The history of Kawār is very obscure. The caravan-route on which it lies was already in use in ancient times although we have no formal evidence of this. In any case this group of oases was already in existence at the time of the conquest of North Africa, if we may rely on the stories of the Arab historians who attribute its conquest to the legendary hero of the conquest, Usba ibn Nafis. He is said to have taken the castles of Kawār one after the other. Al-Iisi, in the twelfth century, several times mentions the importance of the trade through these regions. He mentions inestimable mines of alum which must be some confusion with the salt-deposits. It seems that at this time Kawār was under independent local chiefs. Later when the kings of Kasaem extended their authority over Fashān, they certainly held Kawār; this is the situation described by Ibn Khaldūn following Ibn Sīdīr; for the rest, local traditions seem to preserve the memory of migrations from the south. It is certain that a strong power at one or other extremity of the caravan-route would try to control the whole route.

In the 13th century, Kauwār was visited by several European travellers; first in January, 1555, by the Denham, Clapperston and Oudney expedition and then by Vogel, Barth, Rohlfs and Nachtigal and lastly by Montefelt. In the closing years of last century Kauwār was in a somewhat wretched condition. It was under the nominal authority of a chief (maw) elected by the notables; in reality each village ruled itself. Kauwār had been seriously affected by the general decline of trade in the Sahara; it was still more affected when the French occupation of the Tchad put an end to the slave-trade, the principal source of business. The inhabitants paid tribute, apparently to the Tuaregs; they were nevertheless plundered and blackmailed by them and raided by the Toubou and Awdâl Shīms. The Kauwāris than because the centre of political aspirations. The Sanûsyya had had a sāwīya there for quite a long time; it was a necessary station for them even when they were endeavouring to extend their influence in the countries of Central Africa and when the Sanûsyya Shīms dreamed of creating a regular principality bounded by the two sides of the Sahara. The Turks also tried to obtain their authority recognized in the Kauwār as they tried to do at Djenne and in Tibesti. The occupation of the Kauwār by French troops from the Tchad region in July, 1906, and the establishment of a permanent post there put an end to these efforts, at the same time giving the inhabitants of this group of oases effective protection from the anarchy of their turbulent neighbours.

KAWIK (r.), mariage, dowry, see MANAK, SUGAH.

KAWKAB, star, in Arabic astronomy the general term for a luminous heavenly body. The five planets known to the Arabs (Mercury to Saturn) were called al-kawâbah al-khadimah (almunâshâyûrûf). The general term for the sun, moon and the five planets is al-kawâbah al-dâsîrîn or al-kawâbah al-nasîrûf (i.e. the moving stars), in contrast to the fixed stars (al-kawâbah al-yamûsûf). The same kawâbah yamûsûf is applied to the star α of the Little Bear, which is nearest the north pole of the heavens. In al-Bârûni it is called farîd al-kawâbah wa-dânun qâlûd al-kisâl (i.e. tip of the tail, i.e. the little goat). The position of it is called the kawâbah yamûsûf, the only correct in regions which lie approximately north of Mecca (cf. Reinhardt's note in his Introduction to Geographie al-Medîniyya, p. etc.); for, the Meccans are at the edge of the Syriac and as such have a partial part in the Mesopotamia, and in Egypt, the goat is a guide to their own situation, and the abode of the Meccas, and the like (the same abode is also called the Kawâbah al-kâfîr) i.e. of the stock (of sheep).

The name of a castle near 'Askar north of Najâb. It was called Kawkabân, the two stars, i.e. star-castle, because it was adorned with silver stripes outside, the roof was covered with white slabs of stone, the interior panelled with eucalyptus wood and paved with mosaic, different gems, onyx and crystal, which shone like stars at night. This marvellous building was naturally ascribed to the Jinn. This castle is perhaps also mentioned in the inscription Glaser No. 238, (Qibl us-Kawkabât), which comes from Bilb Ghurit in the vicinity. The castle is said to be still standing.

3) A little village on a great cliff on the right side of the Wâdî Sabûn, N.E. of al-Hadîd and called Kawkabân-Hadîd to distinguish it from other places of the same name.

4) Capital of the province of the same name, N.W. of Suq, The town of Wâdân lies at a height of 8,750 feet above sea-level in 15° 31’ 42” N.Lat., on the northern part of the range which begins about half a mile S.E. of the town of Kawkabân at the left towards Tawil and runs S.E. to N.W. for several hours’ journey. It is part of the great Maslah’s plateau and is called Djalâl al-Dîlû. The south-eastern part of the range, the especially precipitous part, is separated from the main massif by an almost straight ravine, and the Wâdî Sabûn, which runs from Bilb to al-Hadîd and is the one gate of the town of Wâdân (Djûl al-Hadîd) to the Wâdî Nâshûn, west of the Djalâl Kawkabân. Two roads run over this mountain, one off only by the ravine of the Wâdî Nâshûn, the one through the town of Bilb, following the very deep ravine of Nâshûn which is bridged over, an old winding narrow path of steps high out of the rock, and the second, on an easier one, running in the Ka’â al-Dîlû and crossing a bridge over the Wâdî Nâshûn just before reaching the Djal al-Hadîd. The town of Kawkabân stretches from the Djal al-Hadîd to the S.E. and runs quite close to the eastern slope of the cliff all along that side. This part seems to be the older one, far from the gorge on the great plateau square in the centre of the town (to the northern part) is a double wall for the most part now in ruins. betweens two walls a great number of skillfully walled pits have been cut out of the ground, which served as granaries for the old inhabitants. Similar granaries, but of more recent date, are to be found in the southern part and outside the town. The town itself consists of a large number of excellently built houses of red stone, the architectural effect of which is often striking, the domes of the houses are often ornamented with fine iron work. The houses of the former inhabitants and now for the most part decayed or shat, pieces are particularly striking with their splendid façades. Besides the principal buildings in ruins, the one called Maqâlît, lies in the south, exceedingly deep and enclosed on the west side by a wall 60 to 70 feet high. The second, the east of it, begun but not quite finished by Sâyîd 'Abîd al-Karîm about 1840, is called Darîs al-Zâmiyâh. There are also four smaller cisterns. This water supply would suffice for a town three times the size of Kawkabân. The Jewish quarter lies E.S.E. outside the town but consists almost entirely of low stone houses, with little windows and doors.
A stone bridge with huge arches led across the Wei Nabhân to the fish al-Hashid but it was blown up by the Arabs in 1572. Kawabân is an ancient city dating from the Hellenistic period, as inscriptions found there show, Al-Hasan, the old stronghold of Kawabân on the summit of the Jabal Dihâr which is identified with the old town of the modern Kawabân. In troubled times its strength made it a desirable place of refuge — in 1569 the Turks besieged the stronghold in vain — and for centuries Kawabân has been important as a capital and residence of the Idumâ of the principality of the same name. The latter comprised in addition to Kawabân the towns of Shaham, Hadâs, Tawâl, the Khâlîn Mirwâh (between Kawabân and Harrâa), the lands of Misâr, Sinâ', Hitâ, Miûn, Abûl'âbâa, 'Arab, Banû Qâyâl, al-Shâhâlîya Lâz, a part of the Banû Habshan, the Banû Nahhâr and of the Banû 'Abnân. The old dynasty of the country, which traced its descent from the Ídám Hâfiz of Sân, was able to retain its imamate even during Turkish rule and to maintain its independence from the imams of Sân after the Turks were driven out in 1634. N. Nicholas (p. 226; see the Bibliography) has given a genealogical survey of the princes of Kawabân. When the Turks again invaded Yemen in 1872 and subjected the country, Kawabân after seven months' siege also passed to the Turks, but not after capitulation. The last ruler of Kawabân, Saiyid Ahmad b. Abd al-Rahmân, who had bravely defended his town against the Turks, afterwards lived in Sân, on a pension given to him by the Sublime Porte. At his visit in 1833 his brother Saiyid Yahyâ still lived in the old ancestral house in Kawabân, which is remarkable for the splendid stucco-work of the interior and the rich ornamentation of its façade. The windows and doors had all sorts of varied shapes, columns and ornaments.

Kawabân is now almost depopulated; although the house, which in spite of much destruction are still imposing, afford accommodation for some 30,000 people, there are barely 1000 now in the town; from the town one gets a splendid view over the fertile fields and valleys of the country around, especially the plain of Shajûm, a part of the plain of Sân and the surrounding hills.

5) Kawabân al-Shâ's is in Mahâd, west of the town of Kawabân 4), but belongs to Tawâl, a small place of no special importance.

KAWM (n.), plural abkâm, abkâm, abâdân, abûdân, people. The word occurs also in Nabataean, Palmyrene and Sabæan inscriptions in the name of the deity Siwm al-Kawm "support of the people," see, Lischbarth, Ephemeris fü r semitische Epigraphik, i, Index v. — According to some lexicographers the word applies in the first place to men, evidence for this opinion is afforded by passages from literature where K. is used in opposition to wân (women). The term does not primarily suggest the meaning of nation. A man's K. are his wife and his wâdî (abûdân). In this limited sense the word occurs also in the well-known tradition: "Who claims to be a K. without the permission of his wâdî (partner) is cursed by Allah, the angels and the prophet." (Bukhârî, Fâṣîl al-Madînâ, bâb 1). Used without article it has the same meaning as English "people," French "gens" and German "Leute," c. e.g. area c. 5), "People who do not understand," cf. 8, 9, 9, 9 (also with the article 12, 97). The plural has the same meaning. In tradition it is said: "There are many people (abûdân) in my community, who will proclaim licentiousness regarding women and wine." (Bukhârî, Fâṣîl, bâb 6).

In the Kur'ân the term is mostly in connection with the prophet's Muhammad's predecessors: the people of Drisâh, Lâh, Nîth (e. g. 7, 145, 146, 22, 4, 35, 139, 38, 31, 38, 1, c. e. their unbelief concerning him. In this sense
KAWM — KAWS KUZAḤ

is also used in connection with Muhammad himself: "Thy people declare Him a lie, though He is the Truth" (Sura 6:46). The same use of the term is to be found in Hadrath, e.g. Bukhari, Anth. 19, 31, 34 etc.

Kw, however, has also come to be used in a sense that comes nearer to the modern conception of "people," e.g., in the tradition referring to one of the festivals: "Every 8, has its festival, and this is pura" (Bukhari, Tabaqāt, būt 53). Al-Kaws, with the article, has sometimes an emphatic meaning, e.g., Ahmad b. Hanbal, Masnad, v. 72, where Tufail, one of 'Abd al-Rahman's brothers, relates a dream which he had. He dreamt that he passed by some Jews and said to them: "Verily, ye would be the people, were it not that ye pretend that 'Umar (Ezra) is the son of Allah." They answered: "And ye would be the people, were it not that ye say: "Abū 'Abd Allah was-ṣādiq Muḥammat" etc.

In Atchīn (Atīqā), the term has acquired a peculiar form and use: Ḥuṣain has here the root-meaning of all those who descend from one man in the male line; see Snouck Hurgronje, The Archæology, Index a.v. Ḥuṣain. For special meanings of the word see Dārīs, Supplement, u.v.

(A. J. WARENSKIRK)

AL-KAWS = the bow; in Arabic geometry the arc of the circle; in astronomy the constellation of Sagittarius, the ninth sign of the Zodiac (Greek Ἄστρος, Latin Arcturus, Arabic "Arcturus"); (H. SEYF)

Kaws Kuzāh (Al), the rainbow. The ancient Arabian deity Kuzaḥ (q.v.) who is described as ša'ītān (devil) was a thunderspurred who shot hail-arrows from his bow and then hanged the latter on the clouds. He is found in the combination Kaws Kuzaḥ, rainbow. Kuzaḥ is also in popular belief the angel who looks after the clouds. Other names of the rainbow are: Aṭīqā, bow, the bow of the prophet of God, bow of the heavens, bow of the clouds (qanān, mansa), sign of heaven ("Allām al-namāz"). It is also called the "bow of the seven sa'ādāt of Jacob, (see above the superstitious parts of a cloud). Quite different in origin are the names barā'īn (dusk), bawālīn, bawālīn and bawālīnūn. Muslim scholars include the rainbow among the Ḏahih al-ṣawā'ira, the upper phrenas. The rainbow is usually opposite the spectator, while the sun is at his back and there is a dark cloud or wall behind drops of water; the drops may be in a cloud or formed at springs, water-wheels, in turbulent rivers where spray is formed, in the steam of baths or in water which is ejected from the mouth in a spray (see Hizir, par. 315 etc.). Frequent reference is made to a display of the rainbow in,</p>

Kaws Kuzāh (Al), the rainbow. The ancient Arabian deity Kuzaḥ (q.v.) who is described as ša'ītān (devil) was a thunderspurred who shot hail-arrows from his bow and then hanged the latter on the clouds. He is found in the combination Kaws Kuzaḥ, rainbow. Kuzaḥ is also in popular belief the angel who looks after the clouds. Other names of the rainbow are: Aṭīqā, bow, the bow of the prophet of God, bow of the heavens, bow of the clouds (qanān, mansa), sign of heaven ("Allām al-namāz"). It is also called the "bow of the seven sa'ādāt of Jacob, (see above the superstitious parts of a cloud). Quite different in origin are the names barā'īn (dusk), bawālīn, bawālīn and bawālīnūn. Muslim scholars include the rainbow among the Ḏahih al-ṣawā'ira, the upper phrenas. The rainbow is usually opposite the spectator, while the sun is at his back and there is a dark cloud or wall behind drops of water; the drops may be in a cloud or formed at springs, water-wheels, in turbulent rivers where spray is formed, in the steam of baths or in water which is ejected from the mouth in a spray (see Hizir, par. 315 etc.). Frequent reference is made to a display of the rainbow in the sky, through the rays from the first and the third by the rays from the first two; the bows are therefore successively weaker. It is emphasized that the rainbow is not always composed of the same colours, a phenomenon which has recently been fully investigated by M. Pernot. It is also mentioned that the rainbow is particularly beautiful when the sun is on the horizon. The older treatment of the theory of the rainbow goes back to Aristotel, whose meteorological works the Arabs were acquainted. Thabit b. Qurra is said to have translated a commentary by Alī ibn Abī Ḫayrāb — ābjūdūt — on Aristotle's essay on the rainbow (Ibn al-Kift, p. 59). Aristotle is followed by Ibn Sīna, Ibn al-Haytam, al-Khwaṣṣī, etc., although in many details they make additions and corrections to his views. It is always assumed that the rainbow is produced by the light of the sun, and are regularly reflected on the raindrops on very minute reflecting surfaces. Later Kamāl al-Dīn al-Fārāb b. 9. 9. gave a brilliant exposition of the correct explanation, as far as was possible in the general state of knowledge in his day, when the dispersion of light was unknown. Like us he says that the light is once or twice reflected in the interior of the globule of water and then radiates out from it; thus we have the main and secondary rainbows. His endeavours to investigate the cause of the colours although, of course, not satisfactorily. By experiments he proves the correctness of his results, which are on a much higher level than those of Theodoricus of Freiberg (about 1400).

