold both. The complete cause of anything into which human will can enter must have as an element in it, among so many others, free will. It sets all the others in movement. Under this conception, though never clearly stated, is evidently implied that man has in him an element of the divine deciding power. If there is freedom in the divine nature, there must be also in its emanations. For Ibn 'Arabī the oneness of the divine nature meant against the creation had overcome everything, 'Abd al-Razzāk says stress on the multifarious interwoven causes of the world, its constantly developing processes, to show that in life, purpose and will there must be multiplicity. The divine is spread down through the sub-lunar things, it does not simply rule from above. Again, amongst the many causes working in the world and upon men are the restimuls and influences of religion, the promises and threatenings of the prophets. These are the means of producing effects upon men as parts of the whole scheme, the process of training under which we are. But, again, why should training be necessary? Why are there good and bad? Here, again, is an implication, once pretty clearly expressed. Man is of very differing nature, grosser and finer. It can receive only a corresponding soul, therefore souls also vary. Character and disposition is a combination of both, and it is for the soul to overcome its material body and itself rise to this. This is evidently the fundamental thought, but 'Abd al-Razzāk does not give much space to it. Rather, he uses the old theological catch. This must be the best possible creation, otherwise God would have created a better. Further, if all things were equal, there could be neither order nor organization. This would also be hard on those less perfect things thus rated out of existence. All things should have a chance; it is for them to make it. God knows their differences and will allow for these. The most and the greatest sins are from ignorance, and God will so treat them. In the life to come the same thing is to go on. Some will attain felicity, others, because they might have done better, must undergo purification by punishment, but that will not be eternal. Here, perhaps, 'Abd al-Razzāk is most unsatisfactory. He passes over into the normal Muslim conception although it is not at all clear that his system can permit individuality apart from matter. Freed souls, we should expect, would either return into the material world else he sent forth again to another material life. Like so many in Muslim theology and philosophy, this instance was adapted to an audience, and was not perfectly ingenious. Yet behind its caution of statement the real system is tolerably plain. It is nearer orthodoxy than that of Ibn 'Arabī, but not as near as this eschatology would suggest.

Bibliography: St. Guillaum, in Journ. duc. sécr., t. 125, et seq., which is the main source; Brochelmann, Gesch. der aram., Litter., ii. 203-204, who made of him two different persons.

(continued)
brief mention of the birth (704 = 1320-1321) and accession (716 = 1326-1327) of the Ilkhans Abü Sa‘ıd (†1337), in chronological order, in two volumes (vol. 1 up to the death of Timur in 1405; up to the year 830 [1426-1427] is principally made of the Žahâd al-fonun‘ of Hâfiz-ı Abru [†1361], which is at times quoted literally. Some portions of this work are known to us only through 'Abd al-Raziq; from the same work (the original text appears to be preserved in MSS. at the Biblio. of the Aby. [†1411], not recognized by Ebn-Ke, Catalogue, p. 90) the famous account of the embassy to China in 823-825 (1426-1428) is also taken. For the periods from 826 to 875 (1426-1471) 'Abd al-Raziq’s work is one of the most important original sources of information. We do not yet possess a complete edition of the Žahâd al-fonun‘; MSS. are to be found in nearly all the larger European libraries, but they are now rare in the East. E. Quatremère gives extracts in the Notes et extracts des manuscrits, pi. 161, 162; as also H. M. Elliot in his History of India, iv. 89, 92, and others.

Bibliography: Elliot, loc. cit., pp. 94 et seq. (W. BARKTHOLD).

'ABD AL-SALAM B. MAJIZH AL-HASHANI, a celebrated Morocco Sufi, was murdered about the year 625 (1227-1228). he appeared to be a paragon of Sufism in Northern Africa. He was a disciple of Abu Madyan Shams (†1329) and the master of Abu’l-Masun ‘Ali al-Shahbath, who has given his name to the law of the largest Muslim confraternity. Little is known of his life, which is the greater part legendary: he seems to have had as a rival Muhammad b. Ahâl Tashfin, who was the religious head of the Moroccan Kaitum, as he himself was of the Banu Arba. Muhammad, however, had him assassinated or murdered him himself, and he was buried on Djahal. Alum amongst the Banu Arba. There are numberless pilgrimages to his shrine; the Moroccans maintain that all the trees on the mountain lean towards him. It has been impossible for any European to visit Djahal. Alum, because of the extreme fanaticism of the inhabitants: it is one of the least accessible parts of Morocco. The reverence for the memory of 'Abd al-Salam and the prestige which surrounded his descendants was greater than one could imagine in the whole district. He was one of the most revered Sufis in the entire Musulman world, and figures in a number of mystic chaits. Legend has naturally embellished his biography with a great number of miraculous events: at his birth swarms of bees from every point of the horizon settled upon him; 'Abd al-Kâdir al-Ghûlan, another celebrated Sufi of the East, who lived more than a hundred years before him, did him homage. His death is also surrounded with miraculous episodes: there were astonishing signs in the heavens and on earth. His shrine is still a place of many miracles. Every year after the Feast of the Prophet (the birth of the Prophet), the inhabitants of Elshâan (Shesham), a small town not far from Tetouan, arrange a great pilgrimage which attracts enormous crowds. The people of the tribe of al-Akkina (Lekhûda), have the privilege of coming every year as pilgrims to the shrine of the Saint and of driving the ‘Alamûshin (Shertâ) away from it; none of the latter can be there at that time without running the risk of being molested. These ‘Alamûshin (Shertâ) are very rich, as the revenues from the shrine of the Saint are considerable. Further, as these Sheiks are descendants of libos, they inherit a part of the revenue from the great Zawiyah of Mehdî libos al-Saghâ at Faris: they send a delegation there every year, which settles there for a month and collects one-twelfth of the annual revenue of the Zawiyah.

‘ABD AL-WâD, an ancestor of the kings of Central Maghrib (Timnaies) (see ‘ALAMÎN). The following is the genealogy of ‘Abd al-Wâd as given by Yahyâ b. Khâlidân: ‘He was the son of Shu‘ayb b. Mâqsûr b. Nizar b. Ma‘âyân b. Ahsân, according to the opinion given to me by Ibn Abu-Yahyâ and other authors’. Notwithstanding the slight value of this genealogy, it still shows that ‘Abd al-Wâd lived before Islam. This fact is confirmed by (‘Abd al-Rahman) Ibn Khâlidân, according to whom, part of the Banu ‘Abd al-Wâd inhabited Avara from very ancient times and were there at the moment of the first Muslim invasion.

In the absence of documentary evidence it is impossible to fix the epoch or the country in which ‘Abd al-Wâd lived. As to the name ‘Abd al-Wâd, it is apparently a corruption of the regular ‘Abd al-Wâl, and not, as de Slane thought, a change from the Arabic ‘Abd al-Wâl in consequence of Berber influence (comp. A. Bel, Hist. des Beni ‘Abd el-Wâl, voix de Timmân, Algiers, 1904, introd., p. ix).

‘Abd al-Wâd gave his name first to a portion of a tribe, which, according to all Musulman authors, is a part of the great Berber tribe of the Zanata (Zenetas). The name of Banu ‘Abd al-Wâd was afterwards extended to twelve other parts of the same tribe.

‘ABDAL-WÄDIDES (BANU ‘ABD AL-WÄD). This name was first given to a part of the great Berber tribe of the Zanita and was afterwards extended to many other portions of the same tribe.

The dynasty of the kings of Central Maghrib, who took Timmân as their capital and whose kingdom lasted from 637 to 962 (1239-1554) was of the Banu ‘Abd al-Wäd family.

During this period of 315 years, twenty-seven kings of this family (of whom two reigned together) ascended the throne of Timmân. These kings are also often called Banu Zaydâ, because one of their ancestors, the father of the first independent
king of Tlemcen was called Zayyân. The two names Bani 'Abd al-Wâd (Abdaldâwîdêès) and Bani Zayyân (Zayyânides) may be used indiscriminately for all the kings of this dynasty, although sometimes it was thought, but wrongly, that only the first five of the kings should come under the name of Bani 'Abd al-Wâd (657—737 = 1239—1335), and all the others under that of Bani Zayyân.

Almost all the Muslim historians have ascribed a noble genealogy to the 'Abdalâwîdêès without, however, being able to establish the fact decisively. 'Abd Hamûn, historian, after having assessed the nobility of the family, adds that he has managed to express doubts about the nobility of the 'Abdalâwîdêès, or to make reservations on the subject which say more to us than all the assertions of paid chroniclers. Besides these, more recent chroniclers, written after the fall of the kingdom of Tlemcen, such as al-Durrâ al-musîqa (Récits des actes du Congrès des Orientalistes, 14th session, Algiers, 1905) deny their title to nobility.

The attainment of kingship by the members of a family of a portion of the Bani 'Abd al-Wâd in 637 (1239) brought this Berber tribe, the name of which without this would hardly have been known, into notice; for nothing certain is known of the history of the 'Abdalâwîdêès before the founding of the kingdom of Tlemcen. In fact we have only the fantastic accounts of the Muslim chroniclers who were contemporary with the kings of Tlemcen, and who sought to glorify the illustrious story of the tribe and to put it in the limelight by the history of the Maghribi al-Maghribi after the introduction of Islam. It was at the beginning of the 13th century of the Christian era that the 'Abdalâwîdêès really took part in the political history of Northern Africa. Their capital, Tlemcen, became an important city full of mosques, schools and magnificent palaces. The monuments and ruins which are still found at Tlemcen have preserved the memory of this ancient splendor for us. The list of works relating to the 'Abdalâwîdêès is not enough to show how much everything that has reference to Tlemcen and its kings has been studied. Apart from certain details which still remain obscure, the political history of Tlemcen and the history of its civilization at the period of the 'Abdalâwîdêès kings are now well established in the main, thanks to the Arab chroniclers, inscriptions and archeology; but non-scientific future archeological and epigraphical discoveries will perhaps throw some more light on it and bring new knowledge of the history of the kings of Central Maghrib. It may, however, be said that few of the Berber dynasties have been the object of so many researches and scientific works as that of the Bani 'Abd al-Wâd.

Bibliography: In addition to the bibliography of the article 'Abu al-Wâd, Brusselaar, Mémôires épigraphique et historique sur les tom-
formed the very foundation of the Almohade empire (comp. Goldscheider, in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, all. 30 et seq.; A. Bel, Les Souvenirs de Maroc, Paris, 1903; Le Livre d'Ibn Tanur, edited by Lucasini, with a preface by Goldscheider, Algiers, 1902). He had publicly made concessions to the Christians, which scandalized his subjects; he had gone so far as to build them a church at Marrakush with permission to ring bells in it. This policy had alienated a great number of his partisans among the Musulmans.

Al-Rashid, or rather his advisers—saw that in order to being the dissidents over it would be necessary to make a change of policy; he re-established the institutions of the Mahdi, which did some good. Nevertheless the Khali Arabis and many Berber parties of the Harhira sent for Vahyaa b. al-Najir, the pretender to the throne who was first cousin to al-Rashid, and besieged Marrakush, of which they took possession. Al-Rasheid, who had gone to make war in the South-East, near Sidjillama, returned and recaptured his capital (655 = 1255-1256). After this initial success he went to take possession of Fez, where the head of his opponent Vahyaa was brought to him by some Arabs who had assassinated him.

In 655 (1255) the Almohades having repudiated the sovereignty of Ibn Haid, tarne the submission to al-Rashid, as also happened at Ceuta.

Being continuously occupied with the defence of his capital and throne and with the pacification of farther Maghrib, al-Rashid was unable to hinder Yaghmurin b. Zayyin from proclaiming himself independent at Tlemcen and founding the Albadalawides kingdom of Central Maghrib there. In spite of the efforts of al-Rasheid he did not succeed in stopping the powerful Bani Mar'man, parties of the Zanatta, who invaded his country and established their influence there by a series of victories won by them against the Almohades. It was the Marinides who were to become from that time the most formidable enemies of the Almohades. After several years of a cleverly conducted struggle, they succeeded in their turn in wresting the empire of the Almohades from the last successors of Abd al-Mum'in.

Al-Rasheid died after a reign of ten years on the 10th Djamara 640 (5th Dec. 1243), being drowned in a cistern at his palace in Marrakush. He was only twenty-four years of age. Although the chroniclers say nothing on this point, it appears that it was his mother who, in reality, governed the kingdom.

ABD AL-WASII DIJARII. Abd al-Ghanii, a Persian poet; one of the panegyrists of the Seljuk Sultan Sandjar. A native of the province of Ghoristan, he lived at first for some time at Herat, and then went to Ghuzna, where he entered the service of Sultan Bahram Shah, son of Mas'ud, of the dynasty of the Ghurids; after four years, when Sultan Sandjar came to Ghuzna to support Bahram Shah, who was his first cousin on his mother's side, he took advan-
ABD AL-WASIS — AL-ABDARI

tage of the occasion to address an ode to him. It is said that he died in 355 (1169). His Diwan was published at Lahore in 1862.

ABDALI (A'dal), plur. of hadıl, substitutum, one of the degrees in the Shi'ah hierarchical order of saints, who, unknown by the masses (risqift al-ghabas), participate by means of their powers in the influence in the predilection of the arrangement of the universe. The different accounts in the Shi'ah literature disagree as to the details about this hierarchy. According to the most generally accepted opinion, the A'dal, forty in number, take the fifth place in the saints hierarchy issuing from the great Kuth [q. v.]. They are preceded according to the Kuth by: 2) both assistants of the latter (al-mutamimin); 3) the five *stake* or *pillars* (al-ahad al-munad); 4) the seven *incomparable* or *leaders* (al-tawfiq). For the A'dal, who, as was already said above, are split up in thirty-two others, of the seventy-preferable (al-mustafijin); 7) the 300 *chiefs* (al-ahad al-munad); 8) the *troops* (al-tawfiq), 300 in number; 9) the *wise* or the *lonely* (al-ahad al-munad); of an unlimited number; 10) the *guardians* *al-ghibas*; have their residence in Syria. Their merit and intercession bring about the necessary rain, the victory over the enemy, and avert general calamities. Every individual of them is hadıl (sing.); still hadıl, which grammatically corresponds to another plural (hadilât), is a more used designation for a single one.

(where is to be found the most frequently accepted division of the classes); A. von Kremer, Gesch. d. pers. Litter., ii. 739, the celebrated traditionalist and jurist Ibn Da'îjî al-Id (Siyâsî, Han al-munafaqin, l. 1-2, Cairo, 1321; Ibn al-Sabîk, Tâbik al-ghidra, 2, Cairo, 1324); Zain al-Dîn b. al-Majdî, Ibn Farbî, p. 205, Feb. 1377; Adbul Râzî, al-Munafaq, p. 194, Feb. 1377; 'Abdul Allâh b. Kâfatî and Tâfi al-Kurdim at Tarsî, Abî Zaid 'Abî al-Rahîm b. Abî Aswâd at Kasrânî, 'Abî 'Hasan 'Abî b. Ahmad al-Kurdim and others. Among his pupils only his son Muhammad and 'Abî 'Kâfîn b. Ridwân are mentioned.

His book, the writing of which was only begun at Fezma, is an instructive and useful book not only because of its exactness in topographical information, but more especially for its archeological details and its studies of the customs and full show of the Musulman scholars of the 7th century of the Hegira.

Looking at things from a lofty standpoint and rarely stopping for geographical details, al-Abdari, who was a master in Arzûb, was specially solicitous about the state of Musulman science, searched out men of letters, whose companionship would interest him; and in consequence lost no opportunity of devoting himself to literary exercise, which was full of lexical excentricities, alliterations, puns, metaphors, etc. His style, however, changed on leaving Cairo, it became temperate and clear, and to a certain extent it ceased to be declamatory.
The work contains a great many pieces of poetry, of which the principal are: 1) al-Abdārādī insulting Ibn al-Khaqānī by Abū Muhammad Abū Allāh Abū Zakārīya 'Abd al-'Azīz b. Abī Zarkārīya; 2) a tawhīd of the Manuscripts of 'Abū al-Fawā'id; 3) an epistolary rhyming in 158, which al-Abdārādī sent from Kairouān to his son Muhammad, and in which he gave him good moral precepts; 4) a piece rhyming in 162, which al-Abdārādī sent to Sultan Sanāʿ al-Dīn Yūsuf b. Ayyūb, and in which he begged him to free the country of Latin from the yoke of the Christians; 5) a piece of 105 verses, rhyming in 170, which resolves with emphasis the dispute.

Mohamed Ben Chemer

Abd-ar-rādī Muḥammād b. Muḥammād b. Muḥammad b. al-Qālqūnī Abū al-Qāsām Abī al-ʿAdī Allāh, a theologian, studied in Fes, went to Cairo whilst on a pilgrimage, settled there as a professor and died in 1377 (December 1339). He was the son of the author of a piece of 170, [cited preceding article], to which his appellation of Ibn al-Kalbī perhaps refers. He is not identical with this latter, as Goldscheider (in the Zeitschr. d. Deutsch. Palästinakommission, xii. 116 and Goetze, Gesch. der Arab. Literatur., 1899, p. 466) assumes, is shown by the difference of the Kunyas, apart from the difference of age. His principal work is the Kitāb al-madhābī līl tanzimīyat al-ṣawādāt al-ḥāshiyāt al-mālīkīya, which spread among the Mussulmans of the East. It is printed in 3 volumes in Alexandria, 1393, and in Cairo, 1320. He further wrote a mystical book on the secrets of the letters of the alphabet, Al-Musāb al-sawāw wa-ḥāṣbih al-aswāw. It is printed in 2 volumes in Alexandria, 1393, and large.

Abd-ar-rādī (v.), ablation. [See Würd.]

Abdi (abbreviation of Abdu al-Rahman), an Ottoman historian, was brought up as a page (teqāb) at Gaht-Suba, he was ensered by the Sultan Muhammad IV to write the annals of the reign and the sovereign confided to collaboration with him, his giving some insignificant hints to his notice. He was appointed private secretary (1679 - 1680); in the following year he took the place of Abdi Pascha as Nishāndji (scribe appointed to make out the tahrirs) and was promoted to the rank of vizier. He was chosen as Khālik mašān during the campaign of Ceyhan (8th Rabiʿ II 1089 = 30th May 1680). In 1093 (1682) he was appointed governor of Ceyhan and from that moment he stopped writing his annals. He died governor of Ceyhan (1102 = 1690) advised by his subordinates on account of his love for justice.

His history, (Tāżkīrat Nishāndji Abū al-Kātibkīnī Pascha) extends from 1054 (1648) to 1095 (1682).

Bibliography: Hammer-Furtstall, Gesch. des osman. Reiches, see index. (Cla. HIRZEL.)

Abūd-adh (or Abūd-adh), the first of the 8 verses memorable, with which the Arabs used to designate the letters of their alphabet. These eight words are usually pronounced as follows: 'abu-udh 'bāghr ṣawf bāghr ṣawf bu 'tīb bāghr ṣawf.

The Maghribi Mussulmans arrange the last four words as follows: 'tīb bāghr ṣawf bu 'tīb bāghr ṣawf bu 'tīb bāghr ṣawf.

The order of the letters — only the consonants are to be counted — in this series is the same as in Hebrew and Aramaic, and thus, together with the paleographic proofs, confirms the theory that the Arabs have received their alphabet through the Nabataeans. The six letters peculiar to Arabic alone have been placed at the end of the series.

The list above shows that the 1st letter has, besides these 8 mnemonic words in which we themselves are meant to be preserved, the present day in the use of the letters as numerals, again analogously to the Hebrew and Aramaic; from 1 to 8 they are used for 1 — 100 and the remaining nine as hundreds up to 1000.

Side by side with this old order, which takes us back to the origin of the Arabic alphabet, the order as used at the present day was early evolved. It grew out of the idea of putting letters of the same graphic form behind the first letter which occurs under this form, so that, for instance, 1 and 2 come behind 3, etc., only 5 and 9 are placed at the end. The Maghribi alphabet has preserved the order thus obtained to the present day.

In the East Islamic order adopted by European scholars the original form already so completely unrecognizable is further altered; it is impossible to recognize in it any underlying principle exactly carried out, but it is seen that phonetic considerations have had some influence. Together with these two popular forms of the alphabet, a few scholars have arranged the letters entirely on a phonetic-physiological basis in such a manner that the sounds produced lowest down in the throat, the gutturals, are at the beginning and those produced in the front of the mouth, the labials, at the end. Thus the order given by al-Khalīlī in his Kitāb al-Sawāw is as follows:

Abu-udh 'bāghr ṣawf bāghr ṣawf bu 'tīb bāghr ṣawf bu 'tīb bāghr ṣawf bu 'tīb bāghr ṣawf.

The Hebrew-Aramaic origin of the Arabic alphabet is beyond doubt, yet the Arabs, entirely ignorant of the other Semitic languages, and being besides prejudiced in consequence of their profound self-consciousness and pride of descent, have sought for other explanations of the origin of the mnemonics.
'abjed etc., handed down to them by tradition. All that they have said about it is, however, interesting it may be, to be just as down to as fabulous. According to some, six kings of Madyan had based the order of the Arabic alphabets on their own names; according to another tradition, the first six words are the names of demons, and finally according to a third, they were the names of the days of the week. Silverstein de Sacy has pointed out that in these traditions only the first six words were used, and that, for example, Friday is not 'abjedhah but 'abjd'; but to assume that Arabic originally had last six letters is not, on the grounds of this vague tradition, scientifically admissible (comp. de Sacy, Grammaire arab. 2d ed. 1 § 9). For the rest, there have been also amongst the Arabic grammarians, as al-Muharrad and al-Saff, who were not satisfied with the traditional explanation of the 'abjed, but fundamentally declared that the words must be of foreign origin.

Relating to the properties of the letters as representing numerical values, the mystics early made use of the words 'abjed etc. as incantations and magic-charms. To each of the letters of the alphabet, there corresponds according to this system a name of God and certain other powers of nature, and on the basis of this mutual relationship of numeral and letter on the one side, and the symbols corresponding to them on the other, a whole system of practical mysticism was erected. Thus for instance the introductory formula of the incantations are added together as numbers letter by letter and the resulting total again brought into relation with the world of the Ljinn. An analogy to this use of letters is found in the Jewish practical Cabala of the Middle Ages,

**ABEL.** [See Abel.]

**ABEN, ABN, AVEN,** pronounciation of the Spanish Arabs for Ibn, son. Hence, Avencen, Ibn Sini; Averoez, Ibn Ragul; Avempace, Ibn Badji; Aben Pascalis, Ibn Bashkawul; often also by the Spanish-Arabic Jews; as, Avenchro, Aviceor, Ibn Gabrito; Abenda; Abenaster; [see also Avenceors]. — The classical form ibn also occurs though rarely; comp. Pedro de Alcalá, s.v. heippo and Anador and the whole form ibn also occurs though rarely; comp. Pedro de Alcalá, s.v. ibenn, Ibn, and Anador. Thel.-lashen, ll. Ibnalbänner, a surname of Almacina [comp. Kenya].

**ABEN RAGEL,** Ibn am Riqel. [See Abenhazen.

**ABENCERAGES, (also Abencerrages),** an Arabian noble family whose name occurs only in the mythical history of the last days of Granada, and who are said to have been miraculously murdered by Boabdil in the Alhambra. The myth, no doubt, refers to executions under Abu'l-Hassan [Ali (1461-1482); comp. Müller, Der Islam im Morgen- und Abendland, ii. 672, 676, who, however, also endeavors (as does Schack, Prosit und Kunst der Araber in Spanien und Sicilien, 2d ed. i. 355) to derive the name from Ibn al-Sartridi, the son of the sultan (as the name of a former vizier), whilst in my opinion only the family of the Banu Sarridi, whose native town was Cordova, and who probably emigrated to Granada, can be taken into consideration. The pronunciation of the word in Spanish also supports this: Abencerrajah (French: Abencérage); comp. in al-Ma'qal and in the Bibliotheca Hispanica Arabica names such as: al-Ma'd al-Sarridi; Gayangos, History, i. 315; ii. 26, 370, 403, 541.

**ABESHR, ABOUSA, capital of Wadi in Central Sudan, 14° north lat., and 14° south of the old capital Wadai. It was founded in 1879, has from 2000 to 3000 inhabitants.** [Comp. Wadai, where also will be found a bibliograpy.]

**ABHAR, an ancient town in Persia, between Kerman and Zanjan fortified by a citadel as early as under the Sassanids. In the year 645 it was conquered by the Arabs under al-Harith b. Arsh, the governor of Rih. Though in the Middle Ages it was a fairly important town, it has now sunk to the position of an insignifi cant place.**

**AL-ABHARI AITH AL-DIN MUHAMMAD B. UMAR, a philosophical writer, concerning whose life nothing is known; died in the year 655 (1256, according to Basshehrac as early as 1236). He was the author of two greatly used and often commented works on scholastic philosophy: 1) Hadith al-wahha, in three parts, a. Logic (al-Manah); b. Physics (al-Takrib); c. Theology (al-Ihsan). Amongst the commentaries the best known is that of the Indian Mir Husain al-Ma'bud, written in 880 (1475), printed at Calcutta, lithographed at Lucknow (n. d.). — 2) Kitâb al-taghâni, an adaptation from the Avicennas of Porphyry. Of the commentaries that of Shah al-Din Amedi al-Farsi (died in 834 = 1430) was printed in 1420 at Constantinople and often glosed to the commentaries of Zakariyya al-Ansari (died in 926 = 1519) by al-Farisi (died in 1178 = 1764) were published in Cairo in 1305, 1306, 1310. Besides the above, al-Abhari wrote three small astronomical treatises; comp. Brockelmann, Gesch. d. arab. Literatur, i. 461. (BROCKELMANN)

**ABHR, plur. of bahe [q. v.].**

**ABIS** is the designation used by the Arabs for the month of Bkaz which occurs in the calendar of the Egyptians or Copts (Twaskal al-Abis); comp. also the Hebrews Abis of the ancient Hebraism (Exod. ii. 4).

**ABID, (a), plur. abada or abated, worshipper of God.**

**ABID B. AL-AREA, a pre-Islamic poet of the tribe of Asad b. Khuzaima (Mudar). More exact data concerning his life are not known, he was a contemporary of al-Nahj and al-Dhahabi, and lived, highly esteemed as a poet, a great deal at the court of al-Hira. His poems which have been handed down to us are distinguished by their facility of language and lively descriptions. Several anecdotes about him are to be found in the Kitâb al-Aghlab, which also tells of his violent death at the hands of King al-Mundhir b. M't al-Samit.**

ABIK, a runaway slave.

ABISH, a Salukhidae princess, a daughter of Abd al-Salih b. Ali Bekr. After the death of Salluhah (1394) she was appointed to rule over Fatim by Hulagu and married his son Mengu-Temür. She, however, ruled in name only, for the Mongols were the actual masters of the country, and died in Tiflis in 1287. The dynasty of the Salukhids [q. v.] became extinct with her.

ABJAD. See: D'Ohsson, Hist. des Mong., vol. iii. 402.

ABJAR, a town near of Nais (Nasr), probably the present Mahuimadiabah, and lying to the west of Merw, once belonging to the Persian province of Khurasan, now to Russian Turkistan. Abjär is mentioned as the seat of a Syrian bishopric in the 6th century. For the name (also abbejare, abbejar, abjare), comp. Nodheke, in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, xxivii. 147, and Macnally, ibid. xlii. 628.

AL-ABIWAR, Muhammed b. Ahmed Abu Mu'inijah, an Arabian poet and genealogist, of Umayyid descent from the branch of the younger Mu'awiya, a descendant of 'Abdu b. Abbās ibn Mu'-iyya, in Abjär in Khurasan, and according to al-Sam'āni in the village of Kūkān in the neighborhood of the latter town, for which reason he is also called al-Kūkān, died from poison at Ḥarrān in the year 507 (1113) not in 572 = 1161-1162 as in the Bulak edition of Ibn Khallīkān. His linguistic and historical-genealogical works, amongst which a history of Aljär and a work on the influence and identity of Arabian tribal names are especially mentioned, have been lost; the latter work, however, was extensively made use of by Ṣa'īd b. Ẓāhir al-Maḳdisī b. al-Kaṣṣārī. Of his Dwān only the three most important divisions have each been preserved separately in manuscripts: al-Najīfī, al-Ṭarāqī (mostly about the caliph and Mu'tadīl, 467-468 = 1075-1076, al-Mustashfīrī, 468-469 = 1076-1077, and their visitors) and al-Waṣīfī. A selection of smaller poems, Muḥāṣṣaṭ al-Abjarī al-Uṣūrī, appeared in Cairo in 1277 (1860-1861).

Rössingh., Ibn Khallākīn (ed. Wüstenfeld, N. 646; Abu'l-Fida', Makbūr, vii. 380; Yaḥyā, Miṣḥān, ii. 111; Wüstenfeld, Die Geschichtsschreiber der Araber, p. 223; Brockelmann, Gesch. d. arap. Litter., ii. 250; B. t. (STRECKER)

ABKARIUS, VENKEDIS, a Vakht, or Vakht, a born Armenian, who lived in Beyrouth and had devoted himself enthusiastically to the study of Arabic poetry. His work Nikāyat al-arab fī aḥkāmat al-'Arab (Marcellens, 1852; a revised edition as Tunja niḳāya al-arab, Beyrouth, 1858) was formerly much used also in Europe, but must now be considered obsolete since his authorities, viz. the Kitāb al-Adliyya, as well as the Khatmīn al-Adhād of Abd al-Rahmān al-Baghdādi, are accessible to us. A third edition of his English-Arab Dictionary appeared in Beyrouth as late as 1892. A history of Lebanon is to be found in manuscript in the Cairo Library (Frideriz. ... al-Aḥkāmat al-Ḥāliyya, v. 171). — Abkarius died in 1303 (1885).

ABKHAZ, a tribe of West Caucasian, on the Black Sea. The country of Abka was a region extending from the main ridge of the Caucasus to the sea-coast, between Gagry in the north and the Ingur in the south. Before the union with Russia it was divided politically into three parts: 1) Abkha, proper, on the coast from Gagry to the Galdage against the principality of Shvarestse; 2) the Highlands of Tarkhola, without any centralized government; 3) the country of Samzhian on the coast extending from the Galdage to the Ingur (ruled by a branch of the house of Shvarestse, subsequently united with Mingrelia). Since the 17th century a portion of the tribe has crossed the main ridge and settled on the southern tributaries of the Kuban. In the thirties of the 19th century the population of Abkha was estimated at about 95000 and the number of all the Abkha at 228500 souls. Philologically the Abkhaz language is considered as representing a special family of the Caucasian languages.

The Abkha are mentioned in the ancient times as Ashkhul (by Ararat) or Ashgulpi (by Pline), according to Procopius (5th century A. D.) they were under the sovereignty of the Lazes (Lassoi); in those days slaves (enanga) were brought to Constantinople from Abkha, Subjugated by Justinian and converted to Christianity, about the year 560. In 1124, the Abkhas won their independence with the help of the Khazar, the prince (estarat) Leo II, married to a Khazar princess, assumed the title of king. Under the governor of Tiflis, Ishaq b. İshak († 870-883), the Abkha were required to have positive privileges in the Arab-Islamic, while, however, the Abkhas still did not lose its importance for the whole kingdom. In Arabian and Persian sources up to the Mongolian epoch, the Abkhas were always called, "Kings of the Abkhas." The Byzantine Cedrenus designates the king of Georgia as Ḥiṣām (or Ḥeṣraw) 'Aḥsātī, even in the form of the title of the kings of the Abkhas, taking the first place. The reason for the designation of the Abkhas as also to be looked for in the West (on the Coru and Rion). About the year 1253 the house of Shvarestse (alleged to be descended from the dynasty of Shvortse) was enthroned with Abkha; in 1432 (under King Bagrat II) the confirmation of the Shvarestse as princes (esterat) of the country took place. In the Turkish epic Kızrak koçknd (probably originated about the year 1460 in the Armenian plateau) only MS. exist in Dresden; comp. Barthold, in the Zeytün, xii. 184; rubr. archiv. orient., viii. 203-204) the Abkhas together with the
Greeks of Trebizond are called the enemies of the Muslims; a law, affirmed by his people, will "go to the heirs of the Abkhaz, the golden crown in his hand and kiss the hand of a man clothed in the chasuble (pilam). According to a letter from the emperor of Trebizond in the year 1456, the princes of the Abkhaz are said to have disposed of an army of 30,000 men.

After the settlement of the Ottomans on the coast of the Black Sea, the Abkhaz could not escape the Turkish domination and the influence of Islam, although Christianity was preserved and slowly supplanted. The Dominican John of Lucena, who was there during the time (1827), the Abkhaz passed as Christians although the Christian usages were no longer observed. Since the separation from Georgia the country had been under its own Catholicos (for the rest mentioned as early as the 13th century) in Pitsund. Up to the present day the ruins of eight large and about 100 small churches, including chapels, are said to exist in Abkhazia. The house of Sherwazidze did not embrace Islam until the second half of the 12th century (Prince Levan), at the same time recognizing the Russian sovereignty. On this account, he was given the fort of Sukhum, which had already been besieged by the Abkhaz about 1725—1728. After the union of Georgia with Russia in 1801, the Abkhaz had also put themselves in relation with their powerful neighbor. The first attempt was made in 1803 by Prince Sefer-Beg, but was abandoned soon after. Only after the assassination of this prince in 1806 did his son Sefer-Beg get into closer touch with Russia, and aimed his main effort against his brother, the pasha Arslan-Beg. In 1810 Sukhum was taken by the Russians; Sefer-Beg, who had become converted to Christianity and assumed the name of George, was installed as prince, but nevertheless Sukhum has since that time always been occupied by a Russian garrison. The two sons of Sefer-Beg, Demetrius (1852) and Michael (1853, after the poisoning of his elder brother) had to be put in power by the Russians with armed force. The movement, limited to the neighborhood of Sukhum, whose garrison could only remain in communication with the other corps by the sea route. By the incorporation of the whole coast-lane from Anapa to Poti, based on the Peace of Adrianople in 1829, Russia's position was naturally strengthened, but even in 1835 only the north-western part of the country, the district of the Ryoib, is said to have been in the possession of Prince Michael. The other parts had remained under the dominion of his Muhammadan uncle. Later on the princes succeeded, with the help of Russia, in establishing firmly their power, and, contrary to all his predecessors, in acting towards his subjects almost like an absolute ruler, but he too, in spite of his Christian faith, had surrounded himself with Turks.

After the final subjugation of West Caucasia by the Russians (1864) the dominion of the House of Sherwazidze, like that of the other native princes, came to an end; as early as November 1865 Prince Michael had to renounce his rights and leave the country. Abkhazia was incorporated into the Russian empire as a special province (oblast) of Sukhum and divided into three districts (okrug)—Pitsund, Otenemiri and Trebelba. An attempt made by the new government to get for the purpose of taxation more exact information concerning the economic conditions of the Abkhaz, led to a revolt in 1866, and, after this had been repressed, to the emigration of a great part of the Abkhaz to Turkey, causing the population to decrease from 7,000 to 6,500, it is said. The almost depopulated district of Tsebelba ceased to be a district and was placed under a special settlement ('Carlsberg') under the name of Sukhum-Kale (Sukhum-Kafal). At present the whole of Abkhazia under the name of district (obrug) of Sukhum-Kale (Sukhum-Kafal) is under the protection of the government of Kutaisi.

The population has been greatly diminished by fresh emigration and especially after the participation of the Abkhaz in the rebellion of the Cossacks (1876) caused by the landing of Turkish troops; in 1883 the number of Abkhaz was estimated at about only 20,000.

Under the superintendence of General Bartholomew, the owner of the well-known collection of coins described by Djoerv, a book on Biblical history has been published by the "Society for the Restoration of Orthodox Christianity in the Caucasus", the work being done by three native Abkhaz: the priest Geia and the officers Margani and Kurtskalie. An attempt to introduce the Abkhaz language as a school subject in the gymnasium of Novozerck failed completely.

ABLAQ, Arabic woman's name, for example, that of the sweethearts of "Alcazar" in [v.]

Al-Ablaq, the name of a strong castle which belonged to the Jew Samaw'el (Samuel) b. 'Adiya [v.], so called on account of the variety of its colors (Bibliotheca Geographia, ed. de Goeje, vii. 128 et seq., xii. 179; viii. 258). This castle became proverbial for its resistance to every assault, for which reason it is sometimes described under the name of al-Ablaq al-fard (al-Ablaq the incomparable). According to two verses of Samuel (Al-ahzab, ii. 45; Al-Hijr, Mashumm, 20 ed., p. 279), al-Ablaq had been built by 'Adiya, the father (or grandfather) of Samuel. But al-Ablaq, singing the praise of the castle and of its owner, through whom he had recovered his freedom, says that al-Ablaq was built by King Solomon. If we must give credence to legend, the building was at any rate older than it is said to have been in the verses of Samuel mentioned above. For the story goes that the famous queen al-Zubba', who lived in the third century, tried unsuccessfully to seize Mirdid—another strong castle—and al-Ablaq, that which gave rise to the proverb: Mirdid proved rebellious and al-Ablaq inaccessible (Freycht, Arab. Proverbs, i. 218). Al-Ablaq is mentioned again in the case of the coins of Alruri's 'I-Kaiz, which the latter had entrusted to Samuel b. 'Adiya, when he went to implore the emperor Justinian II to aid him against his father's murderers (comp. de Slane, in the preface to his edition of the Diwan
of Isma'īl (r. 686–723) and his descendants, the Al-Abdāq were prominent in the region during the 9th to 12th centuries. They were frequently involved in military actions against neighboring states, particularly against the Byzantine Empire and the Abbasid Caliphate. Their influence and power waxed and waned over time, with the dynasty producing numerous military leaders and scholars. The Al-Abdāq were known for their loyalty to the Fatimid rulers and their contributions to the spread of Islam in North Africa.

Abūnā (الأبوين), or the rectors of the religion, refers to the two supreme religious leaders who were responsible for the guidance and administration of the community. In the context of Abūnā, the term is often used to denote the leaders of the Muslim community in the wake of the Prophet Muhammad's death. The Abbasids, under the leadership of the Al-Abdāq, were instrumental in establishing themselves as the dominant power in the Muslim world, and their rule was marked by significant military and administrative achievements.
ABRAHAM. [See 'ARABIM AL-SHALL.]

ABRAHAM, the more ancient name of Nissa-
bar or Nisibin [q. v.]

"ABS, the name of several Arabian tribes, also
that of persons and the name of a mountain as
well as of a river, in the territory of the Banu
Asad. To the root 'Ab belong besides the names
'Alax, 'Abana, 'Abis, (al-) 'Abâd, 'Arooj, Safatâ,
'Alâya, 'Ummah, 'Ummataim (afterwards
'Ummataim, 'Ummatâ), all probably from 'abah, "to
frown." It is to be observed, however, that an apppellative
adjective 'aib does not occur; perhaps therefore
as 'aibân, 'aibât, or collective of 'abî, as pâbîn
of pâbhin (the plural tribal names of Kallî and
Amûr) also occurs as name of persons.

Besides the best known 'Alas, with which we
have alone to deal here, and which together with the
Dhûbyan and Amûr form the group of
Baghâli amongst the Ghassân, there were also
tribes of the same name amongst the Asad, Hâfîz,
Gâwazîn b. Asad (a Kûfta tribe), 'Amr b.
Kuś al'Abîn and 'Akk. See the sub-tribes of 'Alas
in Wüstenfeld, Geograph. Tabellen, H.

The dwelling-places of the 'Abisites were situa-
ted in the central part of the Wadit-Rumma,
the largest valley of the Negeb, here running
west from east. Their neighbors were in the
East the Asadites, who dwelt in the Lower Wadit-
Rumma, in the West the Killabites occupying the
Upper Wadit-Rumma. The 'Abisites possessed the
lower and the Asadites the upper portions of
the Wadit-Dâkid and the Wadit Djurayît. They shared
the water Khulâba with the Asûtâites.

Mountains mentioned as belonging to the 'Abisites
are: Abâsim (the white one, the black Abâsim belonging
to the Fazzae—both of them striking mountains
between which the Wadit-Rumma flows), al-Aim
(a landmark), al-Asâr, Kaltâ, al-Kalil, Kâtan,
al-Khâma, Rummân or Rummatân (two hills),
Sabtaj (a solitary, massive mountain), Tristan (a
mountain on the road from Medina to Bâsra). Further
the Harrât al-Nâr and the Harrât Khudâir belonged
also to the 'Abisites.

'Abisite waters: al-Âqîîta, 'Alâîta (brackish), Dâi-
ân, Dâsit al-Âab, al-Djâd, Djaîf al-Shûm, Din-
airyât, al-Ghâmîya, 'Abîl-Dhâvîr, Kâba, Kâba,
Karma, Khubâl, al-Lâ'a, Mawwâl, Milâhâl,

Settlements of the 'Abisites: Djaîf al-Hawâl,
Djaîf al-Âshâra or Djaîf al-Ujûb (far in the
East, west of Mâwîl, on the pilgrimage road from
Hajâr to Meccâ; perhaps not settled by 'Abisites
before the Muhammadian epoch), Djaîf, Khalâ,
al-Khâma, Mâwîl, Râhâdâ, al-Zawâiya. — At the
time of the Muslim wars of conquest many 'Abisites
came to the Madâ'în. A great number remained
there when the majority of them went to the
newly-founded Kufa, where they had their own
mosque in the quarter named after them. The
'Abisites were also among the tribes which under
'Amar conquered Egypt. Like other Arabic tribes
they had their special place in Fustas. 'Abisites are
also mentioned as being in the Bihlá near Fustas.
'Abisites in Maghâr are said to have given
a mountain there the name of Kâtan, after a mountain
in their native country (see above).

Historical. The tribe of 'Alas is said to have
belonged to the three Djaînawît (who never
made alliances). Although not precisely large it
is said to have been respected. Many feats are
mentioned: with the Asad, Bûdr, al-Djâma, al-
Fâla, al-Ghâmîya, Hâfîz, 'Abîn, Sierra, Jumal,
Sulamî, Tirî (it was a Tâlîyân who killed 'An-
ûs, Tanûm, Yarab). Part of these feats belong
to the Dâkid War (with the slave-tribe of Dhuqân)
the second half of the sixth century A.D.
This war, many episodes of which are related,
is the best known event of the pagan period. It
broke out in consequence of the dialöyic conduct of
the Dhûbyanîtes at a horse race, was prolonged
for decades into Islamic time and caused great
losses on both sides. These unfortunate battles of
the 'Abisites against the numerically superior
coalition of their enemies forced the tribe to make
several migrations. The 'Abisites also claim to
have had their homeland in the heathen period,
namely Khûlîb al-Sûsî. Some are said to have
accepted Islam at an early date, but the whole
tribe followed suit much later. After Muhammad's
death they joined, after much hesititation, the Asa-
dite Anti-Prophet and rebel Tulba, but were
repeatedly beaten by the Muhammadans and had
a great part of their pasture lands. In Muhammad's
time they unsuccessfully resisted the Negebites.
Under 'Abî al-Malik, whose wife Wallâda was an
'Abisite, they were happy and prosperous,
as also under his son al-Walid and Sulamîn. Later
on too, we still meet with 'Abisites. In the first
half of last century, three or four days' journey
in the north of Yâbu, on the Djebl El-Hassan
on the island of al-Harra laying opposite, there
were a few 'Abisites families of fishermen, who
were still living in the time of the 18th century
and had still formed a numerous tribe. They were shepherds
and sailors and bit little commerce.

'Allân al-Sulâmî wrote 'Abînârîd of the 'Abisites,
which, however, has not been preserved.

(RECKENDORF.)

ABâHÎ, wrong spelling of 'Abâhî [q. v.]

ABU, that form of the word 'âb (father) which
is used with a following genitive in order to
designate a person, animal, or thing whatever
as the possessor of a thing, a state, or a property.
This combination is most frequent when anybody
is called after his son (more rarely after his daughter)
and for this reason many Arabian masculine names
are compounded with 'âbî (sometimes abbreviated
to 'âbî). Such a name is, it is true, not the
real name of the person but his surname (khâyû)
which, however, is generally so frequently used
in every day life when addressing the person,
that the real name often gets forgotten. Such com-

ABRAHA — ABU
pound names are greatly adapted to surnames, and popular etymology has to be taken into account when explaining them. Examples follow below. [Comp. MUNYA.]

**ABU 'IBN 'ABBĀS AL-SAYYID, the first 'Abdul side caliph.** His real name was 'Abd Allah, but to distinguish him from his brother, the subsequent caliph Abū Dīja'far 'Abd Allah al-Mansūr, he was usually called Abūl-'Abbās. His father Muḥammad b. Abī was a great-grandson of the Prophet's uncle; his mother's name was Raṭa' bint 'Umar bint Abī Ḍa'ūd. 'Abd Allah. On account of their relationship to the Prophet, the 'Abbāsids then formed the strongest claims to the caliphate than the Umayyads, and on account this early began to intrigue against the ruling dynasty. This was especially the case with Muḥammad, the father of Abūl-'Abbās, and his work was continued by his son, first by Ibrāhīm, then by Abūl-'Abbās and Abū Dīja'far. According to the usual account, the latter was the elder, but he renounced his rights in favor of his brother. In Ramadān 129 (June 747), the black flag, the ensign of the 'Abbāsids, was unfurled in Khorāsān. Kūfa surrendered and in the year 132 (749) Abūl-'Abbās had himself proclaimed caliph in that place. The town became the temporary residence of the new dynasty. The last Umayyad caliph Marwān II. in Dumat al-Jandal (Jan. 750) suffered a decisive defeat on the Upper Zāb and was soon afterwards killed. Now the great point was to secure the throne against any danger from the Umayyads, and the new caliph saw to this in the most dastardly manner. By forcing and by cunning the remnants of the previous reigning family were got rid of by the caliph and his uncle Abū Dīja'far. In his speech from the throne in the Great Mosque of Kūfa. Abūl-'Abbās called himself the 'pilfered blood-shedder' (al-Suṣṭāb) and he honestly did his best to make himself worthy of this terrible name. The Umayyad were, however, not the only victims of his bloodthirstiness. The new caliph had many difficulties to face, but in every case the opposition was with the greatest severity. For the rest, Abūl-'Abbās found little time to care for the development of his empire. This task was reserved for his successor al-Mansūr, who indeed appears to have played during his brother's reign an important rôle as governor and councillor. In 'Uthūl-Iḫḍās 736 (June 754) Abūl-'Abbās died at Amār on the Euphrates, at the age of about thirty, having had homage paid to his brother as his successor to the throne — according to the usual tradition.

**ABU 'ABD ALLAH AL-MU'TAMID-BI-AL-SUNNIT**, as he is also called, the establisher of the Fatimid rule in Africa. His real name was al-Husayn b. Ṭāhir b. Abī Muḥammad, and was a native of Ṣan'a in Yemen; his surname al-Muṭāmid is said to be due to the fact that he was a market governor (Muḥātšīb) in al-Baqr or somewhere else in the 2nd. Later on he was chosen by the Īsāḏīya propaganda to work amongst the Berbers as an emissary. He therefore made the acquaintance of some Berber pilgrims in Mecca and was taken by them to their native country. In 280 (893), or according to others in 288 (901), Abū 'Abd Allah began his work amongst the tribe of Ḥarāt and with such success that almost the whole tribe rose up under his leadership, and soon became dangerous to the Īsāḏīya [q.v.]. Thereupon the Mahdi, 'Utbay b. 'Umar, whose speedy coming had been announced by Abū 'Abd Allah, started on his journey to the West, but was nevertheless attacked and kept a prisoner in Sīdījīm. Meanwhile Abū 'Abd Allah after several battles succeeded in breaking the power of the Īsāḏīya and in occupying their residence, Rakīda [q.v.] in the year 288 (900). Thereupon he took Tāhert, the seat of the Banū Ṭūrīm, and Sīdījīm, where the Banū Ṭūrīm held the power. Here he set free the Mahdi, who made a new entry into the Mahdi on the 20th of the month of Jumādā I 291 (15th January, 910), and who conferred great honors on his rescuer as well as on the latter's brother, Abūl-'Abbās Muḥammad, but suspicion arose between the ruler and his servitors, and the former did not hesitate to have them both murdered in the year 298 (911).

(M. TH. HOUTSMA.)

**ABU 'ABD ALLAH YĀḤĪYĀ B. DĀWŪD, a vizier. Yāḥīyā, who is eulogized by Arab writers not only on account of his learning but also for his noble and amiable character, had joined the two 'Alids, belaud Muḥammad and Ḥāfīz b. 'Abd Allah. He was in this, together with his brother 'Āli, thrown into prison by Caliph al-Mansūr after the suppression of the uprising, and only received his liberty from the latter's son and successor Muḥammad al-Mahdī. By means of giving skilful advice he managed to win the confidence of this ruler and after being appointed vizier in 163 (779-780) he gradually succeeded in making himself almost omnipotent in the 'Abdul-Side Court. Nevertheless, the doehnly vizier at last fell a victim to the envy of his ambitious adversaries. The reason of his fall is stated in different ways. According to some accounts the caliph is said to have ordered him to get rid of an 'Alid secretly; Yāḥīyā, who showed a certain preference for the 'Alids, let him however escape, and the incident was at once reported to the caliph by a female slave. According to others, Yāḥīyā is said to have reproached al-Mahdī for drinking wine and to have fallen into disgrace on this account. In any case he was imprisoned in the year 166 (784-785) and only set free several years later by caliph Hūrin at the request of the vizier Yahya b. Khlid al-Barnakī. On Hūrin giving him permission to settle down where he liked, he went to Mecca. It was there that the once so powerful vizier, who had become blind during his long confinement, died some time afterwards. The year of his death is not exactly known.
ABU 'ABD ALLĀH — ABU 'L-ALAR.

ABU 'L-ALAR. MUHAMMAD B. AL-KĀSIM B. KHALIṢ B. YĀṢIR B. SULĀMĀN AL-MĀRĪ, an Arab lay literateur and poet. He was born about the year 900 (855) in al-Awāzi (his family came from al-Yaman) and grew up in Basra, where he received instruction from the most famous philologists, Abū 'Ubayda, al-Aṣma'i, Abū Zayd al-Ansari, and others. He was amongst his contemporaries not only for his linguistic attainments, but also for his quickness at repartee. Ibn Abī Ṭāhī collected anecdotes concerning him in a special work entitled Akhkhār Abī 'l-ALAR, many of which are to be found in the Kitāb al-Aghāni. The book itself as well as the collection of his poems have not been preserved. He became blind at the age of 40, later on he emigrated to Bagdad, but returned to Basra again and died there in the year 283 or 284 (896). 

Bibliography: Biwāzī, p. 153; Ibn Khallīkān, ed. Wüstenfeld, N. 613. (Brockeimann.)

ABU AYUDB KHALIṢ B. ZAYD AL-ANSAH, standard bearer of the Prophets, died of dysentery under the walls of Constantinople during the siege of that city by the Arabs in 622 (672); he was buried there and his tomb was, it is pretended, recognized by Shaikh ʿAbd al-Raūf al-Din, when Sultan Muhammad II came to invest the city. A mosque was built on this spot (863 = 1458), it was enlarged in 1000 (1591) by Imāmālī Zākāʿ Abū Ahmad Pasha; two new inscriptions with galleries were built in 1136 = 1723; Sultan Mustafa deposed there the relics of the Prophet, which had been found in the treasure of the Serai (foot-print).

The grand visier Sinā ʿAghā Pasha (d. 1153 = 1740), the sultana Mah Frūz Khālidīa, mother of Othman III, the grand visiers Sāli al-Pasha and Gārā Khālid al-Muḥammad Pasha, Lala Muṣṭafa Pasha, the conqueror of Cyprus and many other noted persons are buried in the turbe or in the immediate approaches of the pavil. The mosque, situated outside the Byzantine encirce and round it which an important viaduct has grown up, is venerated by Mussulmans, and an unbeliever is not allowed to enter it. It is here that at the commencement of each new reign of the Othman dynasty the ceremony of enthroning the sovereign takes place; he is solemnly gilded with the sword of his ancestor by the hands of the caliph, the General-superior of the religious order of the Mawlawiya (Mawlawī) or dancing deservers, who is a direct descendant of Djalāl al-Din Rūmī, and who expresses expressly for this purpose from Konya his usual residence.

Ḥāfiẓ Iskandar, Hāfiẓ li al-Mawlawīn (Constantinople, 1881), II. 243; Abidān to al-Muṣṭafa in Haartner-Pargstall, Hist. de l'Italine ottoman, xviii. 57; Ch. Huart, Konia, la ville des servites türques, p. 206. (Ch. Huart.)

ABU 'L-ALAR. AḤMED B. 'ABD ALLĀH B. SULĀMĀN AL-MĀRĪ, the celebrated Māhmadan poet; born in 363 (972) at Maʿarrat al-Neʿman, a small town in Northern Syria, between Aleppo and Emesah. He belonged to a respectable Arab family claiming descent from the tribe of Taʾṣūq, which had long been settled in this region. His grandfather had filled the office of ḥajj, and his father seems to have been a man of some cultivation. Abu ʿl-ALAR was scarcely four years old when an attack of small-pox left him almost totally blind; and we may well be astonished by his extraordinary powers of memory which enabled him, in spite of this deprivation, to display in his works variety and range of learning that have seldom been surpassed. His youth fell in troubled times. The Hamdanides still maintained a precarious hold on Northern Syria, but they were hard pressed between the Fatimidives advancing from the south and the Byzantines on the north. Circumstances, however, were not wholly unfavorable to literature. Although the brilliant epoch of Safī al-Dawla had passed away, the revival which had been inaugurated had not yet spent its force, and the literary renown of Syria stood very high at this time, as it may be learned from al-Ǧuhrāiliation, Abu ʿl-ALAR’s contemporaries (see Margoliouth, The literature of Abu ʿl-ALAR, introduction, p. xvi). Abu ʿl-ALAR received his education in Aleppo, Tripoli, and Antioch under the pupils of the grammarians Ibn Khallīkān and other Syrian scholars. The career to which his studies were directed seems to have been that of a professional encomiast, like Muḥammad, and several of his panegyrics on the Hamdanides Safī al-Dawla have come down to us. In any case, he soon abandoned a calling which, however successful it might be, would have exposed his proud and sensitive nature to intolerable humiliation. Never, he says in the preface to the Safī al-Dawla, did I tackle the ears of princes with chants or eulogies any one in the hope of gaining a reward. On his return to Maʿarrat he supported himself by a small annual pension of 30 dinars, paid from a trust-fund, and provided by the fees of pupils whom his already great repute must have attracted. That he was not without honor in his native town appears from the fact that he was chosen by his fellow-citizens to answer an official communication addressed to them by the well-known politician and author, Abu ʿl-Kāsim b. ʿAbd al-Maghrībī, Abu ʿl-ALAR remained at Maʿarrat until 401 (1010), when, for somewhat obscure reasons, he resolved to settle in Bagdad. It is not strange, that in the prime of his life he should have felt the constraining limitations of provincial society and pinned for a larger field in which his talents might obtain their merited recognition. To the capital accordingly he went, but after four or five years he was once more on the way home. He himself says that his mother’s illness, and his own lack of resources were the causes of his return, but the latter reason seems improbable as he had many influential friends who could have come to his aid if necessary. At the same time his reception cordial and even flattering as it was, was marred by some instances of insecurity: and moreover, the poet’s refusal to make verse professionally stood in the way of his ambition. An indignity which at the hands of al-Murtuḍī, brother of the famous poet, al-Sharīf al-Raḍī, may have finally decided him to leave the city (Margoliouth, loc. cit., pp. xxvii et seq.). His visit to Bagdad
marks the turning-point in his life. Hitherto he
had won distinction as an erudite savant and as
an accomplished poet in the style of Mutanabbi,
for whom he cherished an enthusiastic admi-
ration. His peculiar genius is revealed only in his
later works written after his return to Ma‘arr—
the Lāsimiyat and the Risālat al-ghafrūn; and it
can hardly be doubted that in Baghdad he was
first imbued with many of the unorthodox ideas
and speculations by which these works are char-
nacterized. There is an atmosphere about the
lectures of the leading scholars of the day in con-
tradiction by his own testimony: in a letter in-
foming his uncle that he had arrived in Ma‘arr
from Bagdad he observes that since passing his
twentieth year it never occurred to him to seek
knowledge from any inhabitant of Iraq or Syria.
He reached home only to be greeted by the
tidings of his mother’s death, an event which
affected him deeply and confirmed him in his in-
tention of renouncing the world. It is said that
henceforth he lived in a cave and adopted strictly
ascetic habits, eating no animal food and abstaining
even from eggs and milk. The name rūḥ al-mahbū-
sin (‘the double prisoner’), which is sometimes
given to him, refers to his solitude and his blind-
ness. He was not allowed, however, to be a her-
mit. The fame and fortune which he had missed at
Bagdad he found awaiting him at Ma‘arr. Pupils
came from far countries to read with him, and
his letters which have been edited by Margoliouth
show that he was frequently in correspondence
with scholars anxious to profit by his learning.
The Persian traveller and poet, Naṣr-ib Kharawīč,
who visited Ma‘arr in 439 (1047) eleven years
before Abu l-ʿAlā’s death, speaks of him as ex-
ercising absolute authority in the town and pos-
sessing great wealth which he distributed amongst
the poor, while he himself practiced austereities
and lived like a saint. Abu l-ʿAlā passed nearly
forty years in retirement, but not in idleness,
as many of the long list of his poems which were
composed, for the most part, during this period. He died in 449 (1058).

He owes his popularity in the East to his col-
collection of his early poems entitled Safī al-sand,
of which there are numerous MSS. in European
libraries. It was first published at Bâbāy (1809),
then at Beyrouth (1834), and forms the subject of
dissertations by C. Riem (De Abu al-ʿAlā vivo et sar
inabulboa, Bonn, 1841). The best known com-
mentaries are those by the author himself (Jami-
al-bahār) and his pupil al-Tibrīzī. Most of
the poems in the Safī al-sand were written before
Abu l-ʿAlā’s journey to Bagdad, but it includes
some of later date. They consist of encomia, elegies,
occasional pieces, etc., a special section being
devoted to the cormína hortíaria (al-dirāfi). The
influence of Mutanabbi is apparent not only in
the artificial and allusive style but also in the
freedom with which conventional rules are ignored
or defied. Though the poet sometimes breaks in
remonstrance in touching on religious matters, there
is no trace of the quite unorthodox views which
are commonly associated with him. These form
a striking feature in the second collection of his
poems entitled Lāsimāt tālib yahām, generally
known as the Lāsimiyat, a name which refers to
the technical difficulty of the rhyme. Their con-
tents have been fully discussed by von Kremer
Abād d. Wiesbaden, xxvii. 6th part, Vienna, 1889),
who has also published the text and translation
of selected passages in the Zeitschr. d. Deutsch. Mä-
gel, Gesellschaft, (xxix—xxx and xxxvii). Von
Kremer’s estimate of the work is perhaps too
favorable, but it must be admitted that here Abu l-ʿAlā proves himself to be a singularly
talented and original thinker as well as a lofty
moralist. Not satisfied with fearlessly denouncing po-
itical and social abuses, he takes the whole of
human life in hand and experiments upon the
deepest problems. To compare him with Abu
l-ʿAtshiyā, whom he obviously resembles in some
respects, is to do him less than justice. In the
Lāsimiyat Abu l-ʿAlā shakes off the fetters of
dogma which bound his predecessor and rises to
a higher plane. Another remarkable work, the
Risālat al-ghafrūn, of which there are manu-
scripts at Constantinople and Cambridge, has been
described and in part translated by the present
writer (Journal of the Roy. Asiatic Soc., London, 1900,
pp. 637—756; 1904, pp. 75—104; 104—362, 81—
847). It is an epistle in ornate prose addressed
to a certain Abū l-Mansūr of Aleppo. The heathen
poets who have been forgiven — hence the title
—and raised to Paradise, where the scene is
hid, are introduced as the principal characters in
what may be called a burlesque Divina Commedia
or, as it really is, an audacious parody of
Muhammadan ideas concerning the Afterworld.
Besides this, it contains a gross deal of misand-
raneous learning and in particular an onslaught
of the isdākīs (freethinkers) with specimens of their
poetry and reflections on the nature of their be-
1. The best correspondence (sīāz-i wāli) of Abu l-ʿAlā has been edited with a translation,
valuable notes, and an exhaustive biography by
D. S. Margoliouth (Oxford, 1898). Of his other
works, about sixty in number, very few have been
preserved.

The question of Abu l-ʿAlā’s orthodoxy was
warmly debated during his lifetime, and though
he did not lack defenders, many of his contempo-
raries looked upon him as a heretic, a view
which has generally prevailed ever since. The
evidence afforded by his writings is ambiguous
and contradictory. It is said that he composed a
work entitled al-Fuṣūl wa-l-ghafrūn in imitation of the
Kūfān (see Goldziher, Mā’āmun, Sīyāsah, II. 403),
but in his Risālat al-ghafrūn he severely cen-
curs Abu l-Rawandi for having done the same
thing, and accepts the orthodox view as to the
incomparable style of the Sacred Volume. If in
some passages of the Lāsimiyat he seems to
speak as a pious Muslim, yet there is scarcely
any dogma of Islam that he has not ridiculed.
Different explanations have been given of this fact,
but none so curious as the suggestion that
the course of his thoughts was determined by a
difficult metre in which he chose to write. One
cannot help feeling that he was a thorough snap
at heart and that his most characteristic utterances
are in this vein. The orthodoxy of these poems
probably meant to throw dust in the eyes of his
critics, or it is conceivable that he sometimes
doubted his own doubts and saw no harm in
having two strings to his bow. In reading them
one is often reminded of Lucian, and often again
of Lucretius. He is a materialist, but the God
in whom he believes is little more than an impos-
tional Fate. He does not accept the theory of
divine revelation. Religion in his view is a product of the human mind, the result of education and habit, and he repeatedly inveighs against those who take advantage of the superstition and credulity of mankind in order to gain power and riches for themselves. He appeals to the prospect of a future life and the fear of annihilation as a happy release from the burden of mortality. His despairing pessimism leads him to the doctrine that it is sinful to beget children and expose them to all the miseries that flesh is heir to. But his philosophy is not merely negative. He favors active piety, active righteousness, which he sees far above fasting and prayer. The man of true religion is he that fights against evil and has guided himself with the guides and hand-cloth of asceticism. Every one should follow the precepts of reason and conscience, which are the only sure guides to Truth. Indian influence is probably detectable in his creed that all living creatures should be slain for food or injured, and in other opinions of a peculiarity kind. He himself says that he adopted vegetarianism in his thirtieth year, i.e., before his journey to Baghdad, partly from motives of economy (Journ. of the Roy. Asiatic Soc. 1902, pp. 319-320), but he ultimately evades giving an answer to the plain question, "One has not religious ground do you abstain from meat?" It would be unfair to tax him with hypocrisy, though several passages might be quoted which indicate that he was considered himself free to practice dissimulation, whenever it suited him to do so, in any matter connected with his religion.

ABU 'ALI KALANDAR. Samad al-Din FANBADI, an Indian saint, came from the Irak to Fanabat, where he died in 754 (1342). It is related that he met there the famous saint Kur al-Din Baghtiyar Khati (9 v.), although this latter died as early as 650 (1252). Quilt as fabulous is the account which tells how, after a long stay in Fanabat, suddenly moved by the divine spirit, he went to Asia Minor to receive instruction from the famous mystics Shams al-Din Tutiriz and Muzaffar al-Din Rumi. It is, however, certain that he is highly honored in India under the name of Shaikh (or Shakh) Sharef al-Din All Kalander, that many miracles are ascribed to him and that his grave is a much visited place of pilgrimage.

ABU 'ALI AL-KALANDAR. [See AL-KALANDAR.]

ABU 'ALI MUHAMMED B. ELYAS, lord of Kirmán, a native of Sogdiana. A landlord at first, then a general in the service of the Ilkhanides, he made himself independent afterwards as the master of the province of Kirmán, which he governed for forty years, whilst in this position he received a flag of honor from the "Abhásáe-e Lúsh Mufti" (the Ilhām in 348 959). Having been struck with paralysis and fearing for his life, he invented his eldest son Alyas with the government of Kirmán; then, becoming suspicious, he had him confined in a fortress, from which the young man escaped, whilst his father was in one of his long swoons, and at the head of an army returned to besiege him. The latter deserted and retired to Bukhára, where he was well received by the Sámiáne Mánjür II. Nílú: he stayed with him until his death, which took place the same year (356 967). He advised him to attack the Buídís' country. Kirmán was subdued the following year by the Buídís. Aghá al-Dawla. Bibliography: Ibn al-Athir (ed. Tokyo), viii. 393, 426 et seq., 432 et seq.; Mirkhond and Husain Allah Mustawfi (Defavour and Hikayat d. Sámiáne, pp. 154, 269). (Cl. Haury.)

ABU 'ALI MUHAMMED. [See AHWÁZ B. NABÉ B. MUHAMMED.]

ABU 'ALI MUHAMMED B. MUHAMMED B. MUHAMMED, successor to his father Abu'l-Hasan (9 v.), as governor of Khorásán and hereditary prince of Kíhištán. During his father's lifetime he had been governor of Herít; after the former's death (Abu'l-Hajíj 378 = March/April 989) he successfully stood his ground against the Sámiáne and the Pëtroríyen (384), at that time governors of Bukhára. Without openly rebelling he reality assumed the status of an independent ruler, gave himself high-sounding titles — as is proved by his coins, — and took possession of all the government revenues of his province on the pretext of having to provide for the maintenance of his army. He is said to have had a secret agreement with the Karakhánidé Boghás Kháhit Háiri, the conqueror of Transoxáni, and to have arranged with him to divide the Sámiáne territory on the understanding that he should have the land up to the Oxus frontier. However, after the death of Bukhára (Rabí'il 383 = May 995), the Khán, entirely neglecting the agreement, wished to treat Abu 'Alí as his governor. The latter, therefore, joined the Sámiáne Kháhit Kháhit and received ample assurances from him which, however, were likewise not kept, as the Sámiáne succeeded, owing to favourable circumstances, in returning to Bukhára without any outside help (on Wednesday 14th Djamádat II = 17th August of the same year). Abu 'Alí now endeavored to maintain the assistance of his former enemy Firuz, to maintain his supremacy, but the allies were defeated on Tuesday the 15th Ramáuzán 384 (23rd Oct. 993) by the Sámiáne and his allies the Athásáne. Abu 'Alí went to Amed (the present Sámíjed) and thence to Kháhití, being trencherously made prisoner by Kháhit 'Abdul-Malik, the prince of Gurgání, and through his mediation returned to Bukhára. At first Kháhit received him with great pomp, but shortly afterwards he was cast into prison and handed over to his enemy Sáhib al-Musulín (Second) of Kháhití (386 = August-September 996). It is said to have perished miserably in the fortress of Gurgán, where he was imprisoned. His coffin was transported to Kháhití in Kháhití (388 = July 998); according to the statement of the priests, whom Abu 'Alí always favored, on the opening of the coffin his corpse clothed only in a shirt of white wool (Rafí) was found in a state of perfect preservation. — His brother Abu'l-Kásim Ali b. Muhammed followed him in Kháhití.

ABU 'ALI

from al-Batir, Tawâgh Nûhâ, in Sana', Kitâb al-arabî, v. 1. al-Samgûrî (quoted by Barthold, Turkestân at the time of the fall of the Mongol, Russian, 1:60).

(W. Barthold.)

ABU 'ALI b. SINA. [See ibn SINA.]

ABU 'AMR (Zahhâk). b. AL-'ALI b. AMMAR (or AL-AHSA'I) (923-979), one of the first canonical readers of the Koran. He was born about the year 760 (679) in Mecca, and lived in Basra where he had intercourse with 'Abd b. 'Umar al-Hasa'i, the teacher of al-Khallâf and of Shihâb, and where al-Arus was his pupil for ten years. He died about the year 164 (770) in Kâfâ on his return journey from Damascus where he had been visiting the governor 'Abd al-Wâhhab. His main work consisted of compiling the ancient poetry of the heathen period and he was wont about it in a more conscientious manner than Khallâf al-Al'mar and other compilers, though on his own confession he is said to have found at least one verse of al-'Aqâf (comp. Muslim, ii. 221, l. 10). He later on burnt his very extensive compilation, as it is said, from pious motives, to devote himself entirely to the study of the Koran. His recension of the sacred book was much studied later whilst nothing has been preserved of his profane philological works. A verse in praise of him is in Farazadâ, Dinân, No. 666.

ABU 'A'ISH. chief place of a district (Kohâ) of the same name in the Sandjâk of Hodiida, six hours journey from the sea. In 1834 the town contained 7000 to 8000 inhabitants amongst whom lived an immemorial number of trading Batans and Hashemians. The port of the country, Djibân (the ancient Djalibân), has been of no importance for a long time past in comparison with Hodiida.

HISTORICAL: Abu 'A'ish was formerly subject to the rulers of Yemen, but in the 18th century a certain Sherif Ahmed founded there an independent sovereignty. Through the Turkish campaign of 1871 the town became nominally Turkish territory.

ABU 'ASWAD ZÂMAL b. SUFÁN b. DUYAL' (this according to the pronunciation of the Baghâns; Kunf pronunciation al-Dirî), a poet of the Dil tribe, which, however, left in order to settle amongst the Nuhâllîtes; he also dwelt some time with the Bani Kašîha the tribe of his wife. He was a partisan of 'Ali and was sent by his Baghân representative as a negociator to Kašîha, Ta'ahha, and al-Maim, and he also fought for 'Ali at Siffin. When Ibn al-'Abbas was 'Ali's governor in Baṣra (from the year 36 = 656-657), Abu 'Aswad held a high office there. He gave vent to the ill temper, which occasionally arose from his duties, in his poems. In the Khâdîjah wars he acted as leader of Ibn al-'Abbas's troops. It was he that brought to Ali's notice the latter's embezzlement, and after the latter's dismissal he is said to have himself become governor in Baṣra for a short time. This, however, is improbable, for a man, who in his own poems calls himself the "down-trodden one" and for every kick was ready to kiss the giver's hand, was by no means the man for the delicate state of affairs in Basra in the assassination of 'Ali furnish him with a fresh frame for his lamentsions. In a poem, for the rest quite insignificant, written under the fresh impression of the event, he already accuses the Umâymids of being the moral instigators of the crime. The agreement between 'Abd al-Malik b. 'Amr, Mu'awiya's governor in Baṣra, and Ibn al-'Abbas is therefore painful to him, for in consequence of Abu 'Aswad's feelings for the 'Abdal, Ibn 'Amr let their friendship cool down considerably. He had also to complain of the behavior of Ziyâd b. Sannâya, who in 'Ali's time was his subordinate but subsequently, after Ibn 'Amr, was himself governor of Baṣra; still Ziyâd is said to have stirred up ill-blood against him even in 'Ali's time. His wife, too, like her tribe, was to his great sorrow a friend of the Umâymids.

Abu 'Aswad was not always favored by fortune and like all Arabs was envious of clients who were better off than he. In the year 69 (668-669) at the age of 85, he is said to have died of illness; the last dated event mentioned in his poems took place in the year 60 (680-681). It is mere invention to say that he laid the foundation of Arabic grammar. The anecdotes about him are not favorable, but according to the evidence of his poems they are partly at least well-contrived.

(See the Appendix.)

ABU 'AT'AH APLAH (or MAKBUZ) b. YASIR AL-SINDI, an Arabian poet. He owes his surname al-Sindi to the fact that his father came from Sind; he himself was born in Kâfâ and lived there as a client of the Banî Asad. He fought for the decaying Umâymid dynasty with pen and sword, praising them and casting scorn on their adversaries. It is true, however, that when the 'Abdadl was obtained the power, he lowered himself so far as to endeavor by singing the praise of the new rulers to wedge himself into their favor. But the iron character of the "Blood-shedder" was but little sensible to such fawning, and during his successor al-Mansûr's reign the poet was even obliged to keep himself hidden. Only after al-Manûs's death in 257 (774) did he again make his appearance and no doubt died shortly afterwards; the exact date is not known. Abu 'At'ah was considered a good poet — his elegy on Ibn Hulâla [v. i.] being especially famous; although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

BIBLIOGRAPHY: Ibn Kusâibâ, Kitâb al-kîrî (ed. de Goeje), pp. 462—484; Abûnâ, xii. 21—37; 'Abdallât al-adâb, i. 170; Brockelmann, Gesch. d. arab. Litter., i. 63.

(A. Schade.)
ABU 'L- ATĀHIYA, one of the most important Arabian poets of the 'Abbāsid epoch. Abū ʿĪsā b. ʿAbd al-Karim b. Suwayd b. Khaṭābi, nicknamed Abū ʿL-ATĀHIYA, was born in 150 (748) in 'Aṣir al-Tamur, a small village not far from al-ʿAzāz (according to other accounts in the neighborhood of Medina). His four fathers belonged to the Bedouin tribe of 'Azāzi; his father al-Ḥasan was a carpenter. He himself and his brother Zaid had a small pottery in Kāfā, and it is related that people who visited him wrote down on potsherds the poems he recited. When he had begun to make a name for himself as a poet, he went to Baghdad with the musician Ishāq al-Mawsilli who became famous afterwards. At first, however, he was not able to make himself heard, and for a while he was obliged to retire to the modest Jāra. From that place, however, his fame as a poet succeeded in reaching the ear of Caliph al-Mahdi, who summoned him back to Baghdad. But Abū ʿL-ATĪHIYA was not to enjoy the princely favor for long. He was imprudent enough to mention and to describe in his poems a female slave of al-Mahdi's, named ʿOtba, and the caliph, highly incensed at this, cast him into prison. But he was soon set free and thereafter was on friendly terms, if not intimate footing, with al-Mahdi as well as with the latter's successors. His early satirical and sarcastic style of life made him detest the frivolous court life, and after Ḥārūn al-Raʾīš's accession he even wanted to abandon entirely the vanity of poetry, a decision which the despot endeavored to shake by again putting him in prison. There are several accounts as to the year of his death; according to a tradition ascribed to his son Muḥammad, he died in 210 (825); according to another in 211 (826) or 212 (828).

Abū ʿL-ATĪHIYA's contemporaries have represented him as a moralizer, but he had denied the restoration of the dead. He endeavored to solve the eternal riddle of dualism by assuming that God had created two mutually opposing substances (al-ṣawwar), from which everything had been evolved and into which everything would resolve itself.

Abū ʿL-ATĪHIYA's poems have only been incompletely preserved. They are distinguished by a clear range of ideas and simplicity of expression; he thoroughly grasped the power of poetry as a means of desert-poetry, which, under changed conditions, sought to more conventional elegance. He desired to write poetry comprehensible for the people, and the contemplative meaning of his Kādūna was the main point in his eyes; most of them consist of loosely connected sayings and admonitions. The greater part of his works which have been preserved belong to the Zuhdīyyah Kind (i.e. religious poems). The main feature of them is the poet's frank pessimism; asceticism is warranted by the nullity of the things of this world. The world, he says, is a lasting rotation of pain; everywhere purity is mingled with the colors of matter, and only he can hope to be satisfied, who carries contentment in his own heart. In spite of this melancholy view of life there is no question of effeminate whimpering in his philosophy; robust and determined, even if not glad and joyous, he bears the burden of life simply because it must be so.

The second and smaller part of what has been handed down of his writings falls into six divisions: 1) Khadījīyahs (very only fragmentary) mostly in praise of the caliphs al-Mahdi, al-Hādī, Hārūn and al-Muʿāwīya; 2) occasional poems, amongst which are many pretty and witty tributes; 3) satires; 4) tragic poems; 5) extemporaneous poems; 6) epigrammatic maxims.

Abū ʿL-ATĪHIYA is the first philosophical poet in the language; he stands alone — unfortunately — in the independence of the form he chose. The Society of Jesus of Beyrouth has furnished a good edition of his poems (Abū ʿL-ATĪHIYA fī šawwar Abū ʿL-ATĪHIYA, Beyrouth, 1887).

ABU 'L-AWāR ABU 'AMIR B. SUFYĀN AL-SULAMI, of the powerful Sulaim tribe, whence the "relative" Sulaim. His mother was a Christian and his father fought at Ohod for the Sonnites. The son, who does not seem to have frequented the Prophet, went to Syria, probably with the column commanded by Yaṣṣūr b. Abū Sufyān. He played a conspicuous part at al-Yarmūk as divisional commander, remained from that time bound to the lot of the Unayyids, and in consequence drew upon himself the mediations of 'Ali, particularly after the part the Imam took in the battle of ʿSifān. He helped 'Amr b. al-ʿĀṣ to conquer Egypt for Muʿawiyah, and was in command of several naval expeditions. He proved himself as good a diplomatist as an administrator. At ʿSifān he entered into negotiations with 'Ali and drew up the preliminary protocol to the conference of Al-Qādisiyyah; he was commanded to take a census of the felāhi in Palestine with a view to a new assessment of taxes. Muʿawiyah also intended that he should replace, in Egypt, 'Amr, b. al-ʿĀṣ, who showed too much independence, an undertaking in which he miscarried. He was governor of the Province of the Jordan. His manifold services caused him to be ranked by the Arab annalists amongst the principal deputies of Muʿawiyah, forming his gbe'a or ibṣan. He disappeared from the political scene before the end of the reign of this caliph.

(H. LAMMENS).

ABU 'Awn 'Abd al-Malik, b. Yaḥyā al-Khorasānī, a general in the service of the 'Abbasids. After the outbreak of the rebellion of the Khurāsānīs in the province of Ramazān in 93 (9th June 747) Ibn Abī ʿAwn several times took part in the war against the Unayyids. At first he accompanied the 'Abbasid general Khaṭṭāba b. Shibli, then he was sent by the latter to Shahrazur, where on the 20th Dhu’l-Hijja 131 (10th August 749), in conjunction with Malik b. Tarīf, he defeated ʿOthmān b. Suwayd. Whereas Abū ʿAwn remained in the vicinity of Mawṣil, the Unayyid caliph Marwān marched on and met him at Umm al-Qura, the supreme command of 'Abd Allah b. ʿAlī, Abū ʿAwn took part in the battle by the Greater Zā'im (11th Dhu‘ al-Mādād II, 132 = 25th January 750), and in the pursuit of Marwān and in the capture of Damascusa by 'Abd Allah b. ʿAlī. When the latter remained
behind in Palestine, he sent Sallih b. 'Ali together with Abu 'Awn and a few others to continue the pursuit to Egypt, and it was there that the caliph, after a fresh defeat, was tracked down and killed in the same year. Abu 'Awn remained in Egypt till further orders as governor. In 159 (775-776) he was appointed governor of Khorasan by al-Mahdi, but deposed in the following year.

(K. V. Zetterstern.)

ABU BAIHAS AL-HAJJAJ B. DIHRIM, b. Kharijite of the Banu Sa'd b. Dubaha. In order to escape from the persecutions of the well-known al-Hadjiqah, he fled to Medina, but was taken prisoner by the governor, 'Othman b. Hiyah, and executed in a most cruel manner (94 = 713). He appears to have been a prominent position as a teacher, for a section of the Kharijites is named after him; this section taking up an intermediate position between the harsh Ahrarites and the more gentle Sofites and Kharijites (Abahijatites). It is true that the Baliashites admitted that the Muslims who did not share their views were unbelievers, but they considered it permissible to live with them, to marry into them, and to accept legacies from them. For the rest their views were in disagreement so that they fell into several subdivisions.

ABU BAKRA. called himself a freedman of the Prophet's after he had been converted to Islam. He lived at first as a slave in Ta'if. When Muhammad besieged this town in the year 8630 and invited all the slaves of the Thaqefites to desert to him, he obeyed this summons and thus obtained his freedom. As he had let himself down the walls by means of a trough-gutter (bakra) he thenceforth as a Muslim bore the surname of Abu Bakra. His real name was 'Umar b. al-Harith (Masri). But better known than his supposed father is his mother Samiya, a Persian slave, who was brought by chance to Ta'if, and bore three sons, of whom Ziyad b. Abli [q. v.] is the best known. Abu Bakra subsequently lived in Basra and was scourged by 'Umar when his accusation against al-Maghira b. Shu'ba [q. v.] was not confirmed by his brother Ziyad. During the fight between Ali and 'Abu'l-Asma he kept in the background. He died in 51 or 52 (671-672) and is said to have left forty children. Amongst his descendants the Raji Bakkar b. Kotaba (comp. about him Ibn Khallikain, ed. Wustenfeld, N. 115), who also happened to bear the Kurnas part of Abu Bakra, and who was born in 182 (798) and died in 270 (884) is the best known.

ABU BARAKISH. a fabulous bird, similar to a sparrow, or, according to Karawati, similar to a stock, and living in the depths of basins. It is generally credited with the peculiarity of altering the color of its feathers continually. The predominating color is said to be dark grey (between white and black), according to Ibn Khallikain cited in the Liwan al-Abar.) the ends of the feathers being ash-grey, the middle red and the bottom part black, so that the feathers assume different colors according as the bird ruffles them. Like the chameleon (asb al-balda'a) the abu barakish also became proverbial for inconstant, changeable people.

(HELL.)

ABU 'ALI BASHAR (a.), a surname of Adam.

[See Adam.]

ABU BEKR. Abu Ali, with the surname of Ati'a, variously interpreted by moderns, the first caliph. It is not related why he was given the surname of Abu Bekr (i. e., 'father of the camel's foot'), which his enemies mockingly twisted into Abu Fadjr ('father of the wretched young of a camel'). His father 'Othman, also called Abu Kahlifa, and his brother 'Umm al-Khair Salma bint Sahih both belonged to the Meccan family of Ka'b b. Sa'd b. Tamim b. Murra. According to the current account, Abu Bekr was three years younger than Muhammad. He lived as a well-to-do merchant in Mecca and is said to have been a stockbroker (Ibn 'Asakir, Ifbat, II. 883), to have been friendly terms with Muhammad, before the latter was called to be a prophet. He belongs to Muhammad's oldest supporters, even though it remains doubtful whether he was the first male believer, as many maintain. He soon took an important position in the newly formed community, not only on account of his close friendship with the Prophet, but also by virtue of his own personal qualities, which make him one of the most attractive figures of ancient Islam. Especially characteristic of him was the unshakable, blind faith with which he considered Muhammad as the chosen instrument of divine revelation, and which made him accept his every word as absolute truth. On occasions when others doubted, e. g. after the Prophet's account of his journey at night, or when they did not know what to make of his conduct, as on the occasion of the Hudaybiya covenant, he remained unshaken. His was the anger of a man. During the reading of the Koran he shed tears, a thing that made a great impression on many, but especially on the women; and, as his daughter related, he wept with joy at the news that he might accompany Muhammad in his emigration. At the same time he was of an open, right-thinking nature and was several times able to restrain Muhammad from rash actions by his sensible advice. He was very susceptible of the purely mortal thoughts in the Prophet's position, proving this by purchasing the freedom of several slaves and by similar other actions. If, after the impressive conduct of the Jews of al-Zubair, he really uttered the bigoted words, which sound so harsh to our ears, and which tradition puts in his mouth ("He will meet his beloved ones again in Hell," it must be explained by his complete absorption in the religious ideas with which his friend inspired him. No sacrifice was too great in his eyes for the sake of the new faith. Thus it came about that of his considerable fortune, invested at 40000 dirham, he brought to Medina the small
sem of 5000 dhirham. Amidst the greatest dangers he faithfully stood by his friend and master, and was one of the few who during the worst period did not flee to Abyssinia. But once, during the exclusion of the Khawajas from the Mecca, community, he is said to have lost his courage. He therefore quitted Mecca, but soon returned under the protection of an influential Meccean, and from that time forward remained in the city although his protector left him in the lurch. His life attained its apotheosis when Mohammed chose him to accompany him on the flight from Mecca, and his self-sacrificing friendship was rewarded by his being made immortalized in the Koran as "the second of the two." His family also went to Mecca with the exception of his son 'Abd al-Rahman, who, strangely enough, had remained a heathen and fought at Badr against the faithful, till he too finally was converted and migrated to Medina. In this new home Abu Bekr, who went on supporting the "cause" with the rest of his fortune, set up a modest household in the suburb of al-Sunna. Through his daughter 'Aisha, whom Mohammed had married shortly after the emigration and greatly loved, the tie between the two men was strengthened still more, and would probably not have been broken by the scandal which the frivolous young woman brought about, even if it had not taken such a fortunate turn through the revelation. Abu Bekr was nearly always with the Prophet and accompanied him on all his campaigns, during which he, though little warlike himself, never stirred from his side even in the most perilous moments. On the other hand he was very sullen and in exceptional cases employed as a leader of military enterprises, e.g. in the Tabuk campaign he was entrusted with a standard. But the Prophet sent him in the year 9 (631) to Mecca to conduct the pilgrimage, and it is quite possible that it was he and not 'All, as tradition maintains, who on this occasion read out the sermon in the mosque to the Muslims in his stead. This distinction made it possible for 'Umar and his friends, after Mohammed's death on the 8th June 632, to propose Abu Bekr as the head of the community, thus preventing the threatened split. But also from other points of view this choice was the most probable that could have been made. In no way did Abu Bekr represent new ideas or principles, but clung to Mouhammad's way of thinking and held fast to everything his friend had ordered or hinted at. In this manner he was able, in spite of all mutual antipathy, to hold together the talented men who had gathered round Mouhammad, and make use of them for the good of the community. Through his absolute lack of originality and his simplicity, but sturdy character he became a reincarnation of Mohammad, conducted the young religious Community through the most difficult and dangerous times, and left it at his death in such a firm position that it could support the rule of the powerful and talented 'Umar. He gave a proof of his scrupulous obedience to Mouhammad's orders first after the latter's death, by, sending, in spite of the threatening state of affairs in Arabia, the young Utsama with an army on a quite unimportant expedition to the farthest east of the Jordan. Meanwhile the tribes in the country round about began to rise up against the political centralization in Medina. Abu Bekr indignantly rejected the demand for the remission of the taxes, considering it as a betrayal of the Prophets instructions. When Utsama's army had returned home, he marched out against Abu l-Kasqa and was lucky enough to choose the talented general al-Khadij ibn al-Walid as commander of his forces. This latter defeated the Aasai and Faram at al-Bnakla, subjugated the Tamim and finally, after the bloody battle at 'Akrad'in the Garden of Death, brought the Banu Qamita under the power of Islam, a thing that even Mouhammad had not succeeded in doing. His fortune in war made it possible for other generals to suppress the revolts in Bahrain and 'Oman, and finally also Yemen and Hidramaut were again brought under the dominion of Medina by 'Abd al-Malih and al-Muthahhir. Following his master's example, Abu Bekr treated the vanquished mercifully and probably thus helped to re-establish peace in the country; certainly, as for instance on some women who had sung parodies on Mouhammad's death, or the burning of al-Fajr's, but seldom occurred. After the subjugation of Arabia, which was completed in less than a year, it was the lot of the conservative and unwarlike Abu Bekr to set about an eastern province which was in a short time to alter completely the political situation of the whole world; he sent Khadij and other trusted generals on a campaign of conquest against Persia and Byzantium. It can safely be assumed that the energetic men who were held him originated this idea in order, by means of a campaign made in common and promising rich booty, to put an end to home troubles and to teach the Arabs in a practical manner the unity of Islam. Abu Bekr was able to consent to this campaign with a calm conscience, since the repeated expeditions which Mouhammad sent against the Byzantine dioceses in the latter part of his life could be interpreted as an indication of the great universal task of the new religion. He had the satisfaction of seeing during his short rule the first great victories of the Arabian army on both theatres of war: in Persia the conquest of Hormayn May or June 633, and in Palestine the Battle of Adh-dhab in July 634. Shortly after this latter success he died on the 23rd Dumnah II 15 (23rd August: 654), and was buried beside Mouhammad. In order to mark him out as a martyr, a tradition makes him die of poisoned food, of which he is said to have partaken a year previously: but a more prosaic tradition, according to which he fell ill through fasting on a cold day, does not sound very credible either, as it does not suit the season in which he died. His short reign, which was mostly taken up in war, did not bring about any epoch-making changes in ordinary life. It is important to note that he had the first compilation of the Koran made, although he hesitated to carry out such an undertaking without the Prophet's express authorization. Moreover his share in it was probably inconsiderable, as according to another account, 'Umar had the first copy drawn up. As to the division of the spoils of war, he kept to the dictum of the Koran, that all true believers had equal rights, a principle which 'Umar later abandoned. As Caliph he lived as simply as before, at first in his house in al-Sunna, and subsequently, when the distance became inconvenient, in the town itself. Tradition relates many anecdotes of his modesty and his
ABU ḐAMAD, the hero of a collection of anecdotes, which is quoted as early as in the tenth century. He is made to say all sorts of foolish maxims, and especially to give ridiculous decisions on legal questions, similarly to Kārkhālī later. This Abu Ḑamad is perhaps identical with the wise man, who, in or before Muhammad’s time, in lieu of paying the property tax, offered his good name to the servants of God; for this express renunciation of the respect of mankind would surely be understood as a perversion and a challenge to set him up as a model of stupidity. Extraordinary knowledge of ancient poetry is ascribed to a man who bore the same name, but it has been impossible to decide whether it was the same person as the above.

(J. Horovitz.)

**ABU ‘L-ĐARDA’** AL-KHĀRAQI AL-ÂMIR, one of the younger contemporaries of Muhammad; his real name was according to some Usâmah, according to others ‘Amir. His father’s name, too, is diversely given. He was converted to Islam, so that he took part in the battle of Uhud, but afterwards became one of the greatest Kāfûn scholars. Under ‘Othman he was the public prayer-reader and kāfî in Damascus, where he died in 31 (652) or a few years later.

**Bibliography:** Ibn al-Ŷafî, Usd al-ghaba, iv. 159; v. 185.
(M. Th. Houtsma.)

**ABU DĀWŪD** SULAYMĀN B. AL-ÂMIR AL-SULAYMĀNI AL-ÂZDI AL-SULAYMĀNI, traditionalist, born in 266 (880). In his youth he undertook long journeys in search of the hadiths. He studied at Baghdad under the Imām ‘Abdullâh b. Hanbal, eventually he settled definitely at Basra, where he died in 275 (888).

Abū Dāwūd’s principal work is a collection of traditions, known under the generic title of Kitāb al-nawâmi. Like all other books of this name, Abū Dāwūd’s work is distinguished from the collection of traditions known as Dāwū’ in that it does not concern itself with historical, ethical or dogmatical enquiries. As a principle it contains nothing but traditions relating to the sharia, things ordained, or allowed, or forbidden by law; its contents are almost exclusively juridical. Other peculiarities distinguish Abū Dāwūd’s Kitāb al-nawâmi from earlier collections of traditions, the two Shāfi‘is for example: it has, to begin with, less severity in its criticism of testimony; everything is thought by Abū Dāwūd to be worthy of belief in his information, whenever no formal proof is been given of his express unbelief. Besides very few of them, Abū Dāwūd makes the text of the hadith transmitted by him to be followed by his personal appreciations as to the value which he considers should be allowed to them. These short notices may be considered as the first examples of that criticism of the hadith which in later times was bound to develop into mutazilism. Abū Dāwūd himself recommended his Sunna to the scholars of the two holy cities in a Kitâb,
in which he set forth his views, pointed out the uselessness of his work and showed the system of his criticism. The work at once met with great success, and still in the fourth century enthusiastic admirers styled it "The wonder of the world" and "The gospel of Islam"; and subsequently, although it was definitely considered one of the "six bases" which composed the canonical "corpus traditional" of Islam, the Kitāb al-nasab did not possess nearly so much authority and veneration as was acquired by the Ṣaḥāḥ of Ṣaḥḥār and the Ṣaḥāḥ of Musallān. The work was published at different times in the East (Cairo, 1250; 1310 on the margins of Zaydīn's commentary to the Musāwī of Malik; Lacknow, 1838; Dallī, 1839, with glosses). A small collection of "wuzūf traditions" is also due to Abū Dāwūd; the Kitāb al-
masūdī was also published (Cairo, 1410).

Abū Dhārr al-Ǧīlīfā, a companion of Muhammad highly honored on account of his piety. His real name was Dżumād b. Ljumāda al-Rabīb, but there are several different accounts of this as well as of his descent. He was considered, with ʿAbd Allāh b. Masʿūd, as one of the best traditionalists of Islam, and was distinguished for his beautiful pronunciation of Arabic. It is, however, principally on account of his ascetic tendencies that he became in the later traditions of the Sunnah and Shāfiʿī, who relate many stories about him, a model of a pious Musulman. He died in al-Rabīb in the neighborhood of Medina, whether he had retired, in the year 32 or 33 (653).

Abū Dhūʿāb al-Hudhālī, his real name Khuwālad b. Khalīl b. Muḥīṭ, an Arab poet of the tribe of Hudhālī, belonged to the so-called Ḥudhālījāmīn and therefore lived to see Islam. He is a high place among the poets of his tribe and of his time. His name is not to be found in the portion of the Hudhālījī poems which has been preserved, but the Divān of his poems has been handed down in manuscripts, which are unfortunately not yet published, mainly, in the Landesbibliothek, Munich, and the Constantinople MS. (Public Library, N. 3598), which are Imperial Library in Vienna possess. A copy made by N. Khodokanidis, under Supplement, N. 4164. — The year of Abū Dhūʿāb's birth is not known, but it is certain that he went over to Medina late in life. In the year 26 (647) he went to Africa under the command of ʿAbd Allāh b. Saʿd b. Abū Saʿd, and took part in the conquest of the country. Being sent by his general to accompany the youthful ʿAbd Allāh b. al-Zubair to Caliph ʿOmar, he died during the journey, probably in the year 28 (649) whilst still in Egypt.

(Al. Haffner)

Abū Dīʾār al-Muḥājir, Uṣūd al-Hujjāt; i.e. "Lord of the Hujjāt". He was the representative (Naʾl) of the Būyādī Sharaf al-Dawla in Omān, but later on recognized the supremacy of Ṣamʿān al-Dawla. The former therefore sent troops against him and took him prisoner in 734 (945). After the death of Sharaf al-Dawla in 735 (946), he was placed over the province of Khurāsān by Ṣamʿān al-Dawla. After the latter had been killed in 738 (950), Abū Dīʾār retained the command over the Dālamīnic troops there. Afterwards he entered the service of the Būyādī Ǧabāla al-Dawla, but his great age forced him to retire shortly after. He died in 406 (1015), at the age of 105. His son Ḥasan was also a general of the Būyādīs.

(Comp. Ḥasan b. Uṣūd al-Hujjāt.)

Abū Dūʾāl, properly Abū ʾl-Hakam ʿAbd b. Ḥāṣan b. al-Muḥājir, also named Ibn al-Hanẓālyā, a descendant of the illustrious Kūtābī family of Muḥammad. According to one account he was of about the same age as the Prophet. The traditions concerning him possess but little historical value; in an anecdote it is evident from them that he was one of Muḥammad's most embittered opponents among the ascetics of Mecca. He eagerly took part in all conferences against the Prophet. He is said to have maltreated the weaker of the Muslims and even to have killed a woman; he persecuted the Prophet himself with his abuse and was only prevented by miraculous visions from doing him bodily harm. Some commentators connect this, though wrongly, with Korān, vi. 60 et seq., whereas Korān, vi. 62 and alvī. 45 are said to have been called forth by his mockery at Muhammad's description of Hell. It was very much against his wish that the proscription against the Ḥijāshīs was again abrogated. In the conference of the Kūtābīs shortly before Muḥammad's emigration he advised them to have him killed by men from every family in Mecca. When hostilities broke out between Muḥammad and the Meccans he met a host sent out under Ḥāṣan's command, but it did not come to a battle; he is nevertheless put down to his piety that a light did take place at Badr. On this occasion Ṭūba b. Rābaʾ gave him the nickname of "the man with the perfumed buttocks". Through his prayer before the battle: "Let him perish who most cuts the tie of blood-relations", he, according to tradition, called down his own destruction. In the battle he was wounded and killed by Muḥāfīz b. Amr b. al-Ẓākirīnī and Muḥīṭ b. ʿĀfīrī al-Wassārī. When Muḥammad saw his corpse, he is said to have called him "the handsome of his people". His picture, naturally drawn very one-sidedly by tradition, is completed by the mourning songs of the Meccans on him, in which he is called "the Meccan chief, the noble-minded man, never vulgar nor greedy".

(F. Borl)
ABU DULAF. [See AL-SAN`I, 1, 107-110, and MIRAK B. SHAHIJAL.] 

ABU DULAYMA ZAND B. AL-MUNJID, a black slave, client of the San`i Camp in Kufa. He is already mentioned in the history of the last Umayyad caliph, but appears as a poet only under the name of Abu`l-Abbaa`da, and plays the part of a court jester in the palace of Al-Saffah and especially in those of Al-Mansur and Al-Mahdi. His poem on the death of Abi Muslim (137 = 754-755) is said to have been the first of his works which made his name. Examples of his poetry show him to us as a clever and witty satirist, who reduces events upon poetic forms and displays all sorts of wit with cynical joy; but he does not despise the most insipid and foolish praise when this form of mendicancy promises some reward. He attacks the praise of the court and his sycophants' tongue is feared by all. It is true he does not spare himself and still less his near relatives; he would even occasionally revenge himself for the coarse jokes which the mulattos played on him when one of his patrons was pleased to ridicule another through him. He also enjoyed the jester's liberty of being above the Islamic laws and could also make them the butt of his insolent mockery. He has given proverbial fame to his mule that possessed all possible defects and to which he dedicated a witty Kalila. His statements as to the date of his death vary; according to some he died in 400 (772-773), according to others in 470 (786-787).

MIRAI B. ZAMB [See ABU AL-AYN.

ABU `L-FADL. [See AL-FADLI and others.]

ABU `L-FADL (FADLI) AL-MA`AM (Shakht), the secretary and prime-minister of the emperor Akbar, was born at Agra on the 4th Muharram 1558 (14th January 1551). He was the second brother of Sheikh Muhammad Nafiz (d. 1595), the author of the commentary in the Koran, and the younger brother of Sheikh Faidi (q. v.), the poet. On his father's side, he was of an intelligent family which had emigrated to Hindustan and had settled first in Sind and later at Nager, in Dindupur (Radjastana). Hence his father is generally spoken of as Nafiz; though he had settled and married in Agra some years before Abu`l-Fadl's birth. On his mother's side, Abu`l-Fadl was connected with Mir Rafi` of Al-Din Shafi`i of Id. near Sultai, who was regarded as a saint and consulted both by the emperor Humayun and his adversary and conqueror, Sher Shah. Abu`l-Fadl was a student from childhood and early interested himself in religious questions. In his account of his mental development, given in the third volume of his *Insha* (Newal Khushor lithographed edition, p. 256), he says he began to meditate on the meaning of the Koran verses; and that when he was fifteen, he was versed in all current science. For ten years later, he taught pupils and discussed religious matters with himself and others. But he found no inner peace and often was tempted to renounce the world and become an anchorite. In the Akbar, indeed, he thus writes of himself: Through during the day, my cell was made bright by teaching science, yet at night I would take the path of the fields and approach the enthusiastic of the Way of Search and implore inspiration from those treasure-possessing workers. But no helpful remedy touched the troubled spot of my soul. While my soul was drawn back to the Sources of Ossuth, while it inclined to the ascetics of Asamoum (the Druses); whiles a desire for disportion with the Lamas of Tibet broke my peace and whiles a sympathy with the priests of Portal tapped my skirt. Sometimes a conference with the mahouts of Fergia, sometimes a knowledge of the secrets of the *Zand-awar* rubbed me of my repose; for my soul was alienated both from the rationalists and the enthusiasts of mine own land.

From the struggle between jarring thoughts and from the antagonism between the contemplative and the active life, he was relieved, according to his own account, by the introduction to Akbar, which he regarded as his second birth. Before this, however, he had to undergo, in common with his father and brother, considerable persecutions at the hands of the *ulama* and had to flee to Agra and remain in hiding for a time.

Abu`l-Fadl was presented to Akbar in the nineteenth year of the reign (1574), just before the latter set out on an expedition to Bihar. Faidi, who had been restored to favor, was instrumental in introducing his brother to the emperor. At this time, Akbar held orthodox opinion and was zealous for the Muhammadan faith. Abu`l-Fadl also was a believer at least in appearance. He therefore presented, as a scholar's gift, a commentary on the famous Tirmiz verse of the Koran. Next year, when Akbar returned victorious to Agra, he received, as appropriate to the occasion, one on the opening of the Chapter of Victory. Faidi and Abu`l-Fadl soon gained high favor with the emperor and rendered him the service of helping him in his discussions with the *ulama*. Indeed it was they, and in particular the latter, who were accused of destroying Akbar's faith in Muhammadanism. In the words of Badu`i (Baduyi) Abu`l-Fadl was the man who saved the world in flames. Indeed, it is not recorded of any in rank. Faidi never held a higher command than that of Faisi Hundred and it was not until 1585 and after eleven years of service, that Abu`l-Fadl became a Commander of One Thousand. In the following year, he was associated with the veteran Sheikh `Ali Makhram in the joint-government of Dilhit; in 1592 his command was doubled; in 1600 he was promoted to the *mugtak* of Four Thousand. A year earlier he had been sent on service to the Uddukna, at the instigation of Prince Salim and others, who were jealous of his influence over the emperor. If they hoped he would fall in his first independent military command, they were mistaken; he distinguished himself greatly and amongst other exploits, captured the strong fort of Arimgarh. He was much assisted in his campaign by his son, Shaikh `Abd al-Razak and Khalil, who spoke in the language of the *Mamluk* al-Salama, and at the command of the front of his quiver (fi-e-r-ya-yi tofeet-i ii). His success still more embittered Prince Salim who, when he had heard that Abu`l-Fadl was returning...
to reunite the emperor with whom he himself was at feud, procure his assassination. A Handela chief wayled Abul-Faij near Narwar, killed him and sent his head to Salim at Allahabad.

The murder was committed on the 4th Rajab 1011 (22 August 1602); the headless body was conveyed to Antri in Gujrat and there buried. The grave still exists but is neglected.

Abul-Faij was a man of great industry and the Akbar name is a monument to his toil. Most valuable part of the book is the third volume; this contains the Akbar's letters which are the best authority for Akbar's administration. As the work of a contemporary, the Akbar's name can never be superseded, but it must be admitted that the historical narrative is no longer interesting nor philosophic.

Besides this voluminous book, Abul Faij wrote several others, the Fars-din which is an abridgment of the Annals of Akbar, and many letters which were published after his death by members of his family in two collections: Mulkshahiyn Akbari and Kafkat Shabi Abul Faij (for Engl. Abul Faij). His name is also connected with the Persian version of the Mughal state, and with the Tathra Alif.

(see S. B. Bhatia, History of Indian Literature, D.C. Pachauri.)

ABU L-FARADJ. A very frequent synonym.

(see S. B. Bhatia, History of Indian Literature, D.C. Pachauri.

ABU L-FARADJ. Ali b. Al-Husayn b. Muhammad b. Ahmad b. Khorasani b. Al-Imamani (or Al-Ishahani), an Arab historian. Abu L-Faradj, a descendant of the Umayyads, was born in Iraq in 1284 (897) and studied in Baghdad. He then led the life of a wandering litterateur and enjoyed the patronage of Salif al-Dawla and of the Buyyids. On the death of Isma'il b. Abbad and al-Mahalli and also of the Spanish Umayyads, whom he, however, did not seek for personally. He died on the 14th Dhu l-Hijjah 356 (21 November 967). His chief work, which alone has been preserved, is the Kitab Al-Falast; in this he collected the songs which were popular in his time, adding the accounts of their authors and their origins which appeared of interest to him. He had previously made a more extensive collection of songs with the indication of their airs but without any additional notices. The book begins with the collection of 520 songs, which, at the orders of the caliph Harun al-Rashid, the most famous musicians of his time, Ishaq bin al-Musayyib (comp. Frank Dyer, Chester, in the Journal of the American Oriental Society, vol. 31, 1910), Isma'il b. Dzanifin and Fudayl b. al-Award, and written under the caliph by Ishaq b. Ishakyn. Then follow other selected songs, especially those of the caliphs and their descendants. With every song there is indicated, besides the text, the air according to the musical terminology of Ishaq bin al-Musayyib, to these are added very detailed accounts concerning the poet, often also concerning composers and singers of both sexes. In spite of its sometimes severe order this book is our most important authority as far as the history of the third century of the Hijrah but also for the history of civilization. It was printed in 20 volumes in Biladis, 1285; a new edition in 21 volumes appeared in Cairo, 1905-1906. Wellhausen filled a gap in the 14th volume from the manuscript MS. No. 370 (Zeittrh. d. Deutsch. Morgenl. Gesellschaft, vol. 145. 19), Bruna gives gleanings from MSS. in The twenty-first volume of the Kitab Al-Falast (Leiden, 1893), F. Guida published an index under the title of Tab Ultra-

ABU L-FATH. [see ibid. Al-Ashani, Al-Flah.]

ABU L-FATH. Abul-Fadhl b. Ismail, name of the hero in Humaydan-the Muhamad.

ABU L-FIDAI. Ismail b. 'Ali b. Ma'mud b. Omar b. Shahbakan b. Ayth Imad al-Din al-Ayyub, an Arabian prince, historian and geographer. He was born in Dumat al-‘Umar (November 1728) in Damascus, whichever his father al-Malik al-Adil, a brother of the then prince of Hammat, al-Malik al-Mustasir (a branch of the Egyptian Ayubides), had died with his family from the Mongols. In the service of his uncle he early began his military career in the latter's feud against the crusaders; when, however, after the death of his children cousin Mahmud II on the 21st Dhu 'l-Kada 698 (20th August 1299) the vacant principality of Hammat was conferred on him but on the emir Senouj, he entered the service of Sultan al-Malik al-Ne'ir, only when he had served faithfully for 12 years was he installed as governor of Hammat on the 28th Dumat al-‘Umar 710 (14th October 1310). Two years later, when on a visit to Cairo, he received the rank of prince and the title of al-Malik al-Salih. A further recognition of his faithfulness as a vassal was accorded him on the 27th Mahram 720 (1st March 1320) when he was given the title of al-Malik al-Mu'ayyad and the hereditary rank of Sultan. He died on the 25th Mahram 725 (27th October 1331) at Ismail. As prince he was desisting in that he created useful buildings round his residence. His fame, however, mostly based on his literary work, the most important of which are his History of the world and his Geography. The former under the title of Multabat al-Din al-Abd al-Samad in the east and west and the latter in full in 3 volumes at Constantinople in 1286 (1506-1507). Single parts are: Al-Fadlan historia antemoderne arabe. vol. 2, 1794, lat. vol. 1795, 1802, lat. vol. 1795, 1802, lat. vol. 1795, 1802. The end of the work is the treaty on the title of the East and West and the latter in full in 3 volumes at Constantinople in 1286 (1506-1507). Single parts are: Al-Fadlan historia antemoderne arabe. vol. 2, 1794, lat. vol. 1795, 1802, lat. vol. 1795, 1802, lat. vol. 1795, 1802.
ABU 'L-FIDA' – ABU 'L-GHAZÂLI BEHADUR KHAN.

Abû 'l-Fida' was the Arab ruler for the ancient Antipatris, which is to be sought for in the Wáyld (saw). The shorter form 'Futrus' is also met with for the town. Usually, however, Nahr Abû Futrus (also Nahr Futrus, or Abû Nawât) is meant, which properly designates the Wâyld (saw) 'Awâlî) that flows by the town. Here Marwàn II rested on his flight to Egypt from Damascus in the year 132 (750), and shortly afterwards the town was the scene of the butchering of 72 or 80 Umayyads (comp. Theodore, Chronographia, ed. Boir, l. 457, who certainly has the same event in mind and places it at Antipatris). Subsequently diverse battles took place in the vicinity of this town.

Bibliography: Tahtab, iii. 47, 51, 64; Yücelit (ed. Houtsou), ii. 425 et sqq.; Bibliographie arabe, vii. 119; Yücelit, Muqaddim, iii. 963; iv. 831 et sqq.; Encyclopædia Biblica, pp. 188 et seq. (Y. Bouk.)

ABU 'L-FUTûH HASAN (354–430/1064–1139), Shârif of Mecca, of the family of the Mu'awiyah (called after Hasan's great-grandson Mâsûlî). Abu 'l-Futûh is especially known amongst the sons of Mecca, who reigned before the house of the Banû Kattîda (this latter being in power from 1200 till the present day), because in 1011-1012 he let himself be persuaded to lay claims to the dignity of caliph. A son of a grand-vizier, who, after his father had been killed at the election of the Fatimid caliph Hâkim, had fled to Arabia, seems to have induced him to take this step. When he had journeyed to Syria with supposed relics of Muhammad and 'All, he received news of a revolt in Mecca. As he had besides but little confidence in his followers, he hurried back and reconciled himself with Hâkim.

For the rest, his rule, as that of his son Muhammed Shâh, was distinguished from that of most of the predecessors of Kattîda by his great duration.

Bibliography: C. Snouck Hurgronje, Mîhâh, l. 59 et sqq. (C. Snouck Hurgronje.)

ABU 'L-GHAZÂLI BEHADUR KHAN, Turkish historian and sovereign of Khâjariz, was the 2nd son of 'Arab Muhammad Khan, whose capital was Urgandz, and who was descended from the Cinghit Khâns. He was born near Urgandz in 1603 (the year of the birth; the date given by himself of the Hegira — 1014 — cannot be correct). Being on bad terms with his brothers, his father invested him with the government of the town of Kât; he commanded the right wing when his father was defeated by his rebellious sons, and took refuge at Semach and with Imam Kuli Khan. On the accession of his brother Isfendiyâr he received Urgandz as his appanage (1033 = 1623), which had become almost a desert after the Ame-raft had changed its bed to the sea into the Aral Sea (about 1575). He was afterwards exiled to Persia and remained ten years at Isphâhân. After the death of Isfendiyâr at the beginning of the year of the sheep (1643), he was proclaimed Khan of Khâjariz. He declared war against the Turkomans and killed a great number of
them, retook Kātes, fought the Kalunaks and their laid waste the conditions of Bokhārā (1065 = 1655 and 1656). He died in 1704 (year of the Hijra 1065), after a reign of 33 years. His work called Shāfi-qasi Tūrk, written in Tūrk (Cagman), contains the history of the ancestor of the Cagmanis together with that of his conquerors and his descendants, especially of the branch of Shāfi-qasi. He began to write it in 1674 (1664) at the end of his life; feeling that he could not complete it, he divided it among his son Abu l-Muqaffā Al-Muhammad Behāder to finish it; the latter wrote the part from 1054 (1644) to the end; the work was finished in 1706 (1695). The first known manuscript of it was found in Siberia by Tabler of Stahlenberg, a Swedish officer, who was made prisoner at the battle of Poltava, and who made the German translation published by Messeritschmidt (Göttingen, 1730).

**ABU HABBA (father of gharb)**

The name of an extensive area of ruins, south-west of Bagdad and north-west of Muṣṭafâ, a short distance from the east bank of the Euphrates. The excavations conducted there by H. Rassam in the years 1881 and 1882 proved that Abu Ḥabba is the site of the old Babylonian town of Sippur, which had formerly been sought for in the ruins of Sīsara. (see Sīsara; Peter, the author of Sīsara, situated much more to the north, on account of the similarity of the names. The excavations undertaken by Father Scholl in 1894 at Abu Ḥabba were also crowned with great success. The cuneiform inscriptions obtained by Rassam, Scholl and certain Arabs consist mostly of texts of the so-called contract literature, i.e. of juristic or business documents. These, for the most part, come from the archives of the famous temple of the sun god (Shmas). Sippur was one of the most ancient towns of Babylon; its existence can be traced back in documentary records far back, as far as the beginning of the third millennium before Christ. The Euphrates probably flowed close by the town; at the present day its bed is some 12 km. (7½ miles) distant from the ruins. Sippur formed with Agade (also called Sippur el Anuual, i.e. Sippur the town of the goddess Anuual), which was probably only separated from it by the Euphrates, a double town, and to distinguish it from Agade it is sometimes called Sippur el Shamash, i.e. Sippur, the town of Shamash, i.e. it is still a most peculiar point whether these towns together correspond to the Biblical Semiramis (II Kings, 21: 18).

**ABU HABS**

**ABU HABS (son of Māsūd)**

Abu Habs, or Masud, is the author of the novel of Dehle Nefusa, an Arabisch scholar mentioned in the Kitāb al-ṣawā'id of Shamas. pp. 561, 562, in a short notice, without any indication as to date. He translated into Arabic the old 'Abdāl of the Abbasites of the Maghrib, written originally in the Berber tongue. It is still the cahemical used by the Abbasites of the Maghrib and by the Almoravids. The 'Abdāl of Abu Habs has given rise to numerous commentaries, amongst which the 'Abdāl, the author of the Kitāb al-ṣawā'id, which is extant in manuscript with the Arabische commentaries of the Abbasites of the Maghrib and of Dehle Nefusa. Next in rank some certain commentaries of Shamsī, Abu l-Rasam al-Thalāt (18th cent.), and the older one of Abu Sulaimān Dāwūd b. Bahrām al-Thalāt, which have been autographed or printed as an appendix to the 'Abdāl in several collections edited in Algiers or at Cairo.

The 'Abdāl of Abu Habs has been published and translated with notes taken from the Abbasite commentators by A. de Motylns (Le Caire populaire des Abbasides algériens. — Recueil de manuscrits et de textes publiés par l'École des Lettres et des Médecins, en l'honneur du XVIIe Congrès des Orientistes d'Algérie. — Alger, 1905).

Following the order in which Shamas gives his biographical articles, we may suppose that 'Omar b. Ḥaṣīm lived at the end of the eighth or at the beginning of the ninth century of the Hegira.

**ABU HABA (a Handahī)**

A. de Motylns. [See 'ABU HABA (a Handahī)].

**ABU HABA (a Handahī)**

Abu l-Murak, a Kurd chief, lord of the slave (v. b.), who took part in the campaign against the Serbs. Then 1404–1405 (1111), and who, besides, played an important part in the wars of the later Seljukis, Mal'kūt and Mawdūd.
or in the sense ‘upholder of pure monothelmism’), jurist, philosopher, Sufi, and compiler of manuals, lived in the fourth (10th) century. Little was known of his biography, but four documents quoted by Yakt quoted that he was alive in Baghdad in 400 (Feb. 1010), and that he died at the age of more than eighty. His home was placed by different authorities at Nishapur, Shiraz, or Wasit. Much of life was spent in Bagdad, where he studied grammar under Abu Sa'id al-Strati, and 'Ali b. Isâ al-Rumânî, Shāfi‘i law under Abu Hamîd al-Marwânî and Abu Bekr al-Shirîni.

At a late period of his life he attended the philosophical courses of Yâhya b. 'Abî, Abu Sulaiman al-Muhammed, al-Tâhir 'al-Logian, and others, at various times between 361 and 391 (971—1001).

Owing to historical opinions expressed by him in works now lost, he was banished from Bagdad (where he had apparently supported himself by acting as scribe) by Mahdâl (â. 352 = 963), and at first applied for help to Abu al-Amid in Khorasan, whom he approached with an elaborate epistle, afterward published by him as a model of eloquence. From 370 to 376 (977—980) he lived at the court of Abu al-Abbdâl at Raj, where, having refused to act as amanuensis, he failed to receive any gratuities; he afterwards arranged himself on both sides by attaching them in a treatise on their faults, as well as by active in his work entitled al-Masâmi‘. He appears to have had more success with the viziers of Samânid al-Dawla, Abu al-Amid (d. 375 = 985-986), and ‘Abî Allah b. al-‘Arâj al-Shirâni. The last part of his life was again spent in Bagdad, where he lived in poverty. Towards the end of it he burned his library, for which he alleged he excused the neglect of the people of Bagdad, among whom he had lived twenty years. In the preface to his Treatise on Friendship he makes a similar complaint of being despoiled by general consent at the capital. The following list of his works is given by Yäkhî (Ma‘âli‘ as-sadârât, Constantineople, MS.):

1. On Friends and Friendship (Constantineople, 1304), with an appendix on the sciences.
2. Refutation of Ibn Dù‘ân’s commentary on Matanâlât.
3. Al-Mâ‘āk, az-‘âm al-Màxâya (quoted by al-Khîfi, p. 284), a passage of which is quoted in the Zillab, d. Dîrit, Moriggi, Gerlede, il. 30, first called attention to by Ibn ‘Arâj, Mosâminâ, il. 188, and by Gurgull, Ma‘âli‘ as-sadârât, H. 62, and perhaps also in Yäkhî, sec. cit., also gives several extracts.
5. Al-Jûmî‘.
6. Al-Ma‘âkâh (published, with the title Ma‘âkâh or as-Ma‘âkâh, at Bombay, without date; see also Catal. cod. sv. bibl. ac. Lucknow Ratione, 1st ed., il. 314-315).
7. Nîyâf al-‘ârâj.
8. Thârîq al-‘ârâj (of this a large extract is given by Yäkhî in his life of Alî al-Dînawarî).
10. Al-‘ârâj as-sâli’il izzâ fi al-jî’ve (an al-Masâmi‘ al-Masâmi‘).
The text contains a passage in another language, which appears to be a historical account. The content is not translatable to English due to the nature of the language and the context. However, the document seems to be discussing historical events, possibly relating to a person named Abu Hammû Musa II, and mentions historical figures and events such as the Edirnekapı and the city of Tiemce. The passage includes terms and names that are indicative of a historical or legal context, such as legal titles, names of individuals, and possibly locations.

The text also mentions the city of Tiemce, which was an important city in the history of the region. It is mentioned in the context of the time of the deserters of the army, and the attempt to reinstate the young Abû Hammû before the walls of Tiemce, and the deserters of the army, which led to the resignation of the Amir of Edirne. The text highlights the actions of Abu Hammû, which were significant in the context of the region.
Hammāt succumbed in getting back again a little later. In 728 (1370) the capital fell in the hands of the king of Fez, who placed his own governor in charge of the town, whilst the unfortunate Abū Hammāt had to flee to the Mūlab and the desert.

The sultan of Fez, Abūl al-ʿAlā, having died in Rabī‘ 2 (October 1375), the Marinid army evacuated Tlemcen and the kingdom. Abū Hammāt, having been immediately recalled, left his retreat and to his great surprise recovered the possession of his capital.

Having returned in such an extraordinary manner to the head of his kingdom Abū Hammāt set himself to the pacification of his states. But hardy he could put down a revolt on one side when a rising against his authority took place elsewhere, and a pretender to the throne appeared somewhere. The Kālidīn gives abundant details about these events, in some of which he was besides directly implicated.

Besides these continual troubles Abū Hammāt had to put up with many anomalies in his family, with his own children. His eldest son, Abū Taḥṭīf, heir presumptive to the throne, made him suffer every kind of vexation. As early as 780 (1378-1379) Abū Taḥṭīf showed the sentiments with which he was animated with regard to his father by causing the assassination of Yāḥyā b. Kālidīn, the historian, secretary and intimate friend of Abū Hammāt (Rammālah 780 or Dec. 1378, Jun. 1379). Towards the end of 788 (Jan. 1387) this son of the king had all of his brothers who were in Tlemcen arrested together with his father himself, and shut up the latter in a prison at Ouan. Abū Hammāt, however, succeeded in escaping and even in recovering his kingdom; but Abū Taḥṭīf took refuge at the court of Fez and returned at the head of a Marinid army to attack his father in his capital. Abū Hammāt was killed in a battle against the army under his son's command on the 2nd Dhu ‘l-Qa‘dah 789 (21 Nov. 1386).

Being of a highly cultivated mind, he sought for the society of the famous scholars and poets of his time; he was, further, benevolent and readily accessible to the humblest of his subjects which made him popular. If he lacked energy and courage on the field of battle he had as a compensation a very resourceful mind in expedients. He could beguile his enemies and get himself cleverly out of difficulties; thus in spite of all the reverses of fortune he suffered he was able to make his way to power.

Abū Hammāt wrote for the use of his son a treatise on political ethics, published at Tunis (1927–1928) under the title of Wīṣāf al-malik fī tūṣūḥ al-anwār, of which Mariano Gozzi has made a Spanish translation entitled Al villor de poetas (Saragossa, 1899, in the Colección de escritos árabes, iv).

The yearly festival of the birthday of the Prophet gave occasion, in Abū Hammāt’s time, for great rejoicings and literary displays, the importance of which has been noted by the chroniclers. Long poems in praise of the Prophet and of the King of Tlemcen were sung in the royal halls in the presence of a crowd of guests, who were supplied with quantities of savory dishes. On this occasion see the great mechanical clock, which embellished the palace of the king; and of which al-Tasāwī has given a complete description, was made to play.

Abū Hammāt wished to show the interest he bore towards intellectual works by having a new school built; he himself installed there the celebrated professor Shīrī Abū ‘Abd Allāh. This establishment, richly endowed, received the same of Medrasa Yaḥyāyya from the name of the king’s father, Abū Yaḥyā, who was buried there.

The epitaph engraved on the marble of the tomb of Abū Hammāt has been published by Brusselard.

[Bibliography: Ibn Khaṭīb, Jāhil (Hist. des Berb.), ill. 456 et seq.; al-Tasāwī (Fatḥ, Commentaire), pp. 147–1438); Brusselard, Timbres des armées, ii, 117, 118, pp. LXXI et seq. [See also the bibliography under "Aḥmedbāhāry." [A. Bell.]]

Abū Hānīfah [See Abū Hānīfah]

Abū Hānīfah: A Musulman jurist, the founder of the Ḥanfī school which is named after him. He was probably born in the year 80 (699) and died in the year 132 (752) at the age of 70. His grandfather Zūhūr was brought to Kūfa from Persia as a slave by the Muhammedan conquerors and received his freedom in that town, thus becoming the chief (Marāb) of the Arabian tribe of Taim-Allāh, to which his liberator belonged.

Ṭāhūr, the father of Abū Hānīfah, was born a member of this tribe. He probably belonged to the ‘Alīde party, for it is expressly stated (e.g., Nawawī, ed. Wustenfeld, p. 699) that 'Abdul-basīt his father and his descendants.

Abū Hānīfah was a prominent scholar and devoted the whole of his long life to the study of the sacred science. His public lectures in Kūfa soon gave him a name as a great scholar and his utterances had great weight with the persons round him. People flocked daily to hear him and to question him on the ritual and on the law. The Ḥanfī school named after him is one of the four orthodox Madhābi (i.e. courts, schools), which have maintained themselves to this day in Islam.

The opinion of many European writers that Abū Hānīfah worked on quite new principles and erected a very intolerant system, in which he made the greatest concessions to the speculative method of deduction (the ṣiḥḥah) is quite unfounded. It is true that he was open to the reproach made by his opponents that he attached little importance to tradition but rather independently followed his own judgment (ra’y). The scholars in the two holy cities, Mecca and Medina, asserted that he was unacquainted with tradition and gave free play to caprice. But we should not be led astray by these statements, hostile as they are to Abū Hānīfah. In any case there is in general no real difference of principle between the different Fiqh schools in Islam.

Abū Hānīfah appears to have confined himself during the whole of his life to imparting his teaching only to his auditors; many Arabic writers quote his views, and have thus formed the basis of the whole Ḥanfī legal literature from the very beginning of the Ḥanfī school up to the present day. It appears, however, that he himself never wrote anything. The titles of some of his small works are indeed mentioned, but
they are said to have been composed by his disciples, and most especially by his grandson b. b. b. Hammad. Of these works ascribed to Abu Hanifa the best known is probably a small pamphlet on the civil and religious doctrines of al-zuhhar. The authenticity of this work has been doubted, because it contains a protest against the Māridite doctrine, to which Abu Hanifa himself is said to have subscribed (A. v. Kreuser, Gesch. d. islam. Ideen, p. 35, note 2 to T. Sachau, Zur ältesten Gründl. des muhammed. Rechts, p. 14—Sittengesch. des phil.-hist. Clauss, De origine et fonte vitae academ. d. Wissenschaft., lxx. 11:1; M. von Houtmann, De stridum. inst. civil. et religios. Yasus-his., p. 176). The so-called Manual of Abu Hanifa is a collection of traditions compiled by his disciples and later Hanafees, which the master, no doubt to give them his guarnatea, had used in his teaching and worked up into a complete edition according to the chapters of the Fīqh (Goldziher, Musamman Stud., ii. 330).

Abu Hanifa’s life we know but little. He was an independent, well-off man, who made his living as a merchant, having a business in cloth. Most of Abu Hanifa’s later biographers relate that Ya‘lād b. ‘Omar b. Habib, the governor of the Umayyads in Kufa, and later on the caliph al-Manṣūr wanted to compel him, by corporal punishment, to accept the office of judge, and that Abu Hanifa died in prison in the year 150 (707) in consequence of the ill-treatment, to which he was subjected on account of his persistent refusal.

Perhaps this is only a legend, invented by later Hanafees, who could not understand that the Government had never tried to induce the master to enter its service. In any case Kufa was in Abu Hanifa’s time the seat of the Umayyad government, and later on, after the expulsion of the Umayyads, it was the residence of the first two ‘Abbāsid s. Abu Hanifa’s native town was therefore in that stormy period the centre of the tremendous agitation caused by the dynastic change. Probably Abu Hanifa had, when the ‘Abbāsides began to agitate against the Umayyads, joined the movement with which he no doubt sympathized. When then, after the fall of the Umayyads, the new rulers drove back their cousins and all the ‘Alids, he probably in his disappointment took the part of those later against the ‘Abbāsides. This would explain his being persecuted and punished. Perhaps the Government made attempts to win over this influential man by promises of high office and by threats and punishments. It is well known that many pious, independent men in those days deemed it wrong and refused to enter the service of the Government or to accept an office dependent on it (comp. Goldziher, loc. cit., p. 39).

According to other less trustworthy accounts Abu Hanifa died later and not in prison.

**ABU ʿL-ḤASAN.** [See al-ʾAbdār, al-]

**ABU ʿL-ḤASAN (or Abū ʿl-Ḥasan) Muḥammad b. Imāmī b. Simāmī, the caliphal viceroy under the ‘Abbāsid princes: Abū al-Malik ʿIb. Manṣūr I and Nūh II, he was three times governor of Kūfa in the years 436—462, 350—377, 378—396, 968—983, 986—990, during his second governorship of 20 years he practically enjoyed the esteem of an independent prince and obeyed the Sāmūtādīs only as far as pleased them. On the accession of Nūh II (385 et seq.) he was overwhelmed with the highest honors, being recipient of the title of Nārī al-Dawla; his daughter was married to the sovereign, but as early as the year 371 (984) he was, at the instigation of the vizier Abū ʿl-Ḥasan ʿOtba, ignominiously deposed. After mature reflection he abandoned his first thoughts of asserting himself by armed force and retired to his hereditary estates. After the removal of the vizier and the outbreak of civil war he was restored to the government, kept the position, till his death; he was succeeded by his son Abū ʿAli (q. v.).

The clergy praises Abū ʿl-Ḥasan as a god-fearing and just emir; comp. Samʿānī, Kitāb al-ʿarbūs, a.v. al-Qanīrī (quotation from al-Baytūrī, Tārīkh Nāṣirī, made by Barthold in Türkistan in the time of the Mongol invasion), Russian, i. 60); in other authorities he is credited with many violent deeds. In the description of the events at the time of his deposition there are two series of traditions, according as the compiler took the vizier’s side (ʿOtba) and the compilers depended on him, such as Ibn al-Athīr, Mkhkhdm, etc., or the government’s (as Gardî, Awwā and Hand; Allâh Kâshânî, comp. the text of Gardî and Awwā in Barthold, Türkistan etc., 3. 18 et seq., 93 et seq. (W. Barthold).}

**ABU HASHIM.** [See al-Qānūnī.]

**ABU HASHIM.** Abū ʿAli b. Muḥammad b. Abī ʿAlī b. Abī ʿAlī b. Muḥammad, an ʿAlīd in the line of Abū ʿAlī b. Muḥammad, was the father of the well-known Muḥammad b. al-Ḥanṣāyya, and was venerated by the Shiʿites as their recognized chief. Shortly before his death he is said to have bequeathed his own and his family’s claim to the ʿImāmat to the ʿAbbāsīde Muḥammad b. All, the father of the subsequent caliphs al-Saffār and al-Manṣūr. This statement, though found in the oldest Arabi historians, is strongly doubted by more recent investigators, and is to be ascribed to the invention of the followers of the ʿAbbāsīde, who desired to prove in this way the claim of the ʿAbbāsīde to the caliphate. Abū Ḥashim died in the reign of Sulaymān b. Abī al-Malik in Husainiyya, a small place south of the Dead Sea, which the ʿAbbāsīde pretenders had chosen as their residence. Bibliographie: Ibn Khallikān in ‘alām al-aʿlam (tronk), li. 553—565; A. von Kreuter, Kunstre- gesch. des Orientes unter den Chalīfīn, b. 491—497; Goldziher, in the Sittengesch. der phil.-hist. Classe der kais. Akademie der Wissenschaften, lxxviii. 500 et seq.; ibid. Die Schriften der Abī Hanīfa, pp. 3, 12 et seq.; Snouck Hurgronje, in Literaturkritik, fur orient. Philosophie, b. 419 et seq.; idem, Le droit musulman, p. 54 (= Règles de l’histoire des religions, xxxviii. 186); A. Sprenger, in the Zeitschr. der vergl. Rechtswissenschaft, 9, 15 et seq.; Bruckemann, Grund. d. islam. Litteratur-, 1. 160 et seq. (Th. W. Juttner.)

**ABU HASHIM.** [See al-Qānūnī.]
ABU HÂSHIM MUHAMMAD (455–484 = 1065–1093), a qadi of Mecca. He finally obtained this dignity through that the pious prince of Yemen, al-Salâhi, who put with his troops a stop to the brutal sheriffs of the sheriffs for the upper land and formally installed Abu Hâshim. Most of the sheriffs who held supreme power in Mecca before Kâthîd (598 = 1200) were descendants of Abu Hâshim’s and were named after him or after his great-great-grandfather Hâshâmî (Hâshâmîs). During his long period of office, Abu Hâshim exploited the pilgrims in every way possible, even by plundering them, and trafficked with the rights of supremacy which he sold alternately to the caliph of Baghdad and the Fatimide caliph of Egypt.

ABU HÂTIM (Sahl b. Muhammad) al-Squirvânt (or al-Siqsî), an Arabian philologist of Byzantium. He was a pupil of al-Usâfî, Abu Zaid al-Amastî, and Abu ‘Ubaydâ Ma’mar b. al-Muthânis, whose traditions concerning Arabical philology, poetry and antiques he propagated. He learnt the grammatical principles of Shemawh from al-Akhfash, but was not able to make a name for himself in the finesse of grammatical. The subjects in which he excelled are poetry and the knowledge of the old poets and their language; he was also esteemed as a Koran scholar. Nevertheless the old lists (see Führer, Die grammatischen Schulen der Araber, p. 88) contain besides works on the above mentioned subjects also grammatical pamphlets. On the other hand, no mention is made of his Kûthî al-anunnawât (On those who live long) and the Kûthî al-muqaddîs (Testament) belonging to it. Amongst his pupils Ibn Durânî (355) and al-Muhaqqâd (455) are the best known. The date of his death is given between 248 and 255 (862–869); probably the latest date (255) given by Ibn Durânî is the correct one. Of his works there have been published a Book on the palm first reviewed by S. Ciano in the Archivio Società Storica Italiana, vol. I. 1873, comp. Zeitsschr. d. Deutsch. Morgenl. Gesellschaft, xxviii. 500 et seq.; by Bartolomeo Legati, in the Atti della Reale Accademia degli Lincei, iii. 1859, and the Book on the long-lived by L. Goldscheider (Abh. der arab. Philologen, ii. Leyden, 1899).

(De Motsukiier.)

ABU' HAWL ( Hubbard, l. e. “Father of Terror,” the Arabic designation for the sphinx of Gizeh (Gizh). Certain authors call it simply al-Samâm “the idol,” but its proper name was already mentioned in the Fatimide epoch. At that time it was also known under the Coptic name Bîhî (Bîhil), or, according to Kühni in Mexico, Bâhiha (Bâhîwâ). Abu’Hawl is probably an Arabic popular etymology deriving from the Coptic name; the initial B contains probably the Coptic article, which in Arabic is often transformed into Abîh. Ancient tradition understands under Abu’Hawl only the head of the sphinx, as its limon formed body was buried in sand in the Middle Ages, and only in 1817 was laid bare. Modern Arabians use the word in the sense of long-lived, and not only for the one near the pyramid, but also for the one near the nilus.

The Arabs, who were not acquainted with the ancient Egyptian culture, considered with superstitions the majestic head projecting from the sand of the desert. It was considered as a talisman which hindered the progress of the sand of the desert into the Nile valley, a magic power sacrosanct by others to the pyramids. A colossal statue in the shape of a woman according to its description it must be lost with the child Horus, placed on the other shore of the Nile, in Fusjât, passed as the beloved one of Abu’Hawl. The former turned its back to the water just as Abu’Hawl to the desert, and was considered as a talisman against the inundation of Fusjât by the high water. In 712 (1311–1312), it fell into the hands of treasure-seekers, and its stones were built into a mosque. Another tradition considers Abu’Hawl as the image of the legendary Usamun, to whom the Sabeans, it is said, brought offerings of white hens and frankincense.

Arabic reports contribute very little to the history of this monument. According to al-Mugaddas, as early as 375 (985) the face, it seems, was
no longer intact, although later reports praise the beauty and harmony of the features, frequently pointing out the reddish color. Towards 290 (1378) a funereal shield added some damages to the statue.

ABU ’l-HUDHAIL MUHAMMAD b. AL-
HISHÁF AL-ABDUL-AL-LÀH, one of the principal representatives of the Mu’tazilis school, was born in 135 (753-753). He was a native of Basra, a freedman of the tribe of 'Abd al-Ra’s. He went to study at Baghdad, where he was the pupil of a dialectician. According to Marwân, Paris, 304-305, after his return to Baghdad in 308 al-Mârîmî persuaded him to come to his court, as well as Nâqî, another celebrated Mu’
	azil, to argue with the partisans or opponents of their opinions. Shahrastân (ed. Cureton, p. 141) tells us of other disputations that he had with Hâjjî b. al-Hâkim, who professed certain anthropomorphic opinions with regard to God.

The date of Abu ’l-Hudhail’s death is often put at 333 (849-850), which would give him a hundred and one Muslim years. Abu ’l-Másîlîyn (ed. Jâmi’ and Matth., l. 719) gives the above date as that of the death of this doctor according to al-Tabâhî, declares, however, in another place (ib., p. 675), adding some other details, that Abu ’l-
Hudhail died in 326 (840-841). It seems that the latter should be preferred.

The works of Abu ’l-Hudhail have not reached us. We know from Shahrastân and al-Iqût something of his doctrines. Shahrastân establishes ten points by which his philosophy differs from the ordinary teaching of the Mu’tazilis. These points refer to theodicy, to the question of free will and to ethics.

With regard to theodicy, Abu ’l-Hudhail admits the qualities and attributes of God in opposition to the Mu’tazilite school which denies them, but he identifies them with the divine essence! God is knowing through knowledge and knowledge is his essence, powerful through power and power is his essence, etc. So that qualities would be only fashions of the divine essence. Shahrastân compares them to the divine persons of the Christian theology, a comparison one could scarcely understand unless one recalls the custom the Greeks had had of personifying the attributes. — On the subject of the will in God, Abu ’l-Hudhail distinguishes volition from the thing willed; further, he distinguishes creative will from legislative will. The will to create is creation itself, and this will, distinct from the object created, is not in a place. Abu ’l-Hudhail was the first to express this last opinion which was at once adopted by the Mu’tazilite school. The divine word is distinguished in the same manner as the will; the creative word expressed by the phrase ‘He let be’ is identical with creation and is not in a place; the legislative word, comprising preceptive and prohibitive maxims as well as revelations, is in a place, by way of an accident.

As to the question of fatalism Abu ’l-Hudhail naturally admits free will, like all Mu’tazilites, with this difference that he does not attribute free will to the other life. In eternal life all actions are necessary and created by God, without which there would still be need of the Law. This doctrine, moreover, admits that the future life will cease and that individuals will reach a state of repose, happy for some, painful for others; this opinion is not founded on theological but on logical grounds, that is to say Abu ’l-Hudhail did not feel able to admit motion without beginning or end. As to the duration of physical life he teaches a mitigated fatalism: he believes that man dies only at the destined hour, always excepting cases of violent death.

In morals Abu ’l-Hudhail studies the question arising from the subject of the moral responsibility of man and the knowledge at what moment an act is in existence. He only recognizes an accomplished act; for him ‘he does’ is quite different from ‘he has done’. This is applied to the act of the ilah: but it is the same for the act of the heart: desire, volition do not exist completely, as long as the power of executing it is wanting to the limbs. — Another important moral idea is that which we call the natural law. His doctrine points out that man, who are able to reflect, having lived before the revelation, must know God and a certain minimum of morals by rational demonstration, and that, if they failed to reach this knowledge, they were liable to eternal punishment. The Mu’tazilites for the greater part shared this opinion.

Bibliography: Ibn Khalilik (ed. Wustenfeld), 59, 617; Shahrastân (ed. Cureton), pp. 34-43 (Hetzbrucker, i. 48-53); H. Steinert, Die Mu’taziliten oder die Freidenker im Islam (Leipzig, 1865); J. de Bœc, Tel. histoire de la philosophie en Islam (London, 1903); Carre de Vaux, Antistasis (Paris, 1800); Statio quintâ et sexta et appendix theror Moravici, auctore Aristhon de Dun, ad Iqût (ed. Socranis, Leipzig, 1548); Kûtar al-umûrâtîf (Constantinople, 1239); W. Arnold, al-Mu’tazîlî (Leipzig, 1865).

ABU HURAÎRÂ, a member of the Salmân b. Faḥm class of the South-Arabian tribe of Ard, a companion of the Prophet and a zealous propagator of his words and deeds. He is generally known by his Khânas Abu Huraîrâ; the most divergent statements concerning his real name in heavenburdens and in Islam have been handed down. In the most trustworthy accounts his name varies between ‘Abd al-Rahmân b. Sulaym (see Nasawi, ed. Wustenfeld, p. 770) and ‘Abd al-Ra’ûf, ibn Durayd, Kûtar al-umûrâtîf, p. 295); the name of the father of the little cat is supposed to have been given him on account of his tenderness to cats. He came to Medina in the year of the battle at Khâtîb (7 = 629), joined Čulma and thenceforward lived with him. At first he is said to have earned his sustenance as a horse-dealer. His constant intercourse with the Prophet encouraged him after the latter’s death to transmit a greater number of Hadîths in his name than the other companions; the number of those that are supposed to come from him is estimated at 3500, but certainly a great part of them have been foisted on him. Amongst those who had heard the sayings transmitted by him are to be found
the names of the most respected members of the oldest Islamic community. Legend justifies the idea of infallible memory, with which he imparted his numerous traditions, by inventing the tale that the Prophet had with his own hands wrapped him in a cloth spread out in front of them during their conversation and then by this means he was seen in the faithful remembrance of what he had heard—a fabulous text which is also to be met with as a symbol of intimate friendship. On account of his great renown as an interpreter of the sayings and deeds of the Prophet, ‘Umar was able to appoint him prefect of Bahrain. After his deposition, he refused the caliph’s offer to restore him to the office, and preferred to remain for a length of time in Medina as a private citizen. It is very improbable that Marwan, who favored him in many other ways, appointed him as his lieutenant in the governorship of Medina. Abu Huraira died in the year 57 or 58 (676–678) at the age of 78.

The humorous temperament (manasa) of Abu Huraira, which gave rise to numerous anecdotes (Ibn Kaysan, ed. Wüstten, p. 421), is often reflected in the way he gave his Hadith communications, in which he placed the most unimportant things in pathetic asides. The manner of his speech of information which he always had in hand (the Abu Huraira Hadiths take up no less than 415 pages in the Musnad of Ibn Hanbal, II. 428–542) appears to have raised suspicion of their trustworthiness in the minds of his immediate auditors, nor did he hesitate to give utterance to their suspicions in a formal form (compare also Buhrat, Paddal, 597, No. 1). He had several times been defrauded and slighted against the charge of idle talk. These facts give our criticism every reason to be prudent and sceptic. Sprenger calls Abu Huraira “Extreme of praise humbug.” At the same time we must take into account the fact that most of the sayings of which tradition makes him the originator were probably told on him at a later date.

Bibliography: Muslim, ‘Abd. v. 202 (Buhrat and Timirio have an especial place in the Jari’il of Abu Huraira): Ibn al-‘Ati’i, Usul al-ga’ib, v. 315; Sprenger, Das Leben und die Lehre der Mohammedani, III. pp. 120–121; Goldberg, Abil, vom alten Philosophen, B. 491; idem, in the Zeitliche, 4. Demarch, Morgen, Geschicht. I. 471; D. S. Margoliouth, Mohammed, p. 352. (Goldziher.)

ABU HUSAIN (Bani Abu Husain), name of a Kelbia family. To this belonged the Fātimid governors, who since 936 (945) ruled over Sicily [q.v.]

ABU ISHAK. (See Al-Ishāk and Al-Iṣbāl al-‘Adil)

ABU KALAMUN, also Bi Kalamun, the usual designation in Persian but more rare in Arabic for the chameleon. Originally Abu Kalamun designated the pisces (Grock ṣaira’āt), of whose slender bodies (ṣairi biḥabba, uṣīn mo’āl) consist the small, greenish bodies of the chameleons. The philologists (Ṣafī, Aḥsan, Ḥuwairi) know Abu Kalamun almost only as a kind of cloth of variegated colors brought into commerce by the Byzantines. The original signification of the name was therefore forgotten, some connected it with Mount Kalamun near Damascus, and Kazwin (ed. Wüstten, II. 364), who was acquainted with the production and use of the ‘ṣa‘w’ wool on

the Spanish coast, knows Abu Kalamun only as a cloth woven after the colors of Abu ʿAmarah [q.v.].

ABU KALB, “father of the dog,” Arabic designation for the chameleon, for which the lion was regarded as a dog.

ABU KALDIJAR AL-MU’AMMA R B. SULTAN

Al-Dawla, a Buyyide, had been appointed by his father as governor of al-Awzā’ in 412 (1021). On the death of the latter (415 = 1024) he was called to Shīrāz to succeed him, but was forestalled by his paternal uncle Abu ‘Ukbarī b. Bahā’ al-Dawla, governor of Kirmān, with the help of the Turkish guard, which preferred him. Abu Kaldijār gathered some troops, who defeated his uncle’s army and entered Shīrāz; but he would not hold his own there because of the hostility and discontent of the Dailamite garrison. The peace which resulted only left him Kirmān; a fresh victory gave him Fars (417 = 1026), although he was detested by the inhabitants of the country. He was called just pillaged Anbar, acknowledged his suzerainty; on the contrary the inhabitants of the marshes of Lower Badūn (al-Battah) revolted under the command of Abu ‘Abd Allāh al-Husain b. Bkhr al-Shaftāb, his old leader, on account of the exactness to which they had to submit (418 = 1027). The same year he attacked his uncle Abu ‘Ukbarī to take Kirmān from him, but failed. Abu Kaldijār supported the progress of his army and peace was concluded on the terms of the partition of Fars and Kirmān between the two princes. He took as his minister al-Adil Bahrūn, son of Māfūn’s of Kāzvin; taking advantage of the struggles between the Turkish and Dailamite troops, he took possession of Bosra (419 = 1028), of Kirmān, without striking a blow, at the request of the inhabitants, after the death of Abu ‘Ukbarī in 420 (1029), which he could not keep. He saw Abu al-Awzā’ pillaged and the women of his family taken as prisoners to Bagdad by Dā’al al-Dawla, he attacked him and was routed after three days’ fighting; the situation was retrieved with the money of his minister al-Adil. In 421 (1030)  he joined battle with Dā’al al-Dawla at al-Maṣṭar, the capital of Mesawa, was defeated and lost that place, which was recovered shortly afterwards on the arrival of reinforcements; he left Bosra, then was recalled thither by the inhabitants. In 423 (1032) he put to death the sūḥābī Sanā‘a, who had left him only a nominal power. In 428 (1036–1037),  Būr Ṭagḥān tried to get him recognized as master of Bagdad, but without success. He made peace with his uncle Dā’al, who gave his daughter in marriage to Abu Mansūr, son of Abu Kaldijār. He took Bosra (431 = 1039–1040), tried in vain to seize Ḥippāh by treating reinforcements near the city. Omnā then in revolt (435 = 1041–1042) and delivered Dā’al in Kirmān, which was besieged by the Ghuris of Toghril-ī-gal. The Sīlīdīs (434 = 1042–1043).

On the death of Dā’al al-Dawla (4th Shābān 435 = 9th March 1044) he succeeded him at Bagdad on promising hostages to the Turkish troops, and was enthroned the following year with the title
of Muhiyi 'l-Din. He retook two fortresses in Kirman from Fatihars, the son of 'Ali al-Dawla, and was recognized as suzerain by Gereşepâ, also summoned. Abu 'L-Kalidja', another son of the same, who had just seized Hamadhân from Toghrâl-beg, but who remained there only one year. He retook the walls of Shīrah, a work which was finished in four years, and saw himself acknowledged as Isphahân, but, having lost 14,000 horses, he was supplanted (437 = 1045-1046). He acknowledged the suzerainty of Toghrâl-beg (438 = 1046-1047). Peace having been concluded, he gave his promise in marriage to the Seldôiid sovereign (Râhî II. 439 = Oct. 1047). He took possession of al-Kāṣim the same year and imprisoned his minister İbu 'l-Sûhârî, the son of Fâārâbî; the death of this person, which took place the following year, was even attributed to his orders. He died on the 4th Dhu-l-Hijja 446 (14th Oct. 1048) at Jâmilâ in Kirman, from an anagae contracted whilst mounted, in the age of 40 lunar years, after a reign of 4 years at Bagdad. His camp was pillaged by the Târâkī, the Dâlîmâtes saved his only son Ahi Mântûr, Fîtâ Şârûn. His eldest son al-Mâlik al-Kâshânî (a title which the calligraph refused to recognize) Khorrâ Fîtûs succeeded him at Bagdad.

**Bibliography:** İbu 'l-Athîr (ed. Tombah.), fis. 228-283; Mîrkonndî, Konfîyât-ı alvârî, IV. 53, 54.

The same name was borne by a son of 'Ali al-Dawla b. Kâlûyû, who was in command at Hamadhân in 429 (1037-1038) when that town was attacked by the Gûr, and saved by a treaty of peace, but he could not defend it the following year, after the taking of Râhî, and died to Kâkâwâr (İbu 'l-Athîr, ix. 270-274). - by the general and minister of Dârû b. Mînûzîl b. Khâbûr the Zâiyâbî, Abu 'L-Kalidja b. Wâhûnî al-Kâshânî, whose imprisonment by Anbâhshâni, the brother of the former, was the cause of the conquest of Lâjurjânân and of Târâk in Bagdad in 433 (1041-1042) (İbu, xiii. 301, 340); - by Fâhîr al-Dawla, b. Rûkûn al-Dawla (478-490); al-Rûtînî, p. 133; - by Şâhwâlmîn b. 'Abîd al-Dawla, Abu Shâhûrî Iskâwûrî, 9th Râjîdî and Amîr al-Umâmî (982-988) (ix. p. 434); - by İbu 'l-Athîr, fis. 15, 16; İbu 'l-Fâhîn, fis. 155; - by Mîrkonndî, the son of the Mîrkonndî, the son of Sha'îr Fîtûs, a general of Şâhwâlmîn al-Dawla (495; İbu 'l-Athîr, fis. 79); - by Anâkâlîka, inspector of Târâkî, who was vanquished in 454 by Masûd the Ghanâwî of Tâbâhshî-Abûnî, in Elifât, Bibilzg., index to the history of India, p. 187.

The form Be-Kalidja is employed by İzâr al-Dawla (217, 227) to designate a son of 'Abî Kâshânî; it is also borne by the general of Shâhî al-Mâlik Kosârân of the Buwît dynasty of the al-'Abîn, this name being given by İzâr al-Dawla (199) to the son of Mînûzîl arising from a confusion with the general of Dârû mentioned above. - This name was also borne by a farsa in the province of Multân (Darfîrātî, in the Journal, 4th series, xi. 427; Râvîtûrî, Mîmûkhî, pp. 1, 75) and a town to the east of Bâhçars (Ahsââd, p. 733). It belongs to the dialect of Gîbîût and Behistûn, = battle. (Pekh. lîhrdbât, Pers. bâhrî, Jâhîz, Fis. Nâmeqâvâd, p. 153.) (C. H.)

**ABU 'L-KÂSIM.** See [AL-KÂSIM.]

**ABU 'L-KÂSIM.** The son of the Prophet Muhammed.
Hakkârî and Samsûkand were frequently undertaken. Abu l-Khair appeared with greater forces in 855 (1451-1452) as an ally of the prince Abd Sâdîd against the then sovereignty of Samarkand. Abd Allah, known as "Abd Allah was besieged and killed and "Abd Sâdîd was installed as sovereign of Samarkand. Râbî'ul Sâdîg Begun, daughter of Ullugh-Beg, was given in marriage to Abu l-Khair. A second attempt to interfere with the dispute of the Timurids came out less happily. Prince Maḥmûd Dîjûlî, favored by Abu l-Khair against Abd Sâdîd, was forced in 856 (1456-1460) after some success to raise the siege of Samarkand at the approach of the army. To quit the country ravaged by Abu l-Khair's auxiliary troops (under Barke Sâdîgan) and in 856 (1456-1464) - as it seems not giving any assistance from Abu l-Khair to surrender to his adversary. Shortly before, probably about 856 (1456-1457), Abu l-Khair's grandson, Maḥmûd, born in 858 = 1454, is said to have been then three years old, Abu l-Khair's power received a hard blow from the Kalmucks; beaten in the open field, he had to flee to Sigismund with the remnants of his whole army up to the Sir. About 870 (1465-1466) it is said that three took place among the Ozbegs that split, through which the proper inhabitants of the steppes, called since Kazakh, separated from the other portion of the nation. The year of the nat. (1458) erroneously put as a parallel with 874 = 1469-1470) is given as the year of Abu l-Khair's death; the power founded by him was after a short interruption set up again by his grandson Maḥmûd Shâhîd and developed into such a magnitude that was never dreamt of.

Bibliography: Abu l-Khair's biography was written towards 950 (1533-1544) by Muḥâfiz b. Qâdi Muhammad al-Khâfî (Târîkh Abu l-Khair Khân), the statements in Howorth, Hist. of the Mongols, ii. 687, prove correct only so far as concerns the MGS. of the Howorth Manuscript, but not those of himself comp. Rien, Cat. of Pers. MSS., I. 182; the St. Petersburg MSS., among them being also that of the University Library or. 82, used here, have also the beginning of the biography. Maḥmûd was besides able to utilize the oral narratives of Abu l-Khair's son Suyûnî Khûn (d. 931 = 1525), who seems to have drawn his information from written sources, as for example the Maf'ûl al-hikâya of Abu l-Râziq al-Samânî (q.v.). Information about Abu l-Khair is also to be found in the historical works on his grandson Shâhîd and his successors, especially in the Târîkh-i-sâlîrî masuq (comp. Rien, Cat. of Persian MSS., pp. 276 ff, 813) and the writings dependent on it. (W. BARTIKOHL.)

ABU L-KHAJIB, a usual suffix of Buxhe, called after a freed-man of Caliph al-Mansîr, the most important of the canals, which in the Middle Ages, flowing from the west, fell into the main branch of the Tigris, the Djezîrâ "Awârî of the Arabian authors and the present Shajî al-'Arâb. It's bed still exists. It is on the shore of this canal that the Zandî rebels built in the 9th century the large fortress of al-Mukhârî.

ABU L-KHATTAB. Abî al-'Alî b. Al-Sâmûî al-Mâshîhî al-'Azîzî al-Bâbî Mâdî, first Imam exiled by the Abâdîbîs of Djezîrî Nûfîsî. He was one of the group of the five missionaries who travelled with the Abâdîbîs under the orders of Djezîrî Nûfîsî and Tripoli, having rallied in great numbers to the Abâdîbîs, decided to appoint a leader. They met under the pretext of settling a matter of interest in a place called Siid, to the west of Tripoli, and proclaimed Abu l-Khattâb as Imam. Their enemies Tripoli by surprise, and forced the Abâdîbîs government. At this period the government who had seized Kairânân gave themselves up to the worst excesses in that town. Wishing to put an end to their abominations, Abu l-Khattâb collected his troops and marched against Kairânân at the head of 6000 warriors. He subdued Gubais in passing and, after having defeated the chief of the Wârâjûm, Abu al-Malik b. Abu l-Djâhî, who had come out to meet him, made the place a free state. It was bearing this title that, according to the truth of what he did, his principal lieutenant, Asîm al-Beqîûtî, died from the effects of a poisoned malon by the besiegers.

Kairânân was obliged to surrender to the Abâdîbîs forces and fell into the hands of Abu l-Khattâb (Safar 141 = June-July 759), who caused a hateful slaughter of the Wârâjûm. He entrusted the government of the place to Abu al-Râ'un b. Rustân, and then returned to Tripoli, whence he extended his power over the whole of Fitriya. In Fâh al-Hâfîzî (April 759) Muhammed b. al-'Adîbî al-Khâfî, appointed to the government of Egypt by Caliph Abu Djezîrî al-Mânsûr, sent, for the purpose of re-establishing order in Fitriya, first an army commanded by al-Awârumî b. Abu al-A'iz al-Beqîûtî. Abu l-Khattâb went as far as Berdaines to meet it, and sent forward a van-guard under Malik b. Sîhûm al-Hâfîzî to check the enemy in the march. The Abâdîbîs army was routed in the neighborhood of Sart. A second army having Abu l-'Alîwâs 'Omar b. al-'Alîwâs al-Djâli as its commander was defeated at Meghmedes by Abu l-Khattâb in person. The Imam returned to Tripoli after this victory believing that he had finished with the Arabs. But in the meanwhile Ibn al-Asîrî was ordered to go himself to fight the Berbers and to take the government of Fitriya.

As soon as Abu l-Khattâb was informed of his march, he set out with a considerable army. But being deceived by a stratagem of Ibn al-Asîrî, who pretended he was returning to the East, he allowed his troops to be disbanded. Ibn al-Asîrî, by means of forced marches, soon reached the territory of Tripoli. The Imam hastily reassembled the nearest tribes to stop him in his march. The encounter took place at Tawerghi in Safar 141 (May-June 758). The battle was terrible: Abu l-Khattâb perished on that day with 12000 or 14000 of his followers. In Djamââtî (August), Ibn al-Asîrî took possession of Kairânân again. (A. DE MOTYLUSSIN.)

ABU L-KHATTAB. Muḥâfiz b. Abî Zainab (al-Mâshîhî, TJâhâs or Yâhûs) al-Mâshîhî, called al-Asîrî ("the mutilated"), a Musulman poet of the 13th century. At first adherents of Dîjâfûr al-Sâdîk (q.v.), but afterwards, as he declared the latter (as the Imâms in general) to be
a prophet, even a divine being, on account of
which he was disavowed by him, he claimed for
himself what he had asserted as belonging to the
\'Alid, and won over many followers who, according
to al-Makrit, were classed in not less than
50 sects, and all together united under the name of
Khaybath (q.v.). All that is known of the
personal situation is that in 143 (760) he was
executed at the order of 'Ali b. Misk, the Ab-
basid governor of Kufa.

(A.M. Th. Houtsma.)

ABU KUBAIS, a sacred mountain on the
east frontier of Mecca. The origin of the
name is not known, although Musaamid legend
occupied itself with it, and amongst others it ad-
vances the statement that this mountain was, in
pagan time, called al-Anta, because, legend as-
serts, the black stone was preserved there. Ac-
cording to another legend, in this mountain was
also the Treasure Cave (Muqaddas al-khas, q.v.),
in which the first progenitors of mankind dwelt,
and in which they were temporarily buried after
their death.

L. 474.

ABU LAHAB ("father of the flames", i.e.
man of Hell), the surname, by which an
uncle and at the same time violent opponent
of Muhammad is designated in the Korān (xi. 1)
and called chiefly by the Musulmans. His real
name was 'Abd al-`Uzza b. 'Abd al-Mutaallih, the
beauteous character of which shocked Muhammad.
Until his death he sided with the most unfortu-
inate adversaries of Muhammad in Mecca. This fact,
otherwise so discordant with the lively family
sentiments of the Arabs, may be explained by
that his wife, Djamal bint Harb b. Umaiya, was
the sister of Abu Sufyān, the prominent leader of
Musaamid's adversaries in Mecca till the year 8.
In any case she showed much hostility to the
Prophet and stirred against him her husband's
enemies' antagonism; for in the above-mentioned
Sura, beside Abu Lahab, also her torment and
humiliation in Hell are indicated. — This Sura
reads as follows:

1. Perch the hands of Abu Lahab and perish [himself].
2. His fortune and all what he hath
acquired profane him not. 3. He will roast in a
glowing fire (Abī laḥab), 4. And his wife
carries wood. 5. On her neck a rope of brass.

The sequence shows that verse 4 means that
in Hell she must gather the wood for the glow-
ing fire (comp. Baidāwī, ad loc.), and that it is said
in her lifetime she was carrying wood, that is to
say, thorns, and stirring them in the way of the
Prophet (as some commentators explain it; comp.
for example Tabart, Tafor, xxxi. 192, and Baid-
āwī, ad loc.), nor that in her lifetime she used
to spread insults on Muhammad's poverty. — As
a motive for this hostile prediction the following
is given by several Arab traditions in the name
of Ibn "Abbās: "After verse 244, in the
xxvi. xxvi. next line, those who stand near thee"
were revealed, Muhammad addressed from Mount
Safl (according to some from Misk) his related
families in Mecca in the following terms: If I
announced to you an approaching enemy would
you not believe me?" — Yes, they answered.
"Well," said he, "I caution you against a great
punishment!" At that time Abu Lahab came up
towards him and said: "Perdition on you, O la-
ḥab!" Is this what those that heard thee
have been revealed? Materia]ly not much different is the
account of Ibn Ḥajjāk in the name of "Abūl-Bāk.
According to another account of Ibn Ḥahā, reproduced
by Ibn Ḥahām, however, Abu Lahab expressed
himself with scorn against Muhammad on another
occasion, before Hindu b. Ḥašā, adding the
interjection word ābū. — There is no doubt that
previously a series of hostilities called Abu Lahab
against Muhammad must have taken place, which
called forth such a severe, pitiless execution of
the latter against his uncle, as much more that on
a previous occasion, in the party quarrel of the
Mecceans with Abu Ṭallib, Abu Lahab had occa-
sionally stood by his brother, and thus indi-
cately by Muhammad (Ibn Ḥahām, p. 244).

The Sura is generally considered as a Meccan one
(the proterite: takūat used for the prediction of
the future condition; comp. Baidāwī to Korān, xi. 27);
Nabakī counts it amongst the oldest. Meccan
Sura. Still the wording of verse 24: Muḥammad
sa'āda minbāb shows, according to the unexceptional
way of expression in the Korān, something that
had already happened (comp. Korān, vii. 46; xv.
84; xxvi. 207, basīm), for in case of future
events: the imperfect tense (waqūad) is always
used; neither is there any parallel to the usage of
waqūd as a proterite future. According to
such a wording this Sura contains consequently
triumphant out of the already happened death of Abu Lahab (see below), and could be
composed only some time after the battle of Bedr.
Abu Lahab did not personally take part in that
battle, because, according to some, he was sick,
according to others, he was wounded, in which
case he sent in his place 'Asīr b. Ḥahām, whose
fortune he had won in an arrow game, and whom
he had made his slave in his lifetime, and Abu
Lahab's great-grandson, the poet al-Faqīr b.
al-Ahbar al-Lahab, in his poem hauntingly mentions the latter's death in a verse (Aṣbaḥān, xv. 7).
The news of the had lives of the battle threw him in such an
anger that he betook himself to violent acts against
the bearer of the news and his wife. Shortly
afterwards (7 days according to Ibn Ḥahām) he
died of smallpox. The hatred of the Musulmans
was satisfied by that his sons feared to touch his
corpse, which they let to become corrupt, and
when they were ordered to remove it, it got an
unworthy burial (Ibn Ḥahāk in Aṣbaḥān, iv.
33 et seq.; Baidāwī to Korān, xi. 24). According
to one isolated source, he died considerably later
(about the year 5), as he had promised the last
priest of `Uzza, before his death, to defend the
interests of that goddess. But this statement
seems no evidence; for, firstly, the name of him
he was made away from the year 2 (622-623), and
secondly Ibn Safl tells in a tradition which he
traces up to Ibn `Abbās that at the conquest
of Mecca in the year 8 (629-630) Muhammad
received into Islam Abu Lahab's both sons, `Otha
and Muṣṭarij, who fought on the Prophet's side
in the battle of Hunayn. It is quite out of the
question that their father should be still alive at
that time or shortly before.

Abu Lahab is depicted as a large, corpulent,
ABU LAMÀB—ABU MADAYAN.

ABU LAMÀB—ABU MADAYAN.

Amongst which the study of the "Mussalman traditions" (Hadith) especially figured, one may think that the Maghr ibi was already under the domination of the Almohades.

Arab biographers describe Abu Madyan as conversant with diverse branches of Mussalman science, both religious and profane. In fact, from what we have just seen, Abu Madyan was residing at Fes at the moment of the growth in the West of Almohade doctrines and of the revival which they brought about in theological and judicial science. But it does not appear that the young Andalusian faith ever proclaimed his preference for the new theories. His taste led him to a softness towards mysticism; he was directed in this path by the shahih Abu Ya'qub, who brought him by fast and prayer and by the continual practice of the strictest asceticism to the title of perfect Sufi. Besides, Abu Madyan, who was very poor, had not much difficulty in detaching himself from the world and its ephemeral pleasures; he passed successively all the degrees of the mystical hierarchy and reached the rank of Kâbîl and of Ghâibî.

After remaining some years at Fes, the young Sufi went to Mecca, where, it is said, he met the great Musulman saint, Abu al-Kâbir al-Dîjî [q.v.]; he bound himself in friendship with him and under his direction completed his mystic studies.

On his return from the East Abu Madyan art himself to teach mysticism in the Maghribi. He settled in the town of Bougie, where he professed the severest asceticism; he soon acquired a reputation for sanctity and knowledge. People came from very far to consult him and to attend his lessons. Before his departure from Fes he had already performed miracles; he performed others during the course of his journey in the East and after his return to Bougie.

The mystic teaching that Abu Madyan professed at Bougie was in opposition to the opinions of the Almohade doctors of that town. The latter were disturbed at the constantly increasing reputation of this professor and of an ever growing number of his adepts; so it was resolved to get rid of him. The Almohade sovereign, Abu Yusuf Ya'qub el-Manghr, having been made aware of the situation, ordered the governor of Bougie to send the ascetic away to Marrakûsh, so that he might question him himself. Abu Madyan submitted with good grace to the injunction of the sovereign. After having said farewell to his pupils, he started for the capital of the Almohade empire, followed by a few companions. He died on the way some kilometres from Tiencen, on the bank of the river Isker, and, according to his last wish, was buried at Ribât al-Tubkâd close to Tiencen, where to-day his tomb is a point of pilgrimage for Mussalmans of all countries.

All the doctrines professed by Abu Madyan may be summed up in this verse, which, according to Yahya b. Khalid, he often repeated: "Sul, Allah! and abandon all that is matter, or is connected with it, if thou desirest to attain the true goal!"

It was by the strict application of this principle that he himself attained the highest degree of mystical perfection, that he reached complete abstraction of his intellectual being and his perfect identification with that God whom he thus defined with his last sigh "Allah al-Hâkî."
The works of Abu Madyan are rare, except for a few mystical, religious poems, one Wasāywa and one 'Aṣāwā (see the Arab. MSS. of the Bibli. Nat. at Paris, No. 1230, 10°; 1441; 4585, 9°; and those of the Bibl. Nat. at Algiers, No. 376, 9°; 895, 9°; and 1938, 9°.); 7—9; 1859, 4. 75.

The funeral of Abu Madyan took place in the midst of a great concourse of the inhabitants of Tlemcen, and was the occasion of a most imposing manifestation of respect and veneration for the saint. Since that time Abu Madyan has been the protector and patron saint of Tlemcen. The city has grown and developed under the benefits and influence of the great saint, and the town of al-Tubbādī, which has grown up around his tomb.

The mausoleum of Abu Madyan was built by the command of the Almohade sovereign, Muhammad al-Nâṣrī, shortly after the death of the saint. Since then many of the princes and kings who succeeded to the throne at Tlemcen wished to contribute to the embellishment of the sacred crypt. Splendid monuments, of which many remain in a state of good preservation (notably the Mosque of the Madrasa), were erected in honor of the saint by the side of his tomb by the Marinid kings, the masters of Tlemcen in the 14th century.

ABU’L-MAHĀSIN DIJĀL AL-DIYALA E. TACHIRBAZI E. ABU AL-LĀHĪ Aḥ-ṢAYF AL-DUWAINI, Arabian historian, born in Shawafl

813 (February 1411) at Cairo; his mother was a Turkish slave of the sultan Al-Malik al-Ẓāhir Barquq. His father died in 815 (1412) as governor of Halaib (Aleppo) and Damascus. In Cairo, Abu’l-Mahāsīn was a pupil of al-Maḥṣūṣī and other celebrated scholars of that time. In 863 (1458) he performed the pilgrimage to Mecca; he died in 874 (1469), or according to others in 870 (1465—1466). Of his still preserved seven historical works his History of Egypt from the Arab conquest to 857 (1453) is the most renowned. This work contains also some facts regarding the neighboring countries, and inscriptions of every year; its full copy was executed in the years 866—867 (1453—1458) under the title of al-Maḥṣūṣī al-ḥātib fi muḥāta Mīrīt wa-l-Ǧūḥra, edited by Iyyūnī and Mathīs, 4 vols. (Tājīr Barquq annals, 2 volumes, Leyden, 1855—1861; it goes only as far as the year 865 = 1467, the remainder is expected). His Manusul al-lahsā ṣī fi muḥāta ‘alā Jūḥra ‘alā bi‘l-ḥātkī (Ahlwardt, Kern, ed. arab. Hamburk, N° 4682; The Arab. MSS. in the Brit. Mus. N° 1244) and that of al-Safadī’s al-Wāfiyya, biographies, arranged in alphabetical order, of distinguished men from the year 650 (1252) till his time, under the title of Manāḥil al-lahsā wa-l-muḥātanat bi‘l-ṣāfī’ (the Vienna cat., N° 1174; the Paris cat., Nos. 2068—2073; Frisquet... al-bi‘l-ahātkī wa-l-ḥātkī), v. N° 162, deserve a closer examination. Besides his historical works he left a collection of mystical poems entitled al-Sukhr al-ḥāṭib wa-l-ṣā‘ī’ al-lahsā (Dernbourg, Cat. Essor, N° 367).

Bibliography: Wüstendorf, Die Geschichtsschreiber der Araber, N° 490; Brockelmann, Gesch. der arab. Litteratur, ii. 41. (Brockelmann.)

ABU MANSUR. [See AL-‘IZZ AL-LAH.]

ABU MAṢHR Dḥā‘r ah. Mughiriwī. m. ‘Omar al-Balā‘ī, one of the Arab astrologers most frequently cited in the Christian Middle Ages (under the name of Algimassar). He was a native of Bakhsh, in Khurasan, and a contemporary of al-Kindi. At first he devoted himself to the science of tradition, and only at the age of 47 he began to occupy himself with the study of astrology. Arab authors already charged him with plagiarism, which was successfully confirmed through the investigations of O. Loth (al-Kindi als Astrologe, in the Meersch. Forschungen. Festschrift für Prof. Dr. Fetscher, Leipzig, 1879, pp. 370 et seq.). He spent the greatest part of his life in Bagdad, and died in Wust, the 28th Ramadan 727 (8th March 856), said to have been over 100 years old. — Of his pretty numerous writings the following principal works are extant in manuscript: a. Kitāb al-muṣūl muḥāta ‘alā Jūḥra, i.e. Kitāb al-muṣūl muḥāta ‘alā Jūḥra, i.e. Kitāb al-muṣūl muḥāta ‘alā Jūḥra (introduction, i.e. two introductions), in Oxford, Leyden, Constantinople (Hamdī); translated into Latin by Joh. Hispalesius and Hermannus Seuendus (of Dunbarton); the latter translation was printed in Augsburg, 1489, under the title of In-
ABU MA'SHAR — ABU MIHDIJAN.

ABU MIHDIJAN "ABU ALLAH (or MA'RIK or 'AMIR) a. 'ANSAH (Husayn), of the 'Amash tribe, an Arab poet, one of the Mu'addimun. As a pupil he fought with the 'Amash, and was one of the defenders of 'Al'lah when besieged by the latter (8 = 630). At that time he hit with an arrow 'Abd Allah, one of 'Abd Bahr's sons, of which wound he died in the year 12 (632-633). It seems that he had set himself also against Makkah a. 'Awt al-Nafqi, who, as leader of the Thumamah, Salama and Fahan, placed by Muhammed under his command, pressed hard the Thukitdates. At least his fragm. 22 (of Abú Mihdíjíns edition) alludes to it. Shortly afterwards Abú Mihdíjí came with the men of his tribe over to Sulam (9 = 630-631). Under 'Umar I he was in the lines of the Muslim command conquest troops, and as such he took part in the battle of Kádiyád. Not long before that he is said to have been, at 'Umar's command, banished to Hafjawa (comp. Goldschm. Abb. sur Arab. Philologie, 1), because he indulged in the forbidden enjoyment of wine — according to another version, because he was not Sijam, the wife of one of the Arabs of Kádiyá (fragm. 16). But when he had to embark in the boat, which was ready to depart, he succeeded in deceiving his guards and thus escaped (fragms. 10 and 18). He betook himself to Sa'd b. Abú Waqás, who, near Kádiyád, held the field against the Persians. Having been informed of his flight, 'Umar had him seized again through his general. But it is more probable that Abú Mihdíjí belonged to the insolent and resistent Khātám b. Urjaf, whom the commander-in-chief Sa'd, having fallen sick, had appointed as his substitute. So it came about that in the beginning of the battle of Kádiyád (14 = 635) he was kept under lock and key (fragms. 11 and 20). Sa'd's wife, Salmá bint Abú Hāfīj, who was in discord with her husband, set him free on his promise to return after the battle. Thus Abú Mihdíjí could take part in the action, the resemblance of which is eloquent. The story of his heroic feat, namely that he in this battle rendered harmless a Persian war elephant, which was attacked by Abú 'Ubayd b. Mu'addib at the risk of the latter's life, is often narrated and also mentioned by Abú Mihdíjí himself in his verses (fragm. 17). He must also have fought in the battle of Vologesias (Ullas), whither Muhammed retired after the defeat of the bridge (fragm. 17, verse 12).

As Abú Mihdíjí was, in spite of the Kor'ān and the frequent corporal punishment, addicted to wine, he was never in favor with the rigorous 'Umar. In the year 16 (637) he is said to have been banished to Násí just for this delict. People assert to have seen his tomb at the frontiers of Al-Hurayb against Archimedes and Archimedes; still the tables in connection with this statement deduced from fragm. 12 throw much doubt on it.

A son of Abú Mihdíjí is mentioned in the time of Mu'awiyah's reign. Of his family the mother Kanāt bint 'Abd Allah b. Abú Sleem and his uncle Sultan b. Ghabīlān are also mentioned (fragm. 12).

The preserved fragments of Abú Mihdíjí's verses reflect with sufficient accuracy his life, or rather the little of it that we know. As a poet he is just as rarely original as many others —
much more extolled — of his colleagues. The fragments of love songs 18 (on a jewess in Hilla) and 16 do not say much, and the boastful song 15 (with love companions) and 11 (partly) are in the same strain. Fragment 2 most describes a battle, in which Abu Midjan took part. No. 9 seems to be a fragment of an elegy (wa'ïâyât) in which the dhihân (the Persian land-owners) in Khurasan were only through him converted to Islam (so according to Ibn Abi Tâhir Taâfarî, MS. Brit. Mus., add. 4743, p. 66); the two lines added by V. Rosen, in the Zâbiî manuscript, add. incipit, russk. arkhiv, ulia, l. 325, is to be added in Brockelmann, Gesch. d. arab. Liter., l. 138). In the summer of 120 (747) the insurrection was openly declared; but Muhammad succeeded in uniting under his flag all the enemies of the dynasty, among whom were also the Yemenites (after the attainment of success the leaders of this party were put aside). In the following winter he victoriously entered Mecca and annexed it to the Muslim empire. The battles in the West till the final overthrow of the Umayyads were fought without his participation. He remained governor of Khorasan till 137 (754-755), in which year he was buried in the Jârî by Caliph al-Mansûr, and there he was in Shâbîn (Jan.-Feb. 755) treacherously murdered.

Abâ Muhammad deserved to be praised as much on account of the interior organization of his province as on account of the security of its frontiers. In Mecca and Nishâspur he erected mosques; further the building of many other edifices in Mecca and Samarqand (among which the large wall around the latter city and its environs) is attributed to him. The battles in Transoxania against the exterior enemies were conducted not by himself but by his subalterns Sîrîb b. al-No'mân al-Arîf and Ziyâd b. Shîh al-Khâliq; it was of great importance, especially the victory of the latter over a Chinese army at the Talas (in Dhu'l-Hijjâd 133 = July 754), through which the political domination of Islam was consolidated in Central Asia (both generals later, stimulated by the Abbasid, revolted against Abâ Muhammad and were removed by him). In his religious propaganda Abâ Muhammad seems to have amalgamated the doctrines of Islam with the ancient popular belief, particularly with that of the agnostics, and to have preferred to be an incarnation of the divinity; his pugil Hâshîm al-Mâdhâbak represents him as the last incarnation of the divinity before himself (Nâshkhâl, Ta'zirâb Buhârî, ed. Schefer, pp. 64-65); also later sects, especially the Bâzîtîs (Jânîlîtes), traced their doctrine back to Abâ Muhammad. He must have been greatly beloved by the Persians, as it is shown by the numerous romances on his life; still a remnant in the spirit of the old religious property in contradiction to the official Mahaldian (the sect of the Behîšfîds), was preserved by him with the same bloody severity as the uprising of the Arab Shîites in Dhu'bâh. Abâ al-Mu'min shrunk from employing no means either against the adversaries of the Abbasid or against his personal enemies and rivals, and removed all that was in his way either by force or by artifice. It is difficult to judge of his ambition extended and how much the fears of the Abbasid were justified; the challenging letter addressed to him (Dossy, Essai sur l'Épistolière, 38).
trans., of V. Chavrin, p. 240) is hardly authentic.

The Turkish novel Abū Muslim is extant in manuscript in Vienna; comp. V. Chavrin, Bibliothèque des orientistes arabes, ill. 123. A printed adaptation from Firdawsi was printed in Constantinople, 1500 (1888).

Bibliography: Besides Tahāri (particularly ii. 1949 et seq., 1960 et seq.) and Nasrallah, Ta'rifāt al-Bahārā (ed. Schefer), pp. 75, 8, 64, Gardīzī, Zā'im al-šarā'īf is to be specially consulted. As to the religious position of Abū Muslim and his attitude towards other sects, comp. besides Shahristāni (Haarbrücker, i. 479, 493; ii. 405) also the chapters on the Rāfi'īs in Nisām al-Mulk, Siyāṣat nīnā (ed. Schefer), pp. 182, 199, 204; Mas'ūdī, Muḥāt (Paris), vi. 186; G. van Vloten, Richelieu sur la domination arabe etc. (Amsterdam, 1894 = Verhandelingen der koninklijke akademie van wetenschappen te Amsterdam, afdeeling letterkunde, l. No. 3); and Ommayyad of al-Abbāsid (Leyden, 1890); both works are frequently quoted by Weltzellen, Das arab. Reich und sein Sturm (W. Barkemühl).

ABU NASIR. [See al-Faráhī, Farrāhī.]

ABU NU'AIM AHMED b. 'ABD ALLAH b. AHMED b. ISHĀQ AL-ISPAHĀNI, author of an Arabic History of Saints: 'Ahdītī and traditionalist, born in Rājab 330 (January 945), and died at Isfahān, in Muharram 430 (October 1040). His extensive History of Saints (Hisnāt al-ānishāt wa-salāḥāt al-ṣālihāt) became widely spread through the extract in five volumes made by Ibn al-Hajjāj under the title of Siṣīf al-ṣafqān, which in its turn was again revised several times. Besides some writings on tradition, his Ta'rifāt Isfahānī (Catalog. cod. et. bibl. uc. Librario Etoniano, ad ed. i. 190 et seq.), a history of the scholars of Isfahān, is to be mentioned.

ABU NUMAIY MUHAMMAD I (652—701 = 1254—1301). Sheriff of Mecca, second successor to his great-grandfather Karāta, the founder of the Sheriff family which rules to the present day and ancestor of all later Sheriffs. He possessed the requisite energy to maintain his ascendancy in the ever-coding turmoil of public life in Mecca, and it was of great advantage to his position that the powerful sultan Bābur of Egypt exercised undisputed sway over the sacred city. In his day the custom of sending every year a Mawṣūla from Egypt on the occasion of the pilgrimage to Mecca is said to have begun.

Bibliography: Snouck Hurgonroe, Mecca, i. 80-84. (Snouck Hurgonroe.)

ABU NUMAIY MUHAMMAD II, Sheriff of Mecca, 931—974 (1526—1560), and nominally so until his death in 982 (584), although in these last 18 years his son Hasan really ruled. The general fear of the Ottomans, who subjugated Arabia from 1516 onwards, enabled those two Sheriffs to extend their territory more than was ever done before or subsequently. In his time there was added to the Mawṣūla sent annually with the pilgrims from Syria and Egypt a new one from Yemen. But all these had become merel symbols of the Turkish power. All subsequent Sheriffs who ruled in Mecca are descended from Abū Numayī.

ABU NUWĀS AL-HAJJAR b. HĀDI b. HAJJAR, one of the greatest Arabic poets. He was born in al-Ahwāz in the year 130 (747), or according to others, in 145 (764)—his mother Ḥejīlān was a wool washerwoman—and he felt himself more a Persian than an Arab. He spent his youth in Basra and khūfa, where he was a pupil of the philologists Abū Zaid and Abū 'Ubayda and the poetical compiler Khālīf al-Allām. The poet Wālīb b. Ħabīb al-Aswad, with whom Abū Nuwās kept up an ignoble intercourse (a pedantic obscenity of the former: Ibn Riṣālī, 'Umda, p. 435; an alternating poem between him and Abū Nuwās: Dīwān, ed. Apel, pp. 24—39), seems to have had a great but unfavorable influence on his moral development. He is said to have completed his linguistic cultivation by growing one year in the desert. Having grown up to manhood, Abū Nuwās settled in Baghdad, where he enjoyed the favor of Hārūn and al-Maymūn. Under al-Ma'mūn, however, he fell into disgrace, and the caliph, it is said, interdicted him to compose wine songs (Zahr al-ma'āddāt, ii. 12—13). Beside wine-Persian poetry played the main part in his life. In his old age he renounced worldly enjoyment and placed his art at the service of asceticism. His ethics, which, however, he continued to compose, are said to have taught cost him his life. The Rūm Nawāštī, a prominent family, had him out of vengeance for a satire so satirized that he died in consequence thereof. With regard to the year of his death, the statements fluctuate between 190 (806), 195 (810), 196 (811), 198 (813) and 199 (814).

In the center of his poetic activity were his wine songs, in which he simulated as prototypes Wālīb b. Yāṣīd and therefore indirectly Abī d. Zaid. His special model, however, was his contemporary Husain b. al-Dāhīb al-Raḥīlī (q. v.), whose spiritual property cannot, to be sure, easily be separated from his in a well-defined manner. Abū Nuwās himself is said to have, on the same grounds as once al-Farákhīd, appropriated to himself a verse of Ibn Mayyād (Zahr al-ma'āddāt, ii. 10), and later street-singers were too much inclined to ascribe to Abū Nuwās every song on wine and boys (Dīwān, MS. Vienna, f. 162), by Mee to Abūulhasīn, q. xxviii). Of less poetic worth are the laudatory lines, in which the artisan-like fashion makes itself to be felt strongly, while in the elegies a profound feeling and a touchingly plaintive coloring make us excuse certain defects, namely the artificial language and oriental exaggeration. The love-songs contain as much of the tender and genuinely poetical as of the cynical and mean-spirited. The satires are firm, sometimes rough, keenly witty, but often mean; the latter may be said of his jokes and drolleries (ma'āddāt), while his conscious verses (arza's) show again a more serious bearing (A. von Krenner, Culturesch. der Orient, unter den Chalifen, ii. 371). Besides the already mentioned ascetic poems (al-shahāyīt) there must be mentioned the venery ones, which at first sight appear to us absurd, but in which, even without taking into consideration the frequent descriptions of the desert
ABU NUWAS – ABU SA'ID.

beasts in the old šajjāra; he had still unknown predecessors. The apocalyptical prophesies, which he composed together with al-Ražīq, the pune-
gyrist of the Barmakides (Al-Shārīqī, xxv. 35), in the style of 'Abd al-Lātīf, under the name of Abu Ṭayn al-Ḥābi'b, a typical blockhead, and which later passed as being of the latter's
composition (al-Dīwān, Fayās, ii. 7 et seq.), have not been incorporated into the Dīwān. Editions of the
latter have been prepared amongst others by al-
Ṣāliḥ (d. 335 = 946), in 10 chapters, and by Ḥamn al-
Hādī al-Muṣṭafā in al-Fuṣūḥ al-adhā (168). All
al-Ḥābi'b Ḥamn al-Ṭabāhānī, probably through con-
fusion with the editor of the Dīwān of Abu Ṭayn
al-Ḥābi'b and al-Buḫtānī); the latter edition is more
extensive, but more uncritical, and al-Maḥmūd b.
Yāmūt b. Muzzarrīd (about 332 = 943, he was
also still alive) wrote against it an epistle on the
Sūratul-Nāfi'āt (Derenburg, Cat. Esкур. ii.

