Borneo became known later than the other islands of the Archipelago. Although Ptolemy (Chap. iii. 2, 3) describes the land of the Orang Utan and the Kinabalu (?) and the many Vignette Hindu antiquities in Kutei argue intimate relations with further India, and on the Kapuas and Barito with Hindu Java, the earliest definite accounts are found in the Chinese annals. These refer to the west coast, from which according to the History of the Sung Dynasty (Book 488) campmhor was brought as tribute in the year 977 A.D. In the History of the Ming Dynasty there is a similar entry for the years 1370 and 1405. In this period the Chinese had commercial relations with the important state of Brunei on the north coast, with Banjarmasin and the Karimata Islands. In these notices we find descriptions of the natives which agree in many points with present conditions. Important kingdoms on the coasts are also mentioned. These were founded either by Malays from Johor (e.g. Brunei and Sambar) on the west coast) or by Javanese (Sukadana on the west coast, Konwarinangin and Banjarmasin on the south coast and Kutei on the east coast). The rulers of many smaller kingdoms on the Kapuas are descended from the Hindu chiefs of Sukadana, who settled there in the 6th century.

In the middle of the 16th century Islam was preached in Sukadana and Main from Palembang in the year 5500 H. Kaszama ascended the throne then as the first Muhammadan prince. During his reign Europeans first began to visit the west coast (van Waerwijk in 1602), while the Portuguese and Spaniards had been visiting Brunei on the north since 1518 (de Gomes) or 1528 (de Menezes) or 1521 (Pignatta in Magellans's ship). The kingdoms on the coast of Borneo were able to retain their independence longer than those on many other islands of the archipelago. For nearly 300 years, the Portuguese, Spaniards, Dutch, English, and other Europeans successively visited their capitals to trade and build counting-houses there but made no permanent settlements. Banjarmasin [q. v.] was the first to surrender a part of its independence to the Netherlands in the middle of the 19th century. Sukadana on the west coast was for a short time captured by Banyan [q. v.] on West Java in 1609, but regained its independence about 1725 with the help of Buginese from Calebes. From that time many Buginese began to settle on the west coast and became themselves rulers of separate kingdoms (Mampua). The kingdom of Sukadana was first overthrown by the Dutch and the Sultan of Pontianak in 1756; it's kings henceforth ruled only over Matan. The Sultanae of Pontianak owed its elevation to an Arab adventurer, Shariif Abd al-Rahman, son of Shariif Husain Ibn Aqbab al-Kadiri, whose tomb in Mamapua is still visited by pilgrims, and a Dyak woman. In his youth he endeavoured to satisfy his thirst for adventure and lust for gold by trading voyages and piracy but was therefore caught by his pious father and, leaving Mamapua, settled with his followers of robbers in 1772 at the confines of the river Landak and the Kapuas. By his ability and energy he succeeded in making himself master of this favourably situated position and founding an important trading centre, the modern Pontianak. By the year 1779 he was able to get himself recognised as Sultan of Pontianak by the Dutch East India Company and to make a treaty with them. His descendants still reign in Pontianak although they are very much under the control of the Dutch government.
The Sultanate of Sambas (capital Sambas) was founded by Malays from Djohor, the autonomy of which was recognised at first; as early as 1609, the Sultanate of Sambas made a trading agreement with the Dutch East India Company. In the first half of the 18th century the ruling house was driven out by Radin Sulainan, a son of Radja Tengah, prince of Brunei and a princes of Sukadana, who lived in Sambas; the latter rejoined under the name of Muhammad Sufl al-Din. He was the first Sultan of the present dynasty. In the 18th century Sambas was notorious as a nest of pirates; in the year 1811, an English expedition had to be sent to destroy it. The practice of piracy, by introducing foreign elements, exercised a great influence on the kingdom on the north and west coast of Borneo, as did the gold-washing industry in the hands of the Chinese, which has been developing since the middle of the 18th century. The first relations of the Chinese with Borneo certainly date from as early as the middle of the 17th century as we know from their arrivals; in later centuries they traded chiefly with Brunei and settled in the commercial centres. It was not till later, when the Malay chiefs began to plunder them more and more, that these trading voyages ceased. Numerous descendants of their marriages with native women are however still to be found in the coast towns of Borneo and some Dyak tribes of the north coast are thought to show an admixture of Chinese blood.

The Malay chiefs of Mampawa and Sambas brought the first Chinese goldwashers from Brunei to their territories about the year 1760. They obtained such good results that soon hundreds of their countrymen began to pour in; according to their custom they formed numerous, secretly organised, mining companies (Tonggus) which however changed very much in the course of time. They were soon able to make themselves independent of their Malay and Dyak neighbours. In the year 1774, fierce feuds broke out among these companies, which have been constantly renewed. The consequence was that the Chinese spread themselves farther and more over the land and occupied not only the districts of Luarah and Lumar but also Moutrado and Mandoer. It was not till the second half of the 18th century that the Dutch succeeded in quite subduing them. The gold-washing industry, has now almost ceased and the Chinese still settled there live by agriculture. The origin and development of the kingdom of Sambas (capital Kuching) affords us a unique and highly interesting opportunity of seeing the beneficial effect which a firm but not harsh application of European ideas may have on the political and economic conditions of a native population. When its founder James Brooke, an English naval officer, landed in 1838 in the west of the kingdom of Brunei with a ship which he had equipped himself, he found the country in a dreadful condition, brought about by the plundering of the people, piracy, slavery, bloodshed and the licentiousness of the Malay chiefs. With his help the well-meaning but weak prince Radja Muda Hassim was able to restore order to some extent and in 1842 Brooke was recognised as Raja of the country of Sambow by the Sultan of Brunei. Relying mainly on the oppressed heathen Dyaks and the proceeds of the antimony mines he was able to restore order and suppress the rebellion of the Chinese and Malays who formed the hostile elements in the population. It was only for the suppression of the Arab chiefs, who with the Malays and Dyaks in the east, lived by piracy, that he required English help (1845). With the help of only a few Europeans besides the princes of the native populace who all enjoyed equal rights, Sir James Brooke ruled his domain with great success so that it prospered economically and extended its boundaries. In 1863 he left to his nephew Charles Brooke an orderly kingdom which now stretches to the lands on the Limbang river. Sambow has placed itself under the sovereignty of England. The Sultanate of Kutai on the east coast with its capital Tenggaros and the fort of Samarinda occupies the lower course of the Mahakam river. Extensive Hindu remains, which are found along this river, point to a lengthy period of colonisation in the Hindu period of the Archipelago (till about 1500). Kutai was one of the lands dependent on the kingdom of Majapahit in Java; afterwards it belonged to the kingdom of Bandjamata. During the 17th century the Sultanate made several treaties with the Dutch government whereby this kingdom also yielded its independence.

In the year 1905 the census of the Dutch territory gave the following figures: 1,382 Europeans, 55,524 Chinese, 3,141 Arabs, 746 foreigners from the Archipelago, and 1,737,664 natives. The last figure is partly based on a rough estimate. The population of the island of Borneo consists of pagan Dyaks in the interior and a Musulman population on the coast which is Malay. It is small in number, estimated at from 1—3 every two square miles, i.e. about 2,000,000 in all. The Dyaks are agriculturists and grow rice, tobacco plants, marrt etc.; they also hunt and fish. In the forests around the sources of the large rivers wander various separate tribes of hunters, known by the names of Or, Pusan, Brikatan etc. The agricultural Dyaks are divided into numerous small tribes which are organised on a patriarchal basis, speak many different dialects, are hostile to one another and are thus able to offer little resistance to the more closely united Malays. The Dyak tribes belong to the older stratum of the Malay population of the Archipelago but differ markedly from another, probably more closely admixed with other stocks. The independent Dyaks who live in the centre, are well advanced, some of their achievements in the field of art and industry, for example, being really wonderful. As they are little developed they are helpless against the injurious influences of their environment and make but poor use of the materials at hand for food, clothing and dwelling. Neither do their numbers increase nor does their culture make much advance. They have had an evil reputation for their head-hunting from the earliest times. They are driven to this practice rather by their animistic ideas than by their character, for they are described as mild in temperament. Where the Dyaks are more or less subject to the Malay chiefs, a greater or less degree of culture may be observed amongst them. This is a result of the harsh war the Musulman chiefs have exploited the heathen chiefs; the latter were able to retaliate the more cruelly they were treated.

The Malay tribes on the coast differ very much in physique, intellect and customs according to
their composition. They have remained near on the west coast, being strongly mixed with Buginese only in the delta of the Kapas. In the commercial towns like Pontianak and Sambas the richest merchants, next to the Chinese, are the Bangalarese and Buginese. The Malays have extended farthest inland along the Kapas; here however they often marry Dyak women; besides, when a Dyak becomes a convert to Islam, he is reckoned a Malay. Nevertheless we find many among them with little or no Malay blood in their veins.

As a rule these Malays are little developed; they devote much less attention to industries than the indigenous Dyak, do not care for agriculture and only take it up when driven by necessity. They prefer to live by trading, fishing (formerly by piracy), hunting and like a free, roving life. As they are more closely united by their political system, have a greater unity of religion and language, and import better weapons and war from abroad, they have been able to rise to be the dominating race. As they always settled at the mouths of rivers, the only trade routes in these pathless lands, they were soon able to control the imports and exports in the wide basin of the river. Here the knowledge of the interior, such as gunpowder, copper, iron, salt, has been brought by the Malays to seek them farther and farther inland. They therefore now found at the present day, either individually or in groups, among the most remote Dyak tribes, and thus involuntarily help to spread Malay civilization and Mahommedanism. The expansion of European dominion, which has increased the security of the lands under its sway, allows traders to proceed farther up the rivers and to visit the Dyaks in greater numbers with the same results. On the south coast, the Bangalarese with a strong admixture of Javanese form a centre of progress and commercial enterprise in the ancient kingdom of Banganasmie. [q. v.]. On the east coast, the presence of numerous Buginees, who are distinguished for their commercial ability and enterprise, is of great political and economic importance. The great mass of the Malay inhabitants of the former and present kingdoms of Piri, Kuto, Gunung Tabur, Sambalung and Balungan, are no longer on the scale of civilization than those of the west coast.

Bibliography: To detail all the works referring to the island of Borneo, its peoples and their kingdoms would require too much space. They may be found up to the year 1854 in R. J. Voth, Borneo's New Administration (Zabonner, 1854); to the year 1883 in Th. Posswitz, Borneo, Entdeckungen und Unternehmungen (Augsburg, 1889), English translation by Hatch, London, 1872) and in H. Lang Roth, The Natives of Sarawak and British North Borneo (London, 1896); a very full bibliography is given with the article DAYAK in the Encyclopaedia van Nederlandse-taal. The most important books that have since appeared are: S. R. Saint John, Rajah Brocks (London, 1899); A. W. Nieuwewines, In Central-Borneo (Leiden, 1900); A. C. Haddon, Headhunters (London, 1901); T. Furman, The Headhunts of Borneo (Philadelphia, 1904); A. Combine, Au pays des Cannibales de Tite (Paris, 1902); O. Beccari, Nelle Foreste di Borneo (Firenze, 1902), English translation by E. N. Gigiolu, Wundervisse in the Great Forest of Borneo (London, 1904); G. A. F. Molengraff, Geological Explorations in Central Borneo (Leiden, 1902); A. W. Nieuwewines, Quer durch Borneo (Leiden, 1904 and 1905); D. Cator, Among the Headhunters (London, 1905); E. H. Gomar, The Sea-Dyaks of Borneo (London, 1907); H. H. d'Jynvoort, Catalogus der Ethnographische Sammlungs (Batavia, 1909 and 1910); J. P. P. Barth, Bouwman, Nederlandse Werdmelkhoek (Batavia, 1910); M. W. H. Beech, The Tidong Sibotes of Borneo (Oxford, 1903); S. B. Gould and C. A. Bangsby, History of Sarawak under its two White Rajahs (London, 1906); J. E. Tehupepori, Onder de Dayaks in Generaal Borneo (Batavia, 1906). (A. W. Nieuwein weines.)

**BORNÜ, a state in Central Sudan. Borneo is bounded on the north by the Siamese, on the west by the Huma country, on the south by the Adamaas, in the south-east by the Bagirmi, on the east by Lake Chad. These boundaries are as Nochtigal points out, rather indefinite in the neighborhood of the desert, and on the other sides they have continually varied with political circumstances. During the first quarter of the 13th century Borneo might have been regarded as lying between 11° 19' and 14° 30' North Lat. and 96° 50' and 106° 29' East Long. (Greenw.) Its area may be estimated at about 80,000 square miles. The origin of the word Borneo is still uncertain. The etymology which derives the name from Barr Nibk, "the land of Noah," ought certainly to be rejected. Barth says the word is of Berber origin, relying on the analogy of the words Berruni (Bordun), Berda or Berdaa (a Libyan family from which, according to tradition, the first kings were descended) and Berber. He quotes also the name Ba-besberche (the "Berber" nation) used by the Hausas to designate their neighbors of Borna (Barth, Reisen, Vol. II. Ch. vii. p. 293). As to the name Borna, it is found for the first time under the form بُنيار in Ibn Faqīr al-M upright al-Omar, Ta'rif bi l-Mugāfaq al-ṣari' (Cairo, 1312), p. 27. The country itself was for long only known from a few notes in Arab historians and geographers, Ibn Sa'd, Ibn Khaldun, Maqrizi, and a chapter in Leo Africanus (Description de l'Afrique, Part iii. Bk. vii. Ch. 14. ed. Schefer) who made a brief stay there at the beginning of the 17th century. The Borna was practically only made known to Europeans by the narrative of Denham, Oudney and Clapperton, who visited Kūta in 1823, from 1823 to 1835, Barth, the sole survivor of the expedition organised by Richardson, explored several provinces, made three prolonged stays at Kūta and collected documents and traditions among the natives, which enabled him to give a brief account of the country of Borna. His researches have been supplemented by those of Vogel (1854–1856), Bédirian (1860), Rohls (1860), Nachtigal, who was entrusted with the task of bearing to Siūkh 'Omār, the presents of King William of Prussia (1870–1872), Mathenac and Maastricht (1880–1881), Montell (1892) and quite recently by the works of officers and administrators in Nigeria, the Cameroons, West Africa and French Congo.
Bornú, strictly speaking, is an almost level plain. The ground only rises on its outskirts, in the Musio and Zinder country on the N.W., where some eminences reach a height of 3000 feet and towards the S.E. in the Marghi and Mandara country. The nature of the soil varies in different districts. Around Lake Chad, it is very permeable, with comparatively shallow and long open expanses of impermeable clay which becomes baked and cracked during the dry season and after the rainy season, forms basins in which marshy pools form and stagnate. The streams are carried to the Chad by the Yoa and the Yuo, wrongly called Komadugu Wau and by Barth, the word Komadugu meaning an expanse of water and being applied to the marshes and the lake itself as well as to actual rivers. The Yeo flows from S.W. to N.E. It receives numerous tributaries of which the most considerable are the Chaba on the left, and the Koshe on the right, and flows into the Chad 12 miles north of Kika after a course of about 450 miles. The lake itself forms the frontier of Bornú, from the village of Ngigmni at its N.W. corner to the delta of the Chabi. Its banks are very uneven and steep in some places. Some of them are almost perpendicular and the lake dries up; this is particularly the case with the N.E. part which at the present day is nothing but a pestilential marsh; sometimes on the other hand it suddenly inundates the surrounding country. It would even appear, from the most recent explorations that the N.W. shore is being carried away by the waters while on the south considerable deposits of soil are constantly being laid down. Thus Kaua, the harbour of Kika in the time of Barth is now 14 miles from the lake.

Intermediate between the tropical zone and the equatorial, Bornú presents all the characteristics of a transitional region in flora, fauna and climate. The seasons, instead of being reduced to one as on the Congo, or to two as in the western Sudan, are three in number. The cold and dry season, from November to March, during which the temperature never rises above 77° Fahr. and falls as low as 59°, the hot and dry season, from March to June, during which the thermometer remains at about 104°; the rainy season from June to October, characterised by abundant downpours and storms of great violence; it is also the season of great material fevers, fever etc., which attack the natives as well as Europeans. The Bornu becomes gradually richer as one goes from north to south. Near the Sahara is a region of prairies covered by scanty green vegetation over which are scattered a few shrubs; this zone, desolate and arid during the dry season, is transformed after the rains into verdant plains "pleasant to the eye".

Then in Bornú, in the stricter limitation of the word, the number and variety of the trees increase, acacias give place to the <i>djem</i>-palm, the tamarisk, the baobab, the butter-tree, the cotton-tree, growing in clumps but not dense enough to constitute forests. It is only in the southern part of Bornú, particularly in the regions bordering on the tropics, that we find forests. Besides the natural flora, plants that have been cultivated by man grow also much grown here. The Bornuans are excellent agriculturists and grow millet, sesame, and corn, which is reserved exclusively for the Suluan, tobacco and lastly rice in those areas which are periodically flooded or in the stretches of water which stand for a while after the rains.

Little attention is paid to trees, though around the towns may be found gardens in which are planted citrus and pomegranate trees. Dates, which form part of the sustenance of the people, are imported from Kânem and the oases of the Sahara. The fauna is very rich, particularly in the steppes adjoining the deserts where antelopes, gazelles, gerenuks, gazelles, great varieties of birds (hens, storks, pigeons etc.) literally swarm. The banks of the rivers and marshes are frequented by herds of elephants and hippopotamuses. Crocodiles and reptiles abound, as well as insects, of which some kinds such as termites and ants, are perhaps more noxious to man than the larger animals. The domestic animals are the horse, ass, cow, sheep and pig. The camel alone is not fitted for the soil or climate of Bornú.

**Population.** The population of Bornú, to which the general name of Boriuani is applied, is composed of very diverse elements: Kanuri, Negroes, Arabs, Berbers and Fulbe.

1. The Kanuri are the preponderating element both in point of view of number (1,500,000 out of a total of 5,000,000, according to Barth and Nachtrigal, as well as the Arabo-Negro). Their name has not yet been explained. According to Nachtrigal, the natives derive it from the Arabic word <i>askar</i> and the prefix <i>al</i>; it would thus mean "the bearers of light", in allusion to Jâku, which the Kanuri have long professed and have propagated among the Idratums tribes. According to another hypothesis, the word Kanuri of which the primitive form would have been Kânemri, is to be connected with Kânem, the home of the invaders who came in the sixth century, A.D., and settled in Bornú proper. In any case, the word Kanuri is not applied to any particular race nor to even a definite tribe; it is applied to a mixture of peoples of diverse origins in opposition to the original elements themselves, which combined to form this group and some portions of which still preserve an independent existence. The ancestors of the present Kanuri came from Kânem in the sixteenth century. These invaders numbered in their ranks representatives of tribes who had long been settled in Kânem and claimed Arab origin, as well as of the Kânembe, Tubu and other elements, traces of whom may still be found in the population of Bornú. To the first category for example belong the Mâguni who are scattered in small groups in the provinces of Musio and Zinder and the Ngâla-Dukko. The Tubu are represented by the Kali-Dita, who form the greater part of the population of Koyin, the Ngâla scattered throughout the whole length of Bornú, the Turâ etc. On the other hand the invaders themselves were assimilated with black peoples and groups of half-breeds have thus arisen such as the Ngoma, who inhabit the country between Dikos and Ngornu.

In physique, the Kanuri present a type intermediate between the Tubu and the negro; they have not the slight build of the former and their limbs are better proportioned than those of the latter. The profile approaches the European rather than the negro type but like the latter they have curly hair, prominent maxillary and thick lips. The colour of the skin varies from reddish-brown to dark grey. In their social relations and manner of living the Kanuri are likewise readily
distinguishable from their neighbours. They are not inclined to drunkenness and their industry contrasts with the indifference and idleness with which the negro is usually reproached. Men and women work together at agriculture and weaving. The men prepare the strips of cloth for the manufacture of *token*, a garment peculiar to the country; the women practise the art of embroidery. The Kanuri engage in numerous trades, e.g., the making of pottery, basketwork, and working in iron. They are incessantly the most industrious of black peoples. Their nobles alone look down upon manual labour and physical fatigue and even think themselves disgraced if by chance they are compelled to walk.

The position of women among the Kanuri is relatively better than among the majority of African peoples. In girlhood she enjoys great liberty and is allowed to associate with young men; when married she is not forced to work. Polygyny is only practised by princes, and great nobles who keep large harems in imitation of them. Family life, according to travellers, is well developed. The influence of the wife is considerable in all classes of society; the Sultan's mother or Magera enjoys very great privileges, notably the right to dispose of her own interests, and various districts as she pleases; the first wife of the Sultan possesses similar privileges. The genealogy of the princes and high officials is given by their bearing the names of their mothers and not of their fathers.

It is possible that in these peculiarities we may trace the Berber origin of some of the elements which have gone to form the Kanuri. As among the Berbers also, hospitality is largely cultivated among the Kanuri although Barth and Nachtigal have perhaps exaggerated their disposition to welcome strangers. It may easily be that the cordiality of the Bornilam is really inspired by the desire and the desire to receive presents and gratuities from the guest.

2. Native tribes, distinct from the Kanuri in language and customs. Amongst these there are two which may be mentioned. The Makkari or Kotoko, who live in the south of Bornu in the province of Kotoko and the vassal kingdom of Logon. They appear to have come from Central Sahara and to have subdued the SS, the original inhabitants before being themselves overcome by the Kanuri. Of a darker skin and stouter build than the former, they devote themselves to agriculture and fishing.

The Keribì live in the same region. They appear to be the last representatives of the SS. The Muhamar live on the left bank of the Ye-u, three days' journey from Kuka. The Mangai are found over an area of 150 miles from the mouth of the Ye-u. Barth regards them as a cross between the Kanuri and Nachtigal, as the survivors of an aboriginal conquest of the race.

The Bédre and the Kerikerriti, to the south of the Manna. The Fika and the Bábir, neighbours of the Adamawa.

The Marghi, to the S.E. of the Bábir.

The Gamergu.

The Mandara or Wanda, to the S. and E. of the Gamergu.

The Masga, between the country of the Mandara and the Logone.

According to Nachtigal the total number of these various tribes amounts to about 1,500,000 people.

3. Arabs. — The Arabs settled in Bornu are known by the name of *Shua* or *Shiw*, in opposition to the Arab merchants, who make brief stays, called *Wassili*. They have preserved a more or less fair complexion, according to their degree of admixture with the natives. Some of their tribes, such as the Aafia, the Liyami, the Sellamot, came, according to Barth, from the east about the beginning of the xviith century. Others like the Khosam and the Ulad Hamit only left Kasisem to settle in Bornu, early in the xith century. They are found scattered throughout the provinces of Koto, Mandara and Logon. They have settlements there in which they live during the rainy season, while they lead a nomadic life with their flocks during the dry season. Some of their subdivisions, whose flocks have been decimated by epidemics have given up their nomadic life and become quite sedentary. Their numbers estimated by Barth at 290,000, have much diminished since that time, according to Nachtigal the figure does not exceed 150,000.

4. Various tribes. To the tribes mentioned above should be added the Tugrugs, known by the name of Kindii, who have been settled for several years on the northern frontier in the district of Dabahi and around Zinder; Fellaït (Fatha, Fali) who have formed colonies in various places since the xviith century. Lastly Hamas, who, mixed with Kanuri, Fellita and Tugrugs, inhabit the provinces of Zinder and Gammel.

The population of Bornu is, on the whole, sedentary. The inhabitants live in villages and towns of which some are of considerable size. The most important at the end of the xixth century was the capital Kuka. Founded in 1814 by Muhammad al-Kasim in a plain 10 miles from Lake Chad, it grew rapidly. Barth estimated the number of inhabitants at 120,000, Nachtigal at 60,000, Montell, the last European to visit it before Rahab's conquest of Bornu, at 50,000. It was divided into two parts, separated from one another by a surrounding wall and by a wide open space, used as a market. The western town was inhabited by the less civilized and the merchants, particularly by the Turaws who came originally from Tripolitania and were often related to the chief families of the land. A large street called Dandal ran through it from side to side and opened out on the market-place. The eastern town enclosed the palaces of the sovereign and the dwellings of the great dignitaries. Barth, Robtis and Nachtigal dilate at some length on the picturesque appearance of this agglomeration of huts or cottages of clay, built in the centre of the green country, and on the commercial activity of this great city, the real metropolis for commerce between Central and Northern Africa. The products of Europe, brought from Tripolitania or caravans, are here exchanged for hides, ostrich plumes, timbuktu salt and slaves. As many as 15,000 or 20,000 people sometimes assembled here. Only the memory of this period of prosperity now remains. Kuka was utterly destroyed by Rahab and has not recovered from this disaster.

Among the other places in Bornu, may be mentioned: Ngornu (20,000 inhabitants according to Robtis) 30 miles S. E. of Kuka; Barawa (1500
to the Shoa who along with their language, have preserved their religious fanaticism. For example, they left Bornu in great numbers, to follow to Mecca the Fulle pilgrim, Shayat D-din, who caused a regular emigration of Suddanese Mahummadans about 1850. Nevertheless Islam has been a civilizing influence in Bornu as in all the negro countries and has raised it well above the level of the adjoining countries. Bornu is however far from showing that the negro peoples have given it. Intellectual life has always been at a slow stage of development there. At the beginning of the sixteenth century Muhammad al-Kazaam was regarded as a learned man because he was able to write Arabic correctly. At the present day, schools, which are for boys only, are few in number and are only found in the large towns. There was, it is true, in Kuka a kind of university attended by 2,000 or 3,000 students who lived on alms or on the liberality of the nobles whose children they taught, but instruction there was limited to the teaching of the Arabic script and to the learning of a few Sutras of the Koran by heart. "The professor" says Rohls (op. cit. 1, 342), "are hardly more learned than the students; intellectual development is non-existent".

The empire of Bornu then comprised two distinct groups of countries: Bornu proper or tindé (tindé) Koka, administered directly by the sovereign; and the towns and villages governed by native chiefs. To this second category belong Inglesa (capital Binsa), Minizo, Zinder, the land of the Bejde, that of the Korda, and the Mandara, Kukor, Mandara, Kotoko, Logone, Udjde. The chiefs of these various countries had to pay a tribute in kind and in slaves, whom they procured by raiding neighbouring tribes. Some of them like the Sulun of Kotoko and Logon were practically almost independent.

The Sultan of Bornu, until the middle of the sixteenth century bore the title of Mai or Sulun. After the death, in 1846, of the last representative of the Suliuf dynasty, the sovereigns were content with the title of Shikak, borne by Muhammad al-Kazaam, the founder of the new dynasty. The ruler exercises despotic authority and combines in his person both spiritual and temporal power; he disposes at will of the lives or goods of his subjects. He is however surrounded by a council or wushka, whose members are called kadumwara and which Nachigal regards as "the ancient aristocratic constitution of Bornu, but it has no real power. This council includes the heir presumptive (jirima), the sons and brothers of the Sultan, his relatives or matwa, the great nobles and captains commanding the troops. The sovereign lives surrounded by a splendid court. He has in his service several officers, of whom in the sixteenth century there were twelve, according to Barth, but the number has varied since that time.
The chief are the Sonoins or Lord High Cappbearr, the Maino or Lord High Sieward and the Marmakele-Dha, who has charge of the slaves. Namuch, as at all Mahommedan courts are numerous and sometimes play a very important part in politics. One of them, S podróż ʿAbd al-Karim, has been the real master of Bornu for half-a-century, during the reign of Shalikh ʿOmar and his successors.

Next to the dignitaries attached to the personal service of the Sultan are the officials entrusted with administration (Kuqinsane, Kukisunum), some of whom are free-born and others of servile origin. They receive no salary but are given lands or governorships out of which they make as much as possible, though they have to give presents to the Sultan every year. Such, for example, are the Dzigo or Dzugum, a kind of minister for Foreign Affairs; the Fuguma, executioner and at the same time governor of the town of Ngorou; the Kaoluwa, governor of the district of Ye, the Galadiana, an important soudoury, entrusted with the administration of the western districts of Bornu. As a rule the aboriginal tribes have retained their own chiefs under the supervision of Bornu officials. This is the case with the Makkari, whose townships and villages are often governed by Bornu officials called Ali-ja, and with the Shoa, who are allowed to retain their Shaikh and Bashshaikh, on condition that they renounce to a representative of the Sultan a quarter of their regular incomes.

The Sultan has at his disposal an army comprising about 1000 footsoldiers, 1000 horsemen armed with lances and bows, and 3000 men armed with lances and bows. He also possesses an artillery battery of a score of cannons, a body guard of a thousand archers and lancers wearing coats-of-mail and helmets, mounted on horses, protected by thick padded covers. The officers, recruited from among the slaves are the Kachettla Bialli or Kaiguma, chief of the archers and lancers, the Kachetti Dzuma, commanding the mounted troops, and finally the Kachetti each of whom commands a company of one hundred men. In addition to these regular troops there are the contingents furnished by the Shoa whose tribes have to do military service in time of war, and the bands raised by the Kachetti or Kaiguma. The regular soldiers are not paid but receive lands on the cultivation of which they subsist. Bornu can put in the field a total of from 25 to 30 thousand men. Its cavalry and fire-arms give it an advantage over the negro tribes who are not so well equipped.

History. The history of Bornu has been sketched by Barth who, in addition to the traditions collected by him in the country, has made use of several written documents: 1. an anonymous chronicle, giving a list of the Sultans from the earliest period, it runs from 1114 to 1220; 2. a list of the sovereigns; 3. the chronicle of the first twelve years of the reign of ʿAbdul ʿAziz, compiled by the Imam Ahmad. Besides these chronicles, the Bornuans told Barth of another, called the Chronicle of Masfarma which neither he nor Nachtigal was able to procure. Nachtigal, however, modified in a few points the statements of Barth; for example he attributes the number of sovereigns, who had reigned in Bornu during the period stated above, from 67 to 164; he has also altered the dates of several reigns: in the whole, however, he has added nothing to the work of his predecessor. The information derived from these chronicles may be supplemented by that given by Léo Africanus, and by the accounts collected by Koelle, of which the most interesting refer to the coming of the Kâremdi family.

Bornu was ruled till the middle of the sixteenth century by the Sultans (Saliya) dynasty, which, after reigning several centuries in Karem, transferred its seat to the western shores of Lake Chad. The name of the dynasty is derived from Sali, son of Ibu-Yanu, this legendary hero of Ibu, son of the last king of Yamin, according to tradition, founded a kingdom in Karem, by subjecting to his authority various tribes (Tabû, Barbers and Kâremdu) living in that country. As a matter of fact, it appears that the Mahommedan kingdom of Karem was founded by invaders who came, about 1150, from the country of the Barso, a tribe who had a nomadic life in the eastern Sahara. According to the Imam Ahmad, the capital of this kingdom was Njâm. The accounts handed down to us of the early Sultans are quite legendary; two of them, Ibu and Kariu, are, for example, credited with reigns of 250 years. The direct line of the Saliya ceased at the end of the sixteenth century A.D., in the person of Seluwa. According to legend, the power then passed to another branch of the same family that of the Bani Hani (or Hanu). The founder of this dynasty, Hamu, (479–500 A. H. = 1068–1097 A.D.) perhaps the Mahommed b. Djalal (read ʿAbd al-Djall) b. ʿAbd Allîth of Makari, is probably the first historical personage in the history of Karem, (see Becker, Der Islam, Vol. I. p. 171). He adopted Islam and died in Egypt while on pilgrimage to Mecca. The adoption of the new religion was followed by a rapid growth in the power of the rulers. Dûmmu (494–545 A. H. = 1092–1143 A.D.) extended his kingdom by successful wars. He organized an army in which the cavalry was the principal force. He thrice made the pilgrimage to Mecca but was drowned in the Gulf of Suez by the Egyptians, who were astonished by his ambition and the success of his arms. His son Biri acquired a great reputation as a jurist and scholar.

All these princes were of white race; they had, the chronicle tells us, a complexion as fair as that of the Arabs. After the sixteenth century A.D., they were supplanted by negro sovereigns. Salimma, the first of these (560–617 A. H. = 1144–1220 A.D.) was held in great esteem and was victorious over the neighbouring tribes. He entered into friendly relations with the Hafsid of Tunis, who continued under his successors. He was succeeded by Dûmmu (618–657 A. H. = 1221–1267 A.D.) who triumphed over the Tabû after a seven years' war, forced the people of Fesâtan to recognize his authority and extended his kingdom from the southern shores of Lake Chad to the little Nile and the Niger. After his death the kingdom passed through a critical period. The Saliyas had to wage long wars against the So, a people living between the Ye and Lake Chad, who, after being conquered by the princes of Karem, had taken up arms against them. Within four years, the So fought and killed four Saliyas. It was till the middle of the sixteenth century A.D. that King Idris
expedition against the neighbouring pagan tribes of Lagjimi.

The xvii century was the most brilliant period in the history of Bornū. In the xvii century, however, the decline began, perhaps in consequence of the weakness of the souverains who no longer took an interest in public affairs. "All, son of Ḥajjī ʿUmar and fourth in succession from Idrīs (1055—1096 A. H. = 1645—1685 A. D.) also took part in politics. He had to wage a momentous war against the Sulṭān of Agades. Besieged in his own capital by the Tuğreg and the Kôna, he succeeded in setting his adversaries against one another and ultimately drove the Tuğreg into the desert. But his successors lived in luxury and indolence, allowing their neighbours to attack the country while its unfortunate inhabitants, exposed to the constant depredations of robber bands, gave up cultivating the soil and were decimated by disease and famine. At the beginning of the xvir century, Bornū was quite unfit to resist the redoubtable enemies who began to attack it: the Ful or Fulbe. The invasion of the Fulbe took place in the reign of ʿAlī Nūrūsimmān (877—909 A. H. = 1472—1505 A. D.). This prince, called ʿAlī Ghajīduyīn by the Bornūns, put an end to the civil wars, forced the great officials, who were in rebellion to obey his authority, particularly the Kutgama who had tried to make himself independent. He built a strong fortress on the site of the Voe, the"days" journey to the east of the modern town of Kāka. He waged several successful campaigns and thus earned the title al-Ghāṭī. Thus restored, the power of Bornū still further increased in the reign of Idrīs Kastakūmbī (910—932 A. H. = 1504—1526 A. D.) who brought about the ruin of the Bulūt and recaptured the town of Nūjum, out of which his ancestor in 1322 years before, and during the rule of his son Muhammad and ʿAlī Dūnuma (Ǧumārōnī, son of Muḥammad, suppressed a revolt of the Bulūt, fortified Kaṣr-Eggoomo and concluded a treaty of alliance with Dragut (Durğūtu, Pasja of Tripoli). Idrīs Ansānī, also pronounced Anuam, from the place of his burial, Anu (Añ), appears to have been still more powerful (970—1014 A. H. = 1571—1603 A. D.).

He ascended the throne after the brief regency of his mother and undertook to subdue the heterogeneous elements in his kingdom. He was successful owing to the superiority of his army which included a body of macebearers and well mounted cavalry. The Sē, although a tributary state, harassed Bornū very much by frequent risings. Idrīs conquered them, deprived them of the strongholds they still possessed, and dispersed them or reduced them to slavery. The Kanawas lost all their possessions; with the exception of the rock of Dala, at the foot of which the town of Kāna was afterwards built. The Tūreg in the N. W. and the Berbers of the Air, who were ravaging the northern lands of the kingdom were defeated, as well as the pagan tribes of the east and south (Marghe, Mambilas, etc.).

Five expeditions were sent against Kānānī, where a serf had dethroned the legitimate Sulțān Muḥammad, whose father had declared himself a vassal of Bornū. At the same time, important buildings were erected in the various towns, such as the mosque at Kaṣr-Eggoomo. All these details refer to the first twelve years of the reign of Idrīs. We know nothing, however, of the events which took place in the second part of his reign; he perhaps died in the course of an
Muhammad brought him by force back to Berberis, then deposed him and put one of his uncles on the throne. This new Sultan also declined to comply with the wishes of the Shishak, and when he began to build a new residence at Birni al-Djoudj, two miles to the N.E. of Ngour, Muhammad deprived him of his power and restored it to Djamana, who retained the title of Sultan till his death in 1818.

At the same time, no doubt in order to emphasize his independence of the older dynasty, Muhammad, who had been his builder to build himself another palace, in 1814 he began the building of Kika, which was started under a shaikh (in Kanuri: ḥāk) which grew in the plain at the place chosen by the Shishak as the site of his palace. At the same time he tried to restore the fallen fortunes of Bornu; he regained from the Fulbe a part of the provinces conquered by them and sent expeditions against the tribes of the East. In alliance with 'Abd al-Karim Sab'ah, Sultan of the Wadai, he declared war on 'Othman Burchumani, Sultan of Baghirimi (or Baghirmi and Wadai). But Sab'ah, after ravaging Baghirimi, concluded a treaty which placed that country under his sway. To make up for this loss, Muhammad made an alliance with the Shishak of Fassan, ravaged the northern part of Baghirimi, and advanced to Massoura, but could not gain a decisive victory over the enemy who were strongly entrenched behind the Shari. The war continued till 1824 and was ended by a decisive victory of the Bornuans at Ngbila. At once in this direction, Muhammad turned his attention to the west, and recovered the province of Bantchi but had to make peace with the Fulbe in 1826, after a defeat at the hands of Sultan Belli. He also made several attempts to conquer Kano; he died in 1839, leaving the succession to his second son 'Omar, the eldest of his sons having been killed in 1817, during the war with Baghirimi.

Shalik 'Omar (1835–1881) was at first content to govern in the name of the Sultan Ibrahim (1813–1865 A. H. = 1818–1846 A. D.), brother of Dinnama. He was of a peace-loving disposition and remained on good terms with the Fulbe and the Baghirmi, although he had much difficulty in keeping down the governors of the various provinces, who were constantly trying to make themselves independent. Taking advantage of these disorders, the partisans of the Sallahis attempted to restore the ancient dynasty to its former power and overthrow the Kinsimel influence. Muhammad Safi, Sultan of Wadai, acting in accordance with the malcontents, took advantage of the absence of the Shishak's troops on an expedition into the Zinder country to invade Bornu. On hearing of this, 'Omar sent Ibrahim into prison; and, collecting all the soldiers at his disposal, marched against the Wadaians army. He was totally defeated at Kusseri in an encounter in which his vizier Tirk was slain. His brother 'Ali taken prisoner and had to take refuge in the western provinces after executing Sultan Ibrahim. The Wadaians devastated Bornu and burned Kika, but retired on the approach of a Bornuans army from Zinder. Before departing, Muhammad Safi had installed 'Ali, the son of Ibrahim as Sultan in Birni al-Djoudj. Left to his own resources, this prince was unable to resist Shalik 'Omar successfully and was defeated at Minfere, perishing in the battle.

With him disappeared the last representative of the ancient Salihid dynasty. The rebels were crushed at all points, the partisans of the Salihis crucified and burned to death. Another revolt broke out in 1853, stirred up by 'Abd al-Rahman, brother of 'Omar, jealous of the influence of the vizier Harram. The rebels were victorious, Baghiri was put to death and 'Omar forced to abdicate; but, on being threatened with exile in Dikoa, the Shishak gathered some supporters, defeated 'Abd al-Rahman, and had him executed in 1854.

Henceforth 'Omar was allowed to rule undisturbed till his death in 1881. He could have claimed the title of Sultan but like his father, was content with that of Shalik. He was a just and peace-loving ruler. Well disposed to Europeans, he gave a hearty welcome to Barth and Nachtigal. He unfortunately lacked energy and allowed himself to be dominated by those around him. After the death of his vizier Baghiri, he fell under the influence of the emir of Sokoto. In 1881, under the name of the Shishak was the real master of Bornu. He carried out the wishes of 'Omar, who wished the throne to pass to his sons and decided the order in which they were to succeed him.

The eldest, Bo-Rakhi, renounced for his generosity and military skill, reigned only three years (1881–1884). He died while preparing an expedition against Wadai. He was succeeded by his brother Shalik Ibrahim (1884–1885), who was followed by Shalik Haham (1885–1894) another of 'Omar's sons. Montell who visited this prince describes him as a gentleman and a scholar and educated Muhammadan. He took little interest in the affairs of state and lived in his palace surrounded by his 450 wives and 350 children. Ruled by his favourite, Maladam, he was not at all popular. The decline of Bornu, already apparent during the last years of Shalik 'Omar began more manifest every day. The population had devoted themselves to agriculture and gradually lost all military qualities and in consequence of the tendency of the sovereigns to entrust the most important offices to individuals of servile origin, no one any longer took an interest in public affairs. Shalik Ibrahim and his viziers began to multiply rapidly. The tributary princes and the great officials acted as they pleased. It was the Sultan of Zinder, who refused to pay tribute, the Gudawal declared himself independent; the tribes of Wadai made continual incursions and plundered and murdered with impunity up to the very market-place of Kika. The Sultanate of Bornu was a tottering edifice, which the slightest blow might overthrow. It collapsed under the attacks of Rabah (q.v.).

In 1895, Rabah, after laying waste Baguirimi, hearing of Bornu, he seized Karak Logou where he was rejoined by his ally Hayatu, the claimant to the throne of Sokoto. The Bornuans army, sent to meet them, was defeated at Giffs near Karak and at Hambey between Diko and Ngibari. Shalik Haham, having himself taken command of his troops, was likewise defeated at Habum and driven into the shores of Lake Chad. This victory opened the gates of Kika to Rabah and he was able to enter it without striking a blow. Haham then tried to come to terms with him; he was assassinated in 1894 by his nephew Ahi Kiari who attempted to continue the struggle but was defeated and slain near Kika. Rabah then destroyed Kika and chose 48
BORNU — BOSNIA AND HERZEGOVINA.

Dikoa as his capital. Some of the sons of Hāghīm stayed with the conquerors but others retired to Zinder where they were afterwards rejoined by the heir presumptive ‘Umar Sanda, who had first of all sought refuge with the Sultan of Mandara.

The rule of Rabah in Bornū was brief. On the 23rd February 1900, the conquering African was slain near Kosuri by the French troops under Commandant Lamly. ‘Umar Sanda, whom Foureau, the Explorer, had discovered in Zinder, was summoned as Sultan of Bornū but soon afterwards disposed in favour of his brother Djerhal, who appeared more capable of facing the difficulties of the situation. Faṣl Allāh, son of Rabah, prepared to regain the throne by force. Djerhal attempted to check him but was defeated and driven into Kānim. French troops had again to intervene to aid Bornū of Faṣl Allāh, who took refuge in Nigeria on being routed on the 2nd February 1901. From there he attempted another invasion of Bornū but came in contact with the French troops on the 13th August 1901 at Gūdība and perished in the battle.

The death of Faṣl Allāh has assured the re-establishment of the Kānimid family in Bornū. The Sultanate itself however has now lost much of its importance. The lands which compose it are practically divided among the three European Powers whose spheres of influence extend up to Lake Chad: England, France and Germany. Kānim and Damergu are now part of the French possessions; Bornū proper with Kūka which is being rebuilt has fallen to England. The southern district, with Dikoa, the most populous town at the present day are among the possessions of Germany.

BOROLLOS. [See BURULLUS.]

BOSNA-SARAJE (Slav Sarajevo), the capital of Bosnia, built at a height of 1,500 feet at the confluence of the Mlava (Miljačka) and Bosna. In the eighteenth century there was a town called Vrbosana on the site of the modern Sarajevo. The town did not become important till it became the residence of the Turkish governors. It is the greatest Will of Bosnia, Ghazi Khanaw-Beg that Bosnia-Sarajevo, must of its buildings be destroyed. On the 9th August 1875 it was taken by General Baurin Philippovich, occupied by Austria in terms of the treaty of Berlin, Sarajevo was finally annexed in 1908. The town, in which twelve towers of the ancient fortress still stand as witnesses of its history, has over 40,000 inhabitants and 160 mosques. See Bosnia.

(B. C. HUART.)

BOSNIA AND HERZEGOVINA.

I. STATISTICS.

The area of Bosnia and Herzegovina is 19,702 square miles; Bosnia alone being 16,173 sq. m. and Herzegovina 3,529 sq. m. According to the census taken by the Turkish authorities in 1875, when these lands were still under their rule, the population was approximately 1,951,000 souls.

According to the census of 1910 the total population of B. H. was 1,898,444 of whom 612,000 were Muslims, 825,338 Serbians Orthodox, 434,190 Roman Catholics, 8,136 Greeks Orthodox, 5,849 Augsburgian Confession, 488 Swiss Confession, 8,579 Sephardic (Spanish) Jews, 3,685 other Jews, 96 various other creeds.

The greater part of the population is engaged in agriculture. There are (reckoning by heads of families): 1,474,250 landowners; 1,358,854 free peasants; 79,701 kmetes; free peasants who are also kmetes 31,415; other individuals connected with agriculture 20,450; 1,668,585 persons in all with their families. The remainder of the population is chiefly engaged in trade and manufactures.

II. HISTORY.

The north-western corner of the Balkan Peninsula may be compared to the entrance to a bridge over which various peoples have passed from the earliest times on their migration from the South-East to the West and from North to South. Before Roman times, Bosnia and Herzegovina were occupied by various Illyrian tribes. The only sources for our knowledge of pre-Roman conditions are the prehistoric remains. The oldest and richest deposit in Bosnia is the site of Butmir at Sarajevo; it dates from the Stone Age. The Illyrians were divided into numerous smaller tribes. Those who lived on the sea coast were described as pirates by the writers of antiquity and those who lived in the mountains were branded as robbers. The bravest Illyrian tribes lived in the modern Bosnia and Herzegovina. It was only after much fighting that the Romans succeeded in subduing them (6 B. C.— 9 A. D.). For four centuries Bosnia and Herzegovina were Roman provinces. At first they formed a part of the province of Illyrium but were later united with the territory along the Adriatic coast to form the province of Dalmatia. In the first and second centuries A.D. the mines of Bosnia were worked with great energy. To transport more easily the products of the mines and to be able to defend more readily the area between the Save and the Danube and the lands to the north of the Danube (Pannonia), roads were made: which ran from Salona (the modern Splito) to the modern Sistek and Mitre-
vian and were thence further extended. In Ilidza near Sarajevo, there was a beautiful feast, and very fine mosaic pavements have been found at Stolac (Herzegovina). The second and third centuries A.D. furnish numerous examples of Pannonian and Illyrian soldiers who rose to be Emperors. The greatest Illyrian Emperor was Diocletian who did a great deal for his favourite province and native land of Dalmatia. In his division of the Empire, Bosnia and Herzegovina remained with Italy and the west. It was from there that the Christian religion was spread among the towns of the coast and thence into the highlands of Bosnia. After the division of the Empire in 395, the influence of the new imperial city of Constantinople began to make itself felt in this area.

The Slavonic migration of Avar and Slavs in the 8th century destroyed the remains of Roman civilization and brought about the modern ethnographic conditions in the region along the Duna and the coast of Herzegovina, which was then called Hum (Chin). The Slav tribes, among whom the bond of union was a loose one, were led by chieftains, called Voivodes and until the defeat of the Avars at the attack of Constantinople (626) were under their rule. Between 626 and 940 some of the larger tribes, known collectively as Croats and Serbs threw off the Avar yoke and penetrated into the north-eastern part of the Balkan Peninsula where they conquered Dalmatia, Bosnia and Herzegovina, Montenegro, North Albania and the territory of Novi-Bazar. The Slav tribes, who occupied the modern Dalmatia as far as Cetinska and part of modern Bosnia approximately up to the river Ibar, were known as Croats. At the head of these tribes was the Great Zupan whose vassals were called Zupans. The original stock of the Serbs settled in Montenegro and the surrounding country, in Zeta and the land of Ruika called after the river of the same name. The Croats later adopted Roman Catholicism, while the Serbs from the beginning were adherents of the Orthodox Greek Church. In the midst of these Croats and Serb tribes, thus divided into two nations, arose Bosnia, inhabited by tribes speaking the same language, which separated into Banates. The rank of Ban is probably of Avar origin and the name certainly is.

From the 9th to the 12th century the people of Bosnia and Herzegovina shared the lot of the Croats and Serbs. They recognised the Byzantine Emperor as suzerain, although not directly, till Hungarian power Incorporated in its Empire or at least its sphere of influence, first Croatia, then advancing southward in the beginning of the 12th century, the territory around the confluence of the Rama and the Narenta. Under the Hungarian king Koloman (1096–1116), whose rule extended not only over the interior of the ancient Croat kingdom but also down to the Dalmatian coast, the part of occupation of Bosnia took place. In the year 1137, Bosnia submitted to King Bela III, who appointed his 5-year-old son Josip, "Duke of Bosnia." The Hungarian supremacy did not, however, destroy the power of the native chieftains. The ancient laws and customs remained intact and the country continued to develop on its own lines. In Bosnia, neither the Roman Catholic nor the Orthodox faith was able to become supreme. The New Slav inhabitants of the Dinaric Alps retained for long their pagan beliefs and were thus inclined to be neutral in religious matters. The position of this people between two different religious prepared the way for a new faith, Bogomilism, which in spite of the persecutions of the Popes, the Hungarian and Servian Kings, gradually became more powerful and left its mark on the history of Bosnia. Thousands of more or less rudely executed monuments attest to the present day the once general dissemination of this faith. The splendid tombs at Stolac and Kašani-Doboj may be especially mentioned. The middle of Bosnia and Herzegovina, the Voivodes and Knezes early became converts to this faith and even the Lord of the land, the Banus, for a period professed the new religion.

The history of Bosnia from 1137 to 1878 may be divided into six periods. I. Bosnia under Banus who ruled the whole land (1137–1251). II. Bosnia under Banus who ruled various parts contemporaneously (1251–1314). III. the period of the two Kotromanas (1314–1377). IV. the Bosnian kingdom and the Duchy of St. Sava (1377–1495). V. the divisions of the land between Hungary and the Ottoman Empire (1463–1526) and VI. Bosnia as a province of the Turkish Empire (1526–1878).

The first period of the rule of the Ban in Bosnia covers the reign of four Banus of whom the most important was the Ban Kulin. At the end of the twelfth century the Bogomils began to spread and the Papal court took energetic steps to suppress them. In the year 1160 Ban Kulin appears as ruler of the land. It is related of him that he did much for the material prosperity of the country. The Kulensvýcheg (a prominent Muslim family in Bosnia) believe they are descended from him though there is no documentary evidence on this point. The period after the death of Kulin-Ban is gloomy one in the history of Bosnia. The Catholic party, regarded Prijezda of the Banal family of Kulin as ruler, while the Bogomil national party, who were in the majority, foiled round Mate Ninoslav. During his long reign, Ninoslav sometimes made peace with the king of Hungary and sometimes called in the help of the Pope against him, and was always able to extricate himself from the most difficult complications and embarrassments. Fortunately for Ninoslav, the Dalmatian towns, struggling with one another fully occupied the forces of the Hungarian king.

After the death of Ninoslav, however, in the fifth decade of the fourteenth century the power of Bosnia began to totter. The Hungarian King Bela IV had given the western part of the modern Servia with the fortress of Mačva to the Russian Duke Rostislav, who had married his daughter Anna. At this period the leading Croat-Dalmatian vassal-families, who had come to the king's help against the Tatars, particularly the Šubić the ancestors of the Šubić, began to come to the front. For these families Bela created Banates in some districts such as the Banate of Soll (Fuzla) and of Uvora (Ozora). Younger than the land divided up into numerous little divisions, while in Herzegovina the feudal tenure was in the hands of a few of the chief families. The confusion, which arose on the extinction of the Arpad dynasty of Hungary, further favoured this partitioning of the country.

In 1314 arose a dynasty in Bosnia: the family of Kotromana which was descended from Prijezda.
Stefan Kotromanovic (died 1553) reigned 30 years. He also was a Bogunail although surrounded by Catholic clergy; his wife was certainly a Catholic. Certainly he had the support of the Turks attached to the diplomatic alliance with Hungary and claimed its protection but in secret when it suited his interests he intrigued against this power. His daughter Elizabeta came to the Hungarian court at Ofen where the young and widowed khan Louis the Great fell in love with and married her.

After the death of Kotromanovic his nephew Tamaz, a boy, was named king but the last son of his reign during his minority he was under the guardianship of his mother. He had to defend himself against many risings of his vassals, and not only acknowledge the suzerainty of his uncle (as the rock-inscription at Delezhic shows) but also feel it. But all this adversity only served to steel the character of this prince whose keen eye quickly saw the weaknesses of his enemies and who is easily the most prominent figure in the history of his country. In the year 1577 he took the title of king, had himself crowned by the Church and founded the kingdom of Bosnia which was destined however to but a brief existence. King Louis of Hungary made no objection to his elevation to the regal title. The exact details of the process are unknown. The most important part of the reign of Twarco falls into the epoch (1382—1391) of the confusion which arose on the death of Louis the Great. He took advantage of the rebellions in South Hungary and Croatia against the queen Elisabeth and extended his territory at the expense of the Hungarian power which had been broken in these areas. One after the other the Dalmatian towns with the exception of Zara submitted to him. He fought on the side of the Serbians in the sanguinary battle of Kosovo (13th June 1389) and entered into possession of the Servian lands on the coast. Whether by his adoption of the Servian regal title he is to be regarded as the champion of the downtrodden Servian national spirit, is uncertain. It is certain that he made the Dalmatian towns independent on all sides and he is to be regarded as the founder of the kingdom.

Twarco I was succeeded by his younger brother Stephen Daibis (died 1405) who was followed by Twarco's natural son Stephen Ostojich (died 1418); on the latter's death the rule was shared by his legitimate son Stephen Ostojic (1417—1421) and Stephen Twarco II (1404—1443) son of Stephen Twarco I. From 1444—1461 reigned Stephen Tomnis, natural son of Ostojich, whose son Stephen Tomnasivich was the last male heir of the House of Tvarco.

The great results of Twarco's reign disappeared under Stephen Daibis. He became the vassal, in the medieval sense of the word, of King Sigismund of Hungary, on which account the Dalmatian towns lost their confidence and interest in the king of Bosnia. The reign of Sigismund of Hungary was unpopular; the disastrous battle of Kosovo was followed by the victory of the Turks at Nikopolis in 1396. The opponents of the King of Hungary made alliances with the Turks; so did the Christian princes of the Balkan Peninsula. The kings of Bosnia in this period were mere tools in hands of their "Magnates" Affairs were managed by two real statesmen: in Bosnia, Herroja of Hvar and in the south Sandalj Hranic (died 1435) son of the Voivod Hranje Vukovitch from whose family sprung the later independent princes of Hercegovina. In the year 1408 the fortress of Dobor was taken by Tomnas fighting under Sigismund's generals, Nicola Garay and John Marothy and King Twarco II taken prisoner.

The Ottomans profited by this struggle. Herroja became the governor for the Hungarian king but in the year 1415 with the help of the Turks he annihilated a Hungarian army. He made his headquarters in the fortress of Jaje which he had built, but the Turks remained, although in a small part of the land (on the modern district of Seravejo), nevertheless permanently within Bosnian territory. Bosnia henceforth was in the sphere of influence of the Turks, Hungarians and Venetians. A further blow to the unity of Bosnia was that Sandalj's nephew, Stephen Vuketic, "The chief Voivod of Bosnia by the grace of God" in 1448 adopted the title of Duke of Saint-Sava and forced Bosnia to recognise it. From this time on, his land was called "Hercegovina". Till the year 1463 the devoted country offers a melancholy picture. Even the victories of John Hunyadi could not inspire the kings of Bosnia to throw off the Turkish influence under which they had so completely fallen. After the fall of Constantinople in 1453, it was only a question of time when the advancing tide of Ottoman power would attain the shores of the north and west. Turkey ultimately took possession of Bosnia. The last king Stephen Tomnasivich fell a victim to his double dealing. His contemporaries accused him of the murder of his own father; he was suspected of having sold the fortress of Semendria to the Turks and the powers that might have protected him finally paid no heed to his promises and left him to his fate. He took refuge in the strong fortress of Jaje and made it his residence as he no longer felt secure in the southern part of his country. The Turkish hordes occupied Bobovac, Jaje and Kljeuc in rapid succession and the king himself was taken prisoner. The end of this unfortunate monarch is variously stated; it is certain that the Sultan had him beheaded to make sure of keeping the place. (A head joined to a skeleton is still shown as that of Stephen Tomnasivich).

Bosnia did not yet pass totally under Turkish rule however. King Mathias of Hungary captured the north from the Ottomans and in 1463 went to war for the possession of Jaje which he also took and retained in spite of the valiant defence of the Janissaries. Nominally he preserved the independence of the conquered district intact and gave it a titular king in the person of Nicolas Ujnalik, a rich magnate, in 1471. This district comprised the ancient Banate of Bosnia (the lands on the Save as far as Strebeneca, the modern district of Turc) with the addition of Teocak (near Zvornik). The Banate of Jaje remained under military occupation and was in close relations with the Lower Slavonic counties. Nicolas Ujnalik's rule was however short; his son John became Regent of Bosnia in 1491 as a Hungarians withstood the Turks even after the disastrous battle at Mohacs in Bosnia. Till 1528 only part of Hercegovina and the southern part of Bosnia were in the hands of the Turks.

It was only after the break-up of the Hungarian kingdom in 1526 that the lands which still retained their independence, succumbed, and the continuous exertions of the great conqueror Su-
As the policy of the Hapsburgs was mainly concerned with the west, Bosnia remained unoccupied under Turkish rule in the xvii century, and the Eastern policy of the statesmen of Vienna now being to preserve the integrity of the Turkish kingdom, in agreement with Western Powers. This principle was adhered to in spite of the beginning of the decline of Turkey and the loss of Servia (1804-1815), Egypt and Greece. In Bosnia, nevertheless, affairs began to be more and more unsatisfactory early in the sixteenth century. The "European" reforms of government in Constantinople met with little favour in Bosnia and the Slav Mohammedans took up arms to resist them under the leadership of Husain, captain of Gradac (1830). The Visier Mehmed Wendhj Pasha wished to introduce in 1840 the modern administration which had been announced in 1839 through the Khatiji Sherif of Gulkhin and began to replace the native captains of each district by Mohammedans, who had been appointed in Constantinople. The Bosnian aristocracy felt this to be a heavy blow to them and therefore the Mohammedans of Sarajevo rose against the Visier. They were put to flight by the Sultan's troops at Vitez (in the district of Travnik). In the years 1843 and 1846, revolts broke out in Krajina (Turkish Croatia) because the Turkish government demanded the payment of the legal tithe (agha) which the Mohammedans thought they were not bound to pay. The insurgents were scattered on both occasions. A fertile source of unrest was the undefined relationship of the Mohammedan landlord (tupihai, leg agha) and the peasant (kmez).

The kmys complained that they were at the mercy of the will of the landlords. The Visier Tahir Pasha decreed in 1848 that the feudal labour of the kmys on the private estates (leg hghi) of the landowners should cease, while the kmys were to give the landlord one third (the so-called Tretina) of the corn, fruit and vegetables produced on their own holdings and the half of the hay. Neither the kmys nor the landowners were satisfied with this enactment. Therefore, when Tahir demanded that every Mohammedan and Christian householder should pay 44 piasters both to the Bosnian Mosques and the Khorbeg, in addition and that the legal tithe was to be paid on all holdings, the Mohammedans in Krajina rose in revolt and besieged the fortress of Bihac. The rising was secretly favoured by "Ali Pasha Rivanbegovic, the then Visier of Herzegovina, and soon spread over almost the whole of Bosnia till the Serbs' "Omar Pasha defeated the rebels in the winter of 1850-1851. In the spring of 1851 he had "Ali Pasha Rivanbegovic arrested in Buna (near Mostar) and led away, a prisoner. It was given out that "Ali Pasha had been accidentally shot while being taken away. Some of the remaining prisoners were executed, some banished and the ancient political institutions reorganised. The residence of the Visier was moved from Travnik to Sarajevo again, and the power of the Bosnian aristocracy broken. Parallel with the unrest among the Mohammedans of Bosnia, discontent developed among the Christians who complained that the reforms promised in 1839 and 1850 by the Khatiji Humayun had not been carried out. In some districts the Christian peasants rose against the Mohammedan landlords and the Turks took harsh measures in reprisal, numerous Bosnian Christians fled to Austria and besought the government at
Vieina to intervene (1888). They also presented to the Turkish Ambassadour, a petition to the Sultan, in which they asked to be protected against their landlords. The Pope sent a commission to Bosnia to settle the point in dispute. In 1859, the ordinance of the 14th Sfar 1276 A. H. (17th September 1839) regarding the Bosnia-Herzegovina Cattelina came into force, which regulated the payments of the knjizi to their landlords and other rights and obligations on both sides. The enforcement of the decree of Sfar was defective however and gave cause for new disputes. In spring 1875 a rising of Christians took place in Herzegovina, which proved fatal to Turkey and spread into Bosnia also among the Servian Orthodox Christians and really only came to an end on the occupation of the two provinces by Austria-Hungary as a result of the Berlin Congress of 1878. The last Wiff of Bosnia was Ahmad-Mah Pasha (1878).

On the 5th October 1868, the annexation of Bosnia and Herzegovina was proposed and the European powers and finally Turkey also agreed. On this day, the Emperor Franz Josef I published through his Foreign Minister, Count von Ahrenthal, an autograph letter in which he extended the rights of his suzerainty to Bosnia and Herzegovina and declared that the order of succession in the ruling house was to apply to these lands also.

III. LEGISLATION.

In the proclamations issued on the advance of the Austra-Hungarian troops into Bosnia and Herzegovina it was announced that the old laws were to remain in force as far as they were not abrogated by new ones. The first thing necessary therefore on the occupation was to collect the Turkish laws then in operation and translate them. These were published in the Collection of Laws and Ordinances of Bosnia and Herzegovina in 1878-1880 and dealt with various branches of law—particularly the land laws, the various kinds of landed property and its conveyance, commercial law and the commercial and Sharia courts etc.

Till the proclamation of the new constitution in 1910, legislative power in Bosnia and Herzegovina was vested in the Crown and the right of bringing in bills proposing legislation to the Provincial Government of it. By the new constitution a Parliament (Zabor) has been summoned to co-operate in the legislation of the country. The Parliament consists of 60 elected members and 26 elected deputies. The ex-officio members are: the Ra’s al-ulamal, the director of the [Wakf-Muattof], the Muftis of Sarajevo and Mostar and in addition, the Mufti who has held his office longest, the four Orthodox Servian Metropolitan and the Vic-President of the Grand Administrative and Educational Council of the Orthodox Servian Church, the Roman Catholic Arch Bishop and two Roman Catholic Diocesan Bishops and the two Provincial of the Franciscan Order. The Sephardic Chief Rabbi, the President of the Chamber of Advocates, the Mayor of the capital, Sarajevo, and the President of the Chamber of Commerce and Industry in Sarajevo. The number of elected members and deputies is 72. The period of office of the members of Parliament is fixed at five years. A resolution is only valid if more than half the members are present and those present must be absolutely unanimous.

For a resolution which concerns legislation in religious matters, the presence of at least four fifths of all members and a majority of at least two thirds of those present is required. All bills within the province of the Parliament require the approval of the government of Austria and Hungary before being brought into the House. Bills approved by the Parliament have to be approved by both states of the monarchy and require the sanction of the Crown. The sphere of legislation of the Parliament of Bosnia and Hungary is confined exclusively to denominational matters. A provincial council of nine of its members is chosen by the Parliament to represent its interests and give utterance to its wishes in such public matters as Bosnia and Herzegovina is interested in. Each denomination in Parliament elects representatives to the provincial council in proportion to its numbers in the country.

The most important matters, that fall to be dealt with by the Parliament are: the settlement of the annual Budgets, the borrowing of new loans and the conversion of those already existing; the sale or mortgage of the property of the state; criminal law; civil law with the proviso that the application of Sharia' law in dealings of Musulmans with one another or regarding marriages, inheritances, or family affairs, shall be guaranteed; sanitation; industrial conditions; matters affecting the general prosperity of the people; educational matters relative to all educational institutions; religious questions, concerning the relations of the denominations to one another or to the government in so far as the enjoyment of equal rights, the internal organization and the public exercise of worship, of the several denominations recognized by law is not interfered with; agrarian laws; the introduction of new taxes and the increasing of those existing or the making of special additions to a tax already being levied; the building of railways, for which proposals are made by the government, the making of roads, ways and other means of communication; the organization of the communities; the examination and approval of accounts etc. The estimates of the provincial income and expenditure have to be placed before Parliament annually and to be approved early by the provincial government, and Parliament must proceed, without delay to discuss them so that they may be passed before the beginning of the next year. If the estimates are not dealt with punctually by Parliament the Budget of the coming year remains in force until the new one is passed in the statutory fashion to replace it.

The members of Parliament are elected by the people on a denominational basis. All male citizens of Bosnia and Herzegovina, over 24 years of age, who have had a fixed abode in the country for at least a year, are entitled to vote, as also are similarly qualified citizens of Austria-Hungary who are engaged in the Civil Service of Bosnia and Herzegovina as civil servants or teachers. All males over 30 years of age, who are similarly qualified to vote, and are in full enjoyment of civil rights, are eligible for election to Parliament, with the exception of officials in the Civil Service of Bosnia and Herzegovina, officials and employees on active service on the national railways and also teachers and other officials in the public schools. The electorate is divided into Curtas. Of the 72 deputies to be elected, 18 are allotted to the first Curta, 20 to
The second and 34 to the third. Within the first Curia, and in the second and third Curias taken together, the senators are divided into the numbers of the three chief denominations of the population, so that in the first Curia the Catholics have four seats, the Muslims 6, the Servian Orthodox Church 8, and in the second and third Curias, the Catholics have 12, the Muslims 18, the Servian Orthodox Church 23. In addition the Jews in the second Curia have one seat. In the first Curia the following are eligible to the first class of voters: all Muhammadan landowners who pay a land tax of at least 340 Kr. (£5—16—8). Landowners of other denominations, who pay a tax of not less than 140 Kr. are allowed to vote either in this class or in the division of the second class into which they would fall by their religion; 9 in the second class of voters: all persons who pay not less than 500 Kr. (£21—6—8) in direct taxes excluding licenses; persons who have completed their studies in all High Schools and other similar educational institutes within the Austro-Hungarian monarchy; the clergy of all denominations recognized by the law; all officials and teachers whether active or pensioned in the Civil Service of Bosnia and Hercegovina as well as officials on the railway or other state-owned enterprises and military officers on the retired list. The Second Curia consists of all inhabitants of towns who are not already in the First Curia. Eligible voters living in the country and not in the first Curia form the Third Curia. In the election of representatives of the first class of voters in the First Curia, the whole country forms one Muhammadan electoral district, while for the election of representatives of the second class of voters in the First Curia, the whole country forms an electoral district for each of the two religions. Each voter in the First Curia has to vote for as many candidates as there are seats allotted to the electoral district he is voting in. The election of representatives of the Second and Third Curias, the whole land is divided into denominational electoral districts each of which elects a deputy. Each voter is entitled to vote for candidates in another Curia than that to which he himself belongs. The members of those denominations which are too small to have a separate seat allotted to them, e.g. the Protestants, are entitled to vote at the elections in one of the denominational electoral bodies of the Curia according to the particular Curia to which they belong.

The first centennial opening of the Parliament took place on the 15th June 1910 in Sarajevo. The new provincial constitution has in the first session of Parliament answered: the expectations placed on it in a most satisfactory manner and proved a most useful instrument for the harmonious co-operation of the people and the government in the administration of the country. The new Parliament has already instituted, within the brief period for which it has existed, numerous reforms in all branches of public life.

IV. ADMINISTRATION.

Bosnia and Herzegovina form a single province, which, in accordance with the Austrian statute of the 22d February 1850 and article VI of the Hungarian statute of 1860, is under the responsible government and supervision of the common ministry of the Empire and Kingdom. The Common Minister of Finance attends to the above-mentioned classes of business on behalf of the common ministry. The administration of the county and the carrying out and enforcing of the laws is the duty of the provincial government of 9, in Sarajevo, which is under the common ministry and is responsible in it for its administration. The head of the provincial government is in as a rule, a military officer of high rank (the Commandant of an Army Corps or an Army Inspector) who is assisted in the civil administration of the county by the civil Prefect. The provincial government consists of four divisions, viz. the administrative departments and the departments of Justice, Finance and Commerce. At the head of each department is a Chief Secretary. The division of the country is as it was under Turkish rule has been taken over by the new government with a few unimportant alterations. The country is divided into six districts, viz. Banjaluca, Bihac, Mostar, Sarajevo, Travnik and Tuzla. The number of counties is 54. The counties in the district of Banjaluca are: Banjaluca (the town and the county round it forming two separate counties), Dervent, Bosnia Dubica, Bosnian Gra- diška, Bosnian Novi Gradac, Prijedor, Prnjavor and Tuzla; in the district of Bihac: Bihac, Carić, Krupa, Bosnian Petrovac, Sanski Most; in the district of Mostar: Bilećka, Gacko, Konjic, Ljubinje, Ljubuški, Mostar (the town and the country round it forming two separate counties), Nevesinje, Stolac and Trebinje; in the district of Sarajevo: Čajnića, Volča, Vojinica, Rogatica, Sarajevo (the capital Sarajevo has its own organisation) Vilegrad and Visoko; in the district of Travnik: Bugojno, Glamoc, Jajce, Livno, Prozor, Travnik, Vares, Vukovo, Zenica, Vitez and Zupanija; in the district of Tuzla: Bjelasnica, Rečka, Gradac, Gradac, Kladan, Maglaj, Stolac, Tuzla (the town with the industrial area forming one county and the county district another), Vlasenica and Zvornik. The number of civil servants and other officials in the service of Bosnia and Herzegovina was in 1900, 10,044. Of these 3,846 were Austrian, 3,057 Hungarian citizens, 4,024 citizens of foreign states. The estimates approved by the government for 1910 were:

<table>
<thead>
<tr>
<th>Expenditure</th>
<th>5,182,886 Kr. (£214,854)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Income</td>
<td>5,359,370 Kr. (£214,854)</td>
</tr>
</tbody>
</table>

In regard to Public Health it may be noted that in 1909 there were a provincial public hospital in Sarajevo, 9 county and 14 local hospitals, 1 private hospital and 35 dispensaries. Steps have been taken in 34 counties to eradicate the syphilis which is very prevalent among the people. To counteract the dangers to which pilgrims are liable on their journey to Mecca, suitable steps have been taken. In the year 1909-1910 56 individuals made the pilgrimage.

V. RELIGION.

Before the Austrian occupation Ijuš in as a denomination did not have a particular organisation in Bosnia and Herzegovina any more than in the other districts of Turkey. The Orthodox Servi, who were officially considered to be part of the Greek Church, and Jews (Sephardites) were regarded as Milites. The Greek Catholic and the Evangelical Church only appeared after the
The organisation of the Evangelical Church in the country is at present being carried out. The Serv. Orth. Church was reorganised in 1905 and was granted permission to regulate and govern its ecclesiastical and educational affairs independently and free from state supervision, provided the laws of the country were not infringed. There is a special statute of the same year defining the work and sphere of influence of the autonomous Serv. Orth. Church in ecclesiastical and educational matters.

The Muslims had, as early as 1881, expressed the wish to have a head of their own (Ra's al-'ulama'), who, supported by a committee of men learned in the law, could govern their religious affairs. In 1882 this wish was granted and the committee mentioned, consisting of the Ra's as President and four other members, was constituted. In 1883 a provisional Wafk Commission was appointed, whose duty it was to ascertain details of all Wafks in the land, to control their expenditure and to carry out new regulations regarding the administration of the Wafks. In 1884, provisional Wafk commissions were instituted in all the districts; these were preceded over by the Kaif of the district and had to enquire what Wafk property existed, to look after mosques and Wafk buildings and particularly to supervise the trusteeship, management and officials, to lay their accounts before the Provincial Wafk Commission, and to carry out the directions of the latter. In 1894 the Wafk administration was reorganised. In place of the provisional Wafk Commission, a Provincial Wafk Commission, a deliberative and administrative body, and a Provincial Wafk Board as an executive body were introduced. The Provincial Wafk Commission is composed of the President, Inspector (Mu'amir), Secretary (Kadi), four members of the Mudjifti Council, and two prominent Muhammadians from each of the six districts of the country, who hold office for 3 years and are nominated by the ministry. The Provincial Wafk Board consists of the President of the Provincial Wafk Commission, the Inspector, Secretary and the necessary clerical staff and accounts department.

This was the state of affairs till 1909, when the Muhammadians received the right which had already been granted to the Servian Orthodox Church in 1905, of managing their religious affairs themselves. The main provisions of the Statute are as follows: The duties of the Wafk-Ma'arif committee of management are: the foundation and maintenance of mosques and other Muhammadian buildings, religious, educational or charitable; the education and payment of the required number of clergy and teachers; the education of the Muhammadian youth in the belief and spirit of Islam; and as far as possible the propagation and consolidation of a knowledge of their religion among the Muhammadians. The administrative machinery of the Wafk-Ma'arif consists of the Djamat (djamats); the Djamat Councils; the district council; the Provincial Assembly and the Committee of the Provincial Assembly. There are also certain specially elected bodies, the district assemblies and the county committees. All the above mentioned bodies are elected by the Muhammadians in accordance with the provisions of the Statute. The autonomous Wafk-Ma'arif and religious authorities discharge all business falling within their province according to the provisions of the statute absolutely, so that there is no appeal to the civil courts against the decisions of these boards so long as they are not contrary to the common law of the land. In case the law should be broken by a legal decision of one of these autonomous boards, the government has only the right to annul the decision and to refer the matter to the autonomous board concerned for reconsideration with a view to coming to a new decision.

The provincial government may demand that the 'Ulamâ-Mudjifl, the provincial assembly and its committee shall give particulars of its own proceedings and of the managing body of the Wafk-Ma'arif and these committees are bound to supply the desired information.

All the Muhammadians in a community with at least 100 Muhammadian members form a Wafk-Ma'arif District. The Djamaat-Mudjifl is elected for 3 years. The representatives of all the djamats in a district form the district assembly. The work of the district commission consists mainly in acquiring information on all the movable and immovable property of the Wafk-Ma'arif, the supervision of the religious and educational Wafk-Ma'arif buildings; supervising the work of the Mawsaxis and schools, as well as of all individuals in the district, who are paid out of the funds of the Wafk-Ma'arif; seeing that the curriculum of the Medreses, Mektebs and other Wafk-Ma'arif institutions is properly carried out; and making a report to the Mufti, the 'Ulamâ-Mudjifl or to the political officials in cases where it comes to the knowledge of the commission that the curriculum for instruction in the Muhammadian religion is not being adhered to in public schools or institutions.

The Wafk-Ma'arif Provincial Assembly is the chief autonomous governing and supervising body for all the Wafk-Ma'arif property in Bosnia and Herzegovina. Its meeting place is in the capital Sarajevo. Its members are the Ra's al-'Ulamâ, the Muftis of Banjaluka, Bihâr, Most, Travnik, Tuzla and Sarajevo, the Wafk-Ma'arif Director and finally 24 members elected by the district commissions. The statutory President of the national assembly is the Ra's al-'Ulamâ, while the Vice-President is elected by the members themselves from their number. The special duties of the Provincial Assembly are the supervision of all that is done by the various branches of the Wafk-Ma'arif and of all the officials of the Wafk-Ma'arif and their subordinates; deciding on the erection of mosques, medreses, mektebs and the foundations connected with them; deciding on the erection of educational and charitable institutions of all sorts and on the purchase, exchange or bequeathing of all the movable or immovable property of the Wafk-Ma'arif, as far as it is in accordance with Shari'at law; the settlement of the annual estimates for the individual Wafks and the funds of the Central Wafk Ma'arif; the alteration of existing and the passing of new regulations regarding the management and supervision of the property of the Wafk-Ma'arif.

The committee of the Provincial Assembly is its governing and executive body. It consists of the Wafk-Ma'arif Director who is president, the Mufti of Sarajevo and six other members elected from its midst by the Assembly. The committee of the National Assembly is particularly concerned
with the routine business of the Wa'f K-Ma'arif property, the supervision and direction of the activities of the district commissions; the supervision of individual Wa'fs as regards the management of their property and the fulfillment of the object for which they were founded; the collecting of the revenues of the Wa'fs-Ma'arif and the application of them in accordance with the decisions of the Provincial Assembly; the approval of the foundation of Wa'fs for pious or useful purposes and the acceptance of presents and legacies; the appointment of Mutawallis and other administrative officials of the Wa'f-Ma'arif; the appointment of secular teachers at the Wa'f-Ma'arif schools, of officials and servants at the district commissions, the exercise of disciplinary authority over these individuals; the making of proposals to the 'Ulama-Madzlis, regarding the appointment of educational or ecclesiastical officials paid out of Wa'f-Ma'arif funds.

Each independent Wa'f is managed by a Muttawall, appointed by the committee, according to their rules and usage. The Muttawall represents the Wa'f managed by him before a court or other authority.

The resources of the Central Wa'f-Ma'arif consist of the moveable and immovable property which has been collected in the past in the National Wa'f Fund or may be accumulated in the future. The objects of the Central Wa'f Fund is the defrayal of all the expenses of administration of the machinery of the Wa'f-Ma'arif the settlement of the expenses of maintenance and of the public contributions to the Wa'f Funds; the granting of subsidies for the repair and building of mosques, the maintenance of the staff of mosques, religious institutions and schools for which there are no or only insufficient Wa'fs etc.

The 'Ulama-Madzlis, which has its seat in Sarajevo, is entrusted with the supreme direction of the Mahomedan ecclesiastical affairs in Bosnia and Herzegovina. The 'Ulama-Madzlis consists of: the Ra's al-'Ulama as president and four members. The Ra's al-'Ulama and the members of the 'Ulama-Madzlis are appointed by a separate Curia at a secret sitting. This Curia is composed of 30 persons of the rank of Khodja, the Muftis of Sarajevo, Banjaluka, Mostar, Trebinje, Trebinje, Zenica, and 24 elected members. The King-Emperor appoints as Ra's al-'Ulama one of three candidates who are selected by the Curia. When there is a vacancy in the membership of the 'Ulama-Madzlis the Imperial and Royal Common Ministry appoints one of two candidates selected by the Curia. The Curia applies to the Shahih al-Islam in Constantinople to grant powers to take up the religious duties of his office to the individual appointed Ra's al-'Ulama by the King-Emperor. This request is transmitted to the Shahih al-Islam through the Royal and Imperial Embassy in Constantinople. The 'Ulama-Madzlis is empowered to govern, super- vise and direct all the affairs of Islam; to note any necessity for building mosques or other religious buildings such as Mektebs, Medresses and other denominational charitable institutions and to lay proposals with regard to them before the administrative of the Wa'f-Ma'arif; to see that the laws of Islam are not broken in the Muslim denominational schools, nor in the public schools and institutions as well as generally; to co-operate with the 'Ulama-Madzlis, Provincial Commission to prepare a curriculum for all the education in the Medresses and Mektebs as well as for the religious instruction in the other institutions of the Wa'f-Ma'arif; to define the course of Mahomedan religious instruction in the state and denominational schools and institutions in co-operation with the provincial government; to appoint the Medresses and other religious and educational officials of the Wa'f-Ma'arif on the proposal of the committee of the Assembly; to choose instructors in the Muslim religion in the state schools and other public institutions and to lay their appointments before the Provincial Government for confirmation; to examine candidates for the office of Shahih al-Islam and in the Wa'f educational institutions and issue certificates to them; to propose candidates for vacancies in the office of Mufti to the Provincial Government. The Ra's al-'Ulama has the following special privileges: the appointment of Muftis to the Shahih al-Islam; the appointment of Imams and Khatibs; the supervision of the Shahih Law College in Sarajevo. The 'Ulama-Madzlis is bound to supply to the Shahih al-Islam in Constantinople for a decision of doubtful or contested points of dogmatism or Shariah Law. The documents containing the question to be settled have to be conveyed through diplomatic channels on behalf of the Provincial Government and the reply comes by the same route.

In the chief town of each district of it there is a Mufti. The Muftis are appointed by the Provincial Government on the nomination of the 'Ulama-Madzlis. For this purpose the 'Ulama-Madzlis proposes the names of two candidates for the vacancy, who possess the requisite qualifications. The Government appoints one of them Mufti. The main duties of the Mufti are as follows; to issue fatwahs when necessary, to visit the mosques and other places of worship to see that the curriculum, proposed by the 'Ulama-Madzlis for Muslim religious instruction in the state and denominational schools and institutions, is adhered to; to preside at the examination of the pupils in the Medresses etc.

The Provincial Government is empowered to erect and maintain institutions in Bosnia and Herzegovina for the advancement of education in the religion of Islam in co-operation with the 'Ulama-Madzlis. The most important Wa'f-Ma'arif schools are the Mektebs and the Medresses. The Provincial Assembly may also found other institutions for the education of the Mahomedan youth but the approval of the Provincial Government is necessary. Secular education in all Wa'f-Ma'arif schools can only be imparted by teachers qualified for the purpose. The Mektebs are elementary schools for instruction in the Muslim religion. Education is free. The curriculum comprises the interpretation of religious subjects and the time-table for the Mektebs are all planned by the 'Ulama-Madzlis. Every Muslim is bound to send his children to a Mekteb, the boys before they are eight and the girls before they are seven years old. The Medresses are more advanced schools for religious instruction and their aim is to educate a sufficient number of Khodjas for the religious requirements of the country. These institutes are under the supreme direction and supervision of the 'Ulama-Madzlis. The subjects of instruction in the Medresses are taught by Madrerrissi, who are appointed by the 'Ulama-
Majlis on the proposal of the committee of the Provincial Assembly. The Provincial Assembly has the permanent right to collect a tax for religious purposes to defray all the expenses of public worship and the maintenance of the Waqf-Ma'asif and is allowed to cover the requirements of education and religion generally. This tax is levied and collected as a percentage in addition on all direct taxes. For the first ten years during which the statute was in force, the amount of this tax was fixed at 10% of all direct taxes. The total Waqf budget of 1909 showed on expenditure of 761,114 Rs. (£ 27,713) and an income 768,877 Rs. (£ 32,011), giving a credit balance of 7,103 Rs. (£ 2,95). The movable and immovable Waqf property was estimated in the same year at 9,931,661 Rs. (£ 413,792). The number of individual Waqf was 1,530.

VI. EDUCATION.
The Turkish act of the year 1285 A. H. (1869) which however was never put into force did not suit the altered conditions in Bosnia and Herzegovina after the occupation and sweeping reforms were introduced in the educational system by the new government.

In the year 1909 there were 434 elementary schools in Bosnia and Herzegovina of which 389 were undenominational, 134 denominational and 11 private with a total attendance of 38,950 pupils. To make allowance for the peculiar social and religious requirements of the Mussalmans, special elementary schools (Küçük-i Yerlik) were instituted in the capitals of the six districts of the country and also in Brčka, which is the chief town of a county. These schools have the same educational objects and curriculum as the ordinary elementary schools except that Arabic and Turkish are additional subjects taught in them. Attention was also devoted as far as possible to the education of Muslim girls.

The largest institution of this kind is the Muḥāmada girls' School in Sarajevo, which is supported by the state, which has four elementary classes and a three years' course of secondary instruction, the object of which is to prepare Muslim girls for the preparatory classes in elementary schools. In 1909 there were also in Bosnia and Herzegovina, 9 commercial-schools, 1 military-boarders-school for boys, the object of which is to prepare native boys for entrance to the military academies; 3 undenominational and 7 denominational girls schools; 2 industrial schools, 12 industrial continuation courses, 1 technical school, 1 school of forestry, 1 training college for male teachers and denominational training college for women teachers, 3 public gymnasias, 2 denominational gymnasias, 1 Franciscan seminary and 2 State realcolleges.

In all these institutions provision has been made for religious instruction by appointing teachers of all denominations. Muslim pupils at the gymnasiums study Arabic instead of Greek. The educational institutions supported by the Muslim community are the Mektabs, the Madresas and the Dār al-Mu'allsims in Sarajevo. Before Muslim children go to the undenominational elementary schools, they have as a rule to attend the Mektabs where they receive their first religious instruction. Other subjects are rarely taught in the Mektabs. As the methods of the Küçük-i Yerlik in these Mektabs produced but poor results, a movement was set on foot in the winter of the Waqf Commission with the support of the government to reform the Mektabs. In 1909 there were nearly 1000 of the old-fashioned Mektabs (Küçük-i Yerlik) of which 83 were for boys and 9 for girls.

The Madresas in Bosnia and Herzegovina are organised on the same lines as those in Turkey and need to be reformed. In 1909 there were 44 with 1613 pupils (29%). The best known are the Küçük-i Yerlik and Küçük-i Yerlik in Sarajevo which are supported by the Ghazi Eshwarbeg Waji. The Dār al-Mu'allsims, founded in 1883 in Sarajevo, provides a kind of supplementary course to the Madresa and gives the scholars in addition to the subjects of the Madresa, which are mainly Turkish and Arabic, instruction in the mother tongue as well as in such useful subjects as history, geography, arithmetic and pedagogy, and qualifies them for posts as teachers (mu'allim) in the Mektabs or as teachers in the Madresa.

The course lasts three years. In the session 1900-1901, 66 students attended the Dār al-Mu'allsims.

In the Şar'ıat Law College in Sarajevo founded in 1887 which is supported by the state and the main object of which is to educate suitable candidates for posts in the şar'ıat courts, the Muḥāmada have an institute which supplies one of the requirements of Islam. Admission to this college is obtained by nomination from the Ka'a al-Ulamā' through the government. In the session 1908-1909 the college was attended by 28 students of whom 25 lived in the college and received full board and clothing. The course of instruction lasts for five years. The curriculum includes the following subjects: Arabic, Logic (manṭiq), Muṣannaf maḥṣuriyya, akhīdha, Şar'ıat Law (şari'ah), muḥārīb, ṭarīqah, muḥāsib, al-muğābala, European jurisprudence, the vernacular, mathematics, geography, history, and Arabic calligraphy. In the year 1908-1909 there were 9 teachers on the staff of the College.

The National Museum in Sarajevo which was founded in 1885 and taken over by the government in 1888, may also be classed with the educational institutions of the country. Its literary section is the: Giornale romano della Bosnia e Erzegovina, which has appeared quarterly since 1889. A selection of the articles published in it are issued annually in a German version under the title: "Wissenschaftliche Mitteilungen aus B. und H."

35 newspapers appeared in 1909, which may be classed according to their political or religious tendencies as 5 Croat, 6 Servian, 13 non-party, 4 Muḥāmada, 4 Roman Catholic and 2 Servian Orthodox.

The Muḥāmada of Bosnia and Herzegovina, who before the occupation shared the intellectual life of Turkey and wrote in Arabic and Turkish are now using their Servian vernacular more and more for literary as well as scientific purposes. They usually write in the Latin alphabet. Of late years, particularly among the Küçük-i Yerlik, a movement has arisen to write at least literary works of a religious nature with a Servian text in Arabic characters. The Arabic alphabet has therefore been adapted to the requirements of the Servian language. The organ of the National Society of Mu'allsims and Imāms in Sarajevo, the Mu'allsim, appears in this form.
The right of having their subjects tried by their respective consuls, which had been obtained from the Turkish government by various countries, was abolished in 1878-1881, with the approval of the government concerned, not only as regards Austria Hungary but also for the other countries. After the occupation, the administration of the courts was adjusted to the organization of the government authorities. In Sarajevo there is a High Court which is the chief court of the country; there are district courts at the headquarters of each district and county courts in the chief towns of each county. In addition there are county courts in some of the more important towns.

The Şarraf courts, which have been incorporated in the above mentioned courts are organized on special lines. The county Şarraf court consists of the Şarraf judge (kâdi), a Muhammedan who has been educated for this profession and who has graduated from the Şarraf Law College in Sarajevo (see above); he also has the assistants and clerical staff assigned to him. The Şarraf High Court consists of the President of the High Court, two judges of the High Court and two Şarraf chief magistrates. The sphere of jurisdiction of the Şarraf Courts was defined by the Government of Bosnia and Herzegovina in 1883. They are to deal specially with: a) questions arising out of the Muhammedan law of marriage, when both husband and wife are Muhammedans, whether the question is one of the property or of any other point; b) disputes, concerning the Muhammedan law of parent and child; they have also to deal with the Muhammedan law of inheritance and the division of estates in so far as they consist of the class of property known as "Milkam".

The Şarraf court deals with the first class of cases by itself but, with the second in a joint court. Before coming to a decision, the High Court may ask the opinion of the Ulama-Magjitis on any point, which requires further elucidation. As regards the decisions of the Şarraf courts, a clause is attached to them by the Şarraf court stating that the sentence is to be carried out, but the actual enforcement is done through the medium of the ordinary courts.

In 1906, 26273 lawsuits were dealt with by the Şarraf courts and 17,457 transactions regarding inheritances, 7312 marriages were registered and 519 divorces granted. The payment of the judges of the Şarraf court is on the same scale as that of other officials of the same rank.

Regarding the criminal statistics it may be noted that the number of individual sentences for crimes or misdemeanors was 3572, of whom 2532 were Muhammedans, 1504 Orthodox Greeks, 517 Catholics, 10 Jews and 9 belonging to other faiths.

VIII. Finance

According to the Austrian and Hungarian acts of 1850 the administration of Bosnia and Herzegovina is to be so arranged that the expenses of government be met out of the revenues of the country itself. The Budget of Bosnia and Herzegovina shows a great increase since the occupation, proportionate to the development of the means of communication and the improvement in economic conditions generally. The first Budget of the civil government in 1878 showed an income of 9,531,000 K. (£ 588,560) and an expenditure of 8,942,324 K. (£ 674,399) giving a surplus of 588,676 K. (£ 43,161). In the year 1890 the expenditure was 19,375,358 K. (£ 1,360,952) which included £ 43,161. According to the estimates for the year 1910, the total expenditure was estimated at 74,551,900 K. (£ 5,095,132) and the income at £ 74,371,600 K. (£ 5,090,017) yielding a surplus of £ 121,999 K. (£ 5,185).

IX. Economic Statistics

As soon after the occupation as orderly conditions were restored in the country the government took various measures to improve the condition of the country particularly with regard to agriculture.

The yields of various products for the year 1907-1909:

The ground available for agriculture is either the freehold property of the landowner or certain rights of the peasant (knez) are attached to it. The knez's holding (knezica), so long as he is able to cultivate it properly, must remain in his tenure. In other matters the landlord can deal with the holding as he pleases. The knez has to pay the landlord a certain portion of the produce annually in kind. There are government provisions for the eviction of the knez when he neglects to cultivate his holding. The relation between the landlord and tenant was defined by the Ottoman decree of the 14th Safar 1276 (18 September 1859) which has been retained in force by the Austro-Hungarian government. The knez may buy his Çiftlik by agreement with the ground.
landlord and thus become owner of it. From 1879 to the end of 1909, 26,321 knets’ holdings had been purchased by their occupiers at a cost of 20,259,574 K. (£ 843,318).

The richness of Bosnia in minerals was famous even in ancient times. At the present day the mining of salt, coal and iron has attained great importance. The value of these products in 1909 was 50,392,500 K. (£ 2,145,902).

The total area under forests in Bosnia and Herzegovina is 4,374,287 acres of which 48,945 acres are Wälder forests. The latter belong for the most part to the Črni Koraljević Wäld in Sarajevo.

The total length of railway line in Bosnia and Herzegovina is 1,686 miles, of which 743 are broad gauge and 345 narrow gauge. The length of the high roads was in 1909, 1,132 miles and of the district roads 1,556 miles.

The imports of fat stock and draught animals were 31,053 head in 1909 and the exports 26,940.

The remaining trade amounts to 17,970,000 metric hundredweights of which 7,75% were imports and 77,39% exports.

BOSPORUS. [See Map, p. 737.]

BOSRA (Bostra), at the present day also called Elk-Sjehm (Old Damascus), the centre of a Nāḥiya, is a wretched village in Hawrān, with imposing ruins recalling its past splendour. The archaeological value of the town can first be fully realised if we put it in the context of the Umayyad period (1 A.M. v. 29) and in the period following it, as much more frequently mentioned and in Roman times under the name Novi Trajana Bostra it was expanded and fortified; after Diocletian it was the capital of the province of Arabia. It does not seem to have belonged to the Ghassânids but to have been ruled directly by the Byzantines. In the year 613 or 614 it was destroyed, like Alḥiriq [q.v., p. 135] by the Persians and never afterwards regained its former greatness. According to the legend, Muḥammad visited Bosra as a boy with his uncle Abū Talib; and was recognised as a future prophet by Bālūqī [q.v., p. 576 et seq.] a monk, who lived there. At a later period in his career, he sent a messenger, who kindled the way to the Sāhib al-Khalīfa, probably the Governor, Bosra was the first town in Syria to be captured by the Arabs, for it surrendered to Khalid in 634 and promised to pay Jizyah. Under Arab rule it retained its importance as the chief town in the district of Hawrān. In the year 906 it suffered much at the hands of the Karmātians and Kalbites led by Abū Ghānim, as did the whole of the northern part of the country east of Jordan. During the period of the Crusades, the treacherous commander handed over the town to Balduin III., but Nikorai, the ChristianCommander of Bosra from taking possession of it. Salāḥ al-Dīn and his successors fortified it strongly, so that the Christians were unable to take it at a later period. After the Mongols had laid it waste, like other Syrian fortresses, it was rebuilt by Bābār after his victory in 1260. It remained the capital of an administrative district under Damasci during the Mālikī period. Most of the ruins date from Roman times (see above), the latter ones belong to the Ayyubid period. The once splendid Dīrijn al-Arus is rapidly falling into ruins.

Abū 'l-Fidāʿ describes Bosra as a very old town inhabited by the Banū Fākhr and Mura, the houses in which (as at other places in Hawrān) were built of black stone which was also used for the roofs; he also mentions the mosque, the fortress, which reminded him of Damascus, and the market, held there. Muṣṭafāzī mentions the viniculture of Bosra, which is also referred to by Nābigha (27, 9) and speaks with admiration of the monastic there, traditionally connected with Bābār, for which special taxes were annually collected by order of the Sultan.

BOSTAN (Ar. baṣrān, "place of perfumes") properly a "garden of sweet-smelling flowers," also means "orchard." As a loanword it appears in Turkish with the meaning of "vegetable-garden," in which melons, water-melons and vegetables are grown; in Arabic (plur. bāṣārūn) its meaning varies in different districts; in Bairût, for example, bāṣārūn means a piece of ground (Cainch) planted with mulberry trees and surrounded by a hedge, in Algeria it means also "cypress" (Boumsdji). — Bostan is also the title of a Persian didactic poem by Saʿādī, English translation by Forbes Falconer (Selections, London, 1838); German, (metrical) by Graf (Saβādāt u.Buṣān, Jena, 1860) and by Schlechter-Waschbrenn (Vienna, 1854) and French by Barbier de Meynard (Paris, 1850).

(CL. HuAkt.)
the palaces of Adriano and Constantiopla; their dress consisted of a long red hood dress (kōrā) peculiar to the corps, red jacket and blue trousers. The third, the grenadier regiment, wore a red jacket and blue trousers for the second, green dolman and blue trousers for the third. In their capacity as guards of the garden they were divided into nine sections, distinguished by the colour of their girdles. Like the Janissaries, they were recruited from the 'adžami ağbani [q.v., p. 140]. They were also privileged to row the barges of the Sultan and all the palace ships when they walked abroad. Mağtaği III built a place of worship for them in the Sarai and founded near it a library for the use of the officers of the corps.

BOSTANLI-BĀSHI, chief of the gardeners, a high official in the Sultan’s palace in Constantinople under the old régime, who commanded the bastiments. Under him were the kāşikı-aga, his representative and chief of the kāşikı (subordinate officers chosen from the bastündği and serving as a bodyguard), the uğha-bēkülâşı, the lieutenant-colonel, the taş-fıqı-bashi, inspector of the forests under the care of the bastündği-bâşı, the kāşikı-bashi, who collected the duties earmarked for this office and the revenues of the Imperial estates, the bastündği-aga-bâšı, his agent with the government, who lived in the palace of the Grand Vizier, the uğha-bâşı, the intermediary between the Sultan and his Vizier, and the uğha-bēkülâşı, who watched for fires from the tower of the palace of the Aga of the Janissaries and had to report immediately to the Sultan any dangerous outbreaks of fire. The bastündği-bâšı had to inspect the shores of the Bosporus and the Sea of Marmora from the Black Sea to the Dardanelles. His permission was necessary to build or repair a house or building of any kind, and for this he charged arbitrary and exorbitant dues. When the Sultan went for a trip by water, it was he who held the rudder of the imperial barges and also supervised the executions of high rank when these took place in the palace; he also had charge of the Ferâís prison (so called because it was near the bakery), where torture was inflicted on officials to make them confess their crimes or give up property which had been confiscated. As Inspector-General of the waters and forests around the town, he had charge of the hunting and fishing, and through his agents controlled the trade in wine and lime. The Governor of Adriano, who commanded a body of 1500 bastündği-bâšı bore the same title.

BOUZI, a town on the coast of Africa (Department Constantine), Long 6° 5’ o’ (Greenwich), Lat. 30° 49’ N., Population in 1906: 5,528.

The town is built in an amphitheatre formed by the outermost spurs of the Djebel Gîrîya (2000 feet) around a bay, well sheltered from the winds from the open sea by high cliffs. The temperature is extremely hot in summer and very cold in winter and as the rainfall is very abundant, the vegetation is luxuriant (olives, holm-oaks, cork-trees etc.).

Of the history of Bougie for the first three centuries after the Mahommedan invasion we know very little. We do not even know what period the Roman town of Sallae disappeared, which once occupied the site of the present town. It appears probable that the anchorage never ceased to be frequented by ships and that there was always a town of some importance at the foot of the Djebel Gîrîya. Al-Bakri (Description de l’Afrique, transl. de Sianc, p. 192) actually describes Bougie as a very ancient town inhabited by the Andaluni tribe, which was probably in- habitable for wintering in. According to Ibn Khallîf (Hist. des Beréres, transl. de Sianc, ii, p. 51) the site of the town was formerly inhabited by a Berber tribe called Benjîya or according to the native pronunciation, Benjîya, in Kabyleen Bouzîth. Bougie did not however begin to play any important part in the history of Barbary till the time of the Hammadid dynasty [see Quatremou] when the Sultan of Kaifa, threatened by the invasions of the Hilîlî Arabs, decided to move towards the coast. In 453 a. H. (1062-1063 a. D) al-Nâṣîr b. A’lâmûn, the fourth in succession from Hammud took possession of the hill of Bougie and built a town to which he gave the name of al-Nâṣîriya, but which the natives continued to call Benjîya. He soon attracted a large population thither, by exempting all the new inhabitants from taxes and also, the story goes, by forcing all his subjects to build a house there and making every one who entered it bring a stone or pay a piece of gold. In 461 (1068-1069) he himself settled there, built a palace, the Kaṣr al-Lurîa ("Castle of Pearls"), a mole, an arsenal, aqueducts and a wall flanked with bastions around the town. He soon succeeded, al-Mamûn, transferred the capital of his kingdom from Kaifa to Bougie in 483 (1090-1091). He built the Kaṣr Amînûth, erected a mosque adorned with a minaret sixty cubits high, and a façade with 17 porticoes and finally constructed an aqueduct to bring to the town the waters of the Djebel Tûghia. Bougie thus became one of the most prosperous towns of the Maghrîb. It was divided into 21 quarters and contained 72 mosques. Travellers praised its wealth, magnificence and commercial activity. "Bougie" wrote Idriši, "is the capital of the Banû Hammûd. Ships unload there; caravans come to it by land and it is a depot for merchandise. Its inhabitants are rich and have more skill in various arts and trades than those of other towns so that commerce is in a flourishing condition. The merchants of this town trade with those of western Africa as well as with those of the Saharan and the east; merchandise of all sorts may be found warehoused here. Around the town are cultivated plains on which grow wheat, oats and fruit in abundance. The surrounding mountains and valleys are well wooded and produce resin and tar of excellent quality so that large ships for war are built here". (Idriši, transl. de Googe and Doughty, p. 106.) The inhabitants work the iron mines which yield very good ore. To sum up, the town is a busy centre of industry. Learning was held in honour as well as the pursuit of industry and commerce. The historian al-Ghâbirî, himself a native of Bougie, gives the biographies of 140 personages illustrious for their knowledge or piety who lived in this town in the 11th century A. D. Among them may be
mentioned the Fāshīda 'Omār b. Yahya l-Ḥusaynī, 'Abd al-Ḥaṣîb b. Rāḥs and 'Abd al-Ḥaṣîb b. 'Omār al-Kāfī; the historians 'Abd Allāh b. Mūhammad b. Isḥāq, Mūhammad b. Aḥmad b. 'Abd al-Mu[qīn, Mūhammad b. 'Abd al-Ḥaṣîb b. Rāḥs, Mūhammad b. 'Abd Allāh b. 'Abd al-Ḥaṣîb, the physicians Aḥmad b. Khaḍīj, Mūhammad b. Aḥmad al-Ummawī, Abū l-'Abbās Aḥmad, a Persian by birth who settled in Bougie after travelling in China, India and Armenia, Taḥtāl al-Dīn of Muṣāl, 'Abd al-Ḥaṣîb b. 'Abd Allāh b. 'Abd al-Ḥaṣîb, the poet Ibn Fāshīda, who has preserved in the annals of a journey to Morocco and his rival, the poetess 'Aṭīa, the daughter of the Fāshīda l-Ḥusaynī. Ibn Tūsīn appeared in Bougie as a preacher in the reign of 'Abd al-Ḥaṣîb and ʿUmar Abū Mālik taught there for many years [see Ibn Tūsīn, and ʿAbd al-Mu[qīn, p. 985].

The prosperity of Bougie survived the fall of the Hamīmids and continued under the Almoravids. ʿAbd al-Mu[qīn [q. v.] took possession of the town in 546 (1152), dethroned the Sultan Yahyā and replaced him by one of his sons. Bougie then became the capital of a province, the administration of which was in the hands of a prince of the ruling house. Occupied in 1153 by Ibn Ghaṭniya [see Almoravids], Bougie was soon reoccupied by the Almoravids. ʿAbd al-Ḥaṣîb ʿAzāzī had made himself independent in the era in 629 (1228) it passed into the power of the Fāshīdas [q. v.] following the example of the Almoravids, Abū Zakartya gave the government of the town to his eldest son. During the latter half of the 12th century and the two following centuries the history of Bougie was an exciting one. On several occasions the Almohads (1160, 1209; 1210; 1218; 1264-1265) the Fāshīda government threw off the suzerainty of the Sultan of Tunis and made Bougie the capital of an independent state, which covered the greater part of the present province of Constantine. They also had to repel the attacks of the ʿAbdallāhidids of Tiemcen and the Marinids of Fez [see Tahk al-ʿAlaʾi, Rijālīyya and Marinids]. The former besieged Bougie in 1218, 1226, 1240, 1316 and 1388-1390. To gain their end and to blockade the town moreover, they established themselves permanently at Temzemed, in the valley of the Summam.— The Marinids were more fortunate and succeeded in taking the town. Abū l-Ḥasan entered it without striking a blow in 1347 and the Marinid ruler lasted till 1301. In this year the Fāshīda again succeeded in forcing the town to recognise their authority. Bougie again became the capital of a principality administered by a son of the Sultan of Tunis, and like Constantine formed a sort of appanage for the prince of the royal house. Harmony did not long reign between the governments of Constantine and Bougie; their constant wars bayed Algeria in blood throughout the 14th and during the early years of the 15th century.

In spite of this Bougie and Constantine together to the present day continue to play an important part in the economic life of Northern Africa. The Hamīmids had always been on friendly terms with the Christian states, particularly with Rome and the Italian republics. Al-Nāṣir had even signed a treaty with the Pisans authorising them to come to trade in his dominions. The Almoravids followed the same policy, renewed al-Nāṣir's treaty with Pisa and granted similar concessions to Genoa and Muraslilla. Under the Fāshīdas the harbour of Bougie (mentioned in western texts in the forms Bogia, Bogia, Bougac and Butunque) was regularly visited by Catalans, Provençals and Venetians. Christian merchants had ʿajamiya there and came to buy wool, oil, hides and wax. This state of affairs was however changed at the end of the 13th and beginning of the 14th century, in consequence of the revival of piracy, which had never really disappeared. The inhabitants of Bougie soon took their place among the corsairs most dreaded by Christian sailors.

When the Spaniards had decided to occupy the principal places of the Barbary coast, they meant to take Bougie also from the Hamīmids. Pedro Navarro seized the place in January 1509. The fortifications were strengthened but the town was sacked and the Hammudid palaces, which were still standing, destroyed. Attacked in 1515 by the corsair ʿAbd Allāh [q. v.], the Spaniards were able to hold out and retained the town till 1555. Their rule nevertheless was always precarious. Continually blacked through by the Kābiyya, the garrison never could receive sufficient reinforcements of men, munitions or provisions from Spain. The walls were falling into ruins when the Beylerbeysi Sulṭān Rāḥs laid siege to the town. In six days he was able to take possession of the defenses of the town and forced the governor, Don Alonso de Peralta to capitulate (16th September 1555). On his return to Spain, Peralta was tried by court-martial, condemned to death and beheaded.

After thus gaining Bougie, the Turks held it for 188 years. They placed a garrison there but were never able to appease the hostility of the Kābiyya of the neighbourhood or to restore the town to its past prosperity. In the 16th-century Bougie never had more than 500 or 600 inhabitants, exclusive of its garrison of 168 Janissaries.

On hearing of the capture of Algiers by the French in 1830, the Kābiyya drove the Turkish garrison out of Bougie and seized the town. The French government, after first trying to set up a chief chosen by it here, decided to take possession of the town, and when this was refused, the town was occupied by another Power. An expedition, finally, sent out from Toulon, disembarked a body of troops commanded by General Trézel in September 1833. After much fighting and bloodshed (30th September—12th October), he remained master of the town. The situation of the French, constantly harassed by the Kābiyya was for a long time very critical, and on several occasions it was thought they would have to evacuate the town, the occupation of which did not appear to be worth the trouble. It was not till the conquest of Kābiyya (1847—1857) that the safety of the town was assured. Since that date, the exploitation of the town, the sale of abounding mineral deposits in this region, as well as the construction of roads and railways connecting Bougie with Great Kābiyya, have considerably increased the prosperity of Bougie.

BOZANT, the Badmandun (or Barbadun, Baddandun) of the Arab geographers and the Greek Todanos, the name of a river and a town of great strategic importance situated on it, at the dark all-from, the Pylai Clisiana, south of Lathia (Lamia). The place had an early tradition, because the 'Abdun Caliph, al-Mal'mun (318 = 853?) died suddenly there on a campaign against the Greeks after incunabulously drinking cold water. He was buried in 'Arabi at the Gate of Badmandun. The modern Bosant is a wretched village with 500 inhabitants.

BRAHUL [See BULGIOB, p. 327]

BROACH. [See BHARAH, p. 710]

BRUSA, Turkish Bursa, the ancient Pharsa, is situated in 26° 40' East Long. and 40° 31' N. Lat. at the foot of Olympus (Kastoria). The number of inhabitants in 1907 was 60,151, a railway connects the town with the harbour of Mudania. The principal occupation of the population is the rearing of silk-worms, and butины, olive-oil, opium and fruit are also exported. Near the town and the village of Cekirge, some distance off, are the well known and much frequented warm sulphur and chalybeate baths. Among the sights of the town are the mosques built by the early Ottoman Suljans, i.e. the 'Abdun Mosque built by Muhammad I, the Ulom, the mosque of 'Aldar with its painted walls, the Suljans and the Yildirm Mosque. Brusa first attained importance for the history of Islam, after its conquest by Orkhan, son of 'Othman in 726 (1326). — He made it his residence and after his time it remained the capital and imperial residence till the conquest of Constantinople. Brusa is now the capital of the Wilayet of Kavdramdik.

BEGGARRA or, according to the modern pronunciation, BAGGARE, one of the most ancient villages in northern Lebanon. In the Arab geographies the district of Baghara usually means the name 'Abdul Baghria or Baghara, which has preserved to the present day; under the Mannls, the district belonged to the Nijehna of Tripoli and appears always to have been governed by Christian Manuals. Near Bajara grow the famous cedar of Lebanon, which are nowhere mentioned by Muhammadan writers. The great market town of Bajara (3000 inhabitants) belongs to the Kaimakmual of Barra. The whole district is Mareet.

BETDUDDIN (abbreviated from BET IT-EL DIN), a small town in Lebanon with about 400 inhabitants not far from Darr al-Kamar, from which it is separated by a deep ravine. About 1812 the Emir Bashir Shihabi [q. v.] began to build a residence here with courts and gardens planned on a splendid scale. It is now used as the summer residence of the governor of Lebanon. Besides the Sarai there are several other palaces in Betduddin, in one of which the Kaimakmul of Baghara resides for a time. The place consists mainly of government buildings and the houses of officials with a few shops and hotels. For administrative purposes, it belongs to the district of Darr al-Kamar, which, although situated in the centre of Baghara, does not form part of it, but is administered directly by the governor.

BÜ, [See ANU, p. 733]

BUTh, a place near Medinah famous for the battle fought there between the related tribes of the Ans and Khalid, some years before the Migration of Muhammad and his adherents to that town. It belonged to the Jewish tribe of Karsija, and according to Samhili, was two miles east (to be more accurate, quarter of a mile) above a cornfield called Kastuq. A few incidental mentions of the place in the traditions help to locate it more accurately, Muhammad's men, who slew Ka'b b. Azrah, went past the Bani Karsija, thence past Buth, and thus reached Harrar al-'Ura'il and from there went to Buth al-Gharbel to the east of the town. At the attack on the Karsija, Khowall b. Dibalid slipped past the 'Abd al-Ashilah, and Zunrah and the three past Buth and thus came up to the Karsija. The battle, which was the climax of a series of petty fights, at first went against the Ansites but ended in the total defeat of the Karsijites. It gave rise to a number of songs which became very popular.

BUCAK is the Turkish name of the steppe, which forms the southern part of the Russian province of Bessarabia, roughly equivalent to the cicle of Akerman and is sometimes used as a name for the whole of Bessarabia. This district passed under Turkish rule during the reign of Mustapha II, in 1685 (1484) and was not finally ceded to Russia till the treaty of Bucharest in 1812, although it had been several times previously occupied by the Russians during the wars with Turkey. On the Tauris-Tatar elements in the population see the article AGASSI.

BUCHAREST, Turkish BUCUREŞTI, the capital of Roumania [see p. 182] The Peace between Russia and Turkey was signed here on the 28th May 1812, by which the Pruth to its confluence with the Danube and Thracian and the left bank of the latter to its entrance to the Black Sea became the frontier.

BUDAIL, n. WANGI, chief of the Bani Khuzay's, a tribe living near Mecca, who served Muhammad in his march to Khaibar and the enterprises of the Koranah and after the agreement at Hudaydah (6-626) were his allies. Budail appears for the first time in the camp at Hudaydah to tell Muhammad that the Meccans were armed to resist him. On his return he carried the Prophet's offer to Mecca, where he had a star. The Bani Khuzay's fled thither during their war with the Banu Bakr, when the Koranah took the side of the latter, their clients, against the former. This was a breach of the treaty of Hudaydah, by which the Bani Khuzay's had been recognised as allies of Muhammad and thus gave him an opportunity to attack his native town. Budail hurried to Medina to make an arrangement with Muhammad and on the way met Abi Sufyan (q. v., p. 107) who was on the way to Medina on a similar errand. Apparently they both came to an arrangement with Muhammad in Medina regarding the terms of a peaceful surrender of Mecca for which they offered their services. Muhammad advanced against Mecca at the head of 10,000 men under the pretence of avenging the Bani Khuzay's. On the day before his arrival in Marr al-Sebêtre (the middle of Kamaqan S.3rd beginning of June 630) Budail went out with Abi Sufyan to reconnoiters. If the two had not been friendly to Budail himself he might have persuaded both to leave the camp, to go with him at such a critical moment. After they entered the Prophet's tent, they are both said to have paid him homage and adopted Islam. The conversion of Budail cannot have taken place earlier, because he is mentioned among the enlistees of the conquest (rābi'a) of Mecca. It was granted him that his house in Mecca, should be recognised as a place of asylum for the belligerents. After the capitulation of Mecca, Budail accompanied Muhammad with his adherents to Huma. He was not present at the siege of Taif because he had to guard the booty taken at Husnain in the camp of Dāiratun. He is not again mentioned and must have died before the Prophet, i.e. between the years 629 and 630.

BUDALA (L.), Plur. of Budul, s. above under ABOUL.

BUDAN, Bâbâ, the eponymous saint of the Bâbâ Budan monastery, the loftiest range on the Mysore table-land, bounded in by the rivers Cauvery between 13° 25' and 13° 35' N. lat. and 75° 31' and 75° 52' E. long. Bâbâ Budan is said to have introduced the cultivation of coffee into India, in the 17th century, on his return from a pilgrimage to Mecca. His tomb is located by the Muhammadan in a cave, which the Hindus, on the other hand, venerate as the place into which the sage Vatsayana vanished and out of which he is expected to re-appear as a prophetic sign of the last Avatara of Vishnu; the spot is thus a place of pilgrimage for the adherents of both creeds.

BUDEPEST, the capital and chief town of Hungary, which arose in 1272 through the union of the towns of Buda (Budin, Budan) and Pest, is only of importance in the history of Islam, as in an earlier period, when the town of Buda (Budin, Budan) was under Turkish rule (1541-1686). Sulaiman entered Buda on the 10th Sept. 1526, after his victory at the battle of Mohara and three years later the fortress was occupied by him. The Emperor Ferdinand's attempts to regain the town (1530 and 1540) failed and provoked a third campaign into Hungary, Sulaiman then appointed a Pasha governor of Buda and by various other means endeavoured to make the town quite Muhammadan. In the years 1598 and 1602, the town was unsuccessfully besieged by the Archduke Matthias and again in 1654 by the Duke of Lorraine who was finally able to take the town in 1686. The only relic of the Muhammadan occupation is the tomb of the saint Gâhâbâ (q.), which is still occasionally visited by Turkish pilgrims.

BUDD. The word Budd or Budda is used with various meanings. It is applied either to a pugda, or to a sage, a wise man, not necessarily a figure of Buddha. The word means for example in a passage in the Al'Falâ al-Hind (Les Marveilles de l'Orient, ed. and translated by Marcel Deville, p. 3), where it is said that a town in the island of Ceylon possesses six hundred large Budd. This meaning is the rarest.

Budd or Budda sometimes means Buddha in authors like Masudi, al-Biruni and Shahristani. For example, Masudi, speaking of the temple in Multan known as the "House of Gold," says that in it the Indians preserve their archives from the date of the coming of the first Buddha amongst them, i.e. 12,000 times 36,000 years ago (Kitâb al-Tanbih, Livre de l'Antiquité, tr. by C. De Vaux, p. 201; cf. al-Biruni, India, transl. Sachau, i. 368; ii. 181); Al-Biruni, though possessing such a good knowledge of the history of Buddhism, does not say anything of the origin of Buddhism. The reverse holds true of Shahristani whose article on Buddhism is of some interest. This writer defines a buddha as a person in this world, who is not born, does not marry, neither eats nor drinks and never grows old or dies; this definition evidently refers to innumera
or living Buddhas. Shahrastāni (ed. Curzon, p. 416) refers indirectly to the doctrine of successive Buddhas for he says that "the first Buddha" appeared five thousand years before the Hijra; he was called the "Arab-i-buzrug" and was the son of Sakyanami. This historian knows well of the Bodhisattvas; the next rank to that of the Buddha, he tells us, is that of the Būdha, i.e. of the men who seek the path of truth. He explains that this is attained by patience, renunciation of the world, abstention from desire, sympathy with others, practising ten virtues, which are all virtues of gentleness and among ten virtues of which the chief are: the slaughter of any thing that has life, fornication, lying, slander, and calumny. The Buddhists appear in various forms; the Buddhists assume the eternity of the world and believe in the retribution of acts in another life. This is almost all that Muhammadan scholars know of Buddhism; Shahrastāni thinks that this religion flourished in India because of the climate of the country and the large number of ascetics it had.

The Arabs give the name of Budisp to the mythical founder of the religion of the Sabaeans. In the reign of Taimurid and Taimurids, Bidasip is said to have proclaimed this religion to the Persians who were previously known as the Sunnite, i.e. pagans. The name of Bidasip, a corruption of Bīdīs, is found in Roman (Buddhāstān, xviil); its origin is not known. From Bidsip it is said to be derived from Buddha but rather from Bodhiyana (cf. Avadā, trans. J. Darmesteter, ii. 259 and iii. p. xvii: Masū'di, Kitāb al-Tanbīh, transl. de Vaux, p. 130).

The name Buddha is often also used in the sense of idol; thus the author of the Composition of Wonders says that "the most prominent feature of the religion of the people of India is the worship of Buddha." The Sīrāj al-Tanbīh (p. 134-135) gives the name Budisa or Budisa to an idol worshipped in a country in India to which courtiers are dedicated; the word budisa has been explained by janma, idol. The idol of Somnath, the capital of Lārātān was well known to Muhammadan India. It is of that Būdha tells in his Bābānī (transl. by Hašīb de Muyard, p. 354), that heessenger to the king, in the act of pulling the string, with which he worked the arms of the statue. The story is, however, evidently fictitious. Duquislet (Cosmographie, ed. Mehren, p. 170-171) describes in detail the idol of Somnath; it evidently belonged to a Shi'a sect; he gives the name of budisas to the principal object of worship which consisted of two stones representing the male and female organs of generation; this object was adorned with precious stones and placed on a pedestal, large enough for ten men to stand on. The pedestal itself was placed on the top of a pyramid with nine steps, covered with idols in human forms, very hot dishes were offered to these divinities and the vapours rising from them were thought to nourish the spirits of the fetish and those of the idols that surrounded it as well as as the souls of the dead (cf. also what Reinaud says of the idol of Mārtān in the Journal Asiatique, 1844 and 1845. (B. Carka de Vaux.)

BUDINJORD, a town in Köhrāstān, formerly called Bunaindaj, to the north of Elliwit in the valley of the Atrek at the foot of Nakhshir-kūl on the north and of the All-i-Dagh and Schlik on the south; it has about 4000 houses. A citadel, in which the governor resides rises above the town. A boulevard planted with trees (Khārijāt) leads in a straight line from the gate of the citadel to the farthest end of the town, which before the Russian occupation, was exposed to the inroads of the Tukh Tartarians.

Bibliography: Naṣir al-Dīn Shāh, Seyyedhān-nāma-i Khwāsān, p. 348. (M. Husayn.)

BUDH is an artificial talismanic word formed from the elements of the simple three-fold magic square:

<table>
<thead>
<tr>
<th>4</th>
<th>9</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
<td>7</td>
</tr>
<tr>
<td>8</td>
<td>1</td>
<td>6</td>
</tr>
</tbody>
</table>

expressed in Abjad by

Other groups of letters from that square are similarly, but not so generally, used, e.g. ب، ث، ج، د، ح، خ، ز، ق، ض، و، ع، ی, and together ب، ج، د، ح، خ، ز، ق، ض، و، ع، ی. From some, also, larger squares are built up, as a four-fold on ب، ج، د، ح، خ، ز، ق، ض، و، ع، ی, and a six-fold on ب، ج، د، ح، خ، ز، ق، ض، و، ع، ی. In the older Arabic books on magic (e.g. el-Shāb, d. A. H. 622, Shams al-madīr) this formula plays a comparatively minor part, but after it was taken up by al-Ghazālī and cited in his Mushālīf (pp. 46 and 59 of ed. of Cairo, 1503) as an inexpressible, but certain, assistance in cases of difficulty, it came to be universally known as the three-fold talisman, or seal, or table of al-Ghazālī (al-mufrad, al-abarām, al-jawā'id, al-muṣṭafā'ī) and finally becomes the foundation and starting point for the whole "Science of Letters" (ilm al-ḥurūf). Al-Ghazālī is said to have developed the formula, under divine inspiration (i'lāhī), from the combinations of letters (khabbād), and حمصف and which begin Sūras xix. and xlii. of the Korān, and which by themselves are also used as talismani (Relnaud, Monumens musulânes, ii. 236). For the process see the 5th and 7th sigs. of Maṣ'ūdī al-khâ'it (Cairo, 1537) by Abūl Ḥasan al-Zarkaf, a contemporary Egyptian magician, and on the subject in general, the sixth and seventh Khāsānī in that volume. Others trace the formula back to Adam, from whom it passed down to al-Ghazālī (Al-'ilmīya al-rābhābīya p. 44, and Al-muttâlīr al-rābībāyīr p. 16, both by Yūnāf Muḥammad al-Hindi, a contemporary Egyptian writer on magic, who also has a special treatise on this wujûf which I have not seen). In all this al-Ghazālī's established reputation as a custodian of mystical knowledge and especially the book Al-Dījr, evidently played a part (Journ. Am. Or. Soc., 1933 p. 113; Goldsmid, Ibn Tumart, pp. 15 et seq. Again). Another suggested origin is the Arameo-Persian name of the planet and goddess Venus, Belebn, bāb (G. Hoffmann, Auszüge aus syrischen Abhak persischem Mysteriern, p. 123 et seq.).

Budjak (baddak) G. Hoffmann, Auszüge aus syrischen Abhak persischem Mysteriern, p. 123 et seq. But though this name appears in the Fireh (i. 311, 7) with magical and diabolic associations and is quoted without connection with the Zabara (e.g. Maktur in his Khatib, 1. p. 8 of ed. of 1324; Thulthi in his Khatib, p. 29 of ed. of 1314 — both with misprints) it appears to be totally unknown in magical or Uijan literature. Yet the name evidently passed early into South Arabic, became used there as a feminine proper name and as a feminine epithet, fat, 1
and was confused with the root َبُجُرُ (Budh, m. p. 484) sub َبُجُرُ. Other standing in Arabic it does not have. Further, when Budh is associated with a particular planet, it is with Saturn (Zubal) and its metal is lead (Masfar, above, p. 170), not copper as Vanni would require. Hardly worthy of mention is Von Hammer's fancy that Budh is one of the names of Allah (Journ. As., 1830, p. 72) though it may have a Turkish basin (and see, too, de Sacy below), and the derivation he suggests or the story told by Michel Schabhb to de Sacy (Mem. Acad. 1788, p. 58) that it was the name of a pious merchant whose packages and letters never went astray, though that may well be a popular Syrian explanation. In magical books there are few cases even of personifying the word (e.g. Ya Budh in Al-fath alf-munadin by Abi Dahn. Saf'ud, p. 31) but for the popular mind Budh has become a Djinni whose services can be secured by writing his name either in letters or numbers (Journ. As., Ser. 4, xli. 321 et seq.; Spiri, Vocabulary of Celia, Egyptian, p. 36); Dotte, Magie et Religion, p. 296, with Kafyoun as though a name of Allah; Kleininger, Upper Egypt, p. 387). The uses of this word are most various, to invoke both good and bad fortune. Thus, in Dotte (op. cit.), against meningiagia (p. 234), against pains in the stomach (p. 229), to render one's self invisible (p. 275), against temporary impotence (p. 295). Lane's Cairo magician also used it with his ink mirror (Modern Egyptians, ch. xii), and so in several magical treatises. It is also engraved upon jewels and metal plates or rings which are carried as permanent talismans, and it is inscribed at the beginning of books (like Zad al-Qudr as a preservative, e.g. in Fath al-Din, Tunis, 1290). But by far the most common use is the arrival of letters and packages. Besides the references above, see also Reinhard, Monumens musulman, ii. pp. 243 et seq., 251 et seq. and 256.

(D. B. MACDONALD.)

BUGHRA, in Eastern Turket means a dromedary (cf. Bughra), generally a male one; it was also the name of several rulers in Central Asia (cf. Bughar the Tartar Khan). It is named as a kind of pasty called in Ottoman Turkish "adım pakshi" (Persian ragout) and turac "kurti" (pasty).

Bibliography: Sulaiman-Efendi, Lughat-i Bughhati, p. 82; Vambérys, Cogitations Spruchstudien, p. 245; Favey de Courville, Dictionnaires tur-oriental, p. 172; [Mirza Habib], Grammaire à l'Usage des Forces d'Abi Is'ak Habibi, p. 175. (Cl. HOUGHTON)

BUGHRA-KHAN, the name of several rulers of the Turkoman dynasty of Ilk Khan or Karajhinds (in Central Asia). The most famous are:

1. Satrik-Bughra-Khan 'Abd al-Karim (s. 896) is said to have been the first member of this dynasty to adopt Islam and propagate it in his kingdom. He is said to have been the son of Shahak (so Shahak is to be emended) Kara-Khakhan by Ibn al-Kudr (cf. Treiberg, 34). We have no reliable information either regarding his reign in general or his conversion unless the account given by Ibn al-Alfar (viii. 396) of the adoption of Islam by a numerous Turk people in 349 (960) refers to the subjects of this prince. According to Djamali al-Kursah (in Barthold, Türkistan w eptits moegelbige

magarevye, l. 130) he was dead by 344 = 955-956; his tomb at Artuk (the modern Artik) near Khalghar is still a place of pilgrimage. The account of his life known as the Tahrir-i Bughra-Khan, which has been edited by F. Green (Journ. Asiat., 16th Series, xv. et seq.) is certainly legendary. Some portions of the saga are to be found in the oldest document that has survived to us, in Djamali al-Kursah, and others have been added at later periods; it cannot be proved that there is any real historic basis for these traditions.

2. Bughra-Khan Hüyün b. Mür (in the Al-Aftr, ix. 68; Hürān b. Salimān), grandson of the preceding, the first of this dynasty to conquer Mā wara-nahr. The power of the Sāmānids had been shaken by internal disturbances during the reign of Nuh ib. Mānṣūr (385-387 = 977-989); when the conqueror set out from his capital of Balāsghān it was not until 394 that he arrived in the frontier town of the Sāmānids kingdom on the northwest, he met with no great opposition anywhere. The nobles, who were hostilely disposed to the Sāmānids, are said to have called in the Turki themselves; Bughra-Khan was able to enter Turkestan, the capital of the Sāmānids in Rabi' 1, 382 = 7th May-8th June 992, but soon afterwards he became very ill through overindulgence in fruit and had to vacate the conquered land again. By the middle of Dhimād 11. of the same year, on a Wednesday (the 17th August) Nuh returned to his capital; Bughra-Khan died on the way to Kā współghar in Kassar-bagh, perhaps not far from the source of the Ču, which is still called Kōsār, Ibn al-Alfar (ix. 68 et seq.) who could not find any exact details in his chief authority, the Ta'rikh-i Yomādi of Uht, makes Bughra-Khan the first conqueror. Kūbārā in 383 (993-994) but this statement is definitely disproved by the accounts of Gardzī (in Barthold, Türkistan etc. i. 12) and Bāhāk (ed. Morley, p. 234) which are quite in agreement.

3. Bughra-Khan Muḥammad b. Yūsuf, grandson of the preceding. In the lifetime of his father Kadr-Khan Yūsuf, who ruled in Kāsūkht, he bore the title of Dār al-Kāim (or Bank). After the death of his elder brother Arsalān-Khan Salisīmān, he received the title of Bughra-Khan and was granted Turkā, (the modern Ālāwī-Aṭa) and Jafūkā. Both as prince and ruler, he entertained relations with the Ghāznavids and hoped with their help to drive his opponent 'All Tegīn (q. v., p. 297) out of Mā wara-nahr; this plan was never carried out; nor was his marriage with Zainah, daughter of Sulṭān Mahmuð and sister of Sulṭān Mas'ūd, ever celebrated, although the prince himself came to Balkh in 416 (1025) in the reign of Mahmuď to fetch his bride (cf. Bahāk, ed. Morley, p. 655 et seq.). When the consummation of this alliance was again postponed in the reign of Mas'ūd, Bughra-Khan made an alliance with the Ghāznavids, and not only of the Ghāznavids but also of his own brother Arsalān-Khan; Abu Śālik Tabāhī, the Irtam sent by Mas'ūd, who left Ghāzan in the 7th Dzin 1-Kudr 428 = 25th August 1037 and spent 18 months in the land of the Turks, succeeded in appeasing Bughra-Khan, however, and in reconciling him to his brother. During these years coins were struck in the name of Bughra-
Khan even in Mā ṭariq al-Nahr from which it may be concluded that his rule was recognized there also. According to Ibn al-Āthir (ix. 358), he put down a Mā ṭariq al-Nahr, with great severity, Shī'ite emissaries had at that time been successfully winning adherents for the Fātimid Mustaḥqīr (457–487 = 1065–1094); Baghār Khān himself made a pretence of being in sympathy with the heretics but it was only to deceive them; when they believed they were safe from all danger through the protection of the Khan, the order was suddenly issued to destroy all heretics in the provinces as well as in the capital. Ibn al-Āthir (ix. 211) makes Baghār Khān reign only till 439 = 1047–1048, Bahaqā (p. 250) who as a contemporary, is naturally the more reliable, till 449 = 1057–1058. According to both sources (the text of the MSS. of the Taʾrīkh-ī Bahāqā is here, as the Persian lithographed edition of 1307 = 1889–1890, p. 193 rightly remarks, hopelessly corrupt) he had driven his brother out of his kingdom and occupied it shortly before his death. According to Ibn al-Āthir, Baghār Khān was poisoned by his wife, who also had his imprisoned elder brother strangled.

4. Baghār Khān, prince of Kāshgar, to whom Vainal Khatrā Khudābād of Bahrāṣṭān dedicated his Bahrāṣṭān-Bīlih in 462 = 1065–1069. He was probably Baghār Khān Hūsa, according to Ibn al-Āthir (ix. 312 et seq.), a brother of the preceding. This Baghār Khān is said to have reigned for 16 years as joint-ruler with his brother Tughrul Karn-Khan, and afterwards for 29 years alone over Kāshgar, Khotan and Bahrāṣṭān; the date 462 = 1065–1069 is given as the year of his death. The notices in Ibn al-Āthir (v. 312 et seq.) of the "Khān of Kāshgar" who submitted to Suffolk Malik-Shah in 482 (1019) must refer to him; the same author tells us of the wars between this Khān his brothers Yāḥīb-Tegin (prince of Atbaḵā) and a third prince Tughrul but gives no information, regarding the ultimate result of these wars.

BUHAI (See Boleh.)

BUHAIRO (al-Buhairī) is the name of the north-western province of Egypt. It comprises the whole territory west of the Rosetta Arm of the Nile. It is bounded on the north by the sea and on the south by the hills at the south-east end of the Wadī Natrun which separate it from the province of Dīra 30° 25' n. B. In 1894, the population was 691,295 persons and the province is divided into the following seven districts (Marāḵēn): Abū Hamam, Mā ṭariq Khān, Damānhār, Kufr al-Dawâr, al-Najafī, al-Ragī, and Eyyā (pronounced Teb) al-Bāriḍ. These districts comprise 365 towns and villages and 2582 smaller settlements. Alexandria has its own government and is not included in the province.

The province of Buhaira has existed since the division of Egypt into provinces by the Fātimid Caliph al-Mustaṣḥir. It corresponds roughly to the ancient Šawwāli (Ghurāb) which was divided into eleven circles (kāra) down to the rearrangement of the provinces by Mustaṣḥir. One of these circles, mentioned by Ragī ʿl, was called al-Buhaira. Kalkashendi supposed that this moniker refers to the "Sea of Buhaira". This suggestion is incorrect in so far as the name Buhaira might have been applied to the whole province from one of the large lakes in the north which periodically dry up. Buḥairā, however, may also be regarded as a diminutive of baḥara, according to Lane, "a wide tract of land, low or depressed land". For a while in the middle ages, Buḥairā was of much greater extent, for the district of Fawwa which now belongs to Gharbiya then belonged to it. Since the division into provinces, Damānhār has been the capital of Buḥairā. Ibn Lūṭfīn gives the amount of taxes at which it was rated at 740,245½ diners and the number of the districts (raʾīs) 222.

AL-BUHAIRO AL-MUNTINAH, "the Shinking Sea", is the Dead Sea, s. RAJAH LIV, p. 582.

BUHULĪ, AL-MADJĀN, ABBU MUḤAMMAD, b. AMEŠ."Al-Mutikī al-Muṣaffā, al-Kūfī was one of the 'abād al-madjaḥīna, "intelligent madmen", a contemporary of Hūrin al-Ragī (d. 193) and the source of many edifying and pious anecdotes and parietic verses. His name, Buḥulī, had in his time no association with al-Qūr (the see of the books (Ṣabh, Ṣamānī, Līdān, xii. 77, Lane p. 2670) give it the meanings "great laugher", "one who is generous or noble", "a chief combining all good qualities", "a generous tribe" and in Ibn Taghrībirdī's Annals (l. 513, 697; l. 185), for example, we find it borne by eminently sane and responsible men who in 185, 253 and 298. That one of those who died in 195, the year which Ibn Taghrībirdī gives for Buḥulī al-Madjaḥīna's death, was Buḥulī al-Ragī, may explain the present tradition (Ibn Tarih, l. 518, Vellers in Zeitschr. der Deutschen Morgenl. Ges., xxxii. 115, for present day Cairene popular legend) connecting our Buḥulī with al-Sahīf, the semi-legendary son of Hūrin al-Ragī (Chaunin, Bibl., ar. vi. 193 and references there). An early reference to Buḥulī is in the Kitāb 'abād al-madjaḥīna (Berlin Codex, vi. p. 316, No. 8328) by al-Husayn b. Muḥammad al-Naisabūrī (d. 406) although he may be mentioned also in the similar work (Derenbourg, Revue, No. 482, Brockelmann, i. 154), by Muḥammad al-Nisayyīn. Ibn Burān states that in 587 in his Maʾālik Shamsāt al-Miṣrī (Cairo Cat., v. 7) he "eins altbekanntes Personlichkeits". Ibn al-Ṭawās (d. 597) tells that in 188 Hūrin al-Ragī was met at Kūfah by Buḥulī, who, inspired by him from the Prophet, and refused a reward (Ameen in Journal of the R. A. Soc., 1907, p. 35), there are also anecdotes of Buḥulī in his Māhī, pp. 180 et seq. of ed. of 1277. Ibn Taghrībirdī (d. 870 or 874) gives a longer account, based on Buḥulī's (d. 748). Buḥulī's insanity was intermittent; essentially resembling that of ʿAbdūn al-Madjaḥīn, Shāfī′s Tabaqāt, p. 54 of ed. of 1316), his language was good, and quick-witted stories came down from him. Dāhahād said that he narrated traditions from Amr b. Ummūr, ʿĀṣim b. Buhairsa and Aiman b. Naʿīl; but: as a traditionalist he was neither accepted nor rejected, and students did not write down anything which he gave. He lived through
the whole realm of al-Rashid, whom he used to
exhort and whose gifts he rejected. She'swāt (d. 972)
gives, in his Ṣafākhūt (p. 54), an account of such an
interview and exhortation. In Yādī's (d. 768)
Rasaf al-Mā'ṣūmīn there are two anecdotes (pp. 33
and 45 of ed. of 1315) of a Bulhūl, but one of
them describes a conversation with Shibli who
died in 354. Shibli meets him riding on a cane
with a Cait (a horse) and asks him if he remembers
himself before Allāh. The conversation is similar
to those above. The second is an interview at
Baṣra reported by Bulhūl himself, with a pious boy,
descendant of ʿAbd al-Majīd, who is described as
being different in that the exhorting is done by the
boy.

His grave was shown to Nizāhur at Baṣra
where he is described in an inscription dated 501,
as the sahib of the madghābihs (saints attached
to Allāh) and the dawūl sahib (pious ascetics).
To Nizāhur he was called Bahhahāl-dinān,
"wise fool," and was described as a relative of
al-Rashid and as his court fool. Stories of his
wit and acumen were told in the coffee-houses,
and he had evidently been transformed entirely
from the pious idiot of the earlier legend (Bīārī,
ii. 253; see also 1315). The extreme of this last development of the legend
is reached when Bahhahāl became the hero of erotic
stories, as in the Rasaf al-Maṣūmīn of Nafzūfī
(ii. at Tanū 3v cent.: p. 14 of Cairo ed. and
p. 9 of ed. of 1315), which makes Bahhahāl a
contemporary of Maṣūmīn. See, too, the stories
in Miṣṣīṣī's Mawārub, Dīrābīdān, pp. vii,
and 73—
85. From the above it is plain that Ibn Khallīn's
(A. 808) distinction of bahhahāl (bahhāl),
idiots whose reason (fāzi) alone failed, but whose
logos sahibī (saint) was still intact and who
were, therefore, capable of sahibī, and the
insane (madghābi) in whom the logos was
ruined, was quite late, after bahhāl had be-
come a common noun (Fasōlī, ed. Quatremère,
ii. 201 et seq.; de Slane's trans. i. 239 et seq.,
and Macdonald, Relig. Attīs. in Islam, p. 103).
So Ibn Ḫāṣīרח (d. 779) had one of his very minor
kharīmatī with a bahhāl (ii. 89). The later and
modern development of this, especially in the
Maghrīb, can be read at length in E. Deuté's
Les Maraboutes, pp. 75 et seq., where it should
be noticed that the bahhāl are characterized by great
bursts of laughter. There are also bahhahāl. This
curious persistence of the original meaning of
bahhāl suggests that the word itself, equally with
the existence of the historical Bahhahāl may have
led to this application. To judge by Redhouse's
Turkish and English Lexicon (p. 416) bahhāl
still means "great laugher" in Turkish. Dory
(Soppū, s. v.) quotes a similar Arabic usage
from Bochot. For references to stories about
Bahhahāl, mostly of the court-foul type, see Cham-
ihān, ii. 139 et seq. The traditions, poems by
him and stories about him are catalogued in
Berlin, Kat. vol. iii. p. 241, No. 54373; vol. vii,
p. 179, No. 8021; p. 253, No. 8193; p. 670,
No. 8784; vol. viii. p. 51, No. 9056; in Cal. of Biblio.
Nat., p. 623, No. 3613. (D. B. Macdonald.)

AL-BUṬṬURĪ, Abū ʿUbdāl al-Walī b. Ṭālib,
Arabic poet and anthropologist of the third
century (204/819, approximately). His name
signifies member of the Bahdhur clan of the tribe
Ṭay, whose glory he frequently celebrates. His
birthplace was Manbūjī (or, according to one
account a village near Manbūjī called Zadrāfah,
and of Manbūjī he often speaks as his home;
here he ultimately acquired property, which seems
to have been inherited by his son Ṭabḥūlī, who
was living there in Ṣafākhūt's time. The woman
who forms the subject of his erotic prologues in
the greater number of cases was one 'Alwa
Biyāṣī of Ḫulb, daughter of Zarāja; in a
poem addressed to al-Fāṭīḥ b. Ṭabḥūlī (i. 44)
he speaks of her "as a friend and friend's friend
and the joy of his heart" whom he had
left behind in Syria; and in another (ii. 109) she
is obviously satirized; there is no doubt that
she is historical, which is probably not the case
with the other women mentioned in the prologues.
What appear to be authentic traditions bring him
into connexion with the other great Ṣafā poet Abū
Ṭabṣūnī, though the accounts of their meeting
are inconsistent; Abū Ṭabṣūnī is said to have
recommended him as ensign of his tribe to the
people of Maʿarrat al-Nuʿmān, who engaged him at a salary of
4,000 dirhems. If this be true, the poems of his
belonging to that period appear not to be included
in the diwan, where "the village of Nuʿmān" is
mentioned in connexion with Ibn Thawīlī (i. 127),
who must have lived in the time of the caliph
later. The earliest poems included in the diwan
appear to be addressed to eminent families belong-
ing to the poet's tribe, the Banū Ḥumayd, three brothers Abū Nahāwī (mentioned in Aghānī,
ix. 102), Abū Mūsā, and Abū Dīrābīr (this last
can scarcely be identical with the victim of Bābāk,
ob. 214), and the family of Abū Saʿd al-Muẓaffar b.
Yūnīf (ob. 236), at whose house he is said to
have met Abū Ṭabṣūnī; a poem in which this
passage is conveyed for the death of Muʿāṣir
(i. 169, probably of the year 227) is perhaps the
earliest in the collection. An early patron of
the poet was the vizier Muḥammad b. ʿAbd al-Malik
b. al-Zayyātī, whom he eulogized in the reign of
Wāthīq (ii. 104). Another family to which he
addressed encomia was that of ʿAbdallāh b. Ṭuhm,
whose son Muḥammad was made vice-rey of
Baṣra in the year 237; a poem which is
perhaps not much later congratulates him on his
appointment (ii. 125); two other sons, Sulaimān
and ʿUthbān Allāh, also form subjects of encomia,
as well as more distant connexion. He appears
to have become court-poet first in the reign of
Muṭawakkil, when he enjoyed the patronage of
al-Fāṭīḥ b. Ṭabḥūlī, to whom his Qanīzu is dedi-
cated; to both he addressed a large number of
encomia, though his relations with al-Fāṭīḥ appear
at times to have been strained. From the year
235, when Muṭawakkil proclaimed his three sons
heirs to the throne, these encomia follow the
events of the reign, such as the Armenian revolt
(237), the Caliph's temporary residence in Damas-
cus (243), his recovery of the Nīṣābūr, and his
building of Muṭawakkiliana (245-246). Māʿṣīh has
preserved a narrative in which Bahdhur records as
an eye-witness the murder of his two patrons;
and indeed he confesses in his dirge on Muṭaw-
akkil (i. 28), that he was present, and excuses
himself for failing to defend his patrons effec-
tively on the ground that he was unarmed; he did
however what he could with his hands. These
two he continues to upbraid to the end of his
life (ii. 163, L. 114). After the catastrophe he retired
to Manbūjī, but speedily came forward with a
eulogy on Muḥtsár, and he continued to officiate as
court-poet under the succeeding Caliphs, Mustaʿsā
Mu'azz, Muhtadi and Mu'tamid. He appears to have been in especial favour with Mu'azz, to whom he addressed numerous odes, and whom he even employed as mediator between himself and 'Abd Allah b. Mu'azz. It would seem that his powers failed before the end of Mu'tamid's reign.

His success as court-poet naturally brought him into connection with all the leading men of the empire, and of the large number of persons mentioned in his odes the greater number are otherwise known. These include statesmen, such as the viziers 'Uthayb b. 'Abd Allah b. 'Abd Allah b. Khokhar, Hasan b. Mughalad, Sulaiman b. Wahh, and Iman b. Bullah; generals and governors, e.g. such as Ibbar and Ahmad sons of al-Mudahhir; Ahmad b. 'Uthman, Malik b. 'Asw, and his brother Muhammad; secretaries of state such as Ibn diqwa, 'Abd Nabi, 'Abd al-Hakim, etc.; the courtiers 'Ali b. al-Munajjadjim and Ibn Hamid; the grammarians al-Mu'arrad; the geographer Ibn Khurshidah; the litterateur Abu 'Abd al-Haitham. His diction thus forms a welcome supplement to the chronicles of the period and is invaluable in shedding light on the manners and customs of the times. Sometimes by giving us the full tastes of these personages, at others by recording events which the historians appear to have overlooked.

The poems addressed to the Caliphs contain numerous references to the controversy between the 'Abbasids and the 'Aliids on the one hand, and the Umayyads on the other; only on one occasion, when a Muslim official had been delivered over to a Christian to torture, does the poet wish with Umayyads days back. Ordinarily he insists, on the claim of the ulema to the succession, on the merits of 'Abbas himself and his privilege of nujub, which the poet seems to interpret quite correctly as the right of obtaining rain (I. 21, 23), the services to Islam of the Persians, whom he calls Musawit, and their equality with the Arabs, and the services of the 'Abbasids to the 'Aliids, which he exalts somewhat in the same style as did Mansur (I. 63). He delights in describing palaces, e.g. the ship-palaces called Zumbar, those built by Mutawakkil, the Dausai of al-Mu'azz, those of Mu'tamid called Maqshuq and Maqshuq, and the ruined 'Ain of the old Persian kings, which he visited in the company of his son Abu Jafar and on which he has an interesting ode (I. 168); somewhat similarly in his description of a warship (I. 257), and the aqueduct constructed for the benefit of the pilgrims by the mother of Mu'azz (I. 146). As might be expected, the battles of Mawafak and his captains with the rebel Zanjids are frequent subjects of allusions.

Like most of his class Buhtur was constantly begging, either for assistance towards his harshad (I. 269, 167, 168), or for help in the matter of his estates (I. 159, ii. 162), or against officials who were attempting to defraud him (I. 153), and complaining that his remuneration was insufficient (I. 257) or that promises made him had not been fulfilled (I. 223). In the Aghzain a singularly ingenious device is explained whereby he racketed money, which was to induce friends to purchase his slave-boy Nazim, and then complain so bitterly of the parting that the purchaser gave him back; a series of poems addressed to 'Abd ithim b. al-Mudahhir illustrate this process (I. 179-181).

Buhtur is said to have given dying injunctions to the effect that his antires should be destroyed, and the author of the Aghzain thinks that the best way may have prevailed; nevertheless a considerable number remain, and it is clear that he employed the common plan of exacting remuneration for his elegies by threatening to mutilate those who refused it; in consequence there are numerous cases in which the diwan contains elegies and satires on the same personage; at other times (e.g. in the case of Ibn Tulun) his mind cooled with political and not only personal considerations. Of his fellow-poets 'Ali b. al-Dhahim (li. 88, 90, 107) and al-Hasan b. al-Radj (ii. 107) form the subject of satires; on the other hand he seems to have been on friendly terms with Dhib (I. 177). He attacks the grammarians in one of his odes (I. 132), and Christians more than once (I. 96, 112).

Native criticism classifies him with Abu Tamman and Munafah as one of the three chief poets of the 'Abbasid period, and comparison between him and Abu Tamman is a favourite subject of essays. In his own opinion his best was below Abu Tamman's best, and his worst above Abu Tamman's worst; Mansur devotes some pages to the consideration of this subject, and it is treated at length in the Kita' al-Mawzu'atu biwa Abu Tamman (Jafar b. al-Muhajir). Buhtur's own estimate of his worth is shared by Mas'ud, who however is charged with gross favouritism towards Buhtur. Probably most European critics would find Buhtur less brilliant than Munafah, yet far more poetical than Abu Tamman.

The Aghzain attributes to Buhtur besides the diwan a work on "Poetic chase" and a "Hansas", which is preserved in a Leyden MS, and was both fossilised and edited in 1909 (see TAMANA). The diwan was published in Constantinople, 1500, extensibly from a MS. of the year 424; the odes are roughly grouped by the persons and families to whom they are addressed, but this arrangement is not consistently observed. A similar copy is that in the Vienna Library (Catal. I. 436). The poems were arranged in alphabetical order by Silah, and part of such a copy exists in the Munich Library (no. 508). 'Ali b. Hanza al-Ghabbas (Yahyai, Dictionary of Learned Men, v. 200) is said to have arranged them excellently in order of subjects (Aghzain, 165). The diwan sometimes bears the title safirl al-dhahab. Of Abu 'Ali's commentary upon it called Aghzain al-Waddi some extracts have been printed in the Muhadd. This author (Abu 'Ali) in his Rastul (ed. Oxon., p. 90) records the curious detail that Buhtur had "peasocks' feet".

(D. S. MARGOLIS)

BUKAA (also written BUKA), a Turkish chief of the tribe of Ghuzz (Turkmen).
others moved to the west and passed through various provinces of Khorasan in the next few years to Diyar-Bahr, owing allegiance to no one, till they suffered an annihilating defeat from the Arabs, of Diyar-Bahr under Kirwâr b. Muqallad (a prince of the Banû 'Uqail) on the 20th Ramaḍān 415 = 21st April 1044. During these years they wrought terrible havoc on many towns—from Damghan to Mawāli; the harm done by these nomads however was not permanent; the Ghuzz came and went like a summer cloud," says Ibn al-Athir (Is. 277). Būkā is several times mentioned in the accounts of those marauding corsairs, once as chief of a division which returned to Rayy from Adharbaidjân and plundered it for a second time, and afterwards took part in the siege and plunder of Hamadhan. His name is also found in the list of the chiefs who rejected in the abruptest fashion the offer of Sulaym Tughril Beg, who belonged to the same stock as they did, when he wished to take them into his service. Būkā was also present at the last battle against Kirwâr whether he was slain in this battle or was one of few who survived, is not related.

(W. BARTHOLO.)

BUKĀ or BUKĀ (both forms are found), a place first mentioned in connection with the invades of the Dāiḏ Giovanni-Mardaites into Syria. The name is again found in the history of the Daghâ, the Umayyad Caliph, Hârîm. After its first destruction, it was rebuilt and Būkā is mentioned in the 9th century, after the Kuras of Antioch and Tarsus; it must have been still in existence in the time of the geographer Yâkût; we know that it lay not far from Antioch and from the Daghâ of Dukkân (southern Annuma); its site therefore is to be sought in 'Amâr or in that part of the plain of Antioch, in which the name of Dukkân is applied. Its neighbourhood must have been swampy, for in the reign of Walid I. the Zeit with their bullfrogs were sent from Syria by Hâdji dâd and settled here. This description suits the district in which we noticed the little village of Dourjân, the name of which reminds us of Dourjân. It also fits with the very probable Syrian etymology ḏâlī mosqîna, which is farther testimony to the marshy nature of the district. The population of Būkā was possibly Mardaites.

(H. LAMMENS.)

BUKĀ also Ḍaḡâ' (A.), according to the lexicographers means a strip of land which is in some way distinguished from its surroundings and is particularly applied to a place where water lies and stagnates. The word, with its diminutive al-Bûkā' often appears in the names of plains. The plural al-Bûkâ' is the name of the long plateau, with an average height of 3000 feet, which forms the central part of the great Syrian depression between the mountain masses of Lebanon on the one side and Hermon and Anti-Lebanon on the other which, according to a theory now rejected, put forth by Th. Nöldeke in Hermet, x. 167, had given its name to the Khâz ârîn "Hollow Syria." The word al-Bûkâ' has often been connected with the Holrew Bû's, *Chassan, valley,* and even with the name Bâlîbek [q. v.], the largest town in the district. For the explanation of the name—in accordance with the meaning of the Arabic—one ought rather to point to the marshy district situated between Karak Nîn and 'Ain al-Dîjr (the modern 'Anjâr), which was drained and settled by Tênhî, governor of Damascus about 1330. Al-Bûkâ' belonged to the Grond of Damascus from early times. In the Mamlûk period the district was divided into two administrative districts, al-Bûkâ' al-Dînâl al-Majâr in the north and the al-Bûkâ' al-Sâlih in the south, which belonged to the northern frontier province (jâmi'a) of the miyâsâr of Damascus. Arab authors derive the name al-Bûkâ' al-Sâlih from al-Fârîz (q. v. p. 540) son of Sa'id al-Dîn (who in the time of the God Agge (see Pahlî-Wisanû, s. v.)). The numerous sanctuaries, such as the Grond of Noah, Kašî 'âyâs, and Nâli Shîh, may perhaps justify the conclusion that the place once had a particularly sacred character. According to the modern Turkish administrative division, Kâhalbe and Bâlîbek al-Sâlih (with its seat of administrations in Djbûl Djêfûn) are two Kadîs of the Sandjak of Damascus.

BUKAIK or MAHKAM ÂR' HASSIM, one of the most seditious propagandists of the Abûhâsids. Bukair was originally employed as secretary or interpreter with Djaun'id 'Ab'd al-Râhîn, governor of India when the latter was dismissed. Bukair went to Kâfla in 1057 (723-724) where he was won over to the 'Abûhâsid faction and placed his great wealth at their disposal. After the death of the Abûhâsid emissary Mansûr, he was entrusted by 'Abd Allâh b. ʿAll, the leader of the 'Abûhâsids, with the charge of the propaganda in 'Irak. He displayed particular ability and energy in his efforts to win over the people of Khorasan to the 'Abûhâsid party. In 107 (725-726) he sent several agents to this province; they were seized and executed however, by the governor 'Abd Allâh, only one, Ammâr b. al-Abdâlik, being able to escape by flight and return to Bukair. In the following year he is said to have made another attempt which ended in the execution of Ammâr and the flight of those accompanying him; but this appears to be merely another version of the preceding story. In 118 (736) Bukair appointed Ammâr b. Yarâd to take charge of the 'Abûhâsid propaganda in Khorasan; the latter, in the absence of Mansûr, took the name of 'Abûhâsid and eagerly threw himself into the task of winning adherents for Muhammad b. ʿAll. At first he met with great success, but when he adopted the doctrines of the Khurasjân and preached the coarsest immorality and irreligion, he was seized by 'Abd Allâh and executed with the cruellest tortures. Another consequence of his agitation was that Muhammad b. ʿAll was accused of the followers of Khwsâb and 'Abd Allâh and the Khurasjân, who adopted the doctrines of the 'Abûhâsids and the Khurasjân, who adopted the doctrines of the 'Abûhâsids, fled to Bukair to join him in 120 (738) when he returned, Muhammad gave
him a letter to take with him which only contained the words *Nami Yaddhā’ Irāq-danā ngārā*. He also sent Bukair to Khorasan openly to deny the doctrines of Khālid. Bukair however was received with suspicion and had to return with his object unaccomplished. Muhammad then sent him again to Khorasan, and gave him a stick of sticks, some of which were shot with iron and others with copper. When Bukair divided the sticks among the slaves of the families of the founders, they saw their mistake and were converted. In 124 (741-742) Bukair was seized and imprisoned, meetings were being held in a house in Kūfa as the chief agent of the ‘Abdhālī propaganda, Bukair was held mainly responsible. Even while in prison he worked for the ‘Abdhāls and succeeded in winning *Ṭāb b. Ma‘āk̑īl* to their cause. The latter had a slave named ‘Abd Muslim, the future general and governor of Khorasan. According to some accounts Bukair bought him from *Ṭāb* and gave him to Ibrahim, son of Muhammed b. *Ṭāb*; but the exact details of the manumission of ‘Abd Muslim are not absolutely known. In 126 (743-744) Bukair was commissioned by Ibrahim to go to Khorasan to announce the death of Muhammad. Bukair declared it to the assassins of the ‘Abdhāls and proclaimed Ibrahim as his successor. After receiving the homage of the people of Khorasan on behalf of Ibrahim, Bukair returned, bringing with him the money that had been collected in Khorasan for the ‘Abdhāl cause. Bukair died in 127 (744-745). On his deathbed he recommended ‘Alī Salama b. Ṣulaimān as his successor. This choice was confirmed by Ibrahim and ‘Alī Salama was recognized as his posthumous successor.

(K. V. Zettersten.)

**Bukair** v. *Wassall*, Governor of Khorasan. In the war between *Abd Allah b. Khāzin* governor of Khorasan and the Tutmutes, Bukair is often mentioned. Ibn Khāzin was a supporter of the rival Caliph *Abd Allah b. al-Ṣalih* and opposed against the Umayyads. As soon as he had made his position secure, he began to oppress the Tutmutes, who were scattered throughout Khorasan. When the latter appealed to his son Muhammad in Harrāt, whose mother was a Tumitite, Ibn Khāzin wrote to Ṣamman b. Dhwār and Bukair b. Wāshāy, his lieutenants in Harrāt and ordered them to drive back the Tutmutes. Harrāt, however, went over to their side, while Bukair sought to carry out the order but, in the end could not prevent the Tutmutes from entering the town and sacking Muhammad b. *Abd Allah b. Khāzin*. In 72 (691-692) when Ibn Khāzin refused to take the oath of fealty to *Abd al-Malik*, Bukair was appointed governor of Khorasan by the Caliph. Ibn Khāzin then advanced against Merv, but was challenged by *Ṭāb* b. Wāshāy and a battle ensued in which the former was slain. Bukair now succeeded to take the credit for the death of Ibn Khāzin and threw *Ṭāb* into prison. As the population of Khorasan was afraid of renewed unrest, they wished to have a Kornshīte governor and Bukair was therefore deposed in 74 (693-694) and Umayya b. *Abd Allah b. Khāzin*, appointed his successor. *Ṭāb* was then set free and became reconciled with Bukair. In 77 (696-697) Umayya equipped an expedition against Bukair and placed him in command of it. As he had, however, been warned against Bukair by *Ṭāb*, he took the field himself, taking Bukair with him and leaving his son behind in Merv. As soon as Umayya had crossed the Oxus, Bukair set the boats on fire to make his return impossible and hurrying back to Merv, he declared himself independent and threw Umayya’s son into prison. Umayya was thus forced to make peace with the people of Bukair and advance against Bukair. According to another account, the latter never went with Umayya, but remained in Merv during the campaign. In any case, his rebellion ended in Umayya’s having to grant him honourable terms of surrender. Among other points he promised no longer to pay attention to the defamatory statements of *Ṭāb*. Nevertheless Bukair was accused of treason at the instigation of *Ṭāb* and executed in the same year.

(Bukhāra, a city in Turkestan.)

The lower course of the Zāraḏūh. We have only the scantiest notices of the history of the city in pre-Umayyad times. There can be little doubt, however, that the Iranians had settlements and even towns on the Zāraḏūh at a very early period; even in the time of Alexander the Great of Macedon there was another town in Sogdiana besides Mānukandā (Samarkand) on the lower course of the river; but whether this town corresponded to the modern Bukhārā may be questioned. Local tradition in the early centuries of the Hūdiyr described some other settlements in the same neighbourhood as “older than Bukhārā”; one of these, the village of Rāmūn, Rīyāstān, or Arūāstān (the modern Carahmārī-Ramītan) is regarded by Muḥammad (ed. Mommsen, p. 282) as the ancient Bukhārā (*Bukhārā 7-kānd*).

In the southern part of the province of Bukhārā, a large city was founded on the site of the ancient Bukhārā several centuries before Islam. From the 9th century downwards, this town is known to Chinese writers as Nu-ni, which corresponds to the ancient name Miinjudkāh which survived into Muhammadan times. The name Bukhārā (Chinese Po-ho) seems to be first given by the Chinese pilgrim Hsia-Chung (about 650).

That the name, as such, has been suggested, is identical with *Bethar*, the Turk-Mongol form of the Sanskrit *Vārāha*, “monastery” is not improbable, the same explanation is given in the 18th (xilih) century by Djeiwaint (cf. the text in Schefer, Chrestomathie Pers. ii. 122). In any case there was a Buddhist monastery at Bukhārā as at Balkh and Samarkand; indeed the network on the topo-ography of the town in the 18th (xilih) century which are quoted below enable us to fix its site approximately.

Of the native (or possibly Turkic) dynasty of the Bukhārā-Khādūr (or Bukhārā-Khādūd, princes of Bukhārā) which ruled here before the Arabs, we only know from Chinese sources that one of those princes boasted about 627 A.D. that his ancestors
had been ruling the land for 22 generations. The remainder of our information about the Bukhār-Khudāt is obtained from historians of the Mughal period. Besides the information contained in works on universal history or in the literature of the conquests, we also possess, although only in a later revision, a separate history of the town, composed in the year 1739 by Maqāmil Nārshahkī; this work contains much valuable information and is especially valuable for the historical topography of the town; nevertheless what Nārshahkī tells us about the pre-Mughal history of Bukhār obviously rests on no very reliable tradition. It is, for example, more than doubtful whether Nārshahkī had any evidence for his statement that the Bukhār-Khudāt who first struck coins in Bukhār was a contemporary of the Caliph Abū Bakr. (11-12 = 5021-534 A.H.).

The accounts of the first Arab conquests across the Oxus are also purely legendary and still require critical examination. The first Arab army is said to have appeared before Bukhār in 54/547 under Uḥād b. Ālāʾ b. Ziyād. The ruler of Bukhār at that time was Ibn Abī Hammam, a member of the royal family. The Sālim b. Bishārī was thedx (a woman); in Tabaristān, ii. 169 in place of her, Kabūl-i Khudāt is mentioned, not as a widowed princess of Bukhār but as the wife of the reigning king of the Turks). According to Nārshahkī (ed. Schefer, p. 7) he ruled 15 years as regent for his infant son Tughshāhā (in Tabaristān, ii. 1693 (Tūhshi)); but this Bukhār-Khudāt appears again in Tabaristān as still a youth in 91 = 970, when Kustābā b. Muslim after overthrowing his enemies, installed him as prince of Bukhār. The rule of Islam in Bukhār was first placed on a firm footing by Kustābā. Even Tughshāhā, adopted Islam or, at least, pretended to and ruled for 30 years afterwards in Bukhār. In Rasāmid 181 (11th Aug.-9th Sept. 739) he was murdered by two nobles in the camp of the governor Nāṣr b. Sayyār at Samarkand. During his long reign several rebellions against the Arab suzerainty took place and the Turks invaded the country several times; in 100 = 725-729 the town of Bukhār itself was lost to the Arabs and they had to besiege it but regained it next year (Tabaristān, ii. 1574 and 1529). What attitude Tughshāhā took up during these years is unknown.

His son and successor, called “Kustābā” in honour of the conquerors, behaved at first like a good Muslim and earned the gratitude of the House of the Prophet; when in the year 133 = 750-751 the Arab Shahīr b. Shāhīr raised a revolt in Bukhār against the new dynasty of Caliphs, the rebellion was put down by Ziyād b. Sallī. Shahīr had been sent thither by Abū Muslim, with the help of the Bukhār-Khudāt. Nevertheless the Bukhār-Khudāt was at a later period accused of apostasy from Islam and put to death by order of Abū Muslim. His brother and successor Biyā’ī (the reading is not certain) met the same fate during the reign of the Caliph al-Mahdi (159-160 = 775-776) for the Caliph had him put to death as a follower of the heretic al-Mukhammad. After this period the Bukhār-Khudāt appear to have been of little influence in the government of the country but they held an influential position on account of the great estates in their possession. In the early years of the reign of the Samānids, while his brother Nāṣr was still alive, mention is made of the Bukhār-Khudāt. Abū Ṭāhir b. Ṭabīb described the latter of his lands but he was to be allowed the same income (20,000 dirhems) from the state treasury, as he had previously derived from his estates. How long the government fulfilled this obligation to the Bukhār-Khudāt or his successors is not related.

Beyond the narrow confines of the Bukhār-Khudāt, there was of course, in Bukhār from the first years of the conquest (at least from the time of Kustābā b. Muslim) an Arab Emir or “Khān” who was subordinate to the Emir of Khurasan, whose headquarters were in Merv. On account of its geographical situation, Bukhār was much more closely connected with Merv than with Samarkand and the other towns of Māwarrah al-Nahr; the Bukhār-Khudāt had even a palace of its own in Merv (Tabaristān, ii. 1888, i.e. 1987 a.d. 1392 a.d.). In the 12th century (ixth) also when the Emirs of Khurasan transferred their seat to Nishāpūr, the administration of Bukhār remained separate from that of the other parts of Māwarrah al-Nahr; till 1310 = 767, Bukhār did not belong to the Sāmānids territory but was under a separate governor, immediately responsible to the Tabaristān Emir. The governors at a later period also had their palaces in Merv (Tabaristān, ed. de Goeje, p. 260). After the fall of the Tabaristān (1259 = 853) the emir of the Yaghūb b. Lāthī was recognised only for a brief period in Bukhār as Emir of Khurasan; the clergy and the populace applied to the Sāmānids Najīr b. Aḥmad, who was ruling in Samarkand and he appointed his younger brother Ismā’īl governor of Bukhār. Bukhār henceforth was ruled by Ismā’īl and his successors till the fall of the Sāmānids. Ismā’īl continued to live in Bukhār, after the death of his brother, Nāṣr in 279 (982) when the whole of Māwarrah al-Nahr passed under his sway and also after his victory over ‘Abū b. Lāthī in 287 (990) when he was confirmed by the Caliph in the rank of Emir of Khurasan. The city thus became the seat of a mighty ruling house and the capital of a great kingdom (the officials also had their residences in Bukhār) although it never equalled Samarkand, the ancient capital of Māwarrah al-Nahr in size or wealth during this period.

The Bukhār of the Samānids period is described in detail by the Arab geographers of the 9th (ixth) century; we also owe much information to Nārshahkī and later editors of his works. A comparison of these accounts with the description of the modern town (particularly thorough in Khani-kow, 2Oz 36 Bukhārstāb Khurasan, St. Petersburg, 1843, p. 29 to 209), shows clearly that in Bukhār, likewise Merv, Samarkand etc., only an expansion of the area of the town and not a shifting of the town from one place to another, may be traced. Although Bukhār has been as little spared by fire and sword as the other cities of Central Asia, it has always been rebuilt on the same site and on the same plan as in the 9th (ixth) century. It is thus much easier to understand the original authorities on the subject. We can rarely trace the development and the topography of a medieaval town so distinctly as here.

As in most Iranian towns, the Arab geographers distinguish three main divisions of Bukhār; the citadel. (Pers. Bukhār, “city or fortress”), usually written “bukhār” in Arabic and afterwards contracted to “bukhār” or “bukhāristān”; the original town proper (Arab. madda; Pers. “ghāristān”)
and the suburb (in Persian works also only the Arabic name khabr is applied to it) lying between the original town and the new wall which has been built in Muhammadan times. The citadel from the earliest times has been on the same site as at the present day, east of the square still known, as in the Samnund period, as "Rigistān"; the gate then led into the fortress (at the present day there is only one, from the Rigistān side), the "Rigistān Gate" on the west and the "Chuhrīyān Gate" or "Gate of the Friday Mosque" on the east; a street led from the one gate to the other. As the area of the citadel was naturally limited by the site on which it was built, probably no alterations have been made in it from the earliest times; it is now about 1 mile in circumference and has an area of 23 acres. Within the fortress, probably on the site that is now occupied by the palace of the Emir of Bukhārā, the palace of the Bahār-Khātūt. This building is said to have been erected in the viii century A.D. before the conquest; it was supported by seven stone columns, which represented the constellation of the Great Bear (banyū nivārtā). Above the gate of the palace was a low wall on which was the builder's inscription. According to an old popular belief no prince has ever fled out of this palace before an enemy nor has one died within its walls; death overtook them all while without it. The translatol of the Turkmén Bukhārā, Abūnāzd al-Kubāwi (wrote in Ljumitā 152 = May 1128) says that the palace was first destroyed in his lifetime and the place with the founder's inscription perished also. As Iṣṭakhrī shows (p. 306 above) it was however still being used by the Samnundīs; the latter Samnundīs did not inhabit it; according to Muḥammad (p. 380) they had only their treasures and their prisons there. Besides the palace there was in the citadel the oldest Friday Mosque, erected by Kahtāb; a temple of idols (āb-šāhār) is said to have occupied the site previously. When the ancient mosque was replaced by a larger one, the old building was used as a revenue office (dawān al-āzārāj). The citadel was several times destroyed in the vii (xii-th) and viii (xiv-th) centuries and rebuilt; the last remains of the ancient buildings were destroyed in 360 = 1164-1165 and used as building material to repair the town-walls.

Unlike most other towns, the citadel of Bukhārā was not within the Shahrūstān but outside (it; between them, to the east of the citadel), was an open space where the Friday Mosque stood from the second half of the second (viii-th) century to the vii (xii-th) century. What part of the modern town corresponds to the Shahristān may be exactly determined, for, according to Iṣṭakhrī (p. 307), there was no running water on the surface either in the citadel or in the Shahristān; on account of their high situation. According to the plan given by Khanīk in his book, this high-lying portion of the town is about twice as large as the citadel; it is of course long since it was surrounded by the separate wall which encompassed it in ancient times. This wall had seven gates, the names of which are given by Narshākhi and the Arab geographers. At the time of Sofā Kāīn, the market place in pre-Muhammadan times was without the city walls, before the gate which in later times was called the "Hazar Gate", but which Narshākhi still calls "The Gate of the Spica-

Merchants" (dawān al-āzārāj); while the Arabs called it the "Iron Gate" (fāqul al-āsāfha); it is probably to be sought for on the east side of the town.

We have the express testimony of Narshākhi (p. 29) that at the time of the conquest the whole town (zhār) consisted of the Shahristān alone; there were no houses in the suburbs outside but these had not yet been linked up, as they were later. Narshākhi gives us a fairly exact account of the topographical details of the Shahristān and it would probably be possible to determine which of the streets of the modern town correspond to the streets mentioned by him; no one has as yet, however, investigated this point. Unlike most other towns, the Shahristān of Bukhārā partly retained its earlier importance at a later period after the extension of the boundaries of the town.

A new Friday Mosque was built by Arslān Khān Muhammad b. Subkumān in the year 515 (1121-1122) in the Shahristān, probably in the southern part of it where the chief mosque with the Maḥṣūs Miḥ-ʿArāb built in the vii (xvi-th) century and the great Mīnrūn still stands. It was not till the Muhammadan period that the Shahristān was linked up with the suburbs to form one town and surrounded by a wall, according to Narshākhi in 535 (849-850). By the iiii (xix-th) century another wall had been built close to the old one, enclosing a greater area. Each of these walls had, like the wall of the present town, ten gates; the distance between the gates of the inner and outer walls is, unfortunately, not given, otherwise we might be able to determine how far the development of the town had been furthered by its extension in area. The question how far the names given by the Arabs to the city-gates correspond to the modern names, can be readily answered with certainty. One gate, the "Samarkand Gate"[15], the gate on the north, bears the same name at the present day as did the corresponding gates in the Samnund period; the other names may be easily identified. The gates of both walls were opened by Iṣṭakhrī in their proper order; on the outer wall begins with the "Gate of the Square" (fāqul al-Mādīrān) in the south-west, through which one came on to the road leading to Khorkān (the modern Karkul Gate), thence passes on to the Darb Hindūn, immediately to the east (the modern Gate of Shāhīn Dāštī) and round by the south-east north, and west sides. In detailing the inner gates he begins with the Samarkand Gate on the north, but does not state in which direction the next mentioned gate lies from this one so that the order of succession cannot be determined with the same accuracy from the Arabic text. Narshākhi (p. 93 et seq.), however, in his account of the conflagration of the year 355 (952) gives us some details, as to which of the gates mentioned by Iṣṭakhrī were north of the main canal and which to the south. Since the canal, as is clear from Muḥammad (p. 331) corresponds to the canal which flows through the town at the present day (the Kellibkūlt Gate corresponds to the modern Karkūl Gate on the east side of the town), the task of locating the sites of these gates is considerably lightened by this statement of Narshākhi; it is clear that Iṣṭakhrī, in the case of the inner wall also, went to the east from the Samarkand Gate and gives the names of the remaining gates of the inner wall in the order of
succession of the east, south and west sides.

The identification of some of these names is also of importance for the understanding of the accounts of the early history of the town. The "Nawbahar" from which a gate on the outer wall (the modern "Mas'ud Gate") had taken its name was apparently a Buddhist monastery; it is a remarkable coincidence that at the present day, the way to the most important Muhammadan Sanctuary in the neighborhood of Bukhara, the tomb of Babar al-Imam Nakhshbandi, who died in the viiith (xvith) century, lies through the same gate (whence its name also). It cannot quite be determined what connection the places called Nawbahar, which, according to Iskakh, were in the Shahristan as well as in the suburbs, had with this monastery.

The gates on the inner walls, in the south-east part of the town, were called after the "Mosque of Makki," so that we can approximately determine the site of this sanctuary also. As Nargashki (p. 19) tells us, the mosque was built on a site which had first been dedicated to the worship of idols (probably some Buddhist cult is meant) and later the worship of fire; whether, as Christensen (Oriental. Zeit. vii. 49 et seq.) supposes, the word Makki is to be taken as a diminutive for Michael, as a Michael church, and the cult was originally connected with the worship of the moon is doubtful. Nargashki (born 286 = 899) says that even in his lifetime "idols" were offered for sale here on two fixed days of the year. Probably these were little clay figures of the kind that are frequently dug up in Samarkand; in the ivth (xth) century they must have been merely regarded as toys.

Of the outer gates of the inner wall, the "Gate on the Road of the Magi" (bah bahara naka-ghan) in the north-west of the town, ought to be mentioned. This was probably the quarter of the town which as late as the Samanid period still bore the name of "Palace of the Magi" (karb-i-muglan). According to Nargashki (p. 28 et seq.) after the conquest of the rich merchants, the Kesh-Kushan, yielded to this part of the town. According to the agreement with Kutabah the inhabitants had to give half of their houses and estates (ghitya) to the Arabs; this treaty appears, however, only to have referred to the town proper, the Shahristan. The Kesh-Kushan preferred to evacuate their houses in the Shahristan entirely, leave them to the Arabs, and to build 700 palaces in the neighborhood for themselves. Before every palace there was a garden, and the servants' houses; in the time of Alauddin, this settlement had a population more numerous than the town itself (Nargashki, p. 62). These palaces are said to have been destroyed in a popular rising; their gates on which the owners had depicted their "idols" were used in the buildings erected to extend the Friday Mosque. The above-mentioned Aymosi al-Kalawi says that one of these gates was still to be seen in his time (xviith = xiiith century, Nargashki p. 47 et seq.).

Besides the palace in the citadel, the princes of Bukhara in pre-Muhammadan times had their palaces in the Shahristan also. In later times the Samanid Nizr II. (301—331 = 912—943) built a palace there; accommodation for the ten state chancellaries (therefrom the names of which were given by Nargashki (p. 74) were provided for in the buildings before the palace gate. During the early years of the reign of Manuz b. Nuh (350—365 = 961—976) this palace is said to have been entirely destroyed by fire and never afterwards rebuilt; Mukaddas, however, tells us that the Dar al-Mulk was still standing on the Rigistan opposite the citadel; he had never seen such a fine building in any other part of the Muhammadan world; till the year 360 (971) the Rigistan was also used as a mansab (Kenn. manusil). During the same period, there appears to have been another royal palace on the Ljih-i Muyiyyan Canal lying not far from the Citadel and the Rigistan on the north side. This palace was built by Iskakh b. Ayman and fell into ruins after the fall of the dynasty.

In the reign of Manuz b. Nuh a new mansab had to be prepared as the Rigistan could not contain the multitude of believers on those occasions. The new place of prayer was built in 360 (971) at a distance of 1½ farsakhs (1½—2 miles) from the citadel on the road to the village of Samt; unfortunately we know nothing further about the situation of this village. According to ancient custom, the people attended such assemblies armed, as the custom of carrying arms was still general in Mawar al-Nahr in the time of Iskakh (p. 102) and the period (Hillal al-Nihâ', ed. Amerdan, p. 402).

Between the citadel and the Shahristan close to the Friday Mosque was a large weaving establishment (bargah also called ba'il-al-fir'as) the products of which (carpets etc.) were exported as far as Syria, Egypt and Rûm according to Nargashki, p. 18. What Mukaddas (p. 324) tells us about the wares exported from Bukhara, testifies to a great development in trade and industry; even the reeds (num ar-yuhal) manufactured in the prisons (fâ-l-imâvid) were exported.

Even in the ivth (xth) century the town was thought to be overcrowded and insanitary, with bad water, foul air etc. The streets were broad yet there was not sufficient room. Considering the large number of inhabitants in the town, the trade and manufactures and the products (Lavish i naka-ghan) of the town, Dake, I. 83 et seq.) describes the effects of the town in the most scathing fashion; to Mukaddas Bukhara is the "organ of the district". Among the defects of the town enumerated by Mukaddas, the danger from fire is emphasised. Apparently in his time much more of the town was built of wood than is now the case: even the upper part of the minaret on the chief mosque was built of wood so that in 460 (1068), when two pretenders to the throne were fighting for the possession of the citadel, the tower was set on fire and the names spread to the chief mosque which also perished. When the tower was rebuilt after this calamity, it was built entirely of brick for the first time in its history (Nargashki p. 49).

Nargashki and the Arab geographers give us particular details of the canals which are shown on the map (pl. xxvii) round Bukhara. In Iskakh (p. 30) the names of the canals which led from the Zarafshân to water the fields are given; according to Nargashki, some of these canals were first formed in the Muhammadan period. Many of these names have survived to the present day as Sinjakowski has shown (in the Istorija Turkett. Otdel' v. II. Naniho Geograf. Oglilt. Vol. ii. part i. p. 136 et seq.). It would be of importance for the reconstruction of the surface conditions of Central Asia and the
changes which have taken place in historic times, if we could prove that the canals, which date from pre-Muhammadan times, flow in markedly deeper beds than those of a later date; this point has, however, not yet been investigated.

It is to Sitjakowski also that we owe the establishment of the fact that traces still survive of the long walls which were built to protect the town and to throw back the incursions of the Turks in the 8th/18th period. According to Nasir al-Din (p. 35 et seq.) these walls were begun in the year 782 (832) and only completed in 795 (845); whether, as Mas'udî (Tab'ah, p. 65) tells us, it was rather the renovation of an old wall that was carried out at this period, is doubtful, although similar edifices had been erected in quite early times in Central Asia, as the description of Margiane (in the district of the modern Marw) in Strabo (Chap. 516) shows. The town itself was not in the centre but in the western half of the area enclosed within the walls; the village Tawâwâ, for example, 7 farasîkh from Buhârâ on the road to Samârgand was within the walls (Iṣâ'ahî, p. 313); while on the road to Khurâsân the gate of the wall was only 1 farasîkh from Buhârâ (Ibn Khâlid, ed. de Goeje, p. 25 and Tab'ah, loc. cit.). Of the villages lying north of Buhârâ, Zaudana (4 farasîkh from the city) and Maḏâkân (5 farasîkh, cf. Iṣâ'ahî, p. 313 and 315) were within the walls. We are nowhere told how far the walls extended to the south of the town; it is not even certain whether the district on this side had to be protected by such defences. After the time of Ismâ'îl b. Ahmad, who is said to have declared: *As long as there is a life in me, I shall myself be a rampart for the defence of Buhârâ*, the walls were no longer kept in proper repair; at a later period the ruined walls were given the name Kânpur (probably to be read Kamptîr = 'old woman'); remains of these ancient fortifications, still bearing the name Kamptîr-Dumât (Wall of the Old Woman) have survived to the present day in the north-east, on the borders of the steppes between the cultivated areas of Buhârâ and Karımûs (Petrovskii, Turk. khriz. jug. archeolog., ill. 89 et seq.).

The entrance of the Ilak Nârî b. 'Ali into Buhârâ (10th/16th Jan.-23rd Oct. 990) put an end to the Sâmârgân kingdom, although the conquerors had still to struggle to the mastery with Ismâ'îl al-Munštâjîr, the last representative of the dynasty, for the next few years (till 995 = 1004-1005) and were even driven out again for a brief period from the former capital of the kingdom. On the fall of the Sâmârgân, the town lost much of its earlier political importance; it was for a time usually governed by princes or governors and did not again become capital of a kingdom till the 11th/17th century. Only a few of the Ilak-Khâns or Karâhânîdîs lived in Buhârâ and erected buildings there. In the second half of the 12th/18th century, the Khâns Shāhs al-Mulk Nârî b. Buhârâ built a palace for himself to the south of the city and prepared a hunting-ground; this Shâhsulâh was allowed to fall into ruins after the death of his successor Khârî-Khân; in the reign of Arslân-Khan Muḥammad b. Sulaimân a *sanâ'âbâ* was made of the hunting-ground in 513 (1119-1120); it is still used for this purpose at the present day. Many
as against the Mongols; Mahmūd Valīvī, the governor, who lived in Khogand, managed to aver- 
the wrath of the victors from the town on the 
suppression of the revolt. According to 
the account of Diwaim (cf. the text in Dehremy, 
Journal Asiatique, 17th Ser., xv. 392, and in Schefer, 
Christian Prat de Persan, ii. 127 et seq) our only 
authority for these happenings, this rebellion arose 
not as it had happened 30 years previously, among 
the artizans but among the common people. 

Now may we go into particulars as to how the 
town and its lands were governed during the early 
years of Mongol rule. In Diwaim's account of 
the life of the Uighur Kirān (cf. threens d'Ohsson, 
Histoire des Mongols, iii. 107 et seq.) Sāyīn-Makkiṣāh is mentioned as prince of Bukhārā, 
but nothing further is known about him. 

According to Waṣṣīf (ed. Hammer, p. 49, Indian 
edition, p. 12), in addition to the Mongol Bukhārā, 
a certain Conkān-Tulīf, apparently a 
Chinaman, is mentioned as commander in 
Sāmarqand and Bukhārā since the time of Gengiś. 
This probably explains the fact that during 
this period copper coins were struck in Bukhārā 
with Chinese inscriptions. At the same time, Mahmūd 
Valīvī and later his son Muṣʿūd-Beg (see_char 
Jānī, p. 72), in his account of the revolt, had also a 
share in the government of Maʿ ad al-Nahr. Although the Muljanwādzan clergy had 
taken a prominent part in the defence of the land 
against the Mongols, and even at a later period 
remained hostile to their conquerors, Mūsilān 
and Suiyāds, like the priests of other religions were 
exempted from all taxation in the Mongol 
government. Even more remarkable is Diwaim's state 
ment (cf. also d'Ohsson, Histoire des Mongols, ii. 
297) that Sijyarkents, a Christian, and mother of the great Khān Mānke and Khahbūlāi, built 
a Maṭrīsā: called the Khābānā in Bukhārā at her own 
expense; the famous scholar Saff al-Dīn Buğ 
egāri (died 512 H. ka. 659 = 737 H. Sept. 26 
Oct. 1261) was appointed its madrasa and muḥā 
wallā. Maṣʿūd Beg also built a Maṭrīsā, which 
was called the Qalāshā in Bukhārā. Sāyīn-Makkiṣāh of 
Bukhārā, probably the Rigīšān; in these two 
institutions nearly 1000 students were maintained. 

On the 7th Radjūd 571 (28th January 1273) 
Bukhārā was taken by the Mongols of Persia under 
Nikpāl-Bābuhrūr, Ikūn Avākū's general (q. v., 
p. 4) and plundered for seven days in which 
almost the whole town was destroyed by fire and 
sword and the population almost exterminated; 
three years later, the remaining inhabitants 
had the little that was still left them taken by the 
Caghatāi chiefs Čūhār and Kayūn. Such a calamity 
had never before visited the town; as Waṣṣīf 
(ed. Hammer, p. 148, Indian edition, p. 78) says, there was not a living soul in Bukhārā for the 
next seven years; it was not till about 1283 that 
measures were taken by Maṣʿūd-Beg by command 
of the Khān to rebuild the town and bring back 
its inhabitants. The Maṣʿūdīya, which had been 
destroyed in 571 (1273) was rebuilt and its 
founder was buried in it in Shawkāl 688 = 1346 
Oct. 15th Nov. 1290 (Jamiʿ al-Kuškū in 
Barthold, Türkistan, t. 8. (19th Sept.-18th Oct. 1316) by 
the order of the Khān, who settled in the town the 
prince Yūkaṭār; many of the inhabitants of 
Bukhārā and other towns were carried off by force 
and settled in the lands to the south of the Oxus 
(d'Oahun, Histoire des Mongols, iv. 387 et seq.). 
Bukhārā seems otherwise to have been of no 
importance in the political life of Maʿ ad al-
Nahr under the rule of the house of Caghatāi 
[?v.], or later under Timur and the Timūrids. 
There is much information on the busy political 
and religious life of the town, before and after 
this period, in the Kābnā-Mulšāraka, which is 
practically unknown in the West, but numerous 
manuscripts of it exist in Russia; it is the 
work of Almān b. Almūsā, called Muʿ ṣūd al-Fuṣṣālī (wrote probably in the 13th-14th 
century), cf. the extracts in Barthold, Türkistan etc., i. 106 et seq.). On Bahāʾ al-Dīn Nāšabān 
died 791 = 1398), his teachers and pupils and the Nāšabānī order of Dervishes founded by 
him (cf. especially the Kābnā b. al-Fuṣṣālī of 
Husain al-Kašānī (cf. Ebn in the Grundzüge 
der iranischen Philosophie, ii. 365). Ulugh-Beg (died 853 = 1449) famed as a patron of learning also 
built a Madrasa in Bukhārā on the Carāt (centre of the 
town). 

Towards the end of the year 905 (in the summer 
of 1500) Bukhārā was taken by the Uzbeks under 
Shah-bab Khan and thus made the capital of their 
empire except for a brief period after the disastrous 
defeat of the Uzbeks at Marw (946 = 1530). As in 
all nomad kingdoms the dominions of the Uzbeks 
were regarded as the property of the whole ruling 
family and divided into a number of small principalities; Sāmarqand still remained the capital and 
residence of the Khan (usually the oldest member 
of the ruling house); but the prince who was elected 
Khān always retained his hereditary principal 
ship, usually lived in his former capital and 
naturally paid more attention to the town he resided 
in than the capital of the kingdom. The most 
important princes of the house of the Shah 
Bānī Ubdāl Allāh b. Mahmūd (in Bukhārā from 
848 = 1542, died 946 = 1539) and (Abul Allāh 
B. Išhāqīān (in Bukhārā from 964 = 1557, died 
1006 = 1598) had their capital in Bukhārā. Both 
princes for long allowed the resident princes of 
the ruling house to bear the title of Khān but 
they alone practically held all the rights of 
sovereignty; through their prominence their capital 
Bukhārā became a real centre of political 
and intellectual life. The princes of the next dynasty 
of Djamānā and Ashahgāzhāna also ruled their 
kingdom from Bukhārā, while the old capital 
Sāmarqand lost almost all its importance, mainly in 
the first half of the 16th (xviin) century. 

The materials for the history of Bukhārā during 
this period are still only accessible in manuscript, 
as the history of Central Asia during the last two 
centuries has been but little investigated. Much 
information about the buildings of the 16th (xviin) 
and 17th (xviiin) centuries are given in the 
chronological compendium known as the "Muṣṭāfī al- 
Musāyli fi Ṣarf al-Kāsim" (compiled in 1113 = 1703 - 
1704; cf. Barun v. Rosen in Collectioin Scientifiques 
de l'Institut des langues orientales du ministere 
des affaires étrangères, iii. 115 et seq.); the chief 
authority on the intellectual life of the town under 
Ubdāl Allāh is his contemporary Waṣṣīf, author of 
the Buṭūb al-Waṣṣīfī (cf. C. Salemann in the 
Mitteilungen Altpersischer Gesellschaft, 46th 
vol., the sources of the history of Alī b. Išhāqīān, see the 
article on him, p. 25 (there is, inter alia, a description 
of Bukhārā in the "Abd Allāh Nāma", which
shows that the author was acquainted with a fuller version of the *Tārākhī Naṣrābādī* than the one which has survived to us). On the Bukhārī of the xiith (xviiith) century cf. particularly Muhammad b. Ansar, *Wahzi Nāyīr-nāvarī* (*ft mardīk el-khāzīr*), Cod. India Office, n. 575.

From the vth (xivth) century there was constant intercourse between the Usbeg kingdom and the Caes of Moscow, so that the capital Bukhārā became better known in Russia and Western Europe than previously. In the xvith and xviith century all merchants and emigrants from Central Asia whose settlements were found as far as Tobolok, were known to the Russians as *Bukhārāns* (Bukharis); the same name was also extended to the habitants of the modern Chinese Turkestan which began to be called *Little Bukhārā*.

The reign of Khān Abd al-Azīz (1055—1061 = 1645—1650) was regarded by later native historians as the last great period in their history; the later rulers could no longer hold the kingdom together; princes (Begs) of the Usbeg tribes made themselves independent in many parts, the Khān who lived in Bukhārā ruled only a small portion of the former kingdom and even there, the authority was not in the hands of the Khān himself, but of a Beg or Atālik ruling in his name.

In 1123 (1740) Bukhārā had to submit to Nūrī Khāt and did not regain its independence till his death. About the same time a new dynasty was founded in Bukhārā. The Atālik Muhammad Baktān of the tribe of Manfīt had himself proclaimed Kāh; his career has been written by his contemporary Muhammad Wafī Karmānī under the title *Tāhfa al-Khāzīr*; his immediate successor Dānya Bāg was content with the title of Atālik and allowed a scion of the house of Cingin-Khān to be the sovereign title; his son Murūd or Mir-Maḥmūd, however, again claimed the kingly title for himself after the year 1190 (1785); he and his successor did not take the title of Khān but of Emīr.

The observation of religious ordinances was much more harshly enforced by Murūd and particularly by his successor Hādīr (1215—1242 = 1800—1826) than had been the case before; for example, in the reign of the following Emīr *Abd al-Ahmad* (1885—1919) the line of division between Bukhārā and Afghanistan was defined; by the agreement come to between England and Russia in 1885 the Panj was to be the boundary between the two kingdoms, so that the Emīr had to give up a part of the province of Daryāz to the Afghans while he received in return the provinces of Rūshān and Shaghatān.

When Nūrī Khāts successor Māzaffar al-Dīn (1830—1853) resumed the throne, the Russians had already secured a firm footing on the lower course of the Sir-Daryā from which they gradually advanced on the remaining portions of the ancient Māwarz al-Nāfr. After being repeatedly defeated, the Emīr had to submit to Russia, give up all claims to the valley of the Sir-Daryā which had been conquered by the Russians and cede a great part of his own kingdom, with the towns of Dīrāz, Jūn-tūb, Samarkand and Katta-Kūrtān (1886), though his capital, unlike Khiwa and Khoqand, to the present has been spared the shame of being besieged or taken by the enemy. The territory lost in the war with Russia was more than made good by the conquests of the next decade, made to a certain extent with Russian help. Lands, which, like Shāhri Salū and Hīmāt, had been politically separated from Bukhārā for more than a century, or, like Karatun and Darwāz had never really been permanently in the hands of the rulers of Bukhārā, had now to submit to the Emīr; in 1873 the Emīrate was increased in the west at the expense of Khiwa which had been taken by the Russians. It was therefore only under Russian sovereignty that the Emīr maintained its present position. For example, in the reign of the following Emīr *Abd al-Ahmad* (1885—1919) the boundary between Bukhārā and Afghanistan was defined; by the agreement come to between England and Russia in 1885 the Panj was to be the boundary between the two kingdoms, so that the Emīr had to give up a part of the province of Daryāz to the Afghans while he received in return the provinces of Rūshān and Shaghatān.

The relationship of Bukhārā to Russia was also defined during the same reign. Since 1885 a Russian railway has run through the Emīr's dominions; the more important towns including the capital itself, are now touched by the railway, a Russian settlement called *New Bukhārā* arose more than ten miles from *Old Bukhārā* on the railway, now known as the railway station of *Khāzīr*; it was not till later that this settlement, the residence of a Russian officer of police, was connected with the Russian capital by a branch line, built at the expense of the Emīr. The whole kingdom is within the Russian customs area; Russian customs-houses have been built on the Afghan frontier and Russian military stations also like Kārtī and Terman on the Amu-Daryā and Khorog in Shaghatān. Commerce between Terman and the Russian town of
Petro-Alexandrowicz on the Ámu-Darya is carried on by Russian engineers. Timur is also connected with Samarkand by a post-road; there is also telegraphic communication between Bukhara and Samarkand.

Nevertheless the kingdom of the Emir has not yet been but little influenced by Russian civilization. The system of administration and taxation which has been extended to the recently-acquired provinces is still the same as that in vogue a century ago: the population is still, as before, exploited in the most ruthless fashion by the Emir, his officers and governors. Since the Emir has borne the title "Highness" and thus ranked nearer the Russian Imperial House, he has gained enormous prestige and can now treat with the Governor-General resident in Tashkent or with the political agent with much more independence than before. The policy pursued towards the Emir has recently been subjected to sharp criticism by some Russian authors (cf. particularly the writings of D. N. Logofet, which have appeared under various titles: 1. Na geograficheskom Sobranii; 2. Strana bezpravnoj; 3. Bukharskie khramy pod russkimi protokolami). It cannot be denied that the results of this policy can only be disadvantageous not only for the interests of the Emir but also to Russia's prestige in Central Asia.

Since 1910, the Emir of Bukhara has been Mir 'Alim, son of his predecessor 'Abd al-A'zam; he was educated in Russia (in the Cadet Corps at St. Petersburg).

By the Russian successes in Central Asia the geographical exploration of the land has been considerably advanced, as has to a certain extent the investigation of its ethnography. Since 1870, a large number of articles and larger treatises on the kingdom of the Emir and its separate provinces have appeared in Russian; cf. for example P. Maloves, Ocherki Bukharskogo Khurata, Tashkent, 1876; the itineraries in L. Kostenko, Turkestanskij kray, ii. 102 et seq.; Kasneecov, Darmaw, Noviy Margelan, 1893; A. A. Semenov, Etnografiya Bakhtruy, Moscow, 1909; V. Berthezal, La vallée de l'Ouzbékistan, Moskow, 1905; G. A. Bobriansky, Gerci vostochnykh Prusijan, Moskow, 1905; A. Serebrunskov, Pamir (Rysskaja Yevropeiskaja oblast, i. 90 et seq.). On the other hand, very little has been done towards the study of the past history and present conditions of the country from the point of view of the Orientalist. The writings of the native historians, even of the sixteenth century, are still with a few exceptions (on these see Tenfel, Quellen zur Geschichte der Chinar, reprint from the Zeitschr. für die Deutsc. Morgenl. Ges., Vol. 38) only accessible in manuscript. No archaeological, or historico-topographical studies of any importance have as yet been carried out either in Bukhara itself, or in other towns like Shahri Saray (with the palace of Aš-Sarri), built by Timur, Tashkent (with the ruins of ancient fortifications) and the beautiful tomb of Muhammad ib. 'Ali Tirimikhat who died in 255 (869), cf. therein, R. Koeve in the Tijdschr. f. Oostersch. Geogr. Onderzoek, xxiv. 644 et seq., with illustration). No description of the present conditions of the country has appeared from the pen of an Orientalist, so that Khanikov's book published in 1843, cannot yet be regarded as superseding essential material on the land and its history in works in the languages of western Europe is still more insufficient.

AL-BUKHĀRĪ, Muḥammad b. Ṣamīl Abū 'Abdallāh Abū l-Muḥājīb, Abū l-Muḥājīb, author, born 13th Shawwāl 910 = 21st July 1500 at Bukhara, the grandson of a Persian, named Buriqah. He began the study of the Traditions at the early age of eleven and in his sixteenth year made the pilgrimage and attended the lectures of the most famous teachers of Tradition in Mecca and Medina. He then went to Egypt as a student and spent the next sixteen years, of which five were spent in Egypt, in wandering through all Asia. He then returned to his native town where he died on the 32nd Rummân 256 (31st August 976); he is buried in Khurasan, in the village of the Saint, 'Abd al-Ṣāliḥ, which established his reputation. This work is divided according to the chapters of the Fikh, for which he had planned a complete scheme, although he did not succeed in preparing the necessary material of Tradition for all chapters. In his selection of Hadiths he showed the greatest critical ability and in editing the text sought to obtain the most scrupulous accuracy. Yet he does not hesitate to explain the material by brief notes, quite distinct from the text. The transmission of the Ṣāliḥ texts was from the beginning most carefully done but it was impossible quite to prevent the appearance of variants, which are given us by the commentaries. The Vulgate at present in use was edited by Muhammad al-Šārḥawi (died 622 = 1225) with the help of the famous philologist Ibn al-Malik (died 672 = 1273). Cf. Le Recueil des traditions musulmanes par Abī 'Abdallāh Muḥammad ibn Bāqī al-Bukḥārī, publi. par L. Köhl, (Leyde, 1862—1868), continué par Th. W. Jungblöd, iv. (ibid., 1208); printed Bibl. 1210, 1282, 1284, 1289, Cairo, 1279 (lith.), 1305, 1306, 1312, 1314 (9 vol., with), Delhi 1370, 1356, Bombay 1356, 1863, 1871, 1873, (on the 7th vol. cf. R. Basset, in Géneralités de la science arabe, t. x. 760). El-Bukhari, Les traditions islamiques, transl. of the Arabic text with notes and indices by O. Houdas and
The Arab authors place the date of Hippocrates about 100 years before Alexander. According to the Ta'rikh al-Husaynī he lived at Enoas and afterwards at Damascus and lectured in one of the gardens of the latter town in a place still called Ǧīla Būlāzī, the "bench of Hippocrates".

As great a physician bad descendants who bore the same name and practised the same art, a certain confusion has arisen which could only be resolved by the Arab writers, who number as many as four Hippocrates. They have even performed a plural, al-Būlāzīyun from the name Hippocrates. Tūlīb b. Kūnna was the first to settle the question of the number of the Hippocrates (Ta'rikh al-Husaynī). He says: "the first is the one who was of the family of Asclepius and the second was the son of Hesychius; there were nine generations between the first and the second, as many as between Asclepius and the first. The second Hippocrates left three children: Iblis, Dārās and a daughter named Muḥانتشار who became more famous than her brothers; the two latter each had a son called Hippocrates. 1. According to the same authority, there were eight masters of medicine in ancient times, who succeeded one another at almost regular intervals, from Asclepius to Galen. We can trace in this arrangement the tendency of Eastern scholars and particularly of the Sabaeans to regard the sages of antiquity as a species of prophets; the idea of this line of great physicians, originating in a demi-god, Asclepius, is analogous to that of the prophetic succession. (See also the Fihrist and Ibn Abī Uṣaybi‘a, li. 24 et sqq.)

D. Garra de Vaux.

BULAK [See Cairo]

BULANDSHAHR (सब्रो, "high town") a town and district of India, in the Doth, United Provinces. Area of district, 1,569 sqm.; pop. (1901), 1,128,101, of whom 97% are Mahārāsmans. The town, built on a bank above the Kāli Nāl, was originally called Karan, whence the name of the historian, Dīyā al-Dīn Bharud [q.v.], who was born here; pop. (1901), 15,208, of whom 97% are Mahārāsmans. Most of them are converted Rājput and Pathanis, both of which classes own considerable estates in the district.

Bibliography: F. S. Growse, Bulandshahr (Benares, 1884); Bulandshahr Gazetteer (Allahabad, 1903), J. S. Cotton.

BULBUL (بُلْبُل, "robin") the nightingale. In Persian and Turkish poetry, the nightingale plays a great part usually in conjunction with the rose. Oriental fancy has conceived that the nightingale is consumed with love for the rose and therefore sings in numbers without (whence its epithet, Hashe ḍa‘īn) of its love but her love is unrequited. It is mystically conceived as the image of the human soul which is consumed with love for God. Of the birds in the Grundriß der bewegten Philologie, li. 259, 1; Gibb, History of Ottoman Poetry, iii. 110 et sqq.

BULDUR or BULDIIR, the ancient POLYDOMON, capital of a Sandjak in the Wilāyāt of Konia, lies in a pleasant, fertile district on the Buldur-göl (the Ascania Amne of the Byzantine writers). The population lives by cattle-rearing and agriculture; Buldir is also famous for its wines, distilleries and inns.

BULGARIA; a country lying between the Balkans and the lower course of the Danube; it owes its name to a branch of the Bulgars people; it was born, after the fall of the great Hun empire, by the remnant of the invaders who were driven back from the lower Danube into the steppes of South Russia [see the article BULGARIA] and in particular by the hoards which contain the coins of the Arab writers, who number as many as four Hippocrates. They have even performed a plural, al-Būlāzīyun from the name Hippocrates. Tūlīb b. Kūnna was the first to settle the question of the number of the Hippocrates (Ta'rikh al-Husaynī). He says: "the first is the one who was of the family of Asclepius and the second was the son of Hesychius; there were nine generations between the first and the second, as many as between Asclepius and the first. The second Hippocrates left three children: Iblis, Dārās and a daughter named Muḥانتشار who became more famous than her brothers; the two latter each had a son called Hippocrates. 1. According to the same authority, there were eight masters of medicine in ancient times, who succeeded one another at almost regular intervals, from Asclepius to Galen. We can trace in this arrangement the tendency of Eastern scholars and particularly of the Sabaeans to regard the sages of antiquity as a species of prophets; the idea of this line of great physicians, originating in a demi-god, Asclepius, is analogous to that of the prophetic succession. (See also the Fihrist and Ibn Abī Uṣaybi‘a, li. 24 et sqq.)

Bulgaria formed an independent state under the national dynasty of Asnaks, on the right bank of the Danube; it was founded by the north by the Danube, on the south by the Balkans, on the west by the Black Sea and on the east by Servia. Eight passes (derbān) through the mountain chain led into the interior of the country: Šīr Aḥmad, Kapulū (Succi, Trajan's Gate), Isalād, Kaşanik, Demir-Kapulū, two passes leading to Rūbāk and Sillistria, and Nadir. Its inhabitants were divided into factions by the dimensions of the boyards. On the death of the Căs Ałxandăr in 1304, the country was divided between Şīh Aḥmad III, his son by a Jewish woman, who reigned at Sūd, and Şezīmir who occupied Watl. Uneasy at the progress of the Ottomans under Mūʿād I Khūdāw�ānd, Şīh Aḥmad, although he was the brother-in-law of the Sultan entered the coalition of Serbs and Bosnians; an army of 20,000 men under the command of Lāhājīn was totally defeated and almost entirely massacred. Allāh Pāhān, son of Kān-Khāliḳ Cemalūdī, at the head of 30,000 men, crossed the pass of Nadir and advanced on Šümā (Şummas) and Tińwō; the first surrendered as soon as it heard of the fall of the second; the Kral, shut up in Nicopolis on the Danube, obtained peace on abandoning Sillistria and paying the tribute due; but instead of handing over this place he strengthened its fortifications. The war was therefore renewed. After the capture of the fortress of Dragășan and the town of Hīrghowā, the Kral again besieged in Nicopolis was forced to surrender at discretion. The Sultan granted him his life and gave him an income suitable to his rank, but incorporated Bulgaria in his empire after the capture of Tińwō in 1395 (1395).

Under this former devastation, Bulgaria formed the Eyasli of Sillistria, divided into six Sandjaks: Sillistria, Semeadra, Wse, Horat, Kirk-Kilissē, Ngolov, Wilden and Cerman; it therefore included the cantons to the south of the Balkans and took the place of the former Eyasli of Oz (Oeknom)
when this town was ceded to Russia. After the division into Wilayets, Bulgaria formed the Wilayet of the Danube (Tânia). The Treaty of Berlin had constituted Bulgaria as an autonomous and tributary principality, under the suzerainty of the Sultan and with practically the same boundaries as at the Turkish conquest; after annexing Eastern Roumelia, it has quite recently been formed into an independent kingdom (23rd Sept. = 5th October 1908).

Under Turkish rule, large numbers of Bulgarians became converta to Islam; nevertheless the majority of the population remained Christian. The political union with Constantinople allowed the Greek Patriarch to work at bringing the people over to the Greek Church and to reject the Slavonic liturgy. It was not till 1870 and 1872 that a national movement obtained the creation of an Exarchate and in consequence the establishment of an independent Bulgarian Church.

According to the census of 1901, the total population amounted to 33½ millions of whom 2,889,219 were Bulgarians and 531,240 Turks (principal in the north-east of the kingdom); as to religion, 3,000,000 are Greek Orthodox and 600,000 Mohammedans. Some groups of the inhabitants present remarkable features; such are the Gagauzians, Christians whose language is Turkish, on the borders of the Black Sea, and the Pomaks, Mohammedan Bulgarians, in the mountains of Rhodopus and near Lovc and Pleven.

(BULGARIA, a people of uncertain origin, by whom two states, one on the Volga the other on the Danube, were founded in the early middle ages. The name is first found in the 3rd century among the Sarmatians. In the 9th century, the Slavonic Chronicle of Zacharias the Rhetor (about 555) the Bulgars are mentioned among the nomadic peoples of the Caucasus who "dwelt in tents and lived on the flesh of cattle and fish" (Anecdota Syriae, ed. Land, ill. p. 357; The Syriac Chronicles, known as that of Zacharias of Mykne, transl. by F. J. Hamilton and E. W. Brooks (London, 1869), p. 328.) John of Ephesus (about 585) gives a story, in which Bulghians and Khazarics, the ancestors of the Bulgars and the Khazars respectively, appear as brothers, which points either to a blood-relationship or a close alliance between these peoples. Centuries later, when this bond had long been broken and the lands of these peoples nowhere bordered on one another, Hykheart (ed. de Goeje, p. 253) tells us that the language of the Bulgars of the Volga resembled the speech of the Khazars, a statement, which is all the more important as the same geographer expressly emphasizes the close linguistic unity of all the Turkish tribes from the Kirghiz and Tchaghourzh in the East to the Ghibez in the West (ibid., p. 91; met. "khazays b'tegharn au kehfez", as well as the Turkish, or the Bokharian, or Pechenegs (p. 10). The language of the Khazars and Bulgars cannot have been identical with Turkish or Russian; even the people known as Burjâq, who were certainly Finns, and then occupied the lands between the Khasar and the Bulghar must have spoken a different language.

In the 8th century A.D. the steppes of Eastern Europe with the basin of the Volga belonged to the same great Turkic nomadic kingdom as the Central Asian steppes; up to the Chinese frontier (on this point, cf. the reports of the Byzantine Ammianus, which have been most recently collected by J. E. Greppi in his Documenti per le Trece Oecumenici, St. Petersburg, 1905, p. 133 et seq.). How and when the dominion of these Turks in Eastern Europe was destroyed is not now known. According to the Arabs as well as to the Russian sources, the leader of the Khazar here the Turkic title Kagan (in Arabic Khâlan). The account given by the Arab of the ceremonies observed at the accession of each new Kagan is bykhan, p. 284, obviously corrupted in Ibn Hawkal, p. 824), agrees perfectly with the Chinese notions of the Turkic rulers of the 8th century (cf. e.g. De Guignes, Histoire des Huns etc., Vol. i. pt. ii. p. 460). It may be concluded therefrom that the kingdom of the Khazar arose immediately out of the Turkic principality mentioned by the Byzantine writers, which formed a portion of the great nomadic kingdom of the 8th century. In the 11th century the kingdom of the Golden Horde arose out of the great Mongol Empire. In this case also, the conquerors must soon have adopted the language of its more numerous allies or of its subject peoples.

The Khazar kingdom is first mentioned in the year 627 as a powerful ally of the Byzantine Empire in the war against Persia. There was not then a capital on the Volga nor had there been in the Turkic kingdom of the preceding century; it was only after their luckless struggles with the Arabs in the beginning of the second century A.D. (after 720 A.D.) that the Khzars princes moved their residence from the northern slopes of the Caucasus to the lower course of the Volga.