From Kaws comes a word, ṣabā'īn (the word is not found, as I said in the Archiv für die Geschichte der Naturw. und Technik, 1902, ii. 9). It means "showing the colours of the rainbow" or briefly "the colours of the rainbow." It is defined by Kamāl al-Dīn as "different graduated
colours in the region between bluish green, yellowish green, red, smoke-coloured, white that is, in regards to personal perception.

The rainbow is also given an astrological significance according to the sodalional sign in which it appears, in the run it means meaning and death (Alhwarthi, Berlin Catalogue, 1854, p. 506, al-Kaua, add. Thal Kino, Kamo). In another MS. (No. 5915, 2) it is said that in September a rainbow indicates great tyranny and oppression.

\[\text{[Further text not legible]}\]

KAWSARA, a small volcanic island in the Mediterranean Sea between Sicily and Tunis, 60 miles south of Cape Granita and 45 miles east of Cape Bon (Ras Addar); area 40 sq. miles, now called Puntellaria. The name Kawsara (variously written in the MSS.) goes back to the classical Consor (cf. Pauly-Wissowa, 'Realencyclo-
pädica der Class. Altertumswiss.,' vi. 1909). The island, famous for its antiquities (cf. Orsi, Puntel-
aria in 'Monumenti dell' Egitto,' 1899, pp. 450-459), was already important in ancient times for intercourse between Sicily and the African coast and played an important part during the conquest and rule of the Arabs in Sicily, which was always attacked from Africa. The first conquest of Kawsara by the Arabs was as their expedition to Sicily under Muawiyah b. Khalid b. Abdul-Malik, in the year 628 A.D., according to the Caliph Muawiyah (Ibn Khaldun, K. al-Umar, l. 227; Yahya, Musliwn, p. 225; according to the Aghlabid, Ibn Khaajah, ed. de Goeje, p. 235). It does not mention the island was occupied by the Byzantines; the Byzantine recaptured it (al-Bakri, K., al-Maghrib, L. 120). According to Ibn Taghribirdi (ed. Juyb- 
hull, Liden 1885, p. 230), Ali's murderer, Ibn Mughal, was banished to Kawsara. 'Abd al-Malik b. Kutan, the general of the Caliph 'Abd al-Malik, recaptured the island from the Rumi (al-Tadini,

\[\text{[Further text not legible]}\]
and rivers of wine, a pleasure for those that drink, and rivers of clarified honey." These rivers correspond to the rivers of oil, milk, wine, and honey, which had already been placed in Paradise by Jewish and Christian eschatology; the only difference is that Mahsnaad replaced oil by water; in Arimis pure water was not to be taken for granted and besides it was necessary to mix with the wine of Paradise (see Horovitz, Das kauvatische Paradies, p. 4). When, after the Prophet's death, exegiatical explanations of the "abundance of Sira xivili" were to be made, al-Kawthar was identified as one of the rivers of Paradise and when we find in one of the verses quoted in al-Fahd's Ta'rif that "its water is whiter than snow and sweeter than honey" or "and its water is wine," etc. we have obviously an echo of Sira xivili. But they did not stop at simply transferring these Karimi descriptions to the Kaukib, but the imagination of later writers gave the river of Paradise a bed of pearls and cisterns and golden banks and all sorts of similar embellishments. According to a later view (see Ahmad al-Kiyama, ed. Wolff, p. 107), all the rivers of Paradise flow into the Hawa al-Kaukib which is also called Nooh Muhammad, because, as we have seen above, is the Prophet's own.

Bibliography: given in the article.

KA'WUJL, "the man with the bow," a character in the Orta Oyunu.

The Turkish word bowen means the inner cup-shaped part of a certain kind of headgear, a rather high cap around which the headdress proper, the turban, is wound; a cap-like this could be of different shapes; it either eliminated in a round top or in a flat surface; sometimes also it was wider at the top than on the bottom. It was usually made of woolen felt in perpendicular strips narrowing towards the top. These bowen's were worn by officers of different ranks in the janissaries. They varied in form, colour, and name according to rank. For further details see Mahmut Shawkat, Osmanil Tezkirati ve-Kiyameti 'asker-yeri, Stamoul 1335, i. 29 sqq. Other professions also had particular bowen's; thus there were molu, kizil and pezhel bowen, or from the shape, one talked of takiel bowen, while dal bowen acquired the special meaning of parasite. This word bowen (plural bowen) has even penetrated into Arabic.

Kawthar, "the man with the bow" has acquired a special significance as one of the two principal characters in the Turkish folk play of Orta Oyunu. It is not till last century that we are at all minutely acquainted with the Orta-play and the names Orta and Kawthar do not seem to be any older. According to a tradition, the character of the Kawthar was first introduced by a certain otherwise unknown Shakeri, in place of a character called Nehre, whose main feature is said to have been a fondness for opium. Kawthar is the real comic figure in the Orta-play and plays a part that of Karagaz [5 v. 3] in the "shadow-play. Pezhel bowen is the character most frequently mentioned in the Orta Oyunu, is, on the other hand, the real director of the piece, a kind of stage manager, who always appears first on the stage and corresponds roughly to the Hadijul of the shadow-play. The costume of the Kawthar is sometimes decribed in the pieces themselves. Its chief feature is a high bowen on his head. This is usually heightened above, red in colour and made of strips (filimli) sewn together, almost like a top-hat without the lower rim. The bowen is jokingly compared to a 'turban,' the Turkish stove of similar shape. A shawl called bowen, made of wool and silk is wound round the bowen. The Kaukib (q.v.) of the Kawthar and his trousers are also of red cloth while his under-garment (yolcu) is of striped woollen cloth or silk (yon baskirti or ati parvani). An ordinary shawl is used as garb. The Kawthar wears yellow Turkish slippers (lotik parvani) usually with heels, over the leather stockings called mori. He usually carries an umbrella made of different coloured parts; in modern times more and more of the old dress has been lost and even the bowen has had to give place in a few, with a long tassel.

In the play the Kawthar is usually a shopkeeper, artisan or a servant. Like Karagaz he is responsible for the grotesque and comic element. He misunderstands the remarks of the other players, especially the Pezhel, in substance as well as language, carries out orders in a stupid fashion, commits fumbling into the obscene. He is taciturn and stupid, especially when he has to lie on good behaviour among good class people, but in his ignorance aggrandizes respect even from his friend, whom he treats badly, and is very capricious. If he describes his experiences, he exaggerates tremendously but unfairly disparages any persons that have been given to him etc. If he is caught in a trick he usually succeeds in escaping by some of his thousand shifts. A further favourite source of humour is the imitation of foreign voices and dialects, tachia (Ewlyn, i. 635 sqq. gives the name to Orta-like plays of his time), sometimes with the addition of disguises. It seems that the players were originally foreigners and non-Muslims and in the older period the business was still considered unseemly and it is regretted when a Muslim earns his livelihood in this way.

All his pranks have to be improvised by the player, only a rough outline of the piece being given. The part of the Kawthar makes the greatest demand upon the player and only a few really great actors have succeeded in playing the part to the general satisfaction. The most famous was a certain Hamdi at the end of last century and in some of the texts known to us from that period the Kawthar is often addressed simply as Hamdi.

(WALTER BÖHMANN)

KAVURD, B. DAUD ÇAGHRIBEK, sometimes also called Kerit Arslanbeg, the founder of the line of Saliqia of Kirmân. The first year of his reign is given by most of the chroniclers as 1873, but it was he and not Ibrahim Nâsîr (cf. Ibn Al-Thir, ed. Torbern, i. 349) who led the Ghiroz, who came to Kirmân in 434, but he did not succeed in establishing himself there. Then, for the lord of this province, the Bâyûd 'Abî Râghûb [5 v.] was informed of the raid and sent troops who put the Ghiroz to
flight: it was not till some years later (1440 = 1465) after the death of Abd al-Khabir, that the capital of the country, Bâdasî, where Bahram b. Lâh-karamân commanded for the Kûfs, was taken and henceforth the land belonged to Kâwûr. By a stratagem he was able to subjugate the Buda tribes of the Kûfs and Kufânjû, who dwelled in the Garmar (the hot region). He also waged war in Sûhân and in Fârîn, in the latter country with the chief of the Shâhânksar Fâlûn — on him cf. Ibn al-Bakîhî, ed. Le Strange and Nicholson, p. 106. 

and with the assistance of the Ami of Hâmân, expelled the Turks across the Gulf to the coast of Arabia who conquered Oman so that his successors ruled there till 1537 (1145 = 1443). He was an energetic ruler in every respect and maintained order in the land and acquired merit by making wells and building towers to serve as landmarks in the desert. One of these towers still stands between Bâr-Tabûr [cf. E. M. Sykes, Ten Thousand Miles in Persia or Eight Years in Iran, p. 428]. But in the end his ambition proved his downfall. Even during the reign of his brother Alp Arslân, he could scarcely bring himself to acknowledge his successor but when the latter died in Kirmân (456 = 1064 and 459 = 1067) he did not dare throw down the gauntlet but showed himself submissive. But as soon as he heard that his brother had fallen (1072) and that his son Malik-Shah had succeeded him he collected his forces and marched against him. The two armies met near Hamadân. Kâwûr’s troops were put to flight, he was taken prisoner and strangulated. The best account of this battle, which was fought on Dûnmuîl 1260, 466 = Jan. 27, 1074 (according to Ibn al-Bakîhî, x. 53, in Sûhân = April), is contained in the Zâbâl al-Tâbûrî (R. M. L. M., vol. 2). The victor, however, left the sons of Kâwûr in possession of Kirmân.

Bibliography: In addition to the sources quoted in the article: Recueil de textes relatifs à l’histoire des Schî, l. 2 1897; cf. in addition Houtouma in the Z. D. M. G., xxxix. 367 sqq.

KAWWAS, an Arabic word meaning originally archer, then archer, finally, like the French archer, came to mean military police. The form kawwas (with fâd) is found in the root Nâhid (Dony, Sallp.). The word is applied in the Levant specially to the military police, called in French service or sometimes famuissaire (because before the absorption of the latter, they were chosen from their ranks), detached to act as guards to embassies and consulates. They go in front of the head of the embassy or consular when he goes into the town, whether officially or not, and make way for him in the crowded streets and bazaars. In Turkish they are called nasîb-lî. In terms of articles 45 and 50 of the renewal in 1740 of the treaty between France and the Ottoman Empire, known as the capitulations, the ambassadors and consuls may employ such assassins as they please without their being forced to use any who do not suit them (T. X. Braoula, Nouveau Guide de la Connaissance, Paris 1813, p. 273—274). The regulations of S מב 23, 1730, contain few rules on the number of natives that the consulates could employ; an account of their privileges is at p. 276 for consuls-general and consulates in the chief towns of provinces, 5 for ordinary consulates and 2 for vice-consulates or consulate agencies. Their appointment is notified to the governor-general of the province who keeps a register of the names of those employed (Aristsche-bey, Legislation Ottomane, Constantinople 1855—1888, v. 15 sqq.).

KAY, the name of one of the 24 tribes of the Ghurz (q.v.) or Qûlûs from which the Ottoman ruling house is descended. Cf. the pertinent text of the Ta‘rikh al-Sultânî and the Kešrâ Hânû za ‘arûsî in the Zîrî, xiv. 977. Mahmud Kâshârhân (Qusûr) (al-bakîhî, l. 164) still has the old form Kayî and this identification proposed by J. Marquart (Abb. Geogr, W. Göttingen, Nova Foge, xii. 5, 1899) with the Kâl mentioned by al-Birûnî and al-Masîri in the extreme east. The Kâl are regarded by Marquart as Turkicized Mongols (op. cit., p. 58) which also (he says, op. cit., p. 191) explains the role which the blood-stained and fratricidal race of Osman and Ottoman people have played in history”. That the Kâl were Mongol is very probable. They are cited by Mahmud Kâshârhân (op. cit., l. 36) with the Târîk and others among the peoples who speak a language of their own, although they also knew Turkish; but the Qûlûs or the Kûfûl or Kâl had certainly nothing to do with the Kâl.

KAZ (l), goose, occurs also in geographical names such as Kâz Dagh, the Caucassus [see KABA].

KAZA [see KABA].

KAZAK (D., robber, disturber of the peace, adventurer; on these and other meanings, see W. Rudolf, Vorzeit eines Wirtschaftslebens der Türk. Dialekt, ii. 364. The existence of the word in Turkish can be first shown in the ninth (xvth) century. During the civil turmoils under the Yúrâfs the tyrants, in contrast to the actual rulers, were called Kazak; those who did not accept the verdict of fortune but led the life of an adventurer at the head of their men; cf., for example, the mention of the Kazak years (janat) of Sultan Hüssain, afterwards ruler of Kürêstân, in the Bahor-Name, ed. Beveridge, p. 173, infra. The name Kazak is also applied to whole bodies of people, who had separated from their princes and kinsmen; in the Türkî-Khâtîb (transl. E. D. Ross, especially p. 82 and 272) the Özbek, who had abandoned their Khân Aba L’Khâr (cf. the article), are called Özbek-Kazak or simply Kazak; the latter name has been retained by their descendants as an ethnic to the present day (cf. the art. KOGH). In Russia the word Kazak first appears about the same time as in Central Asia (in the second half of the xvth century) and is probably borrowed from Turkish although it appears in Russian in a larger number of meanings; thus individuals without kinsmen or possessions were called Kazak even although they did not lead a wandering or masandía life; the word, therefore, had not yet the exclusively military meaning which it had afterwards. The word Cossack, used in Western Europe, is the result of the little Russian and Polish pronunciation. No certain etymological explanation of the word Kazak has yet been given. The last suggestion by N. Marc (Zeitsch. Mit. v. v. 1915, June, p. 286), according to which the old Cossack other Kazaks, which lived in the Russian towns under 6473 = 965 is preserved in Kazak, is a hypothesis which can hardly be accepted by the historian. (W. Bartold)
KAZAN, also written Kazan, in the 15th and 16th centuries the capital of a Tatar principality, in the 16th century a Russian university town, now capital of the Tatar Soviet Republic. According to legend, the town was built by Batu. In 1358 Kazan was destroyed by Russian freebooters from Novgorod, and again in 1399 by the Prince Yuriy Dmitrievich. About 1445 a powerful kingdom was founded here by Ulugh-Muhammad and his son Mahmud (in Russian works Mikhail); and in 1552 it was burned and pillaged by Ivan III, of whom Ulugh-Muhammad captured the Russian Grand Duke Vasiliy of Kazan, where a prince called "Ali Beg" was ruling, was captured by Islam. In 1448 Ulugh Muhammad was killed by Ivan III; two other sons of Ulugh Muhammad, Kuzma and Ya'qub, had to flee to Russia from their brother, where Kuzma founded a local dynasty in Kazan (q.v.), which is called after him. Like many later pretenders who sought refuge in Kazan, Kazan took part on the Russian side in the war against Kazan. Mahmud died about 1464 and was succeeded by his sons, Shakh III; and in 1465 the city fell to Ivan III; and in 1466 a large Russian army advanced to Kazan. In 1505 the Tatars committed against Russian suzerainty and killed or robbed the Russian merchants who came to the town, and were defeated by the Tatars. The Tatars advanced as far as Nijni-Novgorod; in 1506 a Russian army was defeated; while a second campaign was being prepared the old relations were restored by a treaty of peace in 1507. Muhammad Amin died in 1518, and in 1519 the Tatars had the previous year; with them the dynasty founded by Ulugh Muhammad ceased to exist.