Bibliography: ʿAbī Ǧīhāl, a legendary person, whose
alleged tomb in al-Muḫqanās, by the frontier of the
dsar distr. of Mecca, is still now lapi-
dated by pious Mussulmans during the pilgrims' festival, because legend makes him the ill-famed
man, who led Abūn (q.v.), into the sacred ter-
ritory, but who died in the above-mentioned place.
According to one tradition, he was born at Taif and
proponent of the Thakafītes, and was put to
death by the Caliph on account of his cruelty; accordin
g to another tradition he was a tax-gatherer
sent by the Prophet (q.v.), and was killed by the
Thakafītes on account of his bad behavior.

ʿABU SA'ID (q.v.)

M. Muḥāfiz b. Ḥaḏrānī, a. `Abū Ǧīhāl, a visier. Abū Sa'īd was appointed visier by the Jūdībūmi emir ʿAjlūlāl al-
Dawla. Abū Ṭabāh b. Ḥaḏrānī al-Dawla shortly after the latter's entry into Baghdad in Ramadān 418
(October 1027), but was soon deprived of his office. Nevertheless he shortly afterwards was reinstated in this office and in the years following the same proceeding was repeated so often that Abū Sa'īd is said to have occupied the visierate no less than six times under the emirate of the weak and little esteemed ʿAjlūlāl al-Dawla. Abū Sa'īd died in the
year 459 (1064).

Bibliography: Ibn al-ʿAdī (ed. Tunb.)

Ά. 260 et seq.; Ibn Khaṭṭāb, TV., 2790 et seq. (K. V. Zettersten).

ʿABU SA'ID DAWDAT b. ʿAIWĀN, the founder of the dynasty of the Sāliḥītes, and a Türk̲h̲, in general, a native of Oṣūrūn, in the
service of the caliph al-Muʿtaṣim, was invested by this prince with the Mecan road, that is to say, with the places situated thereon, in 344 (958); Ibn al-ʿAdī, 245 (853); Ibn Khaṭṭāb, 247 (856–857). There he fought against the ʿAlīds Mu-
ḥammad b. ʿAfaq, who had just taken the place of his brother ʿAbd al-Muʾtāb at Mecca (851 = 865). He returned to Baghdad in 252 (866), was entrusted with the receipt of the taxes in the region of the Ṣaftās, and succeeded by a race in seizing upon the ʿAṣira Abū ʿAlī, Muḥammad b. ʿAbtān, who had revolted there. He was afterwards success-
ively governor of Aleppo (852 = 888), then of ʿAlīb, he was obliged, in the latter position, to fight the Šanṭā, was beaten and saw his capital pillaged. At the time of Muḥammad b. Lāthī, the Saftās' campaign against Muwaffāq (264 = 870), he joined the former and shared his defeat. It had been recalled to Baghdad, be-
headed at Ḫubait al-Dawlat on 246 (879–880). – His
grandson Dīwādat, son of Muḥammad ʿAlī, was governor of Tūf in Armenia, a town which had been compared by his father. Having been
chosen by the army to succeed the latter, he was defeated by his uncle ʿAfaq and took refuge in

Ibn al-ʿAdī (ed. Tunb.), v. 354; Well, Gesch. d. Chalifen, i. 497. (C. Huart.)

ʿABUṢAFYĀN is considered in popular legend as a pre-Islamic king of al-Baṣra in the
Dubel al-Ziyā, north of Apanus, and west of Mu ṣārat al-No'man. The ruins of al-Baṣra are
still now the most important in the whole sur-
roundings. The city flourished in the fifth, sixth
and seventh centuries of the Christian era; the
Syrians called it Kafr de-Baṣra. It still con-
dined to flourish under the domination of al-
Islam, at that time a Jewish colony existed there, it was the object of contests in the time of the
crusades. It was probably during that time that
Muḥammadian fortress was built to the north of the
city, called to-day Kāfr said Saṭfī. – Popular
legend, however, pretends that this fortress was
built before al-Islam, and ruled by a Jewish
king called Ṣafī, Legend tells us that
ʿAbdu al-Rahmān b. Abī Bektā had a love
with ʿAbū Ṣafīn's daughter, Luhāsī, and that
he was there in the citadel when his father
summoned him to embrace Islam. ʿAbdu al-
Rahmān b. Luhāsī was both converted to Islam and
died. ʿAbū Ṣafīn pursued them, and it came to
a fight. The champions of Islam, especially ʿOmar and ʿAbd al-
Rahmān b. al-Walīd, called to help by the
angel Gabriel, appeared on the battle-ground, Abū
Ṣafīn was killed by ʿOmar, and the whole land fell into the power of the Mussulmans.

tions, pp. 191 et seq.
30th Ramadan 516 (16th Dec. 1216), his solemn accounce to the throne did not take place before Şefar 717 (April-May 1217). He had already in 1333 been appointed governor of Khorasan though of course under a guardian. During the first ten years of his reign, till 1237, the kingdom was powerfully, and prudently governed by the mighty vizier, Cohan. The long war with Egypt was brought to an end by a treaty in 1233; the invaders from South Russia and Central Asia were repulsed and avenged by victorious advances in both directions, viz. in 1235 through the gate of Derbend to the Terek and in 1236 to Ghaneh. In Asia Minor, which was governed by Cohan’s son Tahir Shah, the strength of the Mongols against the Greeks and the Turks was again established and the welfare of the population raised. The Shī‘ite dogma which Ukhayr had elevated to a State religion was abandoned and the coinage again bore the names of the four orthodox caliphs. The finances of the kingdom are said to have been entirely ruined after the execution of the vizier Kachil al-Din (718 = 1318) [q.v.] under his unmeditated successor, ‘Ali Shah; only after Cohan’s fall were they put into order by the new vizier, Ukhayr al-Din, the son of the executed Kachil al-Din. The fall of Cohan and of his sons stirred up the Mongolian armies in the whole kingdom, from Asia Minor to Khorasan; after many hard-fought battles the insurrection was everywhere suppressed, but after the death of the sovereign, which took place shortly afterwards (13th Rabii II 736 = 30th Nov. 1335), the kingdom could no longer be kept together. Abu Sa‘id had left no heirs, the dynasties was represented only by descendants of parallel lines which could not obtain general recognition.

ABU SA‘ID FA‘UJ AL-‘AZIM, Abi ‘l-KHAITEF, Persian poet, born on the 1st Muharram 357 (7th Dec. 967) at Mahana (Mihana), the chief town of the district of Khaward in Khorasan; died there the 4th of Sha‘ban 440 (12th Jan. 1049). His biography was written by one of his descendants, M. Z. M. Alavi (d. 1158 = 1550). The valuable and interesting work, entitled ‘A‘ubr al-tawbii fi ma‘ahid al-shahid Abu Sa‘id, edited by V. Zhukovsky (St. Petersburg, 1890), forms the basis of the articles devoted to Abu Sa‘id by Farokh al-Din Amir in the Ta’khiert al-tawbii and by Djamal al-Naqshaband al-Murshidi. Abu Sa‘id, whose father was a druggist by profession, received his early education in his native town. After finishing his grammatical studies, he proceeded to Merw in order to read jurisprudence with Abu‘l-Abbas Allah al-Hujjat, a Shī‘ite doctor; and on the latter’s death he betook himself to Abu Bekr Kafri. We are told that, having passed ten years in Merw, he then set out for Samarkand, where he pursued the study of theology under Abu‘l-Abbas Ahmad. Here he was initiated by a crazy dervish, called ‘Abd al-Majid al-Maghani, to the famous Shī‘ite ‘A‘ubr al-Fadl b. Haan, a pupil of Abu Nasr al-Sarraj, who traced his spiritual descent to ‘Abd al-Malik b. Abi ‘l-Hajjaj, and whose works the mystic priest Jami‘ al-‘Arab, who died in Baghdad (d. 707 = 1122). Abu Sa‘id eagerly embraced the doctrines of Shī‘ism, acknowledged Abu‘l-Fadl as his Pir, and obeying his command went back to Mahana, where he spent seven years in complete seclusion. He then returned to Abu‘l-Fadl, who bade him go to Abi‘l-Abbas al-Sulaiman al-Nishapuri (d. 1031 = 1216) and receive the Khvārezm (derwiskh frölyck) at his hands. After the ceremony of investiture he once more returned to Mahana and renewed his studies. Disciple now began to gather round him, and much was the veneration in which he inspired that his neighbors creed to drink wine, and a melon-skim which he let fall by chance was sold for a sum of twenty dinars. At this time, according to his biographer, he left his home and during the next seven years wandered in the desert, eating no food except leaves and herbs. When Abu‘l-Fadl died, Abu Sa‘id went to Amul to visit Shams Abu‘l-Abbas Khashali, who treated him with the utmost respect and clothed him with his own ‘Abbâz. Shortly afterwards he set out for Nishapuri. There he spoke daily in public and gained hosts of friends, but his practices gave great offence to the different theological parties — Karaites, ‘Abdis al-Ra‘yy, and Shī‘ites, who joined in addressing a letter of complaint to Sultan ‘Alauddin of Ghaneh. They alleged that in the course of his public speeches the shahid, instead of confounding himself to exegesis of the Korâin and the Traditions of the Prophet, frequently recited poetry; that he was always giving luxurious feasts; and that he and his disciples indulged in singing and dancing. ‘Alauddin replied that the leading divines of Nishapuri must investigate the matter and, if necessary, inflict the legal penalty. The shahid, however, exercised his miraculous powers so effectually that his enemies withdrew their opposition, and thenceforth no one in Nishapuri dared to say a word against the Shī‘is. Many stories are told concerning the relations which existed between Abu‘l Sa‘id and ‘Abd al-Karim al-Chuchani (d. 485 = 1092), author of the well-known Riwal on Shī‘ism. Khayyam, at first regarded the new-comer with suspicion and dislike, but was finally reconciled to him and became his intimate friend — a result which does not appear to be very probable. At Nishapuri Abu‘l Sa‘id also met the famous Ibn Sinâ (Avicenna), who is said to have afterwards remarked, ‘All that I know, I see.’ A Persian quadrain written by Abu Sa‘id in conversation to one by Avicenna has come down to us (Khânum, in Shahr-ud, Afghân, and b. b. Qâq, Julkhan, Class, 1878, pp. 32 et seq.). After staying a year in Nishapuri, Abu‘l Sa‘id returned to his native town, where he ended his long life at the age of 85.

Abu Sa‘id is an important figure in the history of Shī‘ism. He represents the extreme pantheistic ideas which were introduced by Bābâzâd of Bistâm (d. 626 = 1224) and which characterize the Persian Sufis in general. It is perhaps superfluous to add that he held Islam in as well as every kind of positive religion in contempt. His original thinking manifests itself in the new and striking form which he gave to these ideas. He is the founder of Sufi poetry. Although he wrote only rasâîl in them, we find almost the first examples in verse of that symbolical style and fanciful imagery which the great poets of Persian Sufism, Farid al-Din Attar and Hâfiz al-Din Rumi, have made familiar. It was he, moreover, that first imposed the Persian râz ‘the mystical stamp which it has retained ever since, and which has passed into European
literature through Fitzgerald's version of Omar Khayyam's Rubaiyat, the poet himself, who is really the author of all the quatrains ascribed to him, in view of the statement that most of the poetry which he recited in public was composed by one of his teachers, Abd-Al-Kasim Bihz Yusr (see Hali u-ma'akalat-i Sheikh Abd Al-Saad, ed. by Zhukowski, St. Petersburg, 1899, p. 54). Ninety-two ruba'ats have been published by Ethe with a German verse-translation in the Sitzungber. d. kön. bayer. Akad. philol.-philosch. Classe, 1875, pp. 145–168; and 1876; pp. 23–45 (Nicholson).

Abu Sa'id al-Karmat'i. [See al-Dinm-
SNARIH.]

Abu Sa'id Sultan Mirza M. Muhammad b. Miran-Shah b. Tumur Bux, Mongol raja, born in 830 (1427) and put to death in 873 (1469).

His father when dying confided to Mirza Ulugh Beg Shih-rukh, who had come to visit him, and the boy grew up under the eye of the astrono-

mical astronomers of his father. He learned by memory, and his great mother, and was taught the art of astronomy.

He carried his early lessons into practice later on, for he not only became a great ruler, the most powerful of his day, but showed such character as led Abu'l-fazl Ali Amal to mention that in his prosperity he remained discreet and open-minded, and that he was submissive to the teaching of pious persons. It is on record that he was a handsome man and a fine horseman, and he was trained to the ladies from a Moghul by having a full beard. That he was tactful and resourceful is shown by the mo-
thods he used in supplement to his military force both for the capture of Samarkand in 853 (1451) and in dealing with the Cagatai khans.

If we may believe 'Abd al-Rasul al-Samarkand, the chief historian on this subject, Abu Sa'id, whilst yet sojourning at the court of Ulugh Beg, meditated the seizing of the sultanate for himself. In the year 853 (1449) at the age of 29 he made an attempt, poisoning by the way between Ulugh Beg and his son 'Abd al-Latif, to capture Samarkand from the hands of 'Abd al-Aziz, another son of Ulugh Beg, with the aid of the Turcoman tribe of Argish, but was forced to retreat as 'Abd al-

A'ziz called his father to his aid. In the following year (854) 'Abd al-Latif, after having slain his father, was murdered himself at Samarkand, and Abu Sa'id was proclaimed sultan at Bukhara. Being defeated by his adversary 'Abd Allah, he was compelled to flee to the north, occupied Yidz (the present Turkistan), where he was besieged without success by 'Abd Allah. In 855 (1451) he succeeded, with the aid of Abu Khimri [q.v.], son of the khan, in conquering Tashkent. Later (861), and definitively in 863) he conquered the province of Khurasan and made Herat his capital. — W. Bartholomew.

In the year 855, when Haidar Mirza Dughlat describes him as 'ayyub of Transoxiana (where al-nahiyah), he met with strong opposition from Isha Bogha Khan Cagatay Moghul, which was renewed after a dispersion of the khan's army and led to an important historical event. For Abu Sa'id was bent on acting against 'Itrakh and was restrained by the attacks of Isha Bogha Khan and brought himself of a means of wounding them from himself. In Shirez dwelt, in obscurity and in the shadow of the rulers he loved, Yissan, the elder brother of Isha Bogha. Hei Abu Sa'id sent

for, and with him made a compact that must have had a serious effect on the history of Transoxiana. Yissan then asked of Abu Sa'id the Moghul Khan and gave in pledge, the headship of the Moghul Khan to Yissan Khan as a vessel of Abu Sa'id. The whole episode is told with life and vigour by Haidar Mirza Dughlat. From this time friendship and intimacy existed between the two men and their bond was strengthened later on by the marriage of three sons of the mirza to three daughters of the khan. Now Abu Sa'id set forth Yissan Khan, with money and other aids in order to congratulate his brother and distract him from himself.

From the beginning made in 855 by the capture of Samarkand, Abu Sa'id widened his dominions till they stretched over Transoxiana, Khurasan, Badakhshan, Khabul, Kandahar and the borders of Hindistain and Irak. In the early growth of his power, he overcame his cousins of the Shih-rukh house; later his assistant was another Timurid Sultan Hasan, Mirza Bughra. His death was brought about by intervention in the feud of the Turcomans.

In 871 (1466–1467) Djalala-ghan the head of the Black Sheep Turkomans was killed in battle with Sultun Hasan of the White Sheep, and his son sought Abu Sa'id's aid to avenge him. In 872 Abu Sa'id marched out and made for Karakhus, the usual summer quarters of Sultun Khan. On his way, he received repeated petitions for peace, which he disregarded; these all went on till he was in lands so well known to Sultun Khan that his supplies could easily be cut off. Abu Sa'id's army was reduced to a state of famine; his men deserted to save themselves; he had but a few followers and was taken prisoner by the sons of Sultun Khan and conveyed to the Turkoman camp. Sultun Khan himself would willingly have spared the captive's life, but some of his officers opposed this.

Three reasons are mentioned as leading to his execution; first, desire to remove him from the path of Ydghar; second, desire in his own interest to have a successor who would dispute with him; third, he desired peace to be made with his father, and he regarded the plan for peace of Sultun Khan, a co-religionist and as this was against the Law. Consequently he was made over to the boy Ydghar, then about 16, on the 29th Rajab 873 (4th Feb. 1469) and three days later, at the age of 43, he was put to death.

The 'Abbas name contains many references to Abi Sa'id, naming several of his emirs, his learned men and his exploits. It contains too a tradition that he expelled MIR ALI SHIR SAWAYA from Herat. It describes certain pictures which Abi Sa'id had painted in a palace in Herat built by Jabbar Mirza Kalandar, which commemorate his own warlike exploits. Here in 912 (1506) Bihar himself was entertained by one of Abu Sa'id's widows, Khudaija Aga. On one episode of his reign most historians dwell, namely, the magnificent festivities that marked the ceremony of the circumcision of his son, Abu Sa'id. In the absence of a sense of achievement, in energy and mental capacity, was a worthy forbear of the distinguished men
who carried on his line, Bahrā, Abū, Ḡabār, Abū- Ḥabār, Shāh-Ḥabār.

Three marriages, with women of high rank in the
recorded. His first, and most respected wife was a daughter of Uthmān Būḥa Ta’khūn, who
belonged to the most ancient order of local nobility. Several members of her family were
mentioned by Bābur as being even royal style, and
they played a great and ruling part in the early
history of his time. This marriage issue in
Almād and Muḥammad. Mīrāz. A second wife was
a daughter of Shāh Sūlān Muḥammad Bābhāk, the
refined and cultured king, who, claiming descent
from the Prophet, was commended by
Ḥaḍīr Mīrāz Dīgāltā and Khondemr as the
father of six daughters whose marriages these
writers record. A third daughter of his,
early protector, Mīrāz Ulugh Beg. A wife of lower
rank and the mother of one of his
harās, who subsequently was
married by Sultan Husain Bāy-šārān and by him
promoted to the rank of Begam. She was whose
prionuences played a ruinous part amongst his sons.
Abū’l-Farrā’ Aḥmād, the last of whose name has
risen to importance, Almād, Muḥammad, Šaṭir, Shāh-Ḥabār, the
father of the later emperor Bāhrā, and Ulugh
Beg. Kābuli. He had at least nine daughters;
seven were named by Gūl-bādān Begam and three others
by Bāhir whom they visited in Hindūstān. The
denotement shown to them in act and word by
these two of the younger generation casts relief
light on the high esteem in which their
father was held by his descendants.

Litter., p. 357. (Brockelmann.)

ABU' s-HAWK. [See ZA'H H U M M A M E R.]

ABU'l-ṢHIṢ MUḤAMMAD b. RAJZI, Arabic poet. He was a disciple of the Kitâb al-ḥikâm, the uncle, but according to the Kitâb al-sakkakât of Ibn Kotalshî (who consequently makes Rajzî to have been the poet's grandfather), the cousin of the poet Dâhil. Like the latter he lived at the Court of Harûr al-Râshîd. Agâmîn (v. 36) relates an adventure that Abu'l-Ṣhiṣ had with a female slave of the caliph. Disappointed with the appreciation and above all probably with the reward he obtained in Baghdad, he went to al-Ḵâfiṣa, where, according to his own statement, he won through a litany poem the favor of the emir of that place, ʿUkba b. Ḫaṭîrî b. al-Ḥâfiz. There he remained as the boon companion and court poet of his patron until his death (196 = 811). The fragments of his poetry, which the above-mentioned two compilations contain, however scanty they may be, induce us nevertheless to declare that Abu'l-Ṣhiṣ could claim no original importance for his wine and venery songs, which, as it seems, were his favorite kind of poetry. Better than the elegies of that old age, composed by the poet, who had become blind, towards the end of his life, because they come from an immediate impulse. The touch of self-irony that appears now and then in his verses shows that he was by nature rather more fitted for comic composition; comp. Ibn Kotalshî, loc. cit., p. 536 (ma farrâfah etc.). To ridicule the imitators of the desert poets — he proposes to substitute the "camel of separation" for the "ravens of separation" — he had certainly not much right either. Bibliography: Tabâhû, iii, 763; Ibn al-Ḳâhir (ed. Torn., vi, 135; Agâmîn, sv. 108 et seq.; Ibn Kotalshî, Kitâb al-ṭîfî (ed. de Goeje), pp. 535 et seq.; Ibn Ḥallâshîn (trans. al-Sane), iv, 232, note 22; 359; note 4; al-Kutubî, Futûhî, II, 281-283; Brockelmann, Gesch. d. arab. Litter., l. 83. (A. Schade.)

ABU SHUḌÎA AYYÇÎ: AYYÇÎ b. AL-ḤUṢAYN (Husain) b. AYYYEṬ b. AL-ḤUṢAYN, Shâṭîfît jurist consulant, born in 1434 (1042-1043), was the author of a much used manual of jurisprudence: al-Thâbât 'al-ṣâ'yârî, edited by Keyser (Leiden, 1859), and

ABU SUFYÂN (or Abu Hanîfâ) SâJîR b. HÂRÎ b. UMAYYA, of the Kûsaîîhite family of 'Abd Manûr, a leader of the aristocratic party in Mecca hostile to Muhammad. According to the usual statement regarding his death (see below), he was a few years older than Muhammad, according to others, however, he was ten years older. Abû Sufyân was a rich and respected merchant, who repeatedly led the great Meccan caravan. Like most of the great merchants he took up a hostile attitude to the movement brought about by Muhammad, which touched him personally so far that his daughter Umm Maktaîb had married a follower of the Prophet's and emigrated with him to Abyssinia. He was already too old for this adventure, he brought about the fateful battle at Bedr; the army, which had hasted up at his cry of distress, would not return without striking a blow, although he ordered it to do so once he had got his caravan in safety. His eldest son Ḥanîf fell in the fight; another son 'Amar was taken prisoner but exchanged subsequently for one of Muhammad's followers, who, as a pilgrim had fallen into the hands of Abû Sufyân's last son. After the battle of Bedr, he took over the command of the Meccans. It is not at all clear as to the facts concerning his oath of vengeance after the defeat and the miraculous campaign he undertook to fulfill his vow (the Sawîk campaign). The battle of Ohod afforded great satisfaction both to himself and to the Meccans, but he did not know how to make use of the victory, and neglected the opportunity to crush Muhammad and his followers with the force he had collected. Equally obscure is the tale of the meeting arranged after the battle of Ohod for the following year at Bedr and of his non-appearance at the rendezvous. Whether Muhammad really, as Ibn Ḥîṣâm relates, sent assassins to Mecca to kill Abû Suf-
After the murder of Khadija and of Zaid, it is very doubtful if the year 5 (627) during the campaign of the Monastery, he led one part of the army that advanced against Medina; as however after some time he saw the hopelessness of the siege, he ordered his troops to march back and soon the whole army melted away; Abu Sufyan had always unwillingly taken part in military enterprises, but after this fiasco he completely abandoned the idea of continuing the fight with his sturdy and obdurate enemy. During Muhammad's campaign which was concluded by the treaty of Hudaybiyya, he kept entirely aloof from the ground. For military duty was still a power in Mecca. When the treaty was broken by the quarrel between Bekr and Khuzayma, he feared the consequences for his town and proceeded to Medina to arrange the matter. According to Ibn Hisham and others, he is said to have been very badly treated by his daughter Umm Habiba, who had married Muhammad in the meanwhile, as well as by Muhammad himself. In reality, however, the Prophet, to whom an undertaking consisting of an oath had been very valuable, doubtless received him in a quite other manner and discussed the surrender of Mecca with him. In harmony with this Muhammad at the beginning of the campaign against Mecca proclaimed that anybody who took refuge in Abu Sufyan's house should enjoy complete immunity. It is true that Abu Sufyan's wife 'Hind' claimed him on her husband's weakness, but her fury was as unsuccessful as the armed resistance attempted by a few irreconcilables. By his respectful treatment of Abu Sufyan, Muhammad admitted how much he owed to the latter's coming surrender. Abu Sufyan accompanied him on his campaign against the Hawazin tribe, and though the dangerous turn that things took during the Yamama fight may have inspired him for a moment with the hope of getting rid of the tyrant, he did not let it appear. After the victory he always preserved for himself and his family a generous share of the booty that he had every reason to be satisfied with. At the siege of Taif, behind whose walls another of his daughters was living, he lost an eye (according to Tabari, i. 2104, this accident happened in the Yarmuk battle). Abu Bekr made him governor over 'Najd and Hijaz (thus Belachif, ed. de Goeje, p. 103; comp. Ibn Hajar, Kenneth, iv. 477, where the statement that the Prophet had already placed him over Najd is contented). For the rest, most of the other tales concerning him are of no value as they show too distinctly anti-Umaysid party interests. Thus it is very doubtful whether, as is related in Tabari, i. 2874 et seq., he opposed Abu Bekr's election and was on this account reprimanded by 'Ali. Certainly the account of Abu Bekr's insulting address to Abu Sufyan and his words to his startled father were invented in an anti-Umaysid spirit. Still more clearly is this tendency shown in an account, according to which Abu Sufyan is said to have been delighted at every advantage gained by the enemy of the Muslims at the Yarmuk battle. As a matter of fact there exists another tale, according to which he called on Allah for help during the battle. That he took part in the battle is also mentioned elsewhere (Belachif, ed. de Goeje, p. 135; Safi even makes him a Kazi on this occasion: Tabari, i. 2695), but it is rather remark-
father [see 'ABU AL-MU'TĀLĪ] died. According to tradition Muhammad accompanied him on his business journeys. Abu Abd Allāh was poor and had a numerous family, Muhammad is said to have shown his gratitude to him by bringing up his son 'Ali in his own house; but this is perhaps only a later legend, especially as it does not agree with what is elsewhere related of Abu Talib's conduct. Thus when the Mecceans began to persecute Muhammad on account of his attacks on their religion, he, as husband of the family, took up his side and in spite of the repeated threats of the Mecceans would not abandon the fulfillers of this parental duty. His example was followed by the other Hashimides with the exception of Abu Lahab, and when the Koranites made the declaration of ostracism, they all retired to the quarter of the town inhabited by them (the Sūr of Abu Talib), and lived there for a length of time in a very oppressed condition. It was therefore a heavy blow for Muhammad when his faithful uncle died 3 years before his emigration to Medina, and 10 years after his prophetic mission. It is not astounding that tradition took possession of this man, who had so intimately connected with the Prophet and of whom so little was known. In our tradition he has become the Sāyi'd of the Koranites. Kāfūnūs were composed and put into his mouth. More especially was the question discussed as to whether he was converted before he died or whether he died an infidel. Party interests had their influence in this case; the general and certainly correct theory was that, whilst remaining quite faithful to his nephew, he yet considered his preaching as a reversion. This was very unpleasant to the 'Alidie party and they therefore manufactured several traditions which asserted the contrary with more or less decisiveness. The consequence was that the opponents of the 'Alide came forward in which the Prophet himself speaks of the pangs, surely moderate, which his pagan uncle had to suffer in Hell.

ABU ṬALĪB KALIM. [See KALIM.]

ABU ṬALĪB KALBAN. [See KALBAN.]

ABU ṬALĪB, KHAN B. HAMID MUHAMMED BEK KULI, of Turkish origin, born at Lucknow in the year 1165 (1753), was at first 'Amadār of Iwans and other districts, then held various offices, through which he was of great help to Colonel A. Hannay and Mr. Middleton. In the years 1799-1802 he undertook with Captain D. Richardson a travel through Europe which he described after his return to Calcutta (1803). He was, however, unable to publish the description of his journey, as he died shortly afterwards (about 1806). The work was edited in Calcutta, 1812, by Mirza Husain 'Ali and Mr. Kudhat 'Ali under the title of Māsār-Ṭalīb fī bīlād-i Irfanā. Two years later an English translation of it by Stewart appeared in London, and an abridged adaptation from it by D. Macfarlane was printed in Calcutta, 1837. A French translation by Ch. Malo, called Miroir d'Abul-Talib Khan, voyages en Afrique, un Europe écrit par la main, appeared in Paris, 1819.

ABU TAMMAM. 'Abd al-A'war, poet and anthologist, born in 1580 or 1585 (1596 or 1601), and his birth-place is said to have been Dijānem, a village near Damascus in the direction of Tibir, died in 228 or 234 (842-845 or 845-846). His father was a Christian named Thalib (Theodorus), by whom the son, when he became a Muslim, substituted the Arabic Aws, to which he attached a pedigree in the tribe of Ta'ī, whence he is often called simply the Ta'īite. Some of his early life was, it is said, spent in Damascus, where his father kept a wine shop, and he worked as a washer's assistant. Thence he went to Iznik (Emesa), where he commenced his career as a poet by lampooning the family of 'Othah b. 'Abd 'A'la in the interest of his patrons the Banū 'Abd al-Kasim. Then he went to Egypt, where he at first earned a living by selling water in the Great Mosque, but where he also found opportunity to study Arabic literature, especially poetry, and the subject thereby connected. He there first neglected and then lampooned 'Ayllah b. Lahab's-ḥadrami, and at Damascus again first eulogised and then lampooned 'Abī Maṣwākī Mahī b. Ṣalīhi. Abu Tamam's real gift was his wit and his quickness, and the favor of Abu-Mu'min, he went to Mayyil (Moṣul), where much of his life was spent. He met with more success at the court of Mu'azzam, who rewarded his encomiums, and even took him as companion on his famous expedition against Amurāt (223-838); and he also enjoyed the favor of Mu'azzam's son, Ahmed, and his son and successor al-Wālid. He was naturally also employed as encomiast by many of the eminent men at the Court, e. g. Ahmed b. 'Abī Da'ud and Muhammad b. Zay'īd, as well as other generals, ministers and provincial governors, e. g. al-Asfahī, Abu Sa'id Muhammad b. Vāsif, Abu Da'ud b. al-Fa'il, 'Alī b. 'Alī b. al-Khayatī, 'Abī al-A'far b. Dihūt, Mālik b. Zhawī, al-Hasan b. Sa'd, al-Hasan b. Ra'dī, al-Hasan b. Wasli, Khalid b. Yāsīn al-Shabībī, etc. Various anecdotes are told of his visits to his provincial patrons: when staying with Ibn Ra'di in Fars, he gave his patron reason to suspect the Moslem religious observances, and when questioned on this matter, expressed doubts as to the effectness of those observances, a confession which nearly led to his execution. Of these religious doubts there are no traces in the Kitāb (published at Beyrouth, 1889 and 1906: indices to the latter in Towne, of the Roy. As. Soc., Oct. 1905), which contains some devotional poems, besides the encomiums on the author's various patrons, laments on the dead, and satires on the poet's enemies; the conquest of Amurat and the defeat and death of Bābek the Khurramite with the execution of al-Afghān are the chief matters of historical interest with which it deals. It was collected and arranged in alphabetical order by al-Ṣūli, and afterwards rearranged in order of subjects by 'Ali b. Ḥamza al-Afghānī. Its ideas are said to be mainly derived from the works of older poets, of which Abu Tamman made exhaustive studies, resulting in the composition of six anthologies (Ikhāliyāt), viz. 1. Ikhāliyāt al-Kābulī, the Greater, containing selections from tribal lays. 2. Ikhāliyāt al-Kābulī, selections from tribal lays by little known poets.
placed to his credit. He built, however, a
Ma'drass, which in remembrance of its founder was
called Madrass Tashfiniya. The king, by building
this edifice, evidently wished rather to mark the
respect he bore towards the scholars and poets,
whom he entertained to sing his praise, than to make
a school for subjects of the literary and
philosophic sciences.

Except the great reservoir (al-sukkrih al-xanam),
which may still be seen, no other trace of the
buildings raised at Tlemcen during his reign
remains. It is, however, a fact important to note,
that the workmen, and probably the architects
employed by Abū Tashfin were Christians
prisoners of war confined in Tlemcen.

With regard to external politics, Abū Tashfin
had in various times to intervene with his troops
to settle the quarrels which arose between the
Marindic princes in the West and the Hafsides in
the East. It was principally on the side of the
Hafsides, where a Hafsida prince with the support of Arab
tribes attempted to seize the sway, that the king of
Tlemcen hurried his armies. Bougie and
Constantinople notably were successively besieged by his
Troops. His commander-in-chief Māshā was Abū
actually founded the town of Tumzidiki in
the valley of the Sûmmar, a day's journey from Bougie,
for the purposes of more closely blocking the
latter place.

Abū Tashfin hoped, by help of the troubles
which were shaking the Hafsida empire, to extend
his kingdom towards the east, as his father had
done before him. He would have liked to carry
the frontiers of his kingdom beyond Bougie and
Constantinople. He was intoxicated by the first easy
successes of his generals and was obstinately
resolved upon the war with his Hafsida neighbor,
which brought about a reconciliation between the
latter and the Marindic king of Fes. An alliance
was concluded between these two sovereigns, and
the king of Fes intervened to bring about the
conclusion of peace between Abū Tashfin and the
king of Tumis. Abū Tashfin would listen to nothing.
A second embassy sent with the same object to
Tlemcen by the Marindic sovereign Abū al-Hasan,
who had just replaced his father on the throne,
was badly received by Abū Tashfin. In 1332-1333
the king of Fes marched against Central
Maghrib, at the same time warning his ally, the
king of Tumis, to attack the 'Abdalsawiedes on the
cast of their kingdom.

After having ravaged and subdued the states of
Abū Tashfin, Abū al-Hasan began the siege of
Tlemcen in 1335 (1335). Less than two years
afterwards (30th Ramdân 737 = 28 May 1337), the
besiegers entered the 'Abdalsawiede capital by as-
sault and King Abū Tashfin perished, with his
arms in his hand, before the gate of his castle,
where he defended heroically. His three sons
and many great personages, notably Māshā b. Abū, the
famous general, who had been received again into
favor and at that time held the position of first
minister, fell by the side of their king.

With Abū Tashfin the kingdom of the Banū
Abū al-Walid of Tlemcen disappeared for a time and it
became a Marindic state.

[For bibliography see "Abū al-Walid and 'Abd-
al-Sawiedes"].

(11) Abū Tashfin, II. King of Tlemcen,
born at the beginning of Rabî’ I 752 (April-May
1351) at Nèdroma, where his father Abū Hamûl
Mâshâ II was on a holiday with the emir Abū
Ya’qub, the grandfather of Abū Tashfīn. The latter passed his youth at Nâdžora with his grandfather, whilst his father Abū Ḥammū, fleeing from Tīmēn with the sultan, who had been defeated by the Muslim leaders, went to seek refuge in Tuwān [see Abī ‘Abbās Ḥammū ‘r]. The Muslim Abī ‘Inān, who did not hesitate to put the two uncles of Abū Ḥammū to death, had considered for the latter’s father, Abī Ya’qūb, on the retirement and peaceful life he led at Nâdžora, he seemed an old man and his grandson, Abū Tashfīn II, to live at Faz, where they were well treated. After the restoration of the throne of the Banū ‘Abī al-Wād of Tīmēn by Abī Ḥammū II, he succeeded in making his father and son return to his capital where they were received with great pomp on the 12th Rajab 760 (14th June 1359). Whilst Abī Ya’qūb went to fight in the east of the kingdom and died at Aqīj in S̱gẖbān 765 (May-June 1365), the young Abī Tashfīn lived at the court of Tīmēn and enjoyed his father’s entire solicitude.

In spite of the attentions with which Abū Ḥammū surrounded this son, whom he destined for the throne, Abū Tashfīn was impatient to reign. He caused his father to be imprisoned at Oza with the intention of putting him to death, but Abū Ḥammū succeeded in escaping and returned to his capital. On being informed of this sudden reappearance of his father, whom he believed to be dead, Abū Tashfīn hastily quitted the mountains of Tībat where he was fighting against his brothers and returned to Tīmēn by forced marches. On his approach, Abī Ḥammū died precipitately and hid himself in the minaret of the great mosque. Abū Tashfīn joined him there; he appeared to be moved at the sight of his father, and was reconciled with him for a day. Abī Ḥammū proclaimed his abdication and asked as a supreme favor to be permitted to make the pilgrimage to Mecca. Abū Tashfīn consented and put at his father’s disposition a ship to take him from the port of Oza to Alexandria. On the way Abī Ḥammū bridled with money and promised the people charged with guarding him, and was disembarked at Bougie; from there he returned triumphantly to his capital in Rajab 760 (July 1358) and took the reins of government in his hands. Meanwhile Abī Tashfīn, meditating revenge, had taken refuge at the Court of Faz, where his intrigues met with all the success he promised himself from them. At the end of a year he reappeared on the territory of Tīmēn at the head of a Muslim army, which encountered that of Abī Ḥammū on the 1st Dhul-Hijja 791 (21st November 1389) at al-Ghīrūn on land of the Banū Wādirad. The result of this encounter was that the troops of Abū Ḥammū were routed, and Abī Ḥammū himself killed. His head was carried to Abī Tashfīn who gazed on this horrible trophy unmoved.

When this wicked son had thus wrested the power, he seemed to wish to redeem his crime by imitating the good administration of Abī Ḥammū and by encouraging art and letters. The feasts of the Mawlid were celebrated, the laws had been in the reign of his grandfather, with great gravity. But it was not all in warlike expeditions that this king showed his military worth and the qualities of a man of action and energy, things his father lacked.

For the rest he was cautious, violent, cruel and debauched, and the Arab chroniclers, at-Tanāst in particular, strew him with too many flowers. He was, who in the lifetime of his father caused the secretary and confidant of the latter, Yahyā b. Khalid, to be assassinated from jealousy. He was not contented with having caused his father’s death, and as soon as he had the power, he caused many of his brothers to be put to death. He had succeeded in reaching the throne thanks to the support of the Muslims of Faz and on condition of remaining their vassal. He was faithful to his engagements on this side, but it seems that he would not have delayed long in shaking off the yoke of this troublesome servitude if death had not struck him on the 17th Rajab 795 (29th May 1393) after a reign of 3½ years (Nov. 1392 to May 1393). His tomb has been found by Roscher in the vaults of the old castle of Tīmēn.

---

**ABŪ THAWR IBRĀHĪM b. KHALĪL b. KHAİR b. YĀMĀN b. MULK b. JABAR** was a jurist who belonged to the Tīmūnī school, but later he joined al-Shāhī, whose older (Baghdad) writings he transmitted to posterity. In many respects, however, he deviated from his master’s teaching, and became the founder of a school of his own, the teaching of which still in the fourth century of the Hegira was widespread in Armenia and Adharbājjan. Abū Thawr died in 420 (854) or 426 (860) in Baghdad. Nothing of his works has been preserved.

**Bibliography:** Fībrīs, i. 211 (comp. ii. 91); Ibn al-Ṣubki, i. 227—231; al-Dhahabi, Tādhīth al-adḥūnāt, ii. 94 (ch. 8, No. 44); Wüstenfeld, Schriften, No. 12. With regard to his teaching comp. the Abīlaf works (e.g. Taβnah).

**Abū Ṭumās, a mountain 1551 metres high in the northern part of the Harūn range (Dārāra al-Durān). Recently it is becoming known through that a Drusian sanctuary consecrated to the Maryt (Messiah), was erected on its top. The Drusian sanctuaries resemble very much the Muḥammadan ones in their architecture. A saint is called by the Druses just as by the Mussulmans, 'Wādi'l-Ṣalāh'. The reason why a sanctuary was erected on Abū Ṭumās for the Messiah is, because it is said, the latter appeared in a dream to a Christian of Harūn, telling him that he lived on that mountain and expressing his wish to have there a Maṭān. Among other saints, al-Kahf is particularly worshipped by the Druses on a high, isolated mountain.

**Abū Turāb** (father of Abū Ṭumās) was of the Ḥamāṣah of the Ḥamāṣah, which is said to have been given him by Muḥammad, and which is considered by the Shī‘ites as an honorific surname. Nālid, (in the Zeitsehr. für Deutsch. Morgenl. Gelehr. iii. 29 et seq.), however, thinks this Ḥamāṣah has rather been given 'Abī his enemies as an injurious nickname: this is also the opinion of Sarrān (Das Bild Abī bei den Historiern der Sunna, p. 34). But, as the Shī‘
ABU 'UBAID AL-MA'ARIR AL-MUHAMMADIN, celebrated philologist, born in 1120 (720). His enemies asserted that he was of Jewish descent, and it is certain that he was not a member but a client of the tribe of Taim. Therefore he defended the rights of the non-Arabs, and belonged to the tribe of Arab. He was not only a scholar of the Arabic language, but he was also a poet and a writer. He was one of the greatest poets of the Arab world, and his works were highly respected. He was also a great teacher, and his students included many of the famous scholars of the period. He died in the year 1210 (805).
AL-BUKHĀRĪ, one of the greatest Arab mathematicians, very probably of Persian origin, born in Kūhân on 3 July 885 (the 2nd of Dhū al-Ḥijād) and died in Kufa on 10 Ramadan 328 (10th June 440). His first teachers in mathematics were his uncles Abū Amr al-Mughāzli and Abū 'Abd Allāh Muhammad b. Bahau, the former having in his turn studied geometry under Abyḥa-al-Merwān (or Mawarid) and Abū-l-‘Alā b. Karim. In the year 348 (959), Abū 'Al-Wafā’ emigrated to ‘Iṣāk, and then he lived in Baghda until his death, which took place there in Rajab 388 (July 997) according to Ibn al-‘Abbās and Ibn Khālid, who wrote about him, 287 = 997). — Of his mathematical and astronomical works the following are the extant: — 1. An arithmetical book, entitled Kitāb fī ṣināʿat yahdīhū lihāli al-khitābat wa-l-‘amalān min līm al-khitāb (A book of what arithmetic writers and business men need), identical with the Kitāb al-amīnātī yahdīhū lihāli al-khitābat (The book of the stations on arithmetical matters), mentioned by Ibn al-Kīfī, Leyden (not complete) and Cairo (?); Woepekas published in the «Journ. As.,» 5th ser., v. 246 et seq.; the title of the chapters of the stations and of the chapters of that work. — 2. Abū 'Al-Wafā’ al-maṣūla (The complete book), probably identical with the Almadīnī mentioned by Ibn al-Kīfī (Paris, incomplete); certain parts of it have been translated by Carra de Vaux («Journ. As.,» 8th ser., xii. 408—417). — 3. Abū 'Al-Wafā’ al-ahwād (A book of geometry), in Constantinople (Aya Sofia, Arabic and Persian), probably the same as the Persian Book of the geometrical constructions of the Paris Library, reviewed by Woepekas («Journ. As.,» 5th ser., v. 218—256, 309—336); the latter is of opinion that this book was not written by Abū 'Al-Wafā’, himself, but by one of his pupils summing up his lectures. — Nothing unfortunately has remained of his commentaries to Euclid, Diophantus and al-Khwarizmi, or of his astronomical tables called al-Wafā’s; still the tables called al-Zīg al-khwarizmi in Florence (Lanzen.), Paris and Brit. Mus., of an unknown author, are very likely an adaptation from Abū 'Al-Wafā’s tables.

The chief merit of Abū ‘Al-Wafā’s consists in the further development of trigonometry; it is to him that we owe, in spherical trigonometry, the substitution for the right-angled triangle of a perfect quadrilateral with the proposition of Masalins by means of the so-called rūm of the four magnitudes (sine a = sine b = sine θ = sine A = 1) and the tangent theorem (tan. a : tan. A = sine b : 1); of these formulae he infers still: cos. c = cos. a . cos. b. For the oblique-angular spherical triangle he probably first established the sine proposition (comp. Carra de Vaux, loc. cit., pp. 448—449). We are also indebted to him for the method of calculation of the sine of 30°, the result of which agrees up to 8 decimals with its real value (Woepekas, in «Journ. As.,» 5th ser., v. 206 et seq.). His geometrical constructions, which are partly based on Indian models, are also of great interest (Woepekas, loc. cit., 5th ser., v. 218—236). On the other hand, the praises for introducing tangents, cotangents, secants and cosecants into trigonometry does not belong to him, as these functions were already known by Ahmed b. Abū ‘Alīk, called Halâsh al-Khālid. Neither was he the discoverer of the proposition of the sine of circular arcs, which becomes a point of dispute between L. A. Sëdîlot and Charles on one side and Rôêt, Munk and Bertrand on the other (Carra de Vaux, loc. cit., pp. 450—471).

ABŪ ‘AYZĪD b. KĀIDĀD, a Khārijī, who impelled the Fāṭimīde dynasty at its very beginning. His real name was Mus'īk b. Kāidād, he belonged to the Banū Warākī, a subdivision of the Zātta tribe, and was born at Kawkāw, in the Sudan, where his father was engaged in business. He embraced very early the Khārijī doctrines of the Nekkārites and propagated them at Tykārī, where he lived practicing the profession of schoolmaster. Having become suspected on different occasions, he departed to the East; then he came back and was thrown into prison at Tā'īn. He was set free by his son and the chief of the Nekkārites, Abū Aṣūlān al-Blīd, and travelled through the country between Warghā and the Arwā, where he met with people favorably inclined to him. The Fāṭimīde power had then sunk in the Zone of Kābyla, but it almost succumbed under the blows of the Zātā and the Arwā. Abū ‘Ayzīd, then 60 years old, lame and feeble of body, but endowed with remarkable eloquence, and possessing a certain intellectual culture, stirred up the Berbers and rapidly conquered Southern Irīkiyā. He used to ride an ass, whence his surname, the man on the ass, and made show of austerity in conformity with the irreconcilable doctrines of the Nekkārites, which he professed. Still the religious enthusiasm did not extinguish in him the political man. He cleverly associated with the Umayyād of Spain, the rivals of the Fāṭimīdes, for the possession of the Maghrib, and received from them a disguised, but effectual support. Soon afterwards he seized almost the whole of Irīkiyā, and, after having taken Kairawān, he came to besiege in Marinids the Fāṭimīde caliph al-Ḥāsinī. The desperate resistance of this town saved the Umayyād dynasty. At the same time, the Nekkārites were not little dissatisfied to see their chief abandon; his former democratic habits of simplicity, wear alken garments and mount a thoroughbred horse. The siege, by its prolongation, became more lamentable for the besiegers than for the besieged, and the former were compelled to withdraw in spite of the efforts of Abū ‘Ayzīd. The latter took again to his former kind of life and soon the Berbers flocked themselves under his colours. But the impulse had gone; after some success he miscarried before Saṣa, which was defended by the Fāṭimīde caliph Ibrāhīm, the successor of al-Ḥāsinī, the latter having died during the siege. A new defeat before Kairawān threw Abū ‘Ayzīd back to the West; then the rout began. After some changes of fortune, accompanied only by a few of his men that remained faithful to him, he finally was handed down in the Ljūbel Kiyānā, south of Seuf. During the assault on the last fortress he was mortally wounded, which hindered his escape, and so he fell into the hands of the Fāṭimīde caliph. The latter wished to show him to the public as a trophy, but Abū ‘Ayzīd died of his wounds.
ABU YAZID — ABU ZAIYAN.

28th. Mahmud 356 = 19th. August 947). His body
stiffened with straw and his head cut off were
exposed to the insults of the mob of Mahdyia,
which had trembled before him. His sons, how-
ever, found a shelter at the Court of the Umay-
yada of Cordova.

ABU ZAIYAN [See Also BAKKAL].
ABU ZAIYAN, hero of the Makhtam of al-
Harrî [q. v.]

ABU ZAIYAN, hero of a romance, or rather of a
series of romances, which depict the heroic
adventures of the Hâtiîlî [q. v.]. These nomads,
through their plundering, laid waste Arabia under
the reign of the 'Abidences. The Fātimid army
conquered Egypt, who had vanquished them and
their allies, the Kuranis, at first cantoned them in Upper
Egypt, then relented them to Hîryâs, pacifying them;
this country if they would succeed in sub-
jugating the Illiti, who, having been the Fāt-
imides' governors of Hîryâs, became real sover-
eigns. It is mainly the second conquest of Hîryâs in
the 11th century that inspired the Illiti, poets with songs and
lyrics, some of which were written by Ibn Khâlidî, and others are
still alive in the memory of the African inhabitants.

ABU ZAIYAN, the name of four
Abâldawîl or Zayîyânîs kings.

1. ABU ZAIYAN IBN MUHAMMED b. ABU SAYD b. 'OLEMAK, the third
successor of the Zayîyânî dynasty, was proclaimed
king at Tiemcen, on the death of his father,
the 9th Di'Ou-Kaïda 703 (6th June 1904), during
the absence of the army of that town by the Maritine
sultan Abû Yâkûb al-Mansûr. His reign was kept on
since the 3rd Shu'âban 628 (6th May 1920), and was not to be finished before the 7th
Di'Ou-Kaïda 706 (10th May 1920) when Abû Yâkûb was assassinated by one of his enemies.

The Maritine sultan had founded, with the object of having Tiemcen entirely blocked, by the side of the latter town, the famous camp of
Manzana, a real fortified city, with mosques, a royal palace, public baths, bazaars, markets, etc.,
of which some imposing ruins have still been preserved. But, after the death of that prince, his suc-
cession was disputed by three competitors, and Abû
Zaiyân, having treated with the principal one of them, Abû Thabîl, obtaining the raising of the
siege of Tiemcen and the enemy's handing over of
Manzana and the Tiemcen territory.

Abû Zaiyân then went to punish the tribes of
the eastern part of his kingdom, for having sup-
ported the Maritines: the Tûdîr Berberies were
compelled to submit and to pay taxes; the Arab
tribes were used very ill and forced back into the
desert. Then the sultan entered Tiemcen,
while he was occupied with repairing the damages
carried by the siege (fortifications, royal palaces,
ABU ZAIYÁN

his two sons, Abú 'Abd Allāh Muḥammad and Abū Zaiyān Muḥammad, continued for the throne. Abū Zaiyān was supported by the Turks of Algiers and his brother by the Spaniards of Oran. Abū Zaiyān seized the throne through armed force and had himself proclaimed king in 947 (1540). Abū 'Abd Allāh sought refuge with the governor of Oran, Count Almadet, and asked his assistance, engaging himself in return to recognize the sovereignty of Spain. A military expedition, commanded by Don Alfonso de Matarra, was undertaken in favor of the dispossessed prince. But the Spanish troops were made to submit to their leaders from Oran and routed by Abū Zaiyān’s cavalrymen that were more in number. All the Spaniards, among whom the commanding general, perished in that battle, which was so bloody that the place where it was fought received the name of Zawat ad-Dhīn (the mountain pass of flesh). This took place in the very beginning of 1543.

The Spaniards, however, avenged this defeat before long. An army, consisting of 9000 footmen and 300 horsemen, seized Tlemcen, drove Abū Zaiyān away, and installed there Abū 'Abd Allāh Muḥammad (30th Dhu’l-Ka‘dah 949 = 7th March 1543). The town was given over to plundering, while Count Almadet pursued ill. Muḥammad Abū Zaiyān and his followers. On their way back, the troops of the Spanish governor were harassed by the Arabs till they arrived at Oran. At the same time, the sovereignty protected by the Spaniards was driven away by his own subjects. The latter recalled Abū Zaiyān, who reigned from then till his death (957 = 1550).

Abū Zaiyān had declared himself the vassal of the Turks and had the public prayer of Friday (Maghrib) recited in the name of the sultan of Constantinople.

Abū Zaiyān Muḥammad, the name of five Marinid kings.

1. Abū Zaiyān Muḥammad, son of the Marinid sultan Abū Inān Fāris. The latter, while seriously ill, had designated Abū Zaiyān for the succession to the throne, indicating him at the same time the vizier Mḥāt b. ’Isa-al-Astil as his prime minister. The illness of the monarch was growing worse, and the vizier, in order to avoid the competition of pretenders, wanted to hasten his master’s accession to the throne. He, accordingly, spoke of it to the principal personages of the Marinide Court, who recognized Abū Zaiyān as sovereign.

But just the same people feared Abū Zaiyān on account of his severity and harshness towards them. Won over by the vizier Abū l-Ḥasan b. Ṭūmar al-Fāḍīḥ, they, with the complicity of the
militia officers, proclaimed sultan another son of Abu 'Inan, called Muhammad al-Sayyid, a child of five years. Then, Abu'l-Hassan, escorted by soldiers, went to the royal harem, where Abu Zayyan had fled for refuge, and compelled the latter to go pay homage to the young sovereign. After this, he called Abu Zayyan to some deserted room of the palace, where he strangled him. This took place on the 24th Dhu'l-Hijjah 759 (23rd November 1358), or according to others, Wednesday the 25th Dhu'l-Hijjah of the same year.

2. Aбу Zayyan Muhammad, the son of Princes Abu 'Abd al-Rahman Yahya and grandson of the Marinid sultan Abu'l-Hassan, took, when ascending the throne, the surname of al-Mutawakkil 'Ala'llah. Since 750 (1349) he sought shelter in Spain, at the Court of the emir of Granada, in order to escape the persecution that his family suffered at the hands of his uncle, Sultan Abu Said. The latter, however, through his intrigues compelled him to quit Granada and to flee to the Court of the Christian king of Castile, who received him well and assigned him Seville for his residence. After the assassination of Abu Said, the vizier 'Abd Allah al-Yahya had at first the Marinid prince Abu 'Omar Tashfin, a man morally incapable of occupying himself with state affairs, proclaimed king: but soon afterwards, unable to resist any longer the Marinid chiefs, the same vizier deposed his own creature, and called Abu Zayyan Muhammad to the throne.

The latter, having signed a convention with the king of Castile, set sail for Ceuta, whence, escorted by the troops of 'Omar b. 'Abd Allah, he directed his steps towards Fez, the Marinid capital. His cousins, the sons of the former Marinid sultan Abu 'Ali, tried in vain to bar his entrance into the capital. Being thrown back upon Taza, they were compelled to withdraw from the strife, and one of them, 'Abd al-Halim went to found a kingdom at Siddifanis.

Abu Zayyan, after his arrival at Fez, was proclaimed sultan on Monday the 21st Safar 763 (30th December 1263) ; but in reality the vizier 'Omar was the only ruler. In order to be in the good graces of the Marinid chiefs, 'Omar married a wife of the family of one of them, namely of the son of 'Abd al-Rahman b. Rahn b. Masri, and made his friend 'Amr b. Muhammad, the governor of the city of Fez, marry a Marinid princess. But in spite of his intrigues the latter two chiefs revolted shortly afterwards and proclaimed two other sultans, one at Morocco ('Abd al-Mumin b. 'Ali), and one at Tadilat ('Abd al-Rahman b. 'Ali). 'Omar, however, defeated Ibn Masri and negotiated with the governor of Morocco.

The sultan Abu Zayyan was conscious of the dangerous situation and wished to free himself from 'Omar. But the latter had surrounded him with spies, who were even among the women of his harem. Thus when 'Omar b. 'Abd Allah became aware of the sultan's intentions, he got rid of him. On the 24th Dhu'l-Hijjah 767 (30th August 1366), in the morning, the sultan was found dead in a well of the garden called Rasul al-Qahair. 'Omar spread the rumor that the sultan, having become drunk, fell, but there by accident and was drowned; but in reality he had him first strangled by one of the soldiers, then thrown into the well. He was succeeded, at 'Omar's suggestion, by the Marinid prince Abu'l-Aziz, the son of Sultan Abu'l-Hassan.

3. Abu Zayyan Muhammad al-Said, son of the Marinid sultan Abu Faris Abu'l-Aziz. The latter, after he had seized Tlemcen, fell ill there and died. The vizier Abu Bekr b. Ghazi b. al-Kis, informed of the event by the envoys of the palace, immediately took upon himself the shoulders of the young Abu Zayyan, a child of five years, and brought him to the troops, who proclaimed him king of the 24th Rahil II 774 (17th October 1374). Since then the vizier Ibn Ghazi ruled in the name of the young prince. But this minister was not able to prevent either the ex-sultan of Tlemcen, Abu Hamid, from retaking his capital, nor the emir of Granada from setting insurrections and roasting on all sides pretenders to the Marinid throne. The emir of Granada claimed his underhand dealings to be legitimate on account of the shelter and protection that the sultans of Fez had offered his former minister Ibn al-Khasib. Finally, on the 6th Muharram 776 (9th June 1374), Abu l-'Abbas Ahmed, son of the Marinid sultan Abu Saidin and one of the pretenders stirred up by the emir of Granada, rendered himself master of Fez, dethroned the young sultan Abu Zayyan, and had himself proclaimed the only Marinid ruler.

4. Abu Zayyan Muhammad al-Muntasir as-Salih, son of the dethroned Marinid sultan Abu'l-'Abbas Ahmed b. Abu Saidin. The Marinid sultan Masri b. Abu'l-Fadil having died suddenly, thought to have been poisoned by the vizier 'Ubayd b. Rahn b. Masri, the latter hastened to have the young Abu Zayyan, a child of five years, proclaimed sovereign on the 3rd Ramadan 788 (28th September 1386). But the young prince had scarcely been installed, when a revolt, fomented by three viziers dissatisfied with their colleague 'Ubayd, brought to power a candidate supported by the emir of Granada. The new sovereign, al-Walid ibn-l-Ish, a brother of the deceased sultan Masri b. Abu'l-Fadil, deposed Abu Zayyan on the 15th Shawwal 788 (9th November 1386), after the latter had reigned 43 days.

5. Abu Zayyan Muhammad al-Walid ibn-l-Ish, son of Abu'l-Fadil and grandson of the Marinid sultan Abu'l-Hassan. Abu Zayyan was in Spain, a refuge at the Court of the emir of Granada. Then after the Marinid sultan Masri had been poisoned, the vizier Ibn Masri offered him the sovereign power. He accepted the offer, and the fact that in the meantime Abu Zayyan al-Muntasir was proclaimed king did not prevent him from proceeding on his journey to the Marinid capital. As he was supported by the vizier Masri b. Masri and by most of the distinguished personages of Morocco, he could easily overpower his rival. Ibn Masri deposed al-Muntasir and had Abu Zayyan Muhammad al-Walid proclaimed sultan in his place (15th Shawwal 788 = 9th November 1386).

But Ibn Masri, who had chosen the latter prince on account of his feeble character, could not for a long time rule over the Marinid kingdom in peace. Having claimed the restitution of Ceuta from the emir of Granada, who had unjustly seized it, the latter dispatched against the Maghribi the Marinid ex-sultan Abu'l-'Abbas at the head of a numerous army. The emir of Granada endeavored to implant his influence over Northeast
Africas, and willingly encouraged anarchy in the Muslim family of his neighbours. The partisans of both sides were strengthened with each other for nearly a year in the whole Marinid kingdom. Finally, Abu'l-Abbas seized Fès, deposed his rival, Abu Zakariya Mahammed al-Wâlikhi (2nd Ramadân 780 = 19th September 1387), and brought him to Tangiers, where he had him executed.

**ABU ZAKARIYA’ VARJYA K. ABU BEKH**

A native of Warla, author of the historical work on the Rostemides and the Maghribi Abâdîs, entitled *Kitâb al-waâlîn al-âlamân*. This work has been discovered in the Maḥrûs and translated into French by Maqueray, under the title of *Chronique d’Abu Zakariya* (Algiers, 1876).

The Abâdîs chronicle Dârżînî and Shâmâkî, who based their historical and biographical works principally on Abu Zakariya’s *Chronique*, give very little information concerning this author, and indicate neither the date of his birth nor that of his death. All that is known from Darżînî’s *Kitâb al-pâkhîfar* is that one of Abu Zakariya’s teachers was Abu Râbi’i’s Sunnî, Yékhlîf al-Masîh (d. 471 = 1078-1079). We may thus suppose that the Chronicler was written either at the end of the 5th or at the beginning of the 6th century of the Hegira.

After Dârżînî, who, on returning from his travel to the Sahara, brought a manuscript of al-Shâmâkî’s work, the honor for signalling the importance of the Abâdî works is due to Maqueray. The *Chronicle* of Abu Zakariya’ of which the latter published a French translation, though imperfect, and showing in several places the author’s inexperience, furnishes valuable information about the history of the Imâmâ, the Rostemide dynasty and the beginning of that of the Fatimides. The value of this Chronicle, the publication of which is very desirable, appears even as far as the East. It is from it that the anonymous author of the *Kashf al-shâbânum* (a work which was the basis of the history of the Imâm of Omân translated by Badger) drew his information about the Abâdîs of North Africa (K. Basset, *Les conquêtes du Djebel Nefousa*, Paris, 1869, p. 6).

The *Chronicle* of Abu Zakariya’ is the most ancient document regarding the history of the African Abâdîs written by one belonging to that sect. It was almost textually reproduced by Dârżînî in the first volume of his *Tâbârî al-malikin*, which is yet unpublished. Shâmâkî used it to a great extent for the articles in his *Kitâb al-sâyah* (Cairo, 1301) devoted to the introduction and development of the Abâdî doctrine in the Maghrib as well as to the history of the Rostemides. (A. S. MÔHÂR.)

**ABU ZAKARIYA’ VARJYA K. AL-KHAF*8* bất ‘A-mar al-‘Imrâwî (a native of Ma’zawmân, in the Djejel Nefousa), an Abâdî doctor, quoted by Shâmâkî (Kitâb al-sâyah, pp. 135

of seq.) as one of the lights of his epoch. He studied under the ædile shâhîk Abu Râbi’i’s Sunnî, Abu âÆţi’d in the mosque of Imaân. He professed so much by the lessons of his teacher that Shâmâkî says, when he came back to his country, he spent six months in answering to questions, addressed to him on every branch of science without ever being puzzled at a single point.

He left diverse works on the *purî*, one of which, on fasting, is to be found in a collection autographed in the Baroutya printing establishment in Cairo. His principal work is the *Kitâb al-awwâf*, autographed in the same place, in 1305, with marginal notes of Shai’kh Muhammad Abu Sæïd al-Kâfî. It comprises seven books in 3 vols.; *Tawwîh,* 2, 5, 13; *Furqân,* 2, 3; *Prayer,* 4, 5; *Fasting,* 6; *Pilgrimage,* 7. This volume seems to be the first part of a complete treatise on Abâdî legislation written by this author, which is quoted in a catalogue of al-Barradî (A. de MÔtylinski, *Les édits de la sérifie abadî*, p. 12), with an indication of seven parts that it comprises: fasting, marriage and divorce, testament, judgements, sales, rights of ownership, and pledges (comp. also of MÔtylinski, *Le Djejel Nefousa*, p. 59, note 1; E. Basset, *Les sanctuaires du Djejel Nefousa*, Paris, 1899, p. 62; *Les manuscrits des Zanouas de Ain Mastrat et de Tlemcân*, Algiers, 1883, p. 36).

It has been said above that the book on fasting has been separately published. The book on marriage and divorce has also been separately autographed with marginal notes of Shai’kh Muhammad Abu Sæïd al-Kâfî. These different treatises were the principal source for the chapters on the same subjects in the *Kitâb al-wâlî* of the shai’kh Abu al-Arî. The *Kitâb al-sâyah* of Shâmâkî furnishes no chronological indication regarding Abu Zakariya’.

**ABUÂM, capital of Tâfîlalet. Like the other parts of this province, Abuâm has been visited only by a very few Europeans: René Callîlî, Robîfî, Schmidt, Harris and Delbrôl. It is a very important commercial center. Before the French occupation of Tâwât, Abuâm had centralized the commerce of Sudan, Sahara and Southern Morocco. Many merchants of Fès have settled there. A market is held there twice a week and is very animated; dates, salt and skins are the chief native exchange products. The latter of Tâfîlalet is very renowned in North Africa; the dates are the best of the region, but they are inferior to those of Southern Constantine and Southern Tunisia. A little to the east of Abuâm there is the tomb of Mûtâlî ‘Ali Sherif, the great saint of that region and the founder of the present Ait Saên dynasty of Morocco; it is a much venerated place of pilgrimage. Abuâm is about an hour from Abuâm is the Kasr of Kistel, the residence of the authorities. At a little distance to the west are to be seen the ruins of the celebrated Zjûlûmîn (q.v.), now called al-Malhûn al-khârîy (‘the red city’).

ABUBACER. [See UN FIHAL]

ABU.BUKR (Bu'kri), name of various places in Egypt:
1. A small Egyptian seaport of 1668 inhabitants on the Mediterranean Sea, after which are called the bay, the island — also called Nelson Island — and the lake (see No. 4) near it. It is situated 23 kilometres (15 miles) east of Alexandria on the Rosetta (Banshd) railroad; and belongs now to the district of the environs of Alexandria, in the government of the latter town; formerly it belonged to the district of Damanhur in the province of al-Bahriya. This place, which is perhaps identical with the ancient Bakrit, is not mentioned by the ancient Egyptian geographers; still Abu'l-Fida and Khaligahyani knew it as a place. All that is known of the history of Abu.Bukr in the Middle Ages is the invasion of the Franks in 764 (1362-1363). Abu.Bukr was much spoken of only after the naval battle, which is called after it, had taken place in the Bay of Abukir on the 1st of August 1798. The English under the command of Nelson destroyed the French fleet that covered Bonaparte's expedition to Egypt. One year later, Bonaparte defeated, also by Abu.Bukr, the Turkish troops that had landed there (24th July 1799). Finally on the 8th March 1801, they landed at Abu.Bukr the English expedition, which put an end to the French domination in Egypt.

Bibliography: Diction. gén. de l'Egypte, 1868, p. 34: "Abu el-Murak, el-Kalaf el-gadid, No. 13 u. seq.; Djabart, Agouz el-Maghar (Cairo, 1897), iii. 1 u. seq. (French trans. of Nouvelles Brevetahiques et Historiques, Cairo-Paris, pp. 59-60). Turkish troops sent to the camp of campagn. de campagne en général, Bonaparte en Egypte, in Syria, Syria, in Egypt, by R. T. Wilson, History of the British expedition to Egypt; see also Y. Kircher, Bibliograph. Napoleon., pp. 40 u. seq.

3. A spot in Upper Egypt, belonging to the city of Arazn, in the district of Luxor (al-Ahzur), province Kenia; comp. ibid.

4. A large lake of 3000 acres formerly stretched landward behind the city of Abu.Bukr (No. 1) and now dried up. In the time of the French expedition the lake — also called then el-Madita — was still connected with the sea. The narrow plain in the east, which separated it from the Sea of Arica (Edku), was also perhaps broken through at certain times. In the west it is bounded by the narrow strip of fertile land, through which passes the abidul of Alexandria, the present Mahmu'diya Canal. Then follows, to the west, the Lake of Marzics, which was dried up in the Middle Ages and which was submerged again by the English only at the time of the siege of Alexandria in 1801. At that time the water of the Lake of Abu.Bukr was conducted to the fertile land. Later on the connection with the sea was cut off, and from 1888 the whole lake was drained by an English company and dried up. Now it is a specially productive cultivated land.

The lakes of Bubkr and Edku were, according to the Arabian tradition, fertile tracts of land in the time of the Pharaohs and partly also under the caliphs. Legend relates their origin as follows: The wife of a Pharaoh, to whom these lands belonged, on a sudden required money for the tugile of the vineyards, which were to be paid to her; the peasants could not afford it, and they had those lands submerged. But prosaic statements connect the origin of the lakes with the neglectfulness of the canal, the removal of the estuary of the Nile and strong spring-tides. Such a strong overflow of the sea is said to have occurred in 720 (1320).

5. Abu.Bukr or Bubcr is the name of a legendary mountain (or of a place on a certain mountain) in Egypt, on which all the birds flock once a year. All of them put their heads in a cleft until one remains there suspended dead. According to Yacoub and others, the birds that flock on that mountain (commonly called el-Dagel el-Tahir) are called Abu.Bukr. The mountain was supposed to be situated near Abydos in Upper Egypt.

(C. H. BECKER)

ABUKLEA, English misspelling of the Arabic Abu Tilif, the name of a watering place on the caravan road, which runs from Dongola through Kurru (Korti, on the Nile), avoiding the Nile curve of Berber, directly to Al-Matsumma, on the Upper Nile, and then further to the Sudan. Abu Tilif is situated between 17° and 18° north lat., a little north-west of Al-Matsumma. Its renown is mainly due to a brilliant military feat of the English against the troops of the Sudanese Mahdi Muhammad b. Abd Allah, which took place in 1885. In order to rescue Gordon blockaded in Kharism, the expedition of Lord Wolseley to Kharism was undertaken in the autumn of 1884. In Kurru Wolseley divided his army into the "river column" and the "desert column." The latter, consisting of 1800 men with 2800 camels, was to push from Kurru to Al-Matsumma through the desert. The Mahdi's men mauled to prevent it in all possible manner, and so it came to several fights, the most important of which, the one near Abu Tilif (17th January 1885), is celebrated as a decisive victory of the English arms. The English had 74 dead and 85 wounded; the enemy lost about 2000 men. The effect of the rout on the Mahdi's camp is depicted by Statius Paena in his Five and seven in the Sudan, p. 319.

ABUMERON, misspelling of Abu Mareen. [See UN KUHUL]

ABUSHERR. [See BUSHAIR]

118 ABUAM. — ABUSHEIR.
ABUSHA, or "little father"), an East-Turkish-Osmanli dictionary for Mr Ali Shih's works, entitled, after its commencing word, There exist two editions of it, the more circumstantial one has been translated into Hungarian by Vámógy (Budapest, 1854), and edited by Welyaninoff-Zaroff (St. Petersburg, 1868). Numerous MSS. are extant; comp. Pertsch (Berlin), № 85.

ABUSIR. [See Shuyta.]

ABWA, a place on the road from Mecca to Medine, 23 miles from al-Djufra. According to some authorities the name really belonged to a mountain situated there. According to general tradition, Muhammad's mother, Amína, died there on her return journey from Medine and was buried there. Some Meccans are said to have proposed, before they marched out to the Qobh battle, to dig up her corpse, in order to have a counter-pledge in hand against Muhammad, but the others refused to do so. But how certain this all is, may be seen from another tradition (Tahari, i. 980), according to which Amína's grave was in Mecca. Muhammad's first looting expedition from Medine was called after this spot. Spengler (Die alte Geographie Arabiens, p. 155) speaks Abwa in the present: Mastorna; comp. Burchhardt, Travels in Arabia, ii. 112 et seq.

ABWAB. [See aBawab.]

ABYSSINIA, a country in East Africa, the name of which is a corruption of the Arabic Mada'í. This name, which was thought to designate a mixture of races (root ād ōd), seems rather to have been that of a South-Arabian people, who probably lived in the western part of Yemen (Tihima), and who emigrated afterwards to Africa. The coast of Aden (Zöla), the only one in the whole stretch of the African coast of that Red Sea that offers a tolerably safe landing and, in addition, is in the proximity of the Abyssinian plateau, might have attracted those emigrants from South Arabia and facilitated commerce with Mecca, which was pretty flourishing in Muhammad's time. Owing to this circumstance, and on the advice of Muhammad, Mecca made several attempts to conquer the country and to bring the inhabitants of the plateau to Islam, emigrated to Abyssinia in order to avoid being tempted by the Korníshites to abjure their new faith. The Muslim historians, however, allege another reason for it; they declare also that there was a second emigration to Abyssinia and that Muhammad sent a messenger with a letter to the Abyssinian king, all of which is merely a legend. In the year 64 (645), or later according to others, 'Omar is said to have sent a small naval expedition against the Abyssinian coast, which expedition miscarried.

Since that time for centuries the Mussulmans have as good as not at all penetrated into Abyssinia, and that is the reason why we have almost no information at all about Abyssinia proper from the ancient Arab geographers, such as Ibn Khordadbeh, Ya'qúbí, Ibn Kusayb, Muqaddad, etc. It is only Djami, which is indicated as the capital of the country, this statement has originated in Khvâshčâí's Švarat al-âzîf (without, however, being borrowed from Polomey's España, 1647), namely the map that Caliph al-Mà'mân had drawn up between 201 and 310 (816-825); al-Khârijism distinguishes between a large Djami and a Djami of the Abyssinians. Mâ'sûén (Marâ'if, Paris, ill. 34) says that there are many towns in Abyssinia, but he mentions only the capital of the Nàla, Kâhar (Ancobre) Axmîr = Kalîghrî). Yâkût (Mu'asir, l. 29) mentions only Djami and that only by the way, for he has no special article on Abyssinia. What he says about the "seven islands" (Maswîla, which is mentioned by Mâ'sûén, Tâmákh, p. 330; Tahari, i. 2480 et seq.) and of Dahlak may hardly be called an exception. Idâra speaks of it at greater length, but some of the towns which he enumerates are: on the littoral, and the three cities: Dhambrâ (Adna? Bôha?), Makkata and Nàla, situated at a little distance from the river that crosses Abyssinia to fall afterwards into the Nile, have not as yet been satisfactorily identified. Ibn Sa'd (d. 1286) and Abû'Fî'id (his Geography was finished in 1321) added to the information they had drawn from Idâra many, but inexact details; they knew the province of Sahart (Tîgės), the nation of Kôrî (Kôulla) the lake Alwarâs (K'arâ? Aga), Kalîghrî, etc. Dimmâshî mentions six Abyssinian races, of which only three can be identified with Abyssinian regions; Amârâ'ah, Saharti and Dînîm (the last name may not designate the large region of Deimam). Ibn al-Wardî (13th century) and no doubt Ibn Shâhîb al-Harrâdî (14th century), whom he copies, repeat only after Mâ'sûén the name of the capital: Kâhar (Vatican MS, № 385; Kâ'tîr). As to the later Arab authors, one may hardly expect from them information about Abyssinia. That part of the geographical literature produced by them consists mainly of râdû, of descriptions of travels on the occasion of pilgrimage etc., and contains no geographical work of any importance.

The letters which the Abyssinian kings wrote to the sultans of Egypt (namely sakkûr for the metropolitans, or äbblû), and the answers of the latter gave 'Omar the opportunity of furnishing in his al-Târif, al-Mu'assêt al-šarîf some information about Abyssinia, which is only current as far as regards the Mussulman provinces of Adal. The only Arabian author who gives exact information about the processions of the kings of Abyssinia of his time is Makîrat in his small treatise: al-Tâhirī al-kâkhûrî, man bâ'd al-Adalîn min al-Mozîrî written in 839 (1424-1425). Makîrat speaks of a region (îlam) of Abyssinia called Zâla (after its principal town, the present Zöla), which comprised seven principalities: Awibî, Dâwûrân, Arabâbî (Arâsî), Shâshîk, Bâl, Dârî and the powerful state of Hâlyâ. Each of these principalities was governed by a local prince, but all together were subject to the sultan (âfîr) of Adal. Makîrat evidently has in mind the State of Zöla in the years 1425-1432 when Djami al-Dîn II endeavored to subject it to his rule, in which he indeed succeeded for a short time without, however, obtaining political supremacy. The proper empire of Zöla, corresponding to the previous Adal, arose under Sultan Dâfar II (1305-1356-1375-1375) from the principality of Awibî (fâ), whose first known prince was 'Omar al-Walîshî (about 1260). The old empire of Adal as will be seen below disappeared in the wars with 'Amâr Sênîm. — All those countries were under the suzerainty of the king of

ABUSSHUKA — ABYSSINIA. 119
Abyssinia, of which, however, they endeavored to
rid themselves. In the course of the 13th and
14th centuries a pretty large number of Musul-
man penetrates into Abyssinia (in Shoa and up
to Bëganebed); the first king of the Solomonian
dynasty, Vekuno Amili (1470–1585), is said to
have persecuted the Muslims. This was the cause of
of several years of war, chiefl y renowned for the
victories of 'Anda Seyon (1314–1344) over the
kings of Adal; Selo al-Din, Djamal al-Din, etc.
These wars were continued by 'Anda Seyon's suc-
cessors: Newaya Krestos (1344–1373), Dawit
(1378–1411), Yeshai (1415–1429), Zara's Wa-
skob (1434–1465), Bë'eda Märyam (1468–1475),
Essender (1478–1494), etc. Bë'eda Märyam, besides,
subjected also the king of the Danakil (Afar), a
Musulman tribe, which up to these days occupies
the region between the Red Sea and the Abyssinian
plateau. In the beginning of the 16th century
Islam in Abyssinia was in complete decadence.

For two centuries the theater of these wars was
in general out of Abyssinia proper. In 1521 the
sultan of Adal, Abi Bekr, M. Muhammad, removed
to Harar the seat of his government, thus
putting it in close contact with Shoa and Abyssinia.
Shoa, with Shoa, since then began the great invasion
of the Somall chief, Ahmad ibn M. Muhammad Gräfi,
who, supported by the artillery and the troops,
which the Turkish pasha of Zelig had sent him,
penetrated into Abyssinia up to its northern fron-
tier, ravaging the country repeatedly, and even
burning the famous cathedral of Axum. The history of
this conquest by 'Arab Fālīth (written towards
1543) is the only Arabic work that mentions
many places in Abyssinia. In 1544 Gräfi was
defeated and killed by King Gallis Atledgedua (reigned
1540–1559), who in his turn was, in March
1559, vanquished and killed by Nat'al-Din, Gräfi's
successor. Two years previously, Mussawwa was
occupied by the Turks, who, thanks to the assistance
of the amara Yeshai, the governor of the maritime
province, seized the neighboring towns, even
Debaro, the capital of that province. Yeshai, having
made an alliance with King Sarha Dergel (1565–1597),
made an alliance with the Turks, but they were
beaten in a great battle near Ahaba Grarik in
1578. In 1589 Sarha Dergel defeated near Arkiko
the Turkish pasha Kadiwai, who perished in
the battle.

Owing to these victories of Sarha Dergel and to
that which he won over Muhumed IV, king of
Adal, in 1577, and also to the help of the Portu-
guese, the Musulmans, either in the north or in the
south, were no longer a serious danger to
Abyssinia. The Musulman kingdom of Sennar
was also conquered by King Susanes (Sisanius,
1607–1632). In 1574, Talh, the emir of Adal, was
incited by rebels to seize Abyssinia, but he gave
them to understand that it was impossible. The
Balew (Bodge), who, towards 1650, had founded
the Musulman State of Sumhar, under the
nâb of Arkiko, frequently annoyed the people of the
frontier, but they felt too feeble before the Abyssinian:
kings. Thus, in 1663, the nâb Misih (a descendant of Ager Kunna), having returned
certain things that were destined for King Iyasu
I, went himself to Axum to implore the king's
pardon. Shortly after, in 1667, an emir of
the Bäkl also was vanquished, and in 1676, under
Râs Mika'iil, the nâb's policy of independence
was immediately constrained.

Still, there is no doubt that the Muslim inva-
sions, and chiefly that of Gräfi, contributed to
Abyssinia being opened to the Musulmans, that
which accounts for the presence of the latter in
that country, although the forced conversion im-
posed by the kings of Adal possibly did not last
long. Thus in 1648 the ambassador of the Imam of
Su'adi, Ismail al-Mutawakkil, found at a short
distance from Gondar a town entirely inhabited
by Musulmans, and in the frontier they met with
Sha'allite Muslims; at Gondar, too, Musulman pat-
ters existed already at that time. Unfortunately
there are no circumstantial annals for the reign of
Fatihado (1652–1667), but it is known that in
1668 a council convened by King Yohannes I
interdicted the Musulmans to live together with the
Christians, and that this interdiction was re-
newed in 1678; this shows that there was a respect-
able number of Musulmans in Abyssinia.

In the course of the 18th century the Islâmic
faith was spread among the Gallis (Boran), south-
est of Abyssinia proper and north of Shoa. Accord-
ing to Krapp (Revue, i. 106), the Wollo were
converted to Islam by an Arab called Debeko.
Râppel affirms that towards 1830 faith progressed
in Abyssinia, and indeed the tribes of the Tigre
language (Northern Abyssia) that were still Chris-
tians in the beginning of the 19th century are now
Musulmans either entirely, as the Habab, Tamsir,
Takles, etc., or in a great part, as the Mena,
etc.

It is to be remarked that Islam in Abyssinia
has been indirectly favored by commerce, in or-
to enter Abyssinia it was necessary to cross
the Musulman's territory. This circumstance made
the Musulmans almost sole masters of the Abyssinian
commerce, that which increased greatly
their number in that country and procured them
great wealth and influence. Râs 'All of the Edj Galla (Goga), who from 1830 to 1855 was
very powerful in Bëganebed; etc., though baptized him-
self, favored the Musulmans and displeased the
Abyssinians; this brought forth a reaction under
King Theodoros (1853–1868), an implicable
enemy of the Musulmans. This reaction attained
its highest degree after the wars with the Egyp-
tians, who had occupied (1835–1855) certain
provinces in Northern Abyssinia (Hailiang, Al-
gheleb, Samberti, etc.), spreading there the Islâmic
faith. In 1864 they took Mussawa from the
Turks; in 1875, after having seized Harar and
some provinces in Southern and Western Abys-
sinia, the khedive sent by the way of Mussawa
an expeditionary corps, which was annihilated by
King Yohannes in the battle of Gubba-Gaddi
(19th November 1875); a second Egyptian army,
commanded by the khedive's son, Hasan Pasha,
was also defeated at Gna on the 7th March 1876.
King Yohannes, firmly seated on his throne, pro-
mulgated an edict (1889), which compelled the
Musulmans either to embrace Christianity or to
leave the country. Many Muslims emigrated to
Gallabat, and in 1883 the Musulmans of Sene, Hamase, and other places obtained the permis-
sion to remain in the country, but they were
separated and confined to two places, and in mea-
ures, for the northern part at least, did not last
long. It is also to be borne in mind that before
the persecutions of Theodoros and Yohannes the
Musulmans were not equally distributed in the
different provinces: they were for instance of a
AD, an ancient tribe frequently mentioned in the Koran. Its history may be learned only upon sporadic indications. It may be said that the tribe lived immediately after the time of Noah, and which became haughty on account of its great prosperity (Korân, vii. 67; xli. 14). The large edifices of the 'Adites are spoken of in Korân, xxvi. 126 et seq.; comp. lixxi. 5-6 the expression "Ad, Iram of the pillars," where Iram may designate either a tribe or a place. According to Korân, xlvi. 20, the 'Adites inhabited al-Abyâd (the land of the Bawshar). The prophet sent to them, their "brother" Hud, was treated by them just as Mahomet was later treated by the Mecceans, and on account of that they were, with the exception of Hûd and a few pious men, swept away by a violent storm (vii. 70; xi. 61; xii. 15; lviii. 19; xiii. 6). Finally, in Korân, xi. 54, is said that they suffered from a drought. These indications gave rise to whole legends narrated by the Prophet. It cannot be said with certainty what more ancient elements are those legends. Among the ancient poets knew 'Ad as a native nation that had perished (Tarsûf, i. 5; Mufâidîsh, viii. 40; Ibn Hisâm, ed. Wâsîânî, i. 468; comp. Zahrî, xx. 12 and the article LOGHSPORT). Hence the expression, since the time of 'Adâ (Yusûf, ed. Freytag, i. 195, 341). Their kings are mentioned in the Dîwan of the Hudhalîs (xxx. 6) and their prudence in that of Naîgha (xxv. 4). The mention of the 'Adites Al'mah by 'Abdallah (Al'âmâlû, verse 31) and in the Dîwan of the Hudhalîs (p. 31) merits consideration, as the Mussulman legend puts this (Kudîr) al-Almah in connection with the Thamûdîtes [q. v.]. Whether these really existed, and where, a nation called 'Ad is still an unanswered question. The genealogies of the Arabs with regard to the 'Adites naturally are valueless, just as their location in the large uninhabitable sandy desert between 'Oman and Hâjranah. The identification of 'Irâm with Aram adopted by the Arabs and several modern scholars is not sure at all. Among the latter, Lohi identified 'Ad with the well-known tribe of Iyâd; on the other hand, Sprenger sought for the 'Adites in the Qudîs, who, according to Ptolomy, lived in Northwestern Arabia, which reminds of the 'Irâm well in Hûsân (Hamdanî, p. 106; Sprenger, Die alte Geogr. Arabiers, § 207). But Wallhausen remarked that instead of since the time of 'Adâ, the expression min al-'adâ also occurs, and therefore he supposes that originally 'Adâ was a common name ("the ancient time"); adâ = very ancient) and that the mythical nation arose from a reinterpretation of that word.

ACHIR. [See AHSEIR.]
current in those juridical cases which are not closely connected with the religious ordinances. The practical validity of this right, which often is in disagreement with the theologically established law, divided in many countries the jurisdiction into a spiritual and a secular one. We are now in possession of several collections of 'Adā laws. In literature, 'adā is sometimes substituted by the term 'urf, or qānūn.

I. Goldziher, Die Zivilkriiten, pp. 204 et seq.; Snouck Hurgronje, Van den Berg’s, beweisende van het Moslim recht, i. 10 et seq.; T. W. Juyhull, Handling over, pp. 5 et seq. As regards the literature on Indian and North African 'Adā, see Prussianer Jahrberichte, 1905, pp. 200 et seq. For India, Customs in the transborder territories of the north-west frontier provinces (Journ. of the Roy. As. Soc. Bengal, iv, part 5, 1904, extra number, pp. 1-34); for North Africa: Said Boulaf, Le kannah de 'Adā (Recueil de Memoires et de Textes, Algiers, 1905, pp. 151 et seq.); Decembrezio, Kunian orbis des Berberen van de south-African (Roma tesiunum, ix. 346 et seq.). (I. Goldziher.)

'ADA (1), a word meaning 'island' or 'peninsula', which often occurs in geographical names, e.g. 'Adāšale [q.v.], 'Adā ʿarab, 'Ada ʿawā, 'Adā paizar, 'Adā darb (island sea = archipelago). 'Adā (2), lit. 'payment', 'accomplishment', a technical term used in the ḥaḍīth to designate the accomplishment of a religious duty in the time prescribed by the law, in opposition to ḥaḍīth (or ḥaḍīth), which designates the belated accomplishment of a religious duty (of course when the delay is permitted). It is also to be distinguished between a perfect and an imperfect accomplishment (al-ʿadā al-kabīr and al-ʿadā al-ṣākhīr). In the reading of the Kūfī ʿadā means the traditional pronunciation of the letters, synonymous with ḥaḍīth [q.v.].

'ADAB (3), a term meaning, in both the heathen and the Islamic times, the noble and humane tendency of the character and its manifestation in the conduct of life and social intercourse. There is a well-known aphorism, also frequently occurring in the Ḥadīth: ṣadār al-ʿadā al-ṣuḥāb li al-ḥadd bi al-idā bi al-ṣuḥāb (it was almost always asserted that the Companions equalled two-thirds of religion). Parallelly to this practical designation of this word there is also a metaphorical one: the knowledge that leads to an intellectual culture of a higher degree and ensures a more refined social intercourse, especially the knowledge of Arabic philology, poetry and its explanation and the ancient history of the Arabs (comp. Almustaṣr al-ʿadā, [q.v.], 124). The latter application of the word ʿadā arose from the influence of the culture tendency, after the Persian model, towards a more refined tone and the growth of profane literature since the second and third centuries of the Hijra. According to this, one may judge of the contents of more special writings, e.g. Ibn Kotabba's ʿAdab al-ʿRīb, of the books entitled ʿAdab al-unwar, etc. The different branches of ʿadā, being profane belle-lettres, are strictly distinguished from 'ilm, which sums up the religious sciences (Kūfī, Ḥadīth, and jurisprudence). Besides the real attainments sometimes also social qualities and skill in sport and in ingenious, mostly inspired games, are included in the term ʿadā. Persian influence on ʿadā is reflected in the following maxim of the vizier al-Qāsim b. Sahl (d. 130 = 849-851). The arts (al-ʿadā al-ṣākhīr, pl.) belonging to fine culture are ten: three Shāhrazūrī (playing lute, chess, and with the javelin), three Nūbirwānī (medicine, mathematics and equestrian art), three Arabī (poetry, genealogy and knowledge of history); but the tenth excels all: the knowledge of the stories which people put forward in their friendly gatherings (al-Ḥusayn, ʿAdā al-ṣākhīr, [q.v.], 142). The sphere of ʿadā is naturally not firmly established; sometimes artistic skill and then also industrial ability are included among the ʿadā (al-ʿadā al-ṣākhīr, ʿAbd al-Malik b. ʿUrfa al-Qāsim, vizier of Ibn ʿAbd al-Qāsim in Spain (end of 4th = 10th century), composed a didactic poem on six different parts of ʿadā (al-ʿadā al-ṣākhīr, [q.v.], 190); besides philosophy, poetry and mathematics, also magic, fortune-telling, alchemy, etc. are included in this group of sciences. In the course of instruction in the modern Ecce speculum arabicarum (training school for teachers) of Cairo, the following subjects are included under the term ʿilm al-ʿadā: grammar, prose composition, calligraphy, lexicology, poetry (ʿarūṣ, ʿabādī), rhetoric, theory of style, logic (program of Director: ENN Bel Siyam, year 1905). The taste for ʿadā brought forth a very important branch of Arabic literature, of which al-ʿadā is a part.

'ADAB (4), number. The Arabs give different definitions of 'adāb. The most comprehensive definition says: 'The number is the unit and all what results from it by division, repetition or by the combination of both functions (al-ʿadāb wa-ma ʿadāb libna ...). According to this theory, the 1 and also the fractions would be included in 'adāb. Still, whether the 1 itself is a number, is a question, to which the most Arab mathematicians answer: two numbers. Thus the 1 is to the numerical system what the atom (al-ʿadāb al-ṣākhīr) is to the substance, and although it is the basis of every number, it is no number itself. Two other definitions, in conformity with this theory, exclude the unit; according to one, every number is the half of the sum of its two adjacent numbers (maqā'iz at-tābiʿ ātāb-lūṭ), e.g. 3 = 1 + 2 + 1, according to the other, it is the quantity composed of units (al-ḥamāyit al-naʿīt al-ṣākhīr maλ al-ʿadāb). The latter definition, varying in its terms, is the one most frequently advanced. According to another and less frequently given definition, the numerals express the quantity, that is to say, they answer to the question 'how much', or 'how many', and so as far as they are expressed according to the order the numbers (al-ʿadāb al-ṣākhīr maλ al-ʿadāb), i.e. the regular name of the number). As, however, in Arabic the question 'how much', or 'how many', is not answered either with 1 or with 2, but with the singular or dual of the object in question, those two numerals, according to this definition, are also excluded.
According to al-Zamakhshari, there are, properly speaking, only 12 numerals which have special names in the Arabic language; namely: the numbers 1-10, 100, and 1000; all the others are, from his point of view, formed of these in a secondary manner by means of composition of other combinations.

The main peculiarity of the numerals from 3 to 19 is that the numbers and the feminine form; quite in disagreement with the general rule, the 'alif' is replaced in the masculine instead of the feminine form. The different explanations given by the Arab grammarians (e.g., Ibn Ya'qub, 1. 776 et seq.) are not very conclusive. Because the isolated numeral and with the 'alif', it is supposed that this primary form (al-qaf) of the numeral has been retained for the masculine, while the feminine, which is considered as a branch (for the) or the latter, retained also in the numerals the secondary form. European grammarians (e.g., Wright, 1. 316, note 2) see in this anomaly an effort to return to the independent substantive nature of the cardinal numbers, by which they differ from the dependent adjectives.

The compound numbers 11-19 have a particular formation; generally they are (with the exception of 12) indeclinable, and are so closely connected with one another that they are treated of by al-Zamakhshari (p. 76, § 240), besides in the chapter on the numerals, also in that on compound names (al-marubah), in Arabic and in the Arabic dialects they are fused into one word. It is quite different with the numbers 21-99; they are formed by placing the units before the tens and connecting these two by 'ain. Both units and tens are declined and in opposition to the numbers 11-19 are also designated only as ma'dafa.

It is known that the numbers 3-10 govern the gen. plur., 11-19 the ace. sing., and from 100 upwards the gen. sing.; the numbers 300-900 have, besides, this anomaly that we in this form is put not in the plur., but in the gen. sing. In larger composed numbers the different elements are arranged in the ascending or in the descending order connected with one another by 'ain. In the definition of number, the 1 has a peculiar position also in the description of the numerals (Ibn Ya'qub, 1. 774 et seq., 798 et seq.).

The proper word for 1, as in the Arabic, 'aws, which is, firstly, the nominal designation for the numeral 1 (i.e., 'awas/mawd 'aws), and secondly, an adjective derived from 'aws. It must not, however, be confounded with 'ads, which is also of a double nature. The numeral 'ads (mawd 'ads) occurs as meaning "one" (mawd 'ads) only in composed numbers, e.g., 'ads wa-ans, 'ads - 21. And in the place of 'aws, therefore the hamma is considered as the substitute (hadda) for the number. When 'ads stands alone, it is then an indefinite pronoun, "some one", with a general meaning (mawd 'ads al-sami wa-'hadda). And only in negative propositions, e.g., 'ad was 'ads, etc. This second 'ads, in which the hamma is supposed to be real, is therefore called, in opposition to the numeral 'ads, the 'ads of negation (mawd 'ads al-sami 'hadda). The former is, therefore, a case as the latter, also a grammatical remark of the Arabs, show an enormously great power of observation, but do not hit at the right point. The proper word for 1 is after all 'ads, which in Arabic as well as in other languages can be used in an infinitive sense.

The cardinal numbers are also in Arabic considered as the real numerals, and are therefore plainly designated as mawd 'ads. The other kinds of numerals have no special terms. The ordinal numbers have from 2 to 10 to the form fath, 11-19 are indeclinable and from 20 onwards they resemble their corresponding cardinal numbers.

The multiplicative numbers or numeral adjectives have no special form in Arabic; they are for the greatest part expressed by means of words as mawr, karra, da'a, and the like, or by the repetition of the numerals.

The distributive numbers likewise only in rare cases a special form; al-Zamakhshari counts this form as mawd 'ads in his treating of the diptotes (p. 10, § 15). The form fath is properly speaking not considered as an independent grammatical form, but as one derived from the cardinal or ordinal form. Besides, distributive numbers also occur in the form mawd 'ads.

The nihis formations of the numerals are treated of in a continuous way only by Ibn Sida (xvii. 118 et seq.), who, besides other details, distinguishes between thalatha (mawd 'ads al-thalatha) and thalatha (mawd 'ads al-thalatha), as, for example, in the three cardinal numbers. These are treated in the most considerable way of the nihis of numerals composed of units and tens.

The fractions (mawd 'ads wa-mawd 'ads) have the form fath, fath, and also fath (Ibn Sida, xvii. 120). As to the more exact grammatical, formal as well as syntactical, treatment of the above mentioned forms of numerals, comp. the European and Arabic works enumerated in the bibliography.

The terminology referring to the numbers is very rich. The whole numerical system is divided into three series (mawd 'ads, sing. mawd 'ads) of units, tens and hundreds (mawd 'ads, 'as-sarha, mawd 'ads), every one of which is divided again into 9 parts (mawd 'ads). The thousands (mawd 'ads) are not considered as a special series, but as deriving from the three former series (mawd 'ads al-'as-sa, 'as-sarha al-'as-sin, mawd 'ads al-'as-sa, mawd 'ads) (Ibn Ya'qub, 1. 774). The number is either absolute (mawd 'ads) and consequently an entire one (solih), or relative to any assumed unit (mawd 'ads al-wa al-sam al-mawd 'ads) and consequently a fraction (hadd, fath, fath, hasab, dhar). The assumed unit is the denominator (mawd 'ads). Mawd 'ads is the product of a number multiplied by another number, mawd 'ads is that of a number multiplied by itself, that is to say its square. If the former multiplication is continued by either of its two facies (e.g. 3 X 4 X 4), the product is called mawd 'ads (tridimensional); if the same process is applied to the square of a number the product will be the cube (mawd 'ads). In the simple product, each factor is termed solih (right), that is the square, 'ads (most), the number itself is therefore called mawd 'ads.

An even number is called fath, an odd one fath. In case that the division by two (mawd 'ads) of an even number can be continued until the quotient comes to 1 (as for instance in 16), the number is then called mawd 'ads, if not, it is called mawd 'ads. No difference whether the division by 2 can be done only once (mawd 'ads), or more than once (as in 12). Still the explain-
tions of the Arabic concerning this are not positive. The prime number is called "al-"asdel al-asdel (or also asdel fundu, because they are all odd), and is defined as a number divisible only by 1 ("al-asdel asdel to ya'asdeluク penn al-mudhe), i.e. 1 and i do not even as prime numbers, just as in the definition of their figures and their syntax, these numbers have also in the calculation a peculiar position; the 1 is compared to the point (mash"a), the 7 to the line (khet), the 3 and the following numbers to the plane (saf). As contrasted with the prime number is the compound number ("al-asdel al-muwakhab). The term muwakhab is also used as in opposition to mufrad (simple); in this case it means a number composed of 2 or 3 of the 7 asdel, e. g. 15 which consist of a unit and a ten.

The general classification of all the numbers in rational and irrational quantities, as it is done by modern mathematicians, is not known to the Arabs, and therefore the explanation of Ibn Khaldun (Mukaddima, ill. text. p. 95, transl. p. 132) does not exactly prove correct. The technical term for rational is "mufrad" (expressible); the mathematician Muhammad b. Muha uses "mufrad in the sense of rational," that for irrational is "asdel" (mute). Properly speaking both these terms are used only with fractions and roots. As the Arabic language has no special term for the fractions, 1,1 are considered as expressible, that is to say rational. (These fractions have the numbers 2-10 as denominators), the other fractions are considered as "mute," because they are expressed only by transliteration (e. g. 1/2 is 1 part of 3). In the same way roots are termed rational when they may be expressed, that is to say solved by a whole number (e. g. \(\sqrt{2}\)) and on the other hand irrational when they are inexpressible (as \(\sqrt{3}\)).

These latter roots are expressed only approximately, and according to a tradition traced up to 'Amuus, only Allah knows them. Instead of "mufrad asdel" also designates the rational root. Proceeding from this principle the Arabs call inversely a whole number represented by one of the rational fractions 1,1, mufrad al-basir (expressible through a fraction) and when it is representable rational root, they call it mufrad al-frasir (expressible through a root).

When a number is equal to the sum of its divisors, it is called "saf" (complete), or also "mudhla or muwakhab, e. g. 6; for 1 + 2 + 3 = 6. If the sum of the divisors is smaller than the number, it is then called "mudhe" (defective), e. g. 4 + 1 + 2 = 7; if it is larger, it is called "asdel excessing, e. g. 12 > 1 + 2 + 3 + 4 + 6 = 16. Proceeding from the same principle a numbers are called mudhla, when the sum of the divisors of a number is equal to that of the divisors of the other, as for instance 39 (the divisors of which are 1 + 3 + 13 = 17) and 55 (of which 1 + 5 + 11 = 17). Two numbers, of which the sum of the divisors of each one equals the other number itself, are called muwakhab (the two that have each other reciprocally), as 220 and 284: for 1 + 2 + 4 + 7 + 11 + 22 + 44 + 77 + 154 = 220; 1 + 2 + 4 + 7 + 11 + 22 + 44 + 77 + 154 = 284. The numbers in their natural sequence 124, 284, 1914, etc. are called by the Arabs natural or successive numbers ("asdel al-asdel or al-muwakhab). If the numbers follow one another omitting every second one (inflig) they are called, according as they begin with a mufrad of mudhe (1, 3, 5), or asdeli mudhe (2, 4, 6, etc.). If the numbers are arranged in such a way that the intervals between each two successively increase according to fixed principles, they result in particular sequences of numbers (al-asdel al-muwakhab or asdeli). Thus if the intervals are in the natural sequence of the numbers there results the series of mudhe (1, 3, 6, 10, . . .); if the intervals increase in the order of 2, 4, 6, etc., there results the series of muwakhab (4, 9, 16, . . .); if the intervals increase in the order of 3, 6, 9, etc., there results the series of mufrad (1, 5, 12, . . .). It seems that these series take their names from the figure that immediately follows the 1. From the series of muwakhab results that of mudhe, etc., when the parts of any series are amplified either by addition or by multiplication (comp. Abdallah al-Karimi, pp. 289-90).

The most essential characteristic of the Arabic numerals is the remarkable fact that the figures have their absolute value and at the same time the one relative to their place. Thus for instance when we write 25, the figure 2 has its absolute value "two" and at the same time the value relative to its place "two tens," and not "two units." The 5 has its absolute value "five" and its relative one, "five units;" the whole number designates accordingly "twenty-five." — The priority for this system of writing the numbers and the calculation of the figures, however, is in no way due to the Arabs. The latter either took them from the Hindus, who in any way were the teachers of the Arabs in arithmetic. Formerly the Arabs liked to express the numerals not in their own signs, but in writing them in full. From these words, through abbreviations, arose the so-called divan figures, in the use of which the single figures of a number are not arranged in the order of their successive magnitudes, but according to the linguistic use. The numbers under 100 the ones are written before the tens, just in the same order as the different parts of a series of numbers are pronounced. Besides, the Arabs used to express the numerals by means of the letters of the alphabet of the abjad (qur. v) order. Thus, 1 = x, 2 = f, 3 = h, 4 = a, 5 = w, 6 = b, 7 = l, 8 = k, 9 = m, 10 = n, 20 = t, 30 = z, 40 = s, 50 = l, 60 = k, 70 = n, 80 = 2, 90 = 3, 100 = 4. If, for instance, they wanted to number 326, they wrote — naturally, as the other Semites, in the direction from right to left — the corresponding letters of the alphabet: sh k w. In order to
express greater hundreds than 400, they composed two or more corresponding letters of the alphabet: after 400, 1000, 600, 800, 1200, 1100, etc. Indeed, according to a great extent to the need of knowing how to read and write, the Akkadian is opened into the writing of the numbers named, namely calculation, could not be attained through the hitherto developed and practiced methods. Here a number however large may be the number of units it expresses—presented by written characters could not suffice; there precaution was to be taken that the figures expressing the numbers should have such a stamp that they could be taken as the basis for calculation. This was obtained by that the Aramaeans added the 9 figures used by the Hindos and the zero also the value relative to their place given to them by the Hindos. They also named the zero, in faithful agreement with the usage of the Hindoos language, the emptiness (al-żiffl, whence, through extension to all the figures, the English cipher, the German Ziffer, etc.). Still the numeral characters of the Western Arabs must be distinguished from those of the Eastern Arabs. While the former endeavored to imitate the ancient Indian numerals, which are now called Arab numerals, the Eastern Arabs received the Indian figures already in their altered form which they then underwent (8th century, Christian era). The manner in which this happened can hardly be established with historical certainty (see concerning this: Cantor, Vorlesungen über Gesch. d. Mathemat., 2d ed., pp. 669 et seq.; there also the bibliography). (Märhler)

'ADAIM 'Aḏadim, an eastern tributary of the Tigris. It is formed of the junction of several rivers, which have their sources in the mountainous east and far parallel to the Euphrates in, and which in their course from N. E. to S. W. break through deeply cut ravines. The most important of these rivers are the river of Kerkük — the Kāra (Kuus, Khassa)-Caal; on our maps it figures also under the name of Kara-Su, — which issues from several sources north of Kerkük; further the river of Tawk Nāhen skon Tawk (comp. Tāneh), which is the most important of all, which joins the Kāra-Caal southwest of Tānk (comp. concerning the river of Tawk G. Lo Strange, The lands of the western caliphate, Cambridge, 1905, p. 92; about Tawk — Syr. Dājkina — itself: G. Hoffmann, Anc. und verschollenen Abken persischer Märsyren, p. 273, and the Aq-Su, also called the River of the Khurmali. The latter comes from the Shākime-Julqah, and falls below the place Tawk-Khumrtali into the river of Tawk (comp. concerning the latter comp. also G. Hoffmann, loc. cit. p. 273). From this juncture onwards, the river is called 'Adaim, or also Shett, after 'Adaim. It forces its way through the Djiel Hamurr, flows in southern direction across the BABYLONIAN lowland and falls below 34° north lat. and 44° 20' east long. (Greenw.) into the Tigris, animating for a short distance the fall of the latter which is rather weak from its entrance into Babylonia. On the west side of Tawk (below Kerkük) till the discharge of the Aq-Su the northern and then the united northern and middle source rivers meander through extended swamps. When the snow melts, the 'Adaim is connected through a dried up riverbed, northeast of Djiel Hamurr, with the Nārin Caal (on the maps also Nārin-Su), a tributary of the Diyāla, the inhabitants are able to establish such a communication, when necessary, south-west of the Djiel Hamurr, by utilizing the generally dried up Nahr-Raḥfūn, which is connected with a tributary of the Diyāla. When the channel of the Nahr-Raḥfūn is opened into the Djiel Hamurr, and the Lower 'Adaim is almost entirely dried up, towards its estuary the 'Adaim is very scantily supplied with water in the hot season; according to travellers' statements, it is often for some months entirely dried up in its lower course. Many particulars are still doubtful. The exact course of the various rivers is in many places not yet established with certainty. Great confusion results also from the untidy nomenclature in the statements of travellers and partly also on the very spot. Comp. concerning the 'Adaim and its basin Ritter, Erdkunde, III. 342 et seq., 557 et seq.; Billerbeck, in the Mittheilungen der Vorderasiat. Gesellschaft. vic. (1878), pp. 85-86, 83. The name 'Adaim occurs for the first time in the 14th century as al-'Ad'īm or al-'Uqaylan by the author of the 'Arba'ījīāf, see besides, G. Hoffmann, loc. cit., note 2162; comp. also in Mastawi (v. 1740 a. d.): Nahr al-'Adīm — and the hand of the 'Adaim and not with the Southern Diyāla that we may most probably identify the Tarnot of the casemate inscriptions and Teraedotus (Thorna) of the classical writers; see about it Hommel, Grundzüge der Geschichte u. Gesch. des mittl. Orients (3rd ed., Munich, 1904), pp. 3, 9, 29 et seq. The Lower 'Adaim appears to have once had also the name Radām shown from the casemate inscriptions; the latter name has been preserved in the above mentioned Nahr Radām; comp. Streck, in the Zeitschrift, für Assyriologie, XV. 275; Fr. Hommel, loc. cit., pp. 293-294. It is still questionable whether we may also identify the Gyndes of Harodotes with the 'Adaim; comp. Billerbeck, loc. cit., III. 72 et seq. and the author's article Gyndes in Paula-Wissowa's Realencycl. d. hell. Altert.-Wissensch., v. v. (Streck)

'ADARAK 'Adaقار, an island castle in the Danube in the proximities of the city (Dower kapa in the text of the text), still now inhabited by Turks. The fortress was repeatedly besieged by the Turks and Austrians and captured, and till 1878 had a Turkish garrison, but since then belongs to Austria.

'ADAL, one of the Mussulman States (kingdoms) in East Africa that played an important part in the wars between Jaflan and Abyssinian Christians. Makrit (Kūrūk al-ḥālūn bi-dhabbān man bi-saw el-ʿAbbasīya min mutāf el-Jāfūn, Cairo, 1895, p. 6) enumerates the following seven Mussulman States in Southern and Eastern Abyssinia, which he designates as manālīḥ bi'dāl Zala: Aftāt, Darwōr, Aranyahat (Arabahat, Arabatine), Ḥadyā, Shārkīs, Bilāl, Dirā. From these and other chronicles, other States are known which stood on the same footing as the above, one of them being Adal. — Adal ('Adal) is situated to the farthest east of those States, and is approximately identical with the present "Côte française des Somalis". The inhabitants are partly Somali, partly "Afar" (Dannif). It is mentioned the first time in the wars between the Abyssinian king 'Amda Šeyon (1314-1344) and the Mussulman in the march of 'Amda Šeyon upon Zala"
(ADAL) the king of Adal, who wanted to bar his passage was vanquished and killed. Under the kings Zar's Yev'akoh (1434–1458) and Bar'edh Mah'ym (1463–1478) negotiations took place between the Abyssinians and Adal; afterwards the king went to war with the Sultanate of Zalla and defeated him in that region. Further, the king of Adal, Mehdun, son of Awa I, Baday, (Fernhun, Chroniques de Zar's Yev'akoh et de Bar'edh Mharyn, p. 311), belonged to the sultan family of Zalla; he was a grandson of the celebrated Sa'id al-Din, after whom the dynasty and the land were called (Harb Sa'id al-Din). The latter lived about 1400; he fell in 1425–1450 in the battle with King David I of Abyssinia (1382–1410). Adal and empire of Zalla are of synonymous, and their histories are closely connected with each other (comp. Zalla). With regard to the 16th century comp. also GEAN AHMED R. MAHHIM AL-QASIM, Imam of Harar. In the later history of these countries, the wars with the Musulman Somali and A'far are put in the background behind those with the Galla, who since 1540 incessantly warred with the Christian Abyssinians; Adal is still mentioned a few times in the chronicles. Even in the 19th century, before England, France and Italy took possession of the Abyssinian littoral, King Sabha-Setfa of Shoa called himself also King of Adal.

(LITTMEI.

'ADALA (a.) — muscle. Har Sima (Aviceena), in his Canon (Bilb., 1597), l. 39, defines the muscle as follows:

The real movements of the limbs can be executed only by means of a power that flows towards them from the brain through the agency of the nerves. The immediate connection of the nerves with the bones, which are the most essential elements of the moving limbs, is impossible, since the bones are hard and the nervous soft. Therefore the Creator by his goodness made a thing to grow upon the bones, which resembles the nerves and which is called sinew or tendon, and united it with the nerves, interweaving them as one thing. This thing, composed of nerves and tendons is in every circumstance delicate, because the nerve by its union with the limbs experiences no increase in volume and thickness in comparison with its origin. Its volume at its origin is such that it corresponds to the substance of the brain and of the marrow of the spinal column, to the volume of the head and its outlets. And if the nerve had the task to put in motion the parts of the body, especially there where it must be divided and ramified in the limbs, and by the increasing removal of its origin becoming always thinner, it would lead to an obvious decay.

For this reason the Creator by his wisdom bestowed on it a certain thickness through pulling to threads the tissue composed of nerves and tendons, at the same time filling the interstices with flesh, wrapping it up with a membrane and establishing in its middle an axiform column of the same matter of which the nerves are composed. Thus this whole becomes a limb, composed of nerves and tendons and their fibres, of flesh that fills up the interstices, and of a membrane which wraps it up. This organ is the muscle.

When a contract it pulls the sinew, which is composed of tendons and nerves and which stretches from the muscle to the bone. The sinew then contracts and by this pulls the limb. When the muscle extends, the sinew relaxes, and the limb returns to its previous position.

The following anatomy of the muscles begins with those of the face, the number of which corresponds to the number of the mobile parts of the face. They are:

1. The frontal muscles.
2. The muscles of the eyelid.
3. The superior palpebral muscles.
4. The muscles of the cheeks in connection with the lips.
5. The special muscles of the lips.
6. The muscles of the sides of the nose.
7. The mandibular muscle.

Then follows:

8. Anatomy of the muscles of the head.
9. Laryngeal muscles.
10. Pharyngeal muscles.
11. Muscles of the hyoid bone.
13. Corvical muscles.
14. Thoracic muscles.
15. Brachial muscles.
16. Abdominal muscles.
17. Digital muscles.
18. Spinal muscles.
19. Abdominal muscles.
20. Truncal muscles.
22. Ankle muscles.
23. Facial muscles.
24. External and patellar muscles.
25. Tarsal muscles.
26. Muscles of the toes.

As a sample may serve the anatomy of the muscles of the hyoid (ac - Tap, 71, p. 11);

The hyoid has muscles, which belong to it alone and others which serve also other organs. The special muscles of the hyoid are three pairs; one pair comes from the sides of the lower jaw and joins the straight line which is found on the hyoid, pulling it towards the lower jaw. Another pair takes its root under the chin and proceeds under the tongue till the highest point of the hyoid. This pair also pulls the hyoid towards the sides of the lower jaw. The third pair rises at the arrow-shaped bone appendages that are found near the ears; it joins the lower end of the straight line upon the hyoid. The muscles which also serve other limbs are already mentioned and will be yet mentioned (Ibid., p. 45).

ADALIA (a. Antiya; Eng. Sultana, the ancient Attilla), capital of a sandjak in the province of Konis, a Mediterranean port on the gulf of the same name, built on a steep rock 250 metres high. The town has the shape of a horse-shoe, and is surrounded by a triple wall, the foundations of which are washed by the waters of the Darden. These walls, the origin of which goes back to the Roman epoch, have been aggrandized by the Genoese, who have enclosed
there inscriptions and a number of pedestals. They were rebuilt about one century ago by Tekke Oglu, a Dervish chief, who openly rebelled against Salim III. Population 25,000; of whom 15,664 Musulmans, and 9,067 Orthodox Greeks; 62 mosques, of which 3 monumental; 12 Orthodox Greek churches; 1 library. The port, well sheltered, was the chief naval station of the first Turkish corsairs. It corresponds to the ancient province of Tekke; it comprises 5, kazas, 9 nablises, and 544 villages; 22,000 inhabitants, of whom 18,682 Musulmans, and 27,000 Orthodox Greeks; about 15,000 yurts (nomads), and Kajil-bash who practice the trade of takkago (board sawers). Yast forests; veins of chrome and manganese yet unexploited; manufacturing of cotton striped tassies (tağų). Under the Seljukidis it was their maritime arsenal and their preferred winter residence. It had been taken away by Kii-Khanaw I (5th Shabani 607 = 5th March 1207).

ADAM, the name of various proper names: non-existence; art. wafa'd (q.v.): existence.

ADAM, surnamed Abel-Begar, "the father of mankind," and Safi Allah, "the one chosen by God," the Biblical Adam. His creation is related in the Koran in the following terms: "We created man of dried clay of black mud formed into shape;"... (xx. 26). According to Mahomedan legend, however, the angels Gabriel, Michael, and Azrail had, each in his turn, received the order of God to take from the seven layers of earth seven handfuls of sand. The earth had refused to give it; Azrail then, having seized the sand, tore away by force a quantity of earth sufficient to create a man of it. This legend, with some modification, was borrowed from Jewish literature (see Tangir of Jerusalem in Gen., ii. 7; Bab. Tal. Soukohet, p. 38; Pirke R. Elazar, ch. xlii). God also gave Adam on several days of the week, the power to make it grow. The words had been knitted by angels, God himself made the mould of it, which He let dry for a long time before animating it. Manlid, referring to the above mentioned passage of the Koran, states that Adam's body had remained formless during 30 years, and then 120 years longer without being animated; comp. Besiktah Rabbas ad Gen., ii. 7, and Abd 15 K. Nuits (ed. Scholeit), p. 22. After Adam had been created, God commanded the angels to prostrate themselves before him; all of them obeyed with the exception of Iblis (Satan), who by his rebellion brought down his own and Adam's fall (Kor'an, ii. 34; xi. 11; xvii. 62 and elsewhere). As to the legend that God had established Adam as the king of the angels, the Koran followed the Christian Syrian Misder, comp. Besiktah, Schottolde, p. 3 et seq. (text, p. 14). After Adam had been created, God commanded the angels to prostrate themselves before him; all of them obeyed with the exception of Iblis (Satan), who by his rebellion brought down his own and Adam's fall (Kor'an, ii. 34; xi. 11; xvii. 62 and elsewhere). As to the legend that God had established Adam as the king of the angels, the Koran followed the Christian Syrian Misder, comp. Besiktah, Schottolde, p. 3 et seq. (text, p. 14).

ADAMAUA (Adamawa), a region in Central Sudan, bounded north by Bornu, east by Bagirmi, south by Cameroon, and west by Nigeria. From a political point of view, Adamausa corresponds approximately to the territory of Adamalui, and to the usual States that depend upon it. It is comprised between 10° 15' and 10° 15' north lat. and 8° and 15° 30' east long. Its area is estimated at 25,000,000 square kilometres (about 90,000,000 square miles); its population is about 2,000,000 inhab. (8,000,000 inhab. in 1900). The principal towns: Yola, Garin, Bonyo, Tabia, Ngaoundere (30,000 inhab.).

The name Adamausa is not applied to a well described geographical unit, but designates a totality of countries differing from one another in their situation, outlines and products. The southern part of Adamausa which encloses the plateau that separates the basins of the Niger and the Chad from that of Congo, and from which the waters flow towards the Atlantic Ocean through the Sao, towards Congo, towards Chad are the name given for the large expanses of the basin of Adamausa, to which God has revealed books (alluding to the Book of Adama). God showed Adam all the generations of men with their progeny; having learned that David was to live a very short time, Adam, the duration of whose life should have been 1000 years (equal to one day of God), gave him 40 years of his own life, thus Adam lived 960 years (Tabari, i. 330, et seq.), Ibn al-Athir, i. 57, Comp. Besiktah Rabbas ad Gen., iii. 8, and Benilab Habbas ad Numa, vii. 28, where, depending on Gen. v. 5, it is said that Adam gave David 70 years of his life. Having been driven from Paradise, Adam alighted upon the island Surumudi (Ceylon), where he stayed 300 years separated from his wife, spending his time in doing penitence (Kor'an, i. 37; comp. ibid. Tal. Yukta, p. 189). There is on the island a mountain called by the Portuguese Pico de Adam, where, according to legend, are set on a rock the imprints of Adam's feet. While Adam was separated, God brought his summit to Mount Arafat near Mecca, where he met his wife. According to Tabari (1. 122) and Ibn al-Athir (L. 29), God ordered Adam to build the Ka'bah temple, and Gabriel taught him the pilgrim's ceremonies. Adam died Friday the 8th Nisan, and was buried in the Cave of Treasures (Mas'had at-i-banu), at the foot of Mount Abu Kais (Vakili), ed. Houtana, i. 50. According to other authorities, his corpse was after the flood brought by Malchireshed to Jerusalem. (Benzaid, loc. cit., pp. 9-10).

ADAMAUA.

seems that of the Congo region, while in the center and north there are two seasons distinctly different and great variations of temperature. Finally, from the gallery-shaped forest one may pass to the herbaceous savanna almost deprived of large trees. The relief of the surface increases the variety of aspect. From Cameroon to Bornu a rather narrow mountain ridge (7 to 8 kilometers) of a middle height (7 to 800 meters) is overtopped by peaks which do not exceed 15 to 1400 meters, crossing Adamana (the Cebbi mountains), a range of mountains of Atlantika, south of the Benue, and the Mandara mountains, north of the same river. From the central mountain ridge detach themselves ruminant counterforts, which separate the valleys of the various tributaries of the Benue, and afford a shelter to the tribes chased by the possessors of the plains, here and there rising isolated mountain chains (Sari to the south and Mendi to the north of the Benue).

The population of Adamana is extremely composite. By side of races particular to this region (Dokka, Durru, Ahom) which belong to the Negro group, there are others which approach the type of the desert tribes, or which come from a cross between the two. One meets indeed in Adamana Hausa, Kanuri, Fulani. The latter introduced Islam in Adamana, and succeeded in establishing in this country the political organisation which it possesses now.

Toward 1825 Fulani adventurers, settled north of the Benue under the command of a certain chief called Adams, crossed that river, invaded the country of Mitombda, that was occupied by fetishist tribes, and established a camp at Gurin. The success of the first invaders attracted others of them and soon the gangs united at Gurin had to be dispersed. The warriors, led by Adamu, settled at Yola, while other chiefs were conquering the neighboring counties, founding there small States, which, though recognizing the suzerainty of the monarch of Yola, were ruled by the descendants of the first conquerors. Thus the Fulani were scattered in the whole of Adamana, little by little they occupied the western and southeastern regions. Some of them settled at Garun, others reached the South-African tableland; towards 1835 a chief called Aiya subdued the Ngaoundere country; after 1870 other gangs conquered the country of Garin. The Fulani mainly owed their successes to their horsemen armed with bows; therefore they were powerless before the mountainous that were defended by the nature of the soil as well as before the tribes, which, thanks to their being in the neighborhood of Europians, had succeeded in obtaining firearms. Now the Fulani rule over the whole Benue valley, from Yola to Bebene, in Northern Adamana till the Mandara mountains, south of the Benue, in the plain between Yola and Koula, and in the Faro valley below Camu. On the other hand the Fulani possess south of the mountain chain of Sari nothing but dispersed colonies and some posts commanding the road from Yola to Ngaoundere. The pagan tribes of the center (Adajin, Galibi, Sadji) recognize, nominally at least, their supremacy, and pay tribute to them, while on the table-land, the pagan State of Galim escapes their rule entirely.

The organisation established by the Fulah in Adamana is a feudal one, comparable in certain things, according to Passarge's expression, to the German Holy Empire. The nominal chief of the country is the sultan (babamun禹) of Yola, chosen among the descendants of Adamu, but the sultan himself recognizes in his turn the religious supremacy of the sultan of Sokoto, who has taken the title of "Amit e-Mu'min". The sultan is assisted by a kaffil, guardian of the Musulman law, who is a council consisting of his ministers and of the "galadima" representatives of diverse Muslim groups which participated in the conquest. The different provinces are administered by "lamids" chosen in the families of Adamu's principal lieutenants. These chiefs receive from the sultan a turban as a token of investiture. Their vassalage, however, is for the most part only nominal. The three provinces Tibesti, Ngaoundere and Bahr-el-Mahadi in reality are entirely independent.

Thus the Fulani form a military and political aristocracy. Still since their settlement in this country, they modified their way of life. From exclusive nomads and shepherds which they were primitively, they became in a great part sedentary, and devote themselves to agriculture with the cooperation of slaves obtained in the raids made upon the fetishist tribes. But commercial activity and riches gradually flow into the hands of the Hausa, the "African Paria" as Passarge calls them.

From a religious point of view the role of the Fulah has been considerable. They have imported and spread Islam in Adamana. Still, Islam is far from having completely conquered this country. The tribes which remained fetishist actually get the superiority over those that adopted the new faith: — the Fulani, Hausa, Kanuri and the Shek Arab are only the tenth part of the entire population. Besides, the practice of Islam is very superficial. The new converts adopted the garments and cultural ceremonies of the believers; they accomplish the five ritual prayers, frequent the mosque, repeat the name of Allah to excess, but they have at the same time preserved the fetish practices. The Fulani themselves, through their prolonged contact with the pagan tribes, adopted superstitions and rites foreign to Islam. They, for instance, bury their dead in houses, where they must light no fire and which they must not repair. On the family organisation the influence of Islam has scarcely made itself to be felt. The women's condition has not been altered; their morals are now as free as before. Intellectual progress is virtually sought. The knowledge of the Arabic language is very little spread. Passarge tells us that he had great difficulty in finding at Ngaoundere one capable to read the letters of recommendation written in Arabic which he had with him. In this respect Adamana is much behind Bornu and the Hausa countries. The difference between them, Passarge says, is as great between Russia under Peter the Great and Western Europe. As to European influence, it scarcely begins to be noticed in this part of the Sudan. Adamana, visited by Fiegen in 1813, whose arrival was a longtime intimated to Europeans. Fiegen in both travels could not stay there, Miron crossed it from north to south in order to reach the Congo basin (1891), but in the course of his second travel (1893), he could not go beyond Yola, which Maitre, arrived from Ubangi also reached in the
same year. The first German missions that departed from Kamerun were compelled to retreat to Bia. Still the English missions that departed from Nigeria succeeded in going upwards beyond Yola. The von Uechtritz-Passarge expedition, organized by the Committee of Kamerun, succeeded in the course of the years 1893-1894 in studying systematically this part of Africa. Adamana was finally the object of competition of European Powers, established on the coast and on the Lower Niger, which endeavored to include it in their sphere of influence. The treaty of the 15th March 1894 between France and Germany fixed the boundaries of the territories assigned to either of the two Powers. The line of demarcation was drawn in such a way as to leave Nifara, Kumdo, Gana, that is to say, Eastern Adamana to France. As to England, it has preserved a circular zone around Yola, the radius of which is a line drawn from Yola to a point 5 kilometres distant from the estuary of the Faro, a tributary of the Benue. It may be concluded from what has been said that the greatest part of Adamana is under German occupation and belongs to the colony of Kamerun.

Besides the exposition of the results of the von Uechtritz mission which it contains, this work recapitulates and coordinates the previous works and observations; comp. Markovits, in the Zeitschrift der Gesellschaft für Ethnologie, 1895 et seq. (G. Vv. á.)

ADANA, capital of the province of the same name in Asia Minor. The town counts 30,000 permanent inhabitants (of which 13,000 Musulmans, 12,575 Gregorian and other Armenians), besides a fluctuating population of 15,000 workmen, occupied with the decortication and cleaning of cotton. Adana is situated in the middle of a stretched plain, on the right bank of the Sûphan (the oulter Saras), it is connected with the port of Merina by a tramway, and possesses old bridges built by Justinian. The old Byzantine citadel was entirely destroyed by Muhammad Ali Pasha in 1836. It contains a large mosque Ulû-Lidâmec, built by one of the Râzâda-Oghlu, Khâli Bogh, or Piri Beg, 28 mosques, 37 madrasas, factories for sesame-oil, military cloth and felt; 7 mills for glazing cotton. The province of Adana is divided into 5 sandjakhs (Adana, Merina, Il-Hi, Közün, Ujbal-Bakrash), 15 kazas, 22 nahiyes, 1844 villages; total population 403,340 inhab., of which 13,000 Musulmans, 69,000 Gregorian Armenians, 46,000 orthodox Greeks; very mixed races: 12,000 newly immigrated Circassians, Kurds, Turkomans, Yuârus (nomads), Napatiris, Syrian Arabs, etc. — The sandjak of Adana consists of 5 kazas (Adana, Humidiya, Kâra-Talin, 5 nahiyes, and 50 villages).

ADAR or AMAR, a-v., the sixth of the Syrian months which the Arabs call islâm al-ţanû the month of the Romans.* (E. Mahler.)
The Arabs themselves have sought, already for explanations for these phenomena, but only one deserves consideration in so far as it is in the interpretation it leads back to the root, whence both meanings branched out ( Ibn an-Abîrî, loc. cit., p. 4, II. 20 et seq.; Masâkîn, l. 195, II. 25 et seq.); the other explanations account only for the actually occurring meanings, and either regard all the ad-Dâd as meanings borrowed by the Arabs from one another (Ibn an-Abîrî, loc. cit., p. 7, II. 15 et seq.; Masâkîn, l. 194, l. 4) or attempt, often uncervely, to find a harmony between the meanings; for instance the Arabs explain dâd in its meaning "whole" by that the whole thing is only a part of something else (Ibn an-Abîrî, loc. cit., p. 6, l. 16). All the recent attempts to explain this linguistic phenomenon from one point of view, such as Abîl’s (Über den Genus und der Urworte, Leipzig, 1884), who opposes them to be the remainder of the logically contradictory conception of the first man (see Gise, Untersuchungen über die Addâd, p. 52), or even that of Legrand (Étude sur les formes des racines nominales, Paris, 1858), who tried to trace them back by ventre's etymology (see Landau, Die gegenwärtigen Wurzeln in All. und Arab. in der Geschicht, pp. 21-22), may also be considered now as done away with. (See also the notice in the Journ. of the Soc. of Ar. As., 1895, pp. 223 et seq. and in the Aretic Quarterly Review, new series, IX. (805, p. 242), who found in the ancient poetry only 22 words with contrary meanings, has supported by the results of sematology, furnished for the solution of this difficulty different productive method of which, if applied to all the domains of the Arabic language must certainly be amplified and modified (even if he did not succeed in explaining all the ad-Dâd); 1. Metonymy, which is understood as an one meaning of a word being a causal or temporal consequence of another meaning: e.g. nalî, to fill a basket with diffluence, to carry it away; nûdî, he who goes to the water, the thirsty one; he who returns from the water, one having his thirst quenched. 2. Conception of conceptions of various natures; e.g. instance bâlî (e.g. 4. For the words of emotion and odor the neutral original meaning is to be supposed; to be excited, no difference whether it is applied to the good or bad sense; thus for instance ûnî to be afraid and to be pleased; jârî, to be sad and to be joyful; râjî, to hope and to fear); qaflâ, bâlî, to be narrow-ness, to narrow.
and therefore may be applied both positively and negatively; e. g. farada, to rise, to sink (comp. चर्चा, निपट); see Lansd., loc. cit., pp. 71 et seq.).

— Besides this the lack of compound prepositions in Arabic makes much ambiguity possible (comp. al-Suyuti, loc. cit., p. 189, l. 12: madda = adda, to turn oneself to; and = adaba, to turn oneself from; suwada, लिख, to give on (in the sense of to answer), and many similar expressions which admit a double interpretation (Landsd., loc. cit., p. 168 et seq.), e. g. amma, properly and then as a thing of little or great importance; mada'm, a gathering place of women, either on or on joyous occasions; umm, "husband," "wife." Finally the many dialectical adda are of importance. Arabic philologists already quoted such examples: addafa, "armoire" in the dialect of the Tanimelis, light in that of the Kabists; addaha, to sit (adda) in the Himyarite dialect, to spring up generally in Arabic; further adda' or adda, etc. This phenomenon of alteration of the original meaning of a word in different cultural spheres and according to different modes of viewing life and the world is to be noticed not only in the Arabic dialects alone but in all Semitic languages (e. g. Arabic, Persian, Hebrew, Irish, in the Semitic family, originally: stone, wooden, etc.); see also poverty, originally: strong; weak. Recently Landberg contributed valuable material from modern dialects (La langue arabe et ses dialectes, Leyden, 1935, p. 64 et seq.).

The adda problem is for the Arab scholars widely different from what it is for us; for them it is a practical problem, for us it is a scientific one. To the Arabs it was of prime importance to give an index as complete as possible of all the words desired for daily use, which have contrary meanings; in this they are often guided simply by exterior concession; so for instance do they put among the adda the word wadhā, i. e. apprehending root = د.ج. = "vigorous," "strong," "root of y. The origin and explanation are for them a secondary consideration, which, if looked to, is only superficial. With us the practical need is put in the background, we occupy ourselves not only with words but also with things, and we explain the adda with roots. We should therefore not be satisfied with the classical language and its quotations from the Korān and poetry alone, we should rather bring into the sphere of consideration all the dialects, also those even the kindred Semitic languages, which many Arab (e. g. Ibn Duraid), in reality consider as adda only those words which have in the same dialect both contrary meanings (al-Suyuti, loc. cit., p. 191, II. 12 et seq.; adda = adda), and draw the other dialects into the sphere of their consideration simply from practical motives, because misunderstandings or even mishaps might arise from unacquaintance with them (ibid.); Ibn al-Anbars, loc. cit., p. 59, II. 4 et seq. s. v. वाट). The lack of understanding the conception of the rise and organic development, which properly arises from religious motives and which extends too, of knowing the language, has deterred the Arabs, in spite of the great amount of material, from coming to the proper solution of the problem. In addition to this there is a total unacquaintance with the other Semitic languages and West Asiatic history and culture as well as the groundless exaggeration of the

words of religious life (e. g. अम्मा, अम्मे, अम्मा).

The works on the adda have till now been undertaken only on the basis of the material, sometimes misleading, of Arab philologists that has been handed down to us. A compilation and treatise, independent in its construction, and taking into consideration the dialects and kindred languages would bring an important amount of knowledge of the history of culture.

ADEN, a maritime town in South Arabia, on the northeastern coast of the completely arid and vegetationless peninsula of Aden; the town owes its importance to maritime trade that flourishes there from ancient times. The present harbor Steamer Point, which is visited every year by 1300 steamers, lies at a certain distance from the proper, strongly fortified town. The population of the latter has at all times been of a mixed origin; this explains why the Arab geographers designate the Arabic spoken there as a corrupt dialect. Even now the population there does not consist exclusively of Arabs, for many Hindius, Somalis, Jews and Europeans have also settled there. The total number of inhabitants is estimated at 44,000. The magnificent cistern constructions in a mountain-gorge, which supplies the town with drinkable water, and on an ancient structure neglected for a long time, then restored by the English, — are worth seeing. Aden does not possess any special Muhammadan edifices, the principal one is the monument of the saint of the town, Shikh al-'Ali Daras, erected on its grave. In the vicinity, on the road to Shikh 'Olahm, there are some salt-pans.

Historical. Aden, known already to the Greeks and Romans under the name of Adama or Athana, received its first Mussulman governor, Abdulla al-'Ash't, from the Prophet himself. Later on Aden generally shared in the fate of the province of Yemen, among whose maritime towns it was considered, after the Banu Zayd had founded there an independent dynasty (904 = 916). About one century later (928 = 1041) the Banu Ma'in [q. v.] attained supremacy in Aden, Labihi, Abyssin, and Hadiyamaw. They, the Sadahans of Yemen, were the dominion over Aden, afterwards discord broke out among the Banka Karim, till finally a portion of this family, the Banka Zarai [q. v.], preened and declared itself independent about 1019 (1125). The domination of the latter lasted till 509 (1617), when Tarak Shah, Sultan al-Din's brother, conquered Yemen. Then the power was held there successively by the Abysinn (till 655 = 1258), the Rasuliden (till 858 = 1454) and the Tadjides (till 923 = 1517). In 1513 the Portuguese under the leadership of Alfonso d'Alvarenga appeared before Aden, but could not capture the town anymore than a few years later, could the Egyptian Mamiliki after they had torn away the zity of Labihi from the last Tadjide. More fortunate were the Ottomans in 1538, although they lost again in 1568 in their war with the Zaidites of San'a. It is true that they reconquered the place once more, but were compelled to renounce it for good in 1630. Since that time the Zaidites ruled there; still in the beginning of the 18th century Aden fell into the power of the sultans of Labihi [q. v.], under whose rule the town last its previous importance as a harbor-place, so that when in 1838 the
ADHÀ (アダ), victims (cassia, sheep, and horned cattle), which are slaughtered as the forenoon (Ja'f) of sacrifice (al-hajj), i.e. the 10th of Thulî-l-Hajj. The flesh of the victims is considered as qadîdah and is left to the poor, yet he who brings the offering also partakes of it. The characteristics of the victims and the manner in which they are slaughtered are accurately prescribed in the Jâfi books (Comp. Thânas and Nasîh). The custom of doing this on the above-mentioned day in Mindû [q.v.] is pre-Islamic and was established also for Islam through Sûra xxii. 34-37. Of course, the law compels nobody to bring sacrifices, unless when one is obliged to do so in account of a vow or of a certain misdeed. The victims destined for this solemnity were consecrated by coveting them with old shoes or by making bloody incisions in their skin.

'ADHÀB (أذى), torment, sufferance, affliction, inflicted by God or a human ruler, and in so far as it expresses not only absolute power but also love for justice, also punishment, chastisement (عذبة). The divine judgments, which are also mentioned in the Qur'ân, hit the individual as well as whole nations in the life of this world as well as in the life to come. It is mainly unbelief, doubt of the divine mission of the prophets and apostles, rebellion against God that is punished by death (see Abdel Râhîm, Thânî, Tâhâlî, and others). With respect to the punishments in the life to come, which begin already in the grave (عذة الدهر), see Thânî, Munkar, and Nakîs.

The punishments established in Musulman law (الذنوب) are of four kinds:

1. Jâhî, i.e. retaliation. The guilty one may, by virtue of the right of retaliation, be killed, wounded or mutilated (see Sâlih).
2. Diya', i.e. blood money, which has to be paid if retaliation is not taken into account, or if the same is either impossible or unpermitted (see Diya').
3. 'Âdûd, i.e. the punishment exactly defined by the law, which may neither be reduced nor augmented, e.g. lappation, a fixed number of lashes, crucifixion, cutting off the hands or the feet and others (see 'Âdûd).
4. Tâ'ârî, i.e. the punishment inflicted by the judge according to his estimation. It may for instance consist of imprisonment, exile, corporal punishment, boxing on the ear, a reprimand or any other humiliating proceeding. The judge may for instance blacken the face of the culprit, cut off his hair or have him led through the streets, etc. (see Tâ'ârî).

The punishment is considered in Musulman law either as the right of God (الذة الاله) or as the private right of a man (الذة私人). In the latter case the punishment is applied only at the desire of the plaintiff (or by the latter's relatives or assign). The punishment, e.g. retaliation, is inflicted upon the culprit as the personal right of the plaintiff.

In the case of a transgression against God, and the punishment consequently being then a jâhî, there is, however, a peculiar principle in the law. God, it is supposed, is forbearing and requires no punishment of the transgressor.

Punishment was considered in the beginning of Islam, just as in Arabian paganism, as a purification from sin. So for instance a certain Mâa'î b. Malik came to the Prophet and said to him: 'Abû Bakr, punish me.' Comp. L. Goldschm. Mos. Stud. i. 87, note 1; ibid., Das Strafrecht in Islam (Fragen zur Rechtsvergleichung, gestellt von Th. Mommsen, herausgegeben von H. Brunner, etc.), pp. 101, 104, note 2.

But the Prophet is stated to have said: 'God will forgive the sins of every believer except when the sinner makes them known to the public. God loves those of his servants that cover their sins.'

On the ground of this tradition, there is a prescription in the Musulman law books that when the punishment is to be considered as a jâhî the transgressor should hide his guilt as much as possible and not confess it, and even when he did confess it to revoke his confession. He is supposed to turn himself much more to God in stillness, for God accepts his conversion when his intention is pure.

The witnesses too are commanded not to testify to the detriment of the accused person, and it is meet that the judge should show the latter all the circumstances extenuating his guilt and the validity of revoking his confession. The judge may even entirely leave out the punishment except when the right of a man is also injured at the same time and the latter demands the punishment of the guilty one.

Only in the case of a punishment established by the law (الذنوب) the judge has no choice and must execute the punishment. With regard to the latter punishments even an interference on behalf of the culprit is not allowed, while otherwise it is even recommended. But in order to establish the guilt of the person accused evidence produced with great difficulty is always required in such cases. Practically the decisions of the canonical law offer everybody the opportunity for escaping such punishments. There is only one practical ground on which the legal evidence and the execution of 'determined punishments' may be based, it is the confession of the culprit himself, so that in this respect the 'determined punishments' have the character of peritence.

It is hardly necessary to be remarked that eastern despots were never satisfied with these legal punishments. Very often by mere arbitriness they inflicted quite cruel and barbarous punishments for real or supposed misdeeds. Particularly there was nothing more sati with that
discouraged visitors or other dignitaries were subjected to most unhuman terrors with the object of extorting money from them before their execution. — As to the criminal law now in vigor in Turkey, see MIJELLE.

ADHANIA, collective name for the pupils of the celebrated Shafiite Imām, 'Abd al-Rahman ibn Ahmad ibn Hanbal, who, from the point of view of later authors, have formed a Delegated order.

ADHAN (a.), "annunciation", a technical term for the call to the divine service of Friday and the five daily ʻazādāt.

According to Mussalmam tradition, the Prophet, soon after his arrival at Medina (1 or 2 years after the Hijra), deliberated with his companions on the best manner of announcing to the people of Medina the four seasons. Some proposed that every time a fire should be kindled, a horn should be blown in a ʿādāt (i.e., a long piece of wood clapped together with another piece of wood; with such a ʿādāt the Christians in the East used at that time to announce the hour of prayer) should be used. But one Mussalmam, 'Abd Allah b. Zalī, told him that he saw in a dream somebody who from the roof of the mosque called the Mussalmans to prayer. 'Omar recommended that manner of announcing the ʿādāt, and as all agreed to it this ʿādāt was introduced by order of the Prophet. Since then the believers were convicted by faith, and up to our days the ʿādāt is used at the time of the ʿādāt.

The ʿādāt of the orthodox Mussalmans consists of seven formulas, of which the sixth is a repetition of the first.

1. ʿĀdāt al-šaʿb: ʿĀdāt al-šaʿb is called al-shaʿb, ʿĀdāt al-šaʿb: ʿI testify that there is no god besides Allah.
2. ʿAdāt al-ʿālim: ʿAdāt al-ʿālim: ʿI testify that there is no god besides Allah.
3. ʿAdāt al-nabi: ʿAdāt al-nabi: ʿI testify that Muhammad is the Apostle of Allah.
4. Ṣalāṭa: Ṣalāṭa: ʿCome to prayer!'
5. Ṣalāṭa: Ṣalāṭa: ʿCome to salvation!'
6. ʿAdāt al-Shaʿb: ʿAdāt al-Shaʿb: ʿI testify that Allah is most great.'
7. ʿAdāt al-ʿālim: ʿAdāt al-ʿālim: ʿI testify that there is no god besides Allah.

The first formula is repeated four (by the Malikite: three) times, after the other, the other formulas are repeated twice, except the last. These four are: ʿI testify that there is no god besides Allah. The 2nd and 3rd formulas after being pronounced once are added in the ʿādāt. This formula, when pronounced twice, is inserted between the 3rd and 4th formulas, but the Hanafites pronounce it at the end.

The ʿādāt of the Shafiites differs from that of the Sunnis in that the former has an eighth formula (inserted between the fifth and the sixth): Ṣalāṭa: Ṣalāṭa: ʿI testify that there is no god besides Allah, and pray to God! These words have at all times been the Shihbush of the Shafiites, when called out by the Friday preachers in an orthodox country. The inhabitants of a country would become Shafiite if a Shafiite Imam should appear in the country. Snouck Hurgronje, Mekka, i. 63: S. de Sacy, Christenstaaten und Islam, i. 60, 169). The Shafiites pronounce also the final formula twice.

The Mussalmans who hear the ʿādāt, must repeat its formulas, but instead of the third and fourth, they recite: ʿAdāt al-ʿālim: ʿI testify that there is no god besides Allah, and pray to God!, instead of the ʿādāt formula in the morning ʿādāt, they say: ʿAdāt al-ʿālim, ʿI testify that there is no god besides Allah. The ʿādāt is followed by glorification which is more accurately determined and recommended by the law. It is omitted only after the call to the maghrīb-ʿādāt [see ZALAY], because the interval between the ʿādāt and the prayer is very short.

There is no fixed melody for the ʿādāt. Every ʿādāt may be modulated at will with any known tune, provided that the right pronunciation of the words is not by this interpolated by it. Comp. Snouck Hurgronje, Mekka, ii. 87: In Mekka one hears different airs at the same time. Like the recitation of the Koran, the singing of the ʿādāt is in Mekka an art well cultivated and highly developed. Only among the Hanabites there are doctors that do not allow any melody for the ʿādāt.

Every Mussalman who, whether alone or with his family, recites the above-mentioned ʿādāt at home or in the field must have the ʿādāt pronounced in a loud voice as it is prescribed by the law (comp. Snouck Hurgronje, Meccanische Sprichworter und Redensarten, p. 87: Die ihn in der Tat, land und volk, von Niederadel, 5th ser., l. 519). The call to the other common ʿādāt, for instance the two holiday ʿādāt, those at sun and moon eclipses, etc., has only one formula: ʿAdāt al-ʿālim, ʿI testify that there is no god besides Allah, and pray to God! This formula is said to have been current already in the time of the Prophet. Comp. I. Goldscheider, in the Zeitschr. d. Deutsch. Mission. Gesellschaft, vii. 314: Important information respecting the modifications of the ʿādāt formulas and the various times to which they are related in various places from the beginning of Islam is to be found in Makrit, ʿAdāt, i. 569 et seq.

Owing to the profession of faith frequently oc-
cutting in the adhān, the Mussulmaus used to pronounce it in the right ear of a child shortly after its birth (comp. Smuczk. Hasznosza, Melch. II. 138) as well as in the ear of people supposed to be possessed of jinn (evil spirits).

ADHAR or ADAB, the name of the 9th month in the Persian calendar, and at the same time that of the 9th day of the Persian month. For the sake of distinction the former is designated by Adhar-nâth (Adhar day) and the latter by Adhar-nâta (Adhar day).

(M. B. MAHLER.)

ADHARBADJAN, a province in the empire of the caliphs, bounded on the S. E. by al-Ishtah (the ancient Mediæa), on the S. W. by the eastern part of the province of Lâşar (the ancient As-Syria); on the W. by Armenia, on the N. by the provinces of Ayr and the countries of the Caucasus, and on the E. by both shore-lands of the Caspian Sea, Mughân and Gilân. Nowadays under Adhar-
badjaun is understood the northwestern province of Persia which borders on Turkey and on the Russian Caucasus and which mainly comprises the former Abbasid province. In ancient times this district formed at first a part of the great Median province of the Achaemenian empire; it is only since the time of Alexander that it came into the possession of the Persians, and was after Atropatene, a Persian satrap, who had gone over into the service of the Great and who at the division of the world among the successors of Alexander maintained himself as master of Northwestern Media, the so-called Media Minor. His dynasty held the sway at least till the beginning of the Christian era. Atropatene remained further still as an independent Arzakid independent state, which must at least have existed still in the second half of the 3rd century A.D. (comp. A. V. Gutsmid, Gesch. Trans., Tübingen, 1888, pp. 149-150). The boundaries of Atropatene have repeatedly fluctuated in the course of time (comp. concerning this Marquart, Erzahlb. w. d. Geogr. d. Iran. Moslem. Orient., p. 339 = Abbé). d. Götz, Gesell. d. Wissemensch., new series, ii. Niederl. 1901, pp. 108 et seq.). — The Strabonian derivation of the name of Atropatene from Atropates is in any case to be maintained as the right one; it is wrongly rejected by modern authors; the name is not to be found in the Assyro-Babylonic cuneiform inscriptions (comp. Streck, in the Zeitschr. d. Assyriologen, xxv. 359). In Armenian works the name Atropatene occurs under the form of Arpat-
takan. The exact pronunciation of the name in the 3rd century was without any doubt: Adhar-
badghân, which surely preserved its official character till the fall of the Sassanid empire in the 7th century. But already in the course of the 4th century a form of the name characterized by the pronunciation then the elision of the second adhâ was formed in the popular language. This vulgar form was throughout used by the Syrian authors in the 5th century: Adharbadghân, whence the Byzantine form Adharbadjiân (Adharbadjiân). The Arab geographers write (A)Adharbadjian, here and there also Adharbadjian. The modern Persian name is properly speaking Adharbadjian, and is pronounced Abharbadjian in consequence of the usual Arabicized spelling. For the modern Persians, who could not know of Atropates, it was quite natural to connect the name with Adhar, "fire," an etymology too much more natural as just in the region of this name there were in the time of the Sassanides specially considerable fire temples (as for instance a celebrated sanctuary of this kind in Ganzak). With regard to the name and history of Atropa-
badjan was among the less important provinces; later on, after the Mongol storm, it stood off in more political relief.

Physically Adharbadjan appears as a magnificent, rifted Alpine landscape, and more exactly as a high plateau bordered all around by higher mountain crests. The Sahend (ca. 3700 metres high), south of Tâbita, the extinguished volcanic Sawaian (3820 metres), the Sarkân of the Arab geographers, west of Aribat and the smaller Arazat (4930 metres) rising in the northwest are to be considered as the highest elevations in the province. The center and at the same time the deepest depression (1300 metres) in it lies in the Urmia Lake, the most extensive basin of the present Persia. The most important water courses are: the Anâ sau of the classical writers; the Aras (Araxes of the classical writers); the Turki-Uzen (red river); a Turkish name proved to have been current in the 13th and 14th centuries) in the south. The latter in its lower course is now called Saffid-udl (White River), and the whole river was known under this name to the Arab writers of the Middle Ages; comp. regarding this G. J. Strange, The lands of the eastern Caliphate (Cambridge, 1905), pp. 170-170. With regard to the Kiril-Uzen, the ancient Arméno, its sources, course etc., see the detailed description of Andreas in Pauly-Wissowa, loc. cit., i. 1734 et seq. The Aras and Kiril-Uzen, both of which fall into the Caspian Sea, are still now, just as in the Middle Ages, in a great part of their course as frontier rivers: the Aras as the boundary between Abharbadjian and Caucasus and the Kiril-Uzen as much between Abharbadjian and al-Libnân (Media, more exactly Media Major of the classical writers), the present Persian province of Irâk-Adrâm. The capital of Atropatene was Ganzak (Ga-
ADHARBAJDJAN—ADHROH

ADHARBAJDJAN (trans. Clémont-Müller, Paris, 1866), l. 569; Kasmir (ed. Wilamowitz), l. 271; L. Leclerc, in "Le Nörec et extrait des manuscrits," c.ill. 38. (HALL.)

ADHRA' (A.), Ht. al-'uṣīra, name of a constellation in the zodiac, also called al-Sanbūla, after its star of the first magnitude (Sφην ιουρίδας). It was also the name of the beloved one of Wāḥiṣ (q.v.).

ADHRAṬAT, the Biblical Edrit, now Dera'a in the East-Jordanian country. The name, mentioned by Ibn al-Qādī (ill. 19), was in 613 or 614 so thoroughly destroyed by the Persians—who thoroughly assaulted the Byzantines in the vicinity—that it was never afterwards completely re-established. The Jewish tribe Nadir, driven by Muḥammad from Medina, moved to this town. The statement (Belädhör, p. 63) that the inhabitants of Adhraṭ submitted to Muḥammad when he stayed in Tabkil, is apparently based upon a mistake. But they submitted to the Muslims under the caliphate of Abū Bekr and later welcomed 'Omar during his stay in the East-Jordanian country (ibid., pp. 126, 439). The city, famous for its wine, became under the Arabs the capital of the province of al-Baḥrāniyya. Like the other East-Jordanian towns Adhraṭ was laid waste in 293 (906) by the Karmathians. Muṣṭafid (p. 162) describes it as a town situated near the desert, the mountain chain of Džūmah forming its territory. Yāḥṣīb (Muṣṭafid, i. 176-177) mentions some scolars natives of Adhraṭ. As to the present relatively important locality of Dera's, comp. Schönmacher, "Accez der Jordan," pp. 121 sqq.; Bahri, l. 1005, 1007, 1415; ill. 2257; Bibliogr. arab. (ed. de Goeje), vii. 113; al-Bakrī (ed. Wüstenfeld), l. 83; Noldeke, Geogr. d. Prophet. u. Araber zu Zeit der Sassaniden (Leyden, 1879), p. 299; idem, in the Zeitschr. d. Deutsch. Morgenl., Gesellschaft, xxix. 431. (F. Burck.)

ADHROH (this is the pronunciation of the very spot; comp. Adasq.), more rarely Ogghj, a place between Maḥṣūr and Petra, a magnificent Roman camp with an overlooking spring, unfortunately discharging its waters into a kind of a funnel. This place, situated in the Djaḏhum country, was later visited by the Korsılmāc caravans. At the time of its submission to Muḥammad it contained at least one hundred families. Muṣāwīya is said to have received there homage from al-Jaza, the son of 'Alī; it is still mentioned in the 11th century of the Christian era as inhabited by Hāshimi Mawās. It is not mentioned any more since the time of the crusaders, who nevertheless possessed in that region Almahatī, the Vān Musa (or 'Wādī Mitāq), etc.

Adbroh is chiefly known on account of the conference—called the conference of Adbroh—which took place there. At Sufīn it had been agreed upon choosing a place just in the middle between Syria and 'Iraq: Dīnāt al-Djandil or Adbroh. It was decided for the latter, on account of its beautiful water and being more accessible to the illustrious Medinim invited by Muṣāwīya. If certain statements state Dīnāt al-Djandil to be the place of the conference, it is simply by transcribing the 'imāmūt without discussing them. In another place they decide for Adbroh, and the testimony of contemporary poets removes every doubt (comp. al-Aḥṭal, Dāhkār, 'Iraqa. 23). The
assembly (38 = 655) had to decide between 'Ali and Mu'awiyah, each of the two plenipotentiaries (hashimun), Abū Mansūr al-Aswārī for 'Ali and Abū Isḥāq for Mu'awiyah, was escorted by 400 men. According to the current version, Abū Mansūr was deceived by a false disloyalty of 'Amr; the latter, after it had been agreed to depose Mu'awiyah, publicly took back his word and went so far as to proclaim him caliph. But this is inadmissible: such an enormous lie would rather have heightened 'Ali's prestige, and called forth the protests of the Ḥishāni escort, such impartial witnesses as Sa'd b. Abī Waqqās, Ibn 'Omar, etc. Neither would have 'Ali's own partisans.—as was the case with Khirr b. Rāshīd—ascended from him on account of his prejuring 'Ali himself does not mention in his protestations 'Ali's lie; if he names the arbitrators it is to accuse both of them of felony.

The honest, but naïve Abū Mansūr could not struggle with the artful (al-azzāyī) 'Amr, and the latter cleverly turned to his advantage the misunderstanding, with which terminated the conference. The object was not clearly determined, still less the points that were to be discussed: the arbitrators had simply confined themselves to declare that the Ḥishāni would serve them as a basis and a standard. The conference was considered by the Ḥishāni as a simple formality, in which their candidate should triumph. The Syriacs, on the other hand, if the discussion of the mentions of both 'Ali and Mu'awiyah—the latter had not yet then made them manifest—was to them out of the question, wanted only to examine whether 'Ali's responsibility in the assassination of Othman did not exclude him from the government of Islam. Al-Aswārī's chief mistake was in allowing his colleague to place on the same footing Mu'awiyah, a simple governor of a province, and 'Ali, recognized as caliph by the majority of the Mussulmans. Before that time, the son of Abū Saḥīfī had passed only for the avenger of Othman's blood, and, as Ibn Abī Rabīḥ (Ibn Iyās, ii. 192) observes, the Syriacs followed him as such and not as a pretender to the caliphate. Because Abū Mansūr did not make any distinction between the two candidates, he thus encouraged the secret designs of Mu'awiyah: he allowed 'Amr to disavow the latter's rights to succeed Othman. After having tired Abū Mansūr by proposing a series of unacceptable candidates, 'Amr induced him to declare that both candidates should be removed from the throne. Mu'awiyah lost nothing by this sentence, but it deprived 'Ali from the supreme dignity. While he became again simply the son of Abū Talib, his rival remained governor of Syria. This brilliant diplomatic victory, constraining 'Ali to prejuring, placed the right on the side of Mu'awiyah and habilitated the people in general to consider him as the only person capable to restore peace unto the Mussulman world. On Mu'awiyah's return from Adhārūn, the Syriacs began to salute him with the title of caliph.

Adī b. ʿĪṣaḥ, with the kunāya of Abū Tāfīr, a partisan of 'Ali. He was the son of the celebrated poet Ḥīṣān al-Tawārīṣī, of whom he inherited the royal power over his tribe, the Ṣaḥābiya. Being threatened with the loss of the royalty, 'Adī, who like his father was a Christian, went over to Islam in the year 960. He collected for the Prophet the taxes among the Ṣaḥābiya and Andifer. He knew how to prevent the threatening apathy of his tribe after the death of the Prophet. He moved with Khalid to Ṣalāḥ, where he took part in the war of conquest as a sub-commander. 'Othman gave him the village of al-Rawāḥa on the Nahr Ḳaṣf, near Bagdad, for his service (biʿra), yet he kept out of the caliph's way, and, as it may be concluded from Tabari (i. 3104), he must have stood in some connection with Othman's murderers. In the battle of the Camel he fought for 'Ali, by whom he was among others appointed as envoy to Mu'awiyah during the four years of armistice before the battle of Ṣuḥra. When finally it became necessary that the sword should decide, 'Ali honored him by appointing him as standard bearer. Later on, 'Adī lived in Kufa, where he did not deny his 'Aliite sentiments, and took under his protection his tribesmen that were persecuted by the powerful governor of Iraq, Ziyād b. Abī Saḥīfī. — 'Adī died in 67 (686—687), at the age of 120 years.

Booklist: Ibn Hisābūn, i. 948 et seq.; 9905; Tabari, see index; Ibn al-Ḥṣīṣān, al-ʿĀjīb, i. 392 et seq.; Yūsūf, Muṣūfūn, s. v.; Zhīqāfī, Belqājī (ed. de Goeje), p. 274; Wustenfeld, General Tabellen, index, s. v.; (A. Schaad.)

'Adī b. Muṣūfūn (Ṣabīrī ᵃḏī'), a Mussulman ascetic, said to have been born in the village of Bezdār, near Baṭābšak (Bottich), where the house of his birth was in Ḥīṣān Kallīkān's time still the place of annual pilgrimage. 'Adī, who was celebrated on account of his sanctity by himself as the founder of a religious order called after him al-ʿĀdāwīya. He had fixed his residence in the mountains of the Ḥakkār Kurds in the region north of Mosul, and died at the age of 90, in 557 (1162), or according to others in 555 (1160) in the hermitage which he had built there for himself; his descendants continued to live there and to enjoy the same reputation of a saint. According to an eyewitness, he was of middle stature and much tanned. It is he whom the Yazidis adopted as their national saint. His sanctity is indicated by three conical capstans in the shrines of the village of Bezdār, 20 miles to the east of the Nestorian convent of Ḥrabūn-Hormūz. Nightly processions by torch light, the exhibition of the green colored palm, which covers the tomb, the distribution of large trays with smoking brazier (a ragout with congealed milk) compose the ceremony which attracts a great number of Yazidis and of which H. Layard was in 1849 an eyewitness. The poem of 80 verses, translated into English by Layard and Hodge (Nestorians and their Rituals, i. 113—115), shows that this ascetic was a mystic pantheist of the Soft order, and that his followers believed that he was the incarnation of the divinity.
ADIL: See SIRKH.

ADIL (col.), 'equitable', synonym of 'adil', frequently entering as an element in the titles of princes, e.g. al-Malik al-Adil, 'the equitable king'. Some princes known in history under this name follow below [comp. also SARAHAN, ERTUBDA, RUSKIN, SALAMM, and other]

AL-ADIL, name of two Ayyubid sultans:

1. AL-MALIK AL-A'LA', 1271-1287, with the honorific title SAHAB AL-DIN ('the sword of religion'), the Saphadin of the crusaders, the brother, assistant, and spiritual heir of Salah ad-Din. He was born in Bahriyah in 1260 (June-July 1154), or according to others in 558 (1143-1144) in Damascus, or in Baalbek, then

ADIL (b.), Zaid b. Malik b. 'Adil b. al-Ka'b, Arab poet of the 'Amila tribe, a subdivision of the 'Adans, of urban and not Bedouin origin, lived in Damascus as encomender of the Umayyads, particularly of al-Malik b. 'Abd al-Malik. He had a poetical contest with Dzjar, Muhammad b. Sallam, placed him in the third class of Islamic poets. Of his verses a bitim (verse) on Umam al-Ka'ib is mostly quoted (e.g. Muhammad, Kamil, pp. 85 ib. 14).

ADIL b. Zaid, pre-Islamic Christian poet, the year of whose birth is unknown. He was of a distinguished family of al-'Ina, and his father had sent him to the royal court of Persia for the purpose of receiving there a higher education. ADIL, even after his return to his native country, stood in close connection with the Persian Court, whose interests he furthered after the death of al-Ma'mun III as its successor. He naturally played a prominent part at the Court of these Aghlabid princes, until his envious and enemies succeeded in making him powerless. Al-Ma'mun had him thrown into prison, where he was assassinated (ca. 602). His death is said to have been the cause of the fall of the Aghlabid dynasty. His poems are mainly wine songs and elegies on the transitoriness of earthly power and greatness.

ADID AL-DIN AL-SHI, the last Fatimid caliph. His real name was Abu Muhammad Abu Al-Sali, and he was the son of Sulayman, whom 'Abbas b. 'Abd al-Fattah [q. v.] killed, and the grandson of the caliph Hisham. He was a cousin of his predecessor al-Fadl, who died on the 17th Rajab 355 (25 July 1160) at the age of 11 years, after having reigned 6 years. ADID was born on the 20th Muharram 356 (9 May 1159), thus at the time of his accession to the throne he was 9 years old. From the beginning till his death at the age of 20 (10th Muharram 367 = 13th September 1171) he was an unconscious instrument in the hands of the occasional generals, only shortly before his death he seems, that he called Nur ad-Din [q. v.] to have personally meddled with the affairs of the country. He passed for a realist Shifite and persecutor of the Sunnites. There is nothing for the rest to be reported of his acts; but during his reign the greatest changes took place in Egypt, which was in the west here by the way only, as they will be circumstantially treated in the

Bibliography: Ibn Khalil al-Kamal, trans. de Slane, li. 172 (1817) H. ADID b. AL-KA'B (b.), Zaid b. Malik b. 'Adil b. al-Ka'ib, Arab poet of the 'Amila tribe, a subdivision of the 'Adans, of urban and not Bedouin origin, lived in Damascus as encomender of the Umayyads, particularly of al-Malik b. 'Abd al-Malik. He had a poetical contest with Dzjar, Muhammad b. Sallam, placed him in the third class of Islamic poets. Of his verses a bitim (verse) on Umam al-Ka'ib is mostly quoted (e.g. Muhammad, Kamil, pp. 85, 14).

ADID b. Zaid, pre-Islamic Christian poet, the year of whose birth is unknown. He was of a distinguished family of al-'Ina, and his father had sent him to the royal court of Persia for the purpose of receiving there a higher education. ADID, even after his return to his native country, stood in close connection with the Persian Court, whose interests he furthered after the death of al-Ma'mun III as its successor. He naturally played a prominent part at the Court of these Aghlabid princes, until his envious and enemies succeeded in making him powerless. Al-Ma'mun had him thrown into prison, where he was assassinated (ca. 602). His death is said to have been the cause of the fall of the Aghlabid dynasty. His poems are mainly wine songs and elegies on the transitoriness of earthly power and greatness.

0—8 years younger than his celebrated brother, who conducted and represented him remained till the latter’s death. Having always been his own personal policy, which, however, was to the advantages of the dynasty and Islam. He proved a good soldier on land as well as on water; but his main successes—he obtained as politician and diplomat.

After al-Adil had already distinguished himself under Nur al-Din, he came with Saladin under the command of Shirkh to Egypt, but only in 570 (1174-1175) he won greater importance, when under Saladin he went to Syria where he replaced him in Egypt. In this position he proved a real magician after 573 (1177-1178) and 578 (1182-1183) on the occasion of interior revolts as well as of Frankish invasions. In 579 (1183-1184) he was removed from Egypt to Aleppo, but came back to Egypt in 583 (1186-1187) as his nephew and successor al-Malik al-Munafar Taqi al-Din Omar did not agree together with his kinsman al-Malik al-Adil [q.v.], a son of Saladin. Both were consequently revolted, and al-Adil was again entrusted with the management of the affairs under the nominal supreme authority of al-Malik al-Afdal [q.v.], another son of Saladin. In the following years al-Adil energetically supported from Egypt the policy of his brother, and also often came in person with an army or fleet to Syria. In this way he conquered Yafa and Karak, was present at the conquest of Jerusalem, attempted in 585 (1189-1190) to relieve Akka and played a particularly important part in the negotiations between Saladin and Richard Cœur-de-Lion. He entered Jerusalem with the latter and one of his sons was created a knight by Richard. In 587. (1191) the adventurous plan was even considered to marry al-Adil with a sister of the English king and to let both rule jointly over Palestine. In the same year al-Adil renounced most of his Egyptian and Syrian fiefs and was indemnified with Mesopotamia and Diyar Bekr. In Syria he received among other places the Baljah and Kunak, where he just stayed when the news of Saladin’s death (27th Shabir 589 = 4th March 1193) reached him.

When now the struggle for the sovereignty was inflamed between Saladin’s sons, al-Adil of Damascus and al-Aziz of Cairo, al-Adil at first played the mediator, but only in order to seize for himself the way at a favorable opportunity. At first al-Aziz marched against al-Adil, but peace was restored through the intervention of al-Adil and other Ayyubides (590 = 1193-1194). When in the following year al-Adil received his paternal conquest, al-Adil made common cause with al-Afdal; they drove al-Aziz back to Egypt, where they came afterwards to an understanding. Al-Afdal returned to Damascus, and al-Adil remained as manager of the affairs with al-Aziz (591 = 1194-1195). But shortly afterwards it came again to a war, provoked by the Egyptian, the aim of which was the conquest of Damascus. Al-Adil, being nominally the vassal of al-Aziz, obtained also the sovereignty over Syria. He thus became again free to act against the crusaders and would put in order his Mesopotamian possessions. The unexpected death of al-Aziz (27th Muharram 595 = 29th November 1198) called him back to Syria, where he had to fight for his existence; for in Egypt, on al-Aziz’s death, al-Afdal was in an insurmountable manner chosen as tutor of the latter’s son and successor, and he hoped to arrange himself on al-Adil by means of an unexpected attack from Damascus, in which his brother al-Afdal of Aleppo would support him. Yet al-Adil forestalled them, he cleverly knew how to disrupt his antagonists: al-Afdal was compelled to surrender and al-Adil became also the ruler over Egypt. He distributed the gigantic empire among his sons: al-Kamil represented him in Egypt, al-Mu’azzam in Damascus, al-Fays in Mesopotamia, other sons and relatives ruled over smaller provinces, and the lustrous-independent members of the family received portions of the emirate of al-Adil. Thus almost the whole of Saladin’s empire was re-established. Al-Adil had not much to do with the crusaders; it was then the quiet period between the fourth and the fifth crusades, the period of the children’s crusade (1212) and of the expedition of the Hungarian king (1217). Small collisions with the Frankish states were not lacking, but al-Adil sought everywhere to establish peace quickly. With this policy he harmonizes also al-Adil’s efforts to further commerce, efforts shown in the treaty of commerce with Venice. Towards the end of his reign there began the new crusade against Damietta in Egypt; he did not live to see the fall of Damietta; while he was occupied with equipping troops for Egypt he died in Akshe on the 7th Djamadh II 615 (31st August 1218).

He was born in the month of April 1171 (Jan-Febr. 1221) at al-Manqush in Egypt, from which place his father watched the Franks before Damietta. At the age of 12 (629=1231-1232) he appeared already as the representative of his father in Egypt. As he held the same office also at al-Kamil’s sudden death (24th Radjah 635 = 8th March 1238), he was recognized by the Syrian and Egyptian emirs as his father’s successor. His elder brother al-Salih Ayyub (born the 29th Djamadh II 643 = January 1247) was of course not pleased with it; he succeeded indeed in establishing himself in Damascus, but he lost again this city shortly afterwards. He even was taken a prisoner by his cousin al-Nasir Daud, who sided with al-Adil, but who afterwards preferred to make common cause with al-Salih against al-Adil. The latter marched against them till Bilquis, but was there determed by his own insubordinate emirs (8th Djamadh II 653 = 31st May 1249), and al-Salih was proclaimed his successor. He died in prison at Cairo on the 12th Shawwal 654 (9th February 1249).
ADIL, ADJA.

AL-ADIL b. AL-SA'ÎD, with his full name Ali b. al-Adîl Abu'l-Hasan 'Alî b. al-Salâh, a vizier alleged to have been of Kurdish descent. When the celebrated Fâtihî asserted al-Adîl Shâhinbâgha took Jerusalem from the Ortûkîs in 1491 (1497-1499), a part of the mercenaries of the latter entered into the Egyptian service. Amongst these was al-Adîl's father, who later, like his son, entered the body-guard of the powerful vizier. As al-Adîl distinguished himself by his intelligence and skill, he soon rose to the rank of emir. Then the caliph al-Haâyî entrusted him with the administration of Alexandria and Êûnhûr. Al-Adîl was in the most important position one of the most powerful men in the Fâtihîs, who, with the power slipped from the hands of the central administration at that time and went over to the governors of the large provinces. When the caliph took up the appointment of his favorite Ibn Mas'ûd his vizier, al-Adîl rebelled, killed Ibn Mas'ûd and entered himself Cairo as a vizier. His vizierate, however, was not of long duration, for he was assassinated on the 6th Muharram 548 (3rd April 1153).

AL-ADIL BAYA, a daughter of Ahmed Pasha and wife of Sulaimân Pasha, an Ottoman governor of Bagdad. In her husband's lifetime, she took part in the government of the province, had her audience days, in which the petitions of private persons were presented to her through the intermediary of one of her enarchs. She had a mosque and a caravanserai built and gave them her name. Seeing that the way was escaping her after the death of Sulaimân, she incited against his son-in-law, sons of All Pasha the Jâhânâyro escrito. Five of the principal Mamlûkis and Made 'Omar Pasha, her brothers-in-law, were to be recognized as governors in the place of All Pasha (1745). She died in obscurity, the date of her death is unknown.

named that Adja' and Salim were two lovers who met in the house of Salim's nurse, al-'Awqaf, and when they were surprised, they fled to the high craggy mountains and the valley (al-'Awqaf) lying between them. There they were killed by their furious relatives. More important is what the same author (loc. cit., iii. 912) states in the name of Ibn al-Kalbi, that a red projection of human skeleton in the middle of the black granite mountain, was called Fale and worshipped by the Ta'iyites. This idol, which had there its own priests, the Barã Bawàn, was destroyed by order of Muhammad in the 9th year of the Hijra.

Just as in the ancient times these mountains were called after the tribe of Ta'iy; they are now called the mountains of the Shiasmâr, after the Shiasmâr [q.v.].

Bibliography: Besides Tekli, Kafawi (edi. Wustenf. i. 152 ii. 49; Wellhausen, Real arab. Heidentum, pp. 51 et seq.; further statements under Shiasmâr and Bawân.

ADJAL (A.), "term, goal of life", the period decreed by God for individuals as well as for whole classes and totalities, a term which can neither be shortened nor lengthened (Korân, vii. 24, xi. 30, xvi. 63, xxix. 53, lxxii. 4). "Neither is the life of a human being made to live predestined nor is anything diminished from his life, but that is written in a book (of Allah's decrees)" (xxxv. 12). The adjal is not shortened even through sinning (xxxv. 44, xliii. 13), while on the other hand it may be concluded that Muhammad presupposed the shortening of the adjal as a punishment, but it might be restored to the original length through repentance (xl. 3, xlv. 11). The Korân very often emphasizes the expression of adjal as the invariable period of life assigned by God with the epithet of muwassâm (xxxix. 43, xl. 69, and elsewhere). This adjal (without ambiguity), through a word which had proceeded from God (xliii. 23); the same epithet is applied to the course of the unchangeably operating phenomena of nature (xxxvi. 28, xxxv. 14, xxxix. 7).

The decreed duration of the world is also often designated by this formularistic expression (xl. 2, 61, xxxiv. 44). At the end of the time decreed from the beginning for the existence of the world (adjal as an integral part of the universe), there is a period of resurrection: neither sooner nor later. One may notice in the Korân the tendency to refer the adjal muwassâm, where it is possible, to the period of the end of the world.

The religious conception of the adjal resulted for the dogmatic schools of Islam in a series of debated particular questions, about which diverging dogmas have been formed; particularly with respect to the questions: whether violent interruption of life (which includes the spleen of the adjal decreed by God) whether in the sense of the adjal dogma: the unnatural manner of making an end to life is included in the divine decree and included in God's eternal prescience (the death was decreed: the Adjâris, Abu-l-Husnâl al-Allâh; comp. Zeitschr. d. Deutsch. Morgenl. Gesellsch., xx. 21), or whether the person, for whom a longer adjal had been decreed and which was killed, could without that violent interruption to its life have continued to live; whether violent death is an entirety free action of the murderers and independent of divine determination (Mâšâfes); adhesion to this difference of opinion concerning the adjal by Khâ-

zâr, Rashîd, Constantinople, 1297; p. 108, l. 4 (from the bottom). The advocates of the last view may argue in their favor from the consideration that according to the opposite opinion revenge for homicide and in general punishment for murder would be unjustified and paradoxical. Further the dogmatists discuss in connection with the conception of the adjal the question: in how far God lengthens or shortens the adjal as a reward for obedience or as a punishment for disobedience respectively, a question to which the answer results in the harmonizing interpretation of the Korânic verses quoted above and puts the adjal question in the domain of the debates on hadâd (q.v.). — There is a modality of the adjal question which is applied to the death of great masses by means of catatrophe, war, persecution, etc.

The treatment of these questions has formed since the beginning of dogmatic literature in Islam a section of dogmatic compendiums, e.g. al-Asfâr al-Shâdâ fi muhîl al-mu'ayyada (Haiderâbâd, 1731), p. 76; al-Idrî's Ma'âshî (Constantinople, 1260), p. 325 and others. A detailed exposition of the school differences with regard to these questions of Islamic dogmatists is given by Ibn Abî l-Hâdî in his commentary to the Nâzâ'il adh-Dînâr, a work wrongly attributed to Abû Dâhir Allâh Shârî (Ki. 1), inserted some quotations from it in an exhaustive chapter of the Nâzâ'il adh-Dînâr (Lucknow, 1310), l. 140-153.

The Jewish religious philosophy has developed the treatment of the question from the point of view; see concerning this D. Kaufmann, in the Zeitschr. d. Deutsch. Morgenl. Gesellsch., xlix. 73-84; S. Parnas, in Monatschr. f. Gesch. d. Juden, xlv. 143-144.

(L. GOLDBERG.)

ADJAL (A.) — a wagon, cart. According to Dory, Supplement, it also designates the constellation Ursa Major (al-Dâkh ad-âshâr).

ADJAM (A.; coll.) in opposition to "Arab foreign", "nom-Arab". We find already in pre-Islamic poetry this designation for non-Arabs more frequently, however, in the form Adjâm, pl. Adjâm, and namely not only for Persians; the latter, whose usages and customs are mentioned in pre-Islamic poetry, are in such cases mostly designated as Fârsî. Later on the application of Adjâm was preferably used to designate the Persians, and even now in geographical nomenclature "Adjâm" designates Persia. Although Islam taught the equal worth of Arabs and non-Arabs, yet the Arabs took with them their national pride towards the Adjâm also into Islam, and under the Umayyads asserted also in the administration (see Mâfikî), under the Abbâsid the foreign element stepped forth more freely. This competition of the non-Arabian Muslims with the concealed aspirations of the Arabian element has manifested itself also in literature (see ADJAM).

( L. GOLDBERG.)

ADJAMI OGLIAN, fourth division of the January corps, composed of 34 batts. They formed the depot of the corps and never left Constantinople, not even in time of war. The recruits received from them their military training before they were admitted to the corps and distributed among the other divisions. According
to the law established by Sultan Murad I; the recruits who had been prisoners of war and therefore made slaves, or thoselevied by compulsion among nomadic Muslims, were obliged to serve for seven years as supernumeraries in special barracks. Later on, the admission into the corps having become more and more slow, they arose among them riots, which compelled the authorities to accelerate it (1057 = 1647 and 1059 = 1649). Those that were assigned for the service of the imperial palaces served there as gardeners and guards and finally formed the Bagdandi corps, others learned the trades of carpenters, bell-founders, tanners, saddlers, and bakers, or were sent as cultivators into the imperial farms. The Amurdaghans, who had become Janissaries, received the title of Cikas.

(C. H. M. N. B.)

'Adjamir, the capital of the British enclaves Ajmere-Marwar in Rajputana, in 1901 the enclave counted upon 702,043 square kilometres (about 3002 square miles) of 720,000 inhabitants, of whom 15% Muslims, the town 73,839 inhabitants, (the half of them Muslims). Adjamir is renowned for its monuments of Muslim architecture, such as Akbar's palace (now a large ruin), built about 1560 by Krishi of Humayun, and the magnificent Asif-ul-dunya-samkar mosque built about 1560 by Kashi of Humayun, and the Davush, the sepulchre of the saint Mut'am al-Din Cuhliq [q. v.] highly revered in India, with mosques attributable to Akbar and Shah Jahan. The former used to visit the tomb of the saint every year.

Historical. Adjamir is said to have been founded in 1438, by Adajna, and in 1024 was plundered by Mahamdu the Gharaswai. In 1588 (1192) the town fell into the power of the Ghurids and in 1559 it was incorporated by Akbar in the Mogul empire. In 1736 Adjamir was conquered by the Mahrattas, who held it until 1818 when Dostul Ilahi Simhad ceded it to the English.

Bibliography: A. Pharaoh, Turkei de Empire ottomans (1907); Rajputana district gazetteer (1904).

'Adjabn, a stranger, in Turkey particularly a person of foreign nationality but domiciled in Turkey (in its civil position, comp. Turkey).—In the Arabic grammar 'Adjabn designates a word in compound propositions, which apparently stands in no grammatical connection with the subject (comp. de Sacy, Grammaire arabe, ii. 208).

Adjudar, a city in Palestine between Ramla and Beit Jibrin (comp. Yafa, Mash'ad, i. 137, according to Abu Mouha, in the region of Kandala, in the territory of Beit Jibrin); al-Hakim, ed. Wustfæ, i. 72: in the province of Urbaun, but according to others in that of Filastin, between Ramla and Lijjbin; Tabari, i. 2125: "a small" between Ramla and Beit Jibrin; Nawawi, ed. Wustfæ, p. 430. From Tabari's mode of expression (i. 2125) 'Adjudar seems to have been a fortress. In Qumiad I 135 (July 533) according to others in Qumiad II); a large battle took place there between the Arabs and the Greeks, in which battle the imperial troops were so seriously beaten that their general Arjan (Atruc; comp. Butler, The Arab conquest of Egypt, p. 215) had to seek a refuge in Jerusalem. Suf (in Tabari i. 2398. et seq.) wrongly places the battle in the year 15 of the Hijra. The name cannot be authenticated in the most ancient times and appears to have been borrowed also in a later epoch. De Goeje supposes that Adjudiadin is to be looked for in the neighborhood of Yarmuk, the Biblical Jarmuth (Jos. X. 3 and elsewhere), that which explains the confusion of the battle of Adjudiadin with that of the Yarmuk (q. v.).

Bibliography: Ibn Hisham (according to 'Umayr) in Tabari, i. 2126; al-Madina, ib. p. 2127; Belhadjid (ed. de Goeje), p. 114; al-Ya'qubi (ed. Houssayn), ii. 151; de Goeje, Memoire sur la conquete de la Syrie, 1804, pp. 33 et seq.; A. Muller, Die Islam im Morgen- und Abendland, i. 251-252; Wellhausen, Sieben, pp. 57-58, 68. (F. Bourli.)

Adjudiadin, better Ajurediadin, title of a much used grammatical sketch, called after the author Ibn Adjudiadin (q. v.).
'ADJÜZ (A.), "old woman," the "days of the old woman" (ṣiyām al-maghar) are the last winter days in Syria and elsewhere, generally seven in number, among the last three days of Sha'ban (February) and the first four days of ‘Aṣura (Muharram), which are deemed as rainy, stormy, and cold. Each of these days has its own name, sometimes their number is given only as five and their names are also differently stated. A similar designation for certain days, but in a different season of the year, is given among various nations around the Mediterranean Sea.

Bibliography: Kaswani (ed. Wüstenf.), li, 77; further sources in Lane, Lexicon, i. 1961.

ADWA‘ (A.), "concave" (derived from diwan, "cavity," "hollow"), a term used in the terminology of the grammarians to designate the verbal middle imperfect (mutall al-samā‘ = یَعَرَتْ، یَعَرَتْ), which are occasionally designated as "concave roots" (also by Europeans), because the feeble second radical, which eventually may entirely disappear (as یَعَرَتْ, یَعَرَتْ), is enclosed between two strong ones, so that the entire root is considered as concave. These verbs are called according to whether the second radical is originally a ی or a یَ. Such verbs, e.g., jallu yamīn, jā’r yasīru, are considered as irregular in this respect (more details about them in Zamakhshari, Medieval, p. 178, l. 121 - p. 183, l. 177), with the exception of those that designate colors or bodily defects, like ḥā’irān, ḥā’irān; in these verbs the ی is considered as a strong radical. For the verb middle imperfect in Arabic as compared with other Semitic languages, compare: Weight, Comparative Grammar, pp. 242 - 255; Zimmern, Vorgl. Semit. Gram., § 51.

Bibliography: Spruner, Dict. of tech. terms, p. 247; Tidy of ‘Arab, vi, 63; (Weil).

"ADLI (A.), "equitability," also concert (as َداًل، "equitable," "blameless," therefore "all" designates in the َد a person whose testimony is valid; antithesis fašr, comp. Jayebil, Handling of the sources of the Moh. sect., pp. 293 et seq.; Doxy, Supplement, ii, 103, 1. 103. In numerical "all" means "all full weight," and therefore in this word (often shǎgṣi in 2) stamped on coins to show that they have the just weight and are current (valid).

ADLI, poet's name of Mymen III, and Mymen II, fourth of Bayazid II. It is true that the latter's poet's name is supposed by Gobin (History of the Othmanic poesy, ii, 32 et seq.) to have been Adli, but the MS. of Upsala bears 'Adli.

ADN (A.), a word occurring in the expression diwan adn (Korān, ii, 73) which designates the Garden of Eden, a designation taken from Biblical tradition (see DIWAN).

ADNAN, according to Arabic genealogists the ancestor of the last immigrated territory Arab (Ismāʿīlī): comp. Wattenfeld, Register zu den genial Truthen der arz. Schola., p. 47; Ilm Hākim (ed. Wüstenf.), l. 5-61; Tabart, l. 1112 et seq.; Causin de Perceval, Essai sur l'histoire des Arab., l. 8 et seq.; 175 et seq.

ADRAMIT (Ereumid, the ancient Aramattium), a town in Asia Minor, capital of a khan in the province of Khudoushigdes (Bruss), four kilometres (about 2½ miles) distant from the city of 6250 inlets, of whom 4950 Mussalmans and 1290 Orthodox Greeks; preparation of olive oil and wine; thermal sulphuriferous springs in the village of Frunk. Commerce is carried on through the harbour of Akm, to kilometres (more than 6 miles) distant from the town, with which it is connected by an alley of gigantic olive trees. — The khan of Agramit counts 50014 inlets, of whom 42933 Mussalmans and 7081 Orthodox Greeks; it is divided into two mahali (in which the capital) and 109 villages.

(Ch. Huert.)

'ADRAR (in Berber "mountain range"); name of two African regions: 'Adrar of the Aweilumites [see AUERL], situated north of the Middle Niger, and 'Adrar Taurit, or West 'Adrar, to the north of Senegal between the newly organized French territory of Mauritanis and Southern Morocco. The pronunciation of the natives is, according to Barth, for the former 'Adrar, for the latter Adrar.

West 'Adrar is one of the least known parts of the Sahara. Perhaps in the beginning of the 17th century it was visited by the Portuguese settled in Arguin, who were there, and then were again, and then again until the mines. Since then only a few Europeans traveled through the country, the Frenchman Pernet (1859) and Vignat (1863), the Spaniards Cerrada and Quiroga (1856) and finally the members of the Blanchet expedition (1900), who could not go beyond Ait-Amar. 'Adrar has the shape of a triangular plateau inclined to the east and southwest. To the west it is bordered by a reef of moderate elevation (about 150 metres), but so steep that it offers only one practicable passage for beasts and burden. The Tidere river, and to the east by an unlevelled surface partly masked by sand-dunes. The interior of the plateau is covered by elongated depressions, similar to coves, in which alluvium is accumulated and in which some humidity is always left. The rains from August till November are indeed abundant enough to supply water some Wāfs that flow from northwest to southwest, and yet 'Adrar is after all a rather miserable region. Cultivation (barley and millet) is rudimentary; irrigation, indeed, is not practiced here. The date tree, however, forms the principal resource of the country. Industry scarcely exists, the commerce is confined to transactions carried on at the passage of the caravan.

The population is rather scanty (7000 souls according to Barth). The sedentary people are grouped in the oases, of which the main ones are, from west to east: Ait (200 houses and 2000 settled people according to the Blanchet mission); Shingel, the most important place in the time of Capt. Vincent, and whence still now depart the caravans to Saint Louis and Nioro in the Sudan; Wadam, now entirely in decay; and Ujel.