Still less do we know when and why the Bulghars separated from the Khazars brethren. In the explanation of the puzzling language, proposed by J. Marquart, to be the correct one, then the Bulghars are mentioned by Tabari (i. 895 et seq.) as the enemies of the Sännild Khmers Anahidwan. The Bulguard also, mentioned by Ya'qub (Historiae, ed. Houtsma, p. 203), the Bulghars of the Danube are also sometimes called by this name, cf. e.g. Fragments Histor. Arab., vol. de Goeje, p. 26 et seq.) would, according to Marquart, be identical with the "North Caucasian Bulghars", although the reading Burjâq is in this case assured by the verse quoted in Ya'qub (i. 548). After the 8th century A.D. we have many notices of these branches of the Bulghars, who settled on the Black Sea and the Danube and came into contact with the Byzantine Empire (cf. the article MILITARIA). Another branch of the same name is mentioned to the central course of the Volga, apparently under pressure from its enemies, where they afterwards adopted Islam, and for long formed the farthest outpost of Muhammedanism in the north till the foundation of the Siberian kingdom on the Irish and the Tobol.

We only have one first-hand account in the 11th century, in the Diaries of the embassy of Ibn Fa'djân, preserved by Ya'qub; this embassy, sent by the Caliph Muktasde, left Baghdad on the 11th Safar 399 (24th June
of all the peoples of the Volga area; the author does not appear to have heard of the Bulgars and to have regarded the Don and, not like later geographers, the Kama, as the source of the Volga.

This last objection may be neglected on the ground that we do not possess Ibn Khurdadbeh's work in its final and complete form. It is possible that a copy of the complete work may have survived in India, perhaps in a Persian translation. I have already pointed out in my notation of the text of Gardizi (cf. Barthold, Oezet patvandie v Serdzyazju Astuz, St. Petersburg 1897, p. 79) that the itinerary from Bârgâhân on the Issyk-kul to the land of the Tughlughz ads otherwise only known from Gardizi (ibid., p. 91 et seq.) is also given by Râvîrî (Tabâhâk-i Nâzîrî, p. 961) likewise in Persian but with a reference to Ibn Khurdadbeh. The Persian translation of Ibn Khurdadbeh used by Râvîrî has, as far as I am aware, not yet been made known.

The two other difficulties, also, are perhaps not so insuperable as at first sight appears. Ibn Faḍlân here contradicts himself; in one place he says that the prince told him his father had been an unbeliever and in another he makes the prince explain some points in the tradition about the life of Muhammad as a combat between believing and unbelieving Dulam and say he had received this explanation from his forefathers.

The Arab embassy which had been sent at the request of the king of the Bulgârs had not only a religious but also a political object, which for the prince himself was naturally the more important one. The Caliph was not only to provide for the instruction of the Bulgârs in their religion but also to build a fortress against their enemies. The political side of the mission was entrusted to the ambassador, Staun al-Raṣîd who had apparently been appointed "by the government" (muta ghiyât al-fâsâl) and to whom the honours due to the leader of the embassy were paid on the reception at the court; Ibn Faḍlân had charge of the organization of the education of the prince's sons in Islam as the trouble he takes about the Khûta and the concealment of women from men while bathing, show. He probably over-estimated the importance of his side of the mission and represents it to his readers in this light. Both prince and people had apparently been already converted to Islam, although the statement regarding the schools may be based on an over-estimate, probably on the accounts of Bulgâr merchants, who had good grounds for doing so, for, as good Muḥammadans, they would have to pay less duties and be able to sell their wares at a better advantage.

There still remains the name Alûm or Alûmî. It is doubtful whether the name appeared in this form in the riśâla or in an earlier, or in a later, copy (in Yâghî's time the riśâla was widely disseminated in numerous copies). Ibn Faḍlân says that the Bulgâr prince afterwards adopted the title "Ermî" in the Khuja; we actually possess coins which were struck in the town of Suwâz (see below) by a contemporary of the Caliph Muḥammad (the name of the Caliph is given on the coins): the Bulgâr prince calls himself "al-Ermî" Bârend. There are also other coins. There is a specimen of this coinage in the Coin Cabinet of the University of St. Petersburg, Fâhîn's statement (Opusculorum Pecuororum pars secunda, ed. B. Dorn, Petropoli, 1877, p. 312).
that al-Kādir should be read for al-Muktafar and that the coin was struck in Shabāh (Ṭaffākht) by a "governor for Buğhā Khān" as clearly contradicted by the form of the letters, to anyone acquainted with the Kufic alphabet on coins, it is clear that an *AḤF* could not stand between the article and the two final letters. On the other hand, it is very probable that the copies of the *riżāl* confused this *BĀNĪMAN* with the Almas or Almāsh known to them from Ibn Khurāshdīštī, Dāšāhūr or other sources.

Ibn Rusta cannot be proved to be independent of Ibn Faḍīlān. Even the story, so popular in Muhāmmadan literature, of the short summer nights and brief winter days, which made the observation of the prescribed hours of prayer impossible, are found neither in Ibn Rusta, nor in al-Bakrī, nor in Gardīzī but we find it given in Iṣṭakhri (p. 225) in almost the same words as in Ibn Faḍīlān: یَسَّعَطَ لِّذَإ ۱۲۶۶، ۱۰۱۰. It is at any rate certainly not improbable that the Khuṭṭīl on whom Iṣṭakhri here relies, is identical with Ibn Faḍīlān. What Yākūt (ib. 436, 20 ۱۰۱۰) tells us about the Khuṭṭīl, on which authority of Ibn Faḍīlān one cannot speak of the word for the text in Iṣṭakhri p. 220 ۱۰۱۰ (cf., also F. Wsänstofeld's note, Yākūt, v. 173). It is equally clear that Maṣʿūdī, when he says the Buğhās adopted Islam in the reign of the Caliph al-Muktafar after the year 310 was thinking of Ibn Faḍīlān's embassy and his report although there is nothing about the *dream* mentioned by Maṣʿūdī, in the extract from the riżāl, made by Yākūt.

The account preserved in Ibn Rusta, al-Bakrī, and Gardīzī appears only to give the most meagre and contradictory accounts of the Buğhās that had penetrated to the Arabs before Ibn Faḍīlān's embassy. Mosques and schools, but no towns are mentioned; the people dwelt in woods and lived by agriculture. The Buğhās or Burūsīs dwelt between the Buğhās and the Khuṭṭīl, they were subject to the Khuṭṭīl and had been conquered by the Buğhās. It was 15 days' journey from the land of the Khuṭṭīl to the land of the Burūsīs and thence three days' journey to the land of the Buğhās (obviously the references here are to the capitals or most important places in these three lands). The Buğhās were divided into two parts, but metal was not very great; there were only 500 families of importance. Even then the land was of great importance for its trade in furs and was visited by the Khuṭṭīl and Russians for this reason; Muhāmmadan trading vessels also came there and had to pay taxes. Taxes were paid by the populace in horses and other kind; amongst other jevés, at every marriage the bridgegroom had to hand over a horse for the honour of the prince. Money of metal was not struck; the fox-selt was the unit of currency, each being worth 2/4 dirhems (about a shilling). There was also silver, money current which had been imported from Muhāmmadan countries, this money being used to buy the goods of the Russians and Slavs. The land was bounded on the one side by the land of the Burūsīs and on the other by the country of the Slavs.

The picture drawn by Ibn Faḍīlān of the Buğhās and their land is much more complete. It is remarkable that in his account the Buğhās of the Volga are called *Slave*'. The embassy covered the road from Djarjänysa (near the modern Kama-Urgent in Kīlwa) to the capital of the Buğhās prince in 70 days. Yākūt has unfortunately not given a description of the ruins; the number of days' journeys suggests that the embassy came from Buğhās to the lower course of the Volga and from there entered the land of the Buğhās through the country of the Khuṭṭīl and Burūsīs. According to Iṣṭakhri (p. 227) it took a month to go *through the desert* from till the capital of the Khuṭṭīl to Buğhās, going by water it was two months' journey through the mountains and then 20 days in the valley. They were reckon 30 days' journey from till the Khuṭṭīl capital, to the frontier of the Burūsīs and thence 15 days to the limits of this people probably to the north-west, towards the land of the Slavs, not in the direction of Buğhās.

The site of the capital of Buğhās is defined by the ruins of the village of Buğhāske or Upanse-ke in the circle of Spanak in the province of Kazan. The distance between the ruined site and the left bank of the Volga is almost 4 miles. The Borenius mentions this agreement with Ibn Faḍīlān's statement that it was less than a farsākh from the town to the river, so that we may conclude that neither the town nor the river-bed had changed their position since the 8th century. No further description of the town is given in the riżāl nor in the extract made by Yākūt, nor is there any information given about other towns in this country. Iṣṭakhri mentions two towns, Buğhās and Suwār (the ruins now existing near the village of Kūresskīa) lying near one another; there was a Friday mosque in each of them; the male population of the two towns amounted to about 10,000 in all. The inhabitants spent the winter in wooden huts, and the summer in tents. According to a *Awhī* (Arab) of the Volga, the distance between Buğhās and Suwār was two days journey; we do not know his authority for this statement. The notices of Buğhās and Suwār in Maḥaddas (ed. de Goeje, p. 361) are probably based on a later authority than Ibn Faḍīlān. According to this source, Buğhās lay on both banks of the river; the Friday mosque was in the market-place, and the houses were built of wood and reeds; the inhabitants of Suwār lived in tents. But the suburbs of Buğhās are here included with the actual town. Vaga-Bām (probably Aghā-Bām) is mentioned by the Russians as the harbour of the town of Buğhās on the Volga; traces of other suburbs have survived on the right bank of the river also.

At the reception of the Arab embassy, silver coins were scattered in their honour; whether these coins had actually been struck in the country itself is not stated. During the ceremonial reception the king sat on a chair, covered with Greek silk (al-tādfīd al-rāmī); to the right of him sat, the king's subject, to the left the ambassadors and before him his son. Whether the word Bilwār which appears in the name of the reigning king as well as in that of his father, is to be regarded as a date or is certain is not quite certain; *Awhī* (cf. the text in Bardolt, Zapiski evropeisk. arkh. obšch., ix. 264) is the earliest authority who says definitely that the word is a title of the king of the Buğhās (in the manuscripts both Buğhās and Biğhān are found). The title is explained by Sekowski as the Slav *vladařevac* (ruler), by Marquard as the Turkī alif
THE end of the reign of the Caliph whose name appears on them, in 366 (978-977), under the Caliph Tâ'立, Mu‘mîn b. al-Haasan is the prince who exercised the prerogative of striking coins. Coins of a later period in the reign of some princes have not yet been discovered. The disappearance of silver money, for which no satisfactory explanation has as yet been given, which is noticeable in Central Asia in the vii (219) century, and in the other lands of the Muhammadan world also at a somewhat later period, may also have been felt in the lands of the Bulgars. It was not till shortly after the Mongol conquest, in the time of the Caliph Nikâ (473-622 = 1080-1235) that silver coins were again struck in Bulghar; on the one side of these coins is the name of the Caliph and on the other in a very barbaric Arabic script the mint (al-âmâr al-farsh bulghârî). The name of the king is not given.

The question has been much discussed (particularly by Westmacott and Marquart), as to how far the account only given by Ibn Hawkâl of the devastation of the whole Volga area by the Russians in the year 358 = November 958-959 agrees with the actual facts. Ibn Hawkâl refers to this campaign, in several places in his work (ed. de Goeje, p. 14, 281, 482 and 486); the Russians are said to have conquered all the lands of the Bulgars, Bursë and Khasar and laid them waste; those who escaped the sword took refuge on the peninsula of Stikh-Kul (Mamigishak) and Bâb al-Abwâb (Apsheron) in the Caspian Sea; these refugees were later forced to make a treaty with the victors by which they agreed to return to their homes and live under Russian rule. It has escaped the notice of both Marquart and Westmacott that, as is clear from the main passage, p. 284, 10 of v., the date 358 really was the year in which Ibn Hawkâl, who was then in Djurdjan, received the account of the Russian invasion and through some carelessness on the part of the author it was transferred to the event itself. There is then no chronological disagreement between the account given to Ibn Hawkâl by the people of Djurdjan and repeated by him and the accounts of the Khazars in the annals of the Archdeacon Sviatoslav against the Khazars in the year 965 (according to Westmacott the account in Ibn al-Athir, viii. 418, of an invasion of the Khazar kingdom by ‘Turkish’ peoples in 354 (965) also refers to this campaign). There is no ground for supposing that in addition to the invasion known from Russian annals, there was another, otherwise quite unknown, raid by the Vikings. Ibn Hawkâl’s statements about the return of these ‘Russians’ through the lands of Rûm and Andalusia, are probably, as Marquart suggests, based on some confusion with the contemporary raids by Normans of Denmark on Spain. It is very doubtful if the Russians, as Ibn Hawkâl says, really conquered on this occasion not only the Khazar territory but the people on the Volga also, as nothing is said about it in the Russian annals. There has probably been, as in many other Arab sources, some confusion between the Bulgars of the Volga and of the Danube, against whom Sviatoslav had at this time just begun his campaigns.

It is on the whole very probable that the Bulgars gained more benefit than hurt from the
The capital Bulghar, appears to have risen to a flourishing condition in a relatively short time again; even under the Great Khan Mangü (1251-1259), coins were struck in Bulghar again. The traveller Rubruqqa, who had not himself been in Bulghar, although he was within five days' journey of it in 1253, regards this country, which, like his predecessor Julian, he calls *Bulgaria Magna*, as the last remnant of the once powerful state of the world (*ultima regis baken civitatis*: *The Journey of William of Rubruck*, transl. by W. W. Rockhill for the Hakluyt Society, London, 1900). It is not known when or why the town was abandoned by its inhabitants. Timur's campaign of the year 1395 does not seem to have affected the countries so far north, but Bulghar was soon afterwards (1399) destroyed by the Russians. The town probably suffered more from the rise of Kazan, which is said to have been founded just before this time by Bâr-Kühân, than from these wars, particularly as Kazan had been selected as the capital of an independent Tartar state, of which Ulú-Muhammad (died 1446) may be regarded as the founder. It is to this Ulú-Muhammad that the last dated coins bearing the name of the town of Bulghar belong (March 1439). The town was taken in 1428. The importance of Bulghar as the greatest market on the central course of the Volga passed first to Kazan and then to the Russian town of Nijni-Novgorod. The word Bulghar still remained in use in literature, though only as the name of a country, till a later period; towards the end of the 8th (xvith) century (in the work itself the date 986 (1051) is mentioned), Ghârâl al-Din Husân al-Din Bulghar composed a history in Turki of his native land entitled *Bulghar* (*Bulgharye*); it has survived to us but contains nothing but fabulous stories about the propagation of Islam and the lives of the Muhammadans saints.

The surviving ruins of the town of Bulghar belong as the inscriptions on tombs which have been found there show, to the 8th (xvith) and the 9th (xvith) centuries. This is not always mentioned, but there is little resemblance to the Bulghar of Ibn Fâlân. Most of the buildings were of stone, procured from the heights on the right bank of the Volga. The town had a circumference of about 6 miles, was surrounded by an earthen wall and a ditch, possibly, as Berezin supposes by a wooden wall also, and was in the shape of a long quadrilateral, the breadth of which gradually decreased from north to south, adjoining the town proper on the south, was the citadel with the royal palace, likewise surrounded by a ditch and an earthen wall. The suburbs lay to the north and west of the town. The most important buildings were in the centre of the town (two Friday mosques, with a minaret beside each, not far from them a large bazaar establishment, which, as Berezin (ells as, without have disregard and is an imitation). From the size of the mosques, Berezin computed that the town must have had a population of about 50,000 souls. The care and preservation of the ruins has now been undertaken by the *Society for Archaeology, History and Ethnography* in Kazan. Previously the stones of the ancient buildings were, as usual, used for building purposes by the modern inhabitants. The inscriptions also, which were copied by order of Peter the Great, are now for the most part no longer visible.

When the Mongols were returning to the East after their victory over the Russians on the Kalka (1224), they were incited by the Bulghars into an ambush where they suffered heavy losses (Ibn al-Kathir, xi. 254). This surprise is said to have been revenged in a most sanguinary fashion. In 1229, according to the Russian annals, the Bulghar frontier guards on the Vylyk (Ural) were put to flight; the final overthrow of the kingdom and the destruction of its capital followed in the autumn of 1236 according to the Muhammadan historians, and in the autumn of 1237, according to the historian Ḥâfiz Khan (p. 116).

The land of the Bulghars of the Volga now formed a part of the kingdom of the "Golden Horde" which had been founded by the Mongols.
Besides the Muhammadan epitaphs, Armenian ones have also been found in the ruins, which probably points to the importance of the town as a commercial centre. The Muhammadan inscriptions are usually in Arabic, but they also contain Turkish; as Ashmarin has shown, this Turkish element is related not to the Old Bugarh, but to the New Bugarh. In their opinion that the view, previously put forward by Kunik and put on a more solid basis by Ashmarin, is based, that the Old Bugarh language was a Turkic dialect similar to the Cuanash and that the Cuanash must be regarded as descendants of the Bugarhs of the Volga. It has however been recently quite justly emphasized by F. Korah (cf. Žiško vost. xix. vii. 1 p. 180 and Etymog. Orient. 1910, x. 1 p. 177) that this question cannot be regarded as settled until the most important material on this point, the non-Slavonic inscriptions in the so-called "Liste des Princes" of the Bugarhs of the Danube, has been satisfactorily explained from the Cuanash. In spite of Radijof's attempt to explain them, these numerals still remain one of the unsolved riddles of philology. After further studies, Rosenthal and J. Marquart urge that these are not numerals but "characters for the reigns and personalities of the individual Khans" — a statement which can only be explained by the fact that its defenders must have used Jireček's Latin translation and not the original Slavonic documents. The Slavonic words "a été comme" can only refer to the years of the kings' lives.

If the view put forward by Ashmarin cannot yet be proved correct, it cannot on the other hand be denied that the above quoted Arab accounts of the relationship of the Khans and Bugarh language to the Turk and Finnish (the language of the Burids) would be best explained by it. The Cuanash is known to be a Turkic language, but unintelligible to other Turk-speaking peoples.

The question has hitherto, even by Ashmarin, been only treated from the point of view of the philologist; but there are other difficulties in the eyes of the historian. The Cuanash, who are mentioned as early as the year 1551, were known to the Russians to be heathen. Ashmarin gives a few words which had obviously once been borrowed with other Russian words. The Cuanash have assumed quite a different meaning among the Cuanash, Pagan prayers being joined with the word, 

1-Ka'ba: 805 = June 1403, having a short time previously resigned some of his offices in favour of his sons. Besides a few commentaries he wrote of the Kitab al-Jami' fi 'l-Fikr wa-‘l-Ma‘rifah al-Islamiyyah al-Mamsiyyah (s. Ahwardt, Verschielt der ar. Haus. der Kgl. Bibliothek zu Berlin, N. 1086; Vullers, Katalog der islam. u. ar. insl. der Universitätsbibliothek zu Leipzig, N. 321; Catalogue Cod. Orient. qui in Museo Brit. ass., II. Codd. Ar., N. 500; Fihrist al-Kutubiyyah al-Kabirah, ii. 206). His son Shihab wrote an appendix to his Tazkiya al-Kabirah (Ahwardt, ed. cit., N. 4067). The latter, born in 701 (1309), was Professor of Koran Exegesis at the Burj-ul-Ahmar and of Hadith at the Madrasa of Kabi-Bai and from 826 (1423), was Kadi of Cairo. He died in 868 (1463). In addition to a biography of his father, the Tabqat al-Shafi‘i‘i al-Islami al-Bulghini (Kopfmann-Medressa in Stambul, N. 1061) he wrote a treatise on the legal relationships of freemen and slaves, entitled al-Zami‘a‘r al-Farid fi-ta‘lih al-Qi‘l fi ‘l-Hurra al-Abd (Ahwardt, ed. cit., N. 4995). His older son, 'Abd al-Rahman ibn 'Omair Damil al-Din, born in Rama'yan 759 = July 1356, became Kadi of Damascus in 840 (1431) and died in Damascus 824 = Oct. 1421, after being several times deposed and reinstated. He wrote a commentary on the Koran entitled, Nahe al-Hujza‘ (see Catalogue Cod. Orient. qui in Museo Brit. ass., II. N. 1553 = 1557) and a treatise on the requirements of a Kadi entitled al-Maqalat fi ‘l-A‘qal‘a al-Rahma‘ (Ahwardt, ed. cit., N. 5016).

BULUGH (أ), "Maturity." According to the Shafi‘i school, one's majority is attained on the completion of his fifteenth year unless he has already shown signs of puberty. Should this happen, however, before the completion of the ninth year, the minority is not terminated, according to the Hanafi school and some Malikis also, the completion of the fifteenth year is the allotted period for the completion of the period of minority; according to most Malikis, on the other hand, it is the completion of the eighteenth and in the personal opinion of Abu Hanifa the completion of the eighteenth year for boys and of the seventeenth for girls.

A major is called Bulugh (i.e. "grown up") in opposition to the minor, who is called Sakhi ("little one") or Sahi ("boy") in the law books. A minor who is almost grown up is called Murabij.

(Ten. W. Juvett.)

BULUKKIN (Bologouin) B. Za‘id belonged to the great Berber family of the Sanhaja who proved themselves devoted adherents to the cause of the Fatimids, in opposition to the Zenata, who were partisans either of the Khattari or of the Umayyads of Spain. After the defeat of Abu Nazif, when Ziri received the governorship of the Maghrib from the Caliph al-Mansur, he placed his son Bulukkin over three towns, Algiers, Medea, and Milliana, which had recently been founded or rather rebuilt. The war was continued against the Maghrib with great earnestness and when, after being at first victorious over Muhammad b. Khair, Ziri was in turn defeated and killed in 856 (974) and his heir won the Caliph of Cordova, Muhammad al-Mu‘taz, who had decided to make his capital in Egypt, handed over the government of the Magrib and of Ifriqiya with Kairouan as its capital to Bulukkin. The latter immediately took steps to avenge the death of his father, repossessed the whole of the Zab and pursued the Zenata into the desert as far as Sidjilmasa. The Fatimid Caliph gave him the honorary title of Abu ‘l-Fadl and allowed him to take the name of Yuni‘ (22nd Dhu ‘l-Hijja 361 = 4th October 974). Bulukkin proved himself worthy of his office and honours. After the departure of his sovereign, he recommenced the campaign against the Zenata, seized Tlemcen 362 (975) and transported its inhabitants to Ashur. As a reward, he received from the Caliph al-Mansur, who had succeeded al-Mu‘taz, the province of Tripolitania which he held by a treaty of lands and continues the war against the Zenata, who were in alliance with the Umayyads of Spain, captured Tiss and Sidjilmasa 369 (986). He was not, however, able to attack the Umayyad vassal, al-Manazir who had disembarked at Cenut with a large army. He therefore turned his attention to the Bergha-wa (q.v.) and slew their king, Tik ‘Abd. al-Mansur, on the return of this expedition, he died at Wareken (var. Wurkenfur) between Sidjilmasa and Tlemcen on the 21st Dhu ‘l-Hijja 373 leaving his power to his son al-Mansur the governor of Ashur.

BULUKKIN (Bologouin) B. Za‘id was the son of Muhammad b. Hammad, and cousin of al-Mansur, belonged, like the preceding, to the great Sanhaja family, a branch of which ruled over Eastern Algeria with the Ka‘a of the Banu Hammad as their capital Yuen, brother of al-Ka‘a and uncle of al-Mansur, having revolted in the Maghrib, Bulukkin was sent against him by the Hammadid sovereign; the latter did not trust Bulukkin, howeyer, and had two Arab chiefs, his lieutenants, Khallifa b. Magsa and Atsaf al-Sharif, to assassinate him. The latter informed Bulukkin, who revolted in his turn and in concert with them, seized al-Mansur, who had taken refuge in the Ka‘a and slew him in 1047 (1055-1056). The latter was a brave and clever man but cruel. The town of Biserta, having revolted at the instigation of its governor, Dafar b. Abi Rumain in 459, Khalifa b. Haidara was sent
against it and put down the revolt. The principal authors of the rising were brought to the Ka'ba and put to death. Four years later, in 454 (1062), Bulukkīn advanced against the Almoravids, drove them back into the desert, took possession of Fās and led away its principal citizens as hostages. While returning the same year, he was assassinated at Tessa by his cousin al-Nāṣir, who sought to avenge the murder of his sister Taimut, slain by order of Bulukkīn. The latter suspected her of having caused the death of her husband, al-Mu'āṭtīl, his brother.

(Rese Bestem)

**BULUWADĪN,** the POLYPYTMUS OF THE BYZANTINE historians, a small town in Asia Minor, chief town of a Ḥazāla in the Sandjak of Ayn Al-Khwar, 25 miles distant from the latter town, lying in a plain at the foot of the Emīr-Dagh and Sulṭān-Dagh, is surrounded by numerous gardens mixed with ancient ruins, and has six mosques, at least ten madrasa, a *Nūkhāna* (modern school) a monastery of Khālid dervishes and 8000 inhabitants. In the town are the hot springs of Khīlīkh, the Josephites and the Seldjuk ruins of İslām and Cal. **Bibliography:** *Allahul-WaLīya* *Yaqūb as-Ṣaḥābī, p. 216; V. Cucnet, *Twogee al-İsλim*, v. 240. (Cf. Huarte.)

**BUNDUX,** also FUNKRUN, arabized from the Latin (p.xus) *funiculus*, the hæmurrunt, thence bullet or projectile not only of modern fire-arms but also of ancient siege artillery [cf. p. 435].

**BUNDUKDAR.** [See BUMBARS I, p. 588.]

**BUNDUKAYA,** a Venetian seigneur; from Bundu-qa, the Arab name of Venice (Abu l-Qad), Geography, Arabic text, p. 120 formed like the German Venedig, from *Veniendum.* (Cf. Huarte.)

**BUNDUKAYA,** amulet (derived from bunduk, [q. v.] naut, ball, crossbow, hence bundukā or numek-ha in its usual use throughout the East (Wetstein, *Sprachliche aus den Zeitungen, Zeitschr.* d. Deutsch. Morgenl. Gesellsch., xxii, 426, note 1; Burton, *Personal Narrative*, ii. p. 104), and is not unknown in certain dialects of Algerija also (Beaussier). (Cf. Huarte.)

**AL-BUNI,** Muḥyī l-Dīn Abu l-ʿAṣr al-Arāmī b. ʿAlī al-Bīrūṭ (i.e. of Bīrūt), is one of the most important Arab writers on occult sciences. He died in 622 (1225). He is the author of books like the *Sirr al-Hayān,* or *Secret of Sciences*, on the Cabala and divination, of minor works on the virtues of the *sarmaka*, on those of the divine names and of the letters of the alphabet. In these treatises, the construction of magic squares, ephemerides, and other talismanic signs.

The earliest manuscripts of his works which are the most used even to the present day by Muḥammadans, who deal in magic or amulets. In the west they have been of service to scholars like Reinsand in his work on the *Monumentum Arabum, Personae et Tabula, du cabinet de M. le Duc de Boulay, 2 vols. 1828,* in the part where he discusses enchantment and M. Doutte in numerous passages in his book on *Magie et Religion dans l’Afrique Francaise.*

The manuscript on magic, belonging to the Bibliothèque Nationale in Paris (no. 2662), is in part based on the works of al-Buni, who is there quoted — evidently by mistake — under the name of Sharaf al-Dīn. (See Carra de Vaux, *Notes sur les Talisman et conjurations arabes* [Geneva, Ar. 1907], p. 549; do., *articles Chamsa and Amulets* [*Muḥammadan* in the *Encyclopedia of Religion and Ethics*]. — Cf. also Brockelmann, *Geschichte der Arabischen Literatur*, i. 497.)

(R. CARRA DE VAUX)

**BUNN.** [See KAMWA.]

**BUURAIDA b. al-ḤUSAYN, one of Muḥammad’s Companions, chief of the tribe of the Aslam b. Āfaq. When the Prophet migrated from Mecca and was passing the settlement of the Aslam in al-Ghāzin, Buuraida became converted to Islam, with about eighty families, who were with him. He did not go to Medina till after the battle of Uhud but thereafter then he took part in all Muḥammad’s campaigns. In the year 4 (626) he was sent to collect taxes from the Aslam and al-Qifār and is said to have accompanied ‘Ali’s expedition to Yamān in the following year. When the Prophet was preparing for the campaign against Tabykāh, he again sent Buuraida to the Aslam to call them to his aid against their enemies. After Muḥammad’s death, he remained till Medina and the commune of Bagh where he built a house. In the year 51 (671), he went with al-Rahb b. Ziyād to Rāḥim and died in Mawr in the reign of Yazīd b. Mu‘awiya.

(K. V. Zettersten)

**BURAQ.** [See BUURAH, p. 744.]

**BURAQ,** this name, which is connected with *buraq* ("lightning") is applied by tradition to the fabulous animal which the Prophet mounted on the night of his ascension (*Mi‘raj*). Allusion is made in the Korān (xxviii. 1, 67; iii. 1-19) to a vision which the Prophet had in which he seemed to be borne from Mecca to Jerusalem and thence to heaven. The animal which carried him is neither described nor mentioned by name in the Korān; but the commentators say that on this night Muḥammad was in the *bayt* of the Holy House, that is, in the precincts of the Ka‘ba, and that the Archangel Gabriel brought Buraq to him. This legend has been considerably embellished and has become a favourite motif with poets and miniaturists. There are long descriptions of Buraq, who is represented as a mare with a woman’s head and peacock’s tail. On this subject see an excellent article in the *Magasin Pitterrson*, 1876, p. 364, where a reproduction of a curious Persian miniature is given; another is given in the same periodical for 1884, p. 4. This miniature is taken from the celebrated Uglun manuscript, containing the translation of the Persian poem on the *Night of the Ascension of the Prophet*, attributed to Farid al-Dīn *Āṭar* (ed. Pavot de Courteille. See also Abu l-Qad), Bukhārī etc.). Buraq was also used by ‘Abdullāh on the visits he paid to his son Ismā‘īl, banished to Mecca. (See Tabari, Persian *Chronicle*, transl. Zotenberg, l. 1055.)

(E. CARRA DE VAUX)

**BURAQ-ḤADĪB,** prince of Kermeén and founder of a new dynasty in that country. He was originally one of the Karāt-Khālīl, a pagan people; according to
Djouwaini he was brought to Muhammad b. Takaq Khair-al-Din after the battle on the Fadah, in which the Karsh-Khdt were defeated (Rahib i 667 = August—September 1210) and taken into his service. According to Nasawi (ed. Houdas, p. 95), he had come to Muhammad as an envoy from the Karsh-Khdt (Djouwaini tells us the same story of his brother) and was there forcibly detained; according to this authority also, it was only after Muhammad's decisive victory over the Karsh-Khdt that he was forced into service and was appointed Hadji Jibril (Chamberlain); he is also said to have filled the same office in the kingdom of the Karsh-Khdt. When Muhammad and his sons had to flee before the Mongols, Buršuk went with one of these princes, Ghiyath-al-Din Fris-Shah to Persia. Towards the end of the year 618 (the winter season of 1221-1222) when the father was dead and Djallal al-Din, the eldest son, had fled to India and the Mongols had left the land they had laid waste, Ghiyath al-Din was recognized as ruler in almost all Persia and appointed Buršuk governor of Isfahan.

As a result of a quarrel with the vizier of that town, Buršuk obtained permission to go to India to Djallal al-Din. On the way thither he was attacked by Shujjat-al-Din, prince of Kerman, who wished to free his city of the goods Buršuk and his relatives were not only able to defeat their opponents but in a short time to conquer the whole land of Kerman, whereupon they gave up their intention of proceeding to India (629 = 1232-1233). This is Djouwaini's version; Nasawi (op. cit.) however makes Buršuk appointed governor of Kerman from the beginning. When Sultan Buršuk returned to Kerman in 621 (1224), Buršuk paid homage to him and was confirmed as governor of the province, although some of his dealings aroused the suspicions of the Sultan. While on his campaigns in Armenia, Djallal al-Din received intelligence in Djouwaini I 623 = June 1226 that Buršuk had risen against him and was in alliance with the Mongols. Ghiyath-al-Din was sent with 600 men in the attack against Buršuk; Djallal al-Din soon followed him and the two princes could do nothing to Buršuk who was securely entrenched within the walls of his fortresses (Nasawi, p. 124). Djallal al-Din himself does not appear to have come as far as Kerman; on the way thither he received repeated envoys from Buršuk assuring him of his devotion to his master. He was still in the neighbourhood of Isfahan when he decided to give up the campaign against Buršuk, confirm him in his office and even to send him a robe of honour (Ibn al-Aljir, ed. Tornay, xii. 276) towards the end of 625 (1228), Ghiyath al-Din, who had quarrelled with his brother, came a fugitive to Kerman; with him was his mother who, against her own will and the will of her son, had become the wife of Buršuk. Soon afterwards she became the son of having been poisons. Buršuk had his wife strangled and the 500 retainers of the Sultan massacred; Ghiyath al-Din himself was thrown into prison and afterwards done away with; likewise, although a rumour spread abroad that he had made a marvellous escape to Isfahan. As we learn from Djouwaini, Buršuk informed the Caliph that he had now adopted Islam and would be a faithful subject of his; the Caliph grunted his request and gave him the title of Kutughh Sultan (the fortunate Sultan). On the other hand Nasawi had seen with his own eyes a letter sent in the name of Buršuk to Sultan Djallal al-Din's vizier in which Buršuk declared that he had rendered the Sultan a great service by ridding him of his worst enemy, and the Sultan might confidently conform in the rank of Princess of Kerman which his father had received from him as an advancement. He informed the Mongols, as Wassaf (India, lithographed edition, p. 287) tells us, that he had slain Sultan Ghiyath al-Din as a rebel against the Great Khan and therefore according to Mongol law had a right to the estate of the dead man, including the right to seize his wives. He is said to have appealed to these laws when he advanced against 'Ali al-Dawla Mahmu'd, 'Ali Beg of Yezd, with whom Ghiyath al-Din's widow was now. An arrangement was come to between the two princes; the Sultan's widow was handed over to the prince of Kerman, and is said to have afterwards borne a daughter to him; in return he gave the prince of Yezd his daughter to wife.

When the Mongols undertook the conquest of Sistan in 632 (1235), their leader, Tāhir Bahādur, demanded that Buršuk should join the Mongol army as a sign of his submission to the Great Khan. Buršuk excused himself on account of his being advanced in years and sent his son Ruhun al-Din instead to Mongolia; while on his way thither, the prince received news of the death of his father, which took place on the 19th of Djallal al-Din (633 = 2nd September 1235) following the St. Petersburg manuscript of the Ta'kīh-i Wazīfī; in the lithographed edition p. 288, the date is not given.

Bibliography: The portion of Djouwaini's Ta'kīh-i Djallal Khān, which has been used here is given in Huntuma, Recueil de Textes relatifs à l'Histoire des Seljoudides, i.大战, p. 40; ed. Tornay, ii. 276 et seq.; ed. Fris-Shah, iii. 5 et seq.; ed. Shujjat-al-Din, iii. 5 et seq. and the brief notice in Hammer-Purgstall, Geschichtesch de u. A., t. 66. (W. Barthol.)

BURAK KHAN, a Mongol prince in Central Asia, great-grandson of Caghanli [q. v.], grandson of the Mūnghang who had fallen at Būmiyān in 1221 [see above, p. 644]. His father Yseba-Tuwa had taken part in the events of the year 1251 (cf. the article AHRV, KHAJ, p. 682) and shared the fate of the other rebellious princes. Like the rest of the chieftains of Caghanli and Ugedes, Buršuk and his brothers were educated in Mongolia; some years after the accession of the Great Khan Khudilai (1260-1294) they received permission to return to their home and to take possession of Caghanliyan, their father's ancestral estate. Shortly before, Buršuk's cousin, Mubarak Shah (the second prince of this line) had been recognized in Central Asia as head of the house of Caghanli; Buršuk had therefore received a Yarīgh (written order) from the Great Khan in which he was appointed co-regent with his cousin. Without producing his Yarīgh and without doing anything in particular openly against his predecessor, Buršuk is said to have retained his position in a short time without inuring Caghanliyan; all the princes of the house of Caghanli deserted Mubarak Shah and rallied round
the new claimant; Mubarak Shah himself was forced to recognise Burak's suzerainty and to enter his service as head of the barak (court hunters). The dates given for these events are uncertain and contradictory. According to Djemal Karamdj, the author of our only authoritative account of the affair in Burak, the events occurred in the year 1264 (1857) and 1265 (1858). Mubarak Shah was raised to the throne in Djerdra in 1664 (1665). He was later taken prisoner in the Battle of the Hill of the Year of the same year (3rd September-17th October) at Kho- drai by Burak; according to Waqafi, Burak's accession took place as early as the beginning of 1665 (which began on the 10th April 1664). It is certain that the brothers Nicolò and Matteo Polo whose sojourn of three years in Bukhara must fall within the years 1265-1266, mention Burak-Khan as prince of the country; it is just possible, however, that Marco Polo, who had heard of Burak-Khan and his campaign into Persia during his own journey through Persia and Afghanistan, may have added his name to his account of the first journey of his father and uncle. During the years following, Burak Khan had to defend himself against the Great Khan Khubilai as well as against the pretenders to the throne of Central Asia, Kaldar, the grandson of the Great Khan Ugedil. Mahgulatun, the governor of Chinese Turkistan appointed by the Great Khan, was driven out by Burak and replaced by another governor; the Great Khan sent an army of 10,000 cavalry to restore the deposed governor, but the army had been sent to meet them by Burak was much more numerous (30,000 men), so that the Great Khan's cavalry had to retreat without risking a battle. The town of Kho-darai, which belonged to the Great Khan's empire, was plundered by Burak's troops by his orders. The war against Kaldar was less fortunate; Burak was again successful at first, but his opponent received support from the kingdom of the Golden Horde. The prince Burakdzh, brother of the Khans Bum and Berke, appeared in Central Asia at the head of 50,000 men, so that the war took another turn. Burak was defeated and retired to Mai war, the Nah; to offer a desperate resistance to his enemies there; it was Kaldar himself who offered to be his envoy for peace. Kaldar (parliament) was summoned at which a kingdom quite independent of the Great Khan was organised under Kaldar's sovereignty. All the princes were to regard one another as kinsmen (andar); the property of the people and villages was to be respected, the princes were to be content with the pastures on the mountains and to keep the herds of the nomads back from the cultivated areas. The greater part (two-thirds) of Mai war, the Nah, was left to Burak, but there also the government of the cultivated areas was placed in the hands of Masrid Beg, a governor appointed by Kaldar. The place and date of this parliament are variously given; according to Raghid al-Din it was held on the Talas in the spring of 1265, according to our account of Kafirud, the grandson of Samarkand, a year or two earlier, for according to him Masrid Beg went to Iran in 1266 (1667) as ambassador from Kaldar and Burak; and Burak's campaign against Ababira took place in 1265 (1666-1667). Some such campaign had been already proposed at the Kurfurdi and had received the support of Kaldar; probably Kaldar wished to get this still dangerous opponent of his out of the country by this means. Mai war, Beg was sent to Iran ostensibly to collect the revenues, to which Burak-Khan had a claim (the prince), but he was still required that all the princes of the ruling house should have their share in the revenues of every country conquered; the real object of his mission was to oust the land and its resources. Soon after the return of the envoy, Burak opened hostilities and occupied parts of Khorasan and Afghanistan but did not receive effective support from the troops sent to his help by Kaldar with the prince Kafirud at their head and who was soon left in the lurch; as Raghid al-Din tells us, Kaldar afterwards said this had been done by his orders; Kaldar and Ababira ever afterwards regarded one another as friends. Ababira inflicted an annihilating defeat on his opponent on the 18th of July 1268 (24th July 2257): Burak had to retreat across the Oxus to Bukhara with only 5,000 men; during the battle he had fallen from his horse, been thereby lame and had to be carried in a litter. Various accounts are given of the last year of his life. According to Waqafi he spent the winter in Bukhara where he adopted Islam and took the name of Sultan Ghiyath al-Din; in the following year he undertook a campaign into Shistan, but his plans again came to naught through the defection of several princes; he had finally with his wife to throw himself on the mercy of Kaldar and was poisoned by the latter's orders. Raghid al-Din's account is more detailed and apparently more reliable. According to him the defeat of the princes took place immediately after Burak's retreat over the Oxus; Burak himself went to Tashkent; from there he sent to Kaldar who set out with an army of 20,000 men but deliberately advanced, very slowly to await the result of the struggle between Burak and the rebellious princes and to use it to his own purposes. Burak emerged victorious from the struggle and begged his kinsmen to return home as his help no longer required; nevertheless Kaldar continued his advance. His army was obviously much stronger than Burak's; when Kaldar approached Burak's camp he surrounded it with his troops and set fire to it. Burak died in the night, from fear it was said. When in the early morning Kaldar's envoys appeared in the camp, they were received with cries of woe, learned that Burak was dead and returned to their lord. By Kaldar's command, Burak was buried on a high mountain, after the Mongol and not the Muslim funeral; the princes, with Mubarak Shah at their head, complained of his high-handed deeds; Kaldar allowed them to appropriate the property left by Burak; Mubarak Shah's wife took the rings from the ears of Burak's widow with her own hands. Mubarak Shah afterwards entered Ababira's service; the account given by Raghid al-Din was probably obtained from one of his retainers. According to Waqafi, Burak was dead by the end of 1668 (summer of 1267), according to Djemal al-Karamdzi he did not die till the beginning of 1670 (1271), but the date is obviously the preferable one as it alone agrees with the above quoted, apparently reliable account by Raghid al-Din of the battle between Burak and Ababira.
BURAK-KHAN — BURDIJ.

(W. Barthou.)

Buran or Burań, daughter of Khañam Parnia, a Samtian Queen who reigned for a brief period at 650.

Bibliography: Noldeke, Geschichte der Perser und Araber zur Zeit der Sassaniden, p. 390 et seq.

Buran, wife of the Caliph Al-Mu'amín. According to some authorities, her real name was Khashchija and Burán was an added name. Born in Safr 192 (December 877), while still a child ten years old she was delivered to the Caliph at whose court her father Hasan b. Sahi was held in the highest esteem. The splendid wedding ceremony, which was celebrated on a scale hitherto unknown, did not take place till Ramazán 210 (825-826) at Fam al-Silb, near Wāsi. The Ashir writers delight in fabulous descriptions of the gorgeous celebrations, all the expenses of which were borne by Hasan b. Sahi. On this occasion Burán is said to have pleaded for the imprisoned pretendent Ishtihā b. al-Mahdah and obtained his release; others, however, ascribe his pardon to the influence of the Watt Ahmad b. Abi Khalid. Burán died in Rasf 1. 271 (September 884), nearly 50 years of age.

(K. V. Zettersten.)

Būraḍa. A piece of wooden cloth used since pre-Islamic times, which is worn as a cloak by day and as a blanket by night. That of the Prophet has become famous. As a reward for Ka'b b. Zuhair's [q. v.] poem, he made him a present of the Būraḍa he was wearing. It was bought from the son of the poet by Muš'ayr and was preserved in the treasury of the 'Abbasid Caliphs till the occupation of Baghdir by the Mongols. This Būraḍa caused it to be burned but it was afterwards claimed that the real Būraḍa of the Prophet was saved and is still preserved in Constantinople.

2. The name of a celebrated poet by al-Ísáy [q. v.]. According to the legend he composed it while he was following a racing-bull which had seized him by the Prophet. He twisted its mane over his shoulders as he had done on a previous occasion for Ka'b b. Zuhair. The fame of this miraculous cure spread and the poem which was entitled al-kağvah al-bâriba wa'sālih al-qāri'ayn came to bear the name Būrāda. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has attained such renown. Over ninety commentators have been written on it in Arabic, Persian, Turkish and Berber; the tubhul, the ta∫hīh and the ta∫hīh that have been made from it are immeasurable. The poem begins with the usual main, in the style of ancient Arabic poetry; the author then proceeds to regret his youth and confess his faults. His career is contrasted with that of the Prophet, who restored to the followers of the tradition, which the poem adheres to, the following verses.

The poem concludes with a supplication to Muhammad and several verses in his honour. There is no trace of Sulaym in it and this is not the least of its merits. Among the chief commentaries may be mentioned.

The general edition of the Būraḍa material in Paris (Bibliothèque Nationale, n. 1630) and Munich (n. 347); that of Ibn al-Marrāt of Tlemcen (died 842) described by Duss as "un emblème en langue orientale"; that of Kharīl al-A ṣrah (died in 905) which has been several times printed, occasionally with that of Ithnâ al-Iṣṭīfâr (died 1247) (Dhu l-Ka'da 1276); that of Ibn Åâ'shī (Cairo, 1906). The text was published for the first time by a Sufi by Ibn Umar in 1671 under the title, Cancillierat, Būraḍa, which was a Latin translation. Since then it has often been reprinted, particularly in the East and there is practically not a Sufi who does not contain it. In the West, von Rosenweig's edition may be mentioned: Fundatioe Vandalitanae zum Lob des Entscheid der Grundsätze (Vienna, 1824), with a German translation and notes. The best edition is that of Rosāf, published after his death by Behrman, Die Burda, ein Leibgedicht auf Muhammed (Vienna, 1860), with translations into Persian, Turkish and German; it does not however contain the series of apocryphal verses given by von Rosenweig. The Burda has been translated into various languages; without enumerating all the translations, we may mention, in addition to those mentioned above, that of de Sacy (at the end of the Expositions sur les Prophètes, by M. A. de Sacy, translated by G. K. de Tassy, Paris, 1822) and that of R. Basset, with a commentary (Paris, 1894); that of Redhouse, The Burda (in W. A. Clouston, Arabic Poetry for English Readers, p. 324-341, Glasgow, 1881); Gabriel's Italian translation, al-Burdatu (Florence, 1901), p. 59-85, with notes.

(R. E. Basset.)

Būrādī, arabised from the Latin bergenii through the Syriac (cf. Fraenkel, Die Aramäischen Personalnämmer in Arab., p. 215), a burgher. In astronomy būrādī meant "the sign of the zodiac."

BURDJ was the name applied to the Mamluk army of Mongols and Circassians founded by Sulaym Kāfūn and quartered in the towers of the citadel (burdi) of Cairo. From the time of Sulaym Burdi (784-804 = 1282-1298) the Sulayms were chosen from their ranks; Bāhars II [q. v.] was the first Burdi Mamluk to occupy the throne of Egypt. Their last ruler Tāwān Bey el-Brāji was executed in 1517 (922) by the Ottoman Sulaym Selim.

(M. Sobriner.)
AL-BURGHUTHIYA — BURHAN.

AL-BURGHUTHIYA is the name applied to the followers of Muḥammad b. Iṣḥāq Burghāthi, a Muḥammadan theologian, who founded a sect; he is considered by some to have belonged to the Ḥanāfīs and by others to the Nāṣīriyya [q.v.], but on some points of minor importance he followed his own views. Nothing further is known of Muḥammad b. Iṣḥāq, not even how he came to be known as the nickname Burghāthi, "thief." Bibliography: Shahristānī, ed. Curéton, p. 61, 103 (Haarbercker, p. 94, 153); al-Baghdādi, ed. Muḥ. Badi, p. 197.

BURHAN ("Proof"), aṣḥābiya of Muḥammad b. Ḥusayn b. Khalaf al-Tibrizi, compiler of the Persian dictionary, Burhān al-ʿarib; see ʿarib. BURHAN, a family (ṣulūk) in Būhrān, in which, in the vii (616) century the office of ṣulūk (superior, at this time the word had not yet acquired its present meaning of nāṣīriyya) of the Ḥanāfīs of that city descended from father to son; the title ṣulūk al-ḥāfiz (pl. ʿarīb) is applied not only to the head of the family but to all the other members also. Some poets compare these "Indians" with the "Emirs" of the Samanids' dynasty and rank the wearers of the ṣulūk with the "kings" of the crown (ṣulūk, ʿarīb). The title ṣulūk al-ḥāfiz was also borne, at a later period, under the Mongols, in Samarkand as well as in Būhrān by the office-bearers of the highest rank among the clergy and in the civil service. In almost all stories of the Burhan family, in addition to their spiritual rank and learning, particular emphasis is laid on their great wealth, to which they apparently owed a great part of their influence. The ṣulūk maintained an almost princely attitude towards their fellow-citizens. It is not quite clear what was their relation to the Turkish Khāns residing in Samarkand. Some of these Khāns exerted their authority in Būhrān also and regarded the ṣulūk as their vasals; at other periods Būhrān is described as a town under the rule of the ṣulūk-ūzūn and politically quite independent of Samarkand. This relationship was apparently not always settled in a peaceful fashion; it is significant that in the genealogical table compiled by Muḥ. al-Faḍlān (Kītāb Maḥallat al-Athār, in Burhān, Tāleqan 2966, to be found in the nāṣīriyya, p. 161) all the ṣulūk with the exception of the first are called "martyrs." Independent of this genealogical table in which the ṣulūk appear as descendants of the Caliph ʿOmar I are the notices of the ʿarīb recently collected by Muḥammad b. ʿAbd al-Wahhāb Kaswini (Part 2 of the Lāhūnī Lāhūnīyya of Muḥammad b. ʿAṣw, 1st ed. Browne, London and Leiden 1906, p. 332 et seq.). The founder of the power was the house of the second ʿUmar (ʿAbd al-Ḥāfaẓ Burhān al-Milla is ʿAṣw b. ʿAbd al-ʿAzīz b. ʿOmar Milla. The three series quoted in the nāṣīriyya from ʿAṣw b. ʿAbd al-ʿAzīz refer to this ʿarīb and not, as Muḥammad b. ʿAbd al-Ḥāfaẓ Burhān supposes, to the latter ʿAbd al-ʿAzīz. The date of his rule is approximately fixed by the statement of Abu ʿAbdullāh Bāḥṣaṭṭi (Ṭūr̃bīth Bāḥṣaṭṭi, Cod. Mus. Brit. Or. 3557, 61a et seqq.) that his father, who was born on the 1st Sawwal 447 = 24th Dec. 1055, and died on Thursday the 20th Dhuʾl-Maʿṣūm 574 = 21st August 1132 was at school with this ʿarīb. The second ʿarīb Husnī al-Din ʿOmar, son of the preceding, was slain in 536 (1141) at the taking of Būhrān by the Kārkhīs (Recueil de textes relatifs à l'histoire des Seljoukides, ed. Couture, ii. 278 and Niẓāmī ʿArūfī, Caḥar Maʿṣūla, ed. Muḥammad, p. 22). Nevertheless according to Niẓāmī ʿArūfī, the governor appointed by the Kārkhīs, Niẓām al-Mulk, received instructions to follow the advice of the Imām ʿAṣwī b. ʿAbd al-ʿAzīz (apparently a brother of the slain ʿarīb) on all questions, Ibn al-ʿĀṭīr (ed. Tarnovskii, xii. 205) makes the ʿarīb Muḥammad, a son of the slain ʿarīb, lead the moderation of the conquerors in the year 539 (1136-1137); this date cannot be correct, cf. Barthold, Turkestan etc. ii. 358. This same Muḥammad is called ʿarīb in the genealogical table. According to the same authority, his son Burhān al-Dīn Muḥammad and his great-grandson ʿAṣwī al-Dīn ʿAṣwī also held the same rank after him. Contemporary accounts however show that the genealogical relationship of the later ʿarīb to the earlier must have been different. Unfortunately these accounts are very defective and much still remains uncertain on this point. ʿAbd al-ʿArīf II was slained by ʿAṣwī as son of ʿOmar (Lāhūnī, i. 213); apparently this is the person to whom Muḥammad b. ʿAṣwī ʿArūfī dedicated his edition of the Tur̃bīth Naujavān (ed. Schefer, p. 2 et seq.) in the year 574 = 1178-1179: but this ʿarīb there is called ʿAbd al-ʿArīf II ʿAbd al-ʿArīf II. The ʿarīb ʿAṣwī Saif al-Dīn Muḥammad b. ʿAbd al-ʿArīf who was still alive at the date of composition of the Lāhūnī (617 = 1219-1220; Lāhūnī, i. 181) was probably a son of ʿAbd al-ʿArīf II. The following must be regarded as sons of the ʿArīf b. ʿAbd al-ʿArīf mentioned by Niẓāmī ʿArūfī.

1. Manṣūr b. ʿArīf, whose son Burhān al-Dīn Tāfī al-Dīn ʿOmar and grandson Niẓām al-Dīn Muḥammad were personally known to ʿAṣwī (Lāhūnī, i. 169 et seq.).

2. Burhān al-Dīn Muḥammad b. ʿArīf, author of several works on the Fikhr of the Hanafis (Broedelmann, i. 375).

3. The Burhān al-Dīn Muḥammad b. ʿArīf, mentioned by Ibn al-ʿĀṭīr (ed. Tarnovskii, xii. 170 et seq.) and Nasawi (ed. Houdas, p. 33 et seq. and 39). According to Ibn al-ʿĀṭīr, he made a pilgrimage to Mecca in 623 = 1226-1227 and was at first received with great honour but later on all sorts of peril and danger by his behaviour, which was such that a wit slyly remarked that his title should be changed to ṣulūk ʿarīb. It is probable to this pilgrimage that a story given by ʿAṣwī refers (Barthold, Turkestan etc. ii. 88) of a ṣulūk of Būhrān, who is said to have lived in unheard-of luxury in Mecca.

About this time must have taken place the popular rising in Būhrān mentioned by Dāʾūr (therein ed. Barthold, Turkestan etc. ii. 381); a man of the aranān class, son of a vendor of shields (mugāna-farīrāt) seized the ruling power and took the title of Malik-Sindjar; the "well-to-do classes" (zāḥḳāt ʿarīb) were persecuted on all sides; it was to be expected that the rich ʿarīb would be among those driven out of the town and as a matter of fact we learn from Ibn ʿArūfī (Lāhūnī, ii. 358) that ʿAṣwī had to take refuge with the infidel Kārkhī, before whom they laid their charges against their enemy Malik-Sindjar and received the necessary decrees but could do nothing (the power of the Kārkhī had long
decayed); they fell into debt, their villages were without water, and their movable property was stolen; their journey to the Karak-Khânî was sati-
ished by the poet Shamsī, whose verses are quoted by 'Awfī. It was probably immediately after his de-
mission that the qadî Buḫārā al-Dîn, like many Oriental princes, undertook the pilgrimage to Mecca.

'Awfī was able to add that affairs soon took another turn, Buḫārā was occupied by Muham-
mad b. Taḫshâ, Shâh of Khâhirîm probably as early as autumn 604 = 1207 (cf. Barthold, Tur-
kestan, ii. 386); Malik-Sihâr, as we learn from a verse quoted by 'Awfī (Lubâb, ii. 392),
brought first to Aūnî on the Oxus (the modern Curdju), afterwards to Khâhirîm where he lived for a considerable period and is also mentioned by Nazawî (ed. Houdes, p. 21). What Nazawî
tells us about the qadî Buḫārā al-Dîn Muhammad clearly shows that the qadî was able to return to Buḫārâ, was for long Ōmâ and al-Fâhî of the Ḥanafîs again, and lived in the same princely luxury as he had 6000 jurists (ṣâhâḥ) are said to have been maintained there (here) by him. He was after-
wards deposed by the Shâh of Khâhirîm and brought to Khâhirîm. When Turtûn-Khâtûn, mo-
ther of the Shâh of Khâhirîm, had to flee in 617 =
1220 before the Mongols, she had the qadî, her brother Ittibâh-Ittânî and his two sons Malik
al-İsâm and 'Azîz al-İsâm, with the rest of the ruler and his princes imprisoned in Khâhirîm, brought
into the Oxus.

The influence of the family was not destroyed by these disasters but survived even the Mongol
invasion. Whether, as Murâd Muhammad supposes, the qadî-žûdân mentioned as a contemporary of Sultan Uğurîn (703 — 716 = 1303 — 1316) be-
longed to the same family is uncertain; on the other hand, Ittânî in his account of the rising in the
year 636 = 1238-1239 expressly describes the then qadî-žûdân as a "son of the family of Buḫārā" (faḫaṣṣa-butubû-i buḫāban, cf. the Persian text in Schefen, Christiano-muscie Persan,, ii. 129, and in Defermèry, Journ. Asiat., iv. Series xx. 377).

structured by Djalhängic in the seventeenth century have recently been repaired for modern use.

**BURI** (or Wolfs, in Eastern Turks.) * 角 Buri is a Turkic name, and this last mentioned as Buri in the Turko-Turkish literature. In the **Turkic text**, it is often written as *Buri*. In the **Buryat text**, it is usually written as *Buri-Tegin*. In both cases, it refers to a Turkic chief or leader.

**Buri-Tegin** is a prince of the house of Karakhânsids or Bab-Khánids in Mkhwar-Al-Nahr. In all manuscripts, the text is written as *Buri-Tegin* or *Buri-Tegin*. It is known from the **Turkic** literature as *Buri-Tegin*. In the **Buryat text**, it is almost always written as *Buri-Tegin*. In the **Khaikhi text**, it is written as *Buri-Tegin*. In the **Qaraqalpaq text**, it is written as *Buri-Tegin*. In all cases, it refers to a Turkic chief or leader.

**Buri-Tegin** was a son of Bab-Nahr, a important member of the Khânsids, and an important member of the **Turkic** community. He is known for his military success and his political influence. In the **Turkic text**, he is described as a strong and wise leader, who was able to maintain the power of the Khânsids in the face of external threats.

In the **Buryat text**, he is described as a brave and noble leader, who was able to maintain the power of the Khânsids in the face of external threats. In the **Khaikhi text**, he is described as a strong and wise leader, who was able to maintain the power of the Khânsids in the face of external threats.

**Buri-Tegin**'s military success and political influence were due to his ability to maintain the power of the Khânsids in the face of external threats.

Bibliography: Besides the main source (Tūrākī-b-i Bahādūr) Bīrūnī-Tegın is also mentioned in Gārdūz (cf. the text in Barthold, Turkestān etc., l. 9) and in Minūštāhī (Dāvā, ed. Bīrūnī-n-i Kāzimīrī, text, p. 47). Cf. the discussion of the original sources in Bīrūnī-n-i Kāzimīrī (Dāvā, ed. Bīrūnī-n-i Kāzimīrī, Paris 1887, Intrud., p. 118 et seq.) and in Barthold (Turkestān etc., II. 378 et seq., 392 et seq., 396 et seq., 401 et seq., 404 et seq., 413 et seq., 417 et seq., 420 et seq.; Barthold). Būrīds is the name given to a dynasty which ruled independently in Damāscus as Ayyābīs (governors of the Salājūk Sulhāns) from 503-549 = 1100-1154. Toghtēği, the founder of the dynasty, was Asāb from 497-505 = 1103-1109. Asāb was the son of the Salājūk prince and afterwards for Toghtēği's brother Baktāh, the dynasty is called after Toghtēği's son Būrī (q.v.). Its last ruler was Būrī's grandson Mājlūt al-Dīn Abuks (534-549 = 1129-1154), an incapacious and suspicious tyrant; he had put to death his real followers and could only rely for support on the Crusaders. To prevent Damāscus falling into the hands of the Franks, Ibn al-Dīn seized the town, forced Asāb to be content with Iṣfahān and later to exchange the latter town for the district of Bahār. Bibliography: Recueil des Historiens des Croisades, Orient. i, 25, 27, 31, 435-450, 497, 495, 497. (M. Sehrenkho.) AL-BURUNI, AL-HASSAN IBN MUHAMMAD AL-DIMASHKĪ AL-SAßAFFI BAIK AL-DIN, AN ARAB historian and poet, born in the middle of Ramadan 965 = July 1559, at Saffuriyya in Gallia, came when 10 years old with his father to Damascus, where he received his education at the Madrassa al-Saffuriyya. After the completion of his studies, which he had to interrupt in 974 = 1567 by a four years' stay in Jerusalem on account of famine, he lectured in various madrasas. In the year 1020=1611 he acted as Kātib to the Syrian pilgrim canavān. He died on the 13th Dhu'l-Qa'dah 1024 = 11 June 1615. His chief work is the collection of biographies entitled Tawāhid al-Aṣyān min al-Asbāb al-Zāmani, containing accounts of 400 individuals which he had collected at long intervals and completed in 1023 = 1614; it was edited by Fażil Allah b. Muḥammad Allah in 1078 = 1665 and published with a supplement (cf. Ahlwardt, Versuch eine des arab. Handschrift in der Kgl. Bibliothek zu Berlin, p. 9889; Fliegl, Die arab. pers. und türk. Hütten, der Kgl. Hofbibliothek zu Wien, No. 1150; Fehrist al-Kutub al-Khitāniyya, v. 333); his Division is preserved in Staunzel (Kupferstich, No. 1287). There are some of his poems in Berlin (Marashi on the Sūf Muḥammad b. Abī 'l-Bārakāt al-Kādī, S. Ahlwardt, op. cit. No. 7853, 3); Gotha (poetic epistle to Asāf b. Muṣṭafā b. Abd al-Qādir al-Dīnishī in the latter's reply by Toghtēği, cf. Alwān al-Manṣūr, Bibl. No. 1162, 7), and London (Catalogue Coll. Or. Mus. Brit., i. No. 650, 2). Lastly he also wrote a commentary on the Divān of Ṭūsī b. al-Fārid, Jihān, Cairo, 1279; he completed the commentary on the Divān al-Saqqāh in 1032 = 1625, cf. Derenberg, Les Div. de 'l'Enkvit, No. 420, 4.

24th June. He was also among the Eunirs who revolted against Mas'ūd in 530 (1136) and made their peace with him in the following year.

(CL. HUART.)

AL-BURUṢI [See also sonor., p. 226.]

BURṬAS or BURṬÂS (in al-Bakīr: Burkâs), a pagan people in the Volga territory; on the relations of the Burṭâs to their neighbours on the north and south, the Khazar and Bulgâr, see the article BURṬÂS, p. 786 et seq. Mas'ūd also gives the name Burṭâs to a tributary of the Ili (Volga; Murâdî, ii. 14 and Taṣfîhî, p. 62). Marquart (Oesterreichische und osteuropäische Streifzüge, p. 316) considers this river to be the Sowara. No adherents of Islam are mentioned among these people by any authority, unlike the Khazar and Bulgâr. Yâkût's statement (i. 567) on this point is based on a misunderstanding: Ḳūṣkî's (ed. de Goeje, p. 225) statement regarding the Bulgâr is erroneously transferred by him to the Burṭâs. In the source of Ibn Rustâ (ed. de Goeje, ii. 170) it is said that the Rozos (Urōsoi) and the Sūrōs (sūrōs) were contemporaries of the Bulqâr (ed. Sūrōs) and the Bulkâr (ed. Sūrōs) (see the note on the Bulqâr). The name of this people is also given by Fīrūz (ed. Sūrōs) etc., p. 44) and Gârdî (Burthold, Oecdot. p. syahd. v. 268, p. 96) all that is told us of the religion of the Burṭâs is that their beliefs were the same as those of the (Turkish) Ĥūraz and that one section of them buried their dead and the other burned them. The Burṭâs were far behind their neighbours on the scale of civilization; there was no real ruling authority in their land, only the elders of the tribes. The commercial relations of the Burṭâs with the Muḥammadan world were of little importance to the fur traders. The furs (sârâ) of the Burṭâs are mentioned by Yâkût (I.c.).

The Burṭâs are identified with the Finnish people known to the Russians as "Mordwa" (in Rabrûqvís Mordvâ). Their settlements immediately adjoined the Slav lands on the Oka and stretched along the Volga to the north; the town of Nîšâq-Novgorod was founded in their lands by the Russians in 1221. Like the other peoples of the Volga territory, the Burṭâs had to submit to the Burīs in the xvth century; rising by them are however mentioned as late as the xivth century; nevertheless they showed themselves much more ready to adopt Christianity and Russian culture than the Muḥammadan peoples of those who had been affected by Muḥammadan culture. A large section of the Mordwa is now completely merged in the Russians. (W. BARTHOLD.)

AL-BURUDI (A.) Plural of AL-BURUDI (p. 796.)

BURULLUS (Burroli, Burroso), a district and lake in the Nile Delta. While the main branches of the Nile flow directly into the sea, many of its smaller streams flow into the lakes which lie to the north of the fertile land of the Delta and are only separated from the Mediterranean by a narrow chain of sand hills. The large salt lake lying between the Rosetta and Damietta arms of the Nile, is called Lake Burullus at the present day. Throughout the year it covers an area of 200,000 acres and about twice this area in season of floods. It has an outlet to the sea through which when the Nile is high, the fresh water flows out into the sea, and when it is low, the salt water rushes into the lake. The lake is famous for its richness in fishes and the population of the northern coastlands live by fishing.

The name Burullus (Burroli, Burroso) or more correctly Burullus (Yâkût, Ibn Baṭṭûta) is quite ancient. In Coptic we have Paranlû, Tâsâtila, in Greek Pâsâlû as the name of a town (see a bishop, which is also called Nikedâm, Nikêdam; al-Kindi mentions Burullus among the fortresses of the Egyptian frontier. No town of this name now exists, but the little villages at the end of the tongue of land, which lies along the north of the lake to the east of its exit, probably represent the remains of the ancient Burullus; the name is applied at the present day to the whole area in the northeast of the lake, a district (mâzâ) of the province of Qatrînâ with 15,153 inhabitants. The chief town of the district is Balûr which had supplanted the ancient Burullus even in Ibn Baṭṭûta's time.

In the middle ages the lake was not called after Burullus, but after Nastirîh or Nestorâ. This place, which has not yet been identified, probably occupied the site of the now abandoned Kom Moṣârûth which lies along the coast of the exit of the lake. According to Ibn Dûṣînî, v. 115, the ancient Nestorâ must have occupied this site; even in his time it was quite buried in sand.

(C. H. BECKER.)

AL-BURZULI, ABD AL-KARIM AL-BURZULI, ABD AL-MAH MOHAMMAD AL-MAS'UDI, an Arab author, came as a pilgrim in 686 = 1243 to Cairo, became Imâm at the Zalâţa, muftî, preacher and professor in Tunis, and died on the 25th Dhu 'l-Ḥadîd 841 = 20th Apr. 1438 (according to others 844 = 1440 or 842). He wrote the Zādith Mâshîl al-'Abînî minna nāzîla min al-Kulayl al-Mustafîa wa l-Hukkâm (ed. Catalogue Grav. Moc. Or. cat. in Dép. des Mus., ii. Cod. Or., N° 244–245; Catalogue général des man., des bibliothèques publiques de France, Départements, xviii., Algiers, para E. Fagnan, N° 1833–1834). A synopsis of this author is perhaps contained in Brit. Mus., N° 247. In the 2nd half of the xivth century Ahmad Ǧâfûlî made a selection of Mas'ûdî from this work; an anonymous copy of the year 1449 = 1706 is in the editors.

Bibliography: Zarkashî, Târîkh al-Dawlatîn al-Muṣâbîhîn wa l-Ḥafîzîn wa l-Hukkâm (Tunis 1280), p. 122; Ibn Mûsâr, al-Burûnî (Algers, 1905), p. 150; Brockelmann, Grisch., d. or. Lit., ii. 250; (C. BROCKELMANN.)

BUSHÂR, AHMAD ABU BUSHÂR (usually called briefly BUSHÂR), was born at Shîrâz, lived chiefly at the court of Timur's grandson Iskandar b. ʿOmar Shâhî in Jâfâr and died there in 1324 or 1327 A. D. He appears in the Persian Fârâbî as the authority on culinary matters. From the original Bushâr al-ʿAsfîm, "Bushâr of the
BUSHAK — BUSHIR.

Meins", Persian Bushak of Arna, Afina became known by the same name by which this author was afterwards known, although he himself used the pen-name Bushak. Very little is told us of the events of his life though his works testify to his importance as an authority on culinary matters. His Dizin (extant in manuscript) was published in the last-named town in 1303 contains the Kima al-Istikhtah "The Treasure of the Appetite", Khasias and verses in other styles, the Maznavi Ahrar-i Kangh, "The Secrets of the Forks" (dishes of pastry and dates), "The History of Saffron Pillow and Macramal" (a burlesque epic), "Rice and Macaroni" (prose and verse intermingled), "The Dream" (how the poet famines his tomb in terms of cookery); the Monah-varga of the rivalry between bread and sweet cake (Rith, Letternutzogch, 9.24) is not in it. At the end is given a list of dishes, which the poet explains in prose, but unfortunately not in the form of recipes, so that one cannot now make them from his descriptions. The smaller poems are almost all parodies on poems by Seid Hisb, Sahih Fardin, though there is one original, on Kher-pilow — among the Khasias.

Bushak is the Persian gastronome par excellence; in him the Persian gourmet is seen in perfection; of the higher, aesthetic art, he is quite ignorant, his technical term for gourmet being "worshipper of the belly" (Sikam-purati), not perhaps "worshipper of the palate" or simply "belly-wise" (Greek Gouttephoecpho). His methods are so firmly established to regulate the eating whether, reader, it delight thee or weary!}

BUSHANDJ, BUSHAN or PISHANDJ (probably pronounced PISHANDJ in pre-Muhammadan times), a town south of the Herat below Herat, a day's journey or (according to Yatil, i. 758) 10 farsang from this city. In the local history of Herat composed by Mi'ın-Din, in Isfah of 971 (1561) (Jahiz, al-Lanqah, Cod. Univ. Petrop., 33) Bishandj is described as the oldest town in Khorasan and as a foundation of the mythical Peshag b. Asfayiyah (in the Iranian epic, Peshag is the father and not the son of Asfayiyah); this statement is obviously based merely on the similarity of the two names. In the Iranian list of towns (on this work cf. the Grundzüge der Topographie von Persien, i. 75) with the Tarigianm of Theophrytus. The town was certainly in existence in the pre-Muhammadan period and is mentioned in the account of the Syriac in the year 588 A.D. as the see of a Nestorian bishop, cf. Marqart, Erzulaker, p. 49. The name is compared by Tomachek (Zur Historischen Topographie von Persien, i. 75) with the Thaugman of Theophrytus. The town was certainly in existence in the pre-Muslim period and is mentioned in the account of the Syriac in the year 588 A.D. as the see of a Nestorian bishop, cf. Marqart, Erzulaker, p. 49.

Bishandj was like the rest of Khorasan conquered by the Arabs in the first century of the Hijra. Tabir b. Husain, the founder of the Tarhird dynasty, (III = 15th century) came from Bishandj. In the IVth = 12th century, the town was about half the size of Herat, had three gates on the road to Herat, Niahsir and Khilisheh. In the 8th century, ed. de Goede, p. 268). The highway from Niahsir to Herat, described in detail by Ibn Rusta (ed. de Goede, p. 172), usually went past Bishandj; Yatil (loc. cit.) however did not touch Bishandj when in this district, but only saw it in the distance. Ibn Rusta also emphasizes the importance of Bishandj as a strong fortress. The country around the town has the reputation of being exceedingly fertile; the town itself was the centre of the timber trade and timber was exported from it to various districts.

Like other towns and villages on the Hari, Bishandj was able to recover from the Mongol invasion in a comparatively short time and to attain a new prosperity under the rule of the Kar dynasty (645-791 = 1245-1390), whose capital was Herat. According to Ibn Rusta (f. 112) the poet Irtuq, who compiled a poem (Kar-snashe) glorifying the Karta, was a native of Bishandj. In the middle of the 12th century (752 = March 1351 Bishandj was besieged by Timur, taken after a week and destroyed in the cruelst fashion but it was soon rebuilt; the town at this period was also strongly fortified. Bishandj is also often mentioned in the 15th = 16th century; Bishandj (Cod. Bodl. Elliot 423, f. 233') also mentions the bridge-head (surekh) of Bishandj on the road between Herat and Kishian (the modern Kahan). According to Ibn Rusta (f. 35') there was then a mosque and a ribat at Bishandj, the foundation of which was ascribed to the patriarch Abanam; destructions in the times of the ribat were regarded as the footprints of the patriarch. According to Tomachek (loc. cit.) Bishandj corresponds to the modern Gürman; the country round Gürman is likewise still regarded as one of the most fertile districts on the Hashtbul. Like many other towns below Herat, Bishandj was probably only finally destroyed by the invasions of the Uzbegs and Turcomans. (W. Bartolomei.)

BUSHIR (Boushehr) the chief seaport of Persia, in the province of Fars, Long. 50° 51' E. (Greens.) and Lat. 25° 22' N. (Bottomley), lies on a narrow island (the Mozambique and Kaprarseille of the ancients) lying north and south, which is connected with the mainland by a tongue of swampy land which is regularly covered by the tides (it is called Makhfit, cf. Stolle-Andrunes, p. 46). On the south end of this island or rather peninsula are the ruins of Rishah. The neighbourhood of Bushir is a cheerful desert, only relieved by a high, mountainous range in the distance bordering the low narrow strip of coast. The sea is so shallow that ships have to lie far out in the roads; larger steamers anchor four miles southwest of the town.

Like Bender-Ashak (1, v., p. 604) the other seaport of importance on the Persian Gulf, Bushir has only arisen in comparatively modern times, likewise at the expense of other towns. The former was the successor of Hormuz, the latter of the above mentioned Rishah. The latter may date back to the period of Babylon's prosperity; numerous burial-urns and in 1873 (excavations by Andrews) and again in 1877, bricks with cuneiform inscriptions were found in its immediate neighbourhood (now is the British and Berlin
The "City of the Greeks" ("Toumaa") of Isid. of Seville must be identified with Rishah (Tommaschi, op. cit.). The modern name Rishah, (abridged from Raw Shah) dates from the period of the Avars, whom a reconquest of the town is ascribed. To distinguish it from the town of the same name in the district of Araghas (q. v., p. 460) this Rishah is characterized by the Arab authors of the middle ages as that near Twaladj; it is written by them Rishah and Rashah (cf. G. Galland, ed. de Goeje, p. 387). Until comparatively recently it was a busy maritime town: even on Portuguese maps of the xvi\textsuperscript{th} and xvi\textsuperscript{ii} centuries, Reixa or Reissel (a corruption of Rishah) is marked with red letters as the chief emporium on the Persian coast.

According to a note in the Armenian geography of Pseudo-Moses of Chorene (see Marquart, Erdm. 1901, p. 27, 146) the frosty pears procured in the Persian Gulf were brought to the market of Rishah. The Portuguese de Barros in the xvi\textsuperscript{th} century estimated the size of the town at 2000 houses. Rishah gradually declined as Bhaishe arose; it became the quarry out of which the material was obtained not only for several villages in the neighbourhood, but also for the greater part of Baishe. Of the ancient town there now only remain the ruins of the former fortress (\textsuperscript{582}) forming a huge square, which in its present form probably only dates from the Portuguese period. Rishah is used at the present day by the European colony in Baishe as a country resort; the British Resident also has a summer residence there.

Baishe seems to be first mentioned in Yaqut (i. 503, line 1) in the form Baisheh, which is nearer the original Abul Shahr -- "father of the town"; perhaps however the reading should be Bashihe.

The name was corrupted by English sailors to Bushire and Boshir. Baishe was a wretched little fishing village down to the middle of the xvi\textsuperscript{th} century. The foundations of its modern importance were laid by Nadir Shah when he raised the village to the rank of a town and destined it to be the base for the whole Persian navy. The young English merchants had built an important factory there. Since then the trade has been mainly Anglo-Indian; England, India, and other English dependencies almost exclusively control the import and trade and have about half of the export trade. The most important articles exported are: opium, especially, woolen goods, wheat and tobacco. The main imports are: cotton goods, weapons, munitions, tea and indigo. Besides the fairly regular traffic with Beshir, the Abaran, Bemzor and Mesul, mostly Persian, Turkish and Arab, i.e. of Mascat, which call at Baishe, is by no means insignificant.

On imports, exports and shipping the best source of information is the Administration Reports of the British Resident at Baishe, which have appeared annually since 1876 and are printed at Calcutta as Selections from the Records of the Government of India, Persian Gulf. The tables, covering the years 1809-1857, given by M. v. Oppenheim, op. cit., ii. 361-374, are based on these official English returns; the statistics on exports and imports given in Stolze-Andrass's (p. 60-73, for the years 1866-1869, 1878-1882) and de Morgan's notes (op. cit.) on trade and commercial relations on the Persian Gulf, may also be consulted.

Baishe may be regarded as the harbour of Beshir. It is connected with this town, about two miles distant, the chief intermediary for trade between the coast and the interior of Persia, by an important caravan route, which passes through some towns of importance (the principal is Kâserm). The road is difficult to traverse; as several dangerous mountain passes and five high parallel ranges have to be crossed.

The town which rises but little above the sea-level is surrounded by a wall, half in ruins, with bastions; its best feature is the abundance of the water which allows only small boats to land; the town consists of narrow crooked streets, the bazaars are fairly extensive. On account of the almost unbearable heat the dwelling houses as in Bender-Abbas are provided with column-like erections (bâdîr, Persian "wind-catcher") which carry the cool air from the upper strata of the atmosphere to the lower rooms.

The climate of Baishe is very hot but in the opinion of competent judges not actually unhealthy, although it can only be borne by European constitutions if great precautions are observed; on the climatic conditions cf. Stolze and Andras, op. cit., p. 7, 8, note 1. Locusts are a terrible plague to this district as indeed to the whole stretch of coast from Baishe to Shiraz; cf. Ritter, viii. p. 786.

The principal building of Baishe is the Residency, lying outside of the town proper, the immense fortified palace of the British Consul General, who supervises all Britain's political interests in the Persian Gulf. On account of its great importance the post of British Resident is maintained in a splendid fashion; gunboats and soldiers are always at his disposal.

The number of inhabitants was estimated by Morier at the beginning of the xvi\textsuperscript{th} century at about 10,000, by H. Peterman in 1854 at only 4000-5000. Ross reckoned it at 10,000 in 1855; Stolze and Andras at 12,000 at the same period. More recent estimates are as follows: M. v. Oppenheim, 20,000-30,000; Culinet, 15,000; Lorrai (1900), 20,500; on the last see also Sapan in Peterman's Ges. Mitt. 1891, p. 26. By far the greatest part of the population is of Arab descent; there are a few Jews and Armenians; the Europeans (mainly English) number not much over a score.

BUŚIR

(Bushir)

Also written Busyra and in the true form Buṣir (l-Sir), the name of several localities in Egypt. The name is connected with the God Osiris, who was originally worshipped in the Delta, so that the name occurs more frequently in northern Egypt. The ruins of the ancient Taposiris Magna have retained the name Abu-Sir; likewise a village with 356 inhabitants in the district of Sinbadawin in the province of Damietta. Better known is a place of this name with 6271 inhabitants in the district of Mahalla al-Kubri in the province of Qalyubiya. It was called Buṣr Banik in the middle ages. There is a fourth Buṣr southwest of Cairo between Sakhera and El-Dqai (Giza). At the present day it has 2456 inhabitants, and is called Buṣr al-Sir to distinguish it from other places of the same name. 'Abd al-Latif gives a remarkable account of its pyramids and tombs (De Sacra, Religio de Egypto, p. 171, 220 et seq.). Excavations have been carried out quite recently here under German auspices. Another Buṣr, frequently mentioned, is Buṣr al-Malāq at the exit of the Faiyum in the province of Bani Souf (formerly Buhais). This place used also to be called Buṣr Kuraidis (or Kuradis, Curitis, Kritis and many other variants) and is said to be the place where Marwan II., the last Omayyad Caliph, died in 132 (749-750). His tomb is still pointed out in Buṣr al-Malāq. Local tradition thus agrees with the popular belief so that al-Kindi (ed. Guest, p. 96; Yaqut, i. 670) must be mistaken when he says that Marwan died at an otherwise unknown Buṣr in the province of Asmumun. Buṣr al-Malāq at the present day has 3339 inhabitants. Before the division into provinces, i.e. in the early Muhammadan period, it was a separate ibara. The poet of the Bards: takes his Niṣa from this Buṣr. There is also a Buṣr Dafiān (from the mediæval Dafāned) in the Faiyum, which now has 1411 inhabitants. The rock of the same name at the Second Cataract is probably an Arabised form of the Nubian word and has nothing to do with Osiris.

(G. H. Becker)

AL-BUSûRî, SHAFAK; AL-DEÎM MUHAMMAD B. SÄDÎ B. HAMDÎ B. MÜSÎN, an Arab poet of Berber origin as his tribal name al-Sanhâjî shows. He was born on the 1st Shawwal 688 = 9th March 1213 in Abûqîr (whence the name al-Busûrî), or according to Suyûtî at Diîbâa (he is also called al-Dîbâa). Very little is known of his life. He lived at Bithlîs, a clever calligraphist, attended the conquests of the Sûfî Abu l-'Abbâs Ahmad al-Mard and acquired the reputation of being learned in Tradition. The date of his death is not certain: Makâtib and Ibn Shâkir give the year 696 = 1296-1297, Suyûtî, 695 = 1295-1296, Hâdîthî Khalifa 694 = 1294-1295. His grave was near that of the Imam al-Shâfi'î. He compiled a number of poems of which the Burda [v. 1] is the most famous. We may also mention the Humûdîyat 'l-mudâdî al-muwâya, which has often been published and annotated; the Dhûr al-mudâd 'allâ awwam al-nâm al-hâfiz al-Sâ'îdî, in which he imitates Kâb b. Zuhair's celebrated poem; the Khatât al-Khuwariyya and the Khatât al-Muwâya fi l-hâfiz 'allâ al-hâfiz al-Tâmisî bi 'l-Kurîn.

Basset, Introduction to his translation of the Burda (Paris, 1894), i. 10; Brockelman, Gesch. d. arabs. Literatur, Vol. iv., p. 264-265; Gabrielli, al-

Burjardanî (Florence, 1901), p. 24-29.

(K. Basset)

BUŠR or ĀR ĀṬAT or R. ĀṬAT (there is less authority for the latter form), an Arab general of the Kâsaîj clan of the Banî 'Amir, was born in Mecca in the last decade before the Hijra. Only traditions which have been influenced by Shî'ite prejudices deny him the title of Şâhîb. He went with the relief column into Syria under Khalîl b. al-Ma'âkîsî; distinguished himself there by his bravery and afterwards took part in the conquest of Africa. His bravery earned him a jam'ah and rewards from 'Umar. During the civil war he vigorously declared himself on the side of Mu'awiyah for whom he won over the influential Khidî chief, Shorabîlî b. al-Sjîmji. At Siffin we find him in the Syrian camp. He afterwards helped 'Amir b. al-As to reconquer Egypt for Mu'awiyah. Buṣr is perhaps the most striking among the lieutenants of this Caliph. He was a typical Beduin of the old school, utterly unpre-
'Ali, he commanded the vanguard. As a reward, he received the governorship of Bašra where he established a dictatorial regime. He spent little time in 'Irāq but returned thither to seize the children of Ziyād b. Abīh and by this drastic measure subdued the last armed partisans of 'Ali. We later find him leading several naval expeditions against the Byzantine Empire.

After the year 50 (670), this agent of Ma’wiya’s ambition, general and admiral by turn, disappears from the field of politics. He is said however to have lived at court till the death of the foreign king. His active mind was worn out because he brought down 'Ali’s curse upon himself. He reappears again in the reign of Wulfd I, when he is said to have again taken part in an expedition to Africa. Other authorities make him die at Medīna in the reign of 'Abd al-Malik. He seems to have lived a long and fallen into his dotage.

**BUSTA,** a town which formerly stood in the modern Afghanistan, on the left bank of the Helmand just below its junction with the Arghandāb. The situation of this town in the angle between the two rivers where the roads from the west (Herat and Zardam) unite to cross the Helmand and continue eastwards to Bašrāsīn and India, at the place where the river begins to be navigable, seems to have been an exceedingly favourable one.

Vast earthworks in the neighbourhood of Bust, which was one of the centres of ancient Iranian civilisation, point to a great prosperity in ancient times. At the beginning of the vii century we find Bust in the possession of the Ḥishāmites from whom Khurstāw I Anḡarwānī won back the town.

It was won for Islam by 'Abd al-ʿRahmān b. Samhūt, in the period following, Bust again having been an outpost of Arab dominion against the independent native chiefs of the lands adjoining on the east who bore the name or title of Ṣumbl [see the article Ṣarq al-Raḥmān b. Muḥammad b. al-Ṣumbl, p. 56 and cf. Marquart, Erzb.ahr, p. 750]. The Arabs sometimes consider Bust as being in Sustān, which in the narrow sense did not strictly stretch so far to the east. The founder of the Iranian dynasty of Ṣafārids who came from Sustān, Yaʿṣūb b. al-ʿAṣāf (254–265 = 868–876), is said to have spent a year in Bust between his campaigns. In 266 = 976, Bust was taken by Suḫuktūnī, the founder of the Ghawrid dynasty. It is from the period shortly before and shortly after this event that the descriptions of the town by Ṣaḥarīt and Maḥmūd ibn Falā‘īn are based. The former speaks of the Indian trade of Bust, both mention the bridge of bust, which crossed the Helmand and praise the rich orchards in the neighbourhood. The Ghawrid period appears to have been the most flourishing in the history of Maḥmūmadan Bust. Maḥmūd speaks of the military town of al-ʾAskar (the modern ruins of Lashkari Bust) lying ⅜ farākhi east of Bust, as the dwelling of the Sulṭān. Bust is repeatedly mentioned as the royal residence. In 447 = 1058 'Abd al-ʿRahmānī, grandson of 'Abd al-ʿRahmān, succeeded in defeating Dīʾāʾ b. al-ʿAskarī, the capital Bust; the glory of Bust seems to have been shattered by this blow. Its favourable position and wretched existence during the following centuries. Any prospect of a more prosperous future was destroyed by the invasion of Timūr’s hordes at the end of the viii = xiv century. The destruction of Bust’s dam transformed Sustān into a desert as it depended for its prosperity on irrigation from the Helmand. The fortress of Bust alone, owing to its strategic position, survived many a storm until it was finally destroyed by Nūrī Shāh in 1738. Its walls still rise high above the bank of the Helmand and a wide area covered with ruins testifies to the erstwhile splendour of the seat of the Ghawrids.

**AL-BUSTA,** The "Post," Arabic pronunciation of the Turkish Porta [q. v.]

**AL-BUSTANI,** the name of a prominent Maronite family which has produced several literary men who have rendered considerable service to the Arabic language and literature. The most deserving of mention is Buṭrus al-Bustani who was born at Dibbiya (between Sanda and Bairat) in 1849 and died in May 1883. He received his early education in the training-college of 'Alī Maḥṣūṣ but in 1840 he became connected with the American Mission in Bairat and became a convert to Protestantism. He then held an appointment as teacher in the college in 'Amūl and composed a textbook on Arithmetic entitled Kāf al-Ḥiṣāb. After a stay of two years there, he went to Bairat and worked on the translation of the Pentateuch into Arabic, undertaken by E. Smith. At the same time he was engaged in his Arabic dictionary Muḥāf al-Muḥājir (ed. 1865–1866) of which he prepared an abridgment, the Kāf al-Muḥāfat (printed at Bairat, 1869).

In 1870 he founded the newspaper al-Qaṣawān and afterwards another al-Qaṣawāna and finally the magazine al-Qaṣawānak. His plan of publishing a list of proper names, after he had finished his dictionary, was enlarged in 1875 to his beginning to publish an Arabic encyclopaedia entitled Diwān al-Maʾārif assisted by his son ʿAlī al-Bustani and other collaborators (1876). When the ninth volume was about to appear, Buṭrus died, but the work was continued by his son and on the death of the latter also in 1884, it was continued by his other sons and a relative Sulaimān al-Bustani and others till its completion in 1898.

The Sulaimān, just mentioned, won no less re-
nown by his translation into Arabic verse of the Firdawsi (Hyderabad Himmars and avroo npaeno, publ. by the Harmsworth in 1901), according to M. Hartmann, Die Arab. Poesie, "an achievement of the first rank worthy of the highest praise."

AL-BUSTI, Abū al-Mahma, Abū l-Fath, an-Nakhtī, b. Muzaffar, r. 761-811, born in 360-497 at Bust in the Kubl district, was in his youth secretary to Bīktār, lord of his native town. When the latter was overthrown by Subuktagn, al-Busti attached himself to the new ruler. His son Mahma wished to take him to the land of the Turks but he died on his way thither in 401 (1010) at Bakhrāz. Of his Diwan only an extract in Leiden (s. Catalogus cod. or. Bibliothecae Academiae Lugduno-Batavorum, ed. acc. i. No. 613) and two poems in Gatha (s. Persch, Der Ar. Helden der Her. Bibl., No. 26, 1) have survived. His most famous is a didactic poem entitled 〈Zarur al-ilhām 〈Bustī, Vie Poétique an Arabic Grammar, iii, Muṣaffar ibn Darād, p. 95; Subkt, iv, 5). This poem has been commented on by Abū al-Ādām b. Muhammad b. Ahmad al-Attar (died 776), s. Above, Versicherung der Arad. Helden des Kgl. Bibliothek zu Berlin, No. 7594-7595; Catalogus cod. or. Bibliothecae Academiae Lugduno-Batavorum, ed. acc. i, No. 634; Vullers, Katalog der Islam. u. ar. Handschriften der Universitätsbibliothek zu Leipzig, No. 519, 520; Persch, op. cit. No. 2336-2337; Codices or. Bibliothecae Regiae Hamburghensis, No. 242, 7, and by Abū al-Rasāt b. Zain al-Maliku (about 780) (hemal, 1378), s. Al-Birrā, op. cit. 7500; Abū al-Kādī b. 'Alidhūrārī, 7597) wrote a treatise in elision of the first two verses.

BUT, Persian form of the Arabic Būtān [q. v., p. 769]; whence Būtānān [plural].

BUTHAINA, the name of Djamāl’s beloved [q. v.]

BUTNĀN, a district in Syria, east of Halab (Aleppo). In the middle ages, the Arabs understood by the Wādi Butnān the land watered by the Nahṛ al-Dhabah and its branches. Butnān is certainly a very ancient name for the district. The forms Batnaih (by Syrian authors) might, as Sasan suggests (op. cit.), be a corruption of the Bat-Adini (the Bib. Benī ‘Eden) of the cuneiform inscriptions, the name of a small state, frequently mentioned in Assyrian times, on both sides of the Euphrates (defined roughly by lines drawn from Almāh to Edessa in the north and from Halab to Harrāz in the south) with Tell Ṭabāt (op. cit., p. 751) as capital. The classical writers also knew at least two places named Batnai (Batna, Batana) in the Syrian-Mesopotamian area, of which the one in Cyrythecia (the lands lying between Halab and the Euphrates) is certainly identical with Wādi Butnān which at that time was an important place. On the Batnai (Batnān) of the ancient authors cf. Fauly-Wusowa, Rettymykl. a.
In military history Wāli Butan is particularly prominent in the reign of 'Abd al-Malik. This Caliph used to spend the winters in Butan during his campaigns against the Parthians in the years 69–71. He was succeeded by 'Abd al-Malik's brother, 'Ubayd al-Mansur, who reigned from 831 to 834. Under his rule, Butan remained a tributary state. Butan was conquered by the Mongols in the 13th century and became part of the Ilkhanid Empire. In 1351, the Mongol general Tamerlane invaded Butan and destroyed the capital city of Punakha. The city was later rebuilt and remained an important center of trade and commerce.

**Bibliography:**

**BUTRUS AL-BUSTANI [See AL-BUSTANI] BUKAIT, the name of several places in Egypt. According to Boinet Bey's *Dictionnaire Géographique* there are two places in modern Egypt of this name, which is however pronounced Bawit.

1. A village with 274 inhabitants in the district of Damietta, in the province of Bahria, and
2. A village with 4,449 inhabitants in the district of Bawit in the province of Asuit.

"All Maburak mentions a third place of this name in his *Khalifat al-Madina* in the province of Bawit in the administrative district of Al-Qal'at. This appears in Boinet Bey as Abulq and belongs to the district of West Bawit. With 1,556 inhabitants in the district of Dairit, in the province of Asuit, must also be mentioned here. One of these places was the chief town of a district (khur) in the middle ages (Kalkashendi, trauma. Whitehead, p. 94). As the name of this district is written Abwait by Abu'l Faid's time, it could perhaps be identified with this place, but according to Kalkashendi, *cit.* the identification with No. 2 is more probable. Yutoff, B. Yutoff, the famous scholar and contemporary of al-Shafi'i (d. 231 = 845–846) took his name Al-Bawit from one of these places, presumably No. 3.

Besides the above-mentioned:

**C. H. BECKER**

**BUKHAR, a place in British India, on the railway from Bombay to Calcutta, west of Bankipore. In 1764, the English under Mann defeated here the Nawab Wars of Oude and the Great Mogul, Shah Alam.

**BUYIDS or BUWAIHIDS, a Persian dynasty whose founder Abī Shu'ayb Bīya (Bawit) is regarded by some to have been a descendant of the Sassanian king Bahrām Gör. The alleged genealogical table of the Buyids, who were originally freemen in Dailam, does not go back to the Sassanian king himself but only to his first minister Mīrzā Nāṣir; little reliance is to be placed on this table however and the whole is apparently only an attempt to glorify the dynasty. As chief of a wandering horde, which number mainly of Dailamites, Abī Shu'ayb had already played a prominent part in the struggle between the 'Alids and the 'Abbasids; the real founders of the dynasty however, which rose so rapidly, were his three sons 'Ali, Hasan and Ahmad. After the fashion of their countrymen they preferred to be regarded as Shi'ites; but for these wild warriors religious questions were of quite subordinate importance. The Buyids had enlisted in the service of Mardawijd B. Ziyār, who was at the height of his power about 929–937, the eldest brother 'Ali was appointed governor of Karrūj (S. E. of Hamadhān), but when the latter defeated the Caliph Kāhir's troops and occupied Isfahān, Mardawijd began to fear the rivalry and ambition of the Buyids and returned. Isfahān to the Caliph whereby he provoked them to open hostility. Mardawijd had already been vacated by the Caliph's troops; the next place to fall was Nawab-daghān, which was occupied in 937 (933) by 'Ali, while his brother Hasan drove the Arab garrison from Karrūj. In the following year the three brothers succeeded in taking Shārūz and occupying the whole province; after the assassination of Mardawijd in 947 (943), his brother and successor Waghūrī was unable to hold Media which province also fell into the hands of the Buyids. While 'Ali remained in Fārs and Hasan ruled in Media, Ahmad conquered Kirmān in 944 (940) and kept gradually advancing westwards. When in Lūnmān I 334 (December 945) he entered Bābūl, the Caliph Mullasthīf had to create his Amīr al-Umār and give him the honorific title of Mīrāz al-Buwaydī. At the same time 'Ali and Hasan received the titles "Amīr al-Dawla and Ruhul al-Dawla respectively, and similar pompous titles were henceforth the usual appellations of the Buwayd rulers. A few weeks later in Lūnmān II 334 (January 946) Mu'izz al-Dawla had the unfortunate Caliph blinded, and proclaimed Abu'l-Kāsim al-Fadili, a son of al-Makhdūr, his successor under the name of al-Mut'ı. The Caliphate now passed through a period of the deepest humiliation and bearing the title of "Commander of the Faithful" became a mere puppet in the hands of the Buwayd Amirs. According to one account, Mu'izz al-Dawla went as far as to adopt the title of Sultan; this is not confirmed by the coins however, on which the Buwayd only bear the title Amt or Malik. In the year 338 (949–950) 'Imad al-Dawla died and as he left no male heir, the next oldest boy for Rukn al-Dawla was recognized as head of the family while the government of Fārs passed to his son 'Abd al-Dawla. Discontents soon broke out within the family however. When Mu'izz al-Dawla died in 356 (967), his son 'Isa al-Dawla Bahkhiyur succeeded him in Kirmān, Kāhārān and the 'Irāq. The latter was unable to maintain proper discipline among his troops who consisted partly of Dailamites and particularly Turks; but had to seek the assistance of his cousin 'Abd al-Dawla who restored peace but took Bahkhiyur prisoner and seized his lands. Rukn al-Dawla managed to bring about a reconciliation between them and Bahkhiyur received his lands again. After the death of Rukn al-Dawla in 356 (967), hostilities
broke out again. He had divided the kingdom among his three sons and this plan, which has so often proved fatal, brought misfortune to the Buyids also. The suzerainty of the whole kingdom was to fall to 'Adud al-Dawla, while Mu'ayyid al-Dawla was appointed governor of Ifsān and the third brother Fakhr al-Dawla received the remaining province of Media. After 'Adud al-Dawla had defeated Bakhtiyar's troops and subjected all Irak to his rule, he next deprived his brother Fakhr al-Dawla of his kingdom. When the latter sought to make himself independent, he was attacked and had finally to flee to Khwarizm. 'Adud al-Dawla was now able to unite the whole kingdom under his sceptre and in his reign the dynasty reached its zenith. After his death in 372 (983) war broke out among his three sons. In the following year Mu'ayyid al-Dawla died childless and while 'Adud al-Dawla's sons, Shajar al-Dawla, Sanā'ī al-Dawla and Bah'd al-Dawla were fighting with one another, their uncle Fakhr al-Dawla was recalled from his exile by the nobles and recognised as ruler in Media, Tabaristan and Dżurf. The war between the sons of 'Adud al-Dawla ended in 380 (990) with the triumph of Bah'd al-Dawla. The latter died in 403 (1012), and under his four sons, Sulṭān al-Dawla, Mugharrif al-Dawla, Kawām al-Dawla, and Djalāl al-Dawla, and their successors, the family became more and more divided and the subordination of the Turkish and BMamite lieutenants increased more and more so that the kingdom gradually fell to pieces. With his power disappearing before his eyes, the fancy of fate prompted Djalāl al-Dawla to become dissatisfied with the hereditary title of Amir and to adopt the old Persian title of "King of Kings".

The authority of the line of Fakhr al-Dawla next collapsed. In 388 (998) Kābul b. Wadaghir had conquered Djerdjan and Tabaristan, and ten years later the Kurd Kākhyūs (Kākhwayhid) seized Ifsān. Hamadhan also finally fell into their hands and in 420 (1030) the good-for-nothing Maḏd al-Dawla, a son of Fakhr al-Dawla, was overthrown by Mahmūd b. Sabuktagin and taken to Khwarizm.

It was now the turn of the other Buyids. Under Sulṭān al-Dawla's sons 'Imād al-Dīn the state of affairs was still endurable; but after his death in 440 (1048) the former confusion broke out again. In Baghdaḏ the Sunnis and Shi'ites were fighting with one another, and in the provinces there was war between 'Imād al-Dīn's two sons, Khosrow Fīrūz and Fulād Sūṭūn. The latter had to take flight and allied himself with the Seljuḳs, while Khosrow Fīrūz was recognised as Amir of the Irak with the title al-Malik al-Rājūm. In 447 (1055) however, the Seljuḳ Sulṭān Togrūl Beg entered Baghdaḏ and put an end to Buyid rule. The last Amir of the dynasty, al-Malik al-Rājūm, ended his days in confinement.

The Buyids, with the exception of 'Adud al-Dawla, had little time for the arts of peace. It is to 'Adud al-Dawla's honour that he found time to attend to the domestic development of his kingdom as far as lay in his power, by encouraging poets and scholars, building mosques, hospitals and other public buildings, repairing canals and wells which had become filled up, and granting funds from the state treasury for the relief of the poor. This period of peaceful prosperity was of but short duration and after his death the kingdom resumed its downward course.

BUZÁ (also Buzát), a town in Syria, seat of Halab. Long. 37° 05’ E. (Greenw.) and Lat. 36° 13’ N., in the middle ages the most important place in the districts of Buzán (q. v., p. 506). This was the starting point of the pilgrimage journey to Mecca, which meets in the town. The town was taken by the Turks in 1681 and has been in use at the present day. According to the traveller Ibn Djiqur (viih = xith century) Buzát's was in his time midway between a town and a village in size. Its abundant water supply, flourishing gardens and fine bazaars are praised. A strong castle (sfla‘a) was above the town, outside of it stood, Abu 'l-Fidás tells us, the shrine (maqṣūra) of 'Abi 'Abd Allah, brother of the Caliph 'Abd al-Malik (see above, p. 239). M. v. Oppenheim compiled three inscriptions on the mosque at the west end of Buzát's, which refer to Malik Šallí, Isma'il (reigned 569–587 = 1174–1181, son of Núr al-Dín, see van Berchem, op. cit., nos. 59–72. The Crusaders conquered Buzát after seven days' siege of the citadel in 1253 = 1158; in the same year it was taken again by the Romans. In 573 = 1173, Šallí al-Dín (Saladin) gained possession of it. At a short distance from Buzát's, 3 5 miles to the north, lies al-Báb (= the gate) 1050 feet above sea level (see Baedeker, Palestine, p. 399). an important station in the middle ages on the road from Halab to Damascus, now known as al-Bāb. It was once regarded as a sort of suburb of Buzát, whence it is occasionally also called Bāb al-Buzát. In Yākūt's time Bāb was an important market for cotton goods which were transported from it to Damascus and Egypt. The whole neighbourhood between Halab and Damascus has always been a famous cotton country. On four Arabic inscriptions from Bāb (of the xith and xith centuries) see van Berchem, op. cit., nos. 63–67. The name Yākūt, the modern Tālib, lies nearer Buzát than Bāb to the southwest: on two Arabic inscriptions from there, see van Berchem, nos. 68–69.

BUZÁRA, governor of Fārs, under the Sāliḥiyya. Buzát was one of the Emirs of Mangishara, governor of Fārs, and ruled the province of Khuzistǎn on his behalf. He was therefore with the troops of his overlord, when the latter in alliance with the other Emirs advanced against the Sāliḥiyya. Ruslán was taken prisoner in the battle of Kūshānda (other authorities give the place of encounter as Panlj Angughā) and afterwards put to death (535 = 1137–1138). While the Sāliḥiyya were thus in possession of the hostile camp immediately after the battle, Buzát fell upon them and put them to flight, captured several distinguished Emirs of the Sāliḥūn and the latter himself only escaped with great difficulty along with the Atthāb b. Buzát. From the slaying of his overlord, Buzát had them all put to death including Buzát's son. To revenge the latter's death, his father undertook a campaign into Fārs in the following year and placed the Sāliḥiyya prince Sāliḥ b. Shāh in command of the operations. Hardly had Buzát set off with his troops, when Buzát, who in the interval had retired to the fortress of Sāfas Dīya (Kaftar al-baad), appeared again and took Sāliḥ b. Shāh prisoner as he was left without troops (536 = 1139–1140). Sāliḥ Maʿrūd had therefore to hand over to the prince of Fārs the house of Buzat and Buzát managed to make his position more secure by making an alliance with two other Emirs, Abūsha, Lord of al-Bayrān and 'Abd al-Raḥmān Tughyranak. The Sāliḥūn tore the tattered of these Emirs for a time, but was finally able to regain his independence by treacherously murdering both of them. When Buzát then took the field against the Sāliḥūn, he was taken prisoner at the battle of Marj b. Kaysānug, a day's journey from Mamāddān, and put to death in 542 = 1147.

BUZĀKH熔, a well in Arābān, in the land of the Arāb tribe, where Ṣulayl b. Ṣalawāt as-Salawāt was put to death by his son in the year in A.H. (632) et al. above, p. 475.

Bibliography: Yākūt, Maqādam, i. 601 ss.; Costani, Annali dell' ltàma, ii. 604 et seq.

AL-BUZDJAN (see also 'l-Wajār, p. 112).

BUZURGMIHR B. RASHID ON, second Grand-Master of the Assassins of Isfahan, born at Kūshānda, was after his admission to the sect entrusted by Ṣaḥāb with the task of capturing the fortress of Lemsar. He took it by surprise in the night of 20th Dhu al-Ka‘bd 495 (= 5th Sept. 1102) and held out there for 20 years. In Safar 511 (June 1117) he was besieged by the Atthāb b. Buzát.
general of the Sa'dīk Sultan Mūhammad. When Ḥasan Shāhīd fell sick in Rāsi I I 518 = May—June 1124, he summoned Buṣūrgumīd to him and proclaimed him his successor, and after Ḥasan’s death on the 26th of the same month = 12th June he was succeeded by Buṣūrgumīd. After ruling for 14 years in Al-Karīt, on the same principles as his predecessor, he died on the 20th Dhu’l-Qa‘da 555 = 21st March 1138, leaving the post of Grand-Master to his son Mūhammad.

(See also K.)

CADIZ (rarely also in an older form CÁDIZ), written Cadiz in French, Portugese and German, but pronounced Cádiz (whence Cadizec, Spanish Cádizano, Germain Cadizez) is at the present day a great capital of the province of the same name, the most southern of Spain, with 70,000 inhabitants, lying on the Bay and Gulf of Cádiz on the Atlantic Ocean northwest of the straits of Gibraltar. It was founded about 1260 B. C. by Phoenicians from Sidon as a depot for the tin which was brought from the Cassiterides (Britain) and the silver of Tarshish, Tarshūya, Tarsūya, not far from the mouth of the Escueva (Gomalepúrī) in the land of the Turdelaisi (Turdulī) on the rocky northwestern promontory of the island of Yaystain or Cotonum, which is now called Ila de León. In Phoenician the town was called Gaddir, (H)Agaddir Ḥaddir (cf. the Hebrew ḥād and ḥiḏ) = Ḫagese wall, ḥṣeptah, septim- mentum, a walled place in a state of defence, a fortress (cf. the Haag) from which the Greeks made Tæbra, the Romans Cádiz, the Arabs Kadsī, which latter is naturally the original of the Spanish Cádiz (as an appellative, the Punic qadhir passed also into Libyan Berber, as qaddr, the Arab. ḥiḏr, and has given rise to modern place-names like Agadir.)

After 500 B. C. the Phoenician Cádiz was occupied by the Carthaginians and became the centre of operations for the Punic conquest of the south of the Peninsular, just as at a later period Hámilcar, Hasdrubal and Hannibal equipped their fleets and armies in this rich commercial centre, the Phoenician emporium of the west; a similar use was made of it by the Scipios in the second Punic war when Cádiz had preceded to Rome in 206 B.C. out of commercial jealousy of Carthage, Greek scholars like Polybius, the time of Alexander the Great, Artemidoros in the second and Pseudo-Alexander in the first century B. C., who remarked the phenomenon of tides, which they had been practically unacquainted with in the Mediterranean (there is a difference of 6—10 feet between ebb and flow), frequently visited the town in which many Greeks resided. The flourishing trade and period of great prosperity of Cádiz lasted throughout the ancient period. On the other hand the Gothic period and the Arab middle ages mark a period of great decline in which the fortunes of the town reached a very low level (cf. Alexandria and Carthage); the town and its commerce continued in a state of stagnation; in 844 it was plundered by the Normans but in 859 the fleet of the Emir Mūhammad turned aside their attack. So far had the town fallen from its position as a world centre of commerce that Alfonso X the Wise after capturing it on the 14th September 1262 had to repopulate Cádiz again, till at a later period on the discovery of America a new era of prosperity dawned when it became the port of arrival for the silver fleets from the west; in this period it was able to defy the attacks of the Barbary Corsairs in 1530, 1533 and 1574, but it suffered severely when it was plundered in 1587 by Drake and again in 1596 by the Earl of Essex.

Cádiz is, it is true, occasionally mentioned by the Arab geographers but in comparison with Seville and Córdoba its role is of no importance and in competition with Tarifa, Algeciras, Málaga, Almería and Cartagena, it fell into the background. While the Arab authors give us but scanty details of the ancient fortified port of Cádiz, they are never weary of giving valuable accounts of the famous "Pillars of Hercules" near Córdiz, al-ṣūdūr Ḥirakāt or briefly al-Aṣṣūdūn (also al-taṣṣūd al-Malakīya in Masdūl, Tashāb, p. 635), so often mentioned but never described in the classics; they mention seven of these pillars in which most famous was the al-Sūdūr al-Kabīr, called also al-Muḥāṣṣar al-Kabīr at Cape Trafalgar Tāruf al-atgir (Maḥkār, l. 83, et al.; not to be confused, as Rainaud does — Abū ‘l-Faddāl, ii, 260— with the once very famous temple of the Phoenician Herakles-Melqart, containing no idol, in the southeast of Cádiz). It is described as a brazen statute of a bull with a long club (according to others, a key) in his hand, on the top of a trinangular pedestal resting on two square tapering blocks of marble; it was destroyed by Al Córdiz = B. M. M. Māsmūn, out of capricious in 540 = 1145; for further details of these "Pillars of Hercules" see Dory, Recherches, ii, 314—314, Append. N°, xxxv, p. lxxixi—xcxvi, and sig. p. xxv, lower.
The town of Caghāniyān was then larger than Tirmiţ, but could not compare in numbers or wealth of its population with the commercial city on the Oxus (Iṣţakhan, ed. de Goeje, p. 293). On the market place stood the chief mosque with pillars of bricks but without arches (hāl ṣāda, Muḥammad, p. 293, et seq.). As late as the vi10 centuries, in the period of Samanid, the mosque of Caghāniyān was a "hospital and a building (Jama' masjīd). The number of villages in Caghāniyān was estimated by Muḥammad at 10,000; of towns on the road to Tirmiţ there are also mentioned Bārāngī (farsašk from Caghāniyān) and Dārāngī (farsašk farther on, inhabited by weavers); Čarāngī, 6 farsašk from Dārāngī, already belonged to Tirmiţ.

Little is known of the later history of Caghāniyān. In the first half of the vi11 century, the princes of Caghāniyān had to recognise the suzerainty of the Ghurids; on Sulṭān Muḥammad's winter campaign, cf. the article Sulṭān, p. 796. After Baljī had been finally ceded to the Sulṭāns by the treaty of peace in 1311 (1319), the lands on the other side of the Oxus also submitted to the new conquerors; a rebellion which broke out in Caghāniyān as soon as Sulṭān Alp Arslān (1219) (De Goeje, p. 524). In the vi12 century Caghāniyān is sometimes called a possession of the Khān of Samarqand (Muḥammad al-Khitīb al-Samarqandi in Barthold, Turkestan, etc. I 72), and sometimes regarded as a part of the Ghurid kingdom of Bilānīyān (q. v., p. 643).

In the accounts of the Mongol campaigns of conquest, Caghāniyān is never mentioned; the land later appears as a possession of one of Caghāti's grandsons and his descendants (see Berke-Khān, p. 794). The valley of the Surkhan was much valued not only by the Mongols but by other nomadic peoples also on account of its grazing-grounds; at the present day the original Iranian population has been completely dispossessed by the Uzbeks. The pre-Islamic and mediaeval towns here have long since disappeared; even their ruins have disappeared. In the accounts of modern travellers only old brick bridges are mentioned over the Bandī Khān (which is now only filled with water in the spring time) not far from its confluence with the Surkhan; the site of the town of Dārāngī was probably here. The town of Caghāniyān had probably disappeared by the vi13 century; the earliest mention of Dībā Nāw in the Zafar-Nāma of Shāh ʿAlī Darvish (Indian edition, l. 146); but here however (Nabās-Nāma, ed. Berdeev, see Index) still gives the name Caghāniyān to this district and its capital but this is probably only under the influence of literary tradition.

W. Barthold.

Caghāniyān, a tributary of the Oxus, now called Surkhan. The town (ric. pre-Muḥammadan origin, of Caghāniyān) is mentioned in the Istakhan (ed. Tarnowski, q.v., et seq.) written in the year 972-982, and was still in use in the vi12 centuries (Zafar-Nāma, Indian edition, l. 146).

W. Barthold.

Caghāti-Khān, a Mongol prince, second son of Cingis-Khān and his queen Burtī-Fudž. Even in his father's lifetime he was regarded as having the best knowledge of the Viet (the tribal laws of the Mongols which had
been codified by Cingiz-Khan and being the greatest authority on all questions of law and custom. Like his brothers, he took part in his father’s campaigns against China (1211–1216) and against the kingdom of Khusraw-Shah (1214–1219). The capital of the Khusraw-Shah, Gurgan (the modern Kunya-Urgench) was besieged by the three princes, Duzi, Caghati and Ugdadi and taken in Safar 618 = 27th March–24th April 1221. In the same year Caghati’s eldest son Muteen was slain before Bamiyan (see above, p. 644). After the battle on the Indus (according to Nasavi, ed. Houdas, p. 85, on Wednesday the 9th Safar 618 = probably the 24th November 1221), Caghati was entrusted with the operations against the Khusraw-Shah, Duzi al-Din, so that he spent the winter of 1221–1222 in India. When Cingiz-Khan undertook his last campaign (against Tangut 1225–1227), Caghati remained in Mongolia in command of the troops left behind there.

After his father’s death Caghati no longer took an active part in the campaigns. As eldest surviving son of the late ruler (his brother Duzi also had died before his father) he enjoyed enormous prestige. In the year 1229 he presided with his uncle Cogen at the meeting of princes which elected Ugedei Great Khan; owing to his position as the recognized authority on law in the whole kingdom, he exercised an influence to which even the Great Khan Ugedei had to bow. He seems to have spent this period partly in Mongolia at his brother’s court, partly in the territory allotted to him by Cingiz-Khan where he held his own court-camp. Like all Mongol princes, Caghati had separate camps (orvut) for winter and summer. Djuwant mentions Marsawal-Ul II as his winter residence and Kuyal as his summer quarters. Both were in the Illi valley in the modern Chinese province of Illi, of which the modern capital Kulyja lies southeast of the medieval town of Almaty. The camp mentioned by the Chinese traveller Chang-Chun lay to the south of the river Illi; as this traveller was here in May 1225 (cf. Brot- schneider, Medieval Researches from Eastern Asiatic Sources, i. 98), it is probably the summer residence he refers to. The residence of Caghati’s successor is called Uligh-II (or Uliq-II is perhaps the correct rendering) by Djuwant and others.

Caghati had recovered from his father all the lands from the Uighur territory in the east to Beke-Kara and Samarkand in the west: we must not however regard those lands as a single kingdom governed from the Illi valley and only indirectly subject to the Great Khan whose capital was in Mongolia. Everywhere, even in the Illi valley, itself, the local dynasties who were there before the Mongols remained. On the relationship of the native dynasties to the Mongol rulers we have no accurate information; we know equally little about what sovereign rights the court on the Illi could claim from the Great Khan and his deputies. The settled lands of Central Asia were certainly not governed in the name of Caghati but in the name of the Great Khan. In the account of the suppression of the rebellion in 636 (1238–1239) in Bukhara (see above, p. 81) Caghati is not mentioned; the governor of Mih wahr al-Nahr at this period was Mahmut Valawmi, a Khwarizmian by birth who lived in Khodjand and had been appointed by the Great Khan. Even the generals of the Mongol troops in Mih wahr al-Nahr were appointed by the Great Khan. When, soon afterwards, the governor Mahmut Valawmi was arbitrarily deposed by Caghati, the latter was called to account by his brother and had to confess the illegality of his action; Ugedei was satisfied with this apology, and granted the land to his brother as a fief (indiq); but the legal position of this territory was not thereby altered. During the last years of Ugedei’s reign, as well as later under Mongko, all the settled areas from the Chinese frontier to Beke-Kara were governed by Mahmut Beg, the son of Mahmut Valawmi, in the name of the Great Khan.

It cannot be ascertained how far Caghati’s Muhammadan minister Kagh-al-Din Habbaq ‘Amid had a share in the administration of the country along with the representatives of the Great Khan. According to Rashid-al-Din this minister came from Otrar, according to Djasmal-al-Korashi from Karmania, and had like many other Muhammadan dignitaries at this time made his fortune among the Mongols as a rich merchant; he was on terms of such intimacy with the Khan that each of Caghati’s sons had one of Habbaq ‘Amid’s sons as a companion. Caghati was on the whole not favourably inclined to Islam. Among the ingrenements of Mongol law which were rigidly punished by him, was the observance of certain prescriptions of Islam. Among the Mongols it was forbidden to slaughter an animal by cutting its throat, which is in the form prescribed by the Shafi’; another law likewise frequently broken by the Muhammadans at their abductions was that which prohibited washing in running water. The cruel punishment with which Caghati visited any such trespasses made his name hated among all Muhammadans. At his death the poet Sadiq ‘Awne sang: “That man from fear of whom no one goes into water in himself, now drowned in the wide ocean” (of death). His Muhammadan minister did not have a good reputation for piety. It is said to have been at his instigation, that Caghati executed Shaih Abd Vali Ahmad al-Sakka (thereon, cf. Khodemst, Habib al-Siyar, Teheran edition iii, 69); we also have a poem (given in Barthe, Turkistan in spicchio mongolo-shape mascherei, i. 104) by Shaih Saff at al-Din Ibn Buzi (died 24th Dhul-Qaj 550 = 20th October 1261) in which reproaches are heaped on Habbaq ‘Amid. It was probably on account of his hostility to Islam that Caghati was regarded as a friend of Christianity; according to a story given by Marco Polo, he is even said to have been baptised but this statement is nowhere corroborated.

Caghati only survived a few months his brother Ugedei who died on the 5th Djamal II 639 = 5th December 1241: his death must therefore have taken place in 1242. According to the Mongol custom, his physicians (a minister of Chinese origin and Mahdi al-Din, the physician-in-ordinary, a Muhammadan), were put to death because they had not succeeded in saving the life of their sovereign. Habbaq ‘Amid survived Caghati many years and died in Shixum 659 (20th August 1260). Of all the sons of Cingiz-khan, Caghati is the only one whose name remained attached to his dynasty and the kingdom founded by this dynasty. In the kingdom of the Golden Horde, the names of heathen Khans were quite driven out by the name of the Muhammadan Uxeug-Khan. The people became known as Uzebegs and their
country as Uzbekistan; on the other hand, the Turkish or Turkishized nomads in Mā war al-Nahr were still known as Čaghātai as late as the 17th century, although there had for long been no ruling family there descended from Čaghātai. The same name is still borne here at the present day by the Eastern Turks. A literary language, first developed under the Timurids, now preserved in the books of the region, the dynasty and those deposed in favor of Visā-Mongkē, a son of Čaghātai, by order of the Great Khan Gūyūk (1246—1258) the events of the year 1257 (cf. the article KAYKHĀN p. 682) utterly destroyed the importance of the house of Čaghātai for a period. All the adult members of the house were either slain or banished. Flaghāna, the widow of Karâ Ḥullāgū, who was re-instated and died soon after, held the regency, the li during the following decade during the minority of his son Mubārak-Shāh; but she seems to have exercised no authority over the adjoining lands. As the narrative of Rubrūqūsī (1531—1555) shows the Great Khān's empire at this period was practically divided into two separate portions; Bālt, the ruler of the western half, was able to approach the Great Khān almost on terms of equality (although the coins everywhere were struck in the name of the Great Khān Mongke); the territory directly subject to the Great Khān began between the rivers Tāsū and Ċū. The above mentioned Maṣʿūd-Beg who enjoyed the esteem of both Khāns, was governor of all the settled areas between Bāqh-balak and Ḥaravīm.

On the death of the Great Khān Mongke in 1269, a different condition of things arose. During the struggle for supremacy between Khūbulī and Argh-Bakht, the brothers of the late Great Khān, Alğhit, a grandson of Čaghātai agreed to take possession of Central Asia for Argh-Bakht and to support him from there against his enemies. He succeeded in establishing himself in the whole of Central Asia under his sway in a brief space of time, including lands like Khwārizm and the modern Afghanistan which had not previously been nominally numbered among the possessions of the house of Čaghātai. He had of course won these successes for himself and not for Argh-Bakht; he everywhere declared himself an independent ruler, particularly after Argh-Bakht, who tried to assert his rights, was forced finally to vacate this territory in spite of some initial successes. Maṣʿūd-Beg was still governor of the settled areas, now no longer in name of the Great Khān however but in name of Alğhit.

Ałğhit may be regarded as the founder of an independent Mongol state in Central Asia; he enjoyed his success for a brief period only; he died in 1264 (1265-1266), some years after his death the prince of the house of Čaghātai in this district had to cede the ruling power in this state to Kālid, grandson of Ḫāfez (cf. the article MĀKHĀN p. 793), who ruled till his death in the beginning of 701 (autumn 1301). We again find Maṣʿūd-Beg governing the settled areas of Central Asia in name of Kālid. Maṣʿūd-Beg died in Shewan 688 = October—November 1289; he was succeeded by his three sons in succession: Abī Bakr (ill. Spāḥān 697 = May—June 1298), Saʿīd-i-Beg (ill. 702 = 1302-1303) and Saʿīd-i-Beg; the first two received their powers from Kālid and the third from his successor Čapar. Čapar was only able to assert his authority for a few years after the death of his father; he was deposed by Fudūs, son of Bāriḵ-Khan, in 706 = 1306-1308. The throne was assumed by the great founder of the kingdom of Čaghātai. The boundaries of this kingdom dividing it from the other Mongol kingdoms (China, Persia and the kingdom of the Golden Horde) are given on the Chinese map of the year 1331 (cf. the article MĀKHĀN p. 793).

It was some time before this kingdom received an independent organization of its own. Djiwan al-Dīn Ṭawūsī's work written in the reign of Čapar shows that affairs in Central Asia were in much the same condition even at this period, when there had long been a strong Mongol central government in China and Persia, as they had been in the early years of the Mongol conquest. Besides the old family of governors, the earlier local dynasties had also survived even in the III valley itself; in the towns, where there was no local dynasty, the chief of the Mughāmān clan was the head of the administrative body.

The Mongols were here apparently less under the influence of Islam and Muḥammadan culture and were able to preserve their peculiar features in spite of their conquered subjects longer than in Persia. Except in the land of the Ughi, Islam was everywhere the state religion by the time of the Mongol conquest, even in the III valley; nevertheless these areas had been but little influenced by Arabo-Persian culture. The Mongol conquest, as Rubrūqūsī pointed out, was followed in these lands by an extension of the pasture lands at the expense of the towns and areas under cultivation; at a later period urban life quite disappeared here under the influence of Mongol rules except in Mawar-i-Nahr and the modern Khwājgān Tøkhenān. The Muḥammadan civilization of Mā war al-Nahr naturally exerted some influence on the Mongol, particularly the rulers; this influence was not strong enough, however, to induce the mass of the people to change their mode of life. When the ruling family decided to settle in Mā war al-Nahr and to break off from the customs of their people, the complete separation of the eastern provinces was brought about.

Even the brief reign of Visā-Mongkē (1246—1251) appears to have been favorable to those who professed Islam. The minister then was a friend of the Khān's youth, a foster-son of Ḥābāsh-ʿAmīd, Bahāʾ al-Dīn Marghīznānī, who was a descendant of the Māshūd al-Islām of Farghānā and proved more favorable to the new conquerors than his foster-father. He is praised by his contemporary Djiwan, who was personally acquainted with him, as a Māceyan; his house was the centre of all scientific and literary pursuits. Ḥābāsh-ʿAmīd, who was hated by the Khān as an adherent of Karâ Ḥullāgū, owed his life to the intervention of Bahāʾ al-Dīn; nevertheless Bahāʾ al-Dīn, when, after the events of the year 1251, he had to share the fate of his Khān and was handed over to his foster-father, was executed
in the cruellest fashion by the latter's orders.

Under Orghlan, Habsih-Ammid again took the position he had held under Caghatai; this prince was however favourably inclined to the Muhammadans; she is described by 'Afnan as a protector of Islam and by Djalil al-Kurashi she is even said to have been a Muhammadan. Her son

Muharram-Shah, who was raised to the throne in Mīr wār al-Nahr, certainly adopted Islam, as did his rival Burūk Khân some years later. The rule of Alighī seems to have been less favourable to Muhammadans; Sulayman-Beg, the son of Habsih-Ammid, attached himself to the new rulers; on the other hand, Shāhīsh Burūk al-Bahrām, the son of Shāhī Shāhī al-Dīn Bāghshī was slain at the taking of Bukhārā. The events of the following years put off for some decades the victory of Muhammadan culture, the way for which had been paved by the conversion of Mahārāk-Shah and Burūk Kaidū and Čupāt; and as in Daud and the other princes of the house of Caghatai remained pagan and had their dwellings in the eastern provinces. In the reign of Čupāt al-Bahrām, the son of Daud, the armies of the Great Khan penetrated from China far into Central Asia and ravaged the winter and summer residences of the Khān; the writer of the continuation of Rashīd al-Dīn's Zhīmī al-tanzurī in his account of these happenings says that the winter-residence of the Khān was the district on the Jast-Kul, while his summer residence was on the Talas.

Jum Bakh's successor Khān Kakhak (likewise a son of Daud), who, according to the historians reigned eight years, according to his coins till 726 (1326), was the first to return to the settled lands of Mīr wār al-Nahr. Though he did not adopt Islam he is praised by Muhammadans as a just prince; he is said to have built or restored several towns; he had a palace built for himself in the neighbourhood of the town of Nakhshī or Naṣīr, from which the town takes its modern name of Karshi (Mongol = *palace*). He introduced the silver coins afterwards called *Kakhāb*, which may be regarded as the first independent coinage of the Caghatai kingdom; from the Mongol conquest to his time there had only been the coins of individual towns and dynasties in circulation in Central Asia. This fact also makes it possible that the kingdom was first united on a firm basis by Khak, although we have no definite statements on this point.

After two brief interregna, Kakh'āb's brother Turamshīn was raised to the throne probably as early as 726. This Khān adopted Islam and took the name of *Alī al-Dīn*; the eastern provinces were entirely neglected by him so that the nomads of these provinces rose against him as he had broken the *Yazd*; this rebellion appears to have taken place about 734 = 1333-1334; it is scarcely possible to detail further events, for it is quite impossible to reconcile the accounts of the historians, which are probably little reliable on this period, and Ibn Batūta's account, which is equally tinged with romance (ed. Defrémery and Sanguineti, iii. 39 et seq.). The statements of contemporary missionaries prove that the centre of the kingdom was again transferred for a brief period to the Jīl valley and Christians were allowed to spread their religion unhindered and to build churches there in the reign of Djalikshī (about 1334-1338); it is even said that a seven-year old son of the Khān was baptised with his father's consent and received the name of John. Soon afterwards these missionaries fell victims to a Munshi man agitation.

Some years later Nasāf (Karashi) is again mentioned as the residence of the Khān Kānīn; this Khān soon fell (in 747 = 1346-1347) in battle against the Turkish military aristocracy in his lands, whereupon the rule of his house in Mīr wār al-Nahr came to an end. Till 1370, descendants of Caghatai were placed on the throne by the Turkish Khans as nominal rulers; in the time of Timur, these rulers were chosen from the family of Ügendī. Nevertheless under Timur and his successors, the nomad population of Mīr wār al-Nahr, who, as a warrior caste, enjoyed many privileges (the Spanish envoy Clavijo (1403-1406) gives full details), was still as before called *Caghatai*. When the Caghatai had been driven out in the 18th (18th) century by the "Uzbeg", the name *Caghatai* was transferred to the Turks who migrated to India. Up to the end of the 18th century there was a ruling house which claimed to be descended from Caghatai in the modern Chinese Turkestān (these princes were sometimes able to extend their rule as far as the lands north of the Celestial Mountains (Ti-šan) as well as to undertake campaigns into Mīr wār al-Nahr, Tibet, India and Afghanistan); the subjects of these princes appear to have called themselves not Caghatai but simply Mongols (Mongol Peterburg).

**Bibliography:** Our sources for the history of Caghatai and his successors are much scantier than the accounts of the Mongol kingdoms in Persia and China; nor have they, we suspect as they are, yet been collected or edited. With the exception of Djamāl al-Kurashi's *Mahlītāt al-Shāhī*, which stands quite alone, there are two manuscripts in the Asiatic Museum in St. Petersburg; in Western Europe the work has hitherto been quite unknown; extracts are given in Barthold, *Turkistan* etc. i. 128 et seq. There are no historical works composed in Central Asia during the period of Mongol dominance. Among Persian historians, Djamāl (*Turāštān*, *Djalān al-kurāshī*), extracts in Defrémery, *Journ. Asiat. 4th Ser. Vol. xx. 381 et seq.) and Rashīd al-Dīn's *Qānīf al-tanzūrī*, extracts in Barthold, *Turkistan*, chordom on the *Jast Kūl* (ed. 1st ed. p. 446 et seq., 515). On the Christian missionaries, cf. Mathew's *History Turcestani Ecclesiae*, Heidelberg, 1741, particularly Append. No. 78, 80, 84 and 92. Valuable material on the condition of Central Asia is contained in that portion of Ibn Fadh Allah al-Omari's *Mahlītāt al-Shāhī* which has been made known by Quatremère's *Notice sur les écrits arabes d'Asie*.

Clavijo's account of his journey has been edited in Spanish and Russian in the *Sbornik* (collection) russkago jazyka i slovostroya Imp. Academi Nauk, Vol. xxvii, (St. Petersburg,
the account of the "Ghara" is given
on p. 220 et seq. On the Caghti dynasty in
Chinese Turkestan, the best authority is the

CAHCHR BEG or MUKHTAR, the Sâ%alâq or, with
the Biblical name of Dâlithu, which is the one
Bajkhat always calls him by, was a brother
Toghrulbeg [q. v.] the founder of the Saldjiq
power. A third brother Paighui, who always takes
the first place in Bajkhat, was not so prominent
afterwards, although the three brothers were the
recognized heads of the Ghuz tribe of Chârâ-
and were held in high esteem among the other
Ghuz also. They first begin to play an important
part in the history of the Saldjiq after the death
of Ali Beg when, at the end of 1033 A.H. (1624), they were no longer
allowed to remain on the latter's territory in Nör
Bajkhat and sent a letter to Abu 'l-Fadl Shâtir
b. al-Murzân, the Ghaznavid governor of Khorsâsân,
to get permission to settle with their people and
farming in Khorsâsân territory. Bajkhat witnessed
the Saldjiq by no means unprepared and was
severely defeated in the summer of 1026 (1633).
As a result of this, entered into negotiations with
the Saldjiq and was not granted any rights,
but was allotted certain districts and made
them officials of the Ghaznavid government with
the title Dâlithu on condition that they remained
at peace and restrained the robber Ghuzs
from raiding. They were, however, unable to fulfil
this condition in a satisfactory fashion, and
complaints became too loud; Mâ'âtâ ordered
the Great Hâjî Shâtir to collect troops and
and drive out the robber Ghuzs, Shâtir was able
do little against the swiftly moving nomads, whose
numbers were constantly increasing, so that the
campaign dragged on and Caghti Beg even took
Maw in 1037 and had his name mentioned in
the Khâ.'] as lord of the town. Shâtir then
received orders to attack the Saldjiq but was
put to flight near Sângâs in 1039 (1655). Toghrulbeg
entered Nishapur in the same year and had his name mentioned in the Khâ.' Mâ'âtâ then
decided to take the field in person but shared
the fate of his generals and received a decisive
reverse at Dârsanâqân on the 3rd Ramsâd 431
(23rd May 1910) [cf. the official account in
Bajkhat, p. 790 et seq.].

Though we have detailed accounts of the
further successes of the Saldjiq in the west under
Toghrulbeg, we know very little of the progress of
Caghti Beg's campaigns in the eastern provinces
of what has once been the Caliph's dominions.
It fell to him and his famous son Alp Arslân
[q. v., p. 320] to continue the campaign against
the Ghaznavids which finally ended in both
sides agreeing to a peace, by the terms of which
each was to remain in possession of the
lands actually in its possession at the time of
the conclusion of peace. The whole of Khorsâsân
and some of the adjoining lands thus fell to
Caghti Beg who acquired fame not only as a
general but also as a ruler. He continued to live
on good terms with his brother Toghrulbeg and
aided him in his campaigns, which were often
only successful through his intervention. He was
shortly supported by his brother son Alp Arslân;
his daughter Arslân Khatun Khâ hit was married
in 1052 to the Abbâsîd Caliph al-Kârum
b Qârân Alâdâr; another son Qârân Alâdâr was
the founder of the Saldjiq kingdom of Erân. Caghti
Beg died in Kâfsh 451 (August-September
1059) according to the most probable statement,
and left his throne to his son Alp Arslân, who
also inherited the dominions of his uncle Toghrulbeg
when the latter died childless.

CAIRO, the chief town and seat of the
government in Egypt, it is situated in 30°
18' N. Lat. and 31° 26' E. Long. (Greenw.),
about 11.5 miles south of the head of the Delta at
the point where the Nile branch is at its nearest
to the Nile. This site is of great strategic
importance as it commands the approach to Upper
Egypt and was settled and fortified even in ancient
times. It was not, however, till after the Arab
invasion, that it became of special importance,
when the great military camp of Fustâs was
placed here in which all the towns and castles
became incorporated in course of centuries. Mâ'ûtâ
Alâdâr was first founded under the Fâjîmids in
the year 359 = 969; it was the capital of the
Fâjîmids and gave the whole group of towns
the name it bears to the present day. In course
of time individual parts of the city disappeared
while others sprang up in their place. Remains
of the ancient Fustâs still survive in the mounds
of Old Cairo (Mas'âlây). The expansion of the
city took place as a rule from south to north
and from east to west. Until at the present day
the process is going on.

TOPOGRAPHY OF THE TOWN AT THE
TIME OF THE ARAB CONQUEST.

The history of the conquest gives us the follow-
ing picture of the city. In the south of the
plain of Cairo lay the ancient town of Heliopolis
[Or, the 'Am Shâmi [q. v., p. 412] of the Arabs,
the ruins of which still render the identification
in certain of the present day. In the south of the
plain was the fortress of Babylon [q. v., p. 559]
the Chers-Obeh of the ancient Egyptians. In
the article Babylon, Cassanov's explanation of the name as a graccified form of Py-Hapi-r-on is followed;
Steindorff says in Bischler's Egypt (p. 39): "The
Greeks named it Babylon, probably in imitation of the
Egyptian name of the island of Kopté, viz. Per-
Hapi-r-on or the Nile City of On." (Heliopolis)"
This Babylon, the ancient Egyptian and Greek fortress, which was much extended by the Romans, has survived to the present day in Old Cairo under the name of Kasr al-Sham. The name is, according to Butler, probably an Arabicised form of "Babylon an Khammi", i.e. Babylon of Egypt. That Kasr is a popular etymology of Khammi, supported by very few authorities, who considers that the high towers of the fortress were once used as lighthouses. This fortress remained in a fairly good state of preservation with its strong towers and walls and served as a refuge for the Copts till after the English occupation of Egypt, but it then became very dilapidated till quite recently it was placed under state protection by Max Herr Bey, who has rescued so many Egyptian monuments from destruction. Between Kasr al-Sham and the Nile there now lies a great portion of Old Cairo, but at the time of the Arab conquest the Nile washed the walls of the castle. The strong fortress was connected by a bridge with an island, also fortified, which lay opposite it and was probably a southern continuation of the present island of Kofa and formed with it a fortified town. Thus a bridge of boats to Djuma (Gizeh) and controlled all communication with the west bank of the Nile. As its ruins still show, this was a very strong fortress; it held out against the Arabs under the conqueror of Egypt for a long period. After a siege of six months Babylon fell on the 9th April 641 = 21st Kiahf. 22 a. H.; it was not taken by storm however but surrendered peacefully. For further details see the article BABYLON. The name is still found attached to the monastery of Der Bubinta south of Old Cairo. Full details and bibliography are given in Butler, The Arab Conquest of Egypt, p. 235 et seq. Two places, Umm Dumnain and Misr, are known to have existed at the time of the Arab conquest between Ain Shams and Babylon. Umm Dumnain probably corresponds to the Tandimay mentioned by John of Nikipt. Amr the Conqueror made his headquarters here for a period before the battle of Ain Shams. Leone Caetani approximately identifies the site of Umm Dumnain with the modern Erbakiya, which was then situated on the Nile. Further to the south under the walls of Babylon, the fortress of the Romans, lay the unfortified town of Misr. It is not quite certain whether it lay south of the fortress — this is Butler's view — or to the north which is the conclusion come to by Guest in the Journal of the Royal Asiatic Society 1907, p. 63 et seq. It certainly did not cover the whole plain; otherwise it would have been impossible for the Arabs to pitch their camp in this neighbourhood. We may assume that there were individual settlements, particularly churches, monasteries, gardens and vineyards all over the plain between the Nile and the Muqattam.

2. The Foundation of al-Fustat.

As had been the case in the Irak where Kafa and Baṣra were founded as military towns and depots for the Arab armies, far from the earlier seats of government, so in Egypt also it was not Alexandria that was chosen as the seat of the Caliph's representative, but a new town was built near Babylon, the character of which was purely military. The choice of this particular point was probably settled on as a result of the experiences of the period of conquest which had proved the great strategic importance of Babylon. Fustat did not, however, arise in a night by command of the authorities as a result of a regular system in the allotment of the quarters (khettaf), but the camp of the army pitched in quite an aimless fashion at the siege of Babylon, assumed permanent form. The excessive patriotism of the Egyptian historian must have given us a wonderful example of information on the foundation of Fustat, which has enabled Guest (op. cit.) to give a clear picture of this Egyptian military town save for one or two uncertain points. The new town lay along the Nile for about three miles with a breadth of about half a mile, from Der al-Tin, which bears the same name at the present day and the now dry Birka al-Halashi in the south almost to the top of the Ikhbat Yasmak on which the Tullun Mosque was afterwards built. In a fairly central position to the north-north-east of Babylon was the residential quarter of the governor 'Amr b. al-As, a clue to the situation of which is given by the Mosque of 'Amr, to which additions have of course often been made but the other portions of which date back to the period of the Conquest. This quarter bore the name of Khettat al-Asl al-Raja i.e. "Quarter of the Commander-in-chief"; the explanation of the name is, that a number of comrades-in-arms, particularly Aṣṣar and Muhādhīrin, who formed the nucleus of the army and belonged to the oldest branch of the troops of Islam, had assembled here around the standard of the commander-in-chief. The various other groups of the people attached themselves to them to form tribes, as it were. There was a khettaf corresponding to each of these tribes and a paylist in the D庄严 for each khettaf. This ethnic principle of division was only broken among the Abl al-Neṭ. These had a tribal roll to themselves although they really belonged to different tribes. Another association of members of various tribes called al-Neṭ, also had a separate khettaf, but its members went with the standard in the paylists. Members of the various tribes arrived at a later date settled in the khettaf of their own tribe; when they could not find room with their kinsmen, which often happened, these strangers were collected as Abl al-Zabir in a separate quarter outside. Tradition says that members of the tribes of Tuqib, Ghuṣair, Khawāla, and Ma'āẓr were appointed to superintend the sticking out of the khettaf. These must therefore have been the most strongly represented; they are all tribes from the Yamun. The North Arabian element was not strongly represented at the foundation of Fustat. It is difficult to get a clear idea of the Khettat, as the word is applied both to fairly large tribal quarters and to their internal subdivisions. There were open spaces (fushа), between the individual khettaf, which is of course of time only narrow streets came to be left. It is clear from the history of its origin, why Fustat was not laid down on a definite town-plan; it simply developed out of the union of a number of struggling tribal encampments and ran from north to south outside the fortress of Babylon and the main quarter with the great Mosque lying to the north of the latter. It is not quite clear, how far the town of Misr was incorporated from the first in important part of the camp, which was gradually joined up to form a town, was the
bank of the Nile north of Babylon as far as the northern boundary of the town at that period. It was called al-Ḥamrāwāt and was divided into al-Ḥamrā al-Dunyā (near Babylon), al-Waṣṣāt and al-Ḵuṣṣāt. This district is mentioned in a Greek papyrus of the end of the first century (Bell, Catalogue of the Greek Papyri in the British Museum, Vol. iv, p. 331). At this period there must have been a distinction between Babylon and Fustāṭ, which was official rather than geographical. The name Fustāṭ drove out the older Babylon. The ancient name Mīr or Maṣr remained in existence alongside of Fustāṭ. According to the dictionaries, Fustāṭ means tent. The name of the town is given in very different forms, viz., Fustāṭ, Fustāṭ, Fustāṭ, Fustāṭ, but the most appellative also has various forms. Dory, Supplement, s. v. recognized that in Fustāṭ we have an Arabicised form of a foreign word, the Byzantine fostra i.e. fustum "camp." The Papyri give evidence of the use of fostra as an old name for Fustāṭ. It can no longer be determined, what historical connection there is between the name of the town and its original meaning. At any rate, the city of the army was not at first surrounded by walls and ditches but only by a Zašā (Old Arabian Zard), a barricade of thorn-bushes. The ancient name Mīr is now combined with Fustāṭ to form a single name: Mīr al-Fustāṭ, Mīr or Maṣr, a place-name, which the Arabs found when they came there, was regarded by them as identical with Mīr, Amr, camp, and also with the Arabic name for Egypt, which had been in use even in pre-Muhammadan times. Mīr was popularly pronounced Maṣr and this name was transferred from Maṣr al-Fustāṭ to the younger sister town of Mīr al-Ḵmār and has retained its usual name to the present day.

3. History of the Town of al-Fustāṭ.

The camp gradually developed into an important town by incorporating the towns of Mīr and Babylon, which dated from pre-Muhammadan times. The town however remained undefined, as is evident from the statement that in the year 64 (683) the governor of Ibn al-Zubair had a ditch dug to protect the town from Marwān b. Umays and who were advancing on it from Syria. We can hardly imagine how primitive the houses of the Arabs were. Even the original Mosque there were also places of prayer in the individual khīta and besides a Masjīdat outside in the desert for the appointed services at the two great festivals — was naturally a very simple building, though it was increased and embellished in course of time (cf. Schwally, Zur älteren Bau geschichte des Moschee des Amr in Al Kair (in Strausburger Festschrift zur XLVI. Versammlung deutscher Philologen 1901). Other public buildings were also erected in time. At the end of the first century we hear of great granaries being built (Bell, Aphrodisias Papyri, p. 52) and of the erection of an abūl for the Abūl al-Muḥāsin (ībīd. p. xvi) — it is probably offices for the government that are meant. Some years later a treasury (bāṭ al-munāfīs) was built in Fustāṭ (Becker, Reiburse über Geschichte Ägyptens, ii. 165). These are only casual notices which testify to the continual growth of the town. Its development probably dates from the second half of the first century, as under ʿAbd al-Malik's brother, ʿAbd al-ʿAzīz, it was not Fustāṭ but Ḫelwān, which was the governor's residence. Although the central part of the town thus expanded, the whole area of the original khīta did not remain built upon; for example, the northern quarters, al-Ḥamrā al-Ḵuṣṣāt, and the district of Djebel Ṭafṣur fell into ruins and became a desert. (Makrīzī, Kitāb, i. 304, s.) When on the fall of the Umāyida (132 = 750) the ʿAbbāsid troops entered Egypt to follow up Marwān II, Marwān burnt the whole of Fustāṭ except the great mosque; at least so we are informed by a Christian source, Severus of Asvernus, ed. Mettler (Patrol. Orient. Tome V, fasc. i, p. 168). This may be the reason why the ʿAbbāsid governors no longer resided in the ancient Fustāṭ but built a new residence, Dīr al-Imārā (in the above mentioned old quarter of al-Ḥamrā al-Ḵuṣṣāt to the north, around which a new quarter arose which was called al-ʿAskar. The topography of the whole of this district has been particularly studied by C. Salmon (see Bibliography). A second Chief Mosque (2620 m²) was attached to the Dīr al-Imārā here, which was an old Qubbat al-ʿAskar and later Qubbat Shāh al-Qollā. Large buildings and markets also came to be erected here and al-ʿAskar became united with Fustāṭ to form one town. This quarter also had a police station (Shārutf) of its own, the so-called Shārutf al-ʿUyād.

This notice by Makrīzī (Kitāb, i. 304, s.) is of importance, as it enables one to see that the division of the town into two parts, Amal Fāh and Anam Asaf, which existed throughout the whole period of Fustāṭ's prosperity, dates back to the foundation of al-ʿAskar, i.e. to the year 133 (750). Makaddas (ed. de Goeje, p. 109) gives the clearest account of this division of the town. According to him, the Mosque of ʿAmr was distinguished as al-Qubbat al-Suffānī and the ʿUyād Mosque (see below) as al-Qubbat al-ʿUyādī. The boundary between the two divisions was formed by the Masjīdat ʿAbd Allāh, the site of which can no longer be located — a clue is given by Makrīzī, i. 334, 5. This statement would lead one to regard the southern part of the town as Amal Asaf and the northern as Anam Fāh, but this is not correct. Makrīzī (Kitāb, i. 5, 4; ed. Wetz, i. 12, Note 6 and i. 299, 4) tells us of Amal Fāh, that it had two ends (parāf) and that, beginning to the south of Kašr al-Sham, it stretched via al-Rasād and the Karafa as far as al-ʿAskar and the ʿUyād town. It thus enclosed in a semi-circle the division Amal asaf, which formed the older portion of Fustāṭ. In these circumstances it is confusing to be told that Amal Asaf adjoined Cairo (Kīhāt, i. 299). This statement was probably made while the author was thinking of later conditions after the decline of al-ʿAskar, or perhaps Amal Asaf stretched eastwards of al-ʿAskar along the Nile. In any case Asaf and Fāh are here not identical with the boundary between Upper and Lower Egypt, but Asaf rather refers to the low-lying bank of the Nile, while Fāh refers to the higher land further from this river. This is quite clear from Kīhāt, i. 343, 4. There was a police-station (Shārutf) corresponding to each of the administrative districts (Amal) which was called Šāhī Amār Asaf (Ibn Saʿīd, ed. Vollers, 52, 4) and Fāh or, as above mentioned, al-ʿUyād for each separately. In times of unrest the merchants used to retire
from ‘Amal Fāih into ‘Amal Asfai, i.e., into the interior of the town. (Musabbihī in Becker, Beiträge, i. 70, 1.). That the ancient Fustāṭ re-
mained the scene of the town even after its burning by Marwān down to the late Fatimid period, is evident from all accounts.

Al-‘Askar, on the other hand, was the residence of the ‘Abbasid governor till a new period in the history of Egypt began in 254 (868) with ʿAbd Allāh b. ʿUthmān, and a transference of the seat of government and extension of the town became necessary with the new requirements of the court and the military. The site, where this new town which was not, however, its forerunner, arose, is still defined by the Tūlūnīd Mosque, which is situated in this great complex of buildings to which the name al-ʿAskarī was given. As further landmarks, ʿAbd al-Rahmān (Kābir, i. 313, et seq.) gives the citadel, the Romanha square, and Zain al-ʿAbidīn, which, according to the map published by Guest and Richmond in the Journal of the Royal Asiatic Society, 1905 (p. 791 et seq.), is to be sought for in the southeast. The Tūlūnīd Mos-
que, Al-ʿAskarī was therefore to the east of al-
‘Askar. The new town is said to have been a square mile in area (Ibn Ḥawqal) and to have taken its name al-ʿAskarī (sing. ʿAskarī) from the fact that the ground adjoining the royal palace was divided into separate allotments (ʿAskarī) and granted for their support to the troops and officers of the palace, who were organised partly on a territorial basis and partly according to their occu-
pations. This great expanse of buildings sur-
rrounded the great Mosque, a large racecourse (Maidiyn) for polo, and other buildings required by a royal residence. It has hitherto been diffi-
cult to form a picture of this royal town, but the res-
sults, still unpublished, of the excavations by Sarre and Herrfeld in Samarra may clear up our diffi-
culties in a surprising fashion. That E. Tūlūn, who had risen to power in Samarra, built his pa-
lace in the style of the caliph’s palace is a pri-
eprobable. ʿAbdāl also laid down new buildings in al-ʿAskar; his hospital (Maristan), the first of its kind in Egypt, was built in this quarter of the city. His son and successor ʿUthmān took down a part of his father’s buildings to re-
effect them in a still more splendid fashion. The de-
scriptions of the splendour of his palace, gardens, the pond of quicksilver and his menagerie sound like fairy-tales. The Tūlūnīd period is one of the most splendid in the history of Fustāṭ. When the dy-
asty fell in 292 (904) and the ‘Abbasid general Muḥammad b. Sulaymān entered Fustāṭ, he had the splendid palace of the rebel Tūlūnīd razed to the ground, and although al-ʿAskarī survived, it suffered severely as did Fustāṭ itself, the mosque alone remaining unharmed. It may be mentioned, that at first both al-ʿAskarī and al-ʿAskarī were regarded not as quarters of the city but as enclosed groups of buildings outside Fustāṭ (Kābīr, i. 304, 30).

After the destruction of the Tūlūnīd palace the governor’s residence was again moved to the Dar al-Imāra of al-ʿAskar, in which the Dimān al-ʿAskarī had been under the Tūlūnīd. The name al-ʿAskarī, however, had fallen out of use even in the Tūlūnīd period and people spoke of the “city of Fustāṭ” and al-ʿAskarī (Kābīr, i. 305, 2), the name al-ʿAskarī being occasionally used, although at first it had been regarded as a

It is evident then, that this whole area must have been very much built over during the Tūlūnīd period.

The prosperity of Fustāṭ, now increased by the incorporation of al-ʿAskar and al-ʿAskarī, lasted for several centuries more. Even the foundation of the Fustāṭ city of Cairo did not affect it; indeed one rather gathers from the accounts of the travellers, who visited Egypt while the Fustāṭ dynasty was at the height of its glory, that the splendour and particularly the commercial activity of Fustāṭ far surpassed those of Cairo. ʿUthmānī was, for example, writing in the year 1375 (665), describes Fustāṭ and its wealth in great terms, while he dismisses Cairo in a few words. He was particularly impressed by its huge population: 10,000 prayed behind the Imām on Fridays. The main centre of business activity was around the Mosque of ʿAmr (Zamzam al-Kanādī), i.e., he sae houses of four and five stories; in one alone 200 men had their dwelling. Fustāṭ was to him the most splendid and most populous city of the Muslim world. (Ibn ʿArabī.) ʿUthmānī, however, did not live in Cairo; in fact the necessary of life were constantly being imported from all parts of the world. It must of course be admitted that the pious traveller was not blind to the dark side of the picture of this busy city. About 60 years later (439 = 1046), the Persian traveller Naṣīr ʿAbd Allāh gives a similar account of the city. To him also the richest market in the world was the Sūk al-Kanādī near the Mosque of Amr. He also praises the lofty houses and tells us of the artificial gardens, which were laid out on the roofs on the top of the seventh story. He also, on the other hand, mentions narrow streets which were overshadowed by buildings and that, it was difficult to light artificially all day long. He describes the rare and costly wares, which were sold in Fustāṭ, and describes the industries of the city. He praises the peace and security of the city and the authority of the government. Of topographical interest are his statements, that Fustāṭ looked like a huge mountain from a distance and that the Tūlūnīd Mosque lay on its edge. The note on the high situation of Fustāṭ no doubt refers to the suburbs in ʿAmal Fāih; for even by this time, the low lying position of ʿAmal Asfai had provoked the criticism of contemporary hygienists (Ibn ʿArabī in Kābīr, i. 339).

Naṣīr ʿAbd Allāh gives us an idea as late as the reign of the Caliph Mustaʿṣir, but the Fustāṭ kingdom was still at its zenith. In the second half of the long reign of this prince, it suddenly began to decline. Famine and mutinies among the soldiers destroyed the prosperity of the dynasty and were disastrous to a city like Fustāṭ, which lived by peaceful commerce. The northern parts of Fustāṭ suffered most, the Tūlūnīd city and the ancient ‘Askar, which were abandoned by its inhabit-
ants and fell into ruins. These districts were found useful at the restoration under Bayt al-Dimān, when all movable parts of its buildings (Dimān) were carried off to be used in the extension of Cairo. It therefore became necessary at a later period to build walls to conceal this dreary ex-
pansion of ruins from the view of the Caliph, when he rode to Fustāṭ, from Cairo. In the Caliphate of ʿAmr (495–524 = 1104–1130) the Vizier al-Maṣḥūr al-Dalālī proclaimed in Cairo and Fustāṭ, that whoever possessed a house in ruins,
should repair it and live in it or make it available by selling or letting it; whoever did not do this, was to forfeit all claim to his property. But even these measures only served to promote an extension of the new quarter, adjoining Cairo on the north, between the Ramla and the Bib al-Zuwaila of Cairo. Of al-Kahf and al-Aqmar there only remained the division of Djahan Vahshur with the Tulliniz Mosque, but the latter was in a hopeless state of neglect; it was even used as a camping-place for Maghribis passing through on pilgrimage, until, in the eighteenth (xviii) century, it was restored by the Mamlik Lâdjin. Fustat in the larger sense received the final blow, when the Crusaders came to Egypt in the reign of the Fatimid Aalid. Cairo was now fortified but Fustat quite defenceless. The Viceroy Shrawar was afraid the Christians might occupy Fustat and use it as a base for their military operations. He therefore ordered it to be set on fire on the 19th Safar 564 = 21st November 1168. Over 20,000 vessels of naphtha were distributed throughout the city and the fire lasted 54 days. Even this conflagration however, appears to have spared certain areas remote from the main body of the city, till the reign of the Mamlik Balbars that these were destroyed and what was valuable of their remains was used for a new foundation near the Mosque of 'Amr on the Nile.

According to the usual view, the famine under Mustansir and the fire under Shrawar entirely destroyed Fustat. It was certainly at this time, that the great mounds of rubbish ('ElFaou, Khintûa) arose which still stretch between Cairo and Old Cairo. By the creation of this expansion of ruined buildings, the most northerly division of Fustat, the modern citadel, the Tulliniz Mosque and the lands adjoining it on the west, became separated from the main part of the city, which lay around the Mosque of 'Amr. The space, separating these portions of the town from Cairo, which lay somewhat farther north, was less than the distance between them and the quarter around the 'Amr Mosque which was stretched round to the south. It was therefore natural, that, with the transformation of the mass of the population to Cairo, the remains of the Tulliniz city gradually developed till it became incorporated in Cairo. The beginnings of this process have already been indicated above.

The great city of Fustat, which had stretched from the Birkat al-Jabaq to the citadel and to the Nile in the west, was now a thing of the past. Though Fustat once practically joined Cairo, at the end of the Ayyubid period it was estimated by Ibn Sa'id, that the distance between the two towns was two miles. A dusty road led through the mounds of ruins from the Bib Zuwaila to the quarter around the Mosque of 'Amr, which soon made a remarkable recovery after the conflagration. Shihâth brought back the inhabitants of the burnt city and Saladin restored the Mosque of 'Amr in a splendid fashion. Though plague and scarcity destroyed the gradually increasing population of the town in 656 (1259), between 657 (1250) and 647 (1249), i.e. in the reign of the Ayyubid Shalîb, Ibn Sa'id gives an account of Fustat, which, though naturally in striking contrast to the glowing descriptions of Muslim and Nâfîrî Khosraw, gives a good idea of the commercial prosperity of Fustat (Abû Sa'id, b. 341 et seq.). It is true, that the town had a dismal aspect, the city gates and many of the houses were in ruins, the streets narrow and dirty, the mosque neglected and used as a short-cut, but not even this far-travelled man had seen any thing like the array of ships and merchandise, which he saw on the Nile bank. The sugar and soap industries still flourished as in ancient times. Of great importance is his statement that Fustat was still as in former days the seat of commerce and industry and that goods were landed here and then forwarded to Cairo. Cairo, the brilliant modern city, was essentially a military town in origin. Fustat's prosperity in Ibn Sa'id's time may be partly to be traced to the revival in the prosperity of the island of Rûa at this period, of which we shall presently speak.

Soon afterwards troublous times again fell upon Fustat. Maktûr mentions the years 696 (1296), 749 (1349), 776 (1374), 776 (1374) and 790 (1388) as being particularly disastrous. Many other changes were brought about by the Mamlûks in the once so brilliant city of Fustat. Under them it became the administrative capital of Upper Egypt, while Cairo held the same position for Lower Egypt. This arrangement is most expressly stated in Ibn Dhu'mayl's work. The Kâfî and Muhallîb in Cairo had authority in the Delta also, while the corresponding officers in Fustat were supreme in Upper Egypt.

Little is known of the further vicissitudes of the town. With the gradual preponderance of Cairo, which ultimately became the chief commercial centre also, Fustat gradually declined. Whether it has further decreased since the Mamlûk period appears doubtful, but the relative difference between the two and Cairo has naturally been constantly increasing. Indeed, the very name Fustat ultimately disappeared, while the popular name Mayr for Fustat as well as for Cairo remained in use. Cairo gradually became so important in comparison with Fustat, that the latter became designated in European literature as Old Cairo. Even the scholars with the French expedition report of *le vieux Kaire* as an established term and quite earlier travellers as authority for its use. The Arabic expression at the end of the xvi. century was Mayr-El-Abâs, while the modern *Cimissionaire Géographique de Boînet Bey* gives Mayr El-Kadîma. At the time of the French expedition, Old Cairo had about 10,000 inhabitants, of whom 600 were Copts who had survived here for centuries beside their ancient churches and monasteries. The French scholars also again emphasise, as did Ibn Sa'id long before, the importance of the harbour, particularly for trade until but many other changes were brought about by the Mamlûks in the once so brilliant city of Fustat. Under them it became the administrative capital of Upper Egypt, while Cairo held the same position for Lower Egypt. This arrangement is most expressly stated in Ibn Dhu'mayl's work. The Kâfî and Muhallîb in Cairo had authority in the Delta also, while the corresponding officers in Fustat were supreme in Upper Egypt.
middle ages it was separated from Fustat by a wall. A larger and smaller Kahrā al-Kubrah and al-Sughra) were distinguished, which stretched from north to south parallel to the Mu'āṣṣam and the city. Al-Kāfrīna and the Guzārī lay nearer the Nile and corresponds to the modern City of the Dead which stretches as far as the Mausoleum of the Imam al-Shâfi'i. On the two Kahrās, their history, tombs and sanctuaries, a monograph was written in 804 (1401) by Ibn al-Zayyāt entitled al-Kahībī al-sughrī fī Turāth al-Ziyārā fī 'l-Kahrāfātāin al-Kubrah wa l-Sughrah (printed Cairo 1325 = 1907).

4. The Nile-Bank, the Island of Kōdja and Djīza (Gizeh).

The task of clearing up the historical topography of Cairo and the neighbourhood is very much complicated by the fact that the Nile has several times changed its bed since the conquest. At that time, as we have seen, its waters washed the Kafr al-Sham and the Mosque of 'Amr, but only a few decades later it had retreated so far back that there was sufficient land left dry between the castle and the new bank to be worth utilising. Abd al-Azīz b. Marwān erected buildings here. The struggle with the Nile goes on throughout the whole medieval period in the history of Cairo. Any methods of controlling the river were at this time quite unknown to the Muslims and their adventurous efforts in this direction had at most but a very temporary success. The Nile then flowed, as has been stated, much further east than at the present day and must also have taken a considerable turn to the east in the north of Fustat so that great areas of the modern Cairo were then portions of the river-bed. The name of Kāfrīna (Kā'fī al-Kāfrīna) is given to that quarter of the town near the Tūnīnīd Mosque. This Kāfrīna lay immediately to the west of the Dībiy al-Yashīkur and was a favourite resort as it lay on the Nile. At the present day it is more than 4 miles distant from the river; and this is a good deal in the plan of a town. The many dries (dhīrjas) within the modern city also remind one of the gradual shifting to the west of the Nile. First of all, islands arose in the river-bed, then the water-courses which separated them from the banks were cut off from the main bed; these were only filled with water at periods of flood, then they became birānī till they finally dried up altogether. The areas gained from the river were first of all used as gardens, then finally built on, till now only the ancient name reminds one of the change they have undergone. It is in this way, that the whole area between the modern bed of the Nile and the ancient settlements has arisen within the Muḥammadan period. It is evident that this constant process of change does not facilitate the identification of localities.

At the period of the conquest, there was only one island in the Nile in this neighbourhood, called Djāzīra al-Kubrah or simply al-Djāzīra. This island is in its nucleus identical with the modern island of Kōdja. With Babylon (see above) it formed a single strong fortress and guarded the passage of the Nile. We have no definite information as to whether the Djāzīra was already connected with Djīza also by a bridge in the time of the conquest or only with Babylon. In the time of the Caliph Ma'mūn — this is the earliest date known — there was a bridge over the whole Nile which was even then known as the Old and replaced by a new one. This old bridge must therefore — as it is a priory probable time back to the beginnings of Muḥammadan times. In all the centuries following, this bridge crossed the whole Nile. It was a bridge of boats. According to some statements, the Djāzīra was at first practically in the centre of the river. The arm which separated it from Babylon soon became silted up however. In the year 536 (947) the Nile had retreated so far that the inhabitants of Fustat had to get their water from the Djīza arm of the Nile. It was at this period under Kāfar al-Abbāsī that the deepening of the arm of the Nile was carried out, to be repeated several times in the viith (xiii) century under the Ayyūbīds. In 600 (1203), it was possible to walk dryshod to the Nilometer on the Djāzīra. In 628 (1230) the energy of Malik Kāmil brought about a permanent improvement, although Malik Sallīb also annually took advantage of the period of low water to deepen the arm of the Nile which gradually became a channel. Why did they wish to preserve this particular channel? The reason is to be found in the military importance of the Djāzīra. At the conquest the Arabs found a castle here; the Byzantines who were shut in by the Arabs, were able to escape over the Djāzīra. After the fall of Babylon, we hear nothing further of the island fortress. In the year 54 = 673 the naval arsenal (al-Sūnā'a), a dock for warships, was laid down here. This arsenal is mentioned in the payasy of the first century; it was also a kind of naval base. Ibn Tulūn was the first to make the island a regular fortress, which he thought his power was threatened (563 = 876); but the Nile was more powerful than the will of Ibn Tulūn, and his fortress in the Nile gradually fell into the waters; the remainder was destroyed by Ikhshīdī in 323 (934); two years later this prince removed the arsenal also to Fustat and the Djāzīra became a royal country residence. The island appeared to have become larger in course of time and more people came to settle on it. Under the Franks it became a pleasant town and one talked of the trio of towns, Cairo, Fustat and Djāzīra. Al-Akdâl, the son of Būdī al-Djumālit, built a pleasure palace with large gardens in the north of the island and called it Kōdja. This name was gradually extended to the whole island which has retained it to the present day. Later, under the Ayyūbīds, the island became a Waṣfī. This Waṣfī-land was rented by Malik Sallīb who built the third great Nile fortress on it. This new fortress was called Kā'fī al-Kāfrīna al-Muṣā'ībī, Malik Sallīb evicted all the inhabitants of the island and razed a church and 53 masjīdīs to the ground. In their place he built 60 towers and made the island the bulwark of his power; this was the reason of his regular dredging operations to deepen the canal separating the island from the mainland. There, surrounded by the Nile (Bahr), he dwelled with his Mamlikūs who became known as Bahrī Mamlikūs from their capital [see Badawi p. 386]; but even this stronghold in the Nile did not ensure safety of the fall of the Ayyūbīds. The Mamlikū Albak destroyed the fortress; Ballārī rebuilt it, but later Mamlikūs like Kālīnīn and his son Muḥammad used it as a quarry for their buildings in Fustat.
In the 18th (xxvi) century the proud citadel of the Nile had fallen to pieces and another dynasty was building on its ruins. Rūḍa never again took a prominent part in history.

At the present day the most remarkable sight in Rūḍa is the Nilometer (Mīḥyā), which dates from the time of the Umayyad Caliph al-Raṣūl; its erection was completed in the year 97 (715) by Uṣmān, the minister of finance. The history of this Mīḥyā has been written in a masterly fashion by Marcel who took part in Napoleon's expedition to Egypt and who was appointed Curator of the Nilometer after his return (861). Up to the latter year, a Coporix in charge of the Mīḥyā, but in this year Ibn Abī l-Raddād was placed in charge of this important instrument, the barometer not only of the prospects of harvest but also of the prevailing market prices in the city. The office was hereditary in the family of the Bants Abī l-Raddād till the Ottoman period. Almost all the Muhammadan dynasties of Egypt have built around the Nilometer and some of them have left inscriptions. The Turki, French and English (1853) have also been active in preserving this venerable monument. In modern times a new water-gauge was required for the eastern quay-wall of the island. The historic Mīḥyā is like an enclosed well in the centre of which rises a marble column on which the scale is marked in ells (fellūt).

At the present day Rūḍa is much built upon and only in the north are there large gardens. Nothing has remained of the Pharaoh's expedition's plan of laying out a European quarter here. Before the regulating of the Nile this would have been a dangerous undertaking, for the九rival writers tell us of occasional inundations of the island, when the Nile was exceptionally high. The idea, which was good in itself, has been put into practice in a still better situation farther north on the Djezzar Būlāq.

From the historical point of view, Rūḍa is inseparably connected with Dīzā (Dīzā), with which it formed a defence of the passage up the Nile at the time of the conquest of the city, and during the middle ages, Dīzā was certainly not a foundation of the Arabs, but portions of the conquering army planted their Kāhir there as did their companions in Fustāṭ. On account of its exposed situation to attack from the other side of the river the Caliph ordered Dīzā to be fortified. The defences were completed by ʿAbd al-Rahmān in the year 257 (645). It was probably only a case of restoring or extending Byzantine fortifications. The Kāhir of the tribes was partly outside the fortress which was probably merely a stronghold at the entrance to the bridge. The strongest tribes settled here were the ʿAmmār and Ḥamād; in the Masjīd of the latter the Friday service was held; it was only under the Khān el-Khalīfī that a Chief Mosque was built in Dīzā in 350 (961). Its military importance naturally went parallel with that of Rūḍa and the bridge over the Nile. This bridge collapsed in the Ottoman period and was only rebuilt by the French. It was afterwards removed and recently a permanent bridge has been built. Dīzā itself has always been a flourishing centre. The land behind it is very fertile, and it used to be the chief town of a district (Kāhir), and afterwards to the present day of a province. The modern province of Dīzā comprises the circles al-ʿAyyāt, ʿAmmār, ʿAbd al-Rahmān, Dīzā and Sabīl, the latter on the right bank of the Nile. The place itself had in 1897, 10,000 - 17,000 inhabitants.

5. The Fāṭimid City, Misr al-Kāhirā. The modern Cairo was originally only a military centre, like al-ʿAṣkar and al-Kāhirī, north of the great capital of Misr al-Fustāṭ. When the Fāṭimids in Kairūnāwī saw the precarious position of Egypt under the later Ḥashālibīds, they felt the time had come to put into operation their long cherished wish to occupy the Nile valley. On the 17th Shawāb 358 (= 17 July 969), their general Dīwūrī overcame the Alids and entered Dīzā (861). The weak government was able to offer no resistance, which, after his return to Dīzā, and entered Fustāṭ on the day following. He pitched his camp north of the city and for seven days his troops poured in through the city. When on the 18th Shawāb = 9 July the whole army had collected around him, he gave orders for a new city to be planned. Such an important undertaking could not be carried out in those days without first consulting the astrologers as to what would be the propitious hour to begin. The historians tell us that a suitable area had been marked off and all the more distant parts of it connected with a bell-pull, so that at the given moment at a sign from the astrologers work might begin everywhere at the same instant. The bell- rope was however pulled before the auspicious moment by a raven and the building began at a moment when the unlucky planet Mars, the Kāhir al-Falāq, governed the heavens. This calamity is however somewhat mitigated by the fact that they sought to deprive the evil omen of its malignance by building the new town the name of Maʾṣūṭiya. As a matter of fact, Cairo does appear to have borne this name till the Caliph Muḥāfaḍah himself came to Egypt and from his own interpretation of the horoscope saw a favourable omen in the rising of the planet Mars. The new foundation thus received the name al-Kāhirū al-Muʾṣūṭiya (Kāhirī, l. 317).

The process of expansion of the old city of the Fāṭimids can be reconstructed even at the present day without difficulty on a plan. The best is the French plan of the year 1798 in the Description de l'Egypte, because it was prepared before Cairo had been modernised, but the map in Bœdeker, after which our sketch map is prepared, also gives a clear idea of the town. In the centre between the northern boundary of Fustāṭ and Heliopolis (Ar-Raḥmānī), there lay at this time the little village of Muyān al-ʿAṣibrāh, where the caravans for Syria used to assemble. Muyān al-ʿAṣibrāh lay on the Khālalī, a canal which traversed the whole length of the plain, leaving the Nile to the north of Fustāṭ, passing the ancient Heliopolis and finally entering the sea at the modern Suez. This canal was probably originally a silted-up branch of the Nile, which had been excavated for use as a canal even in ancient times. After the Arab conquest, it was again cleaned out by ʿAbd al-Rahmān to make a navigable waterway between Fustāṭ and
the holy cities to supply the latter with corn. It then received the name of Khaliṣīy Amīr al-
Muʿāminīn. This Khaliṣīy was closed in 69 (688) to cut off the corn-supply of the anti-caliph in Medina and finally abandoned as a waterway to the Red Sea in 1145 (762) in the reign of Man-
ṣūr. It still remains to this day, and it was built to remain for a thousand years the water-supply of the plain north of Fustāṭ and the water-road, so famed in song, on the west side and at a later period in the centre of Cairo. After the reign of the Fāṭimid Caliph Hākīm, who did much for it, it bore the name of Khaliṣīy al-Ḥākimī; at a still later period it was called by a host of names of different stretches of it, which are given on the French map of 1798. Instead of flowing to the sea, in the latter centuries of its existence it ended in the Birkat al-
Djabbī in the north of Cairo and in its neighbourhood. It is only quite recently (the end of the ixth century) that it has vanished from the plan of Cairo. Its course is still clearly recognisable; it corresponds to the broad road followed at the present day by the electric tram from the Mosque of Sāliyda Zānāh, or rather from a further point in the south of Cairo to the northern suburb of Aḥbāṣṭa (Aḥbāṣr Helwān).

The city can lay immediately south of Munyat al-Aṣlāḥī between the canal and the Minaṣṣām. Its northern and southern limits are still defined by the Bāb al-Fuṭūḥ and the Bāb Zuwwāla. The town founded by Djuwar was rather smaller in compass than the Cairo of the later Fāṭimid period. At first the open space in the south, where the Muṣāyjūd Mosque now stands, and the Mosque of Hākim in the north were both outside the walls. In the west, the Khaliṣīy for centuries formed the natural boundary as did the heights in the east. The main part of the Fāṭimid city was defined by a broad series of streets running north and south parallel to the Khaliṣīy, connecting the two gates just mentioned with one another and dividing the city into two large sections not quite equal in size. This series of streets is also clearly defined at the present day, though it must have been broader originally. It is still known by different names in the various sections, of which the best known is Sāfrī al-
Nabāḡān. At the present day it is crossed at right angles by one of the main channels of traffic of modern Cairo, al-Siḥka al-Ḥajjāda, the continuation of the Munkī. Its name, "New" Street, proves what must be particularly emphasised to avoid misconceptions, viz. that the Fāṭimid city had no such main street running from east to west. It only arose in the ixth century. If Fustāṭ had been divided into Khaliṣīy Cairo was divided into Ḥarān or districts, which is really only another name for the same thing, except that Cairo was intended to be a city from the beginning, while Fustāṭ grew out of the chance arrangement of a camp. The altered circumstances of the period are shown in the fact that the quarters were no longer allotted to different Arab tribes but to quite different peoples and races. In the north and south lay the quarters of the Greeks (Romāni), to which Djuwar himself belonged. His settlers his countrymen the main gate of the city was probably intentional. Berbers, Kurds, Turks, Armenians, etc. were allotted other portions of the town. Some late-comers were settled in the Ḥarān al-Buṭṭāliyya outside the first walls of the city between it and the Muṣṣām. Lastly the negroes, called briefly al-Abīd, who formed a quite undisciplined body, were settled north of the Bāb al-Fuṭūḥ beside a great ditch which Djuwar had dug to defend the city against attacks from Syria. This part of the town came to be called Khānasar al-Abīd from the ditch and those who dwelled near it.

The splendid palaces of the Caliphs, which are indicated on our map, formed the central portion of the town. We must be careful to distinguish between a large eastern palace (al-Kāṣr al-Kabīr al-Ṣāhir) and a smaller western one (al-Kāṣr al-
Ṣāhir al-Shargī). Their sites had previously been occupied, to the west of the main series of streets, by the large garden of Kāfur, to the east by a Coptic monastery (Dair al-Thāmm) and a small fortress (Kāfur al-Sawāfīk), which were used for the building of the palaces. The East Palace was the first to be built in the early days after the foundation of the city. On the 24th Ramadan 362 (28th June 973), the Caliph Muʿizz was able to enter it in state. It was a splendid building with nine doors of which three opened on the west part on the main street. This part was 1264 feet in length and the palace covered an area of 116,544 square yards: it lay 30 yards back from the present street, from which one may gather how much broader the latter must have been. On the other side of the street lay the Garden of Kāfur, which stretched to the Khaliṣīy. In A.H. (365-386 = 975-996) built the smaller western Palace also called al-Asil after him — the exact year is unknown — its two wings stretched up to the street enclosing a broad square into which the street here expanded. As this series of streets passed between the two palaces in the centre of the town here, it was called Rūḥāṭ baw al-Kāṣrīn, a name which survived the palaces themselves for centuries and is still in use at the time of the French expedition. The city was also known more briefly as Kāṣrīn al-Kāfurīn. The two palaces began to fall into ruins in the Ajuŷīd period. The history of this part of the town, and of the great palace in particular of which some fragments still survive built into other houses, has been most carefully dealt with by Ravnisse in the Mémoires de la Mission Archéologique Française au Caire, Vols. i. and iii.

As Cairo was from the beginning a military and at first not a commercial city at all, even Djuwar must have taken care to fortify it with walls. These walls were afterwards extended in the reign of the Caliph Mustanṣīr by the commander-in-chief Bahr al-Djamātī, and the gates built in the form in which they have survived to the present day. That Bahr built all the walls, is disputed — perhaps wrongly — by Casanova. Mention is made in later times of a third building of walls in the reign of Saladin. Djuwar's walls were of brick, two trace of them has survived. Even Muṣṣām knew only of a few unimportant fragments and says that the last remaining portions of them were destroyed in 803 (1400). In some of Makri's admiring statements (i. 377), Djuwar's wall cannot have survived for any very great length of time, for so early a traveller as Nizārī Khurraw (p. 131) describes Cairo as unfortified. Bahr's defences which were begun in 480 (1087) consisted of a brick wall with strong gateways of stone, the portions of the walls adjacent to
them being of stone also. Max van Berchem (Journal Asiatique, 1894, 443 et seq.) has exhaustively studied these walls and gates and called particular attention to the fact that the great gates, which still command admiration at the present day, the Bab al-Futûh, Bab al-Nâsir and Bab Zuwaïla, were built by architects from Edessa and differ in a rather marked degree from the later fortifications of Saladin, which appear to be influenced by the Frankish style of the Crusading period. We also owe it to van Berchem an accurate delineation of those portions of the walls which still survive at the present day, which date from the Fatimid period. The picture we have of the two walls of the Fatimid period is as follows. In the west, the city was bounded by the Kâbil which ran below the walls for 1500 yards and served as a moat. It is a debatable point, whether we may conclude from the street name Rûn al-Strâm, which is still in use, that two walls existed here one behind the other. Djawhar's walls were certainly a fair distance from the canal, the space being large enough to allow of pleasure palaces being built on it. There were three (according to Casanova, only two) gates here, from south to north, the Bab al-Sâ'da, Bab al-Farnâj and the Bab al-Kantara. At the latter, near the northwestern stretch of the walls, there, in the south, a bridge over the canal. This connected the town with the suburb and harbour of al-Maks, on the Nile, the ancient Umûm. On al-Maks cf. Papyri Schott Reinhardt, i. 53 et seq.: the name appears in the Graeco-Arabic papyri of the first century; even before the foundation of Cairo, therefore, this was the harbour at which the customs were collected. Al-Maks must have comprised the modern Esbeklyeh and the area adjoining it on the north. The northern side of the town must naturally have been the most strongly fortified. Djawhar had a ditch dug here along the wall. The two gates, Bab al-Futûh and Bab al-Nâsir, built by him, lay more within the town than the modern gates of the same name which only date from Badr's time. The Mosque of al-Hâkim was originally built outside the walls and was first included within the fortified area by Badr. There seem, however, to be reasons for believing that the Hâkim was the first to advance the line of fortifications in the south, and he later had to build new gates (Kalkashandi, transl. by Wustenfeld, p. 79; Salmon (see Bibliography) p. 59 et seq.). The wall had two gates on the east, the Bab al-Karâtûm (afterwards al-Mahîrûj) and the Bab al-Bârîkâ. In this locality Badr's fortification also included the quarters which had arisen after the erection of Djawhar's wall. Finally Badr moved the Zuwaïla gate somewhat further to the south. There were originally two gates. The town so extended by Badr was still anything but large. It may have been about 3/4 of a square mile in area.

The intellectual and religious life of Cairo was concentrated in the great mosque, the Djâmî al-Ashâr, in which the first service was held on the 7th Râmâdân 361 = 20th October 971. On the history and importance of this mosque cf. the article AFIAR by Karl Völlers p. 532. The erection of the Mosque above mentioned outside the northern gates had already been begun in the reign of 'Afanah and was completed by his successor, after whom it was called the Mosque of al-Hâkim. The building operations lasted from 393 (1002) to 403 (1012). After an earthquake, it was entirely restored by Fâbârî II in 703 (1203), who added the minaret. It was used by the French as a fortress and at the present day is in ruins. Of the other ecclesiastical buildings of the Fatimid only two deserve particular mention: the Mosque of Aâsîr, with its charming stone façade, so important in the history of art (Franz Pfeiffer, Cairo, p. 29 et seq.). It was finished in 540 (1150), but it was only under the Mamlûks that it received the right of Aâshî in 801 (1398). The second of these two monuments is the older Dâjûlî Mosque, built quite outside of Cairo on the summit of the Mûsâkhân, which was built in 478 (1085) by Badr al-Djâmilîr (van Berchem, Corpus, No. 32; do., Mémorial de l'Institut Egyptien, t. ii.). On other buildings and inscriptions of the Fatimids cf. the works of van Berchem just quoted. It is impossible to detail here all their buildings, etc. mentioned in literature. Most of them did not survive the dynasty or survived it for a brief period only.

During the Fatimid period, Cairo was not yet the economic centre for all Egypt which it was to become under the Ayyûbîs and Mamlûks. This role was first held, as we have seen, by Fustâr. On the other hand Cairo was the seat of a splendid court with all its military pageantry. Ibn Túmâr and others have given us vivid pictures, preserved in Makârik, Khalâshâ and others, of the ceremonial processions and festivals, the magazines, treasuries and stables, the banners and insignia, the members of the royal household, the various classes of officers of state and court officials with all their punctilious ceremonial. Eye-witnesses, like Nâṣîr-i Bâhrâwar, confirm these accounts. It must have been a glorious period for Cairo, but was soon followed in Münâm's time by a desolate epoch of anarchy when the economic foundations of its prosperity were destroyed by famine and unrest. A better era dawned on Cairo with the accession of Badr al-Djâmilîr. Cairo now began slowly to gain over Fustâr. In economic importance, a process which gradually became more definite in succeeding centuries.

6. The Citadel and Post-Fatimid Cairo

Quite a new epoch in the history of Cairo as in that of Egypt dawns with the accession of Saladin and the Ayyûbîs (see the article AYVER). The history of the growth of the city only can be discussed here. Saladin twice played a part in this development by erecting large buildings. Casanova has thoroughly dealt with this process in his Histoire et Description de la Citadelle du Caire (Min. de l'Impér. d'Arts, Vol. vi.), though his conclusions cannot perhaps be regarded as final on all points. The material is too imperfect. At any rate he is probably right in saying that Saladin in the first instance in 655 (1170) only restored and improved the fortifications erected by Djawhar and Badr. It was only after his return from Syria when he was at the height of his power, that Saladin conceived the colossal plan of enclosing the whole complex of buildings forming the two towns of Fatimit and Cairo within one strong line of fortifications (372 = 1179). This new foundation was to be commanded by a fortress (Kâšâ) after the fashion of the strongholds of the Crusaders. This fortress
is the modern Citadel or, to be more accurate, its northern part. In the northwest, Cairo was to be protected by this strong fortress and in the southwest, Fustat. The east wall of Cairo was to be advanced farther east to the Mokattam and the entrance for inroads from Syria to be definitely closed. A new wall ran along the hills from the new tower in the north-east, the Burdi al-Zafar, of which traces still exist. It then took a turn westward towards the old city wall, the fortifications of which were to be extended farther south to the citadel. The north wall of Cairo was to be advanced westwards up to the Nile and to run along it to near the Kasr al-Sham, which was the extreme south point of the whole system. A wall was to run thence in the east of Fustat direct to the citadel. The Ka‘f al-‘Asyf was to be the residence of the sovereign. Saladin’s trusted sannūsī Kharaqānī was entrusted with the task of carrying out this gigantic undertaking; he had previously carried out building operations for Saladin. The gigantic undertaking was never completed nor did Saladin avail himself of the citadel, but when in Cairo as a rule, he lived in the old Vilayet palace of the Fatimid city. The most important part was the completion of the north wall which was actually built eastwards as far as the Burdi al-Zafar and westwards as far as al-Maks on the Nile. The portion connecting the eastern wall of the Fatimid city with the citadel was not completed. The names of several gates in the great wall which was to run from the citadel to the south of Fustat, have been handed down, but it can hardly be assumed that they were ever built. The wall along the Nile was never begun at all; but it was probably the least urgently required.

These buildings had considerable influence in two directions. After the north wall had been advanced up to the Nile, the broad stretch of land between the Khālīj and the Nile was secure from invasion and the way was paved for an extension of the city in this direction. The Khālīj thus gradually came to be in the centre of this extended city. Through the removal of the forces of defence and later of the court itself to the Citadel, Cairo began to develop in the south also and the union with the northern suburbs of Fustat, which has been described in section 3, thus came about. This process was not however completed till the Mamluk period (Kāhīt, i. 378 et seq.)

The citadel was first appropriated for the use to which it was originally intended as the residence of the sovereign by Saladin’s nephew al-Malik al-Kāmil, who was also the first to build a palatial residence here. He entered the new palace in 604 (1207). From this time onwards, with the exception of the reigns of al-Malik al-Salih, whom we may already have acquainted with as the builder of the fortress and royal residence of Roja in the Nile, the sultan remained the abode of all the princes and pashas who ruled Egypt till the Khādījīs went to live in various palaces they had built for themselves in the plain again. It is difficult, however, to draw a picture of the gradual transformation of the citadel, as the most radical changes were made in the Mamluk period. The present text still show that we must divide the whole area in two sections, the original north or northeast citadel, the Ka‘f al-‘Asyf proper of the Ayyūbīd period, which was and is still separated from the Mokattam by a deep ditch, and, in the south extending towards the town, the citadel of the palaces where the Mamluks built a complicated entanglement of palaces, audience-chambers, stables and mosques. We must therefore distinguish between the citadel proper and the royal town which adjoined the citadel. Of Saladin’s buildings, which lasted 7 years, there remains today only a portion of the wall of the so-called Joseph’s Well (Bir Yūsuf); the latter is a deep shaft from which Karakshah, the architect of the fortress, obtained water. The machinery for raising the water was driven by oxen. A pathway hewn out of the rock leads down to the bottom of the well. The name Yūsuf is not the pronomer of Saladin but commemorates the Joseph of the Bible, legends of whom are attached to other portions of the citadel also. Great alterations were made in the citadel by Barbars and his successors and their buildings again were completely altered by al-Malik al-Nāṣir Muhammad b. Ka‘f al-‘Asyf, many of whose buildings have still survived, as for example the mosque wrongly called after Ka‘f al-‘Asyf, (erected in 715 = 1313) and remains of his palace in black and white, hence called al-Kāsir al-Abbi (built: 725 = 1323-1324). The same prince also laid down great squadrons to bring the water of the Nile to the citadel, as the wells were not sufficient to supply the increasing numbers of military quartered there. At a later period Kütt Bey took an interest in the citadel again and Qhārūt also laid out a garden here. The Ottoman Pašas built a good deal here also, but they allowed more to fall into ruins. Muhammad Allī was the first to take an energetic interest in the citadel again, he repaired some of the ancient palaces and built the so-called Alahbaster Mosque, the Dārūnī, Muhammad Allī’s, in the Turkish cupola style, the minarets of which give the present citadel its characteristic outlines. It was begun in 1829 and finished in 1837 by Sa‘d Paša. The restoration of the walls also dates back to Muḥammad Allī.

It was not only in the citadel but in the city lying at their feet also that the Mamluks erected numerous splendid buildings. The Cairo created by them was practically the Cairo that existed when the French expedition arrived there. A vivid picture of the home of the Mamluks in the period of their splendour may be obtained from the plan of 1798. A series of splendid monuments stood here partly built on the ruins of Fāṭimid buildings. We will only mention a few that still exist: on the site of the ‘Aṣzi palace stood Ḥa-‘fīn’s hospital, the Madrasa and tomb of his son Muḥammad al-Nāṣir and Ibā‘ūkī’s Madrasa. There were also numerous Mamluk buildings on the site of the great East Palace, including the Khān al-Khalīfī well known at the present day. Of other large buildings at this period there also be mentioned the Mosque of Zāhirī, built by Barbars I., of which the massive walls still survive at the entrance to the ‘Abibliyeh, the Mosque of Sultan Ibars at the foot of the citadel (cf. Herr Bey, La Mosquée du Sultan Hassan au Caire, Cairo 1895), of great importance in the history of art, the Mu‘ā‘īyih Mosque at the Būl Zawalla, only completed after the death of its founder and Kütt Bey’s Madrasa; we cannot count the numerous tombs outside the town proper nor the many other smaller buildings. What a lamentable contrast to
this period of activity in architecture is afforded by what has been done in the Turkish period (since 517) in the city of the Mamlik; only a few Konaks for Pashas have been built, a few Selibs and one or two smaller Mosques and Tekyehs. The configuration of the town did not however change so much between 1500 and 1800 as in any earlier period of the same length. In spite of the ravages of their soldiers the city must have flourished and increased under the warrior princes of the Mamlik period. It must have been a busy and splendid city. But the grave damage done by the Mamlik system could only be repaired by strong rulers. The Ottoman Pashas were not fit for the task and so Cairo slowly declined till Muhammad 'Ali and his successors created a new Cairo which gradually became Europeanised.

7. Modern Cairo.

Modern Cairo dates from the period of French occupation (22nd July 1798—25th June 1801). The French scholars were able to make a plan of Cairo as it had existed in medieval times. What strikes one most about their excellent plan is the large number of ponds of not insconsiderable size which were then in the city. These ponds, for example the Birkaat el-Esbekeya in the north, and the Birkaat el-Fil in the south, were at that time only full of water when the Nile was flooded. They were covered with boats on these occasions, which were illuminated at night for pleasure trips. When the water had run off, the bottom soon became covered up with vegetation, which withered in the early summer. The origin of these ponds has already been discussed above. The plan shows the confusion of streets which is still usual at the present day in the native quarters. Only the three great thoroughfares, parallel to the Khalij — one of them the ancient great medium of traffic in the Fāṭimid city — divide the town into distinct sections. The city was divided into 35 quarters (Ifrās), which took their names from the chief monuments of architecture in them, from groups of trades, or from particular nationalities settled in them (Greeks, Armenians etc.). There were 21 city-gates. The population was estimated in 250,000—260,000 inhabitants, whose houses numbered 25,000—26,000. There were still gardens lying between the boundary of the city and the Nile. Communication was difficult, and after a riot, the French found themselves forced to make a direct connection between the Esbekeye and the old Fāṭimid city. It was thus that the modern Muski (properly al-Maswik) arose; the Esbekeya was also connected with the suburb and harbour of Bilāq on the Nile — now a part of Cairo with 70,000—80,000 inhabitants — by a broad road. Various old buildings were converted into forts, for example the Mosque of Hakim and the Mosque of Zahir; in al-Kahb — the western slope of the Djebel Yashkur — the Muirecius Fort was built and so on. The gradually increasing influx of foreigners (Levantines) which has been going on since the Khedive's period, since the French period, and the modernising of the government which requires ministerial offices, have brought about the foundation of various new quarters of the city; the ground between the western boundaries of the town has been more and more built over and at the same time the boundaries advanced on the north side. The new quarters usually took their names from their founders, for example, the 'Abdāliye, the northern Levantine quarter called after 'Abbās I. (1848—1854), the Isam'īliye, south-east of the Esbekeye after the Khedive Ismail (1863—1879). This is adjoined on the south by the quite modern quarter of European houses, the Kāṣir al-Duchatra, in which the palace of the English Agent is situated. The Tawfikīye quarter was laid out under Tawfik (1879—1892) to the north of the Isma'iliye. The old ponds are now built over, the Esbekeye, which takes its name from an Emir Esbeck of the Mamlik period, was transformed into a beautiful park in 1870, and the finest hotels, the Opera House and other buildings have sprung up around it. A new feature enters the plan of the city in 1889 when the Esbekeye was connected by a long straight thoroughfare (Shari' Muhammad 'Ali) with the citadel. Cairo, which is flourishing rapidly, is constantly extending to the north and west. Helipolis with its huge hotels has already become a suburb of Cairo, in the west the European population has occupied the Djezira (Bilāq) where the splendid gardens of the royal family have recently been divided up into smaller plots for private owners. A bridge is now being built here. The southern end of the islet has been connected with the east bank (at Kāṣir al-Aini) by a swing bridge.

In the south, although still slowly, the city is beginning to advance into the region of the mounds of ruins of the ancient Fustāt. The railway has now brought the health-resort of Helvān so near the city that, like Helipolis, it is regarded as a suburb of Cairo.

There has thus arisen in the last century out of the cramped and closely built town of the Mamlik an extensive and spacious Cairo, planned on a gigantic scale by the Khedive Ismail. The Levantine quarters are usually built in the South Italian style or after French models. In the most recent quarters, the modern individualistic style is most prominent. A glance at the plan shows by the way the streets run where European architecture has been at work and where the old-fashioned native style survives. Cairo has now over 600,000 inhabitants. It has a governor of its own and in it are all the important government offices. The 'Abbās Paşa palace is used for official receptions, but the Khedive lives in the greater part of the year in other palaces.

Conclusion: It is only necessary to give a history of the architectural development of the city here as the political history of Cairo will be dealt with in the article KIFFT in connection with the history of the country. Further information regarding economic conditions will also be found there. As regards our plans it should be noted that the plan of Fustāt is a reproduction of Gouss's plan from the Journal of the Royal Asiatic Society, 1897, pp. 49—83, while the plan of Cairo is new, being based on Baedeker's with the inclusion of the results of the researches of Kühnau and Casanovu. Its aim is rather to give a systematic but clear view of the history of the town in its general development than to be topographically accurate.

Bibliography: The main sources are Makriti, al-Kahfa; Ibn Daud, Kithar-il-Infiqar, Ali Mubarak, al-Khitat al-qadila. There are occasional mentions of the city in most of the Arab geographers and travellers. Of European accounts of the town and discussions of the
original authorities, there may be mentioned in addition to those quoted in the text: Description de l’Egypte, État Moderne (Text and Atlas); A. F. Muhlen, Cahiers et biographies (Copenhagen 1863) and therein Bulletin de l’Acad. Imp. des Sciences de St. Petersbourg, t. 1; H. H. C. Kay’s articles in the Journal of the Royal Asiatic Soc., xiv, xviii; C. M. Watson, ib. xviii; E. K. Crockett, ib. 1891; the publications of the Comité pour la Conservation des Monuments de l’Art Arabe, which has been in existence since 1848 Dec. 1851; as well as Ravaisse in Mémoires de la Mission Arch. CAKMĀK, al-Malik al-Aṣīf al-Dīn. Sultan of Egypt, was in his youth enrolled among the Mamlikūn of Sulṭān Barqūk. He gradually rose, till under Sulṭān Barsbay he became Chief Chamberlain (President of the Administrative Council), Chief Master of the Horse, and finally Aṭībēg (Commander-in-Chief). On his deathbed in 842 (1438), Barsbay appointed him regent for his infant son al-Malik al-ʿĀṣif al-Vāṣif. The various divisions of the Mamlikūn, originating in the bodyguards of the Sulṭān Barqūk, Nāṣir Pārūji, Mālayyad Shāhīd and Barsay, were at enmity with one another and their sole aim was to obtain all the wealth and influence they could. In the confusion that arose the only course open to Ṣeṣmen was to seize the reins of government for himself. Sulṭān Vāṣif was deposed, placed in confinement in the citadel, retaken after an attempt to escape and finally taken to Alexandria and kept under a mild form of custody. Soon afterwards the resistance of the governors of Egypt, Ṣeṣmen and others, also collapsed, as they were defending Sulṭān Vāṣif’s claims to further their own interests. The Syrian rebels were defeated, the leaders executed and Ṣeṣmen’s supremacy was assured in 843 (1439). Like his predecessor Barsay (q.v., p. 666) Ṣeṣmen wished to make war on the Christians under pretence of checking piracy on the north coast and therefore sent ships via Cyprus to Rhodes but the Egyptians had to return as the resistance offered by the Knights of St. John, who were well prepared, was too strong for them. Thus in the years 846 (1444) and 848 (1444) the Egyptians again made unsuccessful attempts to conquer Rhodes, and had finally to make peace with the Knights. Ṣeṣmen’s foreign policy was a successful one; he was on good terms with all the Muslim rulers and did not, like Barsay, fall into the error of causing irritation by petty trickeries. Against the advice of his Emirs, he allowed Timur’s son Shāh Ṣukk to send a covering for the sacred Ka’bah, although they had a privilege of the Sulṭān of Egypt (see the article Matthew p. 558). The populace was still so strongly inclined against the Mongols that they actually attacked an embassy which included one of Timur’s widows. He was also on good terms with the Ottomans and the princes of Asia Minor. In his domestic policy, in Egypt itself, he was not quite able to put a stop to the misgovernment of the state monopolies (see Barsay p. 667). Jews and Christians were tormented by strictly enforced petty regulations. He could not restrain the arrogance and outrages of the Mamlikūn so that the only way he could protect women from them on the occasion of festivals, was to forbid them to go out. He himself was an exceedingly frugal and pious man, liberal only to the learned, and thought no price too high for a beautiful book; he left little behind him after his death. Through his example the morals of the court improved. When, in the year 854 (1452), he felt the approach of death — he was now over 80 years old — he had homage paid to his son ʻOthmān whom the Caliph chose to be Sulṭān. The Emirs and officials of the court and a large multitude of the people attended his funeral, contrary to the usual custom, sincerely grieving at his loss.

(M. Sobirnheim).

CALATRAVA, Arab. Kalīṭ al-Rādāb, "Rahīb’s citadel", called after the sūtān and dāghīl. All b. Rahīb al-Lahmī (cf. Calatayd Bilbilis) = Kalīṭ al-Rādāb from the sūtān and dāghīl Alī b. Ḥabīb al-Lahmī) was an important builder of Arab power (perhaps built on Roman or Iberian ruins) in the 10th-11th century. It is located on the left bank of the upper Guadiana just below the union of the three rivers which form it, the Zacaca-Guadalupe, Guadiana Alto and Bajo-Arnoz, one league north of the modern Cerro de Calatrava. The extensive area of ruins of the ancient Arab Castillo with the town of C. la Vieja would repay more thorough investigation (with pick and shovel also). This Old Calatrava played an important part in the wars of the Emirs of Cordova against Toledo, which was constantly in rebellion, and after its conquest in 1085 as a frontier defence against Castile, till it was itself taken in 1147 by the Emperor Alfonso v., who handed it over to the Templars, who only held it for 10 years as a frontier fortress of Toledo against Andalusia, when they retired from it on account of the constant attacks of the Almohads (from Morocco). This led to the foundation of the new religious order of Knights of Calatrava in 1158. After the terrible defeat of the Knights at Alarcos (q.v., p. 260) in 1195, the fortress of Calatrava also was taken and destroyed by the Almohads; for the next few years the fortress of Salvatierra was occupied by the Order till it also was lost in 1210. After the brilliant victory of the Christians at las Navas de Tolosa (s.a. 1212), which broke the power of the Almohads, Old Calatrava was to be rebuilt on the Guadiana; but it was at a spot half a league from Salvatierra, south of the modern La Cadena de Calatrava near Atalaya de la Cadena (547 feet high) and Puerto de Calatrava, that the still so famous monastery of New Cala­trava (Calatrava la Nueva) was founded in 1217; before the splendour of the latter the ancient fortress of the Moors in the north fell totally
into oblivion, so that at the present day there is the greatest confusion between Old and New Calatrava, two places 30 miles apart. Since the beginning of the sixteenth century New Calatrava has also been abandoned by the Knights and has quite fallen into ruins. Only the name Calatrava has survived in the Order of Chivalry, laicised in 1498, and in the geographical designation of the former extensive lands of the order, particularly in the fertile Campi de Calatrava in the broad valley of the Guadiana, Jaborón and the Túrroafuera, south of the present provincial capital Ciudad Real, founded for the first time by Alfonso the Wise in 1252 as Villa Real, east of the ancient Alcaraz, which was given the nobler name of Ciudad Real by John II. in 1420. It also Santiago de Calatrava west of Mátos and Jael in Upper-Andalusia, which came with Mátos into the possession of the Order on the reconquest.

Bibliography: Madonna, Diction. geogr. et stat. v. 209-293; Vásquez, li. 747; idem, Description de l'Afrique et de l'Espagne, p. 156 (= 320); Al-Baydun Al-Moghir (trad. Fagan), Index; Burke, Orders of Knighthood (London, 1858), pp. 201-306. (C. F. Sertoli.)

CALCUTTA, or KELMUTA, the capital of the province of Bengal, and, till 1911, also of British India, situated on the right bank of the Hooghly, the most eastern month of the Ganges, which is here navigable by the largest shipping. Area, 20,534 acres; pop. (1901), 877,906, being at persons per acre. If all the suburbs and also Howrah on the opposite side of the river be added, the total would be raised to 1,106,738. Muhammadans form about 30½% of the vast majority returned themselves as Shaikhs, Pathans or Afghans numbered 12,555, Siyids 6,192, and Maghals only 1,303. Calcutta is a creation of British rule, having been founded by John Charnock in 1690. It was never under Muhammadan rule except when captured in 1756 by Siraj ud-Daula, who attempted to resume the name of Allahgarh. Consequently there are no Muhammadan buildings of importance. The principal mosque is that built and endowed in 1542, by Prince (Bhuton Muhammad, son of Tipu Sultan. The Madras, founded in 1781 by Warren Hastings, part of the endowment bestowed by Muhammad Mahdiun (q.v.) of Hugli, and in its Arabic department educates more than 300 students, most of whom live in the Elliot Hostel.

(C. S. Cotton.)

CALDÍRAN, a plain in Ædharbalidjan east of the Lake of Urmia near Tabriz. It is famous for the battle fought there on the 23rd August 1514 in which the Ottoman Sultan Selim I defeated the Safavid Shah Ismail mainly owing to his superior artillery. Shah Ismail had to flee, his camp and harem falling into the hands of Sultan Selim; he was only saved from further disaster by a mutiny of the Janissaries who refused to advance any farther and forced the Sultan to return from Tabriz to Constantinople. As a result of this victory, Armequa and Kurdistan came, nominally at least, under Ottoman rule, though in reality the Kurdish Bega ruled practically independently. In the year 1655 there was another battle here between the Turks and Persians, who had been repeatedly trying to regain the frontier lands. On this occasion, also the Turks were victorious.

CALICUT, or COCHIN ("cock-fort"), a seaport on the west coast of India, in the Malabar District, Madras Presidency: pop. (1901), 76,951, of whom 40% were Muhammadans, mostly Mappillas (q.v.) descended from Hindu mothers by Arab immigrants. From an early date Calicut was a great centre of maritime trade. It was visited by Ibn Batuta (1354) and by Ahb al-Raschid (1442), both of whom speak of the security afforded to commerce by its Hindu rulers, the Zamorin, whose descendant still lives here; and it was the first place in India reached by Vasco da Gama in 1498. It contains more than 40 mosques, including the Sheikthi Allah, built over the tomb of Sheikh Mansur, said to have been an Arab with a great reputation for sanctity who came from Egypt in the sixteenth century; this mosque is constantly resorted to by Mappillas, for the adjustment of civil and other disputes. Calicut has given its name to Caliaco.

Bibliography: Malabar District Gazetteers, Malabar (Madras, 1908). (J. S. Cotton.)

CAMBAY (KAMARVA), a Feudatory State in the western part of the province of Gujarat, India, at the head of the gulf of the same name; area, 350 square miles; population (1901), 75,225, of whom 13½% are Muhammadans. The Nawab, a Subah by sect, traces his descent from Mo'min Khan, governor of Gujarat, who died in 1742. The town of Cambay (population in 1901, 31,780) was in early times one of the chief ports of Gujarat, and at the time of its conquest by the Mughals in 1298 is said to have been one of the richest towns in India, but the sitting up of the harbour at the close of the xviii. century threw much of the trade to Surat. Cambay is mentioned by al-Mas'udi, al-Iṣṭakhri, Ibn Hawkh, and other Arabic geographers. It cannot now be visited by vessels of more than 50 tons.

Bibliography: Imperial Gazetteer of India, s. v.; Elliot-Dowson, History of Cambodia and Cambodia (India); for notices of Cambay in Arabic literature, see Gazetteer of the Bombay Presidency, i. (Part 1), 514 et seq.; Archaeological Survey of Western India, vi. (London, 1879). (J. S. Cotton.)

CAMIENIEC, in Ottoman Turkish Kaminca, a circle and chief town of a circle in the Russian administrative district of Podolia. It was formerly a strong fortress of the Poles and the scene of many heroic struggles between the Poles and the Turks in the fifteenth and sixteenth centuries. In the year 1672, it was taken by the Grand Visier Ahmed Pasha Kuyudas and the Turks in the reign of Sultan Muhammad iv, who took the field in person in Podolia. The Ottoman poet Nâfic composed his Ta'rîkh-i Kamisnas ( MSS. in London and Vienna, and printed in Constantinople in 1358) in honour of Ahmed. At the peace of Buczac (1672) Camieniec with Podolia came into the possession of Turkey, who held it till 1699 i.e. to the peace of Karlowitz (q.v.). In 1795 it became Russian.
CAMPÀNER, a ruined city of India, in Godjahr, Bombay, lying beneath the hill fort of Fogg, on the south of Mahum Shah 1 of Godjahr. After a long siege, captured the hill-fort from its Rajpûti chief, and founded the city, which he made his capital, under the name of Mahumbatâd Câmpâner. In 1535, it was pillaged by Humâyûn, and shortly afterwards the capital was transferred back to Ahambadât. The Bûdard or citadel and the Djaâfî Masjîd, both built by Mahumtâd Shah with other buildings, still remain in fair preservation, though the whole site is overgrown with jungle, and there are no inhabitants.

Bibliography: Sikanbar d. Muhammad, Mirî Mihr, Assan, pass.; Indian Antiquary, xxii, 7, and Isi, 5; Archaeological Survey of Western India, vi. (London, 1876).

CANNANORE, a seaport on the west coast of India, in the Malabar district of the Madras presidency. Pop. (1901), 27,811, of whom 40%, are Muhammadans, Mârippalas [q. v.] descended from Hindu mothers by Arab immigrants. It is of historic importance as the capital of the Allâ Radj or Land of the sea (îshâh = sea' in Malayalam), who traces his descent from a Hindu converted to Islam about the end of the 9th or beginning of the 10th century. The family still resides here, and exercises nominal sovereignty over the Laccadive islands.

CARDJUI, the modern name of the ancient Anu, [q. v. p. 343] on the Oxus. The town appears to have received its present name in the time of the Timurids; in his account of the events of the year 903 = 1477-1478, Bâbur (Babur, Nâmâ, ed. Beveridge, f. 58) mentions the passage of the river at Cardjui (Cardjûi gâzari). In the year 910 (1504) the fortress of Cardjui (in the Shahbânî-Nâmâ of Muhammad Sulî ed. Melchiori, p. 197: Cardjû gîn, in the Persian Shahbânî-Nâmâ of Râzî, quoted by Samlovîçvi: Zâujî vitt. ord. arch. stip., xix, 6173: Kâli-i Cubârdjû) had to surrender to the Uzbegs.

In the period of the Uzbek domination as in the middle ages, the most important passage of the Oxus was here; boats were always kept in readiness for this purpose; bridges of boats were occasioned for the passage of large armies as, for example, for Nadir Shah's army in 1253 (1740). Cardjui is, however, as far as is known, nowhere mentioned in any authority as a large town in this period still less as the residence of a prince or governor of importance. When Burnes (Travels, iii. 7 et seq.) was here in the year 1832, the town was governed by a Kalmuck; the number of its inhabitants was not more than 4000-5000, most of whom led a nomadic life on the banks of the Oxus in the hot season. A picturesque citadel was built on the top of a hill commanding the town. The town was of no importance as a commercial centre, and the ware exposed in its market were of but little value.

Burnes certainly is more worthy of credence than Joseph Wolff (Narrative of a Mission to Bokhara, p. 162 et seq.) who, writing in 1844, says that fourteen years previously, i.e. about 1830, Cardjui had a population of 20,000, but had sunk to be an insignificant place with about 2000 inhabitants through the incursion of the Khivines and Turkmans. Long as the ancient caravan route from Persia to Bokhârâ through Merv was rendered unsafe by the Khivines and Turkmans, it is evident that no town of any great size could arise here. In 1879, when Mâşık-bekov (Turkestan, St. Petersburg, 1886, p. 600 et seq.) visited Cardjui, affairs were in much the same condition as before, although the heir to the throne of Bokhârâ (Turezhou) now lived in Cardjui. There were only a few wretched huts in addition to the citadel and the palace (apparently recently built) of the Turezhou. The Turkmans robbing the country almost up to the very gates of the town. The forests, 30 miles from Cardjui, from which the inhabitants got their wood, could only be made use of under military protection.

In the 19th century, the Turkmans of Merv had to submit to the Russians; the old caravan route was replaced by a railway which reached the Amu-Dariyâ in 1886. The importance of Cardjui, as a result, rapidly increased; the town, which is the residence of a Beg of Bokhârâ, has now about 15,000 inhabitants. The Russian town of Cardjui, built on a piece of ground granted by the Emir of Bokhârâ to the Russian government, 12 miles from Old Cardjui, beside the railway station of Amu-Dariyâ, has now 4000-5000 inhabitants and is the residence of a Russian military governor (Weyznâsh uamâlîh). The new railway bridge, opened in 1901, is nearly 1½ miles in length and is the greatest engineering feat of its kind in Russian territory. The town is also of some importance for its shipping; steamers go from here down to Petroaleandrovsk and up to Termes (Tîrmidî). Trade is for the most part in the hands of Armenians. Its situation on a railway and at the same time on a great navigable river distinguishes Cardjui from all other towns of Turkestan; it was therefore proposed in 1894 to transfer the seat of government from Tashkent to Cardjui, but this proposal has since been dropped. The summer is so hot that cereals and fruit ripen around Cardjui earlier than in the other parts of the country; the melons of Cardjui are regarded as the best in Turkestan.