The following decades were a period of almost uninterrupted fighting between the pretenders supported by Russia, the brothers Shakh 'Ali and 'Ali, both of them in Kazan, and not 'Ali Beg, the former and latter, who had come from Astrakhan to Russia, and the national party supported by the Crimean Tatars and the Nogays. The latter was their biggest victories in 1531. Shah 'Ali was driven out by prince Sattal Girai who came from the Crimea, the brothers Muhammad Girai from the Crimea and Sattal Girai from Kazakhstan advanced up to Moscow; the Grand Duke Wassily abandoned his capital; a peace was concluded in his name by the Tatar prince Peter, a convert to Christianity, by which the Russian government bound itself to pay tribute to the Khans of the Crimea.

The Russian expansion by the Crimean Tatars in Kazan and by the people of Kazan in Astrakhan. In 1524 Sattal Girai went to the Crimea and left his thirteen year old son Sattal Girai in Kazan. The only original document that survives from the period of the principality of Kazan dates from the reign of Sattal Girai: it is a decree dated 23 3 9289 (Jan. 1, 1525), confirming a family name property that is nobles' feudal rights. The taxes are detailed so that the document is of some importance for the domestic history of the principality.

After vain efforts to come to an agreement with Russia, Sattal Girai was driven from the throne by the Russian people in 1530; at the wish of the people it was not Shah 'Ali but 'Ali Beg (that is, the elected Shakh 'Ali; he was killed in 1555, in a rising of the national party, the Tatars rallied and supported by his father Sattal Girai, he was driven from the throne of the Crimea. The Russian attempts to restore their suzerainty had therefore for a long time no success; it was only in the year 1546 that Sattal Girai was driven out and Shah 'Ali put in his place; but Sattal Girai returned immediately after the departure of the Russians and held the throne till his death in 1549. He was succeeded by his two year old son Otmish, who was taken to Russia. In the following year, christened by the name of Alexander and given in 1540, he was crowned as Shah 'Ali of the Crimea. The brief and cruel reign of Shah 'Ali ended with his banishment. Vildur Muhammad, a prince born in Astrakhan, was summoned from the land of the Nogays to Kazan as Shah 'Ali. The Grand Duke Ivan, who had already conducted two unsuccessful campaigns (1548 and 1550) against Kazan, now appeared before the town with a large army; after hard fighting Kazan was stormed on Oct. 24, 1552, and all armed men put to death.

The conquest of Kazan: retaining its former appearance and its military importance under Russian rule for a long time. The town had ten gates and a citadel separated from the other quarters of the town by a ditch; the old woollen yard was replaced by one of stone in 1555. The town was then about 600 cubits (= a mile) in length and 500 cubits (1500 yards) in breadth. To injure the commercial importance of the city, the Russian government as early as 1554 had founded the annual fair at Nijni-Novgorod; at the same time merchants were forbidden to trade in Kazan. Christianity was industriously preached. Kazan was the see of an archbishop from 1555 and later of a metropolitan. The immigration from Russia proper assumed considerable importance.

Little is left of the old town; a tower in the citadel still bears the name of the princess Stajinbig, wife of Sattal Girai (she was previously married to Ijjan 'Ali and later to Shah 'Ali). Under the influence of national Tatar movement the memory of this princess is kept green; in 1914 a biography of her was published for women is published under her name, but it is not definitely known when and how the tower received this name, and what parts date from the Tatar period and what from the Russian. During the 17th century Kazan had lost all military importance and was mainly taken — with the exception of the citadel — by Pugachev and on July 1774 there were only 2867 houses in it. Even at this date Kazan was of much greater importance than Nijni-Novgorod as a centre of government and of culture. The university founded in 1555 became especially for its Oriental faculty (strictly the Oriental section of the faculty).
of history and philology). In 1855, as a result of the opening of the Oriental faculty in the University of St. Petersburg, instruction in Oriental languages in the university of Kazan was stopped and the library and other accessories for the most part brought to St. Petersburg.

Instruction in Muhammadan languages was resumed in the university of Kazan in 1861. According to the census of 1897, Kazan had 131,508 inhabitants, in 1911 188,477, of whom 39,781 were Tatars.

(Barthold.)

KAZBEQI. A Persian copper coin worth, according to Chardin, the tenth part of a shirih. It is now obsolete. Claudin says: iv. 279 (Rome, 1723), the name means "the King’s money", but see the titles Gorgid and Ghalgheh in Behnam-Jahom (revised ed.). Another form of the word seems to be Kasbali from Kazan, where they were coined.

(B. Beveridge.)

KAZERIN, a town in Persia in the province of Fars, between the sea and Shiraz and 55 miles from the latter at a height of 3,000 feet. It is supplied with water from wells and pipes as the district has no river. Its industries used to be flourishing; it manufactured a kind of cotton called kazemis (Yagh., iii. 288); it had a rich trade carried on by merchants for whom ‘Aqaid al-Dawla the Beylild built a bazaar and who had luxurious dwellings and pleasure-houses in the town and vicinity. A kind of date called gudin was gathered there. At the present day it is surrounded by tobacco-fields; there is a horse-market frequented by the nomad tribes. The principal mosque was built on a hill commanding the highway. At a distance of two or three miles from the town, on the road to Shiraz, there was the village of Kazrin, which was the only place where the Sultan, on his return from an expedition against the Persians, had his headquarters. The town is now deserted, and its ruins are overgrown with grass.

(K. von Hammer.)

KAZI-KUMUKH. [See Kazakh.

KAZIMAIN, a town next Baghdad, one of the most celebrated of Shih's places of pilgrimage. It is a little over a thousand yards from the right bank of the Tigris, which there narrows into a loop. It is separated from the river by a girtle of gardens. Kazimain itself is prettily stashed among palm-groves; there are also gardens almost without interruption in the direction of Baghdad. It is connected by a horse-tranway with the west side of Baghdad (Kharnqa; see the art. AKBAR) about three miles away, which was laid down by the governor Mecrut Pasha, who did a great deal for Baghdad (1856—57, cf. I. 1564). Quite recently Kazimain has also become a station on the Baghdad-Samarra railway, which runs along the right bank of the Tigris. Down to the World

(C. Beest.)

KAZI-ASKER (a.s.), military judge, one of the highest offices in the judicial system of the Ottoman empire; its holders hold precedence immediately after the Shastik (Sultan). There are two kinds: Safr (i.e. the 'amdin'); they are entitled Safr (i.e. iv. 50); they are equal in rank to the visier and muftih. They are entitled in written petitions to be addressed as "rnalki-i, 'your benevolence'. There are two Kazi-Askers, one of Ruma and the other of Anamathia. Before the reforms, the first was inspector-general of all the tax offices (mulalets) except those of the two holy cities, when they became vacant (nulih). By the decree of their administrators (malamat) since the harem, this duty has fallen upon the Sultan of the Amadhi.

The title Kazi-Asker was created in 763 (1362) by Sultan Murad I in favor of the Kazi, Kazi Khalil Djevcherdji; this judge followed the Sultan in the army and exercised his functions in camp. After the capture of Constantinople, Mohammed II in 885 (1480) duplicated the title and made it the name of the Grand Vizier, Kazamati Mohammad Pasha (i.e. iv. 745). Among the credits enjoyed by Maimun Celebci: Mustufi 'El-Din Kasamati and Maimun Hanum were the first holders of these new offices. The Shastik of Ruma or Grand Muftih did not have precedence over them until the reign of Sultan Rukshat al-Khan. They had the right to appoint all the kazi and muftih (professors of theology) except those of Constantinople, Bruss and Adrianople, the three successive capitals of the empire; these nominations were reserved for the Grand Vizier.

The Kazi-Asker of Ruma dealt with the cases of Moslem in questions belonging to the capital while those of non-Muslims were left to the Kazi-Asker of Anamathia. The importance of the first of these posts put the second in the background: His competence extended to cases relating to states, to debts of the state and interests of the treasury; down to the reign of Mahmud I his sphere of jurisdiction included the three Barbary regencies; his authority over the kazi of the Crimea was recognized by the treaty of Kainarj (1725) and the convention of Amelk-i-bakar (March 21, 1779).

KAZI-KUMUKH. [See Kazakh.

KAZM MAIN, a town next Baghdad, one of the most celebrated of Shih's places of pilgrimage. It is a little over a thousand yards from the right bank of the Tigris, which there narrows into a loop. It is separated from the river by a girtle of gardens. Kazmain itself is prettily stashed among palm-groves; there are also gardens almost without interruption in the direction of Baghdad. It is connected by a horse-tranway with the west side of Baghdad (Kharnqa; see the art. AKBAR) about three miles away, which was laid down by the governor Mecrut Pasha, who did a great deal for Baghdad (1856—57, cf. I. 1564). Quite recently Kazmain has also become a station on the Baghdad-Samarra railway, which runs along the right bank of the Tigris. Down to the World
War and Kâzım was the seat of a kült-mahalle and the capital of a 3âb of the wazir of Baghdad, with a population of 25,000 (of whom 5,000 are Shî'is); see Cuinet, op. cit. The number of inhabitants of the town itself Cuinet estimated at 6,000, Aubin (1907) at 7–8,000, of whom two-thirds were Persians. They are very fanatical, access to the sanctuary is strictly forbidden to Christians. The Arab Beduin tribe of al-MajdubDW enclosed along the Tigris as far as Kâzım (see M. v. Oppenheim, op. cit., ii. 71).

The name Kâzım, a so-called dualis a poetici (cf. Wright, Grammar of the Arabic Language, l. 190), means "the two Kâzîms." The focus is to the two Alids buried here, Mîsâ al-Kâzîm (d. 186 = 802) and Muhammad al-Dajjal (d. 219 = 834), the seventh and ninth Imams of the Shîa sect of the "Twelve." (cf. Tāmir 'Asūrī, ii. 6. 563). The place is often briefly called Kâzîm (also Ghâdir in books of travel) or Kâzîmî (Kâzîmîyeh); the name Imam Mîsâ is also found. There is evidence of pilgrimage to these Alid tombs as early as the seventh (thirteenth) century (in Ibn Khallikân). At the present day Kâzîm is one of the four greatest sanctuaries of the Shîa. Its favourable position at the junction of the roads to the three other Shîa places of pilgrimage, Shînehzâr in the north and Kerchel and Nadîf in the south, accounts for the fact that many thousands of pilgrims pass through it annually. Frequently 25–30,000 believers assemble here on one day. The demand is greatest during the first ten days of the month of Muharram, when a spiritually charged memorial of Husain and the Alids generally. One of the four Muhadiths, the principal spiritual leaders of the Shîa, lives in Kâzîm.

The sanctuary of Kâzîm is one of those exceedingly splendid and rich temples which the 'Irâk owes to the Shîa and for which Persia and Shîa India supplied the necessary millions. With its domes covered with gold, the drums and the spires of its minarets it is visible to the traveller a long way off. Its present form is due, however, to the Safavid Ismail I (968–970 = 1558–1564), whose family claimed descent from the Imam Mîsâ al-Kâzîm (cf. above, ii. 544). The inscription of Ismail I, p. 99, of the year 926 (1520) refers to the complete transformation of the old building by the Shîa. The restoration work was completed by Ismail II by the Ottoman Sultan Suleimân I, who visited Baghdad in 941 (1544). The covering of the domes with golden tiles was done — according to the inscription in 1211 (1799) — by command and at the expense of Shâh Agha Muhammad Kâhî (q.v.), the founder of the Kâzîm dynasty. On the occasion of his pilgrimage (1876) Shâh Nâṣir al-Din had the gold plating on the principal dome and on the roofs of the minarets renewed; cf. Cuinet, op. cit.

The double cupola, ranked by few, was completed in 1325 (1907). The inscription shows that two saints are buried beneath it. Close to this mausoleum stands an isolated pavilion under which are the graves of Dičîfat (formerly supposed to be that of Ismail II and Ismail III, sons of the Imam Mîsâ. The cupola of this building is modern and a gift of the general of division Salîm Paschâ (cf. Masson, op. cit., p. 100). It may be noted here that there is also at Hadîda an Espharath (between 'Araa and Hîh) a small sanctuary which is said to contain the tomb of Muhammad, son of Mîsâ al-Kâzîm; see Herzfeld in Sarre-Herzfeld, op. cit., ii. 524.

On the tomb of a certain Hamza b. Mîsâ al-Kâzîm in Kâzîm al-Nabîyâ (in the 'Irak) cf. Masson, op. cit., p. 60. In the vicinity of Aṣârîchâ (q. v.) there is also an Imamâ-âde (tomb-chapel) where a descendant of the Imam Mîsâ called Imam Dâ'ûd is said to be buried; cf. Malamud in the Z. O. M. G., xxv. 335, and in Das heilliche Ufer des karthischen Meeres, Leipzig 1868, p. 119–120.

Like the sepulchral mosques of other great places of pilgrimage that of Kâzîm also is surrounded by a very broad courtyard (jâmeh) enclosed by a wall. This latter was rebuilt in 1238 (1880), with the permission of the Turkish government, by a wealthy Persian named Fâshîr Mirzâ and adorned with ceramic work and inscriptions containing whole stanzas; cf. Masson, op. cit., p. 110. In the great court, in course of time, extensive buildings for the housing of innumerable pilgrims have grown up, especially along the enclosing wall. In 1907 Aubin estimated the number of bazaars and caravanserai within the area of the sanctuary at forty-five. There are also a number of pretty coffee-houses.

Adjoining the wall of the courtyard is a Sunnî mosque with the tomb of the famous Hârîf lawyer Abu 'Abd Allâh al-Ma'ânisî (q. v., d. 1224 = 720); cf. Masson, op. cit., p. 57. 700. It is a mistake, as Le Strange (Baghdad, p. 164 sq.) supposes, to locate the grave of Zabûdî, wife of al-Hârîf al-Muhammâd, in or near this Kâzîm. Against this Masson, op. cit., p. 110 sq., and Herzfeld, op. cit., ii. 541, and also the article AL-KARARI.