'Adrar seems to have been very early occupied by Berbers. It is the cradle of the Landiati, who, with other tribes of the same race, took part in the Almoravide invasions [see ALMOUAVIES, JANHANJA]. Some Berber tribes of the Atlas, thrown back into the desert, took refuge there at a later
date as well as Arab tribes. Towards the middle of the 17th century, the Mamluks, who had settled in Adrar, were driven from there by the Ulaidillah, the latter having a powerful sub-

Adrar. It was destroyed in 1690 by a nephew of Muhammad, whose army advanced till Taggant. The authority of the sherifs, however, could not maintain itself in these remote regions, and at present Moroccan influence over Adrar is disputed by the countless advance of the French south of Senegal.

The tribes of Adrar fall into two categories: marabouts and warrior tribes. The warriors of Hassan live only by plunder, and the principal warrior tribe is the Ulaid Ghailan, Ulaid Bu Shaab and Ulaid Yya. Of Oumane, who claim pure Arab blood. Each of these tribes is ruled by a shaykh, who is assisted by a genel. The marabout tribes feed the warriors. The former generally are nomads, going up with their herds towards the north during the winter and going down towards the south in the dry season. Some of them are sedentary, e.g. the Snumad that settled at Atar; they are administered by genel. As to the confederation of the Knuts, which intermarries both marabout and warrior tribes. Finally warriors and marabouts have sometimes tributaries or harunat, which are unanimously considered as the survivors of the aboriginal nations. All these nations embraced Islam at the time when this religion was introduced into the Sahara from North Africa. The religious brotherhoods, particularly those of the Kadiriya and Fadhiya count there many followers, and the religious chiefs such as Sa'd bin enjoy considerable prestige and influence.

ADRIANOPEL. [See CHERN.]

'ADUD AL-DAWLA. FERNA KHSRAW ASIB Shujah b. REHM AL-DAWLA, a Baytul Sultan, born at Rayyan in the 5th Dhul-Qada 324 (24th September 936). At the age of 15 (337 = 948-949) he was appointed by his uncle 'Imad al-Dawla his successor to the throne, and when the latter died in the following year, 'Adud al-Dawla succeeded him under the guidance of his father in the dominion over the province of Fars. His warlike activity, however, began only in 357 (968) when he seized on Kirman; later on (Rabi' I 357 = December 973) he conquered 'Oman. In the following year (10th Dhu-l-Qada 367 = 30th January 975) 'Adud al-Dawla in a battle near Wusat, inflicted on the Turks under the leadership of Ali- tegin a terrible defeat, after which he triumphantly entered Baghdad. He won by presenting the caliph al-Tahir, who had fled with the Turks to Takrit, and had him come back to Baghdad. He had for a long time coveted Persian Iraq, the territory of his cousin Baghthiye, and only fear for his father had kept him off from seizing it. Nevertheless after the defeat of the Turks he obtained through intrigues the abdication of Baghthiye, whom he threw into prison

the 24th Dhu-l-Qada 370 (17th March) of the above-
said year, and only on the intervention of Rukan al-Dawla he was compelled to release him and return him his kingdom. After Rukan al-Dawla's death (Muharram 356 = September 976) 'Adud al-Dawla marched at the head of a strong army to 'Isfah, and after a bloody battle with Bekhtiyar's troops he seized Bagh; in the following year he subjugated the whole of 'Isfah. Since then he conquered one province after the other until he reached the kingdom of his brother Fakhr al-Dawla; in 371 (981-982) he rendered himself master of Djordjan and Tabariel, so that he united under his scepter the dominions of all the other Buyyiden. Already in 367 the caliph had conferred upon him the title of Sultan and in the following year he entered to mention in the Friday prayer after himself 'Adud al-Dawla with the title of king of kings (al-khali
dschah malik al-malikat) and to beat the drums in front of his door in the house of prayer. Thus 'Adud al-Dawla was the first of Fars in Islam who took the title of Khilaf. The ties between him and the caliphs were strengthened still more by that the latter married his daughter (370 = 980-981). In 371 (981-982) 'Adud al-Dawla sent the Khilaf al-Malik al-Mutlaq on an embassy to Constantinople, about which the Eastern authors relate many fables. In 369 (979-980) 'Adud al-Dawla had been stricken with epilepsy, which grew more and more violent, till he died of it on the 8th Shaww 372 (26th March 983). He was temporarily interred in Baghdad, where he died, his death having been kept secret; in the following year his death was made public and his body was transported to Kufa for definite burial.

'Adud al-Dawla is considered not only as the greatest Buyyide prince, but also as the most illustrious ruler of his time. In spite of his manifest ambition for the sovereign power the Muslim historians describe him as a man highly endowed and as one of great love for justice and truth. With regard to the latter trait it is told that he placed in his audience hall various kinds of animals for the purpose of intimidating those who would tell a lie. All what is certain is that he distinguisnished himself by his charitable deeds and by the favors he lavished on poets and literary men. Of his numerous buildings there may be mentioned: the celebrated hospital at Baghdad which bore his name, finished in 358 (975-979), the mausoleum on the presumed tomb of Al, the seat of the Kut near Shirda known under the name of Benh Emet, and others. For these works he found valuable aid in his Christian viceroy Nasy h. Hann. Many of his poets, among whom Mutambabb, sang his glory, many writers dedicated to him his works, for instance Abu 'Ali al-Farabi, who wrote for him his Khilaf al-khali
dschah. 'Adud al-Dawla himself wrote verses, several of which al-Thalithi reproduced in the Mutam t al-dawar.

'ADUD AL-DIN. [See AL-GITI.]
held the office of Châlil Dîl under al-Mustandîj until he had the latter assassinated in the bath and homage paid to al-Mustandîj (566 = 1176). He was appointed vizier by the latter, but one year later he was dismissed and shortly after re-established in his office. When 'Abd al-Rahîm al-Dîn prepared himself for the pilgrimage to Mecca in 573 (1178) he was killed by the Isma'îlîs. — Ibn al-Ta'âwîdî [q. v.] was one of the poets who glorified him.

**ADWIYA (A.), pl. of ḍowda, „medicinal drugs“. The Arabs divided the medicinal drugs into simples (mawṣûda) and compounds (mawārîd), the latter being comprised also under the term of ab rahâlan, pharmacoepia*.

The simples again were divided according to their properties into warm and cold, dry and moist, and namely according to the temperature of the human body.

The simples are also distinguished as primary and secondary, according to whether their natural mixture consists of one or more elements. Thus for instance milk is considered as a secondary simple, since it is composed of water, cheese and fat. This natural mixture must be treated by practice or analogy, as for instance the same medicament may act when warm on the human body and when cold on that of a lion or of a horse.

The following terms were used to designate the effects of the medicines:

1. mawāfîf (硬化, make solid).
2. musallâl (loosening).
3. ḍarâlg (polishing).
4. mawāshârâ (making rough).
5. musaltâl (opening).
6. musâkâl (relaxing).
7. musâfâl (digestive).
8. musâlâl (purgative).
10. mawâfi (cutting off).
11. sâshâl (pulling).
12. sâshâl (biting).
13. musâshârâ (episaptic, a vesicant).
14. mawâshârâ (a stimulant).
15. mawâshârâ (ulcerating).
16. musalâl (caustic).
17. suhâl (consuming).
18. musâfâl (wiping off, removing roughness).
19. mawâfâl (putrifying).
20. suhâl (burning).
21. mawâfâl (wiping off hard).
22. mawâfâl (corroding).
23. mawâfâl (fortifying).
24. râdî (repellent).
25. musâfâl (insensitive).
26. mawâfi (repeeling).
27. mawâshârâ (harpicotic).
28. musâfâl (neutralizing).
29. mawâfâl (making odorous).
30. suhâl (wash, polisher).
31. mawâshârâ (hardening the ulcers fibrous).
32. mawâshârâ (tarting).
33. mawâshârâ (corrosive).
34. mawâfi (dissociative).
35. sâshâl (saturating).
36. sâshâl (compressing).
37. suhâl (constipating).
38. mawâfâl (narcotic).
39. mawâshârâ (decolorizing).
40. mawâfâl (making flesh grow).
41. mawâfâl (covering).

Some examples may show how these terms are used. Thus the definitions invariably begin with the formula: This is the medicament, the intrinsic property of which is to . .. Thus for No. 7 (mawâfâl): This is a medicament of which the intrinsic property is to help the process of mixing at the time of digestion by uniform warming; it also has an astrigent power which holds together the mixture and forcibly does not let it be dissolved, for that would be a disruption. — For No. 26 (sâshâl): This is the opposite of mawâfâl (No. 2) and of mawâshârâ (No. 7), and is a medicament the property of which is to remove by its coolness the effect of natural and foreign warmth; likewise at the time of nourishment and mixing, until it remains indigestible and not ripened. —

Now and then medicines are joined to the definitions as examples: at No. 1 (mawâfîf): byssac, thyme and ramselle; at No. 2 (mawâfi): castoreum; at No. 4 (mawâshârâ): meillot, etc.

Sometimes behind the function only the predicative mawwi (known) stands instead of the usual definition, as is the case with No. 28 (mawâfîf).

These participial definitions of medicines are followed by three substantival ones:

1. al-mawâfi (the killing medicine), it alters the mixture to a pernicious excess, such as euphorbium and opium.
2. at-sâsh (poison), it corrupts the mixture only by its special reaction, as for instance the foxglove.
3. tharâsh and bezoor stone, both are preservative medicines for the strength and health of the soul.

In Ibn Sînâ there follow twelve tables in which are briefly enumerated the medical cases of coloring, adorning, swellings, parasites, wounds, ulcers, of the organs of the limbs, head, eyes, breathing and chest, of the organs of digestion, and secretion, of fever and of pains. An index in the Abuâl warder of the simple medicaments forms the close.

The Arabs possess an old literature on this part of medicine; it arose simultaneously with the Arabic translation of the Greek medical works. The meritorious Ishāk b. Husain composed a Kitâb al-adwiyâ al-mawṣûda (Ibn al-Kifî, ed. Lippert, p. 80, l. 8), and thanks to the celebrated Harrânînas Tâhîlî the Kurra we possess two monographs on this subject: 1. Kitâb fi uṣūr ma ṭawâbur al-bîshar (kûl, p. 119); 2. Kitâb fi uṣūr ma ṭawâbur bîhi al-adwiyâ (ibid.). The valuable work of Ibn al-Ishârî (d. 646 = 1248) Dīwân mawṣûda al-adwiyâ wa-l-adwiyâ, was first made known through a German translation of inferior value by J. v. Sonnhofner under the title of Grosses Zusammentzen über die Krytâf der bekannten eisichtlichen Heil- u. Nährmittel (Stuttgart, 1876-1877), then through the publication of the Arabic text (Ibnâk, 1875) and finally it was translated into French by the military physician L. Leclerc under the title of Traité des simples (Paris, 1883) and furnished with notes and an index. It is to be considered as the most important Arabic work in this domain as it unites both practical knowledge and nomenclature and contains more than 3000 names.

The work of M. Steinschneider: — Histoinzene ren der Araber (Wiener Zeitschrifke, f. d. Kunde des Orientes, 43), which contains 2043 numbers, is also based on profound original researches.

(1. Lippert.)

**AFĀ (A.), the female viper, a black spotted, venimous snake, of various sizes, with a broad head, narrow neck and short tail, sometimes with two horned scales over the eyes (the horned viper). The viper, which lives mostly hidden under the sand, was considered by the Arabs as the greatest enemy of man (Damûl) and as „one of the ugliest beasts“ (Kârin); many fabulous accounts, of which very little is true, are in circulation about it: e. g. that it lives to an age of 1000 years, that it becomes blind and recovers its sight
at the cărbună tree etc. In ancient poetry the viper is represented as the emblem of the mortal enemy, namely of him who seeks revenge for murder, and he who is stung by a viper is "vindictive," for it is said to recover the sting when it is held by the tail. Another proverb read: "He who has been stung by a viper is afraid to take hold of a rope." The vipers of Sidi Jamalu are considered as the most dangerous. Like the Greeks, the Arabs considered the head of the viper a remedy for anthrax and other skin diseases. Viper's blood was supposed to fortify the eyes and the dried heart of a viper is said to act as a talisman against a charm.

Biography: Damasc., p. 34-35; Karw. (ed. W. M. de Goeje), ii. 428-430; Ibn al-Tabarî, al-\[1201\], i. 40. (Hull.)

APAL (k.); See "Pal.

APAMIYA or FAMIYA, the ancient Apama, situated near great swamps in the Omantara valley. The city, important in the time of the Seleucids, was conquered and devastated in 549 by the Persian king Khorram. After the capture of Himy (Emesa) by the Persians and since then played no special part. A disastrous earthquake in 1122 changed the city from a sea of ruins, which was still the site of the former city and above which towered only the old Kasf al-Muallahi.

Biography: Belkhouri (ed. de Goeje), p. 313; Yâkût, Mag. i. 332-333; ii. 826-827; E. Sachau, Reis in Syria and Mesopotamia, pp. 71-82. (P. Buhl.)

APAR. See "Baskil.

AL-AFPAL, his full name, ABBU-MARAK 'Ali AL-MALIK AL-AFPAL NûR AL-DIN, an Ayyubid, the eldest son of Saladin, shared in the lead of his father. He was born in 565 (1169-1170) and was initiated into Islamic science by the best teachers in Cairo and Alexandria. In 579 (1183-1184), when he was only 14 years old, he was entrusted with the representation of Saladin in Egypt. Taki al-Din 'Omar was appointed his mentor. As they did not agree together, Saladin recalled both of them in 582 (1186-1187) and exiled al-Afpal with Damascus. From there the young lord of less than twenty was under the control of his father, with whom he took part in the battle of Hatta (25th Rabî' II, 583 = 4th July, 1187). His name is accounted of this first battle of his life has been preserved. Shortly afterwards he conquered Akka, which he received as a fief. Then he took part under the command of his father in the battles against the Crusaders and in 588 (1193) in the negotiations with Richard Coeur-de-Lion. On Saladin's death (27th Safar 589 = 4th March, 1193) he inherited Damascus and Syria as well as the sovereignty over the other Ayyubids. But evidently he was not yet mature for such an important position, for just at that time this man, otherwise so pious and depicted almost as an ascet, is said to have indulged in various kinds of debauchery and to have entrusted his minister Dîya al-Dîn b. al-Âdhâr al-Lujzani, the brother of the celebrated historian, with the management of the State affairs. The disastrous influence of his minister is supposed to have induced him to neglect the old and meritorious ends of his father. The latter having been disappointed, abandoned him and went over to his brother al-Azîz in Egypt. Thereupon al-Azîz declared himself independent and set out in 590 (1193) for the purpose of conquering Damascus. The two reunited brothers were once more reconciled by the old, and well-tried Salîf al-Dîn or Sophadîn (al-Adîl I, q.v.) and other mediators, but in the following year a new expedition against Damascus came about again. This time al-Azîz was abandoned by his troops before the gates of Damascus, and was obliged to flee and was pursued till Egypt by al-Afjal, who was joined by Salîf al-Dîn. Al-Kâdi al-Fâqir, the aged minister of their father, reconciled on Egypt to the two brothers; al-Afjal returned to Damascus while al-Azîz remained with al-Azîz in Egypt. In the year 592 (1194-1195) the Egyptian allies returned again to Syria with a hostile intention; al-Afjal was removed from Damascus and was indemnified with the small fortress of Surkhâd, which he received as a fief. When al-Azîz died in 595 (1198-1199), the Egyptian emiracks, leaving out the powerful al-Azîz, called al-Afjal to Cairo as a hostage of the minor al-Manṣûr. He wanted directly to conquer Damascus, but al-Azîz prevented him, sowed discord between him and his helpers and followed in his footsteps to Egypt, there al-Afjal was forced to capitulate in Rabî' II 596 (Jan-Feb., 1200). The promises made to him were not fulfilled and he had to return again to Surkhâd. Thereupon he allotted himself in the following year with his brother al-Zâhir of Aleppo, who promised him to conquer for him Damascus. The city was already on the point of falling when the two brothers became dissatisfied and the siege was raised. Al-Afjal withdrew to Himy, where his family was found, as he had previously given up Surkhâd. In the negotiations of the following year he received from al-Azîz (in the three fortresses): Kasf al-Nadjîn, Surkhâd and Samaqat, but in 599 (1202-1203) they were taken again from him. His mother tried in vain to intercede for him with al-Azîz. Still al-Afjal established himself firmly in Samaqat and declared himself the vassal of the Selçûkîs of Asia Minor, Rukn al-Dîn Salâhanî II. With the aid of the latter's third successor Kâle-Kâne, he attempted once more, and namely soon after the death of his brother al-Zâhir of Aleppo, to found an empire. The enterprise, however, was entirely miscarried on account of discord between the camp of the allies, and the interference of Al-Azîz, the son of al-Azîz (615 = 1218-1219). Al-Afjal renounced all further attempts of conquest and returned to Surkhâd, where he ended his life full of disappointment.

AFGHNISTAN.

AL-AFĐAL. Al-Hashr al-Shâhînshâh, successor to al-Malik al-Afḍal, was the son of the minister for many years of the Fāṭimid caliph al-Mustansir, the Armenian Badr al-Djâmâlî, who, shortly before it was too late, brought the Fāṭimid empire once more to a flourishing state. Badr al-Djâmâlî, simply known under the title of Badr, was for a long time the minister of Nâṣir. Like his father, he made for himself such an independent position beside the throne that, in spite of his arrogance, had to yield and after Badr's death confirmed his son Shâhînshâh in all the offices of his father. Badr and al-Afḍal are the first examples of omnipotent generals, in whose hands the caliphs were reduced to insignifi-
Afghanistan consists of a territory of irregular shape lying between 29° 30' and 38° 30' N. lat. and between 61° and 75° E. long.

Geological formation. This country forms the northeastern portion of the great Iranian plateau, which is bounded to the north by the Central Asian depression, and to the east by the plain of North India, while to the south and west it slopes away into the depressed tract which occupies the central portion of the plateau, and on the southeast is connected with the mountain system of Balochistan. The northern barrier of the highlands is the mountain range extending westwards from the Panj, with its outlying ridge, the Band-i-Tarkiwan, beyond which the plain of sand and loess extends to the Oxus. On the east there is a sudden drop into the Indus valley. It will be seen therefore that, with the exception of the low plain of Turkistan, the whole country belongs to the plateau, which is itself a late geological formation of the tertiary period, mainly sandstones and limestones. The northeastern part of the plateau, previously formed part of a great ocean connecting the Caspian depression with the North Indian plain. The process of upheaval which has raised it still continues, and Holdich mentions some subsidences and the formation of lakes. These changes are due to the fact that the erosive action of the rivers is too slow to keep pace with the upward movement.

Orography. The most prominent feature of the mountain system is the northern range running east and west above alluded to as forming the northern boundary of the plateau. It divides the Turkistan districts on the north (the ancient Bactria) from the provinces of Kābul, Herāt and Kandahār (the ancient Ariana and Arachosia) on the southern. This main range is known by various names such as Hindū-kūsh on the E. where it branches from the Panj, Koh-i-Bâbc further west, and Kōbel Sâfîd and Sīyâh-Numâb near Herāt; the latter is generally known as Paropamisus, although the true Paropamisus (or Paropamisus of Ptolemy) included the Hindū-kūsh. The greatest part of the country south of this range is occupied by a number of subsidiary chains or long spurs which run from east to west or more generally from north to southwest. These ranges and the intervening valleys form the greater part of the Herēt and Kandahār provinces, while the rugged mass of mountains lying to the south of the eastern Hindū-kūsh comprises the valleys of the Kābul and Kūmān rivers and forms the provinces of Kābul and Khâfēsh. The highest elevation in the northern range is the Shahulak peak (16870 ft. = 5133 metres) in the Koh-i-Bâbc, and the long spur running to the southwest contains several peaks of about 14500 ft. (4422 metres). Other ridges dividing the Helmand, Târnak, Argandâh and Argâshân are outliers of this system, and it may be traced further southeast into British Balochistan. The Sulaimân Range (highest peak the Takhîl Sulaimân 14200 ft. = 4341 m.) which drops finally into the Indus valley and is the eastern edge of the plateau, is beyond the political limits of Afghanistan. The mountains further north on this eastern flank of the plateau between the Kābul and Gomāl rivers are of more irregular mass with peaks over 10000 ft. (3053 m.), while

Further north still between the valleys of the Kābul and the Kūmān in the Safâlil Koh, the highest range in Afghanistan after the Hindū-kūsh and Koh-i-Bâbc (highest peak Sulaimân 15600 ft. = 4764 m.) lies in the north of the country. Northwards from the Hindū-kūsh the level of the country falls rapidly towards the Oxus valley, while southwards the valleys fall more gradually towards the Sistan depression containing the Helmand Hamān (= H. Lake) and its extension the Gūd-i-Zirāh, into which flows, with the exception of those belonging to the Indus system, all the rivers south of the Hindū-kūsh. Thus the rivers flow naturally into three directions, which may be called the Indus group and the Oxus group.

The Indus group comprises the Kâbul river and its affluents, of which the most important are the Taghā and Kūnār flowing from the Hindū-kūsh on the north and the Lōghar flowing from the Gūd-i-Kōh on the south. South of this is the Kānān passing in the Faiwar, and its tributary the Teč, called in its lower course the Gomāl, which joins it in British territory below the mountains. Still further south separating the Wazīrān mountains from the Taghī-Subāin is the Gomāl formed by the junction of the Kandār and the Zābīl. These rivers, though of small volume drain extensive tracts and mark important military and trade routes through the mountains between India and the plateau. Other small streams such as the Wakāl, Lūst, Kohā and Nūrī farther south serve a similar purpose. It may be noted that many of these streams flow not along the natural valleys formed by the mountain range but transversely across the sandstone and limestone ridges of the Sulaimân Mountains, through which they cut deep precipitous gorges.

The second of the Helmand group consists of the Helmand and its tributaries, and on the other rivers running towards the southwest into the Sīstān depression. The Helmand or Hīramān (the Haunun of the Avesta, the Ryamondros of classical writers) is the principal of these. It rises near Kābul and flows through narrow mountain valleys into the more open country of Zanjīn-dawar, where it joins on the left bank by the Arghandāh (Harahwalli, Arachosia). The latter in its turn is formed by the junction of the Upper Kushān, the Tārnak, and the Argâshân (or Arghāshān), which drain a series of nearly parallel northeasterly and southwesterly valleys. Another member of the same system is the stream flowing southwest from Ghāzni, which never joins the Helmand system but is absorbed by the Abīstān Salt Lake. Other rivers west of the Helmand, with the same general southwesterly flow, which also discharge into the Hamān, are the Khiash-rud, the Farīd-rud and the Hurâr-rud.
Afganistan.

Irrigation, and can be drunk, a circumstance due no doubt to its occasional overflow. The level of Sistán does not appear to have risen since ancient times in spite of the enormous volumes of alluvium discharged by the rivers which have no other outlet. The cause of this is probably the prevalence of violent northwest winds through a great part of the year, which remove the light surface soil.

The third or Oxus group of rivers comprises the Oxus and its southern tributaries, as well as the Murgab and Hari-rud, which also flow northward into the plain but never reach the Oxus. All of these rise on the northern flanks of the great mountain barrier, with the exception of the Hari-rud, which rises on the south of the Kuh-i-Babak and flows westward through a narrow valley between the Koh-i-Saffed and Kuh-i-Siyak into the Herat plain where it turns to the north and after passing through a depression in the mountains loses itself in the plains of Russian Turkistan beyond Dohna-Fikeh.

General formation. The mountain ranges generally become less lofty towards the south and west and the difficulties of communication that exist further north disappear. Hence the easy route for trade or military expeditions from Herat to Kandahar has in all ages been circumscribed via Sabzawar, Farah and Ghirghit, while from Kandahar to Kabul and Ghazni the direct line of the Tarnak valley is followed. From Herat, where the Paropamisus drops to an insignificant elevation the Turkistan province is easily accessible, and the same country can also be reached from Kabul directly by difficult passes, the Kpawak, Barmian and others, through the Hindukush.

The three towns Herat, Kandahar and Kabul are marked out by natural position as the most important points in the country. Each of them lies in a fertile valley and is self-supporting, and each of them commands important routes to the others as well as to India, Persia and Central Asia. Therefore Afganistan is to be an independent political whole the possession of these three points is essential to its rulers. There can be no stability if they are in separate hands.

In this political sense Ghazni and Doshkhandh must be classed with Kabul, the old capital Bost and Ghirghit with Kandahar, and Sabzawar with Herat. Sistán lying on the easy route from Herat to Kandahar has always been a debatable land.

Kabul is in every way the strongest position, and has generally in consequence been more independent than other districts. Herat on the contrary is much exposed to attack from the west and north, and when Herat has been conquered by a foreign invader Kandahar is immediately threatened. As long as Herat is held Kandahar is safe from an attack on the western side, and it has also a strong position towards the Indian side, though not so strong as that of Kabul.

The district of Sistán adjoining the Hamun is fertile and suited for irrigation. Occupying a commanding position on the route leading eastward to Kandahar and westward to Herat, it is of great importance to the rulers of Afghanistán, and its present division between that country and Persia is unfortunate. As an ancient seat of Iranian culture and connected with Persian legend the Government of Persia holds to it tenaciously and it seems that it is destined long to continue divided as at present.

Climate. The whole country is liable to great extremes of temperature ranging from the intense summer heat of Sistán, the Garmár district and the Oxus valley to the great winter cold of the high exposed regions, where violent snowstorms are not uncommon. Instances of armies suffering from such cold are well known in history. The march of the emperor Babar from the neighborhood of Herat through the Hazara Mountains to Kabul is a case in point, and the Hindukush (lit. Hindul-shay) is popularly supposed to derive its name from the death of the Indian troops of the emperors Shah-Dinán. More recent instances are the sufferings of Ablul-Rahmán’s army in 1868 and of the British Boundary Commission in Bârghil in 1885. The daily range of temperature is everywhere very great, the difference between maximum and minimum varying from 17 to 30 degrees of Fahrenheit. In the spring and autumn the upland valleys have a temperate and pleasant climate, which is very favorable to the growth of fruit, especially grapes, melons, peaches, plums, apricots, walnuts and pomegranates. Modern travellers have found the neighborhood of Kabul to be not unworthy of the praises lavished on it by the emperor Babar.

In the more lofty part of the Hindukush inhabited by the Kázb tribes, a truly Alpine climate is found resembling that of parts of the Himalayas.

The vegetation generally speaking is that of the Persian plains, and is quite distinct from that of the Indian plains. In the plains few trees are found except those cultivated in gardens, fruit-trees, poplars and poplars, while on the higher mountains many varieties of pines and evergreen oaks are found with wild vines, ivy and roses. On the lower and dryer ranges the wild pistachio (Pistacia chinifah), wild olive (Olea europaea), juniper (J. sargentii) and the reedalm (Tamarus endorada) are the most characteristic trees. The angos or big (Pharsa monfaçid) is very abundant in many parts. Wild flowers also abound in the spring, especially the iris, tulip and saffron.

Political Divisions. The divisions of the country follow its physical formation.

Kabul. The province of Kabul contains the fertile high-lying valleys round the upper waters of the Kabul, Loghara and Taghe rivers and Ghazni, also the lower part of the Kabul valley near Doshkhandh. Ghazni was the most important town in this tract formerly, but Kabul has taken its place during the past four hundred years. Kabul was recognized as the centre of government under Mogul emperors, and was adopted by the Durânt kings as their capital taking the place of Kandahar. Its old rival Peshawar is the present centre of the tribes in the lowlands near the Indus, but has been cast off from Afganistan since it was taken by the Sikhs in 1849 and since 1849 has formed part of British India. Kabul is now a thriving town. Its population is variously stated. A late resident (F. Martin) places it as high as 100,000, but this is beyond all other estimates. Under the firman rule of the late emirs it has no doubt grown rapidly.

Kandahar. Kandahar includes the old province of Zumundawar, and comprises the lower valleys of the Helman, Tarnak, Arghandab and Argham, the principal home of the Durrans. The modern town of Kandahar on the Arghandab
has been the capital of the province since the 15th century, and has taken the place of older towns such as Gischak and Dast.

Sistan. Sistan is the name of a fertile irrigated district lying around the Hāmān. A large share of it, however, belongs to Persia. It contains no large town.

Herat. The Herat province includes the fertile valley of the Hari-rud and the open country lying between the Hazara Mountains and the Persian border; also a considerable part of these mountains which are inhabited by the Hazara and Čahār Aimaq tribes. The town of Herat, one of the most famous in eastern history, is its capital, although fallen from its ancient glory it is still and must remain a place of importance and will not doubt develop greatly with peace and improved communications. Salavār is also a thriving town in the south of the province.

Hazarat. The country of the Hazara and Čahār Aimaq tribes is the mountainous mass bounded to the north by the Koh-i-Bābāh, to the west by the open country of Herat, to the east and south by the Helmand valley. It is the country anciently known as Ghūr, and the ruins of the town of Ghīr lately explored probably mark the site of the old capital of Pākisthān, where the Ghūr kings reigned in the 12th century. It now contains no town of importance.

Turkistan. The country north of the Koh-i-Bābāh as far as the Oxus is known as Turkistan. Its old capital Balkh has lost its former importance, and the present centres of administration are Mazār-e Sharif, Tagkhurgan, and Balkhān.

Badakhshan. The region lying north of the Hindu-kush and east of Turkistan along the left bank of the Oxus is known as Badakhshan. It is watered by the Kundūr-River and its affluents.

Wakhś. Still further to the east and extending as far as the Pamir is the long mountain valley called Wakhś.

Kafiristan. The recently conquered mountain mass of the Hindū-Kush lying north of the Kābul valley and west of the Kunar, inhabited by the Kāns, is known as Kafiristan.

8. ETHNOLOGY.

The races which inhabit Afghanistan may be classed under the following heads: 1. Afghan; 2. Persian; 3. Turkish and Mongolian; 4. Endogamous tribes of the Hindū-Kush. — But considerable intermarriage has taken place, and it is not easy to determine the elements which enter into the composition of every tribe.

The Afghans. Physically the Afghan race belongs in the main to the Turko-Iranian type with a considerable admixture of Indian blood among the eastern tribes. There is great variation of type, and the abundance of anthropometrical observations over the greater part of Afghanistan renders certainty unattainable at present. It may be considered as established, however, that the proportion of brachycephalic heads is larger than among the Indo-Aryans of the Panjāb, and probably larger than among the pure Persians. Among the southern tribes such as the Kākars of Zābāb and the Tarīns and Akāčkas of Pāhlav and Čarmān the type resembles that of the Balochis with broad heads while among the tribes of the Hindū-Kush heads are narrower. Figures are wanting for the great central body of Durrāns and Ghāzais. Noses are generally long and often curved and this is perhaps the origin of the idea which some have entertained that the Afghans are of Hebrew origin. Ujāfhy has noted that this peculiarity is very marked in the portraits of the Kūshān kings and the coins of the 1st cent. (A. D.), and it is certainly not confined to the Afghans but widely spread among the races of the country as well as among the Balochis and in the Northwestern Pāndjāb and Kāshmīr. The Afghans are tall and well-built race, often fair in complexion in comparison with their neighbors, brown beards and even blue eyes being occasionally seen, but in these points there is great variation even in neighboring tribes. Some modern writers have attempted to draw a distinction between Afghans and Pākisthāns. They maintain that only the Durrānts and kindred tribes are entitled to the name Afghan, while the title Pākisthān (an Indian corruption of the native form Pākisthān or Pākisthān, pl. of Pākisthān, Pākhān) includes all tribes of whatever origin who speak the Pashto language. This distinction, however, appears to be unreal and of modern origin. The name Pashto or Pākisthān is undoubtedly the true national name and it is universally used, while the word Afghan seems to be of literary origin and like many other words was first applied to this people by foreigners, and in modern times it has been adopted as a polite designation by educated persons and those who are proud of their descent. The theory restricting it to the Durrānts and to the other tribes who claim by their genealogies a similar descent appears first in the works of Bello and has been adopted by others without sufficient reason. According to this theory great tribes like the Ghāzais are allowed to be called Pākisthāns but not Afghans, and this is applied also to the Afrīdī, Bāngul, Khātāk, Wazīri, Kākur, Gandāpān, Shinālī, Usturānt and many others without any sufficient justification. Bello accepts the story of the Hebrew origin of the true Afghans and supposes them to have come into the Kandahār province from the west, and there to have met the Indian colony from Gandāhār (the present district of Pākhānwas), which had been driven thither by Scythian invaders in the 5th or 6th cent. (A. D.). From these Indians they are supposed to have acquired the Pashto language, evidence of the fact that Gandāhār was purely Indian and the language spoken there a form of Prakrit and not an Indian idiom from which Pashto could be derived. The Afghan settlement of the Vaiṣṇavas dates only from the 15th cent. Bello supposes without a particle of evidence that they were only returning to their original home. The name Kandahār he supposes to be identical with Gandāhār, and to have been carried to the Afghans by the latter colonists, who may be identified here as Kandahāri is historically a modern place and we hear nothing of it before the 14th cent. The Ghāzais are identified by Bello and others with the Turkish tribe which he calls the Khilfī, i.e., the Khaljī. Darmesteter (Chants des Afghans, p. 83) supports this view, and it may be admitted that the Ghāzais have probably absorbed a good deal of Turkish blood although the actual identification of many other national appellations is doubtful. The tribes of the Sulaimān Range are supposed by Bello to be aboriginal Indians and he follows Lassen in identifying them with the Nāgarzai, who are stated by
Herodotus to have occupied Persia on the Indus. Among the other identifications made are those of the Afghis (or Afghans) with the Αραια of Herodotus, and the Khājaks with the Καστρες. Of these the first is prima facie correct although it is by no means certain that the Αραια occupied the country of the modern Afghis. That of the Khājaks with the Καστρες cannot be accepted. The name given by Herodotus appears as Ταθαγρα in the Achaemenian inscription of Behistun, and the initial Σ of the Greek form evidently corresponds to this Σ, and could not represent a guttural as in Khājaks. The identity of Παχάν, Παχαπλής and Pachān, Paḥān mentioned above as first advocated by Lassen has been more recently supported by Trumpp and Grierson but is considered very doubtful by Spielberg and Geiger. Grierson considers the connection between the Persian پخِت, پخیت (back, mountain), Vedic पक्ष, the Paḥān of Herodotus and the Patrās of Ptolemy very probable. Darmesteter considers the latter form the most likely, to be near the original, and thinks that the Paḥān of Herodotus may stand for some form like Parijī. It must be remembered that in the modern language the form with š is older than that with ā. It seems improbable therefore that a form like Ṣapān (which we know only through the Greek) could give rise to a modern Paḥān or Pakhtah. Revett thought that Paḥān might be represented by the town of Pakhtah on the Upper Indus, and this is not impossible considering how frequently an ancient dental passes into č in Pashto.

The combination č, š, in Avesta or Sanskrit, frequently becomes č in modern Iranica languages. Thus the Pers. پخِت, Pakhtah पखित represents Av. paχhí, Sanskrit पक्षित, Paṭhār śatān = Av. pāchih; Pakhtah पक्षीत, Pers. paχčān = Av. paχč, etc. Paḥān or Parijī therefore may well be represented by Paḥān-Pakhtah. The Paḥān are mentioned by Ptolemy among the five tribes comprised under the head of Παχαπλάς (the others being the Βασιλεῖς, Αραιας, Παχας and Ἀγαμέμ), who occupied the southern and eastern slopes of the Hindu-kush. A native tradition derives the name from पक्ष (back, mountain), a name very possibly the original form from which Paḥān/Parijī was taken may have borne the meaning of "highlander."

The form Paḥān certainly came into use in India, though it is now used to some extent in Afghanistan, and in Baluchistan it takes the form Pažān, with the accent on the first syllable. Grierson finds a form Pažān in use in the East Central valley to denote a Mahomedan Rājput, not an Afghan. This name Pažān (from the Sanskrit प्रतिर्जन) is also the name of two well-known towns. It seems possible that some such vernacular term may have influenced the form taken by the Indian adaptation of Paḥān as Paṭhān.

The name Paṭhān first appears among the writers of the 16th century and Nūr-al-Dīn finds an imaginary derivation for it in the name Patān said to have been bestowed by the Prophet upon Kūr 'Abd-al-Rahmān. The word is said to mean the keel of a ship, in what language is not specified, so it is not Arabic.

The name Afghān was used much earlier, and is the only name applied to the race by the older chancellors from the 5th to the 18th centuries of the Hijrī (19th c. 18th a.d.). It was originally suggested by Lassen, and again by Crooke that the origin of the name may be looked for in the "Aχανγαρ of Aχανγερ of Ariaz (Aχανγερ of Strabo), and the Aχαν of the same writer (the Aχαν of Strabo), and that these names are identical with the Afghān of the Mahābharata, who are associated with the Awaka of the Mahābhārata, who are associated with the Awaka of the Mahābhārata, who are associated with the Awaka of the Mahābhārata, who are associated with the Awaka of the Mahābhārata, who are associated with the Awaka of the Mahābhārata. It seems that the identification of Awaka with Aχαν may be justified as a Parthian form and Aχαν might be the Iranian equivalent of the Greek version (as Skr. आचान = Av. aχāna = Gr. Aχαν). But the modern name Afghān cannot be deduced from it, as the combination αχ, ṣ, or ṣ, never gives rise to a modern ṣ or χ, but rather to ṣ, ṣ, or χ in North India and Afghanistan (see Grierson, Indian languages, p. 293). This origin is on these grounds rejected by Grierson, also by Kermesiefer (Chants des Algéres, pp. cit., cit.) Beller's suggestion of an Armenian origin (Aχαν) has met with no support. It may therefore be stated that no satisfactory origin of the name Afghān (often pronounced Aχān or Aχān) has yet been found.

The theory of Hebrew descent of the Afghāns, especially of the Durrānīs, who as stated above are assumed to be the only true Afghāns, which many modern writers such as Beller, Yule, Holmich and to some extent Revett have advocated, as of purely literary origin and may be traced back to the "Mack’m-i Aχān" compiled for Klān Dījhān Lōli is the reign of the emperor Dījhān, and does not seem to have been recorded before the end of the 18th century. It is an example of the widespread practice among the Muzulmāni masses of Persia, India and Afghanistan of putting forward a genealogy claiming connection with the family of the Prophet of descent from some personage mentioned in the Korān or other sacred books. Thus the Bahlōlōne claim descent from Mir Hāmza, the Dāwūdpatras and Kalhormas from Afšār, etc., and the chronicles, anxious to glorify the Afghāns who had risen in the world and become a ruling race under the Lōlīs and Shārs, found an ancestor in Maslama or King Saul. — This legend is paralleled by another which Frighta (p. 17, Lucknow text) quotes from the Mas’ī al-awlī, in the sense that the Afghāns were descended from certain nobles of the Court of Fir’daww (Fir’aww), who refused to accept Islam when preached to them by Moses, and emigrated to the Sulamīn Mu‘āminin. — There is absolutely no historical evidence in support of either form of the tradition; both forms were unknown to the early chroniclers.

The first mention of the Afghān in written history is in the chronicle of al-‘Othī known as the Torīj-i Yānnī (the author was secretary to Mahmūd of Gharānī, and an almost contemporary mention by al-Brītī, al-‘Irīdī, in his account of Kābul and Ḵandākh (end of 12th and beginning of 13th centuries) does not mention them. Al-‘Othī records that Shīkh-togūn enrolled Afghāns in his army, and that Mahmūd in his Invasion of Tokištrīn led an army consisting of Indians, Kāfīs, Afghan and Ghurzs, and that on another occasion he attacked and punished the Afghāns. Hīṭī’s Chronicle only a little later in date confirms this. Mahmūd’s attacks on the Afghāns took place in 1121 (1020-1021) and 114
(1023-1024). Al-Biruni mentions the Afghans once (ed. Sachau, i. 269), saying that in the western mountains of India live various tribes of Afghans who extend to the neighborhood of the Sind (i.e. Indus) valley. Thus in the 11th cent. when the Afghans are first mentioned they are found occupying the Sulaiman Mountains now occupied by their descendants, the very tribes which the advocates of the exclusive claims of the Durrans will not admit to be Afghans. Al-Biruni no doubt also alludes to them in the passage (loc. cit., p. 199) where he says that rebellious, savage races, tribes of Hindus, or akin to them, inhabit the mountains which extend from India towards western Persia. There is no record that at this time any Afghans were found west of Ghalanai nor in the Kābul valley and Gandhāra which was occupied by a Hindu kingdom. Confusion has arisen through the error of modern historians who have, as Raverty has pointed out, mistaken Tādzh Ghratī and Turākī Khażī for Afghans. Raverty considers with good ground that the Afghans were at this time found only in the mountains south of the Kān̄as and east of Ghalanai. The most persistent mistake is that regarding the Khandān period when the Afghans (Al-Biruni, cleansed of the word Afghān, but still calls them Ghurī Sūrī; i.e. a descendant of Sūrī, and not a member of the Sūrī tribe of Afghans. Even so accurate a writer as R. J. Browne (Lit. hist. of Persia, ii. 303) speaks of the Khāns of Ghīzī, those fierce and hardy Afghāns of Fīrūz-khānī. It is evident that throughout the Ghaznavi period the Afghans continued to be an obscure mountain race. We occasionally hear of them, but as adventurers who went in as hill rebels only. In 341 (1050-1050) Mas'ud sent his son Amr into the hill country near Kān̄as to subdue the rebel Afghans (Malleson, loc. cit., p. 86, turns this into Afghāns, Abdalīs and Ghilzais, the two latter names being absolutely unknown at that time). In 512 (1115-1116) an army composed of Arabs, Aḏjamīs, Afghāns and Khażīs, was assembled by ʿAbd al-Qādir. In 344 (1345-1346), Alfi says, Buhārī Ghilzāi assembled and defeated the Afghans and Khażīs. With the rise of the Ghōrī Khāns, as the name begins to disappear from the scene, this continues. In 588 (1193) according to Ferḥisṭa the army assembled by Mūʾīn al-Dīn Muḥammād b. Sām consisted of Turkic, Tadjīks and Afghans, and his Indian opponent Fihōrā (Fīrūz Rāḏī) assembled a force of Rājānī and Afghāni horsemen. Thus in this great war between Musliman and Hindu Afghans are represented as fighting on both sides, which probably indicates that they were not yet completely converted to Islam, although the majority of the Sūrī Afghans who are not yet living have been converted from the days of Khālid. It is not clear whence Ferḥisṭa obtained this statement. It does not appear in the account of his war given by Mīnābādī Tāshdī in the Jābālī-i Nāṣirī. This author does not mention the Afghans throughout his account of the Ghānčārī and Ghōrī kings. His first and only mention of them is in his account of the year 398 (1160) in the reign of Nāṣir al-Dīn Maḥmūd of Ghur. He there says that Nāṣir Khān employed yoke in the Afghans in subduing the hill-tribes of Māzā in Rādžātān. During the next two centuries we find occasional mention of Afghans in Indian history. For instance in the reign of Maḥmūd b. Tugh-
the Ghūrī kings, whether Thālīk, Turk or Afghan. There are many Kākās also, both in the United Provinces and the Punjab. The Zāmand tribe settled in Multān and Kāsar in the Punjab, and a large number of Abdālīs driven from Kandahār by the Ghūrīs in the early part of the 18th century joined them at Multān. From these sources spring the Multānīs and Kashtiya Pathāns. The Afghāns thus colonized northern India largely, and their descendents there are still distinguishable, although greatly assimilated by the surrounding population. They have lost their language and tribal organization.

In their own country the Afghāns never succeeded in establishing an independent rule until the 18th century. They remained, like the rest of the country, nominally subject to the powerful rulers of the day: the Moghuls, the Timurids, the Moghul emperors of India, or the Safawī kings of Persia, until the rise of the Ghūrīs to power under Mt. Wāls, and afterwards of the Abdālīs (Durrānts) under Ahmed Shah. It was at this period, when the Afghāns became the ruling race over a large population, that the name Afghānistan was extended to the whole country, including a large part of what had till then been known as Khorasan, a name still in popular use for the plateau country above the Sulaimān Mountains.

The genealogies recorded in the Moghānī Afghan are the foundation of those found in many modern works such as the Haykī Afghan. In their later parts they are historical, in the earlier they are valuable only as a guide to beliefs entertained three hundred years ago as to the relationship between the tribes. According to these almost all Afghāns are descended from Kās Abūl-Raṣḥīd, who was converted to Islam through the intervention of the victorious Khaīdī, and who was himself descended from Afghān son of Inīyā son of Malik Talib or Šārīf (Sanī). He is supposed to have derived his name from Kās (Kīsh) the father of Šārīf. From Kās Abūl-Raṣḥīd the alleged descent is as follows:

Kās Abūl-Raṣḥīd

| Sarbān | Bātan | Ghurghūshī |

These three sons are the eponymous founders of the three main branches of the Afghān race, the Sarbāns, Bātans, and Ghurghūshīs. Sarbān had two sons, Shārkībūn and Kharshībūn, and from them we find that a large number of the most important tribes claim descent. Thus from Shārkībūn we have:

Shārkībūn

<table>
<thead>
<tr>
<th>Sherūn (by a Kākā wife)</th>
<th>Miy̝y̝n̝a</th>
<th>Berūc (an adopted son)</th>

Sūr

Lūḥāni

Now broken up
From the Lohshā stock the present Dawlat-Khel, Miyan-Khel, Niyāš, Marwat, Khosta, and Tatar tribes are derived. It will be seen that the only tribe claiming to belong to the Bātar section in the male line is the small Bātar tribe, while the great Ghilzai tribe, almost a nation in itself, and the numerous Lōshā and Lohštā are believed to descend only from Bātar’s daughter, by her marriage with Shāh Husain, a descendant of the Ghilzai kings. This probably means that a large Tadjik or Ghilzai element is to be found in these tribes. The legend of the illicit connection between Shāh Husain and Bibi Mato, afterwards sanctioned by her father, and the birth of a son named Ghazār (‘thief’s son’), no doubt conceals the adoption of some such element as Afghān. It has been thought by some that the Khosti Turks are the tribe thus absorbed and that the same Ghilzai is simply Kholēji. This is very doubtful, but it is probable that there is a Turkish as well as a Tadjik element in the tribe.

The Ghurghusti branch is also not very widespread. The pedigree is:

- Ghurghusti
- Dānāl
- Ḍūbāl mixed with Durrānī
- Kākār
  - Kākār tribe
  - Nāqsh tribe
  - Panī tribe
  - containing the
  - Pānī tribe
  - of Sāblī

- Ḍūbāl mixed with Kākār
- Māndī-Khel
- of Zābīb
- Dānāl
- mixed with the Kākār

There remains a group of tribes which are jointly known as Kārīn or Karlīn supposed to be descended from Kāran or Kāran, whose origin is disputed:

- Kārīn
- Kōbāl
  - Wardak
  - Dīlūkān, Oγār, Mangal, tribes.

In addition to these the great Wastī tribe divided into Māshād and Darwāsh-Khel, and the tribes of Dāw are separate, and are not included in any of the genealogies.

Certain sections of tribes claim to be Saiyid by origin. They are found among the Sherūns, Kākārs, Kārīns, Dāwā, Tarīs, Miyanās and Bātāns. The Gandārūs and Ustārūn tribes also claim this descent; they were originally sections of the Sherūns but are now separate tribes. The Bangash claim to be Kāshī by origin.

All these tribes were recognized as Afghāns in the Mahāmā Afghānis with the exception of the Bangash and Wandīrs and the Karīns of the Kōbāl branch including the Kārīns and Kārās, and the tribes of the Kāran valley and Kōbāl, the Ustārūn-Khel, with the Dīlūkān and Tarīs, and the Dūdārūn, as well as the tribes of Dāw and Bānī. These were probably unknown to the author as they lived in obscure and inaccessible mountains.

He mentions other tribes such as the Fāmils only to reject the idea of their being Afghāns, and his omission of these tribes must have been due to ignorance.

1. DISTRIBUTION OF AFGHĀN TRIBES.

The Durrānīs occupy the lower valleys of the Helmand, Tarīs, Afghānūb and Argharān, Zābadār, the country south of Kandahār up to the Balūchistan border.

The Ghilzai are spread over the upper valleys of these rivers and the whole country of Zābadār east of Gharnū up to Khsī and Wārīstān, and the northern tributaries of the Gomāl. They go down in large numbers every year by the Gomāl and Tēktī passes to the plains of the Indus and are largely engaged in mercantile pursuits in India during the winter. At the beginning of the hot weather they make up their caravans in the plains of the Dāwāsh and go up to their upland pastures. This class of Ghilzai is known as Povindahs and belongs mainly to the powerful Suldān Khān clan. The smaller tribes known as Nāṣir and Kharost are of a similar type and are also migratory. They resemble the Ghilzai but are considered to be distinct from them. South of the Ghilzai is the widely spread Kāran tribe, now mainly located in Zābīb and Peshān, province of British Balūchistan. The same remark applies to the Tarīs, a tribe akin to the Durrānīs, who are now confined to British territory, and border on the Balūch and Irān tribes. The Panīs and their offshoots also inhabit Sāblī and the hill country bordering on the Balūche.

North of the Ghilzai in the lower Kāshū valley we find the Gāsīnts and Dūdārūn. In the hill country from the Kāsūr to the Khaiber Pass the Mohmands who are divided between Afghānīstan and India. East of these lie the Yandīns.
in the Paghâwar valley and the hills north of it, where the Urmuzani clan is best known, and in Buntâ, bordering on the Indus and the Dakhân. North of the Khâbareh Pass are the Shushawârs and south of it, owing a slight allegiance to the government of India, are the Afrîds, Orakzais and Zainukkâts. In the Kûmân country the Bangshâ, the Tadjiks and Turis. In the mountains between the Kûmâns and the Gonjâz are the Darwâsh-Khel and Mahând Washrizâns, with the Dârsîns in the adjoining valley of the Tôôt. In the plains of Kohât are the Kishâks, and in Buntâ on the lower Kûmân and Gambilâ are the Buntâns, a mixed race. The Bâtagans occupy the outer hills bordering on the Mahând country. South of the Gonjâz the Shushawârs, Ustârânts and some smaller tribes are found, and in the adjacent plains of the Dârsînâ the Gandjârâ, Miyân-Khel and some minor tribes. These extend southwards both in the mountains and plains till they meet the Balšâ tribes. The whole of the last mentioned tribes from the Khâbareh southwards although Afghâns are not under the government of Afghânistan but are wholly or partly under the control of the government of India.

2. POPULATION OF PERSIAN ORIGIN.

The name Tadjik (or Tâšht) is generally used not only in Afghânistan but in the neighboring parts of Persia and Türkistan to denote the settled Iranian population, which is probably the earliest established of all the races now inhabiting the country. Some have supposed the name to represent the Dâdhiâl of Herodotus, and even that Tolomeus has been thought to be the same word, the initial being wrongly inserted instead of P. These guesses do not require serious consideration. The word Tadjik as now used properly means Arab, and it was applied to those communities where Arabs settled at the time of the first Arab conquest. It was soon applied to all the settled communities, and the traces of Arab blood now remaining are but slight. The Tadjiks are almost entirely a settled agricultural community and doublains occupied all the more fertile parts of the country before the Afghâns spread from the eastern mountains. They are organized as a rule in village communities and not on the tribal system. They also supply the bulk of the trading classes and artisans of the towns. The trading instincts of certain sections of the Ghashâls may perhaps be attributed to their partly Tadjik blood. Wherever the Afghâns are in possession the Tadjiks are their tenants or dependants, although they often own the land. Where they have villages of their own they are presided over by their own heads or baadâshâs. Although Persian in race and language they agree in religion with the Afghâns and are devout Sunnites. The tribal system maintains itself among certain independent branches of the race which exist in mountain tracts. Such are the Kabulâns of the Kabul province, the Kûhîs of Lesghâr and Bûtghâr, and the Fârînâts who occupy the country west of Kabul. The population of Kabul itself is mainly Tadjik and the language Persian. The people of Sustân are also mainly of this stock mixed with Balšâns, and the traditions preserved in the Zêhîs are point to this locality as one of the earliest Iranian centres. A few Kayâns families which claim to be descendants of the ancient Kayân or Achaemenian kings are still found in Sistân. The province of Zâvarsh or Lesghâr, afterwards Sistân, Sijista, Sistan, included the lower basin of the Helmand River, perhaps as far as Zainukkât, and it was here and in the adjoining mountains of Ghôr that the powerful Tadjik kingdom of the Ghôrasts arose in the 5th and 6th centuries of the Hijra, which overthrew the decaying Ghazawî monarchy and supplied competitors to Northern India. Tadjiks formed an important element in all armies, and the desperate resistance which the Ghôrî mountaineers offered to the Mongols is evidence of their warlike qualities. The Kûrî dynasty, which invaded Afghânistan under the Persian Mongols were also Tadjiks.

In the south, spreading into Balûshistan the population of Tadjik origin goes by the name of Dehwar or Dehchû, i.e. villagers, and north of the Hindû-kûsh as in Türkistan generally they are known as Saris.

The Pathâi race which occupies the skirts of the mountains N. of the Kabul River in the Balûshân province may perhaps be classed with Tadjiks, although they speak a non-Iranian language akin to that of the adjoining Sîyâl-pûsh Kûrîs. The Urmûts of Lesghâr and the Kânîwâns of the Mahând Washrizâns, who speak an Iranian dialect called Bargast, must also be placed among Tadjiks.

The Ghâlsâ races of Wakhân and Badakhshân, which occupy the northern slopes of the Hindû-kûsh and speak Iranian languages differing from Persian, are generally classed as belonging to the Highland Tadjik type, which has kept apart from the Lowland Tadjiks of Badakhshân who speak Persian. They are a broad-headed race and are considered by Tadjik and others to belong to the Alpine race. They are found in Sarikol, Wakhân, Shigûnâ, Mundzûn, Sanghû and Ishkâshûm and comprise also the Vîdâsh on the south side of the mountains. The name Ghâlsâ applied to the group simply means in Persian "peasants".

3. TURKISH AND MONGOLIAN RACES.

South of the Hindû-kûsh. The mountains which lie between the Hindû-kûsh and Koh-i-Bâlûk on the north and the Helmand valley on the east and south that is the country formerly known as Ghôr are now inhabited by tribes shown by their features to be mainly or partly of Mongolian origin, although they are an admixture with the original Tadjik population. Those nearest Herat on the west side of the mountains are known as the Châshî Assalû, and still make use of the Turkic language to some extent. The Hazarâs, who occupy the greater part of the mountains, speak Persian, and are Shites by creed. It is generally asserted that they are the remnants of the army of Mengî, grandson of Chingiz Khan, but their actual origin is by no means clear. It may be taken as most probable that they gradually occupied deserted parts of the country after the devastations of the Moghul invasions, during the time of the Karîs of Herat, who, though themselves of Ghôr origin were under the suzerainty of the Moghul Ilkhâns of Persia, and depended a good deal on Moghul support. They are a hardy, brave and industrious race and are on the whole a peaceful disposition. Their Giro creed is a cause of offence to their Afghan neighbours on the east,
and to their kindred tribes, the Čahār Aimaq, on the west, and they are seldom on good terms with either of these.

The Čahār Aimaq are Sunnites, and consist of the four tribes (or Aimaq) of Huṣâlī, Djamshīlī, Taimani and Féfik-kūhī. They occupy the western valleys spreading down towards the eastern country of Herāt and Suhrawâr. Some Afghan state that the Taimani tribe is an offshoot of the Afghân Kâkâr, but if there is any foundation for this statement, they have lost all resemblance to their ancestry.

North of the Hindu-kūsh. In the territory of Afghân Turkistan the principal part of the inhabitants are Turk speaking Ozbogs with a substratum of Tagïks or Sarts, and in the desert tract to the west bordering on the country under Russian rule a few wandering Rešâ Turkomans still live inside the Afghân border.

4. NON IRANIAN ARYANS OF THE HINDU-KUSH.

The races grouped together as Siyâh-pōgh Kâfûs inhabiting the mountain country known as Kâfüristan are undoubtedly Aryan, and perhaps, as their language indicates hold an intermediate position between the Indian and Iranian stocks. They have all preserved some form of paganism till lately, but since their conquest by ‘Abd al-Rahmân, they have outwardly at least accepted Islam. Sir G. Robertson divides all Kâfûs into

1. Siyâh-pōgh, (2) Wall-güls, (3) Frenûn-güls, or Wirun, and mentions also a race probably allied to the Wall-güls, the Askhun of whom little is known. The Frenûn-güls, Wall-güls and Askhun are classed together as Safdâ-pōgh, or white-clothed, but differ from one another in dress, appearance and language, while the Siyâh-pōgh, or black-clothed tribes have a strong resemblance to one another, both in speech and appearance.

The tribes classed as Siyâh-pōgh are the Kâfûs, Madûgîl, Kâshân, Kân and Istari or Gurdeh; and of these the Kâfûs is by far the most important. Aryanans. The more distinctly Indian-sounding Indians known as Hindûk are found in some extent in the east of Afghanistan, but mainly in the districts now under British rule. They are mainly cultivators, generally Dâj by race.

Hindûk traders belonging to Khârî or Arees families having their centre at Shikarpur in Sind are found in towns everywhere, and even in Turkistan.

5. LANGUAGE, LITERATURE, RELIGION AND POLITICAL INSTITUTIONS.

LANGUAGE. The languages spoken in Afghanistan with the exception of the Turki of the Oxus province and of the Čahār Aimaq, and the Kâfû group of Kâfüristan, belong to the Iranian family.

Of these Persian is spoken by the Tagïks everywhere, in the provinces of Kâhûd and Herât including their chief towns, and in Badakhşân and the Kōhîs; also by the Mongoloid people of Hazûrî, and by the Kâl-i-bâgh of Kâhû and Herât who are as eighteen century immigrants belonging to the Turkish tribes of North Persia.

The Persian spoken is generally verbal, and everywhere preserves the old distinction of nadhû and avarîf between Ñ and A, Ñ and A, which is lost in modern Persian. The Persians of the Hazard are thought by some to resemble the ancient Zabûl, the Tagîkî of Badakhshân, Darâvûr, Kûlûb and Kâfüristan is a distinct dialect of Persian.

There is no distinctive literature apart from the general Persian literature.

The other Iranian languages belong to the East Iranian group, and comprise Pashto, the Ghilzâ group, and the Baghâni spoken by the Urmârs.

Pashto, Pashto or Afghân is the language of the Afghan and extends throughout their territory whether within or without the realm of Afghân state. On the north it is bounded by the Kâfû and Dard languages, on the east by West Fandžî or Lahnû, on the south by Balûk and on the west by Persian. The total numbers of speakers of Pashto may perhaps be 3500000 of which 2000000 may be in Afghanistan proper and 1500000 in British and independent territory. The East Iranian character of the language is clearly established although it has undergone many alterations and corruptions, and has been so strongly affected by Indian influence as to lead Trumpp to believe that it should be classed as an Indian language. Geiger gives the following distinctive points as indicating its origin clearly:

1. Original Aryan dental s (except before ñ) becomes ñ; often lost altogether in modern pronunciation.
2. The Aryan aspirates become spirants, as in Old Iranian.
3. The Aryan surds ñ, ñ, ñ, before consonants become spirants, and often disappear in later forms.
4. Before s Aryan dental becomes ñ, as usual in Iranian.
5. Aryan ñ becomes ñ, as in Iranian; the group ñ becomes ñ.
6. Aryan ñ, ñ, answering to Indian ñ and ñ appear as.

A change which is peculiar to Pashto is the general change of ñ and often of ñ to ñ. The Indian aspirates do not exist and Pashto speakers are unable to pronounce them. ñ is frequently dropped in conversation. Indian cerebra ñ, ñ, ñ and ñ exist, but in Indian words only.

The borrowed elements are large. Indian loans are not only in the vocabulary but the grammatical, even the infinitive termination of ñ is of Indian origin. Loans from modern Persian are numerous, and through the medium of Persian a large number of Arabic words have come in, and even a few Turkish.

There are two principal dialects, which may be called (1) the northeastern (with its centre at Pejghar) and (2) the southwestern (with its centre at Kunduzh). They are distinguished from each other by the pronunciation of certain consonants which are gutturals in (1) and sibilants in (2).

These are: q, d, b or b, pronounced ñ in (1) and ñ in (2); ñ in (2); ñ in (1) and ñ in (2); ñ and ñ in (2); ñ and ñ in (1) but not in (2).

The pronunciation ñ in (1) becomes ñ (1) and ñ in (2) becomes ñ (2) but this is not uniform. Thus

(1) khâsts or khatûs, woman in, becomes (2) khâsts (1) aghstân, the earth, becomes (2) agstân.

As the same character is used in writing whatever the pronunciation these spoken variations do not affect the written language, and they are nowhere sufficient to make one dialect intelligible to the speakers of the other. A very distinct dialect however is that spoken in Bamî, Dawz and Wûrzûn, a branch of (2).

In this a complete system of vowel change is found, according to
which: \( \dot{\alpha} \) becomes \( \dot{\alpha} \) or \( \ddot{\alpha} \). As in plurals for *plurām*, pl. of *plur*., *father*; for *mer*., *mouse*; and for *south*, *see*.

Among the Afghāns also \( \ddot{\alpha} \) is often pronounced \( \ddot{\alpha} \).

The language in its more cultivated forms may be studied in the works of Dono, Raverty, Vaughan, Belcher, Trumpp and Darmesteter.

**Literature.** — The existing literature of Pashto comes from the 16th century, and is mainly poetical, but there are also a few important works in prose, especially histories such as Alīdī Darwāzī’s *Madkham-i Pashto* and *Madkham-i Dīwan*, and Aḥmad Khān Khtān’s *Tawāqkūh Muraqqa‘*. The principal poets are Khūshghul Khān the Khākān chief who was for some time a prisoner at the Court of the emperor Awrangzîb, and wrote a Dīwan after the Dīwān model, Mīrzâ Khān Anārî, a poet of the Sūfî school, and the popular poets ‘Abd al-Rahmān and ‘Abd al-Hamīd who have both left Dīwān’s of a mystical character, also ‘Abd al-Kādir Khātān and Ahmed Shāh the great Durandī king. ‘Abd al-Rahmān is considered by Afghans to be their best poet, but European opinion probably will give the highest place to the more simple and energetic verse of Khūshghul Khān. On the whole the literature must be considered as artificial and imitative, and cannot claim to be more than a reproduction of Persian models.

**Popular poetry.** — But side by side with it there is the genuine popular poetry which has till lately attracted little attention. Darmesteter’s collection of these poems has rescued them from oblivion; they are the genuine expression of popular feeling in war, politics or love. Thorburn has also recorded some ballads, riddles and proverbs, and some spirited ballads in the Wazīr dialect have lately been published by E. B. Howell. None of the popular poetry is of ancient date, there are no heroic ballads relating to the great migrations and conquests of the Afghāns except one relating to Ahmed Shāh. Most of the 19th century, there is nothing to compare with the fine heroic ballads found in Balāsht.

**Religious literature.** — Religious writings both in prose and verse abound in Pashto, a great number of works of this type are lithographed at the presses of Pešāwâr and Lahore. Most of these have no great merit as works of literature. *Mīr Ḥamzâ*’s long poem by Mīr Šāh Mūhammad Šabtī may be mentioned.

**Alphabet.** — Pashto makes use of the Arabic characters in the wāfīf form, and has adopted certain modifications to express the peculiar sounds of the language.

Some of these such as \( \mathcal{A} = \dot{r} \), \( \mathcal{C} = \dot{\varepsilon} \), and \( \mathcal{Z} = \dot{\varepsilon} \) are already used in Persian. The peculiar sounds of Pashto are distinguished in an original way by the addition of a loop in the line instead of an alteration in diacritical points; thus:

\[
\mathcal{S} = \dot{\varepsilon}, \mathcal{Y} = \dot{r}, \mathcal{Z} = \dot{\varepsilon}, \mathcal{Y} = \varepsilon, \mathcal{V} = \ddot{r}.
\]

The guttural or sibilant \( \mathcal{M} \) is written \( \mathcal{M} \), and the peculiar palatals \( \varepsilon \) (\( \varepsilon \)) and \( \ddot{\varepsilon} \) (\( \ddot{\varepsilon} \)) are both expressed by \( \mathcal{S} \); Trumpp employs \( \mathcal{S} \) for the latter, but this is unknown in actual use.

**The Ghâlîcā language.**

This group of languages, often known as the Pamir dialects, is found in Wolgan and the eastern part of Badakhshān. The whole of them are spoken north of the Hindū-kush with the exception of the Šīkāhâ which has found its way across the range and is spoken in proximity to the Khwâr or Citrālī. Of the remaining three, viz. the Šīkāhâ, Sarōψî and Yaghsîl are spoken in the part of the Pamir under Russian rule, while four, viz. the Wolgan, Ishkâshîmî, Sangîlî and Minjdîl lie within the political limits of Afghanistan. Wolgan is spoken in Wolgan on the Upper Paruîr River, Ishkâshîmî in the Lower Panjî; Sangîlî is the language of the upper Warflî valley, which is the northern approach to the passes leading into Citrālî, and the Minjdîl is spoken in the upper valley of the Ab-i Djaran which flows into the Warflî. Yaghsîl is the speech of the Yaghsîl who live to the south of the Djaran pass in the British sphere. These languages are closely related to one another; they belong clearly to the Old Iranian family, and have also been to some extent influenced by the proximity of the languages of Harâsî, called by Grierson the Pashtū group. They also have some points of resemblance to Pashto, as for instance the use of \( \dot{\varepsilon} \) for an original \( \dot{\varepsilon} \) in Minjdîl and Šīkâhâ.

**Avestan languages of Kāhristān.**

These languages spoken by the Kāhir tribes and in Lāhīmān together with those in the adjoining countries of the Indus, Kāhirīstar, Citrālī and Gilgit have been studied by Kāhin and Grierson, and are placed by the latter in a group by themselves separate from both the Indian and Iranian families, as they share certain phonetic characteristics with each family, and have others peculiar to themselves. Grierson divides them into three groups:

1. The Kāhir of western, including Bas głîlī, Wolgan, Weron, Pachîl, Gavwar-bāt, Kalâsh, Ashkandar.
2. Khwâr or Citrâlī.
3. Dīrī or western.

Of the Kāhir languages Basğâlī, Wol-gālī, and Weron are the purest and are spoken in the central parts of Kāhristān. Pachîl is spoken on the southern slope of the Hindū-kush and in Lāhīmān almost to the banks of the Kāhalī river, from the Kânal on the east to the Lâhīmān on the west by a comparatively civilised Musalman population. It has been much influenced by Pashto, and is also called Dehngâlī, as Dehngâlī is the same borne by the tribes that speak it. The Kalâsh and Gavwar-bât are related languages, and the Tīrākī of Nangâshchā (formerly spoken in Tīrākī) and the Dīrī or Dīr are also connected with Pashto.

**Religion.**

Since the conversion of the Kâhīr of Kāhirīstan after their conquest by ‘Abd al-Rahmān the whole population of Afghanīstan belongs to the Mahāmān religion. The orthodox Sunnî creed is professèd by the great majority including Afghanīs of all tribes with one or two insignificant exceptions. The Tadîlī, the Ōbâgî and Turkomans of Tur-
Afghanistan. 157

The Persian speaking Hazaras are Shifties, and this creed is also professed by the Khail-hilf of Kâbul and Herât, the Kayání of Safâ and Harâzi and the Ghâzis tribes. Among the Afghans a few Shifties are found among the tribes on the Indian border, viz. the Orkunni and Sâiyids of Târîf-ah, the Toâ-e-Kâran and the Samnâli Bângsh of Kâbûl. These are in reality followers of Pîr Râghân (the old man of light); nicknamed Pîr Târîf, the old man of darkness). This heretical sect was formerly much more widely spread than it is at present. The celebrated Agâhi has been its great opponent, and it led to bitter wars in Kâbûl's time. It has fallen into disrepute, and its followers are now generally classed as Shifties.

Although mostly orthodox by profession the tribemen are in general very ignorant of their religion. The Afghans and Tadjiks are particular as to the observance of fasting and prayer times, but the adoration of Pîrs or local saints is universal and practically constitutes the religion of the masses. With their ignorance of the true doctrines of their religion they combine an intense hatred of all non-Muslims and the belief that the slaying of a Christian, a Sikh, or a Hindu is a most righteous act and it is very widely spread. The preaching of a dîkhâb (Holy War) by an influential Mulla is generally the signal for an outbreak of violence.

Religious mendicants abound, and many of them are believed to possess miraculous or magical powers. Similar powers of healing diseases by charms or breathing on the patient or on the water he drinks are believed to be inherent in members of certain clans and families. Mullas are often popular leaders and sometimes take the lead in important political movements. Want of orthodoxy is severely dealt with, heretics being sometimes killed by stoning, and in Kâbûl persons of every class are strictly examined as to their knowledge of the prescribed prayers, and are exposed to public obloquy if they prove to be ignorant.

The influence of the followers of Sayyid Ahmed, a native of Rohâtghân who preached the Wahhabî creed and fought against the Tadjiks in the early years of the 18th century, and that of his orthodox rival Abd al-Qâdir better known as the Akbîn of Swât, who was universally believed to have the power of working miracles, is also powerful up to the present day.

In the war of 1880-1881 a very prominent part was played by a Ghânzâni Mulla named Mughîl-Âlam, and in the more recent border wars of Swât and Târîf Mullas have been the leaders.

Political Institutions.

The modern Afghan kingdom began with the rise to supremacy first of the Ghânzâni and shortly afterwards of the Durrânîs under Ahmad Shah. His rule was based on the supremacy of the Durrânî tribe and especially of the Safdîni family of the Popâzâni clan of that tribe. Within the tribe the great rivals of the Safdânis were the Bârsânis, headed by the family which displaced the Safdânis in the early part of the 19th century and still rules. At first the Durrânî monarchy was a loose association of tribes. Ahmad Shah was contented to reign without interfering with the internal affairs of the more powerful tribes, but such loose aggregation of elements had not the strength to endure as a powerful kingdom although the personal influence of Ahmad Shah was strong enough to preserve it for a generation after his death. The Bârsânis under strong and unscrupulous leaders like Dost Muhammad and Abd al-Rahîm have aimed at consolidating their power and destroying all rivals, and their efforts, especially those of Abd al-Rahîm, have proved successful. At his death he left his successor, the present king Habîb Allah a solid kingdom in which his word was law and there was no longer anything resembling an imperium in imperio. Any chief who were too powerful were executed or exiled, and any tribe that opposed him was broken up or scattered. The emir is no longer dependent on tribal muster; they have a strong centralized force with artillery and modern arms entirely under their own command. Whether in the case of a was with England or Russia such a force would prove reliable is at present doubtful, and it is also possible that the old effective power of the tribes, which has hitherto been greater against invaders than of the organized army, has been weakened by the suppression of all able leaders.

The country is divided politically into five provinces and two territories which are not as yet constituted into regular provinces as follows:

**Provinces:**
- Bâdghîshâ
- Kâbul
- Herât
- Kandahâr
- Turkistân
- Wâghân	

The tribes, which are outside the emir's border and which are within the political boundary of the Indian empire but not within its regularly organized district, retain their internal independence absolutely, while those which are settled in organized Indian districts are subject to the ordinary laws but retain their tribal organization. They are to a great extent governed through their leading men and in accordance with local custom where these do not conflict with the criminal law. The organization of the Afghân tribe is very democratic. Although every large tribe has a nominal chief, who is the head of a certain family (the Khan-Khel) to which the hereditary right of providing the chief is attached, yet in practice he has but little power, and the headman of every small section of the tribe has to be consulted in all business of importance. Towards the south among the tribes bordering on Balûshistan this rule is modified, and the tribe tends rather to follow the Balûk model in which the chief of a tribe, though not free from criticism, is the actual ruler of his tribe, which is framed on the patriarchal principle and believed to be of one blood with the chief.

In this system it is not uncommon for strong clans to shift from one tribe to another and to become affiliated as members of some powerful tribe to which they did not originally belong. Such clans are not subject to the tribal laws of a common origin, and are more apt than others to assert their independence of the chief.

In some cases the clans admitted as members of a tribe to which they do not belong by blood are regarded as inferiors, and in such cases membership was probably granted as a reward for service.

The non-Afghan population is everywhere sub-
ject to the Afghans, but the degree of subordination depends upon the extent to which they are mixed with Afghan tribes. The mass of cultivating Tajiks living in villages are under their own Kadjahdads, and the Hazaras are also under their village headmen or Hoks. There are some mountain communities of Tajiks still under their own chieftains, and the large tribes of the Hazaras and Chahar Amanak are also presided over by chiefs who possess great power. The Tajiks who remained in the higher mountains after the Mogul immigration are probably absorbed into these tribes, as there are no separate Tajik communities now resident among them. All the Hazaras who had become very independent and always hated the Afghans were subjugated and put down with great severity by the emir 'Abd al-Rahman.

The population of Kafiristan consists of a few large tribes each consisting of several smaller clans, occupying separate valleys, and very loosely connected one with the other. The emir's authority is now recognized by all.

4. History.

At the dawn of history the countries now comprised under the name of Afghanistan were found in the possession of the Iranian race. They were well-known to the authors of the Avesta, and we can still recognize several names of provinces or rivers which have persisted till modern times. The colossal earthworks found at Baat, Ulun Robat and elsewhere in the Helmand valley may perhaps have been attributed to this period, but Afghanistan is as yet closed to the researches of archaeology, and no information from this source is accessible as to its early inhabitants.

Of the names in the Avesta we can recognize the following:

Old-Persian | Classical | Modern
---|---|---
Avesta and Bactria | Bactria | Balkh
Bakhtrish | Ariana | Herat
Harašva (Achaemen.) | Harahva (Aria) | Harat-Rud R.
Mūrū | Margiana | Merv; Marghelan R.
Murgu | Margiana | Merv; Marghelan R.
Wātīgāh | Margiana | Merv; Marghelan R.
Zayka or Lake | Zirah of Sistan (Gāzī-Zirah) | Zirand (median valley, now a rain)
Zarah (Achaemen.) | Drangiana | Drangiana

Hureen-suhbati (Achaemen.)
Farnamwati
Frastha
Phē
Hrāspā
Hrāstara
Hastamun
Harawwati
Haramwati
Pisnâh
Urza

Pharnacotta
Phraathis
Phraathis
Khospe
Kosuza
Beymantra
Arachottia

Hursti-Rud R.
Fārāth-Rud R.
Kurd-e E.
Khāsh-Rud R.
Běrnandar Helaund
Arghandāb R.

Fahīn
Urgiha
(in Faramūl)

Paraparainnanna (stands for Gandīrā in the Babylonian version of the Achaemenian inscriptions).

It is clear therefore that the Helmand valley, Sistan and Herat were among the countries best known to the early Iranians, and they were also comprised within the Achaemenian empire, as our first information as to the composition of which is derived from the cuneiform inscriptions of the kings and the lists given by Herodotus. Among the twenty-three provinces of which the empire was composed we find the following six:

Zaranj in Herodotus now Sarakal, in Ariana Zaraq (later Dandahla, showing that the Avestan form in r2 had been superseded by the Old Pers. form in D)
Harašva Arela of Herodotus now Herat Bakhtiриsh Bactria now Turkistan of which Balkh is the old capital.
Gandharā Gandārītīs Indian Gandhāra, i.e. the Kābul valley, now the Hazarān country
Thangah Shattagydāi now the Khudabār province, which are practically identical with modern Afghanistan.

Four of these six have been identified above with countries named in the Avesta. Gandhāra was an Indian, not an Iranian country, and this perhaps applies to Thangah as well. It may be noted that Duris Hystaspes about 500 B.C. added to the empire an Indian satrapy extending to the Indus, which is not included in the inscriptions. Zarandīsh was, like Persis, free from tribute, and it seems probable therefore that it was regarded as an ancient home of the Iranians, and not a foreign conquest. Traditions which may be traced to the Avesta were still alive there in Firdawsi's time and were embodied by him in the 548.4-5 about 1000 A.D.

When the Achaemenian monarchy fell before Alexander this part of the empire was frequently traversed by the Macedonian armies, and after Alexander's death it fell, with the other oriental provinces, to the share of Selucides. But the rival kingdom of India was at the same time pressing on the eastern side, and Candragupta in his revival of Indian power not only recovered Alexander's Indian conquests but obtained possession also of the provinces south of the Hindī-kūāh. It is probable that they continued to form part of the Mauryan empire up to the death of Aśoka, (ca. A.D. 234) when it began to decline. A hundred years after the census to Candragupta the Sanskrit text of the Mauryan empire was attempted without much success to extend their sway to the Indus again. The expedition of Antiochus the Great (206 B.C.) in which he conquered an Indian king named Sophagense (i.e. Subhaga-Sena) does not seem to have had any permanent result. Throughout this period we have no information as to the people of the country.
Afganistan.

We may suppose that the Indian kings would find no support among the Iranian population but they would perhaps be welcomed in Gandhara. On the other hand, they would have little sympathy with the Macedonian invaders. Fresh energy was shown by the latter after the independent kingdom of Bactria was erected. Only ten years after the expedition of Alexander, Justin mentioned Demetrius son of Euthydemus made his way over the pass from Bactria to the Kabul valley, and conquered a large territory in the Panjith. The head of an elephant worn as a hood on his head appears on his coins as a symbol of his Indian conquests. The successful rebellion of Eukratides seems to have deprived Demetrius of his conquests south of the Hindū-kush, and at one time he held at least some part of Bactria for he founded there the city of Eukratides. Demetrius on the other hand founded Demetrias in Acharnias and Euthydemia in India, but there seems no doubt that Eukratides reigned for a long time in India and the Kabul valley. Demetrius never (with one exception) uses any language but Greek on his coins, while the extensive coinage of Eukratides is mainly bilingual, the Greek inscriptions being translated into Pankht or the Khorassan dialects. Eukratides was murdered by his son Apollodorus, who succeeded him in India, while another son, Hierokles ruled in Bactria and probably south of the Hindū-kush as well. In his time, about 140 B.C., the Greek monarchy of Bactria fell before barbarian invaders, but south of the mountains, Greek kings continued to rule. The most important of these was Menander I, king of Kabul, who invaded India and penetrated as far as Mathura and Oudh. He is probably the king mentioned in the Kunda of Buddhist tradition. His invasion of India may have been about 155 B.C., and the extent of his invasion is shown by the abundance and numerous find-spots of his coins. From this time on, the territory held by the Greeks may have been split into several principalities, and Hermaeus the last Greek king was subjugated by the Kushan Kujulakana Kadphises about 45 B.C. Coins are in existence bearing jointly the name of the two kings, and resembling closely the later coins of Aungkuras, from which they seem to have been imitated. Meanwhile for two hundred years a large part of Afghanistan had been occupied from 140 B.C. onwards by barbarian chieftains ruling side by side with Greek kings.

The most important of these barbarians were the Sakas, a nomadic Iranian race, who had formerly occupied an extensive territory in Scythia, north of the Oxus. It has been conjectured that the (Shahis) tribes of the Pamir and the Altai (who, though not present in speech, are not Mongolian in features) are their modern representatives. It is possible too that the Balochis, who are first heard of historically in the time of Nūrān, are an offshoot of the same stock. The Saka were attacked about 160 B.C. by the tribes known as the Chinese as Yüht-chi, probably of Turkish origin, who had themselves been driven west from their original home in Kiang-yü by the Hung-ni. The Saka were gradually pushed southwest and the Bactrian kingdom north of the Paropamisus fall before them. The Saka kings Manas (or Herata) and Hyroodies, whose coins were certainly struck north of these mountains, probably belong to this period. They further broke up and seem to have made their way into India, into Bactria, and into Persia and Arabia. They were a race of fierce people who were not satisfied with the tribute paid them, and obtained complete possession of the satrapy of Drangiana, which was known as Sakastane or Sakastane (whence the medieval Saksan, Saidjakan and the modern Sistan). This has been the accepted theory of most writers on the subject, but recently F.W. Thomas has brought forward strong arguments to show that the Sukaks were not as the Achemenians, that they held the whole mountain country now known as Harastra, and that any invasions they may have made into India were made from this centre into the Indus valley, and not from the north by the Hindū-kush. In any case the Sukaks were found in Sistan at this period.

The kingdom of Parthia had arisen in North Persia about the same time as that of Bactria, but it had a more solid foundation, and was not shaken by Sukaks or Kuchtags. Indeed, if we may believe Ctesias, the Gondophares I of Parthia invaded India about 178 B.C. and annexed the country comprised in the kingdom of Taxila up to the Gakhram. But here they had to give way to the Sukaks, and a king of that race named Mamis or Maxis is found ruling at Taxila ca. 120 B.C. In Sistan the Sukaks are shown by their coins to have been under strong Parthian influence. Vonones was probably contemporary with Mami and held not only Sistan but also the province of Acharnias. The Parthians under Mithridates II conquered Sakastane ca. 90 B.C., and it seems to have lost Arrachania but succeeded in Sistan. His son Aivilis succeeded, followed by Aivilis II and the Parthian Gondophares who conquered Sakastane, Acharnias and the lower Indus valley. He was a powerful monarch, and is the king associated with the legend of St. Thomas's visit to India. On his death the kingdom broke up, Orthagoras obtaining Arrachania. About 70 B.C. the whole country came under the rule of the Kushans.

The Yühi-chi of the Chinese, of whom the Kuchtags were a branch, are believed to have been of Turkish origin, but it is probable that they were partly of Iranian blood and culture, which would have rendered easier their assimilation by the pre-existing Iranian population (including the Sukaks). The portraits on their coins show them as sturdy bearded men with long noses, in fact of the type still prevailing among Afghans and Yühi-chis; their language seems to have been (or to have rapidly become) Iranian, and the Gods they worshipped were mainly Persian. Their home before they were attacked by the Hung-ni was in Chinese Turkestan, where recent discoveries show the early civilization to have been mainly Iranian and the language identical with that of Sogdiana. They probably assimilated many elements during their residence in the Oxus country, and learnt something also from the Greek princes whose coins they imitated, although their knowledge of Greek was much less perfect than that of the Sukaks, and they often used Persian words written with Greek letters.

Certain dates have been derived from inscriptions of these kings, and it has been generally held that these must be referred to the Sukak era.
which commenced in 78 A.D. According to the generally accepted view the succession of kings was as follows:

Kadphises I (Kudaik) A.D. 45-50
Kadphises II (Hama) 50-55
Kanishka 55-120
Wuenksha 120-150
Wusandша 150-180

It seems probable, however, that it is not necessary to assume that Saka and Kushans used the same era, and that followed by the Kushans, and identifies the commencement of this era with the date of Kanishka's accession. Following this era the Parthian king Gondophares is found to have been reigning at Taxila in the 26th year of his reign in 35 B.C. In accordance with this theory the succession of kings is tentatively arranged as follows:

1st Kushan dynasty: Kanishka A.D. 32-100 B.C.
Wusandsha (?) 30-22
Husandsha 22 B.C. 16-6 B.C.
Wusandsha 16-40
Kadphises I 50
Kadphises II

It seems clear that the Kushan kingdom, whether first established by Kanishka or by Kudaik Kadphises, swallowed up all competitors in Afghanistan during the century from 50 B.C. to 50 A.D. The Kushans were still mainly to the north of the Hindukush when visited by the Chinese Chang-kiu-en about 125 B.C. Some time after this the Yuezhi were divided into five principalities of which the Kwei-Chwang or Kushans were one. About a hundred years later the Kushan king subdued all the other principalities, attacked the Parthians, conquered Kabul and founded a widespread empire. The Chinese version of his name is Kiong-Suan, who is succeeded by his son Ven-Kan-Chiu, who invaded India. The first is generally identified with Kadphises I and his successor Kaddi, Kadphises II, who finally supplanted Huma, the last Greek king of Kabul, if the coins are rightly interpreted, and his son with Hema or Hema Kadphises, whose coins are abundant both in Afghanistan and North India. His empire extended from the frontier of Parthia to the Ganges and northwards into Sogdiana. The whole of Afghanistan seems to have been under his control as his coins are associated with those of a chief known only as Sotte Magos, perhaps his general or viceroy. The coins of Kadphises I bear a strong resemblance to those of Augustus and Tiberias, and seem to have been copied from them, and the Roman standard of weight was also adopted for the gold coinage. Kadphises II is believed to have reigned for about forty years. Kanishka's reiga, according to the generally accepted account, began about 125 B.C. His coins show the extent of his dominions, and he is celebrated in Buddhist tradition as the king who called the great council which established the Mahayana system. The figure of Buddha with his name in Greek letters appears on one of his coins. Fleet has, however, pointed out that Buddhist tradition fixes the accession of this king at four hundred years after Buddha's death, and that this is inconsistent with such a late date as 125 B.C. subsequent to the two Kadphises kings. S. Lévi also to some extent accepts this view though he has not adopted the theory of the Samvat era. Fleet considers that Kanishka's and his successors preceded the Kadphises kings instead of following them, and reigned from 35 B.C. to the commencement of the Samvat era, until nearly the time when the last Greek king Hermion was displaced by Kadphises I. The reign of the last Greek kings was not doubt confined to a very limited area.

If we note that the Kadphises kings employed either Greek or Persian in Greek letters on their coins, and until the last king of the series Bario or Wusandsha, who is shown by his name to have been indianized, the die stamps which appear on their coins are mainly Persian. The Kadphises kings, like the Greeks, employed both Greek and Sanskrit, and the type of the reverse of their coins is Siva and his bull, which had only been used by Bario among the Kadphises kings. From this it may be argued that the centre of the dominions of Kanishka and his followers was in an Indian district such as the lower Balish valley or Taxila. After this period Siva and his bull continued to be used for centuries, and there was no reverse to the Persian dastur even under Saltanian influence. These facts seem to be in favor of the theory of succession advocated by Fleet. We know very little of the Kushan coinage except from coins and a few inscriptions. The inscription on the Warchak race shows that Kabul was included in Husandsha's dominions. The power of the Kushans declined rapidly in India after the time of the kings we have been considering, but in Afghanistan it was maintained for some centuries in fact till the invasion of the Ephthalites or White Huns. During this period we again find Afghanistan as the battlefield of Indian and Persian influence. The Parthian power disappeared, and its place was taken by the Sasanian monarchy of Persia, while in North India the great dynasty of the Guptas rose to power. In some of the later Kushan coins, struck probably in Sistan in the 4th and 5th centuries, there is a distinct Sasanian influence. This probably began with the conquest of Sistana by Warchak II 294 A.D., who gave his son Warchak III the title of Sistan-kush, Hormizd II soon after in the early part of the 4th century married the daughter of the Kushan king of Kabul, and described himself on his coin as the royal family of the Great Kushans, and at the siege of Amidah Shapour had the support of the people of Sistan (Segestia) and of the kings of India, i.e. the Kushans. Some of the Kushans are found with such distinctively Sasanian names as Hormizd, Warchak and Firoz. On the other hand the great Guptas contemporaries Candragupta is shown by his inscriptions to have had intimate relations with a Kushan king.

The rule of the Kushans in Afghanistan seems to have been extinguished by the invasion of the White Huns or Ephthalites, in the latter part of the 5th cent., which was the period of the wars of this race against the Sasanians, in which Perises met his death in 480 A.D. Kabul and Gandhara fell into their hands about 510 A.D., and their king Tanarimes established a rule which extended far into India. His capital was at Saka, i.e. Siyalkot in the Panjdeh. These barbarians roughly imitated Sasanian types in their coins. It is not certain whether a king of Kabul named Napti who struck coins of Sasanian type at this period, was a Kushan or an Ephthalite. The rule of the
to Kabul, where he took the fifth prisoner; no doubt one of the little Kafsh Khan kings. This final advance was made in the time of the caliph Ma'muni. These conquests led to no permanent occupation, though the sultan is said to have occupied Kandahar and repeated the act of doing justice, which was always acceptable and close to the province of Kandahar, was thoroughly subdued; and from this base further attempts were made to subdue the kingdom of Kabul. An expedition headed by 'Umar and Ahmad ibn Idris was sent, and they were obliged to ransom himself and his army for 700,000 dinars. In 747 (700) al-Hajjaj despatched another expedition, but the commander 'Abd al-Rahman b. al-Ash'ath was disgraced. He then in revenge allied himself with the sultan, but was afterwards betrayed by the caliph and committed suicide. The king's name is given as 'Abd al-Rahman or Zuhd or Rabid, but the form is not certain. Under Harun al-Rashid another expedition against Kabul is stated by Ya'qubi to have been directed, and it was again taken, but not held, and when al-Ma'mun had himself succeeded to the caliphate and the 'Abdards had risen to power, we hear of a rebellion of the Khurshid heretics in Sijistan.

The rise of the Saffarids, headed by Ya'qub b. Lahib about 860, is undoubtedly due to a movement of the indigenous population against the Arab conquerors. After Ya'qub had put an end to the 'Abdards and established his power in Sijistan he extended it through Djarun (i.e. the Garmsir of the Lower Helmand) and Zululistan, conquered al-Rukn Allah, Ishaq and Nadir, and took the fifth prisoner. His occupation lasted longer than any of the previous invasions, and we find a coin of his struck at Rashid in the Kabul Khorasan in 260 (973-974). In 887 (936), under al-Lahib b. 'Ali struck at Bost in 268 (914). Kabul seems to have been permanently occupied about 873 (817), a date which corresponds closely with the commencement of the so-called Brahman kingdom of Kabul as shown above. The last Shahi kings evidently collapsed under the combined influence of Muslim attacks from the south and the rebellion of their Hindu subjects in the east. This Hindu kingdom formed a barrier against the advance of Islam into India till its conquest by Mahmud, for although the faith had been established in Sind its outward extension from that side was checked by the desert. The possession of the fertile belt of country below the Himalayas was indispensable as a preliminary to a further advance, and this was impossible until the Hindu kingdom had been destroyed.

The Saffarids were, as has been already noted, of Persian stock. The ruling family claimed descent from Khusraw I, whose son, Lahib ib. Lahib, made peace with the caliphate, and he and one of his sons made a nominal submission, and was confirmed in the possession of Faras, Dharjal in Sijistan and Khorasan; but the fall of the Saffarids recovered power of their people. In 881, the Bassiri were the first to assert their independence, still sanctified in Sijistan, another family of Iranian stock. Their ruler, Ikhtisar ib. Bishr, was defeated by 'Abdallah ibn Abi Bakr b. 'Abd ibn 'Abd al-Rahman, who reigned till 921. The Bassiri ruled in the north, the Farsids in the south, and the Sassanids in the west. The Saffarids thus lost all their dominions in Persia and Khorasan, but reined in Sijistan which extended into the Tigris, and perhaps even to the Hindu desert, remained under the suzerainty of the Saffarids.
and numbers of the same family ruled Sīdī jāstāns as governors throughout the time of the Ghurans and Ghōrī kings. How far the Sīmānīde power extended in Afgānīstān is doubtful. Iṣmā'īl Sīmānī was stated in the Mughal mālā to have ruled some parts of India. Raverty considers that this refers to the Khābūl territory. It may perhaps imply some admission of suzerainty by the Hindu kings of Ohind. Zannadāwār was probably governed through the Saffārs, who did not however make any admission of Sīmānīde suzerainty on their coins. After 390 (913) the country was restored to Stanī, proper, and the greater part of Afgānīstān must have been independent under its local chiefs, no doubt some of them still Zoroastrian, Buddhists or heathen in their beliefs.

About 350 (961) a Turkish slave named Alp-tegin who had been Ḥādjiū or Chamberlain under the Sīmānīde king ʿAbd al-Malik rebelled against his successor Mąnsūr, and took possession of the town of Ghazān. He displaced its local chief Laqūk who is called ʿĀqū or ʿĀqūk, perhaps one of the later Ḥādjiū chiefs, and also subdued the province of Zabul, and thus began to build up an independent kingdom. He had an army of Turkish troops under his command, and was able to hand over his power to his son ʿAbdūl who ruled from 352 (963) to 355 (966). Balkās-tegin a Turkish slave of Alp-tegin succeeded him, and struck coins in his own name, which his predecessor as far as we know had not done. When he died another slave of Alp-tegin named Subuk-tegin rose to power and became the actual founder of the Ghaznavid dynasty. He issued coins from the mountain fort of Farānān north of Khābūl admitting the overlordship of the Sīmānīdes, but became a powerful ruler throughout Zabul, Zannadāwār and Ghōr, and attacked Ḥādjiū the Hindu king of Ohind. He was also invested by his Sīmānīde overlord, the emir Nūh with the government of Khurshān. The Sīmānīde kingdom was now weakened, and the power of the rulers of Ghazān rose as it declined. On Subuk-tegin’s death in 387 (997) his son Iṣmā’īl succeeded, but was dethroned by his brother the celebrated Mahmūd, then (389 = 999) in his twenty-eighth year. The Sīmānīde king Mąnsūr was soon afterwards dethroned by rebels, and his brother ʿAbd al-Malik also fell shortly after. Mahmūd espoused the cause of his fallen suzerain, punished the rebels and kept the kingdom. Possibly he was implicated in the revolt, as Farghāli says that he himself attacked ʿAbd al-Malik. Mahmūd then fixed his capital at Balkās, and received investiture from the caliph al-ʿĀṣir, with the titles of Yānnūn al-Dawla and Amīn al-Milla, and dropped the name of the Sīmānīde king. The title of Sultān by which Mahmūd is generally known to the chroniclers does not appear on his coins nor on those of his immediate successors, and does not appear to have been recognized in his time. Its first official use was by Sulṭān Toḡrūl Beg Sehlūj in 439 (1047), after Mahmūd’s death, and among the Ghaznavī kings it makes its first appearance on the coins of Ilbūlīm who succeeded in 451 (1059). The statement in Elliot and Dorson, History of India, ii. 482, that Mahmūd I bore the title of Sultān al-Muʿāẓẓamin is not borne out by the coins. Mahmūd used the titles of Nışābūr al-Dīn, Malik al-Maṣūmī and Malik al-Maṣūmī. Firdawī in his well-known satire addressed him as Shah. Al-Őtāba however sometimes speaks of him as Sulṭān, and the title was doubtless in popular use before it was officially recognized.

Mahmūd’s conquests in India and Persia do not form part of the history of Afgānīstān. He was there a foreign ruler, a Turk, and Ghazān was a convenient centre for his empire, but his dynasty was in no way national, and the chiefs of Sīdī jāstāns, Ghōr and of the Afghān tribes in the Sulaimān Mountains continued to rule locally under Ghaznavī suzerainty. Probably the later kings of the race were to some extent assimilated to their Tādījk subjects, and names like Farghālū, Bahrūm Shāh and Khūsaw imply Persian influence. Mahmūd’s armies were recruited wherever he could find salutary material, the nucleus being Turks of his own race. The Khābūl, another race of Turkish origin, were also an important element. When Mahmūd marched to Balkās to meet Nūh Khānas, his army according to al-Őtāba contained Indians, Khābūl, Afghāns and Turkomans. Of these the Afghāns no doubt belonged to the lately conquered kingdom of Ohind, and his successor Mansūr employed, Bulbjāz tells us, Hindūs with success even against the Turkish rebel Ahmed Nīyāl-tegin. In the battle of Kārūn the cavalry consisted of 2000 Hindūs and 1000 Arabs and Kurds. The Ghaznavīs were no doubt the Tādījk of the Ghazān province or Zabul, The Afghāns begin at this time to appear as component parts of the armies. Their first recorded employment was by Subuk-tegin. The Khābūl were very widely spread at this time over Khurshān and Susiana, and Yābūt (Miyāqān, s. v. Kubā) quotes Iṣbālī as saying that they conquered Khābūl. In these mixed armies the Turkish element undoubtedly was predominant.

Mahmūd’s first important expedition was against the Hindū kingdom of Ohind or Wuhand, with which Subuk-tegin had already been at war. The first campaign was shortly followed by another which ended in the total defeat and capture of Dājiūl in 392 (1001) near Paṣwār, and the fall of his capital Waḥīnd. After Mahmūd’s first invasion of India, when he was confronted by a confederation of the warlike Hindūs of North India headed by Amanḍāt assisted by the Ghūkhrs, Dājiūl seems to have remained faithful to him, and soon afterwards offered him a contingent of 2000 Indians to serve in his army. In the intervals of his numerous Indian expeditions and other foreign conquests Mahmūd found time to consolidate his dominions in Afgānīstān. The Tādījk principality of Ghōr first attracted his attention. Its princes though destined ultimately to overthrow the Ghaznavī monarchy were still obscure mountain chiefs.

Subuk-tegin had conquered Zannadāwār and Ghōr, and Baṣt the capital on the Helmand, but the mountain country, was evidently unsubdued, and Mahmūd found it necessary to attack it. He was engaged in operations there from 401 (1010) to 405 (1014). The hillmen were evidently as yet unconquered to Islam. Bulbjāz speaks of them as cursori unbelievers. The war ended with the capture of the Malik, Muhammad son of Zinūr. In 414 (1023) Mahmūd attacked the mountain Afghāns of the Sulaimān who had been giving him trouble, and plundered their country.

At the close of his reign Mahmūd ruled over
a vast empire including on the west Khorsâstan with parts of Irâk and Tabûristân; on the north Turâkistan south of the Oxus, with some influence beyond that river; on the east the whole of the Panjâb; and all modern Afghanistan in the centre. His mint towns illustrate its extent. In Afghanistan he struck coins at Ghaznî and Farwân, in Khorsâstan at Nahâpûr and Herât, at Djiqâju near the Caspian, in Turâkistan at Balkh and Walwâla, and in the Panjâb at Lahore, all called Mâshâd. Mâshâd was brought out of prison and crowned the throne (444 = 1053 A.H.). He reigned till 451 (1059) and won popularity by lightening the heavy taxation of Zâbulestân. Probably the rising strength of the Ghôr Maliks had something to do with this leniency. His brother, Bidârám, succeeded him; and his long reign of over forty years was on the whole peaceful and prosperous. He made peace with the Seljuks and married afterwards his son Mâshâd III to the daughter of Malik Shah; the Seljuks kings who made some conquests in India, but is more celebrated for his peaceful exploits, the erection of mosques, sarais and schools. Mâshâd III succeeded in 492 (1099) and reigned till 508 (1115). His reign was prosperous and his alliance with the Seljuks preserved him from molestation on the north and west. He was able to organize further expeditions into India, one of which penetrated to the Ganges. After his death a rivalry between his sons Shârâd and Arslân ended in the deposition of Shârâd. Arslân reigned only two years, and his misconduct brought the long peace with the Seljuks to an end. He insulted his stepmother, sister of the great Sandjâr now the Seljuks king, and drove out her son Bahram, his own half-brother. Sandjâr made war on him and he was defeated and retired on Lahore, but recovered Ghaznî for a short time. Bahram with the aid of the Seljuks defeated him a second time and he died in India in 511 (1117). With Bahram's death the struggle may be said to have ceased to exist. Though the Seljuks were still called himself Sultan al-A'lam, yet he became a vassal of Sandjâr and put his name on his coins as suzerain. Bahram Shah reigned till 547 (1152) but his rule was restricted, and there was no longer strength nor energy in the administration to deal with enemies internal or external. The Turkoman hordes of the Ghuz, originally akin to the Seljuks, but now their most dangerous enemies, threatened from the north, while the mountain chiefs of Ghîr now began to challenge Ghaznî supremacy in the south. They had been gradually growing in strength, and, unlike the other rulers of the time, were truly indigenous, sprung from the Tajik stock. Mâshâd III had already in 493 (1099) bestowed the government of Ghîr on Izz al-Din Husain son of Sim, and the Maliks were supported also by Seljuks influence. Izz al-Din Husain was succeeded by his son Sad al-Din Sitrû, whose brother Kirth al-Din Mahammed, known as Malik al-Djâhîd or king of the Mountains, was poisoned in Ghaznî through jealousy by Bahrain Shah. In revenge for his brother's death Sitrû invaded Ghaznî. Bahrain Shah fled to Kûran (i.e. the Kûran valley), and Sitrû, with his brother 'Alî' al-Din Husain who commanded his army, took possession of Ghaznî. 'Alî al-Din then returned to Ghîr, and in his absence Bahrain Shah, having assembled a force of Afghans and Káhidîs, regained possession of Ghaznî.
and captured and slew Sust. Bahāʾ al-Dīn Sām, the eldest surviving brother had meantime been building up the Ghūr power in his own mountains, and founded the hill-fast of Fīrūz-kūh. After some years he marched towards Ghāzni accompanied by 'Alī al-Dīn, but died on the way, 'Alī al-Dīn succeeded, and carried out his brother's intention. He defeated Bahāʾ Shāh in Zainulbābād and after two more battles took Ghāzni. He wreaked his vengeance in such a savage manner that the town never recovered from the wholesale massacre and conflagration. From this 'Alī al-Dīn obtained the name of Dāhilūn-sās or world-burner. He also destroyed the town of Bunt, which seems to have been the Ghānawī capital of Zainulbābād as opposed to the Ghūr town of Fīrūz-kūh, the mountain capital. Ghānawī never recovered its importance, and Bunt has remained a ruin till the present day. In later times Kandahār took its place as the capital of Ariana. Bahāʾ Shāh seems to have reoccupied Ghāzni after the defeat of 'Alī al-Dīn Dāhilūn-sās; he died soon after (547 = 1152) and was succeeded by his son Khwāja Shāh. He was quickly driven out of Ghāzni by the advance of the Ghūr hordes, and retained nothing but his dominions in the Panjūj. At Lahore he was succeeded after seven years by his son Khwājā Malik who reigned there for nearly thirty years until the Ghānawī dynasty was finally extinguished by the Ghūrs in 586 (1187-1188).

A long period of power in Afghanistan might now have been anticipated for the Ghūr kings, but its progress was suddenly checked by the rising forces of Central Asian barbarism. The Ghūrs, the Shāhs of Khwārizm and the Moghuls under Cinga Khān burst upon the country in rapid succession, with the result that the Ghūrs lost all power in their own country, although they conquered an extensive empire in India and were able to hand it on to a long line of successors, — not judged their own descendants but those of their Turkish slaves. At the time when 'Alī al-Dīn Dāhilūn-sās took Ghāzni the most powerful monarch reigning was Sultan Sandjar Sefīdī, who claimed to be successors both of Ghānawī and Ghūrī. Towards the end of his reign he began to have trouble with the northern hordes, both Khwājā Khwāna and Ghīthā. In 526 (1424) he suffered a defeat at the hands of the Khwānjī and was threatened by the Ghūrs. These events seem to have encouraged 'Alī al-Dīn Dāhilūn-sās to throw off the Seljuq yoke. He enlisted a large number of Turks, Ghūrs and Kūtīs in his army and marched into the valley of the Hari-rud, where he was encountered by Sandjar, his wild allies deserted him, and gave the victory to Sandjar. 'Alī al-Dīn was taken prisoner, and chained with golden fetters which he had himself prepared for Sandjar. He soon however obtained Sandjar's favor, and Ghīthā was restored to him. Next year Sandjar himself fell a victim to the Ghūrs, and was captured by them. Khwājā Shāh was laid waste in a savage way, a foretaste of what was to happen in the time of Cinga Khān, who was born the year succeeding the defeat of Sandjar. The king's imprisonment lasted four years; he died in 554 (1157) and the rule of the great Seljuq passed with him. The Ghūrs were now in great fear of the northern frontier of Ghūr. 'Alī al-Dīn had extended his dominions into eastern Khoṣānī and the Murgāb valley, and died at Ḥerāt in 558 (1156). Safī al-Dīn Muḥammad who succeeded was defeated and slain by the Ghūrs of Balkh in 558 (1156), but his successor Shīh Shāh al-Dīn inflicted a severe defeat on them the same year. Meanwhile the Ghāzni had seized on Ghāzni after Bahāʾ Shāh's death and held it for twelve years until they were driven out by the Ghūrs. King and his celebrated brother Muʿizz al-Dīn Muḥammad b. Sām (often alluded to by his earlier name Shīh Shāh al-Dīn). A short respite from barbarian invasions was thus obtained, and Muʿizz al-Dīn became ruler of the Ghānawī empire. As the successor of his brother who reigned at Ghūr. He immediately begins to organize expeditions into India, not only against the Hindīs and the Kazakhian heretics of Multān, but also against the still existing remnant of the Ghānawī empire. He seized and imprisoned the last king Khwājā Malik and annexed his dominions in 583 (1187). Thus he obtained possession of the Panjūj as a base for his further Indian conquests. Shīh Shāh al-Dīn was himself occupied on the northern frontier of his dominions. He asserted his supremacy over Sigdūr, which was at last submitted under its own Malik as governors under Ghānawī, Seldūq and Ghūrīs. Tādž al-Dīn Harb admitted his supremacy, but continued to strike his own coins. In 571 (1175) Shīh Shāh al-Dīn occupied Herāt. In 586 (1192) his northern dominions were attacked by Sultan Shāh, brother of Tāsūr the sultān of Khwārizm. Mulūz al-Dīn joined his brother from Ghāzni and they defeated Sultan Shāh on the Murgāb, but the Khwānjīs Shīh Shāh did not give up their plans of conquest. As soon as Shīh Shāh al-Dīn and Muʿizz al-Dīn lived they were able to guard their dominions, but Shīh Shāh al-Dīn died in 598 (1201) and his brother who succeeded him was assassinated by a fanatic at Dānyāk between the Indus and the Ghāmān rivers on his return from a campaign against the Khwānjīs near Lahore in 602 (1206). He had made his cousin 'Alī al-Dīn ruler of Ghūr in succession of Shīh Shāh al-Dīn Muḥammad b. Sām, but after the death of Muʿizz al-Dīn Shīh Shāh al-Dīn recovered his throne but was murdered in 607 (1210-1211) by some prisoners who had kept at the desire of the Khwānjīs Shīh Shāh in his fort at Fīrūz-kūh. He was not able to hold his own at Ghāzni, where the power fell into the hands of the Turkic general, formerly slaves, of Muʿizz al-Dīn Muḥammad b. Sām, who had left no son. The principal of these was Taḏḏ al-Dīn Yaldūs, Khūţ al-Dīn Alībā, Nāṣir al-Dīn Kubāzā, and Ghāzna al-Dīn Alīmatūs. Of these four Yaldūs was the favorite of the deceased king, and he held possession of Ghāzni for nine years during which he continued to pay the deceased sovereign's name on his coins as successor, calling himself "his servant" (musicāhu). Khūţ al-Dīn's activity was confined mainly to India, but he once took Ghāzni and held it for forty days. Kubāzā made a kingdom for himself in Sind and Multān and disputed the possession of the Panjūj with Yaldūs, but finally succumbed to Alīmatūs, who established a dynasty in India. Yaldūs was a strong ruler and kept the impending invasions at bay for a time, and spread his authority over Ghūr and Ḥerāt. He also invaded Sīstān, but ended in making peace with Taḏḏ al-Dīn Harb who remained in possession. But the rivalry between Yaldūs and Alīmatūs was fatal to the stability of the kingdom. They met in battle at Tūrūst near Karāfil in 612 (1215) and Yaldūs was defeated and put to death.
but Rumish, though strong in India, had no hold on the Ghazaut territories, and was unable to hold them. The Ghur Malik had lost their power and there was no one left to withstand the conquering 'Ali al-Din Muhammad b. Takhq. of Khwarizm. He took the defenceless town of Ghazaut in 612 (1215) and obtained possession of the whole dominions of Ghur. Abu'l-Abbas Ahmad b. Malik. His son, Malik al-Din Mangubhar, as Sultan, and himself went north to meet a yet more mighty foe, the irresistible Ghurid Khan. After his defeat and death in 617 (1220), Djilal al-Din made a brave but hopeless struggle against the Moghul advance. He had lost his hereditary dominions of Khwarizm, and made Ghazaut the centre of his resistance. The Ghur Malik supported him. He defeated the Moghuls at Farwik, but had to fall back before Cinghs who crossed the Hindu-kush at Bandan. Djilal al-Din retired on the Indus but was overwhelmed near the Nilfl ferry, and only escaped by swimming his horse across the river, where Cinghs Khan did not follow him. His further wanderings are not connected with Afghanistan. The Moghul invaders, the accursed pagans, were now in complete possession of the country, Herat was taken by Tuli son of Cinghs in 619 (1222), and a frightful massacre of the Musulman population followed. Sialtak also fell into their hands. But Herat and independent Malaikas finally disappeared. Ghazaut was taken by Ogutai after the defeat of Djilal al-Din on the Indus. Cinghs himself returned by Badais to Turkistan. Ogutai then advanced into Ghur, and using this territory as his centre of operations he dominated the mountains of Ferkus-koh and Ghardjistin as well as the plains of the Garmsir and Sialtak. The last Ghur Malik went down before the flood, and Ferkus-koh was destroyed so thoroughly that even its site is now doubtful. (619 - 1222.) Tulkah, another strong mountain fort, made a successful resistance at this time but fell soon afterwards. Possibly the Moghul colonization of the Hazarab hills began at this time, as we learn that the population of Tulkah was transferred to Sialtak. Other mountain towns made a stubborn resistance, but their tenacity only led to mere thorough destruction. A leader of the people of Ghur was Emir Muhammad of Ghardjistan, who was descended from the Ghur Malik on his mother's side. A few years before the conquest of Herat during its siege by the Moghuls in 620 (1223), the founders of the Kurt dynasty were his descendants. The greater part of Afghanistan was now incorporated in the Moghul empire, but on the eastern side a Turkish chief Saiif al-Din Aasan Kairlugh who had perhaps been associated with Djilal al-Din Mangubhar obtained possession of Badais, Garmn and Ghur for a time. He certainly was in power as early as 622 (1225) as a coin was struck by him in the name of the conqueror; al-Din, and continued till 636 (1240) when he submitted to Ogutai and received a Moghul Shaima or intendant. Notwithstanding this he was driven into India by the Kaym valley. He and his son Nasir al-Din ruled in Sind for twenty years longer. Garmn and the Kaym were now used by the Moghuls as a base for their further invasion of India. We hear nothing of Afgain in connection with these movements, and it is possible they had not spread as far north as the Kaym valley. After the Moghul empire was divided, and Afghanistan fell to the share of the Persian Ilkhanids, descended from Tului. Under their suzerainty a Tadjik dynasty known as the Kaita or Karts rose to power and held a great part of the country for nearly two hundred years. The founder was Rukun al-Din Muhammad Maraghanli, who obtained the favor of Cinghs Khan and was left in possession of Herat. His son, Shams al-Din accompanied Mongl Khan in some of his raids and rebellions, and was confirmed by the possession of Ghardjistan, Ghur, Fashk and Sialtak. He submitted to Uzbek in 654 (1256), and was afterwards engaged in wars in Sialtak, where he said, according to Afgain, but against the indigenous Tadjiks. He is said to have taken a fort in an island in a lake called Bakar. Ravingly places this in Sialtak, and it may be represented by the ruins of Kakhana on the island of Shahid al-Din in the Hamun, but the name Bakar seems never to have been used in Sialtak. Howarth puts it in Lake Ahwus, which seems impossible. The name Bakar may possibly be due to confusion with the island fortress of Bakhur on the Jaxas.
further favor by the successful resistance he offered to another invasion of Yaqūb (719 = 1319). He also decorated Herāt with many fine buildings. The final defeat and death of Yaqūb still further increased the power of the Kūrt, Ghiyāṣ al-Dīn was able to go on a pilgrimage to Mecca (726 = 1326) and died soon after his return (729 = 1329). After the short reigns of two of his sons the third, Muṭṭaṣ al-Dīn, succeeded in 731 (1332), but reigned only thirty-eight years. He was a strong ruler, and perhaps in the break up of the empire which followed Abū Saʿīd’s death he might have succeeded in making his kingdom really independent had it not been for Timūr’s invasion. There is no doubt that his position as a Tādīk prince excited great jealousy among the leaders of the Moghuls, and they combined against him under the emir Khaqān-i Mā warṣ al-ʿĀmil. He was driven out of Herāt by his own people, and Khaqān-i Māwarṣ al-ʿĀmil ultimately withdrew after exacting a treaty from the effect that Muṭṭaṣ al-Dīn should attend on him in his own dominions. This promise he faithfully kept, and thereby obtained the support of Khaqān-i Māwarṣ against his domestic enemies. Timūr in his early days served under Khaqān-i Māwarṣ al-Dīn and relates in his memoirs that even then he had determined to make Khaqān-i Māwarṣ his own, Muṭṭaṣ al-Dīn died in 731 (1330), while negotiating a treaty with Timūr. His son Ghiyāṣ al-Dīn Fīrūz, however, refused to admit Timūr’s supremacy, and in 732 (1330) Timūr laid siege to Herāt. The Kūrt prince submitted, and was well received. Herāt was spared, but the fortifications were levelled and the treasure carried off. Three years later, however, there was an outbreak of the Ghūrī troops headed by some members of the Kūrt family, and the garrison was slaughtered. Timūr retook the town, and this time there was a massacre of the inhabitants and it was destroyed. Ghiyāṣ al-Dīn was killed during this rising, and with him the Kūrt dynasty came to an end. It represented the last attempt of the brave and civilised Tādīkīs of Ghūr and Herāt to maintain an independent kingdom in their own land. From this time till the rise of the Afghan to power in the 19th century there was no indigenous dynasty; the country was under the rule of foreigners.

In the course of Timūr’s invasion the Afghans were sightfully ravaged and has never since enjoyed its old prosperity. Irrigation works were neglected and towns deserted. The ruins of Sarōtā, Zaránji, Tarakūn and Ramūsā still retain to attest its former greatness. Kābul and Kandahār (now rising into importance) were rapidly subdued, and the whole country became part of Timūr’s empire. In 800 (1397) Timūr turned to the east. His grandson Pir Muhammad made a raid on the Afghans of the Sulaimān Mountains and then marched into India. Timūr himself hearing that he had been checked at Maliana crossed the Hindū-kush from Andarab, and turned aside in Laghmān to attack the Śiyāḥ Saras and Kātū Kāfirs. It may be noted that a principal section of the Kafirs still bears the name of Kātū, and it is possible in this name to see a continuation of the title Kātūr born by the later Kūršāns. After this expedition he again attacked the turbulent Afghans, and crossed the Indus at the spot where Dāulat al-Dīn Manglaīr had swum across. He passed through Bānlī both going to and returning from India, so he probably followed the Tōtī route which leads through the country of the Ghiljānīs and Wazīrfān. We do not hear of any Afghans being enlisted in his armies, although Tādīkīs served under him. When Timūr died in 807 (1405) Pir Muhammad succeeded in 812 (1353), and reigned only twenty years, but wasted his time in debauchery while Khaqān al-ʿĀmil seized the central power. The war which followed ended with the murder of Pir Muhammad. Khaqān al-ʿĀmil deserted soon after, and Shahrākūr, who had been governing well at Herāt, became supreme monarch (812 = 1409). His reign of nearly forty years was a period of peace and prosperity, during which the land had time to recover from the devastations of recent years. Herāt, the capital, profited by his leadership, and new towns and buildings were erected, some of which still exist. His son Ulīgh Beg, a student and philosopher, reigned as supreme king only three years when he was murdered by his son Abū al-ʿAbbas, who reigned for a few months only, Abū Allah followed, and then Bānlī Mīrān ruled locally for several years; but he never became emperor (Gīrduwar). In 861 (1455) Abū Saʿīd obtained this title, but the possession of Khorāsān and Afghanistan was disputed by his son Husain Bālāqarī. He conquered this prince in 870 (1464) but only reigned two years, and his successor Sultan Ahmad never held Khorāsān. Husain Bālāqarī now exercised undisputed sway away from his capital Herāt over Khorāsān, Sistan, Ghūr and Zanandīwār till 911 (1506). Herāt during the long reigns of Shahrākūr and Husain Bālāqarī was at the height of its fame, one of the most celebrated centres of poetry, philosophy and art. Towards the end of Sultan Husain’s reign the growing power of Shahrānī and his brother overshadowed it from the many new towns and a tendency appeared in other parts of Afghanistan to break up into separate principalties, though not under native rulers. Bānlī afterwards the conqueror of India who had been expelled from his hereditary kingdom in Farghānā and Mā warṣ al-ʿĀmil, established himself in Kābul and took the title of Pādshāh (or Bādshāh, as it is pronounced in Afghanistan and India). Kābul had been more or less independent under various princes of the house of Timūr, and had just been seized by Maḥmūd Arghū when Bānlī suddenly appeared before it and took possession of it (910 = 1505). Kābul remained under Bānlī and his successors the emperors of India for over two hundred years, until the invasion of Nadir Shah.

The rise to power of the Arghūs was more dangerous to the Khorāsān kingdom. Dīn-ul-Nūn Beg Arghū, a descendant of the Ikhsāns of Persia distinguished himself in war and was invested with the government of Ghūr and Sistan. After a successful campaign against the Gīrduwar and Nikōdī tribes he received in addition Zanandīwār and the Garmūr, and fixed his capital at the growing centre Kandahār. There he became practically independent, and extended his power southwards, with the assistance of his son Shīḥ Beg, to the Bolān Pass and Siwāstān. He is still known in Balātī legend as Zanam commander of Shīḥ Husain’s armies. In 902 (1497) he espoused the
cause of Bādir al-Zamīn, the rebel son of Humāin, and gave him his daughter in marriage. In 904 (1498-1499) Hūsain invaded Zamindawar but was obliged to retire, and Dhu'l-Nūn Bega himself now openly invaded Herāt drawing his army from the warlike population of Gōr, Zamindawar and Kandahār, probably Tājīfīs and Afghānis. This war left him long in arrest, so that even in Bādir al-Zamīn's recorded the province of Balāk, and Sāfat was given to Dhu'l-Nūn Bega. The successful raid of his son Māšim on Kābul for a time added to his reputation. Sultan Hūsain died in 911 (1506), and during Bādir al-Zamīn's short reign Dhu'l-Nūn Bega was at the height of his power, but Shāhshāh's invasion was fatal to him. He was defeated and killed in the first battle against the Obeigāh, and Shāhshāh took Herāt in 913 (1507). His son, Shāhshāh, and Māshim were now between Bādir and Shāhshāh. Bādir with some right claimed to be heir to Timur's empire and advanced against Kandahār, while the Afghānis princes allied themselves with his old enemy Shāhshāh. Bādir defeated them and took Kandahār. He left his son Nāṣir Mīrza in charge there, and he was immediately attacked by Shāhshāh. Bādir himself was on his way to Herāt to concert measures of defence against the Obeigāh with Sultan Hūsain when he heard of the latter's death. He joined the sultan's sons in their campaign on the Murghāb, and then after visiting Herāt returned in winter by the mountain road to Kābul, a journey during which he and his troops underwent great hardships. He returned to Kābul in 912 (beginning of 1507) just in time to suppress a dangerous plot among his own relations. Then he followed his expedition to Kandahār in the summer, and was back in Kābul by Jamūd 1913 (Sept. 1507), arranging an Indian expedition, and his son. Māshim began with his collection of the news that Kandahār had fallen and that the Afghānis had been restored by Shāhshāh. When the news reached him he was actually engaged in war with the Afghān tribes of Dāghdāshah and Naqshāroh, tribes recently established in the Kābul valley. He had great difficulty in holding even Kābul, where his authority was threatened by rebellion and mutiny. Shāhshāh was now master of Khorāsan and all of Kandahār, but his power began to decline. His armies suffered severely during an expedition into the mountains of Gōr, and another warrior king, Shāh Iṣṭār, founder of the Safavi kingdom of Persia, threatened him from the west. In 916 (1510) Iṣṭār invaded Khorāsan and Shāhshāh was defeated and slain near Merv. Hūsain passed into Iṣṭār's possession, and the Shi'ite doctrines were enforced there by a severe persecution. Bādir now allied himself with Iṣṭār and recovered for a time possession of his hereditary dominions in Central Asia, leaving the kingdom of Kābul to his brother Nāṣir Mīrza, the alliance with the Safavi king however was impolitic, and the Obeigāh rallied. In the end Bādir, after the severe defeat at Ghashahwār near Būghdār (918 = 1512) from which he barely escaped with his life, had to fall back upon Kābul, which he found in great disorder, and he had to suppress outbreaks among his own Moghul troops and among the Afghan tribes. The Afghan tribes had moved down from the mountains into the Punjab valley, and expelled their predecessors the dilzāmaks from the mountains of Bādir and Ṣams. Bādir put them down severely and took Bādir's war with great hatred. He also had to put down risings among the Hazāras. He then turned his attention to Kandahār where Shāh Iṣṭār was still established. He had tried in vain to make terms with Shāh Iṣṭār, had been imprisoned at Herāt, but escaped, and had since been endeavoring to establish a kingdom for himself in Sind, which he invaded with the assistance of some Balūc tribes in 917 (1511). Bādir made two attempts to take Kandahār but finally succeeded in 928 (1528). Shāh Iṣṭār then removed his headquarters to Shīā (Quetta) in summer and Shīā in winter, and pursued his schemes in Sind while the whole Kandahār province remained in Bādir's possession. Bādir now felt himself strong enough to embark on the series of enterprises which ended in the overthrow of the kingdom of the Iştār Afghāns in India. He always preferred Kābul to the plains of India, and was buried at Ĥamānī where his tomb is marked by a column.

This period was marked by four simultaneous invasions of the plains of India from the mountains to the west of the Indus valley. Two of these were invasions by armies led by ambitions to carve out kingdoms for themselves, i.e., that of Bādir which founded the Moghul empire, and that of the Afghānis which founded a short-lived kingdom in Sind. The other two were of the nature of national migrations, the movement of whole tribes seeking for fertile lands on which to settle. Of these the first was the movement of the Vihānas, the Lōhābāhs and other Afghan tribes into the valleys of Peshāvar, Kābul and Iṣāfān, and the second the movement of a great mass of Balūc tribes into the Indus basin, whose descendants are still very numerous in North Iṣāfān and the South Pandjālī.

Afghanistan itself entered upon a more settled period under the influence of the two great empires of India and Persia between which it was divided. Herāt and Sāfat remained with Persia though still for a time troubled by Obeigīs raids. Kābul remained part of the Moghul empire while Kandahār sometimes belonged to one and sometimes to the other. The power of the Moghul emperors was gradually restricted to the south of the Hindu Kush. North of it, Shāh Iṣṭār Mīrza, established by Bādir as governor of Kandahār, founded something like an independent dynasty, and the rest of the country remained under the Shāhshāhs. Iṣṭār died in 930 (1524), and Bādir in 937 (1530). Bādir's son Ṣams Mīrza succeeded him and his brothers Kābul, Kandahār and 'Askari held various governments. Kābul and Kandahār were united with the Pandjālī under Kābul. On the Persian side Tāhmasp the successor of Iṣṭār had made his brother Ṣams Mīrza governor of Herāt. The Safavīs regarded Kandahār as an appendage of the kingdom of Khorāsan now in their possession, and considered its occupation by the Moghul emperors to be a usurpation. In 941 (1535) Ṣams Mīrza made a sudden attack on it, but it resisted him successfully, and after eight months the Kābul arrived and raised the siege. During Ṣams's absence the Obeigāh under 'Ustad Ali Ḥasan invaded Khorāsan, and the unfortunate town of Herāt was again taken and sacked. Tāhmasp recovered it, deposed Ṣams and himself attacked Kandahār which he took, but it was recovered by Kābul. Meanwhile Humāyuń lost his throne in India through the rising of the Sūr Afghāns under Shāh Iṣṭār, and in 950 (1543)
he made his way from Sialt through the desert south of Kandahar to Sustian and Fera, where he was treated hospitably by Shah Tahmasp. In 1532 (1545) with the assistance of a Persian army he laid siege to Kandahar which was held against him by his brother Askan on behalf of Kamaran; and took it after a prolonged resistance. In accordance with his engagement with Tahmasp he made the town over to the Persians, but this excited great discontent among his own followers, and Humayun at last retook Kandahar from the Persians, and treated the province as part of his own dominions, greatly to the anger of Tahmasp. Shortly afterwards Humayun took Kabul and with it obtained possession of his young son Akbar now three years old. During the next few years the war between the brothers went on with varying fortunes. Kamaran twice regained possession of Kabul but could not hold it long; on one occasion he is said to have exposed the young prince Akbar on the battlements. He then spent some time among the Mahmud and Kahlil tribes of Afghans whom he incited to plunder the Kabul valley. At last in 1561 (1553), he surrendered to Humayun and was deprived of his sight. Humayun now held the kingdom of Kabul and Kandahar and found himself strong enough to attempt the reconquest of India. This resulted in his victory over the Sirk kings, but shortly afterwards in 1563 (1556) he died from the effect of an accident. While the young king Akbar was occupied in completing the reconquest of India Tahmasp took the opportunity (1565 = 1558) of seizing on Kandahar, and it remained under Persian rule until the prince Muradsh Hussain surrendered it to Akbar thirty-eight years later in 1593 (1594) during the first years of the reign of the Persian king 'Abbas the Great. The future history of Kandahar may be given here. In the reign of the emperor Daha-jagir in 1631 (1621) Shah 'Abbas recovered it, but it was lost again by his successor Shah Safi I in whose time the governor 'Ali Mardan Khan surrendered it to Shah Djaan (1647 = 1637). Girshk was also taken after a siege, and Zamindwar occupied. In 1648 (1649) the young Persian king 'Abbas II, then only sixteen years of age, led an army to Kandahar and took it, and it never again formed part of the dominions of the Moghul empire. Shah Djaan's armies in vain attempted the reconquest. The rival princes Awrangzib and Dara-Ahmad both conducted expeditions against it, but were equally unsuccessful, and after the failure of the last (1662 = 1652) no further attempts were made.

With all the vicissitudes of Kandahar there is little to record in the history of Afghanistan during the time it was divided between the Moghul and Safawat empires. The Afghan tribes were steadily increasing in numbers and influence, and it was probably at this period that the Abdal and Ghilzais spread from their mountains over the more fertile lands of Kandahar and Zamindwar and the Tarkan and Aghan-dah valleys. The decline in the position and influence of the Tadjik races which had borne the brunt of the Mongolian invasions, and the occupation of their mountain fortress of Ghur by a semi-Mongolian population, gave the Afghan race the opportunity of rising to prominence. In their western domains they had been but little affected by invaders eager chiefly to proceed through the passes to the plunder of India, and the same need of an outlet for their increasing population which led them to spread into the plains of India on the east also led the pastoral tribes to spread westwards. The mountain tribes continued to maintain practical independence of all rule. The Moghul government at Kabul ruled nominally, but its actual power was confined to the open valleys. In 1594 (1586) for instance Akbar's army met with a disastrous defeat at the hands of the Vaisnavas of Swat and Kohar, and the general Rada Bhurial was defeated by the general Rada Khan. Afterward the Afghans defeated the Vaisnavas but they were never really conquered; they often raided the plains and sometimes took sides in dynastic quarrels, as when the Vaisnavas took up the cause of the pretender Shah Shuja at Agrangarh. When Shah Alam I, before his accession was governor of Kabul under Agrangarh in 1114 (1702) one of his commanders Firdusi Khan, himself an Afghan, was killed with all his troops when trying to attack Kabul, and he had to bribe the tribes to keep open the road between Kabul and Peshawar.

In the Kandahar province the frequent changes of government between India and Persia fomented dissensions and intrigue, and enabled the powerful tribes to play off one against the other. The Abdals near Kandahar succeeded in this manner in obtaining concessions from Shah 'Abbas the Great. Sadh was recognized as chief, and his descendants the Sadzais became the ruling family. Nevertheless their misconduct led to part of the tribes being removed to the Herat province. This removal led to an extension of the influence of the Ghilzais towards the Kandahar, and their power continued to increase until the accession of the emperor Shah Alam I, when the Ghilzais of the Kandahar province began to intrigue with him against the Persian government. This plot was discovered and Gorgut Khan, a Georgian chief, was sent to Kandahar at the head of an army, and arrested Mir Wais the Ghilzai chief. During his imprisonment however Mir Wais succeeded in gaining the confidence of Shah Husain the Persian king, and was allowed to return to his tribe. Shortly afterwards he treacherously murdered Gorgut Khan whom he had invited to a banquet, seized upon Kandahar and defeated all attempts to subdue him. He died soon after, and his brother Abd al-Aziz, who showed an inclination to submit to Persia, was murdered by Mahmud son of Mir Wais, who established himself as ruler.

At the same period the section of the Abdal tribe in the Herat province became practically masters of that province, and defeated a strong force sent against them under Safi Kull Khan, and held their own till the time of Nadir Shah, even taking Farah from the Ghilzais after the latter had conquered Persia. But the Ghilzais were the most formidable tribe at this period, and Mahmud, perceiving the weakness into which the Safawat monarchy had fallen, boldly invaded Persia. He marched by way of Sustian and Karman, but was defeated by Lutf 'Ali Khan and fell back on Kandahar. At the same time the Abdal was spread over Khorasan and laid siege to Mughel. Mahmud now strengthened himself by the alliance of a large body of Balbaks and renewed his attack. On this occasion he took Karman a second time, and leaving Yezd untouched, marched straight to
Ispahan. Shah Husain tried in vain to bribe him, and after an unexpected victory Ispahan fell into his hands through the folly and cowardice of its rulers. Husain absconded and crowned Mahmud with his own hands, and the Ghilzai chief became Shah of Persia. The reign of Mahmud and his successor Ashraf belongs to Persian history. They were in no way fitted to reign over a country like Persia, and had not the sufficient force behind them to support a truly national movement. Even the support of the Kandahar province was lost when Ashraf succeeded his cousin Mahmud, whose brother was able to retain Kandahar. The Abdalis too remained independent in Herat. Thus when Nadir Kuli Khan put himself at the head of a national movement, even though he was an Afghan, Turk, and a Sunni, Ashraf's government collapsed rapidly, and few of the Ghilzais survived to reach their native country. Ashraf was killed while marching in Badakhshan in 1142 (1730). Nadir now turned his arms against the Abdalis under Malik Mahbub Khan who held Meshhad (1142 = 1730). He thoroughly defeated them and took many prisoners. Nevertheless he perceived their value as fighting men and secured their support by restoring to them their old home near Kandahar, from which he removed the Ghilzai when he had the opportunity. He banished them to the Herat province, but very few of any of them seem to have really settled there and none there at the present day. When Nadir Shah had made himself king of Persia he laid siege to Kandahar which resisted him for a year, but at last fell. During the siege he had built up a new town outside the old walls which he called Nadirabad. The Ghilzai power was thoroughly broken up, but towards the Afghan tribes in general and especially the Abdali he pursued a policy of conciliation, and enlisted large numbers in his army. Many Ghilzais took refuge in the Kafir empire, and Nadir Shah, assuming that his remonstrances had received no reply, advanced on Kabul which fell at once. Thus it was finally severed from the Moghul empire. The last known date of any coin of the emperor Muhammad Shah struck there is 1138 (1725). Nadir Shah apparently did not use the Kafir mint, but struck coins at Kandahar in 1150 (1737), the year of his conquest, and others struck at Nadirabad no doubt refer to the period of the siege. The whole of Afghanistan was now in his hands and afforded him the necessary base for his invasion of India in 1152 (1739). As a result of his victory over Muhammad Shah the whole Moghul territory west of the Indus including Peshawur and the Dera Ismail Khan, with the sovereignty over the Kalhars or Abdali rulers of Sind was ceded to him as well as the province of Kalmi. On his return from Delhi (1152 = 1740) he first crossed the Indus at Attuck and attacked the Yousufzais who had been giving trouble, and then went to Kandahar and the country west of the Indus by the Karam river and the Buztagh country, and went through the Dera Ismail Khan, reaching the Indus near Kandahar and thence to Herat. During the remainder of his life he relied to a great extent on his Afghan troops and little on the Persians from whom he was alienated by his Sunnite creed. The Abdalis were especially favored and their young chief Ajmod Khan rose to a high position in the army. Tradition says that Nadir himself prefigured that Ahmed would be king after him. When Nadir Shah was assassinated by Persians and Kafirs, Ahmed Shah who was near by with a strong body of Abdali seizes on a treasure convoy and made his way to Kandahar, where he made himself king, and obtained possession of all the eastern portion of Persia and of the Kafirs. Herat soon followed, and in the general break up of the Persian monarchy Ahmed Shah acted as the protector of Shahrukh, grandson of Nadir Shah, who was blinded by his enemies, and maintained a principality for him in Khurasan. This province in reality formed part of the dominions of Ahmed Shah and his son Timur Shah, both of whom occasionally struck coins at Meshhad, but Shahrukh continued to rule in name until he was seized and killed by Agala Muhammad Kadjur after Timur Shah's death. Herat was however treated as an integral part of the Durranian monarchy, and the ancient kingdom of Khurasan has remained divided between Persia and Afghanistan. In popular parlance the name is still employed to denote the Kandahar province and the tableland west of the Indus valley.

Ahmed Shah made Kandahar his capital and gave it the name of Ahmedabad which appears on his coins and those of his successors. He changed the title of Durrani to Durrani and his tribe, the Abdalis, have since then been known as Durrans. His family had long been looked up to, and this fact, combined with his tact and energy, enabled him to hold his own. The tribes were treated mildly and he relied upon foreign war rather than taxation to provide him with a revenue. The Durrans were proud of him and followed him willingly, but they were not an easy race to govern, and his son Timur Shah on this account moved his capital to Kabul where the population is mainly Tajik. In his Indian conquests Ahmed Shah not only rivalled but excelled Nadir Shah, and extended his dominions far beyond the Indus. He added the provinces of Kasmur, of Lahore and Multan, that is the greater part of the Punjab and the sovereignty over the Dandawat or Bahawalpur to his dominions.

He invaded India several times, and occupied Delhi more than once. His defeat of the Mahrattas at Panipat in 1174 (1761) was a turning point in Indian history, but he did not add any provinces beyond the Punjab to his own dominions. His wars with the Sikhs were perpetual and led to the eventual loss of the province. The khans of Kalsu too the Bahar Naja Khan who had become feudatory to Nadir Shah declared his independence in 1172 (1758). Ahmed Shah besieged Kalsu without success, and being called away to India accepted a purely nominal submission. Naja Khan, however, supported Ahmed Shah in his wars in Khorasan, and contributed greatly to his victory over Karim Khan Zand in 1182 (1768). On this occasion the blind Abdali chief took the side of Karim Khan and sheltered him in Meshhad which Ahmed Shah reduced by blockade.

Ahmed Shah died at Murgab in the hills near Kandahar in 1187 (1773), leaving his successor a very extensive but insecure empire.

During the first half of the eighteenth century the break up of the Moghul empire together with the invasions first of Nadir Shah and then of Ahmed Shah gave a fresh impulse to Afghan settlement in the Ganges valley, some of the so-
venturers rose to great power such as the Rohbād, Hādūṣ, Rahmān Khān, and the Bangash Nawābi of Farrukhābād.

Timūr Shāh had held important posts under his father, such as the Nizamshāp of Lahore and Māltān, which is marked by a distinct series of coins. At the time of Aḥmad Shāh's death he was at Herāt, and was made wali of Jōzān by order of Kandahār after being sent there. He then moved his capital to Kābul, and reigned uneventfully for twenty years, during which the monarchy declined steadily in strength and stability, although externally it remained unimpaired. The authority of the central government over the outer provinces was precarious. The Sikhs grew in power and took Māltān in 1196 (1781), but Timūr Shāh retook it the same year. In Sind the feudal Kalkhāts were overthrown and replaced by Balūč emirs of the Tāliqār tribe (commonly called Tālipurs), who waged successful wars against Timūr Shāh, from 1197 (1782) to 1201 (1786), and remained independent, although they accepted a nominal suzerainty. The Mangit emir of Bukhārā, Māyūm, who had been emerced on the Turkāstan province, especially Merw, also made a nominal submission when attacked by Timūr Shāh, but retained all his conquests. In Kāshān also there was a revolt which was suppressed. Internally the power of the Bazrakzai clan of Durrānā was gradually greater. Timūr Shāh died in 1207 (1795) and was succeeded by his son Zāmān Shāh, who reigned till he was dethroned by his brother Māhmuḍ Shāh in 1213 (1800). Short as his reign was he was able to concentrate in it crimes and follies enough to wreck the Durrānī monarchy. Although weakened at home by the rivalry of his brothers Māhmuḍ and Shujā‘ al-Mulk, threatened in Khorāsān by the Kājāgs and in the north by Shī‘a Māhā mir Mangit, and in the south defeit by the Khāns of Kīsh and the emirs of Sīn, yet he could not refrain from wasting his strength in foolish attempts to rival Aḥmad Shāh's conquests in India, and to pose as the champion of Islam against Sikhs and Mahārājas. This brought him into collision with the English now rapidly becoming the ruling power in North India. His first invasion, 1209 (1795) was cut short at Hasan Aḥbāl by the news that Agha Muḥammad Kājār had captured Mughār and murdered the blinde old Shī‘a Khurshīd. Having been appeased by an embassy from the Persian king he began a second invasion of India, which was interrupted by the rebellion of Māhmuḍ at Herāt. Having defeated this rising he invaded the Pāngājī, and this time reached Lahore and received the nominal submission of the Sikhs, now headed by Panjāgī Singh, but the Kājār envoys in Khorāsān again called him back. Māhmuḍ meanwhile led a wandering life intriguing with discouraged persons in Herāt and Kandahār. Among these was the powerful leader of the Bazrakzai clan, Pānda Khān, known by the title of Sarfarz Khān, who was jealous of the authority wielded by the vizier Wāzi‘īr Khān. The conspiracy was detected and Pānda Khān was executed. His son Fath Khān fled to Māhmuḍ in Khorāsān and induced him to throw himself on the sympathy of the Durrānī tribe, with whom Zāmān Shāh was unpopular (Zāmān Shāh's mother was a Yāsūnī while Māhmuḍ's was a Popolūzī Durrānī). This advice was justified by the result.

Māhmuḍ obtained possession of Kandahār while the infatuated Zāmān Shāh was preparing for another invasion of India. Māhmuḍ advanced on Kābul and Zāmān fled, but was soon captured and blinded (1215 = 1800). Simultaneously with Māhmuḍ's accession at Kābul Shujā‘ al-Mulk proclaimed himself king at Peshawar. He was named Māhmuḍ and in 1218 (1803) he took Kābul, imprisoned Māhmuḍ and released the blind Zāmān Shāh, his own whole brother. For a time Kandahār was held by Māhmuḍ's son Kāmrān supported by Fath Khān, but the latter made terms for himself and submitted, but discontented with his position almost immediately set up a rival king, Kāsrā Shī‘a son of Zāmān. The next few years were occupied by constant intrigues. Fath Khān changed rapidly from one pretender to another, sometimes supporting Māhmuḍ and Kāmrān, sometimes Kāsrā while Shujā‘ al-Mulk dissipated his strength in expeditions to Sind and Kāshīmīr. Finally Fath Khān, who was now supporting Māhmuḍ, defeated Shujā‘ al-Mulk at Nūma (1224 = 1809). He fled into India, and Māhmuḍ's second reign began. He was however absolutely dependent on Fath Khān, whose power became very great. His brother Dost Muḥammad held high office, another brother Muḥammad Agha had become governor of Kāshīmīr, and another Kāhmīlī governor of Kandahār, which had become independent under another prince was reconquered by Fath Khān and Dost Muḥammad in 1232 (1816). Soon afterwards Dost Muḥammad incurred the enmity of Kāmrān, who had become governor, by entering his harem and insulting his sister. He fled to Kāshīmīr and Kāmrān took his vengeance on Fath Khān whom he blinded and afterwards killed with the consent of Māhmuḍ. Although perfidious and inscrupulous Fath Khān was greatly admired by the Afghāns, and his brother Dost Muḥammad had no difficulty in raising a large force and defeating Māhmuḍ in 1235 (1815) near Kābul. Māhmuḍ lost Kābul which he never recovered. He held Herāt till his death in 1245 (1829), and Kāmrān continued to rule there till he was murdered in 1258 (1842). The Bazrakzai chiefs held the rest of the country, but ruled in the name of various puppet kings of the Sadhāni family, such as Aḥyā and Sulṭān ʿAlī who took the name of Sulṭān Muḥammad on his coins. But the outer provinces of the empire were now lost. The Sikhs took Māltān in 1233 (1818), Kāshīmīr in 1234 (1819), Dera Ghāzī Khān in the same year and Dera Isāmu‘īl Khān in 1236 (1821). Peshawar long resisted them under Sadrul Sulṭān Muḥammad, but it too fell in 1250 (1834). The emirs of Sīn threw off the last sign of Afgān rule by taking Shī‘abānī, and Bahīrī north of the Hindū-kūsh was lost also. Dost Muḥammad there-fore became the ruler of a compact Afgān kingdom; the loss of the outlying provinces, which had always been a source of weakness to the Seldūn kings, tended to consolidate his power. Although without scruples of any sort in attaining his ends, he yet had the reputation of a just man and was popular among the Afgāns who will forgive any defect in a strong ruler. His rule no doubt contrasted favorably with that of all the kings since Aḥmad Shī‘a. His progress was checked by the inevitable rivalries of his brothers. He made Kābul his capital, while Kāhmīlī Khān held Kandahār. In 1250 (1834) Shujā‘ al-Mulk vainly attempted
to recover Kandahar, and after his failure Dost Muhammad took the title of emir, but neither he nor any of his successors before Habib Allah took the title of Shah or king. Hertaz was taken by the Persians after the murder of Kamar by his viceroy Yar Muhammad Khān and was only recovered by Dost Muhammad in 1285 (1869) just before his death.

Shujāʿ al-Mulk after his failure at Kandahar endeavored to obtain British assistance, and political events led to his ultimately obtaining it. Attempts to negotiate a treaty with Dost Muhammad by Bernes had broken down, and the growth of Russian influence led the Indian government to look favorably on his claims. The Persians had at this time (1253 = 1837) laid siege to Herat. It was believed that their operations were directed by Russians and an English officer conducted the defence. This brought matters to a climax. An Anglo-Indian army advanced through Sind and the Bolan Pass on Kandahar and thence to Kabul. Dost Muhammad fled to Bukhār and Shah Shujāʿ was placed on the throne of Kabul in 1255 (1839), Dost Muhammad soon surrendered and was sent to Calcutta. Shujāʿ al-Mulk's reign was a troubled one. Kabul was abandoned by the British Indian army in 1841, and on its retreat the army was almost annihilated at the Kābul Pass, and for a time the city was besieged by Akbar Khān son of Dost Muhammad. The British army continued to hold Ghilzābād and Kandahar and recaptured Kābul in the autumn of 1842. Just before this event Shujāʿ al-Mulk was murdered (1254 = 1842). His son Fath Dīng was recognized as king by the Pāchirzā but opposed by the Bāzakzā. The British soon afterwards left Afghanistan, and Fath Dīng, knowing he could not hold his own, went with them, accompanied by the blind old Zāmeer Shah who was still living. Dost Muhammad was sent back to Afghanistan, as he was the only man who could establish a firm government. His son Akbar Khān, however, did not accept a subordinate position; easily, and was on bad terms with his father till he died in 1866 (1289). Dost Muhammad maintained friendly relations with England except at the time of the Sikh war of 1849 when the Afghan contingent covered itself with ridicule by its rapid flight after the battle of Ghurkār. The Dost's troubles of 1857, when the Indian army mutinied, Dost Muhammad gave them no support. He occupied himself in strengthening his own country, and from 1867 to 1872 (1286-1855) he reconquered Bālkh, Khānum, Kandus and Bādakshān. In 1280 (1863) he succeeded in driving the Persians from Herat, and he died there immediately after its recovery, having been a good ruler on the whole in spite of obvious faults.

Shāh 'Ali, his fifth son who had been nominated by him as his successor, succeeded, but was immediately engaged in civil war with his elder brothers Muhammad A'īm and Muhammad A'fshād, and with 'Abd al-Rahmān the able and determined son of the latter. [For an account of these wars see AFGHANISTĀN.] Shāh 'Ali was defeated in 1283 (1866), and lost first Kābul and then Kandahār. A'fshād and A'īm reigned in succession till 1285 (1869), but never held possession of Herat, whence Ya'qub, Shāh 'Ali's son, advanced in the latter year and recovered Kandahār and Kābul for his father. Shāh 'Ali now held the whole of Afghanistan, he was recognized by the Indian government, and met the viceroy Lord Mayo at Ambrāla in 1286 (1869). He was not however satisfied with his treatment, as he could obtain no definite promise of support against other powers. At this period he imprisoned his enterprise son Ya'qub and resorted to the attempt to intercede for him. He agreed to an arbitration by British officers as to the Sitān border, regarding which there was a dispute with Persia. According to this arbitration (1290 = 1873) a considerable part of the most fertile lands was awarded to Persia, and this was another cause of resentment. Finally he began to negotiate with Russia, and refused to receive a British embassy. These came led to the war of 1877-78. The British army took Kābul, and Shāh 'Ali fled to Massā' al-Shirif in Turkestān, where he died in 1297 (1879). His army, organized on the European model, was defeated without difficulty by Lord Roberts at the Pāwār Pass, Ya'qub was released from prison and became emir, and concluded the peace of Gandamak, ceding to British India certain territories near the Bolan Pass and the Kāyām valley, and agreeing to receive a mission at Kābul. A few months later a rising in Kabul resulted in the massacre of the mission headed by Cavagnari. This led to a fresh outbreak of war. Roberts took Kabul again in the second time but was besieged there by a tribal army headed by Muhammad Dīn and the Mulk Mushki. 'Ali, after this was suppressed Ya'qub was deposed and removed to India where he has since lived, and the government was offered to 'Abd al-Rahmān, a separate State being constituted at Kandahār. Part of the army at Kandahār under Stewart marched to Kābul, as a prelimin to evacuating the country, and in passing through the Ghilzai country was attacked at Aγūnd Khāl by a large force of men of that tribe, who were only defeated after a most desperate conflict. Scarcely had 'Abd al-Rahmān been proclaimed when A'īthā, a son of Shīr 'All, who had been collecting an army at Herat, marched on Kandahār, defeated a small Anglo-Indian force at Māwand, and laid siege to Kandahār. Roberts marched rapidly from Kābul and defeated A'īthā. After this the Kandahār army withdrew and the majority including Kandahār was made over to 'Abd al-Rahmān [q. v.].

The latter died in 1319 (1901), and his son Hābīb Allah succeeded him, and has ruled successfully since. He appears to be a firm and enlightened ruler and has maintained good relations with the neighboring states. Another boundary arbitration has resulted in a better definition of the Sitān border. The emir Hābīb Allah has this year (1907) paid a long and friendly visit to India, and his right to bear the title of king has been recognized.

Although Afghanistan is now to some extent under the influence of the British government in India and is disturbed by treaty from direct relations with other powers, it is in all other respects absolutely independent, and there seems no reason that it should not remain so. Its condition at the present day probably compares favorably with that at any previous stage in its history. The government of its emirs though arbitrary is strongly and is animated by the intention of justice. Freedom from the influence of India it has not, and this review of its history shows that it has
never been free from such influence of its neighbors either to the east, west or north, and has frequently been divided between them.

Persia exercised such an influence under the Achaemenians, the Seleucids, the Parthians, the Sasanians, the Seldjiks, the Mongolians, the Safavids and Nādir Shah. Central Asia exercised it under the Khiāns, the Shāhāns, the Mongolians, the Safavids and the Russians. And India exercised it in the line of the Maurya kings, the Guptas, the Moghul emperors, and exercises it now under British rule. Such a condition is inherent in the geographical position of Afghanistan, but it seems to be compatible with complete independence in the management of its internal affairs.

AFGHANS (Afgan, Afghan), an Asiatic nation. [See AFGHANISTAN.]

AFIF AL-DIN AL-TILMISI. [See AL-TILMISI.]

AFILAH b. YA'QUB. [See ASU 'ATY.]

ALAFAK. [See FALAK.]

AFLATUN, Arabic spelling for Plato, the name of the celebrated Greek philosopher. Plato exercised considerable, but indirect influence on the mind of Musulman thinkers. He is less known to them than Aristotle. The list of his works that have been translated into Arabic, that of diverse, separately or partly sporadical works that have been attributed to him and that of the works which Musulman scholars and philosophers devoted to him may be arranged as follows:

I. The Republic (Kitab al-islah), translated by Hujain b. Iskâh. — The Laws (al-Nashâlah), translated by Hujain b. Iskâh and Vâyûh b. 'Adî, Nasâh with the meaning of "laws"—must not be confused with the same word meaning "artifices, secrets, recipes". The Muslim knew of a book with such a title ascribed to Plato and treating of superstitions and the secrets of the world, which has been translated by Hujain b. Iskâh. No manuscript of the translation of the Laws is extant. A translation of the Timaeus has been corrected by Vâyûh b. 'Adî (according to the Fikrî and Ibn al-Kifî). In another place (in the works just mentioned) there is a reference to the Timaeus, translated by Ibn al-Birûnî and Hujain b. Iskâh. Mas'ûdî (Kitâb al-tanzîh, ed. de Goeje, p. 165) ascribes to Plato also a Medical Timaeus (Timaeus, fihih), devoted, he says, to the study of physical nature, while the Timaeus proper was devoted to metaphysics. We know that Hujain b. Iskâh translated Galen's commentaries to the Timaeus of Plato; it is very likely that Medical Timaeus, or Physician's Timaeus is a suitable title for that translation. A MS. of Constantine the Philosopher, V, 490, bears the title of The Book of Plato called Timaeus on philosophy. The Timaeus is many times quoted in the Arabic literature, in Aristotle's theology, by al-Birûnî, Mas'ûdî, not speaking of the theologians. — The Sophist, translated by Vâyûh b. Hujain, with the commentary of Olympiodorus; this dialogue has been quoted by Avicenna (V. Mehem, Philosophia d'Avicennam, p. 33). — The Phaedo is quoted by al-Hallâq (Indica, ii. 286, 348, 395) and by Mas'ûdî (Civ. Diet., p. 185). — Particular reference to the Apocalypse of Socrates is made by Ibn al-Âsâlibî.

Besides these works, the following dialogues are quoted by Arab philosophers to whom they are known at least by name, leaving out some titles very badly translated: The Symposium, Theaetetus, Protagoras, the Gorgias, Phaedrus, Theaetetus, Laches, Lysias, Euthyphro, Euthydemus, Crito, Politicus, Parmenides, Meno, Meno, Crito, On the Constitution of Plato's State, which in reality belongs to Hippocrates, besides, two other dialogues figure in this list: Hipparchus and Minos, the authenticity of which has been rejected by the critics.

II. The writings or fragments ascribed to Plato in the Arabic literature are: Plato's testament (Fihih) to Aristotle; a treatise on the education of children (Salâm al-islah); tetralogies (salâm) quoted by Ibn al-Kifî and Ibn al-Âsâlibî; there exists under the latter title a work of mystical philosophy and alchemy ascribed to Plato; further diverse writings, among which a book on the causes of the forces included in the superior essences, that is to say in the celestial spheres; this book is quoted by al-Kindî, who also composed one on the same subject; it is also quoted by the Illuminated Abulafia (Abû'în'înya), it is besides possible that in this supposed authorship a confusion has been made between Plato and Plutarch. There are mentioned writings on alchemy, on oraculography, the magical force of numerous signs, physiognomy, the secrets of astronomical figures, the elements, the proportions, a book on human seed, the principles of geometry translated by Keßî b. Iskâh. Hujain b. Iskâh's Apophthegms of the philosophers contain sayings ascribed to Plato and
Aristotle and the legends of their seals; a Hebrew MS. of Munich (No. 32) entitled *Liber et humana anima* contains some proverbs of Plato which are not found in Human’s anthology; some sayings of Plato are also found in *Abu’l-Wafā* al-Masaghi’i’s *Maqālāt al-khāli* (written in 455 = 1053-1054). Finally an ethical treatise of unknown origin entitled *Maqālat al-khāli* (edited by Bar- 
Daimerov, under the title: *De castigatione animarum*, Bonn, 1873) is ascribed by Ibn Abi Uṣūlī to Socrates and 
Plato.

III. Many of the most celebrated eastern thinkers have devoted writings to Plato. The Christian Human b. Is’ah wrote an introduction to Plato’s philosophy under this title: *That which ought to be read before Plato’s works*. The Sahmsan Ṯẖald b. Korra and his son Sinān have studied the great philosopher’s politics, the former in an *eṣpedile* for the explanation of the allegories in the book of the *Republi*c and the latter in a work prouised by Ma’ādī, *Ma’ādī, Paris, i. 19* but which has not reached us.

Some great authors of the philosophers’ school, as al-Kiūdī, al-Fārāhī, al-Ra‘īṣ, Averroes, have written diverse works on Plato: al-Kiūdī wrote an *eṣpedile* on the numbers, which are spoken of in the *Republi*c; he also wrote a small work on intelligence, *de intellectu et intellectu*, in which he says, when beginning, that he is going to present his intelligence according to the views of Plato and Aristotle (ed. Alphonse Nage, *Bibliographe zur Geschichte der Philosophie der Mittelalter*, Münster, 1897). To al-Fārāhī we owe several treatises on the *philosophy of Plato and Aristotle*, the *concordance of Plato’s and Aristotle’s views*, the intentions *(ṣaghrāf)* of Plato and Aristotle*, and a brief compendium *(ṣawāmīh)* of the *Laws* in nine parts. The Arabic text of a small work of the Spanish Jew Shim Tūb Ibn. Palaquers on Plato’s philosophy (written towards 1240) has been edited by Steinschneider (al-Fārāhī, pp. 176, 323); the editor thinks that it is nothing else than a translation of a fragment of al-Fārāhī’s treatise on Plato's and Aristotle’s philosophy; the epistle on the concordance of views of the two Greek philosophers has been edited by Dieterici (al-Fārāhī’s *philosophia Arab., Leyden, 1860*). Abū Bekr al-Ra‘īṣ (Razes) commented the *Timaeus* and wrote a work on reading according to the views of Plato. Averroes commented the *Republi*c; this paraphrase was translated into Hebrew by Samuel b. Judah of Marseilles, and printed in the Latin translation of Jacobus Mantuanus, in Rome, 1539, and in Venice, 1533, 1534. A less illustrious author, *All b. Rāgīn* (d. 1061 or 1068 a. D.), wrote on the immortality of the soul according to the views of Plato and Aristotle; another of his writings seems to contain extracts from Plato’s work *on the nature of man*.

IV. The acquaintance which the Arabs may have had with Plato’s philosophy is of less importance to us than that which they had with his writings. The most celebrated Arab biographers, Ibn Abī Uṣūlī, Ibn al-Kīfī, al-Nadim, Barhebræus, Hāfiẓ Khasīf, have spoken of Plato; Human’s *Apokrēfotēgēm* also contains some particulars of his life. The most important of these writings is that of Ibn al-Kīfī; it approaches by means of unknown intermediaries the ancient biographies of Diogenes of Laerte and of Olympiodorus; the genealogy of the philosopher is given there just as in the biographies of Diogenes of Laertes; the histories of Melanthios and of Kordios are to be found there; Plato is shown there as devoting himself to poetry in his youth, writing on music, then going through the philosophy of Heraclitus and coming to Pythagorism and to Socrates; the three journeys of the philosopher in Sicily are narrated there. Afterwards Plato, having returned to Athens, at first occupies himself with teaching; then he devotes himself to teaching; he attracts a great number of disciples, marries two wives and dies at the age of eighty-two. The eastern biographers retained the tradition, according to which Plato called the young Aristotle, when he came to study under his direction, the understanding*. Isaac b. Solomon Israeli (Abū Ya‘qūb ibn b. Sulaimān al-Iṣrā‘īl) reproduces in the *Libro de los testimonios* an anecdote, according to which Plato on his deathbed required of his disciples that they should prefer the teacher above the book. On the whole Plato’s personality remained vivid enough before the eyes of the Orientals, they saw in him the sage, the master, the orator and the man of action and not only the writer. They gave him the title of *Hinshel of the Greeks*, an appellation not very precise to be sure, but which expresses this feeling of dignity and mastery of the man, and which is applied to the person rather than to the work; that is what is meant. V. Plato’s philosophy was not known to the Muslims precisely enough so that they should have been able to establish a truly Platonic school. The Greek philosopher’s system, in the way Shahrastānī expounds it, does not represent the doctrine of a Muslim school, but only what the Arab author believed to be Plato’s idea; this idea seems throughout this exposition to be systematical like that of the scholastics and in some points subtile like that of the Mu’tazilis. Plato’s influence in Islam was real, but penetrants only in so far as it was exercised indirectly: the Platonic spirit acts only behind Neoplatonism; but under this cover it is easily recognizable; the seduction of this spirit made itself to be felt by daring and free thinkers; they understood the beauty of the Platonic conceptions; they underwent their charm. The historian Ma’ādī, for instance, very willingly speaks of Plato and evidently with more pleasure and sympathy than of Aristotle. Plato’s merit as a theologian, his lofty conception of a moral god were recognized by the Muslims, namely by Shahrastānī; still the latter misses a little the theory of the Supreme Good; it is more clear in the mystic works of Avicenna, connected with the theory of Providence and with that of optimism; according to this thesis the evil attains only what is transient and perishable. The question of the one and multiple and that of the procession of multiplicity occupied the Muslim thinkers; they were in general more systematic in these points than Plato; one must recall to mind the very methodical constructions of Avicenna’s metaphysics, the lofty, though it is true, somewhat mysterious reflections of Ḥaḍāl al-Dīn Rāmi, the proceedings of Ibn Ṭufail to reduce to the unit the individual, then the species and genera. The Ḥaḍāl al-Sa‘īf (the Brethren of Purity) intended to be Platonicians by making to correspond to the first four numbers the four terms which, as they think, compose the world of ideas: God to the unit, the
intelligent to the dual number, the soul to the number 4, and the form of the matter to the number 10. The Musulmans kept very clear the idea of the two worlds: the world of intelligence and that of the senses; the mystics gave these worlds different names, and particularly al-Fārābī called them the world of creation and the world of command. The Platonic idea appears in Arabic philosophy under the names of "form" (fīfad) or "intelligibility" (ma'āfi) or "example" (ma'āf). The problem of realism and nominalism which agitated the schools of the Occident was put less clearly before the spirit of the Orantists. It may be said, however, that in a general way theologians, neotaballistic and orthodox doctors like al-Ghazālī were nominalists, while the school of the philosophers was realist. The world of ideas was placed by the philosophers in the series of the pure intelligences which preside over the celestial spheres, or was made up of the ensemble of these intelligences. The habit of considering our world as a reflex or as an imitation of a superior world was general with the mystics. The conception of the soul of the world and of the animation of the spheres was dear to the School of the Philosophers; the Brothers of Purity have amplified it. The question whether man's soul was born before the body or whether it was a part detached from the Universal Soul was discussed by Aviceana, Ghazālī, Averroes and others. Musulman orthodoxy was with regard to this point just as to the question of the animation of the world, in disagreement with the Platonic sentiment. Mas'udī remarks that a problem studied by Plato was to know whether the soul is in the body or the body is in the soul (Mu'ātūq, Paris, iv, 18), and the indication of the Arab historians is that the soul is a substance which sets the body in motion. The doctrine of the metempsychosis was also known to the eastern authors; that of reminiscence was the object of ingenious interpretation by al-Fārābī (Carrera de Vaux, Avicenna, p. 115). Plato liked to treat of the numbers, this taste was shared by several philosophers of the East and particularly by the Khwān al-Safā; considerations of a Platonic kind on the distinc-
tion and the resembling, on the same and the contrary, are met with in al-Fārābī, Djalāl al-Dīn Rūmī and Ibn Tufail. The Platonic physics were a little known to the Musulmans; Plato is often quoted as a physi- cist; we have seen that he was not unknown as a geometer. The Platonic politics had influence on many thinkers, from al-Fārābī to Ibn Khaldūn. The nature of love which occupied Plato's mind was the subject of many dissertations of Musulman authors, whether mystics or not; the Khwān al-Safā for example has a "love" (lūlī, sī, vīl. 181) knows Plato's sentiment defining love to be "a divine folly". The Greek philosophers surely had considerable influence on Islamic mysticism. The mystics found that he had a certain esteem for ecstatic practices; they based on it the idea which they had about the imitation of the superior beings; the solitary hero in Ibn Tufail's romance tries by the postures and movements of his body to imitate the harmony of the stars (Mayy, ed. E. Gauthier, p. 87). Above all the theory of the two worlds was essential to mysticism; al-Ghazālī teaches that, as there are organs to comprehend: the world of the senses, there must be certain faculties of the soul fit for comprehending directly the intelligible things. Al-Fārābī thinks in an analogous way. In the considerations of this order, Plato's influence, his doctrine and even his name are found to be closely enough associated with those of Platonism. Plato, being regarded in all schools as a sage, was considered as a veritable prophet by several of them, non-Musulman or heterodox, Sabaean of Hatrīn, by the Khwān al-Safā, by the mystics of Sijistān's group (see T. de Boer, History of Philosophy in Islam, p. 127), by the illuminates of Suhrawardi Makki's school and by the Isma'ilis: Bibliography: Shahrestānī (ed. Caretto, pp. 283-300 (Hartner). H. C. 179, 209 steq. v. 175, 256 steq.); Ibn al-Kifā (ed. Lippert), pp. 27-27; físīrat (ed. Fligel); Hājjī Khalīfa (ed. tariorum (Leipzig, 1843); M. Steinschneider, Die arab. Übersetzungen aus dem Griechischen (Centralblatt für Bibliothekare, xii, Leipzig, 1893); idem, al-Farabi, des arab. Philosophen Leben und Schriften (St. Petersburg, 1869); A. Müller, Die griechischen Philosophen in der arab. Über-
lieferung (Halle, 1873); See besides the general works on Arabic philosophy: Munk, Melanges de philosophie juive et arabe (Paris, 1859); J. de Boer, The history of philosophy in Islam (London, 1903); Reman, Averroes et l'Aver-
véisme; Carra de Vaux, Avicenne et Gazzali (Paris, 1901, 1902); the works of Disterer on the Khwān al-Safā, al-Fārābī and the Arabic philosophy of the 10th century. (CARA DE VAUX)

AFRĀSIYĀB (Yunagisayān), mythical king of the Turcomans according to Iranian tradition, in the old nisle and other works. Later historians in their genealogical constructions made him the ancestor of Turkish dynasties.

AFRĪDIS, an Afghan or Pāhār tribe occupying the mountain country at the eastern end of the Saffī Koh, which extends to the gorge of the Kābul river on the north, and on the south is bounded by the mountain country of the Orkzais. The hills occupied by the Dāhkī section of the tribe lie to the east of this position, like a peninsula extending from the main mass of mountains, and are surrounded on three sides by the empty country of Pāshkāvar and Kohāti. The neck of the peninsula is crossed by the Kōhāt Pass, which leads from Pāshkāvar to Kohāti. Through the north of the A프리다스 hills, just south of the Kābul river, runs the Ghāzbār Pass, through which the main road from Pāshkāvar to Kohāti runs. The centre of the mountain mass is the upland country called Tādīrb, which consists of several valleys separated, from each other by hills, and is from 6000 to 7000 ft. above sea level. This country is divided between the Afrīdis and their southern neighbors the Orkzais. The principal valley of the Afrīdi portion is called Mārāz, a fairly open plain. North of this their principal seat is the
valley of the Bārs river, which flows eastward into the Pechławar plains.

The Afridis are a race of mountaineers. Tall, strong and wiry but slender, with high cheek bones and strongly marked features and eyebrows sloping upwards, they differ considerably from the general Afghan type, and may perhaps be considered an aboriginal mountain race absorbed by the Afghans in the northward advance. Their identity with the अङ्गीरस of Herodotus has been assumed by many writers, but mere similarity of name is not alone sufficient proof of identity after the lapse of 2400 years when there is no intermediate evidence. The name does not occur in the Achaemenian inscriptions, and it is doubtful whether Herodotus intended to describe the अङ्गीरस as dwelling where the Afridis now are.

The country of Tīrah was undoubtedly at one time occupied by a race speaking a language still known as Tīrah, now only spoken in Nan grāñāt, north of the Saffī Kōh. This language, as Grierson has shown, is akin to the Aryan language of the Hindī-kūgh. It seems probable that when Tīrah was occupied by a Pashto-speaking race some part of the old inhabitants may have been absorbed. The name of Afridis does not appear in any of the medieval historians, even Bāhrām who was brought into close contact with the Afghānīs of these mountains does not give the name, and they are not mentioned by Nīmat Allah, who lived three hundred years ago. According to more modern genealogies, they are a branch of the Karālī tribe. Kākhā son of Kārān or Kārān, the eponymous ancestor, is represented as having had four sons Barhān, Khuğīla, Sulaimān and Shētāk, and 'Othāmān, afterwards called Afrodis, is said to have been the son of Barhān. But, in the Makhānī Afridis none of Kākhā's descendants are given, and in Kōla qāt al-ḥāla, a later work, we find that Kōlaq (Son of Dora's translation) had only two sons Sulaimān and Shētāk, and the Afridis are there derived from Kōlaq, the founder of the other branch of the Karālī tribe. Kōlaq is said to have had seven sons, of whom one was Orkāzāi and another Mīnāl ancestor of the Afridis, and the author adds that the Orkāzāi and Afridis live together in Tīrah. It is evident from these discrepancies that no useful deductions as to the Afridis can be made from the genealogies.

The story of the origin of the name Afridis given in the Aṣīāfīd Afridis is also evidently a modern fabrication. It is stated that on entering a house and being asked who he was, 'Othāmān replied "I too am a creature (āfīdā) of God," and that from this Persian participle the name Afridis was derived. Such stories denote that the true origin of the tribe is unknown, and that in all probability the Afridis (or Afridis as they themselves pronounce the name) are of mixed origin.

The present division of the Afridis is into clans, of which the following are the principal:

The Adam-khel, including the Dṅawtwāra, near the Kōhālī Pās, and bordering on the Khātabī tribe. The Ak-khel from Akor to the Bārs river. These two clans are not so warlike as the rest of the Afridis and are largely engaged in the varying trade, especially in conveying salt from the Kōhālī Pās.

Of the other tribes the Kūlī-khel, Kambar-khel Zakka-khel Malikdā-khel, Kāmān-khel and Sīhad (often classed together as the Khātabī Afridis) occupy Mādīn in Tīrah and the upper Bārs river in summer and in cold weather move down to the plains, many of them to the Kōhālī plains, north of the Bārs river where it flows from the mountains. The Zakka-khel move to the Bāzār valley and the Kūlī-khel to the eastern end of the Khātabī. These Khātabī tribes are the wildest and most uncivilized and are much given to raiding in the plains. The Zakka-khel have the worst reputation, in Mādīn most of the clans have villages and cultivation.

They have a very democratic constitution, and in all negotiations a great number of individuals has to be dealt with. They are, though deceitful and cruel, brave and hardy race, and were till 1897 extremely proud of the fact that no foreign conqueror had ever penetrated their mountains. In that year however every part of the country was traversed by the British Indian force under Gen. Lockhart.

In the time of the emperor Akbar the Afridis adopted the burqa of Pir Ḍāhān (otherwise Pir Tīrah), and soon afterwards they were found in possession of Tīrah whence they drove out the Utnān-khel northwards. They were also at war with the Orkāzāi to the south, and finally divided Tīrah with them. At the present time of the two principal valleys one, Mādīna, belongs to the Orkāzāi and Afridis, Dūhān-āq himself made war on them, and deported large numbers to Hindūstān and the Dekhān, where their descendants are still found. When the Durānī kingdom arose they submitted nominally to Akbar Shāh, and were included in the enumeration of fighting men made by him. He reckoned the tribe to 10,000 men, and it probably could not produce more than the same number at present. In early days the Afridis began the practice of enlisting freely in the armies of the emperors and kings, which they still maintain, but their reputation for fidelity was not great. In 1801 they betrayed Shōndāl-al-Mulk and caused his defeat by Mahmūd Shāh. During Nadīr Shāh's invasion in 1737 we read of the Kāhbarīs being ordered to dispute his passage, but they seem to have offered but little resistance. Their only concern was to make what profit they could out of the passage of armies or the traffic through the Khātabī Pass, and they were left as a rule unmolested in their own hills. The same condition of things continued during the Sikh rule, and after the annexation of the Peshawar country to the British empire in India their independence was still respected and they enlisted freely in the frontier regiments. Allowances were made to them to keep open the passes, which led through their country. Troubles arose in connection with the Khātabī Pass which was often closed by internal funds in spite of the allowances received. The clan principally involved was the Adam-khel, and in 1877 a punitive expedition was undertaken against the Dṅawtwāra east of the pass. Even this led to no permanent settlement, and twenty years after a much more serious war broke out. Religious excitement spread rapidly among the Afghan tribes along the British border in 1897 and Āfīlis was preached by a Mulla of Hadža in the Shāhkīlī country. The Afridis were not at first infected, and it was only after a serious outbreak among their northern neighbors the Māmūlūs that a warlike feeling grew among the tribes near the Khātabī Pass, especially the tur-
bulent Zakka-khāl, and an attack was made on the fort of Landi Kotal in the past, itself garrisoned by Afrīdī militia. They made a good defence but ultimately surrendered. The rest of the Afrīdīs were drawn into the quarrel, and the Usūkštīs joined them, with the result that the military power of the Usūkštīs was extinguished. In the south of the Usūkštī country, held by small bodies of Sikh troops, were attacked and taken after a heroic resistance. This led to a regular invasion of the Afrīdī mountains by a small army under Sir W. Lockhart, in which there was a good deal of hard fighting. The army suffered severely, but every part of the country was traversed and surveyed, and punishment dealt out to all the disaffected sections. The Usūkštīs had the first of the fighting and soon submitted, and the central sections of the Afrīdīs followed the Zakka-khāl and Kāth-khāl standing out to the last. The country was entered from the south, Kūkēt being the base. Actions took place at Dargel, the Samngua Pass in the Usūkštī country, and the Arghun Pass leading from Mastür to Maidān, and after a considerable halt in Maidān, the force returned down the long Bānī valley. Another part of the force under Gen. Hart followed the Mastür and Warīn valleys to the junction with the Bānī. A further advance was made up the Khāsh and the Bānī valley brought the remainder of the Afrīdīs to terms. The country was thoroughly explored and surveyed by Holdich during these operations. The Afrīdīs have been on the whole quiet during the past ten years, and enlisted in the frontier regiments with enthusiasm immediately after the war. Of late, however, signs of unrest have again appeared especially among the Zakka-khāl, and there have been some raids on the plains.

In the early part of 1908 these raids led to an expedition being sent by the government of India into the Bāz̄ar and Bārd valleys to attack the Zakka-khāl who submitted after a fortnight’s operations. The other sections of the Afrīdīs took no part in the fighting, and themselves induced the Zakka-khāl to submit.

By the Durand treaty of 1893 between the government of India and the emir ‘Abd al-Rahmān the Afrīdīs were left entirely within the British boundary. In 1894 the Afrīdīs sent deputations to Kābul, and endeavoured, but without success, to obtain assistance from the emir. It seems probable that these hardy mountaineers will eventually settle down to a more peaceful life under the British government, which does not attempt to interfere in the internal affairs of the tribes.

AFRIT. [See SHAKHT.]

AFAST (அ), the gallnut as well as the oak tree (Quercus hamata orientalis indica) that yields it. The Arabs, who did not yet know of the production of the gallnut by the gall-fly, considered it as the fruit of the oak tree, produced either at the same time or alternatively with the kernel. In medieval Arabic medicine, the gallnut wasofficial, and was used either in powder form or boiled in wine to make a remedy for skin diseases, and also internally as a remedy for diarrhoea: mixed with honey it was considered as a remedy for the illness of bees. It was also used for the preparation of ink.

AFSANG (ALSO AFŠANG, AFŠAN), the common wormwood (Artemisia absinthium), distinguished from Artemisia pontica, Arabic abš. Like Dioscorea the Arabs distinguish four kinds of a āfšāntī, which, surely, do not correspond with those of Dioscorea: the Greek (φολο), the Nestorian, the Khosrovian and the Turkish (Türk) afšāntī, of which the last was considered as the most bitter and best kind. The curative effect of wormwood as a stomachic, tonic and vermifuge was generally known; it was also not seldom used externally in plasters, ointments, etc.

AFSAR, a Turkish tribe emigrated to Persia, where it formed two great divisions, Kāsimī and Ersāhī, according to Ritter (Athus, viii. 409-409), or Szángi and Kirkt, according to Morier. It consists of 80,000 families scattered in Astarābād, Kermān (Zangān and Kātū-Nūr, Kāzwīn, Hamadān, Teherān, Khosrov, Khorāsān Farsīstān and Māzarānān. It is called after Awtāsh (Afrān-gāh Nārī), or Awtāsh (Rashīd al-Dīn, ed. Berosine, p. 32), the eldest son of Volīzād, third son of Oghūz (Abūl-Ghānā, p. 27); the meaning of the name is: he who is prompt in his affairs (ib., p. 25). Nadir Shah was of the Kirkt tribe, who came to Astarābād with the Mongols and settled under Shah Ismā‘īl towards the north of Mashhad and in the region of Mesh (Māḥdi Khān, Histoire de Nader-shāh, trans. Jones, i. 2-3).

(Č. H. BAOT.)

AFSHIN, title of the native princes (in pre-Islamic times) of the country of Urmān in Asia Minor (about the stretch from Bīrak to Koordjānd and to the south of it the territory on the upper course of the Zarābash). The last Afschān, Haidar b. Kārus (in the sources he is generally called not by his proper name but by his title Afschān), the general of Cālīsh al-Mu‘tasīm, was rewarded with reward and honour for his repressing the dangerous rising of the Khurram under Bābāk and for his victories over the Greeks in Asia Minor. But in 236 (848-841) he was overthrown, accused of apostasy, and in Shāhrūz of the same year (May-June 841) he was made to die of hunger in prison. — The title Afschān occurs also in Asia Minor; in Yōmây (ed. Hoogh), the inqūjād of Sagārān, calls himself Khāshīd of Sogdān, Afschān of Samarqand in the deed of his treaty with Kotabā b. Mulem.

AFSHIN — AFTASIDES.

AFSOS, poetical name of Mir Shör‘ Ali, the son of Sayyid 'Ali Muqaffar Khán, and descendant of the Prophet through İsmán Djafar Şah. His ancestor was a khan in Khorassan. Some of them, Sayyid Bahr al-Dín, the brother of Sayyid 'Ali Muqaffar Khán, came to India and settled at Naurâl, Şayyid Gholam Muqaffar, the grand-uncle of Afsos, came to Delhi during the reign of Muhammad Sháh (1710–1748), and was an associate of Nawsh Şah Mohammad al-Dawla Khán, his father and uncle, Şayyid Gholam 'Ali Khán, were companions of Ūmdat al-Mulk Amîr Khsân. Afsos was born at Delhi, and obtained a liberal education. On the assassination of the Nawab (1747), when Afsos was 11 years of age, his father took him to Patna, and obtained service under Nawsh Djafar 'Ali Khán, commonly known as Mir Djafar; he remained at Patna until the deposition of the Nawab in 1760. He then went to Lucknow, and thence to Haidarábâd, where he died. Afsos settled at Lucknow 2 years before his father went there, and was supported by Nawsh Siyâh Djaq, the son of Isâh Khán, and became an associate of Mirvâzeh Djaq al-Dawla (řahim-dár Şah), the eldest son of the emperor Sháh Al-Amir, who had come to Lucknow from Delhi.

After living some years at Lucknow, Mirzâ Hasan Rijā Khán, the Nâşir of Nawsh al-Dawla, introduced him to the notice of the Resident, Colonel W. Scott, at whose recommendation he went to Calcutta in 1805–1806, and was appointed head Munshi in the Hindustani department of the College at Fort William.

Afsos wrote a Hindustani Dwâna during his residence at Lucknow. He also made there a translation of the Guźînas of Šâh, which was completed in 1814 (1799–1800), under the title of (Border to Error. While at Calcutta he revised the Kulliyât of Sauda, and Hindustani translations of Persian works which had been prepared by Munghis of the college. He also made a translation of the first part of the Řahim-nâma, or a Persian history of Hindustán written by Munghis Sulîman Râ'î of Patilâ in 1707 (1692). This work was completed in 1820 (1805) under the title Râ'îg-Shâh. It was first printed at Calcutta in 1808, an English translation was made by M. J. Court, and published at Allah-Abbâd, 1871 (2d ed. Calcutta, 1884). According to Garic de Tassy (Litt. Hind.) and Spranger (Oudh Cal., p. 198), Afsos died in 1389.

APFINS (Afsn) (f), charm, incantation; secondary form of afshan, derived from ofshidan (comp. fash, fahs, fahsyddan etc., root šal) (Solemann, in G. D. F. iran. Philol., 1, i. 304). This word designates especially now in Persia, a charm against the biting of poisonous animals; certain devishes who pretend to have the power to charm serpents, scorpions etc., will, for some gratuity, communicate their invulnerability to other persons. Often it is one part of the body which is so protected, as for instance the right or the left hand, and it is with this that the animals of this kind must be seized (Polôk, Persians, l. 348).

AFTASIDES, Berber dynasty of Badajoz (418–487 = 1027–1094). Muhammad b. al-Aftas, the father of the founder of this dynasty — which is the 'brother' dynasty of Afsafis (see above) — was a native of Meknès and had come to Spain probably with al-Mansur's Berber troops. But as soon as the Afsafis attained to power they attributed to themselves an Arabic origin and claimed descent from the noble Yemenite tribe of Tügib. It must be said, however, that 'Abd Allâh, the first Aftaside king, was born in Spain, in a place called by Arab authors, Fass al-Balîsî, which Dossi identified with the Campo Calatrava of to-day (Recherches sur l'histoire et la littérature de l'Espagne, i. 204). As early as 401 (1010), Badajoz, of which the governor was a certain Sahâr, had succeeded from the Caliphate of Cordova, and Sahâr had made of it an independent principality. He appointed his counsellor 'Abd Allâh b. Aftas, whom he held in great esteem, his successor. Thus 'Abd Allâh's accession to the throne took place after 413 (1022), the year of Sahâr's death. From the very beginning his reign was characterized by disastrous wars and by the defeat which he suffered at the hands of the 'Abbasid, prince of Seville, and of Muhammad al-Burjâl, prince of Carmona. Al-Muqaffar, son of 'Abd Allâh, who was in command of his father's troops, was taken prisoner by al-Burjâl and did not recover his freedom before the month of Râbi' I 421 (March 1030). Four years later 'Abd Allâh re-engaged himself upon Ibn 'Abbad in a perilsous manner. He had granted the latter the freedom of his territory for his army commanded by his son Isâm. Then he unexpectedly fell upon the latter and massacred the greater part of his soldiers; Isâm and a handful of men succeeded in escaping.

'Abd Allâh died on the 17th Djîmmadul II 473 (30th December 1045) and was succeeded by his son Abû Bekr Muhammad al-Muqaffar. The latter, besides that he had to fear Ibn 'Abbad, the implacable enemy of the Afsafis, was also threatened by Ibn 'Abd-Nâsir, king of Toledo. Upon the advice of Muhammad b. Dâhân, Lord of Cordova, al-Muqaffar and Ibn 'Abbad allied themselves with him in order to offer a united resistance to Ibn Dâhân; thus the two enemies were reconciled for the moment. But soon a war broke out between Ibn 'Abbad and al-Muqaffar and the latter was beaten twince. Then there took place the expedition of Ferdinand I (beginning of 447 = spring of 1055), who deprived al-Muqaffar of several fortified places and imposed upon him a tribute. Al-Muqaffar died in 460 (1068). This prince distinguished himself by his great love for Arabic literature, which was compensated for his want of success in his wars. He wrote a rather voluminous work on medicine, entitled Muqaffâr (comp. 'Abd al-Wâhid, ed. Dossi, p. 52).

After al-Muqaffar's death, his son Yahyâ, who later took the surname of al-Munster, ought to have succeeded him; but his other son Omar, then governor of Evora, declared himself independent. Thus the two brothers reign together.
for several years, Omar over the western and Yahya over the eastern provinces. According to certain authors some were taken place between the two brothers as well as between their allies, but this can not be established with certainty. Yahya died in 473 (1081), and as he left no son, Omar, who took the name of al-Mutawakkil, became sole ruler of the kingdom. The latter like his father was more prominent on account of his literary taste than of his military exploits; his name was chiefly immortalized by his secretary, the poet Ibn 'Abdun (q.v.), who later mourned over the fall of the dynasty. But his caliphate was long. From the fall of the rest, the old state of walled towns was not restored; Alphonso VI of Castile incessantly invaded the Moslem territory, and in 478 (1081) he even seized Toledo. The Musulman kings al-Mutawakkil, 'Omar the Aftasid of Badajoz and 'Abd Allah of Malaga decided to call the Almoravide Yusuf b. Tughffin to their aid. The latter indeed was not slow in responding to their call; he defeated the Christians in the battle of Zallakeh (12th Rajab 483), and returned to Africa. But his success stimulated his eagerness for conquest, and in 486 (1093) he gave his general Sir b. Abi Bekr the order for subjugating the Aftasid kingdom. Badajoz fell into the hands of the Almoravide general in 487 (1094); 'Omar and his two sons al-Fal and al-'Abids were taken prisoners and afterwards put to death.

(M. SELIGER)

AFUW = "very forgiving". — Al-AFUW, one of the 99 names of God (see Allah).

APYON (απειγόμενος, dim. of ἀπειγός, opium, i.e. the inspissated juice of unripe poppy capsules, 7th-8th centuries A.D., see P. Tischendorf, Alphabeticum, p. 319). From the first to the twelfth century of the Christian era Asia Minor seems to have been the only source of supply of opium for trade. From there the Musulmans spread it by means of their warlike expeditions over the whole Islamic empire, so that opium is now cultivated in East India, Persia, Asiatic Turkey, Egypt and China. The production of opium was already described by Dioscorides almost in the same manner as it is still produced in Asia Minor: incisions were made in the defoliated capsule, and on the following day the juice, which had oozed through them and become thick, was removed and kneaded into small cakes. The effects of opium as a medicinal drug, and chiefly its being an article of commerce, were from ancient times accurately diagnosed and tested.