W. BARTHOLOM.

CARLOWICZ, in Turkiah, KARLOPÁCA, a town in Croatia-Slavonia, in the county of Slavonia, with 3450 inhabitants, — almost all Croats and Serves, — on the right bank of the Danube below Petrovaradin. It was in the time of Carlavicz was concluded on the 25th January 1699 between Austria, Venice, and Poland on the one side and the Turks on the other. Russia also took part in the negotiations but she was not till 1702 that she concluded a separate treaty of peace. Austria received Hungary — except the Banate of Temesvâr, — Siebenbürgen and Croatia and Slavonia with the exception of the eastern part of Slavonia; Venice received the Peloponnese, exclusive of Corinth, and the whole of Dalmatia, except Ragusa, and in addition the Porte renounced its claim to tribute from the island of
Zante; Fodolia with Camieniec (q. v., p. 327) and the western part of the Ukraine was ceded to Poland. A truce was to be observed for 25 years. This treaty was of importance as being the first occasion on which Turkey gave up its claim to the so-called "gifts of honour" and availed itself of the intervention of European Powers (England and Holland).

(From: Giese.)

**CARMONA,** a town in Andalusia, 25 miles east of Seville with a population at the present day of 17,000, is the ancient Roman Carmo (probably previously an ancient Iberian town of the Turdetani, but the name is not to be derived from the Phoenician *kerem*, vineyard, as some fanciful etymologists have proposed). As a strong fortress on a height commanding wide plains, it played a part on Caesar’s side and afterwards had the right to strike its own coins. In 712 it was taken by Musul b. Nusair and henceforth it bore the Arab name Karmana (probably a corruption of Carmona). It was the strongest fortress of Spain. In 765, Abd-al-Rahman I was besieged for two months in Carmona by the Abbadid rebel al-'Ali b. Mughith b. Yahyuli, but becoming reckless of desperation he made a sortie and won a brilliant though sacrilegious victory (Dozy, Histoire, i. 360—367). In 844, the Sevillians fell back here before the Normans. In the time of the rebellions of the renegades against the Emirs of Cordova (end of the 12th century) it was called Bobastro, (q. v., p. 736) a safe retreat for the rebels. With the extinction of the Umayyids and the decay of the Caliphate of Cordova (Reyes de Taifas, Muhik al-‘ummi’i), Carmona made itself independent under the Berber dynasty of the Banu Birzil (Birzil) which possessed practically only the strong fortress of Carmona and Eljiz (Astigi, Estella). Astigi was in Carmona on the Gulf of Carmona facing the lands to the north up to the Guadalquivir: Muhammad b. ‘Abd Allah 1029—1042, his son ‘Abd-Allah till about 1054, al-Aztir al-Mustahhir ill 1067, when Carmona fell into the hands of the Abbasids (q. v.). In 1247 it was taken by Frederick III. the Saint of Castile and repopulated.

**Biography:** Valla, iv. 69, reading Karmana for Karmonia; Simonet, Historia de los Mudejares, Index. (C. F. Serboi.)

**CARNATIC, or KARNATAK,** a term of varied application in Indian geography. As meaning the country where Kanara is spoken, it seems to have been applied originally to the Hindu kingdom of Vidjayanagar. When the Mahamadnads conquered this kingdom in 1565, they extended the same further south, so that the English erroneously applied it to the Nether who ruled at Arcot, where the language is not Kanarese but Tamil.

(J. S. Cotton.)

**CASA BLANCA.** [See DAKRA, DAKADA.]

**CAWASH,** a Turkish word signifying "sucker" applied by the Turks to the inhabitants of a body of 630 cott. ushers employed in the various tribunals, who marched at the head of the procession at state ceremonies (cawash-dagh, stuhb-

sweet). Their chief (cawash-dagh) was vice-president of the Grand Vizier’s court, minister of police, grand-master of ceremonies and introduced ambassadors. He also had command of a company of 200 golubi na’ms, who carried orders to the provinces. He also supervised the farming out of taxes during for the lifetime of the purchaser. The same name was also applied to a certain number of musicians drawn from among the pages and wearing the same uniform as the dwarves. In the army the name was given to a body of 330 subordinate officers of Janissaries chosen from the oldest who served as aides-de-camp in time of war and as express messengers in time of peace. They had to carry out the corporal punishments inflicted on officers of Janissaries (chib-lawshah); their chief, the bish-lawsh, commanded the fifth orik or bilaš (q. v.). In the present organisation of the army, *lawaš* is a rank corresponding to that of sergeant of infantry or quartermaster of cavalry or artillery; the *bish-lawaš* is the sergeant-major.

Finally *lawaš* is also the name of the best sort of grape grown in Turkey; it is said that this variety was brought to Fontainebleau in France and from it has been produced the variety called *chabaslar* (*lawaš*) was used in the famous *lawaš* of *sprach* in Spach’s and Eytal’s Wirtheil der Turke-Tatarischen Sprachen p. 130 derive *lawaš* from the Caghatai law, "call, proclamation" so that it has originally denoted a herald or one who proclaimed a royal command.

**CELEBES,** in size the largest of the Great Sunda Islands covering an area of 3255 geographical square miles. Like the island of Haimahein, it has the peculiar form of a massive nucleus from which four great peninsulas run, north-east, east, south-east and south respectively. The many archipelagoes (768 geogr. sq. miles) surrounding it form continuations of it both geographically and geologically and connecting links with the Philippines, Moluccas and Little Sunda islands. The island is very mountainous (the highest 10,640 feet) and its plains are few and small so that there are no navigable rivers; it is however surrounded by large deep bays, that of Bone being 1100 fathoms deep and that of Tomini 1875. The mountains are as a rule in ranges; in the centre they run from north to south and in the peninsula in the direction of their axes. The middle ranges of the centre are of granite, gneiss and crystalline schists, those in the east are of more recent formation of folded sedimentary rocks and those in the east of volcanic rocks and Tertiary limestones. In the Minahasa and the south there are great volcanic centres. The numerous lakes, and many more have dried up, give the island a peculiar stamp. They are either tectonic basins in an area where the original rock still exists like Lake Posso (1000 feet deep) 1600 above sea-level), Towuti (30 miles long, 12—25 miles broad) and Matamb (1600 feet deep) or of volcanic origin like Lake Tondano in the Minahasa.

As regards diffusion of plants, animals and
CELEBES.

men, Celebes holds a peculiar position in the Archipelago. The flora shows a transition stage between those of the Malayan region and the Australian region of the Malay Archipelago. In the animal world the large mammals of Western Asia are lacking; only a kind of ape and four forms of Asiatic, true freshwater-fish being found. On the other hand two forms extinct elsewhere are found, the chamois-buffalo (Anoa depressicornis) and the hog-deer (Porcula habrosus). The Australian part of the Archipelago is represented in Celebes by two kinds of mammals.

The island of Celebes is now wholly subject to the Netherlands and is divided into the residency of Menado, comprising the northern peninsula, the northern half of the centre and the eastern peninsula, and the Government of "Celebes and its Dependencies", which consists of the remainder of the island. There are still several native principalities on the north and south peninsulas, such as Gowa, Bone and Luwa in the south, but their ruling houses were deposed in 1906 and 1907 without the slightest opposition on the part of their subjects. Others like Tanette, Sopeng and Sidengteg have still a kind of self-government.

Celebes remained much longer unknown to history than the other Sunda Islands; it is not for long as long as the rest, and in the year 1533, the Portuguese settled on the coast of Gowa. In the course of the xvii century, the princes of the dual Makassar kingdom of Gowa and Tello succeeded in conquering the whole of south Celebes, a part of the centre and of the Little Sunda Islands. In the reign of Tundjallo (1565-1590) the Malay-Mambai prince of Ternate, Bonthain, concluded a treaty with them and sought to propagate his religion in Gowa. The first ruler to adopt Islam, however, was Tundjallo's son, who was converted in 1603 by a Malay named Datari Bandang from Meningkabau and reigned till 1639 after taking the name Suliam 'Ali al-Din. His minister Karamat Matowaya followed his example and the Malay influence spread rapidly among the many Makassar and Buginese peoples of South Celebes, for the kingdom was at the same time increasing its power considerably.

When the Dutch (after 1607), English (after 1605), Danes (after 1618) and other Europeans began to visit the capital Makassar about this time, they entered into commercial rivalry with the Portuguese, who had long been settled there, and with one another, and tried to gain trading privileges by alliances with the native princes, mainly for the spices of the Moluccas. The Dutch who ruled in the latter islands were not then able entirely to prevent the export of spices to Makassar. The perpetual breaches of contract and occasional murder of Europeans by the Makassars lasted till the second half of the xvii century; Speelman, the General Commissioner of the Dutch East India Company, in alliance with Bone and Ternate, then succeeded in conquering the heart of the Makassar kingdom in 1667 and 1669 and forcing its princes to sign the treaty of Banggai, the terms of which were afterwards agreed to by all the kingdoms of South Celebes and until quite recently undermined their dependence on the Netherlands. Minor wars was another way important historially and more highly developed. The Spaniards had settlements here as early as the xvii century but they did not enter much into relations with the heathen population of the interior. With the help of the Dutch East India Company the natives succeeded in freeing themselves from Spanish domination; their quadrant allies have remained there to the present day.

The population of the island of Celebes is estimated at about 1,640,000 souls, or including the islands dependent on it, at about 2,000,000, but its composition differs exceedingly as regards density and development if not as regards elements. As a people the Chinese do not appear to exist here, the whole population must be regarded as belonging to the Malay-Fenugian group, unless we allow with the Saracens (see Bibliography) a Taola substratum, the existence of which they believe to have proved over a great part of the island. At any rate the still practically unchanged, heathen Torajá tribes in the centre form the prototype. Their relatives on the southern peninsula have through the influence of Hindus and the Hindu Javanese and later by admixture with Malays become relatively highly developed peoples, the Makassas and the Buginese. The tribes on the south-east and east peninsulas appear to be strongly mixed with the Taola tribes who are physically and industrially at a low stage of development. The population of Minahasa is annal. It which is of different origin; their language and other characteristics point to a nearer relationship to the Malay peoples of the Philippines, Formosa and Japan. In the commercial centres like Makassar (1059 £., 20,178 natives, 4672 Chin. and 141 Arabs), Donggala, Menado (576 £., 6669 natives, 2754 Chin. and 500 Arabs), Gorontalo (1245 £., 5427 natives, 806 Chin. and 177 Arabs), Siringo (51 £., 3578 natives, 108 Chin. and 25 Arabs), Bone (155 £., 6544 natives, 197 Chin. and 3 Arabs) we find the usual, very mixed population in which the Buginese form the majority; it is only in the larger centres that we find Europeans, Arabs and numerous Chinese.

The Torajá are settled agriculturists who sometimes also trade and fish. Their own industries show themselves very clever, highly gifted craftsmen. Their numerous tribes dwell in settlements, strongly fortified on account of the continual warfare, in the vast forests which cover Central Celebes. Their density is estimated at 2—4 per square mile. The Torajá near the Buginese kingdom on the coast have become converts to Mahommedanism, in the North-East Christianity is becoming predominant; the great majority however are still pagans.

The closely allied Mahommedan peoples, the Makassas and Buginese, originally inhabited the southern peninsula, but, being traders and fearless voyagers, they spread over all the coast-areas of Celebes and the greater part of the archipelago from east to west. This statement is particularly true of the Buginese. The home of the Makassas is in the west of the southern peninsula, roughly from Maros to Bulukomu including the kingdom of Gowa. The Buginese inhabit the eastern part of this southern and farther north their lands cover the whole of the peninsula. The most important of the kingdoms of the Buginese, which were organised on a system of despotic government, were Bone, Wajo, Luwa and Sopeng, of the Makassas, Gowa, Tanete, and the southern island-group, Seluye. Besides these
there were and still are numerous smaller kingdoms, which formed alliances with one another and sometimes also were dependent on the larger kingdoms. The rulers of one of these kingdoms is a hereditary prince or princess; he (or she) is aided by a minister and a muker, a council of the most powerful relatives of the ruler and his vassals; subject princes were also members. The power of a prince depends in a great degree on his personality and his skill with the possession of certain regal insignia; the latter is a manifestation of the animistic beliefs, still predominant among these peoples. Next in rank to the royal house is a nobility which has sprung from it through polygamy, a class of freemen and one of slaves, who have now been freed, and bondsmen. The latter were as a rule well treated but like the poorer freemen were liable to be plundered and severely ill-treated by the higher classes.

As throughout the Archipelago, the daily life of the people of South Celebes is influenced by animistic beliefs, somewhat altered by Hinduism and Mahayanism; but the ancient usages of family law and the law of inheritance have survived among them as among the other Malay peoples of the Archipelago. The marriage ceremony is, it is true, performed according to Mahayanist rites but the pages priests (basins) direct the celebrations which follow, often lasting many days; besides princes and chiefs have a good deal of legal control over marriages and divorces. The position of the married woman is a very honoured one; this and their other privileges of inheritance, divorce etc., are due to the many maritarchal customs which still survive among these peoples. It is only in the larger towns that the Mahayan law of inheritance is becoming more and more followed. The economic position of the Buginese and Makassan is one of the highest in the Archipelago; not only are they excellent agriculturists and horse-breeder but their achievements as weavers, smiths and shipbuilders, their commercial ability, and their skill in navigation and fishing are on a very high order. The density of population is estimated at 12 in Goa, 12 in Tanete and 9 in Buna while under the favourable economic conditions in the districts directly under Dutch rule it rises to 25 per square mile.

The Makassar and Buginese languages are written with an alphabet of their own which is derived from a further Indian one. Their literature is fairly well developed; among the prose a collection of their laws, rayapang (Mak.) and latanu (Bug.), may be mentioned.

There are important Buginese settlements in the Archipelago on the east (Kutel) and west (mouth of the Kapas and Sambas) of the island of Borneo, in the Kiooe Archipelago, on the Little Sanikah Island, east of the island of Lombok and in the North Sumatra.

The Minahassans, who are now Christians, were divided into tribes, organised on a patriarchal basis, but this has to some extent been altered under the influence of Christian missionaries. With their help and a well developed system of education, they have reached a high stage of civilization which reminds one in many points of European; (handel) of the day. The population is about 16 to the square mile, rising in the centre around Lake Tondano to 36. They live mainly by agriculture, cattle-breeding, fishing and fish-rearing, by commerce and to some extent by industries. Like so many native industries, the fine plaited and carved work of the Minahassans has disappeared before the imported products of European manufacture.

The exports are: coffee, copra, Muscat-nuts, dammar, tortoise-shell, tripang, edible birds' nests, horses and gold.

CELEBI, a Turkish word, of the later cultured period, and the original and original meaning of which have not yet been definitely ascertained. Celebi is probably derived from Cehl, also written Cehel, "God;" the latter word is at the present day pronounced Cehel by the Malians; and, according to an article by K. Foy (Mittheil. der Deutschen Gesellschaften f. Ost- und Weisst Studi, ii, 1841), is the only word for "God" among the Vurung of Asia Minor. In the written
language ָּלֶּחֶב first appears in the viiith (xiiith) century among the Turkic poets of Asia Minor; that, as is sometimes (by K. Foy also, loc. cit.) stated, it is "not unknown to Cağhatâsi", has not yet been proved by quotations. Melloranski (Zapiski vost. obšč. obzr., xxv. 425) quotes from the Khâliq-i 'Abâî some (this dictionary is, as Melloranski has elsewhere (Arab. filolog., p. lix. shown, extracted by Muhammed Zîvûy from the Sangâhî of Mîrzâ Mahdî Khâbî) the statement, that kelâb is in Greek [κέλλα] 'a name of God (με-νό-νί-ξο-βά κύριος). The word kelâb was used in the Ottoman written language down to the viiih (xiiith) century as a title or epithet of persons of princely rank, high ecclesiastical officials (particularly those who were at the heads of Derwisk orders), famous authors, etc. The first person known to have borne this title is Celebi Husân al-Dîn (died 683 = 1284), who succeeded Djiâlî al-Dîn Rûmî as superior of the Mawwawi order of Derwîshes (Grunds. der islam. Philosophie, ii. 288). In the poems of the poet Kâsim-i Anwâr, born in 'Alahârûdîn (died 833 = 1431-1432), kelâb means "beloved" in the Shîh sense, i.e. God (quoted by C. Seimans, Zapiski etc. xvii. p. xxxiv). Several Turkish princes hold titles in the viiih (xiiith) and ixth (xiiith) centuries were called Celebî, among them all the sons of Sultan Bayazid I. (died 805 = 1402). Ibn Bûtîa (ed. Defrémery and Sanguinetti, ii. 270) says that kelâb "in the language of Rûm" (i.e. in Greek) means "my lord" (αυτοίξων) in vulgar Arabic  סדרה). On the other hand kelâb was only known to the Greeks as a Turkish word, according to a gloss on Psalms, kelâb in the language of the Turks, ἡ στίγματα ἱδρύσασιν had the meaning "of noble birth." In the Khâliq-i 'Abâî (in Melloranski, Zapiski etc., xxv. 424) kelâb is explained as "writer, poet, reader, initiated, of keen intelligence by nature." The word is similarly explained in Ahmad Wafik Pasha's Lâhûgi-i 'Oğlanîâna (i. 482), with the additional note that kelâb "in the sense of 'skilled in reading'" was later supplanted by the word efnâl from the Greeks. The quotations from European authors of the viiih century, collected by W. Strînow (Zapiski etc., xviii. 15 et sqq.) do, as a matter of fact, show that kelâb was then used with the same meaning as the Spanish "Dom" and the French "Monsieur", i.e. like the modern sfendi (from the Greek σαμπρίζ). Efnâl seems to have come into use as an epithet of poets and scholars in place of Celebi about the end of the viiith and beginning of the viiih century; it would be of importance to investigate (from the narrations of European travellers and other sources) whether it was not till then or previously, that kelâb was supplanted by efnâl in the language of Ottoman society. Such an investigation has, as far as I know, rarely, yet been made.

Apart from the religious meaning which it has retained to the present day (it still denotes the highest rank in the Mawwawi Order; the superior of the order is called kelâb-e'efnânî), kelâb seems to have had approximately the same meanings as the Persian mirâb (from персид žâde), which was applied to princes of the blood as well as to nobles and gentilemen, to prominent scholars as well as to humble writers. At the present day kelâb in opposition to efnâl is only applied to gentlemen who are not Muhammadians (particularly Europeans); Christian and Jewish ladies call their husbands by this title; in one modern Armenian dialect the bride has to address the bridegroom's brother as kelâb. In its earlier general meaning of man of culture, gentleman, the word has only survived in proverbs such as "kelâb men kelâb aktin bâkâr." ("Thou art a gentleman, so who shall carry the horse"), or the Arabic َالله َالله َالله َالله "he is a bird of good omen in the Turkish court" (Kremmer, Mittelsyrrien und Damaskus, Vienna, 1853, p. 95).

Ahmad Wafik Pasha has proposed an explanation of the words kelâb and kelâbî in his Lâhûgi-i 'Oğlanîâna (i. c.) which has been adopted by many European Orientalists also. In the time of Cingî Khân the Tatars and Eastern Turks were first taught to read by Christian priests, i.e. made acquainted with the art of writing; the Turks therefore at this time adopted besides the "Chinese" َلرل and the Old Turkish َأجِمِ, the word kelâbî (Syst. kelâbî, Arnî. zâhilî) also, which properly means "crucifix" as a name for God; for the same reason the word kelâbî, properly "worshipper of the crucifix," retained the meaning of an "educated man, one able to write." The order in which Redhouse (Lexicon, p. 725) gives the various meanings of the word kelâbî is, however, "originally, in Tartary" the word is said to have denoted a Christian priest or "worshipper of the crucifix," "next in Turkey" — a prince, "next," "a man of letters, a Muslim doctor of law and divinity," "later still" a "gentleman of the pen," "ultimately" a "non-Muslim gentleman."

With Ahmad Wafik Pasha, Baron Rosen (Zapiski etc., xxv. 305 et seq.) supposes that the words kelâb and kelâbî are to be regarded as relics of the missionary activity of Syrian (Nestorian) priests; but this activity must be placed in a much earlier period than the xiiith century; both words were brought from Central Asia to the west by the Seldjûks. He argues that the fact that neither of these words has as yet been found among the Turks of Central Asia or even among the Persians Seldjûks, is of no importance as the areas have not yet been at all fully investigated.

Another etymology was proposed by Baron Tierschenhagen in 1898 (Zapiski etc., xli. 307 et seq.). Celebi is, he suggests, to be derived from the Arabic root َلِبَ to "bring," "import" (whence َبِلِج, "imported goods," َبِلِت "slave"); the kelâb as "officials able to write" are to be compared to the َبِلِج (plur. َبِلِج) mentioned by Kûb al-Dîn (Die Chroniken der Stadt Möbâ, ed. Wüstenfeld, ii. 188 et seq., 243), who formed a separate regiment in Egypt in the Mamlûk period, skilled in reading, writing and all the arts, and were frequently called upon to fill the highest offices.

In learned circles this etymology has found no favour; as Baron Rosen remarks, such an explanation would only be justified if it were first proved that there was no connection between kelâb and kelâb "God."

In the article written some years later by P. Melloranski (Zapiski etc., xxv. 305 et seq.) this connection is expressly emphasised, but with the observation that both words must have come to the Turks in their present form, as such a word-formation (with the addition of the termination َت) is not known in Turkish. The Christian origin of both words suggested by Ahmad Wafik Pasha is "probable but not more;" on the other hand, in opposition
to Barout Rosen, it can safely be maintained that they first appeared not in Central Asia and not under the influence of Nestorian priests but among the Turks of Asia Minor, probably through the influence of their Christian neighbours.

W. Shirnow, again, (Zeitschr. d. d. a. i. xxvii. s. 10.) claims that the word Selb is the Czeckoslovak word for "singing, writing or writing well"; even among the Byzantine Greeks this word had the meaning of "educated, distinguished gentleman", with which meaning it was borrowed by the Turks.

The latest discussion of the origin of the words Selb and Selb is by N. Marr (Zeitschr., etc., xxvii. s. 10.) His investigation is based on the use of the word Selb among the Dervishes of Asia Minor, espoused by Baron Rosen and on the philological evidence adduced by Melnianski that Seldi could only be derived from Selb by a non-Turkish people. According to N. Marr, the origin of both words is to be sought for in Kurdist, where the words Seldi "God" and Selb "potable" are still to be found. The word Seldi is not from Seldi, but may be considered a relic of the pre-Iranian language of the Kurds. This language belongs to a branch of the family called "Japhetic" by the author, closely connected with the Semitic family. The Kurdist Seldi goes back to a "South Japhetic" kerd or kerd, from which arose the Aramaic tald and the Arabic taldum in Semitic. All the meanings in which the word Selb was used by the Turks in Asia Minor in the viii or ninth century, were already possessed by it previously among the Kurds. Its original meaning was "follower of God" (Seldi). Selb was also the earlier name of the sect now known as Yazidi (from the Persian bzd + God).

Kurdish paganism has exercised an unmistakable influence on the religious life of the Muhammadians generally and particularly among the Dervishes in Asia Minor; the Kurdist sect, widely disseminated in Persia at the present day under the name of Atâ-bâz or Atâ-bâz, may be mentioned as proof of this. The fact that there is at the present day a village called the "Celebileri" (the Selb) not only near Siwa in Asia Minor but also in Russian Armenia (in the province of Yerven), is also important.

Should the question again be taken up from the other side, it ought perhaps to be taken into account that in the Sufi poet Kâzîm Anwâr it is not the followers of God who are called Selb, but God himself as the "beloved" in the Sufi sense. Perhaps also the word-combining ending "i" may not be so foreign to Turkish as Melnianski has supposed. Max von Berchen (in a private letter) has called the attention of the writer to the name Alpi (apparently for Alp, "hero") among the Turkish Ortaq ats in Mynopotamia (vii or viii centuries) and to Cagîri, probably identical with Cebir, "sparrow-hawk," among the Seljuks and Kâkhis (W. Barthold).

**Celebi Efendi:** title of Mavâhin Hunkâr Dilâk Çelebi, a great Ottoman statesman and statesman of the 17th and 18th centuries.

**Celebi Zade:** Asim Efendi Ismî'il, Saîid al-İlâm, and Turkish historian, son of the Ka'b Efendi Kâkî-Celebi whom the name by which he is known; he was first of all a judge and teacher of law, was later appointed historiographer to the Ottoman kingdom in place of Başheid (1130 = 1717), became successively Fâti in Brusa (1132 = 1720), Medînin (1137 = 1724), and Constantinopoli (1161 = 1748) and finally Şâhîr al-İlâm (1172 = 1758), which office he held till his death eight months later. His history (printed at Constantinople in 1183 = 1770) covers the period from 1155 to 1141 (1725 to 1728); his Dîvân contains 5211 pieces in praise of the Sultan Ahmed III, and Mahmed I, occasioned verses on the more important events of the period 1127 to 1135 (1710 to 1724) and 1183 (1770).

people, according to Lullier, whom I follow here as the best authority on the Cerkesses, was divided into the following tribes:

1. Abadeskis 6. Mokhosh
2. Shupung 7. Kengui

In addition there were the Chem, Khogals, and Khetuk (or Adali) but they have long been either merged in other tribes or exterminated by war and pestilence.

The Adighe tribe formerly dwelled on the north and south slopes of the western main chain i.e. the left bank of the Kuban and its tributaries and the coast of the Black Sea as far as the river Zhezhe. The few remnants of them, that survive in the Caucasus, still dwell with Tatar tribes, Ossetes, Circassians and Russians (chiefly Cossacks) as their neighbours practically in their ancient territory: the Kabardin main branch in Great and Little Kabard (Terek territory), in the valley of the Moxa, the Baksan and the Cerek, the upper course of the Kuban, the Aksam and the Zelenchik, as well as on the right bank of the Terek, where it turns from a northern to an easterly direction. The following tribes live in the south of the Kuban territory: Abadeskis, Shupung, Bezent, and Natukhal. There are also some Cerkesses on the Black Sea near Tussari: in all about 200,000.

With the Akhass and the Ukha, who have all emigrated, the Cerkesses form the northwestern branch of the Caucasians proper. Of all their languages only some of the Kabardin and the Abkhazian have been made known to us, by Lopatsinski and Ider and of the others we have only isolated and quite inadequate notations. The Adighe proper, according to Lopatsinski, may be divided into three dialects: 1. Lower Adighe (Kukh), to which Lullier has given the name "Common" Cerkessian. 2. Middle Adighe (Beklemyewian) which forms a link between Lower Adighe and 3. Kabardin (Upper Adighe). The phonetic character of Cerkessen is usually harsh; it has many gutturals and sharp hissing aspirates; the weak and strong glottal stop are found in almost every word and the broadened [t] does not contribute to the euphony of the language. Very emphatic sounds are even frequently found at the beginning of a word (sex = I, did = them, etc.)

The grammar is very peculiar and can hardly be fitted into any of the known schemes; certainly not easily into the latest, that of Finck's in his Haupttypen der Sprachbaus. The prefixes of the pronoun root and the strong development of moods and tenses are characteristic of the verb: the relations of the noun to another which we express by declension or prepositions are expressed by elements quite loosely attached.

The Cerkesses had and, strictly speaking, still have only an oral literature. They had no alphabet; it was only after the Russian conquest that the Russian alphabet was adopted to their language; at the same time a modest attempt was made to found a written literature.

The Folklore of the Cerkesses consists mainly of two classes, the Nartensaga (heroic legends) which they have in common with other Caucasian peoples, e.g. the Ossetes (it has not yet been ascertained which has borrowed it) and heroic-historical ballads.
We have very little reliable information on the history of the Cerkesses. Such as there is, has been handed down by oral tradition only, mainly in the Crimea, and among a people of such a warlike disposition, it has been preserved in a very personal fashion. Schoraw-Bekemirost-Nogov has collected and published the historical traditions of his people (see above); but there is not a word of it which can be taken without great caution. It is certain that the Cerkesses have frequently played a part in the current of events, north of the Caucasus, but what is truth and what is fiction in their traditions, it is impossible to ascertain. The Warago-Russians of the Tmutarakan principality on the Taman peninsula, at any rate, came into contact with the Cerkesses at quite an early period (1867).

As far as has yet been ascertained, the Cerkesses appear to be anthropologically a mixture of a fair northern race with a dark southern. Puntuchow regards the typical representatives of the race as subulotiochephalic (index 75-79), among whom there are more light- than dark-eyed. But as has been stated, they are strongly mixed with a dark broad-headed stock. They are described as handsome men, though some observers say that the beauty for which the women are renowned, is overrated. There is really some truth on both sides, for, as among all Caucasians, we find handsome individuals beside others who have no particular claims to beauty. The export of girls to Turkey which has been going on for centuries must naturally bring about a degeneration of the race.

In former times the Cerkesses practised only cattle-rearing and, to a smaller extent, agriculture. Their horses were and still are famous. Their chief food — the frugality of the Cerkesses is proverbial — was a kind of polenta made of millet. Meat was but little eaten and that only at sacrificial feasts. They made their own cloth and their b器ec (felt cloaks), in addition to articles of leather which their women were fond of embroidering with gold and silver. Their houses, which as a rule contained only one room, were built in groups. There usually was a room attached to each house for guests.

Hospitality was and still is a sacred duty among the Cerkesses. Among the tribes with a feudal organisation it was mainly the chiefs and nobles who had the right to exercise hospitality. The guest is even regarded as a member of his host’s clan as far as the right of protection is concerned, so long as the latter does not give him over to another ranuk (host). The host is responsible with his life and property for the safety of his guest.

Some tribes in earlier times had a feudal organisation. The Nokos, Shapag and Abadzhe had no chiefs but only nobles while among the other tribes the government was in the hands of princes; these nobles, however, are said to have possessed more power than the princes of the other tribes. Under the influence of Islam which was brought by emissaries from Turkey, the ancient system has been broken down; as early as 1826, Hasan Faiba, the Seraskar of Anapa, took away the privileges of the nobles of the three tribes mentioned above.

The people were divided into four classes: 1. Polko (Poko) princes, 2. Uork (Uorkhi) nobles, 3. Tlokot who had to obey the Polko’s and Uork in certain respects, and 4. Pshiot (Pshot) = Serfs. Islam with its democratic tendencies struck the first blow at this organisation. Bell appropriately called the Muhammadans among the Cerkesses of his time “Radicals.”

The Cerkesses are nominally Muhammadans; there are also a few members of the Orthodox Church amongst them. Islam is not yet 200 years old among them. It was introduced by the Krim Khans and was first adopted by the Kabardins. At an earlier period Christianity appears to have been propagated amongst them; at least the ruins of churches and certain customs point in that direction. Neither of the religions professed by them are deeply rooted, any more than among the Ossetes. The old heathen religion retained the firmest hold among them, as is still the case to-day among the Ossetes.

The following gods were worshipped: Sosere, the protector of crops, whose feast was held in December practically at our Christmas; Akkia, the protector of cattle; Zeigiat who watched over their rains and military enterprises; Mezitik, the god of hunting and the chase, who rides on a horse with golden bristles; Yemize, the patron of shepherds; Tshik, the god of smiths — oaths are usually taken in his name; Khepeguash (sea-nymph); Pesegaash (water-nymph) worshipped for rain; Kheseguash, the protectress of gardens; Tsokhaish and Sheshersi, who are mentioned in prayers after Sosere (are they perhaps merely secondary presentations of Sosere himself?)? Khakas, who is a kind of patron god of the tribe among the NatKhaz and the Shapag, but also protects the oxen used to plough with; Kowash is represented in the form of a fish and rules the sea; Pabone, Thatsakei and Tkaxofshu correspond somewhat to the Laces and Females; Merizim, protectress of the bees; she is also represented as mother of the Great God (obviously a transformation of a pre-Christian deity under Christian influence); harvest-festivals also are dedicated to her; Shible, the god of thunder and tempest, to whom those slain by lightning are sacred; and Tba, the supreme god.

The Cerkesses had neither temples nor churches. Prayers were offered up and sacrifices made in sacred groves or under sacred trees. Nor was there any proper priestly class; the sacrificial ceremonies were carried out by an old man elected for life for this duty.

Justice was formerly administered according to traditional custom (Cufar). There was no separate caste of judges, at least not among the Shapag and NatKhaz. A declaration of innocence on oath used to be accepted; but as perjury was not uncommon, the whole structure of this system of customary law fell to pieces. Society required blood-vengeance for murder as an absolute right and duty; it was however also possible, though difficult, for the murderer to escape blood-vengeance by payment of a fine: the fines prescribed were fixed by the social position of the injured individual. The absence of any limitation of time after which vengeance could not be taken, gave rise to endless vendettas.

A wife was obtained by purchase. If the consent of the bride’s parents could not be obtained she was usually carried off by force, as was also done when the bride herself was unwilling. A pretended carrying off of the bride by force still forms an essential part of the marriage ceremony.

As a rule a newly married pair do not appear
CERKESSES — CEUTA.

In public with one another till the birth of the first child. Their code of sexual morality is a very strict one. On the wedding-night the bridegroom gives his kholat (the leather coif) of the bride which she has worn since her childhood without ever taking it off.

One of the most striking features of Circassian life was the Ataka, i.e. the custom of handing children over to strangers immediately after birth to be brought up (the boys till their 13th—18th year and girls till their 15th—20th year). The foster-parents were treated with great reverence, and held a position almost superior to the actual parents. This custom created a kind of foster-kinship which contributed considerably to the unity of the Circassian tribes. A fugitive who succeeded in touching with his lips the breast of the mistress in the house of a stranger, thus became a member of the family and the head of the house was responsible for his safety. This is probably a point from which one may understand and explain the social and family relations of the Circassian peoples.

Another factor which contributed to the unification of the Circassians was the system of swarming brotherhood, in which the touching of the breast of a woman also played the main part; a man universally held in high esteem stepped forward from the one group of those swarming brotherhood while a woman came forward from the other group and offered the man her breast; the ceremony was completed by an oath on the Koran.

The Circassians were in many ways the teachers of their neighbours. Not only was the masculine dress (sheepskin cap, felt cloak, Circassian i.e. overcoat) imitated, but in part also (by the Akh-Khas and Ossetes for example) the feminine, i.e. the corset, chemise, trousers, upper garment with a deep opening on the breast, girdle and the high cylindrical hat. This dress is now rapidly disappearing as everything is in a state of transition. It may also be supposed that the social organisation and particularly the ancient heathen religion of the Circassians exercised a deep influence on their neighbours.

There are also a series of valuable essays in the Russian Ethnographical Review, in the publications of the Caucasian section of the Imperial Russian Geographical Society of Tiffen and in the work describing the localities and tribes of the Caucasus (Tiflis); in vol. iii. of the latter there is a short Kaimisian grammar with glossaries (in Russian).

A. PIXE.

CESHME, a Persian word meaning "source", which has passed into Turkish with the same sense: it is the name of a market-town in Asia Minor with a safe natural harbour on the Mediterranean coast, at the entrance to the Gulf of the same name, at the north-western extremity of a peninsula opposite the island of Chios. It is the chief town of a ḏāf in the sandjak of Smyrna, Wilayet Ađrīn. The town has 5555 inhabitants of whom there are 2593 Muslims and 1000 Orthodox Greeks; there are 8 mosques, 14 Greek churches and 1 synagogue. The present town, which is quite modern, occupies the site of the ancient harbour of Cyzynae, now called Rhythia. There are hot-springs at Illidja.

A Russian fleet of nine ships of the line and seven frigates, divided into three squadrons commanded by Siritshak, Arziz Orlet and Elphinestone, which had sailed from Kronstadt to aid the revolted Mahotsiats, attacked the Turkish fleet here, consisting of two corvettes, fifteen galleons, five schooners and eight gallyes, commanded by Kapitāna-Pacha Usman al-Din and Captain Dejmir Hakan. The Russian and Turkish flag ships both caught fire at the same moment and those of the crew, who could save themselves by swimming (11th Feb. 1767), bailed out July 1770). The remainder of the Turkish fleet was set on fire the following night. This defeat of the Turks at Ceshme was the fore-runner of the Peace of Kastoria.

CEUTA, a maritime town in Morocco on the Strait of Gibraltar, io miles south of Gibraltar, 40 north-west of Tetuan and 140 north of Fes (Fes), with 6694 inhabitants; Lat. 33° 54' N., Long. 5° 18' W. (Greenw.). It is fortified and is one of the most important of the Spanish presidios. Ceuta was built on a peninsula running from west to east terminating in a rocky mass (Tibell al-Mina) surmounted by a lighthouse. The peninsula itself is dominated in the centre by the Monte del Hacho which rises to a height of 600 feet. The town is divided into two parts, the old town, "Ciudad Antigua" which lies in the hollow of the isthmus and the modern town, Almna, rising like the tiers of an amphitheatre up the slopes of Monte del Hacho. Beyond the isthmus the land rises to form a large plateau cut up by ravines, which in the north descends abruptly to the sea by steep cliffs. This is the Serallo Plateau shutting on the outer spur of the massif of the Adjurnas, called by the Spaniards Sierra Hulmonos and by the Moors Tibell al-kins or al-Younas. These are two bays, one on the north and the other on the south of the peninsula, the first fairly large but badly sheltered; the second is smaller but well protected from the winds from the open sea and offers a safe anchorage to ships. In spite of these natural advantages, Ceuta plays a secondary part as a commercial town and ranks far below Tangier or even Melilla. On the other hand, it is a strategic position of the highest importance, equal if not superior, to Gibraltar.
Ceuta is called Sahut (Sahut) by the Arab historians and geographers. The etymology of this name is uncertain. The author of the Itinerari (t. 210) derives it from Sahut, a descendant of Shem, son of Noah; al-Idrisi (ed. Dossy et de Goeje, p. 269) connects it with the Latin word setacem on account of the account of the town, on a peninsula stilted in by the sea on all sides except the east. The most probable explanation, however, is that which derives the word Ceuta from Septum (Sarete), the name given by the Romans to the heights on which the town is built.

The position of the peninsula of Ceuta at the entrance to the Mediterranean had early arrested the attention of the Phoenicians who founded the trading settlement of Abila here. After the Carthaginians, the Romans who succeeded to their heritage established themselves here in their turn and founded the colony of Julia Trajecta. In the 4th century of the Christian era, the town was taken by the Vandals, then taken by the Byzantines who surrounded it with fortifications in the time of Justinian and gave it the name of Sepsa. At the time of the Arab invasion Ceuta was conquered by Cato Julianus who had succeeded in making himself practically independent there. When 'Okba b. Nafi' was nearing Ceuta after his victorious march through the Maghrib, Julian came out to meet him bearing a magnificent present, promised to be his tributary and obtained confirmation of his authority from the Arab leader (al-Bakri, Description de l'Afrique, t. 3, p. 376). According to the same author it was Julian who furnished '赭 dict and his companions with the means of crossing to Spain. A few years later the Arabs were allowed to enter the town and settle there.

The Khaldjids revolt in the middle of the 12th century almost brought about the ruin of Ceuta. The Berbers of Tangier invaded the town and drove out the Arabs. "Ceuta," says al-Bakri, "remained abandoned and in ruins with no inhabitants." says wild beasts." After the battle of Badiria, Baldia and his companions who had taken refuge there, were closely blockaded by the Berbers. Ceuta finally became a part of the Idrisid kingdom. It was granted by Muhammad, son and successor of Idris II, to his brother al-Kasim along with Tangier, Tetuan and Baza; it next passed to al-Kasim's brother 'Omar and then to the latter's son 'Ali who reigned over all the Idrisid kingdom. In the 11th and 13th century, Ceuta, though nominally part of this kingdom was ruled by a Berber dynasty founded by a certain Madjaks (Maiken, according to al-Bakri). This man, who belonged to the Ghumara tribe, adopted Idris, established himself in Ceuta and had himself appointed lord of Ceuta. In his turn he allowed Ceuta and the ruler of the Maghrib. The Umayyads of Cordova held it and, as it was the gateway to Africa, they made all efforts to retain it. 'Abd al-Rahman al-

Najir surrounded it by a stone wall of great strength; another Caliph built fortifications on the plateau of al-Mina, and tried, but without success, to transplant the inhabitants thither. A large garrison was quartered in it. These precautions proved by no means unnecessary. In 771 (779) Binikbn b. Zir (q. v. p. 792) advanced on Ceuta but, seeing the immense supply laid in by the Umayyads, gave up all thought of undertaking the siege of it. The Hamuskudl Idris, governor of Tangier for his brother Yabiy, was more fortunate and succeeded in taking the town. It was won back by the Umayyads but finally lost to them when the Almoravids seized it. Besieged by al-Mu'tam b. Yusuf b. Tha'labin, Ceuta had to surrender after a valiant resistance. The governor Diya' al-Dawla was put to death by order of the victor in 475 n. (1084-1085 A.D.).

The Almoravids succeeded the Almoravids in Ceuta. In 1140 'Abd al-Mu'tam had tried to seize the town, but had been repulsed by Kha'il Tyas. In 1146, the inhabitants submitted voluntarily and received an Almohad governor. They rose the next year against their new masters, killed the governor and appointed an Almoravid chief Yabiy b. Ummayya as their ruling. This rebellion was quickly put down. 'Abd al-Mu'tam returned to Ceuta and placed one of his best officers, Sidi Abl Sallam, in command of it. The Caliph Alah Ya'qub afterwards gave this important post to his own brother Abl' Abl-Hassan. The turbulent spirit of the people of Ceuta frequently manifested itself in revolts against Almohad authority. In the reign of al-Mansur, his brother Abl' Missil had himself proclaimed Caliph at Ceuta under the name al-Maanayid, then made an alliance with the Emir of Murcia, Ibn al-Hlid, whose intervention forced the legitimate Caliph to raise the siege of Ceuta (1234). The Caliph al-Rashid made an alliance with the Christians in order to overcome the rebels.

A Genoese fleet of 30 ships blockaded Ceuta without being able to take it. It was only through the intercession of the inhabitants of Ceuta that the rebels were restored to the Almohads. When the revolt against Ibn al-Hlid, drove out his representative and opened the gates to their former masters.

In spite of these vicissitudes, Ceuta appears to have enjoyed considerable prosperity during the 14th and 15th centuries A.D. The town, properly speaking, only occupied a portion of the peninsula, the remainder being covered with gardens, vineyards and plantations (al-Idrisi loc. cit.). In the 16th century, the town was still within the walls and remained a prominent city of considerable wealth. "There is no coast more productive," says Idris, "over a hundred kinds of fish are found there... the tannery-fishery is particularly important." According to this geographer, coral was also abundant in these waters; worked, polished, rounded and pierced in the bazaars of Ceuta, it was exported far as Gdama and the other towns of the Sahel. Their mercantile pursuits did not however prevent the inhabitants from the pursuit of learning. "Ceuta," says al-Bakri, "has always been one of those places where the sciences have taken up their abode."

The decline of the Almohad empire brought a...
renewed period of disorder for Ceuta. The inhabi-
tants, after recognising the authority of the Hajjids for a time, submitted to the Marinids. Their alle-
giance however was rather doubtful and on several occasions they threw off the authority of the
sovereigns of Fès. Thus we find them in the reign of the Marinid Abu Tāḥuf, electing al-Aṣaff their
ruler; he finally became master of the town on condition of paying tribute to the Sultan of Fès
(1273) but was assassinated at the instigation of the al-ʿĀdib, the king of Granada. The Spanish prince on becoming
master of the town encouraged the rebellion of ʿOṯmān Abu l-ʿĀdib, a Marinid pretender, who took
up arms against the Sultan Abu Tāḥuf and on being defeated by him, took refuge in Ceuta
(1308 a.d.). Abu Tāḥuf then began the siege of the town but died before its walls; it was finally
taken by his successor Abu Rāfīʿ to whom Don
Jayme of Aragon had lent 50 ships and 1000
horsemen. There was another attempt in 1316 by
the citizens of Ceuta to restore ʿAṣaff to power.
This was put down with great vigour by the Sultan
Abū ʿAbd Allāh, who built a fortress called Afrag
on the highest point of the peninsula to keep the
inhabitants under control. A son of Abū ʿAbd Allāh,
named Mūsā, however landed at Contans in 1326
and on landing was proclaimed Sultan. The
king of Granada who had supported this pretender
seized the opportunity to place a garrison in Ceuta.
A Marinid army blockaded the town but was
scattered by Abu l-ʿAbīs, a new pretender. The
latter finally became lord of Morocco and did not
hand Ceuta over to the king of Granada (1387 a.d.).
The Marinids did not long hold Ceuta, which they
had then acquired from the Moors of Spain.
They were soon supplanted by the Christians. In
1415, João I, King of Portugal, sent an expedition
against Ceuta. The Christian fleet after being
scattered on the voyage by a storm, succeeded in
entering the harbour on the 14th August.
The Portuguese took the town in spite of the vigorous
resistance of Kābd ʿAbīl, who commanded it, and
installed a garrison there under Don Pedro de
Meneses. In 1421, Ceuta was constituted a bishopric.
As a result of their failure before Tangier (1437)
however, the Portuguese signed a treaty by which they
agreed to restore Ceuta to the Muhammadans.
This agreement was not however ratified by the
Corres and the place remained in the power of
the Portuguese at the price of the liberty of the
Infant Don Fernando who had been left as a
hostage and died in captivity.

The annexation of Portugal in 1580 by Philip
II transferred Ceuta to the Spaniards. They retained
it after Portugal had regained its independence
and had their right to it recognised by the treaty
of Lisbon (1668). It was only with the greatest
difficulty that they were able to maintain their
position there. They had to resist the attacks of
Mūsā, ʿAbīl who had set himself to drive the
Christians out of all the points they occupied on the
Moroccan coast. After informing the governor
Don Francisco Varino of his intention of recon-
quering Ceuta, the Shīrīf laid siege to the town
with an army of 30,000 men. He laid out a
fortified camp and blockaded the place closely;
the garrison consisted only of 600 infantry, 80
cavalry and 120 ecclesiastics. The siege lasted five
years (1693–1721). Occupied with the war of
the Spanish Succession, the Spaniards were too
busy to attend to the course of events in Africa
and did nothing to help the beleaguered city. In
the meanwhile, the English who had taken Gibraltar
in 1705, had tried without success to occupy Ceuta
in order to hold both keys of the Strait. Finally,
in 1721 the Marqués de Lérez was sent to Africa
with reinforcements, dislodged the Moors from
their positions and drove them back to the Sierra
Bullones. Some years later the Shīrīf Muḥammad
Abū Allāh made another attempt to take Ceuta. The
Spanish suggested, it is said, of the renegade Ripperda, was put to flight.

The Spaniards thus remained in possession of
the town, but throughout the xviii century they
were constantly attacked by the neighbouring tribes.
To put an end to this state of affairs, the Hispano-
Moroccan treaties of 1782 and 1799 granted to
Spain a strip of land around the town, a measure
which did not however prevent further depredations
by the natives which the Mahbūr was neither
willing nor able to prevent. Napoleon's intervention
in Spain seemed at first to deprive the Spaniards
of Ceuta. The English, fearing that the Shīrīf
would seek to profit by the occasion to retake Ceuta and considering that this town "ought to be
preserved", occupied it from 1810 to 1814
when the "famine" in Spain was at its height it
was replaced in possession of Ceuta, continued to
suffer from the aggressions of the native tribes,
particularly the Andalucia. The treaty of Laarache
(1845) did not succeed in improving the situation.
Hostilities continued and the destruction by the
Andalucia of the defences erected by the Spaniards
near the town brought about the Hispano-Moorish
war of 1859-1860. It was an Andalusian that the Spanish
troops were concentrated before marching on Te-
mania and it was around Ceuta (on the Serrano
Plateau) that the first fighting in the campaign
took place (August—November 1849). By the
treaties of Real Rás and Tetwān, Spain received
an extension of the territory of Ceuta, which now
stretched from the sea to the ravine of Andalucia
in the Sierra Bullones, a distance of about 9 miles.

CEYLON, an island off the southern
extremity of the Indian peninsula,
situated between 5° 55' and 9° 51' N. and between
70° 41' and 81° 54' E., with an area of 25,485
square miles. The population in 1911 amounted
to 3,592,397 of whom 276,361 were Muhamma-
dans; of these the majority (260,454) are styled
Moors or Moormen, and either claim descent from
Arab immigrants who intermarried with the women
of the country and made converts from among
the inhabitants, or are Indian traders who visit
the island from the peninsula; the rest are Malays,
chiefly descended from soldiers and labourers in-
troduced into the island by the Dutch from Java
and Sumatra; there are also a few Afghans and
other Muhammadan settlers.

Ceylon was early known to the Arabs on
account of its pearl-fisheries and trade in precious
stones and spices, and Arab merchants had formed
commercial establishments there centuries before
the rise of Ceylon; Local tradition represents the
first Muslim settlement to have been made by
done Arabs who were sent into punishment by
Muhammad as a punishment for their cowardice.
at the battle of Uljat. There is of course no historical basis for this legend; but the commercial importance of Ceylon must have caused the knowledge of it to have become known in the Muslim empire at an early period. From the IIIrd cent. of the Hijra onwards mention of Ceylon is frequent in the works of geographers; it is referred to several times by Ibn Khurdadbeh (about 270 A. H.) in his Kitab as-sulalat wa'lamamalih (Bibl. geogr. arab., vi., 63-70), (the oldest work of Arab geography that has come down to us); under the name Sarandib, a corruption of the Sanskrit Sinhala-stiptra. Sarandib is also employed in a narrower sense to denote only that district in which Adam's Peak is situated, in which case the island as a whole is called Siyalun (al-Kazwini, Kitab al-mukhtasir, ed. Wilhlemfeld, I., 112; Ibn Battûta, iv., 105, 179). The name Sahidun is found in al-Dacch al-Hind (Algèrs s. v.); and Ibn Rustah, besides Sarandib, knows the Greek name of the island, which he writes Taphelotin (Tâphelotin), (Bibl. geogr. arab., vii., 84, 134.)

Adam's Peak, (a prominent mountain 7420 feet high), is well-known throughout the Muhammadan world, and was on earth touched by the foot of Adam when God drove him out of Paradise (al-Taharî, l., 121); the spices that grow on the island are said to have sprung from the loaves of bread that Adam was allowed to carry away with him from Paradise (id. 115-120). The print of his foot as a rock at the summit of the mountain is a place of pilgrimage for Muslims, as well as for Buddhists and Christians (Ibn Batûtah, iv., 182-183).

The Arab merchants were undisputed masters of the trade of the island until the appearance of the Portuguese in the Indian seas early in the XVIth cent. It was the Portuguese who first called them Moors and the name has been commonly applied to them since. The rising power of the Arab merchants and their descendants was checked by the Portuguese, and by the Dutch as well, when they succeeded them in the possession of Ceylon (1658); they were forbidden to hold lands and attempts were made to suppress the public exercise of their religion. The British who occupied the island in 1796 were slow to abandon the restrictive policy of their predecessors, and it was not until 1853 that the Moors were allowed to own lands in Ceylon.

As a British crown colony, Ceylon is administered by a governor assisted by an executive and a legislative council. One of the members of this legislative council represents the Moslems. The Moslems are mostly engaged in petty trade as shopkeepers and peddlars, or are boatmen, fishermen or coolies; a small section of them are agriculturists. They speak Tamil, with an admixture of Arabic words. The only portions of Muhammadan law in force in Ceylon are those contained in the Code adopted by the Governor in Council on the 5th August, 1806; this includes Muhammadan law so far as it has been specially introduced into the island, either by express legislation or by ancient and continuous custom; when the Code of 1806 is silent on any point, resort is had to the Common Law of Ceylon.

CHINA.

The Muhammadans of China fall into two main ethnic groups: Turks and Chinese, who again may be considerably subdivided. On the Turks of China see the article TURKISH PEOPLES. In this article the Turks will only be dealt with in so far as they have had a share in the development of Chinese Islam. China in this article is the land of the eighteen Provinces.

I. HISTORICAL AND GEOGRAPHICAL SECTION.

The intercourse of the pre-Islamic world with China was based almost exclusively on the silk-trade; in fact the usual words for silk in Western Asia and Europe are probably only corruptions of the Chinese shîr or sîr. In Western Asia this trade was in the hands of the Persians who were at the same time consumers. The Turks, their neighbours in the western lands of Eastern Asia on the borders of the Chinese Empire, were the carriers of silk and other articles of commerce between China and Western Asia. Some two hundred years before the dawn of Islam, these commercial Turks tried to make a change in the trade route, as they wished to get into direct communication with the great trade routes of Persia. The negotiations between the Emperor of Byzantium and Dizakobul, the Khân of the Turks, did not however lead to anything of importance (Menander Prokhebas gives the history of the embassies with the report of Zenarch). At the dawn of Islam the old state of affairs still remained; almost nothing was known on this side of the Tienshen of the wonderful land from which came silks and other articles made by cunning hands, for the goods were only carried by the Chinese as far as the borders of their kingdom; there they were taken over by the people of the Turin basin who were in the main Turks (with a few Persian colonists). It is most probable that Persians attended to the actual purchase of the goods in China, and of course the important testimony on this point in Hirth, M. Sia, Berlin 1, with documents granting foreign merchant permission to import certain goods into Chinese markets) and that they employed Turks as carriers.

We have numerous accounts of the relations of the Muhammadan world with China, which in part...
prove to be very accurate. Those sources have not as yet been treated in a critical fashion. To the Arab geographers, especially, is the land of the unknown and mysterious, into which only the boldest may venture. It must be noted that even in the oldest Arab geographers, who deal with China, that China has survived to us, the connection of South and North China is known while in earlier times an absolute disconnection was made between the land of the Seres and that of the Siniae; it is one and the same land whose countries are named in the Indian Ocean (Biblical Etiopia, *Bagh o-Husul, q. v.*) and whose mountains are connected with the mountains of Parthia and their continuation; so we are told by Bahlit in *Kifri o Hadd* and Ibn Hawik (sea-counts, p. 405, 1913; mountains, p. 109, 249). What the tradition of the Muslims of China itself tells us about the earliest intercourse, is worthless and erroneous, although it is strewed in numerous manuscripts in stone. It deals with the famous companion of the Prophet Sa'd ibn Abi Waqqas, whom it makes a maternal uncle of Muhammad and whose grave in Cantian is revered, although he really never came to China (Thienart mentions the name Wahb Abi Kalâsah in addition to Sa'd ibn Abi Waqqas without sufficient authority). Broomhall, p. 75, refers to the bringing of Islam to China by land and sea (Kamal) by Arab envoy and the exchange of 3000 Arab and Chinese soldiers as a result of a dream of the Emperor Tai Tsung (607—650 A.D.). These legends have been collected by Thienart and more critically by Deyver, *Origines*. The oldest document on the beginnings of Islam in China is a note in the chief Mosques of Sungard, which promises to have been erected in the first year of Tien-Pao i.e., according to Broomhall, p. 86, in 722 A.D. According to this, Islam must have been known in China under the Emperor Tsai-Huang of the Sai dynasty (581—608 A.D.). Equally impossible dates for the introduction into China of Islam are given in other places also. (Broomhall's explanation of the puzzle is that in 723 = 1531, when a new chronological system was proposed, the 753 years were assumed to be Chinese i.e., solar years, so that all dates were thus put back about 23 or 24 years.) In any case the inscription is a palpable forgery, it was probably erected when the mosque was repaired, possibly at the revolts under taken by Sai Tien-chih (Sauly Alygal, see below). The Chinese official tradition found in the dynamic histories is not much more reliable than that of Chinese Islam. These also are full of legendary matter, profusely influenced by national pride and complais with the usual Chinese lack of critical judgement; nevertheless they must not be entirely neglected as they contain a few geographical and linguistic data. I would particularly call attention to the fact that in the older Chinese literature the Muslims are always called—to-dish i.e., T'aish (taishik is the Middle Persian form of the modern Persian tazi; it is the Persianized form of the Aramaic tazi, properly *Arab of the tribe of Taiz*. The change in meaning is explained by the fact that since the Muhammedan To was regarded by our body of Persians as the progeny and type of the Arab world, their name was extended to all Arabs and thus came to mean: *Arab* or *Muslim*. Later they learned to distinguish more accurately between various branches of Muhammedans and *fadak* again became limited to the To in question and was applied to the Muslim inhabitants of North-East Persia on the modern Tadjik of the Pamirs see *Jaul in the Grundriis der Iran. Phil.*, H. 401 et seq., with an erroneous derivation of the name from *fadak, a crounlike headgear*. Our Arabic sources are much better. We have such splendid works as Tibli's history, which gives us all the material available in his time about the countries we do not know about ourselves; it is improbable that any important notices from older times have escaped him. The Arabic sources afford a check on the Chinese, which we cannot afford to neglect; they are quite silent regarding the legends handed down by the traditions of Chinese Islam.

The Arab geographers are of particular importance. While no exact definition of the locality of China or its chief towns is given by the historians, the geographers by the very nature of their works have to give this information. Striking differences are found when one compares the different authors, according to the views prevailing when they wrote. Particularly striking is the utter disagreement between the statements of Ibn Rusta (who wrote his *Alkif o Alif o Kifri o Nafin* about 950 = 932) and Mas'udi (who wrote his *genius, this personal work* in 745—756). According to the Kusta (p. 96, et seq.), the first climae begin in the East in the hands of the farthest borders of China, pass over China, thence over the coast lands in the south of the land of Silk etc.; the second climae begin (p. 96, et seq.) in the east, pass over China, thence over India and thence to the hand of Silk etc.; the third climae (p. 97, et seq.) begin in the west with the Turanian, pass over Northern China, thence over India etc.; that is the first station of the fourth climae (p. 97, et seq.); the fifth climae begin in the land of Vaidjär, in the East (p. 98, et seq.) and passes immediately into Northern Khurasan; the sixth climae begin in the land of Madjäd and passes over the land of the Khazars, the seventh climae (p. 98, et seq.) begin in the east with the Turanian, passes over the land of the Turks, the coast lands of the Caspian Sea etc.; Ibn Rusta adds (p. 98, et seq.): "what lies behind these climae, in addition to the inhabited areas enumerated by us, begins in the east with the land of Vaidjär, then passes over the land of the Toghuquin (this name appears at Tugumghun in the old Turkish inscriptions of Mongolia, cf. my *Zur Geschichte der Turken; Oriental. Lit. Zeitung, 1908*, col. 293; *teghughun* should also be read in the Arabic texts, cf. the article *tegughun* and the land of the Turks, then over the land of the Alans, then over the Abars (the land of the Aware), then over the Baidjii (the land of the Bulghars) and the Shahlaks (the land of the Slaves) and ends in the Western Ocean". It is clear from this sketch that Ibn Rusta and his contemporaries only knew of South China, which was called *shen* to them, China is a country by the sea, and so he speaks (p. 83, et seq.) of the Sea of the Indians, Persians and Chinese (the sea is properly only "people of China", but it is used even without "bolfor" for "China"). When he says (p. 87, et seq.): "The Sea of the Indians is bounded on the west side (at the beginning) by the steppe (enlarged by me on the analogy of the land) by the land of the Cimranaks, the at the end by China and is bounded on the east side at the beginning by the Gulf of *Aden*, at the end by
Jara, he evidently means that the Indian Ocean is divided into an Eastern and a Western section, the first of which ends on the one side at the island of Tamukrān (behind that there must of course still be water, but this is no longer the Sea of the Indians) and on the other at China, which is a vast expanse of land reaching in the north to the land of Tibet in the fourth clique and to the land of Yāṣādī and Māḍīṣada in the fifth to seventh cliques. Characteristic of Ibn Rusta’s views is also the statement (p. 582) that the sea on which one sails from Bajra to China is one sea and one water reaching to China; in which India also is situated; it was however thought that there were really seven seas, each of which had its characteristic features, such as different winds, different taste, different colour and different animals; on this opinion cf. Mas’ūdī, l. 325 et seq., where it is stated that the sea is one but is to be navigated in different ways in different parts (this point is not raised on p. 88, 11 et seq., where probably al-sabāḥ should be read for al-far). Ibn Rusta unconcernedly makes another land adjoin China; Japan and Korea; he says p. 88, 17, 83: *Every Muslim who enters a land at the end of China, which is called al-Sīra and where there is much water. Never to return again from it*, we are also told elsewhere of Muslims who had come to al-Sīra.

Mas’ūdī is better informed; though there are many confusions in his account of the cliques (p. 32 et seq.), it is in the main based on a knowledge of the northern situation of China; according to the general view (p. 31 et seq.) the sixth clique is particularly associated with Vigādī and Māḍīṣada and the seventh with the Māndānāī (1) and the Chinese; on the other hand we find the other view manifesting itself on p. 26, et seq., where China and Japan are regarded as the last inhabited areas in the east; the farthest outposts of civilization in the east are the frontiers of China and al-Sīra (Japan) up to where they end in the wall of Vigādī and Māḍīṣada, which Alexander built, and which Mas’ūdī refers to in p. 336—477, which which the wall runs; Vigādī and Māḍīṣada used to sweep down on the plains from there; the beginning of this wall is outside the habitable region in the seventh clique; it then takes a southward direction and runs right along till it finally reaches the Dark Ocean. (The notices of the fabulous wall against the eastern Barbarians have been collected by de Goeje in his De Muro non Goe in Maceg.) Mas’ūdī also knows that India and China are once another; *thither go ships of the Muslims who on the voyage thither and to Djidja and al-Kulūm are attacked by the pirates of the land of Sind, called Almajī, on harwarī, which are like the dhariani of the Mediterranean* (p. 335, et seq.). Mas’ūdī gives more information about China in his Warr al-ʿIrān al-Mānī (336 = 947), rewritten 345 = 955). There was no longer a direct connexion by sea in his time but ships came either from side to Galla (Point de Galle) which was almost the halfway point, from which Chinese ships sailed to Khindā (Canton). In olden times it was otherwise, when the Chinese ships sailed to the land of Omāra, to Strīf, the coasts of Fīrāq and Fāriq, to O ṣārān and Bajra and ships from these places likewise reached the East of China; it was only after justice could no longer he relied on and the above described state of affairs in China had come about that they began to meet at this intermediate point* (l. 308). The journey was actually undertaken by the Porte temporarily in pursuit of Mas’ūdī, a merchant of Samarkand, whose experiences Mas’ūdī gives (l. 307—318) while a Ṣūrāf in the time of the Slave Revolt in Bajra (889—879) sailed from Bajra to India, thence proceeded partly by water and partly by land to China and landed at Khinf in which he visited the Emperor in his residence Khindānī (905). In l. 303, Khinf (this is the correct reading in place of the ṣafīqa of the text) is also mentioned as an important commercial town up to which ships from Bajra, ‘Urmān, Strīf, the towns of India, the islands of al-Ẓāhādī and Sīrīf sail from the mouth of the river, some six or seven days’ journey distant. At an earlier period Chinese ships came as far as Nomāj; at least so says Mas’ūdī l. 216: *the great bulk of the water of the Euphrates used to flow into the land of Hira; the ancient bed called al-ṣafīra, on which was fought the battle of Kāshāya, is still visible; it flowed into the Armenian Sea (i.e. the Indian Ocean; it is evidently the Pulkos, which is referred to) in those days the sea came up to the place which is now known as al-Nāṣr and ships from India and the rich cities of the Euphrates, for the Kings of Hira’s, Renew, Relations, p. xxx, do not give this passage quite correctly; there is nothing in Mas’ūdī about a period other than that of the battle of Kāshāya. Nor ought Renew to have added Huma al-jalāfsānī (p. 102) as evidence for the presence of Chinese ships at Hira; for he only says: *Hira was then the coast region (ṣafīra is not the sandbank) of the Euphrates for the sea (read aṣbah in place of al-farash which Gūttauwī thoughtlessly transcribed; this error in copying is explained by the al-farash which appeared immediately before); then stretched far into the land (literally, was situated nearer on the northern border of the lowlying coast lands of Babylonia) and even reached as far as Nadir*. This fanciful distortion of the meaning has led Richthofen to the following erroneous statement even as the authors of their travels.

*According to the testimony of Mas’ūdī and Huma al-jalāfsānī Chinese ships used to anchor every year (!) beside ships from India before the houses of Hira*.

The roads leading to China have been most fully described by the oldest Arab geographer who has survived to us, Ibn Khundīfīn, who held the office of chief superintendent of roads (died 335 = 949) in his Kitāb al-muḥāazzat wa l-Mawādīh composed in 322 = 934. According to his relations with China were principally maintained by sea and his account of the ports of South China is surprisingly thorough. After giving the route of the traveller to China from Bajra to al-Ṣafīf on the coast, three days’ journey from Khindā, he continues (l. 69, et seq.): *from Khindā to Kāshāya (336 = 947) is the first harbour in China, is 100 fathoms (1 fathom = 4 miles) by land and water from Lāṭūn to Khinf, which is the largest port, is a journey of four days by sea and of twenty days by land from Kāshāya to Kāshāya is an eight-days’ journey; from Kāshāya to Kāshāya is a journey of twenty days, wavy harbour of China has a large river which the ships sail into; there is ebb and flow of the tide there; the length of China along the coast from Arnāūlī to the end
of the land is a journey of two months. There are 300 flourishing towns in China, ninety of which are particularly renowned; the [northern] frontier of China runs from the sea to Tibet and the land of the Turks, in the west to India; to the east, China is the land of the Phenicians, and there is gold. . . . (p. 76, et seq.). At the end of China opposite Khurasan, there are many mountains and many kings, this is the land of Al-Suf; there there is much gold; the Muslims who enter this land settle in it on account of its attractions (cf. the account of Ibn Rusta, p. 841 above); it is not known what lies beyond. The whole route from Ceylun to Kānūn is dismissed by Spranger in his _Port. und Reisereise_, p. 82, et seq. (on the route to Ceylun it should be noted that "the harbour between Omau and China" is not a place called Kila, to be identified with the town of Malakka, but Galla, which still survives in Point de Galle, cf. p. 841 above). Al-Suf (Tashan) he identifies (with Reinhard and Peschel) with Tabilunga i.e. South Cochin-China and locates in it the mouth of the River Songkoi. As to the latter part of the route, all has been altered by the critical edition of Ibn Khurdādhbih in the Bibl. geogr. arab., vii. The following points are certain: Khānāūn, which is undoubtedly Canton, and Kānūn, in which we readily recognise the Khanāūn of Ibn Rusta; this latter is clearly Hang-chou (that hang formerly appeared as jūn and later as shōn is not doubted; for the corruption of jūn to shōn (shūn) we may perhaps compare the pī for pier in my Chineisch-Arabische Glossar, p. 885). I would identify Khānāūn as Ch'ān-chou, and suppose Khānāūn to be a corrupt's mistake for Qānūn; this would agree with the distance and we would then have evidence of the existence of Zalme, afterwards so important, in this period (cf. p. 843).)

Ibn Khurdādhbih was however also acquainted with the land-routes to China. He only briefly describes the route followed by the Jewish merchants of Rāhāna in connection with the route followed by them by sea from the land of the Franks (Mediterranean — al-Pāram) — they carried their goods on their backs over the isthmus to al-Kalām (= Suez) (p. 155, et seq.). Beyond Rāhāna into the lands of the Sinars, the town of the Khānāūn, then across the Caspian Sea, then to Balkh and Transoxiana, then to the Caspian (i.e. yezd = land) of the Toghuqzou and thence to China. It is much more detailed in describing the roads which lead from Transoxiana to the east, and gives a vivid picture of a journey by the main route from the lands of the west to the east (p. 178 et seq.). At the end on the upper course of the Oxus where it separates the Pamirs from Tekkāhān (Balakhān), the Turks used to wait on the Pamir side and watch for foreign merchants appearing and signalling to them on the summit of the mountains opposite; they crossed the river and brought back the strangers and their goods to set them on their journey again to China or to India; he describes in thrilling detail how these merchant caravans travelled through the great deserts of rocks, where no path was visible; this agrees pretty closely with what modern travellers tell us about the Pamir districts Darwīz and Shugnān, which is the locality referred to by Ibn Khurdādhbih; even the name has survived, for we may easily recognise Shugnān in the Sahābūn of Ibn Khurdādhbih (p. 179) who calls this part of the district Sahābūn (p. 178, et seq.). Ibn Khurdādhbih also gives the name of the district in the form Sahābūn (p. 37, et seq.) Perhaps we also have al-Shakūn in the al-Shakūn of Iskākī, p. 290 (de Goeje proposed to read al-Shakūn, Bibl. geogr. arab., iv, 425). Al-Bīrūnī mentions a Shāhīn Shāh as the prince of Shugnān (India, p. 101, et seq.). The Chinese transcribe the name Shāhīn, see Yule in the Journ. of the Roy. As. Soc., xl, 97, et seq. When Ibn Khurdādhbih calls the Shāhīn Turks the Sīkh Tārūkh (p. 178), al-Turk al-Shakūn = yusuf al-Shakūn (Shāhīn), he is using the name in a very general sense; the inhabitants of Shugnān as well as all of the whole of the rest of Tekkāhān were certainly Aryans and probably spoke the same dialect (Shāhīn) as they do at the present day. He was probably dealing with the road over the Barogli Pass and the Wakhdīr Pass, on which see my Chineisch turc. Reise, p. 61 et seq. Ibn Khurdādhbih's account makes it quite clear how distinctly the difference between China and the land of the Turks was understood in his time. This is all the more remarkable, as in his time the influence of China in the Turkish lands between China proper and the Tien-San was not inconsiderable; the Khānas and the lesser Turkish princes were regarded by China as its clients and they certainly never hesitated to put themselves under the protection of the Chinese Fugghir (on this word which Neumann first recognised as fūghur = Son of Heaven Fūghur) see Yule, Cathay, i, 331, note 2) when it was to their advantage, for example, when they had to defend themselves against vigorous attacks from the Muslim world. Probably also the Turkish princes used occasionally to come as Chinese to the Muslims. Through intercourse with the harbours of China, the Muslims were well enough acquainted with the characteristics of the Chinese to understand the differences between them and the Turks. The division of the earth into four continents by Ibn Khurdādhbih is characteristic, (p. 155): Asia = Europe, Lābīya = Africa, Iqīqīya = Ethiopia with Tihāna, Vardīna = India and China. But with this account, Asia = Europe, Lābīya = Africa, Iqīqīya = Ethiopia, China and India as described by Ibn Khurdādhbih in his Ahdār al-Sin wa' Allah (the older literature on the subject is discussed by Yule in his Cathay and the Way Thither, i, et seq.). Though the first part of this work is merely a repetition of the notes compiled in 851 by Sulaimān the merchant (Reinard, ii, 61) supplemented from Ahdār's own materials, the second part deals with the changes that had taken place in commerce by sea, in their relation to history and gives the narrative of the Kuraqas Ibn Wahh (of the clan of Khāna). This narrative is of the geographical importance that only two towns are fully dealt with, i.e. Khāna, which has just been discussed above and shown to be Canton, and Khānāūn (= Khānah = Emperor = Tang *court*) the capital of the kingdom, Shugnān, which Ibn Wahh visited. In the Relations, Khāna is the great centre of trade between the Arabs (the word is of course not to be taken literally, but means Muslims generally) and the Chinese; on account of the frequent fires and
shipwrecks, the goods exposed were not numerous, however; trade was also seriously hampered by piracy (ii. 12); Sulaimān is quoted for the statement that a Muslim was appointed law-giver to the Mughamadan colony by the King of China; this judge was also Imām and prayed for the Caliph. His decisions were universally respected (ii. 13). The voyage from the Gulf to Khānāfūl was made in fresh water (ii. 19); the Chinese governor of Khānāfūl bore the title Ḍīfūl (ii. 37); the revolt of this Tangūra was a consular period in the history of Khānāfūl; he attacked the town which lay in the interior, a few days' journey from the coast, on a large river; this was in 263 = 878; after the capture of the town by the rebels over 120,000 souls perished from among the foreigners alone, Muslims, Christians, Jews and Magians (ii. 63 et seq.). It was possibly this blow to Khānāfūl which brought Chūn-chou, the nearest commercial town to the north, to the front. Lastly Abd al-Zād tells of a native of Ḍūrān who came with his wares to Khānāfūl and from there visited the capital Khānādn, more than two months journey distant (i. 106 et seq.).

It is not till a later period that the seaport of Suchitan appears in Arabic literature, probably for the first time, in 1384, in the statement of Abu l-'Fida'ī (p. 365, trans. ii. 124) has been utilised, along with those of one who had been there, probably a fellow countryman and subject. It is next described by Ibn Baṣṭān (iv. 268 et seq.), who first stepped ashore on Chinese soil at Suchitan and made it his centre for his journeys into the interior. The identity of Suchitan with Chūn-chou-flu is suggested long ago by Martini and Delougazer and established in the learned note α to chap. lxxii. of the Yale-Cordier edition of Marco Polo (Book of Ser Marco Polo, ii. 327 et seq.). We now have a record in stone from Chūn-chou, which proves the existence of a mosque there in 1010, if we may trust the inscription of 1010 which professes to be a renewal of an older one of 929 (see van Berchem in Ts'oung Pao, xii. (1911) p. 704 et seq.). At Suchitan as "identical with Shādūlī" (note the i, which appears to be the u of ch'uan) points to the fact that the town was known in the West in its time by its Chinese name (of which I suppose Suchitan to be a corruption: siau or shi is a corruption of ch'uan, and shāf was added, thus making a word familiar to every Muslim from Korān, xlv. 1). I must point out here that Abu l-'Fida'ī's other statements on China show some confusion; he mixes up Canton and Hing-chou-flu, as his al-bālāwī (identical with Khānāfūl) shows (see above p. 342). He only mentions Khānādn and Ḍīfūl in his *notes* and is not aware that his Khānāfūl (ii. 12 et seq.) confuses two quite different towns, viz.: Ḍīfūl in the north (as Pekhkon, cf. Ibn Baṣān's account on p. 845 et seq.) and Canton in the south, which should really be called Khānāfūl.

Lastly, must be mentioned the description of the land route connecting Ts'oung Pao with China which is given in a work by Abu Sa'id Abd al-Hajy Ibn Dāḥūk Gardizī (Margart, Streifzüge, i. 379 et seq.), but see Rieu, Car. Port., Brit. Mus. 10, p. 104, and above p. 891 et seq. (Tishāhād Nādrī, p. 901). The importance of which has been reconnoitred by Barthold who has published a portion of this author's valuable Zait al-Ākhār (composed about 1050 a.d.) in Otlet in p. ocqnlk f. Sereb'ınjui Azīj, 1653-1664, St. Petriob, 1897). Gardizi's description of China occupies pp. 92, 94-94. The most important part is the itinerary from Suchitan to Khānādn, 92, 161: Cimāndīk (i.e. Tariqah-Kara Khoja) in the land of the Tughrūghūn to Kumul, 8 days; at Bagh Shīrā (we may recognise in Shīrā, the Persian Shīrāf "garden"; the word Shīrā is probably identical with the turā which frequently appears in Turkish names); the river has to be crossed by boat; thence it is 7 days' journey across the steppes, which has springs of pasture, to Shāfān (Shīfān, on maps usually Salnūq, Sanūq), 30 days. In Relig. in Westasia, ii. 159, note 5, "Sucha-čou (Sucha-čou)" with the remark that the town was called Dan-čou (Tung-huan) down to the beginning of the 18th century: at the present day the road goes by Am-sai-flu, N.E. of Shīfān; thence three days to a rocky desert (tengfāndī); thence 7 days to Suchītān (Tsucha-čou); the river is a corruption of an old pronunciation which we find in the form sufiin ("74 days from Kandahār in Kān-čou") in Abu l-'Fida'ī (p. 366, trans. ii. 125). Thence 3 days to Khānādn (Kūn-čou, the modern capital of Western Kansu, Kān-čou in Abu l-'Fida'ī); thence 8 days to Kūn-čou (Kūn-čou, i.e. Singanfu; for the total of days travelled is 43); there are good rest-houses at the stations on the road. There is still much that is not clear in this record; but some stations can be identified. This road was certainly always the main route by land from China to the west. It appears that the Mongol Emperors, when setting out from their residence at Kanakurum to the lands in the west, used to take the road to the north of the Tien Shan to Bishāblīk (which can no longer be identified with Urumi but is to be located 6 miles north of Tsi-mu-sa; see Barthold in the article Bishāblīk, i. 728); Alīnīk (Wjariyā), Tales, Sanār and Tashkend (see Bremer's, ed. of全镇巡, part 4, cf. my Islam. Orient, l. 84). Although we have during the Mongol period we hear of a great deal of traffic on the great roads of Central Asia, it must not be assumed that this is evidence of great commercial activity. It is almost entirely military movements that are referred to; commerce certainly declined when anarchy and lawlessness became rampant everywhere in the state into which the Mongol Empire had been broken up.

The above analysis of the accounts of the land of China by Mulmādan writers will facilitate the investigation of the history of Islām in China. For the older period our investigation must be undertaken in two quite separate fields. The two routes by which Islam came to China were quite different in character and led to quite different parts of the country, that route, which led into Northern China, brought Islam into the western parts of the northern kingdom only and did not send out colonies to the coast; the route by sea ran along the coast of China as far as Kūn-čou (i.e. Hing-chou-flu, cf. p. 342) founding colonies everywhere, which carefully avoided any attempt to advance into the interior. This is one of the features of the advance of Islam; when it came by water, it remained on the coast, and
when it came by land, it remained in the interior. Islam has as a rule been afraid of the sea; from the very beginning it was impressed with a sense of the supremacy of the unbelievers on the ocean and made practically no efforts to dispute their dominion. When we do find Muhammadans undertaking naval expeditions, they were almost always driven by the attacks of Byzantium, for example, from the sea failed. It was not till the Mongol period that Islam began to advance through the interior of China, indeed one might almost say that but for the Yuan dynasty the conversion to Islam of large tracts of the interior of China would have been impossible, for it was the first to break away from the policy of splendid isolation.

The advance of Islam by sea was, one might say, an automatic process. As soon as the Muslims had conquered South Babylonia, and the principal towns on the Persian Gulf, they found themselves forced to carry on the seafaring traditions of those lands unless they wished to leave their newly won positions unprotected. There was naturally no immediate change in the management and meaning of ships, such as a rule they seem to have continued as before. If the experienced old sailors would not adopt the new religion, men to take their place were found among their countrymen. It must not be imagined that the Arabs had taken up navigation; the Arab proper, i.e., the inhabitants of the Hijaz and the Syrian steppe were quite useless as sailors. The crews of the ships must have been recruited from the peoples of the South Arabian coast and the Persian Gulf. (We may perhaps find evidence of the dependence of the Persian element in the fact that in the older Arabic literature the word for "captain of a ship" is شاهزاده, see Vallers, Lex. Pers., s. v., and Dorsey, Supplement.) There was nothing against seafaring in the teaching of Muhammad; on the contrary, the almost reverential mention of the ships which God causes to sail upon the sea (Koran, x. 25) might rather have encouraged it. The advance of Islam by land was governed by other motives than its expansion by sea. The primary cause in this case was the divine command: "Fight the unbelievers till ye are victorious over them," in the interest of the safety of the border hordes and the commercial instincts of the townsmen of the Hijaz. There were practically no limits to the movement thus set up; as soon as one unfed people had been subjected, another was discovered beyond them which had also to be converted or conquered. This process continued till some insuperable obstacle stood in the way. The economic side of the movement was not systematically developed in the Arabic period. Under the influence of the ideals of Arab nationalism, a system of Arab colonization was pursued, which though not deliberate, proved highly effective; from its earnest convictions and the necessity for expansion, but the lack of a sound system of political economy among the Arabs, and their ignorance of the organization of capital, with the unbridled individualism of the time, are the causes which prevented them reaching a dominating position in the world's commerce.

On the other hand, after the fall of the Arab kingdom and the union of all intellectual and economic forces in the Iraq, we may certainly speak of an Islamic Capitalism, which took advantage of the conquests of the Muslim hosts with the greatest energy, deliberateness and penetration, so as to secure a footing everywhere, at the same time facilitating the advance of the inner regions of Islam by assuring that their posterity would find co-religionists everywhere. Of course, when unusually difficult physical conditions made advance practically impossible or where a strong hostile power, continuous of the danger threatening it, sought to prevent systematically the entrance of any Muslim element whatever, even the keenest business man could not do. This was the case with China and her outlet province of Sinkiang, which lay between Trasianoa and the entrance to China in Western Kansu (Yü-nan-hsien); long after Transoxania had been conquered, the towering mountain wall of the Tianshan in the east continued to form an obstacle to more lively commercial intercourse. The desire to exchange certain wares from the Far East for others from the lands of Islam, however, had always forced a few enterprising traders to surmount the obstacles; this was done even in ancient times and Islam merely took up the heritage on entering these lands. The hostile collisions of Islam with the Great Power of the East and its vassals interrupted this traffic for a brief period only; and in the long run they appear rather to have stimulated it. We saw above (p. 840) the tremendous difficulties of the journey through these mountain passes which were overcome by the Chinese with the help of the Turks just as they are at the present day by bold and experienced travellers, and the second great obstacle was not so easily vanquished with, the resistance offered to everything foreign by the cautious Chinese government; for travellers were wholly dependent on the mediation of the people of that immense land which separated them from the gates of China proper. These Turks were half Chinese; they knew exactly how to deal with their Chinese masters; they alone understood the web of subterfuges and tricks, thousands of years old, with which the worthy Chinese bureaucrat eradicated the regulations for the exclusion of foreigners. This was not however calculated to change Muslim traders as their Turkish friends were very unreliable allies and the stranger was not safe from attacks on his life or property while among them nor even when he had reached China, the goal of his journey; nowhere could he hope to get justice. A better state of affairs came about when the great Uighur kingdom arose, a clearer view of whose history we may now obtain from the German excavations in Kara-Khojohn (the ancient capital Khojent) near Turfan. We now know that from about 866 a. d. to the Mongol invasion there was a powerful kingdom here which afforded protection to all civilisations and whose Buddhist, Christian and Muhammadan priests were allowed to expend their doctrines and propagate them in writing also. Confidence in the administration of justice, the rule of a strong arm from Peking to the heart of Transoxania and of a powerful and intelligent government which understood the requirements of commerce had finally been established when Chinghis Khan with his body of Mongol and Turkish followers, which rapidly swelled into an avalanche, made his first decisive advances on east and west from his home Karakorum in the Northern Mongolia. It seems that at the beginning of the XIII. century, that is, just before the fall of the Mongol power, the overland traffic had attained...
special importance because the princes of Hormuz and Kish at the entrance to the Persian Gulf were then fighting for supremacy at sea and severely harassing foreign trading-vessels. The seaborne trade did not, however, become permanently affected thereby. The sea-route for imports to China offered this immense advantage, that the official supervision of commerce in the Chinese ports was in the hands of the officials of the expansion of trade, whose business it was and who possessed a regular routine. There was also the political situation to be considered: the rule of the Mongols (Yuan Dynasty 1260-1368) who were favourable to the influx of Muslims. It may be presumed that the participation of Muhammadans in the sea-trade with China reached its zenith about the time when Vasco da Gama discovered the sea-route to India. About 150 years before this event, which was to affect such a great transference of trade, Timur had visited many Chinese seaports, in all of which he found Muslim colonies (Yale, Calcutta, ii. 477-510, has given a critical account on his journey to China; on his trustworthiness, ibid. ii. 433 et seq.; on the various places visited by him see Yale, Morea, passim; the historian in China at the same time, Ch'ien-chung-fu, from there made an excursion to Siin-siu-2en ("China of the Chinese", "Original-China") also called Jhia Koon ("great China") = Canton, and next went from Zaitun by boat to Kanjiang1u (which is perhaps only Han-jen-foo "town of the Chinese", 19 days' journey, Beilaw (Pei-wang'), Kujj, 4 days, to Khamo = Hang-chow-fl, 17 days, to Khunablik (i.e. "Khan's town") also called Khamnablik = Pekin, 64 days, and back. The discovery of the sea-route to India by the Portuguese was a heavy blow to Muhammadan trade with the Far East, and was all the more severe because the power which discovered the route was a very strong one both politically and commercially and was ready and able to take full advantage of its power at once. The coast of East Africa, the shores of the Persian Gulf, and the west coast of India were occupied by the Portuguese, and these Franks were by no means willing to recognise the right to trade in these waters as a Muslim monopoly. It was rather their intention to secure the whole of the trade for Portuguese ships. No one of the Muhammadan powers could offer effective resistance to this ambition. At this period a great shifting of the balance of power was going on in Western Asia, the Mamluk kingdom was tottering to its fall; the Oghlanli Turks, that vigorous, young race, which had made a stormy entrance into the world's history about a century before, had established its position and was able to risk an encounter with Egypt which was still a world-power and to unseat all the other small powers of Syria and the Levant. This did not directly affect Persian power as it was still very much, as the Turco-Egyptian fleet in the Red sea was not strong enough. Even at a later period the Turks were unable to harm the Portuguese. They proved themselves incapable of pursuing an effective naval policy; an end was made at Lepanto of their feeble attempt to found a great navy, and thus the Far East had been destroyed by the time Albuquerque's power in the Persian Gulf was at an end. The Dutch and, soon afterwards, the British gained control of the trade with the Far East.

In the preceding paragraphs the commercial interests have been discussed but there still remains to be treated the purely political and general cultural movements which must be dealt with in connection with the history of the advance of Islam in China.

The earliest notices of the relations of Islam with China, that are worthy of mention, are connected with the political events which followed the death of Islam. The last Sassanian king, Yazdegird III had fled to China after the decisive battle of Nihawa in 642 and sought to persuade the Emperor to take action on his behalf. His prospects seemed on the whole not favourable, as an important revolution had just been accomplished in China at this time; the Sui Dynasty had been superseded by the Tang (619-906) whose first Emperors were pursuing an energetic career of conquest. Muhammad and his successors were similarly engaged in the west. The fact that the huge mountain wall of the Tien-shan formed a barrier between these two new powers and that on the Chinese side between it and China proper lay the inhospitable Taran basin, did not prevent Muslim legend from supposing that the Prophet had entered into relationships with the distant empire. According to an oft repeated tradition (see Goldscheider, Moh. Stud., i. 220 et seq.) Muhammad issued a warning against provoking the Turks, whose name he possibly did not even know. Such stories are later inventions whose object it is to increase the prestige of the Apostle of God by crediting him with foreseeing later events. The Chinese were accustomed to hold aloof when under exceptional circumstances strangers entered their territories or when their armies would have to be sent beyond the natural frontier. They followed this policy in the case of Yazdegird. The Emperor T'ai Tsung (627-652) refused his request for help (this we may assume from Tsahari, i. 485 et seq. even if the report of the envoy is legendary; cf. i. 129). The spirit of Islam, on the other hand, urged its adherents to unprovoked aggression as soon as it seemed possible to risk it and by 715 the great general Kutha b. Musil had led an army out of the conquered Ferghana across the mountains into the adjoining land of the Turks. His campaign was unsuccessful; the comparison of the original authorities in Tsahari, i. 1275-1279, shows that his expedition did not result in the conquest of Kishkan. The story of the sending of an ambassador to the Emperor of China (Husain-Tsong 712-756) which Tsahari gives (ii. 1277 et seq.) in the traditional form adorned with well known motives, is probably historical; but we find no mention of a return embassy from the Chinese (at an earlier period Chinese ambassadors are heard of at Kishkan). The story of the embassy of Jambukha, which appears at the Sasanian court in the time of Khosrow Apošt̄arvita, see Tsahari, i. 89-90; Nosdeko, p. 167). The Muslims under the Omayyads had a good deal of indirect intercourse with China, in as much as the Kishkan of the Turks and the Yabghu (in Tsahari everywhere corrupted to Dijjōa, cf. on this reading, the kiyâpât̄i of the manuscripts and printed editions, which F. W. K. Müllerr has ingeniously recognised as the true Ephthalites), were vassals of the Emperor; the scene between Naṣir and the Yabghu on the one hand and the shad (the shad of the Orkhon inscriptions) and the shadel (probably to be compared with the Züflèb of Tchoupham, see Chavannes, Teu-
CHINA.

The Chinese, as a people, are a much more tractable race than the Persians. They have never been known to rebel against their rulers, and they are not prone to the vices of the Persians, such as rioting and anarchy. The Chinese are a peace-loving people, and they have always been content to live in peace with their neighbors. They are not given to the wild and reckless behavior of the Persians, and they are not prone to the excesses of the Turks, who are known for their fierce and brutal nature.

The Chinese have always been a peaceful and industrious people, and they have built up a powerful empire that has lasted for centuries. They have always been quick to learn from the mistakes of others, and they have always been willing to work hard to achieve their goals. They are a people who value education and hard work, and they have always been willing to invest in their future.

The Chinese have always been a peaceful people, and they have never been known to engage in war or aggression. They have always been willing to live in peace with their neighbors, and they have always been willing to work together to achieve their goals. They are a people who value harmony and cooperation, and they have always been willing to work hard to achieve their goals.

The Chinese have always been a peaceful people, and they have never been known to engage in war or aggression. They have always been willing to live in peace with their neighbors, and they have always been willing to work together to achieve their goals. They are a people who value harmony and cooperation, and they have always been willing to work hard to achieve their goals.
Ithal in China might thus have been produced. Cingis Khan took as one of his officers a man who was said to come from Bukhara and claimed to be a descendant of the Prophet, namely Shams al-Din Omar, known as Suyidi-i Adalji. We have several biographies of this man: the principal is in the Vaiz-i-chah, the official history of the Mongol dynasty (Book xxxiv. Biographical 12) which Visetiæ has discussed in D'Ollonne, p. 25 et seq.; there are others in the Tien-si (I, p. 25 et seq.) with notices of his sons Najir al-Din, the Nesciri of Marco Polo, and Husan, and in the great biography Ta-Ching-yi-tung-chi (translated by Visetiæ in the Rev. Memos Mus., February, 1908), of special importance is the biography by Fa-Hsian, which has been critically discussed by Lapage in D'Ollonne, p. 30 et seq.; lastly must be mentioned a passage in Ragid al-Din, which is given in Bischet's translation in D'Ollonne, p. 26 et seq. According to Fa-Hsian, Suyidi-i Adalji was the fifth descendant of a certain Si FE-i-lich (Sifulin) and 26th in line from the Prophet (Visetiæ, p. 25). The descendants of Suyidi-i Adalji in a separate essay in D'Ollonne, pp. 176-183). He was called Shams al-Din Omar and was called to high office by Khubilai (1260-1294). The Emperor gave him the name Si Tien-ch'ı, a translation of Suyidi-i Adalji "illustrated lord" and appointed him governor of Yunnan to restore order there. He was afterwards also given the honorary title "Prince of Hsien Yang." He left five sons and nineteen grandsons. Lapage rightly doubts the authenticity of the genealogical table in Fa-Hsian. It is not improbable that it was invented by the later chroniclers, partly to give their hero more prestige and partly to conceal the connection of the rise of the family with the invasion of the hated Mongols. According to the usual statement Suyidi-i Adalji came originally from Bukhara and governed Yunnan from 1273 till his death in 1279; he was buried in Wu-ch'eng near his capital. His tomb near with its inscriptions was first discovered by the D'Ollonne expedition and aroused great interest particularly as there was a second tomb, also with inscriptions, in Singan-fu. It has now been ascertained that the second grave in Shen'ai is a cenotaph which only served as the mausoleum of the autumnal equinox for the Suyidi, Kinde Shuo-Mukahmeistan, p. 41, note 1).

Although Suyidi-i Adalji certainly did much for the propagation of Islam in Yunnan, it is his son Najir al-Din to whom is ascribed the main credit for its dissemination. He was a minister and at first governor of the province of Shansì, the later became governor of Yunnan where he died in 1392 and was succeeded by his brother Hsuan. The other sons also held high offices of state and did the grandsons. Among the further descendants may be mentioned Ma Chu (c. 1630-1710) (in the fourteenth generation) who was a learned scholar and published his famous work "The Magnetic Needle of Islam" in 1683; he supervised the renovation of the tomb and temple of his master Suyidi-i Adalji; one of the inscriptions on the tomb in Yunnan is in the name of the family is Na Wu-Ch'ing, Imam of a mosque in the province (D'Ollonne, p. 182). Whether or not the systematic expansion of Islam took place under the Saï provincial dynasty, it may be regarded as certain that the predominance of Islam in Yunnan dates from that period. There have been scarcely any appreciable infusions from outside since that period. It cannot be too strongly emphasised that the direction of this movement was from the interior, from the north. The Muhhammadan colonies on the coast were hardly affected by it. On the other hand, it may safely be assumed that the Muslims of Yunnan remained in constant communication with those of the northern provinces of Shansi and Kansu. The trade of ts'au-fu, i.e. hirc of animals for riding and transport purposes, still pursued at the present day by the Muslims of China, which brings them into contact with numerous foreigners, was no doubt followed by them quite early and they are particularly well adapted for it by their energy and endurance.

If these Muslims were left to themselves and received no additions through immigration from other Muslim countries, the fact that there are so many of them is remarkable. The number of Muslims in China used to be very much overestimated, however. There are certainly not 20-50 millions of them (1/2-1/3 of the whole population). The D'Ollonne estimates, which must be much below this figure in the districts it visited and these were those which had been most subject to Muhhammadan influence. D'Ollonne estimates the Muslims at 1/10 of the population on the route followed by him, but gives a higher figure for Yunnan and Kansu. Davies, Yunnan, 1908, estimates 3% for Yunnan, i.e. 300,000 in 10 millions and gives a much lower figure for Shensi which has four times the population of the other two provinces together. We thus arrive at an estimate of 4,000,000 for the whole of China (D'Ollonne, p. 100 et seq.).

The estimates in Broomhall are only approximations which are quite unreliable, and give no clue to the proportion of Muslims to the rest of the population; for we have no reliable statistics for the total population. Broomhall sent forms of inquiry to over 800 people in China and received 200 replies from various parts of the empire. As a result we have the following figures for the individual provinces.

Kansu: minimum 2,000,000, maximum 3,500,000; the Muslims are irregularly distributed; they are more numerous in the west and they increase more rapidly than the Chinese. The administrative districts have been depopulated in large number and the important town of Lien-ch'ou-fu, the seat of the government, are only 70 Muhhammadans, who are allowed to live there. In Hsi-ning-fu, including the administrative district, there are said to be 250,000 Muslims while there are 35,000 in Lien-chou-fu, the capital. There are several mosques in most of the larger towns; in some places Muhhammadans are not allowed to live within the town so that the mosques are in the outskirts; this is the case in Ning-hia and P'ing-lang.

Shansì: Before the risings there were said to be 1,000,000; but after these a great migration to Kansu took place. Official figures give 9450 for Singanfu and 24,000 for the whole province. There are certainly not more than 500,000 Singanfu has 7 mosques and Hsun-ch'ou-fu 5.

Shansi: From the statistics for individual districts the total may be estimated at 25,000.

Chihli: The figures differ considerably and the total varies from 25,000 to 1,000,000, Peking, with 30-40 mosques (the Chief Mosque is Nien-chih, in which the Turk 'Ali Rizzi teaches), and
over 10,000 Muslims; there are large colonies north and south of Peking; north of the Great Wall there are Muslims in the district on the Mongolian frontier and they form dreaded rubber bands.

Shantung: between 100,000 and 200,000; there are few in the east, but in the centre and south the numbers are numerous. We have detailed statistics given by a Mullah for Chi-nan, Chi-nieng, Yen-chou-fu, Ta-yen-fu, Ta-chou-fu, Sin-ching-chou, Sal-chou and Ching-chou-fu, which have in part been proved fairly accurate.

Honan: probably rather more than 200,000; there are 40,000 Muslims in Hui-ching-fu and the surrounding villages are all Muhammadans; Cheng-chou has 10,000 (prolific families); the whole population of Hsii-tien-chi is Muhammadan; mosques are numerous, almost every Haim town has one.

Kiangsu: the estimate is very uncertain, perhaps 250,000; in Nan-k'ing there are 10,000 with 25 mosques; almost every town of any size has one; we have no statistics for Shu-chou.

Shantung, the districts for which we have figures, give a total of about 50,000; as the province is a very large one, we may assume the total to be 250,000; the great Muhammadan centre is in the northwest (Sung-pan-Ting, etc.), and Islam is making remarkable progress on the Tibetan frontier. In Cheng-tu the Loo (Kii)-chiao appears to be represented (with 12 Imams and 100 Abougs) as well as the Hsin-chiao (with 15 Abougs).

Kwei-chou: hardly more than 10,000; there are only 4 mosques in the whole province.

Yunnan: the estimates vary from 100,000 to 1,000,000; the rebellion made great gaps; the Muslims probably had to give low estimates in order not to arouse the suspicions of the Chinese. Muslims form scarcely more than 3% of the whole population (cf. note in Davie's work, p. 533 above); the Muhammadans of Yunnan are said not to be distinguishable by dress or mentality from the Chinese. According to Davie they are ten times as numerous in the plains as in the highlands; he estimates the total population at 100 millions, so that if we take the proportion at 3%, the Muhammadans number about 3,000,000, which is striking contrast to Tshiam's 4,000,000, Soulie however (Jrev. du Monde Mus., Oct. 1909) estimated the number at 800,000 to 1,000,000 and the missionary Rhodes at 1,000,000. Mosques have not been allowed since the rise of the cults, though previously the Muhammadans had important places of worship (a temple in Ta-li-fu was used as a mosque).

Hapsh: scarcely more than 10,000; there are 3 mosques in Wu-chang and 2 in Han-kou. Kiangsi: not more than 2,000.

Anhai: estimated at 40,000; they are most numerous in the north; there are 6,000 and 2 mosques in Anking and the neighbourhood.

Chekiang: about 7500; Hang-chou-fu, which is mentioned by all the older Arab geographers and where there was a large and prosperous Muhammadan colony in Ibn Battuta's time, has now only 120-1000 families (including the surrounding country) and 3 (4) mosques.

Hunan: about 20,000; the largest colony appears to be in Chang-te where there are 3000 with 3 mosques.

Kuang-tung (with Hainan): about 25,000; the great city of Canton, the Khair of the geographers, the kiai baiun of Ibn Battuta has at the present day (including the district around) 7000-10,000 with 5 mosques. Hainan has two places with mosques.

Kueisi: 15,000-20,000, of whom 8000 are in the capital Kiu-liin, who have probably immigrated from the north; there are 6 mosques in Kiu-liin and in Wu-chou.

Fukien: probably only 1000; there are mosques in Amoy, Fu-chou and Chang-chou-fu; the 40 or 50 Muslims in Amoy belong to the official class.

Manchuria: about 200,000; Mukden 17,000, K'ai-yuan 2000, Hsien-min-fu 2500, Chin-chou-fu 3500, Fu-kien-men 3000, Tiao-yung 2500, Kuangning 7500.

Mongolia: there are Muslims in the south only; no figures are available.

Although Turkistan does not fall within the scope of this article [see above, p. 839], it may be mentioned that the estimate varies from 1,000,000 to 2,400,000.

These figures give, exclusive of Turkistan, a minimum of 3,700,000 and a maximum of 3,400,000. It is remarkable that the missionaries living in the country give very dissimilar figures; some evidently found centres of Islam and quite important schools where others saw nothing.

II. SOCIOLOGY.

If we regard the Muhammadan population of China as a social unit, the five phases of life under which any society may be dealt with are as follows:

1. Relations of the Sexes (marriage, family, kinship). The relations of the sexes are governed by the Shara'a law binding on the whole Islamic world, in the scholastic form developed by the Hanafi school, but the details of the codes are not well known to the great mass of the Muhammadans of China nor are they observed as far as they are known. How far alterations have been produced by the influence of the surrounding Chinese cannot be ascertained from the meagre details at our disposal; it would be in any case impossible to generalise from these as the influences at work differ in the different localities. (See p. 266 note 1) reference to the well-known law that the Minin may have not more than four wives and have slaves as concubines. *In China Muhammadans are forced to observe the laws of the Empire in regard to marriage* is certainly incorrect, if it implies that the Chinese government would interfere in this domain of private law, although the Chinese marriage laws may lay claim to be universally observed. These have been digested in L. Heng, Le Mariage Chinois au point de vue religieux, Ver. Sinolog., N.° 14, Shanghai, 1899. I have been unable to find in this work a definite statement that Muhammadans occupy a special position. The general position of woman, too, is not uniform but differs according to rank and locality. According to d'Ollone, the prescribed wearing of a veil is not followed and the women go about unveiled; this was previously noted by Grenard, who, however, made an exception for the wives of rich men; it was only in Ho-chou that d'Ollone found another custom prevailing, where the women wear a veil of black silk below the eyes (this appears to me to be connected with adherence to the teachings of
Ma-Hsia-ung); they also appear in the streets on horseback instead of in carriages (p. 247). As to binding the feet d'Ollone found no distinction between Muslim and Chinese women; particularly in Kan-su, this custom was very prevalent among Muhammedans. The fact: that the woman is not a Muhammedan, is not an obstacle to marriage; it is even thought to be meritorious to bring a woman of other faith; this is in the interests of the country, by encouraging the mixing of races. On the other hand, Muhammedan women are strictly forbidden to marry a man of another faith, and such a union is looked upon as a most heinous sin (see for example the saint catherine in Wassil-skew-Stibe p. 108, § 6, also in Thionors, II. 266 note 1); even here compromises are made with heaven: for example, the Emperor Ch'ien-lung received a Turkish princess into his harem and when I was passing through Minjol (a day's journey west of K'ang-hsi) in 1903, I saw a Chinese man with his Turk wife. Illicit intercourse of the sexes no more receives the punishment prescribed by law (40 lashes with a whip, or stoning) than in many other Muhammedan countries. It must not be supposed however that morality is particularly lax, nor are the amoral views, considered from the moralistic point of view, very influential in Matignon, Sagersttton, Crime et Misere on Chine, Lyons 1902, p. 185 et seq.), so widespread among the Muslims. Special attention is not paid to the bringing up of children. A striking feature of family life is the homage paid to the parents and the reverence in which the ancestors are held. These virtues are extolled, for example, in the Chinese Arak Ma Sin, Hartmann 1, published by Forcke, and laid expression in forms of prayer for parents and ancestors; ancestral tablets in Chinese fashion are also used. Social distinctions are not defined by pedegree except in the case of descendants of the Prophet. The mischief which has been produced in other Muhammedan lands by the exaggerated respect for this nobility of birth and the obtaining entry to it by false means, is not found among the Chinese Muslims; nor is the Siyid system developed here. This is explained by the fact that the people know they have for the most part been converted to Islam and are descended from converts (mugun). Any traces of the Siyid system that exist in China seem to date from the mid 19th century when the seeratic Ma-Hsia-ung declared himself a Siyid (see p. 852). Whether the Muslims of China may be distinguished by the common possession of inherited physical characteristics (by race) is a question which cannot yet be satisfactorily answered. The usual supposition is that there are ethnic peculiarities and it is even said that the Muslims show a special type, which may be recognised at once (pp. 221 et seq.; cf. also the Muslims of Sinkiang, who differ considerably in appearance and regard themselves as brothers by race of the Europeans, Berthelot, Comptes-Rendus de l'Ac. des Inst. et Bulletin-Lettres 1905, p. 188). We must however take into account the opposite view adopted by d'Ollone; it is true that he gives pictures of Chinese Muhammedans which have something of the Arab or Turk, but he lays stress on the fact that it is only the exceptions he is showing to his readers and emphasises (p. 430) that the great mass of Muhammedans are quite like other Chinese; it may however be noted that it is impossible to speak of a single Chinese type; there are numerous different types in China and this diversity is naturally seen among Muhammedans also. An Arab and a Turkish type are due to immigration and natural increase without any connection with the Chinese stock; a matter of fact however, most of the Muslims belong to the latter. There may be many variations in the evolution of the type of the immigrants, because since the first great immigrations of Muslims, many fearful devastations of the districts in which the population is mixed have taken place. We have already spoken of the marriage of Muslim men with Chinese women; the children are of course Muslim and repeat the process so that after several generations there is but little foreign blood left in the individual. In the great majority of cases there is not one irup. Generally the Muslim is a Chinese who has been adopted or purchased as a child by a believer and brought up to Islam (on the purchase of children see also my Lit. Orient. l. 45). Converts of adults are also frequent (p. 851).

II. LANGUAGE AND ETHNIC RELATIONS.
If the possession of a common speech be a sign of the same nationality, then the Muhammedans of China are undoubtedly Chinese, for Chinese is the language, which they write and speak; although they are said to possess dialect peculiarities (according to Brocchall, p. 223 et seq. the Muslim is frequently recognisable by his speech), that their language is essentially the same as that of their Chinese neighbours is not to be denied. But religion forms so sharp a dividing line between Muslims and the other Chinese, that each of these groups feels itself to be a separate people (cf. the Ottomans of Turkish descent and the Turkish-speaking Armenians, who are sometimes scarcely distinguishable from real Turks and in whose language also there is practically no perceptible difference). In this respect the Muslims feel themselves far superior to their Chinese compatriots and the Chinese will hardly grant the Muslims the name kan-jen. They are more usually called Hui-hui or Hu-i-chu, though they do not tolerate this name themselves but call themselves pei-chan *white-band* i.e. wearers of white turbans. Whether there is a connection between *salat* and the same for the Uigurs, written very differently in Chinese, is doubtful (cf. Charanun, Les Tou-kins Occidentaux, p. 57-94). Only one group of Muslims in China are distinguished by their language, viz. the Solar who live in Hsin-hsi-ting (Playfair, 34, no 1) on the right bank of the Heng-hsi and in the surrounding villages and are also to be found on one portion of the road from Hsing-fu to Ho-chow. They most resemble the average type of Chinese Muslim; the figure is lank and tall, the nose large and not flat, the eyes black and level, the cheekbones prominent, the face long, the eyebrows thick, the beard full and black, the forehead retroussing, the skull flattened behind, the skin brown but never yellow; they are therefore very like the Turks of the Chinese Turkestan. They must remember, from this characteristic, that their language which might be called a corrupt Turk (cf. the specimens of Gnezd and Potasino). In religion they are strict Hanfu and show great respect to their clergy (achenor), but for the rest they are rather given to the drinking of
spirits. Even the lowest classes are acquainted with the Arabic alphabet. They do not burn incense nor allow the Imperial tablet to be exhibited in their mosques. They are said to have received their present form of religion from a monastic order of Musulmans of the name of Mau-Ming-hsin (Muhammad Amīn) who preached about 1750: he laid special stress on praying aloud (cf. p. 853) and much confusion was thereby brought about. The Salars are bold robbers and consort with the ruffians on the upper Hoang-ho, to whom they are bound by a common hatred of the Chinese. The above account of the first account of the Chinese Turkestan was perhaps exaggerated; they have frequently played a part in revolutions and claim to have originally come from Sarma-kand. D'Ollonne, p. 307 et seqq. has collected historical notices of them from Chinese sources. The Tungus are not to be considered as a separate linguistic group. According to most travellers the name is limited to the Chinese Musulms of the provinces of Kansu and Shensi. According to my own observations, the name is applied to all Chinese Musulms by the Turks of Chinese Turkestan. This is quite natural; for the name means "returned," i.e., to the true faith (according to the common Muslim idea, every man is born a Muslim and his conversion from another religion in which he has been brought up by his parents, is really only a return to his original faith); it corresponds exactly to the name given by the Ottomans to the Jews in Smyrna and Salonica, who became converts to Islam in 1650. The term is regarded as an insult by the Chinese Muslims, just as is the word "Mussulman" among the Moslems of Salonica; the explanation of the word as from turk (d'Ollonne, p. 250 and 317) is to be utterly rejected.

IV. Religious Life. Religion, with the Muslims of China, as in other parts of the world, dominates their whole view of life. From their earliest childhood the child of Muslim parents has it impressed upon him that he is a Muslim and as such better than the infidel Chinese. It cannot be denied that the consciousness of belonging to the great Islamic community inculcates in the Muslims of China a feeling of pride which makes their spirit nobler, their eyes brighter and their bearing more dignified. On this point all observers agree. These haughty men are, however, very shrewd and have always been ready to make concessions to the ruling class and the religious and political system under which they live, in order to obtain security for their lives and property.

Those who enter the government service take part in the ritual formalities, a procedure which Mickie, in his "Missionaries in China" recommends for imitation to Chinese Christians. At the same time there is a great gulf between the Chinese and Muslims, who are suspected of wishing to form a state within the state. Where their fanaticism has not yet been aroused, the Muslims are frequently disposed to Europeans and frequently regard them as of the same race as themselves in opposition to the Chinese or "blackheads," Though individual Muslims of high rank have been conspicuous for their hatred of foreigners, this is, as in the case of non-Muslim Chinese, due, not to religious motives, but to resentment at the strong arm with which foreigners are interfering in the internal affairs of China. The attitude of Muslim generals is frequently simply due to a quite mean desire for rank and wealth. For example Tung Fu-Hsiung was not a "fanatical Muslim" at all but an adventurer, who gathered adherents around him during the anarchy of the rebellion of 1861-1874 and in return for the rank of Mandarin became a tool of the Viceroy Tung-T'ang and the General Lu-Song-shan. He beheaded the instigator of the rebellion, Tung Hsin-Tung, the "pr proponent of the new religion," who fell into his hands in a sortie from his town of Kien-ki-pu. Tung on this occasion gained huge estates. In 1895 again, it was Tung, who put down the rising in Hsi-ning-fu and Ho-Chou, and enriched himself in the usual way with the plunder which he took as victor from his co-religionists. He received the title of generalissimo (te-fu) and was practically king of the land. When in 1900 the Boxer rising broke out in Peking, he hastened
CHINA.

583

thither, with his missions, among whom was the notorious Ma An-liang, Tongling of Ho-Choo, and distinguished himself by his fanatical and malignant attitude to foreigners; the latter only saw in him a Muslim with a body of Muslim followers and knew nothing of his real relationship to Islam. He was officially "banished" as a punishment to Kauara where he lived the life of a grand seigneur; he had two strong castles at Kin-ki-pu and a bodyguard of 500 old soldiers, while he usurped the tenancies on the estates which he had taken from the Muslims. The governors of Kin-ki-pu and Lin-chow dared do nothing without his consent. When he died in February 1908, all the titles, which had been taken from him under European pressure, were restored to him and his body was interred with the highest honours in Kon-yuen, his birthplace. Another Muslim who held high military rank in recent times was Ma Ti-kai, a native of Yunnan, nephew of the sectarian Ma Han-liang, and general commanding the army in Sze-Chuan.

Taught by oppression, the Muslims of China have been working from the earliest times, and particularly keenly during the last 250 years, to lift their body politic through the means of their natural reproduction. Their main instrument has been conversion. To obtain children to convert to Islam, they adopted the simple plan of buying them from their Chinese parents when the latter were in great need (see this and parallels from the practice of Christian missions see "China und der Islam" in my Islam, Orient, i. p. 45 and note 1). Many hundreds of thousands of Chinese children have thus become members of the Islamic community. We have already mentioned the marriage and conversion of Chinese women by Muslims (see above, p. 849). With adults it is not the preaching of the true faith, which the Muslims would, as a matter of fact, hardly dare practise, that is effective, but dependence on some influential Muhammadan; thus, for example, soldiers are much more touched by Muslim officers; Muhammadan mandarins are few often able to make converts owing to their frequent change of residence. D'Ollone met several Muslims, who were recent converts, others could trace their faith to some ancestor who had been converted and were even able to say who he was. The number of converts has varied in different periods according to the power of the Muhammadan officials. At the present day conversions are rare, because the court is suspicious of Muslims since the great rising, and they have fallen into discredit (D'Ollone, p. 431). What will be the effect of the new regime cannot yet be stated but it will certainly keep a sharper eye on any separatist movements. When in the middle of January 1912 the demand of the Chinese revolutionaries was published, that "Mandchus, Mongols, Muhammadans, Tibetans and Chinese should be treated with perfect equality" it was the Turks of Chinese Turkistan who were meant by "Muhammadans"; they to lose a few petty privileges in the process of equalization. The Muslims of China proper are not affected by it. It may safely be said that Islam is by no means un congenial to the Chinese temperament in one more respect (the indulgence in pork, alcohol, opium and ancestor-worship). One must be cautious, however, in accepting the far reaching possibilities suggested by D'Ollone (p. 432) and it is very questionable if even a Muslim Emperor of China could bring about the conversion of the greater part of the Empire to Islam. For the history of the country shows us that China assimilates foreign elements and rejects what it cannot perfectly assimilate; it would thus be an Islam which was no longer Islamic that we would have to deal with; this is, however, improbable, for throughout the whole Muhammadan world there are signs of a distinct movement towards ecclesiastical reform in the sense of a stricter observation of the precepts of Islam; au Islam, transformed by the Chinese temperament, would certainly no longer be felt to be an Islam by the whole community. The question of founding a new mixed religion would more probably arise. Some of the works, which have been collected by Visiutre in his "Ouvrages chinois makamétans" in D'Ollone, p. 392 ff., are distinctly characterized by an endeavour to reconcile Islam with the teaching of Confucius through a kind of philosophy of religion (cf. particularly nos. 7 and 93; a similar work belonging to Harret Hackman is at present in my keeping). Conversions from Islam to the religion of the country are not to be thought of, because in ancient China as in modern China we find an inclination to form unions and societies, this happens also to be in a particular degree a Muhammadan characteristic. The Muslims in China form a great friendly society, in which every one helps the other (the "jákôan" which is recommended in the Korân). Community in Islam offers so many advantages to its members, that they have no cause to leave it even if their beliefs did not keep them faithful to it. The present state of affairs has naturally a good deal of light thrown upon it by its historical development, which has already been discussed above. D'Ollone rightly remarks the striking silence of the Chinese historians with regard to the Muslims while they mention Buddhism and Chinese missionaries; he also recognises the worthlessness of the epigraphical inscriptions in Tung-chou. But there has never been any expansion of Islam inland from the coast, but rather that the Muslims of the colonies in the seaports were content with the privilege afforded them of practising their religion and kept apart from the rest of the population. D'Ollone draws conclusions from the mention of the "hu-chî à Amalî"-Muslim under the Tang and of the Hui-ha under the Liao and Chin dynasties (cf. also the mention of the Hui-ha under the Liao in Bretezelder, Medieval Religions, i. 267, and under the Chin in Thiersant, i. 6, though problematic); but this only points to a knowledge of the Muslims of the west and is no proof of Muslim immigration. The Sauty in D'Ollone who came from Bukhara with several thousand Muslims and settled on the banks of Mongolia and China is a fictitious character. As a matter of fact (cf. above, p. 847) there is no reason to believe there was any appreciable immigration of Muhammadans before Sâyi'd A'dal' Omar. Marco Polo only once mentions the presence of Muslims in the province of Yunnan through which he travelled a year after the death of the Sâyi'd while everywhere else he speaks of idols (cf. p. 846 above). The Sâyi'd ascribes the two first mosques in Yunnan (D'Ollone, p. 35) and the Muslims of Yunnan trace their origin to him and his son Nâsir al-Din, Khubilai also was
surrounded by Muslims in his court; the history of the notorious Ahmad has already been mentioned (p. 846). In 1335 a grandson of Saiyid-Ad-Allah obtained a decree from the Emperor that Islam should be recognised as ching-chiao-chiao "the true and pure religion"; as it is still called at the present day; in 1420 another grandson of the Saiyid was commissioned by the Emperor to build mosques in the provincial capitals Singanfu and Nanking. A later descendant of the Saiyid, the Mu-chu already mentioned, presented a petition to the Emperor in 1683-1684 asking to rank equally with the descendents of Confucius. This brings us within the period of the Manchu dynasty. One can hardly be wrong in supposing that with the end of the Ming dynasty (1644) and beginning of the Manchu there was a great increase in the activity of Islam and a corresponding reaction on the part of the Imperial government. This is undoubtedly connected with the activity and desire of the early Manchu Emperors for expansion. The risings that took place in the province of Kansu in 1644 and 1783 were a reaction against the dominating authorities. It was also natural that the Muslims of Kâghghar, who had been practically independent under the Kalmucks (Kalmaq) of Ili, repeatedly tried to throw off Chinese rule, under which they had fallen on the destruction of the Kalmuck kingdom (about 1750) (cf. Ein Heiligenstaat im Inland in my Islamische Orient, I). Of the later risings the following ought to be mentioned: 1820-1829 in Kansu and in Turkestan (the connection between these two movements is, however, uncertain); the Muslims of Kansu, who are called Tungon by the Turks, have on several occasions taken the field against the Muslims of Turkestan); 1855-1873 in Yünnan; 1862-1877 in Kansu, Shensi and Turkestan; 1895 in Kansu. I leave it an open question whether the conclusion is correct, that there have only been risings of Muslims since about 1644, because they did not feel their number large enough before. It appears to be correct, however, that it has only been under the Manchus that a deliberate policy in regard to religion has been followed by the Muslims, with the systematic reduction of their numbers by the purchase of children and bringing a mild pressure to bear upon possible converts; this policy was, however, very soon met by an equally deliberate policy of suppression on the part of the wily Chinese. The placing of a greater development of Islam in this period receives important corroboration from the fact that to all appearances, the literature of the Muslims in China does not begin till the end of the Ming dynasty; at least the ching-chiao chen ch'iao "Vernacular Exposition of the True Religion", the preface of which is dated 1643, appears to be the oldest monument of this literature (N. 1 in Visàière's list in d'Ollone, p. 393 et seq.). Since that time the production of books of instruction in religion has never ceased. It was not till 1783, however, that the attention of the Imperial government was attracted to the literary activity of the Muslims, and the Emperor Ch'ien Lung ordered the Marshall A-Kul to investigate the books of the Muslims, on which the latter was able to make a favourable report. That no one has troubled about this literature, shows what little importance was attached to the Muslims. If we may suppose that with the change of

Dynasty in 1644, a new stratum appeared in the Islam of China, this perhaps explains the gradual emergence of a separate religious movement, which has still to reckon with the ancient Islam of the country, which may be defined with some degree of certainty by the researches and observations of the d'Ollone expedition. The Muslims of the three chief Muslim provinces of China, Kansu, Sue-chuan and Yünnan are actually divided into two great sections, who are hostile to one another; the followers of the lao sheh "the old religion" and the followers of the hsi chiao or "the new religion". However grateful one may be for the extensive materials collected by d'Ollone on these two movements, though he gives them with all reserve, it will only be possible to come to a final conclusion as to the essential difference between them when further material has been collected by specialists. D'Ollone's view that the new religion is characterised by the cult of saints and their tombs and the recognition of heads of the community, to whom God has given special grace is supported by parallels from other Muslim countries. It is an axiom that the supremacy of the democratic principle in the life of the community, is the earlier, the stronger organisation among leaders, who appear as supermen, the later development. The older views would seem to be still the predominant ones among the Muslims of China.

Travellers are all agreed (for D'Ollone's notice see p. 438 et seq.) that the total lack of organisation is one of the most remarkable features of Chinese Islam. The various communities are quite independent of one another; they recognise no authority, neither in their province nor in the Empire, not anywhere at all; they know nothing of a Caliph; the Sharif of Mecca is, they grant, a worthy servant of religion but they do not recognise his authority. In brief, there is no spiritual hierarchy and none of the İmams (Ałhange) of China takes precedence of the others except through learning or renown. Those who officiate among the communities are dependent on the believers, who elect, support and dismiss them without the slightest interference from any one (d'Ollone p. 439).

Of the details of the division into hsin chiao and lao chiao, I can only mention here that the "new religion" was founded by the Ma Hua-lang who was slain during the rising in Kansu. His adherents in Kansu where they are numerous, and in Sze-chuan, where they are yet few in number, regard him as the true successor of Muhammâd. His descendants or disciples possess supernatural powers. The essence of the "new doctrine" is not yet properly known. One is inclined to find Shî'ism represented in it or at least a very strong vein of Sûfism. The notices in d'Ollone make it clear that the teaching of Ma Hua-lang is orthodox. Şûfî and that any special variety of mystic contemplation, such as is found over all Central Asia, is not present in it. Ma Hua-lang appears to belong to the group of fakirs or ascetics who are typically represented in Chinese Turkestan by the Khâdis, i.e. the descendants of Makhûdî-l A'âma, whose religious and secular conception of the state I have fully discussed in Ein Heiligenstaat im Islam in my Islamische Orient, i. 195 et seq. Whether Ma Hua-lang was influenced by the doctrine of Makhûdî is not certain; there is no definite reference to this in d'Ollone.

In
any case Ma Hsin-lung was regarded as an incarnation of the Spirit, as a šeng jen “holy man” or “Prophet”, equal to the Prophet Muhammad or superior. It is greatly to the credit of the Muslims of Kansu that they allowed themselves to be deceived by this impostor, who, though he had never had the least education, appeared to know everything and had an answer for every question. As the founder of a new sect, Ma Hsin-lung had to prescribe some external distinctions so that his adherents might be readily recognised; he chose that they should pray with loud voice and hold the hands flat and horizontal in the gyanic attitude of prayer in opposition to the low voice and the hollowed hands usual elsewhere; from their custom of praying aloud, it is derived: the usual name for the followers of Ma Hsin-lung: Dhyānya (correlated to Chakravine) “one who prays in public” in opposition to Kshyleye (popularly Hurseye) “one who prays in secret”. In these external distinctions, Ma Hsin-lung appears to have associated himself with a movement in the West which had entered China as an earlier period; 160 years previously, a certain Muhammad Amīr from Turkistan, known in China as Ma Ming-hui had appeared as a reformer among the Salars (see above p. 850), and introduced praying aloud which led to a good deal of strife (see Grenard, Nota sur l’Ethnographie du Kansu in Dutreuil de Rhins, Mission Scientifique dans le Haut-Ouest, ii. 458). Ma Hsin-lung did not definitely forbid attendance at mosques but allowed prayers to be offered up in private houses in the common hall without the observation of any particular formalities of dress. Three or four houses usually have a common place of prayer, a room specially reserved for this purpose; this arrangement was instituted with a view to accustoming his followers to pray more. In Sung-p’yan’s time the followers of the new religion go to the same mosques as those of the old, but in Shensi the schism is complete. The d’Ollone missions had a very bad reception in the mosque of Ch’eng-tu; the followers of the new doctrine have the reputation everywhere of being hostile to Franks while Muslims, as a rule, are friendly to them. After Ma Hsin-lung’s death (1871) a schism arose between his son Tsuin-hui, and his grandson Ma Ebin-hui, disputed the sacred heritage; Ma Tsuin, who was 55 years old in 1898, had the majority on his side and his home Ch’-hsien near Ka-yuen is a religious centre of importance and also has a Madrasa. Ma Hsin-lung’s teaching was introduced into Yunnan by Talaman (Talaman) his younger brother or nephew, who subsequently fell in battle against Ma Yu-lung. The number of adherents in Yunnan seems to be less than in Szechwan, where d’Ollone found people of the hsin chia from the frontiers of Yunnan to the borders of Kansu. In addition to the two sects: Harseye and Chakravine there are two others: Kherbinoye and Katerinoye; the meaning of Kherbinoye cannot be ascertained (for bhārīhi); Katerinoye is certainly a Chinese abridgement of Sharru无线电 Khadīsalīn. According to one Abung the four sects are connected with the four cakraps and each of the four is said to have instituted one form of worship; Abu Bakr the Harseye, ‘Othman the Chakravine, ‘Umar the Kherbinoye and ‘Ali the Katerinoye. The name Katerinoye is also said to be applied to those who pay reverence to tombs. As in most Muslim countries, here also the tomb of famous holy men, who are represented as saints, are reverenced; for example, about a mile mouth of Sung-’p’yan is the tomb of an Abung from Medic, who same thither in 1668, lived for a time in Shensi, released the land from a drought by his prayers in 1673, and died in 1680. An Abung attends to this tomb. There is also another smaller tomb within the Manooleum. The orthodox Mulas preach violently against the reverence of tombs. It is supposed by d’Ollone that the reverence of tombs is one of the characteristics of the new teaching. We cannot agree to this, however, besides it is in contradiction to other statements of the same writer. It is rather the case that the reverence of tombs is widespread in these areas and the fact that Ho-chan, the centre of the new teaching, is rich in tombs, is an accident. It must also be investigated whether the name kuns-hohai of the new doctrine which d’Ollone mentions and on which he bases his conclusions is in part to be understood as emphasizing this “teaching regarding graves” as a distinguishing feature. On the religious position of the Salars, who are ethnically distinct, see above p. 849. The Muslims of China as a whole are quite ignorant of the control of the whole Islamic world by a Caliph. But the efforts of Stambul at the end of last century had some result: Yu’bush “is said to be the faithful”, and Sulamis, the Muhammedan king of Yunnan, sought the help of the Caliph, though vainly as it happened. On the intrigues of ‘Abd al-Hamid, see below p. 854. As the intellectual life of the Muslims is closely bound up with his religion, the object of elementary education is to instil the elements of religious knowledge into the children by the reading of the Koran and by short catechisms. Two languages are used in this process: the language of the country and that of the Koran, or rather a mixture of Arabic and Persian. There are numerous books of selections from the Koran with or without Chinese translations in use in the country, and little volumes, in which the main principles of Islam are given in one or two paragraphs (I have fully discussed a book of selections from the Koran and a Persian handbook on prayer in Zwei Islamische Kauthemschriften in my Islam, Orient, i. 69 et seq.); a small bilingual catechism (in Arabic and Chinese with scraps of Persian) is in my possession. Of works of a didactic nature in Chinese, the d’Ollone expedition brought back 36 examples (bloc-print), which Vissière (in d’Ollone, p. 393 et seq.) has described, with the inclusion of all other available material. In the list given by Broinwall, p. 301 et seq. there are only three works with which Vissière was not acquainted. According to Vissière in d’Ollone, p. 379 et seq. there is a Muhammedan newspaper published in Peking entitled Abung or Sabung *Patriotic Gazette*, Arabic and Turkish publications find their way among the Muslims of China in fair numbers (d’Ollone, p. 380 et seq.). Art has no place in the life of Chinese Muslims. In one field only is there any attempt at decorative work viz. in Arabic calligraphy; the letters are elaborated into many elegant forms, influenced by the Chinese style of writing; angles and loops are made as in the Chinese way of writing (particularly the ‘grass’ or rapid hand). These Muslims are fond of producing beautifully written
Arabian tablets which frequently differ so much from the ordinary hand, that they can only be read with great difficulty (even so experienced a scholar as Blouet, read an r. wrongly for a y in one of these tablets, see Rec. Mouv. Musul., v. p. 291). V. Political Life. The Muslims in China proper have never formed an independent state and even in Turkestan since the annexation of the land about 1750, there has only once been an Islamic state and that an ephemeral one (under Ya'qub Beg, see above p. 853). The rising in Kansu and Shensi 1863-1874, which was a condition of Ya'qub Beg's successes, had the same object. It failed and indeed was doomed to failure from the first; for a permanent state can only be founded on a rational basis. This foundation is not possible among the Muslims of China. The possibility has been suggested that the Muslim Chinese might force their religion upon their non-Muslim fellow-countrymen and thus a great Muhammadan Chinese Empire might be formed. It is true that the Muslims are not lacking in inclination to realise such a scheme and that in certain Muhammadan circles this ambition will always lead to risings against the government of the country. Unfortunately repeated risings have been abused for purposes of political intrigue. Abü Al-Hamid conceived the fantastic notion of bringing the Muslims of China under his authority. His first step in this direction was to send his Adjutant Enver Pascha to China (at the end of 1900), at the time of the European coalition against China to carry on propaganda with a view to his recognition as Caliph. This failed utterly; Enver was imprisoned from the beginning and besides he was not sufficiently supplied with money (Rec. Mouv. Musul., i. 394). Afterward Abü Al-Hamid was induced by the visit to Stambul of an important Akhun, Wang Hao-Shan also called Wang Kuan, alias Abü Al-Rahma, from Pekin, to send two Ulama, 'Ali Ruh and Hasan Hāfez to Pekin where they established a school in 1907 (Rec. Mouv. Musul., iii. 623 et seq.; vi. 658 et seq.). They also travelled about the country but did not, however, visit Kansu and Shensi, the two great Muslim centres. The Chinese government has apparently foiled the Turkish intrigue most cleverly. The incident of the "few Osmancis in China" who sought German protection at the German Embassy in Pekin, how the German Embassy in Constantinople promised Turkey to afford this protection and how the Chinese government suddenly declared they knew nothing of it and had no wish to know of it, is within recent memory. These two emissaries, however, of whom it has been proved that they were Ottoman officials with a monthly allowance of 200 taels = £ 25; applied, when Abü Al-Hamid left them in the lurch, to the German Embassy and were said to have been successful there. They returned to Stambul at the end of 1908. Even in the new constitutional Turkey the question has been raised of sending an Ottoman Embassy to Pekin, a vain dream which has not the slightest prospect of being realised.

Although the future of Islam in China cannot be precisely defined at present, it is abundantly clear that its victory over the other religions of the country cannot be foreseen as the supremacy of the Muslims over the other peoples of the Empire is a mere dream, to follow which will bring only misfortune and destruction upon the Muslims. Even if through some unforeseen chain of circumstances, this hope should be realised even for a brief period, this would be a grave disaster to the whole Chinese Empire. Islam is not a religion compatible with civilisation; it is emphatically the bitter enemy of Frankish culture and it is this which China is about to adopt. If the Muslims should attach themselves to some extent to the party of reform, two results are possible; they will either adopt entirely the new ideas and work in unity with the Han for a strong regenerated China on an ethnic basis in which case they will do no harm, or they will secretly cherish schemes for the supremacy of Islam, in which case they will be crushed without mercy as soon as they are discovered; for Muslims will always form an infinitely small proportion of the leaders of the reform movement. Nevertheless the Chinese nation will be well advised to keep a watch on the Islamic elements in their midst and particularly to prevent their increase by the purchase of Chinese children.

(MARTIN HARTMANN.)

CHICIM (CHUTIC, Turk. Khovrta), the capital of a district in Bessarabia, famous in history for the fierce but unsuccessful attack by Sultan Othman II on the strong encampment of the Poles there in September 1621 (1039). In 1084 (1673) there was further fighting around Chocim, in which the Turks were again unsuccessful, but finally in the beginning of 1674 it had to surrender to the Ottoman troops. In 1182-1183 = 1769, the town was besieged by the Russians and captured but afterwards given back to the Turks. This was repeated in 1788. It was not till after their capture of it in 1809 that Chocim was definitely ceded to Russia in 1812.

CIFT, 2. Turkish word (from the Persian čīft), of Avestian, vaytā, meaning "pair", "couple" and in particular, the "pair of oxen yoked to the plough", whence it comes to mean "cultivated fields", "ploughing", and the "amount of ground"
that can be filled by a pair of oxen is a day". As an abbreviation for *lit. a stock or a position, it means a definite tax on certain tributary land.

CİFTLIK, cultivated land, hence country farm i.e. the dwelling-house of the farmer and the lands attached to it; the farms on the imperial estates are known in the official language as *Heslak-l-i Amiriyya. In Russia, *Ciftlik land of the first quality consisted from 60 to 80 dounas (1 douna being 40 acres square), of the second quality from 90 to 100 and of the third from 120 to 150.

CİGHÂLEZÂDE SINÂN PASHA, an Italian renegade, who was brought as a prisoner to Constantinople with his father. They belonged either to Messina or Genoa, where a prominent family of the name Ciocca is known to have existed.

According to Gerlach, *Turkisches Tagebuch p. 17 and 244, the father was Visconti, Scelsa of Genoa, a powerful Cossack and holding high rank in the service of the King of Spain. The *Heslak-l-i Amiriyya calls him a captain of the republic of Genoa, Gerlach relates that he was taken prisoner off Majorca en route from Genoa to Spain - by Fra Paolo, according to the *Heslak-l-i Amiriyya. The father died soon afterwards in the prison of Yedikule. His son, whose Christian name according to the *Heslak-l-i Amiriyya was Scipeco, became a convert to Islam, took the name Sinan and was brought up among the pages. In 1575 when 28 years of age he became an Agha of Janissaries having previously married a daughter of Ahmet Pasha, a grand-daughter of Rustam and an Ottoman princess. He had played a prominent part in campaigns in various parts of the Turkish empire: Moldavia, Hungary, Erzurun, Bagdad and Van. In 1589, he became Kapudan Pasha, and in 1596 after the battle of Kureczte, Grand-Vizier where he only held for four weeks however. He made himself intolerable by ill advised measures, particularly his great carelessness with the Janissaries and 1596 was dismissed to Algebriz. He again became Kapudan Pasha and held this rank for four years. After a rather unsuccessful campaign on the Persian frontier he died in Diyarbekir in 1605. He was the type of unscrupulous renegade who without any personal ability succeeded in attaining high rank by his connections at court and his wealth.

CİLLA, a fast lasting forty days (quadragecima) in which pious ascetics and devout spend in seclusion, prayer, and fasting, C. Jacob. *Divina Scholica p. 36.

CÎM, the name of a variant of the letter Djin (q. v.) which the Persians have invented to express the fricative s + i (cf. the article, *ARABIA (Arab. Writing, p. 301)). This derivative of the letter *Djin is noteworthy for its pronunciation of *I, in the time and district in which it was made. Other peoples, who use the Arabic alphabet, have borrowed it from the Persians.

CİMKE, the capital of a district in Russian Turkistan, lat. 42° to 45° 10' N. and long. 60° to 30° E. (Greenw.), 1550 feet above sea-level, on the right bank of the Shadam which flows into the Aris, a tributary of the Sir-Daryâ. At the time of the Russian conquest (1821 = 1864) the town had a circumference of about 4 miles and was surrounded by a low wall of clay; the citadel was on a high mound in the south east. According to the most recent census the number of houses in the old town is 1886, while there are 105 in the Russian quarter. The present population is 12,500 of whom 800 are Russians and 150 Jews. The town which is pleasantly situated, is distinguished by its temperate climate and excellent water from most of the other towns of Central Asia and is visited by many Russian families from Tashkent as a summer resort. The post and military routes to Tashkent from European Russia (via Orenburg, Kazalinsk and Turkestan) and from Siberia (via Wjatki and Awilja-Aksu) meet at Cimke so that the town used to be of some importance as i trading-centre; Cimke was not approached by the Orenburg-Tashkent railway opened in 1905.

Trade is, as usual in Turkestan, mainly in the hands of Tatars (Nogai).

Since the last decade of the 16th century there have been 17 Russian villages in the district of Cimke, which are almost all fairly prosperous. The most important of the native villages is Sairim, the Ashkalib or Ashkalib of the Arab geographers (now pronounced Chet wielo), in Persian manuscripts frequently Sinjâb, with many tombs of an earlier period, now chiefly noted for its horse-market.

Of cereals, wheat is the most cultivated, the best quality being produced in Sairim and the Russian villages since 1897 cotton has been grown particularly in the immediate neighbourhood of Cimke; formerly it used to be thought cotton could not be grown in this part of Turkestan, an account of its not very healthy situation; in the first year 25,000 kg. was produced which has now risen to 800,000 kg. The district of Cimke is now the only area in the world where the medicinal plant *Artemisia sinaica, from which sahrim is prepared, survives; the whole annual yield goes to Hamburg; there and not in Russia are the prices fixed for the whole world market. Cimke (sic) is mentioned in the *Zhurav-Azim of Sharif al-Din Yarrit (und. ed. i. 160) as a village near Sairim, in later sources also, at least down to the first half of the 18th century (in 1723 Sairim was taken by the Kalmucks and always Sairim and not Cimke which appears as the "town" of this district; the changes, by which Cimke became a town and Sairim sunk to a village, have only come about in the last two centuries. In 1864, Sairim was sacked as a punishment for a treacherous attack on a small body of Russians.

(W. Bartholdy).

ČINGÅNE, one of the names applied to the Gypsies in the East, which has passed into various European languages in more or less modified forms. The origin of the name is still disputed. It is supposed that the Sasanian Bahram V Gór (420–438) first brought the gypsies from India to Persia and that they spread thence over the world. In the passages referring to this in Ferdowsi and Hamaa Isphahani, these Indians are called Latt or Zoy. Other names commonly used are Nomm, Nemi, Ghurbat or Kurgat in Aleppo, Persia, Egypt; and elsewhere in Egypt the same Chajjar is also in use, while the gypsies of Egypt are fond of calling themselves Barmakāt (descendants of the Barmakides). Other less known names may be found in the works of F. Annanis and de Goeje cited below.

As in other countries, the Gypsies of the East are a race of coppersmiths, tinkers, peddlers, jugglers and moneylenders, and are also found among the merchants. Their name is not heard of in Persia, for others lead a wandering life. There are no reliable statistics on their numbers but they are certainly fairly numerous in Persia and Turkey. Some are nominally Mahomedans, others Christians, but in reality they have their own religion and political organisation, which need not be discussed here as they are outside the scope of this work.

Annanis in Maghrîb, de Goeje, Mémôres d'histoire et de Géographie Orientales, No. 3.

ČINGIZ-KHAN, frequently written CINKIZ-KHAN, 'Mongol conqueror and founder of the Mongol world-empire, was born in 1162, 1163 (according to the Turo-Mongol animal cycle in the year of the pig, 549-550 a.d.), on the right bank of the Onon in the district of Durlin-Bolbâk (now in Russian territory, about 117° 40' E. of Greenwich). He is said to have received his original name of Temudgin from the name of a prince who was conquered by his father Witskâli-Khatâredar about the time of his birth. What else is related of his ancestors and his early youth was not written till afterwards and is influenced by his later career; even the oldest form of the Mongol tradition contains the story that the future conqueror of the earth came into the world with a piece of splotched blood in his hand.

The people, who in the first half of the 13th century shook the foundations of every kingdom from China to the Adriatic Sea in their campaigns, are called Tatar in all contemporary sources, whether Chinese and Mahomedan or Russian and Western European. It seems to be the case that the Mongols before Čingiz-Khan's time called themselves by this name (the word Tatar appears as early as 1222 in the Örkhon inscriptions of the 9th century A.D. as the name of a people). The Chinese distinguished three divisions of the Tatar people viz., the white, black and "wild" Tatars. This classification is obviously based neither on their origin nor their political divisions but on the respective degrees of civilization attained by the three groups thus formed. The white Tatars who lived near the Great Wall of China were under the influence of Chinese culture; the black Tatars led a nomadic life in the district north of the Gobi desert; and the "wild" Tatars, the "peoples of the forest" of Mongol tradition dwelled in the most northern parts of the present Mongolia and in Transbaikal, which is now under Russian rule; the life of the cattle-raiser was quite as disastrous to these hunter tribes as that of the peasant bound down to till the soil is to the nomad. According to the Chinese view Temudgin belonged to the "white Tatars"; Mongol tradition names his fellow tribesmen, the Taidigty among the "tribes of the forest"; in any case it is certain that their abode (on the Onon and Kerulen) was on the frontier between the lands of these two divisions; they were certainly on a lower level than many other tribes of the black Tatars, such as the Keriitt, who were converted to Christianity (on the upper course of these rivers and on the Tola) but were more civilized than any of their neighbours.

The name Mongol (in the Mahomedan sources Moghol or Moghuli) first came into use as the name of a dynasty and kingdom under Čingiz-Khan and later came also to be used as the name of a people, being attached, as it seems, to a small principality of the 13th century, the ruler of which had risen against the Khin dynasty but ruling in North China. In the Annals of the Khin Dynasty (Khiia-Si) a treaty of peace concluded with these Mongols in 1147 is mentioned, and in 1161 a campaign against the Meng-kw-ta-ta (Mongol Tatars). It is apparently to the same principality that the notices in Mongol tradition refer, of the princes who were defeated in battle against the Khin and the Tatars on the lake of Buyir-Nor and whom Čingis-Khan is said to have afterwards avenged and gained renown thereby. Kuthu-Kaia (this form was used by the Mongols for the Turtu Kaghia) is mentioned as the last of these princes; his son Alata is mentioned among the followers of Temudgin (he afterwards, like many others attached himself to the opponents of this upset and fell in the ensuing conflict). According to the Mongol tradition, Yisikul (of the family of Alata) is also connected with this house; whether the relationship actually existed or is a later invention, is a moot point. It is equally uncertain whether Yisikul himself, as the tradition would have us believe, was during the latter years of his life the leader of a large confederacy of tribes. He died in 1167, when his eldest son Temudgin was only 12 years old; immediately after his death the confederacy led by him is said to have broken up. Temudgin, his mother and brothers and sisters, forsaken by all, had to live by hunting and fishing. Čingis-Khan therefore must have laid the foundations for his later sovereignty alone without having inherited anything from his father. He therefore did not enter on his real career till he was at a much more advanced age than all other conquerors; up to his fiftieth year not a word is heard of him, hardly have been known to any one outside Mongolia.

The founder of the greatest empire, that the world has ever seen, first appears as the leader of a body of adventurers, some of noble birth who had elected him their "Khâna." Their accounts of this part of his life are scanty and very un-
available; yet the masses in which the "Khan" and his "subjects" are said to have won their pledges to one another is characteristic. His subjects are related to have said to the Khan on his coronation: "If thou wilt be our ruler, we will fight in the forefront in every battle against countless enemies; should we gain beautiful women and girls and noble steeds as booty, we will surrender them to thee. In the cause, all the men do as the women do; we all others and land over to thee the animals we take". In the days of his misfortune the Khan, deserted by his faithless followers, spoke in a similar strain; he said he had fulfilled his promises to them: "I have won many hordes of horses and sheep, women and children and given them to you; when we were hunting in the steppe, I organised drives for you and drove the game from the mountains down toward you". Even in the days of his greatness, Cingiz-Khan had advanced but little from these primitive views; it was always his greatest delight to ride the steeds of his conquered enemies and to kiss their wives (cf. the Persian text of Rashid al-Din, ed. Bereis, Travels, vol. ii, appendix, xiv. 194). He nowhere claims, like the Turkish Khan in the Orkhan inscriptions of the viiiith century, to have undertaken his campaigns of conquest for the good of his people as a whole, to have made the people, that was few in number, numerous, the poor rich, and to have clothed the naked.

The events in Mongolia in the second half of the xith century, were, apart from local causes, provoked by the policy of the Chinese government. Like many other Chinese dynasties, the K'inch practised the principle of putting down out-rivals by their dotee constant war with the help of other branch of the same people. The Tatars on the Buyr-Nor, with whose help the Mongol princes were slain, had at this time become too powerful for the Chinese; in the war against this enemy we find the title of prince of the Chinese government pronounced. The war was decided in favour of the allies; as a reward, the Kerätly prince received the title of king (Chin. wang, won, or son among the Mongols as among the Turks of the viiiith century) from the Chinese general (ling-mang), while his son received the military rank of tsu-song-tsa (Mong. tengin). The original name of these two princes seem to have been quite supplanted by these Chinese titles; Temüjin also was given a similar title of honour, which however never attained the same popularity.

The following decade was a period of domestic strife in Mongolia. Apart from the countless feuds between individual princes and tribes, in which Temüjin always fought as a faithful ally by the side of the Kerätly prince (he is said to have called him "father"), a more serious quarrel is mentioned; in 1201 (the year of the cock) a considerable number of tribes attached themselves to Temüjin's former blood-brother (noini) Dżanïka, whom the Temüjin had fallen out with the title Gürkhan. This movement is evidently to be explained as a war of the masses against the aristocracy; unlike Temüjin and his allies, Dżanïka did not expose the cause of the aristocratic "horrors", but of the poor and despised "shepherds". The army collected by Dżanïka was soon defeated and scattered; but he afterwards succeeded in sending the confidence of the Sengün and his father and arranging them from their former ally. This breach had the gravest consequences for Temüjin; abandoned by almost all his followers, he had to retire with a small body of faithful retainers to the small lake of Džaljaws and drink its foul water. Nevertheless he succeeded in cunningly baffling his opponents and surprising them by an unexpected attack. Ung-Khan and his son Sengün had to save themselves by flight and afterwards perished in distant lands, the father in the west of Mongolia and the son in the district between Kurchig and Khotan. All the tribes in the eastern half of Mongolia had to acknowledge Temüjin as their lord (1203; year of the pig).

The faithful few, who had remained true to Temüjin even in the dark days at Džaljaws, afterwards enjoyed great privileges as "Küdiljusun" in the empire founded by Cingiz-Khan. It is important to note that three Muhammadans are mentioned among them: Bultan-Khöji, Husan and Dżanigman-Dżandil (the father of Dżanïka). Temüjin's campaign against the kingdom of the Khirshmsghah and rendered great service to him by carrying on the negotiations between him and the inhabitants of these lands; Dżanigman must have been much younger than Temüjin, for he survived him by 25 years and is mentioned as tutor to his grandson Melik (one of Egedel's sons). These Muhammadans could only have come to this part of the world as traders; indeed we are expressly told by a contemporary Chinese writer (Meng-hung), that the trade between Mongolia and China was in the hands of Muhammadan merchants from the west. These merchants, called by the Mongols by the Turkish word aroeg (lit. 'middleman') enjoyed the favour of Cingiz-Khan at a later period also; in the sayings ascribed to him he advises his captains to have on a journey the arts of war so that they may enter on their campaigns with the same confidence as a merchant, sure of the value of his goods, on a trading journey. It may almost be assumed that the counsels of these men, obviously much superior in education and experience to the Mongols, had some influence on Cingiz-Khan's policy and on the institutions of his empire; but we have no certain information on this point.

The subjection of the western half of Mongolia was only completed in 1206 (year of the tiger) after the conquest of the powerful tribe of the Nümün (likewise Christian); in the same year according to Chinese authorities, Temüjin adopted the "title of Emperor". As a matter of fact, however, neither he nor his immediate successors ever regarded themselves as Emperors of China, even after the destruction of the K'in dynasty, but always as the rulers of a kingdom of nomads only. Like many nomad princes before him (his successors did not follow the custom however) Temüjin also adopted a new name when he became sovereign. The old tradition gives us no reliable details as to when he first took the name "Cingiz-Khan" and what "Cingiz" really means. According to some, Temüjin already bore this name as "Khan" of a band of adventurers, according to
others it was only taken by him after his victory over the Keräyit in 1205 and according to others again not till 1208 when he overcame the Naimän. His Chinese contemporary Mong-hang considered the word "Čingiz" to be a corruption of the Chinese "Tiün-ťse" ("Son of heaven"); another Chinese etymology (Chiing-an, i.e. perfect warrior) is given by K. K. Dongla (The Life of Jeongchik Khan, London 1877, p. 54). According to the Mongol etymology given by Rashid al-Din (cf. the text in the edition by Reinisch, Tractat von der Geschichte des Abkommens der Chinesen, xi. p. 13), Čingis is explained as a plural formation from the adjective "čing" *strong*. As Temüčin is said to have received his title as sovereign from a shaman, the word "Čingis" is probably taken from the domain of the religious ideas of the Mongols (which has as yet not been properly investigated).

All authorities agree in stating that it was not till 1206, after he had united the whole of Mongolia under his sway, that Čingis-Khan summoned his first parliament (kuraltau) and that it was on this occasion that the insignia of his sovereignty and the institutions of his Empire were first definitely established. As a symbol of the power of the Khan, a banner with nine white horse-tails was erected in his camp; according to Chinese annals, there was a black moon represented on this banner.

Čingis-Khan is credited with saying: "He, who is able to keep his own house in order, is also able to create order in an empire; he, who is able to command ten men in a proper fashion, may also be entrusted with the command over 1000 and 10,000 men". In his own life, Čingis-Khan exemplified this saying (which is of course not always applicable) possibly as no one else ever did. Just as he did when leader of a marauding band, when Emperor, he was able to surround himself with a narrower circle of men from among his vassals, on whom he could rely as upon himself and who continued his work with the same success after his death (unlike the history of all other conquests which either completely miscarried or involved the destruction of the natives). Of special importance for the military successes of the Mongols was the creation of a numerous bodyguard, which attained its final form in 1206. The duties of these guards (10,000 strong) in the Khan's camp were defined to the smallest details; discipline was maintained with the greatest strictness; in the empire these troops were a privileged aristocracy; a private in the bodyguard was higher in rank than the commander of 1000 men of other troops. No officer dared inflict capital punishment on those under him without the sentence receiving confirmation from the Khan. Out of these guards was chosen a special regiment of 1000 men who were in immediate attendance on the Khan and only went to war when the Khan himself took the field with the army. A valuable means of maintaining discipline, and of training and testing the soldiers, were the hunting expeditions organized on a grand scale, in which all the prescriptions of military discipline were observed with the same exactness as in actual warfare. How strongly developed the spirit of discipline among the Mongol troops was, is best evidenced by the work on Mongol history compiled about 1240 from Mongol tradition. The unknown author shows the greatest independence of the princes of the ruling house and freely reapproaches them with their faults and crimes; he shows little interest in the conquest of distant lands and gives the meagrest details about these wars of conquest; yet a trifling offence against military discipline committed in Khorään (also mentioned in Muhammadan sources; a body of troops had against the Khan's orders, stayed behind; to plunder a field) seems to him of sufficient importance to be specially mentions.

It is characteristic of the home policy of Čingis-Khan (if this expression may be used here), that he, unlike the Khan of the Orkhoń inscriptions, the helper of "the poor and naked", in the utterances ascribed to him, only emphasizes his services to the establishment of order and discipline among his people and in the army. Before his time, the son had not obeyed the father; the younger brother the elder, the daughters-in-law the mother-in-law nor the subjects their ruler, nor on the other hand had the rulers fulfilled their obligations to those under them; under Čingis-Khan order was created everywhere and his position allotted to each.

It was in the land of the Naimän that Čingis-Khan first became acquainted with the use of seals and the art of writing. His Muhammadan chancellors were apparently unable to write, as is the case at the present day with most merchants in the east even though their trading enterprises cover much wider areas. There was a Uighur secretary in the service of the Khan of the Naimän; Čingis-Khan took him into his service, introduced the use of the Uighur alphabet into his kingdom and had his sons and other young Mongols of high rank taught it. The Mongol Empire does not appear to have been at this period directly influenced by the Chinese civil service system. That the Chinese Empire enjoyed great prestige among the nomads is quite natural. The princes of the house of Kös, who had been given to Čingis-Khan as a wife shortly after the taking of Pekin and who survived her husband by over 30 years, was not far of face nor did she possess any chivalry, but neither was she the "daughter of a great Emperor", she was treated with great respect throughout her life, even after the fall of her fatherland (cf. the text of Rashid al-Din, Treni. vost. et. arch. édité, t. iii. p. 4). Even long after the foundation of his sovereignty, Čingis-Khan had no representative of Chinese culture at his court. As Meng-hang tells us, it was only after 1219 that the Chinese alphabet, even in negotiations with China, began to be used by the Mongols; hitherto any political documents sent to China had been written exclusively in Uighur. Nor does Čingis-Khan appear to have had Persian officials in his service: before the conquest of the Moe wark al-Nahar (cf. the anecdote given by d'Ohsson, Histoire des Mongols, i. 413 et seq. from Rashid al-Din). Even in Čingis-Khan's lifetime, those were young Mongols who had, thanks to their appearance at least, perfectly adopted the culture of their conquered foes and were able to speak several languages; the civilization of the nations he subjected always remained foreign to the Khan himself; he never learned a language other than his Mongol mother-tongue.

It cannot be positively proved that Čingis-Khan had ever disdained any great schemes of conquest during his early career in Mongolia. His first campaigns against the adjoining settled lands were
raids whose only object was plunder; it was only at a much later period that Mongol rule was permanently established in these lands. The campaigns to the west were, in the first place, undertaken in pursuit of enemies who had fled thither; it was only through the course of events that these campaigns gradually developed into a deliberate war of conquest.

In 1205, Chingiz-Khan undertook his first campaign against a settled country, viz. Tangut, the kingdom of Haia or Ho-hai of the Chinese, and returned with rich booty. The war with Tangut was afterwards repeatedly renewed; in 1210 the king of Haia had to give Chingiz-Khan his daughter to wife. Hostilities did not cease till a much later period and it was only in the last year of the conqueror's life that an end was made of the kingdom of Haia.

The war which was begun in 1211 with the powerful Chin dynasty in North China lasted equally long. Almost all the forces available were employed from the beginning of this war; only 2000 men remained in Mongolia; the Khan himself and his four sons took the field with the army. After several successes the divisions of the enemy united before Baotou in 1213 (according to Rashid ad-Din) or 1214 (according to the Chinese dynastic annals); a treaty of peace was concluded and a matrimonial alliance arranged between Chingiz-Khan and a Chinese princess; the war was renewed again; however, after five months; in 1215 Pekin had to surrender to the victorious Khan after a long siege. In 1216 he returned to Mongolia; and immediately after his departure the Chin succeeded in retaining a great part of their kingdom. The conclusion of the war was then entrusted to the general Muqa'it; but in spite of all its reverses the kingdom of the Chin survived and was only finally destroyed by Chingiz-Khan's successor.

During the years 1211-1216, when all the Mongol forces were required in China, the pursuit of the enemies who had fled to the west had to be suspended. All successes of the Mongol arms in the west were therefore attained either before 1211 or after 1216.

On the immediate west, Mongolia and China were bounded by the great kingdom of the Karakhiitai, which comprised all the lands from the Urgut territory (see Nurtajan, p. 729) to the Sea of Anhui. This kingdom was first invaded by the hordes who fled from Mongolia and by their parasites; the power of the Urgut, which had already been considerably weakened by the secession of several Muhammedan rulers, notably Muhammed KhvazarMah, was finally destroyed by these invaders. The prince (Jahar) of the Urgut submitted to Chingiz-Khan in 1209 as did Arslan-Khan, prince of the Karakhiitai in the north part of the modern Semirejiev (the first Muhammedan ruler to pay homage to the Mongols) in 1211 and later (after 1216) the prince of Nahl in the Illy valley also. Mwari al-Nahr was conquered by the KhvazarMah Muhammed; the remaining parts of the kingdom of the Karakhiitai were occupied by Kuchak, prince of the Ni'man. During the years following, Kuchak was able to consolidate his power in these lands without hindrance. Like most of his tribe, he had originally been a Christian; in the kingdom of the Karakhiitai, he became a convert to idolatry (probably Buddhism). He persecuted severely the Muhammedans of the modern Chinese Turkestan, who had only submitted to him after a long resistance; public worship was entirely suppressed and the population forced to adopt the Khivit dress; rebellious or suspected people, had, like the Protestants under Louis XIV, military in their upon them.

It was not till 1216 that Chingiz-Khan again found himself free to turn his attention to the west. He entrusted his eldest son Bulutmish with the task of following up his enemies who had taken refuge there; the latter's first campaign was not, however, directed against the Ni'man but against their former allies the Kipchaks; this people had been driven by the Mongols out of the land to the east of Baikal and had found an asylum in the modern Urgut steppe. Fighting first took place in the western part of this steppe, the present Turgai territory, and the Kipchaks were there almost exterminated; immediately afterwards, however, the Mongol army was attacked by a great army of the KhvazarMah which had undertaken a campaign from the lower course of the Sir-Darya against the Kipchaks, the predominant people in this neighbourhood. Nasr-i, the only historian, who seems well-informed, accords the place of the battle and the physical conditions of the terrain, expressly says that this battle took place in 612 = 1215-1216, not as the other authorities say, after the massacre of Otrar. The battle was undecided; in the following night, the Mongols vacated the camp, leaving their camp fires burning to deceive the enemy, thereby gained a start and could not be overtaken by their enemies. That Djurt did not seek this battle we are expressly told; the KhvazarMah is said to have declared that he considered all unbelievers his enemies; still it is very probable that this attack was not premeditated by him. Whether, how, or when Chingiz-Khan received news of this attack, is not known; in any case it did not affect the relations between the two countries; this encounter was probably regarded by both sides as due to a regrettable misunderstanding. It is not till 1219 and quite independent of this event, that Chingiz-Khan undertook his great campaign against the kingdom of the KhvazarMah, which was to prove so fateful to the Muhammedan world.

The causes of this campaign have been often previously discussed, but usually without a sufficient knowledge of the original authorities. Even in the most recent scholarly works, the embassy said to have been sent by the Caliph Nigel ibn Allah to summon the Mongols against his enemy, the KhvazarMah, is represented to be a historical fact, although we only have a fragmentary account of it in Migun ("Vie de Chingiz Khan," ed. J. Aubert, p. 102 et seq.); in the original sources, the story of such an action by the Caliph is not substantiated, and it is vague rumor, which had become current in the Muhammedan world, just as two centuries later the same charge was laid in Europe by the adherents of the Pope against Frederick II, and by those of the emperor against the Pope (cf. the quotations in L. Cahen, "Introduction à l'histoire de l'Asie," Paris 1896, p. 356 et seq.). Chingiz-Khan actually did receive a Muhammedan embassy in Pekin, in the year 1215 or 1216; but it was not sent by the Caliph but by the KhvazarMah himself. The
news of the Mongol successes in China had penetrated to Central Asia; the Khârîmâšâh also had heard of them and, through this embassy, hoped to ascertain more accurate details of the power of the new conquerors. The only historian who gives an account of this embassy (Džâñûdžâri, Tazhâbi-i Nâṣīrî, transl. by Râvâtî, p. 270 et seq., 263 et seq.), received his information from the ambassador himself (Bâhâ al-Dîn Râstî).

The caravan of merchants mentioned by Džawâlînî (cf. the text in Schreiber, Chronica Eurasiaca, ii, 156 et seq.) must have arrived about the same time. Whether these merchants had met the Khân in Mongolia or previously in China, is not related. The first steps towards the establishment of commercial relations between the two kingdoms were therefore made from the land of the Khârîmâšâh; the despatch of an embassy and of a caravan from Mongolia to Central Asia can only be regarded as an answer to these overtures. The fact, that even before 1205 Muhammadan merchants had found their way to Cingiz-Khân, is sufficient proof that these commercial relations were of much greater importance on both sides than has generally been supposed.

In the year 1218, there appeared in Mâ warâ al-Nahr, as envoys from the Mongol Khân, three Muhammadans of whom one had been born in the Khârîmâ, the second in Bâkhârâ and the third in Otrâr. They were commissioned to bear rich presents to the Khârîmâshâh in the name of their sovereign and to announce to him that the Khân regarded him as "the dearest of his sons." Muhammad must have felt insulted by this comparison as the word "son" in intercourse between princes in East Asia as well as in the Muhammadan world denoted the relation of vassal to sovereign; but it is at least very doubtful if Cingiz-Khân, as has been stated, deliberately intended thereby to irritate the Khârîmâshâh and to make war inevitable. In any case, the breach between the two sovereigns was not brought about by this incident. Muhammad is said not to have disputed his indignation during the interview but only in the following night in conversation with one of the envoys, from whom he received a reassuring explanation and dismissed the envoys with a favourable answer.

The caravan consisted of 450 men, all Muhammadans; at their head were four merchants, Omar Khâhidhâr of Otrâr, Hammâl of Markhâ (in Ashbarabâdjan), Fâhîr al-Dîn Dînâsh of Bâkhârâ and Awhâm al-Dîn of Herât. All these merchants were massacred in the frontier town of Otrâr and their goods seized. Whether this massacre was caused by the cupidty of the governor or ordered by the Sultan himself, is not certain; at any rate, it is nowhere stated that these traders had in any way merited such treatment, either by espionage or any other contrivance requiring punishment. Cingiz-Khân is said to have sent another embassy to demand satisfaction; Muhammad had this embassy and at least one of its members put to death.

War against the Khârîmâshâh was thus rendered inevitable. According to the Muhammadan historians, Cingiz-Khân took the field with a host of 600,000 or 700,000 men; these figures are, of course, much exaggerated though, the Mongols naturally brought as great an army as possible against their formidable opponent; this is evident from the fact that, as in 1211, the Khân himself and his four sons were with the army; but the eastern parts of his empire could not be entirely surrounded of troops, as the war in China was still being continued. Almost half (62,000) of the Mongol army of 120,000 men was at the disposal of the general Mûköli; of this army, it is probable that few or no divisions were sent out of China, otherwise the Khân would have made better use of this period. The number of the Mongol standing army which took part in the campaign against the Khârîmâshâh, must have been not much more than 70,000 men; the levies of subject peoples were probably rather more numerous; two Muhammadan princes, Arslân Khân, prince of Karâsh and Sughulâk-Tughân, prince of Almâlik, were forced by the Mongols to fight with their armies against their co-religionists. What we can ascertain regarding the composition of the Mongol army during the wars in Mâ warâ al-Nahr and other lands, makes it probable that the Mongols and their allies together can hardly have numbered more than 200,000 men.

The army of the Khârîmâshâh was undoubtedly superior to that of the Mongols: but the individual sections were at variance with their rulers and with one another and thus were unable to resist the troops led by Cingiz-Khân and his generals.

The victorious advance of the Mongol host through the lands of Islam, in which Cingiz-Khân himself went westwards as far as Bâkhârâ and southwards to the banks of the Jutus near Fâshâwar, while bodies of his troops even reached the Sea of Azov, has already been several times fully discussed; there is little to be added to what has been done by d'Ohsson (Histoire des Mongols, i, 316 et seq.). The destruction of the kingdom of Kûlikût by Cingiz-Khân's general Djâlo in the autumn of 1218 cannot have failed to influence the course of future events. In Bâkhârâ and other towns the inhabitants rose against their oppressors and welcomed the Mongols as liberators; in contrast to the religious persecutions which the Mongols had suffered in Kûlikût's reign, the Mongol general announced that every one would be free to follow his father's faith. The news of these happenings must have penetrated to Mâ warâ al-Nahr; as only Muhammadans had fallen victims to the massacre at Otrâr, the Khârîmâshâh, who had in any case no easy task to persuade his subjects that war against the Mongols was a meritorious war in defence of their faith, found his task now made much more difficult.

The manner of warfare employed by the Mongols in all settled lands (China, Western Asia and afterwards in Russia) was always the same; everywhere the defenceless inhabitants of the villages were driven in large numbers to assist the Mongols in besieging the fortified towns; in storming fortifications the Mongols used to drive disbelievers before them so that they received the brunt of the hail of arrows and prepared the way for the army following them. Sometimes banners were distributed amongst them to give the army the idea of a numerous army. At the siege of Khodâjdn the number of Mongols present is said to have been only 20,000 while the number of prisoners made to accompany them was 50,000.

Mongol supremacy in Mâ warâ al-Nahr and Khârîm was firmly established in Cingiz-Khân's
time; the other lands of the Khwarizm-Sultan had to be again subjected at a later period. Muhammad himself practically never came in contact with the hostile army; the accounts of his death and flight are probably to be interpreted as meaning that his pursuers lost track of him, or that the troops would not or could not follow their way to the island in the Caspian Sea which was quite near the mainland. The work of the anonymous Mongol writer of the year 1240 shows that the Mongols regarded Muhammad's successor Djiiltal al-Din as the king by whom the Mongol envoy had been slain; Ibn Batuta heard similar stories in Central Asia a century later (ed. Defrémery and Sangueletti, ill. 23, 8th ed.). Cingiz-Khan himself and those immediately around him must have been better informed.

The army, which Cingiz-Khan himself commanded, suffered not a single reverse during the whole of the war; it was only against the smaller divisions of the invading host that the Muhammadan generals had any ephemeral successes. We have well authenticated accounts of the general progress of the war; on individual points it is always easy to settle by the relation of the chronicles to the facts, as most of them are based on one source, the Tarikh-i Dhill-i-Khan, written by al-Din-i Djuwayni, which was not written till 648 = 1250; this interval of 40 years was more than sufficient for many legends to arise, particularly concerning the deeds and sayings of the Khan himself. The story has been frequently repeated even in the most recent scholarly works, of how Cingiz-Khan, who was only able to speak his native Mongol tongue, addressed the people from the minbar of the place of prayer (mueilid) at the taking of Bukhara, and described himself as the scourge of God sent to men as a punishment for their sins (in Schefer, Circet. Persicae, ii. 124). It is sufficient to point out that we possess accounts of the capture of Bukhara, by three historians whose works are earlier than that of Djuwayni and that this striking picture is not to be found in any of them.

Some information on the condition of the devastated lands, on the arrangements made by the Khan himself and his sons, and on the date of the Khan's return from the neighbourhood of the Hindush-Kush to Mā warsh al-Nahr is given by the Chinese historian Meng-hung and the Persian Djiiltal. The latter was distinguished from his countrymen by his great stateliness, his broad forehead and his long beard. Djiiltal also mentions his strong physique and his "cat's eyes"; only a few gray hairs remained on his head.

Even in his lifetime Cingiz-Khan had appointed his third son Ugedei as his successor. In the empire founded by him, as in all nomad states, the principle remained in force that the empire belonged not to the ruler, but to the ruling family, and that each member of this family had a right to an ultim (a number of tribes), a yurt (an estate) and an engin (an income suitable to the requirements of his court and his troops). This principle was also followed by Cingiz-Khan, the exception of the youngest son who, according to Mongol custom, was to inherit his father's "house", i.e., his original estates (the eastern part of Mongolia); each of his sons was allotted definite lands in their father's lifetime. As long as Cingiz-Khan lived and his will remained law, the unity of the empire seems to have suffered little from these dispositions of territory; his sons appeared not as rulers of separate areas, but as retainers and faithful followers of their father, who was able to entrust each of them with a special branch of administration. Djiiltal was supreme in the hunting-field, Caghatal in the administration of the Mongol tribal law (yalta) and Tilt on the battle-field. Just shortly before his death a breach arose between Cingiz-Khan and his sons; this was the only one that had not returned to Mongolia after the conquest of the lands of the west. Whether Djiiltal had actually rebelled against his father and disobeyed his orders, or whether, as Mongol tradition states, the estrangement was brought about by slanderous tongues is not clear; certain it is that Cingiz-Khan was preparing to go to war against his son when the news of the prince's death
reached Mongolia. According to later authorities he died only six months before his father.

**CIRAGH DIHLI**, with his real name NASTA AL-DIN MAḤMUD R. YAHYA, was born in Oudh in India and when he was nine years old, his father died. His mother sent him to Mervâ in Ṭab al-Karrn Sh-i-Mandān to acquire learning. After the death of his teacher, he sat at the feet of Hîlahâr al-Din Gûšâni. At the age of forty he came to Dihlî and became the disciple of Nūṣrâ i-Din Awîlî, who esteemed him very highly and called him Ciraghi Dihlî (the light of Dihlî) by which title he is known in India. His many disciples have been collected in A. H. 750 = A. D. 1355 by his disciple Hâlîl under the title of *Kâfûr al-Mağfûrîn*. He died in A. H. 757 = A. D. 1356.

**CIRAGHAN** (Pur. from the Persian Cirâgh, "torch, lamp or light"), "Illumination of gardens and kiánkât; the name of a palace built by Dâmâr Ḫurshîd Pasha, Grand Vizier of Sulṭân Ahmed III, on the European shore of the Bosphorus between the villages of Beşikteş and Ortaköy, into which Sulṭân Muḥammad II moved from Topkapî and which was rebuilt by ʿAbd al-ʿAzîz. The name is derived from the festivities which used to be celebrated there nightly. The "feast of Ciragan" was particularly famous; it was the most brilliant of all the illuminations which Dâmâr Ḫurshîd used to prepare for his sovereign (von Hammer, *Geschichte des Osman. Reiches*, vii. 381, Frankf. transl., xiv. 65). The palace is built entirely of marble and consists of several blocks of buildings, surrounded by gardens and high walls. The façade facing the Bosphorus is over 300 yards long. The interior was magnificently decorated in the Iranian-Moslem style. It was in this palace that the Sulṭân ʿAbd al-ʿAzîz was assassinated in 1876 and the deposed Muḥammad V. was kept there for 47 years. It was used as a Parliament House for the Senate and the Chamber of Deputies but was completely destroyed by fire three months later on Wednesday, 7th Muḥarram 1328 = 19 January 1910.

*For other meanings see Vullers, Dict. Pers., s. v.*

**CIRGIOSSANS.** [See ČERKESES, p. 834.]

**ČISHTI.** MušHUMMMAD, founder of a Sûfî brotherhood, widely disseminated throughout India and one of the greatest of the saints of India, as the name Ašfāl-i Malûk-i Hind (Son of the kingdom of Hind) indicates. MušHUMMMAD al-Dîn belonged to Sâlih and was born in 537 (1142); when he was fifteen years of age, his father Ghiyâth al-Dîn Ḥasan died; he then lived in various towns in Khurasân and finally came to Baghûtât. During this period he made the acquaintance of the most famous Sâlih of the time, including Najm al-Dîn Kâbûrî, Shûbût al-Dîn Alâdur-râwî and Shûbût al-Dîn Kâmûshî. In 580 (1183) he came to Dihlî but almost immediately moved to Adjmir where he died in 635 (1236); his tomb there became a very popular place of pilgrimage; the great Emperor Akbar made a pilgrimage to it on foot. A splendid mausoleum (darâgîh) was erected which is visited to this day.

He is not, however, the only Indian saint who bears the name Čisti; we need only mention Sulûm Čisti, the contemporary of Akbar, whose darâgîh at Fâlyûrî Sikri is likewise held in great reverence. Other individuals who bore the name Čisti are cited under their names.

**ČITMAL,** the name, no longer in use, of a small Indian copper coin, worth 1/2 of a dinâr (g. v.); cf. Yule and Barnett, *Hindoo-English*, s. v., Peirce, p. 457.

**ČITMAL** = ČITMAL; in its usual acceptsation denotes the upper valley of the Kunâr River, from the Bârghûl Pass (Lat. 36° 50' N.) to Arwânil at the confluence of the Bârghûl River with the Kunâr (Lat. 35° 10' N.). This valley, formerly called Kâlâjûr, has received the name Čitmal by which it is known to the general population of the valley as a whole. It is the main range of the northern part of the Kunâr. For the Kûnâr Pass, which lies between 47° 10' and 47° 30' E. and is 290 feet in height, see the Kûnâr on the East. On the N. W. boundary of the range is the main Hindû-Kâshî range, culminating in Tirâlâ (5,542 ft.) south of which the Dûrâh pass at the
head of the Lutkhi valley leads into Kahrant and Badakhshan. In the South the principal approach from the plains of India is by Swat, the Kundghar River, Dir and the Lawarai Pass (10,350 ft.). The most accessible side is by the southern Kahrant valley and Aasmir to Qaillahd on the Kundghar route. The main route is, by the boundary laid down in 1895, included in Afghanistan. This included valley has of recent years been included within the British Empire of India, though still under its own rulers or princes.

Races and languages. The principal race is known as the Khozi, which occupies the whole of Kahrant and spreads southwards over the Lawarai nearly to Dir and E. over the Shandur to Ghizer. The Khos are the cultivators and herdsmen, and above them in rank is a privileged race, the Asmahalak, or 'food-giver' so-called from their duty of supplying the Prince and his followers with food. Above them again are the Zumri or Rains, perhaps of Arab descent, who generally supplied a Wazir to the Prince. The ruling tribe is the Shah-Sangali, to which belong the Kahrant families of the Khos and the Khunzak, who long ruled in Upper Kahrant and Ghizer. They are related families, both claiming descent from Shah Sangali who first established the power of the family and himself was descended from Bait Aylid, an adventurer from Khurit, who first assumed the title of Mirah.

The races of the people are of Aryan race, alabaster, with well formed features and abundant hair, pleasant and attractive in their manners but treacherous and given to crimes of violence and passion. The women are good looking, and till recently, were frequently sold as slaves. The upper classes are perhaps of Iranian descent, but all are assimilated to the common type and speak the same language, the Khozi. In Yassin this language follows the race as far as Ghizer. The rest of the people are Shah except in the North or Warchigian country, where the Burushaki, a language of Mongolian type, is spoken. The Kalo-war and Sinan languages belong to the family described by Grierson as Pishli, and he (agreeing with Khan) considers that they are Aryan languages neither Indian nor Iranian, but representing a stage before the differentiation of these branches. Khan however maintains that they are mainly Iranian.

A purely Erizan language, the Vaghli (akin to the Munjari of the Ghilzai group), is spoken by a small number of people in the Lutkhi valley, while in the extreme south a number of Kafirs speaking the Kaf匣 language are found.

Citril was a Buddhist country before the extension of Islam, and traces of Buddhism are still found. The population is now purely Muslim except a small Kalai Kafir vagabond population which has been converted. The Mawat Sort, identical with the widely-spread Jamati berries, is very powerful.

History. The name Kafir as applied to the ruling family seems to have been originally a title, perhaps existing before the rise of the present family. Cunningham and others have identified it with ancient names such as Khidr and Kula. The title of Kafir was given by the later Kafirs, who claimed descent from Alexander, due probably to the undoubted fact that Alexander used the route by the Kâmir valley and thence to Swat in his invasion of India.

In modern times the family has been divided into two branches, the Khatt and the Khakhwi of Yassin and Upper Kahrant. The two branches were frequently at war all through the sixteenth century, and Yassin was often invaded by the Kafirs. The Yassin chiefs were exposed also to attacks from Khorassan and from the army of Persia on their eastern side. The murder of the English traveller Haywood at Dardar by Mir Wali in 1670 led to his expulsion by his brother Daghak, who finally fell in 1680, being attacked at once by Kafirs and by Amârn Kalif. The later had come into power in 1687 and gradually extended his dominions. In 1877 he began to enter into relations with the British Government through Major Biddulph, agent at Gilgit, and further agreements were made through Capt. Dunbar who visited Citril in 1880.

After Amârn's death in 1892 a series of intrigues and assassinations, in which the late Kafir's brother Shâr Afzal and his sons were involved, led to the deposition of G. (now Sir G.) Robertson to Citril, and the capture of Amârn. Shâr Afzal, who was generally regarded as the eldest son of Amârn, was murdered, was killed by Shâr Afzal, who was shortly driven out by Nâzam Al-Mulk the eldest son of Amârn Al-Mulk, and took refuge in Kâbul. At this instigation a third brother Amârn Al-Mulk murdered Nâzam Al-Mulk, and made himself Kafir. Shâr Afzal again appeared on the scene and Umer Khân the powerful Afghan Chief of Quanduli who had seized Dir, now crossed the Lawarai Pass into Citril.

At this time Robertson was in Gilgit and Lutu, Gordon with a small escort was in Citril. There were small detachments at Ghizer and Mastuj in the upper valley. Robertson hastened to Citril and arrived in time to be besieged there with his small force. Some small detachments on the way from Gilgit were destroyed and others besieged. The old fort built of stone and wood, was defended with great difficulty and gallantry by its small garrison from March 5th to April 20th 1895, when a body of about 400 Sikhs under Col. Kelly arrived from Gilgit having crossed the snow bound Shandur Pass after great suffering and fought actions near Mastuj and in the Nist Gol defile. A larger force was on its way from India via the Malakand Pass, Swat, the Pindjkora river and the Lawarai Pass. Unfortunately Umer Khân, who was defeated and fled into Afghanistân, where he was interned by the Amir. Shâr Afzal also fled but was captured by the Khân of Dir and interned in British India.

The young Kafir Amârn Al-Mulk, who had taken refuge with Robertson in the fort of Citril during the siege, abducted and his younger brother Shâr Al-Mulk, took his place. This was afterwards formally installed in Sept. 1895 by order of the Indian Government under the suzerainty of Kâshmir, and has since ruled successfully. The road over the Lawarai is kept up by the Indian Government and relations with Citril are managed by the Col. Agent for Dir, Swat and Citril under the orders of the Chief Commissioner of the Northwest Frontier Province. The Yassin Country however is under the management of the Agent at Gilgit. The road was closed for a time during the Swat rising of 1897 but Citril itself was not troubled.

were possibly first brought into contact with Islam by merchants or emigrants from South Arabia in the early centuries of the Hijra. It is not known when Islam was completely adopted in these islands but it was certainly brought from the African mainland or the islands lying off it. In the beginning of the eighth century the Comoro islands are said to have been conquered by followers of the Prophet who were known as Shafi'i princes, who had settled at an earlier period in East Africa (see C. H. Becker in Islam, ii. 9). The inhabitants of the islands are — in spite of temporary Ibadi influence — like the Snabali whose language is allied to theirs, followers of the Shafi'i sect. Cf. G. Ferrand, Les Musulmans de Madagascar et aux îles Comores, l.—ii. (Paris 1891—1902), particularly iii. 170 et seq.

CONSTANTE (Arabic: Kustantine, with numerous variants) a town in Algeria, the capital of the department of Constantine, 330 miles east of Algiers and 50 miles southeast of Philippeville, which is the port of Constantine and is connected with it by railway; it lies in 36° 22' N. Lat. and 48° 56' E. Long. (Greenwich). In 1906 the population was 52,247, of whom 15,779 were Europeans, 8,437 Jews and 28,404 natives.

The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the S.E., N.E. and N.W., by deep ravines and connected with the surrounding country on the S. E. only by a narrow isthmus. The plateau itself declines rapidly from north to south. The Kasaï on its highest point is 2500 feet above sea-level while the Marhab of Sidi Râshid is a mile above 2170 feet high. Of the ravines which represent the moats of this natural fortress the most remarkable is that which runs along the southeast and northeast faces of the plateau, at the bottom of which the Kussiel flows. This river runs along a narrow gully, a real 'cañon', the walls of which rise sheer upright to a height of 500 to 600 feet, disappears for 1/2 mile under these subterranean passages which the water has hollowed out, makes its exit in waterfalls and descends to the ventilating plain of al-Juma. Across this gorge above which on the right bank rises the plateau of Mansuri (2340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest. Al-Fakri (Description de l'Afrique, transl. de Slane, p. 150) mentions it and al-Ghadi (ed. de Goec, p. 111) describes it as one of the most remarkable works which it had ever been granted him to see. Consisting of two rows of arches, one above the other, 217 feet high, a road and an aqueduct bringing the water necessary for the town ran across it. It collapsed in the eighth century, was rebuilt in the twelfth by order of Salâhab, minister of the supervision of a Spanish engineer and on finally breaking down in 1797, it was replaced by an iron bridge 423 feet long crossing the Kussiel at a height of 528 feet. Another bridge is at present being constructed, farther up the river, to connect the plateau of Mansuri where the station and the European quarter are built, with the quarters previously in existence to the S.W. of the town on the flanks of the affluent of Kulliat-Arg, a height which commands the entrance to Constantine from this side.

Although these works have sensibly modified the general appearance of the town, it nevertheless

M. LONGWORTH DAMEZ.

CITRÁL — CONSTANTINE.
preserves an originality of aspect which is in striking contrast to that of other Algiersian town. It resembles a great Kabyl village rather than an Oriental city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow tortuous streets, which sometimes descend like stairways to the edge of the ravine, the heights of which are crowned by houses. A noisy throng of Kabyli, Jews and Musulmos fill the streets and markets. A few monuments of no artistic interest recall the past history of Constantine. The great mosque dates from the time of the first Hashid sovereigns (xiiith century a. D.). The mosques of Sidi al-Ghazali, now a cathedral, of Sidi al-Salah and of Sidi al-Kattani, all of which were built in the xvith century, belong to the Turkish period as does the palace built by Ahmad, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by the natives. The earliest mention of the existence of a town named Cirta at this place. The Semitic origin of the name (qurt = town) would lead one to suppose that the Carth­egians had established a colony there. In any case, Constantine was a very important town in the Punic wars as the capital of the kings of Numidia. Syphax had a palace there. Masinissa and his successors erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the first century B.C., P. Sittius Nuceriae, an adventurer, seized Cirta on Caesar's behalf and on the latter's ultimatum triumph the town and territory. Cirta then became a Roman colony under the name of Colonia Cirta Julia or Cirta Sittianorum. Juba II. made it his capital after the restoration of the kingdom of Numidia by Augustus and lived there for seven years (24-17 B.C.), till he was forced to exchange Numidia for Mauretania. Cirta still remained the capital of the republic of the 'four colonies', then in the third century A.D. It became that of the province of Numidia Cirtensis, then, two centuries later, of that of Numidia Cirtensis, established by Maximinus Hercule in 297 A.D.

In the course of the civil wars which followed the abdication of Diocletian, the inhabitants recognized the authority of the usurper Alexander and gave him asylum after he had been driven from Carthage and thus brought upon their heads the wrath of Maxentius. The latter took Cirta and razed the town to the ground in 311 A.D. It was rebuilt in 313 by Constantine, the conqueror of Maxentius, and received the name of Constantine which it has retained to the present day. At the Vandal invasion, Constantine was occupied by the Barbarians but given back in 442 by Geiserich to the Emperor. After the destruction of the Western Empire, Constantine remained independent, till the Byzantine victor, crowned by the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chronicles are silent as to the date at which it fell into the hands of the Mahommedans. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the seventh century at the same time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of Ifriqya, Constantine owned the rule successively of the governors of Kairouan, the Aghlabids, the Fatimids, then the Almoravids. Al-Mu‘izz had transferred the seat of the Caliphate to Egypt, of the Zirids. The latter retained it even after the Fatimids had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hilaüt invasion. The Almohads, of Al-Mu‘izz took advantage of their troubles to seize the town and include it among his own possessions. The successors of Al-Mu‘izz retained the town for a century but split of a revolt instigated by Bel Barq, uncle of the Emir Al-Nasir. After the capture of Tunis by the Almohads, Yahya, the last king of Bongie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to Abü Al-Mumin whose troops took possession of the town. Attacked unsuccessfully by Abü B. Ghaniya in 1185 A.D., Constantine remained faithful to the Almohads till the final collapse of the empire founded by Abü Al-Mumin.

At this period, Constantine was a very prosperous city. "Kostantina" says al-Bakri, "is a large and ancient town with a numerous population; it is inhabited by various families who were originally part of the Berber tribes established at Milla, in the land of Nafusa and in that of Kas­shily, but it belongs to a certain Kashtian tribe. It has rich bazaars and a prosperous trade. (cfr. p. 150) Al-Idrisi describes Constantine as a populous and commercial town. "The inhabitants" he continues "are rich; they have agreements with the Arabs and co-operate with them for the cultivation of the soil and the preservation of the harvest. Their subterranean storehouses are so good that corn may be kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to foreign countries..." (op. cfr. p. 111).

When the Almohad Empire was broken up, Constantine recognised the authority of the Hafsid Abü zakariya who was proclaimed at Tunis in 1230 A.D. (cf. the article HAFSID). The history of the town under the Hafsids (xiiith-xivth centuries) is very complex and disjuncted. The rulers of Tunis attached great importance to the possession of Constantine; they frequently lived there and delighted in improving it; they usually entrusted its government to princes of their own family. Nevertheless in spite of their precautions and trouble they lost it on several occasions; in 1282 A.D. for example, in the reign of Abü Ishaq, the governor Ibn al-Wazir rose against the sovereign of Tunis, who had to send his son, Abü Fares, to retake the town by force. In 1284, its inhabitants opened their gates to the pretender Abü Zakariya of Bongie; in 1305 at the suggestion of the governor Ibn al-Amir, they submitted to the Hafsids, sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the King of Bongie, Abü T-Baksh. The latter succeeded in restoring to his own advantage the unity of the Hafsid kingdom in 1309 A.D. and for some years maintained peace in the Eastern Maghrib. But new troubles were not long in arising. From 1312 to 1319, Constantine was almost independent under the authority of the vizier Ibn Charrar, who succeeded in placing on the throne of Tunis one of his own choice, Abü Yahya. In 1325, the revolt of another vizier, Ibn al-Kafita, exposed the inhabitants to an attack.
which proved unsuccessful, from the 'Abd al-Wādītin. The war which then broke out in the Eastern Maghrib between the Marinids and the 'Abd al-Wādītin as well as the good government of the governors Abū 'Abd Allāh and Abū Zaid, son and grandson of Abū Yahyā, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with difficulty, was again broken. In the middle of the sixteenth century by Marinid expeditions. Abu-l-Hāfin entered Constantine without striking a blow and supplanted Hašid authority by his own in 1547. The defeat of Abu-l-Hāsin at Kairāwan brought about a revival in favour of the Hašids and one of them, al-Pādž, took advantage of the occasion to seize the town. He held it for only a short time. The former Hašid governor, Abū Zaid, set at liberty by Abu Inān, retook Constantine, then abandoning his protector, proclaimed Sulṭān a son of al-Hāsin named Tāşfīn. Soon afterwards, Abū Zaid's brother, Abu-l-Hābin, overthrew him and dethroned Tāşfīn. He in his turn took the title of Sulṭān, repulsed the Dawāwīda and Sadāwīnah Arab tribes, who had laid siege to Constantine in 1555, but could not prevent the town being taken by Abu Inān, who cut off the town from it. He regained it from the Marinids in 1560. Becoming Sulṭān of Tunis in 1570, Abu-l-Hābin maintained peace in the province of Constantine till his death. His successor Abū Fāris had on the other hand twice to reconquer Constantine from his brother Abū Bakr, who had seized it with the help of the Arab tribes.

We have no exact details on the history of Constantine in the xvth century. Rebellions against Hašid rule were, it seems, less frequent than in the preceding century but its authority was more nominal than real. During this period the real masters of Constantine were the chieftains of the Awlād Sawla, a section of the Arab tribe of Dawāwīda. In the town itself the exercise of authority was in the hands of a few families, clients of the Awlād Sawla. Such, for example, were the family of 'Abd al-Mu'min of Marabut origin, whose chiefs exercised by hereditary right the functions of Shākh al-Islām and Amīr al-Rakah (leader of the caravan of pilgrims to Mecca); the family of Ben Bādis, whose members had arrogated to themselves the duties of Kāfi, that of the Ben al-Faggān (or Lāfgnān), famous as legal authorities.

The arrival of the Turks in Northern Africa opened an era of troubles for Constantine. There were two parties in the field. The one, led by the 'Abd al-Mu'min, was favourable to the maintenance of Hašid suzerainty; the other, led by the Lāfgnān, invited the Turks thither. According to M. Vayassette, a first attempt by the Turks to occupy the town was made as early as 1517. According to M. Mercier de Husain, one of Khān al-Din's lieutenants, forced the people of Constantine to recognize his master's authority in 1519 or 1520. The submission of the town was only an ephemeral one, however, for in 1526 a representative of the Hašid sovereign of Tunis was resident in the town. It is not till 1534 that the establishment of a garrison definitely marks the occupation of Constantine by the Turks. Their authority was not firmly established without difficulty. The partisans of the Hašids did not bow at once to the Turkish yoke but sought to rid themselves of their new masters. At the end of 1567 or in the early months of 1568 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muḥammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest rigour. The 'Abd al-Mu'min who had instigated it was speedily put down. From that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1642, taking advantage of the difficulties caused to the Turks by the revolt of the Kabylis and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the Beylik of the East in the xviith century, Constantine enjoyed complete tranquillity for the half-century following the period of government of the Bey Fuḥat (1637). But the intervention of the Algerians in the affairs of Tunisia ended in exposing Constantine to the reprisals of its neighbours. In 1700, Mannār Bey, a son of Tunis, besieges against the Bey of Kindja Bey of Constantine, laid siege to the town and blockaded it for three months. The Day of Algiers, at length received warning of the precarious situation of the town by a messenger, who had succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not dare await.

The xviith century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather than as dourle representatives of the Bey of Algiers. Such were Karūnān Husain Bey, called Bu-Kumāna (1713—1736), Ḥasan b. Husain called Bu-Ḥanāk (1736—1754), Ahmad al-Kullī (1756—1771) and above all Shālab Bey (1771—1792). Constantine owes to them many public works and buildings of general interest. Bu-Kumāna built the mosque of Sūk al-Ghaṣūl; Bu-Ḥanāk made new streets and built the Mosque of Sidi Lakhdar. Shālab Bey rebuilt the bridge over the Eumel and the Koman aqueduct bringing the waters of the Djebel Washā to the city; he also built the mosque and madrasa of Sidi al-Kattānī and commissioned Italian artists to build him a palace adorned with faience and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Shālab Bey himself, depose by the Bey of Algiers, to whom he had given offence, tried to stir up a rebellion but perished miserably. Seventeen Beys ruled Constantine in the period 1792—1826. Some of them only held office a few months or at most a year, all were distinguished by their cruelty and rapine. Constantine suffered much from this state of affairs; public works were abandoned; commerce was ruined; the lives and property of the inhabitants were continually endangered. To the internal disorder were soon added attacks by the surrounding peoples. The Kabyl hostiles of the Marabut Baydjaḥi (against Harz) attacked the Turks and advanced up to the walls of Constantine in 1804. A Turkish army commanded by Sīmān Kikhlīs besieged the town three years later. It was blockaded
for two months (April—May 1807) and was once
bombardeed. The approach of a relieving army
from Algiers caused the Tunisians to raise the
siege and in their retreat lost 1167 prisoners
and all their artillery.

Aḥmad, the last Bey of Constantine, possessed
those qualities which were lacking in his prede-
cessors. Intellectual, active, ambitious and energetic,
he unfortunately made himself hated by his acts of
prudery and by the exactitude levied by him to raise
funds to build a palace in Constantine to
replace the old ʿAzīz-al-Bey. After the French
occupation of Algiers, he sought to profit by the
appearance of the Offense to create an independent
principality in the east of the Regency and had
the title of Paşsha given him by the Ottoman Porte.
Deposed by a decree from General Clauzel on the
11th December 1830, he nevertheless retained
possession of Constantine. The hesitation on the
part of the French government, which tried to
come to terms with him for his voluntary sub-
mission and after the failure of these negotiations
did not wish to enter on a dangerous campaign,
delayed his fall. But in 1836, Marshall Clauzel,
then governor-general of Algeria, obtained per-
mission to undertake an expedition against Con-
stantine. On the 21st November 1837, the
French troops arrived without difficulty in sight
of the town and took up a position on the heights
of Manṣūrīya and Kādiṭa. Two sorties by the
besieged led by Bīn Atīm (Taia), Khalīfa of the
Bay, were repulsed; on the other hand, two attacks
by the French in the night of the 22nd-23rd
December also failed. Clauzel decided to raise
the siege and returned to Bone after a retreat which
was rendered very difficult by bad weather. This
check was made good the following year. An
army under General Damrèmont laid siege to
Constantine on the 5th October 1837. Batteries
were planted on Kūliāt Atī, so as to make a
breach in the south-east front of the town. Dam-
rèmont was killed on the 12th October; but his
successor, General Välèe, ordered an assault on the
situated on the town. The town was taken after a
lighting by columns led by Colonels Combe and Lambeaux
ariers. Aḥmad Bey who had left Constantine on the
approach of the French troops, retired to the
south where he held the country against the French
for eleven years longer. It is said that the siege
of 1837 was the nineteenth that Constantine had
to endure.

After the French occupation, Constantine, the
administration of which had been entrusted to a
Hākim under the supervision of the military
authorities, became the headquarters of a comman-
dement supérieur and the base of French operations
in the eastern province. At first under military
law, it was not given a municipal government
till 1848 and became the capital of the départem-
ent in 1849. Since then the town has developed con-
siderably, but in spite of the growth of the Euro-
pian population, the natives still hold a more
important position in it than in other townships
of Algeria with the exception of Tlemcen.
Constantine has in fact remained a market and centre of
supplies for the tribes of the east; its native
industries have survived and supply the population
of the whole province with cotton stuffs and
articles of leather.

CONSTANTINOPLE.

CONSTANTINOPLE TO THE OTTOMAN
CONQUEST (1453).

The Name. The city, which Constantinople the
Great on the 11th May 330 raised to be the
capital of the Eastern Empire and which was
called after him, was known to the Arabs as
Konstantin’iyah (in poetry also Konstantine, with or
without the article); the older name Byzantium
(μυστάντινα, in various spellings) was also known
to them as well as the fact that the later Greeks,
as at the present day, used to call Constantinople
simply "ὗπατρία τῆς πόλιος", the "kings city" par excellence (Mau-
čů, h. i. 537; Ibn al-Albâni, h. i. 273; Ibn
Ma’nî, h. i. 39; Dimkî, p. 241, 259; Ibn Baṭūṭa, h. ii.
431). From ṭī ṭūbīyâ the Turkish استنبول Stamboul (Istanbul in Ibn al-Albâni and in Ebnûs;
Iṣnaqâl in Abu ʿl-Fidâ, Dimkî, Yâkût, Ibn
Baṭūṭa; Câvîjî, p. 22, ed. Brunn: Escocibî,
Schillerger, p. 45, ed. Langnitzel: "Constantinopel
hayesn die Chriften Ithambol und die Thürchen
hayesn Stamboul"). In the 7th century we find
the form Iltambol "Islam-ful" appearing, Ko-
stantin’iyah, with the variant Konstantine, has
reained the official designation to the present day
on coins and firmans; the form Iltambol appeared
on coins from Aḥmad III to Selâm III; in
the written language and in more refined conversation
the form dor-ızâ−ızâdât, less frequently ıltınâ−ı−ızâdât, "the Gate of Bliss" is used. Stambol has
survived in everyday speech and in the narrower
sense is applied to Constantinople proper, in
opposition to the suburbs, viz. Galata and Pera,
as was the usage even in the days of the
Byzantine Emperors.

The Campaigns of the Arabs against
Constantinople. It is said that the Prophet
himself had foretold the conquest of Constantinople
by the faithful. The Ottoman historians adduce
the following hadith: "Ye shall conquer Constantin-
ople! Peace be upon the prince and the army
to whom this shall be granted!" (ʿAli, Ṭabâk ā
akhlûkâ, v. 252 et seq.; Solakrâde, p. 194; ʿAbd
l. 32 et seq.; 73, 'Ab Shîr, Ṭabâk ā al-deferînâ, 32 et seq.); Suyûṭî's al-Dhâfûn al-paghârâ is given
as authority; older references are wanting. As a
matter of fact, the Umayyads set about this enter-
prise with the energy and valour, that inspired
the early warriors of Islam. In the year of the
world 6146 (beginning of June, 1285), according
to Thoephanes, p. 315, a fleet was equipped in
Tripolis "against Constantinople" which under
the leadership of ʿAbdul-Razzâk (i.e. Baṣr Ibn Alī Abî Arjâ) defeated the Greek fleet at Phoenix (Finika)
on the Lycian coast; but it did not reach Constan-
tinople; at the same time Muhammad had in-
vaded Byzantine territory.

In the year 1444 or 1456 of the world
(664 A. D.), took place the campaign of 'Abd
al-Rahîm b. Khâlid who advanced as far as
Ferganou; the admiral Baṣr Ibn Alī Abî Arjâ, ac-
Concerning Arabic sources, it is said to have reached Constantinople (Tabari, ii. 86).

In the course of the next years, Fadaila b. Ubaid advanced as far as Chalcedon, and Yazid, son of Muawiya, was sent after him (according to Theophanes in the year 6159 of the world, beginning 1st Sept. 666; according to Elias of Nilus in Yazid appeared before Constantinople in 51 a. h., which began on the 18th January 672; a fleet commanded by Basri b. Abbas, son of Yezid, had supported this enterprise. In 672 a strong fleet anchor off the European coast of the Sea of Marmora under the walls of the city. The Arabs attacked the town from April to September; they spent the winters in Cyprus and renewed their attacks in the following spring until they finally retired "after seven years' fighting." A great part of the fleet was destroyed by Greek fire; many ships were wrecked on the return journey (Theoph., p. 353 et seq.). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 667 and the fleet to have finally retired in 673. The Arab historians vary between the years 48, 49, 50 and 52 a. h. and place the death of Ab. Aliya of the year 57 a. h., 58 or even 53 a. h. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unaccountable.

This siege has acquired particular renown in the Arab world as the Ansari Abul Ayyub Khalid b. Zaid fell in it and was buried before the walls of Constantinople; the finding of his tomb during the final siege by Salah ed-Din. It was an event only comparable to the discovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of Abul Ayyub is first mentioned by Ibn Katul, p. 140; according to Tabari, iii. 2324, Ibn al-Asb, iii. 381, Ibn al-Jawwari and Kayyim, p. 418, the Byzantines respected it and made pilgrimages to it in times of drought to pray for rain (litob); the Turkish expression "Ferag" is given very fully in Leucavius, Hist. Ant., p. 41 et seq. and in the painstaking monograph by Hadji Abul Allah, al-Ashur al-mujaddatiya d'Abul Ayyub al-Khailidiya, Istanbul 1257 a. h.).

There was a truce for over 40 years between Byzantines and Arabs until in 97 a. h. (beginning 7th October 715) Sulaiman b. Abul Malak came to the throne. A (Abd al-Malik was at this time current, according to which a Khalif who should bear the name of a Prophet was to conquer Constantinople. Sulaiman took the prophecy to refer to himself and equipped a great expedition against Constantinople. His brother Murad led the army, which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Aydapa and entered Constantinople. The Arab armada anchored partly near the walls on the coast of the Sea of Marmora and partly in the Bosporus; the Golden Horn was barred by a chain. The siege began on the 25th August 716 and lasted a whole year; Murad then found himself forced to retire owing to the attacks of the Bulgars and the scarcity of provisions (Theoph., p. 356—359; full details in Ibn al-Muqaddasi, ed. de Goeje, s. v. Mucada; Ibn Khwarizmi, ii. 134 et seq.; Ibn al-Asb, iv. 17 et seq.; cf. the vivid account in Gellius, Periplus marum by Theophanes and Osmann, p. 49—63). There are many references to Murad's hazardous march among the later Arabs. Even several centuries later, they knew of "Murad's Wall" at Abyssus where he had encamped (Mas'udi, ii. 372. Ibn Khurshid, 164), and the mosque built by him there (Yakut, i. 374). 4Abol Allah b. Talylb, the first Muslim to lead an attack on the "Garde de Constantinople," was one of Murad's commanders (Ibn Katul, p. 275). Murad is said to have made the building of the Imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Stambul (Makaddas, p. 147). Ibn al-Asb, x. 18, Dimishki, p. 227; finally he is credited with building the Tower of Galata (Dimishki, p. 228) and the 'Arab Usur' in Galata (Jah. al Aswad, Tashrih al-Turiv, year 97 a. h.). Elyas and his authority have made two sieges out of Murad's campaign and embellished their narrative with incredible stories. Narak (died 1044 a. h. = 1634) discusses Murad's campaign in the fourth section of his Pentes, following Muhayli l-Dir al-Abah's Mawriari.

Only on one or other occasion did an Arab host appear within sight of Constantinople, namely in 894 a. h. (1258), the fleet of the islanders marched through Asia Minor unopposed and encamped at Chrysopolis (Scutari). The Empress Irene who was acting as Regent for her son Constantin, hastened to make peace and agreed to pay tribute (Theoph., p. 455 et seq. under the year 6274 of the world (788-789); Badabkin, p. 168; Tabari, iii. 504 et seq.; Ibn al-Asb, vi. 44 a. h. 165, beginning 26th August 878). Elyas and his authority (Mas'udi, Ibn Khwarizmi, i. 957 =1550 according to Rieu, Catalogue etc., p. 46 et seq. have made no less than four regular sieges of Constantinople out of the campaigns of the Arabs under al-Mu'tad and Harun against the Greeks. After the second, Harun gained a quarter in Sambul by a trick similar to that by which Dido gained the site of Carthage (Leucavius, c. 114; Elyas, i. 81 = Feyg) the same story is given by Chalip, p. 27 of the settlement of the Genoese in Galata, and Elyas, Travel etc., i. 2, 66 of the building of Rumeli Hisar by Mehmed II.

The Arab accounts of Constantinople date from the 8th century. They considered the Dardanelles, the Sea of Marmora and the Bosporus as a single "Canal" (Behir), connecting the Mediterranean with the Black Sea, and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Stambul in time of war that is referred to (see below). The high double walls of the city with their towers and gateways, including the Golden Gate, the Ayasofya, the Hippodrome with its monuments (notably the Egyptian Obelisk), the four bronze horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantine" (really of Justinian, the so-called Augusteus) are described by them in greater or less detail. The Hawal and Makadda devote particular attention to the Pristorium where their countrymen, prisoners of war, were kept under a mild custody and the Dukas of Harun, the sons of Harun (cf. Yakut, i. 796, s. v. Balik and Constantinos Prophoropulos, de Cerim, i. 592 and 767). The most detailed account is that of Ibn al-Wardi (sixth century): he men-
CONSTANTINOPLE.

In the year 1452 he built the castle of Rumeli Hisar (then called bugas-hessen "the barrier of the strait") on the European shore of the Bosporus. The siege began on the 9th April 1453 and ended on Thursday the 29th May, when the main attack was directed against the land-walls between Topkapa, the "Gate of the Cannon", and the Gate of Adrianople, where the heart of the besiegers had made a great breach. Two episodes of the siege have become particularly renowned: the entry of the Turkish fleet into the Golden Horn, which was closed by a great chain, by being dragged overland (from the Bay of Dolma-Bagdah over the ridge of Pera into the valley of Kebir Pasha) on the night of the 21st-22nd April and the discovery of the grave of the Anjci Ahi Aytub by Sheikh Al-Shams Al-Diu.

The conquered city was given over to plunder and devastation for three days; the Sultan then made his entry, offered up the Friday prayer in the Aya Sofia and returned to Adrianople after appointing a sublieutenant (governor of the city).

The Genoese suburb of Galata which had remained neutral during the siege capitulated a few days after the fall of Constantinople.

On only two occasions since it passed under Ottoman sway has a hostile foreign force appeared before the capital; on the 29th February 1807, the English Admiral Duckworth, who however retired ten days later without making a serious attack, and in 1877, the Russian army which did not occupy the city but encamped in the suburb of San Simeon.

CONSTANTINOPLE UNDER OTTOMAN RULE.

The Seral and the Government Buildings. In the years immediately following the conquest, Mehemmed II employed himself in re-peopling the deserted town and making it the royal residence. From the inhabitants who were transplanted from Karahan, arose the names Karman and Aksarai of two quarters in Stambul; the conqueror also brought the inhabitants of Kaffa, Mytilene and other islands to the capital; there was also a great influx of Armenians, Persians and other races to the city. In the period following, large numbers of Jews and Arabs, who had been driven from Spain, settled there (cf. the very fantastic statements in Ewliya, Travels etc., l. 28, at any). The city had increased before and after the last siege, gradually returned. The imperial Byzantine palaces were allowed to fall into ruins; in their place Mehemmed built a Seral in the centre of the city on the third hill (Cristolium, ii. ch. l, § 21 Ducas, p. 317; according to Ewliya, Travels etc., l. 1, 50: from §55—$60 = 1454—1458); at a later period after the completion of the new Seral it was called the Esbi (old) Seral and was used for several centuries till the reign of Mahmiid II. — to provide apartments for the princes of dead or dethroned Sultans; it then became the residence of the Serasker and was taken down early in 1897; on its site was built the Seraskerh, but the ancient name — Esbi Seral — is still popularly applied to the latter.

Comparatively early — in 877 a. h. (1457-1468) it is said — Mehemmed began to build a second Seral in the midst of extensive gardens on the promontory between the Sea of Marmora, the entrance to the Bosporus and the Golden Horn and cut off the whole on the landside by...
a strong, high wall (completed in Ramadán 883 A.D., which began on the 26th Nov. 1478) on the sea side. The sea walls marked the limits of the Serai. Of the buildings of the Conqueror only the Ciniil (i.e. saloon)-Kiosk, finished in September, 1478; it is now attached to the Imperial Museums. On the site of the New Serai and its individual buildings, cf. the authoritative essay by 'Abdarrāşīḩ Shereif in Vols. I and II of the Revue Historique de l'Institut d'Histoire Ottoman (with a Map).

Within this area the Serai proper, situated on the site of the pre-Byzantine Acropolis, formed a separate complex of buildings with three great courts, which were entered by as many gates (Bab-i Husayn, Ondo-Kapusi, also called Bab-i Selim-i, and Bab-i Sāla'dar). Around the third court were the private apartments of the Sultan with the Harem, the treasury, the chambers containing the sacred relics of Islam (Zāhrā-i Şahriyāst Oda) and in the court itself was the hall of audience (Ard-e ʿAṣrāb) the hall of the Divān. It was built on the second court with the "outer treasury" (Taqīraḵābanisni); the first court contained amongst other buildings the armoury of the Serai (Jīrāh-šāhān, formerly the church of Irene, now a museum of arms) and after 1653 the mint (Zarḵābānā). The latter Sultan laid out a whole series of palaces and kiosks, partly on the heights, partly in the lower lying parts of the Serai, and close to the sea at the "Gate of the Cannons" (Topkapu), the best known are the Baghādād Kiosk outside the third court of the Serai, built by Murād IV, the İndjū Kiosk on the Sea of Marmara and the Yali Kiosk on the Golden Horn, the two latter now being destroyed. The palace of Topkapu which was used as the Sultan's winter residence till the beginning of the 16th century, perished in flames in 1662. Mahmut II was the first to reside in Beşiktas; his successor, "Abd al-Majid, built the splendid palace of Dolmabahce there, and his successor 'Abd al-'Aziz the palace of Ciragan which was destroyed by fire in 1910; 'Abd al-Ḥamid II (destroined in 1909) returned to the Yildis Kiosk on the heights above Beşiktas. Since then Mehemmed IV has occupied the palace of Dolmabahce. To distinguish it from the other modern palaces, the area, which has just been described, with its buildings is called Old Serai by Europeans; the Turks give it the name Topkapu Serai, formerly Yeni Serai.

Down to the year 1654, the Grand Viziers had no special official buildings allotted to them; the business of state, which did not come before the Divan, was transacted in the Grand Vizier's private house. In 1654, Mehemmed IV presented the Grand Vizier Derwish Mehemmed Paşa with a large building opposite the Aliä Kiosk near the Serai; this became the office of the Grand Vizier under the name "Sublime Porte" (Bab-i Alt, in popular language, Babu-i Paşa Kapusi; Tugla-i Paşa, Hohe Pforte). In the course of centuries it has been repeatedly destroyed wholly or in part by fire, the last occasion being on the 6th February, 1911. Besides the Grand Vizier the Agas of the Janissaries had also his separate Porte, the Aga Kapusi near the Janissary barracks and the Sulaimâniyâ-Mosque built by Sulaimân I, it was burned in 1750 along with the "Fire Kiosk" (yangin kiosk) and rebuilt by Mahmut II. After the abandonment of the corps of Janissaries the building was given to the Şah Râşid in 1825 as an official residence (Şah Râşid Kapusi, Bâb-i Furşat-i Şah Râşid) and the famous Vîr Kiosk was taken down, the Senaker Tower being built on the site.

The government offices which were instituted in the sixth century on a European model are now housed in various buildings, mostly quite modern of no historic interest; only the Dâtiyât-Khana (land-register office) on the Atmâlîâ with the registers compiled by Sulaimân I, the so-called (Kâpurk beacon), for the whole kingdom, deserves mention.