In the time of the Caliph, extensive cemeteries lay on the west side of Baghdad above the Harûbiya quarter. The two Alids grave was in the cemetery of the Kurâţij (Muâshîr al-Kurâţij); the names Shâhâshy and cemetery of the Bâth al-Tam are also found for it. When Yâkût wrote (925 = 1519), Ma'sûlî al-Kurâţij was a fairly populous suburb surrounded by a wall. Hamîl Allîh Mustâwî writes a century later found that this place, formerly reckoned a suburb of Baghdad, is now an independent little town. Who first built the Alids sanctuary at Kâzîm in unknown. We know that princes of Shîa tendencies, like the Hâlîds, frequently bestowed gifts upon it. But in the course of time, especially during the frequent fighting in the capital between Shî'is and Sunnis, it was repeatedly burned and plundered, notably in the years 443 (1054) and 622 (1225). At the conquest of Baghdad by Hâllîgâ in 636 (1245) it was again laid in ashes. It may be mentioned that in 1801 on the occasion of the Wahhâli invasion the treasures of the sanctuary were removed from Kerbled to Kâzîm; see Jacob in A. Noldeke, op. cit., p. 487, note 1. Opposite Kâzîm, on the left bank of the Tigris, connected with it by a bridge of boats, is the suburb of al-Ma'sik (see above, i. 565), a stronghold of the Sunnis and a kind of national sanctuary of the Turks. In this place of about two thousand inhabitants is the highly venerated sepulchral mosque of Abu Hašîta, the founder of one of the four orthodox schools of Muhammadan law (q. v., d. 150 = 767). On this tomb cf. M. v. Oppenheim, op. cit., ii. 321; Strecz, op. cit., i. 162; Le Strange, Baghdad,
KAZIMAIN - AL-KAZWINI

p. 190–192: Langnerger, cp. ut., p. 61–62; Massigoniou, cp. cit., p. 58–79. It is from the epistle of Abū Ḥanīfa, al-Insān al-A`lam` al-Mu`awwgin (see highly venerated Imams) that this suburb of Baghdad takes its name.

KĀZIMAIN, the name given by Topkapi Sultan, of Myosore (1197–1213 = 1787–1799) in the term rises (t. sama) in silver; it commemorates Muṣṭafa al-Kāzinain, the seventh Imam.  
(J. Allan)

KAZIMOF. [See KAZMOW.]

KAZWIN (formerly Kesh-wain), a town in Persia in the province of Title. Aujourd'hui too miles from Tabris at the foot, on the north, of Mount Alborz [s. v.] at a height of 4,000 feet above sea-level; present population about 25,000.

The etymology of the name is uncertain. Al-Baladhuri (p. 361; ed. Ibn al-Fāṭbih and Ḥamāna) says that Kha-yīm means the "shrubbery which one watches," i.e. "well guarded"; it may also be explained as "the one who watches the fowl," but this seems to be a popular etymology. It has been connected with Kirta (Spiegel, Erna. Altdastromanische, l. 74, note 1)

Founded by Šīrāzī (Ibn al-Fāṭbih) and called Shīrāzī by him, it was besieged by al-Barghūthī in 1622 (624) and surrendered to him. The people adopted Islam to escape the imposition of the ziyā or poll tax. This strong place, which in Persian times had served as a barrier against the incursions of the mountaineers of Cilicia, was used by the Muslims as the starting point for their campaigns against the latter. Muḥammad ibn-al-Ma`ṣūm, a Muslim who built a mosque there, was called Mesqal al-Dhawr, "mosque of the bull." The Caliph Muṣṭafa al-Hāfiz built a new town opposite the old one, called Madīna Muṣṭafa, Maḥran al-Turk, a freedman of Muṣṭafa, built a fortress there called Muṣṭafiyah in which he put a garrison. When the Caliph al-Ashraf marched through the town on his way to Hādżim, the inhabitants of Kāzwin asked and obtained a relief from their titles, alleging that, living on the frontier, they had to fight for the faith. Hādżim built a mosque there and began to restore the ramparts which work was continued by the Amir Abd al-Dīn al-Dīn al-Ṣa`d, minister of Sultan Arslan, in 372. Ruined by the Mongol invasion at the beginning of the 12th century, Kāzwin revived again under the Safawis. Tahmāp I lived there for long and Abāba fabled it with fine buildings. In 1723, its inhabitants drove back the Afghans. Kāzwin has retained a certain importance in the roads from Tabriz and from KhāRAFT to Tabaristan under these; the latter is for camels and for carrying traffic and is used by merchants. Kāzwin is a depot for the silk of Gorgan and Shirvan and manufactures carpets.

(Rep. Al-HaṣṣA)

AL-KAZWINI, Abū ʿAbdAllah Mauḍūd ibn al-ThānwāN al-TarmāN, a Shāfiʿī jurist, teacher of al-Shāfīʿī. He belonged to Amul in Tabarinistan where he began his studies. In Baghdad he studied under Abū ʿAbdAllah al-Labūn († 406), the law of inheritance under Ibn al-Labūn († 402) and the Qiyās under Ibn al-Balkhī († 403). He taught in Baghādād and Amul in 440 (1048/9). Al-Shāfīʿī describes him as his best teacher. Of his works the following are mentioned:
1) Kitāb al-Fāṣilah al-Muhāsim al-Mudālib al-Muṣṣalim, a synopsis of the legal work of al-Muṣṣalim ibn al-ThānwāN († 427); 2) Jawārih, a synopsis of the Kāzwin of al-Muṣṣalim († 427); 3) Kitāb al-Baladhuri and the Kāzwin, ed. J. Schachar, Hamburg 1828, the only one that has survived and one of the oldest works of the scinty Shāfīʿī literature on legal questions (īrād). The book, unlike the Hanafī works of the same name by al-Shāhābī, al-Khāṣṣī et al., was very little used for the practical purpose of getting round the Shāfīʿī, but was rather primarily intended to point out legal quibbles which were forbidden or disapproved of, keeping with the stricter Shāfīʿī standpoint, which regards the īrād used by the Hanafī as contemptible.

CL. HAṣṣA)

The Cosmography contains of two parts the first, which deals with heavenly things and the second with terrestrial. After a very full introduction the heavenly bodies (sun, moon, stars etc.) are described; next the inhabitants of heaven (the angels) are dealt with; the first part concludes with a chapter on chronology. The second section discusses sub-lunar phenomena and the elements in general, especially the sphere of fire, air and water, natural history in the three kingdoms (minerals, vegetable and animal) and lastly man. The Cosmography also contains a great deal that is purely geographical as it describes in more important the mountains, islands, seas, rivers and springs; in the Geography, to some extent the same things are again dealt with, usually in the same words.

The manuscripts of the Cosmography differ very much from one another. There are longer and shorter versions and further abbreviated editions or more or less modified versions, sometimes published under another title. References to the manuscripts of the Cosmography are given by Pertisch, Die arab., Hist. der Bibl., in Gotth., 125-127; supplementary information in the Cat. cod. arab. Bibl. Jagn. Biblioth. Berol., p. 14. The oldest copy of the text is Cod. Monas. 464, which, according to Seybold, was written in 678 (1280) i. e. three years before the death of al-Kazwini (cf. II., iv. 260). Almost identical with it is the Cod. Sarre prepared about 1420 (see Tasccher, Die Psychologie des Kazwini, 1912, p. 6; Seal in III., iii. 152).

Wüstenfeld (see his edition of al-Kazwini, vol. I., p. iii, sq.) distinguishes three different editions of the Cosmography all of which he believes to have been prepared by al-Kazwini himself: the first of the year 661 (1263), the second of 674 (1176), much enlarged and considerably rewritten, and a third which is represented only by a single codex the latter part of which is incomplete (Gotha, 1568). The third edition on which Wüstenfeld based his edition of the text has two titles, an earlier, Tafsir al-Kâzînî, and a later, Miftâh al-Kâzînî. In it, apart from other minor additions, we have two entirely new sections (on the different races of mankind and the various arts).

This idea of Wüstenfeld's is, however, untenable, as Ruhs has shown in his important Aramts-Studien in Islam, 1913, iv. 14-56, 25. (A summary of his researches was given in an article: "Über den falschen und echten Kazwini in der Mitteilung zur Gesch. der Medizin und Naturwissenschaft, 1914, iii. 181-188"). As a result of his analysis of the structure of the text of the cosmography and the historical and geographical sections (especially of the section on the rains-stones) of the Cosmography based on a number of Arabic MSS. and Persian translations of the text Ruhs comes to the conclusion that we must distinguish not three but four recensions of the Cosmography. Of these I (Wüstenfeld's II) is so far known only from two Gotha MSS; II (Wüstenfeld's I) is represented in many — some very old — MSS. in the text of the Cosmography given on the margin of the printed edition of al-Damini. To this second recension also belongs the already mentioned oldest MS. of al-Kazwini (Monas. 464) and the Codex Sarre. The Arabic original of Rec. III is lost; it is not certain what its relation was to the two preceding.

Al-Kazwini's style differs considerably from the classical language; it is warming with solecisms. This style is perhaps to be explained from the fact that Arabic was not al-Kazwini's mother-tongue.

The title 'Adîth al-Mahbûhât wa 'Charîth al-Manâfi'dhât is that
Its characteristic feature is the addition of chapters 7 and 8 on the races of men and on the arts. The Arabic original of Rec. III — of which the date of the first partial manuscript must also have been the original of the Persian translation as well as the basis for the version preserved in Rec. IV. The final of a Persian version without an Arabic basis, e., of a translation of Rec. IV from the Persian, may be set aside as quite improbable. Rec. V, which is only represented in the already mentioned Cod. Gothans 1508 defective at the end, represents a version of Rec. III. It is quite different from the text of the Persian translations in contrast to which it has marked interpolations; many chapters are amplified by considerable additions. It alone contains the extracts regarding the Turkish horde of the tenth century from the Journal of Mīṣār b. al-Muballih [q. v.] and Ibn Fadlan's [q. v.] notes on the Slavs, Khazars, Russians, etc., as well as the excerpts on jewels from al-Khāzīn's book. This Rec. IV (as Wustenfeld's III) cannot be from the pen of al-Kazwīn himself. Gotha 1508, besides, as has already been mentioned, has a different title from the other three recensions and, indeed, expressly describes itself as a commentary (darāf) on al-Kazwīn. Gotha 1508 is perhaps original; at any rate it was compiled by someone with a thorough knowledge of the old literature.

Wustenfeld's edition of the text of the Cosmography therefore does not contain the genuine text of al-Kazwīn but a much later recension of the sixteenth century. Almost the whole of Wustenfeld's volume (p. 757-785) follows the text of the recension of Cod. Goth. 1508 and the portions are omitted from this and replaced by portions from other manuscripts, which have also been used to fill up other gaps. Wustenfeld's procedure has therefore given as an entirely arbitrary edition of the text. To obtain the true text of al-Kazwīn's Cosmography it would be best to choose the older, shorter Rec. II (as Wustenfeld's I) which also seems to have been the most widely disseminated. Among the numerous manuscripts of this recension the oldest Cod. Munich 464 should be taken as a basis.

Extracts from the Cosmography also exist. One with the title Kišāa al-Durar manzūṣa min 'Agīth al-Muḥītā in the Paris Bibliothèque Nationale; cf. de Smey, op. cit., ill. 436; and de Smey, op. cit., iii. 456; Wustenfeld's edition of al-Kazwīn, vol. ii. p. xi., and Ruska in St., N. 172, 260. There are also abbreviations e.g. London, British Mus. (Rieu, 1957, p. 495; N. 17). In Cambridge is a manuscript which also contains excerpts from the Geography of al-Kazwīn; see Brown, Cata. of the Persian MS. in the Brit. Mus., p. 208 (N. 126. Hamza Aḥmad Aṣfari Dīnī in the Brit. Mus. (N. 856 = 1456) composed a poetical synopsis of the second part of the Cosmography entitled Gharāʾib al-Dumayrī. Of this the Bodleian in Oxford (Catalogue by Sachau-Elte, col. 403-405) and the India Office in London (Elte, Cata., 70 and 191) have each 2 MSS. This synopsis forms the second part of a much more comprehensive poetical cosmology in four chapters which Aḥmad published under the title Miʿrāg al-Maʿālik. There are also various Turkish translations; on them cf. Treuacher in the Z. D. M. G., iv, x. 55. There is one by Aḥmad b. Khājī finished in 977 (1570) in MS. in Vienna (Flügel, Kata. der oriental. li. 509); it is entitled Taḥāfūt al-Ālīf wa-Maʿālik al-Ghāribīl. Another translation was made by the famous theologian al-Sūfī (d. 696/1297). There are manuscripts of it in London, British Mus. (Rieu, p. 107-109; Add. 7894 and Add. 24,954). The anonymous Turkish translation in the Berlin Library N. 177 (see Portsch's Catalogue, p. 197-198) is probably different; its author has dealt very freely and arbitrarily with the Arabic original, has omitted many articles and added others in their place. The original work has been much abbreviated throughout and the arrangement of the matter is different. Another Turkish translation made by Ismail Pasha and dating from the year 1109 (1697) is only known from Hājjī Khalīfa (ed. Flügel), vii, 154, N. 14, 658. The Berlin and London translations (Brit. Mus., Rieu, Catalogue, p. 206-209) also differ from the Arabic original and from almost all the Persian translations in that they include a book of countries, a synopsis of the Geography, as in the Cambridge Persian Codex mentioned above. Another manuscript, British Vatiaji-Oghlan's work, Ḥalāfat al-Maʿālikāt, is probably only a free version of al-Kazwīn's Cosmography; cf. Portsch, Kata. der ar. Hess. zu Götha, iii. 127, and Portsch, Verschöner von der Welt, Hess. zu Berlin, p. 199.

There is apparently a Caghatal version of the Cosmography in the St. Petersburg Library (Chanykov, N. 108); see Portsch, Kata. der ar. Hess. zu Götha, iii. 127.

2. The Geography. The Geography exists in two editions with different titles; the older is called 'Agīth al-Muḥītā and the later Aṭṭār al-Bidār wa-Maʿālik al-Farīd. The first recension represented by MSS. in Berlin (see Althardt's Catalogue, v. 379) and Paris (de Slane, p. 392) dates from the year 561 (1163). The second, much enlarged and in some points completely altered edition dates from the year 674 (1275). On the two recensions and their relationship to each other see Wustenfeld in his edition of the Geography, p. vii, 12, he based his edition on the second recension which exists in numerous manuscripts. On the MSS. see the references in Wustenfeld, op. cit., vol. ii., p. iv, 42, and Portsch, Kata. der ar. Hess. zu Götha, iii. 152 sq.