Bibliography: Kazwini (ed. Wusten), i. 282; Ibn al-Ballath, al-Qirrain (Ibn, 1049), i. 45; Abul Masan al-Muwaflak, Kitalk al-kubra (ed. Seligman), i. 36; Ibn al-'Aswam, Kitalk al-futakat (trans. of Clément-Müller), ii. 1, 128 et seq. (on the cultivation of the poppy in gardens). (HELL)

At-APZARI, the mugh of the minister and poet Ahmad al-Din As'ad b. Nour, according to Hajji Abiad. Hassun Fastel (Fawwād as-Sulayhi, Shi'ah, 1373, i. 331; ii. 179, 333). After or Abzu is a small town of Fâra, south of Shâm. (Bâl. geogr. avâl, el. de Goeje, ill. 447, note 1). [See AL-],&nb
AGHA MUHAMMED KHAN, founder of the Kaghaz dynasty in Persia, son of Muhammad Hassan, born of Faith 'Ali Khan born in 1155 (1742). When still a child he was made a eunuch by order of 'Adil Shah. On the death of the madār Kurn Khan Zend, he retired to Astrakhan; turning to his advantage the disturbances of Persia at that time, he made Tehran his capital and declared himself a king there in the beginning of 1201 (1786). He struggled for eight years with the last prince of the Zenal dynasty, Lutf 'Ali Khan, who fell into his hands through treachery, and perished under fearful tortures in 1209 (1794).

A successful expedition against the Russians (1810 = 1795) re-established peace on the north-eastern frontier, another expedition to Georgia tore away the latter country from Russia; Agha Muhammad escaped a conflict with the latter power only thanks to the death of Catherine II. He seized the prince Shahrubuk, grandson of Nadir Shah, who, though blind, continued to reign in Meshhed, and by torture extorted from him the diamonds which the conqueror had brought from India, and ten thousand pieces of silver with which he anciently endowed a madrasah. At the age of 55 he was assassinated (1211 = 1796) by two slaves whom he had condemned to death, and was buried at Nadijf (Meshhed 'Ali). His nephew Bābā Khān, who took the title of Fath 'Ali Shah, succeeded him to the throne. Agha Muhammad founded by violence and force a dynasty, whose chief merit consists in its restoring to Persia a peace which has remained until now.

AGHĀ (Turkish: "tree, wood"); a secondary form in East-Turkish piğāh, a land measure designating the principal distance at which a man placed between two others can make himself heard by them, thus something as a measuring of a mile. A verse of Mir 'Ali Shah names it at 12000 piğāh (double cubit, the length of the arm from the shoulder to the end of the middle finger); another verse of Mahmūd Katt estimates the dimension of the earth at 140000 piğāh. Pietro della Valle (Foyerger, iii. 141) thinks the piğāh to be equivalent to a Spanish league, or four Italian miles, and according to E. Fladand and P. Couto (Foyage en Perse, i. 111), it is equivalent to six kilometres (a little less than four English miles).

AGHA KHAN, title of the head of the Indian Shiklas or Khodjas [q.v.]. The present Agha Khan Muhammad Shah, born in 1857, resides at Bombay and writes articles for English periodicals (The Nineteenth Century; East and West). He is the third Agha Khan, for his father and grandfather also bore that title. The latter, called Agha Khan Mahallat (after Mahallat in Persia, to the west of Kurn), was governor of Kurn and Mahallat under Fath 'Ali Shah. Having missedcarried in his revolt in 1838 against the grand vizier, he was obliged to flee to India, Mahallat's father Shāh Khalīl Allah Saiyid Khāκ, assassinated in Yezd in 1817, was son of Abūl Hasan, the governor of Kermān. The Agha Khans claim descent from Hasan Sabbāh [q.v.].

AGHA KHAN, head of the family of the Indian Shiklas or Khodjas [q.v.]. The present Agha Khan Muhammad Shah, born in 1857, resides at Bombay and writes articles for English periodicals (The Nineteenth Century; East and West). He is the third Agha Khan, for his father and grandfather also bore that title. The latter, called Agha Khan Mahallat (after Mahallat in Persia, to the west of Kurn), was governor of Kurn and Mahallat under Fath 'Ali Shah. AGHA, East-Turkish: "elder brother"; comp. Vakuf, Vachof, etc. Tham et al. (Scriptions de l'Orient Méditerranéen, p. 20, l. 17-18).

AGHA, modern-Arabic pronunciation for 'Aqeil [q.v.].

AGHA, East-Turkish: "elder brother"; comp. Vakuf, Vachof, etc. Tham et al. (Scriptions de l'Orient Méditerranéen, p. 20, l. 17-18).
AGHÄNÎ (حايني) was a dynasty which ruled over Irkhtyi after the death of his master, the 9th-century Christian era. Founded by Ibrahim b. Al-Aghlab al-Mu'addin, the governor of Zabila, the dynasty lasted for several centuries until it was overthrown by the Fatimid Caliphate. The Aghlabids were a Berber dynasty that controlled a large part of North Africa, including modern Tunisia, Algeria, and Libya.

The Aghlabids were known for their patronage of the arts and sciences, and they supported the development of the Berber language and culture. Their capital was Kairwan, and they built many mosques and universities, including the University of Kairwan, which was one of the most important centers of learning in the Muslim world.

Ibrahim b. Al-Aghlab is said to have been a scholar and a poet, and he is credited with the development of the Berber language as a literary language. He is also said to have been a patron of the arts, and he is credited with the construction of many buildings and monuments in Kairwan.

The Aghlabids were overthrown by the Fatimid Caliphate, which was founded by the Abbasid Caliph al-Mu'tasim in 909. The Fatimids were a dynasty of Persian origin, and they were led by the Caliph al-Mu'tasim himself.

The Fatimids quickly took control of Kairwan and the surrounding areas, and they continued to promote the arts and sciences. The Fatimids are often remembered as one of the great dynasties of North Africa, and they left a lasting legacy in the region.

In summary, the Aghlabids were a Berber dynasty that ruled over a large part of North Africa for several centuries. They were known for their patronage of the arts and sciences, and they left a lasting legacy in the region.

ABBASID (عباسي) was a dynasty that ruled over Moslem lands from the 8th to the 13th centuries. The Abbasids were descendants of the Prophet Muhammad's cousin, Abbas b. Abi al-Abbas, and they were the first dynasty to rule over the entire Islamic world after the death of the last Umayyad Caliph Harun al-Rashid.

The Abbasid Caliphate was centered in Baghdad, and it was one of the most powerful empires in the world at its height. The Abbasids supported the arts and sciences, and they built many mosques and universities, including the University of Kairwan, which was one of the most important centers of learning in the Muslim world.

The Abbasid Caliphate was overthrown by the Fatimid Caliphate, which was founded by the Abbasid Caliph al-Mu'tasim in 909. The Fatimids were a dynasty of Persian origin, and they were led by the Caliph al-Mu'tasim himself.

The Fatimids quickly took control of Kairwan and the surrounding areas, and they continued to promote the arts and sciences. The Fatimids are often remembered as one of the great dynasties of North Africa, and they left a lasting legacy in the region.

In summary, the Abbasid Caliphate was a dynasty that ruled over Moslem lands from the 8th to the 13th centuries. They were known for their patronage of the arts and sciences, and they left a lasting legacy in the region.
AGHMAT, a place to the south of Marrakush. Agmat is now a vast agglomeration of fields, gardens and earth houses, abundantly watered and shaded by trees of various kinds. It is one of the prettiest spots of that region. It belongs to the ga'îdate of Massûmîa. At a distance of two or three kilometres from it is Warika, a large village with an important mellâb (Jewish quarter), which constitutes a separate ga'îdate. Both countries are irrigated by the Wadd Agmat which comes forth from the Atlas at Warika: the latter is the most and a foot of the mountain and even on its first slopes. The Wall Agmat furnishes numerous régia, one of which goes as far as Marrakush and contributes to furnishing the towns with drinkable water.

Before the foundation of Marrakush, Agmat was besides Nûfis, the chief town of the region; it is mentioned as having formed a part of the Ifridlîs empire. Later, before the Almohad invasion, it is found to be occupied by the Maghribis; the last emir was called Leghût or Lajût b. Yûsûf, the husband of the celebrated Zinâb, who later married Abû Bekr al-Lamutî and afterwards Yûsuf b. Tâghîn, the founder of the Almohad dynasty. Agmat was taken in 449 (1057-1058) by the terrible arroubâtîn, and Leghût sought shelter with the Tâdûs. After Marrakush was founded in 452 (1062), Agmat lost its importance and since then has not ceased to decrease. Al-Kindi says that before the foundation of Marrakush, distinguished between two Agmats: Agmat-Allân and Agmat-Wartha. Perhaps Agmat-Allân is identical with the Agmat of to-day while Agmat-Wartha would correspond to the present Wartha; unless Agmat-Allân be Iggil or Allân which is 7 or 8 km. NNE. At any rate the historical Agmat seems to answer to the place which is still called Agmat. There is still an old madrasa; large enough and numerous tombs are found there. Perhaps it is there where we must look for the tomb of the unfortunate al-Mu'tamid, the last emir of Seville and of Cordova, whom Vysof b. Tâghîn exiled to Agmat and whom he kept there as a prisoner. Al-Marrakush made a touching account of his captivity. This tomb existed still in the 15th century, but we do not know what has become of it; now, the access to this madrasa being strictly forbidden to Christians and Jews. Around the madrasa there are found vestiges of old brick buildings, of a stone bridge and of old earth cunnovellations. In the time of Leo Africanus, Agmat was already in utter decay; still pilgrims are yet made to the saints of Agmat. The region remained celebrated on account of its fresh water, its shady trees and various fruits which supply the market of Marrakush.

AGHRIDAGH or EGHIRIDAH. [See AGRABAT.]

AGRA, capital of the district of the same name in British India, situated on the right bank of the Jumna River. In 1901 the city counted 93,500 inhab. (about a quarter of whose Mussalmans), the district (1945 square miles) 106,054 inhab. — Agra is renowned for its many magnificent buildings from the time of the Moghul dynasty. Several of them, as the Moti-Maajid (erected in 1654 by Shah Djiîhân), the Nâginâ-Maajid and the Mina-Maajid, the public and private audience halls (dowlâ-i umûs and dowlâ-i khâzir), the palaces known under the names of Shish-Mahall, Khânâg-Mahall, and Dâhângir-Mahall are within the spacious citadel. (21 km = 14 miles in circumference, built by Akbar) surrounded by a moat and a wall 72 ft. high; access to that citadel may be gained by two gates, while a third gate on the side of the river is closed. On the opposite side of the river is the tomb of İmâm al-Dawla [q.v.]; the most famous monument of Agra is the Tâj-Mahall [q.v.]. For the rest the area of the present city is only about the half of what it was in the flourishing time of the Moghul dynasty.

History. — Agra has been known since the Lodî [q.v.] dynasty ruled India, and yet Akbar only made it his residence, in which he also died (1605); his tomb ornamented by a monument, however, is not in Agra but in Sikandra [q.v.], which is at a distance of 3 km. (about 5 miles). The name Akbarâbâd given to the city in his honour fell later into oblivion. His successors resided only now and then in Agra, and Awarâbâd removed his residence to Delhi. In 1770 the city was taken by the Marres, who occupied it with a short interruption till 1803, when Lord Lake subjected the city to the English rule (battle of the 17th October 1803).

A'HAD (A.), pl. of ahd [see next art.], meaning unit in arithmetic. In the science of tradition it is used as an abridged pl. of khâlid, which are, as contrasted with wâlid [q.v.], health communications which come not from a larger number of trustworthy companions (a'hd), but from a single person. By means of liifid, i.e. further extension by different liifid ways, the a'hd tradition was raised to the rank of mukaddim. The discussion of the question: to what extent the a'hd contain positive science and may serve as a criterion for the practice, forms one of the most conspicuous chapters of the whole science.

AHAD — AHIH — DHIMMA.

From a Shi'ite point of view: Djamal al-Din al-Amili, Mubarak al-nil (Lahouc, n. d.), p. 107.

AHAD (a.), a numeral "one"; also surname of God (see WAHID). Ya'qub al-ahad, the first day of the 'waxing.'

AHADI, the cavalry guard corps in the army of the Great Moghul.

AHADITH (a.), traditions. (See HADITH.)

AHADIYAH (a.) = unity, technical term in philosophy denoting simply the indivisibility of God's unity, which in the teaching of the Sufis constitutes the highest degree (marbathah) of the divine Being. Comp. the definitions in the Dictionary of the Technical Terms (ed. Leen), p. 1469.

AHAD, pl. of "ahdd, command, covenant, alliance; hence wa'l-ahad = successor to the throne by virtue of a decree of the reigning prince; ah-allah, the people of the covenant." (See AHADITH.) Those, who have made a covenant with the Musulmans, namely the Christians and the Jews (see ABAD), are considered as "people of the ground." Further, "had" means the document itself which contains the regulations of the alliance; hence al-ahad-ahad, the "Old Testament" and Ahl-al-Djrayd, "the New Testament." (See AHADITH.)

Bibliography: Brockelmann, Gesch. d. arab. Literatur, ii. 255; Kay, Yemen, its early medieval history, pp. xviii et seq.

AHADATH (a.), pl. of hadath (q. v.).

AHIH, Turkish poet, whose real name seems to have been Beili Hasan (Hasan with the mole). His father Sidi Khoudja was a merchant in Tetuan (not far from Casablanca). After the latter's death Ahi left school, became an inconstant and chosen for him an occupation of a scholar, but he did not for a long time advance any further than the degree of a candidate (milâbân), because he declined the position of Muderer in Bayyad Pasha's Medresse in Brusa. Finally he obtained a similar position less important position in Ksar-Ferya (Herboron), where he died in 1252 (1857). He left two unfinished poetic works, of which the titles are: Khawar m-Shirku and Hüm u-did. The latter work is an allegorical poem written in prose interpersed with verse, and is an imitation of Fattat's [q. v.] work of the same title. Gibb has epitomised its contents in A History of Ottoman poetry, p. 296, et seq.

AHKHAF (a.), = the sand dawns. The Arabs particularly apply this appellation to the large sandy desert south of the Arabian Peninsula, an entirely unknown region, visited by no traveller. — It is also the title of the 469th Sura.

AHKAM (a.), pl. of ahkam [q. v.]

AHL (a.), originally meaning "those who occupy with one and the same (Habse, Ahd), thus family, inmates." Therefore al-ahd means "the household of the Prophet, his descendants." When the ahb (pl. ahbâf) of a town or a country is spoken of, it denotes its inhabitants, sometimes, as in Medina (according to Burton), especially those who were born there and own houses. But this word is often connected with other notions, and then its meaning is still more subtle, so that it may mean so much as "sharing in a thing, belonging to it," or "owner of the same," etc. Some of the compounds with ahb mean in the following:

AHL AL-AHWA' (a.), sing. kaum, "predilection, inclination of the soul;" comp. Kur'an vi. 151) is according to the view of the orthodox theologians the appellation of the followers of Islah, whose religious sects in certain details deviate from the general ordinances of the Sunna; comp. Zaitser, d. Deutsche, Monatsh. Gelehrten, iii. 359. As examples there are mentioned: Dailiurî, Khadiïri, Rawadî, Khwârizmi, anthropomorphists, Mâfisîsî. From the above definition it may be inferred that in the sense of Musulman theology it is not proper either to designate these tendencies as sects.

AHL AL-BAIT (a.) = "the people of the house, of the family." With reference to the Korân, xxxii. 33, the Shi'ite and in general the Muhammadians friendly to 'Ali attribute to "Ali, Fatima, their sons and their consecrated, to whom alone they restrict this appellation, the greatest social and spiritual merits as well as the greatest influence on the political rule and religious guidance of Islam. These idea comes to the surface in a more or less exaggerated form with regard to the 'Alids according to the views of those spheres [see above]. In a notice by Ibn Sa'd (iv, 59 verso) the appellation Ahi al-bait is contrasted with Mahdîs and Ameen, and referred to the Prophet's family. In Sunnite exposition, the notion of Ahl al-bait is in several ways extended to the branches of the Banu Hâshim including their Marwî (see Mawla), who in the sense of the law must not be admitted to the partaking of the qadda; see the codes, e. g. Kadiri, Muhammad (Kazan, 1850), p. 233; Nawawi, Nâzîya (ed. Van den Berg), p. 345; Ibn Rasûl al-Ghazzî, Fatâh al-akhârî (ed. Van den Berg), p. 425. The Sunnite interpretation accepted for the most part, does not restrict the ascertainment of the term to Hâshimides descended in a narrower or wider sense, but numbers among the Ahl al-bait all the wives and children of the Prophet, and also Ali, his son-in-law, who prevents the specially "Ahdib interpretation [comp. also Al.] See the commentaries to Korân, xxxii 33 and 34 to Abu-Dahshîr, Bayâtî al-mâfisî, Nâhî, 30 (al-Kasâbanî, vi. 151). An exhaustive treatise in mini-Siûtes spirit on the compass of the idea of Ahl al-bait is to be found in Ibn Hâşîjs, al-Hasanî, al-ahdîn al-mukhabîrî (Cairo, 1372), pp. 37 et seq. (Golzheier.)

AHL AL-BIDA' (a.) = the people of innovation, i.e. sectarians.

AHL AL-BUYÛTAT (a.), originally denoted those that belong to Persian families of the highest nobility (Noldeke, Gesch. d. Perser, ii, Araber zur Zeit der Sassaniden, p. 71), then, the nobles in general. Other meanings are given by Dusky, op. cit., p. 131.

AHL AL-DAR (a.), = the people of the house, in the Almohad hierarchy the 6th order.

AHL AL-DHIMMA (a.), the Jews and Christians, between whom and the faithful there is according to Musulman law a certain legal relation (see DJIMMA).
AHL AL-DJEBEL (אִילָה אל-דַּזְבֶּל) are "mountaineers", particularly in Palestine the Bedouins of Hawrán.

AHL AL-FARID (אִילָה אל-פָּרִיד), the legal heirs of the first disciples according to Muhammadan right of succession. [See FARID].

AHL AL-HADITH, also تاریک EL-HADITH (אִילָה אל-הָדִיחֵת), the people of official traditions. [See Hadith], as contrasted with the people of their own judgment (ra‘itî) and with the sectarianists in general. In India the Wakhêhah [q. v.] call themselves so.

Ahl-ỉ Haqq (אִילָה אל-הָאָק), "the people of the truth". [See IHSAN].

AHL AL-HAWA (אִילָה אל-הָוָא), "libertines".

AHL AL-KABALA (אִילָה אל-קבָּלָה), a synonym of ahl al-Dhimma [See Kabala].

AHL AL-KIBLA (אִילָה אל-קִבָּלה) is "the people of the Book", a vocabulary of the Prophet (Muhammad himself, Alli, Fatima, Hassan and Hâlin). For the origin of the vocabulary see the tradition quoted above under AHl AL-MAYT.

AHL AL-KITAB (אִילָה אל-כִּתָּב) is the "people of the Book", Muhammad calls to the Jews and Christians, in distinction from the heathen, on account of their possessing divine books of revelation (Tevrîr = Korâh; Zolânk = Sûlêlit; Sâîdî = Gospel), which, it is true, they transmit in a falsified form, but the recognition of which secures for them a privileged position for the heterodox. In contradiction to the heathen, Muhammad granted them (Korân, ix. 20) after their submission free public worship against payment of a poll-tax (gîyâz, q. v.). The pious observance of the special conditions laid upon them ensures them implicitly the protection of the Mussulman authorities (as moskîlam or ahl ad-Dhimma = protèges in accordance with an agreement). Violation of this defensive alliance with the Ahi al-Kitâb is considered a heinous perfidy. Of course the proceedings of the Prophet with regard to the Bani Nadir and Bani Kursâia cannot be taken as a model. In spite of all fanatical sentiment expressed in odious terms the following principle in the form of Muhammad's saying has been set up: "He who wrongs a Jew or a Christian will have himself (the Prophet) as his inditer on the day of judgment." (Delphort, p. 162). Likewise in the ancient instructions for the generals setting out on expeditions of conquest as well as for administrators of the provinces stress is always laid upon the clause that the subjects of Ahl al-Kitâb must not be disturbed in their public worship and must be treated with humanity. To be sure after the death of the Prophet, who had begun himself with the expulsion of the Jews, permanent stay in Arabia itself was interdicted to them. The Mussulmans based themselves on a saying supposedly uttered by the Prophet in his last hour, the purport of which is "two religions may not dwell together" on the Arabian Peninsula. (Muhammad, iv. 71) comp. Rashîd's commentary as to the geographical limits, a principle which is pretended to have been applied already by Abû Bekr in his message to the Christian inhabitants of Najîrân (Tabari, i. 1887; 11). The restrictive, special conditions, which became always more oppressive in proportion to the increase of spirit of intolerance, are codified in their oldest form in a document which passes for the "Akhā Omayr, the treaty of Oumar" (with the Christians of Jerusalem), but which is certainly a production of a later epoch (de Goeje, Mémoires sur la conquête de la Syrie, 2nd ed., 1840 et seq.). This document is the basis of the interconfessional legislation in Islam, and it has been further developed in the codifications according to the ruling opinions of their respective authors. With the right of free public worship the following question remained as the leading one: To what extent may the Ahl al-Kitâb erect new prayer houses or restore old ones? It always gave rise to renewed negotiations. One may conceive that in different law schools in spite of the maintenance of the principles differences with regard to the treatment of the Ahl al-Kitâb from the point of view of religious right became manifest. The principal differences appear in the questions of the Lâhâhāt. Ahl al-Kitâb (if the Mussulman may partake of what they slaughter) and of the Munšâkahāt Ahl al-Kitâb (to what extent a Mussulman is allowed to marry a wife of them). The assumption that the books which the Ahl al-Kitâb possess are falsified and that they concealed their true contents (Korân, ii. 73; iii. 64; v. 15; vi. 91), as well as the belief that Muhammad, his mission and the victory of the Arabs and Islam are foretold in the Holy Scriptures of the Jews and Christians and that the Ahl al-Kitâb rendered obscure these prophecies by false interpretation called forth an extensive polemical literature, the materials for which the Mussulman theologians received in the first place from converts. With regard to the Jews a particular subject of polemics took rise on the formation of the makhâ al-sharî'ah, i.e. the abrogation of the divine laws affirmed by the Mussulmans and denied by the Jews.

Islam extended very early the sphere of the Ahl al-Kitâb beyond its original limits. Supported by the statement that Muhammad adopted the gîyâz from the Persis in Haßân (Bahrain), the Mussulmans included the Mâllûs too in that class. The time of Caliph Mâmûn (815 = 890) the heathen of Haßân succeeded in suggesting to the Mussulmans that they were the Saûhîn mentioned frequently enough in the Korân among the believing nations, and that they possessed books of revelation brought to them by ancient prophets (Chwolson, Die Schneller, i. 141). In the 14th century s. Musliman prince in India allowed the Chinese, against payment of a gîyâz, to keep up a pagoda on Mussulman territory (âh. Bâna, iv. 2). The state of interior affairs in India brought it so far that verifiable holocausts were considered Ahi al-Dhimmas (îsh, pp. 29, 223). Such extensions could be made only by concession of religious toleration. The two questions alluded to above (the laws of food and marriage) were never taken into consideration beyond the sphere of the Ahl al-Kitâb.

Polemics: Steinmüller, Poles. and apologists. Literature in Arab. Sprache (Abh. für die Kunde
AHM AL-KITAB — AHMED I

AHL AL-KIYAS (A.), those who consider the conclusion by analogy (aflat) justified in inferring the legal decisions.

AHL AL-NAZAR (A.), the philosophers.

AHL AL-SUFFA, more rarely AML AL-SUFFA, isolated form: AML AL-ZULLA (A.), the people (or owners) of the (mosque) vestibule. Among the believing Mekkans, who had accompanied the Prophet in his flight to Medina and among those who emigrated to Medins from other places there were some without means from home, others having left their sphere of action in their native country became poor and suffered from want of food, clothes and a home. Even the far extending charity of the Medinian co-religionists was unable to remove entirely the misery that prevailed in those districts. In the meantime a vessel with parched barley, bought with the money of the community, was set up for the poor in Medina near the fountain in the yard of Muhammad's house. The homeless persons encamped under the sufqa, i.e. the northern part of the mosque covered only with a roof but with open sides. They were on account of this also called the guests of Islam. Still on the other hand even very poor immigrants are said to have never entered there. Their number is differently rated (10, 30, 70, 92, 93, 400 persons), as in fact it fluctuated from instance to instance in the earlier time it was certainly greater than later. Sufqa people, who were with regard to their tribe strangers in Medina, were for instance the Ghafritte Abi Tharr, the Yemenite Abi Sa'd, the 'Abisite Hudaifa, the Leithite Wasla etc., further the slaves Abi Muwawa, Abil Ammar, Bilal (an Abyssinian), Khabab, Sulaiman (a Persian), Sulahab (a Greek). Among the persons that were connected with the Prophet Abi Harara is at best to be mentioned the most near the heart of Abi Waqas, one of the ten men (namely the ten most intimate friends of Muhammad), there was one there.

The construction put by many Muhammedan theologians on Korin. Il. 273, 274; vi. 52; xviii. 277 xili. 26, as referring to the Afl al-Suffa gives way for many reasons, one of which is the fact that these passages were partly revealed in Mecca. In later times the Afl al-Suffa were very highly respected, and placed even above the ten (see above), perhaps because, owing to a foolish etymology, they were considered as the founders of Sufism, whereas others emphasized and substantiated by Koran's passages the tenet that all are equal in Islam and that it depends simply on the degree of piety. Legend tells of them among other things that they heard the conversation which Allah had with Muhammad during the midnight travel (which, however, as everybody knows is supposed to have occurred in Mecca) instead of Nezem al-Khakhtai (d. in 430 = 1038) treated of them in his Kitab al-ayyam al-masbi. Taqi al-Dtn al-Sukhit (d. in 756 = 1355) wrote a book entitled Tafsir al-fi'afuli with al-ajal al-suffa, Abul 'Abd al-Rahman al-Sulami wrote Tafsir al-ajal al-suffa. Later on al-ajal al-suffa became the designation for (homeless) jugglers.

AHM AL-SUNNA (A.), the Sunnite, the orthodox people [see SUNNA].

AHM AF (A.), pl. of alif (q. v.)

AL-AMMAR (A.), the red one; also a person's name: the Massaalian princes of Granada were called Haumdl-Al-Ammar. These are a sect.

AHMED, one of Muhammad's names according to Korin, Is. 6, Comp: Spenoner; Das Leben und die Lehre des Mohammed, i. 156 et seq.

AHMED I, fourteenth Ottoman sultan, eldest son of Muhammad III, born in 998 (1590), succeeded his father at the age of 14. Derogating the custom established by Bayazid I Vildrian he had not assassinated his brother: Mufta when ascending the throne. He removed his grandmother, Sultana Saffia (the Venetian Basha), who had ruled over the empire under Murad III and Muhammad III, as well as her confidants. He entrusted the Kapudan-pasha Cicala with the chief command over the troops led against the Persians, who had just conquered Erivan, Akkale Kaas and Kar, but the renegade suffered a defeat at the hands of Shah Abbas I, and died of grief (1604 = 1668). The grand vizier Mustafa Pasha received his order to relieve Buda, in which he succeeded, but on the other hand was forced by bad weather and by the cowardice of the Agas of the Janissaries to abandon the siege of Pest and Gra. A little later he conquered the latter city after which he concluded with Austria the Peace of Sitterok (11th November 1660) and renewed the agreements with France, England and Venice. — About that time the passion for tobacco was spread in Turkey. — Ahmed's grand vizier Murad Pasha, surnamed Qadjja Kuydilja (the old well digger), defeated at Urdugu-Osmans the Kurds Ali Djinubal (3d Radjab 1076 = 28th October 1667), who had rebelled in Aleppo, routed Kalendar Oghlu and Kana Salat at Gokoln-Yalla (8th July 1668), made away with the other insurgent chiefs by assassination and treachery and in this way he re-established peace in Asia Minor. At sea Khatlil of Kushtaria defeated ten Maltese galleys in the waters of Cyprus in the so-called Kana Dijhansun Battle (after the name which the Turks gave the red galleon commanded by Femandet, and which they seized); but his fleet suffered great loss then, especially in a battle against Ottavio of Aragon near Cape Corvo, not far from Chio (1613), while the Ottoman admiral ravaged the country of Malta and chastised the dog of Tripoli of Berberia and the rebellious Maimoses; Spinou was devastated by an incursion of Cossacks. He made peace with Persia, on the renunciation of the tribute of 200 bales of silk paid by the Safawides and of the countries conquered since Salim I and later lost again. Iskandar Pasha reconquered the rebellious Moldavia and on the 26th Ramusul 1026 (7th September 1617) concluded with the Cossacks the Peace of Burzom. Ahmed I died in the same year (23th Dhu-l-Ka'da = 22th November) at the age of 28 after a reign of 14 years.

In spite of the energy he had shown in the beginning of his reign he was weak and undecided and cruel besides, his grand vizier Nasib Pasha, whose arrogance had put him out of humour, was strangled by his order (1023 = 1614). He had the regulations of the emirates of the empire anew and codified them under the title El-Fatwa nebe. The erection of the Ahmediya Mosque on the
AHMED I — AHMED.

AHMED II, Ottoman sultan, born on the 5th Djamād I 1052 (1st August 1642), brother of Sultan Suleyman II, whom he succeeded on his death at Adrianople (26th Ramadān 1102 = 23rd June 1691) and was enthroned in the old mosque of that town. He confirmed Mustafa Koprulu in the office of grand vizier; the latter lost the battle of Shakanen (19th August 1691) against the Imperial and persian on the battlefield. Hâdji Allâh of Merzifon, who took his place, succeeded in having the siege of Belgrade raised (15th Muharram 1104 = 29th Sept. 1692), but a third minister, Sarmelî Ali of Dimetâla, was compelled to abandon the siege of Peterwardein (1106 = 1694). The Ottoman army was more fortunate in Dalmatia than in Poland; Châu, besieged by the Venetians, capitulated. Ahmed II deserted from duty (23th Djamâd I 1106 = 27th July 1695). The tax collector was a melancholy disposition and very insensible; he was fond of hunting, but was addicted to drinking.

Bibliography: Hammer-Purgstall, Gesch. des osman. Reiches, see index; Râghid, Turcîl, iii. 202; Guhlîni ma'âlaflî, ii. 503—1014; Mustafa Efendi, Nâsâli es-senâmî, ii. 8—11.

AHMED III, Ottoman sultan, succeeded his deceased brother Mustafa II and was enthroned on the 10th Rabî' II 1115 (23rd August 1730) at Adrianople. He immolated the persons of the revolted Janizaries denounced, but as soon as he entered Constantinople he dismissed the Bûndanjî corps and replaced it by a levy (the last of that kind) of 1000 Christian boys. He had several Janizary chiefs executed or sent them into exile, and depopulated the inaccessible Bûndanjî Muhammed, who was, however, reinstated. The Muharram 1118 = 3rd May 1756. The Mustafa ravaged the country around Asia Minor and defeated the Turkish troops in 1121 (1709), Charles XII of Sweden, who took to flight after the battle of Pollawa, sought shelter on Turkish soil; that king, called by the Turks denem bâkî (iron head), seems to have undertaken his last campaign on the vein assurances of the grand vizier that the Khan of Crimea would send his Tartars to his aid. The emir, uttering the Bajrîl to the affairs of the State was the signal for war with Russia (1123 = 1711). At the very beginning of the campaign Peter I, humbled in his retreatments of Horiste near Kish between the Pruth and the swamps, would have been compelled to surrender had not Catherine I been ingenious enough to sacrifice all the jewelry she could procure, sending it as a present to the grand vizier, by which means she obtained Ahmed II's signature of a truce and the dismantling of several towns. Still the treaty was not carried out in its totality, modifications having been introduced into it the following year. War broke out with Venice on account of the Montenegro refugees in Cavaro; the sultan himself took the command of the troops; Tunis and Corfu capitulated; Argos, Nauplia (Napoli di Romania) were taken as well as the rest of Morea and the last Venetian possessions in the Archipelago. In the war with Austria, the Turks were defeated under the walls of Peterwardein (5th August 1716) by Prince Eugene. Ahmed II detached Ali Pasha from his garrison to attack a fleet having perforated his headfore. Tenemur surrendered to the Imperial and also Belgrade in consequence of an unsuccessful battle lost under its walls (16th August 1717). Dâmid Bârîm Pasha brought the war to an end by the treaty of Passarowitz (21st July 1718). The Turks, turning to their advantage the advance of the Afghan into Persia and that of the Russians into Shirwan, occupied Geneza, including Tiflis (1123 = 1723), and seized Kâbi in Persia (1136 = 1734). A partition-treaty with Russia (24th June 1724) was brought about, but in order that the clauses favorable to Turkey should be observed it was necessary to continue the war with Persia: Hasan Pasha seized Hamam-lûn (Huart, Hist. de Bagdad, p. 145); Erivan capitulated; Tiflis was besieged without success, but was taken the following year (1137 = 1724); the campaign ended with the defeat of the Turkish army, commanded by Ahmed Pasha, in the plain of Andranok (27th July 1725). The Turks brought about an honourable peace. Under the reign of Ahmed III, the first three-deckers, built in Turkey, were launched at the Golden Horn; a porcelain factory was established in the ruins of Hebdoumon (Takah fûr Serail); five new boats or reservoirs were constructed to supply the capital with water; the Hungarian renegade Bichth founded a second Turkish printing house. The first successes won by Tahmasp Kûl Khan (Nafr Shah), general of Shah Tahmâsp, induced the Janizaries to rebel, and the execution of the grand vizier and two other persons of note (13th Rabî' I 1143 = 1st October 1730) did not satisfy them. — Ahmed III abdicated and his nephew Mahmd II was put on the throne; he died, as supposed, by poison, on the 20th Safar 1149 (30th June 1736). He was of a frivolous character, very fond of birds and tulips, and spent his time in diverting the Îmam-ul-Mulif, who retained the influence. He nevertheless was clever enough in choosing treacherous ministers who rendered his reign illusory.

AHMED (Abû 'Ali) b. ÂBî BEKKE MUAHMED b. AL-MUGAFFAR b. MUQTADî, of the dynasty of the Shâhînâyî princes, was安装 to Khorasân as governor in the place of his father, fought successfully with the Bûrûzids and Zïyûrîds and conquered Râïf (conclusion of peace in Djamâd I 331 = Febr.-March 943). Having been deprived by the Sûmânid, Nîbî b. Nâpî in consequence of the complaint of the population (333 = 945), he undertook in the beginning of 335 (August 946) a rising in the name of Prince Ibrîhim b. Ahmed, the viceroy of Khorasân, crossed the Amîl, camed Nîbî to flee to Samâkand and had the prince received in Buchhâr in the name of Ibrîhim (Djamâd I 335 = December 946—January 947). Shortly afterwards he
had to leave the town on account of the hostile attitude of the people towards him, and retired to his mother-country, Şuğlaşyan (Ramadan 335 = Febr.-March 947); the princes (two other brothers of Nūjī besides Ḫūthānī are mentioned) allied themselves with Nūjī and surrounded him. After his entry into Biğahat (Ramadan 335 = March-April 947), Nūjī broke his promise and had all three princes blinded. Ahmed gathered on the upper course of the Amīn against Nūjī a coalition of all the vassal princes; beaten in the open field, he successfully held his own in his mountains. Peace was concluded in Zjumādā 11137 (December 948); Ahmed remained prince of Şuğlaşyan; his son Abī-Ḥajī Ṣaʿīd went as a hostage to Biğahat, where he was received with great honours. Towards the end of 940 (May 952) he was again appointed governor of Khorāsān; he then brought order in his province and renewed the war with the Biğaid, which, however, was soon afterwards brought to an end by a treaty of peace. This treaty was rejected by Nūjī and Ahmed was deposed; supported by the Biğaid Ahmed rebelled again, made an attempt to recite in his name and that of Caliph al-Mu'tāfī (whither not acknowledged in Khorāsān), but already under 'Abd al-Malik I (q.v.), on the advance of his successor Bektār b. Malik, he was compelled to leave his province; he died in the end of Randall 344 (November 955), shortly after the conclusion of peace between the Śimāsides and the Biğaid; his remains were brought to Şuğlaşyan.

The accounts of Ahmed by Ibn al-Abīrī and Gāhdī (Zain al-abdīr; extracts by Barthold, Turchiustin in the time of the Mongol invasion, i. 8–10) seem to be borrowed from a common source, probably from the Tūrāīa remāk Khorāsān of al-Sallānī (comp. about this work, Barthold, loc. cit., ii. 11 and Orient. Stud. Th. Nūdhez gurami, i. 174), a contemporary of Ahmed. Comp. also Ibn Ḥuwaqī (ed. de Goeje, p. 350) for Ahmed's great qualities as governor.

AHMED b. ABB ASH HUWAI, a vizier. He began his political career as a secretary and shortly after the accession of al-Ma'mūn was made vizier. He exercised soon great influence over the caliph; it was he that urged to confer the governorship of Khorāsān in 825 (841) upon his brother Abī-Ḥajī b. al-Ḥusain, then governor of Bagdad. Al-Ma'mūn had already appointed Ghasānī b. 'Abd governor of that province, but when Ahmed pointed out to him that Ghasānī was unequal to such a difficult task and stood security for Ẓahir's loyalty, the caliph let himself be persuaded to put Ẓahir in place of Ghasānī. In the meantime the shrewd Ahmed is said to have made Ẓahir a present of a census, whom he ordered to poison his master in case he would manifest rebellious leanings. Thus when Ẓahir omitted the caliph's name in the 207 (822), and by that actually refused obedience to the 'Abbasid government, al-Ma'mūn ordered his vizier to depart immediately to Khorāsān and call the rebel to account. Ahmed could with great difficulty obtain a delay of twenty-four hours, but still before the expiration of this delay, the welcome news of the sudden death of the rebellious governor arrived at the capital. Just as Ahmed had interceded in favour of Ẓahir, he recommended now his son Ṣa'īd. The latter was thus entrusted with the administration of the province in question, but at the same time al-Ma'mūn sent Ahmed to Khorāsān, to support Ṣa'īd or rather to keep his eye upon him. The vizier pushed forward till Transoxiana and conquered Ẓihrān. The pardon obtained by al-Ma'mūn's uncle, Ẓabrūr b. al-Mahdi, who had come forth as a pretender to the throne and gone around disguised till he fell into the hands of the caliph's police, is also ascribed to Ahmed's influence. — Ahmed is said to have died in 826 (825–826).

AHMED b. ABB ASH HUWAI. [See Ibn Abb ASH HUWAI.]}
the State, Ibn Hansal's trials ceased; he was on several occasions distinguished by the caliph and invited to the Court, even a pension was without his knowledge allowed his family. The renown of his learning, piety and unswerving faithfulness to tradition gathered a host of disciples and admirers around him. He died at Baghdad on the 13th of Safar 210 (July 855).

Ibn Hansal is the subject of fabulous description by biographers. His tomb, around which marvelous stories are woven (comp. Goldziher, *Muhammad*, Stud. v. 257), in the Bagdadian cemetery of martyrs (*ma'āris al-shaabān*) in the Harblya quarter, was for a long time venerated as that of a saint. After it had been transferred towards the end of the 17th (13th) century by the foundations of the Tigris, the veneration was transferred to the tomb of his son 'Abd Allah in the Kortash cemetery near the Sunna Gate, which Tirmid had restored in 694 (1296-1298). After that time the tomb of the son was confounded with that of the father, and the cult of the latter was transferred to the former (G. le Strange, *Bagdad during the Abbassid Caliphate*, p. 166).

Among Ibn Hansal's works, the great encyclopedia of traditions, *Musnad* [*q.v.*], compiled by his son 'Abd Allah, his history, *Musnad*, amplified by supplements (*lanādīf*), containing 28400 traditions, acquired great renown (printed in Cairo, 1311, 6 vol.). Comp. Goldziher, in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, L. 465-506; M. Hartmann, *Die Traktaten unter Schicht im Musnad des Ahmad Ibn Hanbal* (in the Mitteil. des Seminar für orient. Sprachen zu Berlin, year 9, part 2, Berlin, 1906). The son also supplemented his *Kitāb al-asbāb* (*the book of asceticism*). The *Musnad*, around which a considerable series of secondary works and adaptations was grouped, has continually been the subject of pious reading. From the 12th (18th) century we have the statement that a pious society read this work to the end in 56 sittings at the Prophet's tomb in Medina (Murādī, *Sīh al-Āwar* [*q.v.*]); besides the *Musnad* there has been published Ibn Hansal's *Kitāb al-qalam wa'lam fī al-iḥsān, on the discipline at prayer* (lithographed in Bombay, n. d., and printed in Cairo, 1823). Ibn Hansal, written in prison, is frequently quoted in works of Hanbalite dogmatists: al-Radd 'alā Jawālibi al-Kurān (in *al-Qāfik al-mīl* and in his *al-Nayl* [195-207=810-215]). His religious tone of mind was in creed and law unlawfully determined by the old traditional views. He had the opportunity to exemplify them, when under the caliphs al-Mu'āwīya, al-Mu'āwīya al-Saghrî and al-Wâhîb (212-234 = 833-849) the *Mu'tazila* definition of the dogma was raised to a *confessio fidelis* prescribed by the State and painful proceedings were introduced against acknowledged theologians who would not without reserve profess the doctrine of the *mawṣul* al-Kurān. Ibn Hansal too was summoned to the *al-Qāfik* (the *al-Qāfik*). Being led to *al-Qāfik* in chains, he remained on his way the news of the caliph's death. Under the latter's successor he patiently submitted to corporal punishment and imprisonment, without, even showing any moderation in the stubborn traditional form of confession. Only when under al-Mutawakkil return to orthodoxy was required by
tions put to him by his son Salih and his decisions with regard to them) and answers to the questions of his pupil Harb ( Ibn Kayim al-Luwiya, al-Turab al-kilaniya fi istiyan al-ksany); Cairo, 1317, pp. 251, 259 et seq.). His Fatawa, accessible still to the author just mentioned, amounted to about 15 books (cf. comp. Hift al-abdiyya, Cairo, 1323, p. 221). Still in his lifetime some of his disciples systematized his legal teaching, namely Abu Ya‘qub Ishak al-Kawanshi, who in doubtful cases applied to Ibn Hanbal for oral instruction (Ubahad, Tazhkirat al huwa’iy, ii. 105), and a little later Abu Bekr al-Khaliﬁ, who died in Baghdad in 311 = 923-924 (Ma’sallif Ibn Ahmed b. Hanbal wa-gamii’ wa-wasmiati-buhu; ibid., iii. 17). The latter’s work is still quoted by Ibn Kayim al-Luwiya (d. 751 = 1350), in his al-Manawir fi al-mawjuda (see the appendix to al-Tahara’s al-Mu‘jam al-aghib, p. 271), but certainly not from autobiography. The course of teaching developed under the guidance of Ibn Hanbal’s idea was recognized by the ideology of the orthodox Sunnites as one of the four authoritative mawjudat [q. v.]; it is that of the Hanbalites. Ibn Hanbal, as an adherent of the Abu’l-Hasan school, was the only one of those traditions that was urged by sheer necessity and where possible every law was derived from traditional sources. It compels him to be very indulgent to the hadith and sometimes to admit very feeble traditions as the basis of his decisions. In none of the recognized rites has the prohibition of the hide’ [q. v.] been pushed to such extremes as in the mawjudat named after Ibn Hanbal. Hence a far extending rigorism resulted in all ritual correctness and a more fanatical interpretation than in the general orthodoxy. In dogmatic theology his school clings to the pre-Ahmaditic orthodoxy, even al-Ash’ari himself was compelled, in order to gain a footing in the general conception of the Mussalman, to make several concessions in the deﬁnitive form of his dogmatics, may even to declare expressly that he was in harmony with the teaching of Ibn Hanbal and that he avoided that teaching that was in contradistinction to it (Ibn Anakir; Sitta, Zur Gesch. al-Ash’ari, p. 133). The totality of Ibn Hanbal’s dogmatism may be found in the most concise manner in ‘Abd al-Karim al-Djashy al-Dajawi fi al-ahdab wa al-kalil (Mecca, 1314), i. 48-66.

The Hanbalites, who represent now the most scarce Islamic mawjudat, were in the 8th (14th) century much more widely spread in the countries of Islam. Mukaddas ﬁnds them in Persia: in Jundhan, Ras, Shahrzad and other places, where their religious course seems to have been characterized by extravagances of various kinds. First of all they displayed in those places a particular predilection for the memory of Caliph Mu’awiyah (ed. de Goeje, pp. 365, i. 384, i. 399, v. 407, i. 3). This attachment to the memory of the Umayyads may of course not be intended for his merits as a pious man, but for the caliph recognized by the orthodox in contrast to the favourable feeling for Yazid, in general spread among the Hanbalites, is to be interpreted from the same point of view (illustrations for which in Zeitischer. d. Deutsch. Morgenl. Gelehr., iii. 666, note). In Syria and Palestine, where the Hanbalite mawjudat was introduced in the 9th (14th) century by ‘Abd al-Wahid al-Shibli (Kift al-ins al-dajali, p. 265), it was repre-
(d. 1051 = 1641-1642) and his pupil Muhammed al-Rumlati (d. 1088 = 1677-1678); both lived and taught in Cairo. In the Anwar Mosque the Naif al-Muxtari (a commentary on the Dalil al-filb of Muhammad ibn Yazid, otherwise known as al-Muxtar) was printed in 1228 — i.e. taken as task of Hanbalite instruction.

Abul-Faraqi 'Abd al-Rahman b. Rashid (d. in 706 = 1303-1309) wrote Jamali al-Hamshabi, which is extant in manuscript (see Vollers, Kat. Leipz., No. 706). The literature of Hanbalite law is most copiously registered in the catalogues of the Cairo manuscripts, e.g. 393—301. Comp. further W. M. Paton, 'Abd al-Rahman b. Rashid and the Mihlan (Leiden, 1897) and in connection with it: Goldziher, in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, ill. 155 et seq.; idem, Zur Gesch. des hamshabi. Bevorgangen (ibid., Liti); Brockelman, Gesch. d. arab. Litteratur, i. 181 et seq.

(GOLDZIEHER)

AHMED b. MUHAMMED TAFAN, the 36th direct descendant of Haun, the son of All, was born at Baouli on the 12th of Spetember 1231 (24th October 1776). He was first educated at Lucknow, then he went to Delhi, where he became in 1222 (1807) a disciple of the famous devotee Sahl 'Abd al-Aziz, the eldest son of Shah Wali Allah. The latter is said to have inspired him with the peculiar religious views for which he became celebrated. After some years of instruction he started on a missionary tour as a religious teacher and reformer. His tenets were somewhat identical with those of the Arbabians Wahihi's in the adoption of a pure and simple form of worship from all superstitious innovations, or veneration for prophets and apostles. His chief disciples, and constant companions in his chequered career, were two relations of 'Abd al-Aziz: Mawlawi Muhammed Ismail, his nephew (author of the Nabi al-mustafidin, an important Hinduist work on the tenets held by the followers of Sadiq Ahmed), and Mawlawi 'Abd al-Hadi, his sometime law. His reputation spread far and wide, thousands of Muslims adopted his religious views, and he was everywhere hailed as the true Khadifa or al-Madhi. One of his biographers, Mawlawi 'Abd al-Ahmid, asserts that more than 40000 Hindus and infidels became converts to Islaam through his preaching.

In 1232 (1821) Sadiq Ahmed set out from his native city on a pilgrimage to Mecca and Medina, staying a few months at Calcutta on the way. On his return to India two years afterwards in 1823 he made active preparations for a gibilal, or religious war, in the Pandhaj, in order to rescue the Muhammadans of that province from the alleged tyranny of the Sikhs. Having enlisted the sympathy and promised aid of his co-religionists at Kabul and Kandahar, he started on his expedition in 1824 (1840) with an army of ten or twelve thousand enthusiastic实实在在, and attacked the Peshawar frontier. After several years of constant warfare, with varied success, a decisive battle was fought at Bhalok in 1245 (1831), in which he was killed, and the remnant of his army took to flight. (BLUSIARDY)

AHMED b. SAIIH. b. HAJJAN, of the aristocratic Dihkhan family Kawakhtyaan (who had settled near Mez, which boasted of Satian descent, governor of Khorasan. In order to avenge the death of his brother, fallen in a fight between Persians and Arabs (in Marw), he had under 'Abd al-Latif stirred up a rising of the people. He was taken prisoner and brought to Satian, whence he escaped by means of an adventurous flight, and after a new attempt of a rising in Marw he fled for refuge to the Kinston b. Ishaq b. Ahmad in Bukhara. Ahmad took an active part in the battles of Khorasan and Raus under Ismail and in the conquest of Satian under Ahmad b. Ismail. Having been sent under the command of Nasr b. Ahmad against the rebellious governor of Khorasan, Haman b. Ali al-Merwyati, he defeated his antagonist in Rab' b. 506 (Aug.-Sept. 918). But shortly afterwards he rebelled himself against the Simniders, was vanquished on the Marghbat by the commandante-in-chief Hamyla b. Ali and sent to Bukhara, where he died in prison in Dhu'l-Hijja 307 (May-June 909).

Comp. Ibn al-Asif (ed. Torb., vol. viii. 26 et seq.) and the same information in a somewhat more circumstantial wording in Gardizi, Zain al-khairan (extracts in Barthold, Turkindan in the time of the Mongol invasion, i. 6-7); evidently there is a common source, probably al-Sallami's Tarikh al-maliki Khorasani (Berlin).

AHMED b. SAIIH, founder of the dynasty which is still reigning in Muzaffar, died in 1775, according to others in 1783. Ahmed descended from an Aslan family which had a long time lived in 'Oman (At li-Sa'd), and during the occupation of that country by the then Sultan 5th b. Sultan he was governor of Sohar. There he managed to stand his ground against the Persians, and afterwards made with them a treaty, which entitled them to Muscat alone, and which obliged them to evacuate the country. Finally he took away from them that town also, whereupon he was elected Imam by the Ibadiite population, but he had his residence in Kasab. In 1750 he undertook a military expedition against Fars and put the Persians to flight; after that the Ottoman Sultan paid him a fixed sum annually. He is said to have also made a treaty with the Great Mogul of Delhi.

AHMED b. TULUN, founder of the dynasty of the Tulkiders [q. v.], the first governor of Egypt and Syria who was only nominally dependent upon the caliph. The career of this Turk is typical — the founders of all the smaller states on the ruins of the Caliphate, crumbled to pieces, acted in the same way. — His father Tulun was brought in 909 (815-816) as a slave to the Court of Bagdad, but rose soon to an important position. Ahmed is supposed to have been born on the 23rd of Ramadhan 220 (20th September 835), but perhaps a little later, and he received a thorough military and theological education — theology he partly studied in Tarsus. He had early the opportunity to distinguish himself, and acquired the favour of Caliph al-Musta'sham, by whom he had later to watch as a prisoner. He did not share in the caliph's assassination, on the contrary he gave him a peaceful burial and then
he returned to his Turkish countrymen in Samarrâ. Shortly afterwards his stepfather Nâyâkhâkî, having been invested with the governorship of Egypt, appointed him his lieutenant, and Ahmed entered Fustâṭ on the 230th Ramadân 554 (15th September 668).

Ahmed's first endeavor was to take to his bands the administration of the finances in addition to the military command. But Ibn Mudâblîr, a clever and skilled financial director, notorious for his introduction of new imposts, endeavored to thwart him. Both struggled for years for the administration, in Egypt personally, and in Samarrâ through their respective nominees. Ahmed showed himself as strong as the caliph through his connections, and yet he had to struggle for four years before he succeeded in removing Ibn Mudâblîr from Egypt. Thereupon he obtained the administration of the finances with it the entire disposal of the Budget by introducing a regulated payment of tribute. Before that already a formidable hazard had enabled him to constitute an army in good fighting trim in order to subdue a Súfí rebel — later another person who had estranged him. From that time on, the caliph had authorized him to make a gigantic purchase of slaves. These troops laid the foundation of his power. He managed to bring their number up to 10,000.

Thanks to his elaborate spying system he discovered in due time the intrigues plotted against him in Egypt and in the Court, and made them ineffectual by means of unscrupulous bribery and violent intervention. Thus when the districts on the Syrian-Egyptian frontier were transferred to him, his power became towards the end of 258 (871-872) a factor, which had to be taken into account in Samarrâ.

About the same time the central government became strong again, when Caliph al-Mu'tamid named his brother al-Mawâfîk vice-regent of the empire. It is true that al-Mawâfîk officially had only the eastern half of the empire under his control, while the western half, in which was Egypt, was under the rule of the caliph's son al-Mufâwâjîr; but when hard pressed by the Zanj war al-Mawâfîk endeavored to mobilize also the finances of Egypt for his purpose. Ahmed refused to pay, and an attempt to compel him to it failed, on account of the pernicious exhaustion of the central government. Not long after, the governor of Syria died in 258 (871-872). Ahmed occupied the latter country without that the people dared to oppose him. Ramla, Damascus, Hâleem (Emessa), Hamâs, Halab (Aleppo), opened their gates before him, only An'tiok required a siege necessary. The victor's joy was troubled by the news of the revolt of his son Abbâs, whom he had left in Egypt as his lieutenant. Ahmed hastily returned to the Nile valley, where he soon became master of the revolt. Thus he became ruler of Syria and Egypt, and he appears as such on the coins from the year 266 (879-880).

The latent conflict with the vice-regent al-Mawâfîk was brought to a critical point by the defection of Lutb, a general of the Tulfânides, who, having been left in Syria, went over to al-Mawâfîk. In order to counteract this Ahmed insisted upon the caliph Mu'tamid, who was kept likely, by his brother al-Mawâfîk, to flee for refuge to him in Egypt. He himself hurried to Syria, where, however, his union with the caliph was at the last moment hindered by the vice-regent. Ahmed then assumed the title of defender of the imamate and raised himself in Damascus to the deposition of al-Mawâfîk. This he carried out by a collective farâ'îd obtained from the jurists who adhered to him. Yet he did not think of freeing the caliph by force of arms; rather he availed himself of the occurrence to remove the last remainder of submission to the central government. Al-Mawâfîk in his turn appointed a new governor of Syria and Egypt, who remained only "in paralaxa". Neither did al-Mawâfîk dare to apply to arms for a decision. Both jointly reformulated themselves with cursing each other from the pulpit in their respective countries. A few years later al-Mawâfîk made overtures of peace by officially recognizing the status quo. The negotiations were still in their beginning when Ahmed, who had fallen sick in an expedition to North Syria, suddenly died (Tijû'î, Kâtib 270 = May 584).

Ahmed owed his career to his ability, his luck and his connections. In order to maintain his personal authority, the only thing he had in the beginning, he gave his State a rigid military organization. Turks and Negroes were his main support. To keep these troops in permanent employment was possible only by the increase of financial resources; therefore he chiefly cared for the administration and economy. The withdrawal of the money to Baghdad having ceased, he could freely spend the surplus of the imposts on his own country, and particularly on buildings and what was very natural, he was able to make a display of splendor in his Court. Fustâṭ became a large and magnificent town, a new quarter, al-Kâţîbî, grew up, the Tulfânînî Mosque and other splendid public buildings were erected. It is in this way that Ahmed prepared the soil upon which the dynasty of the Tulfânînîs finished despite the eminence of the central government. This dynasty shows in all its expressions a manifest imitation of the forms that grew up in Bagdad and in Samarrâ under Persian influence. With it a new period of culture began in Egypt (see EGYPT AND TULFÂNÎNÎS).

Ahmed Baha — Ahmed al-Badawi

Thulthul-Hilidja 960 (28th November 1553), or according to Muhibbi and Wafsiyat, 963 (26th October 1556) — but the former date was a Tuesday and the latter a Monday. — He studied Masulman science under his father, grandfather and several eminent members of his family, and his co-religionists considered him a great Masulite jurist and usulist.

Having refused the offer of Timmuktu by the Moroccans, he was by order of General Mahmuad Zarku put with his family in chains and conveyed to Marrakush, where he arrived on the 1st Ramadun 1002 (21st May 1594). He lost on that occasion more than 1600 volumes, and on the way he fell down from his camel and broke his leg. Sunday the 21st Ramadun 1004 (19th May 1596) he was set free on the condition that he would henceforth live in the capital of Morocco. There he devoted himself to teaching in the Djami al-Sharif and his lessons were attended by a great number of people, among whom were al-Raddadji, the Muffit of Fez, the Qadi Abu'l-Kasim b. Abul-Nu'man al-Ghasabat, Abu'l-Abbas Ahmed b. al-Khut, the author of the Iltumam al-Khunjia, etc. He was several times smuggled with the fatwa, which he held in abeyance.

On the accession of Muliti Zaideh, he received in 1014 (1605-1606) for himself and his relatives which were still alive the permission to return to Timbuktu. He stayed there for the rest of his life devoting himself entirely to teaching law particularly.

"He was strictly just even towards the most humble, and never was afraid to speak out what was right not even before emirs and sultans." He died Thursday the 6th Shaban 1036 (23rd April 1627), or according to Muhibbi, 1032 (6th June 1623), a date which seems to be erroneous. He was the author of more than forty works, of which only the following are known: 1. Nadi al-khidrasi fi-nafsia al-khidrasi (Fez, 1317). 2. Kifayat al-muhammad bi-nafsia man lafi snia (Marrakush), a recast and abridged edition of the preceding work. 3. Two commentaries on Kaliih b. Iskandar's Masulis from the chapter on the nakib till the middle of the chapter on marriage. 4. Glosses upon several passages of the above-mentioned Muhibbi. 5. Hashibta minna al-rafah al-dabili fi makinnittak tahaf Khallal. 6. Fawaid al-muhammad bi-nafsia snia al-shafi'i (Muhibbi of Marrakush, chapter on omia, p. 69, s. 5. of the Paris edition of 1883). 8. Tarbi al-isal al-muzdi al-Wansurthi (unfinished). 9. al-Nukat al-muhsina bi-nafsia al-shafi'i al-muhamdi (unpublished). 10. al-Nukat al-naqib ish-shafi'i al-muhamdi (unpublished). 11. Ghayat al-ajara fi musawat al-fil al-hamuda fi sharh al-filah. 12. al-Nukat al-mustadziyda fi musawathmih al-fil al-filad, al-fil, new edition of the preceding work. 13. Nadi al-amazi fi raffal al-amazi, al-a'mazi. 14. Sharat al-ajara al-Santil. 15. Muhibbi, a treatise against slavery, written in Marrakush. 20. al-Dar al-majid. 21. Hamdi al-arifa. 22. Najat al-arifa; the latter three works are collections of prayers for the

Prophet. 23. A great number of questions about different subjects, three of which are found in the Bibliothèque Nationale d'Alger (Fagon, Catalogue, NV. 538, 22, 180).

(MOHAMED BEN CHIFFOUR.)

Ahmed al-Badawi Safi, one who has for centuries been considered the greatest saint in Egypt; said to have been a descendant of All. His forefathers are said to have emigrated to Egypt about the year 73 (697) in consequence of the troubles in Arabia. Ahmed was born at Fes in the Zaib al-Hasan, probably in the year 959 (1599-1600), and he seems to have been the youngest of seven or eight children. His mother was called Fatima; the father of the holy physician is not mentioned. His full name was Ahmed b. Ali b. Ibrahim and his genealogy was traced up to Ali, a saint even to Ma 'mad and 'Abdun. His name and surnames of which some are explained in the sources and some are not. He was said to have been a saint from the age of seven, and like the Bedouins he wore the face-veil (fihid) for the double 'Abdun see n. v.). Further in Mecca he was called al-Attah, the "intrepid horsemans" (some sources did not understand this Maghreb expression); the same meaning underlies as it seems his name Abu 'Abdun, although the sources do not say it. In Mecca he was also called al-Khadib, the "furious, raging one"; further Abu 'Abdun, which might come from Abu-l-Fiyad by the rub'is (miswriting). In his position a Sufi he was called al-Kudat, al-Khut ("the pole") and the silent, and in more recent times Abu-Farrad ("liberator") named of prisoners.

When still a child he set out with his family on a pilgrimage to Mecca, where they arrived after four years travelling. This is placed in the years 653-607 (1206-1211). Even his imposing reception by the Bedouins seems spoken of, but Egypt is not mentioned. In Mecca his family died and was buried near the Bat al-Malat. Having grown up a youth Ahmed is said to have distinguished himself in Mecca as a daring horseman and a merry wild fellow, whence his above surnames al-Attah and Abu-l-Fiyad. Then about 627 (1230) he must have undergone an internal transformation. He read the Koran according to all the seven ahmas (readings) and studied a little Shafiite law. He gave himself up to devotion (tasbih) and declined the offer of a marriage in the Berlin MS. NV. 15014 (p. IV) there is said about it as follows: "I have resolved not to marry any other woman than one of the maid of Paradise (nis as-har al-firz; Kor; lvi. 22). He retired from men, became taciturn, made himself
understood by signs only, and often fell into trances (waqiah). According to some authorities the journey to Mecca was undertaken after a vision, but others mention here three consecutive visions, which summoned Ahmed (Shawan 83-86. June-July 1236) to Bariat (Tanta), where Ahmed al-Ridhi’s (d. 570 = 1174-1175) and ’Abd al-Kaddir al-Gilani (d. 561 = 1165-1166) had been worshiped as the greatest saints for two generations. Ahmed migrated thither in the company of his eldest brother Hassan. From that time onward the reports become very fabulous and vague. The brother visited, besides the tombs of the two “saints” mentioned above, a great many other saints, amongst them being al-Hallal (d. 309 = 922-923) and ’Abd b. Mustafâ al-Hekfeti. Abu l-Farajî (d. 538 = 1142-1143). Under the impression of these visits Ahmed’s religious conscience entered on a new phase. Al-Ridhi and al-Gilani, the “owners of the keys of the countries,” offered him a partnership in this possession. But Ahmed refused the offer saying that he would accept the “keys of the countries” from none but God. In his bid he subordinated afterwards the independence of his mission and his previous non-committal and unswear by any man, and refused her offer to marry him. In the Zaynalibâd and elsewhere this incident has been turned into a highly romantic story. A year later (634 = 1236-1237) Ahmed had another vision which induced him to visit Tâdit in Egypt, where he stayed till his death. His brother Hassan returned from Tripoli to Mecca. In Tâdit Ahmed entered on the last and most important period of his life. His mode of life is described in the following way: “He climbed in Tâdit on to the roof of a private house, stood there motionless and looked up into the sun so that his eyes went red and sore and looked like two fiery candles. Sometimes he would maintain a prolonged silence, at other times he would indulge in continuous screaming. He went without food or drink for about forty days”. Trials of this and similar nature have evidently been borrowed from the lives of Indian ascetics (yogi). In Tâdit and its neighbourhood he met both with friends and adversaries. In his search of a cure for his sore eyes he came across ’Abd al-Karîm, who at that time was still a boy and afterwards became his son-in-law and Kâsîf (successor). He worked miracles and tokens (sânâ’iyya) which many of them described at some length in the authorities. Those saints, who were still worshiped at the time of his arrival in Tâdit, found themselves eclipsed. Hassan al-thama does not acknowledge him and leaves the place; Sâlim al-Maghribi submits to him and is for that reason allowed to remain in Tâdit. Wadh al-Kamar is earnestly desired by Ahmed and his aides in desertion and falls to ruin. His contemporary al-Mallik, al-Zâhin al-Bâkî, is paid to have worshipped him and had to kiss his feet. His disciples were called Sa‘îdhîyya or Aish al-Sâfî from the habit of living on the roof. His appearance at this period is described as follows: He was tall, strong, and bony; his complexion zamâl (the usual colour of the Northern Egyptian, whereas the Moroccan is of a darker hue as a rule); he had a squinting nose (asbân), three protruding holes under his eyes and the scar of a knife-cut between them. He wore a mantle (tâshal al-’rbel, which, along with his turban (Zamâl), worn to rage without once being washed, was handed on to his Kâsîf as the insignia of his succession. His path was 634-5. Kâsîf al-ma‘âr ‘alî al-Majliy al-‘Arûsî. He always seemed to have felt conscious at the end of his life that he had subjected Egypt. That way I explain his words (Shawârî. l. 427, 428; 429): “My pilgrimage revolve on the wide oceans; if the water of all the saddle-wheels in the world became used up, mine would still not be used up.” In the night he used to read the Korân in his prayers he was joined by two imams. Concerning his state of mind it is said: “He was never silent in his recitations; he was like a lamb in his recitations in his recitations in a trance.” After he had lived and worked in this way at Tâdit during nearly 41 years, he died on the 14th of Kâbî 1 673 (24 Aug. 1276), that is on the anniversary of the Prophet’s death.

Judged by his conduct Ahmed al-Badawi is a representative of the inferior, yogi-like type of the dervishes, and his intellectual and moral personality is of equally small importance. The following have been devoted down to us as the productions of his mind:

1. A prayer (zârî‘). Berlin Cat. ill. 411, 3581.
2. Selâtî, on which a commentary was written by the celebrated Sultân of the 12th (or 13th) century ’Abd al-Rahîm b. Muzaffar al-Ashriti. (1133-1192 = 1722-1778). Under the title of Faith al-Rahîm (Cairo Cat. vii. 88).
3. His spiritual testament (wawṣrî‘), addressed particularly to his first Kâsîf as ‘Abd al-Ali. The sayings and admonitions it contains are of such a general nature, are so little individual and so exactly identical with the fundamental ideas of the Islamic asceticism of all times, and part of them even similar to those of the non-Islamic asceticism and mysticism, that it is doubtful whether they can be considered as the spiritual production of Ahmed al-Badawi, and whether they may be ascribed to his moral personality. First comes the advice to adhere to the Korân and the Sunna. Nightly devotion is highly praised. Every single sala by night is worth a thousand by day. The merit of the dâhir is very strongly commended; the heart must take part in it, else the dâhir would be nothing but mere bowing (shukhâf). The ultimate fruit of the dâhir is the wooden, the lowest stage of the spiritual development, enters the heart of the devotee while at his meditations on the unity of God, making his shudder all over. Then the longing for the Loved one (God) is born in him, and he clings to him firmly. Faith is of the highest value; he whose belief is strongest (tarnîy) is the most excellent (piyûs). His ethics or that of his followers may be gathered from the same tradition: “Our way (nurâ) is built upon the Korân and the Sunna; on piety, purity, truth, faith, endurance of injury and faithful observance of engagements once made.” At another passage: “Do not indulge in crool enjoyment, do not slander, do not inflict any harm on your neighbour, return him good for evil”. The following words sound quite evangelical: “Woe to him who eats the flesh of the horse, eat the flesh of the horse, feed the hungry, pay dâ’ûmome to the stranger and the guest, and perhaps God will have delight in them”. Also: “love of the world spoils a pious conduct, like vinegar spoils honey”. The following words contain an allusion to the hierarchy of the

13
It is probable that the dates of the nawâlât are founded on those on which the old Arabian annual and national festivals were celebrated. It is hardly possible to confute this supposition by arguing that the application mawâlî al-ra'îfât must be explained as a derivation from the name of an obscure shaikh, Râshid, and that the middle mawâlî originates in a definite historical occurrence ('All Mubârak 50, 47 ff. et seq.). The small and the middle mawâlî are essentially big feasts, whereas the principal mawâlî, apart from its commercial importance, is a political-religious celebration in the grandest style with offerings, prayers, vows, dikârîs and sermons; it ends with the râhab (or the ruhâb) al-kâbîfâ, i.e. the solemn procession of the Kâbîfah with its retinue through the town of Yâmâ. The followers of al-Badawî are called Ahwâlî and are found all over Egypt and beyond. Their badge is the red turban. The Bâyâmîs, the Shîhimâs, the Aswânîs and the Shubâ'îs are looked upon as branches (fâjûr) of this order. For a long time Ahmed has ranked as a jâhî, in Egypt together with 'Abd al-Kâdir al-Gûlanî, Ahmed al-Bâli'î and Ibrahim al-Însâlî, in what is called the four rulers of the people.

One of his greatest worshippers is 'Abd al-Wâhhab al-Sha'rawî (d. 977 = 1565), whose family, like Ahmed al-Badawî, came from the Maghrib, but had settled down in Egypt. Al-Sha'rawî called himself Alâmed after him (Voleuès Cours. Légitémo No. 353); he often went on a pilgrimage to his tomb, counted himself amongst the greatest Sâfîs and conversed with him in visions. In the course of one of these apparitions al-Sha'rawî was called by Ahmed the "only light of the Sâfîs," which was not yet extinct, designating him thereby as the most genuine holder of his doctrines; cp. Revue Africaine (1870), 229. It is one of those mysteries of religious life that a man like al-Sha'rawî could be caught in the spell of al-Badawî, who was both intellectually and morally everywhere his inferior (cp. below).

It is altogether impossible to account for the historical importance of Ahmed al-Badawî by his individuality; it can only be explained by supposing that, both as a Sâfî and as a saint, he had become the point of crystallisation of many wants and tendencies of his own time and of those which came before and after him. In more than one point he has been transferred into mystical regions. I have already mentioned the probability of the dates of Ahmed's mawâlât being a remnant of the old Arabian festivals. For the present I feel inclined to believe that the above-mentioned combat of Ahmed with Fatima bint Burt, which has not yet been explained, signifies something more than the mere taming of a Bedouin Amaranze. It has already been noticed by Maspero, Ebers and Goldscheider, that old Egyptian elements have got mixed with the cult of Ahmed. In addition to the immoral features of his cult, which have been narrated by Goldscheider, may be mentioned what al-Sha'rawî relates of his pilgrimage to the tomb of al-Badawî. Being one day at the tomb of the saint in the company of his newly married wife Fatima, whom he had not yet approached, he was summoned by the (dead) Ahmed to deliver her before him at his tomb. The summons to this act and its ensuing execution are just as much in keeping with the cult...
and the spirit of Ahmed, as they are opposed to the character of al-Shafii, whose feelings were very delicate in matters of sex. I feel inclined to recognize a mythical trait of a solar nature in the tale of Ahmed's double veil, which is related by al-Shafii and others. Being one day asked by 'Abd al-Majid, the disciple and afterwards the Khudafa of Ahmed, to lift his veil and show his face to him, Ahmed warned him saying "Tell me now, what do you want?" = each look costs a man's life!" As 'Abd al-Majid insisted, the upper veil only was pulled aside by Ahmed and the other sunk immediately to the ground as if struck by lightning. Compare herewith what is told about Ibn Taymiyya of which form and meaning were already obscure to the old Arab; Tabari ii. 864, 866, or Kamil (ed. Wright), ii. 125, 126, Ibn Vadsah, p. 73, 197; Ibn Battuta, i. 399, 401; Archd. J. Religionswissenschaft. ix. (1906), p. 177, 183.

All over Egypt prayers are addressed to Ahmed, and not only in Tunis; feasts are celebrated to honour him, often in Cairo for instance by the Ahmediya, and even in small villages, e.g. Balshad ("Ali Mubarak, i. 37, 38). It is more difficult to ascertain, whether the tombe and chapel which bear the name of al-Badawi have anything to do with the man Ahmed. A still more obscure case is the "Salih ibn al-Salih ibn al-Husayn ibn al-Munif" which is mentioned in the Journal des Orientalistes xiv. 153, 154. The traditions concerning Ahmed are quite reliable, though tinged with a legendary colouring. All the oldest authorities refer to an account of Ahmed's brother Harram, who still lived with him in Mecca and parted from him after the journey in Iraq. Ahmed's importance in the 9th (15th) century can be concluded from the fact, that al-Masri and Ibn Hajar al-Asqalani devoted biographical articles to him (ep. Berlin, Cit. iii. 271, 3360; x. 483, 1010); also al-Suyuti (Hist. al-Maghrib, Cairo 1299, i. 293 et seq.). The account which al-Suyuti gives of him in his Tuhfat was written with fervent piety (Ishiqi. Cairo 1322, i. 245-257).

In 1028 (1619) a certain 'Abd al-Samad Zain al-Din, employed at the masjid of the saint, wrote his Al-Qawm al-ru'ayatu (containing?) al-tawwārīd wa-l-nābda al-ahmadiyya, in which he brought together everything on the subject which was worth knowing (Men. in Gotha, Leipzig, Paris etc.; printed and illustrated at Cairo 1305 etc.). He drew not only from the above mentioned sources, but from unknown authorities besides, e.g. Abu 'l-Sa'id al-Waajiz, Siyajj al-Din al-Hanbali, Muhammad al-Hanafi and the "genealogy" (male) of 'Yunus (elsewhere 'Usuf); b. 'Abd Allah, called Ebeek al-Sifti. The anonymous Nasab of al-Badawi (137 fol.), mentioned in the Cairo Catalogue v. 167, may be the work of this Ebeek. And a still greater given account of Ahmed's life and states his authorities; next comes a description of the ornaments of the monaxe and of the Khudafa; at the mention of Ahmed's death the elegies of his brothers and sisters are given; then he writes of the ahmadiyya, his miracles, his magyār, and adds numerous biographies on him, arranged alphabetically, by Bishāli al-Akīmī, Shams al-Bakrī, 'Abd al-Azīz al-

Dīrāt (d. c. 690 = 1351), 'Abd al-Kadir al-Danāshī, and others; finally he treats of his followers and of the eight words of his first years after which he became qaimāt (actuarium). Much less important is the work of 'Ali al-Halabi (d. 1044 = 1634-1635) al-Nāfiṣa al-ahmadiyya fi ba'yān baṣrī wa-tarīk bittin al-ahmadiyya (Berlin, Cit. ix. 428, 1010). The author's principal aim is to praise sectarism and the fatāwa of Ahmed. A London MS. (Brit. Mus. Suppl. N. 659) contains notorious manuscripts of Ahmed (27 fol.); cp. also Berlin, Cit. ix. 466, 10064, 4 (3 fol.).

The latest publication concerning Ahmed is the one by Hasan Rashid al-Maghāth al-Khashabī: al-Nāfiṣa al-ahmadiyya wa-l-qawwālīn al-mušādātīn (Cairo 1321; 4to, 316 p.). Ahmed is often treated of along with the other abāb, for instance by Muhammad b. Hasan al-Ajlunī (f. 839 = 1439), cp. Berlin, Cit. ix. 60, 165; and by Ahmed b. Yusuf ibn al-Sharafī (f. 950 = 1343), cp. ibidem iii. 226, 3371. A short poem on Ahmed is found ibidem v. 29, 5432; vii. 197, 5115, 3 (of the year 1175). Later accounts, such as 'Ali Mubarak xi. 48-51, borrow mostly from al-Sinā'ī and 'Abd al-Samad. Cp. also E. W. Lane, Modern Egyptians; Brockelmann, Gesch. d. arab. Litter, i. 450.

AHMED BEY, bey of Tunis (1837-1853), succeeded his father Mina, the ninth sovereign of the dynasty of the Husaynids. His government was notable for a persistent effort to destroy Tunis with western institutions and to bring about the permutation of the country by the modern spirit. He therefore in 1841 prohibited the exportation of negroes and set free the slaves belonging to his own household. In 1846, at the instigation of France and England, he formally abolished slavery in the Regency and closed the Sikk al-Barks where slaves were offered for sale. He showed his toleration by repealing the exceptional laws for the Jews. He also did his best to aid the development of education by allowing French men to open a school for girls at Tunis (1843) and by permitting a priest of the same nationality to start an educational institution for boys. French engineers were commissioned from 1841 till 1848 to make a map of the Regency.

But Ahmed Bey was especially concerned about the organisation of military forces among the European fashion. At the very outset of his reign he decided on the formation of a regular army. Barracks were built, ten regiments of infantry, one of cavalry and four of artillery were recruited and drilled by French instructors. A polytechnic school was founded for the training of officers. But these attempts were not very successful. The soldiers, recruited from amongst the populace of the towns or the settled peasantry lacked military spirit and despot, the officers were almost entirely ignorant; the equipment was so much neglected that during the Crimean war the Tunisian contingent had to be prevented from using their arms lest accidents should constantly be happening. Ahmed also wanted a navy. An arsenal was built, a harbour: dug at Porto Furfax and a fleet of twelve ships was bought abroad; they even undertook to build a frigate in 1840. The efforts however were so deficient, that this unique specimen of Tunisian naval architecture was not launched until 1853 and proved incapable of putting to sea. As for the harbour, it became un-
Tunis in an awkward position. His indisputable good qualities were joined with the worst faults of Oriental despotism. His generosity bordered upon prodigality, his taste for pomp and ostentation drove him into expenses out of all proportion to the resources of the country. For instance, he had sacrificed millions to the building of the Muhammedan palace, a compensation of gigantic measures, at a distance of eleven miles from Tunis on the banks of the Sebkho Sejelid, which were never completed and now are left in a dilapidated state. No less disastrous to the finances was his bounty to his favourites, Count Raffo, an adventurer from Genoa who had become his minister of foreign affairs, and especially Musaffi Kharandik, formerly a slave, who from 1837 till 1842 was the actual sovereign of Tunis. The expenditures of the government were such that the people revolted several times. An insurrection, which broke out in the Kabs of Tunis in 1840, was only quelled with great difficulty. Another rebellion took place in 1842 in Goletta. The full weight of the fiscal charges was laid upon the populace of the towns and on the settled tribes, for it was considered safe to exact either taxes or conscription from the mountain tribes. In 1842, under the brilliant show the symptoms of a decadence were already visible, which became more prominent under the successors of Ahmed Bey. In many ways this prince is responsible for the fall of the Regency.

AHMED BIDJAN. [See BIDJAN AHMED.]

AHMED DJALAI, the fourth sovereign of the dynasty of the Djalalides (784-813 = 1382-1410) was the fourth son of Sultan Uwaia. During the reign of his elder brother Musim he became governor of Bous in 776 (1374-1375). In 784 (1383) he raised the banner of insurrection, took possession of the capital, Tunis, and had his brother executed. He was not however recognized as sovereign in all parts of the realm until after severe combats with his other brothers (786 = 1384). During the course of the following years he lost a considerable part of his territory to his enemies abroad; his capital, Tibirts, was ravaged cruelly in Dhi'il-ba'da 787 (Dec. 1385-January 1386) by Tugzamash, and again by Timfir in the following year. After Timfir's departure it was occupied by the Turbozamans under Karim Muhammad in 789 (1387). In 795 (1393) the next important town, Baghdad, was also taken by Timfir. His wife and his son 'Ali al-Dawla remained in the power of the conqueror; Ahmed himself had to fly to Egypt, where he met with a friendly reception from Sultan Barakat (Safar 796 = Dec. 1393-Jan. 1394). With Egyptian help he succeeded in that same year in returning to Baghdad, where he stood his ground for three years against both Timfir's generals and his own rebellious subjects, partly with the support of Karim Yusef, prince of the Turbozamans. Not until the end of 803 (July 1401) was Baghdad conquered again by Timfir. Ahmed had already left the town and gone first to Syria, afterwards to Asia Minor, accompanied by Karim Yusef. During the war between Timfir and
obtained the certificate which enabled him to take a profession in one of the mosques in the capital. The completion of the commentary to the Ausco’s Misir produced him an appointment as a member of the school-board at the Education Department and the post of director of the seminary for public middle schools.

Along with his patron Fu’ad, he took part in the famous mission to Bucarest (1848) and after his return he wrote to Brussa, in collaboration with Fu’ad, the Ottoman Rules, the fundamental grammar of the Turkish language (German translation by Khelzheu, Halsingfors 1845). After that he went, in the company of Fu’ad, for a short time to Egypt. In 1850 (1853-54), at the time of the Crimean war, he got a commission from Sultan 'Abd al-Majid to write a popular history of Turkey from the peace of Käfik Kaimarjie till the destruction of the Janissaries (1774–1826), and already in the following year he was able to present to his sovereign the three first volumes, brilliant with youthful freshness. He was regarded as being appointed Historian to the Empire. As a result of his work on the practice of the Muslim law (Mudhalal), which two years later appeared under the title of ‘The fixed text and was received with loud approbation, the government appointed him a member of the learned council, which at that time was engaged in codifying the civil law, and also made him president of the committee for the reorganization of the state administration. In the course of his splendid career he quickly attained by degrees to higher posts, amongst which may be especially mentioned the office of Visiir, for which he gave up his title of Historian to the Empire (1281 = 1864–65), and in 1284 the presidency of the committee for the revision of the civil law code, which committee set to work with great energy, as soon became evident. He was consecutively Vizier of Aleppo, Brussa, Mars, and Janina, and afterwards twice Vizier of Syria. Three times he was Minister of Education, twice Minister of Justice, once Minister of the Interior and of Trade, and also Vice-president of the Privy Council. He was at his best as Minister of Education; he instilled a more modern spirit into the public schools.

After his retirement from office he spent his long evening of life in the full enjoyment of physical vigour, devoting his time with unabated passion to his reading. His modesty never forsaken him. He is shown to have been of devoted father by the literary productions of his sons and daughters. He passed away, after a short illness, in the night between the 24th and 25th of May 1895, at his country-seat at Berek on the Bosphorus.

Besides his Ottoman Rules which continued to be published in constantly improved editions, both in their original form and epitomized, are two other philological works of his deserving of praise: Mi’yar-i sadde and ‘Adab-i sadde, introductions to literary style. He read and spoke Arabic and Persian like his mother tongue; he had also mastered Yemeni and Bulgarian. Not many of his poems are extant. They are simple and, though without faults, are more a display of skill than an outpouring of poetical inspiration.

The great jurist and writer of his epoch: the civil law code of Turkey, was completed during his second term of office of Minister of Justice (1293-1294 = 1876-1877) and appeared in print.

Ahmed Djewdet was greatest as an historian.
At the time, when his praise was in everybody's mouth, about the close of 'Abd al-'Aziz's reign, he delighted the Turkish nation with one of the most wonderful of Oriental literature, the book of 

Peoples' Tales and Caghlî stories, which continue as far as the assassination of Othman, Muhammad's son-in-law. Anyone who nowadays, even in the remotest districts, ventures into the domain of national literature, is sure to start from this book. But the work, which ensures to his name a lasting place in the literature of the world, is the Turkish History (Wâfi'î or wâsilê-itâfî, from 1188 till 1774) written in twelve volumes. The first edition was printed in Constantinople 1771–1774, which was followed by several others, the latest of which appeared in a politically revised form. Ahmed Djewdet did not draw his material exclusively from the archives, but often also from his predecessors in the office of Historian to the Empire; first of all Wâsi, next such as Esvert, Edik, Nür, Piyet, 'Asım, Şahîrûdî and Esalî; but he also had access sometimes on the great Arabian historian Djâwâd, a fact that, though writing of an epoch, in which France ruled over half Europe, never once consulted any of the famous French authorities, with the sole exception of Napoleon's reminiscences written at St. Helena. He has remodelled the works of his predecessors in such an independent spirit, that the narrative, which bears the stamp of genius, is the entire product of his mind. During the life of 'Abd al-Madjid and 'Abd al-'Aziz he also descended into the vaults of the state-archives, but evidently not for the three last volumes. The concatenation of the events is chronological as a rule, though wars and domestic occurrences are with proper tact not thrown into a pell-mell for the sake of chronological order. His style, though not florid, resembles in the first five volumes the manner of the ancient historians with its splendour of rhetorical expression; but at the beginning of his work he suddenly abandons it and passes on to the simpler mode of speech which meantime had come into fashion. On the whole he is certainly reliable. A rapid survey over the past centuries mentions is made of unimportant events as though they were brilliant conquests and decisive victories, whereas the crushing defeats which brought about the loss of the whole of Hungary are passed by in silence; but such cases of silence are rare, and may moreover be excused with a reference to the example of Tacitus.

Ahmed Djewdet was fully convinced of the educational value of historical study. He warns his countrymen continually against the gaiwan of Oriental administration; he gives his attention to every slightest semblance of progress and in splendid apostrophes summons all to collaborate towards the renaissance of their native country. Especially the first five volumes abound in grand reflections. Nothing annoys him more than the sudden stoppage from sheer laziness to the working of a mine, which had been conducted successfully for centuries. Victories of science cannot be praised with greater enthusiasm than they are by him. With patriotic paths he comments conquests of civilization, made by his own country, such as the subjugation of civil and military authority, which was carried through in the 15th century, centralisation of administration, and the regulation of the coinage by the state. In foreign politics nothing affected him so deeply as an alliance with Austria against Russia, Turkey, and Austria (both half-Slavonic countries) would only be able to oppose the torrent of the pan-Slavic idea, which came from Russia, if they were united.

Besides the above-mentioned works of Djewdet Paşa are also noteworthy:

Bayân al-mawzûh, Mîllîn-î nûhâ, Ta'limât al-nûh, the conclusion of the Turkish translation of Ibn Khaldun's History.

Bibliography: Lhâmi al-Daw and Ahmed Djewdet, Othmaînî wâsilê ma-awrârâtâli (Constantinople 1341), 'Abîl 'Azîz, Turkish anthologies of the 19th century, Constantinople 1308, 3rd number; Dûrdî Zâhidî, Maqâmât-âbârî li, 155 et seq. (K. Seiheîm).

AHMED FARîS AL-SHîvâkî. [See Fâris al-SHîvâkî.]

AHMÉD HIJKMET is one of the modern Turkish novelists. He is also called Muftiattu after his grandfather who was Mufti in Tripoli at the time when this city was the capital of the Ottoman Empire. He was born in 1870. After he had left the Lyceum of Galata, which he entered in Constantinople, he started on a journalistic career, became later Vice-consul in the Piraeus and in the Caucasus, and is at present Professor of Literature at the above-mentioned Lyceum and the head of the Consulate department at the Foreign Office. A collection of his best-sketches and novels, which originally appeared in periodicals, especially in the İlahi and the Thawrât-i ûmûr, was published under the title of Ḳiṣâyah ma-wâlîl-i 'Arabî (Thorn-garden and Rose-garden) Istanbul 1312 (1899-1900). Three of these tales have been translated into German by Fr. Schröder, and published under the title of "Türkische Frauen" in the Türkische-Bibliothek edited by Fr. Jacob (vol. vii Berlin 1907). Ahmed Hijkmet is one of the most important representatives of the modern movement, which advocates the idea, that the regeneration of Turkey is only possible on a national basis and cannot be brought about by a blind imitation of Western civilisation. His writings, which are often seasoned with a fine humour, prove him to be an excellent observer and a skillful stylist.

(From)
by the most refined works of fiction of Western European literature accessible to Oriental circles, which had been hitherto scarcely accustomed either to any kind of reading or to the Western conception of life. The translations were made by Ahmed Ismail, a Gujerati merchant about fifty, amongst them 45 works by Jules Verne alone.

With the intention of giving his countrymen a modern and illustrated magazine instead of the old-fashioned periodicals which had appeared until then, he founded in 1897 (1901) the  "Charminar Fanum and immediately afterwards went on a tour through Europe, for which he had been longing since his childhood, in order to better understand the management of European reviews and their printing-offices. In three months, crammed with work, he travelled through the whole of continental Europe, with the exception of Spain, Scandinavia and Russia. His experiences were described in an exceptionally charming manner in a big illustrated volume, which went through a second edition in the same year 1897, and was very soon out of print.

The young reviewer profited indeed by his travels; its first year may be favourably compared with any European family-magazine. Striking pictures of the great men of the day such as Gladstone, Renan, Crispi appear on its pages. The Ottoman affairs occupy only a modest, almost too modest place; one feels in the midst of universal activity. The magazine became a centre of the Turkish intellectual movement and is indispensable for the study of the somewhat peculiar development of modern Turkish literature. All the younger talents appear amongst his collaborators: Ekrem Bey ("P auction in the Carriage"), Khalil Djik ("Forbidden Love, Blue and Black"), Ahmed Kesim and particularly Nâzif Zade Nişân (d. 1896), who made the most brilliant hit with his Sin of Neglect. The Chicago international exhibition of 1893 brought Ahmed Ismail's civilising activity into prominence, and the Turkish Government followed this praiseworthy example. But soon afterwards another tendency gained the upper hand in Constantinople, which caused a fatal change of collaborators. Tawfiq Fikret however joined the staff, a genius possessing a noble flight of thought, which seemed capable of sustaining the highest summits; and also Lâzâr Shihâb al-Dîn, a poet with a graceful and bright imagination, such as presentation could be proud of. But in 1906 the police interfered, because of an alleged revolutionary article. After the case had been on trial for seven weeks, the prosecution was withdrawn; the existence of the review was safe, but the staff resigned, and Ahmed had to trust to his own powers. This is the third stage in the existence of the periodical.

Ismail's original literary production is less important than might be expected of his talent. He complains repeatedly of certain national circumstances. They form the main topic of two short but well sustained novels: "Kâörü ("Charmed Fanum 1908) and "Ufmat (1908). The rest of his writings are mostly sketches: "Tragedy and Crime (1908, both originally written for the stage), "Women and Secrets (1908), "Potam (1908), and a European subject: "The Wages (1908). Outside the dominion of literature lies his "New System of Photography (1908) and his clear and able "National Economy (1909). (K. SUSHEMAR.

Ahmed Khan, the son of Saiyid Muhammad Mutlaq Khan, was born at Delhi, the 17th October, 1817. His ancestors came from Abyssia to Herat, and afterwards to the reign of Afnûn Shâh. When Saiyid Ahmed was 29 years of age, his father died, and the year following (1837) he entered the service of the British Government as record-keeper in the Criminal Department at Delhi. In 1841 he was appointed Munsif, or Subordinate Judge, at Fatehpur Sikr in the District of Agra. During the mutiny of 1857 he was Munsif at Jâhâna, and saved the lives of the European residents by sending them safely to Meerut. For his loyalty to the British Government, and his conspicuous courage, he was rewarded by the grant of a pension, and subsequently by the title of a Companion of the Star of India. When 52 years of age (1869) he visited England, taking his two sons with him in order to give them the advantages of a Western education. He took the greatest interest in the welfare and education of his coterritorials, and on his return to India, he founded a college at Ghâzipur. Subsequently, on his transfer to Allâghar, he founded a Literary and Scientific Society, and finally succeeded in inaugurating the Muhammedan Anglo-Oriental College at Allâghar, despite much opposition from many who regarded the introduction of a system of Western education as being subversive of the orthodox faith of Islam. The college was opened in May 1857, and the foundation-stone of the present college building was laid by Lord Lytton in January 1857. An account of this institution is given by the late Theodore Beck, formerly principal of the college, in an appendix to Lieut.-Colonel G. Graham's "Life and Work of Sayd Ahmed Khan" (London, 1855). He retired from service in 1876, became a Member of the Legislative Council from 1878 to 1882, and was made a Knight Commander of the Star of India in 1888. The rest of his life, till his death in 1898, was devoted to literary pursuits, and to the advancement of the interests of the college.

Saiyid Ahmed's most important work is the "Akhûr al-mawdûd, an archaeological history of Delhi, written in 1847 (2nd ed. 1854), which has been translated into French by Garcia de Tavera (Paris, 1861). He has also written "Hindustani prose on the conquests of the Indian revolt, which was translated into English in 1873; also commentaries on the Bible, and on the Korâan, and a great many essays and lectures on social, religious, educational, and political topics, including a series of essays on the life of Muhammad. His letters written during his journey to Europe were published in the "Aligarh Institute Gazette, a translation from which is given in Graham's biography of this notable Muhammedan reformer.

Ahmed Köprüoğlu. [See Köprüoğlu.]  
Ahmed Midhat is the most important author of modern Turkey. He was born in 1841 of humble origin. He received a good education, but as a young man he came in touch with the young Turks, and, at about the same time, Köprüoğlu, who was his elder by four years, he was banished, a rather common punishment under the reign of Abd al-Asa. His travelling-years in Europe became a very important time of apprenticeship for Ahmed; he learnt to discern that
young Turkish party was completely wrong in mingling literary and political tendencies; and that the emancipation of Turkey would only be possible, if the national education was raised and the present Government was left intact. After Abd al-Hamid's accession to the throne he was pardoned, allowed to return and admitted into the civil service. Owing to his good knowledge of French and his untiring activity he was quickly promoted. His literary merits brought him into personal contact with the sultan, who soon learnt to appreciate this loyal and sagacious ruisser of the Ottoman national spirit. Ahmed Midhat became an enthusiastic champion of the policy of Abd al-Hamid, which he supported in the papers İlahîd (Unlawfulness) and Tarâjunnakâtije (Interpretation of Truth), both founded by him, and the sultan was not deficient in acknowledging his merits as a journalist and an author.

In 1895 he was appointed President of the international Board of Health, and honoured with the title of Excellency and with the Grand Cross of the Order of the Ottoman Empire. In addition to his state-duty the sultan has awarded him an exceptional poet's pension. Ahmed lives in domestic happiness, and he is the idol of the younger Turkish writers, whom he befriends and advises like a father. One of the most famous among them, Mahmud Ahmed Méjdi, who died in 1895, was his son-in-law.

Ahmed Midhat's literary programmes is twofold. First of all he advocates the preservation of the pure Ottoman character of the written language, like Sinansız had done before him; but in the second place it is his aim, remote though it may be, to secure for his countrymen the means of acquiring a general education. That is the reason why, besides his purely literary work, Ahmed Midhat has written on any subject which seemed worth knowing in every branch of knowledge, history, science etc. These treatises, extracts and compilations were mostly taken from French sources, but always with great skill and in a clear and popular manner. As a journalist he has treated of social, philosophical and economic problems, often with surprising ingenuity, and always in a considerate and omniscient way. All along he has been striving for the adaptation of European knowledge to the Islamic frame of mind, withholding every element which is incompatible with pure Mohammedan feelings. If at the present day one can speak of an Ottoman civilisation, Ahmed Midhat's Haremian task must be premintently thanked for it.

His main importance however is founded on his work in the domain of literature. Here also he has developed the same immense fertility, the same astonishing ease of production; he invents and shapes with equal rapidity. Amongst European authors Honoré de Balzac is the only one who in this respect can be compared to him. Ahmed Midhat has hit on the extremely fortunate idea of introducing the colloquial speech of the Mevaths (the public narrators) into higher literature by using it in his novels. The apostrophe to the audience is the form of questions for instance, which is so common with them, as a means of enhancing the attention, is also very often found in Ahmed Midhat's works. Many of the younger writers have tried to imitate this attractive chatty style, but with little success.

A list of his novels and tales alone would fill a good-sized catalogue. Only a few of the most important need be mentioned here: İlahîd (The sailor Uzun), an imitation of Dumas' 'Conte de Monte Cristo,' which was followed by its companion-epic İlahîd-fevîlîk (The peasant Hussain); Ye şıkkıdce malak (An angel on earth), a book which at first gave offence by its unusually free ideas.

Ahmed Midhat's charming gifts as a narrator show all the better advantage in his short tales. He has collected them in a considerable row of volumes under the general title of İlahîd-fevîlîk (Entertaining stories). His work in the Geschicht der Türkischen Moderne has given him an extract of the contents of the 25 first volumes, and E. Stadel has published an excellent translation of three of them (The Glimpse; Marriage; Youth) under the title of Türkisches High Life (Leipzig 1898).

Ahmed Midhat's activity has also extended to the drama, but here he has little to show compared with the results of his other works. He has written both tragedies and comedies, and especially the latter, amongst them Ayet-kêlî (Breadhead) and Conci (The dancer), and achieved great success. He himself has also written the music to Conci and a few others.

As a teacher and guide of the younger Turkish generation Ahmed Midhat is partly responsible for the fact, that the intellectual life of modern Turkey, with its tendencies towards European civilisation, has sought its nourishment exclusively in France and French literature. But the simple and straightforward Ottoman has nothing whatever in common with the character of the French nation, and one day this unnatural mingling of the Ottoman and French spirit will avenge itself. Only by adhering to what is national can the Ottoman literature be endowed with lasting life, and it remains the principal merit of Ahmed Midhat that he has pointed out that right and only way.

AHMED PASHA, son of the kăbî of the village of the Adams, Ottoman poet of the time of Sultan Muhammad II, was at first professor at the madrasa of Sultan Murad II in Brusa, kăbî of Adrianople, afterwards tutor of the princes, and Vizier. He composed 33 gazels, imitated from those of Mr. Alî Şâh Newâyî. He died in 1496 (1496) and was buried at Brusa, near the mosque which he had founded and whence he had been banished because of an immoral adventure. Sultan Bayazid II had commissioned him with the administration of that sanâbat. He was the first Ottoman lyrical poet; his works introduce the period of the elegant style of compositions; he is the veritable creator of the poetical language of Ottoman Turkish.

AHMED PASHA — AHMED-SHÄH.

8 July 1521), commanded a division of the army which was charged with the siege of Rhodes, was afterwards appointed commander-in-chief, reduced the besieged to ultimate extremity and obliged them to capitulate (2 Safar 929 = 21 Dec. 1522).

But he was young and ambitious character he had hoped to be made Grand Vicier. But when then he did not get this post he asked for the Government of Egypt, which was granted to him. He aspired to becoming an independent monarch, gained the Mamelukes for his cause, subdued the Janizaries, espoused the cause of the Sultan, and caused the sultans to be said and money coined in his name (January 1524). But he was betrayed by his constant Muhammed Beg, who in the Sultan’s name caused the Shah还不 Khaṭīb of the Banū Bahr to give Ahmed Pasha up to him. His head was sent to Constantinople.

AHMED PASHA, second Vizier of Sultan Suleiman, of Albanian origin, was appointed in 959 (1552) commander-in-chief of the expedition into Hungary, instead of Muhammed Sokollu. He forced Temesvar to surrender, took Szebenich, and besieged Erzur (Eger), but without success. He was appointed Grand Vizier during the Persian campaign; but during the Sultan’s absence on 12 Dhu’l-Ka‘da 962 (= 28 Sept. 1555) his head was cut off, on the pretext of his intrigues in connivance with the administration of Egypt; but really because the Grand Vizier wished to see her son-in-law Rostem Pasha called to the post that Ahmed Pasha occupied. He left several charitable institutions, among them a mosque near Topkapı.

Bibliography: Hammer-Purgstall, Gesch. der Osman. Reiches, cp. Index; Joannis and van Gaver, Turquie, pp. 145-146; Gulshani ma’dārif i. 556; Pecatori l. 24, 274, 281, 334, 346 et sqq. (CL. HUART.)

AHMED PASHA, nicknamed Gedik, Gedik (Gap-tooth), Ottoman politician and general, rose from a common Janissary to the post of Beierbel and Vizier. He was commissioned by Sultan Mahomed II to subject ‘Alā‘, which was still ruled by the last surviving descendant of the Seljukids of Kān, called Khālid Arslân. He obtained the surrender of the place (975 = 1470); after the defeat of Ulun Hasun at Trench (16 Kāb, 1. 877 = 21 August 1728) he subjected Karmania and Cilicia; after a fruitless attempt to make Pr Ahmed his captive by treason, he drove him to committing suicide. After the death of prince Müsaf, and the execution of the Grand Vizier Mahomed Pasha, he became the latter’s successor, and in that quality conducted the Crimean war, which caused the Gencce the loss of Kaffa (4 June 1475) and Anzow. Because he opposed the Albanian campaign, he was dismissed and imprisoned at Khamil Hissar; but the intervention of Mir ‘Alī Husein-tâle brought him again into favour, and he was entrusted with the command of the fleet of 29 galleys, which occupied Se ‘Maure and Zante. He landed on the Italian coast and ravaged Otrante (11 August 1456). After the success of Bayezid II he went to join him shortly before the battle of Yendi-Sheikh (15 June 1480). He was commanded to persecute the fugitive prince Djam, but out of favour and was only saved by the Grand Vizier Isâh Pasha, who procured him the order to persecute Kâsin Beg in Karmania. He was assassinated at the command of the Sultan, who had not forgotten the reproaches which he had been obliged to endure in the midst of a great festivity (6 Shawwal 887 = 18 Nov. 1482) on account of the bad conduct of his troops. Being of a proud and inflexible character, Ahmed Pasha had openly disapproved of various political measures which Bayezid had taken, such as the peace with Venice and the negotiations with the knighthood of Rhodes concerning Prince Djam.

(CL. HUART.)

AHMED PASHA. [See Bonniel.]

AHMED PASHA c. HABAN PASHA, the named the conqueror of Hamadan, succeeded his father in the government of the provinces of Bagdad, Russie, and Mârûah; he recaptured Kūmandhātū and Arslūn (1724, 1725, 1727) from the Persians. Taking advantage of the Turkish victory at Kortjian, he concluded a treaty, according to which the Araxes should be the frontier between the two realms, but Tihriz was restored to the Persians. He defended Bagdad against the attempts of Nâdir Shâh (1145 = 1733), was commissioned to continue the negotiations of peace with the conqueror, not without incurring the suspicion of tampering with Nâdir, and was appointed Seraskier (1157 = 1744). He died in 1160 (1747) during a campaign against the Curds, after he had twice governed Bagdad, first for a period of eleven and the second time for twelve years.

AHMED RASIM. [See Kîshî.]

AHMED RASIM. [See Kîshî.]

AHMED SHÂH is the name of various Muhammedan monarchs in India. The most notable are:

1. Ahmed Shâh Bahâdur Muhammed Al-Dîn Anû Naub, son and successor of Muhammad Shâh, Grand Mogul of Delhi. He was born in 1138 (1735) and came to the throne in 1161 (1748). The actual ruler during his reign was Sa’dar Djinj, Nawab of Oudh, who also appointed Vizier of the new Emperor. In order to check the Kolhâs he called upon the Mahrâjâs for help, which resulted in their plundering the provinces of his realm, while the Afghâns devastated the Punjab. Ahmed Shâh himself was quite an incapable ruler and lived for pleasure. So after the disbanding of the Vizier Sa’dar Djinj his reign soon came to an end, another Vizier, Imâm al-Mulk Ghâzi (7-Dîn Khân caused him to be declared unworthy to govern, had him put into prison and his eyes put out (1167 = 1754). Ahmed Shâh died in 1189 (1775).

2. Ahmed Shâh I b. Dawod Shâh, a Bakhtunide,
reigned from 825 till 838 (1422-1435) in Dehkan and removed his residence to Bihisht (cf. v. 3. of BAHAMANID). 3. AHMED SHAH II, son and successor of the preceding, reigned from 836 till 862 (1435-1457). In the list of the Bahmanides he is often mentioned by his surname 'Ala' al-Din. He subjected the Khorasan and conducted successful wars against the Princes of Khorasan and Gandjar (cf. BAHAMANIDES). 4. AHMED SHAH III, the MAHMUD SHAH II, who reigned in the same only from 924 till 937 (1518-1521). (cf. BAHAMANIDES). 5. AHMED SHAH I, MUSAHMED SHAH I, 856-844 (1431-1442) (cf. KHALJI KANS). 6. AHMED SHAH I, TATAR KHAN, succeeded his grandfather Mu'azzar Shah 814 (1411) on the throne of Gandjar, and reigned till 846 (1445). He removed his residence to the town of Ahmadshah, which he had founded. 7. AHMED SHAH II, also Prince of Gandjar, reigned from 901 till 909 (1553-1561). 8. AHMED SHAH, or, as he is generally called, Ahmad Niyari-Shah, founded the dynasty of the Naqiri-Shahis. He was the son of Naqiri al-Mulk Bahri, the Vizier of the Bahmanides Mahabat Shah. After the assassination of his father he usurped the title and dignity, put to flight the troops, which the Bahmanides had despatched against him (895 = 1490) and founded an independent reign in the new-built town of Ahmadshah. Ahmad Niyari Shah died in 914 (1568) (cf. NIYARI-SHAH). AHMED SHAH DURRANI, founder of an Afghan dynasty, Ahmed Khan (he was so called previously, the title Shah he took later only) was son of Muhammad Zamam Khan, Saddouli, a chief of the Abdalis who had settled in the neighborhood of Herat in the time of Shah Abbas I. The family was recognised as the leading one in the Pahlevi clan of the Abdali tribe, and had been banished to Multan. About 1716 they were found at Herat, and a feud broke out between two branches of the family, which ended in the deposition and perhaps the murder of 'Abd Allak Khan, the Chief, by Zamam Khan, who became the leading man in the tribe and increased their power. This spread over Khorasan and in 1722 went so far as to besiege Mazarshahr. Ahmed Khan was born about this time. Allahshahi Khan son of 'Abd Allah Khan returned from banishment to Herat, and succeeded in turning out Zamam Khan. When Nadir Shah invaded Khurasan in 1728, Allahshahi submitted, but the sons of Zamam Khan, Durr-i-Fikhr Khan and Ahmed Khan broke out again. In 1731 Nadir Shah took Herat and took the Abdali power. Many of the leading men were banished to Multan. Durr-i-Fikhr Khan and Ahmed Khan fell into the hands of the Ghulatis of Kandahar, and when Nadir Shah took that town in 1737, they released them and took them into favor. He enlisted the Abdalis in large numbers in his army and settled them on their ancient territory near Kandahar which had been seized by the Ghulatis.

Ahmed Khan was appointed Governor of Mazawarar and became a principal viceroy in Nadir Shah's army. After Nadir Shah's invasion of India he gradually became suspicious of the Shiah elements in his army, the Persian and Khilishti, and showed favor to the Ozbeks and Afghans, especially the Abdalis. This led to the conspiracy in which he was killed (1160 = 1746). Ahmed Khan who was near-by with a body of Abdalis attacked a Persian convoy, and seized upon a large treasure, and then went off with his followers towards Afghanistan.

Kandahar fell into his possession without difficulty, and he was elected king by all the principal Abdali Malik's on the advice of a dervish named Sahir Shah. Besides the Abdalis the chiefs of the Baluchis, the Hazaras and the Khilsiti took part in his election, and the Ghulatis seem to have been treated as conquered enemies. Ahmad Khan, now about twenty-five years of age, took the title of Shah and called himself Durr-i Durrani, "Pearl of Pearls" (not Durr-i Dauran, "Pearl of the Age" as is sometimes stated), and the Abdali tribe also from this time on were known as Durrani. After his coronation he marched to Kuth, but Kandahar remained the capital during his reign. He built a new town to replace the Naulinhad founded by Nadir Shah, and gave it the title of Ashraf al-Abdal ("most illustrious of cities"). Kandahar was occupied with but slight resistance, he reduced Ghazni, subdued the Ghulatis and appointed Durrani governors over them, and then immediately proceeded towards India. It must be remembered that he regarded himself as heir to all Nadir Shah's Eastern Dominions which included all the west country of the Indus ceded by Muhammad Shah. But Ahmad Shah aimed at rivalling his predecessor's exploits, and was by no means satisfied with this limited Indian province. The empire of Delhi was no longer formidable. Nadir Shah's invasion had shaken it to the core, the Sikhs were rising to power in the Panjab, the Mahals in central India, and there was every prospect of success for a bold invader. But Ahmed Shah's first invasion (1161 = 1748) failed. He took Lahore but was defeated at Sirhind (March 1748) by the viceroy Kamal al-Din, and his brave son Mir Manu, but the viceroy was killed in the action. The Emperor Muhammad Shah died soon after, which led Ahmed Shah to renew the attack (1162 = 1749), and Mir Manu, now governor of the Panjab, receiving no support from Dehli, submitted to Ahmed Shah, and placed the provinces of Lahore and Multan under him. Ahmed Shah returned to Kuch, passing on the way through the Derais, Multan, Sialkpur and the Bolta Pass.

During the next four years he was occupied with the affairs of Khorasan. He took Herat and advanced on Meshhad, which he occupied. Shahrukh, the grandson of Nadir Shah, was left by him in possession there, and he succeeded in 1163 (1750) in taking Nishapur which still till then held him. The next year Shahrukh was seized and blinded by Mir Alam Khan of Kuch, but Ahmed Shah restored him to his throne and defeated and slew Mir Alam Khan. The same year he came into collision with the rising Kajjar power, but was repulsed at Astarabad, and was never advanced further in the west. A coin of Ahmed Shah struck at Meshhad in the fifth year of his reign may be referred to this period.

In 1169 (1755) Mir Manu died, and his widow Mughalsat Begum usurped the power in the Panjab, and ruled with her favorite Adin Beg. The viceroy Ghulat Dinn, who was in possession of Dehli, seized on the opportunity of recovering
the province for the empire. He married the daughter of Mahâfizâl-Îârî and carried her and her brother to Dehî, and seized upon Lahore. 

Ahmed Shah immediately marched to Lahore (1770 = 1756) and expelled Adina Beg, who had been left in charge there. He then advanced to Dehî. Ghâzî I-Dtin and the helpless Emperor 'Alâmgu'r II could offer no real resistance. Nadîjî al-Dawla Rohâta joined Ahmed Shah, and he entered Dehî victoriously with the Emperor and the victor in his train. He spent only forty days in Dehî and it was thoroughly plundered by his followers. Gold and silver coins dated 1790 H. were struck in memory of this occupation. Mahârîn was plundered, and Ahmed Shah, before he returned to Afghanistan, plundered Nadîjî al-Dawla in power. He had already made his son Timûr Nâqin of Lahore and Multân, and arranged a marriage for him with the daughter of 'Alâmgu'r II. He himself married a daughter of the late emperor Muhammad Shah. Timûr was left to deal with the escaped governor Adina Beg, who was in revolt and had stirred up the Sikhs, now numerous and powerful. He was also assisted by the Mahrâtâs, who began to spread over the Parnâbjâ. Adina Beg took Lahore in 1773 (1759), the Sikhs took Amritsar and sacked Sarhind, and the Mahrâtâs reached Multân and the banks of the Indus at Atûk. These events brought Ahmed Shah into India a fourth time (1774 = 1760). The emperor 'Alâmgu'r II was murdered by Ghâzî-I-Dtin on his approach, and the young prince 'Ali Djiwân, afterwards Shah 'Alem II, fled to the English for protection. Ahmed Shah came by the Bolan Pass and marched northwards through the Derândij to Paghâwin, and thence followed the ordinary route to Dehî through Lahore. The Mahrâtâs fell back before him, and he occupied Dehî, but a great Mahrâtâ army approached from the south, forced him to collect his forces and retire upon Pûnpûj. This great force included all the leading Mahrâtâ chiefs under the command of Sadbâg Bhâko, and a body of Íjâ'í under Sîrîdij Mal. This combination of the most warlike races among the Hindus, while the Munúlman's rallied under Ahmed Shah's banner, gave the war the aspect of a religious struggle. 

The Mahrâtâ army had a nucleus of European drill in the European fashion, with a numerous cavalry and powerful artillery. The strength of Ahmed Shah's army was in his Afghan horse. 

The battle which followed had been preceded by numerous smaller engagements. It ended in the complete defeat of the Mahrâtâs, and with it ended their hopes of an empire in Northern India. Ahmed Shah, however, probably wisely, did not attempt to take their place. Lahore and Multân were difficult to retain, and he recognized the impossibility of holding a more extended empire. This campaign is illustrated numismatically by coins struck at Dehî, Bârî, Murâdshâd Aûgâ, and Sarhind (for Sarhind). He returned to Kâthum, and the Sikhs broke out almost immediately. They laid siege to Djiwântûla near Amritsar. 

It was against these Sikhs that Ahmed Shah's fifth expedition (1775 = 1762) was directed. It was related in the Wâ'dâ&t Dicâû. He might have been one night suddenly picked a body of horsemen, and rode off into India, and that when he reached Djiwântûla he had but ten or twelve followers, yet such was the terror inspired by his name that the Sikh army fled. He collected his army and pursued them, and defeated them near Gûjarâwâl, south of Ludhînna, with enormous slaughter. This fight is known to the Sikhs as the "Gâhilgâh" or "great overthrow." 

Ahmed Shah returned through Lahore, and left a governor in Sarhind, who was shortly afterwards defeated by the Sikhs. The town of Sarhind was destroyed (1776 = 1763) and in still a ruin. These events brought Ahmed Shah into India a sixth time (1777 = 1764). He traversed the Panjâb and marched back again without effecting much; and three years later he entered the country again (1780 = 1777; his last invasion of India) and now tried to conciliate the Sikhs, and to form a party among them. Sarhind was made over to the Phâtânian, the ruler of the Patãla State, and the Mahârâtâs of that State were the Sikhs and the name on their coins. Ahmed Shah's troops were, however, discontented, and a large body deserted him; his own energy was now failing, and he was harassed by the Sikhs in his retreat. The Sikhs soon after took the powerful fort of Rohâta near Djiwântûla which had been built by Shîr Shâh. 

During the intervals of his Indian campaigns Ahmed Shah had occasional outbreaks to deal with in his country. The Gâhilnâs rebelled about 1747 (1744), but they were easily subdued. Nasr Shân the Bârâh chief of Kûl, who had been a vassal to Ahmed Shah declared himself independent in 1771 (1758) and Ahmed Shah laid siege to Kûl, but his army suffered greatly, and he at last accepted the terms offered by Nasr Shân. The Khân of Kûl were from this time on independent in all but name. Many Barâhs, however, continued to serve in Ahmed Shah's armies, and he also employed many Írûbûgâs, 

as well as his own Durrâtis and other Afghans. His mixed army suffered much from the heat on his return from his fifth invasion of India in 1776 (1763), when he had to march rapidly to represent rising among the Aïmûk near Herât. After his last invasion of India he also had to return suddenly in a similar manner, to deal with the affairs of Khorât. Nasr Allah, son of Shâhreza rose in rebellion and the combined Persian force opposed Ahmed Shah's army which was commanded by his son Timûr assisted by Nasr Shân the Bârâh chief. The Persians were defeated, but were sheltered by Shâhrukh himself in the sacred city of Mûshâh. It was finally taken after a long blockade. Shâhrukh was still treated with consideration by Ahmed Shah, who never forgot his obligations to Nasr Shân. He was left in possession of Mûshâh, but promised Ahmed Shah the services of a body of troops and gave his daughter in marriage to Timûr. Ahmed Shah's health had been very bad for some time, and he appears to have suffered from cancer. He retired to Mûshâh in the Toba hills in the Aïmûk country and died there in 1184 (1775) in the fifteenth year of his age after a reign of twenty-three years. 

Ahmed Shah was by nature a bold soldier and leader of men, but he failed to found an enduring empire beyond the limits of Afghanistan. He was very popular with his own tribe, the Durrâtis, even with the rival Bârâh clan, whose enmity proved fatal to his successors. He was able also to establish Durrât control firmly over
the other Afghan tribes, and the Tajik, Hazara, and Khudz of Afghanistan, and that control remains firmly established to the present day. His success was due to his personal qualities and conciliation being both brought into play; and the revenues derived from his Indian expeditions enabled him to dispense with heavy taxation. He knew his own limitations, and did not attempt to extend his Indian rule beyond Lahore and Multan. He undoubtedly perceived the impossibility of maintaining distant conquests with the uncertain means at his disposal, and his later dealings with the Sikhs show that he contemplated the rise of a dependant Sikh power. He could hardly foresee how that power would grow at the expense of his weak and divided dependants and of the moribund empire of Dahr. Lahore indeed was practically a Sikh possession at the time of his death, but Peshawar, Multan, the Dera, and Kutchmir remained attached to the Durrani kingdom for nearly forty years longer. He had already recognized the practical independence of Balochistan, and Khorasan was evidently destined soon to become a Persian possession with the exception of Herat which is essential to the independence of Afghanistan. It is clear then that Ahmed Shah, though he did not found a great empire entailed to the credit of founding the State of Afghanistan much as it exists at present. As a military commander he takes a high rank. His overthrow of the Mahrattas at Panipat was a victory of the first order, one of those battles which affect the whole course of history; although its importance did not affect his own dominions except in so far as it strengthened the Sikhs by removing the Mahratma menace. Ahmed Shah must be considered as the most important man that the Afghan race has produced. His only rival was Sher Shah Sur, but his exploits were confined to India while those of Ahmed Shah were intimately bound up with the fortunes of his own race and country.

AHMED TAIB OTHMAN NADIR [See OTHMAN NADIR.]

AHMED TEKUJER [See TEKUJER.]

AHMED WASEIF [See WASEIF.]

AHMED WEPIK PASHA. Turkish statesman and famous man-of-letters, was born at Constantinople in 1233 (1810-1820) and began his diplomatic career as first secretary of the Turkish Embassy in Paris under the reign of Louis Philippe. He next fulfilled the same office at Petersburg and after that lived a long time in Tiflis as a plenipotentiary, whence he was sent to Paris as Ambassador. Later on he was appointed Amin of Minister in Constantinople. Here he occupied successively various high posts, became Grand Vizier and Wali of Hoodowedlar (Brossa), was six times out of favour with the Sultan, and spent the rest of his life in studious leisure at his country-seat in Kamili Hills on the Baibars, where in March 1507 (1820) he died and was buried.

As an historian, a philologist and a transactor he has made good use of his pen, in presenting modern ideas, and in many ways has done good service in improving the modern written language. The most important of his works is the Laajah-i 'Alamgiri, first ed. 1293; second ed. 1306, in two volumes. The first volume contains the Turkish, the second the Arabic and Persian elements of the Ottoman-Turkish vocabulary. The second volume was first published as an addition to the second, edition (cf. the review by Barbier de Meynard in the Journal Asiatique 7e s. v. 275: 8e s. v. 370). He also deserves to be mentioned as the first translator of Moliere. He seems to have rendered the whole of Moliere, and according to the Grande Encyclopédie "les principales œuvres de Schiller et Shakespeare" as well. But nothing has appeared in print of the last-mentioned works, and very little of his translations of Moliere. I only know Verseau d'Amour and Zorabé pahol, Zor-nishki, which appeared in 1286 and are both in my possession. Belin also mentions only these two. They are not literal translations, but independent adaptations, skillfully arranged to suit Turkish conditions. He had these plays translated by Armenians in his own theatre at Brusa. He also translated Fersen's 'Illegam (7. Legam in Sirjaghezi) (1298) and Voltaire's 'Mara'uj (published in 1298 as an appendix to a collection of Ottoman works). Other works of his are: 1. Fedeli-Ci-tëkht-i 'Alamgiri, an epitome of the Ottoman history until the reign of Sultan 'Abd al-Aziz, especially intended for schools, which has passed through several editions (1st ed. 1284). 2. An edition of 'Awliyâ (1286). 3. An edition of a translation of Lucian's Paraphrasis, which had been prepared by Wasiyat Efendi (1286). 4. An edition of the Makhtal al-bulân by Dr. 'Ali Shâr Nawâl, in collaboration with Belin (1289). He had planned the publication of an extensive Capatai dictionary, but neither this nor any other of his East-Turkish collections has ever been printed.

Bibliography: The necrology of Ahmed Wepi Pasha is in the Thaurati Fânus 1st year 94, 95, 78, which was partly founded on the article in the Grande Encyclopédie, and Journal Asiat., 6th s., xx. 288, 7th s., xx. 284, and 8th s., xx. 344 (F. Gires).

AHMED YESEWLI, one of the oldest and most famous East-Turkish Shaiks and mystics, was born in Yasi (the present town of Turkestan), and died there in 562 (1166). The year of his birth is not known, but in his Diwan it is stated that he was 63 years old when he died. When he was seven he became a disciple of a certain Baba Arslan, concerning whom no further information has been found. After his death Ahmed went to Bukhara, where he became an adherent of the celebrated Shahîk Yusuf Haskhânî. Afterwards he returned to Yasi, where he remained until his death. In 600 (1204) Timur caused a mausoleum to be erected on his tomb in Turkestan, which is at present being examined by Prof. Veiselovskij by order of the Russian committee.
for the exploration of Central and Eastern Asia. The Mogul legend represents the popular Turkish hero Ildige-i as a descendant of Ahmed Yesewi. Ahmed is considered to be the chief of Turkish Central Asiatic mystics and the founder of a whole school of mystics, and is so much highly revered. Hakim Ata belongs amongst others to the fourth generation of this School. Ahmed's mystic poems (hidāyat or manâtíq) are much read. His Dwân has often been published in Kānân under the title of Dwân-i hidâyat-i faqrâh sulâh al-mâtîr khâddî. Ahmed etc. This Dwân has not yet been examined in detail. But it is sufficiently evident from its contents, that not all the poems can be the work of Ahmed himself. Unfortunately not a single old manuscript of the Dwân has been found. Four later ones are in the Asiatic Museum at St. Petersburg: nos. 292, 293, 294 and 295. Ahmed's language in the manuscripts that are extant and in the printed edition has doubled to a great extent been modernised by later scribes.

Ahmedabad is the capital of the district of that same name in India (Presidency of Bombay), on the river Siharmat. In 1901 the town numbered 158,589 inhabitants, of which about 66 were Mohammedi alls, the district (3816 square miles = 9883 square kilometres) containing 795,967 inhabitants. Ahmedabad is one of the most beautiful and most fertile towns in India and is famous for the manufacture of gold and silver brocade, of silk, cotton and satin (sâhâhuk) materials. It is equally noted for its brise and bronze works, and for the manufacture of mother of pearl ornaments, of Japanese goods and wood carving (botal-boxes i., pâhluh). There are also a great many monuments of ancient Moslem art, amongst others mosques and mausoleums of the XVth and XVIth century.

Ahmedabad was founded in 1413 by Ahmed Shah I, [q. v.] Sultan of Gujarat (the same who made the old Hindu town of Avasal his capital), and he enriched it with countless buildings. In the first century of the Gujarat dynasty it rapidly attained prosperity. But after that it fell into decline, enjoyed another period of prosperity under the reigne of the Mogul emperors, until in the XVIIIth century it again deteriorated. In 1818 the English took possession of the town.

Ahmed, with his full name Tâj- al-Din Ahmed b. Ibrahim al-Ahmedî, was one of the most celebrated West-Turkish Ottoman poets of the 16th (1430-1440) century. If we may believe Tâhkûrî Zâle he was born before 675 (1334-335) in Germân, at that time an independent principality, but now part of the wilayet of Brusa. According to Lâyîf and the historian 'Alî (from Gallipoli) however, he was born in Sîâs. He equalised his brother the poet Mawlawî Hâmûrî in remarkable talents and ambition. After he had studied the sciences at home he went to Cairo, where he came into close contact with his countryman Hâdîddî Pâsha, who afterwards became a famous physician, and Mawlawî Shams al-Um Muhammad al-Fânîr. After his return home he entered the service of the ruler of Germân as khatîf. There it seems to have devoted his leisure hours to composing his iskender nâmâ. His master however, Mir Sulâmî, to whom the work, according to statement before 792 (1390), was dedicated, is said to have been but little edified by it. After that we find him at his new seat Amâsia in the company of Timîr. Their meeting evidently took place after the battle of Angora and the death of Bayzâd I, about the time when the powerful conqueror, with a view of peopling Caïta again, the native country of the tribes of the Kâm-Tatars, caused these tribes to be removed thither from the country of Tôkât, Amâsia and Kâsârya, where they had peacefully lived for 150 years (1405). The proud monarch, who had subjected the whole of central and anterior Asia, is said to have honoured Ahmed with his conversation on that occasion. Be that as it may, after the temporal prosperity of the poet had reached the peak, the survival of their continuous feud, Ahmed is in order to escape from the utter unsafety which prevailed in Anatolia, fled to Bayzâd's eldest son Sulâmîn, who beyond the Bosphorus kept a splendid court in Adrianople (1409-1410), at which he gathered men of culture and talent from all the Ottoman provinces. The poet wrote a great number of hasâlas and ghalas for the prince, which he afterwards collected into a Dwân (Turk. Col. Cairo p. 113; Peters, Versuch, d. türk., etc., etc., Berlin Nö. 366). But Sulâmîn's fortune began to waver — in 1410 he was killed on his flight to the Greek Emperor in Constantinople — so Ahmed left Rumelia and returned to Amâsia, his adopted country. There he died in 1442.

The poet's merit consists in having introduced profane subjects into West-Turkish literature. But his iskender nâmâ is also the first Turkish example of an epic describing the exploits of Alexander the Great, which shook the whole of the East. The campaigns of the great king (eastward as far as Japan, west as far as Morocco) are described in 8250 couplets, and at the same time as a mass of encyclopedic knowledge it is didactic fashion, put into the mouth of brilliant and learned and unlearned.
AHMED (March 1390). But some copies continue the thread of the narrative till the death of Hayazid I, and mention Sultan Ismail as the sultan reigning by right. In other copies Sultan Ahmad’s defeat of Tahir (816 = 1408-1411) is the concluding episode. To the list of manuscripts given by Reis (Cat. of the Turk. Mus. in the Brit. Mus., 1888, p. 703) must be added Handskriftlicher Kat. der Kgl. Biblioth. zu Berlin, chth. 28, Teil. II, Nr. 356.

Ahmed’s first biographer Sahib (d. 1548-1549) also ascribes to him a romantic poem Djamshid wa-Kakhshid. He is also said to have translated most of the khads of the Persian poet Salim of Siwah into Turkish verse.

AHMED is a gold dinar called after Ahmad b. Talut [q. v.]

AHMEDYYA is the name of the adherents of Mirza Qamal Ahmad Kadkhid (of Kadhán, district of Gardaspur, in the Panjab). In 1900 they were with their own approval entered under that name on the official census lists of the Indian Government, as a separate modern Mohammedan sect. The Ahmedyya are especially numerous in the Punjab, but are also found in the provinces of the Presidency of Bombay and elsewhere in India. They are found besides in other Mohammedan countries such as Afghanistan, Persia, Arabia, Egypt etc. Their number is gradually increasing in consequence of zealous propaganda. Their principal organ is the Review of Religions, written in English, which since 1895 has been published regularly once a month at Kadkhid. But they also make use of various other papers in Indian languages, weeklies, mouthlies and quarterlies. They have also separate extensive writings, amongst which Barahin-i Ahmedyya (The Arguments of the Ahmedyya), written by the founder Mirza Ahmad, is the most important. The first volume of this work appeared in 1850, and in it the author claimed the divinity of a Mahdi, though not till March 4th, 1859 did he demand the homage of his adherents.

The doctrines of the Ahmedyya agree on the whole, with those generally taught by the Islam. The most striking differences concern only the Chritology, the vocation of the Mahdi and the jihâd (the holy war). As to the first mentioned doctrines, they assume that Jesus did not die on the cross, but after his apparent death resurrection migrated to India, strictly speaking to Kashmir, in order to preach the gospel in that country. There he is said to have died at the age of 120 years; his tomb at Srinagar is still known, but is mistaken for that of a prophet called Yuz Asaf (which according to the Ahmedyya must not be explained as a corruption of Bodhanatwa!). At the instigation of a certain Mawla, Muhammad Husein a fitna against Mirza Ahmad was published in India, purporting that this doctrine was a return to the Koran and therefore had to be looked upon as heretical. Regarding the vocation of the Mahdi and the jihâd the Ahmedyya teach, that the task of the former is one of peace, and that the jihâd against the unfaithful must be conducted with peaceful means instead of instruments of war. Under all circumstances sincere obedience must be given to the British Government. The Mahdi himself must be considered an incarnation both of Jesus and Muhammad. To believe in him is a article of faith, because first of all his coming early in the 14th century of the Hijra was predicted by Muhammad, and secondly because he proved his divine vocation by his prophetic gifts. On various occasions this gift has manifested itself; not only the terrible destructions caused by pestilence and earthquake during the last decades, but also the death of certain people are said to have been prophesied by him. When one of his last-mentioned predictions came true through the murder of an inhabitant of Lahore, Mirza Ahmad was accused of the crime by three Christian missionaries, but acquitted in court.

Since the Mahdi (who died in 1908) resigned his leadership because of old age, the affairs of the Ahmedyya have been conducted by the Saheb Anqâm-soon-i-Ahmedyya.

(4. Th. Houtma.)

AHMADNAGAR is the capital of the district of the same name in India (Presidency of Bombay) on the river Siva. In 1901 the town numbered 42,000 inhabitants, the district (6536 square miles = 17,056 square kilometres) 827,095 inhabitants. The town was built in 1499 by Ahmed Nâsim-Shâh, the founder of the dynasty of the Nâsim-Shâhs [q. v.], who reigned for about a century in Ahmednagar, until, after a brave defence by Omâr Bâbûr, the place was taken by Akbar’s troops and annexed to the Mogul empire. After the death of Awrangzib, Ahmednagar became subject to the Mahrâshas, and in 1803 Nawâl Râo Sindhiya was obliged to surrender the town to the Duke of Wellington.

AHMEDU SHAHEED B. AL-HASÂN ‘OMAR, the founder of the Tahjât empire in Western Soudan, was in 1862 left in charge of Segu by his father, before the latter had effected the conquest of the Macina, and he maintained his authority there, in spite of the opposition of his brothers, under the death of al-Hâshî ‘Omar in 1865. In 1857 he took the title of Amir al-Muwini, and while keeping the district of Segu under his immediate authority, divided the provinces of Upper-Senegal, Kaarta, Lingaier etc. amongst his brothers, who became practically independent rulers. But while the French troops were on the march to occupy the country, Ahmed succeeded in reestablishing the empire of his father for a short time, by poisoning Tahjât, emir of Bandjâgara. Vainquished by Colonel Archbould, who took Segu in 1860 and Sniro in 1891, Ahmed made friends with Samory. But Archbould took Djenné and Bandjâgara (1893), and Ahmed on his flight eastward crossed the Niger and sought refuge in Sokoto. Cp. Le Chatelard, L’Islam dans l’Afrique occidentale (Paris, 1890).

(6. Demontminville.)

AL-AHNâF is the nickname of Shéhir b. Kais (his pedigree is given L. 4 by Ibn Khaldûn, Asr-al-Mu‘jirim p. 276, 30 Tâhâr III, 4292, 427). Sometimes he is also referred to by the name of
to get their consent to the designation of his
son Yazid to the succession. Al-Ahnaf
on that occasion spoke the well-known sentence:
"I fear God, if I lie, and you: if I speak the
truth". But he expressed his aversion to the plan
in unmistakable though respectful words, which
however remained without effect. — In Bâṣra he
exerted his influence over his Tammites to
persuade them to remain for the present reserved
towards the Avides, who especially at that period
migrated to Bâṣra in large numbers. The Avides
consequently accepted the help which was offered
them by the Râfibâtes. So Al-Ahnaf lived to see,
that in the fatal antagonism between the Madâr
(to which the Tammun belonged), and the Râfât,
the Avides adhered to the Râfât, in consequence
of his own policy. During the disorders after the
dearth of caliph, Yazid I, the governor of Irân,
'Ubayd Allah b. Ziyâd wanted to murmur the dignity
of caliph. Part of the Tammites, who had done
him hommage, went over to his opponent 'Abî
Allah b. Zubair, and Al-Ahnaf tried in vain to
bring them to reason, which he had assured
the governor that he would be able to do. The
consequence was that 'Ubayd Allah sought an alliance
with the Avides, and they were supported by
him in a battle with the Tammites, the Tammites
being surprised in their quarters. Especially under the latter's command
was Al-Ahnaf, at the head of the van-guard, one
of the most active and energetic generals. He con-
quered the country of Khabistan, the town of Hezêt,
Merv, Merewerd and Balkh and other important
places. Long afterwards a castle near Merewerd was
still called by the name of Qasr al-Ahnaf in honour
of him, and a place: in that same neighbourhood,
Kûstak al-Ahnaf. He even led his troops into the
dangerous country of Taykhiristan. He did not
succeed, it is true, in preventing the escape of the
Persian King Fazraddin III, who retreated gradually
towards Central Asia; neither was he
successful in his campaign from Balkh against
Khwrâzm. Nevertheless it was predominantly his
duty, which hindered the Persian king from
going: a firm footing anywhere: he also baffled
the latter's endeavours to turn the Persian tribes
against the Mohammedans, and he prevented the
outbreak of serious difficulties with the Trans-
oxanian Turks in the far East. He had moreover
to guard a long and constantly endangered mil-
itary route. He was also for some time deputy-
governor of part of Khwarzâm. In the conflict be-
tween caliph 'Alî and the party of Al-Ahn founded in
he was personally a declared partisan of 'Alî's; but he
was not able, it seems, to guarantee any actual
interference on 'Alî's behalf by the Tammites.
Still insofar did Al-Ahnaf contribute to Al-Ahnaf's
success as to induce the Tammite contingent of the
population of Bâṣra (which numbered 6000
men) to remain neutral during the battle of the
camel" (s. 856). After the battle had been
decided in Al-Ahnaf's favour, Al-Ahnaf is said to have
been the first of the Bâṣra people to do him
hommage. Also in the battle of Siffin (31st s. 637)
we find him on 'Alî's side. He was at that
time advanced against Abd Mâsid being
appointed sentinel. The Umayyad government
afterwards considered him a man of great influence
with his tribe; as evident from the fact, that
he was one of the leading men, whom Musâ'îm
summoned to Damascus in 56 (675-676) in order
the latter is usually understood to designate the entire district, which since 1875 has been a subdivision of the vilayet Bagdad, under the misleading name of Nejd.

Bibliography: Bibl. geogr. arbul. (ed. de Goede); Röcker, Vahdun, s. v.; Ch. Schuher, Seifer-Namh (Paris, 1881), p. 223 et seq. Further references will be found s. v. Nejd.

AHSÁ, whose real name was Ahmed, was a well-known Shi'ite theologian and the founder of the sect of the Shâhīks. His father was the Shâhîk Zain-al-Din of al-Ahsá, in the Arabian province of Bagdad. Ahmed was born in 1107 (1744). At an early age he left his native country, and went to Persia, where he stayed in Yezd and in Isfahánd. Afterwards he seems to have lived in Kerbelâ and in Kâzím. He died in 1242 (1827-28) on a pilgrimage to Mecca. Al-Ahsá was looked upon as a saint and a scholar, and was the author of various writings. The titles of his works are enumerated by Browne (A traveller's narrative, p. 224 et seq.), who derived his information from Mirzâ Muhammad b. Sulaimân-Tanâkhîn, Kiyâr al-Sulami (Tehran, 1304 = 1886). The doctrine, expounded in these writings, is not sufficiently known. To judge from what Browne says, it belonged to the pantheistic Shî'ites and worshippers of Ahriman, and its philosophical arguments were based on the opinions of the famous philosopher Mâlaq Sadrî (q. v.). Al-Ahsá's disciple Hâjî Sâyî'd Khân of Râdî (d. 1325 = 1843-44) continued in the spirit of his Master, but after his death the opinions of the Shâhîs diverged. Part of them went over to the Bâbîs (q. v.), others on the contrary opposed the claims of the Báb. The literature on the subject is given by Browne, ibid., p. 242.

AHSÁ is the name of a province of the realm of the 'Abbásidâns. It was bounded by the 'Iraq on the West side, by the province of Fârs (Fârîs), the ancient Persis, on the East and South, and on the North by that part of the province of Tâbûl which is nowadays called Lâr-rû'sh of Al-Ahsá, more generally speaking, about the same extent as the province of Susiana or Elymais described by the Greeks; the country of Elam known from the Old Testament; as Elamtu found in the cuneiform inscriptions; and as Khûzistan of the present day. The name Al-Ahsá is the Arabic plural of the singular Hûs (for Khûzûs) and corresponds with Syriac Hûsā, and he classic Greek Οῆζα which originally designated one separate tribe of that country. But the Persians coined it, in the form Susiana, as a name for the old country of Elam. Cf. comp. the name: 'Idhâdik in the Nacho, d. Kg. Geistlich, d. Wissen., u. Göttingen, 1874, p. 138 et seq.; Kierpert, Lôbôr, d. wirt. Geogr. p. 139; Marquart, Kühnreich u. d. Geogr. d. Persien Mosc.-Orient. (Berlin, 1901) = Akbând, d. Kg. Geistlich, d. Wissen., u. Göttingen, N. F., 1877, vol. iii. p. 2, p. 37; comp. the capital of Al-Ahsá esp. A. v. Kerner, Culturland, d. Orient unter d. Chalifen, l. 290-205; G. le Strange, The land of the eastern Celts (Cambridge, 1905) p. 232-247; Barbier de Meynard, Diction. géogr., hist. H litter., de la Persîa (Paris, 1861), p. 57-61; Witenfeld, in the Zeitschr. d. Deutsch. Morgenl. Gesell., xvii. p. 425; K. Ritter, Erdkunde, l. xvi. p. 228 et seq.

The capital of the province of Al-Ahsá was called Sük-âl-Ahsá (market of Al-Ahsá), and hence often simply Al-Ahsá. It is situated on Id-庄. 31° 19' N. and Long. 48° 46' E. (Greenwich) on the river Khûzû, below its confluence with the Dîrâfî, after which the lower part of the Khûzû is called Alâb Al-Ahsá (river of Al-Ahsá). For a time during the course of the Khûzû the river ceases to be navigable in consequence of rapids. In spite of this Sük-âl-Ahsá possesses strategically and commercially an important situation, that predisposed it to be the capital, which it was even before the period of the 'Abbásids. Reference has been made to it as the residence of King Nâcîr, grandson of the ancient Kings of Elam, who was afterwards robbed of his domination by Abâr-âd. The latter took Sük-âl-Ahsá and built a new town beside it, which he called after himself Hormûz-âdârsh (afterwards through contraction Hormûzârsh). The Arabs called it also Sük-âl Al-Ahsá, cp. Nûdarâne, Gâshâ, d. Perser w. Ûnder ele Zeit d. Sassaniden (Leiden, 1624), p. 19; 19; A. v. Gutsmind, Geogr. Iran. (Tübingen, 1858), p. 160 et seq. The official appellation Hormûz-âdârsh of the Sassanid period is also found in the Tâbûl and in the Syriac writing Alâb Al-Ahsá, cp. Nûdarâne, ibid., p. 19, note 5. At one time Hormûz-âdârsh also served as the residence of a Nestorian bishop; cp. Guilâl, in the Zeitschr. d. Deutsch. Morgenl. Gesell., 1883, 410. Sük-âl Al-Ahsá retained its importance in the Arabo period, especially as an emporium of commerce. Both its industry and trade were principally concerned with sugar. The province of Al-Ahsá at the time of the caliphate of the 'Abbásids had attained worldwide renown for its sugar refineries plantations and its sugar manufacture. In the X 0th (XIth) century the place began to decline. Al-Ahsá of the present day is a poor little place of about 3000 inhabitants, which occupies but a small area of the old town. Extensive ruins are still visible. Concerning Al-Ahsá in the middle ages, cp. Witenfeld, ibid., xviii. 424 et seq.; G. le Strange, ibid., p. 233 et seq. Concerning Alâb Al-Ahsá of the present day, cp. K. Ritter, Erdkunde, l. xi. 239-250; Rostain, Nouv. géogr. univers. l. 297 et seq. (with a map); J. Debeney, La Persie, La Chalde et la Susiane (Paris, 1887) p. 694 et seq.; J. de Morgan, Mission scientifique en Perse ii. (Royaude geography), p. 275 et seq. — Sük-âl Al-Ahsá is often belived to be identical with Aayret mentioned by Strabo, but this is almost certainly a mistake, cp. Andrea in Pauly-Wissowa's Realencyclo, des altert. Alterthums- wiss. l. col. 812. — The second capital of Al-Ahsá was Tustar, nowadays Shâster (q. v.). Particularly concerning the geographical conditions of the province of Al-Ahsá will be given in the future. Special reference must be made to K. Ritter, Erdkunde, l. xvi. 152 et seq.; Morgenl. Gesell., ibid., l. xi. 249-252; Bütteler, Susa (Leipzig, 1893) p. 2-23. The most important cartographic material concerning Khûzistan is given by Hantsch, Routen im Orient in den Jahren 1876-1879, revised by H. Künper (Berlin, 1882), and by J. de Morgan, ibid., l. xi. (with maps) and the Atlas der sarmat belonging to it. (Streek.)

AHSÁ (a.), Plur. of Al-Ahsá (q. v.); in the title of the 33rd Sînâ.

AI (r. ), Moon, Month: often used in compound proper names (cp. Radhëf, Veresch von Wörterb., l. 5).

ÀIBEG (Arab. pl. Aibâk), properly called Ibr al-Din Abu-l-Manghr Albeg al-Ma'âmmûn,
was a man of the Ayyubid al-Malik al-Mu'izz of Shiraz al-Din 'Uthm, who was governor of Damascus from 597 till 615 (1200–1218), and afterwards, from 615 till 624 (1219–1227) head of the court of his father al-Malik al-'Adil. In 608 (1211–1212) the town of Saffhad in the Hanwa and the surrounding district were given to him in fee. He was also appointed Majordomo (Ustâd-Dar). In the year 624 (1227), when al-Malik al-Nâsiq al-Dâwi had succeeded his father to the throne of Damascus, Albag was even raised to the dignity of regent of Damascus and thus held the entire political authority in the hands. At least, however, Damascus was conquered by Dâwi's uncle al-Malik al-Aghfar. Albag was dismissed from the Regency, but he was allowed to keep his freeholds in the Hanwa. In 636 (1238) he is still called "Lord of Saffhad and Zarra." But after that he became suspected of treacherous designs and lost his political position. He died in 646 (1248–1249) at Cairo. His remains were removed to Damascus, and interred in the mausoleum specially built for him. Albag has done considerable service to the countries which he governed by the erection of various works of architecture. In Damascus he founded three Hanâa'ite academies, and a fourth one in Jerusalem. As Majordomo he had to be especially concerned about the building of Meâlah. As Governor of Saffhad he tried to promote the traffic along the commercial route from the Northern Arablands and Babylonia to Damascus, as far as it ran through his dominion. He erected the desert castle of Kafr al-Asrâq, had the large water-reservoir (Meqâla, otherwise Berka) in 'Ainark repaired, and built a large Khân in Sâla. His rage for building communicated itself to his subalterns, especially to his manumolâ Alam al-Din Kafrânî. The following amongst his buildings in his fief deserve special mention: a Khân in Saffhad (617 = 1220–1221); arcades and a tower (minaret) in the mosque of Saffhad (630 = 1232–1233); a castle in Kafr al-Asrâq (634 = 1236–1237); a Khân in Zarra (636 = 1238); a reservoir in 'Ainark (636–637 = 1238–1240); and a mosque in al-Ayn (635 = 1240–1241). About the year 630 (1232-1233) the mosque and Khân in Saffhad are also known. The exact date is not known, the inscriptions having been preserved in a fragmentary state.

— Both Shiraz al-Din 'Uthm and his manumolâ Albag are well known from the time of the crusades.

AÎBÊG KUTB AL-DIN was the first ruler of the so-called slave dynasty, which after the death of the Ghürîe Shah Shihâb al-Din (Mu'izz al-Din Muhammed [q.v.]) came into power in Delhi. Albag was a native of Turkistan and had come to India as a slave of the above-mentioned Muhammed Ghûrî. Afterwards he arrived in Ghurâz as a slave of the above-mentioned Muhammed Ghûrî. The latter soon noticed the eminent talents of his slave. After Albag had vanquished the Kulpûta in a great battle near Nâsirîn, and had conquered Adumut and other places in India, Muhammed Ghûrî appointed him his commander-in-chief (Sipah-Salâk) in India, and entrusted to him the complete submission of the country. After that Albag conquered Mirât and Delhi, took a prominent part in the conquest of Râmâra (1194) and in the war of the Ghûrîe against the Râjâi of Gâvâlîr, gained a big battle against the prince of Aânhâwara, took the fortress of Kândjâr (599 = 1202), in short, the whole of Hindustan north of the Wêmandiya was annexed to the dominion of the Ghûrîe mainly by his strategy. Meantime Albag had chosen Delhi for his residence, and after Muhammed's death (602 = 1205) he was recognized by his successor Ghûrîyâb al-Din Muhammed as an independent sultan. Then Albag began a war against another former slave of the Ghûrîe, called Voldarâ, who had risen to princely dignity in the same way as he had done. For forty days he occupied Ghurâz, the capital of Voldarâ. Not long after his return to India he died in 607 (1210), in consequence of a fall which had been incurred while playing the Persian polo game. His son Arân Shâh being unable to assert his authority, Albag's dominion passed into the hands of his slave Bûntâsh [q.v.] who had served him in the same way as Albag in his time had served Muhammed Ghûrî. Albag was not only an eminent warrior, he also gained great fame by his liberality, his justice and his love of art. The Kutb Minar, which is still seen at the principal mosque not far from Delhi, has been called after him. The inscriptions which it contains have been published by Thomas in his work The Pathan Kings of Delhi. Cp. also Arcot, Reports i. and iv.

AL-AIDARUSI, ABD AL-RÂMÎD AS MALÂZÂ, born in 1135 (1722), was a mystic belonging to a South Arabian family of dervishes, which had been famous for ages. In his youth he accompanied his father to India. But a couple of years later he returned to his native country and after a few more journeys he settled down in al-Târî. In 1714 (1670) he removed to Cairo, which he had already visited three times. Thence he undertook several journeys through Syria. He also went to Sumhâl. A year after his visit there he died in 1725 (1778).

He wrote various works on mystical doctrines according to the ideas of the Naqshbandiyya order. He was also the author of a collection of poetry Tawûk al-sarfî, which was printed in Cairo (1857) along with two supplements: Tawûk al-sarfî (concerning his experiments in Kâppî) and Ghûrî al-tawûkî (containing letters from Egypt).

(Breckelmann.)
'AIDHAB is a port on the African coast of the Red Sea. In the Middle Ages 'Aidhab was a well-known harbour for the Mecca pilgrims, and an import-market for goods from Central Africa and for those from India which were shipped via 'Aqien. The Arabian geographers describe its situation as having been just opposite Djidla, at a distance of 13 days' march by caravan from Assuan and 17 from Kh. It must not be identified with one of the well-known Ptolemaic ports, but almost certainly with the 'bourough' of Aidip, which is found on modern maps further down south, a little below Lat. 21° N. — Between 450 and 770 (1058–1356) 'Aidhab–Aidip was at the height of its prosperity, though in the earlier centuries of the Islâm the place was already much frequented by pilgrims and merchants. The caravan route between 'Aidhab and the Nile ran to three different terminals: Assuan, Edfu, and Kh. Assuan was the oldest station of these three, but afterwards Kh. attracted most of the traffic. 'Aidhab was an unpromising town of about 500 collewges made of reeds. The inhabitants were Boghish, with whom Arabic tribes had intermarried. They had an administration of their own, under the supervision of the Egyptian Government. All means of subsistence, even water, had to be imported. The populace earned a livelihood by fishing and pearl-diving, and especially by conveying goods and pilgrims by sea and land. When at the close of the VIII (XIV) century the Indian trade reverted to the north of the Red Sea, 'Aidhab began to decline and sank into oblivion.

AIDIN GÜZEL HİAR (the beautiful fortress of Aïdin), the ancient Tralles, is a town of Asia Minor, on the river Deûlûtik (Telabak-Cay) (the ancient Euxon), a tributary river of the Maeander. It has 36,250 inhabitants, amongst whom there are 26,000 Musulmans, 8,500 orthodox Greeks and 1,400 Latins. It is situated on the slope of the Djumà-dagh (the ancient Messogis), below the plateau which supports the ruins of Tralles, and surrounded by green fields and gardens. It contains two stone bridges, fourteen mosques, four churches, one synagogue, extensive and much frequented bazaars, tanneries, factories of leather belts for the Zeibeks to carry their weapons in, a promenade called Banaraka, and a railway-station on the line from Smyrna to Dimar (Geziye). It was occupied by the Seljûq Turks in the Middle Ages, and became afterwards the capital of the principality founded by Emir Aïdin, who gave his name to the place. His grandson Emir Isà surrendered it to Sultan Bayçàr I. and after the death of Emir Bayçàr it was finally conquered by Sultan Murûd II (830 = 1426). The family of the Ksar-ôltûm-ôgûlîs possessed the hereditary government of the province for several centuries, until Sultan Mahmdî at last deprived them of it (1:249 = 1353). After that the town became the capital of the province (çalli, vilayet) of Smyrna.

At the present day, however, it is only the capital of a sandjak of that province, officially known as Aïdin. This sandjak embraces six kazas (Aïdin, Segrè, Çuna, Bozdaghîn, Nazîlî, Karçà 6), eight nîñîye and 440 villages.

AÏLA is a seaport town in the north-east corner of the bay of 'Akaba (Lat. 29° 30' N., Long. 35° 5' E. [Greenwhich]). It is situated north of a rather steep lateral spur of the Djebel Umûn Nûhî. The Arabic name Aïla (Waila) corresponds with Hebrew El-Pâ'nîm, Elitén, Elûn, Elûnâ, Greek Aïléa, Aïléa, Aïléa, Kómbak, Aïléa, Aïléa, Aïléa, Aïléa, Aïléa, Hâla, Lûnîn, Lûnîn, Aïléa, Aïléa, Aïléa, Lûnîn, Aïléa, Hâla. In antiquity and partly also in the Middle Ages Aïla was of the greatest importance both for the shipping and caravan trades, for there, at the northermost bay of the Red Sea, were the routes from Egypt to Central Arabia and from the Phenician-Philistine harbours southwards crossed each other. Therefore to possess it became the main aim of the Israélites, when striving after the expansion of their dominion; and David, who subjected the whole of Edom, succeeded in conquering it. Though Solomon lost the eastern part of Edom to Hâdad, the western part remained in his power as a province of Judah. With Phenician help he built a mercurial marine at Aïla (1 Kings 9, 14; II Chron. 8, 16), of which however no further mention is made after his death. Aïla remained for some time in the power of Judah. Uzias had it fortified (II Kings 14, 18; II Chron. 26, 3), but soon afterwards it fell into the hands of the Edomites and still later was captured by the Nabatæans. In 105 A. D. it was annexed to the Roman province of Arabia, and early in the 4th century it is referred to as a part of the province of Palæstina Tertia; and in the seat of the Legio Decima, which accounts for its being connected with Syria and Palestine by military roads. Christianity took root here at an early period: amongst the signatures on the acts of the council of Nicæa there is one of a Bishop Peter of Aïla. The decline of the Byzantine power in the border districts proved dispositions to the commerce in Aïla, which, together with the surrounding country, was subject to the sphere of influence of the Ghassânîde princes.

In Tabâk 9 (650) 'Uzûnân b. Rûfû, Lord (acc. to Macêthi) Bishop of Aïla, offered to pay a yearly tribute of 300 dinars to Mu'mar. In exchange for that no harm was done to the town by the Moslem armies, and it revived to new prosperity. As the harbour became unnavigable, it was removed further down south, and the town was laid out towards that side. The ancient Aïla was abandoned as early as the 9th century and the new town of Wail (diminutive of Aïla) was at the period of 300 dinars to Mu'tam. In exchange for that no harm was done to the town by the Moslem armies, and it revived to new prosperity. As the harbour became unnavigable, it was removed further down south, and the town was laid out towards that side. The ancient Aïla was abandoned as early as the 9th century and the new town of Wail (diminutive of Aïla) was at the period of 300 dinars to Mu'mar.
AIMAK is an East-Turkish and Mongolic word, almost synonymous with the more usual *tribe* of Turkish dialects. The original sense of both words is *tribe*, but they are also used to denote larger tribal unions as political units. Northern Mongolics (*Khalkha*) is divided into four aimaks on the basis of the four *khans* (*Tusheet Khan*, *Tusheet Khan*, *Sain Noyun Khan* and *Tamshi Khan*). In Afghanistan four nomadic tribes (*Ulaghli*, *Nazar Khan*, *Firkol Khan*, *Morek Khan*) are called by the comprehensive appellation of *Citi* (*Zhik* Aimak (four aimaks).

AIN (v.) = Law, institution. Famous are the *institutions* of Emperor Akbar, collected by his Vizier Usul-i-Fadil [q. v.] in the third volume of *Akbar Name*, under the title of *Ain-i Akbari*.

AIN (a.) = Eye, also spring, substance etc. In the sense of 'eye' the word is sometimes used in compound proper names (*Lakhah*), such as 'Ala al-Dawla (Eye of the government), and 'Ain al-Mulk (Eye of the realm). In the sense of 'spring' it occurs in various geographical names, the best-known of which will be given below. — Concerning 'Ain as the name of an Arabic letter see the next article.

'Ain is the name of the 18th letter of the Arabic alphabet, which in modern Arabic writing is denoted 70. The original symbol in the North-Semitic inscriptions was a little circle like our 0, whence, as it resembled an eye, the name was derived. It is the voiced (maghāra) glottis, the throat-sound with the deepest possible articulation (C. W. Litt. in *Ain* iv. 349; xxv. 216, b, *Ain* 34); the nearest sound is *h*, to which it is consequently assimilated (Zamakhshari, *Muqafi* p. 194; xxv. 26, *et seq.); it shifts its articulation place towards that of the *th* where it is followed by a pause (*Mufr. p. 190, et seq.*). Al-Khali has also considered the *ain* to be the deepest throat-sound, and for that reason he started his lexicon with that letter. Later writers on the contrary (amongst others al-Zamakhshari, who follows Ibnu Sawaih) *Mufr.* p. 183, *et seq.* are mistaken in giving precedence to the *ain*. To the Arab minders springs up from innumerable sources close, by the sea is salty and spreads fever. The inhabitants earn a livelihood mostly by trade, and in a few cases by agriculture; they also cultivate palms. About 3500 date-palms in the neighbourhood of al-Akhah are the property of the chieftains of various Bedouin tribes, who pay about one half, two thirds or three quarters of their profits to the villages for cultivating them. There is no fishing. In 1858 not one boat could be found in the whole village. Little is left of the ruins of Al-Akhah (its according to the modern pronunciation), which are to be found at a distance of 1½ miles towards the north. But at the present day, southeast of these ruins a seyel-āl (seyelī-girmānī) is still worshipped because of its sanctity (it is inhabited by a spirit); a circumstantial account is of notice, as the ancient town of Elath (*sāhār* tree) seems to have owed its name to it.

AIN DILFE is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the monastery of Kabir al-Banūt. Its source is on the northern slope of the Diebelfavādī and it runs through a narrow channel cut out in the rock into a pump-room (*kūblī*). According to a yet unpublished inscription, this pump-room was built in 677 (447-4472) by a man named to high-sounding village, the name of Māltān b. Abu. It is highly probable that on account of the...
AIN DILAFT, "spring of Goliath," owes its name to the tradition that it was the place where David slew Goliath. It is situated close by the bank of the small river DJILFT, east of Zerqa. The crusaders called it Tutanza. At this place the Mongols were beaten by the Egyptians under Kajus on 26. Ramadam 658 (3. Sept. 1260). C. Weil, Gesch. d. Chalifen, IV 16.

AIN DRAHAM is a locality in the north of Tunis, at an elevation of 2644 feet, on the very pass between the Djebel Fersig (2968 feet) and the Djebel Bir (3343 feet), through which the road runs, which leads from the valley of the Medjerda (Souk al-Abia) to the Mediterranean (Taharka). Consequently Ain Draham is the most important strategic point of Khâmilia, commanding the whole of that mountainous region. During the French occupation of 1881, it was occupied by the troops of General belebecque. Since then a permanent camp has been established there. A European market-place has developed itself close to the military station, numbering at present 500 inhabitants, who find their principal livelihood in exploiting the cork-tree forests.

AIN MUSÄ (Moses' spring) is situated east of Petra in Edom. Islamic tradition connects it with Sûra 2, 97; cp. Brutman and Domaszewski, Die Pro vinz Arabia 431; Musli, Arabia Petraea 31; Edmon, 1907; 42; and the Arabic Aráb. - Other Moslem spring are: 1. Those at the foot of the Naba mountain in Shoab (cp. Survey of Eastern Palestine p. 89); 2. the spring near Al-Kaf on the western side of the Hâwrán mountains (see the map of the Djebel Hâwrán in the Zeitschr. d. Deutsch. Palästina, xlii, 123; 3. those on the east coast of the bay of Suez, south-east of Suez. The so-called "AIN MUSÄ near Cetous" is not actually a spring.

AIN SHAMS is a town in Egypt. Ain Shams is the Arabic name of the ancient Egyptian town of On, which the Greeks called Heliopolis because of its famous sun-temple. A recollection of this cult is contained in the Arabic name (sun + spring = eye), which seems to owe its form to popular etymology of an old name. In the early Arabian era Ain Shams was, according to some authorities, an important town, and the capital of a separate district (lihara); but other assert that at that period the place had already fallen to decay and was used as a public quarry. The Fatimids "Ala built a few castles on the spot, but afterwards the destruction became complete. The extensive ruins, especially the two obelisks (mirabilis) in front of the temple, stirred the imagination of the Arabs. One of them has been preserved until the present day, the other collapsed in 1525. It is said to have contained over a hundred of ore. Still at the time of the Arabs a statue of a beast or a woman with a man on its back stood between the two.

The other curiosity of Ain Shams was its balasen-garden, which was cultivated under the supervision of the government. During the Middle Ages the balasen-tree is said to have grown only here, though formerly it had also been a native plant in Syria. According to Coptic tradition accepted by the Moslems, the Mother of Jesus had washed the body of child in the spring there on her way back to Palestine after her flight to Egypt. Since that time the water had been salubrious, and only on those fields, which were watered by it, the balasen-tree was able to yield its product, which the Middle Ages held in such high esteem.

AIN AL-TAMS (date-spring) was a locality west of the Euphrates, not far from a probably north-west of the latter place. As it was situated on the very border of the Syrian-Arabian desert, Ain al-Tams was primarily important as a provision-market for caravans.

AIN TEMUSHENT (Ain Temouchent) according to the official French spelling) is a town in Algiers (district of Oran), situated at the confines of the Wad Temouchent and the Wad Semaan, at a distance of 45 miles south-east from Oran, and 36 miles north-west from Flora. There are 7000 inhabitants, 4000 of whom are Europeans. Ain Temouchent occupies the situation of the Roman town of Abulca. At the time of al-Bekr there was in that neighbourhood a locality called Karh Ibn Suan. It was found at a distance of a day's march east from the Berber town of Ales, and also at a day's march west from Dje rawa Lazrî, a marketplace established by Ubar dân b. Siman al-Andalusi, the ruins of which can still be seen at the spot called Mediat Aluan on the left bank of the Rio Salado. The French occupied 'AIN TEMUSHENT and fortified it with a redoubt, in which, in 1845, 79 men withstood the attack of 1500 soldiers of Abd al-Kadir. In 1851 the place was raised to the rank of a commune. At the present day it is a flourishing centre of colonisation.

AIN AL-WARDA is a locality, which according to Yâkî is identical with Ra'a 'AIN [q.v.]. It owes its fame to the big battle of 24 Djamda 1:65 (6 Jam. 688), in which the Shîites
of Kafr were slaughtered by the Syrians. Cyp., Well, Gesch. d. Chalifen 350 et seq.; Müller, Der Islam auf Morgen- und Abendland, p. 374.

Ain Zarba is a town in the county of Minor, north of Mersin (the ancient Mersinica); to be more exact: situated in the plain formed by the Djilqan, the Tyanaus of the ancients, and its tributary the Sambat. The town existed already in antiquity and was then called Anazarba; cp. Hirschfeld in Pauly-Wissowa, Realencyclop., der Blatt. Alterthumskunde, 1, sol. 3101. The Arabs connected the first element of the name, Am, with zoom 3 spring; cp. Sauer on the oasis in his native town, Sahl. Caliph Harun al-Rashid caused 'Ain Zarba to be strongly fortified in 180 (796). The town became an important centre in the 10th century, when it was supplied with new fortifications by the Buyid ruler Saif al-Dawla. It was nevertheless captured several times by the Byzantines, notably in 952 (cp. Freytag in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, 21, 98; Well, Gesch. d. Chalifen, p. 171). The inhabitants of the town, who called it Anazarba, destroyed it. Afterwards 'Ain Zarba belonged to the little-Armenian realm, which was founded in Cilicia in the 11th century. The name of the town was corrupted to Nawarz in the 12th century. At the present day the place is a complete ruin known by the name of Anawara. — Cz, especially O. le Strange, The land of the eastern Caliphate (Cambridge 1905) p. 129; K. Ritter, Erdkunde xix. 36. For further authorities cp. Hirschfeld in Pauly-Wissowa, ibid. (Streck.)

Aini (Hasan), renowned Mumayyid-i ShusCro (corrector of the poets), was born at 'Ainshah (1170 = 1756), studied with a view of entering the civil service, but afterwards abandoned the idea and got an appointment as professor of Arabic and Persian at the Chancery of the Superior Pontiff. He died in Safar 1554 (May 1838) and was buried in the monastery of the Mesiwli devotees of Galata to whom he belonged. The best of his poetical works is the Suhita-nma, a summary of his philosophical reflections on human life. A prothomous work is a collection of ghazals and walticks (chronograms). His panegyric of the Prophet were collected under the title of Nezari Bawwadik (Cambridge 1884) by Hammam-Farghali, Gesch. des vicum, Dichtknst ii. 302; Gibb, Hist. of ottoman poetry iv. 336 et seq. (Cl. Huxley).}

Al-Aini (Abu Muhammad Majmud b. Ahmid b. Musa Badil-din), historian and faqi, was born on 17 Ramdaan 762 (22 July 1360) at 'Ainshah, a locality between Aleppo and Antioch. He belonged to a cultured family (his father was a kahfi) and commenced his studies at an early age in his native town, afterwards in Aleppo. At the age of twenty-nine he visited Damascus, Jerusalem, and Cairo. Having been initiated at Cairo into the mystical doctrines of Shisun, he entered for some time the Bajgudiya monastery of derelics, which had been newly founded. After several journeys to Damascus and his native town, he settled finally at Cairo and was there appointed mawashi. In 821 (1420-1421), under the reign of Sultan Malik al-Zahir, he was repeatedly dismissed, re-appointed, and finally succeeded in 825 in obtaining the enviable post of inspector of the pious foundations. At the accession of Sultan al-Malik al-

Mu'ayyad Shah, (815 = 1412) he fell into disgrace; but soon after was received again into great favour; later he was depopulated of his office. His knowledge of the Turkish language was of assistance in ingratiating him with the sultans; Mu'ayyad, Malik Zahir Tahrir and Malik Ashraf Rashid. For Tathj he translated the treatise on law by al-Kadi into Turkish. In the course of his long and frequent conversations with Sultan al-Malik al-Ashraf he read aloud to him his Arabi chronic, translating it at sight into Turkish. This fortunate gift enabled him to become a perfect courtier, and composed, besides his other works, panegyrics in honour of his masters (a life of Mu'ayyad, a eulogy of al-Malik al-Ashraf). Having obtained the post of supreme kahfi of the Hannafis in 829 (1425-1426), he occupied it for twelve consecutive years. In 846 (1442-1443), at the age of eighty-three, he was even exalted in complaining the charge of munishim, inspector of the pious foundations, and supreme kahfi of the Hannafis, a unique case according to his biographers. He was also professor at the Madrassa Mu'ayyadiya. In 853 (1449-1450) he was disgraced, and two years later he died (4 Dhu'-Al-Hijjah 855 = 28 December 1451). He was buried in the Madrassa Al'amiya, which he had founded, and where, at a later period, another commentator of al-Bukhari, al-Kastallani, was also to find a sepulchre.

The life of al-Aini affords highly interesting information concerning the conceptions of the literary men with the Mamluk sultans. He took an active part in the intellectual movement of his century, and had connections — had thought they were — with two of the most eminent Moslem scholars of that epoch, al-Maqrizi and the Shahi Al-Jilani. The Hadj Aga al-Musallam. He resided in the office of munishim, and consequently incurred his hatred; against the latter he conducted a very animated controversy: a propos of his commentary on the Sahih of al-Bukhari.

Al-Aini's works are very numerous. Some were written in Turkish, the majority in Arabic. The three which are best known are as follows:

1. His General History entitled Fed al-maghani 20 tariikh wa itqan (an extract in Roumi de l'idiome des croisés, Hist. or. 1054; 2. His commentary on the poetical examples quoted in four commentaries of the Alifia of Ibn Malik, with the title of al-Makhfa al-maghalaya fi sharh al'asho'ib, sharh al-nufas (printed in the margin of the Kanzul al-musulim al-Bagdhadi, Biblia 1299, 4 volumes); 3. His extensive commentary on the Saint of al-Bukhari. Practically (published at Cairo in 1508, at Constantinople in 1508-1510, in eleven volumes). In this last work al-Aini evinces a certain method, which contrasts with the usual pell-mell of the Moslem exponents. In studying the separate hadiths he observes the following order: the connection between the hadith and the superscription of the chapter: an examination of the tawal of its peculities and of its authorities; an enumeration of the other works or of the other chapters of the Sahih where the hadith occurs again; an examination of the literal meaning, and finally of the juridical or ethical rules which can be deduced from the hadith.
AIR (or ARAB) is a mountainous district of the Sahara between Lat. 25° and 16° N. Air is 280 miles in length from north to south, and 60 in. breadth from east to west in its central part. Its area may be estimated at 8800 square miles, the population at a number varying between 60,000 and 100,000 inhabitants. This country is at present one of the least known regions of Africa. Barth explored it in 1850, and it was afterwards visited by E. de Bary, who was prevented by the hostility of the natives from advancing beyond Adjir. In 1869 the Sahara mission of Fourcroy-Lamy went as far as Jerwan and Agades, from whence they reached Damergi. They ascended the Traray and Chudeau (1865-1866). The information gathered by the Sahara mission rectifies and completes the statements of Barth concerning the geology, the climatology, and the topography of Air. But still, the work of the German explorers remains the principal authority upon everything that concerns the ethnography and the history of the country, as a long journey had enabled him to collect a great deal of information amongst the natives.

Air is divided into three distinct regions (Fourcroy):

1. Northern Air, being the transition from the Sahara-Hammad to Air proper. Plateaux and plains constitute its general aspect, the rising of the ground nowhere exceeding 3200 ft.

2. Central Air, stretching from the massif of the Mokhtel in the north to that of the Awdar in the south. It is 186 miles in length and forms a compact and homogeneous whole over a surface of about 110 miles. Prominent are the massifs of the Taghzai (3600 ft.), the Ighaghelt, the Timging, the Bandit, the Sersse, the Aggila, the Baghman, the Agzahna (the Agata of Barth; 3900 ft.), the Digbelt (4250 ft.) — the latter two separated by the mass of Kabneh (12250 ft.) — the Bila (4600 ft.) and the Awdars, all of them rising above a foundation of granite and sandstone. All these elevations, with their abrupt flanks resembling

inaccessible walls, end in sharp points or in isolated and isolated crests. The decompositions resulting from the evolutions has formed a flight of two terraces, surmounted by a "balustrade" of accumulated blocks. Deep, isolated ravines penetrate the heart of the mountains. In spite of this disturbed relief Air does not deserve the name of "Alpenland" which Barth assigned to it. Indeed, not one single massif seems to have an altitude above 3250 ft., nor rise above the level of the valleys any higher than 2200-2600 ft.

3. Southern Air, being a succession of rocky plateaux, sloping down towards the Soudan. A single summit, the Tilabak, attains a height of 3300 ft.

Though Air belongs to the area of the Sahara, it is much more watered than the desert proper. There is a moist season from the end of June till the end of August. But the rains are not so regular in Air as in the tropical zone. They only strike certain parts of the massif, and come down precipitously in violent but short-lasting showers, turning the discolored rocks of the "cloud" (wadya) into impetuous but intermittent torrents. They are principally useful in supplying the ghiand and in sustaining the subterranean water reservoirs. Their frequence and abundance moreover vary greatly from year to year. So far instance the year in which Barth visited Air, seems to have been exceptionally moist, but the year of the Sahara mission unusually dry. Fourcroy insists that currents are very rare. The rivers, according to his statement, are not "living," except at rare and short intervals. As for the hydrographical system, it is still very little known. On emerging from the mountains the valleys expand and the "wei" become lost in the desert. But in all probability the waters descending from the southern massifs flow towards the west, those of central Air towards the west and north-west, and those of southern Air towards the south and south-west, though to exact information concerning the principal basins in which they are received, we have yet been gainst.

The comparatively moist climate of Air supplies it with a vegetation much richer than that of the Sahara, though less xerogic than that of the Soudan. Most of the plants are of the gumtree order. The fauna is represented by the lion, the wild boar, the jackal, the gazelle, the wabon etc. In spite of the fertility of some of its valleys Air does not deserve the name of "Sahara paradise." Agriculture is but little developed. Damergha and the Soudan supply the millet which constitutes the chief food of the population of Air. If they were reduced to relying on their own resources, they would run the risk of starving, as was stated by Fourcroy, de Bary and Barth. Air owes its place of importance in the economical life of the Sahara first of all to the situation it occupies at the meeting of the caravan routes between Sokoto and the Niger, the regions on the one side and Touat, Ghent, Chelabers and the salines of Blima on the other. Consequently various African tribes have disputed the possession of Air amongst themselves, though it lends itself but little to the establishment of a powerful state.

The name of Air is mentioned for the first time in the 14th century by Leo Africanus (l. 6). The original appellation however seems to have
Air, which is still called amongst the black population. The earliest occupants of Askan were the Giderawa, a branch of the Hausa tribe. According to Mahammed Bullo they had come from the north-east and were perhaps related to the Coptic. Towards the close of the 16th century the Berbers in Hethem settled down in that country. On the road while at the present day connects Awilwara with Agades at about 30 miles north of the latter, they built the town of Tchamara or Askanara, which became the capital of a flourishing state and attained a certain degree of intellectual culture. It is now a ruin. But the political aspect of the country was thoroughly changed by the arrival and subsequent settlement of fresh Berber conquerors, the Kel-Ouft, about the year 1790 according to Barth. From the information supplied to him it appears that the Kel-Ouft came from the north-west, and that their most powerful families belonged to the confederacy of the Awarllok, whose language is still spoken by their descendants. The Kel-Ouft, on the contrary, are said to have come from the Alaskoko country, between Zinder and Kuka, a statement which was gathered by Coray but does not seem to be well founded. Be that as it may, the Kel-Ouft slaughtered part of the population of Air and enslaved the rest, with this restriction however, that neither these captives nor their children could be sold out of the country. They themselves took possession of the land, but however much they were to preserve some of its customs (e.g. their peculiar rules regarding succession to power), they could not long escape the influence of the Hausa element. Consequently the chief-lords acquired the habit of marrying negroes instead of Berber women. That accounts for the Kel-Ouft being much more a mixed race than the Touaregs in the north. Few individuals amongst them had a fair complexion (except in the Mamour tribe of the Ighdalalai). For that reason the northern Berbers despise them as "Htalin" or slaves. Their language became prevailingly by a great number of Hausa expressions. Still worse, this language, the Awarllok, soon ceased to be used in daily intercourse, and was reserved for the palavers and diplomacy. To the number of these tribes the Songhali of the Niger must finally be added, who as early as the Middle Ages had founded a few settlements in the region of Agades. They immigrated in great numbers during the 16th century and conquered the conquests of Mahammed Askan, Sultan of the Songhali. Hence round about Agades and in the town itself the Songhali language is still spoken at the present day by the Ighdalalai, a race springing from the union of Berbers and Songhali.

The population of Air can accordingly be divided into two principal elements: the black and the Touaregs. The Touaregs of Air constitute two groups: the Kel-Ouft in the north, the Kel-Geres and the Ilisan in the south. The Kel-Ouft comprise a great many subdivisions, the most important (according to Barth) being the Ighblang, the Kel-Ferwa (Tintellian), the Kel-Assareu (on the Bina road), the Ikasenu, the Kel-Taisen, the Kel-Tais, the Kel-Fes, the Kel-Padu etc. They can muster 10,000 men (Barth).

The Kel-Geres and the Ilisan have probably been established for a long time round about the massif of the Mahdun, but they were expelled by the Kel-Ouft and settled south and west of Agades. They seem to have preserved the physical characteristics of the Berbers much better than the Kel-Ouft. Their numbers amount to about 5,000. They are excellent riders, whereas the Kel-Ouft make exclusive use of the camel.

These Touaregs of Air differ in several respects from those in the north. They are half-settled and only move if compelled by the change of pasture-grounds. The groups into which they are divided are more important than those of the northern Touaregs, but still too insignificant and disconnected to constitute veritable peoples. Their political organization is rudimentary. Being excessively fond of their independence, they are incapable of putting a stop to their quarrels and have perpetual feuds amongst themselves. The chief-lords or "zamorok" of the various confederacies have but a small authority. The most important amongst them, the zamorok of Agades, who is often regarded as the sovereign of Air, has only a semblance of power, isolated from the rest of the country, he is at the mercy of the Kel-Ferwani. His resources are limited to the tribute which he levies on travelers who come from the north. Most of the localities of Air are only villages of hovels, or even simple encampments. Their names are: Ferwani, Timbilat, Taiselt and Assali. The last one numbered formerly 1000 houses and seven mosques, but only 50 dwellings have remained. The only congregation deserving to be called a town is Agades (or Egedesh). Barth asserts that it was founded in the middle of the 15th century by the five large Berber tribes that had divided Air between themselves. It became the capital of a prosperous realm, and a commercial centre for the merchants from the north and the Songhali tribes. It attained the height of its prosperity towards 1510, when it was captured by Mahammed Askan, Sultan of the Songhali. Part of the Berber populace emigrated, the rest submitted and became mixed in course of time with their conquerors. Agades retained some importance until the close of the 18th century, though it never recovered its former prosperity. But the development was accelerated by the decay of Gorgon on the Niger, the starting point for the caravans, which stopped at Agades before entering the Sahara, and by the emigration of the populace at the establishment of the Fulani caliphate. In 1850 the town contained only 6,000 houses, whereas in the 19th century, according to Barth, it could hold 50,000 inhabitants. Foussay estimates the present population at 5000 inhabitants, wretched people exposed almost to starvation during the rainy season.

The population of Air are Musulmans. Near every monastery stands a mosque consisting as a rule of a roof supported by poles or small stone walls. Agades alone possesses a mosque to which a minaret in the shape of a pyramid lends an almost monumental aspect. At various spots one finds in addition certain places of prayer (nasila), rectangular enclosures of varying size, bounded by walls running from north-east to south-west, and having a semicircular projection facing south-east. The most celebrated of these places of prayer is the one which is called Mahdm al-Shabak-Si
'Abd al-Karim (Makam Cheikh-el-Baghdadi, according to Fourcault), at the end of the narrow pass that leads towards Awarad. It was erected in commemoration of a Muslim missionary, who converted the Harra to Islam. In their dealings with foreign visitors they like to boast that as ṣafar, the people of Aisha affect great religious rigour. But de Bury and Fourcault agree in stating that their religion has been adulterated by the admixture of superstitions and fatalistic practices. Islam has none the less energetic and indefatigable propagandists in these regions. The most devoted auxiliaries of the patriarchs of the north, and the most fervid adepts of the fraternities amongst the natives are the smiths, who, in Aish, just as in the Soudan, enjoy very special consideration. The Tidjaniya have indeed a good number of Ṣaḥibis; but they cannot compare in importance with the Sufis, whose doctrines and influence are propagated by secret or avowed emissaries from Tripoli or Tunis. Although Islam has conquered the country, the Arabic language has spread but little. It is taught in the Koran schools (the one in Agades numbers 300 pupils at the time of Bards’s visit), but it is only understood by the learned.

Mag., xv., 1899, p. 535–540); E. Fourcault, D’Algérie au Congo par le Tchad (Paris 1902); the same, Documents Scientifiques de la Mission Saharienne (Paris 1905).

AIRAN (Air) is a beverage made of fermented cow’s milk. According to Vamdey (Das Turkmenen, p. 208) it is sometimes or even usually prepared from the milk of sheep and camels. The Altai people and other Turkish tribes concoct a kind of milk-beverage of airin and kumus. Cp. Radloff, Aus Sibirien I. 297 et seq.

ʾAISHA RENT ABD BEKIR, the favourite wife of the Prophet, was born at Mecca 8 or 9 years before the Hijra (613-614). Her mother was called Umme Riuma bint Umair b. ʾAmir, and her own ʾAmur was Umme ʾAbd Allah, after the name of her nephew ʾAbd Allah b. al-Zubair. After the death of Khadija Muhammad was incogent. One day Khawla bint Ḥakiim, the wife of Othman b. Maʿṣum, suggested to him the idea of marrying either ʿAisha, who was still a child, or Sawda bint Zainab, a widow of mature age. Muhammad proposed for ʿAisha to Abd Bekir. At first the latter made some objections but finally complied with his wishes. Muhammad however had to wait until ʾAisha was disengaged from her betrothal to Ṣulṭar b. Maʿṣum, after which he married her, two or three years before the Hijra, when she was only six or seven years old. But the marriage was consummated only six months after Muhammad’s departure to Medina (April-June 623). Muhammad’s morning gift amounted to 50 dinars, in order to give ʿAisha the mehndi (cf. Abū Ṭalāʾ, 1100) 400 dirhems. She brought her toys with her to the home of her elderly husband, and soon succeeded in winning the affection of Muhammad, who sometimes joined in her games. But an unfortunate accident afterward endangered ʾAisha’s power over her husband. It happened when Muhammad was on his way back from his expedition against the Bani Mughit in the year 6 (628). The historians do not agree in regard to certain details, although all found their accounts in ʾAisha’s own statement. The majority of them assert that ʾAisha was her husband’s sole companion in that campaign; she having been appointed by drawing lot according to the custom of Muhammad (ep. however Müller, Der Islam im Morgen- und Abendland. I. 173. ʿAisha. She travelled in a litter carried by a camel. As long as she was inside the chair, the curtains remained drawn but when there was a halt she dismounted and left them open. During one of these stops, not far from Medina, ʾAisha withdrew from the camp in order to perform her ablutions. When she came back to her litter she discovered that she had forgotten her necklace of Yemen shells, and went back to fetch it, leaving the curtains of the chair closed. In her absence Muhammad gave the signal for the departure, and ʾAisha’s retinue, seeing the curtains closed, concluded that she was in the chair. They loaded the litter on the camel and stabled on their journey. (She herself declares that her weight was next to nothing, as the food supplied to the women had been very scanty.) ʾAisha found on her return that she had been left behind, sat down on the ground and waited until some one should come to fetch her. Then Ṣafwân b. al-Muʿaṭṭa happened to find her there. He mounted her on his camel and led the animal by the rein. The sight of ʾAisha arriving alone in the company of a young man gave rise to grave accusations. The principal accuser was ʾAbd Allah b. Ubaiy (q.v.), to whom the following remark is ascribed: ʾṢafwân being handsome and young, it is no wonder that ʾAisha prefers him to Muhammad! Other persons of note were equally vehement in their charges, amongst others the poet Ḥusayn b. Thabit, Muṣṭafā b. Uthâma and Imām b. Dibâbah — the last one having a grudge against ʾAisha because the latter had opposed the marriage of Muhammad with her sister Zainah. Muhammad gave evidence that he had often brought ʾAisha by the company of Ṣafwân. ʾAisha became ill with vexation (or perhaps feigned some malady), and the Prophet excommunicated her by means of a revelation (Korâ 24. 51 et seq). saying that no charge of adultery is valid, unless it is supported by four witnesses, and adding that those who accuse but cannot bring forward four witnesses must be punished with thrashing. In spite of that the suspicion does not seem to have lost hold on Muhammad’s heart, and on his later expeditions he preferred to carry with him ʾUmar b. Salama. According to Spranger however (Zur Geschichte und Lehre des Mohammed [iii. 73]), who quotes from Bekhârî and Ibn Sa’d, ʾAisha accompanied him once more and again lost her necklace. But on this occasion she sent some Muslems to fetch it. The time of prayer overturned them when they were far away from the camp and without water for their ablutions. This circumstance induced the
Prophet to prescribe that where water was lacking fine sand might be used.

At the time of the Prophet's death 'Aisha was 18 years old. She has always remained a sacred personage to the majority of the Moslems. She often interposed in politics, and almost every in- triumgue was inspired by her. She opposed 'Uth- mane and declared that he had to do penance or resign, and she doubtless had a hand in the insurrection against that Caliph. But when 'Uthman was besieged in his palace ("the day of the house"), 'Aisha was not at Medina but had prudently gone "on a pilgrimage to Mecca". When afterwards 'Ali, her mortal enemy, was elected Caliph, she did her utmost to raise the Muslims against him, under the pretext of want- ing only to avenge the murder of 'Uthman. She joined Talha and al-Zubair, who assembled a great army and preparations and started for Mecca. The Tannamiya Y'sh b. Muna, who contributed largely to this expedition, bought 'Aisha a thoro- rough-bred camel, called 'Askar, for which he gave 200 dinars. The armies of 'Ali and Talha and al-Zubair met in battle on the Dumlukii 36 (4. 16). Victory was on the side of Talha and al-Zubair. 'Aisha, on her camel was in the thick of the fight; seventy men of the Banu Dhaba, wanting to defend her, fell one after the other, until the camel was killed (hence the name of "Battle of the camel" originated). 'Ali gave order to conduct 'Aisha to the home of 'Ubayt b. al-Harith b. Talha al-Abdi, and supplied her subse- quently with everything she wanted for her return to Medina. Seeing how much stronger 'Ali's party was, 'Aisha suggested to him that she should stay with him and be his companion on subsequent expeditions against his enemies. But 'Ali declined this offer and intimated that she had to depart. Once again she appeared on the scene at the death of al-Hamza b. 'Ali. It was suggested that she should be buried at the side of the Prophet, but 'Aisha opposed this plan, arguing that the tomb was her property. That day she was again mounted on a camel; the people of Medina began to murmur against her, but finally gave way to her wishes. The date of her death is generally assumed to be 17 Ramadhan (or 9 Ramadhan) 58, but the years 56 and 57 are also given. But as the day of the week is stated to have been Tuesday, only the first mentioned date (17 Ramadhan 58 = 13 July 678) is proved to be exact. Her last wish was to be buried that same night, as she was interred in al-Baqi' (the cemetery of Medina).

'Aisha occupies a prominent place amongst the most distinguished traditionists. 1210 traditions are recorded as having been reported by her direct from the mouth of the Prophet. She was often consulted on theological and juridical sub- jects. She is praised for her genius. She had heard, read, and knew several poems by heart. Some writers assert, that she possessed a special copy of the Kor'an.

416-417; iii. 62 et seq.; Muir, The life of Muhammed, A. Müller, Der Islam im Morgen- und Abendland. 1. 133; 312 et seq.; Wissew. (M. Selimow.)

'AISHA BINT 'ALI b. 'UMAYR ALLAH b. 'Abu Bakr was a celebrated Arabian woman. She possessed a high degree of all those qualities, which amongst the Arabs were valued most in the sex. She combined a rare beauty with noble descent and a lofty, proud spirit, such as the Arabs liked in their wives. Her father was one of the most distinguished companions of Muhammed, her mother 'Umm Khalifa was a daughter of Caliph 'Abi Bakr, and the Prophet's favourite wife 'Aisha was her aunt. No wonder that the beautiful Arabian became one of the most celebrated women of her time. A governor is even said to have lost his post for her sake. Once staying in the holy city for the performance of her religious duties, he sent a message to the governor of the place, al-Harith b. Khalid, who was appointed master of ceremonies of the pilgrimage, asking him to defer the general service until she had completed the last of the seven prescribed pro- cessions round the Ka'aba. The governor indulged her in this request; his ill-timed gallantry aroused such indignation, that Caliph 'Abd al-Malik b. Mar- wan felt obliged to dismiss him. 'Aisha was married three times, first to her cousin 'Abd Allah b. 'Abd al-Rahman b. 'Abi Bakr, then to 'Uqba b. al-Zubair and finally to Omar b. Uqba. Allah b. Ma'mar.