The Mosques. 1. The Aya Sofía, see the separate article, p. 524.

2. The Mehmed-i î, built by the Conqueror on the site of the Church of the Apostles and the Manseleum of the Byzantine Emperors on the fourth hill in the years 867–875 (1462–1470), famous for the various endowments attached to it, including a mosque built on the second court with the "outer treasury" (Taqīraḵābanisni); the first court contained amongst other buildings the armoury of the Serai (Jīrāh-šāhān, formerly the church of Irene, now a museum of arms) and after 1653 the mint (Zarḵābānā). The latter Sultan laid out a whole series of palaces and kiosks, partly on the heights, partly in the lower lying parts of the Serai, and close to the sea at the "Gate of the Cannons" (Topkapu), the best known are the Baghādād Kiosk outside the third court of the Serai, built by Murād IV, the İndjū Kiosk on the Sea of Marmara and the Yali Kiosk on the Golden Horn, the two latter now being destroyed. The palace of Topkapu which was used as the Sultan's winter residence till the beginning of the 16th century, perished in flames in 1662. Mahmut II was the first to reside in Beşiktas; his successor, "Abd al-Majid, built the splendid palace of Dolmabahce there, and his successor 'Abd al-'Aziz the palace of Ciragan which was destroyed by fire in 1910; 'Abd al-Ḥamid II (destroined in 1909) returned to the Yildis Kiosk on the heights above Beşiktas. Since then Mehemmed IV has occupied the palace of Dolmabahce. To distinguish it from the other modern palaces, the area, which has just been described, with its buildings is called Old Serai by Europeans; the Turks give it the name Topkapu Serai, formerly Yeni Serai.

The earthquake of the 23rd May 1766 caused the cupola of the Mosque to collapse and the türbe of the Conqueror was severely injured; the Mosque was then subjected to a thorough renovation which occupied almost five years (1767–1777).

3. The Mosque of Bayṣatî II on the Great Bââr with the türbes of the builder and his daughter Sâlihî Sultan, built from 1501–1506, famous for the market, which is held in the outer court during Ramadân and for the pigeons which nest in it.

4. The Selimiye, on the fifth hill, above the Fanar quarter, with the türbe of Selim I, completed by Sulaimân I in 1552: in it is also the tomb of Sultan 'Abd al-Majid.

5. The Mosque of the Prince, (Şahîha-i Şâhîh) on the third hill, built for Sulaimân I by the architect Sinâni (q.v.) in 955 (1554–1559) in memory of Prince Mehmed who died in 1499 A. H. with the türbe of this prince and his brother Şahîhûr (died 1560 A. H.) and the tombs of numerous Viziers.

6. The Sulaimânîye, whose commanding situation on one of the highest hills of the city and great size give it an imposing appearance. Built for Sulaimân by Sinâni in the years 1550–1557 with four medreses, an "intret" and other buildings, the four Minarets have 10 spiral staircases (şerîf), presumably because the builder was the tenth Ottoman Sultan. The türbe of Sulaimân I is in the court of the Mosque and Sulaimân II, Ahmed II and various Sultanesses are also buried in it.

7. The Ahmediye, on the Atmâlîâ, famous for the number of its minarets (six), completed
by Ahmed I in 1617; it encloses the | 11. The Mosque of the Grand Vizier Sokollu Mehmed Pasha, southwest of the Hippodrome, formally a Byzantine church, was finished in 1571.

8. The Yeni (New) Djami, on the shore of the Golden Horn at the 'Jews' Gate' (Čiist Kapısı) which has now disappeared, was begun by Kosem and afterwards completed by Terzahan Khadidja Sultan, the mother of Mehmed IV, in 1674 (1663-1664). Amongst other tombs in it are those of the Sultan Mehmed IV, Mustafa II, Ahmed III and Osman III.

9. The Nur-i Osmanlıys, on the second hill near the Great Bazaar, begun by Mahmut I in 1748 and finished by Osman III in 1755.

10. The Lüleli Mosque, the smallest of the imperial Mosques, built in the interior of the city to the south of Marmara near the Lüleli Çeşme ('Tulip Fountain') in the years 1761-1764, on the plan of the Selimiye, with two minarets in which the children, its two sons (including Selim III) and wives are buried.

The Mosques just mentioned are the 'Great Imperial Mosques' within the walls of Stambul; of the others — over 500 in all — the following are worthy of special mention:

1. Kılıç Aya Sofia ('the little Aya Sofia') on the Sea of Marmara, formerly the church of SS. Sergius and Bacchus, but transformed into a Mosque in the reign of the Conqueror.

2. Zeirek Djami, on the Golden Horn, above the Kız Kapi, was used for a period after the conquest as a tannery, and was then made a Mosque by the Conqueror; it is called after the neighboring cell (Zaüiya) of Zeirek Müllis Mehmed.

3. Mahmut Pasha Djami, near the Nur-i Osmanlıys, occupying the site of a church which was taken down in 1865-1864, and completed by the famous Grand Vizier whose name it bears and whose minarets it contains.

4. Mustafa Pasha Djami, in the Aşşerler quarter, built in 1463-1464; the founder was one of the Conqueror's rulers.

5. Weâr Djami, on the Golden Horn, built by Bayazid II in 1481-1487 (1479-1477) for the Zaüiya Shahîç Mahmut Pasha.

7. Kollu Mahmut Pasha Djami, in the Parnassus quarter, changed in 1497 (1489-1490) from a Byzantine church into a Mosque; its founder, whose name it bears, originally a Christian, is said to have been the same man as the famous Prince Djem. The Mosque is noted for the legends attached to the cypress tree, and the wall in the outer court.

8. Eski (Old) Pasha Djami, at the Cemil Bey Pasha, built in 903 (1490-1497), with the tombs of numerous Grand Viziers.

9. The Mosque of Mihrimah Sultan, daughter of Selim I, who died in 1557 (1555-1558) on the highest point in the city near the Adrianople Gate, whence it is also called Edirne Kapısı Djami; it is one of Selim's works.

10. The Mosque of Rustam Pasha, in the

Tahkassal's quarter on the Golden Horn is famous for its silver work; the founder, who was for a long time Vizier to Selim I and husband of Mihrimah Sultan, is well known from Bosnich's account of him; he died in 1561; the Mosque was built by Sinân.
small, are very numerous (μὴνάς, αὐτοί, αὐτίκα). In 1885, there were 260 such monasteries in Istanbul and the suburbs, including the villages on the Ropotarios, which belong to the most different orders. The most important are the Mevlevi monastery on the Yeni Cupa (built in 1056 = 1597-1598), the Sūntūlī monastery of Mekeş Efenli in the same place, founded by Şināb Mūshīl-d-dīn Mīrāzho (died in 991/1584), and the Mewlāwī-khān of Perā, which will be mentioned later.

Medreses (Colleges): von Hammer, Gesch. d. Osm. R., ix. 145 et seq., gave the names of 275 Medreses; in 1885 there were 168 in Istanbul and Ayıbat, one each in Belhektah, Top-khān and Scutarī, or only 171 in all 7,148 occupants. The most largely attended were: Aya Sofya (143), S. Ayham (200), the Medreses of the Sultan Mehmet (644 in all), and those attached to the Mehemmedīye (902 in all).

The Hospitals and Asylums, (στήλον, ἑίδος, Τάβλικά, Επανεναλθούσα) which used to be attached to the Mosques, have now been replaced by modern institutions on the European model (the hospitals of Güllahha, Haydar Pasha etc.; cf. Rieder Paşa, Fünf Jahre Istanbul, Jena 1904); the best known were the hospital of the Mehemmedīye and the Asylum of the Ahmedīye. The imaret (public kitchens) which used to be attached to the Mosques have also lost their importance; Parliament has just (1911) decided to reduce the number to three.

Libraries. In 1882 there were in Istanbul, Ayıbat and Top-khāne, 45 public libraries with 60,162 volumes in all — almost exclusively Islamic manuscripts —, most of these belonged to Mosques, or rather to the Medreses attached to them. The richest were: the Aya Sofya (3444), the Mehemmedīye (3883), Nīr-i Osmanîye (4353), Ebed Efenli (3853), Kūpsalı (2777) and Rāghib Paşa (1733) volumes; these figures do not include the collections in the Old (Topkapı) Serai and "public" libraries (amulet, containing many printed books) founded since that date; catalogues of these libraries (with the exception of the Serai libraries) have since been published in Istanbul. The first fairly accurate list was given by von Hammer in his Gesch. d. Osm. Reiches, ix. 169 et seq.; the older catalogues, manuscript as well as printed (cf. Flügel's edition of Madīdī Khafṣa, vol. vii), have not lost their value in spite of the modern catalogues.

The most important collections of the Serai are in the Bagdad Kilise (ca. 1500 volumes) and in the library built by Ahmed III in 1719 (Endülüsî hikayelî hikayelâmës, ca. 3000 volumes). The Serai Library has been famous in Europe since the sixteenth century for its wealth in Greek and Latin MSS. (now 37), because it was hoped to discover among these the lost works of classical authors.

The covered Bazars with open shops (hīrān, benestī), as well as the khān (like the Italian fornetto), both storerooms and shops in Istanbul all appear to date from the Turkish period. The Great Baz̄ar, laid out by Mehmed II, was in earlier times repeatedly ravaged by fire; great damage was also done by the earthquake of the 10th July 1564. A similar Oriental character to that of the Great Baz̄ar is borne by the Egyptian Baz̄ar laid out by Sultan I in 1560, and rebuilt in 1609 in stone by Ahmed I after a fire (Mīr Ćahān, baz̄ar for drugs and spices) near the Yenidjim on the harbour side.

The oldest and largest khān lie on the streets leading from the harbour to the Great Baz̄ar, for example the famous Yeni Khān (built in 1645 by Köşem Wālīde-Sultane as a work for the Yeni Khantı), the great resort of Persian merchant with about 400 rooms, the Büyük Yeni Khān, built by Meşef III with 320-350 rooms, the Sultanlı Khān, the Mâmûd-Pacha Khān, etc., of the others we may mention the Old Khān (in the Tağkhanı quarter) built by Köşrnzs. Fatih Pasha and that of Pâvest Pasha in the district of the Yenikapı. The number of these buildings dating from the older period and still in use may be estimated at 200.

The Çarşawsı (likewise called khāns) have almost entirely disappeared from Istanbul, or have lost their importance as resting-places for travellers; the largest used to be in Scutarī. Among them was the Elıe-Khān ("Khān of the Ambassadors"), taken down in 1885, which was the Divan of the opposite the so-called "Burnt Pillar" (Cemirli Taz), down to the second half of the eight century (according to von Hammer, Gesch. d. Osm. Reiches, v. 391, till 1644) the Emperor's envoys were quartered or rather interned there.

Water supply. The oldest aqueducts were laid down by the Emperors Hadrian and Valens; the picturesque remains of the aqueduct of Valens, Beyoğlu Kemerı, are preserved between the third and fourth hills. The Byzantine Emperors arranged for a perfect supply by bringing water through new aqueducts and pipes from the distant springs on the European shore of the Bosporus to the town. The Sultanı, who succeeded them, still further extended these waterworks, which were particularly important on account of the numbers of the Muslims, the first to do so was the Conqueror himself (Kritobulos, ii. 10. s.). Sultan ı. described the building of waterworks as one of the three great tasks of his life (the two others were the building of his great mosque and the conquest of Vienna). He ordered his architect Sinan to lay down five aqueducts (Bendińersı, Umay Kemerı, Mahaulık, Guluğlu K. and the Kınırsı of Midirbeshizı) with the pipes connected with them and a great reservoir — kawm (καώμ).

Osmanı II built the Pyrgos reservoir in 1620; to Ahmed III is attributed the building of the great dams (ḥawd) in the source area of the Belgrad forest; Mehmed I built the dam of Baghele-Köf in 1732 and the aqueduct which supplies Fera, Galata and Top-Khāne. In addition to these works, water has been brought for the last thirty years from the lake of Derkos by private enterprise. The Oriental style of architecture of the older works appears in the Tağkhanı (water-distribrutor) buildings and in the Sutanı (water-balances) pillars. The best known are the Tağkhanı of Fera and the one outside the Eged Kapa gate on the island of Stamboul.

Of all the Byzantine cities (over a dozen have now been discovered), which were used to collect water for periods of scarcity — droughts, sieges, etc. — and were fed from the great aqueducts, only one, that of Yere-balı-Serai ("the salted Serai"), has remained in use; the others, at least those that are roofless, have been turned into vegetable gardens (tahkār bāṣāh); the others are used, as for example the largest of them,
formerly the cistern of Philoxenus, now called Din Bür Darwâz ("two pillars"), as workshops for silk spinners on account of their moist atmosphere. In the Byzantine period, thousands of fountains (yâzâh, skîldâhâne) have arisen, some of them being real works of art, both as regards their architecture and decoration; particularly worthy of mention is the fountain of Ahmed III before the main entrance to the Serai (İbâd-ı Hamâyûn) with an inscription composed by the builder: himself in 1141 (1738-1739).

None of the Byzantine Baths have survived; their place has been taken by the well-known hot baths of Orientals (hamam) and at the end of the 17th century, the number of such institutions in Istanbul was estimated at 130 — there are probably about the same number to day.

The old Byzantine city walls, although they have long been worthless for the defence of the city, have survived practically unaltered on the west side. Mehmed II had them repaired a few years after the conquest and built the fortress of the seven towers (Yedikule). The castle of Yedikule (Greek: "Seven Towers"); it is one of the remnant of Constantinople had a garrison under a Divanî and was used down to the sixteenth century as a treasury and to the sixlî as a prison for high officials of state, foreign envoys and prisoners of war. In it Mahmut Paşa, Mehmed's II famous Grand Vizier, was interned and put to death and Osman II was strangled by his executioners in 1424 (1516). The Java from the menagerie (Deveshâhâne) on the Atmâidâm were transferred here; it is now left to fall to pieces.

The great earthquake of 14th September 1859 did great damage to the walls, and forced Bâyazid II to repair them (von Hammer, Gesch. d. Osman. Reiches, II, 350). In the reign of Murad IV (in 1635) the sea walls, which had been repeatedly damaged, were rebuilt by Bâroutü Paşa and white-washed (cf. Ewliya, Travel in, l. 1, 2 et seq). A thorough renovation of the sea walls and the harbour walls as far as Eğrikapâ took place in the reign of Ahmed III in 1722-1724 (Celebi-nâme, vol. 67 b. et seq).

Since that date nothing has been done for their preservation; a great part of the sea walls was removed when the Eastern railways were laid, the walls of the Golden Horn are almost entirely covered by the houses that have been built over them, or destroyed by fire and only in a few places have portions of any size survived.

The Gates of the City-Walls.

a. on the Golden Horn from East to West:
1. Bağdâât Kapâ (Garden Gate); 2. Cifîn Kapâ (Jew's Gate) before the Veni Lýâmî; 3. Bağlîbaşı Kapâ (Fishmarket Gate); these three are now destroyed; 4. Yenî skîldâssî Kapâ ("the Gate of the poor for fruitkops") usually called Züldûz Kapâ (Plan Gate) on account of the adjoining debtors' prison, which was also used as a female prison (changed in 1827-1832 into a Karakol watchhouse); near it is the tomb of Baba Dîârlâz, the patron saint of the prisoners; 5. Odun Kapâ (Wooden Gate); 6. Veni or Ayázma Kapâ, built in the sixteenth century; 7. Un-kapâ Kapâ (Gate of the flour storehouse); 8. Dînhbâli Kapâ, so-called after the man who took part in the siege under the Conqueror; 9. Ayaz Kapâ, (Saints' Gate, from the neighboring church of Saint Theodosius, now the Goldświ); 10. Fener Kapâ (at the entrance to the Fener quarter); 11. Petri Kapâ, which in the Byzantine period led into the fortified Petriot; 12. İcîrî Yenî Kapâ ("the new gate leading into the interior of the Golden Horn"); 13. Belâ Kapâ, so called after the palace of the Blachernai, which was situated there; in the sixteenth century it still bore its Byzantine name of Köyces" (Hittor's Gate); 14. Alâwâne Kapâ (ruined from Aiyb. Amâri, as it leads to the suburb of Aiyb), in the sixteenth century also called Xyloporta by the Greeks.

b. The Gates of the land walls, from north to south:
1. Eğrikapâ ("Oblique Gate"). At Eğrikapâ, adjoining the city walls are the ruins of the Tekfur Serai, the palace built by Constantine Porphyrogennetos (10th century). After the conquest it was used in turn as a stable for elephants, a workshop for the manufacturers of Nicanian t姵es and glass, and has become famous by the finding of the Çoĥanî, the most valuable diamond among the Ottoman crown jewels; 2. Edine Kapâ ("Adrianople Gate"); 3. Trencin Kapâ; 4. Mövelvhânî Yeni Kapâ (New Gate of the Derwich monastery); 5. Siliwî Kapâ (Siliwî Gate); 6. Kapalî Kapâ ("the Wall-up Gate", now reopened); 7. Salâhî Kapâ (Slâgherbon Gate) usually called Yedikule Kapâ.

The Golden (Triumphal) Gate of Theodosius III has been walled up since the Turkish conquest; the barrel arch, which adorned it as late as the beginning of the sixteenth century, has now entirely disappeared.

c. Gates on the sea walls, from west to east:

d. Gates of the Serai walls along the Sea of Marmora and the Golden Horn:

These gates were only used for communication with the Serai.

The sacred and profane buildings which have been enumerated, give a clear idea of the changes that have been brought about in Constantinople through its occupation by a people of different race, religion and culture with totally different requirements of everyday life. This revolution which spared nothing, has also affected the numerous monuments and works of art which once adorned the streets and public places of Byzantium. The Conqueror ordered the great equestrian statue of Justinian (bahîcî arî "the brazen horse") to be taken down from its pedestal and the metal melted down to make cannons; the other statues met the same fate.

(Or the other pillars etc. the following have survived — almost by a miracle, probably because they were regarded as talismans. On the Atmâidâm there still stand the Egyptian obelisk, the Snake Column and the core of the obelisk of Constantinople Fororphigenetos; the latter has however lost its coating of bronze. The Snake Column survived to
the beginning of the xviii century with its three heads with gaping jaws almost unearth; in 1705, while a Polish embassy was quartered on the Atmaidan, the three heads were cut off by some Vandals who were never discovered. The foreign guests were suspected of having committed this act of vandalism (quod non ferventur barbari, fecer Barbierii). One of the heads had lost its upper jaw before the committee according to the usual story, it was cut off by the pages of Ibrahim Pasha, Sulaiman I's Grand Vizier; others say it was done by Mehmed II, and others still by Selim II or Murad IV.

The porphyry pillar of Constantine the Great on the Taubkanar, called Lembertädik by the Turks, has survived in spite of the damage done to it by lightning, fire and earthquake; so has Mecu's pillar (i.e. taşlı; columna virgines) near the Saddler's Hall (Salehiye, Kâhin); the shapely base which supports it, is believed by the Turks to be the grave of the daughter of Constantine the Great. Of the Column of Arcadius, (the columna historiata, so called from the reliefs which cover the shaft as on Justinian's column) only the base of the column remains, and the beginning of the xvii century and the base-reliefs disappeared. On the various columns see: C. Guritli, Antike Donausäulen in Konstantinopel (1909); on the vicissitudes of the Snake Column in ancient and modern times, see O. Frick, Das Plastische Weltgeschicht zu Konstantinopel (Leipz., 1859); Fabricius in Jahrbuch der Deutschen Arch. Inst., xxix. 175-191 (1886). Old views and plans of Constantinople as well as some engravings of the beginning of the xviii century make it clear that at that time many monuments still survived, of which we have now no further details. On the monuments of the Atmaidan and the statues removed by Ibrahim Pasha from Pest and set up there, see Wieband's paper in the Jahrbuch des Deutschen Arch. Inst., xxiii. (1908).

The ancient harbours of the city on the Sea of Marmora have disappeared under the Ottomans; the largest of them, the harbour of Eleutheria, was quite filled up in the year 1760 and is now a large market garden (Ewanga berdön). The "Galley harbour" (Aydun önum, harbour of Julian or of Sophia) was used as a name of the houses afterwards built and extended till Selim I and Sulaiman I built the arsenal on the Golden Horn.

The Golden Horn (lavina bogaz) has since become the naval and commercial harbour of Constantinople. In the Byzantine period the entrance was repeatedly closed to hostile fleets by a chain (see van Millingen, p. 229 et seq.). A connection between the two shores was maintained by small boats at the place where the New Bridge has been erected.

Fragments still remained in the xvii century at Ayîth of the stone bridge built by Justinian which Ibn Batūta, 431 mentions as destroyed; there were one or more bridges in the innermost branch of this arm of the sea, at the "sweet waters" (Κλασσαία). The "Déspaïa" bridge and the Bridge of Elephas (Ed. Àpópias) are mentioned as existing within the Taubkanar, and this seems to have been the original state of affairs. The famous Mutfà Fâjlâfâj (beginning of the xvi century) wanted the jasan father Bemier to erect an observatory on the top of it.

The walls of Galata were pierced by the following gates: on the Golden Horn (from W. to E.): Azap Kapı, Kütüklî Kapı, Yâghi Kapı, Balkhisar Kapı, Karakö Kapı, Kuzuñî, Mahmûnî Kapı, Mumâfâ Kapı, Kuvikt Kapı, Egi Kapı; on the land-side (from E. to W.): Must Lambeyî Kapı, Dâvî Köy Kapı, Top-Sãhîne Kapı; in the inner walls: Kâcâk Karakö Kapı, Mahal Kapı, Mevlîndî Kapı, Kiliç Kapı, Iç Azap Kapı, Şarî Kapı. In the years 1857-1860 the walls with their towers were almost entirely taken down; a similar fate awaits
the Khâne of the Genoese period that have survived is the Pershembetârë. The originally Frankish (Italian) population formed the nucleus of the latter so-called Latin community of Pera; Greeks (particularly from Chios), Jews and Armenians settled there; after the foundation of the Arsenal and the gun-foundry of Top-Khâne, Muhammadans from the east and west also forced their way in and took possession of the larger Catholic and Greek churches which they found there. Only St. Pierre, St. Georges and St. Benoît have remained to the Catholics; the others, viz.: St. Paul, now the "Abâr Dârî" (a Mosque since 1525 or 1535), St. Maria de Dreapers (consecrated in 1665), St. François (since 1607 the Mosque of Wâlile), St. Anna (consecrated in 1697), St. Sebastian, St. Clara, disappeared in the course of the xvii and xviii century. Of the Greek churches the best known was the Xwsewès; it appears in the xvii century. The Turks have 14 Mosques in Galata of which 4 were originally churches.

One of its tavernas and other places of amusement was, as Pera now is, much visited by Turks who wished to enjoy themselves there like a France. Mehmed II used occasionally to visit the Catholic churches to see the services.

As early as the beginning of the xvi century, the ambassadors of Venice and France as well as other foreigners also settled on the heights north of Galata in the "vignes de Péra". Pera, abbreviated from this place, became the name of the new settlement and then fell into disuse as the name of Galata, to which it was originally applied. Luigi Gritti, the adviser and agent of fethi Pasha, Grand Vizier to Selim I, had his residence there equipped in oriental splendour; the name by which he was known to the Turks, Ibntrt ("Son of a prince" as he was son of a door) is still the Turkish name for Pera. The Greek name is Stavrópolis, the "cross roads", because at the entrance to Pera, the main road from Pera is crossed by the road from Top-Khâne to the Arsenal.

Pera has since been constantly expanding and with its 100,000 inhabitants forms the real European residential quarter; Galata has remained the commercial and industrial quarter. The "Turkish population which at an earlier period had settled on the western and eastern slopes of the high ridge of Pera, is gradually disappearing and only a few, small Mosques in the centre of the Christian quarter remind one that Muhammadans also were once settled here.

Two other foundations of the earlier period have survived: the Galata Serai and the Mawlewî monastery on the road between Galata and Pera. The former, built by Süleyman II, was used as a training school for the Imperial pages; in the reign of Selim II and again in that of Mehmed IV (in 1576 a. d. = 1665-1666) it was closed till Ahmad III revived it in 1714. the old building was taken down in 1820, the new one built in 1827 was too late, and demolished after a few years; since 1807, it has been the Lycée Imperial, instituted on the French model.

The Mawlewî monastery, the oldest settlement of this order in the capital, called "Galata Mawlewîkhâne" as the district of Galata included Pera also, was built in 897 (1491-1492), burned down in January 1765 and finally rebuilt by Seimen III in his present form in 1810 (1795-1798). It is best known to Europeans as containing the tomb of the renegade Ahmad Pasha (Bonneval, q. v., p. 744) and to Muhammadans by the tomb of Ismail Aghârâwi, the commentator on the Mihranmi.

Close to Galata, to the east on the seashore, is the suburb of Top-Khâne so-called after the gun-foundry erected there by the Conqueror himself and much extended by Selim II. The present building, which is only used at the present day for government offices, as artillery are now procured from foreign countries, dates from 1745. Just opposite it, Kapudan Paşa Kiliç Ali built his great Mosque in 1580 with a dome, both the work of Sinâh; the tomb, which is built in the Frankish fashion in bad taste, probably dates from a later period. In 1732 Mahmut I built opposite the Mosque a handsomely decorated fountain; and at some distance, on the open space, is the Nusretiye Mosque built by Mahmut II in 1823-1826 in memory of the massacre of the Janissaries. The site of the above-mentioned palace of the Grand Vizier, in which the astronomer Taqi al-Din built above Top-Khâne by command of Murâd III and which was destroyed in February 1580 on the representations of the historiographer Sa'd al-Din, cannot be more definitely located.

In the same neighbourhood in the Findikli quarter is the Mosque built by Selim I in 967 (1559-1560) in memory of Prince Dâlı Mehmed, who perish in 1553 on the Perisan campaign and called after him; it is a well known landmark and has been several times destroyed by fire; it was last rebuilt in 1833.

"Kâhârâdâh" or "the Rough Rock", was the name of a dangerous cliff near the shore at Dolmabahçe, the "Petra Thermostas of the ancients" (von Hammer, Const. u. Bist., i. 191); a certain Mustafa Nejîdî, who had a villa there on the shore, built a pier to it early in the xvi century. It was finally restored safe by the building of a small haven in 1627 (1853) but the name has remained.

"Dolm a-Bâghâh" ("the wall-filled garden"), the translation "Gourd-garden" — which first appears in von Hammer, Const. u. Bist., ii. 190 — is based on an amusing misunderstanding. The term which is accepted by the palace built in 1853 by 'Abd al-Majîd and the open space in front of it, was originally a deep gulf between the gardens of Kara Bâlî and Beşiktâş, often mentioned in the xvii century. It was regained from the sea in 1614 within three months by Kapuz Pasha Kahfî. It was from this bay that the conqueror's ships were dragged into the Golden Horn in 1453 (see above p. 869). At a later period the admirals used to anchor here for several days when the fleet was about to sail and give farewell festivals. The above-mentioned palace was used as the Imperial residence by Sultan 'Abd al-Majîd and his successor 'Abd al-Azîz till the latter built the palace of Çâsâhüta; the reigning Sultan Mehmed V has again returned to Dolmabâhçe.

Bibliography: On the Conquest, see Ducas, Phanères and Chalcondyles in the Bonn Corpus, also Monumenta Hung. Hist., xxi. et seq. (ed. Déthier); A. D. Mordtmann, Bilagerung und Evolutions Constantinopel..... 1455 (Stuttgart 1858).

The main source for the history of the Mos-
ques of Stambul and its suburbs is the Hâkânis al-Jâmiâ, the "Garden of Mosques" by Hâns Hüseyn Efendi of Alawasir (founded in the second half of the 18th century), which was first made known in Europe by von Hammer (cf. Gesch. des Osman. Reichets, ix. 46–144); it was printed in Stambul in 1251 (1661–1665) and was also re-edited in "Arif Sinâ" which came down to the reign of Abd al-Majid. The earliest descriptions of any value with pictures were given by Grote in his Relation nouvelle d'un Voyage à Constantinople (Paris 1672); there are fine engravings in D'Ohsson, Tableau de l'Empire Otoman, Vol. iii. of the folio edition. The section in von Hammer's Constantinople et des Byzantins, i. 335–446, although in many places out of date, still deserves to be consulted; see also L'Architecture Ottomanne, Ouvrage publié sous le patronage de S. E. Edhem Pacha (Constantinople 1873); Cornelius Gurlitt, Die Baukunst Konstantinopels (about to be published); Paspali has discussed the Byzantine churches which are now Mosques in his La荐e des Monuments of the Matel (Stambul 1877); lastly, J. Ebersolt, Étude sur la Topographie et les Monuments de Constantinople (Paris 1909).

On the aqueducts the authoritative work is still Andréosvoy, Voy. à l'Embouchure de la Mer Noire (Paris 1818; second edition entitled: Constantinople et le Bosphore de Théou, ibid. 1828); cf. thereon von der G Elia's map of the environs of Constantinople (Berlin 1867); cf. also v. Hammer, Const. u. jahr., i. 500–582, the baths are specially dealt with on p. 530 et seq. and by White (see below), ii. 296–313.

On the city-walls: A. van Millingen, Byzantine Constantinople (London 1899); A. Tanotti, Autour des murs de Constantinople (Paris 1911).

General works: Cosimo Comida de Carbogno, Notizie sopra l'istituzione generale di Constantinopoli (Bassano 1794); v. Hammer, Constantinople et des Byzantins (2 Vols., Pest 1822; not yet obsolete); Do, Geschichte des osmanischen Reichets (2 Vols., Pest 1827–1835); Charles White, Three Years in Constantinople (3 Vols., London 1845); Skarlatos Byzantinou, Kavourivoli (Athens 1851–1869; In Modern Greek; an industrious but uncritical compilation); E. A. Grosvenor, Constantinople (2 Vols., London 1895); Eugen Oberhumer, Constantinopoli, Stuttgart 1899 (reprint from Pauly-Wissowa Real-Encyclopädie, Vol. ix.); Jipal Essad, Constantinople, De Byzantine à Stamboul (Paris 1909).

Among Oriental authorities Ewšia Çevel (18th century) may be mentioned; these are three recensions: 1. ادیکپاتی (Stambul 1329) (H.; contains only the first sections); 2. Ewšia Efendi, Narrative of Travels in Europe, Asia and Africa, transl. by von Hammer, London 1850 (incomplete); 3rd edition in 6 Vols.; Stambul 1341–1358 A. H. An almost complete survey of the older travel literature is given by Lüdecke, Beschreibung des türk. Reichets (Leipzig 1780), i. 399 et seq., ii. 93 et seq.; cf. v. Hammer, Const. u. jahr., Vol. i. preface.

Plans of the City. On the older plans see Oberhumer, op. cit., p. 25; the first real plan is the considerable one compiled by F. Kaiser in the year 1726, and revised in 1726, which appears in its original form in Choiseul-Gouffier, Voy. Pittoresque de la Grèce, Vol. ii. and J. B. Lechevalier, Voy. de la Propontide (Paris 1800), H. Kiepert's, Overstreck en des Bosphorus (Berlin 1853) utilizes Mottk's surveys of the years 1836–1837. The latest plan by C. F. Stolpe is practically based on its details on that of Kaiser.

CONSUL (Arabic ٍبُنَش, Persian ٍبُنَش, Turkish ٍبُنَش), the accredited administrative and commercial agent to the local authority in a commercial town. Turkey gives its consuls the title of sheb-bender and Persia that of bâr-jârdîa. In Multan compared countries, the consul as well as those, who claim his jurisdiction, have the right of extra-territoriality; he is the judge of the latter, who are exempt from the jurisdiction of the local courts, except in mixed cases. The old Venetian capitulations granted the republic the right of maintaining at the Porte a consul called the "hule" (cf. the article sülü, Vol. p. 640), an official who had previously existed at the Byzantine court; in 1304, the Genoese Podesta had the title "îzlemiş inan courtel" (Salti, ii. 22). There was a Venetian consul in Egypt as early as 636 (1238); his right of jurisdiction was confirmed by the treaty concluded with the Sultan al-Malik al-Adîd II (1238–1240 A.D.). The French capitulations, which reserved for French citizens the privileges formerly granted to Venetians (last renewed in 1790), have fixed the position of consuls in the Ottoman empire; they manage lawsuits between their own citizens, without the intervention of the local authority (Art. 15 and 20); the Sublime Porte reserves the right of judging cases in which the consul is a party, but he cannot be imprisoned nor the seals placed upon his dwelling (Art. 16); they may make wine in their houses or import it from abroad without any one interfering (Art. 40) or levying duties upon it (Art. 51). They shall employ such native dragomans and such jazaries (yâsâqi) as they please (Art. 45 and 50). They are to be allowed to hoist their flag on residences which they have lived in for some time [except in certain towns such as Damascus] (Art. 49). They are to examine the papers of vessels of their nationality (Art. 54), levy the consulate dues (Art. 64), deliver and examine passports (Art. 66); they shall be present at the searching of his domains in connection with any crime committed by one of their country men (Art. 69 and 70).

CÓRDOBA, French Córdoue, English, Italian and German Córdoba (KÖRDOBA), Arabic Kūtura, Latin Córdūna (370 feet above sea-level) on the right (north) bank of the central course of the Guadalquivir (from the Arabic Wād al-Kāhin "the great river"), the ancient Baetic, with 60,000 inhabitants, is at the present day the capital of the province of the same name which lies on both sides of the river in the heart of Andalusia. The southern and smaller half of the province, practically the famous La Campiña (al-Kāmīnīyah, Idriši, Arabic text, p. 174), rising in the south east to a height of over 1200 feet, is more level, hot and fertile, being especially devoted to viniculture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights over 2900 feet high in the central Sierra Morena (Marini Montes) with the plateau of los Pedroches which inclines in a northerly direction to the Zájar valley in the west and the Guadalquivir valley in the east; this plateau is called Ifīn al-Balūṭa by Idriši and by others Fīn al-Balūṭa "extensive" and in it lies the little town of Pedroches known to the Arabs as Bīrāwdj or Būqāš (whence al-Bīrābdj, q. v. above p. 735). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (caballos cordobeses) and rich deposits of coal and minerals. The name Córdoba has frequently been called "the pearl of the South" or "the pearl of the West" (p. 777), "good town" since Conde first suggested this etymology in his Description de España de Jerón Almedin, Madrid, p. 161 (for even rashier etymologies see Madoz, vi, 646 and Makkar, i, 355). The name is certainly not Semitic but Old-Iberian (cf. Saldua the Old-Iberian name for Caesar-Augusta, whence Saragossa, Zaragoza; there is a Saldua = Mearha in the south between Malaga and Gibraltar). After the second Punic war it became known as an important and wealthy commercial city (see Córdobense) under the name Kābīya or Kabīyāh or Corduba. It was finally taken for Rome by M. Marcellus in 152 B.C., colonised with Roman citizens and as Colonia Patricia raised to be the capital of the Provincia de Hispania Ulterior. As Córdoba had taken its name from Molyca it was severely punished by Caesar after the battle of Munda in 48 B.C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lusus) alternately with Hispalis (Seville) and Italica (later the Arabic Tāllīja). Lewigk, king of the Visigoths took it in 571 from the Byzantines who had been settling in Southern Spain since the time of Justinian, but although it was a seat of a Bishop it remained unimportant under the Goths. In 711 Córdoba was captured by Mūghūth al-Rūmī, a married slave — it was betrayed by the Jews — but 400 Goths held out for three months longer to save the seat of the fortified church of San Acisclo. The town was treated very leniently by the Arabs (Simonet, Historia de los Maureses, p. 49).

As early as the year 100 (779), al-Samb b. Mālik al-Khāwānī, the sixth of the 23, mostly ephemeral, Umayyad governors, transferred the seat of government definitely from Seville to Córdoba and repaired the ancient Roman bridge. When the last governor Vīsuf b. `Abd al-Rahmān al-Fitrī (129—138 = 747—756) was overthrown by the Umayyad prince `Abd al-Rahmān I b. Muṣṭafī al-Dāhkī (9 v. p. 53, who had escaped the massacre of his house in Syria, the great period of prosperity of the city began, and lasted throughout the Umayyad dynasty (q. v.) of Córdoba, which was independent of the `Abūs̄īdīs in Baghdad (138—429 = 756—777). This incomparable period of splendour of the western rival of Baghdad, the city of the Caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridgehead, the fortress-tower of Calahorra (Arabicised from the Iberian Calagurris), the Ka'bah of the west; although, at the re-conquest in 1236, it became a Christian cathedral and was disfigured by alterations, it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (Patio de los Naranjos), the wall which encircles it as if it were a fortress or monastery, the bell-tower, which was however renewed in 1593 and 1763, along with its popular name of La Mequita "the Mosque" while all the other splendid buildings and monuments of this world-famed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd 'Abd al-Rahmān I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Haraks of North Africa, the Mochéans and the Berbers of North Africa, the Spanish renegades and the Mosarabs who remained a constant weakness to Arab rule in Spain and brought about its ultimate fall, he began the building of the great mosque in the last two years of his life 785 and 786. His son and successor Hishām I (172—180 = 788—796 completed it, and built the minaret (often called in Spain promenade and seenār = masure), but 'Abd al-Rahmān II. (206—238 = 822—854), son and successor of the Amir al-Hakam I. (180—206 = 796—822), found himself forced to enlarge the building; by extending the 11 naves southwards he added 7 transcepts with 10 rows of pillars and built the second mihrab into the south wall, west of the present Capilla de Nuestra Señora de Vírgenes (q. v.), while his son and successor Muhammad I. (253—273 = 852—886) had in 852—856 thoroughly overhauled the older building, which had been too hurriedly put up; he devoted particular attention to the decoration of the doors and walls, raised off the mukarnas reserved for the Amir and the court in front of the mihrab by a wooden screen
and built a covered passage (zabdā) from Alcázar, the palace to the west of the mosque, to provide a direct and private entrance to the maqṣara at the daily prayers. ʿAbd al-Raḥmān III, al-Nāṣir (300–350 = 919–961), the “Khalif” [q.v. p. 53], who marks the zenith of the Arab epoch in Spain, annexed the minor emirate which had been severely damaged by the earthquake of 888, in splendid fashion; he was also the builder of the celebrated country house Madinat al-Zahra (now called Córdoba la Vieja) for his beloved al-Zahra, 15½ hours’ journey northwest of Córdova at the foot of the Sierra (near the convent of San Gerónimo which has been built out of the ruins of the palace), but practically nothing is now left of it (cf. Makār, i. 344 et seq.). The most beautiful extension of the mosque proper (almost doubling its size) was carried out by the learned and scholarly Caliph al-Hakam al-Mustanṣir billāh (350–366 = 961–976), son and successor of the great ʿAbd al-Raḥmān III, who ordered his Prime Minister or Grand Vizier (called Ṣalāḥ ibn al-Mujāhid) to extend the colonnades in the mosque to the north to meet the addition of two transapsides, and built a splendid new maqṣara, a new mihrāb and the third noble mihrab, which alone has survived in its entirety. The last great extension was made by Hishām II al-Muʿayyad’s (366–399 = 976–1009) powerful vizier, the regent al-Mansūr (Alfonso, died 1002), who added seven colonnades to the whole length of the building in the east and thereby raised the total number of naves (previously 11) to 19, but threw the mihrab out of its proper place at the end of the central axis of the sanctuary (on account of the precipitous slope down to the Guadalquivir it was found impossible to extend the building further to the south). Like al-Zahra in the N.W., al-Madinat al-Zahra (“the flourishing city”), founded to the east of Córdova by al-Mansūr to be the seat of the government and its officers, was destroyed in the period of revolution in the beginning of the 11th century and has now quite disappeared.

After the complete extinction of the Umayyads with Hishām III al-Muʿayyad’s (415–422 = 1027–1034), Córdova became a republic under the presidency of three Umayyads: Abū ʿAbd Allāh al-Ḥāshib b. Muhammad b. Dībā, 1031–1040, Abū l-Walid Muhammad, 1043–1064, and ʿAbd al-Malik, 1064–1070. In the latter year it passed to the ʿAbbadids of Seville; in 1091 to the Almoravids and in 1148 to the Almohads, With Its conquest by Ferdinand III of Castile in 1236 it was doomed to gradual decline.

Of the Arabic scholars who belonged to Cordova, we will only mention here Ibn Hazm, died 1044, Averroës (Ibn Rushd), died 1136, and Maimonides, died 1204.

Bibliography: Makār devotes a whole book to Córdova, i. 297–482 (enlarged in Gayangos, History of the Mohammedi Dynasties in Spain, i. 200–249), though it contains many lies and bore historical notes referring to other places; Idrīsī, L’Afrique et l’Espagne (1866), p. 208–234 (arabic = tradition 256–266); Yūnūs, Muḥammad al-Buldān, iv. 58–81; al-Kawkubī, ʿAḥsan al-Bilād, 370; Mādar, Dictionnaire géogr.-statistique, iii, vi. 458–660; Schach, Poésie et Kunst der Araber in Spanien und Italien, ii. 182–224; Contreras, Estudio...

COROMANDEL, the name adopted by European geographers for the eastern coast of India. It is a corruption of Chiramanagallūthu, the kingdom of Chera or Chola, which is found in Tamil inscriptions of the 6th cent. at Tamil. The early Muhammadan name for the same coast is Ma‘bar [q.v.]

CRAC, CRATH, a medioeval Frankish corruption of the place-name Karak [q.v.]; CRAC DES CHEVALIERS SEE KHAN AL-ARKHED.

CRETE.

1. Present Conditions and Constitution. Crete, the geography and pre-Muhammadan history of which will not be dealt with here, was called: Chriomonos by the Arabs and Kirith by the Turks. At the present day it is an autonomous state, owning the sovereignty of the Porte but paying no tribute and governed on behalf of the four protecting Powers, Britain, France, Italy and Russia, by a High Commissioner (till 1906 Prince George of Greece, who was followed by Zaimis; the post is at present unoccupied). The High Commissioner is assisted by an Administrative Council of three members (kompotik), who control the departments of Justice, Finance, Education and Home Affairs. They are appointed and dismissed by the High Commissioner, are responsible to the Chamber and may be impeached before a special tribunal. According to the constitution which was granted on the 10th–23th April 1899 and modified on the 8th–12th February 1907, the Chamber of Deputies (Parlamento) was created to represent the people. One deputy is elected by each 5000 inhabitants. The Chamber meets annually on the 1st May for 2–3 months. There are elections every two years. Parliament has control of finance and approves taxes.

The four protecting Powers control the foreign affairs of the island.

Cretan is divided into 5 réyas, formerly called reías: Canea, Candia, Rethymnos (Turk. Rezuno), Spakia and Lasithi (Turk. Lagysh); each of which is under a Nomarch. Canea is the capital.

Ecclesiastical affairs are controlled by the Synod, which consists of the Metropolitan and several bishops of the island. They meet in Candia (Herakleion).
Justice is administered on the French model. Muhammadan judges retain their jurisdiction in matters of religion, marriage and inheritance as well as in of the worship of the mosque. The police and militia are commanded by Greek officers.

According to the Decree of 12th June 1015 (1837) the population is as follows: 307,512 Christians, 27,852 Muhammadans, 487 Jews, in all 335,274.

2. History.

The Muhammadans first came in contact with the island on their earliest campaigns against the Byzantines and occupied it temporarily in 673. We know very little of the history of this early period. It was not till 825, that Abū Ḥafṣ `Omar b. `Uts b. Sha`bīn al-Ballūṭī (q.v. p. 87) permanently won Crete for Islam. Abū Ḥafṣ `Omar was the leader of the inhabitants, who had to flee after an unsuccessful resisting against Hakam in Córdoba. On his raids on the Mediterranean coasts, he landed at Crete which he gradually subjected with the exception of the territory held by the Spahikotsis. In spite of repeated attempts by a Byzantine Emperor to drive them out, the Moslems retained their newly won possession for 135 years. To render their footing on the island more secure, they built the new capital of Khânadâk, which later became Candia, near the promontory of Charras. This name was commonly applied to the whole island down to the most recent times.

In 961 the Byzantine general Niképhoros Phokas succeeded in taking Candia after besieging it for several months and soon after subduing the rest of the island. The last Amir `Abd al-Azîz died in Constantinople and his son Anemas entered the service of the Emperor. The Muhammadan population left the island or in a short time adopted Christianity.

After the conquest of Constantinople by the Latins, Crete fell to Count Boniface of Monteferrat who sold it to the Venetians in 1204. Down to the Turkish conquest in 1669 it remained under Venetian rule, which, although very unpopular with the inhabitants and on several occasions guilty of acts of great cruelty, nevertheless produced a period of prosperity such as it has never again reached.

In 1669 began the Ottoman conquest. The pretext given was an attack which the Venetians and Maltese made on the Kīšār Aghâ Towqâl Agâ when he was on his way to Egypt with a slave and her child, whose father was said to be Sulṭân Berâhim. Their intention to occupy the island was however of much longer standing. After a siege of 57 days the Turks took Candia, then Rhethymnon and after long and heavy fighting and a desperate resistance on the part of the Cretans they finally occupied Candia (1648–1669).

The whole western world sent assistance to the Venetians under Morosini. Nevertheless the towns had to surrender on the 27th Sept. 1669 to the Grand Vizier Aḩmad Körpûli. By the terms of the treaty of peace the Venetians only retained Grámo, Ñídua, and Spinalonga. It was not till 1718 that the latter finally passed to the Turks.

At first the Cretans had hailed the Turks as liberators from the hateful Venetian yoke and aided them in many ways, but soon saw that they had only made their position worse. Many of them sought to advance themselves by adopting Islam. These Muhammadan Cretans, who were hated by their former coreligionists, the Christians, even more than the immigrant Turkish elements, who were on the whole less numerous, were the real cause of oppression. They became the possessors of the land; the Janissaries on the islands were recruited from them, and were the real rulers of the island, as the Ottoman government could do nothing against them. We really know very little about Turkish rule in Crete up to the beginning of last century. Small risings had often taken place but it was not till 1770 that there was a serious revolution. It was begun in the hope of receiving support from the Russian Empress Catharina II, who ordered Admiral Orloff to cruise in Greek waters, and was put down by the Turks with great rigour. In 1813 the governor Hadjiçjî "Othmân with the help of the Christians managed to suppress the Janissaries for a brief period. He was however misrepresented in Constantinople and recalled. The Janissaries then became masters of the island again. Crete took a prominent part in the war which began in 1821 for the freedom of Greece. The Risâli principium such compasse that the Sulţân (1813) had to summon Muhammad "Ali from Egypt to his help. When, in 1830, the Conference of London established Greece's independence of the Sulţân, Crete was not, as was hoped, given to Greece but to Muhammad "Ali, Muşâfi Paschâ, an Albanian, governed the island from 1832–1853, even after it was returned to Turkey in 1840. His rule was on the whole the best that Crete has had. After various smaller disturbances, the greatest revolution the island had yet seen broke out in 1866. It was only by great sacrifices on the part of Turkey and the granting of various demands of the inhabitants that peace was restored in 1868. In the so-called "Organic Statute", a national assembly; mixed courts and other reforms were introduced. When Turkey was occupied in 1878 with the war with Russia, Crete rose again. The Treaty of Berlin did not grant the wishes of the Cretans and Greeks, but only bound the Sulţân to carry out the provisions of the "Organic Statute". On the 13th August of the same year, the Pact of Châlepâ (Kálela nea Karakou) was signed by which the Cretans practically granted self-government. Affairs however were not improved thereby: on the contrary they became worse. A period of purely party government followed during which the finances particularly suffered. In 1889 a revolution again broke out. The Pact of Châlepâ was nominally modified, but practically annulled, and the island was governed by the governor sent from Constantinople. In 1894 Karathâbouda Paschâ, a Christian, was appointed governor, because the Cretans wanted a Christian; but he also was powerless. Almost the whole island was in revolution. He therefore sent in his resignation which was accepted in February 1899. Disorder increased more and more; at Whitewash there was fighting in the streets of Chánapà between Muhammadans and Christians so that the Great Powers sent their warships to the island, which arrived on the 26th May. On the 30th July the Christian deputies declared themselves ready to adopt the scheme of autonomy prepared by the representatives of the Christian Powers and the Porte, but the revolutionary committee of the rebels in Campi was against this and the Muslims also were not satisfied. On the 3rd February 1899, there was again fighting in
the streets of Canes, and at the same time the town was set on fire in several places. The foreign Powers landed troops from their ships. Greek warships soon afterwards appeared, which attacked a Turkish transport. Greek troops were landed. During the war between Greece and Turkey which ended in a treaty for the former, affairs in Crete remained unsettled. In 1878, Germany and Austria withdrew their troops. The remaining Powers (Britain, France, Italy and Russia) divided the island into four sections each of which was ruled by one Power. After a rising of the Mahommedans of Caudia and an attack on the English, the Powers demanded that the Turkish soldiers should be removed from the island by the 15th Nov. 1898, which was done. Prince George of Greece was then installed as High Commissioner for three years. Peace reigns at first but the Mahommedans emigrated in large numbers. Discount had been increasing since 1901 and in 1905 there was again a rising. The clamour for union with Greece became stronger and stronger. The Powers were determined to maintain the status quo. On the 1st Oct. 1906, Zaimis, a former Prime Minister of Greece, became High Commissioner. On the 20th March 1908 he announced to the Powers that he could not carry out the conditions of the treaty, and his commission was abolished. The defeat of the forces of Turkey by the Greeks, which took place in November 1913, has been a great advantage to the Cretan national feeling. The rise of the Cretan National Assembly is of great importance to the future of the island.

F. GISEL

CROJA. [See AS. HEBAR, 5, p. 224.]

CU, a river in Russian Turkestan, rising in the Turski-Alatau mountains and called Kobzar on the upper part of its course, approaches within 12 miles of the west end of the Issyk-Kul and sends out a branch, the Kotunshki, to this lake; the river itself rushes through the Bum (Bügham) ravine, receives the waters of the Great and Little Kebin on its right bank and on its left the Aşau and Kuragati with their tributaries and after a course of about 650 miles falls into the small lake of Samul-Kul, about 80 miles from the bed of the Sir-Darya. The Çu forms the southern boundary of the Sir-Darya territory from the neighbouring districts of Semipalatinsk and Åkмолinsk, and a part of its eastern boundary from the Semirechye territory.

From the mouth of the Kuragati to the Samul-Kul, the Çu flows through a dreary waste, which has never been of any economic importance; at the present day the banks of the river in this area are visited by a few nomads in winter only. On the other hand the pastures on the upper course of the river have always been of great importance for the nomads; hence the Çu and the Bum, ravine, the geographical conditions favour the development of agriculture, so that permanent settlements were made here at a very early period; the water used for irrigation purposes is, as in the valley of the Amu-Darya and Sir-Darya also, not from the main stream but from the tributaries taken from the main stream but from the main stream.

Even in the pre-Mahommedan period, in the 8th century A.D., there were villages and even towns where was a centre of commerce here: as we know from Hiian-Luang's travel, the culture of this district had developed under the influence of Transoxanian civilization, the land from the Çu to the valley of the Amu-Darya is regarded by Hiian-Luang as being under the same civilization. In his time, two great trade-routes led through the valley of the Çu from China to Western Asia: one ran the Ili valley and the Kastek pass, and the other through Chinese Turkestan; to Aşau, thence over the Bedel pass and along the south side of the Issyk-Kul. In the valley of the Çu some pre-Mahommedan geographical names have
survived to the present day, such as that of the village of Merke or the river Aghara.

Even in the oldest Arab itineraries (Ilum Khudayjib, ed. da Goeje, p. 49; Khodjai, ibid., p. 206) several towns are mentioned in this neighborhood including Nawakatj), which is also mentioned by Šebib (in. 1593, alt.): The valley of the Cu was only affected in the extreme West, and that only temporarily, by the Arabs on their campaigns of conquest (campaign against Kilita, the modern Turti, in 194 = 313; mentioned by Ilum al-Ājurj, ed. Tarrabeg, vi. 164); Islam does not appear to have penetrated here till the 15th-16th century (cf. the article ČAHĀRA-KHAN, p. 517) proved fatal to prosperity and civilisation, both Muhammadan and Christian, in these lands. Even in the history of Timbú's campaigns neither towns nor villages are mentioned on the Cu. In the time of Muhammad Ḥalāl, the author of the Tawārikh-i Ḥalāl (about the middle of the 16th century), there were only the ruins of ancient towns in this district; their very names had been forgotten. Muhammad Ḥalāl mentions an inscription on a tomb of the year 723 = 1321-1322 and several buildings, including a minaret, a madrasa and some domed buildings, all of which were in ruins; these ruins were called Māwär āqāt, from the highest building among them. The only medieval building that has survived on this site (not far from Tokmak) at the present day, is a high tower, called Burana. This tower has been frequently described and reproduced (cf. e.g. Barthold, Oīt, etc., Plate VI and is apparently to be identified as the minaret of the Friday Mosque; even its name, as Petrovsky suggests (Zapiski vost. otd. Imp. Russ. akad. nauk, viii, 352) may be derived from the Arabic awzā'.

Down to the time of the Mongol conquest, the town of Balaqışt (q. v., p. 614) in the Ču valley was the residence of most of the feudal rulers of Turkestān, of the Muhammadan Ilkhan Khāns (or of one of their branches) as well as after the 13th century of their heathen conquerors of the Karā Khālūd steppes. Almost all conquerors of Eastern Asiatic origin, who have invaded the western part of Central Asia, have passed through this district. The revolt against the Karā Khālūd in 667 = 1260 and the destruction of the town of Balaqışt probably affected the other settlements considerably, although only temporarily. In 1218 the land submitted to the Mongols without resistance. Three years later the Chinese pilgrim Çancān crossed the Ču on a wooden bridge; at this time there was a small Muhammadan town immediately to the south of the Kastek pass and a number of villages between the Ču and the Talas; in addition to agriculture, viniculture and the breeding of silk worms were the only occupations followed. In the 14th century another Chinese pilgrim, Çancān, found a numerous population here but there were already many ruined sites which seem to show that a decline had set in. According to Rashīd al-Dīn (the passage given by Barthold, Oīt, etc., p. 38, note 2 is wanting in most manuscripts, and even in Blochet's edition), "City" was in his time still a land with many villages which were governed by the prince K̄ilījta, daughter of the Khān K̄ilīj who had died at the beginning of 701 = autumn 1301.

To the same period (vii=viith= ixth=xith=xivth centuries) belong, as the dated epigraphs show, the Christian cemeteries discovered at Pišpek and Tokmak. That the district on the Ču had some importance in the history of Nestorian Christianity, is clear from the title of the Bishop Metropolitan of Kāshgar in the Tabula Ameri: *K̄an 647 = 1250* (otherwise the Nawakatj mentioned above). The inscriptions on the tombs are composed partly in Syriac and partly in Turkic (in the Syriac alphabet); an Armenian epitaph of the same date has also been found in this neighborhood. When and how Christianity was definitely destroyed by Islam is unknown. The Catholic monk Piszchal speaks of a religious persecution in the year 1338, in the following year several Catholic missionaries perished in these persecutions. According to the inscriptions the land was visited in the same years by a pestilence (It has been supposed that this was the "Black Death" which appeared nine years later in Western Europe); but it cannot be made of it by Piszchal who must have passed through this district on his route from Urgen to Almanjīr and in the histories.

Certain it is that the constant wars and struggles for the throne in the xin= xiith century (cf. the article ČAHĀRA-KHAN, p. 517) proved fatal to prosperity and civilisation, both Muhammadan and Christian, in these lands. Even in the history of Timbū's campaigns neither towns nor villages are mentioned on the Ču. In the time of Muhammad Ḥalāl, the author of the Tawārikh-i Ħalāl (about the middle of the xivth century), there were only the ruins of ancient towns in this district; their very names had been forgotten. Muhammad Ḥalāl mentions an inscription on a tomb of the year 711 = 1311-1312 and several buildings, including a minaret, a madrasa and some domed buildings, all of which were in ruins; these ruins were called Māwār āqāt, from the highest building among them. The only medieval building that has survived on this site (not far from Tokmak) at the present day, is a high tower, called Burana. This tower has been frequently described and reproduced (cf. e.g. Barthold, Oīt, etc., Plate VI and is apparently to be identified as the minaret of the Friday Mosque; even its name, as Petrovsky suggests (Zapiski vost. otd. Imp. Russ. akad. nauk, viii, 352) may be derived from the Arabic awzā'.

Down to the xivth century, various nomad peoples have occupied the Ču valley in turn; for a period the land was under the rule of the pagan Kalmucks; even their successors, the Turkish Karā Khālūd, were but superficially affected by Islam before the Russian conquest. After the Kāshgar of Khoqand had succeeded in subduing all the nomad peoples on the lower course of the Sir-Darya as far as the Amu-Darya, they were again founded on the Ču and its tributaries by colonists from Mā warz al-Nahr, two of which, Pišpek (Pişpek in the historians of Khoqand) and Tokmak, were fortified. When the Russians penetrated into the Ču valley over the Kastek pass (the Asghār of the historians of Khoqand) from the II valley, both strongholds were taken in 1860 and destroyed. Pišpek is under Russian rule the capital of the district; a post road from Pishpek across the Ču and the easy pass of Kardus into the II valley; the old route via Tokmak and the Kastek pass is no longer used, so that the district around the modern Tokmak, north and south of the main stream, has no longer the importance it had in the middle ages. In the last few decades a considerable number of emigrants from Russia in Europe have settled here; lands in the Ču valley have also been allotted to the Russians who fled from Chinese Turkestan.

Bibliography: Histoire de la vie de Hwaam-Thisang, trad. par. Stan. Jüben (Paris 1855); Mémoria sur les matières occidentales, trad. par
CUPAN, CONAN (Cagnatia) or CUBAN (Oghamli and Krim-tatars), a Turco-Turk word for "herdsman"; it is applied particularly to shepherds and cowherds in opposition to horseherds (Pers. kalâbân). The Cupan is considered the type of the lowest class of the people in a contemptuous sense, when the rude and uncultured people are contrasted with the classes chosen to rule (cf. the sayings ascribed to Câpig-Khan in Kâshâli-Dju, ed. Bereini, Terci, ed. Ziya-ed-Din, et al., vol. 176, as well as in epic tales in which the representative of the inherent strength of the people appears as the faithful and revered son of his self-sacrificing parents (cf. in the Kâshâli-Kalâbân, Zâb, vost. et al., ii, 938 et seq.). The word "Cupan" is also found as the name of persons of the highest rank (cf. for example, Emir Cupan, regent of Persia under Abâ Sâliâ 1316-1327 a.d. and founder of a dynasty).

CUPAN-ATA (Turk. "father-herdsman"), a ridge of hills on the south bank of the Zarafshân near Samarkand. The modern name is apparently connected with the legend given in the Kâshâli-Kalâbân. Samarkand is said to have been attacked by a hostile force over a 1000 years before Muhammad; the inhabitants prayed to God and his prophets for help; when they awoke the following morning, not a trace was left of the enemy's army, but before the city was a mountain which no man had seen before and on it a shepherd was grazing his sheep. It appeared that the mountain had been brought by divine providence from Syria in a night and placed on top of the whole army of the besiegers with their horses, weapons, and baggage, so that not one escaped. In other legends the Cupan-Ata appears as a Muhammadan saint. Whether the city and the hill connected with it arose, is unknown; the building of the tomb which now stands on the summit of Cupan-Ata, is ascribed to Timur. The use of "Cupan-Ata" as a geographical name cannot be quoted before the sixteenth century; even in the sixteenth (seventeenth) century the literary language appears to know only the medieval name "Kûshâk" (Pers., little mountain) for the hill. On account of the important part played by Cupan-Ata on the course of the Zarafshân (the irrigation of the whole valley west of Samarkand is regulated by the dam built there and repaired annually), the name Kûshâk was transferred to the river itself; its modern name only came into use in the written language in the sixteenth (seventeenth) century.

At Cupan-Ata, not far from the modern railway bridge (1300 yards long), have survived the ruins of a medieval bridge; at the time of the Russian conquest two arches were still standing, now there is only one. It cannot be exactly ascertained to what period this bridge belongs; like all buildings of any size in Turkestan it is particularly ascribed to Timur or to "Abâ Allah Khusây" but no such building is mentioned in the histories of either of these rulers. It is possibly the bridge called Zhir by Ibn Hawkal (ed. du Gersac, p. 371, L. 13), dating from the Samanid period, but this cannot be proved, for the Arabic geographers give only very confused accounts of the course of the Zarafshân and seem to confuse the main streams with the Syr-Darya canal (for further details see the article SAMARKAND).

On the 17th May 1868 the army of the Ameer of Bukhara took up a position on the heights to ward off the attack of the Russians under K. v. Kaufmann, but was easily driven from its point of vantage and put to flight with little loss (2 dead and 31 wounded), whereas Samarkand surrendered next day to the victors.

Pankratov, Ablom tertilishekan pamjatnikov goroda Samarkanda, No. 31 (reproduction of the tomb on the top of Cupan-Ata) and 38 (reproduction of the two arches of the bridge).

(C. W. BARTHOLOMEW.)

CYPRUS, Arabic KURUS or KURUS, Turkish KORUS, an island in the east of the Mediterranean, is geographically a plateau which has remained while the surrounding land has been submerged, consisting of two mountain chains running from east to west (rising to heights of 3142 and 6020 feet respectively) belonging to the Taurus system and the plain lying between them (4124 square miles in area). The island, which greatly facilitated the primitive coasting traffic between the Syrian and Egyptian seaports and the Aegean Sea, has, owing to the commercial importance of its position and the export of copper, for which it was particularly noted in ancient times, and to which it gave its name, always been an important centre of civilisation. The Greek settlement of the island, the foundation of Phoenician colonies, its political relations with the great powers of Egypt and Assyria, the wars of the Greeks and Persians for its possession, the vicissitudes of Cyprus in the Hellenistic, Roman, and early Byzantine period, testify to the importance of the island as a commercial centre.

When the expansion of Islam began, the island was under Byzantine rule. The first war against Cyprus was sent by Mu'awiyah in the year 28 = 649, (following Wallisaham, i.e., tradition gives various dates). It did not result in the
permanent occupation of the island but was merely a robber raid. The town of Salamine-Constantine was destroyed on this occasion. The result was, if we may believe the Arab sources, that the island had henceforth to pay the same tribute to the Moslem as to the Byzantines. The Aqada Ummi Hārūn, wife of 'Ubāda b. al-Sānid, had taken part in the expedition and died during its course; a tomb which is said to be hers near Larissa is still revered as the resting-place of Muslim saints in the island (see Journ. of the Royal As. Soc., 1897, p. 81–103). A second expedition in the year 33, according to Baladhuri, led to the first steps towards the settlement of Muslims and the extension of Islam to the island. Muḥammad’s successor Ṭāʾīr again visited the island, according to the Arab accounts, the correctness of which is doubted by Wallis and others. One of the conditions of peace between ’Abd al-Malik b. Marwān and the Emperor Justinian II in 69 (648) was (Chronicon, ed. de Boor, p. 753) the division of the Cypriote tribute between the two powers. In 745 (745) Walīr II is said to have deported Cypriotes to Syria.

From these accounts it is clear that Cyprus was a Realm of the Umayyads, apart from occasional Arab raids, and quite ephemeral occupations, gained a fairly independent position between the two great powers, to which it was materially bound by the payment of tribute, on which point the sympathies of its Christian inhabitants were rather with Byzantium than Islam. Under the ‘Abbasids the situation became still more favourable to the Byzantines. It is true that we read of successful expeditions against Cyprus, under Hārūn ar-Rashīd, for example, and even later. It is clear that on these occasions the permanent occupation of the island was not thought of. But Byzantine influence always soon became preponderant again (Byzantine conquest, 874–876). The population remained Christian as before; their trade assured them friendly relations on either side. The island was however used as a naval base by whichever side happened to be predominant at sea for the time. After Nicephorus Phocas (963–969) we find it again in the possession of the Byzantines.

When Richard I’s fleet reached Cyprus in 1191, Isaac, a son of the ruling house of CuriaCXI, was ruling there independently. The plundering of the ships of his fleet, which had been wrecked there, was followed by the conquest of Cyprus by Richard; he sold the island to the Templars, who soon passed it on to Guelo of Lusignan. Franks held the island for almost 400 years; massive fortifications and churches still remain as witnesses of their rule. The Frankish kingdom of Cyprus was a powerful ally for the Crusaders; on the other hand it formed a permanent menace to the Mamluk kingdom of Egypt and Syria.

Hullars I, the real founder of the Lusignan dynasty, therefore sent a fleet against Cyprus in 1279 = 1280, but this was wrecked off Larnaka = Famagusta and after brief fighting at the saltpans (13th–14th, not far from Marina = Larnaca) destroyed the citadel of Limassol. The most disastrous blow to the Lusignan kingdom was struck in 1295 = 1325. The Saladin’s army again occupied Limassol. A decisive battle was fought between this town and al-Ma’dara at Khorahrobor, in which king James was taken prisoner. The Muslims devastated the sanctuary of St. George (Rizokar) and even captured al-Attas (Koza — Leukosia, Nicosia). They did not however think of occupying the island permanently. They were content with exacting tribute, an arrangement which several times afterwards gave the Manhālik Saladin an excuse for armed intervention. The kingdom of Cyprus thus continued to survive; indeed in the reign of James II, Famagusta was again incorporated in St. Caterina Cusano, the widow of the king, called the island to Venice in 1489. It was still in the latter’s possession when the Ottoman under Sultan Selim II prepared to conquer it. The Beasik Lade Magišt occupied Nicosia in September 1570; Famagusta held out till the following August. Turkish rule which was established by a treaty was introduced with the greatest severity — though the Venetians were not entirely blameless in this matter — and was a period of great decline. On several occasions (1665, 1690, 1754–1766) risings had to be put down by force. The decline of the importance of the island, which had begun with the exhaustion of the coal mines in the early middle ages, was sealed by the development of steamships. In 1832 Mohammad Ali occupied Cyprus and was formally granted it in the following year, but had to return it to the Sultan in 1840.

By the convention of the 4th June 1878, Cyprus passed under English administration, the Turks retaining a nominal suzerainty, in return for which England pledged herself to guarantee the Asiatic possessions of Turkey against Russia.

The island is governed in the name of the King by a High Commissioner, who is assisted by a Legislative Council of 18 members (6 ex officio and 12 elected; 3 by Muhammad, and 9 by non-Moslem members) and by an Executive Council of 3 members; only English and Cypriote administrative persons. The island is divided into 6 districts: Nicosia, Famagusta, Larnaka, Limassol, Paphos, and Kyrenia.

With good government, Cyprus has again revived. Between 1878 and 1901, the population rose from 186,000 to 237,000. The majority of the inhabitants are Greek Christians; the number of Turks in 1901 was 48,900, and of Muslims 31,900. The economic prosperity of the island is again developing. Roads have been made and a railway from Famagusta to Morpho via Nicosia laid down. In commerce which almost doubled between 1900 and 1907, imports practically balanced exports (chiefly coal and barley) with totals of £692,954 and £603,530 respectively.

DABBAN, SUMR, and TAMHIN. A. ALYAS. MUSIRAN was the ancestor of the well-known tribe of that name. The name (which means a land, locuta soundeakers) is borne also by Dabbala b. 'Amir of Hisham, Dabbala b. al-Harith b. Kannab, and others (cf. Tabas, p. 3710-3711; iii. 1359). Dabbala b. Udd was brother of 'Abd Manat and of Muzainin (strictly 'Amir) and uncle of Tamun b. Marr. He is sometimes included amongst the Riblah which strictly denotes the three sons of 'Abd Manat only.

The pasturing grounds of this tribe lay in al-Vanana, but included the Ustr. 'Aqif in Najd (cf. 'Abd al-Fattah ibn al-Cansaul, New Tabas, p. 3714). During the war between 'Abd and Dhiyaban, the former got off time settled amongst Dabbala, but, owing to a quarrel, they had to leave, and after the outbreak of the war between the Banu Tamun and the Banu 'Amir b. 'Abdullaha, 'Abd entered the territory of the latter tribe. Upon this the tribes of Dhiyaban, Asad and most of Tamun, together with Dabbala and the Riblah, united in an attack upon 'Abd and 'Abd. They were, however, defeated at the battle of Dabbala. This happened some time about the year 579 A.D. When, in the Caliphate of Abu Bakr, the prophet's slave appeared, her claims were admitted by many branches of Tamun, especially Yathrib b. Hanapa, but Dabbala and the Riblah held aloof. On the defeat and death of Abu 'Ubad at the Battle of the Bridge in the year 12 A.H., or 634 A.D., Dabbala is mentioned as one of the Ruraw tribes who cast in their lot with al-Muhannak; and they distinguished themselves by their defence of 'Abd in the Battle of the Camel in which they lost a thousand men. They settled in Basra and took their full share in the repeated disturbances in that town. They opposed Muhannak and were engaged in the wars of the Khawarij. When Sulim b. Kutama held Basra for the Umayyads in 132 A.H. Dabbala were opposed to the 'Abbasids cause. They took a half-hearted part in the expi- dition of 'Abd b. 'Amir al-Qahwai against the Karumians in 287 A.H.

A few members of the tribe migrated to Spain (Makki, l. 185). Dabbala is one of the three Dhamah al-Arab, who did not form alliances with other tribes. Eventually, however, they became absorbed in the Riblah (Khanun; Gomara; and Lane). Dabbala b. Udd, the eponymous hero of the tribe, was the originator of several expressions which became proverbial (Malashi, Arab. Pros., l. 350, 599, 601).

Bibliography: Tabari, by index; Ibn 'Abd Rabbii, 'Abd al-Fadil (Cairo, 1305), ii. 48; Ma'ad, l. 326; Cassini de Perceval, Essai, 466 et seq.; Sprenger, Alte Geogr. Arabien, 316 et seq. 339. (T. H. WEBI.)

DABBAL, any animal that walks, creeps or crawls upon the earth. *And God hath created every Dabbal of water, and some of them go upon their belly, and some go upon two legs, and some upon four.* (Sure 4: 49). Here the word is used both of rational and irrational creatures. But Dabbal particularly applies to a beast that is ridden, especially the horse, male, or male; it signifies both the male and female.

Dabbala al-Ard is one of the greater signs of the resurrection: it is said to be a beast of corri- brils high, the parts of whose body belong to different animals, the head of a bull, the ears of an elephant, the legs of a camel, etc. It is to appear in Thaina or between al-Safa and al-Marwa. On the face of the unbeliever it will put a black mark and on the face of the believer a white mark. Those marks will spread until the whole of the face becomes white or black, and thus believers will be distinguished from unbelievers. It is said that the beast will bring with it the rod of Moses and the seal of Solomon. With the first it will strike unbelievers on the face and mark them with the word wau'mun with the latter it will stamp the word khayr on the face of the believer.

These traditions are issued on Sure 27, 28, "When the sentence shall be ready to fall upon them, we will cause a beast to come forth unto them from out of the earth." etc. — On the Dabbala al-Ard mentioned Sure 34, 11. supra 418. Art. Arada.

AL-DABBAL, ABDU 'ABDAR AHMAD b. YAHYA b. AHMAD b. AMIRA (not al-Kurjat), a Spanish Arab scholar of the 9th (9th) century, was born at Villed (Ruthio, Blanco) west of Lora, as appears practically certain from references to himself and his family in his work, and began his studies in the latter town when not yet 10 years of age except for his journey to North Africa — Sebta (Ceuta), Marrakesh, Badiyia (Busgos), and Axamina — he seems to have spent most of his life in Mursiya (Murcia) and have died at the end of Rabi' ii. 599 — beginning 1205. Of his writings there has only survived a valuable biographical dictionary of the Arab scholars of Spain prefixed by a brief survey of the history of the Arabs in Spain, which is supplemented by 'Abd al-Wahid al-Marrakeshi's introduction (History of the Almoravids, ed. Dozy). For the rest, al-Dabbal follows closely al-Hamadani's Dhad- wasul al-Muhaddis (which comes down to 450 = 1058) and expands it by the addition of biogra- phies for the next 150 years. The work entitled Bughyat al-Mutana'is (not Mutamans, as stated by Brockelmann, l. 340) ft 'irfikh aligal al-Andalus was published by Codex and Ribera in 1791 from the good, old but just badly pre- served unique manuscript in the Escorial as the third volume of the Bibliotheca Arabico-Hispanica.
DABIR, a town in medieval Egypt famous for its manufactures of cloth, belongs to the district of Damietta and lies to the province of Gharbiyya (Ibn Djalal, Khams al-Djame, ii. 9). It is situated 16 miles E. of Tabgha and 25 miles W. of the city of Dabir (Middle East), which is placed 8 miles south of Silveshin on the main line of the Survey Department, near the N. E. W., in lat. 37° 30' N. Lat. (cf. Bonnet, Dictionnaire Geographique, p. 165) and only about 35 miles from the site of the ancient Tanis. The Dabir cloth was woven of linen threads but seems to have been occasionally or regularly interwoven with gold and silk. Originally a name denoting only the place of origin, like Tanis, Dnyje, Shatwau, Dabir cloth soon came to be the name of a particular kind of cloth, which were also made in Caria for example (Yaqût, ed. cit., i. 273). But there were more easily stuffs in Egypt; one may conclude from the customs duties paid at Dabir (Makhdoumi, ed. de Goeje, Bibl. Geogr. Arab., iii. 104, 1). In the reign of the Fatimid Azzar, the custom of making Dabir cloth of gold was worn, the gold of which alone without the silk and the cost of weaving was worth 500 dinars. The length of one piece of cloth was 100 cm. (Makhdoumi, ed. cit., i. 276). The material (habah) must therefore have been very thin. There were also thick materials for garments, which were likewise called Dabir (Yaqût, ed. de Goeje, Bibl. Geogr. Arab., vii. 338, s.). The Egyptian Dabir was an important and well-known article of commerce (Makhdoumi al-Tifih, ed. Cairo 1316, p. 26).

DABIR, a locality in northern Syria, in the district of Asur (Yaqût, ed. cit., ii. 513) on the road from Manbij to Amuqia (Tabari, i. 110), on the Nakš Nawwash above Halab (Ludor, Zeit. schrift der Deutsch. Pal.-Verein, viii. 53). These statements suffice to establish the identity of its site with that of the modern village of Dabir (near it is Dabiris - Turkish), which was the headquarters of the army and the base of operations for campaigns of the Marwandi and early Abbasid against Kattun. The Caliph Sulaiman b. 'Abd al-Malik in particular spent a good deal of time here. He died in Safar 99 = September 717 and was buried there. After his death the pious sabha b. Hajja had homage as future caliph paid in the mosque at Dabir to the man whom Sulaiman desired should succeed him; and when this was done, a will was produced which designated 'Uqba b. 'Abd al-Aziz as this man (see Wellhausen, Arch. Rev., 1858, p. 162). The Abbasids bestowed Sulaiman's tomb in Dabir after their victory (Mas'udi, Maruf, al-Dadjih, v. 471).

The name is best known however by the decisive battle fought between the Ottoman Sultan Selim I. and the Mamluk Sahnas al-Tha'iri on the 25th Baalaq 922 = 24th August 1516 on the field of Dabir (Maruf, Dabir) not far from the sanctuary of Nabi Isma'il which is still highly revered at the present day (cf. Yaqût, iv. 537, 545, and Mas'udi, iii. 402, No. 5). The Mamluk Sultan fell and the fate of the Egyptian kingdom was sealed (see v. Hammer, Gesch. des Osm. Reiches, ii, 474 et seq.; Jorga, Gesch. der Com., iii. 356; Welt, Gesch. der Chalifen, v. 413).

There is a popular legend that a decisive battle will once again be fought on the blood-stained field of Dabir, in which Turks and Franks will fight for the mastery.

DABIR, the poetical name of Mirza Sa'id, the son of Mirza Gulam Husain of Lucknow. He was a pupil of Muhammad Husain, called Dabir, and is noted chiefly as a writer of masnavis, or elegiac poems on the death of the sultans of Khorasan.

DABISTAN, the title of a Persian work, which describes the various religions with special reference to religious conditions in India in the 2nd (ivth) century. It is based partly on the sacred books of the various creeds, and partly on oral statements of their adherents. The author's observations on the Mughal period and Muhammadan literature on the subject has also been used in many chapters. The religion of the Persians is first discussed with special thoroughness; next follows that of the Hindus and the rest of the short chapters on the Buddhists, Jains, and Christians. Islam and its sects are treated of; the work concludes with sections on the philosophers (Ferishteh and Naqshbandi) and the Sufis. Mazahir Fari was long erroneously regarded as the author; the author really seems to have belonged to an enlightened Farsi sect and probably those manuscripts are correct which agree with Sinjii al-Tim Muhammad Ardi (in his Tashkhir) in attributing the work to Muhammad Shah or Mulla Milhifd. From internal evidence it is clear that the author was born in India shortly before 1528, came to Agra in his youth, spent many years in Kashmir and Lahore, visited Persia (Mazahir Fari) and was also acquainted with the west and south of India. The work was concluded between 1664 and 1667.

Bibliography: Dabirshin al-sud-i (Calcutta 1824 = 1859) — other editions have been printed in Teheran, Boushay and Lucknow; the Dabistan or School of Manners, translated... by David Shee and Anthony Troyer.
DADJIL, a fabulous personage in the mythology of the Persians, a kind of Antichrist.

According to Arab legend, he dwells in one of the islands of the ocean of the Mahattri or the Zulfi (Java). The scribes of Staff and of Omsa say that, in passing near this island, beautiful music is heard, produced on the lyre, the oboe, the tambourine and other instruments, accompanied by dancing and the clapping of hands. This story is widely diffused; it is found in Ibn Khurdadhbeh, al-Dirimi, Kanwairi, Dirghani, Ibn Lyysa, Mandri's "Fleures des Merveilles" (Meymoud et du Courtille, t. 1433) and Arab all kings (Livres de l'Amour). "Imaret (Imaret) et des Merveilles, 2nd ed., 1852.

The correct pronunciation of Dadjil need to be regarded as a sign of pure Arab descent; according to tradition the Prophet praised himself on this point. Cf. A. Schaab, Schwabich's "Lautlehre," Index.

A. Schaad.

AL-DADJADJA, the domestic fowl. The eggs are covered with down when they come out of the nest. Quick in their movements and able to take care of themselves (Macrophagy); they follow when raised. After a time however, they become stupid and ugly and ultimately are only useful for scavenging, laying eggs and eating. They have no fear of heaps of prey; but if they see a jackal, they run in front of its feet. They sleep very lightly and like best to perch on a high place such as a wall, a beam, etc. They combine the characters of birds of prey and granivorous birds, for they eat meat and flies as well as corn. The hen lays throughout the year except in the two winter months; many hens lay twice a day. It requires ten days to perfect the egg; the shell is soft when the egg is laid but hardens as soon as it is placed in the air. Between the white of the egg and the yolk is a thin membrane. The white of the egg corresponds to the seed while the embryo derivates from the yolk: the eyes, brain, and head are first formed from the white of the egg, then a covering (Libya = segmentum) which becomes the skin of the body; while a second covering is formed out of the yolk which becomes the umbilical cord of the chicken. Two chikens are produced from double-yolked eggs. If the hen while sitting bears thunder, the eggs are spoiled; if she is old and weak, the eggs have no yolk and produce no chicks. She also lays eggs without being covered by the cock but such eggs produce no chicks. When these become fat they no longer lay, just as fat women do not become pregnant. Eggs keep fresh a long time, if they are placed in straw in winter (chopped straw) and in hay in summer. The fresh ones of flesh, eggs, eyes, gall and dung, etc. in medicine are very numerous. Half-cooked eggs (moi-djhah) are credited with special efficacy as an aphrodisiac.

The Arabs astronomers give the name al-Dadjil to the constellation of the Swan, which is also called al-Tawir.

ity and the place where he is to manifest himself at the end of time. According to some, he is a Jewish contemporary of the Prophet of the name of Shabbah ben Ze'id (Ibn al-Wardi, p. 142-144) others say he is the son of the son of Shabbi, the first of this name (Abeg, des Mannes, loc. cit.). Tabari in his chronicle (Persian synopsis, ed. Zonolberg, i. 67 et seq.) makes him a kind of Ishūanśu, a giant, king of the Jews who rules over the whole universe in this passage the author applies to Daghistān the Jewish prophecies relating to the Messiah. He is to appear, mounted on an ass as large as himself, when Gog and Magog break through the wall. His reign is only to last for forty days; nevertheless he will have time to go over the whole world from East to West and from North to South. His power and also his gigantic stature will disappear before these and the Mahdi; the Mahdi shall show him, Tabari's account says that Daghistān's real name is 'Abd Allah al-Sayyidūl.

He is to appear either in Khorasan, or at Kāna or in the Jewish quarter of Isfahan (Ibn al-Wardi, loc. cit.) or also-al-Biruni, Chronology, p. 295-296.

(D. Carra de Vaux.)

DAGH, a Baluch word meaning moun-hi, and hence applied in local nomenclature to a gorge or defile. It occurs as an equivalent in the Pashtū language which is similarly employed; and to which it is eymologically related (C.E. Av. sāfā). Example of use: Gandaksir Dagh, near the Bolan Pass, often spelled Daff in maps.

(M. Longworth Damer.)

DAGHİ, the poetical name of Nawârî Misra Khan of Dagh, one of the most distinguished Urdu poets of modern times. He was the son of Nawârî Ghansu al-Din Khan, and grandson of Nawârî Ahmad Bakhsh Khan, and was born in a.d. 1831. He obtained an excellent education under Maswali Ghishay al-Din, the author of the Kâshf al-Lughāt, and also studied Persian with Nawârî Vâsāf 'Ali Khan, ruler of Rampur, during his stay at Dagh. Dagh had a remarkable aptitude for poetical composition, and, under the influence of Shahî Wallâh Dabwâl, he became so proficient in the art that, when only 14 years of age, he used to take part in the amalkats, or poetical contests, of renowned poets which were held under the auspices of the emperor of Dagh. On the deposition and exile of Wadjâr 'Ali Shâh, Dagh left Dagh and went to Rampur, where he became the intimate friend of Nawârî Kâbul 'Ali Khan, the son of Nawârî Vâsâf 'Ali Khan. On the death of his father in a.d. 1865, Dagh was appointed to be one of the Court officials at Rampur, and had ample opportunities for writing poetry and associating with the leading poets of Lucknow, such as Ali Sattar, who used to assemble at Rampur. In a.d. 1895 (A.H. 1210) Dagh went to Haidarabad, and was honoured by becoming the poetical instructor of the Nizâm and members of his staff. He died there in a.d. 1896 (A.H. 1222). His biography has been written in Urdu with copious extracts from his works, and obituary press notices, by Muhammad Nihâj, 'Ali Shâhâ, formerly Director of the Educational Department of Jamnâ and Kashmir, and was published at Lahore in 1897.

(Daghi (Fr.)—"Mountain".)

DAHGHESTAN, properly Daghistan (Mountain land; Smack, Horgan, Melba, ii. 245 noted in Mecca that the name was pronounced Daghystan even by people who belonged to it), a Russian territory (coloured) on the west shore of the Caspian Sea between 43° 30' and 41° 11' N. Lat., has an area of 15,228 square miles and a population of about 700,000. Its boundaries, as in the days of the Sultan, in the south the Saray, in the west the watershed between these rivers and the Alasai, a tributary of the Kara; the territory is divided into nine districts (obrâg). Its present boundaries and its constitution as a Russian territory date from 1869 after the war with the mountain tribes; its name which is probably a unique linguistic phenomenon (Turk. dag=test mountain, with the Persian termination used to form the names of places) appears to be first found in the 8th (viii) century. Terek-Khan Dagh is the capital of the territory and the residence of the Russian military governor, but the number of its inhabitants is much less than those of the coast towns Derbend and Petrovsk (now the only harbour in Daghstān).

The highlands and lowlands on the coast were never united for any length of time in the possession of one people or under one dynasty before the Russian conquest. The highlands of Daghstān are divided into two parts by the Pass of Derbend, only 1½ miles broad, of which the southern belonged to the settled states of western Asia, and the northern to the nomadic kingdom of Northern Persia. Neither the peoples of the north nor those of the south have had any appreciable influence on the ethnographical conditions of the highlands. Before Russian supremacy was established, no foreign conqueror had succeeded in permanently establishing the highlands; from time to time the mountain tribes succeeded in conquering portions of the lowlands, but this always led in a short time to the severance of the political bond between these conquerors and their relatives who had remained behind in the highlands.

In recent times the southern portion of the lowlands as far as Derbend belonged to Albania; to the north, apparently in the mountains, lived the peoples called Algâns and Fāns by Strabo (Cit. 503). The Roman, and after them, the Persians, had to fortify the pass of Derbend against the nomad tribes. The state of the country when conquered by the Arabs leads one to conclude that the civilization of the Sassanian Empire and probably Mandaean also had been without influence on the neighbouring mountain-tribes. Several rulers of these regions are mentioned by Persian titles, e.g. the Tārazūn-Shah, the ruler of the district now called Tashkurgān (west of Derbend); in the same neighbourhood dwelt the Zīlahgīrūn (from the Persian ariq, cost of mail) who were famous smiths, the modern Kūbah (Turk. Kölbe), whose burial customs have been described by Ali Yâhid al-'Amdadī (text in Barthold, Zabāîk, v, 171, v, 88, xiii, 182) and seem to have arisen under the influence of the Iranian religion. Whether Christianity had been brought from Albania and had any influence on the people of the mountains and subjects at this early period, cannot be ascertained from the documents we possess.

In spite of individual successes of Arab arms in the northern parts of Daghstān (particularly under the Caliph Hârûn, 105-125=724-745, whose brother Maslam was the first to establish Arab rule in Derbend), even in the Arab period,
Dagestan.

Derbend still retained the position as a border fortress which it had held under the Sasanians. Trade with the neighbouring peoples seems to have become much more active, as was the case elsewhere also, after the Arab conquest than before; but it was at first only Christians and Jews and not till later Muamammadans who profited thereby. As early as the time of the Armenian Patriarch Sahak III. (674-705 A.D.) the "Hams" or the Khasars, are said to have adopted Christianity; in the reign of Hārūn-alk-Rashīd (780-809) the Jews succeeded in converting the ruler and nobility of this people to their religion.

The geographers of the 9th to 10th century give us fuller details of the ethnographic and political conditions in Dagestan as well as of the discrimination of the three religions. The Arabs only possessed, in addition to Derbend, the neighbouring castles which, according to Mas'udi (Mārūṣī, ii. 40) were only three miles (one farsākh) distant from Derbend. In Mas'udi's time (ibid. ii. 7) a Muslim, the sister's son of the Emir of Derbend 'Abī al-Ma'ālik, was ruling in Tabaristan. The prince of the adjoining Khasār (this is the correct reading according to Marquart, Ostostreichs und osmanitische Streifzüge, p. 492) professed all three religions; according to Ibn Rusta (ed. de Goeje, p. 147 - of 192), and Friday with the Muhammadans, Saturday with the Jews and Sunday with the Christians in Mas'udi (Mārūṣī, ii. 5), he appears as a Muslim and is even said to have invented an Arab genealogy for himself; but there was no follower of Islam except himself in his country; this principality belonged to the Khasar empire (ibid. ii. 7); the prince bore the title Salātīn. Further north ruled the Barazan, prince of the Gurīd, also a Muslim; north of his lands were the Christian Gmunit and further north still lay the imperceptible highland countries of Zirgūrgān (or Zīrgūrgān) where all three religions had adherents, and lastly the land of the Christian prince of Sarir who bore the title Frizūrkī (or Khīshgūrī). According to Ibn Rusta, only the inhabitants of the capital on a high mountain were Christians, the other religions of the people heathen. Ibn Rusta gives that title "Aba'wī" to the ruler. According to 'Irākṣār (ed. de Goeje, p. 223), the frontier of Sarir was only two farsākh from the town of Samandar on the coast; the Christian ruler of Sarir had made peace with the Jewish ruler of Samandar, a relative of the king of the Khasār, as well as with the Muhammadans in Derbend. According to 'Irākṣār Samandar was four, and to Mas'udi eight days' journey from Derbend and is described as a flourishing city; there were 4,000, or according to other reports 6,000, wineyards there; the Muslims had their mosque; the Christians their churches, and the Jews their synagogues there. In the west the land of the Sarir bordered on the land of the Alans.

Samandar seems to have lain in the northern part of the country, near the lake Tarlik or Talik and the modern Petrovsk. The land of the Sarir lying next to this part of the coast consists in the district now inhabited by Avar tribes (cf. the royal title monument by Ibn Rusta); the chief town in this district, formerly the residence of the Avar Khan, is Khūmāk, which is said to have been founded by the Arabs. Mas'udi does not appear to define the location of the land of the Zīrgūrgān accurately; the correspond-
belonged to the kingdom of Toqisium: the Kaitak are described by Shams al-Din Yarali (Zafar-Nama, ed. i. 742 et seq.) as a people "without religion" (ba'd fi'lam) or "with a bad religion" (ba'd al-'Ilm) so that Islam was not then the dominant faith among them. According to Barber (Hunnu, vol. ii. 105) even in the xvi century, there were still many Yunos. - Ghilzai, Armanian and Russian Catholics — among the Kaitak; on the other hand the ruler of the Kaitak (Khalil Beg) mentioned in the account of his journey by Afnasai Nikitin bears a Muhammadan name.

The Kait-Kumilk were Muhammadas and were regarded as the outposts of Islam against the neighbouring heathen tribes: their prince was called Shawkal. North of the Kait-Kumulk dwelled the Aghjikdas; the Kait-Kumilk had helped the latter against Turtur; they were therefore reproached by him with having stained their reputation as warriors of the faith by their alliance with these unbelievers (Zafar-Nama, I. 737 et seq.). The Aghjikdas therefore had not at this time adopted Islam. In the history of these campaigns the town of Turtur is mentioned. The Zirighsan lived between the Kait-Kumilk and the Kaitak; i.e. in the district of the modern Koolak, they still retained their ancient fame as armourers and brought considerable revenue. They had made, as offerings to the conqueror (Tibet, I. 732).

The tribal name Aghjikdas may safely be connected with the name of the village Akhsa, the capital of the district of Dasa (Dorjvantsy okrug). The language of this region at the present day shows only dialectic differences from that of the Kaitak; but the inhabitants were never subject to the prince of the Kaitak and have never obeyed any authority but that of the elders of their tribes.

The account of the campaigns of Timur affords conclusive proof that the conditions found by the Ottomans in the brief period of their rule in Daghestan (1586—1595 = 1587—1600) could only date from the xvi (1586) or xvii (1600) centuries. Nevertheless the historical tradition which was first invented about this time depicts this state of affairs as having existed in the early centuries of the Hijra. Just as the Jews possibly even before the Arab conquest had localised various events in the history and tradition of the tribe, so in Daghestan (as in Georgia, Ossetia, Khevsure, p. 20) and as at the present day the so-called "mountain Jews" (Daghestani) say their forefathers were brought hither by their Assyrian and Babylonian conquerors, so all the Mahromnads tribes claim to have been converted by Abi Muslim to Islam, and their rulers to be descended from Arab governors, left behind by Abi Muslim. The title maksim of the rulers of Tagvanan was explained as Arab 'awal (midnight); Arabic etymologists were also founded for the title of the Usul of the Kaitak ("ingenious") from the Arabic (sam 'usul) and of the Shamskili of the Kait-Kumilk (now written Ghuzi-Chumuk). The word Shamskili was said to be derived from Shams = Syria; various explanations were given of the second syllable. There was also another etymology (Shas-BoI). It is not impossible that the pronunciation of the various titles became influenced by such etymologies. It certainly is not an accident that the title of the ruler of the Kait-Kumilk appears in the oldest Russian documents in the same form (Shewkat or Shawkal) as in Shiraf al-Din Yarali; it is obvious that both Persians and Russians could not have independently corrupted Shamskili to Shawkal; it is much more probable that the present form of the title only arose out of the above mentioned etymology. The subjects of the Shamskili, the Kait-Kumilk, now claim to have distinguished themselves fighting for the true faith. Muslims and by their names, as late as this early period the complimentary appellation "Ghan" from the Arabs. The Chief Mosque of the village of Kamshik is said to have been built by Abi Muslim as is evidenced by an inscription (which is of course much later) on the interior of the main entrance. In Shamskili, the Avesta capital, Abi Muslim's tomb is still shown as well as his sword and clock, on which the date 150 A.H. is said to be inscribed. The scholars were of course aware of the fact that Abi Muslim never was in Daghestan; to reconcile the legend with history, it has been asserted that it is not Abi Muslim Marwazi that is referred to here but another Abi Muslin; on account of the similarity of names, this Abi Muslim was confused with Muslama, so that in historical works and even in inscriptions "Abi Muslim b. 'Abd al-Malik" sometimes appears as conqueror of Daghestan and founder of Mosques. A Shamsi Abi Muslim is said to have lived in the xv century A.H. It is, however, more probable that these native scholars have hitherto been misled by the invented tradition and the irresponsible compilations of native scholars.

The first historical prince of the Kaitak, who bore the title Usul, appears to have been the Saljoq Ahmad Khan who died in 995 = 1587-1588. He is said to have founded the village of Magaita, where the members of his tribe assembled to transact their business (whence the name); by his orders the provisions of the customary law were collected to form a code which the judge "fayza" had to observe, a proceeding which Mirdas Hasan Efendi, the author of the Ajwa-i-Daghistan (p. 85), regarded as "grow importance" (sussr-fayza). Among these prince's innovations is mentioned the law by which the sons of a Beg, whose mother was not of princely birth, were to be excluded from inheriting their father's estate. About the middle of the xv century (1646), a part of the Kaitak separated from their compatriots and migrated to the lands lying south of Daghestan, Husain Khan, the leader of these emigrants, succeeded in founding a new principality in Salakta and Kuba; Fath 'Ali Khan, prince of Kuba and Derbent, in the xvii century, was descended from this branch of the Kaitak.

The Ottoman traveller Eyvili-Celebi (Sevitbadii, II. 291 et seq.) in 1647 met those transplanted Kaitak between Shakt (the modern Nohcha) and Shamskili; the vocabulary given by Eyvili-Celebi shows that the Kaitak did not then speak Lezgian as they now do, but Mongol. Unless there is some inconceivable error here, the fact is of great importance for settling the question of the origin of the Kaitak.

The Shamskili of the Kait Kumilk (or Ghuzi Chumuk) gradually extended their power from their mountain home in a south-south-westerly direction to the coast; in the xv century these princes used to spend the winter in the lowland at Baniak and the summer in Kamshik. The Shamskili Chubin died in 886 (1587) at Baniak and his lands were divided among his sons. The power of the house
was thereby much weakened; the Ghureh-Ghunduk who remained in the mountains gradually made themselves quite independent of their former rulers. Since the death of the Sháhghul Sulkhálí-Mírak in 1649 (1639-1650), the Sháhghulí have only ruled on the coast in Búntuk or Türksh (Turkí); none of these princes came to Kánsú where the tombs of the early rulers of the dynasty may still be seen. The name Ghundúk is still borne by a village in the lower Gureh-Ghunduk, not far from Ténsúr. Kánsú Sháh, the present capital of Daghestán; this village is now called Kánsú-Kúntsú. The following story is told to explain the origin of this name: at the same time as the Ottoman, the Khor Tátos invaded Daghestán by command of the Sultan; Adil-Girán, a brother of the Khor Músháhík Girán, was defeated by the Persians in Shárat and ended his life in confinement. His mother wished to release her son and therefore undertook the journey to Persia, bearing rich gifts; her arrival was too late; on her return journey she was robbed in the land of the Sháhghulí for the sake of the presents she had brought for the Sháh, and died in this village; for this injustice done to a woman, its inhabitants are still branded as "womanisers".

The inhabitants of Daghestán never in any way impressed the Ottoman conquerors as pious Mahommedans. The historian Ali Caldwell, who took part in the campaign of the year 1578 and has described it in his Nuwar-Namasí, called the attention of the Sháhghulí to the barbarous practices of his subjects; one section of the inhabitants which he called Délí ("dog-tongued") on account of their language, is accused by him of having had community of wives (cf. v. Hunsen, Geschichte des Osmanischen Reiches, 2nd ed., ii, 486).

To the same period belong the earliest Russian attempts to subdue to Astrakhan the lands of the northern Caucasian, including Daghestán. In 1554, a Russian army under Prince Paul Zotovitch, succeeded in taking Tábruz and building a fortress on the Kánsú Sháhí; but the Russians were soon afterwards defeated by the armies of the Sháhghulí and had to retreat over the Sulak. An attack on Türksh in 1604 under Butúnik and Peshbekly had still less success.

Since that time three powers, Persia, Turkey, and Russia, have claimed supremacy over Daghestán as well as over the other lands on the western shore of the Caspian Sea; the native rulers made alliances sometimes with one and sometimes with the other power; it was not till the sixteenth century that the struggle was finally decided in favour of Persia. After 1558-1578, in addition to the Sháhghulí and the Khor, the ruler of Tabásaran (the same even at this time is still written Tabarssun) and the ruler of the Khasa had submitted to the Sultan. When Sháh Abbas brought Persian rule here in 1613 (1603), he was joined by the Umád Rúmúsh Kháín, while the Sháhghulí remained faithful to the Turks; amongst other provisions of the treaty of peace made in 1612 (1612), it was provided that the Sháhghulí and the other princes subject to the Poste should not be interfered with by the Persians. The same Rúmúsh Kháín went over to the Turks in 1625 (1625) on which account his position, the Sháhghulí, was invested by the Sháh and confirmed in his rank; he had already received confirmation from the Caer-Michael (Akbásh Dáíkide, p. 51).

When the Safawi empire began to decline under the weak rule of Sháh Husain, a revolution against Persian rule broke out in Daghestán also. At the head of the movement was Qází Sháh Sháhí-Khán, who a short time previously had founded a new principality in the land of the Ghur-Gurúkhí. Allied with the Usán and the leader of a popular movement, the Mudarris Hájjí Dávid Efendi, he succeeded in taking Sháhghulí in 1724-1725; the subsequent events took an unexpected turn; he received letters of marque, titles, and arms from three and were adopted as subjects of the Sultan. Affairs took another turn on account of the intervention of Russia. 300 Russian merchants had been slain at the taking of Sháhghulí; as Russia had received no satisfaction, Peter the Great undertook a campaign in Persia at the end of the Northern war and occupied Tehran in 1722; soon afterwards the other provinces on the west bank of the Caspian Sea had also to submit to Russia; by the Partition Treaty of 1734, Russia's claims to these coasts were recognised by the Porte also.

Russian rule did not last long on this occasion; when Nádir Sháh had succeeded in establishing the unity of Persia, all the lands south of the Kura were given back to the year 1722, and by that of 1725, the land between the Kura and the Sulak also. The Porte also had withdrawn its claims in 1733 after an advance on Daghestán by the Khor Tátos which was failed by the Russians, but hostilities were renewed at a later period; the native population also, particularly in the highlands, stubbornly resisted the new Sháh. It was not until the constitution that Nádir Sháh was able to establish his authority permanently. The Sháhghulí Adil-Girán had taken the oath of allegiance to Peter the Great in 1725 and given his assistance in the campaign of 1722, but had afterwards risen against the Russians; in 1725, he was sent to Lapland and the rank of Sháhghulí was declared abolished; the rank was next restored by Nádir Sháh and given to Khán-Púkhí Khán, the son of the vanished ruler. In spite of Russian influence (particularly in 1733 and 1744) the population of the highlands remained independent.

After the assassination of Nádir Sháh (1806-1847) there was no strong government in Persia for half a century, which might have maintained Persian suzerainty in this region. Even the inner provinces of the country could not be protected from the robber raids of the princes of Daghestán; for example, the town of Khorshid was plundered by Umád Ansí Hámára. In spite of the treaty of 1735, Russia again made its influence supreme in Daghestán. When the traveller Cosnin was captured in the land of the Umád and died there in 1774, the land was ravaged in the following year by an army under Medem; in 1784 the Sháhghulí Músháhí Ali again attached himself to Russia. In 1785, Russian power in these regions was strengthened by the creation of a Caussanian government. Daghestán was only subjected indirectly by a religious movement under Sháhí Mánúshí, provoked by the Turks in 1797-1820, 1845; most of the rulers took up a hostile attitude to this movement.

When the Kánsú which had succeeded in again bringing all the provinces of Persia into one kingdom, the Caussanian lands were intended to be included
in it also; but Russia was not now inclined to give up its claims without a war, as it had done in the time of Nich. Shah. War broke out in the last year of the reign of the Empress Catherine II (1795): Derbend was occupied by the Russians, vacated soon after by order of the Czar Paul, but occupied again in 1801 by Russians. Persian rule in Daghestan finally came to an end, although it was not till 1837 that the Persian government finally gave up its claims to those lands by the treaty of Jennis at Gallistan.

The resistance offered by the native rulers and particularly by the people, lasted much longer. In 1818 almost all the rulers in Daghestan with the exception of the Shamlul made an alliance against the Russians; the rising was put down by the Governor Jerome, and without difficulty. In 1839 the title of Czar of the Khatkhi and in 1828 that of Mari of Tabasaran was abolished; the remaining rulers have had Russian officers given them as joint rulers since the thirties of last century. The resistance offered by the mass of the people tainted by their religious leaders against the infidels was much bigger. The members of the murdered order of Nebishandov had founded their way into Daghestan and spread their doctrines there with great success, about 1830 a movement was started. In the head of the Avars by the leaders of the order, which was directed against the ruling dynasty as well as against the rule of the infidels. Shahul law was to become supreme, all provisions of customary law which were in contradiction to it were to be abrogated. The first leader of the rebels, Ghafl Muhamed, called Kass-Mullah by the Russians, was pardoned by his disciples as an authority on Arab sciences (Ullman 'Arastw'); he is said to have composed a book directed against the customary law entitled 'Usma al-Beiruha 'al-ahfarta 'Urusbi'ét Daghishtin'.

On the 19th—29th October 1832, Ghafl Muhamed was surrounded by a Russian army in the village of Girmi and slain; his successor Hamza-Beg fell soon after in 1834 at Khimsan; the third leader, Shamlul-Efendi was more fortunate: though he was sentenced as a scholar, he was far superior as a ruler and general. He held out against the Russians for 25 years in his native mountains; his greatest successes were won in the years 1843–1844, when the Russians were reduced to the coasts and the southern districts; all the Russian fortresses in the mountains were taken, and the Lezgos captured many prisoners, weapons (including 25 cannon) and supplies. After 1849 Shamlul was again driven back to the western part of the highlands but was able to continue the war for ten years longer.

His strict rule won him great respect among his people. But even in a state like this ruled by a Shahil, it was impossible to observe perfectly the principle that only the Shahil law should be valid; the taxes levied by the Avar Khatkhi, the grazing lands, and the Avar cattle, were retained by Shamlul although they were handed not as a religious but only on customary law.

After Shamlul submitted to Prince Bahrotkhan on the 25th Aug. (=6th Sept.) 1859, the power of the Avar rulers was restored to the Russians for a brief period. It seemed advisable to the Russians to strengthen the hands of the rulers and nobles, to break the influence of the clergy by their help; but the Russian authorities seem departed from this principle. The Avar ruling house was depopulated in 1869 and soon afterwards the rulers who still remained, including the Shamlul, in 1879, had to give up even their nominal rule. The district was organized, which it is still governed. In 1875, during the Russo-Turkish war, the people of the highlanders again took to arms; on the 8th (22nd) Sept., they took the fortress of Kunstk; the representatives of the ancient ruling houses in Khatkhi and Tabasaran again took the titles of Enik and Maljan; but as above this time the war against Turkey took a favourable turn for Russia, the revolt was soon suppressed.
DAHEKHAN (arm.) = Per. Dagh,
A gold (and silver) coin worth 20 (v.t.).

AL-DABHAK. A noted pasha of Meccan.
In the year 939-600 by the latter's orders he
undertook an expedition with 3000 men against
the pashas of 'All in the Hijaz and barred the
way for pilgrims to Mecca, till 'Ali sent Husayn b.
Abd al-Karim against him, who put al-Dabhak to
flight. In the year 55-675 or according to
another authority in 56 he was appointed go-
vernor of Kufa. After filling this office for some
time, he was dismissed in 56-675. After
the death of Mu'awiyah he was 60-680, al-Dabhak,
who delivered the late caliph's funeral oblation,
in obedience to his dying wish, secured the elec-
tion of his son, Yazid b. Mu'awiyah, as his successor.
During Mu'awiyah's illness, he was appointed
by him to lead the prayer in Damascus till the
new Caliph could be chosen. Al-Dabhak also played
a part in the intrigues in Syria on the death
of Mu'awiyah II in 64-684; but all the details
are not clear. The Caliph left no children and his
nearest relative was his sixteen-year-old brother
Khalid b. Yazid, who was appointed Caliph in
'Arak and he had also many supporters else-
where. Taim Marwan b. al-Hakam, who had inten-
ted to go to Mecca to bear in person the ho-
mage of the Syrians to Ibn al-Zahiri, allowed
himself to be persuaded by 'Uthman Allah b. Ziyad
to carry out as a claimant himself, as he was the
oldest and most respected among the Umayyads.
According to some, al-Dabhak, who was by this
time provincial regent in Damascus, had always
been a partisan of Ibn al-Zahiri, according to
others he preferred to remain neutral in order to
be able to appear as a claimant to the vacant throne
when a suitable occasion should arise. In any case
after some hesitation he openly took the side of
Ibn al-Zahiri. According to a statement which is
certainly not improbable, he was induced by the
sultan 'Uthman Allah to demand that homage should
be paid to himself. He thereby lost the confidence
of the people however; this plan had soon to be
given up and al-Dabhak again took the side of
Ibn al-Zahiri. When Marwan was elected Caliph in
Damascus on condition that after his death the
throne should pass to Khalid b. Yazid, the strug-
gle had to be decided by the sword. The hostile
armies met at Marj Fihah, the Kais led by al-
Dabhak and the Kais by Marwan, in 94-684.
After skirmishing for 20 days, the latter was vic-
torious; al-Dabhak's army was slain, and his followers
had to take flight.

AL-DABHAK, son of Al-Sha'beeni, a Kharrijiti.
When the chief of the Kharrijites, Sa'd b. Bahjat
al-Sha'beeni, died in 127 (745) of plague on
the road to Kufa, al-Dabhak was proclaimed his
successor. The Kharrijites flocked to his standard
from all sides, and when al-Dabhak advanced against
Kufa with his powerful forces. Marwan b. 'Abd
al-Malik, governor of Iraq, al-Nadji b. Sa'd al-Hurathi, and the governor of Hira, 'Abd Allah b. 'Umar, united their forces,
but were defeated in Ragibia 128 (746)
although they were said to have had an army
of about 30,000 men, and had to flee while al-Dabhak
occupied Kufa. Ibn al-Hurathi went to Marwan in
Syria, while Ibn 'Umar remained in Wasit,
where he was besieged by al-Dabhak. In Shawal
August of the same year he had to capitulate
late after a siege which lasted several months
and conclude a peace with al-Dabhak by the
terms of which Ibn 'Umar received Kaskar, Malsah,
Daimalim, the land on the lower Tigris, al-
Ahwaq and Fihals, as governor. Al-Dabhak then
returned to Kufa while Ibn 'Umar remained in
Wasit. In the following year the people of Mosul
applied to al-Dabhak and begged him to take the
town. After an absence of sixty months or it is
said, he set off and drove Marwan's governor
out of Mosul, which then fell into his hands. As
he was able to give high pay, recruits flocked to
him and according to the probably exaggerated
accounts of the Oriental historians,
bad an army of 120,000 men at his disposal.
The Caliph, who at this time was in Syria, occu-
pied with the siege of Hims, sent his son 'Abd
Allah against the victorious Kharrijiti leader.
The former came as far as Najaf; but after an
unsuccessful encounter he had to retire into this
town, where he was besieged by al-Dabhak.
After the conquest of Hims, Marwan himself took
the field and came upon al-Dabhak at Karfathiti
in the short of 128 (about Sept. 746). The
battle lasted the whole day; al-Dabhak was slain
and when his successor al-Khalisi sought to re-
pel the attack, he was also killed, whenupon
the Kharrijites retired to Mosul. According to another
account, al-Dabhak and al-Khalisi did not fall
till 129-740. 741.

et seq., Wellhausen, Das arabisch. Reich, p.
224 et seq.;
DAHLAN, the name of the principal island of the group of the same name in the Red Sea off the coast of Masawa. The origin of the word is uncertain; it is hardly possible to derive it from the name Kala (Kala) of this group mentioned by Arreborsch and in the Periplus Maris Erythræi or from the Allaca which appears in the elder Pliny (L. v. 31. 9). The population is of Tige origin and speaks this language. Islam was brought to Dahlan at quite an early period; it was used as a place of punishment under the Umayyads; the poet al-A'abyhim and the Medina jurist A'mar were imprisoned there. This use of the island survived under the Abbasids; but Dahlan was lost to the caliphs under their rule and fell to the dynasty of the Princes of Zaid, whose vassals it shared. Trade with Abyssinia brought wealth to this outpost; for after the 12th century we find Arabic inscriptions here, monuments of which have only been partly collected by Valentin, Sall, Küppel and Maflouni. The island became independent of the Caliphate and took the title of "king"; these entangled relations with the Mandi Sultan, probably to be the more easily able to assert the claims of the Yemen. Dahlan was nevertheless under the suzerainty of Yemen again when Almusco d'Albuquerque and the Portuguese arrived in 1557. Almud, the prince then reigning, whose name is known to us from an epitaph, attempted to give them a friendly welcome but really meditated treacherous designs. As a punishment the island was laid waste in 1520 but the inhabitants had left it. Peace was come to however: Shaikh Almud was allowed to gain possession of the island again on condition that he paid tribute to the Portuguese, which did not prevent him from attaching himself to Almud Gazi when the latter had become lord of the whole Ethiopia kingdom and receiving the government of Dahlan (Arakko). His successor followed his example and on the approach of 2,000 men under Don Estavan da Gama in 1541 had to flee with the entire population of the island. The further history of the island till the conquest of Yemen for which it shared, by the expulsion of the Turks by the Esmadin, is unknown. In the period following, Dahlan's history is that of Massawa; it was an independent Yemeni suzerainty and was finally ceded to Italy. The population is estimated at 1900 souls; the pearl-fisheries are almost abandoned.

Al-Dahnazi (Med. Pers. dahan), Mafhizite, green copper ore. The description of this mineral in the *Ikhwan al-Safa* may be traced to the *Petroleum of Aristotle*. It is said to be formed in the copper mines from the sulphur dust which combines with the copper and forms stratified layers. It is a soft mineral and shows the greatest variety of all shades of green. Tiftah, following Florence, describes mafhizite as mafhizite, i.e. malachite, copper lazuli (not lazuli copper, hematite) were originally copper, which first of all became shahbazlum; when this is affected by heat, it becomes green like dahni, if a little moisture still remains in it, or blaze lazur, when as a result of the great dryness of the earth block is mixed with it. The most copper is therefore obtained from these stones. We may safely recognize in those descriptions, if the ambiguous names are correctly applied, the association of minerals found in certain copper mines. Tiftah, says, it is chiefly found in Kermān and Siyāhjan as well as in the land of the Banū Sulaym in Arabia Deserta; he also describes the agate-like designs on the beautiful varieties which are used for vases, daggers, sealstones and ornaments of metal; the stone loses its brilliance as it is not very hard.

It is said to belong to that group of stones which are clear in a good light and clouded in a dim light. It is also said to cause a clouding of the colour of the emerald. The statement in the *Ikhwan* and in Aristotle's *Petroleum* that it soliders broken gold — it is even more effective with brass — shows a connection with the ancient chemical tradition (ἀρχαία) in Kzawat, quite the contrary statement is made.

It is considered a poison for people in good health but it is also an effective antiseptic, taken internally with vinegar and applied externally for bee-stings etc., leprosy, and as an aphrodisiac.

(J. RUEG.

DAHR. This word is used by the philosophers to mean "eternally" in opposition to time. It is regarded as something transitory and fleeting and eternity on the other hand as abiding. This is the abode of that which changes or alters; it is measured by the movements of the heavenly bodies. Things, which do not move and are eternal, have their place not in time but in eternity, like the "Ideas" of Plato. The latter, philosophers tell us, is in a sense the basis of time; it is the "prime principle of time," *šahî al-sha'ab* (cf. my *Atlas*, p. 189).

The book of the *ta'rifat* gives the following definition of the word *dahe*. It is the permanent moment in which the divine presence expands; it is the basis of time and unfolds in itself eternity and perpetuity*. (H. CARL DE GAUX).

DAHRYA (Ar.). A name applied with reference to *Sūrat al-xv. 23* (where it is said of the unbelief). And they say: "There is no other than our present life; we live and we live nothing but the course of time (al-dahe destrawth anu) to those people who are not content with repudiating the belief in one God, the creation of the world by Him and His Providence, and denying the postulates of any positive religion (divine laws, future life, retribution), teach the eternity of time and of matter and assert all that happens in the world merely to the operation of natural laws (or the movement of the spheres). As the most characteristic principle of their teaching on which all the others depend, Aristotle is held on their doctrine that time is without beginning (*Mofa* al-*Umm*, ed. van Vloeten, p. 35; penult., 40). It would be difficult to give a satisfactory translation of the term *dahr* in the sense in which it is used in Islamic literature, for (as is also the case with the application of the term *šahîd*) its connotation is not rigidly defined and it is easier to define it in negative than in positive terms. Discourses are by no means absent in theological literature as regards the details of their teaching. Shahrastani in one passage says of them that they deny the existence of intelligible entities (mofa al-*Umm*) and only allow those which can be perceived by the senses (mofa al-*Umm*). (ed. Cureton, 201, 9) and in another he contradicts this by saying that they also allow intelligibles (201, 9). We even find a definition of the Dahrists according to which they grant the existence of a world that explains the origin of the world from the random concurrence of atoms whirling about in space: Atimites (Ikhwan al-Din al-Kazzwi, *Mufid al-umma* al-Ma'um al-Bi'at [Cairo 1310] p. 57). One comes nearest the meaning of the name Dahrists by translating it Materialists or Naturalists, the meaning Fatalists, formerly much in vogue, is quite wide of the mark. — The oldest definition of the meaning of *dahr*, which we have in the main followed above, is to be found in *Ikhwan* al-Ma'um al-Bi'at [Cairo 1325, viii. 5] where (with reference to Sura xlv. 22: "he who taketh his desire for his God") they are credited with a hedonistic view of life in addition to Atheism and Naturalism mingling the terms in their most general sense: "The (the dahrists) knows no connection between man and beast, only what stands in the way of his desire is evil in his sight; everything with him turns upon the question of pleasure and pain; that alone is right which is to his advantage, though it should cost a thousand men their lives." It follows from their general doctrines that they deny popular superstitions and scoff at the existence of demons and angels, the interpretation of dreams and the efficacy of magic (*Dhab*, ibid. ii. 59, et sqq.) on the other hand many of them are said to grant the possibility of the metamorphosis of men into animals (mawdah) on rationalistic grounds (ibid. iv. 24, 25, et sqq.). As do the Manichæans generally, the Jewish Arabist theologian *Sâ'ul* (died 942) also repeatedly combatsthe dahrists; first in the introduction to his commentary on the *Sûrat al-Isrâl* (ed. Lambert, Paris 1891) afterwards in his first book of his *Kizah al-ushâb* wa-Mawdâd (ed. Landauer, Leiden 1880, pp. 63-65) in connection with the belief of those who deny the origin of the world without time, and in the latter place he devotes particular attention to combating their limitation of the perceptible to that which is perceptible by the senses. In his translation of Job, he refers characteristic xxii, 15 to the Dahrists and trans-
lates the Greek "words of the text by mazābīk al-dāhiryyat; or, also several passages in his commentary on Proverbs (H. Heller, in Recueil des Études Juives, xxxvi., 229).

The origin of the Dāhiryya is traced to the Greek schools of philosophy: they are distinguished by Ghazali (al-Mustakhrib, p. 1309, complete vol., N° 8) from the físāyiyāt (fēsāiyyāt), as granting the existence of a creating and controlling Deyl, deny the substantiality of the soul and its consequence its immortality, and from the isārīyan (sawātīyya, Sābit, Aṣūrīyya, Gūthtdīlī). — With the penetration of European natural science among oriental scholars, Darwinism, Materialism etc. have made great advances among them (translation of Huxley's Käf ywati and Kafka into Arabic by Shibli, Khallil al-Lebi, Alexandria 1884, and the pamphlet al-Adwa'ī, by the latter w. k.). A literature consisting of these tendencies has also been produced of which may be mentioned the anti-Darwinian writings of Ismail al-Hawwāyat and Beydār (al-Madknīl, ab. 'l-baṣtīl, Darwa'in maqā'el al-shārūf al-madīdīn, li-šarī'at al-Adwa'ī, li-Shibli 1887; a reply to Shibli). While these writings and their reputation have been produced in Christian circles, the materialistic philosophy which has also found its way among Muhammadans has been combatted as Dāhiryya by the Afghan scholar and agnostic Djamāl al-Din al-Husaynī (q.v.) in a pamphlet, which originally appeared in Persian (Boulay 1296, līfīth), was afterwards translated into Urdu (Calcutta 1886) and into Arabic (by Muhammad 'Abduh) and in the latter form was printed first in Beydār (1903) and again in a new edition at Cairo (1912; 100 pp. 5°) under the title Khassās bi 'l-lāfīz al-maḥkūm al-dāhiryyāt wa-kāf ywati naṣīfīyya min al-bāzīl wa-nakhrīyya wa-maṣūfīyya min al-Marādīs wa-fāsādīyya wa-maṣūfīyya min al-Andalūsīyya wa-maṣūfīyya min al-fāṣārīyya and has been widely disseminated in Muhammadan circles. To this literature also belongs al-Durar al-maṣā'īl fī lāfīz al-dāhiryyat wa-ndāhiryyat lārāfī al-maṣā'īl fi lāfīz al-dāhiryyat by 'Abdallāh al-Hāfiz al-Hudnī al-Durānī (Cairo 1313; 190 pp. 5°). It is clear then that in this connection Maḥdīyyat (materialists) and Dāhiryyat are used as synonyms. Philologists allow that the latter word may also be pronounced dāhiryya according to a vowel change common in Arabic (Sittah Prin. der, Berlin, ii. 64, et seq.).

DAHSHUR, a place in the Egyptian province of liṭrān (district of al-'Abya') on the west bank of the Nile northwest of Cairo. Dahshūr has been known since ancient times for its pyramids, the building of which is ascribed by the Arab geographers to mythical kings (like Khafraim and Shāhād b. aṣhā'). Abū 'Ishār mentions a Christian monastery and a church of Moses there; the latter was afterward turned into a mosque while the monastery was overthrown by the Nile. Before

the making of the railway, the place was one of the stations for carriages going from the Faiyum to Cairo. "Alt Mahirah mentions Dahshūr among other places as being visited by pilgrims who visit the tombs of the heroes of the faith who had fallen in the battle with the Byzantines; in honour of these a festival is celebrated annually."

Bibliography: Yāqūt, Majmu'a 11, 653; Abū Sa'id ibn 'Isa (ed. Evvetti), vol. 51; Majrūt, Makhtūt, 1, 413; Al-Bīrūnī, al-Makhtūt, q. 113; Ibn al-Ḥāfiẓ, al-Makhtūt, q. 127; Boudier, Historien Géographique d'Egypte; Boudier, Anfāsīn, p. 152.

Dā'ī. This title means "missionary," literally, "the one who calls," who he summons to the true faith. It is frequently found in the history of the Ismāʿīlīs, the Karmānis and the Druzes.

The dā'ī is in the scale of dignitaries in the Ismāʿīlī sect; beside them are the Khăṣīn (prophet) or Naqīb whose duty it is to spread their doctrines. The five ranks in the sect correspond to five metaphysical principles: that of the dā'ī corresponds to time and that of the Khăṣīn to space.

Among the Druzes, according to the system of Hamza, the dā'ī is not included among the five supreme ministers; nor are they, like them, incarnations or representations of spiritual principles. They are at the head of the lower ministers and have the Maḥdīs, and Mahāsib below them to aid them in their missions; they hold their powers from the fifth minister, called the tāhīf. The dā'īs are sometimes summoned al-fāṣāl (the application) because they have solemnly studied the true doctrine or also dā'ī al-fīsāl (missionaries of glorification) because it is believed that the Antichrist will also have missionaries who will be called "missionaries of the blind Illumination." Moḥjāna (the Servant) who exercised supreme authority over the Druzes after the retirement of Hamza, recommended that twelve dā'īs and six māḥdīs should be appointed as soon as possible to each diocese. The heads of missions receive from the masters of the sect the letters destined to be read to the faithful.

The name dīs is also used to designate persons of different rank, one of whom is subordinate to the other. We find the title Grand Dīs or Dīs's of the historians and Fātima. We read: "Uthmān Allāh, after being proclaimed Mahdī, came to Bakkhāda" in 397 A.H., a certain Shāhīr, surrounded by dā'īs, held a public assembly; he thus acted as Grand Dīs.

We learn from Majrūt and Nawāz how these missionaries went about their work. They spoke to people in a manner suitable to their mental attitude and degree of education, tried to persuade, without doubt, the religious in their minds, taught them that one should judge by reason rather than by traditions, explained the systems of ancient philosophy and made by representing the rites of religion as more symbols. If the listener accepted these premises, he was asked to become utterly subservient to the Imam and was then initiated. Among the Ismāʿīlīs, the greater part of the dā'ī themselves would now completely initiated; the ceremony of initiation had at first seven steps and afterwards nine. Many missionaries stopped at the sixth.

On must be careful not to think of these missionaries as purely religious; they accompanied
expenditures and many of them have been military leaders of considerable eminence.

The most celebrated of these are: Abdun and Harun Karun, Ismaili missionaries who founded the Karunian sect; Harun was the first Grand Da'i of the 'Iraq; — Zi'kraab, Da'i of the Western 'Iraq; he was able, thanks to the missionaries he had with him, to collect a force powerful enough to ravage the frontier towns of Syria and the 'Iraq; he was finally defeated and slain in 294; — Ali b. 'Abd al-'Ilumah, who conquered the city of the Caliph 'Abd al-Malik near Basra, conquered all the towns of Bashiun, and subdued the caliphate within 20 years of its fall, and died in 300 A.H.; — Abu 'Abd Allah, who, beginning as a missionary of the lowest rank, succeeded by his real and military genius in putting himself at the head of the powerful tribe of the Katima and conquered all North Africa on behalf of 'Abd al-Malik; he had the latter consecrated and thus founded the Fatimid dynasty in 296 A.H.; — 'Abd Allah, jealous of him, put him to death in the year after his accession (298 A.H.). — 

DAIBUL (DAIVAL), a commercial town and seaport in Sind, mentioned even in Sanskrit history; the Arab on the occasion of the first Arab expedition (154) to India won a victory at Daibul and it was finally conquered by Muhammad b. al-Kabir in 934. The Arab geographers, some of whom had personal acquaintance with Daibul, describe its situation (not far from the mouth of the river) and emphasise its importance as a commercial harbour; in Mughal times the merchants spoke Sindhi and Arabic. Yuhin gives the names of traditions who belonged to Daibul and it is mentioned by the Persian historians of India down to the time of Avrangzib. It is mentioned by European travellers as late as the middle of the 18th century. Unfortunately, with all the notices in geographical and other works it is not easy to locate the exact site of Daibul in the Indus has considerably changed its course; the old name may also have been transferred to other places in later times. The identifications with Kanal, Ratn and Lakhri Bandar cannot be maintained; Hughe believes he has identified Daibul in the ruins of Kalrak Bakri on the right bank of the river (Carre de Vaux).

The name Dair al-Āšul can hardly be explained, as has been done, from the Arabic as "monastery of the camel-birth" (Arabic ʿāšul, popularly ʿāṣul), but most certainly like so many other pre-Musliman place-names in the Ḥas man be of Aramaic origin. The Arabic ʿulḥl reproduces the Aramaic ʿuluḥ, from which the name means the "monastery at the bend of the river", and refers to a settlement which was founded at a place where the Euphrates takes a decided turn. In any case ʿĀšul exists elsewhere as a place-name in Babylonia, as the name of a salubrity of the Arab town of Kūš in the northern sphere; but this word itself seems to be merely a translation of the Aramaic), that this name was given on account of a well marked bend in the Euphrates there, is expressly stated in Syriac sources. Cf. on this point, Nöldeke in the ʿāṣul, an epithet given to Bagdād is perhaps to be similarly explained (see above p. 563).

Dair al-Āšul is famous in history for the decisive battle fought there in 622–627 between Yaʿqūb b. Laḥūn al-Sāfārī and the army of the Caliph al-Ḥasan ʿal-Dinārī, in which the rebellious governor suffered his first serious defeat which threatened the Caliphate was arrested. On this battle cf. Taḥṣīl, iii. 1871; Masʿūdī, Marājī, Marājī al-Dhakāb (ed. Paris), viii. 41 et seq.; Weil, Gesch. der Calīfāt, ii. 441; Müller, Der Islam im Morgenländ. Abendland, l. 583; Nöldeke, Sketches from Eastern History (1893), p. 195 et seq.

DAIR AL-DJMĀDĪJIM, a Christian mon astery in Babylonia, 7 parasangs (128 miles) from Kufa, according to Yaḥyā, on the edge of the desert on the road to Basra. Near it was another monastery, called Dair al-Kuʿra, which may be identified with the al-Kuʿra in Kaḥīsya (cf. Yaḥyā, B. 685; s. v., 763). The distance between Dair al-Kaḥīsya and Kaḥīsya is 5 parasangs (30 miles); cf. H. Wagner in the Notaer, der Gesell. Geograph. der Wissensch., 1902, p. 257 et seq. From a story in the Kitāb al-Āṣul it may be deduced that Dair al-Djmādījim was near the bank of the Euphrates and apparently on its west side. According to these data, the site of this monastery should be sought for south of Kūš (the ruins of which are known as the "city of Masʿūd") or the monastery of al-Najdī, somewhere in the southeastern part of the modern Bay ṣul, a swampy lake which has arisen on the west bank of the former channel of the Euphrates.

Dair al-Djmādījim means "monastery of the skull". There are various stories in the Arab authors of the origin of this name. All are agreed that the same ornamented in skulls of men slain in a battle there, buried or piled up; but no to the actual event, which is placed in pre-Musliman times, and those who took part in it, opinions differ. Sometimes it is said that the skulls in question belonged to members of the Banū Tamīm, who met their death here in a tribal feud; sometimes they are said to have belonged to Persians slain by the ‘Abū Ḍafī, a third tradition says that it was the Persians who were concerned; their bodies covered the skull in an encounter between the two tribes and were buried in the monastery. Whether the name really owes its origin to some such incident, may be doubted. It may more probably be derived from the skulls of martyrs and saints buried and reverenced in the monastery. In any case, the analogical name al-Djmādījim means "the skull", which is borne at the present day by a village at the mouth of the mixed of Babylon, should be compared. There are two different views on the origin of this latter name; cf. on the one hand, J. C. Rich, Collected Memoirs (1839), p. 61; or on the other, Meisner in the Archiv für Religionswissenschaft, v. 322, and in the Mitteil. des Seminaris für Orient. Sprach. (Berlin), iv. 1901, Abteil. ii. p. 137, and.

In Muḥammad, the "monastery of the skulls" is mentioned by itself under the title of al-Djmādījim in its neighborhood. In 827 (701) after the Hijri, the governor of ‘Abd al-Malik, and the rebel ‘Abd al-Raḥmān b. Muḥammad b. al-ʿĀṣul [q. v., p. 56]. The former had his headquarters at the above-mentioned monastery of Dair Kānūr, while ‘Abd al-Raḥmān occupied a strong position at Dair al-Djmādījim. The opposing armies skirmished with one another for more than three months. Although ‘Abd al-Raḥmān’s force was raised to over 100,000 by the addition of the troops from al-ʿĀṣul, he had finally to quit the field, when the last, decisive battle was won for ‘Abd al-Raḥmān’s Syrian troops by a powerful cavalry charge by Sufyan.

DAIR AL-DJÁTHALIHK — DAKHAN.

'Isáq, governor of the Anti-Caliph 'Abd Alláh b. al-Zubayr. Mu'ájab, on whose side the poet Ibn Kúsá al-Rušáyfí fought, was slain after a desperate resistance, after being deserted by the majority of his followers. A chapel (muqadd) was built on the spot where he was buried, which soon became an object of pilgrimage. The name "monastery of the Catholic" points to the fact that later the Nestorians stood here at times. There was a monastery of the same name in Baghdaid; cf. Strecker, op. cit., t. 167; Le Strange, Bagdad, p. 210.

DAIR MURRÁN, a place of which cannot be identified with certainty; at the present day the name is unknown in Damascus. From the 7th century onwards the Arabs writers are ignorant of its exact site. Some of them have wrongly tried to locate it at Dummar, at the entrance to the Barada valley. Dair Murrán belonged to the Ghíta in the district around Damascus; it was built not far from and in sight of (jáuz) the capital, on an elevated piece of ground among vineyards and luxurious gardens near the foot of the Djabal Kásiyút. At a short distance from it was the 'Aqabá or Pass of Dair Murrán. In poems written after the Umayyad period, the place is frequently mentioned, along with certain villages, all in the immediate neighbourhood of Damascus. Dair Murrán was "opposite Bah al-Farádís", i.e. in order to pass through one had to pass through this gate. During the rising against the Umayyad Walid II, we find the inhabitants of Dair Murrán uttering Damascene by this gate. These data point to Dair Murrán having been in the northeast of Damascus, not far from where the Barada enters the Ghíta at the western end of the present large quarter of Saliyút.

As the name shows, Dair Murrán possessed a monastery, adorned with mosaics and precious marbles, and occupied by a large number of monks. At the conquest the monastery was not interfered with. The country residence of the Umayyads at Dair Murrán is frequently celebrated in their poems, particularly by Ya'qúb I; he spent a while there shortly before his departure for the siege of Constaninople. Dair Murrán must have belonged to the estates of the Ghíta on behalf of which this caliph dog or enlarged the canal derived from the Barada, called the Nahár al-Walid I died there. Walid II chose Dair Murrán as his country residence. The Caliph Hírán al-Rušáyfí used to go there to drink wine and hear the aerophones of the Umayyads related to him. After the 8th century the name only survives in the Ka'imís of the poets of Damascus as that of a place of no historical importance, if indeed it still existed at all.

DAKHALÍYÁ, also pronounced Dákhálíyá at the present day, is an Egyptian province of the Eastern Delta. It is called after the town of Dákhálíyá; Amélineau (Geographie de l'Egypte) traces this name to the Coptic Tékhel. And al-Salih counted the Dákhálíyá as one of the provinces of Egypt, and estimates its revenue at 35,761 dinars; on the other hand Yakút calls it a district (fihri) in the time of Náhir b. Kálíyún. It seems to have formed with Múrtíthá the province of Ughúmín 'Amádhá. At the present day the Dákhálíyá province has, according to Boinet Bey, 9 districts and about 736,000 inhabitants. Its chief town is Músínúr.

DÁKHAN (DECCAN), derived from the Sanskrit word Dákhána, the south'. As applied to India it means, etymologically, the whole of the southern part of the country, but convention has restricted its application to the tract bounded on the north by the Vindhyas mountains and the Godavari, the natural boundaries between northern and southern India, on the east and west by the sea, and on the south by the river Krishna, the country to the south of that river being known as the Peninsula. The Dákhán consists of several natural and ethnographical divisions. The narrow strip of country between the western Ghíta and the Indian Ocean is known as the Konkan, and the country above the Ghíta to Mahárásthá, the home of the peoples speaking Maráthí, Easterners of Mahárásthá and extending to the Bay of Bengal, lies Télinghá, the land of the Telingáns, a Dravidian race. On the north of the Dákhán lies Gondwána, the country of the Gonds, a forest tribe of Dravidian origin, and the northeastern and southwestern angles of the tract are occupied by the races speaking Ûriyá and Kamararáse. According to Hindu legend the greater part of the Dákhán was ruled in prehistoric times by a king who had his capital at Yádhavára, probably the modern Bidá Dar. In historical times the country has been ruled by the Máryles of northern India, in whose empire it was included, and, on the decline of their power, by a number of local dynasties, the Cénáníras, Sákas, Pádaváros, Yávaúras, Káthrákás, Váktákas, Cúlahkas, Yávâras, and Kákátyaras.

The Muslims first appeared in the Dákhán in a.d. 1294 when 'Alá al-Djáhíd, nephew and son-in-law of Fírús Khásí fir Dáhil, led a raid into the kingdom of Devagíri, and compelled Ráma- chándra, the rajá, to agree to pay tribute to Dáhil. The two principal southern kingdoms at this
time were Dervâsî or Mahâbâtkhân, governed by the Vâdavas, and Warrangal or Telengkun, governed by the Kâkâtidas. The former were finally overthrown in 1318, and their kingdom annexed to Dîhlî. The Muhâammadan conquests in the south were greatly extended by Muhâammad-i Tughlîk, but in 1347 his officers in the Dakhân, girt to desperation by his tyranny, rebelled, and under Hassan Khân who, under the title of ‘Allâ’ al-Dîn Bahman Shâh, founded the Bahman dynasty, established the independence of the Dakhân. The kingdom of Telengkun was finally subdued by ‘Abd al-Mîrâd I of this dynasty in 1424-1425. In 1490 the weakness of Bahman Shâh’s descendants led to the dissolution of their kingdom and between this year and 1525 the Dakhân was divided into the independent kingdoms of Bidjâpûr, Ahmadnâgar, Golkonda, Berar, and Bida, under the ‘Abd Shâh, Nizâm Shâh, Kâti Shâh, Isâm Shâh, and Barid Shâh dynasties, founded by the provincial governors under the latter Bahman king. Berar was subsequently absorbed by Ahmadnâgar and Bida by Bidjâpûr, and in the reign of the Emperor Akbar the Dakhân was invaded by the imperial troops and Berar was annexed, but the further advance of the Mughals was long stayed by the ability and energy of Malik ‘Amber the Africano, who was nominally the minister of the later representatives of the Nizâm Shâh dynasty, and it was not until after his death that the dynasty was overthrown and the kingdom annexed by Shâhjâhân’s officers in 1633. The remaining kingdoms of Bidjâpûr and Golkonda coexisted, by intrigues with the Mûrâqis and by bribing the corrupt imperial officers in the Dakhân, to maintain a precarious existence for another half century. ‘Awrangzîb placed Bidjâpûr in 1686 and Golkonda in 1687, and the whole of the Dakhân was incorporated in the Mughal empire, but the authority of the imperial officers was set at nought by the rising power of the Mûrâqis, who established their independence in the western Dakhân and overran and levied blackmail in the Mughal dominions. In 1723 Khîlî Khân Nizâm al-Mulik, who had been appointed viceroy of the Dakhân, defeated at Shurkirkhâh in Berar Mubârâz Khân, who had been appointed by the two Sâlyûdîs then a dominion of the Mûrâqis, and overthrew him, and established the virtual independence of his family in the Dakhân. In the eighteenth and the early part of the nineteenth centuries the eastern and western districts of the Dakhân passed into the hands of the British, as a result of their wars and treaties with the French and the Mûrâqis, and in 1903 Berar, the northernmost province of the Nizâm’s dominions, was leased in perpetuity to the Government of India, but the Nizâm of the Haidarbâd still governs the greater part of the Dakhân.

Dâkhânî, also spelt Deccani, Dakhânî or Deccanî, the form of Hindustani spoken by the Muhâammadan inhabitants of the Dakhân, or Southern India, more especially of the Haidarbâd State. The language is that of Western Hindi, with an admixture of elements of Persian and grammatical forms, introduced into it by the Mughal conquerors, who formed a large accession to the Hindo population of this part of India. The structure of sentences also differs from that of the modern and more polished style of Hindustani as spoken in Upper India. Thus we find the Persian termination -nd to express the plural numbers of Hindustani names, whether denoting persons or things, as d圩ênd ‘people’, -ndîkînd ‘eyes’. The use of the Agent case (-nd) and the construction of the transitive verb—peculiarly characteristic of the polished style—is, as a rule, not observed in Dakhânî.

Dakhânî Hindustani was the language in which Urdu literature took its rise in the beginning of the 17th century, A.D. The early poets of the Dakhân were of the Sîn’s creed, and their works were written in the Persian character—consisted chiefly of versions of popular Persian or Arabic theological treatises, stories of Muhâammad, the Caliphs and saints, and adaptations or translations of popular romances or legendary stories. The earliest extant compositions of Dakhânî poets are the Tîwânbîh, or ‘Tales of a Parrot’, These two works were written by ’Aliwâsî, a poet at the court of ‘Abd Allah Khâtîb Shâh, Sultan of Golkonda in Haidarbâd. The first is dated 1327 (A. D. 1618), the other A. D. 1629 (A. D. 1639). During the reign of the same ruler Ilm Nîshâbî wrote, in A. D. 1656 (A. D. 1655-56), a romance called Pîshîn, translated from the Persian Rûdûh, and Nussâtî, the court poet of Bidjâpûr, wrote the romance of Prince Manohar and Madhumâlâ, entitled Guîhâsâ Tîwânbîh (A. D. 1668 = A. D. 1657-58), and ‘Aliwânsal, an eulogy of his sovereign ‘Ali ‘Abd Shâh II (A. D. 1727 = A. D. 1660-61). Several other minor Dakhânî poets, viz. ‘Âdîn, Sowak, ‘Anûr, Ghûlâm ‘Ali Khân Luthîf of Hyde- rashad, and others flourished about the same time.

Shâtî Wall of Ahmadnâgar in Osûrjat, the most distinguished poet of the Dakhân, bornished in the time of the emperor ‘Alângî I, in the beginning of the 18th century. He enjoys the distinction of being the first to compose an Urdu Diwan in accordance with the Persian system of prosody, which form of poetical composition was universally adopted by the poets of Lucknow, Dîhlî, and other principal cities of the Mughal kingdom.

(J. M. Bûnîmakît.)

Al-Dakhîlî, an epithet of ‘Abd al-Rahîmî I of Cordova. [v. v., p. 53.]

Dakhîlî, is a musical term applied to a vocalised consonant preceded by an ‘âlâì (here called ‘âlâì al-ta’âtî) and followed by a ‘awwâr or rhyming consonant (vocalised or quiescent). Thus, for example, in a verse which ends with mîkâhî, mîkâhânî or ta’kâhânî, the Allî (îlî) is the ‘âlâì al-ta’âtîn the Rît and the Kâf (kî) the ‘awwâr. [Mott. in the Digest of the History of India.]}

Dâkhânî, is one of the southern groups of the Dakhânî, the most important in the region of Asâs; the most important place in it is Mûrî with about 1300 inhabitants. Little is definitely known about the history of the oasis; the accounts we find are mostly fantastic tales of mythical rulers and fantastic wars and battles. Thus the lake is located there into which all lakes which fly over it irresistibly fall; we are also told that whoever approached the gates of the town guarded by four idols of copper, fell at
once into a deep sleep from which he could only be awakened by being breathed upon by the inhabitants. According to Ibn Wash Sirh, Mīrāb b. Nūsair unsuccessfully attacked for seven days a fortified town, which had been built in ancient times to afford protection against the Deluge. While al-Bakrī speaks of the great fertility and large population of the oasis, which was apparent at one end of a road to Qādis, which has been engulfed by the desert since the 2nd century, Idrīsī a few generations later describes its dreary desolation. There can be no doubt that much flourishing land has been covered by sand as occasional allusions show. Makrīzī points out, ve ter allah, that the feuds which arose through the intermingling of the original population with Berbers were considered the cause of its decline. Al-Kāmilī and al-Kalāmilūn are the towns most frequently mentioned. The oasis now consists of 12 villages and has about 27,000 inhabitants.

(A. Graeber)

DAKIKI, ABD MANṣUR MUHAMMAD B. AHMAD, a Persian poet belonging to Ṭūb. He began an epic in the mārtiḫār metre for the Sāmānīd ruler Nūh II b. Māsūrīr and had completed 1000 couplets (covering the reign of Ghuḥāyib and the preaching of Zoroastrianism), when he was murdered by a Turkish slave, his favourite, in 341 (952). These 1000 couplets were incorporated by Firdu’sī in his Shāh-nāma (ed. Turner Macan, iii. 1065—1105; ed. Vullers, iii. 1495—1555). He also wrote lyrical poems of which a few fragments have been preserved by Avvāl (ed. Brown, ii. p. 14—15). It has been supposed from a verse in one of his poems that he was a Māzḏūz, but it is more probable that what he really admired in Zoroastrianism was the liberty to drink wine.

DAKKA, a village in Sūhā, on the west bank of the Nile opposite the mouth of the Wāḥlah al-Allāhī [5° 4′, p. 314], famous for its gold-mines. It was probably to its situation here that the ancient Per-selket, called by the Greeks Paolchō, owed its importance; ruins of temples of the Hellenistic period exist still and far from Dakka. Cf. Behzdek, Egypt, v. p. 385 et seq.; E. A. W. Budge, Egypt, vii, 349; ii. 130—114; 119, 297, 329 et seq.

DAL, the eighth letter of the usual Arabic Alphabet, and fourth of the Abjad (whence its numerical value = 4). It is pronounced at the present day as in Old Arabic as a voiced dental explosive. Cf. A. Schadee, Silhouethide’s Listenthe, Index.

(A. Schadee)

DALAL‘ (预售 "broker, commission agent"). Dalal, literally a "finger-post", is the popular Arabic word for "similar, usual. The Tāfil al-A‘ūs says on itmān: "this is the man whom the people call dalal; he points the way for goods to the buyer and for prices to the seller." The Arabic notices of the occupation of sannāl, which is of great importance in the history of commerce, and corresponded to the Byzantine meris, are very scanty; as there are no systematic lists available, we can only give here a few suspicious notices. In the law-books, the sannāl are cautioned against trickeries usual in trade (Ibn al-Hajjā, Kitab al-Madhāb, iii. 75). They often commend highly to the buyer goods which they know to be worth less than the price placed on them and, just as the modern dragons in trade do, they made common cause with the dealer against the buyer. Their occupation, which under certain conditions was of an official character, was called dalalī. Al-Dalalī appears quite early in names (Tāfil al-A‘ūs). In the Fātimid period certain goods could only be sold through the intermediary of a sannāl (Mu‘ayyadīs, ed. de Goeje, Bibli. Gorgias, Arab., iii. 215, etc.). In the Mamlūk period a tax was laid on the sannāl (sannāl al-dalalī) which had been usual in Cairo from ancient times, by which the dalalī had to give up half of his profits, a tax which he naturally managed to evade by the public. This was called nīf al-amara (Makrīzī, Khafṣ, i. 84, etc.). A somewhat similar arrangement existed in North Syria (cf. Soberheim in von Bercher’s Corpus Inscriptionum Arabidarum, ii. No. 55, and my review in Der Islam, i. 100). The most important transactions were made at the customs-offices at the seaports. Here the sannāl were also interpreters in commerce with the Franks. The relations of these sannāl and the interpreters were minutely defined in the treaties of commerce (Amari, Diplomats Arab., 166, 203). Heyd, Levantische Handelst., collects all the available information on these points. On the western Mediterranean cf. de Maat Lutri, Traité de Poids et de Mesures (Paris 1866), p. 189. The business of brokering was then taken over by the west (cf. Schanze, Handelsgeschichte der romanischen Nationen, 761).

It is not only in commerce with foreigners but among themselves also that Orientalists employ the dalalī but in this case he appears also as an independent dealer, e.g. in old clothes (Description de l’Egypte, Etat Moderne, xxiv. 2, p. 421). The auctioneer in the secondary market is also called dalalī, as more frequently is the small broker and commission agent. His manner of business is well described by Lane in his Manners and Customs of the Modern Egyptians, i. 13. Women brokers (dalalīs) are also found who take business with the better-class harems (Lane, op. cit., i. 200, 239, 242). For other meanings of the word see Daş, Supplement, s.v.

(C. H. Becker)

DAM is the name of an Indian copper coin. Dams and damay are diminutives applied to fractional parts of a Dam.}

The first coinage of dams was under Shīr Shāh and his successors of the Sūrī dynasty and it was continued by Akbar and his successors up to the fall of the dynasty, Damay is the popular name
in N. India for a small coin at the present day. Damān were issued in great abundance by Shēr Shāh and Akbar, and in smaller number afterwards, in fact so scarce were those of the later Mughals. The Persians, however, had all the advantage in the principal European collections. During the past twenty years owing to the researches of C. J. Rodgers, Oliver, Burn, Wright, White King and others numerous specimens have come to light. Akbar's damān weigh from 303 to 347 grains (= from grammes 19.8364 to 21.3896) these being the lowest and highest recorded weights. There were also according to Abu'l-Fazl half, quarter and 'ghir' damāns called respectively shabās, maddās, and damārā. These were also double damāns, a specimen of which weighing 625 gr. is given by C. J. Rodgers (Journ. of the As. Soc. of Beng., x11 (1), VI. xx.) on Akbar's currency the name damān does not appear, the coins being described simply as faāths. The names damār and damārā however are found on some of the small coins. According to Abu'l-Fazl 360 damāns went to the officer and 46 to the runtime.

(M. Longworth Damk.)

Dāmād, son-in-law of the Sultan. Under the early Ottomans Sultan, princesses of the royal house were occasionally given in marriage to the sons of chains of Mamluk, for example, to the Mamlūk Mamluks, and even to the viziers and generals of the sovereign; the case of the saint Sūrī Sultan of Brum, who married a daughter of Sārānās, is quite unique not only for that but also for later periods. We afterwards find Grand Viziers, Kapadān Pāsha, Ağhan of Janisaries, Bostān ğilāqāt and other high officials as sons-in-law of Sultan, the best known are: İbrahim Pāsha, the favourite of Sultan İsmet Pāsha, husband of Murādīn, Sokollu Mehemmed Pāsha (husband of Sultan), İbrahim Pāsha (son-in-law of Mehemmed III) and İbrahim Pāsha under Ahmed III, etc. (cf. v. Hammer, Gesch. d. Osman. Reiches, s.v. 607 s.v. Sultan). The name dāmād is applied to some of them by their contemporaries and in history, as it is still the usual fashion (e.g. Dāmād Mehmēd Pāsha, Dāmād Perād Pāsha, etc.).

DAMĀN "security, bail", is an agreement by which a man pledges himself to the creditor (al-muqāblah) to stay the debts of a third person (al-muqāblah 'annab) if the latter does not do so. The guarantor (damān or damās) can only demand compensation from the debtor when he pays his debts if he becomes secure for him with the latter's consent; otherwise he is considered a guarantor "for the sake of God". The latter is the case amongst others when a man becomes secure for the debts of a dead Muslim. — Damāns in the books on Fīhār further means responsibility for things, the loss of or damage to which must be compensated to the creditor.

(Th. W. Juyunb.)

DAMĀN, a Pers. word meaning 'skirt' applied to the low lands lying along the base of a mountain range, fully written dama beard. This is especially used to designate a tract in the De radjat, now part of the Dera Ismail Khan District,
N. W. Frontier Province, India. The dāmān is the high plain below the mountains, and does not include in its lower land the Indus known as māblād or kathā. The eastern part of this raised plain formerly called Mokhānādīd is now included in the dāmān. In the similar tract farther South (in the Dīrā Gharī Khūn Dīst.) the corresponding tract is also called dāmān occasionally, but more usually Fākhād or West. The dāmān is a level patchwork plain with little vegetation, intensely hot in summer, very dry with scanty rainfall. Irrigation from torrents is carried on by an elaborate system of embankments which catch the flow after rainfall and divert it on to the fields. In a few places there is irrigation from permanent hill-streams (kālādān), the chief of which are the Takwa near Tānk, the Gōmāl (called the Lāri where it issues into the plains) and the Vahābā. The principal towns in the dāmān are Khullār, Dhrand, Čañdhwāna and Tānk. The population is mainly Afghan, speaking the southern dialect of Pashto, with numerous comm.unities of Pathī, speaking Lahūndā, especially in the tract near Tānk known as the Dpāžārī. There are also some Balūcīs, and the Khārānā an aboriginal tribe assimilated by Afghān at Vahābā. The principal Afghan tribes are the Gundāpur, Mānṣūrī, Bābār, Ustaţānī and Kandī. The Pāwīndā or nomad Afghan traders enter this tract every year in the autumn by the Gōmāl Pass and spread through the dāmān where they camp and graze their camels while their traders wander through India. When the hot weather commences they return to the highlands of Afghanistan. These traders are mainly Sulāmānī and Kharāzī.

(M. Longworth: Damān).

DAMĀNHUR, Captive Timūrid, "city of Horus", the name of a number of places in Egypt, mostly in the Delta of which only the most important are mentioned here.

The Damānhur al-Shābid or Damānhur Sūlah, mentioned by Sīhā, p. 401, and placed by Ibn Ḳīfīn in the suburbs of Cairo, deserves special mention on account of the Christian Festival of the Martyrs, also frequented however by Muslims, observed on the 9th Pashghōnā, which the Christians used to throw a wooden box containing the finger of a saint into the Nile to bring about its rise, apparently a corruption of some ancient festival of Osiris and Horus. In 702 = 1502 the festival was forbidden, but in 738 = 1338 permission was again granted until 755 = 1354. The relic itself was burned (see Notices et extraits, Vol. iv. P. 177).—F. Mālākhī, Šūrūn Māmsūlāt, trad. Quatrempre, ii. 2, p. 213.

Maundbild speaks of a Damānhur in the Rif; as Ḳūrīr Bānī, which gives a clue in the Coptic texts to the locality of a Damānhur, was certainly in the Rif, we would be inclined to regard the two places as the same and further to identify them with Damānhur Wābīḥ (in Bīnī Bāy; Damānhur al-Wābīḥ) which the later Arab geographers locate in the province of Ghāribā. This is unfortunately rendered uncertain by the fact that at the present day there are two places bearing the name Damānhur in Ghāribā. The Damānhur al-Wābīḥ of the Arab authors must not be confused with the above mentioned Damānhur Wābīḥ; the former (the ancient Hermopolis Farra), is by far the best known of the places of this name. According to the later division into provinces which still exists, it was the capital of the province of Buḥārah [q. v., p. 772], was fortified in 792 (1392) by Buṣrākī, and lay on the western road, the so-called Tārib al-Kulāyī, (see Quatrempre in Maṣṭūl, Šūrūn Māmsūlāt, ii. 2, p. 188), now on the railway from Cairo to Alexandria. This fine town, which forms the centre of a large system of railway lines, is of importance in the cotton trade and for its industries.

DAMASCUS, Arabic Dμasqūs, Dimashq, Dimashq al-Šāṣem, also like Syria briefly called al-Šām, the largest city in Syria, situated in 36° 18' E, 33° 27' N., Lat., 2330 feet above sea-level on the edge of the Syro-Arabian desert, close to the boundary of the great mountain wall of Liban and Antilebanon with Hermon. The spur of these mountains (the nearest is Djbēl Kāshīr) shelter the plain of Damascus in the north and south; in the south the Djbēl al-Aswād and Djbēl al-Mānī afford a certain amount of shelter but on the east it is quite exposed. The climate of Damascus, which has not yet been properly studied, cannot be described as particularly healthy (east winds predominate; but there are also west winds bringing snow and rain and in spring occasionally the burning Khamsin, great variation of temperature from 6° C. in the middle of January to 27° C. in the middle of July) but on the whole it compares advantageously with the country adjoining it on the east.

The importance of its site lies in the fact that the Bāndā [q. v., p. 652] has here created an extensive oasis, the celebrated Ghīța [q. v.], where it debouches from the Antilebanon into a country with a low rainfall (average estimated at 14 inches yearly) before its waters are finally lost farther to the west in the swamps of Ṭalāib. This splendid district, a veritable garden, naturally forms a centre of civilization for the broad stappy-like hinterland. Owing to the incomparable fertility of its natural surroundings the town, lying on the north-south road through Inner Syria, was able to attract the trade of North Syria and Mesopotamia, of Arabia and Babylonia with the Mediterranean and Egypt from the natural routes farther north and south respectively and to make itself the centre of this traffic.

With such a favourable situation Damascus has naturally been a centre of culture of the first rank from the very earliest times. The name (see the phonetic list: Timaṣṭa, Aṣyrmā Dimasqūs, Timaṣṭa, Hebrew Timaṣṭa) later in Syriac: with dissimulation of the double consonant - is obviously pre-Semitic. In the Old
Testament the name early appears in connection with the story of Abraham (Genesis xvii, 5). This association was further extended in Tradition and even at the present day, Muslims locate the Mundjid Ibrahim in Jerusalem. They also locate Damascus (presently the Aqsa Mosque of Joseph) as the birthplace of Abraham. After the 3rd century B.C. we find an Aramaean Kingdom of Damascus, mentioned in the Old Testament and in Assyrian texts, which was destroyed by the Assyrians in 732 B.C. For the history of this kingdom as well as of the later vicissitudes of Damascus under Assyro-Babylonian, Persian, Greek and Roman rulers, the reader may be referred to J. Beazley's article in *Pauly-Wissowa's Real-Encyclopädie*, 4th edition, 1924–1928 and the authorities there given. Here we are only concerned with Damascus in relation to the Arabs. About 85 B.C. the town passed for the first time under Nabataean rule (Arabs I. III. Philhellene). The Nabataean kingdom owed its possession of Damascus for the second time to Rome (between 37 and 54 A.D., under Aulus IV. Philopator; cf. *Second Carthaginian War*, p. 15). Arabic influence made itself strongly felt at once and the town which was too much exposed to the desert ([Justinus: Η 13] Arabophile 72 A.D. or 55 B.C.). This gravitation towards the desert was probably also the reason why Damascus under Roman rule never became the capital of a province. According to the later division into provinces it belongs to Phoenice, Lycias, the political metropolis of which was Emesa (Himera). On the other hand the strongly Hellenized town of Emesa was never directly subject to one of the Arab phylarchs ruling in the neighbourhood, not even to the Ghassanids; yet the latter were the lords of the immediate neighbourhood ([Quillin, q.v.] cf. Nabolak, *Geschichte Färöer*, p. 47) and there was always a lively intercourse between the Beduins and their great market. They were acquainted with Damascus, looked upon it as the ideal of earthly splendour and gazed with wondering and envious eyes upon the treasures of the town. It is therefore no wonder that towards the end of the Arabic period the Muslim Arabs not only referred passages in the Koran like xvii. 41 and xxiii. 28, the name *Irano Abi Sirr Amul* (Koran ixxxiv, 6) to Damascus but increased its glory by many sayings put into the mouth of the Prophet.

We have no accurate descriptions of the Damascus of antiquity. Even Julian who praises the situation and embellishments of the city in words of unmeasured, gives no details. We can hardly be wrong however in supposing that the general plan of the town had been the same for centuries before it was at the Arab invasion. The town had suffered considerably shortly before from the Persian invasion, but this had certainly not brought about any radical alteration in its configuration. Since the Muslim conquers the walls and essential features of the town have been practically unchanged. This striking fact is largely due to the natural position of Damascus; for it lies at the point where the road from Damascus to Emesa from north to south crosses the Barada which runs from east to west. A regular arrangement of streets was thus formed. This feature was further emphasized by the gigantic temple of the ancient quadrangular temple (of the Sun?) in which Theodosius or Arcadius built the Church of St. John. We must look upon the city as having existed since Roman times in its present day form, as an elongated rectangle on the right (south) bank of the Barada, which was cut through by a road along its greatest length which is still called the 'old road pleasing to the foreigners' (in allusion to *kheil*, cf. *Josh.*, xiv. 9). In the northern part lay the real centre of the town, the great sanctuaries. The foundations of the citadel in the northwest corner probably also date from ancient times. We do not now know where to locate the armories founded by Diocletian. Even the city-gates, which were there before the Arab conquest have in part survived to this day. Balakhtari (following Wajheli) mentions, in connection with the siege of Damascus by the Bani al-Shakii at the east end of the main street, on the north side the Bilt Tambah, the Bilt al-Fardah, then the Bilt al-Dhabya in the west at the end of the street running northwards and the Bilt al-Saggira and Bilt Kaisan in the south.

**The Conquest by the Muslims.**

After the battle of Badr and Fidh al-Dhul-qarnayn da 13 = January 635 the Arab hosts advanced on Damascus along the Djawf road. They met with no resistance until they reached Mardj al-Saffar north of al-Sanamayn. The Byzantines were at first successful in surprising the Muslim advance guard but were finally forced to fall back on Damascus (Muhammad = February 635). Fourteen days later the Arabs appeared before Damascus. Khalid b. al-Walid, the commander-in-chief, made his headquarters north or northeast of the city at Dair Sallil or Dair Khalib (see: Ibn Shaddab, quoted by de Goeje, *et al.*, p. 94); the predominant tradition placed his camp at quite an early period further east at the tomb of Shashi (Shaddab, see Feuillet, i. 35 and *Journ. Asiat.*, lxxvii. Ser. v. 405; *id.* 449). It is necessary at all costs to prevent the union of the troops who had been driven back on Damascus with an army of relief which might come from the north; and this object was attained. The consequence was that in Rajahis = September 635, the inhabitants of the city (perhaps through the bishop, as Baladhi says, or al-Mansur the grandfather of John of Damascus, as Enychius says) secretly opened the eastern gate to Khalid's Muslims whereas the Greek garrison retired to the north and the city passed under Muwarranmud's sway.

A wealth of irreconcilable traditions exists concerning the taking of the city. Only the most important can be mentioned here. The usual view, which has been disseminated in the east by Ibn Asakir and in the west by A. von Kremer, is that Khalid b. al-Walid conquered the eastern part of the town by force of arms from the Bani al-Shakii, while the Bilt al-Dhabya side of the town was surrendered to Abu Ubaida. The two generals met in the ancient church of St. John and thus the eastern part of this building with the eastern part of the town came to be occupied by the Muslims, while the western remained to the Christians. The untenability of this late story which is in contradiction to all better older traditions has now long been recognized.

Baladhi's account seems more worthy of credence, according to which Abu Ubaida seized the Bilt al-Dhabya and was met by Khalid, who had entered by the east gate, which had either been surrendered or treacherously handed over to him, at the Muqattam Church (*Journ. Asiat.* i. 197, *id.* 239, *id.* 271). *Journ. Asiat.* i. 197
Ser. vii. 376, 381, 404; at the Three Kanûns; cf. V. Kemmer, Topographie, ii. b. Tahî al-Qanûnîn); in al-Bârî (de Goede =âšâh, probably the vase recta).

The credit of having conclusively shown, in his exhaustive examination of the point, that Abî 'Ubâda was really never in Syria at all in the year 14 is due to Cantani. It was Kahîb whom the city was surrendered to. The date of the meeting of the two leaders in the centre of the city, so persistent in Tradition, therefore falls through, unless we, giving a new turn to a suggestion of Lammens (Mélanges de la Faculté Orientale, Beyrouth, iii. 355), replace Abî 'Ubâda by Yâsîd b. Abî Sufyân who according to the usual story had entered at the Bâb al-Saggîr. There can be no question of the falseness of the story of a partition of the city, particularly of the church of St. John. The Christians were rather guaranteed the possession of their property, their houses and churches and only pledged to pay tribute.

The Arabs spent the winter in Damascus, but had to vacate it on the approach of the large army of Heraclius in the spring of 636. A second siege of Damascus was therefore necessary after the decisive battle on the Yarmûk in Râdâh 15 = August 636, in which Abî 'Ubâda commanded the operations. Cantani therefore places the incidents which are said to have taken place at the Bâb al-Qââyibya, in this second siege. In any case the city surrendered for a second time in Tih 7-Ka'da 15 = December 636 under conditions which were perhaps somewhat harsher: it was possible on this occasion that the number of churches to be left to the Christians was fixed at 15.

The fall of Damascus, this earthly paradise, was an event of incalculable importance. The Muslims took up their abode in the houses abandoned by the Byzantines. Here, if anywhere, were the conditions requisite for the assimilation of Hellenic culture by the Arabs in a great centre of civilization, in the neighbourhood of which tribes of Arab stock had long been settled. It was fortunate for Damascus as for the city, that it received as governor a man of the Meccan family, which proved itself capable before all else of bringing civilization into the Umma of the Prophet, the Unayzâ Yâsîd b. Abî Sufyân.

**DAMASCUS UNDER THE UMAYYADS**

Yâsîd succumbed in the year 48 to the plague of 'Amwâsh. His heir was his brother Mu'âwiya who united all Syria under his rule in 31 A. H. He succeeded in making his position so strong in his governorship that after the assassination of 'Othmân in 36 he was able to wage a war against the Caliph 'All to avenge 'Othmân, in which he was finally victorious in 41 (661) after the death of 'All and the abolition of his claims to the throne by his son 'Abd al-Malik. Damascus became the capital of the new empire. Never before and never again was Damascus so prominent in the history of the world as in the Umayyad period. How far the city immediately benefited by this is difficult to say. Mu'âwiya does not seem to have shown any activity in building on a large scale in Damascus. The area around the Church of St. John or rather the Umayyad Mosque as it afterwards became, continued to form the centre of the town as it had previously been and still is to the present day. Here close together lay the Old Mosque, the Church of St. John, and Mu'âwiya's new palace al-Khârîj. The only contemporary account of Damascus is given us by the Gallic bishop Arculf. According to this account transmitted to us by the monk Adamnan, he describes Damascus as follows in qua (see cited) Saracenerum urbem aduersas virum triumfatum sequn, et ibidem in honorem Sancti Johannis baptizavit granulæ fudenda ecclésia sit. Quandam enim Saracenorum insigne in urbe coram locumdum ex opis in eadem civitate, quam neu fragmentum, fabricata est (Hieron Hierosolymitanae, ii. 262, 263, 270, 276). The mosque was therefore quite distinct from the church. That they were close together is clear from the Arab accounts of later events. The Khârîjjoined them from II. Mu'âwiya had direct access to the mosque and it was near enough the church for him to be disturbed in his sleep in his old age by the noise of the al-Khârîj (Ibn Khaldûn, Cv. al-Alkâh, p. 328). According to Ibn Dhu'aybi, the mosque stands on the site of the later emir's baths, which probably corresponds to the modern goldsmiths' baths (cf. also the Khâlî al-Adîlî, vi. 159, 160). Mu'âwiya's son and successor Yâsîd I. did not particularly care for the city; nevertheless he bequeathed the gratitude of the envoys by making or extending the Ca'nal of Yâsîd (see the article Barakâ, p. 653; cf. Zewa, A. i. 8th Ser., vii. 400 et seq.).

After the death of Mu'âwiya II. (64 = 683) there was no one left of the Sufyân branch of the Umayyad house, who could be seriously considered as a successor to the Caliphate. The succession was disputed by various factions. In Damascus where al-Đahhâk b. Kais (94, 9, p. 892) played a double role, a riot broke out during and after divine service between his party and the partisans of the Umayyads, represented by Hasan b. Malik b. Nâfîl, which became celebrated as the Day of Djarîrûn. According to Yahyâ b. 175, 176, Djarîrûn was a ball with pillars dating from pre-Muhammadan times, after which the east door of the great mosque bears the name Bâb Djarîrûn. This celebrated building, which survived till 559 = 1164 when it was destroyed by fire, lay to the east of the modern mosque, for the building of which according to Maxâwî, Mu'âdîtî, iii. 271, portions of it were used. It can hardly be doubted that the pillared halls were part of the ancient temple buildings, of which the Church of St. John only occupied a part, and from which arose the isolated pillars and groups of columns which exist to this day in other buildings (on Djarîrûn cf. also de Saiss in his translation of 'Abd al-Lâ'îf, p. 442 et seq.). If we add the fact that the scene named as the Day of Djarîrûn apparently took place in the mosque itself (Tabâri, ii. 470 et seq.) it is natural to suppose that the Djarîrûn was really the old mosque itself. The latter's site is thus really, as Tradition says, to be sought in the east of the present Unayzâ Mosque. What exactly was the position of the mosque with regard to the Church of St. John in detail, cannot be definitely ascertained. The location of the site of the Church seems to be even more difficult than that of the old mosque (cf. the new theory proposed by Thiersch: Phares, p. 104); however
simple it may appear from Castani, Annali dell' Islama, ii. 390 et seq. (but see also ibid., p. 349 and cf. Becker in Islam, iii. 397), the solution is by no means easy.

The hostilities which began with the Day of Ḥijrat, led to the bloody battle on Mardj Rabīṭ which secured the Caliphate for the Mawāridh branch of the Umayyads. With the decrease in the personal importance of the Caliphs and the decline in their actual power, which marked the following period, there went hand in hand a gradually increasing necessity to make an external display of empire. It is therefore now that the most brilliant epoch for the Caliphate and the capital begins although in secret its disintegration had already set in. The city owes its greatest claim to fame, the Umayyad Mosque, to the Caliph al-Walid b. ʿAbd al-Malik, the most important builder among the Umayyads. The old mosque had only been a makeshift; the capital of the empire was at last to receive a place of worship worthy of it. The site on which it was to be built was already indicated. The centre of the town was always to have been, even in the days of Paganism and Christianity, the seigneurie or bourghouf of the great temple. The first thing to do was to deprive the Christians of their church and build the new mosque on the site occupied by it and the old mosque, with the material that still remained in the ruins of splendid ancient buildings. This was then done. In 86 (705), the Christians were forced to give up the church; this was partly destroyed and the new building, which was afterwards celebrated as the third wonder of the world, erected on its ruins. It used to be thought that the building was left practically unaltered and only the decoration was the work of Walid. Objections have recently (see in particular, Thiersch, Placita, p. 104 and 214) been rightly raised against this view. Careful examination of the building has actually shown that more particularly the colonnades and the transept cannot well be pre-Muhammadan (see Fleckie in the Quaterly of the Palestine Exploration Fund, 1897, pp. 268—282). Walid's expenditure on the building was enormous. Hosts of workmen were brought from Constantinople particularly for the mosaics. Papryi recently found show that materials and skilled workmen were brought from Egypt (see Islam, ii. 274. 374). Probably only very essential parts of the old walls were retained, but these, if Thiersch is correct, need not have been the walls of the church itself, and the western and eastern towers as minarets. It is very doubtful, if, as appears probably from the Arabic sources, the whole of the old mosque was incorporated. In the new edifice, Absolute clearness in detail may be obtained with good fortune by renewed expert examination on the spot with judicious utilization of tradition. In any case al-Walid's work certainly was the building up of the present mass of buildings at the mosque into a whole, the erection of the minarets, the execution of the northern minaret, Mīljam al-ʿArba'a, used as a beacon tower, we learn from later writers, the building of the Musalla with its beautiful mosaic in a form essentially the same as it has at present, as a lunāba with three waves and a transept, above which rises the celebrated Kubbat al-Nasr (on this name, see Zeitschrift der Deutschen Morgenl. Ges., 18. 369, 702; Isliv. 661). On the artistic importance of the Mosque, cf. also H. Saladin, Manuel d'Art Musulman, i. 80—87, van Berchem and Strzygowski, Islam, p. 326 et seq.

The later Caliphs did not do a great deal for Damascus. Several of the Mawāridh transferred their capital to another place and others spent at least a considerable part of the year in Egypt (q. v., p. 557) in their palaces in the desert. Those of the splendid palaces in Damascus which might have served to preserve the glory of the Umayyads were sacrificed to the fury with which the ʿAbbāsids sought to extinguish the memory of their predecessors. At a later period there was a prison on the site of the Khidr. Only one other Umayyad palace may be particularly mentioned here as the great road to the southwestern suburb of al-Maidān bore its name to modern times, the ʿAṣr al-Hādījīā, called after al-Hādījīā b. ʿAbd al-Malik b. Marwān, which lay outside the Bāb al-Sughr and Bāb al-Dhābiya (Yahkū, iv. 110), according to which von Krenner's statement, Topographie, i. 14, is unsatisfactory; cf. Journ. Asiat., 18th Series, vii. 379.

A. von Krenner, Culturgeschichte, i. 114, has given a very astute analysis perhaps something too splendid a picture of life in the city of the Caliph. Unfortunately we know very little about the time and rate of the Muslimisation of the city. But it is quite obvious that the number of Muslims settling in it immediately after the conquest must have been quickly much increased by immigration. Under the earlier Umayyads at least, religion did not however form an unmountable barrier. We find Christians on terms of intimacy with the Caliphs and filling the highest offices. The family of the Byzantine surveyor of taxes, which played a part in the surrender of the city, and to which John of Damascus belonged, may be specially mentioned (see Castani, iii. 376; Lammens in the Mélanges de la Fac. Or., iii. 248 et seq.) Here were the conditions requisite for the adjustment of relations between the two religions. How strongly Christianity had inspired Muslim theology just then developing, may be clearly seen from the writings of John of Damascus, which are in part clearly the outcome of disputation between Christians and Muslims (see Becker in Zeitschrift für Ägyptologie, xxvi. 175 et seq.).

The end of the Umayyad period with its civil discontents brought misfortunes to the town. On several occasions in 740 (740) turbulent Ṣuqāq set fire to it and laid various quarters in ashes (Tulasi, ii. 584; Theophanes, ed. du Bœuf, p. 412). In 126 Yastal b. al-Walid succeeded in gaining the capital of the Empire and thenceforth the Caliphate by a coup de main, but this seems to have passed off without bloodshed. After Yastal's death Marwān II. (127 = 844) occupied Damascus without opposition, his opponent Sulaimān b. Hishām taking to flight. But when the new Caliph moved the capital to Harrān, Syria rose against him. The rebellion was put down and, according to Theophanes, the walls of Damascus were razed as a punishment. It had played its part as capital of the Islamic Empire.

From 750 to 1150.

Two years after Marwān appeared to have made his empire secure, it fell before the ʿAbbāsids. After a short siege, Damascus was taken by ʿAbd Allāh b. ʿAli, an uncle of the new Cali-
liph, on the 4th Ramadan 132 = 25th April 750.
The 'Abbasids gave rise to their hatred and dis-
honoured: the tombs of the Umayyads. According
to the Arab historians it was now that the old
walls of Damascus were destroyed. The new rulers
resided in the 'Irak, and Damascus sunk to be
the capital of a province. The western parts of
the empire were often—not to their advantage—
granted as a governorship to a prince or favour-
rice in Baghdad who only resided in the
provinces.

The notice of Damascus in the following period
is not numerous. It is clear that the split between
Kufa and Yemen in Syria which had been gradu-
ally increasing in the days of the Marwhids,
continued (in 170 the Marwhid Mutha' was sent to
Damascus and in 180 his brother Dja'far). The
frequent visits of the Caliph did not of course
restore the ancient glory of Damascus as the
place of the Arab empire and al-Mutawakkil's
plan of again making Damascus the capital (244
= 858) was given up after the Caliph had made
but a brief stay in the Syrian city.

The empire was rapidly approaching its disso-
lution. When in 254 (868) a strong personality in
Ahmad b. Tullam became governor of Egypt, the
independence of this province soon became an
advantage for the Caliph of Damascus, who also
passed into his hands. The 'Abbasid supremacy
only lasted about a quarter of a century; this
at first so brilliant period for Egypt can hardly
have been the same for the more ex-
posed Syria, although we read of a palace which
Khumrasaw built for himself near Damascus
below Tiberias (q.v. p. 785) on the Nahr Tiberias:
the palace in which he was assassinated in 260
(873). The latter, ill-fated period of the Tullamids
coincided with the ravages of the Karmatians
who had been constantly appearing before the
gates of Damascus since 389
(903), until they were routed by the forces of
the Caliph, which next made an end of the Tullamid
rule also.

A schism of the Transoxanian dynasty of the Ikhtshid, who
had proved himself a trusty officer, had
been created in 293 (905) at Khumrasaw.
Tughdi b. Luff. His son, the Ikhtshid Muhammad
(293 = 915), governor of Egypt, was despatched
again to play the Tullamid drama in Egypt and
Syria. The latter was always a dangerous and
insecure possession. The Ikhtshid finally fell be-
fore a power which also disputed the religious
title of the supreme Khalifa: the Shifatulmids had
long been ready to pounce on Egypt. When the
Karmatians were again ravaging Syria, al-
Mu'tasim saw his opportunity had arrived. Egypt
fell in 358 = 993. Damascus fell in the same
year, only to slip from his grasp almost immedi-
ately. The city was first taken by the Karmatians.
Their overthrow was followed by a state of
anarchy in which great parts of the city were
destroyed by fire. Even at a later period the
century of Fatimid rule does not seem to have
been a happy one for Damascus; we read of
frequent changes of governor, of risings, which
are certainly not to be wholly ascribed to the
recess spirit of its inhabitants. One of these
turbults resulted in 401 (1008) in the burn-
ing of the Umayyd Mosque.

In 408 (1016) the Saljuq general Atula seized
Damascus. The town was for ever lost to the
Fatimid. The name of the 'Abbasid Caliph again
appeared in the Khilafah in the pulpit. Atula is
said to have built the citadel (Journ. Arislogeth.
16 Series vii. 375) but its foundations at least
are certainly older (see above p. 905). His rule
lasted only a few years. In 471 (1079) he had to
vacate the city in favour of the Saljuq prince
Tuimiq (see his inscriptions in van Berchem, Insr.
Arabicae, p. 12 et seq. 90 et seq., and Beltraga su Atevrologia, vi. p. 149).

After his death, the Saljuq chief Tughpeq governed
for his son Dja'far, whom are ascribed a hospital
(Journ. Ar. 14 Series iii. 328) and a Khilafah
(Sb. v. 328) and from whose time the oldest
madrasa in the city is said to date (ibid iv. 306),
till he finally became really an independent prince,
after the death of Dja'far in 479 (1084) and shortly
afterwards his son also, and founded the
Buluk dynasty (q.v. p. 800), which ruled Damascus
for half a century.

The stormy period of the Frankish invasion was
not suited for architectural activity on a great scale
(cf. however the collection of inscriptions of
this dynasty made by van Berchem in Floridgem
et Voghi, p. 29-43). Tughpeq earned the gra-
itude of the principal sanctuary in the city by
rescuing the supposed original cave of the Karim
of Sb, and his successors restored it to Damascus
from Tabariya which was threatened by the Crusaders
in 492 (1099). Tughpeq's successors showed themselves more and more unfit to cope with
the dangers threatening them. Sometimes Damas-
cus was being attacked by the Franks (e. g. in
353 = 1159, and in 343 = 1148), sometimes the
Arabs were calling upon the Franks for help against
Zangi (343 = 1139) and his son Nur al-Din (544
= 1151) of Hulaf until the latter finally succeeded
in capturing the city in 543 = 1154.

THE DAMASCUS OF NUR AL-DIN AND
Saljuk Al-Din.

The period of Nur al-Din opens a new era of
prosperity for Damascus. The two reigns of Nur
al-Din and Saljuk al-Din are the most brilliant in
the history of Damascus, but its glory is different
in character from that of the days of the Umayyads.
The whole city was inhabited by the religious
orders. The first cause was the foundation of
the city and alongside of this the cultivation of
pious learning; the profuse branches of
knowledge were not however entirely neglected;
this is for example the period of Ibn A'shikir,
the great historian of Damascus. But gradually all
the subjects cultivated became theological. The
ruin of the Crusades contributed largely to quicken
the spirit of asceticism. Damascus became the
great bulwark of Islam.

Although the name of Damascus is inseparably
associated with later ages with Saljuk al-Din and
the glory of the city as its residence is celebrated
even in contemporary western poets, it was really
rather his predecessor Nur al-Din who gave
the new Damascus its character. The defence of
the city was improved by the renovation of the walls
of the towers and gates. North of the citadel
he built a mosque where he opened a new
gateway, the Birr al-Foradji. Not far from it, ac-
cording to von Kruzel, Topographica, l. 14; ii. 84;
probably on the site of the present military Serai
lay the Birr al-Add (also called Birr al-Saf'a; cf.
of troops, opened its gates to the victors; the only obstacle the latter met was a vain resistance in the citadel. The victory of the Mamlicks of Egypt at Ain El-Attas [q.v., p. 212] made the latter masters of Syria. The Sultan then proceeded to the capital, Damascus, where he was received with all honors by the native Christians, who were encouraged by the good reception they had given them by the destruction of the long-faithful Church of St. Mary [see Abil Shatta: Rev. Hist. Cris., Or. v. 192].

In the following period, Damascus became the center of the most important Mamlick province in Syria, the Mamlick fleet al-Dinâq, which practically included the whole of southern Syria from the Egyptian frontier up to Baraî, Hims, Tadmur, al-Raṣûma on the Khefran (afterwards united to Hâlab) with the exception of the little principality of al-Karak, and Safad for a period also (see Hanzâ and Hims).

Under al-Zahtû Babar [q.v., p. 588], the great organizer of the Mamlick kingdom, brighter days again dawned on the city. This indefatigable monarch often held his court in Damascus. He not only rebuilt the ruined walls and citadel but also built a new palace for himself on the Mâdîn al-Askarîah on the Khefran. The Mâdîn al-Askarîah, which is said to have served as a model for al-Reṣâlî in Kâfi‘în [see above p. 524] building of the same name in Cairo, on the site of the modern Têsêkkîya (see Quatremer de la Villard titled as Mamil, Damascus - Mameluke, i. 2, p. 44: Journ. Asiat. ix. Ser. vii. p. 235; Ibn Sâkîh, Tâmîd al-Wajîsât, i. 190). Babar died in 676 (1277) in Damascus and was buried in the Mausoleum of the Mamlicks built by command of his son el-As-Sâd by 2nd al-Dînâq, governor of Damascus, northeast of the Umayyad Mosque (Makrî’î, Sultûn Mamilûk, i. 2, p. 162; Journ. Asiat. ix. Ser. iii. 400 et seq.). Babar’s reign had been for Damascus a worthy continuation of the prosperity it had enjoyed since Nûr al-Dîn; sciences were also steadily cultivated as evidence of which we need only recall the name of Nawawi [q.v.]. But under the late Mamlick Sulthan’s decline set in. Damascus remained unvisited as the second city in the empire and this, the most important province, was naturally filled only by most distinguished Mamlicks; but this too readily resulted in a rivalry between the Sulthan in Egypt and his officer in Damascus. To prevent this, the commander of the citadel was appointed by the Sulthan himself, independent of the governor, who naturally produced a constant strained relationship between these two officials. Immediately on the deposition of Babar’s son el-Sâd and the accession of Kâfi‘î, Sulthan al-Aṣkhar [678 = 1279] rose in rebellion, supported by a farâwî from the Kâfi‘î 1-Knights Ibn Khalilîkân, but this rising was put down in the following year. During the confusion which followed the assassination of al-As-Sâd Khalî, Sulthan Katboghû was surrounded by troops devoted to Lâdîn in the citadel of Damascus and forced to surrender in 676 (1277). A fugitive Nâib from Damascus, Kâfi‘î, is said to have been the man who brought about the Mongol Ilbânî’s campaign in 659 (1300), in the course of which Damascus suffered terrible devastation in the fights between the Mongols who occupied the Mosque and the Mamlicks who stubbornly defended themselves in the citadel while the suburbs like al-Sâhiyya [q.v.] were utterly destroyed. The garrison of the citadel levied the whole neigh-

The Mamluk Period.

Soon after the middle of the 13th (xii. century) the invasion of Thâlû’s Mongol hordes made an end of the Ayyubid kingdom of Damascus. In Rabî’ I 652 = March 1260 the city, empty
bourgeois from the Bāb al-Nasr to the Bāb al-Faraj, and the Mongols burned great stretches of the city including the Dār al-Dawād and the Qābūs. The Mongols soon retired and Kīptāq, who was left behind by Chagātsu as governor submitted to Sultan al-Nasir. Damascus escaped with only a slight damage from the Mongol invasion of the year 702 (1303). As regards the intellectual life of Damascus, it continued as in previous periods. The activity of Ibn Taimiyya [p. 276], whose puritanical ideas ultimately brought him into conflict with the government. During al-Nasir’s third reign, Tangi, the governor of Damascus, to whom the other Syrian Nāṣir’s were subordinate was for a quarter of a century (724-740 = 1312-1339) regent in Syria with practically unlimited power. In 717 he founded the Tangiyya Mosque on the site of the present military buildings behind the military Serai (Journ. Asiat., ixth Ser., vii. 237 et seq.), and in 729 a school for the study of the Korān and the Hadith (Journ. Asiat., ixth Ser., iii. 284). He repaired the damaged southwest wall of the Umayyad Mosque and is also said to have widened the streets. While he was occupied in repairing the damage done in the city by a fire, he fell into disgrace and was finally shamefully put to death in prison in Alexandria.

In this period the military prerogative role again followed the peaceful reign of al-Nasir and Tangi, during which rival Amirs were struggling for the mastery. Damascus rose up in 753, 762, 790 also was the scene of these wars. In 791 (1386) the decisive battle between the all-powerful minister Miṣṭaham and the dethroned Sultan Barqūk, was fought before the gates of the city, by which the latter won back his throne. His son Faraj had to win back the town in 501 (1500). Under the youthful Sultan the rivalries of the Amirs broke out, so that Syria fell an easy prey to Timur. In Djumah, i. 303 — December 1400, his forces encamped before Damascus. When Faraj, owing to a rebellion in his camp, left the city and fled to Egypt, the result of the campaign was decided. The city surrendered but the citadel continued to offer a stubborn resistance for a long time. Contrary to the terms of the surrender Damascus was entirely given over to plunder, and a fire in which many houses were destroyed whilst the garrison were still in the great Mosque which was then set on fire. It is certain at least, that the citadel, which by Timur was the heaviest blow this much harassed city had suffered for centuries.

The latter part of the reign of Faraj was again filled with anarchy by the rebellions Amirs, whose operations chiefly centred around the ill-fated Damascus. During the whole of the last century of Mamluk rule these tumults were constantly recurring. The change of ruler in Cairo was usually the signal for the rebellion of the governor in Damascus. It is therefore no wonder that the city did not so rapidly recover from the devastation wrought by Timur. Kalkhašdī (died 521 = 1423) says that only a part of the city still lay in ashes (Dar al-Sabah, p. 283). Nevertheless new schools and mosques were constantly being founded and the names of the Sultan were perpetuated in numerous inscriptions, which tell of new buildings and restorations of ruined buildings, of pious endowments and royal proclamations. To this period Damascus owes buildings like the beautiful Sābūnīyya in the Maidān Road (Journ. Asiat., ixth Ser., iii. 264), the Ilībghā Mosque northwest of the citadel (ibid., p. 256, 453 et seq.). The western minaret of the Umayyad Mosque is a present form from the time of Khātāt Bīt as this part had been burned down in 834. But even this more energetic Mamluk rulers were no longer able to revive a real and permanent period of prosperity for the city.

The Turkish Period.

A few weeks after the defeat of the Mamluks at Aţībākh on the 25th Rajab 922 = 24th August 1516, Damascus opened its gates to the victorious Ottoman. Previously under the Mamluks of Egypt, it had still been only the capital of a province but now it passed entirely under foreign rule. From this period the land ceased to be the scene of the great events of history. It is hardly right to ascribe its decline solely to Turkish misrule, for its resources had already been exhausted by the wars of the preceding centuries. The Turkish period preserves a place of honour in the history of the architecture of Damascus and is one of the finest monuments of Mamluk architecture in the modern city date from it. The Egyptian style had become very prevalent under the Mamluks, but now Turkish influence began to make itself felt. Subhānī I. in 962 = 1554 built the Tekkiye further the western gates of the city on the site and from the ruins of the ancient Kūr al-Aṭībākh; this beautiful building picturesquely situated on the Burāq is built in the Turkish style (see Journ. Asiat., ixth Ser., vii. 255 et seq.; Safahī, Maqālī l'Art Musulman, i. 174). Only two of the most celebrated mosques in Damascus may be mentioned here which owe their origin to Turkish Pashas: Both lie on the Maidān Road. The first is the Darwijīya begun by Darwijī Pasha in 779 = 1371 (Journ. Asiat., ixth Ser., vii. 260) and the second the Sīnānīyya, so famed on account of its faience work, built by Sinān Pasha in 994 (1585) on the site of the ancient Māmik al-Balad (Journ. Asiat., ixth Ser., vii. 260), according to von Kremers, Topographies, i. 48, the finest in Damascus next to the Umayyad Mosque. In fact, architectural activity in Damascus never seems to have ceased, although we have but scanty sources at our disposal for its history in the last few centuries.

The re-awakening of the East is associated with the appearance of Muhammad ‘Ali. From 1832—
1840, Damascus was in the hands of the Egyptian Pashas. Ibrahim Pasha strenuously strove for restoring peace and order to the ruined country. Trade and industries began to flourish. Buildings for administrative and some particularly military purposes were erected, for which unfortunately however, ancient and vanished edifices were often sacrificed. Thus, for example, the Tangiyya was altered to form a military school and the Ilībghā Mosque became a biscuit factory. The modern Military School is built on the site of the Nūr al-Dīn’s Dar al-Adl. The churches between Regus and Maronites in Lebanon, which had been gradually increasing during the Turco-Egyptian wars in the time of Baqīt Shibā, lead in 1850 to a terrible massacre of Christians in Damascus, in
which 'Abd al-Kadir [q.v.] who had been hanged from Algeria placed the Christians greatly in his debt. In recent years one may mention the brief period of government by the reformer Hudaib Pasha (1875); education was improved though the system soon in part broke down again; a permanent reform was the replacing of the old narrow bazaar alley by broad streets. With the end of the ease in Damascus in earlier centuries, the building of the city has again in quite recent times been affected by great outbreaks of fire. In 1853 the Umayyad Mosque was burned down to its walls and in April 1912 considerable portions of the new bazaars perished in the same.

The commerce of Damascus was considerably affected by the opening of the Suez Canal. The railways, which since 1864 have connected the city with copper-producing Hauran, since 1895 with Beirut, and since 1905 with Heliopolis, have afforded a certain compensation, while the main line of the Hijaz railway does not yet seem to have produced any considerable effect on its economic prosperity. Although the continuation of the Syrian railway system will more and more completely ruin the caravans traffic, yet a great development of the narrower hinterland may certainly be expected, which will probably reassure the city permanent prosperity if it does not also bring it back its erstwhile predominance. According to the English Consular Reports the total trade of Damascus for 1909 and 1910 was roughly the value £ 1,000,000 both for exports and imports.

Damascus, which, as the capital of the Wilayet of Syria, with the four sandjaks, Damascus, Hamah, Hauran and Karak, is the seat of a Wali and the headquarters of an army corps staff, is, according to the last edition of Besideker (1912) with 300,000 inhabitants (exclusive of 3,000 garrisons) which is probably too high.

The Configuration of the Modern City.

As has already been pointed out, the ground-plan of the heart of the city has hardly altered in any essential features in spite of the numerous savages of fire and sword since the Umayyad period. A sketch of the modern city will therefore be a supplement to the historical survey. That the eastern part of the city has practically not yet given beyond the bounds of the walls is probably in a sense the result of the fact that the Christian and Jewish quarters are here; but the reverse is still more likely, that these quarters are here because the ruling Muslims preferred the western parts as they were situated on the roads to the more cultured lands of Syria. The city soon exceeded its ancient boundaries. At quite an early period we read of the suburb of Al-Uqayqieh northwest of Damascus. When, after the town of Nur al-Din, a new period of prosperity dawned, new suburbs grew up before the Bāb al-Dajbiyya expanding towards the Ma'dān al-Akdhar (Qwīq Mādān) westwards and the Ma'dān al-Fāsak (corresponding to the modern suburb of al-Ma'dān) to the southwest. Gradually the old western boundary became the military and administrative centre while the business activities of the population continued to be concentrated as before in the quarter around the Umayyad Mosque. This evolution has been slowly but steadily going on from the time of Nur al-Din to the present day.

The great veins of traffic from east to west, the "street which is called Straight" ends in the east of the city at the ancient Bāb al-Sharkī. From this point, the city wall, still well preserved, runs past the tomb of Sheikh Arslan (see Journ. Asia, ixth Ser., v. 204) northwards as far as the Barada, which it reaches at the Bāb Taimā. It then follows the southern of the two arms of the river, which here enclose an island, up to the Bāb al-Salām. Between the two last named gates there was once, according to Ibn Shākir (Journ. Asia, ixth Ser., vii. 372 et seq.) a gate Bāb al-Lajjūth, called after the quarter of the same name: which forcibly reminds one of the ancient poetic name of Damascus, Ḥjjīlīth. The traces of the course of two walls may still be followed, although now built over in many places, westwards from the Bāb al-Salām, between which runs the Bātras Ṣārān and up to the Bāb al-Faradī, to which there was according to Porter, l. 53, a second gate farther inside and the Bāb al-Amāra outside across the Barada. This gate takes its name from the suburb al-Amrā which began at the Bāb al-Salām and gradually developing by the incorporation of originally isolated quarters like al-Ma'dān from the Mahārīth al-Dājbiyya (Journ. Asia, ixth Ser., vii. 451), al-Balụja, etc., now sends out a thoroughfare to the northwest up to al-Salāfīyya (cf. Journ. Asia, ixth Ser., iv. 472 et seq.), which had arisen at the foot of Ḥṣīr al-Kāsūn before 600 (1200). The city wall must have been somewhere here linked up with thecitadel. The manifold alterations, one of which is witnessed to by Nur al-Din's section of the Bāb al-Faradī (on the site of an older Bāb al-Amrā, cf. Journ. Asia, ixth Ser., vii. 374) probably owe their origin to the desire to protect the quarters which were gradually growing and becoming linked up to the city. But the city constantly expanded beyond the bounds drawn round it; and Porter and v. Krenner have not succeeded in definitely locating the course of the ancient walls in this part of the city. While the ancient Bāb al-Yahud was incorporated in the citadel in the sense of al-Adīb's alterations in it, the name was transferred to the formerly called Bāb al-Nāṣr, a little farther to the south and has thus survived to the present day. The wall then ran close along the east side of the Ma'dān road up to the Bāb al-Jābiyya, which corresponds to the west end of the great street running the whole length of the city, and without a doubt continued a considerable distance farther in the same direction, although all traces of it have now utterly disappeared, following the šīk al-Sifūniyya until it turned eastwards at the Bāb al-Saghrī. At the present day the suburbs of Ma'dān with numerous beautiful mosques stretches a mile or two southwards on this side, as far as Bawwābat Allāh, the starting point of the Ḥujjāj route, not far from the Ma'dān al-Kadām, where Tradition sought to locate the grave of Moses and footprints are pointed out which need (see Ibn Līdān, ed. de Goeje, p. 281 et seq.; Ibn Baṭīt, l. 236 et seq.) to be said to be those of Moses and at a later period of Muhammad (cf. von Krenner, Topographie, ii. 22; Zeitschr. der Deutschen Palästina-Verein, xii. 284). It does not appear quite certain, although according to Yāqūṭ, ii. 236, very probable, that the ancient Bāb al-Ṣaghrī is identical with the modern Bāb al-Ṣaghīr, at which a double doorway is further evidence for the former existence
of a double ring of walls. Although the name Bāb al-Šaṣīr for the gate has now disappeared, it is preserved in that of the most celebrated cemetery in Damascus, the Māhbarat Bāb al-Šaṣīr, where a number of companions of the Prophet, and several wives of Muhammad as well as his daughter Fāṭima found their last resting-place. The very memory of the tomb of Muṣawwīn which was once here has utterly disappeared, while not far from the neighbouring Qubā‘ al-Ḍarrāb, in which — probably merely owing to some misunderstanding — the grave of Ali ibn al-Ḍarrāb is shown, the alleged tomb of Yazid I. remains still an object of veneration (von Kremers, Topographie, ii. 201; cf. Zeit. d. d. Mitt. gr. u. alt., xvi: 365). From this point to the new closed Bāb Kalaāsh, where legend locates the scene of Aṭ‘a‘, i.e. 35, and thence to the east gate, the wall is still fairly well preserved with many towers but only as a single line of defence, although it seems to have been once double here also, cf. Thévenot, Sallust’s Knight of Levant (1673), p. 23 et seq. The alleged tomb of Bīlān b. Rabah [q.v., p. 719] and a Christian sanctuary of St. George, which is however also revered by Muslims, are situated in the gardens south of the city.

As the more important monuments of architecture in Damascus have already been mentioned above, a few general remarks on the interior of the city will suffice. As in all Oriental towns the usually dilapidated houses of the quiet residential quarter with their blank high walls, which often however conceal veritable palaces, form a striking contrast to the streets of the bazaars always busy and full of colour, with their huge khan, the offices and warehouses of Eastern merchants. One great advantage the town has over others is its inexhaustible supply of running water which the Horan supplies. It is no wonder then that the baths of Damascus, often splendidly decorated with faience work, enjoyed particular renown. Weitzstein had a delightful picture of the picturesque scenes in the markets of the city about the middle of last century in the Zeit. d. d. Mitt. gr. u. alt., xi: 475–525. If the city has since lost some of its real Oriental character, it has nevertheless remained purer than in the other great cities of the east which have been more influenced by European cosmopolitanism. The old established industries of Damascenes have however declined considerably. The armourer’s art, which is usually traced back to the armories founded by Diocletian, has been extinct since Timur carried off those who followed it. The once world-famed silk-looms (cf. Idris, op. cit.) have, it is true, not entirely disappeared but they have lost their former importance. At the present day manufactured goods (particularly cotton-stuffs) hold fast place among imported articles. On the other hand many craftsmen still supply good and well made articles for native use. The leather work is particularly well known. The goldsmiths make pretty filigree work while the wood and metal (copper, brass) inlaid work is a ready market in foreign countries also. Though the town has irredeemably lost its erstwhile importance as the capital of a great empire and a centre of the world’s commerce, it by no means lives solely on its glorious past and we may well concur in M. von Oppenheim’s verdict that “The new era of prosperity is clearly dawning upon it.”

254; Ḥājīdī Khudīfī, Dīkḥāmūnūd (Constantinople 1145), p. 571 et seq. G., Le Strange, Palæstina under the Muslimes, p. 224–237; H. Sauvain, Description de Damas, in the Journ. Asiat., 9. ser. iii:–vii. Numerous works in manuscript specially devoted to Damascus, particularly Ibn Ḥāshār, have unfortunately not yet been printed; but even the available sources have not yet been systematically utilised; indeed the topography of modern Damascus has not been thoroughly studied. The publication of the inscriptions of Damascus announced by van Berchem will supply a new basis for investigation. A. v. Kremers’ old, in many places erroneous Topographie von Damascus, I. ii.: Denkhafe, der phil.-hist. Cl. der k. Akad. d. Wissensch. Wien, 1896, xi: (1854 et seq.), is quite inapplicable, also Qattaneh in Makrit, Sultan Montiukh, i: 1, p. 262–285; A. v. Kremers, Mittlerungen und Damaskus (Venice 1853). For the conquest of the town by the Arabs a. de Goeje, Mémorial sur la Conquête de la Syrie, p. 82–113; Caustani, Annali dell’ Istria, iii: 326–422. The older travellers have been utilised in Ritter, Erdkunde, vili: 1332–1428. See also more especially J. L. Porter, Five Years in Damascus (London 1846); H. Schmoller, Reise in Orient, i: 44–174; Loret, La Syrie d’Aujourd’hui, p. 367 et seq.; M. von Oppenheim, Von Mittelm. zum Fert. Golf, i: 49–77; Baudet, Palæstina und Syria (1912), pp. 298–332. (R. HARTMANN.)

DAMİETTA, a town in Egypt 12 miles south of the mouth of the eastern arm of the Nile. Damietta, Arabic DUMYAT, also popularly pronounced DUMYAT, has at the present day (census of 1897) 31–32,000 inhabitants and is the capital of the government (mahāz) of the same name, which has 43–44,000 inhabitants. In spite of the fact that it is at the present day a moribund town and only holds the tenth place among Egyptian towns as regards number of inhabitants. In the middle ages on the other hand Damietta was a flourishing industrial centre and an important seaport, the importance of which may be recognised from the fact that when it was besieged by the Crusaders in 616 (1219) Malik Kāmil was ready to restore the kingdom of Jerusalem as it existed before Saladin’s time to save Damietta, an offer which was however refused by the Crusaders. When the period of Damietta’s prosperity began, cannot be exactly determined. In Coptic sources it is called Tāmint or Tamiati, a name which it is said to have received from a son of the legendary eponym Ughmān b. Miṣrayīm. Nothing further of the pre-Islamic town is known.

The history of the conquest also, in which a relative of Mūsawwī plays an important part (Makrit, Kāmil b. Li. 213 et seq.) strikes one as even more legendary. Al-Muṣawwī b. al-ʿĀwad is said to have been its conqueror. The exposed
situation of the town was responsible for the fact that Damietta, even after the final occupation of Egypt by the Arabs, was repeatedly a subject of hostile attacks and suffered much from the Byzantines and afterwards from the Crusaders. The town was, for example, thus suddenly attacked in 70 (708-709), 121 (715-719) and in the beginning of the third (ixth) century. An assault on it in the year 383 (852) induced the Caliph Mahommed the Fatimidi's government to fortify Damietta. After a century of peace the town was again disturbed by the Byzantines in 557 (967-968) and two centuries later devastated by the Normans of Stirling (550 = 1153). The fights for Damietta, best known in history, are however episodes of the Crusades. It was recognised by the Christians that the possession of the Holy Land could only be secure if Egypt, the great bulwark of Islam, were overthrown. It was with this end in view that the expeditions prosecuted so vigorously against Damietta were undertaken; the first of these was a joint attack by the Byzantines and the king of Jerusalem upon Saladin who had just come into power (562 = 1160). The second expedition was led by Jean de Brienne, King of Jerusalem (615-618 = 1218-1221) against Malik Adil and after the latter's death against Malik Kamel of Egypt. Damietta fell after fierce fighting but was soon afterwards retaken by Kamel. An equally ill-fated attempt was made by Louis IX, on his Crusade in 647-648 = 1249-1252. These events took place just as the unity of Egypt was passing from the Ayyubids to the Mamluks. To render such occurrences impossible in the future, Damietta was destroyed in 648 (1250) by the Mamluks. The whole town was razed to the ground except the mosque which alone was left standing. A new Unfortified town arose further to the south. In 659 = 1260-1261, Balbars al-Brunk abdominal made the mouth of the Nile at Damietta impassable for ships. In the period of Damietta's prosperity the entrance had been barred by a chain. The new Damietta immediately adjoined the old town. The former Chief Mosque of Damietta, which dates from the period of the foundation of the town, the Djami' Abu 'l-Ma'ali or Djami' Fateh, still survives in a ruined suburb lying to the north of the modern Damietta, as Salaman has demonstrated: beyond all doubt. The site of the ancient Damietta is also thereby defined, a problem for which various solutions have been offered on historical grounds. It was not until the French period that Damietta again began to play a part in history. After Napoleon's return, Kleber defeated a Turkish force which had landed here, on the 1st November 1799. The English afterwards occupied it and then returned it to Turkey.

While the modern Damietta has only a few unimportant industries (weaving of coarse linens, sugar, salt fish, and pottery), in the middle ages it was a centre for the export of the textiles manufactured there. The linens called Dinayaj (also Shahr, Kung etc.) were famed throughout the Muslim world. Only white stuffs were manufactured in Damietta but in the neighbourhood coloured clothes were also made (Yakht, Majum al-Balchli ii. 604, 8). An admixture of gold thread was very popular and silk, which had to be imported, was applied in many ways. These industries were carried on by the state as well as by private individuals. The work was done by free-men (Christians) who were quartered in the factories and worked up a given amount of material allotted to them (cf. the article Damiya; for further information see C. H. Becker, Reiseberichte zur Geschichte Ägyptens, iii). This industry was at its zenith in the Fatimid period. It did not survive the wars and turmoils of the Ayyubid period and had perhaps disappeared or lost much of its importance even before Saladin's time, but we have no details on this point. At the present day only a few miserable remnants of the ancient industry remain. The decline of the town was sealed by the making of the Mahmyda canal (1816) which diverted trade to Alexandria.

The remaining literature will be found in the important study by Georges Salmon, Rapport sur une Mission à Damietta (Bulletin de l'Institut Francais d'Archéologie Orientale au Caire, ii, Mai-Juin 1905).

(C. H. Becker.)

**DAMIR**

a technical term of Arabian grammar: the personal pronoun. The term al-damir or al-nu'mar is really elliptic for *al-damin al-farai or al-numar, the implied name* (al-damin al-farai or al-numar), the explicit name expressed by a substantiate. It originally denoted not the personal pronoun itself but only the substantive represented by it (cf. Fleischer, Klein Schriften, i, 161). Shawaithi therefore does not call the personal pronoun *damir or nu'mar but *al-damin al-numar or *al-damin al-farai (see for example, Derenbourg's edition, i. 188, 4 and 329, et). The personal pronouns are divided in the later Arabic Grammar, of which al-Zamakhshari's *Mašfafi is the classic, into independent (damir mun'uzil) and dependent (muqaddif). The former are the separate or independent pronouns *ana, anta, kawn etc.; the latter include primarily the suffixed pronouns of all three cases (fathat, *sura, ru'da, ru'a 3a) but also the merely virtually existing pronouns like *kaws in the form fi'dna etc. A pronoun of the latter class is called *muqaddif (invariable), in opposition to the suffixed which although dependent is actually existent (muqaddif). A variety of the *damir al-muqaddif, the invariable personal pronoun, is the *damir al-silfin, the inherent pronoun, which is however not a rule expressed, as for example, the subject of the first and second persons of the verb.

In Shawaithi this terminology is not yet developed. He only distinguishes between an implication (damir) which actually finds some poetic expression (either by a separate personal pronoun or by a suffix, one which is not so expressed (cf. particularly i. 188, 4 and ii. 318, 320, 332, et). But he already has expressions for the first, second, and third person (al-mukaddim, al-mukhabbat and al-qatii), in place of the latter also of al-mu'adatha *kawn*. As regards syntax, the personal pronouns have given rise to a very subtle distinction amongst the Arabs, which thronged on a theory of knowledge. Even Shawaithi (186, 3) says that the personal pronouns are always determined, "because a noun can only be implicitly referred to when one knows that it has been made clear to another whom or
what is referred to and that one is referring to some thing definite". Doubts as to the antecedents of personal pronouns (te which as genitives the possessives also belong) can only arise in cases like the following: ἁδρακάντων ὄνειρα, ὄνειρα (a Bedouin lost his she-camel) and are hence practically cleared up (for further information on this debatable point see Ill. Yalquth, p. 683). But even on this point the Arabs have found the correct view, viz. that ἢ in a case like this is still determinative although it refers to an indeterminate noun for it cannot refer to any Bedouin but only to the one just mentioned (loc. cit., l. 11).

It should be further noted that our demonstrative and relative pronouns are not considered by the Arabs as one class with the personal pronouns but form a separate class by themselves, that of the μουκεντίδεσ [q.v.].

**AL-DAMIRI,** Muḥammad b. Mīrā, b. Ḳaṭāb (1330-1414) was born at Cairo in 750 = 1344. His nisba is derived from the northeastmost of the two towns both called Damirat near Sambandus in the Delta (Al-Ṭāhir Juddāda, st. 59). He was a Shaikhī, a pupil of Ḳaṭāb al-Din al-Sulḥāt (d. a. h. 773). Brockelmann, ii. p. 121, to whom he acted as famulus, and of Ḳaṭāb al-Din al-Iskandar (1772, Brockelmann, ii. p. 90). After first gaining his livelihood as a tailor, he became a professor of theologian and taught with reputation the normal branches of theology, philosophy, and belles-lettres at Cairo in the Azhar, the Dār al-Ẓāhir, in the Ḳutubiyya and elsewhere. He held a delectative lecture (μαθετά) in the Madrasa of Ḳaṭāb al-Ṭāhir, inside the Ṭabār al-Naṣīr, having been appointed to it by the founder (Maqrīzī, Kāfīrī, i. ed., ii. p. 391 = ii. ed., iv. p. 250). He was also in charge of the course in Ḳutubiyya in the Kubba of the Kubba of Bābār Lāyāḥakār (Maqrīzī, i. ed., ii. p. 216 = ii. ed., iv. p. 276; Ibn Siḥna, Ṭabābī in Wustenfeld's *Aeretics*, p. 373) which made the pilgrimage several times and taught at Mecca; one of his pupils told that he heard him in the interior of the Ka'ba. As one of the Sufi brotherhood of the Kubba, in the Dar al-Sud al-Sa'dī (Maqrīzī, Kāfīrī, i. ed., ii. p. 355 = ii. ed., iv. p. 373 et seq.) he celebrated for his ascetic life and for his preaching; al-Maqrīzī, a younger contemporary, tells us that his *Uṣūl* and what he used to go and hear him with admiration and frequently for him years, *Ḳur享受到* were ascribed to him alone and that, after a youth inclined to gluttony, he became almost a perpetual fastener. The great majority of his works were of the conventional commentaries, epitomising verifying kind, and seem mostly to be lost. Thus, he wrote a commentary, derived from al-Sulḥāt, on the *Muṣannif* of al-Nawawī (Brockelmann, i. p. 248) and in it has the remark that some held that the Ḳutubiyya (Hariri's apparently) and Ḳutubiyya *wad-Dira* were the allegories of alchemy. He left also two *Ḳur享受到*: one a treatise on canon law in *Ḳur享受到* and all these were in the capacity of his profession, but his great work, the *Ḳur享受到 al-Khayrām*, by which he is known in the east and the west, was evidently a labour of love in spite of his disclaimer in the preface of Ḳur享受到, or natural faculty for such an undertaking. The book is a theological dictionary in which the zoological element is minimised; the names of the animals are given in alphabetical order, and all the longer articles extend to seven sections. (I.) *Philosophical,* derived from Ibn Sīdī, li-, al-Qāḍī, al-Dāmīrī's predecessor in writing, a *Ḳur享受到 al-Khayrām*. (ii.) *Description of the animal and its habits,* (iii.) *Ḳur享受到* mentioning the aspect of (iv.) It's lawfulness according to the different schools of canon law, (v.) *Ḳur享受到* bearing upon it. Majdūdī is used mostly. (vi.) *Ḳur享受到* properties of its different parts, (vii.) its meaning when occurring in dreams. The result is an enormous compilation, full of digressions and almost unreadable consecutively, but a store-house of folk-lore, tradition, popular medicine and racial psychology beyond all praise. Very frequently Dāmīrī had no knowledge of all the animals on which he was writing, but he had an immense knowledge of what had been said about them and all that he brought together with scrupulous care but in bewildering order. The book exists in three recensions, a long, a short and an intermediate, of which fortunately the long one is that which has been printed; at least at Bilād and Cairo. There are also abbreviations, and a Persian and a Turkish translation. For these see Brockelmann, ii. p. 138. It is being made generally accessible in an English translation by Colonel A. S. C. Jaynaker (London & Bombay, 1906, 1908) which has reached *Ḳur享受到 al-Misāh*, having covered more than three-quarters of the whole.