In this work al-Kazwīn gives a description of the earth following the Ptolemaic division into
seven climates or longitudinal zones (see the art. Rückl. and cf. also Taeschner in the Z.D.M.G., lxxvii. 51 sq.), Within the seven climates the separate countries, towns, mountains, islands, lakes, rivers etc. are arranged in alphabetical order. Their remarkable features are described and many historical events connected with them are given. Considerable space is taken up by the sections on the life and work of famous men born in the various places. The book is therefore, like Yakuti's Geographical Dictionary, loaded with historical and biographical material. In arrangement it is a geographical lexicon, like Yakuti: only, as a result of the division into seven sections, it is less easy to consult. Many articles such as those on various mountains, lakes, rivers etc. are also found in the Cosmography usually with identical text.

There are also Persian translations of the Geography; manuscripts of them exist, for example, in St. Petersburg (Chanykov, No. 107; see Pertsch, Katal. d. arab. Hist. zu Gotha, iii. 15) and in Oxford (Souchau-EtTHE, Catalogue of Pers. MSS., col. 401, No. 401). It has already been mentioned that a synopsis of the Geography of al-Karwini exists in a Persian (translation MS. in Cambri gene) and seems to have been inserted in several MSS. of a Turkish version of the Cosmography.

We may here say a little about the illustrations found in many MSS. of al-Kazwini's works, astronomical figures and tables, etc. Painted pictures are, it appears, only found in MSS. of the Cosmography. We may assume with certainty that the originals of al-Kazwini were full of such pictorial embellishments and of tables. Indeed, almost all the larger MSS. of the Cosmography are embellished in this way. Manuscripts which show signs deliberately left for the insertion of pictures are: copied from illustrated originals; such are: Gotha No. 1358 (cf. Ramski in Lit., iv. 264) and London, Iuulia Office (Catal. by Roth, p.209 sq. No. 725). Rade pictures are contained e.g. in Gotha 1507; Munich 465 and Vienna 1436; better: Gotha 1506 and Vienna 14577; numerous fine illustrations in Munich 404 and Cod. Sartor (see supra); cf. thereon: the Catalogue of Animer (Munich), p. 192 sq.; Fligel (Vienna), lii. 505 sq.; and Pertsch (Gotha), ill. 128 sq. The Persian versions of the Cosmography also are usually adorned with miniatures, as the two Berlin Codd. 345 and 346 (see Catal. by Pertsch, p. 367 sq.) and London, Bibl. Mus., No. 8 (Catal. by Rien, vol. 464), the latter with illustrations in the Indian style. Although these pictures with their illustrations of plants, animals, marvels of the sea etc. are very often quite fantastic in character and not infrequently pure invention, they ought not to be simply ignored in any future new edition of the Cosmography, as Wustenfeld did, who has only reproduced the astronomical and other figures and tables in his edition of the Cosmography and Geography (cf. theoson Wustenfeld, Kosmographie, p. 163). Several later facsimiles have been published by Möller in the old Gothic Catalogue, vol. ii., from Gotha No. 1507. The miniatures in al-Kazwini's Cosmography have, however, been used in the discussion of important problems, e.g. by Saxl in his investigations into the history of the representation of the planets (in Elam., ii. 151 sq.). There he discusses the seven pictures of planets of Codex Monac. 464, which he also reproduces (PL, fig. 1-4 and 3, 6-8). Saxl in München. Jahresb. der ausländischen Kunst, i. 18 sq. discusses the somewhat different figures of the Cod. Sartor.

In criticizing al-Kazwini's two works, it is also important to know what sources were used for them. A list of the authorities quoted in the Cosmography was compiled by Möller and there are two MS. copies of it in the Gotha Library; see Pertsch, Katal. d. arab. Hist., zu Gotha, i. 151, No. 1509 - 1510. Wustenfeld in the G. A. L., 1848, i. 351 - 353, briefly discusses the sources known to have been used for the Geography (practically the same as for the Cosmography). According to him, about 50 authors are quoted in the Geography, including the more important geographers and historians. The following are specially cited for the geography of Spain: al-Qunawi Muhammed b. 'Abd al-Rahim (d. 1085 - 1108; on him see Wustenfeld, Lüdde's Zeitschrift für vergleich. Ethnologie, ii. 1. 133); and two of al-Udriq Ahmad b. Umar (d. between 476 and 487 = 1085 - 1095; on him see Jacob, op. cit., i. 3 sq.). Ahmad bin al-Aubalat, d. 365 (1060), the author of a Cosmography entitled Tadhkira al-Malik (on it see Jacob, op. cit., iii. 69 - 94), is often quoted. The already mentioned Persian Cosmography of Ahmad al-Tust (on it see Reinand, Geogr. d'Abbonidés, vol. ii. p. xvi., and Pertsch). Die pers. Hist. zu Berlin, p. 360) is also found among the sources. Further may be mentioned the works of Avice, the so-called Periplus of Arioste wrongly ascribed to Aristotle (cf. the two works by Klotz; see Bildt) and the Alid al-Hariri (on him see Jacob, op. cit., iii. 497 - 498; also Fränkel and M. C. al-Mahdahli have already been mentioned. Many of al-Kazwini's sources e.g. the Africans travels of al-Jahiz are now lost to us. Al-Kazwini also utilized oral information from foreigners e.g. al-Multan Abu 'l-Rahm Salimikhan who had travelled in the interior of Africa. The remarkable information regarding various French and German towns which al-Kazwini owed to the Spanish Isma'il al-Tarhibi (d. 477 = 1085) was also probably communicated orally and not taken from a book; on this cf. Jacob, op. cit., i. (third edition entitled Ein arabisches Berichtsschriften aus dem 10. Jahrh. über Flandre etc., Berlin 1896) iv. 137 sq.)
As to the printed editions of the two works of Al-Kazwini, the first and only complete European edition is that of Wüstenfeld. The Geography (published as the second part of al-Kazwini) appeared in Göttingen in 1849 and the Cosmography (in Part i.) in 1848. The value of the latter has already been discussed above. In the east the Cosmography has been repeatedly printed on the margin of al-Dinari's Kitab al-Hajj al-Ghaybi al-Mahajn, etc., in Cairo 1305, 1309 and 1330. An edition of al-Kazwini printed in 1331 in Cairo (only the Cosmography) is mentioned by Hämmerlin, Einblicke über neue Erwerbungen, N.F. 2337. On earlier editions and translations of parts of the two works of al-Kazwini cf. the references in the B. S. c., i. 434, 435, 450; Wüstenfeld in Liddell's Zeitschr. für vergl. Erdk., i. 1843, p. 49, and in his edition of the Cosmography, l. p. 91; Persich, Künst der arab. His... zu Gaza, iii, 1851, p. 426. Of earlier editions of parts of the Cosmography we may mention: de Sacq, c. cit., ii, 365–510, with Arabic text, p. 168–207 (sections on minerals, plants, men, with translation and full notes); L. Lüder, Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen, Berlin 1809, p. 373–403 (the text of the description of the stars with annotations); Volck, Kalender für die arabische Länder, Lat., 1859, ed. mit注释, Leipzig 1859 (dealing with the chopper on the Syracusan months).

Of translations alone we may also note: Eitel's translations of the Cosmography, part i., Leipzig 1896; this only covers about the first half of the Cosmography (Wüstenfeld, l. 1–205); of special value is the full appendix of notes (with many textual emendations by Fleischer); J. Ruska, Das Steinbuch aus der Kassamid. des Kâzûh, Heidelberg (Pezig, der Orientalische), 1896 (translation of Wüstenfeld, l. 206–245); cf. with this also, J. Ruska, Das Steinbuch des Aristoteles, Heidelberg 1912, p. 81 ff.; J. Andrae, Der Abschnitt über die Geister und wunderbare Geschicth.: transl. and annot. Erlangen (dissert.), 1910, (transl. of Wüstenfeld, l. 368–374, 448–451); F. L. Carabes, Die Psychologie Kâzûhs, Tübingen: dissert., Kiel 1913 (transl. of Wüstenfeld, l. 301–322).

Valuable material for a commentary on al-Kazwini is further given by the works of C. Jacob and K. Wiedemann, who have translated and edited various shorter articles from the works of al-Kazwini. Special mention should be made of Jacob's Studien in arabischen Geographien, part 1–4, Berlin 1891–1892 (of which part 1 appeared in a third enlarged edition in 1896); K. Wiedemann has made many contributions on the subject to the Mittel-, vor Gesch. der Modernen und Neuren, S.B.P.M.S., etc., and to other periodicals; cf., for example, the references by Ruska in it., iv, 336 (Nº 503), xxvi, 270 (Nº 76) and 271 (Nº 129). A conclusion, attention should be drawn to the fact that in preparing a new edition of al-Kazwini's works Fincher's own copy of Wüstenfeld's edition of the text, containing numerous emendations, which is preserved in the MSS. Dept. of the Berlin Library, should be utilized.

(M. STRECK)

AL-KAZWINI, IHARR AL-ALÀ INN f. ASI BANI B: A:HMAD s. NAGH MUSIYAWH AL-KAZWINI, a Persian geographer and historian. He belonged to an old family of Kâzûm of which he himself (Tâhirî Kâzûm, ed. Brown, p. 839–842, p. 844) gives a full account. It was a什i family, with which traced its descent from Harî b. Vazîr al-Riyâkhi who fought at Karrâ, and had held the governorship of Kâzûm since the time of the Caliph al-Mu'tazzim with only a brief interruption under the Buyids. In the time of Mahsud of Ghâzna this office was taken from them. Ahmad Alâ's great-grandfather was accountant (qudâlah) of the Trakh, hence the family name. The author himself was appointed financial supervisor of the districts of Kâzûm, Altâ, Zamâlî and Târâmân (Tâhirî Kâzûm, p. 598; cf. Nasrî al-Kâzûm, ed. Le Strange, p. 27; Engl. transl., p. 33) by the vizier Rashîd al-Din. In 677 (1279/80) another Mustawfi, Fârîd al-Din Alâ, was once more governor of Kâzûm, but jointly with a certain Mirzâ al-Din-Shâkî.

The year of al-Kazwini's death is not given. The date of his birth can be calculated from the following data. We know that he finished his Gafarûnûm in 735 (1334/35), worked at it for 15 years and began the book when he was 34 years of age (Rieh, Supplement, p. 173). This work was interrupted by the composition of the Tâhirî Kâzûm (Rieh, ed., iv, p. 173; Tâhirî Kâzûm, p. 5); the time spent on this is probably included in the 15 years. He was therefore 59 years of age in 735 and was born in 682 (1281/2).

Works. His intercourse with the celebrated vizier and historian Rashîd al-Din Fârîd Allâh († 718 = 1318), to whose entourage he belonged (his brother Zain al-Din was Nâshî al-Din-Wâsit al-Sâhir under the same vizier; see Rieh, Cat., l. 81), aroused in al-Kazwini a desire for historical studies (Tâhirî Kâzûm, p. 4). About 720 therefore he began his great historical epic, the Gafarûnûm, finished in 735, which was intended as a continuation of Firdawûsî's Shâh-nâmeh. Further details are given in the description of the unique MS. of the work in the first, Mm. in Ria. Supplement, p. 173 n. The poem contains 75,000 haft and deals in three sections with the life of Mahbûb-âd and the history of the Caliphate, the history of the Persian dynasties, and the history of the Mongols. The author gives no literary sources; according to Rieh, his statements regarding historical facts are very accurate, and the Mongol part gives valuable information, which the author owns in part to his great-grandfather Amin Nâgr al-Mustawfi. The last event which is mentioned is of the year 734 (1333/34). From the few specimens in Rieh it is not possible to pass judgment on the language and style. We see therefore grateful to Rieh for giving in his History of Persian Literature under Tâhirî Donunnen, p. 96 n., a passage in 24 distichs dealing with the devastation of Kâzûm by the Mongols. We can see the slavish copying of Firdawûsî's style (the rhymed style ṣabîn-râhâfûn and does not without its parallel in Firdawûsî's text as we
Al-Qazwini's last work, the *Nahdat al-Khilāl*, completed in 740 (Kieš, *Catalogue*, I. 419), is mainly geographical. It is divided into an introduction (*Fātīha*), which deals with cosmography, and three sections (*mukhātāt*), which deal with natural history, anthropology, and geography. Then follows a concluding section (*khatimah or *khujadalāt*) on wonderful things and curiosities in Iran and other lands. As in the case of the *Turkik* *Gustād*, there is a large number of MSS. of this work (a survey of them is given in Le Strange's preface to his edition in the Gibb Mem. Series, xxii/1, p. xiv, and xx). On the sources of the *Nahdat*, cf. Kieš, *Catalogue*, I. 418; Browne, *Hist. of Pers. Lit. under Tzartar Dominion*, p. 99. They include, as might be expected, the famous geographer Yāḥyā, the older Kāzin, Ibn Khurdadhbih and others not so well known. The statements regarding Persia are taken from Ibn al-Khaṭīb's *Flānānāt*. That he, as Le Strange supposes, made use of official documents, taxation lists, etc, as is to be expected from his position as finance officer, is very probable.

The *Nahdat-i Kuldūb* editions: Bombay 1311 (1694; I have not seen this, an edition of the whole work); The geographical part of the *Nahdat al-Qulūb* ... ed. by G. Le Strange; Gibb Mem. Ser., xx/1, (1915). *Engl. transl.* 1915 and 1919. A part of the text had been previously published by Schefer, *Staatsarchiv*, Supplément, 1897, p. 141-235 (not accessible to me).

(V. F. Büchsen)

**Al-KEF** (*الكَف*), a town in Tunisia, 110 miles S.W. of Tunis and about 20 from the Algerian frontier, situated in 36° 11' N. lat. and 8° 30' E. long. The population in 1911 was 6,532, including 1,700 Europeans and 800 Jews. Many of the latter are descended from the Jews who used to live among the Beduin, whose customs and dress they had adopted.

The word *kef* means "rock." It is given on account of the situation of the town on a spur of the Djebel Djerif, a height varying from 2,430 ft. in the S.W. to 2,853 ft. in the N.E. Before the establishment of the French protectorate, it was surrounded by a wall now in part destroyed. The area, circumscribed by the wall contains many
buildings now in ruins and empty spaces in compensation a European town is in process of formation on the plain near the station on the railway now connecting al-Kef with Tunis. At the foot of the hill rises an abundant spring, the 'Ain al-Kef, an object of veneration to the inhabitants and regarded by them as *marabout*. Commanding the principal roads from Algiers to Tunis, al-Kef was for long one of the busiest markets of the Regency in economic importance the town ranked next to Tunis and Bizerte. This is no longer the case since the building of the Tunis-Constantine railway to the towns in the valley of the Mogherina. Nevertheless the mineral resources of the adjoining country assure al-Kef the elements of its future prosperity. The town was, and still is, a religious centre. The two most popular brotherhoods in the Regency, the Kadiyya and the Bahluliya, have such a much-frequented **namya** there.