AISHA HINT YUSUF b. AHMED b. NAIF b. KHALIL b. AL-BUKAYHA WAS a younger sister of Muhammed b. Yusuf al-Hanafi (p. v.). She lived in 922 (1516) in Aleppo, but afterwards from 1523 in Cairo, and died in Damascus. Her poetical talent appears from a few ayats (Ahl- ward, Vern. d. arab. Haus. d. Kgl. Bibl. zu Berlin no. 7933, 1-3) and a bay'afa, a poem containing model examples of the figures of rhetoric, entitled al-Farid al-mu'akkil bi-ma'sh al-anwa (Ibid. 2.7326; Rioi, Supplement to the Catalogue of Arabs, Arabic Manuscripts in the British Mus. no. 985 v. 597; Moutoua, Catal. des ms. du Mus. de Navawi, 1349 et seq.). The manuscript of the Al-Farid of Nawawi is in the university library at Leipzig, no. 194 (Vollers, Leipzig Catal. ii. p. 54) is in her handwriting. Her biography is found in the anonymous Safina, ibid. p. 654. (Brockmann.)

AISSAOUIA is the French spelling of 'l'a- wilia (p. v.).

AIT (other names: Aith, Ait, Ait) is a Berber word signifying "sons of", used exclusively in compounded proper names, like Bani and Awali in Arabic. It is only used however by three groups of Berber tribes: in Algiers by the Kabyles of the Djurdjura (e.g. Aith Yenni, Aith Taret); in Morocco by the Berbers of the Central Atlas (Ait Atta, Ait Ayash); and by those of the Sild and the Wd Dra (Ait Bu Amran). Elsewhere (in the western Sahara) the words Ait (Atha) or Kit (Touareg), or also the Arabic words Had (see Banah) or Unad (see Awali) are in use. (B. Basset.)

AIWALIK ("quince country"), in Greek Ky- donia, is a town of Asia Minor in the province
of Khadāvērdēngē (Bruna). It has 20,974 inhabitants, for the greater part Greek Orthodox. The place was raced to the ground in the Greek war of independence (1826 = 1823), but has since recovered its prosperity, which is continually on the increase. There are 24 Greek schools, amongst which is a grammar-school recognised by the government of Athens. The people of Aiának cultivate the vine, olive, and maïz; they export olive-oil, soap, leather and tanned skins, nouis, wines and brandy, and common glass ware. The kara has no nābēya's and comprises besides the town of Aiának only one village called Kuthē.

AIWAN, or to be more exact, Aïwan, plural. Aïwans, is an Arabian mansion from Persia (Iran) (connected by Salemann with the div. pers. zīyā means house, e.g. Grundr. d. iran. Palast. i. 179). The latter signified a presence-chamber of the Sámadîs, being an immense, rectangular hall enclosed by walls on three sides and open on the fourth. Part of the aïwan belonging to the palace of Ctesiphon is still standing on a desolate spot south of Baghdad, and is known by the name of Aïwan-i-Kârî = "Hall of Chosroes." From the definite form of aïwan, which is derivable from the Pers. Aïwān, the appellation applied to a room in Arabian houses in Egypt and Syria, which is of similar character, open on one side (Lane, Modern Egyptian i. 18—20; Cuche, Dict. arab. p. 614. A. von Kersaus, Topographie von Damascur p. 10). This word already occurs in the Arabian Nights' Entertainments (Doré, Supplément ii. 563).

AIWAH (Aïwah) is the name of the servant (usually an Armenian) in a komak, who carries the food from the kitchen into the dining-room.

AIYAN (A.) = days, plural of ayyun (see above).

AIYAN AL-ARAB = "Days of the Arab" is the name which the Arabian legend is applied to those combats (e.g. Lišān, s. v., ayyun xvi. 139, according to the al-Sīkkit), which the Arab tribes fought amongst themselves in the pre-Islamic (sometimes also early Islamic) era. The particular days are called for example Yawm Bāḥū = "Day of Bāḥū," or Yawm Dhi Kār = "Day of Dhi Kār." Their number is considerable, but many of our subversive are not commemorative of proper battles like the "Day of Dhi Kār," but only of insignificant skirmishes or fray's, in which instead of the whole tribes, only a few families or individuals opposed one another. The Arabs themselves have sometimes noticed this fact. Al-Zuhair b. Bukkār for example, when speaking of the combats between the Aws and Khārizm says: "We have heard, the day of Bāḥū a proper battle had been fought, and that on the remaining days the fight had been limited to throwing of stones and beating with sticks. (Aghīnī ii. 162.)"; this passage was evidently derived from Zubayr's account of the combats between the Aws and Khārizm, which is mentioned in the Fihrist i. 146). The number of these combats, handed down by tradition, has moreover increased by the fact, that a great many were called by different names after the settlement, the well-springs, hills etc., near which they took place. Consequently one and the same occurrence has been recorded in various places under different names.

The course of events on each individual day is somewhat after the same pattern. What in this respect is said by Wellhausen (Skizzen und Vorarbeiten i. 25 et seq.) of the particular combats between the Aws and Khārizm, applied to the Aïyan in general. At first only a few men used to come to blows with one another, perhaps in consequence of a border dispute, or at some insult offered to the proteges of a man of influence. Thus the quarrel of a few grows into the hostility of whole races or even of entire tribes. They meet in battle, Bloodshed is generally followed by the intervention of some neutral family, Peace is soon restored. The strife, which has henceforth become an adversary the price of blood for the surplus of dead bodies.

The accounts of the Aïyan, written in good old prose, together with the ancient poems supply excellent information concerning conditions previous to Islam: They especially afford an insight into the chivalrous spirit, by which the old Arabian warriors were inspired. Popular memory kept the recollection of these heroes alive for centuries. So similar subject-matter to that found in the Aïyan often recurs in later popular romances, drawn out, it is true, in legendary fashion. One example may suffice: Zīr, a hero of the Siyâr ibn Hīdāl is none other than Muhāhīl, brother to Kâlahī Wīs, who sets a landing party in the Basa war between the Bakrī and Tughrīli tribes (Muhāhīl is already called al-Zīr = "the visitor of women" in Aghīnī iv. 145. et seq.).

Tradition affirms (e.g. Ibn 'Abd Rabhībī, Tādī, Cairo 1302, iii. 61 towards the end), that Mūhamma'd's companions already discussed the events of the Qāhēlīya in their assemblies (mawlahānī). Consequently the Aïyan al-Árab afforded at an early period a favourite subject of study to the Muhāhīlīyūn, i. e. traditionalists, who were engaged on the Aghīnī al-Árī, the most important history of the Aïyan, amongst which the Aïyan are included. In the Fihrist (maḥāla i. fons 1) several of these authors are mentioned as having written narratives of particular battle-days or of all of them. The original of such a work on the Aïyan has not come down to us; but considerable extracts by subsequent writers are extant. Most of these have borrowed from Aḥī 'Ubāda (a. 210 = 825). Of his work we have only the title (in the Fihrist G. 53 et seq.) mentioned in the Fihrist (G. 53 et seq.). Something more concerning him is reported by Ibn Khallīkān (ed. Wāṣāmsf. n. 734, who is followed by Ḥaḍīth Kāfirāt 1. 499 n. 1513 = s. v. Aḥī 'Ubāda al-Árāb). According to these authorities Aḥī 'Ubāda wrote two books on the Aïyan, a shorter one describing 73 days, and a more extensive one covering the beat of events of 1200.

The information concerning the Aïyan which later writers have preserved, is partly given in scattered bits, and partly in entire chapters in proper connection. Instances of the former are found in al-Tūrītī's Tadhīl commentary, in the Nīqāl al-arābī, where they are inserted by way
of explanation of events alluded to in the ancient verses, in the collections of proverbs, and in the works on geography (al-Bahri, Yākūt). Examples of the latter are contained in the "Bake al-farah" of Ibn 'Abd Rabbih (iii. 61 et seq.), in al-Nawawi's encyclopaedia Nihayat al-awal fi wasma al-adil (famn wūr, waqīr, bi'rīh v.), and in Ibn al-Athir's historical work al-Kamil fi l-tārikh (i. 367-517).

The account in the "Ifrīd was probably based on an oral work of Abu 'Ubaida. It is very concise, often purporting much more at some slight expense of detail, and obliterating the meaning, so that it can only be ascertained by comparison with more detailed accounts by other writers. Al-Nawawi has — apart from details — copied the whole chapter on the Ayyām from the "Ifrīd. Ibn al-Athir has tried to arrange the separate "Days" in chronological order, in accordance with the character of his History. His account goes much more into details than that of the "Ifrīd. A great deal of it must doubtless be traced back, either directly or indirectly, to the larger version of Abu 'Ubaida's work; much also to other sources all of which cannot be retraced.

It must finally be observed, that also al-Majdūdī treats of the Ayyām al-Arāb in the 29th chapter of his Madkūl fi l-maqāmāt. His narrative is extremely concise, but very useful for quick orientation. He restricts himself as a rule to giving the pronouncement of the name, explaining its meaning and enumerating the tribes which engaged in the battle. In this way 132 pre-Islamic days are dealt with by al-Majdūdī. In addition to these, 85 Islamic days are moreover enumerated in a second section of that chapter. See further bibliography in E. Mittwoch, Preislamic Arabian Chronology (Ajamun al-arab) gomnads litteis tendia sint (Diss.) Berlin 1889; C. L. Hyll, Ibn al-Kadhī's account of the First Day of al-Kalbū, in Orientalische Studien (Nördcke-Festschrift) pp. 127-154.

E. MITTWOCH

AIYĀR. [See IYĀR.]

AL-A'AYISHI ABD SALIM 'ABD ALLĀH b. MUHMMAD, AFI BERR, a Maghārib name of letters, lawyer and learned šūlā, was born on one of the last days of Ṣāḥba 107 (April-May 1628) amongst the Berber tribe of the Afit al-'Ayyāshī between the high and middle Atlas, not far from the sources of the Māla. He studied first under the guidance of his father, and at Dar's under the tutelage of Abū 'Abd Allah Muhammad b. Nājir al-Darī, and subsequently visited the principal towns of Morocco. His travels during that period were al-Attār, Māla, Azīz, Abū Kāf and especially Abu Muhammad 'Abd al-Kadhīl al-Šalībī who gave him an iṣāba.

He twice made the pilgrimage, in 1059 (1649) and 1664 (1653-1654). He made a sojourn of some duration at Mecca and Medina, where he delivered a course of lectures on the Muḥākamāt of Sūdī Khālid, the Shāhāme of Tirmidhūl, the Muḥākama of untoc. The Muṣāf of Shūrī, the Muṣāf of al-Muḥākama and the Muṣāf of Ibn Malik. After that he went to Jerusalem, where he only stayed a few days.

In coming through Cairo he attended the lectures of 'Ali al-Uṣūlī, Shiḥab al-Dīn Maḥmūd al-Khāṣṣab, and Abū al-Kadhīl al-Maḥallī. His principal teachers in Mecca and Medina were Abu Maḥdī 'Umar al-Dīn al-Shālīfī from Algiers, and the great šūlā Abu Iyāsh Malik Dāhīn b. Iyāshū al-Kūtānī al-Shāshūrī.

He died of the plague on the morning of the 19th of Dhul-Qa'da 1090 (13 Dec. 1679).

Al-A'ayishi wrote the following works: 1. A treatise in verse on "safīr", on which he afterwards wrote a commentary; 2. A study on the conditional particle bn; 3. Al-A'ayishi al-Maṣūmī and al-Maṣūmī, being a study on the tōmār discourse; 4. Ibn al-'Abīnī's "Māla" and "Malā"; 5. Ibn al-'Abīnī on "li ǧāḥib" li "mār wašā" (the Zana); 6. "Sūfī al-Maṣūmī al-Maṣūmī"; 7. Ibn al-'Abīnī's "Malā" al-Maṣūmī; 8. "Malā" al-Maṣūmī, a collection of biographies; 9. "Malā" al-Maṣūmī on "malā" al-Maṣūmī" containing biographies of his teachers (to judge from the titles evidently one and the same work with 6); 10. "Maṣūmī" al-Maṣūmī, known by the title of Rūḥa or "Narrative of a journey"; two large volumes printed at Fez 1306. It is an important work of information upon the way followed by the caravans travelling from the Maghārib to Mecca. Though his special concern is to give detailed information about the various stages, he manages to sketch with a single stroke the manners of the inhabitants of the countries through which he travels, to write the biographies of the scholars he meets, etc. The style of the Rūḥa is quite simple, except where he speaks of Sūfīs.

MOHAMMED BEN CHENDO

AIYIL (A.; cp. Hebr. ayil) is an antelope mammal, described by Damūrī (Cairo 1274-1275 L. 165-1677) as follows: Its horns are massive, and begin to grow when it has passed its second year. During the third year they shoot into branches, and this ramification continues until they form a tree-like antler. This is afterwards thrown off every year, but always grows again. The number of the "nodes" (antlers) corresponds with the number of the animal's years. The ayil is a good leaper; when chased it precipitates itself from the summit of a mountain (?). The hunter has first its attention diverted by whistling and singing, and then suddenly catches it unaware.

An exact determination on the ground of Damūrī's statements is not possible. But the description of the antlers as being like a tree gives reason to suppose, that some animal related to our common stag is meant, rather than the fallow-deer.

Damūrī also knows fabulous tales concerning the ayil's mode of living: it is fond of eating snakes, is on friendly terms with fishes etc. The antler, burnt, pulverised and mixed with honey
Aiyûb, the Job of the Bible, is mentioned in the Korân amongst the other just men. He is called there "the servant of God," and represented as the patient man. It is told briefly in the Korân that God had put Job to the test, that he had lost his wealth and possessions, and sent a disease of the skin, but that he was restored to his former state and that God returned to him all his family and possessions (Korân xxi. 83-84; xxxviii. 40 et seq.). The Moûlãn writers however have made a great number of stories about Job, which they derived mainly from the Book of Job and the Jewish haggadah. Job is generally represented as a Rûch, a descendent of Eem (see Testament of Job, ed. James, 1). He was the son of Amos (Korân), the spelling, however, is not quite fixed), and of a daughter of Lot. But according to one author, quoted by Tabari, he was the son of "him who believed in Abraham." The majority of the Muslim writers call the wife of Job Râma, daughter of Ephraim, son of Joseph. But one isolated authority states her name to have been Râmânah, daughter of Makhir (Makin), daughter of Manoah (Mâhî), whose son was mistaken for a daughter. Finally his wife is also referred to by the name of Zéhân (Zethân), daughter of Jacob (cp. Biçâlî in the Korân, i. 2). This last statement was evidently occasioned by a confusion of the names of Lech, the wife of Jacob, and of Zînâ, his daughter, who in the haggadah is said to be the wife of Job (Boûh Botûr, p. 19; Biçâlî Rabba, xxii; Targum of Jerusalem on Job ii. 9), and also in the Testament of Job (i. c.). The traditionists, amongst others Kâb al-Abhâr, have even described Job's appearance as a tall man with a big head, crisp hair, beautiful eyes, short neck and long limbs. His riches are described according to the Book of Job, with some exaggeration of course. A certain portion of this description is twelve sons and twelve daughters. Job was very plain and very generous; he was a kind guardian to orphans and a protector of widows. He was a prophet and God had sent him to preach monotheism to the people of his country, which, according to some, was the Hârâni, and according to others Israiliâni. Every evening all those who believed in his word assembled in his mosque and recited with him the same prayers (cp. Boûh Botûr, i. c.; Sûrû Oûlam Râbba, xxii.-Biçâlî Rabba, xxii. 9; Aûbûr K. Nâzârân, ed. Schechter, pp. 33-34, 164). The Moûlân traditionists have reproduced almost literally that part of the Book of Job (i. 6-8, 7), where it is narrated how Job was put to the test, and they add that Iblis was driven by envy to strike Job. When finally God had given him full power over the body of Job (except over his tongue, his heart and his intellect), Iblis blew into the nostrils of the latter, causing thereby an inflammation of the body and filling it with vermin. His body began to smell so horribly that he was forced to leave the town and make his lair on a dung-hill (cp. Aûbûr K. Nâzârân, p. 164; Testament of Job v.). The wife of Job had to seek work wherever she could find for herself and her unfortunate husband. Although Iblis saw that in striking Job he had missed his aim, he never ceased to devise new and artful means of torturing him still more. He appeared under different forms, one day to the inhabitants of the place, advising them not to give any work to the wife of Job, another time to the latter herself, trying to persuade her to believe in him, who could make an end of her husband's sufferings. All these means having failed, Iblis declared himself vanquished. The majority of the Muslim authors are of the opinion that Iblis was suddenly stricken when he was stricken by Job (see Biçâlî Rabba, xxiii. 3; ibid. 45; Testament of Job xii. 3; cp. however Biçâlî on the Korân xxxi. 83). The duration of his affliction is differently estimated by various authors: by some at 7 years (cp. Testament of Job, xxii. 36), by others for 7 months and 7 hours; also at 3, 13 or 18 years. The Korân (xxviii. 41) contains a short account of Job making a well spring up from the ground by stamping on it at God's command, after which he bathed himself and drank from the water. The Muslim legend however connects the angel Gabriel with this incident in the following manner: After Job had addressed to God the prayer which is mentioned in the Korân (I. c.), he was enveloped in a cloud, through which lightning flashed and thunder rolled, and Gabriel, whose voice sounded round about it, came to him, the cloud's head was far from the place where Job was, and as he was too weak to walk, Gabriel carried him on his wings. After his bath Job became again fresh and vigorous; the worms which had eaten his body were changed into little worms and honey-flies. The obscure passage in the Korân (xxviii. 43): "Take a birth, beat it with a rod, and do not forget when they have become a hundred times a hundred;" as referring to Job's wife, when he was commanded by God to beat, because he had sworn to give her a hundred blows. The reason for this oath has not been sufficiently ascertained; some are inclined to think that she incurred his anger by having been one day absent for too long a time, others assert that she had desired it by suggesting to Job that he should pray to Iblis. The same expounders add that it must have been a birch consisting of a hundred twigs, or perhaps a branch with a hundred leaves, so that he could scourge himself of his oath by a single blow. The narrators do not agree in their statements regarding the children which were born to Job after his re-establishment. According to some they were the same children which had perished and had been raised up to the earth; according to others that his wife had become young again and borne him other children, their number varying up to 26. God let it rain golden locusts on him, and he began to gather them, when he heard a voice saying to him: "Hast thou not enough?" and he answered: "Who can say "enough" to thy mercy?" He had two threshing-floors, one for corn, the other for barley; God made two clouds descend.
which filled the latter floor with gold, the other with silver. Some authors fix the age of Job at 93 years, asserting that he lived 20 years after his recovery; but others affirm that he lived the same length of time after as before his affliction. Macalister thickens the monstrous of Job, together with the purgation in which he bathed himself, were still celebrated in his time, and that they were to be found at a short distance from Nawi in the province of Urannah (op. Yâkub, Malghum ii. 645 s. v. Dair Ayibi). Still at the present day one is shown there the Shumâm Ayûb ("bath of Job") and in its neighbourhood the famous stone of Job (pâkâr Ayûb) must also be mentioned. It is actually an Egyptian monument of Ramesses II, as is sufficiently well known. It is interesting to know that Env-roqel, mentioned in the Bible (Joshua xvii. 7 et al.) is now called Ayûb Ayûb ("the well of Job"); see Mâdâr al-Din, Hist. de Jérusalem, publ. in the Führer durch den Orient ii. 130.

AIYYUB KHAN is the fourth son of the Emir Shâh al-Abbâs of Iraq. He was the whole brother of the Emir Yâkub who succeeded Shâh al-Abbâs in 1270, their mother being a daughter of the Khan of Ilyrâs. Aiyûb Khan was intimately associated with his brother in the principal events of his life, and when Yâkub was disgraced and imprisoned by his father he took refuge at Mecca and died in Persia 1301 (1874), and was there for the next five years. When Yâkub became Emir he appointed Aiyûb Governor of Herat, and on Yâkub's fall he began to gather troops and strengthen himself in his government until the reconquest of Abul-Rahman as Emir by the Indian Government. On this Aiyûb Khan, who was a popular favourite throughout Afghanistân, advanced on Kandahâr. He was met at Malwând by a small British Indian force under Gen. Burrows which he overwhoreled in July 1880. He then unawgily laid siege to Kandahâr, instead of advancing and raising the country from Kandahâr to Kâbul, where he had many supporters and abandoned his siege of Kandahâr rendered his failure inevitable. Gen. Roberts with a force of 10,000 men marched rapidly from Kâbul to Kandahâr while Gen. Stewart after making over charge of Kâbul to 'Abd al-Rahmân retired to India by Djâlalâbûd and the Khâbar Pass. Aiyûb was attacked and defeated by Roberts in Sept. 1880, Kandahâr was relieved, and the scheme of a separate Government there having been abandoned, was made over by the English to 'Abd al-Rahmân, Aiyûb who had fallen back on Herat renewed his attack the next year, in 1299 (1881) he defeated 'Abd al-Rahmân's troops at Gobulâk and took Kandahâr. 'Abd al-Rahmân assembled his forces and also had recourse to bribery to detach Aiyûb's supporters, and finally defeated him in September, but this time Aiyûb lost all hold on Afghanistan, and fled again into Persia. During the Qâbalai outbreak in 1305 (1887) he intrigued with the mutinous Ghilzai troops at Herat; and attempted to make his way into Afghanistan, but without success, as 'Abd al-Rahmân was now too strong. Aiyûb now saw that his cause was hopeless and made up his mind to accept the terms offered by the Indian Government. He surrendered to Gen. MacDowall the Coreen General at Mehestan, and went to India. He has since lived at Rawalpindi and Meerut, and receives a pension from the Indian Government, which has accepted the responsibility of preventing him from entering Afghanistan. Aiyûb Khan was once a popular prince, but fate has been against him. The murder of Liet. MacDowall who was a prisoner in his camp at the battle of Kandahar in Sept. 1880 would if committed with his knowledge be a blot on his character, but his conscience has never been proved, and such an act is contrary to his previous reputation.

Bibliography: see under Abul-Rahman.

ALYUBIDES is the name of a dynasty in Egypt, Syria and Yemen, one of the most powerful of the mediæval east, so called after Aiyûb b. Shâhî, the father of Saladin (Salâh al-Dîn). The latter was its actual founder, but after his death the realm was divided into various isolated principalities, which were only temporarily reunited into a vast dominion. The separate branches of the race flourished in Egypt till 650 (1253), in Damascus and Hâlab (Aleppo) till 628 (1260), in Mecopotamia till 643 (1245), in Harran till 748 (1341) and in south Arabia till 625-626 (1228). The descendants of Shûkhîb, a brother of the eponym Aiyûb, who from 574 (1178) till 661 (1262) were in power in Harrâ (Emsa) are usually reckoned amongst their number.

Shâdî (or Shâdul), Aiyûb's father, was a Kurd and a native of Dîwîn (Tovin), a town of Armenia. Nothing is known about his ancestors; the court genealogists of the later Aiyûbides have nevertheless devised for him a descent from a noble Arabian stock. Shâdî, together with both his sons Naudâm al-Dîn Aiyûb and Asad al-Dîn Shûkhîb, migrated to Bagdad, and was appointed commander of the forces of Tikrit on the Tigris, owing to the influence of a friend at the Baghdad court. Shâdî died in Tikrit, and Aiyûb became his successor; according to other authorities he, and not his father, had all along actually held that post. When in 526 (1132) the Aunâb Zengî of Masûl (Mosul) was defeated in the neighbourhood of Tikrit by the troops of the Seljuk of Bagdad, he was left in his escape by Aiyûb, the vassal of Zengî's enemy. This conduct was of course resented at Bagdad; and when, on the top of that, a few years later Shûkhîb, the brother of Aiyûb, slew a distinguished officer in a sudden outbreak of chivalrous passion, it had become impossible for them to stay any longer. In the night preceding their departure or shortly before, at any rate still at Tikrit and in the year 532 (1137-1138), Saladin, who was born of Aiyûb and Shûkhîb, went to Zengî, who had not forgotten Shûkhîb, and his rescuers and gladly welcomed the brave warriors. They remained for some time at his court in Mosul, and took part in Zengî's campaigns. They aided him for example in capturing Ni'âkh and Aiyûb was entrusted with the command of that place (early in 533 = towards the end of 1139). After Zengî's death the Bûrides at
tempted to reconquer Bébeck, and Ayûb, not being able to hold the town, went over to them of his own free will (541 = 1145-1147). He became a distinguished general, and finally even commander-in-chief, Shirkhâb in the meantime had remained in the service of Nûr al-Dîn Mahmund b. Zengi, who had inherited Aleppo from his father, Nûr al-Dîn aspired after the possession of Damascus, and Shirkhâb was commissioned to capture it from his own brother. But the two brothers made an agreement together, and Shirkhâb entered Damascus without a blow (545 = 1151). Ayûb received great honours from Nûr al-Dîn and was appointed commander of Damascus, whereas Shirkhâb obtained Hîm, which afterwards became the hereditary possession of his descendants.

When afterwards Nûr al-Dîn decided to interfere in the political affairs of Egypt, Shirkhâb was sent thither as his representative, and Saladin was ordered to accompany him. After difficult combats, both military and diplomatic, with the Egyptians and the king of Jerusalem, Shirkhâb finally succeeded in mastering the situation and in securing his brother Fâtimâ Idhâbîl Calîph Âfîd. At his sudden death Saladin was rallied to the post. No sooner had the latter secured his position, than, at the instance of Nûr al-Dîn, he declared the dying Caliph deposed and commanded the re-insertion in the âqâifa of the name of the 'Abbasîd Caliph Fâtimâ. Previous to that he had summoned his father and family to Egypt. Ayûb served him as a friend and counsellor, until 568 (1172), when he died in consequence of a fall from his horse. In the meantime the relations between Saladin and Nûr al-Dîn had deteriorated, owing to an evident aspiration after independence on Saladin's part. At the very moment when hostilities seemed no longer avoidable Nûr al-Dîn died. Saladin had previously made himself sure of a place of refuge to fall back upon in case of emergency, for instance in Nubia and also in Venetia, which had been taken for him by his brother Türkshâh. But after Nûr al-Dîn's death he had nothing more to fear. He occupied Syria without much difficulty and extended his dominion also over Mesopotamia as far as the Euphrates. Then the time arrived for him to attack the crusaders with his whole power. The battle of Hattin destroyed the forces of the Christians of Jerusalem (583 = 1187), and a few months later the holy city itself surrendered. Its fall became the signal for the third crusade, which did not bring about much change in the mutual relation of the two opposing powers. Soon afterwards Saladin died (586 = 1193).

Before his death he had divided his dominion amongst his sons and his brother Alâdîn. The latter obtained the Mesopotamian possession, Alâfîd Damascus, al-Arîz Egypt, al-Zâhir Aleppo. Venan remained in the power of Saladin's brother Tughâtînâ, who had already during Saladin's lifetime succeeded Tharnâbîh there.

No sooner had Saladin closed his eyes, than his sons began to quarrel. Alâdîn took advantage of these discontents and gradually supplanted Saladin's sons, until he had united almost the entire realm of his brother under his sway. He repeated Saladin's proceeding, dividing his dominion amongst his sons during his lifetime; Alâkâbul became his representative in Egypt, al-Ma'nîm in Damascus, and in Mesopotamia al-Fâ'dîn, who was succeeded by al-Ashraf until 607 (1210), when he was in his turn followed by al-Ashraf. Aleppo alone remained in the power of Saladin's descendants. Alâzâr was succeeded thereby by his son al-Azîz in the year 613 (1216).

Less important lateral branches ruled in smaller districts, but were all of them subordinated to that of Alâdîn. The latter died just about the time when the expedition against Damietta was started, which intervened between the fourth and fifth crusades (615 = 1218). His son and successor in Egypt, al-Kâmil, was compelled to retreat in consequence of insubordination in his camp. Damietta was taken, but the united efforts of all the Ayyûbides prevented the crusaders from further companies and retaken from them later on the only one they had made. Alâkâbul, fearing the intrigues of his brother al-Ma'nîm of Damascus, began to negotiate with Emperor Frederick II. But the latter had not yet started on his crusade (the fifth), when al-Ma'nîm died. Alâkâbul decided that his son al-Nâşir should be appointed by al-Kâmil's brother al-Ashraf, as the latter also governed the possession of Mesopotamia and was believed by al-Kâmil to be reliable. Frederick succeeded nevertheless, thanks to his diplomatic skill, in persuading al-Kâmil to yield Jerusalem to him, along with a narrow stretch of land connecting it with the sea. In return for that he promised al-Kâmil to aid him against all enemies, and to prevent the reinforcement of the states of northern Syria. This famous treaty, equally condemned by both Christians and Moslems, was concluded in 626 (1229).

Alâkâbul showed great skill in putting a stop to the constant little jealousies of the minor Ayyûbides by leading them to battle against a common enemy abroad. But his successes, gained over the Seljûqs of Iconium, aroused their envy again. An alliance was formed against him, which was joined by al-Ashraf of Damascus. But the latter was no longer alive at the time when al-Kâmil appeared before Damascus, and his brother al-Sâîb Ismâ'il had to surrender the town. Immediately afterwards al-Kâmil also died. That was the beginning of the end, for then began a fight of all against all. Alâdîn b. al-Kâmil, who had been proclaimed al-Kâmil's successor in Egypt, was soon supplanted by his elder brother al-Sâîb Ayûb. In Syria Damascus was recovered by al-Sâîb Ismâ'il, who concluded an alliance with other minor states against the Egyptians. Once more the Manûlûke troops of the Egyptian ruler succeeded by dint of a barbarous warfare, in restoring the bulk of the former dominion of the Ayyûbides, but it was only an outward show of power; they never had lost its inherent strength. When al-Sâîb Ayûb was made king of Egypt by the Abbasîd, St. Louis with the chevaliers of the sixth crusade appeared before Damietta. The town surrendered, but in an attempt to penetrate still further the entire French army was destroyed. In the meantime al-Sâîb had died. His wife Shoftar al-Durr, an energetic, daring woman, kept her husband's seat, and Tharnâbîh, his successor to the throne, had returned from his absense, but the latter failed to make himself agreeable to the Manûlûke of his father, and was murdered in 648 (1250). Shoftar al-Durr was proclaimed Sal-
in his stead, and after her the Mameluke Aïbeg. The latter was the actual ruler, although the immense grand-ducal of al-Kâmil, al-Azhâr Musâ, was mentioned in the Extracts until 622 (1225). Aïbeg was the first of the dynasty of the Bahritic Mameluke sultans.

In Aïbeg, al-Nâzîr Yâsîn had succeeded his father al-Arîs, in the year 634 (1236). He conquered the city of Damascus after the death of al-Sûlîf of Egypt. His claims to the supremacy of Syria led to hostilities with the Egyptian Mamelukes, which lasted uninterruptedly, until the Mongol invasion put a stop to them. The Mesoopotamian realm, where al-Munafîr Khâtîr had been the latest ruler, succumbed in 643 (1245). Aïpeg and Damascus were taken in 658 (1260). The Aïbieshes of Hamât, an insignificant沙龙 branch, descended from Saladin’s brother Shahânhî and founded by the latter’s son al-Munafîr, submitted voluntarily to the Mongols. Like the descendants of Sîrkhâ in Hims they were deprived of their independence by the Mamelukes. They retained only a semblance of power as governors under the rule of Egyptian Mamelukes until 742 (1341), except for one long interruption, whereas the Aïbieshes in Hims already died out in 661 (1263). More than 100 years before, in 645 or 646 (1246-1247), Aïbieshes in Yemen had also been supplanted by the Rashîdes.

The many heads within the dynasty and its separate families must not blind us to the fact, that the Aïbieshes as a whole were an important phenomenon. They reunited the scattered remains of the Fâtîmid realm and the states of the Syrian Arabîs into a concentrated power which was able to oppose the crusaders. The dynasty has also produced such a number of powerful characters as is seldom seen; not only Saladin, also al-Azhâr and al-Kâmil were excellent rulers. They equaled, if not surpassed, the crusaders in chivalrous virtues, and many an Aïbieshe prince was even dubbed a knight. Literary functionaries of that period have left us interesting information about their administrative activity. They were personally concerned about agriculture and the irrigation system, which is so closely connected with it. They also showed a lively interest in commerce. Several commercial treaties with European countries were concluded during their time, some of which have been preserved. The military power of the realm was based upon the slaveguards and the feudal system, which, in contrast to that of Europe, consisted in an inveigle with state revenues. The growing predominance of the slaves, which were bought for military purposes, the so-called Mamelukes, in the long run made the weaker princes especially the sport of their Praxitors.

The epoch of the Aïbieshes is also remarkable for a new phase of culture. In Egypt they were the representatives of the religious reaction, brought about by the Seljûqs, and of the constantly on-eroding Peripatetic system. The Aïbieshes, in a new artistic style (mudejar architecture), in an alteration of court manners and titles, and in the development of the specifically Turkish form of the feudal system. This culture is of such great importance, as it has exerted its influence on western Europe through the intermediates of the crusades. Many a rule and custom of European chivalry can be traced back to Aïbieshian practices, e.g. the heraldic system. The Mamelukes, who as a rule deliberately followed the traditions of the Aïbieshes (even in their titles), also continued at first the culture of their predecessors without any modifications.

Aïk (I’s) = white. This word often occurs in Turkish proper names; the following instances are the best known:

AÏK DÎN (I’s Dîn) = White Sea is the Turkish appellation for the Mediterranean (in Persian as a rule Bâbi-ye soﬁl or Derya-ye soﬁl). The name can certainly not be traced back to ancient Greek, in which it was simply called Sakkos, nor to the idiom of the Byzantines, from whom the Turks might have borrowed it along with so many other words. For in spite of some modern Greeks, who adhere to the latter explanation, not a single passage can be quoted to support it. There is more reason to believe that the phrase â Armen Sakkos (â Maçykos is less colloquial and restricted to the written language), which was brought into currency by the Byzantine populace of Turkey, was borrowed from the official Turkish language; which is more easily recognizable, as formerly a great many Ottoman nobles were recruited from among the Greeks. Since the diminution of the Ottoman power the name Aïk Dîn on the coasts of Konmeria and Anatolia has been restricted to the Aryan Sea. Even the papers in Constantinople, when referring to the Mediterrenean, resort to circumlocution, mentioning the coast to which this sea is meant, as for example "the sea opposite Italy", etc.

Pir Kâhsî b. al-Hâkîbî Melmed (his own name being Melmed, according to Hâkim Khâlîfâ, d. 962 = 1554-1553) presentee about 930 (1532-1534) to Sultan Sulaymân an atić (of which several copies are extant in Europe), containing 30 maps of the coasts of the Black Sea, the Aryan Sea and the Mediterranean; as far as Crete and Creta. The work belongs to the most important productions of cartography (Further particulars are given by Petrusch, Verzeichn. d. Türk. Hs. als Kritis. w. 184). Ewêlyâ Celâbi (d. about 1590 = 1679-1680), who assisted at the siege of Crete (1654 = 1655), wrote an ample description of his voyage thither across the archipelago, which is included in the second of the two volumes of his extensive book of travels. In modern times, apart from insignificant compendiums, only one book has been published: Sulâman Nûtî Elżâlî's
Aşk Deniz — Aşk Hisar.

...illustrated Afşarî hârîyes’-ê vêhemîye, which can contribute but very little to our knowledge.

The province of the islands of the White Sea (Qadîrîh Bahî, keşiş Wilîyetî), which, with the exception of Crete and Samos, comprised the parts of the archipelago, which have remained in the possession of the Turks, is divided into four sandjakhs of Rhodes, Chios, Mytilene and Lemnos, with an aggregate population in 1890 of 335,000 souls, of which 73,000 belonged to Rhodes, 100,000 to Chios, 187,000 to Mytilene and 45,000 to Lemnos. Only 27,000 profess Islam, whereas there are over ten times as many Greek orthodox. But the former manifest much more zeal to extend their cultivation.

About 50 of the 284 schools belong to them. In spite of the rocky character of the entirely deforested soil, and the competition of the western powers with their large capitals investing on all sides, the populace in the 19th century has since the Greek rising made gradual progress, which remained uninterrupted by military convulsions. The principal products of the soil are grapes, olives and figs, which are also primarily important for the export trade. An agrarian bank, which was founded several decades ago, is especially credited with promoting the general welfare. In 1890 little Tenedos alone had an export of two millions, Mytilene of 19 millions of kilograms. The navigation in that year amounted to 27,000 vessels with an aggregate tonnage of 1,900,000. The revenues drawn from the islands by the Turkish government were estimated at 300,000 Turkish pounds, whereas the administration of the national debt raised an additional 60,000 by its own officials. C.p. Cunet, La Turquie d’Asie i. 349 et seq. (K. Völckerm.)

Aşk Hisar (v. = White Castle). There are four places of this name:

1. The one best known is the town in the Anatolian province of Axios, situated in a large plain near the left bank of the river Göztlik. In Antiquity and in the Byzantine era it was called Thateira; it owes its Turkish name to a fortress on a neighbouring hill. Three quarters of the 12,000 inhabitants are Moslems. With the exception of the six mosques, the churches, the Government school and the bazaar, all the buildings are of wood, making the place look more like a big, prosperous village than a town. Aşk Hisar is connected by railway with Soma (the ancient Sardes) in the north, and with Magnesia and Smyrna in the south, and owing to these modern means of communication has grown into a considerable market place. It is the centre of a cada’ of 32,000 inhabitants, which produces an excellent white poppy and a large quantity of cotton (c.p. V. Cunet, La Turquie d’Asie iii, 548 et seq.). Aşk Hisar is said to have been annexed to the Ottoman realm for the first time in 1382. During the disorders, following Timur’s invasion, it was lost again by the Turks. The emperor Bayezid, who had conquered that district, was defeated by Kâzîl Yahyâlu Bey in 829 (1425-1426) and taken prisoner at the surrender of the fortress (c.p. Hisâddî Hâfallî, Ta’âvisî, 11-105). According to a statement of Cunet, however, it is not supported by any authority, the Prince of Karmania penetrated in 1444 as far as Aşk Hisar and plundered the town. As the Ottoman rule brought peace to the province, the fortress lost its importance as a strategical centre.

Three men from Aşk Hisar, who lived in the most flourishing epoch of the Turkish realm, are well known:

a. Izmîr Iâs b. Mâdîd el-Dîn. When the Ottomans had reached the summit of their power (965 = 1557-1558) he ventured to write a book of prophecies (Nâzîrî-î rûmî-û cüswî), which foretells the duration of the Ottoman realm, without hardly any calamitous interruptions, until the end of the world, and from the numerical value of the letters of the proper names predicts the circumstances of the nation up to the year 2032 of the Hijra (Persisch, Fersisch, d. türk. He. 110... in Berlin, ne. 45; 9. Krafft, Vienna Acad. Catal. n. 301; Flügel, Vienna Catal. i. p. 581).

b. Al-Mawlid Muhammad b. Badr el-Dîn, the best known of the three. Amongst the Turks nowadays he is usually called Munezîl Aşkîzarî, formerly also sometimes by his surname Mahîyal-Dîn or, after the government district, al-Sarîkhanî, still more rarely al-Ruqî and al-Moaddûf. It was he, who persuaded Süleyman to write his famous Hâdîq commentary. In 981 (1573-1574) he began his esteemed and valuable commentary on the Korâni (Nâzîrî-î tâ-ânî) which he dedicated to the sultan. He was rewarded by his appointment as Shâhîr el-âhmar of Median. Afterwards (998 = 1589-1590) in Damascus he wrote an Arabic commentary on the Bûrda of Shams el-Dîn Muhammad al-Adîîsî (Ahxvî, Bûrda Cat. no. 7792). He died in Mecca towards the close of the year 1000 (1592 according to Aşkî’s supplement to Tashkîrî’s el-âhmar al-nsîmâwî, Hâdîdzî Khalîfâ ii. p. 380; Ta’âvisî, i. 65. printed in 1047, p. 40. In the face of these authorities no trust can be put in Hâdîdzî Khalîfâ vi. p. 339 and Khâfîzî al-âhmar, where 1001 is given as the year of his death.

c. Mawla Nûbî Nasîfî (d. 1003 = 1604-1605), the translator of Ghâzîî’s famous Kâmûlî el-âhmar. In 990 (1582) he was appointed tutor of the future Sultan Mehmâd III. In this capacity he wrote a Fersîhâmâmî, in which the duties of a ruler are displayed in the example of Alexander the Great (Rûm. Cat. of Turk. Ms. in the Brit. Mus. p. 117).

2. The capital of a cada’ of the same name in the government district of Iznik, situated on the left bank of the Sâkarya. It is a station on the Anatolian railway and numbers 15,000 inhabitants. The fortress, unguarded at the present day, commands the vast plain. Already before its early conquest by the Ottomans in 708 (1308-1309) it must have been a flourishing place, as is shown by the remains of a great many ancient columns and other buildings, both in the town itself and its neighbourhood. Its ancient name however is not known. The cada’ Aşk Hisar, famous for its agriculture, numbers 22,000 inhabitants. C.p. Cunet, ibid. iv. 397.

3. Aşk Hisar in Albania, at the present day called Aşkêjhîs (Albanian: Kâtya, Croja = west-spring), a town in the sandjak Shkodra, which has revived new prosperity in the course of the last decades. It has a wealth of gardens, and covers a large surface, inhabited by about 10,000 people, all of them confessors of Islam. The place is mentioned in the chronicle of Akrôpolites (13th cent.) by the name of Kroua. In 1345 it was a
Akkerman (1735–1744; Pazi, Bibl. Nat., fonds turc, n° 168).

(Re. T. Süsser.)

AK MESCID (v. = "white mosque") is:

1. The name of a town in the Crimea (1765 dwellings). It was destroyed by fire in 1756, but in 1758 rebuilt under the name of St. Michael the Archangel Church.

2. The name of a fortress on the Sir-Dary, which on August 9 (28 July) 1853 was stormed by the Russians and rebuilt in the same year under the name of Fort-Petrovskoy.

It is now the district-town of Voronizh in the province of Sir-Dary, with about 5000 inhabitants. The other fortresses which the ruler of Khosrow had ordered to be erected on the lower Sir were also subject to the command of Ak Mescid. The tributes (zakat) of the nomads and the toll revenues of the caravan road between Orenburg and Kakhkhor were collected from Ak Mescid. The troops of Khosrow, under the command of Ya'qub Beg (1759–1763), the future ruler of Khosrow, entered in March 1852 a raid against the Karakhs, who were Russian subjects, and captured about 5000 souls (villagers). In June of the same year an attack attempted by the Russian colonists Blanenburg was repelled by Ya'qub's successor Bihisht-Bahadur General (afterwards Count) Petrovskoy, who conducted the campaign of the following year, proceeded with exaggerated prudence and precaution, which caused the unnecessary loss of many victims. The garrison of Ak Mescid consisted only of 500 men with three guns. Its commander Muhammad Ali (acc. to the Tevk-i Sekerdem ja. p. 98, acc. to Russian authorities his name was Muhammad Walli or Abdal-Wall) and the greater part of the garrison fell in the defense of the fortress, and the Russians only made 74 captives, most of whom were wounded. An army under the Mir Bashir Kazim-Beg, which was despatched from Kakhkhor to recapture Ak Mescid, was repelled with heavy losses. The capture of Ak Mescid by the Russians was an event of decisive importance for the history of Central Asia, as it was their first acquisition on the lower Sir; in military history it is chronicled as an example of tactics which is quite unobservable in Central Asia.

(W. Barthold.)
ATH SARAI (т. е. "white palace") is a frequent appellation in Turkish of towns, palaces and castles. The best known are the following:

1. Αξ Σαράι (Αγκαρα) at the time of the Seljuqs; in Antiquity Arcadiia), the capital of a kaza of the Sandjak Nigde (prov. of Konika), comprising 160 villages. Of its 2500 inhabitants one fifth are Armenians. Its principal buildings are the mosque of Karman Oghlu (14th century), a madrasa of the same time, which has fallen to ruins, and the mosque Nakitgah-djami. At the time of Sultan Muhammed II it had conquered Constantinople, the inhabitants of Ἀξ Σαράι, along with those of Trebizond and Sinope, were summoned to repeople the almost uninhabited capital, where they established themselves in a quarter, which is still called Ἀξ Σαράι. It was formerly known for its manufacture of rugs of sheep's wool, which were exported as far as India and China (Ion Capuș. ii. 256). This industry is still in operation.

Reclus, Nos, géogr. anin. ix. 571; Hamilton, Researches ii. 222; Guliyan'-i mar'ift in. 524, no. 524; "Abl al-Dawla, Memapol-i şeyhâtinâ in and isl. wulah-ñef'ni, 1274, p. 21 (Ch. Husayn).

2. Aξ Σαράι in the town of Mahri Saha, in 781 (1379-1380) erected for Timur by architects whom he had carried away from Khwarizm. The remains of this palace, one of the most beautiful buildings of that period, have been preserved up to the present day. The name was possibly taken from a similar one in Khwarizm.

3. Aξ Σαράι near Urgench, which is still mentioned in the Šāh-nāma" (ed. Vamšlętę. p. 392). (W. Baethold.)

AΣ SHAMS AL-DIN MUHAMMED b. HAMZA, a shiṣqui, who accompanied Sultan Muhammed ii. on his expeditions, was born in 792 (1390) at Damascus. He was a pupil of the Shiṣqui Bārām of Osmanīji and the Shiṣqui Zakī al-Din. Seven times he performed the pilgrimages to Mecca and was invested at Gūrak. He made himself known by his discovery of the tomb of Abū Alyūh (q. v.) during the siege of Constantinople, and by his interpretation of the Sultan's dream before the battle of Tergjan (878 = 1473), in which Urūj Hasan was defeated. He is the author of a treatise on the processions and dances of the Sufis, entitled Kādē fi 'jamāt al-qāsid min-dawāhin (Hajīlī Khalīf, ed. Flugel, iii. 397). He descended from Muhammad b. Shīhīb al-Din al-Saḥrawardi and was the father of the poet Ḥanīf.

AΣ SHEHR (Αξ Σερίς, "the white town"), the ancient Philochemum) is the capital of a kaza of the province and sandjak of Konya, which comprises 2 nābihis (Dogha Ηες, Ηες, 2500) and 90 villages with an aggregate population of 39,511 inhabitants. This little town (1000 inhabitants) extends itself at the foot of the Sultān-tagh; its most interesting sights are a mosque of Sultan İlyanat I; relics of the of the Seljuqs; Tugh-Metrens which were during the reign of Jīz al-Din Kay-Kāhwā in 1216; and inscription on an ancient monument of derishes, built during the reign of Kay-Kāhwā in 759 (1552) and the tomb of Sāyiyl Mahommed Khażrat, surrounded by a rectangular pyramid (621 = 1244). The mosque contains a modern tomb of Nav al-Din Khūr (with the falafal date 326 = 906).

AΣ SONKOR AL-ƏMEDURELI, a Kouridk Emir, who after the death of his father Almüfred (510 = 1116) succeeded him as lord of Mağرغ (q. v.), Almüfred's grandfather Wohūd b. Muhammad al-Kawwâd, Lord of Aḏharbâjjan, had submitted himself in 446 (1054) to the Seljuqs prince Tughrâl. AΣ Sonkor played an important part during the reign of Sultan Mahommed (531 = 1136—1141) who appointed him atabeg to his son Dâwûd. As Mağرغ appointed Dâwûd his successor, AΣ Sonkor occupied later on the most important place in the realm of the Seljuqs. The oldest and mightiest Seljuqs princes Sandjàk, however, declared himself in favour of Tughrâl, and when the latter in the year 526 (1132) encountered the troops of his opponent, in the neighbourhood of Hamâdjan, Dâwûd, whose troops had muti- mized, took flight with his atabeg AΣ Sonkor. Afterwards, however, when Dâwûd met Mağرغ in Baghad, these two Seljuqs princes became allies and, supported by the Caliph, marched to Mağرغ, where AΣ Sonkor guaranteed them further aid, so that they could soon clear the province of Aḏharbâjjan of enemies, and march against Tughrâl, who had drawn up his troops at Hamâdjan. This time Tughrâl was no match for them and was obliged to withdraw to Râs. But when Mağرغ had the town of Hamâdjan in his power, AΣ Sonkor was murdered by some Bârîns (527 = 1133) as his father had been before. —About his son, whom Wau and others erroneously also call AΣ Sonkor, compare the article Məşq Meshk.

AΣ SONKOR AL-Burâşkî (with his full name Abû Sa'id Šafî al-Din, Kâsim al-Dawâm AΣ Sonkor al-Burâškî), general and governor of the Seljuqs, sultana Mağرغ and Mağرغ. He was a mameleke of the Seljuqs Emir Barâşkî (q. v.) and therefore by the Western historians of the crusades he is always called by his nick, under one of the corrupted forms Burqulun, Boraqhum, Boraqgûn and Boraqus. He was a faithful companion of the Seljuqs prince Mağرغ (1105—1118), who therefore appointed him police-prefect of Baghdad and the whole of Mesopotamia. While he held this office he sought several battles with the Arab chief of Hilla, Šâdaqa b. Dâlah, with the
Emir Cawli, who was then reigning over al-Mawilul, etc. and after the death of Mawilul [q.v.], 560 (1114) even claimed the preference of al-Mawilul. At the same time he was charged with the conduct of the wars against the crusaders. He marched up to al-Rahib' (Edessa) and besieged it for more than two months, without success however. He had better luck in Maragh, where the widow of the Armenian prince Kegh Wasil, who had recently died, submitted to him. After an unfortunate battle with the Ortuklid Lighat, however, the preference of al-Mawilul was taken from him, already in the year 560 (1115), and until Muhammad's death, he lived retired in al-Rahib. Muhammad's successor Malikshid instantly appointed him prefect of Bagdad again. During the wars about the succession between this prince and his brother Masud, he again lost his office, but in 515 (1121) he got back the preference of al-Mawilul, to which after a year the preference of Bagdad was added, as also the dominion of the town of Wasi. This led to a new war with Duhals, the son and successor of Sadaka. When after this the latter allied himself with the crusaders and supported Baldwin at the siege of Halaib (Aleppo), Ak Sonkor marched up to relieve the town (518 = 1125). After he had succeeded in this, he left Halaib to his son Masud. The next year (519 = 1125) he took Kafarjah, but at the siege of Asa he suffered a heavy defeat, which compelled him to return to al-Mawilul. There he was soon after (8 Dhul Qa'ad 520 = November 2660 1126) murdered in the mosque by some assassins, who according to the Recueil de textes relat. a l'histoire des Seljoukides (ed. Houssay) ii. 144 et seq. were paid for that by the sultan's Vizir al-Dergerzini.

Houssay) i. 144; Recueil des historiens des Crusades, Hist. v. i. 100 mond. ii. 36-58; iii. 496 et seq.; Ibn Khallikán (ed. Wustenf.) n° 993; Wilken, Gesch. der Kreuzkrieger ii. 382 et seq.; 521 et seq.

Well, Gesch. der Chalifen i. 155 et seq.

AK SONKOR (the name of Zenji, q.v.) a Turkish Emir in the time of Malikshah. The latter, whose name he had married, gave him in 480 (1087) the government of Halaib (Aleppo) and the title of honoram Kasim al-Dawla. In 485 (1092), shortly before his death, the sultan contemplated great plans; among other things the Fai'um of Egypt was to be brought to subjection; and Ak Sonkor and also Burzah, the governor of al-Ruhu' (Edessa) received the command to join Tutush, to whom the conduct of this war was to be entrusted, with their troops. However, when the three generals got to Tripoli, they fell out; it is said and because of the governor of this town, Ibn 'Amur (q.v.), had bribed Ak Sonkor, and his viceroy Zerrus Kamur. However Ak Sonkor withdrew, and that compelled Tutush also to abandon the expedition. A short time after this Malikshah died, Tutush made use of the occasion to claim the khilafship for himself, and with this end in view he at once marched up to Halaib. Ak Sonkor, not understanding his hatred against Tutush, did not think it advisable to oppose him, and followed against his will, which Butsh did also. Wus, however, the troops had marched on so far, that a battle with Barkiyurik, the right

ful heir of Malikshah, must soon take place, they both deserted Tutush and joined the side of Bar-kiyurik. Tutush was forced to withdraw to Syria but did not give up his ambitious plans and in 487 (1094) he once more appeared with his troops before Halaib. Near the village of Raykan a battle ensued. Ak Sonkor's men took flight and the himself was led before Tutush, who killed him on the spot.

AK ŚU (?), "white water", is very often used as the name of a river in the countries where Turkish is spoken. When a canal is made to branch off from a river, that part of the water which flows along the original bed is as a rule called Āk Śu or Āk Daryâ, and the artificial canal is called Karā Śu or Karā Daryâ (black stream); but still many single streams and brooks bear the name of Āk Śu. The name has often been extended from rivers to towns and villages; especially well-known is Āk Śu in East-Turkistan on the river Āk Śu, a tributary of the river Yarkand-Daryâ or Tarim. The Turkish name is not found until the 8th century; therefore the identification with the town of Āk Śu in Persia is supposed, pretty generally accepted since it will have to be rejected. In Chinese sources the town (already mentioned in the History of the elder Han, 1st. cent. after Christ) is called Wen-on (still to the present day), Ta-ku or Ye-shu (written by the Persians Bān-šabī and pronunciation uncertain) in the anonymous Qundāl-al-ḍawla, 4th (10th century), and by Gari, 5th (11th) cent., the text in Barthold's Oitt & poocu in Sredoruyu Asya p. 917, comp. J. Marquart, Osteuropäische und orientalische Strelf, preface p. 20. — In Timur's time Chinese merchants are already spoken of in Āk Śu (in the Zafar nāme) from which the importance of the town may be concluded. In the 15th century the river Āk Śu is described as one of the chief towns of East-Turkistan. Later on Āk Śu, compared to Yarkand, Kābbahar and Tarāk seems to have been of only secondary importance; by modern travellers Āk Śu is described as a small town (about 2 kilometers in circumference). From 1867 until 1877 the town was in the hands of Alūğ-Beg (q.v.) after whose death the Chinese have re-established their power in Āk Śu and in the whole of East-Turkistan. No buildings belonging to past ages have been preserved in Āk Śu.

W. BARTHOLD.

'Akaba (A.) = a long, steep promontory, with a path leading to the top. There are numerous places bearing this name, the best-known of which are the following: 1.

1. By al-'Akaba, without any further indications, is meant the hill between Mink and Mecca. This blank and weird spot was certainly already consecrated before Muhammad, especially the spot where the Ljamo si al-'Akaba now stands. This is a stone-column, at which stones are thrown by the faithful at the Ḥajj. In accordance with this, tradition has it that in olden times a Hâfit lived here. Except this, all memory of the meaning of the place in pagan times is lost. But the part which it has played in the biographies of the prophet and in the history of the origin
of Islam is all the better-known. For it was here that Muhammad had some secret meetings with some men from Medina after his teaching had failed with the people of Mecca. After six of them had first embraced the Islam there, twelve more did homage to him, without however binding themselves to give real protection to the prophet. The biographers call this the homage of the women (bayt al-nis bi) or the first ‘Akaba’ to distinguish it from the second ‘Akaba’ in the next year, when 70 men from Medina promised to protect Muhammad, if necessary with the sword (bayt al-har). Afterwards a mosque was built in the neighbourhood of the above-mentioned stone-column, which in memory of the world-historical event which took place here, is called the mosque of the homage. Comp. the art. DAMIKA.

4. ‘Akaba of the women, a spot on the Euphrates border of Baghdad in Syria, where one of the wives of Maslama b. Abd al-Malik was killed in an accident. Comp. Belkhirih, (ed. de Goeje) p. 167; Yükt, Maqdat ill. 692. (FR. RUHL.)

‘AKABA (See ‘Akabma’).

‘AKA’ (or ‘AKA’, KASA’; an onomatopoetic word) = magpie. — As this bird inhabits copses, gardens and the margins of woods and spreads over Europe and Northern Asia, the Arabs probably got more intimately acquainted with it in the countries in which they designed it. It is hardly mentioned in pre-Islamic literature; but in the middle ages its characteristics are very well known, it is known to be fond of building its nest in the foliage of a dolev-palm and of stealing glittering objects, and to exchange its nest and its young for those of other birds, i.e. that it steals other birds’ nests; that is why it was proverbially called treacherous, faithless and stupid. Its cry was considered a sign of ill omen to travellers; its body was ascribed medicinal power, also in Europe; (German: Blasenkrinzel): — swallowing the blood and brains of a magpie was supposed to make one eloquent; the same substances were also supposed to extract alien bodics from the body and the yolk of a magpie-egg was used as a cure for inflammation of the cornea (eyebow).

‘AKAL or ‘AKAL (A.), a band made out of a horse’s hair, generally black, with going twice round the head, fastens the keffiyeh (kaffiyo, q.v.) and is generally worn by the Bedouins. According to Dozy, Supplement ii. 154 the classical spelling is khal, but the modern pronunciation is as indicated above.

Bibliography: Dozy, L. c.; Oppenheim, Von Mittelmassien zu persischen Golf l. 122.

AKARIB (Sung. ‘Akabbi; according to Spengler, Die alle Geographie Arabiens p. 80, identical with the Aramitic tribe in the neighbourhood of ‘Adun. Their territory, which is very small (only about 2-3 square miles), is crossed by the lower part of the river of Lajjul [lajjul], which here is nearly dry. As rain is also lacking, the soil is barren and yields but little fruit. The chief town is Biat-‘Amid, with a few hundred inhabitants and the castle of the Sultan, who resides there. The castle of the Sultan resides there. The Sultan resides there. In the year 1668 the ‘Akariy sold their coasts, together with the volcanic Djebel Ḥaṣan (with the donkey’s ears), two rocky peaks. The English now also protect the ‘Akariy against their Arab enmies the ‘Abdill of Lajjul, with whom they fought for the last time in the year 1853. Comp. especially Malzahn, Reise nach Süd-Arabien (Brünswieck, 1873) p. 314—325. (J. SCHRIEFER.)

AKARKUF (Sometimes pronounced and written ‘Akarkuf) is the name of a not unimportant group of ruins which lies 2½ hours to the West of Budair. The spot is often mentioned by Arabian geographers. References to it may be found in: G. le Strange, The lands of the western Caliphate (Cambridge, 1905) p. 67; comp. further: Well, Gesch. d. Chalifen ii. 197; Clodewig, Die Sultanen (Breslau, 1763) ii. 643; Blum, in the Zeitung für Deutsch. Morgenland Gesch. xxvii. 333. According to a Moslem legend already found in Arabian writings the inhabitantsof the Meneh the stage into which the market of Najd threw Abraham is said to have been at ‘Akarkuf. That is why ‘Akarkuf has also been called Tell-Najd (Najd’s Hill) until the present day. However, the site of ‘Akarkuf was also connected with other places, i.e. with the ‘Aqabah of Tell-Malik (to the south of Budair). The hills covered with ruins of ‘Akarkuf have already been mentioned by European travellers since the 16th and 17th centuries; comp. the reports of earlier travellers in Ritter, Erdkunde xi. 847—852 and Tschech, Die Naim umge (Leipzig, 1845) p. 46. 2. H. Raffa, found in ‘Akarkuf bricks with the stamp of the town of Dūr-Kurigalzu (wall of Kurigalzu’) on them. Hence ‘Akarkuf has been identified with that town, often mentioned in the cuneiform inscriptions, which was called after its founder (or reconstructor), one of the two Kassite kings of Babylonian who were called Kurigalzu (between 1500 and 1000 before Christ) and Kurigalzu comp. Fr. Delitzsch, Weg d. Paradies (Leipzig, 1861) p. 207 et sqq. and the same, Die Sprache der Košū (Leipzig, 1854) p. 9 and Fr. Hommel, Grundriss der Geschichte und Geist. der alt. Orienta (2nd edition; Munich, 1864) P. 345.

AKBAR (Arab. Fath ‘Abdallah al-Din Muhammad, third Timuride Emperor of Hindustan, was born at Amurkot in Sind on the 15th October 1542, was crowned at Kalant in the Pandjgur, on the 14th Febur. 1556 and died in Agra on the 16th October 1605 leaving his throne to his son Salim (Djaghating). He traced his descent from Amur Timur Barlas (1336-1405) he was Bibar’s grandson and the son of Humayun and Humala Bibar a daughter of a Persian scholar in the service of Hind, Bibar’s youngest surviving son. Akbar was born in exile in one of the greatest
centuries of history, and in it he was the greatest
ruler. Not Europe only was in mental ferment;
a leaf was worked also in Hindustan, as indications
of the presence of which there may be named the
Kabir Panthi, the Rauhaals and the Sifmat of
which Shahih Mubarak Naqvi was the exponent in
closest touch with Akbar.
In the greatness of his accomplished kingly task,
Akbar had no equal; second to him ranks the
Englishwoman who was his contemporary.
It is a well-attested statement that through his
long life of intellectual activity he did not master
the arts of reading and writing. This is in him
the more singular that he came of a family of
traditional culture and that he lived not only
amongst men of education but was closely asso-
ciated with at least two women accomplished in
letters, his wife, Salima Saljma, and his aunt, Gili-
badan. His lack of instruction in childhood may
well have been owing to his father's unsettled
position and profligating character, but in adult
life, only his own deliberate choice will explain
it. A keen observer, avid of knowledge, a student
of at least one branch of knowledge, Religion, his
dependence on the ear is a fact of great interest
which falls into place only when one recalls his
blindness from youth and then significance.
It seems as though Akbar learnt best by the living
word.
The long story of his military success does not
lend itself to summary and it will suffice here
to set in opposition his territory at accession and
at death. He had gone with his father to Hindustan
in January 1555 from Kauk and had been pre-
sent at the decisive battle of Sihrih on 22nd June
1555, which gave Ajin and Delhi again to the
Timurides. When his father died (24th January
1556), he was with his beg-
atka, Bairam Khurr Bahadur, pursuing Sikandar in
the Pandjahl. On that day the only land he
owned was a small part of the Pandjahl; Ajin had
been taken by Hemu, Delhi had been evacuated
by his general; Harun Begam and Salimun
Badakhshi had seized Kauk. He was then fourteen
years old. When in 1605 he laid aside the cares
of State and ceded to Salim a stabilised kingdom
of the whole of Upper India, Kauk, Khardar,
Bibr, Bengal, Oria and a great part of the
Dekkan.
Great as he was as a soldier, it is as an adminis-
trator that he has gained highest fame. His revenue
reforms with which the Hindu, Todar Mall, is
closely associated were pushed through all oppo-
sition and pursued unflinchingly; so too was the
safe-guarding of lowly people; he had the genius
of taking pains and the open-mindedness which is
symbolised by his favourite motto, "Peace with
all." Changing personnel Muhammadan practice
in Hindustan, he ruled for the Hindu majority of
his subjects, and set them free from insulting and
oppressive enactments. In return they provided
him splendid and faithful servants.
Perhaps what rivets attention to Akbar more
than his genius as a sovereign, is his own pursuit
of truth. It is well-known that he broke away from
orthodox Islam and promulgated an eclectic
Tus-
Mati lac, a Divine Faith. This appears to have
been pure Thesan, the common element of all the
creeds he sought into. If men craved for a symbol,
as in truth his own researches must have con-
vinced him they did crave, he recommended for
this the Sun or its earthly counterpart, fire. He
allowed of no priesthood and sanctified purity
and plainness of living.
What adherence the Tus-Mati lac obtained
outside the inner Court circle cannot now be said;
eighteen names are recorded as those of members
of the Faith. Most of those inscribed are literary
men, poets; one great name only is there, "Arts
Kuna, whom, extoration in Mecca had driven from
orthodoxy. There are men to whose gift belongs
Akbar's conversion from Islam was sanctified, Shahih
Mubarak Naqvi and his sons. Akbar's closest
interest was with the sects within Islam itself and
he became disgusted by the rancour of orthodox
disputants; he married a Raudjihani, the mother
of Salim, and he studied Zulfiqarism from learned
priests and through Hindt Scriptures which he
had translated for himself; stiff free-thinking was
strong round him and Persians were of his home
circle; he acquired special sympathy for the Sun-
worship of the Parsi, a sympathy not likely to be
less that Raudjihani's claim to be the children
of that luminary. To none of the Eastern creeds,
however, did he give such close and admiring
attention as to Roman Catholic Christianity. Shahih
Nir al-Hakj3 who writes without the bias of either
Abul-Fadil or Abd al-Kadir Badhur, states that
the Emperor tried to reconcile different creeds from
differing opinions and this with one sole object, the
ascertaininig of truth. What he finally accepted was
but the besat fact of all creeds, man's first temet, and
to this he added a plain rule of conduct.

AJKCA (-) = whitish; as noun, silver coin,
copper-piece, especially small coins, f.i. in Russian
countries = kopecks or half-kopecks. In Tur-
key a coin of this name was used worth one third
of a paras = one asper (comp. the anl'Alac' al-
BUN Fajia). In the same way faren and
gul (q. v.) are used in Arabian and Persian
countries.
AKD (A.) = agreement, contract, treaty, oc-
curs in many compounds, f.i. akd al-nihaj, mar-
riage-contract, akd al-nihjma, treaty of protection
etc.
AKDARIYA is the name of a well-known dif-
cult law-mentioned about inheritance which be-
longs to the malal wuljabha (i.e. questions
'called by special names'). When a woman leaves
behind as her heir: 1. her husband, 2. her mother,
3. her grandfather, and 4. her sister
(whether she be her jibabah (i.e. her real sister,
or her abab al-labab, i.e. her half-sister on the
father's side), then her husband gets 1/2, the
mother 1/3 (comp. Korân iv, 12-13), so that there
would only remain 1/6 of the inheritance for
the grandfather and the sister. The latter are
generally considered, when they inherit together,
"sagülük, that is the sister inheriting half of the
grandfather's part, and together they get every-

thing that remains when the ağašt al-furqādât (the heirs to whom the Körân grants a definite part of the inheritance) have been satisfied. Now the grandfather can, according to the current interpretation of the Körân (v. 13), in any case lay claim to the sixth part of the whole inheritance. But then the sister would not get anything. This is actually the way the Hanafites look at it. They say: the grandfather here excludes the sister from the inheritance. But the other schools are of opinion that in this case the grandfather and the sister are not to be regarded as ağaštâl, but that in the same way as the husband and the mother, they get the parts to which the Körân entitles them. Then the division is as follows:

the husband inherits =
  mother =
  grand-father =
  sister =

By means of and (q.v.) these nine sixths are reduced to nine ninths. Then the husband receives:

the mother =
  the grand-father =
  the sister =

But as the sister can after all only lay claim to half the grandfather's part, the right proportion between these two parts has again to be re-established. Together they inherit \(\frac{1}{2}\), but the grandfather receives \(\frac{1}{3}\) of this and the sister \(\frac{1}{6}\).

About the meaning of the name Akhbariya the Arabian scholars hold different opinions. Some e.g. say that the question is to be settled, obscure as it has ever proved subject to great difference of opinion, or because the otherwise generally accepted principles are "trash" in this case: others are more inclined to think Akbar the name of a man, to whose decision Abd al-Malik b. Marwan submitted this question. Besides these there are still many more such explanations of the name Akhbariya.

(H. W. JUVENROLL.)

AKH (a.) = brother.

AKHALČIKH, Russian Akhalkalik, Turkish Aksis or Akhischa, nowadays the capital of a district of the government of Tiflis, was originally a Georgian fortress (the name means in Georgian "new fortress") in the year 1045 (1635). It was taken by the Ottomans after a siege of 23 days and is later on mentioned as the chief town of a separate Wilâyet. After having been taken by the Russians in 1828, the fortress had to be yielded to Russia at the peace of Kăzim-nâpole (1829). About Akhalčik in Turkish government comp. Hüfûd-i Kâhilî (Zähkân-nâme) p. 291, (W. BARTHOLOM.).

AKHÁL TEKKE is a region of Russian Turkestan. Under the name Akhál (which only appears in modern times) are gathered together the cossacks on the Northern slope of the mountain-ranges Kopet-Dagh and Kūtre-Dagh, between the present railway-stations Kâšîl-Arkat and Gjaur. The second part of the name is taken from the present inhabitants of this region, the Tekke, a tribe of Turkmans. Abâ'ı (Ishak already mentions the Tekke in the 15th (16th) century as inhabitants of the region between the Balğit-Özayan mountains and the town of Därîn (near the present railway-station Baharden). In the year 1838 Akhál Tekke was taken by the Russians and since 1882 it has formed a separate district (wond) of the Trans-Caspian territories (oblast); until the year 1830 the name of Ağašt Tekke was kept for this district; now it is called after the metropolis Aşkhabad (really Aşkhabad, q.v.). The geographers of the Middle Ages have no special name for this region; it is described as forming part of Köfân together with the town of Naxâ (already an important town under the Parthians; now only two heaps of ruins near the Aul Bagir, about 5 miles to the west of Aşkhabad) and the border fortresses Fartawa or Aškerâ (near the present Kâšîl-Arkat) and Shahrisâzâ (about 15 km. to the north of Naxâ, on the border of the desert). The country has often been in the possession of the lords of Khâzâr, even at the time of the rule of the Ozbeks in the 10th and 11th (16th-17th) centuries; to distinguish it from the real Khâzâr province on the same side (on the north side) Ağašt Tekke together with the Atek (q.v.) was formerly called Tagh-Buyuk (mountainside); at that time the town of Naxâ seems to have existed still; in the west the town of Därîn (v. a.) is still mentioned. At the time of the Russian conquest the country had no towns; Aşkhabad and Kâšîl-Arkat have only become towns under Russian rule.

AKHÁR MADJMU'A; "collected stories" is the title of an anonymous historical work of the 11th cent. of the Christian era, which gives length about the conquest of Spain by Tarik, the time of the first governors and the civil wars, as also about the reign of Abd al-Rahmân I, whereas the time of Highân until that of Abd al-Rahmân III it only contains anecdotes, letters and poems. The full title is: Aḥkār madjmu'ā y hikāya al-Anfal wa-takhrír man mad'hûbân min al-nâma'ī ilâ dârâb il-'āmil Abd al-Rahmân b. Madâwiyâ wa-šahrâtul hisâb il-hâmar wa-muqaddesâh fakhr al-mubâhâr bi-wâṣl al-kâlima f sâlihihain shinân. Comp. Ibn Abârî, al-Bayyân al-muqaddâr (transl. W. BARTHOLOM.).

Akbâr Nâma'ân, Colecção de tradiciones, cronica sular, del siglo XI, dados a luz por primera vez, traducida y annotada por Don Emile Lefebvre y Alkanny (＝ Collection de obras arábigas de historia y geografía que publica la Real Academia de la Historia, Tomo I; Madrid 1867).

AKHALTEKARI — AL-AKHÉDAR.
one and call it Ḍharmavādī dīrī, i.e. the Wednesday of the last blast of the trumpet (on Doomsday). Sweet raksas are asked for this day, over which the Ḍhātuṣ is many times spoken in the name of the Prophet. Another custom is the drinking of the ḍīrī at tāmūn, that is of the seven Ṛās-verbs Ṛāsī, Ṛāsī, Ṛāsī, 105, Ṛāsī, 120, Ṛāsī. These verses are written on a banana- or mango-leaf on one piece of paper, and while the writing is still wet, they are washed off. Whoever drinks the water used for this purpose may be certain of future peace and happiness. Comp. Herle, On the customs of the Mohammedans in India p. 329 et seq.; Sell, The faith of Islam (2nd ed.) p. 313; García de Tasso, El islamismo d’après le Coran (3rd ed.) p. 334 et seq.

AKHIRA (a.), the fem. of the preceding word, is a term already used in the Korān for the life to come, according to the commentators properly Akhīr al-akhirā (the last dwelling), as opposed to al-dunya, the nearer (dwelling place), that is the present world.

AKHĪL (a.), pl. of Khul ("character"). The ḍhātuṣ are the traits of man’s moral character, and the science of the ḍhātuṣ (ilm al-ḍhātuṣ) is moral philosophy when presented in a didactic form. Passages concerning morality are found in many diverse branches of literature; they are found in the poems, in the religio-poetical and in the legal; naturally they are found in the Korān and its commentaries, and in the collections of traditions; also in the writings of lawyers, to whom morality chiefly appears in the form of casuistry, then in the historians and compilers of anecdotes, who are occasionally moralists. But the science of moral philosophy differs from all this; it has an existence of its own; it is not an extract from different literary works, it is a science which is in fact connected with the tradition of Greek philosophy, whether it be with the oral traditions transmitted by the schools and convents of Egypt, Syria and Persia, or with the written traditions handed down and restored by the work of the translators.

Hāḏīl Khālīf has defined the science of the ḍhātuṣ as: “a part of practical philosophy” (ed. Flügel, I. 206 et seq.). This definition presupposes a distinction between practical philosophy and speculative philosophy, which is always found in Plato, but which the Arabs chiefly knew through the tradition of the schools. Hāḏīl Khālīf, adds, quoting Ibn Sadr al-Dīn al-Shirwānī (died 1056 = 1626-1627), ḍīl, comp. of the vīnas Negāḥ, and the author of al-Fanūrī al-ḥikmatīs ("useful things for the Khālīf"): This is the science of virtues and the way to acquire them, of vices and the way to guard against them. The rāṣṣars and acquired virtues, which are joined with the reasonable soul, are its data. — So this definition limits moral philosophy to the methodical study of virtues and vices (al-faṣūl al-kafrī l-rāṣṣarī), thus represented, the doctrine of the ḍhātuṣ is nothing but the ethics of the peripatetic philosophy.

A preliminary objection may be raised against the very possibility of a part of that science: as it is a man’s character which constitutes his personality, his individuality, it seems that character is an inherent part of the very nature of man, and cannot therefore be changed. So there may
exist a science the object of which is to describe different characters, but there can be no art that can possibly alter them. Ḥāfiz al-Ḳāfī reports this objection, raised by Ibn Ṣadr al-Dīn; it is also found in many other moralists, for instance in Yahyā b. Ṣadī, Ghanīl al-Naqṣ al-Dīn al-Ṭīsī. Ibn Ṣadr al-Dīn even defends this objection with words such as: "moralities correspond with the physical body and cannot be modified." His answer is that some traits of character are natural and others acquired by habit; that if those that are natural are fixed, those that are the consequence of habit may be changed; and that way of looking at it, which is in accordance with Greek tradition, is corroborated by a ḍāfatī of the prophet saying: "I have been sent to bring good morals (wulūm al-aḫlāq) to perfection." —

The objection and the answer are about the same in Gharāḍī; but he develops them at greater length and more brilltantly.

Moral philosophy thus defined should not be confounded with what the Arabs call adab, good education, refinement of spirit and deportment, "ḥinnétēta" in the sense this word had in France in the 17th century. Adab is something less deep than moral philosophy, and of wider compass, as the term indicates; all literature, philosophy, science, education, which are hardly numbered among the virtues, at least not among the principal ones. With moral philosophy are connected the maṣlaḥa, admonition or counsel, and the wulūma, recommendation or testament; under these two heads Arabic literature possesses pieces, attributed to important persons, which contain moral precepts, but they do not treat of moral philosophy in a methodical way; therefore these essays have to be classed among the proverbs, apothegms and maxims. Let us only mention, by way of example, the recommendations of the dying Saḥīḥ to his four children, as told by al-Aṣma'(Mağṣūma l-adaab, Beyrouth, 1896, i. 53). — Moral philosophy is primarily concerned with man in general; yet there are some treatises on morals (the ḍāfatī), which apply to certain particular categories of individuals. The most important ones are those concerning the meanings of the words. These treat of particularities, which, in the eyes of the Arabs as in those of the ancient philosophers, are a branch of moral philosophy; it is true, but a branch important enough to be studied apart. There are also treatises on the morals of pious men, but these works do not really treat of moral philosophy, for morality, taken by itself, must be distinguished from mysticism and piety.

We are not perfectly sure which Greek works about moral philosophy were known to the Arabs. The Nicomachean Ethics are said to have been translated by Ḥūmaīn b. ʾIbšāk, in 12 books, under the title Kitāb al-ṭabāḥ, but the Nicomachean Ethics only consist of ten books; have we to suppose that to this Kitāb al-ṭabāḥ the Nicomachean Ethics are joined? Do we have to join the two books of the Magna moralia? Or is this only a variant of another piece of information with which we are furnished elsewhere, namely that which ʾIbšāk the son of Ḥūmaīn, and not Ḥūmaīn himself, is said to have translated the commentary of Porphyry on the Ethics of Aristotle in 12 books, where the number of 12 books has also been obtained by annexing the Magna moralia? We know that ʾIbšāk the son of Ḥūmaīn translated the commentaries of Themistius into Syriac and perhaps also into Arabic. Al-Fārābī knew the Nicomachean Ethics, the Magna moralia and the Moral Philosophy of Eudemon; he himself wrote a commentary on part of these treatises, Symposion afterwards published the Nicomachean Moral Philosophy. A certain Ibn al-Khaṣīnī translated a book on ethics which Wernich thinks must have been the Ethics of Aristotle. We do not possess in our libraries the Arabic translation of the Nicomachean Ethics. The physicians Ḥusayn b. Ṣaṣāri, Abū Ḥāriṯah b. ʾAbd Allāh b. Ṣabī', died 435 = 1043, is said to have written a commentary on the Ethics; we possess a translation from the Syriac into Arabic by him of Aristotle's ethnēkoita, ʿr ʾyīsṭāk. The moral writings of Plato are of politics rather than of moral philosophy properly so-called; let us only remember that his treatise about the Laws was studied by Ḥūmaīn the son of ʾIbšāk and by Yahyā the son of ʿAdī. Of Plutarch there was known a Kitāb al-ṭabāḥ, a book on moral exercise, on virtue, translated by Kosta the son of Līḥāj. A treatise on the "education of children" (Adab al-ṣawā'ib), translated by Abū ʿAmr Yaḥyān, the son of Yaḥyā, was also attributed to Plato. Wernich proposed, without very strong reason however, to change the name of Plato into that of Plutarch here.

Of the Pythagorean school the Arabs have known the golden verses (carmena aurea) which must be classed among the maxims, and also the maxims of the philosopher Secundus. Ibn Masʿawīhī has preserved an interesting moral treatise, entitled the Tahāba Cēkēs which seems to be a work of the stoical school (edited by Eichhorn, Leyden, 1640, and by Randi Besseg, Aligina 1685). Another method of moral treatises, especially representing the Platonic doctrines, is that which bears the title Maʾṣūma l-adab, the restoration of the soul; this treatise, edited by Bardenhewer (Hermetico-trismogetici qui apud Arabos fertur de castigatione animus iudicium; Bonn, 1873), is attributed sometimes to Hermēs Trismegistus, sometimes, by Ibn ʿAbd al-ʿAlī, to So-crates and to Plato, and sometimes, in a manuscript at the Bodleian, under the title Ṣafār al-ṣafārī, to Aristotle. Ibn ʿAbd al-ʿAlī, as Bardenhewer thinks it is the work of a Mussulman and compares it to the writings of the Brothers of Purity; Steinschneider (Die arabischen Übersetzungen aus dem Griechischen, p. 23) prefers to see in it a Greek work of an oriental Christian.

Passing by several "testamenta" (maṣlaḥa) and the "book of the apple" (Kitāb al-tawāsak), an apocryphal dialogue between the dying Aristotle and his pupil, written in imitation of Phyllon, we must still mention: a treatise on Economics written by a Christian, which is at the Escorial; a work by Abū Ḥāriṯah (died in 453 = 1061 or 460 = 1065), a kind of autobiography into which the author has inserted a passage about morality and politics, which was afterwards attributed to Aristotle and translated into Hebrew; and a lesson in morals (Jaʾīsā) supposed to have been written by Aristotle for Alexander, preserved in the British Museum (p. 203 of the catalogue).

About all these translations, authentic or apocryphal, see: Wernich, De auctorum Graecorum vernaeus et commentatoris, Leipzig, 1842; M. Steinschneider, Die arabischen Übersetzungen aus
Philosophical order. A large number of small facts
which are in a way the cumulus of history.

There are some features which all these moral philosophers have, in common. The admiration specially accorded to certain virtues such as re-

signation, contentment with one's fate, command over one's tongue, patience, is a disposition which
one finds in all these different authors and which is

specially islamic. The idea of considering the vice as maladies of the soul and moral phil-

osophy as a kind of medical science is adopted by

them all, and the mystics the composition is

completed by comparing the spiritual

directors to the doctor. Thus moral philosophy is

the art to cure diseases and to keep in health.

This aim is the attaining of felicity; this aim is

taught by Aristotle and by Plato. One also

notices in all these authors a certain rather scholastic

wish to effect a methodical division of the

virtues; that division is founded on the analysis of the

caractistics of the soul, each faculty having its

virtue and its vice, and sometimes the virtue is

conceived as the opposite of the vice and sometimes

the moralist admits two vices the one the

result of excess, the other of want, lying on either

side of a middle state, where the virtue resides;

this is the well-known idea of the golden mean.

The virtues which are often spoken of in Mus-

liman ethics are, besides those we have already

mentioned: the delight of the soul, exaltedness

of thought, liberality, gratitude, indulgence, goodness,

charity; often bitterness, jealousy, envy, anger,

insensibility, pride. Special chapters are

often devoted to friendship, sociability and to

the duties of the different classes.

AKHÎLĀT, in Khaîrî, Better than Khâliq; comp.

I. L. Marzâîâ, ed. Juybîlî, p. 360) is a town on the

western shore of lake Van, in the Middle

Agia one of the largest towns of Armenia, very

populous and strongly fortified. Comp. Ritter,

Erdkunde x. 324-328; G. E. Strange, The lands of

the eastern Caliphate (Cambridge, 1905) p. 185; C. Schefler, Soseh-Namer (Paris,

1881) p. 21. Of. reg. In the 9th century after Christ Akhrî was taken by the Arabs, but in the year 928 it

was again taken from them by the Byzantines.
comp. Well, Gerck. d. Chalifen ii. 638. Later on Aghlab came again under the rule of native princes. In the year 1000 the family of the Seljuk Sultan al-Mukhtal took the town from the Medine wānides, thus its lords, and established his own rule. Comp. Tomasech, Satan (zu Sitzungsbereichte der phil.-hist. Classe der kais. Akademie d. Wissensch., vol. 133, 8. iv. p. 31 et seq.). About later sieges and conquests see Saint-Martin, Muisser sur l'Arménie, 1. p. 103 et seq., and Stanley Lane-Fox, The Mohammedan Dynasties p. 110. In the year 1232 and 1244, Aghlab was taken by the Mongol; cf. Tomasech, Satan, 1. p. 34 et seq.; Quatremère, Hist. des Mongols de la Perse, Paris, 1836 i. 320, 344. The Byzantine writers call the town Ḥalūr or Ḥalūr; the Armenian authorities Chelî (Cheleë); according to the latter the town belonged to the canton Bennizik of the province of Tutajurban; cf. Hülschmann, in Indigenismenische Forschungen xii. (1904) 228. The place still exists to this day and possesses very interesting remains; e.g., the Roman bath, seu civ.; Reclus, New. geogr. univers. ix. 376. (STECK.)

Akhnim is a town in upper Egypt. Akhnim is the old-Egyptian Eps or Khent-Min, hence Copiotic Shenin, Arabic Ahelmin or Ikhnim; the Greeks called it Chemnis or Ptenopolis. It lies on the eastern bank of the Nile 26° 33′ N. Lat. and 30° 6′ East long. There were 20,000 inhabitants. In the early Arabian time it was the metropolis of a separate canton (íaða), from the end of the time of the Ptolemies until the time of the Mamelukes it was the capital of the province of Ikhnentya. To-day it belongs to the district Sofág in the province of Girga. In the Middle Ages Akhnim was a flourishing town, surrounded by arable land, sugar-cane plantations, vineyards and date palms. It possessed two mosques and several Christian churches. Also weaving was practised on a moderate scale, as it had already been done in Strabo's time and is still to-day; linen and probably also cotton materials were manufactured there for the inhabitants of the neighbourhood. As in all industrial towns of Egypt the Christian element predominated at Akhnim; today 6,000 Copts are still living there. They still hold to the old magic art. All sorts of superstitions and legends are connected with the templarium, called Birsia or Birka, which were still preserved in the Middle Ages, and the sculpture of which (human beings, animals, starn etc.) has given occasion to all sorts of fancies. According to Ibn Duhair one of these temples covered a surface of 220 × 160 metres, and numbered 40 pillars. His description of the temple has special interest for Egyptologists.

Al-Akhras is a tribe of the Qahtân, an Arabian poet, who was born about the year 1320 (1855) in al-Mawil and died about 1390 (1845) in al-Bayrak. His father, Akhras (the dumb one) he owed to an impediment in his speech. One of his patrons, the sâlih of Baghdad, sent him to India, in order that he might undergo an operation. As this could not be done without endangering his life however, the operation never took place. In his poems, which were very popular in his native country Iraq, he follows the example of his predecessors. He wrote many章程s on Nomagah, akhr, but did not take the trouble to correct them into a diwan. This was done after his death by Ahmed Izzat-Pasha el-Fârâbi, who in 1394 (1860/1861) had the collection printed at Constantinople under the title of al-Târîkh el-anfas fi el-adzhab. Bibliography: Djârid Zaidan, Maâvi, al-Asswâl el-mi. 200 et seq.: C. H. Huert, Littérature arabe p. 426.

Al-Aksâm (r.) = "evening," one of the five ritual-times with the Persians and the Turks.

Al-Aksâkath was in the 4th (10th) century the capital of Farghânah; under Bâhir it was the second of the large towns and was then called Aksî; still in the 11th (17th) century the present capital Namangan is spoken of in the Bahâ al-âzâr (Tâhir, India Office n. 875, p. 108) as one of the less important cities (ílamât) of Aksî. According to Bâsil, Aksâkath was situated on the right bank of the river Sir, near the place where the Kisan-Sn joins it. At present there still exist (near the villages Aksî and Shânnd) the ruins of the old citadel (Iki Aksî, 1000 steps from west to east, 600 steps from north to south, about 150 feet above the level of the water of the Sir; explored in the year 1855 by professor Veselovsky from St. Peterborough). Information concerning the state of the ruins may be found in the Svedenskiâk Wostotnî (rus.) Tashkent, July 1896. (W. BARTHOLOM.)

Al-Akhtal, an Arabic Christian poet, born about the year 640 of the Christian era at al-Ilâb (Akhalt y. 170) or in the Syrian desert not far from Kosaja, where his clan camped; comp. the Zohra al-Akhtal, ed. 1890 (hereafter referred to as D), p. 82, and Agzîr at 55 et seq. His real name was Gîlahy b. Shalt b. Tarka. He belonged to the taghibih clan of the Qâdsam b. Berk (comp. D. pp. 176, 178; Agzîr vi. 195; Mackenzie, 1904 (hereafter referred to as M), at the bottom of p. 479), one of the most illustrious clans of Arabia. His mother Lâlî belonged to the Chir tribe of Yalid. As he himself adopted the surname Akhtal, I cannot have reminded him of anything disagreeable; his uncle was called Dawbah (*fîg, wull*) (D. p. 1). From his eldest son he took the ta'na Abl Mâlik. Being descended from the Christian Taghibihes, he lived
and died a Christian; if necessary the satires of Djibril would prove it. His diwan shows few traces of his Christianity, which was, moreover, superficial as all religious faith among the Bedouins; mention need not be made of this, or of his dedication to the customs of Christians, or of his occasional oaths; to these may be opposed Islamic expressions — comp. D. pp. 78, 119, 184, 204; diwán, ed. of 1905 (hereafter referred to as D.), p. 173, 5 — current expressions which prove the influence of his surroundings (comp. Al-Mushaikhu viii. 173). He appeared in public with a golden cross round his neck, according to the custom of the Arabians Christians, turned to the east when praying, received communion and had distinctly in the public presence that his confessor imposed on him. He proudly replied the Caliph’s offer, inviting him to change his religion (D. p. 154) and reproached his adversaries that “hunger and not conviction” had led them to Islam (D. p. 315, ii). The way he practised evangelical morality is more unpleasant: he was divorced and married again a divorced woman, a common practice among Arabian Christians, but he told to those a slave-wife whom a son of Ziyad had given to him (D. p. 315, i); Margoliouth (Mohammed p. 40) states it but does not prove it. Al-Akhṭal was a great drunkard. But apart from the influence of the ancients, whom he knew and imitated, drinking was to the Christians a proof of their independence from Islam. Personally Al-Akhṭal, together with several fellow-Muslims (Al-Mushaikhu viii. 15; ib. 76; vii. 39) saw in it a source of inspiration. He was seen in public houses in the company of Hashimides and a son of “Othman (D. p. 47, i; B. p. 174). In his whole conduct it seems more difficult to confuse his intercourse with female singers of very loose morals, than his neath, a kind of platonic love (M. p. 479: “Bu ḫāʾr al-żāhir faham”) which became a common place subject of poetry. His diwan is chaste, some very realistic passages (comp. B. pp. 105, 106, 109-110, 165, et seq.) excepted, as is easily explicable considering the obscene character of Arabian satire. Let us only think of Djibril, Faruḍāya and a great lady of the Anṣār, Hamida (Al-Mushaikhu viii. 139-140). Like all the Taghlibites, Al-Akhṭal belonged to the monophosphate confession; this, however, did not hinder him from being the friend of the very influential Melkite family of Ibn Said, who adhered to orthodoxy.

When Ka‘b b. Ijūrār, the poet of the Umayyads, was invited by Yazīd, the son of Mu‘awiya, to attack the Anṣār, he let the young Al-Akhṭal, who belonged to the same tribe as he, take his place. But the success of this virulent ḥijāż (D. p. 314) would have cost him his life, if Yazīd had not intervened. From that time he shared his table and accompanied him to Mecca. At this period his panegyrics on the Umayyads began: Yazīd ‘Abd Allāh b. Mu‘awiya (according to commentators in D. p. 167-176) (comp. B. pp. 63-72; however the battle of Marjī Rihāt, which took place after Yazīd’s reign, is mentioned); Khālid b. Yazīd; on their lieutenants: Ziyād and his sons, al-Hajijādī (see). Having been appointed official poet of the dynasty (Al-Mushaikhu vii. 172, 176) by ‘Abd al-Malik, he sings the praise of the Caliph, his relations such as ‘Omar b. ‘Abd al-Azīz, his sons al-Walad, Sulaimān, exalts the memory of Othman (D. pp. 39, 172, 174), tacks to his enemies: ‘Abd al-Hakkūn, Al-Azrāq, (D. pp. 58-64, 73-76, 93-94, 204, 277-278, 289 et seq.) the Khālid, hostile to the Murūjids since Marjī Rihāt; a real political poet, petted by those in power and feared by the opposition! That part of his the martyrdom of the Umayyads is the most important: in it one finds the old gḥālibīyya still surviving, the echo of contemporary passions, and in the proud and independent attitude of Al-Akhṭal (M. p. 478-482) the tolerance of the Umayyads, who are still Arabs rather than Muslimans. The influence exercised by this Christian is not one of the least instructive aspects of that period of transition. According to B. p. 170-171, ‘Abd Allāh b. Ijūrār al-Dajjāl (and not Dajjāl as B. has it) had definitely allied himself with the Umayyads. The rivalry of al-Akhṭal and Dajjāl has remained famous in literary history; as a rule the former had the advantage of his rival, who was less biting and more trivial; their nāṣī七 are a favourite theme. Al-Akhṭal, Dajjāl and Faruḍāya together form the first class (al-ḥabbā al-makhtūb), a group of three standing apart, with which Arabians critiqued poetry, and were in a position to compare since Islam. But critics do not always agree about their respective value, a subject which has raised incommensurable discussions among the ‘Abhāsīs grammarians (Balḥākhī, Mūḥāsin p. 458). If al-Akhṭal had not been the Christian author of malicious verses against Islam, they would have accorded to the palm to him. His style being usually more chastened, he reminded one more of the ancient models. In satire, in the ḥāṣār, he is undoubtedly the first. In panegyrics his inspiration carries him to much higher flights than his rival, who are much more vulgar. Notwithstanding his “Weitere Ausschau” which is frankly that of a Bedouin, we see the courtier in this Taghlibite, who, moreover, loves a roaming life and hates the life at Damascus (D. p. 121, o). The Christian betrays himself, we believe, not so much by professions of faith as by the rarity of obscene passages, which his rivals indulged in. In that respect al-Akhṭal could say like Nūsib (Al-Mushaikhu i. 145) that a young girl might read his diwan. As in the case of Shamsukh and Ḥujāfa (Al-Mushaikhu vii. 102) one might find fault with some of his ḥāṣār in that they are too artificial, do not run smoothly and are all of them difficult; he was not a maṣřīī poet and did not care to produce theology on the Umayyads (D. p. 98-118) is considered his masterpiece, where may be read the verse which immortalizes the ḥijāż of those caliphs: “Terrible are their wrath, when they are resisted, they are the most merciful men, notwithstanding their power” (D. p. 104, 8). Although it is true that al-Akhṭal imitated his predecessor and botched their verses, yet he has never committed plagiarism with such honest-faced cynicism as Faruḍāya. One part of his diwan (D. p. 166, 129, 133, 298-299; B. pp. 167, 169; comp. Khātul, pieces 3, 9, 10, 13) sings the vicissitudes of the wars of his tribe with the Kūfa (which had first been their allies against Kābi; having fought in those wars, in which he lost his son, he assures us that he showed great courage (D. p. 97); exaggerated praise! Al-Akhṭal had no warlike temperament; from the butchery of Bahr (Kūfān, 23, et seq.), which his poetic viceroy escaped by flight. Allowing to the commiseration of ‘Abd al-Malik he died out before him: “If
intemperance (Ağhabî xi. 59-60) had provoked, the Kornilâtes in their power refuse justice to those we can have done with all the same" (B. p. 141).— a revolutionary verse which comes close to that in which he declares the obscure ' Abd Allah b. Sa'id b. al-'Àzî, the descendant of a Taghlibite (B. p. 117-118) and the brother of the one who had all but overcome ' Abd al-Malik, "worthy to command". These audacious utterances did not deprive him of the favour of the Caliph, Walid I—his poet was called ' Abd b. al-Riây (Ağhabût viii. 19) — showed no very warm admiration for al-Akhî. This Caliph, not a very cultured man, paraded a Mussalman fervour (Ağhabût vii. 69, 9). The Hakirî, for a long time the enemies of the Taghlibites (comp. B. p. 161-162), chose him as an arbitrator and al-Akhî pronounced judgment in the mosque. He must have died before the end of the reign of Walid I. Ibn ' Abd Rabîhî (Ib. i. 155, ill. 70) prolongs his life until the reign of ' Omar II, doubtless deceived by some verses (B. p. 277-278) recited in the possession of that Caliph. If we have been right in giving ± 640 as the year of his birth, al-Akhî attained his seventieth year and in that case his poetic career lasted about forty years. No descendants of his are mentioned.

Akhîr (r.) = star.

Akhîrî is the ta'libûl-Ahîn of Musaîn-al-Dîn Mu'afîd b. Shams al-Dîn al-Kâhinî (d. 968 = 1561). He wrote an Arabic-Turkish Dictionary (952-1545), known by the name of Aghabîn kahîr (there are also concord recensions), and printed at Constantinople (1422, 1356, 1392). C. Fügel, Diet arab., p. 1197. He was w. i. 119-120.

Akhûnd, also Akmân (Castelli; Skâpokov. Polak, Pertiwi i. 269) and Akkmân (Sakapevan, Richardson, Vallers) = "schoolmaster"; East Turkish akhûnd, akhûn (Vambery, Cugatseh Sprachstudien p. 205; Sulamán-Efendi, Lodgoi Cugatseh p. 6); Akmân and Akmânul = office of schoolmaster (Quatremer, Hist. des Sultans ottomans, 69). The original meaning of the word is "under-master", "substitute", from a + kimân (kîman), contraction of kîmanûf, which occurs in the compound names of Mûkâmî and Khamîn-Emîr. According to Quatremer (ibid. 1, 65; note 96), it is not found in use until after Timur's invasion. — Akkmân-Sülûk is the name of a poet of Shiraz (Perrich, Cat. Hei. Berlin p. 63); Justi, Iran. Namenbuch p. 139). Akmânul = the schoolmaster's son" is the surname of Mîrîn Faîl 'All (q.r.), a playwright, who wrote comedies in Assê Türkîse (see KHAMRAEZÎ, (C. H. Lensen).)

AKÎD (a., plur. akîdid) is a word which signifies the article of faith, the proposition, to which the faith is strongly attached, as it is illustrated by the concrete term âkida "belief". The writer of the Târifat gives the following definition of the akîdid: "that in which the soul itself is kept in possession." They are indeed formulas, in more or less concrete phrasing, serving to express the principles of religion, the akîdât; the latter, according to the definition of the Târifat, are the truths, "the reason of which consists in themselves, and on which the others are based". There is a science of the akîdât; the akîdid do not properly constitute a science; they are only sayings. They can be considered as a preface to the akîdât; the akîdid of Târifat bear the double title of "akîdid of the people of the Sunna, or surface (muhaddîsin) to the principles of religion".

In Islam as a matter of course an official redaction of the dogma of faith has never existed, the Islamic theory of the revelation precluding the appearance of personalities like the apostles of Christianity, composing a creed with help from above. But many doctors, mystics and even philosophers, have tried to give substantial expression to their faith; and several of these texts have since been adopted, taught and commented upon by the theologians in the Islamic schools.

This kind of writings seems to go back as far as at least the 5th century of the Hijra. The one that has enjoyed the greatest vogue is that of Nâdir al-Dîn 'Omar al-Nasafi (d. 537 = 1143). On it various commentaries have been written, notably by Sa'îd al-Dîn Mas'ûdî al-Tâhânî (d. 791 or 792 = 1392-1390). To this commentary glosses were afterwards added by Mullâ Ahmad b. Mînî, commonly called Khayyûl (d. 860 = 1456); by Mullâ Kâṡûfî (d. 901 = 1495-1496); by Mullâ Salîh al-Dîn, tutor of Sultan Bayzâz, and by still another, Hâdidî Khâsis, who has a long article on this subject, even quotes glosses on the glosses of Khayyûl. It is on the treatise of Nasafi that Al-Mubarak founded his exposition of the Masullûn doctrine.

When one studies theology at the universities from a series of works like those mentioned, the student, during the first four years, may only read the original treatises (mawâ'id) and its commentary (akhûnd); only during the ensuing years he may study the glosses and the paraphrases (naqâsîh and nafsîh); see F. Arminjon, L'institution, la doctrine et la vie des universités musulmanes d'Egypte (Paris 1907).

Besides Nasafi, the oldest scholars who have written akîdid are al-Tâhirî (d. 341 = 953) and al-Samârî (d. 342 = 954); and the most celebrated are: the Imam 'Abd al-Hamamîn, the tuteur of Gâdîdî (d. 478 = 1085-1086); Gâdîdî himself, who wrote a book under the title of wa akîdid as part of his great work Ibnîn al-Dîn al-Ijâl, the author of the Mengârî (d. 756 = 1355); the mystics and founders of orders 'Sâlîhî al-Dîn 'Omar al-Suhrawardi, 'Abd al-Kadir Gilânî and 'Abd Mâdîyûn; the voluminous
principle (qiyas). For example the principles in the section on "the essence and the unity of God" are: the existence of God, his eternity, that he is not in a place, that he knows neither accidents nor directions, that he is "established on his throne", as the Koran says, that he will be seen in the other life, that he has no associate. The rational proof of the existence of God is: that every product needs a cause to produce it; that consequently the world, being a product, needs a cause which is God. In other sections of the same book, Ghazali treats of the qualities of God, of his works, and a knowledge of his works, of the problem of free will in man. One section is especially devoted to the traditional beliefs relating to the resurrection, the judgment, the perfect caliber and the insistance. In the course of his exposition Ghazali introduces very interesting speculations on faith, its nature, its degrees, the means to produce it, to defend it and make it grow; sometimes he calls it "attachment" (qabiliyat), sometimes "satisfaction" (itma), he distinguishes faith from Ilim, faith being the belief in proposed dogmas, whereas Ilm is the abandonment not of the spirit only, but of the heart and of the whole being to the will of God. Ghazali also discusses in which degree speculation is useful to the establishment and the defence of faith. This book of the 'Adl id is preceded by another one on science, which forms the preamble to it, just as Nasafi places a definition of what science really is at the head of his 'Adl id.

To the mystic 'Abd al-Kadir Gilani 'Adl id in rhythmical prose are attributed, which are both poetical and very philosophical. In this short treatise one observes moreover a painstaking care to preserve the purity of faith against the various heretical sects. Here is no theorising about knowledge; it is the theodicy which appears at the very beginning: "Glory to God who is the mode of the mode, and is himself free of modality; who is the place of the place, and cannot himself be localised; who is to be found in everything, but is too holy to be adorned by anything; who abides in every place, but is above every abode...." This very abstract expression of the dogmas of the theodicy is followed by protestations of faith on such and such a point, made by the sects: "We believe, contrary to the Habisites", the author says, "that God leads the infidels (kuffar) astray; that the Moslem sinners (jussakib) are better than the Jews, the Christians, and the Magi, which is denied by the Djuwarites; that God sees himself, and that he sees and hears everything, both of which beliefs are opposed by the Kabitites; that he has created man in the most beautiful state, and that he will make him return to his former state, a theory rejected by the Djuwarites; and we maintain against the Mu'tazilites that the friends of God will see him on the last day."

Then follow exhortations; the scholar addresses the soul in a more poetical than dogmatic manner; he praises the benefactions of God and the beauties of Paradise.

On the *Akhīda* and that of al-Samarkandī which are very popular in the Indies: Van den Berg, in *Tijdschrift voor Ind. taal-, land- en volkenkunde*, xxi, 537 et seq. — Amongst the Turks the *Akhīda* of Birgwerf [q. v.] is much studied; it is the only one which Gesner de Tussi has based his *Exposition de la loi musulmane*. (Caesar de Vaux.)

**Aṣkīr**

**PAŠA** Muhamed was a Turkish statesman during the reign of Sultan Mahmūd II; he held the posts of Minister for Foreign Affairs and of Home-minister. He was the son of the *kādī* Alīnākī, Mahmoud, and was born at Yezhad on 15 Rabi' I 1203 (25 Dec. 1787). In 1228 (1813) he came to Constantinople, and entered the administration under the auspices of his uncle Muṣṭaṣ-ṣāfa-Mahmut, rais-emir, whom he succeeded afterwards; when in 1251 (1832) this function was abolished, he was appointed Prime Minister for Foreign Affairs of the reform (Tanjitsul), but was soon supplanted by his rival Pertev-pașa. In the beginning of the reign of *Abū al-Majjud*, Aškīr retired to private life (1255 = 1839) at Adrianople and at Brusa, undertook, for the second time the pilgrimage to Mecca (1263 = 1847), and died on his way back to Alexandria (1265 = 1848). Turkish owes first of all to him a reform of its written language. He tried as much as possible to exclude from the ordinary vocabulary of authors all the Arabic words excepting those which had been borrowed for scientific terms, and all those Persian words which were not indispensable to the rhetoric of the poets. He created a simpler and clearer style, and the old phraseology of the Ottoman authors. His poetry of which the most famous piece is the *Adam-ṣasādāt* (Ode of nothingness), is written in the ancient manner.

Atrio, *De diplomate ottomano* (1836; translation of the *Tabgha*), p. 1-49; *Aḥīdī-Efendī; Muṣṭaṣ-ṣāfa* (Constantinople, 1250 = 1839). (Cl. Huart.)

**Aṣīl** ([?]) *mumūn anzīyat*; *Aṣīl*, the name of the cornelian, which is found in Arabia in various colours and qualities; of which the red shade is especially in demand. The cornelian has of old been exported from Yemen (al-Siyahr) via Socotra to the ports of the Mediterranean. It was used for seals; for ladies’ ornaments and even costly mosaic, for example in the mihrāb of the great mosque of Damascus (according to M. Kadūnc). It was used as a medicine for the preservation of the teeth; superstitious belief ascribed to the cornelian the snaking of the power of soothing the heart — especially in a combat — and of stopping hemorrhage. Even Muhammad is said, according to some traditions, to have shared this belief, and to have confirmed the power of the seal to give happiness and to protect from poverty. Down to the present day the cornelian has retained its place as neck-ornament for women, and the name Aṣīl has been transferred to a kind of necklace which is of a red colour, whether made of glass or shells or other materials.

**Aṣīr** is the name of a valley. Two miles south-west of Medina its depression began, forming a valley of considerable width, in which the water of a wide-spred net of affluent was collected. Distinction was made between the greater and the lesser Aṣīr. The abundant moisture under-ground supplied the two principal wells with excellent drinking-water, to the use of which the people of Medina were supposed to owe their blood-tempered nature. Numerous springs watered the palm plantations and the baths, and all of which formed a constant to the surrounding volcanic aspect of the country. At one and same hill established a ṣūrah or large stud. In the shelter of the trees villages were country-houses of distinguished Mussulman families, such as the *dīn* of men such as ʿAbd al-Wās, ʿAbd al-Qādis, ʿAbd al-ʿAzm, ʿAbd al-Kālid (Belshdti, ed. de Goeje, pp. 6, 12, 13, 21, *Aṣīr* V, 144, xvi, 45; xvi, 165, 108; Ṣahih III, 82, 2350; Ibn al-Ṣūdāt, III, 104, 174, 204, 279-280; Ibn Jādīr, *Iltuw* ii, 163). They went there for the spring season, but the heat drove them away to ʿAṣīr. But the greatest attraction of the valley was afforded by the wādī Aṣīr itsef, as it was the only spot in the Ḥijāţa, which gave one the illusion of a river. If in winter rains were exceptionally frequent (Belshdti, pp. 53-54), the bottom of the valley was transformed into a stream of water, the water of the Euphrates, foaming and overflowing like the latter river. At the news that the Aṣīr was beginning to flow”, the whole town was astir at once (Ibn ʿAbd Rabbī, *Iltuw* ill. 214). In a moment the banks of the temporary river were covered with a motley crowd, anxious to bathe their feet and to enjoy the various pleasures of hydrotherapy. In short the valley of the Aṣīr was what might be called the "Boise de Boulogne" of Medina, or to borrow a phrase from the *Aṣīr al-maghāb* (IL, 173), "the pleasure-ground of Medina during the rainy season and spring", the place where elegant society met, the favourite promenades, the rendezvous of fashionable parties, a veritable other Ephesus, extension of the desert town, into which the Rome of Islam had been transformed. Among the very mixed crowd one might notice, besides illustrious poets such as ʿOmar b. Abī Ṭālib and al-Ālī, musicians, singers, and a special class of men known by the significant name of muşkamudn of the Aṣīr”. Wine was drunk there in public; parties were organised in the depth of night, which were visited not only by the "young ladies of Corsica (the Ḥāshimides, the descendants of Ali, of Ṭabānī, of Ḥāsinā; of Thabit and of ʿAbd al-Kaḥfīn b. ʿAwrī), but also by the woman of the first families such as the famous Sūlaiman,—
in Dutch East India cp. C. Smoorck Hargroote, De Afghansen l. 423 (= De Achœneus i. 213) van Hasselt, Meden-Samarra p. 269 et seq.; Matthes, Bijdragen tot de etnologie van Zuid-Celebes p. 67. (Th. W. Jutten.)

'AKIL (A.) = "in the full possession of one's mental faculties", in the Moslem law-books often combined with the adjective sâlih, l. e. *grown up*, *of age*. Such a person is capable of acting with a purpose in view and deliberately. That is why the jurists often briefly describe the sâlih as muhalaf, i. e. *some one who is obliged to fulfill the precepts of the law*, to whom the commandments and prohibitions of the religious law refer in general. (Th. W. Jutten.)

Amongst the Druses and a few other sects the name dâhil (plur. dâhilû) is used to denote some one, who is an adept in the doctrines of the sect, as contrasted with the lâkill (sing. lâkill), who forms the majority. See the art. Druses.

'AKIL b. AL TALIF was a brother of 'Ali for a long time he refused to believe in the message of Muhammed. In the battle of Bedr he fought on the Meccan side (according to accounts of later date he died on the side of himself, cp. Nawawi, ed. Wüstent, p. 427); he was taken prisoner, but was soon ransomed by al-Abbas (cp. the account of Tabari i. 115-116). He was married by tim Hâshim, Vâsâ'î, ed. Houtsma, p. 46). Later on, after the conquest of Mecca, — according to others already after the agreement of al-Hudâbiyya (cp. Ibn Hâjjar, Taba'î ii. 1175) — he embraced Islam and went to Medina. He accompanied his brother Dâ'îr in the unfortunate campaign to Mutâ. Illness prevented him from taking part in the succeeding expeditions: some authorities however assert that he fought in the battle of Hunain. When 'Ali was proclaimed Caliph, 'Abî said goodbye to him and went over to Mu'awiyah's side, with whom he fought in the battle of Siffin (cp. Belâqtîs, ed. de Goeje in the Zeitschr. d. Deutsch. Morgenl. Gelehr. xxvii. 391). A'âkîl died during the reign of Mu'awiyah (according to others in the beginning of Yazid's reign). He was famous for his knowledge of the old genealogies, and was consulted by 'Umar when the latter made the lists of the dhawâs.

(P. Bel.)

'AKILA (A.) is the name of a man's male relatives who according to the precepts of the religious law have to pay the penalty (the 'ajâfî) for him, when unintentionally he has caused the death of a Moslem. This decree was based on a verdict of the Prophet. One day in a quarrel between two women of the Hudâlî tribe one of them, who was called 'Ukâ, killed the other with a stone which hit her in the womb. When, soon after, the other woman also died, the Prophet decided, that her kin ('akila, or, according to a different reading, her 'ujâh, i. e. agnates), in accordance with an old custom, had to pay the penalty to the relatives of the woman who had been killed.

The original custom with the ancient Arabs
was that the whole tribe was obliged to pay the wergild. (Robertson Smith, Kinship and marriage in early Arabia p. 53; O. Prockasch, Über die Blutsstrafe bei den vorislamischen Arabern p. 36 et seq.) It made no difference whether the author of the deed had acted premeditatedly or not. According to the Moslem law however the penalty can only be claimed from the kinsmen in the same manner as the injury, because according to the generally accepted version of the above-mentioned tradition the Hashshaliy woman had also slain her adversary unintentionally. The majority of the jurisconsults agree that the author of the deed should not be obliged to pay the penalty. Only the Hanafites and a few Malikites scholarly maintain, that he should be treated in the same manner as the other members of the family, and therefore should contribute his share to the amount.

There are moreover various contradictory opinions regarding most of the special problems which refer to this matter. For example the majority of the Moslem scholars consider only the male relatives of the author of the deed as 'akla. But the Hanafites maintain that in consequence of the altered political and social conditions only the members of the family, but rather all persons who are obliged to help one another (such as the members of the guild to which the perpetrator belongs, his neighbours, or the inhabitants of the same part of the town etc.) should be compelled to share in the payment. They defend this theory with an appeal to the example given by the second Caliph. The latter had commanded that in the various districts, late (divans) of Moslem brothers-in-arms should be drawn up. The persons whose names were contained in those divans owed one another mutual assistance and had to contribute to the payment of the penalty for manslaughter committed by one of their community.

The kinsmen (the 'akla) have to pay the money within three years' time. The full amount, precisely fixed by the law, is a so-called 'light' penalty (cp. the article övva). The question as to the amount of the share which each separate person has to contribute, is solved in different ways. According to the Hanafites no-one may give more than three or, at the highest, four dirhams, i.e. only one (two) dirham a year. According to the Shafiites only 6 dirhams may be claimed from well-to-do people, and according to the Malikites and Hanbalites each person is liable to pay as much as he is able. Moslem tradition makes the Prophet proclaim emphatically, that neither will the children have to atoms for the sins of their fathers, nor the fathers to answer for the sins of their children. This statement implies, according to many jurisconsults, that neither ascendants nor descendants are obliged to pay the penalty. Consequently they consider it as bound to pay: first the brothers of the perpetrator, next the sons of these, then the uncles, then the uncle's sons etc. If the author of the deed has no kindred at all, the penalty must be paid out of public funds.

ÅKINDLI = 'skirmisher', 'scout' (from åke 'incursion', 'razzia', 'raid of cavalry' from the root å-k-m = 'flow', 'gush'). At the beginning of the Ottoman conquest the åkindli, in the van of the regular troops of the invading army, struck Oriental Europe with terror by the rapidity of their movements: they received neither loot nor pay, but lived on the booty they captured from the enemy. They appear for the last time in the early years of Othman's dominion, first in Asia Minor, notably in a campaign, which Er-Toghril gave to an army composed of Greeks and Tatars, in the plain of Bruss, towards the close of the 13th century. During the first siege of Vienna (935 = 1529), they advanced as far as Ratisbon, far beyond Linz which they passed on their way, devastating the whole country by fire and sword according to the account of the cultivated Italian, Giovanni. The family of Mikhail-Oghlan, which was descended from Köpe-Mihran and related to the Paleologues, boasting besides of a relationship on the mother's side to the Duke of Savoy and the King of France, possessed a long time the dignity of commander of this troop.

'ÅKKA is the name of an Arabian tribe. 'Åkk means 'excessive heat' and 'very hot'; consequently the same belonged originally to a mishāf (province), and was afterwards transferred to its inhabitants. As a curiosity we may mention here that the 'Åkkites are said to have founded Atre ('Åkha).

Their genealogy is given by Wustenfeld, Genes. Tabellen, A. There 'Åkk and 'Ånadd are mentioned as the sons of 'Adâm. Others consider the southern Arabic 'Utîn as their ancestor which has often caused mistakes in the text. They appear always as southern Arabs. The 'Åkkites shared the place al-Mahjūm with Khawalites, the place al-Kadr with 'Ash'ītes and the place al-Suq with Rabbites, Mahdīites, Farsaunites and Kainites. But in the main their province is inhabited by them and 'Ash'ītes, with whom they are closely connected; occasionally the origin of both tribes is traced back to the same ancestor. They often appear in joint action, for example for they have their governors in common. Also certain peculiarities of language are common to them both.

Habitations. Geographically their country belongs to southern Arabia; it is the Tihama (lowland, littoral) of Yemen. Their settlements extended north as far as the region of Djidda. Also according to its administration their country belonged to southern Amran; sometimes however it was under the government of Mecca.

The Mountains in the Shari'a, the mountains
country by which the Yhôma is bounded on the east side, were called: Djarabl, Hartz, KhOUNI, Kahana and al-Maghrib. The WATERS were: Dhu' al-Mawr (after which also a province is called, north of Sourd), Sahim (south of 15° N. Lat.) and Sourd (north of 15° N. Lat.).

More of less important places were: al-Athib (far away in the north), Balda (on the Wadl Mawr), al-Kadib (on the Wadl Sourd), the west of Himm, al-Lânî (a district in the mountaineer), al-Mahbajam (also called Sourd), al-Mawwull, al-Sanhâr (on the coast), al-Sanâ' (on the coast), al-Sanâ' (in the region of the Hamdûn). There were also Akkites in Khorasan, in Syria (on the Jordan), in Egypt and in the Magrib. In Kûth they shared one and the same quarter with northern Arabians.

History. Poëlemaeus tells them: "Aggyres (var. Aggyres etc.). Some genealogists state a close connection between the Akkites and the Assytes (through the medium of Ushtân, at supra); which seems in accordance with the story that the Assytes in the period of their persecution had lived for some time in the territory of the Akkites. The Akkites were amongst the first who after Mahammed's death abandoned the Mahammedan faith, but with the allies, the Assytes, they were defeated in the extreme north of their country. The better elements of the tribe, it is true, seem to have kept aloof from this hostile action against Islam. At the outbreak in Yemen of the insurrection against Alî Bekr's governor Fâris, the Akkites and Ushtân hastened to his assistance and forced a way for Fâris to escape to Sanû'at the very moment when he seemed irretrievably lost. Supported by these auxiliaries he acted on the offensive and defeated the rebels. The Akkites took a prominent part in the conquest of Egypt by 'Aizar. In 'Alî's wars with Ma'âwiyah they deserved the latter's thanks for venturing at his command into one of the most dangerous situations of the battle of Sûfian, when together with the Assytes they had to face the attack of al-Ahwar. In the battle on the Harrâ, Akkites fought on the side of the Muslims and during the succeeding siege of Mecca they took part in the burning of the Ka'hâ. In 207 (822-823) mention is made of an Akkite causing disturbance amongst the 'Ak, which was soon quelled however by al-Ma'ânûn.

(References.)

AKKAE. See the present name of the ancient 'Akko, called Poëlemaeus, a port on the west coast of Palestine. 'Akkâ was captured by the Arabs under Shurabîl b. Hamû, when they overcame the Byzantines. He also caused docks and to be built in A'kâ, which after-wards were removed to Tyré by Caliph Hâchîm. After a later period Ibn Tûlûn had the harbour surrounded by large stone embankments; Mahaddâst, whose grandfather was the architect, gives an interesting description of their construction. With the coming of a new epoch began the town. In 1164 king Baldwin I, after a previous abortive assault, succeeded in conquering the important sea-port town, which now became one of the principal possessions of the crusaders in the Holy Land.

To the 'Akkâ of this period the description refers, which is given of the town by Ibn 'Arnâ: it is there called a large, widely-extended place with many farms, a beautiful and safe harbour, and a mixed population.

After Saladin had won the great battle of Karân Hüttâ, 'Akkâ was surrendered to him in 1187. But to the Christians the possession of "Acre" (the French transformation of the name) was of vital importance. That is why they soon afterwards began a siege, which dragged on for a couple of years until the French and Richard Coeur-de-lion finally forced the scale and 'Akkâ was taken in 1191. From 1299 onwards 'Akkâ was the centre of the Christian power in Palestine and the seat of the great orders of knighthood, amongst others of the order of St. John, after which the town was called St. Jean d'Acre. In 1519 Sultan al-Malik al-Aghlûn put an end to the dominion of the Christians in Palestine by conquering 'Akkâ. The town was completely destroyed, and lay waste for a long time, a collection of grand ruins, only inhabited by a few living beings. About the middle of the 18th century it was called to new life by Shahâb-zâhir, the founder of a dominion in Gallûs, who chose 'Akkâ for his capital. The town was rebuilt and regained actual prosperity during the reign of terror of the cruel Ameel al-Djânânî (1775-1804). Napoleon I. was also interested in the town, which was protected by the English fleet. During the peaceful rule of al-Djânânî's successors 'Akkâ retained its prosperity; but in 1832 it was again raised to the ground after Dscheth Pacha had succeeded in conquering the town. It revived a second time, only to be shelled in 1840 by the Turkish fleet supported by the English and Austrian. Since that time it has recovered a little under Turkish government.

AKKERMANN. See A. KERMÀN, under 2.

AKKL. (n.) is a philosophical term employed in "Rationalism" (so for example Gerhart of Cremone) or "intellectus, "intelligentia." In neoplatonic speculation, which in many respects resembles the late-Hellenic doctrine of the Logos and also corresponds with Logos-Christology, "âkîl is the first, sometimes the second, entity, which emanates from the divinity as the first cause, or proceeds from it by means of intellectual creation, the "maâlî, the "nasîl etc. coming after the "âkîl in sequence. As first created entity the "âkîl is also called "the representative" or "the messenger" of God in this world, and various sects acknowledge incarnations of the "âkîl. As a cosmological, purely intellectual principle of motion it corresponds with the "ââlî of the Aristotelian metaphysical system and its expounders. The purest adherents of peripateticism in Islam call the divinity itself "âkîl, because they maintain that the definitions of the "âkîl to "maâlî and so on, ought not to derogate from the
essential unity of God. The αἰθή, thus defined, is followed by the 'αὐθή of the spheres, usually ten in number: the encompassing sphere, the spheres of the fixed stars and of the seven planets, finally the terrestrial or sublunary sphere. The spirit of the last-mentioned sphere is called 'αὐθή 'καθῆκτος, ò τίμιον, ἀγας in a more restricted sense, although the attribute 'καθήκτος is also due to the higher spirits and to God. In theological or harmonising exposition the two spirits of the spheres are identified with the angels who stand next to God; the 'αὐθή 'καθῆκτος is then called the angel Gabriel. — The speculation concerning the 'αὐθή has acquired the greatest development in psychological and ethical treatises, not only from philosophers and neortics, but also from orthodox Musulmans. Taking for their basis the commentaries on Aristotelie's De anima and especially the then-entered work of Alexander of Aphrodisias, they commented (as a rule according to the Pythagorean quaternary), and also explained the consecutive degrees of man's mental and active development, though preeminently of the former. They are mostly given in the following order:

1. The αἴθη 'καθήκτος (ό θεός έλεγχων, Μονα), the intellect trained in the rudiments or principles of knowledge.

2. The αἰθή λόγικα (ό νομός έλεγητός, Μονα), the intellect trained in the rudiments or principles of knowledge.

3. The αἴθη λόγικα (ό νομός έλεγητός, Μονα), the intellect trained in the rudiments or principles of knowledge.

4. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

5. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

6. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

7. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

8. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

9. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

10. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

11. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

12. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

13. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

14. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

15. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

16. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

17. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

18. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

19. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

20. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

21. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

22. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

23. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

24. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

25. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

26. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

27. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

28. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

29. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

30. The αἴθη τοῦ ἀνθρώπου (ό τάξις τοῦ ἄνθρωπος, Μονα), the intellect trained in the rudiments or principles of knowledge.

The following remedies may prevent this issue:

1. Take equal quantities of chalcolithiasis (cupper-bloom), of honey and of salt, and with their mixture rub the affected spot; that will hinder its development, making the putrid part drop off and protecting the contiguous flesh.

2. And when the process has passed the stages of inflammation and discharging, a more gentle treatment must be tried, setting it gradually or by a little washing.

3. And here follows another cure for the pustule:

Powder it with rolled hollow-root and gall-mut mixture in equal quantities until it becomes dry. Vitriol and yellow vitriol are equally effective, especially together with vinegar and nut-leaves, and also with the wild cucumber or its juice. And if part of the flesh is already corrupted, and it away or make it fall by means of some coccola pastilles; still stronger than this is embrocation. And after one layer has fallen off, get oil ready and put it on the sore spot; then the rest will come off and the sound flesh will appear. Red vitriol may be sprinkled on the wound to spare the skin. When the pus has become visible, it must not be cut away nor be removed by uncovering it, lest the taint should spread. And if the inflammation round the putrid part increases, barley water with hibiscus juice is recommended as a good expedient for stopping it. But I cannot approve of that, although I consider it indispensable for the treatment of the sound parts of the body to keep the disease away from them. When the rotten member has been cut away, the adjacent parts ought to be burnt with fire — which requires resolution and prayer or with caustic and burning remedies, especially in cases where such members are affected as soon as they touch any part of their own body and the contiguity of secretions, for example the penis and the anus.

The foregoing is what we wanted to say here; in our discussion on ulcerous useful matter may be found in addition to the present chapter".

(AKRA) ΑΚΡΑ is the name of the scorpion. The scorpions belong to the class of the arachnids. They are not found beyond 45° N. Lat. In Europe and the other countries on the Mediterranean their class (otherwise dangerous for its sting) is mostly represented by the harmless field-scorpion (buthus occitanus). But in Asia and Africa various varieties are found, which by their sting not only cause paralysis, fever, fainting fits and nausea, but sometimes even death. The scorpion is a very common insect in hot climates, where it often finds its way into people's houses and hides in warm clothes and footwear, by which habit it has stirred up of old the imagination of the oriental peoples. It was given a place amongst the stars as a constellation and as the eighth sign of the zodiac; it played a part in the interpretation of dreams; and to find one was considered a good omen. — It was gene-
rally believed to be more dangerous than it really was; magic spells (afterwards versed from the Koran) engraved in seal-rings were used as a safeguard against its sting, of which, according to tradition, even Muhammad did not despair. Modern investigation has proved to the Arabian scientists to have been right in observing that the spider escapes extreme heat and other evils by a prick with its own sting, in other words by committing suicide, and also that the mother carries her young on her back until she perishes under the weight. The spider, like most poisonous animals and insects, played an important part in mediaeval Arabian medicine: the best cure for the spider's sting was either to eat it, roasted or to lay it, pulverized or soaked in oil, on the wound; its ashes were considered a remedy for weak eyes and the gravel; another mixture extracted from the most poisonous of all spiders, the black spider (scorpio afer), was even said to be an efficacious remedy for leprosy. But especial healing power was attributed to the Arabs (who herein followed the Greeks) to the spider oil which was prepared in various ways; it was used for virulent sores, for back-ache and sciatica, and especially as an antidote against the bites of snakes. Concerning the use of scorpions in war cp. a remarkable communication in Elliot and Downes, Hist. of India, 550-555.

In Arabic literature the spider is often mentioned, and always as the embodiment of perfidious hostility (Husain, ed. Freytag, p. 156; verse 1, p. 156, verse 2; Khadzal, poem, no. 24, etc.; Mufaddal, ed. Thorbecke, no. 19, v. 11; Najib, ed. Alwand, no. 41, x); it is a symbol of caustic sarcasms (Urwa, no. 25, and of slander (Urwa, no. 5, ed. Faxadak, Deobor, no. 61, f.). It is used in like manner in the proverb: "More stinging than a spider's sting." Freytag, Proverbs, no. 902. The coldest winter days (the time of the new moon in November, December and January) were called the "three Scorpions" because of their "piercing" cold (already in Faxadak's Deobor no. 122, ; cp. Calendrier de Cordova, p. 105.)

AKRABA is the name of two localities:
1. A place on the frontier of Yemen, famous for the bloody battle in which Musulims and the Bani Hafsiss were defeated by Khaifah. In its neighbourhood was a grove (hadtha), surrounded by a wall and, before this battle, known by the name of "Rahman's garden"; later on it was called "garden of death." Bibliography: Tabari, i. 1197-1198; Belaabert (ed. de Goeje) p. 88; Yakut, Muqaddimah ii. 226; iii. 694.

2. A place of residence of the Qassimid princes in Qassim; it is probably identical with the present 'Akra'ba in the province of Qassim. Bibliography: Yakut, Muqaddimah iii. 693; Noldeke, in the Zeitschr. der Deutschen Morgenland. Gesellschaft, xix. 430; cp. in the Zeitschr. der Deutsch. Palastin. Vereins xii, the map of the Gebel Hawkûn A B 3. (F. Bin.)

*AKRASADHIN* (A. also Akrasadooph) pharmaeopoeia. The word is derived from Syriac ܩܪܡܐ ܕܚܝܐ, which in its turn was borrowed from the Greek (ἱερὰ ἁπάν — short triads). Lit. it "All defines us to make medicine and one should know for which the modern equivalent is pharmacopoeia.

The Slav. Krasivii, c. 309 contains the following comment on the subject: Not every disease can be cured by a simple drug, especially not those of a complicated character; if we did not know one we should prefer to use it. But we may perhaps find a composition, corresponding with the complicated nature of the disease; or we may find only such one as needs strengthening in one of its symptoms by an additional element. Is that case we have to add a simple drug which enhances its virtue, as is done with camomille; for in this way the dissolving power is stronger than the astringent power, so the latter must be increased by the admixture of a simple drug.

And sometimes we find a warming simple medicament; but supposing our need of warmth is less than the quantity of warmth it supplies, we have to add a cooling medicine. If on the other hand we require more heat, another warming medicine must be added.

And sometimes we need a warming medicine composed of four parts, and we only find one of three and one of five; in that case we mix the two to see whether the mixture will yield one of four parts.

And sometimes the medicine, which we want to apply, is efficacious in the case under consideration, but it is detrimental in another. In case of the latter we must mix it with such an element as neutralises the harm it might do.

And sometimes the medicine is bitter and the patient loathes it; the stomach is nauseated and sends it back: then we must add something to make it palatable.

Sometimes we want the medicine to work at a remote part of the body, but we are afraid that the first and the second digestion might diminish its strength; in such cases we wrap it up in a power, which prevents the two digestions from doing it any harm on its way to the member in question, as for example opium is mixed with theriacs.

Sometimes we want the medicine to disperse. For instance camphor pastilles contain a portion of camphor to enable them to reach the inner parts when they have reached it the dispersing faculty begins to operate; it expels the camphor, deprives it of its power, and makes the cooling and quenching elements affect the heart, in the same way as the separating power does, by separating the dissolving and astringent faculties. It is all the same whether the medicine be natural or artificial: it lets the dissolving element escape towards the affected member to dissolve the matter, and the dispersing element towards the canals of the matter to prevent its flow.

Sometimes we want a medicine, which slackens a little on its way, to the affected part, so that it can have a fine and thorough effect; but supposing the medicine is quick in passing through, we have to mix it with that which retards its passage. Such is the case with many aperients, for they are quick in passing through the liver. So if we require a retardation of the medicament in the liver, we add such medicines as tend towards a direction away from the liver — such as radish seed, which tends towards the opening of the
stomach. In that way the passage of the medicine is slackened to such an extent as to allow its useful element to reach the liver and to pervade it.

Sometimes the medicine which we employ serves two ends, whereas we aim at one only. Then we have recourse to an admixture of a drug which, according to the desired end, Spanish flies for example are put into diarrhoeic and purgative medicaments, in order to turn them away from the direction of the veins and towards that of the kidneys and the bladder.

Understand that a large majority of medicines have a place of operation and a place from whence they operate. Sometimes it is required that the medicine operates beyond the place where it stops. In that case something is needed which can prepare the way to it. Another time we want it to operate nearer the place where it stops, and then we require a medicine to arrest it.

Understand that the thing which has been tried is better than the thing which has not been tried, and that a few drugs are better than a great many for each individual case.

The reason why the thing which has been tried is better, lies in the fact that in each composition, both its component parts and their totality are operative. That which has not been tried can only be considered useful on the strength of our knowledge of its components, but we do not know what will be the effect of their mixture, whether it will yield something better than we expected, or not. For sometimes the result of the mixture is more efficacious than its component parts would seem to promise.

The compound medicines are arranged into eleven categories, which in their turn can be analysed into countless separate drugs, which are either called after the method of preparation or after physicians, countries etc.

The eleven categories are the following:

1. Āl-thārd, Greek ἀκράτης, universal antidote, was mixed with the flesh of vipers being preferred most; āhrān (pastilles), maṣūf (electuaries), combāt.
2. 'Iyārīt, Greek ἵππος, amongst which are especially famous the ḥaqq ṭaraq, the sacred bitter medicines.
3. Dzarnātikāt (Pers.), aperients and nonaperients.
4. Sāfāfār, powders, medicines which are taken dry.
5. Lhārāt, electuaries.
6. Aḥmattha and rušānīāt, the difference between them being, that the former are juices that work independently, and the latter are such as operate by the admixture of something sweet.
7. Nārda and sugared medicines.
8. Āhrān, pastilles.
10. Ointments.
11. Moṭāhim maṣ-homād, salves and dressings.

AKRĀD (a.) plur. of KUR (q.v.)

AKRĀS (a.) corresponds with what we call pastilles. The medicinal signification of the word does not seem to have been recorded in any original Arabic dictionary, not even by Ibn Sīrāj. Ibn Sīrāj, Kāmil fil, 382 (in the text erroneously 372) restricts himself to giving a collection of recipes of various sorts of pastilles after their titles, without any explanation concerning their meaning, as he is otherwise wont to do.

First it mentions the āhrān al-khānād, i.e. constellation pastilles, and says that they stood in the highest esteem with the ancient physicians, who for that reason gave them this name. After that he speaks about the effect of these pastilles: they act upon the weak stomach, counteracting the secretions which other members discharge into it, and they stop the bitter acidity. They are rubbed upon the forehead and soothe head-ache; they are useful in cases of erath and tooth-ache, and together with galbanum are applied to a corroded (probably cancerous) part of the body. They are good for ear-ache, for loss of blood, for a discharge from any part of the body, for chronic coughs and intermittent fevers when taken in pyritic water containing silver, and for poisons when taken in rue water.

Then follows the recipe:

Take myrrh, cassiureum, nard, cassia, sealed potters's clay and mandrake skins, 5 drahms of each; opium, saffron, bryony, root of earth (yābūl al-ṣaraf), anis, violet seeds, fluid starch, resin, and celery seed, 8 drahms of each. Pound all these drugs and knead them with gum which has been moistened first with flavoured wine, and divide the dough with pastilles of half a drahm each, which must be put to dry in the shade before use.

Then follow seven rose pastilles with their recipes:

1. Rose pastilles for the whole
2. 3 * 9 of Ašurīfīnīs
3. 3 * 9 of Sārāmīnīs
4. 3 * 9 of Zābūlīns
5. 3 * 9 called Dārūtuxpīna
6. 3 * 9 another recipe
7. 3 * 9 of Sāruul (fycarīns).

Then five cauφprom pastilles are enumerated, usually with the addition "cauφprom pastilles" (another recipe).

Then follow tābūlī forces pastilles.

Then pastilles of Emīl Baγh.

Then six more pastilles of other kinds, all of them with an account of their effect and a recipe.

(AKRāS) means in version, used in a pregnant sense (al'ah al-ṣarada) to designate a certain figure of rhetoric, which consists in the transposition of two parts of a clause, or of two clauses, with the result that what comes first in the former comes last in the latter, and what comes last in the former comes first in the latter. The Arabic philologists call this figure of rhetoric also tanbī, and look upon it as one of the most beautiful plays upon words, which at the same time define the meaning accurately (al-ṣarada al-maṣīra). They distinguish three different kinds: 1. In one nominal clause the transposition of the subject and the genitive which is dependent on it, e.g. 'al-ṣarada al-ṣarada al-ṣarada. 2. In two nominal clauses the transposition of the subject and a word dependent on the clause, e.g. (Sūra 12, 30) lā hāna jībiḥ la-ḥum, ulla ḥum yuβlīniṭ la-bīrūnīn. 3. In two verbal clauses the transposition of two words which are dependent on the verb, e.g. (Sūra 10, 21) nan yūḥyīrīn al-ṣarada yīn al-maṣīra nan yūḥyīrīn al-ṣarada yīn al-maṣīra.

Bibliography: Mehran, Shāhīd, p. 104;
AL, the article in Arabic, is the particle of determination, and as such called al-sif (or huruf) al-ta'rif. According to Al-Sirhawi and a vast majority of grammarians, the al-sif or huruf is only a prefix, whereas the taw is the actual vehicle of the determination. Al-Khallil on the other hand maintains that the al-sif has always formed part of the stem but was slurred down to an al-sif mutawwan in consequence of the frequent use of the word. He therefore calls the article al-sif wa-l-taw, the majority of the other grammarians simply taw al-ta'rif. The Arabic philologist take the taw to be a demonstrative (still preserved for example in dzhid, al-jid), just as the Hebrew article has demonstrative meaning (the primary form of the latter article seems to have been the demonstrative la, and not hal, which would correspond with Arabic). In such forms as al-in, al-yamin a trace is preserved of the original demonstrative sense of al, which afterwards has become a simple particle of definition. The article and the noun following are always written in one word; if the initial letter of the noun is a daffa, the taw is assimilated to it. (Zamakhshari, al-Mufasal p. 103, 23 et seq). Al is used to single out a certain special individual (taw al-yadi), or to define the species (taw al-daffa). It is occasionally used also as a relative pronoun. In the south of Arabia the dialectal pronunciation of the article is am (Mufasal p. 169, 9, 174, 23 et seq).

ALA (a.) = fats morgans, a kind of mirage, caused by the heightened temperature of the earth due to the heat of the sun, in consequence of which the ground looks like an expanse of water; cp. Jacobs, Alturab. Beobachtungen (2nd ed.) p. 9 et seq; Guyot, Zur Geographie des Sinai (Vienna 1809) p. 71; al-Hujaysa's n. 7, 15; al-Kutaybi, n. 7, 10 et seq. - A synonym of AL is sarah.

AL is also the name of a demon, who attacks women in childbed; to judge from the descriptions a personification of puerperal fever; cp. Zeitler, d. Deutsch. Moselt. Gesch. xxxvi. 85; Goldziher, Äh. zur arab. Philologie l. 116.

(A. Haffner.)

ALA (a.) = family, kindred, relations, in the widest sense of the word. According to accounts dating from Islamic times the pre-Islamic Ka'bah had called themselves AL (or ASLI) ALLAH (references are given by Margoliouth, Mohammad p. 19), because they were the keepers of the Ka'bah and the sacred treasures. In Islam the word obtained a wider sense in the combination AL-NABI, particularly through the medium of the prayer attributed to Muhammad: 'O God, pray for us, for Allah's sake'. SD. is one of the definitions of the idea shi al-Ra's (q. v.) the Shi'ite sects restrict also the expression AL-NABI to the family of the Prophet in the line descending from 'Ali and Fatima. This lineal succession is especially called al-'Gas.' Those who stand aloof from Shi'ite tendencies understand by AL-NABI the Bani Hashim in the most comprehensive sense of the word; others the wives of the Prophet or his kinsmen in general; the most explicit denial of the Shi'ite claims is contained in the interpretation, that the AL of the Prophet comprehends all votaries irrespective of relationship, or in a still wider sense all Mohammedians collectively, the entire Umma.

Ibn Khallaway (d. 514 = 920-21) wrote a treatise Kitab al-AL (quoted by Bahbahani, Manar al-kutub, Bombay 1320, p. 200), in which he divides the AL of the Prophet into 25 classes (Flügel, Die grammatischen Schulen der Araber p. 231). The pamphlet of the Shi'ite theologian al-Rayyan b. al-Salt of Kurnam, which contains the collected apophthegms of the Imams and concerns the difference between AL and UMMAT (Tat, Lit. of Sky's book, n. 294) was probably meant as a reaction against the Summert tendency to extend the reception of AL over the whole Umma. Concerning AL in the eulogies see Goldziher in the Zeit. d. Deutsch. Mosel. Gesch. l. 114-117. (Goldziher)

ALA-IMRAN (a.) in the title of the 3rd Surah.

ALA (a. plur. ULLAH) = instrument. In the classification of the sciences of such attainments as are acquired not for their own sake (as an end in itself), but as a means to something else, e. g. philological discipline and logic, which are a help in the study of religion: al-fira'un ar-Rahma along with al-ullah al-Ilahiya. Cp. the expression ULED al-wu'uduna = knowledge and capacities which are useful in social intercourse. Consequently that what is called AL differs only in so far from what is called AL in [3, 5, 7], as the former takes into account the attainments in their relation to the tim, cp. also ULDUN al-uddin (ed. Brockelmann) b. 4, 10, et seq. The appellation ULDUN corresponds exactly to the expression 'ulama in the classification of the philological branches of learning by Tyrannion of Amisos; see Ussen, Philologie und Geisteswissenschaft (Bonn, 1883) p. 23.

ALA (a.) = higher, highest, also used as a technical term [see HADJ]. ALA-IVIB is one of the titles of the 87th Surah. (G.H.)

ALA (a.) = spattered. This word is often found in geographical names (see the following articles).

ALA DACH ("the spotted mountain") is the name of two massifs to the west of mount Ararat on Russian and Turkish territory. The north-eastern continuation of the Bulgark Dagh (Tanur) also bears this name.

ALA-SHEHR (ALA-SHEHR. [y.]) = "the spotted town," the ancient Philistalchur) is the capital of a kast in the district of Sevhak (wilayet of Aina-Snyna), at the foot of the Blag-dagh (Tanur), 31 miles from the Keth-tai, at an elevation of 574 ft. It has 22,000 inhabitants, amongst whom there are 17,000 Musulmans and 4,326 Greek Orthodox. Ala-Shehr is the terminus of the railway Smyrna-Kastoria. There are cotton-mills, lignorice factories, spinning-mills and tanneries, and it is famous for its black cloth. The place was conquered by the Ottomans in 1591, though not until 1425.
a definitive occupation was carried out by Sultan Murad II. Near Alsh-Eshl in 607 (1210-1211), a battle was fought between Theodore Lascaris and Kaimkhan, the Seljukviz of Rüm, in which the latter was killed with a javelin by a Frankish soldier of the Greek Emperor.

Houtte, Recueil de textes relat. à l'histoire des Seljuques ii. 88; Ch. Haari, Epigraphique arabe d'Asie Mineure p. 63; E. Haar, Nerven, geist. u. nat. ii. 605; Hamilton, Researches ii. 375. (Cl. Haari.)

'ALA' (Αλα) = elevation. Hence the honorific surnames of 'ALA' al-Dawla = elevation of the dynasty, 'ALA' al-Din = elevation of religion.

'ALA' AL-DAWLA. [See DUSSENYANZIAN.]

'ALA' AL-DIN. [See Husain QAJARNE, KAI KÖKLÜ KAI KÖKLÜWAR. MUHAMMED KHAN BAHADUR, AL-BAHADIRAWI.

'ALA' AL-DIN MUHAMMED R. HARBAN was the last Grand-Master but one of the Assassins (q.v.). He was born in 609 (1210), and obtained the dignity of Grand-Master after his father's death in 618 (1220). Soon afterwards he is said to have lapsed into a state of melancholy and insanity in consequence of sexual excesses, for which reason some people wanted his son Kukan al-Din Khurshāh to take his place. Schirin within the order and massacres were the result, and last, in Dha'kh-Ka'da 655 (Dec. 1255) the Grand-Master himself was murdered.

Bibliography: Rashid al-Din, Djamal al-dowla, Neleh-i dawlat-i dawla; O'Scon, Histoire des Mongols iii. 174 et seq.; Browne, A literary history of Persia ii. 450 et seq.

'ALA' AL-DIN MUHAMMED KHALID, Prince of Delhi, nephew and son-in-law of Jalal al-Din Firuz, caused his uncle to be murdered treacherously in 605 (1206), had his uncle's son cast into prison and blinded, and himself ascended the throne. Before his accession he had made conquests in the Deccan; in the early years of his reign he repeatedly put to flight the Mongols, who often afflicted the Punjab with their predatory incursions; and after he had made himself master of India, he resumed his former conquests and commissioned his generals to subject Deogiri (the present Dvālshāhād) and Wannigāl. They were successful, and having advanced still further south, conquered Dwarka, destroyed a heathen temple in Mahār and brought home an enormous booty. 'ALA' al-Din proved a powerful and unscrupulous ruler. Although he possessed no culture whatever, poetry and sciences were zealously cultivated during his reign. He died towards the close of the year 715 (1316). Cf. the art. KHALID.

Bibliography: Barani (Barani), Tārikh-i Firuz; Firuzā; Tārikh-i 175 et seq.; Elliot and Dowson, History of India iii, Imperial Gazetteer ii. (1908) 301-362.

'ALA' AL-DIN FASHA was the first notable legislator of the Ottoman realm. He was a son of the founder of the realm 'Othman, the second according to the official Turkish historian Idris from Bitha (d. 930 = 1527-1528), who had the largest store of information at his disposal, the eldest according to Mehemet Kâbi Zâm, who wrote considerably later (d. 952 = 1574-1575) and for this epoch mainly relied on Neghri, a writer of the first half of the 16th century. Whose account however this question of the brothers' ages is passed over in silence. In spite of that, the latter statement has been promulgated with some zeal by later Turkish historians, for what reason it is not easy to see. In all descriptions 'ALA' al-Din appears as a rather impassionate, passive nature. That explains why his father, a few years before 708 (1308), when he settled down in the newly conquered towns of Yezli-Shesh, kept 'ALA' al-Din at his; this because the western Orkhan at this time already was sent in all directions to extend the empire. The second half of Orkhan's reign prides with the praises of Orkhan's victories, but of 'ALA' al-Din nothing is heard for a period of twenty years. No wonder then that 'Othman before his death, amongst other testamentary directions, consigned the succession to Orkhan, who had deserved so well of the empire as of Islam; this because of a strictly private character, as no mention is made of the presence of any witnesses. Not a single word in the long admonitions refers to 'ALA' al-Din. After 'Othman's death (726 = 1325-1326) the two brothers had first of all some amicable discussions together. 'ALA' al-Din 'Osman', who liked to take things easy, was so struck with consternation at discovering that their father, that move conquered, had left them no fortune, that he suggested to his brother that they should choose the more lucrative occupation of herders, but impulsive Orkhan declined this mode of life for himself, 'ALA' al-Din observed indifferently: 'well, our father during his lifetime indeed bequeathed the principality (keyhül) to Orkhan's charge', and submitted to the testamentary disposition. He paid his brother homage without delay, gaining thereby every one's praise for his conciliatory disposition. 'ALA' al-Din evidently having been initiated by his father into the state-affairs, Orkhan asked him for his help, which he granted without reserve (according to Idris), Nishri asserts that he refused the post of vizier, which was offered to him on that occasion, but according to a Turkish history in manuscript (E. G. Königl. Bibl. Berlin, acc. ms. 1894, 15. 177.), which is brought into relations with the year 917 of the Hijra, he accepted the offer. Although the latter statement is not made explicitly by Idris, who indeed rather too much in general expressions, we may conclude as much from his practice of referring henceforth to 'ALA' al-Din as Fasha. About this time 'ALA' al-Din asked his brother to give him the village of Pöd, which lay on the left-hand side of the main road from Bixra to Mihbig in the plain of Karia (written: Kitch) and he obtained it at once as his property. In the Tähme al-dawla, written more than three centuries later, the year 727 (1326-1327) is given as the date of the proclamation of Ottoman laws in compliance with the advice of 'ALA' al-Din Fasha, but to this isolated statement little importance can be attached. Perhaps it was the author's sole intention to imply, that in the year mentioned 'ALA' al-Din received the highest dignity, as shortly afterwards he again refers to the well-known laws of Orkhan's reign under a different date.

But 'ALA' al-Din's activity becomes especially noteworthy during the years (that follow, in 729 (1328-1329), on the occasion of a visit to his
brother, whom he had come to congratulate on the recent conquest of Iremh, the principal port on the sea of Marmara, he suggested three important innovations to Orkhan. They are the achievement of a race, which felt sensations of honor opened a new era, and dared look on all sides without fear. They proclaim their wish that all the Turkic nomads living under the rule of 'Othman's family, shall be united under the shield of a firm dominion able to enforce obedience on every side. The three innovations are the following: a monetary system, an official costume, and an organisation of the army.

It is almost certain that, after the collapse of the domination of the Seljuk's in 1325, 'Othman, as aforesaid, of the last Seljuk prince 'Ali al-Din Kar Kol Abd III, had the right to stamp coins in his own name; but according to a reliable authority he never made use of this sovereign's right. At 'Ali al-Din's suggestion the first coins were stamped in Orkhan's name in 729 (1328-1329). They show on one side the article of faith and on the other the name of the prince together with the optative formula 'Allahu 'Alaikum 'Abdun (may God succour his servant), under which was inscribed a bird: this mark, which has crept in, the spelling Orkhan in stead of Orkhan, is due to the Turkoman practice of slurring the 's. The name of Orkhan's father, the year and the place of coinage and also the prince's title are omitted. The characters are kufic. We only possess silver coins of Orkhan Bey, as gold pieces as a rule were not stamped in the Ottoman realm until the second half of the 15th century. The old Arabish basis of the monetary system was abolished by the Ottomans and supplanted by a standard of coinage which was first brought into practice by the last sultans of the Seljuk's ('Ali al-Din Kai Kol Abd III and his uncle Mansur II), and has remained the coinage of the Ottoman rulers ever since. Its basis is the asahi, which is a translation of Greek άσπρος, the name of a silver coin of the Byzantines, which had been current since the tenth century or even earlier. Owing to the want of contemporary authorities for the history of Asia Minor, the word is not found in the epoch of the first Ottoman rulers except, towards the close of the reign of the Mongol prince Ghazan Khan (d. 703 = 1304), amongst the Turcomans of Adharbayjân. The new coin was called asahi (from asahi, sung simply asahi in daily use). Its full weight amounted to six bismi (i.e.: a quarter of a dirhem as fixed with great precision in Muslim law), although it was allowed a latitude of 1⁄3 of the full weight. The actual amount of metal at that time was 51 1/4, exceeding by far the lowest limit (51 1/4) of the bismi. Consequently the asahi corresponded in weight to the present piastre, being bigger, as its circuit was 18 millimetres, but also thinner than the latter. Besides the simple asahi no other silver coin was stamped during Orkhan's reign. Of an explicit prohibition of the circulation of Seljuk money nothing is heard.

It is not very probable that the asahi of eight carats, which in 1334 was current in Rhodes (cp. P. Facanelli, De salute S. Johannis Baptitis, Rome 1755, p. 310), was identical with the Ottoman asahi. Also at Trebizond, in Caucasian Armenia, and the bordering countries of the Mongol Sultan 'Ali, soldi the asahi was current coin about 1334. (op. Poggetti, Della decima e delle altre girovane, vol. ii. ed. by Pagani, Liebou and Lacing, 1766, p. 9, 157) The second reform of 'Ali al-Din consisted in the choice of an official costume for the Ottomans, after the example of the Byzantines. Whereas the Greek costumes were conspicuous at a remote distance by their rich gold-embroidered head-dress, and even their servants wore a gold embroidered head-dress though of a simpler style, for the Ottomans a cuffless cap of white felt was prescribed, on the ground of the highly esteemed Arabish maxim: ‘the best one is the white one’. This head-dress however was only intended as a mark of distinction for civil and military servants of the Sultan, whereas the rest of his subjects evidently remained free in the choice of their clothes.

The third suggestion, the organisation of the army, was the most important of the three, not so much because of the motives, which brought 'Ali al-Din to its conception, but because of its result. For it met with a certain appreciation from the side of the warlike nomadic people, that in a short time the Ottoman nation underwent a complete metamorphosis and became what has been seen in Europe for centuries. What 'Ali al-Din desired was a division of the troops into subdivisions, and the appointment of officers over the latter. Hence we may evidently conclude that until then the Turks, as far as they had sworn allegiance to 'Othman's race, were free to hand together at random and to go marauding in hostile territory, which would account for the absence of an officially recognised supreme command. The right of warfare now became state privilege. Economical considerations seem to have had just as much weight with 'Ali al-Din as military motives. For details he referred to the "judge" Kara Khalil, a relative of their father 'Othman, who was far superior to 'Ali al-Din in knowledge and energy. Whereas the latter was more concerned about outward things and unable to realise the actual faults and deficiencies, the Sultan with his military experience and the judge with his commanding view of the entire domain of state-affairs went at once down to the core of the matter. They came to the conclusion that lack of infantry had made the Turks waste too much time on prolonged sieges, not the least on that of Brusa. The three men discussed the matter together, and the outcome was a decision to form an army of foot-soldiers, which should only be summoned in case of war. It should be formed of young men of Turkish nationality, and have divisions and sub-divisions of 1000, 100, and 10 men, an organisation which seems to be a near mental idea with all nations. The men during their service in time of war should receive a daily payment of one asahi each. This organisation, an army without drilling, had the germ of death already in itself, and was soon supplanted by the institution of the janizaries, which was the exclusive work of Kara Khalil. The name of 'Ali al-Din is not mentioned in connection with the formation of the latter corps; he certainly had an important share in it, but it consists in having referred his brother to the incomparable organising genius of Kara Khalil.

We have no means to ascertain whether 'Ali
al-Din at a later period played a prominent part once more, whether he held the post of vizier, or in the later authorities have it with great pretensions to exactitude, whether he lived the retired life of a pious private man. In the Kûshârî quarter at Bruss he built a divan monastery, and erected two mosques in the fortress which bears the approach to Kâthîja, near one of which he chose his abode.

He died at Bight in the year 732 (1331-32), or according to Choktonyâs, who wrote, it is true, after the conquest of Constantinople by the Turks and took great freedom in handling the historical facts, Orkhan had made away with him. He was interred at Bruss; his coffin is still shown there in the mausoleum of his brother who, more fortunate than he, had come to power.

Descendants of 'Alî al-Din were still at Bruss in the middle of the 16th century. The above account, which differs in details from those of Hammer and Ktschen, is mainly founded on Nîshârî's and Idrisi's histories of the Ottoman realm. Sa'd al-Din, having no further material at his disposal, was the first to draw a little on his imagination, which he was outdone again by Monrad's, d'Oslo's in his Tableau de l'Empire Ottoman (1788; vol. iii. of the Polos edition), Zinkwast's version is based on an analysis of the accounts by Sa'd al-Din and d'Oslo. Special articles on the monetary question are found in Bellini's Essai sur l'Histoire économique de la Turquie (Genoa. A. 15th. ser. vol. ii. p. 241 et seq.) and particularly in Larbi (Jâhâbî's Tawâhir-e mawzûhâhâh-e Jâhâbî), Constantinople, 1307; also in Mahmud Djebedi's Wâjs-e damâlitâ' i Nâsirî (1780), p. 301, and finally in Stanley Lane-Poole's The Turks in the British Museum (London 1898), of which only a discreet use should be made. (K. SCHÖNEM.)

ALACA (T.; originally a diminutive of ala 'q. v.) = spotted, variegated = chint with coloured stripes (ep. Yule and Burnell, Hobson-Jobson, s.v. Aljele, p. 8 and 756); it is also found in geographical names (see for example the next article).

ALACA DAGH is the name of a mountain, constituting a spur of the Kara Dagh in the territory of Kas. Near it the Russians gained their well-known victory over the Turks on October 16th 1877.

ALACTAGA (Mongolic; also Alaktaga, Alakdagon, Alakdâga) = Horde-jumper, a species of the family of sand-jumpers (Sciuridae) which is closely related to the jerboas (Arab. yarâbîq) q. v.). The "hoare-jumper" is found in south-eastern Europe, especially in the steppes along the Don and in the Crimea, although its native country is Asia below 34° N. Lat. and west of Mongolia. It is about the size of a squirrel and its graceful little head is like that of a hare, for which reason it is called "ground-hare" or (on the Joak) "sand-hare" by the Russians, and "camel-hare" by the Tartars. It is a night animal, and one of a mouse, the hind legs are almost four times as long as the front legs. The alactaga is the object of a rather energetic persecution, partly because of its edible flesh, which is considered a delicacy by the steppe-dwellers, partly because of the harm which popular superstition ascribes to its flesh dried and pulverized is taken as a medicine in various places. Cp. Brehm, Thierschen 3rd. ed. li. 485 et seq. (Help.)

ALADDIN (='Alî al-Din) is the hero of the tale of the magic lamp, which for the first time is found in Galland's translation of the Arabian Nights' Entertainments. The Arabian original was discovered again by Zöllner and published in 1888. Bibliography: Notices et extraits des manuscrits de la Bibliothèque Nation. xxvii. Chauvel, Bibliographie des ouvrages arabes v. 55 et seq. (J. HOKOVITZ.)

ALAHOT. [See AL-HEBB R. ABU AL-SHAMAN AL-TALAKAHS]

ALAI (b.) = procession, pageant, ceremony; also = regiment in the military organization of the Turks. — Gelînlîç-i âtilçî = ceremonial procession to the husband's home. — Şerîlîç-i âtilçî = ceremony at the departure of the førî-cumî (d'Olsou, Tableau de l'Empire ottoman iii. 202). — Bahirîlîç-i âtilçî = the Sultan's solemn procession to the mosque for the mid-day prayer on the two Bayram. — Âtilç-i âlîvâkî = sergeants of the procession; the title of twelve scutal officers charged with the organization of the public processions; they were dressed in red velvet and carried a silver-mounted stick in their hand (d'Olsou, ibid. vii. 179). — Âtilç-i mânih = a name formerly assigned to a feudal officer, subordinate to the sanâdî-kapî, who had the care of the latter and the contingents of the şahîb (d'Olsou, ibid. vii. 374); at the present day it is a title borne by the colonel of the gendarmerie of a province (milliyeç).

Bibliography: Barbier de Meynard, Diction. turc-français i. 101. (C. HUART.)

ALAK (b.) = clot of blood; Shirat al-a'lab, title of the 96th Sîhî.

ALÂSHA (a.) = relation, used in grammar to denote the correlation between noun and verb (de Sacy, Grammaire arabe ii. 538); and in logic as a term for the connection of ideas, especially of judgments in a conditional proposition, which are necessarily associated, e. g.: "If the sun has risen, it is day" (Diction. de tech. terms p. 1031 et seq.) (Du BOK.)

ALÂM (b.) plur. Aiman, "world," a Hebrew (resp. Aramaic) loanword (= alâb âlam), which already occurs in the Korâne. In the technical language of the philosophers and sults it is often connected with various nouns and adjectives to distinguish between the visible and the invisible world, between the various degrees of mystical perception etc. Cp. Diction. de tech. terms, p. 1039 et seq.; Lenzker, Türk-Arab. Pers.-Wörterbuch, p. 620; Dory, Supplément ii. 165.

ALÂM (b.), plur. Ölem, "finger-post, bound" (in the latter sense Arabic was also ġâlit and 934). Already in pre-Islamic times each Bedouin tribe had its own banner, which differed in colour from those of other tribes. The banner was tied on to the lance, and it was usually the chiefman himself who carried it in the war. The Prophet also had his own banner, called Qâda, which is the long hair, named from one of a mouse, the hind legs are almost four times as long as the front legs. The alactaga is the object of a rather energetic persecution, partly because of its edible flesh, which is considered a delicacy by the steppe-dwellers, partly because of the harm which popular superstition ascribes to its flesh dried and pulverized is taken as a medicine in various places. Cp. Brehm, Thierschen 3rd. ed. li. 485 et seq. (Help.)

In the technical language of the philosophers and sults it is often connected with various nouns and adjectives to distinguish between the visible and the invisible world, between the various degrees of mystical perception etc. Cp. Diction. de tech. terms, p. 1033 et seq.; Lenzker, Türk-Arab. Pers.-Wörterbuch, p. 620; Dory, Supplément ii. 165.

ALÂM (b.), plur. Ölem, "finger-post, bound" (in the latter sense Arabic was also ġâlit and 934). Already in pre-Islamic times each Bedouin tribe had its own banner, which differed in colour from those of other tribes. The banner was tied on to the lance, and it was usually the chiefman himself who carried it in the war. The Prophet also had his own banner, called Qâda, which is the long hair, named from one of a mouse, the hind legs are almost four times as long as the front legs. The alactaga is the object of a rather energetic persecution, partly because of its edible flesh, which is considered a delicacy by the steppe-dwellers, partly because of the harm which popular superstition ascribes to its flesh dried and pulverized is taken as a medicine in various places. Cp. Brehm, Thierschen 3rd. ed. li. 485 et seq. (Help.)
Also the Persians and the Turks had their banners, concerning which the articles attentively, NAIRAK and NAGIRAK may be consulted.

Not only in warfare, but also in the religious life of the Moslems the banners played an important part. In the latter case they are of various kinds, often adorned with devices, particularly the Muhammadan articles of faith, and are fastened to a decorated staff. A great number of such banners are carried in religious processions, especially at the Muhammad feast in Persia and India. Especially noteworthy are those standards amongst them, which are decorated at the top by the figure of a human hand with outstretched fingers. Finally may be mentioned that during the solemn religious service on Fridays a banner is planted on either side of the pulpit.

ALAM (a.) = "sign." In grammar it is used as a general term for "proper names." men, animals and things. The term in A.D. (nomens proprium) always denotes a single definite thing of a sort; consequently it is considered as determinate in itself, and as such opposed to the tum in Abs (nomens genericus). The Arabic philologists give a classification of the term in c. al-Ashār from various points of view. The principal classes are the three following:

I. With regard to the connexus:
1. in = name in its proper sense.
2. kunya = the compound name with the name as its first element.
3. Lūnūb = surname.
4. Nāma = nickname, i.e. Bāta (duck).
5. Name of honour, i.e. Šakān al-Malāk (the son of the high dignitaries).

II. According:
1. ʿAṣim, a root.
2. Alam marābak, the compound name, which is either
   a. Dijma, i.e. a complete sentence, such as *Thwakha Sāna* (he has taken mistime under his arm), as also called marābak īyālā (predictive compound), or
   b. Ḫirām, i.e. a sentence, but either
      i. Juzātul Ḫirām (mixed compound), or
      ii. Ḫirām marābak Ḫirām, formed by the connected juxtaposition of two nouns, i.e. ʿAdalab, maḏāʾir; also called Marābāt Ḫirām (mixed compound), or
   c. Ḫirām ʿAṣim ʿAṣim, consisting of two nouns, one in the genitive case being dependent on the other, i.e. ʿAṣim ʿAṣim. This form comprehends all Ḫirāms.

III. Formative:
1. *Aṣim marābak* (= improvised), i.e. the form exists only as an element of proper names (i.e. ʿAṣim), or else it would have to be altered if used in the ordinary formation of nouns (i.e. Mahāb, Mahāmay; instead of Mahāb, Mahāmā).
2. *Aṣim marābak* (metaphor), i.e. the form of the proper name is derived from the or-

inary word-formations and designated originally
a. a concrete noun, i.e. Anq (iron),
b. an abstract noun, i.e. Ṣaff (excellence),
c. an adjective, i.e. Ḫirām (excellent),
d. a verb, i.e. Ḫirām ("thou vanquished"),
e. the name of a tribe,
f. an onomatopoeia, i.e. Bhāna, or

a. a compound expression, i.e. Ḥarāb"Sāna.

(Weil)

AL'AM (i.e. "the man with the headgear")

Abū Ja'far Muhammad b. Sulaymān al-Salami, a Spanish-Arabian philologist, was born at Santamaría in 410 (1015), came in 435 (1045) to Cordova, where he had the benefit of the instruction of Alhambā, Muhammad ib. Al-Mutib (d. 443 = 1050), gained for himself great renown as a teacher, and died in 476 (1087) at Seville.

After he had assisted his master Al-Mutib with his commentary on Maimouna (which perhaps is still extant at Berlin, — cp. Ahlwardt, Vocab. d. arab. Misc. d. kgl. Bibl. n. 7509), he himself wrote a commentary on the six poeta (i.e. in Paris, Supplement 1424 and 1425 — cp. de Shane, Les diverses de l'Amateur p. xii et sqq.; Ahlwardt, Die divia of the six ancient Arabic poets p. xvi and in Vienna; from the latter manuscript its previous owner C. Landburg has edited the commentary on Zuhayr (Principi Arabiae faci. II. Leiden 1887; also Dynhoff, Zur Geschicht der Überlieferung des Zuhayr-Textes, Munich 1892). He also wrote a commentary on the Sāwīnī in the Kitāb of Sīwālī under the title of Tāhār ʿUmar al-Jahāb fi maḍām al-mashār al-adl fi ilm maqāmat al-Arab, which he finished in 457 (1064) (Mus. at Oxford, cp. Nicos, Bibliothecae Historiae und. Misc. Catalogue ii. n. 243; at the Escorial, cp. H. Davenbourg, Les Mus. arab. de l'Escorial n. 310, and at Constantine). This commentary was used by Jahn for his translation of Sīwālī. Al-ʿArab's Kitāb al-jamāa is quoted by Abū al-Kāmil al-Baghdādi in the Kitāb al-adl n. 535, near the end, ill. 165, no. 330.

Bibliography: Makki (ed. Dayy and others) ii. 471; Ibn Khallikān (Bīlaq. 1299) no. 455, n. 131; Ibn Baghdādi, al-Sīn (ed. Cœdenn i. 1391; Brockelmann, Geschichte d. Arab. litter. i. 309.

BROCKELMANN.

ALAMAK is the name of a star of the second size in the left foot of the constellation of Andromeda. The name is derived from the Arabic designation Ṣālih al-Mawṣūlī = earth-god, i.e. a badger (?). Cp. Idler, Untersuchungen über den Urspr. u. d. Ben. der Sterneamen p. 126-127.

MAHLER.

ALAMEDA (Spanish) = avenue of poplars, from Arab. al-mudāmak [q.v.].

ALAMGR. [See AABANGATZ].

ALAMUT is the name of a mountain-fortress north-west of Karman, which owes its fame to its having been the seat of the Grand-Master of the Assassins from 453 (1060-1061) until 654 (1256). The name admits of two explanations, either "eagle's nest" or "eagle's instruction," but the former sense seems to be the correct one; cp. C. Hiiart, Le fortezza d'Alamut, in the
ALAMUT — ALBARRACIN.

MEMOIRS of the Science of Linguistics of Paris XV. The fortress was built by the 'Alijah Hasan al-Din al-'Imam li-Hak¢ (246 = 860), remained after the Mongol conquest, and was used as a state prison during the reign of the Safawides. Ruins of it were still to be found in the last century, and may be seen perhaps even now.

ALAN. [see ALAN.]

ALARCOOS (by its full name NUESTRA SEÑORA DE SANTA MARIA DE ALARCOOS) is the name of a holy shrine (santuario, ermita) one legua (6.687 kilometers) west of Ciudad Real. It is situated on a hill, formerly the site of the ancient town called al-Ark and al-Arkah in Arabic, which was destroyed by the Almohads after the great victory which under Ya'qub they gained here over Alphonse VIII of Castile. On historical maps the situation of al-Ark is always erroneously displaced towards the east of the Sierra Moron. Ibn al-Abi (transl. by Fagans p. 611) calls the battle-field 'Maraj al-Hadid' and 'Abd al-Wahid al-Marikhusi (p. 205) 'Fah al-jalaldh'. — C. P. Marko, Diccionario geografico-artistico-historico, s. v.; Seybold, Die geige, Lagen von Zalaca-Soarescu (1808) and Maraes (1825), in the Revue hispanique xv (1906). (C. F. Seybold.)

ALAFIE (Spanish) = inspector of public works, from Arab. al Far' (expert), espec. architect.

ALAT. [See ALA.]

ALATI (A): derived from alati = instruments), plur. alatiya = professional musician, who performs both instrumental and vocal music, whereas the singers (in Egypt) are called alitma (Aminet). — C. P. Lane, Manners and customs (1842) i. 285. (C. F. Seybold.)

ALAYA is a port in Asia Minor, the capital of a bar, of the same name in the sandjak of Adalia, with 5000 inhabitants. The town received its name from the founder 'Ali al-Din Kai Kobad, who about 1200 supplied the place with walls and buildings and chose it, together with Adalia, for his place of residence during winter. There was formerly a castle here called Galonovs because of its beautiful situation (Galonec = Kazo Zeyn; hence the name of Candorf or Skenderol found in European mediaeval authorities); it was possessed by an Armenian baron when it was captured by Kai Kobad. For a long time after the fall of the Seljuk realm descendants of the dynasty of Kai Kobad have asserted themselves in Alaya, until the last of them saw himself obliged in 1471 to surrender the town to the Ottomans.

BIBLIOGRAPHY: Hauera, in the Actes du 6e congrès intern. des orientalistes, ii. vol. i. p. 385; V. Calvet, La Turquie d'Asie, i. 857.

ALBACETE is the capital of the Spanish province of the same name, which forms the northwestern part of the ancient kingdom of Murcia, south-east of the Mancha and the province of New Castile. It is situated on the south-eastern slope of the central Iberian Meseta, at an elevation of 3000 ft. The modern name comes from Arabic al-Brat, "a large ancho y estendido y llano y ras" not from al-Batya, "the plain", as one still often reads. The place and its name are found for the first time in al-Dahli of Cordova and in Ibn al-Abi'd of Valencia, who both wrote in the 12th century; they mention it in connection with the great battle of 540 (1492-1497) between Alphonse VII of Castile and the phalangian king of south-eastern Spain Saif al-Dawla (Span. Zafoneda, Zafral, Cabedella) al-Muslim, Alphonse I of Castile, in which the latter together with his ally and governor of Valencia 'Abd Allab b. Muhammad b. Sat'ta's lost his life. 'Abd Allab has since been known amongst the Arabs as 'Alab al-Batish, i.e. 'master (martyr) of Albaecete'. This battle, which in Christian authorities is neither dated nor localised, is also called the battle of al-Lu-djij (Ibn al-Abi'd: al-Iman ul-hadi al-baqi 'alilla mukhaba min jami'a). In the neighbourhood of Chinchilla we cannot now ascertain whether al-Lu-djij is identical with the place (and river) Lussan, west of Albaecete, or with Alaraz east of that town on the northern declivity of the Sierra de Chinchilla (in the latter case we should have to read al-Lu-djij). Fakso al-Lu-djij is already mentioned by Ibn al-Abi'd of Kordab (Ibn al-Dory, Scrlptores arabum loci de Aldahidii ii. 19).

ALBARRACIN is a town on the upper Ebro (Guadalaviar) in the present province of Teruel, the southern extremity of Aragon. The earliest reference to it is to be found in Ibn 'Abd Allab, who mentions it only incidentally under the year 346 (957), in an account of a journey made by one of the above-mentioned independent princes of the Berber family of the Banu Kazin, from al-Sahla (the fertile valley of the lower Ebro) to Cordova, at which place he was to take the oath of allegiance to 'Abd al-Rahman III, Gayunus (i. 70) calls 'Iza al-Dawla the builder (prob. re-builder) of the town. Its Arabic name is always Shant Marivat al-Sharq, i.e. Santamaria del Oriente, eastern Santamaria (in distinction from Shant Marivat al-Adhar, in Algarve), or Shant Marivat ibn (or Ban) Kazin, i.e. Santamaria of Ibn (or the Ban) Kazin, whence the name of Albarra- cin was derived; Hidal (p. 175, 185) however gives the form Shant Mriya. After the fall of the Spanish Umayyads (411 = 1020) the town became entirely independent under Abi Muhammad Hudhull ibn Khalaf b. Lope b. Kazin, who was succeeded by his brother Abi Marwan 'Abd al-Malik I b. Khalaf 'Abdik, who in his turn was succeeded by his son Abi Mehemmed Hudhull II 'Iza al-Dawla, who again was succeeded by his son Abi Marwan 'Abd al-Malik II Huida al-Dawla (d. 606 = 1102; other dates are not known). The son of the last mentioned, called Yahya, was expelled by the Almoravides even before they had taken Saragossa (1110). In 1097 the lord of Albarra- cin and the old Campeador had become friends, and together they had marched against Valencia (1094). Afterwards the town belonged...
to the house of Don Pedro Ruiz de Arauca, who had taken it from the Moors, and in 1231 it passed into the possession of Aragon.

Bibliography: Dory, Hist. des Musulmans d'Espagne lv. 246, 503; the same, Nécess v. 179—186; Ibn al-Akhrî (ed. Terni) lv. 204 (transl. by Fagan p. 443). (C. F. Seydor.)

ALBATEGNIUS. [See AL-BATTÁNÍ.]

ALBISTÁN (Abü Istán) is the capital of a kaza in the nadi másjik (wilāyat) of Aleppo, on the river Díqshús (Pyramus) at the foot of the Kurd Dagh, at an elevation of 3,600 ft. It numbers 6,500 inhabitants, of whom 3,546 are Muslims and 2,954 Christians. The town is surrounded by woods and gardens, and a great many ruins of castles from the time of the little-Armenian kings are scattered about the environs. There are 10 mosques and 1085 houses. The people earn a livelihood mainly by agriculture. Various spellings are found for the name of the town, owing to popular etymology: The Arabs take it to be a compound of al and hístán (garden), or else of al and stán. This gave rise to spellings such as Abú Istán (Yahşú), Abístán, Abístam, which however must all be traced back to an older form Abístár; e.g. Saint-Martin, Mémoires sur l'Arménie lv. 138. The town was from 1097 to 1105 in the possession of the crusaders, and afterwards in that of the Seldjûks. In the plain of Abístán a great victory was gained by the Mameluks Sultan Boular over the troops of Abúqa, on 13 Dhu'l-Kadás 575 (18 April 1277). In 912 (1151) the place was conquered by Selim I.

ALBÖHALLI = Afâr All. [See AL-KHAFY.]

ALBÖHAZAN, AL-HOZAIZAN etc. = Abî-Husain. [See now under AL-HOZAIZ.]

ALBUBÁTHER = Afâr Bahr. [See AL-JASAN-KHÁDIJ.]

ALBUCAÍS = Abî-l-Kásim. [See AL-BAKAWT.]

ALBUFÉRA (Portuguese: ALBUFEIRA, varietatis ALBÉCIRA, ALBERCA; from Arabic al-buháïra, small sea, lake) is the name of a lagún near Valencia, the Palos Nacarum of the ancients. Part of it has been drained both with the alluvium and by artificial means, and is now used for growing rice. (C. F. Seydor.)

ALBUFEIRA (for the etym. cp. the preceding article) is a Portuguese seaport town in Algarve. (C. F. Seydor.)

ALBUMASA. [See ABU L-SHÁIBÁ.]

ALBÚRZ (also ELEPH) = old Persian Elâb Béspasé (high mountain) in northern Persia, bounding the Iranian plateau; also the side of the Caspian Sea. The average height in that western part is 9,850 ft., culminating in the Dîmavvând [g. w.] (18,000 ft). The northern slopes are covered with dense woods, the southern declivity on the contrary has no vegetation whatever. In Firdawst Alburz is the name of a mythological mountain in India; the Arabian geographers do not know the name. Hamd Allâh Mustawfi is the first who mentions it. Albury, Elmers must not be confused with the name Elmers in the Casams. Cp. G. le Strange, The lands of the eastern mulsâmûn p. 368; note, Sáhîb. Das sächsische Ufer der Kaspíschcn See p. 21.

ALCABALA, ALCAVALA (Spanish) = "duty on mercantile transactions", from Arabic al-kašâlâ (guarantee). ALCAVITY. [See AL-KASH.]

ALCADA. [See AL-CALDE.]

ALCÂLA (from Arabic al-kâlâ = castle, fortress, citadel) is the name of numerous Spanish towns. The most famous are: Alcâla de Henares, the ancient Complutum, taken in 1138 from the Arabs by the Archbishop of Toledo, and afterwards in vain attacked by the Almohades; Alcâla in Real, northwest of Granada, in Arabic called Kâfîr Bant Saíd or Kâfîr El-Abîn because this family, which owes its name to the learned Ibn Saíd, was descended from Yaḥṣûb of Yemen; Alcâla del Río; Alcâla de Guádâira (near Seville). [CP. CALA,... CALÀ [...].] — CP. Mağârî l. 681. (C. F. Seydor.)

ALCÁLDE (from Arabic al-kâlîd = judge) is a Spanish name for "mayor", not to be confused with alcâlde (from Arabic al-kâlîd = leader, general) which in Spanish means "commandant of a fortress", "steward of a castle". (C. F. Seydor.)

ALCANTARA (from Arabic al-hanîra, probably a Greek loanword = nákos, cantium), Spanish = "bridge" (mostly with stone arches), "aqueduct". The town of Alcântara (Spanish: Alcântaral-Asif) on the Tagus, close to the Portuguese frontier, owes its fame to the order of knighthood, which was founded in 1156 for the war against the Moors and from 1213 had its seat in this town, which in 1166 had been captured by Ferdinand of León. The order has since been called after it. — The name of Alcântara is also given to the valley of a riviére west of Lis-boa, so called after the arches of the aqueduct thrown across it; this valley is well-known as the scene of Alva's victory over Antonio de Crato, which made Portugal subject to Spain from 1530 until 1540. — As an appellative alcântara has become obsolete; hence for example the place-name "Punan de Alcântara"; cp. the old "Alcântara" of Cordova, Saragossa etc.

ALCARAZAS, ALCARRAZAS, Spanish and Provençal: caravanes in which water is kept cool; from Arabic al-kârâzûs (= damâra, drach). ALCATIPA. Spanish: Alcatifa (Portug.; Alcatich in the Dutch East Indies) = carpe. from Arabic al-katâifa.

ALCAZARR, Spanish (from Arab. al-kažâr) = castle, citadel (Portug. ACOZAR). Famous are the Alcázares of Seville, Cordova, Segovia, Toledo etc. Alcazar is also a frequent name of places, e.g.: Alcazar de San Juan, a town in the Spanish province of Ciudad-Real, Alcazar Quivi, the Spanish name of Kusî al-Kâzbûr [g. v.], a town in Morocco.

ALCHEMY. [See KIMYÁ.] ALCHIPA, a contraction of Arabic al-Hístâ, "the island" (usually called in full Djizzat Shârû, "rarely Shârû alone = Shârû Island", in the Shârû = Sucro = Jécur), the capital of a district
in the Spanish province of Valencia, south of the city of Valencia, is a fertile, abundantly watered plain in the lower Júcar. In 1243 it was conquered by Don Jaime of Aragon. In 1609 it suffered severe damage in consequence of the expansion of the industrious manufacturing Moriscos.

**ALCOLEA** from Arabic al-khallat (a small fortress, castilloj), is the diminutive of al-khalat [esp. al-cala], is the name of various places in Spain (i.e. the south-eastern foot of the Sierra Nevada), in most cases with a specifying addition: Alcolea de Tajo, de Cenca, del Rio, de Calatrava etc. — Alcolea is also the name of the massive bridge and the old locality 71 miles above Cordova on the Guadalquivir, which played a part in 1236, 1608 and 28 September 1808 (victory of the insurgents over the troops of Isabella II).

(C. E. SEYMOUR.)

**ALCORAN.** [See SORA.]  
**ALDEBARAN** is the name of the star α of the first size in the head of the constellation of the bull. The name is derived from the Arabic appellation al-Dabadhin, which according to Hadji (Untersuchungen über den Ursprung u. d. Bot. der Sternnamen, p. 141-142) is synonymous with another Tvl Ṭūlud, "the one that follows the star" (viz. the Pleiads).

**ALEMBIC** is an old name for that part of the distilling apparatus which is also called "head" or "cap." The word comes from Arabic al-ambik, which in its turn was borrowed from Greek Αλημπίς. Al-ambik occurs as early as the 15th century in a translation of Dioscorides, in the *Mafath al-śulh* and in al-Ras (Kopp, who follows Well, is incorrect in lili instrumentalis). The ambik is often referred to as "one of the apparatus used in distilling rose-water."

The complete distilling apparatus consists of three parts: the "cucurbit" (bal'ul), the "heuel" or "cap" (ambik) and the "receiver" (kalīḥ). Modern retorts have the "cap" and the "cucurbit" made into one. — Illustrations of distilling apparatus in Arabian manuscripts are to be found in al-Dinibigh's *Campanographia* (ed. Mehrer, p. 194 et seq.). Whereas usually however the cucurbit is surrounded by the cap, here it is placed in front of it. In the former case the cap has the shape of a capping-glass, as it is represented in the *Mafath* (ed. van Vloten p. 257). The ambik is described by Ibn al-ʿArawān (transl. by Clément Mallet ii. 344) where he explains how rose-water is distilled. But in this description the name does not always refer to the entire "cap," but often to the additional faucet-pipe only, which fits into it (if at least the text is not corrupt). The ambik is also called the "head' (head) of the cucurbit.

The ambik is mentioned in the various lists of chemical apparatus, amongst others in the *Moṣaffah al-śulh*, in the *Kitāb al-ʿárab of al-Kaṭf* (Cod. α. 256 of the Leipzig municipal library, p. 4 r. v.), and in a text written in Karhātj which has been published by Stotz, and shows close similarity to al-Kaṭf's account.

Special kinds of ambik are the blind ambik, which has no additional faucet and is consequently closed, the ambik with a beak, and others of various shapes. In Ibn al-ʿArawān the appendix is also called ambik (as Cl. Mallet prefers to read it) or al-ḥāṣa as the text has it, and as Dorary would like to retain, because he combines the additional faucet with a warm-pipe used in condensing (but no illustrations of the latter can be found).

As the Arabian alchemists mainly depend on the Greek alchemists, the illustrations which are found in the works of the ancients can be turned to account. Some also occur in the Latin translations of works which are attributed to Geber (Abū Mūsā Dāhir ibn Ḥayān).

**ALF (α).—thousand.**

**ALF LAILA WA-LAILA (α).—Thousand and one nights.** is the title of the most famous of all Arabian collections of fairy tales. Like all Orientalis the Arabs from the earliest times enjoyed imaginative stories. But the intellectual horizon of the true Arabs being much narrower, the material for these entertainments was borrowed mainly from elsewhere, from Persia and India, as we gather from the accounts concerning the Prophet's competitor, the merchant al-Najr. So the relations between Arabs and Persia (and even more distant eastern countries), which were commenced during the seventh and eighth centuries, gave rise to an active importation of subject-matter for fables and fairy-tales. The individual stages of this process cannot now be traced with absolute certainty, a few cases only excepted such as the story of the origin of the book *Kalībat wa-Dinama*. For everything which was of the nature of a fairy tale lay outside the scope of the professional man-of-letters.

In later centuries, when Arabian civilisation had grown richer and more comprehensive, new, original tales were invented in the centres of Arabian culture, and along with the centre of intellectual development fairy tale fiction also migrated gradually from the East to the West. A comprehensive view of this whole process is afforded by Alf Laila wa-Laila, the largest and most diversified Arabian collection of fairy tales, in it we find the foreign elements of eastern origin side by side with genuine Arabian matter. The account of the growth of this book constitutes a highly characteristic chapter of the history of the development of Eastern civilisation in general, but owing to the above mentioned lack of information it can only be sketched in brief outline with approximate accuracy.

The question concerning the origin of the Alf Laila wa-Laila was for the first time thoroughly discussed in the beginning of the nineteenth century. The first scholars who expatiated upon this subject was the founder of modern Arabic philology, Silvestre de Sacy (in the *Journal des savants*, 1817, p. 628, afterwards in the *Recherches sur l'origine du recueil des mille et une nuits, Paris 1829*, and in a dissertation under the same title in the *Mémories de l'Académie des inscriptions et des belles lettres*, 2. 1833).
p. 30). He denied a possible authorship at one
single writer, and (in the two last-mentioned dis-
courses) took it for granted, that the book was
written at a very late period. He early disapproved
the existence of Persian and Indian elements, and
a passage in the Arabic author Mazīdī, where
this statement is expressly made, leads me to
graciously declare quotations by de Saucy. This
passage being of the greatest importance for the
entire history of the Alfatīla wa-lailā, I hope to
be excused for translating it here. Mazīdī (ed.
Barbier de Meynard iv. 89) expresses himself as
follows: "It is a similar case about these legends
(of Shaddad b. 'Abd and his town of Iran 'ābd al-
'Amr) as about the books which were trans-
lated into our language from Persian, Indian (one
manuscript has here: Pehlevi) and the Greek,
such as for example the book of 
Hebrei esfānān —
which in Arabic means "thousand tales", because
the Persian word esfānān corresponds to the Arabic
Hebrei (tale) —; this book is usually called
Alfatīla (two manuscripts have here: Alfatīla
ma-lailā) and it narrates of the King, and
her daughter and her nurse (according to other renderings: slave-
girl); these two are called Shāhriyār and Dīnantī.

Contrary to de Saucy, Joseph von Hammer-Purgstall in

Journal Asiatique, 1843, p. 216; Journal Asiatique, 1844,
ser. 2, 32, sér. 3, p. 32; Preface to "Die
noch nicht übersehrten Erzählungen der Tausend
und einen Nacht", Stuttgart 1843) maintained
the genuineness of the passage in Mazīdī with
all its consequences.