**Bibliography:** Besides the references above, *Weinfield, Arresi*, No. 255; *Leslere, Medicinal Arabes*, ii. p. 278; *Introduction to Jaynaker's translation; Encyclopaedia Britannica*, ixth ed. (much fuller than xth).

**DAMMA** the name of the sign for the vowel *a* (also *a, o*) in Arabic. The sign is originally an abbreviatum *aw* (cf. the article, *ARABIA, ARABIC Alphabet*, p. 354). The sound expressed by *Damma* is given (though *Damma* i. e. "contraction," of the lips, rounding of the lips. The Arabs therefore correctly recognised the feature of the formation of *a* and *o*. Cf. also A. Schairer, Sibawayhi's *Lawlehier*, p. 24.

**DANAK, DANNAK, (Pahlavi, dajrā, Pers., *danak,* "corn"; cf. Pahlavi and Pers. *dakān,* Arm. *danak,* OIr. *danax,* a small weight and using the sixth part of a dirham or of a zollor. Among the Moors, the *danak* was in the pagan period a weight of 28 lb. (barleycorns of average size); afterwards it was worth 3 ½ *Trees* = 10 *bogha* (barleycorns) = 40 *wenna* (grains of rice). In Spain it was a rule worth 2 *boghas* (Castil.; *Bibl. At. Hist.,* i. 366 and *al-Qalqisina*).

**DANAKILA,** sing. *DANKULETH;* an inhabitant of Dan (q.v.).

**AL-DAMI,** Abū ’Ammar ʿAbd Allāh b. Sa’d b. ʿOmar al-ʿOmrāwī, born at Cordova in 371 = 981-982 is best known by the name of Abu ʿAmr al-Dāmī (of Denia) as he lived for long at Denia, in the province of Valencia. I began my studies, he tells us himself, in 385 (var. 384, 386,
At the age of 14 and set out for the east on Sirmian, the 29th of Muharram 397 = 29th Sept. 1006. After spending four months at Kairouan I entered Cairo in the month of Shawwal of the same year. In 398 (=1007) I left Egypt and went to Mecca and Medina to perform the pilgrimage. I spent the most of these two years in study and returned to Cordova in the month of Dhu 'l-Ka‘da 399 = August 1008.

In order to escape the turmoil which was then raging in the latter town, he took himself to Almeria and then to Denia where he died on Monday the 14th Shawwal 444 = 8th February 1053; he was given a sumptuous funeral — the prince himself walked before the cortège.

His pupils were: Abu Da'ud b. Nadjib, author of the Kitab al-Fasial fi 'l-Kasab, Khalif b. Burhum al-Toledi etc. etc. A Malikite jurist, Abu 'l-Azm al-Din is everywhere credited with having immense knowledge of all the sciences connected with the Koran and the Hadith. His life was inexpressible, and his education admirable; according to his biographers he also possessed a prodigious memory such as none of his contemporaries could claim to have.

At Denia, he formed a friendship with the ruler Mudjihib, the Mugalus of the early Christian chroniclers, who had a decided leaning for the sciences studied by Abu 'l-Azm al-Din.

Out of more than a hundred works from his pen enumerated by him in an 'Oryx' we now possess only the following:

DANISHMANDIA. The Turkomau dynasty of the sons of Dānishmand originated, according to Oriental authors, in Malaya (the Maltese of the Byzantine) and traced its descent from the Arab tribe, Bajfili Ghat (p. 562) who fell in 740 in battle with the Byzantines; according to Nekuen (Bonn edition), p. 45, they were of Arakid descent. Their ancestor, Malik Ḏaṉsẖm̱āṉḏ Ahmed Ghat (d. 1334), invaded Asia in alliance with and in the train of the Seljuk sultan Kaykhusraw and founded an independent kingdom there, which in addition to Swās, their capital, included the towns of Aminis, Kangirai (Gangra), Corus, Nekaar (Neocaesaris) etc. within its borders. He also ruled over Ahaltan (Ellasses) and Malaya (Hasanefenn, Hadjiq Khalfa). He died, according to Abu 'l-Fariqi, in the year 1154 A. D., in 1150 according to Armenian authorities, while according to Hasanefenn and the coin in the Ostomucnum Museum (Ahmed Tewfik, No. 191) his death must have taken place some years earlier (in 1084 A.D. Cassovia presumes). He was succeeded by his son Malik Ghati (Amir Ghati or his kinsmen and in Armenian sources: 'Amurjegi) who, in his coins and Batumi in 1277 engaged in fighting the Byzantines, among whom he wielded the capital of Paphlagonia, shortly before his death (Kinnamos, p. 15 et seq.; Niketas Chon, p. 35 et seq.). Ewliyya credits him with the conquest of Gümüşhane and Corum and his son (in 1205, 1207; iii, 189), but according to Hasanefenn they had already been taken by his father, Muhammad, the son and successor of Malik Ghati, come to the throne about 1126, to follow Kinnamos and Niketas. He lost Kaykhusraw and Gangra to the Byzantines, but retained possession of the other dominions, the modern Ermopref, and established himself in Konya. He also waged war on the Georgians and captured several towns in Cilicia. Niketas calls him lord of Kaykhusraw; on his coins he actually describes himself as lord of all Anatolia.
and Romania (i.e. Dalmatia, Asia Minor, in the narrower sense of the district of Amaia). He was succeeded in 537 (1142-1143) by his brother Nizam al-Din Yaghbashian (the lay prelates of the Byzantines, Yaghbashian, Amaia Arslan of the Arabs, and Yahub Arslan of the Armenians). According to Niketas, p. 152, he ruled over Amaia and Angora and was brother-in-law of Kilij Arslan II of Karaman; another brother-in-law of the Seljuk Sultan ruled in Kazkaya and Smyrna, Daladzes, i.e. Imam al-Din Dhu l-Nun b. Malik Muhammad, a nephew of Yaghbashian. Yaghbashian was in a way under the protection of the Emperor Manuel and was therefore constantly assailed by Kilij Arslan (Kinnamos, p. 39 et seq. year 1143). This did not however prevent him from plundering Byzantine territory; in 1155 he fell upon Osmannion (Unia) and Pamaz (Balstra) on the Black Sea; but this did not prevent him from sending a special embassy to greet the Emperor when the latter appeared with an army in Cilicia, an allyship with him in 1158 against Kilij Arslan (Kinnamos, p. 176, 182, 200).

After the death of Yaghbashian, who according to Hazarimn died in 562 (1166-1167), Kilij Arslan decided to dispense with the Danishmandids and drove Dhu l-Nun out of his territory; the latter, in vain, tried to take Amaia with the help of Yaghbashian's widow; on the other hand the Emperor Manuel claimed Yaghbashian's estate on the ground that it was originally Byzantine territory. Ultimately Amaia fell to Kilij Arslan while Niketas surrendered to the Emperor (Kinnamos, p. 296 et seq., 300). The disastrous war, which Manuel then waged with Kilij Arslan, and which ended in the total defeat of the Byzantines, forced the Emperor to restore his conquests. (Kinnamos, p. 230 et seq.). According to Abu l-Farraj, Dhu l-Nun had died in the Emperor, who was trying to restore him; he then turned with greater success to the Arab Abu al-Din of Damascus, who again procured for him the possession of Smyrna for a period.

Hazarem and Minuedjamshid mention as successors of Yaghbashian:
1. Abu Muhammad Kamal Ghazi, son of Yaghbashian.
2. Malik Irshad, son of Muhammad, and nephew of Yaghbashian.
3. Shams al-Dunya wa l-Din Abu l-Khalid Isma'il, son of Malik Irshad, died 564 A.H. (1168-1169).
4. Dhu l-Nun, brother of Malik Irshad.

A coin of Isma'il is known which shows that he actually reigned, if only for a brief period; Dhu l-Nun's coins are more numerous. After the death of Niketas (May 1173), Kilij Arslan finally made an end of the Danishmandid kingdom. According to Djanbogl and the author of the Nakhbat al-Tamuriki, in von Hammer, Gesch. des Osman. Reiches, i. p. 22, Kilij Arslan had the last Danishmand prince — probably therefore Dhu l-Nun — put out of the way by poison and at the same time occupied Malaya, where another branch of the family ruled. The latter is as yet only dimly known from scattered allusions in Armenian sources. The following dynastic list may be compiled.
1. 'Ain al-Dawla, son of Ghazi (Malik Ghazi), died 1111.
2. Dhu l-Karim, son of 'Ain al-Dawla.

DAR (a.) *house*, frequent in compounds of which the most important follow.

DAR AL-BEBA (Baibda'), called CASABLANCA
in Europe, a town on the Atlantic coast of Morocco, about 200 miles S.E. of Tangier and 200 N.W. of Mogador, in 31° 37' N. Lat. and 12° 15' W. Long. (Greenw.), with 30,000 inhabitants, including 4000-5000 Jews and 5000-6000 Europeans (Spanish, French, English, German and Portuguese). The town is surrounded by walls crowned with towers and pierced by four gates. It is divided into three sections: the Medina with houses built of stone in the Moorish style, but with outer walls, traversed by irregular streets; the Mellah or Jewish quarter; the Taibar, a quarter of reed and clay huts. Adjoining the Taibar is an extensive enclosure of recent origin which has not yet been built upon. There are no remarkable buildings; the great mosque, the only building of any importance, is by no means a work of art. The town is surrounded by a narrow circle of orchards of olives and fig-trees and vineyards with a few scattered country houses.

The largest section of the native population consists of Arabs and arabized Berbers, natives of the surrounding country, who form a profligate class of labourers, porters, camel-drivers etc. The public offices are filled by Moors who came almost entirely from Fez, Rabat and Tetuan. The Jews are artisans or merchants, as are the Europeans. The Musulms of Casablanca have a special reverence for Sidi Bel-Abb, whom they regard as the patron saint of the town. This saint, whose cult seems to have made particular progress in the second half of the sixteenth century, is said to have had the gift of omnipresence and of subduing wild animals. According to Dourtet, *Marrakech*, p. 15 (Paris 1905), his name is a corruption of the literary Arabic *Abu l-Layth* "the man with the lions*. The water that falls into his Kabba is credited with the power of irresistibly bringing back to Casablanca any one who has lost it. Casablanca is of considerable economic importance as a market for the district incorrectly called Shafiyya by Europeans, the arable surface (or "black earth") of which is estimated at 1500 sq. miles and which supplies a population of 200,000 natives.

In 1909 its foreign trade totalled £1,010,600 in value and about 20% of the trade of the whole of Morocco. The harbour is the busiest in Morocco although it consists of a dock accessible only to small boats, while ships of large tonnage have to anchor in an open and unsheltered roadstead.

Casablanca occupies the site of Anfa, the Anafe of Massini, a flourishing place in the middle ages. It is mentioned in a passage referring to a harbour visited by merchant ships which came to get wheat and barley (Hdtis, ed. de Goeje, p. 34). According to Leo Africanus, Anfa was a rich and populous town, with beautiful buildings, traces of which were still to be seen in his time, where learning was held in great honour. In the 15th century its possession was disputed between the

Marinid princes of Fes and Marrakesh, but Anfa seems to have succeeded in retaining its independence. The piratical raids of its in habitants on the Spanish and Portuguese coasts however exposed them to attack from the Christians in retaliation. The Portuguese sent a fleet of 50 ships against Anfa in 1458. At the approach of this fleet, the people of Anfa, feeling unready to offer any resistance, quit the town and abandon it to the Christians who entered without opposition and sacked it utterly.

The site of Anfa remained deserted till 1555, when the Portuguese laid the foundations of a settlement which they called Casablanca but had however soon to evacuate. It was not till the exilic century that Sulthan Muley Mulamanet, anxious to develop Moroccan commerce, rebuilt the town which received the name of Dar al-Beba. Dar al-Beba, where the Spanish were allowed the monopoly of the trade in cereals in 1569, and which had to sustain no attack from the natives of the surrounding country in 1790, was at the beginning of the six century still only a wretched little town. It developed considerably in the reigns of Muley 'Abd al-Rahman and his successors so that by the end of the six century it had become the most important centre of commerce in the whole empire. The enlargement of the harbour was deemed necessary and undertaken. The murder of several European workmen employed on the harbour works on the 30th July 1907 provoked the armed intervention of France.

A body of soldiers occupied the town and restored peace in the Shafiyya country which had risen. The French occupation has resulted in a material transformation of Casablanca as well as in a notable increase in the number of European residents.

(G. Yerv.)

DAR AL-DJHAD. [See DAR AL-HAJJ.]

DAR FUR or DAI FOR, a territory and Sultanat in the Eastern Sudan, is one of the still unoccupied areas in Central Africa, nominally belonging to the English sphere of influence and even paying tribute (cf. the annual Reports on Egypt and the Sudan) but still practically independent. Its boundaries can only be roughly defined as: in the north the 15° and in the south the 10° N. Lat., in the west the 22° and in the east the 27° E. Long. (Greenw.). Dar Fur is bounded on the west by the Sultanat of Warda under French influence, in the south and east by the province of Bab al-Ghazal (*q. v.* p. 37) and Kordofan of the Anglo-Egyptian Sudan. To the north lies the Eastern Sahara, the ownership of which is still undefined. Its frontiers have frequently changed. At times great stretches of Warda's, Kordofan and even Bab al-Ghazal have belonged to it and at others the rule of its Sul than has been limited to the natural geographic centre, the Djabal Marra and the territories adjoining it. Since the end of the 18th century the capital has been al-Faher. Nachigal, to whom we owe all our real knowledge of the older Dar Fur, estimated the population of the whole country at 3-4 millions, but this suffered great diminution in the horrors of the conquest by Zahir Pacha.
and in the time of the Mahdies. Dār Fūr is inhabited by negroes, immigrant Arabs and half-breeds. The five main elements of the population are distinguished by the letters a, b, f, s, n. These are according to Nachtigal whose orthography is practically retained here, 1.) the Dā dzięki—called Tagó by Satán Pasha and the geographers since idiots—probably the old owners of the country, living in the south and south-west; 2.) the Tuscher (imæfír, perhaps from 'tmæfír), of Arab origin but strongly mixed, said to have come 400 years ago from North Africa into the country, still speaking Arabic and living in the centre of the kingdom at the eastern end of the Murr range and also in Wadā'ī and Bornū [q. v., p. 747 et seq.]; 3.) the Fūrāwa, forming with the Dā durée the great mass of the population, live principally in the Murr range and the S., S.W., and W.; they speak a language of their own; 4.) the Zoghwā are wholly or half-arabic and live chiefly in the N., 5.) the Nawi's show who are probably the earliest immigrant Arabs and are divided into numerous sections, all of which profess to belong to the Dīj-hāinā (q. v.) tribe. They are mostly cattleteers, Bakkäras (cf. the article Kāhkār, p. 561).

Of these six tribes, the Zoghwā have played a certain role in the north and east outside of Dār Fūr proper (Dār Iškān, i. 162 et seq.), but in the history of the land itself they are not at all prominent. The course of the latter was first defined by the Dā durée, then by the Tuscher and finally by the Fūrāwa, who within the historical period gave Dār Fūr proper (the dwelling of the Fūrāwa) this name still in use to this day. According to Nachtigal, III. 360, the Dā durée ruled the country for some centuries from the Murr mountains. They lost their power without a struggle to immigrant Arabs, the Tuscher. The first ruler of this line was called Āhmad al-Maqār. The name is explained by Satán as al-Maqār (the man with the cut snout in his foot) and an ethnological legend adduced in support. He seems a historical personage, but later than the Fūrāwa. The Tuscher period is still very uncertain. The last Tuscher ruler Shāh was overthrown by a relative, a descendant of Āhmad, who on his mother's side belonged to the tribe of Kērā, a branch of the Fūrāwa. This, the first ruler of the Kērā dynasty, was called Dālī or Dālī Bahār and is still one of the most popular of the kings of Dār Fūr, being particularly famous for the national system of laws which he is credited with introducing. The Book of Dālī, which has unfortunately not yet been studied by any European. The Book of Dālī forms the basis of the administrative and criminal law of later times. According to it, for example, the land was divided as follows. The country was divided into five provinces, the north province Dār-Tokanāwal, the south province Dār-Uma, the southwest province Dār-Ifhīma, the east province Dār-Diffi and the west province Dār al-Qāwīn. The latter province was divided into 42 districts and many minor divisions which have not survived in its entirety. The west province was the only one, which did not have a governor, but its three districts were ruled directly by the king. The centre of the Murr range had also a separate organization of its own. The punishments inflicted by the criminal code were exclusively money lines which, when money was not available, were paid in kind, confiscation of property etc. It is highly improbable that this book originated at so early a period; for it may be presumed that the use of writing was not known till a later period. If the whole story is not actually fiction, the customary law must have been codified at a later period and ascribed to the legendary founder of the ruling dynasty. It is also possible that a king named Dālī was invented from the book bearing this name. Nachtigal and Satán regard both individual and book as historical. Nachtigal places the Dālī of the legend in the middle of the xvi. century. Some ten kings followed him, whose names are uncertain. The last of this line was overthrown by Salimān Shāh, the son of an Arab woman. With him we enter on more historical ground. Iškām, which had possibly already entered the land with the Tuscher but secured no strong foothold, now became the state religion; the borders of the flourishing kingdom, which became a real state, were extended far and wide across the Nile and farther to the Athana. The most prominent ruler and the second founder of the kingdom was Salimān Shāh’s grandson Āhmad Bobkār, who was the first to make Dār Fūr a real Musulman state and by attracting foreign elements on a higher scale of civilization sought to elevate the country. At this period a strong current of immigration set in from Bornū [q. v., p. 747 et seq.] and Bagirmi [q. v., p. 570 et seq.]. Mosques and madrasas were built everywhere, firearms introduced and the government probably first organised on the lines which Nachtigal described at a later period. It is impossible to mention here the constant civil wars, the quarrels with Wadā’ī and the struggles for the throne which Nachtigal has carefully detailed. Dār Fūr remained the great power in the Eastern Sudan till Mahnnumad ‘Ali conquered the Sudan. The Sudan now sought to enter into negotiations with Constantinople and ‘Abd al-Magdhūf and ‘Abd al-'Aţīz actually issued firmans confirming them in their power. But circumstances were stronger than these firmans. It has already been stated. The young Shāh al-Ghārāfī [q. v., p. 579], how the Egyptian government followed in the wake of the slave-traders. Zībār Pasha at the instigation of the Egyptian government advanced on Dār Fūr while Isma‘īl Pasha co-operated in the north. In autumn 1874, King Isamūn (Brühl) fell in battle with Zībār at Manusah and soon afterwards al-Fāsh was sacked. The country was now ruled from Khartūm, but pretenders still held out in the more inaccessible parts. Both fell before Zībār Pasha and succeeding governors continued the war with his successor Hārūn. A general rising, which Hārūn was able to stir up against the Egyptians, was quickly put down; and Gordon, the recently appointed Governor-General of the Sudan, was able to pacify the turbulent spirits of Dār Fūr also. He left Hassan Pasha Hālīns there as Mudīr who was succeeded by the Italian Messediglia and later by the Austrian Stali.
Dārā succeeded in reviving the ancient Dār Fūr kingdom. England has not again intervened in the domestic affairs of the land but is on diplomatic relations with ‘Ali Dārā and receives tribute from him regularly. With the advance of the Sudan railway Dār Fūr is gradually being opened up to commerce. The land has recovered somewhat what under ‘Ali Dārā’s rule from the grievous damages done by the constant wars and the ravages of the Mahdists. A list of the historical Sahālas is given here; a very useful genealogical table is given in Helmolt’s Die Geschichtlichen, iii. 573. 1596–1637 Salimam Solon; 1637–1682 Mūtak, son of the preceding; 1682–1722 Ahmad Bakkar, son of the preceding; 1722–1732 Mūhammad ‘Umar, son of the preceding; 1732–1739 Oma ‘Asā (the Asa), son of the preceding; 1739–1752 Abū ‘Abd al-Rahmān, uncle of his predecessor; 1752–1785 Mūhammad ‘Abd al-Rahmān, brother of his predecessor; 1785–1799 ‘Abd al-Rahmān, brother of his predecessor; 1799–1839 Mūhammad al-Fāṣr, son of the preceding; 1839–1872 Mūhammad al-Hadda, son of the preceding; 1873–1874 ‘Abd al-Rahmān (Ibrahim), son of the preceding; 1874–1875 Bosch h. Mūhammad al-Fāṣr, uncle of his predecessor; 1875–1879 ‘Abd al-Rahmān al-Nāṣir, son of the preceding; 1880–1885 ‘Abdullāh Dāl Benga, cousin of the preceding; 1885– ‘Ali Dārā, regnant.

It was fortunate for science that Nachigal was able to visit Dār Fūr just before the break-up of the ancient kingdom and to make a permanent record of the conditions then existing. The great collections of material that Slatin made at a later period were destroyed by the Mahdists. Of special interest are his notes on the ceremonial punctiliously observed at the court with its hierarchy of officials. Immediately below the king (‘Ali Kāri or Asli) ranked the king’s mother who bore the title Abo and as the chief of the Abungs (plur. of Abo); the seven mothers — widows or relatives of the royal house advanced in years — also played a certain part in the state religion. The Kamene (the king’s neck), a kind of reflection of the king, the king’s shadow, as Nachigal calls him, was hardly less important. He was an official, to whom all honour was shown as to the king himself, but he had no actual regal power. In ancient times he was put to death when the king died. This shadowy figure was of lesser actual importance than the Abū Shaltik Dall, the chief eunuch and governor of the eastern province. He had charge of the harem, had great influence on the transactions of the court and in earlier times was the real maker when a vacancy in the throne occurred. He was considered the guardian of the book of Dall, whence his name. He had also to keep a sacred fire alight which was only extinguished on the death of a king. A second such fire was maintained in the royal palace. Fourth in rank was the Iya Rasi, i.e. the great woman, almost always a sister of the king. She actually had the onomasticon of an official, appeared in public on horseback, and had great influence everywhere, almost more than the king’s mother although the latter was superior to her in rank. These were only the highest members of the court to whom were attached numerous others.

We have already seen how much that is pre-Islamic has survived in Muhuyun Dār Fūr, and the late appearance of Muslim influence in originally heathen ceremonies like the principal annual festival, for great drums were still not clearly recognised. It was originally merely a spring festival celebrated according to the solar year at which sacrifices were offered to former kings on their tombs. The ceremony became so far influenced by Islam as to have passages from the Korān read at the tombs for the good of the souls of the Muslim kings along with these sacrifices. The Korān was not read at the tombs of heathen kings but sacrifices continued to be offered. To this was attached a typical spring rite. The king dug seven holes in which he placed seeds. These holes were then filled in by the seven Abogas; a further part of the ceremony, from which the whole took its name, was the slaughter of white cows and oxen with the skin of which the great royal drum al-Manṣura was covered. The king had to beat a rib of the slaughtered animal on its own skin drawn across the drum. The drum as a tribal religious symbol is also found among the Fulbe (Strumpehl, in Mitteilungen der Geographischen Gesellschaft in Hamburg, xxvi. (1913), p. 51 et seq.). The third part of the ceremony consisted in the pursuit of a sheep, of which a certain part with symbolic meaning was allotted to each office. The half decayed intrinsics of the animal had then to be devoured by the courtiers before the eyes of the warriors of the court. Whoever hesitated, was originally slain. The sheep in this peculiar meal is said to have been substituted for a virgin under the influence of Islam. Elsewhere we also find traces of a primitive cannibalism in Dār Fūr. It is to be hoped that the future opening up of Dār Fūr will add to the account of this interesting land by Nachigal.

(Dār al-Harb. In Muslim constitutional law the world is divided into Dār al-Harb and Dār al-Islām. “Abode of Islam” is that which is already under Muslim rule; “Abode of Jāhil” is that which is not, but which, actually or potentially, is a seat of war for Muslims until by conquest it is turned into “Abode of Islam”. For an anomalous and disputed exception, see Dār al-Sulh. Thus to turn Dār al-Harb into Dār al-Islām is the object of Ḫāshidī [q. v.], and, theoretically, the Muslim state is in a constant state of warfare with the non-Muslim world. But practically that is now impossible. The rulers of Islam are not in a position to keep up a constant warfare against Christianity. Territories that have, occasionally coming under the rule of unbelievers. To meet this situation the early and logical position...
DÄR AL-SALAM, "Abode of Peace," is in the first place a name of Paradise in the Korân (vi. 127; v. 90), because, says Babâjî, it is a place of security (salama) from transitoriness and injury, or because God and the angels salute (salama) those who enter it. Hence it was given to the city of Bagdad by al-Mansûr, and the town of Madina al-Munâwarah (cf. al-IKhâmish, p. 565 above, and also in the geographical lexicon of Yahyâ, ad 180). As for the capital of German East Africa it is Daresalam, p. 923.

DÄR AL-ŠINA'A, also DÄR AL-ŠINÀA and DÄR AL-SINÀA, the Arabic word for dockyard. The literal translation is "house of work." With so general a meaning, it is natural that Där al-Šina'a not only means dockyard but also simply workshop (e.g., Där al-Šinàl fât, "a workshop of iron,") and even a place of manufacture (Där al-Šinàf, "a place of manufacture of cloth"). But the meaning Där al-Šina't al-Bârî is by far the commonest and has passed into the Romance languages from the Arabic like so many other nautical and commercial terms. In Italian it appears as darsena and arsenale, in Spanish as arsenal, and thence has passed into almost all European languages (Dorsy and Engelmann, Glossaire des Mots Espagnols et Portugais dits d'Arabe, p. 205 et seq.). The dockyards were in the first place naval shipyards. In the earliest period of the Caliphate there appears to have been a Där al-Šina'a only in Egypt (Halâkhi, p. 117). In the year 490 (569), Mu'aâwiya built an arsenal at 'Akhâr (Acre), which was transferred by the later Umayyads to Şar (Tyre). Even in the reign of 'Abd al-Malîk, warships were built by him in Tunis (Dorsy and Engelmann, c. 4). We are best informed on the arsenals of Egypt, to which Maqrizi devotes a comprehensive chapter, "Arsenal," Li'âl warmer. The Aphrodito papacy gave valuable information on the Egyptian arsenals (cf. H. I. Bell, Catalogue of Greek Papyri in the British Museum, Vol. iv., The Aphrodito Papry, p. xxxii; C. H. Becker, in Zeitschr. für Assyri., xx, 84 et seq.). At a later period there were naturally similar arsenals at all
important places on the coast. The head of a Dar al-Sina'a was called Mutawalli or 'Shay'. Ibn Munmatt, *Kamal ed-Din*, pp. 16, gives some account of the work done in one of these government workshops.

(C. H. Becker)

**DAR AL-SINA'A**. Besides Dar al-Harb and Dar al-Ism (q. v.) some schools of canon law recognize the existence of a third division, Dar al-Sina'a, or al-Mas'ud, which is not under Muslim rule, yet is in tributary relationship to Islam — a form of control by force. The two historical examples of such a status, as far as the origin, apparently, of the whole concept is Nadrjan and Nubia, where, the Christian population of Nadrjan Muhammad himself entered on treaty relations, guaranteeing their safety and laying on them a certain tribute, regarded by some afterwards as *Kharaj* (q. v.) and by others as *Diriyah* (q. v.). See on the whole story Bulaghiy, *Mufid ed-Din*, pp. 63 et seq.; Sprenger, *Leben Mohamмедa*, iii. 504 et seq.

In the course of events, and because of their position within it, this protection for the people of Nadrjan amounted to very little. The case of Nubia was somewhat different. Their treaty with the bow the Nubians were able to hold off the Muslim attack and to maintain their independence for centuries. In consequence, (Abd Allah b. Sa'd entered into treaty with them, not requiring the head-tax (Diriyah) but only a certain tribute in slaves (B. B. H., p. 562). Others, however, evidently disliking the implication that there could be any territory in a status of Nadrjan or Nubia, further specified the arrangement for an exchange of commodities (Bulaghiy, *Mufid ed-Din*, pp. 236 et seq.; Well, *Gesch. d. Chalifat*, i. 10, 11 et seq.; Lane-Poole (following Kafri), *Hist. of Egypt*, p. 21 et seq.; Torrey (translit. from Ibn 'Abd all-Hakam), *Vols Bibl. & Sem. Studies*, p. 307 et seq.). This conception in some vague form was probably also the basis on which treaty relations with Christian states were accepted as possible; the present day by such states, and then regarded as *Kharaj*.

An emotional situation on the matter is thus formally laid down by Müsward. All territories, into the control of which, in different degrees of directness, Muslims come, fall into three divisions: (i) those taken by force of arms; (ii) those taken without fighting after the flight of their previous owners; (iii) those taken by treaty (Sa'ba). The last divides again into two, according to the soil: (a) in the Muslim people as a whole, or (b) retained with the original owners. In the first case, the original owners remain in actual possession, becoming *Diriyah* (q. v.), and paying *Kharaj* and *Diriya* and the land becoming *Dar al-Ism* (q. v.). In the second case, (b), the terms of the treaty are that the owners retain their lands and pay a *Kharaj* from them, as a provision that they are not *Diriyah*.

C. H. Becker

**DAR (v.): Avestan door** "door or gate", particularly the gate or outer court of a royal palace. Dar*gâh* (Pahl. dar*c*ga*"*d* "door, properly 'place of the door'). Dar*g* Sakt* (formerly and *d*anâl* "gate of bulls", a name given to Constantinople. Dar*g* (Anglo-Indian dar*kar*) is the name given in India to solemn court ceremonies, receptions and morning audiences.

**DAR-I AHAHIN** or DERSENDEN AHAHIN, Arabic BAH AL-HADO or BAH AL-HADID, Old Turkish "Chim-Kapun" = "Iron Gate" — a frequently recurring name in the Muhammadan world for impassable passes and ravines. The meaning of the name, about 2 miles long and only 12—20 yards broad, in the Balasum-taw range, through which ran the main road from Samarqand and Bakhshir to Balkh. This ravine is first mentioned under its Perisan name by Ya'qub (ed. de Goeje, p. 200); Ya'qub's statement that a "town" bore this name is not confirmed by any other authority. The name "Iron Gate" dates from pre-Islamian times and was known to the Chinese pilgrim Huan-Chung (*Merveilles sur les Contre-Ocidentales*, trad. par Stan. Jules, i. 23). To the east of this ravine began the highlands on the upper course of the Oxus comprised by the Arabs under the name Tashkhrista (Chin. Tu-bu-bo), where Buddhists were supreme as late as the fifth century A.D., in opposition to the districts of Samarqand and Bakhshir. In later times also the "Iron Gate" was always regarded as the natural boundary between the land of the Nubians and the lands dependent on Balkh on both sides of the Oxus. Besides the "Iron Gate" there are other routes across the Baisum-taw, which were known even in the fifth (sixth) century; one of these routes
is described by the Chinese pilgrim Ch'ang-ch'un who was here in the autumn of 1225 (E. Bretschneider, Medieval Researches etc., i. 91); but this does not seem to have fixed the strategic or importance of the ravine. In the description of the campaigns that have affected these districts, the "Iron Gate" is almost always mentioned; in the ivth (4th) century the ruler of Čağkhanîyân [q. v., p. 311] had a fortress here which was burned in 337 (948) by an army sent by the Sâmaân Nâb b. Nâz (Gardîst in W. Barthold, Turkistan etc., i. 9). All caravans bearing goods from India via Balkh passed through the "Iron Gate"; a day's journey to the north of the ravine, at Kandah, the road to Nabûshab (Nassaf among the Arazu, the modern Karhâl) and Bukhâr separated from the road to Kâh (Kiss among the Arazu, the modern Shahr-i Salih) and Sarakand. As is clear from Clavijo (ed. Seremewski, p. 251) there was still a customs house here in 1404 from which Timur drew a large revenue. Until 1875 Clavijo was still known as the Frenchman who had ever passed through the "Iron Gate". The ravine is sometimes mentioned by Sharr al-Din Ya'aqi (Zafar-Nâmâ, Ind. ed., i. 49 etc.) and also by Bâbur (Bâbur-Nâmâ, ed. Beveridge, f. 124) by the Mongol name Kâhâqâ, this is the form in which it is written in the Arabic script; at the present day it is pronounced Kâhâ or Kâhâ among the Mongols, whence the name of the town Kalâmân "gates" (the word is not Turkish as supposed by Le Strange, The Lands of the Eastern Caliphate, p. 441). The name Bughâla-Kâhâ ("House of the Chanâl") (which was found in use by the fierst Russian travellers to reach there in 1875) is first mentioned by Muhammed Waft Kâhâqâ (Tâurlâl al-Khânî, MS. in the Asiatic Museum, f. 281), f. 164, in the description of a campaign by Muhammed Kalâmân Khân in 1171 (1757).

At the present day the Russian post-road from Sarakand to Termes (Tirmâd) runs through the "Iron Gate". The road is now not the slightest strategic or commercial importance; the "Iron Gate" is therefore only regarded by modern travellers as a remarkable natural feature of importance for the study of the geological conditions of the neighbourhood; no traces of medieval buildings have survived here. The view of the ravine is in Reclus ( Nouvelle Géographie Universelle, vi. 503) is a reproduction of a drawing made in 1879 by the Russian painter Kazuine; the same view is given in Mughatbî's Turkistan, L. 555 (W. Barthold).

DARÂ SHIKOH, eldest son of Shâh Dâhrân. His mother was Ardjûmand Bânu Mumtâz Mahal, and he was born at Adâjurt on the 20th March 1615. In 1633 he was married to his cousin Nûzâd Begam, the daughter of Prince Parwân, and granddaughter of Dâhrân by her. By her he had one daughter, Dâjân Begam or Dâjânî zebr Bâni, and two sons Sulaimân Shâkhî and Sîphr Shâkhî. Darâ, says Elphinston, was a frank and high-spirited prince, dignified in his manners, generous in his expenses, liberal in his opinions, open in his counsels; but impetuous, impatient of opposition, and despising the ordinary rules of prudence as signs of weakness and artifice. In most of these characteristics he was the opposite of his younger brother Awarangzâb whom he used to speak of as the Namâst the prayer-maker. He had the inquiring spirit of his great-grandfather Akbar, and was much interested in Sûfism and other religious questions. But he had not his ancestor's military skill or daring, and he was unfortunate in all his undertakings. He was thus no match for Awarangzâb. Somehow, he seems to me to resemble Charles I. of England. He was like him in luxuriously, detachment to reli-
region, literary tastes and hungry temper. He re-
sumed him too in his fate. In 1653 he made a
long and fruitless attempt to take Kandahar. In
1657 when his father fell ill, he practically con-
guished the empire. But his younger brothers could
not endure his predominance, and he was twice
defeated by Awrangzēb, once near Agra, in June
1648, and again at Adilpur in March 1649. He was
betrayed and seized by the Afghan Malik Dā�ar, the chief of Jūrū (q.v. the Jūrū of the
Dādar family) and brought to Ulihār where he
was put to death by order of Awrangzēb in the
end of August 1659. He was the author of
several books which are noticed in Rich, Catalogue of
Persian Misc. The best known is the Sūfīn-i
Afghānī or "Ship of Saints," a series of short
biographies of Muḥammadan saints. It has been
lithographed at Lucknow and there is a very full
table of its contents in Eth, Catalogue of the
273-310. There is much about Dādar in Bernier
and Manucci, both of whom were personally ac-
quainted with him.

H. Bavergerd.

Dārābdijārād, a town and district in Fārs; the principal places in the district are Fārs and Zardjīrā. The town which is sur-
rounded by a wall and by suburbs had four gates and
a rocky dome-shaped mass in the centre. In the
neighbourhood, ibn Kh. (mūsāq) was collected in a
vast closed with an iron door and opened once
a year, in the presence of the authoritas of the
town; the pure mūsāq was kept in the royal treasury (vāqīū). Industry was
in a flourishing condition there; all kinds of
clothes, mats of rushes, and the tapestry
known as sīne-īzār were manufactured. Salt
mines in the neighbourhood still yield rock-salt
of various colours. In Iranian legend, the founda-
tion of this town is attributed to Darâšt, father of Dārâšt (Farâs III. Codomanus).

(C. L. Haurt.)

DARAZI, was one of the founders of the religion of the Druze, not the most
important who have given his name to the sect. Several
historians, both Muḥammadan and Christian, have
written about him and he is also referred to in the
books of the Druze: unfortunately these different
sources do not at all agree with one another.

It seems certain that Darazi began as a Bātinī
missionary or ḍāʾī (q.v., p. 385). According to
the Christian historians John of Antioch and Al-
Makki, the first of whom was contemporary with
him, he was called Muḥammad b. Ḥusān and was
of Persian extraction; according to the books of the
Druze he was the preeminent Nežik in which
Turkish. The vocationation of Darazi is given in
the books of the Druze.

He came to Egypt in 408 (1017). He had rec-
ognized Huṣn as Inān in the preceding year
(407 = 1016), for fear says in his epistles that
Darazi had been won over to the mutakker
religion by the Muḥājirūn (a missionary of low

In Cairo he entered the service of the Caliph
Huṣain b. aṭ-Ṭāhir b. I ᾄ i and at first enjoyed his
favour. He then tried to supplant Huṣain; by
409 (1018) he had around him partisans called
after him Dārāzites whom Huṣain persecuted; the
most important of them was Dārāštī. There still
exist writings of Huṣain in which he speaks of
Darazi's undertakings; he called him, the insolent
spirit, the Satan, and describes him as opposed to the
Inān, i.e. himself; he also complains that he has
"gone from beneath the cloak of the Inān" and
 taken the title Sīās al-Inān or "Sword of the
Faith" (409 = 1018).

Darāštī was the first publicly to recognize the
divinity of the Caliph Huṣain; according to him,
universal reason became incarnate in Adam at the
beginning of the world and passed from him into the
Prophets, then into Ali and thence into his
descendants, the Fāṭimid Caliphs. Darāštī wrote a
book to develop this doctrine, which was only an
application of that of the previous Bātinī system.
He read this book in the principal Mosque in
Cairo and, although Huṣain did not protest, this
doctrine caused a scandal. It is also said that he
allowed wine, the forbidden marriages and taught
metaphysics.

According to the ʿAbāda, Darāštī continued in
the doctrine which had been started by the Muḥājirūn,
especially in the valley of Târūf and the Ḥamāsī (q.v.,
p. 645) territory. He came into conflict with the Turks and fell in
battle against them.

John of Antioch and, following him, al-Makki
did not give account of his end; according to
them he was killed by the Turks. The only page on
account of the scandal which his teaching caused,
in Cairo while actually in Huṣain's carriage. After
his death his house was pillaged, and there was
a riot for three days in the city, the gates of which
to which he had been closed. The Turk who had slain
him was arrested and put to death on another
protest. The Druze sources would lead one to
believe that it was at Huṣain's instigation that he
was assassinated; several of his followers, including
Barbier de Meynard shared his fate (410 = 1019).

DARB (Ar.), plural darʾ, "passage, pass, or
road." Al-darb was more particularly any road into
the land of the Byzantines (cf. e. g. Balkālum, p.
137 et seq.; such as the road over the Taurus and the
pass over Araxes (Bellini, pass., q. v., p.
460); more especially those through the Pylea
Cilicia from Tarse via Basshabaddīn = Fondos (see
BOZANT, p. 768) and Luʾlūm = Lulon to Tyana
and Heraclea, and the eastern route from Marābūn
(Germanica) via Itadaz to Malayta. These noto-
riously difficult passes were euphemistically called
Darʾ al-Saltāna (cf. Ibn Khudāddīb, p. 190 or
Balchārī, p. 189 et seq.) The district around the
Taurus passes north of Dijārsīa, in the territory of
Bildīt al-Darʾī in the time of the Armenian king-
dom of Cilicia of the Būrūj, i.e. in Fāṣil Allāh al-ʿQamāt, Tarīkh, p.
181 and 183; Ibn al-Aḥṭī, xi, 20 and 145.

As the word al-darb, which in its technical
sense appears as early as Ismāʿīl b. Kāli, cannot be
explained from the Arabic, the name is usually derived from the name of the little town of Derbe in Asia Minor. The meaning (darkh = dekhur) rather suggests a connection with the Persian darband (cf. the name Zjihal al-Darbando for the Armenian Taurus in Qurani, ed. cit., p. 56). Perhaps, however, both Derb and Darkh be explained from some language indigenous to Asia Minor. One difficulty is the fact that the word appears in Arabic from the very first with a name proper Persian or, if the form of an appellation (whence the article) and gradually becomes quite naturalized in the language with the general meaning of "dark" ="way," "road." (cf. expressions like Darb al-Mu'alla, Darb al-Sultan). 

**Bibliography:** G. Le Strange, Eastern Caliphate, p. 132, 133 et seq.; C. Quatremère in Mârket, Saloum Mârket, ii. i, p. 147; H. Lammens in Mélanges de la Fac. Or., Geneva, i. 15. Sarre, Reise in Kleinasien, p. 86, should also be specially noted.

(R. Hartmann.)

**DARB** (a.) "blow," "striking" (whence darbâh, "mint"); in arithmetic = multiplication; in Arabic a component in the second half line of a verse.

**DARBUKKA** (pl. darbukas) is a drum found in Egypt, the Darbukh in Syria, darbukh in the Maghrib; given as a neologism by Arab lexicographers in the form Darbukk, a kind of drum, consisting of a tube enlarged or expanded at one of its ends; this end is covered with a skin (fish-skin in Egypt and goat-skin in the Maghrib) and the other is open. In the cast the tube of the darbukh; is usually of wood or earthenware (often painted or decorated) but occasionally the skin is made of skins or parchment. For play on this instrument it is placed under the forearm, with the large and covered end uppermost and the skin is struck alternately with the fingers of the two hands. In Egypt the Darbukka is an instrument used by jugglers, and street singers, also by women and the beastmen of the Nile. In the Maghrib the darbukh is played by women; it also forms one of the essential elements of the music of the Berbers and contributes to the rhythmic harmony which characterizes the music of this orchestra. The word is of foreign origin, but its etymology is disputed (cf. Dory, Supplement ad Dictionnaire Arabe, i. p. 430; Völlers, in Z. der Deutschen Morgenl., Ges., 1857, p. 326).

**DARD, or Khwâjâ Mr. DARD,** was a descendent of Khwâjâ Bahâ' al-Din, the founder of the Nakhshbandi order of the Sâfi sect who was born at Buhârî in a. H. 728 and died a. H. 791. His father, Khwâjâ Mr. Nâsir, potently called An-dalû, belonged to an ancient and highly respected family of Dihl descended from Nawâjâ Dîlâr Khân, a noted general of the time of the emperor Djalâhâr. He held a military appointment, and eventually renounced the world and was initiated into the Nakhshbandi order of devotees under the tutelage of Khwâjâ Muhammed Zâbir. Khwâjâ Mr. Dard, like his father, was originally a soldier by profession, and became a religious devotee. His biographer, Mawâli Muhammed Hâsan, Az\d, states in the Abî Fâ'âil (2nd ed. p. 170) that Dard wrote a treatise on prayer, entitled Aṣâr al-Mudâlib, when he was only 15 years of age; and a work, called Wâridât- al-Dîrân, at the age of 29, to which he composed an extensive commentary, entitled Ibn al-Khâtîb, comprising 411 treatises on Sâfi mysticism. He is also the author of numerous works on astrology and material choice, short works in Persian, and an Urdu Dhaqan, which has been frequently lithographed at Dihl. He was contemporary with Sa'dûl, Mr. Ta'bî and Mâhad, and had numerous pupils, chief of whom were Khwâjâ al-Dîn Khâám, Hâdiyât Allâh Khân Hâdiyât, and Tâ'ân Allâh Khân Fardâ. According to most biographers Dard died at Dihl at the age of 68 in a. H. 1199 (A. D. 1785) but Mirâ'âr Lâfî in his Tahdikûr Gourâbîn Hâid gives a. H. 1202 as the year of his death. (J. F. Blumhardt.)

**DARDANELLES, in Turkish Kaf-asül Sultânîya Begkârî, the ancient Hellespont, a strait which joins the Archipelago to the sea of Marmora (Propontis), and separates Europe from Asia (44 miles long and one to five miles broad). Its shores are covered with fortifications which guard the approach to Constantinople and are armed with Krupp guns of large caliber; their garrison consists of two regiments of heavy artillery and one of engineering. The forts and batteries on the Asiatic side are: Kaf-asül Sultânîya, Kân Kafî, Hanûlîya (recent), Mahdijya (formerly Kôse-burnu), Nûgâtû (Atülyos); on the European asent: Sâd-d al-Bahâr, Hâmûlâr, Mahdijya (recent), Nâmisû, Khîbî-i Bahâr, Fatimâ-Janûûr, Çam-bihû, Malûûs, Bokâlî-Kafî, Külâ-Tapû (Seutou). They were entirely rebuilt in 1857 under the administration of the Grand Vizier Muhammed Khâmil. The town of the Dardanelles (Arabic name usually called Comâh-Kâfî = the fortress at the paces), capital of the sandjik of Bigâr which is directly under the Sublime Porte and is not attached to a vilâyât, was until 1876 the capital of the province of the islands of the Archipelago; it was attacked in May 1833 to the vilâyât of Kasrî, since abolished. There are twelve potters in it, none of which are older than 1740; this industry, no longer supplied by foreign wares and vases of strange forms (calabashes or quadrupeds usually taken for the Trojan Horse) painted in brilliant colours and gilted in parts. The Frankish quarter which is close to the shore, was built after a fire in 1860; the other quarters were, for the same reason, rebuilt in 1865. The population is 11,982 of whom 3,551 are Muhammedans and 2,577 Greek Orthodox; the Armenians originated for the most part in Persia whence they came to the reign of Sultan Sulaiman (1526); the Jews, for whose emigration here there is evidence, in 1660, are refugees banished from Spain in 1492. The total population of the Kasrî is 19,494 of whom 9,029 are Muhammedans and 5,501 Greek Orthodox; the 1,826 Jews and 3,173 foreigners are found only in the town itself. There are numerous beautiful forests in the district and gold mines at Asytan and Osramâr.

**AL-DARDJINI,** Abu 'l-'A'nrâ Azâmidî al-Sayîfî, Sullanîr a, Allah al-Hâlî, an Arab scholar of the viiith century A. H. to whom we owe the Kitâb Tabbâbî al-Mulukhî, an historical and biographical collection which has not yet been
published, though there is a manuscript in Mslb.

Abu ’l-Abbas’s work falls into two distinct parts. The first is merely a reproduction of the *Chronicles* of Abu Zakariya, (translated by M. Masquerey, Algiers 1875) in which have been added some personal observations and reflections. The second contains the detailed biographies of the principal members of the Abaši sect, both African and Oriental, arranged chronologically by *jahāmāh*, each of which covers 50 years, from the earliest years of Islam to the end of the 11th century A.D.

For the latter volume, Darbījī made use of a list drawn up by Abu ’lamak ’Abd al-Kafi of Warga, to the end of the eleventh century. To this he added the biographies of the caliphs in the twelfth century. (Cf. the tables in the *Kūt al-Tabāti‘*, Vol. II, given by M. de Mottlinski, in his *Lettre de la morte Abašis*, p. 30 et seq.; Algiers, 1889).

Darbījī’s work is valuable for the history of the Abaši of the Maghrib. It contains valuable information for the groups of oases of Warga, the Wirda, and the Sif where Wahbi Berber communities lived after the fall of the Kusamids.

The *Kūt al-Dimashqīr al-Miṣrī* (discovered and written in the 11th century A.D.) by an Abaši of one of the Dāhil families in Egypt, Ibn Ḭaşām b. Ḫašām al-Barradī, gives an interesting account of the genealogy of the *Barradī*: “Here follow” says al-Barradī, “the circumstances under which the book of Abu ’l-Abbas was composed.”

Al-Ḥašāmī b. Zakariya had just arrived from Ḫan, bringing with him various works, such as the *Ḥillah* of Ibn ‘Uyayna, the *Dīwān* of Shaykh Abu Ḥasan al-Ṭabari, that of Ibn Ḥašām and other important books. His brothers in the East had asked him to send them a book covering the biographies of the Abaši of the earlier centuries of the Ḥijra and retracing their virtues to their ancestors in the west. Al-Ḥašāmī b. Zakariya consulted the learned ’Ababu who were then in Djerba and told them of the desire expressed by their co-religionists in the east. They thought at first of Abu Zakariya’s work but they saw that it was not complete and that the style of its author, noted for theobar language and little bound by the rules of the grammar, was often offensive. They then decided that a new work should be composed giving the history of the Rūm and the virtues of the ancient doctors. No-one was more fitted than Abu ’l-Abbas to carry out this task in a worthy manner and it was to him therefore that it was entrusted.

According to a passage in the *Kūt al-Dimashqīr* (p. 210), Darbījī went to Warga in 516 and spent two years there. (A. P. MOTTIINKSI).

**DARESSALAM, capital of German East Africa**, is a flourishing town of 10,000 inhabitants, 500 miles from Dar-es-Salaam and the terminus of the main railway line of Tanganyika. It is situated on the west bank of the largest river of the country, the Rovuma, which is navigable for a distance of 50 miles. The town is surrounded by a wall of stone, and the houses are built of mud and straw. The streets are narrow and winding, and the buildings are of a simple and picturesque style. The town is divided into two parts, the foreign and the native, and is connected by a bridge over the river. The principal buildings are the government house, the chief magistrate’s residence, the post office, the telegraph office, the customs house, and the hotel. The inhabitants are mainly Germans, followed by Africans, Asians, and Arabs. The climate is healthy, and the soil is fertile, producing a variety of crops, including coffee, cotton, and tobacco. The town is an important centre of trade, and is a centre of education, with several schools and colleges. The town is also a centre of commerce, with a thriving trade in cotton, coffee, and other products. The town is well provided with water and electricity, and has a good system of public works. The town is well connected by rail and road with other parts of the country, and is an important centre of communication and trade. The town is the centre of a large agricultural district, and is well supplied with water and electricity. The town is well provided with schools and colleges, and has a good system of public works. The town is well connected by rail and road with other parts of the country, and is an important centre of communication and trade. The town is the centre of a large agricultural district, and is well supplied with water and electricity.
DARAYA, a district in Central Arabia, so-called after a well with a village beside it on the road from Mecca to Batra, 32 Arab miles from Dzhufila, 18 (according to Ibn Rusta, 28) miles from Tbilis. According to the Arabs, it took its name from Daraya, the daughter of Rabi b. Uthman, the mother of the Kharijite Hadjim. It was a much frequented halting-place for pilgrims, for here was the junction with the road from Hailwan. It was under Medina for administrative purposes. The district of Daraya, of whose wells and mountains al-Bakri gives a detailed account, included the area, called Hammyy (probably = Himayr) on Dougherty's map and described as good pasture land, but also extended to the northwestern side of the hill of the town inhabited by the R. Khilaf, against whom Muhammad sent troops led by Abu Bakr in the years 6 and 7. It. The Caliph 'Omar reserved a portion of it as himayr for the camel-owners as qadala and taken in war (cf. Ibn Sa'd, ii. p. 220, n. and 336, n.); but as the number of these animals was always increasing and reached the total of 40,000 in 'Othman's reign, this Caliph considerably extended the area set aside for them, which was reckoned against him (Kamil, ed. Wright, p. 606, n.) The land afterwards became private property and is said to have yielded an annual tribute of 800 dirhems in the early 'Abbadid period.

**Bibliography:** al-Bakri (ed. Wüstenfeld), pp. 626—639; Bibl. Geogr. Arab. (ed. de Goeje), iii. 109; v. 26; vi. 146 and 190; vii. 181; viii. 254 and 256; Yulîj, al-Mu'jam (ed. Wüstenfeld), iii. 471; Wâkidî (transl. by Wellhausen), p. 226 and 297; Tabari, Annalen (ed. de Goeje), iii. 1107; Bâshîhû, Al-Sawâ'id, Al-Ma'dî, Al-Tâlî, Al-Jâmi', etc. Among his pupils were: Masûmî, Abd al-Darî, al-Tanzûlî, al-Nâsî, except in his Sunnî, Abd Allâh b. Ahmad b. Hanshal, Tabî, b. 'Umar al-Samarqandî, etc.

Appointed chief of Samarkand, he only judged one case and resigned. He was pious, fervent, of keen intellect and pious.

He is the author of the following works:

1. 'Al-Ma'mûn, a collection of hadith, edited for practical use: the Traditions are classified in chapters following the order in the law-books; it was lithographed at Cappadocia in 1293

2. 'Al-Tâfu'î and 3. Kâfîr al-Darî, considered lost.

(MOH. BEN CHENî.)
caravan route from the Red Sea to the Persian Gulf. It was handomely built of stone and lay at the foot of high hills in a narrow valley, and a little west (W. Haifa) which was usually dry in summer ran through it. In addition to a large and several smaller mosques it had many madrasas. It lay in a very fertile neighborhood and was surrounded by extensive wheat, barley and millet-fields and rich orchards with extensive date-palm groves, peach, apricot and fig-trees. This very fine breed of horses, which in this district, was famed through the Arab states. It was inhabited by the great tribe of 'Amara amidst others. It attained its greatest prosperity when at the end of the xviiith and beginning of the xixth centuries it became the capital of the Wahshat kingdom [q.v.] under the independent rulers 'A'id, 'Abd al-'Aziz and 'Abd Allah. In 1818, it was taken by storm after stubbornly resisting a five months' siege by the Egyptian general Isma'il Pasha and almost levelled to the ground by fire; the splendid orchards and date-palm groves surrounding it were mostly reduced to ashes. The Wahshatins considered it unlucky to rebuild the town and transferred their capital to the town of al-Qar'ah, some 7 miles distant. At its zenith, Darya had about 50,000–40,000 inhabitants (according to many estimates, nearly 60,000). At the present day there are about 1500 people scattered around the district chiefly at the time of the date harvest.

The only European who visited Darya in the time of its glory was the Englishman who visited the rulers 'Abd al-'Aziz in April 1805 on a political mission from Muzaffiy, the English resident in Crete on the coast. Captain Sadler saw it soon after its destruction; he was commissioned by the Indian government to pay its respects to the victorious Isma'il Pasha in his camp at Darya. In more recent times it has been visited by the traveller Palgrave.

**DARUM** is mentioned by Muhammad as the district in which Haij Dabrin [q.v.] was situated. It is the Hebrew Darom, the South, which the term Jews particularly applied to the south-west plain on the coast of Iudaea and appears in Eusebius (who distinguishes it from Eleutheropolis) as Doroima. It is wrongly described by certain Arab historians as the goal of the expedition, which Muhammad shortly before his death was going to send Uma b. Zaid; its real objective was, as is clear from the account of the campaign which was afterwards carried out, the southern lands east of Jordan.

The name al-Darum was afterwards transferred to a fortress on the road from Ghaza to Egypt, which king Amalrik built on the ruins of a monastery of the same name. After an unsuccessful attempt in 566 (1170) Salih al-Din succeeded in taking this stronghold in 584 (1185) along with the adjoining coast-towns; but in 588 (1192) it was taken and destroyed by Richard I. The site is marked by the ruins of Dar al-Balah, 14 miles S. W. of Ghaza.

(F.K. Buhl.)

**DARYA (Pers. Daryâ, Daryâh, Daryâh, Daryâh; Arab. Darâ, Darâ, Dârah) in Persia, one of large river. Daryâh-3 Khan is the Caspian Sea; Awal-Darya [q.v. p. 339] and Sir-Darya are the Oxus and Jaxartes of the ancients, the Ijilshin and Sovan of the Arabs. The south coast of Luristan and Kirmân bears the name daryâh-âr (Quatremer) Not. i Extract, xiv. 281, note 1 The naval commander at Bandar A Khâbân bears the title daryâh-âli; among the Ottomans, this name has been used, as is sometimes given to the Šah-e-Poish or Admiral-in-Chief; the daryâh-âlamî were, before the reforms, the administrative offices of the Islands of the Archipelago. — Daryâh-âr, "sea of light," is the name of one of the large diamonds in the crown of Persia (Polak, Persien, i. 374). Daryâh-i-rud is a river which rises in Mount Sabalan (Sabavân) in Ardberndjan and flows to the north to the Arax; its name is connected with the Zend nor, p. 194; with the Zend norâg, Palawt, the name of the river on the banks of which Zoroaster was born according to the Vandsdâd (xiv. 15) and the Bundabâd (ii. 3).

(C. Huard.)

**DARYA-I SHAHI. [See YEMAMA.]

**DASKARA, the name of three places in the "Irâh, viz.: 1. a town on the Diyâl, N.E. of Baghdad; 2. a village in the district of Nahâr al-Malik, W. of Bagdad; 3. a village near Dârâb, on the road to Khristian. Cf. Yâhûn, Mâhid, Jâhid, ed. W. Watenfeld, ii. 575; Mardûs al-Hijjâzi, Lex. Geogr., ed. J. H. Cohn, (London, 1836 et seq.), i. 492; iv. 468. Daskara is a word borrowed from the Arabic darskar, "a shop" in the Persian darîqâzar, mod. Pers. darîqâzar; literally "handled, a work of the hands," whence it means also "building, village, town." On this word see Djavâlî, al-Mârutâb, ed. Sarre, ii. 57; Vullier, Lexicon Persico-Latinum, v. 871, 872; 878 (x. v. Darskâh, Darâvûsh, Darasdâh); Fleischer in L. v. 577 (gegen ii. 942); Petrie, Ethnol. Studies, p. 83; H. Hübschmann, Armenische Grammatik (1897), p. 135. The best known is Daskara 1; for further information see the article DASTAZDIR.

(M. Strick.)
DASTAJDIRD, the name of a number of places on Iranian soil or within the bounds of the former Sassanian Empire (Istkh. The Maqālib gives ten places of this name; the Arabs usually give the Arabicized form Daskar to those in the Irák; for the meaning of Dastājdīr = Daskar see the article DASKAR. The most important was Dastājdīr (De Daskara 7) on the Diyālā, N.E. of Baghdaď (12.5 miles, 20.1 km), from the latter, just above the 34° N. Lat. The Arab historians describe the foundation of this town to the Sassanian king Hormid I b. Şapur (383-385 A.D.). This probably was however only a re-foundation on the site of older settlements; for the Armenians of Scabō must be located practically on this spot. Dastājdīr attained its greatest prosperity under Khwarazm Ḥārūč (590-628), who made it his permanent residence and erected a number of splendid buildings. As it was the favourite abode of this king, the town was called Dastājdīr-i Khwarazm or Daskar nar-Malik i.e. D. of Khwarazm or of the king, to distinguish it from other places of the same name. Cf. also Dastāgār-ḵašt (Chronicon Ponticae) and Deskhtar dē Mālka (Gudī, Sūr. Čerē, publ. in the Verhand. des viii. Orientalisten-Kongr. Sect. P. 211). As a rule Byzantine authors write simply: Dastāyēd (also Dastāyēč or Deskhtor or Deskhtar-bīh). In the Tarikh b. Ḫakhtarī (a Berliner, E. Ger. Ṭarīqā-e Gengi, u. Eichaghe, Babyloniens im Tibet, 1853, p. 30),

Dastājdīr's glory did not last a quarter of a century and was suddenly closed by the great Asiatic campaign of the Herodians, so disastrous to the Sassanian Empire. In the early part of the year 628 the capital abandoned by Khwarazm Ḥārūč fell into the hands of the Byzantine Emperor; it was sacked and reduced to a heap of ruins; immense booty was carried from it to Constantinople. On this conquest cf. E. Gerland in the Byzantin. Zeitchrift, iiii. 368 et seq. Dastājdīr was never able quite to recover from this crushing blow; this is sufficiently explained by the fact that only a few years later the Sassanian Empire, considerably weakened by the Byzantine wars, finally collapsed before the vigorous onslaught of the Arabs.

In the Muhâmmādian period a small town again arose on the imposing ruins of regal splendour, which at a later period still excited the wonder of the Arab geographers (cf. in particular the accounts of Yaḥṣīb and Ibn Rosta); it was of some importance, as a caravan station on the great highroad from Babylonia to the Iranian highlands. (The so-called Towī dē Khorāsān). Yaḥṣīb and Ibn Ḫawāḳ describe it as a flourishing place surrounded by date-groves and orchards. It is not known when the Arab Dastājdīr became deserted. It probably was ruined like so many other, once busy, towns in the Irák by the Mongol invasion so disastrous to progress.

Even at the present day there are considerable ruins of the Sassanian and Muhammadan periods of Dastājdīr. The latter name has however now utterly disappeared from the district; the ruins are usually called Baghdaď ("Old Baghdād"); a name also given to other ruins in the Irák, which is to be explained from the rather common Turkish custom of naming ancient ruined sites after important towns in the neighbourhood. Cf. above p. 504 and Ritter, Erdkunde, x. 216.
of the Sufi Ibrāhīm Dasuki (see the next article) born in 1226–1811 in a poor family following the Mālikī ritual. After completing his elementary education in his native place of Dasuki, he attended the lectures of distinguished Shāfi’īs at the Asāhr Mosque, among whom was the celebrated Mālikī Mūhammad ‘Uleb (died 1239–1823). After his return to the Asāhr for a short time, he entered the employment of the state in 1248 (1832) where on account of the accuracy of his knowledge of Arabic philology he received the office of corrector of the text-books destined to be used in the higher educational institutes and was ultimately appointed khāṣiṣkhā (chief reader) at the government-printing office in Būlāk in the time of the Khedive Ismā‘īl Pasha. He was for a period also assistant editor of the official gazette al-Wafd al-Misrij. He died in 1300–

388. — His claim to a place in this work is based on the fact that, on the recommendation of ‘Erfand, he was employed during E.W. Lane’s (Manṣūr Efendi) second residence in Cairo with him for several years as a trusted collaborator in the preparation of and collection of material for Lane’s Arabic-English Lexicon, for which Lane in his preface gives him a glowing testimony. After Lane’s return to England, Dasuki continued to assist him with extracts from Arabic works (Preface, I. xxii, xxii.). We possess a memoir prepared for the former Egyptian minister ‘All Muhārak’s encyclopaedic work in Sīfī from the pen of Dasuki in which he describes his meetings and intercourse with Lane, his impression of his personality, his domestic arrangements and mode of life in Cairo, his intercourse with Muslims there (including Shāfi’īs, theことが to the Manṣūr and the Qādis, and the modern Egyptian), his singular mastery of the Arabic idiom (‘as if he were as ‘Almān or a Kāfīm’); their joint method of studying the authorities on Arabic philology and their work on the utilisation of these materials for the Lexicon, Lane’s generosity to his Arab collaborators, etc., in the fullest detail. This article is an indispensable document for the biography of the great English Arabist.

Bibliography: ‘All Muhārak, al-Khāfi’ al-Dhijliyya al-Mīr al-Shafī’ī, waw, waw (Khāfī, 1304), Bd. xi. p. 9–131 S. Lane-Poole, Life of E. W. Lane, p. 117 et seq. (I. Goldziher.)

AL-DASUKI, YEHUSRA. M. MUHAMMAD b. ‘ARID AL-RUYMAN, an Arab mystic, born in 833 (1439) and died on the 9th Shafī’ī, 919 = 1513 Oct. 1513 in Damascus; collected passages used in prayer, which have been preserved in a Berlin MS. (Al-Dasuki, Versuchische, No. 3778) (cf. al-Nasafī, K. al-Rawd al-Mizrī, ed. Wezarat, ii. 289; Ahlw., Vers., No. 9868, fol. 172). (C. H. Beckemann.)

DATÁ GANDI BAKISH LÁHORI, whose real name was ‘ALI b. ‘UHDMAH b. ‘ARID AL-DASUKI, al-HIJRAW, an eminent Sufi, was born at Ghan- a, and is called al-Dasuki and al-Hijraawi, because he alternately resided in these two suburbs of Ghanza. He is said to have travelled through all the Maghribian world and to have made his acquaintance with all the eminent Sufis of his time, i.e. the 8th century of the Hijra. In his latter days he settled in Lahore, where he died in 8. H. 405, (1007 A. D.). He wrote many books, of which the Kaṣf al-Maghūbi — a work treating of the ḥesab, teachings, and observances of the Sufis — is the most widely known and read.

DATHINA, a district in South Arabia, lying to the west of the land of the ‘Awādilja [q.v., p. 514] in the Ezbeib Kawr. It is a fairly mountainous country with a dry climate, as a rule. The soil is fertile only in the N. E. where it produces tobacco, wheat and maize. The main wadis are: the very fertile Wād ‘Abd Mārān (Mārān) and the Wād ‘Abd al-Dara. Dathina is inhabited by two large tribes, the main branch, the Ahī um-Su‘āl (Ahī al-Su‘āl) and the ‘Ujār (Ahī ‘Ujār, ‘Ujār al-Kawr and ‘Ujār al-Balj), the chief town is Blad Ahī um-Su‘āl with several hundred inhabitants (including several families of Jews) and a large palace. The chief market of Dathina is Hafsa (also called Sīk, Ahī um-Su‘āl). Dathina is nominally under the suzerainty of the ‘Awādilja [q.v.], but has to pay tribute to the ‘Awādilja.

Dathina is a very ancient country. Hamādīn gives a detailed account of it in his Līdāsī. In his time it was larger than it is now and is probably also comprised the territory now occupied by the ‘Awādilja [q.v., p. 516]. He calls it Ghit, a dry unfertile land, a steppes, which description is still applicable to the greater portion of it. He says it is inhabited by the Bāt Wād (the present ‘Awādilja), who speak very good Arabic. Of settlements in Dathina he mentions: Akma, ‘Arra (also called al-Rujab or al-Ruqab), Alīja, Alīja Khantūn (Tu‘b al-Khantūn), Al-Muwāsh (the vocalization is not given; it is said to have been the largest town in Dathina) and al-Zahrī et al.; of Wādīs: Wādī Dathīna, al-Hār and Tārir, al-Ghar, al-Humārī, al-Muwarik or al-Muíwarik, Mirūn, Ṣaḥf and ‘Urnūf, of hills, besides Ezbeib Āl Wāsir (Black Mountain), the Ruq, and ‘Arabī (Still), which no longer belongs to Dathina, but to the land of the ‘Awādilja.

The name Dathina also appears in the geographers in addition to Dathina. Several Dathina are further mentioned. One is a town between Byrūn and Mecca and usually written Dafīnā.

DĀ‘UD (the Biblical David). The Korān has several passages in which reference is made to the legend of the kingy prophet David, the Kafša of Allah (Sūra, 38, v.). Like the legends of the other prophets, it has been somewhat corrupted and shows signs of Rabbinical influence or
of an effort to explain certain imperfectly known verses of the Bible. Muhammad knew that David elected Goliah in I Kings 2. (16) of the Tetragrammaton, and that he received the Psalms from God. The Book of Psalms is one of the four volumes of the Bible which Rabbans wore acquainted. David shares with Solomon the gift of wisdom (28, 32-37); together on one occasion they delivered a remarkable judgment in a case concerning the damage done by some sheep in a field. The commentators say that in this case, Solomon, though only 11 years of age, showed his wisdom by improving the solution already given by his father. In another passage, the case of two saints is referred to, who came to David to reproach him with his fault in the guise of asking him to deliver judgment (28, 33). Mention is made of the repentance of David in Sura 38, 60. The royal prophet is thought to be the inventor of coats-of-mail, that is to say, he replaced by them the cuirasses of plats of metal. Iron seemed to become ductible in his hands (28, 32 and 38); he had the gift of song; the mountains and the birds alternated with him in his songs (28, 31, 34; 38, 33-34); this is evidently only the literal interpretation of verses in which the Psalmist invites the hills and beasts of the field to praise the Lord. Lastly by combining verses 5, 6 and 21, 62 of the Koran we learn that David punished Saba’ah-brukhe; by changing them into monkeys.

The brief references to David are considerably developed in the commentators and agree in the main points with the Bible: The following are the main points in Tahart. Dâlût (Goliath), a descendant of the Adéites and Thamûdites, having attacked Dâlût (Saul), David says him with his sling; he marries the daughter of Dâlût and shares his authority. Dâlût becomes jealous and tries to kill him; David flees and hides in a cave across the entrance to which a spider weaves its web, thus protecting David from Saul. Tahart gives David's genealogy, tells the story of Bathsheba, wife of Uriah, David's repentance and the plan of building the temple; he also adds a few anecdotes.

Mas'ûd knew the Mihrâb Dâdût, built by this king in Jerusalem and still standing in this historian's time; it is, he says, the highest building in the city; from it one can see the Dead Sea and the Jordan. It is apparently the Citadel or Tower of David. Mas'ûd had some slight acquaintance with the Psalms.

Down to the xiv. century the Muslims like the Christians before them located the tomb of David in Bethlehem although other traditions regarding its site were known to them. In the Crusading period a tomb alleged to be David's was found on the southwest hill of Jerusalem. In the xv. century it was taken over by the Muslims who still regard it as particularly holy (cf. al-Masâri, xii., 898-902; Kühle in the Palestina-Tafeln, vi. 74 and 86).

David is of a certain importance among the mystics. Dâlût al-Din Kûnt in his Maktûbât quotes him several times. The Kâshf al-Mubâlik is a very early work on Sufism, exaggerates in an almost absurd fashion the legends on the charm of his voice: the wild beasts, we are told in this work (p. 84-85), used to leave their lairs to listen to him; water ceased to flow and the birds fell from the sky. People followed him into the desert forgetting to eat and drink for days, many of his auditors perished in this state. On one such occasion 700 virgins and 12,000 men died. Some finer features of his character are given in the same work (p. 197): "Hate them, my God, for my love depends on thy hatred of it."

In Kârâdû there still exists a small sect of followers of David (Dâdût); they live in the mountainous district of Kûra, near Kârâdû, and at Mandâla, north of Baghût; to them David is the most important of the Prophets. (See le Père Anastase, Le Système des Daoudiens in Maghreb, 1903, No. 4, large folio.

Bibliography: In addition to the Korân and the works dealing with the lives of the Prophets: Mas'ûd, Les Précieux des Or (ed. and transl. Barbier de Meynard), i. 106-112; Tahtâb (Perisan Chronicler, transl. Zotenberg); the Kâshf al-Mubâlik by Dâlût al-Din Kûnt (ed. and transl. Nicholson, Gîbûl Memorial, 1911); Al-Sâdi, Kâtib al-Ashârîya (Cairo 1525), p. 170-180; Weil, Die Biblischen Legenden der Muslime, Grünbaum, Neue Börsenkurier, 1892, p. 265 et seq. (B. CARMA DE VAUX.

DA‘UD B. KHALAF AL-IŠÂRAMI ASH-SULAMI, the founder of the Zâhirîyya school of Arab law, which regards only the literal meaning of the Korân and Tradition as authoritative. Da‘ud was born in Kàfa about the year 1007 (815), but was brought up in Baghût, afterwards studied in Bâza and Nisûr (with Īshak b. Râhâwîbî) and returned to Baghût where he died in 1008 (883). Although his father belonged to the Hâfizî school, he attached himself to the Fâhishî but went even farther than they, as he rejected not only the Râ‘î but also the Kâtibî, by which he really denied the Fâhishî, i.e. the unconditional adherence to the teaching of the Imâm, which the Sunni jurists consider necessary. He only nominally approved the validity of the consensus (Jumhûrîa) as he limited it to the companions (Saḥâbî) of the Prophet. His pious and ascetic life is much praised, but his literary labours were less highly thought of. All that nothing of them has survived, although he composed a great many works. But he collected many pupils around him and his teachings afterwards found a fanatical but highly gifted protagonist in Ibn Hâza (q.v.). Cf. the article Zâhirîyya.

DA‘UD PASHA, the name of several Ottoman officials of high rank.

1. Da‘ud Pasha, Bâyazîd II’s Grand Vizier, an Albanian by birth, was taken prisoner in his youth and brought up at the imperial court; he began his career under Muhammad II, fought, as Beglerbeg of Anatolia, in the battle of Kérât îns (1473) against Urûn Hasan (Sa‘d al-Dîn, 557) and, as Beglerbeg of Rumelî, took part in the siege of Sèdru in 1478 (Sa‘d al-Dîn, i. 564). In 1483 (1483) he became Grand Vizier under Bâyazîd II. (Sa‘d al-Dîn, ii. 246) and was deposed on the 4th Rûjûb 920 = 8th March 1497 (Sa‘d al-Dîn, 605); according to the Venetian Report in
von Hammer, Geschichte des Osmanischen Reiches, II. 309 et seq. on the 3rd March) the reason alleged being that he had facilitated the flight to Persia of Mirza Almad, a grandson of Umm Hasan, who had married a daughter of Bayzad II (Lunelar, I. 644 et seq. 1040). He was sent in disgrace to Dinarzade, where he died on the 24th Rabii I. 904 (20th October 1498) (Sa'd al-Din, s. c.). While Grand Vizier he only twice took the field: in 893 (1487) he subjected the Wazak and Torghud tribes in Karaman (Sa'd al-Din, li. 53 et seq) and in 897 (1493) he accompanied the Sultan on his campaign against Albania (do., li. 71). The great mosque built by him in Constantinople in 895 (1490) [l. v., p. 371] is celebrated and after it one of the gates on the sea-walls on the Sea of Marmora is named (Hadżal al-Lajmanî, l. 105 et seq). His name also survives in the plain of Da'dud Pasha before the land-walls of the city, where the army assembled on leaving Constantinople for Rumelia; Da'dud Pasha had built a Serai there for himself (Hadżal al-Lajmanî, l. 396, cf. Kantemir, Gesch. des Osman. Reiches, p. 428; v. Hammer, Gesch. des Osman. Reiches, li. 286 is quite erroneous).

3. Kurna Da'dud Pasha, a Bosnian, brought up in the Imperial palace; in 1013 (1604) as Beglerbeg of Rumelia, and entered with several military expeditions in Asia Minor by Ahmed I.; he accompanied the expedition against Erivan in 1612 and was Kapudan-Pasha for a few days in Mustafa I.'s first reign (1613); in the reign of Osman II. he took part in the Chochem campaign in 1621. At the outbreak of the revolution against Osman II. (May 1662) he was appointed Grand Vizier and on the abdication of Wallid Sultan, the mother of Mustafa II., whose sister he had married, and carried out the execution of the deposed Sultan (20th May 1622). He was generally abhorred for this cruel deed and was deposed in a few weeks on the 7th Sha'bân (13th June), subsequently brought to book and executed on the 7th Rabî'I. 1032 (9th January 1625). His tomb is in the Mosque of Murat Pasha in the Askoria quarter (Husni al-Lajmanî, l. 204). Cf. Hadżal Khalîla, Pekhlevî; Nâsis, von Hammer, Gesch. des Osman. Reiches, in Rev. d'Antiquités. (J. H. Monkmann.)

3. Da'dud Pasha, last Ottoman governor of Bagdad of the Mamûlîk line, a Georgian slave-born about 1188 = 1774, taken to Bagdad at the age of eleven and bought by Sulaiman Pasha; at the age of twenty-seven he was appointed Āsemâdâr (tax farmer) to the governor; becoming the brother-in-law of Sa'd al-Bey, son of Sulaiman, he was elected by the latter as successor (1191 = 1779), but almost immediately dismissed; dissatisfied he assembled a few Mamlûks, enthrone himself at Sulaimanîya (1232 = 1816) and demanded the office of wâli, which he received; he entered into his office without striking a blow (5th Rabî'I. 1232 = 22nd Feb., 1817) and had his predecessor assassinated. During the fifteen years his power lasted, he restored peace to the country by pacifying the Yezidis and the Ancess (1234 = 1818); he prevented the advance of the Persian Army, contributed to the suppression of the Janissaries, carried out numerous public works (canals dug, mosques repaired or built) and instituted manufactures of cloth and gun-foundries; he engaged a French officer, Devenus, whom he took from the Persian service to drill a body of ten thousand regular soldiers which he had created (1824). His delay in forwarding the contribution demanded by the Porte at the conclusion of the war with Russia decided the government to put an end to the practical independence which the province of Bagdad enjoyed. Sulaiman-Efendi, entrusted with the task, was strangled by trusty emissaries of Da'dud who tried to fight but was defeated, rather by frauds and astuteness, than by the military operations conducted against him (1247 = 1831). When taken to Constantinople, Da'dud was well treated by the Sultan Mahmut II and 'Abd al-Malik'; in 1260 = 1844, he was appointed governor of the Tomb of the Prophet at Madina where he died in 1267 = 1851 and was buried opposite the tomb of the Caliph 'Abd-umm âl-âmmâh; his praises have been sung by the Arab poet 'Abd al-Qâdîr al-Ashraf. Bibliography: Ameb b. Hasan al-Halwî, Maqâlât al-Sulûm (Bombay, 1904); Shâhi-Zadi, ii. 306, 379; Ahmed Târîk al-Fârîkî, al-Thābiân al-anfâs (Constantinople, 1830), p. 239; Thâbit-Efendi, Bagdad-îl al-Kutuban Hanbûbî; Ancher-Eloy, Relations de Voyages en Orient, I. 325 et seq.; Cf. Huart, Histoire de Bagdad, p. 198, 275, 175; Coulomb, Histoire de Bagdad. 4. Da'dud Pasha, first governor (Muhâsinî) of the Lebanon province (1867—1868). He was an Armenian Catholic, born in Constantinople in 1816, who began his official career as attaché at the Turkish Embassy in Berlin and was afterwards Consul in Vienna. In 1868 he was appointed Minister of Public Works but was unsuccessful in an attempt to negotiate a loan in Europe and, as his health also began to fail, he had to give up his office. In 1873 he died at Biarritz: cf. Saint Bey, Šâhi al-Šâriy, ii. 217.

Dâ'ûd Pasha is the name of the tribe to which the family of the Nasrâbîs of Bahawalpur belongs. The name means 'descendants of Da'ûd' and the tribe claims descent from Dâ'ûd Khân a member of the Sindi family known as 'Abbût, from which also springs the Kálbârî family of Sindi. There can be little doubt that this family is purely indigenous, probably of Râhjāt or Dard descent, and that the legend of 'Abbût origin (founder of a family of the Egyptian 'Abbût Khalîts, who is supposed to have come to Sindi at the time of Sultan Muhammad Taghlîk) is of late invention. The family first emerged from obscurity in the XVIIIth century and obtained some importance through timely submission to Nâdir Shah, who gave them some of the possessions of the Kálbârîs including Shâhryâr. Shâh Muhammad the head of the family was killed afterwards in a war with the Kálbârîs, but the family continued to exist. Bahawal Khân founded the town of Bahawalpur in 1162 H. (1748 A. D.) and took the title of Nasrâbî, Under Abbât Khân Durrânî and his successors his dominions were enlarged. Bahawal Khân II was involved in wars with the Durrânîs, and Timur Shah invaded Bahawalpur but left it without success, and his successors came rather as refugees than conquerors, as for instance Shah Shuja'. al-Malk in 1219 H. (1804 A. D.) In 1808 Elphinstone visited Bahawalpur and the first treaty was made with the British government. Shâh Muhammad II succeeded in 1224 (1809); he was involved in wars with the Balû tribes beyond
the Indus and made friends with Raṇḍīt Singh, who after he had conquered Dēna Ghaṭī ṭhō ṭhō from the Durrāns gave it on lease for 250,000 rupees a year to Śiddī Ṣiddu Ṣiddu. This involved him in further trouble with the turbulent Bāle tribe, and especially the Khōṭ tribe who rejected his demand for the hand of a daughter of their chief. His successor Bahlīwal Šāhī Ṣī Ṣī was unable to fulfill his obligations to the sikhs and Raṇḍīt Singh sent an army under Gen. Ven- turini and seized him from Dēna Ghaṭī ṭhō ṭhō. To avoid destruction by the sikhs, he allied himself with the British, gave facilities for the passage of troops during the Alīgūr war of 1839-1842, and came to the help of Edwards during the siege of Multān in 1848-49. After the annexation of the Panḍīb, the Nawāb of Bahalīwalpur were maintained in possession of their dominions, but were troubled with internal feuds. The present Nawāb is a minor. He holds the second place among the chiefs of the Panḍīb and receives a salute of 17 guns from the Indian Government.

(M. L. W. D.)

DAW (often written Deaw, etc.), an Arab vessel on the Red Sea and elsewhere. The word is probably connected with dawī, darī, dawīnī (sleep) and appears to be of Persian origin.

Bibliography: Yule and Barnell, Hobson-Jobson, s. v. Dheri, Deaw.

DAWA (plur. ṣawādīs, s. v. p. 144) "medicine", "medicament", "drug". — The word is first used in the meaning of ingredient (constituent part of a medicine). Thus in Arabic prescriptions, after the individual components are stated — usually introduced by the word waṭṭ ṣawādī "let there be taken" — there very frequently appear: ṣawādī ṣawādī ṣawādī munakka munakka "these ingredients are to be pounded, sifted, and combined". Dawā is also used in the wider sense of "medicine", "drug". (A medicine composed of several elements). Medical treatment is therefore called waṭṭ ṣawādī bi ṣawādī in opposition to surgical (al-ṭīlī jī al-ṭīlī) and in medical works the prescriptions themselves are called ṣawādī ṣawādī or ṣawādī ṣawādī or are given with the simple title ṣawādī. The various prescriptions have also separate names according to their character, e.g. ṣawādī waṭṭiḥi "apetent medicine", ṣawādī ṣawādī "pungent medicine". (For other names see the article ADWĪA, p. 144).

An attempt has been made to derive the word "drug" common to all European languages from ṣawādī. Cf. C. F. Seybold in the Zeitschr. für Deutsche Wortforschung, x. 218 ff. 40.

(E. Mittwoch.)

DAWA, means accusation or arraignment in civil and criminal law. It should be noted that according to Muhammadan law, prosecution is still partly a private affair in as much as the aggrieved person means himself or his heir (and not the authorities) has the right either to inflict punishment himself on the guilty individual or to demand his punishment. The law however distinguishes between laws made by man (ṣajj ṣajj) and divine laws (ṣajj Allah). There is for example a human claim for justice when any-one has to demand the blood-money (diyya) in atonement for a murder or the price of a thing sold by a thief or the return of something stolen from him by a thief. If on the other hand an human being has been afflicted in his right, it is only a divine law that has been transgressed, the punishment of the guilty one is regarded as the right of God. In the latter case every believer has the right to bring the slayer to judgment. But the judge may pass sentence on him (ṣawādī). Such an accusation is called ṣawādī ṣawādī, and the office of muḥtār, who supervises commercial transactions in the markets and bazaars and when occasion arises has to act as public prosecutor, has arisen out of this right to arraign those who trespass divine commands. A ṣawādī ṣawādī is not allowed only when it is a quantum of a crime which requires a ṣawādī punishment. In this case the judge, if suspicion falls on anyone for any reason, must himself go into the matter and order punishment to be executed on the guilty individual in accordance with the strict letter of the law, if his guilt is conclusively and legally demonstrated. According to common law however it is regarded as meritorious (even for the judge also) to avert punishment from the guilty one as far as possible, if it is purely a divine law that has been transgressed. (Cf. the article "ADWĪA", p. 132).

As regards impeachment on a question of a law of man, the following is in the procedure to be observed. After the accused (al-ṣawādī) has duly preferred his charge and explained it, the judge hears the reply of the accused (al-ṣawādī al-nāzī). If the latter concedes the justice of the accusation it requires no further proof. If, on the other hand, the accused disputes the justice of the charge, the judge must act as a rule not pass sentence until the prosecutor has brought forward evidence in support of his statements. The judge is however allowed in certain circumstances, if he is personally acquainted with the facts of the case, to give a verdict from his own knowledge without further evidence being brought by either party, and he is never required to give a verdict, based on evidence formally valid adduced by the parties, but contrary to his own better knowledge. Valid evidence in a law-suit is mainly the testimony of free adult believers, who are known as āḥāli; written documents are not legally valid evidence unless their contents are confirmed by reliable witnesses. If the prosecutor cannot bring any proof he is nonsuited if the accused swears that the charge is unfounded. If the accused declines to take this oath, the accused is held to be in the right if he will testify on oath to the justice of the charge. The judge also can make one of the parties take an oath in order to make the testimony of a witness quite conclusive. Finally it is to be noted that the judge must dismiss a charge by a statute of limitation if it be proved that the prosecutor has, without valid grounds, been an unusually long time in bringing his charges, for this can only be interpreted as showing then that the accusation is unfounded. The period of limitation is however not definitely fixed. According to some faiths it is 15 years, while others say it is 30 or somewhat more.

DAWADAR. [See DAWADIR.]

DAWADIR, an encampment of Beduin Arabs, where the tents are arranged in a circle or ellipse, the empty space in the middle being reserved for the stocks;—this very ancient form of encampment is found among the Beduins of the East (North Syria, Mesopotamia), and among all the nomads or semi-nomads of North Africa; and the name dawadir, which is given to it, appears in certain medieval travellers and geographers. In the east, the exact form of the word is dawadir or wadad, and in the Maghreb it is dawadi or dawadi (plur. dawadirs). The number of tents which make up a dawadir is very variable; it may be as many as several hundreds, whilst on the other hand it need not be more than a dozen. Many reasons, e. g. the abundance of pasture, the varying state of security or insecurity, etc., lead alternately to the breaking up of the same body of Beduins into dawadirs of little importance or its reunion into dawadirs of considerable size. On the whole, the permanent state of peace and security introduced by the French conquest into Algeria and Tunisia tends to bring about the ultimate disappearance of the great groups of tents. The administrative language of Algeria, the word dawadir has lost its primitive significance and is used to mean an native settlement, nomad: or sedentary, under the authority of the same chief, wadad or shaih.

(W. MARSHALL.)

DAWAR. [See ZAMIN-DEWAR.]

DOWASIR or DOWAWIR is the name of a tract of country lying to the southwest of Nejd in Arabia. It is contained within latitude 21° and 24° N. and longitude 44° to 46° E., and forms one of the districts into which the kingdom of al-Riyadh is divided. The extreme limit of that kingdom in a southwestern direction is the Wadi Salayil, which separates the Wadi Dawarir from the Araf provence of the Yemen. The Wadi Dawarir itself seems to be the continuation in a northeasterly direction of the W. Tihmas and W. Bitah [q. v. p. 727], and is itself continued by the W. Al-Afr. The province, which is named after an Arab tribe, lies immediately to the north of the great southern desert or Dahab [q. v.], and is itself described as barren and unproductive. Throughout its shallow length of over 200 Arabian miles or ten days' journey are scattered villages of palmsless huts. The inhabitants are an inharmonious and soil. They live, wherever possible, by plunder, and are said to be the most fanatical and dangerous of all the Wadisurites. Palgrave states that they had been already extirpated by Mutanabbi, and are still "the most condemned and the most contemptible among all the Arab races". Dougherty states that one informant told him that one might ride a camel for three days through the Wadi Dawarir without leaving the palm-groves for any length of time; but the common report is what has been given above. It was also said to be filled with good villages of some of which Dougherty gives the names. The distance from al-Afr to Wadi Salayil was said to be twelve days' journey for a Dhuwir. It was also said that the wild ox was found there.

(T. II. WEIR.)

DAWATDAR (DAWADAR, DAWAHSE, DAWWASIR), composed of dawad or dawad and dar = inkpot-bearer, called dawasir in the journals of European pilgrims) was the title of an official in the Mamluk kingdom, who with the Dajdar [q. v.] and the private secretary received the mails destined for the Sultan from the emperors, and all the Sultan's letters signed by him and despatched. He supervised the remuneration of the Mamluks and had therefore the deciding voice in the assessment and allotment of the lands. The office of Adur Dawardar al-Khabir (Great Dawardar) was at first held by a Mamluk, who being a foreigner was often not sufficiently well acquainted with the Arabic language. Sultan Qal'a'n therefore found it necessary again to organise the Privy Chancery on the lines on which it had existed in the Fatimid period. The importance of the Grand Dawardar gradually increased. Even in the time of Sultan Hasan he was chosen from among the commanders of 1,000 Mamluks (general). In the later period of Mamluk rule in the xvth and beginning of the xviith centuries, his influence often turned the scale, particularly as the Grand Dawardar frequently held at the same time the office of faradar (Master of the Household) and of chief superintendent of rents (Khattat al-Kumshul). Besides the Grand Dawardar there was also a second Dawardar Sikkhan also is frequently mentioned; according to Ibn Iyad's account, his office was to conduct the correspondence between the Sultan and his Mamluks. Besides all the higher officials had Dawardars of their own, corresponding to the modern private secretaries.

(M. SCHRERD.)

DAWLATABAD, situated in the north-western corner of the Nogai's dominions, is the ancient DOWASIR or DOWAHR, which has been identified with Fiolemy's TOYAS. It was the capital of the northern TOYAS from 1187 until their final overthrow by the Muslims in 1318. In 1294
Devagiri was attacked by 'Ali al-Din, nephew and son-in-law of Fitr Shah Khalji of Dhill, but Khunzaduddin, the Vdala sidd, was permitted to redeem the city by paying an indemnity and promising to pay tribute. In 1318 the town was attacked and captured by Kuth al-Din Muhammad Shah Khalji who, having taken and stayed alive Hauril Deva, built the great mosque of which the ruins are still standing. Muhummad b. Taghlaq (1325–1351) after his extensive conquests in the Deccan, when in Dhill, Devagiri, fortified it absolutely, named it Dawlatabad, and made it the capital of his empire, driving the entire population of Dhill across India to the new city. The measure was a failure, and Muhammad was obliged, before the end of his reign, to permit the exiles to return. When the centurions of the Dakhun rebelled in 1347, Ishaq al-Din, whom they had elected as their king, was besieged for some time in Dhillatbad by the emperor, who was compelled to raise the siege by the news of a rebellion in Guptala. On his departure Ishaq al-Din resigned his crown to 'Ali al-Din (Ishaq), who assumed the title of Bahman Shah. He transferred the capital to Gulliara, and Dhillatbad remained the capital of the parof, or province, of that name. After 1400 the fortress was included in the dominions of the Nizam Shahi Kings of Ahmednagar. In 1630, when Shah Dahaan resolved to extinguish this dynasty, Fatb Khan, son of Malik Ambar the African, murdered Murtaza Nizam Shah III, and, after proclaiming his son, Husain Nizam Shah III, king, shut himself up in Dhillatbad. He made a pretence of submitting to the Moghuls, and the Nizam Shahi dominions were invaded by an army from Bidjirpur. Fatb Khan sought help from the emperor, but on the arrival of the imperial troops allied himself with the Bidjirpurs. In June, 1633, after a siege of four months, he was compelled to surrender, and Dhillatbad passed into the possession of Shah Dahaan.

The town on which the citadel stands has been scarped on all sides to a great height, and is surrounded at the foot of the escarpment by a deep and wide ditch. Access is gained to the citadel by a spiral passage, cut through the hill itself, and the entrance is closed by an iron gate. The top of this passage is covered by a grating, and when, which it was closed, a fire could be lighted in order to suffocate any who might succeed in forcing the iron gate. The fortress was impracticable before the improvement of artillery, and its capture by the officers of Shah Dahaan was due to the failure of provisions. The extensive ruins of the old city are now unoccupied, save for the huts of a few villagers.

AL-DAWLATABADI, Shihab al-Din Ahmad b. Shams al-Din b. Omar al-Zahawi al-Hindi, was born in Dhillatbad, a town in the Dakhun. His early days were passed in his native land but the fame of some eminent Ulama of Dhill induced him to leave his home, and to visit that town. Here he remained under the instruction of Mawliwani 'Ali al-Mukhtar and Mawliwani Khwajag. When Tamerlane swept down upon India, Mawliwani Khwajag thought it advisable to seek a place of safety. His pupil, Shihab al-Din Alyan, and the Mawliwani went to Kalapi and stayed there for a long time. But afterwards Shihab al-Din went to Dhillpur where he was received with honour by Sultan Ibrahim Shari, who appointed him Kudir al-Kasid (chief justice) of Dhillpur and conferred upon him the title of Malik al-'Ulam (king of the learned). He lived here to his last days and died (N. H. 849, A. D. 1397), and was buried on the right side of the mosque of Sultan Ibrahim Shari, and is the author of a commentary on the Koran, *Ikrar Manmuchar* (illustrograph, Lucknow 1880), and several other works.

(M. HUAET, HOBAIN.)

**DAWLAT-SHAB (Amir).** u. "ALLI AL-DAWLA BAKHTIYARI, a Persian man of letters, a descendant of a family of Isfah' in Khorasan which held certain estates there; his father was one of the most favoured courtiers of Shah Kuth, son of Tuth; he himself took part in the battle between Nush Mahman and Sultan Husain, near Antibakht. He was about fifty years of age when he began to write his *Tafhirkat al-Ghurab,* which was completed in 892 (1297).

The eldest son of Fahd, "Ali al-Shab was also called Dawlat-Shab; he was born at Nawr on the 7th Kabi'a, 1203 (6th Jan., 1883), was for long governor of Kirmam-shahin and died on the 26th Safar 1250 (3rd Dec., 1830) on returning from his campaign against Muhammad Fasaah; he left some poems.

(CL. HAORT.)

**DAWR (A. Joy, *Circle,* technical term in astronomy (period of revolution); in logic: argument in a circle, c. g.: The sun is the star of day and the day is the time when the sun is in the sky; in music: strophe in certain metres; in music: melody, for the meaning in divination, cf. Duy, Supplement, i. 473.)

**DAWRAK, a town in Khatatin, also called Dawk al-Pur, = D. of the Persians), in the middle ages capital of a district which was sometimes called after it and sometimes after Surak. Dawrak lay on the bank of the river of the same name, which flows parallel to the Khatat, in approximately 48° 37' E. Long. and 30° 35' N. Lat. The wells here made use to be famous; a sulphur spring was used for medicinal purposes (baths). A few remarkable buildings dated from the Sassanian period. In recent times Dawrak was abandoned by its inhabitants, who built a new town an hour or two's journey from it, the modern Fallahiya, to which the old name Dawrak (populbly Dukak) is also sometimes given. This modern town is now the most important place in the coastlands of Khatatin (or 'Arabistan). It is built in 30° 30' N. Lat. within the fork of the arms of the river Djarah in a low lying swampy district, above 16 miles from the Persian Gulf. The majority of the innumerable canals end at Fallahiya, and much of their water has been used up to irrigate the fields, and then lose themselves to the south in the swamps. The Djarah
connected by canals with the Kāhī. Fallāḥiyān
is about three miles in circumference; the inner
town is enclosed by a wall of earth protected by
towers around which extensive suburbs lie in the
shades of large groves of palms. With the seven
wells attached to it, the total population
numbered 30,000 or more. Within the town, there
is the manufacture of cloaks (kāfār) which are exported
to Arabia and Persia in large quantities. —

Since the middle ages the swampy lowlying stretch
of coast of Khālītān, 3 parasangs in length and
breadth, through which flow the river of Dāwārən
and the Kāhī, has been called Dānqākshān (Dōhākshān, popularly Dōqākshān) after Dāwārən.
The bay in this district of lagoons in the Persian
Gulf is called Khawr Dāwārən (Khōr Dōhārən).

DAWASA. The place, literally "trampling," was
a ceremony performed at Cairo by the Shaykh of the
Sa’dīte fraternity of dervishes on the Mīdār, or
birthday ceremonies, of the Prophet, of al-
Shāfi‘ī, of Sūlīmān, (a celebrated Cairene
saint who died in A.H. 847; Kāfīf, jad., 933; iv.
103), of Shāhī, Dāshqū, (or Tashqū, another
saint; see Lāqī, Modern Egyptians, chap. xxv.
and Kāfīf, jad., iii. 74, 133; iv. 111) and of
Shāhī of Dāwārən (see below). These took place
by day: a similar ceremony was performed by the
Shāhī al-Dīnār on the Mīdār of Dāshqū, but by
night. This ceremony has been described at length
by Lāqī, and, later, by Kāfīf. It is short, consisting in
about three hundred dervishes of that order laying
themselves down with their faces to the ground
and the Shāhī riding over them on horseback.
By a special kāfūmā [q.v.], inherent in the order,
one was never injured, and by such physical contact
the blessing (bāshā) belonging to the Shāhī was
communicated to his followers. The same
ceremony is performed elsewhere. Lady Burton
found it at Bāzī near Damascas (Inner Life of
Syria, chap. 4). Doby, Supplement, (v. r.) refers
to Fez (Journey to Tunisia, trad. par Pers. 760.
in other Orientals, this ceremony has been described
to rubbing with the feet of the Shāhī and even to the
dust on which he has trod. The
The use of a horse by the Sa’dītes has been associated
with the rank of their founder as a des-}
cendant from the Prophet. The origin of the Cairo
Dōsā is obscure, but the legend told of it is, that
when Shāhī, the son of Sa’d al-Dīn al-Hijāwī, the founder of the Sa’dīte Fraternity, came to Cairo, the Sa’dīte dervishes there asked him to establish for their usage a kāfūmā (good
innovation) which would be a kāfūmā in proof
of Māqāl fi’l-Shī‘a and of the sacred origin of their
order. He directed them to make round glass
vessels in rows on the ground, and to ride over
those on horseback without breaking them.
His successor could not, and prostrate

Dawārən — DAY.

935

derivatives were substituted for the more fragile
glass (Goldscher in Zeitschr. d. Deutsch. Morgenl.
Ges. xxvii. pp. 347 et seq.; Taf'ī’s, Muḥam-
mad ‘Abduh (Caïro, 1324), vol. ii. pp. 147 et seq.)
This Shāhī’s Yazūn is said by some (e. g. Gold-
scher’s authority) to be bartered in the Bāb al-Nāṣr,
and by others, outside of that gate on the way to
Dāwārən (Kāfīf, jad., ii. 2). The dates are quite
uncertain apparently because of the carefull
as to origin between the Sa’dīte and the Kāfīfite
derivatives. Perhaps, also, there has been confusion
with the mājāl of Shāhī Yazūn al-Shāfi‘ī (Ma-
p. 204 et seq.), the founder of the Yūsūfite order.
Sa’d al-Dīn is commonly assigned to the second
half of the 18th century of the Hijra. The Dōsā
was finally abolished by the Khādī ‘Abd al-
Mustafī in 1881, on the basis of a faštūn from the
chief Mufti of Egypt. It was judged, to be a
kāfūmā (good innovation) as involving con-
tempts to the long-standing tradition of Mustafī. The Sa’dīte pos-
tioned, that they might be permitted to hold it
at least on the Mīdār of Shāhī Yazūn himself,
but even that was forbidden. At present, all that
is left is that on the morning of those Mīdārs
the Shāhī finds before his door a number of
derivatives lying on the ground and walks over them

Al-Da’wān, Muḥammad K. an Arab. a Persiān, author,
born in 830 (1427) at Dāwān in the district of
Kāzar, where his father was Kāfīj; he claimed
descent from the Caliph ‘Abd al-Malik whose
Nītha al-Sa’dīte. He ultimately became Kāfīj of
the Bāb al-Nāṣr and professor at the Ma’dīr al-Ālī‘ī in
Shāfī‘ī and died in 907 (1501) (according to others
in 908) near Kāzar. In addition to numerous
commentaries on well known works of philosophical
and mystical literature he wrote a series of smaller
volumes on mystical and speculative treatises in Arabic.

He has been especially praised by his
students for these volumes. He has been
printed by another at al-Qādir al-Abdūn, the
student of Sa’d (d. 756 = 1355), Stamba, 1817, St.
Peterburg 1833; his commentary on the Tābī‘ī al-
Munīqī, an Aṣli al-Tābī‘īn (died 791 = 1386),
Luc
dow, 1264, 1293 (with glosses by Mir Zāhīti),
and his Fī’l al-Zawā‘ir, a treatise on several
philosophical and mystical points, compiled in
870 (1465) (Caïro 1326 with Taf’ī’s), the idea
of which had come to him not far from the Tugrīa,
which is also called al-Zawā‘ir, after a vision of
Alī. Of his Persian works the best known is his
edition of Naṣīr as-Sīnī’s Taf’ī’s, 1773),
Aḥkāf al-Nāṣirī, which was itself a translation
of the Kāfīf of Ibn Maskawah (died 421 = 1030),
entitled Lewā‘ī al-rahīf, fi Maktūm al-Abdūn or more briefly Aḥkāf al-Nāṣirī, printed
Caccurin 810, Navstlah 1283, trad. into English
by W. T. Thompson, Practical Philosophy
of the Muhammadan People, London 1839.

Bibliography: Khowandurī, Iṣṭaṣ al-
Shu‘ar (Bombay 1857), iii. 4, 113; Ross, Cat-
tology of the Persian Manuscripts in the British
Museum, ii. 442; Brückelmann, Gesch. der
arch. Literatur, ii. 217.

DAY (D.). Maternal uncle; cf. the article family.

DAY (DAI), name of the tenth month in the
Perian calendar, and also the name of the 8th, 15th and 23rd day of each month, to which the name of the next day is added in order to distinguish them from one another, thus: Dai bā Aghdar, Dai bā Mīkhā, Dai bā Dīmā.

DEBDU, a town in the east of Morocco at the western end of the chalk range which runs from Tinocom to Debdo, is 3530 feet above sea-level (according to De Fouchald), about 85 miles, as the crow flies, from the sea and has a temperate climate. Debdo lies in the upper valley of the Wat Debdo, a tributary to the middle Mulaya on its right bank. "Debdo" says de Fouchald, is built on a delightful site at the foot of the right bank of the valley, which rises sheer upright to a height of 250 feet above the river. It forms a high wall of yellow rock, over which run long creepers with their dark foliage. At the top lies a plateau with an old fortress in a commanding position on the edge of the precipice with a high miraret and crumbling towers, on the other side of the plateau is a series of steep walls of rock and step slopes rising to the summit of the heights. There, 4500 feet above Debdo is a long wooded ridge called the Gaida. Brooks running from the mountains of the high cascade down these steep walls and clothe the surface with bands of silver. Debdo is surrounded by splendid gardens; vines, olive, fig, pomegranate and peach trees form thick groves around the town, and extend beyond along the edge of the Wat. The rest of the valley is covered with pasture, fields of wheat and barley rising up its lower slopes.

It is not possible to fix the date of origin of Debdo. Historians mention it for the first time in connection with the partition effected by 'Abd al-Hajj in the 8th = 13th century among the Marinid tribes. The district of Debdo fell to the Bani Urtațin and the town became the capital of their fief. These Berbers organised into a kind of mahzam tribe, were entrusted with the task of protecting the kingdom of Fis against the attacks of the rulers of Tlemcen. Thence resulted numerous struggles of which the best known is the war of 'Abd al-Hamid II, king of Tlemcen, against Ibn Zagan, lord of Debdo, and his ally Wannamnat b. 'Attif, lord of Garaf and chieftain of the Mau'étch Arabs of the Angled country to the north of Debdo (Sulit, Aïlif, Sa'djia, etc.). In this war, in the 9th century of our era, the lands of Debdo and of Garaf were utterly devastated by the king of Tlemcen.

The fall of the Marinids and the rise of the Bani Wujjas brought about a revival among the states of the Angled country, who entered the service of the Tlemcen dynasty. Wars followed between the Urtațin Marinids of Debdo and the Arsah. The latter besieged the town; the Marinid chieftain Ibn Rahil negotiated with them, then installed himself at Debdo where about 1430 he founded a practically independent principality. This little state lasted for over a century, then the Marinid the third successor of Ibn Rahil, had a fortress built, erected the mosque and its ka'bah, welcomed many foreigners to his town, particularly the Andalusian Jews who had been driven out at the Spanish conquest. To this day the Jews of Debdo divide themselves into native and Andalusian. It was in this reign of the Amir Muhammad that the Bani Wujjas sovereignty of Fis was forced to recognize the practical independence of the descendants of Ibn Rahil. They were too much occupied with their struggles against the Spanish and Portuguese in the west and north of Morocco, to undertake the difficult task of forcing the Amir of Debdo to submit.

Nevertheless the descendants of Ibn Rahil took up arms on behalf of their Marinid suzerain against the Sa'dian Sharifs who were trying to overthrow the kings of Fis. After the capture of Fis from the Shawir Muhammad al-Mahdi in 1534 we find the Amir of Debdo as an ally of the Marinid of Hassania and of the Türkischer Beghribeg Shah Ra'ia. The second Sa'dian Sultan, al-Dżahhāl b. Tahf, forced the last Amir of Debdo, 'Amundar, to come and live in Fis. On the death of the latter, the Sa'di extinguished the principality and placed the territory of Debdo under a Pasha in 1563.

From this time onward the history of Debdo is full of obscurity. There were not only intermittent wars for predominance between Arab and Berber tribes, wars in which the people of the town played a part, and in which their town was often at stake. The town gradually became so depopulated that the Jewish merchants in it were ultimately more numerous than the Muslims. Debdo became merely the commercial centre of Eastern Morocco and did not have an important garrison. The disputes about boundaries between the Turks in Algiers and the Sharifs of Fis had their scene farther west: the upper valley of the Wat 25, Udjar and the basin of the Tafsīf.

From the time of Mūsīy Hashan (1873—1894) there has not been a Pasha in Debdo, which is over 100 miles from the frontier of French Morocco. Debdo became ruled like the majority of independent Berber districts by the ādām and al-ka'm. The Muhammadan population recognised the authority of the 'Amil of Tafsīf, who annually sent his Khalīfa to collect taxes; the Jews recognised the Pasha of Fis al-Dżahhāl, to whom they regularly sent their tribute. This state of practically complete independence facilitated the anarchy engendered by conflicts between Berber and Arab Luff (political confederations).

In a period which cannot be exactly defined, about the middle of the 16th century, the Ulid al-5ādir Arabs, already masters of the right bank of the Upper Mulaya and the Rakkam (in the south of the Gaida or mountainous plateau of Debdo) ultimately secured the town of Debdo also, in which two of their sections, the Ulid Yusuf and the Ulid 'Abd, definitely installed themselves. Since then Arab influence and the Arabic language have been predominant in Debdo, to such an extent that the Berber language is only spoken in the ísticas of the surrounding mountains.

The accession of the Mūsīy 'Abd al-Azīz (1594), and the rebellion of the claimant 'Abd al-Amir, were the signal for a recurrence of anarchy in this region. Ibn Hujjāj, a Berber of the Bani Sandal, who had distinguished himself in the pretender's wars, brought the region under his rule and tried to make himself independent. But in 1604 at the instigation of a Berber Jew Dūdā b. Hadda, the town and all the surrounding tribes proclaimed the pretender. The latter appointed Kā'id from among his officers to all the tribes; but these foreign Kā'idis were incapable of putting an end to disputes between
the various tribes and to put down the resultant anarchy. They were content to collect tribute from their subjects and to oppress them. Dâdû b. Hâfida, Kâlid of Dâbûbî, rallied by his enemies the "tyrants," alone held out. He took advantage of his position to revenge himself on his enemies, the Andalusian Jews. The latter attacked him before the Rabbinical tribunal of Fâs and even before that of Jerusalem. His Hâdâ was confirmed, but his exploits only ceased with the French occupation of the town, which took place in 1911 after the proclamation of Mûlîyah Hâshî by the Andalusian Jews and the Muhammadan Arabs. It was necessitated by the increase in local disturbances, the Berber attempts to plunder the town but particularly by the assassination of several Frenchmen. Dâbûbî is one of the four markets to be jointly organised by France and Morocco in the Algerian-Moroccan hinterland (Art. 3 of the Franco-Moroccan treaty of the 20th April 1902).

The town consists of two parts, Dâbûbî proper with its fortress Kašba Dâbûbî, and a suburb Mawâlî on the left bank of the valley. Dâbûbî has 2032 inhabitants of whom 729 are Muhammadans and 1303 Jews. The Kašba has 264 Muhammadan inhabitants and Mawâlî 234; in all 2530.

The town is divided into four quarters: 1. the Ulād ʿAmir of Berber origin; 2. the Ulād Yûsuf, Arabs; 3. the Ulūd Abîd, Arabs; 4. in the centre the Mawâlî, the Kašba, and the Jâhâr. The Ulād ʿAmir claim descent from the Malākîs. They are divided into Khwâsh (sons of Kâhîn) who are Berbers, and Andalusian (Ulūd Marqânc, Ulūd b. Guîn, Ulūd b. Susân, Ulūd Nâzîm and Ulūd Mâghâlî).

The Ulūd ʿAmir claim to be banârous; for it is in their quarter that the only mosque in the town is found. The Jews have 12 synagogues of which two are particularly notable for their internal decorations. The natives say that the Kašba was constructed by Christians; in any case it is remarkable for its size and tall minaret.

The houses of Dâbûbî are square in form like those of Tlemcān, built of jâdîm (a kind of tile) and are surrounded by terraces in spite of the high situation of the town. Each has its frînâ, a kind of oven for baking bread but not one has a well or granary. The latter are replaced by mats baskets, in which the natives store their grain.

Before the troubles of the last few years the municipal government of Dâbûbî was carried on by three zâhiyâ elected annually by the citizens. They were also charged with the duty of administering justice among Muhammadans. Among the Jews, on the other hand, justice was administered by a Rabbinical tribunal which still exists. It consists of a Chief Rabbi and two Rabbi assessors. These are appointed by the members of the local consistory called shiâjîh (pler. of shiâjî). The shiâjîh are nominated by the Sâlîm of Fâs. It is clear therefore that the Jews are an influential element, for the Maghribi, in the midst of almost independent peoples. In the case of an appeal the case is settled before the Rabbinical tribune in Fâs which is the final course of appeal.

The marriage customs of Dâbûbî are those of the Berbers of the district except as regards the Andalusian Jews who follow the customs observed in Tetwân and Fâs. The Andalusian Jews can dispose of their dowry and realise it under the supervision of her husband. The Berber Jewesses possess nothing; her husband has bought her from another Jewish family and she is the property of her lord and master. The Jews of Dâbûbî are polygamous.

The Andalusian Jews dress in the western (Teltwâna, Fâs etc.) fashion while the Berber Jews follow the custom of the Arabs or Berbers of their district. The Jewish women dress like Muhammadan women but do not wear the nîbâs of the Beduin. The Jewesses tie a kerchief round their heads and do not wear the sâhâbas.

The women make carpets, which are sold in Tlemcān, weave cloths called nesghâs, which after being embroidered by the men find a market in the country round. At Dâbûbî black soap is also made as well as slaves and other Arab household requisites.

The much frequented weekly market of Dâbûbî is held on Thursdays. But the Berber Jews are not content with displaying their goods there; they go to trade also among the tribes and towns of Algeria of the Uqîdja region and the Upper Mâlîyâ. Owing to a kind of feudal system of protection — Kašbâ yâskâ de jariji, "every Jew has his master" — says a local proverb — they trade in comparative security up to borders of the lands still unsubdued. For this the merchant makes an agreement with a Berber chief, pays him an annual sum, leaves with him in his grey one of his wives and her children, and by an oath on the Bible declares himself the chief's man. Henceforth the Jews can freely go about wherever the influence of the chief extends. This custom, which was noted even in the middle ages by al-Bakî, is general in the Moroccan Atlas.

Agriculture, favoured by the climate, is prosperous in the neighbourhood of Dâbûbî. Muhammadan and Jews alike are landlords and cultivators. Some Jews work as khammâmis, i.e. as hired labourers for a fifth of the gross harvest. The unit measure of labour is the mbâs, the amount which a pair of asses can till in a year, as in Algeria. There are fine nut-trees around the Kašba of Dâbûbî. The woods around are unfortunately rendered unsafe by many wild boars and a few panthers.

To the south of Dâbûbî is a fountain the building of which according to the natives dates from Roman times. They also say that their town is over 500 years older than Fâs. This fountain and many others supply the beautiful gardens with water. The waters irrigating them are divided according to the number of square feet in each.

The length of the time they are to be wasted is fixed as follows: by day the hours are decided
by the length of the shadow cast by a staff placed perpendicularly in the sunlight, by night the hours are fixed by the movement of the stars. In a district, agricultural products in Dehli are carried throughout the "amadi" of Ullas along with those of the Turk Samaus.

Schefer), ii. 330 et seq.; il. 140, 399, 321; De Fouchaux, "Reconnaissance au Maroc", p. 246 et seq.; Marmol, "L'Asie", ii. 296; Masson, "Le Maroc", passim; La Martiniere and Lacrot, "Documents pour servir à l'Etude du Nord Ouest African", i, 122 et seq.; A. Bernard, "La Cosenzza Algérie-Maroc", p. 146 et seq.; Nellis, "Notices sur les Tribus de la région de Douira", passim. The reports of the Bureau des Affaires Indigènes d'Ouloutes have also been utilised. (A. Cour.)

**DEDE** (v.), "grandfather," is a surname frequently given to Shkelsh of Turkish communities. We may cite the names of Khish-Dede Na'nibon, born at Fergana; Muhammad Dede, buried near the seven towers at Constantinople; Hamza-Dede, who had built himself a hut as high as the minaret of the mosque of Sultan Muhammad II and died when his frail structure was destroyed in a night by a tempest; Khamir Dede, Seif Dede, who lodges in a bokhane and threw himself into the sea and was never seen again; Sedik Hakk, Aga of Seima in Hungary, who became daimi at the end of the war under Muhammad III and only recovered his speech seven years hence by pronouncing the words "yemnâ zhorâ" "70 piseler" constantly, which became his surname; he used to walk among the streets of the cities without getting any trace of mud on his slippers; Ahmet Dede, who lived at Saraidji-Hànna, never left it and used to clean the streets of the stones which he found in them; Durni-DDede, at Kamilji-Hjàr, whom the captains of ships used to consult as they passed. In Asia Minor pilgrims visit the tomb of Burhan-Dede, near that of Koyun-Bâbâ, and that of Pir-Dede, a contemporary of Murad II at Marashin.

**Bibliography**: Ewilja Efendi, "Travels", transl. Hammel, ii. 21, 25; il. 97, 215. (Cl. Huart.)

**DEDE AGHÂ**, a supporter on the Aqean Sea in the wilayet of the islam, and capital of the Sandjak of the same name. In recent years since it has been connected by rail with Constantinople and Salonika, the town formerly of no importance, has increased considerably and now has 80,000 inhabitants. The harbour is a fairly busy one and is increasing in prosperity. Cl. "Sîrab, Liqâb, Liqâb, Liqâb, p. 395 et seq.

**DEDE SULTAN**. A certain Borekduje Mujafta is known by this name, who played a part in a religious movement under Sultan Muhammad I. For further information see the article INDIAN SKÂNA.

**DEFTER** (v.), from the Greek διαφημ., parchment, register, book; cf. Yule and Burnell, "History of Turkey", i. 747.

**DEFTERDAR** (v.), strictly "keeper of the registers," was formerly the name applied in the Ottoman Empire to the superintendent of the finances and still applied to the director of the finances of each province ("amadi"). From the time of Muhammad III there was only one defterdar, that of Esmih, who had an assistant for the Asiatic provinces; at a later period there were four of them. Selim I had instituted the third to control the finances of Egypt and Syria; the fourth was created by Sultan IV for Hungary and the provinces of the Danube. Under Selim III, the first, was the minister of finance, the second administered the new taxes which were established under the name of sînâtên fiâoden; the third had charge of the collection of the capital. (sultan世俗aires.) These officials were admitted on Tuesdays with the vassals to audience of the Sultan; but they could not present reports which had been revised by the Grand Vizier and approved of by him. The first promontory on the Bosporus on the European side is called Defterdar-Buari, "Cape of the Controller of Finance.

**Bibliography**: Hammer, "Histoire de l'Empire Othomân", ii. 212; d'Oulotes, "Travels", ed. 192, 261. (Cl. Huart.)

**DEHÄS**, explained by Ibn Hawqal as driving dâw "Ten Mills," the name of the river of Balakh called Baktros by the ancients (cf. Peshawar's "Râf-i-Kapâki," ii. 2814) and now known as Balakh-dâ, to which this town owes its favourable topographical situation (it must however be noted that the Araba frequently mean the Amu-Darya by the Nahr Balakh). The Dehas, which is rich in fish, rises in the Koh-I-Râth from the Band-i Amdr, flows through several natural pools and on emerging in the plains south of Balakh is divided into numerous channels, which irrigate the wide country around the town, in which their waters disappear without reaching the Amu-Darya (see Yate, "Northern Afghanistan", p. 283). The supervision of the individual channels was in ancient times as even in the sixteenth century an important and remunerative task (see Asiatic Journal, xxii. 169). The swamping of the district and its resultant unhealthiness is apparently due to the increasing neglect of the canal system. — For further literature see the article BALASH.

**DEIR AL-ZOR**, the capital of the sandjak of Zeb directly under the Sublime Porte; it is a charming, quite modern town on the right bank of the Euphrates with a government palace in the modern Greek style, three mosques, and two Catholic churches. It has also basars of vaulted masonry rebuilt in 1880 and about 2,500 stone houses with streets 3 yards broad. It is surrounded by the gardens of the island of Havida and connected by canal to the left bank of the river, a large boat called the turâme is used. It has about 20,000 inhabitants, the great majority of whom are Saudis. It is here that the date palm begins to be cultivated (see the article 208).

**Bibliography**: V. Chmiel, "Turquie d'Asie", ii. 275 et seq.; René d'Argonne Macleod, s. ix. 1911, p. 208; M. van Oppenheim, "Vom Mittelmeers zum Persischen Golf", i. 329 et seq. (Cl. Huart.)

DELI (See DELI)

DELEHEM (See ELLEHEM). [See DAVLA.]

DELI (v.), "mad" or "wild", the name of a body of irregular troops formerly in the Turkish army, mainly Bosnians or Albanians by birth and commanded by a Deli Bashi. They often served as the Vizier's bodyguard. — The word deli also appears in Turkish personal names, e.g.
Deli Beräder, as Ghazi of Brusa [q. v.], was called; Deli Bekir Tuszes, a character in the Turkish shadow-play.

_Bibliography:_ Eycart, _Histoire de l'Empire Ottomane_, p. 468 et seq.; Jacob, _Türkische Literaturgeschichte_, p. 24 et seq.

**DEMÅVÆND**, the highest point in the mountains on the borders of Northern Persia, the Elburz (cf. the article _ALBURZ_), and about 50 miles N. E. of Taberhri. According to de Morgan it rises out of the Plateau of Râhna to a height of 13,000 feet above it. The various estimates of its height differ; Thomas estimates it at 12,000 feet (certainly too high), de Morgan at 20,260 feet, Houton Schindler at 19,846, Sven Hedin at 18,187 and in the last edition of Stieger's _Handatlas_ (1910) it is given as 18,350 feet. Its summit covered with eternal snow and almost always enveloped in clouds, may be seen several days' journey off as _Vâkâni_ tells us from his own experience. In good weather and light it may be seen as _Molgoun_ tells us, from the Caspian sea, a distance of over 260 versts (162 miles). Kazwini's statements on this point are exaggerated; but it is certain that the massif of Demêwând commands the whole constellations of Mâzandaran (the medieval Tabaristan).

Geologically Demêwând is of recent origin as is clear from its volcanic nature which is shown in several features. There are as many as 70 craters on this mountain mass; from one of them, which is covered with thick deposits of sulphur, rises a conical peak. There are also many sulphur springs on its summit; Jâzîfeh mentions the springs of Demêwând from which smoke arises by day and fire by night. Demêwând is the centre of the earthquake zone which stretches throughout Mâzandaran. It is clear from the earlier accounts of Arab travellers that the internal activity of the central volcano had not yet quite ceased as it now has.

Demêwând is rich in minerals, particularly anthracite. Sulphur is found in immense quantities; the finest quality, the best in Persia, according to Pollak (op. cit., li. 178), is found just below the summit of the mountain, where it is collected in the warm springs by the people of Ask and Demêwând, and sold by them. Around the foot of Demêwând rise numerous mineral springs of which two, in particular, one in the little town of Ask, the other somewhat farther north on the Horâba (Herbas), enjoy a great reputation (as baths). The majority deposit considerable sediment; for example Ask is built on the deposits of springs (Pollak, op. cit., li. 226). The springs which are found in the valleys of Demêwând are highly esteemed in Persia (Pollak, op. cit., li. 146).

Like the other Titans of Eastern Asia, (e. g. Ararat q. v., p. 409) Demêwând was for long regarded as inaccessible; this opinion which is widely disseminated is found repeatedly in the Arab geographers, though one successful ascent is mentioned; see 'Ali h. Razîn's statement in Kazwini, p. 159. Oliver (1758) was the first European traveller to visit the mountain, without being able to reach the summit. It was not till 1837 that W. Taylor reached the top; he was followed in 1845 by the botanist Th. Kotches and in 1852 by the Austrian engineer Canontii and Baron Minutoli, and also to have reached the summit in 1868; see Petermann's _Geographische Mitteilungen_, 1861, p. 472. In recent years a number of (rather successful) ascents have been made (by Nepals etc.) which have usually been undertaken from Ask; cf. especially Sven Hedin, op. cit. Inhabitants of the towns of Ask and Demêwând also go up the mountain once or twice a year to collect the sulphur found round the summit.

In the ancient history of Persia, Demêwând is the scene of the legendary history of the Fâhshâ and Kayûn rulers. Even at the present day the people of Mâzandaran point out the different places which were the scenes of the wonderful deeds of Djamëhdât, Fâshûtûn, Šám, Zâf, Rustâm and other heroes immortalised in the _Shāh-nâmah_. Demêwând is also the abode of the fabulous bird Simógha. From ancient times the prison of the cruel king Dâhûk (Old Iran. Dâthâka, also Bëwramâny) has been located here. Farîshûn (Old Iran. Farâshû) is traditionally said to have shut him up in a cavern on the summit of this mountain and here the imprisoned tyrant still lives to this day, as the country people believe. The grotto sounds which are periodically heard inside the mountain are thought to be his groans and the vapour and smoke which comes from cliffs and springs on the face of the mountain his breath. It is of course evident, that the volcanic properties of Demêwând are responsible for the formation of this legend. The demon Sâkhîr imprisoned by Solomôn is also enclosed in Demêwând according to one story. This mountain is thought by the Persians to be the highest in Iran next to that on which Noah's Ark rested. Cf. the wealth of legends of Demêwând in _Vâkâni_, li. 606, 610; Kazwini, op. cit.; Molgounf, op. cit., p. 224 et seq.; Grünbaum in the _Zeitschr., für Deutsch. Morgenl. Ge-schlech.,_ xxxi. 238-239.

There used to be many fortified places on the slopes and in the valleys of Demêwând. At the present day, the most important place is the little town called Demêwând after the mountain and situated on its southwestern spur (according to de Morgan 6425 feet above sea-level). It is said to be very ancient and according to Moustafi used to be called Fâshûn. The beautiful valley of Demêwând watered by two rivers with the chief town of the same name, and ten villages no longer belongs to Mâzandaran but to _Isfâhân_. In consequence of its high situation the climate is very pleasant; on this account the Shâh of Persia used to delight in spending the summer in its valleys. The ultra-Shiite sect of the _'Ali b. Fâhî_ (see above, p. 292) has a large number of adherents among the inhabitants of this district.

As to the name Demêwând itself it appears in Persian and Arabic sources in a series of variant forms. Pers. Dânhwând (Vullers, _Lex. Persico-Lat._, li. 907*), Dâmâwând (L. C., 902*), Demêwând (l. c., 919*) and Demêwând (1955) An. Demêwând, Dahwând, Dêmâwând. The oldest form of the name appears to be Dähwând; the form Demêwând is now the usual one.

_Bibliography:_ _Bibliotheca Geograph._, Arab.
DENIA is the chief town in the northeastern district of the Spanish province of Alicante, the most southerly of the three modern provinces (Castellón de la Plana, Valencia, Alicante) which make up the ancient kingdom of Valencia, with 14,000 inhabitants, situated almost at the southeast end of the Gulf of Valencia (Sinus Saronicus) north of Mango (2196 feet high), in Arabic Ḍubba Mātūn = Monterozzi, was on account of its good harbour, northwest of the ancient promontory of Aenartium, Tarradus or Tarraco (now called Cabo de San Antonio, S. Martín de la Nap) an ancient Phocasian settlement (from Massilia-Marseille or Emporion-Ampurias) founded in the 6th century B.C., and was first called Ṭaḥara (Strabo), Homeiropósis, "the watcher for the day," afterwards Aenartium from the famous temple of the Euphrates, Aenarion on the hill on which the town was built and since the Roman period Dianium (the town of Diana) whence the Arabic Aṭīm, with Imāl Dinya and Spanish Denia. Although it was a Greek colony allied with the Romans it was spared by the Carthaginians; near it Carthage defeated the Spaniards before 205 B.C. Its soil was used by Sertorius, the liberator of Spain, as his last bulwark and station for his fleet; and it was most probably there that he was murdered in 73. Caesar punished it as it was on the side of Pompey (Dianium Stipendiarii). As a municipium however it attained considerable prosperity under Roman rule as excavations show. But it was under Arab rule that it reached its zenith (50,000 inhabitants) after the conquest by Tibir in 713 A.D., while nothing is known of it for the period of migrations and the Gothic. It played a part in the risings against 'Abd al-Rahman I and later, but still more after the extinction of the caliphat of Cordova in 1013, when the 'Amirid al-Muwardak, a maimmed slave of 'Abd al-Rahman b. Munṣur, named Abu l-Dihāb Mūṣāḥah, [q. v.] (Mūṣāḥah, wisen in western sources, Musett, Mugeto) seized Denia and the Balearic Islands [q. v., p. 617] (405-430 = 1014-1015 = 1044-1045), at first in alliance with the learned Khalīfa Mūṣāḥah (1015-1030), and tried also to subdue Sardinia. His son 'All Ikhāl al-Dawla ruled over Denia from 431-439 = 1045-1054; but was dethroned by the Ḥabīb al-Muṭlaq, the former remained attached to the kingdom of Saragossa from 1057-1081 when it fell on the partition of this kingdom, with Lérida and Tortosa, to the second son Muḥir of al-Muṭlaq till 1099. His son Sulaymān 'Abd al-Dawla continued to reign under the regency of the Bani Rait till after 1092 when Denia was ruled by the governors of the Berber Almoravids and Almohads (with frequent rebellions and reconquest), who held it till in 1224 James I of Aragon's (Don Jaime I el-Batlador) German general Carcas finally won it from the Muslims. In 1358 Denia was made a county by Pedro IV and a duchy by the Reyes Católicos (Ferdinand and Isabel). In 1610 through the expulsion of the Judaeos Moros by Philip III, Denia lost the greatest part of its population.
and therewith all its importance. As a fortified seaport it played a prominent part in the War of the Spanish Succession on the Archipelago's side, was twice besieged by Philip V and taken in 1708. In 1812-1813 it was occupied by the French.

The most celebrated Arab scholar of Dénia is the great reader of the Koran Abu 'Amir 'Uthmân b. Sa'd al-Denî (q. v., p. 512).

DÉNIZ (Te; Est. Turk. Günge, Sea-Varađ, Sea-Karave, the B. E. and C. A. D. Dini, the Greek Archipelago (also called Acharavës or denizî) and in a wider sense the Mediterranean; it is also the name of a lake north of Antioch in the Wilâyê of Aleppo, which is also called the Lake of Yaghra and Amûk-Gölî (al-Amûk is the name of the district, see Abu L-Fida', Ta'ziyn, p. 45 et seq.). Aqîhâm-dêdîn, "ocean of trees," the name of a great forest with very thick foliage at Famal (Famalic) in the northeast of the peninsula of Kozlî-je.

**Bibliography:** 'Ali Djevâtî, Description de Dêni, p. 17, 34, 346; Semay Bâyî, Kûntî al-alamî, i. 149-150, 239-240, 245 et seq. (Cr. Haury).

DÎNIZLI, capital of the Sanjak, also called Dinize, the name of the province in the province of Aiûdî (Seyyûr) with a population of 20,000 including 2000 Turkish-speaking Greeks, in the sixteenth century a fortified town, and latterly a fortified town of the Caracal, near the railway station of G僧dejî, 6 miles from Dînjâ. In the wars of the Komnenoi with the Seljûqs (twelfth and thirteenth centuries) Dînjâ was repeatedly captured by the latter. Alexios I occupied it for a brief period in 1098 (Anna Comnena, ed. Reiterschneider, ii. 118 et seq.); John Comnenos captured it a second time in 1119 and fortified it (Comnena, p. 5; Nicetas, p. 17); in 1155 and again in 1180 the town was sacked by neighbouring Turkish tribes (Comnena, p. 198; Nicetas, p. 163 and 523), but remained in possession of the Byzantines, who strengthened the fortifications and made the inhabitants live within the city walls. In 1206 Theodore Lascaris was forced to cede the district of Dînjâ and Chomen to Manuel Mawroûzim, the father-in-law and vassal of Kai-Khaswan I (Nicetas, p. 842; cf. Remel of the Texnî Roll in l'Histoire des Seljouqû, ed. Housman, iii. 66, 67 = iv. 28). On the Tatir invasion (1255) however Kai-Khaswan II restored Laodice to Michael Palaemoniogus, but the small Greek garrison was unable long to hold the city (Akropolî, p. 333 et seq.). Lâdî and Chouze became the seat of a vicariato under the Seljouqu (Remel et al., iv. 308, cf. 333).

When Don Baltás visited Dînjâ in 732 (1751-1752) after the collapse of the Seljûq empire, the town and its environs were in the possession of an independent prince, Ismaûî (ed. Delahaye and Sangainzesti, ii. 271; Seljûk al-Dîn, Not. et Extraits, i. 358, 359). Turkomans of the border tribes dwelled in the mountains around Dînjâ (Abu 'l-Fida', travel. by Reinaud, ii. 2, 134). It afterwards belonged to the kingdom of the Karâmângûlî of Kutâhia and on the overthrow of these princes by Bâyazî the I was incorporated in the Ottoman Empire. Thûr spent some time at Dînjâ in the autumn of 1402 on his campaign against Aniâl (cf. Sharaf al-Dîn and Djevâtî, p. 77). The town which at the end of the eighteenth century contained 24 quarters with 7 mosques (Ljkhâmamû, p. 634, cf. Kirat, Present State of the Greek Church, p. 358 et seq.; Constantin, 2nd ed., p. 221) and in the reign of Bâyazî II was the residence of one of his sons (Leonc. Hist. Ott., p. 659), belonged to theEyat al-Anadolu and was surrounded by old fortifications; in 1114 (1702-1703) it was destroyed by an earthquake, by which 12,000 people lost their lives (Rashîd, i. fol. 274v): Pococke, Description of the East, ii. 2, 71, cf. Chandler, loc. cit.; Hamilton, iv. 518); the population moved into the gardens and fields outside the ancient town; cf. the descriptions of the modern town in Cabult, iii. 615 et seq., and Yi. Sarre, Reise in Kleinアジア, p. 10 et seq.

The name of the town was originally Dungânâ (cf. the Arab authors quoted above, Abîhâya al-dînî, p. 42, inscription of Yâ'yubi GemîrîÎîîî in the Kevi Histoire de l'Inst. d'Histoire Ottomane, i. 118, Schillberger, ed. Langmantel, p. 53; Leonc. Hist., p. 659, 684; Tungâhî or Tungâhi in Sharaf al-Dîn) and it was not till later on account of its repulsive meaning (dungâh = domus *swine*) that it was changed to Dungâhî or Dînjâ (from dûngha, dîn, cheese).

(J. H. M. McDONNELL.)

DER. [See DIW.]

DERDJAT, the name of a tract lying between the River Indus to the E. and the Sulaimân Mountains to the W., which includes the modern districts of Dera Ismail Khan and Dera Ghazi Khan. Until 1907 A. D. the Derjat Division of the Punjab included these two districts, and also the District of Bâûnt, but on the formation of the N. W. Frontier Province of British India the Derdjat Division ceased to exist. At present its northern part forms part of that province, while Dera Ghazi Khan remains part of the Punjab. The name Derdjat is a supposed Persian plural of the Indian word Dera or encampment, and means the "Country of the Derjes," those of the three towns of Dera Ismail Khan, Dera Ghazi Khan and Dera Fate Khan, founded by Balut leaders in the early part of the sixteenth century, (See BALOTRAIN, p. 636). Three of these towns were all close to the River Indus, and have been liable to damage by its erosion. Under the Sikh rule Dera Ismail Khan was destroyed and the present town is modern, Dera Fate Khan has disappeared.
entirely, and Dērā Gharî Khān has been almost all swept away in the years 1910 and 1911. The mints of Dērādāj and Dērā under the Durrānī Khāns were at Dērā Ismā‘il Khān and Dērā Gharî Khān respectively, and copper coins were struck at Dērā Fath Khān.

The district of Dērā Ismā‘il Khān has an area of 3,493 sqm. and a population of 252,379 in 1901 (of which 218,338 is Muḥammadan). The town and military station of Dērā Ismā‘il Khān has a population of 31,737. The other principal towns are Trak (formerly under the independent Nawabs of Trak), and Kulār. The Afghans form the most important element in the population, especially in the Dāmān or western part, and Bāłūc in the south. The mountain country of the Shārūst Afghans is also attached to this district. (See also Dāmān, p. 901). Dērā Gharî Khān is a district of 3306 sqm. not including the mountains occupied by Bāłūc tribes, and has a total population of 421,149, of which 412,013 are Muḥammadan. The town of Dērā Gharî Khān before its destruction, a population of 83,721. Other important towns are Lāhūr, Dādīn, and Mīshābūkht, 167,322 of the population are Bāłūc.

(M. Longworth Dam.)

DERBEND, usually written DERBENT by the Russians, called al-Bīr (the "city") Bīr al-Ābīzar (gate of gates) or al-Bīr wa l-Ābīzar (the gate and the gates) by the Arabs, a town in the Russian territory of Daghestan [q. v., p. 887] on the western shore of the Caspian Sea (43° 4' N. Lat.), with about 20,000 inhabitants; it is particularly noted for its long walls, unique in their kind, which used to bar the passage between the mountains and the sea, here only 1½ miles wide, in the Sassanid and afterwards in the Muhammadan period and protect the settled areas of western Asia from the inroads of the nomad peoples of Southern Russia.

Apart from the importance of the military and trade routes via Derbent, the physical conditions also are here more favourable than anywhere else on the Caspian Sea; unlike the desert lands around Baku, the land here, down to the seaside, is fertile and exceedingly suitable for the cultivation of the vine and fruits. The district was therefore probably settled at a very early period. The agreement of the statements regarding the breadth of the Sea in Herodotus (I. 203—eight days' rowing at the broadest part) and in Isābīr (ed. de Goeje, p. 226 it seq., "once crosses this sea with a favourable wind in one week the whole breadth from Tabari to Bāb al-Ābīzar") leads one to suppose that even before the Christian era, as in the middle ages, the most important settlement on the west coast of the Caspian was near the modern Derbent. The Pass of Derbent probably formed the northern frontier of the ancient Alans which only became known to the Graeco-Roman world after Pompey's campaign (69 B.C.). Even then the lands south of the pass suffered from nomad raids (cf. Thon Cassius, 69, 15. 4, on the invasion of the Alans in the years 134-135 A.D.), but no mention is made of the erection of any fortifications in the Roman period.

Effective measures for the defence of the pass were first taken by the Sassanids, who had in the 6th century A.D. extended their influence to the Pass of Derbent and driven the Romans out of the country round. The Roman government was also to contribute to this purpose, at the Persian king's desire, for the winding up of the nomad hordes was a vital question for both empires. We have no record in contemporary sources of the fulfilling of this request, only the Armenian Levond says that in 716 A.D. in the time of the Caliph Sulayman, the Arabs found an inscription here in which the Emperor Marcian (450—457) is described as the builder of the city (Marcianus, Erivan, p. 105). In any case a strong fortress was built here by Yezdegird I. (438—457 A.D.), towards the end of his reign this was destroyed by rebellious Albanians, and the invasion of the Huns in 454 facilitated (Illyas in Marcianus, Erivan, p. 97). In local tradition (Dārband-Nu‘mān, ed. Kazar-Beg, p. 11) also Yezdegird appears as the first king who cleared of sand and repaired the wall said to have been built here by Alexander the Great.

Khwāmaw Ahmadārū (531—575) built a stronger fortress here. Of this we only have legendary accounts from the Arab period; but it is very probable that the great and costly building was actually necessitated by the dangers which threatened the Persian Empire from the north in the reign of this king. All the nomadic peoples from the Black Sea to the Chinese frontiers had just then been united into an empire which had entered into an alliance with the Romans against Persia; in 539 the Alans, the nearest neighbours of the Persians in the Caspian region, were still independent but by 576 the Turkish ruler was able to say to the Byzantine ambassador that he had recently subdued the Alans (Proc. Hist. Græco, iv. 229 et seq. and 246), and the great nomad empire of the Turks had thus reached the Persian frontier. If the fortification of the Pass of Derbent was actually the result of these happenings, the erection of these defences must date from the latter part of the reign of Khwāmaw. That the king himself came here and superintended the building operations in person, is probably as little worthy of credence as the later Muhammadan local tradition which makes the Caliph Hārūn al-Rashīd visit Derbent and spend seven years (180—187 = 796—803) there (Dārband-Nu‘mān, p. 108 et seq. and 140). Even Muhammadan tradition itself has preserved another story of the building of Derbent, according to which it was not the king himself but his governor Nājis b. Djūmā, the ancestor of the Shirwānshāhs, who built the town and its walls at his command (Zāhir al-Dīn al-Maşhūr, ed. Dorn, p. 38).

All that we know of the appearance of the walls, their style of architecture etc., only dates from the Arab period and must therefore be discussed later in this article. Accounts which can be directly traced to Persian reports of the pre-Muhammadan period are entirely wanting; we do not even know what the Sassanids called the town and the fortress. On a basis of the Greek Tagēs and the Armenian Ḻewi, Marqar (Erivan, p. 107) has proposed a Persian form Čet. The name "Darband" (Pers. = gates) is first mentioned in the Geography of Pseudo-Moses Khosrosā
The Greeks and Armenians only tell us that the fortress, in spite of its strong walls, was captured by the Khazars allied with Herussoi in 627 (cf. Theophanes, Bonn ed., p. 430 and Moses Kalpaktschii in Manandian, Beiträge zur Altiranischen Geschichte, p. 41, where the great city of Col with its marvellous walls is mentioned. The Arabians had several times to fight for the possession of Derbend with the Khazars. The statements in the Arab sources regarding these wars, as on most of the campaigns of the first (vii.th) century, are in part embellished with legendary matter and in part quite fictitious; even the account of the hermit death of Salam b. Rahnah (a.d. 643) and his 4000 warriors (Balbaldert, ed. de Goeje, p. 495 et seq.; Yahyâ, ed. Houtsma, ii. 194), whose tomb is still pointed out in the cemetery at the 39th milestone is to Tabari's account, according to which it was not Salam but his brother 'Abd al-Rahnah who fell in this battle (l. 669) while Salam appears as late as the year 34 = 654-655 as governor of Derbend (l. 2928,). In any case it is only in quite modern times that the story has been localised in Derbend; in the middle ages the tomb of Salam was pointed out in the northern part of the modern Daghestan at Balandar: even later, in 1878, Adel (Reise, p. 721 et seq.) heard another story about the tombstones at the Kirjar gate.

The real founder of Arab rule in Derbend was Maslama b. 'Abd al-Malik, who is also said by the Armenian Moses Kalpaktschii (transl. Patakno, p. 261) "to have rebuilt Derbend in the name of the Taqit (Arabs)". According to Tabari these building operations were carried out in 115 = 733-734; in the original Arabic text (iii. 1052) they are only briefly mentioned (as also in Ibn al-Athir, v. 124), while in the Persian edition by Balami, on the other hand, they are minutely described (cf. Dorn, Beiträge zur Geschichte der kaukasischen Länder und Völker, iv.), as well as (with some variations), in Balbaldert, p. 207 et seq.; Maslama is said to have settled 24,000 of his Syriac troops here; according to Balami these Arabs belonged to Dahanans, Hims, Kafta and al-Djazia, and the town was divided into four parts corresponding to these towns; this division was still in existence in the time of Balami (on his authority). Three domes (karya) were erected for the requirements of these troops, one for victuals, the second for barley (as fodder for the horses) and the third for weapons.

In spite of these measures Derbend fell for a brief period again into the hands of the Khazars in 813 (799) in the reign of Harith al-Kashibi; from there they ravaged the land as far as Hb and carried off a large number of prisoners. According to the Arab sources (Ya'qubi, ii. 518; Tabari, iii. 645; and the Derbend-Namak, p. 132 et seq.) the enemy was summoned by Haiyin b. Nasim (or al-Munajjidim) al-Salami, the son of a governor of Derbend who had been executed as a rebel.

During the centuries following Derbend seems to have enjoyed great importance as a harbour on the Caspian Sea and also as the farthest out-
The name of the architect has since disappeared; the modern (first mentioned in the forties of the 19th century) inscription is written partly in Arabic (the original foundation of the mosque in 115, with blessings on Muhammad and his family and partly in Persian; the second part is: alif shadd muh adj hafsa muh adj hafsa in aul ah fird os Aftraz, b. Tahmasb dyart i gafr tazalim (this mosque collapsed in 770 and was rebuilt by Aftraz b. Tahmasb with help of the Most High God). The Aftraz mentioned here (probably an error for Afraxar) has been actually a prince of Derbend or Shirwan is not mentioned in any historical works that have as yet come to light.

It remains to be ascertained whether the whole building was actually destroyed in 770 (1368-1369) (probably by an earthquake) and entirely rebuilt. The central nave (the entrance is on the north side) with its two inarticulate cupolas seems to belong to a later period than the two side galleries, each of which is divided into two parts by a row of stone pillars. A small arch is supported by each pillar; these arches like the cupolas are not of stone but brick. The internal fittings of the mosque in their present form are quite modern. As Hanway (Tavriz, l. 250) tells us, Nadir Shah took possession of the building which was still in the early decades of the xvith century a sanctuary of Isfand, for secular purposes and used it as a storehouse; it did not therefore revert to its original purpose as a mosque before the middle of the xvith century.

Unlike the modern town, the Derbend of the xith century had no citadel; the space between the two stone walls, to which the city itself was afterwards limited, probably sufficed for the garrison. There was a pile of wood constantly replenished on the Dob ("wolf") hill nearest the town, probably where the citadel now is, which was set on fire on the approach of an enemy to inform the people of the border provinces of the danger threatening.

The walls built by Khusrav Anishgarwān were not only to bar the Pass itself, but the adjoining mountain ravines also, by passing through which the fortress might be avoided. The walls are therefore said to have been built up to highest mountain peaks. The distance between the shores of the Caspian and the end of the walls is variously given; according to Ibn al-Fakhrī (p. 291) it was 7 faranākā (1 far. = 4 miles), to Hāmza Isfahānī (ed. Gottwald, p. 57) 20 faranākā, while Masudi (Marvānī, ii. 2) says it was 40 faranākā. Traces of these long walls have been seen by recent travellers also, but it has never been definitely ascertained how far to the west such traces are known to exist. Even at the present day one may be told in Derbend that the wall built by Khusrav Anishgarwān stretched to the Black Sea or even to Constantinople.

To secure the fortress from attack from the sea also, Khusrav is said to have extended the wall not only down to the shore but also some distance farther. As to how this building was executed we possess two different accounts, one in Kudīsī (v. 260 et seq.) and another in Masudi (Marvānī, i. 65 et seq.), but it is clear that neither can claim to be the slightest degree reliable; both only show how later generations sought to explain how this wall was built. We only have contradictory statements also as to how far these breakwaters were carried out from the shore. Ibn Rusta (ed. de Goeje, p. 145) and Kudīnī say 3 miles; according to Mas‘ūdī (Marvānī, ii. 2) it was only one, according to Hamd Allah Kāshwānī, 1½ mile, to Hādī al-Salīh 600 ells, while the Persian translator of Isfandīrī (ed. de Goeje, p. 185, note 2) says it was 5 towers. We would probably be right in taking the last two statements as accurate; as the distance between each tower is little more than 100 ells, the account in the Persian version of Isfandīrī practically agrees with that of Hādī.

In any case it is clear that Derbend then instead of the present open and dangerous roadstead had a harbour protected alike from hostile attacks and the tempests of the Caspian. Only a small entrance was left for ships, which in case of need could be closed by a chain with a lock (gūfī); no ship could enter or leave without the permission of the keeper of the lock (Shāh al-gūfī) (Ibn Hāzīb, p. 222). This explains why Derbend was not affected by the Russian raids in the 19th century.

For the same reason the harbour of Derbend was then of much greater commercial importance than now. Goods were brought to Derbend from all the Muḥammadan and non-Muḥammadan lands of the Caspian Sea. The most important articles exported were linen goods (these were to be obtained nowhere else, neither in Arūz, nor Armenia, nor in Aθhambā)dān) and madder; the principal imports were slaves from the "lands of the unbelievers" (Isfandīrī, p. 184).

This is practically all we know of Derbend in the period of its glory. It is more difficult to get a clear idea of its political conditions, particularly of its relations with Buhār. ibn al-Fārisī’s statement (p. 207) that in his time no new governor was allowed to enter Derbend till he had divided a sum of money among the inhabitants, is significant. The Derbend-Nāma (p. 134) even says that Hādī al-Fahādījī received the title of governor appointed by the Caliph, if he had been negligent in prosecuting the Dīdānī or treated his subjects unjustly. The descendants of a certain Aghāsh al-Sulaimi are said to have been invested with the right of governing the town till the arrival of the new governor, when a governor died or was dismissed. This is probably much exaggerated but as a matter of fact history does know of a considerable number of princes and governors of Arūz and Derbend of the Sulaimi family; from Usāf b. Zāfar, the contemporary of the Caliph Hīṣām, to Saif al-Dīn Muḥammad b. Khālīfī, mentioned by the traveller Abū Hāmid Anidāhī (in Dörn, Missezagn Asia Res., vi. 702) in the 12th century (cf also the above quoted accounts of the rising in the year 185 = 799).

In Yākūt, Ibn al-Athīr and later writers, the town is frequently called "the Derbend of the Shīrān" and actually seems to have usually belonged to the kingdom of the Shīrāwāhī from the 10th (19th) century; but there were at times also rulers in Derbend independent of the Shīrāwāhī (cf. the article ARAS, p. 450 et seq.). The people of Derbend under the Caliph, as well as under Yūsuf b. Abī ’l-Ṣāḥib, ruler of Aθhambā)dān (288-315 = 901-927) had not to pay taxes but only give presents, like the people of the other countries in general as defenders of the faith; this was not till the time of Mārkshāh Sallīr b. Muḥammad that these presents were replaced by a fixed tribute.
Ibn Hawkal (p. 254) gives the tribute for the year 344 (955-956). Naturally the inhabitants were not pleased with this change; this probably explains why Ibn al-Ashir, viii. 370, Marzabon Saltar had to suppress a rising in Derbend in the same year (344).

In a later period also Derbend appears as a practically independent frontier town, which only applied to the central government for help in time of danger. According to Ibn al-Ashir (p. 454), for example, the help of Sultan Mahmut b. Muhammad was sought by the people of the frontier lands, particularly of Derbend, against the Georgians and Kipchaks and he therefore undertook a campaign in these lands in the year 517 = 1123.

It is important to note a fact to which little attention has hitherto been paid, viz., that Derbend was lost to the Muhammadans for a period in the viiith = xith century and was only regained by them with the help of the Georgians. This is clear from a Fat'hul of the poet Khakani given by Khakimov (Millennium Asiatique, iii. 327 et seq.); the poet praises the Shirwanshah Akhlatin b. Muhammad who destroyed a Russian fleet of seventy sail at Baki, conquered the Khasars and Alans, "made Derbend a hell and adorned lamentations in Shirvan"; he adds "the Shirwanshah has today wrought the same confusion in Derbend as among the Russians as these men with dogs' hearts had previously wrought in Shirwan; Derbend and Shibiran have been won by his sword with God's help."

These words show that not only Derbend but also Shibiran which lay much farther to the south at the modern Kula, had for a period been independent from the Muhammadans. As Kanik (quoted by Dom. Cumont, p. 304 and introduction p. 333 et seq.) has shown, the victories of the Shirwanshah celebrated by Khakani must be placed about the year 1173. The annals of Georgia ascribe the conquest of Shibirani to Georgius III. (1156-1184), King of Georgia, who is said to have given the town to his ally, the Shirwanshah. It was probably not till later, in the time of the Georgian queen Thamar (1185-1312) who extended her rule to Georgian Sea, that the town came into the possession of the Shirwanshah.

In Ibn al-Ashir's account (AII. 252, 254 et seq.) of the first appearance of the Mongols (619-620 = 1222-1223) the Shirwanshah Rashid is mentioned as the ruler of Derbend; the Mongols were shown a way by the envos of the Shirwanshah, by which they could avoid the fortress; the town was therefore spared; they then on this occasion (the long walls built by the Shishakid had apparently long lost their importance). A few years later Nasavi (ed. Houdas, p. 174) mentions Derbend as a separate principality independent of the Shirwanshah; Shah Adbi'd-din was the ruler of Derbend, while the prince of Shirwan was a minor, on whose behalf at-ul-aam managed the government. The town was even then still regarded as an impregnable fortress, which could only be taken by treachery; nevertheless after the retreat of the Mongols and still under Rashid the Kipchaks succeeded in surprising the town and taking it for a short time. Derbend had to surrender to the Mongols in 1239. From the Journal of William of Rubruck, who spent a day (17th-18th November 1254), it is clear that the Mongols had destroyed the upper parts of towers and the battlements of the walls. He is also the first to mention the citadel. The town itself was more than a (French) mile long and only a stone's throw broad, that is to say, it was by this time limited to the space between the two stone walls (cf. F. Schmidt, Cher Rubruck's Reise, Berlin 1885, p. 84).

After this period, this disproportion between the length and breadth of the town is emphasized in all descriptions of Derbend; Zakaryan Karhin (ed. Winterfeld, ii. 240) is the first Arab to mention that the town is 240 Dizains long and only an arrow-shot broad: in contrast to the account of Yakhit and the geographers of the xith (9th) century.

In the period of Mongol suzerainty, Derbend appears to have belonged sometimes to the Shirwanshahs and sometimes to princes of its own; the Khans of the Golden Horde are sometimes mentioned as emirs of the land and sometimes as emirs of the town. This is the first time that the Mongol Ul-Khan of Persia Timur's opponent, Tokhtamysh, struck coins in his name here; Timur himself passed through Derbend on his campaign against Tokhtamysh (797 = 1395), as well as on his return from this campaign (798 = 1396); as the frontier fortress of the empire founded by Timur, Derbend was again as before entrusted to the Shirwanshahs. In 1428 an independent prince of Derbend is mentioned; the Italian merchant Giovanni della Valle built a small ship for this prince, with which he made piratical attacks on the ships coming from Asfanabad (Ramazano, Viaggio, ii. 92). The town appears in this century to have finally lost its earlier importance as a seaport. When Ambrosio Contarin was here (November 1475—April 1476), only the citadel and the part of the town adjacent to it, about a sixth of the area between the walls, were occupied, the other parts of the town down to the sea shore being quite desolate (Ramazano, Viaggio, ii. 120). Apart from the damage done by robber raids and the frontier wars the decline of Derbend must probably also be connected with the rise of Baki (q.v. p. 609).

Apparent the petty local princes did not have sufficient means at their disposal to maintain the breakwaters described by the geographers of the xith = xith century; when these fell into disrepair, trading vessels had naturally to go to the secure harbour of Baki in preference to the open roadstead of Derbend.

About this time Derbend begins to be described no longer as an Arab but as a Turkish town; an anonymous Venetian merchant of the beginning of the xith century says that the inhabitants spoke "Circassian or Turkish" (Ramazano, Viaggio, ii. 561). We have no information as to when and how the Arab population became supplanted by Turkish immigration. This development is probably connected with the gradual Turkisation of Adharbajan and the other frontier provinces of northern Persia after the period of the Safedjas, but the name of the above mentioned Safi al-Din al-Subani proves that in the Derbend of the xith (13th) century the Arabs and not the Turks still had the upper hand. Not only the Mongol (Khalka, on this word cf. the article DAIKHAN above p. 920), but also the Turkish name of the pass (Timur's brunette Yorou Gate) appears for the first time in the Mongol period. It cannot be definitely ascertained where the Turkish folk-legends mentioned in Olearius (Aziz, p. 721 et
back to the Persians in 1725. Like Peter the Great, Nadir Shah wished to restore the town to its ancient importance as a port; but the deserted quarter on the sea shore was again to be settled; to encourage people by his example, the Shah ordered a palace to be built for himself there; but these buildings were never carried out or else no trace has survived of them.

After the death of Nadir Shah and the collapse of the Persian Empire, Derbend again appears as practically independent in 1765. The town was taken by the Persians in 1766, and in 1769 it was besieged by the Russian general, Count Potumkin, who captured it. In 1770 it was taken by the Russian general, Count Potumkin, who captured it.

**Bibliography:** The *Darab-Nama* composed in Turkish by Muhammad Awaisi Akhtral, about the end of the sixteenth century, is the earliest Persian work on the town. The text is preserved in several MSS. A critical edition has been published by the Russian Academy of Science, together with a French translation, and a Persian translation, *The History of Derbend*. The manuscript was published by the Emperor, and the Russian government, and the text and notes are contained in a volume.
like his contemporaries in general in Daghhestan (cf. p. 889), applied the state of Derbent in his time to the Derbent of the Arab scribes, and their immediate successors. The greater part of what has been written since the time of Peter the Great about the walls of Derbent and the other cities of earlier times that have survived, has been influenced by this authority; cf. Opečno principis Lucullus Centurionis in loco ujusque Anname vol. VII, ed. Praxiphius Orientale, București 1858; Th. S. Bayeri O persec. ed. Klotz, Halle 1780; E. Eichwald, Allgemeine Geschichte der russischen Kolonisation, vii (in the second volume) ed. M. F. Fried. Die Inschriften von Derbent, Beratn, Pjatigorsk etc. Derbent, etc., etc., etc. D. Turn (Bericht über die wissenschaftliche Reise im Kaukasus, etc.) has done more on the Kaukasus: Beiträge zur Geschichte der kaukasi schen Länder und Völker aus ungenügenden Quellen. Anno ausgebracht sind Schriften von der Geschichte der Kaukasus, etc., etc., etc., etc. Derbent and surrounding areas, have been studied more recently, in making known the Oriental authorities, the bibliography of the Arabic authorities in G. Le Strange, The Lands of the Eastern Caliphate, p. 180, is unsatisfactory. On the occasion of the centenary of Russian rule, in Derbent, E. Komulskij has published a history of the town (istoriya Gervou Derbento, Tiflii-Shvili, 1900); in spite of all his industry, the author, to whom the Oriental sources were only accessible in translation, and the methods of historical research practically unknown, was hardly fitted for his task. Cf. also the articles by W. Barthold in the Zapiski nauč. obč. Imp. Russkogo Arch. Obč. (1853), Vol. XIX, p. 100 et seq.; Vol. XIX, p. 973 et seq.; Vol. XXI, p. 974 et seq. (the author was in Derbent in 1898). (W. Barthold, 1) DERBEYS (Derbeys, also Derbeys, Derbeys, or Derbeys, Prince of the Valley; also Derbeys, Derbeys, or Derbeys, Prince of the Valley), is a name of the great valley, in the north of the Besarab, which runs to the west towards the town of Balkota, and which has given its name to a village at the sea side which is used as a summer resort and is reached by a large pier. (Cl. Hrurt.)

DERBEYS, Princes of the Valley, is the popular name given to those influential officials who made themselves independent from the beginning of the 19th century in Asia Minor and from being officers of the Porte gradually became its vassals. Tolerated and recognised by the government but occasionally also overthrown, if they openly rebelled and disturbed the peace of the country, they founded dynasties and ruled extensive areas, so that at the beginning of the 6th century only the Eyliets of Karasun and Arzab were still ruled by the Porte's governors. The Derbeys followed the Sultans to war and were confirmed by the Porte as representatives of the Hithan governor with the title muhajir odet mutassilin. Sultan Mahmud II in the early part of his reign dispossessed the Derbeys by granting their Eyliets to governors of the Porte on the death of the head of the family and sending his descendants to other provinces.

The best known Derbeys families are:

1. The Kara Osman Oghlu in Aida, Menneis and Hargun from the beginning of the 19th century; they ruled the Sandjak of Sarhan and Ardan and their influence extended from Uruma to Brusa. They regularly sent contingents to the campaigns of the Porte against Russia and against the Russian rebels at the end of the 19th and beginning of the 20th century and were repeatedly entrusted by the Porte with the suppression of revolts within the bounds of their district. Their justice and good government are commended by contemporary European writers. After 1816 the Porte again took over the government of Sarhan and Ardan. The influence of the Kara Osman Oghlu survived their dispossession and they afterwards repeatedly rendered great service to the Porte, for example during the rebellion of Zeynek Keli Mehmed in 1839 and during the invasion of Asia Minor by Iskimbir Pascha in 1833; their descendants still live in Manisa and Kirkaghac.

2. The Çapar (Capan) Oghlu of Baski, of Turkish origin, pacifically contemporary with the Kara Osman Oghlu; they ruled the Sandjak of Roor (Vorot), Kaisaria, Amanis, Angora, Nigde, and at the height of their power, Taras also was a dependency of theirs. The first Capar Oghlu, of whom we know anything particular, was Ahmet Pascha, Mutassit of Roor, who in 1178 (1764-1765) was deposed by the Wali of Sivas by command of the Porte (Wattf, i, 233 et seq., 259); he was succeeded by his son Mustafa Beg who was murdered by his bodyguard in 1783 (Djewâl, i, 234 et seq.) and succeeded by Safiân Mustafa Beg, second son of Ahmet Pascha. Subsequently, Beg, the greatest of the Capar Oghlu, played the same role under Selim III, Mustafa IV and Mahmut II as the Kara Osman Oghlu. After his death in 1829 (1814) his lands passed again under the direct rule of the Porte. His sons filled high offices as walis and governors.

3. The family of Ali Pascha of Djânik in Trebizond, and the neighbourhood. Their head, Djânikli Haidsâli Ali Pascha (born in Stambul 1533 = 1570-1571), distinguished himself in the Russian war (1769-1774) as a general in the army on the Danube; in 1773 he invaded the Crimea and was sent in 1778 a second time as Senneker to threaten the Crimea in conjunction with a large fleet; in 1779 he was attacked by the Capar Oghlu, with whom he had always kept feud, at the instigation of the Porte, fled to Russia, returned after two years and was pardoned; he died in Sivas in 1785 as Wali of Sivas. He was succeeded by his two sons Mihrâd Ahmet (executed in 1796 = 1797-1798) and Hüsân Bâzîl (died 1814 = 1802). Khiar-al-Din Beg, the elder son of Bâzîl Beg, was the last Derbeys of this family; he was executed in 1806. Djânikli Ali Pascha and his sons opposed the military reforms introduced by Selim III and adopted by the Kara Osman Oghlu and the Capar Oghlu. After the fall of Selim III, Taiyê Mahmud Pascha, a younger son of Hüsân Bâzîl, was appointed Kârîmâkâm to the Grand Vizier in October 1807 by the reactionary Mustafa IV, but after a few months was dismissed and executed by Mahmut II.

4. The Elyazi Oghlu of Kusâhâden (Sula Nova near Epheus); they ruled the Sandjak of Kusahaden from about the middle of the 19th century, and are not at all prominent; nothing further is known of their history.
It is stated by European authorities in general and sometimes even granted by Ottoman historians that the rule of the Derbys although it threatened the unity of the empire, was more conducive to the prosperity of the people than the rule of the Porte, which handed over the defensive provinces to the extortionist of the Pashas and carried on a system of plundering which utterly wasted the resources of the land. The Derbys saw to public security, the development of commerce and — with few exceptions treated the people — including non-Muslims — justly; their dispensation was therefore long lamented by their subjects.

**DER (Dare),** strictly meaning the language of the court, is applied to modern Persian. The abovementioned Persian translation of the treatise of the Ikhyan al-Sufi (Bombay, 1804) states that this work was translated into *piri Dare* by order of Tamerlane; and this work is in Persian. By some confusion the panegyrists of Yazd have given the name *Dare* to the dialect they speak. The other etymologies current in the east are quite worthless.

**DERKAWA** (plural of the ethnic DERKAWI) a name collectively applied to the members of the *Torba* or Muhammadan religious brotherhood, composed of the followers of Mulla ʿArabi al-Derkaawi, the area of whose influence extends over Northwest Africa, particularly Morocco and Algeria. An individual member is called Derkaawi while the plural is Derkaawa. They are also called Shafiiliyya-Derkaawa, their brotherhood being an offshoot of the much older *Torba* of the Shafius, founded by the Maghribi Sufi Abu ʿil-Hassan ʿAli al-Shafiite.

**Origin of the Derkaawa:** The doctrine of the Derkaawa was first preached by an Istakul Sharif of the Imraimian group, who belonged to the territory in the northwest of Fas occupied by the Banu Hasayn. He was called ʿAli b. ʿAbd al-Rahman al-Djami and in his youth during the period of anarchy and civil war which followed the death of Sultan Mulla Isma'il, had been attached to the service of the Maghrib, having misled the Sharifs his fellow-beholder into taking the side of Sultan Muhammad, son of Mulla Isma'il, he was obliged to flee from the Maghrib on the fall of this prince in 1151 A. H. (1748 A.D.). He took refuge in Tunisia. There he received instruction from various Shafis and after two years, they persuaded him to return to his native district and recommended him to Mulla ʿArabi, Shaikh of the Zemara of Wazran, where he arrived in 1153 A. H. (1749). Mulla ʿArabi sent him to Fas where he henceforth resided. There he studied Shafi'i under the direction of Abu ʿAbd Allah ʿAbbas and afterwards joined the brotherhood of Abu ʿAli al-Mahmoud Sidi T-ʿArbi b. Ahmad b. ʿAbd Allah al-Musam al-Andalusi, who taught the doctrines of Shafi'i. He followed the teachings of Sidi T-ʿArbi b. Ahmad for over six years. On the death of the latter he succeeded him and built a Zemara at Fas in the place called Hamat al-Rumila. He had passed his hundred and fifth year when he died in 1193 A. H. according to some, in 1194 according to others (1779–1780 A.D.). He was buried in his Zemara. Many disciples had gathered around him of whom the most famous was his successor Mulla ʿArabi al-Derkaawi who was destined to give his name to the brotherhood.

The latter, Abu ʿAli ʿAbd a-Mahmoud Mulla ʿArabi b. Ahmad b. ʿAbd a-Rahman b. Muhammad al-Yusuf b. Ahmad was an Istakul Sharif, belonging to that section of the Derkaawy Sharifs settled among the Moroccan tribes of Banu Zarwul. These Sharifs were so called after their ancestor Yusuf b. ʿAbd al-Rahman surnamed Abu ʿArabi (the man with the leather buckler). Born about 1150 A. H. (1737 A.D.), Mulla ʿArabi al-Derkaawi died among the Banu Zarwul, in his Zemara at Til Bahr, in 1239 (1823 A.D.).

"Ali b. ʿAbd al-Rahman al-Djami, Mulla ʿArabi al-Derkaawi, ʿArabi al-Derkaawi, had preached the renunciation of the things of the world, contempt for riches and power, return to the pure sources of Shafi'i, more especially to the doctrine of Shafi'i. His Zemara (mystic chasm) was traced to the latter through:

1. Sidi ʿArabi b. Ahmad b. ʿAbd a-Rahman al-Andalusi;
2. Sidi Ahmad b. ʿAbd al-Latif, father of the above;
3. Sidi Ahmad al-Yamani;
4. Sidi Kaim al-Khassa;
5. Abu ʿAli al-Mahmoud Yusuf al-Fasi, etc.

These five Sharifs died at Fas in the course of the fourteenth century A.D. This chain previous to Abu ʿAli al-Mahmoud had a kind of reviver of Shafi'i in Fas, is too well known to need to be reproduced here. It may, for example, be found in the biographies of the latter, of which we may specially mention the Mirzah al-Mahmoud (ed. Fas 1323) and the Raf'a (letters) of Mulla al-ʿArabi al-Derkaawi, ed. Fas 1315.

Mulla ʿArabi al-Derkaawi proved himself as strict as his master and followed, moreover, the practices of certain "enlightened one(s)." One day he met in a street of Fas, standing before a shop, the illustrious enlightened Sidi ʿArabi al-Iskalian. The latter was in a state of mystical intoxication, much excited, surrounded by a crowd which he was haranguing. Mulla ʿArabi al-Derkaawi came to his side. The enlightened saint called him, took hold of him, pressed him to his bosom, and put his tongue into Mulla ʿArabi's mouth saying "suck, suck, suck." He added prophetically: "I give thee (power over) the East and the West," Mulla ʿArabi went on and the "enlightened" saint died two days later. This form of initiation was afterwards revived by several Derkaawi groups (notably the Hatayriyya) and the leader of the rising of Margueritte.

Once at the head of his brotherhood, Mulla ʿArabi at once organized it on a solid basis, considerably increased the number of his followers
and gave them in his saintly letters suitable rules of conduct, a kind of law which assured with punishment. The *Sharifs or "brothers" of the gulf who now bear the same name as before known by the name of Derkāwā (i.e. followers of Derkāwā) multiplied on all sides. They may be recognized by the style of the gulf in imitation of the prophet Moses' by the necklet of of large wooden beads, which they wear in imitation of Ahl Harmain, the companion of the prophet Muhammad; by the headgear worn long, and by their garments of raggs (among the more fanciful) in imitation of Ahl Bakr. of *Omar b. al-Khattāb which has earned them the sobriquet of *Ahlu Derkāwā (weavers of raggs). Some, especially in Southern Morocco, have adopted the green turban. Their *Sharīḥ has further recommended them to celebrate the praises of God in dancing (raggs) to pray alone or in the desert, to walk barefoot or with simple shoes, to endure hunger, to mortify themselves frequently by fasting, to avoid the society of those in authority and only to consort with men of piety.

Beside these ascetic practices the actual initiation is simple. The *Sharīḥ takes the initiate by the right hand and reads the following verse of the Koran (20: 12): "Be faithful to your covenant with God which you have concluded with him, and violate not the oaths which you have solemnly taken. You have taken God as a witness, and he knows what ye do". The *Sharīḥ then orders him to recite a hundred times in the morning and in the evening the prayer called *Irshād; as follows: "I testify that there is no god but God, the One only, who has no associates, to Him be the dominion and the praise; He is powerful above all". The initiate has to conclude his prayer by saying a hundred times: "There is no god but God etc." Such is the *Dhikr (q.v.) or prayer peculiar to the order and compulsory. After initiation, the brothers present unites in *Hajda, a pious assembly in honour of the new Derkāwā, interspersed with songs and *ragg (dances), a kind of rhythmic march.

Their political role: Mulây *Aṭār's action was greatly encouraged by the Sultan of Morocco, Mulây Shimān, who had adopted a policy of harmony with the religious elements and the Sharīfs. The Sultan corresponded directly with the *Sharīḥ of the new Derkāwā. It soon became the fashion at the Moroccan court to be connected with the new brotherhood. Its members were soon to be found throughout the length and breadth of Morocco; the lands in the west and the Regency of Algiers were also covered by its ramifications, which formed a bulwark for the policy of the Sultan of Morocco.

Local tradition traces the first disputes between Turks and Derkāwā, in the province of Oran, to the difference between the Marabout Derkāwā Muhammad b. *Ali b. *Amm Ħaṭīb, near Tlemcen, and the *Khālīf Khâlīf, a dispute which was only terminated by the death of the latter (1193). This above every other *Sharīḥ, any disputes arising before the beginning of the sixteenth century.

The Turks of the Regency of Algiers had supported the rebellion of the Rif; Mulây Shimān, Sultan of Morocco, in his turn gave asylum to the Marabouts who had had a dispute with the Turks. Suddenly in 1503 at the call of the Moroccan Derkāwā Sharīf, al-Muḥāammad b. al-Arück, surpassed *Bi Dallī, the Algerian Khān of the Barbary. Al-Asūr district rose under the leadership of their chief *Zāhīd. After a short stay the rebels were impotent enough to attack the Turkish stronghold of Constantinople; they were defeated and *Bi Dallī wounded had to flee. But in the following year, the rebels, having surprised *Omnaut Bey of Constantinople's army in the ravines of the lower Rammel valley, massacred it including the Bey. The Turks were obliged to send new forces to Constantinople under the command of the Bey Afdalātī b. *Ishāqī. In January 1503 the latter defeated *Bi Dallī and his allies; then towards February 1506, with the help of the Mamluks, lords of the Mamluks and feudalities of the Turks, he repulsed the Derkāwā forces on the west in the High Plateaus in the south of Great Kabylia. There also the Turks had to put down risings. The tribe of Ulāt *Nātī rebelled and closely besieged *Mamun after having taken by assault the Turkish fort of *Sāt al-ḳāshūla, now called *Aumula.

While *Bi Dallī was ravaging the east of the Regency of Algiers with fire and sword, a certain *Ali b. *Khālid b. Sharīf, the chief *Mujāhidīn (spiritual lieutenant) of Mulây *Aṭār al-Derkāwā, hurried through the provinces of Tlemcen, everywhere announcing the immediate expulsion of the Turks from the lands of Northern Africa. By 1565 all the country from *Sharīf to the Moroccan frontier was in revolt. *Mushāfī Bey of Oran, taken by surprise in his camp at *Ain Forqās, was forced to take to flight and seek safety behind the walls of Oran; the gates of which he walled up. At the same time the *Derkāwā, in communion with the Moors of Tlemcen, blockaded the Turks of this latter town in their fortress called the *Maghūr and took the oath of fealty to Mulây Shimān, Sultan of Morocco.

The insurrection fomented by the Derkāwā rapidly gained ground; the Bey of Algiers recalled the Bey *Mushāfī and appointed as his successor the energetic Muhammad b. *Mujāhidīn. The latter at once began operations against the insurgents. B. *Sharīf was intercepted on his march by various tribes and driven back to the east. A fortunate stroke regained the town of *Mamun for the Bey Muhammad, whose prisoners included the family of his opponent. The latter had retired with his supporters to the *Zāwīya of Muhammad b. *Awda. He there suffered a crushing defeat. The heads of his followers were cut off and according to the local chronicles thrown at the feet of the Bey "like so many onions" (1507). Another victory at *Sīk al-ḥaḍār in the land of the *Banū *Amir, where 600 more *Derkāwā lost their heads, allowed the Bey to proceed to relieve Tlemcen, punish the rebels and restore this town to Turkish authority. But while the Algerian troops were occupied in the east, the centre and west of the Regency, Mulây Shimān conquered *Fezzāq in 1565, *Gitara and *Tutt in 1568. He took from the Turks the whole of the south-east of the Oran territory. The *Dawān of Algiers resented the importance which his successors had given the Bey Muhammad b. *Mujāhidīn. The latter was suddenly arrested on some ridiculous pretext, then imprisoned and strangled. *Mushāfī, the previous Bey of Oran, took his place and again proved incapable of holding his own against the Derkāwā. A year later the
Dey of Algiers had to replace him by the Bey of Tunis (1808-1809). The latter gave the Derkawī no rest. 'Abd al-Kadir b. Shaffri, who had again begun his exploits against the Turkish government, was driven back southwards by the new Bey towards 'Ain Mahdis and tried to find refuge there. Not being able to reach it he secretly retraced his steps and took refuge among the Beni Hassan. There with the help of his son-in-law Bey Tarfis, he raised the people of Oran and won many converts, notably the Traras. The Bey marched against him and as he dared not face the Bey, but while retreating his column was overwhelmed by snow and he had to retreat hastily with his army in confusion. He was afterwards recalled to Oran, deposed and decapitated.

All the northern Oran territory then rose in rebellion. An energetic officer, 'Ali Karabaghli, working in conjunction with the Turks, shut himself up in Mazaga and held out against the insurgents while 'Omar Agha, the Bey's envoy, was given command of the troops on the frontier. 'Ali Karabaghli was appointed Bey and the two leaders marched with their forces through the districts of Tiemcen and Traras to impress the inhabitants and keep them under control.

Pesco was maintained for some time in the west of the Regency. But in 1816, during the bombardment of Algiers by the English, 'Abd al-Kadir b. Shaffri reappeared, raised the Aljars on the frontier and marched against the Turks. The Bey scattered his forces and B. Shaffri retreated to Figuig.

The Sultan of Morocco however was not long in resenting the influence of Milid 'L-Arbi al-Derkawī and his followers. He suspected or accused him of abetting the rebels in his kingdom and threw him into prison. Milid 'L-Arbi regained his freedom on the death of Sultan Milid SIamun in 1821. Henceforth the Derkawī no longer appeared to play the principal part in the military policy against the Turks. They were to resume this role on the French conquest.

In 1834 the Derkawī SI Mudir raised the Ulad Nâlî and led them on a holy war against the Christians. He occupied Medes but was defeated in 1835 by the Amil 'Abd al-Kadir whose plans he had upset. He reappeared at a later period in the insurrection of Zaaita in which he was killed.

Ten years later in 1847, the Mokaddam Derkawī SI 'Abd al-Rahman al-Tutt assisted by about thirty of his followers, all of the tribe of the Bani 'Amir, tried to surprise the fort of Siddi Bel 'Abbas but the small garrison defended itself bravely and repelled its assailants who were almost all slain.

This feat of arms marked the end of the heroic period of the Derkawī, at least in Algerian territory. The Zawiyas of the order had given evidence of their stern and uncompromising creed, they had thus justified their existence in the eyes of a fanatic people. Once firmly established, accepted by the masses, with branches throughout the country, they limited themselves to increasing the revenues which supported the mother Zawiya. Outwardly at least they have submitted to authority. This is a kind of law from the operation of which no Muslim brotherhood escapes. At the time of the insurrections in South Oran in 1864 and 1884, no chief of this brotherhood took part openly against the French. And again during the rising of Margaistic at Mildiana in 1898, which was caused by an adept Derkawī, the chief of the Derkawī of the district, SI Qasim Alhâl used his whole influence to calm the turbulent spirits. Hadjl Al Ayed willed Makhbûr, the Mokaddam of the brotherhood among the Hamiyas of the plateau on the west Algerian frontier and his successors have always faithfully followed the instructions of the French authorities. The Mokaddam of the Derkawī of Oran, Hadjl b. Simâna, also confined himself to spiritual activity and recommended his Khyâm to submit to the government authorities.

In opposition to the Algerian Derkawī those of East Morocco waged a constant war against the French authorities up to the occupation of the Algero-Moroccan hinterland: in 1907. The occupation of 'Ain Safra 1851 brought them into immediate contact with the French. The Sharif SI Muhammad al-Hâshim b. al-'Arbi, the head of the Zawiyas of Ghafr in the Madgascar country, the most important Zawiyas in Morocco next to that of Bari Bari, preached a holy war against the Christians; but his son, who was over 80, did not allow him to take effective action in person. The same thing happened in 1885 on the occupation of Tjaânt b. Râzî. In 1887 their resentment was turned against the Moroccan government which was accused of having come to terms with the Christians. The death of their aged leader in February 1893 brought confusion into the Derkawī order of the south. SI Muhammad b. al-'Arbi had appointed as his successor SI 'Abd al-Hâjir b. al-Hâwari, head of the Zawiyas of Farkha, acting solely for the best interests of the brotherhood. But his sons would not agree to this arrangement; they founded rival Zawiyas in opposition to those of their father's successor while a certain number of Sharifs at the head of other Derkawī communities sought to promote further ascensions from the brotherhood for their own advantage. These schisms along with the independent spirit of the Berbers rendered the hostility of the Derkawī groups in the south to the French advance, which lost advantage of the dissensions of the rival groups, largely ineffective. Then a certain 'Ali was Hâdî, of the Berber tribe of Att Attâ, organised against the French the attacks at Mefera and Timsîn. At the same time, aarchy reigned supreme in Tuluft; a number of Derkawī of the district formed a aikf or band, called 'Izîf 'Ali al-Hâwarî (from the name of the founder) representing the most violent school of opposition to established authority.

To meet this agitation and the threatening plans of France in the east, the principal Mokaddam was nothing to be free from the state of uncertainty in which they found themselves, and to decide on a uniform plan of action, decided to appoint a Zume, who would have supreme guidance of the brotherhood. The assembly of delegations from the Zawiyas in September 1901 elected Muhammad b. Ahmâd, superior of the Zawiyas of Safra. This nomination was generally well received. Although in Madgascar the sons of SI Muhammad al-Hâshim b. al-'Arbi hastened to accept him, SI Bari b. al-Hâwarî, on the other hand, declined to recognize his authority. The agitation in the south of Morocco has since flourished, supported by the innumerable Sharifs, more or less related to the Sultan of Morocco, who live in the
The branch of the Zawiya of Gaia, in Madagascar. This Zawiya was formerly a kind of place of banishment (a measure of grudge on the part of the rulers of Morocco) of the relatives of the Sultans who had a claim to the throne. It has become a hotbed of hostility to the Christians. The influence of this Zawiya is almost preponderating in Tafilet, among the Morocco Berbers of the High Atlas and the Eastern Central Atlas, as well as in the valley of the upper Muluya.

2. The branch of the Zawiya of Iriwa; its sphere of influence is the Baati Snaasen and the N. W. of Oran.

In Algeria, the principal branches are:

1. That of the Ulaid Malghita, at Medea. Its sphere of influence is the Hamiluya and certain of the Baati Gulf of the Algero-Moroccan frontier.

2. That of Kaddur b. Shemoun, of Moustaga, whose influence dominates the Tell of Oran.

3. That of the Ulaid Lakaad near Tinat, whose influence is preponderating throughout the valley of the Sahil, the mountains of Warrason and those of Mersaret.

There are also a few Zawiya of little importance in Tunisia, Tripolitania and in the East.

The brotherhood of the Derkawa, with some modifications, has given rise to certain religious groups in Morocco, which are even more strict. Such are the Kittattita (disciples of Sidi Muhammad al-Kittani, author of the Salamat al-Anfa/), the Harraktiya, veritable anarchists (disciples of Sidi Muhammad al-Harraki, 3rd successor of Mulay I-Arbi al-Derkawa) etc. The influence of these groups hardly extends beyond Fas and its environs. We have already noted of a group of Harraktiya in Tafilet.

Bibliography:

DERWISH (DARWEŞ) is commonly explained as derived from Persian, and meaning "seeking dooms", i.e., a mendicant (Villiers, L'African, pp. 953, 954; Grundd., i. e. de Viv, Phal. 1, p. 260; ii. pp. 43, 45). But the variant form, daryş, is against this, and the real etymology appears to
be unknown. Broadly through Islam it is used in the sense of a member of a religious fraternity, but in Persian and Turkish more narrowly for a mendicant religious called in Arabic al-jibar, In Morocco and Algeria for derwishes, in the broadest sense, the word most used is akhuna, herethen, pronounced akhuna. These fraternities (pirda, plural of pirda; paf, method of instruction, initiation and religious exercise) form the organized expression of religious life in Islam. For centuries that religious life (see Sufism) was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or sorcery meditations, there was found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a permanent corporation, preserving an identity of organisation and worship under a fixed name. Only in the sixth century of the Hijra did the troubles of the Shabīḥ breakup — dīn continuous corporations began to appear. The Kādirites, founded by 'Abd al-Kādir al-Dījānī (q. v., d. 356 A. H.), seem to have been the first still-existing fraternity of definitely historical origin. Thereafter, we find these organisations appearing in bewildering profusion, founded either by independent saints or by split and secession from older bodies. Such historical origins must, however, be sharply distinguished from the legends told by each sect as to the source of their peculiar ritual and devotional phases. As the origin of Sufism is pushed back to the Prophet himself, and its orthodoxy is thus protected, so these are traced down from the Prophet (or rather from Allah-Gabriel-Prophet) through a series of well-known saints to the historic founder. This is called the sīyāta or “chain” of the order, and another similar sīlība or apostolic succession of Heads of Islam from the founders to the present day. Every dervish must know the sīlība which binds him up to Allah himself, and must believe that the faith taught by his order is the esoteric essence of Islam, and that the ritual of his order is of as high a validity as the sīlība. His relationship to the sīlība is through his individual teacher (shaykh, muraqqāt, muraqqāt, jība) who introduces him into the fraternity. This takes place through an ‘abd, “servant”, consisting of religious professions and vows which vary in the different bodies. Previously the neophyte (muraqqāt, “willer”, “instructor”) has been put through a longer or shorter process of initiation, in some forms of which it is plain that he is brought under hypnotic control by his instructor and put into rapport with him. The theory is always some form of Sufism, but varies in the different jība from ascetic quietism to pantheistic pantheism. This goes so far that in Persia dervishes are divided into those kāshār “with law”, that is, following the law of Islam, and those dākhīn “without law”; that is, rejecting not only the ritual but the moral law. In general the Persians and the Turks have diverged farther from Islam than the Syrians, Arabs or Africans, and the same jība in different countries may assume different forms. The ritual always lays stress on the emotional religious life, and tends to produce hypnotic phenomena (auto and otherwise) and fits of ecstasy. One order, the Khalwātī (q. v.), is distinguished by its requiring from all its members an annual period of retreat in solitude, with fasting to the utmost possible limit and endless repetitions of religious formulas. The effect on the nervous system and imagination is very marked. The religious service common to all fraternities is called a jibar, “remembering”, that is, of Allah (Kor. xxiii. 41 is the basic text), and its object is to bring home to the worshipper the thought of the unseen world and his dependence upon it. Further, it is plain that a jibar brings with it a certain heightened religious exaltation and a pleasant dreaminess. But there go also with the hypothesis, either as excipients or con- sequents, certain physical states and phenomena which have earned for dervishes the various descriptions in the west of barking, howling, dancing, etc. The Mawlawītes (q. v.), founded by Dībāl al-Dīn al-Rūmī (d. at Konya in 672 A. H.), stimulate their ecstasies by a whirling dance. The Sādīcītes (q. v.) used to have the Dowans (q. v.) and still to their mourning the beating of little drums, called ḍūr. The use of these is now forbidden in the Egyptian mosques as an innovation (Bidā’; Muhammad ‘Abdul, Ta‘rīkh, p. 144 et seq.). The Sādīcītes, Rā‘īfites and Aymalītes have particular fascia, peculiar to each jība, of eating glowing embers and live serpents and scorpions and glass, of passing needles through their bodies and spikes into their eyes. But besides such exhibitions, which may in part be tricks and in part rendered possible by a hypnotic state, there appear amongst dervishes automatic phenomena ofclairvoyance and alluvoyance and even of levitation, which deserve more attention than they have yet received. These, however, appear only in the case of accepted saints (nawārī, q. v.), and are explained as hawā al-portu (q. v.) brought by Allah for them. But besides the small number of full members of the orders, who reside in the monasteries (kūhāh, vālīh, šawāw, tubya, or tubya) or wander as mendicant friars (the Khaniqahites an order derived from the Bektashites change wander continually), there is a vast number of laymen, like Franciscan and Dominican tertiaries, who live in the world and have only a duty of certain daily prayers and of attending jibars from time to time in the monasteries. At one time the number of regular dervishes must have been much larger than now. Especially in Egypt, under the Mamluks, their convets were very numerous and were richly endowed. Their standing then was much higher than it is now, when dervishes are looked down upon by the canons lawyers and professes theologians (īlāmī) in the essential contest of intuitionalists on the one hand and rationalists on the other. For this division see further under Sufism. Now their numbers are drawn mostly from the lower orders of society, and for them the fraternity house is in part like a church and in part like a club. Their relation to it is much more personal than to a mosque, and the fraternities, in consequence, have come to have the position and importance of the separate church organizations in Protestant Christendom. As a consequence, in more recent times, the governments have assumed a certain indirect control of them. This, in Egypt, is exercised by the Shāh al-Dakrī, who is head of all the dervish fraternities there (Khitbat al-Shāh, pp. 379 et seq.). Elsewhere there is a similar head
DERWISH — DEWE BOYUN.

for each city. The Sanaites (q.v.) alone, by retiring into the deserts of Arabia and North Africa and especially by keeping their organization inaccessible in the depths of the Sahara, have maintained their freedom from this control. Their membership is also of a distinctly higher social order than that of the other fraternities. As women in Islam have generally the same religious, though not legal, status as men, so there are women derwishes. These are received into the order by the shaikh; but are often instructed and trained by women, and almost always hold their qit’ (or lang) by themselves. In modern Islam such female derwishes often led an eloborated life, and there were separate foundations and convents for them with superiorities of their own sex. Now, they seem to be all extinct. To give a complete list of fraternities is quite impossible here. Besides the separate articles referred to above, see also, the following:

- ARDIYA, ASHERAFIYA, BADAWIYA (see AHMED AL-BADAWI), BAIYUNIYA, BAKRIA, BAITE, DULCI, GULHANIYA, ISAWA, KIDAWIYA, NAJEFIANIYA, SHADDAH, SEMAH, SUGILAYA, WADJARIYA, WADAFIYA, WADAWIYA.

Bibliography: The bibliography on this subject is very large, and the following is only a selection: Depont et Coppolani, Les confréries religieuses musulmanes (Algiers, 1897); A. Le Chatelier, Les confréries musulmanes du Hafiza (Paris, 1887); Goldscheider, Verzeichniss, pp. 168 et seq.; 195 et seq.; Lann, Modern Egyptian, chaps. x. xx. xxiv. xxv. et seq.; J. P. Browne, The Derwiyya, or Oriental Spirituality (London, 1808); Hughes, Dictionary of Islam, sub Pend; D'Ohsson, Tableau général de l'Empire Ottoman, v. (Paris, 1790); Sir Charles N. E. Vambéry, Travels in Central Asia (London, 1864) and all Vambéry's books on travel and history; W. H. T. Girdner, The 'Way' of a Muhammadan Mystic (In Mental World for April 1912 et seq.); the present writer's article Derwisch in Encyclopaedia Britannica, ed. xi. but to correct by above, also his Religious Attitude and Life in Islam (Chicago, 1909) and Aspects of Islam (New York, 1918), both by index.

DERRISH PASHA, the name of several Turkish generals and statesmen.

1. Derwisch Pascha, a native of Mustar, who became Governor of Bosnia in 1604 (1595). His Ghazal on the bridge of Mustar has been published in Wiesenschilft, Mittel. aus Bosnien, Vienna, 1843, i. 311.

2. Derwisch Pascha, Kapudan Pascha in 1644 (1605) and Grand Vizier under Mahsumm III in 1615 (1606) but executed in the same year.

3. Derwisch Pascha, Grand Vizier under Abd al-Hamid I; disgraced in 1790 (1770) after holding this high office for eighteen months and died soon after in Chios.

4. Derwisch Pascha, a Turkish general, who commanded in the campaign in 1862 against Montenegro, and was appointed Governor-General and Commander-in-Chief in Bosnia and Herzegovina. He lost this post however when he failed in the revolution of 1875; in 1877 he received command of the troops stationed at Batum and was able to keep the Russians in check; at the end of the war he was sent against the Albanians, in 1883 entrusted with a mission to Egypt which was however unsuccessful. He died in 1896.

Bibliography: Samei Bey, Kamal al-Alam, iii. 2136 et seq.; v. Hammer, Geschichte des Osman. Reiches, see Index.

DERWISH MEHEMED PASHA, the name of two Grand Viziers. The first of these held office at the beginning of the reign of Mahomed IV, after having held various governorships and having been Kapudan Pascha; he was dismissed in 1649 and executed and his vast fortune confiscated.

The second held office under Mahmut II, 1818—1820, and died in 1827 (1822) at Vashk when on a pilgrimage to Medina.

Bibliography: Samei Bey, Kamal al-Alam, iii. 2138.

DESH (DAHHT) is the name in Persia for a desert or waste tract, and (with the pronunciation Daghht) is used in the same sense in Babylonia. In Russia the name is applied frequently to the great central desert which is nearly 700 m. long from the N. W. near Tbirsk to the S. W. near Siatun. It is known either as the Daghht-i Lut or simply as the Lut. Its northern part is frequently styled Daghht-i-Kawir owing to the Kawir or salt swamps which are frequent there. According to M. Sykes the whole desert is properly called Lut and patches of Kawir are found throughout. The name Lut is probably derived from the so-called cities of Lut (or Lot), strange natural formations on the ground.

The Daghht-i-Bak-sawvet or 'miserable plain' is a windswelt inhospitable plain on the plateau at the head of the Bolon Pass in babylonia. The Daghht-i-Gorana or 'plain of wild asses' is a parched up waste on the coast of Mekran.

(M. LONGWORTH DAMEK.)

DEWE BOYUN (v.) = "Camel-back" a frequent name for mountain ridges (particularly mountain passes) in the districts where Turkish is spoken, e.g.:

1. The name of a ridge east of Erzerum between the latter and Hasun-Kala, the watershed between the Euphrates and the Araxes (Ar-Rass) according to Brun's estimate 5637 feet high. In the Russo-Turkish war 1877 this pass played an important part; for the Turkish army had taken up a strongly entrenched position on it. The first attack by the Russians (in the beginning of December 1877) utterly failed but a strategist tried by them was so successful that the Turkish troops were driven in wild confusion back to Erzerum.

2. Another southeast of Kharip at north of Lake Goljik, the watershed between Murad Cal (the so-called Eastern Euphrates) and the Tigris, somewhat over 4000 feet high.

3. Another northeast of Aintab, 3150 feet high, in 36° 25' N. Lat. and 35° 51' East Long. (Greenw.) in the western part of the Kara-Dagh.

With the name of also Dewe-Tepa = "Camel-hill", the name of a hill in Bolghur-Dagh (Cilician Taurus) the two summits of which look like
a camel's back; cf. therese: Th. Kotschy, Reis
in den Kolk. Turken (1858), p. 201. An ana-
logous name is that of the famous battle-lion of
Gangamela in Assam, which likewise means
"Camel-back" (Asam, gaol-gamal); cf. thron
my article Gangamela in Pauly-Wissowa's Real-
dizier, d. blass, Allteurop., vili. 863.

DEWEWI KARAHIŞIR, i.e. the Karahi-
shir of Deewi (deewiin) karahişir in Nashri,
Edik, de Deutsch. Morgen. Gez., xx. 341
and Lennclius, Hist. Muz., 334) so-called after
the district of Deewi (Hoontow, Rawell etc., ill. 104
at fig.) to distinguish it from other Karahiehs
in Asia Minor, 30 miles S. W. of Kayseri, is
frequently mentioned in the Kirmanian sources
(Hoontow, iv, passim), at a later period belonging
to the kingdom of the Byz. Arthen (cf. Max van
Berchem, Maltevia, etc., 3rd Part, p. 41 and
48) and then to the Karamanogullar, and was taken
in 1394-1392 by Bayazid I (Nashri, loc. cit.)
on the conquest of Karamania by Mohammed II
in 1474, it fell to the Ottomans by voluntary surrender
(Sac'd din, l. 550). At the end of the xvith century the district of Dewi Karahisir
formed a judicial division (bala) of Kayseri
(Lithkran, l. 620), but now it is merely a
mahfiz of the Ilah of Edem, in the Sandjak
Kayseri in the Vilayet of Angora, while
the district of Dewi, as in the time of Hâliâli Khâlî, still
forms a separate Ilah (capital: Evrek).
Only a few ruins remain of the ancient fortifications
of Dewi Karahisir, the town which
is noted for its orchards contains a few hundred
houses and lies at the foot of the hills in the
midst of gardens (Kinner, Journey, p. 109; Halâb,
loc. cit.). In the neighbourhood, 2 miles S. W. of Dewi Karahisir, are the ruins of Zincigil Karfel, which is thought to be
the ancient Nora.

(Ahmed Wâlî, Lebdi, p. 583, Couen, Turquie
d'Asie, i. 304, 320 both give quite confused and
erroneous accounts). (J. H. Mortkmann).

DEWI (Dhawi). [See Dhiu.]

DEWSHIME (Ge. Nálkádzâva "collecting
boys") is the name applied to the forcible
pressing of Christian children to re-
tail the Janissary regiments, and for
service in the imperial palaces; the practice
is said to have been first introduced by Sultan
Orkân (Tur. 16th–17th c. of Tügkûntûlu Kamal
i. 8 and 211: 4th Tur. i. 13 et seq. 33 et
seq.), but it is probable that there has been some
confusion with the creation of the corps of
Janissaries out of the jemâl-e contributed prisoners
of war, attributed to this Sultan; a reliable
authority, Bartholomew de Sanco, writes in the year
1438 that Murad II (1421–1451), created the
duties: "Iberluras supr perdr kalm kuamam
fürrat", while, according to the Turkish sources
quoted, this Sultan only reintroduced the practice
after it had fallen into disuse during the decline
of the Empire. In any case it is certain that
Dewshime existed under Murad II (Zinkelnert,
iv. 106; note 2). Originally they appear to
have been held only every five years (Span-
dugino, Comm., ed. Farnese 1551, p. 123; Ven-
rantius in the Mon. Hung. Hist. ii. Ser., ii. 303;
Georgievsk, De Turcocrum Miribus, ed. Hellmar-
1674, p. 27; Wenner, Reusschöpf, p. 74), which
is perhaps connected with the census; in the xviith
century, more often every four, three years
or even according to some annually; in the xviith
century the intervals gradually became longer
until the practice was dropped.

"Conscription was practised mainly in the Euro-
pean parts of the Empire with a Christian popula-
tion (Greece, Macedonia, Albania, Servia, Bos-
nia and Hercegovina, and Bulgaria); Constantin-
ople with Galata and some other towns, e. g.
Nauplia, as well as the islands of the Archipe-
lag, notably Chios and Rhodes, were exempt
from this levy of boys; the same is also asserted
of the Armenians (see Thevet, Cosmog. Univ.,
799 et seq.; La Boulaye de Gueir, Voy., p. 50;
the contrary is maintained by Kochin, p. 27, text
p. 191 of the translation and Wilck, p. 215). As
soon as an imperial form of order was issued, the
necessary officer appointed to the task, usually a
Fâqihbâz, but sometimes also an officer of higher
rank, went with a number of "şâbâ" ("drivers"
"driven") to the district allotted him and had the boys of
10–15 years of age produced by the Christian
protectors (older of the village), according to a list
prepared by the latter, so that he might be
able to choose those best fitted for service;
the original practice was to take one out of every
five boys (Thevet, i. et al., P. 518), those who were
married being exempted. But even by the xviith
century gross abuses had crept in; not only was it
possible to purchase exemption, but also non-
Christian children, Jews, Turks and Gypsies, were
snagged in and the practice, which had become
like a modern African slave raid (see the descrip-
tion in Thevet, i. et al. and Veranis and the folk-
song in Arastianins, [w666666], p. 218),
gradually fell into disrepute with both rulers
and subjects; the leaders of the levy frequently atoned
for their exactions with the loss of their rank
and sometimes even with death (Salunkhi, p. 263

The number of recruits was pressed into the service
(Adkamogullar) is variously given; it varies
from 2000 to 12,000, these were first of all
brought to the capital and there allotted; some
were rewarded for service in the Imperial garrets
(Nestand, u. et. al., p. 765) and for the rewards
provided for their training in Constantinople, Galata
Reiche, v. 461 on this point); the others were
handed over to Pashas and other dignitaries,
artisans, land-owners etc. to be trained and to
make themselves useful.

After a few years (five according to Kochin),
during which they acquired the necessary phys-
sique and had become quite accustomed to the
Turks in religion, language and education, the
latter were again collected together to obtain prac-
tice in the use of weapons in their barracks in
Constantinople; they did not enter the Janissary
regiments until the latter's ranks were being
filled up, which was usually done every seven
years. Those brought up in the Imperial garrets
entered the ranks of the pages of the Imperial
household in Constantinople as far as they were
DEWSHERME — DEY.

flit for it, where they were educated for the personal service of the Sultans, or for the higher branches of service in the court; those who left the palace, were placed in the civil service. In this way many viscounts, grand viscounts, and other dignitaries of the Solimine Porte rose in the xvth and xvi th centuries from the ranks of its Christian subjects.

The conditions described were radically altered in the second half of the xvth century.

By the time of Selim Dede (Türkheim, ii. 247; "Ata, loc. cit."
"foreign" l. c. non-Christian elements had begun to find a place among the Adjun-
eggülâze; under Murad III, in 1582, there was a great Janissary body which all sorts of vagabonds found a place in the corps (Kâfif, p. 57; and following him Djevret, t. 196, cf. "Tevvâb- 
Safi, loc. cit.") Thenceforth Turks by birth and sons of Janissaries were allowed to enlist in greater numbers and ultimately Dewsherme fell into disuse, or was only practiced at long intervals and exclu-
sively in Europe. Ahmad I was the first to abol-
ish it (Littgow, Adventures and Observations, p. 106; Glasgow, 1906); Kâfif, p. 34 says the same of Murad IV while according to v. Hammer, n. 244, the levy of 1657-1658 was the last of its kind. The reason given is not correct. As late as 1661 the Grand Vizier had to promise the re-
fractory Janissaries that in future only the children of Janissaries should be allowed to enter their corps (Rieu, Present State of the Ottoman Em-
pire, in the appendix to Griston-Knaoles, p. 7), and if the positive assertions in v. Hammer, vii. 
555, 189, and vi. 499 (based on the Reports of the Venetian bulls and of the Imperial Resident) may be trusted, there were again dewsherme in 1664 and 1674; in the 3rd article of the treaty with Poland in 1671 it was expressly stated that the province of Podolia ceded to the Porte
should be exempt from dewsherme (Rashid, i. 
73 of the folio ed.). The accounts of European travellers of the second half of the xvth century up to about 1675 and Esghi Celebi, Tunis, II, i. p. 210 likewise speak of the pressing of boys as a practice still in vogue in their time (cf. Tavernier, Nouv. Règ. du Grand Séigneur, iii. 23; Smith, De Moribus Turcorum, p. 81 of the Oxford edition 1764, and De Ecc. Graecae Statu Hodierna, p. 13; Le Boulaye le Gour, p. 48 et sq.; Rieu loc. cit., p. 19 and Pr. State of the Greek Church, p. 223); Ahmad III again as late as 1793 ordered a levy of 1000
Christian children, but it does not appear to have carried out (v. Hammer, vii. 91); and certainly the attempt was never again made.

Bibliography: The chief source is Zin-
keisen, Gesch. des Osman, Oder. iii. 215—231; 
it. 156, but he was unable to use the Oriental
historians and the Venetian reports not printed in his time and overlooked a number of European travellers — e.g. Fawdopacius, p. 
193 et seq., Tavernier's Relation, Rieu, Smith, 
J. H. Montfaucon.

DEY, a title borne by the rulers of Algiers and Tunis. The word "Dey" in Turkish signifies a maternal uncle. According to a legend reported by Venture de Paradis (Alger au XVIIe 
sicle, Rev. Africaine 1896, p. 257) the father of the Barlaumes used to enjoin his sons to obey 
Khalil al-Din, saying, "He will be your Dey." In 
reality this word seems to have been originally
applied to a subsalter in the Janissaries. At Tunis towards the end of the xvi th century, it denoted the chief of each of the 40 sections into whom Siûa-Pasha had divided the militia. In 1591 these 40 days elected one of their number to command the army along with the Agha. The Dey thus chosen soon became the actual head of the government and substituted his authority for that of the Pasha representing the Porte. But since the latter half of the xvth century the Dey, who held lower commands in the army, tended to supplant the Dey. At the beginning of the xvi th century, Ibrahim Bey assumed the title of Dey, and this title itself was definitely abolished by Hussein b. 
Ali in 1705. [See the article TUNISIA.]

The elevation of the days was in Algiers, as in Tunis the result of a revolution. Tired of the anarchical rule of the Aghas, the Raïs or Cemair captains substituted for them in 1671 a chief appointed for life designated by the name of Dey. At first elected by the assembly of raïs, the Dey were chosen, after 1689, by the officers of the army. Thirty Dey's ruled in succession from 1671—1830. Of this number 14 reached the age of 70 and 12 were assassinated by their predecessors. In this case the election was a mere sham, the candidate being chosen beforehand and installed by violence. No qualification as regards origin or capacity was necessary to fill the office of Dey. The humblest and most ignorant of the Janissaries could aspire to this dignity, but in fact, most of the Dey's before their election had exercised the functions of Khamar-Dj, Agha or Oujal al-Khâlîf. [See the articles ALGIERS and ALGERIA.]

Limited in theory by the control of the Djiva in the power of the days was in reality absolute. The Dey chose his ministers or "Powers," elected as he thought fit the boys of the provinces, administered justice and negotiated with foreign states. He received no emoluments other than the high pay of the Janissaries (30 large piastres a month and free allowance) but also claimed in-
vestiture fees from boys and other officers, had a share in the prizes taken by the Corsairs, received presents from consuls on their taking up their duties and presents from European sovereigns on the conclusion or renewal of treaties of peace, he could enrich himself by partnership with Jewish merchants. He had his own treasury apart from that of the State. Most of the Dey's amassed considerable fortunes which however were confiscated to the public treasury when the Dey met his death by violence. The might of the Dey was less formidable and their power less stable than one would at first believe. They were really obliged to consult the desires of the military un- 
der penalty of being forced to abdicate or to ex- pose themselves to assassination. Very stringent rules regulated their private life. The Dey subsequent to his election was separated from his fam-
ily, no woman could gain access to his palace except in public audience; he was only allowed to spend in his own house the afternoon of Thursday and the night from Thursday to Friday. A Spanish historian, Juan Cano, thus describes the Dey of Algiers: "A rich man but not master of his riches, a father without children, a husband without wife, a despot without liberty, a king of slaves and the slave of his subjects."
DHABAH, gold, is among metals as the sun among the planets. It is formed by the most perfect amalgamation of the purest sulphur and the finest quicksilver so that it is easily smelted by fire but is not consumed nor does it become rusty no matter how long it may lie in the ground. It is soft, yellow with a tinge of red, bright, sweet to taste, pleasant to smell and exceedingly heavy. It is the magnet of quicksilver and sticks in it; quicksilver deprives it of its colour. Gold may be cast or wrought with the hammer, beaten into thin leaves; drawn out into threads; the finest gold dust may also be used for writing purposes. For making coins and articles of ornament it is combined with silver and copper.

Its solvency is due not to its rarity for it is found in large quantities and is being constantly obtained from mines, but is due to the fact that every one who obtains any barites it in the ground so that more is buried in the earth than is current. Gold is as important to the importance of gold as a standard of value. It is one of the first items in all accounts of wealth. It is the greatest proof of God's grace and the foundation of commerce among men. For perhaps a man who has clothes has no corn while the man who has corn does not require clothes so that some medium of exchange is necessary which will be accepted as the standard of value. God has therefore created dinars and dirhums and threatens those who bury treasures of gold or silver with severe punishment as they render God's wisdom and foresight futile. Rich men who use vessels of gold instead of those of wood or copper are also liable to be severely punished.

In medicine gold is said to be particularly effective in diseases of the eye, melancholia, palpitation of the heart, alopecia, etc., A hole pierced in the ear with a golden needle does not fill up; cauterization with gold is considered peculiarly effective. The notices of the places where gold is found in the geographers have not yet been collected; many are mentioned by Dimahati, Gold is usually found in sandy districts and in soft regions, generally in the equatorial zone; in colder regions it is only found at a great depth. An account of the manner in which gold was obtained from 'Ali's in Nablus is given by Idrisi of the 45th century. According to him the gold-seekers go by night to the district, seek out a definite area for themselves and note the glittering of the specks of gold in the sand. They mark the spot and come back to it in the morning. They then take the gold-bearing sand, carry it to the springs where they wash and wash it in wooden pans; they then take the gold dust, collect it with the help of quicksilver (jāwīlān ba tāshā) and smelt it. Traders then come and carry the gold into foreign countries.

being so, of weak authorities, etc. published at Lucknow in 1834 and at Cairo 1835. 4, Taqīdī, Aṣmāʾ al-Saḥīfa, a dictionary of the companions of the Prophet (Haidarābād 1315). 5, al-Tābiʿ al-Nabūwī (var. Tābiʿ al-Nabī), also ascribed to Sayyid ibn Abī al-Raḥmān al-Arsādī (Cairo 1508), the work is divided into three books: 1, principles of medicine; 2, medicine and foods; 3, treatment of diseases.

Further works by him are accessible only in manuscripts: 1, Taqīdī al-Islām, a history of Islam to the year 700, divided into periods of 10 years, each of which comprises a Tābiʿa of persons in alphabetical order; a certain number of volumes of the same work are to be found in various European libraries; 2, an appendix covering the years 707-740 (Leiden 765). According to Abū al-Walīd al-Sabkīh, author of the Tābiʿāt al-Dirāsah, this would be an excellent work if it came from a certain hand; but Kamāl al-Dīn al-Zālīlī, who read it through volume by volume, found it a magnificent work.

Al-Dhahabi took up the same subject again and treated it in four distinct works: 1, Taqīdī al-Aṣr al-Nabī, a collection of the Axamī himself, a history of Islam to the year 706, divided into the same work completed in Dūn 'l-Kaʿda 715 = March 1318 is called Tabāqāt al-Tābiʿīn wa al-Bāṣīrāt al-ʿAṣr (or Al-Bāṣīrāt al-ʿAṣr), a history of distinguished individuals. 2, Taqīdī al-Aswāṣāt (or Shīrāzī's Tābiʿāt al-Aswāṣāt) there are MSS. in European libraries. 3, Taqīdī al-Aswāṣāt (or 'Aqīja of the Axamī, a history of illustrious individuals. 4, Taqīdī al-Aswāṣāt (or Shīrāzī's Tābiʿāt al-Aswāṣāt) there are MSS. in European libraries. 3, Taqīdī al-Aswāṣāt (or Shīrāzī's Tābiʿāt al-Aswāṣāt) there are MSS. in European libraries. 4, Taqīdī al-Aswāṣāt (or Shīrāzī's Tābiʿāt al-Aswāṣāt) there are MSS. in European libraries.
residence, and with it the seat of government, to Murshidabad, so that Dhaka only remained the capital of Bengal for a century. Local administration was then vested in a nizam or deputy, the last of whose descendants died in 1845, when the title of Nawab of Dhaka was declared extinct. The title of Nawab, without any territorial jurisdiction, has since been revived by the British in favour of a Muhammadan family who originally gained their wealth by trade and are now large land owners. To one of them, Sir 'Abd al-Qhan, is due the waterworks of the city; and to his son, Sir Ahsan Allah, the electric installation. The present representative, Nawab Sir Salim Ahsan, ranks as the leader of the Muslim community in Eastern Bengal. In 1903, on the formation of the province of Eastern Bengal and Assam, Dhaka was selected as the head-quarters of the Local Government; and it is understood that it will still be the occasional residence of the Governor of Bengal as reconstituted.