Al-Kef is the ancient *Sicca Veneta*, a Punic town which became a Roman colony under Augustus. Very prosperous during the early centuries of the Christian era, it was in the Byzantine period one of the strongest places in Africa. There still survive many ruins, columns, capitals, fragments of statues, inscriptions, remains of temples, baths and Christian basilicas. The cult of Tunis, identified with Veneta, whose name is found in that of the ancient town, may even have left some traces in local superstition.

Sicca survived the Arab invasion of the seventh century A.D. The ancient name of the town continued in existence in the form *Shurka Bani Murra*. This is the same name used by al-Bakri (ed. de Sarzeau, p. 323; transl. p. 82) in the *Kitab al-Ifritiya* and even in Ibn Khaldun (*Hist. des Berberes*, ed. de Sarzeau, i. 230, 256, ii. 202; transl. ii. 427, 498, iii. 409). We know very little of the history of the town till the seventeenth century, Ibn Khaldun, however, tells us that it was governed at the beginning of the sixteenth century by a certain *Ilyas b. Nase Allah*, who succeeded in protecting it against the incursions of the Hilallis and whom his son submitted to *Abl al-Ma'min* in 1554 (1159-1160). In the following century the Salamis settled in this region and incorporated the Housen Berbers, who had been settled there since the beginning of the second century A.D. In the beginning of the sixteenth century A.D. al-Kef and the surrounding country were occupied by the Oued Silla, a section of the Bani Sherwilt, who attached themselves to the Makhalli, one of the two great families into which the Salamis *Kashen* were divided.

Under Turkish domination, the region of al-Kef played an important part in the fighting between Algerians and Tunisians, especially in 1632, 1655, 1664, 1705, 1746 and 1756. The rulers of Tunis during this period tried to make al-Kef strong enough to bar the invaders' road to the capital. Muhammad Bey scattered the Bani Sherwilt, put in their place a mount on the *Hilal Ya'kub* and stationed a *macina* of spies near the town. The Bey of *All* built a *jeqba* in 1675, so strong that the place was able to repulse an Algerian attack four years later. In 1735-1740 *All* built a wall around the town and placed forts on the cliffs which commanded the *jeqba*. In spite of these precautions, al-Kef, which had been unsuccessfully attacked by the Algerians in 1740, was taken by the Bey's troops in 1756 after a siege of thirteen days. In the beginning of the nineteenth century a new *jeqba* was built (1817) by Hamida Mhah, who said that if his body was at Tunis, his head was at al-Kef. The garrison was put under the command of an *agha* independent of the *pasha* or civil governor. The taking of Constantine in 1837 by the French, by voiding the Regency of the dangerous proximity of the Turks, removed the military importance of al-Kef, the fortifications of which were now only used to protect the town against Bedouin raids. During the Tunisian expedition, the French troops entered the town without striking a blow on April 23, 1881.

---

KEŁAT. [See KELAT.]

KELEG (K), a raft consisting of beams bound together with rope and placed upon inflated sheepskin. These rafts are chiefly used on the Tigris where the river is not navigable for ships. They are described by Strabo as *ceredon* (I. 104) and Seneca as *cerale* (Nat. Anim., l. 5, 10; II. 35; 9 spp.). They are still used at the present day and are mentioned by nearly all travellers in Mesopotamia.

KEMAH (KASSAH, KAMH, KEMAH, KİMAH), a fortress situated on the southern bank of the Euphrates (Kam Şal) in its course North-East to South-West, before it takes a sharp turn to the South. The river is here confined between high rocks to such a degree that there is no longer room for the highway that has hitherto accompanied its course. The town, which still late in the sixth century was one of the fortified places of Asia Minor, is situated on the mountain-slope and surrounded by gardens and orchards. In spring the many scilla trees attract myriads of quails, a phenomenon which is looked upon as something miraculous. The river is still utilized by the natives for floating down-stream timber which is cut in the forests in the neighbourhood. The wheat, cheese and linseed manufactured at Kamah had a high reputation.

Higher up the mountain is situated the fortress which, chiefly on account of its natural position, was considered to be impenetrable. It is said to have borne the name of Ali and to have been one of the chief places of the Armenian kings as well as of the Arsacids who had here their temples, treasury, state-prisons and who were also buried in...
this place. The descriptions of Abü as a royal residence have some resemblance to those of the other place of the same name (see the art. Abü) situated on the Arpa Cala.

Kemâk was ruled by 'Umar b. al-Judâh al-Salami in the year 59 A.H. It has, however, from that time onwards changed its master. In 133 (751/52) it was besieged by the Emperor Constantine. The 'Abbasid caliph al-Ma'ârûf tried to strengthen his hold on it by a restoration of the citadel; it is said that he intended to use it chiefly as a bulwark against the invasions of the Khazars. In 177 (793/94) it was besieged by the Byzantines. Hamd Allâh Mustawfi (born 860 = 1261/62) mentions it as a small town. The Ottomans, Emperor Bayârâd and Selim took it after a siege, the former, at the hands of his general Timurtash, in 1496, the latter in 1515. Timurtash beleaguered it for seven months, without being able to take it. According to J. Brant, who visited the town about 1580, its population consisted at that time of 400 Turkish and 30 Armenian families; it was the residence of one of the last Deyberes [q.v.]. Kemâk is the chief place of the Kir, of the same name, Sinâlini Ermizânî, with a fortress. It is the residence of a sheikh-âba. In the vicinity are numerous tombs. At the present day it is still an important centre of commerce and industry.

The population of the Kaz of Kemâk in 1457 consisted of 14,547 Qurams and 3,053 Greek Armenians, 189 Protestant Armenians and 633 orthodox Greeks (Ciniet).

**KEMÂL AL-DIN ISMÂ'IL,** a Persian poet of Isfâhân, son of Djamâl al-Din 'Abî al-Raschîd, was one of a group which devoted itself to the eulogies to the family of the Schite (also called Al-Isma'ili) which kept political power in its control in Isfâhân. Sarmâd Khâtâtî al-Muâlab "creator of thoughts," he dedicated his ode mainly to the judge Râkû al-Dîn Şîdî b. Ma'sûd, but also to the Khârishmâdî ('Alî al-Dîn Tekesh, Mahmûd b., son of Djamâl al-Din and 'Abî al-Dîn al-Din, his grandsons) who ruled in Isfâhân, as well as to the Abbâsids of Fars who ruled in Shiraz. (Sâdî, b. Zangi, and his son Abî Bakr) In the year 955 he retired from the world and devoted himself to the mystic life under the guidance of Shahîd Shabîh al-Dîn 'Umar b. Muhammad al-Suhâkârî. He was tortured and put to death on 7 Jumâdî I 2, 655 (Dec. 21, 1257), at the capture of Isfâhân by the Mongol soldiers of the army of Oghûrî, son of Cüçû Khan, who hoped to find hidden treasure in his possession. His obituary has been published (n.d.); there are partial translations by Lewis H. Gray, put into English verse by Ethen Watts Munford (Hundred Love Songs, New-York 1904) and by Theodosia Garrison (Littell's Mag., lviii. 783), of the 15 quatrains published by Saleh-\-shikho, Fersichische Grammatik.

**KEMÂL KHOJANDJÎ (KAMEL AL-DIN MUSTÀFÎ),** a Persian lyric poet, born in Khujand in Transoxiana. He followed the mystic path, went on a pilgrimage to Mecca and on his return settled in Tabriz the climate of which had pleased him. On the capture of this town by Tughânân-Khan, he was taken to the town of Surâl at the request of this prince's wife. He remained there four years. Having returned to Tabriz the Djalaluddîn Sulâmî Husain, son of Sulâmî Dawûd, had a house built for him. He likewise received favours from Miran Shâh, son of Timur and governor of Astarabad, who paid him his debts. He died there in 392 (1500) according to Dawlat Shâh, or 503 (1499) according to Khondzuri. He was buried in the Farâh-bâšhî quarter where his tomb became an object of pious visits. Ten of his ghâsâlî have been published by Bând, Century, p. 9-12. There is, in the national library of his poems illuminated with miniatures. (Flügel, Die arab., pers. u. türk. Lyrik, Handbuch... etc Wies., i. No. 383).

**Bibliography:** Dawlat Shâh, Tajizzâdâ al-Shâhî, p. 235; Laf 'Ali Beg, Ateghède, in the section on Tûrân (not paginated); Rûd Kâtî Khân, Ma'âfâr al-Inâfî, ii. 29; J. N. Hammer, Schrifte Râzhechîe Persiens, p. 159; Kâmil Khâtâtî, Hâših al-Siyar, iii. 3, p. 90; Sir C. Oman, Prehistoric Nations of Persian Poets, p. 192-194; H. E. the in the Geographie d'Isfâhân, ii. 304. (Cl. Harky).

**KEMÂL MEHMEĐ NÂMÎK,** one of the most important of Turkish poets, stylists and authors, the principal instigator of the Turkish moderns, creator of the modern Turkish prose language and the most notable Turkish patriot of modern times. Kemâk, born on Dec. 21, 1840 (Shawwâl 12, 1256), in Rhôdos on the Sea of Marmara, belonged to an old aristocratic family which could be traced back through his father, the astronomer Mustafâ Xîrî, his father Shams al-Dîn Bra, and the first Chambrallan of Sulâmî Salâmî III, and his father, the admiral Kamûsî and Ahmîd Rûd Pasha, to the foundress 'Vâ'îrî Bahâ'î Osmân Pasha, the conqueror of Nadîr Shâh of Persia. His father belonged to Yem Şeher in Anatolia and his mother to Kanî in Albania. The Albanian strain in him was the highest importance and explains much in his
KEMAL MEHMET NAMIŞ

Kemal had a rather irregular, unsystematic education at home; he had only nine months' regular schooling in Constantinople at the Büyük-Rüşhâneye and the Wâlîdâ-Mehtebi. He was trained in Arabic, Persian and French by private tuition. In 1854 he was with his grandfather Semseddin Bey in Karas and later in Sofia where he began to write poems although only 14 years of age, in the style of Şemsi-Zade, whose Derisim had to serve him as a model for lack of other patterns. Returning to Constantinople, in 1857/8 he entered the translation bureau of the Sublime Porte and soon found himself among the members of the then flourishing group of poets of the old school Nâzîl, Mustafa Paşa-Zade Memdilâ Fâly, Hülayet, Hemsedil, Arif Hikmet, Ghalib and Kaşim, who imitated Neşî and Fetnû chiefly. Kemal quickly won an honoured place among them. He put together a slim Dinsâl-i Mürettebat of not very original poems. In his poems he took the pen-name of Nâmiş. It is remarkable that the last incomplete ghazâb of the Dinsâl is the first of his patriotic poems.

He only entered upon the field he was to make his own through Şemseddin Efendi, who had studied in Europe and was now in Constantinople endeavoring to attract men of intellect to western culture and ideas, mainly in his capacity as editor of the influential newspaper Tercüman-i Rûfiân. Kemal became friendly with him and soon felt completely under his influence, which directed him from the imitation of classical models to the spirit of the west. Kemal grasped with ardour the new ideas, the importance of which he at once realised. He made his aim in life to bring about a literary, political and scientific renaissance in old-fossilised Turkey and to secure her a place among the nations of the West. He began his troubled career by writing for Şemseddin's paper. Henceforth he wrote under the name Kemal, which soon gained the greatest popularity.

When Şemseddin (q.v.) died in Paris in 1864 he left the authorship of his paper entirely in the hands of the Young Kemal, who at first found it a very difficult task. For a year he published almost nothing but translations from the French. These important political questions (the Polish rising and the American-Civil War) helped him to raise the standard of the paper which had gone down very much. He now took the field with political articles of his own which aroused the greatest interest on all sides and made the Tercüman-i Rûfiân the most influential newspaper. It was in its pages that the expression "Young Turk" first appeared.

Kemal became more and more embarrassing in the government. Although only 25 years of age, he had already been given the title of Şefi, Selâñîyesi (Gallipoli) for a short time and next they wished him to become ambassador to Persia in order to get him away from Constantinople. But he did not accept this post. It was only with difficulty that he escaped being sent to the scaffold. Kemal had joined the Young Turk committee founded by Ziya among the elements in favour of reform, the main object of which was to raise Turkey from her backward state and obtain a constitution. When the members were threatened with arrest, Ziya, Kemal, Nâzî, Rifai and 'Ali Şükrü fled from Turkey in 1866 to London where they settled down. At the time of this first voluntary exile Kemal was expecting the birth of his first child, who afterwards became the poet 'Ali Ekerem. In London Kemal published the paper Muğhlâr ("The Correspondent") on behalf of the party; it was later transferred to Paris and then replaced by the Effûn ("Liberty"). In Paris he studied law and economics and translated important French works into Turkish.

His stay in Europe was of overwhelming influence on his political and literary development. Henceforth he came back again and again to the subject of civilization. When, after the death of the Grand Vizier 'Ali Pashâ, it became possible for the Young Turks to return home, Kemal undertook the editorship in Constantinople of the Young Turkish paper Evet. He succeeded by his articles, which are of permanent value, in making the paper one of the most important in Turkey. At the same time he contributed to a number of other papers and periodicals and thereby completely influenced and revolutionised public opinion.

When Kemal became inconvenient to the government by his political activity, especially through his patriotic dramas, Helmen, which aroused unbounded enthusiasm, he was banished to the fortress of Famagusta in Cyprus. At first he was in the closest solitary confinement, where he planned in his utterlessness cell his drama "Milhem Bey", which he wrote out and printed as soon as the rigour of his imprisonment was softened. He was detained in Famagusta for 38 months until the accession of Murad gave him his liberty and permission to return to Constantinople. But Murad only reigned 93 days. With the accession of 'Abd al-Hamid a limit was soon put once more to Kemal's activity. Kemal took part in the preparation of the constitution and shared in the deliberations with Mihrâb Paşa and Ziya Paşa.

His liberal activities aroused the deepest mistrust in 'Abd al-Hamid. He was arrested and spent 15 months in the common prison in Constantinople where he spent most of his time in historical study in preparation for a history of the Turkish army. In spite of his acquittal after a trial, 'Abd al-Hamid sent him to detention in Mytilene (Chios). This enforced inactivity was a great trial to him after the disastrous conclusion of the war with Russia and he expressed his feeling in songs like the touching Mihiğjir song Allah 'inân Allah beri.
his history which came from Constantinople as the result of a tremendous denunciation of him was therefore a frightful blow and he died during the night after receiving the order, Dec. 3, 1888, in Mytilene.