William Lane, the excellent translator of part
of the Alfatīla, tried to prove that the whole
book was the work of one single author and had
been written in the period 1475-1515 (Preface to
The Arabian Nights Entertainments, London
1839-1841).

In recent years the discussion was resumed by
de Goeje (De Arabische Nachtverhalen in De
Gids 1886, iii. 385; and The Thousand and One
Nights in the Encyclopaedia Britannica xxi. 316).

On the ground of a collocation of a passage in the
Fārisī of Mūhammad b. Ḥakīm al-Warrāzī, in
which the Hebrei esfānān are said to have been
written at the translation of the Hebrei, the
daughters of King Bahram with a passage in Tabari (1.688),
where Esther is called the mother of Bahram and
the name Shāhriyār is assigned to Hamal, de
Goeje endeavoured to show a connection between
the frame-work of the Alfatīla and the Book of
Esther. The same idea was further developed by
A. Müller (Zu den Märchen der Tausend und
einer Nacht, in Deutscherrn Beiträge xii. 222),
who distinguished various layers in the work, one
of which he supposed to have been written in
Bagdad, whereas to another and larger one he
assigned Egyptian origin.

The idea of the various layers was worked out
with greater accuracy by Nöldeke (Zu den ägypti-
tischen Märchen in der Zeitvölker, A. Deutsche
Monatsh. Gesch. xlii. 68), who gave an approximate
definition of the tests, by which each could be
recognised.

Stimulated by these studies Czebrucký (Studien über
euere mbirische Märchen, Costes, 1891; Russian
translation: Institut für slavische Kulturwissenschaften in Moskow 1905) at-
tempted to group the separate tales into three layers,
of which the first one was to comprehend the
fairytale from the Persian Hebrei esfānān together
with the framework of the book, the second those
which had come from Bagdad, and the third use
the stories which had been added to the body
of the work in Egypt; certain tales as for example
the extensive chivalric romance of Omar b. 'Abd Allāh
and his many works, were added in later insertions. To
this elimination of the said romance exception has
lately been taken by Seybold ('Preiszeichnungen
des arabischen Handschriften der Kgl. Universi-
tät Bibliothek zu Tübingen, Tübingen 1907, p. 75).
To the above mentioned Russian translation a number
of supplementary and critical notes have been added by A. Krimski.

The setting of the separate layers of the large
collection was continued by Chamzin in Le
recueil étiopien des Mille et une nuits (Brussels
1892) he demonstrated that the Egyptian
layer consists agnina of two separate parts, one of
Jewish origin. The same (in his Bibliographie
vulgaristes, arabe and in various short articles)
and René Basset (Notes sur les recueils, in the
Recueil des traditions populaires alli. 37 and
303) have also contributed a good many valuable
observations concerning details.

At the present stage of the investigation this
much can be stated with certainty: the original
nullus of the Alfatīla wa-lailā was derived from
a Persian book of fairy tales called Hebrei esfānān,
which perhaps in the third century of the Hijra
was translated into Arabic; the subject-matter of
these tales was for the greater part of Indian
origin. The texts for the tales belonging to
this oldest layer are parallel in Indian and Persian
books, which can be proved to have been written
prior to the Arabian version. Such a parallel may
be one of two kinds: it is either a complete
duplicate of the Arabian tale, or it is some isolated
trait which we recognise; the more characteristic
such traits are and the more importance they have
for the entire structure and the plot of the story,
the more value we attach to them. Besides these
we also have purely outward criteria, such as old
Persian names of the mention of Persian inspira-
tions. Lane, while striving to defend the Arabian
origin of the tales, overestimated the value of
such outward criteria, and could be adduced in
favour of his theory. For it is much easier to ac-
count for an Arabian story-teller or copyist inserting
Arabian allusions and analogies to modern
Arabic conditions, than for the occurrence of
old Persian designations, unless we assume that
the latter are fossil remains of an older stage of
development. The outward tests therefore, which
point towards India and Persia, must have com-
paratively greater weight than the others; the
Arabic narratives knew how to add local colouring
to their foreign tale, how to adapt it to native
surroundings, but on the other hand they were
desirous of that conscious artistic fiction, which
enables one to lend to native matter a foreign
touch and different local colour.

In the very first tale, which forms the frame-
work of the book, both criteria, for its foreign
origin are found by side. The names of Shāhriyār, Shīhāmī and others occurring in it are
Persian, and the story of the infidelity of the
wives of the two princely brothers, which
embellishes the journey of the latter, has its Indian
parallel in Katha Sūrīt Sagara (see British and
Foreign Review xii. July 1840, p. 266). Also the three
incidental little fables, contained in the
frame-work story, about the merchants, who unde-
stood the language of beasts and his cattle, have their analogues in Indian literature. Of special
importance is the analogy between the manner, in which certain tales in the Alf laila wa-laila
are fitted into the frame-work, and the method used in Indian books. This practice of interlocking
one story with another is something specifically Indian. It is observed in the Micha-karasita, in
the Padamatra, in the Watalapannamostar, and in the VRATASAUTRA, in the Watalapannamostar etc.
The improbable, sometimes downright unnatural result of this arrangement, by which the narrators
or the listeners occasionally appear on the scene in situations entirely unfit for telling or listening
to a tale, is no matter of concern to the Hindu.
The leading motive of the Alf laila wa-laila, that the
stories are told in order to gain time and prevent
nakedness, occurs again in the original Indian Sanskrit
Vicharis and, in a different form, in the Indian
Sababatari, where the clever parrot prevents
the wife of his master from visiting her lover in the absence of her husband, by arresting her
at the entrance with the narration of a fragment of a
fairy tale such day, always ending up with the
remark: “Tomorrow I will tell you the rest, if
you remain at home tonight.” In this way the
wife was enabled to escape from executing her plan until the
husband returns.

This frame-work system is just as common in India as it is rarely met with outside that country.
I do not know a single book of ancient date, which is constructed in such a way, with the sole
exception of Ovid’s Metamorphoses. Consequently this practice may be considered a test of the
Indian origin of certain parts of the Alf laila wa-laila. And not only the practice but also the
phraseology belonging to it, recurs in the same
form. In the Indian popular books it usually runs like this: “You may not do such and such a thing
or else you will go the same way as you and so,” — “How was that!” asks the other, and
then the admonisher begins his story. Exactly
the same form is found in the Alf laila wa-laila, and even the same words are used to introduce a
new tale; Arabic ajada and Sanskrit katham etat (“how
was that?”), and I feel inclined to assume that the fundamental words occurred in this very same
form both in the Hidrā sfāmch and in their
Indian original.

The tales which come first in all manuscripts
and editions of the Alf laila wa-laila (the merchant
and the jinnie; the fisherman and the
jinnie; the porter, the three calenders and the
three ladies in Baghdad; the kumbu) are themselves examples of the frame-work system,
and show besides various traits, which remind us
of Indian prototypes, traits such as the trick
which the fisherman uses to get the jinnie back
into the vase from which he has released him;
analogues are found in the mongolian version of the Simhabhadraotesmiri, i.e. the story of Aditi Bariya
Bhhā, and in the so-called “southern”
Padamatra translated by Dubois. Then there is
the motive of the combat between the black and
the white serpent, which are both demons, a
motive which has its parallels in Turan tales
(Journal asiatique 7th series iv. 259), which are
not of Islamic origin as their editor Pavet de
Courcelles is inclined to believe, but were bor-
rowed from India; also the combat between the
demons and the princess who understands magic
art, to which the mongol version of Watala-
pannamostar affords an exactly corresponding
parallel (see Beney, Padamatra i. 411). Finally
such details as, in the history of the king and
the physician Daban, the poisoning by means of
the leaves of a book smeared with venom, a
practice which points to Indian customs (cp. Gilde-
meister, De rebus indicis vero, p. 89). — Several of the tales in the beginning of
the book, on the other hand, have so many features in common, that we can scarcely suppose
that they existed independently from the first in their
present form: probably every one of them was
really taken from the Hidrā sfāmch, but afterwards
underwent some important alterations.

Other tales which doubtless are of Indian-Persian
origin, are the following: (1) the story of the
garlic horse (Persian names such as Sābar and
the Persian feasts of Newrūz and Mīhrīgār being
mentioned in it), the fundamental idea of which
can be traced back to the Padamatra (cp.
Beney, ibid. i. 161); (2) the story of Hasan of Bajra (in the translation by Habicht and Hagen
he hero is called “Asym, the dyer” instead of
“Hasan, the jeweller,” probably owing to the
confusion of Ṣiyā ḥ with Ṣidā ḥ; the two main
features of this story are the more thanacular
feathers, and the stratagem, by which the hero
outsixes the men who quarrel about the inheri-
tance, and procures for himself a means of bringing his runaway sweetheart back again; both these
traits originated in India (see Beney, ibid. i. 265)
and were also circulated towards the East (cp.
Zeitschrift d. Deutsch. Morgenl. Gesellsch. vl. 596
and Stanisław Julem, Anatoman, Paris 1859, li. 74); the first and greater part of the story of
Hassan of Bajra occurs once more in the Alf laila
wa-laila, in the story of Dūhnāsh, inserted in the
fairy tale of Hidrā Kārta al-Dīn and the queen of
serpents, a fairy tale, which originally perhaps
was mixed with Jewish elements; the story of
Dūhnāsh is a later and, from the artistic point of
view, unsatisfactory imitation. Curiously enough
this very story of Hidrā Kārtu al-Dīn was assigned to the Hidrā sfāmch by the contributor to the
Edinburgh Review, July 1826, p. 160, who other-
wise most accurately denies the Persian origin of
the Alf laila wa-laila; without laying too much stress on purely aesthetic criteria, one may state
this much with safety, that this fairy tale, with
its many absurd exaggerations and tasteless repeti-
tions, can certainly not have been derived from the
same source to which we owe such excellently
composed fairy tales as that of the magic horse,
as that of Hassan of Bajra and others; (3) the
story of Saiīl al-Maīlū, the only one in the Alf
laila wa-laila, of which we possess a complete
Persian parallel; the Persian manuscripts in question are mentioned by Lane (Arabian nights enter-
tainment iii. 744; (4) the story of Kāmar al-
Zamīn and of princess Būba; — (5) the story
of prince Bāde and princess Shīravān; of Somasad; — (6) the story of Ardecha and Hīyāt al-
Nūsfa; this tale also appears again in a different version in the manuscripts of the Alf laila wa-laila; in the story of Qāmār Nāwī, (which is in the
spirit of ‘Omar b. Ṣawrū; I venture to qualify as a
late insertion within the frame-work of the Alf
laila wa-laila), an inset story of Tāfū al-Maīlū
and princess Dūnūsā is found, which corresponds
almost literally to that of Ardecha and Hīyāt al-
Nuṣrāt. — Uncertain is the relation between the story of *Alī Shir* and the Persian original, the former containing many details which recur in the probably later narrative of Nīr al-Dīn *Alī and the girld-girl*, also to be found in the Alī lala wa-lalā; and no less uncertain prevails in the case of the story of the jealous sisters and the story of Ahmad and Fāṭima; these two only to be found in Galland.

These tales thus from the *Heār sifāt* constituted the nucleus, round which on Arabic ground various layers of other matter gathered. The first of these consists of matter from Baghdad and attaches itself to the name of the *Alī Shīr al-Rashīd*; some tales of this group are the product of free invention, others spun out and re-modelled historical anecdotes. An example of the latter category is the story of Abū l-Musann or the sleeper awakened; the anecdote is given by al-Dājīlī (Lane, *ibid*. ii. 376). Also several of the anecdotes, which were circulated about Abū Nawāṣ and Abd Ul-Dżama, were in a similar way turned to literary account. We must of course not forget that the name of Hārūn al-Rashīd had at an early period become a common symbol of the good old times, of everything miraculous and fairy-like. Consequently we are not justified in assigning a tale to the Baghdad group on the mere ground of its containing the name of that Caliph; only internal evidence is here decisive. Apart, of course, from many details, which must remain doubtful, this general statement may be made, that the novels of middle-class life, short, simple tales of good and solid composition, with a love intrigue, are, in the caliphate eras, little marked by the hallucinatory or unnatural for their leading motive, are made up of Baghdad matter, whereas the picturesque novels and also the fairy tales (generally of clumsy composition), in which the element of the Lajunas (demons) is excessively prominent, are of later, Egyptian origin. It is worthy of notice that in the oldest fairy tales of Indian and Persian origin the demons, as a rule, act on their own account and independently, whereas in the more recent tales they are always subject to the influence of the writer himself. Hence the writer decides the development of the action, not the Lajunas and *Ifrīs* themselves. In the Baghdad novels everything, as a rule, happens without any magic art. In the picturesque novels we possess something specifically Egyptian, as has been demonstrated by Nothdeke (Zeitschr. d. Deutsch. Morgenl. Gesell. xlii. 68); the classic model example of this entire genre is Herodot's famous tale of the treasure of king Rhamplontis; an interesting analogue to part of the latter story is also found in the Alī lala wa-lalā, in the story told by the eighth Mughad-dam to Suṣīn Bālūbars (Edition of Habich and Fleischer xi. 3753). The other, more recent part of the Egyptian group with its common fairy tales is probably the work of a Jewish-Egyptian author, as Chauvin has tried to prove in *La révision égyptienne des 1001 nuits* (Bruxelles 1894); from the aesthetic point of view these tales are the heart of the whole book.

Besides these four different layers, which, as has been observed above, cannot with perfect certainty be distinguished from one another in the present version of the Alī lala wa-lalā, the book also comprises a number of larger collective stories, each of which is only found in a few manuscripts, and evidently inserted for the sole purpose of making up the number of nights required. Such stories are: The seven sisters (with the additions The seven sisters and The forty sisters), which are of independent Indian origin, and the story of *Kafād* and *Ālima*. Questionable is the position of the cycle of Siadād the sailor, which evidently dates from the time when Bagdad and Bagdad had reached the zenith of their prosperity; it seems originally to have been an independent work. It is a well-known fact that we possess a number of very old Egyptian and Greek analogues of the Siadād narrator. Originally foreign to the Alī lala wa-lalā are the large scholastic romance of "Omar b. Naṣṣan and his sons"; the story of *Sūl* and *Jauwāl* (ed. by Seybold, Leipzig 1902), and two didactic tales, which are widely different from each other: the *history of the wise Twaddad*, which afterwards became a favourite chap-book in Spain (*La doma de Teodor*, Teodor or Tudor is a mistake for Twaddad, for which palaeography can easily account; cp. Marín, *Historia de la literatura arábiga peninsular de Gomara a Enrique de Vedia* l. 534), and the originally Jewish tale of the wise Hārūn.

The final redaction of this voluminous matter took place in Egypt, probably during the reign of the latter Manuélakes, and as may be concluded from the frequent and minute mention of places in Cairo, it was done in the latter town. The same can be inferred from the language of the present version, which, in many respects bordering on the vulgar tongue, constitutes a free and easy development of late literary Arabic. But the redactors have not succeeded in completely effacing the original marked differences of style between the interwoven and concatenated parts. Also the various manuscripts diverge especially in this respect. Chauvin (*ibidem*) has made an attempt to establish more precisely the literary identity of the man who revised the two Egyptian layers, and believes him to have been a Jew converted to Islam. But the number of redactors and professional narrators, who in consecutive periods had a share in remoulding the Alī lala wa-lalā was probably so great, that from this entanglement to unravel the work of each individual reviser would be a task which no one will dare to undertake.

In the above mentioned quotation from Mas'ud it is said that the Persian book *Heār sifāt*, which translated literally into Arabic would mean *Alī blawāfja*, was called instead *Alī lala* (the thousand nights). The formation of later date *Alī lala wa-lalā* (*1001 nights*) owes its origin to the superstitious version to round numbers amongst the Arabs (and Orientals in general), as has first been proved by Gildemeister (*ibidem*. p. 86); the usual preference for a certain surnames in book-titles may also have contributed to the alteration. But just as the Persian book *Heār sifāt* did certainly not contain exactly 1000 tales, the numeral only indicating an indefinitely large number, neither was the fairy tale matter of the Alī lala wa-lalā originally divided into 1001 nights, this arrangement being the work of later times. This is sufficiently evident from the fact that in this period the manuscripts diverge to a great extent, and it was just owing to the endeavour to make up the full number, that the wa-
rious large insertions crept into the work. Besides, the name Alif laila wa-laila being so popular, the copyists liked to conglomerate under that title all sorts of extraneous matter along with that which all manuscripts contained. A good example of the latter kind of manuscripts is the Paris copy of 1775.

A large majority of the tales in Alif laila wa-laila contain a great many more or less lengthy verse quotations; the Bagdad layer is conspicuous in this respect. The usual practice is to put these quotations into the mouth of the speaker; in all passages where the narrator aims at the expression of strong emotion, whether it be grief or joy, the person in question commences his speech in verse. These verses, however, in so far as the majority of cases, are not in the least sense instrumental in continuing the action, but, like the verses in the Indian dramas, rather serve as pauses, sometimes interspersed with reflections and musings. This circumstance is a sufficient indication that those verses are not equally old with the rest of the context, but were inserted at a later date. This inference is corroborated by the recurrence of the same quotation in identical situations; and also the frequent utilization of different verses conveying the same meaning and linked together by the well-known expression wa-fala al-fala & l-mu-mad (*and again he spoke in the same sense*), seems to point at the conclusion. There are also examples of verses sounding absurd in the mouth of the speaker, evidently owing to a mistaken or clumsy insertion. Only in exceptional cases the name of the poet who wrote the quotation in question is mentioned; those who are referred to most are Abu Nawas, Ibn Al-Mulazz and Ishak Al-Mawsili. In most cases stands the stereotyped phrase wa-fala 'l-mu'mad (*the poet spoke*)'. The majority of verses are of a later date and as a rule plainer and simpler than the older Arabic poetry.

The manuscripts of the Alif laila wa-laila belong to different groups, as has been demonstrated by Brockelmann (*Gesch. d. aram.-literatur. ii. 60*) after Zoteberg: an older Asiatic group (the manuscripts belonging to this group are all except one incomplete, containing only the first part of the book) and two later Egyptian groups. The differences between the manuscripts are very great, though less important between those of the first group. Brockelmann gives a list of the editions and European translations (*ibid*), which was enlarged and continued by Krizaki (in his above mentioned introduction to the Russian translation of Oestreich's *Studien*). An extensive bibliography is found in Chauvin *Bibliographie des envoys arab. iv. 120*.

The most complete and exact translations of the fairy tale cycle in European languages are the English one by Baring (Benares-London 1884, lately also published in German in the *Inselschlag*), and the French rendering by Marius (Paris 1860 and after). The most reliable Arabic text edition is still always the Biliḳ one in two volumes (1251); although the more recent Cairo edition in four volumes is more practical and more easily obtainable, as it has been published repeatedly.

(J. OESTREICH)

**ALFARABI.** [See AL-FARABI.]

**ALFARD** is the star of the second size in the upper part of the body of the Hydra. The name is Arabic and means "the isolated one." Cp. Idele, *Untersuchungen über das Ur sprung u. d. Bed. der Sternummen.* (Mahlke.)

**ALFYA** (A.Str.) is "thousand-liners," a poem in a thousand verses, a favourite number with the Arabs, especially for rhymed manuscripts. (Khafla) finally (ed. Filag) l. 407 it says) mentions several of them; the best known are *Alfyas* of Ibn Al-Malik; the one by Ibn Al-Malik, both dealing with grammar, and also the *Alfyas* of Al-Ibrāhīm on the *Ubqat al-kalim* (fundamental doctrines of the science of tradition). Further particulars are to be found in the articles on the authors.

**ALFRAGANUS.** [See al-FARQAN.]

**ALGARVE,** from Arabic al-Qābrt (p. west), was formerly a name for the entire south-western part of the Iberian peninsula; but it has since become the special designation of the southern province (the "kingdom") of Algarve in Portugal. After the fall of the Umayyads of Cordova petty kings also rose in Algarve (Malik al-jum'ah is *Berys de Talafis*, amongst others the Hamid Mu'min in Silves (Silb)); Abū Bakr Mūhammad b. Sa'id b. Mūsān 419—442 (1028—1050) and Abū I-Ashagh, Ta 443 444 (1051—1052); in Santa Maria de Algarve: Abū ʿOthman Sa'id b. Ḥarrūn 407—435 (1014—1042) and his son Mūhammad 435—444 (1043—1052); in Murtala Ḥan Ta'ifān until 1044, who all were finally swallowed up by the Abbadides [q. v.] of Seville. In 539 (1144) the Ta'ifa rebel Abū ʿIbād ibn ʿAbd al-Malik rose in arms against the Almohadids, but in 540 (1145) he was supplanted by the Almohadids. In 1189 Sancho I of Portugal conquered Silves, Sancho II (1223—1248) took Tarvis and Afonso III completed the conquest of Algarve in 1249. In the 15th and 16th century the Portuguese conquests on the Moroccan coast, Coimbra, Algarve etc. were called "Algarve i-alum mar (ultimatum)", Algarve across the sea.

(C. F. SEYBOLD)

**ALGEBRA.** [See AL-DJABER.]

**ALGECIRAS.** [See AL-DŻEBAR.]

**ALGEDI** (from Arabic al-jabīr = young he-goat) is the ancient name of both the pole-star and the constellation of the capricorn [cp. Idele, *Untersuchungen über das Ur sprung u. d. Bed. der Sternummen.* p. 3, 13, 101.]

**ALGER** (Arabic al-İzār; English: Algeirs) is a town on the northern littoral of Africa. It is the capital of Algeria, and the seat of the Governor General and the heads of the various military and civil services of the colony. Its geographical situation is 36° 47' N. Lat., 6° 42' E. Long. (meridian of Paris). The number of inhabitants according to the census of 1906 is 144,000.

We do not know anything definite concerning Algers previous to the establishment of the Romans in that part of Africa, except that on the place of the present town a locality was situated, known by the name of Icosium. Archaeological discoveries, to-gether with a legend about the foundation of Icosium by twenty companions of Hervakus (Solinus iii. 3) would at the most justify the supposition that on this spot of the African littoral a Phoenician or Carthaginian factory had existed. The information concerning Icosium is also very scanty. It became a Latin colony during the reign of Vespasian, was captured in 371 or 372 by the Herber prince Firmus, but some time afterwards restored by him.
again to the Romans. It was the seat of a bishopric, which amongst others was occupied by Bishop Victor, who assisted at the conference held at Carthage in 483 by order of the Vandal king Hunicus. After the fifth century Iconium seems to have remained nearly the same size as a Turkish Alisari, was doubtless destroyed by the Arab invasion of the 7th century and abandoned by its inhabitants. Some traces of ancient buildings were still to be seen in the 13th century, Al-Bakri (al-Ma‘allik al-Durar al-Afrikh an, tr. by de Sane, p. 150) actually mentions the existence, at al-Djazair, of the Banh Mazghan, of ancient monuments, of antique vats, and of a theatre with a mosaic pavemenet, and finally of an apo-saperd wall of a church. Other constructions and some inscriptions have been unearthed since 1830 (cf. Corpus Inscriptionum Latinarum, II, Septentrionale, and Supplement); Gesell, Atlas archéologique de l’Algérie, number I, plate 1, note 6.)

The site of Iconium remained deserted until the middle of the 10th century, although at a date which cannot possibly be fixed. Certain Berber tribes of the family of the Sanhadja, the Banh Mazghan, had settled down in the neighbourhood. During the reign of Zint b. Menad (945–971), Boulegue, the son of this prince, obtained permission to found on this spot a town which received the name of Djazair bani Mazghan (Im Khaldin, ‘Anvar, transl. by de Sane: Histoire des Berbèrs, i, 6) because of the rocky islets which, at some distance off the coast, form a kind of natural mole. Towards the end of the tenth century the new town had arrived at a certain degree of prosperity, as appears from the description of Prosperity, as appears from the description of Prosperity, as Florentine fleets came into port every year (Max. Latrie, Traité entre Chrétien et Arabes, Introd. édit. pp. 330, 333). The inhabitants were remarkable for their intellectual capacities, not for their artistic taste. Men-of-letters were rare amongst them. "On my arrival at Algiers," says Muhammad al-Afchari (who lived in the second half of the 13th century): "I inquired whether there were any learned people of exquisite condition, but I felt like one who, as the proverb says, looks for a stallion with fond eyes for camel's eggs." We must, however, make an exception for the mashbūt Sidi Abd al-Rahman al-Thalibī, renowned for his saintlike life and his theological learning (789-873 = 1387-1465); this pious personage was to become the patron-saint of Algiers, where his memory is still greatly revered. The mosques in Algiers were as a rule clumsy buildings, without any ornamental work, with irregular naves and covered with a roof of red tiles. Some of them still exist: Sidi Hadji, Sidi Ramādīn and especially the Great Mosque, mentioned in an inscription of the year 409 (1018), which in 1324 was furnished with a minaret by Abū Tāhfn, king of Tlemcen.

In the last years of the 15th and the early years of the 16th century, Algiers together with the other towns of the African littoral suffered from the effects of the Spanish Reconquista. Its population increased, it is true, in consequence of the arrival of fugitive Jews and Moors from Spain, but the Christian crusade had to be resisted. The Catholic kings had resolved to subject in their authority all the places on the northern coast of Africa. The conquest of Oran by Pedro Navarro and Ximenes (1509) and the occupation of Bougie (1510) warned the people of Algiers of the imminent danger. Unable to offer vigorous resistance to the Spanish arms, they declared themselves willing to submit, promised to recognize the Catholic king for their suzerain, to pay him an annual tribute, to give up the Christian captives, to refrain from piracy, and to prevent the enemies of Spain from entering their harbour (31 January 1511). The shah of Algiers, Abd al-Tāmī, mortally wounded by a delegation of notables, went himself to Spain, to take the oath of obedience and deliver some presents to Ferdinand. Finally, in order to assure the execution of the stipulations with regard to piracy and to watch the people of Algiers, Pedro Navarro took possession of the islet of the Peñón, at some distance from the town; he built a fortress on it and garrisoned it with 300 men. Raised by the suppression of their piracy, the Algerians were soon tired of this state of affairs and tried to free themselves from the Spanish yoke. Profiting by the agitation caused all over the Barbary States by the news of the death of Ferdinand the Catholic, they persuaded Sulīm al-Tāmī to send a deputation to the Turkish corsair 'Arrāji, who since 1513 had been master of Algiceti and solicited his help. 'Arrāji went to Algiers and was received as a liberator, but he was powerless against the Peñón. He rid himself of Sulīm al-Tāmī by murder and had himself proclaimed Sultān by his own soldiers. The Algerians then came to terms with the Thulābi and the Spaniards to expel the Turks; but their conspiracy was discovered, the leaders of the plot were arrested and beheaded, and those who were under suspicion and the discontented were thrown into prison and executed. In that way all desire of resistance was broken; and 'Arrāji remained master of Algiers. In vain the Spaniards attempted to take the place from him. The expeditions against Algiers conducted by Don Diego de Vera (1516) and by Don Lipo de Mendoza (1519) both ended in disaster. The Turkish power however could not be considered solidly established as long as the Peñón remained in the possession of the Christians. The fall of the Spanish fortress was long delayed, in consequence of 'Arrāji's death and the subsequent difficulties which his brother and successor Khālīf al-Dīn had to face at the beginning of his reign. But in 1529 Khālīf al-Dīn had at last vanquished all his adversaries; Algiers, from whence the Kābyley had expelled him five years before, had received him again; and now he was resolved to put an end to the Spanish possession. He attacked the Peñón at the beginning of May 1529. The governor Don Martín de Vargas had neither received victuals nor reinforcements from Spain. He nevertheless endured the cannonade for twenty-two days. At last, on May 27th 1529, the fortress was stormed, and Vargas saw himself obliged to surrender, having only twenty men left who were able to fight. He was conducted to death at Khālīf al-Dīn's command, and the Peñón was razed to the ground and part of its building-materials were employed to construct a connecting dike between the inlets of the roadstead. In that way the mole was built, which at the present day is still called the mole of Khālīf al-Dīn, and which, after having been completed by a perpendicular mound, protected the harbour against the north and north-west winds, afforded easy shelter to the Algerian vessels in winter-time, so that they need not fear tempests or attacks from the Christians. Batteries planted on the sea-front and a wall enclosing the town on the land-side combined to make the place almost impregnable. All these works of fortification were commenced by Khālīf al-Dīn and continued by the Beylerbeys, his successors.

The installation of the Turks at Algiers was a permanent menace to the Christian nations. Charles V, therefore, undertook to crush their power. Already in 1535 he had conquered Tunis and subjected it to the rule of a sovereign who owed allegiance to Spain; he then contemplated achieving this work by the occupation of Algiers. After long negotiations with certain native chieftains and Khālīf al-Dīn himself, he crossed to Africa in September 1541. The expedition which the emperor conducted personally, comprised a fleet manned by 12,530 sailors under the command of Andrè Dorin, and an army of 24,000 soldiers. Charles V was no more fortunate than Vera and Monsada had been before him. He disembarked on October 23rd at the mouth of the Hartafl and, at first succeeded in ejecting a lodgment on the height of the Kubbat al-Sabīlī, which commanded the town. But in the night of August 24th the troops, while exposed to a violent storm, had to endure a very vigorous sally of the besieged. They were thrown into confusion, and the disaster would perhaps have been complete but for the courage of the knights of Malta, who repelled the assailants into the town, where Hassan Agha had the gates shut with all possible haste. One of the knights, Savignac, thrust his hand into the face of his lieutenant 'Arrāji. A tempest which rose during that same
night and destroyed 140 ships, deprived the army of provision, and made retreat inevitable. The emperor regained Cape Matmoa with great difficulty and at the expense of unheard-of hardships. Thence he embarked the remains of his army. This expedition, which was to bring about the destruction of Algiers, proved in the end an advantage to the Barbary corsairs, who made an immense booty and henceforth believed themselves invincible.

From that moment the Algerines could indulge in "piracy to their hearts' content; they continued to do so until 1830. But the free-booting had gradually changed its original character: it was no longer a mode of warfare against the infidels; it had degenerated into a lucrative industry and become the only occupation of the Algerines. It enriched the government, which received part of the booty, the private persons, who went into partnership to equip vessels, the whole population also, which profited by the liberality of fortunate corsairs and ship-owners. It attracted to Algiers adventurers from all countries, most of them of Christian origin, by the hope of "captains", that is, the reward that might satisfy their desire of rapine or their longing for adventures. The excess indulged in by the corsairs, the outrages committed against Christian sailors, the ignoring of the treaties concluded with the European states, inevitably provoked the efforts to make reprisals, which, however, were quite inoffensive to the town of Algiers itself. The brave attempt of a Spanish sailor, Don Juan Guacon, to penetrate into Algiers, deliver the captives and put the corsair ships on fire, unfortunately miscarried (1567). In vain the town was successively bombarded by the English (1622, 1655, 1672) and the Danes (1770). As France, because of its geographical situation and the importance of its commerce in the Levant, was especially interested in the maintenance of free navigation, it made repeated attempts to chastise the insolent Algerines. The French squadron commanded the mole in vain in 1661 and 1665; Duquesne conducted two naval expeditions against Algiers in 1682 and 1683. A first bombardment, lasting from August 20th till September 20th 1682, laid 56 houses in ruins and killed 500 inhabitants; a second (June-July 1683) caused heavy material damage, but elicited a riot, in which the French residents were massacred, among others the convertized Alger, who was supposed to have connived at the murder of a cannon. A third one, conducted by d’Estrees (1683) proved even more disastrous to the Algerines, and compelled them to sue for peace. But too much money and too many lives were wasted on these expeditions to repeat them very often. In the 18th century, whenever France had to complain of the corsars, it restricted itself to that account to simple naval demonstrations. Spain, on the other hand, having received a declaration of war from the day Muhammad II. Ogman (1773), attempted an act of violence against Algiers. A fleet of 20 men-of-war and 24 bomb-ketches, and an army of 35,000 men, were placed under the command of admiral Don Pedro Castro and general O'Reilly. The Spanish troops disembarked near the mouth of the Harthagh on July 8th 1773, but being surrounded by the enemy, who came to meet them, being commanded incautiously, they had to retreat on the following day, with a loss of 2800 men. A successful bombardment, which the Spanish admiral Don Angelo Baca did directed against Algiers in 1783, was too little compensated. The piracy experienced a momentary revival, owing to the war of the Revolution and the Empire, which turned the attention of the commission's minds into a different direction. After 1815, however, the European powers seemed determined to put an end to this intolerable state of affairs. Lord Esmouth, who, on May 15th 1816, had been to signify to the day the decisions of the congress of Vienna regarding the abolition of slavery, having met with insurmountable at Algiers, the English government, supported by Russia's opinion, resolved to revenge this ingratitude. A fleet of 32 sail under the command of Lord Esmouth, who was joined by the Dutch admiral van Cappellen, appeared before Algiers, penetrated into the harbour under the shelter of the white flag, and opened fire upon the town. Five hundred Turks were killed, the batteries on the sea-front destroyed, and a thousand inhabitants wounded. But the Algerines defended themselves energetically on the squadron and the town and lost a loss of 883 men (August 27th 1816). Only slight damage was caused to the place by a second bombardment, which admiral Neil conducted in June 1825, after a difference which had arisen between Dey Hassen and the English government. Algiers was evidently able to resist successfully an exclusively maritime attack. Consequently the French government, when resolved, after a fruitless blockade of three years, to revenge the insult offered by the day to consul Derval, turned to account the ideas suggested by commander Boutein of the corps of military engineers. This officer, who in 1808 had been commissioned by Napoleon to reconnoitre the defensive works of Algiers, suggested that the attack should be made from the land side, and that all directed against the Emperor's fort, from whence one could command the town. This plan, revised, and completed by the French general staff, was adopted and carried out. The French expeditionary corps landed at Sidi Ferjnah, 14 miles west of Algiers, on June 14th 1830, defeated on the 19th the army of the day on the plateau of Staubell, and appeared on the 20th in front of the Emperor's fort. On the fourth of July, at day-break, the French batteries opened fire, and after a few hours' battle, the fort, partly dismantled and left by its defenders, was occupied by the assailants. The day after, Hassen signed the terms of capitulation drawn up by the commander-in-chief, and the latter entered Algiers at once.

The establishment and the persistence of the Turkish domination of Algiers one of the most original towns in the Mediterranean world. The small Bazar, or market-place, became a prosperous and populous town. Turkish Algiers extended on the rocky slopes that descend from the Kasba to the bench. Hadda, who has given a detailed description of Turkish Algiers, compares its circuit to a cross-bow, the walls constituting the bow and the sea-shore the string. The perimeter of the town, measured along the external walls, was about 10 170 ft. The defensive works, commenced by their al-Din and continued by his successors afforded absolute security to Algiers. This defensive system consisted of a wall, of the Kasba, and of a certain number of forts and batteries. The wall was about 36 to 42 ft high, surrounded by a ditch and flanked with towers.
It had five gates: the sea-gate and the fishery-gate on the shore of the harbour; the gate of Bab 'Azzīn on the southern side of the town, near which the executions took place; the gate of Bab al-Wezīn on the north-side, where Christians and Jews were guil to death; and the New Gate on the southwestern side, through which the road passed which led to the Emperor's fort. The Kasba, built on the highest point of the town, had replaced since 1556 the ancient Berber citadel, which had occupied a slightly lower elevation. The Kasba became the residence of the sultans; the seat of his predecessors, which was situated in the lower town and consequently exposed to a cavo de mala in the janizaries. The Kasba comprised barracks and arsenals, and, besides, the treasury and private appartments of the sovereign. Outside the town, on a height which even commanded the Kasba, rose the Emperor's fort (Turk, Suljûq Kâşî; Arab. Barid al-Tawns), built by Hasan Agha on the place once occupied by the camp of Charles V. The sea-front was protected by the New Fort, the fort Bab al-Wezīn, the fort Bab 'Azzīn and the batteries on the mole, which, in the 18th century after O'Reilly's expedition, and again in the 19th after the bombardment by Lord Exmouth, were reinforced with new armament, amounting to no less than 150 pieces of large calibre.

Within the town extended on the slope of the hill. In its highest part, the "Lubiet" as it is still called by the natives, the white-washed houses supported by wooden arches stood closely pressed together, the upper floors projecting the one over the other so as almost to meet at the top. Steep lanes with flights of steep, darkened by the vaults, mostly too narrow for two men to pass without pressing their backs against the wall, wound up the slopes. The lower part, traversed by the only street deserving of that name, the connexion between the gates of Bab al-Wezīn and Bab ar-Rūr, which since the close of the 16th century, served as the favourite residence of the reis or corsair captains. Their sumptuous dwellings, clustered near the sea, were peopled with their crews; they guarded the harbour and therein was the mole, so that this whole quarter seemed no less than their arsenal, in which they felt safe from a coup de main of the soldiery (de Grammont, Hist. d'Alger sous la domination française, p. 187). There rose the palaces of the most famous reis of the 17th century, such as Mûzî Arrouzi, Sulmûn Riûbî, Mâsûlul Riûbî, 'Arabadjî, 'Ali Ricenia, there also stood the mosques, on the building of which these adventurers had spent part of their wealth. Religious edifices were indeed very numerous in ancient Algiers. Towards the end of the 16th century it comprised 100 mosques, chapels and ma'âtînas. On the eve of the French conquest, one counted 13 large mosques, 100 small ones, 27 chapels and 5 ma'âtînas. The majority of these were certainly of modest dimensions, and only of slight artistic interest. The most noteworthy besides the Great Mosque, which dated from the Berber period, were the new Mesquée (now called Mosquée de la Pècherie), built in 1660 for the Turks belonging to the Hanafite rite; the Mosqué de la Kédaw, ornamented with pcelain tiles, and the Mosquée de Mero Mort, the Mosquée of the Andalusians, built in 1623 by the Spanish refugees; the Zawîya of the Shâriffî, erected in the time of Rey Muhammad Bandi Kháq of 17th century, etc. Public buildings were few in number. One need only mention the Ijazís, the assemblage of palaces and barracks, the seven large "Caservías" or barracks of the janizaries, and the bag'nís where the slaves were detained. But a great many private houses hid behind their bare façades an elegant or sumptuous decoration; pieten with finely sculptured marble colonnades all round, pavellings of cedar-wood, revetments of Iznick, and especially Dutch faience, furniture of which the separate pieces were either of European make or had been fabricated by native artisans in imitation of European models (See G. Margües, L'Exposition d'art mauresque, in the Revue africaine 3rd and 4th quarters 1905).

The population of Algiers varied perceptibly during the three centuries of Turkish dominion. Haidé, whose work appeared in 1612, estimated the number of houses and inhabitants at 12,000 and 60,000. In 1634, when the piracy flourished more than ever, 15,000 houses and 100,000 inhabitants were counted by Father Dau. The decay began with the decrease of the piracy. In 1789, Vincent de Paradis estimated the population at 50,000; which number had dwindled down to 30,000 in 1830. This population consisted of various elements, which can be arranged into three groups: Turks, Moors, and Jews. The Turks formed a very close aristocracy. They had for the greater part come from Asia Minor, and enlisted in the ranks of the Yolrashe. The regulations, to which this army was subjected, allowed the Yolrashe to aspire to the highest degree, that of agha, and even to the highest civil functions. The Turks, no matter though they were simple janizaries, were saluted by the title of "Effendi", as "great and magnificent signors", and formed the upper ten at Algiers. Even after the militia had lost its political importance, its members did not lose that arrogance in the Lower Town amongst the married women of the country, but the children born from such unions, the Kalâglûs, were kept apart. Since the close of the 16th century they had been excluded from public employments, and in spite of their revolts, of which that which broke out in 1663 was especially dangerous, they never succeeded in getting this interdict abolished.

The Turks consequently always remained in a minority in the capital, as well as in the Regency itself. Their number may be estimated as 10,000 in the time of Haidés at Dau, at 30,000 under the Beylerbeyi, at 20,000 in 1643, at 50,000 in 1759. In 1830 they numbered 4000. Immediately after the conquest General de Bournon decided that the unmarried janizaries should be expelled and conducted to Asia, a measure which soon afterwards was extended to all the members of the militia. Besides the Turks, mention should be made of the renegades of European origin, who supplied the Algerian navy with engineers, artillerymen, pilots and some of its most illustrious escraris. Their number kept on decreasing at the same rate as the piracy became more difficult and less lucrative in consequence of the cruises and naval demonstrations of the European powers. From 20,000 in Haidés time it dwindled to 300 or 500 at the close of the 18th century.

The Moors formed a large majority amongst the citizens of Algiers. Some were descended from
the ancient inhabitants of Algiers, others had come from abroad and, since the Turkish epoch, settled in the town, such as Andalusians expelled from Spain by the Christian persecution, European adventurers, Koglouis, etc. Excluded from all naval and military affairs, except from military service, they did not offer any resistance to the Turkish rule, and remained indifferent spectators at the tragedies, which were performed on the stage of Algiers. The rich among them restricted their occupations to taking their share of the gains which the piracy procured, by contributing with their money to the equipment of the ships and by speculating on the sale of the booty and the slaves; the poor did nothing whatever, although they also derived enjoyment from the general affluence. This Moorish element of the population supplied the tradespeople and the craftsmen, who were incorporated in various guilds under the direction of a syndic or axis. Some natives from the inland had also settled down in Algiers. Kabyle, strictly watched by the Turkish authorities, were handicraftsmen and day-labourers; Libyans earned a living as carriers, Makhtites as bakers. Each of these groups of Berbers formed a small community governed by an axis, who was responsible for their orderly behaviour. The Moors numbered 18,000 (the Koglouis included) in the year 1830; the negroes 2,000; the natives of Berber origin 1,000.

The Jews occupied a place which grew more and more important in Algerian life. The small number of native Jews had since the 15th century been joined by their co-religionists from Spain. The first settlement of the latter took place about 1391, under the rabbi Duran and Barfat, but the great Exodus was accomplished in the 16th century. Khair al-Din allowed the Jews to take domicile in Algiers, but he limited the number of shops they might open, and compelled them to pay a poll-tax. In spite of all sorts of vexations with which they were plagued by Turks and Moors, such as the coercion to wear a special costume, in spite even of the enormous fines which were inflicted upon them repeatedly, their number increased rapidly. According to Halévy only 150 Jewish families were living in Algiers at the end of the 16th century; in 1634 Father Dan estimated the number of Jews at 10,000; in 1725 Langier de Tassy at 15,000, certainly not without some exaggeration. About that time a very sharp distinction began to establish itself between the "indigenous Jews", who were always miserable and badly treated, and the "Frankish Jews" of Italian origin, especially from Leghorn. Frowning in their quality of foreigners, by the regime of the "Capitulations" and the protection of the French consul, and consequently exempt from the vexations which harassed their indigenous fellow-believers, they grew rich by their commerce with Europe and by the exploitation of monopolies, which the dyes had reserved shrewdly for themselves. The most influential amongst them in the 18th century, such as Solomon Jacinto (d. 1735) and especially I. B. and the Bunsachs, have become the bankers of the days and the official intermediaries between the Regency and the European powers, played a considerable, sometimes even preponderant, part in the Algerian affairs. For twenty-five years (1780-1805) Néphallu Bunsach exercised his power in making and unmaking the boys and the days, had the disposal of the resources of the country, in short, conducted the domestic and foreign politics of the Regency to the advantage of his own interests. This excessive power, however, brought on its own reaction. The murder of Néphallu Bunsach, "the king of Algiers", by a Janissary (1805) was followed by a bloody riot. The wealthiest Jews were massacred or banished, their shops plundered, their property confiscated. The Jewish "nation" never recovered from this disaster. Reduced to 4,000 individuals (Römer) it endured the Turkish yoke with difficulty. They welcomed on that account the fall of Hussein with the greatest satisfaction, and aided, without any opposition, with the conquerors.

The Europeans in Algiers were represented by the slaves and the free tradespeople. The former had fallen into the hands of the corsairs along with their prizes made at sea, or on their razzias along the Mediterranean coast, especially on those of Spain, Italy, Corfu and Sardinia. Part of the slaves formed the share due to the "beylik"; the rest were sold in the highest bidder in the Nadżidet. The captives, according to the will of their masters, were either set to work in the house, or employed in the town itself, or else in the gardens outside the walls; they were also compelled to row on the galleys for a fixed number of days. At night they were shut up in special establishments, belonging to the government, or to private persons, which were known by the name of bagnios. The condition of these captives was less miserable than has been asserted. Except on certain days when a sort of janizaries or the appearance of a Christian squadron aroused the fanaticism of the Mussulmans, their lives were perfectly safe. The bagnios were even provided with a chapel with officiating priests, with an infirmary and a tavern. But the slaves could not recover their liberty, except when they were either ransomed by their families with the help of ecclesiastics such as Trinitarians, Redemptorists and Lazarites, who devoted themselves to that mission, or released in consequence of diplomatic negotiations. The number of slaves varied naturally according to the more or less flourishing condition of the piracy. It reached its maximum in the first half of the 18th century: 25,000 captives, according to Den, 35,000 according to Gramayo, peopled the Algerian bagnios at that period. These figures went down during the following century. In 1740 only 1,442 slaves remained, in 1763 there were no more than 3062; in 1769, 1800; in 1813, 1869; in 1816, finally, 1200, who were released after the successful naval expedition of Lord Exmouth.

Europeans, who enjoyed unrestricted liberty, were always few in number, as Algiers never had a commercial importance comparable to that of the other Barbary towns, least of all to that of the Levant ports. The corsairs, amongst whom the councils of France and England disputed between themselves for pre-eminence, and the employees at their offices, together with a few merchants, constituted a small colony, of a hundred people at the most. Algiers during the Turkish epoch was governed by a separate administration, placed under the supervision of the "Naseir al-Din", minister of finance of the Regency. The various ethnic groups (negroes, Makhtites, etc.) and the different trades formed.
several corporations ruled by amirs, the Jews constituted a nation governed by a chosen leader. All these amirs were subject again to the khadij al-mamur, the warden of the markets was the task of the mudhif, that of the streets in the day-time of the kasha (from F. késka) and during the night of the agha l-khulaf, who must always be a Turk. The levée was charged with the inspection of the baths and houses of ill fame. The amirs l-khila had to keep the walls in repair and to see that their foundations worked satisfactorily. This administration system answered its purpose and, according to all travellers who have visited Turkish Algiers, secured absolute safety. It disappeared along with the Turkish domination.

Since 1830, Algiers has witnessed incessant modifications. It would be transgressing the limits of this Islamic encyclopaedia to give a detailed account of them and describe the European city, which gradually supplanted Berber and Turkish laws. A few facts must be stated here: First of all the increase of the population, which, according to the census of 1901, had then risen to 138,000 inhabitants, and to 144,000 according to the census of 1906, of which only the rough estimate was known at the time of the composition of this article. The population of modern Algiers is just as composite as that of ancient Algiers. But the European elements have supplanted those of indigenous origin, as may appear from the figures of the census of 1901: 69,000 Frenchmen, 31,750 naturalised Jews, 28,250 foreigners, for the greater part Spaniards. Then the development of the harbour deserves notice. The ancient basin of the port, where the corsairs lay thronged side by side, was enlarged by the continuation of the mole of El-Harf Al-Din and the construction of a new pier thrown into the sea from the fort of Bab Ar-Rah, forming a vast basin of 237 acres where ships of the heaviest draught can anchor. The continuous progress of the traffic (an aggregate tonnage of 6,000,000 in 1904) has even rendered it necessary to plan new works which are in course of construction. Finally the territorial extension of the modern town must not be passed over in silence. A long time ago it was forecasted, the limits of Turkish Algiers, its buildings and those of the suburbs Hnéma Dey, Mergaz, Bab el-Wad, and Saint-Engin extending over an average length of 7.5 miles.

This transformation was not carried out without a profound alteration of the general aspect and originality of ancient Algiers. In the very first days after the conquest it appeared necessary to create ways of communication, to procure barracks for the troops and offices for the various services of administration, all of which could not be achieved without the destruction of private houses and religious buildings. The Djemna was demolished by stone by stone and disappeared altogether in 1856. Of the palaces it enclosed within its wall only the Dhr Rint el-Sultan exist, now used as the archbishop's palace. The Mosque of the Kéchwa was allowed to fall into ruins from 1845 till 1860 and yielded its place in the Catholic cathedral. The mosque of al-Sajiyé was pulled down, that of Mené Morto transformed to a church. Others were turned into barracks or military depots. Of the 176 places of worship, which were found in Algiers in 1830, only 48 remained in 1863 (9 large mosques, 19 small ones, 20 chapels and zawiya). Amongst the Moslem temples that are still in existence, only those in the area of any archaeological and artistic interest: the Great Mosque, with its portico constructed with the columns from the mosque al-Sajiyé; the "Mosquée de la Fédération", constructed in 1660 on a plan in the shape of a cross like the Byzantine churches in Constantinople; and finally the mosque of Sidi Abd al-Rahman al-Tahdité, erected in 1696 by the shey al-Hadj Ahmed on the spot of a more ancient building. The Turkish fortifications were for the greater part demolished and replaced by a modern rampart, which now is being pulled down. The Kasba contains only a few traces of its former state (vaulted rooms, the gate, a fountain, the so-called pavilion of the fan stroke, and the mosque). The batteries and the forts on the sea-front have also disappeared under the demolishers' hands. The town itself has been almost completely modernised, thanks to the European influence, thorough and transverse roads crossing the high town which have deprived it of its originality. These acts of Vandalism, explicable in the early days of the conquest, when a safe shelter had to be secured to the European population within the ramparts, were no longer justifiable after the extension of the town towards the north and the south. European life is gradually moving to these new quarters. The high town, on the other hand, has remained the centre of Moslem life. In its narrow and dark streets the indigenous population is crowded together, exercising their small native trades and crafts. It seems that enlightened minds have realised the necessity of preserving that part of the town from utter ruin, although they have arrived rather late at this conclusion. A society called "Society of old Algiers" was founded for that purpose in 1905, which has itself the task of tracing and preserving what is still left of Moslem Algiers.

Not satisfied with being the political capital of Algeria, Algiers has also been striving of late years to become a centre of intellectual life and of Moslem learning. A law of 20 December 1879 has organised four schools for higher education (law, medicine, science and letters), which together constitute a theoretical university, numbering, in 1904, 916 pupils and auditors. Although the name general education, as the Universities of the metropolitan supply, it is also taught in the schools of Algiers, still the activity and the researches of the latter tend especially towards African questions. Oriental studies occupy an important place at the Law school and particularly at the school of Letters, which conducts a thorough investigation concerning the literature, the language, the folklore, the ethnography and the civilisation of northern Africa. There is a professorship of Moslem law at the first of these schools, and, at the second one, others of Arabic, Persian and Berber languages and literature, of Moslem civilization, of Egyptology, and African history. The work which has been accomplished is already considerable (see Douarre, L'œuvre de l'Ecole des Lettres d'Alger; Revue Algérienne 37th and 38th Quarters 1905). Various learned societies contribute to the researches which have been undertaken since 1830 not only among the past and the present state of northern Africa, but in the first place the Historical Society, which in
its paper, the *Revue Africaine*, since 1856 has published a great many valuable articles and precious documents about the history of Africa. The Geographical Society has organised an historical and archaeological section, and prints in its *Bulletin* not only studies on the geography but also on the history and the civilisation of the Islamic world. Superinsect Moslem education is finally given in the mission schools, the *Abbâya* placed under the patronage of the *Abbâ* Abû al-Rahman. Moslem theology and law, together with some rudimentary knowledge of European sciences, are taught there to the natives, amongst whom the Musulmans, employed in the legal and ecclesiastical professions, are recruited (kâfîls, *âdit*, imams etc.). The National Library possesses 2000 Arabi, Turkish and Berber manuscripts. It may be added that, apart from its efforts to maintain Moslem culture at its height, the French government also endeavours to develop artistic taste amongst the natives, and to revive the local industries. A section of modern art has been organised at the Musapha Museum, in 1903, and encouragement has been given to professional schools, where the manufacture of carpets and embroidery is practised.

(G. Vever.)

**ALGÉRIE (English: Algeria)** is a possession of France in northern Africa, bounded on the north by the Mediterranean Sea, on the east by the Sahara, on the west by Morocco. It is situated between 36° and 37° N. lat. and 6° E. long. and 5° W. long. (meridian of Paris).

**a. Geography.**

Algeria occupies the central part of the Maghreb or Barbary. It is a country of varied relief, which is formed by a compact mass of highlands, separated from the Mediterranean littoral on the one side and the desert of the Sahara on the other by two mountainous borders, the Tell Atlas and the Anti-Atlas. In western Algeria, in the province of Oran, these outer borders are about 250 miles distant from each other, but, owing to the inclination of the Sahara Atlas from south-west to north-east, they converge gradually, until finally they meet in eastern Algeria, in the province of Constantine. The northern mountains, towards the side of the sea, generally descend by abrupt slopes, rarely indented by valleys, thereby isolating the coast region from the inland. The slopes of southern Algeria, on the contrary, slope down very gently towards the Sahara, their different groups being divided from one another by large plateaux, which facilitate the communication between Algeria and the Sahara. Being placed between the Mediterranean and the desert, between a focus of evaporation and a focus of heat, Algeria is contested between contrasting climatic influences, which together form various combinations, according to the proximity or the remoteness of the sea, the elevation, and the orientation, so that adjacent regions are often subject to largely different systems, constituting a great variety of "local climates" rather than an Algerian climate. General phenomena are — the predominance of rains in winter, the irregularity of their fall, their progressive diminution from north to south and, at least as far as the littoral is concerned, their augmentation from west to east (Nemours 468 milluremeters — la Celle 860 millennium). The climate, no less than the relief, does not favour the existence of regular rivers of considerable length and with a regular water supply. In most cases the Algerian wâw appear under the aspect of stony or sandy beds with low banks, and are dry for one half of the year, but after showers or thunder-storms are transformed into destructive torrents. Not one of them is navigable; some are or may be utilised for irrigation by the construction of barrages on the spot where they leave the mountains. Only the Tafna, the Macta (formed by the confluence of the Sinzag and the Harra), the Chulif, the Seboue (Sâboue), the Wâd Sahel, the Wâd el-Kebir, the Seybouse, the Medjerda and its tributary the Wâd Mellieh have a permanent course, and the lower course of the two last ones does not even belong to Algeria.

The variety of elevations and depressions affords a means of dividing Algeria into a certain number of longitudinal zones, parallel to the sea, each of which possesses sufficiently sharp characteristics. The coast zone constituting itself an outer and an inner mountain border, which are separated from each other by valleys or tablelands. The external zone is covered by masses of an elevation ranging between 1300 and 6500 ft., of which the extreme spur project themselves straight on the littoral. Such are, from west to east, the massif of the Trana culminating in the Filhasouane or, more exactly, Fellahane (5796 ft.), the Sahel of Oran and that of Mostaganem, the Sahara, the Zarkana dominating the town of Minlat (5026 and 5183 ft.), the Atlas of Bled culminating in the Abd el-Kader (5339 ft.) and the Mouzna (5262 ft.), the massif of Great Kabylie and the Djurdjura with the Aouknas (7546 ft.) and the Lalla Khedidja (7572 ft.) (see Kabylie), the Baboro culminating in the Harab (6573 ft.), the Sahel of Collo and that of Tafna (5350 ft.). The°shore being almost immediately dominated by the mountains, it is very difficult for ships to approach it. They can only find shelter in deep crescent-shaped bays (Bay of Bensa, of Philippeville, of Bougie, of Aigles, of Arrue, of Mars el-Kahir). The coast lends itself badly to maritime activity, and the construction of the ports has required considerable works. — The
second mountain-range is formed by the mountains of Tlemcen, from whence a great many waters take their source, to which the vegetation all around the town of Tlemcen owes its continual freshness. These mountains are the Tessaouis and the Beni Chegran, the massif of the Ouatenss (6345 ft), the Djae of Amsale (5943 ft), the Bihans, traversed by the route from Algiers to Constantine through the pass of the Iron Gates, the mountains of Constantine, the Maniad, and the Kirta (Kirkis). Between the two bordering mountain-ranges, river valleys (Chelif, Wej Sahel, Seybouse) and plains alternate. Some of those plains are low and often swampy, such as the plain of the Sitif, of the Mitidja and the plain of Bona. Others are higher and more elevated, such as the plains of Tlemcen, of Mascara, of the Arelsa ('Arelis), of the Medjane, and of Séfif. The Tell as a whole may be considered a cultivated region. On the littoral market-gardens and nurseries flourish, owing to the relatively abundant rains and the generally mild temperature; in the interior, the basin-shaped plains, collecting the waters from the mountains, offer a good soil for the cultivation of corn. The mountains, although too often bare, are frequently covered by thick cypress-wood. In Kabylia, especially in the massifs of the littoral, they are overgrown by woods of cork oaks and green oaks; in some places, amongst others in the Atlas of Bilida and at Temiet al-Had (Téniayt el-Ajdel) some cedar plantations can be found. These natural conditions account for the fairly dense groups of population in the Tell. There are to be found the principal town-like agglomerations: Oran, Mostaganem, Téba, Cherchell, Algiers, Dellys, Bougie, Philippeville, Collo and Bona on the Coast; Tlemcen, Sidi bel Abbes, Mascara, Miliana, Médéa, Blida, Aumale, Séfif and Constantine in the interior country. The Tell is also, pre-eminent, and apart from Kabylie, the domain of European colonization, which prevails in the environs of Oran, in the plains of the Sitif, of Mascara, of the Mitidja and of Bona, and shares with the natives the valley of the Chelif and the high plains of the province of Constantine. The surface of the Tell is estimated at about 54,000 square miles. The Region of the High Plateaux, which with greater exactitude should be called the "Region of the high interior plains," extends between the Tell Atlas and the Sahara Atlas. It is the very heart of Algeria. It comprises a series of plains with central depression, decreasing in height from west to east. The high plateaux of Oran maintain an average elevation of 3280 ft; the region of the Zahres is not higher than about 2625 ft; the Hodna sinks down to 1300 ft. Between the Hodna and Tébessa, the country is proved by secondary mountain-chains isolating plains of somewhat narrow confines from one another. The aspect of these plateaux is greatly different from that afforded by the Tell. They are vast spaces where nothing arrests the eye, without a stone, without a rock, without a tree, there are neither valleys nor hills, only slight undulations" (A. Bernard and Lagroix, "Évolution du nomadisme", p. 19). This is the southern border of this second cone. It appears as a series of narrow hill-crests, surrounding the neighbouring regions by about 1000 ft, and separated from one another by undulated plains. Even in the most hilly parts such as the Azir, it does not lose the aspect of a table-land [See A. Bernard]. One distinguishes three principal ranges: the mountains of Fignon and the mountains of the Beni (Djebel Mezzer 6500 ft) — the Djebel 'Amur, flanked by the Kiell (5600 ft) on the west side and on the east side by the Bit Kahl (Ahil Kahl) — and the mountains of the Wad Nahl and the Azir. The Sahara Atlas does not constitute an uninterrupted barrier. Large openings between the various masses, facilitating the relations between the Sahara and the plateaux, and allowing the desert to make its influence felt a long way north. The region of Bôila Sanda, for example, with its dunes and its oasis, seems just an annex of the Sahara. Being isolated from the sea by the Tell Atlas, the plateaux are a region of moderate rainfall (0.60 millimetre a year). The waters, which do not flow towards the sea, are lost in depressions called chotts ('gnejf), channels which are filled with a muddy salty water, and in summer are desiccated and covered with a crust of salt. The most important of these depressions are the Chott el-Jarbi and Chergul (Chargul or 'gnejf), the Zahres, the Hodna, and the Gourara of the Tarf. The climate is one of extremes, the differences of temperature between day and night and between the seasons being considerable. However annoying this climate may be, it is not unhealthy. The plateaux, dry and barren as they are, are not fit for the cultivation of cereals, not even in the best favoured parts near the border of the Tell (plateaux of the Sermon). They are nothing but steppes, which in the spring are covered by an ephemeral herbaceous vegetation, and also by perennial plants capable of resisting the drought, the all in flinty plains, the extremities or its in the depressions, the ashes on the sands. The arboreal vegetation is only found in the lower grounds, the dais or beds of the wadis where some traces of humidity remain. Owing to its height the Sahara Atlas possesses some masses wooded by junipers, thujas, Aleppo pines, and, in the Azir, by cedars. The valleys of the Djebel 'Amur give shelter to some pasture and some arable fields of only limited extent. Under these conditions the region of the plateaux is neither fit for European colonization nor even for the establishment of native settlers. It is a region especially favourable to cattle-breeding, although the breeding of big cattle is hampered by the scarcity of water. But the sheep adapts itself very well to the sparse vegetation of the steppes. Ever since the remotest antiquity (42 000 square miles of the plateaux have been the scene of the wanderings of the nomads and their herds.

3. The Sahara. The Sahara is in all respects a distinct region, no less vast than Algeria proper. A considerable part of the Sahara, moreover, was disjoined from Algeria and received an organisation and a budget of its own, by the law of December 6th, 1902, which created the Territorial Councils. [See SAHARA.]

8. HISTORY.

During the first nine centuries of the Hijra (7th—10th centuries after Christ) the history of Algeria proper cannot easily be separated from that of northern Africa, and, for some periods, from that of Spain. The Muslim armies appeared
there for the first time in the second half of the 7th century after Christ, at the period of their establishment in Ifriqya. Their first expeditions are insufficiently known and bear a legendary character. This much may be ascertained that Qibla, having founded Kairawân in the year 80 (679), undertook to convert the Berbers in the west. His rival Abu l-Mu‘ammar, however, dispatched an agent to him of the government of Shattan, and is said to have himself advanced as far as the neighborhood of Tlemcen, to have defeated the confederacy of the Awdas, their chief Kasida, Qibla, having been taken into favor again and reappointed governor of Africa, advanced to the Atlantic, without venturing however into the Awdas (Auris) or attacking the towns on the coast occupied by the Byzantines. On his return he was surprised and killed at Teblida (65 = 665) [see: Qibla in MAP]. The Berbers took advantage of this disaster to recover their independence and abjure Islam, which they had been compelled to embrace. The indigent realm, however, which Kasida had founded, was only short-lived, although in the mountains of the Aurès resistance was continued under the leadership of the Kairuwa [see KAIRAWANE]. To triumph over this prophesies meant five years of hard struggle to the Arab general Kairuwa b. Sonfili, who at first had been defeated and expelled into the country of llara. In the meantime the last Byzantine places were conquered and, at the beginning of the 8th century after Christ Arabibian authority was acknowledged: all through the central Maghrib. The Christian and Jewish Berbers were converted to Islam, not so much because of religious conviction as in hope of the booty which was promised to them by the Arabivian governors, who enlisted them in their armies and led them on to the conquest of Spain.

Consequently the Arabivian conquest did not thoroughly modify the population; it simply introduced into the country a military aristocracy of comparatively few members, and propagated a new religion. The Arabivian power was at the mercy of the Islamized Berbers. They gave it a hard blow in the second half of the 8th century. Being expatriated, who had claimed the right to impose upon them the Kairuwa, as they did on the infidels, and being vexed by the pride of the Arabivian chiefs, they adopted eagerly the Kairuwa doctrines imported from the East. These doctrines appealed to their democratic instincts and their desire of vengeance. So they rose in arms against the Arabs. The insurrection began in 123 (740), in the neighborhood of Tangier, under the leadership of Majirn, and spread all over the Maghrib. It lasted until the close of the 8th century. Their victory over the Arabivian general Keltum at Bagdutra rendered the Berbers masters of the whole of minor Africa. The disorders, which accompanied in the East the accession of the Abbasid, restrained the suppression of the rebellion. Yazid b. Hātim, commissioned by Caliph al-Mansur, re-established Arabi authority at Kairawân and in Ifriqya; but not in the central Maghrib and the extreme Maghrib, where Berber states had been organized. The orders, who continued to the Sunnite doctrines, had founded a kingdom at Tlemcen; Abd al-Rahman b. Rustem, having been pro-

claimed imam by the Almoravides, had built the town of Taghdint (near the present town of Tiziouga), which was the capital of a state extending soon afterwards as far as Touggourt, Warzla and even Gafsa and the Neftah. Finally, in the last years of the 8th century, the caliph al-Mansur b. Abd Allah conquered the Awdas in 783 (808-809) and his son Idris b. Abd Allah founded the town of Fes and submitted the extreme Maghrib to his dominion. In spite of the rapid decayence of these various states, the Aghlabides, (descendants of Idris b. al-Aghlabi, to whom Caliph Hārid b. al-Rashid had entrusted the government of Africa), did not succeed in reconquering the central and western Maghrib, which remained in the power of the Berbers. They were only obeyed in Ifriqya and in the province of Constantine.

The Aghlabides disappeared in the 10th century, vanquished by the Fàtimides. The latter owed their victory to the Khurāsa Berbers, who had adopted the Sunnite doctrines preached by the da'i Abd Allah, who had given the name of Ubaidd Allah as their chief [See FáTIMIDAS, VAZIR ALI]. The last Aghlabide was expelled from Raqqada, the kingdom of Tamazight and of Sijillah, were overthrown, and the Aghlabides reduced to the condition of vassals. The remains of the Aghlabide tribes were transported to Lóris or emigrated towards the south [See ALBERA, WARDA, MELAD]. The Nekkaríshr Fàtimides, who, headed by Abd al-Yahiz, 'the man with the axe', had risen in arms, were exterminated (333-355=942-947). Profiting by these dimensions, the Usmayyids of Cordova had installed tributary principle at Tlemcen and at Tàizet. Successful expeditions enabled the Fàtimides to recover these countries and to subject the whole of the Maghrib down to the Atlantic. The Fàtimide Caliph al-Mansur, not being able to take the government of the central Maghrib into his own hands, entrusted it to the chieftains of the Şan Urda tribe, Ziri b. Mésa, whose son Bougaïri became the founder of Algers, Mèda and Miliana. But as the caliph lived away for twenty years in Cairo, where, after the conquest of Egypt in 355 (966), they had to fight against fresh disorders were enlarged. The governors left in charge of the Maghrib no longer acknowledged the authority of the Fàtimides, and made themselves independent. One of them, called Hamoud, founded a state extending from the sea to the Zèbè and from the Hodna to Tàizet. He built himself a capital, the Kafa, who reigned between Mala and farâl Rû Azzawi, which became one of the most precious towns of Africa. His successors had to sustain continual fights against the Zirides, the Hilçian Arabs and the Almoravides. Some of the Baní Hummed were princes of considerable importance, such as al-Nâṣir, who removed his residence from Kafa to Bougie and entertained friendly relations with Pope Gregory VII and the Italian sea-owners, and also his son al-Mansur (481-498=1085-1092), who succeeded in repelling the Moslem Almoravides, who had advanced as far as the neighborhood of Algiers [See HAMMAMET].

So, at the beginning of the 11th century, Algeria was entirely divided between Berber sovereigns, when the discord between the Ziride sultans of Ifriqya and the Fàtimides of Cairo brought on the Hilçian invasion [See HILÇIA]. After having
devastated Hukiyah, the Arabian troops penetrated into the Maghrib. Leaving aside the mountain masses and the towns of the Tell, which they were unable to capture from the Berbers, the invaders spread over the plateau and the plains of the inland. As they drove their cattle along with them, they destroyed all agriculture and substituted nomadism for settled life. The Alkabar reached the south of the Jbel and the limits of their movement were as far as the Jbel Amur, the Ghorius advanced into the eastern Zala and the Hodna, the Makri into the steppes of the province of Alger. The Berbers, at any rate part of them, sought a refuge in the mountain masses (Kabylia, Aurès), in the oases and in the Sahara (Mahd, Wadl (SAlt, Sáf), where they have succeeded in preserving their language and customs down to the present day. In the steppes and the plains, on the other hand, the Arabian and Berber elements pervaded each other, their mixture giving birth to new associations. Towards the close of the 12th century, the invasion proper had come to an end, although in migratory movements of the population its reaction made itself felt until the 14th century. By it the ethnography of Algeria was so profoundly changed, that, in the history of Algeria, the Hilal invasion may be looked upon as the first stage of a process of transformation which undoubtedly is not yet sufficiently known in its details. The Islamic, instinctive creative faculty, did no more than augment the disordered state of the country, by their brigandage, and by aiding the princes who disputed for the country amongst themselves, especially with the Zitides and the Hammadides. This inscrutable anarchy left the central Maghrib a ready prey to the new invaders from the west. The Almoravides, after having subjected the whole of Morocco, crossed the Muluya. Yüsuf b. Tashfin conquered Agadir (the ancient Tlemcen), founded Tagant (the present Tlemcen), and for a short time ruled the whole country as far as Algiers. But he did not succeed in maintaining his position [See ALMORAVIDES]. The Almohades were more successful. Abú al-Muhammād captured Algiers and Bougie without a blow (642 = 1242), however, in the Battle of Kallat, the Base of Almohad, in which the population was dispersed, put to flight the Hilianians in a four days' battle near Setif (Saf). and retook the ports, which, profiting by the prevailing disorders, the Christians of Sicily had occupied. After the conquest of Hukiyah, he ruled over the whole of Barbary from the Atlantic to the bay of Gabès [See ALMOHADES, AND ALMORAVIDES]. During the reign of his successors peace was disturbed by the enterprises of the Banu Ghaziya, who, by alliances, were descended from the Almoravides. The latter used, in conquering all the country between Bougie and Millián (580—582 = 1184—1186). After his death his brother Yahiya continued the hostilities until 633 (1235), with the support of the Hilianian lands. Being an indefatigable adventurer, one day victorious and the next defeated, but never despairing, he crossed the Maghrib in all directions from the coast to the Sahara. Algiers, Bougie, Constantine and even Jatké were taken and plundered.

In the course of that same period the dominion of the Almohades became dislocated. The governor of Hukiyah, Abú Zakariyya b. Hafiz, belonging to the family of the Almohades, proclaimed himself independent at Tunis (634 = 1236—1237) and founded the dynasty of the Hafsides. The Abul-alwâdides Berbers, repelled by the Hilia纳斯 from the Siber towards the north, established themselves at Tlemcen, where their chief Aghmar (b. Zayyān usurped the power, which after him passed into the hands of his descendants the Zayyânid. The Benet Martí, finally, occupied the valley of the Muluya, from whence they advanced towards the south. All three dynasties disputed for the central Maghrib amongst themselves. At first the Hafsides succeeded, during the reign of Abú Zakariyya, in subjecting the entire Maghrib as far as Tlemcen, but his successors could not even enforce obedience beyond Setif and Bougie. Eastern Algeria, moreover, was troubled by the rivalry of the Hafside princes, who several times founded ephemeral principalities at Constantine and at Bougie, and shook off the authority of the sovereign of Tunis. All through the 14th century, the Hafsides, Martíides and Zayyânides, warred amongst themselves, without one of the three dynasties being able to establish definite supremacy over the central Maghrib. The main events in the conflicts between the Zayyânides and the Martíides were the two sieges of Tlemcen (698—706 = 1299—1307), and 726—738 = 1327, and 1327, and 726—738, which undoubtedly is not yet sufficiently known in its details. The Hafside, Martíide and Zayyânid, was allowed the Martíides to advance victoriously across the whole of the central Maghrib and occupy Bougie, Constantine and even Tunis. But after the Arabs had deflected the Martíide Abú Iyana (Iyana) back from Sfax, the kingdom of Tlemcen was restored and experienced an epoch of glory and prosperity during the reign of Abú Hamîd II (q.v.; 760—792 = 1359—1389). After his death, however, it rapidly declined to complete ruin. Foreign wars and domestic struggles impaired its strength: the Hafside Abú Fāris conquered Tlemcen three times. A prince of the Zayyânides, Abú Zaim Muhammad, founded a state which comprised Tunis, Millián, Algiers and the Matala; his son Abú Mutawakkil succeeded in asserting himself at Tunis and in the valley of the Chellaf. The towns on the littoral, enriched by the rich Almohad, organized themselves into independent republics. Finally the Spaniards, at the instigation of Ximenez, set foot on Algerian ground, in order to continue in Africa the crusade which they had brought to an end in the Peninsula. They conquered Mars al-Kabir (1505), Oran (1509) and Bougie (1512). Algiers, which they kept in awe by the threatening canons of the fortress on the Peton, and Déllys and Tunis, offered submission and paid tribute. The same thing happened to the kingdom of Tunis, over which the Spaniards exercised a veritable sovereignty.

The arrival of the Turks stopped the progress of the Christian invasion and saved Islam in Africa. On the ruins of the small Berber state, which long anarchy had vacated, the Turks, by force of arms, established a Mussulman state, which comprised the whole of the central Maghrib. Its founders were 'Abd al-Ilid (q.v.) and Khair al-Dîn (q.v.), 'Arid laid the foundations of the Turkish power by conquering Algiers (1516), and it was afterwards his successful career came to an untimely end. Khair al-Dîn was more fortunate. By rendering homage for his state to the Ottoman
Fort and accepting the titles of pasha and beylerbey, he procured himself the moral support and the material means necessary for the success of his enterprises. In the period between 1518 and 1536 he made himself master of the whole of the town on the coast and in the Celil (Bona, Cottès, Constantine), comprised part of Kabylie, to pay tribute to him; and, by the capture and demolition of the Peisem (1529) secured a definite possession of Algiers. The beylerbey who came after him, and whose lieutenant continued his work. They repelled the attacks of the Spaniards, who attempted a renewal of hostilities (discommutation of Charles V before Algiers 1541), and captured all the places possessed by them, with the sole exception of Oran. This town was to remain in the power of the Spaniards until 1707, when it was retaken in 1732, and abandoned it in 1789. In the west, the successors of Kheir-ed-Din conquered the kingdom of Tlemcen and razed it to the ground, as had the Sa'dian Sheriffs, who contested that region. Salih Ra's eventually occupied Fes (1553) and re-establish a descendant of the Marinides on his throne; Hussein Pasha and after him 'Ubayd 'Ali extended his dominions even into the environs of the Moroccan capital. In the east the Turks established their dominions in the western province of Constantine. At the close of the 16th century the "Regency" of Algiers had reached the limits which it maintained until 1530. The western frontier, however, was the scene of sharp conflicts between the Turks and the Moroccans. Twice, in 1601 and in 1703, Mulli Ismail attempted, although without success, to take the region of Tlemcen from the Turks. His successes had recourse to stratagem and diplomacy to weaken the power of their adversaries; they gave encouragement and subsides to the marabouts and the fraternities which were hostile to the Turks, such as the Darqawia and the Tijanists, and their intrigues were privy to the revolts which disturbed western Algeria at the end of the 18th and the beginning of the 19th century. On the east side the Turks of Algiers were in conflict, during the 18th century, by the dissensions of the Hassine family, the Algerians conquered Tunis in 1756, plundered the town and compelled the bey to pay the tribute of an annual tribute. Fresh hostilities between the two Regencies broke out early in the ensuing century, and did not cease until 1821.

The Turks have by no means exercised actual authority over the whole of the territory comprised between the sea, the Sahara, Tunis and Morocco. According to Rim, the region placed under their direct administration covered a surface not exceeding 25,000 square miles, being one sixth of the territory of French Algeria. The rest of the country belonged to populations, which were either independent or connected with the Turks by ties of vassalage more or less close. To the former category may be reckoned: the confederacies of the Kabyles, of the Tunes, the variable federal republics; the tribal communities of the plains and of the south (Sahat, Bâa 'Aghwâ, Sâhâna etc.); and warlike or semi-barbaric principalities, such as Tougourt or Aïn Mahdî. Having failed to subject these groups or to make them obey, the Turks were satisfied to tolerate them at their side. The second category consisted of tribal values, that had preserved an almost complete autonomy, but in their relations with the Turks were dependent on treaties which it was the interest of both parties to sign. For instance, the Uday Stâl Shakîr of the Harrât, the Hunnuks, the 'Amîr etc. But the Turkish policy was careful to keep the tribes dissatisfied, to keep up the discord between the aristocratic families and the jezâr quawas in the republics, so as to prevent all agreement that might prove dangerous to the rulers of the Regency. The Turks also secured to themselves, in the bosom of each group, devoted partisans of their cause. This same system of "divided and vanquished" was also applied to the populations which the Turks had under direct authority. They were distinguished into two categories: subjected tribes or "çâl' and tribes under command or "makhzen. The former were constrained to the payment of the poll-tax, the "sâhîr and the sabîl, and also of a tribute in kind or in money (blâma = rizma). The latter were exempt from all taxes, canonical rates excepted, but they were at the service of the government and had to be ready to march at the first signal. They supplied the Turks with warriors, conveyors and camel-drivers, looked after the payment of the taxes and formed the police of the country. Repelled the sultan: the sultanates were plaged relentlessly by their taxes. The Turkish government maintained its authority with the help of this force, which was a great deal more effective than that which they derived from the authority of the janissaries. These Makhzen tribes, hated by the natives whom they willed, remained necessarily faithful to the Turks. Military colonies or ouzûl (plur. of ouzel) were also established at all points of some strategic importance. Finally, large stretches of uncultivated land isolated the principal indigenous groups from one another. In spite of these precautions, revolts were frequent, provoked in most cases by the exterminations of the Turkish agents. The Kabyles were in a state of almost permanent insurrection during the 18th century, and the earlier years of the nineteenth. Towards the close of the Turkish domination, the province of Oran was entirely disarranged by the intrigues of the Moroccan agents and by the preachings of the Darqawia and the Tijanists. The revolts, of which that of Rez Sheffî (1804) was the most dangerous, were only suppressed with the greatest effort. As to the inhabitants of the towns, the so-called shebels, being deprived of all share in political life, did not even attempt to show off the yoke. The Kabâghil alem, half-breeds of Turks and native women, inspired the Turks with some fear in the 19th century. After that period they were consequently excluded from all the higher offices.

The exercise of power and the enjoyment of its benefits were the privilege of the Turks who belonged to the military (rûjâli). This institution, to which Kheir-ed-Din owed his success in establishing his authority, formed a small military aristocracy, of no more than 15,000 members. These were recruited from amongst the populations of the towns in Asia Minor, and also, at least in the 16th and 17th centuries, from amongst the European renegades, who were attracted to Algiers by the desire and the profits of a life of adventure. After their enlistment, the shebels were either assigned to the service on land or on the
ships; their pay was raised gradually; they were dependent on no one except their officers; they passed through all the successive grades of the hierarchy according to priority of appointment, until they became aghas, and might even then aspire to the highest civil functions. Those amongst them, who formed the army proper, served alternately one year in the towns; the other in the mountains, which were found in the towns or at the most important stations (Algiers, Bougie, Bordj Schaou, Constantine, Médena, Millane, Mazouan, Mascara, Thlemcen), and one year in the ranks (muhadda) to collect the rates, after which they went for a year on furlough. Their insolence and turbulence made them dangerous, not only to the natives, but even to the government itself, which tried to win them by gratifications and presents. The palace revolutions, which were the cause of repeated bloodshed in Algiers, were the work of the janissaries. The influence of the janissaries, however, was counterbalanced in the 17th century by that of the 'faith of the ra's (fasarat ar-ras' or corps of the corsair captains).

The organisation of the Algerian state, although its principles throughout the period had been conceived by Khair-al-Din, underwent, nevertheless, modifications of some importance in the course of the three centuries of Turkish rule. In this respect four different epochs must be distinguished: that of the beylerbeyis (1518-1587); that of the triennial pashas (1587-1659); that of the aghas (1659-1671) and finally that of the deys (1671-1830).

The beylerbey was Khair-al-Din, his son Hasan, Ennafi ʿAlt and Hasan Veneciano, as representatives of the Ottoman Porte, sometimes exercised their functions personally, and at other times had them discharged for them by governors or fahsifars. Although acknowledging the suzerainty of the Grand Seignor, they believed as independent sovereigns. Haïd, without reason, calls them the "kings of Algiers." All of them dreamt of creating, to their own advantage, a kingdom comprising the whole of Barbary; they even tried to naturalise the excessive power of the janissaries by relying on the troops which were recruited from the Khatyres (muhadda). — But their ambition caused so much anxiety to the sultans of Stamboul, that these decided to have themselves represented in Africa by pashas appointed for a period of three years. These officers, being first of all bent on the acquisition of a large fortune, did not give allegiance to their sovereign. During this period, the piracy developed considerably. Towards the middle of the 17th century, a military revolution broke out which brought the aghas or chief of the militiam into power. The pashas only preserved some honorific attributions. The period of the aghas was one of disorder and anarchy. The rivalry between the janissaries and the ra's provoked bloody tumults; all the aghas perished by assassination. — After the lapse of twelve years, the ra's, in their turn, succeeded in usurping the power and appointed a dey. His first three successors were also elected by the corsairs, but the others were chosen by the militiam, which was finally reconquered and maintained its influence. This period is marked by the disappearance of the pashas and the rapid decline of Algerian power. The Ottoman supremacy, it is true, was solely attained by the bestowal of the status of honour and the diplomas of investiture upon the new deys. But, on the other hand, the cruises and naval demonstrations of the great European powers impaired the piracy, to such an extent, that whereas in the preceding century it had enriched the Algerians, it now proved insufficient to maintain their power.

Many of the deys had to submit to circumstances from the natives, at the risk of provoking revolts, or to the help of the Jews, who were steadily gaining power. The favours enjoyed, at the end of the 18th century, by Nephari Busnach and Joseph Bacri, "the king of Jew", called forth bloody riots in 1809. The militia, greatly reduced in number and gradually deprived of military qualities, became more and more exacting. They raised and dethroned the deys according to their own caprice. Of 28 deys, who reigned successively from 1671 till 1830, 14 perished by murder. Not until 1816 did it happen to 'All Khodja to abandon the palace of the Béniou, in the low-town, and shut himself up, with his treasure and his guards, in the Kasba where he would be safe from military rebellions.

[See Alger,]

Having been elected by the militia, the dey enjoyed absolute power. He was assisted by a council or divan, consisting of five ministers with the official name of "Powers". These were the Khamáqjí, the minister of finance; the agha of the camp, the commander-in-chief; the wakil al-hkharij; minister of marine; the balt al-ndažgi, steward of the domain; and the khodja al-khawi, the receiver of the taxes. The shahib al-mudjma was in charge of the police and the jurisdiction in the capital. The dey governed the provinces of Algiers, which constituted the dàr al-mudjma, by the interference of four Turkish khâds. The rest of the Regency was divided into three provinces or beylîks: the west beylîk, which had successively for its capital the towns of Massoua, Mascara (from 1710) and Oran (since 1722); the central beylîk or the beylîk of the Tijar with the capital of Medea; and the east beylîk with the capital of Oran. These beylîks were again subdivided into wathulâs, comprising the territory of several tribes; these tribes again into ouars or assemblages of tens. Each beylîk was governed by a bey; each ouar by a kâlid, either a Turk or an Arab, and each ouar by a shahib. The deys were appointed by the deys, as a rule by means of money; the bey, in their turn and under the same conditions, chose the various authorities placed under their command. They exercised extensive power in their beylîk, but were responsible for the security of the district, and for the collection, with the help of the Makhzan tribes, of the taxes. Every year, in the spring and in the autumn, they sent the proceeds of these taxes to Algiers, by means of their shahîfas. Every third year they had to appear there personally, and deposit the amount of customary dînas (ànâqîs) which was called the dounâfi. This journey was not always without danger for them; for the dey took advantage of their presence at Algiers to make them pay back what they had stolen and even to get rid of them, if he suspected them. They certainly might be tempted to govern independently as they had the disposal of their army and an uncontrolled authority. Some of them, amongst others Maimoun al-Khalîf at Oran, conducted themselves like independent sovereigns. The beys of Constantine in the 18th
and 19th centuries, caused the grossest annoyance to the Algerian governments.

Although the representatives of the beylik were principally concerned about the collection of the taxes, still the main resource of the Algerian treasury, for a period of three centuries, was to be found in the country. Originally having been one of the forms of the holy war, the piracy became, towards the close of the 16th century, a veritable industry which enriched the government and the entire population. Private persons and functionaries supplied the capital necessary for the equipment of the ships. A fixed duty was levied by the state on the sale of captured individuals and merchandise; what remained was divided between the ship-owners and the crew. The captives, especially those who belonged to well-to-do families, gave rise to a lucrative trade; they were bought and sold; their owners entered into negotiations regarding their ransom, in some cases with the captives themselves, in others with the deputies of their families or the members of the religious congregations (Trinitarians, Maronitians, Lazarists), who devoted themselves to this pious mission during the time of these transactions the slaves either lived in the homes of their masters or in the establishments appointed for that purpose, the so-called bagasies. The piracy attained its highest prosperity during the first half of the 18th century; when even the coasts of Spain, Portugal and Italy were exposed to the incursions of the Barbian corsairs; it was still remnant in the second half of that century, in spite of the naval demonstrations of England and France (cruise of Blake, 1659: expedition of Boscourt to Ojdelche, 1664; bombardment of Algiers by Duquesne in 1682 and 1683, and by d'Estrees in 1688. But in the 18th century the freebooting diminished. The great maritime powers, France and England, succeeded in enforcing respect for their flag. The states of secondary rank (Sweden, Denmark, Holland, Naples etc.) had to make up for this by submitting to the compulsory payments of an annual tribute either in money or in kind, in exchange for a guarantee of more or less precarious security for their nationals. The wars of Napoleon, which turned public attention away from the Mediterrenean, gave the piracy a chance to recover its former prosperity. After general peace had been restored, the diplomaticists, in reply to the appeal of publicists such as Sidney Smith and Chateaubriand, sought means of putting an end to that state of affairs. But the Algerians refused to carry out the decisions of the congress of Alia-la-Chapelle. Even the bombardment of Algiers by Lord Exmouth [see ALEXA] could not make them give up their old practices. The piracy was to last as long as the Turkish domination itself, until the year 1830.

The conquest of Algiers and the destruction of the Turkish State were the achievement of France. After vain endeavours to obtain satisfaction for the insult offered to the consul Devai in 1827, the government of Charles X abandoned the blockade, which had lasted for three years, and, instead of the useless conciliatory negotiations, decided on punishing the day Hussein. In spite of the opposition of England, the minister Polignac organised an expedition against Algiers. The day capitalised on July 5th, the town was immediately occupied, and Hussein and the Jani-

naries were compelled to submit. Polignac was determined that France should retain the ports on the littoral, but he was unable to decide what was to be the final destiny of the country. But even before the diplomats had time to assemble, the revolution of 1830 overthrew the Bourbons. The July monarchy received Algeria as an "embarrassing legacy". The politicians who had come into power were undecided whether to yield to the wishes of the "colonists", who demanded the occupation and colonisation of the ancient regency, or, on the other hand, to abandon the country which was likely to prove a burdensome enterprise. Not until 1834, after the "Africa Committee" had finished its task, the government declared itself in favour of the maintenance of the French occupation. At the same time, also, a first attempt was made to organise the administration of the "French possessions in Northern Africa", which, until then, had been subject to military rule. The decree of July 3rd 1834 constituted the general governor. In spite of some bold advocates (such as Marshal Bassigny) of the occupation by the whole territory formerly occupied by Turkish Algeria, the chambers and partly also public opinion preferred the system of limited possession or, in other terms, the occupation of the towns on the coast and their surrounding districts. The island, since 1830, had been the prey of smancr. The former bey of Constantine, Ahmed, asserted himself in the eastern province, and 'Abd al-Kadir [q.v.] was scheming to establish a kingdom in the west of the country. Consequently the French advanced; but slowly: between 1830 and 1840. From 1830 until 1836 they only occupied Bona, Oran, Mostaganem, Arzew and Bougie. The capture of Constantine in 1837, after an abortive attempt in the year before, involved the occupation of the entire province from the sea to the Sahara. In 1844, the French troops appeared at Blida and penetrated into the massif of the Aures. In the west they had a harder struggle against 'Abd al-Kadir. After an energetic and methodical warfare under the command of Bugault, which lasted from 1841 till 1847, the power of 'Abd al-Kadir was crushed and possession was taken of the towns of the Tell and of the plains (Constantin, Melilla, Maamora, Medea, Saidia, Baghja, Gharda). The conquest of 1844, which was the outcome of the treaty of Tangier concluded after the Franco-Moroccan war of 1844, demarcated the frontier between Algeria and Morocco. The sending of French troops to the borders of the Sahara, and the establishing of fortified posts on the plateau secured the submission of the nomads of the south. The name of the Zihiane had to recognise the authority of France after the suppression of the revolt headed by Bil-Itla and the capture of Zantit (1849). Equally unsuccessful as an agitator was the sheik Muhammad b. 'Abd Allah, who, in his turn, tried to resume the Sahara tribes. The French defeated him, captured Laghwi, and advanced as far as Warzia (1854-1855). Until then part of Kabylia had remained independent, the two expeditions of Baguer (1846) and the campaign of Saint Arnaud and of Ran- doux (1854-1855) having effected only a preliminary occupation. Kabylia of the Balors, the region of the Wad Sahel which was defended in vain by Bil-Baghsa, and the valley of the Si-
Algerie. have been conquered, but the Kabyle con-
domies of the Djurdjura remained to be sub-
jugated. It was achieved by Kamis in 1857. He
persuaded the Kabyles into the very heart of the
massif until they were forced to lay down their
arms. They recovered the independence of France,
but preserved their customs and municipal insti-
tutions. The 66i6s "Napoleon" (now called
"Fort national") was erected to keep them under
control. So the administration of the native tribes
was organised while the conquest was drawing
near its completion. In regions outside the area
of colonisation, which, in spite of the efforts of
Flageaud and the attempts at plantation made
after 1848, still remained of limited compass, the
natives were placed under the command of
Masalmah chads (khebrays, aghars, etc.), whose
authority was again controlled by the French gen-
eral and superior officers assisted by Arabian
bureaux.

The submission of Kabylie marks the end of
the conquest. Since then peace has only been
disturbed by some serious insurrections, which,
however, never acquired a general character.
The agitations of Moroccan tribes of the frontier
made it necessary to send an expedition under
General de Martinprieux against the Beni Snassen
in 1859. In the south of the province of Oran
the revolt of the Uld Shetih dragged on for
a period of three years (1864—1867). The
rebels found refuge and support amongst the
Moroccan tribes of the Rhac Gil, the Dhawi
Menla and the Uld Ujeir, whom General Wimpffen
went to punish as far as the region of the Gaf Gaf.
However slow and difficult the quelling of
these different tumults sometimes was, it never
causcd any serious danger to the colony. But the
same was different in 1871. The real cause of the
rebellion must be sought in the diminution of the
prestige of France after it had been vanquished,
by Germany; but its rise and growth were favoured
by the disorganisation of the administration, the
inconsiderate measures taken by the government
of national defence, especially the naturalisation
of the native Jews, and finally by the reduction
of the military contingents. The rebellion was headed
by the former agha of the Medjina, Mohammed,
who represented the vindictive and appreciative
nature, out of self-interest, opposed the establishment
of the civil administration, and
by two marabouts, Shaitih Haddad and especially
his son St Akk, who, disguising their irrigation
under a show of fanaticalism, called the Ralimia
Khawm to arms. The insurrection became general
in the two Kabilies; it also spread through the
south of the province of Constantine and some
parts of the province of Algiers. The west, however,
remained at first the safest. At first the rising caused great anxiety. The towns and the fortresses of Kabylie were actually blockaded, the village of Palascte was destroyed, the Middia massacred by the
insurgents. But the appointment of an energetic
man, Admiral de Gueydon, as governor general,
the arrival of French troops, and the organisation
of an army under the command of the generals
Ponsat, La Lime and Laced, made it possible for
the French to gain the advantage. The block-
aded towns were relieved, and Mohammed was
killed in an encounter at the Wd Seuflat near Annaba. Bl. Mmeziz, his brother, undertook the
conduct of the rebellion; but he was chased from

lesse Kabylie and repulsed towards the south,
where he was finally taken prisoner at Roumont
(Roumert) on January 20th 1872. The number of
rebels had grown to 200,000, and 540 combatants
had been killed. The Kabyles were punished by the
loss of their municipal autonomy, the payment of
a war indemnity, and the allotment of 1,100,000
acres, which were destined for colonisation. The risings, which afterwards took place at al-Amri
(1875) and in the Auzés (1879), were of no impo-
rtance. More serious was that which in southern
Oran was roused by the marabout Bâ Amama
(1881). In consequence of this, permanent posts
were established on the southern border of the
plateau, where they afterwards served as bases of
operations in the Sahara region. [See sana, sahara.]

During this period (1859—1908), the military
operations only occupied a secondary place, admin-
istrative and economical problems demanding
special attention. The higher administration of
Algeria has been altered several times; even a
special department for Algeria was organised at
Paris (1859—1860). There existed a fierce anti-
Frenchism between the advocates of the suprema-
ty of military power and those of civil govern-
ment. The latter, who obtained a few reforms in details
from the imperial government, definitely gained
the upperhand after the fall of Napoleon III.
Since 1871 the governors-general, even those of
military rank, have taken the title of "governor
general civil"; and since 1879 these high functions
have only been entrusted to civil officers. No less severe were the struggles between assimilators
and autonomists: the former held the view that Algeria is only a continuation of France and
consequently ought to be ruled by the same
political, administrative and economic regime; the
latter, on the contrary, asserting that Algeria ought to be given institutions adapted to the
country and the population, or, in any case, that
the French institutions must be altered in such
a way as to make them transformable to local
wants. The decree of 1884, which diminished
the competency of the governor-general and at-
tached the various Algerian services to the respec-
tive French departments, marked the triumph of
the doctrines of assimilation. The reforms which
have been realised since 1896 were inspired by the
principles of the opposing party. But the all-prevailing achievement in the Algerian history
of the last half century is the utilisation of the
land. The domain of colonisation has extended
over the entire Tell and even to the plateau
beyond it. To the cultivation of cereals (which
has always been a tradition in Africa), new cul-
tivations have been added, especially that of the
vine. Mines (iron, zinc, phosphates) were explored
and worked. New public works (roads, railways,
irrigation, hydraulic works) were constructed. The
European population has increased since 1870;
new centres of habitance have been created on
all sides. We shall not enlarge upon this trans-
formation: it is the work of European initiative
and capital; the native have endured it rather
than promoted it.

C. Population.

The population of Algeria, according to the
census of 1916, amounts to 5,311,650 inhabitants,
who are to be divided into the following group:

A. Europeans 658,567
I. French subjects 492,369
French 278,976
Foreigners naturalised according to the law of 1859 148,748
Native Jews naturalised by the decree of October 23th, 1870, and their descendants 64,645

II. Foreigners 166,198
Spaniards 117,475
Italians 35,153
Maltese 6,217
Others 9,333

B. Native Mussulmans 4,477,288
I. French subjects 14,149
II. Foreigners (Moroccans, Tunisians, etc.) 30,639

From this it appears that the native Mussulman population, which in 1850 did not amount to more than 4.1 millions, now forms about 4 of the entire population. It is far from being homogeneous, the different groups being usually distinguished as follows: (1) The Berbers, who are descended from the people who inhabited northern Africa at the time when Islam was planted in those regions; (2) the Arabs, descendants of the conquerors of the 7th century and especially of the Hish intruders of the 11th century, intermixed with the aborigines; (3) the Moors or Hadras, living in the towns, or are descendants from various African populations, which were joined by foreign elements, in the 15th, 16th and 17th centuries by Spanish emigrants (Andalusians), in the 16th and 17th centuries by European renegades; (4) the Kabylites, half-breeds born from the union of Turks and native women; (5) the Turks who remained in the country after 1850; (6) the negroes, who either have been brought into Barbary as slaves, or are the descendants of slaves. This classification, confirmed by usage, does not correspond to the actual state of affairs. All these elements have become intermingled, and now the fusion is so complete, that it is almost impossible to distinguish the separate races. Not even the two most important groups, the Berbers and the Arabs, can be distinguished from one another, neither their language nor their mode of life affording sufficient criteria for such a division. For the Arabized Berbers have renounced their language and their customs, and have even lost memory of their origin, amongst others the Harakut and the Nemouha in the province of Constantine, who call themselves Arabs in spite of their actual descent from the Howatra Berbers, the Leghare Keel, who are descended from the Kelfana, and the Bant Wazin on the Moroccan frontier. Of Arabic tribes, on the other hand, nothing is left but their names, the infiltration of Arabized Berber elements having transformed them completely. This Arabization has taken place all over Algeria, but it has been more general in the province of Oran than anywhere else. To summarize: "the dispersion of the Arab families was accompanied by an equally strong dispersion of the Berber families, and since the 14th century their vicinity has enabled the Arabs either to absorb the Arabs or to transform themselves so far as to resemble them at the present day." As to their way of living, similar habits are found in both groups; education is not especially Arabian, nor is a settled life a distinctive of the Berber; outside the towns one actually finds settled Arabs and nomadic Berbers. In spite, however, of this general fusion, some Berber groups that were expelled into the mountains inaccessible to the invaders, have preserved their language and customs, such as the Kabylis, the Sheriff of the Aures, the Tribes of the Souss region, the Banat Seida of the Tafilalet, the Banat Member of Tlemcen, some tribes of the Bidia Atlas and finally the Mabrides; the descendants of the Arabized Zenatya, who, besides the customs and the dialect of their ancestors, seem to have preserved their physical characteristics, which doubtless stamp them as representatives of one of the most ancient Berber tribes (see maha). A numerical estimate of the various linguistic groups has not yet been made with adequate precision. Sufice it to say that, in 1859, the number of people speaking a Berber dialect was estimated at $50,000. At the present day their number would amount to about one-sixth of the entire population. Groups which have preserved easily noticeable marks of distinction of the Berber race are but rarely found. Everywhere else the Arabs have imposed their institutions and their language on the tribes they converted. Although, in some respects, they were influenced by the aborigines, whose mode of life presented some features very similar to their own (part of the Berbers, for example, according to ancient authors, led a pastoral life, just like the Arabs), the conquerors, in their turn, exerted an undeniable ascendency over the African natives resulting in their assimilation to the Arabs. The common appellation of Arabs for the entire population of Algeria is, in fact, a convincing proof of this final process. On the ground of their way of living the Algerian natives can be grouped into two categories: settled and nomadic tribes. Between the former, distinctions are obvious: the townpeople do not resemble the inhabitants of the Kabylie villages, any more than they do the Egyptians or the Fluids of the Tell. For a number of centuries they have occupied the towns of the littoral and of the Tell: Algiers, Bedia, Medea, Constantine, Bougie, Oran, Nedroma, Constantine. They form a class of traders, artisans, and men of letters, peaceful and indolent citizens, whose numbers have been increased since the French conquest by a profligate of day-labourers, handcraftsmen, and also less commendable individuals. They live in separate families, and, where they come in contact with Europeans, seem inclined to adopt Western habits. The Kabyles, living together in large villages, agglomerations of stone houses affording shelter to the inhabitants and their cattle, and built in rows on the crests rising between the valleys (see KABYLIA). Judging from the number of people who live in these places they would for the greater part deserve to be called towns. In the mountains of the south (the Figuig, the Ksar, the Aitbel Amrut) the settled part of the people is fortified villages (gourbi) built of "piat" or rammed earth, which, at the same time, serve as storehouses for the provisions, as markets and as fortresses (see SAHARA, AMRUT). In the plains of the Tell, the fluid or Husbandman is equally settled; he lives in a "gourbi," a hut constructed of twigs,
crowned withヶ月( a kind of reed) and surrounded, at some distance, by a hedge of thorns or rosebery; a collection of several of these huts arranged in a circle is called a dmar. Elsewhere he erects stone houses or تحش (literally winter camp), of the same size, and shape as the gourbi, surrounded by a fence of thorns. At the present time, and in the south, where the corn is stored. The fellah, however, is not so definitely settled as the townsmen; he likes to live in a tent just as well as in his gourbi, and easily changes his abode. Some spend the winter in the gourbi, and live under a tent in summer; others remove their camps several times a year, in order to utilize pieces of land lying far apart. They generally cultivate triticum turgidum and barley. Thus agriculture implements and methods are still of a rudimentary nature; the results obtained depend first of all upon the abundance or the scarcity of rains. The farther east moves away from the Tell, the less favourable the climatic conditions become to agriculture, which then is substituted by cattle-rearing. In that way the settled, or almost settled life, which predominates in the Tell, passes gradually into the nomadic mode of existence, which predominates on the Plateaux.

It is very difficult to give an exact list of the nomads, as the majority of the African tribes are "more or less nomadic and more or less settled". According to Villiot, the natives usually called Arabs are best divided into two categories: Arabs with a limited range of migration, and Arabs al- Kharâjah (i.e., Arabs of the migration), the latter being the nomads properly so called. Bernard and Lacrosse distinguish the following categories: (1) the nomads with a very small range of migration (from 15 to 30 miles), circulating on the border of the Tell at definite periods in search of fresh pasture grounds for their cattle; (2) the nomads with different winter and summer camps, lying only a short distance from each other; some of these nomads inhabit in the south, others in the north of the Sahara Atlas; (3) the actual nomads, who spend the winter in the Sahara, and, in the spring, leave their migration grounds in the south in quest of pasture and water amongst the tribes of the Tell, which allow them a right of pasture. The Ladhi (Arabic of Laghwi, for example, advance as far as Temis-al-Hadd; the tribes of the Zihan and the Sherkia: Arabs to Chahia ou du Rhumel; Berber nomads to Séiff; other tribes of the southern region of Constantine even push as far as in Calle on the Lifilm. These pastoral migrations are called asal, they are undertaken by sections under the conduct of their sheikhs, according to definite rules and along fixed routes. Formerly they used to give rise to native battle in the towns lying on the border of the Tell and the plateaux. The Turks, who exacted from the nomads the payment of certain duties called on, took care to establish Maghribi tribes in the neighbourhood of those market-places, that they might secure or, if necessary, enforce the payment of this tribute. Wool and dates, in exchange for corn, used to be the principal articles of traffic; to these, at the present day, must be added a certain number of objects manufactured in Europe, which have become indispensable to the nomads.

Their own industry is extensively primitive and mainly practised by the women; it only consists in the making of felis (being bands of wool and camel hair, which, sewn together, form the tent), of woollen clothes, of rugs and of some domestic utensils. Both nomadism and the settled mode of life are not only closely dependent on geographical and climatic conditions; they are also subject to the effects of historical events and of economical changes. The nomads of the French-ruined Africa, compelled certain nomadic tribes to become settled. The French occupation, which guaranteed both safety and relative prosperity, produced either similar or contrary effects. At various places, especially on the border between the Tell and the plateaux, an evident tendency towards the building of تحش and a definite settlement can be observed amongst the natives. In other regions, however, tribes may be found, which at one time had been reduced by misery and insolvency to (hogging together in permanent abodes, but, under the present improved conditions, have renounced their settled life, abandoned the house for the tent, collected fresh herds and returned to pastoral and nomadic habits. This seems to be the case in the country of the Riff.

The social organisation of the natives is still thoroughly patriarchal. The family has retained the basis of society. The father retains authority. The woman, being, in most cases deprived of the guarantees which Muhammadan law affords her, lives under unfavourable conditions. She is married at an early age; in spite of the attempts to prohibit the marriage of girls not having arrived at puberty, and, as a rule, compelled to the heaviest toil, being no more than a servile. Nevertheless her influence remains considerable in consequence of the jealous she excites; adultery is frequent, in spite of the women being watched jealously by their husbands and heavy punishments being inflicted on transgressors. Polygamy, however, is rarely practised, lack of resources preventing the men from keeping more than one wife. According to a statistical estimate of 1891, the number of polygamous households in proportion to the totality of marriages was as one to six (149,000 to 850,000). The Riff, which has almost complete autonomy, can do what it likes with its movable and immovables, may even abandon the tribe it belongs to and join another. These tribes (kabila), into which the families are grouped, comprise the descendants of the apomymous ancestor and families connected with that of the founder by ties of clientage. Tribes which can trace their origin back in a direct line to Arabian or Berber ancestors, without the mixture of foreign elements, are extremely rare; for the greater number have sprung from a conglomeration of various elements affected in the course of centuries. During the Turkish epoch, for example, various tribes were formed by individuals of various origin living round military colonies. An analogous phenomenon has taken place in the neighborhood of the most venerated shrine; there so-called marshali tribes have constituted themselves, the members of which pretend to be the descendants of a saint, whose children they style themselves (Ulema State), claiming, on that account, a kind of religious nobility. Such are, for example, the Ulema State of Shallah. The tribe possesses a domain of its own (urban in the province. Own state: खुल्ता, a real collective and immovable property, of which the possessors are, but the usufructuaries. Below the
French conquest considered the owner of the "oral land," which it could claim and dispose of as it chose; each member of the tribe was entitled to personal enjoyment of the produce of the land. The "emancipation" of 1863 transferred this right of enjoyment into a collective proprietorship by the tribe, a much debated measure, which, according to the intention of its authors, was to prepare a change from collective to individual ownership, and also to facilitate transactions between natives and Europeans. It resulted in the decimation of the tribal territory, and the constitution of native communities, or "deprees," each with an assembly of notables or "lagen" competent to act on behalf of their individual members on questions of property. But the expected results were not realised; collective property continued to exist side by side with personal property; and the necessity of establishing a system of personal title compelled the government to undertake the registration of the natives. To this end a bill was passed in 1853, which has been put into force throughout the civil territory. 3,069,364 natives having, by the end of 1866, been registered under a new name. In Algiers is marked characteristic of Algerian natives. Islam, first introduced by the conquerors of the 7th century, ousted almost entirely from the whole of the Maghrib the Christianity and Judaism of the Berber tribes. In spite of heretical doctrines (Khradrism, Shifsism, Shiifsism), which assailed it from the very beginning, orthodoxy has triumphed. Abolition alone has survived in the Maktib (q.v.). The Malikite rite is the one adhered to by an overwhelming majority of natives, and seems since the eleventh century to have definitely gained the upper hand over the Hanbite rite which until then had prevailed in the Maghrib, but is now practised only by some descendents of the Turks, who reintroduced it into Algiers in the 16th century. Northern Africa, however, has lost, rather than gained, by the change: "The triumph of the Malikite doctrine," writes René Bocca, "has perhaps the worst consequences of the decay of law and science in Spain and in the Maghrib." Maktib law is studied from the Maktib of Khelifa a. Iskak (Sidi Khallil), the principal authority on Muslim law in Algeria. The Khatibe have remained faithful to their Alain. The diffusion of Maktibism over the whole of northern Africa has not, however, prevented the continuation of superstitions customs and festivals observances, doubtless the remains of ancient cults, and beliefs, such as the worship of the sun, of trees, of well-springs and of elevated places. Sorcery and magic art are also in favour with the natives. The temporary adherence of the Berbers to Shiism has left its traces in the doctrine of Mahdism, by which the people understand the expectation of the "master of the hour" (Mulana saheb), who is to appear one day to drive away the Christians. This belief has been stifled since the year 1850 by most of the agitators who have attempted insurrections, and, in spite of their repeated failures, it has never yet been eradicated nor even shaken. The prominent place held by the worship of saints under the form of maraboutism, is a less characteristic feature of Islam in Algeria, where, as elsewhere throughout the Maghrib, it found a field favourable to its development. From the earliest times the populations of these countries have shown a marked tendency to defy human beings and the worship of saints has, as it were, taken precedence of the Islam of the Koran. The Maghribi saints assume the power of marabouts. Be they women, mages or charlatans, sorcerers or mere madmen, once they have succeeded in imposing upon the people by their visions or their conjuring tricks, they become objects of public veneration. The spark of divine favour they possess, the so-called darafa, passes to their descendants, and their tombs (maba, marabout) become a place of pilgrimage by which the family or the tribe of the deceased is a part of public veneration. In the annual festivities, religious lampions (har-date, farate), pilgrimages which by the mola are held to rank with that of Mecca, sacrifices performed according to certain rites, and personal visits or eljara, during which offerings in money or in kind are bestowed upon the keepers of the tomb. Public calamities, drought, or epidemics are also an occasion for pilgrimages, with their inevitable offerings, and further resources are found in the tributes (paddi, bahada) imposed by the Marabouts or the Marabouts, whose influence is very great. Accordingly the Turks strive to win their good graces by a lavish bestowal of marks of respect and presents, and by exempting them from taxation. The influence of the marabouts is mainly local; that of the religious brotherhoods, on the other hand, is exerted over wider regions. Depoint and Coppola state that in Algiers 33 of these brotherhoods exist, numbering 205,139 members, and employing a staff of 57 editors and 6000 agents of various sorts (sahiblu, mabila, adi ete), they possess 349 mosques and levy an annual sum of about 7 millions of francs on their members or Allah. The most flourishing fraternity is that of the Rahimyia, with 156,000 members, of whom 15,000 are women. It is the true national brotherhood of Algeria; its founder was Siddi Mohammed b. Abd al-Rahim al-Kahlini, a pious character who lived in the 17th century, and whose remains, according to legendary tradition, lie in two separate tombs, one situated amongst the Alt Smir (la Tela) in Kabylia, the other in the Hamidiya outside Algiers. The order of the Rahimyia is divided into several branches, and its influence extends over all Algeria, its parent houses being independent and sometimes rival. Such are: Chehardoum de Khammel near Sidi (40,000 members); al-Hamal (42,000); Nofala (13,000); Tolga (16,000); Constantine (20,000); and Akhbar (9000). The brotherhoods next in importance is that of the Tijarnia, whose chief resides at Ain Mahdi. Its 26,000 members are found in the Sahara and southern Oran. Other brotherhoods are the Kellalyia (24,000); the Taliya (22,000), whose head is the shirif of Wazzan in Morocco; the Makhtiyia (sidi el-Makhtiyi), an association rather political than religious of 10,000 members, the Bekakia (9000), fanatics and puritans, who, for a century and a half, have had a finger in all the revolts against the Turks and the French; the Amnetriya (6000) and the Abuna (Bejbatia; 35,000), famous for their devotional exercises and their jugglery; the Hanultyia, dissenters from the Shalihyia, and scattered through the province of Constantine, to the number of 5000; the Zerzakria (2700); the Knessyia or the Shalihyia; the Madanlyia; the Yussufia, followers of the saint
Further, Algeria is divided into civil and military territory. The former comprises the whole of the Tell and the greater part of the plateau. It has been enlarged considerably since 1870 at the expense of the military territory. In that year it covered an area of 1,797,361 hectares populated by 493,000 inhabitants; in 1906 both the area and the number of inhabitants had increased tenfold, (13,7 millions of acres and 4,360,517 inhabitants). Each territory has an administrative organisation of its own. The civil territory is divided into three departments (Algeria, Oran, and Constantine), which are governed on much the same lines as the mother-country. Two kinds of communes, however, must be distinguished in these parts: the so-called "communes de plain exercise", established in regions where European interests predominate, and provided with an elective municipal council; and the "communes mixtes". The latter, to the number of 95, are mainly peopled by natives. Each covers an area of about 146,000 hectares and comprises a population of about 36,000 inhabitants, and is governed by an official, "administrateur", generally called "babès" by the natives, assisted by a municipal council partly elective, and by native assessors, who are called "fâdés" in Arab parts, and presidents in Kabyles. These assessors are appointed by the prefects and are dismissible at will by the governor. They serve as intermediaries between the French authorities and the native population, and receive a salary of one tenth of the total proceeds of the taxes paid by the latter. — The military territory, the extent of which decreases gradually, covers a part of the plateau and of the Sahara. Peopled almost exclusively by natives, it is ruled by the generals of the three military divisions, Algiers, Constantine and Oran, and their subordinates, and is divided into "fâdés" under superior officers, and into "communes" and "postes", which are under subalterns belonging to the staff of the "affaires indigènes", — a mere continuation of the Harems. Arabes system with a few alterations in detail. Immediate authority is exercised by native chiefs, "hâsîa-ghâsîa", "âghâ, âladdîn", or "âbdîs", under the control of the officers. There are five "communes mixtes militaires", and native communes. The population of the military territory amounts to 225,842. Its extent has been diminished not only by the gradual increase of the civil territory, but also by the creation, in 1902, of the "Territorios du Sud" (Twett, Guevara etc.) with separate budget and organisation.

Legal status of the natives. The Muslims are subjects but not citizens of France. The "status-citadin" of July 14th, 1895 declares them Frenchmen, with this restriction that they are to continue under Muslim law "so far as concerns personal status, the family, succession, and real estate in so far as it be not held under a French title to proprietorship". The natives, however, have a right to discriminate their status in matters of justice, although the case be one for Muslim law. They are admitted to military service and may become officers (with the native title only, unless they come out of a special school); they are competent to fill certain civil posts, and may even become French citizens on request, but in that case they must disclaim their personal status and submit themselves to French law; but inasmuch as this, by the majority of the natives is
regarded as a form of apotropia, it is not of frequent occurrence. The natives who are not naturalised are not completely deprived of political rights: they are excluded, for example, from political elections, but have a vote in municipal elections, although the voters are very limited in number by the system, and the deputies who represent them in the various assemblies, financial delegations, and general and municipal councils, are sometimes appointed by the government, and sometimes chosen by their fellow-believers but never by manhood suffrage. Each municipal council, under the system, numbers from two to six native councillors amongst its members, each general council six Muslim assessors, and the financial delegations six Arab and Kabyle members.

In matters of finance the natives are subject to a régime different from that applied to Europeans. They are liable to various taxes, making up together the "impôts arabes." Two of these taxes are of a general character and are collected all over Algeria on an almost uniform system. These are: the *tabaqel, nominally one tenth of the produce of the soil; and the *mabess, on cattle and beasts of burden. Others, local in character, are: the *houk, originally paid to the beylik for the use of the aráq land, and still collected as a ground-tax in the province of Constantine; the vulgar "Arabic" taxes, or taxes as that of Gourret Kabylie, paid in 75 of its communes, which is a sort of poll-tax and a substitute for all other taxes; the fireplace *laoume, imposed on every fireplace in Lesser Kabylie; and the palm trees *laoume, levied in places where this tree is cultivated by the natives, for example at Bi Saïda and in the oases of southern Constantine. These so-called "impôts arabes" are identical with those collected during the Turkish epoch, except that they have lost their religious character and are paid into the Treasury.

The Legal system offers some particular features. Petal justice is exclusively the province of the French courts ("Cours d'assises," "tribunals correctionnels," "justice de paix." in the civil territory; "conseils de guerre" in military districts). Violations of the law by natives are dealt with by special courts with a view to securing efficient, speedy, and impartial punishment by the governmental authorities of the intelligence of the natives. Such are, for minor offences, "dépêches" of the so-called "tribunals répressifs," founded by decree of March 29th 1902 and reorganised by decree of August 19th 1905. The sessions are held in the chief-town of each "justice de paix," and are presided over by the "juge de paix" assisted by two judges, one French and the other native, drawn respectively from the functions and notables. Criminal cases are dealt with by the "tribunals répressifs," founded by the decree of December 30th 1902. These hold their sittings in the towns appointed to be seats of the "arrondissements judiciaires," and consist of three magistrates and four sworn assessors (two French and two native). Finally, both civil and military governors have a rather wide disciplinary power which enables them to prosecute offences peculiar to the natives who are subject as such to particular codes. They are, for example, to provide themselves with a licence for travelling in the interior of the country, for possessing weapons, for starting on a pilgrimage to Mecca, for organising religious manifestations etc. Seditious speeches against France, neglect in the execution of the orders regarding the rights of property and of personal status, the refusal to do forced labour, when ordered by the government, are also dealt with on warrant by the "administrateurs." This much-questioned system is justified by the necessity of immediately suppressing, by means of light penalties, such offences as are likely to disturb public order. The "tribunals de l'air" or tribunal of the skies, are reserved for civil suits, but their powers have been gradually restricted to the gain of the European tribunals. There is a Haudée south at Algiers, and, in various places in the three "départements," the *mabess, the Moslims have their *ahdlitine méridienne.

Public education for Europeans is subject to the same conditions as in France. Higher education is given in the "Écoles supérieures" of Law, Medicine, Science and Letters at Algiers, which are open to both Muslims and Europeans. The teachers at these schools are largely concerned with native questions. The School of Medicine tries to better the natives' lot by training a staff of "auxiliaires médicaux" able to give immediate aid to their fellow-believers, and to spread amongst them elementary notions of hygiene. Muslim law and native customs are taught at the School of Law; lectures on Arabic language, Herber dialects, on Muslim sociology, and on the history and geography of northern Africa are given at the "École des Lettres." Public chairs of Arabic, in connection with this school, exist at Oran and at Constantine. Secondary education is given in "lycées" and colleges, which are open to natives. Muslim primary education long neglected, has, since 1881, received close attention from the government. A decree of November 9th 1889 laid down the principle that primary education was to be given in public schools open to children of all nationalities and in special schools reserved for the Muslims. These special schools have to supply instructions adapted to the requirements of native life, under special programmes, which prescribe instruction in agriculture and in handicrafts, together with the study of the French language. The principle of compulsory attendance at school applies only to boys, and in districts where densities of population are high. At the present day the native schools, which are particularly numerous in Kabylie, are attended by about 30,000 children. Muslim education properly so-called is given in the Koran schools (madras) and in classes of theology held in the principal mosques by *mudarris. And the madras were re-organised in 1895, so as to adapt them for preparing for official service, both legal and ecclesiastical, persons possessing, in addition to a knowledge of Islamic law and theology, some acquaintance with French law, history, geography, literature and science. Pupils coming from these schools may play a large part in bringing about a better understanding between natives and Europeans.

Whether this be possible is a question which, since 1830, has often been put, discussed, and answered, sometimes in the affirmative and sometimes in the negative. The dreams entertained by early enthusiasts of fusing natives and Europeans into one single nation by the mere force of institutions and systems, have long since been dispelled, and their failure has lent force to the contrary belief that Islam opposes an insurmountable barrier to all attempts at mutual unity, and that the relations
between Europeans and natives are destined to remain for ever those of conquerors and conquereds. The truth seems to lie half-way between these two extremes. Even if the fusion of the two populations be but an illusion, the policy of subjugation and of isolating the natives is quite out of date. A policy of association based on community of material interests is inevitable. That Muslims are not impervious to such a policy has been evidenced by the improvement in agricultural methods, by the institution and development of friendly activities, and by the favourable reception given to the founding of native dispensaries and hospitals. And besides, although we may have to give up all hope of radically transforming the native turn of mind, it is far from visionary to aim at developing Muslim civilization within its own limits. To effect this will indeed be a work of patience, and one requiring much lapse of time for its result to become apparent.

ALGÉRIE — ALHAGI. 277

**ALGÉRIAS (or ALGÉRAS),** Arabic: al-Jazirat al-Khidrīt, "the green island" (named after the Isla Verde lying in front of it), sometimes called Djazair Umm Hakim, the first Spanish town taken by Tarfis in Ramação 91 (July 710). It lies on the bay of Algiers or of Giblartar, and, together with the latter place, served the Arabs as a harbour and dockyard. The first governors, and after them the Umayyads, the petty kings, the Almoravides, the Almohads and the Nasrids all used to cross to the African coast from Algiers until it was captured by Alfonso X of Castile in 1242, after his victory on the Salado in 1340. In 1369 it was retaken and temporarily occupied by the King of Granada, who had its fortifications razed to the ground. — From 428 till 440 (1036-1048) it was in the possession of the Hamarids, petty magistrates of Mouhammad, son of the Caliph Kaisim, and of Mouhammad's son Kaisim 440-450 (1048-1058), and then fell to the *Abdallahs of Seville.* — It was in Algiers that between January 1st and April 7th 1906, the international conference was held which, at the request of Morocco, and in the name of the Powers, guaranteed the political and economical independence of that country, and resolved upon the establishment of a Moroccan national bank and the formation of a police force under the command of French and Spanish officers.

**ALGIERS.** [See ALGER.]

**ALGOL** is the ancient name of the star β in that part of the constellation of Perseus which is called "head of Medusa," known among us for its variations in intensity and, consequently, in apparent size. The name "head of Medusa" was translated by the Arabs into Ra's al-qhāil (head of the female demon), the latter part of the name being afterwards attributed to the star β, in the form "Algol." Cf. Idele, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen,* p. 88.

(E. MAHLER.)

**ALGOMAIZA** is the ancient name of the first size in the constellation of the lesser Dog. The name is derived from the Arabic name al-Sharā'īfī, al-Sharīfī, the "Idea-eyed" (Sirius); on its origin, see Idele, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen,* p. 252.

(E. MAHLER.)

**ALGORITHM** is the old name of the process of reckoning with Arabic numerals. In medieval treatises the word is spelled in various ways; e.g. Algoritismus, Algoitismus, Algoitrusmus, etc., and the formation of the oldest known writer on Arabic arithmetic: Muhammad (Mas 'l-Khāristān. His book was translated into Latin in the 12th century by an unknown author, and the only known copy at Cambridge has been edited by B. Boncompagni (Trattati d'aritmetica L.; Rome 1857). It opens with the words: " Dixit Algorithmi," the word is here correctly given in the form of an Arabic "nīšāb, i.e. as a proper name: it is strange that it should afterwards have come to mean the new process of reckoning with Arabic figures, as usually attributed by the Greco-Roman abacan. Of the numerous attempts to explain the word it is enough to mention a derivation from a philosopher Algan, and a supposed origin from the Arabic article al combined with the Greek *algorithm: hence the form "Algorithmus." The right explanation was given by M. Reusand in his *Monumenta arabica* p. 303-304, in the year 1849, before the Cambridge manuscript had been edited, but the false acceptation "algorithm" and "Algorismus" (or "Algorism") is still used in the sense of "system of numeration, arithmetic." (H. SUTTER.)

**ALGUAÇIL.** See ALGUASCIL.

**ALHAGI** (from Arabic al-Hājīy), of the species *leguminosae,* stiff, strongly ramified shrubs with small single leaves and red flowers. The different kinds which are found at the steppes of Near Asia, in Egypt, Arabia, Persia, and India are doubtless but slight variations of the Arabi Maurorum T. or the Arabi al-Hājīy, also called Hadysarum alhagi L. or Manna hebraica Don. (salafina). The last name arose from its secreting a sugary substance, which appears at the dawn on the leaves and branches, and thickens into tiny reddish gums. Common in Persia and Bokhara, this phenomenon seems unknown in Arabia, Egypt and India, and is ignored by the ancient Arabic phytologists who only describe it as a shrub (or tree) with a great profusion of thorns and leaves. It seems to have been much in use for fencing off enclosures, as indeed the etymology of the word *hājī* seems to indicate (root *hājī* "encircle") thus perhaps in Arab Spain, see Ibn al-Awam: Alkīb al-falūba, transl. Clement-Mallet t. 458 and 380. Arab medieval natural science identified the *hājī* of Arabia with the *hājī* of Syria and Egypt, and realized that, in Syria, Iraq, Khurasan and Transoxania, the plant was covered with the nissam *tan-eangūle,* believed to be a dew fallen from heaven. Both the juice of the *hājī* shrub and its sugary product were regarded as medicines, the latter being held especially beneficial against acute fever, cough and indigestion.

Alhambra is the ancient name of the star α of the first line in the constellation Astra, and known by the same name Capella. The original form of the word was Alhaco, a transcription of the Arabic el-Aḥā. For the probable origin and meaning of this name, see Hecker, Unter, über den Umgang u. d. Bedeutung der Sternnamen p. 921; Lépin el-Ahā, x. v.

(3. E. Meiller)

Alhambra (from Arabic al-Ḥamra and al-Ḥamra, "the red bath") is the name of various places and of a few streams in Spain, the best known being: (1) Alhama, south-west of Granada at the northern foot of the Sierra de Alhamih and on the Rio Alhamih; in 1482 it was surprised and taken by Ferdinand, the Catholic of Aragon, the prelude to the conquest of Granada 1492, of the well-known popular ballad; on December 23rd 1884 it was almost completely destroyed by an earthquake. (2) Alhama on the upper Jalón, south-west of Saragossa, the ancient Aquae Bilbilisanae. (3) Alhama between Murcia and Lorca.

(C. F. Seybold)

Alhambra, the fortress of Granada, situated on the plateau formed by a rock on which the Darro, just before joining the Genil, describes a curve open on the south-east. Its name (Arab. al-Ḥamra, i.e. "the red one") is due to the reddish colour of the castle walls constructed mainly of "tapia," a kind of concrete made of clay, lime and gravel.

Our knowledge of the history of this Moorish acropolis is, unfortunately, extremely scanty. At what epochs, by whom and at what time the buildings were first erected on the fortress rock of Granada is a point upon which tradition is silent. The earliest mention of the name occurs in connection with an incident of war: in the year 777 (890), during the reign of the Umayyad 'Abd Allah, Sawār, with his Arabs of the Kair tribe was compelled to retire into the Alhambra by rebellious Spanish renegades and their escape was due to a bold rally with a successful stratagem. A similar occurrence is said to have taken place about 30 years before; but of these events we have no further record. — In 1565 (1611), when Granada was under the Almohades, a bold Almoravid leader, Ibrahim b. Hamaysh, took advantage of the absence of Abu Sa'id, the son of the Almohade 'Abd al-Mu'min, to enter the town by treason. The Almohade garrison retired into the Alhambra, and had to undergo a long siege by the Almoravides before being relieved. — With the advent of the Nasrides and reconstruction of their capital at Granada, the Alhambra became less conspicuous, and the name of the castle was formerly erroneously derived from Rana i-l'Ahmar. They established an independent emirate with Granada as its capital, and it was the founder of this rule Muhammed I, b. al-Armar, who built the world-renowned royal castle on the plateau, the outer wall of which, together with the citadel, may have already existed. There he and his successors resided, and of which Abu 'Abd Allah Muhammed el. III. (701—708 = 1303—1309), Abu I-Halilah Yusuf I (735—755 = 1335—1354), and Muhammad V. (755—760 = 1354—1359) deserve the chief credit for extending and embellishing the palace as well as the other buildings. Under the Nasrid rule the citadel frequently played a part in dynastic struggles. In the year 759 (1359), Ismail II. was besieged in the Alhambra by his relative 'Abd 'Abd Allah Muhammad, who captured it, put him to death, and ascended the throne as Muhammad VI. The Alhambra was indeed the scene of the rise, decline, and fall of the dynasty. In 1492, on the morning of January 2nd, Cardinal Don Pedro de Mezmared planted the silver cross on the "watch-tower" (Toure de la Fe) of the Alhambra, the highest of its towers, and thereby marked the close of the last Muslim dominion in Spain. The deposed Moorish king 'Abd 'Abd Allah (Boabdil) Muhammad XI went into exile, casting from the hill of Padul a last look at the castle of his ancestors, from a spot still called "the last sigh of the Moor." Of the later history of the Alhambra it is enough to record that Charles V changed the Islem mosque, which adjoined the Court of Myrtles, into a chapel, and further disfigured the old royal abode by demolishing the southern wing which had gradually contained the chief porch, He did even worse, he replaced it by a building in the Renaissance style, with a showy façade, in burnish contrast with the simple exterior of the old palace. This western desecration, however, was not complete, nor were the later efforts at restoring other parts of the Moorish castle ever carried out. Another act of pure vandalism however succeeded more completely: the Great Mosque of Muhammad III was pulled down and replaced by the church of Santa Maria, the work of Juan de Vega, in 1581.

Our knowledge as to the history of the separate buildings of the Alhambra is even more scanty. Inscriptions containing names and dates exist, but most refer to the decoration, not the erection of the buildings. In 749 (1347-1348) Yusuf I pierced the outer wall, which measures 3 miles in circumference and is surmounted by many towers, by an entrance known as the "Gate of the Law," a name perhaps indicating that it was the place where, according to old oriental custom, justice was administered by the kings. Further on, in the "Place of the Seven Ladies," stands a second smaller gate, now called Puerta del Vino, inscribed with the name of Muhammad V. in seven lines. From this gate one gets a view of the Alhambra from the left, and of the Palace on the right. The former, i.e. the citadel (al-Kasaba), occupies the western extreme of the plateau, and is probably the oldest of its extant buildings. The latter consists of many structures, all of them, excepting the building erected by Charles V, being grouped round two large courts: (a) the Court of the Pool, or "Patio de la Alberca," also called Court of Myrtles, "de los Arrayanes," near which, on the northern and shorter side of the court, stands the circular tower, on the west, the inner moat still called "Masquefa," and on the east, the baths; (b) the "Court of the Lions," and adjoining it the "Hall of the two Sisters," the "Hall of the Almohades" (q.v.), the baths of the kings of Granada (now completely destroyed), the "Hall of the Tribunal," etc. The inscriptions show that the former group of buildings were decorated by Yusuf I, and later by Muhammad V. The site of the church of Santa Maria,
**Fig. 1. Alhambra Plan.**

(According to Goupy and Juvencé's engraving.)

- **Sala de los embajadores** = The ambassadors' hall.
- **Sala de la fezca** = Hall of the blessing (fezca).
- **Sala de las dos hermanas** = Hall of the two sisters.
- **Sala de los Abencerrajes** = Hall of the Abencerrajes.
- **Sala de los dos sultans** = Hall of the two sultans.
- **Patio de la alhóndiga** = Court of the alhóndiga.
- **Patio de los leones** = The lions' court.
- **Patio de la mezquita** = Court of the mezquita.
- **Patio de las naranjas** = The oranges' court.
- **Batán** = The baths.
- **Jardín de Sánchez** = The garden of Sánchez.
- **Cortijo de la reina** = The queen's dressing room.
- **Palacio de Carlos Quinto** = Palace of Charles the Fifth.

Fig. 3. Alhambra. Capital and ornaments.
(According to Udal, "Mannenbühler in Spanish and Portuguese.")
south of the Palace, was formerly the site of the "Great Mosque." According to Ibn al-Khattab, التَّمْلَكُ بِالْأَقْصَى (Cairo 1319, i. 393) and البَيْتُ الْأَلْبَاسَةَ, apud Caesari, ibid. 1193 al-makrī, H. 275, it was erected by Muhammad III towards the close of his reign. In order to adorn it to the most lavish manner he expended on it the proceeds of the qiyas, or poll-tax paid by his non-Muslim subjects, and he also built and endowed baths for its benefit (سَكَّبَهُمْ), which according to Ibn al-Khattab lay opposite it.

Built in the 13th and 14th centuries, the Alhambra is a specimen of the transition from the culminating point of Andalucian art in Asia Minor to the style of the majority of the monuments which are now gradually being discovered in Persia. Its originality is best realised by comparing it with the many contemporary buildings in Cairo, as the stupendous Mosque of Sultan Hasan built between 1356-1359. No more striking contrast can be imagined. Beside the enormous shrine of Allah, the Alhambra appears as a lofty, highly decorated structure of such perishable material as to make us wonder how it can have survived to the present day. Its value for the history of Art is incalculable. Whereas the Mosque of Hasan is the principal specimen of a type of which examples are numerous, the Alhambra is unique. No other example of an Islamic palace of so early a date and in such relatively good condition has yet been found, if we leave out of account the Umayyad buildings in the desert east of Meah and a few ruins such as the Abbásid remains at Bagdad and Bagrān. These, like the scanty remains of the Fatimid palace in Cairo, are constructed on a very solid plan, whereas the Alhambra, on the other hand, with its walls of concrete (tarpia), and its arches, cupolas, entablatures, and roofs constructed of boards and mudplasters, shows an entirely different technique, carried out with a consistent wealth of detail, but without solidity. Its origin, therefore, must certainly be sought in Spain or in northern Africa; but, as is the case also with whole groups of ornament which spring from Asia, it has retained a temporary predominance throughout the whole of Europe, is more probably to be sought in the vanished buildings of Mesopotamia constructed from equally fragile material.

The Alhambra is usually described as merely a building, but it would be more correct to call it a villa in the midst of extensive gardens and parks. The whole extent of the grounds, from the point where the palace of Charles V now intrudes upon the original plan of the building, to the Alhambra on the west, as well as the whole eastern plateau within the castle walls, where the monastery of St. Francis now begins, must be imagined as a "paradise" of plants, fountains and animals. We then understand why the remote towers on the walls of the northern slope are decorated inside with no less splendour than the Alhambra itself; joined to the palace by the "paradise" they constitute an artistic whole. A like combination of nature and art is afforded in the Generalife which lies on the other side of a ravine, opposite the Alhambra.

The buildings of the Alhambra proper are grouped round two courts (see the plan): the Court of Myrtles (or "Patio de las alcóberas") running lengthwise from the southern entrance to the massive tower of Comares on the northern end, which encloses the Sala de los embajadores; (35 ft. square), and the famous "Court of the Lions" (Sp. 2), at right angles to the "Court of Myrtles," with an entrance in its south-east corner, and terminating in the so-called Tribunal, consisting of three alcoves, separated by narrow cells; on its tranverse axis it leads into two halls, the Sala de los dos hermanas, (25 ft. square) on the north, and the Sala de los Abencerrajes, (20 ft. square) on the south. These two courts serve as a transition from the interktor to the landscape outside, the Court of Myrtles, by its tank and fountains surrounded by myrtles on the longitudinal axis, and the Court of Lions, by its narrow water-courses which flow into the centre of the two Halls and there form a fountain, as also in the restitutions of the two shorter sides. The water meets in the court under the fountain of the Lions. The fountain itself was once surrounded with orange-trees.

The conventional names of the courts do not throw any light upon their original purpose, except, perhaps, the "Hall of the Ambassador," at the end of the Court of Myrtles, for it is probable that this outer court was used for public receptions, as the mosque adjoined it immediately on its west side. The inner court on the other hand, with its splendid fountain was doubtless, destined for domestic purposes. This arrangement reminds one of the ancient house as seen at Pompeii; there we find the atrium, destined for outside intercourse, and, generally lying behind it and separated from it by the tablinum, the so-called peristylo, i.e., the court with the family apartments and the garden. The Alhambra was on this assumption, a typical structure, and we have no cause to regret the loss of the remaining buildings and courts, and that of the mosque pulled down by Charles V. Unfortunately no other specimen of the same type as the Alhambra, has as yet been found. The study of Islamic art has to replace the complete loss of all the numerous palaces and villas, which enaptured the poets. It is for philologists to collect the scattered notices about them. We can only deal with the monuments left to us. The castles of the Umayyads do not resemble the Alhambra, and of the Abbásid buildings nothing but outer walls or façades have as yet been found. There exists indeed a small bath house excavated in Sidi Bou-Madiane near Tiémen (see Marqués, Les monuments arabes de Tiémen, p. 267), which does contain a longitudinal court similar to the Patio de las alcóberas, but without a hall at its end, and from the court a staircase leads to the adjoining bath on a slightly lower level. If with this we compare the bath house of Ambra, where a vaulted hall with three aisles takes the place of the court, it becomes evident how close the relationship is between the Alhambra and the building at Tiémén, which dates from the middle of the 12th century. In the Alhambra too the bath lies at a lower
level, in the angle between the Court of Myrtles and the Court of Lions.

That, at one time, courts in the style of the Patio de los Leones existed everywhere in the Islamic countries on the Adriatic sea, and especially in Sicily, can be proved indirectly, because the well-known courts in the style of the Comunet in Rome with their exotic and fairy-like ornament can only be accounted for as imitations of those Moorish palace courts. The many colonnades surrounding the cloisters of the monasteries of S. Giovanni in Laterano and of S. Paolo are akin to the famous cloisters of Monreale, whose scheme of ornament is clearly related to that of the Alhambra. Again in the "Court of the Lions" we notice, on its longitudinal axis recedes with three or four columns in the corners and two in the middle; and the fountain. In the center, in the Court of Monreale the same recedes occurs, but in one corner only; the number of arches is the same, nor is the fountain lacking. Another point of resemblance between the "Court of the Lions" and the cloisters of the Italian monasteries is the bold rhythm of the supports. In the Alhambra single columns alternate, apparently at hap-hazard, with pairs or with groups of three or four. Such groups occur likewise at Monreale and, alternately, with pillars, in Rome. The shafts of the Alhambra columns are smooth but for the series of rings above and below; but the fine inlaid work in stone on the walls, which is also found in Sicily, and throughout the East, proves beyond all doubt that the "technique" of the column, fashioned in the style of the Comunet was borrowed from Islam.

The capitals of the Alhambra (Fig. 3) have a circular base, decorated with an undulating ornament, above which rises a square superstructure with a profusion of arabesques. Analogous forms are frequent in northern Africa; in the East, however, not a single one has yet been found. Nevertheless, this design must also have been imported from there; the bell-shaped capitals of the Tulun Mosque at Cairo are an indication of the oriental origin of this design. For the rest, the Alhambra decorations differ from the Persian decorations of the Tulun Mosque, which is about 500 years older, in that they were cast in moulds and were put together so as to form a continuous surface, whereas the Tulun Mosque exhibits bands of decorative work fashioned with a free hand. A comparison with the wood-carvings of the Minbar (the pulpit) of Kairouan, which are of nearly the same period as the Tulun Mosque, and the fact that designs on flat surfaces based on our fundamental element were already in use in the ancient East, suggest the conclusion that the designer of the decorations of the Alhambra did not strike out any new path of his own. They are a combination of the usual polygonal ornament, which predominates on the lower parts of the walls, the arabesque which prevails on the upper, and lead up to the stalactites, and, finally, inscriptional, employed for decorative purposes, those in the Alhambra being of special interest, as they are often represented as addressing the visitor in their function of ornament (cf. Schack, "Pastic und Kunst der Araber im Spanien und Italien," 2d edition, ii. 340-350). The niches, for example, in which pitchers are placed, praise themselves in the following words:

My diadem and my robe are matchless in splendour;
The stars of heaven gaze down to me full of longing . . . .

or:
The artist's hand has embroidered me like a robe of silk
And has adorned my diadem with glittering jewels . . . .
The Hall of the Sisters sings:
I am a garden full of beauty, clad with every ornament,
Recognise what I am, while you fast your eyes upon my charms! . . . .
The stars would gladly descend from their zones of light,
And wish they lived in this hall instead of in heaven;
Fain would they join themselves to the company of thy slaves, Lord,
And, full of reverence, do thee service in both halls.

The Tower of the Captives praises itself in a similar way:

Nothing can match this work etc . . . .

And round the edge of the famous fountain of the lions one reads:

Incomparable is this basin! Allah, the exalted, is pleased . . . .

That it should surpass everything in the world . . . .

It is worthy of note that this kind of inscription, in the Alhambra, of rare occurrence as compared with the usual historical inscriptions and verses from the Koran. It would be a matter of interest to the historian of art if the origin of this class of inscription were exactly determined.

The Alhambra exhibits two monuments of art, which, even amongst the surrounding profusion of decoration, are particularly striking: the Fountain of the Lions and the three ceiling-pieces of the so-called "Hall of Justice". In the centre of one of the two courts twelve lions are standing in a circle, each ejecting water through a tube in its mouth; they are designed in somewhat the same style as the animals' heads on the Persian vessels amongst the treasure discovered at Nagh-Senti Miskio. Such fountain pieces are often mentioned in literature; they originated in ancient oriental art, and have also passed into Christian art. The ceiling-pieces of the Hall of Justice are of interest not only in connection with the Gothic art of Spain; they represent scenes from tales of chivalry and hunting episodes, and also two kings seated in a row on a long bench. One feels tempted to connect the former with the hunting and harem scenes of Kusair Tamerlane and the kings with the enthroned figure on the front-wall of this castle of the desert. Their explanation will need to be based upon an examination of Persian miniature painting.

Bibliography: Girault de Prangey, "Essai sur l'Architecture des Arabes et des Maures" (1841); M. J. Goury and Owen Jones, "Plans, elevations, sections and details of the Alhambra" (1838); Calvert, "Moorish remains in Spain; The Alhambra" (1897); also shorter monographs such as Bormann, "Die Alhambra in Granada" (Die
was born in 1448 (1541–1542), or in 1449, at Gallipoli, and had the rare good fortune, when a boy of nineteen years old, to hear Sürlü, the greatest scholar in the Persian language and literature that the Othomans ever produced. No other teacher of Arabic was known except Muhfiz Sin-Din, the master of Arabic versification (who must not be confounded with another Arabist of the same name who lived a century earlier). His career was made, when, in 1556 (1557–1558), he succeeded in presenting his romantic poem Mîhene ed-bâyi (Doxai, Citt. ed. ar. ed. and. Lugd.-Batavas ii. 178) to the crown prince Selim. He obtained a post under the master of the royal household of this prince, called Lala Mustafa, a countryman of his, and in the employment of this favourite he was to witness events of the greatest importance. During the fierce quarrels which broke out between the Sultan, Ali, in his capacity as private secretary, and Selim. After the death of Selim the Great, when Selim had come to power, Ali retained his privileged position. He must have been during this period that he made the acquaintance of the great Nishân-i, from whom he profited himself upon having received so much information concerning important events. In 1567 he went to Egypt as Müşafet's divân secretary, but was soon obliged to return with his master, who, owing to a disgraceful slander, had fallen into disgrace. But in 1570 Mustafa was appointed commander-in-chief of the land forces and entrusted with the conquest of Cyprus (1570–1571), and again Ali acted as his private secretary, in which capacity he had the satisfaction of sharing in the achievement of the supreme power of the Othomans. After the triumphant entrance into the capital Ali spent several years in west Roumelia. During this period (1571–1575) he wrote the Seven Tales (Hetê destar) Library of the Mosque Laleli at Constantinople, no. 2114; printed at Constantinople in the Kâtübehâne-i Lâdim, in which the choice of Selim's reign and the first acts of his successors are described in a pompous style. A number of minor works were also written in this same period. In 1582 (1574–1575) he published his Turkish Divan, which consists mainly of ḥavdât and ghazals (he also wrote a Persian divan, cp. Filâl, Dîr. wez. ûrû. u. türk. Hst. der K. K. Heß, in. 851). As a poet, however, he ranks with second-rate celebrities; he seldom succeeded in immuring his poetry with the raptures of a great passion.

Early in the year 1578 he visited Egypt and the sacred places in the Hijaz, from whence he was called back by his master Mustafâ Pasâ, who, having been appointed commander-in-chief in the war against Persia, wished Ali to act as his special representative. The numerous reports and accounts of Müşafet’s victories, which reached Constantinople from the wild Caucasian regions, proceeded from his pen. He used the opportunity of his sojourn in those parts to collect reliable information concerning the legendary lore and the customs of the mountain tribes, especially of the inhabitants of Gilan, Shirwan and Kurdistan. When, however, the Turkish successes came to a standstill, Müşafet was dismissed and his secretary returned to Constantinople. The unexpected death of the grief-worn Müşafet plunged his protegé into the great-
est. difficulties, which compelled him to redouble his literary activity. He dedicated to his sovereign a concise narrative of the creation and the anomalies of the prophets under the title of "Mirror of the worlds" (Flügel, ibid. iii. 94; Pertech, "Vors. d. türkh. Hist." xx. 36 and 368). A year after his return from the Persian war he completed the Book of Victory, containing an account of this campaign (see especially the map in Ricci, Cat. of the Turk. Mss. in the Brit. Mus. p. 61). He could already claim the authorship of 17 works, when, much as he had gained the good-will of Sultan 25 years before, he succeeded in ingratiating himself with the crown-prince Mehemmed, who had then arrived at manhood, by his description of Mehemmed's circumcision festival, one of the most remarkable in Ottoman history (Nüm. 17 of the Nüüm. Library in Constantinople, no. 4318).

Arı became more and more engrossed in history. In 1905 (1587) or shortly afterwards he collected the most interesting material concerning several hundred masters of calligraphy and the art of book-binding (both important branches of Industrial art in the East) under the title of Talieh of the writers (Flügel, ibid. ii. 356). His Selection of Histories (ibid. ii. 92), a Turkish translation of an admired work of the late Arabic epoch, seems to belong to this same period. Even though it worth while to cultivate the mystical and pantheistic literature which flourished exuberantly in Persia: in his Ornament of men (cf. Rieu, ibid. p. 19 and Pertech, Die Türk. Hist. ... zu Gotha p. 73) he gave an accurate account of the grades of saints and of the power of their works (999-1590). About that time he also arranged a collection of poems both of a general and of a personal tenor, entitled Expressions of truth, which are of great interest for the knowledge of his character (Rieu, ibid. p. 261).

Finally he attained to a high post in the administration of the public revenue, and, shortly afterwards, was appointed chief secretary of the Janissaries. No wonder that at this time, when he had the disposal of the necessary means, Arı undertook the onerous task of giving a general survey of historical events down to his own time. Sultan Mehemmed, immediately after he had ascended the throne, allowed him a considerable salary. But he wanted to write the work in Cairo, at that period the greatest book-market of the Muhammadan world, The Sultan made no objection, and, but for the intrigues of jealous visiers, he would have obtained the post of director of finance in Egypt. From 1902 to 1907 (1593-1599) he was engaged in writing his mature work, his Source of History (1577-1585) in four parts, which, in conjunction with Manuscriptim Badji, is the most important General History which was ever produced by the Ottomans. It was printed at Constantinople in five volumes, though without the final part of the book, which treats of the 150 last years of Ottoman history. Although frequent allusion is made to European nations, it beyer occurs to the faithful Moslem to state any details concerning them. In the first section he expatiates upon the old myths of the prophets, in the second part the personality of Mehemmed and the first glorious achievements of the new religion come into prominence. The author is so convinced of the importance of his race for the extension of Islam, that he gives the title of "Turkish-Tataric" to the third section which contains the history of the caliphs and of the Muhammadan feudal princes. The fourth part, comprising the Ottoman history, represents this epoch as the crowning achievement of the national history. A detailed gazeteer is added to the whole of the work. Arı's compilation of references concerning pre-Islamic history is not more reliable than that of other Muhammadan works of history. The value of his book is to be found in the two last sections. It is a curious fact, that, amongst the 1500 predecessors, whom he quotes as his authorities, not a single one, as far as we know, has ever touched upon the subject of Ottoman History. The 16th century especially has received thorough treatment at Arı's hands. His love of truth in discussing the acts of his sovereign and his tolerance when writing about heterodox people, are specially pleasing features of his work. The style of the first volumes is so much overburdened, with poetical ballast, that one is reminded of Waghš, but towards the end he descends to an unattractive mode of writing. After the completion of this work, yielding to the urgent requests of his friends, he wrote a concise history of the Islamic realms under the title of Decay and formation of states, which has become one of the most widely read books and is to be found in all libraries of any importance. Not long after his appointment to the post of Pasha of Edirne (a reward for his great literary achievements), he closed his literary career with the publication of his interesting little work Haikat e-Bahsi min ar-Ra'i al-fikrī (Library Esad Efendi at Constantinople, no. 2457; Turk. Cat. of the Khedive Library at Cairo, p. 197).

He died in the same year 1908 (1599-1600).

Arı is one of the most attractive personalities of the Turkish bureaucracy. In an epoch, in which intrigue and violence were paramount, he shone forth as a model of rectitude and integrity. No wonder that his honest and steady character did not appeal to the iron-handed men of that perilous period, and that they did not require his services. The Grand-Vizier Sinan Paša, one of the most striking personalities of the warlike Ottoman world, looked down upon him with especial contempt. But, on the other hand, hardly a single author can be found who was not a personal friend of Arı's.

The number of his works amounts to more than thirty, according to a statement which was often controverted by Hammer without cause. The fullest account of his life and writings is given by Hammer, Gesch. d. osman. Reiches iv. 308 and 651 et seq., Gesch. d. osman. Dict. kur. Ill. 115 et seq., and by Mehemmed Tahir b. Rifat, Mi'arrifat al-Muhammedan sistem, (Library Esad Efendi at Constantinople, no. 2457; Cat. of the Khedive Library at Cairo, p. 197).

Writings of inferior authors are often ascribed to Arı. (K. Süßeheim.)

Arı (Arı), adj. "high", often used as a personal noun. Arı is one of the surnames of Allah.

Arı b. Arı, Allah b. Arı-ı Arı was the ancestor of the Abdıhsites. According to Muhammadan tradition, Arı was born in the year 46 (661), the very same night, in which the caliph "All was assassinated; but there are also other statements concerning the year of his birth. His
mother was called Zar'a bint Muharrj. His grandfather 'Abbas was the uncle of the Prophet, and on account of his high birth and his personal gifts 'Ali attained to great distinction. He was looked upon as the handsomest and most pious Khair of the House of the Prophet, and received the surname of "al-Salafiq" (he who preserves and abides by the orthodox because of his constant praying. His piety did not prevent him from plotting secretly against the Umayyads, and was therefore banished from the capital by Caliph Walid I. He went to live in the province of Sharar on the border between Anasir and Palestine. Here he died in 117 (735-736) or 118 in the village of Yumuma. This place remained the headquarters of the 'Abbasid propaganda, after 'Ali's son, Muhammad, the father of the future Caliph al-Saffah and al-Mansur, had been recognised as the head of the 'Abbasid dynasty.

Tornb), ii. 16 et seq.; Ibn Khallikan (transl. by de Stairs), I. 216 et seq.; Well, Gesch. des Chalifen b. 333; ibid. 334; Der Mann im Vorzeit und Abendland (1884), p. 444.

**ALL** b. Ali Talib was a cousin and the son-in-law of the Prophet Muhammad and the fourth orthodox caliph. His father, Ali Talib, whose **khuwaa** concealed the beaten name Abul Manaf, was the son of Abul-Muttalib b. Hashim; his mother was called Fatima bint Asad b. Hashim. 'Ali received the surname Abul Talib [p. 4], from Muhammad, whose daughter Fatima he married. Concerning his descendants, comp. LITURGIA. He embraced Islam at an age which cannot be ascertained with exactitude, and, after Khidr, was the first Muslim (Hurârî, b. al-Husayn, acc. to Abul Dharr, al-Miyad, Abul Safîd al-Khadari etc.), or the second (after Abul Bekr; Mas'udi, ed. Goeje, p. 357; transl. by Carra de Vaux, p. 306). He was one of the ten to whom Paradise was expressly promised by the Prophet, and one of the nine council of whom the Prophet on his death-bed set his boundary. He was of medium height and big protruding eyes; he was corpulent, bold, and rather short than tall; he wore a thick, long white beard, which he dyed sometimes; his face was handsome; he showed his teeth when he smiled (Tâbuk p. 297, transl. p. 388; Nawawi p. 441).

**History:** When Muhammad had decided to emigrate to Yathrib and suddenly disappeared from Mecca, his escape was facilitated by 'Ali, who made people believe that he was still in the house he had occupied. He also stayed behind a few days in order to return to the owners the deposits which had been entrusted to the Prophet. 'Ali accompanied Muhammad in the battles of Bedr, Ohod, al-Khudahq ("the ditch"), and in nearly all his expeditions, except that of Taibah, during which he had the command at Medina in the absence of Muhammad. He himself conducted an expedition to Fadak against the Jewish tribe of Sa'd (628). He received sixteen wounds at Ohod; and on the day when Khalid was slain he carried the pennant. The Prophet sent him to Mina (9 = 630) to read in public several verses from the sixth Sura (al-Baqara), which had been revealed to him shortly before and, at the same time, to proclaim four decisions with regard to the prohibition of polytheism from the pilgrimage; to the circumambulation of the Ka'bah, which no-one was to make naked; to the sentence of the Muslims into Paradise; and to the observance of the time granted for their conversion.

In the year 10 (631-632), he conducted an expedition to Yemen, in consequence of which the Hunasid da'ails were converted. It was 'Ali who advised 'Omar to adopt the bigyes on the model of the Prophet as the starting-point of the Muslim calendar. He was entrusted with the task of making representations to 'Omar on account of the complaints which came from the provinces; when 'Omar began to feel uneasy about his safety, 'Ali was the intermediary between him and the discontented, in the name of whom he accepted the three days' delay demanded by the caliph; during the siege of 'Omar's house (waqat al-'Ar), he showed himself favourable to him and inclined to support him. At first he modestly refused to take the power into his own hands, but five days later he accepted it, and on Friday 25 Thul-1-bidâra 35 (June 25th, 656) allegiance was paid to him as Khalif in the Mosque of the Prophet at Medina; he was the first to ascend the pulpit for this ceremony. In the year 36 (656) he left Medina to return to Mecca; he marched against Basya where 'Abdallah Talib and Talid b. Talid refused to acknowledge him and defeated them in the "battle of the cuirass," which took place at Kharsa' outside Basra on 10 Dhu Al-Dir (Dec. 4th, 656). He beheld the fall of the Abbasids, and was buried in the court of the Mosque of the Prophet at Medina. He died in the year 36 (656) of the Hegira. His body was carried to Medina, escorted by a train of attendants among whom were forty women of distinction. He distributed amongst the inhabitants the money which he found in the treasury, and promised the same amount to them for the projected campaign in Syria. A month later he entered Kufa, where his faithful lieutenant al-Ashur had prepared the way for him. From thence he went to Caspian (al-Mada'in), crossed the Euphrates at Raqqa, and, in the plain of Siffin, gave battle to Mu'awiya in a sort of combat which lasted 110 days (Tâbuk 36 till Safar 57 = June-August 657). 'Ali had almost finished the foundations of the Sullan and submitted to the bravery of the Ashur, when 'Amr b. al-Asyf thought of advising Mu'awiya to make a truce with him. The Syrian troops fastened five hundred copies of the Koran to their lances, to indicate that they appealed to the judgment of the book of God. This truce disconcerted the troops of 'Ali, and made them think of submitting to God's word. 'Ali, therefore, yielded to the urgency of his companions in arms and accepted the ultimatum proposed by Mu'awiya. The latter appointed 'Amr b. al-Asyf his arbiter; 'Ali was urged, against his will, to choose Abu Mun'a b.-Alshur. The two archers met in Kamechta 35 (Feb. 659), furnished with a written document (waqâ'if) giving them full powers. Abu Mun'a, who wished to see his son-in-law 'Abd Allah b. 'Omar become caliph, set himself to outwit 'Amr, who made himself styled "the Messenger of God. Mu'awiya was fully entitled to avenge the murder of 'Omar, of which it was falsely rumoured, 'Ali had been an accomplice. So Abu Mun'a deposited his wealth (Tâbari i. 3359; Mas'udi, Murâdî, iv. 397 adds: "by taking off his turban," which detail seems to have been inserted afterwards). 'Amr followed his example, after which he proclaimed
the man who is attached to the divinity by the mystical tie of the ṣūḥāf, "proximity, friendship", a sense of the word which soon developed into that of "sanctity". All is pre-eminent: the saint of Islam, by which quality he clearly distinguished from Muhammad, who is only the wali, "the prophet of God". All Shi'ism, with its manifold sects, is based on this concept. The Shi'ites are also unanimous in attributing to 'Ali the threefold character of Imām, of warrior and of saint. According to them, the investiture of 'Ali as imām goes back as far as the sermon near the pool of Khamm, when Muhammad, on his return from his farewell pilgrimage, said to the people: "I shall soon be called back to Heaven; I leave amongst you two important beings, one more important than the other: the Kūrān and my family". Already on his return from the expedition to al-Hudaybiyyah (18 Jhūl i-ḥidūb 6 = April 9th 628; Mas'dūd, Tāhāsī p. 328; Goldschmidt, Meh. Stud. ii. 116), Muhammad had said: "He, whose master I am, has also 'Ali for his master". One day, the Prophet assembled 'Ali, Fūtūn, al-Husayn and al-Husayn, covered them with a mantle (ṣaff) which he used to put on when he went to sleep, and pronounced a prayer which gave rise to the revelation of Kūrān xxix. 33; hence the expression aqīla 'Ali". Amongst the family of the Prophet (cp. St. Gayard, Fictions d'Ibn Taimiyyah p. 24, note 1 = Journ. As. 1872, and Fragmenta 217). 'Abd Allah b. Sāba', a Jew from Yemen, is said to have been the first to attribute divine honour to 'Ali: "Thou art God"; he is reported to have said to him, in allusion, perhaps, to 'Ali as one of the epithets of God (Kūrān lv. 38, xlii. 51; Hirschfeld, Journ. of the Roy. As. Soc., 1904, p. 157). The Shi'ites have never been able to understand, how the caliphate, which implies the quality of leader (it is for this right to lead the Sāhib), could be conferred by election; that accounts for the fact that their adherents were especially recruited from amongst the Persians, the inevitable champions of divine right. The following titles and surnames are most frequently employed by the Shi'ites: Murtadā (he in whom God is well pleased), Ḥādhr (the lion), Ẓādhr-i karrāy (the impetuous lion), Abī Ṣalāh b. Ẓādhr, Abī Ṣalāh b. Ḥālīf, Abī Ṣalāh b. al-Azāhar, Abī Ṣalāh b. Ẓādhr, etc. At Medina his opinion had authority, so that he was consulted upon difficult questions. He was very pious, inflicting mortifications on himself, such as burdening his stomach with a heavy stone in order to diminish the pains of hunger, and giving away all his possessions in alms. (Abū Md. b. Haska, Msadd). He despised the world and said: "The world is carrion; whoever wants a part of it, must be satisfied to live with dogs". He also said: "Blessed are those who have renounced this world and only aspire to the life to come!" When he died he left 600 dhimmīs.

The doctrine of the Shi'ites. 'Ali is styled the wali Allāh, "the friend of God",
miracles of the prophets (muṣḥaffāt). Already in Yaḥyā ibn Yaḥyā, God is represented as giving orders to the archangels Michael and Gabriel to descend to Mecca and protect 'Ali while occupying the place of Muhammad in the night of the Bahrūjah. One takes his stand at the head of the bed, the other at the foot, to defend him against his enemies and to avert the storms which are thrown at him. But afterwards other feats, much more miraculous, are mentioned: at ʿĀshḥāb, God made the sun come back after it had set, to enable 'Ali to finish the 'ṣūr prayer; in the mosque of Kātib, he restored the severed hand of a negro, whom he had sentenced to the punishment which canonical law inflicts on thieves; the head of a Kharijite who brought a charge before 'Ali against a woman, and, while doing so, indulging in crying, was changed by him into the dog's head; at his prayer, 80 camels which the Prophet had promised to a Bedouin rose out of the ground; when, in the environs of Babylon, a lion struck the inhabitants with terror, some one was charged by 'Ali to show his ring to the animal, and the lion disappeared; he raised somebody from the dead; he reappeared, several centuries after, in a vision, in order to libel his detractors. The Persians of the present day speak of more than a thousand of 'Ali's miracles; but sixty only have been placed upon record, amongst which, apart from those mentioned above, are found his command to the Ephesiates to decrease when it had inundated the country; the transformation of the bow, which he threw on ʿOmar's shoulder, into a dragon; the iron made soft by the touch of his hands; the change of the iron pivot of a millstone into a ring when hung on the neck of Khalid ibn al-Walid; the apparition of the Prophet's figure, after his death, rising at his summons from the earth on behalf of Abū Bakr; his calling down from heaven a bucket of water wherein to wash the corpse of Muhammad and a ready-made checked shirt; etc. (Dhāriyat ʿAbdullāh, tab. VII). His judgments deserve to be compared to those of David and Solomon; his maxims and aphorisms have always been celebrated all through the Muhammadan East; a hundred or more collections have been published by the Persians, which, in the days of Khalid ibn al-Din Watāwī (Muṣḥaffāt ʿAbdullāh, ed. and trans. by Fleischer, ʿAli's Bandker Sprüche, Leipzig 1857), and some of them, at the command of Faqīh al-Dawla ʿAli ibn Husain, the minister of the Sāḥibīya of Khūṭ, al-Dīn Kātib Khosrow III, were graven in 670 (1271–1272), on the walls of the Gūk-Medrese at Shíwá (Cl. Huart, Égypte, ar. d'Asie-Minore p. 97 et seq.). Some Arab biographies, a forgery of Shīʿite origin of uncertain date, have erroneously been attributed to ʿAli (Broekelmann, Gesch. d. ar. litter. l. 43; Huart, Littér. ar. p. 14; Goldscheider, Abhandl. zur ar. Philos. Berlin 126; Transactions of the 19th Conv. of Orient., London 1892 li. 115). Incarnation of the divinity in the person of ʿAli. The Shīʿites who are called ghāniyin, ʿabbās ("yours") cf. the art. ʿAli (Alawi) have even gone to the length of believing that God had become incarnate in the person of the Prophet's son-in-law by descent (ʿAbbās). Cl. Shashānī, p. 132 = Haartbrücker l. 196. The best known of these sects is that of the Nūṣairī, who regard ʿAli as the first of the three persons of the Trinity (R. Fontaine, Histoire et religion des Nusairis pp. 45, 55, 65; Salzman, Étude p. 37, Haurani in Jenner, Am. enc. XIV, 261; see also 'Amṣī); this sect is still known in Persia by the name of ʿAlī-ʾalī (ʿAlīnān, Treâtise aux Adv. p. 335).

ʿALĪ n. ʿAlī bin ʿAbd al-Samad, an Arab poet and a friend of Abū Ṭālib, he was a native of Khurāsān, and, for some time, occupied the post of ʿabū ṭālib al-muṣūlīm at Ḥadīth. In Baghdad, he lived at the court of the Caliph al-Mutawakkil, and made himself many enemies there by writing sharp, invective poetry. Having composed a satire on the Caliph, or, according to some, on the Caliph's court-poet Bābīt, ʿAlī was sent to prison and detained there until 23 (846), according to some until 229 (853), when he was released and banished to his native country. This punishment was aggravated by the ignominy of being, on his arrival, tied to the cross for a whole day by order of the governor who acted in compliance with a command of the Caliph. Afterwards he went to Syria; not, however, according to some authorities, from Khurāsān, but from Baghdad, which he had revisited; but his satirical vein had aroused so much enmity against him, that it had become impossible for him to remain there. When, one day, he started from Helepolis, on his way to Iraq, his caravan was surprised by a party of horsemen of the Banū Kail, and ʿAlī fell in the fray (249 = 863). His comparatively small diwan is now lost; a poem in praise of the ʿAṣ básād is contained in the Eschatological (H. De la Ronde, Les Mus. arab. de l'Étr., no. 369, 3, another on al-Mutawakkil is extant in Berlin (Alhwart, Vezicher. der arab. His., der Kgl. Bibliol. no. 7539). 4.

ʿALĪ n. ʿAlī ʿAlī, histor of the Almoravids who revolted against the Almohades. — The name of Banū ʿAlī ʿAlī is given to all the descendants of the lady ʿAlī ʿAlī, a relative of the legitimate Yūsuf b. Tālāfīn, the leader of the Almoravide empire. ʿAlī ʿAlī had married a certain ʿAbd b. Yūsuf al-Maṣūfī. The last of the Banū ʿAlī ʿAlī, famous in the history of the Maghrib and Spain for their struggle against the Almohades. But the best noted of all is the one to whom the present article refers. In the family of the Banū ʿAlī ʿAlī, the men of which occupied high posts as governors...
in Spain and the Balearic islands during the era of the Almoravid era, three members were called Ali b. Qhiyana: one was the son of Muhammad, who was appointed governor of the Balearic islands in 520 (1126); he was the grandson of the lady Ghiyana; the second was governor of al-Mahdiya (in Ifriqiya) in the year 600 (1203-1204); he was the son of al-Hasan b. Abi Allah and great-nephew of the former; the third was a son of Isahak, who succeeded Muhammad as governor of the Balearic islands, which post he occupied until 579 (1183-1184). This third personage, in the family of the Banu Ghiyana, who bore the name of Ali, was the nephew of the first Ali (see the genealogical table in A. Bel, Les Béarns Ghiyana p. 26). It was this last one, Ali b. Isahak b. Muhammad b. Ali, great-grandson of Qhiyana, who rose in arms against the Almohads.

The rapid annihilation of the Almoravid rule in Africa and Spain by the Almohads became a cause of serious solicitude to Isahak b. Qhiyana, who governed the Balearic islands on behalf of the Almoravids. Every year he sent presents to the sovereign of Marrakesh. In 578 (1182-1183), the Almohade emperor Abu Ya’qub Isma’il summoned the governor of the Balearic islands to appear before him and pay official homage as his vassal. The reply to this summons was delayed until Isahak’s death in 579 (1183-1184). He left thirteen sons to take possession of the unnumbered inheritance of his eldest son, Muhammad, who was appointed governor of the Balearic islands by the Almohads settled there. But Muhammad realised that this Almoravid vassal could not maintain its independence; he also knew, however, that neither the members of his council, nor the numerous Almoravid nobles who had sought refuge in the islands would ever let him submit himself to the Almohads. Nevertheless, in compliance with the urgent solicitations of the sovereign of Marrakesh, he finally swore the oath of allegiance required of him, whereupon an Almohad officer came to establish himself in Majorca to superintend the governor Muhammad’s administration and represent the Almohad government.

A conspiracy was formed, headed by the brothers of Muhammad; the latter was thrown into prison together with the Almohade representative. The governor was entrusted to Ali, brother of the dismissed governor (580 = 1184).

While these events took place on the Balearic islands, the Almohads sustained the terrible defeat of Santarem, which compelled them to concentrate all their forces upon Christian Spain in order to recover their lost prestige of arms. So their attention was momentarily diverted from the Balearic islands.

But Ali b. Isahak did not doubt but the hour of revenge was near at hand. He began, therefore, to organise the defence of the islands with great activity. But fearing, on good grounds, that he would not be able to sustain for a long time the attack of the Almohades, he began to negotiate with the African, especially with the inhabitants of Bizerta (Bojonga). As soon as he recognised that he could count upon the support of at least a part of them and that he could land without difficulty on the coast by that town, he armed all the ships he possessed (20 according to some, 32 according to others), embarked 200 horsemen and 4000 foot-soldiers, and, well supplied with money, set sail for Bidjaya, where he landed without difficulty; he captured the town on the 6th day of Zilhaj 580 (Nov. 12th 1184), during the absence of the Almohade governor of the place. Ali had only reigned over the Balearic islands for a few months; on leaving for Bidjaya, he committed his post to his brother Tahya. Ali and his companions were never to return to the Balearic islands, which, however, did not until the year 600 (1203-1204) fall into the power of the Almohads.

At Bidjaya, Ali found supporters of his cause amongst all the discomfited, especially amongst the partisans of the ancient Hamadhad realm which the Almohads had destroyed, including numerous Kabyles. Afterwards, as we shall see, the Arabs who had invaded Northern Africa in the 11th century (see p. 266) joined him in troops. Having learnt that the governor of Bidjaya, the Sik (Saladi) Abu ‘Abdallah, had turned back and was coming to attack him, Ali advanced against him and defeated him so completely that he dared not stop in his flight until he was safe behind the walls of Tlemcen. After this victory, Ali organised the administration of Bidjaya and appointed his brother Yafiya military governor of the place, after which he left it to march towards the west and conquer other lands.

It seems to have been the intention of the leader of the Almoravids to penetrate to the very heart of the Almohad realm, the capital Marrakesh. Numerous Arabs and Berbers came to join him in hopes of booty. Al-Djazair (Algeria) was conquered. He left it under the command of his nephew Yafiya b. Tahya, and captured the towns of M’tzriya and Milliana. Considering himself not sufficiently strong to continue his conquests any further, and feeling perhaps not perfectly sure of the fidelity of his allies, he thought it wise to check his march at Milliana and turn eastwards again, along a different route, further south than the one by which he had come. He captured the kala‘ of the Banu Hamdani on his way back, and laid siege to Constantine.

The Almohads became discouraged by so many successful attacks; the Caliph al-Mustazir dispatched against Ali an army of 20,000 men and a fleet with a view to the recapture of al-Djazair and Bidjaya. At the approach of this expedition, all the towns that Ali b. Qhiyana had conquered, expelled the Almoravides and submitted themselves again to the Almohads. Ali’s two brothers Yafiya and Abu Abbas, who had remained at Bidjaya, left the place precipitately when the hostile fleet appeared, and went to join Ali before the walls of Kasaanuts (Constantine). Bidjaya was retaken in Safar 581 (May 1185); after an Almoravide interregnum of only seven months.

Ali b. Qhiyana, seeing all his late allies forsake him after the successive reverses that he had suffered, did not consider it safe to wait for the arrival of the enemy’s army before the town of Kasaanuts. He had to retreat across the Hodna, while the commander-in-chief of the Almohade army, the Sik Abi Zakari, took possession of Bidjaya, that town being the capital of the government which the Caliph al-Mu’izz had consigned to him.

In the Jarid (Djardj), Ali scattered money freely among the natives, and succeeded in securing the help of the Kesy and Djaghma Arabs. Together with his new allies, he conquered
Tawzer and Gafsa; after that he went to Tripoli and concluded an alliance with Kærakush, prince of that region. All the unsettled and menacing forces of the Hill Arab, of that country, joined the two allies, who soon conquered the whole of the Jurd. Kærakush captured Gabes and made it his capital (581–1185-1186).

In 582 (1186-1187), the whole of Idrisia, except Tunis and Mahdia, had fallen into the hands of the rebels and the Arabs, who committed the most outrageous excesses. "All b. Ghaniya was recognized as the head of the whole country, and ordered the prayer to be said in the name of the 'Abidshie Caliph al-Nasir b. al-Manṣūr," to whom he sent an embassy for the oath of allegiance; following, herein, the custom of the Almoravide sovereigns. He acquired thereby, the official title of legitimate head in the eyes of his adherents, and, at the same time, hoped to secure the definite support of the caliph of the East for the complete overthrow of the Almohades. Yielding to the urgent entreaties of the Almohade governor of Tunis, the Caliph al-Manṣūr decided to take upon himself the command of the expedition for the re-establishment of Almohade authority in Tunis. Early in 583 (1187/8) he advanced towards Tunis. At his approach, "All retreated into the Djerid. From Tunis, where he had established his headquarters, al-Manṣūr despatched an attacking column against Gafsa; but this expedition, numbering 6000 horsemen, was completely defeated by 'All near Gabes (Kahf) 1 583 = May-June 1187. Al-Manṣūr, at this news, marched, at the head of all his troops, against the Almoravide, was, in his turn, vanquished at al-Hamma, and fled into the desert. Gabes, Tawzer and Gafsa were retaken successively by the Almohades, and Idrisia became again subjugated. Al-Manṣūr transported 'All's former allies, the Djaamsh and Rihydh Arabs, to the western provinces of the extreme Maghrib, and returned to his capital.

But no sooner had al-Manṣūr left Idrisia, than Kærakush and 'All reappeared in the south and recommenced the campaign. The events subsequent to the departure of al-Manṣūr from Idrisia and the reappearance of the two leaders of the rebellion are insufficiently known. It is, however, on record, (if we may believe the historian Ibn Khaldun), that 'All met his death in a battle against the tribe of the Nafawa, in the year 584 (1188-1189). The chronicle of the Almohade dynasty, al-Marrakushi, states, to the contrary, that 'All died of the wounds he received in the mortal battle at al-Hamma, where he was defeated by al-Manṣūr.

His death, in any case, did not put a stop to the struggle which the last representatives of the Almoravide empire had commenced against the Almohades. 'All was replaced, at the head of the rebels, by his brother Yahya, who waged war to the knife against the Almohades for nearly half a century, dealing such terrible blows to the empire of Marrakush, that he contributed largely to the dismemberment and the final destruction of this Berber empire.

Bibliography: al-Marrakushi, al-Mašší; French transl. by Fagnou in the Revue africaine, 1894—1895; (printed separately at Algiers 1893); Ibn al-Áthir (ed. Turazh); French transl. of the extracts relating to the Maghrib by Fagnou, in the Revue africaine; al-Táhirí, Kihla (see A. Bel, Les Romani Ghânye suppleme); apart from these authorities, which may be considered of primary importance, reference should also be made to chapters relating to the history of the Almohades during the period of 'All b. Ghaniya, in the Arab chronicles of later date and in the works of the geographers, for example Ibn Abi Zârû, al-Kâfûrî, al-Hallâl al-maššíyâ; Ibn Khaldun, *Ibn, al-Nasir, al-Ma'âmarî, *al-Mustawâyi, *al-Áphût, etc. It is also advisable to consult the works of the western authors who have treated of this subject: Cayanqaro, *The history of the Mamelukes dynasty in Spain II, suppl. p. lxxiii; Alverez Campanaro, *Boquejo historico de la dominación islamica en las islas Baleares (Palma 1888); Codera, *Desaparición y desaparición de las Almohades en España (Barcelona 1899); Alfed Bel, *Les Biosos Ghaîyâ (Paris 1902).

"All (Sidi 'All) b. Husain, who as a poet called himself Kâthir al-rûm (also simply Kâthir or Rûm), was a Turkish admiral who distinguished himself as an explorer and oceanographer. Following the example of his grandfather and father who had both been administrators of the arsenal at Galata, he commanded the warfleet and was present at the conquest of Cyprus (1522). After that we lose sight of him; we only know that he took part in the famous voyages on the Mediterranean of Khair al-Dt'a Pasha, Sasan Pasha and other captains, and that he boasted of knowing every corner of that sea. In 1548 he accompanied the Sultan across Cappadocia and Adrzeabdn on his expedition against Persia. He sailed himself of the creation of hostilities during the winter to take lessons at Aleppo from a philosopher and astronomer, and, at the latter's instigation, undertook an amplified Turkish translation of the classical work which Mawltani 'All Cidâlid had written in Persian, entitled in 'All's translation, "Outlines of Astronomy" (Rumi, *Cahier de Turk. Mem. in the Brit. Mus., p. 120; Fortes, *Persian, d. turc. His., ..., in Berlin p. 214). The sailor's literary fame was greatly enhanced by Sulaimân's third Persian campaign in 1553. Again he accompanied the Sultan and, as before, they spent the winter at Aleppo.

While the European war of the Ottomans brought desolation to their western frontiers, heroic efforts were made by them to prepare the complete overthrow of the Persian Safawides by a series of conquests on the Persian Gulf and on the coast of the Indian Ocean; but they all ended in bitter disappointment. After a fresh discomfiture of the Turkish admirals in the Indian ocean, Sulaimân commanded 'All at Aleppo to save the Turkish fleet which was anchored at Basra by directing it to Egypt. But 'All was defeated by the Portuguese as others had been before him, and, with the wrecked remainder of his fleet, which had never been numerous, he was tossed about by repeated gales which lasted for months, and finally driven on the Indian coast, where, in his extremity, he was glad to mortgage his fleet to one of the Khans of that country. At Amristhali, the capital of Gujrat, he finished, in 1554, his great compilation, *The Ocean (al-Ma'âhî*), which,
founded as it is on the books of Arabian and Persian pilots of the 15th and 16th centuries and on his own experience, contains a complete geographical and nautical description of the sea, besides the only written as far as we know yet, which supplies as with information concerning the progress and the state of Modern oceanography at the end of the Middle Ages. The author is not unaware of the importance of the Spanish and Portuguese discoveries in the new world. The remotest country that he knows in the far East is Djer (Cora). — Siid: All remained in India for some time. Everywhere, especially at the court of the Grand Mogul, the deepest respect was paid to him and his Emperor. Repeatedly he received the offer of a brilliant post such as the government of a province or the command of troops, that he might remain in those parts. Early in 1556 he started on his journey back to Turkey, travelling by land across Sind, the Panjuli, Afghanistan, Turlkistan, Khorasan, Adharbadjâ and Iran. During his long journey he learnt the East-Turkish language and even wrote poetry in that dialect. He arrived at Adria in April 1557, and delivered his delayed account of the events of his expedition on the Sultan. He received pardon at his hands and was even honoured by an appointment at the Court. Afterwards he appears in the office of keeper of the accounts for the lesser fiefs.

'All was one of the most popular, though not one of the most famous, poets of his time. Especially his poems on the elements which he might claim as his own, the sea, were long afterwards still in every one's mouth. His poetical efforts are more the effusion of feeling than works of art; but for that very reason they can be read with greater pleasure than by many a thoroughly artistic creation of a professional poet. — Cf. W. Tomasek and M. Bittner, Die topographischen Kapi te der indischen Seefahrten Mohit mit 30 Tafeln (Vienna 1897) and the complete edition of the Mir'at al-nawâsyil by Negib 'Aghd, which was printed in 1713 (1697) at the Beduin printing-office in Constantinople. The Mir'at has been translated several times into European languages, recently by A. Vambery: The travels and adventures of the Turkish admiral Sidi Ali Reis (London 1891). (K. Süssesr.)

'ALI b. AL-HUSAIN ZAIN AL-ARUDN is the name of an 'Alid. 'Ali, frequently called 'Ali the Younger in order to distinguish him from an elder brother, received the surname 'Zain al-Abâha' (the ornament of the worthies of God), on account of his piety, and is revered as one of the twelve Shi'ite Imams. After the death of his father Husain b. 'Ali in 680 (660) at the battle of Kerbêla, Shahib b. Liyân was proclaimed ruler of the family of Husein; they were well received and were allowed to return to Medina. When the inhabitants of this city rose up against Yazid, All was one of those who refused to make common cause with the rebels. He was accordingly treated kindly by the general Muslim b. 'Oqâa, by the command of the Caliph, on the occasion of Muslim's entrance into Medina after his victory on the Harra in 65 (683). According to some, 'Ali died in 92 (710-711), but according to the most usual account he lived till 94 (722-723) and died at the age of 58.

(K. V. Zethjan.)

'ALI b. 'ABD. See Ibn al-Qârâyê.

'ALI b. 'ABD was the best known oculist (khâfhal) of the Arabs. His work, the Tûghirat al-khâfhaln, deserves the greatest claim to our attention from the point of view of the history of civilization in that it is the oldest Arabic work on ophthalmology, that is complete and survives in the original. The name of the author is also recorded in the inverted form: 'Ist b. 'Ali. Preference is to be given to the first form as follows from a reference in Ibn Abi Uqabâ (Kitâb 'usân an-ndhâ fi cahfâl al-aftâb, ed. A. Mâller, I. 440, et seq.), and from quotations in later authors as al-Ghâfîk, Khalifa b. Abi 'I-Mahbûb and Ghâth al-Din. The uncertainty as to the form of the name is due to confusion with the Court Phisician of the Caliph Mu'tawakkil, 'Ist b. 'Ali, who lived some 150 years earlier (Fihrist l. 297, 302, Ibn Abi Uqabâ, t. e. l. 292, et seq.), and also wrote medical treatises.

'Ali b. 'Ist's life falls in the first half of the 5th (11th century); for (according to Ibn Abi Uqabâ, t. e.), he was a pupil of Abu'l-Faraj b. al-Tâlîbi, the commentator on Galen, at Baghdad, who died in the third decade of the 5th (11th century) (according to Ibn al-Kifî, ed. Lippert, p. 223).

'Ali, who, like his above mentioned teacher, professed the Christian religion, seems likewise to have practised at Baghdad. We know nothing of the external details of his life. As a physician he was full of foresight and prudence and kind of feeling. This is evidenced by many a counsel given to the operator in the interests of the patient. His Tûghirat al-khâfhaln (promptory for oculists), — sometimes also designated Rûzâlik (epistle), on account of the introductory words — is a very detailed treatise. According to the Preface the first Book treats of the anatomy of the eye, the second of diseases externally visible and their treatment (diseases of the lid, of the cornea of the eyes, of the conjunctiva, cornea, cataract and its operation), the third of hidden diseases and their treatment (visual illusions, diseases of the eil, crystalline lens, spirit of vision, long sightedness, short sightedness, blindness during the day, and during the night; diseases of the examiner's humour, of the retina, of the visual nerve, of the chordoid, of the sclerotic, aching and weak sight). After a chapter on the preservation of health, the work closes with an alphabetical treat-ment of 147 simple remedies and their particular action on the eye. — We cannot judge to what extent the work can lay claim to originality, since the older Arabic works on the subject are not preserved. 'Ali himself observes in his Preface: I have searched the works of the Ancients throughout and merely added the little of my own thereto, which I have learned primarily from the teachers of our own time and which I have acquired in the practice of this science. He mentions the work of Husein together with Galen as his principal
In addition he cites in the Taghhrw the Alexandrians, Diocoresides, Hippocrates, Orbasius, and Paulus.

The large comprehensiveness of his work laid the foundation of his fame [see art. 'Abbâ]; it has been considerably used by later Arab occultists — until the present day — both for the practical and theoretical portions (Bin al-Khâfîh, i.e., "the physicians of this branch work at all times in accordance with this") and has frequently been quoted whole chapters at a time. A commentary on it written by Dârâsh b. Shâ'âna, is mentioned by Khâlîfah b. Alî 'I-malikîn [q.v.] in the introduction to his philosophical work. This commentary is not preserved; on the other hand a large number of manuscripts of the Taghhrw itself have come down to us. Even in the Middle Ages it was translated into Hebrew and twice into Latin (Treatise de senil. /r. H. H. V. 1497, 1499; 1500; edited once more by Fussier with a second translation into Hebrew version under the title Spicilegium Sinar. Alii de cognitio. senilium regimen cvalvrum Ammianus. Ammian. Paris 1903).

That the great importance of the Taghhrw in the history of medicine has been entirely unrecognized is due to the curious character of the Latin translation and the fact that whole sentences are frequently omitted therein. So the continuity is destroyed and the sense made unrecognizable.

A German translation of the Magnus for occultists based on the Arabic manuscripts is contained in Vol. I. of Die arabischen Augenbäder nach den Quellen, bearbeitet by J. Hirschberg, J. Liepert and E. Mittwoch (Leipzig 1894).

Bibliography: cf. the introduction of the last-named work. (E. MITTWOCH.)

'ALI b. MÂMÂL was the ancestor of the Mahdrât at Zabîd. 'Ali, a Hârânite of the village of 'Anbam on the sea-coast, not far from Zabîd; made his first public appearance as a preacher of Khâridjiyah at the age of 21, in the town (531-536 = 1136-1141) and won many followers. The mother of the prince of Zabîd took him especially under her protection, and at her death (545 = 1150) he went to a mountain stronghold named al-Sharaf together with his faithful adherents, whom he named Mariah, after the example of the Prophet. He named those who joined him there 'Aqir. He then began to make raids, to plunder and lay waste the district of Zabîd. In 553 (1156) the governor of the town, the Khalif Alî Muhammad Säûrî al-Fîtinsi, was murdered in the mosque by one of his followers, and after this open war was carried on between 'Ali and the inhabitants of the town, who called to their assistance the Zâhid prince of Sa'id. The latter complied, on condition that they murdered their chief Fih. This they did in 553 (1158), but the Zâhid prince was no match for 'Ali. The latter conquered Zabîd in 554 (1159); but after that he began to make war himself on his own, and remained ruler of the city until 569 (1172). Cf. also MAHâDIYÂ.

Although 'Ali professed the Mahdiyah of the Hamîfites, he was an extreme Khâridjiyah. Every one who disobeyed his teachings or violated the commands of Islam did not attend the religious assemblies on Fridays, drank wine or was present where there was music and song, passed as an infidel and incurred the penalty of death. His soldiers were also similarly punished if they abstained from themselves from the sermons which he was accustomed to preach every Monday and Thursday at his father's tomb.