The name of Dhaka became known in Europe as early as the xvth cent. for its manufacture of muslins of exceptional fineness, and factories for trade were founded here by the English, Dutch, and French. The industry still survives, but not for export. More important now is the weaving and embroidery of fabrics, which are in request throughout the Muhammadan world for turbans and other articles of apparel. Embroidery, costume-blooming, jewellery, gold and silver work, shell-carving are also important industries. Among three colleges may be specially mentioned the Madrasa, founded in 1874, with an endowment from the Mahbub Fund, which has two well-attended departments—Arabic and Anglo-Persian.

The buildings of the Muhammadan governors of Dhaka have almost all fallen to ruins, through the influence of the climate and neglect. The old fort has entirely disappeared. The Lai Bagh, which was never completed, contains within its walls a beautiful tomb of Pari Bisti, daughter of Shykiya Khan, and wife of a son of Amin-ud-Daula. Rent for the Lai Bagh is still paid to a descendant of Shykiya Khan. More characteristic are the Hari and Chota (large and small) Kathas, two massive buildings originally built for palaces but now put to base uses. The two oldest mosques bear date 1456 and 1458 A.D. Mention may also be made of the Satgumbuz mosque, built by Shykiya Khan; and of the Hussain Dacca, where the last Nawafs is buried, and where the Maharram is still celebrated with great pomp.

Bradley-Birt, The Remains of an Eastern Capital (1906); Sayid Awa'id Husain, Antiquities of Dacca (Dacca, 1903); Bengal District Gazettes, vol. iv. (Calcutta, 1910); Traveklet-Nagrihati (Memoirs of the Asiatic Society of Bengal, vol. ii. N. S. 6) (Calcutta, 1908). (J. S. Cotton.)

DHAKA, the ninth letter of the usual Arabic alphabet (numerical value 700; cf. the article ARAB). The letter is a variant of xi. In Old Arabic it was pronounced as a voiced interdental or postvocalic spirant; now as a rule it is a voiced dental explosive (Dil). Cf. A. Schaefer, Nomerhaut's Lautlehre, index. (A. Schelkle.)

DHAMAR (DAMAR, DAEVAR, the entifier of the Salaman inscriptions), a district (mi'lad) and town in South Arabia, on the south of San'a. The district of Dhammar was very fertile and had rich cornfields, splendid gardens and many ancient citadels and palaces. On account of its fertility it was called the Mura of Yaman. The horses of Dhammar were famed throughout Yaman for their noble pedigrees.

Amongst places which are mentioned as belonging to the district of Dhammar are the following: A'dra'a, Balad 'Ana, Baraddûn, al-Dharah, Dukh and Dhammarra (the women of these two places had the reputation of being the most beautiful in all South Arabia); Dha' Dhuwâl, al-Tallah, al-Turan, Dhamar, Rakhma (Hamdan mentions a Ka'jurna), al-San'a', Yaman, Shawkâ, al-'Azjala, al-'Azhiba, al-Karaj, Ku'na, Mukhdarna, al-Malja al-'Ulla and al-Malja al-Salif, Nahrun and al-Yani; among Wadis: Banâ', Khubû, Surba or Sumara (a large Wadi), Shu'aybi and Mawj among mountains; Ibal (near it rises the black hill of Uluj, was a large spring called Hammed Sulaiman, 'Sukaym' or 'Sukaym', where people sought relief from leprosy) and Sulf (a high mountain with the citadel of Sumara); among citadels: Bar', Hayâwa, Dhuwar, al-Kala'a, 'Awwan', 'Qay'ana, al-Kowna, Hizran, Baimah and Hukir.

Not far from Dhammar there were popularly believed to be remains of the throne of Hiliks (Arab Bilbes), consisting of several pillars near a large stream which one could only cross at the risk of his life. The explorer Niebuhr, who visited Dhammar, could find no traces of it.

The town of Dhammar used to be the head-quarters of the Zaidiya Sect and had a famous Madrasa attended by 500 students, from whose numbers were produced many famous scholars. Its inhabitants included many Jews and Banuans. After the fall of the kingdom of the Zaidite Imams of San'a, it also lost its importance and now enjoys but a minor existence.

AL-DHAMMAYA, i.e. "the Blauemer," a Shi'a sect who accused Muhammad of having claimed for himself the honour due to 'Ali, because in their opinion Muhammad ought rather to be regarded as the messenger of the divine "All. They are followers of a certain "Iltâ (the form is not certain) b. Dhîrâ" al-Sadîq, of whom nothing further is known. In another connection the followers of Abî Hâmîn (see the Art. TUBAYKAT), according to al-Baghdîdî, ed. Muh. Bâdî, p. 109, are called Dhammaya.

DHANAB (A). "Tail," the name of the star α in the constellation of Cygnus (Deneb), properly Dhanab al-Durrā to distinguish it from Dhanab al-Amīd = β in the constellation of Leo.

DHAR, state in Central India, under a Marāthi ruler; area, 4,775 sq. m.; pop. (1901), 142,115, of whom 9,794 were Muslims.

The greater part lies upon the fertile plateau of Mêlwa, including the historic fortress of Mândêla, the town of Dhar, pop. (1901), 17,792 "is a very ancient place, having been the capital of the Paramâra Rajâjas, from whom the present chief claims descent. It was occupied by 'Abîl al-Dîn in 1306 A.D., and became known as Pirâna Dhar from the large number of saints buried here. In 1359, Dilîwâr Khân, Ghûr, the governor from Dihlî, founded the independent kingdom of Mêlwa, the capital of which was moved to Mândêla by his son. The fort, which still stands, is said to have been built in the time of Muhammad b. Taghâlî (1325–1351). Two mosques are constructed of remains of Hindu temples; one of these, built by Dilîwâr Khân, is known as the Lâj Masjid, an iron pillar, now broken into several pieces, which resembles the more famous iron pillar at Dihlî.

An inscription on it records the visit of the emperor Akbar to Dhar in 1598. The city is popularly called "Râjâ Khôjdê's School," because the floor is paved with slabs inscribed with rules of Sanskrit grammar. On the back of the Mihîrâb is a portion of a Sanskrit play, and on two pillars a curious epitome of Sanskrit inflexional terminations, cut so as to resemble a snake. Among the manuscripts are those of 'Abîl 'Alâ Shâh Châsâlî, who is said to have converted the Hindu Rajâ to Islam before the Mâsûlim conquête, and of Shâîkh Kamâl al-Dîn, with an inscription in Kufic characters on a blue tile, recording its erection in 1457.

DHÂRA, word meaning something very small, such as an ant or a speck of dust, which is used by Muhammad in the Koran to indicate the perfection of various qualities of God. For example the perfection of his justice: "God will not wrong any one even by a dhrâra" (iv. 44, and cf. xxi. 7–8); the perfection of his knowledge: "The weight of a dhrâra, on the earth or in the heavens, would not escape your Lord" (x. 62, and cf. xxxiv. 3 and vi. 59); the greatness of his power: "Call upon those whom you believe to exist besides God; they have a power in heaven nor on the earth, not even as much as the weight of a dhrâra" (xxxiv. 20).

According to Zamakhshârî's commentary on Sûra iv. 40, "dhrâra is a small ant; the variant reading mânâh "ant", is actually found in this passage in stead of dhrâra; according to Ibn 'Abbâs, the dhrâra is what one obtains by dipping his hand into dust and then blowing upon it.

The word "atom" best translates the term. But the word dhrâra is not used by Arab writers to express the union of an atom in the philosophical sense; they use rather: dîn, "part". On the philosophical stem see the reference in the article DSWARA.

(ROD CARRE DE VAUX.)

DHARWAR, the southernmost district of the Bombay Presidency of India, lies between 14°17'—15°50' degrees North Latitude, and 74°48'—76° degrees East Longitude. Owing to its remote position, it remained for long free from Muhammadan control; but after the capture of the Fort of Belgaum from Vijaynagar by the Bahmanî Kânsa, Humâyûn Shâh, in 1472, the most of Dharwar also came under the Bahmanî rulers and passed on their fall to the 'Abîl 'Alâ Shâh kings of Bijâipur. For a time the country passed again under Vijaynagar, but from 1573 to the destruction of their house by the Emperor Aâtrângâseb in 1686 it remained under the Bijâipur rulers. It was afterwards under the Nârsinhas, and then under Haidar 'Ali of Mysore, and much fierce fighting took place in it between the latter and the Marâthas. The last and the British besieged Dharwar Fort in 1799 and captured it from Tipu Sâhî's Governor Râdî al-Zamân Khân. On the fall of the Marâthas the district passed under British rule in 1818. The Muhammadans in the district number rather over 100,000 and form 12% of the population; in Dharwar City they form nearly 25 of the inhabitants. There are a few small gaôls among them. The west of the district is hilly and wooded; the east is a treeless plain of black cotton soil.

DHÅT. [See SHÅT.]

DHAW. [See III.]

DHAWI. [See III.]

DHÎ. [See III.]

AL-DHÎ-AB (Dî'âr, "wolf"). A South Arabian tribe. Their land lies between the territory of the Lower 'Awâfî [q. v.], and the Lower 'Abdî [q. v.]. There are also considerable settlements of the Dî'âr in the country of the Lower 'Abdî itself, the villages of which are mostly occupied by them. The soil is unfertile and mostly prairie-like pasture land. In the east of the district is a mountain of some size, the Iblâd Hamra (over 4000 feet high). The chief place is the fishing village of Adhwar (al-Ulî), with an important harbour.

The Dî'âr are a very wild, warlike tribe of robbers and are therefore feared throughout South Arabia. They are 'Abdî (free, independent tribes) and are considered as genuine Himyarits; their globe (Dî'âr, "head") means (al-Dî'âr) "I am the wolf of the Himyarits." They have no common Sultan, and the various branches of the tribe are ruled by Khâlsás, called 'Abîl "father", whom they obey in war

The most influential Shâikh of the Dî'âr-lives in Arghâ (Orgâsh, 'Argeh).

338; Comte de Landberg, Arabicae, iv. (Leiden 1897), p. 19 et seq., i. (Ibid. 1898), p. 230 et seq. (J. S. CHLINKER.)

DHI'B, the wolf, is described as extremely malignant, quarrelsome and cunning. When a large number of wolves are together, no one separates from the flock as they do not trust one another; when one becomes separated is eaten by the others. When asleep, the keep right and left eye open alternately to keep a watch on one another. When a wolf is not a match for an opponent, it howls till others come.
to its help; but when one becomes ill, it separates from the others, because it knows it will devour it when they see it is ill. When a wolf lies designs on a flock of sheep, it howls so that the dog hears and runs in the direction of the sound; the wolf then goes to the other side, where there is no dog and carries off the sheep by seizing it behind the head and licking it with its tail so that the sheep runs away with it. The wolf is particularly fond of making its raids just before sunrise, when shepherd and dog are both tired with watching. When a wolf runs across a man's path from the right, the man will be the victor but if it comes from the left, he is overcome by the wolf. Other wild animals like the lion and the panther only, attack man when they are old and no longer able to hunt, while the wolf is always ready to attack man. It can go for a long time without food; its stomach is able to digest a bone but not a date-stone. Keswini and Ibn al-Bajari mention the ease of parts of the wolf in superstition, while Damiri gives a host of legends and stories.

DHAKK in the mind (bil-bil) means *remembrance*, and with the tongue (bil-bil), *mentioning*, "relating," then, as a religious technical term (pronounced shah), the *glorifying* of Allah with certain fixed phrases, repeated in a ritual order, either aloud or in the mind, with peculiar breathing and physical movements. When these phrases are pronounced aloud, it is a *delh alilk*, when inwardly, a *dahir alilfi*. There is much dispute as to which is of the higher value. This practice is based ultimately on *Kuran* xcviiil, 41. "O ye who believe, remember (or glorify) Allah with much remembering (or glorifying)." A tradition from Muhammad is also frequently quoted: "There are not a company remembering (or glorifying) Allah, but the angels surround them and the (good) men worship them and Allah Most High remembers (or glorifies) them among those who are with him." For the early development of the practice, individually and in company, of such *shah* see Goldscheider in *Wiener Zeitisher* xilii, pp. 25 et seq. When, then, the later derwish fraternities arose and their ritual became fixed, an essential part of each *kaftan* was its *shah*. These consist of the repetition a great number of times of such phrases as al-Ilaha 'Ilaah, subhxna 'Ilaha 'Ilaah, al-'I'ma 'I'ma 'I'ma 'I'ma, and the different names of Allah. Spiritual songs, often indistinguishable from love songs, may be introduced, as also dancing and playing on different kinds of drums and pipes. At the regular Friday service (*chakra*) in the *chakra* or *suraya*, which all derwishes are expected to attend, the ritual consists especially of the form of al-Ilaha 'Ilaah, called the *shah el-ghila*, and of the *shah* (q. v.), or "office" in the technical sense, of the order, which is made up of the recitation selections from the *Kuran* and of other prayers. A simpler *shah* is that of awzaf ("hours" in the technical sense), for which it is to be repeated after each regular *galaat*, or at least twice daily. Another term used in this connection is *wiss*, explained by *zaff* as meaning "access", "arrival" (with Allah), and applied to a short invocation, drawn up by a founder of a fraternity, the recitation of which is now a pious work. Both *shah* and *wiss* are otherwise used to signify portions of the *Kuran*; or of prayer recited at particular times (Lamin, *Lexicon*, sub *shah* and *wiss*).

Each fraternity has a *shah*, or ritual, of its own, constructed and imposed by its founder, but these can be modified freely by the *shah* or *wiss* of *mubadda*, they are given under the separate fraternities. For the usage of the word *shah* which theologians have found in the *Kuran*, and for further description of its meaning and use with followers of the mystical path (*suhf*) see Dict. of Techm. Terms, I, 51 et seq. For descriptions of actual *shah* see Lane's Modern Egyptian by index and the present writer's *Objects of Islam*, pp. 159 et seq. For an attempt to clear the *shah* of superstitious elements, see Kichl al-shah al-mubadda, pp. 63 et seq., the manual for derwish sultans and their pupils drawn up under the direction of the present Shuykh al-Bakri.

(D. R. MACDONALD)

DHIMMA. According to Muslim canon law on the conquest of a non-Muslim country by Muslims, the population which does not embrace Islam and which is not enslaved is guaranteed life, liberty and, in a modified sense, property. They are, therefore, called *ahl al-dhimma*, "People of the covenant or obligation," or simply *ahd al-dhimma* or *dhimma* - the dhimma involving temporal rights from Muslims and duties towards Muslims. If, however, they have been captured in arms, they may be killed or enslaved or ransomed or exchanged or simply set free. The wives and children of combatants in any case must become slaves. But many a *dhima* is, in strictness, open only to a *People of Scripture* (*ahl al-kitab*), thus to Jews, Christians and Sabaeans which has been interpreted to cover Zoroastrians. All others, also roughly as *Dahati*, or materialists, and as idolaters, must be killed or enslaved. But practically this distinction has fallen to the ground, and Muslim states have found themselves compelled to tolerate other than People of Scripture. Each adult, male, free, save *dhima* must pay a poll-tax (*dhiyya* q. v.), of an amount which is fixed in the agreement. His real estate either becomes a *maw* for the whole body of Muslims, but of which he continues to have the use, or he holds it still as his own. In either event he pays on it and its crop a land-tax (*khums* q. v.), which, in the first case, inures in the land and must be paid even though the land comes into the possession of a Muslim; but, in the second case, on the owner's being a Muslim, falls. He is subject also to other exacting for the maintenance of the Muslim armies. He must distinguish himself from believers by dress, not riding on horseback or carrying weapons, and by a generally respectful attitude towards Muslims. He is also under certain legal disabilities with regard
to testimony in law-courts, protection under criminal law and in marriage. Of course all these points have been and are enforced with varying degrees of rigour. On the other hand, the Muslims guarantee security to life and property, protection in the exercise of their religion and defence against others. They may repair and even rebuild existing churches, but not erect new ones on new sites. Nor in the exercise of their worship may they use an offensive publicity. Their life, public and private, must be of a quiet, inoffensive nature. And they are not citizens of the Muslim state. Rather, each non-Muslim community governs itself under its responsible head — rabbi, bishop, etc. — who is its link of connection with the Muslim government.

**Dhīra**, primarily the part of the arm from the elbow to the end of the middle finger; then the measure — a cubit. Containing six hanga (handbreadths) the measure is called Dhīrā' or al-malik (the cubit of the common people, the common cubit). Containing seven it is named Dhīrā' al-malik, or king's cubit, so called because the Dhīrā' of one of the Kurs was seven handbreadths. Also the instrument, of wood or iron, with which the length of the Dhīrā' is measured.

Dhīrā' again is used of the forelegs of cows, sheep and goats, i.e. the part above the knee and the forelegs of camels, horses, males and asses, i.e. the part above the knee; the breast. The brand put upon this part of the leg is also called Dhīrā', and is said to have been employed by the Bedouin to the 'Ibabs and the Bas-Malkah. Lastly Dhīrā' is the name of one of the stars in the Gemini (al-Dhīrā').

(A. S. FULTON)

**Dhu (أ) with a following genitive, "lord" or "owner," e.g. Dhu 'l-Khālid, "owner of the two powers" (the sword and the pen), as epithet of Abu-Alla b. Sahl [q. v.]; Dhu 'l-Muwattā', lord of the two Wastatras, a title among the Arabs of Spain; Dhu 'l-Yamamah, bo of the two right hands, an epithet of Tāhir b. al-Hāshim [q. v.], also "the man of" to express membership, e.g. in the names of South Arabian kings, etc. (Zeitschr. d. Deutsch, Wissenschaft, Gest. d. Erde, 624, often also in the plural, Dhīsūn, Dhīsūn, cf. Soukouk Hurgonen, Mehche 1, 112 et seq.) The word is derived from the demonstrative present dhu and along with the functions of a noun has adopted the inflexion of one: Gen. dhu, acc. dhi. The feminine is dhi, which not only means the "(female) owner" or "mistress," but also has the meaning of "being" and in this meaning has given rise to new words like dhi, dhiya, pertaining to "being." The plural in classical Arabic is dhi, dhi (postposition dhūn, see above). A number of compounds follow.

**Dhu 'l-Faqīḥ (أ) the name of the famous sword, which Muhammad obtained as booty in the Battle of Badr; it previously belonged to an idolat named Ma'rūbah b. al-Hadīfī. The name of the sword is connected with the expression širr ṭabīb "sword with the notch." It is mentioned in several hadiths, which have been collected, for example by Ibn Sa'd, ii. 2 (near the end; not yet printed) among the ḥadīthu'dū in the section fi Sayyif al-Makh. According to one of these traditions the sword bore an inscription referring to the blood-money which ended with the words al-yuğal muhsin bā'dī "no Muslim shall slay for an unbeliever." Its excellence was proverbial and in the Ḥidżr there was a saying, la gaffa 'llāh Dhu 'l-Faqīḥ. These swords are a very popular inscription to this day throughout the Muslim world on the beautifully engraved swords of the middle ages. The sword passed from Muhammad to Ali and was afterwards in the possession of the 'Abdādī Caliphs. It certainly was originally two-edged like all ancient Arab swords. Later when swords with only one edge were the rule, this sword was imagined to have had two points. It frequently appears in this form as an ornament in art, as the reproduction on the accompanying plate. Dhu 'l-Faqīḥ finally also became a man's name, which is found more particularly among Shī'īs.

**Bibliography:** F. W. Schwarazzo, Die Waffen der alten Araber (Leipzig 1886), p. 124.

(T. MURTHWAJT)

**Dhu 'l-Hijjā', literally "Owner of the Pilgrimage", is the last month of the Muḥammadan year, so called because the Pilgrimage to Mecca (Hajj) and the religious ceremonies associated therewith are performed in it, occupying the seventh, eighth and tenth days of the month. In no other month can a visit to the sacred city have the merits of a pilgrimage.

(A. S. FULTON)

**Dhu 'l-Kāda', "Owner of the Trees"; the eleventh month of the Muḥammadan year, so called because during that month the ancient Arabs waged no wars but engaged in peaceful occupations.

(A. S. FULTON)

**Dhu 'l-Kādr, a Turkoman dynasty, which ruled for about a century and a half in Malaya and Allabian, and was founded about the middle of the 16th century. Zain al-Dīn Karajī b. Dhu 'l-Kādr is said to have been the first of the line; he was succeeded by his son Khalīl (1780–1838), who conquered Alabanan, Khalīl Marāqu, Malaya, Kharput and Behesn, but the authorities disagree as to the date of these conquests; both fell in battle with the Egyptian governors of Damascus and Aleppo. Khalīl was succeeded by his brother Shihāb Beg (1788–1800); he defeated the Egyptians, was recognized by them as lord of Alabistan and finally murdered by an emissary of Sultan Barīklī. His nephew, Nāsir al-Dīn Muḥammad, son of Khalīl, lord of Sīs, took over the reins of government (866–946 A.D.); within the first period of his reign falls the expulsion of Kādī Burdīn al-Dīn, ruler of Sīs, and the conquest of Malaya and Behesn by Bāburīisi; Nāsir al-Dīn had married a daughter of Zain al-Dīn and after the latter's death he gave his brother-in-law Zain al-'Abīdīn a kindly reception. (3Ashīk-Pa‘shāče, p. 54)."
laid the whole country waste, whereupon the Dhu 'l-Kadrughla submitted to him (Sharaf al-Din, ed. Petits de la Croix, v. c. 16); on his return from Syria, in the beginning of 1401, he suddenly fell upon the Dhu 'l-Kadr Turkomans who were leading a nomadic existence around Tafmur and drove off their herds of cattle (Sharaf al-tus, qf. cit., v. 28). After Timur's withdrawal we find Najir al-Din in alliance with Sultan Mehmeded Celebi who had married one of his daughter's (Dhu 'l-Kadr, Hist., i. 473); his brother Salaiman Beg in 815 A.H. accompanied Mekmumed Celebi on his campaign against the latter's brother Miski Celebi (So'd al-Din, ii. 264; Leomel., Hist., 452 et seq.). At a later period we find him involved in a struggle with the Karamanoglu and the Ramaanoglu; Sulman al-Mu'ayyad supported him and granted him Kajariya in 882 A.H.; Murad IV, afterwards conquered this town and handed it over to the Dhu 'l-Kadrughla. Najir al-Din died in 846 after reigning over 44 years. Bertrand de Broquiére, who journeyed through Asia Minor in 1432, found Turkomans of the Dhu 'l-Kadrughla at Hamis (p. 102) and in another passage (p. 119) he mentions that this prince had at his disposal "30,000 hommes d'armes Turkomans".

Najir al-Din was succeeded by his son Salaiman Beg (848-858), who had been Beg of Malatya during his father's reign. In 853 (1449) he gave his daughter Sitti Khatun to Mekmumed, afterwards the Sultan of that name (So'd al-Din, i. 398 et seq.; Dukas, 224). As Dukas tells us, Sulman Murad II wished this alliance in order to have an ally in the prince of Dhu 'l-Kadr against the Karamanoglu and the Kara Vasauf.

His successor was his son Malik Arslan (858-870 A.H.). In his reign Umar Hasan seized Kharput; he was murdered in 870, at the instigation of his brother Shishhbadak by a Fidai in Malash.

After his death his brother Shishhbadak was installed by the Mamluk Sultan Khati Bahl while Sultan Mehmeded Celebi, granted Sulman Arslan the title of Sultan of that name (So'd al-Din, i. 370 et seq.); Dukas, 224). As Dukas tells us, Sulman Murad II wished this alliance in order to have an ally in the prince of Dhu 'l-Kadr against the Karamanoglu and the Kara Vasauf who was finally taken by the Egyptians in 877 and executed. Shishhbadak did not however long enjoy his power; another brother 'Ali al-Dawlak, supported by Sultan Mehmeded II, rose against him in 884 (So'd al-Din, i. 670 et seq. and ii. 165) and drove him out of his kingdom; Shishhbadak was imprisoned by the Egyptians whom 'Ali al-Dawlak had been able to win to his side, and when in 895 he tried with the help of Bayazid II. to regain the throne from 'Ali al-Dawlak, he was defeated by him, handed over to the Egyptians and executed by them. Henceforth 'Ali al-Dawlak remained at peace with the Ottomans; his daughter Aisha Khattin was the wife of Bayazid II. (Taghprézid Kamal, i. 60) to whom she bore the future Sultan Selim I. in 1457 A.H. On the other hand he came in conflict with Shish Ismail of Talish, whom he had revolted with the hand of his daughter Beglu Khattin; he had also taken the town of Diyarbakr after the fall of the Aishoyunid. In 913 (1507) Shish Ismail attacked 'Ali al-Dawlak in his own dominions, inflicted a severe defeat on him and deprived him of Diyarbakr and Kharput (So'd al-Din, ii. 130; Leomel., Hist., 852 et seq.; v. Hammer, Gesch. der Osm. Reichsk., ii. 345); one of his sons and two grandsons fell into the hands of the Persians and were put to death by them.

Selim I finally destroyed the power of 'Ali al-Dawlak. On his return from the Persian campaign in 911 (1515), Khodim Sinan Pasha was sent on a punitive expedition against the Dhu 'l-Kadr chief, who was thought to have taken up a hostile attitude to the Ottomans; on the 29th Rabii II = 12th June a battle was fought between Sinan Pasha and the aged Turkoman 'Ali al-Dawlak, 'he is said to have 90 years of age'; his head and those of his four sons and thirty Turkoman sons were sent to the Sultan as trophies of victory (Faridi, i. 302.; So'd al-Din, ii. 293-297; v. Hammer, Gesch. der Osm. Reichk., ii. 425 et seq.). 'Alibeg son of Shishhawur and grandson of Sulaiman Beg was granted the throne of the Dhu 'l-Kadr in place of 'Ali al-Dawlak; he had in his time fled before 'Ali al-Dawlak to Bayazid II. and distinguished himself in Selim's campaign against the Persians (Faridi, p. 302.). Selim I. on his Egyptian expedition and in the reign of Sulaiman I. suppressed the rebellion of Jashbardj Ghaazfell. He was then misrepresented to the Sultan by Farhad Pasha; Farhad Pasha entrusted with the task of chastising him invited him to meet him in his camp at Orukalaish and had him and his four sons put to death, year 928; cf. Leomel., Hist., 759 et seq.); the land of the Dhu l-Kadrinyia was made a Reglerberlik. Two grandsons of 'Ali al-Dawlak, 'Alibeg and Mehemed Khan, sons of Shishhurak, who had escaped to Shah Ismail, afterwards came to Sulaiman I. and received governorships from him; Mehemed Khan died in 977 in Rumelia (on him, cf. Ewliyä, Travels, i. i. 86 = i. 170 of the Oriental edition). 'Abd al-Razak Beg, a brother of 'Ali al-Dawlak, was brought a prisoner with his two sons to Constantinople in 915, but his fate is unknown.

Under Ottoman suzerainty the Dhu l-Kadrughla enjoyed the privileges of a mediatised ruling house (e. g. in the Carellos; cf. Ewliyä, loc. cit.) and it appears in the xvith century with the Kizilbashn of Sinope and the Khans of the Kim among the 'Samiglile of the Regio sanguine' (Sagredo, Memorie Istorieche, p. 1068 of the Venetian edition of 1677).

The name Dhu 'l-Kadr — Dukas writes Teywarys; (224; cf. Suffadiri in Bertrand de la Broquiére, Durcaduri in Sagredo); Chalco- kondyles and the Historia Politica confuses the Dhu 'l-Kadr with the Togud Turkomans of Taghil (Cicilia) and sometimes write Teywerys for Dhu 'l-Kadr, and sometimes Teywarysalts; for Togud — has remained attached to the Turkoman tribes of Marash; the former Eyvliet Dhu 'l-Kadrinya comprised the Sandjak of Marash, Malatya, Aintab, Kara-Khu 'l-Kadrinya and Sumeiset ('Ali 'Ali, Kümümnü risületi, p. 23.), with 2169 beys (Gümümnü und Sümüş), which turned out 5500 men ('Ali, loc. cit. 50). The Eyvliet was also known by the name of land of 'Ali al-Dawlak.

DHU 'KAÑR — DHU 'KARNĀN

ZĀHIL AL-DĪN KARĀR († 780).

1. Kāhil 780—788,
   2. Szūlīmég 788—800,
   3. Ruşūrmī († 788 Lord of Kharput; 'Alt, Qīnāk; u. 819 sent to Mehemmed I; Feridūn, i. 157).
   4. 'Adī 5. Othmān
   (about 788; 'Alt, Qīnāk).

1. Suleimān Beg 846—858.
   2. 'Alī 9. (Sidjīl-ī Othmān).
   3. daughter, married Mehemmed I.

1. Malik Arābīān 858—870. 870—872;
   872—877;
   + after 895.
   2. Shāh Budaq 877—884;
   Shāh Budaq (889)
   taken prisoner
   and blinded
   by 'Alt, al-Dawān,
   'Alī.
   4. 'Abī al-
   Dawān 877—877.
   5. 'Abī al-
   Dawān 884—921.
   6. Sitti
   Khātān, married
   Mehemmed II. (853).

1. Shāh Budaq (Lord of Kirshēri s. 905; Sa'd al-Dīn, li. 63 and 105).
   2. Suleimān (Lord of Bozokli; s. Sa'd al-Dīn, li. 287).
   3. 'Atī the Khātān (married Bayāsid II. before 1467).
   4. Beghākhātān (sought
   as wife by 'Alt
   (Sa'd).

1. Mehemmed Khān
   (+ about 977).
   2. 'Alī (about 940;
   + in Fasān).

Karakšān ('Alt, Fasāl,
etc., fol. 102).

1. Djiñar Beg.
   (Sandjakbeg of Coram, about 1000 H. in Kaisarye, 'Alt, Fasāl etc., fol. 102).

DHU KĀR, the name of a stream in the land of the tribe of Bākri b. Wāsīl [q.v., p. 604] between Wāsīl and Kāfīn. A battle bears its name which was fought between this Arab tribe and the Persians in which the latter were defeated. It is one of the best known and most celebrated of the FTTKAN al-'Arab [q.v., p. 218]. Tradition varies as to the date of the battle. According to some it took place on the day the Prophet was born, according to most authorities however it was not fought till after the battle of Bādīr [q.v., p. 559] and Muhammad is related to have said of it "the day was the first day the Arabs had won their rights from the Persians and through me they have been victorious." In many accounts two battles of Dhu Kār are distinguished. The battle is sometimes also called after other places near Dhu Kār, at which there was also fighting. — The old accounts of the Yamūn Dhu Kār gradually became much elaborated with new material — just as happened with the accounts of the battles between the Bākri and the Tاغih.

Thus arose the popular romances of the Kitāb Ḥurr Bani Shāhān wa's Shāhān Armāshīrāvān (printed, Bombay, 1395).

DHU 'KARNĀN, the "two-horned," a name always given to the individuals cited below, more particularly to the third. The two horns go back to an old mythological idea. Naram-Sin was for example represented as Adad with 2 horns (on the stele of Samsu; cf. Fustelles du Saus, i. pl.x). The two horns of Jupiter Ammon are well known. In Arabic, the name Dhu 'Karnān, the true meaning of which was not known to the Arabs
and which they therefore interpreted in the most varied and often quite ridiculous fashion, is borne by the following persons:

1. Al-Munhir Al-Akbar b. Māʿ al-Samā, the grandfather of al-Nūmān b. al-Munhir. He is said to have worn two long curled locks on his forehead and therefore to have received the name Dhu ‘l-Karnain. According to Ibn Durādī’s explanation he is the Dhu ‘l-Karnain who is referred to in verse 1, 3 of Imrūʾu’s ‘Ayn (Ahmed, Six Dimūn, p. 109).

2. Winckler saw a thunder-god in this Dhu ‘l-Karnain. According to the South Arabian interpretation he is the Dhu ‘l-Karnain mentioned in the Korān (cf. under 3).

3. Alexander the Great is by far the most frequently referred to as Dhu ‘l-Karnain. He is mentioned by this name even in the Korān (Sūra, viii. 52 et seq.), after the original in the Syriac legend which arose in the vii century a. d., in which Alexander asked to God: ‘I know that thou hast cast horses to grow up under thy head, so that I may crush the kingdoms of the world with them’. The Syriac legend is, as Nöldeke has shown, the source of the ‘Two-Horned’ in the Korān. For the details of this story and the accounts of Alexander the Great in the rest of Arabic literature see the article Iṣkandān. Among the explanations which the Arabs give of the name Dhu ‘l-Karnain as applied to Alexander, I may mention the following: Alexander had two horn-like fleshy growths on his forehead; he had two beautiful locks (karn = diwān, see above) on his forehead; he was of noble descent on his father’s as well as on his mother’s side; two generations (karn) passed away during his lifetime; he was endowed with knowledge of the outer and inner world; he penetrated into the regions of light and of darkness.

4. Abū Isār al-Jalīl more rarely bears the name Dhu ‘l-Karnain.

Dhu ‘l-Kifl is an individual mentioned in the Korān (21, 35, 38, 40), in connection with a series of prophets, whose identity is wrapped in uncertainty. Most Muslim commentators have only a very hazy conception of him and hesitatingly identify him with various people, chiefly Biblical personages like Joshua, Elijah, Zachariah, or Ezekiel. Dhu ‘l-Kifl is a name of the prophet just as four other prophets have two names (Ya’qūb; Isā; Dhu ‘l-Nūmā; Isā: al-Mastāb; Muḥammad: Ḥādith). The view is more definitely advanced (Tabarī, Anwās, L. 364, Mustafī al-Dīn, diwān al-Mustafī, p. 68), that Dhu ‘l-Kifl is an epithet of Bīth (according to some, e.g. Tāfī al-Tāfī, Basīhī), a son of Ayyūb, whom God chose as a prophet to convert a heathen people (or King Kinān in Sāhī, where he spent his whole life and died at the age of 75). Ibn Iyās’s story that the sons of Ayyūb waged war against the heathen king Lām b. Dāhim to whom they declined to give their sister in marriage and that Bīth was taken prisoner, stands quite alone. As his brothers declined to ransom him, the king threw him upon a funeral pyre; but the anger of God protected him from a fiery death in the same way as Abūsham had been protected from the fire with which he was threatened by Nūrūd. Lām thereupon converted with all his people. The accepted collections of Ḥadīths make not the slightest mention of Dhu ‘l-Kifl, a proof that Ḥadīth criticism places no value on the manifold legends about this individual. The Nīṣābūrī have therefore been all the more industrious in finding motives for the name of this figure, which is quite colourless in tradition, by etymological inventions, all of which are connected with various meanings of the word kifl and the verbal stem klf. First with the meaning ‘pledge’ or ‘security’ of the word kifl, Dhu ‘l-Kifl is said to have pledged himself to the Prophet Elisha (whom consis, ibn ‘Abīn, he was according to some — Bāṣā‘ī —), to whom he proposed himself as successor as leader of the people of Israel, to fulfill three conditions: to fast by day, to spend the night in pious devotions and never to fall into a passion; in spite of this, Satan fulfilled these conditions. In the legends of Bāṣā‘ī he gives the heathen king Kinān a written guarantee that the king will attain Paradise if he becomes converted or to be a guarantee for the payment of the ransom to Lām. Other legends are connected with the meaning of kifl as ‘double’. Dhu ‘l-Kifl enjoyed a double measure of God’s rewards because he had done a double share of pious works. The name is connected with Takāhālā in the meaning of ‘double’ and refers to the appearance of an angelic figure according to which its bearers maintained 70 (or 100) Israelites (or prophets) who were persecuted by a cruel king; in this story A. Geiger (Was hat Deus . . ., 2nd ed., Leipzig 1903, p. 192) has rightly recognized an echo of the story of Obadiah (1. Kings, 18, 3). Kifl is also the name of a garment (connected with the meaning of ‘doubleed’), a cloak of double thickness: the prophet wore a garment of this kind which was said to have been sought in the possession of a certain king, 1. Kings, ii. 8 (Elijah, 9, 7), Muḥammd von der Katholische, by Mejmed Mursī, ed. by F. C. Andreas, Potsdam 1910).

Besides this Dhu ‘l-Kifl a different saint of the same name is mentioned (ibn al-Altāh, Misrām, ed. C. F. Seybold, p. 190, 1, 4 from the foot, 1 et seq.), whose legend is however connected by Thābit with the prophet Dhu ‘l-Kifl. This Dhu ‘l-Kifl was originally a sinful man, who took advantage of the diligent position of a certain virtuous woman to tempt her to sin, but was restrained from actually sinning by her apparent compliance and converted to a virtuous life. He therefore was doubly (kifl) rewarded by God: on the principle that a converted sinner is of more value in the eyes of God than
a pious man who never sins (al-Tābi‘i and Allah azwān min al-Abī; cf. Bab, Talmud, Berakhot, 34b; Matthew, xviii. 7; Luke, xv. 7). A type which often appears again in the latter moral application, in edifying tales of the East (e.g. the Jewish of Nathan de-Susīl, the Muhammadans of Dā‘ūd al-Antakī, Tāzāt al-Abī t-Tāfṣil Abūl-Walid al-Idrisī [Lith. Cairo 1279 H.], p. 354; in part also in Sindbad, ed. Baethgen, in the Zeitsehr. d. Deutsch. Morgenl. Ges., iv. 257). It is clear from the stories quoted that the Muslims are not at all agreed on the character of Dhu 'l-Kif: whether merely a pious servant of God (‘Abd Allāh). The champions of the first view rely solely on the circumstance that Dhu 'l-Kif has received a place in Sūrat al-Ambīyā (Sūrat al-Amīyā).

Muslim local tradition has located tomba and holy places of Dhu 'l-Kif at various places in Muhammadan territory from Palestine to Balkān. See the references to these places in K. Baselt, Niederröman und die Traversen (Paris 1901) and my notes in the Revue de l'histoire des Religions (1906), 219 ff. To two of these places in particular the memory of Dhu 'l-Kif is more seriously attached by Muhammadan tradition. One, the erstwhile association of which has now, according to Clement Gaume's account (Archaeologische Forschungen in Palestine, ii. 308), been quite forgotten, is a golden of Nabi Kafl in Kafl, one of the so-called Kaflān (from Kafl H.; the name is also used in the earlier form in Maqāb al-Dīn, al-Duw al-Dīlī, p. 88, 7 and Tādi al-Abrā, viii. 99, 15) near Natūs, in the district of which the graves of many prophets are located (cf. Zeitsehr. d. Deutsch. Pal.-Terra., ii. 15). In this case the identification of Dhu 'l-Kif with Bīrūr, the son of Ayylīb (see above) was proposed; the Samaritans ascribe it to Kafl H., the companion of Joshua, son of Nūn. Of greater importance down to recent times was the tomb of Dhu 'l-Kif in Kafl (Maşinon pronounce the pronunciation Kifī) formerly Bet (Bir) Malu‘a, on the left bank of the Hule, in the village of Tiqān (in the Wilāyat of Baghdad, Lwās: Kerbelā; Kadi: al-Himyaf) in which district the tombs of many saints were located and honoured, without a doubt first by the Jews, (τάκτι, ii. 594). One of the latter certainly is the grave of Ezeckiel which has been a highly revered object of pilgrimage from ancient times. On its importance among the Jews, see the sources quoted in the Jewish Encyclopædia, v. 316, among which the account of the Regensburg traveller Petachajah (xiiith century) also gives an interesting account of the reverence paid to the tomb by Muslims (Tour du Monde en Voage du Rabbin Pîachaj de Rábiáchen. . . . . . . etc., Paris, 1834, p. 45 et seq.). With the readiness with which the Muslims always adopted the tombs of saints of other creeds (see Revue de l'histoire des Religions, i. i., p. 274), they have also taken this sacred place of Judaism with the approbation of its reverence and connected it with the mysterious Dhu 'l-Kif. This has also brought about a change in the original place name. During the reign of Ulūgh Beg Khūthānāt (700 = 1300) the fanatic Nabī al-Abī t-Tāfṣil Tā Ḍu al-Dū Abu ʿAbī t-Fadl made an attempt to forbid the Jews access to the sanctuary founded by them and proclaimed it from the charnecy as a place accessible to Muslims alone. This proclamation gave the visier Kaṣhād al-Dūn an excuse to overthrow this rival and bring about his execution (Quintembks, Histoire des Mongols de la Perse, Paris 1836, p. xxiv et seq.).

Noldeke, Karlōs von der Türkischen Düstere, in Beiträge zur Kultur der Orient, ed. by J. Grothe, vii. 53—54 (where a photograph of the Chaft is given). — Illustrations of the tomb by various periods: The earliest is in Uri b. Simeon of Unda (1563), Vichti hā-ḥāṣib (Venice 1659) from a drawing by an unknown artist made in 1536 (the tomb is here located on the ruin of the Tigris); this view is reproduced by Job, Himm. Hottinger in Cipri Hebraici (Heidelberg 1662) on p. 35 and E. Carmoly, Inventaires de la Terre Sainte (Bruxelles 1847), p. 439; Loofs, Travel and Residence in Chalda and Susiana (London 1857), reproduced in the ‘Arabî Encyclopædia, xo. 2, 1899. The most recent is Isma‘īl Ḥakīm Bey Bahānūn Zāde, De Sanaūlī ā dawla, in the Kront du Monde Musulm. (1911) s.v. 253—257.

Dhū 'l-Nūn, Abū ‘Abī t-Fadl b. Ibrāhim al-Mīmān, one of the most celebrated ascetics of early Shī‘ism was a native of Akkān, born of Nubian parents; his real name was Tāhib. He is usually called Dhū ‘l-Nūn the Egyptian. He lived in Egypt and died at Dūn (Ghīsīh) in 245 = 860. He is numbered among the “Polestars” (Kiaf) and the ‘Ayāran, i.e. “hidden saints” (cf. Bāyāzīd al-Bīṣṭami); his name is followed by the invocation: “may God sanctify his hidden state”. Cf. this formula in the title of one of the articles of Book II. of the Mathnawī of Rūmī. He is said to have lived unknown and his great sanctity was only revealed at his death. On the night of his death sixty-one people dreamed that they heard Muhammad say: “I have just met Dhū ‘l-Nūn the friend of God”. It is evident however that this lack of recognition signifies only that his sanctity was disputed and not that he lived in obscurity for we find from the lives of the Shī‘a that he had disciples in his lifetime; his biographers say also that he had great influence over the people of Egypt, so much so that the envious called him a medical and denounced him to the Caliph Mutawakkil. The latter sum-
moned him to Baghdad and at first threw him into prison, but afterwards, impressed by his patience and overcome by his eloquence, sent him back in honour to Egypt. This incident shows the suspicion which Sufi aroused in its early days. According to the Nafāšī al-Unas Dhu 'l-Nun was the first Shāfiʿī who openly professed the Sufī doctrine.

In Book II of the Maqamat of Ljālāt al-Dīn Rūmī occurs a long passage referring to these suspicions or to the astonishment aroused by the doctrine of Dhu 'l-Nun; his friends considered him a madman and had him confined. "When power is in the hands of the dissolute, says the poet, Dhu 'l-Nun is necessarily in prison". In this passage the ascetic is the symbol of spiritual knowledge despised by the vulgar who do not understand it.

Many sayings are ascribed to Dhu 'l-Nun, for example the following: "The man of knowledge (ṣūr) becomes more humble every day because he approaches each moment nearer his Lord".

"Mystic knowledge (mawʿūf) is the communication which God makes of his spiritual light to the depths of our hearts".

The surname Dhu 'l-Nun which signifies "the man with the fish" is applied to the prophet Jonah in Korān, xlvii, 45.

Dhu 'l-Nun.

The Banū Dhu 'l-Nun were an influential Berber family of the Ḥuwarā tribe, who migrated into Spain at quite an early period where, during the rebellions against Muḥammad I (238–273 = 852–856) and 'Abdallāh (275–300 = 888–912) Amir of Còrdoba, they played a leading role in the affairs of the Caliphate of Cordoba in the first quarter of the 9th century. The first independent king of Toledo of the new dynasty, Yaḥyā b. Muḥammad b. Yaḥyā was overthrown in 427 (1035–1036) by Isāmīl al-Zafirī b. 'Abd al-Raḍwān b. 'Amīr b. Mufarrī Ḥ. Dhl 'l-Nun, who reigned till 429 (1037). He was succeeded by his son Yaḥyā al-Mā'sūn (429–467 = 1037–1074) the greatest figure in the dynasty, who enjoyed a long reign and made temporary conquests on all sides from the centre of Spain; he was succeeded by his weak grandson Yaḥyā al-Kādir b. Isāmīl b. Yaḥyā who only reigned at Toledo from 467–478 (1074–1085) in which year he won the kingdom of Valencia from the feebile hands of the last 'Amīr, with the help of Alfonso VI. of Castile to whom he had lost Toledo, and ruled his new kingdom till his death in 1092 when it became a republic under Ibn Djalāl (1092–1094). The splendid, expanse and luxury of the Banū Dhl 'l-Nun became proverbial: Kawkī al-Maḥbūbī "as Ḥurramīan feast" (like a Lucullan banquet).

C. F. Seybold.

Dhu 'l-Nun Bégargoûn was the founder of the Argoun dynasty [q. v.] of Sīn. He was at first Governor of Ghor and Sistan under Housain Baqīrī of Herāt, and made himself practically independent at Khurāsān. He began to extend his power southwards into Sīn with the assistance of his son Shahl Bēg. He was killed in 913 (1507) in a battle against Shahl Bēg near Herāt. (See the art. AFGHANISTAN, pp. 166–167.)

Dhu 'l-Rumma, an Arab poet of the tribe of Banū 'Adi. His proper name was Qaṣīl b. Uṣbah b. Mas'ūd (or Buhaylī). His mother was called Zabya and belonged to the Banū Asad. He was a contemporary of 'Amīr al-Farrāz and in the feud between these two poets took the side of al-Farrāz but without in any way distinguishing himself. He also wrote satires on the tribe of Imrū al-Kais, who found a champion in the poet Hajīn. As the latter could only write riddles versus with which he could set his own against the more elaborate metres of Dhu 'l-Rumma, al-Farrāz had to come to his aid but afterwards went over to Dhu 'l-Rumma's side. The latter also became a panegyrist of Bilāl b. Abū Bārī, grandson of Abū Ṭūs b. 'Alī Qārṭ. The latter had, as every one knows, played a no means honourable part at Achīr but this did not of course hinder our poet from representing Abū Ṭūs's conduct at Abū Ṭūs as a credit to his descendents. Dhu 'l-Rumma's love-poems were at first dedicated to a Beduin named Maiyā; Dhu 'l-Rumma and Maiyā are one of the celebrated pairs of lovers among the Arabs. Afterwards when he harshly rejected him, by his husband's orders, it is said, he turned his attention to a certain Khuršī but died soon afterwards —, according to one authority, of small pox. The year of his death is uncertain. Ibn Khallīkān says 117 (735–736); elsewhere 101 (719–720) is given. The Kirdāb al-Aghāīn says in one passage: "he died in the Caliphate of Abū Ṭūs al-Malik". This could not be later than 86 (705). But as the Bilāl who has been mentioned as Dhu 'l-Rumma's patron, as we know from Tabari, only became chief of police in Baṣra in 109, Kādi in 111, and deputy-governor in 118 (which office he held till 120), this early date for the poet's death is obviously wrong. Probably in the Kirdāb al-Aghāīn we ought to read Ḥanāšī b. 'Abd al-Malik instead of simply 'Abd al-Malik as has actually to be done in another passage. This suggestion is correct there only remains the date 117 which must apply only to Dhu 'l-Rumma's relations with Bilāl. All authorities are agreed that he died in the prime of life ("30 years of age") and was buried in the desert not far from Baṣra.

This story of his burial in the desert is perhaps a myth; but it certainly is entirely in keeping with the character of the poet. Dhu 'l-Rumma was a thorough Beduin: in appearance, habits and ideals and by no means least in his style of poetry. According to Athari critics his greatest strength lay in his mastery of simile. Hammūd al-Rawīa regards him as equal to Imrū al-Kais in this respect. He was particularly skilled in describing
and, noonday heat, desert, water, camel-like "snares" (Ibn 'Uthaiha); and his descriptions of nature are always described as very remarkable. Abu 'Amr says he was the last Sāʿīr (i.e. Kasīsh) poet, as Ku'ba had been the last of the Ragājī poets. But he lacked the effective panegyrics and biting satires. This was doubly disadvantageous to him. At one time the Arab literati denied him the rank of a classic (fakhr); indeed they were on the whole inclined to deny him the credit of being a poet of genius (muṣāfīh) (Aṣma'ī's verdict); but then — and this was probably still more unpleasant for him — throughout his life he was poor, although he was a notorious sponger and often came among the country people as well as to Ku'ba and Bayta to take part in wedding feasts (fājam). To complete this sketch of his character we must add that he plagiarised the works of his predecessors and even of his contemporaries in the most shameless fashion. Ku'ba in particular bitterly complained of him in this respect; he is even said to have said that he would not adopt any of his poems by his brothers. On the other hand it is right to point out that al-Kindī had at least certain verses from Dhu 'l-Rumma because he was more worthy to have written them!" and that the Arabs of this period were, if possible, even more lax in their regard for the ownership of literary products than at the present day.

On the whole Dhu 'l-Rumma was less a poet than a clever maker of verse and a compiler. That he was not a born poet, he himself acknowledged, according to the Arab authorities. We are also told that he was not able to write; he is actually said to have concealed the fact because it was considered a disgrace among the Beduins (or perhaps among the poets of the old school?). He had further a considerable knowledge of the ancient poetry and lexicography, as he showed on more than one occasion. He used to settle the genuineness or falsity of poems, the meaning of rare words, etc. As an authority on the vocabulary of the Beduins he plays an important part in the Arab lexicographers. Yet he likewise frequently quotes him in his geographical dictionary on account of the many place-names which occur in his poems.

(DHU 'L-RUMMA, an ancient Arab deity. According to the Arabic tradition he was a god who owned a reserved grazing-ground (ḵūna) among the Dawaita (Wustenfeld, Genetologie der Araber, 10, 37) with a hollow into which the water trickled down from the rocks, which is in agreement with the fact that the name 'Abd Dhu 'l-Rumma is found in this tribe. According to al-Khalīf (Wustenfeld, 10, 37) also, this deity was worshipped among the related Bani Ṭāhirī; cf. also Lane, s. v., according to whom the site of his cult was al-Sharīṭ. We meet with Dhu 'l-Shārī (Dusares) on more historical ground as the chief god of the Nabataeans, in whose effigies the effective lexicography and biting satires were doubly disadvantageous to him. At one time the Arab literati denied him the rank of a classic (fakhr); indeed they were on the whole inclined to deny him the credit of being a poet of genius (muṣāfīh) (Aṣma'ī's verdict); but then — and this was probably still more unpleasant for him — throughout his life he was poor, although he was a notorious sponger and often came among the country people as well as to Ku'ba and Bayta to take part in wedding feasts (fājam). To complete this sketch of his character we must add that he plagiarised the works of his predecessors and even of his contemporaries in the most shameless fashion. Ku'ba in particular bitterly complained of him in this respect; he is even said to have said that he would not adopt any of his poems by his brothers. On the other hand it is right to point out that al-Kindī had at least certain verses from Dhu 'l-Rumma because he was more worthy to have written them!" and that the Arabs of this period were, if possible, even more lax in their regard for the ownership of literary products than at the present day.

As the compound form shows, Dhu 'l-Shārī is not a real name but an epithet of a god, whose actual name and original character is still unknown to us on account of the meagreness of our sources. That he was the sun-god, worshipped by the Nabataeans (Strabo, xvi, 4, 16), is only a possibility. He certainly only acquired his Dionysian character in a civilised land, in which connection it is important to note that so early a writer as Herodotos (ibid. 8) identifies the Arab god Orotop with Dionysos. One may even ask whether the god who bore this epithet was everywhere the same. The answer to this question depends on the meaning of the epithet and at this point so many possible solutions offer themselves that it is scarcely possible to come to a definite conclusion. The lexicographers give the following meanings for Sharī': district, road, or mountain. As they give as an example of the first meaning Sharī' (Ashīr) 'l-Haram, "the neighbourhood of a sanctuary," the name might be interpreted as: owner of such a district, which could of course, be applied to various gods. The word appears also, however, as a place-name with or without the article (cf. Steph. Byzant., 373, ᵃSharī, ᵃSharī, τῆς Ἰσραήλ ἤρεξαται Ἀραβίας and according to the geographers was applied amongst other places to a hill in the land of the Tiṭits and a place near Mecca, where according to the Dhu 'l-Qānūn of the Hudžailites (ed. Wellhausen, 275, 13), water was to be had and gazelles to be found. A place called Sharī' is also frequently mentioned where many lions were to be met with (e.g. Ramīt, ed. Wright, 33, 37; 54, 37, 56, 4). The place near Mecca cannot be identified as the Dawsite Dhu 'l-Shārī' (cf. Bibl. Geogr. Arab., vii, 316). It is on the other hand more natural to connect the god of the Nabataeans with the district of 'al-Sharīṭ which practically coincides with the ancient Edom although, in spite of the equation proposed by Lagarde, it is still somewhat risky to identify Sharī and Sharīt...
without very careful consideration. Finally Eduard Meyer's suggestion must be mentioned, that the feminine deity Shērī, who appears in an inscription of Būrā, has been evolved from Shārī, which was originally a place or a fetish (just as in older times the wife of Abram/B, Sarai/Sam); he also thinks it possible that the deity Shērī as the name of places, where the deity was worshipped, might be derived from the name Ḍhū 'l-Shārī.

**Dhūbab, Alf.** etc. Other numerous kinds: they are produced in putrescent substances, particularly the dung of animals. They have no eyelids on account of the smallness of their eyes but in本 compound they have two hands with which they may constantly be washing their eyes. They also have a proboscis, which they stretch out when they want to lick blood and withdraw when they have sucked it all. They hum and buzz like a bee which is blown into them. They are able to run as they have no joints like ants and lice; the soles of their feet are rough so that they cannot hang on to smooth things. Fliers wear their midges therefore the latter do not come out by day; they only come out when the flies have gone to rest. If flies did not drive away the midges, it would be intolerable to live in houses. When an animal is wounded, the flies fall upon it and bring about its death, for it is able to keep the wound clean by licking it. The flies secrete their exuviae in the wound and worms come out of it; it is of two colours like that of bugs and looks black on a white ground and vice versa. There are different kinds according to the different animals. They are only found in large numbers in putrescent matter; they like the heat of the sun and also increase by copulation. Flies are also produced in beans and only the heads are left when they fly out. Their uses in medicine are numerous and are detailed by Kāsu, Dāmis' and Ibn al-Bīázār.

**Dhūbab, Ḍhūbab** was the son of Baghūl b. Rāshid b. Ḍhāfūsian b. Sa'd b. Kāli. Alīn. He was the brother of Shāhī and Alīn, and the father of Fākuta, Sa'd and Hālīl Allah. The pasture grounds of the tribe of Dhūbab lay to the east of Madina where they dwell along with the rest of the descendants of Ghassān, between the Hijāz and Adhāt and Salma, the mountains of the Banū Tāy, from whom Dhūbab was separated by the Wad 'l-Raḥm. The two main branches of Ghassān were Ashādā and Baghūl, the principal centres of the latter tribes being Shahrāba and Rabāh, some 150 Arabian miles east-south from Madina. For the suggested etymologies of the name see the Līwā al-ṣubk (sub-use).

**History:** The tribes of Dhūbab came upon the scene in connection with the famous war of the Horse-race. When Khalīf b. Zuhair became chief of 'Abd, Dhūbab obeyed Ḥadīth b. Badr of Fazārī, who was the most important person in the whole of Ghassān. It was a quarrel between these two that gave rise to the war of Dabīs and Ghassān between the two brother tribes which lasted for forty years. The war was terminated by the simultaneous breaking out of a feud between the tribes of Tamīn and 'Abd b. Ṣa'd (see art. Āṣā). 'Abd becoming guests of the latter tribe, Dhūbab cast out in their lot with Tamīn, together with Anūd who were in alliance with Dhūbab, and Nābīr and the Ribālī who were connected with Tamīn. Those allies were reunited on the day of Dajal which Cassius Perceval dates 579 A.D. 'Abd next quarrelled with their hosts the Banū 'Amir and wished to return once more into the tribe of Ghassān. The Banū Tamīn, who were hosts, ruled over the Bedouin in the district of Ḥijāz and Qasim, and the Banū 'Amir, who were the Banū Malikya. After lasting for half-a-dozen years the feud came gradually to an end, when the power of Muslim lasting began to make itself felt (see art. Ghassān).

In the eighth year of the Hijra Muḥammad invited Dhūbab to accept Islam. They killed his messenger, but 'Abdīn b. 'Abdīf (cf. above) paid the blood debt, and the tribe some time after professed the new faith. In the apostasy which followed the death of Muḥammad, Fazārī and other branches of Dhūbab fell away under their chief 'Uṣayna b. Hījāz. In the subsequent attack of the Banū 'Anṣār upon Madina all Ghassān except Asūqāb took part. They gathered at 'Abras in the district of Rabāh, which belonged to Dhūbab. Their attack failed and they were in turn driven back by Abu Bakr, and on the return of 'Uṣayna from Syria, they finally dislodged. Rabāh, being attached to the territory of Madina. They fell back upon Tarāb, who in turn retired to Banūs, Ghassān following. In the battle which ensued Ghassān, and especially Fazārī, bore the brunt of the fighting; the Banū 'Amir were completely defeated by 'Abdīn b. Jālī al-Walid. Ghassān submitted once more to Islam, and, except for certain proscribed persons who had killed the Muslims of the tribe, were pardoned. 'Uṣayna was pardoned also by Abu Bakr. Dhūbab is mentioned as taking part in the battle of Marj Rāhīf in the year 65 A.H. between the supporters of Marwān the Umayyad and those of 'Umar b. Zuhair (Tālārī, ii. 485). Doughty mentions a small tribe called Dhūbab (Zubabian) dwelling in al-Hijāz.

**History:** The tribe of Dhūbab, like all others, was subjugated to the authority of the Umayyads in the reign of Marwān. The Banū 'Amir b. Gharīr, (Cairo, 1395), ii. 40 et seq.; Cassius de Perceval, Eissi, ii. 409 et seq.; Hamdan, Geogr. al-ṣubk (sub-use).
DIBÁB, an Arab tribe, belonging to the Ma'addité group. They were the descendants of Mu'amwiya b. Kihla, who was called al-Dibáb because of three of his sons (Dibáh, Dibab, and Madjih). Their genealogy is: Mu'amwiya b. Kihla b. Rabī'a b. 'Amr b. 'Sa'da b. Mu'amwiya b. Bakr b. Hawāzin.

They dwelled in the district of Hima Dariya in the Nahdī territory.

The following settlements of the Dibáh are mentioned: Dībara, Dībah, al-Dibāh, and al-Tublīy; mountains: Akhūnum, al-Djaghwaniya, Dība Atīm al-Yahmān (a large black hill), Khabsa (with Dība al-Kabāghāt), al-Khanara (a large mountain with Dība Khamara), Numairat Raydān, Shū'bāb (a large mountain, one day's journey in length) and Zuhūţ (a black hill with are depelits), etc.

The following were Wāli of the Dibāh: Dhu-l-Dībah, al-Rāyân (in common with the Dība b. Kīhl), Hasib Ghawwār, Kulant and Turaz (a large W. with palm groves and cornfields, in common with the Hitil and 'Amir b. Rabī'a); watering-places: Arja, al-Awwār, al-Badārān (near Dība ad-Djul môl), Baitān, Thurayā, al-Dībār, al-Ghālid, Kurkūla, al-Khishāf, al-Shawārīna, Shufālyn, Ma'āf, and Marīth, etc.

(J. SCHLEIFER.)

DIBĀD, a variegated silk cloth (sa- til). Dibād is an Arabized form of the Persian diwād, which means a coloured cloth in which warp and woof are both made of silk (ābāgīm, Arab. ābāqīm). Dībād probably first entered Arabic through the Arabic; in any case the word was known by Muhammad's time, for it appears in a poem by Ḥasan b. Thābit (Kiṭāb al-ʿAṣāmī, iv. 57), according to Fransen, Arab. Freuds. Studien, p. 41. The derivation from dīwād = mīšqat al-ṣawīn = cloth of the spirits" (Tofī qoṣār) is of course a popular etymology.

In spite of the interchange of the weaving of silk, diwād was frequently used in the East in the middle ages as a material for masculine dress. It was especially used for robes of honour. At the Pāyūm court in Cairo there was a separate dībar al-dībād (Makārī, Kāfīf, i. 464); cf. Karam- bech, Die Pers. Nadelmaterie a. Samstdchörd, p. 84), in which this material was supposed to be manufactured but was probably only made up. The fabric itself as well as the name came from Sāsānian Persia; the frequent description of dībād as Khaṣāwī or is not merely a picturesque epithet but a direct reference to its origin. Dībād was certainly a highly prized article of commerce on which the Kitāb al-ṣawīn (i. 7) Mūjīn al-Tabi'ār of Abu 'Abd al-Fadl Dībar b. 'Anti al-Dimashki (Cairo 1318), p. 25, says: "There are several kinds of dībād, some of which are used for clothing and some for hanging up and spreading out (as carpets). The best quality is that which is beautiful dyed, the designs (pattern) on which are neatly arranged, the silk fine and the web thick, the colour shining, the weight heavy, and which has remained free from traces of fire during the process of smoothing (fi ʿandarīthī, probably a polishing process). The poorest quality is that which possesses the opposite qualities. The quality used for cutting out for clothes should measure 120, that for spreading out and hanging up 200 spans (qādir) the piece (ṣawīn). It may however be more or less; but if it is not sufficient to make a garment, it is unusable, for it cannot be cut up and is difficult to find a use for it. Even when one finds a similar piece, it is hardly possible to obtain permission to cut a piece out of it to make up the necessary amount'. Numerous pieces of silk preserved in our museums may be claimed to be dībād.

On account of its beautiful appearance and its popularity the name dībād or dībādīya has been transferred to all sorts of other things; for example the preface to a poem or book is called dībādīya on account of its fluid style; the same name is given to the grain of a wood or of a stone. (Kitāb's glossary) for other meanings see the dictionaries. In certain connections dībād and the words connected with it have come to mean beautiful, brilliant, elegant. Dībādī al-ʿAṣārīn is a name used by Ibn Maʿīn for the text of the so-called Ḥanāmīm, which take their name from the mystical letters which introduce them.

(C. H. BECKER.)

DIBĀN, now more correctly pronounced Dībān (Vähä, ll. 717: Dībah; Khālī al-Zahrā, ed. Rassī, i. 320, s.v.: Dībah; Ibn Faṣṭalāf al-ʿUmarī, Turfī (Cairo 1312), p. 154, s.v.: Dībah), an ancient site in Moab, the Dibān of the Old Testament, on the Roman road, which is however known to have been used as late as the Mamlūk period, between Ḥumān and al-Rabba, became famous in 1568 as a result of the discovery there of the inscription of King Moja (the Moabite Stone). — Cf. A. Musili, Arab. Philom. I, 376 et seq.

DIBĪL, as a noun means "an old she-camel!"); the pen-name of a famous Arab poet of the ʿAbbāsid period. His real name, according to the Kiṭāb al-ʿAṣāmī was Muḥammad while other authorities say it was al-Husayn or ʿAbd al-Rahmān. His kunya was ʿAbd ʿAbī or ʿAbī ʿAnything. His ancestor ʿAbī was a client of ʿAbd Allāh b. Khālid the Khansârī who was secretary to the Caliph ʿOmar b. al-Khaṭīb.

Dībil was born in 148 (765); his birthplace is unknown. His family was settled in Baghād but originally belonged to Kīfā, though some say to Karkiša (Circasia). The poet certainly spent his youth in Kīfā. As the result of an unfortunate escapade he had to remain in concealment for a considerable period and wandered about the country in the company of all sorts of rogues and vagabonds. He then appears to have settled in Baghād, Here he made the acquaintance of the poet Muṣīm b. al-Walīd who introduced him to poetry. By a fortunate chance he came to the court of Harūn al-Rašīd.
The following facts are definitely known regarding Dhib's further career at the courts of Hārūn and al-Amin. He was first for a period prefect of the town of Simūndjān in Tūkhāristān, a sāḥīfa (district) of Khurāsān. As his immediate superiors, Ya'qūb (Muḥājir, s.v. Simūndjān) mentions two persons: al-Abbas b. Dāj'far b. Muhammad b. al-Sulṭān al-Abbas at one time and at another time the two were in reality only one, viz., the al-Abbas b. Dāj'far b. Muhammad b. al-Aṣ'ath, mentioned by Tabāri (iii. 609 and 612). This man (apparently a member of the same clan as Dhib) was governor of Khurāsān from 175—175 (789—792) in the reign of Hārūn al-Rashīd. The period of Dhib's prefecture should most likely be placed in the same period. Shortly before 200 (815—816) he made the pilgrimage and proceeded to Egypt to his fellow-tribesmen al-Muṭṭalib b. Aḥd Allāh, who was governed there from 195 to 200 (813—April—May 816). He wrote panegyric on him and was handsomely rewarded and appointed prefect of Uṣnān (Assan). But he lost the favour of his benefactor and was soon dismissed because of lampoons on him (which probably however were composed at an earlier period).

Soon afterwards he appears to have been again in the Baghdad court when al-Muʿāwīya's uncle the singer and aesthete Ibrāhīm b. al-Muḥājir was chosen Caliph during the absence of the Caliph in Khurāsān by members and clients of the family of 'Abbas in Baghdad (24th Dhu l-Ḥijja 201 = 14th July 817). Dhib wrote bitter lampoons on him and the 'Abbāsid family in general: "If Ibrāhīm is strong enough to bear the burden of the Caliphate, then Muḥājir, Zulqarn and Muṭṭalib (three professional singers) are qualified to succeed him." How is it possible — it surely cannot be — that one pro- digate should succeed the Caliphate from another's? Ibrāhīm was naturally enraged at being charged with *strolling people* and when he had again submitted to his nephew al-Muʿāwīya and obtained the latter's pardon, he demanded that Dhib should be punished in the severest fashion. But the Caliph, as can easily be understood, took such a thorough if malicious delight in these verses that he forgave the poet everything that he had said against himself and his family, even a verse in which he praised himself and belonging to the same tribe as his brother's executioner (Muṭṭalib's general Tāhir b. al-Ḥusayn, the conqueror of Baghdad).

This story is by no means improbable. But the rising of the Baghdad 'Abbāsid and the proclamation of Ibrāhīm had its origin in the fact that during his sojourn in Khurāsān al-Muʿāwīya had appointed the eighth Shī′ite Imam 'Ali b. Māsā 'l-Riḍā (see 'Ali al-Riḍā) as his successor. Dhib was a thorough going Shī′ite throughout his life. He wrote panegyric on 'Ali al-Riḍā and was rewarded by him with a robe, which he preserved as a relic. He is also said to have received from him 10,000 dirhems which the Imam had ordered to be struck in his own name (Afghānī, xviii. 42 et seq.). Muʿāwīya's possibly only feigned friendship to the 'Aliids may have induced Dhib to make his peace with this ruler. In any case in the period following he wrote several panegyric on the 'Abbāsid. 'Ali's death his his tribe is said to have resisted one of them to the Caliph.

Dhib maintained himself in the Caliph's favour for a considerable period, possibly the latter saw in him a useful tool. Nor was he in- jured by the enmity of Ibrāhīm b. al-Muḥājir, who was again reconciled to the Caliph, nor of the Mutaţalīfe Kāğı Aḥmad b. Abī Daʿūd, while the Caliph simply took a delight in Dhib's biting lampoons on his secretary 'Abd al-'Abbās. But 'Abd al-Riḍā died at the end of Safar 203 (Aug.—Sept. 817) and on the 29th Dhu l-Kaʿba 207 (17th April 823) the 'Abbāsid national flag of green was replaced by the black of the 'Abbāsid. This is the latest date then (207 = 823) at which Dhib can have returned to his hostile attitude to the 'Abbāsid. To this date or possibly a little later may be placed a poem in which Dhib describes Hārūn al-Rashīd as the worst of men and the 'Abbāsid as a whole as even more unworthy of the throne than the 'Umayyads.

Shortly before this breach of friendly relations with the 'Abbāsid court another feud had begun, which was to occupy the attention of a great part of Baghdad society for years if not for decades: Dhib's quarrel with the poet Abī Sād al-Makhtūm. The latter lauded the North Arabsians (Nīzārites) and poured scorn upon the South Arabsians (Kahfānites), while Dhib was the reverse. While Abī Sād for long exercised a certain moderation in his lampoons and at the same time could not break away from the forms of the old Beduin giyā, Dhib assailed him with the vilest abuse and expressed it in the language of the gutter. It thus came about that only scholars cared for Abī Sād's poems, while on the other hand his opponent's verses were sung by the youth of Baghdad as street-ballads to which Dhib himself contributed his share. This feud lasted into the reign of al-Muʿāwīya's successor, al-Muṭṭalib; for a poem by Abī Sād has survived in which he endeavours in the last verse to draw this Caliph into the feud against Dhib.

Al-Muṭṭalib himself, the eighth 'Abbāsid Caliph, received a severe chastisement from Dhib on his accession and on his death it is said to have exclaimed: "A Caliph has died whom no one laments and another has succeeded whom no one rejoices in." The Vizier, Muhammad b. 'Abd al-Malik al-Zayyāt on this occasion wrote an elegy on al-Muṭṭalib. Dhib thereupon replied with an incredibly unmeasured lampoon in which he called after the late Caliph: "Go to Hell and torment; I have never regarded thee as anything else than a devil." Al-Muṭṭalib, finally, the last Caliph whom he survived, was accused by him in a lampoon of pedantry. The viziers and other officials of the Caliph naturally did not come off any better than their masters.

Dhib's end befitted his attitude throughout his life. He was barbarously punished for a lampoon on the North Arabsians by the then prefect of Baṣrah, al-Idrīsī b. al-Abbas. After his release he fled to al-Ahwāz and is there said to have been treacherously murdered in the village of al-Tīb in 246 (860-861) at the instigation of a certain Malik b. Tāhir whom he had irritated by a particularly cruel lampoon. The details of this story of his murder appear highly suspicious. It may more reasonably be presumed that he died as a result of the ill-treatment he had received in Baṣrah; he was then 98 (Muhummadaun) years of age.

It is striking evidence of the importance attached to Dhib's poems that the above men-
tioned prefect of Basra commissioned a North Arabian poet, Abu 'I-Dalīfa to reply to the lampoons of Dībil and Ibn Abī 'Uyaina in a poem which he published under the title of al-Kāfīdah al-Dīmīgha, the “crushing Kāfida.” — That Dībil’s fellow-triumphant, the Banū Khūṣayn, were proud of their poetical champion is only natural.

If we critically examine Dībil’s poems we can only give a few with any high poetic merit. Only a few isolated pieces have a noble theme (e.g. his farewell to Muslim b. al-Walid and the lament on his cousin: Aḥānī, xviii, 47 and 34); some are pleasant little lutes (we may particularly mention the “Locus-pomum” in Ibn Kutayba, tābihī al-‘Aṣfar, ed. de Goeje, p. 541; it might well be in the Madīna of Abi Nuwas); the great majority are venomous pamphlets and scurrilous songs that were sung in the streets. These are nevertheless particularly interesting to us as an overstock of the wealth of historical references which frequently afford a fairly safe clue to the dating of the poems in which they occur (which is by no means usual in Arabic poetry), and contribute all sorts of little details to our knowledge of the historical personages mentioned in them. We need hardly point out that one must not believe everything that Dībil says about his victims. Cf. also the article al-Kūsheḥ in the al-Durrāt.

Dībil’s Dībil unfortunately does not appear to have survived in its entirety. Presumably his too great popularity — which in this case means popularity with the mob — has prevented serious philologists from exanastasizing studying this poet.

DIDJLA (without the article) is the name of the Tigris, called (Djinsiat) (Dijlāt in Babylonian, Dīlāt in Hebrew and Dīlāt in Syriac). According to the Arab geographers the Tigris rises north of Maṣūf in the region of Hammam al-Mās (Tigranocerta) at Hilla, a place celebrated in history on account of the massacre of the Armenians there in 249 (863) (see Thomaschek, Sasan, p. 23), out of a dark cavern beneath the Mount Ḩilla in Kermān. It is the grotto at the source that is here referred to (according to Belk in the Verhandlungen der Berl. Ges. für Anthropologie, 1900, p. 439), the subterranean course of the Tigris nearly a mile in length, near Didjla (Hilla = Illirias = El- \[\text{E\[\text{u}\]}\] geda = Didjla) see Lehmann-Haupt, op. cit. p. 328, Herzfeld in Memnon, i. 133, at the entrance to which rise the remains of a ‘Chaldaean’ citadel, to the neighborhood of which the name of Ḥillā in Kermān is still attached. (See Lehmann-Haupt, i. 439).

In the upper course of the Tigris and its tributaries and have left us a wealth of statements which do not however entirely agree and cannot always be verified. Yākut seems to have used the best sources. He mentions a Nahr al-Kūth “Dog River” as the first tributary, which is probably identical with the Nahr al-Dībil or the “Walt River” of Muṣākhāda. As he describes it coming from the district of ‘Aṣībān (see 'Isākhār, p. 73; Chasirian, Armeis unter Arab. Herrschaft, p. 72; Huntingdon in the Verhandlungen der Berl. Ges. für Anthrop., 1900, p. 149), it seems clear that he is referring to the Arbajjain-Su. Next comes below Dībil Baker (cf. al-Rams of Mūsakhāda; — probably the modern Ambar-Caul), the Wālī Sādān (certainly the Batman-Su, perhaps al-Maṣiliyyat of Muṣākhāda; cf. M. Hartmann, Baghd. Sitt., p. 221 et seq., and next the Nahr al-Dībil (called Nahr al-Dīb) by Ibn Serapion), the river of Arzān (q. v., p. 472). At the bend in the Tigris at Tell Fāṭima (the modern Tila, the Tilla of the Assyrians; see Lehmann-Haupt, i. 337 et seq.), the Nahr l-Zarn, also called the Bohān-Su or Eastern Tigris, a considerable stream, which has been augmented by the waters of the Bidār-Caul (cf. M. Hartmann, Baghd. Sitt., p. 65 et seq.), joins its western sister river from Dībil Baker.

The name of the next tributary, which Yākut writes Nahr Yarmān (Yarmān, this should according to Andreas in M. Hartmann, Baghd. Sitt., p. 131, be read Nahr Bānān which would be derived from the name of the Banūike tribe of KūrDS. To what modern stream it corresponds is as uncertain as in the case of the Nahr Bānaštān, which is next mentioned (thereon cf. M. Hartmann, op. cit., p. 31 and 136 et seq.), the identification of the latter with Ibn Serapion’s Bānāštān (F. F. S., p. 181, p. 262, 263 et seq.) is not certain, especially as this author’s account contains obvious errors. The identification of Bānāštān with the western tributary called Saffān or Mas’ūdī, Taubki, p. 54, (cf. Saffān Dero in von Oppenheim, li. 158) is on the other hand more probable as it is that of the two names with the Sapphe of Ptolemy etc. (but cf. M. Hartmann, p. 101, note 1, and also p. 99 et seq., 133); Yākūt’s next tributary, al-Bīyār, is quite uncertain whereas the name Nahr Dībil has clearly survived in the present Nahr Dībil, Nusīnāt etc. (M. Hartmann, op. cit., p. 65 and 146).

The Arab geographers have not very much to tell us about the Khābūr al-Hassānya which rises in the upper course of the Tigris near the Tigris north of Faibshāt and forms the southern boundary of Bagdad; mention may be made however of the world-famous Tā filters-in which, according to Muṣākhāda (cf. p. 159 and 162), led across the river of al-Hassānya (= Zabār?) (cf. M. Hartmann, op. cit., p. 39, 70 et seq., on the modern bridge cf. Miss G. L. Bell, Amaranth, p. 287 and 289 and illustration 181; Feuzer, Nordostasien, Bandwanderungen, p. 22 et seq.). After a brief reference, without giving it a name, to the Abu Marya, the stream which flows into the Tigris from the west at Belān = Eski-Mosul (cf. von Oppenheim, ii. 159 and 163), Yākūt proceeds without further mention in this passage of al-Mawīl (q. v.) at once to the al-Zab al-Mawīl, the Upper Zab, which, rising in the district of Muṣāhghār and flowing through the Hafṣīn country past Zargūn and Bābihār (cf. Hoffmann, Ansätze aus Syrischem Akten Persischer Möhrer, p. 227 et seq., 233 et seq.), discharges its waters into the Tigris above the now vanished al-Hadītha.
The towns of al-Simm (see Herrfeld in Memram, i. 233), at the confluence with the Little or Lower Zab (cf. Hoffmann, op. cit., p. 254 et seq.) which rises in the district of Sagh ratified, likewise no longer finds a place on our maps. Augmented by the waters of the latter, the Tigris at the modern al-Patha finally breaks through the Djebel Haurni (earlier Hanimm, q. v., p. 660) which has so long been constraining its course to the right. The al-Tharthar which branched off from the Nahr al-Hurnits which rises at Nasihat is said to have reached the Tigris via al-Hayad (q. v.) above Takrit (cf. Herrfeld in Memram, i. 218 et seq.). By Yezir they have here a watercourse which now disappears in the steppe was no longer perennial; and it is at least doubtful if the channel which formerly connected the Euphrates and the Tigris ever was, as Väätä, i. 321 says, actually navigable.

The great canal system of Babylonia practically begins at al-Musafir’s capital Sümarr (q. v.). A vast network of channels breaks away from the Euphrates and the Tigris, bearing the waters of the Euphrates to the Tigris in the upper part and those of the Tigris to the Euphrates in the lower part. This canal system which dates from the remotest antiquity, has been subjected to great alterations in course of time not only by its own movements or neglect of the dwellers on its banks but also by the working of the waters themselves. Streck in his Die alte Landschaft Babyloniens has fully discussed the problems, many of which can never be completely solved, mainly on a basis of the Serapion’s account. It is on this account that the following brief survey of the picture given by the Arab geographers is based.

Not far below Takrit the Nahr al-Tashib branched off from the west to the Tigris and, after irrigating the district of Tähin, again joined the main stream below Sümarr. Immediately below the point of junction on the same side of the main river the important Nahr Djudil, watering the district of the same name, left the Tigris; the waters of the Euphrates canal of the same name appear to have mingled with it before it returned to the main stream south of Chikra, which then flowed further west in the riverbed now called Shajdat (cf. Streck, op. cit., p. 24, 53, 220 et seq., 126 et seq.). The alteration in the course of the Tigris, traces of which we find as early as the xth century, appear by al-Mustansir’s time (1260—1242 A. D.) to have come to a definite conclusion; it impedes a proper understanding of the ancient accounts in a most unusual fashion (but cf. also Herrfeld in Memram, i. 134 et seq.). Not far from the beginning of the river at Khidir, the Tigris sent out eastwards the Kauful-Tamarr-Nahrawani canal which ran for a considerable distance parallel to the Tigris, receiving the waters of the al-Jalim and the Dayšt (q. v.) from the mountains on the east. It returned to the river at Djanjarăm, or perhaps not till Musafir (see Streck op. cit., p. 298, 300 and 310 et seq.).

In the interval the Tigris received on the west bank four large channels from the Euphrates, the Nahr ‘Isha (the modern ‘Isha Shadâyra) below Baghdad, the Nahr ‘Ashur (Abi Ghurair) above al-Medâli, the Nahr al-Malik (Radwâniya, see also Herrfeld in Memram, i. 134) below this town and lastly the Nahr Kulla (Nahr Itshâm) which ends ten miles below al-Madâli. Here also the exact location of these canals is rendered difficult by the alteration in the course of the Tigris, the bed of which has been shifting westwards since 1000—1200 A. D. (see Streck, op. cit., p. 392).

While Ibn Serapion regards the channel now known as the Hindiya canal as the main bed of the Euphrates, the Nahr Shurûq (corresponding to a portion of the present main stream), bears, according to him, the name al-Sarât al-Kadim as far as the town of al-Nili, where it takes the name of Nahr al-Nili (cf. the modern Shajî al-Nili) and finally flows into the Tigris as the Nahr Sabûn (Lower Zabi Canal; cf. Streck, p. 314) at the village of this name, viz. al-Nurâniya, where it is connected with the Tigris by the Upper Zabi Canal (cf. de Goeje in the Zeitschr. d. Deutsch. Morgan. Gäst., xxix, 5). With the Nahr Shurûq we reach the Shajî al-Nili, which was regarded by the medieval Arab as the Tigris proper, while the modern Tigris, which separates from it at Mâsharûna (proximately Kit al-Amriya) was then of no particular importance. The Tigris of the Arabs, after passing through Wâs at (on the site of the latter cf. H. Wagner in the Göttingen Nachrichten, Phil. Hist. 87, 1903, p. 271 et seq.) and sending off a series of canals, fell at al-Ask into the swamps of al-Batib (q. v., p. 675 et seq.); the various lakes of which were connected by channels navigable by small boats and finally poured their waters into the Nahr ‘Abi al-Masul. The latter joined the Djudil al-Arbâ, the "Blind" Tigris (see Streck, p. 41; and Herrfeld in Memram, i. 145), which apparently corresponded to the present lower course of the Tigris.

According to Ibn Rusta, p. 94, at one time ships from the sea used to sail up the latter and reached the Tigris of the Arabs above Wâsî at Khâtarûna — possibly by the Fami al-Sibî Canal (see Apana on the Sibî) Fâsim, a popular abbreviation of Famiya near Wâsî, which in the account iii. 847 (see Herrfeld in Memram, i. 140), combined with the passage from Stephanus cited by Herrfeld, ibid, p. 136?[) — till branches in the embankments made further advance impossible by this route; and only the western channel through the swamps remained.

In the final part of its course the Tigris now known as Djudil al-Arbâ (see Shajî al-Arab) again sent off innumerable channels; of the nine main canals on the west bank only two may be mentioned here, as connecting al-Basra with the river, the Nahr Ma‘âli and Nahr al-Obalda; the most important on the east side was the Nahr Ilân, which formed a navigable connection of the lower Tigris with the Djudil al-Ahwâz; now called the Khîn, Aboîdâbî (q. v., p. 77), where beacons guided ships by night, was the town at its mouth; by the xth century it appears to have quite lost its importance as a seaport, owing to the advance of the sand-line.

The preceding survey of the course of the Tigris, according to the accounts of the medieval Arab geographers, naturally only gives the main outlines. Reference has several times been made to the undoubted alterations in the course of the bed of the river and to their supposed date. No absolute certainty is possible regarding the details of these changes. It is an open question at what date the Tigris sent its main stream east-
wards after reaching Küt al-Amir. Streek, op. cit., p. 312, believes that the beginning of this movement should be placed at the close of the 'Abbásid Caliphate. We are equally poorly acquainted with the details of the growth of the Delta of šaṭ al-'Arab, before the mouth of which at Fai a mild bank renders navigation difficult.

That the river was of great importance from the earliest times as a trade-center as well as an irrigator of the Babylonian plains, is evident. Traffic is still maintained on the river below Diyar Bakr by the same peculiar rafts supported by inflated hides that we find reproduced in the Assyrian friezes, English and, since Midhat Pasha's time, Turkish steamers also ply between Baghdad and Basra which since the sixteenth century has come to be directly on the šaṭ al-'Arab and forms the limit of the sea traffic. The restoration of the ancient irrigation system, which is now largely ruined has often been proposed in the last century and, thanks to Wilczek's ardent activity, has now passed beyond the preparatory stage; but the expenditure of his colossal scheme seems to be faced by almost insuperable difficulties.

(R. HARTMANN.)

DIIH (r.), a village, or (Old Pers. dokhn). Dihkān, Arabicized form of the Persian dīkān 'head of a village', a member of the rural nobility'. According to Manūdī the dīkāns were divided into five classes, distinguished from one another by their dress (Murūdī, ii. 237); the Arabs used to seek their advice on agricultural matters (ibid., v. 37). In the Sāḥib-Nāmā, Firdawsi represents them as depositories of oral tradition regarding the deeds of the ancient kings of Persia (ed. Mohd., viii. et seq.). M. C. Inostroza's Sasanian studies (Sasanidische Erinnerung) have shown that there were other sources than the dīkāns for the preservation of the Iranian epic (illustrated rolls which were stained in the castle of Eļīs near Arābdān in Pers). These land-tax-payers acted as municipal authorities and were responsible for the payment of the land-tax. Even at the present day, in Turkoman, the farmers are called dīkāns (Revue du Monde Musulman, xiii. 1911, p. 588).

DIHKĀN is a name used for the settled Persian-speaking population in Bālāštan and Southern Afghanistan. Another form of the name is Dehwar, both names meaning 'villagers'. They are related to the Tojikhs and Sārs, and form part of the old stationary Iranian population dwelling in permanent homes as distinguished from the nomadic races.

(M. LONGWORTH DAMEL.)

AL-DIHAWLI, Nūs al-Hāṯeq b. Ahmad al-Hāṯeq, was a pupil and disciple of his father. p. 39. He passed his early days in Dihlī as a religious teacher but his literary fame and pithy induced the Emperor Shāh-Dārā to honour him with the responsible post of Ḫāji in Akbarīdbād. He died in Dihlī at an advanced age of ninety. A. H. 1073, 4. B. 1062.

(M. HEDAYET HOSAIN.)

AL-DIHAWLI, Walī Allah, whose real name was Ḥusayn Ahmad b. Ahmad al-Raṣīfī, was the most celebrated traditionalist and theologian of his time in India. From his autobiography, entitled al-Dīhawlī fi tārīkh al-ḥadīth al-ḍawlah, we learn that he was born in 1114 A. H. (1702 A. D.), that he entered the Naqshbandi Order, of which his father was a spiritual guide, at the age of 15, and 2 years later succeeded his father in this office. At the age of 43 he made the pilgrimage to Mecca, where he remained for 2 years, occupying himself especially in the study of Hadith. On his return to Dihlī he devoted himself to literary pursuits, and wrote a large number of works, dealing with Hadith and other branches of Muslim theology.

(M. HEDAYET HOSAIN.)

DIHLĪ, (the capital of the early Muḥammadan Kings of India from 602 A. H., and of the Muḥgal Emperors from 1053, and, since the 12th December 1911 A. D., redesignated as the seat of the Imperial Government of India by His Imperial Majesty King George V at the Durbar held there by him on that date,) is situated in latitude 28° 38' N., and longitude 77° 13' E. on the right bank of the river Jumna, some 120 miles from the point where it streams from the Siwalik hills, and stands on the eastern edge of a narrow plain about 8 miles broad at its base and tapering to a point 15 miles further north, where the last outposts of the Siwalik Mountains, which bound it to the west, end on the river 2 miles above the city, and by their
Dhilli

position at this point protect the plain from erosion. The population of the city in 1911 was 233,000, of whom 4/5 are Mahammadans. In modern times it has been signalled by the assault and capture of the city in September 1857 A.D. after the outbreak of the Native Army, and the rebellion of the descendants of the House of Timūr, and by four great Durbar held at it, the first on the 1st January 1877 on the occasion of the assumption of the Imperial Title by the Queen Empress Victoria, and the last held as above by Her Majesty the King, in 1902 A.D. Dhilli is the centre of six railway lines, and of the largest body of trade in North India, and in the future proposed for it, will doubtless rise rapidly to the rank of an Imperial city in all respects.

The oldest of the many cities known as Dhilli, usually said to have been seven in number, was the city of Rai Pithora or the Pithori Rājā, a prince of Cawbān Rājāpūt descent, from whom it was captured by Kūtüb al-dīn Akhāk, lieutenant of Shams al-dīn Bahādur in 1210 A.H. In 602 A.H. the conqueror became an independent King, and the founder of the Sultān or Turkī dynasty of Dhilli, which ruled till 1289. By him and by the Emperor Ala-ud-dīn (Iltutmīsh), who succeeded in 607, were constructed the magnificent minār and tower of victory 258 feet high, known as the Kūtüb Minār, the famous Kūtüb al-islām mosque made out of the materials furnished by Dhillī temples destroyed on the spot, the grucenf screen of lofty arches on the west side of the mosque, and the richly decorated tomb of the last emperor. Inside the mosque is the famous iron pillar erected at this spot by a Tomar predecessor of the Pithori Rājā. The second King Rājā, Śāhī dynasty, 'Alā al-dīn, added the beautiful 'Alāi Darwāzhā, or porch of approach, and proposed a great extension of the mosque, and the construction of a second eponymous minār, but these never got beyond the stage of inception. His tomb at the southwest corner of the enclosure, and that of the Emperor 'Abdur rahmān (died 646 A.H.), which lies 1/2 mile to the southeast of it, are now complete ruins. Outside the enclosure of the city to the southwest is the shrine of the eight Saint Kūtüb al-dīn Khālia (died 632 A.H.), round which are the graves of some of the latest Emperors of Dhilli, and other notable persons. The Suhnī Rasāylla, daughter of Alamān (Iltutmīsh), who reigned three years from 634 A.D., was the only female ruler among the Kings and Emperors of Dhilli.

The second capital Sīrī was built by 'Alā al-dīn Khaļdī (605-715 A.H.) two miles north of the first, and the space enclosed by the walls connecting the two, and known as Dhillān-pañth, is reckoned as the third city. This was the Dhilli captured by the Mughal Timūr Lang in 800 A.H.; the only remains in and near it, date from the time of the following dynasty. One of these, the Khirki mosque, is interesting as being entirely roofed over like the mosques at Gulkarga and Ćityak. The Taghākjān kings founded two capitols, Taghākjānī and Fīrūzābād. The first, which lies 4 miles to the southeast of Sīrī, is an utter ruin, but the immensely high somber walls of the city and citadel are still visible for many a mile round, and the tomb of the founder (died 725 A.H.) still stands in the fortified enclosure in the lake, now dry, which once protected it; it probably suggested the arrangement of the tomb of Śāhī Ānūmī at Sasāta (died 952 A.H.). The site of the fifth capital was selected by the Emperor Fīrūz Šāhī (753-790) some five miles north of Sīrī. This was probably much larger than the Mughal Dhilli, and extended northwards well into the southern quarters of that capital, and southwards to nearly the tomb of Humayūn. The Kāla, (or Kālī) Mādqī, south of the great Dījānī Maqījdī of Śāhīdīnī, is of that date; while west of the present city is the very sacred enclosure of the Kāna Shāhīr, containing the tomb of the Emperors son Prince Fātīmah Kānūnī, killed fighting against the Mughals; and on the ridge above Dīhli are ruins of the Royal Hunting seat of Kūkhpī Shīkārī, called from its commanding position Dijānī-ānumūnī, in which was placed a stone dīsht (pillar) of the Emperor Akbar. In the fort, Kōtī, of the city the Emperor erected another stone dīsht; close to the fort on the south side was the Dījānī Maqījdī, which excited the admiration of Timūr. The Emperor Fīrūz Šāhī who died in 790 A.H. is buried in a dome on the edge of the great tank of Ḥawwī Aḥnī, constructed by 'Alī al-dīn, which lies two miles west of Sīrī. After the destruction of Dhilli by Timūr, the authority of the Dhilli rulers became very circumscribed, and after temporary Saiyīd and Lūdīi capitals at Kībekrā and Mubāţkarūpā, south and southeast of Fīrūzābād, the last rulers of the second dynasty transferred the seat of power to Agra, and there the Mughal conqueror, Jāhān, and his son, Humayūn, resided. After Ṣūrī Shah the Fīrūzābād internecine was driven out the latter, he built the Purāna Kaīla at Dhilli, south of the citadel of Fīrūzābād, and constructed the fine mosque with its beautiful polychromatic decorations there. After his restoration in 963 A.H., Humayūn resided at Dīhli and met his death by an accident in the Purāna Kaīla, known usually as the Fort of Indrapur. His imposing mausoleum erected by his widow, Hājīdī Bīgān, and his son, Akbar, stands in a garden enclosure a mile to the south, and is the first great architectural achievement of the Mughals in India. The building stands on a line platform, and is surmounted by a white marble dome which rises above the large central chamber: it is built mainly of red sandstone sparingly relieved with marble inlay and decoration. Close to the mausoleum are the tomb and mosque of Ṣūrī Kānūnī (954 A.H.), the mausoleum (ruined) of the great Mughal noble known as Khānda Kānūnī, son of the famous Bairām Kānūnī who recovered the Empire of India for the young Akbar, the shrine of Nīzhmī al-dīn 'Abdīr rahmān (died 745 A.H.). The tomb of the Sultān Ānūmī and his graves here, and the Dījānī Kānūnī mosque of date anterior to the shrine, are of much interest and beauty. Four miles to the west of these is the tomb of Safīr Dījān, the second Nawwār Wazīr of Oudh (died 1167 A.H.) one of the last Mughal works showing any architectural ambition; and on either side of the road leading to this, we find tombs of the Saiyīd and Lūdīi Kings, who ruled at Dhilli from 817 to 949 and 949 to 959 A.H.

The Emperor Akbar (963-1014 A.H.) preferred Agra to Dhilli for his capital, and his son, Djasīntigī, preferred Lahore and Kasbūra, when he left Agra. It was to the Emperor Śāhīdīnī, who had already constructed the beautiful buildings in the Agra Fort, that the last Imperial
Dhili, Shalddhamad, owes its creation. His splendid palace there, the Lal Kila or Red Fort, was built between 1048 and 1058 A. H.; the grand Djamé Masjid, was completed a year or so later; and the other principal mosques of the city, the walls, and the chief palaces were raised during the next eight years. Though not, with the exception perhaps of the Djamé Masjid, of such perfection of simple beauty as the Mosti Masjid or Taj of Agra, the striking walls of the palace-fort at Dhili made of red sandstone, the two grand entrance gates to it, the Naqée Khana of music gallery, the spacious Diwan-i ‘Amm and the elaborately decorated white marble Diwan-i Khās in it, will ever rank among the great architectural and decorative achievements of the world. The Djamé Masjid is one of the few great mosques in the world which is beautifully designed externally as well as internally — the enclosed court measures 450 feet each way. The works subsequent to 1070 A. H. showed a sudden and marked decadence. The tomb of Safdar Djang (see above) is one instance of this, and the mausoleum of Ghilâl al-din Kān (c. 1165 A. H.) is another, though a less pronounced failure. The reason of this was no doubt that Dhili ceased to be a truly imperial capital within fifty years of its creation. The Emperor Avrangiz, who deposed his father before the original works were wholly completed, left it in 1660 A. D. for the Dakhan and never returned; and at the time of the death of his son, Bahādur Shāh, in 1712, the real power of the Mughal Imperial dynasty was practically gone. Whatever respect it retained was broken by the invasion of the Persian King Nādir Shāh in 1739, and was finally shattered by the sack of Ahmad Shāh Durranī in 1740. After this second agony the city, Rohilla Pathans and Mahuris all held possession of Dhili in turn, and the Emperor Shāh ‘Alam II was a refugee from his titular capital for no less than ten years. Finally in 1803 A. D. the British took possession of the place, and the titular kingship of Dhili ended in 1858, the last titular King Bahādur Shāh II dying at Râgoong in 1862.

Fortunately Dhili was visited during the culminating period of its glory by a number of European travellers, and Bonner and Tavernier amongst them have left full and interesting accounts of the glories of the city and the state and magnificence of the Court. Many prominent features of the former, especially the palaces of the nobles, have disappeared since 1847 A. D., and the main street, the Chandl Chauk, leading to the Palace has lost all its oriental attributes and attractiveness. It may be hoped, however, that in its new future as an Imperial city, Shalddhamad will recover much of what it has lost in these respects.

When Dhili’s caravan was in danger or had been plundered by the Beduins, Muhammad wasted no time in organising an expedition to relieve him or retake their booty from the robbers. In spite of all the efforts of the Traditions, Dhili remains a legendary and almost mythical personage. (Cf. the article Bhogm.).

Bibliography: Ibn Sa‘d, Tâbrîzî, iii. 1; P. 1732 iv. 2. p. 182-185; Ibn ‘Abd al-Barr, Jethâb (Haidarabâd), P. 172; ‘Abd al-Barr, Amr ibn ‘Abd al-Asîrî, (ms. Paris), 300; Simhâd, Amâb (ms. Paris), 85; Ibn Hanbâl,
of his say that he did not feel himself the equal of other contemporary poets, particularly Abu Nawâs, and illustrate this by the following anecdote: Abu Nawâs visited Dîk al-Dînj when he was going to his patron al-Khâṣîb in Egypt but the Syrian hesitated at first to receive the distinguished Hâfîdî poet.

The few fragments of Dîk al-Dînj’s poems that have survived to us owe their principal interest to the fact that he champions the equality which becomes evident in the narrower sense, the Arabized Syrians, with the Arabs proper and sometimes also inveighs against the rivalry between North and South Arabs. The fact that he never left the narrow limits of his Syrian fatherland and never went to the Ḥijâz nor anywhere else to importune the great ones of the empire with poems, may be due not merely to his particularistic attitude but also to a sense of his inferiority as a poet.

Dîkka. The platform, borne upon pillars and surrounded by a parapet, which stands opposite the mîhrâb of a mosque. It is placed either in the front or in the centre of the portico. Also a long wooden seat or sofa placed along the wall of a room.

Cecil vulgarity for ḥikki, it denotes a running string tied round the body to fasten the drawers (ḫâṭîb) in Muslim attire. The mode of this string is round and ornamented with coloured cords by the outer dress. (A. S. Fenton)

Dîlawâr Khân, a name of Amîd Shâh Dâwa, (a descendant of Shâh al-Dîn Ghûrî), who was appointed governor of Miṣr by Muḥammad Shâh IV. of Dîhil. In 301 he received his suzerain Mahmûd II. of Dîhil, who had fled before Timûr, with due honour in Dîhir, but in 804 he made himself independent of Dîhil. He thus became the founder of the first independent Muḥammadan dynasty, of which he was the ancestor in 839. He reigned as king in Dîhir from 804-808, but does not seem to have struck coins in his name. Two inscriptions of his period have however been preserved on the Dîmilî Masjid (now called the Lat Masjid) built by him in Dîhir. He died in 808 and the story goes that he was poisoned by his son Hoshang.

**DIMOTIKA** (turk. Dimotika), the ancient Δυτικορρι-τες, a town in Rumi, in the province and szangāj of Adriannople, 26 miles south of the latter town, near the confluence of the Kizil-Deli-Çi and the Maritta; it is a capital of a kaza and a station on the Dede-Ağan railway. The population is 8,707, mainly Muslimomadans. It has an ample fortress, now in ruins, seven large mosques and a reservoir which has now been converted into a prison. It was taken in 765 (1362) by Murad I, who built a palace there. Charles XII made it his headquarters from February 717 to October 714. — The kaza of Dimotika comprises a nahiya (Kadikeli-burgaz, Karaağa-kılıç, Saitılı and Kara-kılıç) and 42 villages and has a population of 26,551, the greater part of whom are Orthodox Greeks. In addition to vegetables, tobacco and the vine are cultivated.

**DIN.** Behind the chaos of meanings given by the Arabic lexicographers under the form din (see, for example, Lane, Lexicon, p. 944) lie three separate words. There is (i) an Aramaic-Hebrew loanword meaning "judgment"; (ii) a genuine Arabic word meaning "custom", "usage" which is equated to (i); (iii) being related as the Hebrew mishpah to ḥabbeh; (iii) an entirely distinct Persian word meaning "religion," See Nöldeke in Zeitschr. d. Deutsch. Missions-Ges. xxxvii. p. 534, note 2, and for the Persian word, derived from avascript, Grundr. d. iran. Phil., i. 1, pp. 107, 270; i. 2, pp. 26, 170; ii. 6, pp. 644. Voeller contested the existence of din as a genuine Arabic word and, showing that the Persian din, religion, was already in use in Arabic in pre-Islamic times, held that the meaning "custom", "usage" was derived from it. (Zeitschr., f. Assyri. viss, p. 351.) This confusion naturally involved the Muslim exegetes of the Qur'an in endless difficulties. Thus, for example, in Malikī Yawmi 'l-Din (i. 3, cf. Baidawi, Razist and Tabari, i. p. 51), they mostly recognized a necessary meaning of "reversing", "recompense", yet were in great doubt how to reach it. But under one or other of these meanings all the Qur'an passages can be brought. Theologically, din is defined as a divine institution (waqaf ilāhī) which guides rational beings, by their choosing it, to salvation here and hereafter, and which covers both articles of belief and actions ( dict. of T. T., p. 509). It thus means "religion" in the broadest sense and is so vague that it was felt necessary to define its difference from mithla (q. v.), "religious community," mawṣūla (q. v.) "school of canon law" and sharīa (q. v.) "system of divine law." It may mean any religion, but is used particularly for Islam, the religion with Allah" (Kür, iii. 17). It covers three things: Islam in its five elements, Witnessing to the Unity of Allah and to the prophetship of Muhammad, Worship, Fasting, Pilgrimage, Donation, Faith; Ibad, Rightdoing. These three make up the din of Muslims; see the tradition of how Muhammad answered Gabriel's questions (Sahihstan, ed. Cureton, p. 27). Similarly, all religions, as opposed to intellectual, knowledge of which is gained by prophets through major inspirations (nabih) and by saints through minor inspiration (ilàhī) and received by others on authority from them, can be called al-din al-'ilāhi.

**DINAPIUR,** district in Eastern Bengal, India: area, 5,446 sq. m.; pop. (1911), 1,657,865, of whom 1,413,779 are Mohammedans. At the beginning of the 15th cent. A.D., Râdża Kâns, a Hindu landowner of Dinapîr, defeated the Muslim king of Bengal and seized the throne, on which he was succeeded by his son and grandson, Dâhî l-Dîn Muhammad and Shâms al-Dîn Ahmad (1414—1443 s. v.). The tomb of a prince named Nâkurmî is frequented by pilgrims, and is also the scene of an annual cattle fair, at which the attendance reaches 100,000 persons.

**Bibliography:** W. W. Hunter, A Statistical Account of Bengal, vii. 355 sqq.; Bengal District Gazetteers, s. v.; H. Blochmann, Contributions to the Geography and History of Bengal, (Journal of the Asiatic Soc. of Bengal, Part iv, 4, 188, 262 sqqq.). (J. S. Cotton.)

**DINAR,** from the Greek-Latin denarios (σεναρίου), the name of the unit of gold currency of early Islam. Why the Arabs called the gold piece dinar is not quite clear from Greek or Latin inscriptions or literary sources. Pliny once (Hist. Nat., lib. xxxiii. § 13) calls the marcus denarius, and we frequently find the expression denarius aureus or ßeòetoz xwrwov, in the east as well as the equation dinaros — xwrwov, but the Arabic and Syriac name dinar seems to point to the fact that in Syria the gold coin (after the reform of the currency by Constantine I. 309—319) was usually called simply ßeòtoxaros.

The Arabs knew and used this Roman gold coin before Islam (Kur'an, iii. 68). All Muslim Traditions agree that the currency reforms of the Caliph 'Abd al-Malik which were effected in 77 (996) left the standard gold coin unaltered. The exact weight of this coin may be readily
ascertained from the great exactness with which the earliest reformed dirhāms were struck; the dirāh is thus found to weigh 4.38 grammes (66 grains). This corresponds exactly to the actual weight of the contemporary Byzantine solidus which was again based on the later Attic drachm of 4.29. The Egyptian glass-weights (μαγνιτας q. v.) enable us to test this. As gold coins in the East have always passed by weight and not by tale, the weight of the current dirāh at times differed considerably from the legal weight of 4.38. (The contrary assertion in Mukaddasi, ed. de Goeje, p. 240 is only exceptionally true).

The oldest dated dirāh known to us dates from the year 76 (692) and still bears the Byzantine type (figure of the Caiophis); a similar piece is dated 77 in the same year appear the reformed dirāhs of 'Abd al-Malik. These new coins, unlike the dirhams (q. v.) do not bear the mint; it is practically certain that the Umayyads struck gold coins near in Kairouan and Cairo, and after 672 (738) in Cordova also. After the fall of the Umayyads the chief mint for gold seems to have still for a period been Damascus, but in 866 (763), it was transferred to the newly founded Bagdād. In the reign of Ma'mūn (958-918 = 813-833) the mintage of gold was decentralised and a new type, similar to that of the dirhem prescribed; after 812 (827) gold was struck in the most important of the provincial capitals. The secondary dynasties also made so alteration in the dirāh; only in Byzantine Arabia was another standard (2.49 grammes) (46 grains) used.

In Bagdād the last dirāh was struck soon after the fall of the 'Abbasids; the word dirāh disappears from these gold coins about 661 (1262). In Egypt the last dirāhs were struck in the reign of Saif al-Dīn Ḥājjī (747 = 1346). Perhaps as early as the reign of al-Aṣfrag Saḥbān (764-778 = 1359-1370) a new coin was issued in Caire and founded in the 13. grammes (53.4 grains) which displaced the dirāh throughout Eastern Asia. The dirāh, which had never really gained a proper footing there, disappears from India in the reign of Nāṣir al-Dīn Mānhūd (644-664 = 1246-1266), who introduced the national gold tanka (11.29 grammes = 176 grains) as the official standard coin. In the Maghrib dirāhs were struck to the end of the fifth century but the reckoning by dirāhs remained in use till a much later period.

Multiples and subdivisions of the dirāh were at all times in use; 'Abd al-Malik appears to have introduced the terms (tā'īri) of 1.49 grammes (22 grains) as may be presumed from a piece of the year 92. In the Fatimid period the quarter dirāh (approx. 1 gramme = 15.3 grains) was a common coin while in Sicily it was almost exclusively struck and survived into the modern period as the faris d'or. The standard was always very high, the gold being as pure as the technical processes rendered possible.

In the history of Mediterranean commerce the dirāh plays an important part and was imitated by many Christian rulers under the name of denar or surdinar.

In Taw the legal dirāh is still one of 4.38 (66), in finding an equivalent for amounts given by Arab authors the dirāh must always be taken as

4-19 (66) fine gold unless another value is expressly stated.

Dinawar [often also less correctly written Dainawar], in the middle ages one of the most important towns of Dīhāl (Media), now in ruins. Its exact location is according to the latest road-map by Th. Strauss (see Bibli.; 48° 25' E. Long., 34° 32' N. Lat.) or rather lies on the direct line between Kengawar (Kangwāt) in the S. E. and Kirmānšād (Karmānšād) in the S. W. and is almost equally distant from both, namely 32-32 miles. It lies on the northeast edge of a fertile plain some 5000 feet above sea-level, watered by the Abī Dīnawar. This river, which takes its name from the town, enters a narrow ravine (Tugn-I D. = Pāsh of D.), at the southwestern corner of the plain, which afterwards opens out into a broad valley, and finally joins the Jamsad which belongs to the Karkhit watershed. When Ibn Khurābdīgh (ed. de Goeje, p. 176) says that the Nahr al-Sīr = Karkhī rises in the neighbourhood of Dinawar, he is obviously considering the Abī Dīnawar as its real source.

The foundation of Dinawar, which appears also in Syrian sources (as Dinahwar), dates from the pre-Muhammadan period; in the days of 'Omar ii. was the most populous town in the district of Hamadān. Immediately after the battle of Nihāwand (c. 21 = 642) it was surrendered to the Arabs by the Persian governor. In Mu'awiyah's reign it received the new name of Māh al-Kūf, because the taxes raised from it were applied for the benefit of the citizens of Kūf, more particularly for payment of the garrison there. In the administrative division of the Caliph's empire Māh al-Kūf appears not only as the official name of
the town of Dinarwar but also as that of an administrative division of Diyarbak with two districts: Dinawar, comprising the upper lands and Karatani, the lower. In the west, Mith al-Kufa was bounded by the district of Hulwan, in the east by that of Hamadhân, in the south by Mâshâdân, and in the north by Abiâdad, thereon cf. Kûdâm in Bibl. Geogr. Arabi, (ed. de Goeje), vi. 245 et seq. As to the word Mith, this is not to be explained, as do the Arab authors, as a Persian noun equivalent to the Arab kapha = "town, capital"; Mith rather corresponds in form and meaning to the ancient Mîda = "Media." All geographical names which are undoubtedly compounded with Mith and can be fairly definitely located (cf. for example, Mith al-Bayam = Nikhabwand, a name similar in origin to Mith al-Kufa) belong to Media. Mith al-Kufa is therefore to be interpreted as: Media of Kufa, i.e. that part of Media which belongs to K.; on Mith cf. particularly Noldeke in the Zeitschr. d. Deutsch. Morgenl. Ges., xxi. 539 et seq. and in his Geschichte der Perser und Araber zur Zeit der Sasaniden (1879), p. 105, 2; J. Marquart, Erdbilder (Berlin, 1901), p. 18-19.

Dinarwar likewise enjoyed considerable prosperity in the Umayyad and 'Abbasid periods. When Ibn Hishâm in his eighth century it was only about one third less than Hamadhân. Muqâlân praises its well built houses and the rich orchards around the town; he also, as does Kârâwîn, makes particular mention of the excellent cheese manufactured there. The population is a mixture of Persians and Arabs; as Masûdî (op. cit., iii. 253) tells us, the Kûrdish tribe of Shaghâdân also led a nomadic life in the country round. The confusion that broke out in the last years of the reign of Mith al-Kufa's reign brought ruin to the town. When the rebellious general Mardwâjûd of Gilân seized the whole province of Diyarbak after defeating the troops sent against him by the Caliph, Dinarwar also fell into his hands (319 = 934) and several thousands (the figures vary from 7000 to 25,000) of the inhabitants perished soon afterwards. Hâsunâwi (Hassanibah) a prince of the Kûrdish living in this region founded a small independent kingdom of which the capital was Dinarwar and was able to retain possession of it for almost 50 years (until his death in 369 = 979). In the viiiâ (979) century the town was still inhabited, according to Mustawfî. Its doom seems to have been sealed amid the horrors of the Mongol invasion under Timûr.

The present ruins of Dinarwar, which are quite uninhabited, were last visited by de Morgan and Th. Strauss. Strauss (op. cit.) gives the following brief account of them: "The site of Dinarwar is only indicated by a mound of earth, which has several times been ransacked in the search for coins; numerous finds are still made, especially by peasants tilling the fields." According to the same traveller, traces can still be seen in many places in the above mentioned Teng-i Dinarwar of an ancient road hewn out of the rock, which probably connected Dinawar with Baghûlûd. Chalifats, i. 93; ii. 620 (wrongly vocalised Dinewer); de Morgan, Mission Scientif. Pers. Blad. Geogr., ii. 93 et seq.; Th. Strauss in Petersmann's Geogr. Mittl., 1911, Vol. i, p. 69 (with road-map on Plate xii). (M. STRECKE.)

DINAWAR, Abu 'Ali 'Abd al-Malik, Arabian philologist and scientist, probably born in the first decade of the 3rd century of the Hijra at Dinawar in the Persian 'Iraq, received his education in philosophy from the father of Ibn al-Sikhtin, the Kûfa grammarian, and from the latter also; in 935 he stayed in Ispahan to make astronomical observations, which he recorded in his Kûthû al-Raqûl. He afterwards seems to have spent most of his time in his native town where his observatory was pointed out for several centuries later. The dates given for the years of his activity are very variable; but the 26th Dinarwar year (July 805) appears the most reliable. His literary activity, like that of Dûbâhî, with whom he has often been compared, combined entertainment with instruction. Only his Kûthû al-Abhâr al-Tâbîl has survived in its entirety; it selects those periods of the history of the world for which Tradition affords material for an exhaustive survey. It also devotes particular attention to matters of special interest to Persians. He therefore gives a full account of the history of Alexander, of the Sasanids, of the conquest of the 'Iraq by the Arabs with a detailed description of the battle of Kâ Mãz̄a, the battles between 'Ali and Mu'âwiya and the Kâriwâ, the death of Hâsim, the risings of the Arabs and of Mâkhârû, the fall of the Umayyads and the intrigues of the 'Alids, particularly in Khorasan in a brief history of the Caliphs (cf. W. Guigou's edition, Leiden 1888; pref. varr. and index by I. Kraitschek, ibid. 1912). His famous Florî (Al-Iri), a work of which is lost but numerous extracts have been preserved in the lexographers, particularly Ibn Sûda, and also in Ibn al-Bâ'idî, was of much greater importance to science. Like the much less comprehensive works with similar titles by Abî Zaid and 'Abîn, it was the result of a philological study of the old poets and was intended to explain the numerous plants mentioned by them. It was therefore confined to the flora of Arabia but included also plants which had been brought from foreign countries and acclimatised there. His clear and exhaustive descriptions, for which he was possibly somewhat indebted to older works, were not based on his own observations but were compiled from information obtained by him or his predecessors from Arabs of the desert. As the latter were very keen observers of all that surrounded them and had the power of accurate description, this had a tremendous effect on the plant names, which were almost scientific in their precision. Besides the descriptions of plants, which have for the most part alone survived, the work, which was still accessible to the author of the Kûthû al-'Abhâr in six large volumes, in addition to numerous illustrative quotations from the poets, must have contained many philological and
historical excurss on the latter. It began with a
detailed account of the kinds of soil and forma-
tions of Arabia, its climate and distribution of
water, and the general conditions necessary for
the growth of plants. It then proceeded to treat
of the classification of plants in general and the
morphological structure of the individual plants.
The main portion of the work treated of the in-
dividual plants in three groups: plants cultivated
for food, wild plants and plants with edible
fruits. The second group dealt with the plants
in it first according to their places in which they
are found, then according to their nature, and
partly according to their commercial value. The
work, on which All b. Ḥamān al-Bayrī wrote a
trilling criticism, dealing only with points of philol-
gy, in a section of his Kitāb al-aṭba'at
Aḥkāf al-Ruṣālī, became the main authority on
plant-names for later lexicographers.

DIRGHAM ("Lien") a visier of the last
Fāṭimīd al-ʿAṣīd ibn. v. p. 137; his full name
was Abu I-Qasim al-Dirgham ibn. Aḥmad ibn.
Sawwar. As to his origin, his pure Arab blood
is emphasized and his epithets al-Laḥqī al-Man-
ṣūḥ also seem to point to his descent from the
ancient rulers of Hira. He had risen from the
corps of the Barṣiya and was one of the confidants
of Iḥās b. Ṣawwar (q.v.), who appointed him
generals in 1158. In the same year he
defeated the Christians near Ghaza. In spite
of his close relations with the Hani Ruzifu he
was one of Šawwar's (q.v.) chief allies in bringing
about the fall of Ruzifu b. Ṣalāh, whose teacher
he had actually been in all knightly arts. Under
the new visier he received the office of Šībāb al-
Ruzifu but apparently did not consider that his
thecary had been sufficiently rewarded, as he
rose against Šawwar nine months later (Ramādān
1158) and drove him from the country,
but held the Taʾṣi until death and seated the vizier
in his place. The Caliph confirmed him in this position and
granted him the title of al-Malik al-Manṣūḥ; his previous title of Fāris al-Muṣṭafī passed to his
brother Naṣir al-Dirgham. Fortune did not long favour
Dirgham. His attempt to make an alliance with
Naṣir al-Dirgham, with whom Šawwar had taken refuge,
as a failure; the hostile attitude of the Barṣiya in
Egypt drove the jealous vizier to dreadful deeds
of cruelty, which deprived the land of its bravest
spirits. The invasion of Amrīth I, king of Jeru-
usalem, who was going to compel by force of arms
the payment of the tribute previously promised
him, brought further trouble. He inflicted heavy
losses on the Egyptians at Bilbais and only retired
when Dirgham resolved to the desperate means of
breaching down the embankments and flooding
the country. But soon news reached the vizier of
the success of the efforts of his enemy Šawwar in
inducing Naṣir al-Dirgham to undertake a campaign
against Egypt and now too late he sought to
make a permanent alliance with Amurīth by
promises, which meant a considerable humiliation
of Egyptian power; Šamīr, Ṣalādīn and Šawwar
invaded the country, Naṣir al-Dirgham and his army,
most of the leaders of which had been won over
to the enemy, suffered a severe defeat at Bilbais
and soon afterwards Šawwar entered Fustāt. Dir-
gham's adherents gradually melted away; he for-
skied the last remnants of his former popularity
when he raised the funds of the Waqf for orphans
to replenish his resources; in vain also he attempted
the help of the Caliph. When finally, abandoned
by every one, he fled, he was murdered by a
mob at the tomb of the Sijjīd al-Nawfī (Raḥbān
or Ramūzān 559 = May—June or July—August
1164). His head was cut off and carried through the
streets of Cairo; his body was not buried till
three days later near the Biskāt al-Fīl and a dome
erected over the spot by the Flēgēl.

Dirgham is unanimously described as a brilliant
and powerful personality. His extraordinary skill
in all manly sports is particularly emphasised;
he was a remarkably brave man, a friend to
learning, an excellent poet and calligrapher.

DIRHAM. 1. A unit of the silver coin-
ages in the Arab monetary system. The
name here is used in its ancient form, while the
coin to which it was applied was borrowed by the Arabs from the Persians. The derivation of the legal weight of the dirham is more difficult than that of the dinar, as the dirhams were not struck very accurately. The definition of the legal dirham is very variously given by the historians, but all
agree that the weight of the dirham was to that
of the mithqal as 7:10. But since mithqal (q.v.)
has many meanings, this equation can only have
meanings if the mithqal is the legal dinar, i. e.
the Meccan mithqal of 4.25 grammes. We must
consider it as the most probable weight, 2.70 grammes, which is also agreed with the extent (2.90 grammes), as well as with the coin-weights of the
state of al-Maṣ'ūdī (295—320 = 906—914) dis-
covered by E. T. Rogers in the Fayūm. Sauerlau
took as the basis of all his calculations the figure
3.004, arrived at by the Egyptian Commission of
1845; and thereby invalidated his results from
the very first. Decourmayeur, who points out
Sauerlau's error, has arrived at the figure 2.86 by
a series of ingenious calculations, but this does
not agree with the necessary condition of being
1/10 of a mithqal.
The legal dirham of 2.27 was perhaps first instituted by the Caliph 'Omar. 'Abd al-Malik ordered that the dirham of this weight was to be the only legal silver coin. There can be no doubt about the derivation of the Arabic from the Sassanian dirham. The latter was introduced by Ardashir I (226–244 A.D.) on the standard of the new Attic drachm. After gr. 4.00, and remained almost unchanged till the fall of the Sassanian empire (the drachms of Ardashir III of the year 628 weigh 4.10 gr.). The Arab governors in Persia retained the Sassanian type but struck on a reduced standard (3.90); many of their coins weigh roughly 3.90 and thus agree with the legal dirham.

The earliest purely Muhammadian dirhams (apart from doubtful and isolated specimens) date from the year 75 (694); after this date coins of the new type were struck in all the provinces although the Arabic–Sassanian drachms continued to be struck in Persia for some time longer (in Tabaristan till about 180 = 795).

The copper dirhams of the viii. and vii. centuries a. d. are rare in the early centuries of the Hijra. The most usual division was into sixth (dinar = abalus) and the commonest small coin the half. The dirham disappears about the same time as the drachm. In the early days of Islam the relation of gold to silver was fixed at 14.7:1; 40 dirhams = 1.00 dirham = 3.707 gr.

The dirham was also the name of a weight, weighing 3.98 gr. and totally distinct from the coin of the same name. It survived, with local variations down to modern times as an apothecary’s and goldsmith’s weight. The French expedition found it in use in Cairo in 1799, weighing 3.911 gr., and the Commission of 1845, 3.906 gr. in Constantinople at the present day its legal weight in gr. 3.707 gr.

Diu (Din), a town on an island with an area of 20 square miles, situated at the southern part of the Kathiawar Peninsula of GoJarat, India. It was taken from the Czavda Ruliputra by the Muhammadians in 1330 A.D. In the time of the Sultan Mahmud Begara of Gudjrat (1459–1513 A.D.) it was a wealthy Muham- madian port; but shortly afterwards it was taken by the Portuguese, who have held it ever since. It is of importance in the sixth–sixt centuries as a port of call of vessels trading between India and the Persian Gulf and Red Sea.

Bibliography: Gazetteer of the Bombay Presidency, Vol. VIII. (H. C. Fassbinder.)

Diwan [See Diwan.]

Diw (Orth. form dīw, Apocryphal: Anu, the name of a spirit, the power of darkness, the creator of Ahab, the personification of sin; their number is legion. At their head is a group of seven principal demons (including Achatim) opposed to the seven Adjudicants. They are subject to Dhamshid (Firdawsi, Shah-Nama, ed. Mohl, i. 49, cf. the Muslim legend of Solomon).

In the Iranian epic, the white dīw (dīw-i-zāfet) comes to the help of the king of Muzandarīn against king Kal-Kawth; his country is inhabited by dīw skilled in magic (Firdawsi, Shah-Nama, i. 497); he is defeated by Rustam who also fights against two other dīw, Akwān (Akman) and Arjūān. King Tahmūrūst is sur- named dīw-band “the creator of the demons,” because he overcame them in a pitched battle with the help of magic; the hostile army was commanded by the black dīw (rīsh-dīw); it was they who taught the king how to write (Shah-Nama, i. 43–45).

(El. Huart.)

Diwan (Diwan) from a hypothetical Iriniian word dūndā, connected with dūndar “writer,” which is connected by M. Andreas with the Assyrian dăr public registers of receipts and expenditure, kept in ancient (Syria and Egypt) and in Fakhri (Persia) in the early years of the conquest, translated into Arabic and continued in that language from this time on (39 = 700, al-Balkhī, p. 193, 500; al-Mawardi, p. 340). The name next passed to the offices of the treasury and thence was extended to the government of the “Abbasid Caliphs and in Saladin’s time to the Caliph himself (Ibn Khallili, transl. de Saine, II. ind.); Diwān al-Zindan is the office where the register of revenue and expenditure was kept; Diwān al-Tanzuk, that of the State Chancery, the head of which had to audit the accounts of the governors (A. v. Kremser, Culturgeschichte, l. 181); The Diwān al-Bīr, established by ’Aṣr b. Ḥāṣim, minister of the “Abbasid Caliph al-Muqtadir, administered certain estates which that minister had made Wāfī (al-Fakhrī, p. 315). The Diwān al-Khāṣa “office of the Seal,” instituted by Mu’awiyah, survived till the middle of the “Abbasid period.

In Arabic, Persian and Turkish, Diwan also means a collection of the works of a poet, usually arranged in the alphabetical order of the rhymes. The word further means a large building, where customs were collected, foreign merchants put up, also used as a warehouse and exchange and thus was practically synonymous with bāsīn or bāsa- naqš; it is used with this sense more particularly in the Maghrib (Douay, Suppl. i. 479).

(El. Huart.)

Diwāni. [See ARAKA (ARABIC ALPHABET), p. 387.]

Diwrigi, a town in Asia Minor, the
capital of a ҚaCopying the province and sandjak of Stwās, near the Čala-İzmağ, a tributary of the Ḍara-Sū (Western Euphrates), lies at the bottom of a valley surrounded by high mountains; the population is 5,600 of whom 3,000 are Sunni and 1,500 (Stack). In it are the ruins of a fortress the surrounding wall of which alone survives, the mosque of the Amir Ǧīḥāndālah (Ǧīḥāndālah) built in 570 (1175) or 571 (1176), and the mosque of Akhmad Ǧāhid b. Suleyman Ǧāhid (Ǧāhid-
Ǧāhid) built in 620 (1228) of yellow freestone and well preserved; it has been restored on several occasions under the Ottoman Sultans but is now used as a public granary. A tomb of the same date in an old Muslim cemetery, an octagonal building with a pyramidal roof of stone, is the mausoleum of the Amir Rūz al-Dīn (d. 392 = 1196). It is mentioned by the Byzantine historians under the name of Tephrike in their accounts of the Manichean sectarians called the Paulicians. The early Arab geographers knew it by the name of ʿAbūrī and believed that the main source of the Euphrates was there (Vahşi, l. 87; Ibn Ruste, p. 93; Gay Le Strange, Envoy. R. As. Soc., 1896, 733; Kīähl al-Bāḍī, iv. 54.) Conquered about 464 (1071) by the Amir Man-
ğūduljah, a Sāliḥid general, who founded a dynasty bearing his name there, it afterwards passed under the sway of the Sāliḥids of Rūm (625 =
1228) who paid for it the Ottoman empire in 801 (1397) at the end of the Temur-
ūngh campaign (See ʿd al-Dīn, Taʾḥī al-Temūrūk, l. 150). It was held for a time by Egypt (we have inscriptions of Sultan Iḥṣān (854 = 1450) and various governors; cf. Khaṭṭ al-ʿAḥnīn, ed. Ravaisse, p. 51; Kalkaštāndi, Dāw al-Ṣābih, p. 298) and retaken in 922 (1516) by Selim I. It was long believed to occupy the site of Nicopolis, the town built by Pompey to commemorate his victory over Mithradates; but the latter has now been definitely set on the southeast of Erinova. The ҚaCopying comprises 9 ҚaCopyingys and 125 villages with a total population of 48,907, of whom 24,520 are Sunni and 12,261 Shaikh. It has market gardens (tomato, melon and cucumber), vineyards and wheatfields all of which are very fertile. In the mountains there are deposits of iron ore and leadstone, which appear to be no longer worked.

māni, p. 634; Ritter, Erdbevände, x. 795; G. Le Strange, Eastern Caliphate, p. 119; Max van Berchem, Corpus Inscriptionum Arabicarum, iii. 55 et seq.; Cullinet, Topographie d'Afrique, l. 685.

(CL. HART.)

DIYA or ʿAkl is the blood or compensation paid by one who has committed homicide or has wounded another. In the Dīkhānia the price paid by the homicide is said to have been ten she-camels. ʿAbd al-Muṭṭalib received his son ʿAbdallah by the sacrifice of ten she-camels, but ʿAmr b. Ḥazm says it was twenty. The equivalent of a life; and this is the amount laid down in a letter written by Muhammad to ʿAmr b. Ḥazm. The same letter fixed the compensation for a blow penetrating the brain or abdomen at one third of that amount, for the loss of an eye or hand or foot at half, for a tooth or a wound exposing the bone at five camels. ʿOmar put the money equivalent of a hundred camels at 10,000 dinars or 12,000 dirhems — the former payable by the "people of gold" (the people of Egypt and Syria) and the latter by the "people of silver" (the people of Ḥarāb), payment being spread over three or four years. Camels were not accepted as payment from these "people of the towns"; gold was not accepted from the "people of silver", nor silver from the "people of gold", and neither gold nor silver from the tent-dwellers, who paid in she-camels. These camels must be of a definite age and condition, twenty-five she-camels one year old, twenty-five two years old, twenty-five three years old and twenty-five four years old — this for intentional homicides; for unintentional homicide twenty she-camels one year old, twenty-two two years old, twenty she-camels two years old, twenty she-camels three years old, and twenty she-camels four years old.

A woman receives the same compensation as a man up to one third of the Dīya of 100 camels: if above one third, then she receives half of what a man does. This is in the system of Mālik: in that of Ǧīḥān she receives in certain cases half a man's Dīya, e. g. five camels for the loss of a finger instead of ten. (Cl. Lane, art. ʿAkl). A minor or an insane person is not personally liable to give compensation in ordinary circumstances. The Dīya for the latter is paid by the state. If a minor and a person of age together kill a Muslim intentionally, the latter is put to death, the former paying half the Dīya. Similarly if a slave and a freeman kill a slave intentionally, the former is put to death, the latter paying half the value of the murdered slave.

The Dīya for wounding a slave so as to expose the bone is a twentieth of his value, for a wound penetrating the brain or abdomen one third, and so on in proportion to the loss in his market value. The law of retaliation holds between slaves as between free persons. If one slave kill another, the owner of the latter may demand the life of the former, or the value of his own slave, or the ownership of the former may surrender his slave in compensation. If a Muslim slave wound a Jew or a Christian his master must pay compensation, even if he has to sell the slave, but may not hand over his Muslim slave to these.

If a Christian or a Jew be killed, his bloodwit is half that of a free Muslim. A Muslim may not be put to death for an unbeliever unless he has killed him treacherously. The bloodwit of a Magian is 800 dirhems. The compensation due to these three classes for minor injuries is in the same proportion.

In cases of homicide or wounding unintentionally the perpetrator alone is liable to fine, and if he cannot pay, the fine remains a debt against him, but his kin may pay it if they wish, for the sake of peace. In this respect, his nearest kin are his brothers on his father's side, then all the male descendants of his father's father, and so on. A murdār or homicide cannot inherit the property of a Dīya of 100 camels, nor can the former inherit his property, since that might have been his motive in killing him.

The Dīya is of two kinds: Dīya al-ʿAmr, compensation for an intentional injury, and Dīya al-Ḵaṭa, compensation for an unintentional. The Dīya in full is paid not only for a life, but also for the destruction of the lips, of the eye of a one-eyed person, of the tongue and of the two ears if the hearing be destroyed. If the sight of
one eye be destroyed the Diya is a hundred farsangs, and that for a deep wound in the face is more than for one in another part of the head.

Women and children are not liable to pay Diya. Employers are liable for injury to minor employees. In the case of a riot between two parties the injured or killed should receive 'amal from the other side. Owners are responsible for their animals, and those who cause them for accidents. There are many injuries for which no Diya is named and these cases must be referred to the Madhhab.

T. H. WELLS

DIYĀLĀ, one of the most important tributaries on the left bank of the Tigris. Its sources lie in the centre of the Persian province of Arslân (see above, p. 427). The main stream (called at first the Gabe or Gâwê-rud) rises to the west of Anahidсх dd in 34° 50' N. Lat. (the latitude of Hamahkân) and at first runs south of the line. A little above the 35° N. Lat. it is joined from the north by the Ab-i Shîrwan which takes its name from a place named Shîrwan, and rises in the hills southeast of Sihna (Senna); thenceforth the latter is the name almost exclusively used for the Diyâlā. After bending to the southwest the river again resumes its previous northwesterly course and is joined at its farthest north point by the river of Derîd which flows from the Zarrîsr (Zarîsr) Lake to the south. Its confluence with the latter has a decided effect on the future course of the Diyâlā, for its originally northwestern direction is changed to a southwestern and ultimately becomes almost direct south. The Diyâlā, the whole of the upper course of which has hitherto been confined between high mountain walls, now enters a long, high-lying valley, which ends in the narrow ravine of Dûrân; here it receives on the left the waters of an important tributary, the Zamakûn (Zamakân-rud). The latter again returns to the Diyâlā as it descends in the Karîn district. The upper valley of the Diyâlā may be said to end at the mouth of the Zamakûn; its middle course which likewise for the most part flows through a mountainous country ends where it breaks through the Djebel Hamîrîn.

The Diyâlā next rushes through the broad valley of Şamârîn, in which it is further increased by the Tand (or Ta'dîrûd) which arises above Sulaimânîyâ), which flows from the north through Shahrîz; it next flows through the western Zagros ranges. A few hours' journey above the mouth of the Zamakûn, it begins to form the present boundary between Turkey and Persia and continues to be the frontier till it reaches 34° 30' N. Lat. At Zangahîdsh (the Diyâlā is joined by the Jîlîn. The latter rises south of Karîn and takes its name from the once important Babylonian frontier town of Jîlîn (q.v.). Soon after passing Kîrîshîbâr (see Djebel Hamîrîn) the Diyâlā breaks through the Djebel Hamîrîn and enters the Babylonian plains through which it sinks with sluggish course almost imperceptibly to the Tigris, with which the last 80 miles of its course is almost parallel. It is only on the lower parts of its course beginning at Kîrîshîbâr that the Diyâlā is called by this name by the people on its banks; above Kîrîshîbâr it is known only as the Shîrwan-rud. Although in Babylonian times the amount of water taken from the Diyâlā for irrigation purposes, when it flows into the Tigris it is still more than half as large as the latter owing to the plentiful supplies it receives from the abundant mountain streams of its upper and middle courses. The place where it joins the Tigris, in 33° 15' N. Lat. 3 hours' journey below Bagdad (according to the Arab geographers: 3 parasangs = 12 miles), and about halfway between Bagdad and the ruins of Ctesiphon, is, according to Châfîn (La Provinces de Bagdad, Cairo, 1908, p. 88), called al-Makhîl 'the consummation'. A short distance above this point there is a bridge of boats across the Diyâlā.

After its entrance into the Babylonian plains the Diyâlā from the earliest times has been extensively used for irrigating the surrounding districts; canals and dams were built to regulate its flow and to prevent devastating inundations. This irrigation system was at its best in the Abbâsîd period. After the Mongol period, when the rivers gradually fell into disrepair, the inevitable result was that many fertile stretches of land became desert and swamps (bâry) sprang up in places. Even at the present day no decided improvement has yet been made.

The Diyâlâ is connected with its neighbouring Tigris tributary, the 'Adîf (by two or more) canals, which however are usually dry except in the season when the snow melts (cf. above, p. 125). The great Kâûlî-Nahrâwîn Canal, which dates from the Sâsâmîd period, connected the Diyâlâ with the Tigris by numerous offshoots on both sides. This great waterway, which is now in many places choked with mud or quite dried up, but whose course may still be clearly recognised (according to Herrfeld's theory, it is a former bed of the Tigris), leaves the Tigris 5 miles below the modern Sâsâmîd Dîr (south of Sîmârîn) and runs parallel to it as far as the district of Kûsîl al-'Amârî. The water in the canals finally returns to the Tigris at the point where it breaks up into the Shîr al-Hai and its eastern branch, the modern main arm. Besides Kâûlî and Nahrâwîn, the names originally used for the upper and lower courses of this canal, we find the Arab authors also applying to a particular part of it the two names of the Diyâlâ familiar to them (Diyâlā and Šamârîn). This is explained by the fact that the Kâûlî-Nahrâwîn below Bagdad (see above, p. 610) ran for 40 miles along the bed of that river. The canal part of the Diyâlâ may still be traced from Baghrîz (south of Bagdad) to the ruins of Šîfwa (N. N. E. of Bagdad); in recent times the river has however left its ancient bed and between Baghrîz and Šîfwa it flows in another channel from 1—2 miles west: cf. R. Kiepert's map (eastern sheet) in M. Frh. v. Oppenheim, op. cit.).

In the Abbâsîd period the Diyâlâ also watered the suburbs of Bagdad on the eastern Tigris by two canals, Nahîr Kâûlî and Nahîr Bîn, which in their turn by means of further smaller canals filled the streets of the Caliph's capital with a network of small waterways.
The name al-Khalīj has survived to the present day as that of one of the Dīwālī canals; but the medieval and the modern Khalīj are two quite different watercourses. The former leaves the Dīwālī at Bādhāra [q. v., p. 528] and after a comparatively short course falls into the Tigris a little to the west of Barādan [q. v., p. 652] and the latter is a much longer course. It leaves the Dīwālī some distance east of Dālī-Abū; and runs in a south-westerly direction to the Tigris which it reaches at al-Jīdāda (in 33° 41' N. Lat.). This modern Khalīj is by far the most important canal flowing from the Dīwālī in Babylon. The district watered by it and its numerous arms is at the present day one of the most intensively cultivated areas of the Wilayah of Baghdad. In dry years the water left in the Khalīj is insufficient to reach the Tigris but disappears in a swampy delta near Jīdāda.

The whole valley of the Dīwālī still contains many traces of its antiquity as a settled area; its banks, in particular, as well as those of its tributaries (especially the Shīrwan and Hulwān-rūd) are thickly covered with ruins of the Shāhīdī period, most of which still await a more careful scientific treatment. The ancient high road from Baghdad to the Iranian highlands (i.e., to Kermānshāh), which runs up the Dīwālī valley as far as the mouth of the Hulwān-rūd, from which it winds up the latter river as far as the famous "Zagīt Forte". The climate on the lower course of the Dīwālī is unhealthy; large quantities of rice are now grown there.

Of the two other names, Shīrwan and Guberti, of the Dīwālī, the former is found in a passage given by Yūkī (iv. 847) from Ishaq al-As-HTāhī's historical work. It names the valley which comes from the province of Almahbūlūd. It also bears the Persian name Dīrwan and the Syriac Tāmāraz. Dīrwan undoubtedly corresponds to the modern Shīrwan.

The etymology of Dīwālī (Yūkīt vocalises Dayālī) is quite unknown. The name dates from remote antiquity, as the reproductions of it by classical authors show (Ishaq, Abūl-Nasr al-Dīwālī is not quite certain as the correct reading may be Dīwān = Dār). Theазвание of the name usually given it by the Arabs is probably still older; its prototype is in the Syriac form Tamarz, which may be recognised in the Tarnotus of Pliny, the Θεράς of Theophrastos (whence the corrupt forms Corma in Tāritis and Αγελα in Zosimus?), the ἄγραμα of Zosimus (iii. 29) and the Turnast of the cuneiform inscriptions. Turnast appears as early as the inscriptions of Assurnasirpal II (III.) in the first half of the 13th century B.C. (but cf. also the article Ταμαρα in P. 37).

DIYĀR (Lat. "Dwellings", plural of Dīr "house" [q. v., p. 915], particularly common in the following expressions)

DIYĀR BAKR (Turkish pronunciation: Dīya-Bekir), formerly the name of a province, at the present day the name of the town of Amid, the ancient Amida, called Karabük by the Turks on account of the black colour of its walls and buildings of basil. It is the capital of the province of the same name and lies on the left bank of the Tigris, at a height of 2070 feet above sea-level; below it the river becomes navigable for the rafts made of inflated skins (dībāk) which descend as far as Baghdad. The population is 35,000 of whom 20,142 are Muslims (4130 Kurds) and 13,560 Christians. Its walls, forming an irregular circle, are flanked by 72 round, square or octagonal towers, — including the citadel (Al-Kūf), — and were built by Manucsheta and repaired by Justinian. There are four gates, in the west the Gate of Rûm or Aleppo, in the south the Gate of Mardin, in the north Dagh-Kapū (Mountain Gate) or Gate of Kharput and the New Gate in the east; there are 25 large mosques, 12 churches and 130 public fountains. Its manufactures are morocco leather, silk and cotton stuffs, articles of copper, glass and earthenware and a very famous vinegar called shahrara shahrira. 4½ miles down the river is a bridge of eleven arches.

The town was occupied without opposition by Yūkīh b. Ghassan al-Fūhrī in 19 (640) at the time of the conquest of Mesopotamia (al-Halabāthā, p. 176) in the caliphate of " Omar; it was taken by the Ottomans in 921 (1515) after the battle of Ćašīk; Amid had been retaken by the Greeks in 347 (958). After owning the sway of the Sāltūg Tutash, the town belonged to a dynasty descended from the Turkomian Inal, whose ministers were the descendants of Abū 'Ali b. Nāsir. It was occupied by Salūf, al-Dīn (Muḥammad, 575/1180; 578/1182), who ceded it to his ally the Urukīd Nār al-Dīn Muḥammad, whose successors strengthened the fortifications. Tūnūr won it by a stratagem; it next remained in the power of Karā Yūsuf and the Aq-Kūshīs till the conquest of the country by the Şafāvī Şāh Iṣṭālī in 908 (1502), who appointed Ustādūd-Obgīlī governor. The rising of the Kurds and other native tribes against the Persians led the inhabitants of Dīwālī Bakr to declare for Şafāvī Şāh Selim I.; after being besieged between a year by Karā Khan, brother of Ustādūd-Obgīlī, they were relieved by Yūkīh Muhammad who took possession of the town in name of the Šafāvī Şāh.
particular veneration; the second called Hamrawat runs from the Karan-Dagh in the south to the town.

The banks of the Tigris are covered with gardens, which grow melons; the most beautiful is the Karan-Dagh "garden of Basir". Two tombs are associated with a descendant of Khalid b. al-Walid, son of Khalid b. al-Walid, in the mosque of Khalid inside the citadel and that of the Persian historian Lari (Munak Aztis Mouslih al-Din), who was born at Iras in Persia, retired to a hermit monastery and is buried near Shihak Rumi (Erilaya, Sefidkoumne, iv. 53, 55).

(Cf. HUART.)

Al-Diyarbakri.HUDAI AU.SURAH B. MUSRAMI B. AL-HASAN, born at Diyar Bakri, afterwards took up his abode in Mecca, where he became Kafi and died some time after 982 (1574).

He was a Hanbalite and Malikite. He is followed by Wustenfeld, says that Diyarbakri, who completed his Tariik al-Khifis on the 8th Shawal 940 = 23rd February 1534, died in 956 = 1550. But on the various editions of this work that have survived to mention the accession of Sultan Murad III, which did not take place till 982 (1574), the author cannot have died before this year, unless the Appendix is the work of an editor.

He wrote the following works:

1. Tariik al-Khifis lfi usulul anfasif nasir (var. Bruckemann: nasif nasir); Hadiji-Khalifa and Harz: alaouf al-nasir); biographies of the Prophet in which, although very prolific, his endeavours to weigh the various accounts, and to distinguish the good from the bad; the whole is followed by a short history of the Caliphs to the accession of Sultan Murad III. The work comprises 1. an introduction on the creation of the light (nur) of the Prophet; 2. three ruba or foundations: a. events which took place between the birth and the mission of the Prophet; b. from the mission to the Hijra; c. from the Hijra to the death of the Prophet; 3. Conclusions: the four Caliphs, the Umayyads, the Abbassides, and other dynasties to the accession of Sultan Murad III. It has been published in Cairo in 1285 and 1302 A.H.

Under the title Geschichte der Tödtung die Chafif (Omar, Otto von Flaten published (Berlin, 1837) an extract from the Tariik al-Khifis with a translation and a brief introduction in German, relating to the assassination of the second orthodox Caliph Omar b. al-Khattab.

In his Ling. Arab. Grammatica, (2nd ed., p. 45) Petermann gives a short extract relating to the Caliph Omar who had his son 'Abd al-Rahman whipped to death for having drank wine in Egypt.

II. A minute description of the Karb and the Holy Mosque, which survives in Ms. q. 6669 and in the Khotiel Library, iii. 110.

Bibliography: Hadiji Khalfis, iii. 177; F. Wustenfeld, Die Geschichtschreiber der Araber und ihre Werke (Göttingen, 1882), v. 390; Brockelmann, Geschichte der Arabischen Litteratur (Berlin, 1902), ii. 381; C. Hart, Arabic Literature (London, 1903), p. 376.

DIYAR MUDAR, the "dwellings of the tribe of Mudar" in al-Di'at is Mesopotamia, comprised the valley of the Euphrates from Sam阿拉 to "Amm with al-Raqqan as their capital; and the lands on the Balikh. See Le Strange, The Lands of the Eastern Caliphs, p. 106 et seq., 101-108.

For further information see the article MUDAR.

DIYAR RABTA, the "dwellings of the Rabha" in Mesopotamia stretched along the Tigris from Tell Fâhân to Takrit (capital al-Mawwul) and comprised the valleys of Khasub-Hirmâs-Dhahrâz on the right, the lower course of the little Khîbîr, the upper and lower Zab on the left side of the main river. See Le Strange, The Lands of the Eastern Caliphs, p. 107 et seq. For further particulars see the article Rabta.

DIZ (c. older form diaq, Avestan daiza), a fortress or citadel. Arab writers have handed down to us the name Khânattis "the old citadel" borne by the Šâmilian fortresses inside the towns of Khorkshā and Mâ warâ al-Nahr (Samarqand, Balkh, Balkh, Marw, Nishâpûr, Herât, etc.). — Dîzr, the governor of a fortress. Aḥmad Wâfiyî Bahram claims to have descended from a family of Bulgarian origin called Dîzr.

(Cf. HUART.)

DIZFUL, the capital of Khîstân, in 32° 25' N. Lat. and 48° 35' E. Long (Greenlaw), on the bank of the Dîzfül-Rûd or Abî Dîz, which takes its name from this river. This river which rises in the Burtjâr district flows into the Karân a little below Band-i Kîr (Askar Mahrim; see above, p. 488). According to Herodotus, Dîzfül (650 feet above sea-level) is built on conglomerate cliffs 60 feet high, the outermost of the mountains into the Susian plains; the ruins of Susa begin about 15 miles to the southwest. Dîzfül (Pers. Dûzful) = Castle Bridge; takes its name from a fortress which was erected to protect the imposing bridge over the river there. The Arabs say this bridge was built by the Šâmilian king Châxîr II; it was often repaired, at least in its arches, in course of time; Mustawî (740 = 1340) speaks of 42 arches, the Persian writer All of Yarâ (898 = 1425) of 28 large and 27 small, 55 in all; at the present day (according to Loebus) there are 21 arches, which have been so often renovated that they practically show quite modern brickwork; only the piers of the bridge are undoubtedly ancient and may actually date from Šâmilian times. The town, which arose round the citadel at the bridge, is given various names by the older Arab geographers: Karâr al-Rûdâh, Kânjartâ al-Rûd (the Roman Bridge), Kânjartâ al-Rûd (the River Bridge), Kânjartâ al-Zâb (Zâb repeatedly occurs as a river-name; Semitic root Dêt to flow), and simply al-Kanjara; the name Kânjartâ Anâmmâsh (Anâmmâsh is the real ancient place-name) is also found; the Persian name Dûzfull is, as far as I am aware, first found in Yûkût.
The modern Dairfil contains 34 mosques and about the same number of tombs of saints; the walls are in ruins. Sandstone appears to have been the chief material used for the dwelling-houses; the underground apartments (rooms in the cellars, sardībī) usual in Persian towns are also found here. The above mentioned conglomerate cliff and the high mound of mounds, on which the houses are built, as Herzfeld tells us, lacquered with the red passages. The dwelling-houses and sardībī are quite in the style of Mosul buildings, according to this authority. The sanitary condition of the town is very bad; such a state of filth as is here is to be found in very few Oriental towns of any size.

Dairfil is the busiest place in the province of Khūzistān. Two industries peculiar to it are the preparation of indigo and the dyeing of cloths with it as well as the preparation of felts. Indigo was first introduced in the early decades of the 16th century to this district; it soon began to flourish around the town and is now one of its main articles of commerce. The felts are made into Carrie, horse-covers, outer garments and caps. The Lora supply most of the raw wool. From Luristan also come (according to Herzfeld) restra, gams, trugant, gall-apples, hides and feathers. Dairfil is also celebrated for its reed-pens, which are considered the best in the east and are exported great distances to Constantinople and India. The inexhaustible reed-beds of the lower Euphrates and Tigris, the so-called Bāltja (q.v., p. 675), supply the material for this industry. It is clear then from what has been said that in addition to considerable industrial activity, Dairfil is the centre of a busy trade; it is carried on at present exclusively by the great avenues of traffic to Shuster (the second largest town in Khūzistān), as the caravan routes running to the N. and N. E. (Khurramāblīch, Burājījīl) are now practically closed on account of their great insecurity. The chief imports are cotton stuffs, cloths, sugar and tea.

About the middle of last century, Loftus estimated the number of inhabitants at 15,000—18,000 Muslims and about 30 Mandean families; on the latter cf. Petermann, Reisen im Orienti (1861), ii. 455. Houtum-Schindler estimated the number in 1879 at 25,000, well in 1885 at 20,000; Herzfeld (1907) c. 15,000, including Persians, Kurds, Lurs and Arabs; de Morgan’s estimate (1860 inhabitants) seems obviously to be much too small. The inhabitants are hospitable and friendly; two thirds of them are Sāyids, i.e. alleged descendants of the Prophet, with whom Persia swarms everywhere. There are no Europeans or Christians. A Persian under-governor (Nāvīr al-Ḥukūma) lives in Dairfil. A little above the town, likewise on the Ah-i Dīz, is the village of Rūlīndā with a domed mosque, the external appearance of which reminds strongly of the tomb of Daniel at Sāmān.

Dījābāl, Dījābāl (‘a.) *Mountain*, plural Dījābālī. (q.v.)

Dījābāl, i. A town on the Syrian coast south of Lābān, the ancient Gabala. The town, which was fortified, was abandoned by its inhabitants when the Muslims conquered the country in the 4th year of the year 17; but Mu‘āwiyah had it peopled again and built a new citadel outside the old one. In 245 = 859, it suffered severely from an earthquake. When the Byzantines were gaining ground again in the 9th century, they reoccupied Dījābāl in 337 = 968 along with other neighbouring towns, on the death of the Hāmidīn Ṣafī al-Dawla; on this occasion 35,000 men, women, and children are said to have been carried into captivity. In 475 = 1080, Abū-Allāh b. Muḥarrir, the Kādūr of Dījābāl, succeeded in driving out the Byzantines, and the town remained in the hands of the Kādūrs till the Crusaders took it in 1108. Dījābāl describes it during this period of Christian rule as a small, pretty and prosperous town. In 534 = 1189, it surrendered to Sālāḥ al-Dīn, whose son al-Afdal afterwards gave it to his brother al-Zahir. Khāliṣ describes it as a pretty town as late as the 14th century. But what later travellers most appreciated was the town of Dījābāl in the famous saint ‘Īsām b. Adham; the mosque dedicated to him, originally a church, still exists. For the rest, Dījābāl is now an unimportant village, in which the ruins of ancient buildings may still be found.

Nachrichten in Khūzistān (Qādisī), p. 58; Baldadhīr (ed. de Goeje), 531; Ibn al-‘Abbās, Kitāb al-Tartūb (ed. von Teubner), ii. 385; x. 211–213, 284, 317; xii. 3, 71; Bahā’ al-Dīn, Fīta Salafīnīa (ed. Schellem), v. 81, 2. A long, red-coloured mountain ridge in Central Arabia, with a large ravine (dīb), through which alone access to the mountains is possible. On Doughty’s map it is given as Gabbili. According to the Arab geographers, it had al-Sharāf on the east, the waters of which belonged to the Bani Numair, and on the west was al-Sharīf, the waters of which belonged to the Banī Kādī. The ravine itself was inhabited by a branch of the Banū Ḥudayfī, the ‘Uqaylim. It was five days’ journey from Ḥudayfī in Yanūm. A battle took place before Islam in this ravine, which the Arab number with those of Khāliṣ and Ḥud Kūth among the greatest of battles. An unusually large number of Arab tribes took part in it. On one
side were the Banū ʿAmir [q. v.], with whom the Ḳurašiyyah, with whom they had allied themselves; on the other side were practically all the Tamīm under the leadership of Lakhīṭ b. Zayrā, the Ḳuṭayba and Aasā, reinforcements from Hirah led by the step-brother of the reigning king and a number of Kindis under the "two Dījāwās"; two members of the Kindi ruling family which these rulers in turn show of their great superiority in numbers the Tamīm and their allies who, it appears from a remark of the poet Lahḥūd, relied too much on one another, were utterly defeated. The prince Lakhīṭ fell, while Ḥāmiddīl, one of his brothers, was taken prisoner and afterwards consumed for a huge sum. This defeat shattered the last remnants of the power of the Kindis in Central Arabia; one of their leaders also fell in the battle. The statements regarding the date of this battle are, as usual, contradictory and uncertain. According to some the battle took place 17 or 18 years before the birth of the Prophet, while others say it was fought in the year of his birth. Cassius de Perceval places it a few years later and this must be the correct date if the king of Hirah who sent reinforcements, was, as is said, Nuḥān b. Mundhir; for his reign did not begin till about 580.

Djasfar was also called Djasfar, a ruined fortress on the left bank of the central course of the Euphrates, almost opposite Ǧisla. The place, called Dausara in pre- and early Islamic times, was called Ǧisla (see Paulus, Win- drow, iv. 3339.4), Dausara, which is mentioned by the old Arab geographers as a station on the road from Ṭūkkah to Ǧisla (cf. Ibn Khurāddīlūbī, p. 74; Ṣabīḥ, p. 220). In the Mamlūk period a post-road from Ǧisla went to Ǧisla, which was abandoned after Ǧisla had been conquered by the Seljūqs. (Ib. salme.) Albladī, Zaun. Benjamin of Trebizond who passed Djasfar about this time makes the remarkable statement that there were 2000 Jews in it. In Ǧisla's time it belonged to the Ǧisla, b. al-ʿAbbās, Salamūn, the grand-father of the founder of the Ottoman dynasty, was drowned here in 1237 (v. Hammer, Geschichte der Salis, 1. 41). In the Mamlūk period the administrative position of Ǧisla was raised; it was for a time attached to Damascus, but was afterwards transferred to Ǧisla. Albladī says that in his time the castle was in ruins; it was however rebuilt at the end of the reign of Muḥammad al-Nāṣir b. Kałużī. At the present day, a Beduin tribe, the Wāšs, encamp in summer around the ruined but still imposing fortress.

Djahrima is the name given in the history of the sect to the theocracy which to which the Kharijites deny the freedom of the will, and on this point make no distinction between man and inanimate nature, in as much as his actions are subordinate to the compulsion (ẓafar) of God. The most prominent champion of this view is Ǧasam b. Ṣafwān (q. v.); the Ǧasamīyyah, Ǧaziya, Ǧullabiyah and Baktriyah are also considered Djahrima. Muʿāẓza writers however also charge the orthodox Usḥāṣīyūt with being Djahriyah, which, as Ǧashrafīyūt rightly points out, is not strictly correct, as although they deny the freedom of the will, they allow that man has some influence on his action (kastā, appropriation).

Djabart, originally the name of the Muʿāṣrīyūt people of Ǧisla (in Shoa), is now applied to the whole population of Muʿāṣrīyūt. An individual is called Djabart. This name is not found in Suyūṭī's Ṭawhīd al-ʿĀmilī (ed. Veth, Leyden 1840). According to Abyssinian tradition the name is derived from the Ethiopic ṣhabart (plural ṣḥāb) "servants of God." The name given in Amhāric by the Christians of Abyssinia to a Muḥammadan is Ṣamān (plur. Ṣamān). The Djabartis are not distinguished by dress or language from other Abyssinians. They speak the language of the country, but in their schools Arabic is also studied, as far as is necessary for the interpretation of the Korān and religious literature. The Djabartis form a division by themselves at the Arba Mesqai in Cairo. A considerable number of Arab scholars of earlier days, who were descended from the Djabartis and bear this name, are given by Djabart in his Tawhīd (Ṭūbāq, 1297), i. 386 et seq.

DJIABARTI, 'Abdu al-Rahmân b. Isâ'âm al-Hâfi, was born at Cairo 1168 A.H. (= 1754 A.D.), of an Abyssinian family from Djibarat, which had been settled in Cairo for seven generations. It was a family of scholars and had furnished a series of heads to the Rîwâkh of Djibarat in the Asfar, the greatest of whom appears to have been the father. He was the distinguished of being the last to teach astronomy in the Asfar. For the family history, see Djibarat himself in his 'Âḏâb (Anno. 1885; 1, pp. 356-460 in ed. of 1297) and the abstract in Khiyâf gudâdiyâ, vii., pp. 7-15; for the Rîwâkh of Djibarat, Khiyâf, ed., p. 23. 'Abd al-Rahmân carried on the family tradition. He was a distinguished member of the 'Ubâd of Cairo, a contemporary of the last Manbîl Beys, a watchful eyewitness of the French occupation and a keen, if illiterate, critic of the first seven years of the French conquest. Napoleon appointed him a member of the Grand Divan of notables by which he endeavoured to govern Egypt. In his last years he was fâser (nuwasâhil), of the hours of prayer and of the beginning and end of Ramaḏân in the household of Muhammad 'Ali. On the night of Ramaḏân 27th, 1237 A.H. (= June 22nd, 1822 A.D.) he was murdered on the Shari'a Road when returning to Cairo. The responsibility for this has always been charged to Muhammad 'Ali, who had gained some knowledge of his attitude in his 'Abd al-Rahmân 'âjâb aš-šurûq al-s̄âyi'a al-mahālākâh, the great history of Egypt in the 12th and 13th Moslem centuries which he was writing. It is certain that the printing of it was long prohibited and that it reached publication in 1278 (1857-1858). An earlier edition was confiscated and destroyed. Even the French translation by Egyptian scholars has been left unfinished (Cairo, 1888-1894); the fourth volume, covering A.H. 1221 to 1232, is the only one dealing with the time of 'Abd al-Rahmân al-Mâmi in Alexandria. His book is partly a chronicle and partly a sociology. As a detailed picture of oriental life it is of high sociological value and Lane made use of it for that purpose in his "Arabian Nights". After some introductory matter its annals begin with the year 1099 of the Hijra. Up to 1170 the author had to trust the memories of old men, public records and inscriptions on tombs. From 1170 on he professed — a precocious infant! — to have his own recollections. With 1190 he had begun to keep full account, and his book has the value of a contemporary diary. Of his independence of judgment there can be no doubt. He came of a scientific family and knew himself the value of accuracy and of the immediate record. He had thrown in his lot with the French, and later with Muhammad 'Ali, but in both cases with an open, critical mind. Another detailed diary of the French occupation (Muḥāzhir al-tâdhbîh) is still unpublished in Arabic, but has appeared in Turkish, and in an imperfect (so von Kremers, Egyptien, II., p. 346) French version by Casteln. We owe to him also the Arabic translation of Munâlîd's Sīh al-Dinar (Brochelmann, ii., p. 294), which may have suggested the obiter element in his own 'Abûbîb, and an abstract of Dâ'îd al-Ashârî's Tâdrib (Brochelmann, ii., p. 364). For exact references on all these, see Brochelmann, ii., p. 480. Lane tells us in his "Arabian Nights" (chap. I, note 10) that al-Djabarti constructed for his own entertainment a recension of the "Arabian Nights", now apparently lost. His father, also, had been interested in popular tales and songs (Khiyâf, vi., p. 11, 3 et seq.).

DJIBARUT, a technical term used by the neoplatonic philosophers and more particularly by those mystics who were devoted to the illuminative philosophy (al-tâdirîh). The form of the word is not Arabic; it is analogous to that of the word mulâkkah which is similarly employed and is Pehlev. "Djabarat" has now come to mean either the place or the power. The world of djabarut (v.lam.lam.lambarat) is that of divine omnipotence; it is like the world of mulâkkah (v.lam.lam.malakbah) or divine authority, a region above that of earthly things and also above that of real individual things, which corresponds to some extent with the Platonic world of Ideas. The meaning of the word however varies according to the authors who employ it. The world of "Djabarat" (v.lam.lam.djabarat) has been defined by several authors as the "middle world", i.e. the world intermediate between that of Divine Being (al-âkhir) which is above and that of Authority (al-mulâkkah) which is below, of the glorious entitled 'Abûbîb al- Yazı'a al-mulâkkâ & al-Fârâhî al-Mahâfya, printed at the end of Gheratian's Tarîfah.

In Sulawardi Maktûrî, a neo-platonic philosopher put to death for his heterodox opinions in 587 A.H., the World of Power (djabarut) is that which the sages see in their ecstasy. "It is possible", he says, "that they shall see the Light existing throughout the world of Power, as well as the beings of the world of Authority whom Hermes and Plato mention in their dialogues.

In the Turkish dictionary entitled Muftifat Nâma, there is a diagram illustrating the totality of the worlds. In it the world of "djabarut" lies between the divine throne (hariz) which is below and the Tabernacle (tahrîr) which is above it. Below the throne lies the world of authority (mulâkkah); these two worlds have below them the mortal worlds including Paradise.

According to the opinion of the Sufi 'Abd al-Karim al-Râshîd al-Kâshîî (died 730 = 1329-1330), to whom we owe an interesting letter on Fate, the world of djabarut is the place of passât, i.e. of divine determination. It is the world of pure spirit which is above the world of soul. The author here gives the word "djabarut" the meaning of "compulsion". The general forms of things existing in that world in a certain measure impose upon the individual realisations in the lower world a part of their perfections. This idea of a constraining force is also found in the illuminative philosophy, where it is stated that the "victorious light" conquers darkness, and Gebriel's philosophy is similar (see S. Karpge, Études sur les Orisins de la Nature du Zohar, Paris 1911, p. 177-179).

(R. Camilla de Vaux.)

Al-DJABBAR, the Giana was the name given by the Arab astronomers to the constellation of Orion, who was depicted in Greek mythology as a mighty hunter and giant. The older name of this constellation among the Arabs, before they became acquainted with Greek astronomy, was al-Dzamn, which originally may have been given only to the three bright stars in the girdle (from gme = kernel, nut, centre). The majority of Arab astronomers also call the two brightest stars of Orion, Moonh or Yud ah-Dzamn (= Beisegius, q. v., p. 709) and Kifl al-Dzamn (= Zelph), although they call the whole constellation al-Djabbar.

**Djabbul,** a town in Central Babylonia, on the east bank of the Tigre, a few hours journey above Kût al-Amarah, and 5 parasangs (= c. 20 miles) southeast of Nusaiyia (the modern Tell Nusaiyia). It is described as a flourishing place by the older Arab geographers; but, by Yâkuti’s time (the beginning of the 8th or 9th century), it had considerably declined. In course of time — we have no details of its decay — it fell utterly into ruins. This town must date from a very remote period; for the name of the Gomballa, one of the most important Aramaic nomad tribes, frequently mentioned in the first thousand years B.C., must have survived in DJabbul; they have left traces of their influence in modern topography in several other places. The ruins of DJabbul which were known by the name Djambul, DJabal or DJebel as late as the first half of the 9th century according to the traveller, Rich. Chesney and Jones, have now utterly disappeared owing to earthquakes. On the site where Chesney in 1853 had seen the ruins of a large town, no trace of them was to be seen in 1848 when Jones passed it; the Tigris had in the interval entirely engulfed the remains of the town.

(M. Streck.)

**Al-Djabul,** the ancient GAULUS, a place E., of Halab, celebrated for its Mallaqa or Sakhka watered by the Nahar al-Djabul [see above, p. 806]. The salt-mines there lent [DJabul a certain economic importance in the middle ages and they still do, to which it probably also owed its position as an administrative centre in the political division of the Mamluk kingdom.

**Djaber & Aflah Abi Muhammad,** the Astronomer Geber, of the middle ages; he was often confused with the alchemist Geber, whose full name was Abû ‘Abd Allah al-Djaber b. Haiyan al-Sitt (see the next article). He belonged to Sidon; the period in which he flourished cannot be determined, but from the fact that his son was personally acquainted with Maimonides (d. 1204), it may be concluded that he died towards the middle of the 12th century. He wrote an astronomical work which still survives under two different titles; in the Escurial Ms. it is called al-Djab al-Harir (= The Book of Astronomy), in the Berlin copy it is entitled al-Djab al-Majisiti (correction of the Almagest). In it he sharply criticises certain views held by Ptolemy; particularly rightly when he asserts that the lower planets, Mercury and Venus, have no visible parallaxes, although he himself gives the sum of the parallaxes of Mars = 5', and that these planets are nearer the earth than the sun. The book is otherwise noteworthy for prefacing the astronomical part with a special chapter on trigonometry (cf. the article ABU L-WAKH, p. 112). In his spherical trigonometry, he takes the formula as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right angled triangle (cos A = cos a, sin b). In plane trigonometry he proceeds after the manner of Ptolemy, i.e. he attacks his problems with the aid of the whole chord, instead of the trigonometrical functions, sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nürnberg in 1534 under the title: Geber filii Alph. hispaniensis de astronomia libri ix. in quibus Ptolomaei, aliqui doctissimi, commentarii. — Whether a Hebrew work described by M. Steinschneider, Sefer ha-tohar, which treats of secret sciences, was an abridgment of a work by DJabber b. Aflah, is doubtful; besides the author is called not Ibn DJabur but Abû Aflah al-Sarraksh.

**Djabir b. Haiyan,** whose full name was Abû ‘Abd al-Djabir al-Azdi, a famous Arab alchemist, known in the Christian middle ages as Geber, his name is sometimes given as Tusi and sometimes as Tushit. He is said to have been Šafit when his name al-Harir, which is found once, to have early become a convert to Islam and to have shown great enthusiasm for this new religion; the name al-Sitt dates from a later period.

His teachers were Ḥālid b. Yačid b. Mu‘āyiya (d. 85 = 704), on which account he is also called
al-Umawī the "Umayyad", and Dījāt al-Sāliḥīn [q.v.]. This is the story given by some authorities; in reality however he must have lived somewhat later than Khālid b. Yazid so that he more probably flourished about 160 = 776. The Fīrārīt and Ḥududī al-Khāliṣa connect him with the Barma-kids. Of his life we really know nothing; according to the most reliable tradition he spent most of it in Khīf. A view, given in the Fīrārīt (p. 354), that he never lived at all but is only a mythical personage, may be dismissed at once. A large number of works have been attributed to Geber. Those that exist in Latin if we except the Book of the Seventy by Ioh (John) do not correspond to the Arab works and in general they represent a more advanced stage of alchemic science. Our libraries contain 22 Arabic treatises bearing Dījābiya's name; five of them have been published; viz., The Book of the Kingdom (Kulūk al-Mahla'ī), the Little Book of Balances (Kulūk al-Mawāqif al-Sū'īn), the Book of Mercy (Kulūk al-Qawn), revised by a pupil, the Book of Concentration (K. al-Tadīrī) and the Book of Eastern Mercury (K. al-Zubā al-Tāribī). The doctrine contained in these works— and in the Book of Mercy especially, the authenticity of which is most certain— is most anthropomorphic, or, if the term be preferred, very animistic. Metal is considered a living being; it develops in the bosom of the earth for a long period— thousands of years— passing from the state of an imperfect metal like lead to that of a perfect like gold. The aim of alchemy is to accelerate this transformation. The ideas of generation, marriage, impregnation and education are applied to metal; so also are the ideas of life and death; coarse and earthly substances are called "dead" in contrast to light and subtle substances which are called "living". Every chemical body has a soul and a body, a spiritual part and a material part. The work of the alchemist is to separate and remove the one from the other to give each body the spirit which suits it.

Western tradition has attributed important discoveries in chemistry to Geber, namely of aqua regis, sulphuric acid, nitric acid and nitrate of silver; but none of these discoveries is mentioned in the Arabic works which bear his name; they do not appear till the Latin works of the end of the 13th century. The estimation in which the Christian middle ages held Oriental alchemy is therefore not based on definite facts which we can check. Bibliography: Berthelot at O. Houzeau, L'Alchimie arab. (1893); Paul Luzio, Sciences et lettres au moyen âge (Paris, 1877), p. 196 et seq.; Brockenhoff, Gesch. der arab. Litt., t. 340 et seq.; C. Carra de Vaux, article Alchemy in the Encyclopaedia of Religion and Ethics (Edinburgh, 1908).

Dījābiya, the principal residence of the Dījābiya Amirs of Ḍawān, whence called Dījābiya the Kings', in Ḥawāzin, a day's journey S. E. of Damascus. It covered several small hills, whence perhaps is derived the poetical form Ḍawānīt of the plural, with an allusion to the etymological meaning of "reservoir", as a metaphor for generosity, (cf. Miskin al-Dhīrīm, Aḏḥān, xvii., 72, 3.). It was the perfect type of the ancient Hirān, the Ḥira of the Bedouins, of the Ḍawānīt, a large encampment, a collection of dwellings, half nomad and half sedentary, a combined mass of tents and buildings, among the latter a Christian monastery. It had a plentiful water-supply and abundance of excellent pastures around it, which are still visited by the Bedouins of the Syrian desert. The gate in Damascus leading towards it was called Būt al-Dījābīya; it had three entrances like the present gate of Ǧabār Sharqu. Carra took Dījābīya to be one of the ancient names of Damascus. The Arab conquest further increased its importance. A large camp was early established there, the principal in all Syria and for long the headquarters of the Ġand of Damascus. As a military centre, during the Sufyānīd period it eclipsed the Syrian metropolis itself. The name of Dījābiya has been given to the battle of Yarmūk; there was a partial engagement with the Byzantines here and here also the spoils were collected after the battle. This explains why the Caliph Ǧumar came here in the year 17 to settle the position of the new conquerors. It was the capital of the governor of the Ġúlūs of the Ǧurāj with the exception of ʿAlī. It was a triumphal march, the first great demonstration of Arab imperialism. A parliament was held here, at which all the generals and principal officers of the Syrian troops were present. It has become celebrated as the "Day of Dījābiya". The sermon delivered by Ǧumar is likewise called Ǧumūr Ḍawānīt. The ʿAbū Ḍawānīt constantly refer to it as an important document; it was a clause to frame to have been present at it. The importance of this meeting really surpassed that which tradition has given it. In all probability it was on this occasion that the Šama was instituted or the system of regular, allowances. From these donations it was at first proposed to exclude the Arab tribes, natives of Syria, who had assisted the invaders of the Ǧújūs, but their resistance caused this plan to fall through. As its climate was very healthy, Dījābiya became the sanatorium for the troops who were being decorated by the plagues of "Amsāw in Palestine on this side of Jordan. Henceforward the "ṣaf" or large part of the inhabitants of Damascus were distributed here; the place early had a general mosque and a minaret, privileges which put it on the same footing as the Ǧurf and chief towns of the Ġand. It is easy to understand then why all the Umayyad Caliphs after Muʿāwiyā visited Dījābiya. On returning from his winter residence at Šinnāba, ʿAbd al-Ǧalīl used to spend a month there before returning to Damascus (see the article Dījābīyya).

When Ibn Ǧazāwir was proclaimed Caliph and had driven the Umayyads from the Ḥawāzin, the Syrians assembled at Dījābiya to choose a successor to Muʿāwiyā II. Ibn Ḥabīb was the first to arrive at the rendezvous with his Kalbites; Dījābīya the Kais [q.v. p. 892], governor of Damascus, with the Kalbites was an absentee. In addition to the young sons of Yazīd I, the other Umayyads were there and all the Arab chiefs of Syria. Ibn Ḥabīb presided at the assembly (end of June to end of August 684). The various candidates were discussed; Yazīd's children were ruled out of the question on account of their youth. Finally on the proposal of Kāshī ibn Zāhīr, chief of the Banī Ḥāshim, it was agreed to give the Caliphate to Muʿāwiyā ibn al-Hakam. Khālid b. Yazīd I and next the Umayyad Anwār al-Āṣīlāk were to succeed him. The unity of the Umayyad party was thus once more established and Dījābiya became the
Djäbiya — al-Djäbr.

The second operation is an obvious one: to understand the first it must be remembered that the Arabs, unlike the Hindus, do not allow negative terms in an equation; the conception of the negative was still strange to the Arabs; therefore when an equation contained negative terms it was not in order, it was imperfect, and had therefore first to be arranged, then restored (džiš-šara). But an equation with fractional coefficients in the highest term was also not in order, not properly arranged for solution, the fraction had therefore to be removed; the equation

$$5x + 2 = 9$$

had therefore to be multiplied by 3 so that the first term may be only $x$ and it therefore becomes:

$$15x + 6 = 27.$$ 

Abû Bakr al-Karkhî (c. 1000) rightly considered this operation also to be $al-\hat{d}ja\hat{b}$ (ed. the Kâfî # 8 301#6#8) al-Bâkî al-Muhammadî b. al-Husnî al-Karkhî, transl. by A. Hocheheim, Halle a.S., 1878—1880, Part iii, p. 143). In later works, e.g. the Arithmetica of Abîb Zakariyyâ al-Hâshî (before 1000) (cf. Suter in Bibli. Math., vol. 2 (1st Ser.), 1901, p. 12—40), and in those of Tâjî al-Dîn al-Hâfiz (before 1410) and of Ibn al-Hâkim (d. 1412), in addition to the term $al-\hat{d}ja\hat{b}$ used in the above sense we contained negative terms, in the sense that for example the equation

$$3x + 2 = 5$$

by application of $al-\hat{d}ja\hat{b}$, i.e. by division by 3 becomes the equation

$$x + \frac{2}{3} = \frac{5}{3}.$$ 

Carra de Vaux (Bibl. Mathem., Vol. ii (4th Ser.) 1897, p. 1—2) is however wrong in thinking that $al-\hat{d}ja\hat{b}$ is an older name for the second operation and was in time replaced by $al-\hat{m}u\hat{b}\hat{h}a\hat{b}$; $al-\hat{d}ja\hat{b}$ has no connection with $al-\hat{m}u\hat{b}\hat{h}a\hat{b}$, but is a simple extension of the notion of $al-\hat{d}ja\hat{b}$, which is not at all the case.

In course of time the second term $al-\hat{m}u\hat{b}\hat{h}a\hat{b}$ gradually fell into disuse and, contrary to Nesselmann’s view (Algebra der Griechen, Berlin, 1842, p. 45), this happened with the Arab mathematicians themselves: Abîb Zakariyyâ al-Hâshî in his treatise on Arithmetic used only the word $al-\hat{d}ja\hat{b}$ throughout. This name passed from the Arabs to the West: In Leonardo Pisano’s Liber abbaci (1202) we find the untransliterated words algebra et alnumcaba, but immediately followed by the translation restaurazione et oppositio. Canacci of Florence (xvi century) is the first western writer to use algebra alone; alnumcaba is last found in the Algebra of Gosselin (1577). The former is also said to be the originator of the statement that algebra was derived from the name of the Arab scholar Gerber (Djäbr), whether he meant the mathematician Gerber or the Spanish surname of the same name, cannot now be ascertained; Michel Stifel in his Arithmetica Integra also uses the expression regula Gerbi.

But European scholars gave new names also to this science; in Italy arose the expressions stood, *arte magna, arte cùlì et cùmùs (a translation of the words *bašl (a) and *ašš (b)) for which the corresponding Italian arte maggiore and *arte (or regolare) della cosa came after the use. The latter name also passed into German, in the xvth and xviith century Algebra was almost regularly known as *Regel Cuss or simply die Cuss.

The oldest Arabic work on algebra, known to us, was composed by Muhammed b. Mîsâ al-
Khitmit in the time of the Caliph al-Mutanab (ed. Elbek, Arabic and Eng., London 1831); as the terms al-Djabr and al-Mukhabal are not explained in them, it must be assumed that their meaning was already known and therefore that there must have been previous works on Algebra; whether the terms were invented by Arab mathematicians or were taken from Greek or Hindu works, has not yet been proved; in any case Diophant uses both of these operations in solving an equation in his arithmetical work and describes them in a similar way but gives them no special name. Similarly with the other three, it is very improbable that Diophant had been translated into Arabic by the time of al-Mutanab; his first translator is said in the Arabic authorities to have been Khalil b. Liqâ (died c. 810).

**DIJABRÄTL, or Djamal, Gabriel, is the best known figure among the angels of Islam. He is one of the four archangels, one of angels favoured by or "brought near" (mukhar-rubât) God, and one of the divine messengers. His duty is to bear the orders of God to mortal prophets and to reveal his mysteries to them.

Gabeim is an important part in the Korâân. Muhammad applied the legend of this celestial messenger having converses with the prophets to himself and believed that he had received his mission and the subject of his preaching from him. Gabriel's name only appears three times in the Korâân; but in other and important passages, a certain personage is designated by titles or epithets such as "the Spirit," "the Terrible" or even quite indirectly and the commentators unanimously recognize Gabriel in this personage. This identification is found also in the New Testament; it is quite justified by a comparison of the different passages.

Let us begin with Sûra II. 94: "Say: Who is an enemy to Gabriel? for he hath revealed to thy heart, with God's permission, confirmation of what had been before and a guidance and glad tidings to believers". This verse explicitly states the part played by the archangel as revelation of the Korâân; it belongs, it is true, to a late Sûra; but it only reproduces another passage which is certainly early in which the impregnable angel is called "the Holy Spirit," (xii. 52): "Say, the Holy Spirit brought it down from thy Lord in truth to establish those that believe and for guidance and glad tidings to them". Elsewhere in one of the most ancient Sûras, the same spirit is given the title of messenger, followed by a kind of doxology (xxxi. 30–31): "The Korâân is the word of the noble Messenger, mighty, standing sure with the Lord of the throne, obeyed and faithful".

It is possible that Muhammad did not at once give a name to the spirit with which he felt himself possessed, as the three passages, in which Gabriel's name appears, are late. In Sûra xvi, which in all probability is connected with the first revelation of the spirit and the sort of crisis in which he received his mission, the angel is not designated by any name or title; the account, which is quite brief and perhaps mutilated, is impersonal; there it is said: "Preach, in the name of thy Lord who has created... preach, for thy Lord is most beneficent". According to tradition, this first revelation took place on Mount Hirû near Mecca, whether Muhammad had retired, and the voice is said to have added: "O Muhammad, thou art the apostle of God, and I am Gabriel". But this may be only a later development, inspired by § 19 of the Gospel of St. Luke, where the angel says to Zacharias: "I am Gabriel, that stand in the presence of God; and am sent to speak unto thee, and to shew thee these glad tidings".

It appears that as a rule Muhammad heard the spirit but did not see him. Indeed there are verses in Sûra LIII (1–18) written with great vigour and a deep feeling of sincerity from which it is clear that he only saw him on two occasions: "It is one Mighty in power that has taught him; it is the Vigorous One; he hovered in the softest sphere, they came down and remained suspended in the air. He was at a distance of two bowls' length or nearer still; and he revealed to the servant of God, what he had to reveal to him... he had already seen him in another vision near the lotus tree that marks the boundary... the lotus tree was all covered". The minuteness of the details leave no room to doubt the sincerity of the visionary. Tradition adds that after this vision, Gabriel brought to the Prophet the sârâr or chimera Bâzâk [q.v., p. 793].

Muhammad apparently knew Gabriel from the Gospel account of the Annunciation; but he could not have been directly acquainted with this source. It is probable that he heard it from the mouth of some philosopher or religious inquirer, from some fanîf, to whom it had already come in a mutilated version. In his opinion God sent his Spirit to Mary in the figure of a very beautiful man (Korâân XIX. 16); the spirit is not mentioned by name here; he told Mary that he had come to give her a son. In Sûra XXVI. 19, Muhammad recognizes that she retained her virginity, and makes God say "We breathed of our spirit into her". Tradition explains that Gabriel merely approached her and breathed upon her bosom; it was thus that she became pregnant.

The legend of the Archangel Gabriel is highly developed among the Muslims; this is soon noticed if one looks through works rich in legends, like the Mahkâm al-Aglît (Abûl-Dîr al-Miskîlî, trs. Corr. de Vaux) or the first volume of Tabari's Persian Chronicles (transl. Zelinger). There is scarcely a prophet to whom this celestial envoy has not brought help or revelations. Gabriel consoled Adam after the Fall and revealed to him twenty one leaves; he taught him the cultivation of wheat, the working of iron and the
letters of the alphabet; he took him to the site of Mecca where he taught him the rites of pilgrimage. It was Gabriel also who showed Noah how to build the Ark; he saved Abraham from the flames (cf. Sura XXI, 40) and he had a good deal of further intercourse with this patriarch. He helped Moses to fight against the magicians of Egypt; at the Exodus he appeared on a horse with white feet to decide the Egyptians to enter the Red Sea which was to swallow them up. He appeared to Samuel, and to David to whom he taught the art of making coats of mail; he comforted this prophet and brought him leaves with ten riddles which Solomon solved. As in the Gospel, he came to Zacharias to announce the birth of St. John.

In the preparation of charms and talismans, Gabriel also plays an important part; his name frequently appears on the sides of magic squares, for example, along with those of the other Archangels, Michael, Auriel and Iarail.

(B. CARLA DE VAUX.)

**DJÀ'DÀ (‘AMIR), A SOUTH ARABIAN TRIBE.**

Their territory, now ‘Amir land, also Sha'efel, lies to the west of the land of the Yan‘a (q. v.) and is for the most part mountainous. The soil is fertile in the north and produces dates with a little coffee and tobacco. The largest Wādī is the W. Nūtā, into which flows the W. Dālūb. Near the latter lies the Djebel Ard Dha’wān, on which stand three ancient Humsarite castles. The chief town is Dja‘ā (also called Had Sha‘efel) with about 10,000 inhabitants (including about 100 jews), a large market and many palaces. The Sultan of the ‘Amir resides here and is the real ruler, a real army of 3000 men. The little territory of Sha’efel is enclosed in the Dja‘ā territory but is politically independent.

The Dja‘ā are an ancient people. They are mentioned by Hamdānī in his Dja‘ara. He says of them that they speaks old Arabic; for example, they say yāh bū mu‘āmmā fī yāh bū al‘āmmā. Of hills which belonged to them, he mentions: Hīyār and Rada‘a; of castles: Shūkā and al-Uṣāl; of Wadis: among others: Dja‘ā (which still exists as a Wādī), al-Dja‘ās, al-Dja‘ās, al-Hanākka, Khailīr, Shur‘a (which still exists as a Wādī and as a village with about 100 inhabitants), ‘Amīkār, Thawbān, all of which flow into the Abian (Bian). The Wadis given by Maltzan, Reise nach Süd-Arabien, p. 331–360, from a bad manuscript of Hamdānī’s Dja‘ara, are mostly wrong and are to be corrected from Miller’s edition, p. 59, 61, 63.

The geographer al-Bakrī also mentions settlements of the Dja‘ā in the districts of Najdīn. He mentions the hills Urāf and Umm, the villages of Aws, Hamtān, al-Salātīn (Najdīn), and the stream Ḥabīb.

According to Hamdānī the South Arabian Dja‘ā belong to a small tribe of ‘Amīn al-Karb, but as they are called Dja‘ā, they try to claim kinship with the greater North Arabian tribe of Dja‘ā b. Ka‘b, as it is usual amongst the smaller tribes in Arabia to take the name of a larger tribe and to trace their descent from them. But it is really very probable (as Sprenger, Die alte Geographie Arabien, p. 272, note 1, also supposes) that in earlier times a portion of the Dja‘ā b. Ka‘b migrated from Yemen to the not far distant Yemen and there incorporated other South Arabian elements, so that the Dja‘ā in Yemen would really be descendants of the North Arabian tribe.

(J. SCHLEIFER.)

They inhabited the district of Faladī in the territory of Yamāmā. Of places, which belonged to them, there are mentioned, amongst others: Ukbā (a large fortified town on the Wādī of the same name, with a much frequented market, many wells, bazaars and palaces and rich groves), Ghalghīl, Malāb, al-Sidār and al-Thādīq; of Wādīs and watering places: Aṣāfah, al-Dja‘ā (a large Wādī a day’s journey on the length of the same town), Iman (jointly with the Kshair) and the two streams al-Alsā and al-Ru‘ādā. Of castles there are mentioned: Murghīm and Kāt ‘Adu.

The Dja‘ā are said to have gone to the Prophet about a quarrel with the Djārī about the watering-place of al-A‘īk, but he decided it in favour of the latter. In 126 (744), in alliance with the Ka‘b b. Rab‘ā, the Kshār and Kshair, they slew the prefect of al-Faladī, the Hasan al-Mundāli b. Idrīs (the so-called Day of al-Faladī), whereupon the Hasanī, 1000 strong, led by ‘Abd Allāh b. al-Nu‘mān, undertook a campaign of revenge against them and their allies and inflicted a severe defeat upon them (the so-called second Day of al-Faladī).

(J. SCHLEIFER.)

**DJÀHIMA, AL-ALAHMAR or AL-WADJAH (i.e. the leper), A LEGENDARY ARAB KING,** who founded an important kingdom on the lower Euphrates, including the towns of al-Itra, al-Anbar etc., before the Lakhmid dynasty appeared in this territory. Traditions vary as to his relationship to the other rulers, who are mentioned in the pre-Lakhmid period, though the North Arabian legends are agreed that he was an Arzite. Stories of him are very popular and various Arabic proverbs refer to him. So proud was he that he...
would only have two stars or idols (al-Far'adaini, or al-Hassanaddi, or al-Qu'ashtani) as his boon-companions; but he later conferred this honour on two men, Mālik and Abī Qal'ah, who had found and brought back his lost nephew, 'Amr b. 'Adī, his sister's son. His permission for the marriage of his sister with the Lakhḥiš 'Adī could only be obtained after he had been intoxicated—a famous motif, which has even found a place in the biography of Muhammad. He was ultimately enticed by the queen al-Zahbah (Zenobia) to go to her and was slain by her.

It is of course, impossible to sift the historical basis from this mass of legend. At most the contemporaneity with Zenobia may be considered genuine, particularly as it agrees with the fact that the inscription of al-Namara gives 388 a. h. as a certain date for 'Innīsālāta b. 'Amr, who, according to tradition, was a son of 'Amr b. 'Adī.

DJIHMMA. 'Adī was the son of 'Adī b. al-Dhu't b. Bake b. Ar'd-Manāt b. Khīnāna, but he is generally called DIJJIMA b. 'Amīr b. Ar'd-Manāt b. Khīnāna. The small tribe named after him was settled at al-Ghumaisa not far from Mecca, and is chiefly famous for the treacherous attack made upon it by Khālid b. al-Walid in the eighth year of the Hijrah. Twenty years previously Khālid’s uncle al-Faḳih b. al-Mughila had been robbed and killed by a party of Khīnāna. The matter had been settled and in the interval DIJJIMA had professed Islam. Yet Khālid, being sent to them as a missionary, not with hostile intent, first induced them to lay down their arms and then proceeded to murder them in cold blood, in order to avenge the death of his uncle. When Muhammad heard of it he professed to be greatly vexed, and paid compensation for the blood shed and for the property stolen.

DJADID (properly “the new”), a metre, which was unknown to the Arabs and was first invented by the Persains (whence the name). It had originally the form futilat (futilat mastufilun) (twice). An abbreviated form futilat (twice) is also found.

Bibliography: Muhammad A. El-Debary, Dictionary of Technical Terms (ed. Springer et al.), i. 193. (A. Schaad.)

DJADIS, one of the aboriginal tribes of Arabia: Taīm and DJADIS were the two sons of Lāl b. son of Aram son of Shem son of Noah (kitāb al-Ma'dīrīf), but according to another account DJADIS was the brother of Taīm and son of 'Abīr son of Aram, whilst Taīm was brother of Amalek and son of Lāl b. son of Sheem (Ibn Hībān). Their country is said to have been invaded by the Tābī'a b. al-Aṣūr, but their extinction is ascribed to the Tābī'a b. Hādī, who exterminated DJADIS (kitāb al-Ma'dīrīf, p. 508 et seq.). Thus both tribes were destroyed. Caesarius de Perusaul places these events about the year 220 A. H. (Enarr., i. 100 et seq.). Two amulets were coined in reference to this story—‘More keen-sighted than Zarka’ and ‘More ill-natured than Kāshī’—Zarka being a woman who warned DJADIS that the enmity was approaching, and Kāshī being the Tāmūt who invoked the aid of the Tābī’a (Maidan, Arab. Pos., i. 192, ii. 859). DIJJIMA al-Abūrā is said to have attacked Tām and DJADIS before the expedition of Hādī (see Caesarius de Perusaul, Enarr., ii. 12). DJADIS seems to have referred to by Polomy under the name “taniātura” or “laniātura”, and it is obvious that they were still extant about the years 125–130 A. H. (Qa'ida, i. 29). DJADIS, as the name of a sub-tribe of Lakhmi b. 'Adī, is an error for Hailis or Hidās (Kamāl, sub swn.).

DJADWAL (Djaddawal) means firstly, “broad,” “watercourse”; it further means “table, plan” (in this meaning derived from sīkādā). It thus becomes a special technical term in sorcery, synonymous with kālitm; here it means quadrangular or polygonal, sometimes also circular figures, into which names and signs possessing secret magical powers are inserted in the most varied fashion. These are usually certain mysterious characters, Arabic letters and numerals, magic words, the names of God, the angels and demons, as well as of the planets, the days of the week, and the months, and lastly, places familiar, such as the Fāliba, the Shērīt Yāzīta, the so-called “throneverse” etc. The application of these figures is manifold; frequently the paper on which one has been drawn is burnt to smokes some one with its smoke; or the writing may be washed off in water and drunk; along with the ḍawān (conjunction) and often also the ṣa'īm (cath) the djadwal forms the contents of a bīra (amulet). The very popular ḍawān al-Shawm is, for example, prepared as follows: it is quadrangular, is divided into 40 sections by six lines drawn lengthwise and six lines drawn across its breadth and contains:

1. The sā'īm ḍawān, i.e. Solomon’s seal and other peculiar figures. 2. The seven sawẖāb or consonants which are not found in Surah 1. 3. The names of God, Fard, ḍawān, ḍawān, ḍawān, ḍawān, ḍawān, ḍawān. 4. The names of the seven “spirits”: ḍawān, ḍawān, sammān, ḍawān, ḍawān, ḍawān. 5. The names of the seven kings of the djams: Makkīk, al-Maʾrūs, al-Maʾrūs, al-Makār, ḍawān. 6. The names of the days of the week. 7. Those of the planets. The underlying notion is that secret relationships exist between these various components and the djadwal is therefore made to obtain definite results from the correlations of the heterogeneous elements composing it. In this way new djadwals for particular purposes...
come to be made; these are also made by using the above-mentioned seven seals. The extremely complicated system of mystic letters, which is based on the numerical values of Arabic letters, is very frequently used for the djadiwal. A special class is formed by the squares called ٍٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔٔ_126.png
traced to a vice not uncommon in the East, even went so far that he married him to his favourite sister 'Abdāba. As he wished to have them both beside him and 'Abdāba could not uncouple before the young Dja'far, they had to marry; but lest the Barrakids by this alliance might become a menace to the dynasty, the marriage was to be only a nominal one. Nevertheless 'Abdāba bore a son — according to another story, twins — whom she had brought up in Mecca. The truth could not be concealed from the Caliph for ever.

'Abdāba was betrayed by a slave-girl and after Hārūn had convinced himself of the truth of her story, while on a pilgrimage to Mecca, he resolved to have her avenged. On the second last day of Muharram 187 (29th January 805), Dja'far was suddenly beheaded by the Caliph's orders without further investigation. The other Barrakids were thrown into prison and their property confiscated. Whether Dja'far's connection with 'Abdāba was really the cause of the Caliph's sudden outburst of hatred against his favourite, must remain uncertain however. But his dependence on the family of ministers must in the long run have become unbearable to Hārūn and with the unbridled power of the Barrakids only two things were possible, complete subservience on the Caliph's part or destruction under pressure of the Barrakids. Other explanations are also given. For example, it is said that Dja'far had set free the rebel Yāḥyā b. 'Abd Allāh without permission and had thus aroused the Caliph's wrath. In any case the latter must have been embittered against Dja'far personally for some reason; otherwise his wrath would have been mainly directed against his father, the head of the family. The intrigues of Fādī b. al-Rabī' also were certainly not without influence. Probably several circumstances contributed to Hārūn's decision to overthrow the Barrakids. Cf. the article Barrakids (p. 693).

DJA'FAR CELEBI, an Ottoman poet, whose father Kadij-Boy was attached to the personal service of Sultan BayAZid II, while the latter was governor of Amasia in the lifetime of his father Muhammad II, displayed precocious talent and was therefore appointed Muftī in Muhamid Paša's school in Constantinople; from this post he was called to fill the office of Niẓāmi (secretary to the Divan) and Bayazid appointed him supervisor of the Dividents, at the same time giving him the rank of Paša, whence the name Niẓāmi Paša by which he was popularly known. After the revolt of the Janissaries in favour of Selim (917 = 1511) he was dismissed; but when the latter succeeded his father in the following year, he again appointed Dja'far Niẓāmi; a little later, he made him Kadij-Akbar of Anatolia and took him with him on his Persian campaign. Denounced by the Janissaries as one of the instigators of their refusal to march beyond Tabriz, he was condemned to death and executed on the 8th Rābi'a 920 = 29th August 1514. He was buried in the mosque which he had built in the Balâta quarter (the Niẓāmi's Madrassī). He left a Divān, which is not yet published, and a poetical work entitled, Havvanāma "Book of Wishes". The lyrical style of his Divān is not the most delicate, but the general character of his poetry is too marked.

(Inf. Huart.)

"DJA'FAR," or Mr Dja'far, called ZATALL, of Dīlū, a notable author of humorous poetical and prose compositions, some in Persian, others in mixed Persian and Urdu, including Falānna, or treatises on fortune-telling. His ancestors came to India in the time of the empress Hamšān, and were given a town of land rent-free, as a reward for loyal military service. At the commencement of the reign of Shah-Jahan they were dispossessed of these lands, and Soiyid 'Abdā, the father of Mr Dja'far, became dependent for a time on the earnings of his wife as a seamstress. After a while he opened a small shop, and, on receiving monetary assistance from a rich relative in the Dakhān, he was enabled to extend his business, and become a prosperous merchant. Mr Dja'far was born shortly after the accession of Awrangzēb (A. D. 1658). He lost his father at an early age, and was brought up by his uncle Mr Sarwar. On leaving school he obtained service under Khān Bahbah, the youngest son of the empress Alamgīr, and is said to have obtained the sobriquet of Zatāli "The Jester" from the Begam Zeh al-Nisī, daughter of the empress. The date of his death is uncertain, but he is said to have lived to an age of over 60 years. His life has been written by Muhammad Kəmil, under the name of "Hindmānsī Spēna" in a work entitled Zar-i Dja'fari (Lahore, 1890). His Kullāīh, or complete works, have been frequently published.

(J. F. Blumhardt.)

DJAFF, or Dja'fr, there developed very early in Šī'ite Islam a belief that the descendants of 'Ali were in possession of a secret tradition, a body of religious and political esoteric knowledge covering all things to the end of the world. The general Muslim reverence for the family of the Prophet had grown in the Shi'a to a belief that the Imāms could neither sin nor err. Thus, a book was ascribed to 'Ali giving the inner meaning of the Kur'ān (Ibn Sa'd, ii, p. 101, l. 19), in intelligible enough opposition to the Sunnite exegesis of Ibn 'Abbās. Even the Khāridjites make a jest of the secret knowledge professed by the 'Alids (Ash'āb, xx, p. 107, ll. 16 et seq.; and in the third century of the Hijrī, Bīrār b. al-Mutamir, the Mu'tazilite, names a book by which they are deceived, as The Dja'fr (Djakār, Hayyūnūn, vi, p. 94, l. 1). Ibn Kutasba (1165 A. H.) also refers to a book of this kind.

In a quotation by Damiri the 12th-century historian (sub Dja'fr, vol. i, p. 171, ed. of 1713) from Ibn Kutasba's Adab al-Nakib, the Dja'fr is said to be a book by Dja'fr b. Muhammad al-Sādiqī (the sixth Imām, A. D. 668), written on the skin of a Dja'fr, 'a just waxed kid or lamb, for the information of the House of the Prophet, containing all that they needed to know and all that was to happen until the Last Day. This passage does not seem to be in 'Gründer's text, and Damiri may have
mistaken his book. For Ibn Kutub; according to Ibn Khallikân, has a passage to the same effect in his Mâkhzûlî al-Hudîth and adds there some lines by Hârîn b. Sa’d (or Sa’d) al-Dîjîf, head of the Zaidites, ridiculing this pretension (Ibn Khallikân, de Slane’s text, p. 432; de Slane’s transl., ii, p. 184; Whiston’s text, N. 419; Goldziher in Zeit. d. d. Morgenl. Ges., xii, p. 130; Friedlander in Am. Or. Soc., iv, p. 106). Ibn Kutub’s etymology is more than dubious; there seems no trace of Lûfîr being used in the sense of “sellum” or “parcement.” Van Vloten (Chîltisme, p. 36, note 6) suggested a connection with ɡaḥa and Goldziher (Befrî, a. Letter, d. ʿaṣra, p. 30, note 5) with Dîjîf. But more singular still is the fact that while the Fihrist has many references to Dîjîf al-Sâfî (p. 178; l. 15); p. 198, l. 71; p. 224, li. 20 et seq., p. 317, l. 261; p. 355, li. 1 et seq.) and does not hesitate to bring him into connexion with Dîjîf b. Hâlîfûth the alchemist (p. 355) and questions, though to reject, his asserted authorship of a medical book on myrobalan (p. 317, l. 26), it has no scrap of mention of this Dîjîf. A Kitâb al-mâkhzûlî by “Ali b. Vâṣîn is referred to by his authority (p. 224, l. 24), and it is plain that such books were current in his environment. See another K. al-Mû (p. 223, l. 20) and a K. al-ʿaṣra, Dîjîf al-Sâfî (p. 222, l. 17). Yet Vâṣîn’s work apparently falls within the class of Dîjîfîn books. The existence, however, of this unseen, infallible book was universally asserted by Shî‘ites. When a Shî‘ite author tells how Ma’mûn appointed the ‘Alîn Irâmî, ‘Ali b. Mîshîr al-Khâlîfî (eighth Irâmî of the Twelve; d. 202) as his successor, he adds that “Ali in accepting, wrote to Ma’mûn “although the Dîjîfî and the Khâmûnî indicate the opposite of this” (e.g. al-Fâski, p. 198 of ed. of Cairo, 1317). The Dîjîfîn is another similar book often mentioned in this connection. For it see Goldziher, Befrî, a. Letter, d. ʿaṣra, p. 35 and note, and for an interesting hypothesis of its origin, bringing it together with the Rasûlî of the Khâmûn al-Sâfî, Casanova, in Journ. As. Soc., vii, 9 sâî, vol. xi, p. 151 et seq. Yet another such book is the Mâkhzûlî Fâṭîma (Goldziher, l. c.), another historical occasion with which it is always connected is the appearance in the Maghrib of Ibn Tûnîr. It was the Mawâṣîf tradition that their Mahdi had been a favorite pupil of al-Ghazzî, the custodian at the time of the Dîjîfî. That al-Ghazzî had learned from the Lûfîr the high destiny of Ibn Tûnîr, and that at his death the book had passed into the custody of Ibn Tûnîr (see my Life of al-Ghazzîîî in Journ. As. Soc., vol. xx, p. 113, and especially Kâfûrî pp. 116 et seq.); this has been theLINK (see al-Fâski, p. 2 of ed. of Bombay 1314). But the opinion of the sane and more sceptical public may be gathered from al-Biruni and Ibn Khallikân. Al-Biruni (d. 440) speaks (Chronology, trans. Sachau, p. 76, 182) with the greatest reserve of al-Sâfî, but has no patience with the decisions as to calendar falsely ascribed to him. He does not mention the Dîjîfî. Ibn Khallikân treats the Lûfîr in connection with the books of Mâkhzûlî (Quatremer’s text, ii, pp. 184, 191; Bulâtî ed. of 1274; pp. 162, 164; de Slane’s transl., ii, pp. 214, 224). He believes that the House of Muhammad had, like all the wali, the same kind of prophecy. Such a book, therefore, might have been produced by Dîjîfî al-Sâfî, but he finds no proof of such connection. The fragments in currency may, he thinks, connect with a book called al-Lûfîr which Hârîn b. Sa’d al-Dîjîf possessed and which he said had come to him from Dîjîf al-Sâfî. But of that descent there was no proof. [But see above as to this Hârîn]. There was trace also, said Ibn Khallikân, of another book called Dîjîfî. It was by Ya‘qûb b. Isâbî al-Khâmûnî to Hârîn al-Râbihî; it treated astrologically of the fate of the Mamlûk empire and was based on astronomical calculations. But it had been completely lost. So far, the connection of the Lûfîr has been with prophetical traditions and astrological calculations (see de Goeje’s Mémoire sur les Caractères, pp. 115 et seq.). But in time there arose a belief that in it meanings were cabalistically expressed by separate letters, and “Ibn al-Lûfîr” came to mean “Ibn al-Hurûfî,” the method of prediction by assigning (by Abâzîq) numerical values to letters (Baṭûdî Khâfî, li, pp. 603 et seq.). To this science (al-Simûnî) Ibn Khallikân devotes a section (Quatremer’s, iii, pp. 137 et seq.; de Slane, iii, pp. 158 et seq.; Bulâtî, p. 245 et seq.; but makes no connection with Dîjîfî or the Lûfîr. In his exposition Simûnî reads like a reductio ad absurdum of nominalism, and, certainly, the idea that letters in themselves represent real things, combined with a recognition that Arabic is sacred in itself as the vehicle of the Muslim message, seems to have led to this transition (Dict. de tech. term., i, pp. 203 et seq.; also on pp. 127-131, sub hurûf, on Dîjîfî as “Ibn al-Hurûfî”’. This has come to be the ruling association with the word Dîjîfî. For further details, references and instances of existing treatises and fragments bearing this name, see Brockelmann, i, 44, 111; p. 220, note 9; p. 446 (Ibn ‘Arabî, Nos. 77, 78, 80; p. 464 (N. 5, 6, 9); Murûtî, Bk. al-Durûs, l, p. 51 (a translation into Turkish of Dîjîfî al-Khâmûfîlî still assiduously preserved in the library of the Sultan at Constantinople); Aliwardt in BerÄ. C. d. d., iii, pp. 551 et seq.; Rieu in Suppl. to the Cat. of Arab. MSS in Brit. Mus., Nos. 828. For use in popular literature, see Story of Alifîf, Burton’s Arabian Nights, Library ed., vol. xii, pp. 114 et seq.; the book is in the library of Hârîn al-Râbihî and is consulted by him.

Bibliography: Goldziher, Verhandlungen, pp. 224 et seq.; 263 et seq. (important); Ed. Dentz, Magie et Religion, pp. 177 et seq. (on “Ibn al-Hurûfî”; Ruinaud, Monumens musulmans, i, pp. 340 et seq. 370 et seq.

(D. H. Macdonald.)

DIJAGHDUB, a Zawiya of the Senûlî in the Oasis of Faredoûgha on the frontier between Tripolitania and Egypt, fifteen days’ journey south of Benghazî and two or S.W. of it, in Lat. 30° 47’ N., Long. 24° 20’ E. (Greenw.). This place was uninhabited when Sheikh Sidi Muhammad b. Ali Senûlî, founder of the Senûlîya order, settled there on his return from Meccah and Cairo in 1835. He built a Zawiya on a rocky spur commanding the oasis, dug a spring out of the rocks and planted gardens and a palm-grove. He died and was buried there in 1859; beside him lies one of his sons Sidi Muhammad Sharif (d. 27th Ramadan 1315 = 12th March 1897). The Zawiya seems to have developed rather slowly at first. In 1871 it only contained a few students and some slaves but it soon afterwards began to expand rapidly. In 1881, according to Duveyrier,
it contained 750 gilded and 3000 slaves. Besides the religious buildings, there were workshops of all kinds and an arsenal. Under Shah Shihab al-Mahdi, son and successor of the founder, the Zawia became the headquarters of the propaganda, and from it missionaries spread Islam and Sufi doctrines throughout all Central Africa, particularly towards Waalal. In 1890 the Shii Muslims in al-Hadramiyyah gathered at Bida al-Din in the oasis of Kafr, to be nearer Waalal and at the same time to remove his disciplets from the reach of European influence. Djaghbub has nevertheless remained the most important Zawiya of the Sufis. It is a place of pilgrimage and a centre of learning, attended by 3-4,000 students, with a library of about 8,000 volumes as we know from Shah Shihab al-Hajjah.

DIJAGHMINI (or CAGHMIN), MAHMUD b. MUHAMMAD b. OMAIK, an Arab astronomer of some importance born in Djaghbub, a district in Khedrawa. His date is not quite certain but it is very probable that he died in 746 (1344-1345) (cf. my note on this point in the Zeitschr. der Deutsch. Morgenl. Ges. 1876, 2nd ed. 1881. Numerous manuscripts still exist in Beirut and Damascus. Paris, Oxford etc. 1. *Gama sahhaa fi l-Hataa* (Compendium of Astronomy), a work which was very popular and has often been annotated, e.g. by Kaidi and al-Rumi, and Djurdjurd. A German translation of this work by Rudolf was published in the Zeitschr. der Deutsch. Morgenl. Ges. 1876. 245 et seq. Numerous manuscripts still exist, in Beirut, Gotha, Leiden, Paris, Oxford etc. 2. *Gama l-hawwaa al-wa daqah* ("The Strong and the Weak Influence of the Stars"). a copy of which still exists in Paris. 3. *Gama al-tawmida* (the *Minor Canon*), a medical work, extracted from the *Khimaa of Ibn Sinaa*, which still exists in Munich, Gotha, etc.

Bibliography: Hadji Khalil, sl. 115; Brockveltz, Gesch. des Arab. Litteratur, I. 473; Nallino, *Al-Biruni, Opus Astronomicum*, various passages (as the Index of this work); Suter, in *Handbuch. e. Gesch. der Mathematik, Wissenschaft., 1. 184; xiv. 177.

DIJAG (K.), literally "he who takes a place", is used in India, in the same sense as the Arabic *id"", for a piece of ground which is granted to any one either for his lifetime or in perpetuity as a grant, as a reward of service. The holder of such a grant is called *dagardar*. (cf. H. H. Wilson, *Glossary*, s.v.; Bernet's *Travels in the East*, p. 173, 2242.

DIJAHANARA BEGAM was commonly known as the Begam Shihab, and is also sometimes called Fadshah Begam. She was the eldest surviving child of Shih Shihab, and was born in March 1614, probably at Adjum. Her mother was the Ardjumand Bint, or Munia: Mahal or Mumia al-Zammat the daughter of Abul Khan (No. II) and niece of Nisr Khan, for whom the Tal Mahal was built. Dajianara was never married, and was distinguished for her beauty and accomplishments, and her affection for her father and for her brother and spiritual guide, Dark Shihab. Both Bencvis and Manucci have a good deal of unpleasing gossip about her, and though Manucci accuses her of one horrible charge, he does both her and Bernier injustice when he says that Bernier charges her with having poisoned her majesty. She may have had her faults and her enmity, but her beauty was not conducing to evil, but she was most generous and charitable, and was a devoted daughter to her father whom she was old and imprisoned, so that Mr. Keene aptly calls her the Moghul Cordelia. She was very religious, and wrote an account of one of her favourite saints, Mavl al-Din Cughti of Adzmar (Kew, *Catalogue of H. M. Persian MSS., I. 357*). In March 1644 she had a narrow escape from burning. They were celebrating her birthday (according to the solar and not the lunar Calendar) at Agra, and she was returning to her chamber after saying good-night to her father, when her dress of Ucopp mislaid caught fire from a naked light. She was severely burnt on the chest and arms, and her four handmaids who tried to save her were also burnt. Indeed, it appears that two or more of them died of their injuries. The chief mosque of Agra was built by her, or in her honour, and probably as a memorial of her recovery, in 1644-1648. She also built her tomb outside Delhi in the precincts of the tomb of Nizam al-Din Awilya, a famous saint of the Cughti order. It bears a touching inscription composed by herself. The original text of it is given in Sayyid Ahmad's *Athar al-Shahids*, p. 39 of Lucknow edition of 1895 and there a translation of it by Eastwick and Keene (see the last's *Handbook to Delhi*, Calcutta, 1882 p. 37). She died in Delhi on 6 September 1661. There is a good account of her in Keene's edition of Beale's *Oriental Biographical Dictionary*, and there are references to her in the *Tazkiaa* and in *Kahfi Khan*.