His body was first of all interred in Mytilene in front of the mosque and then solemnly removed by his son Ali Ekrem to Bulair, 8 miles north of Gallipoli and there buried with military honours in the türbe of Suleyman Pascha, a worthy honour for the great patriot. 'Abd al-Hamid built a splendid türbe for Kemal. While Suleyman Pascha's türbe was already a place of pilgrimage, Kemal's türbe became to a still greater extent the goal of many Ottomans, who saw in him the incarnation of their ideals. The first thing done after the revolution of 1908 by the "Committee of Union and Progress" was to go solemnly from Salonika to his tomb at Bulair as to the grave of the "founder of the building of liberty" and pay homage to his maimed. The most popular modernisation with which the victorious party proceeded was also a tribute to the influence of Kemal.

The supreme and unique position occupied by Kemal in Ottoman literature can hardly be too highly appraised. His influence on his own and the following generation was tremendous. He was perfectly aware of the difficulty of his task but always believed in a successful result; which was quite in keeping with his singular temperament. His personality — he was a born agitator and thoroughly revolutionary in spite of his aristocratic birth — with his unusual energy and indestructible and unyielding strength of will exercised an overwhelming attraction on the masses. He was filled with a deep, almost fanatical religious, spiritual, and thoroughly Islamic in its attitude and he believed in his people, his country and their future. Basing himself on the ideas of the true Islamic culture with a strong leaning to pan-Islamic ideas which he endeavoured to realise by going back to primitive Islam and rejecting the Islam of the past which did not satisfy him, he evolved the idea of the Ottoman fatherland and was able to impose it on his "lachrymic" people. It was Kemal who first awakened his countrymen to the conception of "Watan" (fatherland), which was later replaced by the Turkish "Vat"; and to the conception of "Millet" (nation) and "Hürriyet" (liberty) which the Young Turks took as their watchwords.

Kemal remained faithful to his task which he regarded as a kind of apostolic office, in spite of the most difficult conditions. His talent as an author was certainly not small but this does not completely explain the almost magical influence which he has exerted down to our own day. The most recent Ottoman literary criticism is rather inclined not to estimate him so highly. But what no critic can deny him, what places him high above all others is his thirst for freedom, his patriotism, and the fearlessness with which he expresses his ideas and above all his mastery of language. When he began writing, he found the language in a chaotic condition, at his early death he left it a wonderfully modelled instrument. The creation of the modern Turkish prose language is undeniably Kemal's work.

In his political and literary essays Kemal is vigorous and convincing when he wants to defend any view. No one has surpassed Kemal in his essays.
only a passionate protest against the government system of the Ottoman Sultans. On account of its obvious bias the piece was always suppressed by the censors.

6. Ebu Bekr "Black Misfortune", first published by the Khalil ibn in 1508, written in Famagusta in 1575, describes the violation of an Italian Emperor’s daughter by a negro who has smuggled himself into the harem as a cook and takes the place of her lover. The disenchanted lady commits suicide by poisoning herself on the eve of her marriage after killing the black monster.

Smirnow seems to be wrong in ascribing a drama Amaddeo Ruyani to Kemal, for which the Sultan is said to have granted him a special reward.

Kemal’s drama suffered from a lack of naturalness, a want of lucidity in the inner motives, too sentimentality, too much pathetic pathos and from tirades. But he knew how to grip the attention of his audience and carry them with him. A certain psychological depth cannot be denied him. The Turkish theatre was then something quite new. The plays are great achievements for their time and circumstances, in spite of all their dramatic and technical defects, especially as Kemal was mainly concerned with using the drama as a medium to convey his ideas to the masses and to arouse the feelings dormant in the people. For him the theatre was “an amusement useful to influence the people”.

He followed similar lines in his two novels, which have the same defects. But in them we have the typical features of Turkish life and thought vividly and realistically portrayed. From the point of view of style they reveal great beauty. The influence of his novels was great; they became the model for a whole school whose most eminent representative was Yegit. The two novels are:

1. Jallun 1902. I Am a Boy: Sergio’s Quest “The Awakening or ‘All Boy’ experiences” (1874; the original title is said to have been Sah Humdallial). It is the description of the adventures of a rich spoiled mother’s darling, who falls into the clutches of a harlot, dutifully by her intrigues heartlessly sacrifices his innocent sweetness and is completely ruined, until finally he kills his mistress, after the sweetheart whom he has abandoned has saved him at the cost of her own life, and ends in prison.

2. Ziemet, a historical novel (1857 = 1880), printed in 1852, 1852 and 1853, the romantic love story of Adil Girad of the Crimean and the sister of the Sultans of Persia during Adil Girad’s captivity in Persia in the 18th century. The main facts are taken from history; Ziemet marks an important technical advance on “All Boy” in the compactness of its style and the wealth of colour. Panathinean ideas are very evident in it.

The most noteworthy of Kemal’s historical works are 1. his biographies, 2. a study on the Ottomans “Strays from the Ottoman Scattered Leaves” (1905) in 4 parts in which he gives accounts of the lives of four remarkable Muhammadan men, writing in a learned style, the European manner, in the further development of his Islamic tendencies; the four are: the Aybuddin Sulayman al-Din, the Ottoman Sultan Mahomet II, Selim I, Yawam and the Emir Newsha Bey. The collection is considered a classic among the Turks, both in language and learning although it is only a good compilation, mainly taken from European sources. In vividness of description and vigour of style they take almost the first place among his works; 2. Der}[st] april “The Period of the Invasion”; 3. Kemal, the story of the capture of the fortress of Kanlan in Hungary, written in 1870 (1873) in Famagusta and printed anonymously the same year.

Kemal was a passionate believer in the vitality of Islam. There is, however, in his views a certain lack of coherence between the Muslim ideas and the Roumanian formulae which he has adopted. He endeavours to prove the perilous position of Islam with the ideas of modern civilisation, which are in the end ideals of Islam also; Islam was in no wise backward down to the 16th century, and had only to give way to the superiority of Europe with the rise of experimental science. In reply to Ernest Reuss’s attempt to prove the hostility of Islam to education, Kemal wrote a defence of Muslim literature published in the Kulliyet, which is based on much sounder foundations than the other Muhammadan pamphlets combating Reuss’s views.

3. Mehted, the history of ancient Rome and the history of Islam which comes down to 438 (1045), were intended as an introduction and a foundation for his Ottoman history. The latter runs from the beginning of the empire to the death of Sultan Selim I (1520).

4. gysy The Dream, the most vigorous and inspired of his writings, which every Turk must have read at the time of its release, dreams of the days when the chains will fall from the fatherland. It has been often reprinted, for example twice in Cairo (Kulliyat) in 1907 and 1909.

5. Sargenstahl (1320 = 1908) also describes a dream.

Kemal was above all a publicist (see above). He raised the Ottoman to be an ideal newspaper.

His articles which appeared in it are still reprinted again and again and put into collections. The separate numbers of the newspaper are still carefully preserved.

As a critic he also displayed a comprehensive activity, an appreciation of which has been given by Gibb. He mercilessly shattered the old Persian and helped the new school to victory. There is much criticism in his essays and in his Mehted. When Ziya Pazâa, his old comrade in arms, made a rather unfortunate selection in an anthology of Turkish literature in his three volumes Akhârê, Kemal wrote two vigorous criticisms of the first two volumes, Tâhir-i Akhârê, 1298 = 1881, and Tâhir-i Akhârê, reprinted in 1853, which Gibb considers among the best essays in Turkish.

Kemal’s letters are of great importance, as he corresponded with almost all the leading personalities in Turkey, political as well as literary. Unfortunately they are only in part published so far, for example the letters to Midhat Efendi, Irk Paşa, a part of those to Abu Zayû Tewfik, Aba al-Hass (Hâmil) and others. He wrote naturally and vigorously and was the first to teach his people the epistolary style.

We must not omit his official papers. However conventional and crude Ottoman official style is, he nevertheless succeeded in giving it facility and eloquence. The number of official documents which he composed in his different official positions is legion. They are essays on the
creation of the state and its reforms; the rights of the people, its intellectual and ideal requirements, on law, history, political economy, social philosophy, schemes, protocols, semi-official documents, etc.

Finally we may mention his numerous translations: Bélá-1 Domáski ("Springtime of Knowledge"), translated with a literary introduction from the work of the Indian Sheikh Iyut Allah. He also translated from the French of Victor Hugo, Lassartine, Montesquieu, J. J. Rousseau, Condorcet, Volney, etc.

A complete edition of his works was begun by his son. 'Ali Ekrem, but his scheme was too ambitious and he broke down in the middle of it. The biography of Kemal promised by 'Ali Ekrem has not been published.

His poetical masterpiece is the story of Yahya and Zalikha often dealt with before (e. g., by Handz, q.v.) and after him, but his treatment of the subject is peculiarly felicitous; his other poems, in which his shrewd wit much admired in his lifetime and his intellectual intuitions are revealed, are collected in a separate Dövme which appeared in 1315 in Stamul (cf. Ghiṣ, Hist. of Ottoman Poetry, l. 347—363; where a full appreciation of his literary activity is given). He further wrote a number of philological works of which we may mention here a dictionary to elucidate difficult Persian phrases, called Dâhil el-afkârât (cf. G. Flügel, op. cit., l. 130). Of legal works special mention must be made of his Kürtün fi Tashaviye el-Makbulân, which deals with the various classes of jurists (cf. G. Flügel, Die Klassen der kanûnî, 1883, in the Abh, der Kgl. Sächs. Gelehr., der Wiss, 1861, xiv. 279, 280, 281, 346, MSS. of it in Vienna; cf. G. Flügel, Die arbei., Pers. in thür. Handschr., in Wiss, x. 612).

He left a vast number of commentaries on the History, Tajvid, Miftâh, Tashkif, notes on the Kur'an, marginal notes on the Kürtün, etc. which are represented in most eastern collections of Oriental MSS. (cf. e. g., G. Flügel, op. cit., l. 130, 132, 133, 251, 291, 314, 1704, 172, 725; l. 220, 221, 612; l. 179, 219, etc.; list of several treatises in Alabazur, Berichte der, X. 12, N. 10; collection of 50 treatises in the Fibrist-ü-Nezâ'î of Der-i-Nezâ'î, etc.) Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'î, Sâbû'
KEMAL REİS, Turkish corsair and sea-captain during the reign of Bayezid II. In his youth he had been given as a present to the Sultan by the Kapudan Pasha Sinan, after which he was brought up as a page at the court. He began his career as a chief of 'abásq, then took to the Mediterranean and captured in 893/1487 a Maltese Prince (Seldjik-i Othmanî, iv, 78). In 896/1490, by order of Bayazid, he raised the Spanish coast in order to support the last Nasrid of Granada, Mulay Hasım, whom, in his critical situation had invoked the Sultan's aid. This expedition is only recorded by Hadżi Kâliba in his Tağfarat al-Tanzîrîh but not in his Story of the Naval Wars (Tağfarat al-Aišî). It is, however, to be known to the other historians, any case it cannot have been of much importance in view of the great difficulties of the Ottoman Empire at the time by the wars against Egypt and Austria. In 903/1497/1498 we find Kemal Reis maneuvering in the Eastern part of the Mediterranean with other corsairs; he took several Christian ships and brought back to the boy of Alexander (Adîbek Pasha Zaide, p. 250); at this time therefore he probably was not serving the Sultan. But in the war of the Turks against Venice (905/1499) he was one of the admirals of the fleet. The Turkish fleet had three newly equipped unusually large battleships (türkç, kâhê) of which one was captured by the Kapudan Pasha Dehû, and the two others by Kemal Reis and Rustûk Reis (Müneçrû Ahnîs Sultân writes Bûkâ, also Leuc- clavius: Bucacius). In the naval battle of Sapelesta (28 July 1499) the Venetians took the latter's ship for that of Kemal Reis on whom they particularly wanted to take revenge. Rustûk Reis was boarded by two big and some smaller Venetian ships; he defended himself with burning naphtha, until he, and his men, were blown up together. The island of Sapelesta was called after him Hurât Reis' Ada. After this battle the Turkish fleet took Lapanto (İne-Balkh). In the next year, after the towns of Koron and Modon had been taken by Turkish sea-power, Kemal Reis was sent with 40 ships to Navarino (Turkish Ayaç), on which town he captured the citadel from the Venetian commander Contarini. He died, according to Sâmi (Kemançe-i Arâmî, v, 3886) in the beginning of the 16th century, perishing by a ship-wreck (Seldjik-i Othmanî).

J. H. Kramer,

KEMANÈSS, k. e. "Archers" or "All Pasha," an Ottoman Grand Vizier. He was born in the Amatolin district of Hamîd-Edî [q. v.], came early to Stamîl, where he was brought up in the imperial palace. In 1050 (1640-1641) he was appointed governor of Diyarbâkîr and soon afterwards of Bagdad. Next year he was given the rank of third vizier of the sultan (âzeb vezîrî). As the vizier of Diyarbâkîr. In 1279/1270, he was given the imperial seal in place of the dismissed Grand Vizier Mehmed Pasha, mainly through the efforts of the Sheikh Allah-Êlîan Yâhiye Efendi, but also as a reward for his readiness in submitting to the incapable and imbecile Sultan Mustafa I. Kemânêss, "All Pasha," weak, timid and common in character, began to get rid of his enemies and rivals by throwing the viziers Girdâr Meshed Pasha and Khâlid Pasha into prison and dismissing the Mufti Yâhiye. His greed and avarice prompted him to the most contemptible embraconements and frauds on the Treasury; he had coins minted with a slight proportion (barely one-fifth) of silver, and pay the bills of the Janissaries into his own pocket and in other ways let the state go to ruin. Within six months he had made a huge fortune by decreeing the currency and selling offices. Sir Thomas Roe who describes the Grand Vizier at his accession to office in a dispatch of August 23, 1623, as "a man quietly honest, but of untidy and therefore suspected ablytye for so great a charge" (cf. The Negotiations of Sir T. Roe in his Embassy to the Ottoman Porte, from the year 1620 to 1624, London 1740, p. 173; tells us on April 5, 1624, of "the owne worldl commissones, who in six moneths had hazed up infinitie treasures, by partysale of all justice and offices, which hath weighed him to the ground") and a Venetian report of August, 1624, puts his wealth at a "somme di 750,000 scudi" in contant, molto appurato" (cf. J. V. Hammer, G. O. K., v, 31). The terrible state to which the empire was reduced (rebellions in Asia Minor and Egypt, the threat from Persia, the fall of Bagdad in November 28, 1623, concluded from the Sultan, Stamîl without food, the currency depreciated, the treasury exhausted, the Janissaries out of hand) aroused to the highest pitch the wrath of the youthful Mustafa IV against the Grand Vizier responsible. Kemânêss, "All Pasha" was summoned to the palace on Hamîdîl-i Kâbir, 1624 (March 23, 1624), and summarily beheaded. His body was buried in the forecourt of the mosque of "Atîq "All Pasha (cf. Glaubitz-De Zwaard, i, 150); J. von Hammer, G. O. K., ii, 75, N°. 512). His successor was Çerkes Mehmed Pasha, Kemânêss, "All Pasha" was married to a daughter of the celebrated Süti-rasch and Shahîl-Elîb, Ustânî, Mehmed Efiढî.