'ALI b. MUHAMMED b. ALÎ ì-î-KHÂÞbîhí, a disciple of the Prophet, was born about 854 (1450). In his boyhood he is said to have been made a page in the court of the Khalif Alî on the Djebel Gumârât, but he resigned this dignity since he could not bring about the prohibition of the use of wine among his people. In 901 (1495-96) he left Fès (Fez), visiting during his wanderings Damascus, Maroc, Jâlib (Aleppo) and Brussa, finally settling at Damascus, where he died in 917 (1511).

He represented a temperate attitude in mysticism and combatted the excesses of religious and social life which he had observed in the East, in his treatise: Tarik al-ginsâr fi-'ilalat rasul Allah, frâmâfûn min al-murâdûs wa-'ilmûs al-mawdûdîn wa al-mawdûdîn wâ-ilmûs al-mawdûdîn, Min al-Àghârân (cf. Goldscheider, in Zeitschr. d. Deutsch. Moslems. Gesellschaft, xxviii. 293 et seq.). This is a work of his old age, which he began on the 10th of Muharram 916. For his mystical writings, among which a justification of Ibn 'Arabi deserves to be mentioned, see Breuschmann, Gesch. d. arab. Litteratur, ii. 124-144. On the Tyâksârîn and al-Nâwâbiyya (cf. the margin of the Khallîkân, Bilâr 1900) I. 540. (BROCKELMANN.)

'ALI b. MAJîM. (See 'ALI 'EMM.)

'ALI b. MUHAMMED was the founder of the dynasty of the Sââlîhîdîn in Yemen. The son of a Sûmâl qâdi in the district of Hâshim in Yemen, he was won over to the Ismailîte movement by an emissary of the Fâtimîdîs, while still of youthful years, and after the latter's death he himself began to enrol others secretly, his first migration to Marhum was a mere opportunity of doing. In 1039 (1628) he occupied a strong position on the Ma'ir, one of the loftiest mountain peaks of Hâshim, and after removing Nadîj, the prince of Thâmân, by poison in 1052 (1660), in the following year he sent an embassy to the Fâtimîdîs al-Munâzir, in order to obtain permission from him to come forward openly. After having been granted this, he conquered the whole of Yemen before the end of 1055 (1665), and removed his residence to Sa'id; even in Maroc, whither he came in this year, he was appointed one of the Sharifs as ruler of the city. In 473 (1080-1081) as according to other accounts in 459 (1057) he was however unexpectedly attacked and murdered by a son of Nadîj, Sa'id al-'Abâwal. Cf. art. YEMEN.

'ALI b. MUHAMMED was the leader of the insurrection (end of the 3rd or 4th century) of the numerous negro (ëmûnî) slaves, principally from the east coast of Africa (Tsu'barîa), who had been brought to the region of the lower Euphrates, whence he was generally named "Shâîb al-ëmûnî." The wily deceiver who, in Arabic sources, is often simply called al-Khâbdh (the rogue) su-
ceeding in exciting to rebellion those slaves employed in the sulphur mines, claiming to be of the house of the Alices and to have been called to their deliverance by visions and occult science. It was in this manner that he aroused the terrible negro insurrection which occupied the Caliph al-Mu'awid for nearly 15 years (255-370 = 869-882). During this time 1/2 million Muslims, or, according to some reports, as many as 2/3 million lost their lives. It is at all events certain that the slaves, who succeeded in surprising the rich commercial cities of Oholla, Alwaz, Hasra and Wadis, plundering them and laying them waste, spared no one and butchered the entire population of the captured cities with the most horrible cruelties. Their leader sought to palliate this by making the principles of the Asrakites [q.v.] his own. The extreme difficulty of putting these excesses to an end was due to the nature of the ground on which the insurrection took place. The swampy district, divided up by many canals, by the lower Euphrates offered the rebels numerous hiding-places that were difficult of access and which made a successful attack on the part of the troops sent out against them impossible, so that the latter more than once sustained heavy losses and were obliged to retreat without having accomplished anything. It was not till al-Mu'awid, the brother of the Caliph, took the management of the war into his own hands and proceeded systematically, shutting up the negroes in al-Majhtara, the fortress erected by them, that he succeeded, after a wearisome siege, in storming it and rendering their leader helpless. — That the name of 'Ali was not less certain, but he was probably an Arab of the tribe of Abd al-Salih.

'Ali b. Muhammad al-Ash'ari. [See al-Ash'ari.]

'Ali b. Muhammad al-Khassib, i.e. the "falconer" (so called because his father was the falconer of Ulugh Beg [q.v.]), was a famous astronomer and geographer, who died in 879 (1474). He studied at Samarkand and afterwards went to Karsmum, where he wrote a commentary on Nasir al-Din al-Tusi's Ta'rif al-hilal for the Timurid Ali Sa'id Gungin. Later he returned to Samarkand, finished the astronomical tables named after Ulugh Beg and went to Thrace to Gora Hanan, the prince of the Al-Kayansu, who sent him on an embassy of peace to the Ottoman Sultan Muhammad II. The latter induced him to return to Constantinople after carrying out his mission and appointed him Professor at the Aya Sophia. Here he wrote astrono- 

mical treatises both in Persian and in Arabic. For his Arabic works cf. Brockelmann, Gesch. d. arab. Literatur. ii. 234; Wopcke, in Journ. asiat. 5th series, xii. (1860), 120 et seq.; for his Persian productions Kraft's catalogue of ms. (p. 1139), that of Durr (p. 304) and that of Rieu (ii. 450) and Persisch (Berlin; p. 351).

'Ali b. Shabir. [See Shabir.]

'Ali b. Shams Al-Din was the author of a history of Gitan entitled Fattish Al-dunya, and comprising the years 880-930 (1475-1514). According to the introduction, the book would appear to have been written by Sultan Aqmed Khan, but 'Ali seems to be the real author. The work has been edited by H. Durn, Muhlammudanische Quellen zur Geschichte des nördlichen Kaukasus und der nördlichen Mesopotamien (vol. ii. Cf. the preface of this volume, pp. 15 et seq.}

'Ali b. Yusuf b. Taqshin (477-537 = 1084-1142) was an Almoravid Sultan. He was one of the five sons of Yusuf b. Taqshin, the founder of the Almoravid empire and dynasty; he was born at Seuta (Silves) in 477 (1084) and was the son of a Christian female slave named Xantira, not of Yusuf's wife, the famous Zainab, who died in 464 (1071). It is noteworthy that this son—who seems to have been the eldest of Yusuf's children — was born in the year 77 (1142) years of age if the chronicles are to be believed, which are unanimous in giving the date of the father's birth as 400 (1000).

Being chosen by Yusuf as his successor, 'Ali was proclaimed Sultan, first at Marrakesh on the 1st Muḥarram (300 (September 2, 1106), the day of his father's death, and on the third of the same month he assumed the title of Almoravide Sultan, which was borne by all the Almoravide Sultans, while that of Almoravide Sultan was left to the Almoravide Caliphs, whose spiritual supremacy they recognized.

One acknowledged in his capital, 'Ali sent messengers throughout the whole extent of the empire, to announce his accession to all the governors of cities and of provinces, Yahya b. Abi Abi, the Governor of Fez and cousin of the new monarch, neglected to pay homage; 'Ali marched against him, compelled him to submit and pardoned him; but he deprived him of his governorship. Following his father's political attitude, he continued the war in Spain against the Christian; it was more lucrative than expeditions in Africa and also more meritorious in the eyes of Muslims, and so the new king did not think of extending his sway further east than Bigiaja (Bougie).

In Africa the empire retained the limits which Yusuf b. Taqshin had fixed: it comprised the districts of the Tull included between the meridian of Bougie and the Atlantic Ocean; to the south-west it stretched to the roses and seems to have reached the Sudan; to this must be added the whole of Spain and the Barelae Isles.

Arab chroniclers are fond of representing 'Ali as abandoning the administration of his empire to the clergy and doing nothing without the advice of the fujaba who surrounded him.

'None had access to the Prince of the Muslims, nor had any influence over him, save those who knew the science of jurisprudence, according to the Malikite science. So the teachers of this school were then in favour and served as guides in the eastern provinces, so that they even began to neglect the study of the Koran and the Traditions; no famous man of this period was entirely devoted to these two branches of study, and at that time any one who studied any branch of scholastic philosophy was treated as impious. The fujaba around the prince viliified this science, and declared that the first Muslims abhorred it, rashly advising everyone who had any taint thereof; it was, they said, a novelty introduced into religion, which often raised the faith of its disciples. These and similar discourses roused in the mind of the prince a hatred for theology and of those who studied it, in such a manner that he sent out into the land strict prohibitions against
his study and threats against those who should be found to possess any valuable volumes on this subject. When the works of Abû Hamid al-Qalâbî reached the West, the prince ordered them to be burned and threatened with pain of death and confiscation of property anyone who should be found to have any fragment of these books; the most severe commands were issued on this matter (Abû al-Walîd al-Marrakûshî, trans. Fagnan, "Histoire des Almohades", Algiers 1893, and Revue africaine xxxvi. 198-199).

The administration of cities and provinces was of two kinds: civil and military. The kâbus was the supreme head; he was assisted by a military governor. For Spain, see Duzey, "Hist. des Marocains d'Espagne", iv. 248 et seq.

The reign of Allô was on the whole brilliant; but it was troubled by the foundation of the Almohade community by the Maâlî Ibn Tumart (515 = 1121), who declared a Holy War against the Almoravides. (see Almoravides), and by the great expedition to the modern Morocco by the founder of the Almohade dynasty, Abû al-Munîn. The end of this campaign was the victory of the Almoravides, in which the Almohade cause was marked by the capture of Marrakesh, which happened in 541 (1146-1147), about 4 years after the death of Allô.  

Allô, who died naturally, had appointed his son Tashfin to succeed him; he himself seems to have abandoned the actual exercise of administrative functions in 533 (1138-1139), to devote himself to deeds of charity, living as a recluse, fasting and praying, if certain chronicles are to be believed. (For bibliography, see Almoravides.)

**Ali al-Askari**, Persian historian and man of letters, was born in 507 (1112); he became his father’s successor as Professor at the Madrasa al-Kâmilîya at Cairo, and later, as West, he entered the service of the Malik al-Nâṣr Maṣûfî al-Dîn Mîšîa, who reigned in Mesopotamia from the year 601 (1170). His principal work is a history of the Islamic dynasties, Kitâb al-dawla al-munfîsît, in 4 volumes, of which only the last, dealing with the history of the Hamânîs, Saljûqs, Tûfûqs, Iḫwâns, Fârîdûns, and Abûâbâ, until the year 632 (1232), is preserved (Pertsch, "Die arab. Hist. ... aus Gotha", 3. 1565; Riau, Supplement II, 461), it is called the Al-Kâmilîya at Cairo 1287 and 1312, in the margin of the Maâlî Ibn Tumart. The Dâlî al-munfîsît al-munfîsît, in 587 (1191), dedicated to Salâb al-Dîn, and dealing with poetic comparisons, forms a supplement to it (Cp. H. Derenbourg, "Les mœurs arabes de l'Écorial", 2. 425).

**Ali al-Askari**, author of a Persian book, Kâfîh Nâmâ, on China, lived under the Sultanate Seljûqs, and Salâbâ. Schefer has published selections from the original (Miângé Orientaux, p. 53 et seq). The work was translated into Turkish under Mustaârîb, III (1575-1595), with the title Kâfîh Sâmîî. (Cen ârâ(581,210),(744,245) (Fillog., Constantinople, 1570 = 1583).

**Ali azîz**, Turkish novel, a native of Crete, died in 1413 (1798-1799). He composed three Müşââyafât (Reveives), one of which was translated by Gibb in 1884, under the title The Story of Têvâlîh. Cp. Gibb, History of the Ottoman Empire (1889).

**Ali bey**, famous for his successful revolt in Egypt against the Sublime Porte in 1784 (1777), was a Caucausan by birth. According to his contemporary biographer Lâïnîgân, he was born in the year 1728 and named Yûsuf by his father Davîd, a priest of the Greek Church. At the age of thirteen, i.e. in 1741, he is said to have fallen into the hands of brigands who sold him to a certain merchant named Âljedîn. This man, soon after, is said to have brought him to Egypt, where he was transferred to Ibrâhîm Kâthîhîdî who immediately had him circumcised and renamed "Allô. Allô was then put under the care of a tutor whose duty it was to instruct the youth in reading, writing and the recitation of the Korân. As he was an apt pupil and showed signs of genius, Ibrâhîm, at the end of eighteen months made him one of his domestics. By the Bûl, 1749, he was put in the house of Sayîfî, enjoying the complete confidence of his master. In the same year, Ibrâhîm was obliged to accompany the hajjî caravan as amîn. "Allô, who went with him on this journey, distinguished himself both on the way to Mecca and return home by repelling the attacks of wantling Arabs, thus winning for himself the nickname of Lâïnîn "Allî and a caftan or robe of honour. Ibrâhîm thereupon took steps to have his favorites, whom he had granted his liberty some time before, advanced to the rank of bey (Lâïnîgân on the supposition of serving under his governor, a certain merchant, the pilgrim caravan in 1511 (1738), in the year 1566 (1753)) he dispatched another under "Ali Bey and died a natural death in 1568 (1754), Lâïnîn "Allî only receiving a mandâb late.

However this may be, the biographers agree that the period of "Ali's life following his master's death was a strenuous one. Continually beset in taking part in the petty squabbles of the bey's, "Ali did not fail to strengthen his power by purchasing numerous slaves and elevating them to high positions, so that finally in 1777 (1760), Abû al-Kâthîhîdî Bey, the son of his former master, recognizing that "Allî's good will and assistance
was necessary in order to retain his position, provided that he should be made their leader, for he had been the professional of Cairo, to which all agreed. 'Allî's first act after leaving the Agāh's caravan was to elevate his mandil Muhammad al-Khâsimî, likewise known as Abî Dhabâb, to the rank of Bey and to exile 'Abd al-Rahmân and numerous others. Of these, Shîlî Bey, not content with his lot, gathered other exiles about him and established himself in Upper Egypt. Here he was attacked by 'Ali's forces under Hisnain Bey al-Kâhsî and forced to retreat. Hisnain had no sooner gained this victory then he was sent into exile. Instead of following the instructions contained in the mandate of exile and going to Lower Egypt, he returned to Cairo. From this moment 'Ali and Hisnain plotted to get rid of each other; the strife finally culminated in 'Ali being exiled to Syria in 1279 (1765-1766). For two months he stayed at Jerusalem. At the expiration of this time he betook himself to 'Akîk where he became acquainted with the Shâshîj, Omar al-Zâhir who later was to become his ally. Thence 'Ali suddenly returned to Cairo where he forced the bey to exile him to 'Akîk in Lower Egypt, whence later he was removed to Assiût. At this place he succeeded in mustering a large force of exiles and Banii Hawâwân, and with some difficulty won over Shîlî Bey, his former enemy, by promising him Upper Egypt if he ever regained control of Egypt again. This he finally accomplished by defeating the forces of Hisnain Bey Kâhsî. On the 30th of Dhu'l-Qa'da 1181 (24th October 1770) he entered Cairo and was reinstated as bey. The defeated leaders, especially Hisnain Bey and Kâhsî, now fled into Syria, where they believed they had fled, and invaded Egypt in 1182 (1768). Their attempt was futile. Surrounding 'Ali's forces under Abî Dhabâb, they were forced to ask for a truce and induced to believe that Abî Dhabâb would act as intermediary for them. Upon their arrival at his house for a conference, they were assassinated, Shîlî Bey's assistance was rewarded in a similar manner.

In the mean time, the strained relations between Turkey and Russia had reached a peak. The declaration of war by the sultan of Musjtâfâ and at the end of Ragût 1182 (November 1768), a letter offering the departure of troops arrived from Constantinople. While employed in the levying of these troops, 'Ali's enemies, among whom was the pasha Muhammad, wrote to Musjtâfâ that the levied forces were in reality for the Russians. 'Ali, informed of this and the fact that the sultan had demanded his head, assembled the bey of whom sixteen owed their position to him and proposed an open revolt. The bey and his followers agreed and the pasha was expelled. Thenceupon an invitation to join was sent to Zâhir of 'Akîk. This the shâshî accepted and rendered valuable aid. In repelling the pasha of Damascus whom the sultan had dispatched against 'Ali, the Egyptian attack was first directed under the leadership of Abî Dhabâb against Mekka and the neighbouring territory to the North. Mekka itself was captured in Rabî' 1184 (July 1770) and 'Abd Allah made sherrif instead of Ahmed, the brother of sherrif Mustâfî, who had just died. In return for this, 'Abd Allah gave 'Ali the title of la bâna of Egypt and the two Seas'. In the following year (1185 = 1771), a much greater conquest, that of Palestine and Syria, was undertaken by Abî Dhabâb, an alliance being made with count Ofroff the commander of the Russian troops. With remarkable celerity Abî Dhabâb accomplished his task advancing as far as Damascus after capturing Jaffa and the coast north to Jâlab (Aleppo). 'Ali, stationed at the success of his general, commanded him to carry his conquest as far as possible. Abî Dhabâb, however, perceiving that his officers were tired of waging war and secretly harboring designs to become ruler of Egypt, called them to a conference and persuaded them to return home with him. Upon his unexpected reappearance 'Ali was not able to do anything to stop his troops out of the way. Abî Dhabâb, well aware of the fate in store for him, fled to Upper Egypt where he collected an army. Against these Fâmil Bey was dispatched; but, upon meeting the enemy, he deserted to them. A second expedition in Mâhrûn 1186 (April 1772) met with overwhelming defeat. 'Ali was once more forced to flee to Syria. Here he remained for almost a year capturing Sidon and besieging Jaffa with his friend Shâshî Zâhir and some Russian battleships. In 1187 (1773), led to believe that he would be welcomed back at Cairo, he mustered as many troops as possible, 6,310 men in all, and set out for Egypt by way of Ghazza. On the 8th of Safar (1st of May; Luisigian: 13th of April = 20th of Mâhrûn), near Shabitya, Abî Dhabâb met 'Ali's forces; victory for a short time favoured the latter, but the infantry deserting, the invading army was put to flight. 'Ali, wounded and crippled, was left on the field of battle. In this condition he was taken prisoner and transported to Cairo, where he either died of his wounds or was sentenced to death seven days later, the 15th of Safar 1187 (8th of May 1773; Luisigian: 20th of April = 27th of Mâhrûn) and was buried with his predecessors in the Kairîf at Cairo.

'ALI CÂELBÎ. [See WÂDI 3] 'ALI AFENDÎ. [See 'ALI] 'ALI EKRÎ. [See 'ALI AKRÂ.] 'ALI ILÂHî (also 'ALÎ YÎT 'ILÀHî, i.e. a defiler of 'ALI), a sect of extreme Shi'ites (ghulât), which is even now widely diffused in Persia, and whose name is due to the fact that they consider an incarnation of God. This has caused them to be identified with the Nizariya, but wrongly, according to Zuhakofski and Dumont. They give themselves the appellation of Ahkî
Hāki. They do not frequent the mosques, nor recognize any ritual uncleanness; they eat pork and drink wine; they do not permit polygamy. At their wedding festivities, they have round dances in which the women, who are unveiled, join hands with the men. Divorce is not allowed. In their esogamy, the creation is the work of five emanations from the godhead, i.e., five powers: Pi'l Ḍaḥšīliem, Pi Benyāni, Pi Dāmiid, Pi Ṭehbūr, Pi Mūṣa. They have a kind of communion, called Al-ḥulmi, which consists in sharing and eating in common sugar candy, a sheep, and on solemn occasions, an ox; in the case of the sheep, the service is named ḫirā, and in that of the ox, gūn-ḥirā. Man is held by them to be swayed by two moral forces, ṣūdān (reason), and nifā (lust). The hereditary head of their religion bears the title of jīr, he is represented by dālī (ṭabīhi) who conduct the ritual ceremonies, and by khalīfū, who are charged with the task of distributing the portions of the communion. They are divided into eight sects: Bihāktī, Ḍāwīli, Muḥāla, Sīlab, Ḫādī, Ṭās, Ṭāl, and Muḥāla. The priests practice jujube, and sit on burning coals, without suffering any harm. Their head quarters, in Persia, are at Kirmāniyā; they are also numerous in India, Cyp. the art, Ṭawīssī and Khīlī-
Kaši (sect).—The other Shi'ites give them the nickname of Khurshid-kush (cook-killers), because they have the custom of sacrificing a cock at the end of the third day, fast which they observe.

ALI KHĀN. [See also 'ALI KHAL.]

ALI KHĀN (Ahmed Muhammad Mas-ūm b. al-Balāsbad) (d. 1563) was a Persian author of biographical works and a book of travel, was born about 1535 (1624) at Medina. He was a descendant of Ghūthā al-Dīn (q. v.). In 1603 (1672), he followed his father to Ḥaddabā, the latter of the had been summoned in 1544 by Prince Shihāb al-Dīn Abū ʿAbd Allāh b. Muhammad Kūtbū. When Ali's father died in 1602 (1671), a year after his patron, 'Ali himself incurred the displeasure of the new Sultan Abū ʿAbd Allāh, and was thrown into prison. He succeeded, however, in escaping to the court of Awrangzhāb, who named him Khān and Dwāmā at Burhānpur. He died at Shirāz in 1613 (1692). In 1674 (1663) he wrote a description of his journey from Mecca to Ḥaddabā, entitled Shīrāz al-phālib na-mawāt al-Akhli (Ahrabī, Vera. d. arāb. Hist. d. Königl. Bibl. in Berlin no. 6176). He is best known for his work on the poets of the 11th century of the Muhammadan era; this was written as a supplement to the Khātibi of

ALI KHAJJI (died 1663 = 1658; q. v.) in 1662 (1671), under the title Shīrāz al-phālib ma-nawāt al-Akhī (Ahrabī, Vera. d. arāb. Hist. d. Königl. Bibl. in Berlin no. 6176). He is best known for his work on the poets of the 11th century of the Muhammadan era; this was written as a supplement to the Khātibi of the Ottomans (1153 = 1745), and commanded the Persian army at the battle of Kūrdgājí (13 Rabi I 1144 = 13 Sept. 1721), under Tāhmasp-Kuli Khān, who retained him in his office. In 1646 (1730), he captured Iṣphān, and, together with Karun-Khan Zand, he established the Safavid Shah Ismail III; afterwards, he quarrelled with Karun, was defeated by him on the banks of the Karun, established a puppet-king at Iṣphān under the name of Sulaymān Husain, died before Karun, and was assassinated by Muhammad-Khan Zand (1663 = 1751).

Bibliography: Reimund, Monumenta aris-

'ALI PASCHA is a name borne by numerous statesmen and generals of the Ottoman Empire. — 1. Vizier and general of Murad I Khvāshī, rejected the proposals of peace made by 'Ali al-Dīn, prince of Karamān, at the time of the advance of the Ottomans on Konya, was then ordered to invade Bulgaria, but captured Tirnavo, Shumen and Nicopolis, where the Khal Sinan was put to death (721 = 1329); chosen as minister by Bayram I, he aided the latter to indulge in his licentious debauches, while at the same time he introduced improvements in the administration;
he obtained from the Sultan the appointment of fixed emoluments for judges, and caused a new coinage to be issued. He was charged with the execution of Theodore Palaeologus, brother of the Emperor Manuel, and went to besiege Constantinople in order to compel the Emperor to hand over the lot of the Sultan, his over-lord; but he was overthrown and defeated by John, the nephew and successor of Manuel, whom he left in possession of the town (1399-1406). - 2. Eunuch and beardless of Romainia, received orders from Bayazid II to invade Moldavia, whose voivode had attempted to resist the Sultan's attacks (891 = 1486); in the same year, after the defeat of the Ottoman troops fighting against the Egyptians in Cilicia, he was ordered to rejoin the Grand Weirid Daud Pasha, and assist in the campaign; he took the field in 893 (1488), captured 'Ain Zartha and other strongholds; lost the battle of Agra Caire against Öz-beg (8 Kamalud 894 = 16 August 1489) and was deprived of his command; in 897 (1492) he was expelled from Tensylinnis and defeated by Stephen of Theolog in the battle of the Red Tower Pass; in spite of these disasters, he succeeded Mustafa Pasha as Grand Weirid, and later Huseyin Ahmed Pasha (909 = 1503); being punitively of Ahmed, son of Bayazid, he wished to aid his accession to the throne; and, to this end, he defeated the troops of Selim I, Ahmed's rival, at Corfu (Qamuda I 917 = 3 August 1511); took command of the army in Asia Minor raised to subdue the rebel Shahkuli, named ShehriJuli, and perished at the same time as the latter in the battle of Shrimkile (Qamuda I 917 = August 1511). He was the first Grand Weirid to die on the field of battle; an enlightened patron of learning, he assembled once a month in his palace scholars and poets, and acted generously towards them; he founded two mosques and an academy; the poet Mustafa has celebrated him in an elegy, and the Persian Idris on whom he bestowed the title of Historiographer (nasib al-nasib), dedicated to him his history. - 3. Governor of Buda (Öten), successor to Kalam Pasha, marched to the help of Khair Bey, who was besieged in Szeged by the haiduk, and delivered him, as the result of which he became the object of the Sultan Sulaiman's attention (1559 = 1552); he afterwards captured Weissamp (Weissb trunc), the castle of DebreO, and other strong positions, but was unsuccessful at Eger (Erla), in consequence of which he fell into disfavour. He was later reinstated at Buda, besieged Szeged without success (963 = 1556), was defeated near Balassagy, and shortly afterwards died of grief on that account. He was an cunning, and very ugly, but was a man of great courage and of unusual military ability. - 4. Ali Pasha, nicknamed Semis (the last) because of his corpulence, governor of Egypt, was the son of a Damotic from Buzza, had been enrolled in the host of the janissaries, became their agha, and governed Egypt for four years; he succeeded Rustem Pasha as Grand Weirid, for four years; he succeeded Rustem Pasha as Grand Weirid, and arranged the treaty of Prague with the Austrian ambassador Biskel on June 1, 1562; he died in 1565. He has become famous for his witty satires. - 5. Ali Pasha, nicknamed Guzeljije (the handsomer) and Celebi (the elegant), son of Ahmed of Kos, was successively Sandjak-Bey of Damascus, Beleberis of Yeman and of Tunis, Weirid entrusted with the administration of Cyprus and of Morocco, afterwards Kapidj-Agha, and he succeeded Oktay Mohammad as Grand Weirid; he had great influence over Sultan 'Othman II, and made himself conspicuous by his harsh treatment of the representatives of Christian powers; he ordered the Venetian interpreter Borilet, who demanded the restitution of the gold, to be put to death (February 1620); he extorted money from the Greek contractor Scarlati, from the Patriarchs, and from numerous Muslims, as the result of which he was able to offer his lord magnificent presents; he died of illness on March 9, 1621. - 6. Ali Pasha, nicknamed Sirmel (the man with cryprium), a native of Dimotokia, occupied in succession various posts in the treasury and finally became first Defterdar; afterwards in the quality of Weirid, he governed Cyprus and Tripoli in Syria and finally was chosen as Grand Weirid by Sultan Ahmed II (16 Radjab 1105 = 12 March 1694). He carried on the campaign against Hungary, which proved unsuccessful. He arranged that a council of the ministers should be held on four days every week, and changed the Egyptian crown-lords which had previously been let on lease and burdened with a yearly rent (mafsa'ah); into fish on a life tenure (milh i dib). The mutiny of the janissaries which marked the beginning of the reign of Mustafa II cost him his life (1106 = 1695); his profligacy had ruined him; the confiscation of his property only, produced a ridiculously small sum. - 7. Cettini 'Ali Pasha, the son of a peasant (Pala Lusca, c. Foyage 1, 116) or of a barber (Cesareni, L'ottomano) from Corfu, first page (boghdan), then colofin, (pall-beater) silly-bir (sword-beater), Weirid, Khaimak (chief officer of a Kasa), Governor of Tripoli (Syria), then once more silly-bir, was appointed to succeed Bajgidji Mohammad as Grand Weirid by Ahmed III (19 Muharram 1118 = May 1760); the kidnapping of Avedik, the Armenian Patriarch, who was hostile to the Catholics from Chios, by Ferenc, the French Ambassador, occasioned persecutions of the Catholic Armenians and the Jesuits of Galata, who were accused of complicity in the plot; 'Ali Pasha attempted to restrict the power of the Shakhil al-Islam, and to reform the administration; he instituted the supervision of the expenses of the imperial kitchens, fixed the number of the defterdar (soldiers released from military service in times of war); he built vessels, cast cannons and anchors, for which he established a special foundry at the arsenal; he built the mosque which stands before the Bassali, and repaired the aqueduct of Halki, at Constantinople. He married one of the daughters of the deposed Sultan Mustafa II. As he wished for war with Russia, he promised Charles XII of Sweden the assistance of the Khans of the Crimea in consequence of which he ventured upon the battle of Poltawa (July 7, 1709); the difficulties created Sublime Porte by the stay of the king of Sweden at Buda for the anatomy, who removed 'Ali Pasha from office (18 Rabia II 1122 = June 18, 1710) and banished his much-resented Kaffa; he died at Mitylene in 1123 (1714). - 8. Hekimzade (Hekim ogli) 'Ali Pasha, son of Nuh Erfeji, a Venetian renegade and physician to Mustafa II, born 15 Shaban 1100 (June 4, 1689); Serasker under the Sultan Mahmut I, in the campaign against Persia; marched on Harmatlik; defeated Shah Tahmasp III on the plain of Kortij (13 Rabia I 1144 = Sept. 15, 1731); captured
ALI PASHA.

Urmia (15 Djamād I = Nov. 15), and Tibet; was elected Grand Wazir when Lutfi was assassinated (15 Ramdān = March 22, 1723); improved the coignage; awarded Bemurrev the title of General of Bombardiers (bombardier), with the insignia of the two horse tails (fāqār); built a large mosque at Constantinople; was dismissed from office, in spite of his wise, considerate and beneficent administration, because he had expressed the wish that he himself might command the army sent out against Persia (22 Safar 1148 = July 14, 1735); was appointed Governor of Bosnia; shut himself up in Travnik in order to check the Austrian generals who had invaded the province, ordered the inhabitants to elect a judge, fought Field Marshal Hildburghausen beneath the walls of Banjaluka, and relieved the town (August 4, 1737); reduced the Albanian insurgents; ravaged the country between the Kulpa and the Umain; was re-instated as Grand Wazir to succeed al-Hādīj, Ahmed (1 Safar 1155 = April 14, 1742) and once more deposed in the following year, when it became known that the Persians had marched on Baghdad and Bagh, was elected Governor of Aleppo (1158 = 1745), and chosen to command, as Samsān, the troops sent out to fight against Nadir-Shah; the peace which shortly followed secured his mission in the province. On the accession of 'Othmān III, he was for the third time appointed Grand Wazir, while he was Governor of Kutahia (4 Djamād I 1168 = Feb. 26, 1755), and dismissed from office fifty-three days later in consequence, as was alleged, of a terrible confabulation, but in reality on account of his quarrel with the favourite Shīlpi of the Sultan; imprisoned in the tower of Leon at Alon (Kilkis), then banished to Famagusta, and later sent to Egypt as Governor; he found this province in a state of absolute anarchy, and when he was recalled (1170 = 1757), he was permitted to settle down in any district of Asia Minor; he died in the first year of the reign of Mustafā III (1171 = 1758). He left behind him some mystical hymns (Wāqf, 135—137; Hamīr-Pungstall, Gme. Dicht. iv. 177). 9. 'Arshādājī 'Ali Pasha, a native of Okbī, Kaim-maḥān of the Imperial Stirrup, was appointed to the post of Grand Wazir by Salāman II, after the death of Muṣṭafā Kūpārī at the battle of Shimkahm (Aug. 19, 1695); punished Muhammad Egīrī, the Agīr of the emissaries, by dismissing him from office, and ordering him to be driven home on a chariot drawn by oxen (whence the surname of 'Arshādājī given him by the people — "coach-man"); when he wished to use the same procedure with Ismā'īl the Kīlār-اغحنا, Nīrūz, the latter's successor, obtained his discharge and his exile to Rhodes (5 Kāgb. 1105 = March 23, 1699).

ALI PASHA DĀMĀK, Turkish statesman and general born at the village of Selaka, on the banks of Lake Nica, succeeded the Abaz Salāman at Silihīr; became the favourite of Sultan Ahmad III, who gave him his daughter Fatima, then aged four years, in marriage. (6 Rabī' I 1121 = May 16, 1709); succeeded in bringing about the dismissal from office of his enemy, 'Ali Pasha of Corfu, and the ap-pointment in his stead of the incapable No'man Koprulā; afterwards of Sultan Mahmūd II. (1125 = 1715); was appointed Grand Wazir, plotted to assassinate him, but was detected; and 'Ali Pasha succeeded him in the highest dignity of the Empire. (6 Rabī' I 1125 = April 27, 1715). He concluded the Peace of Adrianople with the Russians, by which the frontier between the Samara and the Ouzul was fixed (Sept. 1714); he sent 'Abd Allāh Pasha Mahbūb-ādī to Egypt, to put an end to the revolt of Khair-Beg; he commanded the Ottoman troops against the Venetians in the Morea Campaign (1147 = 1735); took part in the expedition to Captar; he re-established at Gałata-Seei the school of the 16-oglinia, maintained the established order of promotion in the college of the "Damas" and organised the postal service and administration of Anatolia. An alliance between Austria and Venice was the result. (7th and 8th of October 1748). Prince Eugene demanding the entire fulfilment of the treaty of Carlowitz, decided him to declare war (1128 = 1719). He fell, struck by a ball on the forehead, during the battle of Peterwardein; when the Turks were already completely routed (Aug. 5). He was interred at Belgrade; seventy years later, Louis canvassed his coffin to Vienna, where it remains to-day, in the forest of Hadern-dorf (Frangon. des Orient. v. 531; Fiecher, Kleiner Schrift. iii. 609 et seq.). He was the patron of the historian Rūḥī. (C. H. HART.)

ALI PASHA MURRAK, officer of the Egyptian engineer corps, statesman, and man of letters, was born in 1230 (1823-1824) at New Beramāl (Dakahlīya, Nile Delta). Though of humble origin and of the peasant class, his industry, ambition and ability enabled him to become a pupil of different schools. It was decisive for his later career that, in 1251 (1835-1836), he went to the school of Kaz al-Aln, afterwards (1254), to that of Abū Zayd at Cairo, and that in 1250 (1844), he was sent to Paris with his "Egyptian" in the artillery-school at Metz, where he performed himself both as an officer, and in the duties of an engineer, who had already been the object of his ambition in his native country. On his return to Egypt (1256 = 1849) he won the favour of Abūn, and gained high positions; in the Crimean War, he was actively engaged at Constantinople, in the Crimea, and at Gūmri; under Sehîd he occupied one after another almost all the ministerial posts, and other responsible offices. Everywhere he introduced reforms, although acting with well-meaning zeal rather than deep understanding. To him is due the establishment of printing-offices, and the printing of school-books; especially technical ones, the work at the barracks near Cairo (al-Ḳas̄;lāf al-Ḳatrīya), and at the Conference of Suze, the construction of railways, and irrigation-works, the foundation of the "Dār al-Ulfit," which may be described as an "Ecole normale," and of the "Slihs[h]ṭūqa Khālis al-" (1870). In matters of education he was fortunate enough to obtain the advice and co-operation of that admirable Swiss
pedagogue, Ed. Der Bey (who died in 1856). In June 1883, in the Rijâl Pasha Ministry, he undertook for the last time the charge of public instruction. The result was more and more crucial, in remembrance the saying of Said Pasha’s day: “Instruction publique — destruction publique.” For as regards administrative and political morality, he was deeply stuck in the morass of the earlier period, which reached its zenith and fell to ruin under Isma’il Pasha. There always stuck to him something of the naive cynicism of the felâh. The various measures of Sir (afterwards Lord) Alfred Milner failed in bringing about his resignation (Spring 1891). He then lived as a private person at Cairo, and died on the 5th Dīdād 1 1321 (November 13, 1893). For the appreciation of his personality and his works, reference can be made to Zeitachs. d. Deutsch. Morgen. Gesellschaft, xlviii, 720 et seq.

His earliest publications mostly treat of education, as for example the Tawfîk al-aklumâz, which appeared in 1856, and the Tawfîk al-‘adlâmûn turâbît al-‘adlâmûn (Cairo 1859). The question of legislation was dealt with in: Nahhâr al-khâs fi tahdîr Nîl Mîrâj (Cairo 1838). I am not acquainted with his Ahsâm al-‘adîn (Alexandria 1299; cf. his Khâtâf, xlii, 45.). Of his metrical studies only Part I appeared, under the title: Khatf fi al-tafsîr wa al-tahrir (1359). During his last period of office he published a reading-book: Tawfîk al-khâs wa tawfîk al-manâžir. His philosophical work, al-Khatf al-‘aswâdat al-tanâjûdîyya, appeared in 1350 (1888-89); it is intended to be a continuation of al-Mahri’s Khâtâf, cp. oriental. Bibliogr. li. no. 1026; Goldblatt, in the Wiener Zeitschr., f. d. Wissensch. der Morgen., iv, 234 et seq. I have already discussed elsewhere (t. v.) the success of the work. It is incorrect to maintain (Broekhuisen, Géogr., t. vii, c., 482.), that his topographical data are for the most part based on his own observation. The usefulness of the compilation should not cause us to forget the fact that we are dealing with a work which is the result of the collaboration of the most varied talents, and in which every statement must be accepted with caution. The Khâtâf also contain his autobiography (I. 37—61, 4.t. Erenbîl).

**ALI PASHA MUHAMMAD EBâN, Turkish diplomatist and statesman, was born at Constantinople in Rabî’ I 1270 (Feb. 1815). He was a pupil of Rashid Pasha, chargé d’affaires at London (1838), ambassador (1841), president of the Tercûmân Council (1855), plenipotentiary at the Congress of Paris (1856) while the Khâtâf al-‘aswâdat was being proclaimed (Feb. 1858), the prime minister of the Porte and that of Fuad Pasha; Grand Vezir 1857 and 1860, and also in 1862 went to Crete in person to treat with the insurgents (Oct. 4), but without success, and he set to work to introduce some more reforms, such as: the extension of the right of succession to the collateral line to the state lands and to the customary usufruct; the admission of foreigners to the possession of real estate in the whole territory of the Empire, excepting Hijâz and Yemen; the creation of a Council of State, of the College of Galata-Senû, and of a High Court of Justice; the introduction of the metric system for weights and measures. The title of Khâdir was granted to Isma’il Pasha, Viceroy of Egypt (1867); the last’s desire for independence led to an energetic intervention on the part of Ali Pasha; on his elevation (Aug. 29, 1869), the Khâdir deposed his fleet of iron-clads, reduced the effective force of his land troops, and reorganized the secret service every year to the Sublime Porte; a statement of his financial position, and to conduct no loans or sign treaties without the Sultan’s authorisation. Under his government, the Sublime Porte protested in vain against the decisions of the London Conference (May 13, 1871), which cancelled the clauses of the treaty of Paris, by which the Black Sea was declared neutral, to Russia’s advantage. Ali Pasha died on Sept. 19, 1871, leaving behind him the reputation of an honourable man and of a convinced infantist; it was by his ability and firmness that he was able to exert considerable influence over ‘Abd al-Azzâ, whose suspicious and despotic character rendered the task a difficult one.**

**ALI PASHA RIZVÂN BERKÖZLÛ, [See RIZVÂN BEKOZLÛ].**

**ALI AL-RIDÁ B. MUṢÂH B. DHA‘âR, eighth Imam of the Shâfîs, born at Medina in 228 (753) or 229 (754). The ‘Abbasid Caliph al-Ma‘ümûr, while he was at Merv in 203 (818), sent two messengers to summon him; he sent him the text of his answer, which was sent to the caliph, and gave him the surname of Nâsir min li-Muhammad (the Well-Beloved of the family of Muhammad); he ordered his troops to change the black uniform of the ‘Abbasids for the green one of the ‘Aliids; he also altered the colour of the flag. He had chosen them in account of his party and of his learning, excluding the ‘Abtashid (4 Râmâzân 201 = March 24, 817). This designation was the cause of many uprisings, notably that of the inhabitants of Baghda, who proclaimed in February al-Mahdi at Caliph. ‘Alî informed al-Ma‘ümûr of the disorders which had been taking place among the people since the death of his brother, and which had been hidden from his knowledge by his Mdini, Fâdî b. Sahl. On the occasion of the latter at Baṣra, perhaps at the Caliph’s instigation, al-Ma‘ümûr left Merv, and went to Tâs, in order to spend a short time by the tomb of Hârûn al-Râshîd, his father. It was then that ‘Ali suddenly died in the same city (in the quarter of Nîyâm) at the end of Shawâr 203 (early in Sept., 818), from a surfeit of grapes; his followers have always affirmed that he was poisoned, and died after a three days’ illness, after eating a pomegranate offered him by ‘Abî b. Hishâm. He was 44 years, 49 years old, or 53 years of age, according to the date that is adopted for his birth. The Caliph mourned him deeply, followed his bier, and said: the last prayers. He was interred close to the tomb of al-Râshîd, and his mausoleum (Maşhîh) which his son, ‘Abd al-Ma‘ümûr, has given its name to the present capital of Persian Khosân, which has supplanted the city of Tâb (Hamid ‘Alî Mrûâfû, Nâsir al-eghîbûlî, and Maṣûlî, Zmaykânâlî, in Barbier de Meynard’s Dictionnaire, St. à Paris, p. 306, note 1; The Bengali, iii. 78).**
Shi‘ah dogmatists. Numerous miracles are attributed to him; rain fell in answer to his prayers, and he indicated for which province every rain-cloud was destined; he caused a gold coin to be found on the road by rubbing it with a piece of stone; he informed the Prophet (Bismillah). Baha‘ al-Din Mughni of a prayer which the latter had made at Makkah; he knew what passed in the hearts of men and gave many examples thereof; he knew beforehand the hour of men’s deaths. In midwinter he made the grass grow in a garden and the grapes ripen. The third hour of the day is sacred to him; his intercession is invoked for a favourable journey by land or sea, and in order to be delivered, from the sufferings of exile ([Jami‘ al-hikmat, tab. XV).

Bibliography: Tahāt ill. 1029; Ma‘ṣūrī, Ma‘ṣūrī (Paris) vil. 3, 61; Ya‘qūbī (ed. Huhtama) il. 550; Ibn al-ʿĀṯīr (ed. Tarni) vi. 249. (CL. BUTLER)

‘ALI SHER. [See NEWAYT.]

‘ALI-TEGIN, a prince of Transoxiana (Mā‘ṣūrī) (al-Ṭāqi) of the house of the Bābkhān. Nothing is known of his genealogical relationships with the other princes of this house, according to Ihsan al-ʿAthīr (ed. Tarni, ix. 323), he was a brother of the conqueror of Mā‘ṣūrī (Nar b. ‘Ali), yet this statement (which seems to have originated as a mere interpolation) must probably be rejected. The name ‘Ali b. ‘Ali is not mentioned on any coins of this period, on the other hand we find that of ‘Ali b. Hūsim, who might perhaps be identified with the ‘Ali-Tegin of literary sources (esp. Howorth in the Fourth of the Rev. At. Soc. xx. 485-486). We know just as little as to when and how he acquired his authority. Bahlūlī (ed. Morley, p. 418) represents the Bahlūlī Abu ʿIzzān Mā‘ṣūrī as saying in the year 432 (1042), that ‘Ali-Tegin had been in Mā‘ṣūrī in Nahr for thirty years. In 416 (1025) ‘Ali-Tegin had to defend himself at the same time against Malik of Ghassan and the powerful Kāshān of Kāshān. The union of the allied armies took place not far from Samarqand. ‘Ali-Tegin was forced to retreat to his capital Samarqand and Bukhārā, and to retreat to the steppes; during the pursuit his wife and daughter fell into the hands of the enemy (for details see Gārān, Zain al-ʿĀs, ibid. 72-74). S. A. C. Chisholm, King’s College n. 213, fol. 123-124, and ma. Oxord, Bodleian, Osamdey no. 240, fol. 153-154, quoted by W. Barthold, Turkistan during the epoch of the Mongol invasion (Turkistan in zprej monažství maliček-tvůj) text pp. 14-17; Mā‘ṣūrī’s union with Kāshān is briefly mentioned in Bahlūlī, ed. Morley, pp. 68 and 665. But the land was soon cleared of Mā‘ṣūrī and his allies, so that ‘Ali-Tegin was able to maintain his rule. In 432 (1032) the Khirvānīs of Alūbahrī appeared before Bakhīrā with an army, by order of the Sultan Mā‘ṣūrī, and captured the city; he was however mortally wounded in the battle of Dahān glands, as the result of which his Wāzīr was compelled to conclude a treaty with ‘Ali-Tegin, and to lead his army back to超强 (Bahlīlī ibid. pp. 424-425). ‘Ali-Tegin’s death must have taken place between the end of 435 or the beginning of 436 (in Autumn). – ‘Amīn ibn al-ʿĀṯīr, Dāḥī (1869), p. 102; (Ibn al-Ḥasan da) 465 (beginning of October; 1034) a report from Khurāsān. ‘Ali-Tegin was mentioned therein as a living ruler (Bahlīlī, p. 532); yet in the middle of Rabī‘ I, 466 (end of January, 1055) the tidings of his death was only known in Nahrāt as a vague rumour (ib. p. 551); not until the beginning of Dhu‘l-Qa‘dah II (April) of the same year, did the Sultan Mā‘ṣūrī, who was then in Tabaristan, receive certain trustworthy news of his death. ‘Ali-Tegin was dead and that his eldest son had succeeded him (ib. p. 575). Yet Bahlīlī in another passage (p. 856) regards the departure of the Seljukus from Mā‘ṣūrī al-Nahr, which took place as early as the year 415 (Autumn of 1034), as a consequence of the events occurring after ‘Ali-Tegin’s death. (W. BARTHOLD).

‘ALI TEPFİDENLI, born at Tepe-dilin (Albania) in 1741, was a descendant of the old Beys of the land. His father having been deprived of his tax, ‘Ali gathered together a number of brigands and succeeded in recapturing Tepe-dilin. To the Sublime Porte he rendered the service of subduing the Pashas of Souari (Siğöddin) and Delvino; was confirmed in his office of Bey; became Pasha of Trasila in 1787; took Janina in the following year and became Governor of it; in 1796 he had been created by the English cedex Pasha to him in 1817. He ruled in Albania, Epirus and part of Thessaly, and declared himself independent in 1834 (1819), when he was summoned to Constantinople to justify his conduct. In order to defend himself, he enrolled Greek volunteers and klephts (brigands) in the Morea, in Livadia and in Beotia, as well as Serbians and Walois. His sons, Ahmet Makhzūm, Walla and Selîm, who were his command at Beotia, Preveza, and Lepanto (Aṭṭar-bakhti) respectively, were either defeated, or abandoned him in succession. Overpowered himself near Janina by Pelhivan and Ismail Pasha (22 Ubil-ba’a, 1323 = Aug. 31, 1820), he shut himself up in the citadel, with 800 men and 200 pieces of cannon; held out for several months, so bravely that Khurṭhīd Pasha, discouraged returning to Arta and did not succeed in regaining the city until the following year (1327 = 1821). Hemmed in at close quarters in a tower of the castle on the lake, ‘Ali Pasha surrendered on condition of a safe-conduct; but the Sultan Mā‘ṣūrī, having ordered his death, he died—defending himself against the soldiers sent to arrest him (13 Dūnhadh I, 1337 = Feb. 3, 1822). Avocational, cruel and treacherous, but of remarkable energy, he lent powerful aid to Greek independence by calling the insurgents of Greece to his assistance.

‘ALI WAFAIL. [See WAFAIL.]

ALIDD(E) [See AL-‘IDD(A)].

‘ALIDS, descendants of ‘Ali b. Abī Tālib, who had fourteen sons and at least seventeen daughters, namely: by Fatimah, daughters of the Prophet (Bismillah), his only lawful wife, who also lived: al-Husayn, al-Husayn, Muhammad (Mā‘ṣūrī among the
Persian [Shi'ites] who died in infancy, Zainab the elder, Umme Kultum the elder; 2. by Umme al-Bahr b. Hurairah al-Hassani; 3. by Matr'ah b. Kharrah (a woman); 4. by Umme Khatun b. Ummi al-Khathirah: Yahyaa, Muhammad, the young boy (according to the Shi'ites and the Alawites); or Yahyaa, 'Awn (according to the Sunnis), was the son of a slave; 5. by Umme 'Abd al-Hamid b. Rabi'a, named al'-Salih, a slave captured by Khalid b. al-Walid at 'Arin al-Turk; 6. by Umme al-Mughrabi b. 'Abd al-Aswad, whose father was Zainab, daughter of the Prophet; 7. by Khawla b. Dzafur, named al-Salih, a slave; 8. by Umme Sada bint 'Uswa b. Ma'did b. al-Hajjaj: Umme al-Hassan, Ra'ula the elder; 9. by Mulayik bint 'Imra b. al-Aswad b. 'Absid: a daughter who died in infancy; 10. by different mothers whose names are not known: Umme 'Abd al-Razzaq, Umme al-Hassan, Zainab, daughter of the Prophet; 11. by Umme al-Khalid the younger, Fatima, Umama, Khadija, Umme al-Khadija, Umme Salama, Umme Dzafur, Dzayma, Nafisa (Tabari i. 3471 et seq.).

Five of these sons left issue, namely: 1. al-Hassan, al-Husayn, Muhammad b. al-Hassan, Fatima, and 'Abd Allah (Abd al-Mu'tadil); 2. the last time of the 'Abbasids: Muhammad b. al-Hassan was named al-Safar; 3. the Qashqais: Muhammad b. al-Hassan was named al-Safar; 4. the Qashqais: Muhammad b. al-Hassan was named al-Safar; 5. the Qashqais: Muhammad b. al-Hassan was named al-Safar.

The descendants of 'Ali b. Abi Talib were, for the most part, unfortunate; and their misfortunes fill the pages of Muslim history. The 'Alids were persecuted by the Umayyads (Ushkhi al-Ikhshid, Zaid b. Zainab al-Abidin), and they were outlawed by the 'Abbasids, who diverted to their own advantage the property of the 'Alids (al-Muhannad al-'Ash'ar al-'Ash'ar), from which the 'Ash'ari' culture. The descendants of Fatima, descendants of Muhammad, and al-Husayn (Abu al-Aswad, a brother of 'Abd al-Rahman b. al-Hassan), and the descendants of Zainab, daughter of the Prophet, were all of the same branch, and their misfortunes fill the pages of Muslim history. The descendants of Zainab, daughter of the Prophet, were all of the same branch, and their misfortunes fill the pages of Muslim history. The descendants of Zainab, daughter of the Prophet, were all of the same branch, and their misfortunes fill the pages of Muslim history. The descendants of Zainab, daughter of the Prophet, were all of the same branch, and their misfortunes fill the pages of Muslim history.
ALIF is the name of the first letter of the Arabic alphabet, with the numerical value 1. Being ignorant of the origin of the name, the Arabs have conjectured various explanations. According to the character of the Semitic alphabet, which can only include consonantal sounds, we understand by it solely the vocalic laryngeal explosive, which, according to tradition, was pronounced with an especially strong intonation by the Taamites, almost like Siri (i.e., instead of ẓ), hence the designation ẓawma for this dialectic peculiarity; Arab philologists, however, saw in alif, when as mater lectionis it denoted the prolongation of the sound  eius, a sign to be distinguished from the consonantal alif, and go so far in their error as to assign it in this case a distinct articulation. The distinction between alif and kamma, which cannot be combined with a vowel of its own, is named by them al-ṣalif al-ḥamāsin or al-ḥamāsin, while on the other hand: they call the true consonantal alif al-ṣalif al-ḥamāsin. As, however, in this last character the alif is always written with the sign kamma, they also give it the appellation of al-ṣalif al-muxabbas or briefly hamza. This distinction between alif and kamma which they lay down and strictly adhere to in their linguistic, is untenable; in practice they themselves frequently use alif in the wider sense to denote the consonantal sound. The alif of the article, of the verbal forms 7 to 10, and of a few nouns (e.g., ẓimr, ẓinār) is only a prothetic alif, which is not pronounced in continuous speech (al-zaamkhāris, al-muṣafārīn. p. 165, i. e. repr.) and hence it is called alif wa; it is opposed to the consonantal alif, alif ʿalā, i.e. alif of separation. On account of the difficulties which the articulation of alif as a laryngeal explosive produces, especially at the end of a syllable, assimilation of the sound takes place in the pronunciation. The Arabs, who name this phenomenon  tūbīf ʿal-kūma (“Lightening of the kūma” — “qubāl p. 165, 167, i.), distinguish three kinds of tūbīf: 1. The transformation of the alif into  waw or  yī’ (lidāl al-kūma), 2. the approximation to either of these two letters in the pronunciation ( ʿalāl al-kūma  kaneh  kāba), and 3. the complete elimination (al-baḥa’). Dubbing or assimilation of the consonantal alif was only taken place in cases like  al-ʿāla (Muṣafārīn p. 169, a’); with regard to the alif of prolongation, this is of itself inconceivable. On account of its manifold application in Arabic, the Arabs have introduced names (alif ʿalā al-dār) for the different functions of alif. The alif al-ḥāṣa or al-ḥāṣa al-fāṣiha (the “discursive” alif), occurring at the end of some verbal forms (e.g., 3rd pers. plur. masc., perf.), has only orthographical significance; the alif al-ḥāṣa (the affered alif) has a constructive etymological force in the case of masculine and feminine nouns, and is either alif maṣāfa (“alif liable to abbreviation”) as in al-nṣība, al-tṣūba, or alif  muṣāfa (always long) as in al-ṭṣūba, al-ṣība, al-ṣīr. In addition, the alif al-ṭṣība (alif expressing superiority and inferiority) is used as the sign for a prefix (alif ʿalā maṣīrab, the alif ʿalā maṣīrab), of the form  ʿalā ṣīf (the alif ʿalā maṣīrab meaning “the form of the prefix ʿalā”). In the interlocutory alif (alif ʿalā al-ṭṣība), the alif of vocative (alif ʿalā al-waṣīfa), the alif expressing a later time (alif ʿalā al-waṣīfa), the alif of the plural (alif ʿalā al-waṣīfīn) is in  ṣūba, and the alif which forms the dual (alif ʿalā al-ṭṣība), in all Arabic lexicons at the beginning of the articles  ʿalā and  alif ṣūba, these and other cases are specified, and also all grammarians treat alif as an auxiliary and supplementary letter (alif ʿalā al-waṣīra) in special paragraphs (e.g. Muṣafārīn p. 170, a’).

ALIGARH is the capital of the district of the same name in British India of the same name, division Meerut (Midnapore) in the “United Provinces”. The district (1946 sq. miles, or 5024-5 sq. km.) had 1,200,000 inhabitants in 1901, and the town 70,434 (of whom 77,518 were Muslims). The town was originally called Coll (Koll), while the creating, which was erected in 1854, was denoted by Aligarh (a “fortress”) after its restoration in 1776 by Nadir Khan. Before this the fortress was called Ramgur, and occasionally one also comes across the name Shitalgur, after a certain Sultan Khan, and Mahammedgunj. The modern Aligarh is principally noted for its Anglo-Oriental College. This was founded in 1875 by Sayid Ahmed Khan, and was not until January 1877 that the Viceroy, Lord Lytton, laid the foundation-stone of the present College. The erection of the College was accomplished by the foundation of a hospital and the so-called “English House”. During the lifetime of Sayid Ahmed Khan (i.e. until 1898), the management of the affairs of the College, especially the finances, were in his hands, and caused him considerable anxiety. He had, however, the good fortune to possess Th. Beck an excellent principal for the College, who during his term of office (1883–1899) was able to surmount all difficulties, and raised the establishment to a flourishing condition. He found worthy successors in Th. Brown (1899–1905) and W. A. J. Archbold, who at present holds the position. Although the original intention of the founder aimed at juvenile instruction, the school soon developed into a College on English lines, which the directors are now striving to convert into a Mahammedan University. In 1891 the number of students was 3203; 10 years later it increased to 506, and at the present time has reached to upwards of 800. Instruction is given in the following subjects: English, Arabic, Persian, Sanskrit, History, Mathematics etc. Eight teachers of European origin, and a certain number of Indian graduates, are engaged in the work; the appointment of Dr. J. Horovit
to the Chair of Arabic arose from the efforts which are being made to familiarize the students with European methods of research in this branch also. The management of the College lies in the hands of a number of Muhammadan trustees, and is independent of the British Government, although the latter promotes the enterprise in different ways.

History: Coll., which was certainly of ancient foundation, was captured towards the end of the 16th century by Kair al-Din Abbeg (q. v.). After this it is often mentioned in the history of the Muhammadan of India and has been described by many Muslim authors, as for example by the famous traveller Ibn Battuta (cp. the Paris edition of his Travels, iv. 6) who visited it in 1345 A.D. In 1783, the town fell into the hands of the Mahratta chiefs of the Sindhia family, who with the help of the Frenchman De Boigne drilled their troops in European fashion, but were finally compelled to yield the town to the English under Lord Lake (1803).

ALIHA, pl. of Ilah (q. v.).

ALILAT, according to a much discussed but very doubtful passage in Herodotus, is the name of an Arabian goddess. As deity of Arabia in biblical times, he is mentioned in the Odes, called Ophrat by the Arabs, and Urania (i.e. Aphrodite Urania), whom they name *Aliat*. On the other hand, he says (l. c. 131), that Aphrodite Urania is named Mylitta by the Assyrians, and *Alatta* by the Arabs. Hence the question arises, which form is the correct one. Bocchi proposes to change Alilat to Alilat; but it is just as probable that in the second passage the name Mylitta which precedes may be responsible for the corruption of the authentic Alilat. Proceeding from Alilat, the form can be explained either as al-lât (l. c. fem. of *El*; cp. *El* of the Phoenicians and the South Arabians) or as a contraction of al-lilât (l. c. fem. of *Ililâh*). According to the latter explanation, whose upholders have in part proposed to read *Alilat* (q. v.); Alilat, the form would be identical with al-Lât (q. v.); Glaser and Hommel compare the Egyptian *Zâwret* with Alilat.

ALIM (L.), wise, learned (cp. *Ilm*); al-Alim is an epithet of God.

ALIM (A.), knowing, acquainted with (cp. *Alim*; *Alam; Al'ma*); the term *Alim* (pl. *Il'mâni*; also *Il'mi*), in Egypt and Syria, where the French alphabet has also the meaning "female singer, dancer or actress"; Lane, Modern Egyptians (London 1822), ii. 345, l. 72.

ALINDJAN is a fortress in the district of Nakhfîtin (Alahrâbîjûn).

Bibliography: P. Horn, Die Denkmaer-Abbildungen des Sâd Thambat von Persien, p. 143.

Sâdîd 1sdehni, Thambat al-Fâth (in Barbier de Meynard, Dictionnaire de la Perse, p. 52); Muhammed Hassan-Khan Sant al-Dawla, Mir'at ad-dibân (Najaf, Tehran 1294) i. 95; (C. de Hulst).

ALISA (or ALISMA) is *Elaisa*, the Biblical prophet Elisah, is mentioned twice in the Korân (xxvi. 86; xxxviii. 78), both times after Isma'il (Josephus). Bâsâfây (on Korân, loc. cit.) says that *Elisa* and al-Kisâ read Alisâ, and he remarks that in either reading the first syllable is the definite article. Although in I Kings xix. 15, 19 it is said that Elisah was the son of Shaphat, the Muslim commentators on the Korân and chroniclers call Alisâ’s father Ukhtihb, Khodement makes him a descendant of Ephraim son of Joseph. His first meeting with Ilyâs (Elisah) is related as follows: Ilyâs once came into the house of a poor old Israelite widow, whose deceased husband was called Ukhtibh and who had a young eunuch son named Alisâ. Ilyâs cared the latter through his prayer, and since then Alisâ accompanied him in all his errands. This has evidently been adopted from I Kings xvii. 9 et seq., although in xix. 20 it is said that Elisah when he first met Elisah had both his parents living. Certain authors identify Alisâ with the prophet generally designated as *Ilyâs ibn al-Aqmar* ("the son of the old woman"). But Tabari (l. c. 535) applies this appellation to Zakkil (Essekil); Alisâ was the name (most) of Ilyâs in prophecy; he was also in charge of the Ark of the Covenant, which according to Muslim writers was handed over from one prophet to the other. After having preached to the Israelites the unity of God, Alisâ prayed to God to take him away from this world and place him near Ilyâs. His first wish was granted; he died leaving Ibn 1-sâlif as his successor. — The Muslim authors assign Alisâ a much earlier epoch than that in which the Biblical narrative places him, i. e. long before King Saul. Tabari (l. 559) even says that it was Alisâ whom the witch of Endor made to rise from the grave for King Saul (see 1 Samuel xxviii. 9 et seq.). But there is much confusion as to his identity; both Tabari and Thâfâr quote the opinion of certain authorities who identified Alisâ with al-Kisâ, while Khodemente quotes the opinion of one who identifies him with Ibn 1-kill.

Bibliography: Tabari l. 342 et seq., 559; the same, Persian recension, French trans., of Zobeyden 1. 410 et seq.; Thouâl, El-Aris (Cairo 1209) pp. 227 et seq.; Khodemente, Hatab al-râbor. (M. Seilbôrenkr.)

ALIZARI (Alisari, Lizzari, Izzari, Azzari), according to M. Devol, Dictionnaire (des) termes d'origine orientale de langue Arab, i.e. *Bara*, pressed-out juice) denotes the portion of the root of the madder which is under the earth, from which alizari was formerly obtained. H. Bullois, Dictionnaire des Botaniques, i. 116. (J. Hill.)

ALJAMIA and Aljambêr are the Spanish designations for "Spanish, written in Arabic characters". The word is derived from the Arabic *al-jambah*, which primarily denotes any foreign, non-Arabic language; so in the East, especially Persian; in Syria and the whole of North Africa, the "lingua franca", which consists chiefly of Romance and some Arabic elements; in the Iberian peninsula, the native, Romance dialects (in
opposition to the Arabic, "Alam detectives." especially the Cenitian, the Aromanian and the Valencian; el romance casilino, aragonés, valenciano (early named "castellano", i.e. Romance, and "castellano", i.e. Latin). For the rest, Salvedra has rightly extended the term "aljами" to include all the literary productions of the Mudejares and Moriscos (Mudéjar) under Christian rule from about 1380, date of the capture of Toledo (till 1609), whether these are written in Arabic or in Latin characters. These works, "textos aljamiados," have an especial value historically and philologically; in spite of the difficulties of reproducing Spanish in Arabic characters, and Arabic names in Latin letters, it is extremely interesting from the historical and phonetic point of view, to learn how the Mudejares and Moriscos of different centuries pronounced Spanish and transcribed it in Arabic letters and how they reproduced Arabic names and expressions in Latin letters. Moreover these documents give evidence of the faith, the customs, the social and political vitality of that people without a country of its own, which was indeed tolerated at first, but was more and more oppressed, until finally under the government of Spain fanaticism owing to the Inquisition and the Reforma, it fell a victim to Christian intolerance.

Yet the literary value of this whole literature is not very considerable; fiction, construction and style are strange, forced, and feeble; though to a certain extent it improved side by side with the development of Spanish literature. The Poema, however, or the "Historia de Josel de Nalfajer (Alhacra de Yllana); 14th century," the later "Panegyric on Muhammad" and the cyclic poems of the Aromanian Muhammad Rabadae are noteworthy literary productions as regards metre, poetry, and matter, after the banishment of the Moriscos in 1609, the exhausted Aljamiado completely died out, both in Spain and in Africa.

**ALKA (A.)** - Hosted. ALKALI. [See El-Kalil, Trè](.)

**ALKAMA B. ARAQUÍ AL-TUUMI** (name mentioned in the early Arab poets, lived in the 6th and 7th centuries. His poetry relates to the combats which took place between the Laghmius and the Ghassanids; by recalling a few lines of his library, his brother Shihab, and the other Tummi, king of the Ghassanids, had taken prisoner. He had poetical contests with several contemporary poets, among them Imara al-Kaši. The wife of the latter, Ijuwalah, whose decision, it was said, had been asked by the two poets, decided in favour of Alkama; in consequence she incurred her husband's anger, and was afterwards divorced by him. Alkama married her, whence his surname of al-Falih. If the two poems which deal with the second day of al-Kâli are really the work of Alkama, it is possible to fix more precisely the period in which he flourished. For most historians believe that Shihab was taken prisoner in the battle of 'Ain Udah (s. 593 A.D.), when Alkama was no longer young (cf. poem n. 45 in Alkama's edition), and the battle of al-Kâli took place, according to Cassim de Perseval, in 612 (Essai sur l'histoire des Arabes ii. 579).—The Divan of Alkama was first published, together with a German translation, by A. Socris (Leipzig 1867), then the text alone, by Alwari (The Divan of the six ancient Arab poets (London 1876) = Bibliotheca Arabica vii. 127-128), xxi. 171-175; de Slane, Le Dictionnaire des Arabes (Paris 1837) p. 501; Cassim de Perseval, Essai sur l'histoire des Arabes (Paris 1837) 314; A. ALKENDI. [See AL-KINDI.]
ALKOHOL. [See AL-KHULJ.]
ALKOVEN. [See AL-QURMA.]

ALLAH, the Supreme Being of the Mussulmans; from the Arabic Allah. That the Arabs, before the time of Muhammad, accepted and worshipped, after a fashion, a supreme god called Allah, "the God," or "the god," if the form is that of genuine Arabic origin; if of Arabian, from Allah, "the god"—seems absolutely certain. Whether he was an abstraction or a development from some individual god, such as Hubal, need not here be considered. For the archaeological and non-Arabic evidence see Wellhausen, "Koransches Religionsleben," pp. 117 et seq.; and especially Noldeke's article on Arabs (ancient) in Hastings' *Dictionary of Religion and Ethnics*, i. 662. Here it will suffice to give the evidence of the Korâns. There, the Mecans affirm that Allah is creator and supreme provider (xxii. 17; xxix. 63; xxxi. 24; xxxii. 39; allii. 8, 87; it is surely a strain on xiii. 18 and xxix. 43, to make them prove that Allah was a rain-god); they call upon him in times of special peril (v. 23; xvi. 55; xxix. 65; xxxi. 30; v. 79; iv. 40; xxxiv. 49); they sought him a separate portion, distinct from that of all other deities (v. 137); they urge that he had forbidden them to worship other gods with him (v. 149; xxxviii. 168). But they also recognized and tended to worship more fervently and directly other strictly subordinate gods. Here it is not easy to distinguish between their views and the interpretation of their views adopted by Muhammad, especially between their vocabulary and that of Muhammad. It is certain that they regarded certain deities (mentioned in liii. 19-20 are al-Uzlu, Manat, or Muth, al-Lail (?); some have interpreted v. 79 as a reference to a perversion of Allah to Allah) as daughters of Allah (v. 100; xxviii. 149; liii. 28); they also asserted that he had sons (v. 100). But the Mecans used of these the term rahat, we cannot tell; perhaps less probable is that they spoke of them as mawâlitka. On all ordinary occasions they worshipped those rather than Allah; their offerings were made by preference to them, and Allah was defuded (v. 137 et seq.); at least these would interfere with Allah (lii. 26); yet the Mecans were uncertain as to whether these were created (xxi. 17 et seq.) and in all extremities they came back to Allah; as to him there was no doubt. Certain also is that they asserted a "knasip" (wazad) between Allah and the Djinn (xxxviii. 158; comp. for Korâns use of the word xxv. 56, xxxii. 103), made partners of Allah (v. 100); made offerings to them (v. 125); sought aid of them (lixxi. 6). Whether they had the idea of angels and asserted their "partnership" is not so certain; that may be Muhammad's interpretation (v. 100; lii. 28). As for his attitude in these matters is also clear. Besides Allah, there existed angels and Djinn with Satan and the Satans in some relationship to the two latter. These, in reality, are the beings on whom the Mecans call; but they can do nothing for them (xvii. 26); making them feminine and giving them names is unwarranted invention. It will be seen then, that whatever may have been the earlier case in Mecca and whatever the case in the rest of Arabia, and whatever may have been the origin of the names applied, the religion of Meccan in Muhammad's time was far from simple idolatry. It resembled much mo'e a form of the Christian faith, in which spirits and angels have come to stand between the worshippers and God. And Muhammad naturally regarded himself as a reformer who was preaching an earlier and simpler faith and putting angels and Djinn back into their true places.

II. Muhammad's Doctrine of Allah. His attitude is stated most simply in the first article of the essential Muslim creed: "La ilâh illâ 'llah," "There is no god save Allah." This meant, for the Mecans and the Meccans, that of all the gods whom they worshipped, Allah was the only real deity. It took no account of the nature of God in the abstract, only of the personal position of Allah. "*Allah*" therefore, was and is the proper name of God among Mussulmans. It corresponds to Yahweh among the Hebrews, not to Elohim. No plural can be formed from it. To express "gods," the Mussulmen must fall back upon the plural of ilah, the common noun from which Allah is probably derived; this Muhammad does frequently when speaking of the "other gods" (e.g., al-Ilahom nabihi v. 15) which the Meccans joined to Allah, and Israelites has followed him with, however, a preference to use instead the more distinctive suqal ilah or wâqil ilah, "idols". Comp. article Allah in Hastings' *Dictionary of Religion and Ethnics.*

But, though the name was the same for the Meccans and for Muhammad, their conceptions of the nature of the bearer of the name must have differed widely. The Meccans, evidently, had in general no fear of him; the fear of Allah was an essential element in Muhammad's creed. Allah lay in very shadowy remoteness from mankind; he was very terribly near to Muhammad at every moment—nearer than the neck-artery (l. 15). The Meccans did not hesitate to disregard him and to cultivate the minor gods; Muhammad knew him as a jealous and vindictive sovereign, who would assuredly judge and condemn in the end. A vague abstraction had become an overwhelming personality.

We must now analyze that personality, as Muhammad conceived it. Fortunately, the exigencies of the so-called rhyme lent him to characterize Allah by a number of epithets, and later Islam, in gathering up these "Most Beautiful Names" (ul-anâm al-husna) — the phrase itself occurs several times in the Koran (vii. 179; xlix. 110; xx. 7; lix. 24) and shows Muhammad's own relish for such descriptions — and using them devotionally, has followed a sound instinct. They express the concrete directness of Muhammad's God far better than the lists of qualities (i§âl) of the scholastic dogmatists, and may be used safely as an aid in correlating and stating Muhammad's too often spasmodic and contradictory utterances. Comp. on them the article by Redhouse in *Journal of the Roy. As. Soc.* 1886, xii. 1-69.

First, Allah in and by himself. The descriptions are at first sight a strange combination of anthropomorphies and metaphysics. Yet when Muhammad speaks of Allah's two hands (v. 69; xxxviii. 75) or of his grasp (xxxix. 67) or of
his eyes (liv. 14) or of his face (liv. 100, 274; vi. 32; xviii. 27 and often) or describes him as settling himself upon his throne (xx. 4 and often) we are not to regard that as due to an anthropomorphic theology but rather as the still plastic metaphor of a poet. To speak technically, we have here only μορφήν. Ἰδεῖν and ἐνθάδηλη lay with the future exigent. Similarly in the case of the metaphysics. The fire of Muhammad's imagination expressing itself with concrete directness confounds the Praise (al-ḥabīb), the External (al-ʿašrāf) and the Internal (al-ʿašrāf), i.e. liv. 3, and even the Self-Substituting (al-bāzīl, i. 256; ii. 1) — the poet had already developed in Arabic a vivid power of wielding descriptive epithets: but the Existing (al-wadīd) does not occur in the Korān, though it might have done, and the Necessarily Existing (al-wadīd al-wadīd) belonged to the future scholasticism. Allāh, then, is the One (al-wadīd, often), the LIVING (al-ḥabīb, ii. 273) He was the Foundation and in and through himself (al-mustawadd, xii. 10 only), the Exalted (al-ʿašrāf, often), the Comprehensive (al-ʿašrāf, ii. 248 etc.), the Powerful (al-ʿašrāf, i. 19 etc.), the Self-Sufficient (al-ʿašrāf, ii. 265 etc.), the Absolute Originator (al-bāzīl, ii. 111; vi. 101 only), the Ensuring (al-bāzīl); as an epithet this does not occur in the Korān but the verb is very frequent of Allāh; see below), the Eternal (al-muṣṭaṣf, xxvii. 21 only); but the exact meaning and origin of this संस्करण are uncertain to the earliest commentators; comp. Tabarî, xxx. 196, 7), the Mighty (al-ṣāla-t, often), the Grand (al-ṣāla-t, often), the Dominant (al-ṣāla-t, xii. 39, etc.), the Sublime (al-ṣāla-t, xii. 76; xxxv. 15 only) otherwise of Korān itself; another of the Nouns, al-wadīd, does not occur in the Korān, the Generous (al-bāzīl, often; in Arabic means strictly generous), He of Majesty and Generosity (al-dīn al-ṣāla-t wa-l-ṣāla-t, liv. 78), the Majestic (al-ṣāla-t; as epithet not in Korān but the idea in other forms is very frequent), the Strong (al-ḥabīb, often), the Firm (al-muṣūr, xii. 58 only), the Knower (al-muṣūr, often), the Sublime (al-ṣāla-t, vi. 103 etc.), the Aware (al-ḥabīb, often), the Wise (al-ḥabīb, often), the Hearer (al-ḥabīb, often), the Seer (al-ḥabīb, often), the Holy King (al-maṣūr al-ḥabīb, xii. 23; liv. 3 only); āmlūd alone is reckoned as one of the Nouns; but it occurs only in combination with King; what idea Muhammad associated with it is quite obscure, perhaps only of separation; elsewhere the root is used only of the Holy Spirit, Gabriel; of the Holy Land; of the Holy Water in which Allāh met Moses of the angels sanctifying Allāh; the commentators explain it, of course, as a term of āmlūd, the Peace (al-āmlūd, xii. 53 only) again the idea is quite obscure but is almost certainly not “peace”; the commentators explain it as ἀσθένεια = immunity from fear or defect”, which is not at all impossible. It may be only a reminiscence of some phrase of a Christian religious service taught up by Muhammad; Justice (al-ṣāla-t, xii. 55; x. 169; So-om; but āmlūd in the Korān is used differently), the Benefactor (al-ḥabīb, liv. 28 only), the Light of the heavens and the earth (al-ṣāla-t, xxiv. 33 only); the context seems to point to worship in Christian churches and monasteries, and in that case the picture is derived from the liturgical altar, and the Korānic phrases in the context recall the “Light of the World” in the Gospel and “Light of Light in the Nicene Creed”, the real or Reality (al-bāzīl), must frequently in the Korān of the content of the message of Muhammad, al-ṣāla-t, must be, must not. So-om; liv. 6, 64; xiv. 25; xxi. 29 in phrases of the “real king”, “he is the reality”.

These epithets state for us a Being who is self-sufficing, all-powerful, all-knowing, all-embracing eternal; who is the only Reality. His few ideal qualities are rarely and obscurely stated. What “holiness”, “peace”, “light”, meant for Muhammad, in regard to Allāh, we can hardly guess. That he would have thought fit to call him “just” should not be doubted. The word most frequently translated “truth” means, rather, “reality”.

Next, Allāh is in relation to others, that is, in relation to his creation; for nothing exists save him and that which he has made. He is the Creator (al-ṣāla-t, xxi. 24 etc.; al-ṣāla-t, i. 51; xiv. 24 only; the last was evidently taken over by Muhammad from the Hebrew, and is used without especial meaning), the Shaper (al-muṣūr, xii. 24 only), the Beginner (al-muṣūr), the Resorer (al-muṣūr), these two not as epithets in the Korān, but the idea frequently, e.g. xxii. 15; xxxv. 13) the Giver of Life (al-ṣāla-t, xii. 39 only, but the idea often), the Giver of Death (al-ṣāla-t, not as epithet in the Korān, but the idea frequently, e.g. xv. 23), the Heir (al-ṣāla-t, i. 3) of all who save him from death, the Reckoner and Recorder of all things in a book (al-ṣāla-t, not as epithet, but idea frequently, comp. xxxv. 11; lvii. 19), the Sinner of the dead from the graves (al-ṣāla-t, not as epithet in the Korān, but idea very frequently, the Assembler of all, again, at the last (al-muṣūr, i. 72; iv. 139), the Strengthener (al-ṣāla-t, lv. 87 only), the Guardian (al-ṣāla-t, xxxv. 4 only), the King (al-ṣāla-t, often), the Lord of Kingship (al-muṣūr, xii. 25 only), the Governor (al-muṣūr, xii. 32 only), the Preserver (al-muṣūr, xviii. 43 etc.), the Tyrant (al-ṣāla-t, xii. 25 only, the word elsewhere, 9 times, is used of men and is a bad one; coupled with ‘aam, ḥāf, 8, al-muṣūr, comp. the last as applied to Allāh).

Allāh is thus the absolute Creator, Sustainer, Ruler, Destroyer, Restorer, Recorder; there is no power nor strength save in him. Expressions can be used of him in his absoluteness, which would mean evil, if used of men, who have no such primal right. He is the Exalter (al-ṣāla-t) and the Honounor (al-ṣāla-t), and he is the Adorer (al-ṣāla-t). He is the Withholder (al-ṣāla-t) and he is the Advantageer (al-ṣāla-t) and he is the Defferer (al-ṣāla-t) and he is the Spreader (al-ṣāla-t); he is the Distresser (al-ṣāla-t). It is true that these last do not occur as epithets in the Korān; but their roots are common as used of Allāh. Curiously enough, the epithet from the last, the Distresser, is used in the Korān of Satan (liv. 11).

Next, Allāh in relation to mankind. He is the Compassionate Compassionator (al-rahīm al-
the Compassionate Rahanun, according to the degree of meanimality which we assign to Noham. These are the most frequent of the epithets, and stand at the head of all the Suras but one. Also al-Rahanun: was at one time used by Muhammad as a proper name, equivalent to Allah, and the Moslems regarded this as one of his innumerable names. Compare the title of the twenty-third Surah, Hudaihah, where they rejected the formula containing it and insisted on the old Meccon form "in thy name, O Allah!" (Rahwéi, on Korân alviil: 26; Ibn Hishâm, ed. Wustuff, i. 747).

That Muhammad derived the formula from South Arabia seems proved; see a paper by Mordtmann and Miller in 'Wiener Zeitschr.', i. Die Kunde d. Morgenl., x. 285: cf. seq. But it was no mere formula. Man's standing naked, defenceless and exposed in God's presence was one of Muhammad's most dominant ideas, and is expressed in these Names more frequently than any other. From the root meaning "no forgive" comes a crucible of three: the Forgiven (al-żalih, vii. 154: xi. 2 only), the Much Forgiven (al-ñabâḥ, often), the Forgiven par matier (al-íaźbâr, xx. 84 etc.). He is also the Pardoner (al-ñâmik, lv. 46 etc.), the Clement (al-šalâm, often), the Repealer of sins (al-mustâfî, iv. 35 etc.; used also of man), the Patient (al-ñabâish, xxi. 27 only; used also of man), and explained by commentators as meaning: in the case of Allah, "the acknowledger of thanksgiving"), the Very Patient (al-ñabâish, not as epithet in the Korân, but idea frequently). Two more intimate Names of the same class, are the Kind (al-ñawâf, ii. 135 etc.) and the Loving (al-ñawâđ, xi. 92; lxxxv. 14 only). But he is also the Physician (al-ñawâvi, iv. 6 et al.), the Rekeeper (al-ñawâb, lv. 58; lxxxiii. 39 only), the Witness (al-ñâzîd, often). Again, on man's behalf, he is the Faithful (al-únawâ', of man it means "the believing"), the Protector (al-ñawâshim, lix. 23 only), the Guide (al-ñawi, often), the Guardian (al-ñawâb, often), the Patron (al-ñawâl, often). The last word is used of man also, and is the basis of the doctrine of sainthood in Islam. It means, literally, "one to whom is near, a comrade or companion, and thus can be either the aiding patron or the dependent client. That there is a special class of the latter, the malis or saints, the proof texts is Korân, x. 63: "Ho! the walls of Allah, there is no fear upon them, and they sorrow not". Naturally, then, he is the Avenger (al-ñawâštah, not as epithet in Korân; but comp. v. 46), and the final Opener (al-ñarâfi, xxxiv. 25, and in other forms) who judges and distinguishes and divides between men — used also to indicate the "opener" of gain and victory. And as all things are in his hands, so all comes from him. He is the Giver (al-ñawâhâb, li. 6 etc.), the Provider (al-ñawâsh, li. 58 only as epithet; but the idea of the dependence of all creation upon him of Allah is very frequent), the Auswearer of prayer (al-ñawâfi, xi. 64 only; but the conception of prayer and petition is frequent); the Giver (al-ñawâs) and the Sufficient (al-ñawâl), taken later in sense of the Rishcher do not occur as either in the Korân, but their ideas are fundamental. Comp. e.g. xx. 32 and lv. 129.

Man's relation to Allah, then, is that of dependence. He needs Allah's forgiveness and patience. Allah is a watch-tower and seckner over him; but he is also a faithful protector and guide. From him comes all "sustenance" is the widest sense. He does everything directly — hence these epithets — and, logically, no angels or intermediaries are needed in the scheme. They must be in Jâhâ, because Muhammad found them in the fundamental religion of his day and had to accept them. And all is by his will: "he leadeth astray whom he wills," (xiii. 27; xv. 95; levii. 53). Each one can but hope that Allah will guide him aright, submit him to Allah in absolute fear, and trust that Allah will not cause him to forget and be of the losers in the Fire (lix. 19, 20). Antinomians had noerrors for Muhammad. He, evidently, never thought about predetermination and free-will, whatever later traditions may have put into his mouth; he expressed each side as he saw it at the moment, and as the need of the moment stood. So Allah is kind, loving, patient (see above) on one side, and on another he says: "I created not the Djin and mankind save that they should worship me; I seek not from them any sustenance, and I seek not that they should feed me". Allah is the Sustainer, He of strength, the Firm (!i. 56—58). Again: he is the Haughty (al-ñawâshkâh), the Tyrant (al-ñabâsh); if he aids, he also distresses (quâr). Again: Whom Allah guideth aright, he allows him to be guided aright, and whom he lends astray, they are the losers (vii. 177). And so frequently, Allah is said to lead astray (quâr). And whenever the root ŏk occurs (iv. 154; li. 98, 99; li. 38, 94; lxi. 75; xvi. 110; xxx. 59; xl. 37; xliii. 18; xiii. 3). It expresses the fundamental fact that Allah "seals" the hearts of the unbelievers that they may not believe. These aspects of Allah may not be contradictory; but their separate statement thus and the emphasis upon the last were full of meaning for the future theological development.

Muhammad's position, then, was theistic in the highest degree, and his theology was theocentric. Yet it might rather be said that he was God-intoxicated, than that he had a theology. Certain ideas and phrases dominated him, and he neither thought nor cared whether they might lead. Thus Allah was for him the Reality (al-ñabâ); but he never asked what that meant. He would have said, without hesitation, that there was then there was nothing but Allah. Whether he would have gone on to say that there would be, whether there would be nothing but Allah — as did some later sects — is uncertain. If put in a rhetorical form, he would probably have accepted it as an existing of Allah over his creatures. In fact, he pressed in certain phrases the absolute existence of Allah so far that the later, pantheistic development is amply conditioned and explained. This occurs especially in connection with the phrase "the Face of Allah", a phrase of unknown origin, but which for some reason seems to have impressed him deeply. The word "face" (masâ'ib) is the Korân is used frequently with the meaning "self" (masâ'ib, 257) in connection with men (e.g. ii. 105; iii. 137; iv. 184; lxxv. 79: ix. 105; xxx. 20, 40; xxx. 21; xxxix. 23; perhaps the origin of the idiom), but when used of Allah, more colour and flavour of the original metaphor seem to remain, though the ultimate meaning is undoubtedly "self". Thus, man not out of desire for the Face of Allah (ii. 254; xiii. 22; xvii. 20; they "desire" or "make for (yâwâdi) the Face of Allah" (vi. 61).
53; xxvii. 27; xxx. 37, 38; they *act for the sake of the Face of Allah* (kabul ilahi); thus to the great texts: *Allah's* are the East and the West; wherever ye turn, there is the Face of Allah* (II. 209); *Everything goes to destruction* (However except his Face* (xxvii. 88); *Whoever is upon it (the earth) is falling* (Har); and the Face of the Lord abides, He of Majesty and Generosity* (Iv. 26). In each case, *Allah Himself* could be substituted with no essential loss; but Muhammad, undoubtedly, felt the picturesqueness of the phrase, and so he omitted it. The point, however, is that we are to believe what he said or not. With the commentators, the explanation is that all things besides Allah are only "possibility of existence" (wasmak), while he is "necessity of existence" (wauli b'il-wajah); but they may, therefore, be described according to their essential meaning as "non-existence* (madanmin); i.e., because they may go to destruction, they are going to destruction. It may be doubted whether such a distinction, or, in fact, any clear thought was in Muhammad's mind.

He left, there, this problem for the future Islam. He had to reconcile the intense personality and clear separateness of Allah from the world with a direct working in the world, which amounts to immanence. The problem was further complicated by diverse phrases which suggested the essential non-existence of everything except Allah. It may be said here, in short, that the scholastic theologians followed the idea of personality, and separated Allah from his creation to a point where it was hard for them to explain how he could affect the world; in doing this they developed the doctrines of towhat (removal) and wuqfi b'il-wajah (dissolution), i.e., removal from Allah of all qualities of immanence, and assertion of the essential difference of his qualities and the similarity named qualities of human beings. The history of the development of Sfism, on the other hand, is that of a gradual merging of the world in Allah, which would be associated with the Beatles.

The Aristotelian-Neoplatonic philosophers followed a third line. Working essentially in independence of the exegest of the Koran, but seeking, for protection at least, to adapt themselves to its statements, they reached the other pantithic position that Allah, i.e., the Aristotelian World, was Allah. It was the life work of al-Ghazali to meditate, and to state a position which orthodox Islam has not yet passed.

It should now be in place to take up the position of Muhammed as developed in the traditions. But to attempt to find in them anything that can be assigned to him with historic certainty is a perfectly hopeless task. A large element, it is quite plain, cannot be due to him; and what nucleus really came from his lips we probably never shall know. Goldscheider has suggested that the traditions are really a record of the first centuries of dogmatic struggle; that therein is their true historical value. But this is an confused, mistakable, indirect, misleading, that it can be used only to illustrate and supplement other more direct sources. Any consideration, therefore, of the traditions, either with reference to the wusf of Muhammed or to those of the early Muslim Church, must now be brief. Even where the traditions have points of similarity with the Koran, these are deceptive. Thus, in the Koran Muhammed develops quite naively two separate views of Allah's working, one rigidly predestinarian and the other leaving scope for free-will. This was due to a real confusion in his own mind. But the similar phenomenon in the traditions had a different origin. There it was due to the contradictory traditions having originated in opposing schools, who freely forged and furnished them on the Prophet in support, each, of their own views. There are traditions which state very clearly that Muhammed objected to all such discussions, while there are others in which he enters on the subject at length. But the first of these are equally suspicious with the second, they are probably due to that party which objected to long for the use of reason (al-ma'na) in theology, and contended itself with repeating the formula which tradition brought to them (ma'na). In the traditions, then, come the following expansions and differences. There is a marked mythological increase. The figure of Allah becomes more picturesque, and his relations to his angels and devils more detailed. The doctrine of the latter is more developed, and the simplicity of Allah's working obscured (frequent in al-Bukhari's Sahih, see especially Kitab al-an'am and Buh al-kadhim). The Face of Allah recurs, and also his throne (murad); the cosmography of the heavens and the earth is worked out. He descends to the lowest heaven (al-mawt) and climbs: *Is there a suppliant? Is there a seeker of forgiveness*? (Kitab al-an'am; see also al-Siyar of al-Bukhari, ed. Cairo, 1312, iv. 175). Then there is the story of the man who will be last in Paradise, and of how he will make Allah laugh (ib. iv. 172, 173). At last, Allah will take the earth on one of his fingers and the heavens on another, and cry aloud: *I am the King, where are the kings of the earth?* (ib. iv. 187, 188). He will press his foot down in hell, so as to make room there (Iv. 175). His eyes, mentioned in the singular and the plural in the Koran (sagh in xx, 40), are opposed to the one eye of al-Djaddil (ib. iv. 160). Secondly, His qualities become still more flatly contradictory. A saying recurs frequently: *My mercy overcomes or precedes my wrath* (e.g. ib. iv. 160, 175), and, on the other hand, there is the monstrous tradition: *These to heaven, and I save not those to hell, and I care not* (comp. 722 of al-Ghazali, ed. with comm. of Suyudi Murtada, vol. vii. p. 398). It is significant that it is precisely on such questions of salvation that the most glaring contradictions appear. At one point, the recital of the first half of the aya and a minimum of works is judged enough, and at another, 999 men out of 1000 shall go to the Fire. It is true that this is turned to a jest; the 999 are to be made up out of the people of Yathrid and Madjid (ib. III. 143). Evidently, we have here echoes of later controversy. Still clearer is this when it is said that the saved remnant of the people will be in Syria (ib. iv. 176), an unmistakable reference to the Umayyads. Again, there is the absurd explanation of the uncrowning of the king at the Last Day (Kor'an, bxviii. 42), an explanation that Muhammed would never have dreamed of, but which has become fixed in Muslim exegesis (Sahih, p. 173; comp. Durre of al-Ghazali, ed. Gauthier, p. 69). A similar attempt is made to exorcise the strange name of Allah, akhlas (al-Bukhari, loc. cit., lv. 127). There are long traditions, too, on free-will etc. (p. 176).
against hypostatizing into a Logos. At all points there was need of careful definition.

Another influence was Greek philosophy. The students of it in Ildian were going to the roots of all things, and, with it as guide, they attacked the problem of the nature of Allah, Unity (tawḥīd), and the philosophical, they had to preserve; but, in preserving it, the nature of Allah himself was gradually reduced to a more undefinable something, described in negatives. For example, Allah for Muhammad was the Knower (al-ʿilmūnū). Therefore, he must have the quality of knowledge. But of what was his knowledge, of something within himself or without? If the first, there was a duality in himself; if the second, his knowledge depended upon something outside of himself and was not absolute; therefore he himself, the possessor of this quality, was not absolute. Evidently, if Allah's unity and independence were to be preserved, he could not be given any positive description.

In this development three tendencies persistently appear. There is traditionalism (nabki), the acceptance of a doctrine because it was accepted and taught in the past. Its followers were called the people of tradition (al-aḥlādā); they followed the schools of men who had heard (al-ḥālīna raʿaṣiya), derived from the Korān, the Sunna (Usag of the Prophet as expressed in the Hadith) and the Agreements (iḥṣās) of the Muslim people. For them reason must not be applied either to criticize or to expand; the statement must be taken just as it stands. For example, in the Korān we read that Allah has settled himself firmly upon his throne (e.g. Korān xv. 4). That must be believed; we must not argue about it; we must not ask how he so sits; we must not go on to compare his sitting with that of a man; we must stay by the recorded word. This has developed into the phrase bāda ʿala taqāfa, without enquiring how and without making comparison. But it is obvious that this is not a permanent position. And so, two further steps were taken: one by the general body of Muslims, the other by certain more rigidly logical. They developed the doctrine of maqāla tawḥīdī, "differences"; everything in Allah is different from the similarly finite in man; we must not think of it as like. This is also called tawzīkh, "removing", that is removing us from any danger of confusion or association with his creatures. In general, this process stopped at a point where it was still possible to form a conception of Allah. He was different, it was conceded; but still, Allah must be thinkable, and these names and phrases gave a thought of him not essentially wrong; we could not get from him what he was, but something like what he was. Others, however, went further and argued that from these expressions we could gain no conception of Allah's real nature. That nature must always be a mystery to us, and we need not think that even the names gave any light. The Korān calls Allah the Most Merciful of them that show mercy" (vii. 157; xli. 64, 92; xxi. 83); but that cannot mean for us that he has the human quality of mercy, or of anything else, anywhere similar. The course of things in the world disproves that. He has only given himself that Name, and what the Name means we cannot know and should not inquire. The great division here lies in admitting or rejecting the possibility of any discover-
ing of the nature of Allah other than purely negative—he is not this, he is not that. But, naturally, there have been many subdivisions, varying from the extreme authoritarian to hold the faith of the Fathers (al-Baqillani) back into the sacred mysteries to a sweeping application of the thesis that the absolute is the unknowable. Only, in Islam the latter position does not lead to agnosticism, but back to a dependence on orthodoxy. The main tendency now seems to be towards that latter position, and though the work of earlier theologians is accepted because of familiarity and antiquity, formal theology at the present day is more and more slack. In Cairo, at present, the rhyme is current: ‘Kalâh na al-ghaffar bi-Allâh, fa-hanna bâdîk, na-milâh al-âhliyâf âlâhâk. “Everything that comes into your mind is perishable, and Allah is different from that”’. That is, Allah is different from any thing we can possibly have, for our thoughts are of transitory things.

The second tendency is rationalism. All would recognize the necessity of the use of reason (‘aql), how much as to its being a normal source of theological truth. We have already seen the beginnings of this in the study of Greek philosophy. The Mu’tasillites [q.v.] continued that development, and frankly reasoned out their religious position, creating their theology by means of reason. On the doctrine of Allah, they, as we have seen, especially objected to his qualities. These were contrary to his unity; at least they must be described as being his essence, not as in his essence. But they tended to reject them altogether, and to reduce Allah to a vague unity. They further objected to absolute predestination as contrary to Allah’s justice (‘adl). Their rejection of the possibility of the Beatific Vision of Allah in Paradise was part of their justifiable, but his spirituality. These three points, then, unity, justice, spirituality, are their position in brief, which they founded on and maintained by dialectic. This, of course, now in its traditional party to similar weapons. But with this dialectic was purely defensive; the doctrines were already given and accepted. Yet reconstruction could not fail to go on, if only in form of statement.

It was in the early part of the fourth century of the Hijra, and especially at the hands of al-Ash’ari [q.v.], that the use of dialectic (kita’i) was finally and fully accepted by orthodox Islam. Therefore, only extreme traditionalists objected to it; scholastic theology was founded. The final system of al-Ash’ari himself followed strictly orthodox lines. It was simply the phrase “without enquiring how, and without making comparison.” The first element was directed against the Mu’tasillites, and the second against anthropomorphism (mammân). On free-will, he took a middle course and taught a doctrine, the ‘ulema of Islam ever since. It is that there is in the creature a certain power of ‘acquiring’ (khitam) his actions, which, though they are strictly produced by Allah, makes them also his own.

The school of al-Ash’ari followed him closely in its creed; but developed his metaphysical ideas into a system which was finally formulated by al-Baṣârî (1093–1153) and thereafter won its way to being the ultimate Muslim conception of the nature and relationship of Allah and his world. It has been stated thus (Mack-
those of Leibnitz in having no nature in themselves, no possibility of development along certain lines. The Muslim moms are, and again are not; all change and action in the world are produced by their entering into existence and dropping out again, not by any change in themselves.

But this most simple view of the world left its hold in precisely the same difficulty, only in a far higher degree, as that of Leibnitz. He was compelled to fall back on a pre-established harmony in being. He had to reason with each other; the Muslim theologians, on their side, fell back upon God and found in Him the 'ground of all things.'

We here pass from their ontology to their theology; and as they were thorough-going metaphysicians, so now they are thorough-going theologians. Being was all in the one case; now it is God that is all. In truth, their philosophy is in its essence a scepticism which destroys the possibility of a philosophy, in order to drive men back to God and His revelations and compell them to see in Him the one grand fact of the universe. From their ontology they derived an argument for the necessity of a God. That their monads came so and not otherwise must have a cause; without it there could be no harmony nor connection between them. And this cause must be one, with no cause behind it; otherwise we would have the endless chain. This cause, then, they found in the absolutely free will of God, working without any matter beside it and unaffected by any laws or necessities. It creates and annihilates the atoms and their qualities and, by that means, brings to pass all the motion and change of the world. These, in our sense, do not exist. When a thing seems to us to be moved, that really means that God has annihilated — or permitted to drop out of existence, by not continuing to uphold — another wire held — the atoms making up that thing in its original position, and has created them again and again along the line over which it moves. Similarly of what we regard as cause and effect. A man writes with a pen and a piece of paper. God creates in his mind the will to write; at the same moment, he gives him the power to write and brings about the apparent motion of the hand, of the pen and the paper on the paper. No one of these is the cause of the other. God has brought about, by creation and annihilation of atoms, the requisite combination to produce these appearances. Thus we see that free-will, for the Muslim scholastics, is simply the presence, in the mind of man, of this choice created there by God. Further, it will be observed, how completely this annihilates the machinery of the universe. There is no such thing as law, and the world is sustained by a constant, over-repeated miracle. Miracles and what we regard as the ordinary operations of nature are on the same level. The world and the things in it could have been quite different. The only limitation upon God is that He cannot produce a contradiction. A thing cannot be and not be at the same time. There is no such thing as a secondary cause; when there is the appearance of such, it is only illusion. God, in reality, is the appearance of effect. There is no nature belonging to things. Fire does not burn and a knife does not cut. God creates in a substance a being burned when fire touches it and a being cut when the knife approaches it.

In this scheme there are, certainly, great difficulties, philosophical and ethical. It establishes a relationship between God and the atoms. But we have already seen that relationships are subjective illusions. That, however, was in the case of things of the world, perceived by the senses — contingent being, as they would put it. It does not hold of necessary being. God possesses in quality and happiness all the attributes of the monads. He is not a material cause, but a free cause; and the existence of a free cause, they were compelled by their principles to admit. The ethical difficulty is perhaps greater. If there is no order of nature and no certainty, or nexus, as to causes and effects, if there is no regular development in the life, mental, moral and physical, of a man — only a series of isolated moments, how can there be any responsibility or any moral necessity? The difficulty seems to have been recognized more clearly than the philosophical one. It was not, formally, by the assertion of a certain order and regularity in the will of God. He sees to it that a man's life is a unity, and as for details, that the will to act and the action always coincide. See further in Heinrich Kettler's paper, Über unsere Kenntniss der arabischen Philosophie, Gottingen, 1844.

But all this was strictly defensive of positions already taken up; and such a scheme as this, while it took in a way the place of the study of philosophy in Islam, was concealed from the masses, and was viewed with more or less dislike by the pious. The study of it was permitted only in defence of the Faith against heretics and unbelievers. There was the difference between the orthodox theologians and the Mu'tazilites. The latter had believed that by reason they could reach ultimate truth; Islam assured itself that reason could never grasp the nature of Allah; he is unknowable to human powers, and we must accept and believe what we are taught by him.

And so the third tendency is mysticism (kawn, unavailing; rasawm, Salam, p. v.). There must be a supernatural basis for our own knowledge of Allah, and, therefore, Islam early came to the position that in the individual human soul there resided a power of reaching and knowing God directly, a personal supplementation of the truth taught to mankind by his messengers, the prophets. That this was in the mind of Muhammad himself, jealous as he was of the prophetic office, seems clear, and it has appeared through the whole history of his Church, in degrees and forms, varying from simple, devout meditation to high ecstasy, union with God and essential pantheism. In the earlier centuries of Islam, this doctrine struggled as a private opinion, held generally by the great majority, approved explicitly by many outstanding theologians, leading from time to time to extreme antiChristian and pantheistic positions, denounced by some few authorities because of these wanderings; but still assimilated to the general body of Muslim truth. In its forms it was partly ascetic and partly speculative; it sought as well as the ultimate appearance of effect. There is no nature belonging to things. Fire does not burn and a knife does not cut. God creates in a substance a being burned when fire touches it and a being cut when the knife approaches it.

In this scheme there are, certainly, great difficulties, philosophical and ethical. It establishes a relationship between God and the atoms. But we have already seen that relationships are subjective illusions. That, however, was in the case of things of the world, perceived by the senses — contingent being, as they would put it. It does not hold of necessary being. God possesses in quality and happiness all the attributes of the monads. He is not a material cause, but a free cause; and the existence of a free cause, they were compelled by their principles to admit. The ethical difficulty is perhaps greater. In the earlier centuries of Islam, this doctrine struggled as a private opinion, held generally by the great majority, approved explicitly by many outstanding theologians, leading from time to time to extreme antiChristian and pantheistic positions, denounced by some few authorities because of these wanderings; but still assimilated to the general body of Muslim truth. In its forms it was partly ascetic and partly speculative; it sought as well as the ultimate appearance of effect. There is no nature belonging to things. Fire does not burn and a knife does not cut. God creates in a substance a being burned when fire touches it and a being cut when the knife approaches it.
mysticism, by Buddhism and by the primitive monotheism, which is the basis of all oriental thought. Its ultimate tendency, therefore, however denuded and avowed, was to find in Allâh the One Existent (wa-la-ilâh-î-mâlikul-îmârâl) rather than the Necessary Existent (wa-la-ilâh-î-qâdîm-kullu-î-security). It was the work of al-Ghazâlî (d. 505 = 1111-1113) to construct a mystical system, in which this pantheistic element was restrained if not destroyed and to weave into the fabric of the theology of Islam the thread of the unveiling of the Snât, beside those of tradition and reason. Reason he used to destroy itself and to transcend it, not to state that with it we can reach absolute knowledge. Tradition he used to discipline, guide and restrain the devilish imagination of the mystic. On the facts of the religious consciousness, so given, developed and guided, he built his theology. Yet, in his view of Allâh, he followed closely the conception of Muhammed. For him, Allâh was Will; he saw everywhere around him the touch and working of Allâh. And man was kin to Allâh, especially in this fact of Will. There he passed beyond the范畴 of the orthodox theologian. Allâh was love in the sense of al-Ghazâlî’s psychology. Allâh had breathed into man of his spirit (Korâ, 99, 29; xxxviii. 73). The soul of man; therefore, is different from everything else in the world; it is a gâwâd rû, a spiritual substance; created but unshaped; not subject to dimension or locality. From his exile here, it seeks the divine, and, therefore, our soul yearns back to Allâh. In a tradition, too, it is recorded that Allâh created Adam in his Worm form (kûrâ). That, for al-Ghazâlî, meant that there is a likeness between the spirit of man and that of Allâh in essence, quality and actions. So, just as man rules his body, Allâh rules the world (al-Maâlûkati al-kalîmâl), pp. 2 et seq.

In spite of all pantheistic dangers in these views, there is no question that they are very close to the mind of Muhammed. And so, for the Church of Islam, al-Ghazâlî must remain her greatest doctor, with the standing of Augustine or Aquinas in Christian theology. When a Muslim theologian now disagrees with him, he prefers to describe the rejected doctrine as a misunderstanding of al-Ghazâlî’s true position. In consequence, alongside of the ousted system of the traditionalists, al-Ghazâlî’s (Raûš) is earnestly studied; and in that study, without doubt, is the hope for the future in Islam.

As, then, these three tendencies are together in al-Ghazâlî, and as any statement by him of Muslim faith is reserved with respect, at the present day, by all Muslims, except such extreme-traditionalists and nihàotheists as the Walâhabites and the followers of Ibn Taimiyyâ (d. 1328), one should consult his Risâlà fudâysa, written at Jerusalem and thereafter incorporated in his Iâ‘lîl (Gi, 86 et seq. of the Cairo edition with commentary by the Siyâlî Manîçâl of Hâshâli). It states very fairly the orthodox Muslim position on the person of Allâh. Unfortunately this Risâla has not yet been translated, and space does not permit the insertion of a translation here. Reference, therefore, can only be made to a very full and nearly systematic analysis of it in ‘Asia Pacliacis’ (Alâyâl, Saragosse 1901) 1: 253-282, and to a shorter statement in de Vaux, Ghazâlî (Paris, 1902), pp. 97 et seq. Reference may be made also, to translations of several other credible in the present writer’s Development of Muslim Theology etc., pp. 293-355.

The statement given in the Risâlâ fudâysa is specifically Alârîs; but al-Ash’ârî’s close contemporaneous, al-Mârîdî (d. 933 = 955) founded also a school, still existent and regarded as equally orthodox. It followed the line of thought of Aha Hâfiz (d. 150 = 767), and it is, in consequence, often called Hâtâsî. It is followed largely by Tûsî, and in the present writer’s Development of Muslim Theology, pp. 308 et seq., will be found a Mârîdît doctrine in full, that of al-Nejâhî. None of the points of difference between al-Mârîdî and al-Ash’ârî are regarded as involving either unbelief (bâf) or heresy (hidjâ), and those bearing on the nature of Allâh can be summed up as follows:

1. To the eternal qualities of Allâh al-Mârîdî added “Making to be” (radîâl). Other names for this quality are Creating (al‘âlî), Bringing to Life (al-fÂ‘l), Sustaining (sâjî), Bringing to Death (al-fâtî). These are called active qualities (al-fâ‘l, al-fâ‘l, al-fâ‘l, al-fâ‘l, al-fâ‘l, al-fâ‘l, al-fâ‘l, al-fâ‘l) and are originated according to the Ash’ârîs; but — because the same as radîâl — eternal according to the Mârîdîs. This is evidently an attempt to veer some of the barrier between the unchanging Allâh and the changing world.

2. Instead of al-Ash’ârî’s stâkî, which appears to be nothing but an attempt to describe how we feel that we are free; that is, God creates in us that feeling — al-Mârîdî simply says that we have actions of choice (al-khuwâsir) for which we are rewarded or punished, and leaves the question there. Yet all actions are by the will of Allâh; only, good actions are by his good pleasure (radîâl) as well; and bad actions are by his bad pleasure. 4. When Allâh requires anything of a creature, he gives him the ability (al-khuwâsir) thereto, that is the basis of the validity of the imposition of that task. 5. Allâh’s qualities are unchanging; but changes come in creatures of happiness to misery and vice versa. This is by change in happiness and misery, and not by change in making happy or making miserable. Again, the unchanging Allâh and the changing world.

6. A Mârîdît remarked that there was nothing logically in the Ash’ârî position to prevent all the believers being eternally in the Fire, and all the unbelievers eternally in the Garden; but that what we taught was diametrically the opposite. So while the Mârîdît held that it was incumbent upon Allâh to reward and punish according to justice, the Mârîdîs only said that Allâh is exalted in and through himself from any injustice, for it would be unbecoming to his wisdom.

Of the differences between al-Ghazâlî’s statement and the views of the Mârîdî, it is unnecessary to say much. Al-Ghazâlî in this Risâla is writing specifically against them; and makes clear their positions which consisted in negating the Qualities, in asserting incompleteness upon Allâh, especially that he must do what is most advantageous to his creatures and in denying his Speech and the Vision of him in paradise. His argument that the world is created, and must, therefore, have a creator is directed against the Aristotelian-Neoplatonic philosophers, who taught the eternity of the world. He himself did not regard that argument as valid. That the world was created he knew, because he, personally and immediately, knew Allâh, the Creator.
See his description of his religious experiences, in his Mansafah. His treatment of the anthropomorphists is more gentle. Yet he marvels over at the mystery of Allah’s so keeping some of his words out of the Koran, that they cannot understand the difference, even, between relative and absolute priority (Section on Allah’s Speech). Thrice, he comments caustically upon their insisting on a wrong use of words, although their ideas were correct enough. The Karaites [q.v.] used “substance” (Genuras) of Allah, thinking that substance meant “an existing being out in a place”, but “existing in itself”. The Rashidunites [q.v.] insisted that they existed “bodily” (Qurra) of Allah, in the sense simply of “an existing being”, or “one existing in himself”. The anthropomorphists, generally, clung to the expression that Allah had direction, as indeed his exegesis of his Acts was his throne required. But, finally, in Book I, Source VI, there is a most absolute statement that any resemblance is impossible between Creator and creature, which is hard to be reconciled with the latter sections of his book, where the mystical basis of faith is taught and with his exegesis of the Koranic passage, where Allah breathes into man of his Spirit (rāh, xv. 29) (xxviii. 72) and of the tradition that Allah created Adam in his own form (al-bah). See reference above, to the Madhāni al-tāfghīl, pp. 2 et seq. But in the same book he takes up this very problem. Do not such views, it is asked, with regard to the soul of man destroy Allah’s “difference”, and constitute tashkīl, making a resemblance? Al-Ghazali replies (loc. cit., p. 3) that that applies only to Allah’s most peculiar quality (al-qāri‘ na‘) of manifesting himself in accordance with the person of the person who seeks to manifest himself, either in a certain quality or in a certain action. And this, he says, does not mean that he should be taught anything positively that is not so; only that certain subjects need not be considered with them.

We have, then, to regard what is given in his statement of the Ash’ite position as one side only. It is complete from the point of view of the doctrine itself, but that is not the case. Yet it cannot but excite surprise that so de-humanized a system should have obtained such a control that a man like al-Ghazali had to cast his dogmatism into its mould. He, certainly, believed greatly in the fear

of Allah, and the thought of the Fire had been a powerful influence in his own conversion; but it is plain from his writings elsewhere that his own Allah was by no means the constructive Force which he depicted. To produce this personification of the irresistible, non-manipulable working of nature, the Muslim theologian must have passed through a stage of defending their faith by showing its agreement with the facts of life and thus made Allah so emphatically the God of things as they are. With this object, they took from Muhammad’s representation the elements which suited them.

In consequence, the already narrow character of the Allah of the Korān is still further impoverished. Another weighty influence in the same direction was the dialectic necessity of representing Allah as unconditioned Being. They had, therefore, to eliminate from him, so far as possible, the elements entailing relationship and all human attributes.

For al-Ghazali, therefore, as a mystic, it became necessary to supplement this system; and it was to be given its essential basis in the subsequent chapters of his work, especially where he deals with “the secrets of the heart”, and demonstrates how the heart sees and knows God. “He who knows his own heart, knows his Lord”, says the tradition; and on that teaching the mystical life is founded. But how we pass from theology to religion, and from the doctrine of the person of Allah to the psychology of belief, and the present writer would refer to his Hasbū Lectures on The religious attitude and life in Islam. For the doctrine itself it may be said broadly that it is still unaltered, and that there exist the same different aspects of tawāw, tashkīl and the mystical vision in varying proportions of the faith of every Muslim of the present day. The use of reason has gone, except to demonstrate the possibility of a doctrine; tradition has become the basis of the later systematizers, rather than the word of Muhammad and the Fathers; mysticism has hurled the dead Aristotelian-Neoplatonist philosophy, and so far as a Muslim, now, is a thinker he is a mystic. For the later plainly pantheistic development in Persian and Turkish Sufism, see Qawwāl). The views of the philosophers do not come within the scope of this article; but reference may be made to the essays of Averroes on what may be called the theology of an educated man, which were published at Munich by M. J. Müller, in Arabic in 1859, and in a German translation, after Müller’s death, in 1875. They are an attempt to render it possible for a thinking man to remain in communion with the Muslim Church, and are largely directed against al-Ghazali; and, as they have been reprinted in the East, may be of importance for the future development of the doctrine of Allah. A Muslim who did not know Averroes’ real philosophical position could study them, agree with them and still remain in his faith.

ALLĀHAKBAR. [See text.

ALLAHABAD (ilalâbâd), the present capital of the United Provinces of British India, which has also given its name to the district and the division, is situated on the left bank of the Jamna river just where this flows into the Ganges. In the year 1901 the town had 472,032 inhabitants among whom 50,274 Muhammadans, the district 459,358 inhabitants with 137, Muhammadans. From the Mughal period there still remain the citadel built by Akbar in 1575 (with Akbar’s pillar and its famous inscription) and the Khairrawâgh, grounds laid out as a garden not far from the railway station, with the tomb of prince Khairawâ, his mother and his sisters.

History. The present town together with the citadel was founded by Akbar, but from early times the Indians had regarded the spot where it is situated as a holy place and had founded there a town called Prayag (Pray). The Muhammadans took possession of it in 1394 under Shaikh al-Din, the Ghiyâd; afterwards it belonged to the realm of the Great Mogul till the Marathas conquered it in 1736. After 1750 it changed hands several times till the English garrisoned the citadel in 1798 and in 1801 the town as well.

ALLAHUMMA is an old Arabic formula of invocation: “Allahumma!”, for which also Lâhûmmâ is found (cf. Nohlde, Zur Grammatik d. clas. Arab. p. 6). Whether, as Wellhausen supposes in his Reise arabischen Heidentums (2nd ed.) p. 224, it was originally meant for the god Allah, higher than and different from the old Arabian gods, is rather doubtful, because every god might be invoked as “the God” (just as “the Lord”). It was used in prayer, offering, concluding a treaty, and blessing or curses (see Goldscheider, Arabisch-ägypt. u. ostr. Philol. 1. 35 1st sqq.; cf. also the expression Allâhûmna fîsa — much good may it do you, al-Aktâl 55, 3). The phrase bi-nâhâ al-lâhûmmâ, said to have been introduced by Umayya b. Abî Shâbî (according to a statement in Alkâtî 1. 15), and used as an introduction in written treaties, has been replaced by others by Muhammad as being a heathen expression (Tun al-Hiâm 1. 747; Wellhausen, Skinzé u. Forsch. iv. 104, 128). The simple Allâhûmmâ (Lâhûmmâ), on the other hand, was retained as inoffensive (e.g. Korân III. 25; al-Mudzâr 9, 47; subhânâka Allâhûmmâ II. 16), and in the same way allâhûmmâ wa-lâ — “certainly”, being taken in parabolical sense from the true (Tabârî 1. 1723, n. 2). For the peculiar formula allâhûmmâ wâ-nârâ (or nârâ), used at the family-offering, cf. Goldscheider in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, xlviii. 95 1st sqq. (P. BÜHL.

ALLAHWERDI (?). is the name of a Turkoman tribe in Für [1. 437]. — Also a common proper name, e.g. the name of a general of the Persian sovereign: A. b. Shâh (Khân). — Another Allahwârdî Khân was Muhâmad Úljâng, the son of a Turkoman of the name of Mirâz Muhâmad Abî, Navâb of Bengal, Bihrâ and Ormuz (1515-1609 = 1452-1560). He obtained this dignity after he had slain the rightful possessor, Abî al-Dawla SârÎshirâ Khân, and left it to his grandson, Sârij al-Dawla Mirâz Muhâmad. [See Muhâmâdâbâd.

ALLâKâ is the name of a wâdi (dry riverbed) in Nubia on the east bank of the Nile in the vicinity of the present village Kâbûnâ, known through its gold mines, which were already in olden times, as well as later, advantageously exploited by the Arabs. For the classical period cf. Diodorus iii. 11: Chonbä, Les inscriptions des mines d’or.

Among the Arab geographers it is Wâdîh (ed. de Goeje, p. 334 1st sqq.) and Lâdîr (ed. Dupuy and de Goeje, p. 26 2nd sqq.), who give the most detailed information about these mines and their working in the middle ages. The exact place of the mines has been found back in Umân Ghuwarah (Wâdî Khawanâb). Their exploitation is now successfully carried on by the Nile Valley Co.

Bibliography: Besides the already mentioned writings: Wallis Budge, The Egyptians Sudan ii. 339 1st sqq.

ALLÂM (Allâm), an intensive form of âlâm, âlâm [âl, âl, âl] — knowing, occurs in the Korân always in the compound Allâm al-kâshâwî, “he who knows secrets” (God), an intensive form of Allâm in Allâm a “very learned”, a predicate given to many scholars. [See Jâran B. XUFFI.

ALLâmî. [See above 1. sqq.]

ALLÂN, name of the well-known Iranian tribe of the Alans, is generally regarded in Arabic manuscripts as a foreign word, with the Arabic article (al-lân), as many other proper names (cf. al-Râm for Arrâm etc.), sometimes it is written all-Allâm (in Yâqût), also in Abu l-Fidâ, Taťfat al-buldân, ed. Riimatâ and Muc Gökcin de Saan, p. 205). By the Muhammadan period all knowledge of the original domicile of the people and its immigration from Central Asia had been lost; the Arab geographers only knew the territory of the Alans on the Caspian, in the vicinity of the important pass through the glen of Duriyâ on the Kâbûk.
Whether, as J. Marquart asserts (Osterr.-polnische und osmanische Streifzüge, Leipzig 1903, p. 167) the other name of the same nation, As, was already used to denote the people as well, or this is hardly to be proved; there are proofs, however, that it does not appear until the time of the Mongols (when it is also written al-As), but is used in oriental writings only; in the communications of European missionaries and travellers the people are called only Alans even in the later middle ages. The form As is the base of the name of the Ossetes, descending from the Alans (see above), derived from the Georgian form of the name of the country, Oustsidi.

Conquered by Byzantine missionaries, the Alans are said by Mašidi (Murādi, Paris ii. 43) to have apostatized from Christinity in 320 (932) and to have expelled their bishops and priests; according to Ibn Rustom (Bihl. Geogr. Arâb., ed. de Goeje, vii. 148) only the chief of the Alans was a Christian. In the 13th century, however, the Alans are mentioned as Greek Christians by all authorities. Their settlements extended at that time much farther east than formerly; at the time of the first invasion of the Mongols the territory immediately to the North of Darband and even the country on the estuary of the Volga was in the possession of the Alans, probably in consequence of the downfall of the Khašar empire. Conquered and subjugated by the Mongols, a part of Alans were moved to different districts in the Mongol empire; a colony of Christian Alans is mentioned by the Roman Catholic missionaries in China; the Persian authorities of this time also know the As as Christians at the court of the Mongol sovereigns. The As in Sâry on the Volga are called Mâhammedans by Ibn Baṭṭa (ed. Deliméry and Sanguineti ii. 448). At the present day among the Ossetes only traces are left of Christinity as well as traces of Islam.

Cl. the Arab accounts in J. Marquart, cit., c. cit. exp. p. 164 et seq. (where the original sources are quoted), for the wars with the Mongols, Ibn al-Athîr (ed. Tourb.) xii. 232 and F. M. Schmidt, Gne Hârûn's Reisen (Berlin, 1885) p. 84; for the As in Mongolia, d'Houtou, Histoire des Mongols (Paris, 1835), p. 235; for the Alans in China, Mausum, Histoire et lextorsoir des asiatiques (Helmantali, 1741), app.

(B. WARTHOLD)

ALMA is a small river in the Crimean, south of Simferopol, is only known through the battle of September 20/8, 1854 (victory of the allied armies of the French, English and Turks over the Russians under Menshikow). (B. WARTHOLD)

ALMA-DAGH is a name often used at present for the entire mountain-chain of northernmost Syria, which mountains were known in the classical authors as Amatus (in camel-skin writing Khañama). The Alma Dagh (Amatus), a branch of the Taurus-system of Asya Minor, breaks off in the neighbourhood of Mârâš to the south of the river Diğîm (Peyrus) from the dolomite massif of the Karadag Dagh, runs parallel to the Taurus and Anticoma-ranges from N. E. to S. W. surrounded with another ridge, branching off to the east, the eastern bay of Iskandara (Alexandriatia) and ends abruptly in a more or less high rock to the south of Ily-al-Khândî (L. c. pig's head, 2,500 ft.) with the Džâbal Mîst (Mount of Moses) or, as it is also called, Džâbal Alman (i. e. the Red Mountain, 1,575-8 ft.) part of the Džâbal Ar'ûs. The deep transverse valley of the Orocos and the mountains of al-Alâr separate the Alma-Dagh from the Lebanon-chain and the Mediterranean Sea, but are the geographical formation (mostly limestone) from that of the Taurus system. With its off-shoots the Alma-Dagh runs on to Câlicia entirely from Syria and the Mesopotamian Hinterland; apart from a few passes that are more scale-tracks, the pass of Bitlîs [L. 7] is the only connection between Asya Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately known; the average height is said to be 1,850 ft., and some peaks even as high as the highest point Djermejec gives the Mebedî, 7450 ft. In the northern part jagged, steep peaks prevail, in the south more rounded outlines. The Alma-Dagh with its fresh verdure is an attractive sight, for its sides are thickly grown with trees out of which the bare dolomite peaks project. The ridge of the Alma-Dagh north of Iskandara forms together with the sides sloping to East and West an administrative unit the welch Jîmayq, etc.; cf. Suchan in the Sitmmamten de Berliner Akademie, 1892, p. 314.

Locally no one common name is used for the whole of the Amansis; in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the Alans we find the name Gawar-Dagh or Juswar-Dagh, i. e. the Mountains of the infidels; H. Klébert in his Carte générale de l'Empire Ottoman (Berlin 1892) makes the Alma-Dagh reach about as far as Jîshîyeh (Nico-polis, 35° 6' 16'); the continuation of this mountain-chain as far as the neighbourhood of Marâš is taken as Gawar-Dagh; cf. also H. Klébert's map for Suchan's Râne in Syria und Mesopotamien (Leipzig 1883). In H. Klébert's map for von Oppenheim's Von Mitteiner am persischen Golf (Berlin 1900) Alma-Dagh only appears as the name of a single mountain massif to the north of Beilân; the name Gawar-Dagh does not appear at all on it, in its stead we find Sur-Dagh. Dju-Duq, Gûlîb-Dagh as names of single peaks between Marâš and Jîshîyeh. The northern Gawar-Dagh is connected according to E. Reclus with the southern mountains by a mountain plateau in the depth of which is situated the Graw-Fûl (i. e. the lake of the infidels). The name of Gawar-Dagh is occasionally extended to the whole of the Amansis (e. g. on the map of Favre and Moret), Reclus does not call the southern Amansis Alma-Dagh but, in accordance with a number of travellers, Alma-Dagh. Bezzinger is evidently mistaken in calling the northern part of the Amansis Gawar-Dagh and the northern part Alma-Dagh. Cronau claims to stand quite alone in calling the Amansis Karadag; this name is evidently the Turkish transformation of Džâbal al-Lûkâmîn (also al-Ukkîmîn), the "black mountains" (sâbân Arabisch: from the Syrian sâbân = "black"), of the Arab geographers of the Middle Ages, the sâbân fûl of the Byzantines! for the name al-Lûkâmîn designating the same name as Amansis, cf. Sarhan, l. c., 1892, p. 325. By a misnomer the Alma- or Alma-Dagh in its most limited sense (north of Beilân) is also often called Nawk-Dagby travellers, names according to Koechly (cf. also the map by R. Klé-

ALMADA. [See ALMADEN.]

ALMADÉN, Arabic al-mudá'n, mine, and generally means any large, more or less triangular, or diamond-shaped mine in which diamonds were dug. The name is used in Spanish for all such mines. (C. F. Sáenz.)

ALMADIA, Arabic al-madà'ia, means in Spanish "red". In Arabic it means moreover a large or small ferry-boat; in literature referring to India it is used for a "small boat" in general.

ALMAGEST, more correctly al-Majist (also al-Majist); or Kitāb al-Majist, was to the Arab astronomers the name of the great astronomical work by Ptolemy μαγιστός στρατηγός (the great compiler). It has been supposed that the Greeks or the Arab translators in their admiration for the great work, turned μαγιστός into μαγιστής, hence the book was simply called al-Majist by the Arabs. In this way it already early corrombored by Arab writers: al-Vahabí says in his historical work (written in 1257 = 851; sold in M. Th. Houtima, Leiden 1885), p. 151: "The book al-Majist treats of the sciences of the stars and their movements; the meaning of al-Majist is "the greatest book". In this same way but not necessarily either does Hadjí Khatíf (r. 358) express himself; he says quite rightly that majist is the feminine of majist, but as the meaning of the word he gives "the greatest construction". The correct explanation is that al-Majist simply means the greatest; he quotes further down (p. 388) from anoccidental writer, the Augustin monk Ambrosio Calepino, author of a large lexicon, who died in 1511 at Burgos. — M. Koppe (Die Beleuchtung der Logarithmen und der Sinus im 16. Jahrhundert), Wissenschaftliche Veröffentlichungen des Vereins der Augsburgischen Mathematik- und Astronomischen Gesellschaft zu Berlin, 1893, p. 247 with whom J. Baroik (Das Euklid'sche Gymnasium in der Zeit des Archimedes) p. 77, no. 3) agrees, doubts this derivation; he believes that al-Majist comes from a corrupt form of μαγιστός στρατηγός, viz. magist to be found in a translation of the Almagest from the Arabic into Latin. We consider Koppe to be mistaken; on the contrary magist has been formed by the Latin translators in the Middle Ages from the vulgarization Arabic majist by a false reading. For the present we adhere to the first explanation. — For Arabic translations of the Almagest and commentaries of them cf. Hadjí Khatíf r. 358 et seq. and Steinmeister, in the Zeitschr. d. Dt. Archäol. Gesellschaft, li, 300 et seq. (H. Sütel.)

ALMACRA, Spanish; arch of Iran, from Arab. al-Makrā.[

ALMALIK. [See KULJA.]

ALMANZOR. [See ALMANZOR.]

ALMAS, — frequently regarded as a determined name (al-mas); correctly al-Masá according to the Arabic, in Litt. viii. 97; the is belongs to the root as in Ḥašā', a corrupt form from the Greek ἄθα, (i.e. "waa-lasat al-arabiyah"), — the diamond. According to the pseudo-Aristotelian Kitab al-ahadhir which — on the basis of vague Greek sources — agrees in the main with the statements of Pliny, the diamond cuts every solid except lead, by which it is itself destroyed. On the frontier of Khorasan is a deep valley in which the diamonds are guarded by poisonous snakes whose looks alone are enough to kill one. Alexander the Great procured some of them by a trick: he had mirrors made in which the snakes saw themselves and died; then he had the flesh of sheep thrown down into the ravine so that the diamonds were cleaned and were brought up by vultures which seized the pieces of flesh. This story, already found in Ephraïm àl XII géométrice, is generally known in the East (Arabian Nights). — Tifbah and Karwil relate that the pieces obtained through smashing the stones are used for试探 (observation of the octagonal schist); the former also says that the diamond attracts little feathers. It is generally mentioned as being need for cutting and policing other stones. Aristotle is said to have used it for destroying stones in the bladder. The powder of it must not touch the meat; applied externally it is a good cure for colic and stomachache.

ALMÉE. [See ALMA.]

ALMERIA, the capital (situated close to the site of the old Liri) of the eastern province

(J. Reus.)
of old Andalusia and the former kingdom of Granada, — in Arabic al-MerFiyy or Merfiyya Kastilia, i.e., "the watch-tower of Bedjana" (= Pechina; the old capital of the province, farther inland), had an important arsenal and harbour from the time of "Abd al-Kahlan I (759-785). After the fall of the Umayyads it was independent under the Siv Kisirin till 1028, then under Zahir till 1028; subsequently under "Abd al'Astir and then of Valencia, next year under the Nasr of Spain (cf. Doury, Recherches, iii ed., l. 211-281): Abu 'l-'Ala' Ma'ani 1041-1053, Muhammad al-Musta'in 1053-1091 and Izz al-Dawla 1091, after which it was conquered by the Almoravides. In 1147 it was taken by Alfonso VII of Castile and Leon, but was again in 1157 the spoil of the Almohades, and after 1258 it was taken by the Nasrids of Granada (finally besieged by the Christians 1509-1510). Not till 1496 was it finally conquered by Ferdinand V of Aragon. It is now the capital of the Spanish province of Almeria.

ALMICANTARAT. [See MIKANTARAT.]

ALMODOVAR, Arabic al-Mudunawwara. "found", is a group of several towns in Spain and Portugal, as well as of a small river in the province of Caceres, flowing from the South East into the Laguna de la Janda; A. del Rio below Cordova; A. del Campo (se. de Calatayud), southwest of Ciudad Real; A. del Pinar in the province of Cuenca; A. west of Merida in South Portugal. (C. F. Seybold.)

ALMOCAGAVER (Castillan and Portuguese Almocagovere, Arabic al-mu'azzama "cowardly that rules at the camp", [P. de Alcala], Dousy and Engelmann, Glossaire p. 172; Equino, Glossaire p. 253; Barthe de Meynard in the Journal As., 9th series, xx. 168), Castilian squire among whom were also found people from Navarre, Castile and of Bas-Languedoc, who after having fought against the Saracens in Spain entered the service of the Palatine in the 14th century and murdered Ishak, the chief of the Turecos at the court of the emperor Andronikos at the moment when he intended to embark for Asia with Constantine, the baptised brother of the Seljuk Sultan Ghiyath al-Din Mas'ud II, son of Izz al-Din Kai Kahanawar, II, whom he wished to put on the throne of Korsia instead of his brother (about 682 = 1282). Under the leadership of Keru de Frim, a former Knight Templar, expelled from the order on account of his misdeeds and made Megazun by Andronikos, they were victorious over the Seljukis at Aulax and before Philadelphia (Ala Shehir); next, after having made themselves hated because of their turbulences and their plunderings, they went on to Greece and there founded the dukedom of Athens (711 = 1311). As in Spain they were already known as almogawares, the derivation from al-Mu'azzama is false.

Bibliography: G. Schlumberger, Expedition des Allmogawares (Paris 1902); W. Heyd, Geschichte des Lehnsmundels i. 551; Hammer-Purgstall, Gesch. des Osman. Reiches, etc. indices; Fuchtmanns ca. 21. (C. Huart.)

ALMOHADES name of a Muslim dynasty. — The founding of the Almohade empire in Africa, generally traced back to 545 (1152) — at which date the branches of the great Berber tribe of the Masmuda wore the mark of hostility to Ibn Tumart — is the result of the religious movement excited in the Maghrib by Ibn Tumart. To understand the success of this movement we must take into consideration the religious condition of the Maghrab at the time. Ibn Tumart came to preach his doctrines. For valuable details on this subject see the remarkable study of Goldsthein, Mohammed Ibn Tumart et la theologie de l'Islam dans le nord de l'Afrique au Xlll siecle p. 22 et seq.

It was about 440 (1052-1050), the time when Ifriqiya shook off the yoke of the Fatimides, that the doctrines of the school of Malik were definitely adopted in the Maghrib. The triumph of these doctrines caused the abandonment of all efforts to seek an allegorical interpretation for those verses of the Koran for which there was no satisfactory literal interpretation. Had not Malik b. Ansar for instance said: "we know that Allah is seated on his throne, but not how this word is to be understood. To believe it is a duty; asking questions about it is heresy"? (Cf. Goldsthein, Die Zahhiriyyen, p. 535).

Reassembling these had caused the study of the Koran to be entirely neglected; similarly the study of the hadith, was neglected as being altogether useless, and the words spoken by A'shah b. Khaif on this point are well known: "I would rather, he said, have in my box a snake's head than the Manusm of Ibn Abi Shabih." (Cf. Goldsthein, Mohammed Ibn Tumart, etc., p. 85).

The whole of fikr had become fixed in the unalterable form which the founder of this school had given it; men had to confine themselves to this and study nothing but the works of fuwar of the founders of the orthodox Schools. The adilh or the individual effort to explain the law according to the original sources, had been banished from the Ilam of the Maghrib and of Spain. The Almoravide sovereigns showed themselves protectors of these doctrines and encouraged the fakhar in this way; the 14th century especially favoured only on those who applied themselves exclusively to the study of the Malikite treatises of fikr.

From that time all knowledge was based upon the Malikite fikr and the discussions of the pseudo-scholars of the period were nothing but "casimatic wrestling" indulged in by people, who in their canonical disputes and their juridical subtleties, pretended to be dealing with the science of religion" (Goldsthein, l.c. p. 28).

Al-Ghazali in the chapter entitled Kitab al-Fil'm of his fikr "nism al-taha" had exposed these pretensions to the learning among the Malikites of the East and had pointed out the error into which they had fallen. He had also pointed out the remedy: the return to the Koran and to the Sunna.

So the campaign carried out so ardently by the great Imans in the East had to be begun over again in the West.

The fakhar thus in the Maghrib and in Spain had condemned the books of al-Ghazali which so powerfully and so cleverly clouded the folly to which they had come. According to their advice the Almoravide sovereigns had these books burnt because they were dangerous as being contrary to the true faith.
This is the picture presented to the eyes of the youthful Berber student of the great tribe of the Masmida: Ibn Tumart. In the East, where he travelled for six years as a student, he had gained the opportunity of becoming acquainted with the theories of al-Ghazali but he had also studied the science of the asr al-fikr which had been completely abandoned in the West. Moreover, he familiarised himself with the theological principles of the Ahrari School and seems to have known well the writings of the great Spanish Zahirite Ibn Harm-ur, whose influence he came. Ibn Tumart, however, does not seem to have been held aloof from the Zahirite theories in matters of dogma and replaces them by those of the Ahrari School, he at least adopts their principles in the matter of legislation.

Ibn Tumart goes further than al-Ghazali; he absolutely condemns the study of the furu, while al-Ghazali, frankly refusing to this study the name of religious science, still owns that it has some value from the point of view of civil law and of ritual. The reason of disagreement is that al-Ghazali bases in addressing himself with his abstract theories on the ra`ul to the whole of the uncultured Berber nation, while al-Ghazali is anything but partial to giving the common people a teaching and theories above their comprehension and capabilities. Al-Ghazali only addressed himself to the intellectual elite, like Fakam in the Reformation of the Christian Church. Ibn Tumart, like Luther, addressed himself to the masses.

The foundations on which Ibn Tumart has grounded his new juridical doctrine have been described at length in his *Wurzi*. Abd al-Wahid al-Marrakushi has shown us in his History of the Almohades how the theories were applied by the first sovereigns of this empire. The character of Ibn Tumart's doctrine cannot be better described than in the words of Goldscheider: "It is evident from his discussion at Alghani with the *al-fikr* that the essential element of his doctrine on the foundations of the law may be summed up in this axiom: *al-fikr la isin ilah f`l-*kah *la-ba*, i.e. "the smallest possible place must be left to reasoning in the laws of religion". It is the objective, material sources which must be regarded as the basis of legislation, that is to say: the Qur'an, tradition transmitted by authentic means and the consensus of the nomen, founded on the traditions that have been supported for generations, together by numerous authorities, forming one uninterrupted chain (*sudur*). The subjective, personal element is thus absolutely excluded, what he calls the *gama*, hypothesis, opinion, which we must add has under the form of the *consensus of the nomen*, necessarily formed a part of the regular sources of the law from the very beginning of juridical speculations in Islam (cp. Goldscheider, *I.c.*, p. 44).

As for the traditions (all of which he approves of) Ibn Tumart yet prefers those of the Medinites and he says: "All that the scholars of Medina have handed down and all that has guided their actions, that is the straight path. Islam, the laws, the Prophet, and his companions existed in Medina at a time when in no other part of the earth was there found either religion, or prayer, or fasting, or the sacrifice of the law; in the epoch the true religion existed neither in the West nor in the other countries. So the people of Medina can justly serve as as proofs against all others. But if someone comes forward, saying: Yes we have received from the Companions, sayings by the Prophet which do not agree with the Medinites' practices; why then have the Medinites gone astray from these traditions in the application of the laws? If anyone puts this question we may answer him thus: this contradiction can be explained in three different ways: 1. either the Medinites have shown with regard to these traditions a conscious and intentional opposition; 2. or they have acted in ignorance (but involuntarily); 3. or they have merely been led to it by lawful reasons. To suppose the first would be an absurdity for that would mean that the people of Medina are the opponents of what God has declared them to be, viz. the adopters of the Prophet walking in the straight path. It is just as impossible to accept the second explanation, for we know how zealous the Medinites have shown themselves for religion; moreover they all stay in the company of the Prophet (and only therefore have known his wishes). - There remains only the third explanation. There may be a lawful reason for opposition, either when the contents of the tradition under consideration have been legally abrogated, or when the traditions in question are suspected of being false or interpolated or do not exist sufficient confidence. Without any doubt the practices of the Medinites give enough arguments against everything opposed to them."

In short, Ibn Tumart, excludes from his legislation the *al-fikr*, formally condemns the *al-fikr* and does not admit the speculative use of analogy (*jimma al-da`f*) as a source of the law. For him the only sources from which one may draw are the Qur'an, the Sunna and the concord of the Companions of the Prophet (*fitna al-thulutha*). In theology, he follows the strict dogmatism of the most uncompromising of the Asgharite schools. A very strict follower of the *al-fikr*, Ibn Tumart was brought to look upon the religious opinions of his co-religionists of the Maghrib as *hufr*. Whoever follows, he said, the literal interpretation of the Qur'an, must inevitably come to *ra`ul* or anthropomorphism to the materialistic conception of God asserting in him material attributes; this person certain is a Muslim and hence this fact should be under the ban of religion and be expelled from Muslim society. This was the case with the inhabitants of Spain and the Maghrib under the reign of the Almohads.

Ibn Tumart, apostle of the *ta`lal*, according to the maqasitite definition of the essence of God and His attributes, makes the sovereign responsible for the faults of the people and declares the *didjiz fi uhib illah* against the Almohads.

The difference existing between Ibn Tumart and other theologians who had already tried before him to combat anthropomorphism by the allegorical interpretation, called *al-fikr*, was that he lifted his doctrinal difference with the anthropomorphists to the height of a *sanas bi`lah*. He regarded anthropomorphism as impiety (*hufr*) and as infidelity towards the highest authority in the country (the Almohads); he considers that this is a sufficient reason for fighting this authority in the name of religion, and for overthrowing it. The holy war against the
Almoravids was just an religious obligation (fard) as a war against any other infidels. Therefore the word mujāhidīn is the habitual denomination of the Almoravids on the lips of Ibn Tumart and the Almoravids.

Anthropomorphists and Christians (Rība) are the enemies whom the Almoravids were bound to fight equally. The war against Christianity they waged in common with the whole of Islam of that period as well as with their political predecessors, but the struggle against rūḏīn and its partisans was their special domain, in which their own dynasty had gone before them with some means as war with fire and sword. As it is their particular property it remains throughout the whole of the Almoravid dynasty the point most firmly fixed in their traditions" (cf. Goldzweber, in Zeitschr. d. Deutsch. Morgenl. Gesellschaft, xi. pp. 67-68; quoted by Alfred Tal, Les Fenins Ghitayna pp. 39-35.

Before he openly declared war on the Almoravids, Ibn Tumart posed as a censor of public morality as Amīn in tawārīf with an al-muḥāsib; he breaks the wine-jars and musical instruments wherever he finds them, he openly blames established authority. One day in Marrākshah he violently admonishes the princess Sarrā, sister to the reigning sovereign, because he met her in fact drinking with the ungodly. At the same time he publicly teaches his theological theories to whoever wishes to hear them. He is everywhere expelled, especially from Bougie, Timbuktu, Fez, Marrākshah and Aghmat and takes refuge with his tribe, the Maṣūmīa, to whom he teaches the Ḵoršā and the principles of the true faith. The author of the Ḵṟj̱ḻṟ represents him as using each of the words forming the first chapter of the Korān as a name for each one of his pupils in a branch of the Maṣūmīa, in order to make them learn it by heart. It was in these mountains of the Maṣūmīa in 515 (1122-1123), after having received the homage of the principal Berber chiefs, that he took the title of Maḥdī, i.e. he who is called by the divine will to speak and put an end to error, to order, justice and the true faith may reign. As Maḥdī he struggled against the right to use violent means in order to establish the reign of pure orthodoxy. From this moment Ibn Tumart's political rôle really begins; from this year, 515, the Almoravid empire is said to date, although the Almoravid capital was not taken till about twenty-five years later.

The first of the companions to whom Ibn Tumart gave his confidence after his return from the East was 'Abd al-Muʿmin, the same who had to take upon himself the direction of the Almoravide affairs after the death of the founder of the empire. Owing to this he must be mentioned here. 'Abd al-Muʿmin, a Berber of the tribe of the Gharīyūn was the son of a potter of Nekkuna but he had distinguished himself as a student at Tlemcen. The meeting between him and Ibn Tumart, which came about accidentally according to some, intentionally according to others, took place without doubt somewhere near Bougie from which town the young Maṣūmīa preacher had been compelled to flee just before in order to save his life. Having seen him, Ibn Tumart's intimate companion, 'Abd al-Muʿmin received the touching of this master, who laid before him the details of his doctrines, the purpose of his preachers and perhaps his future plans.

When Ibn Tumart took the title of Maḥdī he is said to have already succeeded in grouping round him numerous Berbers whose chiefs were his companions and disciples. To these he gave the name of Ṭ̱ṟḇ Arbūtī (students seeking the true knowledge); to others, i.e. the people who regarded him as their spiritual and temporal leader, the name of Muṣṣīrīn (followers the doctrine of Tawārīf); whence Almoravides.

Thenceforward his policy was to win over followers enough that he might begin open war, against the Almoravides sovereigns in order to overthrow their authority in the name of religion and to substitute his own.

On the Berber mountainmen he had already made a great impression by his reputation or wisdom and by the mature life he led, but he had to convince these gross and uncultured people by facts more palpable than theological theories which they ill grasped or abstraction which they could not understand at all. In a country where materialism has been a success at all times and under all forms, Ibn Tumart posed as a performer of miracles; he succeeded by these means in convincing the masses of the superior and supernatural power he would command.

While he was lastly criticizing the Almoravid administration he showed the Berbers how much exposed they were to the vexations of the Government, in particular of its tax-collectors, and how easily they could resist the armies of the sovereign of Marrākshah in their almost inaccessible mountains.

The result of the Maḥdī's exhortations was that several tribes committed acts of hostility against the Almoravides; they refused to pay taxes and did not show regard for the orders of the Government. In particular of the tax-collectors, and how easily they could resist the armies of the sovereign of Marrākshah in their almost inaccessible mountains. The result of the Maḥdī's exhortations was that several tribes committed acts of hostility against the Almoravides; they refused to pay taxes and did not show regard for the orders of the Government.

The Almoravid governor of Sīs who meant to march against the Harūghas and chasseik them, was beaten by them and shamefully fled with the poor remains of his army. This first victory gave the Berbers confidence and the number of tribes rallying round the Maḥdī increased rapidly. Then Ibn Tumart went definitely in the country of the Tinnīl, which was very difficult for the enemy to enter; there he built a house and a mosque near the source of the river Nafta where he fixed his residence. This was the beginning of the town of Tumart, the first capital of the Almohades; in this very spot were also built, the Maḥdī and the Almoravide sovereigns. (The mosque of Tinnīl and the ruins of the town have been discovered by Edmond Doustier during his exploration of 1907 in Morocco. Cf. Tourn. Arc., 9th series, XIX. 158 sqq.)

After 517. (1123-1124) the Maḥdī, thinking that he was strong enough not to be always on the defensive, decided to come forth with a strong armed force against Marrākshah. But his army, commanded by 'Abd al-Muʿmin, who then took for the first time the title of al-Maʿṣūmīn — according to 'Abd al-Walīd al-Marrākshī — was completely routed by the Almoravid army that marched against it. Then Ibn Tumart proclaimed, just like the Prophet after the defeat of Ophod, that all his partisans killed in this battle had died the deaths of martyrs; he succeeded by his clever proclamations in counter-
acting the dismay which such a calamity might have aroused.

The contradictory dates given by the authors, make it difficult to state accurately; the several periods of struggle between the Mahdi and the Almoravids up to the death of Ibn Tumart. Even the date of his death varies in the different works mentioning it. According to Ibn Khaldun, the Mahdi died in 522 (1125), according to others — and they are in the majority — in 534 (1138). These divergences may partly be explained by the fact that Ibn Tumart's death was kept a secret for a long time by his intimate companions. The Mahdi himself, feeling that the end was near, is said to have recommended secrecy until the Berbers should be prepared for receiving this important intelligence calmly and proclaim as leader the man chosen by the Community. It was 'Abd al-Mu'min whom the Almoravides recognized as Imām of the Community under the title of ʿAlībīd or of ʿAbour al-Mu'minin. The new chief of the Almoravides had a glorious reign (see ʿAbour al-Mu'minin): he realized beyond expectation the ambitious projects of the Mahdi, destroying the Almoravide empire and introducing by main force into the whole of North Africa and into Spain the doctrines so ardently preached by Ibn Tumart.

The politico-religious organization of the Almoravides established by the Mahdi was as follows: 1st. The people of the Almoravides formed the Community, the members of which were regarded as the only true Believers; except themselves all other men were infidels against whom they had to wage war without mercy. 2nd. At the head of the Community was the infallible Imam, first, the Mahdi, subsequently the Caliphs, his successors. It was in the name of this leader of the Community that the public prayer had to be said. 3rd. The Mahdi was surrounded by 20 counsellors, chosen from among his oldest disciples. This counsell was usually designated by the name al-qawāṣ, the assembly. It was the Great Council of the Government and the members of this assembly besides having a voice in the important matters of State, could take the Mahdi's place at the head of the Community in his absence or in case of death. It held its meetings at the Friday prayers. 4th. Another council composed of 50 members represented the Berber branches forming part of the Almoravide Community. This was the council of 50 called ʿAbour al-Mu'minin by Ibn Khaldun.

This organization was modified by 'Abd al-Mu'min and the two assemblies seem to have been fused into one.

When the Mahdi died, his successor as chief of the Community, 'Abd al-Mu'min, was first agreed upon or chosen by the council of Ten, next this choice was ratified by the council of Fifty and finally by the People.

From this epoch the sovereign power always remained in the family of 'Abd al-Mu'min. Until the conquest of Marraksh by the Marinids in 688 (1289), eleven descendants of 'Abd al-Mu'min's succeeded one another on the Almoravide throne.

The numerous provinces of this vast Almoravide empire were always held by members of the reigning family and by descendants of the famous Abū Ḥāfṣ ʿOmar. In order to understand this favour enjoyed by the latter we must observe that Abū Ḥāfṣ ʿOmar, chief of the Hāfras, one of the most powerful branches of the Maqū̃ūla in the Mahdi's time, had been one of the first to embrace Ibn Tumart's cause. By thus giving the founder of the Almoravide empire the valuable support of his tribe, he had rendered him a considerable service. He introduced 'Abd al-Mu'min and the Almoravides an even greater one at the Mahdi's death. The latter having clearly shown his preference for 'Abd al-Mu'min, the shāliḥ Abū Ḥāfṣ not only evinced no jealousy, but according to Ibn Khaldun it was he who had Ibn Tumart's death kept a secret in order to have time for himself preparing the Maqū̃ūla for the acceptance of 'Abd al-Mu'min as ʿAlībīd, because the fact that the latter was a stranger to the tribe would not have failed to excite protest. For the same reason 'Abd al-Mu'min always treated Abū Ḥāfṣ absolutely as his equal.

When Abū Ḥāfṣ died (572 = 1175-1175), his children and grand-children were always treated as considerably and with the same honour as the descendants of 'Abd al-Mu'min himself.

Al-Tṣājīn reports that the fourth Almoravide Caliph al-Naṣir, wishing to leave the province of Ḥīṣiyya in the hands of a trustworthy governor, did not choose him from among his own family; he sent to shāliḥ Abū Ḥāfṣ Muḥammad, son of shāliḥ Abū Ḥāfṣ, to say that he regarded him as his equal and if he did not choose to remain in authority over Ḥīṣiyya then it would be he himself, al-Naṣir, who would take that place, but then he would call upon him to go to Marraksh and reign there in his stead. Abū Ḥāfṣ Muḥammad remained in Ḥīṣiyya and afterwards his successors made themselves independent at the decline of the Almoravide dynasty, reigning in Tunis under the name of Ḥāfṣīdān.

It must be observed that the princes of the line of 'Abd al-Mu'min are called Maqū̃ūlān while those of the house of Abū Ḥāfṣ are called Ḥīṣiyya which makes it easy to distinguish them in the history of the Almoravide empire even if they have the same names.

The Almoravide empire was the first state since the establishment of Ifrīqya in the West, uniting under one single authority the whole of North Africa from the Gulf of Gabes to the Atlantic Ocean together with Muslim Spain.

The break-up of this immense empire began, however, less than a century, and a half after its foundation. In 653 (1253-1256) Yaghmurīsī b. Zayyān rose at Tiemcen against the Almoravide authority and founded the 'Abd-al-wāūd kingdom of central Magrib. In 654 Abū Zakariya', the Almoravide governor of Ifrīqyā, had himself popularly proclaimed an independent sovereign and took Tunis as his capital.

of his kingdom, perished in a battle and his capital was taken (447 = 1053-1056).

On the death of Yaqūb b. 'Omar which took place in 447 (1055-1056) his brother Abū Bekr became commander in chief and marching northward continued the conquests begun in the south of the extreme Maghrib. The countries of Sīs and their capital Tālqant were subdued; next Aghmūt and its province submitted to the power of the Almoravids conquerors. Abū Bekr married the widow of the king of Aghmūt, the beautiful Zaināb, of the tribe of the Nafāwī, who was destined to play a certain part in the establishment of the Almoravid empire.

Subsequently Abū Bekr and Ibn Yāsīn attacked the Bergwātī Berbers, whose territories extended as far as the Atlantic Ocean. The Bergwātī professed the sunnic doctrines of their prophet Sallīh; it would be a good work to bring them to Islam. But these Berbers energetically resisted the attack of the Almoravids and Ibn Yāsīn, taking an active part in the military operations, found his death in a battle (451 = 1059). Perhaps Ibn Yāsīn appointed a spiritual leader to take his place at the head of the Almoravids; Ibn Khālid mentions as such Ibn 'Abīdī who, if he did exist at all, played a very subordinate part compared with Abū Bekr b. 'Omar. The latter was the chief of the dynasty and had coins struck in his name; he continued the war against the Bergwātī and subdued them (452 = 1060). Shortly afterwards he was informed that Bulāqūn, lord of the Ḋālī of the Banū Hammīd, was marching with a large force against the countries of the extreme Maghrib, and at the same time that those portions of the Šanālīya which had remained in the desert were carrying on war with one another. He took advantage of the latter fact to leave the Maghrib for the time being and go back to the desert in order to re-establish peace amongst the Almoravids. Before leaving, Abū Bekr gave the command over the troops in the Maghrib and the direction of affairs to Yūsūf b. Tājīfī in (543 = 1148-1149). He also abdicated the chieftainship of the Banū Zaināb which thus became the wife of Yūsuf b. Tājīfī (453 = 1061). This woman of remarkable intelligence, rare energy and great beauty acquired considerable ascendancy over her new husband's mind and had a happy influence on the fate of the young empire. Yūsuf b. Tājīfī confirmed the conquests in the extreme and in the central Maghrib. Abū Bekr, having re-established order in the desert and having received the news of his lieutenant's success, returned to the North to take again command over the Almoravids. But following Zaināb's advice Yūsuf b. Tājīfī loaded him with presents and made him understand clearly that he was not at all disposed to give up the supreme authority. Abū Bekr judged it wise to insist; he retired to the Sinai and to the Sittān where he died in 460 (1067) In his quality of supreme chief of the Almoravids Yūsuf b. Tājīfī founded Marrākūsh which became his capital and that of his successors; then he went on with his conquests in the extreme and in the central Maghrib as far as Algiers. In 475 (1082-1083) he came back to Marrākūsh after having left Almoravid officers in the conquered countries as governors. Urged by the Muslim princes of Andalusia (royal

de Taiffer), and in particular by al-Mu'adhī b. 'Abd Allāh, king of Seville, Yūsuf decided to cross to Spain with a strong army in order to make war against the Christian kings of León and Castile; he gained over the Christian armies the great victory of Zafīlīka (12 July 479 = October 23, 1086) which was for the Almoravids the prelude to the conquest of Spain. Certainly authors mistrust that from this day Yūsuf took the title of Amīr al-Mu'āwīyīn. This assertion is doubtful, at least it does not appear that the great Almoravid conqueror enjoyed this title denoting temporal and spiritual authority at the same time. We even know as a fact beyond dispute that the Almoravid sovereigns, while reserving for themselves temporal authority with the title of Amīr al-Mu'āwīyīn, attributed supreme authority and sovereignty in matters spiritual to the 'Abīdīs of the East with the title of Amīr al-Mu'āwīyīn, given to the Caliph.

The petty Muslim kings of Andalusia, al-Mu'āwīyīn included, soon found out that the risks, their authority and their riches ran through the Almoravid chief, were much more formidable than those they feared from the Christians. They were soon robbed of their dignities and banished by Yūsuf b. Tājīfī, who left in Spain Almoravid troops and governors, chosen from among his relatives.

When Yūsuf b. Tājīfī died in 500 (1106-1107) he bequeathed to his son 'Alī a vast empire, comprising the countries of the Maghrib, a part of Iṣrāyiya and Muslim Spain (extending to the north as far as Fraga). His descendants succeeded each other on the throne of Marrākūsh for less than half a century and the Almoravid dynasty was destroyed in Africa when the Almorahids, led by 'Abd al-Mu'āwīyīn, conquered Marrākūsh (541 = 1146-1147) and killed the last Almoravid king of the house of Yūsuf, called Taḥāk b. 'Alī b. Yūsuf. Soon after the Almorahids conquered Spain with the help of the Andalusian Muslims, who had been tired of the cruel Almoravid yoke for a long time. Since 539 (1144-1145) Almorahid armies had crossed over to Spain and at the death of the Almoravid governor Yūsuf b. 'Abīdī in 541 (1146-1147) the authority of the Almoravids in the peninsula was at an end. [See 'ALĪ b. GHAṬĀY].

In short, if one does not count the resistance of the last representatives of the Almoravids in Spain and on the Balearic Isles nor the rebellion of the Banū Ghaṭāy what is properly called the Almoravid empire had become extinct at the death of the last king of the house of Yūsuf b. Tājīfī in 541 (1146-1147) The rough Sānūsids used to the privations and the fatigue of desert-life and suddenly transported by the winds of fortune to the fertile regions of the Tell and Andalusia, were bound soon to become efficient through contact with these riches, this life of luxury that they had not known until then. They came to Spain at a period when literature, poetry and intellectual pleasures had long since replaced the love of war and the thirst for conquest. Doubtless this state of things facilitated their settling in the country but it was the cause of their ruin as well. The sudden contact with a civilisation so refined, for which they were in no wise prepared, rather than just as it had mined, some eight centuries before, the
Vandals their predecessors in this same North Africa", C. A. Bel, *Les Histoires Génoises* viii.

Such are the true causes of the sudden downfall of this empire which made such rapid conquests and lasted less than a century.

**Almunecar**

Arabic: Al-Munawwih, a little town in Spain to the south of Granada on the Mediterranean, is known through the landing of 'Abd al-Rahman I (756) with 1000 Berber horsemen in 1488. It surrendered to the Catholic kings. (C. E. Seybold.)

**Alp (A.), bey.** Frequently found in Turkish proper names.

**Alp Arslan**

Muhammad b. Dauud (Dauud) or Aqbar Al-Dawla with the kunya Abu Shuja', a famous Seljuk sovereign (455–465 = 1065–1072). Born on May 19, 430 (1010, according to others 448), showed himself already in his father's lifetime a brave and clever military leader, taking part in several successful expeditions, so that his father made him his successor in the province of Khorasan. The date of his mounting the throne cannot be fixed accurately because our informants give as the year of his father's death 450 (1058) or 451 and even 452 (1060); but it appears to be almost certain that even in the last years of his father's lifetime he was the real sovereign. When afterwards his uncle Toghrul had died (455 = in the beginning of Sept. 1055) without leaving any heir, his son al-Kundur [q. v.] called a brother of Alp Arslan's, Sulaiman, to the throne, who was said to have been named by Toghrul himself as his successor, but some influential Turkish notables did not approve of this and paid their homagé to Alp Arslan, who was soon afterwards recognised by the rest al-Kundur and was proclaimed sultan in a solemn meeting on 7 Dhu-l-Mahad 1, 456 (April 27, 1064, by the Caliph al-Kahf b. Amr Allah. In the meantime Alp Arslan still had to overcome the opposition of some of his father's relatives and of the most powerful notables who did not submit to him; or even claimed the dignity of Sultan for themselves. Alp Arslan's military abilities, however, his quick and energetic behaviour soon put an end to this, although one of these relations, Kushtunishhi [q. v.] at first threatened to become a dangerous opponent. The moment this adversary had breathed his last after a fatal encounter in the neighbourhood of al-Rai, Alp Arslan and his troops took the road to the Byzantine frontier (t Rabi' I 456 = at the end of Feb. 1064). On their way many enmis and princes joined them so that the leader could first rule the territory of the Georgians with a powerful army, conquer several towns and make the king of the Georgians his tributary and neighbour. After a而的更多信息。
duct towards the Greek Emperor and his own brother Kawar shows, a man of noble and lofty character. For the rest he was uneducated and probably illiterate; yet he was wise enough to leave the affairs of government to his Wester Nicem al-Mulk [q.v.], and to disregard the accusations made against him.

ALPUENTE, a small Spanish town in the north-west of the present province of Valencia, on the eastern slopes of the Guadalavi-Tierra valley, in Arabie al-Bâni, al-Binz, al-Fent; after the fall of the Umayyads of Cordova it had a dynasty of its own, the Bâni Kâsim: "Abd Allâh b. Kâsim al-Fent Nicem al-Dawsil till 1030, his son Muhammed Yussin al-Dawsil and his grandson Ahmân: Aydân al-Dawsil till 1043—1049, and his brother "Abd Allâh II. Iqân, al-Dawsil 1048—1049 till 1052; then it fell to the Almohads and Almohades with rebellions of short duration. In 1256 it fell to Don Jaime of Aragon through the efforts of Don Guillen Bishop of Segorbe. (C. F. Seybold.)

ALPUJARRAS — probably from the Arabic al-Baghârî (Idrîst: al-Baghârî), pastures, "sierras de yerba y de puesta" — is properly the whole of the mountainous foreland in the south of the Sierra Nevada, as far as the Mediterranean from Motril to Adra and Almería. But this name designates the numerous, fruitful valleys of Padul — Bérn — Lanjarin — Orgiva—Cádiar and Ugíjar — Alcurna — Lanjaray — Ráquay — Gador. The warlike inhabitants of the numerous villages of these valleys and across-valleys, the Alpujarren or Alpujarren, were as early as the time of the Arabs of a turbulent nature and since the eighteenth century have been many uprisings, notably the great rebellion of 1568—1570, which was suppressed by the Marqués de Medinacel and Don Juan d'Austria by the slaughter of the Moriscos (under King Alber Hanyays and 'Abd Allâh Aben-Abdo.

ALRUCABA. [See ERICA.]

ALTAI, a mountain system in the region where the Ob and the Irtysh take their source. The native Turkis name for the southern Altai is Altan-Vigh ("gold-mountains"); so in the Orkhon inscriptions, in Chinoise Chin-Jen; the same mountain-chain is occasionally denoted in scientific geography by the name of Etquet (evidently Aktagh, "white mountain") which arose from Greek traveller's reports in the 6th century A. D., but according to later investigations the mountain-range mentioned by the Greek traveller did not fall in the Altai, but in the Talmen-Sen (K. Chama, Altai, Décor. sur les Turq.-hum occidentalises, pp. 256 et sq.), the error arose through the incorrect. Greek rendering geograoos 'epikos. If the present name likewise originates in a word for "gold", then it can only be the Mongol altan ortata; the name seems, moreover, not to have appeared until the time of the Kalnchuk dominion. The present Turk population are ignorant of this meaning of the name. In a story containing a popular derivation of the word Altai, it is divided into allat ("6 months"), it is used as a common noun in the sense of "(high mountains)."

(\(W. \text{Bartold.}\))

ALPHAET. [See alphabet.]

ALPARIASIUS. [See A-ARAS.]

ALPHAROS (Alpharet). [See ARAS.]
though perhaps the influence was not a direct one. The people are still given up to Shamanism; only a portion of them have embraced the Christianity preached by Russian missionaries (e.g. W. Radloff, *Aus Sibirien, t. 250 et seq.*; A. Vambrke, *Das Türkensmolk in seinem ethnologischen und ethno-geographischen Verhältnissen, pp. 97 et seq.*; Altai in Radloff, *Proben der Volksbürtner der turkischen Stämme Süd-Sibiriens, part I. — Many other authors). The terms "Altai" and "*Altai", in the same sense as formerly "*Unrulatsa*" and "*Unrulatsa", i.e. as a common denomination for five families of languages (Tungusic, Mongol, Turkish, Finno-Ugrian and Samojedic).

(W. Hartshold.)

**ALTAY or ALTAY, is the former name of the town in the northern frontier of the Sassanid or Trak (somewhat corresponding to the old Babylonian), to the south-east of the Khuibya (south of Semnane), Al-Mahbadan describes it as a large and populous town. The place is mentioned to Procopius as Altina (v. 20), still exists; in H. Kiepert's *Manuskripte zur Geschichte des Iran* (Wissenschaftliche Zeitschrift der Königlichen Gesellschaft der Wissenschaften zu Berlin, 1894), it is to be found on the authority of the surveys of J. V. Jones a little to the north of Lat. N. 34, near the head of the Tigris. Yet to-day the position of *Altih* appears to be so far altered that it now lies to the west of the Tigris, whereas according to the accounts of medieval Arabic authors it stood on the east bank of the river. Therefore an alteration of the course of the Tigris for which there is other evidence must be assumed to have occurred in the interval. Close to *Altih* stood a Dair al-Abidat (converts) that is frequently referred to and, which is also called the Dair al-Abid after the name of the town.**

(R. M. Streck.)

**ALTILH (formerly also *Altih*) or *Altišker* (*Altishker*), a name of the Chinese Turkic, properly *six towns*, is a name for part of Chinese Turkestan in which are the towns of Kala, Akbo, U-Turfan (or Urg-Turfan), Kherghar, Yarkand and Khiotan. It appears to have been first used in the 18th century (cf. M. Harmsen, *Der islamische Orient*, vol. 1, p. 226, n. 1, p. 278, n. 3). Juilli-Boissier between Kherghar and Yarkand is now added as the seventh — and is also frequently mentioned as one of the six towns; in this case the other Kala or U-Turfan is omitted; on this account, the country is often called *Dijit* (or *Jitt*). Sibot (*seven towns*) in modern sources (as in the latest historical work *Teḥlik-i *Åmâinit*, written in 1321—1335, printed by N. Pantasow in Khiva, 1889) the best collection of historical accounts of *Altishker* is contained in a Grigorow, *Ost-Türkistan, part II, St. Petersburg in 1877 (Russ- lit.); Belinow, *Kasichur und Kaschuy 1875 is much less reliable.*

(W. Hartshold.)

**ALTILIK (τ), is the name of a six-ponted piece of ALTIN or *At urgency, Guld, also used of gold coins. The word is often met with in Turkish proper names of persons and places, e.g. Altin Köprü, Altinpaşa (Altinpaşa).**

**ALTIN (ALTIN) or *Köprü*, is a town to the south of Irkut (Arbela) on the lesser or lower Zai, where receives the Hodgai or, coming from the north, at 42° 5′ south. Le.-N. (Greenwich), on the level of the sea, built on a large conglomerate island in the middle of the Zai, it appears from within narrow and inconsiderable, but from without it presents one of the most picturesque sights in Further Asia. Two stone bridges on arches connect it with the main-land; the one connected with the East bank has a remarkably bold arch, which time so high over a deep ravine that the whole town can be seen spread out below while the other bridge is below the level of the town. As *Altin Köprü* is the only place by which its bridge affords a convenient means of crossing the lesser Zai, the caravans are compelled to pass through this town. Through it runs the principal road from Bagdad to Mosul, which at all times has been travelled over by European travellers. The inhabitants of the town, chiefly Turkomans (estimation 1914, 2,000), live principally on the proceeds of the carrying trade which, apart from the flourishing caravan trade, is also carried on by water by means of leathern rafts (kelebis). The Turkish name *Altin Köprü* ("gold bridge") can scarcely have originated in the tiles that were certainly considerable in former times, as has been conjectured, but probably in Altin-Şer, the actual name of the upper course of the lesser Zai; cf. concerning Altin-Şer G. Hoffmann, *Ann. aus syrischen Abten persischer Mäcstwerke* (1898), pp. 258, 263. Altin-Köprü in this case would be an abbreviation of Altin-Şer Köprü, i.e. the "bridge of the gold-river".

**ALTIN TASH (pronounced locally *Altin Dadi*), a village of Asia Minor, on the Prutok-Cal between Kutahya and Abya, farther from ancient remains. It is the chief town of a small administrative attachment to the or and sandjak of Kutahya (province province Kristinogdierzis = Brossa); it comprises 43 villages. (See Dacek, 1175, p. 769). 1569 houses, 8749 inhabitants, all Musulmans.

**Bibliography:** C. Huart, *Konia, le solite des vallées tourouses* (Paris, 1897), pp. 72—104; All Anawal, *Manuilis' vishénya* (Balad, 1877). 91pp. (C. Huart.)

**ALTUNŞAH, a town in the province of *Altin Sharif*, or *Altun Sharif*. Its size was once the same as the ancient after being victorious over the Perisan soldiers in *Altun Şah*, in September 407 B.C. (Plutarch)."
Author as of a copyist, was a Turkish slave, later general to the Khazars. He commanded the right wing in the great battle against the Khazars (1002). He was governor of Herat (1002). He died in 1012. His successor was Alp-Tegin. He was the highest rank in the bodyguard of his sovereign, and was a great warrior. He was married to the princess of Herat, and his son was governor of the town until his death in 1043. Alp-Tegin is said to have amazed the surrounding Turk tribes by his bravery and honesty. He is said to have discovered the treasure of the Khazars, and to have been a great warrior. His remains are said to be buried in Herat.

ALUHA (a), a kind of demon [See AL-DIN, MAHMUT].

ALUSI-ZADE, the name of a learned family of Herat, whose chief representative was Mahmud. He was a prolific writer, and his works are still in circulation among the Turk tribes.

ALWAN, see [See LAM].

ALWAN-KOH, a kind of granite rock found in the Alwan-Koh mountains, which are located in the north-west of Persia. The rock is said to be of volcanic origin, and is found in the mountains of Alwan-Koh, which are located in the north-west of Persia. The rock is said to be of volcanic origin, and is found in the mountains of Alwan-Koh, which are located in the north-west of Persia.
isolated red clay of salt formation. Wild rocky precipices, bare cliffs and gorges alternate with fertile mountain pasturages; but no single tree now grows there. The Alwär-Kohn is noted for its abundant water-supply. Mastawfi observes in his geography, written in 740 (1340), the Nukhabît al-Mudnâna, Kohn (1511 = 1595), p. 134, that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from the central portion of the mountain chain, some of which are tributaries of the Tigis, others turning southwards, flow to the interior of Iran. As the result of the plentiful irrigation by the Alwär stream the plain of Hamádún has always been considered as the most highly favoured region of Iran. Hamádún itself, the old Ekbatana, which is built in terraces along the foot of the mountain was a favourite summer residence for the Achæmenid kings on account of its cool, lofty position (1686 metres). Two cuneiform inscriptions dating from Darius I and Xerxes I still remain as vestiges of ancient Persian times at a place named Gandj-Namun (= treasure-house) on the slope of the Alwär-Kohn. Olivier was the first European to climb the summit which is covered with snow for eight months of the year; this feat was accomplished in 1796.

Oriental writers relate many legends but few facts concerning the Alwär-Kohn. Kazwini (ob. 683 = 1285) gives the best account; he names it Kohn Arward. Yakût also uses the form Arward, whereas other Arabic writers employ the later term Alwär (Mastawfi: Alwär Kohn). The Old Persian name Armandâ (Arwana and Farwend: Arward) appears in Greek writers (Polybius, Ptolemy, Dioscorus) in the form Tyras. In Old Armenian the word is found as the name of persons in the form Erwand (Arward); cp. H. Hübner, Armeische Grammatik, Leipzig 1897, p. 40, and in the Armeischimische Forschungen, xxi. (Strassburg, 1904), p. 426. The “white mountains” mentioned in the cuneiform inscriptions are probably to be identified with the Alwär-Kohn; cp. Streck, in the Zeitschrift für Assyriologie, xxv. (1900), pp. 371. However, moreover, the “cedar-mountain” of the Old Babylonian Ologophonic epic refers to the Alwär-Kohn, as Jensen has conjectured in Schrader’s Keilinschriften, Biblioth., vol. VI, part 1 (Berlin, 1900), p. 572.

Stahl, in Petersson’s Geographie, Mittelungern 1907, p. 205 (geological observations) and also 1909, p. 6. (M. Stek.)

**ALWAR (Ukhrul according to English orthography), is a native state in British East India (Rajputana) founded in 1731 and named after the capital Alwar. The state (314,159 sq. miles) contains 828,000 inhabitants (about one-fourth are Mahanmedans), the town 58,000. Among the Muhammadan buildings: the manor-houses of Bahurwar Singh and Fateh Dunga are worthy of mention (see Ferguson, Indian Architecture); in the palace of the Maharaja there are splendid collections of books, precious stones, armour etc.

**Bibliography:** Imperial Gazetteer, Rajputana Gazetteer.

**AMA** [A], female slave, maid. [c.p. 'Amu].

**'AMĀDIYA,** a town in Kurdistan, 18 hours north of Mosul (Mesulu) on the slope of the Tigris mountains [q. v.], Lat. 37° N. and Long. about 43° E. (Greenwich). European travellers use the forms 'Amadiya, Amadi, Amadiz and Amadiya. Although there is good authority for the form al-'Amadiyya in Arabian writers (e. g. Yâkût a. v.), the pronunciation 'Amadiyya, Amadiya seems now to prevail. According to Mastawfi 'Amadiyya takes its name from the Dalmate prince 'Isa al-Daula (ob. 338 = 949); others, e. g. Yâkût ascribes the foundation or restoration to 'Isa al-Din Zengi, who is said to have built the town in the year 537 (1142) on the site of a ruined Kurdish fort named Aŝib. The town is situated on a hill, and is dominated by the minars, built on a steep rock, and long held to be impregnable. The water-supply of the citadel is furnished by cisterns hewn in the rock. In spite of its high, exposed position, the climate of 'Amadiya is comparatively unhealthy, in summer the air is so hot, that the inhabitants are accustomed to leave the town in this season and take up their abode on the mountain-heights, a distance of 2—3 hours, where even in summer snow still lies. The principal valley of 'Amadiya is connected with the valley of Kaxwûr (Kurations). As the result of its favourable geographical position, near the watershed between the basin of the Khabûr and that of the greater Zār, 'Amadiya was for long a commercial centre and the rendezvous of the mountain Kurds, for barter with the merchants of Mesopotamia. A Jewish colony of 1,000 souls recalls this commercial period. The majority of the 5000 inhabitants are Kurds of the tribe of the Hakkâr (Hakkâr), which has its head quarters here. The administration of the town was formerly in the hands of hereditary princes who traced their descent to the 'Abbâsids; at present it belongs to the Turks, who maintain there a strong garrison, for 'Amadiya possesses a strategic importance as the key of Kurdistan. The Turkish administration has attached the Kanz 'Amadiyā which belongs to the Lâwî Hakkâr, sometimes to the Wilâyât Wâgir, sometimes to the Wilâyât Mosul in the last few decades.

AMAL (Arabic: أمال), a plural noun, action, attaining an object, distress, tax-list; hence its derivs., tax-collector, amalium, exorant, etc. In Grammar amal denotes action, the influence of some word on another.

AMALIK (or AMALIK), the Amalikite kings of the Bible. Muslim historians differ as to the genealogy of Amalik; according to some he was descended from Iadr, according to others from Arpachshad, while others consider him a Hamite.

The Amalikite kings are generally considered to be the remains of one of the most ancient Arab tribes, of the name descendant of Taim, Daud and Thamud. The Arabs say that after the confusion of tongues, God Himself taught the Amalik the Arabic language. The great antiquity attributed to them has led the Arabs to identify them with other biblical peoples. According to them, the Camannites and the Phalûnûn (Phalûnûn, hence also Goliat, or Dullûn) were also Amalik, as were also the Pharaohs of Egypt; Hûdân was moreover inhabited by this people, and it was against the Amalik of Yathrib that Moses sent a body of Hebrews with the orders to exterminate them (cp. Exodus XVII, 8 et seq.).

ibliography, l. 514 et seq. (separately printed Goettingen, 1864) (M. Seidmahmou).

AMAN (Arab. إمامة), security, protection, inviolability. In pleading in the dominions of Islam the legal claim to the protection of the Muslim authorities, if they are either recognized as Dhimmis (q. v.), or if a Muslim has granted them the aman, According to the religious law every Muslim, not only foreigners (i.e. even slaves and women, is entitled to offer security to an infidel. The Prophet has said: *All Muslims are bound to protect an infid if security has been expressly guaranteed to him (though it were by the lowest of the Muslims). According to the Malikites and Hanbalites, even minors are authorized to grant the aman if they have attained years of discretion.

AMARA, the capital of the sandjak of Amara (wilayet of Basra). It is a modern town on the left bank of the Tigris, and was only founded in the second half of the 19th century; it has 9,500 inhabitants.

Bibliography: Czinet, La Turquie d’Asie, iii. 270.

AMAT-MASJED (Sulaimân b. Mîhrân Abî Muhammed), an Arab traditionist, born in 60 (679), or according to others on 10 Ahjur Day 61 (Oct. 10, 850), the day of Husain’s death. He was the son of an Iran of Tabâristân (according to others of Dunbêtâ); heard traditions in Hûdân from the lips of Al-Zuhâr and Anas b. Malîk, lived as a client of the Banû Kább b. Asad in the quarter of the Banû ‘Awf, and in the house of the Banû Sa’d at Kifa. There he died in Ichrî 148 (May 765), according to others 147 or 148.

He was a great admirer of Ali and furnished the poet al-Sayd al-Hinayâni with materials for his panegyrics on Ali.

Bibliography: Tabari (app.), iii. 2509; Ibn Khallîkân (Bdût), 1209, ii. 267, 6th. 257; Abyâni, 1st ed. vii. 15; 2nd ed. vii. 14.

AMAZIGH, Berber tribal-name meaning: free man (pl. Imazighen) and used in this sense in the Rif, in Shilha, in Shilha, at Dezañat, in the Khir South Ouarzazat, at Ghardaia and in the Lijebel Neffûsa. The feminine (Tamazighi) denotes the Berber language in the same dialects. In accordance with the rules of the permutation of consonants, the e is represented by an in the Tuareg dialects (hence Amâkîl, pl. Imâmgh in Aghag), or by a or an. These dislocations can be traced in antiquity; in the name of Maâzunahgu, a Berber tribe which invaded Egypt under the 19th dynasty, we recognize the present Imazigh, which is the name borne by the Awelimmed and the southern tribes. The Marâq, who ravaged the borders of Egypt at the time of the late Empire, before the Arab conquest, are related to the tribes which are today called Amazigh (R. Basset).

AMBALA (Umballa), the capital of the district of the same name in the Division of Ambala, Punjab Province, British India. The town was founded in the 14th century, and has 79,000 inhabitants, of whom 32,149 are Mohammedans.

Bibliography: Imperial Gazetteer.

AMBRA. See ‘AMRAH.

AMREDJIL (v.), the title of the Grand Secretary and Chief of the Cabinet of the Sultan, who directs the correspondence with the Sublime Porte.
'AMID, (See AMIDA.)

'AMID (A.), signifies Chief, and is often used in titles, e.g. 'Amid al-Dawla (see e.g. 'Amid al-Mahdi, 'Amid al-Munafiq, etc.), 'Amid al-Din (see 'Amid al-Mahdi, 'Amid al-Munafiq). (See also 'AMID AL-JUWAYNI, 'AMID AL-FARISI.)

Al-A'mid (Ali b. Ali 'Ali b. Muhammad al-Tanribi Al-Shafi'i Al-Din), an Arab theologian, born in Amid in 552 (1150); he was first a Hakimite, but in Boghdad he turned Shi'ite. After studying philosophy in Syria he became a tutor at the Madrasa al-Kutbiya al-Sughriya, and in 592 (1195) at the Zahir mosque in Cairo. His philosophical knowledge brought upon him the accusation of heresy, and he was compelled to flee to Damascus. Later he was called to the Madrasa al-Azziyya, but was shortly afterwards dismissed, because he had entered into correspondence with the Prince of Amid, whom al-Malk al-Kamil had deposed in 631 (1233), with a view to the acceptance of a judicial appointment. He died in 631 (1233).

Al-A'mid (Ibn al-Jassam b. Bashir Abu al-Kamal), an Arab philosopher, a pupil of al-Zahidi and of Ibn Dusat, whose work was principally devoted to the critical study of Arabic poetry; he died in 371 (981).

His principal work is Kitab al-Mu'addina 'asna fi 'Ugd al-Jarid fi 'Ugd 'Amid (ed. Constantinople, Djemahib, 1287-1289); Turkish translation by Muhammad Weled (Constantinople, 1818). It comprises the memoirs of the two most important creators of the Ancients, MS. KITAB AL-MUDJHIF, the principal source of Sayyid, for fixing the names of poets in his Sharh Sharh al-Madini (Cairo 1322, pp. 47, 51, etc.); it is preserved in two Cambridge ms. (see E. G. Brown, A Handbook of the Muhammadan Ms. of C., No. 1127, 1128). His Kitab is quoted by Hariri, Buraq al-Chawabi (ed. Thorbecke), pp. 64, 69, and his commentary on the Dwiyan al-Mustaiyib b. Abu al-Sayyid, al-Sharh Sharh al-Madini, pp. 44, 45.

Bibliography: Flügel, Die grammatischen Schriften der Araber, p. 100; Brockelmann, Gesch. d. arab. litter., t. 111.

Al-A'mid (Muhammad b. Muhammad Abu Hamida Bukan al-Din al-Samarkandi), a Hanafi jurist and Shafi'i, died on the 9th Jumada II, 638 (Sept. 3, 391) at Bukhara.

As a scholar his chief merits are in the sphere of philology in which he especially cultivated the branch denoted by the Persian word Qasid (i.e. research). His principal work on this art is his Kitab al-Faraj (H. Dengelburg, Les mas. arabes de l'Escorial, No. 655, 2). His Kitab al-Mu'addina fi 'Ugd 'Amid is of greater interest to us; it deals with the dependence of the microwords on the macrowords and an adaptation of a Persian translation of the Indian work Astamanaq of Bhalbara (?) Brahman Yogi, com. by Guiñez, Mem. de l'Académie des inscriptions,xxxvi. 791; Gildemeister, Scriptores, etc. de studiis indica, p. 1155, Persis in Fors.activationem an Roth (1893), pp. 288-312; Ibn 'Arab issued a new revision of this work correcting it according to the original with the assistance of a Yogi (see Brockelmann, Gesch. d. arab. litter., i. 446, No. 100). Finally we possess another of his works, a philosophico-theological treatise, Horm al-Hayal, at Paris (de la Bibliothèque nationale, Ms. 773, 2).

Al-'Amil (J.), signifies tax-collector, agent, prefect.

Al-'Amil (Pl. 'Amilin), derived from 'amal (-za on), signifies a grammatical term or a regent, or to express it in the way of the Arabic grammarians a word, which, by the syntactical influence which it exercises on a word which follows, causes a grammatical alteration of the last syllable of the latter, i.e. a change of case or mood. Two kinds of regents are distinguished, one which can be recognized externally (lojfi) and one which is only to be supposed logically, but which is not expressed externally.

The 'amil/lojfi again is of two kinds, i.e. the case where it concerns a whole series of mutually dependent words, which can be treated analogously according to the same rule (as for example in the jafat construction); the case in which each regent requires special treatment (e.g. 'illa, lujn); these two sub-divisions are named 'amil /p/b and 'amil /p/q respectively. It makes no difference whether the regent is expressed as in 'lama Zaid, or whether it must be supplied grammatically from the sentence as a form of the verb, as in Zaid fi /l/ulat. Indeed, the absence of a regent is a very frequent occurrence in Arabic grammar (see Zamanabbari, al-Musammiif, index t. 116; 'Ibrani, Amil...). This case must be distinguished from the complete absence of the regent in the case of the 'amil /p/b, for in this second kind it is impossible to supply the 'amil grammatically, although it can be done logically; grammarians usually cite as an example the subject of the main sentence, whose 'amil cannot possibly be supplied.

Al-'Amila, an Arab tribe belonging to the Yemenite or South Arabian group. The etymology 'Amila is considered by some massaali as masculine, but by most as feminine (Azihvi, viii. 179; 'Ibb. ii. 86; Tabari, i. 252); the latter hy-
pothesis is more plausible. The Banū 'Amilī are said to have formed part of the tribes settled at Hira and also of the subjects of the legendary Zabīb-Zemobla. (Tabari, i. 685; Aḥṣāf, xi. 161; Kifāyāt, iii. 185). At the time of the Muslim invasion, we find them settled S.E. of the Dead Sea; they are mentioned among the Syro-Arabian tribes which joined Hisham (Maḥbūr, ed. de Goeje, p. 59; Tabari, ii. 2547); but do not appear again in the history of the conquest. Shortly afterwards we find them established in Upper Galilee, which is named after them Diebel 'Amīlī (Yaḥyā ibn de Goeje, p. 162; Hamadhān, pp. 129, 732). They play a very important part and are almost completely absorbed by the Banū Ḥudhail. (Ṣa'd b. Aḥmad, the poet of al-Walid, 1, was their chief prince; he celebrated the Ḥudhaiūt Ṭawb b. Zīnhū, as the asiyid of his tribe (Aḥmad, viii. 179, 182); and thereby gives a further proof of their small importance. Ibn Daraʾī (Ṣafahī, pp. 224-225; cp. Ibn I. 26) finds few notable men among them; a rare success with them (e.g. Ḥājjib b. Maḥmūd). After the 11th century A.D. the 'Amīlī seem to have spread S. of the Lebanon, in the present district of Maṭrūh and Qādīq, which is still called Diebel 'Amīlī (Abū l-Fā'id, p. 228; Dimīrah, p. 224).

According to Yaḥṣūr (Majma' al-Anwār, iv. 291), they also occupied a part of the country of the La'māllī, a day's journey to the S. of Alep, which they said was named after them 'Amīlī Mountain. This isolated reference (cp. Ibn al-Asakir, i. 45) is the more surprising in that the corresponding text of the Muqaddimah gives 'Amīlī instead of 'A):(a). To avoid the difficulty, G. le Strange (Palastin, p. 75) supposes an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonym 'Amīlī-Lam. (Roulet des lieux qui ont formé, Hist. séz. ii. 88 for Kāblī: read Qāblī, iii. 491, 543). The application to the 'Amīlī of the passage from the Koran (30, 3), by the poet Līlāt b. Ḳādīq, is a seams of the Tamītli who were jealous of the favours enjoyed by Ibn al-Rikţī, (J. LaMARES). Al-'AMĪLĪ Muḥammad b. Ḥabīb Bahrī al-Dīn with the taqabāl Banū Bahrī, the author of a number of writings both in Arabic and in Persian on different subjects. Born in 953 (1547), he died in 1059 (1621). He was a native of Diebel 'Amīlī in Syria, travelled to Persia and finally obtained an honourable post at the court of Shah Abkāh. He is best known for his Anthology al-Kāshāw (the beggar's bowl), which has often been printed in the East; in addition he wrote a work on Shī'ah dogmatics (in Persian) entitled Li'mān al-Āhī and several mathematical and astronomical treatises. He acquired a reputation as a Persian poet by his Maqāmāt entitled Nām-i Na-bāhā, which according to Ḩudib forms a kind of introduction to the Maqāmāt of Diebel al-Ṭabīk Rāshid. His second Maqāmāt entitled Sākār wa-Sākār is not so well known.