DIJAHANDAR SHAH, MUHAMMAD MUFLIK AL-DIN, is the first emperor of the Sajid dynasty. He was born in the house of Timur, eldest son of Shah 'Alam Bahadur Shah, was born in May, 1661. Before his accession he was governor of the province of Multan, and on his father's death in Lohor in 1712, was raised to the throne by Dhu l-Fikhr Khan, who was instrumental in overthrowing his three brothers, 'Arul al-Sha'an, Kafi al-Kadr, and Dijandar Shah. Dijandar Shah was vicious, feeble, and prodigal, and scandalised all classes of his subjects by his open and shameless profligacy and his subservience to his mistress, Lal Kurnwar, a Hindustani dancing-girl. He had not been seated on the throne a year when Farrukhsarai, the eldest surviving child of his brother, 'Arul al-Sha'an, succeeded in attaching to his cause the two Sajid brothers of Bahr, Abd Allah Khan, governor of Lahab, and Husain Ali Khan, governor of Bibrar. Farrukhsarai and the Sajids marched from Pashawar towards Agra, putting to flight Dijandar's son A'aza al-Din, a cowardly youth who, although at the head of a superior body, did nothing but blow. Dijandar Shah, on receiving news of his son's flight, marched with Dhu l-Fikhr Khan and an army of 80,000 horse from Delhi to Agra. At Sunwar near Agra the armies met; and during a fiercely contested battle Dijandar Shah and his son A'aza al-Din fell, leaving Dhu l-Fikhr Khan opposed to the rebels. Dhu l-Fikhr Khan, unable to discover the fugitives, was forced to retire, and
but had his father's vice of drunkenness, and died before him. Sultan Khurram, afterwards Shah Jahan, rebelled but eventually submitted. He succeeded his father. Sultan Djihangir, but both

Djahangir wrote his own Memoirs. They are styled Ta'ash-o-Djahangiri, and are interesting and valuable. The first volume has been translated, and published by the Roy. As. Soc. London, 1909. There is another version of the Ta'ash but it is more or less spurious. A translation by M. Price was published in 1829 by the K. A. S. The Persian text of the Ta'ash was published by Sajid Ahmad of Aligarh at Châspir in 1863, and again at Aligarh in 1864. It contains a good many errors. Much of the Memoirs is translated in the 6th volume of Elliot's History of India. Sir Thomas Roe's Journal, and the book by his chaplain the Rev. Edward Terry contain interesting accounts of Djahangir. There is also a Persian life of his reign by his secretary Muizzul Khan which was published in the Bibli. Ind. in 1865. (H. Riviere.)

Djahân-Shâh, Muzaffar al-Din, the third ruler of the Kâra-Küyûnâl dynasty, was the son of Kara-Üsaf; after unsuccessfully fighting on the side of his brother Iskandar against Shâh-Rûkh, the son and successor of Tûrir (532 = 1429), he submitted to him in 535 (1434-1435), and was granted the governorship of Aghdarbâdân on Iskandar's flight (539 = 1435-1436). After the departure of the Timurids he was attacked by his brother but besieged him in the fortress of Amânâk, in which he had taken refuge; Iskandar was murdered by his own son Kâbul. Djahân-Shâh became undisputed lord of this province and as such marched against Georgia. On the death of Shâh-Rûkh (Sunday, 23th Bah 121-122 March Jul. Kal. 1447 = 1st Nawrût; see Khojandme, iii. p. 138) he rose against the Timurids, captured Isfahân, massacred the inhabitants and conquered almost the whole of Persia including Khorasân and the coast of Óman (562 = 1458). He fought with the Kâra-Küyûnâl and unsuccessfully invaded Diyar Bakr; when he was retreating in midwinter over the mountains near Mûhâ, which separated him from Tabrîz, he was suddenly attacked by Ellen-Hasan in his tent and slain (12th Kâb 1172 = 10th November 1467). His body was brought to Tabrîz and buried there. He had reigned for 32 years. His reign was marked by the raising of his son Hasân who, confined in Aghdarbâdân, had taken advantage of his father's preparations against Abû Sâ'id to raise the province, and by that of his other son Pt-Budâ, governor of Baghâdâd, who forced his father to besiege him for eighteen months in this city (569 = 1464). Djahân-Shâh was a freethinker, who led a dissolute life; as he retired into day sleep, he was called Shâh-panâ, 'the bust'. After his death the throne passed to Ulûn-Hasan and the Ak-Küyûnâl dynasty.

Djahân-Shâh was also the name of a younger son of Bahadur-Shâh I, the Mughal Emperor of India, who fell at Lahore in 1124 = 1712, in the fighting after the death of his brother Dja-

Djahân-Shâh.
in the legends of Ishār. It is the conception that took hold of the popular imagination in the middle ages, in the east as well as in the west, and we find it expressed with so much power in Dante's work.

Muhammad had only quite a rudimentary notion of the structure of hell; he speaks of its gates, specifying that there are seven (Koran, xxvii. 85; xv. 36-37). A plan of hell is given in the Turkish work, the Ma'drjad-Nûmah. It is situated under the pedestal of the world, above the Bull and the Fish (corresponding to the Behemoth and Leviathan of the Bible) who support the earth. It is composed of seven stories forming a vast crater. Above is a bridge thrown over the whole length of it as a bridge, as narrow as the edge of a sword, has to be crossed by the souls in order to enter Paradise; the souls of saints cross it in a moment; those of ordinary righteous people take a longer or shorter time to cross it, while those of the unrighteous do not reach Paradise but fall into the gulf.

At the lowest stage of hell is a tree called Za'dah which has for flowers the heads of demons (cf. Korân, xxvii. 86-89), a caldron of boiling and stinking pitch and a well which reaches to the bottom of all things.

The punishments in the Muslim hell are varied and graduated according to the kind and importance of the sins, as in Dante's Inferno; the Korân hardly mentions them; but they are described by some authors, notably Suyûtî (died 911 A.H.).

These very materialistic representations of the structure of hell and its punishments have not satisfied all spirits in Islam; even the pious and believing Ghazzî allows himself to explain away a little on this point. Thus the hellish thrown across hell has for him only a moral meaning; it is merely the "straight path", by which God conducts the faithful and symbolizes the just man between opposite faults; it is the boundary between excess and failure, in which perfection lies (see the end of his Ma'drjad, ed. Bionay, p. 126). According to Avicenna, the pains of hell chiefly consist in sinful souls retaining their sensual inclinations after death; but thus they suffer horribly as they have no bodies wherewith to satisfy them.

The Korân attempts to hesitate a little on the question of the eternity of punishment in hell; the passages, which refer to this point, do not quite agree. Perhaps this uncertainty is due merely to the fact that Muhammad, who was not a speculative philosopher, was not able clearly to face a question into which there entered such an abstract conception as eternity.

*They for whom the balance shall be light*, it is said in one passage (Korân, xxix. 33-34) are those who shall themselves perish in hell and shall dwell there for ever (Korân, xiv. 38). But elsewhere (xx. 54-55) Muhammad says: *The damned shall be cast into fire... they shall dwell there as long as the heavens and the earth shall last, unless God wills otherwise*.

The Imam Ash'îrî has reproached the Mu'tazilites and the Kûfârites with making men despair of the mercy of God, by teaching that traitors are condemned to eternal fire. This, according to him, is contrary to the words of the Korân (iv. 111) *she will pardon all else except idolatry to whom he will* and to this traditional saying of the
Djahannam — Djähiliya.
999

Prophet: ‘he shall make men come out of hell after they have been burned and reduced to cinders’.

This Imam’s view is that which has prevailed in Islam.

II; dâ, Fragments d’Echatalogie Musulmane (Brussels, 1855); Léon Gautier, La Prise Précurseur de Djâhil (ed. and transl. 1878); A. F. Mehren, Abou’l-Hasan Al-Asfi (Oxford: Third Meeting of the International Oriental Congress, 1876, p. 47.

(B. Carra de VAUX)

Djâhil (s.) ‘ignorant’: cf. Djehiliya. Among the Druses Djâhil is a technical term meaning ‘uninitiated, layman’ (opp. Âhi, q.v., p. 239).

Djehiliya is the name given to the state of things which obtained in Arabia before the promulgation of Islam, or in a narrower sense the period when there was no prophet, between Jesus and Muhammad (see art. FATRA). It is the collective noun from Djahil, a pagan Arab, especially a poet of the earliest of the four chronological classes, of which the second is Mahbâhám, denoting one who was born in pagan times, and who died under Islam.

As to the exact meaning of the term Djehiliya the usual opinion is that of J. D. Michaladis and others, that it is ‘the time of Ignorance’, as the period before Christianity is named in Acts 17, where Islam being regarded as the period of enlightenment and knowledge. Djahil ‘to be ignorant’ is the antonym of ‘âlima ‘to know’ frequently in the old language and often in modern times. This ‘Antara, Muwâltâb, l. 43: ‘in huta tâlîfâtâ tâbâs tâbâs tâbānî. But Godfater points out that this sense of Djahil is really secondary and that in its primary sense it is opposed not to ‘âlima but to ‘âluma, to be clement, forbearing, grave, and so means to be rude or rough or boorish, and he cites a number of verses in which derivatives from these two roots stand together by way of contrast, e.g. Al-Shantar, Lâmiyât Âd-‘Arab, v. 53: wa lâ vaccination tâlîfâtâ tâbâs tâbânî. Hence he renders Al-Djehiliya ‘Barbarian’, (Mouhaddeesthetic Studies, 1, 219 et seq.). The word occurs in the Korân 36:61; 11:35; 33:75; 48:10.

The religious religion of the Djehiliya have been dealt with above in the art. ARABIA, p. 379 et seq. Godfater draws a sharp distinction between the Arabs of the South and those of Central Arabia. The former were of a distinctly religious torn of mind: the latter had not practically no religion. But this statement has to be modified by the consideration that so many southern Arabs migrated to the north. This was especially the case with Yathrib. Moreover, as Professor Margoliouth remarks, inscriptions may yet be found which will throw light on the religious ideas of the Central Arabians tribes, as has been done in the case of the southern and northern. But, so far as we know at present, the people of Central Arabia, to judge from the poetical and other remains, were indifferent to religious ideas. The utmost they could attain to was a vague delirium or belief in Fate (mâtâ, mamâ). The descriptions of idolaters in the Korân refer largely to times long past and very little at all to Muhammad’s contemporaries, whose treatment of Muhammad shows that their reverence for their idols was not very deep.

What was of very much more importance to the pagan Arab than religion was his tribal connection. The clan was the unit from which all the society he had was built up. Even Islam was powerless to displace his attachment to his tribe, and tribal feuds were carried on after the time of Muhammad: as before, if not to the same extent. The great rivalry of North and South was still being fought out in Khordás in the second century (Mândî, vi. 36 et seq.) and even at the present day the population of a district will keep up the distinction of Kâla and Yamaout (Hmîn, Stirring Times, I. 226 et seq.). Much of the old patriarchy consists in the name of the poet’s tribe and virtue of those to which he does not belong; and the latter is sometimes a very wide term.

The pagan Arab’s idea of morality is expressed by the word mawlid, that is, manliness, virtue. This consists mainly in courage and generosity. His courage is shown by the number of enemies he kills, by his defending his own clan, but also by chivalrous treatment of his foes very much as the term that of the medieval knight. His generosity appears in his being ready to join in the fray or to share in the spoil, in his readiness to slaughter his camels for the benefit of the guest and of the poor and helpless, and in his being generally more willing to give than to receive.

Arab hospitality no doubt often led to excesses in both eating and drinking, such as were common in Europe a century ago, and it cost them a hard struggle to give up the use of wine on turning Muslim. It was considered one of the points of honour to remain a wine-merchant was compelled to take down his sign, the wine being spent. At the same time the riot or habitual drunkard was not tolerated. Bar‐rîj b. Kâla was expelled from more than one tribe on account of his vicious habits in this respect. Wine-songs continued to be composed long after Islam had forbidden the drinking of wine, poetry and religion presenting in this respect a curious contrast. But so strong was the Arab liking for wine that it was permitted during the Umâya period, though forbidden again under the Abhâsids.

The position of women among the pagan Arabs was in some respects freer than under Islam. Marriage with two sisters and the Nikkh al-Muqât were permitted, but on the other hand the institution of the veil was unknown. Divorce was not more easy than it is under the Muslim code and women had the right to it as well as men. Indeed, the relations of the sexes before the time of Muhammad were lit situations in respect quite good. In any case they were capable of being improved, whereas after the law of Islam had once come into force, alteration was not to be thought of. The worst feature of the Islamic marriage code — that of the muštâbîl — was unknown.

The production of the soil of Arabia has always been insufficient to support its inhabitants. In certain favoured spots such as the Yemen, and in the oases food was to be had in plenty. The people of Mesopotamia made their living as carriers between the Yemen and Syria, to which fell to be added the profit they made out of the pilgrims who annually thronged their town. But the desert population of Arabia has always been in a state of chronic starvation. Partly for this reason
they had recourse to the practice of burying female infants at their birth. The flesh and milk of their camels was supplemented by constant raids upon neighbouring tribes. These raids did not increase the total amount of supplies available, but they helped to keep down the number of months to feed.

For the purposes of trade and commerce, as well as in order to enable tribes living at a distance to visit the national shrines and attend the fairs, four months in each year were set apart as sacred months in which raids could not be undertaken. By far the most important of the sacred places to which pilgrimages were made annually was Mecca, and the most famous of the fairs was that of 'Udaih. During these months caravans could pass almost unarmed throughout the country. Muhammad's first success in arms was due to a breach of this "truce of God"; and when he made the Arab year purely lunar he ruined the annual fairs; but the habit of pilgrimage to sacred places was too deeply rooted in the Arab nature for him to put an end to it. The utmost he could do was to abolish all the shrines save one, and make that the house of the One God.

In his theological works, as far as we can judge from the fragments we possess (Kita' al-Hujjāj f. e-Nabā'a, Kita' al-Ma'rifā, Kita' al-Kāfūr al-'Arā`, Kita' al-Nabā'a 'alā 'l-Ma'ālikāt, Kita' al-Adā` 'alā 'l-Nasā'ir etc.; Dākhīl takes his arguments from experience and history and is not satisfied with arid and speculative de
geniations. He also proves himself a fairly good psychologist. The same remark applies to his books on the Mautālib, in which he unfolds the views of the different sects with remarkable impartiality. (Mas'ūdī, Murūj, vi. 55 et seq.). In his books on the Arabia and the clients (Kita' al-ʿArab wa l-Ma`ālik), and on the Arabia and Persians (Kita' al-ʿArab wa l-ʾAdā`, Dākhīl tried to estimate the relative positions of the two dominant races of the Caliphate. These books are unfortunately lost, but we know that the author showed himself an ardent champion of the Arab civilization represented by the ʾAbdāzāh Caliphate, as Goldaiker, Mahā, Studia, i. 165 et seq. Al-Baghdādī however reproaches him with exalting the superiority of the clients over the Arabs (al-Fārā' iba ʾl-Fīrah, p. 163). Next to the Arabia and the clients (Khorāsānīn) Dākhīl wished to consider the Turke the third pillar of the Caliphate. His treatise on the merits of the Turks (Kita' ʾl Fiṣḥ wā l-ʾAdā`) was, published by R. Vollen, Leiden 1905 in Prima Opuscula, wet. al-Dākhīl is a defence of the introduction of Turkish clients into the Islam in many. In the Book of Countries (Kita' al-Buldān) he discussed the characteristics and advantages of the great metropolises of Mecca, Medina, Miḥr, Kūfa, Basra, Damascus, etc. He was not a professional geographer (cf. Mas'ūdī, i. 206) and his observations, to judge by the fragments, dealt with the peoples rather than with the conditions of countries.

Dākhīl was an anthropologist and naturalist with the restriction that his books aim not at making science but at arousing the reader's interest in it by making it attractive to him. Under this category we place his "Book of Plants and Salt Pans" (Kita' al-Zaw' wa l-Nahu), the "Book of Mongrels" (Kita' al-Sorafā' wa l-Hujjāj), the "Book of Blacks and Whites" (Kita' al-Sidā` wa l-ʾItīfāh), the "Book of the Mule" (Kita' al-ʾArā`), the "Book of Metals" (Kita' al-Ma'ālik). In the "Book of Women" (Kita' al-Nisā) he discussed the rather psychological question of the difference between man and woman, the special
philosopher. In spite of his wit and the often surprising truth of his remarks, we can only place his works among the Adabiyat (i.e. edifying and entertaining literary science). For all the individual interest his works have apart from literary and grammatical interest, mainly consists in the valuable materials he gives us on the public and private life, the customs and point of view of the Arabs of his time and preceding periods.

The influence of Djahiz on Arabic literature has been very considerable. Among his imitators may be mentioned his pupil al-Maharrad, the author of the Kitab al-Jamali, a geographic Ibni al-Fahhād and the encyclopedia Thalib, Balaysa's Book of Advantages and Disadvantages (Kitab al-Muhammd wa l-Muhammd) and the Book of Beasts and Antitheses (Leyden 1629) are direct descendants of the school of Djahiz. Mansur had read him. He admired him and quotes him frequently. The influence of his Kitab al-Hayawān on the treatises (Raysh) of the ilkhān al-Safī is a point which is quite worth careful investigation. The zoologists Kāzim, Damīrī, and the anonymous author of the British Museum Ms. (Add. 21,102) owe a great deal to Djahiz.

Bibliography: Beck, Arabic Literature, p. 152 et seq. (where Nos. 5, 7, 9, should be omitted); Arnold, al-Maṣūṣ, p. 38 et seq.; al-Baghdādi, al-Fārī, baina l-Farān, p. 160 et seq.; Horten, Die philosophischen Systeme der islamischen Philosophen, p. 390 et seq. Apart from the works already mentioned, as published, the printing of a collection (Madārij al-Raṣīl, 1324) has been begun in Cairo.

DJAHWA, from Balān. Djam, below, southern, province of Balānšahr, lying below or S. of Sarawān, giving its name to one of the two great divisions of the Balāzūn confederacy: area, 21,425 sq. m.; pop. (1901), 2,424,073, mostly Banūh, with here and there a few Balān and Elī. capital, Kushat. It is mainly a grazing country, supporting vast numbers of sheep and goats, with some camels and a few horses.

DJAHMA. J. S. COTTON.

DHAM. R. S. R. AND M. R. The Man of the Kūshā, called al-Tirmidī by some and al-Saḵki by others, a Muḥammasdān theologian, who attached himself to Ḥārīth b. Surajj, the "man with the black hair", during the risings in Khorāsān towards the end of the Unaiyād period and was therefore put to death in 1254 (745-746) by Sālim b. Aḥwāz. As a theologian he occupies an independent position in us much as he agreed with the Murjihis on the one hand in teaching that being is conditioned by the will of the heart and with the Muʿtazilites in denying all anthropomorphic attributes of God; but on the other hand he was one of the strongest defenders of gibrā (see the article Ḥabarī, p. 95). He only allowed that God is all-powerful and the Creator because these are things which cannot be predicated of any created being. He further denied the eternity of Paradise and Hell. His followers, called Khariṣa, after him, survived down to the 15th century around Turkmen, but then adopted the doctrines of the Ṣūfis.

Djahlawar. The Huns displaced the old-established influential Arab family in Cordova, which produced numerous scholars, jurists and particularly viziers. After the fall of the Umayyads the shrewd vizier of the last of them, Abu 'l-Haam Djahlawar b. Muhammad b. Djahlawar made himself President of the republic or Regent (Rā'is) of Cordova from 921 to 925, and Dory (Historia, iv. 208) makes his son Abu 'l-Walid Muhammad b. Djahlawar reign from 943 to 956, while Lane-Poole, Mohammedan Dynasties gives his date as 435 to 450 = 943 to 958 and his son Ab al-Malkic correspondingly 964 to 970 or 450 to 461 = 958 to 968, while on the other hand Ibn Bashkawal (died 578 = 1183) in his Siwa (Djahlawar, No. 297) says that Muhammad b. Ibn Djahlawar (No. 1068) died in Sulites (Shaykh) in the middle of the Shawwal 462 = 26th July 1070 (interred by the "Abahiid al-Mu'tamid" in Cordova). India mentions his son 'Abd al-Malkic at all. In Vives y Escudero's Monitico de los Dinastias Arabico-Espanoles, (p. 277) two Arabic coins struck in Cordova in 400 = 1008 to 1010, are given, which are ascribed to the Djahlawards. In addition to quite brief notices, which give but little information, there is only an extract of some length in al-Majdli, i. 192 to 194, taken from al-Fath b. Khidhjar's al-Majdli (Constantinople 1302. 14th cent.) with which the brief history of three Djahlawards in Ibn Khaldun's Kita'at al-'Arab (Bulaq 1284 = 1867), iv. 159 may be compared. (C. F. Seydolz).

Djadur, Djéma, is the name now given to the district east of northern Djelân (cf. the article Djélan) separated from it by the upper Nahr al-Raqqah. Al-Na'ara is its southern continuation. It is only rarely mentioned by Arab authors. Yaqût distinguishes it from Djélan but adds that others combine the two districts. He also mentions it as the district in which lay Al-Baqi', the skirts (192). His statements are, however, for these districts in general, somewhat unreliable, for he says that the towns of Surman, north of al-Djéliya, and Nawat, not far to the southeast of the latter, are in the province of Hawrân. Abu T-Fid'ah on the other hand says that Nawat is a town in Djédir. The district was in the province of Damascus.

Djavân, in later times also written Djavan (according to the Armenian pronunciation), the Arabic name of the Pyramus, the eastern of the two rivers which flow through the Cilician plains. The Djavan rises in a powerful spring not far from Albitan (cf. v. Mohrke, Briefe über Zwölftage... in der Türkei, Berlin, 1895, p. 347) but soon joined by tributaries which drain an extensive area. Near Marash, where it receives the Aq. Su from the east, the river changes the southern course which it has on the whole held for a southeasterly one, and flows through the Cilician plains past al-Muşja which it crosses by an ancient bridge often mentioned in literature. Its principal mouth, which has frequently changed in course of centuries on account of the silting up of the delta, is now in a bay west of Ayas after a sharp turn to the east.

Although in the Umayyad period the lands on the Djahlau formed the boundary with Byzantine territory, the river—now usually called Djélin—did not become particularly celebrated till the Mamluk period, when it gave its name to the lands conquered by al-Nasir Muhammad b. Khalil from the Armenian kingdom of Cilicia—al-Furqat al-Djéliyanu—"the conquests on the Djélanu." It separated the Furqat al-Djéliyana in the narrower sense, the capital of which was Ayas, from the Bilad al-Djélib (see the article Darb).

(R. Hartmann.)

Djاحün, Arabie et modern Persian name of the Amu-Darya [n. v., p. 339].

Djâipur, state in Bâghpûrî, India: area, 15,579 sq. m.; pop. (1911), 2,656,047, of whom 73% are Muhammadans; revenue, about £ 4,450,000; tribute, £ 27,000. The chief is the head of the Kachhwâja clan of Rajputta, who fixed their capital at Ambâl about 1350. The family was always allied to the Moghal emperors, in war and in marriage. Both Akbars and Džâhângîr took to wife daughters of the house. Râdja Mân Singh was Akbar's most trusted Hindu general; and Râdja Džâlî Singh I, known as Mirzâ Râdja, played a prominent part in Awarâzâbî's campaigns in the Deccan. But the most illustrious of the line was Džâlî Singh II (1669-1743), known as Savâtî (= "one and a quarter"), being by a quarter son of any of his contemporaries—a title borne by his descendants. Distilled in mathematics and astronomy, he erected observatories, which still exist, at Dihil, Benares, Džâhân, and Mathura. He also collected lists of stars in the Zâd Muhammad Bâghî, called after the Moghal emperor of the time. It was he who moved the capital from Amber, and laid out the city of Dzâipur in regular lines: pop. (1911), 317,098, of whom 25% are Muhammadans.

(J. S. Cotton.)

Al-Djâfâlî (var. al-Djâfâlî), Abu Tâmil Isma'il b. Mûsâ, of Kâsir Dzâfâjî in the Dzâfîl Néfîsâ, an Ablîd Scholar, famous for his marvellous memory, taught law, literature and poetry at Ma'âlûfah. He was the author of numerous works, including the Kwâdî al-Islâm, a book which under the name "Adîd is still the canon of the Abâlîd of Dzâfîl Néfîsâ (published at Cairo with the commentary of Abî 'Abd Allâh Muhammad al-Kâshî), the Kâshâ, a religious encyclopedia in several volumes, which contains a mass of anecdotes, proverbs and quotations (likewise published in Cairo). He was thrown into prison by the Emir of Tripoli for certain violent
proposals, but liberated on the intervention of Ibn Makki, governor of Gabes, to whom he had addressed a flattering poem of which however he afterwards disowned the authorship. On leaving Tripoli, he brought the town; when it fell into the hands of the Christians (735 = 1339) this was regarded as the effect of his curse. He retired to Djerba, where he died in 750 (1349-1350) according to al-Shamakhi, or in 750 (1359-1360) according to Abu Riba, and was buried in the great mosque.

**Djaiyat** (literally "passing") is commonly reckoned as one of the Five Orders (al-Akhun al-
Ammat), in Goldziher, Zahirat Al, pp. 60 et
seq., see also Dict. tch. terms, i, pp. 379 et seq.,
as synonymous with mudahi "permitted", an
action legally indifferent, neither forbidden
nor commanded, the doing of which will
not be rewarded, nor the omission punished.
But Djaiyat is much wider, and from its meaning
of "current", "allowable", covers not only mudahi
but anything not legally hindered, thus wajibi,
manahi, and mikrabi.

Further, it can be taken intellectually as well as legally and mean what is not unthinkable, whether necessary, probable, improbably or possible (Dict. of Techn. Terms, i, pp.
307 et seq.).

**Djakat** (See Zayat.)

**Djailair**, a Maghribi tribe, cf. the article
Mongols. Hamm Benurjg (q. v.) belonged to this
tribe and Djalair is therefore also used as the
name for the dynasty founded by him in Baghdad,
which began on the death of Abd al-Salih in
736 (1335) and was replaced in 1411 by that of the
Kara Kayyahis, Hasan, who died in 757 (1556)
was followed by his son Shabik Uways (q. v.) till
776 (1374), the latter by his son Hussein (d.
784 = 1382-1383), Sultan Ahamad (d. 815 = 1410),
and Basayid and other descendants.
The name of the dynasty is brought about by the campaign
of the world-conqueror Timur (q. v.). Cf.
Cl. Hart, Monnera sur la fin de la Dynastie des
Ilhanisou.

**Djalal** (A.), "Majest"; "eminence".

**Djalal**, Bukhari, Saniyid, commonly
known as Shabik Djalal or Makhdoem-Djalalwiyun,
was the son of Saniyid Ahmad b. Saniyid Djalal al-
Dij, Bukhari, and was born in 707 A. H. (=1307
A. D.). He received his spiritual training from his
father, and from Shabik Raki, the grandson
of Bahat al-Dij Zayat (q. v.); he was made a shahid,
first in the Subhawani, and afterwards in
the Eight Order. He died in 785 A. H. (=1383
A. D.) and was buried at Umm, where his grave is
still an object of veneration. His followers, who
call themmselves Djalal, are vagabond fakirs, with
no fixed dwelling-places; they pay little attention to
prayer, drink bhang (Indian hemp), and eat
snakes and scorpions; they shave their beards,
moustaches and eyebrows, and wear glass armlets
and a woolen cord round the neck. They are
found in scattered groups in Northern India and
are said to be common in Central Asia.

slam, p. 3v.; Hadi Djalal, Sula al-

**Djalal al-Dawla**, an honorary title borne
by several rulers, for example — in addition to the
Buayid given below — the Ghasnawi Muham-
mad (q. v.) and the Murshid Nizam (q. v.).

**Djalal al-Dawla Abu Tahir b. Baba
When Sultan al-Dawla was appointed Amir
al-Umar on the death of his father Baba al-Dawla
403 = 1012, he set out the governorship of
Baghda to his brother Djalal al-Dawla. The latter
remained here for several years without taking
any part in the dissensions within the Buayid family.
In 415 = 1024-1025 Sultan al-Dawla died and his
brother Murshid al-Dawla also died in the
following year. Djalal al-Dawla was then proclaimed
Amir al-Umar; but when he did not appear in
Baghda to take up his new office, Abu Kaidjar,
son of Sultan al-Dawla, was applied to, and he
was as little able to undertake the office. When
Djalal al-Dawla learned that his name was no
longer mentioned in the Kaffah, he advanced on
Baghda with an army, but was defeated and had to
retire to Baghda. In Ramadan 428 = October
1027 he appeared in the capital, however,
in answer to an invitation from the Turks who could
not come to terms with the people of Baghda
and feared the influence of the Arabs. But friendly
relations with the Turks were not long maintained.
By the following year a revolt broke out in
Baghda and Djalal al-Dawla was only able to
restore order with difficulty at the same time.
Abdi Kaidjar won Baghda without striking a blow,
and in 430 = 1029 he succeeded in gaining possession
of Walla also. But when Djalal al-Dawla
made a raid on al-Ahwaz, Abu Kaidjar wished
to enter into negotiations for peace; Djalal al-
Dawla, however, preferred to sack al-Ahwaz and
carry off the women of Abu Kaidjar's family
prisoners. At the end of Rabii I 441 = April 1050,
Abdi Kaidjar advanced against Djalal al-Dawla but
was defeated after a three days' battle and had to
take to flight, while the latter occupied Waila and
then entered Baghda. Abu Kaidjar also was taken
but soon re-occupied by Abdi Kaidjar's troops.
In Shawwal (October) of the same year, the
latter were again defeated at al-Madbir. This town fell
into the enemy's hands but when Abu Kaidjar
sent reinforcements, Djalal al-Dawla's supporters
were driven out again. In the capital the
subordination of the Turkish mercenaries continued
to increase and the Amir al-Umar's power had been
lost the last remnants of his power. In 443 = 1052,
Djalal al-Dawla's palace was sacked, and the only
court left for him was to flee the town and go to Umm-
Barra, while Abu Kaidjar was proclaimed Amir
al-Umar by the Turks in Baghda. The latter
at this time was in al-Ahwaz and as he had no
particular ambition for the Amirate, Djalal al-
Dawla was able to return to the capital about
six weeks later where however matters went from
bad to worse. In the following year his palace
was again stormed and plundered, and for a se-
time the power now quitted helpless Buayid had to
flee. This time he went to al-Karkh, where he
was protected by the Shi'ites, and he remained here
after the rebels invited him back to Baghda. In
the same year Abu l-Kásim governor of Bâsha rebelled against Abû Kâllâjîr because the latter intended to depose him, and invited Djalâl al-Dawlah's son al-Malik al-A'zâ'î to Bâsha. But the latter was driven out in 425 = 1033-1034, and hommage was again paid to Abû Kâllâjîr in Bâsha. In the capital unbridled anarchy reigned and in 427 = 1035-1036 another mutiny broke out in the army, which was however put down by the intervention of the Caliph. In 428 = 1036-1037 Bâsha, one of the most powerful Turkish chiefs in Bagdad, whose position was threatened, called in the help of Abû Kâllâjîr. Djalâl al-Dawlah was once more driven out of Bagdad; but when he received support from Kâmil b. al-Muṣâllâh of Moulh and Dabâbîs b. 'Alî of Jîllâ and the Daffamites in Bagdad quarrelled with the Turks, he was soon able to drive out Bâsha-ghan and occupy the capital. Bâsha-ghan was captured and put to death while Abû Kâllâjîr ultimately made peace with Djalâl al-Dawlah. Their final reconciliation was speeded by the marriage of one of the latter's daughters with Abû Mansûr, a son of Abû Kâllâjîr. About the same time Djalâl al-Dawlah assumed the ancient Persian title "King of Kings", which little corresponded with his own impotence and the general chaos. In 431 = 1039-1040 or according to others 432 = 1040-1041, he had to put down another Turkish mutiny in the capital. Djalâl al-Dawlah died on the 6th Jumâdâ 1 435 = 9th March 1044. It was his reign that brought the Bâyûd kingdom to its lowest depths of humiliation.

Djalâl al-Dîn Mangâzî, the last of the Khârimâhâshî, was the eldest son of Mangâzî and had been allotted by his father the Ghûti lands he had conquered with the capital Ghurmûr, while another son Urfâshâh was appointed his successor. The Mongol conquest under Ḥâjî Khân [q.v., p. 565] rendered these dispositions worthless, for Mangâzî is said to have recognised before his death in 617 (December 1220 or January 1221) that only a valiant warrior like Djalâl al-Dîn was fitted to rule the kingdom in the dangerous situation in which it then was. But this did not please certain Turkish Amirîs, who when Djalâl al-Dîn had come to Mangâshâk with his two brothers Urfâshâh and Aqâshî from his father's deathbed on an island near Abuzkân [q.v., p. 6], formed a conspiracy to seize and kill him. Djalâl al-Dîn was just able to escape this danger by taking flight to Khozâwân, whither his brothers followed him, because the Mongols made any long stay in Khârazim impossible. But while his brothers were captured by the Mongols on the way and slain, Djalâl al-Dîn succeeded in escaping via Nishâpûr, Zauzân and Bund to Error. There he collected an army around him again and put to flight a body of Mongols not far from Farwân, but when he considered body of his troops soon afterwards left him, Djalâl al-Dîn, continually pursued by the Mongols, had to escape to India. He was overthrown by hostile troops on the banks of the Indus but escaped after a valiant defence by himself and his men by plunging his horse into the river and successfully swimming to the other side (Nov. 1221).

Djalâl al-Dîn remained in India for about three years. During this period he had many stirring adventures with the Indian rulers Shâhâm al-Dîn Hûtnîshâq [q.v.] and Kubârî, which we must pass over here, and then went to Kermân in 621 (1224) where Burûk 'Abâbî [q.v., p. 793] had made himself ruler. The latter submitted to Djalâl al-Dîn and was confirmed in his as governor of this province. Djalâl al-Dîn himself continued his journey to Fars and the Persian 'Irâq, where his brother Ghiyâth al-Dîn Fîrûzhî ruled, but soon found himself forced to submit to Djalâl al-Dîn. Ghiyâth Khân had in the meantime gone back to Mongolia, but Djalâl al-Dîn did not think of using the opportunity to restore peace and order to the devastated lands, that his father had once ruled. On the contrary he quarrelled with the 'Abbâsîs, Calîph al-Nâṣîr, and with Burûk [q.v.], the Atabeg of Ashkûrâ, and thought of having himself and his relations, the Khârimâhâshîs, proclaimed as Khân of 'Irâq. During these continual campaigns the Mongols again appeared in the lands of Islam and when Djalâl al-Dîn was preparing to fight them, he quarrelled with his brother Ghiyâth al-Dîn, who left him with his troops and retired to Kermân in 625 (1228), where he met his death through the intrigues of Burûk 'Abâbî. The result was that though Djalâl al-Dîn was defeated in the battle with the Mongols, the latter suffered such heavy losses that they did not continue the war but retired again. Djalâl al-Dîn's power thus remained unaffected and he found nothing more pressing to do than renew the siege of Khâtûkh in 626 (1229) which belonged to the Ayyâshî al-Ashrî [q.v., p. 484], whom he previously attempted to take. This time he was successful in taking the town, though after a six months' siege. The negotiations, which he entered into during this period with the Sâñîdîs of Ashîn Minor, Kâlûzîd, were so far from being successful in their object that the latter took the side of al-Ashrî and the two princes took the field against him, who, defeated in his being severely cut to pieces (627, 1230) near Aregâb. But peace was soon afterwards agreed to in view of the common danger from the Mongols, but when in the following year the Mongols actually appeared again, Djalâl al-Dîn was not able to collect an army to drive them back. Accompanied by a few faithful followers he was able to escape his enemies, who followed him everywhere, for a period, till he was finally captured by a Kurd and while he was living in the latter's house murdered by another Kurd in 628 (1231).

Tornbø), xil. 236 et seq.; Djalâlî, Thala'îlî Nâṣîrî, Text and Transl. by Raverty; Djuwâî, Tâbâdî Li'lâyûhûlî, only partly edited by Schœfer, Christiâtholoique persane, ii. 197 et seq.; D'Ohsson, Histoire des Mongols, i. 355 et seq.; ii. i et seq.; Müller, Die Islam im Mongolen- und Abûlî, ii. 214 et seq.; Barbozî, Türkistan u ıpûlî mûnûzîbû devgî mahaziyya, ii. 400 et seq.

Djalâl al-Dîn Rûmî, one of the great mystic poets of Islam, was born at Balkh in 604 (1207). His family claimed descent from Abû Bakr and was connected by marriage with
As a poet. His teaching is that of Sufism, expressed with glowing enthusiasm; it is not systematically expounded and the thought is sometimes carried away by the lyrical fervor; to reconstruct this philosophy, it would be necessary to collect the elements, which are scattered throughout the book and formulate a number of principles from them.

As amongst other Sufi writers, many Neoplatonic ideas are found in Rumi; others are closely allied to those of Christian mystics; some are very boldly expressed, which may be traced on account of the poetic form. As an example of the last we note this thought, delicate enough in sodic, that even evil contributes to the glory of God, that it makes part of his perfection; a painter who wishes to represent the ugly, shows skill if he renders it in a hideous fashion: *The ugly says: O King, Creator of the ugly, you are as powerful in the beautiful as in the ugly which is despised*. — Another very bold idea is that of an old Shāhīk who says to the Sufi Bāyatīzadī, when he was going on a pilgrimage: *Go and inform me; that will be equivalent to going round the Ka'bah;* although the Ka'bah is the house of God, destined by himself for the accomplishment of religious rites, my being is superior to it as the house of his secrets*. — The episode of Moses and the hardiman has often been quoted, in which the author appears to teach that the manner of expressing the religious feeling is of no importance, that rites and formulas are nothing and that the feeling is everything: *What can words do for me?* says God to Moses: *it is a glorious heart that I want, inflame the hearts with love and pay no heed to thought or expression*.

Another well-known passage is one that contains a kind of doctrine of transmigration: *I die as a stone and become a plant; I die as a plant and am raised to the rank of an animal; I die as an animal and am born man ... dying as man, I shall come to life again an angel ... I shall even transcend the angel to become something no man has seen, and then I shall be the Nothing, the Nothing*. And lastly this curious pantheistic fragment, in which the poet identifies himself with all nature: *I am the mote in the sunbeam; I am the ball of the sun; I am the glow of morning; I am the breath of evening, etc.*,

Horn, Geschichte der Persischen Literatur (Leipzig, 1891), pages 161-168; Carra de Vaux, Ctesid (Paris, 1892), pages 291-306; Clément Haury, Koniah, La ville des Derviches Tennerouz (1883); and cf. the article SHAMS AL-DIN TAPRIZI. (R. Carra de Vaux.)

Djalalabad, town in Afghanistan, near the Kabul river, almost half-way on the main route from Peshawar to Kabul, headquarters of a large district of the same name; permanent post, established at only 2,000, but this number increases ten-fold during the winter, when the Amir often takes up his residence here in a fine palace built in 1802. It takes its name from the Mughal emperor Djalal al-Din Akbar, who is said to have founded it in 1570 A.D. It is famous in history for the defence of the garrison under General Sale during the winter of 1841-1842, when the rest of the British army had been destroyed.

Djalal al-Din al-Shirazi, Pers. 'Abd-i-Ghalib 'Ali Shir 'Abd al-Rahman (1235-1310) is so-called after the Saljuq Sultan Malik Shh Alp Arslan, who in 467 (1074/1075) called a conference of astronomers, among whom was the famous mathematician and poet Omar b. Iththam al-Khayyam [q.v.], at his newly erected observatory (the site is uncertain, Isfahan, Rayy or Nishapur are possible) and commissioned them to regulate the ancient Persian calendar again and bring it into agreement with the results of astronomical observations and calculations. The existing Persian system (the era of Yezdegird) was as follows: the year had 12 months of 30 days each and the five odd days (al-mustara'ah, Pers. andargah) were added to the eighth month (naww) as intercalary days. But as the year has approximately 365 1/4 days, the error amounted to one day every four years and one month in 120 years. So that one month was intercalated every 120 years and the 120th year therefore had 13 months (for the various views on this intercalation see the sources quoted below). In this calendar, which was however driven much out of use by the Muhammadan after the Arab-conquest, the error was the same as in the Julian but it was inferior to the latter in this respect that an adjustment was not made every four years but only every 120 years. — We are not quite clear as to what change was made by Djalal al-Din's astronomers. Authorities are not agreed that they retained the 12 months with the 30 days each and their old names, as well as the five intercalary days, but these were added at the end of the twelfth month (Astagandarmagh, Arab. Isfandormagh) and that a further intercalary day was now inserted every four years (where is not known, probably after the five days). Two different and not quite clear accounts exist of the institution of the cycle after the expiry of which an adjustment with the true time would be reached: according to Ulugh Beg (died 1449) where this intercalation (one day every four years) had been repeated six or seven times, it was postponed to the fifth year (instead of to the fourth); according to Kuth al-Din al-Shirazi (died 1311) it was not postponed till the fifth year, the seventh or eighth time. This statement cannot be otherwise interpreted than as has been done by Ideler and other scholars, namely, that from the beginning of the era the years 4, 8, 12, 16, 20, 24, (according to al-Shirazi 28, also) were leap years of 366 days, but after that the next leap year was 29 (or 33), followed by 33, 37, 41, 45, 49, 53, 57, then the next leap year was not till 62 (according to al-Shirazi 37, 41, 45, 49, 53, 57, 61, 65, 69) the cycle was then repeated again in the same way. According to Ulugh Beg, whose account is probably the correct one, there would be 13 intercalary days in 62 years, which would give an average year of 365.241935 days (the correct length is 365.2422), the error would therefore be one day in about 3770 years, while in the Gregorian calendar it is one day in about 3330 years. The Djalali calendar would thus be somewhat more accurate than ours, not as Ideler has stated, less accurate, because it has taken the average length of the tropical year at 365.2422. On the other hand we must also admit that it is somewhat too complicated; but on the other hand the equation to true time is made in a much briefer period than in the Gregorian calendar, viz. in 62 instead of 400 years. — If Kuth al-Din al-Shirazi's account were the correct one, there would be 17 intercalated days in 70 years, which would give an average year of 365.24285 days, with an error of one day in c. 1540 years. — In his translation of the Prolegomena to Ulugh Beg's tables, L. A. Sehillot has thought the accuracy of the Djalali calendar was still higher, but here he is wrong: a summa cycle of 101 years with 39 intercalated days, which gives an average year of 365.242235 days, so that an error of one day would not be made for 28,000 years. Although 39 intercalary days appear in 101 years of the Persian calendar, this number does not however complete a cycle, which is only done by 3X62 or 186 years and the 25 years which follow the 101, increase the error with their 6 intercalary days. — The Annuaire du Bureau des Longitudes, (for 1851) and following it a number of modern astronomers thought that a cycle of 33 years with 8 intercalated days could be recognized in the Persian calendar, which would have been the most accurate of the calendars yet devised, with an error of only one day in c. 5000 years. This cycle was obtained by the assumption that an intercalary day was inserted every four years for seven times and for the eighth time only after the fifth year; this result cannot be obtained from the statements of Ulugh Beg and Kuth al-Din, as we possess them; but it is by no means impossible that errors may have crept into these accounts and that the Persian should read: "when this intercalation has been repeated six to eight times", in place of "six to seven times" or "seven to eight times"; for in Persian the numerals haft (7) and bost (8) are easily confused, as in Arabic are the figures for 6 and 7 (the letters مش and س). We would thus have 16 intercalated days in 66 years, or 8 in 33, which is the same thing. But it is not easy to understand why the Persian astronomers should have decided on this complicated method if they could obtain the same accuracy with a simpler mode. But on the other hand we must grant that the table in the Prolegomena to Ulugh Beg's tables, for the sum of the days in the years 1 to 1000,
agrees better with the assumption of 8 intercalated days in 33 years than with that of 15 in 62 years. Ginzai has proposed another hypothesis which Matzka has given in his *Die Chronologie der gesammten Umfahrung* (Vienna, 1844), namely, that there were seven cycles of 33 years with 8 intercalated days in each cycle combined with a 37-year cycle with 9 intercalated days; this gave an average year of 365.24257, which agrees to five decimal places with that given by Ulrich Begg. — The Persian astronomers took as the New Year's Day (Nawri) i.e., as the beginning of the new era, the 10th Ramazan 471 A.D. = 29 March 1079, on which day the sun entered the sign of Aries. Whether this era ever attained any vogue alongside of the Mahanmadan, and how long it survived, cannot be ascertained from the authorities; Ideler however mentions that the poet Sa'di (d. 1265) in his *Gulistan* praises the month Asdihahiyyah Djalali, i.e., the second month of the Djalali year (middle of April to the middle of May) as the finest season of the year.

**Djalalzade Mustafa Celebi,** known as *Khali Nishandji,* belonged to Tousia in Asia Minor. He was the father of the office of Kapitän in the Imperial Dowlah, who accompanied the Grand Vizier Ibrahim Pascha on his mission to Egypt in 930 (1524) (v. Hammer, *Geschichte des Osm. Reichs*, iii, 39 et seq.) and on his return was appointed *Râti* al-Kuttab (Secretary of State). In 931 (1525) he accompanied Sultan I on the Persian campaign and was promoted on this occasion to be Nishandji (Keeper of the Great Seal, *tekkib*) which office he held till 964 (1555-1556), supported by the favour of Ibrahim Pascha, whose candidate he had become, and of the Sultan. This year, while holding the office of *mehfisrabaugh* (chief king's messenger) he resigned that of nishandji, at the instigation, it is said, of the Grand Vizier Rustam Pascha who was not well disposed to him. During Sultan I's last Hungarian campaign in 974 (1566), on which he accompanied him as *mehfisrabaugh,* he was again appointed to the office of Nishandji: he only survived the Sultan a year and died in Râti' ii, 975 (beginning 5th October 1567), on the chronogram in his epitaph in *Hezkayat al-Dalîlah,* v, 292. The Turks speak highly of Djalilzade as a brilliant stylist and an extremely capable official. In the offices of Râti Efendi and Nishandji he was entrusted with important negotiations with foreign states (v. Hammer, *Geschichte des Osm. Reichs*, iii, 131, 159; Cornelle de Schepper, *Missiones Dipl.*, 137 = Gwos, *Urkunden*, etc., ii, p. 20) and he obtained an insight into all the branches of the state. He took advantage of his opportunities to write a history of Sultan I, planned on a large scale, the *Tabegh al-Muallih ma Darawijt al-Muâllih,* only a part of which was completed; it comes down to the year 962 and the author had finished the earlier part by 941 A.H. (v. Hammer, *Geschichte des Osm. Reichs*, iii, 138 et seq.). We also possess from his pen a very remarkable history of Selim I (Mu'azzar Selim-Kâbe); considerable extracts have survived of his edition of the laws *Kanûn-i Nûme,* which Ewlija Efendi, i, 171, and Peçevi, i, 43, mention as a separate work. A translation of Maskin's Persian biography of the Prophet, *Mu'azzar al-Nûme wa Mu'azzar al-Fatihâm* and an ethical work *Mawâhib al-Kâfeel wa Tamrât al-Kafalât* are also attributed to him. His poems, in which he calls himself Nishandji, are scattered throughout his historical works. He built a mosque in the Aliye suburb, which is known as the Moalla of Nishandji (Hulfaç, loc. cit.).

**Bibliography:** In addition to the works quoted: Rieu, *Cat. of the Turk. Manuscr. in the Brit. Mus.*, p. 49 et seq.; Khâlifat al-Rasul, i, 5 et seq.; Lâlî, *Lâm*, 335 (ed. 1314 H.); Tashkoprânta, i, 105. (J. H. Mormann.)

**Djalili,** a Turkish poet of Brusa, who had adopted the same name as one of his less known predecessors, the one of whom belonged to Brusa, and the other to Adrianoepolis. He was the son of Hamili and was long in Constantinople the poet Ata's inseparable companion in his banquets; in his native place he was looked upon as a madman. He lived in the reign of Sultan Sulaiman I, was the contemporary of Bilgi (q. v., p. 603) and left two long poems in complete, *Laila u Majnun* and *Khanour a Shirin,* his numerous ghazals are collected under the title *Shâhâb e bâd hâr*b. A translation of the *Shâhâbânah* ascribed to him probably never existed.

**Djalula,** (also *Djalula*), a town in the *Trâk* (Babylonia) and, in the medieval division of this province, the capital of a district ( *masihâ*) of the circle Shâhpâhâbâd in the Eastern Tigris valley. Djalula was a station on the imperial Khwâroon road, the main route between Babylonia and Irān and was about equally distant (7 parsegs = 28 miles) from Dastâlî (q. v., p. 926) in the S. W. and Khâlînī in the N. E.; it was watered by a canal from the Dîyâla (q. v., p. 981) (called Nahâr Djalula), which again joined the main stream farther down at Bâdîjâr (q. v., p. 558). Near this town, which seems from the statements of the Arab geographers to have been quite important, a severe defeat was inflicted by the Arabs on the army of the Shânîdân king at the end of the year 16 (= 637 A.D.). According to Mâstawî (q. 740 = 1340), the Sallek Sultan Malikzâd (465-485 = 1073-1092) built a watch-house ( *ribāb*); popularly *ribâb* which probably also served as a caravansari in Djalula; after his time the place was usually called Ribât Djalula. This statement helps us to locate the site of Djalula with certainty; for there can be no doubt that Ribât Djalula is identical with the modern Kūrâb-robât; besides, the distances given by the Arab geographers for Djalula, also ant Kūrâb-robât; its geographical position is: 34° 10' N. Lat., 45° 30' E. Long. (Greenw.); it lies within the mountains, at the east end of the pass through the Djebel Hamrin. The Dijâla flows past at some distance to the east of the town. The name Kūrâb-robât, popularly corrupted
after a brief stay in India and Cairo, where during a fortnight's stay he came in contact with the Ashur circles and held private lectures in his dwelling, he reached Constantinople (1857 = 1840). As a great reputation had preceded him, a very hearty welcome awaited him at the hands of the leaders of society in the Turkish capital. He was soon appointed to the council of education and invited to deliver public lectures in the Aya Sofia and the Ahmadiyya Mosquée. A lecture for students delivered by him in the Datar al-Fursan before a distinguished audience, on the value of the arts, in which he maintained the gift of prophecy among the various social activities, gave Hassan Fahmi, the Sheikh-islam, who was jealous of his growing influence, an opportunity to charge him with revolutionary views; he had classed prophecy among the arts.

On account of the intrigues of his opponents against him he had therefore to make up his mind to leave Constantinople and go to Cairo, where he was very kindly received by the authorities and educated classes. The government granted him an annual allowance of 12,000 Egyptian pounds without binding him to any definite official duties. He was free to instruct the young men eager for knowledge who gathered round him at his house and in unreserved intercourse in the higher branches of science and literature and at the same time pointed out to them the way toward literary activity. In politics also he influenced these around him in the direction of a nationalist revival and liberal constitutional institutions; his activity was not without influence on the nationalist movement which came to a head in 1882 and led to the bombardment of Alexandria, the battle of Tell el-Kebir and the English occupation. Shortly before this, in 1879, the influential agitator, whose political activities were as inconvenient to the representatives as his regeneration of philosophical studies had been irritating to conservative circles at the Ashur, was at the instigation of the former deported and detained in India (Haidarabad, and later Calcutta) until, after the suppression of Arab's rising, he was allowed to leave India. During his stay in Haidarabad he composed his refutation of materialism (cf. the article DARRIYA, p. 894). From a memorandum by W. S. Illingworth, who was interested in Egyptian politics (in Browne, p. 401) we learn what is not mentioned by other biographers, that Djamal al-Din went from India to America, where he spent some months in order to obtain naturalisation as an American citizen without however carrying out this intention. In 1883 we find him for a brief period in London, soon afterwards along with his friend and devoted pupil, afterwards the Egyptian Matti Muhammad 'Abduh, in Paris where he devoted his literary activities to giving vent to his disapproval of English intervention in the affairs of Muhammadan peoples. The most prominent and influential newspapers opened their columns to his essays, to which much attention was paid by competent authorities, on the Oriental policy of Russia and England, conditions in Turkey and Egypt, and the meaning of the Mahdi movement which had meanwhile arisen in the Sudan. To this period also belongs his polemic with Ebenezer Kenan, arising out of the latter's Sorbonne lecture on 'Islam and Science', in which he stated that Islam did not favour scientific activity; Djamal al-Din sought to refute this in an article which first appeared in the Journal des Débats, also in German, see BIBL.). It may be mentioned in passing that, soon afterwards, Kenan's lecture was translated into Arabic by Hassan Efendi A'sim and lithographed in Cairo (n.d.) along with a refutation (radd). The greater part of Djamal al-Din's literary and political activities in Paris were however devoted to an Arabic newspaper published at the expense of a number of Indian Muhammadans in conjunction with Muhammad 'Abduh, (as actual editor), entitled al-Imarat al-Wilayat ('i.e. Lien Indissoluble') which unsurprisingly criticized English policy in Muhammadan countries (particularly India and Egypt); the newspaper, the first number of which appeared on the 15th Iqamada I. 1301 (13th March 1884) was suppressed by the English authorities in the East, its introduction to Egypt and India prevented, and it was only possible by sending it under cover post for it to reach those whom it was intended to influence (information supplied by Djamal al-Din himself). Although as a result of these obstacles it was destined to but a brief existence (Djamal al-Din and Muhammad 'Abduh brought out 18 numbers in 8 months, the last appearing on the 26th Din I-Ilhada 1302 = 17th October 1884), it exercised great influence on the awakening of liberationist anti-British views in Muslim circles and may be considered the first literary bodystoner of the nationalist movements in the Muhammadan territories of England, which were gradually strengthened by it. That its authority is not lessened at the present day, may be concluded from the fact that quite recently (1928 = 1910) after the lapse of a quarter of a century a new edition of the 'Wilaya has been prepared by Husain Mahfizl al-Din al-Hashabi, editor of the 'Abdalah newspaper (printed by Nabil Efendi Sihab).

But in spite of his frankly acknowledged Anglophobe agitation, through the intervention of W. S. Blunt, the leading statesman of England entered into personal relations with Djamal al-Din with the object of putting down the Mahdi movement in the Sudan but no practical result was attained. Soon afterwards (1886) Djamal al-Din, whose agitation for the awakening of the Islamic peoples was penetrating far and wide, received a telegraphic invitation to the court of Shih Zain al-Din Tchahma, where he had a most distinguished reception and was shown great honour and granted high political offices. But this did not last long as the Shih soon became suspicious, became tired of the increasing influence and growing popularity of his guest and Djamal al-Din had to leave Persia under pretext of considerations of health. From there he went to Russia where he again entered into important political negotiations and remained till 1887. On the occasion of his visit to the Paris Exhibition of 1889 he met the Shah, then in Europe at Munich and was induced by him to accompany him to Persia. During his second stay in Persia he experienced the fickleness of the Oriental ruler's favour in a still more marked fashion. At first he enjoyed the Shah's full favour and confidence, but the intrigues of the Grand Vizier Mirza 'Ali Asghar Khân, Amir al-Salih, who had a grudge against Djamal al-Din and felt he had a rival in the learned and popular

64
stranger, succeeded in procure the Sultán’s mistrust, to which the reform in the administration of justice proposed by Djalal al-Din largely contributed. Recognising the danger of his position, he now retired to the sanctuary of Sultán Abd al-Ázíz near Teherán, which was considered an inviolable asylum where he remained for several months, surrounded by a body of admirers listening to his views on the reform of the down-trodden country, until the Sultán incited by the Grand Vizir, disregarding the undisputed inviolability of the sanctuary had him seized (about the beginning of 1894) by 500 armed cavalry and in spite of his invalid state carried in chains in the middle of winter to the town of Khánkhán on the Turco-Persian frontier. From there, after a brief stay in Bjeza, he went to England again, where he conducted a great agitation in lectures and articles against the reign of terror in Persia. Djalal al-Din’s cruel expulsion from Persia was a signal in the country for a rally of the reform party and its open activity, which was continually encouraged by Djalal al-Din himself in letters, which he sent to influential individuals after his deportation. A special incitement to action was given by the Tobacco Concession granted in March 1890 by the Persian government to an English financial group, whereby the state resourced on important source of revenue in favour of foreign speculators. This gave Djalal al-Din an opportunity to write an impassioned letter from Bjeza to Mirzá Hásan-Áli Shírází, the first Mufti of Semnán, in which he called attention to the squandering of the properties of the state on the “enemies of Islam,” as the economic supremacy of the Europeans had already been brought about by important concessions and now the tobacco monopoly in Persia was further to be handed over to them. He also referred to the misrule and cruelty of the government, particularly of ‘Áli Aghá Khán, in order, by repeatedly emphasising religious motives to arouse this high ecclesiastical dignitary and his colleagues to active intervention in his name against this religion (this letter may be found in Arabic in Manár, v. 326, et seq., and in English in Browne, op. cit. p. 15–21). The immediate result of this step was a forced from the Muftihábíd, forbidding the enjoyment of tobacco to every believer, as long as the government did not annul the concession agreement. It was thus forced to do this on paying a substantial indemnity to the concessionaries, as a result of the resistance of the people. The reform movement which soon afterwards assumed great dimensions and was supported by religious circles in Persia, is also connected with Djalal al-Din’s agitation, another result of which was the murder of the Sultán by Mirzá Muhammad Rízíc, a disciple of Djalal al-Din (11th March 1899). During his brief stay in London (1892), during which he was most active politically, he received through the Turkish ambassador, Bástan Pásha in London, ‘Abd al-Hamid’s written invitation to settle permanently in Constantinople as the Sultán’s guest. He accepted the Sultán’s offer not without reluctance. Besides a monthly allowance of £ 75 Turkish, a beautiful house on the Níftihlib hill near the Imperial Yildiz palace was allotted him, where he was able to live in princely comfort and meet people who sought his inspiring conversation. Here he spent the last five years of his life.
Muhammad had moved from this neighbourhood to that of Herat. On this account the poet, before he adopted the tābālīyat Djamād, used for a period in his works that of Daghāi. In the course of his studies, he was seized with an uncontrollable passion for mysticism and chose as his spiritual guide, Sa’d al-Dīn Muḥammad ibn al-Khaṅghā, pupil and successor of the great saint Bahā’ al-Dīn Nakhjavānī. Towards the end of his life he went quite mad and became dement (Dawlat-Shāh, p. 485, l. 13 et seq.).

The volume of his work is considerable and varied. He took up a theme of the court style, already powerfully handled by Firdawṣī, Tyrūk al Zhulaykā (ed. with Germ. transl., by Rosenzweig, Vienna 1824; English translations by Griffith, London 1881, and Rogers 1885; numerous Oriental editions), and it is a product of his old age (he was seventy when he wrote it) and was dedicated to Sultan Ḥusayn Mīrān, ruler of Khorāsān. This poem has been included with six others (Siwāsul ‘Albān, Sedāyat al ‘Abbās, Tahqīq al ‘Albār, Sulḥat al-‘Abār, Latīf al-Majmū‘a, Khwarāzmiyāt Sīhāndust), in the collection known as the Haft Avrang (more correctly hafta wārang). "The Seven Stars of the Great Bear", when these poems, exclusive of the first two, are published together, the collection thus formed is called the Pashandū "Vesuvius of the Five成交量s. In the field of lyric poetry, he left three Divāns: Fā’l al-‘Ashūb (Beginning of Youth) (884 = 1479), Waṣīr al-‘Ashūb "Central part of the Chain" (894 = 1489) and Khāqānat al-Hayāt "Close of Life" (896 = 1491), from which the dates, he seems to have published at an advanced age. Finally he wrote in prose the Baharīyat, an imitation of Sa’d’s Gullūsān and the Nafṣat al-Dīn "Zephyrs of Intimacy" biographies of Siwās (883 = 1478). His Khulasāt, or complete works, were lithographed in Lucknow 1879.

**DIJAMI** is a state in Sumatra (q.v.).**DIJAMĀR,** (a contraction of dijamāt-ārā, "a chief of state") the jurisconsults of the Sultan’s staff, who were perhaps employed in personal service at the court. They were divided into seven troops (aṭāb) (see Khaṭ al-Zuhīr, Zād al-Dīn, ed. Ravaissé, p. 166). Djamār is also the title of one of the higher ranks in the army in Hindustān, Hindustān and Muiṣīr.\footnote{M. Soebennik.}**DIJĀMÉ** is a Persian poet, usually described as the last of the classic poets of Persia, was born in Khorāsān in the district of Djam in the province of Herat on the 25th Shaban 817 (9th November 1414) and died at Herat on the 18th Muharram 898 (9th November 1492). His family belonged to Daghāi, a district in the province of Ispahan; his father Niṣām al-Dīn Ahmad b. Šams al-Dīn al-Mawlna Nūr al-Dīn ‘Aṣad al-Raḥmān, a Persian poet, usually described as the last of the classic poets of Persia, was born in Khorāsān in the district of Djam in the province of Herat on the 25th Shaban 817 (9th November 1414) and died at Herat on the 18th Muharram 898 (9th November 1492). His family belonged to Daghāi, a district in the province of Ispahan; his father Niṣām al-Dīn Ahmad b. Šams al-Dīn al-Mawlna Nūr al-Dīn ‘Aṣad al-Raḥmān, a Persian poet, usually described as the last of the classic poets of Persia, was born in Khorāsān in the district of Djam in the province of Herat on the 25th Shaban 817 (9th November 1414) and died at Herat on the 18th Muharram 898 (9th November 1492). His family belonged to Daghāi, a district in the province of Ispahan; his father Niṣām al-Dīn Ahmad b. Šams al-Dīn.
Djamil, the Arab poet, who lived in the first century of the Hijira. We know very little about his life. This is partly due to the fact that he had no permanent abode but led a wandering life along with his tribe the Banu 'Udhra, which had a reputation for depth of feeling. His love affair with Banitha or Bintintah, a member of his tribe, who — for a period at least — lived in Walid's court, is famous. He wooed her as a young man, but was rejected by her father. Nevertheless, he still kept up secret relations with Banitha, even after she had married a certain Nausith. Banitha's male relatives, the Banu 'Udhra, then instigated the prefect of Walid's court (according to another version of al-Madi'in) against him, and Djamil had to flee. After many wanderings he is said to have died in Egypt in 82 (701) where he had gone after the manner of the poets of the time, to write panegyrics on the governor of the province, 'Abd al-Aziz b. Marwan. Banitha survived him.

Djamil is further distinguished as a panegyrist. A poem by him in honour of the tribe of Lusinjum, to which his mother belonged is said, for example, to have earned him a rich reward. On the other hand his lampoons were much dreaded. His long feud with the Banu 'Abd al-Malik was particularly celebrated. But it is pre-eminently as a writer of love-poems (wasi'il) that he lives in the memory of posterity and Djamil's verses (all the Banu 'Udhra) are really among the most beautiful and tender that have survived to us from the older period of Arabic poetry, when it was still uninfuenced by the Persians. He is perhaps surpassed only by 'Umar b. Abi Rais among his contemporaries. It is quite credible that Arabic authors are right when they insist, in discussing Djamil, that his verses and protestations of love were the expression of his personal feelings. They are remarkable for their simple unaffected language and is it not by next to their aesthetic value — the reason why they have been set to music and sung by so many Arab singers.

We may farther mention that Djamil, in addition to writing himself, also handed down the poems of Hadiya b. Khaishan; his own reciter (fwm) was the poet Kuthayr (c. v. 3).

Bibliography: Aghmil (1st ed.), v. 34; viii, 77–110; viii, 40; xii, 112; Ibn Kaysa, Kirda al-Sab' (ed. de Goeje), p. 260–268; Ibn Khallikan (ed. Wustenfeld), No. 141 (transal. by de Shale, l. 331–337); Brockelmann, Gesch. d. arab. Literatur, l. 48; specimens of his poetry are also given in Nidāzze, Dicapec, p. 9–13, 34.

Djalīla, a celebrated Arab singer, who lived in the time of the early Umayyads. She was a client of the Banu Sulaim, married a client of the Banu 'Udhrah b. Al-Khazraj and lived with him in Al-Sabah near Madina. She is said to have learned music and singing in her youth from the singer Sa'id al-Khattar, by listening to him without his knowledge. It is of chronological importance to point out that this Sa'id al-Khattar, another of whose pupils was the famous singer Azzaz al-Malakk (q. v.), p. 542] met his death in the battle on the Hurras in the year 63 (682-683). (Aghmil, viii, 188.) Numerous singers, both men and women, were trained in Djamil's school — she was a most celebrated teacher. The best known are: Ma'had, Ibn 'Aliba, Habibah, Salama, etc. She is said to have been a friend of Banitha, the beloved of Djamil (q. v.). Many celebrated poets, such as 'Umar b. Al-Khafifi, al-'Awha, etc., were also on intimate terms with her. A pilgrimage to Mecca, which she undertook, and which, according to some, to believe a very unreliable story, was the nature of a triumphal procession.

Al-Djaml, originally a problem, is particularly used of the heaps of stones in the valley of Minä which have been formed by the stones thrown by the pilgrims returning from the festival at Arafát. There are three heaps which are a bowshot from one another: al-Djaml al-Kabir (or al-Djaml al-Mas'ūd) to the east near the Mosque of al-Khafif, al-Djaml al-Mawṣela in the centre and al-Djaml al-Shāfī at the western exit of the valley. The first two are bordered by thick stone pillars and the third by a wall. Al-Mudhabbat is also used for al-Djaml but it is also the name of a plain between Mecca and Minä. On the third or western heap pilgrims throw seven stones immediately before the sacrifice on the 10th Dhu 'l-Hijjah, and visiting Mecca they again return to Minä and on each of the three Ta'arikh days at sunset throw seven stones on each of the three heaps. At each stone is thrown, they pray: "in the name of God! God is great!" The pilgrims ought to provide themselves with stones beforehand but, according to Burckhardt's account, they do not trouble to do this and take the stones thrown by others. Among the most poetic poems of the Umayyad period, the ceremony of stone-throwing was a favourite wasi'il as women when performing it, lifted their veils a little (e.g. Kifāb al-Aghmil, vi. 30, Vahl, tr. 427; Muharrak, Kamāl, ed. Wright, 166, tr. 379, etc.).

This peculiar custom, which is not directly prescribed in the Korân, but is mentioned in the biographies of Muhammad and in the Hadith (e. g. Ibn Hisham, 970; Wāhidī, Wellhausen, p. 417, 428 et seq.; Ibn Sa'd, 1, 1, p. 123, v. 224 et seq.) was taken over by Islam from paganism. In heathen times, there were, according to Ibn Hisham, 534, 19 (where one should read 534 with Wellhausen), blood-stained sacrificial stones near the heaps of stones; cf. also the stones which were worshipped at al-Muhāqal in a poem by al-Farazdaq (ed. Boncher, 30). As to the meaning of the ceremony Burckhardt's observation, that the Muslims wished thereby to protect themselves from the Devil, is certainly correct, so far as the stone-throwing was originally here as elsewhere a cursing ceremony.

But what was to become accepted thereby is not clear. Van Vloten suggested the withdrawal of the place, thinking of the story in Ibn Hisham, 500, 5. Heusner on the other hand, following his view that the Hijāj is originally an autumnal festival, sees in the healing who is cursed and banished the sun, which was occasionally called al-Shajah by the Arabs (Goldzaher, Al-Tadmur, in C. Philol., l. 313). The question of course can only be settled in connection with a discussion of the whole Hijāj (see this article). The fact that at the principal festival stones are cast only on the Al-Aqab heap, while it is not till the final celebrations that they are cast on the other two,
suggests that the two latter are of quite secondary importance, for which idea one might also adduce the description of Abī Bakr's pilgrimage in Wākīlī (Wellhausen, 417). But we must not overlook the fact that not only does the above mentioned verse in Ibn Hishām speak of several other heirs beside the sacrificial stones but Hasūn b. Tālib in a lament on the Prophet (Ibn Hishām, 1023, v.) calls the Ḍajabha Ḍajabnān in al-Kabrāb, which seems to suggest the existence of other heirs.

**DIJĀN** (Vedic, Śrayaṇa), life, soul in the sense of vital principle (prana). (Cf. H. H. c)

**DIJĀNĀR,** properly "side," "district," has become a title of honour, "highness, excellency." It is found in a metaphorical sense in Mahārī: Ḍijānār al-Safārīn the "majesty of the divine law" (Sacy, Christ. Arab., Vol. II., p. 64 of the text at l. 11). (Cf. H. H. c)

**DIJĀNĀB,** the so-called "major" ritual impurity. One who is in this uncleane state is called ḏいます and can only become "clean" again by a ritual ablution (ʿibād). On the other hand the law only recognises one Muslim in a state of so-called "minor" impurity (ṣawād) (minor ritual ablation). The distinction is based on the different beginnings of verses 8 and 9 of Surah V. of the Korān. Ḍijānāb is the uncleane condition described in the ninth verse: "When ye have had marital intercourse with your wives, purify yourselves!" The law further prescribes that any effusion or seminates shall be considered the same as marital intercourse.

The ḏいます cannot legally perform a valid qādāt. Neither can he make a ḏawrī around the Kaʿbah nor stay in a mosque — except in cases of necessity. The ḏいます is further forbidden to touch copies of the Korān or quote verses from it under his uncleane condition.

Ḍajīb is also called "the major ḏūrāhī" in opposition to minor ritual impurity.

**Bibliography:** The chapter on purity in the collections on Tradition and the Fīqh books; L. Goldscheider, Die Zahrīten (Leipzig 1884), p. 31 sqq. (Fr. W. J. K.)

**AT-DIJĀNĀHIYA,** the followers of Abī Abd Allāh b. Muʿāwiya [q. v., p. 26] are so called after the founder of the family, Dijānāb b. Abī Tālib [q. v.], to whom Muʿāwīya had given the name Dhu l-Ḍijānābīt, when he had fallen in the battle of Muʿātta. This also explains the name al-Ḍijānāhī (al-Ḍijānāhī f. l-Diṣāhī) in Ṣaftār al-Ḍajībī, ed. von Vloten, p. 31. His son Abī Abd Allāh [q. v., p. 26] is frequently celebrated in story for his generosity and the grandur Muʿāwiya also was held in high esteem in Shīʿite circles — cf. the poet al-Kutbī's mention of Al-Ghāri in viii. 34. This explains the success of his son Abī Abd Allāh when he appeared as imām and shows that the Dijānābīs formed a separate section of the Shīʿites, who were attached to the family of Dijānāb b. Abī Tālib in the early days of Islam. As regards dogs, they are distinguished by the doctrines of incarnation, metamorphosis and allegoristic exposition of the Korān just as these were adopted in other Shīʿa circles also.

**DIJĀNBAṬĀL,** Abī Abd Allāh b. Muʿāwiya, known as Bāṭāl, was one of the Grand Dāwūd b. Yashbēk's Mandāhī and is therefore also known as Dijānbal b. Yashbēk. (The placing of bīn between two proper names always denotes the relation with the Mamlik (the first proper name) to own (the second proper name) and is identical with the personal bīn; thus, for example, Ibn Ṣāfī al-Dīn b. Ṣāfī al-Dīn, is called Abī Ṣūr b. Ṣūr and Ṣūrī b. Ṣūr; the manuscripts no longer fully understood this meaning and thus a mistake has arisen in all the European works which deal with the Mamlik period. Ibn was written for bīn. A Mamlik, for example, who is called 'Abī Abd Allāh b. Abī Abd Allāh i.e. of unknown parentage, cannot of course at the same time be called the son of Yashbēk; the manuscripts, which have been preserved from the Mamlik period itself have always correctly written bīn, my Inscr. de Tripol. 64 in Mémoires de l'institut français d'archéologie en Orient, Cairo, xxv. fasc. 1, 1907, V. Yashbēk sold him to Ṣūr b. Ṣūr, who enrolled him in his guard. He became Dāwūd b. Ziyād (q. v., p. 931) accompanied the pilgrims' caravan to Mecca on several occasions, was afterwards sent as ambassador to Bāyazīd's court and ultimately received the important office of Purchaser of Manūkhs (Ṭāfīr b. Mahāmāt). Kālībey's son, al-Mallik al-Nāṣir Muḥammad, appointed him Grand Dāwūd in 902 (1493) he was appointed. Ṣūr b. Ṣūr b. Yashbēk was not recognised by Ṣūr b. Ṣūr, the powerful governor of Damascus and the high officials in Cairo rebelled against him. When the Manūkhs also no longer stood by him, he was seized by his opponents at Dijμān. His last days were spent in captivity. He died in prison there. His reign had only lasted six months.

**DIJĀNBAṬĀN,** Persian plural from dijan, "one, who risks his life!" (in Turkish: rope-dancer, juggler, circus-rider; thence *horse-dealer", *trick-
Djanba — Djanna.

Djanba (also known as Djanba or Djanna) is a native state on the coast of Asia Minor, about 50 miles S of Bombay. It is composed of a body of soldiers of fortune, "daredevils," quartered on the coast of Asia Minor; they were disbanded by Sultan Selim II.

CL. HUART.

Djambulat or Djamulat, a famous Djanba family, according to von Oppenheim of Kurchesh (or Turkish) origin. At the beginning of the 18th century we find them as independent chiefs in the district of Kilis near Aleppo. Quarrels with the Pasha of this town caused them to move to southern Syria where they settled in 1630 at the invitation of the celebrated Djanba prince Fahri Pasha al-Din [q. v.] in Lebanon. Their Shaida at this time was one of the councillors and generals of this prince and his descendants inherited this influential position. One of them, Ali Djamulat, attained great prosperity by his marriage with the daughter of the very wealthy and influential spiritual leader of the Djanbas, Kaprtan al-Kadi al-Tanshii, and built the castle of al-Musshidi in Baalbek which is still the centre of the Djamulat family. The later history of the Djanbas centres round the continual struggles between the Djamulat and the Shaida, who again were supported by the Venetians.

Djanbar (also known as Djanbar) is composed of Jambur and the "bulling", bodyguard; plural Jamburn or Djanburs. (Cl. Doyx,hopefully). The Naba al-Djamulat was in the Mamluk and Marindk kingdoms the bodyguard of the Sultan in his palace and on his journeys; it was their duty to conduct Amir to the Sultan at audiences or paying of homage, and with the dawdares and private secretary they took the mail from the couriers; they had to carry out sentences of imprisonment, torture and death by special command of the Sultan. The chief of the bodyguard, the Amir Djanbar, had charge of the prison in which political prisoners were examined; they remained there only a few days as their trial ended either in freedom or death. The Djanbars were divided into companies (koba), each being commanded by a chief (ibn akba) who had the rank of an Amir of five Mamluk (lieutenant). Their colonel (also called ra' al-nabt al-mawlee al-djamuliya) was chosen from among the Amir of 50 Mamluk; the jabalshkab (i.e. those who had the right to be accompanied by music) and at a later period from among the Amir of 25. Below him were 4 or 5; according to others, 10 chiefs of the palace gates (kardara) and the cavalry, bodyguard of Bedouin (al-jowf al-khastaha).

DIJANJIB, native state on the W. coast of Asia Minor, about 50 miles S of Bombay. Area, 324 sq. m.; pop. (1901), 85,414; of whom 17% are Musulman; revenue about £80,000. It takes its name from a rocky island (Ar. c-lyut), which was occupied towards the end of the 17th cent. by Yarl, an Abyssinian in the service of Ahmad Shah, the Nizam Shahi king of Ahmadnagar. His descendants have since been known as Stias (from Siat), and their territory sometimes as Hibsah. In the time of Awaqul they became the admirals of the Mughal empire. It is their boast that they were never conquered by the Marathas; and they did not enter into relations with the British Government until 1876. In the latter half of the 18th cent., their fleet often wintered in Bombay harbour, as either friends or enemies. Later, one of the family established himself in the castle of Surat, whence he was expelled by the British in 1559. From Surat he occupied the east coast of Kirthawar, which still remains part of the possessions of the Nawab of Djanjib.

DIJANGAL. A word used in many N. Indian languages in the sense of forest or waste land populated with barks; adopted in English in the form "Jungle.

DIJANK (connected with the name of the Turks, Gezmis, Tua, Lazes by Macdonell Kinnett, p. 282), the name of a Turkish province in Asia Minor, bounded on the north by the Black Sea, in the south by the province of Siwa, in the west and east by those of Kastamuni and Trebizond; it is now the Sanliur of Samoja, which is still officially known by its former name also; it is in the wilderness of Trebizond and contains 6 kapi, Samoja, Firta, Unye, Ferme, Czahambas, Tufra and 3 Niaskias: Karabogz, Ata-Cam, and Kayraz; populated by about 350,000, the great majority being Musulmans. The climate is pleasant and cool in the coast and cold in the mountains; the soil is very fertile, growing tobacco (Samoja, Biter) and cereals. The mines are now no longer worked; there are forests (oak, beech, pine and fig-trees) in the highlands. Hadji-Khala notes that the population of the interior, in his time still very uncivilised, was very scattered and that the villages consisted of isolated quarters (kadaghala) each containing three or four houses. This district, which had previously been occupied by Muhammad I, who had taken it from Hasan-Beg, son of Alp-Arash, was entirely captured from the Commandant of Trebizond by Muhammad II. (865-1514). According to historians, however, mention a minor dynasty which reigned over this province: Kobra-Djanni, a vassal of Timur, who attacked Sultan Muhammad I (Sel'd-El-Ch, Tufd-at-Tawakkik, i. 196). Talhan-Oghi, Djamid-Beg, Hujain-Beg.

HUART.)

DIJANNA. "Garden" is the name most frequently given in the Koran and Tradition to Paradise, the abode of the blessed. It is only once referred to in the Koran by the Persian name Firdaws alone and a second time by the two words together gomtoun al-Firdaws. It is fairly often called jannan, "eden," the gardens of Eden; cf. the Biblical name gen-eden (Genesis, ii. 15).

Muhammad's conception of Paradise is well known to be materialistic and voluptuous; it is
expressed in several suras, which belong to the first period of his preaching; e.g. (Iv. 59. 14). This is the description of the paradise that had been promised to the pure; rivers where the water never becomes tainted, and the milk of none whose taste change with the sun and rivers of wine the delight of those that drink of those; and rivers of pure honey, all kinds of fruits and pomegranates.

(Iv. 55.) The elect shall rejoice on couches adorned with gold and precious stones, sitting opposite to one another thereon. Ye shall be wonderfully young and shall go round about them to attend them with gold dusts and baskets and cups of flowing wine, and with fruits which they shall choose to their taste and the flesh of those birds they most desire. (Iv. 59. 14.) They shall abide among lonesome trees without thorns and of mann loaded with fruit from top to bottom, under a shade which casts its shadow far, near a flowing water they shall repose on lofty beds. (Iv. 59. 15.) We have created the women of paradise, the hours, by a special creation, we have preserved their virginity.

(Iv. 13.) These hours are secluded in pavilions.

All these descriptions are quite clearly drawn pictures; they are probably inspired by the art of painting. Muhammad or his unknown teachers must have seen Christiaaa miniatures or mosaic representations of the gardens of Paradise and have interpreted the figures of angels as being those of young men or young women.

In Surat 18, a sura which is composed in the very unusual form of a hymn with a refrain, Muhammad speaks of two gardens given to the elect, each of them filled with shady trees, watered by flowing streams and containing two kinds of fruit. In the same sura, verses 16-19, he also mentions two castles, two wells and two seas. This dualism, except perhaps the two seas, is not at all easy to explain: it might almost be said that the Prophet used the dual terminus because it was more pleasing to the ear.

To sum up, his paradise is essentially a garden in which there are beautiful women, couches covered with rich brocades, flowing streams and luscious fruits.

At a later period Paradise was represented as a pyramid or dome in eight stories; it was given one storey more than Hell as it was believed the elect would be greater in number than the damned. The different stories are built of materials of increasing value and each has a gate. At the top grows the tree of the boundary, mentioned in Koran, iii, 17, whose branches shade the whole pyramid. The books in which are written the deeds of men are kept in Paradise along with a prototype of the Koran; this is what Muhammad calls the "peripiosic book" (Ixx. 2), the "guarded table" (Ixxv. 53). Besides it is the "Kuran or red pen which writes on the tablet; we also find a prototype of the Ka'ba in Paradise, called the "frequented house" and objects which are to be used at the last judgment like the balance for weighing the deeds of men, seats for the prophets, and standards. The standard of the prophet Muhammad, or rather its heavenly prototype, is planted on a mountain called the mountain of glory which rises on the back of the pyramid of Paradise.

Paradise with all its contents is placed above the astral plane beyond the heavens in which the planets revolve and rests on a number of "corns" having abstract names like "the sea of divided substance, the sea of grace, the sea of the Lamb", Above the paradise lie the worlds of dominion (mawalh) and power (sukarn), the Throne and the Tabernacle of God.

Orthodox Muslim theology, whose chief representatives are Ghazali and Asqulani, has admitted sensual pleasures into Paradise though pointing out that they will only be felt after the resurrection.

The pleasures of imagination and of intelligence are also admitted. According to al-Ghazali, an object of delight imagined by the elect will be realized at once although not quite in an objective manner, at least as regards sight and the other senses so that the blessed shall live in a perpetual hallucination. Paradise will be like a great market in which images will be bought. The pleasures of imagination shall accompany those of the senses, they shall consist in the joy of knowledge, in the possession of dominion, and in the contemplation of the glory of the righteous. But the greatest happiness of the elect will be the sight of God.

The beatific vision or sight of God is allowed by orthodox Muslim theology. Ghazali says that God will be seen without being and without form. This belief does not seem to be in harmony with the Koran; for in the Koran God is almost always veiled. He calls upon Adam but does not reveal himself; Noah does not see him; Abraham "his friend" only sees his angels; Moses asks to see God upon the mountain; hardly has he seen him than he falls into a swoon and on coming to himself is filled with repentance. Muhammad himself does not see him; he only sees Gabriel; in the vision referred to in Koran lxxxiii. 19, he does not even see the lotus-tree of the boundary; the lotus", he says, "was all veiled. According to a tradition given in the Makhtakes al-Aghta (Abye al-Merwala, trans. Carne de Vaux, p. 9) the prophet asked the archangel Gabriel "Hast thou ever seen thy Lord"? The archangel was troubled and replied: "0 Muhammad, I have seen Him and me there are seventy thousand veils of light; if I approached a single one of these veils, I should be consumed.

God does not appear in the Koran's descriptions of Paradise. He is however present at the last judgment which is described in the Koran in a fashion quite similar to that of Christian traditions and imagery.

The words Djamun, jardan and uden are also employed to designate the earthly Paradise (see Djamun).

For a plan of Paradise see the Map of\footnote{\textit{Nasab}}; the pictures in this work are reproduced in Carne de Vaux's \textit{Fragmenta d'Archaeologica Musulmana} (brochure) Brussels, 1895.

\textbf{Dijannaba (also Djanika, Dinnaba).} A town in Persia. In the middle ages it belonged to the province of Arradjian and played a not inconsiderable part as one of the more important harbours of the Persian Gulf. It did not lie directly on the coast but (in N. Lat. 29° 30'; E. Long. 50° 40'; Greenwich) about 2/5 miles from it at the top of a bay (north-east of the island of Khurak),

\textbf{Dijanna — Djanahaba.} 1085.
which connects it with the open sea. Djannāba used to be a flourishing industrial centre; the cloths manufactured there were particularly prized and formed one of the principal exports. The town is now in ruins; near it is a village, whose name Dinquawr probably represents the ancient appellation of the town corruptly reproduced by the English ear.

**AL-DJANNĀBI, (R), MUHAMMAD MUSTAFA B. IJASAN B. SINĀN B. AHMAD AL-HEṢĀBI AL-HĀJĪ, an Arab historian, born in Djannāba in Persia, became Khāli of Aleppo and died in 999 = 1590 after being deprived of his office. He wrote a history of 32 Muhammadan dynasties in as many chapters, which has survived in several manuscripts, entitled al-Allam al-Za'īri fi 'Abūl 'Abbas al-Abd al-Mu'min wa-anābīr which is usually called the Tuhfah al-Djannābi. This work was translated into Turkish by the author himself, (v. Fligel, Die ar., pers. und türk. Histo., der k. Hofbibliothek zu Wien, ii. N. 83); and it has also been epitomised of it (ibid., 854). Part of it has been edited as: Mutaqaphā al-Husain Alqanṣūsī al-din Minvulmin bii al-Mουsām al-ṣalih al-ṣūlīd al-Vafaç al-Wala' al-Mufrad al-Mu'ākāh, al-ṣu'ūr (Al-Madina 1357).

**Bibliography:** Wusentfeld, Geschichtskreisen der Araber, N. 538; Breckelmann, Gesch. d. Ar. Litt., ii. 300. (C. Brockermann.)

**AL-DJANNĀBI, ABU SAĪD, an important Kārmanāt chief, began life as a corn-merchant. Hamdān Kārman appointed him ʿāqil (q.v.), p. 853, missionary] for Southern Farsa; he was at first very successful there by flattering the Persians at the expense of the Arabs; he established a socialistic system among his adherents, whose property was shared in common under his administration; but the Caliph's policy ruined this mission.

Hamdān Kārman then sent Abu Sa'id to Bahri, shortly before there had been an insurrection of the slaves in this province. The missionary found a favourable soil; he made numerous converts and married the daughter of an individual of importance. We do not exactly know what date Abu Sa'id had been appointed ʿāqil; but we find that in 286 (929) he had subjected a large part of Bahri and taken Kaff. In 289 his partisans were exceedingly numerous around Hadjar the capital of Bahri and were approaching Bassa. The Caliph Mu'tatīd sent an army of 2000 men against them, which was increased by a considerable number of volunteers. This army was cut to pieces by the Kārmanāt leader; its general was taken prisoner, then set at liberty, the other prisoners were massacred.

About 290 (930) Abu Sa'id took the town of Hadjar after a long siege by cutting off the water-supply; he then subjected Yasmania and invaded Oman. At the height of his successes he was assassinated with several of his officers in his palace at Lahūn (see AL-TA'BĀ) in 301 (913). It is supposed that this murder was instigated by the Grand Master 'Ualī al-Allah, who then proclaimed himself Mahdi, and who possibly had some reason to be afraid of Abu Sa'id.

Abu Sa'id was venerated after his death. His partisans believed that he would return; a horse was always kept saddled at the door of his house. The Kārmanāta of Bahri, call themselves Abu Sa'idh after him. He left seven sons of whom the youngest, Sulaimān Abū Tāhir, succeeded him after disposing of the eldest.

**Bibliography:** M. J. de Goeske, Mémoire sur les Carnavals du Bahri et les Feszmáds (Leide, 1885); Mas'udī, Tawākūl (transl. Carta da Vaux), p. 498-501. (B. Casa de Vaux.)

**DIJĀRĀ, state in Mālān, Central India; area, 508 sq. m.; pop. (1901), 8,402, of whom 19% are Muhammadan, mostly in the capital, revenue, about £60,000; tribute, £6,000. The state was founded in 1817, under guarantee from the British government, by Ghulār Khān, Afghān, who had been confidential agent of Amir Khān at the court of Hōlkār; and a manumission of £13,000 is still paid to Hōlkār on every succession. Opium is a profitable crop.

**AL-DIjb, formerly an Arab seaport on the Red Sea, 20 stations south of Alla, 3 (or 2) from al-Dijbah, and a night's journey (according to others: 3 stations) from al-Madīna. In spite of the want of good drinking-water, which had to be brought from Yalyl, the town with the island of Kāfūn lying before it, whose name should be compared with the Syriac ʿāmān of Potemken, was of great importance as a port of discharge for ships from Egypt, Abyssinia, Arabia, and China and a centre of supplies for al-Madīna (cf. e. g. Tabari, iii. 1941) until it had gradually to yield this position to Yamanh — apparently not before the end of the middle ages. While the same at least is mentioned by travellers down to 1800, it appears to have been supplanted in recent times by Surakha, Bakrā, which obviously denotes the bay of Al-Dijār. Impressing ruins are still to be found on the peninsula which encloses this bay.

**AL-DJARAH, the locust.** According to Dante there are large and small, red, yellow and white varieties; the females of the yellow are black. Kaswini distinguishes fly (al-safr), and hopping (al-ṣāfī). They have the head of a horse, the eyes of an elephant, the neck of a bull, the horns of a mountain antelope, the breast of a lion, the body of a scorpion, the pinions of a eagle, the legs of a camel, the feet of an ostrich and the tail of a scorpion. They have six
Djarash; the ancient Gerasa, at the foot of the southeastern part of the 'Adlân range, in a little valley whose waters flow into the Wâdi 'l-Zarkâ, the Wâdi 'l-Dûr or Wâdi Djarash, the Charybdis of the Greeks. The town is first mentioned in the Maccabean period and appears to have been one of the Hellenistic towns which arose after Alexander the Great. At a later period in the Jewish kingdom by Alexander Jannaeus, it again won its freedom probably through Pompæus' efforts and was reckoned as a part of the Dekapolis. From the time of Trajan it belonged to the Roman province of Syria but about 160 a. d. it was allotted to the province of Arabia till it was ultimately incorporated in Palestine and Arabia. This latter period Gerasa became of predominant importance and from it date the splendid ruins, which arise the admiration of travellers but are unfortunately constantly suffering from the vandalism of the present inhabitants. In the Christian period it was the seat of a Bishop as ruins of churches, some of them converted from temples, still show. The dominating position of the town is also clear from the fact that in the time of Jerome the ancient Gilulad was called Gerasa, of which usage a trace is also found in the Talmudic literature.

Gerasa was, like most of the towns of the province of Palestine and one of the Araba, mentioned by Shurahbîl and is essentially known through the geographers among the towns of this district. According to Ya'qûbî the population was, as in the neighbouring towns, only half Arab. We are reminded of the usage of Ya'qûbî which, when the Mâqdisî calls the Jâbîl Adîlah the Jâbîl Djarash. But the town was no longer of any importance, as is also clear from the absence of Arab buildings among the ruins. There is but one reference to a castle which Taqfîrîn (1106-1144 A. D.) and Abû Shâhîd of Damascus had there, and this was taken and destroyed by King Baldwin in 1121; but no distinct traces of it can now be seen. From the account of one who had seen it, Yâkîtî in the first half of the thirteenth century gives a description of the town which was then entirely in ruins, through which ran a stream, which drove several mills; the hills around, the Jâbîl Djarash, had on the other hand, some farms and villages. He also quotes a poem from the 'Umayyâd period, in which 'alâm (reserved grazing ground) of Djarash is mentioned (Nohldeke, Dichter und Volker in arabisch-arab. 49a-2).

The once so splendid city remains in this desolate condition until in 1878 it was repopulated by Circassians, who have built a little village on the east side of the Wâdi, which covers a very insignificant part of the extensive ancient town. This village is now the capital of the nâhiyya of Djarash, which belongs to the Râ'îâbîn of 'Adlân and like the latter is under the Mu'assasît of Damascus.

from the Eski Serail, which fell at the foot of the Mosque of Sultan Haydar, where a stone was erected to commemorate this incident. The (gündüz = gunduz) were horsemen who particularly excelled in throwing the (girand = girdan).—At Damascus, in the springtime the custom has survived among the young men of going outside the town to throw the girand; for this purpose they provide themselves with a rod, the end of which is shaped like a crozier and which is called idbštah (first-fruits).

Djara (a), the most usual word for newspaper in Arabic, like gazeta in Turkish and gazetā in Persian. This seems a fitting opportunity to collect some of the chief data on the history of the newspaper among Muhammadan peoples, although a review dealing with the subject in some of its distinct phases would far exceed the limits of an article in an encyclopedia. In various sections the necessary preparatory work has not yet been done so that the following account is necessarily rather fragmentary.

For the Arabic Press, which on account of the wide area it covers as well as its intrinsic importance is undoubtedly the most important, we are reproducing a somewhat altered form Martin Hartmann’s sketch which has already been printed in Spéciëel en Algemeene Nieuwsblad, ii. 67 et seq. He is also responsible for the section on China (vi). The accounts of other areas have been prepared by the editors from various materials.

1. The Arabic Press.

On the 12th December, 1828 (20th Nov.) appeared in Cairo the first number of the Turkish Arabic newspaper, al-Wali’ al-Mtitya, the organ of the Egyptian government, founded by Muhammad 'Ali and published twice or thrice a week. In the Journal Asiatique for September 1831 (ii. 8), p. 235–239) Reinard gave a detailed account of this "fondation qui n'est pas en d'autres époques dans mes souvenirs". The periodicals, and a newspaper in French which appeared in Egypt in the three years of the Napoleonic occupation (see Reinard, op. cit., p. 240) are not taken into account. This was the beginning of the newspaper in the Islamic east which has since attained such enormous proportions. This organ of the Egyptian government still exists after a chequered and eventful career. It was not till 29 years later, on the 1st January, 1853, that a second paper appeared, the half French, half Turkish, Jarad al-Djāmid, published by Kāshif al-Khāsir in Cairo, supported by the Turkish government of whose representative in Syria al-Khāsir was always an ardent admirer; but it appeared twice a week and soon it was published daily. (See Reinard in the Journal As. et v., 309–325 and Fleischer in the Zeitschr. d. d. Morgenl. Ges., xii., 330–333.)

About four years later the Barîlî newspaper, mentioned by Muller in the Rapport Annuel, in the 30th June, 1857, appeared in Paris. The first really great Arabic newspaper, beside which all earlier ones seem mere trifles, was al-Djāmid. Founded at the end of July of 1856 in Constantinople by Ahmad Pâvi al-Shâhâbî (or q. v.) a Maronite convert to Islam and eminently subsidised by the
On the 18th October 1877 El Shafik Sarri, son-in-law of the above mentioned Bekaa al-Bustani, published the first number of the Liwa al-Duj. Although the new paper had similar aims to al-Djamah and competed to some extent with it, Syria was large enough for both. Neither of them interfered much in politics; they presented events as far as possible in colorless form, always with a careful regard for the views of the government. They were also quite neutral as regards religion. In the year 1850 a new party appeared; the Maronites founded the paper al-Djaghî to meet the attacks of the Curia. The Karamel al-Suqal al-Mumte and al-Nubsha al-Djarsiya took up the Protestant interest. The Greek Orthodox Church founded al-Nubsha as its official organ. A noteworthy enterprise was the political paper Bafriz which appeared twice a week, which may be described as "independent", though supporting the government and Islam, and was supported by the authorities as an antidote to the Muslim extremists of the Thawarat al-Fumus, which was often a thorn in the side of the government. When on the 1-13th March 1858 Bafriz became the capital of an independent wilayet, a second paper of the same name was founded as the official organ of the provincial government, but distinguished itself by the older Bafriz by the addition of al-Adliyya. Of other Bafriz newspapers and magazines we may also mention from the list in al-Hisâl 1852 (cf. Bibliography) the following political papers: 1. al-Zahra; 2. al-Fateh; 3. al-Mishk; 4. al-Najâja; 5. al-Najâja; 6. al-Nasr; 7. al-Azâl. After the Turkish revolution there were 26 newspapers and periodicals appearing in Bafriz, but the older after figures are given for 1813: 8 dailies, 17 weeklies and 12 magazines. Cf. Revo du Monde Mus., x. 76 et seq.

In addition to the Bafriz papers and the official organ al-Djama and al-Fumus (see above) the following Syrian political papers may be mentioned: al-Lubân 1891; 2. al-Rasafa 1894; 3. al-Ars (in Dâmaj) 1895, appearing weekly "in Lebanon" with several others, now (1912) 15 in all, according to the Revo du Monde Mus., (loc. cit.); 4. al-Shâm, a Damascus weekly; 5. al-Tabâk, al-Shâm, 1893; Tripolis weekly; 6. al-Shamâr; a weekly in Aleppo 1877. But the daily press in Syria had a struggle for existence. The population had long been used to strained circumstances and not even its well-to-do members could be induced to guarantee sufficient support, while the government at once took rigorous proceedings to suppress the slightest free expression of opinion. The greater number of Syrian journalists therefore went to Egypt. In 1876 the Libanese Saleh Tahâ (cf. Zaidân, cf. cit., ii. 99) founded the first Arabic daily paper in Alexandria: al-Saruq i.e. the Pyramids, an able and industrious advocate of French interests in the country. Another Syrian soon afterwards founded a weekly: al-Mabrûr in Cairo. The enterprising fortnightly al-Muqtafif, which had been founded in Bafriz in 1897 by three students of the American College, was also soon transferred to Cairo, where its editors founded the important daily al-Mu'tasim, which is also an advocate of English interests. Egypt, where a more intelligent government laid little restriction on the press and under the English occupation a freedom reigned
which was only appreciably limited about 1850, now became the Eldorado of the numerous young
Syrians with literary talent to whom their native land did not offer the slightest prospect of a
livelihood. We cannot go into details of this
migration of the press to Egypt here, but the
reader may refer to the Arabic Press of Egypt, London 1890 and above, p. 1019. The other people of the country were
very slow in following the impetus given by the
entrepreneur Syrians. It is true that the Copts had founded their bi-weekly at-Waṣn in 1878, which
still appears, but this is a very insignificant sheet and none of its companion papers since issued
are worthy of mention. Islam continued to hold
aloof from the press. It was not till 1850 that a
political daily with some pretensions to style appeared, al-Muṣawir, admirably edited by the al-Maṭākh Shafiʿī, Alif Yaʿnu. A few fanatical rags came into existence alongside of it. The nationalist at-Līwā, founded by Mufaṭṭa Kāmil, now called al-ʿĀlim combats that organ which advances international
Islam. A third important Cairo newspaper is at-Djarida, which steers a middling course i.e. re-
recognises the fact of English occupation.

The above figures are significant of the growth of the press: in 1892 al-ʿĀmil (cf. Bibliogra-

In Mecca a newspaper has appeared since 1900, al-Ḥijāza, cf. below under Turkey.

As in other respects also the Maghrib is the
most backward as regards the press. Only since 1892 has there been a newspaper at-Ḥijāt al-
Tunisī in Tunis; in 1887 appeared al-Ḥijāz; in 1889 al-Ẓahrā also and since 1902 al-Bayān. In recent years however this number has been considerably increased. C. Revue du Monde Musul., vi. 342 et seq. Tunis is peculiar in the possession of two Jewish Arabic papers printed in Hebrew characters entitled: al-Bustān [法律顾问], al-Mu-
ṣawir [法律顾问]. Both are written in a mixture of the vulgar and written language. In Tripolis the government has an official organ, Tarābiʿīs al-
Qurūb, in addition to it Washington-Serresy only mentions al-Turāb. In Algeria we have the following papers, al-Muḥāṣṣar (Algiers) and Tal·
marra (Tiemcen) and since 1907 the Kawmī al-
Fīsya and the al-Qurūb since 1908. Newspapers have only been published in Morocco at Taungr since 1905; C. Revue du Monde Musul., ii. 86, 169.

Malta occupies a special position. Literary ac-
tivity and printing-presses only came into the
island with the English occupation. These Franks
thought for a time that it would be possible to
establish a classical Arabic alongside of the peculiar
dialect of the natives. This was the origin of the
political paper al-Maṭākh which is mentioned in al-
Ḥijāt for 1892. These classical Arabic experi-
ments however proved fruitless, and a written lan-
guage was developed which essentially represented

a dialect of one part of the island and was printed in Roman type. In this language al-
Ḥabbār al-Malī began to appear in 1879.

Even in lands which are not Arab there is a
not inconsiderable production of Arabic papers. They may be divided into three classes: 1. Those that favour Islam; 2. those that defend Turkish
rule; 3. those with other aims. The important
newspaper al-Djarida in Constantinople (see above) was pre-eminently devoted to the cause of Islam and the Turkish government. According to
al-Hilāl 1892 the following papers were also published there: a. political: 1. al-Ṭarīq; 2. al-
Hawdūṭ; 3. al-Sabīl; 4. al-Haqiyāt; 5. al-
Maʿ                                                                                     anụbāt; b. scientific: 1. al-Intisār; 2. al-
Kawmī; and a legal paper al-Ḏiqlīq in Arabic
and Turkish. Cyprus was the only other place in
the Sultan's empire to possess a political Arabic
newspaper: Dib al-Shark (according to al-Hilāl, 1892). The same authority (and following it Washington-
Serruy, p. xx) mentions only a single political
paper in India, Nakhbat al-ʾAṣīrī, without giving further particulars, i.e. below under India.
There should be noted the attempt to create an
organ for the Jews of India and Mesopotamia, which is made by a volume in an Arabic
jargon in Hebrew characters entitled: ʿAṣīrī: "The Jewish Gazette Paerai", in Calcutta. Subsidised by the Rothschilds of Eastern Asia, Sassoons & Co., and
do not serving their commercial ends, the paper circulated throughout the whole of the
Arabic-speaking Judaism of Asia.

Only the following papers are mentioned by
al-Hilāl 1892 as appearing in the west: 1. al-
Munjīthīl, in Italy; 2. et al. in France, vis. 2. al-
Anīf; 2. Ast. al-Ḥurrī; 3. al- Ḥilāl; 4. al-
Munjīthīl; 5. al-Sabīl; 6. al-Maʿ                                                                                     anụbāt; 7. al-
Zamān; 8. al-Sabīl; 9. al-Urwa al-Wuthū; 10. to 12. in London, vis. 10. al-Ṭifāṭ al-
Arabī, 11. al-Majārā; 12. Māʾal al-Aṣāfi (edited by Rīsh-Alī Hāssān, on whom see my Munawūbāt, p. 76 and 232); 13. al-ʾAṣīrī, Tiflis, with the note "appears in Tartar, Persian and Arabic"; 14. Dīlī al-
Kawmī, London, with the note "appears in Arabic, and English"; 15. Rumāni, American, New-York; Washington-Serruy also gives: 16. al-Munjīthīl, and 17. al-Paerai, and 18. al-Majārā, all in
Brazil. These lists may be increased from Hart-
man, col. 227 by the addition of al-ʾAṣāfi's, San
Paulo (Brazil), al-Ḥilāl, Philadelphia, and al-Muṣawir, New-York, and from Hartmann in Os. Liter., 1899, p. 58 et seq. by at least five papers: cf. al-F斯塔 du Monde Musul., xiii. 85 et seq.

A general idea of the language of the Arabic
press may most readily and clearly be obtained from Washington-Serruy, At first halting and laboured, often not in accord with the rules of grammar, it gradually strove to attain greater correctness and fluency. Constant close contact with European
newspapers produced in many journalists an estrangement from the genius of the Arabic lan-
guage and many idioms can at once be recogn-
ised as adopted from European phraseology.
More educated men particularly Adīl ʿAbdīk (see above) early sought to combat such tendencies. At the present day writers in the more important papers endeavours to write pure Arabic. It is only in the comic papers that the spoken
language is med by the press.

As regards contents, the Arabic press has made
great progress. For long the only material available in addition to old lore was the account of a brief survey, pastable to the government, of goings on in Turkey and the local news. At the next edition (see above) alone was a distinguished exception. The daily papers at Ahrum, Al-Mawiyah, al-Mahbubatn, al-Liwat and many others are now covering a wider field and cultivating an interest in politics and intellectual pursuits. There still survives in the less important papers, a lower ideal, the petty squabbings of parties and the most scurrilous personalities. In the first part of his al-Diyar, the worthy Ibrahim al-Yazdi raised a strong protest against this but he goes too far when he demands a press law.

We must also devote special attention to the periodical literature. In this field numerous undertakings have arisen, which endeavour to disseminate useful knowledge, scientific as well as political and intellectual. Of the older ones we may here mention: 1. al-Safir (published by a Druze); 2. al-Turkhi; 3. al-Ma'amul; 4. still appearing, al-Kamal al-Zaghamiyat. Schroeder further mentions three others: Sihabat al-Turkya, al-Afkar al-Mamuliyya, Divan al-Fikriyya al-Mi'ali at-Asiriyya, which are now however defunct. Since 1892 Za'idan's periodical al-Nahl (Cairo) has been unintermitting active in this direction, and the Jewish missionaries in Beirut have been publishing the fortnightly al-Majalis since the beginning of 1898. The Cairo al-Mamul (since 1897) edited by Rashid Ridâ enjoys the largest circulation in the whole Muhammadan world; next to it comes al-Madhabat, edited by Muhammad Nâzîr al-Ali, which has been published in Damascus since 1908 (cf. Revue du Monde Mus., iv. 417 et seq.). We may also mention: al-Ahram al-Fellahin published in Cairo since 1905 (Revue du Monde Mus., iv. 192), Lajuit al-Asâr (Baghdad) edited by Pere Anastase Marie, al-Tâm (Nedjef) edited by al-Salafist. We must not omit to mention the paper for women al-Assâr al-Dajal, which was published by Alexandria Aviroit in Alexandria, whose editors and women were merely figureheads, had disappeared. Women nowadays take considerable part in journalistic work; cf. for Syria: Revue du Monde Mus., xix. 86 et seq.

A brilliant future may safely be predicted for the Arabic press. Among the Christians of Syria there are a large number of earnest, hardworking and able men. Among the Egyptians there is an awakening, and here it is the Muslim element that is devoting itself to journalism with enthusiasm and success. Europeans also have often had a share in the production of Arabic newspapers.

(M. HAETTMEYER.)

II. THE TURKISH PRESS.

Newspapers and periodicals in Turkish are not confined to Turkey, they appear also in the Muhammadan lands of Russia, but the latter of course are either in Anatolian or in the Tartar dialects of Kazan and Central Asia. We will deal first with the Ottoman Turkish press and then with the Russian Turkish.

a. Turkey. The beginnings of the Turkish press in Constantinople are not only contemporary with those of the Arabic press but are equally clearly imitations of the Paris government newspapers. In 1831 an official paper in French, the Moniteur Ottoman was published in Constantinople, and in the next year a Turkish edition also began to appear (cf. Revue du Monde Mus., iv. 397) entitled Yozgatî Wazif and after a brief interval has survived to the present day as the organ of the government; since the revolution it has been published daily. In 1843 a second paper Yozgatî Yavuzlik appeared. Besides these two there were according to Ubicini in 1851-52 newspapers in the whole Ottoman empire of which 11 were published in Constantinople in French, Italian, German, Armenian and Bulgarian. By 1876 the number of Turkish papers had grown to 15, among which we may mention the following: some of which are still in existence: Basîrî, the organ of the Old Turkish party; Tarîkî, Âhosî, Wazif, Irritsîl, and Yavuzlik, which favoured the young Turkish movement and the Tarikî Yavuzlik, edited by Ahmed Midhat [q.v.]; Yavuzlî, founded in French [q.v.] paper, with which the Yozgatî Yavuzlik represented the modern Turkish movement, as well as the comic paper Aksiyet. Besides these Turkish papers there were at this time 9 Greek, 9 Armenian, 3 Bulgarian, 2 Hebrew, 1 Arabic (the above-mentioned al-Diyarî) 7 French (including the official Journal de Constantinople, afterwards la Turquie), 2 English (including the Levant Express and Eastern Herald), 1 German (Konstantinopel-Handblatt). We must further mention the Turkish papers, which are printed for Armenians and Greeks who speak Turkish, in their national alphabets. But these sections of nationalities who have lost their own language are unimportant and so is their press. With the accession of Âhid al-Hamid II troubled times began for the Turkish press; the censorship was stringent, several papers were suspended, notably those of the Young Turkish party, who were thus compelled to found new organs outside Turkey, in Paris, London, Geneva, etc., sometimes in Turkish or with a French supplement, among which the Maghrebî, edited by Ahmed Rihab is very well known. Cf. the titles of the others in P. Fesch, Constantinople aus derners jahrs des Âbad al-Hamid, p. 333, 349, 392. The most popular and best edited papers during this period were the Hâkim, edited by Ahmed Ljubet [q.v.] and the Sâbit, both of which still exist, and the illustrated weekly Serayet (Zemraatî- Fesânik, edited by Ahmed Hûkû [q.v.]).

All this was suddenly changed with the Ottoman revolution; there was a tremendous revival in the press, newspapers sprang up like mushrooms often enough only to disappear as quickly and make place for others. The Revue du Monde Musulman has taken great pains to make a list of these products of the press, so that we may refer the reader to it. In Vol. viii, p. 97 et seq. will be found a list of newspapers and periodicals which have appeared in the whole Ottoman empire with the authorization of the law. This list contains no fewer than 474 titles; this of course includes Arabic, Greek, and Armenian also. Many of these have already disappeared and others have since arisen.

b. Russia. The Muhammadan press in Russia is of comparatively recent origin and has been mainly brought into being by the exertions of two men: Issâdîyeb Gaspirzî and Ahmadîyeb Agayeff. The first named founded at Bagîsh, Serai in 1879 the Tatar paper Tarîgî Musulman, (still in existence) and had also a share in the foun-
dation of other papers. Ahmadbey Agayev founded the first Turkish paper İrşad in Baku. When this paper was suspended by the Russians owing to its alleged political utterances, they resorted to the usual subterfuges of publishing it again under other names so that the İrşad in course of time became the Toraks and later the İlm-i-İhsan, till finally Ahmadbey sought and found a freser field in Turkey. In the volumes of the Revue du Monde Musulman, about 50 titles of newspapers and periodicals appearing in Russia are given, of which the greater part have had but a brief career on account of political or financial difficulties. The press in Russia is on the whole of very little account; its centres in addition to the two places above-named are at Tiilis, Kazan, Orenburg, Astrakhan, Ufa, Karam Babur, Tashkent, St. Petersburg etc. The language is not always Turkic-Tatar; there are also Arabic and Persian papers, which deal with Muslim interests. The new Russian periodical Mir Islam has recently begun to take an interest in the Muslim press in Russia and for example in the January and Feburary number of 1907, the Orenburg papers Wokh, Şahra and Din u Mâjdâlî, as well as the Kazan Bayân al-Va'iz and the Baku Nâdîr are reviewed in detail. The continuation of this review will now for the first time make it possible to get a clear idea of the condition of the Muslim press in Russia.

III. TEBRIZ.

There is but little to be said of the Persian press before the Persian revolution. E. G. Browne (The Persian Revolution, p. 242) gives the following account of it: "Before the granting of the Constitution in 1906 there existed in Persia no Press worthy of the name. Such papers as there were—the Irân (Persia), the Sâras (Honor), the Jâhâl (Information) etc., were lithographed sheets appearing at irregular intervals, and containing no news or observations of interest, but only panegyrists on various princes and governors, and assurances that every body was contented and happy. A few good Persian newspapers (such as the Azkâr or Star at Constantinople, the Hâl al-Mâdîn at Calcutta and the Târîkh-i-Pardvân at Cairo) were from time to time established outside Persia and enjoyed a certain circulation within its borders", As in the adjoining country of Turkey a complete change was brought about by the revolution, so that (cf. Revue du Monde Musulman, ix. 682) in Teheran alone no fewer than 31 newspapers and periodicals appeared in 1908, 3 in Tehran and 2 in Isfahan, Resal and Bandar Bâghîr. A Teheran edition of the Hâl al-Mâdîn was also published; we may also mention here the Mâjdî (since 1906), Sâr-i-Madfrî (since 1907), Irân-i Now (since 1909), all at Teheran and the Mâjdâlî at Bandar Bâghîr (since 1903), and for the others refer the reader to the information contained in the above cited quoted Revue. Browne's verdict on these recent products of the Persian press is very favourable, at least on some of them. "Some of these papers, notably the Sâr-i-Madfrî, the Hâl al-Mâdîn and the Mâjdâlî, he says (cf. ibid, p. 127), "were of a very high order, and afford examples of a prose style, forcible, vigorous, and concise, hitherto almost unknown"; and again (p. 243): "It (the Persian press) reached in many cases a very high level of excellence, most remarkable when we remember how new journalism was to Persia."

IV. INDIA.

The history of the Muhâmmâdîn press in British India still remains to be written. Materials are available for such a history in various official publications of the Government of India, and (for the Hindustani press particularly) in the writings of Garcin de Tassy. The most important of these journals were published in the Urdu language, this being the language most commonly read by Muhâmmâdîn throughout India; but many of them have been short-lived and have had only a small circulation. One of the oldest, still in existence, in the Allâghâb Institute is Ghalib-NAME, which was founded by Sir Sâyîd Ahmad Khân in 1866, as a weekly journal; up to the time of his death in 1898, this eminent leader of Muhâmmâdîn thought in India, continued to contribute to it weighty articles on politics, social reform and education, especially in connection with the Allâghâb College. Two other weekly journals are influential exponents of Muhâmmâdîn sentiments, Waqf-i-Muhammadi (circulation, 1000 copies) by Mawlawî Mînârî, in Allahabad, who has distinguished himself by his advocacy of friendly relations between England and Turkey and his support of the Allâghâb Railway (for which he has collected more than £ 5000), and al-Bâghîr, published in Etawah (circulation, 1050 copies) by Mawlawî Bâghîr al-Din, a zealous supporter of all distinctly Muhâmmâdîn movements. Another weekly journal, Zamin-dar, has recently been started by a clever young journalist, Zâfar-i Mîr Khân. Both Waqf-i-Muhammadi and Zamindar have a daily edition, but unlike of these has so far a circulation on 5000 copies (daily, 1011 copies, weekly edition, 3377 copies), published in Lahore by a energetic and experienced journalist, Munsîlî Mâhîîbî, whose enterprise and wide interests have given birth to a large number of publications. Other weekly journals are Nâsir-NAME, printed in Murâdâbâd, Mâridârî, in Gorakhpur, and Dîwâr-i-Karrînî, in Badînâ. It is impossible to mention here all the Urdu journals published in Northern India, where this language is the spoken tongue as well as the literary dialect of the Muhâmmâdîn population, or to give a list of those published in other parts of India, where the commonly spoken language is not Urdu, e.g. in Haidarâbâd there are 7 Urdu newspapers, in Madras 8, in the Central Provinces 3 and in Bombay 2, most of them having a restricted circulation; in Calcutta, Dîwâr al-Salafîyat has a weekly issue of 400 copies, and in Agra, Star of India 657 copies.

Though most literate Muhâmmâdîn in India read Urdu, it is naturally to be expected that they should publish journals in such other languages as happen in various provinces to be their mother-tongue. The most important of these are the following: in Oudhâbât, Aghâh-i-Islâm (weekly, Bombay, 1000 copies) and Political Bhamiya (weekly, Ahmedâbâd, 1500 copies); in Martâghi, Pillârî (thrice in a month, Kârân Kârân, 450 copies); in Sind, Azbir-i-Sindî (weekly, Sukkur, 500 copies) and al-Hâshî (weekly, Sukkur, 1400 copies); in Tamil, Thâîr-i-Islâm (weekly, Madras, 450 copies) and Muhâmmâdîyat-i-Râmîyat (weekly, North Arcot, 400 copies); and in Malayalam, Malabar Islam (weekly, Cochin State, 600 copies) and Muhâmmâdîya Darpanam (monthly, Travancore State, 1000 copies).
During the last 20 years, several attempts have been made to establish an English newspaper devoted exclusively to Muhammadan interests. It being recognized that there were a number of excellent English journals financed and edited by Hindus, there was no first-class English newspaper under Muhammadan control. The heavy cost of production and the comparatively small number of English-speaking Muhammadans have hitherto stood in the way of the success of such an enterprise. The most important of these journals now in existence are The Parsee Observer (weekly, Bombay), The Parsee Chronicle and The Commercial (Calcutta), and The Muhammadan (Madras).

The most important Persian journal published in India is Habb-e-Mulqat (weekly, 1000 copies, Calcutta). Several abbreviated attempts have been made to start journals in Arabic, generally, with a translation in Urdu, e.g., Al-Riyad (Lucknow), but the support they receive is too meagre for such enterprises to be remunerative.

In addition to the newspapers, there are several weeklies, periodicals, and trifles, chiefly in Urdu, which are deserving of mention. The most noteworthy of these is Tahdil al-Abšāb, founded by Sir Sayyid Ahmad Khan in 1879 and issued weekly until 1876, when the founding of the Aligarh College absorbed his time and attention; five years later it was revived for the space of 2½ years, in 1886 a new series was started, which lasted for 3 years only. The Tahdil al-Abšāb was the organ of the liberal school of Muhammadan theology, of which Sir Sayyid Ahmad Khan was the founder; the greater part of the articles were from his pen and aimed at expounding a purer form of Muhammadan doctrine, purged from the accretions of theologians and mediaeval views of life and nature that were inconsistent with modern science. Among periodicals upholding the older orthodoxy may be mentioned I‘lām al-Sunnah, which was started especially to combat the views expressed in Tahdil al-Abšāb, and Nūr al-Abšāb and Nūr al-Andām, printed in Chunar, and Akhbar al-Muhaddith in Amritsar, edited by Naẓīr al-Muhaddith, a monthly journal, with a circulation of 625 copies, is published in Lucknow, as the organ of the Naẓīrīs in the Unna, an association which aims at grafting modern learning on to the old, traditional methods of study, without any violent breach with the past. All these religious periodicals are written in Urdu; the organ of the Ahmadis sect, however, The Review of Religion (monthly, 500 copies, Qādirān), is in English.

In recent years, some Urdu magazines have been started, on the model of European magazines, dealing mainly with literary and other topics of a non-religious character; from the very nature of their subject-matter: they are not exclusively Muhammadan, but mention may be made of Zāleh-e-Q-save (printed in Delhi), Muhaddith (monthly, 4000 copies, Delhi) and The Aligarh Monthly (monthly, 500 copies), as being specially concerned with matters of interest to Muhammadans. Two magazines for Muhammadan women are printed in Urdu, Tahdil al-Adhār (weekly, 500 copies, Lahore) and Akhbar (monthly, 450 copies, Aligarh).

V. THE DUTCH EAST INDIES AND SINGAPORE.

The newspapers etc. appearing in the Dutch East Indies are detailed in the Regierungsalmanach voor Nederlandsch Indië.

Some notes are given in the Revue du Monde Musulman, particularly viii. 485-7, 1907, through the kindness of Prof. C. Snetzler. Further details of the Muhammadan press there. The Medan Priyayi, "The Areas of Native Officials," is published daily in Bandung; its chief editor is Raden Mas Tjibadilulur. To some extent this opposition to this there has also been published in Bandung since 1912: a second daily, Kawanme "Young People," (to be understood in the same sense as one of Young Turks) edited by A. H. Wijnja di Smit. The Damakhanja which appears twice a week in Surakarta is edited by a Chinese, with the assistance of a Javanese. The name is taken from the Sanskrit and means Good News. A classical name is likewise borne by the newspaper Suriname (Good Arrow) published in Solo, which is edited by the Surakarta Islam to oppose the propaganda of the Budi Utom (Noble Endeavour, etc. du Monde Musulman, v. 415 and elsewhere). The best edited paper next to the Damakhanja is the bi-weekly Utsran Melayu (The Malay Messenger) which has appeared in Padang since 1910 under the editorship of Dato Saran Maharadja and Saran Mohammad Sallim. The al-Muntar is also published in Padang.

At Singapore there appear from time to time Arabic newspapers with a more or less pronounced hostile attitude to European authorities. The Revue du Monde Musulman, ii. 398 etc., gave an account of the Malys monthly al-Andām. The aims of the Nūrājā, the 'Balance,' which first appeared in 1912, are similar. Other Malys papers are the Utsuran Melayu (bi-weekly), published by the Singapore Free Press (Walter M'Keepea); Tannang Penghahawan etc. Of the Arabic newspapers referred to above, we know of the following: al-Eshā (al-Adhār) 1909 (weekly), al-Waṣṣa 1910 ( fortnightly), al-Hasūn, 1910, (weekly).

VI. CHINA.

I have before me two productions of the Muslim press of China: a newspaper and a periodical. But I was assured by a Confucian Chinaman acquainted with these matters that this paper was certainly not the only one. The newspaper is the Ching Tsung Al Kow Pao. "The Muhammadan Newspaper "Patriotism,"" published in Pekin. It belongs to the "Kung Pao" or "Pekin" papers, which is distinguished by format as well as by contents from the larger papers. This paper, which only displays its Muhammadan character in a few features, is said to be very popular among the non-Muslims in Pekin also: it is the only paper that appears in so many "vernaculars"; it is therefore understood by the lower classes when it is read out to them. The Al Kow Pao is a single sheet. Each side contains four pages, one horizontal and vertical division between them being also closely filled with printed matter. We may deduce from the numbering that it has been appearing for six years. The number which I have before me of the 21st March 1912 contains a leading article amongst other items on the news of the day, entitled "a proposal to diminish the troubles in the Republic" by Chu Yien as well as a political caricature.

Broomehall gives an account of one periodical in his Islam in China (London 1910), p. 283 with a facsimile of the cover of No. i (fig. 282-
285) and an index of the contents of the same number (p. 284). The cover bears at the top the Muhammadan title Ḥilāṣ al-ḥiṣām, "The Awakening of Islam", with the confession of faith below it. In the centre is the Chinese title Huáng Hui Pien, "The heart of the wisdom of the Arab"; below this "No. 1"; left: Organ of the Muhammadan Society for the advancement of education in Japan (according to Broocharp of. c.), the publishers are thirty students; they are probably also the leading members of this society; on the right "not for sale". The contents are classed under three heads: 1. Articles which, as is clear from the contrast to 2, are composed by Chinese Muslims, living in Japan. 2. Articles from home contributors. 3. Appendix, with miscellaneous information.

The ten articles in section 1 are: 1. "The relation between religion and education" by Hong Ch'en-pau; 2. "The reform of religion" by Fa'o T'ing-lung; 3. "Exhortation on the responsibility of the education of our members", by the same author as 2; 4. "On the Mahomedans" by the same author as 1; 5. "The civilization of Islam" by the same author as 1; 6. "Islam and Wu chih" (The Japanese "Bushido") by Wang T'ing-chih; 7. "On the progress of religion" by Ma Tsung-chi; 8. "On the education of the masses on Islam in China" by the same author as 8; 10. "The New Mahomedanism" by a member of the society.

— The second group contains five articles. 1. Introductory address to the Japanese Society for the Advancement of Islam, by Ts'ai Ta-yü; 2. A plan for the revival of Islam by Li Shun-Shan; 3. On the mission of the Society by T'ang-ch'uan; 4. An essay on al (education) prayer? by the same author as 3; 5. The characteristics of the sect by Ho Li-fang. — The third group contains three anonymous notes: 1. The position of the society for the advancement of Islam in Eastern Asia. 2. Minutes, statutes, and list of members of the Chinese Society for the advancement of Islam.

While the Christians in Turkey have no press in the language of the ruling race (exception see p. 1021), because their masters themselves are only in the initial stages of the higher developments of the intellectual life, the Muslims of China have assimilated themselves to the ancient culture of the Chinese and their press also will thus share the great advance which has been made by the newspaper-press of the new China. It will render vast services to the country, if it continues to avoid the main danger that threatens Islam under foreign rule, namely the tendency to try to form a state within the state. (MARKT HARTMANN.)

Djarir. 1. Atiya B. Al-Khatâbî of the clan of Bani Kulûb b. Yarhib', a branch of the Muhajirin, the greatest Arab satirist of the Umayyad period, first became prominent as a poet in the reign of the Caliph Ma'âwiya. After he had proved his satiric powers on stars of lesser magnitude, a dispute between his kinsmen the Bani Uthâb, a branch of the Bani Yarhib' and the Madâjij, who were also of Taniim, brought him into hostile contact with their poetic champion al-Farrâdî (q. v.). The feud with al-Farrâdî, which was to dominate the whole of Djarir's future career, appears to have begun in the year 648 (683—684). In Baqarah were the battle was first fought and the war continued so long as the authorities had to intervene — without any lasting effect, it must be acknowledged. The government of al-Madâjij in the 'Irak proved an important factor in determining Djarir's later career, for he introduced him to the court of the Caliph 'Abd al-Malik. Rivalry for the favour of the ruler brought Djarir into poetic conflict with the Tâhirî al-Akhâlî (q. v., p. 234) and 'Adî b. al-Riqâ (q. v., p. 157) of Domascos who had been unsuccessful in throwing his rivals into the shade, particularly in the reign of al-Walid. Djarir enjoyed the full favour of the Caliph under the pious 'Omar II, to which his fits of religious fervour and the modesty for which he was famous probably contributed their share. We find poems in his Dîvân on the later Caliphs Yazid II. and Hâšim also. Djarir appears to have died in Yâmama (in 110 = 726—729), or according to others in 114 = 738—733, soon after his great rival al-Farrâdî.

In his poems Djarir appears as a thorough Beduin. In spite of his inherent lack of reverence for his father, his pride in his ancestors demanded the preservation of the honour of his house even at the expense of truth. He believed he was defending the honour of himself and his tribe in his "flying". Nevertheless Djarir did not live by his lampoons, as others did, but by his panegyrics on those in authority. In addition to these classes of poetry, there are also beautiful laments among his poetry.

His "flying" with al-Farrâdî is to be found in the Nejâtî published by Bevan (1905—1909), the lampoons which he exchanged with al-Akhâlî are collected in the "Umâmî Ma'âlî, No. 5417 in Constantinople. His Dîvân was printed in Cairo in 1315; numerous poems by him are also given in the Kibîb al-Akhâmî.

DIARR (a.), technical term of Arabic grammar of the Basra school = genitive (Kāf Kāf). Diarr (proposed) the infinitive of diarr, to pull, to draw, is still used by Shi'awa as a synonym for A'a'sa and denotes the vowel / in the last syllable of a word when it serves to express the genitive. How diarr came to have this meaning is not quite obvious (cf. the articles Ḥaraka and ʿIṣā). It is for example explained that the later grammarians no longer understood the phonic meaning of the expression and came to use diarr as well as its Kufic equivalent ʿIṣā as the regular word for genitive, "without regard to the function of the ending of, for example al-Ṣanābiyya in the Agarwāṭs (in Aṣmūn, Chrestomathia, 1st ed., p. 140), where three distinguishing features of the ʿIṣā are given: the kasra, the ʿalā, and the ʿaqqā.

According to Zamakhshari's Muṣafāt and his commentator Ibn Yaḥyā, the diarr is one of the ʿabūd al-ʿalam (characteristics of the noun) as it is not found in the verb nor in the particles. Like the two other cases, it is an ʿabūd ʿaqqā as such, and sign for something referred to, the expression of a so-called ṣafā [q. v.]. These ṣafā however only make the diarr necessary (i.e. in order to avoid a confusion of the possessor with the subject ʿaqqā object muḥā). It is produced by the ḥurf al-ʿaqqā, i.e. the preposition which happens to govern the diarr. Such a preposition is added even when a genitive is dependent on another substantive, "because both substantives have equal power and one cannot govern the other." We would therefore have to look upon the žikāmūn, which is an abbreviation of žikāmūn, žiālūn, žiāmūn, žiāfā as an abbreviation from žikāmūn muḥā ʿaqqā. On the fallacy of this conception cf. Fleischer, Kleinere Schriften, ii. 89.

DIJĀK (DIJK or DJSIK), an island in the Persian Gulf. It is only mentioned by Yākūt and Kāhwāp among Arab geographers. From their statements it should most probably be identified with the island of Larrak in the Strait of Hormuz. According to the time of these two authors, Dijāk belonged to the prince of Kīl (Kīl, the modern Kās, a small island in 24° 6' E. Long, Greenw.), he kept a small body of men there as a garrison, who were familiar with the use of the sea for their occupation. At the present day the name Dijāk (Diosk) is borne by a cape (in 24° 20' N. Lat.) on the Gulf of Oman, near the entrance to the Persian Gulf, with a fishin village of about 250 huts. This point, the strategic importance of which is not inconsiderable, is now an English possession (a watch and telegraph station).

(D. Streek.)

DIJASAWR. [See Djasawr.]

DIJAT or DIJAT, the name of a tribe in N.W. India, of uncertain origin and of mixed character. Historically, they rose to prominence on the downfall of the Mughal empire in the eighteenth century, when their chieftains founded the Hindu states of Bharatpur and Dholpur near Agra, while somewhat later they formed the military portion of the Sikh confederacy. In these terms they are still the most valued members both of the agricultural community and of the native army; but as far as they practise widow marriage, they rank below the Kīdāps. In the W. and S. of the Punjāb, as in Sind and even in Bālotān, the name is given to Muslims, presumably converted from Hindūs, who do not belong to any recognized Muslim tribe, and who are often grooms by occupation. The language called Dijāt is only a local dialect. At the Census of 1901, the total number of Dijās was seven millions, mostly in the Punjāb, of whom nearly 60% were Hindus, 20% Sikhs, and 20% Muslims.

Bibliography: Census of India, 1901, Vol. i. Ethnographic Appendix, W. Crooke, Tribes of the N. W. P. and Oudh, iii. 25 sqq. (J. S. Cottom.)

DÍJÁṬÁ, a name given to the Mongols [q. v.].

AL-DJATHIYA (a.), "the kneeling (community)"; a title of ʿAbī al-ʿalā.

DIJÁWA, Arabic name of the island of Java [q. v.]; in the modern use of the term, this name also includes all the peoples of Malay race. Cf. Smauss Hugonos, Mecca, ii. 295 et seq.

AL-DJAWĀD AL-ʾĪṢĀḤĀNĪ, And DJAWĀD MUḤAMMAD b. All, with the honorary title DJAMIL AL-DIN, a Zanjīd Vizier, had received an excellent education from his father and at one time received an office in the Dāwāl al-ʾArḍ of the Sulṭān Sulṭān, Muṣāḥ. He afterwards became one of Zanjīd's most trusted friends and was given by him the governorship of Naṣībān and al-Raṣāq. Under the supervision of Zanjīd he narrowly escaped sharing his master's fate but succeeded in leading the troops to al-Mawṣūl. Self al-Din Ghazāl, son of Zanjīd, thereupon confirmed him in his office during this period Djalīl al-Dīn distinguished himself so much by his liberality, that he became universally known as al-Djāwād (the generous). He particularly won the praise of his co-religionists by the many useful and charitable institutions in the two holy cities, Mecca and Medīna, which he founded at his own expense. He was nevertheless thrown into prison in al-Mawṣūl in 358 (1163) by Kūth al-Dīn al-Mawādī, who had succeeded his brother and died in the following year in prison. His body was afterwards brought to Mecca, carried round all the holy places, then taken to Medīna where it was buried. Among his panegyristes were Ḥāṣa-Shāṣa and Imād al-Dīn.

Djawâd Pasha, Turkish General and Author. Djawâd Pasha to whom his father Mustafa Aşımbej gave the name Ahmad Djawâd, was born in 1213 (1801) in Damascus, educated in Russia and at the military Academy of Constantinople. His military career brought him back to his native city of Damascus, and then to Servia (1876); he particularly earned the gratitude of his country at the frontier of the march with Servia, Russia and Greece. In 1883 he was promoted to be General of a Division and sent to Crete, where he was afterwards appointed Governor and reached the rank of Vizier and became Grand Vizier in 1892. Two years later he resigned office, became commander-in-chief of the Fifth Army Corps in Damascus and died in 1318 (1900). In addition to minor writings he composed a work on the history of Turkish warfare (Tarih-i Aksham-i Oldham), of which only the first volume, containing the history of the Janissaries, was printed (Stambul 1297—1299). A French translation was made by G. Maccioci (Etat militaire Ottoman, de la France). It is the preface jusqu’a nos jours. I. Le Corps des Janissaries, depuis sa création jusqu’a sa suppression, Paris (1882).

Bibliography: G. Zaidan, Mushtari al-Sharh, i. 226 et seq.

Djawâli, Ahmad Munchi Mawrid es Ahmad es-Mo‘oad, a book written with a thorough scientific training, who led the life of a wandering scholar through all the lands of Islam even to India, going to Harran in 613—1216, Kaysia in 616—1219 and then to the court of Al-Malik al-Maaruf of the house of Urtagh, the ruler of Amid and Hisam Al-Kaff who had succeeded to power in 615—1219, and 619—1222. For the latter he wrote an account and exposition of all the things he had learned, being acquainted with all the sciences. His book is a mine of information on the manners of the period. This Kitab al-Ma‘mad fi Kitab al-Faraj, which has been printed at Damascus in 1385, Stambul: p. 120. Cairo 1316, Hidr. A. d. (ca. 1108) together with his Kitab al-Ma‘mad fi Kitab al-Stanci, with both Fawwaj and Fawwaj, was published in 1820.

C. Brockelmann

Al-Djawâf (al-Djaw), a district in South Arabia between Nadjib and Hadramawt. According to the information obtained by Nieuwhu during his stay in Yamin, it is for the most part...
Al-Djawf is first mentioned by Hamdání in his Dqayba. He describes it as a vast plain, through which flow several streams of considerable size, such as the W. al-Khrib, W. Khamasi, W. Nadrijn. Of villages he mentions Aqâl, al-Raam, Hubâlah, Khababat, as-Sulh, Shawaiba, Sawâh, al-Abûn, al-Kâ, Hirrah, etc.; of hills: Wawar and Rim. He does not include Ma'rib in al-Djawf. He says the inhabitants are the Hamdání and Mâdhâbi, who are at enmity with one another, whereas the names Djawf Hamdání and Djawf Mâdhâbi (b. Mâdhâbi) in the geographers.

Al-Sirhân, an Arab district in the north of Nadîjd towards Syria, on the Wadi Sirhân, the largest oasis in North Arabia next to Taimi. The most important town in al-Djawf al-Sirhân was Dumat al-Fudjal (the Dumat of Psalms) with the fortress of Mûsâ. This place is said to be called after a son of Hammâm known as from the history of Muhammad. When the Prophet was advancing against Tâlibik in the year 630, he sent his general Khâlid b. Al-Walid to Dumat al-Djandal, which was then under the rule of the Christian prince Uqâdir of the house of Kindâ. Uqâdir submitted and adopted Islam from which he became an apostate however on the death of the Prophet. After the battle of Siffina (in 657) Dumat al-Djandal (according to another account Adhrâb [q. v., p. 135]) was besieged as the meeting place between Yathrib and Mâdâin. It has now sunk to be an insignificant little village.

Djifw al-Sirhân was visited by Burckhardt in 1812 and about seventy years later by J. Euting. It now consists of a group of large villages surrounded by gardens and palm-trees, called Sinâa (markets), with 80—120 houses and a total population of about 12,000. The individual villages are each governed by their own shaikh. The inhabitants at the time of Burckhardt's stay there were the most part petty traders and artisans (cobbler, smith, & carpenters). They exchanged their wares to the Arabs for camel. In recent times both trade and industry have utterly declined. They used to belong to the Wahhâb sect and their territory formed one of the seven provinces of the Wahhâb kingdom, which had two rulers among them. After the defeat of the Wahhâb king they were long independent. In 1835 they became subject to the Sharif of Hayyâ.

The geographers mention others in addition to the two Djawf above mentioned; one is said to be on the coast between Mecca and Medina.

Djäwâhr (Ar.) *substance*. The notion of *substance* is not so prominent in Oriental scholasticism as it was among the schoolmen of the West. The Muslim thinkers, following the Greek conception, regarded substance as that which exists by itself, which logically at least requires nothing else for its existence; it is opposed to the accident which is always in some other thing other than itself; thus for example the body logically exists before the soul; it is considered a substance with regard to it and the soul with regard to the body is considered an accident. But the interest of the idea of substance is not only logical, it is also metaphysical. It is not sufficient merely to know in what order the elements rely on one another or which are dependent on the others; it is also necessary to investigate what there is which is solid and as an entity is the basis.

This kind of permanent basis of things is substance in the metaphysical sense.

It should be noted that in this latter sense, Muslim thinkers have been especially preoccupied with the search for the "simple substance," that is to say, which, having no component parts, is therefore incorruptible. Thus Avicenna, in order to demonstrate the immortality of the soul, first of all proves that it is a "simple substance"; he then deduces immediately from this, that it cannot perish. Interest in this conception was excited also by the idea of *substance* rather than by that of "simplicity".

According to the author of the *Turtab*, there are five kinds of substances at bottom of all realities: primal matter, form, body, soul and intelligence. Primal matter is the substance which is capable of continuity or discontinuity and receives corporeal and specific forms. Corporeal form is that which is in some sense apprehended by the senses. Body (alâ'im, q. v.) is the substance which assumes the three dimensions, or extended substance. Soul or animal spirit is a subtle substance which supports the vital forces, capability of sensation, and liberty of movement; it is attached to the body. Intelligence or reasoning soul is a substance purified of matter and linked up with the body which it governs. These definitions represent the point of view of philosophers.

The Mutakallimun theologians have another theory, which is an interesting application of the theory of simple substance. They are the most part atomists; to them simple substance is merely the atom and even: the soul, which is simple substance, is regarded as a kind of atom, a true monad. Knowledge abides in the indivisible atom.

The Imâmas Fâhîr al-Din Râzî and al-Ghazali did not take up the concept of atoms outright. Nasafi, the compiler of the *Ajarâf* (articles of faith) and Taftazâni, his commentator, are atomists. "The world" says Nasafi; *with all its parts is produced; it is composed of substances (which he calls *gân*) and of accidents. The substances are what exists by their own essence (logically); they are either composite like the body or not
composite like substance (djawhar), that is the indivisible component (atomy). Tahafiz points out that there is an advantage from the apologetic point of view in admitting the doctrine of atomism for it can be used to refute the thesis of those philosophers who say the world is composed of primal matter and of form, a thesis which leads to that of the eternity of the world and the denial of the resurrection. Matter must be eternal for, according to this system, all that is produced is produced in a matter that precedes it; and as the eternity of matter implies that of form, from which it cannot be separated, the eternity of body results. The philosophers further admit that circular movement, which is that of the heavenly bodies, is eternal while rectilinear movement cannot be so. But when it is admitted that all bodies, including the celestial spheres, are composed of atoms, circular movements are made up of small inmultilinear displacements of atoms, which are not eternal.

Muslim theology does not apply the name "substance" (djawhar) to God; the atomic theologians do not do so, since for them this word is specially used to designate the atom, which is in space and forms part of bodies. The philosophers in the strict sense of the word, when they speak of what there was before there was a thing already posited, or of what subsists logically by itself, speak of a "quiddity", of a certain well defined accident, which is independent of its existence; this accident may exist or not exist; in other words the substance of things are contingent quiddities. This is not the case with God in whom existence is identical with being.

According to Alishari, the substance of things are created by God from instant to instant and from their very nature do not endure; if God ceased to maintain them for an instant, they would be annihilated together with their accidents.

DJAWHRAL, whose full name was Abu 'l-Hasan (Abu al-Ma'mar) called al-Katriz, a Fatimid general. He was born in Byzantine territory whence his name "al-Rum" and was brought as a slave to Cairo. After passing through the hands of several masters he was finally presented by the eunuch Khaff of the Caliph al-Mansur in this town, who made him his personal attendant. After receiving his freedom from his son and successor al-Mu'tas, he soon rose from secretary to the rank of a vizier and commander-in-chief of the army, and in this latter office distinguished himself as one of the greatest of Fatimid generals. His first great feat of arms was the campaign in 347 (958) to the Maghrib; he succeeded in taking prisoner the ruler of Sidjilmas, Muhammad b. Wadd, who had declared himself "Commander of the Faithful", and struck coins in his own name; Fes was taken and the whole district as far as Tangier and Cauna soon subdued. Djawhar's second campaign which took place about nine years later was equally brilliant. It was now at last possible to realise the long cherished designs of the Fatimids on Egypt, which had been breaking up since the death of Kalil. On the 14th Rabii I, 358 = 5th February 960 Djawhar left Raqa'ad with 100,000 men.

Near Alexandria he was met by an embassy from Egypt which offered him the submission of the country. Although he gave the mission a friendly welcome, on its return the war-party gained the upper hand with the result that a battle was fought on the 16th Sh'ban (30th June) at Djawhar. Djawhar had little difficulty in breaking down the resistance of the Egyptians and the enemy was utterly defeated; Shusia, victoriously entered the capital. He next proceeded to lay out a new quarter of the city, the modern Cairo (cf. the articles Aghur, p. 532 et seq. and Cairo, p. 513 et seq.). He intrusted the conquest of Syria to Isma'il b. Fadl, who occupied Damascus in 359 = 959-976. By 360 = 971 however the latter had to retire before the Karmanjurs under Hasan al-A'yan; the reinforcements sent by Djawhar to Syria were besieged in Jaffa and soon the enemy was before Cairo itself. Djawhar tried, not without success, to enter into negotiations with some of the hostile leaders, and after an indecisive battle had first been fought, won a complete victory on the 14th Rabii I, 361 = 24th December 971 before the gates of the city. Jaffa was now relieved but when soon afterwards the Karmanjurs began to prepare for another advance, Djawhar urgently requested the Caliph to come to Egypt in person. He arrived in Kasr al-Nadjar when the Caliph arrived, and the latter hitherto all-powerful Djawhar began to recede into the background; in 364 = 974 he was even deprived of all his honours. It looks as if the Caliph thought the great popularity of his general dangerous. It was only after the death of Musa (356 = 969), in the reign of his successor al-A'zar [q. v., p. 540] that he regained his former rank. This Caliph is 976 sent him against the Turk Afshin, who had shortly before installed himself as ruler of Damascus. In 365 = July 976, Djawhar began his attack on him but when Hasan al-A'yan hurried to his assistance, had to retire and in his turn was shot up in Ascalon by the allies. He finally succeeded in gaining from Afshin a guarantee of a safe retreat, whereas he went to the Caliph in Egypt, who now undertook the direction of the operations in person. Djawhar commanded the advance-guard in the successful campaign against Afshin which followed, but we hear no more of his military activities. After 368 = 980, he seems to have retired to his place near Mostahelim and spent the rest of his life in comparative retirement, winning the esteem of the people by his liberality, and died on the 24th Dhu 'l-Qa'da 381 = 23rd January 992, at an advanced age.

(From: CAIRA ET VAUX.)
After being educated at home by his maternal uncle, Abū Ishaqīma ibn Abī Fardhūlā, al-Dhahabi, author of the work on which the present work is based, had some acquaintance with the learned of the Ḥanifī school in Baghdad, before he went to Būyāhīb, where he attended the lectures of Abū Sa‘īd ibn al-Ḥasan b. ‘Abd Allāh b. al-Murrahūb al-Ṣāfī and Abī ‘Umar al-Hāshim b. Ḥabīb, author of the Kitāb al-Waqā’ wa-l-Wāqia. To obtain a deeper knowledge of Arabic, he travelled in Mesopotamia, Syria and even to the Hijāz, while he devoted particular attention to the dialect of the Ḥijāzī. He then returned to the east, spent some time in Damascus (or Damghān) and in Nisābūr, with Abī ‘Umar al-Ḥāshim b. Ḥabīb, who studied the šīkhī from him. He then continued his journey eastwards but again broke it in the capitol of Khurāsān where he taught the Arabic language, grammar and particularly calligraphy in which he is said to have so excelled that his writing could not be told from that of the celebrated Ibn Makhṭūth. A manuscript of the Korān from his pen cost a hundred dinars. He died in Nisābūr but in spite of this news his body was tried to fly by the two wings of a door and fell from the top of his house (according to narrations from that of the old mosque) while trying to do so.

The date of his death is variously given as 393 (1003), 398 (1007-1008), and about 400 (1009-1010). The first date is uncertain; for Yahyā says: that he had seen a copy of the šīkhī from al-Dhahabi’s pen which bore the date 960; on the other hand this testimony loses its importance when we read that al-Dhahabi died when he had not yet got to the latter šīkhī in the fair copy, and the rest of the work was finished by one of his pupils from the author’s rough draft, either by Abī Uḥūm b. Sahl (variant: Sahlī) al-Warrāk or by the ūlā’s Abī Manṣūr ‘Abd al-Rahmān (variant: Ṭabāqī) b. Muḥammad al-Bakhtî, for whom it is said to have been compiled.

Among his pupils were mentioned Imām b. Muḥammad b. ‘Abd Allāh al-Ṭabāqīh al-Nakhlī, Abī Sahl Muḥammad b. Ḥabīb, Abī ‘Umar al-Ḥāshim b. Ḥabīb, the author of the Kitāb al-Waqā’ wa-l-Wāqīa (the šīkhī is also correct), a large dictionary. The various roots are arranged alphabetically under the first radical, those roots which end in the same radical being arranged according to the first and second radical. In spite of small errors the šīkhī is considered more correct than the ūlā’s of Fīrḍāūsī, which was published in Tabrīz in 1270 (lithographed with vowels); it was published in Būyāhīb in 1282 and in 1292 according to the recension of Imām b. Muḥammad b. ‘Abd al-Dhahāb al-Nakhlī with the al-Wāṣiyya wa-Taḥṣīl al-Šīkhī fi Endi Ṭabāqī al-Šīkhī of Abī Ṭabāqī al-Raḥmān and Abī ‘Umar al-Ṭabāqīh b. Abī ‘Umar al-Anī on the margin.

Bibliography: Naṣr al-Hārūtūn, Maḥbūbī, at the beginning of the edition of the šīkhī (Būyāhīb 1292); Van Dyck, Ikhtifā al-Qāmil (every second page, Cairo 1597), p. 532: Abu ʿUmar Tāhirī, Taḥṣīl (Constantinople 1886), II, 145; Sayyūr, Baghār al-Waqāʾ fī Taḥṣīl al-Šīkhī wa Taḥṣīl al-Luqāyishī wa Taḥṣīl al-Naḥī (Cairo 1326), p. 195;

(Moh. Ben Cherif.)

AL-DJAWLĀN, a district in the north of the country east of the Jorden.

The modern Djiōlan is bounded in the west by the Jorden, in the north by the slopes of Hermon, in the east by the Nahr al-Rikāf and the Nahr al-Allūn and in the south by the Yarmūk. It is divided into a high lying northern part and a lower southern part. The north is wild and covered with shapeless blocks of lava; its former wealth of forest, particularly oak-trees, has now practically disappeared, but it is covered with a rank growth of grass after the rainy seasons. The southern part is flatter and more fertile for, like the greater part of Hawrān, it is covered with decomposed, dark brown lava.

The name of the district points to the Galo-nites of Hellenistic times, which also though only in part extended to the Jorden (Josephus, Bell. Jud. iii, 3, 1). The name was derived from the town of Galon mentioned in the Old Testament which Josephus and Eusebius still knew as a village of Gaulon or Galōn in Batanama. If this town ran, as Schumacher supposes, be identified with the modern Sahm al-Djiōlan, the district of Gaulonitis must originally have had its centre east of the Nahr al-Allūn, and the name was afterwards transferred to the district west of this river. It is in any case certain that the district of Galon in later times also must have included land east of the modern eastern boundary. The town of Djiōlān [q. v., p. 398] is, for example, called Djiōlayt al-Djiōlan by Hassān b. Ṭabīb and other early poets (e.g. Ḥamāna, 658, v, 2); this is also obvious from the above-mentioned Sahm al-Djiōlan, even if Schumacher’s suggestion would be wrong. Yahyā is the first to call the district Djiōlān, in which Djiōlayt lies, and to mention it as a separate district alongside of Djiōlān, although with the note that some consider the two identical. This agrees with the modern division, which separates the land east of the Nahr al-Rikāf from Djiōlan as an independent district Djiōlar. When the Arabs conquered Syria, Gaulonitis belonged to Palestine Secunda and the towns attached to it are therefore detailed in the account of Shurayshī’s conquest of al-Urduj. It had been an important Ghassânid centre as long as this principality existed (cf. Nabilg, 3, 4, 21, 25, 26; Hassān b. Ṭabīb, Tunisia, 89, 91, 100; Cairo, 99, 102, 110, 12; cf. Opp.). The Arabs here abandoned the old division and united Djiōlān to the province of Damascus. It is therefore mentioned by Tabari (Janūb, III, 84), with the name of Djiōlayan, and is associated with al-Urduj and in Nakdadāt, together with al-Ghālūn, Ḥawrān, al-Baṣanty (q. v., p. 674), al-Dīkā (q. v., p. 777), and Ḥūlā the
six districts of the province of Damaus. According to Ya'qubi Baniyar (q.v., p. 648) was the capital of Damaus and the main element in the essentially Kafite population the Bani Murra. At the present day, Damaus is one of the six administrative divisions belonging to the musafirlik of Hawkins, the Kâmil-i-Mahdî which lives in Kandahar. Damaus was used to be supplied with provisions from this very fertile district. An Arab poet (Hamaân, 763, v. 1) also mentions that the clay of Qalân was used for making bricks.

(D. Kirw.)

DIJAWNâR is a district and city lying on the Gunti river to the North West of Benares in the United Provinces of India, between 25.24–26.46 degrees North and 80.7–85.5 degrees East. The population amounts to 0 million and a quarter, of which Moslem Missand form 96%. After Shahab al-Dîn Ghurî defeated the Râshîd King of Kansâdî, the Mûhammadan passed through Dijawnâr to the bank of Benares. Câyâkîn, al-Dîn Tâghlîkî, made his son Governor of the country in 1321 A.D., and 38 years later the Emperor Firuz Shah Tâghlîkî founded the modern city. Thirty five years later again Kâhidji Dâ'îsh, the Maghal Governor, proclaimed himself Sultan al-Shirî, and his successors ruled in Dijawnâr for nearly a century. The principal of these were Mâhrârâr Shâh, Ibn Shâh (1401–1446), Mâhmi Shâh (1449–1459), and Nâsun Shâh (1460–1476), who were engaged from time to time in struggles with the central power of Dîjd, and the rulers of Mâra and made successful raids into Bundelkhand and Oris. The Emperor Humâyûn took possession of the place after the capture of Lahore by Bihâr, and it was subsequently held by Bihâr Shâh. In 1535 A.D. after the succession of Akbar, it was re-taken by the Moghal Empire and fell into decay when Allahabad became the seat of provincial government. It afterwards came into the possession of the Nâwâsî of Quâtî and passed into the British in 1775 A.D. Among the striking architectural features of Dijawnâr are the stone bridge over the Gunti built by Dâmmûmî, Governor of the Emperor Akbar, in 1556 and the Atâa al-Djâhândâshî mosques built by Bihâr Shâh and the Dâsâmî mosque built by two of his nobles; the Lâf Dâwâda mosque built by the Queen of Mahmûd Shâh; and the Lâfâ Ma'dâlî built between the years 1438 and 1478. At the side of the last is an enclosure of royal graves. The special characteristics of the Mosaliki style, derived from the Pâshî style at Dîjd, are the high platform on which the buildings stand, the two-storied colonnade closesters which flank the great central court, and the lofty propylon-like gates on the east side, raised in front of a domed porch, and relieved by panels, cornices and other decorative work.

(H. C. Farnham.)

DIJAZAHAR, in the astronomy of the Arabs and Persians means with some ambiguity (right?), the orbit of the moon, or to be more exact, the circle concentric with the ecliptic, in which the centre of gravity of the lunar epicyle moves; with anaximenes it means the lunar nodes, i.e., the points at which the orbit of the moon cuts that of the sun (ecliptic), and the node from which the moon begins its course north of the ecliptic, is called Râ's al-Djawhârah = the Dragon's Head, the node from which the moon begins its orbit south of the ecliptic, Râ's al-Djawhârah = the Dragon's Tail; the two together are called Dowaćhârah. Diijazahhar is the arabsified form of the Persian word Gawâshar, of uncertain etymology; I shall only mention two derivations: According to Spiegel and Nallino Gawâshar is probably from the Zend Gawâshra (="containing") the seed of the bull", which is the present owner of the epicycle of the moon; the Dictionary of Technical Terms and the Maf'ûdîs (1209), say that Diijazahhar is an arabsified form of the Persian Gawâshar, i.e. form or shape of a knot (literally of a knob or not). For further information the reader may be referred to the bibliography. Its most Arabic astronomers the term as-Ebagaihârah is also found as the two nodes, or al-jad al-jâmî and al-jad al-adâm = head and tail of the snake or of the dragon.

DIJAZRA (plur. Dijazrây) (Ar.,) "island", "peninsula".

- Al-Djazirâ al-djâregâ; the lands of the gulf of Biñâ, in Spain, see ALGIERS, p. 277; - Al-djazirâ = Algeria (q.v., p. 256).

Dijazrâ of al-djâregâ, also briefly called al-Djazirâ, is the name given by the Arab geographers to the northern part of the land between the Euphrates and the Tigris, beginning, according to Abu Tâ ib-Fe'id (ed. Reinand, p. 275) at Malâyê and Amid in the north and bounded to the south from the Kara by a line from Antioch to Taraq; cf. G. Le Strange, Lands of the Eastern Caliphate (Cambridge 1906), p. 24 et seq., 86–114.

DIJAZRA B. 'OMAR, now usually briefly called Dijazrâ, "island", "a town on the right", (west) bank of the central course of the Tigris, situated in 42° 41' E. Long. (Greenw.) and 37° 29' N. Lat. at a height of 1200 feet above sea level. According to the Arab geographers it used to lie in a bend in the Tigris the ends of which were joined by an artificial channel. If we take this literally, the modern river-bed must be the artificial arm and the Tigris once flowed around the town on the west in the bed which is now almost dry in the normal condition of the river.

Even in ancient times there was a passage over the Tigris at Dijazrâ b. 'Omar, at the for-
tress of Bazzadah, the exact site of which has been located by M. Hartmann, (Habib, p. 98 et seq.) from Sachau’s description of the district, south of the modern town west of the ruins of the ancient Tigris bridge, while the site of the district of Zabidane — whether east or west of the river (in favour of the former it might be argued that the Chaldaean diocese of Dair et-tayt is to the east) — is still debated. The traditional equation of Bazzadah with Sapphe should be rejected as quite uncertain. On this point cf. Noldeke in Beiträge zur altchen Gesichtswissenschaft (Festschrift für Kiepert), p. 70 et seq.; Chapot, La frontière de l’Empire musulman, p. 319; Hertzfeld in Memnon, l. 225; M. Streck in Pauwels-Wasaeva’s Reallexikon, Supplement, p. 256.

The district of Bazzadah is often mentioned by the Arab geographers. It was conquered by Yazid b. Ghanm in the reign of ‘Omam. We know less of the town of the same name. The mass of ruins of a bridge south of Dair et-tayt has been identified by ‘Omam across the Tigris naturally points to a time when mostly inhabited by the Aramaeans. In the year 300 (a.d. 656), Byzacius (p. 136) describes it as a well built and populous town surrounded by a fertile country, the harbour of Armenia, from which the Tigris boats exported honey, butter and nuts, almonds, philarchus, etc. to Mosul. In the year 620 (a.d. 676) it belonged to the Marwants [q. v.] and afterwards to the Zangids [q. v.]. At a later period we have a Kurdish dynasty, the Aslijan, as rulers of Bazzadah, who claim descent from an alleged Umayyad Khalid b. al-Walid, although it was well known that they used to be Yazidis. (Cf. M. Hartmann, op. cit., p. 19). By the 14th century, Ian Bat’at (ii. 139) found the greater part of the town in ruins. Timur again destroyed it. The old dynasty gained its power again after being driven out for a period by Usam Hasan and finally submitted to the Ottoman Sultan Selim I for protection from the Safawids. The Kurds, who by this time had already become practically uncontrollable lords of the country, have remained so under Turkish rule. Even when in the sixteenth century the government took more energetic steps and the town was stormed and laid in ruins in 1526, everything was soon as before. In 1599 Lehman-Hamig (Aramoux, i. 365 et seq.) found the Kurdish Hamidie the real masters there.

The modern town of Dair et-tayt (according to Sachau 600—800 houses; according to Müller-Simons 500 houses, of which 120 are Christian; according to Cumi 9360 inhabitants, including 5100 Christians; — according to Siak our most widely disseminated language is Kurdish) which is the village of a Kraij in the Sandjak of Mardin in the Wilayet of Diyar Bakr, occupies only a small part of the area surrounded by basalt walls which the ancient town filled, while part of the ruined remainder is used as a cemetery. In the town streets a few old churches and a considerable mosque have survived. Of the northern corner a few apartments are still occupied; the rest has fallen into ruins. The mud-brick bridge, which united the island in the south with the country on the west of the Tigris was — in a wretched state of disrepair — in use down to recent times but has now been utterly abandoned to decay. At the north side near the fortress there is a bridge of boats which renders communication possible with the mainland.

**Bibliography:** The Arabic geographers have been utilised by G. L. Strange in his Lands of the Eastern Caliphate, p. 93 et seq., 134 et seq., and M. Hartmann, Khuzistan, p. 19 et seq., 33 et seq., 98 et seq., where the other earlier literature is also utilised; see also Barzi in the Siirtungische der Wiener Akad., xviii. (1853), p. 5 et seq., 52. (1853), p. 117—120; Petersmann, Einleitung zum Onco, L’Aramie, p. 353—358; Cui net, La Turquie d’Asie, ii. 312 et seq.; G. L. **Dijazirat b. Oumar — al-Dijazull.**

**Dijazm:** (Ar.); literally, "cutting"; a technical term of Arabic grammar. It is the name given to one of the three moods of the imperfect (funda ma’lum ma’fadh wa’ma al-mudhif), viz., to the one, whose forms without an inflectional ending end in a consonant in a strong verb and in a short vowel in a weak verb (yafzaf: yafzuf; yagham: yagham). The dijazm (in the strong verb at least) corresponds in form to the suflin (which Shawkath also calls wafl), at the end of indeclinable words; according to the Arab view it also corresponds to the fa’ara [q. v.] of the noun (just as the indicative corresponds to the nominative and the subjunctive to the accusative). As it is only found in the verb, it belongs to the Khaz’at al-Fizal. The dijazm is found after certain particles and nouns (see Mu’jaz, p. 112, et seq.). — The elision of short and abbreviation of long vowels at the end of the accented mood are presumably to be explained from the sentence stress.

**Dijazat, al-Kanuni.**

After the completion of his early education in Marrahsheh he went to the east to make the pilgrimage to Mecca and Medina. In Cairo he attended the lectures of the celebrated philologist Abu Muhammad ‘Abd Allah b. Barzi and it is even said that his Kitab is merely a reproduction of the lectures of his teacher on al-Zaidijah.
On his return from the east, he stayed for a while at Bougie which he devoted to the teaching of grammar in the greatest poverty and often had to perform the duties of an imam in a mosque in the neighborhood in order to earn the money to provide him with the means of subsistence to complete his studies, for he would not enter a madrasa.

On his return from the east, he stayed for a while at Bougie where he devoted to the teaching of grammar in the greatest poverty and often had to perform the duties of an imam in a mosque in the neighborhood in order to earn the money to provide him with the means of subsistence to complete his studies, for he would not enter a madrasa.

In 543 (1148-1149) he was in Algiers where he initiated Abd al-Allah Muhammad b. Al-Safi, who was studying with Ibn Barb and which bore his autograph. The man with whom he had pleased it told Abu l-Abbas al-Maghribi, at that time the most famous sufi in that part of the world, of Djazzil's wretched position and Abu l-Abbas met his influence with the Ahmad ibn Sultan on his behalf. The latter appointed Djazzil to deliver the khutba in the Great Mosque of Marrakesh. He died in Ammuri in 606 or 607 or 610 or even 616 according to Ibn Kasif

Wafaqy.

Of his pupils we must mention Zain ibn Abu l-Husayn al-Fahmi, who was a sufi, and Abu All Omar b. Muhammad b. Omar b. Abd Allah al-Safi, who wrote commentaries on the master's Kasim, in which there are copies in the Esquirl (Devereux's Catalogue, No. 2, 36, 1909).

Among Djazzil's works are: 1. a commentary on the Fatimid Kitab as-Sufi b. Zaidal (edited by B. Basset, Algiers, 1910); 2. Al-Kanun, also called al-Madhudiyya as-Djazziliyya; 3. Commentary on the preceding; 4. Anaivah al-Mubah (grammatical dicta); 5. Abridgment of the Commentary on Abu l-Fathi Othman b. Djann on the Dinwih of al-Motaih and 6. Commentary on the Ugil of Ibn al-Sarraj (grammar). Bibliography: Ibn al-Ashur, Tabmil (ed. Codex, Madrid, 1889); No. 1912: Ibn Khallikân (ed. de Slane), p. 486; ibn al-Khatib, (ed. de Slane), p. 194; the letters of Ibn Ishaq, which was guarded by a body of watches and lit all night by a wick as large as a man's body, placed in a kind of vessel full of oil. When Amr al-Safi visited the district of Hafa at a place called Asghaf or Alighat, 77 years afterwards Sultan Abu l-Abbas Ahmad, called al-Arif, after his entry into Marrakesh, had his remains exhumed along with those of the father of the Sultan, who rested beside him, for political reasons, brought the two coffins to Marrakesh and finally interred them there. It almost seems as if the Shahid's body was not uncorrupted after the first exhumation, so we may presume that death had taken place only a short time before.

Apart from his extensive knowledge of Sufi doctrines, Djazzil was also an important jurist and actually known by the title of Medennat al-Musulimun and al-Madhid. His al-Shihab, which was settled in the Moroccan Sut, in the district between the Atlantic Ocean, the Saharan Atlas, and the lower course of the Wad Drit (Darat).
Djebel Bouc, the founder of the Djellabah sect known as the Iskita, whose adherents have to repeat the Basmala 14,000 times and the Dhikr al-Khairat twice a day and in the night once the Dhikr and the fourth part the Koran.

Djezzar-Pasha, Ahmed Pasha of 'AKK, a Bosnian by birth, although he is said to have belonged to the Adana or Nisibese branch about 1180–1190, as first of all in the service of the Grand Vizier Hakim-Oghlu 'Ala-Pasha, whom he accompanied to Egypt, where the latter was entrusted with its administration for the second time; he then made the pilgrimage to Mecca.

When on his return he found 'Ala-Pasha, who had in the meanwhile been dismissed, no longer there, he enrolled in the Mamlikas by selling himself to 'Ali Allah-Beg, one of 'Ali-Beg's Mamlikas (1255).]

1188–1190, in the year in which he returned to Bulgaria, [v. 1188, p. 772], he was entrusted with the punishment of the Beduins who had murdered 'Ali Allah-Beg and revenged the latter by massacring over seventy Arabs, a deed which earned him the epithet of Djezzar ("Butcher"). Suspected of complicity in the murder of the baby-Beg he escaped, disguised as an Algerian, to European Turkey but soon afterwards returned to marry the daughter of a Beduin chief of Bulgaria of the tribe of Hanakli. In Syria he made an independent position for himself with the help of a body of soldiers, which he formed by purchasing slaves and in 1181 (1767) received the rank of Mir-Mirjan and in 1189 (1757) was made Beylerbeg of Rumi; in the same year a reward for his services to the Porte in the affair of Djebel (Taki) 'Omer, he was appointed governor of the Eyubli of Saidli. He made use of this position to fortify 'Akk [q. v., p. 241] and make it his residence; he was on several occasions Wali of Syria and leader of the pilgrims' caravan.

Defeated in 1215 = 1799 by Bonaparte, he retired to 'Akk which he defended with the help of the English fleet under the command of Sir Sidney Smith, who provided him with engineers, gunners and ammunition. The siege began on the 21st March and ended after repeated fruitless assaults on the 20th May. Djebel on his side had made an unsuccessful sortie on the 4th April to facilitate the operations of the Turkish army. He had a monopoly of the trade in corn and cotton; with the vast sums obtained by his exactions he built three splendid monuments of architecture in his capital, a mosque, a school and a market. Regarded by the Porte as a rebel, he was saved from the punishment threatening him by the rising of the Wahhabis. He once again became Wali of Syria and commander-in-chief in Hijaz, but an illness prevented him from further carrying out his plans; he died in 1219 = 1804 at the age of 70.

Djebedji, "tire-makers," a division of troops who had charge of weapons and munitions and their transport; when instituted by Sultan Muhammad II the corps consisted of 700 men; under Murad III it was raised to 7,300. It was composed of two divisions, Belik and Djebedji, such as contained a certain number of men, and each body of the Djebedji was stationed in a separate district of Constantinople in five barracks near the Ayas Sofia and in a Kiosk near the Top-Khane. The rest under station were at the frontier, would be usually called "Asab. Their general was called Djebedji-Beg. They were disbanded at the same time as the Janissaries (1241 = 1825).

Djebel, Djalfi (A.), "hill."

Djebel Tarik. See Girebaltar.

Djejjab or, according to the dialect, Djejjiba or Djejjiyiya, an outer garment used in certain parts of the Maghrib, which is very wide and loose with a hood and two armlets. The Djejjab is made of a quadrangular piece of cloth, which is much longer than it is broad. By sewing together the two short ends a wide arm is formed. Its upper part or sleeve is also sewn up except for a piece in the centre where a hole is required for the head and neck. Holes are cut on each side for the arms. When the garment is put on, the seam joining the two short ends runs down the middle of the breast. The two seams which close the two ends of the upper part run along the shoulders and the upper part of the arms. The hood and neck are put through the space left open in the middle of the upper end. The forearms come through the holes at each side, these would be left uncovered if armlets were not sewn on to the edges of the armholes. These armlets are very short. At their lower extremity is a slit (fezdah) for the elbow and at the top a second slit (fateh) across, through which, when necessary (e. g. for the ritual ablution) the bare fore-arm can be thrust. The Djejjab is made either of native cloth or (in prosperous towns) of European. The former is woolen, rare and only quite recently of cotton or cotton and wool. These cloths are dyed in different colours in different districts; red, brown, black, white, of uniform colour, striped or spotted. The European materials are thick, usually navy blue, black or dark grey. — The Djejjab of native manufacture consists of a single piece of cloth, which is made
of the required size. The hood is not added but consists of a quadrangular piece of cloth woven on, the sides of which are folded together behind and sewed. In the #gêllâb# of European cloth, the hood is cut separately and put on. The seams of the #gêllâb# are covered with braid and often ornamented with tassels, knots and rosettes. The cut, the form of the #gêllâb# and the hood, the ornamentation, the style of weaving, of sewing and of lining vary much in different districts, which, this garment is called #gêllâb# (#gêllâba, #gêllâbâya#), throughout the greater part of Morocco and in the West of Algeria; it is also used in other parts of the Maghrib, e.g. in the South of Algeria and in the Mađb where it is given another name there. Among the Andalusian Muslims however the word #gêllâbâya# was the name of a garment, the shape and use of which we do not know; in Egypt, we find a phonetic equivalent of the word, #gêlîbîya# (with b for d), but the garment it denotes is quite different from the #gêllâb# of the Maghrib. The origin of the word is uncertain. Dory considers the form #gêllâbâya# to be the original one end #gêllâb# to be a corruption. He therefore gives the original meaning as "garment of a #gêllâb#, i.e. a slave dealer." This view seems philologically untenable. It is much more probable that #gêllâbâya# is connected with the Old Arabic #gûllâb# "outer garment". The dissimilative dropping of the i in this word of foreign origin (cf. Nödcke, Neue Beiträge zur arabischen Sprachkunde, p. 53) is not surprising; moreover it has also taken place outside the Maghrib in the modern forms of the word #gêllâb#: thus for example in the dialect of "Oman we find #gîlîb# with the meaning "veil".

DJEM, son of Sulîm. Mehemmed II, was born on the 27th Safar 849 = 23rd December 1449 in Adrânople (Sa'd al-Din), i. 473; "Ali ibn Imân ibn Belligh, "Gûdûzî", 47); according to eastern sources (Thuman, 2), his mother was a Servian princess. While not yet ten years old, he was appointed governor of Kastamuni in Kâdîhî on 8 July 1450 (Sa'd al-Din, i. 517). A middle of the Shîrâz 873 = end of 1476 succeeded his deceased brother Musta'îl as governor of Karaman with a residence in Kâsînî; in Kâsînî he devoted himself to athletic exercises and translated Samîn's poem #lêmmêhî lâ hâkîgîd# from the Persian (Sa'd al-Din, i. 516). During this period he conducted the negotiations with the Grand Master of Rhodes, which preceded the unsuccessful blockade of the island by Mehemmed II on 1450 (Thuman, 12-17). Mehemmed II died on the 3rd May 1451; of his two surviving sons, Bâyazîd II was in Amâna; on the 20th May 1481 he seized the capital and the reins of government. Djem who intended to dispute the throne with his brother only just as far as Brusa, which he took after a brief fight. Here in the old capital of the Ottomans, he had the #mâshîa# read in his name and struck coins. (Neher, Zeitscrif der Deutschen Morganl. Gesellschaft, x. 376). Of the coin described by Gâlib Edhem, no. 126). But in 18 days he had to vacate Brusa before Bâyazîd's army and on the 26th Rabi' II 886 = 23rd June 1481 was severely defeated at Yenişehir (according to Hâdîjî Khâlîfâ at Sulûhî Özi); his army of Anatolian #Azâlî, Karamanîs and Turkmans of Varak was scattered, he himself escaped with great difficulty to Kâsînî, from which he fled to the Cilician highlands, which within the Egyptian sphere of influence, on the 1st Djamâldî I. = 28th June with his mother, his harem and his son. Thence he went by land via Aleppo, Damascus and Jerusalem to Cairo, which he reached at the end of September and was kindly received by the Mamlûk Sulîm Khâîbây. From Egypt Djem made the pilgrimage (December 1481-March 1482); on his return to Cairo, he entered into negotiations with Bâyazîd to obtain a share of the kingdom; but Bâyazîd would only promise him a suitable allowance (Feirdûs). At the same time the Karaman-Oghûn Kâsînîm and others of his supporters urged him to return to Anatolia and once more try the fortune of war. In consequence of this, Djem left Cairo at the end of March, assembled his adherents in Aleppo in the beginning of May, and set out from Adana, where he joined forces with Kâsînîm, to invade the Ottoman territory. This undertaking which was entered into without sufficient forces and was badly managed proved an utter failure. Although at first Bâyazîd's generals had to retreat and some towns like Eregli and Angora fell into the hands of Djem's troops, he could not take Kâsînî, which was defended, and when Bâyazîd advanced with his army (in the middle of June) Djem fled to Tushel, inaccessible among the Cilician mountains, without a great battle being fought at all. Bâyazîd once more offered to make peace with him, and promised him a princely appanage if he would retire to Jerusalem and do nothing against his authority; but Djem proudly and stubbornly insisted on a division of the empire. When he could no longer hold out, he disband his army, took a ship at Korykus and went via Amap to Rhodes, to the Grand Master Pierre d'Avignon, after receiving an assurance of protection and guarantee of the person and property of himself and his followers. He arrived at Rhodes on the 29th July; soon afterwards the negotiations between the Grand Master and the Sulûm were begun, which in the course of the next month led to the conclusion of a peace, by which the Sulûm agreed to pay 45,000 ducats annually to the Knights of St. John, in return for which the latter undertook the maintenance and supervision of Djem. In the interval, on the 11th Sept. 1482, a Thesalan had sent the prince to France, to inform him in one of the houses of the order there. On the 16th October Djem landed at Villarsfranc and first of all spent some months at Nice; from there he was taken, always guarded by the knights, to Chambery, Ramilly, Pontet, Rochechouard, Sassay, Bourganeuf, Monteil le Vicomte, Mortierelles (Limoges), Boisarnay (May 1485) and then back to Bourganeuf (1487), where he remained till the end of 1488.

When Djem made the fateful resolve to go into Christendom, he did it, as his Turkish biographer Sa'd al-Din tells us, with the intention of invading
Rumelia from Hungary and there resuming the war with Bâyazid. As soon as he reached France, he actually attempted to make an alliance with Matthias Corvinus; but his ambassadors were thrown into prison and made away with. For his protectors and warders regarded him solely as a means to an end and had no intention of allowing him any freedom of movement, by which they might lose this valuable hostage and object of ransom.

The rulers, threatened by the Ottomans—Matthias Corvinus, Ferdinand of Aragon, king of Naples, the Pope and the Mamlûk Sulîn, repeatedly endeavoured to get Djem handed over to them by the King of France and the Knights of St. John in order to be able to use him as a means of bringing pressure to bear on Bâyazid II. Charles VIII finally decided, by arrangement with Pierre d'Aubusson, to hand Djem over to Pope Innocent VIII, who was planning a crusade against the Turks. On the 21st February 1489 Djem sailed from Toulon and made his state entry into Rome on the 10th March, where he was henceforth maintained in honourable custody partly at the Vatican and partly at St. Angelo.

No sooner did Djem become a ward of the Pope than the latter was approached by the above-mentioned King of France and the Knights with him; on the other hand Bâyazid, who was disquieted by his brother's change of abode, sent Muzafferê to the Pope in 1490 to make some arrangement with him; two years later a second envoy was sent with presents and Djem's allowance, which was now paid to the Pope at the same rate as previously to the Grand Master. Under Alexander VI (Rodrigo Borgia), the successor of Innocent VIII, who died on the 26th July 1492, Djem's lot seemed to have improved; he continued to be an object of the liveliest interest to all the powers interested in the East. At the end of 1494, Charles VIII of France undertook his campaign against Naples and persuaded the Pope to hand Djem over to him. The latter left the Vaticans to take part in the campaign against Naples but fell ill soon after and died in Naples on the 25th February 1495. Alexander VI was succeeded by Julius II (Salad-d-Dîn), the Scottish story of how a barber, hired by the Pope, caused Djem's death with a poisoned razor; a similar story is given by Ewliya, Travels, i. v, p. 41; at great length by Kauten, 179, et seq., and Haydut, Djem. A distinctive feature of Djem was the fact that he was noted by Leo Africans. *During three months of the year (in July, August and September) this town is like an island, for at this season the Niger overflows its banks just as the Nile does* (Leo Africans, 127). Djem lies at some distance from the left bank of the river, a tributary of the Niger, on a rocky plateau in the middle of the plain which is covered with water in the rainy season. This remarkable feature of Djem was noted by Leo Africans. *During three months of the year (in July, August and September) this town is like an island, for at this season the Niger overflows its banks just as the Nile does*. Leo Africans, 127. The town is situated at a distance from the adjoining country at this season by a gully of swamps, a circumstance which has very frequently enabled the inhabitants to ward off hostile attacks. The town which is surrounded by a wall of unbaked bricks with 14 gates, is about 1000 yards long and 700 broad. It has 6000 inhabitants (Bazo, Bambara and Fulbe), some of whom wrongly claim to be of Arab descent. The language most commonly spoken is a dialect of Bazo; Songhai though known to many people is only used for trading purposes.

Djem was long famous for its great financial importance. In the 18th century the author of the Travels of the 18th century wrote: "It is one of the great Muslim markets. In it the salt-traders from the mines of Taghaza (2 days' journey north of Tou- djen) and the gold-traders from the mines of Biru (according to King in Bâkî) meet..." It is on account of thisfavoured town that the caravans...
assembly in Timbuktu from all points of the compass..." (Tarifit al-Sudan, transl. by Houdas, Ch. I. p. 22). It was further a great centre of the slave-trade. Djenne was also a kind of intellectual centre and a rival of Timbuktu in this respect.

The teaching of theology and law flourished in it. Since the occupation of Djenne by the French, it has still retained some importance as a market for the immediate neighbourhood but the suppression of the slave-trade has dealt a death-blow to the prosperity of the town. Its intellectual activity has also sadly declined. Theological instruction is limited to reading the Koran and to the knowledge, absolutely necessary for the correct performance of ritual ceremonies. The religious life there is rather lax, and the brotherhoods, the Kadiyya and Tijaniyya, which have settled in the town, have great difficulty in winning a few adherents.

The foundation of Djenne seems to date from the third century A.D. In this period the Bozo, who inhabited the district in which Djenne now stands, were conquered by the Nono, invaders from northern Masaia, who soon became quite assimilated to them. The conquerors finding themselves rather cramped in Djenne, left the capital of their state, Nono, moved their residence to a desert plateau a little to the south and thus built the present town of Djenne. At this time they were heathen, but readily became converts to Islam. Only the chiefs retained the ancient religion for some centuries longer. Finally in the viiith century A.D. (xiiiith A.D.) one of them, Komboro (Kohl's Kanbara) became a Muslim. According to the Tarifit al-Sudan he destroyed his palace and replaced it by a mosque, which remained unaltered down to the beginning of the xixith century and whose remains still survive. The erection of this building was traditionally ascribed to a Moor named Mulsim Isra. He is further credited with building the city of Djenne for the town to hold and decorate their houses in the style still usual in Djenne and the neighbourhood. Komboro's descendants (the Mansa dynasty) remained masters of Djenne till the end of the xivith century A.D., when they were overthrown by the Songhai. Sonni Ali took the town about 1480 after besieging it for seven years and levied an annual tribute on the inhabitants. Songhai rule was however quite advantageous to the people of Djenne; for owing to the security which reigned throughout the country they were able to trade as far as Timbuktu, Gao and the lands at the bend of the Niger. The Songhai were succeeded by the Moors. Djinjar Paša, entrusted by the Sharif Ahmad al-Mansur al-Djachabi with the task of conquering the Sudan, took Djenne about 1556 A.D. Moroccon rule lasted till the beginning of the xviith century. The authority of the Sharif was maintained at Djenne by a Paša, and afterwards, by a Wali, assisted by an Amin or treasurer and a Khed in command of the troops. These officers, controlled the local administration which was in the hands of a native chief or Djenné-Koli. Moroccan rule was disastrous for Djenne. Numbers of the inhabitants, exacerbated by the exactions and treachery of the Moors, decided to emigrate, while the Barbars began in the xvith century to make incursions which grew more and more frequent. One of their chiefs Ngelo (cf. the article BAMBARA) even succeeded in taking the whole district of Djenne with the exception of the capital; in the second half of the xvith century.

The invasion of the Fulbe put an end to Moroccan rule. The people of Djenne, wearied of their old masters, voluntarily submitted to the Marabout Ajmalu Shaikh in 1810. But an insurrection stirred up by the Moors resulted in the massacre of the Fulbe who now settled in Djenne and forced Ajmalu to besiege the town which was only taken after a regular siege. The Moors were then punished and their goods distributed among the Fulbe. Ajmalu left the local administration in the hands of a native chief but he was careful to leave behind him one of his own officers to supervise him and made Djenne the headquarters of the Amin wangled, or commander-in-chief of his army. In the course of the xixith century, Djenne shared the vicissitudes of the Fulbe kingdom. Taken in 1863 by al-Haddi Ousseir, it remained in the possession of his successors till 1895 when it was occupied by French troops under Colonel Archimard.

Djenne (the Gnawa of Leo Afrome, and Grievs of Marmol) is an island in the Mediterranean in the Gulf of Gabes. It is in the form of an irregular hexagon, measuring 26 miles from east to west and from north to south from 11 to 26 miles and having an area of 234 sq. miles. An arm of the sea about 40 miles broad separates the western side of the island from the Tunisian coast whilst in the south it is only separated from the mainland by the "Sea of Bagrana", which is practically a lake as it only communicates with the outer sea by two narrow straits. The one on the east opposite Ajim is only 11/2 miles broad but accessible lying from 9 to 12 feet of water, the other in the east opposite al-Kantara, from 2 to 4 miles broad, is so shallow that canoes can cross it at low water by following a ford marked with posts (prih al-djemal). In the Roman period a causeway, the remains of which still exist, completely blocked this passage. The coast-line about 85 miles long, bordered by sand-dunes and lagoons is seen the whole straight, except in the south where the Gulf of Guellala and al-Kantara run inland and the peninsulas of Bin al-Udaine and Tarbella run out into the sea. The shallows around the coast renders access difficult; in the north for example a depth of 5 fathoms is only reached at a distance of 3 or even 6 miles from the shore. The tides are very marked in these waters, where they make a difference in depth of 6 feet and leave large areas covered at low water.

The soil of Djerba is composed of argillaceous schists and limestones covered in the north-east of the island by sand. Its contour is not well marked; no point exceeds a height of 100 feet and the general appearance is that of a plateau sloping gently to the north-east and cut from south-west
to north-east by four folds which separate depressions of no great depth. The climate is equable and mild (the mean winter temperature is 56°F, the spring 62°F). Rainfall is rare and the rainfall insufficient to supply streams or even springs. On the other hand there is a plentiful supply of subterranean water which supplies wells dug at all points of the island with water suitable for irrigation purposes but is too salt for drinking, which compels the natives to collect rain-water on the rough of their houses for domestic purposes and keep it in cisterns.

The soil of Djerba is of remarkable fertility. The date-palm, the olive and the vine are the principal fruit-trees. The date-palms (373,000) the fruit of which is of mediocre quality grow best on the coast and form an almost continuous groove round the island; they are not so numerous in the centre and east where they are found in the gardens along with such fruit-trees as the apple, pear, orange, citron, and pomegranate. The olive-trees (500,000) are found in the centre, particularly in the plains of Sadwikha. The vine is grown in the eastern part and provides table raisins of high quality. Cereals are little grown and do not suffice for the wants of the inhabitants.

Agriculture is not the only occupation of the people of Djerba. They also have various industries such as the manufacture of oil, of clothes and of pottery. These few industries are very ancient and supply work for a relatively large number of people. About 700 people live by weaving wool, cotton, or silk and make coats and kabies, which are much sought after throughout Tunisia. The potters of Guezzala used the plastic clay found in plenty around the town and make white and glazed pottery which is exported to Tunisia and Tripoli. The people on the coast gain their livelihood from the sea. In 1906, 172 coasting vessels and 200 fishing boats were registered in Djerba.

An industrious people, cool and clear calculators, the Djerbian makes excellent business men. Many of them, usually natives of the township on the east of the island (Midan, Sadhghane) have set up as shopkeepers in Tunisian towns just as the Malabites have done in Algeria. There are regular colonies of them at Sfax, Sousse and Tunis, having their own organisation, their own chiefs, and not mixing with the other Muslim merchants. Enriched by their great industry and rigid economy, the Djerbians usually return to their native island after making their fortunes.

The population of the island numbers 31,801, with an average of 239 people to the square mile, which is much higher than that of the rest of Tunisia (29 to the square mile). The population although dense is widely disseminated. It is not found in towns or villages, in houses built thickly together. The type of house usually found is the medina, a country house with its outhouses, isolated from its neighbours by fields, meadows and earthen walls. Less African than its popular and the picturesque homes of the island of Djerba in the 19th century is still true to-day. Geriba is an island near the mainland, quite flat and sandy, covered with numerous estates, growing vines, dates, figs, olives and other fruits. On each of these estates is a house for the family so that we find innumerable settlements but they rarely consist of several houses together. Some of these estates, with their walls still battlemented or pierced with loopholes, recall the days when the Djerbians, divided into jammats or quarters, had to protect themselves against each other. In the island there is a fortress of the midam, an administrative centre of Djerba; in the east Midan, Sadhghane (2466 inhabitants), Ouar (3400); in the west Bani Dru (2435), Ajim (4000); in the centre Sadwikha (2500) and Guezzala (4040).

The native population consists of diverse elements; the great majority are Berbers but there are also Arabs and Jews. According to Ibn Khaldun (Hist. des Berb., transl., de Sane, 172), the Berbers of Djerba belong for the most part to the Lamay tribes. The latter were followers of the Al-Badhi heresy who in 144-761 the Ibn Ristan, driven from Kairouan by the Al-Badhi governor Muhammad b. al-Aghani, retired to the Central Maghrib and unifying the Lamay and the Al-Badhi Lewata under his sway founded the Kingdom of Taharti. On the overthrow of the Ristanids by the Fatimids, a section of the Lamay adopted the doctrines of their conquerors, while the others remained faithful to the religion of their ancestors. The destruction of Taharti by the Almoravids Ibn Ghulniya (665 = 1208) forced the Lamay to disperse. Some settled in Tripoli, others went to Djerba where a Rastian tribe, the Sadwikha, was already installed; these were Berbers who had preserved Khordh doctrines, as several passages in al-Bakri show, who describes the Djerbians as a "wicked and treacherous" people (Hakir, Descr. de l'Asie, transl. de Sane, 48, 169).

The Djerbians differ in language and religion from the other peoples of Tunisia. They have retained their ancient Berber dialect, namely Sheltia. This dialect according to R. Basset, resembles in its vocabulary, the Rif, Zuwara and Ma'b. Like the dialect of Ma'b it has retained the ancient Berber numeral system almost in its entirety. The very numerous mosques — there are 28 in all — present certain peculiarities of architecture, notably the low, square minarets, surmounted by a conical dome, which some scholars consider to be a reminiscence of an ancient phallic cult. Although the Djerbians do not seem ever to have troubled much about intellectual culture, they have produced several scholars (Abd al-Hafif of some repute. Such were Ibn Messewir (died at the beginning of the 14th century A. H.); Isma'il al-Djazaiili (died 730 A. H.); Shalm al-Djazaiti (baptised into the 14th century A. H.); Ibrahim al-Tarti (executed by Dragut, orders of Ahmad al-Maghaz, died 1406 A. H.); Ibrahim al-Djemali (1032-1134 A. H.).

Arabs are represented by a section of the Ha-remi, a tribe settled in the south of Gabes and by the Ulad Metebeul who have migrated in recent times to the neighbourhood of Ajim. The Jews are found in two settlements of Ha-r ra Kabira (2500 inhabitants) and Ha-r ra Saghira (500) to the south of Himi-Sul.
the lotos-eaters of the Odyssey, was known to the ancients as Meninx. The Phoenicians had trading-settlements there; and the Carthaginians and the Iberians land there, the Romans held it under their sway. In Imperial times, Djerba seems to have been thickly populated and very prosperous. It contained several towns, Meninx (al-Kantara), Tipaza (near Ajim), Harilus (not far from Guellala), and near the modern Hmim-Sulik, Gerba or Gerba, to which the island owes its name. After belonging to the Vandals and then to the Byzantines, the island was taken by the Arabs who captured it about 43 (565) under Umar ibn Thabit al-Amak. We know practically nothing of its history in the early centuries of the Muslim occupation. Al-Bakri only mentions that in his time, Djerba was peopled by brown Berbers, who only spoke Berber, professed Kharidj doctrine and lived by brigandage and piracy (Bakri, Deusr. de l'Afri. loc. cit.). Al-Iдр demonstrators, de l'Afr. transl. de Goedge, p. 123) calls the Djerba, 'predators of bad and hypocritical character, always ready to rebel and unwilling to receive law from any one'. It may be surmised that, protected by the situation of the island, they remained practically independent of the Muslim sovereigns of Ifriqiya.

On the other hand they had to put up with severe fighting with the Christians. The Normans of Sicily tried to put an end to the depredations of its corsairs by taking the island itself. In 1133 A.D., George of Antioch, Roger II's Admiral, occupied Djerba. The women and children were sent captives to Sicily and the island incorporated in the kingdom. A rising which broke out in 1153 provoked strenuous reprisals but did not save the Norman sovereignty. 'Abd al-Mu'min after making himself master of Mahdiya and all the Tunisian coast, drove the Christians out of Djerba (1159-1160). They reappeared in 1184 when Roger Doria, Admiral of Peter of Aragon, king of Sicily, took advantage of the dissensions which were rending the Hasid kingdom to attack Djerba. He twice landed troops on the island (1184-1185), ravaged it, carried off 2000 inhabitants whom he sold as slaves in Europe and finally took possession of Djerba. He offered it in homage to the Pope who granted it to him as a hereditary fief. It remained in the hands of his heirs till 1316 A.D., when two factions divided the population, that of Mu'awiya, favourable to the Christians, and that of Masmids, hostile to them. The latter appealed to the Hasid Sultan, who twice tried without success to dislodge the Christians. The rivalry between the two factions however continued to foster disorder. To put an end to this state of affairs, Frederick of Aragon to whom the guardian of the last male descendant of Roger Doria had pledged Djerba, called in the Catalan adventurer Ramon Montaner. The latter established peace by bloody executions and governed the island for three years (1311-1314) after which it was restored to the direct rule of the Kings of Sicily. The chicanery and exactions of the government provoked another rising in 1354. The Sicilian troops were driven out of the castle of Chadali (Bordj Khashil), built by Roger Doria, was taken by assault and the soldiers, who escaped the massacre, sold as slaves. The kings of Sicily, nevertheless, insisted on asserting their claim to Djerba. In 1353, with the help of the Genoese, they succeeded in regaining a footing on the is-

land, where they maintained a garrison till 1352. But the attempts made in the century following by King Alfonso V (1424-1458) to regain this important position ended in failure.

Free from Christian rule, the Djerbians did not long submit to the Hasids. According to Leo Africanus, on the death of Sultan Abd al-Ogman (1450 A.D.), they gained their independence and to protect themselves from the attacks, which they always had to fear from the mainland, destroyed the causeway, which united the southern coast with the continental. About the same time, the chief of the Kharidj, who held the supremacy of the island, saw his rival and founded a hereditary principality. These changes were accompanied by great bloodshed and turbulence; according to Leo Africanus, ten Shakihs were murdered in ten years. In spite of this anarchy, trade was flourishing enough to yield the rulers of Djerba 80,000 donjols from the customs and salt-tax. A few Italian merchants continued to visit the bazaars of the island and traded there with merchants from Tunisia, Tripoli and Egypt. The inhabitants enriched themselves by the export of clothstuffs to Egypt but their chief source of wealth was piracy on Christian nations.

In the second half of the 20th century, Djerba had become a centre of the Barbary corsairs, at the beginning of the following century Artuf and his brothers made the island the base for their operations in the Mediterranean. Dragui next made the island his headquarters and maintained his hold on it in spite of the efforts of a section of the inhabitants to drive him out; the waters of Djerba afforded his ships a safe refuge from the attacks of the Spanish fleet. But he was finally blocked by Andreas Doria in the sea of Bugerra and only escaped by having his galleys hauled over the peninsula of al-Kantara by night (1541). Dragui allowed the Shakihs who governed the island to remain in power but he took care to rebuild the fort of Hmim-Sulik (Bordj al-Kabir) built a century earlier by the Hasids. The rebuilding was finished in 1557 and is commemorated by an inscription which still exists (cf. R. Bassat and Hondas, Epigraphie Tunisienne in the Bulletin de Correspondance Africaine 1582, p. 195. Three years later a Spanish expedition under the Duke of Medina-Coseli went against Tripoli appeared before Djerba. The Spaniards took possession of the island without difficulty and placed a garrison on it (February-March 1560). But, defeated on the 15th March by Padi Pasha, Medina-Coseli had to retire to Sicily leaving the garrison exposed to the attacks of the Turks. The Spaniards, commanded by Don Alvar de Sande held out until famine and disease forced them to capitulate. They were all massacred and their bones used to build a pyramid near the Bordj al-Kabir, called Bordj al-Kabir, the 'castle of heads'), which was not destroyed till 1648. When the Turks had definitely established themselves in Tunisia, Djerba recognised their authority, continued to be administered by its hereditary Shakihs. The family of Sannun, which held this office in the 18th century, was succeeded by that of the Djalladins, descendants of Musa b. Djallal, who had been given the office by Dragui and whose last representatives were styled by the Bey 'Ali b. Hasain b. 'Ali. These Shakihs showed themselves very independent of the Tur-
high Pasha as may be seen from the rebellions which broke out in 1599, 1600 and 1601. The population of the district is estimated at 1,800,000, of whom 61,9% are Muhammadans. It is entirely an agricultural country, formed by the rivers Hooghly and Meghna, and is famous for its rice cultivation. A Muhammadan governor, Khan Djang Ali, ruled in Jessore in the middle of the 16th century, and subsequently Hindu chiefs controlled the country under the Muhammadan Kings of Bengal. The Nawab of Dacca interfered in the district early in the 17th century, and after the English passed with the rest of Bengal into the hands of the East India Company, the Muhammadan residents are chiefly converts from the aboriginal Namasudras of the District.

DJEZAIR-1 BAHR-I SEFID. [See AKE DÉNIS, P. 345.]

DJEZAIR-1 GHÁZI HASAN PASHA, nicknamed PÉLARHEIK ("làm-sou-moustache") one of the greatest Mughal Emirs (Capitán Pasha) in Ottoman history, belonging to Koečit (Telčurdaghi) on the Sea of Marmora, where he is said to have been a slave of a merchant named Haïdji Hassan Agha, after being rescued took part as a janissary in the Austrian war of 1737-1739 and particularly distinguished himself in the battle of Kruze (Krčevik) on the 23rd July 1739. At the end of the war he went to Algeria where he became a dey and finally was appointed Bey of Tlemcen. To escape the machinations of the Pasha of Algiers he escaped to Spain via Ora, where he was kindly received by Charles IV. Recommended by him to the king of Naples and the latter's representative at Constantinople, he returned to the Turkish capital in 1760 and was at once appointed by Sultan Mustafa III to the command of a warship; in 1760 (1765-1767) he was appointed to the kapudan (flagship) and in 1770 took part in the naval war with Russia. At the battle of Çeşme [q.v., p. 836] the kapudan commanded by him went on fire in attempting to grapple the Russian flagship, and both vessels were burnt to the water's edge; Hasanbeg escaped, although wounded, by swimming and reached the Dardanelles by land; on the 15th October 1770 he succeeded in winning back the island of Lemnos from the Russians by a bold stroke. For this brilliant feat of arms he received the title Ghazi and the rank of Kapudan Pasha. In 1773 and 1774 in his capacity as Seraskier of Russchuk he took part in the war with Russia by land; after the peace of Kainardjia (July 1774) he resumed his previous duties. In the next two years (1785-1777) he destroyed the power of Shah Tahir Omar and his sons in 'Akka; in 1778, when the negotiations with Russia regarding the Crimes threatened an outbreak of war, he made a demonstration with a fleet in the Black Sea, which however quite failed in its purpose while several of his larger ships were grounded or otherwise lost and the crews were decimated by the plague. His expedition to the Morea took place in 1779, where he routed the Albanian hordes, who had settled there on the withdrawal of the Russian fleet. In 1784 (1780) he appeared before Alexandria and collected the Egyptian tribute, payment of which had been refused for several years; on his return voyage he interned the rebellious Maimote in 1781 (1781) on the death of the Grand Vizier Silişbâr Mehmed Pasha (20th February), as Câlimanâkæ he executed the duties of Grand Vizier for two months. For the next few years he was mainly occupied with the reorganisation of the navy, built the first quarters for the arsenals (1784), organised the garrisons in the forts.
on the Bosporus at the entrance to the Black Sea and at the beginning of 1786 acted as Grand Vizier for a short time. During 1786-1787 he restored the authority of the Porte in Egypt, which had become independent under the Mamluk Beys Murad and 'Iskand. Although he had but insufficient forces at his disposal, he fought his way to Cairo, relieved Vehsin Mehmed Pasha who was besieged there (3th August 1786) and routed the rebel Beys; while still engaged in restoring order in Egypt, he was summoned away in August on account of the danger threatening from Russia. On the occasion of hostilities for the business concluded with the relief of Ocakow in 1788, he was unsuccessful in several seafights with the Russians off Ocakow in July 1788 and although he succeeded in throwing reinforcements and provisions into the fortress, he was not able to force the enemy to raise the siege. After losing several more ships in a storm, he returned to Constantinople at the beginning of December 1788. On the 12th April 1789 his friend, Sultan Selim III., his successor, appointed Kâzîb ı̇sa Pasha Kapudan Paşa and Djezaârî Hasan Paşa Seraskier of Ismail. After the Grand Vizier had been severely defeated at Martinischtt (21st September) and died soon after, Hasan Paşa took over the supreme command and was appointed Grand Vizier (In the beginning of October). He wintered in Shumla and from there entered into negotiations with Prince Potemkin. A few days after ordering the March out from winter quarters, he fell ill and died on the 13th Radjab 1204 = 30th March 1790, according to some an inflammatory fever, though according to another story, current even among his contemporaries, from eating a poisoned musk-pill (djes) which the Sultan had sent him. He was buried in the Bektashi monastery built by him before the gate of Shumla.

Djezaârî Hasan Paşa was pre-eminently distinguished for his personal valour. His expeditions to Syria, to the Morea and to Egypt show not only great military ability but also a political insight rare in his day. Although his two expeditions to the Black Sea in 1778 and 1788 ended unfortunately, he is entitled to great credit for reconstructing the fleet destroyed in the battle of Kalamante and the organisation of the Turkish fleet with the help of European experts, a course which was continued by his successors.

DJIBAL, plural of the Arabic Jibâl (mountain or hill), a name given by the Arabs to 'Irâk 'Adâmî, the ancient Mediæ. The DJibâl comprised Mükkûl (Mûlûûl), Media, Nûdèka, Gesch. der Araber etc., p. 103; note following Lagarde and Oldhausen), from Kûûf and Basra (Istâkhîrî, p. 195; Ibn Hawîkî, p. 255), i.e. the province bounded in the east by the desert of Khochân and by Fârs, in the west by Advârsûlûnî, in the north by the Alburz range and in the south by 'Irâk 'Arabî and Khûshûlûn. The name is derived from the fact that this province with the exception of the plain which stretches from Bassûhûdîn to Kâîî (near Tâbûrûrû), and that which stretches towards Kûmû, is wholly mountainous; there is not a navigable river in it. There are mines of antimony at Istâkhîrî (Istâkhîrî, p. 203; Ibn Hawîkî, p. 257); the climate is in general cold and there is a great deal of snow in winter. T. Tivy, Old Men of the Mountains, Seniors, Senexes, Vetusis de Monte, given by the western historians of the Crusades to the Grand Master of the Assassins, is the literal but erroneous translation of the Arabic Shûkh al-Djibûlî which really means "Prior (of the Isâmîla) of Media". His capital was the fortress of Alanî in the desert of Karâmîn.

Bibliography: Vâdt, Moçdr, ii. 15; (Bâchet de Meynard, Dict. de la Poppe, 1811); A. P. Malan, Manuel de la Cartographie, p. 248; Mûkâddas (ed. de Goeje), p. 354; G. Le Strange, The Lands of the Eastern Caliphates, p. 185 et seq. (CL. Haarte)

DJIBUL is the name of a district in the very south of Syria, in the highlands east of the 'Arâha (q.v., p. 362) between Shîh-al-Kerîlî in the north and Wadi Abu 'l-Hamîm in the south (see Musil, Arabîa Ferâ′ân, ii. part 1, pag. 1). The name first appears in the form 352 in Psalm 85: 3. The Greek Tûsâîs is sometimes used very vaguely. In the older Arab geographers al-Djibûlî appears along with al-Sháârî as the name of a district in the ùndal of Damascûn (Vâdhîlî, ed. de Goeje, p. 114) or in the ùndal of Filistîn (Istâkhîrî, p. 58; Ibn Hawîkî, p. 113). While Vâdhîlî gives 'Arâdûnas, the ancient Ainsûlûn as its capital, Istâkhîrî gives Basrah (see Musil, q.v., ii. 2, p. 240), obviously the Hobûtûn of the ancients. Cf. Idrîsî in the Zîchîc, des Deutschen Pal., Vertins, viii. 122 and 2; G. Le Strange, Palestina under the Moabites, p. 33; 35; 395.

(R. Hartman.)

DJI'BUTI, the capital of the French settlements on the coast of the Red Sea, opposite Obock, on the other side of the Bay of Tajurra. Djibuti was founded in 1888 by Governor Lagrange, who had noticed the advantages of the site as the terminus of the proposed railway-line from the coast to the south of Ethiopia, which has since been completed. In 1894 the seat of the government was transferred thither and the place developed so quickly that by 1892 it had 6000 inhabitants. Since then it has continued to increase. Djibuti is connected by cable with Perim and thence with Europe. Next to French, Greeks and Italians form the most important elements in the European population, while the natives are Somalis.

(RESE BAERTE)

Djibdia, pronounced Djeïdja by Arab authors, is the Arabian seaport on the Red Sea in 21° 30' 20" N. Lat. and 38° 46' 15" E. Long., its surroundings are desert. In spite of its notorious climate and bad water-supply, the town dates from pre-Mohammedan times, although we have no authoritative statement on the point (cf. Sprenger, Uber Geograph., Arabien, p. 39).

The foundations of its future importance were laid in 26 A.H., by the Caliph 'Othman, when he chose it as the harbour of Mecca. Mecca, the centre of the whole Muslim world, was from the earliest times destined to be a great importing centre. The town was provided with supplies from Egypt via Djibdia. Djibdia is thus the key of Mecca and Mecca and Djibdia are economically and therefore politically dependent on Egypt. The customs (see Mahaddi, p. 79 and 104) of Djibdia, which is described as a prosperous commercial town even in Iskander's time, formed a considerable source of revenue to the rulers of the Hijaz at that time. In addition there were the taxes levied on the pilgrims: for it was here that those who came by sea, particularly the African pilgrims who sailed from Axum (op. cit., p. 210), landed on Arabian soil. Na'ur Khassaw (ed. Schafer, p. 65 = p. 151-152) is the translation in the vii-xxvth century found the unwalled town, which was an important point in the trade, governed by a prince, who levied taxes on the Moors of Mecca, whose chief duty was the collection of the revenues; and Isidor (transl. by Junbert, l. 134, 135) informs us that the Sharfs' finances were dependent on the receipts of the harbour of Djibdia. The town gradually became a centre of the world's commerce, where ships from Egypt met those from India and East Africa.

The Djibdia (ed. de Goeje, p. 73 et seq.) gives a clear picture of the town, as it appeared in 1893; with its red huts and stone houses, the remaining of its walls and its mosques, which were said to have been built by 'Omar and Harun al-Rashid, and its inhabitants of Sharft descent. He praises Sa'idi al-Din for having abolished the taxes levied by the Sharfs.

The tolls which continued to be levied on the Indian ships sometimes threatened to become oppressive. On the other hand, the capitulation of the Saracens of the Hijaz, the Manille of Egypt, had been arrested. After 1542 they took the collection into their own hands, later to share the plunder with the Sharfs (see Snouck Hurgronje, Meded, l. 32 et seq., 99). Finally in 1541, Sulaymân Khassub al-Ghîrî sent a special Wali to Djibdia, who surrounded the town with a wall to protect it from the Beduins and made it a base for the next attack on the Portuguese (ibid., l. 102). That the fortification was not unnecessary was shown by the fact that when the Egyptian sovereignty had been changed for the Turkish, it was attacked by the Portugese in 1541 (ibid., p. 104). Under the Turks also the revenues of the harbour of Djibdia, where a Turkish Wali resided, were shared (Hajjâl Khâfî, Djibîdînî, Constantinople 1145, p. 329; transl. Norberg, i. 184). These revenues, of course, soon began to diminish although the trade in coffee and Indian wares was still considerable as late as the beginning of the xvi-th century.

In 1862 the Wahhabîs besieged the Sharif of Ghîsîî without success in Djibdia, which was securely fortified. But the Sharif ultimately submitted to them until Muhammad 'Ali finally restored Turkish supremacy. In 1864 Burchhardt described Djibdia as a town with 12,000-15,000 inhabitants, whose recently built walls, with the stone houses, that had been growing up under Egyptian rule, enclosed a wide area covered with wretched mud huts. He was particularly struck by the fact that in the crowds that thronged Djibdia, the indigenous elements were scantily represented, while strangers from Veman and Hajramawt were particularly numerous. In 1849 Egyptian rule again replaced the direct rule of the Porte, which as before represented by a Wali in Djibdia. The assassination of the English and French consuls and other Christians in Djibdia on the 15th June 1855 resulted in the 25th July in its bombardment (cf. Snouck Hurgronje in Bijdragen tot de Kerkunde en Christenheid van Sanderij, iii. Series, ii. 391 et seq. and 399 et seq.). Maltzan, who made the pilgrimage in 1860, describes Djibdia in very similar terms to Burchhardt and estimates the population at 15,000 (Hangim in 1864 at 40,000). The opening of the Suez Canal has quite put an end to Djibdia's share in the world commerce, which had for years been diminishing (cf. Snouck Hurgronje, in the Verhandenen der Koninklijk. (Eerste, v. xi, 141)). It has still considerable imports (about 1,200,000) as the source of supplies for the Hijaz, but exports practically nothing in return. Djibdia's main importance now lies in the fact that it is the landing-place of pilgrims for Mecca, of whom 50,000-90,000 annually enter Arabia here. The line to Mecca planned in connection with the Hijaz railway has not yet been made.

The town which now has about 30,000 inhabitants (Arabs mingled with Tukriis, etc.; about 50 Christians) has been the headquarters of a Kâf'î such as since the Wali transferred his residence to Mecca. The rows of white houses in the town stretch up the slopes of a low hill along the shallow bay, which the larger ships cannot enter. The 10 feet high wall around the town is pierced by three gates, the Bab al-Sharif at the custom-house in the west, the Bab Mecca in the east and the Bab al-Djédîd or Bab al-Madina in the north, near which lie the European consulates and before which is the celebrated and much visited tomb of Eve.

Djihâd. The spread of Islam by arms is a religious duty upon Muslims in general. It narrowly escaped being a sixth rubal, or fundamental duty, and is indeed still so regarded by the descendants of the Kharijites. This position was reached gradually but quickly. In the Mecca Surahs of the Koran patience under attack is taught, no
other attitude was possible. But at Medina, the right to repel an attack appears, and gradually it became a prescribed duty to fight against and subdue those who refused the Muslim will. Muhammed himself recognized that his position implied steady and unprovoked war against the unbelieving world until it was subdued to Islam may be in doubt. Traditions are explicit on the point; but the Kur’anic passages speak always of the unbelievers who are to be subdued as dangerous or faithless. Still, the story of his writing to the powers around him shows that such a universal position was implied from the beginning, and it certainly developed immediately after his death, when the Muslim armies advanced out of Arabia. It is now a fait accompli that a duty in general on all male, free, adult Muslims, same in mind and body and having means enough to reach the Muslim army, yet not a duty necessarily on every individual but sufficiently performed when done by a certain number. So it must continue to be done until the whole world is under Muslim rule. It must be controlled or headed by a Muslim sovereign or Imam. As the Imam of the Shi’ites is now invisible, they cannot have a ghulād until he reappears. Further, the requirement will be met if such a sovereign makes an expedition once a year, or even, it is now held, if he makes annual preparation for one. The people against whom the ghulād is directed must first be invited to embrace Islam. On refusal they have another choice. They may submit to Muslim rule, become Ummatis (q.v.) and pay jizya and dhahra (q.v.) or fight. In the first case, their lives, families and property are assured to them, but they have a definitely inferior status, with no technical citizenship, and a standing only as protected wards. If they fight, they and their families may be enslaved and all their property seized as booty, fāra-fāla of which goes to the conquering army. If they embrace Islam, and it is open to them to do so even when the armies are face to face, they become part of the Muslim community with all its rights and duties. Apostates must be put to death. But if a Muslim country is invaded by unbelievers, the Imam may issue a general summons calling all Muslims there to arms, and as the danger grows so may the width of the rule until the whole Muslim world is involved. A Muslim who dies fighting in the Path of Allah (fi tilb Allah) is a martyr (shahid) and is assured of Paradise and of peculiar privileges there. Such a death was, in the early generations, regarded as the peculiar crown of a pious life. It is still, on occasions, a strong incitement but when Islam ceased to conquer, it lost its supreme value. Even yet, however, any war between Muslims and non-Muslims must be a ghulād with its incitements and rewards. Of course, such modern movements as the so-called Ma‘rāṣilî in India and the Young Turk in Turkey reject this and endeavours to explain away its basis; but the Muslim masses still follow the unanimous voice of the canon lawyers. Islam must be completely made over before the doctrine of ghulād can be eliminated. See also Dār al-farq, Dār al-‘Iṣla, and Dār ‘al-ṣulṭān. The latter seems to be a mediating position which failed.

(D. R. MackMaid.)

DJIHÆNGɪər. [See DÆMÆNGɪər, p. 927.]

DJIJELLI (Geogr. in Leo Africanus; the Zé-
nelli, Zegra-Gorreeg, Giotere of western writers) a town on the Algerian coast, 50 miles west of Bougie and 30 east of Collo in 36° 49' 54" N. Lat. and 5° 44' 73" E. Long. (Greenwich) with 6,000 inhabitants. It is situated on the old town of Djellali was built on a rocky pen- insula where the citadel still stands, extending between two bays, one on the west, small and well sheltered, and the eastern, wind-swept, separated from the open sea by a ridge of rock. The modern town with its broad streets shaded by plane-trees was built in 1856 after the destruction of the old Turkish town by an earthquake. It lies along the coast beside the lime and gypsum. The harbour which is protected from the waves of the open sea by a breakwater recently built is of some importance for its exports of cork produced by the forests of Little Kabylia. The working of the numerous coke deposits in the coast-lands as well as the building of a railway connecting Djelfi with the interior will certainly promote trade and industry.

The origin of Djelfi is very remote. The Phoenicians built a trading-centre here, which they called Ilgiw which afterwards passed into the possession of the Carthaginians. In Roman times the Colony of Iligigi belonged to Caracara Mauretania but under Diocletian it was attached to Setif Mauretania. The city was the see of a bishop, and passed in turn under Vandal and Byzantine rule but retained its independence after the conquest of the Maghrib by the Arabs. Ibn Khaldun tells us that in the early centuries A.D. Djelfi belonged to the Berber tribe of Kutana, who lived in the adjoining mountains (Ibn Khaldun, Hist. des Berbères, transl. by de Slane, l. 195). It seems however to have been laid waste and partly depopulated, for Boki describes it as a town "which is now inhabited", (Decr. de l'Afrique Septentrionale, transl. by de Slane, p. 253). According to this geographer it still possessed some remains of ancient buildings. It had two harbours, one difficult to enter in the north and a second, smaller but "calm as a millpond and quite safe". Its inhabitants exported copper ore from the neighbouring hills to Beirut and thence to more distant lands (Ishrâ, transl, by de Goeje, p. 174). The Hammadîs, who had incorporated Djelfi in their kingdom, built a castle there. In the 20th century A.D., Djelfi, like various other towns on the African coast passed under Christian rule. In 1143 George of Antioch the Admiral of Roger II of Sicily took the town and its citadel. The inhabitants fled to the mountains where they built a fort but always returned to the town in the winter time when the stormy weather forced the Christian fleet to return to Sicily and left it again in the spring as soon as the Sicilian ships again appeared. This state of affairs lasted till 'Abd al-Mu‘min overthrew the Hammadid dynasty in 1152 A.D. and next forced the Christian to vacate Djelfi.
After the break-up of the Almohad kingdom, Djellil fell to the Idrissids and repeatedly formed a bone of contention between the rulers of Bougie and those of Tunis. In consequence of these hostilities, the inhabitants made themselves practically independent of both parties (Leo Africanus, Book v., ed. Schefer, ii. 853). They lived by the export of corn, flax, hemp, nuts and figs, which they sent to Tunis, Egypt and even to Italian cities. Their harbour was frequented by the ships of Christian nations, from Naples, Pisa, Catalonia and Genoa. The merchants of these last nations, however, were particularly well received. Djellil's commercial importance then greatly increased during the 15th century as a result of the increase of piracy.

At the beginning of the 16th century, the Genoese, uneasy at the occupation of Bougie [p. 766] by the Spaniards, seized Djellil under the leadership of Andrea Doris. But by the next year 'Arudi captured the Genoese fortress at the invitation of the inhabitants, supported by the Kabyl chief, Abdul Qadir, who made Djellil his capital. In 1572 he proceeded hence to besiege Bougie in 1575 and the conquest of Algiers (see the article 'Arudi, p. 475). Khair al-Din, defeated by the Kabyls, sought refuge here while his enemies sacked Miltidje and seized Algiers. He remained in Djellil from 1520 to 1527, made it the winter quarters of his fleet and was even mediating making it his headquarters when he gave up this idea on taking the Fallah of Algiers (cf. the article Khair al-Din); as a reward for his fidelity, however, he granted the people of Djellil and their descendants, complete exemption from taxes in kind.

Throughout the whole of the 16th century and the first half of the 17th century the pirates of Djellil continued their piracies, and thus provoked reprisals from the Christian powers. A Spanish fleet commanded by the Marquis of Santa Cruz affected a landing at Djellil in 1619 and set the town on fire. In 1663 on the advice of Admiral Duquesne and the engineer Clerville, the French government proposed to make Djellil a permanent naval base for the warships sent against the Barbary corsairs. In the following year a squadron under the command of the Comte de Beaufort appeared before Djellil and landed a body of 1500 troops commanded by the Comte de Gadagne. The French troops occupied the town on the 27th July 1664 almost without striking a blow and made no reinforcements and fortifications some distance from the shore. But pardoned by a treaty that the two leaders, they remained inactive in their position and allowed the Algerians to send reinforcements and plant batteries of large calibre. Overcome by the enemy's superiority, they had to quit the town on the 11th October 1664 and embarked with great difficulty after losing 2000 men.

To guard against future attacks, the Turks installed a permanent garrison in the town; but it was much too weak to overawe the Kabyl tribes and remained almost constantly besieged in the citadel. The Idrissids carried on no negotiations with the sultans, from whom they had to get the wood necessary for the building of ships, except through the intermediaries belonging to one of the branches of the family of Maksam. One of them, al-Hajjdi 'Abd al-Khaliq, was appointed marabout of Djellil in 1168 (1755) and transmitted this honour to his descendants. Djellil seems to have recovered its commercial activity in this period. "The town," writers the French traveller Peyssonel, "is inhabited by Moors, most of whom are merchants or sailors; they buy the wax, hides, and woods of the Kabyls and sell them at La Celle, Toulargue and Tunis. They also collect coal. Although wreathed in appearance, the town continues to be prosperous."

This comparative prosperity received a shock from the Kabyl insurrection of 1693. Then the Idrissids Bu Dall al-Hajjdi and Bu Dall al-Harja attacked the town and the Turkish garrison. Bu Dall proclaimed himself Sultan and granted the government of Djellil to one of his partitions with the title Agha. Sent with a fleet to chastise the rebels, the Rais Hamida bombarded the town without any result (1695). Shortly afterwards, however, the inhabitants, being badly treated by the Kabyls, submitted to the Idrissids, who installed another garrison in the town. The collapse of Turkish authority in 1695 restored their independence to the people of Djellil and they retained it till 1830. The pillaging of a French trading vessel about this time determined Marshal Vallet, governor-general of Algeria, to occupy the town on the 13th May 1836. But the garrison, being unable to communicate with the handful, was cut off by the Kabyls in an expedition; led by General Saint-Arnault, affected the submission of the tribes of Little Kabylia in 1851.

G. Vyer.

Djellil, a place in Syria, the actual site of which was forgotten by the Arab geographers at quite an early period; sometimes they located Djellil in the Ghuta, sometimes they identified it with Damascus; an unlucky gloss by Tahari has even led scholars to locate it in the land west of the Jordan (according to the Geographer in Liviout). Djellil was one of the residences of the Quasam Shamsan Alaa, next to Dhibiya (q.v., p. 989) the most important and most often mentioned. They had a family mausoleum here and suffered a defeat here at the hands of their enemies, the Lughends, a detail, which would not suit the neighbourhood of Damascus or other suggested identifications given above of Djellil. It must have been a place of some size, with several churches. Djellil was celebrated for its gardens, particularly its orchards of olives, and its plentiful water-supply had become proverbial. A clue to its location is given in the old poetry by the mention of several places, all south of Hawrén and Djawila, such as Hurrin, and Saidah, which is confused in the Al-Qadi in the 'Abd al-Aziz ibn al-Husayn with the suburb of the same name (Sidon). Djellil lay south of Harim; coming from Arabia, "the mountain of snow was seen behind it". It was not very far from Bosra (q. v., p. 765) and so near Hulka that the road thither could be seen from its gates. A road from Damascus to Egypt also passed through its immediate neighbourhood.

When we further consider that a Deyrya, or ravine bearing its name was mentioned in the neighbour-
hood, the whole picture formed by these topographical details points to a place which still exists in southern Hawran: Djoilis. The change in the final consonant is, however, a philological difficulty which has not yet been explained.

In the year 12. a. d. (634 a. d.) at the beginning of the year, the Byzantines formed a temporary base at Dijilkik for learning on the devastation of the lands south of the land east of the Jordan and in Palestine, to be prepared for the invaders if they should cross one of the sides of the valley of Jordan: Bakka or Samaria. In 13 on the approach of the reinforcements sent by Heraclius the Arabs vanquished Damascus and took up a position in the south of Hawran on the edge of the desert not far from Adh'irah [q. v., p. 135], commanding the road from Damascus to Arabia, from which they could observe the enemy's movements and await the reinforcements summoned from Medinah, whereupon the Byzantines again took up their old position at Dijilkik. By a successful turning movement the Arabs were at first able to cut off the road to Damascus; a second move drove the Byzantines back towards the valley of the Vartrain, and its tributary, the Allas and the Buklab, and a final onslaught drove them into the ravines dug out by these rivers between Djuwilkah and Adjilum, a series of man-made quays crowned by the victory of Yarmuk. Yazid I. seems to have chosen Dijilkik as one of his a dayah [q. v., p. 557]. Driven out of Syria, the Omayyads took with them to Spain the name Dijilkik and gave it to a place near Saragossa, celebrated for its abundant water-supply; after this date Dijilkik disappears from history; the name was revived from oblivion by the poets of Damascus finding this place-name in Hassan b. Thabit. The Barada being mentioned in the same poem, they were lead — and following them several Arab encyclopedists — to regard Dijilkik as one of the names of their native city.

DJIJILA, the ceremony of raising the bride's veil, and the present made by the husband to the wife on this occasion. According to Djerdjul and Mulyi, 'l-Di al-'Arabi (Djakelmoons, p. 80, 294), Subway is the name of the state in which the mystic is on coming out of the 'Ikhbaha': filled with the emanations of divine attributes, his personal personality has disappeared and mingles with the being of God. One of the two sacred books of the Yathrib is called Kithab al-Djilis; it is attributed to the Sheikh 'Adi b. Musfiir, who composed it in 535 = 1165 (R. Frank, Scheich 'Adi, s. d. dissertation of the University of Erlangen: Kirchling 1911, p. 89).

(II: HAHRT.)

DJIJALWA, a religious order founded by Muhammad Dijalwah, called Fir Ummah, a pupil of Hafs al-Basran, who died at Bruss, his native town, in 985 (1580). Their cloth mantle has eighteen folds and they wear their hair long. The mother-house is at Bruss, near the mosque of the citadel in which the founder is buried.

(II: HAHRT.)

DJIM, the name of the fifth consonant in the Arabic alphabet; its numerical value is 3. The letter qim denotes, according to the dialect, perceptibly different sounds, whose area of articulation is the soft palate to the front of the hard palate.

It is generally agreed that the sound originally denoted by qim must originally have been g, that is a voiced post-palatal velar, corresponding to the Hebrew qim, the Aramaic qim, and the Ethiopic gom. But it is probable that at quite an early period, this sound evolved from closed to half-closed and to a pure aspirate; this tendency probably first appeared in cases where the qim was in contact with a palatal vowel. In any case, from the traditional pronunciation of readers of the Koran, from the rather confused descriptions of the articulation of qim in the older grammarians, and from the modifications of this articulation, brought about by the proximity of other sounds (assimilations and dissimilations), it is safe to conclude that since the dawn of the classical period, the character of qim has been in a certain dialect at least, by palatalization, affrication or even complete aspiration. There must of course have been similar differences to those that exist in modern dialects, in the pronunciation of qim in ancient dialects; some of them may be assumed to have advanced farther than others towards aspiration. Besides, this evolution is still going on at the present day in certain dialects; at Jerusalem, for example, a European observer has noticed that the affricated qim which is used to be heard for qim in his childhood, had become in the usual pronunciation of qim (cf. Littmann, Nomarabische Verhältnisse, p. 3 note 2). In certain dialects where the pronunciation of qim now in vogue is a, dissimilations to s or g cannot be explained as survivals from an earlier but less ancient stage of evolution of this consonant (Broekelman, Graundi, i, 233—336).

We may then trace the following main pronunciations of qim in modern dialects:

1. The original pronunciation of qim as a voiced post-palatal velar, closed sound was still in use at 'Aden in the middle ages (cf. M. Kaddass, p. 96, i, 14). It is found at the present day in Muscat, and in various Beduin dialects of Central Arabia. It is also the pronunciation of qim peculiar to the dialects of Lower Egypt, particularly that of Cairo. At Jaffa (in the southeast,
of Arabia) this pronunciation is no longer found except in the composition of poetry; its character is therefore in archaic and almost artificial. In Damascus (in the southeast of Arabia) it is found in the conjugation of verbs whose first radical in *gizm* when this radical forms a syllable with the prefix. Finally in the greater majority of the dialects of North Morocco and also at Medinah (Algeria) *g* is, by dissimilation, the pronunciation of *dżim* when followed by a bilabial *p* or *b*.

2. In various dialects, the original closed *g* has been palatalised to a sound almost equivalent to *g* or *dż*; a medio-palatal pronounced by raising the middle part of the tongue; it is the pronunciation of *dżim* found in the majority of the Beduin dialects of North Central and South Arabia. It is also that of the Fellah and Beduin of Upper Egypt and is sometimes found at Dakrur.

3. When the original closed *g* has by palatalisation become *g* or *dż*, the last stage of evolution is the medio-palatal *j* which is connected with the semivowel *j* and is often confounded with it. This pronunciation of *gizm* is attested as dialectical by ancient grammarians and lexicographers. At the present day it is general in the region of the Lower Euphrates; it is the pronunciation most common in *Djurf*; it is frequent but not regular in various dialects of ancient Arabia. In the dialects of North Arabia and other Arabian dialects, it can only be noted in a few analogous cases.

4. In many dialects, the original *g* has passed by affrication to a sound almost equivalent to *dj*; a pre-palatal pronounced with the tip of the tongue. This pronunciation for which we have evidence in the *Traq* in the golden period of classical Arabic literature (cf. Zelitch, *Die Arzneimittel*, viii. p. 126), is now found in certain places in Central Arabia. It is usual in Mecca, the *Traq*, among the Muslims of Jerusalem, at Aleppo and in the surrounding country. In North Africa, it is almost general in the rural and urban dialects of northern Algeria; it has survived at Tangier and perhaps at other places in northern Morocco in cases of gemination (e.g. *djedda*, "lock of hair") but usually *jedda*.

When the original closed *g* has become *dż* by palatalisation in the last stage of evolution is the pre-palatal *dż*. This pronunciation of *gizm* is the same now in Cairo in the towns of the Syrian coast, certain districts of Lebanon, Damascus, Mesopotamia and among the Christians of Jerusalem. In North Africa, it is found in the dialects of Tunisia, Tripolitania, Morocco and Southern Algeria; it is even found in certain places in Northern Algeria. It was probably the usual pronunciation of *dżim* in the Arabic of Gadara.

6. Lastly, it should be noted that in the towns of Northern Africa, there is a tendency in certain individuals to pronounce *dż* almost as by the insertion of the trill characteristic of *z*. This tendency seems limited to certain social groups (Jews), to certain classes of society (the lower classes of Northern Morocco) and is not general enough for it to be called anything but an individual peculiarity.

**DjHMAT** (Malay) as a m. v.t., more particularly a written amendment. The word is of Arabic origin from *Ar-Jim* (Ar). (See the article *gimel*).

**Djinn** The Djinn are for Muslims are airy or airy bodies (*sidj), intelligent, imperceptible, capable of appearing under different forms and of carrying out heavy labours (Bajitawi on *Kuran*, lxxvi. 1); Damiri, *Ghayyamah, sub voce*). They were created of smokeless flame (Kur, iv. 14), while mankind and the angels, the other two classes of intelligent beings, were created of: clay and light. They are savourable; Muhammad was sent as a sign among them as well as to mankind, and each will enter the Garden and some will be cast into the Fire. Their relation to Djin, the Shaitan, and to the Shaitans in general, is obscure. In Kur, xlviii. 48, Djin is said to be of the Djinn; but Kur, xlii. 32 implies that he is of the angels. In consequence there is much confusion, and many legends and hypotheses have grown up, see the latter passage in Bajitawi and in Rıān's *Mu'jam* (l. p. 280 et seq. of Cairo ed. of 1307). The native Arabo-logographers tend to explain the name *dżim* from *tajmu*, *becoming concealed, hidden* (see Lane, *o. e.,* and Bajitawi on Kur, ii. 7; Fleischer's ed. l. p. 22, l. 13). But this etymology is very difficult, and derivation as a loan-word from *genar* is not quite excluded. "Naturalism dramp uniususique loci" (Serv. Verg. G. l. 302) expressly expresses the strong localisation of the *dżim* (cf. e.g. Noldeke, *Kurz·*, i. pp. 61, 78; vii. pp. 55, 89) and their quasi-standing as deities in old Arabia (Robertson Smith, *Rel. of Somalia*, p. 131). An individual is a *dżim*; *dżimu* is used synonymously with *dżim* (but see Lane, *Lexicon*, p. 492 s. v.); *džir*, *fri*, *fri* are classes of the *dżim*. For an Ethnographic point of contact with *dżim* see Noldeke, *Nordbeiträge*, p. 63.

Consideration of them divides naturally under three heads, though these necessarily shade into one another.

I. The *Djinn* in pre-Islamic Arabia were the nymphae and satyrs of the desert, the side of the life of nature still unadulterated by man. For this aspect see Robertson Smith, *Rel. of Benihak*; Noldeke on ancient Arabs, in *Hunting*, *Engl. of Rel. and Ethics*, i. p. 669 et seq.; Wallhausen, *Relig. van Vlotten, Demanien...bei alt. Arabern*, in *Wiener Zeit. f. Kunde der Mengel*, vol. vii. and viii. — sees materials in *Dhikm*, *Hayawān*. But in the time of Muhammad they were passing over into vague, impersonal gods. The Meccans asserted a kinship (marat) between them and Allah (Kur, xxxvii. 58), made them partners of Allāh (vi. 100), made offerings to them (vi. 128), sought aid of them (xxvi. 6). See further under Allāh, p. 521 above.

II. In official Islam the existence of the *Djinn*

**Djinn** "genius, claret", a collective term more comprehensive than "kinds" or "species" (*genus*). It is the first of the five general terms of logic which are: genus, species, difference, property, and accident. The genius includes several species. In the hierarchy of genera and species, we arrive, in ascending order, first to a genus which has no genus above it; this is called the "genus generalis"; it is the most universal; in descending order, we reach a species which has no species below it; it is the "species of species", the one that most closely approaches the individual.

The Arab philosophers also give the name *Djinn* to the Categories of Aristotle; they call them the "Ten Adjectives"; this name is synonymous with that of *modiile*. The account of the genus and species in Arab logic is derived from the language of Porphyry.

In metaphysics, the idea of species raised the question of its reality. This question, which is that of realism or nominalism, has not been discussed separately or methodically by Muslim philosophers, but it is touched on in many of their works. Farsini sets himself the question, whether the individual or the species is the more real, and which of the two has the better claim to the name of "substance" (cf. the article *Djinn*, p. 2697).

The answer varies according to the point of view; in one sense the individual, because it exists, is more really substance than the genus or species which only exist in theory and which can only be realized through the individual; but from another point of view, species and genera are the first substances, because they are fixed, permanent, antecedent while the individuals are perishable.

The "Ideas" of Plato in Muslim philosophy are not regarded as being the species themselves; they are spiritual types of the species, really existing in themselves, in opposition to the species which exist only in the individuals and are almost comparable to spirits or angels. There is a world in which the ideas reside but there is not a world for the species (cf. also the article *Djinn*).

**Carra de Vaux**

**Djurdjies**: St. George, Islam sanctions this Christian martyr as a symbol of resurrection and
The legend of St. George and the dragon marked the return of spring. The festival of St. George was celebrated by the people of Islam, for it was associated with the story of how St. George killed the dragon. The dragon was a symbol of evil and disorder, and its killing represented the triumph of good over evil.

The St. George festival marked the beginning of the rainy season, and was seen as a time of renewal and rebirth. It was a time when crops could be sown and the land was fertile. The festival was also a time for feasting and celebrating, with parades and processions through the streets.

Bibliography:

1. Dîsh, in classical Arabic Dîsh (see Frankel, "Arabic Prominence," p. 238) dîsh, the word in North Africa has two further special meanings.

2. Dîsh, or according to the pronunciation in western Morocco, a kind of feudal organisation in the Moroccan Army.

Historical. The present Dîsh dates from the beginning of the reigning dynasty. Previously the various dynasties of North Africa had succeeded to power with the help of groups of people whose political and religious interests were in their own hands. Revolutions not only overthrew the ruling families but forced them to maintain their power by force of arms and spill their blood on countless battlefields. The great families, tribes and clans, who had accompanied the first rulers, became extinct. Later they should become dependent on the Berber class, who could not be relied on to be faithful to a dynasty they had not created, the Sultan had to surround himself with foreign mercenaries, who had no connection with the Atlas territory. The older North African dynasties enrolled Christians, Kurds, Persians and negroes. Under the Banu Wajj, the Kurd, Christian and negro guards were abolished and replaced by a guard composed solely of Arabs (al-Shers). This was composed mainly of the elements which had been introduced to West Morocco by the Almoravid ruler Yûqûb al-Ma'mûr (Uali Hassan, Shehu⼿, Khoi̇, et al.) or of Ma'arif Arabs from the Tlemcen country (Shehu, Banu `Amir, Siyā, Ryyû, et al.).

The latter were quartered in the environs ofÉs (Fer) and formed the corps of Shersh (Orleans). The attacks of the Christians and the unity of the Dîsh (Dîsh), forced the rulers of És to place garrison in the strongholds on the coast and these were given the name makkâns (garrison placed in a town), which was very soon to be transferred to the whole feudal organisation of Morocco. But this makkâns succumbed to the attacks of the Portuguese and Spaniards, the rebellious
and those of a new Makhzen mahkham, which had been formed by the Sa'diids Sharifs of Syria (1545).

When the Sa'diids had become lords of the kingdom of Fās, they quarreled the Arabs of their dijākh in the garrisons of Fās, calling them the Abī Siṣa; they were soon afterwards transferred to the fortresses of the Qābar as a defence against the Kaydī's Arab tribes of what had been the Makhzen Aḥmad. Then they united the remnants of the dijākh of the Banū Waḥsh (Shahāna, Zirra, Uḥud Māz, Uḥud Djarī), with their own and placed them in the garrisons of Tadla and Marrakesh. The Sherākī were also enlisted and remained in garrison in the neighbourhood of Fās. The Sa'di army, the dijākh, was thus created. As in the time of the Banū Waḥsh, it consisted of military custodians of members of the mahkham who were at the call of their sovereign throughout their lives. They lived on estates which formed a kind of fief and were free from taxation. The highest officials rode from their ranks.

But the Sa'di court became influenced by the Turks in the adjoining lands. In addition to the corps of the dijākh, the Sharīfs wished to have a corps of Turks in the European fashion by Turkish instructors. The nucleus of this corps, consisting of Andalusi Moors, renegades and for the greater part of Sūtah negroes, was only of any real value in the reign of Sultan Aḥmad al-Djihādī (al-Manṣūr). While this dynasty was breaking up in the civil wars caused by rival claimants for the throne, Sultan 'Abd Aḥd b. Shāfiṣ wished to have a body of faithful troops upon whom he could implicitly rely and gave the Sherākī most of the lands which they had previously held in fief.

When Mūsā b. Aḥmad seized the throne in 1665 and with the help of Arabs and Berbers from the Uḑdā nation founded the dynasty of Alīid Sharīfs which still survives, he amalgamated his retainers with the Sherākī of Fās. His successor Mūsā b. 'Ali, the greatest ruler of Morocco, gave the Dijākh the character that it has retained to the present day. His mother belonged to the Aḥdī tribe of Mgafrī, a division of the Uḑdā. He invited this tribe to come from the other end of Sīfa and settled them as a mahkham-tribe near the lands of the Sherākī of Fās. He reorganized the negro contingent of members of which he had sought out with the help of the Sa'di Sultan Aḥmad al-Manṣūr register. They had to swear an oath of fealty on the Islam al-Bukhari's book; whence their name Abī Bukhrī (claves of Bukhārī, plur. Bukhrī). The Dijākh further consisted of the Sherākī (Uḥud Qaṣ, Haqwa, Banū 'Aṭīr, Banū Snīf, Soğīna, Aḥlīf, Sa'di, etc.), the Mgafrī (Shahāna, Zirra, Uḥud Djarī, Abī Siṣa, Uḥud Māza, etc.), the Uḑdā (the Uḑdā proper, Mgafrī, etc.) and others.

These were the four mahkham-tribes and together formed the Dijākh. Henceforth the history of the dijākh is that of the domestic history of Morocco; indeed it may be said that their history is that of the revolutions of Morocco. In the reigns of Mūsā b. 'Ali's successors, it was the dijākh that decided the fate of the rulers. The four grand tribes acted just as suited their individual interests. From 1726 to 1757, in the brief space of 31 years, 14 Sultans were enthroned, and deposed by them, in consideration of the presents (muraq) they received. In 1757 on the death of Sultan 'Abd Aḥd b. Ilīsā, who had been much less than twice deposed and restored again, his son Mūsā b. Ilīsā succeeded him. Under his iron rule, the dijākh tribes were kept under control. He broke the power of the Bukhrī by dividing them up and sending them to garrison the various seaports. To counteract the influence of the Sherākī of Tadla and the plain of Marrakesh, he enlisted sections of the tribes of this plain in the mahkham — Minaša, Rahanma, Ablā, Aymar and Harīh — Each of these tribes had to send two Kefīs and their retainers to the dijākh. These detachments were roused against their tribes, entered the mahkham of Marrakesh to which they belonged, received the pay of other troops and were freed from taxes.

Under Sultan Zayd, son of Mūsā b. Ilīsā, the regulations were reversed, such that the king took the role of the ruler. He was assassinated at the time of the tribute Levies for the throne of Morocco began again, which became the hallmark of the dijākh tribes. Finally after 1793, Muhammad Bkhrī succeeded in winning his way to the throne and succeeded his rival Mūsā b. Ilīsā, who had been chosen in Marrakesh. While he was on a campaign against the Berbers in the south, the Sherākī aroused a great rebellion against him. The Uḑdā took his side against the rebels and seized the opportunity to plunder Fās. Mūsā b. Ilīsā was victorious but on his death his successor Mūsā b. Ilīsā succeeded in proclaiming himself Sultan by the Uḑdā in 1822. The latter was almost overthrown by another rising of the Sherākī and had as a rule to resign himself to Marrakesh, the better to be able to control the tribes. In many of the north of his kingdom, the rising of the Uḑdā, the conquest of Algiers by the French and the war of his representative 'Abd al-Karim against them, forced him to retire to Fās. He wished to take the field in person against the French. But after his defeat at Ijīdi, he recognized how unequal to European armies his dijākh was, and resolved to have an army modelled on those of Europe. His successor Mūsā b. Ilīsā carried out this plan by his edict of the 22nd Rajab 1277 (18th July 1861). The organization of the new army was after many experiments finally entrusted to a body of French officers.

Present situation of the dijākh. The dijākh at the present day still consists of the Sherākī, Sherādā, Uḑdā and Bukhrī with the half mahkham-tribes of the plain of Marrakesh (Abdh etc.). The tribes still have only the use of the lands occupied by them, except the Sherākī, who have obtained the cession of most of their lands; and the Bukhrī almost all of whom have land around Meknès (Miknās). The dijākh-tribes are divided into regiments of 300 men (rāṣa 'rāṣa). At the head of each rāṣa is a Zārīf rāṣa, a kind of colonel. Below him are five Zārīf almuṣī, commanders of 100 men, each of whom have 5 men muddam below them, who are subordinate to officers commanding 20 men. The private soldiers of the dijākh is called muddam.

The members of the dijākh can attain to the highest positions in the Makhzen. The Bukhrī still retain a special privilege; from their ranks alone are drawn the Mārūd, a kind of page, who are employed in the palaces of the sovereign. The Uḑdā have the right to call themselves 'uṣūl of the Sherākī. The tribes belonging to the dijākh are each commanded by a rāṣa, except
the Scharādha and Udaya, who are divided into garrisons, each of which is commanded by a Kūd. The Paša of the Bathūrī is also Paša of Hekmen and the Paša of the Alī Sīr is also Paša of Fās Bājūhi. All officers are supposed to live in their garrison towns but in time of peace they do not strictly observe this rule. Their military duties are not taken very seriously and most of them live on their estates. The administration of the affairs of the tribe is in the hands of the shāli, the oldest of the ādān rākha.

When the Šalṭān requires troops each Makhen-telbe sends a detachment corresponding to the number of its rākha. This holds for the Scharādha, Scharādha and Udaya, all of which consist of too many families for them to belong in a body to the ādān. The families who are to be detached are chosen by drawing lots. The others are free, though they pay no taxes and till the lands granted them for the time. They form the reserve of the ādān from which the Šalṭān draws the corps of aṣṣāhāri (military, army service corps) for the aṣṣāh (regular army) and for the artillery. Each member of the ādān called to the colours must take his abode in the Šalṭān’s fort. Familiarity of relations (aṣṣāh) and a monthly pay (raja).

The Bathūrī, who now number only 4,000 men, and the Alī Sīr are all soldiers. A special register is kept of them. They all receive the aṣṣāh and the raja and their widows also receive pensions.

Positions in the ādān often descend from father to son and their holders thus form a permanent element in the Makhen-telbe.

Although the creation of a standing army on the European model, the aṣṣāh, has lessened the influence and political importance of the most prominent members of the ādān, it has by no means destroyed its military value. The fact that they are peasant horsemen is largely due to the ādān al-Barkuš “powder-gun”, in which the ādān excell. The field artillery of the standing army is also recruited from them. Trained by the French officers sent for this purpose, this artillery has been used with good effect.

As we have already seen, the ādān is divided into rākha and these are commanded by a ādānī, below whom are five ādānī mū with their samāhādi. The standing army on the other hand is divided into cābā (battalions or regiments) of varying strength; these are commanded by a ādānī rākha who has a ādānī and a corresponding number of ādānī mū below him.

**Distribution, Armour and Dress.**

The ādān-troops are unequally distributed among the four cities Fās, Mekiner, Rāhā and Marsīkā in which Šalṭān has residences, the two seaports, Tangier and Larāq and a few small garrisons in the Chaîtr (west), east and south of Morocco. In these places the ādān and their people live by themselves and hardly mix with the natives by whom they are feared.

At present these horsemen are armed with the Winchester rifle, which has supplanted the long flintlock; they also carry the sabā, a sword with an almost straight blade, a horn handle and a wooden sheath covered with red leather. They also carry the šamūsāy and the khamsān, engraved daggers with very curved blades. Their horses as a rule, are good, but the harness as usual among the Arabs, is very poor.

They wear a cloth kattān of some loud colour over which they put a white farāqīya, the whole being held together by a leather girdle with silk embroidery. Their red ādānī is conical in shape and wound round by a turban of white muslin. Soft slippers of yellow leather with long spikes instead of spurs complete this picturesque outfit.

**DIJISH—DIJISM.**

The body. The study of bodies is the subject of physics. Avicenna devotes the second part of his Nejīfī to the motion of a physical body, in which the Peripatetic doctrine may be recognised. All bodies in nature consist of matter as substance or support and a form which dwells in the matter, as for example the form of a statue can be made in abode in it. Furthermore the bodies in three dimensions, i.e., they stretch in three dimensions in a rectilinear direction, but not themselves at right angles. Matter does not have these dimensions by its nature; but it is disposed to receive them. In the matter of physical bodies there are other forms than corporeal forms, they are those which are relative to categories, quality, situation. Bodies have certain primary qualities, without which they cannot exist and secondary qualities the absence of which does not destroy them but affects their integrity. They do not move of themselves, but only by forces superimposed on them; either forces which keep them in their state or position like weight or forces which develop them like the vegetative spirit, or in the case of the stars the spirits that animate the spheres. Bodies are simple or composite; those that are simple have not any actual parts but to the mind they are divisible. Other primary and other ideas are closely connected with the idea of body; these are movement and rest, time and place, vacuity, entity and infinity, contact and adherence, continuity or succession. Various notions have given rise to celebrated disputes among philosophers. The primary bodies of which the others are composed are the four elements: fire, water, air and earth, which are respectively hot and dry, moist and cold, moist and warm, dry and cold. The celestial bodies are incorruptible, the others on the other hand are produced and destroyed.

The Mutakallim-theologians, who for the most part atomists do not agree with the philosophers that bodies are composed of matter and form; they are rather composed of atoms without extent, which by their unions form what Bodies for them are not continuous nor infinitely divisible, and the heavenly have not a different nature from earthly bodies (cf. the article: GAWHRAR, p. 1027 et seq.).

The idea of body appears in theology in connection with God; indeed the Korān often speaks of God as if he had a body, saying that he sees, hears, speaks, and is seated on a throne. Certain scholars have consequently held that the word body could be applied to God; certain theologians, like al-Ašārī have combatted this an-
thoromorphide idea and taught that these expressions only designate qualities of the divine being which it is not always possible exactly to define.

In eschatology also, questions of the same kind arise: are the bridge of hell, the balance and the judgment-trump, corporeal bodies? The answer given by orthodox theology is that these objects really exist but that they are not bodies in the ordinary meaning of the word.

(B. Carka de Vaux.)

DIJSR, plural gisūr (A.; cf. Franks, Aram. Fremdenleiter im Aramäischen, p. 285), "bridge," is more particularly, though not by any means exclusively, a bridge of boats in opposition to akhara, an anchored bridge of stone.

An incident in the history of the conquerors of Babylonia has become celebrated among the Arab historians as yarun ad-dīr, "the day of the flight at the bridge:" in 13 A. H. Abu 'Ubaid al-Ṭahrāfī was defeated and slain in battle against the Persians at a bridge across the Euphrates, near Diyar; cf. Wellhausen,希睡与印度, vi. 65 et seq.; 73; Curta, Anzahl der Islam, iii. 145 et seq.

DIJŠ BAINT YAKUB, the "bridge of Jacob’s daughters," a bridge across the Jordan south of the Balṣar al-Huṣa, where the Gus'ars from Damascus to Seifed and Akkā passed the river.

This trade route began to become of greater importance in the Crusading period; it is therefore not surprising that the passage of the river here was often fiercely fought. In 552 (1157) the Franks were defeated by Nār al-Dīn at Jacob’s ford. In 573 (1178), Baldwin IV, built a fortress here on the right bank at the Rīs Fā’ūl near the Mabdiṣr al-Ahālī ("ford of lamentations"), which according to Vājsī, 775, took his name from the fact that Jacob lamented for his son Joseph here; it was soon afterwards destroyed by Salāḥ al-Dīn in 575 = 1179 and pilgrimages were resumed to the Musīkha al-Yaḥṣī (Bn al-Alī, ed. Tornberg, xl. 301; Abu Shāma in Revue des Hist. des Ecrevisses, iv. 194 and 203 et seq.; cf. also Rey, Les Colonies Françaises en Syrie, p. 438).

Dimashki (ed. Menahem, p. 107) mentions "Jacob’s Bridge" (Dijš al-Yāqūt), which crossed the Jordan here in the īxf (9th century) century. A merchant of Damascus built a qāf at this spot (Journ. As. 18 Ser. vi. 262). The road continued to remain the main route to Damascus from the west in the centuries following and we therefore find the bridge repeatedly mentioned in the itineraries of eastern as well as western travelers, by the name it still bears, the "bridge of Jacob’s daughters" (Dijš Sanas Yāqūt, Dijš Yāqūt, pons Jacob, Yāqūt kūpēr; cf. Zeitschrift der Deutsch. Morgenl. Ges., iv. 694-700).

The strategic importance of the bridge was emphasized in modern times when in 1799 the French troops marched up to it.

According to Bandecker, Palæstina, p. 247 the present bridge dates from the 9th century. Not far from it, the tomb of Jacob’s daughters is venerated and a little farther to the south a few remains of the castle of the Crusading period may still be seen.

Bibliography: In addition to the references in the text cf. Rickert, Erdvendt, xv. 266 et seq.; Fea, Explor. Fund, Qumr, Statements, 1858, p. 39 et seq.; Pollini, ‘Ishbaḥ, i. 82; v. 19.

(R. Hartmann.)

DIJŠ AL-HADĪĐ, "iron bridge," a bridge over the Orontes on the road from Hala to Antakya. In the Crusading period this bridge, which was of great strategic importance and is mentioned in the earlier literature, is described as defended by two strong towers. The defences of the bridge were, from the battles of the Crusaders around Antakya to modern times, the scene of much fighting. A small village has grown up beside the bridge.

Bibliography: Roy, Colonies Françaises de Syrie, p. 339; Abu I-Fid’l, ed. Reimund, p. 142; Kitz, Erdvendt, xvi. 1641; Peterson, Relics, iii. 306; Sachau, Reise in Syrien, p. 451; M. Hartmann in the Zeitschr. der Ges. für Erdk., xx. 504.

DIJŠ AL-SHUGHR, the capital of a kālīl in the sand dūk of Halaš, S. E. of the two fortresses al-Shughr and Bakā, frequently mentioned in the Crusading period, on the Orontes, where the road from Halas to Lātibāyra crossed the river. The name is not found in the Arab geographers; Abu I-Fid’l, ed. Reimund, p. 261 mentions the bridge of Kasfahān, east of al-Shughr, where a weekly market was held; we sought therefore — with M. Hartmann — to identify Dijš al-Shughr with Tell Kasfahān (cf. Vājsī, 809), where in 534 = 1188 the Sālāḥ al-Dīn encamped before taking the adjoining fortresses. The village which comprises about 600 houses had still quite recently a Monday market, on which account it was loosely called Bakā.

(DIJŠAN, Mulla, whose real name is Ahmad b. Abi Safi b. Abi ALLAH was born in Amathia, in the neighbourhood of Lucknow. He studied with eminent ‘ulama of his country but completed his courses with Mulla Lutf Allah of Dijphasis. His piety and learning induced the Emperor Alamgir (1656-1707) to appoint him as his teacher and the Mullā enjoyed his favour as long as the Emperor lived. His son, the Emperor Shāh Alam, also (1419 = 1707-1712) had a great regard and respect for him. He went to the ‘Uṣūl when the Shāh of Madina read al-Nasā’i’s Mināt al-‘Uṣūl, gave an account of him and requested him to write a commentary on it. So he agreed to their request and wrote his famous work, mentioned below. After returning from the pilgrimage he spent all his life in teaching and delivering lectures to the students. He died in Dihlī in 1130 = 1717.

He is the author of the following works:

1. al-Mahfūd al-Khālid, p. 247, printed; Calcutta A. H. 1523.

DJIZYA.

1051

(1) "tribute, poll-tax," the name given in Muhammadan Law to the indulgence-taxes levied on the abd al-dhimma.

11. The Theory of the djizya in the Fikh.

In the Fikh-board the theory is discussed in connection with the holy war (jihād, q.v., p. 1041 et seq.). While pagans only have the choice between Islam or death, the possessors of a scripture (abd al-khādis) may obtain security and protection for themselves, their families and goods by paying the djizya. This dogma is founded on Koran 9, 29, where it is laid down: "Fight them, that believe not in God and the Last day and who hold not as forbidden what God and his apostles have forbidden, and do not profess the true religion, those that have a scripture, until they pay the djizya in person in submission.

Relying on this passage the Fikh regards the djizya as an individual poll-tax, by payment of which Christians, Jews, Magians, Saboteers or Saracenians make a contract with the Islamic community, so that they are henceforth not only tolerated but even have the protection of the sultan. The Christian groups, like the Banū Taghitis and the Christians of Nadjem occupy a special position and do not pay djizya. Only adult males in the full possession of their physical and mental faculties and having the means to pay are liable to the tax. Women, children and old men are exempted, as war is not waged on them. Blind men and cripples only pay when they are wealthy; poor men and beggars are not expected to pay. Monks are exempted, if they are poor. But if their monasteries are wealthy, the superiors have to pay the tax. Slaves also are exempted. Alongside of this mild treatment of the poor and weak, there is a corresponding strictness with the wealthy and the rich to be taken that no one who ought to pay escapes. Collectors are therefore particularly warned not to levy round sums on communities on a basis of their numbers alone. How to deal with the tax in the case of a dhimmī who becomes a convert to Islam, or one who dies in the current exchanger-year is a question of本领.

The djizya should be paid in money but it may be paid in kind, e.g., in garments, cattle or even noodles, but wine, and cattle that have died a natural death (mātis), are not legal payment; the proceeds of their sale may however be taken. The normal tax at first was 1 dinar. This later became the minimum. In countries where the standard was a silvery one, it was the equivalent, 12 dirhams. For dhimmīs (q.v., p. 956) in better circumstances the tax was next placed at 2 dinars or 24 dirhams, and for rich 4 dinars or 48 dirhams. According to Abū Yūnus, from whom most of these facts are taken, money-changers, dealers in cloths, landowners, merchants and physicians were considered rich, while artisans such as tailors, dyers, cobblers and shoemakers were counted poor; he gives no details of the middle class. If a man could not pay his djizya, he was not to be forced to do so by corporal punishment (hogging, exposure in the sun, soaking with oil); but only by imprisonment. According to the verse which introduced it, the djizya was to be paid "in submission" (waham al-firsita), which abū Yūnus, no doubt correctly, explains by "half-faith" (ḥalf al-dhimma) which they the dhimmīs were under. Others, on the authority of this passage, demanded a very humiliating method of paying it and it is most probable that the degrading prescripions regarding dress etc. are only interpretations of this passage. The income from the djizya was paid into the state treasury (biqt al-adl, q.v., p. 598 et seq.) and with that from the ḥaradī (q.v.) the land-tax, formed the revenue from the farā (q.v.) which belonged to the whole community.

2. The History of the conception of djizya in Practice.

Djizya originally meant the collective tribute levied on conquered lands. The Arabs everywhere left the administrative conditions which they found, unchanged and regarded the revenues of the provinces as their djizya. The distinction which later became usual between djizya as a poll-tax and ḥaradī as a land-tax did not at first exist, for our authorities frequently speak of a ḥorāḥ from a poll-tax and a dhijiya from land. The revenue from the farā is even quite usually called djizya in allusion to the passage quoted from the Koran. For example, in the Egyptian papryi of the first century A.D., besides the djizya (ṣawara) as the principal tax in gold, only the payment in kind is mentioned, which cannot be distinguished from the jizya. But in the Arab view, this djizya was a poll-tax; for on the conclusion of treaties of occupation, a hypothetical number of inhabitants and not the area of arable land was taken as the basis for estimating the tribute. Now a poll-tax existed before the conquest in the conquered lands, Sassanian and Byzantine (ṣawara, ḥirāṣ, ḥaradī) but the main source of revenue and hence of the tribute was the land-tax, which bore the Arabian name of ḥaradī. This term was identified with the Arabic ḥorāḥ or ḥorāḥ (Koran, xxiii, 170; xxiii, 172) and from the "Abbanid period was in general use in the non-Arabic provinces also, ḥorāḥ as "revenue," "income from land-tax" is interchangeable with djizya, even in the oldest literature that has survived to us. If it was the income from the tribute that was emphasized, it was called ḥorāḥ, but if one were thinking more of the tribute paid by those who had been conquered by Islam, the Korānic expression djizya was used. With the consolidation of Arab power ḥorāḥ gradually became the term applied to the land-tax, which with the gradual conversion to Islam of the subjected peoples came to be levied on Muslims also, and then lost its tribute (djizya) character. The Korānic djizya was replaced by the individual poll-tax which had found already in existence and which was of course levied on non-Muslims only. In the early literature and in Egyptian receipts for the payment of the poll-tax the term djizya (plur. djawārih) was used, which became synonymous with djizya. This djizya or djizya was counted b-ḥorāḥs, of this or that year, because the total income from the farā was also called ḥorāḥ (cf. KALĀR⋮). Thus in the course of a century and a half more the terminology of ḥorāḥ and djizya, although the Fikh treats them as having existed from the beginning.

On the practice in ancient times we really have only satisfactory information as to the custom in Egypt. After payment one was given a lead-seal round the neck, but the Caliph al-Hārūn introduced regular receipts called ḥaradīs. Numbers of these have survived but they have not yet been thoroughly investigated. Egypt is said to have had levied on it at the conquest a tax of 2 dinars a head and as a matter of fact according to the
Greeks taxed-roll of the end of the first century, the totals the give this was an universally much smaller amounts are found. For later centuries it is evident from the receipts that in practice the minimum of 1 dinar, prescribed by the fief, was often very much smaller. In the first century however many persons were entirely exempt from taxation, though we do not know why; there is still much to be explained on the whole subject. The monks were strictly compelled to pay qiyya in Egypt during the time of "Abd al-Asl, the brother of "Abd al-Malik, although they had apparenly been previously exempted.

With the gradual adoption of Islam, the qiyya as purely a poll-tax gradually declined and by Saladin's time the revenue in Egypt from this source was only 130,000 dinars (Makriti, El-Maqam, 1, 107; see, 108; 110). Nevertheless this tax, levied as a sign of their subjection on the non-Muslim citizens of the second class, remained a permanent institution. We only have exact details for Turkey; these have been collected by Haidleboh, "Les Fiscales Ottomans" (Vienne-Leipzig 1912), p. 224 et seq. from V. Hammer and other sources (There is a reproduction of a Turkish receipt for qiyya in Karaceboglou, Führer durch die Ausstellung der Papyrus Erzherzog Albert, p. 175). Qiyya was still a tax in Turkey down to the time of the Crimean War. By the law of 26th May 1553 (F. Baumberg, Geschichte der oriental. Angelegenheiten, p. 265), the qiyya as a tax on the free exercise of religion was replaced by a tax for exemption from military service. The last trace of it only disappeared after the Revolution in Turkey since when Christians also do military service.

BJÖDHUR is the largest state in Rädj-patan, India, with an area of 35,000 square miles, and lies on the west border of that Province. It is a country of sand dunes and desert tracts, but produces fine millet crops with a very moderate rainfall. The state was founded by Räthjör Rådhspur after their defeat of Kamar, by Muhammed Gört in 1014 d. A. D. (Bezzel of Dajppur: being founded later in 1459. Rao Mål, the ruler of Dajppur, who gave best lodging and aid to the Emperor Hannun, was attacked and defeated by Shér Shah in 1544, and again by the Emperor Akbar. His son, Udi Singh, gave his daughter in marriage to the Emperor Akbar, and his daughter to Prince Salim, afterwards Dajkinger, and the Rådhspur then became friendly connected with the Moghul Emperors of Delhi. Mahârâja Ujraume Singh (1628—1638) served in the wars on the deposition of the Emperor Shahjahan, was Viceroy in Gudjarat and the Dakhlan, and died at Jhurander near Peshawar. During the minority of his son, Adût Singh, Awaungar attacked and sacked Dajppur; this chief afterwards recovered the city, but was again besieged by the Satyrd that attacked and captured many cities, and smaller amounts are found. For other centuries it is evident from the receipts that in practice the minimum of 1 dinar, prescribed by the fief, was often very much smaller. In the first century however many persons were entirely exempt from taxation, though we do not know why; there is still much to be explained on the whole subject. The monks were strictly compelled to pay qiyya in Egypt during the time of "Abd al-Asl, the brother of "Abd al-Malik, although they had apparently been previously exempted.

With the gradual adoption of Islam, the qiyya as purely a poll-tax gradually declined and by Saladin's time the revenue in Egypt from this source was only 130,000 dinars (Makriti, El-Maqam, 1, 107; see, 108, 110). Nevertheless this tax, levied as a sign of their subjection on the non-Muslim citizens of the second class, remained a permanent institution. We only have exact details for Turkey; these have been collected by Haidleboh, "Les Fiscales Ottomans" (Vienne-Leipzig 1912), p. 224 et seq. from V. Hammer and other sources (There is a reproduction of a Turkish receipt for qiyya in Karaceboglou, Führer durch die Ausstellung der Papyrus Erzherzog Albert, p. 175). Qiyya was still a tax in Turkey down to the time of the Crimean War. By the law of 26th May 1553 (F. Baumberg, Geschichte der oriental. Angelegenheiten, p. 265), the qiyya as a tax on the free exercise of religion was replaced by a tax for exemption from military service. The last trace of it only disappeared after the Revolution in Turkey since when Christians also do military service.

of judicial institutions in the Sultanate best emphasizes this fact. In 1859 a supreme court was instituted with the Dutch Resident as president and the Resident's other high Javanese officials as members; the powers of the president and the assistant native Suartab (court of the clergy) and Pradhi (criminal court) were transferred to it.

In the same year a court for Europeans was instituted with the Resident as president and European members. The third native court, the Soehungan, for civil causes and agrarian suits among natives, survives in Djokjakarta to the present day. Since 1903 the administration of the penal code in Djokjakarta has been exercised by a European judge and in the residencies outside the "Vorstenlanden", has been organized and thus transferred to European authorities.

In Djokjakarta as well as in the other "Vorstenlanden", we find the typical Javanese and his society; on the one side is a highly developed aristocracy around a royal house from which it has sprung and on which it is still quite dependent as a ruling authority. On the other side, the poverty-stricken masses, an agricultural population on a very low level, which regards the class that exploits it with awe and reverence. The most remarkable feature of Javanese society is the strict formality, observed to the smallest detail, which marks the intercourse of the latter with the former.

As a result of their environment, the parasitical nobility has not developed any serious conception of life nor any kind of activity but only the tendency to satisfy their passions; there is no inclination among the toady-trotted and exploited people to raise themselves to a higher level; they are content if they obtain, by legal or illegal means, the necessities for life, debaucheries, opium-smoking and gambling. As elsewhere among the native population of Java, society here is entirely ruled by its beliefs. But it is animistic conceptions, modified by Hindu and Muhammadan ceremonial, that guide the Javanese in his daily life. The practice of Shafiite teaching in the "Vorstenlanden" and in Djokjakarta has the following peculiarities: the ordinary Javanese does not adhere strictly to his religious duties with regard to Salat (veneration) and on Fridays it is usually only the "sahor" (devout) and the "ulam" that assemble in the masjid. The call to prayer does not consist simply of the prescribed yaddak, but also of the beating a large drum (kering) in the outer gallery of the temple; there are no minarets in Djokjakarta. This sultanate is one of the areas where pulaka and jirra are rarely and very irregularly paid. Fasting is not seriously practiced by the masses and only observed by the devout and the "ulam". The "badhi" however, has a great attraction for them, and many from Djokjakarta go to Mecca without seeing that their families can subsist without them.

In Djokjakarta also the circumcision of boys and girls is regarded as the first duty of a Muslim. In the "Vorstenlanden", including Djokjakarta, the great festivals of Mawlid, Isd Al- Fitir and Id Al-Khozam (garlik astrid, -pulak and -blaur) are observed, more than in the rest of Java, with ceremonies and rejoicings. The first two derive their importance from the fact that the Sultan and his vassals receive their land-tax (pajadi) then.

For six days before the garlik astrid music is played on the gamalon and religious meals (icht
ab) take place. The gurlić judali is regarded by Europeans as the Mulamadan New Year and visits of congratulation are paid.

In the nights of the 21st, 23rd, 25th, 27th and 29th Ramadán religious meals (maldem) with recitations of the Korán, are held in a spirit of rejoicing even in the little villages.

**Djlof (Djlof)** was the name of a kingdom, that no longer survives, which included the modern Wolof, Walo, Gany, Baol, Siné, Salum, Dimar and provinces of Tambac adjoining the desert of Ferlo.

Wolof is the name of the language spoken in these districts and also of the people who speak it.

The modern Djlof (14th—16th N. Lat., 14th—16th W. Long, of Greenwich) is bounded on the north by the Gambia and Fouta-Toro, in the east by Futa and Bondali, in the south by Bomi and Niámar, in the west by Diambf, Baol and Cayor. Djlof has no rivers within its boundaries and is one of the most sparsely populated districts in Senegal; but it possesses fine pastures and groves of guin-trees. It has always been a place of refuge for agitators and rebels who, when defeated and exiled from their own country, find a safe asylum here.

Tradition tells of a pious Muslim named Bahakar (Abú Bakr b. Ómar, also called Abú Daryah, of the family of the Prophet, who came from Mecca about 1200, settled in Senegal and preached Islam. He married the daughter of the Jumari, Fatimata Sal, who bore him a son Almáñu, who afterwards became ruler of the great kingdom of Djlof under the name Mhadiane Ndiaye (1212—1252). From him was descended the ruling family of Djlof and the title of Djlof remained in it for over three hundred years. The extinction of this kingdom is placed about 1560. Long before this however, Europeans had become acquainted with Djlof. In 1446 Díaz Fernandez discovered the river Senegal and captured four Wolof, whom he brought to Lisbon. Ca da Móst, who reached the 'Gilofes' (Marmol's Gelofes) in 1453, gives a detailed account of the king of Senega, Zochalin (Bur la Teme), of the religion of the negroes, their manners and customs, and the products of the country; as to the Senegales and Barbares (of Sené), he tells us that they "are beyond the authority and realm of the king of Senega." Legend agrees with the Portuguese historians regarding Bint Dílán, brother of the Bur la Birauns, who went to Portugal in 1482.

The first mention of a French voyage to the mouth of the Senega is in 1558, when traders from Dieppe were very well received by the Senegalese. From 1638 dates the first permanent French settlement at the mouth of the river. Jannenquin tells us that an ambassador from the Danil and another from the Baol were received there, and that French boats used to go for hides to the kingdom of Sambil-Lame, the successor of the Danil and the Baol. Later in 1677, Dussauz

sized Raphaque and concluded treaties with the chiefs of the country, by which France was guaranteed, on payment of customs, a monopoly of trade in those regions. Two years later, he advanced into the interior, forced the chief of the Baol to sue for peace and compelled the Danil of Cayor to accept his terms; he imposed new treaties on these chiefs, which assured to France possession of, and sovereignty over the coast between Cape Verde and the Gambia, for 6 leagues inland, as well as a monopoly of trade, without paying customs. About 1682, Le Cambe gave some details of the Wolof, their occupations and their dealings with the Arab marabouts.

In 1685 La Cambe was visited by the Brak of the Wolof; in the following year, he sent his agents to make a treaty with the "Bour ba Guiolof." At this time, he tells us, the Moors had taken advantage of the chaos reigning among the Wolof, to kill the Brak, and drive the Danil and Bour ba Guiolof from their dominions, and the Wolof however, ultimately succeeded in ridding themselves of the Moorish yoke. In 1701, by order of the Senegal Company, Brus again began negotiations with the Danil of Cayor. Adamsson's journey occupied the years 1749 to 1753 and, after spending five years in Senegal, he brought back a mass of documents which he used for various works. Pouget de la Rivière in 1763 and 1765 negotiated the cession of the peninsula of Cape Verde with the Danil; in 1785, M. de Repentigny signed a treaty of alliance with the Baras. Boulfors in the following year came to an agreement with the Danil of Cayor, by which in consideration of an increase in the customs the latter renounced all claim to the coast; the cession of Cape Verde was renewed in 1787 under the governorship of Geoffroy Villeneuve, who in the same year visited Cayor, Djlof, Baol and Sine. Roubash had made a journey through the lands of Cayor and Djlof in the preceding year. In 1819, Wolof was ceded to France, but attempts to cultivate it failed; about 1841 Jambert began to develop the cultivation of earth-nuts in these lands. Faidherbe arrived in Senegal as governor in 1854. In 1855 and the following three years he waged a bloody war on the Moors and their allies, the Tineus of Wolof; in 1856 the Tirzacs and the Braknas sued for peace. In 1856 Faidherbe restored the Diambur; and in 1859, after several political manoeuvres, he signed treaties with the kings of Baol, Salum and Sine. The French had not yet made any treaty of peace with Cayor. A desire to protect traders and to establish a telegraphic line between St. Louis and Gorgé led them in 1859 to enter into negotiations with the Danil of Brayna. After his successor Makouo repudiated the agreement, he was deposited in favour of Maltiday who all the chiefs of provinces, including Lat-Dior, recognised as Danil of Cayor in 1861. Lat-Dior however, soon afterwards collected his adherents and attacked Malidio; force had to be used to defend the Danil elected under French influence. Lat-Dior was defeated in several engagements; in 1862 driven out of Baol and then out of Sine, he took refuge in the Rip country and found an ally in the chief of Maka. The incompetent Malidio was deposed and the government of Gorgé invested with the green mantle chiefs chosen by the French in Cayor; but new difficulties arose with Maka, then with Almáñu Shaikh and Lat-Dior.
In the reign of the baron de Djolo, Bakar, the coast of Kiky, a small out of Fata, called Malo, ravaged the eastern district of Bara; and at the request of the Lat-Dio, he invaded Djolo in 1865, defeated the Bar at Mayari and threatened Cayor; his army was routed near Niero in 1865, when about to invade Sene, he was defeated and slain in Sambu.

Hardly had he disappeared, when the Tidjani chief Ablamud Shishki made an alliance with Lat-Dio and attempted the invasion of Cayor; their followers were defeated at Luga in 1865. In 1871, the government of the colony recognized Lat-Dio as a Diam. When Ablamud Shishki with his Tidjani again invaded Djolo and Cayor, an expedition, supported by Lat-Dio's troops routed the Marabo's army at Bounou and he himself was slain at Cok in 1875. At first relations with Lat-Dio were quite cordial; but in 1883, the construction of the railway from Dakar to St. Louis raised new difficulties. Lat-Dio, having shown signs of hostility, was pressed upon him to move towards Samba Laobe, who, on whose entry to his palace. Through French intervention his nephew Ablamud Ngone Fall was recognized as Diamal. Samba Laobe attempted to defend his claims but was defeated; but as Ablamud Ngone had not been able to win the sympathies of the people of Cayor, he had to abdicate and Samba Laobe succeeded him. In the meanwhile the Dakar-St. Louis railway was completed. In 1886, a dispute arose out between the baron de Djolo, Ali Buri and the Diamal; their armies met at Djolo and Ali Buri was victorious. The governor levied a heavy fine on the Diamal for his conduct; Samba Laobe refused to pay and rebelled; he was killed at Tivazoune.

Lat-Dio claimed the succession and attacked a detachment of Saphis at Dikkele but was slain in the battle that ensued. In consequence of his action, Cayor was divided into six provinces and in 1886 finally entered a period of peace and prosperity. French intervention had to be equally effectively enforced in Basol and Sine. The deposing of the Emir of Basol in 1890 and the disarmament of the Tijous in 1891 definitely established French authority in this region which was divided in 1894 into two provinces. In 1898 they died of their disease. Sate and Salou also were divided into two provinces under French control. 

At the present day the Wolof constitute the predominating element and by far the largest in point of numbers (last census, 407,379) of the population of Senegal. In the north of the country, where they form almost half the population, their neighbours are the Taurer. In compact groups, whose unity is hardly affected by the presence of a number of nomadic Fulbe tribes, they occupy Walo, Djolo, the countries formed on the division of the ancient Cayor kingdom and the Atlantic shore from Dakar to the Gambia. In most of the parts on the Senegal and the Niger there is a quarter of Wolof traders.

The Wolof are tall in stature and wooly; their skin is an ebony black with a bluish tint except the palms of the hands and the soles of the feet and the inside of the limbs; the hair is wooly and thick, and the nose very long. The men are about five feet six inches in the male and five feet three inches in the female, and the cranial capacity is 1,495 (Holloway) and the prognathism very marked. Their hair is thick and wooly; the lips thick and the incisors almost vertical; the arms are muscular and the hands long; but the long limbs are thin, the calves little developed, and the instep almost non-existent. The Wolof woman is also tall (average 5' 4''); in her the spine is very curved and the breasts pear-shaped; on the whole her thicker lips, flatter nose and protruding lower jaw render her an inferior type to the man.

Wolof are very common; these are vases from the Koran enclosed in a leather case, or sometimes a piece of cloth, over which magic words have been inscribed, placed in the horn of a donkey or in a small helmet, or as ornaments. He who wears one is safe from the effects of sorcerers, from serpent-bites, from the evil eye and need not fear bullets or evil tongues, while he soon becomes a good shot. The women wear them, real or imitation, in their hair, as ornaments.

The Wolof live in the form of a beehive, the lower part, which is cylindrical, being made of reeds (Djolof) or they (Walo); the conical roof is of reeds. The only opening is in the floor; sometimes however, there are small windows of the size of a man's hand enabling one to see what happens outside. The cottage is divided into two parts by a wall of earth or reeds; in the first apartment the occupants eat, sleep and receive their visitors; the other apartment is used as a larder and during the wet season as a kitchen. One family occupies several huts, which are found grouped in a corner of an enclosure (kou) surrounded by a hedge of irregular shape of branches, reeds and posts; in another corner a very small hut forms the henhouse; at a little distance are pegs to which the cattle are tethered; the hives of the Wolof are usually grouped as chance directs and not according to the classes of inhabitants; at the entrance or in the centre of the village is the palaver tree under which the business of the village is discussed and idlers come to smoke and chat. The furniture includes the bed, which varies in shape, wooden boxes, trunks in which clothes and objects of value are kept; on a table are placed the calabash for milk; arms are hung on the walls; in the second apartment are the wooden mortar and pestle for grinding millet, calabash, few earthenware pots and mugs. The Wolof live chiefly on millet; they eat it cooked in water (gino), or after pounding it, the women make kaiks (fibre) or soup (jik) of it; these dishes are also made of maize or rice; earth-nuts are eaten raw, boiled or roasted; potatoes, manioc, the fruit of the baobab are also eaten; in Walo, a good deal of fish is consumed.

Millet is the staple food grown by the Wolof; the principal article of export is the earth-nut in (1910: 2,370,900 tons). The rice, maize, manioc and vegetables grown are consumed in the country; the Wolof country also yields a small quantity of rubber, which comes from the Gambia country, and some gums.

The Wolof are not cattle-rearers; they are fairly skilful smiths, cobblers and weavers etc. When a woman is heavy, she covers herself with grigrie to protect herself against magic; as soon as she feels the pains of travel she tells the midwife that she is in labour and male children are sent out of the house; the woman shuts herself up with her mother and experienced women friends in the hut, which is kept dark; no midwife is employed; the birth
takes place in a crouching position; the umbilical cord is broken and not cut with some sharp instrument. The young mother only takes light food (milk, rice); for seven days she does not appear in public or make her toilet. On the seventh day after its birth, the child is given a name and its hair is cut for the first time; a feast is held and presents made to the child and the mother.

Among the Wolof only the boys are circumcision. The rites are less strictly observed than among the Tuculor for example. Thus circumcision may be performed twice a year, it is performed at a relatively early age (10 to 12 years); the operation is performed in the village itself, the operator is not necessarily a cobbler or a smith, nor is the newly circumcised boy forbidden to enter the village etc. During the operation, which is performed in the morning, shortly before sunrise, the boys must not betray the slightest sign of pain; experienced individuals bandage them; then all hurry out of the village and take a long walk in the country. On their return, the people of the village come to meet them and clothe them in the dress worn by circumcised persons, a long shirt of black cloth 'with a white seam at the foot of the sleeves and a head-dress of black cloth tied on the neck. A piece of twisted cloth thrown over the shoulder is used to heat off those who come too close; they are all furnished with a stick with which they chase the birds which the newly circumcised are allowed to kill and take away. Till they recover, they eat and sleep with a guardian who watches carefully that they all begin and finish a meal at the same time. He forces them to take many husks of coarse millet (sunba) and makes them dance and sing; every week these boys eat mutton outside the village. When completely cured, they put on a head-dress higher than the first, but they only discard their sunba long after their recovery; this sunba, in which the precipe that has been cut off, is kept, is used as a greis-gris and protects from bullets.

Marriage takes place between people of equal status; a man may take a wife from his caste or from a lower. Marriage is performed by her father (edd); when the hut is ready, the girl goes there accompanied by her girl friends. At the door of her new abode, the husband's sister offers her millet-seeds tobacco and pistachios. Polygamy is regulated by the Koran; the first wife has authority over the others, and is head of the household; questions of divorce are laid before the bishop; according as the case is decided, the wife gives up or keeps the dowry given by her husband.

When a Wolof dies, his body is washed, then wrapped in a piece of white cloth; the intestines take place almost immediately after death. The grave, which is very narrow, is dug by those present, who are careful not to re-open an old grave; the body is placed in it on its right side; graves are turned towards the east. On leaving, the mourners are careful not to turn back. Seven days later, the family prepare food for distribution to the poor and to the pupils of the Koran schools, who pray for the deceased.

A woman, who becomes a widow, wraps herself from head to foot in a black cloth; she wears this single garment without washing or changing it nor paying the least attention to her toilet for four months and six days; at the end of this time, she goes out of the village by night, casts off her garb of mourning, washes herself and puts on new clothes. A widow does not wear mourning.

The unit of society is the family, i.e., a group of individuals having a common ancestor. Descent may be traced through the male line (perm) or the female (weme). Each weme-family has a name but the Wolof call themselves and salute one another by the clan-name they receive from their fathers.

Besides its division by families, there is a classification by castes; the first, and the largest in numbers, is that of the ayaumbara or freeman, who were divided politically into nobles and commoners; next comes the caste of nieni which is chiefly composed of artisans, smiths, goldsmiths, tailors, cobblers, musicians and singers, weavers, makers of boats and wooden utensils and lastly the griot, the most despised of all. The captives were on the lowest rank of the social scale.

There was a hierarchy among the noble families, some furnishing the chiefs of districts, others the chiefs of provinces, the electors of kings. To be eligible for election as baas, a man had to belong to the royal family on the male side and on the mother's side to one of the three princely families. In Djolof, rights were only transmitted in the male line while in Sine and Saloum power remained in the hands of a family by female descent.

The Wolof language is spoken in Djolof, Walo, Cayor, Balol and Sine-Saloum; it is the language usual in commerce throughout Senegambia. Many of the Fulbe of Djolof, of the Moors of Walo, of the Serer of Sine and of the Laobe speak it also; the Wolof and Serere have a connecting link in the language of the Ledama.

The sounds a, o, and u of French are not found in Wolof nor the aspirated clicks peculiar to the Serer and Fulbe language. t and d are nasally palatals, ñ, s, x, ñ, ñ may be nasalised; t and d are also found cerebralised.

The conjugation of the verb distinguishes the principal tenses, past, present and future but has very few secondary tenses. The use of varioushoods, and the many derivatives from the nouns give the Wolof language considerable weight of expression and a certain energy.

The Wolof employ a quinary notation. Their literal are fond of talking Arable, and can express themselves more or less purely in literary Arabic.

"The Berbers must have converted the Wolof to Islam, partially at least, at quite an early period. In the 16th century, Ca de Mocto found their chief following the Muslim faith which however they soon lost through contact with Christians. Nevertheless the knowledge of one God, whom they called Yalla, was wide spread amongst the masses who remained heathen; the pagan Wolof only reverenced their family spirits (ntaml), whom they regarded as intermediaries between them and this Distant God."

Although they had relapsed into paganism, the rulers of the lands on the Senegal appear to have always been very tolerant to Muslims, even giving the Marabouts connections, in which they could settle and form communities which took their name. The industrious masses of freemen, exploited by the warlike and pagan Tidjans abandoned their Heathenism to return to the aristocratic
cato; we know with what repugnance Lat-Dioc adopted Islam. There are 5000 Catholics among the Wofal; they are particularly numerous in Porto, Goa, Macao, and Macau. At the present day, the great majority of the Wofal are Muslim. In each village, there is a place reserved for common prayer (Alma = Almà), and one or more Mara-
buta, generally Wofal or Tuculor. The Catholic Wofal are very strict as regards praying and fasting; they observe the festivals of Todos (all-
di-habiku) and of Kor (all-di-
apalisa), feasts that are held in the festivals that have supplanted pagan feasts. The Muslim Wofal readily join reli-
gious brotherhoods; while the Tuculor are mainly Tidjâni, the Wofal are on the whole Kaidiri. It is
in the Wofal of Ceylon, Badol, Djofal and Sin-Salum, that Ahmadu Bamba, the head of a curious sect recently founded, has found most of his adepts, the Nuretis.

DIJUHA, a town on the coast of Syria between Hatrîn and Hatîn. The ancient holy city of Adonis had lost much of its importance, by the time it was conquered by Yarrid and Mùamî, the sons of Abu Safayn. It was incorporated in the town of Damascus, and like the other townships had a small garrison till the Fatimid period and was the home of a number of Muslim scholars. In 490 i=1103, it was taken by the Crusaders, and as the seat of a maron, it was given to the king of Jerusalem. Yarrid regained a certain importance, its little harbour was restored and the strong

fortress built, the remains of which still arouse the admiration of the visitor. Djofal was captured by Salah el-Din, but restored to the Crusaders by the Khwaïr and held by them under Muslim rule; but it has never since played a part in history and its importance has gradually diminished. At the end of the 19th century, it passed with the lands attached to it, into the hands of the Bani Hamda; the Murawali family, ruling in Lebanon, who retained it till the 18th century, when it had sunk to be a wretched little village. Since then, it has become a seat of a Moslem in the autonomous district of Lebanon, it has become a little busier; but as it has no harbour and the district around is confined and unproductive, it can never attain any considerable de-
velopment. The population is about 2000, almost all of whom are Maronite, except a few Muslim families.

(H. Lamers).

DIJUBBA (A.), in Egypt, a garment of Syrian origin, with narrow sleeves (Bakshâr, Bzk), transl. by Houthas and Marçais, ii. 321, sometimes lined with cotton, worn under the "haalan, q.v." p. 1. In Egypt it was worn over the "haalan, i.e. it was a long robe with short sleeves, lined in winter with fur. In Spain, in the transition period, djubbas of rock silk were worn. In Morocco the garment, which is made of light cloth or silk, is worn over the "haalan during the hot season; it is thrown over the shoulders. Women wear a jilbâb of cloth, velvet or silk, or velour, and gold or coloured silk, narrower than the man's. The word has passed into the Romance languages: Spanish alhoba, Italian giubba, French jupe, japon.

DIJUBBAT, Ali 'Abî Muhammad, a controversialist of the 14th century, author of the famous book of the Murâdis. He studied with Abî Ya'qûb Yûnâf al-Sha'îbî, the head of the BaShar school of Murâdisites and afterwards became one of the chief champions of this school till his death in 993 (1515-16). He composed a work on the fundamental doctrines of al-Sha'îbî and wrote polemics against al-Raschidî (q.v.), al-
Naqîf, and others. He is also described with his pupil al-Aqârî, who, when he had abandoned Murâdisite doctrines, published several pamphlets against his teacher (given in Spitta's Zur Geschichte Abu 'l-Hassan al-Ash'arî's, notably a refutation of Djuła's work on the fundamentals. No trace of these works has survived, however, nor of al-Djułbah's commentary on the Korânn, which he wrote in the dialect of his native town (Djofal) and whose loss is much to be deplored on philological grounds. Even more remarkable than the father was his son ABD AL-HAJJAM(?) AL-SALAM, who died in 321 (933) and whose followers are known as
Bahgamiya. Another name for them, given by al-Baghdadi, is al-Thamamya, as above p. 926; seems rather to be a term of reproach and is less usual. One of them was the celebrated Ruyid visier Ibn 'Abbâd [q. v.], so that at that time almost all Mu'tazzites honoured Abû Hâghim as their Shahîh. Only the titles of his works have survived, but we know his views fairly accurately through the polemics against them by his opponents. His theory of conditions or moods has particularly contributed to make Abû Hâghim's name celebrated. We cannot go fully into the doctrines of the al-Djubbâ'î, father and son, here, and must therefore refer the reader to the Bibliography; it may be sufficient to note that al-Djubbâ'î regarded the attributes of God, as identical with his being and, in consequence, practically denied their existence. Abû Hâghim sought to reconcile this teaching with orthodox doctrine, by explaining these attributes as conditions (al-âdâb), by which he meant qualifications, which were nearer the essence of things, than the more or less separable accidents and therefore play a part not only in the conception of God, but in the domain of universals also. He believed that, by this explanation, he not only restored the unity of the divine being, but also justified speaking of the attributes of God, in as much as the moods are nothing essential but simply conditions of phenomena, but his opponents were not satisfied with this compromise between being and not-being.

DJUDDÂLÁ. The Banû Djuddâl were one of the Sanûhîa tribes who wear the Lihtâm. They lived west of the Lamanita in the western Sahara on the shores of the Atlantic Ocean near Aguin and Cape Blanc. A Djuddâl, Yahya b. Ibrahim, while returning from the jâbi, induced the latter to settle in this district. His reformed Islam was forced upon the Lamanita tribes, more particularly the Djuddâl (Safar 432 = Oct.-Nov. 1040). But on the death of Yahya b. Ibrahim they refused to recognise the spiritual authority of Yahya, so that he had to retire to the adjoining Lamanita strifes in Mauritania 448 (March-April 1096), to the number of 30,000, they besieged an Almoravid general Yahya b. Omâr in the Jbel Lamanita and in the same year slew him with a large number of his followers at Tafidârâ (?) between Talwin and the Djebel Lamanita. They were probably subjected by Abû Bakr b. Yâyâ, Yahya's successor, about 493 (1052), and, with all the Lamanina wearing Sanûhîa, passed under the rule of 'Abd al-Malik b. 'Abd al-Malik, the first Almoravid Amir. They shared the fortunes of this dynasty and since then their name has disappeared from history. They have been identified as the Gassulli of ancient writers.

DJUDDÂM.

Khalân

Morra

al-Hârith

'Adî

Âmilah DJUDDÂM Lâkham

The above is the traditional genealogical tree of Djuddâm, the eponymous ancestor of the Banû Djuddâm. Djuddâm is only a nickname, his real name being 'Abd ar-Rahmân. He was the son of 'Abd and Lâkham; i.e., in the first century A. H. these three tribes were believed to be very closely related. By this time the Djuddâm had absorbed the Lâkham. Their Yamanite descent was not so readily accepted. Madjar and more particularly the Banû Asad b. Khuzayma claimed Djuddâm as a Madjarite tribe which had in early times migrated to Yemen. Ancient verses were quoted in support of this. But even if we neglect the partiality of Arab poetry, all that can be deduced from these verses is the existence of friendly relations, possibly even of a šîbīf. These discussions testify to the importance of the Djuddâm. The great majority of the tribe itself claimed South-Arabian descent, which claim had perhaps no more substantial basis than the other view, but better corresponded to their political situation in the Sufyânî period.

During this period, the Djuddâm were really a confederation of nomads, occupying the deserts between the Hibla, Syria and Egypt. In the north, they were bounded by the Banû Kašîf, and on the Arabian side by the Medinâ territory. They were scattered throughout the Wâdi 'l-Kurz and around Tabût and Alî; they were to be met with on horseback on the Egyptian frontier; their territory was undulating, of deserts, steppe, pastures, oases few and far between and including 'Ammân, Ma'ân, Aqâbâh, Ma'dâné and Ghaza. They made their living on the trade-routes joining Arabia, Syria and Egypt, as guides and caravan-leaders and levied customs and tolls for their services. The Îirs mutawwân as belonging to the tribe, a water-place named Dhab al-Salālî, which has not yet been identified, and Hismân, an extensive area to the southeast of Alî. They have been represented as descendants of the Midianites, but why not of the Nabataeans as they occupied exactly the same territory as the latter? The Medinâ tribe of Banû Nadir is said to have broken off from them, and adopted Judaism. This circumstance explains why this religion made converts among those of their clans, who lived near the Medinâ territory. Their constant intercourse with Syria and Egypt had early conduced to the diffusion of Christian ideas among the Banû Djuddâm. In the early years of the Hijra, we find them at the head of the Marmîlî tribe of Christianised Arabs, allies of the
Byzantines; their Christianity however, was very superficial, like that of the nomad tribes.

Their first dealings with Islam were by no means friendly. One of them, who was loyal to the Rashād of the tribe of Saqayn, later the Battle of Badr, that Muhammad was lying in wait for his caravan. His son, a supporter of the Rashād, fell in battle and was captured. As his mother believed to this district, he hoped to be able to enter into relations with the Djudhām, to extricate him from his difficulties, a column had to be mobilised under Abu ‘Abdār b. Djudhām. A few Djudhām chiefs appear to have independently negotiated with Medina. At ‘Amar they again bartered the ‘Abd Al-Mu’min’s way to the north and the Tabuk campaign was decided on to give them a lesson. We are not surprised to find them on the side of the Byzantines during the great invasion and they fought at Yamūk on their side. After the final victory of the Muslims, they proved faithful allies of the Arabs and helped them greatly in completing the conquest of Syria. Their recruits filled the gaps caused by war and plague. At the assembly of Djudhām (q.v., p. 988) when ‘Omar established the dinār, they claimed to be allowed to profit by the new organisation. It had been intended to exclude them from the revolt; in the event, they had no claim to the title of the Mahdiyyah; but their revolt had to be granted to their energetic protests. In the struggle between ‘Abd Al-Mu’min, they, like all the Arabs of Syria, embraced the cause of the latter. In the meanwhile, crossing the frontiers of their ancient desert country, they had entered Djudhām Fāsītah, where they hitherto formed the bulk of the Arab population. In Syria, Djudhām is frequently called the land of Ṭakkūr. When the principal chiefs of Rawḥ b. Zanbāl at the Umayyad court and under him they took part in the Hijāzic campaign under Yazīd I.

Just before the violent schism between Kātib and Yamānites, we have a facet of the ancient discussions on the genealogy of the Djudhām; the case was taken before the Caliph’s tribunal but the violent intervention of one of their chiefs broke up the proceedings. At the second assembly of Djudhām, the skill of Rawḥ b. Zanbāl was responsible for the success of the candidature of Marwān b. Al-Hakam, and he thereby gained the gratitude of the Yamānites for himself and his tribe. With the Banū Kalb, the Djudhām were at the head of the Yamānites tribes of Syria. In Egypt, where they helped Ṣa‘id b. Al-Riḍā in his conquest, they obtained important concessions of territory. In the 16th century A.D., we still found them around Alexandria. Their poet was ‘Adī b. Al-Riḍā, the favourite of Wahb I.

The great rising of the Kātibites, after the battle of Marj Rāhāt, strengthened their belief in their South Arabian origin. They continued to maintain their position as a distinct group. In course of time the name Djudhām disappeared before more modern names. In the 16th century, in addition to their lands in Egypt, territory be-longing to them is mentioned in Balka, chiefly in the region of Karah, where the energetic tribe of Banū Shabār is said to be descended from them, and to the east of the Jordan and the ‘Arab, they still occupy the lands of their ancestors.

the Christians and the Arabs learnt it from them, when their conquests carried them into Bohdat, when they encountered the name Djidj, which the Kurman (Sura xi. 46) mentions as the landing-place of Noah, quite unconcernedly to Mount Kardit which had, from the remotest times, been regarded as the apostle-stone. But Muhammad really meant the mountain called Djidj in Arabia (Husain, p. 504 p. Yāqūt, ii. 270, 11 = Muḥammad, p. 111), which he probably thought was the highest of all mountains. Thus writes Noldeke in the Jahrh. für Kultur (1858), p. 77, and he is clearly right. It is also proved that Muhammad was in his localisation of the mount on which the ark rested was influenced by some older tradition current in Arabia. For this view we might quote a remark of the apostle Theophylact (ad Autolyx. lib. III., c. 19) who mentions that, even in his time, the name of the ark were to be seen on the mountains of Arabia. The transference of the name, Djidj from Arabia to Mosopotamia by the Arabs must have taken place fairly early, for it has been mentioned, probably as early as the time of the Arab invasion; even in the oldest poets, for instance, Ilum Kais al-Rufayjī (ed. Rhedonekath, ii. Noldeke, Wien. Zeitschr. f. d. Kunde d. Morgenl., xvii. 91) and Usamah b. Abi 'l-Salīm (ed. Schultheiss, Beitr. u. d. Assyriolog., viii. 39, 3) Djejel Djdj is no longer an Arabian, but the Mosopotamian mountain. The transference of the name Djdj to the Kardit mountains and the rapid acceptance of the new name may probably have been favoured by the circumstance that the land south of Bohdat towards Assyria, where, in the Assyrian period formed part of the district of Gutia, the land of the Gutu (Kardit nomads), and, this, name of a people and district, had quite disappeared in the early years of Islam. On the geographical term Gutia, which is known to have existed even in the early Babylonian period, see Schult., Com. rend. de l'Académie des Inscriptions et Bell. Lettres, 1911, p. 378 et sqq., 606 et sqq.

If we assume, as is obvious, that the term Ararat (Assyr. Urašt) at one time also included an area to the south of Lake Van (cf. the mountain name Arar in the Gordyaic cuneiform inscription at Sinda, op. cit.) then Musul (Great Ararat) and Djibbel Djdj, both traditional resting-places of the Ark, might each be called Mount Ararat in conformity to the Biblical account.

Like the whole country round Ararat, the neighbourhood of Djibbel Djdj is to this day full of memorials and legends which refer to the Deluge and the life of Noah after leaving the Ark. Thus for example at the foot of the mountain is the village of Saryat Thumann = the village of the 80 (Syr. 8hāman sarcast, Tumûn = 8); where legend says the eight persons saved in the Ark first settled; cf. Haleman, loc. cit., xvi. 333-334. The Arab geographers also mention a monastery on Djibbel Djdj in their time, Dar al-Djdj; on this see Skloufhis, Kitāb al-Dā'irāt (J. Horsch. Die krit. u. geogr. Quellen in Yāqūt, geogr. Wörterbuche, 1898, p. 96) = Yāqūt, ii. 653.

(M. STRECK.)

DJHAINA. An Arab tribe. The Djhainas are near relatives of the Bahl, Bahra, Kahl, and Tam whilst and belong like them to the great South-Arabian group the Kāfā. In the pre-Islamic period we find them first in Najd, then in the neighbourhood of Medina, between the Kaf Sama and the Wadi Yarras (cf. the map in Caetani's Annali, iii. 376). They were settled on the south-western slope of the mountain where Muhammad's power began to extend. They adopted the Prophet's religion and were incorporated in the Islamic community without resistance. They did not take part in the Bidda, but remained strong supporters of the rising caliphate. A section of them remained in their ancient territory, and there the Djhainas dwell to this day in that district, but the bulk of the tribe migrated, particularly to Egypt; at least it is only on Egypt that we have any information. We find the Djhainas here at the conquest with other closely allied sections of the Kāfā. They then gradually advanced from Lower Egypt, where the little village of Dair el-Djtaina (Roeme Bey, Dictionaire Geographique, p. 10) is still inhabited by Beduins of the name, to Upper Egypt where they played a considerable part in the Fatimid period. After a good deal of fighting they ultimately settled down peaceably with other Arab tribes around Akkerm. Members of this tribe were mentioned even earlier, in the third century B.C., at Assuan and, although the details are not exactly known, they were among the tribes here on the borders of the Nubian kingdom, who gradually broke the power of this ancient Christian Kingdom. In any case it was the Djhainas (Ilī Khulde, v. 429, 19), who brought about the dissolution, no-
Dijulahä, or Djulahä, the name of the Musulman weavers, who form almost an occupational caste: throughout Northern India, though they have also found their way to the cotton mills of Bombay. At the Census of 1901, their number was three millions, or nearly 3% of the total Musulman population, of whom just half were in the United Provinces.

Djulamerg (Djulameek), the capital of the Sanjâq of Hakkiârî in the Wilayet of Wiln (pop. 4000, according to Caillet). The town is shut in by mountains and lies about two miles from the Zab. There are hot sulphur springs near it.

According to Andrea's view (see Fasti-Wissowa, l. 1859, M. Harrmann, Beitrâgen, p. 125), combated by Markward, Jerukhalâ, p. 158 et seq. Djulamerg is the ri Xanjaban of the ancients. The village of Djulamerg gave its name to a Kurdistân clan, on which see Ibn Fadl Allah al-Umiri: Not. et Extr., xiii, 317 et seq.

Djulfa (Russian Dijlâ), an ancient, once important town in Armenia, on the north bank of the Araxes, lying approximately in lat. 39°N., now belonging to the Russian government of Erivan. Shah Abbas I the Great (see above p. 8) brought about the ruin of the town when in 1605 he brought the entire population (300 families) which had won his sympathies by expelling the Turkish garrison during the Turco-Persian war, to Persia, chiefly to the capital Ipâhân and thereby introduced a new element into the population of his kingdom, of great value for their industrious habits. The Armenian town destroyed by Abbas I soon became utterly deserted and it was not till the beginning of the xviiith century that a few families settled among its ruins; at the present day their are only a few customs- and excise houses besides a few customs-offices inhabited by Russians and barracks for Cossacks, as Djulfa is a station on the frontier; on the southern (Persian) side of the Araxes is the Persian frontier and a khan. Considerable ruins of the town (including 20 churches) still exist; the large cemetery with its thousand of tombs of former inhabitants is celebrated. The remains of a splendid bridge, which is traced back to Roman times, may be mentioned; over it most of the traffic between Persia and Armenia (especially to Erivan and Tills) crossed the Araxes. To distinguish it from the Armenian colony in Ispahan, which is also called the name Dijlâ, the original Armenian town is now usually called Eski-Djulfa ( = Old Dijlfa).

The Armenian colony in Ispahan, New-Djulfa, quickly developed into an important suburb with flourishing commerce and industries. There can be no doubt that the industrious, enterprising and wealthy Armenians laid the foundations of Ispahan's great trade and wealth. In their new homes the Armenians enjoyed absolute freedom of religion; they built 24 splendid churches there, of which half still exist. The flourishing period of this colony lasted a century after which its importance and prosperity gradually began to decline. At the present day the suburb of Dijlfa, which has extensive gardens, has only a few thousand Armenian inhabitants.

Djuma, i.e. the day of "general assembly" in Friday, became it is a religious obligation on Musulms to attend on this weekly holy day the divine service, corresponding to the daily midday salât (jumât-az-zarih). The Friday salât itself is also called djumâ. Even in the Korân (Ixxii. 9) it is expressly ordained in a sYOUR ORDER ISN'T CLEAR. HELP ME UNDERSTAND IT. CONTACT SUPPORT FOR HELP.
by the Khāṭbih before this Salāt. But it is con-
sidered meritorious and is the usual prac-
tice to perform another prayer after the khalīfah's two
prayers in the Khāṭbih also. For a djamā to be valid, it
must, according to the Shāfi‘ī school, be at least 40
Muslims present, who are legally entitled to
partake in the worship of God. The Ḥanafīs
and Mālikis do not however adhere to the
number 40; they say that the service should only
be held in a town or community of some size.
According to the Shāfi‘ī and most of the other
schools, it is further illegal to hold the Friday
service in more than one mosque in the same
place, except in cases of necessity, when it is im-
possible for all the inhabitants to meet in one
building.

It may be presumed that Muhammad himself
used to hold a common Salāt with a sermon, as
the Jewish fashion, in the court of his house in
Medina on Fridays. Possibly he used to begin
with the Salāt which was followed by the address,
just as in other assemblies of the same kind in
older times a common Salāt preceded the discharge
of business. At the Friday service in the
great military camps of the Muslims after the
death of Muhammad, the Umayyads and their gov-
ernors used to appear with all the symbols of
their rank and conduct the service. The individual
tribes also used at that time to meet in a mass
of their own in camp, but the Umayyads endeavoured
to unite them in one common mosque. It is
probably from this period, that the command-
ment against holding the djamā outside a town
and holding it in more than one mosque dates.

In the later Umayyad period the ceremonies at
the Friday service became more and more
influenced by the Christian service. Thus the
ceremonial adhan (which is held on Friday in the
mosque, after the faithful are gathered there, be-
fore the sermon) and the peculiar form of the
khāṭbih, in two sections before the Friday Salāt,
seem to have arisen under influence of the Christian
mass. The professional preacher gradually came
to take the place of the Caliph and his representa-
tives as conductor of the service.

DIJUMĀ (lit. Upāya, and Upāy-ah-ah)
Djumā (Djumā, also called Djamā‘ār or Bas-
shādd) is the Turkish dījumā, Islām and
the Persian dāy, "mace-bearer", a court offi-
cial who entered at the side of the Sulṭān on occa-
sions of great ceremony and protected him with a mace or a club. According to Khātīl al-Zahhīr,
Zubdah (ed. Rāvīnāi), p. 164 there were 40 mace-
bearers in all.

DIJUMĀL (See Djamūlaq; p. 1914–
Djumla (a.; properly "aggregate, sum, total"); a technical term in Arabic grammar—
sentence. The word in this sense is synonymous
with kalim. On the latter al-Zamakhsharī
days (Maqāṣid, p. 4, 18–17): "A kalim is com-
pounded of (at least) two words, which stand to one
another in the relation of subject and predicate".
A single word as for example the imperative jāmūl
(stand) can of course form a complete sentence;
but in this case the subject (here: thou) is under-
stood. — On the various kinds of sentences (no-
mental, verbal, adversative, categorical, interrogative
etc.) see the grammars and more especially the
detailed treatment of the question in Muhammad
Alī, Dictionary of Technical Terms (ed. Spranger
and others), i, 245–350. (A. S. H. A.)

DIJUNGHĀR, native state in the penin-
sula of Kāṭhīvar, W. India; area, 1,284
sq. m. (pop. 1901), 595,445, of whom 22.5% are
Muslim, 77.5% are Hindu; about 2,318,000. It takes
its name from the "old fort", or Uparāk, which
contains Buddhist caves and a mosque built by
Sulṭān Mahmūd Begān (end of 16th cent.), who
named the modern town, which contains a college
and other fine buildings, Mīrgāfštāb. The state
was founded about 1735, on the decline of Mughal
authority, by Shah Khān Bābā, Pāhārān. The territory
includes the Gir forest, where alone the lion is
now to be found in India; the hill of Girnar,
sacred to the Dījumā; the ruined Hindu temple of
Somnath plundered by Mahomīd Ghanzāwī in
1026; and the seaport of Porbandar, which was
the principal port of embarkation for hajjāds during
the rule of the Sulṭāns of Gujārāt (q. v.). This
state is one of the few in British India that still
issues its own coin.

DI-JUNNAH (Ab al-Rahmān, a gover-
nor appointed by the Caliph Yazdī II, to the
Muslim possessions in India; he was dismissed
after a brief tenure of office. In 107 (725–726)
Khālīf b. Abī Allāh al-Kaṣī who was then
the governor of Khorāsān, sent him back to India. When
he reached the Indus, he attacked the Indian ruler
Ibn Dījumār who had adopted Islam a long time
before and been recognised by Omar II, as ruler
of these lands, took him prisoner and put him
to death. Some authors accuse al-Dījumah of
ambition to Ibn Dījumār; the details are not quite
clear, but it is at least certain that al-Dījumah had
his brother, who was going to the 'Irāq, to com-
plain of his faithless conduct, secretly murdered-

DIJUMĀ — AL-DJUNNAH.
During his stay in India he undertook several successful expeditions, on which he won rich booty. In the year 1174 (729-730) Aghnas b. 'Abd Allah al-Salami, governor of Khorasan, who had come into conflict with the Sogdians and the Turks, was dismissed and al-Djunaïd appointed his successor. He hurried with all possible speed to the help of Aghnas and joined forces with him in Bukhara. The Turks were defeated at Zaranta near Samarkand and the Arab army fought back to Khorasan. In the following year al-Djunaïd again prepared for a campaign against Turkistan. He had already sent several bodies of troops off by various routes, when the governor of Samarqand, Sawwa al-Čurr, sent him warning that the Turks were threatening this town and that he could not drive them back without reinforcements. Al-Djunaïd at once sent out, crossed the Oxus and reached Khiz. From there two routes led to Samarqand, the one across the steppes and the other through the mountains. He chose the latter on account of the heat of summer, but was ambushed by the Turkish Khāns in a ravine near Samarqand and had to ask Sawwa's help. The latter hurried up but was attacked by the enemy and slayed with the greater part of his army. Al-Djunaïd was however enabled to continue his march and enter Samarqand. The Khāns then turned his attention to Bukhara and laid siege to the town, but was defeated in Kamaran 112 or 113 (November 731) at al-Ṭawwād, and al-Djunaïd entered Bukhara. Meanwhile the Caliph Hālid had had to send him 20,000 more men from Basra and Khūfa; they met him on the march and were sent to Samarqand. Early in 116 (spring of 734) al-Djunaïd was dismissed; he had incurred the Caliph's wrath by his marriage with al-Fātima, daughter of the rebel Yaqūt b. al-Muhammad. 'Aṣim b. 'Abd Allah al-Hillāl was appointed his successor, but al-Djunaïd died in Merv of dropsy before the latter arrived in Khorasan.

Bibliography: Tabari (ed. de Goeje), ii. see Index; ibn al-Aṣrār (ed. Tornberg), iv. 466; v. 93-139; al-Qādī (ed. de Goeje), p. 429, 444-445; Weiß, Geschichte der Chalifen, i. 629-635; Helwald, Das arabisch-römische Reich, p. 280 et seq. (K. V. Zettlerien.)

DIJUNAIK, N., the father of Sultan Haidar. Djunaïd lived like his father in Ardabîl, but, as his religious and political views seemed dangerous, he was banished by Djiāhngīr, the chief of the Kara-Kuynūn at that time. He then went to Djiyābā, married and sister of Usṭān Hājim (q.v.), the chief of the Al-Kuynūn. The reputation as a Sufi saint, which he has in common with his ancestors and his son Haidar, was not however affected by his political alliances. He was slain in battle with the forces of the lord of Shiraz in 860 = 1456.

Bibliography: see the article SAPAWIT.

DIJUNAIK, ABU 'ĀŠIM b. MUHAMMAD b. AL-DIJUNAIK AL-ḲAZIZI AL-KAWARIK. A celebrated Baghdad mystic; he belonged to a family balking from Naḥwān and was the nephew of Sart al-Salṭān. He studied law with Abu Thawr, the pupil of al-Šāfi'i. He wrote the pilgρimage to Mecca in four days, but he died in Bukhara in 927 (910) and was buried in the Shā’zilān cemetery beside the mausoleum of his uncle. When some one expressed surprise that he should hold a rosary in his hand in spite of his great reputation for asceticism, he replied: "I will not renounce the path that has led me to God." The use of a rosary was to him one of the means of attaining a state of ecstasy. He was known as Ṣa’īd al-Tūbīn, "lord of the sect," and Ṣa‘īd al-Lūmāni, "ssekant of the learned." He admitted the superiority of prophets to saints and opposed the divine presence (sawāfīn), of which his former brother was the exponent, to the contemplation (swagīkād) of the latter. He preferred sobriety to mystic intoxication of the soul. In theology, he maintained that the knowledge of God only came from demonstrative reason. His pupils and followers are called Dijunaiti.

DIJUNAIK, a clever and cunning adventurer, said to have been a member of the royal family of Aldinehūg (Lamellia, Hist. Mus., 531; Abūlghoufandeh, p. 78), was born in Smyrna, where his father, the "Karnavahy" i.e. the chief magistrate (according to Dijunaiti's account his name was Israilīm), had been given an office by Bayzāz I. After Ti'Neill's retreat from Asia Minor, Djunaïk rose against the native rulers who had been restored by TiNeill, the Aldinehūg 'Isā and 'Omarbeg, and depose them with the help of Mir Sulaimān Celebi, Bayzāz I's eldest son who lived in Adria nople (1403 and 1406). According to the Turkish annalists (Lamellia, i. 417-416; 'Abd al-Ahzār, v. 1351; Smīd al-Dīn, i. 285 et seq.), he gave his support to 'Isā Celebi, a son of Bayzāz I, who was favoured by Mir Sulaimān in his struggle with his brother, Mehemmed Celebi, but was defeated by Mehemmed Celebi, who did not however deprive him of his power. He next came into conflict with Mir Sulaimān who advanced against him with an army; abandoned by his allies, the Kāmnānghū and Germānghū, he submitted to the Sultan. The latter however deprived him of his territory and took him with him to Europe where he was appointed governor of Ochrida. Soon afterwards Mir Sulaimān was attacked by his brother Mehemmed Celebi and met his death in battle with him (1410). Djunaïk took advantage of the confusion to return to Asia Minor; with a body of his old followers from Smyrna and Tyre, he drove out the governor of Ephesus appointed by Mir Sulaimān and soon regained his former power. Mehemmed Celebi, who overthrew Mehemmed Celebi in 816 (1413), after restoring order in Rumelia, turned against Djunaïk, stormed his strongholds (Kyme, Kayadjak, Nif) and advanced on Smyrna which surrendered after a ten days siege. Djunaïk, who had not dared risk a pitched battle, submitted, but was dispossessed by the Sultan, receiving the governorship of Nikopolis in compensation. The Turkish sources, which mention neither this campaign which is presumably to be placed in the 15th century nor the previous one with Mir Sulaimān, tell us that the Sultan forced Djunaïk in 814 (1411-1412) to recognize his suzerainty and his claim to have
his name inserted in the sermon (khejīta) and to strike coins (Leneni, i. c. 449—451; All, l.c. 167; Sa’d al-Din, i. 201). In 829 (A.D. 1422) a usurper appeared in Wallachia who claimed to be Mun’ir, the son of Bayazid II, who had disappeared in the battle of Angora. Djunaid took his side and fled with him to Saloniki, pursued by Mehmed I., where the Byantine governor afforded asylum to the fugitives. At the Sultan's request the sul- danhī Muṣṭafā was interned by the Emperor on the island of Lemnos and Djunaid in a monastery in Constantinople. After the death of Muḥammad I. the Emperor set up Ṣa’īd as a claimant to the throne against Murad II; Muṣṭafā, who had made Djunaid his viceroy, seized Rumelia and advanced against Murad, who had come from Amasia and was awaiting his opponents at Ulubad (Lepadow). While there Murad succeeded in persuading the Rumelian Bogs, who had taken the pretender’s side, to desert him; Djunaid followed this example and left Muṣṭafā to his fate (1422). Accompanied by a few followers, he reached Smyrna, where the inhabitants received him with open arms. With the poorly armed troops he raised in the Erythraean peninsula, he defeated and slew the Aṭīn-daghī Muṣṭafā and soon regained the territory he had once ruled; he prepared a place of refuge for all the eventuaries in his castle of Ippoli (Tyre) on the isle of Mamure in对面 of Samos. As soon as the state of his kingdom allowed it, the Sultan turned his attention to this dangerous usurper. A Turkish army invaded Ionia; Djunaid’s son, Kurd Hasan was defeated and taken prisoner at Aḥriṣṭā (Tyrrhēi); he himself retired to Ippoli and made an unsuccessful attempt to obtain help from the Karanogolli, after a long siege and only when Genoese ships were threatening the town from the sea, he decided to submit and was beheaded with all his relatives in the Turkish camp; his son Kurd Hasan and brother Ḥamzah, who were prisoners on the Dardanelles, were executed at the same time. According to the Turkish sources, there were two campaigns against Djunaid, the first in the year 827 (1424), according to the so-called Chronicle of Veranzoli, the second a year later in winter (Leneni, i. c. 506 et seq.; 531 et seq.; Aḥṣāʾīya, pne., p. 78; All, Kinsly, v. 293; Sa’d al-Din, i. c. 324 et seq.

Bibliography: The chief source is Dukas, Chronicle, i. c. 79—95, 96 et seq., 102—121, 124, 130—136, 135—137, 136—170, 190—199; also isolated notices in Chalkondylas, p. 204, 223 et seq.; in addition to the Turkish historians already quoted, cf. Perdikis, 1. c. 159 et seq., 161. Djunaid (in Dukas, Tāvārī, Chalkondylas: Zauąk, Zeynep in Schapper, p. 14) is usually called Uluğušī; ‘ibn Shaghīr, by Turkish writers, but sometimes also Aḥmor-Djunaid. On the very rare coins (unpublished, in my collection), on which the name of the Sultan ‘Abdunrnun (son) of Bayazid’ appears, and which were probably struck in 813 A. H., it be called himself Ghazāl Djunaid; on the equally rare coin dating from his last usurpation with the date 825 [S. Lanckoropa. The Coin of the Turks. Britisli Museum Catalogue of the Oriental Coins, Vol. viii., p. 32], his name is given as Djunaid ‘son of Bayazid’ in a Tughra. (J. H. W. FRIEDMANN.)

Djund (see A. F. Frankel, Die armen. Freund- schriften, p. 238) ‘regular army’, used in the Koran in the sense of the New Testament ἡ στρατιωτική, was used after the Muslim conquest of Syria to designate five military districts, a division based on the Byzantine division into themes, each occupied by one legion. These were Fihārj, Urdum, Dmaqsh, Ḥmad and Khmāriz; Mesopotamia was attached to the latter but separated by ‘Abd al-Malik b. Marwān. Khmārez at first belonged to Homs, till Yazid I. b. Mu‘awiyah formed a new jurisdiction to this town, ‘Aṭābāra and Munshid. Hā Raven-al-Rasjīd separated Khmārez from the other places when he founded a separate Djund al-Awāmī (i.e., p. 515 et seq.) which included Cilicia.

Bibliography: Vīktū, Muṣṭafā, i. 156. (J. H. W. FRIEDMANN.)

Dijand-Sabur, a town in Khurāsān, founded by the Sassanid, Shahrī b. (whence the name wundem Shahrū ‘conquered by Shahrī’), cf. Noṭdeke, Geschichte der Perer etc., p. 41, note 2), who settled it with Greek prisoners. It is the town known as Bith-Iṣṭār in Syriac, corrupted to Bīt-Aʿbābā, now almost unrecognizable in the forms nīla and nīla; the site is marked at the present day by the ruins of Shahba’d (cf. Rawlinson, in the Journ. of the Royal Geogr. Soc., ix. 72; de Bode, Travels in Persiān, ii. 167). The town was taken by the Muslims in the caliphate of ‘Omar by Mūsa al-Afšār, 17 = 735, after the occupation of Tusar; it was surrendered (Bulaq, p. 383). Saif b. al-Sa’ūd’s story in Tābārī, i. 256, and Ibn al-Athir, ii. 432, according to which the fall of the town was the result of a mistake made by the slave Makhd, seems to be a romantic fiction. The site of Māl, the founder of the site, was hung on a gate of the city. Djundal-Sabur was celebrated for its school of medicine founded by Khorasani, where Hellenistic science was taught in the Arabic language; it survived down to the 19th period. The town was the capital of Yaʿqūb b. Lālit al-Saffar (262—263 = 875—877), who died there in 265 = 878. In Yaʿqūb’s time only a few ruins marked the site of the town (ii. 136).

Dünar, town in W. India, 56 m. N. of Poona: pop. (1901), 9,675. In the neighbourhood are many Buddhist caves, and the hill-fort of Sheniā where Swājī (v. p. 319) was born. The town was brought under Muhammadan rule in 1426 by Malik al-Tutgiī, the leading Bahamane, and it was long the capital of a Muhammadan province. The governor was named by Fyzr, an English doctor from Bombay, in 1615. The chief buildings are the Džiātī Maqṣūdī, contemporary with the foundation of the town; a mosque dating from the time of Shāh Ḥaṣan; and two large dhargahs. As often in former Musltman head quarters, manufacture of paper still survives.

Dīr. (See Dīq.)

Dūrājdima. (See Dūrājad.)

Dūrājd, a saint, whose story is said to have been related by the Prophet himself and has...
therefore found a place in the Hadith. The various versions differ in details from one another, but one motif is common to them all, viz. that the saint is succeeded by a woman, who had had a child by another man, of being the father, but the child itself being asked by the saint, declares the real father’s name and thus clears the saint from suspicion. "Djurjâ" is the Arabic reproduction of Gregorius and one version rightly states that he lived in the period without a period (futurum) between Jesus and Muhammad. There is a similar example in the biographies of Gregorius Theonas and we may safely assume that this story became known among Muslims through Christians, till finally it was accepted in the Hadith.

(J. Horovitz.)

**Djurjat**, the poetical name of Şahî Resâ Kâlandar Bâkîî, a distinguished poet of Dîlî. His real name was Yûfî Anâmîn, and that of his father Hâfiz Anâmîn. His ancestors received the title of Anâmîn from the emperor Akbar. One of them, Ra’s Anâmîn was slain at the sack of Dîlî by Nâsil Shâh in A. D. 1726, and the street in which he lived is still called after his name.

Djurjat at first took service with Nawâlî Muhhamadh Shâh, son of Hâfiz Râhîm Kâhen Nawâlîc of Bareilly, in A. D. 1725 (A. H. 1800) he settled at Lucknow, and enjoyed the patronage of Mîrâd Shâhînî Shikîb, son of the emperor Shâh Alâm, and died in that city in A. D. 1225 (A. H. 1790). He studied poetry under Mîrâd Dîqâr ‘Alî Nasîr, and was also skilled in music and astrology. According to Naqshîb (Sukhâm-i ‘owmî, p. 102) Djurjat lost his eyesight from an attack of small-pox when he was only 10 years of age. Selections from his Dîrâs have been published at Agra (1867) as part of a series, entitled Mehkâh-i nâmîr, published under the editorship of Sayyîd Hûsain Silvaqî. A copy of his *Awâliq* or complete works, is in the Library of the British Museum.

**Djurjzn**. Old Persian *Wakana*, Modern Persian *Bakran*, Byzantine *D تركيا* the ancient Hrynean, at the southeastern corner of the Caspian Sea, which is therefore also known as Bâkî Djurjân (Marc Hroncunm). The province, which was practically equal to the modern Persian province of Azerbaijan (p. 493 et seq.), forms both in physical features and climate, a connecting link between sub-tropical Mæsopotamia with its damp heat and the steppes of Dâhistân in the north. The rivers Atrak (p. 516 et seq.) and Djurjznzd, to which the land owes its fertility and prosperity, are not an unmixed blessing on account of their inundations and the danger of fever which results. Djurjzn played an important role in the Sâzand period as it was the frontier province against the nomads pressing in from the north. The fortresses of Shahrâbâd-i Yerzidrâd and Shahr-i Pürú (see Margarit, *Evvâdên*, p. 54 and 56) were built as a defence against the nomads of the steppes of Dâhistân (See Out. of Wallisidey, *Ansatn an yez. Afr. pers. Mart.,* p. 277 et seq.). A long wall was built along the northern frontier to defend the lands (cf. *Bib. Geogr. Ar.,* vi. 261 et seq.; *Vânsî*, *Reise in Mittelasien*, p. 43 et seq.

Sayîz, b. al-Asî is said to have lived tribute from the "Mâlîy" of Djurjzn as early as the year 50 a.h.; but the real conquest of the land was the work of Yazîd b. al-Muhallab (p. 716).

At that time the lord of Djurjzn was a Marzili but the actual residence of the Djurjzn was on the banks of the Turkî chief Sal (cf. Wallisidey, *Arab. Reich.,* p. 278 et seq.).

After publishing the early population of the valley of the navigable Andarzûn, the modern Djurjznâz, Yazîd founded the town of Djurjzn, which henceforth was the capital of the province (Yazîd, K. 48 et seq.). Djurjzn must have been a very prosperous place in the third (9th) and fourth (10th) centuries. The garden around it, irrigated by the water of the river; was celebrated; its chief product was silk. Djurjzn was also a station on the route of caravans to Kâshân (Bibl. Geogr. Ar., vi. 154). The town was divided into two parts by the river which was crossed by a bridge; on the eastern side was the town proper, Shahr焣în, whose nine gates are detailed by Muhammadr and on the western, the suburb Bâkran (called after a settlement of the Arab tribe). Cf. Bibl. Geogr. Ar., l. 212 et seq.; l. 273 et seq., III. 357 et seq. The prosperity of the town seems to have been early threatened by internal dissensions. The ‘Alî propagandists had found a congenial soil in the lands on the Caspian Sea and the ‘Alî dynasty of Tabûristân included Djurjzn in its sphere of influence. In Djurjzn itself the tomb of Muhammadr b. Dîqâr al-Salih was an object of great reverence (Kâshân, i, 378). The constant unrest in these lands enabled Mardâkâr b. Ziyâ in 316 = 928 to found a kingdom of his own in Djurjzn with the help of the Dailamites, which survived for over a hundred years, although nominally dependent on the Samâhidz and later the Ghâzîwîdz (cf. the article *Tabûristân*). The dome-shaped tomb of the ruler Kâhin b. Washmîr (366 = 976–1012) still exists as a memorial of this period.

The Mongol invasion seems to have brought about the ruin of the town. Montawfî (cf. *Jumâria, R. Ar.,* 1902, p. 745 et seq.) describes it in the ivith (xIth) century as a heap of ruins. Although Thâûrî is said to have built a palace in 794 = 1393 (according to Hâfiz Abûrî, cf. G. In *Sturz*, *Eastern Caliphate*, p. 375) on the banks of the river, Djurjzn never again attained its former prosperity. Hâfiz Kâhilîa, *Ziżâkînâzum* (Constantinopolis 1145), p. 339, however, mentions Djurjzn, which had been rebuilt since the Mongol period, as inhabited by fanatical Shi‘ites.

Djurjzn’s situation in the angle at the confluence of the Djurjznzd and the Sunduh is only marked by mounds of ruins which have not yet been investigated. Only the Gumbâr-i Kâhin about a mile to the northeast, and about 423 mile south of the river has resisted the weather and the hand of man to the present day.

**Bibliography:** The *Kâhin Madîs‘î ‘Ulama‘* Djurjznw of Hâmâtd b. Yûsîf al-Sahîî (died 427 = 1036), preserved in Oxford (Bibl. Bodl. Cod. Cai., l. 746) might probably contain valuable material. — In addition to the works
AL-DJURDIANI, ISMAIL b. AL-DURISHIN, ARAB PHYSICIAN, DIED 530 = 1135, COMPOSED IN ADDITION TO SMALLER WORKS TWO TEXTBOOKS OF MEDICINE, ONE FOR "AL-DIN AL ARAB" ENTITLED AL-TASHKHIR AL-ASHRAFATI ET AL-SIML AL-TIBBIYAH (SEE DE SLANE, CATALOGUE DES M.V. ARAB. DE LA BIBL. NAT., NO. 29, 29953) AND FOR THE KHWASCHMUDI AL-DHISHRAT KHWASCHUMBA (YENI ASMYI). HIS MEDICAL WRITINGS ARE IN BAVARIAN METHEPERIECH (AFTERR, NO. 915, 916); SEE WUSTENFELD, "NEW ARAB., NO. 165; BROCKELMANN, GESCH. ET ARAB. LIT., 1887. (C. BROCKELMANN.)

AL-DJURDIANI, NUR AL-DIN MUHAMMAD, SON OF "AL-DIN AL-ARAB" (SEE ABOVE), DIED 538 = 1144 IN SIRJAH, TRANSLATED A TREATISE ON LOGIC WRITTEN IN PERSIAN BY HIS FATHER, WROTE A COMMENTARY ON HIS RASAL Et AL-OPAL, AND ON TAFSIRI'S GRAMMAR FARKH AL-HALAL AND WROTE AL-SHURRA ET AL-MANAFI', ON WHICH AL-SAFAWI (DIED 543 = 1148) WROTE A COMMENTARY (SEE DE SLANE, CATALOGUE DES M.V. DE LA BIBL. NATIONALE, NO. 2397).

ACCORDING TO THE ARAB STORY, THE DJURHUMIS WHO WERE RELATED TO ISMAILI BY MARRIAGE, ONCE RULED IN MOCCOA AND HAD AUTHORITY OVER THE KURDZABILIS, BUT THEY WERE DRIVEN OUT BY THE KURDZABILIS FOR THEIR WICKEDNESS. THE LEGENDS ASSOCIATED WITH THIS EVENT ARE OF COURSE ALL QUITE WITHOUT, BUT THERE MUST BE SOME HISTORICAL FOUNDATION FOR THE TRADITION. THE POET RASHId (WAILABA, V. 16) SPEAKS OF A MAN OF NAME "ARAB" AND DJURHUM WHO BUILT AND HAD BEEN REMOLED, AND SIMILARLY ANOTHER POET ASHAF SWAED (THE CHRONICLER) THAT KUSAY AND IBN DJURHUM BUILT. THIS TESTIFIES TO THE PARTICIPATION OF THE DJURHUMIS IN THE BUILDING OF THE KURDZABILIS, BUT IN A WAY, WHICH DOES NOT WELL AGREE WITH THE LATER VIEW OF A LINE OF SUCCESSIVE RULERS IN MOCCOA, ENDING IN THE KURDZABILIS.

DJIUWAIN is the name of several localities in Iran:

1. A village in Aashtir Khurma, some farsakh from Shiraz on the road to Aranjan, usually called Djuein, the modern Guyum, cf. G. Le Strange, Lands of the Eastern Caliphate, p. 253; P. Schwarcz, Iran in Mittelalter, p. 44, 179, 479 (not to be confused with Djuein Abi Ahmad in the province of Dakhshid, the modern Jueum, see G. Le Strange, op. cit., p. 254; P. Schwarcz, op. cit., p. 102 and 201).

2. Djuein (also written Guyum) a district in the Nakhir country, on the caravan road from Tabriz to Bakuh (Qobustan). The district, whose capital is given as Ashtvar, later Faryad (see Jowm. R. A. Soc., 1902, p. 735) contained 158 villages according to Vakil, ii. 164–166, whose information is taken from Abu l-Kasim al-Bakhtiyari; they were all in the northern half, while the southern half was unsettled; cf. G. Le Strange, Eastern Caliphate, p. 351 et seq. The plain of Djuein enclosed on the north and south by ranges of hills, still forms a district of Sakavars with about 65 townships, which lie along the river Djuein in a long series. In the middle of the valley near the village of Aashtir, are the ruins of the ancient capital. The modern centre is Jagair (Cahegasus) which is situated to the southeast of it, at the foot of the hills on the south; cf. MacGregor, Khurasan, ii. 145, 225; C. E. Yates, Khurasan and Sistan, p. 386 et seq.

3. Djuein or Djuein, a fortified place in Sandjistan, 2½ miles N.E. of Lash on the Pa-babelh, appears under its modern name in ancient (see Marzink, Erstbauer, p. 198; Tabbes 'ara, E. E. Emendation on Izidors of Charax) and early medieval itineraries (Ijakji, p. 248; Ibn Hawkal, p. 304). The importance of the sister towns of Lash and Djuein still rests on the fact that the roads from Kandahar and Herat from the Afghan side and those from Meshhad, Yazd and Najibbid, from the Persian meet here. The Arab geographers say that Djuein on the road from Herat to Zararzal was a Khurraghstronghold (Malekzadeh, p. 368; Ibn Rusta, p. 174).

Djuein, built on a slight elevation in the centre of a fertile plain covered with ruins, and surrounded by a quadrangular wall of clay, forms a striking contrast to the rocky stronghold of Lash; it appears to have considerably declined in the second half of the last century. With the fall of Lash occupied by a garrison of the Afghans, Djuein is occupied by a chief of the Sakazi (Ijakji) tribe, besides whom it contains a number of Khistah; cf. G. Le Strange, Eastern Caliphate, p. 344 et seq.; Ewan Smith in Eastern Persia, i. 319 et seq.; A. C. Yates, England and Russia face to face, p. 99 et seq. (R. Hartmann).
in the western part of Khurasan (it is mentioned as early as the 17th century and was a day's journey north of the town of Rummanābād which still exists under this name, cf. Jastakht, ed. de Goeje, p. 284); according to Ibn al-Takhālīf (al-Fakhārī, ed. Alwardi, p. 209) 'Ali al-Dīn claimed at a later period to be descended from Fadl b. Rabī', the vizier of Harūn al-Rashīd. Bahā al-Dīn Muḥammad b. 'Ali had paid homage to the Khān-rūmānī of Tāzhā, in 588/1192; his grandson Bahā al-Dīn Muḥammad b. Muḥammad appears in Daukhatā (i.e. Dewān) p. 135, as the constable (Makharāl) of the Khān-rūmānī of Muḥammad b. Tāzhā (died 637/1230) in a story said to be taken from the Tawārīḫ-i Dā'ūd-i Khūshqī; but this passage, like several other quotations in Daukhatā, does not seem to be found in this work. Its author seems first to have mentioned his father in his account of the last battles between the Mongols and Sulṭān Dschīhāl al-Dīn Manguberti, (cf. above, p. 204). Bahā al-Dīn was then in Nishāpur; the town had been held by two of Sulṭān's principal officers. Tughril Sanğur and Kārūndja, but they were soon afterwards driven out by the Mongol general Kūl-Būlāt; Bahā al-Dīn went with a few companions to Tūs and took refuge in a fortress there, but was afterwards handed over by his commander to the Mongols at their demand. He was kindly received by Kūl-Būlāt, entered the Mongol service and for the next few decades filled the office of Shāhī-Dīnār (finance-minister) of Khurasan under different governors; on several occasions he accompanied Arghun-Aghā, the last of these governors, to the Mongol capital Karakorum. In the second half of the year 651/1253, when he had reached the age of 60, he wished to retire, but at the request of the Mongols he had to give up the idea and died the same year in Jafrān. 

'Ali al-Dīn tells us of himself, that, while still a youth, he chose an official career against his father's wishes, without having received a proper literary training, and received positions in the Diwan. On two occasions (647—649 = 1250—1253; and 649—651 = 1253—1255) he made the journey to Byzantium and back with Arghun-Agha. When prince Hüğüği invaded Persia at the head of an army and took over the government of the country, 'Ali al-Dīn was left in Khurāsān in the spring of 655/1257 to govern the land with Arghun-Aghā's son Gīrī-Malik. In the same year he entered the gratitude of the people by rebuilding the town of Khābāhghān (the modern Kūfān) which had been destroyed by the Mongols; at his request also Hüğüği protected the celebrated library of the Assassins from destruction at the taking of Alamut (q.v., p. 246, p. 351); the books were handed over to 'Ali al-Dīn, who ordered all to be framed but dealt with the heretics of the sect and preserved the others; the majority were afterwards placed in the newly founded observatory in Marāgha.

In 661 = 1262-1263 'Ali al-Dīn was appointed governor (Mashih) of Baghhdād; he probably owed this appointment to the influence of his brother 'Abū al-Dīn Muḥammad (see below) who had been appointed Shāhī-Dīnār in the same year. Henceforth, a Hamd Allah Kāsrawī (Ṭawārīḫ-e Guščī, MS. of the Univ. of St. Petersburg, 153, p. 325) tells us, he governed the land of the Arabs in place of the Caliph (al-Ṭawārīḫ-i βαγχαδσ). He is said to have won great renown in restoring the prosperity of Baghhdād and the tranquillity of the province; he expended 100,000 dinars of gold in making a canal from the Euphrates to Kūf and Najaf and thereby opened up new areas to commerce (Waṣf, Ind. edition, p. 59). The work was carried out by Tādž al-Dīn 'Ali b. Muḥammad, the father of the author of the Kitāb al-Fakhārī, Tādż al-Dīn afterwards sought to get Abāk to dismiss the governor and was therefore murdered one night at the latter's instigation; 'Ali al-Dīn thereupon put the assassins to death, but at the same time, confiscated the murdered man's property (al-Fakhārī, ed. Alwardi, p. 316). A Derwich named (Kūbekeka) was put to death for deriding the governor on the other hand sought to protect members of other faiths from the fanaticism of Muslims; in 1268 the Nestorian patriarch Denha found a safe asylum in his house. In 1271 an attempt was made by the Assassins to murder the governor, whereupon the Christians were accused by the Muslims of complicity in the plot; in spite of his toleration 'Ali al-Dīn found himself forced to imprison several bishops, priests and monks.

The hostile attacks to which the two brothers were exposed in the reign of Abāk (1284—1289), particularly in the latter years of his rule, had even more serious consequences for 'Ali al-Dīn than for his brother. In 669 = 1270-1271 Abāk had the accounts of income and expenditure for the province of Baghhdād audited and arrears of 250 tūnāms (1 tūnām = 10,000 dinars of silver or 6 dhūrras each) were found; 'Ali al-Dīn was able to show that this debtor's estate was by the poverty-stricken condition of the people and that the inhabitants would have been utterly ruined, if the payment of the money had been insisted on. Abāk was satisfied with this explanation and relieved the province of its arrears of taxation; 'Ali al-Dīn was allowed to return to Baghhdād. The same accusations were brought against him in 680 = 1281 with more success; 'Ali al-Dīn was further accused of negotiating with the Christian Church, whereupon he refused and, to escape torture, he pledged himself to pay 250 tūnāms to the treasury but, after exhausting all his resources was only able to raise 170 tūnāms; he was set free on the 4th Ramadan = 17th December by Abāk's orders, but soon afterwards re-arrested for the 130 tūnāms which he still owed, tortured and led naked through Baghhdād. When the Shābī-Dīnār, through the favour of the new ruler Ahmad (1282—1284), was able to destroy his enemies, 'Ali al-Dīn also received his freedom and had his property and his governorship of Baghhdād restored to him; but in the same year (681 = 1282/1283) prince Arghun on his own initiative reopened the enquiry into his administration and confiscated all his property. When 'Ali al-Dīn, who was in Avrān at the time, heard this, he had an apoplectic stroke and died on Saturday the 4th Diwān 1-Tīlīhīn 681 = 6th March 1284.

'Ali al-Dīn's references to his defects in his literary education are probably to be put down to conventional modesty; he is praised by his contemporaries, among them the author of the Kitāb al-Fakhārī, the son of his enemy, as a highly cultured man and a patron of poets and scholars (Zahariya Kāsrawī's Ḥijāb al-Mahbūbār, amongst other works, is dedicated to him, cf.
Djuwaini: 1089

Broedelmann, I. 381 on the first edition of this work, in 1661 = 1261); his history was regarded as an unrivaled model for its style. The work is divided into three main sections: 1. History of the Mongols and their conquests to the death of Khubilai (cf. the article 1271, p. 947 et seq.), including the history of the descendants of Liaji and Caghudzi; 2. History of the dynasty of Kházir-magha, based in part on previous works such as the Maghâr al-Fisâlîr of Abu 'l-Hassan Ba'ilaki (cf. above, p. 594 et seq. and Vüktü, Tâvâkî, ed. Kâfûlî, v. 208 et seq.) and the Diwân al-Dîrâsât of Ba'ilaki's heir (cf. Kâfûlî, Supplement, p. 102 et seq.), and a history of the Mongol governors of Khorâza to the year 658 = 1260; 3. Continuation of the history of the Mongols to the overthrow of the Assassins, with an account of the sect, based chiefly on works found in Almati such as the Sa'ûdî, Jâlî, Sa'îdî, and the Ta'rikh al-Sâlihîn (written for the Baydîl Fakhr al-Dawla (died 387 = 997); on this work cf. W. Barthold in the Orientalistische Studien, VII, 91, 92, et seq.). Extracts from the Ta'rikh of Qâhin-Kâshkhâi have been published in: die Anuario árabe, I, 37 (1900), and Verhaert, Christenbonds Pers. ii, 106 et seq. Housman (Remaindes de textes relatifs à l'histoire des Seljoukides, ii, xxii, et seq.) of Salamaan (in W. Reade's Kastoral Bibl., Introduction, p. 111 et seq.) and Barthold (Turkistan, etc., i, 103 et seq.) cf. the translation of passages in D. O'Leary, Histoire des Mongols, ii, 429 et seq.; cf. also Elliot, History of India, ii, 386 et seq. and Ross, Turki-cel, i, 288 et seq. The accounts of the authors who were first collected by Quaiteme (Gazetteer of India, 1. 20 et seq. and Histoire des Mongols de la Perle par Rashî al-Dîn, p. 160 et seq.) and afterwards by D. O'Leary, (Histoire des Mongols, i, 187, et seq.; iii, 470, 511 et seq. 536 et seq., 382); Elliot, History of India, 1. 384 et seq.) and Schefer (Christenbonds Pers. ii, Notex, p. 134 et seq.) only reproduce Quaiteme's and D. O'Leary's views and facts given by them. A few corrections to D. O'Leary's account can be found in Hambrecht, Geschichte der Teuton, etc. See Index). A complete edition of the Ta'rikh al-Dîrâsât of Qâhin-Kâshkhâi, of which the first volume has already appeared (1913), is being prepared by Mii I., Muhammad, Sarwîlî, f. The Gibb Memorial Series; the fact that no such edition has hitherto been undertaken is described by Browne in his Literary History of Persia, ii, 473) as "nothing less than a scandal!" The work, which has considerably influenced the historical tradition in the east, is for me also an historical authority of the first rank. The author is probably the only Persian historian who had travelled to Mongolia and described the countries of eastern Asia from his own experiences; it is to the Ta'rikh al-Dîrâsât of Qâhin-Kâshkhâi and to the Journal of William of Rubruck that we owe practically all we now know of the buildings in the Mongol capital Karakorum. The accounts of Cingel-Khân and his conquests are given nowhere else in such detail; many episodes, such as the battles on the Sir-Darya above and below Ofak and the celebrated massacre of Khojaian, are known to us only from the Ta'rikh al-Dîrâsât of Qâhin-Kâshkhâi. Unfortunately Djuwaini does not give us in these cases the first-hand impressions of a contemporary, but the opinions of the next generation, so that the details of his narrative, particularly the number of the numbers of casualties and slain have to be taken with great caution; cf. for example, the fact pointed out long ago by D. O'Leary (c. 532 et seq.), that the city of Bukhârâ according to Djuwaini was defended by 30,000 men all of whom were slain on its capture, while Ibn al-Athîr (ed. Tarnberg, ii, 239) on the authority of an eye-witness, says the garrison consisted only of 400 cavalry. The account of the events in Mâdârâ al-Nahr before the Mongol advance, particularly the battles of the Khân-Khânân and the Khâzir-magha, Muhammad, is given in different chapters, the result of which is that the author gives quite another account in the later chapters from the earlier, apparently from other (written or oral) sources. It was only by later compilers like Mîrghâbi that these contradictory accounts were woven into an uniform narrative, not of course, according to the criteria of modern criticism; European scholars, to whom the compilations were much more accessible than the original authorities, have been frequently led astray by them.

Djuwaini wrote his history while still a young man and does not seem to have again returned to this field of research in later life. According to his own statements, he was asked, when in Mongolia, as early as 650 = 1252-1253 to write a history of the Mongol conquests in the presence to the work we are told that the author was 27 years old at the time of its composition; in the account of the siege of Bukhârâ and Samarkand the year 658 = 1260 is given as the date of composition of this chapter (cf. the text of Schefer, C. L. C., ii, 118 at the foot), in the (late) manuscript B. M. 155 (cf. Rieu, Catalogue etc., p. 161) the month Bagh (15th February-15 March) as the date of the conclusion of the whole work. In spite of Quaiteme's views, it cannot be proved that the present was written so much as after that date; Quaiteme relies on the fact that Khân Möngke, who, according to Rashî al-Dîn (cf. Biographie, p. 332), died in 655 = 1259, is mentioned in the preface as still reigning; but the date given by Rashî al-Dîn is certainly wrong; according to the Chinese authorities Möngke Khân did not die till August or September 1259 (in the 7th month, cf. C. Arndt in the Mitt. d. Orient., viii, Berlin, Oct., p. 155); the author of the Turberât Nâqîz (transl. Raintrey, p. 1929), which was also written in 658 = 1260, only knew of his death through a vague rumour. Quaiteme is no more correct in his thesis, that the author could not have concluded his work with the account of the extinction of the Assassins, although, as Quaiteme says, Maharâd Nikût b. Marûd bases his account of the fall of Baghdad on the Ta'rikh al-Dîrâsât of Qâhin-Kâshkhâi; a similar account is actually to be found in one of the St. Petersburg manuscripts (Imper. Library, iv, 2, 345) of Djuwaini's work, but the chapter containing it is expressly stated to be a "continuation of the book" (Şa'ârî, Şâhî). Quaiteme's statement that so late a year as 663 = 1264-1265 is mentioned in the account of Sultan Liaji al-Dîn (an adventurer is said to have declared himself the lost Sultan in this year), seems to be based on a wrong reading in a manuscript,
the St. Petersburg manuscripts give the date as 633 = 1225-1226.

During the persecution he suffered under Aba'ū, Djounine wrote in Arabic an epistle of consolation to his brothers (Tasliyar al-Haqqayn, as it is correctly given in Qustapamun, i. 274 and Hamman-Purgatz, Geschichte des Islam, iii. 207; cf. Wsāfā', Ind. Hist., p. 101, and Mīrkhōnd, Per. Hist., Vol. vi. without pagination; in d'Ohsan, ii. 585, the title is erroneously given with a reference to Mīrkhōnd as Taṣbih al-Haqqayn, al-ta'rif min al-fers; the same mistake occurs in Scheler, Pers. Chron., ii. Notes, p. 10). A Ḍuṣṭ from this work is said by Wsāfā' (l. c.) to have been imitated by seventy poets who added verses with the same rhyme (tawziq). (W. Barthold).

DIJWAINE, ŠAMS AL-DIN MUHAMMAD B. MUHAMMAD, brother of the preceding, a Persian statesman; as Šāhīd-Dinwain, he was at the head of the administration of Persia under Mongol rule in the reigns of Hülagū (to 1265), Aba'ū (1265-1283) and Ahmad (1283-1284); according to Rakīd al-Din (ed. Quatrepertes, p. 102 et seq., 426-1265-1266). It is not known whether he was elder or younger than his brother; nor do we know anything of his career before the year 667; he is not mentioned by his brother. In 678 = 1278 he was sent to Asia Minor to arrange the affairs of that province; an account of his work there is given by his contemporary Ibn Bīhī (in Houtsmoot, Reizen de Oosterschelde, lv. 349 et seq.), amongst others. The last years of Aba'ū's reign were as troubled for Šams al-Din as for his brother; it is said that he not, like Aba'ū, deprived of his freedom and property and that he was even able to retain his office; but his enemy Majdī al-Mulk Yānīd was appointed controller of the kingdom (Mukhtār al-Malīkī) and thus became second minister along with Šams al-Din; documents drawn up in the Ḍawāneh on the right side the seal of the Šāhīd-Dinwain and on the left that of the Mukhtār (Wsāfā', Ind. Hist., ed. p. 95); no communique occasions at court, the Mukhtār was openly favored by the rules, while insults and mortifications were heaped on the Šāhīd-Dinwain. After the death of Aba'ū the situation took another turn; Ahmad, who had adopted Islam, was completely under the influence of Šams al-Din; the Šāhīd-Dinwain and his brother were exonerated from all the accusations levied against them and received the most lavish compensation; Majdī al-Din on the other hand was accused of high treason for his relations with Arghūn, handed over to his enemies, and put to death by them (40th Dīwān I. 681 = 26th August 1283, according to Hamad Allah Kāzwīnī, Taṣbih al-Ghulāma, MS. in the Univ. of St. Petersburg, No. 555, p. 324; the date given by d'Ohsan, Histoire des Mongols, iii. 359 following Rakīd al-Din, does not correspond to the week-day. After the struggles between Ahmad and Arghūn had ended in favor of the latter, Šams al-Din could expect no good from the new ruler; for some hesitation he had to make up his mind to pay homage to the victor, was at first treated kindly, but soon afterwards a charge was brought against him and he was executed on the 4th Shāwa 1 = 16th October 1284 near the town of Abbūr (on the road from Kāzwīn to Zangān). His sons met the same fate; their tombs were near Tabriz, where Wsāfā' visited them in 692 = 1293 (Taqhīk-i Wsāfā', Ind. Hist., p. 142).

Like Āla' al-Din, Šams al-Din was considered a patron of art and learning, and even wrote Arabic verse, which however savoured of barbarism (infamatur) to the critics of Baghīri (Wsāfā', p. 58 at the end). According to Uswālī-Shāh (p. 105) the work Šahīdviwa was dedicated to him, and he himself wrote a commentary (Sharāf) on it. The apophasic poems of Šāhīd known as Šāhīdviwa are addressed to Šams al-Din; the third of Šāhīd's prose works (Risāla) consists of questions by the Šāhīd-Dinwain and the poet's replies (Ethi in the Grandissime d'. Iran, Phil., ii. 294). Šams al-Din himself, as Wsāfā' (p. 142) expressly says, was never in Kāzwīn, but his death was lamented even there. He is particularly celebrated for the prosperity he brought the kingdom and for his protection of Islam from oppression by the heathen rulers. Hamad Allah Karwīnī (Taqhīk-i Wsāfā', Gwātī, MS. in the Univ. of St. Petersburg, 153, p. 322), the cousin of his enemy Fakhr al-Din, pays him the devout compliment of having obtained for himself by his good government (ḥas̱anāt tadbīr) vast estates and considerable wealth; his daily income from his estates is said to have been brimmed (according to Rakīd al-Din, in d'Ohsan, i. 8: = 1000 diwān, but even this would be an incredible sum for those days). Wsāfā' (p. 56) also tells us that when in the reign of Gālibī in the year 693 = 1294, the revenue of the estates (bāṣūr) of the Šāhīd-Dinwain (wāzīlāt al-Šāhīd), which had been incorporated, in those of the ruling house, was estimated, it was found to be 296 million a year. Cf. d'Ohsan, Histoire des Mongols, ii. 390, 500 et seq., 534 et seq., iv. 4 et seq.); Hammer-Purgatz, Geschichte des Islam, sect. 4. (W. Barthold).

DIJŻ, plural ÂN̄Ż (A.), "a part"; in nomad "food". In a line, Dijz is also the name of the 39 divisions into which the Kūrān is divided for purposes of recitation.

DIŻDŻAN, Persian Gōzgān, the older name of a district in Afghanistan between Margūl and the Aym-Durul. Its boundaries were not well defined, particularly in the west but it certainly included the country containing the modern towns of Mallana, Anāhilī, Shahr-e Gān and Sar-e Pāl. Lying on the boundary between the outskirts of the iranian highlands and the steppes of the north, Dijżan probably always supported nomad tribes as it does at the present day in addition to the permanent settlements in its fertile valleys (cf. Ibn Hawkiš, p. 322, et seq.; Ḥudūḏ al-Khalīf, 2:242, No. 113, p. 316).

The principal wealth of the land lay in its rocks (camels). The water, however, was abundant; Vānerny, Del. i. 315—L. Moreau, Prod. mentioned, p. 136, 147, note 23; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del. i. 315—L. Moreau, Prod. p. 222; Vānerny, Del.
The district, which in the beginning of the 16th century was attached to Tajikistan (see Marquart, *A. Z.*, v. 67), was conquered on the occasion of the Afghán B. Kál's magan in 33 A. H. by his lieutenant Al-Akur. The mughals suffered not only from the wars with the Turks but from domestic differences within the empire also. In the year 1109 = 737 the Khánqah was defeated by Azad b. Abdullah Al-Kasri near the capital of Dżubdżan (Sğurkán). In 1125 = 745 the 'Ali b. Yáhýa b. Zúl's whose tomb was revered longer afterwards (cf. Wellhausen, *A. Z.*, p. 311) fell in battle before the Umayyads. During the Abbáds period the governor's residence was in Sháhán (probably the Diríkshéstan of Nasir-i Khusraw, p. 2). The ancient ruling house of Džubdžan-Kushán, the Afghán dynasty continued however to survive and had its capital in Kundurrum (cf. Istáklí, p. 270; Ibn Háráq, p. 321 et seq.; Ya'qóbí, p. 237). Shúbúrgán (Sğurkán) occasionally appears as the political centre of Džubdžan, while Múshádsat (p. 297) and Yáhýa (p. 149 et seq., mention Al-Yahdhibi as the capital of the province in 1125 = 745). The name of the province Džubdžan appears gradually to have fallen into disuse, to survive in literature only for some time longer. The various towns in it continue to be mentioned again and again as the scenes of hostile attacks; we can only mention Chínigü Kášán and Timur's invasions here. Nothing shows the importance of the district more clearly than the fact that a number of towns have survived all these vicissitudes to the present day.

In modern times quite a number of petty Uzbek Khánqáhs (Akké, Andkhúsh, Sığurkán, Sar-i Pál, Maiámán) have been established in the ancient Džubdžan, but they were much harassed by raids of their more powerful neighbours such as the invasions of the Turkman nomads. Since the time of Dost Muhammad [q. v.] these Khánqáhs have gradually been incorporated in the Afghan province of Turkistan; Maiámán alone retains a vestige of independence under Afghan suzerainty.

(D. R. Hartmann.)

**DIJZHJAN, MINHAJ AL-DIN** AND 'OMAR 'OHMMÉN B. SIRÁK (AL-DIN) 'MUHAMMAD, A Persian historian. His father, who filled the office of Káfi in Bāmiyún and Tajikistan, was slain, while going to the Caliph of Baghdad as ambassador of the Court, by robbers who fell upon him on the way. He himself escaped to India (Dilíh) when the Mongols came to Ghür in 624 (1227). He spent the years 640—643 = 1242—1245 in Lukhánwátí, then returned to Tahítí and received the office of Káfi of Gwâlîr and of superintendent of the Núştrá-Mádârnás in Díhí. He was chief Káfi from 649—651 = 1251—1253 in the reign of Núshirván of Persia, who had been on the throne since 644—1246, when the Great Káfi was restored to his former position in 653—1255. Nothing definite is known of his later days except that it may be deduced from his history, which he called *Táháláb-i Núshíá* (printed in the *Bibliotheca Indica*, in 1804, trans. by Rávërt) (Ibid., 1873—1875) in honour of Sultan Núshirván, that he was still alive in 658 (1260).

**DOÁN, THE NAME OF A WÜDÁL IN HAJRÁMAWÍ, some fifty miles in length, running in a N. W. direction between the 48th and 49th degrees of east longitude. This valley was visited in 1846 by Von Wrede in an unsuccessful attempt to reach the Wüdáls of Hadrámát. Theodore Bent and Mrs. Bent had intended to go by this route in 1853—1854, but were prevented by their Arab guides, who represented that the people of the town of Khâlît, situated near the head of the valley, intended to attack them. Bent suggests that this is the town of Duán of Hamdân, the last of the Dynasties of Hadrámát, and that the maps of Polo and of Hirsch should be consulted. Duán was a large town, and a considerable trade flourished. Earlier in the same year Léo Hirsch had struck the Wüdáls of Duán at the point reached by Von Wrede and continued to Shíbán. Hamdân mentions two places, one called Duán in the Jew country, and one Duán or Duán in the Hindús.

(D. H. Wayn.)

**DOBRÚDJA (from *Dobrudja*, in Herodotus V, 16 a Paeonian people, or from Dobrotiw, the name of a Bulgar ruler of the 14th century, or from the Bulgarian *dohri* "stony, unfruitful district"); a district in the Dobrudja, a peninsula bounded by the lower Danubé, the Black Sea (from the coast of Râkí, to the delta of the river); it is a broad, arid plateau from 200—500 feet high, of grey sand, covered with swampy, without drinking water, but rich in pasture for cattle; it has numerous lakes of which Karâ, in the centre and the lake of Kâmní are the most important. The only elevation is the small range (1800 feet high) of Bugh-Tepë, "the Five Hills"); the district is traversed by the Konstándia—Carnoval railway, which follows the triple line of fortifications known as Traján's Wall, which was built in the reign of Valens in 377 by Trajan, a military officer (Arn. Marc., xxx., 8). The Deli-Omran ("most forest") separates Dobrúdja from the Bulgarian province of Varna. The few towns in the district are Mejdiljë, founded in 1855, in the centre on the railway; Rasova, Konstándia, Hisorov, the fortresses of Kâmní, Teştik and Tula, all on the Danube, Băbâ-Daghi, on the northern lagoon and Konstándia on the coast. The plateau is inhabited by a few Nogáh Turks, who were transferred hither from Băbâk (q. v., p. 786) in South Russia 1784 and 1812, and from the Crimea in 1856, and by Circassians who immigrated in 1864. In the northern part of Dobrúdja there are a number of Lippowans, Russians, Ruthenians and a few Old Believers, whose
ancestors were driven out of Russia by Catherine II. On the southern arm of the Danube delta there are a few villages of German and Albanian colonists. The population on the coast is Bulgarian to the north of Kustendjia, Turkish in the south, and there are a few Arabs in the area mentioned in 1833 (immigrated in 1833). The whole population is about 115,000—116,000.

The name Dobrudja is first found in Laoninos Chalokkondylas in the second half of the xvii. century. By 788 (1386) the district was under Turkish rule, however, for at that time Serdi, a Tatar ruler, acknowledged himself the vassal of Sultan Murad I with the consent of Constantine the lord of Kustendjia (v. Hammer, Gesch. d. Osman. Reiches, i, 206). At the outbreak of the last Russo-Turkish war, Dobrudja belonged to the Sandjak of Tulca in the Wilayet of the Danube, and comprised the Kaşas of Killa, Shina, Mahmuđiya, Isakli, Maćiš, Bilen-Dégh, Hironva, Kustendja and Madjadiye. By the Treaty of Berlin in 1878 (Art. 46) the district was transferred to Roumania, which was to give Besarabia to Russia in compensation. At the same time Dobrudja was extended in the south by the inclusion of an area stretching eastwards from Silistria to the south of Mangalia on the Black Sea. Since then, it has been divided into two administrative districts, Tulca in the north and Constanta in the south.

DOPAR. [See ZAPAR.]

DOLMA BAGHÇE. [See CONSTANTINOPLE.]

DÖMBKI, the name of a Balık tribe now located in the plain of Kocb, with its head quarters at the former town of Ibrh. This tribe is considered to be of the Keres tribe blood, though not of the greatest importance. It was at one time celebrated for raiding in Sintih, but became more peaceful after punishment by Gen. Jacob. The tribe, in 1901, numbered 4938. The name Dömbki is by legend connected with the Döm or ministre tribe, but more probably is really derived from Domansk in Persian Balochistan. (M. Longworth Damal.)

DONGOLA (DuNCULLA, DONGOLA) a district in Nutia, which lies along both banks of the Nile between 19° 42' and 18° 0' N. lat. for a distance of about 170 miles; at the present day it is a Mohameda of the Anglo-Egyptian Sudan. The population, (Dünjência, Döngela; sing. Dongola; pl. numbers about 56,000; it has in course of time received a considerable infusion of Arab blood and speaks a dialect of Nubian. The capital is New Dongola, or El-Tiu, with about 15,000 inhabitants. The district takes its name from the ancient capital of the Christian kingdom of Makurra (on the latter of Marquet, Bénin, p. ed. 1748), which at the time of the Muslim conquest, covered roughly the same area as the modern Dongola. In the Arabic sources the name is first mentioned in connection with the campaigns, which Abülahlah b. Ali b. Zari undertook against Nubia in 31 (652), in the course of which the town was besieged and its church destroyed. The celebrated treaty was then signed by which the kingdom was pledged to make certain presents or tribute (cf. the article SAKET, p. 686 et seq.), though on the other hand the Egyptian authorities had to give presents in return. As soon as this is arranged it is mentioned in Dongola which the Nubians had to promise to protect and support. The land, however, remained a stronghold of Christianity for centuries longer; in the second century A. D., the king (Kyrikos) even invaded Egypt, to effect the release of a Coptic patriarch, who had been imprisoned by an Umayed governor, and was successful in his object. When Ijiwar (q. v., p. 1028) had conquered Egypt in 539 = 969 for the Fatimids, he sent an embassy to the Nubian king reigning at that time, George, demanding that he should adopt Islam, but without success. According to Abü Suli, King Raphael built a lofty palace with several domes of red brick, similar to the buildings of the Itrah in Dongola in 539 = 1002. At the beginning of the Ayyubid period we learn from a description sent to Shme al-Dinwa Tahir Shah in connection with his Nubian expedition, that at that time the only cereal grown in Dongola was wheat, and the yield to the fruit of small measure. We also have an important article of diet for the population. As to the town itself, it consisted, with the exception of the royal palace, of rude huts only. About a century later, in the reign of Rabban, the independence of the kingdom was finally destroyed. In 674 = 1272-1273, King David's refusal to pay tribute and to give them into Upper Egypt provoked a punitive expedition, which reached the capital, 674 = 1275 Dongola was taken and Showkun, David's nephew, who had taken refuge from him in Egypt, raised to the throne in his stead. The kingdom thus became practically a dependency of the Mamluks. During the next few troubled decades the Egyptians soon repeatedly to have deposed the reigning prince in favour of one agreeable to them, who, however, as soon as the troops supporting him were withdrawn, was deposed. This happened on the campaigns against Dschumana in 686 and 688 (1287 and 1289); and again in 716 = 1316, when a Muslim ascended the throne for the first time in the person of a member of the royal house who had become a convert to that faith. The usurper Kan al-Dinwa (the Ben Rattsun: Kan al-Din) — a member of the Bani I-Kan tribe settled around Assouan — who soon afterwards seized the throne, was also a Muslim, but the population remained Christian. Under this ruler the kingdom again became independent (in 1325 A. D., but in 1367 = 1366-1366, Egypt again interfered in Nubian affairs, on account of the constant molestations caused by the Ben Djaghi, Bani I-Kan and Akram, and caused the king to take up his residence in the fortress of Paw, as the capital Dongola had been abandoned by its inhabitants. The history of the centuries following is by no means clear. The land became more and more a prey to the ravages of Arab tribes and during this period its gradual conversion to Islam was accomplished. That the Hijaz was in this respect already affected is also proved by the Tugder, who in the xvith century founded the kingdom of Dafir (q. v., p. 915 et seq.) and of Wadat.
[q.v.] claim to have come from Dongola. Burckhardt was told that the power had long been in the hands of the Zibbi and Fannyje families. The latter are probably the Fani, who founded the kingdom of Semnun some time after 1500 B.C., and extended their conquests as far as Dongola. At the beginning of the sixteenth century the Shybytiyins Arabis became supreme in the country; besides them there were probably also Abarbids [q.v., p. 183, et seq.] and Bahri. The influence of the tribus considerably diminished when the Mamluks, who had escaped the massacres of 1811 and 1812, found a firm footing in Dongola, soon won the sympathies of the people, endeavoured to protect them from being plundered by the Arabs and successfully endeavoured to promote agriculture; they also drove the Shybytiyins out of their stronghold Mansula, (the modern New Dongola) on the left bank of the Nile 80 miles north of Old Dongola, which they thus made their headquarters. But in 1820 the conquest of the Sudan by Isma'il Pasha began; they fled to Shendi, and the Shybytiyins offered themselves though vain resistance at two points before they finally submitted to the Egyptian troops. Dongola now became one of the five military stations in which the conquered country was divided; but native chieftains were not, however, deprived of their positions. In 1835 the province, like all the others, became affected by the rising of the Mahdi, himself a native of Dongola. After the governor Muhammad Pasha Yaww had twice defeated the invaders, in the battles of Debhe and Koroi, it was decided in June 1885 to evacuate the province, which thus fell into the possession of the dervishes. It was not reconquered till 1890, when Lord Kitchener's troops entered Dongola on the 30th September, after twice defeating the dervishes. In terms of the agreement of 15th January 1899 the country became a mandiri of the Anglo-Egyptian Sudan.

DONME, a sect of Jewish Muhammadans in Salonica. In October 1676 the false Messiah, Sabbatai Zebi died; he became worshipped and addressed in prayer as a saviour by the majority of Jews in the city even after their adoption of Islam. His widow thereupon declared that her brother Jacob was her son whom she had borne to the reconstituted Sabbatai Zebi as a ten-year-old boy. The infatuation for mysticism and cabalistic heresies, which were at that time very popular, enabled her to find many adherents in her native town of Salonica, who recognised in her alleged son an incarnation of the Messiah and paid him divine honours. They called him Jacob Zebi (Querido = favourite). The Turko-Cabalist idea that, when a husband no longer took pleasure in his wife, he should divorce her and take another in order to fulfil the Mosaic commandment that married life should be happy, was strictly practised by the followers of Sabbatai Zebi and Jacob Querido and resulted in countless marriages and divorces. The Turkish authorities, whose attention had been called to this state of affairs by numerous complaints, made investigations and instituted severe penalties. Their wrath was particularly directed against Querido, the head of the sect, but, in order to escape punishment, he at once adopted Islam. Many of his followers also assumed the turban and performed a common pilgrimage to Mecca. On the return journey Querido died and his son Berechja was thereupon worshipped as the Messiah and a divine incarnation. They called themselves "Maninim" (al-Masimmam), the Jews gave them the name "Minim" ממיד and the Turks Доним, "sacred".

— They are divided into three minor sects, who are called: 1) Shofri from Sufyana, the birthplace of Sabbatai Zebi. They are also called Kitayim or Canealiere, because the aristocracy among them belong to this sect. 2) Yabedites from Jacob Querido. 3) Kandis, founded by Jacob Kandis ("Elmane Bawwah") an attendant in the temple, at the end of the 18th century. They intermarry, attend the mosque as well as their own synagogue and observe many Jewish as well as the Mahomedan fasts and festivals. At the present day there are still about a thousand families in Salonica numbering some 10,000 souls in all of this sect. Their preacher is called Ab-Beth-Din and his leader at prayers Paytah. The former gives the children instruction in the Bible and Tora according to the system of Sabbatai Zebi, administers justice, performs marriages and grants divorces and in his sermons admonishes his hearers to consider kindness to the poor. Circumcision, originally performed on the eighth day, is now also performed in the third or fourth year, under Turkish influence. Their marriages are performed on Mondays and Thursdays; their ritual seems to be a mixture of Jewish and Mahomedan rites and customs. They believe that Sabbatai Zebi and Jacob Querido will one day return and save them. As a result of intermarriage, they are gradually being broken up and in the course of a few generations will be quite merged in their Turkish neighbours.

DONUM (from the Turkish donum to turn round) a Turkish measure of area, originally named from the peasant's habit of turning the plough and its team round when he reached the end of a furrow. The donum is a square whose side is 40 ordinary paces long with an area of about 1000 square yards. In the law concerning property
in land in Turkey (Art. 125) the đãm-i hasta (decidual đównûm) which is a square with a side 100 paces long.

DOST MUHAMMAD, the founder of the Barakzai rule in Afghanistan, was a son of Pâinda Khân who was made chief of the clan under Témir Shah, the Durrâni King, and afterwards had the Ghazânis also put under him. He obtained great influence which continued under Zamâr Shah until a rival, Wâsâfâr Khân, obtained the Shah's confidence, and Pâinda Khân was executed on a charge of conspiracy. He left twenty-one sons of whom Fath Khân was the eldest. Dost Muhammad was the 44th and his mother was of Persian origin. He was not therefore of pure Afghan blood. After his father's death Dost Muhammad lived as a child with his mother's relatives until his elder brother Fath Khân, who had risen to importance as the principal supporter of Mahmúd Shah against Zamâr Shah, took charge of him in his twelfth year, 1215 (1800). Dost Muhammad remained attached to Fath Khân in his varying fortunes, and when Mahmúd Shah's second spîra began in 1224 (1809), he obtained high positions, and his great abilities were generally recognized. He was one of the principal agents in the defection of Shah Shudârî by Mahmúd, and showed absolute unconcernfulness in getting rid of all rivals. Dost Muhammad commanded successful expeditions against rebellions in Kâshâr and Herât 1252 (1846). After Herât was taken it is said that Dost Muhammad grossly insulted the wife of one of the princes who was herself the sister of Kâmîrî son of Mahmúd Shah. Dost Muhammad fled to Kâshâr, and Kâmîrî in revenge seized and blinded Fath Khân who was afterwards killed in the presence of Mahmúd Shah. This murder caused a revulsion of feeling against Mahmúd Shah, and Dost Muhammad was able to raise a large force and defeat Mahmúd and Kâmîrî 1255 (1848). Khân came into his possession, while Mahmúd, and after his death Kâmîrî, retained Herât.

The power over central Afghanistan including the cities of Kâbul and Kandahâr and the great Durrâni and Ghilzâi tribes remained in Dost Muhammad's hands. He never claimed to be Shah in succession to the Safâzî kings, but was content with the title of amir. His early coins commemorated his father Pâinda Khân in the coinage. Sinâ, a fîlit, is known in Kafir dil to mean wâzâr. Wâzâr, the Afghan cabinet ministers, were always chosen from the Khâtûs. Sinâ, therefore, may be translated, "minister," "cabinet minister," or "a man having a high official rank or position of trust," and its Malví meaning is "service to his king." The prince or minister would then receive his income and the civil and military powers of the realm, which would be exercised by his viceroy or minister in the absence of the ruler. The word wâzâr is also used to denote a person having charge of a function.

The principal events in his reign including the invasions of Shah Shudârî al-Mulk, the war with the English, his flight to Bokhârâ, imprisonment in Calcutta, and final reinstatement at Kâbul in 1258 (1842) are detailed in Art. Afghanistan. At Kâbul in 1258 (1842) Dost Muhammad and his son Akbar Khân were installed as the two rulers. After his restoration he confirmed himself in his government, and had trouble with his eldest son Akbar Khân, who had been principal leader in the wars against the English. Akbar Khân died in 1266 (1849). The same year during the second Afghan war of 1848-1849 an Afghan force entered the Panjâb to assist the Sikhs, but met with no success and returned in disorder after the battle of Gûjjarat. After this Dost Muhammad saw the wisdom of confining his efforts to the consolidation of his own rule, and recovered the provinces beyond the Hindú Kûsh mountains which had been lost after the fall of the Durrrâni kingdom. Just before his death he had to bear the loss of Herât which had been held by Persia ever since the murder of Kâmarî in 1258 (1842). This event took place in 1286 (1863) and he died while in his camp the same year. He left the succession to his fifth son Shâh Ali to the exclusion of his elder sons, M. Aârân and M. Aftâl, which led to much subsequent trouble.

Dost Muhammad owed his rise to the incompetence of the latter Durrâni kings Zamâr Shah, Mahmúd Shah and Shudârî al-Mulk as much as to his own undoubted abilities and lack of scruple as to the means of attaining his ends. He never hesitated at any murder or treachery, but yet was a good ruler according to the standard of his country and was considered a just man. Minor faults, such as an excessive fondness for drinking, did not stand in his way, and his name is still a great one among Afghans of all classes. He left behind him a much stronger though a less extensive kingdom than that of his predecessors. The possession of Pâkistân, the Durrâni and Multân, Kâshâr and Kâmîrî were really a weakness and not a strength to the administration, and their loss enabled the British Government to be strengthened, with the result that his kingdom in despite of civil and foreign wars remains practically intact to the present day.

DOVIN. [See DovIN.]

DRA, the Dârâ, a Atâh in Atlâ, a river in Morocco, flowing into the Atlantic Ocean 40 miles southwest of Capes Nân. The Dra is the longest river in Morocco. Its course which is not very accurately known, is perhaps over 200 miles long.

The Dra is formed by the confluence of two streams from the central High Atlas, the Wâd Idrîsî from the west and the Wâd Ïdâs from the east. The former is in turn formed by the union of the Wâd Tâdlîs or Tâlîs which drains the Ljebel Tâdlîs and the Wâd Werzâza (see the article Atlas, p. 290 et seq.) which drains the Ljebel Kernûsa. The second rises in the country of the Ait Mergouâlis. The two streams whose union forms the Dra flow in opposite directions, through the long hollow between the High and the Anti-Atlas. Their comparatively narrow valleys are bordered by meadows and cultivated land; but, in consequence of the high level of their upper courses, olives are rare and palms are practically not to be found in them. The population is almost exclusively Berber: Berâbér, Ait Sâdârî, Imerâm in the Wâd Dâder; Tâknûs, Ait Marzîf, Zenâgê, Ait Amrû in the Wâd Idrîsî. These tribes among whom are a few communities of Jews, are beyond the authority of the Sultan.
The Wad Dra breaks through the Anti-Atlas in the Khenej (ravine) of Tanez, it then turns to the southeast, traverses the Djebel Bani in a second ravine and thus reaches the desert. Its valley plunges into high mountains, gradually becomes wider; though the arable land which it waters does not exceed a mile and a half in breadth; sometimes it is limited to only one bank. The various districts watered by the river, Mezwita, Tinilla, Termite, Fergana, Kwaies, which form the Dra country, are among the richest in Morocco. For a stretch of 100-110 miles, villages follow one another in practically uninterrupted line in the midst of palm-groves and orchards. The most important are Tamegroute on the left bank, which contains one of the most sacred Zawiyyas in Morocco, that of Stiil Muhammed b. Nilgir, the founder of the Najirita order, and Beni Shik. This district has been prosperous from quite ancient times; even in the 20th century al-Bakri draws a picture of it which quite corresponds to the accounts given by the few modern travellers (Kohlri de Foucauld) who have visited it: *The banks of this river* writes the Arab geographer *are covered with luxurious woods and orchards. Every day of the week a market is held on the banks of the Dra at one or other or sometimes at two of the places which have markets, so vast is the area of the district and so large the number of its inhabitants. The land under agriculture in this country is seven days' journey narrow*. The population is mainly Berber: according to de Foucauld, 95% of the inhabitants speak Tamasrit. Among them, we find Berberi, Ati Sidrat, Ullat Yahya, Raba, Ati Attia, and so many Harratin so that the word Dra América has become a synonym for Harratin (cf. the article annexed). Except in Mezzita these Harratin have lost their independence and have to pay tribute. The lower course of the Dra is quite different in every respect from the central course. Beyond Meziria al-Whileh, the river enters the desert region through which it flows till it reaches the sea. Its banks are uninhabited; the settled population is replaced by nomads (Tajakani, Atrib, Idris b. Belah, Ali a. Mrabet), who live some distance from the river. The latter describes a wide curve to the west and continues in this direction to its mouth; it gradually loses in volume on its course through the desert. Apart from a few days when it is flooded, it is as dry as the Wadis of the Sahara. But the presence of subterranean water enables some parts of its valley to be cultivated, for example, the sandy plain called Delaya, two days' journey long and one and a half broad, which is covered with water when the river is flooded, and the arable stretches called *madia* in the bed of the Dra itself, which opens up into it. These, six in number, which are separated from one another by barren stretches, grow corn, more especially maize.

**DRAGUT.** [See TOUTHUT.]

**DRISHAK.** The name of a Balis tribe which has its headquarters at Asil near Raisaour in the Djeb Blidas Khma District of the Fadida. The tribe is of Khint origin, but in the present day is mixed with the Lijit cultivators. The Balis language is giving place to Lahadi in this tribe.

(M. Longworth Dames.)

**DRUZES.** The Druzes are a people or a nation living in the Lebanon and Anti-Lebanon, around Damascus and in the mountains of Hauran. They have their own religion and hold a special position in the administrative arrangements of the Ottoman empire. Their name is derived from that of Darm (q.v., p. 921). Their ethnographical origin is obscure. It is probable that they already had distinct racial features before the founding of their religion and that they were never quite converted to Islam. They may be the remnants of some ancient peoples, who sought refuge in the mountains in times of invasion and always retained a certain amount of independence in those places so easy to defend. Benjamini de Tudela, who travelled in the East in 1172, believed that they were descended from the Ismaelites, who in the time of Alexander's successors became notorious in Asia for their brigandages and were therefore forced by the Romans to fall back on the mountains of Lebanon. In the 16th century they were regarded as the survivors of the Latah Christians, who escaped the massacre at Acra when al-Ashraf Sulayman of Egypt took this town in the 1291 and destroyed the last remnants of Frankish power in the Holy Land; this last tradition is clearly worthless, as it would place the date of the origin of the Druzes much too late; it is however interesting as much as it is connected with the claim put forward by the Druze chiefs of the 16th century to be descended from Godfrey de Bouillon. The Druzes, who have the Emir of Baha at their head, have had two very celebrated Emirs in the course of their history: the Emir Fakhri al-Din (q.v., popularly called Fakardin, in the 16th century and the Emir Baha (q.v., p. 671 et seq.) in the 17th. The descendants of Fakhr al-Din, of the family of Ma'nu, continued to rule the Druzes till the beginning of the 17th century when the power passed from the family of Ma'nu to that of Shihabi. The Emir Baha belonged to the family of Shihabi.

The withdrawal of the Egyptians from Syria (1840) was followed by a troubled period for Lebanon. There was a reaction among Maronites and the Turkish authorities against the Christians. The Druzes and Maronites had hitherto lived on good terms with one another; but the Turks won over the Druses with gifts and the allies fell upon the Christians in 1840. The Maronites, attacked on several sides, defended themselves successfully at Dair al-Kamar; but at Hezbe they were massacred by the Druzes of Hauran acting in name of the Turko. The Forte deposed the Emir and sent an Ottoman governor in his stead to Dair al-Kamar. This appointment raised the protests of the Powers, who did not wish to see direct Turkish rule established in Lebanon.
Their diplomacy resulted in two Ka'immakams being provisionally appointed for Lebanon, one a Druze and the other a Christian; the Porte then separated the Lubbil district from Lebanon, and incorporated it in the Falalik of Tripoli. In September 1844, two Wakils were installed in the mixed townships, one for the Druzes and the other for the Christians; these officers were to be subordinate to the Druze and Christian Ka'immakam respectively. The Porte next sought to place the Christian Wakil also under the Druze Ka'immakam. The Maronites protested, saying they would rather be under the Paška of Saïda than under Druzes. On the 30th April 1845, the Druzes backed by the Turks again fell upon the Maronites and massacred them. At the end of this year (1845), the organisation of Lebanon was completed. The principle of separation of the two races under two separate chiefs was recognised and government by two Wakils in the districts where the population was mixed. The two Ka'immakams, Christian and Druze were retained, assisted by two councils, one presided over by the Druze Emir, and the other by the Christian Emir.

These councils were composed of ten members each, of whom two were Druzes, two Maronites, two Melkites, two Greek and two Muslim. The Christians were therefore in a majority of six to four on them and this plan did not please the Druzes. In 1850 there were again massacres, marked by the most atrocious cruelty, in the Lebanon and Anti-Lebanon, particularly in the districts of Ḥāsbā, Ḥāgbé, Zehle and Dahr al-Kamār. Europe at last took action; a body of French troops was sent to Syria and those responsible were punished.

Following the events of 1850, an international commission devised a new organic statute with guarantees. The Majlis or central administrative council of the Mutassariflik of Lebanon was composed of twelve members. The Druzes had the right to be represented by three of their number: one elected by the Mudiriyah of Shih, a second by the Mudiriyah of Menn, and a third by that of Ljezirat. Quiet has not yet absolutely returned to the Lebanon. The Druzes and Maronites are at peace with one another, but the Druzes are waging a continual struggle against Turkish authority.

From 1879 to 1896, the Druzes of Hawrâni were constantly fighting bitterly against the regular Ottoman troops. In the latter year the Turks received their submission. Since the Turkish revolution they have become practically independent.

The Druze population has been estimated at a little over 150,000 for the last century or so. In 1842 it was put at 140,000 with 45,000—50,000 fighting-men; in 1855 Taylor put the figure at 120,000 of whom 40,000 were fighting-men. Max v. Oppenheim, in 1859, estimated 132,000 and Cuniet (1896) 150,000. The Druze population of Hawrâni has been increased by immigration of Druzes from Lebanon and numbers at least 40,000 souls.

The Druzes are a warlike, energetic and valiant people; they would make very good soldiers if their independent spirit did not make them particularly irascible. They can be very cruel; the fiercest are those of Hawrâni. In spite of their warlike disposition they have some ability as agriculturists and grow the vines which yield the fine Damascene grapes and also mulberries, olives and tobacco. Their women weave and embroider very fine cloths. In their dress the Druzes are distinguished by the turban which is of black or red silk. Their women used to wear a peculiar head-dress called "horn". This was a kind of very high hat which turned over behind; it was of silver or gilt copper among the rich and of pasteboard among the poor. It was fastened by means of a kerchief tied under the chin and by another around the head. A veil of white linen or dark-blue silk hung from the top; attached to the horn by black strings of camel-hair. This head-dress was worn by night as well as by day. The women's dress was a short, dark blue tunic, bordered by a broad reddish brown band, with stripes of the same colour on the back, embroidered trousers and yellow shoes.

Religion. The Druzes have no rule: but little religion; they call themselves Muslims, when with Muslims, and Christians, when with Christians. They have no places of worship. What is called the Druze religion is a learned system which is not known to all the people. Those who know it are called Tâhîsh (the learned); the others are the Lubbil (the ignorant). The Tâhîsh alone take part in the religious meetings which are held in the night from Thursday to Friday; the place of meeting is called Khâshim (retirement). The most meritorious of the Tâhîsh is the person who has composed a portion of in 50, become Adjutant (perfect).

Belief in metamorphosis is widespread among the people; the good are born again in infants, but the wicked are, in the bodies of dogs. Polygamy is allowed and it is said that the marriage of brother and sister is sometimes practised; but the law forbids this (cf. de Sacy, ii. 700).

The religion of the Druzes in its learned form, belongs to the Fatimid system. It was founded in the time of the Fatimid Caliph Ḥâkim (386–411 A.H.) by Hamza b. Y. and Daraq (cf. supra, p. 544). It is known to us from over a hundred works to be found in European libraries. These scriptures, some of which go back to Hamza are professions of faith; expositions of doctrine; works dealing with the organisation of the sect, diplomas for the installation of different ministers, letters, fragments of polemics against the Nusairis and the Mâlikis, neighbours of the Druzes, against the Ja'fâris, from whom they separated and against several ministers and missionaries who had corrupted the doctrine from the beginning. These dissenters are accused of preaching licentious doctrines and favouring the worship of the calf. The figure of a calf actually appears in the ceremonies of the Druzes and some authors say they worship it; but it is probable that in the true religion the calf is the symbol for the demon and only appears as an object of exoration.

The Ja'fâri doctrine was based on the idea that God became incarnate in man in all men, and God himself or at least the creative force, was conceived as composed of several principles which proceeded one from the other. Each of these principles became incarnate in a man. Druze theolgy retained this system. According to it the Caliph Ḥâkim represented God in his unity; this is why Hamza called his religion "Unitarian". Ḥâkim's worshipped and is called "Our Lord". His excretions and his evil deeds are explained symbolically. He was the last incarnation of God; they do not admit that he is dead; he is only
hidden, in a state of "occultation" and will reappear one day, according to the Mahdist idea. Below Hijāmīn there are five superior: they are the incarnations of princes that have come forth from God. The first is the incarnation of universal intelligence ("Aqīf"); the second of universal soul ("Nafsi"). The conceptions of universal soul and universal intelligence are derived from philosophy. The third minister is the incarnation of the Word (Kalīma) which is produced from the soul by the Intelligence; the fourth is called the Right Wing or the Preacher; the fifth the Left Wing or the Followers. Together they are called the seven percepts, and they have other symbolic names also. At the foundation of the sect these ministers were respectively: Hamza the founder; Jamāl ibn Muhammad al-Tamimi, one of the writers of the sect; Muhammad ibn Wahbi; Sulaym ibn 'Abd al-Wahhāb al-Sa'arī; 'Abd al-Mu'tasim ibn 'Abd al-Salām.

Below these superior ministers were those of lower rank, divided into three classes. These are not incarnations of princes, but functionaries, preachers and heads of communities. They are called in the order of the classes, 'āqīf (v. p. 905 et seq.) or missionary; Ma'dhdhīn or he who has received permission; the Mufassir, the interpreter, also called Nebīth. The 'āqīf is also called "industry"; the Ma'dhdhīn, "the opening"; he who opens the door to the aspirant; and the Mufassir, the "phantom", the appearance in the night of error. The Rāshīs employ the same terms in a somewhat different sense. According to the knowledge of the nature of God, of his attributes, his manifestations in the series of principles which are incarnate in the ministers, constitutes the dogmatism of this religion. Its moral system is summed up in seven precepts which take the place of those of Islam viz., to love truth (but only between believers); the adepts are pledged to watch over one another's safety; to reverence the religion to which one formerly belonged; to cut one's self off from the world and to those that are living in error; to recognise the existence in all ages of the principle of divine justice in humanity; to be satisfied with the works of "Our Lord" (Hijāmīn), whatever they are; to be absolutely resigned to his will — it seems to be understood; in as far as it is manifested through his ministers. — These precepts are binding on both sexes.

On the literature and religion of the Druzes, cf. Silvestre de Sacy, Exposition de la Religion des Druzes (3rd ed. Paris, 1839); C. F. Sicran, Die Druzenkreisheit Ktib al-Nasr Abb. Dusayn (Turin, 1849), (B. CARRA DE VALE, DUA'A (Ar. "blessing," "prayer"); in the same sense as the Hebrew Hetha, hence comes ultimately to mean "curse," not to be confused with Salāt, which is often also translated prayer, but really means the whole service.

As the first Sūra of Kūfr is used, the usual Muhammed prayer, it is commonly called Surah al-Dua'ā'. There are of course quite a number of other forms of prayer for different occasions, which are given in the catalogues under the name Dua'ī or Dhikr. The Hāl al-Dhikr al-Baṣīri (v. p. 1052 et seq.) is for example very popular, as is al-Baṣri's (v. p. 1052 et seq.) collection of prayers. Belief in the magic power of the word is very general. Cf. the articles DUA', DHAHAB, SALSAL, WIKALAH.

DUBAI (Ar. "abode" or abode of two) is generally the land lying between two rivers ("the land with two rivers"), and more particularly to the very fertile plain lying to the north of the Djar and the Ganges from the Himalayan hills to their union near Allahabad, cf. Imperial Gazetteer of India, xi. 365 et seq. — W. E. Wilkinson proposes to give the same name to the district between the Ami-Darya and the Sirdarya (Geographical Journal, xxx. 357).

DUBAI (Ar. "certain one") is, in the legend of Darya, a wandering cavalier of the Crusading period, who, like his ancestors (cf. the article MAXYARD), bore the title Malik al-'Arab and after an adventurous life was hospitably welcomed in 529 (1135). Darya was captured by the hands of the Saljuq Sultan Muhammad in the sanguinary conflict in 510 (1118), in which his father was slain; the Sultan treated him honourably after imprisoning an oath of fidelity on him, but would not allow him to return to his native district. It was only after the death of Muhammad in 537 (1143) that his successor Malik gave Darya the desired permission and he at once took up the influential position in al-Hilla that his father had held. In the hope of more firmly establishing and his power, like his father before him, by taking advantage of the dissensions among the Saljuqs, he allied himself with Mar'am, Mah'mud's brother, in his attempt to win the caliphate. In the war that followed, Mah'mud, however, was victorious and Darya himself forced to take refuge with his father-in-law Ilghiz, lord of Mar'am, but he submitted to the Sultan when the latter's troops besieged Hilla and Kūf. Soon afterwards he quarrelled with the Caliph al-Mustarshid and lost the battle of al-Nāf against him in 547 (1153). He himself had a hairbreadth escape but appeared soon afterwards when he led the marauding Druze of the Meshwak tribe against Darya. But when the Caliph sent troops against them, Darya did not dare meet them, but betook himself to the Crusaders whom he persuaded to attack Hilla (Aleppo). They were not successful in taking the town and, when they retired, Darya went to the Saljuq prince Toğruğ and persuaded him to march on Baghdad and subdue the province of al-'Irāq. But the Caliph was able to prevent this and Toğruğ and Darya had to seek refuge with the Sultan Sulaymān. Sulaymān
thereupon went to al-Ra'i and summoned his nephew, Sultan Mahmud, to his side and he obeyed the call. The two Suljids thereupon came to an agreement and Sandjar interceded with Mahmud on behalf of Dubais, who wished to return to his home in al-Hills and be forgiven by the Caliph. But nothing came of this through Dubais's further offences; after twice plundering Baja he had to flee to the Karakhan desert. While here he received an invitation to come to Sarkhad; the lord of this place had died and his concubine had an offer of Dubais to replace him in the hope of thus being able to remain mistress of the place. Dubais did not hesitate to accept this invitation, but lost his way in the desert and was captured by some Kalbi Beduines, who handed him over to Tadj al-Mulk Buri, lord of Damascus. The latter sent him to 'Imad al-Din Zangi, lord of al-Marzul, who wished to have him beside him so he could be useful to him in his plans. We soon find the two jointly undertaking a campaign against the Caliph and their expedition ended with disastrous results; they were put to flight by the Caliph. Dubais managed to hold out for a time in al-Hills and Wasi, but had finally to give up the struggle. He next attached himself to Sultan Marzul, who, in 539 (1140) took the Caliph prisoner in battle and brought him to Maraga. There he was treacherously murdered, according to some accounts, at the instigation of the Sultan, who is said even to have put Dubais to death also, to avert suspicion from himself. While Dubais was waiting in the audience-chamber one of the Sultan's pages came up to him unawares and cut off his head. "Thus", says Weil (Geschichte der Chalifen, iv. 331 et seq.); "in the interval of one brief month towards the end of the year 529, died the only two Arabi, who, although they had always been sworn foes, had always endeavoured to set limits to the aggressions of foreign rule. They were both of very versatile mind and followed a selfish policy; both were moreover well liked as men and honoured as poets and warriors. - Dubais has been given immortality in a maqam of Hariri (xxvi.), in which the poet describes him as one of the noblest figures in Islam."

AL-DUBII AL-ASGHAR AND AL-DUBII AL-ABBAS - The Little and the Great Bear, the translation of the Greek names Άσωρος μικρός and Άσωρος μεγάς of the two northern constellations. The oldest Arabic name for these constellations was Banūt Nasīr (or Banūt al-Nasir) = the daughters of the bier, al-Sagharī for the little and al-Kubrā for the Great Bear. Karwân remarks that the stars which form the quadrangle are called al-Nasīr (the bier) and the three that form the tail are called al-Dubai (the daughters). Gallus (edition of al-Baghdāni, notes on p. 64) thinks that these daughters are the women mourners who precede the bier. The feminine form Dubai (in the medieval west written Dubhi) particularly designates the star α Ursae Majoris; this name probably comes from the Latin translation of the Table of Alfonso, which we know were originally written in Casilian (1529).

DUD AL-KAZZ, the Silkworm. Karwân and Damīr give accounts of its culture which supplement one another and may therefore be dealt with separately. According to Karwân, the worm, when it has eaten enough, seeks a place on trees or thorns, draws thin threads out of its saliva, and weaves a ball around itself as a protection while the wind and rain fall on it. It then sleeps its appointed time; all this is done through the instinct given it by God. In spring, when the leaves of the mulberry tree appear, the eggs (bare) are taken and placed in pieces of cloth; women carry them for a week under their breasts, so that the warmth of the body affects them; they are then spread on chopped mulberry leaves, whereupon the young worm begins to move and eat the leaves. The caterpillars do not eat for three days - this is the "first sleep" - then they eat for a week till the second sleep of 3 days when the same proceeding is repeated. A great deal of food is then given them, so that they soon begin to make cocoons (saljīgit). A thing like a spider's web begins to appear over their bodies, when rain falls and softens the cocoon, the worm pierces it and crawls out; it has now grown two wings and it flies away in which case no allēs (shāhshāh) is obtained from it. But when the cocoon is placed in the sun after it is finished, the worm dies and the silk may be taken from it. A number of cocoons are preserved so that the fly may come out and lay eggs, which are kept till the next year in a clean earthenware or glass vessel.

According to Damīr, the silkworm or "Indian worm" in the egg stage is as large as a figseed; the creatures come out, when placed in warm places, without being artificially hatched, but they are placed in their bosoms by women if they do not come out at the proper time. They eat the leaves of the white mulberry tree and gradually attain the size of a finger, while their colour changes from black to white. This takes about 66 days. The worm then weaves a covering of the size of a walnut till the material is exhausted and remains for days in the cocoon, when it comes out as a white butterfly with wings, which are constantly in motion. Soon afterwards the males and females copulate by attaching their tails to one another, and after they have separated, the female lays her eggs on white pieces of cloth, spread before it to collect all the eggs; the creatures then die. If silk (bare) is wanted, the cocoons should be excised ten days after they are finished in the sun for one day.

The silkworm is the emblem of the miser, who lays up treasures for himself, which his mocking heirs take; if these however make good use of the wealth that has fallen to them, they are not responsible for the avarice of the other.

DUDJAIL. [See KADUN.]

DUGHJAT or DUGJAT, originally the name of a Mongol tribe: Rashid al-Din (ed. Beronis, Tractat vest. ed. enkh. ed.) xii. text, p. 47, and
of the history of the tribe, Rashid al-Din can only tell us that, during the tribal fends out of which the Mongol empire was to arise, it always took the side of Cingis-Khan; and that nevertheless, neither in this period nor at a later did a man of any note appear in the ranks of the Dughlat (I. 306 et seq.) as a valiant Amir, who was in command of the Mongol army in the year 1305 (year of the smokes); but nothing is said there of his being a member of the Dughlat tribe or of his relationship to Kamal al-Din. Kamal al-Din is first mentioned in the Zafar-Nama (I. 178) in the year 1368 (year of the age) as leader of the Mongol army; he had slain Khan Haji Khoda, son of Tughluq-Timur, and seized the supreme power. He is last mentioned in the same work (I. 494 et seq.) in 1391 when defeated by Tugrul, he had to take flight to the Indian and there
finally sought "into the land of Tulus, where there are many riches and emperors". His brother Kuch al-Din (not mentioned in the Tarikh-i Rashid) entered Timur's service and, in the year 1393, took part in the siege of Takrit in Mesopotamia (Zafar-Nama, I. 650).

After Kamal al-Din had been overthrown the power passed into the hands of Khudabakhsh, son of Baudji; at the time of his father's death shortly before Tughluq-Timur, i.e. about 1360-1362 he was seven years old (Tarikh-i Rashidi). Khudabakhsh had KhiidrKhoda, presumably a son of Tughluq-Timur, proclaimed Khan; he is said to have appointed other five Khans in the Mongol empire in course of time (ibid., p. 67 et seq.). Khudabakhsh is not mentioned in the Zafar-Nama; according to the Ma'ali-al-Sulailin of 'Abul al-Razzaq Samarqandini (q. v., p. 64), who in this passage is only quoting the text of the tarikh-i Hafiz-Abul, with a few alterations, he always took the side of Shish-Kukh and Ullugh-Beg, even against his own Khan (the latter ruled till 122 = 1409 in the name of his father in Samarqand). When in 824 = 1423 Ullugh-Beg undertook a campaign against the Mongol empire, Khudabakhsh joined his army on the other side of the Carin in the present district of Semri-Eyve and was received by him with the honour due to one of his advanced years (Ma'ali-al-Sulailin, MS. in the Univ. of St. Petersburg, N. 157, f. 230). This accession to the enemy of his native land is excused by family tradition on religious grounds: Khudabakhsh had long intended to perform the pilgrimage to Mecca, but could not receive permission from his Khan and was only able to carry out his desire by an alliance with Ullugh-Beg; he afterwards died in Mistana and was buried there (Tarikh-i Rashidi, p. 66 et seq.). The same authority tells us that Khudabakhsh ruled for 90 years and went on his pilgrimage when 97; according to the dates given above, however, he could not have been more than 70 at the time.

(The text continues on the next page.)
Khudūlād had previously divided his lands among his sons and brothers (Tarīkh-i Rašīdī, p. 109); in spite of his father's succession his eldest son Muhammad Šāh was confirmed in the rank of Ulūm-Beg by Wāsi-Khān; his residence is said to have been Al-Bu'al (in the south of the modern Samarkand). (Ibn-i, p. 78). Sīyāvīd Aḥmad, Khudūlād's youngest son, had received Kāshgār and Yarkand from his father, but had been driven out of them by the Timūrids (according to Abū al-Rasūl, the Timūrids took Kāshgār in 819 = 1416, cf. Nota et Extraits, iv, p. 290), and died before his father. His son Sīyāvīd Al afterwards succeeded in regaining Kāshgār from the Timūrids and reigned there for 24 years; he seems to have succeeded his uncle as Ulūm-Beg; on his tomb in Kāshgār the year of his death is given as 863 = 1457-1458; he was then 80 years of age (Tarīkh-i Rašīdī, p. 87 and 92); if this is true his grandfather must have been little over 20 years old at the time of his birth. His sons Sānūs-Mīrza (862-865 = 1457-1458-1454-1453) and Muhammad Ḥaidar (586-585 = 864-1464-1465-1460) succeeded him in Kāshgār; the latter was succeeded by Abū Bakr Mīrza, son of the former, who drove his uncle and with him the Kāshgārī Yūnis out of the western part of the modern Chinese Turkestan and founded an independent kingdom there with Yarkand as his capital, which survived till 920 = 1514, when he was overthrown by Saʿdī Khān. The author of the Tarīkh-i Rašīdī (p. 293) makes Abū Bakr rule for 48 years, which does not agree with the dates given by him.

The fall of Abū Bakr marked the end of the rule of the house of Dūghlāt in Chinese Turkestan; under Saʿdī Khān the Amurs of this house no longer appear as independent princes, but only as leaders of divisions of the army in the Khān's service. In earlier times, when the Dūghlāts were still ruling in Kāshgār, other Amurs of this tribe had arisen, who succeeded in winning strong positions for themselves and participated in the struggles for the throne, in which we often find them fighting their kinmen in Kāshgār, just as during the wars against Abū Bakr the historian Muhammad Ḥaidar and his uncle Sīyāvīd Muḥammad Mīrza were in Saʿdī Khān's camp. Muhammad Ḥaidar, the historian's grandfather, had rebelled against Kāshgārī Yūnis in Abū after being driven from Kāshgār, made peace with him soon afterwards, was appointed governor of Osh in Farghāna, and while there had made an unfortunate attempt to renew the war against Abū Bakr; he was taken prisoner by the latter and allowed to go to Bādālshan; he then went first to Samarkand and to the Timūrid Ahmad Mīrza, and then to Tashkent to his old master Yūnis, whom he is said to have attended as physician during his last illness (892 = 1487). His eldest son, Muḥammad Ḥusain, the father of the historian, was 12 years old in 885 = 1480 (Tarīkh-i Rašīdī, p. 105 et seqg); after the departure of his father from Farghāna he remained two years there with the Timūrid Omar Shahīk and then returned to his close friend Saʿdī Muḥammad Khān, the son and successor of Yūnis; the latter appointed him governor of Uz Tepe in 900 = 1493-1495, but he had to hand over this town to the Ulūm Begs in 908 = 1505, after Saʿdī's Muḥammad Khān's defeat at Abū; he then went to Karalūn and thence to the land of the Uzbegs where he became intimate with Muḥammad, the brother of his former enemy Shahīk; after the death of his friend in 909 = 1504, he went over to the Timūrids from the Uzbegs again, went first to Khorasan to Sultan Ḥusain Mīrza, from him to Bābur at Khānī, took part in a conspiracy against the latter in 912 = 1506-1507, was pardoned by him and returned to Shahīk once more, who had him put to death in Herāz in 914 = 1508. His brother Sānūs Muhammad Mīrza, who was 41 years of age in 920 = 1514 (Tarīkh-i Rašīdī, p. 305) had formerly been in the service of Kūnī Sultan Muḥammad, and been handed over to the Uzbegs by his enemies; he was released by Dūghlāt, Shahīk's cousin and made another attempt to set himself up in Andī∫ān; on being driven out of this district he went with Saʿdī Khān to Chinese Turkestan. In Saʿdī Khān's kingdom he occupied a prominent position till the latter's death in 939 = 1533, but was murdered in the beginning of 940 (Thursday 24th July 1533) by command of his son-in-law Abū al-Rasūl (Tarīkh-i Rašīdī, p. 450). On the life of the historian Muḥammad Ḥaidar Dūghlāt, see the separate article.

The name Dūghlāt (in Vemhi, Das Turkischetc, etc., p. 286: Dotal) is born at the present day by a numerous (according to Arisow, Zemistiela von tschirchens Satanis, etc., 227, p. 77 numbering about 40,000 tents) branch of the "Great Horde" of Kāshqāi (called Kirghiz by the Russians) between the ill and the Sir-Darya. The word Dūghlāt appears to be derived from Dūghlāt and like the names of most of the subdivisions of the Kāshqāi, to have been brought west by the Mongols. Arisow's attempt to connect the Dūghlāt with the Tu-u of the Chinese and the Qalghātar royal house of Doul, is certainly futile. Unlike some other originally Mongol tribal names found among the Kāshqāis (Nūmān, Jalayir, etc.) the word Dūghlāt is no longer found in Mongolia with this meaning; the Dūghlāt therefore must have left Mongolia in the 8th century either entirely or leaving only a few of their number who since have been incorporated in other tribes.

(W. BARTHOLD)

DUHĀ (A.), "hareém"; a time of prayer, see SALĀT; it is also the title of Sūra xix.

AL-DUKHĀN (A.), "Smoke", title of Sūra xxiv.

DULAFIDS. The Dulafids were the descendants of Abū Dūlaf al-Kāfīn b. Ithālī (see the article AL-KASĪ), who held a more or less independent position in Kâradj (between Hama-dān and Isphān) and are therefore treated by some Arab historians as an independent dynasty. After the death of the founder of the dynasty in 228 (845) his son Abū al-Abī became head of the family and on his death in 260 he was followed by his son Dulaf (died 265 = 878-879), Ahmad (died 280 = 893), Omar al-Hārīb, called Abū Laila, in succession. When the last named was slain in 284 = 897, the power of the Dulafids came to an end.

Bibliography: Ibn al-Athīr, Kāsim (ed. Turkestan), vi, vii, viii. DULDUL, the name of the Prophet's white she-mule, which was ridden by him on his campaigns. She survived him and when in her old age, she lost her teeth, they used to feed her by putting corn in her mouth. She is said to have survived into Mu'āwiyah's reign and to have died.
at Yathu'. According to a Sufi legend she retained her vigour so long that 'Ali was able to ride her on his campaign against the Kharijites. She had been sent by Muhammad as a present, with the ass 'Ofaiz, by Maukawy; this was the first occasion on which the Muslims had seen a she-male. According to another tradition, which conjures Duldul with another she-ass called Fidat, Muhammad had received her from Farwa b. 'Amr al-Dajhanati. The name Duldul properly means "porcupine" (Tazaj al-ard, vii. 324; Liwa al-ard, xii. 264), but as this name is not a very appropriate one for a she-male, it was probably only with reference to its speed that it was given.

DULFIN, the Arabic form of the Greek ἄλφα (also ἄλβος), is the name given by the Arab astronomers to the constellation of the Dolphin. The older or popular name among the Arabs was al-Sallit = the cross, and the outermost star of the constellation. East of al-Sallit was a star or basis of the cross (the astronomers call it Ṣumah al-Dulfin = tail of the dolphin). In Kazwini we also find the name al-Śuma, probably to be translated "the pearls" (of the necklace), for the four stars which are close together forming a chias.
In his treatise entitled al-Durr al-fāḥīha, "The precious Pearl", Ghassāli imagines that God at the end of time, when all beings are dead and gone out of the earthly world, will rise from the depths of the sea and lure the heavens and the rulers. Then he has reduced them to their future destiny by thy splendid! And after the resurrection the same author makes the earthly world appear: "in the guise of a grey-haired old woman of extreme ugliness"; men are asked "Do ye recognise her?" They answer: "We take refuge with God to escape from her'. They are told: "She is the earthly world for which ye have hated and envied one another!"

DURAI D b. AL-ŠIMMA AL-DURJĀTHI was descended from 1jjahman b. Mu'awiyah b. Hārūn b. Hāwāzin. His real name was Mu'awiyah and that of his father al-Hashi. He was one of the bravest horsemen and one of the best poets of the Araba, who preferred him ever to 'Antara. His father had commanded his tribe of Djasman on the day of Makhla in the war of the Fiṣr, and died shortly afterwards in another battle. Sometimes after the conclusion of that war, another broke out between Khāna and Sulaim assisted by Djasman. Duraid had the misfortune to be taken prisoner by Fīqra. The leader of his tribe, but, as he had on a former occasion promised his horse to a member of that tribe, he was set at liberty, and never again fought with them, though he is said to have made a hundred raids, all of them successful. Towards the end of his life he wished to marry the famous poetess al-Khaṣṣat, who was of Sulaim the brother tribe of Hawāzin. He had four full brothers who were all killed in battle before himself, the best known being 'Abd Allāh, who perished in a raid against Qasimān, in which Duraid also narrowly escaped with his life. 'Abd Allāh's famous steed Kīrab was captured on the day his master was killed (Cf. Harir, Majmū'a 45; Freytag, Arab. Proo. ii. 210). One of the last acts of Duraid was to play the part of peacemaker in the quarrel which arose about the chiefship of Sulaim after the death of Mu'awiyah and Sākhr the brothers of al-Khāna. He perished in the battle of Hārūn in the year 3 a. h. He had not professed Islam. Owing to his excessive generosity his last years were spent in the deepest poverty. He was named the 'brother of Hawāzin' (Tabarî, i. 3344, where 'All quotes one of his verses: also 3368).

Bibliography: Tabârî, i. 1255—1257, 1666—1667; Canov de Persiavâl, Zonari, ii. 539 et seq.; ii. 245 et seq.; Khāb al-Durjāthi, ix. 5—20.

DURKĀN, a Bāʾilī clan forming part of the Guntān tribe. The Durkāns are descended from the Dāghan, a Radjūt tribe absorbed at an early date into the Bâbil confederation. They are a mountain race inhabiting Mt. Dirâjal in the Sulaimān, Mus., and speak the Bâbil language.

M. Longworth Damesi.

AL-DURR, the pearl. The ancient legend of its origin is found at great length in the Arab authors, first in the Petrology (Steinmadel ed. Rasha) of Aristotle, then with variants in the Ikhān al-Saf and the later cosmographers. According to it, the safrān (Sterps), risen from the depths of the sea frequented by ships and men, was thrown into the Ocean. The winds there set up a shower of spray and the shells open to receive drops from it; when it has collected a few drops, it goes to a secluded spot and exposes the drops morning and evening to the breeze and the gentle heat of the sun, till they ripen. It then returns to the depths of the sea, where it takes root at the bottom and becomes a plant. If the sun or the air reach it at midday or in the night, the pearls are destroyed; they are also ruined if they stay too long at the bottom of the sea, just as over-ripe dates lose their beauty and flavour.

Scattered among these fables we find a few real facts and critical observations, for example the statement, that the shells through rough and unclean outside, are smooth and brilliant within, or that the substance composing the pearl is identical with that which lines the interior of the shell, which points to its being produced from the latter. We also find a comparison with the onion's egg or with the child in its mother's womb. Of particular interest is the statement that there is a worm in the pearl; for recent research has shown that the formation of pearls is actually the work of parasitic worms (cf. Meisenheimer, Naturw. Wochenschr., 1905, p. 272 et seq.).

Maxull gives us the earliest account of the provenance of pearls in various parts of the Indian Ocean and of the pearl-fisheries of the Persian Gulf; in his Murâd al-Zhabāt, he refers to an earlier work of his in which he appears to have drawn upon Yahyâ b. Mūsawî's book on stones, which was extracted from Tiflîs. According to him the only pearl-fisheries are on the coast of the sea of Babān at Khârâb in the Persian Gulf, at Kânarī, Omarī and Serendîh. The divers live only on fish and dates; a slit is made in their necks below the ear, through which they can breathe, for they close the nostrils by clamping a piece of tortoise-shell on the nose (or according to Yahyâ b. Mīsawâgh, they place a long reed in the nose and breathe through this). They can remain half an hour below the water. They eat cotton wool steeped in oil in their ears; when under the water they squeeze some of it out so that it becomes quite bright. They paint their legs with a black substance lest they should be devoured by the mosquitoes of the deep. While under the water they communicate with one another by a kind of barking sound. Ibn Bâjīna also gives some of these fables, but on the whole his account of the pearl-fisheries is based on his personal observations at Surâf. There the Bunt hand dive for pearls in a calm bay. In the months of April and May many boats assemble here with divers and Persian merchants. The divers place the clumps on their noses, tie a rope round him and remain one to two hours (ii) under water. He finds shells firmly attached between small stones and sand and pulls them through; he then cuts them off with a special knife, and puts them in a leather bag which he has hanging round his neck. When he can remain below no longer, he shakes the rope; the man in the boat sees this, pulls him up, takes the shells, opens them and collects the pearls. The Sulînj receives five of
such household and the merchants sell the others, but the divers themselves have little profit as they are always in debt to the merchants for advances made them.

The pearl is the jewel set in jewelry and is distinguished above other jewels by the fact that it is a natural, not artificial gem, and gives a very full account of the perfection of and defects in pearls: their value, their various colors, the restoration of pearls, etc., while Dilmahsht tells us how mother-of-pearl ("š̄rš̄ al-dā'ī") is obtained from the layers composing the pearl-shell. Valuable medicinal qualities are of course ascribed to the pearl. They are believed to be particularly effective in cases of palpitation of the heart or melancholia, they strengthen the nerves, cure headaches and, if dissolved in water and rubbed on the affected part, mitigate leprosy. They are dissolved with citron juice and vinegar.

A separate article would be necessary to treat of the role of the "pearl" in the titles of books, in poetry and in rhetoric; we must limit ourselves here to the natural history side.

**Bibliography:**

**DÜZAKHI.** [see Sar.]

**DWAIR (DWA'R)** plural of DWA'A "circle," a confederacy of families whose duty it is to give personal attendance on a native chief. Before the French conquest of Algeria, the name DWA'R was borne more particularly by four groups of families or tribes, encamped in the southwest of Oran, attached to the service of this town and its Bey. They were organized as a militia on a sort of feudal basis, and lived on the produce of lands granted them by the Turkish government, and on the booty won in expeditions against unobserved tribes or those that refused to pay taxes. It must not be forgotten that, when the Turks arrived in the Maghrib, they found a country without any homogeneity and without the bond of a common nationality among its inhabitants. They had not to "divide to rule" as has sometimes been said, but had only to take advantage of the existing dissensions. This is how in spite of their small numbers they were able to rule such a vast territory. In such province of the regency, the tribes were divided into those that paid taxes and bore all the burdens and tribes who did not pay taxes but collected them and shared with them the ruling share. These tribes, the DWA'R Zalâ, Al-Sha'r, etc., were also called the Macedonian tribes (cf. the article MAKHEK), but it was the DWA'R that attained special celebrity in Algerian history for a period. An individual soldier in this militia was called al-Makhari.

**Origin.** The native legends on the origin of these tribes agree on one point, viz. that the DWA'R are descendants of the regular soldiers brought by Mūbāsy al-Ma'sūm, Sulṭān of Fār to garrison Oran and the surrounding country during his struggle with the Turks (1719). This convention was a failure, and several of the Turks enlisted these picked troops into their own service and they settled and had descendants in the land. The Dey placed a native family devoted to the Turks over them, the Bohāṣtihya whose genealogy to the French conquest is:

![Genealogy Diagram]

Baghīr b. Bohāṣtihya

Baghīr the founder of this family was a famous fighter in the struggle between the Arabs of the valley of Ṣalīf and the Turks. He belonged to the Ulid Maš'a and a section of the Ulid Bi Ṣafār, a branch of the Maš'a confederacy. But having slain one of his cousins in revenge, he sought refuge among the Turks and enlisted in their army. When the DWA'R were organised, he was made Agha of this soldiery. On his death a certain Shariṣ al-Ḳurīt succeeded him with Iwālī, Baghīr's son, as Khālīfa (lieutenant). On the death of Shariṣ, Iwālī succeeded in command of the DWA'R and appointed Shariṣ's son his lieutenant. The post of Agha of this famous body of men was henceforth kept in these two families. At the time of the French conquest, it was occupied by Muṣṭafā b. Iwālī, grandson of Baghīr; his Khālīfa was ʿAbd al-Ḳurīt b. Shariṣ.
The organisation and duties of the Dwa'ir. The Bey of Ouer had four Aghas under him, to represent him among the tribes. Two of these posts were reserved for the Dwa'ir, i.e. for the families of Bashir al-Boujathiri and Sharif al-Kurdh and two for the Zmala. These important offices were much sought after and were not granted without payment. At their nomination, the Aghas of the Dwa'ir paid to the Bey of Algiers the sum of 40,000 riyal dadrı (about £ 2500) for the right of wearing the gawadıra, a kind of uniform of office. The Aghas of Ouer only paid 20,000 riyal dadrı for the same reason. The Agha, while on active service, also paid a similar sum into the Bey's treasury every six months. The two Aghas relieved one another annually. Their armed men paid annually a trifling sum to the Bey's treasury, the "spur-tax", which relieved them of all other taxation. The Dwa'ir and the Zmala had the sole privilege of collecting taxes in the extensive province of Uger, Smith-Oman called the Ya'kubiyia, which extended from the Saghaghiya mountains and the hills of Temeen to the Djerbour Amsir. The taxes paid by the tribes of the Ya'kubiyia to the Bey through the intermediary of the Dwa'ir, consisted of slaves of both sexes, wool, sheep, sleeping-carpets, red leather for saddles, bridles, native boots (jemen), horse-covers, camels and the zemna (tribute in silver). Besides having to collect the tribute from the western part of Ya'kubiyia province, the richest part, the Dwa'ir had also to police the tribes of the west of Ouer.

The Dwa'ir since the French conquest. The capitulation of Algiers in 1830 surprised the Turks of Ouer and their Makhenz, just when they had pacified through terrorising them, the tribes who had been agitated by the machinations of the Sultan of Morocco. The Arab tribes believing that Turkish rule was at an end, rebelled against it everywhere. The Sultan of Morocco seized the opportunity to attempt to get himself proclaimed sovereign by the people of Temeen and the whole province. The Bey Hassan of Ouer, the Turks and Kalghil of Ouer and Temeen and the Makhenz, seeing that the French government did not meet their advances, sought another way out of their difficulty. The Bey sent for the East. The Kalghil of Temeen and the Makhenz tried to save the situation by relying on Muley 'Ali, the khalifa and nephew of the Sultan of Morocco, who had been sent in great haste to take possession of the province. The Agha of the Dwa'ir, Mutasfi b. Isma'il, was retained in his office and further received command of 100 horsemen of the Sultan's negro guard ('Abd al-Kadir) to go into the Mascara and Medjennan districts to proclaim the Sultan. But Muley 'Ali, who was badly advised, did not know how to win the Kalghil of Temeen to his side. He allowed his officers, guilty of plunder and deception by the natives, to fall upon their allies the Dwa'ir, to plunder them and carry off their money and cattle. The Sultan of Morocco seeing his nephew's incapacity had to recall him. The celebrated Emir 'Abd al-Kadir, Muhayy al-Din replaced him. The latter from the first endeavoured to get Mutasfi b. Isma'il and the other Makhenz to join in the holy war against the French. Mutasfi, then in preliminary negotiations with the French, would not move; his nephew Mazar, on the other hand joined the Emir. Henceforth their tribes were divided; one section followed Mazar to 'Abd al-Kadir, while the other remained with Mutasfi. But General Desmichels having been appointed commander of the troops in Ouer, the French advanced ceased. 'Abd al-Kadir having summoned the tribes to a holy war in May 1833, the Dwa'ir and their chiefs came to take part. Mutasfi however, went on his own way and received the same honours from his men as 'Abd al-Kadir did from the other Arabs. After their defeat, the Dwa'ir and the Zmala with Mutasfi b. Isma'il, still held themselves aloof. To prevent them joining the French, 'Abd al-Kadir endeavoured to win them to his side. It happened that, to obtain the submission of the Angal, one of the tribes of the former Turkish Makhenz, the Emir had been obliged to grant them certain pastures, claimed by the Banti 'Amer as their property. The latter refused to pay the tribute they had previously agreed to pay. The Emir sent Mutasfi b. Isma'il and his Dwa'ir against them. The Banti 'Amer submitted and paid the tribute, but it was too late, for the Banti 'Amer had been annihilated and their chief killed. The quarrel that arose between Mutasfi and the Emir, resulted in a series of Homicidal combats. The Emir was defeated successively at Hennara and at Sikkas near Temeen; his undisciplined Arabs could not stand the unwavering charges of the Dwa'ir cavalry. He would certainly have been exterminated if he had not found help with the French, who did not properly understand his case. Before such an alliance, Mutasfi thought it prudent to take flight to Morocco and enter the Sultan's service. He sent the letter as a proof that he was won from 'Abd al-Kadir, including a golden cup presented to the Emir by the Kalghilis. It was a difficult matter to restore peace but in the end the Dwa'ir submitted; Mutasfi refused to remain at their head and entrenched himself in the Meqhar (a fortress of the Kalghilis of Temeen which held out against 'Abd al-Kadir) with 50 Dwa'ir families. They continued to fight bitterly against the Emir.

The Emir 'Abd al-Kadir seeing that he would not succeed in subduing the Kalghilis, entrusted the siege of Meqhar to the Moors of Temeen, their enemies, and retired to Mascara where his headquarters were. The Dwa'ir and the Zmala, who had embraced his cause on the return of Mutasfi from Morocco and the futile reconciliation between the two chiefs, were placed under the sole command of al-Mazari, the Agha of the Zmala. But the latter were not long in seeing that the Emir could not protect them against the French. General Desmichels after the occupation of Mettagmen in August 1833 carried off their families and their flocks to punish them for the support they had given his adversary. They were forced to come to beseech him to make peace and restore their families and property. The majority submitted and pitched their tents on their lands around Ouer under the supervision of French troops. They were settled in Mettagmen (September 1833). They elected as their chiefs, Isma'il al-Kahfi and 'Abd al-Othman for the Dwa'ir and Hajjol al-Uza and Habib al-Shalghi for the Zmala. Since then they have always shown themselves faithful to France and fought with her troops even against their kinsmen who remained in the ranks of 'Abd al-Kadir (tamurra, 1834).
Suddenly the rising of Stiû l’ariîh in the valley of the Shäfî and of the Deîjâw Si Musî in the south against the Emir 'Abd al-Ḳâdir and the appointment of General Trézel to Deîmîl’s command, gave renewed hope to Mûṣâfî b. Ismâîl, the irreconcilable enemy of 'Abd al-Ḳâdir. In name of the Kulûghî of Timcen and the Dwârâr he made overtures to the French general who, however, did not accept them. But these overtures enabled the French officers to bring relations which were later to be a source of great trouble to the Emir. The latter was not ignorant of these negotiations and, relying on the decisions of the Usûms of Fas forbidding Muslims to lend their aid to the Christians, he tried to win the support of the Dwârâr and the Zmâla, either of their own free will or by force. Besides, the example of the latter was encouraging other natives to trade and negotiate with the French. In June 1835 therefore he sent to the two Mahzen tribes al-Masari, the Agha of the Zmâla who had remained faithful to him, to persuade the Dwârâr and the Zmâla of the country round Oran to return to Masari and to use force if necessary. Masari did not succeed in his mission; in his wrath he had his own nephew Mûṣâfî old Ḳâdî, Agha of the Dwârâr of Oran, thrown into chains and was about to hand him over to the Emir 'Abd al-Ḳâdir when his own Zmâla threatened to mutiny if he did not set Ismâîl free, which he did. Masari retreated just as the French, who had been warned, were setting out to pursue him.

On the 16th June General Trézel pitched his camp at Figueris, a few leagues from Oran, to protect the Dwârâr and Zmâla who had declared against 'Abd al-Ḳâdir. There he received envoys from these two tribes and signed a treaty with them by which they recognised French sovereignty, placed themselves under the protection of France (art. 1) and entered her service as Makhzen troopers (art. 7). This treaty provoked a declaration of war on General Trézel by 'Abd al-Ḳâdir.

Mûṣâfî b. Ismâîl was satisfied; he renewed his offers which were accepted by Clauzel, the new governor. He succeeded in obtaining French permission to undertake an expedition to relieve the Kulûghî of Timcen who were besieged in their Mhâwr by the Moors of this town, who were partisans of 'Abd al-Ḳâdir (Jan.—Feb. 1836). He himself regained his rank as head of the Dwârâr. Henceforth there was not a military expedition in Eastern Algeria in which the Dwârâr and the Zmâla did not play a prominent part. Mûṣâfî himself, in spite of a wound which shattered his right hand in the battle of Sikkak (1837), never ceased to set an example of courage and loyalty to France to his tribemen. After every battle he received some new distinction and when distinctions were exhausted, Louis-Philippe appointed him Maréchal de Camp. It was in this capacity that he took part in the Masara and Takdim expeditions of 1841. In 1843 he took part in the capture of Smâla from 'Abd al-Ḳâdir and, while returning to Oran with his Dwârâr laden with booty, he was shot in the chest by an Arab as he was crossing the Flitta country. He fell dead on the spot; he was nearly eighty years of age. With his death the heroic age of the Dwârâr and Zmâla came to an end, but they have continued to be loyal to the French authorities. Whatever may have been the personal motives that drove Mûṣâfî b. Ismâîl and his men to the side of 'Abd al-Ḳâdir’s enemies, they nevertheless filled a glorious page in the history of Algeria.

(A. Courn.)

**DWIN,** formerly one of the most important cities in Armenia, now an unimportant village south of Erivan, a little above the ruins of Ararat (Artashat), in Lat. 40° N. The etymology of the Armenian name Dwin, Syriac Dvba, Greek Τερσά, Procopius, Aram. Dibli, is unknown; the form Dvba and Tervin, which frequently occur, are wrong. The city was founded by the Sasanid Khusrav II, who built it in 350 as the capital of the Persian section of Armenia. When, on the deposition of the last Arsakid, Artašat in 429, Persian Armenia was completely incorporated in the Sasanid empire, the seat of the Persian government was transferred to Dvin; cf. above p. 437. Under the Arabs also Dvin retained this position; throughout the Byzantine it was the capital of Muslim Armenia; see above p. 444. In the middle ages the town had a large population and was celebrated for the cloths and carpets manufactured in it and the surrounding district (particularly appreciated were the purple carpets); see above p. 446.