Ma'mun's army under Tahir b. al-Husain at al-Reay; Ali was slain, and his troops took to flight. A new army despatched by al-Amir against Tahir was likewise defeated, and when the Caliph in 196 (811–812) ordered his troops to take the field for the third time 16, had the further advantage of Mecca, and that the reprisals of Tahir succeeded in sowing dissatisfaction in the camp at Khālikan, and the whole army returned to Bagdad without having accomplished anything. In addition there arose dangerous disturbances and disorders in Syria. In the capital itself Husain, son of the 'Ali who had fallen at al-Reay succeeded in setting on foot a conspiracy against the Caliph in Bagdad 196 (March 812) and captured him in person together with his mother and although al-Amir was soon afterwards set at liberty by his partisans, his situation was becoming more and more dangerous. In the meantime the troops of Tahir were approaching nearer and nearer, and one quarter of the city after another was stormed. When the Caliph at last was compelled to submit to negotiations as to the capitulation, it was agreed that he should be taken away from his palace at night in a boat by Harthama and that the insignia of his office should be handed over to Tahir. The boat however was attacked by Tahir's men. Harthama and al-Amir escaped by swimming, but on reaching the land the Caliph was captured and sent to death the same night, at the end of Khammar b. al-Saffah (September 813).

Bibliography: Taht. iii. 625 et seq.; Yaqubi (ed. Hausen), ii. 495 et seq.; Ibn al-Athir (ed. Thrax), vi. 74 et seq.; Weil, Geniz d. Chalifon, ii. 163 et seq.; Müller, Der Islam von Morgen und Abendland, i. 495 et seq.; Munt, Ta Chalifat, its rise, decline, and fall (y. d.), p. 477 et seq.

AMIIN, MA'AMIN, or AL-MADANI, an Arab traveller; he was first Madarin in the mosque of the Prophet in his native town of Medina. He was born (as he published in 1072 (1875) a pamphlet against the veneration of relics, especially the hair of the Prophet. Afterwards he travelled in the Musul in East and in Europe as a book-seller. In 1833 he even came to Amsterdam and Leiden, where he sold an important collection of manuscripts to the Leiden Library. Later we find him in Bombay (where he died), engaged in literary work. Among other works he wrote a history of Dawud Pasha, Masih al-ulmā bi-tilak alashr al-Madinah (1804) (1887) and pamphlets against Dildil Zaidan (q. v.), entitled Nahid al-Mudallalin, Zabti Dildil Zaidan, Bombay (1807) (1890) and against the Rishi Saliq Ahmad Arslân entitled al-Sayyid al-Masihishi Sala-yi'awāl al-ma'ribi, 1312 (1895), the last named under the pseudonym 'Abd al-Basit al-Mahm.

Bibliography: Snouck Huygevonde, Het Leidseche Orientologen-Congres (1883); in Tijdsschrift Indisch-Tijd. Landen en Volkken, xii. 191 (1913); Leiden, Catalogue des Mus. arabes provenant d'une bibliothèque privée de al-Madinah.

AMIIN, a legendary wife of Solomon. He one day entrusted to her the ring, on which his dominion and his wisdom depended. She gave it to a demon who had assumed the form of Solomon, and it only returned to the king after many adventures.

Bibliography: Grünbaum, Neue Beiträge zur orientalischen Legendenfrage, 232 et seq.

AMIIN, MA'AMIN, a Moslem. According to the genealogies, she was the daughter of Wahab b. 'Abd Manaf of the family of Zuhra and of his wife Harm of the family of 'Abd al-Din, both families of Mecca. The expression of the poet Hasan b. Thabit of Medina: "We have brought him (Mahmudel) forth!" (Noldeke, Diebescr., p. 74, n. 6) would, according to ordinary usage, signify that his mother was of Medinah; but according to the traditions of the Arabs this is not possible, and this expression as also the alliance to Muhammed's maternal uncle as living at Medina (Ibn Hisham, ed. Wusten, i. 107; Tabari, i. 980; Ibn Sa'd, iii. 91, et seq., can only refer to the wife of his grandfather 'Abd al-Mu'tadil (q. v.). The mention of Amzin as a woman of high rank (Tab. i. 1578) is due to the later legends which embellish the facts (the expression in the poem in Ibn Hisham, i. 39, v. is probably a mere term of politeness, if indeed the poem is authentic). For her marriage with 'Abd Allah b. 'Abd al-Mu'tadil, see the latter. The accounts of her own pregnancy (Ibn Sa'd, i. 56 et seq.; Tab. i. 986, 979) are legendary and should not be made use of, as Sprenger does, to give pathological explanations of the nestorial disposition of her son. She died, when Muhammad was 6 years old, at Alaw (q. v.), after taking her son out a visit to Medina (Ibn Hisha, i. 107; Ibn Sa'd, i. 73; Tab. i. 980).

[For Bibliography see IYADAH.]

'AMIIR, the name of a South Arabian tribe (see YIYADAH).

'AMIIR I. (al-Malik al-Zahir Salih al-Din), founded in Yemen the dynasty of the Bani Tahir, after the fall of that of the Rustadis about the year 855 (1451) in conjunction with his brother Ali (al-Malik al-Muqadd Shams al-Din). He lost his life during an unsuccessful attempt to capture the town of Sana'a (1875–1889), viz. by Mohammed, Historia Jemenana, p. 186 et seq. and the art. TAHIRIDOS.

'AMIIR II. (t. 'Abd al-Wahhāb, al-Malik al-Zahir Salih al-Din), was the last prince of the house of the Tahrids; he ruled in Yemen 894–923 (1488–1517). Already in 923 (1516), the Egyptian emir of Halaqa occupied the capital of Yemen, Zabid, because 'Amir refused to supply the fleet sent out against the Portuguese with provisions. Husain left his brother Barshai behind in the city; and in the following year 'Amir who had taken flight together with his brother 'Abd al-Malik fell in a combat with Barshai. As in the interval the Mamlik dynasty had been overthrown by Selim I, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

AL-AMIIR H-SADR AL-AMIN ALLAH ALI AL-MANAFI, the tenth Fatimid, was born the 13th of Ma'arrus, 20th of Dec. (31 Oct., 950). As a mere child of five he was proclaimed caliph on the 14th of Safar 495 (Dec. 8, 1101) by his father al-Mansuri.
AMIR a. Sa'āda, Arab tribe [in Egypt it appears, though apparently further in the South, as Hamirel or Hamiriel, Hamirinot, Hamiritia, Aminot, Aminiote]. The name occurs comparatively rarely, in a recognizable form as the name of a separate tribe; generally it is a collective name for a small number of tribes belonging to the great Hashemite group. The artificial genealogical scheme is: 'Amir b. Sa'āda b. Mu'tarris b. Bēkē b. Hashim. With Sa'āda are classed for example, the Awf, Lījah, Liqaḥ, Naq, and others; with 'Amir the Murrah, Qhidir, Mārin, Wādī, Sallīb and a number of others. In the 'Amirite group the Bilāl, Kiblā, Numair, Kūtarah, Bābū, Sa'āda, 'Ukāil etc. are more or less loosely united.

In the North the 'Amirites were the neighbours of other Hashimite tribes and of the Sultains, in the East of the Sallūm (the well Māturār already belonged to the latter), but they also appear in the Yamāma; in the South they were the neighbours of the Thajjīf and can be traced as far as the district of Taifaik, even as far as Nādiriyya. In the West 'Amirites were settled as far as the coast of the Red Sea.

Localities are frequently denoted as 'Amirite without an indication to which of the 'Amirite tribes they belong; only such localities are mentioned in the following list:

'Amirite mountains: Azim, Abū, Liqālah (between the region of the Numair [a. above] and that of the Kīlāb [a. above], renown on account of the battle that took place there [see below]); Kīlāb, al-Mid'inah (in the Yamāma), Wil Wāṣat. The wide sandy region of Dharrāb also lay in 'Amirite dominions. 'Amirite wašīs: Ulfū, Dārū, Rahka, 'Amirite waters: al-Qīn, Immar, al-Nisār. 'Amirite places: Aḥkrāb or Aḥkrub (battle between 'Amir and Naḥā), Bāṣtrār, Rūda, Hāfīz's double mountain), Bāṣtrār, Būrutū, Da'ār, Handjara (near Kinnaser), al-Hawmān, Hājibā, Hawīya, Muṣṭūna, (in the South, near Taftalī; al-Lākī, Nibīlī, al-Ruḥā, Ramā, al-Ranīš, Rawdāt al-Arafa, Ruḥā, al-Ruḥāb, 'Aṣ'āna, al-Sī 5-days journey from Medina; successful attack by the Muḥammas cracked on heaven: 'Amirite), al-Sulhāy, Ṭuṣ, Wāf, Zawīl.

History. Here also we must take into consideration the fact that the sources often speak of the 'Amirites, where only one portion of a tribe is meant. In heaven and in Muḥammedan times sahā looks place with various Arab tribes, which, for the most part, cannot be arranged chronologically; namely with the 'Abā, Asad, Dābba (battle at al-Sallān), Dubayy (Victory of the latter at Marawrah), Hanīf (battle at Falad), Yā시설ites (battle at al-Nahāt), Khātān, (battle at Kard), Madīkh (battle at Fal al-Rīḥ), Naḥā (battle at Aḥkrāb or Al-Ḥrūb), Ṭayy (battle at al-Muṣṭūn), Tanām (victory at Ṭajīrī mountain not far from al-Taqīp. Defeat in the night battle at al-Watār, Victory at Mount Uqayla one of the most famous battles of the heaven times, which happened, it is said, 17 years before Muḥammad's birth; a year later victory of the Tanūn at Naḍīrī). Uqayla (march of the 'Amirites against al-Taʾīf), the Tabāb b. Saʿā. In addition a battle of Khūnīn is mentioned. In heaven times the 'Amirites had belonged to the tribes which observed the rites of the Hunsites. Among the tribes which observed Islam in the year of the sabbatans, 'Amirites are mentioned. During the great revolution under Abū Bēkē they remained
Amir — Amir Al-Mu'minîn.

quiet at the approach of the Mughal army. In the battle on the mound of Râhil they fought for Ibn al-Zahîr, together with other Khâtibs and also took part in the subsequent events. In the 15th (1400) century, "Amîrînî" appeared in the Karmâniya as a poet. His book "Mu'âzzi" was published in 1447 (1522) and was translated into Persian. On 15th of X. 1352, the office of Amir al-Hadîjî was not only in charge of such cases as the cases of murder, but also in charge of the cases of theft, fraud, and forgery. According to Burt, "The pilgrimage of the Mughals" (1879), p. 402, the Amir Al-Mu'minîn was not only in charge of the cases of theft, fraud, and forgery, but also in charge of the cases of murder, and the cases of theft and fraud. According to Burt, "The pilgrimage of the Mughals" (1879), p. 402.

Al-Amir Al-Kabir was originally the title of the oldest Emir at the Mamluk court, later, after Shamsun al-Numân had borne it (1752 = 1351), it was the designation of that Emir who stood nearest to the Sultan. After the Amir al-Kabir there came: ( cp. Khalîf al-Zahîr, ed. Râzî, p. 114). 1. the Amir Sahîr, 2. the Amir Jâlî, 3. the Amir Fâlî, 4. the Great-Demiril, 5. the Great-Demiril, 6. the Amir Nâbih al-Nâ'im, 7. the Amir al-Hadîjî al-Hâfizî, 8. the Amir al-Kabir. The bearers of this title were always chosen from among the leaders of the Mamluks (Ma'Ïdûd al-Dîrî), cp. Makrî, "Historic des oulîa Mamlouks" (transl. by Quatremâres), I. 3.

Amir Khan, the first Nawab of Tonk, of Afghan origin, was born in Tonk in 1782 (1858). In his thirtieth year he began an adventurous life as leader of a band of brigands, entered the service of the rulers of Malwa, Bhopal, Indore and Bhopal; and caused great mischief in Central India by his ravages and plundering. Finally driven into a corner by the English, he concluded a treaty with them in 1817, binding himself to disband his troops, in return for which he was confirmed in possession of the territory which Kho Hollar of Indore had allotted him; thus the state of Tonk was founded, in which his successors have since ruled. He died in 1834; and his life has been written by one of his officials Hasân Lil of Bilgram. E. H. A. Royle, "Bhawan Lal, Memoir of the Pathan soldier of fortune the Nawab Daula and Daula Mohamed Amur compiled in Persian, translated into English by H. T. Princep" (Calcutta, 1833); H. T. Princep, "History of the political and military transactions in India during the administration of the Marquess of Hastings" (London, 1825).

Amir Mâdîli (or Al-Madîli), Master of Audiences or Cenámond, one of the highest dignitaries at the court of the Sûfîs of Asîn Minor. Under the Egyptian Mamlûks he held the third place among the Great-Emirs [see Al-Amir Al-Kabir] and had the supervision of surgeons and physicians. In Egypt he has formerly been named Amir Mâdîli, cp. Makrî, "Historic des oulîa Mamlouks" (transl. by Quatremâres, 115, 97); M. van Berchem, "Materiels pour un corpus islamic. arabic" pp. 274, 275.

Amir Al-Mu'mînîn, i.e. lord of the faithful. 'Omar was the first to bear this title. In the East the Umayyad and 'Abbasid caliphs followed his example, as did those of their opponents who from themselves entitled to claim the Caliphate (Alîda, Karmâniya, Fûâlî). It was not till the fall of Baghûd (656 = 1258)
that the smaller rulers in the East also styled themselves Amr al-Mu'minin.

In the West the title occurs more frequently: it was borne by the Rostemids, Aghlabids, Zirids, Hammadids, the Umayyads after 315 (928) and some of the petty Spanish kings. On the other hand those dynasties which recognized the supremacy of the 'Abbasids, e.g. the Almoravids. Their opponents, the Almohades, founded the independent African Caliphate and called themselves "lords of the faithful," as also in part the Hafṣids, Marinids and Zayyānids. At present the Sheriffs of Morocco and the Sultan of Turkey are still styled Amr al-Mu'\text{"umin}. — It may be added that as early as the year 2 of the Hijāj 'Abd Allāh b. Dājjal bore this title during the expedition to Nakhdā.

Bibliography: M. von Berchem, "Tiers califat d'Orient" (Genou. Ar. Series 10, xi. 243—335), where complete bibliographical references are given. (A. J. Wernicke.)

AMIR AL-MUSLIMIN, i.e. lord of the Muslims, a title which the Almoravids first assumed, in contradistinction to Amr al-Mu'\text{"umin} [q. v.]. The latter title was born by the independent dynasties; the Almoravids, however, recognized the supremacy of the 'Abbasids to which they also wished to arrogate to themselves this title of the Caliph. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these titles, according as they sought after the independent caliphate or recognized any supremacy.

AMIR SILAH, the title of one of the highest dignitaries at the court of the Egyptian Manikut, who supervised the royal arsenal (Silah-bāsi) and the armed men (Silahbār). He occupied the second place among the Great-Emirs (cp. Amr al-Kahā). AMIR AL-UMARĀ', chief of the army, commander-in-chief of the army. As the name shows this dignity was originally confined to the military command. But the pretensions continued to become more powerful, and already the first bearer of the term, the enanah Minas, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Muqaddas owed his rescue on the occasion of the conspiracy on behalf of 'Abd Allāh b. al-Mu'tazz in 296 (908). After the appointment of Muhammad b. Kāf as the governor of al-Naṣr in 324 (Nov. 936) as Amir al-Umarā', by the Caliph al-Kāfi, this despotic ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayers together with that of the Caliph. So the Emir became in reality virtual rulers, while the Caliph sank more and more to mere shadows of former power.

AMIRGHANIYA [See Al-Mu'\text{"ummin}].

AMIRIS, the descendants (and successors; also clients and freedmen) of the great regent of the last Umayyads in Spain, al-Mu'\text{"umin} b. 'Abd ar-Rahmān II. Al-'Abbās b. 'Alī (the Almoravids, q. v.) died in 331 (941) of the Yemeni family of 'Abd al-Malik al-Ma\text{"ahārī, who had come to Spain with Turkish freedmen. Aml\text{"ahār's sons 'Abd al-Malik and 'Abd al-Rahmān (Sancho?) b. al-Ma\text{"ahār, e.g. the Almoravids), the son of the last mentioned was the founder of the dynasty of the Amiris in Valencia, where he ruled, 453—457 (1064—1068). He was succeeded by his son 'Abd al-Malik al-Mu'\text{"aflare [q. v.], 455—457 (1061—1064). After the ten years' interregnum of al-Mu'\text{"aflare (of Toledo), 'Abd al-Malik's brother 'Abd al-Salām b. 'Abd al-'Azīz ruled in Valencia, 468—478 (1075—1085). In this year the city was taken by the Christian forces of al-Salāman b. 'Abd al-Salām and fell into the hands of al-Kāfīr, who had been determined to Toledo. — Among the former clients of the house of the slave Maqāshīl al-'Abbās, who raised himself to be ruler of Denia and the Balearic Islands may be mentioned. (C. F. Seyfert.)

AMK (or Amk) a vast district extending from Syria to the mountains of the Taurus. A land of blue clay, marsh and sand covers the surface of the plain to a depth of 60 m. According to Sichard (Reise in Syrien und Mesopotamien, p. 460), the soil has not the appearance of a swamp but the character of a meadow, such as is sometimes found on the banks of rivers, where the surface of the ground consists of a thin layer of turf of little firmness so that it is possible to walk in and unendurable conditions to disappear entirely. Towards the edges of the plain the ground becomes firmer and there are a few villages. Here and there isolated groups of basalt columns rise up from among the reeds and the green marshes; and on them the wretched dwellings are perched like storks' nests. The inhabitants are Arabs and live on their buffaloes which lead a contemplative existence in the morass. Besides the Amk serves as pasture land to nomadic Bedouins, Kurds and Turkomans. In the midst of the low-lying country stretches the smooth surface of a lake called by the Arabs Buharai Anjānīya (the "lake of Antioch") or simply al-Buharai, by the Turks Al Dina (the "white lake"). Until the 10th century the name of the lake at Yaghra was also in use after a locality of that name situated to the north of the lake (Yaghra signifies in Aramaic "hill"). With this name Arabic writers of the Middle Ages were already familiar (cp. for example Yaghra, Mu\text{"aflam, i. 516); they also use the name Buharai al-Salawwar or Tell ("veil lake"). The Karaz-Su and the Murat Pasha which proceeds from the Buharai-Gül ("gul"
lakë") quite before they enter the lake. The small seas that stretch to the north and east of the latter are only to be attributed to the want of an outlet for the water that enters it. The lake, (caused by seismic crevasses?) may only have come into existence shortly before the times of Mahad (900 A. D.), who is the first writer to mention it as the "lake of Antioch." By deepening the channel of the Oronites, into which the lake discharges its waters, the whole district might be reclaimed without great expense, and fruitful land obtained. Under present conditions the plain threatens to become nothing but an enormous swamp. The numerous ancient colonies of the 'Amek now appear mere mounds of earth. All the sand and the boulders that the different water-courses bring with them or the rain washes down from the sides of the surrounding mountains are deposited in the 'Amek, and cause the level of the ground to rise; hence at present the foundations of the old settlements lie deep beneath the surface, and the latter themselves appear as Tell'; while the storms, sweeping along with great violence, have heaped up rubbish, sand and boulders round the rains.

The Semitic name 'Amek, European travelers also: 'Amik, 'Amik' signifies "depth, hollow." In the Assyrian cuneiform inscriptions it occurs in the form of Ulıki as early as the 9th century B.C., and almost contemporaneously in the Old Ammic inscription of King Šamaš-šumu-ukiddin (810 B.C.), as Šamaš-šumu-ukiddin. In Ubydika we meet with 'Amišša niki (in the Ubydikian Moses: 'Amišši), in Sarbo 'Amišša niki. Syriac authors write 'Amišša de Jerkia or shortly 'Umba.

According to the administrative geography of the Turkish Empire, the greater part of the 'Amek belongs to the Wilayet of Aleppo, a smaller portion to that of Adana.

AMMAN, the old capital of the Ammonites, in the Old Testament called Bethel Benis 'Ammon or Rabbah, later Rabbathannam, Amman, Ammona or called by the Hebrew name Philadelphia. This city, which at the time of the Romans was of great importance, was taken by Vastil b. Abi Sufyan after the capture of Damascus (14 = 532). It became the capital of the fruitful region of al-Baša with a trade in corn, sheep and honey. The inhabitants were, at the time of al-Mukaddem, principally Sufis. The magnificent ruins date back to Roman times, with the exception of an Arab building on the castle hill (the castle of Dijlah with the tomb of Uraiah).

AMMAN (Ar. 'Amman) better Ammon, with the Taḥbulas lyuf and is an Indian writer, famous for his Urdu translation of the story of the four Derivases entitled Bāgh-e-Bahār and of the well-known ethical treatise Akhīr Khājiyat of Hassan Wādi Kāhūl under the title Gāngī-l-Akbar. Both translations have been repeatedly printed in India, and that of the story of the four Derivases has been translated into English by G. F. Smith (The Tale of the four Derivases, translated from the naroor tongareh Calcutta, 1813). cp. García de Tassis, Histo. de las tierras, indias y hindustàn (1st ed.), i. 268 et seq., who mentions other translations and by Duncan Forbes, Hollings and Eastwick: id. Bag-e Bahar, Le jardir et la terre poétique. Poéme hindoustânis trad. en français (Paris, 1872), — Amman was stimulated to the above mentioned translations by Dr. Gilchrist, he wrote the Bāgh-e-Bahār in 1217 (= 1602). ARMAM is in Munaddij al-Dišq ii. 595, the name of a dynasty which ruled in Tripoli, 724-803 (1324-1400). It is true that the Hashids of Tunis were not in a position to assert their supremacy over Tripoli during these years, and it was virtually in the hands of independent rulers, but neither their names nor their relationships are sufficiently known. One of them was a certain Muhammad b. Dhahir Abi Bekr; during his rule the Genoese were surprised and plundered the city (1355). Finally the Hashids of Tunis, the Hashids Abi al-Ahli (1394-1432) brought the domination of these city kings to an end.

ARMAM, one of the most famous and certainly the most original of Arab oculists. Abu l-Hasan 'Amman b. 'Ali al-Maswili lived first in Iraq, then in Egypt. He travelled widely, as he himself informs us in his works, and on his travels which took him to Khurasan in one direction, and to Palestine and Egypt in the other, he practised and performed operations. In Egypt, in the days of Sultan 1I'ākim he composed his work on ophthalmology. As the rule of this potentate falls between the years 996 and 1020 A. D., 'Amman was a contemporary of the more famous but less original oculist 'Ali b. 'Abi (q.v.). If the "promptness" of this author is due but for the Arabs the standard work on ophthalmology and overshadowed 'Amman's work, the reason lies in the greater completeness of 'Ali's work. 'Amman's book, with its strictly logical arrangement is extremely succinct, as even the title shows, (Nikah al Mundhassh f.t. lit. al-Ain = book of Selection on the reason of the eye). After a preface on the story of its composition, it deals first with the anatomy of the eye, then with diseases of the eyelids, of the cornea of the
Ammar, the conjunctive, nouns, the pupil, the albumen and the visual nerve. The descriptions of diseases and of their treatment are in general very clear, often, of dramatic vividness especially when he describes operations that he performed himself. That is especially the case in the six cases of operation for cataract which Ammar describes. His principal significance lies in the radical operation for cataract by suction through a hollow metal tube invented by him. Salih al-Din of Hamid (end of the 13th or 14th century) has borrowed the part on this subject almost verbatim in his Nihal al-Din.Ibn al-Qayyim. At an earlier date al-Ghazali (7th or 12th century) had made considerable use of Ammar’s book in his medical work Marjarid.

Of the Arabic original the first two thirds are preserved in ms. 889 at the Escorial (Caust. 19 p. 317). The manuscript is mutilated, and breaks off in the middle of a sentence. The last third is almost completely preserved in the third part of the Ms. denoted by Caust. as ‘anonymus’—Cod. Esc. 894. The Hebrew translation into the Hebrew is completely preserved; the work of Nathan ha-Me’ush, who lived at Rome in the 13th century A.D. and who also translated the Kafrin of Ibn Sinah (Avicenna) into Hebrew. This translation of Nathan’s is exceptionally well done; it is much more intelligible than the barbarous medieval translations of Arabic medical works into Latin. Some short chapters and sentences, which occur only in the Hebrew translation show that Nathan’s Arabic copy represents a later recension of the text than the Arabic

The Latin treatatus de oculis Cumansuall of David Heremodus or David Armencius (printed Venice 1497, 1499, 1500; newly edited by Panier, Paris 1904) pretends to go back to Ammar al-Mawalli (first recognized by Steinmaeucker, Die Hebräischen Übersetzungen der Mittelalter, p. 567). But it is a crude forgery, has nothing to do with the original of Ammar, and is therefore of no value for forming a judgment of the merits of his work.

The German version of Ammar’s Malakhkhit is in vol. 2 of the work Der arabische Augenarzt und sein Wirken. Ein introduction zur arabischen Augenheilkunde by H. J. Lippert, J. Mittwoch (Leipzig, 1905). Bibliography: esp. Introduction of the latter work and Ibn Abi Usflin’s (ed. A. Müller), ii. 89.

(2. Mittwoch)

AMMÅR E. YABÉ E., AMAR E. MÅLÅK OF THE Hadjījāt tribe ‘Aba, a partisan of ‘Ali; His kunya is Abu ‘I-Yahya; he is also called Ibn Sumayya (s. below). His father came to Mecca in the 6th century A.D. with two brothers, in order to seek another brother of his and he there came under the protection of the Makkāmite Abu Hudhayfa, who gave him one of his female slaves named Sumayya to wife. She was then manumitted, but the family remained with Abu Hudhayfa till his death. They accepted Islam rather early. Ammar, it appears, in A’buah’s house. Father, mother and son are said to have been put to the torture for religion’s sake, the mother, the first female martyr of Īṣām is even said to have been stabbed. (She is occasionally confounded with a less virtuous Sumayya, the mother of the famous Ziyādat ‘Abd Allāh Suffānī, commonly known as Ibn Abī Thāthī). Ammar is reckoned among those who denied their faith under torture, but received pardon from Muhammad. He was one of the emigrants to Abya’sa and took part in the Hijra. At Medina he acquired merit at the building of the first mosque, took part in the very first campaign, e.g. in the notorious expedition to Najjāra, then in the battle of Badr, Othayn, and at all of Muhammad’s expeditions. When Muhammad established the bond of brotherhood between the men of Mecca and Medina, he entered into that relation with Hudhayfa b. al-Yaman. Under Al-Abd Ibn Bahr he fought bravely on the day of Yamama, when he lost an ear ("they had needle against my better ear", he is reported to have once remarked to some one who called him "one-earled"). In 21 ‘Amar appointed him successor of Sinān b. ‘Abd al-Walīd in the government of Kufa, and he was given a share in the command at the conquest of Khosrawan; the battle of Nahwe’Ad took place at this period. As the people of Kufa were as little satisfied with him as they had been with his predecessors, he was replaced by al-Sukhārī b. Sinān. Several years after, he was appointed by ‘Ali commander of the garrison of Gharra. He was a warm supporter of the commander of the garrison, and when the Sayyida became the caliphate, he followed to the opposition, offered the Emperor his moral assistance at Medina, and during the open rebellion against ‘Ommān he played at least an ambiguous part. He had from the outset declared for ‘Ali and according to tradition, was wounded in the battle of Munkār, together with others, and paying homage to Abū Bekr, for this reason; and after ‘Ali’s election to the caliphate (33 = 655) he was an ardent partisan of his cause and enjoyed his special confidence. When the war with Talib and al-Zuhair had become inevitable, ‘Ali sent him to accompany his son al-‘Uqba to Kufa, there to carry on his propaganda among the inhabitants and the decision of Kufa for ‘Ali is principally to be attributed to his efforts. In the battle of the Camel (36 = 656) he was among those who dragged ‘Ali’s horse from her litter, after her horse had been brought to the ground, and brought her as a prisoner to Basra. In the battle of Siffin (37 = 657) the old man of 93 or 94 fought like a youth for ‘Ali against Mu‘awiya and died on the top of the hill, his horse killed by the enemies, and his cavalry was commanded by Aś-‘Āshārī. Centuries later his tomb was still pointed out at Siffin. ‘Ali lost in him “one of his two right hands” (the other was Aś-‘Āshārī who shortly afterwards was poisoned). Ammar passed as one who possessed accurate knowledge of the traditions concerning the Prophet, and owed the esteem in which he was held principally to his great piety, trustworthiness and devotion to the cause. The Abūnād historians, however, did not fail to glorify the memory of the bitter enemy of the other Umayyads, who lost his life in fighting against them, with legendary stories, inventing utterances of Muhammad concerning him, and exculpating allusions to him in the Korān, in order to exhibit his energy, discreetness etc. in the brightest colours. The following passages in the Korān are referred to him, mostly on account of his persecution by the heathen: 3. 29; 7. 25; 39; 6. 29; 25; 16. 137; 20. 124; 28. 1; 29; 139; 29. 3. The Prophet is said to have declared that if ever internal wars were to break out, the truth would be on Ammar’s side, and the lie. The legends deal at length with his
arrested cooperation in the erection of the first mosque at Medina and the remarks made by Muhammad on this occasion. The Prophet even wrought a miracle for him on one occasion: when he was being tormented in the fire by the heathen, at Muhammad's command the flames were changed into a refreshing coolness, as in the case of Abraham. Moreover an exact prophecy is attributed to the Prophet concerning 'Amr's death by the 'rebellious' messengers, whom he consigned to hell, and al-Zubair is said to have become successor to the rightfulness of his own sake, when he heard that 'Amr was in the camp of the enemy. The news of his death is said to have produced a most gloomy impression in Me'awiya's camp, e.g. on 'Amr b. al-Asj. Many pious sayings are attributed to him, which were uttered, as we are told, on the day of his death.

'Amr had a son Muhammad, who also passed as an authority for traditions, and a daughter Umme al-Hakam.

(II. RECKENROTH.)

'AMMARIYA, an order of Desert fathers in Algeria, which takes its name from 'Ammiya Bz Bebna, born about the year 717. 'Ammiya's tomb is in the Levant in the province of Constantinople, where also is the head quarters of the Ziyara of the order. The order was really founded in 822 A.D. by al-Hajjaj, Emir of the Maghribi of Bishr al-Bishri. According to Depout and Coppolani, Le concile ecumenique unanimum (Algeria, 1897), p. 356 et seq., the order numbers in Algeria 26,000, in Djerba and 6,435 members. — Rinna does not mention it.

AMORIUM, according to Arabic pronunciation, 'Amurina, a well-known Byzantine city in Ancient Phrygia, on the great road from Constantinople to Cilicia. Its exact situation had for long been unknown, until Hamilton discovered it in A.D. 513. A mile from the present village of Halkad Hanna, Amorium was repeatedly besieged by Arab military leaders (among others by Mamun in 819-825) and in 838 it was captured by the Caliph al-Mut'am after a siege of 55 days and levied to the ground. Complete accounts are given in Arabic histories, especially abd al-Saluh (ed. de Goeje), il. 1256 et seq., and in Archaeography. Hamilton, Researches in Asia Minor, pp. 431 et seq.

AMR (A.), signifying command; affair, Alamy was thereby meant unlimited authority.

In Grammar Amr denotes the Imperative.

'AMR b. al-A'am al-Tammi al-Minbari, a member of a poetically gifted family; and himself fond of using metre and rhyme. He must have been born shortly before the Hulga, for in the year 9 (663) when he came to Medina with the embassy of his tribe, he is said to have been a youth. In the year 12 (673) he followed the prophetess Su'bah, and was later converted to Islam and took part in the war of conquest. He informed Omar in verse of the capture of Ra'gabakar. — Little of his poetry is preserved; according to a contemporary judgment they had made more outcries and proclamation than depth of ideas. He was famous on account of his physical beauty, which won him the surname al-Muqabali ("the pointed").

'AMR b. al-A'am al-Salhi, a contemporary of Muhammad of Kursheh birth. The part which he played in Islamic history begins with his conversion in the year 6 (627-628). At that time he must already have been of middle age, for a sudden death which took place circa 665 he was over ninety years old. He passed for one of the most witty politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mecca already foresees shortly after the unsuccessful siege of Medina that this fact was the turning point in Muhammad's career. It is not strange therefore that this man like Khalid b. al-Walid, Othman, Tala and 'Amr b. al-A'am went over to Islam even before the captain of Mecca. Not much importance is to be attached to the story of their conversion. That of 'Amr is said to have taken place in Abyssinia under the influence of the Christian Negus—Muhammad at once made use of his newly-gained assistance: after a few small expeditions he sent 'Amr to Oman, where he entered into negotiations with the two brothers who ruled there, Djarar and 'Abdul haq al-Hajjari, and they accepted Islam. He was not to see the Prophet again. The news of the latter's death reached him in Oman, and occasioned his return to Medina. But he did not remain there long. Probably in the year 12 (673) Abu Bekr sent him with an army into Palestine. The accounts of the conquest of this country [a.o.] are known to be somewhat confused (esp. also Castanelli, Annali dell' Islam, A. H., 12); but this is certain, that in this undertaking 'Amr played a most prominent part. The subjection of the country west of the Jordan, especially its achieved, and he was also present at the battles of Adh-dharn and the Yarmuk at the capture of Damascus. Yet his real fame is due to his conquest of Egypt. According to some sources he aspired to a share of the spoils himself there with his troops on his own responsibility. It is more probable, however, that 'Umar was informed of the matter (esp. Wellhausen, Schmiede, und Forscherh, vi. p. 93) or even that it was undertaken under his orders. It is certain that re-inforcements were sent out to him, under al-Zubair. For the history of the conquest cp. the article EGYPT; only the following may be mentioned here: In the summer of 19 (640) the Greeks were defeated at Hellinopolis. In 20 (641) Babylon was occupied by the Arabs, in 21 (642) Alexandria lay in their power (see ARTS, EGYPT, AND MAGAWWAR). But not only the conquest of Egypt was the work of the genius of Amr; he also regulated the government of the country, administration of justice and the imposition of taxes. He founded Fustat, which was later called Misr and in the 10th century al-Kahina. We can understand, that 'Amr felt himself wronged, when the Caliph 'Uthman recalled him in favour of 'Ala' b. Sa'd, shortly after his accession to the throne. He retired in disgust from active life, occasionally giving attention to his mortification. When circumstances became three-
Several Lakhjids however were called Muhaṣṣir, which seems to be the old name of a divinity (see Rostostain, *Die Dynastie der Lakhjids* sec., pp. 46 et sqq.). He was killed at a meal by the poet Amr b. Kūlthūm (q.v.), because the latter’s mother had been wronged by his father.

**AMR b. KULTHŪM** was the head of the Taghlibis, and so famous as a poet, that his principal work was included in the *Mafālikat al-fikr* collection. He lived in the 6th century A. D., hence before Islam. His mother was Lāṭīr, the daughter of the Taghibi poet Muḥarrad. We are told that on account of an insult intended for his mother he slew the Lakhjīd prince *Amr b. Hind* (q.v.) in 576. Exact dates of his life are not known, but it is related that he lived to the age of 150 years.

**Bibliography:** Agūfah (q.v.), b. 181–185; Cheikho, *Ḏawār al-Muḥāṣṣir*, pp. 197–204; Rostostain, *Die Dynastie der Lakhjids in al-Ḥira*, Berlin 1899, p. 100. (A. Haffner.)

**AMR b. AL-LA’TĪR AL-SA’BĪ** is said to have been in his youth first a mule-driver, then later a mason, and later to have attached himself to his brother Ya‘qūb. Proclaimed commander at his death by the latter’s army (265 = 882), *Amr* submitted to the Caliph and was invested with the province of Khorasan, Fārā, Ḥaʾmān, Batān, Rāmūn and Sind. He was the only one of his tribe to leave the Lakhjīd dynasty after strenuous struggles with his opponents Ahmad b. ‘Abd Allāh b. Kūlthūm al-Khajānī, Rāfī b. Ḥarthama and Ḥusayn b. Tāhir; during these battles he was twice (271 = 885 and 276 = 890) deposed by the Caliph, and the first time also cursed by the king: his final confirmation as governor took place in 279 (892), but not till 283 (897) did he succeed in removing his last enemy Rāfī b. Ḥarthama. Like the earlier governors of Khorasan he also wished to continue the rule of Trajanovissia with this governorship and demanded from the Caliph to be invested with this province; his desire was granted in Muharram 285 (Feb. 898) and the Simmad 291 (A. H.). Ahmad was declared deposed. Isma’il however forestalled him by committing *Amr’s* general, Muḥammad b. Ḥūṣayn, to treason and slave: in the following spring (287 = 900) *Amr* himself was taken prisoner at Kūh; and shortly afterwards (288 = 901) brought to Bagh- dhād; in 289 (902) the dying Caliph ab-Mu’tādīd caused him to be assassinated.

*Amr* is said to have ruled his empire and his army with a strong hand; there had not been
such good order in Khorasan for a long time as there was under his government. As under Ya'qūb, so under ‘Amr the equality of all subjects under the power of a military despot was effectively established; the great were rigorously supervised by specially appointed spies and were not even allowed to ill-treat their slaves. In the original sources ‘Amr is frequently depicted as an astute, mischievous, misrule and therefore hated ruler, yet both in his residence at Nisibis and in his own country Sirāṭ, the erection of many buildings of public utility is attributed to him.

‘AMR b. Luḥayān, legendary chieftain of the Banū Khūna, who, according to Muslim historians, held the sovereign power at Mecca. ‘Amr is accused of having corrupted the religion of Abraham (al-khamsiya) by introducing idolatry into Mecca. He is said to have filled the Ka‘ba with idols, and among which was the famous Hulail, which some historians declare to have received from Ma‘ālik (Moza) as a present from the Romili, or according to al-‘Azmān (Wüstef, Die Chroniken der Stadt Mecca, i. 133), from Mesopotamia. Historians also attribute to ‘Amr the introduction of certain superstitious customs relating to animals, which under certain circumstances became sacred. al-Shāfi‘i was among those who deplored the acceptance of the animal sacrifice. ‘Amr b. Luḥayān brought Hulail to Mecca at the time of Sā‘ūd b. Dam‘-I Ḥakīf, i. e. in the first half of the third century. A. D. As however according to the same authority (loc. cit., p. 59) ‘Amr and his descendants reigned for 500 years, and according to Marʻūdī, 554 years, it would be difficult, to determine the precise date at which this event is supposed to have taken place.

‘AMR b. Ma‘ndār (Abū Ṭhmāh b. ‘Abd Allah), chief of an Arab tribe and poet, said to have been born about 500 A. D., and died about 521 (643). He was descended from a noble family of the Banū Zuhayr in Yemen; he is described as a man of quite exceptional bodily strength, and is said to have distinguished himself in the battle of ‘Qādis, although he must have been over a hundred years old at that time. He had received Islam after a personal interview with Muhammad. No long poems of his are extant.

‘AMR b. Sa‘d al-Mu‘ādān, governor of Mecca at the time of Ya‘qūb b. Mu‘awiyah’s accession to the throne in the year 60 (680). In the same year he was also appointed governor of Medina, and at the command of Ya‘qūb sent an army to Mekka against ‘Abdallah b. al-Zubair, the rival caliph. He entrusted the command of this expedition to a brother of ‘Abdallah, ‘Amr b. al-Zubair, who was taken prisoner and, with the consent of his brother, hanged at Mekka by his personal enemies. ‘Amr b. Sa‘d was deposed at the end of the following year. Later he accompanied the caliph Marwān on his expedition to Egypt, and when Mu‘ājam b. al-Zubair attempted to regain Syria during the absence of the caliph and invaded Palestine, ‘Amr was sent by Marwān to oppose him and forced him to retire. Already after the death of Ya‘qūb, when the question of the succession was under discussion, ‘Amr had been mentioned as a possible successor to Marwān. He was very popular in Syria, being a nephew of the caliph on the mother’s side, and, as a member of the Umayyad family, also related to him on the father’s side. Under these circumstances he might easily have become dangerous, but when Marwān had established his authority, he resigned his two sons ‘Abd al-Malik and ‘Abd al-Aziz as heirs to his throne, and the oath of allegiance was taken to them. In spite of this fact ‘Abd al-Malik was afraid of ‘Amr even after his accession to the throne and, as events showed, not without reason. For when the caliph undertook an expedition to Iraq in 689, ‘Amr made use of the opportunity to put forward his old claims to the caliphate, and stirred up a dangerous insurrection at Damascus. ‘Abd al-Malik was forced to return, and by the promise of life and liberty caused his rebellious cousin to submit. Very soon after, however, the caliph resolved to rid himself for ever of this danger, in the year 70 (689-90) he summoned ‘Amr to the palace, and according to the ordinary tradition, killed him with his own hands.

Tornberg), ii. 318 et seq.; Weil, Geschichten der Chalifen, i. 303 et seq.; Müller, der Islam im Morgen- und Abendländ, i. 359 et seq.; Mair, The caliphate, its rise, decline and fall, 3a. ed., p. 344 et seq. (K. v. ZETTERSTEN).]

‘AMR b. ‘Uraid b. ‘Umayya, one of the earliest Mu‘aṣṣarites. Originally a follower of the ascetic school of Ḥasan al-Baṣri, he adopted the opinion of Wāli b. ‘Abd on the question as to the status of the Muslim who has fallen into sin. We have an incomplete account of his literary activity, but it is known that he was distinguished among his contemporaries through moral earnestness and piety. It is in keeping with this character that he joined the party of Ya‘qūb III, who claimed the throne as a rival of the frivolous Wāli II. Later, on ‘Amr was on very friendly terms with the ‘Abbāsid caliph al-Mansūr. He died in 145 (764) at Marrān on his return from the pilgrimage to Mecca.

‘AMRA b. ‘Umayya (‘Amra b. ‘Umayya), the little castle of (‘A.), an of the Fārs, situated in the country east of the Jordan, about 36° 31' E. of Greenwich and 31° 50' N. Lat., due east of the nor-
to show that Ḫubbat al-Bīr, the largest and most richly decorated of the two small doors, was originally the entrance to the apodyterium and the fourth and last room of the caldarium, but while it is easy to fix the purpose of these two rooms it is uncertain whether the two intervening apartments served as frigidarium and tepidarium respectively, or were both tepidaria. At Ḫubbat al-Bīr, the large hall served as entrance to the bath, and may also, with its two closets, have been used for some domestic purpose. Mau suggests that a door communicating between the third of the smaller rooms and its eastern annex was the original entrance, but that it was subsequently closed; he founds this theory on the style of vaulting in this room along the south and east walls, and the position of a hole in the floor, at a point corresponding with the position of the apodyterium. The hypothesis does not accord with several facts: the survey gives no cause for assuming that any such rebuilding has ever taken place, and makes it even less probable that the door leading from the large hall into the first small room should have been added as a later stage. Nor do other parts of the building show any traces of different periods of construction. It seems moreover that the arrangement of the bath, which necessarily begins with the apodyterium and ends with the caldarium, excludes the possibility of such an alteration, and I am convinced that the entrance to the bath was always through the large hall.

In the outer facade of the building is a reproduction of the structure of the interior, the exteriors of the vaults showing on the bare rib-stone walls. This feature of the construction finds its explanation in the climate of the country, and as similar climatic conditions are frequently found in the East but hardly ever in the West, the complete harmony between the structure of the interior and the outward appearance of the wall belongs to the typically Oriental character. The technical construction of the wall is as follows: they are about 2½ feet thick, and built of large blocks of lime-stone of double cleaving-grain, except for the doorframes and window casements which are fashioned blocks of black basalt. The colour of these materials is very vivid. The masonry is not very solid, but a compact mortar has given it a stability enabling it to last more than a thousand years without suffering serious injury. For the roof and the water conduits cement has been used.

A distinguishing feature of Ḫubbat al-Bīr, in which it excels all similar monuments of the neighbouring country and of the more distant regions of mainland Syria, is its rich pictorial decoration; nowhere else have pictures been preserved in such perfect condition; another interesting feature (of very rare occurrence elsewhere) is the presence of inscriptions which enable us to fix the date of this building and, by means of comparison of several other monuments as well, frescoes are found in all the rooms, the large
AMRA.

hall and the bath itself, being absent only from the east chamber. Their state of preservation corresponds to age: dust, dirt, the sneer of fires and graffiti have done considerable damage. In printing the pictures, the colours were laid broadly in flat tones on the white smooth surface without much care in the treatment of the half tones; these were partly added in a way similar to that found in the encaustic mummy-paintings of the 1st-3rd Century. The absence of the details and of the drawing betrays an unusual care of touch and considerable skill in the use of colour. The white surface is frequently used as local colour, but coats of white paint are also laid on. No part of the paintings is drawn by rule and compass, but they are all sketched on the wall with a free and sure touch; yet, the work on the vaults was very laboured. This freedom of treatment is clear evidence of a long-established practice, and the painters of these pictures followed an old tradition. Besides black and white: their colours include blue, dark-brown, red, light-brown, pale yellow and sometimes green. The blue is natural ultramarine; the brown is iron; the dark brown is red covered with a thin coat of ultramarine and the light brown is ochre; the yellow is same ochre mixed with chalk; the green ochre with a coat of ultramarine.

The subjects of the pictures are bathing-scenes, gymnastic exercises, hunting of all sorts of game, with packs of hounds, or nets, or from boats; rows of pictures represent trades, there are also some symbolic figures such as the figures of the History, Philosophy, Poetry, a caliph on his throne represented as Pantocrator, the enemies of Islam and a rich zodiac. Of a more decorative nature are the numerous female figures in the niches, heads in medallions surrounded by foliage, figures of men and animals in lozenges. The ornament consists of drapery, foliage growing out of vases, vines, laurel, palm-trees with clusters of fruit, and birds with birds of the desert. Some detached parts of these frescos, viz. a nude female figure with a rich head-dress interwoven with pearls, and the fragment of an inscription, are now in the Kaiser Friedrich Museum at Berlin.

The pictures are arranged in rectangular borders, or in a circle as in the niches, as in a picture-book; the composition is of an epic-narrative character; and both in form and contents the syro-hellenistic tradition is predominant. Certain features, especially the epic style and perhaps the type of some of the female figures, seem to be derived from old oriental art, while the aquatic scenes and the chase with nets remind us of the art of the Sassanid period. Other elements, such as the architecture of the back-grounds and niches with their spiral columns, give a definitely Byzantine impression; while the laurel-garlands and draperies recall western classical art; some features, finally, such as the birds of the desert and the palm-trees are copied directly from surrounding nature. The more architecture too corresponds to the style of the Seljuk, the groins and vaulting seem to be of western origin, while the vaulting of the large hall and the shape of the cupola in the caldarium appear to be of the Syrian type: the general character of the building as a whole is hellenistic, and the outward appearance typically oriental.

It would therefore have been very difficult to date the monument by the aid of criteria furnished by the history of art. The building presented an altogether new type, and it is not surprising, that the pictures were at first taken for classical works of the 1st. or at most the 6th century A.D., and that the Chosrodes kings were thought of as builders. The case of the other famous Umayyad castle, al-Majduba, was similar: it was thought to be of post-classical, Chassidical or Sassanid origin. In the case of Kasr Amra two pictures in the large hall, which bear inscriptions, defining the date; these are the picture of the enthroned caliph and that of the enemies of Islam. The first has a long Arabic inscription, unfortunately so damaged that it has not been possible hitherto to decipher it; in the second the figures have bilingual inscriptions in Greek and Arabic; in the third place there are Greek inscriptions on the allegorical pictures representing History, Poetry and Philosophy (φιλοσοφυ). The fact that the inscriptions are bilingual as well as the shape of the curvate Arabic letters indicated from the outset that they belonged to the end of the I. or the beginning of the II. century of the Hijra; the interpretation of the picture representing the enemies of Islam, which was written 675 and not earlier, was done by H. Becker with the assistance of Th. Noldeke and E. Littmann, fixed this date with conclusive certainty. (Muil had already arrived at the true date by means of detailed historical arguments and by a correct appreciation of the inscriptions and pictures; but he was unable to put forward the reasons for his view in the great book published by the Viennese Imperial Academy, because the historical part of the work had been entrusted to other hands.) The important picture in question represents, besides two uncertain figures, the emperor of Byzantium, Roderick the visigoth, the Sassanid Vordiugerd III. and the Negus of Abyssinia, with the following bilingual inscriptions:

[RAIΣΔR RΩΟPOΧΡΟΣ XOΣΑΡΟΣ ONAT]

(The underlined texts are considerably damaged.)

Kasr Amra was built therefore in the first half of the VIII. century, between the year 711, when the Arabians in the north against the last king of the Goths, and 750, the date of the fall of the Umayyad dynasty. Within this limits the fact that direct relations existed between Roderick and Walid I speaks for this caliph, while the historical accounts, collected by Muil, which speak of Walid I's passion for building and of his residence in the district of Kasr Amra favour the claim of the latter.

Some new and important suggestions are found in a recently published study by M. Max van Berchem. Starting from the fact that the six figures of the picture representing the enemies of Islam are arranged in two groups, he points out 1. that the figures in the first group are those of the sovereigns of great empires, while the second group contains mere kings, 2. that the arrangement of the three figures in each group from left to right corresponds to their geographical situation from West to East. Hence it follows that the third figure of the first group must represent some great Asiatic sovereign dwelling to the East of Persia, while the third figure of the second group must stand for a monarch of the second
Amsel Feld 

[see SOKOYAL]

Amsel Feld (see SOKOYAL)

AMTHAL (a), plural of Mathal (q.v.),

AMUD (a), pillar, club; in mathematics technical term for the vertical line.

AMÜ-DARYA, one of the two principal rivers of Russian Turkestan. The old name Oxus (Oxus) is derived from an Iranian form Wukhsin. As late as the 10th century (Al-Dirazi) Wukhsin is mentioned as the 'genius (mawdā) of water in general and of the Oxus in particular'; on modern maps the name Wakhsh (in medieval geographers Wakhshah) is confined to a tributary rising on the Alai, which is also called Surkhāb and Kizil-Scha; the natives are said to apply it also to the Panj and other head-waters. Other names are: Peshawar Wukshin; Chinese Kuchin, Wuchu, Pukara and Puksh; Arabic and Mod. Pers. Djarjilun (a word used in Persian sources — by Gaudat as early as the 13th century — to denote large rivers in general.) The modern name is derived from the name of the town of Amul (which like Amul in Tabari's has been traced back to the pre-Aryan people of the Amuri; cp. J. Marquart, Untersuchungen zur Geschichte von Iran, II. 57) later Amul and Amitya (the modern C gather), hence Ab-i Amitya or Darya-i Amitya (the river of A.).

Owing to its situation on the chief route from Khorasan to Mā wara' al-Nahr A. was a town of such importance, that it could give its name to the whole river.

Modern geography regards as the principal head-water the Al-scha rising on the Lower Pamir; the natives (as well as the medieval geographers) suppose it to be the Panjdi (medieval name Djarjila which rises on the Greater Pamir and in its upper course bears the name Wakhsh; Panjāb was originally the name of the place where the Wakhsh joins the other streams and the 'five' head-waters become a single river, (thus mentioned in the beginning of the 13th century). Isjkhal (ed. de Goeje, p. 266) mentions as head-waters besides the Panj and Wakhsh the River of Hulbuk (the names Askhtr and Barhshu or Balshu, perhaps to be read Tatliz, seem in spite of Isjkhall's view to have denoted the same river, now called Kullāb-Darya), the Fargh or Farghār, the modern Kizl-Surkhāb and Kizil-Scha and the Andijānāhāb or Andijānāhāb, (this variation in the spelling is, as is well known, at the sound i), hence Andijān, modern name Tār-Scha). The only tributaries of the Pamj on the left, mentioned by Arabic authors, are the Koke and Al-Sara; the pronunciation of the old names remains yet to be established with certainty. The main river is further joined on the right by the Kūr Nūh (in the Middle Ages Rūmāl which is now the name of a head-water) and the Sorkhāb (called in the Middle Ages and i late
as the time of Timur Caghán-Roś; the Zafar-Nâme gives it as Daghut-Roś). The district through which the headwaters flow consisted of the following countries: The Pandj, after leaving the country of Wâkhân, separated Bâdakhsân from Shânkân (also written Shîkân, Shîkhan and Shîkna) and Karân (probably the modern Kshân and Darwâz; the latter name is also used by many of his successors). Between Pandj and Wâkhân were situated the mountain district Khuttal or Khuttalân and the plain of Wâkhân (the modern Karghan-Tube). The Wâkhân flowed through the districts Fâmir (written Fâmir and Bâmîr; the name apparently included the Alai valley), Karâš (called Kâr-i-Tîgin at the time of Timur; modern name Karategin), Kânkût (written Kumarâk; or Kumârâk, the Kowâqeh or Kowâqeh of the Ancients). Between the Wâkhân and the Kânî-Nâhû were situated Wâghîrât (from Wâghd-jû) the modern Fâlâbâd and its district and Kânshû (now called Kâlbâlîyân). The mountain-country containing the head-waters of the Kânî-Nâhû and the Surkhan was inhabited by the people of the Kânî-Nâhû (the people of the Kânî-Nâhû), whose alphabet is of the Ancients, the Kowâqeh or Kowâqeh. The name of the party of the Kowâqeh is the same as that of the Kowâqeh. It is also the same as that of the party of the Kowâqeh of the Ancients. The passages from Balâhâr quoted in Bartold, Tâhstein o yezdân mowqoteh mâkhârî (texta, p. 9). In the valley of the upper Kânî-Nâhû (the district of the modern town Dâghumbe and Hisâr) were situated (from east to west) Shûmâna and Kâsân of Aqha-bân; the valley of the Surkhan formed the country of Kâmîyân (from Kâtân to Aqha-bân), the country of Gaftân referred to in the history of the Arab conquest is probably identical with the district of the modern town Shârâbâd. On the left bank between Bâdakhsân and Balûkh lay Tâkhristân in the narrower sense (also written Tâkhristân; in its wider sense this name (derived from the people Tâkh-ris, who appear first in the II. century B.C.) comprises all the mountain districts on the right and left banks of the upper Amû-Daryâ, which are dependent on Balûkh. In these districts only the water of the mountain streams which flow into the Amû-Daryâ was used for purposes of irrigation; the canals derived from the Amû-Daryâ itself only began near Zârmâ (on the left bank) and the modern Kâl (to-day the irrigation-channels start further up-stream near Kâl). From Amû (the modern Cârdjûl) onwards a strip of cultivated land followed the left bank without interruption, although its breadth was subject to many changes; to-day the greater part of the land between Cârdjûl and the frontier of Khwâna is occupied by sand, and from Hamûd Allah Qâwânî it appears that as early as the VIII. (xiv.) century the strip of cultivated ground was no longer continuous. Khâshchân, the country irrigated by the lower Amû-Daryâ, began in the iv. (x.) century near Tâhîrya, 5 days journey below Amû; from the v. (x.) century up to most recent times the town of Dâghum (called by Arab-Geographers, as now minus of Dâghum-Ash, which according to Hamûd Allah Qâwânî lay 12 parasangs below Tâhîrya, was regarded as the southern frontier-town of Khwâristân. The modern frontier above the town of Pînîk was only determined after the Russian campaign of 1873; near this spot the mountains slope down close to the town, so that the river-bed is narrowed down to a third of its ordinary width; this 'gate' is about 1,100 feet wide, and is called Bahûn. Shîr (the Lion; Mouth, thus already in Hamûd Allah Qâwânî and Dâshül, Alâtâqeha, referring to a legend about a jump of Dâshül, the horse ridden by the Calif, Alî); On the right bank the cultivated land only began 9 parasangs below these rapids near the town of Ghârâbakhsh or (Ghirâbakhsh) (leaving out of account the old town Farâb or Fârâb situated opposite Cârdjûl). The famous town of Dâshül and all his successors. Between Pandj and Wâkhân were situated the mountain district Khuttal or Khuttalân and the plain of Wâkhân (the modern Karghan-Tube). The Wâkhân flowed through the districts Fâmir (written Fâmir and Bâmîr; the name apparently included the Alai valley), Karâš (called Kâr-i-Tîgin at the time of Timur; modern name Karategin), Kânkût (written Kumarâk; or Kumârâk, the Kowâqeh or Kowâqeh of the Ancients). Between the Wâkhân and the Kânî-Nâhû were situated Wâghîrât (from Wâghd-jû) the modern Fâlâbâd and its district and Kânshû (now called Kâlbâlîyân). The mountain-country containing the head-waters of the Kânî-Nâhû and the Surkhan was inhabited by the people of the Kânî-Nâhû (the people of the Kânî-Nâhû), whose alphabet is of the Ancients, the Kowâqeh or Kowâqeh. The name of the party of the Kowâqeh is the same as that of the Kowâqeh or Kowâqeh of the Ancients. The passages from Balâhâr quoted in Bartold, Tâhstein o yezdân mowqoteh mâkhârî (texta, p. 9). In the valley of the upper Kânî-Nâhû (the district of the modern town Dâghumbe and Hisâr) were situated (from east to west) Shûmâna and Kâsân of Aqha-bân; the valley of the Surkhan formed the country of Kâmîyân (from Kâtân to Aqha-bân), the country of Gaftân referred to in the history of the Arab conquest is probably identical with the district of the modern town Shârâbâd. On the left bank between Bâdakhsân and Balûkh lay Tâkhristân in the narrower sense (also written Tâkhristân; in its wider sense this name (derived from the people Tâkh-ris, who appear first in the II. century B.C.) comprises all the mountain districts on the right and left banks of the upper Amû-Daryâ, which are dependent on Balûkh. In these districts only the water of the mountain streams which flow into the Amû-Daryâ was used for purposes of irrigation; the canals derived from the Amû-Daryâ itself only began near Zârmâ (on the left bank) and the modern Kâl (to-day the irrigation-channels start further up-stream near Kâl). From Amû (the modern Cârdjûl) onwards a strip of cultivated land followed the left bank without interruption, although its breadth was subject to many changes; to-day the greater part of the land between Cârdjûl and the frontier of Khwâna is occupied by sand, and from Hamûd Allah Qâwânî it appears that as early as the VIII. (xiv.) century the strip of cultivated ground was no longer continuous. Khâshchân, the country irrigated by the lower Amû-Daryâ, began in the iv. (x.) century near Tâhîrya, 5 days journey below Amû; from the v. (x.) century up to most recent times the town of Dâghum (called by Arab-Geographers, as now minus of Dâghum-Ash, which according to Hamûd Allah Qâwânî lay 12 parasangs below Tâhîrya, was regarded as the southern frontier-town of Khwâristân. The modern frontier above the town of Pînîk was only determined after the Russian campaign of 1873; near this spot the mountains slope down close to the town, so that the river-bed is narrowed down to a third of its ordinary width; this 'gates' is about 1,100 feet wide, and is called Bahûn.
this branch is said to have reached the Çinik and then to have flown on some distance further; it seems clear that the group of lakes called Kha-
hidjân must not, as has been maintained, be sought at the Altbirg, but at the Saiî-Kamâl. None of the later geographers seems to have known
the delta from personal observation; Al-Jâhiþ and Al-Râzi say that the place the fâlibin-village, called Sahzû, is at the spot where the river enters lake Arnî. At the time of Al-Mâkândâtâ, who wrote in the year
757 = 955-956, or his authority (for there is no doubt that he himself never visited Khâ-
hirâm) the left arm of the river west of Gurgânj seems already to have been dry; and the building of a dyke for the protection of the town of Gurgânj is given as an explanation for the drying-up of this river-bed. The water is then said to have turned 'eastwards', and to have flowed 'in one direction only'. (Muk., p. 288, n. 107.) No details are given as to the direction in which the main
stream, after being dammed off at Gurgânj, flowed to lake Arnî, nor are we told whether the Kuran joined it or reached the lake independently.
Al-Mâkândâtâ (380) knows the Ubrûf as a dried-up river-bed, which even at his time was regarded as the old bed of the Amû-Darya; the drying-up of this river-bed and the dessication of the region near the Balakh mountains were con-
nected with the rising prosperity of Khâhirâm, although the river could have reached the Saiî-Kamâl and the sea only by way of Khâhirâm (traces of a source further south have not so far been identified with any certainty). That the view given by Al-Mâkândâtâ was universally prevalent, is proved by the name 'Old Khâhirâm' as ap-
plied to the Balâkhia district in Ibn al-Mâtîr (ed. Tornb.), iv, 267. It is still impossible to say with certainty, whether the report that a town existed at the Balâkhia, rests on any basis of histori-
cal fact; the suggestion made by Tomschuck (Sergiana, p. 94 and 112) and Marquart (Erkala-
kie, p. 55) to identify Balâkhia with the Chinese Po-Lo and the town Râkka mentioned by Frisz
(V. century A. D.) cannot be accepted without reservation.

In the xii. (xiii.) century after the Mongol in-
vasion, perhaps in consequence of the devastations
of this epoch, the course of the river seems to have been diverted towards the left. We are told that several towns on the left bank, among them already Hâzârasp, were flooded, and that the Mongols at the capture of Gurgânj, which was then the capital, (Sâfar 618 = April 1221) de-
stroyed the dyke and thereby completed their work of devastation. A few years later the town (called Uргenct) by the Mongols and later by the Uzbeks), was rebuilt; but it then lay (like the modern Kunyz-Urgenç) on the 
right bank of the branch which flows past it. During a space of 350 years this branch, which flows towards the Çink moun-
tains and the Saiî-Kamâl, is referred to in all descriptions of travel and historical accounts (true in the history of Timur and including Morettâd (ed. Di-
âne, 431-1446) whom Al-Goce regards as particularly trustworthy, were completely dependent on the written sources of the preceding centuries. In addition to the Arabic geographers of the iv. (x.)
century Hâfirî and al-Râzi say that the desert between Khâhirâm and Khorsûn is so well known that no detailed description of it is needed, is taken word by word from the Lashân-Nâmâ (cp. the text in Burhînî's Tawârîkh in ethnî, mongol. majmi, i. 81), and can therefore not be taken as referring to Hâfirî's own observation. The statements of Hâmid Allah and Hâfiz on the other hand cannot be trusted and are not known to us; and the trustworthiness of the for-
mer is particularly supported by the fact that he mentions a large waterfall on the Ubrûf, for the modern dry bed actually shows traces of falls of considerable height (up to 28 feet). Observe references to such a waterfall are also found in
ancient authors (Buduquq quoted by Strabo and Polybius); but the assumption, that Hâmil Allah's statement may go back to these or similar sources, is made impossible by the fact that he mentions the Turkish name of the fall (Gövidî, lit. noise, rumbling, thunder). In the account of Hâfiz Abru' the statement, that the Saiî-Darya joined the Amû-Darya and that the combined river flowed into the Caspian Sea, deserves special notice; for this there is no other literary authority, but traces of such a junction of the two rivers are preserved both in old river-beds and in local tradition; the statement has certainly nothing to do with the opinion of the Ancients which regarded the Jassat as an independent tributary of the Caspian Sea. Hâfiz Abru' wrote his historical and geo-
graphical works at the court of sultan Shahhiâk, at a time when Khâhirâm belonged to the decora-
tions of this monarch. This thus makes it hardly probable, that his information on the lower course of the Amû-Darya should have been incom-
plete. At the same time it must be admitted that neither Hâmid Allah nor Hâfiz knew the Ubrûf from personal observation. A more important source (not used by de Goeje) are some contempo-
rary accounts of historical events (campaigns etc.,) which took place in the region of the Ubrûf, especially the following two: 1. Zâhir al-Dîn al-Mâshî (ed. Dorn, text p. 436, transl. p. 449) narrates how at the command of Timur the sâyîds of Mâzâdanar were in 704 (1302) brought in a s.h.r to Aghriçâ, (this is in Hâfiz Abru' and later in Abru' that the name of the place where the river enters the Caspian Sea, and Hâmid Allah are in the Caspian Sea, including Morettâd (ed. Di-
âne, 431-1446)) as far as a certain place (obvi-
ously as far as the waterfall?), the author's father, then twelve years old, is said to have accompanied
them on this journey. 2. Khîndemir in the Hâfiz al-Siyar (ed. Toher, iii, 244-246) describes the campaigns of Hûsun Bahkâr (who later became sultan) from Aztrâbâd to the Ubrûf in 864 (1460) and 865 (1461); in the year 864 Hûsin goes
from Astrabâd to A'qhrâz and Adâk. A fortress of this name is also frequently mentioned in the accounts of the campaigns of Sultan Mahmoud Shahbât; it is to be sought on the left bank of the Ushôb, on the chief route between Khvârûm and the cultivated district on the northern slope of the Kârân-Dagh and Kopet-Dagh, perhaps where the well of Kârtîsh now is), after seven days he reaches the Âmû-Därây which he crosses on a boat; in 858 he leaves Astrabâd in the same direction, loses his way, and suffers much owing to the proximity of the channels of the Kârân-Dagh; he reaches Adâk, whence he crosses the Âmû-Därây, his army encamps on the bank of the river A'qhrâz and later occupies the newly founded town of Wûzîr (situated according to Abu'l-Qâhid at the foot of the Ust-Urt, at a distance of 6 parasangs from Urgûnc). Both narratives prove very clearly, that the Ushôb at that time carried water in its lower course, and that it was regarded as a continuation of the Âmû-Därây. There is no reason to assume an alteration of the historical accounts under the influence of pre-conceived geographical opinions (such as might have been gathered from Hâfiz Allâh and Hâfiz, especially not in the case of Khodemût, who in the section on geography is termed a learned geographer). Father Martignoni's A'qhrâz, and his own Allâh-Allâh, use only the geographical authors of the iv. (x.) century, and still makes the Âmû-Därây flow into Lake Aral only.

We do not possess a detailed description of the course of the river for the time from the vii. (xii.) to the x. (xvi.) century. According to Abu'l-Qâhid both the Ushôb and the Ushôb in its lower course, up to the Urgûnc, were not only inhabited, but also under cultivation; the road from Urgûnc to the bend at the Balâkhan is said to have led from and to salt, and we are told that fields and vineyards ran along both banks (though not in an uninterrupted line as the French translation has it); the occupiers are said to have been Druids or Romans (such as now inhabit the district on the Gurgân). Considering that at the time of Abu'l-Qâhid the banks of the Ushôb had long been desolate, it is probable that his contemporaries had an exaggerated idea of the splendour of this past prosperity; in Hâfiz Abu'n's account the course of the Âmû-Därây from Khvârûm to the Caspian Sea goes for the greater part through desert country. From the present state of exploration of the best of the Ushôb and the surrounding district it appears that only the water of the Şût-Kamîsh and the upper Ushôb were used for the purpose of irrigation; further down stream the water probably contained salt, owing to the chemical constituents of the soil, as is now the case in the Atrek. The fact that the favourite spot of the Atrek, at about 12 miles from the northern shore of the Caspian Sea, in the district which, according to the accounts of the Ancients, was the home of the Mâkîs (Am âl), and Amâl is (the regular Mod. Persian form of the (hypothetical) old Persian Amârda), in the period of the Sassanids Amâl together with Gâlân (the modern Gîlâm) formed a great Persian ecclesiastical see, cf. Ziehrer, d. Deutsch. Morgenl. Gesellsc. 1879, p. 407. The town is also mentioned several times in the Shah-Nâmê. In the Muslim period Amâl became an important seat of commerce, and under the last Abbâsids took the place of Sîriyû (the modern Sari) as capital of Tabarestân. Ibn Hâwâjal describes the right branch, the Kurdar of the Arabic geographers (called by Jenkinson Aradakh, prob. for the Turkish Arâtîk), although the left branch flowing past Urgûnc and Wûzîr was still regarded as the Oras proper (called by Jenkinson Oğûs). We are told that the river at that time no longer reached the Caspian Sea.

Soon afterwards the water definitely diverted into the right branch, and in spite of a few isolated attempts (during floods) at breaking through in the opposite direction (such as took place as long as 1879), the great quantity of the river's water has since flown in that direction. Abu'l-Qâhid (born in A.D. 1603 according to the cyclic reckoning; the year of the Hijrî is erroneously given as 1014 instead of 1013) states that the event which robbed Urgûnc, then the capital, of its water-supply and resulted in the gradual desiccation of the whole district, took place 30 years before his birth; and it is already referred to by the Osmanli Seifî, who wrote in 1890 (1582). In the xi. (xvii.) century Khvârûm takes the place of Urgûnc as the capital of the country; later on the towns of Urgûnc and Wûzîr are founded in the same district, obviously in place of the deserted towns on the dried-up river bed; the island in the delta Arat (which has given its name to the river) in its historical development assumes an importance which had never belonged to it before. It was not until the last century that some canals were again diverted to the left, and that the town of Kûnûs-Urgûnc (prop. Khûnûs-Urgûnc, old Urgûnc) to distinguish it from Urgûnc near Khvârûm), was rebuilt; except for a few years these canals have not longer been of any use since 1879. The question of constructing an artificial connection between the course of the river and the Şût-Kamîsh and the Caspian Sea, has been under discussion, but as the enterprise would be of no advantage in any respect, it has been given up since.

(W. Barthold).
Amul in the year 367 (973) as a very populous city, larger even than Kazwín. The town was also a centre of active industrial life (carpet-weaving) and of scholarship; it is said to have possessed 70 madrasas (academies) in the city. The famous historian al-Tarabí (d. 921) was born here in 909 (1501). The prosperity of the town was seriously impaired through Timur's devastations in the end of the 14th century. To-day Amul is the capital of a large district of the province Mazandarán (corresponding more or less to the old Tabaristán). The rapid stream of the Herbars-Firúd which leaves the mountain-glen of the Alborz just before reaching Amul, flows in several branches through the town, which for the greater part is built on its left bank. The old town was situated to the west of the modern Amul; it is said to have been destroyed in an inundation, and extensive ruins (especially of an old fort) still indicate its site. The number of inhabitants, estimated by Frasé at from 35,000—40,000 in 1822, is stated by Melgund at 10,000 in 1860, and more recent estimates give sometimes 8000, sometimes 20,000. These fluctuations find their explanation in the large diminution of the populations during the summer, when a considerable number of the inhabitants go to the mountains with their herds. Amul lies in the centre of an open, well cultivated district, still characterized, as already in the Middle Ages, by extensive rice-fields and rich orchards (famous plums). The small town of Herbars, the Ain al-amn of the medieval Arabic geographers (Yàkût, i, 409; Alisír) situated where the Herbars-Ríd enters the Caspian Sea, serves as harbour of Amul.

AMULET. [See AMUL.]

'AMÚR (Ichibél), a mountain massif of Southern Algeria, situated between the Ksar mountains in the S. W. and the mountains of the Awdal Nair in the N. E. [See ALGERIA, ATLAS]. It is an elevation stretching from N. E. to S. W., at a length of about 63 and a breadth of about 37 miles, and covers an area of about 3700 square miles. Its height is only from 650 to 975 feet above the plateaux from which it rises in gentle slopes, towards the Sahara, however, it slopes down fairly abruptly. The structure of the massif is rather irregular, though several ridges and a few dominant peaks can be distinguished; in the south the Guenn 'Arif (5005 feet); the Djebel Sult 'Oko (5545 feet); the Gibril (5545) the Ichibél Mabég (4600); the Ichibél Sult Ri' Zeit (4895); in the south, the Ichibél Sult Shamsa (5014); the Ichibél Mimbér, the Ichibél-Umra Khamiwi, the Ichibél Redaët. A characteristic feature of the eastern part of the Ichibél is the 'Amar, a very slimy plateaux of sandstone cliffs, which are the 'agdas, vast plateaux of sandstone cliffs, which are the 'agdas; these are covered with vegetation and surrounded by ravines with steep walls of a height from 100 to 500 feet. This 'agdas in the 'Amar extends between the two branches of the Ichibél-Mid, the Ichibél al-Grú, and the Ichibél Malû.

Owing to its high situation the Ichibél 'Amar receives abundant rain and, in winter, even snow; it is an important hydrographic centre from which
water-courses descend in all directions, forming rushing torrents with deep-cut valleys which, after leaving the massif, lose themselves in the sands of the Sahara or in the closed basins of the high plateaus. Such are, in the S. E. the Oued Melich, the valley of which, narrowed by the gorge of the Kinnet el-Melich is one of the ways of access to the Sahara; in the South the Oued M'tern which, after flowing through the South of Algeria under the names of Oued Djerdi and Oued Surt, loses itself in the Sahar Malghir; in the North the various streams forming the Oued Sekhaj, which flows into the basin of Tguzin whereby the Clatif wells, in the Northwest the Oued Sidi el-Nacer flowing towards the Sahar el-Sharqui.

The high situation, the comparatively freshness of the climate and the abundance of water have favored the development of agriculture and of vegetation in general. Fields of barley and wheat are deep down in the valleys, in the depressions extending between the mountain-chains, yield in normal years sufficient grain for the needs of the population; there are also meadows and orchards full of fruit-trees. In these regions are situated the villages which are inhabited by the sedentary farmers of the districts populated by the nomads. The following are the most important of these villages, the largest of which contain hardly a hundred homes each:

In the South, Sidi Bu Zid, Aof, the administrative center of the district, and Tadamna; in the South al-Righa, Tawila, el-Hamwida, and al-Aman. The mountain-slopes and the heights of the 'gadus' are covered with trees (terebenthis, thorns, el-débes, junipers, and saks with corky scars), which grow so thick as to give the country the appearance of a real forest. Altogether the Oued el-Amur is a very different country from the regions adjoining it in the South and North. It is a real Tell of the Sahara... it always impressed the natives as a fairy-country which their imagination was pleased to paint in enchanting colors.

The Djebel 'Amur having been formed by drawing推崇 in the scathed rocks, and by the tombs found everywhere in the massif, has been inhabited since a very ancient period; at the time of the first Muslim invasion it was occupied by the Waglimten, a group of Berber tribes belonging to the Tagila. Towards the x. century of our era the Rashid, a sub-tribe of the Berber Watan, settled in the mountains, and gave them their name (Djebel Rashid); they were driven forth however by the invasion of the Bent Hill. An Arab tribe belonging to the Abbedj group, the 'Amir who later on were joined by the 'Orwa, settled towards the end of the x. century on the eastern slopes and the surrounding plateaus; thence they advanced gradually to the Rashid on the North and South, until in the xvi. century they became master of the whole district as far as the Ksar mountains. The name Djebel 'Amur was then substituted for that of Djebel Rashid.

Owing to the protection afforded by their mountains the 'Amur practically preserved their independence until the French conquest. The Turks were unable to subjugate them, and the boys of Oua never succeeded in gaining possession of Tawila, the principal Ksar of the country. They therefore had to content themselves with a nominal sovereignty, and the Djebel 'Amur was in point of fact a kind of hereditary fief held by the family of the Banu Yahya. In 1830 Djeudh el-Yahya, the head of this family, succeeded in putting an end to the intestine wars, which had devastated the country, and established his own authority over the whole massif. The 'Amur tribesmen at that time divided into seven sects: Awlad Mina, to which the Banu Yahya belonged; Awlad Bani 'Amur; Awlad Rahman; Amaas; Awlad Ya'kibi; Makna; Hadjafal; they were capable of putting in the field 500 horses and 5000 men. To them must be added the Kemanata, a Berber tribe, of whom the chiefs only spoke Arabic.

The 'Amur preserved their independence until the year 1845, when they submitted to General Merey-Mongé; after 20 years of tranquillity, however, they rose at the instigation of the Awlad el-Shalgh and took part in the insurrection of 1864-1865. Even before the French conquest a fraction had separated from the rest and penetrated as far as the district of Figgaï; they were called 'Amur Saharans to distinguish them from the Djebelja, the inhabitants of the massif. In the treaty of Lalla Maghnia concluded in 1845, the 'Amur Saharans were recognised as subjects of Morocco.

AMURATH [see Murad.]

'AMWAS or 'AMWAWS, the ancient Emara mentioned several times in the time of the Maccabees and in Josephus, situated in the plain of Iudæa, right at the foot of the mountains, on the road from Jerusalem to Antioch, was a city of 15,000 souls since the Ill. century A.D. The town was taken by 'Amr b. al-As in 717; formerly the chief place of a tophary, it remained a provincial capital under the Arab dominion, until the seat of administration was transferred to al-Raml [q.v.]. The modern Amwas is a miserable village with few old remains. The Caesarean Emara mentioned by the Crusaders may perhaps be identified, as Robinson has done, with the ruin of the castle of Latrun at a distance of little over a mile. 'Amwás is especially known for the fact that it was a chief centre of the plague of the year 156 (perhaps already 17) A.H. (653-659), which for this reason was called the 'Amwar (or plague of 'Amwás and al-Quṣayra: Talut, ad. de Goeje, l. 2516, 1). Its victims are said to have been 25,000, among whom were 'Abū 'Ukga, Mu'āwiyah b. Djahl, and Yaqub b. Abi Sufyan.

(FAHUL)

ANA, town in the Quatar (Mesopotamia) near the front of Tyre, situated at N. Lat., 34° 27' and E. Long. (Greenwich), 32° 18'. It is a very old town known already to the cuneiform.

AMUR — 'ANA.
ANADOLI HİSAR, a castle erected by Bayezid I in 1398 (1396) on the Asiatic coast at the narrowest part of the Bosphorus. Its original name was Güzide Hisar; it has now fallen into neglect. On the opposite coast, Mehmed the Conqueror built in 1565 (1552) the castle of Rumel Hisar, in order to bring Constantinople completely into his power.

ANAHID (Anāhīd), Persian name of the planet Venus (Arab. Zohūr).

ANAK (anāk), plural of mā'an, cattle. Also the name of a star.

ANAMBUR, the ancient Anamibur, a promontory and harbour in Asía Minor; now only a landing place (Scala) and chief town of a ham.

ANAPHA, Harbour on the Black Sea, in the district of Kuban (Russian Caucasus), with an old fortress restored by the Turks in 1783; belongs to Russia since 1828.

ANAS (Abu Hanifa), one of the most prolific of the exponents of the Sunna. After the death of the Prophet he gave him the title of Imam, and the right to interpret the laws of Islam. He was the author of many works on the law and theology, and his influence on the development of Islamic law was enormous.

ANASIYA (n.): derived from anas, i.e., rain; egoman.

ANAZA (A.), staff or spear (see Lišūn vii. 257). In the Muslim ritual the 'anaza first appears in
the year 2 (623). When Muhammad for the first
time celebrated the festival of Breaking the Fast, Bilāl carried a spear before him on his way
to the ummār; during the service this spear was
planted in the ground and served as entara [q.v.].
Precisely the same thing was done on the occa-
sion of the other festival (10th Dhu 'l-Hijjah).

— The custom of carrying a spear or staff was ob-
served and expanded by Muhammad's successors.
It has become the rule for the preacher to hold
in his hand or to lean upon a staff, a sword or
a bow, when he ascends the pulpit at the Friday
sermon, and the sacred wooden wands of the
waqf

used. It is obvious that all these things are
symbols expressing the same ideas as the 'anaza.
According to Becker's explanation staff and pul-

dit are the two attributes of the judge or imām among the ancient Arabs.

Legend relates that the prophet received the
'sanaz or even three of them' as a present from al-
Hārith ibn al-Kalb, to whom it had been given by the
Nogaz.

(A. J. Wenshick.)

ANAZA, an Arab tribe; it is said that their
original name was 'Amir, but that they were called
'Anaza, because the ancestor of the tribe killed a
saint named 'Amir. The name is certainly not connected with 'onaz, the word for a goat.' 'Anaza also

designates a mimal, apparently a kind of vessel.
Nisāb al-'Anaza, the man of 'Anaza is sometimes confusing
with that derived from 'Am. Other tribes of the same
name are 'Anas b. 'Amr b. Aṣaifa (belonging to the
Khāz'ī group) and 'Anas b. 'Amr b. Aṣwaf
(belonging to the Qasimī).

The genealogy of the tribe in question is:
'Anas b. Asad b. Khabla; the Qadla and 'Anaza
are mentioned as brother-tribes, while the following
were counted as sub-tribes of the Yazdī (including
the Aslam), the Yaqūdum, and the Hālabī (including
the Siyāk). The modern sects which partly are
divided into further sub-divisions of which 'Aṣwaf of
their own are as follows: 'Abd al-Karim, Sa'īd,
Haddīthī (these two are said formerly to have formed
the tribe of Bīgla), Hāsama, Rawla (the most numerous
and most powerful tribe); Prince Muhammad, a
son of the Khedive 'Abbās I, was sent to them in
order to bring about in union in accomplishments;
Wulad 'Alī, Sirāh, Arfaddh, Tawf. The whole tribe is estimated by A. Blunt to possess
30,000 tents or 120,000 members. They do not
however form a political unit, and instances of wars between 'Anaza tribes are not lacking; the
Heseine e.g. formerly one of the leading tribes,
were reduced to a very inferior position by an
unsuccessful war against the allied Sāhā and Rawla.
A number of smaller tribes are allies or tributaries
of the 'Anaza; and it is a general rule that all
Bedawī and farmers of the Syrian and Mesopotamian
plains live within the tribal influence of the
'Anaza or Shammar, the two strongest tribes of that region, pay tribute to one of these,
and sometimes to both.

At an older period places are seldom referred
to as belonging to the 'Anaza, so that it is impossible
to locate their habitations at that time with any certainty. There were 'Anaza near Medina,
in Yamāma, and even in Yemen. At the present
time the district covered by their wanderings
includes the whole Syrian plain, and reaches to the
North as far as the latitude of Aleppo (they
are also found in the Hālā), to the South as far
as the Shammar hills, and eastwards to the Euphrates
and even beyond that river. At the beginning of
the winter these nomad tribes at times pass through
the hills where they still find fresh pasture for their
camels; and from December onwards no 'Anaza
are found in the whole district north of the chain
of hills which begins to the north-east of Damascus
and reaches as far as the Euphrates. Towards
March, when the she-camels have dropped their
young, the 'Anaza begin to return north, so as to
reach their summer quarters again by the middle
of April. They do not take their sheep with them
to the south, but leave them in the care of the
subject tribes. The Euphrates is, on the whole,
the boundary between the 'Anaza and the Shammar
of Mesopotamia; the former however frequently
cross the river by numerous fords in order to
make raids in Mesopotamia, so that there is a
permanent state of war between these and the
Shammar who are barely half their numbers. The
'Anaza are always readily assisted by the Yazdīs;
the raids from one side of the river to the other
usually begin with the arrival of summer.' 'Anaza
are found even in the district of Nībih and Mosaīf;
and east of the Khābīr there is a fairly considerable
part of the tribe, a sub-tribe of the Haddīthī,
who emigrated to that district in consequence of
dissensions with their fellow-tribemen and joined
the Shammar.

Of the history of the 'Anaza in the older
period little is known. Individual members of the
tribe occasionally take part, but like the whole
tribe and its various parts, they are of no con-
derable historical importance. In pagan times
they had an idol Sai'īr, and like the other Kaffī
their tribes they assigned to Mulūrīk a son whom
they called Bahlī. In the famous war caused by
the murder of Kalath they are said to have joined
the Bakr and shared their troubles and perilous
existence. In the early times of Islam a certain
al-Kadūl b. al-Hārij is said to have been the
most influential person among the Bakr's tribes.
Al-Fakīr b. Dāsim b. Hanzāfī was a rich and noble
member of Bakr, who, having been captured by
forces of the 'Anaza. But their importance does not
begin until the second half of the xvii century;
about twenty years after the Shammar, coming
from the Nejd, had made themselves masters of
the Syrian desert, the 'Anaza also advanced from
the Neajib; the first tribes to move seem to have been
the Fedean and Huzzam, who with the assis-
tance of some of the Sedawi's driven from their
seats by the Shammar, forced the Shammar to
cross the Euphrates; they were followed, as it
seems, by the Hadhdhâh, Sith and Wâlud 'Alî,
next came the Ruksha towards the end of the xvii
century, and at the second half of the xix.
century the Taraf and Eridhdât. As the Turkish
governors were powerless to interfere in these
dangerous movements, the 'Anaza became undisputed
masters of the Syrian desert as far as the
Euphrates, where they stopped all traffic and commerce.
Down to the second half of the xix century the
district on the Euphrates was in their undisputed
possession, and therefore a dreaded and almost
impassable country; in the sixth decade of the
xix century they made a raid on Aleppo and
looted the town. Early in the thirties 'All Pasha,
the governor of Bagdad who was then fighting
the Jâbrûs (Shammar) called upon the 'Anaza
for assistance against the Shammar; they came in
such numbers that the governor was obliged to
hasten his departure. But the Shammar soon began to be
afraid of his friends and allies; he vainly attempted
to persuade them to return, on the plea that
they were no longer wanted: they demanded a
reward for having come to his help from such a
distance and settled on the pasture-lands near
Bagdad. 'All Pasha now invited the Shammar
against them, but when war broke out the 'Anaza
were victors, and ravaged the Shammar
country; they also gained a decisive victory over the
government troops and besieged Bagdad which
was full of refugees, but retired before the savage
Zabîd whom 'All Pasha had summoned against
them. The troubled condition of the Syrian desert
and the Euphrates district, for which the 'Anaza
were responsible, began to improve slowly after
1862 in consequence of the vigorously conducted
campaigns of 'Unur Pasha, the governor of Aleppo,
and later of Midjâb Pasha who at that time was
governor of Bagdad. There is much ill feeling
between the 'Anaza and the Druzes of the Haw
rin, not only because they have put a check on their
predatory raids, but because the protection with
which the former have been provided has enabled the
latter to venture on raids against the much more
powerful 'Anaza. It is for this reason that during
the great rising of the Hawrin Druzes (1896),
the 'Anaza remained loyal to the Turkish govern-
ment and took part in the suppression of the
insurrection. — They seem to be very negligent
in observing the Mohammedan religious law (e. g.
prayer). When the Wahâshât movement spread to
Syria they were obliged to receive the pious
Wahâshât imams and to submit at least outwardly
to the strict observances of Wahâshât; but after
the fall of the Wahâshât power in Syria they
were quick to throw off of this irksome yoke
of strict piety.

**ANBAR (A.), AMBERGRIS (ambre gris, amber grise) to distinguish it from amber (ambre propre = amber), a substance of sweet musk-like smell, easily fusible and burning with a bright flame; highly valued in the East as a perfume and as a medicine. It is found floating on the water in tropical seas, (spec. gravity 0.78–0.95), or on the shore, sometimes in large lumps. Ambergris probably is a morbid secretion of the gall-bladder of the sperm-whale in whose intestines it is found. Kawrini mentions it together with sulphur, asbestos, mineral tar and mastic, and states in addition to various marvellous theories of its origin that it is secreted by an animal and found in the body of sea-fishes. There is, he says, no difference of opinion as to its originating in the sea; the 'sea of Zanj' especially (i.e. the part of the Indian Ocean stretching along the east coast of Africa) washes its shores at certain times in big
lumps, mostly of the size of a head, the largest
lumps weighing 1000 wiehter. — He states further, that it strengthens the brain, the senses and the heart in a wonderful way; it increases the mental substance, and is, of the greatest use to older men owing to its subtle warming effect. —

The fullest account of the medicinal effects of
ambergris are found in the al-Qârim; the most
detailed account of its origin of the various
commercial varieties and their provenience in the
Encyclopaedia of Nawawi who follows Ahmed ib.
Yûhâmi and Muhammad ib. Ahmed al-Tantist
respectively. There is an interesting reference to
varieties called 'bab-ambergris' and 'beak-ambergris';
the former also called 'swallowed ambergris' (ad-
ma'am); it is said to be gotten from the beak of a
large fish called hât or unber who swallows
the ambergris floating on the sea and dies in conse-
quence; the body is cast ashore and bursting
open gives forth the ambergris which it contains.
The 'beak-ambergris' (al-mamâr) contains the
dews and beak of a bird which alights on the
lumps and being unable to get away perishes
on them. This fact is obviously founded on the
fact (pointed out by Dr. Swedes) that ambergris
frequently contains the hard mandibles (beaks)
of a cuttlefish which serves as food to the sperm-
whale.

(J. Reuka.)

**ANBAR (Arab 'l-ANBAR), an Arab tribe whose
name is derived from ambergris or the sperm-whale
[cp. the preceding article]. The grammarians men-
tion Hal'ambar as an abbreviation of the name,
but this form occurs only very rarely in literature.
Khadjam is also given as the name of their
ancestor.

The genealogy is as follows: Anbar b. Amr b. Tamim; the Hadjam, Dârid and others were brother-
tribes, the Djundit, Kha, Mâlik and Bahshû
septs of the 'Anbar. The 'Urdjî and Haridjî
belonged to the Djundit. A malicious genealogical
story about the many marriages of their ancestors
'Umar Khâridjî is found in *Alzâhî* 1, 99; 2, 75; *A'umîl* (ed. Wright) l. 265. Their origins were in the Yamam. Of moun-
tains belonging to them; there are mentioned:
al-Mughâissîl, Tamûlîs; of wâli's and wells:
al-A'zala, al-Faky (occupied after its inhabitants had perished with Massilimm), Faidji, al-Khaff, al-Kharimik, al-Lulaiyin, Mawiya (in the valley of Faidji), Mawjishan, Munadij, al-Targhauja, Tibrak, Usaha; of localities: Djou Soudia, al-Fak" (inhabited by the Dakhla and 'Anbari), Hasayal, tananani (palms-plantations), Lughat (inhabited by the Malaghji and 'Anbari), Makama, al-Kasiga (palms-plantations), al-Rajmout, Shattu Firtas (palms-plantations and fields). History. When Muhammed was called to give the Tamim in consequence of the refusal of one of their tribes to pay the tax on them, he sent the Umayya against the 'Anbari. The latter were beaten and had to leave a considerable number of captives in the hands of the Muslims. The induced the whole group of Tamim tribes to tender their submission through their skaffas. In the inscription of the year 11 (632) the 'Anbari seem to have been among the loyal Tamim, and later they took part in the expedition of 'Aqrima.

(RECKENDORF.)

'ANBAR, a town on the left bank of the Euphrates, in the north-east of 'Irak (Babylonia), situated under 43° 46' E. long. (Greenwich) and 33° 23' N. lat. According to the Arabic geographers the distance between 'Anbar and Bagdad on the main route was 12 (Yekht: 10) parasangs or 65 miles, reckoning the parasang at 5.5 miles (1.34c., Strack, Babylonien nach den arab. Geographen, Leipzig 1900, I. 8). The town is said to have been built by the Sassanid king Shapur II (Arab. Sibur) who reigned from A.D. 309-379; this statement however in all probability does not refer to an actual new foundation, but to the rebuilding and fortification of an older settlement already existing on the spot, especially as the survey of the ruins still extant on the site which was undertaken by Ward and Hilprecht, has furnished definite grounds for assuming the existence of a pre-Sassanian town. Anbar soon became one of the principal towns of the Sassanid empire, and already in the time of Anilkus it was regarded as the most important town of Babylonia after Ktesiphon. As a strong military station intended to protect the capital in case of attack from the side of the Eastern Roman Empire, it was of pre-eminent strategic importance, and thus played a considerable part in the emperor Julian's well-known campaign against Persia. The importance of the geographical position of Anbar was chiefly due to the fact that the first large navigable canal of Babylonia which served as a communication with the Tigris, branched off from the Euphrates at a short distance below the town. This canal called Nahr 'Isa in the Arabic sources (cp. Strack, loc. cit., p. 25 and sqq.; G. le Strange, Enquête dans l'Anatole et la Syrie, published by the Oxford University Press, 1900, p. 74 et sqq.) undoubtedly belongs to the pre-Islamic period, and seems to have been cut by one of the Sassanid kings, mostprobably Shapuri II. Being situated in the midst of the most fruitful province of the Persian empire and connected with the capital Ktesiphon by a short and convenient waterway, the strongly fortified town was chosen by the latter Persian kings for their arsenals and magazines. It is to this circumstance that the town owes its name; for the word 'Anbar, which the Arabs regarded as a plural, is derived from the Taimani (Oid. Irh, hypot. kum-dara, Mod. Pers. anbar, arm. ambar) and signifies storehouse or treasury; cp. N. Oldenbourg, Grammatik der neusprachlichen Sprachen (Leipzig, 1888), p. 415; S. Finke, Die aramäischen Fremdwörter im Arabischen (Leiden, 1886), p. 135; H. Leuschmann, Ägyptische Grammatik (Leipzig, 1897), i. 278; A. Scheffer in the Zentralbl. der Deutsch. Morgenl. Gesellschaft, 1894, p. 598. The name of the town Férido-Shapuri (Arab. Foojra-Shapuri) is said to have been given as a second, the Sassanid king, the Persians seem always to have used the name Férido-Shapuri, by which it was also known to the Romans (Ammianus Marcelli, 21, 16, 1; Strabon: Zoisius: Strategia); it is also used by the Syriacs who had a Nestorian bishop residing in the town (cp. Guldin in the Zeitschr. der Deutsch. Morgenl. Gesellschaft, xiii. 413). The Byzantines know only the form 'Abasara ('Abasa, 'Abassara) which they had heard from the Arabs. The latter retained the name Fairis (Firis)-Sibur only as the designation of a district ( oppressed) in the province (asas) al-Diyali of which Anbar was the chief town; cp. Strack, loc. cit., p. 16, 19.

Anbar remained a flourishing town during the early centuries of Islam. It was taken as early as the year 12 (634) under the caliphate of Abul Bakr, by Khalid who defeated the allied Persians and Byzantines in a sharp conflict near the town. For a short time it even was the seat of the caliphate: the first ruler of the 'Abbasid dynasty, Abu'l-Abbas al-Saffah (132-136 = 750-754) made Anbar his residence and was buried there in the palace which he had built; and his successor, Abul Djasar al-Mansur, resided in the town until the foundation of Bagdad in the year 145 (758). After this the importance of Anbar gradually diminished; its capture and devastation by Abu Tahir, the leader of the Karmaites in 315 (927) accelerated the process of decay. In the time of al-Ma'addad (375 = 985) the number of inhabitants was already small. The palace of the caliph was still extant in the days of al-Issakhir (340 = 951), though in a partly ruined condition; it is mentioned once more in Bagdad al-Din's account of the Mongol advance against Bagdad in the year 656 (1258).

To-day the site of Anbar is quite waste; the situation of the town is indicated by the ruins of Tell 'Akbar ('Akara) and Anbari (Chesnay: Omn. Harr., in which latter form Ritter already recognised the old name of the town. The Nahr Sebjaywiy which leaves the Euphrates to the west of these ruins cannot (at any rate in the earlier part of its course) be identical with the above-mentioned Nahr 'Isa (diffcrently H. and R. Kiepert; cp. the map in M. v. Oppenheim's Von Mittelasiens zum Fert. Golf, Berlin 1899). The very extensive mounds of ruins which indicate a town of considerable size, have recently been visited and described by J. B. Bewaher and Ward (together with Hilprecht).

in the power of the Muslims, and finally limited to the modern kingdom of Granada. The christians of Northern Spain did not know it at all, but the old name Hispania or Spain for the Arab South, while calling their own country by specific names like Asturias, Leon, Castile, Aragon etc. This is pointed out in a similar way by al-Idrisi (p. 174). Cp. Dozy, Recherches sur l’histoire et la litterature de l’Espagne (3 ed.), I, 301-303: Abu ’l-Fida, Tazfig al-Andalus, trans. by Keimanel I, 234; Goethe, Die Alhambra, p. 85: Aragon und die Andalusien (4th ed.), 178.

Following the ill-drawn and distorted map of Ptolomy, beyond whom they did not easily venture to go in tracing the exterior boundaries, the Arabs frequently describe Spain as an irregular triangle with the following points: Panta Maragrepi and Tarifa (Djaratt Tariff) on the Straits of Gibraltar, which is called al-Zubayid, the road ‘ar Djasay, in the South, Finisterra in the North West, Cabo de Creus and Port Vendros (Panam Veneris = Haikal al-Zubara) in the (North) East. Similarly, the whole coast from Tarifa to Creus (cp. al-Marraksh, al-Musaffa, p. 4) or at any rate as far as Tarragona and Barcelona is sometimes regarded as the southern frontier, while the chain of the Pyrenees assumed to run almost due south to north and thus drawn on the maps appears as the frontiers on the east. Later on however, ‘Shark al-Andalus (East Spain) is of course also used more correctly to denote the later Kingdoms of Valencia and Murcia. The western frontier on the Atlantic (Bay al-Zalima or al-Zalimah, al-Bah al-muljan = mare tenebrosum, al-Bahr el-sabih = a Sham, Awtayannah, al-Shamah, al-Bahr al-gharbi contracted as al-Sharki, al-Tam, al-Shaim, al-Sawwassit, the Mediterranean) is also frequently reckoned only from Tarifa to Cape St. Vincent or to Cabo da Roca near Lisbon; the northern frontier beginning there is made to turn round the corner of Galicia and to reach the West Pyrenees near Fuenterrabia. The Pyrenees are usually called Diebel al-Bustal, mountain of the pueblos (mountain-passes) or al-Diebel plateaus or al-Bahr al-Whiley, the separating mountains (ibn’a al-Andalus wa l’Ifnyrmat), the mountain ranges of Castile bear the name Diebel al-Sharirat, mountains of the Sierras, and the Sierra Nevada is called Diebel al-Thallu, snow-mountain, or Diebel Shubaytis, snow Solotana.

As regards the descriptions and maps of Arab Spain which have hitherto been published, e.g. in the atlases of Spruner and Munks (2 ed. 1880) and Droysen (1884) cp. also the maps in August Müller’s Der Islam in Mesopotamien und Alemannien, ii. and especially in Stanley Lane-Poole’s The Moors in Spain, 2 ed. (1887), it must unfortunately be said that all without exception show no innovation and full of errors which are handed down almost indefinitely from the unhappy times of Castile, Conde, Sossa, Jaubert, Gayangos, Hammer, Mehren etc.; even the labours of a Dozy seem to have left almost no trace on the geographical exploration of Arab Spain, and that great critic and historian himself was not very critical enough in dealing with the impossible names, the immutable forms in the section on Spain of the Direction de l’Afrique et de l’Espagne par Edrisi (texte arabe avec traduction, des notes et un glossaire, par R. Dozy et M. J. de Googe, Leyde 1886), cp. on this work E. Sauerla, La geographie de Espagne du Edrisi, Madrid (1888–1889), though the responsibility for the mistakes probably rests with the original text of al-Idrisi. Apart from such sporadic corrections of details, and identifications of names and sites as are found scattered about the works of Dozy (cp. especially Observations geographiques sur quelques ancien beasts localites de l’Andalousie in the Recherches, 3rd ed. I, 349–347) and in the writings of Sauerla, Simonet, Egalas, Costera and Basset, very little has hitherto been done for a scientific treatment of the geography of Muslim Spain. It will therefore be necessary to collect from all accessible printed and unprinted sources all the notices referring to this large subject, which occur in Arabic geographers and historians, as well as in biographical dictionaries and anthologies; the material thus brought together will have to be compared, arranged and subjected to critical analysis, and to be used as the basis of an entirely new geographical description and for the preparation of new maps; no help at all can be derived from the utterly incorrect and unscientific identifications of Castile and Conde down to those of Hammer and Mehren; it will be sufficient to compile only the undisputed mass of 833 place-names of the Iberian peninsula, putting down without all critical selection in the most arbitrary forms, pronunciations and mis-readings, which Hammer’s blind encyclopaedia really compiled chiefly from Castile, Conde, Hamer and Gayangos and on which he wanted 47 pages of the Sitzungsberichte der Wiener Akademie (1854). In the field of history the great Dozy found it necessary to throw overboard all the old ballast (Conde etc.), before he could write his monumental Histoire des Musulmans d’Espagne by the help of the Arabic sources, first critically edited and exploited by himself; in the same way it will be necessary for geographical research to turn over an entirely new leaf, before a really critical exploration and description of Arab Spain — al-Andalus — is possible. I have shown in isolated examples the method to be followed (involving of course, where necessary, the comparative study of the Medieval sources, both Latin and Spanish, and even of Ancient classical literature), and I have indicated how from the study of Arabic sources results can be gained even for determining and identifying ancient classical place-names and for fixing the corresponding sites: cp. Oviedo = Altivar = Oviedo = Altivar = El Puy de Cebolla = Oviedo (Fr. Flamen) in Homenaje a Don Francisco Codina (Saragossa, 1904), p. 115–119; Monseigneur et Arlésiens d’Aragon chez les auteurs arabes en O. Archaeologie Portugaise, ii. (1903); Zur spanisch-arabischen Geographie: Die Provinz Calis in R. Haupt’s Katalog 8 (1905); Die geographische Lage von Zafullah-Saracins (1868) and Marcus (1875) in the Revue Hispanique for 1906; cp. also David Lopez, Toponymia arabe de Portugal in the Revue Hispanique for 1902. Owing to the fact that during the ‘reconquista’ especially after the capture of Granada (1492) invaluable treasures of historical and geographical literature, especially dealing with Spain, were sacrificed to blind fanaticism and irrevocably destroyed, the material about Spain which still exists scattered in North Africa and the East, should be brought together from all quarters; the whole material should then be made accessible to a wide circle
of scholars, geographers and historians, by means of critical translations accompanied by detailed commentaries. The whole geographical and historical literature of the Arabs, in so far as it contains any reference to Spain, should be treated in the same way. It is difficult to mention all the short notices written in A. D. 846, and the works of Al-Yaḥṣā, Yaḥṣā etc. (cf. especially the monumental Bibliotheca Geographorum Araborum ed. de Goeje, 1870-1894) down to the late gigantic compilation which the Maghribī Ahmad al-Maṣḥari collected at Damascus in the years 1628-30 out of 100 Arabic sources, and which may be described as an encyclopedia of Muslim Spain, especially as Guyangos' so-called translation of this mine of information, The History of the Mothemonian Dynasties in Spain (2 vols. 1840-1843) is most inaccurate, uncritical and obsolete, and avoids difficulties by ignoring them. All geographical references and names should moreover be collected from the vast Arabic dictionaries of learned men and of mists' especially many of these books treat of a surprisingly large number of Spaniards, thereby proving the flourishing condition of Arabic letters in Spain: the principal work to be used in this way is of course Codera's Bibliotheca Arabica-Hispánica, the ten volumes of which contain biographical works specially dealing with Arab Spain; (it is unfortunate however that false readings and corruptions are particularly frequent in the case of place-names). The history of Muslim Spain can here be only treated in its outlines. It begins with the marvellously rapid Arab conquest of the Peninsula (from 92 = 711 onwards) the story of which has been embroidered by many legends, led at first until 755 by the quickly changing governors of the Umayyad caliphate of Damascus (more than 20) the Arabs boldly advanced as far as the heart of France (732 Tours-Poitiers) there followed the civil war between Northern and Southern Arabs and Berbers, and in the year 756 the foundation of the separate emirate of Kūṭaiba (Cordova) or al-Andalus independently of the 'Abbasids by 'Abd al-Rahmān I, the Umayyad who had escaped from the ruin of his family, The rule which he founded was of peculiar importance, that of splendid underside 'Abd al-Rahmān III (912-961; caliph 929); soon however it began to wane, especially after the death of the gifted regent (al-Ḥārūji) al-Maṣʿūdi (1002) (q.v.) the greatest statesman and general of Arab Spain, who may be called the Bismarck of the 10th century; and in 1031 it disappeared entirely. Out of the ruins of the great caliphate there arose numerous but shortlived petty states under princes (Muḥammad al-Tālabīfī, Reyes de Taifas) who for the most part were men of high culture, In the years after 1056 (victory of Vitovs. Tālifin over the Christians at al-Zallāka = Sacratius north coast of Baitaifs) these small dynasties were destroyed in a tragic manner by the rough force of the Almoravids (al-Murāwīdīn), Berbers from Morocco, who in their turn were supplanted both in Africa and Spain (1145-1150) by another religious and political sect and dynasty, the Almoravides (al-Marmādābīdan = Unitarians). The power of the Almoravides in Spain gradually dwindled down after their heavy defeat at Las Navas de Tolosa (al-Tāb) in 1212; and after 1236 the Arab domination was restricted to the small, but industrially active kingdom of Granada which, though protected by the mountains, yet had to acknowledge the suzerainty of Castile. The town of Granada was taken in 1492; there followed the insurrections of the Moriscos in the years 1568-70, and in 1609, the final expulsion of the Moriscos, Mudejares and Jews. A detailed treatment of this long history would be out of place here, and we must refer the reader to the special articles dealing with the various subjects. Here we content ourselves with an enumeration of the various dynasties which reigned in al-Andalus, with the names of their capitals: Umayyads (Cordova) 756-1031. Abbadis (Seville) 1025-1091. Dajwaridas (Cordova) 1051-1076. Ziridas (Zamora) 1015-1092. Bircidas (Cádiz) 1029-1069. Bakridas (Hendaye) 1011-1052. Beni Yaliy (Niebla) 1023-1051. Banu Murad (Seville) 1048-1051. Zâul b. Hāfiz and his son Muhammad (Santa María de Algarve) 1016-1052. Afaridas (Badajoz) 1022-1092. Banii Dbi (Toledo) 1036-1085. Amirdas (Valencia) 1021-1065. Banii Hdi (Sevilla) 1039-1110. Banii Raste (Alhambra) 1056-1078. Banii Āmira (Aljucena) 1025-1092. Banii Šumadīh (Almeria) 1044-1091. C.F. the chronological table in Duy's Histoire (appendix), which is followed in Stanley Lane-Poole, The Moorish Dynasties (abridged edition London 1894) Antonio Vives y Escrue, Monades de las dinastías arabes-espánolas (Madrid, 1893). Codera, Traité de numismatique arabes-espánolas (Madrid, 1879), and his smaller special contributions: Juan de Dios de la Rada y Delgado, Catálogo de monedas árabes-espánolas que se conservan en el Museo arqueológico nacional (Madrid, 1892); H. Lavois, Catalogue des monnaies musulmanes de la Bibliothèque nationale, Espagnes et Afrique. (Paris, 1891). For the period from 711-1110 we have Dory's classical work, Historia de los reinos de España (Leiden, 1786; german tr. Leipzig, 1874; spanish by F. de Castro, 2. ed. Sevilla-Madrid 1877-1878), an abridgment of which is given by A. Müller, loc. cit. For various controversial points and disputed questions recent investigations must of course be consulted e.g. Hugard's Estudio sobre la invasión de los Berberes en España (Madrid, 1892), where it is made probable that Rodrigo escaped after the first battle against the Arabs and Berbers on the Laguna de la Anda in 711, and put up a brave fight in the North, West until 713, in which year he was killed fighting against Musul in the battle of Segovia and Tábara, near west of Salamanca, a theory supported by the traditional site of his tomb at Vitus in northern Portugal. (Cf. also Sarnatta, Felicia, Madrid 1906; Juan Menendez, Leyendas de los últimos reyes musulmanes de España (Madrid, 1906)). The times of the Almoravides, Almohades, and Nasrids or Almárrides (Banū Nasr, Bani 'Abmar) 1232-1492 of Granada, i.e. the period covered by the xiii-xiv century, still wait for a second Dory, whose first task it would be to make full use of the Arabic sources. Sporadic contributions like Codera's De decembris y desperi-
vion de los Almorávides en España = Colección de Estudios arabes; iii. Saragossa, 1899) are of course to be welcomed gratefully as a valuable source which ought to be critically analyzed. Fagnan's French translations of several Arabic sources for the history of Spain and the Maghreb are also very pertinent: Histoire des Almohades d'après Abd al-Malek al-Merroukhi (Algiers, 1895). Chronique des Almohades et des Hassides attribuée à Zechachi (Constantine, 1895); Ibn al-[Ahli: Annals of the Maghreb and of the Iberians (Algiers, 1898—1901). Historia de l'Arabe et de l'Iberian inique al-Baydawli 'l-Maghribi (by Ibn al-'Ash'at), i. (Algiers, 1901), ii. (1905); En Nosotros en otros: Extral relatos de un Maghreb (out of Abu 'l-Mahsen b. Taghribardi; Constantine, 1907); unfortunately the place-names do not receive sufficient critical treatment.

It is only the last episode of the chivalrous struggle projected through 800 years for the possession of the beautiful peninsula, which has since again inspired historical works either of honor or interest. For the purpose of this work the following sources will have to be given their due share of attention in a final history of Granada and its Almohads: Ibn al-'Ahli: Annals of the Maghreb (out of Abu 'l-Mahsen b. Taghribardi; Constantine, 1907).

ANDARÁB, Middle Persian (hypothetical) Andiarpak ('Between the waters'), a geographical name occurring several times in countries of Iran and Iraq.

1. The river on which Andarab is situated, belonging to the system of the Araxes (Araxes), rising on the right slope of the Sangwall chain, the (Sulâh of the Arab geographers, see above p. 134) it flows in a curve round these mountains, first in a northeasterly, and beyond Andarab, in a north-westerly direction. The sudden change of direction is caused by the mountains of Gilân which obstruct the course of the river like a dam and prevent it from continuing into the Caspian Sea. To the north east of the Sangwall-Tagh the Nahí Andarab joins the river of Albâr coming from the west. The united river — the modern name of which is Kâra-Sû — flows northward to join the Araxes. The Nahí Andarab is nowadays called Balkû-Sû ('fish-river'); the name Kâra-Sû is also frequently extended to it.

2. A town situated at a distance of a few parasangs from Bardîba, the capital of the province of Ardán (q.v.); also name of the fruitful district of which Bardîba is the centre.  
3. Town in Khôrûkhân, 2 parasangs from Murs; also called Andarrâb.

4. Town and river, five days journey south-east of Simîrîm (to the south east of Balkû); like No. 3, it is also called Andarrâb.

Bibliography:

To 1.:
ANDIJAN, chief town of the district Farghāna in Russian Turkestan, important commercial town with 49,512 inhabitants (1900). Under the name of Andukān it is mentioned as early as the iv. (x.) century; it is said to have been re-built towards the end of the sixteenth century by the Mongol ruler Daukāt and Kaidū; under the Timurids and later it was the residence of the princes or governors of Farghāna; in Eastern Turkestan all inhabitants of Farghāna are still called Andijān. All buildings of the modern town (mosques, madrasas etc.) belong to the last century. In 1898 there was a rising against the Russian government, which was suppressed in few days; in 1902 occurred a great earthquake, in which nearly all the houses of the natives were destroyed, and which claimed 4500 victims. As in most towns of Turkestan, a Russian quarter has risen side by side with the original 'Asiatic town.'

(Ad. Kurethold.)

ANDJUMAN (Turkish pronunciation Eņgūmen), a Persian word the original meaning of which is: Andjumān (Arabic equivalent: wāqīfāt; and wāqīhad) for a long time however, as Champlin points out, the word Andjuman has been used to denote especially religious or denominational associations such as the Zoroastrian societies of Yazd and Kermān which exercise judicial functions, and the associations of darwishes founded by Ghār al-Din, the governor of Hamadān. Since the introduction of parliamentary government the word has acquired a new meaning, and the political groups which arose in great number at first in the provinces and later in Teherman, were called Andjuman's. In the latter sense the word has frequently been rendered by 'club,' a translation which, though not incorrect, yet fails to express adequately the character of these societies of modern Persia. Most of them undoubtedly present a striking analogy with the Clubs of the French revolution, and exercise the same kind of political activity. At the same time however they play, according to their importance, the part of provincial parliaments or municipalities. There have also been Andjuman's formed as philanthropic, scientific, educational, or charitable societies; but all these associations, whatever their name, were devoted to liberal and constitutional ideas, and exercised some political activity.

The most famous of these societies is the Anjuman-i-Millī (National Club) of Tabriz founded on the 1st Ramazān 1324 (17th December 1906) by the leaders of the constitutional movement after leaving the British consulate where they had taken sanctuary (khatrī). At first it consisted of twenty merchants and a few 'ulama.' The number of members increased rapidly and soon included representatives of all classes of the community. From the very beginning its influence was such that the mīr 'ulāmā, Muhammad 'Ali Mirzā was represented in it by an accredited deputy. Nor was the growth of its authority impeded by some conflicts with the Chamber of Deputies, especially when the latter ordered the recall to Tabriz of the called 'ulama,' or by the difficulties attending the vote on the law concerning the provincial assemblies which desired to obtain legal recognition at the earliest moment. The club was temporarily dispersed after the coup d'état of June 1908, but re-assembling soon afterwards, it seized the supreme power in Adharbājān and appointed Sattār Khan and Bāqir Khan generals of the constitutional party; working in agreement with the other andjumans of Persia it organized the resistance against the perfidious government. Although supported all through by the press, the National Club decided to found an official organ, the Djebrat-i Millī which published the minutes of their meetings.

The next in importance after the Tabriz club, is the sacred club of Isfahān, founded in 1907; it consists of 18 members, 3 from each class of the community, and ordinarily meets every Saturday. It is the andjuman of Isfahān which organised the resistance against absolutism in the South of Persia; it also secured for the constitutional party the powerful assistance of the Bakhtiyāris and freed Fārsān from the domination of the Shībī. Other societies of no less activity were founded at Māshhad (3 andjumans), of which one is a charitable, and another educational, and at Hamadān, Ardabil, Naqsh-e Jahan, Shirāz, Bāb-e-Bahrī etc. At the last mentioned place the opening of the meeting was announced by salutes of artillery, and the troops presented arms before the delegates of the people.

The capital was somewhat slow in following the example set by the provinces. At first it had only meetings of corporations for the purpose of preparing the elections — for which each class of the population nominated its representatives separately. — But as soon as the andjumans had been approved of by the religious authorities of the Andjumans, which served as a municipal council and originated many important reforms. Other societies were formed to include people belonging to the same province, or following the same occupations, e.g. students, professors, physicians, and telegraph officials, or interested in the same questions; similarly there was founded a society for Public Education, which had representatives in the provinces, an agricultural club and many charitable associations.

The Andjumans of the Brethren admitted Zoroastrian as members. There was even a society of women: the Andjuman-i-Niswān which met every Friday for the discussion of social questions of interest to women. During these meetings ladies were not permitted to smoke or to drink tea, nor were they allowed to bring their children.

In June 1908 Teherān possessed no less than 124 andjumans; nearly every inhabitant of the town belonged to one, and many to several. It must be admitted that apart from a few exceptions, these societies in spite of their great number and varied aims, maintained on the whole a perfectly correct attitude. Their meetings were much frequented, and the smallness of the contributions facilitated the acquisition of new members.

Several Persian andjumans were founded in foreign countries: at Bombay there exists a Persian patriotic society called the Andjuman-i-Watānjadī-i Iranī. After the restoration of constitutional government in Turkey several liberal associations, among them a Persian Committee of Union and Progress, were founded at Constantinople in order to collect financial assistance for the champions of freedom, and to secure for them the sympathies of Europe. Persian societies for
mutual assistance have for a long time existed in the Sanaa and `Amil. 

In India the same name of Andjuman has been adopted by a large number of Muslim societies, on which see: A. le Chanzier's important article on the Age d'or in the Revue du Monde musulman (November 1906, p. 77-78; see also ibid, November-December 1907, p. 579, January 1908, p. 172, March 1908, p. 806). Such societies are e.g. the Andjuman Islamiya at Bombay which has done such much to improve the state of the Indians in Musulms; the Andjuman Islamiya of Patna, Lahore, Bangalore, Coimbatore, Trichinopoly; the Andjuman-i Musalami of Madras; the Andjuman Mufaddul Islam of Madanpur and others.

ANEIZA (see Tanen)

ANFAL (A.), plural of Naif, booty; Sârat al-Anfal is the title of Surâ 8.

ANGAREB (Angara), a low hat made covered with leather, used in the Sudan.

ANGORA, the ancient Antioch, called Anter in the Arabs and Engrâvite by the Turks, on the eastern bank of the river Mêikûl, on the left bank of the river of the same name in Asia Minor. The town which, according to Cuenot, has 27,825 inhabitants, is built upon the slopes of a rock which rises above the plain to a height of about 500 feet; at the top of the rock is the citadel (Aji squash). The most notable building is the mosque of Mîhâk Idrîs dating from the time of Sultan Sulayman, on the north side of which are found the remains of the famous temple with the inscription of the emperor Augustus (Monumentum Augustanum). Since 1852 Angora has been the terminus of the Anatolian railway. The town is also known for its goats and cats, but the formerly flourishing wool-industry and the important export-trade in materials made of goats hair, has now ceased; at present these materials are only manufactured in a single village of the plains called Stanci or Istanî. The distillation of spirits is now a flourishing industry, and the surrounding district produces excellent wine and other kinds of fruit.

History. During the prime of the Arab caliphate the town suffered frequently through the annual raids against the Byzantine empire; it was not, however, permanently occupied by the Muslims until the time of the Seljuks. After the fall of that dynasty the district of Angora was temporarily independent, until it was incorporated in the Ottoman empire by Mustafa I. (1751-1757). In 1359 and 1386. In the neighbourhood of the town is the plain of Cilân, the scene of the battle between Bâyrâz and Timur (19 Dec, 1399, July 1402) in which the former was defeated and taken prisoner.

Diograph: M. Cunoet, La Turquie d'Asie, in 1779 et a.v., Pauliny-Wiloska, Realien-

ANHALWARA (Analawara), the former capital of Gudjarat, taken by Mânumâd of Ghaznav in 416 (1025). The site is now occupied by the town of Fath in northern Baroda.

AL-An'hui or Selim Efendi, modern Syri-<ref>http://www.newadvent.org/cathen/11630c.htm</ref>
(called by Arabic authors Sanah; b. Ashut) was crucified in the year 914 by the governor Yusef b. Abi ‘l-Fadl, whose act is stigmatized as ‘tyranny and rebellion against God and His prophet’ by Ibn Hawkal (ed. de Goeje, p. 252). Even under Shapur the kingdom of the Bagratisid is said to have included the whole region from Dvin (Armenian capital) to Bagrat’s reaching southwards as far as the frontiers of Mesopotamia (al-Djami‘; thus al-Iṣṭikhib, ed. de Goeje, p. 188 and 194). The son of the murdered king, Ashot the Iron, succeeded, partly with Byzantine assistance, in re-conquering his kingdom; a ruler of Armenia he bore the Persian title shahānshah (king of kings) which had already been conferred on his predecessor and rival, Ashot son of Shapur, by Sabuk, the successor of Yusef.

A part as the first half of the ix. century the Bagratisid under Ashot Masker bought the district of Ant from the Krumarskan; but it was not till time of Ashot III (961–977) that Ant became the royal capital. The wall which is now extant was built by Shapur II. (977–989); the site of Ashot’s palace in 964 has been fixed by the excavations of 1896. The two halls and possible spaces enclosed by the two walls show that a few decades had been sufficient to witness a considerable increase in the number of inhabitants. At a later period town life was undoubtedly not restricted to the comparatively narrow space within the walls. The Bagratisid built several bridges over the Arpa-Cai thus enabling the trade between Trebizond and Persia to take the shorter route through Ant instead of passing through Dvin. Their dynasty reached the summit of its power under Gasik I (990–1020); and the most flourishing state of the capital would naturally coincide with this period; from 993 onwards Ant was the residence of the Catholicon of Armenia. As numerous inscriptions prove, Gasik retained the Persian title of shahānshah which also appears in an Armenian form (arzakat arzak); he was also styled ‘king of the Armenians and Georgians.’ The remains of a church erected by Gasik in 1001 were excavated in 1905 and 1906; among them was found a statue of the king which represents him as wearing Muslim headgear (chapa); the same headgear is also found in a relief portrait of Ashot in the monastery of Smatii preserved in the monastery of Haghpat.

Under Gasik successors the kingdom rapidly hurried towards its close, and as early as 1044 it became a part of the Byzantine empire. The growth of the town of Ant however was further encouraged by the Byzantine governors (catapans); an Armenian inscription ascribed to the satrap Hron the erection of a magnificent aqueduct conducting waters from the hills of Aladja to the town.

The Greek rule was ended by the sultan Alp Arzan who conquered and destroyed Ant in the year 1064; according to Ibn al-Asfir (ed. Tarnih, v. 27) the town possessed at that time 500 churches. In 1072, a year after the defeat of the emperor Komnas Diogenes, the sultan said Ant to the Muslim dynasty, the Shakhids (probably of Kurdish descent, mentioned as early as the x. century as rulers of Gondji), and down to the end of the xii. century the town remained (apart from a few interruptions) the residence of a branch of that family. At that period the town had two mosques, one of which is still preserved and has been used, since 1907, as a museum for the objects discovered during the excavations; the other collapsed during the second half of the xii. century. There are also Christian buildings belonging to the same period; the Shakhids acted as benefactors and even towards their Christian subjects, and being related by marriage to the Bagratisid, they were recognized by the Christian population as native and lawful kings. The walls of the town were repaired and furnished with some towers during their rule.

Ant was for the first time conquered by the Georgians as early as 1124, under David II who laid the foundation of the town of the Georgian Kings; after the final expulsion of the Shakhids the town became a part of the kingdom of Georgia, but was left in the possession of the Armenian dynasty of the Zakharids who held it as a fief. Under the Zakharids the walls of the town were extended so as to reach the steep banks of the Arpa-Cai. The ecclesiastical buildings of the period show that the Georgian rulers (like their Eotian predecessors) favored the so-called ‘Chalcedonic’ (Greek-Byzantine) type of church accordingly predominated at the time, a fact ignored by the Armenian tradition. There was no religious persecution of Muslims during this period, just as there had been no persecution of Christians under the Shakhids; a Muslim contemporary (p. Ibn Hawkal, ed. de Goeje, p. 242 et seq.) bears witness to the fact that the Georgian king protected Islam against all law and that under their rule no distinction was made between Muslim and Georgian.

Ant was besieged unsuccessfully by the Khwarizmshah Djafar al-Din in 1226, and conquered by the Mongols in 1239; but even after this conquest the town remained for a time in the possession of the Zakharids; an humiliation on the main gate shows that at a later period it was considered the ‘private domain’ (Khānl-Fuqh) of the Mongol rulers of Persia; but it never regained its former importance. According to tradition Ant was finally destroyed by an earthquake in the year 1319, but both inscriptions and coins of a later date have been found. A variety of copper-coins struck at Ant by the Ilkhan Sulaiman (1295–1344) is called the ‘key-coins’ (nominal coins), the coins bearing the image of a hairy figure. Money with the inscription Ant was struck as late as the second half of the xiv. century by the Djalir and, even in the xv. century by the Karat-Koyunlu; but their mint is probably to be sought in the vicinity of the town, perhaps in the fortress of Mahaspert at a distance of less than 2 miles from Ant. It is impossible to determine when the town was finally abandoned by the inhabitants; the excavations shows that after the decay of the palaces and churches a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter’s visit (November 1877) it was possible, even without excavations to distinguish clearly those houses and their separate rooms, as well as the streets of the later period, which are only 12–14 feet wide. Ant is now the name of a Turkish village situated near the ruins. As the villages of the neighbourhood possess no mosque for the Friday service, the mosque of the town which is still comparatively well preserved, was
down to recent times used for the purpose. This is done even now on one occasion in the year, although in the eyes of many Muslims the building has been deserted, since the objects found during the excavations, including the statue of king Gogkh and many stones with crosses, were brought into the mosque.

Biography: Accounts of the history of Ant are chiefly found in Armenian sources, especially in Stephen Asolik, a contemporary of Geoffre. The Arabic and Persian accounts are extremely scanty, and the town is not mentioned at all by the Arabic geographers of the 9th and 10th century; Yaqut (ed. Whately, l. 70) gives it a single line; Ahmad Al-Dschawir (ed. Nisjm al-Maluk, Sīyāhāt-Nāma, ed. Schéfer, Supplement, p. 293) states merely that the district has a cold climate and produces much wheat and little fruit (translated in The lands of the pattern ottomane by G. Le Strange, p. 185: "A town in the mountains where much fruit was grown"). Ibn al-Athir (ed. Tarn, x. 27) seems to be the only Muslim author who describes (not quite accurately) the situation of Ant.

The ruins were first visited in 1695 by Gemelli Careri (Collection de tous les voyages faites autour du monde, ii. Paris 1708, p. 94) and described at length in 1817 by Ker Porter (Travels, i. London 1821, p. 172-175). Since the peace of Turkmen-Cal (1827), in which Persia ceded the district of Erivan to Russia, the Arpa-Cal constitutes the frontier between Russia and Turkey; the ruins of Ant therefore, although on Russian soil, were now situated close to the Russian frontier, and travellers could visit them from Russia without danger or difficulty. Plans of the town were sketched by Texier (1839); cp. Voyages en Arménie, Paris 1842, Atlas, plate no. 14) and Abich (1844; cp. M. Brosset, Rapports sur un voyage dans le Géorgie ou dans l'Arménie, St. Petersburg 1851, Atlas, plate no. 23 and id., Les ruines d'Ant, St. Petersburg 1858, Atlas, plate no. 30); Abich's plan was still used during the excavations of the last years. The Christian monuments were especially described by Murawjew (1848; cp. his Graviti i Armēnīa, St. Petersburg 1848); an account of the Mohammedan inscriptions is given by Khanykov (1848; cp. Milange Armēnique, i. 70 et seq., and M. Brosset, Rapports etc., 3eme rapport, p. 121-150); the Album compiled by Kästner (1850) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian and Georgian inscriptions on 22 leaves (cp. Brosset, Les ruines d'Ant, p. 10-63). Among Arabic authors of recognition is due to Nokes Sargyian and Sargy Djalvants for the collection of Armenian inscriptions. A study on the history of the town based on this material was published by the Armenian Alligation (Venice 1855, in Armenian, cp. Brosset in the Mēlange Antiquaries, iv. 392-412); the writer had not himself visited the ruins, but his results have only been made obsolete through the excavations of Ant.

Ant became a part of the Russian empire through the conquests made in the war of 1877-1878; but the excavations were not begun until 1892; they were interrupted for 11 years after 1902, and continued systematically since 1904. The results of these investigations conducted by N. Marz (N. Mars) throw new light on the history of the town. Buildings which formerly had been inscribed to the Bagratian have now been recognized as dating from a later period; on the other hand discoveries have been made both in the town and in its surroundings of buildings belonging to the earliest period of Armenian Christianity, when the influence of the Syrian Church had not yet been supplanted by the Greek civilization. The excavations have brought to light clear evidence both of Byzantine and of Arab and Persian influence, where the tradition of the church has preserved no record of such connections with foreign culture. The results of the excavations have therefore acquired considerable importance not only for the investigation of Armenian history but also for the treatment of general historical questions on the relations between the civilizations of Christianity and of Islam.

As the excavations have not yet been completed, only separate articles and reports by Marz are as far available: 1. Ant, stelîna dznerni Armēnii (St. Petersburg, 1890, in the collection Protivskoy pož모yâvâr armēniâ); cp. Mit- telt, des Seminars für oriental. Sprachen, Westen. Stud. ii. 93 et seqq. 2. Raschbach in Ant in 1904-1906 (St. Petersburg, 1906, in the Architektur und Struktur des christlichen Konstruirs, part 18); 3. O raschbach i rastakat in Ant in 1905-1906 (St. Petersburg, 1907); 4. Zekpi wa rekk, ed. Imp. Russ. Arch. Obšči, xvii. prokollyu, p. xxxiv-xxxvi (on the excavations of 1905). A systematic study of the history of Ant based on the results of the excavations is still wanting. The facts brought together in this article are derived partly from the reports quoted and partly from direct communications from the explorer and his collaborators.

(See W. Bakthova.)

ANAKA, a large legendary bird, which is said to have received its name from its long neck or, according to others, from a white collar on the neck. (The name of the biblical 'Amakim is derived from the same root). The further accounts of Arabic authors suggest both the griffin and the phoenix, and legend connects the 'anak' with the sajji alwaa (q. v.) mentioned in sira 25, 48, and 50, etc. Although it is generally assumed that the bird only existed in the remote past, Ibn Khallīkān (quoted by al-Damūsī) claims to have read in the historian al-Farghānī, that an 'anak' was to be seen among other strange animals in the zoological garden of the Fatimid caliph. The description which he adds indicates that he alludes to a species of waders (herons) occurring in Upper Egypt.

ANKABUT (A.), the spider. Al-Kasmini and al-Damūsī mention several species, the most dangerous of which is the poisonous tarantula, al-Kanāl in al-Qadīrus. Al-Damūsī also describes a fieldspider of redyash colour and very large, from this it has four claws with which it bites; it spins a nest in the ground, and seizes its prey by night. The weaving spiders make their
webs according to mathematical rules; according to some the male spins the web and the female the web; according to others the female only is capable of making a web; as material for the web they use the spider sick. When the weaving is finished, the spider sits down in a corner waiting for a fly to enter the web, and pounces on it at once. Others suspend themselves on threads, others sit motionless on the ground and catch their prey at a jump; after rendering it helpless by smothering it in their web they carry it off to their lair and suck its blood. According to al-Hajjâz the spiders young are eschewed. With the most wonderful of relating this because they are able to spin without being taught. The spider lays eggs out of which come small worms which, after three days, change into spiders; the act of copulation lasts a very long time, Damûr describes how the male approaches the female. Spiders webs are applied to external wounds to stay the flow of blood; they are also used for polishing cornished silver. The spiders themselves when wounded are said to be a good remedy against uawas forer etc. According to the tradition a spider once saved Muhammad from a great danger. When during the Hijra' he and Abu Bakr had sought refuge in a cave the Kuranî who pursued him found a spider web in its opening. They therefore gave up the search thinking that no one could have entered the cave a short time previously. This and similar legends are founded on the fact that the spider makes its web with extraordinary rapidity. — Shî'it al-An'âsî is the title of sûra 29. — Cpt. also the article Astûràlă. Bibliography: Karwini (ed. Wüsteml), 1, 439; Damûr (Caire, 1398), II, 132 et sqq. (J. Rokka). ANMUADZI, arabisèz from the Persian umânta, model, pattern. Anna, a coin and weight in British India. The coin equals 1/16 of a rupee. ANOSHWARAN, Arabic form of the name assumed by Khorasan (Tabari, ed. de Goeje, L, 862), Pehlevi anâshewart, Persian anâshwart, of immortal soul; in Persian it has become Anashwaran. In the Book of the Dead there is written: 'Let the four-made name-worship of gentile soul (Purâk o Anâshwart). It is also the name of a son of Mustâfîl and a daughter of Mahbûr of Ghazna, who was Bairi of Iljirgan from 420-434 (1029-1043). Ibn al-As'îr: 292 sqq. (Cp. ANOSHWARAN.) (Cl. Huart.) ANOSHWARAN, S. Shâhid, M. Shâhîd al-Kashânî, waqf of the Seidjûlî Madkûl (522 = 1127) and Sâmil (530=1135-1136), and from 526-528 (1132-1134) of the caliph al-Mustâfirîh hâlikh, Anoshwaran was greatly honored by his contemporaries, and especially praised in many poems by poets of his time, because he was an author himself and liked the society of poets. He composed memoirs in Persian on the events of his time, entitled Fatûlî sâmil al-As'îr, which were later translated into Arabic by ‘Imâd al-Dîn (864). Al-Bondârî’s abridged version of this translation has been edited by Houtema (Recueil de textes relat à l’histoire des Seidjûla, ii, 89). Another work by him, entitled Nasîr al-Madkûl is mentioned by al-Wazirâni (ed. Minû, Muhammad, p. 4), and Hâshîh Khâshâ, but is not extant. It was Anoshwaran who encouraged al-Harîf to compose his famous mawzûâ. He died in Kâshân 534 (May 1139).
where the help of men was not forthcoming. Gradually the helpers became his subjects. While they expected to advance his cause they were also prohibited from rendering any form of assistance to his enemies; they were commanded e.g. to lay only information with Muhammad against their pagan relatives. At the same time they preserved their old rights against the right of criticism, and demanded respect for their persons, which Muhammad was ready to accord. — The Ansar had no reason to regret their exposure of the cause of the prophet; "Allah helps those who help him" was a saying of Muhammad, which did not remain unfulfilled. After passing through the critical period the community of the Ansar soon began to flourish; rich spoils of war flowed into the town, and trade improved. After the taking of Mekka many Ansar feared that Muhammad might transfer the seat of government to that town, but he allayed their fears by saying that he wished to live where they lived, and to die where they died. It is obvious that he could have found in the population of no other town such trustworthy supporters of his cause as he found among the Ansar; had he gradually become. Yet it was the fate of the Ansar to see the noble population of Mekka, who formerly had opposed the prophet, in every possible way, loaded with tokens of his favour [cp. further the article MUHAMMAD.]

Although the Muslim monarchy after Muhammad's death was at first elective, the Ansar did not succeed in securing the dignity of caliph of one of their number; and when it had become hereditary in a dynasty of the Koraishah belonging to Mekka, they were for ever excluded from the succession. They became however the classical types of Muslim piety, devoted to the memory of Muhammad and pre-eminent in the science of tradition. This distinction was their answer to the pride of the Mekkan, which occasionally found expression in venomous words; they could also appeal to the fact that they alone had rendered assistance to the persecuted believers in their direct need, and the recognition which their conduct had received from the prophet. Like the Koraishah they traced back their excellence to the choice of their ancestors and opposed the confidant pride of the Koraish in their ancestral nobility by an embellished version, probably invented at that time and for this purpose, of their own early history, which told of glorious past in South Arabia, their traditional home; it is probable that the famous contrast between Northern and Southern Arabia established by the genealogists, had its chief source in the jealous imagination of the Ansar [see Goldscheider, Mahomed. Geschichte, i. 93 sqq.]. Yet their chief pride was in the name of Ansar, which they preferred to their former much praised tribal names of Medina.

ANŞÄRÎ (Abu İmran b. Abu Ḥâmid b. Ṣulaymân, Muḥammad), one of the oldest and most famous Persian mystics, usually called Pîr-i Anşârî or (after his birth-place) Pîr-i Hīrî, his nisba indicating that he boasted of Arabic descent (he is said to have been a descendant of the famous Abu Ẓâïb al-Anşārî). The year of his birth is 386 (1000), that of his death 451 (1060). Anshârî is the author of the famous Kitâb al-Abyad, under the titles of which are enumerated by Ebnû-l Ḥâfiz and Zāwâlî in the books quoted below. The best known of them is their Frâyez (Muṣświadczenie) which have been frequently printed (Teheran, 1299, 1324; India, 1286, 1297).

AT-ANŞAKÎ (Dâwûd b. ʿOmar al-Darî), Arabic writer on medicine, born at Antioch as a son of the râs of ʿIṣâr-Shtâb b. al-Nasîrân, in spite of his blindness he travelled extensively, and visited Asia Minor where he learned Greek, in order to study the sources of his science in the original texts. Later he lived at Damascus and Cairo and died in 1208 (1899) at Mekka, where he had resided less than a year.

His chief work is a great compendium of the whole science of medicine Šuṭārârât al-ḥâlāl wa-šuṭārârât al-ḥālân, published at Cairo 1306-1509 = 1334 (Qbomb, by a pupil, and, on the margin, a treatise on Therapeutics, entitled al-Nâsî b. ʿUmarî-nâsî b. tâfîl al-nâsî-nâsî b. tâfîl al-nâsî-bn al-nâsî-bn al-nâsî, cp. Leclerc, in the Notice et Extraits, xxix, p. xii. The art anatomy having always been considered as an appendix to medical science, he prepared an abridgment of the work of Muhammad al-Bârî (died 508 =1106) on Love, entitled ʿUlayq al-wâlîn bi ʿaṭîf (north) nawkîl al-nawkîl, printed Bâlîk, 1303; Cairo, 1279, 1305, 1308; cp. Kosogutian, Creusa, p. 23; A. V. Kerner, Jeler, p. 428; Goldscheider, in the Stammheer, a. Wien. Akademie, Philhist. Classe, livxiv, 543 et seq., ii. vii. In addition to a few smaller treatises on his science he wrote a book: On the philosophers stone Rûmûl b. Ḥâfiz (de Scholasticum, Cat. n. 60, ar. de la Bibl. Nationale, n. 2935, a.) and one on the application of astrology to medicine Unmîndî b. tâfîl al-ḥâlân (ed., n. 2557, 3).

Bibliography: Muhî-ibn, Khulîl-ibn- ʿAfsî, u. 140-144; Leclerc, Histoire de la médecine arabe, u. 304; Winterfeld, Geschichte der arah. Literatur und Naturwesen, N. 275.
AL-ANTÁKI — ANTÁKIYA

AL-ANTÁKI (Valya b. Sulay), Arabic author, who continued the history of Khatyáshá [q.v.], the work which deals with the years from 326—417 (938—1026) was completed at Antioch, where the author had gone in 405 (1014/1015). It is probable that he was born in Egypt where he had spent the first 35—40 years of his life, and that he died in 458 (1066).

ANTÁKIYA (the classical ANTIOCHIA), a town in Northern Syria, situated in the very productive and beautiful plain of the lower Orontes valley, not very far from the rivers mouth, (about 14 miles in a straight line) under 36° 10' North Lat. and 36° 6' East Long. (Grunewald).

Antakia was founded in B.C. 300 by Seleucus I in place of two important older Greek colonies; as the residence of art-loving rulers and as an important emporium of trade, it soon became the capital of Syria, and was later regarded as the most important and most populous city of the whole Roman empire after Rome and Alexandria, and as the capital of all the Asiatic provinces. It was during the days from the foundation of the Sassanid empire which caused the regions on the Euphrates and Tigris to be more and more removed from the sphere of its political and economic influence. This was followed in 499 by the complete separation of the Persian Nestorian Church from the Church of the West, with the result that Antakia lost its primacy over the Christians of Babylonia. It always had been the policy of the Persian kings to weaken the Asiatic centre of the Roman power. At early as 260 the town was besieged and captured by Zabdir, I, who transplanted a large number of its inhabitants to Damiabahpí in Susiana (cp. Tabari, i, 287). Again in the vi. century Antakia was the principal object of the expeditions of the Persians. Khoesaw I Anitákin was captured and destroyed the city in 538, and in the same year a large portion of its inhabitants, including the immediate vicinity of Kaisíshrn, where a town called Rýmba, was built for them on the plan of the Syrian Antakia; cp. Nöldeke, Gesch. d. Persen. und Araber vor volk Zeit des Sassaniden (Leiden, 1879), p. 105, 239; Streck, Babylonen nach dem aram. Geographen, ii. (1901), p. 256 et sqq.

Apart from the two devastations by the Persian kings the decay of the town was accelerated by terrible earthquakes which occurred with extraordinary frequency. During the first five centuries of our era no fewer than ten great earthquakes are counted, one of which (in 536) claimed 250,000 victims. The emperor Justinian rebuilt the town on its ruins after the destruction by Khoesaw I, but it was restored in considerably less than its previous size. Antakia was occupied by the Arabs in the year 17 (538); cp. al-Baladhi (ed. de Goeje), p. 132; Well, Gesch. d. Chaliften, I, 79 et sqq.; A. Mullar, Des Islam im Morgen- und Abendland, I, 159; and the Muslims remained in possession of the town in spite of the heavy defeat which the inhabitants suffered at the hands of the Byzantines in 69 (688); cp. Well, loc. cit., 479. It was not until the end of the year 353/966 (according to Cadmous) or at the latest 358/970 (according to the Arabic sources) that Antakia was wrested from the hands of the Byzantines by Surtetos, the bold general of the Greek emperor Nikephorus Phokas, assisted by a traitor among the Arabs (an earlier attempt to gain possession of the town, which Nikephorus Phokas himself had undertaken in the spring of 353/966, had proved unsuccessful); cp. Freytag in the Zeitschr. d. Deutschen Altertums-Ver., II, 139, 239; Well, loc. cit., 159; A. Mau, Mowqil I, 574. For more than a century Antakia remained the chief bulwark of the Byzantine empire against Islam. After 473 (1080) it had to pay tribute to Muslim, the Úqailí prince of Mosul (Mawill), and in 477 (1083) it passed again under Muhammadan rule, the treachery of the Greek governor having opened the gates of the town to Sulaiman I, the Saljúq sultan of Ispain. A dispute broke out between Sulaiman and Muslim regarding the possession of the town, and the latter was killed in 478 (1085) in a battle near Antakia, Sulaiman died soon afterwards (cp. 479 = 1086), wherupon Muslim's lieutenant invoked the intervention of Malakhah who established order by appointing Vâğıt Basan emir of the town. The latter was killed in battle with Antakia, when a large portion of the Crusaders appeared before its walls on 21 October 1097.

The town was protected by strong and extensive fortifications as well as by the natural features of the ground, so that the siege presented considerable difficulties to the Christians. It took more than four months to complete the investment on all sides, but as in the case of two previous attacks, it was only possible to capture Antakia by the help of a traitor. On 2. June 1098 the crusaders stormed the town with great slaughter. Three days later there appeared a large Muslim army under Karbíght, the emir of Mosul, who had set out to raise the siege; the Christians were now besieged within the town, and their position soon became desperate. But their spirits having been lifted by the alleged discovery of a large body of the besiegers, they mutinied on 23. June by a bold sally, which was followed by an overwhelming victory over the troops of Karbíght in spite of their superior numbers. For 179 years Antakia remained in the possession of the Christians and became the capital of a principality, a vassal state of the kingdom of Jerusalem, comprising the coast region of Northern Syria from the Nahé Djabú in the North to the Nahé el-Kelí (near Ládhákiya) in the South and including the 'Antak depression (q.v.) and the valley of the Orontes as far as Súquir (Larrisse, to the north west of Hamat). During this period Antakia once more experienced a certain prosperity; many new buildings were erected, and the population increased and gained in wealth owing to the revival of trade.

The Christian rule in Northern Syria found a sudden termination at the hands of the Baibars, the Mamlúk sultan of Egypt. Already in 666 (1263) his armies had devastated the principality of Antakia; in 666 (1263) he proceeded to greater deeds. Threatening the town by a sudden attack he gained a complete victory over its knights who had met him in the open field, forcing a surrender having proved unsuccessful he attacked the town by open force on 19. May, and
Antakya fell into the sultans hands almost without further resistance; 16000—17000. Christians are said to have perished at the capture of the town, 100 000 to have been led away to captivity; the whole town including the citadel was burned down, and the spoil taken was enormous; Antakya never recovered from this blow; it has remained under Muslim rule ever since, but its importance has decreased steadily.

The situation of Antakya is most delightful; it lies in the richly-watered valley of the Orontes which is here about 140 feet wide. The favourable climate and the great productiveness of the soil make it one of the fairest spots in the East; and Oriental praise Antakya as the most pleasant town of Syria after Damascus. The abundant rainfall to which it is exposed — and which according to Petermann has gained for the town the nickname *kakakakakak* (= pissaiah, Weisbach's correction of Petermann's *nabakakak*) produces a most luxuriant vegetation.

The modern Antakya is situated in the plain on the right of the course of the Orontes and extends as far as the slopes of mont Silpium (Arabic Hâshib al-Najâdî, 1323 feet above the level of the sea) which belongs to the Cæsarea chain. The town is surrounded by extensive gardens in the East, and the pleasant fruitful land of the immediate surroundings affords a vivid contrast with the wild and rugged mountains of the neighbourhood, the sharp outlines of which present a very beautiful view. In antiquity the slopes of the Silpius were covered with houses, but the modern Antakya occupies hardly a tenth part of the space which it occupied before Justinian's time. Its extent at that period can still be clearly determined by the traces of the ancient walls which suffered no serious damage at the conquest of the town by KhusRAWI and, and the course of which can still be recognised everywhere. The town as re-built by Justinian occupied a smaller space within these walls.

By far the most interesting of Antakya's ancient remains is the enormous grid of fortifications of which considerable portions are still extant; it is a wide oval which enclosed the little modern town situated in the north-west corner of its circumference. The many-battlemented walls, rose boldly over the heights, as well as the enormous dimensions of the fortifications which, for the medieval art of war, were practically unassailable, still excite our admiration. Their length is more than 16 miles; enormous towers of defense rose from the walls at distances of 70—80 paces from each other (altogether, it is said, more than 360). The destruction of the walls has advanced rapidly during the last few decades, as after the last great earthquake (1872) the inhabitants received permission to use them as building material for their houses. The citadel built by Nikephoros Phokas on the Silpius has been in ruins since it was destroyed by Debars. On the Silpius is shown the martyr's tomb of the 'prophet' Šâhīb al-Najâdî (i.e. Agabos: Acts 11, 28) said to have been the first Christian of Antioch; it is regarded by the Muslims as an honoured place of pilgrimage, and has given to the Silpius its modern name. The most important remains of antiquity are situated on the slopes of the Silpius, the ruins of the colonnaded aqueducts being especially noteworthy. Of the ancient gates a few are still tolerably well preserved; the interior of the modern town has no buildings of importance, the large mosques of the town are unimportant. The houses give an impression of great poverty; and the frequently occurring earthquakes have left everywhere vast heaps of rubbish and ruins. The town, which is built can—in many places be clearly recognised as similar rubbish heaps of an older period.

The ancient Antakya situated at the meeting-place of the roads leading from the Euphrates to the sea with those leading from Syria to Asia Minor, was the chief centre of traffic between the East and the West; to-day trade and industry are in a state of absolute decay. The bazaars are unimportant and not much frequented. The most considerable of local industries is the manufacture of soap for which Antakya is the most important town in Syria next to Idlib (S.E. of Haleb). Other occupations of the inhabitants are the production of silk, the cultivation of corn and olives; cedars are also sought in the Oronotes in large quantities. The appellative noun *Antakia* in 'cover, earthen' indicates the form of the town as a seat of textile art; cp. Fränkel, *Die arab. Fremdwörter im Arab.* (1886), p. 44 and Zulsar, *Mualaha,* 8 (9), Var.

In Antiquity Scænsia Picta (Arab. Salâkia) served as harbour of Antakya, in the Middle Ages al-Suwâidya situated farther to the South at the month of the Orontes, both harbours are now in a state of absolute decay. The modern Antakya suffers not only through the want of a protected harbour, but also through the fact that the upper part of the river as far as the town is not navigable. One of the chief reasons why the town in spite of its magnificent and advantageous situation never again rose to any degree of prosperity since it was captured by Berbers, must be sought in the fierce hatred with which Muslim fanaticism regarded the former capital of Oriental Christianity. Another obstacle to economic progress were the frequently recurring severe earthquakes (see the enumeration in Ritter, *Rundsch.,* xxvi. 1155 et seq.); the most important shocks of recent date occurred in 1822 and 1872. Since the decline of Antakya trade and traffic was more and more diverted to Haleb (Aleppo).

The number of inhabitants, which was very considerable in Antiquity and the Middle Ages is now greatly reduced; in the last decades a slow increase of the population can be observed. In 1853 H. Petermann counted about 10 000 inhabitants (one third of whom were Jews and Christians, chiefly Greeks and Armenians), another estimate dating from 1849 states the number as 17000 (15000 Christians); later authorities give only 6000 inhabitants; Scehna's information in 1880 estimated the size of the town as containing 3500 houses, i.e. about 17500 inhabitants (among whom 2500 Christians and 250 Jews); Caunet (1892) notes 25 000 inhabitants, Böecker (edition of 1900) 25 000 inhabitants (4000 Christians, a small number of Jews). In the Arab Middle Ages Antakya was the capital of the *'Aqabîn, district (q.v.) i.e. of the 'military frontier' erected against the Byzantins on the frontier in Syria and Asia Minor. To-day Antakya belongs to the wilâyat of Haleb and is the seat of a Râ'în-mâqâm. Of the five existing 'patriarchates of Antioch' belonging to the different Christian sects (on which cp. Neber
ANTAKIYA — AN-TAR(A)

Antakya is the ancient city of Antioch, located in modern Turkey. It was an important center in the ancient world, being founded by Seleucus I Nicator in 301 BC. It was a major city of the Roman, Byzantine, and later Ottoman empires. The city has a rich history, hosting several empires and civilizations.

The city's name derives from the Greek term Ἀντίοχεια, which means "city of Antioch." It was a major cultural and intellectual center in the ancient world, and it is known for its contributions to philosophy, science, and the humanities.

The modern city of Antakya is located in the southern part of the country, and it is the capital of the Antakya Province. It is a major commercial center, with a population of over 200,000 people. The city is known for its beautiful natural surroundings, including the Antakya Forest and the Antakya Lake.

Antakya has been an important center of Christianity since ancient times, and it is home to several important religious sites. It is also a center of modern-day Turkey, being a major hub for trade and commerce.

Râfqi); Abî Akbarî (Bâirat, 1864); Dâvûd, W. Akinâh, The Divan of the Sixteen Arabic Poets (London 1879), p. 38-52, app. p. 178-183; Dârânî (Bâirat, 1888, 1901, Impr. Scient. Cairo, 1815); W. Aâwâdût, Berichterstatter über die Archäologie der alten Arabischen Gliederung (Gotha 1872), p. 50-57; H. Thürbecke, Anwârâh im persischen Dichter (Leipzig 1883); Th. Nûzî, Fünf Melâkat übersetzt und erklärt (2 Bâirât, 1891: A. Kâshah, Akademie der Wissenschaften in Wien, philol.-hist. Cl. u. v.); Wien 1900, p. 1-49; Brockelmann, Gesch. d. arab. Literatur, 1. 82 (Brockelmann, Gesch. d. arab. Literatur, ii. 62). The Strat Antar shows clear traces of the traditions on which it is based. Essential features of this model bâdâw are already found in the account which the Kâtib al-Ashkâli (1. ed. vi. 148; 2. ed. vi. 155) gives of the poet Antar (q.v.; for the secondary form Antar there is evidence already in the commentary to the Hamâts, ed. Freytag, l. 108); his descent from the slave-girl Zuhût, his reception into his father's family on account of his brave deeds, his love of 'Abd allâh, his treacherous murder at the hands of Wâsî b. Dîmît, called al-Azdî al-Râbi'î. The story was amplified by the insertion of numerous elements belonging to other cycles; it is now known in two recensions, that of Hîdîjâ (al-Sîra al-Hijâjîyya) which is more detailed, and the shorter Syrian recension (al-Sîra al-Hijâjîyya) with which the Babylonian recension (al-Sîra al-Hijâjîyya) is probably identical. The date of the origin of these recensions cannot be fixed with any certainty. The earliest authority quoted is al-'Azmâlî who may be regarded as the rival of the old Antar poems but has nothing to do with the work in question, in which but little is found of the genuine poems. The Bâirât edition mentions a certain Yûna b. Ibrâhîm al-Mîrî (perhaps identical with Ibn Khallâl al-Yûna b. Ibrâhîm al-Mîrî) as collector of the Sîra. The statement of Ibn Abî Dîsîha, that Abî Mu'âthî yâsh Muhammad b. al-Muqtâlî b. al-Sâgîr al-Anbût (lived between 540 = 1145) collected stories concerning Antar is worthy of attention. We may assume that the stories about the hero and poet Antar re-form in the course of a novel, became at an early period the subject of the recitations of 'professional story-tellers; a man of literary tendencies may now and again have put together the various recensions known to him, but the work of re-constructing the popular tale did not cease at any given time and is still in progress.

Kâshâh, part 9; Bâirat, vi. 912-913); Fertich, Die Hârâb. in Geschichte, iv. 365 et seq. v. 53 et seq. — Chief editions: Cairo 1366-1811 in 32 parts (âsur) and Bâirât 1855-1874 in 154 books (âsur) and 1881-1885 in 6 volumes. The Cairo edition represents the recension of Hîdîjâ, the Bâirât edition probably that of Syria. — About a third of the whole was translated by Hamilton (Târirîcch Antar, 2 Bâdawîan renaissance (London 1790-1820); 4 vols.); L. M. Devî, Les aventures d'Antar, fils de Chekleid, roman arabe des moines-citéens (Paris 1864), (M. Hartmann, "Antari (q.), a word derived from 'Antar, in Egypt (q.) a reciter of the romance of Antar and (q.) a short garment worn beneath the caftan. In the latter meaning the word also occurs in Turkish, where however it is written with Alîf, not with 'Ain (Antarî); cp. Dâsy, Sublimation, x. v, and the passages quoted there.

ANTARTUS. [See TARTUS.]

ANWARI, the shining', poetical name of Awasd al-Din 'Ali. Anwari was born at Badma, a small village in the district of Khwarîn, and came to the court of the Soltân asmâu Sâdîq after having recited his first kâfîda in praise of this monarch. When his patron had been taken prisoner by the Ghurâb he accompanied the embassy sent by Sâdîq's wife, Turâsh Khutban, to the ruler of Samarkand, in order to secure his assistance; on this journey he composed his famous elegy, translated into English by Kirkpatrick under the title The tears of Khurram (Atisic Miscellany, l. 236 247), in which he describes the terrible devastations perpetrated by the Ghurâb in Khurram. After Sâdîq's death Anwarî seems to have lived at Merw at the court of the later rulers, until he suffered a serious blow in consequence of his predictions for astrological calculations. He predicted a storm for a certain day of the month of Kadhjâ 583 or 582, on which all the planets stood in the sign of Libra; as however there was a complete absence of wind on that day, he gained nothing but universal derision for his prophecy. On this account he left Merw and went at first to Nihâpîrt, later to Balah. He probably died shortly afterwards at the latter place (according to Ethrî between 585 and 587 = 1189-1191), but the precise date is unknown.

Anwarî owes his fame chiefly to his Khâtad which are greatly admired by the Persians. His diwan has been repeatedly lithographed in Persia and India (Tabriz, 1260, 1266; Lahânâb, 1850), and poems of his have been published and translated (from Kirkpatrick) by Zhuskow, Fizli and others.

elements like cornucopias, vases etc. In the fully developed arabesque, even these objects, cornucopias and vases, have become abstractly conceived designs of leaves. Abstraction goes so far that the whole wealth of decorative elements taken from plants consists only of two or more combinations of a small number of patterns some resembling palm-leaves and others wholly inure to nature. Stalk and leaf are no longer as in nature — two co-ordinate but formally distinct elements — but have conformed to such an extent that the leaf no longer grows out of the chief stem on a small stalk, but represents simply an expansion or outgrowth of the chief stem. The want of reality, or rather the direct opposition to nature, is further emphasised by the fact that the stalk grows through the leaf, in other words the leaf does not represent an end, but develops into a new stem and so on in countless repetitions. This is connected with the fact that the composition of the ornament is usually based on the principle of infinite correspondance, that is to say each surface, however small, is ornamented in such a way that by putting together the design we get a doubly symmetrical surface pattern capable of infinite expansion. This law of composition governs not only the ornamentation of surfaces, but also that of borders, although the latter, by their nature, are capable of infinite expansion in one dimension only. In spite of this fact their composition is frequently of such a nature as to admit of infinite continuation, without change, in their secondary direction, viz. that of width. In the case of borders there frequently appears the cognate principle of reciprocity, in which two corresponding parts of the pattern stand to each other in the relation of punch and matrix, so that the infinite correspondence is effected by a means resembling the reflection of mirrors. Apart from this the ornamentation of borders exhibits the conventional schemes of single, double, and undulating interlaced foliage with a wealth of variations. Another composition of frequent occurrence is that representing the foliage as growing out of a vase. It is dominated by the principle of strict symmetry in relation to a single axis, as is also the scheme of composition known as the "heraldic style". Another form of composition, closely related to the last and sometimes indistinguishable from it, represents the foliage growing up as a tree, and may be connected with the old oriental ideas of the tree of life. — While these principles are universally applicable to the arabesque of all periods, other features are subject to variation according to time and place. The quantitative relation between surface and pattern, and that between stalk and leaf, varies between two extremes. One of the extremes is represented by the type of arabesque best known from the stucco decoration of the mosque of Ibn Tulun in Cairo, where the leaf covers almost the whole surface. The stalk very nearly disappears altogether, so that leaf grows out of leaf. The result is that the ornamented surface is entirely covered, and nothing is seen of the ground. This is the "horror vacui" of ornamentation. It follows that the design of the positive ornament is effected merely by means of a few imaginative, especially spirals, which pass through the leafage. The artist in executing the design, draws or carves or points not so much the ornament itself, as the ground. The opposite extreme is found, e.g., in the ornamentation of the buildings of Nur al-Din Mahmut in the here the leaf plays a quite secondary part, the pattern consisting of stalks ingeniously and elegantly interwined. The positive ornament is equally balanced, or even dominated by the ornamented ground. All the other principles of form and composition are preserved.

The tendency to a geometrical composition of arabesques finds an unmistakable expression in the intertwining of several systems which are frequently arranged in such a way, as to create a contrast between larger and smaller geometrical compartments, or between compartments ornamented with greater or less fulness, or in different styles of design. Besides the ornament consisting of foliage only, geometriically intertwined bands are similarly combined with foliage. This combination is the most common form of arabesque. The intertwined geometrical design forms a complicated framework; the manifold irregular polygons formed by the mutual crossing of the lines are filled by the foliage, either separately or in a connected pattern. These forms pass into arabesques of a purely geometrical nature, i.e. those consisting of intertwined bands. Here all possible combinations are represented, from the simplest platting, the mere intersecting of systems of parallel lines, to the most complicated geometrical figures. As in the case of the foliage ornament the effect aimed at is the creation of a contrast: a linking up of the positive pattern by means of larger or smaller portions of the ground surface. A wealth of polygonal shapes or stars appear as the fixed points which create order in the kaleidoscopic confusion, of small irregular polygons. These compositions, which are often most ingenious, are formed by the well-thought out and frequently surprising use of a few lines not unfrequently broken; it is often very difficult to disentangle their fantastic play so as to arrive at the system. A certain advance stage of the power of geometrical vision is an indispensable presupposition of this kind of composition. The systems most favoured are those found on polygons or stars with an odd number of angles, e.g. pentagons or monagons, or stars with seven or fifteen points.

In addition to these two prevalent elements — foliage and intertwined bands — there appears a third specific feature in the motifs derived from the Arabic script. Writing itself as a decorative element plays a much more important part in Muslim art than in any other. It is undoubtedly an expression of a certain bigotry on the part of the Muslims, that they inscribe merely every article of artistic craftsmanship with some verse from the Koran, the confession of faith, or with innumerable, sometimes rather pointless, formulae of blessing or congratulation. But besides these inscriptions proper, which we may well accept with gratitude because of their historical importance, there frequently occur groups of letters which do not form intelligible words or sentences at all. This should by no means lead us to the conclusion that the objects thus inscribed are the work of illiterate men. It is rather a purely decorative use of the characters, an ornament in the shape of letters. The letters most frequently employed in this way are, on the whole, Alif-Lam
and Līm-Allīf, which often form whole borders. We may suppose that these are not quite meaningless characters, but that they serve as a kind of 'siglum', being in fact an abbreviation for ornamental purposes of the šahāda, which already in the ṣaqqūra protocols is shunted as a kind of Līm-Allīf's. The decorative value which the letters of the šahāda already possess owing to their symmetrical and symmetrical symbols is not thereby diminished. Other meaningless groups of characters are inaccurate copies of the blessings and congratulatory formularies which occur so frequently; and letters, the nature of which has been completely misunderstood, are found on objects made by non-Muslim artisans especially on Western imitations of Arab works of art. Finally — and this is of greatest importance for the arabesque — the decorative writing developed into a particular kind of linear ornament, in which all consciousness of the original nature of the letters was completely lost. This phenomenon appears very clearly in carpets from Asia Minor.

The term arabesque in its wider sense, as denoting the ornament of Muslim art in general, also comprises a number of figurative elements which are, indeed, impossible to distinguish from these, taking this word in a narrow sense, and to class them under the term 'iconography'; but the value of these figurative elements is for the most part purely ornamental, while their composition is frequently closely connected with or even inseparable from the arabesque. A short survey of these figurative elements belongs therefore to an aesthetic analysis of the arabesque. The most independent elements are a number of genre pictures: hunting scenes, banquets, games, occupations are represented sometimes in a whole series of pictures. They usually fill appropriate spaces of the rich arabesque in the form of medallions. In subjects and style they depend chiefly on miniature painting, and frequently show the influence of Eastern Persia and Central Asia. Another class is formed by representations of astrological or originally symbolic meaning, which have become merely decorative forms. Their wide-spread occurrence is due to the decorative value inherent in all symbolic representations, a fact which it would be easy to illustrate by instances from all periods of art. To this class belong pictures of the Sphinx and griffins, genii or angels, the signs of the Zodiac, the seven planets, vases with bows and arrows, and animal combats. None of these decorative motifs has been created by Muslim art; they all belong to the inherited stock-in-trade of old periods of art. No essential change was made even in their specific forms. We may include in this class the somewhat rare old representations of dragons, of St. George slaying the dragon (Khiṭṭ, ḫyāṣ), probably also the Sasānian winged Dragon which frequently bear the Phœnician sign of the ḫawwaw (unless we ought to adopt a recent suggestion and read it as Arabic 帑) and the royal ram. In the same connection should be mentioned the Chinese motifs, frequent since the ṣafāwī period, but occurring even earlier, such as the dragon, the phoenix, and both together forming the Ming crest, the Klin and the Fuh, the line of clouds of symbolising immortality, and many others; lastly Indian subjects, such as the three spheres as a Buddhist symbol and the Anguvastara garment. Some figures have even been identified as Buddhists and Bodhisattvas, but this identification is disputed.

Another frequent feature of the arabesque are the representations of animals belonging to the so-called heraldic style. They are placed facing each other according to a strict principle of symmetry, and some vegetable elements enter into the composition. Other frequent animals are lions, griffons, deer, lutes, peacocks, parrots etc. Besides these animals also occur in the ornamental design of composition, known already in antiquity, viz., in an undulating foliage ornament interrupted by pictures of animals. Another group is formed by heraldic crests proper. The Ming crest has already been mentioned. Cretes consisting merely of an animal emblem, such as the lion or leopard or the double eagle, belong to the Turkish race, and probably go back to primordial totemistic ideas. There are further the emblematic crests of the Manlîkks which are closely connected with the ornamentation of pottery and enamelled glassware; and such isolated subjects as the Tree of the Moon, the crest of Bade al-Dîn Lâ‘îb. In Spain we find representations resembling cabbages which recall the ornament of old Moorish art. A special class of decorative motives is that of the Moorish towns. These especially, but also the other motives, are found in close organic connection with the arabesque. Lastly there occur isolated figurative elements, such as the heads of lions and other animals, the bodies and wings of birds, claws and hands, which coalesce with the arabesque and are of the same ornamental value as the foliage. This phenomenon can be observed particularly in the ornamentation of Moslem mihrabs in the period of Bade al-Dîn Lâ‘îb, but it also occurs in later Eastern Turkish and Turkish works of art.

It is clear that the arabesque as described above according to its principles of composition and its separate elements, did not suddenly come into existence; rather, even at the time of the rise of Islam. The aesthetic description of the arabesque as something which can be followed by an inquiry from the point of view of the history of art, which regards it as something in the process of becoming. There is an obstacle to this mode of inquiry in the fact, that our knowledge of monuments varies considerably according to time and place. As there are some great gaps in our knowledge, it is somewhat dangerous to draw a rapid sketch of the course of development. So far as we can extend our survey the growth of the arabesque, we may say that the first steps in the arts and crafts of all the provinces of the caliphate meant an uninterrupted continuation of a received tradition; a fact which has recently been emphatically demonstrated by the monuments of Mahatta and Ku‘afir ‘Arnâ. As mentioned above, the already existing tendencies, which started as a reaction of the oriental principles of the hellestic art against those of west, gradually gain a more and more extended authority. The different provinces naturally exhibit considerable differences of style, and some characteristic provincial features of the earlier period are adopted locally. As the material has to a great extent become known quite recently, or is still unpublished, we cannot avoid the enumeration of definite examples. Generally speaking, the arabesque contains the tradition of the universal hellestic foliage ornament with
become a dominant feature of supreme authority for the whole art of Islam? and 2. how was it possible for the arabesque, derived as it is from many heterogeneous sources, to become a single organic unity? Both questions can only be answered when treated in connection with the whole of Islamic art. In order to find an answer to the first problem, we must remember how the Muslim outlook on life, as contrasted with that of classical antiquity and even Christianity, left, strictly speaking, no room at all for Art on a large scale. The whole character of the Muslim view of life explains the gradual disappearance of the figurative element from their works of art, whereas in antiquity figures had formed the essential part and vegetal ornament only an accidental by-work. The development of ornamental decoration as exhibited in the arabesque, was favoured by the prejudice against the large forms of art in general and against the representation of figures, which latter applied equally to the detailed work of the craftsman; the great wealth on the other hand created a desire for luxury, art and ornament. It is even more difficult to find an answer to the second question. An analogy to the unity of Muslim art may indeed be found in the unity of hellenistic art, as the provinces influenced by it extended to the East and West even beyond the frontiers of the kingdom of Alexander and of the Roman Empire. We may even regard the unity of hellenistic art as a necessary condition without which the rise of a homogeneous Muslim art would have been impossible. There is however a great contrast between the conditions at the beginning of hellenistic and Muslim art. In the one case the conquerors were the most artistic nation that has ever existed, and in this respect contributed most to their relation to the conquered peoples. The case of the Muslims was completely different. The Arabs had no artistic gifts, and the conquerors were the receiving element in all matters affecting culture. The hellenistic countries were welded together by Greek civilization; the link which bound together the countries of Islam was only the community of religion and government; handicrafts were left entirely to the subject population; the hellenistic provinces the participation of the subjects caused the change and the decay of Greek art; in the Muslim countries it created the art of Islam. In view of these facts the only explanation hitherto advanced for the homogeneity of artistic style, and for the dominating position of the arabesque, was reference to the general economic situation and to the state of Muslim civilization. All the lands of the caliphate were united by religion and language. The pilgrimage to Mecca afforded an opportunity for intercourse and exchange between the inhabitants of the East and the West. In spite of the imperfect means of transit, lively traffic circulated through all the Muslim countries, as formerly through the Roman empire. A great number of individuals travelled through large portions of the known world; while commerce, the most important factor in the spread of art, extended with fewer limitations than at any preceding period, through all the countries of Islam. Although these considerations afford a perfectly opposite contribution towards an explanation of the fact of artistic unity, they are yet of such a vague and
ARABESQUE — ARABIA. 307

general nature, that they cannot satisfy us completely; Recent research, especially C. H. Becker's study of papyrus, has brought to light a tangible and very important element, the Greek system of "liturgies" existed in the early times of Islam: the populations of the most diverse parts of the empire were bound to make their contribution towards public buildings and institutions of common interest, such as mosques and medresas; but also in the form of workmen and master-builders. In constructing the Umayyad mosque of Damascus, for instance, a Persian and an Egyptian Arab served as architects; and workmen of the various nationalities were employed on the great buildings. This fact explains the syncretism of Muslim art; it explains the occurrence of Persian elements in mosques, etc.; and gives an opportunity of learning the various traditions from personal experience. In this way there is a process of assimilation and the creation of a homogeneous style, from which the art of Islam, and with it the style of the architecture, arose as a unity. And always in the course of such developments, it is hardly possible to determine the date of its end, especially as the material known to us is scanty.

We may say that the arabesque, in its developed form, is found already in the mosques of Ibn Tulun. This however does not yet signify the final completion of the assimilating process. The ornamentation in question, although a pure arabesque, is yet a specific variety belonging to Egypt. And the arabesque which in the provincial type is blended in a more complex form, and which attained universal predominance, does not seem to have reached its goal until the Fatimid period.

Immediately after the end of the unifying process, there is a series of centrifugal developments. Just as the caliphate dissolves itself into separate states, the art of Islam is broken into themes which partly strike out new paths of their own. This development is particularly recognisable in the field of ornamentation, i.e., of the arabesque. Three large regions can be distinguished, characterised both by internal relation and by manifest differences from each other: the East, with its centre in Persia, surrounded by the eastern Hijaz, Iraq, Turkestan, and India; the centre consisting of Egypt, Syria, and the eastern Hijaz, and Anatolia, each of which parts maintains a certain independence; and lastly the West consisting of Northern Africa and Spain. The arabesque of the eastern group shows a development towards greater realism, obviously under the influence of Central and Eastern Asia. The arabesque of the central group preserves more faithfully the motifs by which it had been dominated at the time of its origin; Byzantine influence being very noticeable in Anatolia. The arabesque in the art of the western group shows some characteristics approaching oriental taste.

All provincial developments, apart from a few exceptions, change the style of the arabesque in its outward features only. The essential characteristics of the arabesque are preserved throughout, both in regards to composition and their elements; there is therefore only one and the same arabesque in antiquity as well as in modern times, in the East and the West, and in the South as well as the North.

E. HERRAND

ARABFAKH (Abd el-Kadir b. Sliman, Sihab al-Din), Arabic historian; he wrote towards the year 950 (1543) at Djiziz a history of the wars of the Imam Ahmad Gréf of Harar against the Christian Abyssinians; the book is entitled Ta'liqat al-Zamani or Faras al-Habash, and is based on memoni and materials, but also in the form of workmen and master-builders. In constructing the Umayyad mosque of Damascus, for instance, a Persian and an Egyptian Arab served as architects; and workmen of the various nationalities were employed on the great buildings. This fact explains the syncretism of Muslim art; it explains the occurrence of Persian elements in mosques, etc.; and gives an opportunity of learning the various traditions from personal experience. In this way there is a process of assimilation and the creation of a homogeneous style, from which the art of Islam, and with it the style of the architecture, arose as a unity. And always in the course of such developments, it is hardly possible to determine the date of its end, especially as the material known to us is scanty.

We may say that the arabesque, in its developed form, is found already in the mosques of Ibn Tulun. This however does not yet signify the final completion of the assimilating process. The ornamentation in question, although a pure arabesque, is yet a specific variety belonging to Egypt. The arabesque which in the provincial type is blended in a more complex form, and which attained universal predominance, does not seem to have reached its goal until the Fatimid period.

ARABIA, the westernmost of the three peninsulas of southern Asia.

a. Topography, Climate, Products.

Arabia, called by the Arabs Ash-Sharaf al-'Arab, "the peninsula (island) of the Arabs," or abbreviated al-'Iraq, "the peninsula." Arabia by the Persians and Turks, is only joined to continental Asia in the North and is bounded to the West by the Red Sea, to the East by the Persian Gulf and the Sea of Oman, to the South by the Indian Ocean. By the Sabans of Saba it was connected with Africa, from which only the straits of Bab el-Mandeb separate it at the entrance to the Red Sea. To the East at the entrance of the Persian Gulf it approaches the country of Peru. The area of Arabia corresponds to about a fourth of Europe, but it is almost impossible to give an accurate statement because data as to the boundaries in the North differ considerably. Some draw them as far as the territory of Aleppo and the Euphrates. But although the mesopotamian plain has been inhabited by Arabo-tribes for many centuries past, no geographer has made Arabia reach farther than the Euphrates boundary. Neither must the so-called "Arabia peninsula," as it is frequently regarded as belonging to Arabia but to Syria, although it is inhabited by Arabs. The Shatt peninsula al-Tih [q.v.] on the other hand, which most Arabic and European scholars regard as a part of Egypt, geographically belongs to Arabia.

West Arabia (extending in length about 16°) consists of two large parts: Hijaz and Yam en. Hijaz — the name of the people, properly speaking the mountain-range separating Tiham, the lowland along the coast, from Najd, the highland; as a matter of fact, however, it stands for the whole country, bounded to the West by the Red Sea, to the East by Najd and stretching from the farther end of the Gulf of 'Ashl弓a to a few days' journeys south of Mecca where Yemen begins. The northernmost part of Hijaz (as far as Tālibī) is only one, and Hejār after the mountain-range crossing it from North to
South. It is a poor country, possessing, it is true, a great number of wadis (valleys) through which after heavy rains mountain-streams (tiaa) flow towards the sea, but yet suffering much from drought. Formerly the Djâhîm lived here, at present the Huwâjij, who are regarded as the descendants of the old Nabatânean.

The road from Aqaba to Medina, the old pilgrims’ road from Egypt, goes along the coast as far as Yanbo and a little farther to Al-Dhâr, the old harbour of Medinâ as a distance of two days journey from this town. The only place worth mentioning on the Gulf of Aqaba is Mâsâmah where the inhabitants as early as in the year 9 (620-621) concluded a treaty with the Prophet from which it is evident that they were weavers and fishermen. Next we may mention Al-Wadîh, the territory of the Balî-Abâs begins and which offers an excellent roadstead for small ships. Close by is the mouth of the great wadi Idâm with its many bimuchas, now called wâdî ’Himmâ, which begins to the south-east of Khaibar running very far from the source of the wâdi Ruwâma. It first turns to the South-West, then passes near Medîna and making a great bend goes on to the North West. In pre-historic times this must have been an important stream; now it only occasionally has water after heavy rainfall. Farther inland but more to the north are the ruins of Madyan [q.v.]. From Madyan the road used to lead straight through Badî’ to Wâdî ’l-Kûrâ (“the village of valleys”), of which Khârîb was formerly the principal place. Here the road from Egypt to Mecca joins the pilgrims’ road from Damascus which goes east of the Hijaz-mountains past Ma’âr, Tabbâk and Al-Hijjî, or Ma’dîn in Shābî, from where a road to Al-Wâdîh as the harbour of Al-Hijjî which corresponds to Stambo’s Egrip. On the coast south of this place we find Al-Hâwâ (“the white village”), in which Sprenger recognised the old Leukseke. Here is the end of the Balî-Abâs territory and the beginning of that of a kindred tribe the Dāhîmah. The country between Al-Hijjî and Wâdî ’l-Kûrâ used to be the territory of a tribe famous even up to the present day for their deep love of passion, the ’Udhânah, “who are when they love”.

The whole country round about Medîna is volcanic — the volcanic zone is said to reach from Palmyra as far as Mecca, — and even in historical times has been a few eruptions. The last of which we know took place in 654 (1256); see Sâmîhûd, p. 40. In Arabic the black volcanic mountains are called Hârâr or Lițâm (lava). Medîna itself is situated between two of them; hence the phrase: “What is between its two Hârâreh (or Lițâm) for ‘the whole town’.” The valleys in these Hârârehs are remarkable for their comparatively great fertility. The cultivation of dates especially has been of importance for centuries past. Less than an hour north of Medîna is the hill of Obîd [q.v.]. To the territory of the town belong the big Hârâr of Khaibar (to the east of Wâdî ’l-Kûrâ) where the wâdî Ruwâma has its rise. Tâmîm (Taima) to the east of Tabbâk on the west frontier of the Nufâd desert and even the oasis Damm (also Dâmmat Al-Djândal, i.e. the Dûmâ built on stone), called at present Al-Djâmî or Al-Djîmî [q.v.], and situated on the north-western boundary of the Nufâd desert at a distance of 13 days journey from Medîna and 10 days from Damascæ, are also reckoned to belong to the territory of Medîna by the Arabic geographers.

From Yanbo it is possible to travel along the coast to ’Idîddah and from there in two days straight to the east to Mecca. The Holy territory (al-Hijaz, now also often called al-Hudâf, i.e. Al-Hajjî al-Mâzâm) is entered at Ta’if at a distance of 24 miles from Mecca where the mosque of ’Aqâr stands. In all other directions the boundaries are farther away from Mecca. Even before crossing the frontier the al-‘idâm is put on. The pilgrims from Nejd and Yemen put it on at Karân al-Manâzîl. In its vicinity was the famous market of ‘Oqâ, where a competition between poets took place. Almost due southward 36 miles from Karân al-Manâzîl is Ta’if situated high up in the Chawâni hills, the summer-resort of the well-to-do Mekkans. The air here is invigorating so that all south-European fruit grows in abundance. Especially famous since olden times, are the grapes and raisins of this district. According to Al-Lejârî the mountains of Ta’if are the only place in Hijjât where in winter the water freezes. (This happens on many mountains in Yemen, e.g. according to Gläser on the Hâjirî.)

The hills to the south of Mecca have been inhabited from very ancient times by the Hudâb, who produced many talented poets. In their neighbourhood we find even to the present day the Tahâf to whom Ta’if formerly belonged. Here the mountain-range, called further on on Safâ, broadens out and becomes an Alpine country. This is the most fertile part of the Hijjât. The mountains themselves are inhabited by Yemenite Arabs called Bahmînya (i.e. “castle-like”) by Ibn al-Mudjâwî on account of their rough customs. The instances he gives are partly corroborated by Burckhardt. Ibn Djalîr relates that they behaved very disparagingly in Mecca in what is still Arabia’s most sacred month, the month of Rajab, but that people had to put with their conduct because of the rich supplies they brought to market. At the time of the 11th century, they were still called Badjâl, now they bear the name Astî [q.v.]. The eastern part of the alpine highlands is the territory of the Kaftân, who are for the greater part camel-brokers. They are a very old but still a vigorous tribe from whom most of the Yemenite-Arabs claim descent.

Yemen — properly the country on the right, i.e. the southern country, also the happy country — has been famous from time immemorial for its great fertility and its riches. It consists of two unequal parts: Thâhmit al-Yamam (the coastland of Yemen) and Nejd al-Yamam (the highland of Yemen, also Dûfâl al-Yamam, the mountains of Yemen), with the plains of Nejdîkh in the North, Mârib in the East, Sana in the centre, Ta’if in the South. The Yemenite Thâhmit is the continuation of the Thâhmat of the Hijjât, according to Gläser’s observations it grows ever broader, owing to the retreating of the sea.

The road from Mecca to the highland of Yemen goes round the mountains on which Ta’if is situated and leads over the well-known mountainous Turâbî and Tabbâk to the high town of a flourishing fertile district on the western bank of the Bighâ, which continues as far as Central Arabia, journeying from Hijjât to Yemen the frontier is crossed between Ta’ifbîth, situated at about the
same latitude as al-Sirwan, and Eljard, From these two main roads go straight on to Sa'db, while a branch route leads eastwards to Nadjif [q.v.]. From Sa'db the road goes southward to San'a, the capital of Yemen. To the east of San'a lies Marib [q.v.]; the territory of which Marib is the capital, is now called al-Lubayn (1900). It stretches from Nadjif as far as salt Ballah to the southwest. Everywhere in the interior of this region, there are evidences of a very ancient and important Berakish, famous from antiquity. The first Europeans who visited these regions with great danger to their lives were Armand and Halévy. The port of Yemen further south has recently been described at length by Landberg (Arabica, v).

Going southward from San'a through Qunjan (Qunjan), famous for its horse breeding, Varris is reached, the village where Forskål, Nahlub's companion died; half a day's journey farther south are situated the ruins of the capital of the Himyars, Zafar in the longitude of San'a, and the latitude of Zahadi. From here the road leads over Qunjan, famous for its cotton spinning — the Prophet's body was washed in a pond of Qunjan — in Dham, formerly famous for its cotton weaving. At an important village of the same name, a famous mosque of Muhammad B. Lalahat, not far from Ta'izz. In the vicinity of Qahlah was situated the famous fortress al-Mudhabqin, the tools of the Karmian rule over Yemen. The town furthest south in the mountains is Ta'izz, in the middle ages and up to a century ago a place of great importance, the capital of the Karmians, but now in decay. The mountains are here called Sarah, alluded to by Ibn al-Mudhayk as the Princes of Yemen's mountains, and famous for its coffee plantations arranged in terraces and an excellent system of irrigation, and for the cultivation of the kah (cassia seeds). The young sprouts of these plants, which are highly valued as an anti-malarial, are exported in large quantities to all the towns of the Tihama. To the north of these mountains are the wilay of the Hamdah and al-Usha (Ushah), also called al-Ti Dibbi, the waterway that separates the Indian Ocean and the Red Sea. Here are the sources of two perennial streams, the wadi Zabdh flowing to the North and the wadi Band (Banad) flowing through the old miqlish Ra'ain and opening out into the Gulf of'Aden to the east of the mouth of the wadi Tuban or wadi Malik. Another road, which Mammuz has followed, leads from Varris straight southward to 'Aden. The road from Hjaldah to San'a, over Mundakia (the chief staple for coffee) has been described by Glaser.

The old division of Yemen into districts, al-Mudhayk, which also applied to Hadhramaut and the Yanma, has long been obsolete.

South Arabia. To the south Yemen is bounded by the province of Hadhramaut, now pronounced Hadramasut. This is a mountainous country intersected by many valleys, whose industrious enterprising inhabitants in more than one respect resemble the Swiss. Since very early times they yearly have sent part of their young men to other regions to try fortunes and thus they are not only found in the seaports towns of Arabia but also in Egypt, Persia, in British and Dutch India. Almost all the Arabs in both the last named countries are Hadhramis. The country is纵向 from West to East by a wide valley, the wadi 'U-Kaar. This wadi has a perennial stream which falls into the sea on the east frontier near Salib; the two largest places Shilam and Yarm are also situated there. To the south-east of the latter town, at the entrance of the wadi Bahrin (Balahar, Berihit), named thus after a still active volcano, is found the grave of prophet Hul, well known from the Koran. Here begins the great desert which surrounds Hadhramaut on the north, south, east, and east. The best seaport of the coast is Makhäll (the name means simply 'harbour'). It is not improbable that this place is identical with the Lul (al-Lul) of the Arab geographers, just as in Yemen numerous ruins and tomb points in Hadhramaut to a bygone time of considerable prosperity and wealth.

To the east of Salib, which perhaps corresponds to the old Kharot, begins the Yemeni coast, named Masin and often called Shih by the Arabic geographers, a name meaning 'coast' in the old language of South Arabia. The name Shih is now limited to the first (westerly) seaport. The eastern frontier is Hierak to the east of Mirbat. The latter place has an excellent harbour but it has decayed to an unimportant village. The city of Mirbat, now called Mirbat, lies to the east of the harbor; some say that the old Mirbat was the harbour of the old, now depopulated capital Zafar. This town was devastated according to Ibn al-Mudhayk in the year 618 (1221). In Ibn Battuta's time however it still was an important town. The latter speaks of the sardines which are still caught here in such enormous quantities that sardines are fed on them. In the country they are called 'muhar' and also 'the fish of the mountain chain which runs parallel to the coast grows the incense-tree. According to Ibn al-Mudhayk everywhere between Hadhramaut and 'Omsa traces were found of former terraced cultivation. This is corroborated by Beut's description of this remarkable district. The cultivation of incense is now very limited. The inhabitants of the Ghar mountains and of the fertile coast between the two districts are partly troglodytes. The coast to the east of Hierak as far as 'Omsa is said to be devoid of trees and shrubs, the island is absolutely unexplored.