EGANT BÂRÎNÇI,

KENA, a town in Upper Egypt, on the East bank of the Nile (35,375 inhabitants in 1917 against 17,485 in 1875, 15,503 in 1854, or 27,500 in 1897). It is the capital of the province (mûdiyê) of the same name which is divided into seven districts (mardinîyê); namely: 1. Diyarbâkîr, 2. ł&m, 3. Keman, 4. Gümür, 5. Kâr, 6. Luâlî, 7. Naüßt Hamîdî. In 1897, the population of the province was 714,457 of whom 120,530 are in the province of Keman. The region produces cotton and cereals, in the town, cloth and woollen stuffs are manufactured. But Keman is especially noted for its porcine pottery; the jarras (jâla), which are made there are called...

KENÁ — KENÁN PASHA

The Arabic name, written Kenán by some geographers and fârsis in the Copto-Arab nabul, comes from the Coptic Ḳōnkh, which give rise to a play on the Greek κόνκο "new town," a name which did not last long as it is never found in the Byzantine period. The identity of this town with the Neapolis of Herodotus has been seriously urged; it is rather the modern Misâba, the ancient Ptolemais. On the other hand it has been conjectured with much probability that at the end of the third century it received the name Mânuelopolis.

In the first Arab period, the sârâ of Kenán extended to the east of the Nile between that of Féw on the north and Kif on the south, in front of that of Dâmsa from which it was separated by the river. The first author to mention it, Yâkî, gives a very unsatisfactory description of the district: he says it is a little town rapidly going to ruin, deserted by its inhabitants who feared the raids of the Bedouin robbers and brigands. Therefore when the new provincial divisions were made under Mustârjib it was Kif which gave its name to the district (sama) and became its capital. Kenán remained unimportant for some time as Yâkî only gives it a brief note and Abu al-Fida does not mention it.

The prosperity was not long in beginning owing to the tomb of the saint. 'Abd al-Râjîn which became an object of pilgrimage while thus Muslims settled in its vicinity. Some years previously the Dârsî had mentioned Kenán as a pretty little town with houses of a decent size; he makes special mention of the virtues of the women who never appeared in the streets. After Ibn Rajîma, Afdaw gives an account of the merits of ‘Abd al-Râjîn; he describes the houses of the town as spacious and very high and mentions two madrasas in Kenán and a number of hospices (riwâ). Ibn Dârsî only copies Afdaw. In the Turkish period Kenán was the residence of a Kâfîy by his in modern times that it has assumed the seminarian position which it owes to its present stage of increasing prosperity.

The town site is at the point where the Nile comes nearest to the Red Sea and became the point of departure for caravans in the direction of Kâfr Bishir. This route took the place of the one used in the middle ages between Kif and Asfih which in turn succeeded the ancient Copto-Somotic road. The continuous intercourse between Egypt and Arabia and India gave these roads great value; it is by this route that many of the Muslims of North Africa go to Mecca and even during the Crusades it was the only pilgrim road. In 1531-1533 Muhammad ‘Ali had the wells improved on the Kenán-Kâfr Bishir road; some were deepened so that they would provide water at all seasons (cf. L’Egypte Moderne, collection Études, pp. 164—166; Barma et Hanne, Top. et Géogr. de l’Est D’ouest des égypt., Central Portion, Cairo, 1911).

The saint who is the object of Muslim veneration, ‘Abd al-Râjîn, the of Ahmad b. Hâdjiyân, twentieth descendant of Bishar al-Solkh, was born in the environs of Cúna in Morocco. After a journey to Mecca where he spent seven years he settled in Kenán and died there on Safar 9, 592 (Jan. 9, 1196). Honoured during his life for his reputation for sanctity and mysticism he has become one of the principal saints of Egypt along with Ahmad Badawi, ibn Shâhi, Dâmsa and Abu I-Hâdjiyân Akhûti. At one time a pious formula used to be handed down which if recited beside the tomb hastened the realisation of a desire or brought about cures. According to some travellers the pilgrims who came to Kenán made circuits (gharâb) of the tomb of ‘Abd al-Râjîn similar to those made by the pilgrims at the Ka‘ba (Afdaw, Talî‘ Sâmīq, No. 27; Godisbar, Muh. Studies, i. 315; R.H.R., ii. 284; Gandolfo-Demounymer, Le pelerinage a la Mekk, p. 224). — There were descendants of ‘Abd al-Râjîn living in Egypt for two centuries; they were particularly jurists and professors (Afdaw, No. 29, 117, 129, 508, 402, 405, 476, 583; Al-Makrî, Kâfîrî, ii. 425).

KENÁN PASHA, also called Sâli‘ K. Pasha, an Ottoman Grand Admiral. He was an Ottoman (Turkish) by birth and came into the service of Bâshîq Âlî Pasha, Ottoman governor of Egypt. On the latter’s execution he was taken by Sultan Murad IV into the Sejat and educated there. He was promoted to be Agha of the sturmi-holders (Râbîh al-dâr aghâ). (Chronicle of Westphal, fol. 91b of the Vienna MS.), became a favourite of Sultan Ibrahim after his accession (Feb., 1645) and married his daughter Aîsha Sâli‘în. He was at the same time appointed third vizier but banished soon after Ibrahim’s death (Aug. 16, 1648) to Oronte. In Sept., 1652, he returned to Sâzand and was appointed in the charge of the defence of the Dardanelles. On Sept. 9, 1653, he was given the governorship of Oronte, its deprived of it on Sept. 22, 1653, and on Feb. 9, 1656, appointed governor of Siliistra. On May 3 of the same year he was appointed Grand Admiral (Kapudan Pasha, q.v.). On June 26, 1656, while in command of the Ottoman fleet sent out against the Venetians, he suffered a severe defeat in the Dardanelles, the greatest naval reverse inflicted on Turkey since the battle of Lezanto (cf. J. V. Hammer, G. O.R., v. 649 sqq. The whole weight of the Sultan’s fleet fell upon Kenân Pasha who was immediately thrown into prison. He was finally released on the intercession of his Russian countryman, the Sultan’s mother (Kosmâ Wallès, q.v.) but was dismissed from the office of Grand Admiral almost immediately, on July 18, 1656. Two years later, on June 23, 1658, he was appointed Kâîîm-küîn [q.v.] but the very next month, on July 16, 1658, dismissed again and sent to Brusa as commander of the garrison (Mabûdî, J. V. von Hammer, G. O.R., vi. 37; Nasîm, Thârîka, ed. II. 660). He set out from here by arrangement with the Austrian rebel ‘Aîsh Husan with whom
he closely allied himself, only to share his fate, treacherous assassination, on Feb. 17, 1659, in Aleppo (cf. Na'um, Türkî, ii. 685). His head was brought to the Drewa in Stambull on March. 9, 1659.

If this is the Kenân Pasha mentioned by Ewliya Çelebi, Sühah-âdâme, iii. 366 (and he certainly never was governor of Osmankoy any more than was Ködşa Kenân Pasha [d. 1652 = 1651/2]) who is also often confused with the Grand Admiral in the Süfîîa's "Oghmûn, iv. 83), he was also an author and composed a Süheîlînâme in honour of Sarî Sâluh Bahâ [q.v.]. His own warfare exploits, especially his military operations in the years 1606—1038 (1626—1628), were celebrated in a rhymed Pergaânlâne by the poet and judge Tâhâ'il İbettîn Efendî (of Kâflandelen) of which there is a copy in the Brit. Mus. (Sloane MS. 3584); cf. Ch. Riem, Description of the Turkish MSS., p. 191 sq., with detailed summary of contents. The possiblity that it celebrates the above-mentioned Ködşa Kenân Pasha who had a very similar career to his namesake and contemporary (both were, for example, governors of Ofen) has always to be remembered.

The biographical data regarding Sarî Kenân Pasha are much confused. The place-name "Kenân" is in Kırzâdan Süheîlînâs Mehdî, Kârî-zâ-ı Kapudânînâme Dvovî (Stammbi 1285) and Şemî Bay Frâghîr, Kârî-zâ-ı Alâ'înâ, p. 3900, which follows, is the same

According to this authority, Kenân Pasha was buried beside the school not far from Kırk Çeşme.

Bibliography (in addition to the works mentioned in the text): A. v. Géral in Jos. v. Chmiel, Österreich. Geschichtsforscher, Viena 1843, ii. 82; No. 79; D. A. Rubel, Jokl, Básès 1843; p. 41, No. 70; Süfîîa "Oghmûn, iv. 83; J. von Hammer, Geschichten der romanischen Reichs, v. 497, under Kenân Pasha.

(Franz Barninger)

KENEZ. [See Kärî.]

KAR-KERÊK, a fortress east of the Dead Sea in the ancient Moab. The name goes back to the Arabic Kar-kârêk, "town", which the Targum gives for the Moabite place-name Kirâ Jâtî (II Kings 12. 14) and Kir Hârâs (Horvât; I. xvi. 7, 11; jur., xviii. 31, 36). It is found as Xagapqâna in Ptolomy (v. 16, 4) on the mosaic map of Mâdâb, in Stephano Byzantius, etc. Its situation on a steeply sloping spur only connected by an (artificially deepened) saddleback with the main ridge makes al-Kerêk an unusually strong fortress. It is remarkable that it is not mentioned in connection with the Muslim conquest of the East Jordan country or in the following centuries; only with the Crusading period, after it had been fortified by King Fulco's former cupbearer, Payan, does it begin to play a part, and that a prominent one. The Christians of that time, who were not well read in geography, sought the ancient Petra here and called it Petra deserti. As it commandered the pilgrim road from Damascus and all traffic between Syria and Egypt, it caused the Muslims much trouble and was therefore repeatedly but vainly besieged from 665 (1170) onwards by Nîr al-Dîn and Salâh al-Dîn until finally it was so starved out that the garrisons surrendered in 584 (1188) to Salâh al-Dîn's brother al-Malik al-Adîl, to whom it was allotted after Salâh al-Dîn's death. In the years that followed it belonged to various Ayyubids and even after the rule of most kings of this family was over, al-Mughîth 'Umar still held out in al-Kerêk until Bâbârs captured it by treachery and put him to death (661 = 1263).

Behind the strong walls of the fortress the Mamût Sultân Nâşir found shelter in 708 (1309) when he escaped from Cairo to found a real power. At this time al-Kerêk was capital of one of the emirates into which Syria and Palestine were divided; its territory lay chiefly to the south of it. How powerful the emirates, the majority of whom were Christians, then was, is seen from the descriptions by al-Dimashqî, Yâqûtî, al-'Umarî and Kâhdal al-Zâhirî. Under Turkish rule it lost its importance until quite modern times when the Ottoman government put a strong garrison into it and made al-Kerêk capital of a separate administrative district. The walls date mainly from the middle ages, while the lower strata go back to an older period.

(F. Buth)

KERBELA'. [See Mazjûd muhammad.]

KERÊK (Kerîni), a town and fortress on the Crimian peninsula; according to the census of 1897, it had 28,952 inhabitants. In the earlier times it was the site of a Greek colony of the Antikyphai, later called Bospora as the capital of the Bosporan kingdom, from the end of the seventh century the residence of the Kazar governor (with the title Tadus) of the eastern part of the Crim (the western with the capital Khevsurov still belonged to the Byzantine empire). The name Kerêk first appears in Muslim sources and is variously written; it is the references to the texts (for the forms Kærî and al-Kærî) in J. Marquart, Ostpersische und osteuropäische Stiefsohne, Leipzig 1903, p. 506, may be added. Kûhân al-Dîn Bâbâr in W. Thesenmann, Scherzk Materialen, ostszylhthforn des ital. Zentral. Ortschr., St. Petersb. 1884, p. 89, (there Kærî). In Marquart, op. cit., the derivation of the name from the Greek Kêpê Κέρες, or Kærî, as a "monastery near Kerêk is called," proposed by Russian scholars (Wassilyewski, Brunn, Kunik, Harkavy), is also given. In old Russian sources the town is called Kerêkow; for example in the well-known inscriptions of the year 6726 (1268) quoted by Karamzin, Istoriya l森zobliche Istoriya, ii. note 120).

After the final destruction of the Kazar empire by the combined forces of the Byzantines and Russians about 1366 the eastern part of the Crim with Kerêk belonged to the Russian principality, of Tatarak, the capital of which of the same name lay on the peninsula of Taman.
Kerc. About a century later the possession of the steppe territory passed to the Kipchak or Kozans and that of the seaports to the Byzantines. As Ya. Kalakowski (Freskoow. Tovarstw., Kiev 1912, p. 93, on the authority of Milutinich and Mollur, Acta et dipl. gr. nom. recit., iii, 25, suggests, the town of Kerc mentioned in the treaty of 1169 between the Emperor Manuel Komnenus and the republic of Genoa is to be identified with the Russian Korčew. From the 13th-century Crimean period, belonging to the Tatar kingdom of the Golden Horde in the year 1268 (Oct., 1269—Sept., 1269), Kerc with some other towns of the Crimea was destroyed by Nogai to avenge his grandson who was killed in Kafa (Tieuschenburga, etc.); in the 15th-century Kerc came into the hands of the Ottoman Turks. After the conquest of Azov, Peter the Great, during his stay in Vienna in 1698, asked that Kerc should be ceded to Russia by the Turks in the peace negotiations then in progress. But this demand was not granted. After the peace of Carlowitz concluded in the same year, Kerc remained in the hands of the Turks (J. von Hammer, Geschichte des Osmanischen Reiches, ii, 909; K. Soloweyew, Literatur Russ., ind. str., v., Oekographie, Polens, iii, 1171). On account of the danger threatening from the Russians, Sultan Mustafa II in 1702 had a fortress built not far from Kerc (now Venci-Kale) (v. Hammer, op. cit., iv, 47). In 1774 Kerc and Venci-Kale were occupied by the Russians without resistance; Abaza Taghá, who was sent to defend Venci-Kale, did not venture to oppose his troops and returned to Sinope (v. v., 622; Soloweyew, op. cit., vi, 738). The cession of Kerc accomplished by the Russians during the peace negotiations in Bukharest (1773) was steadily refused by the Turks (v. Hammer, op. cit., iv, 638) but had, however, to be granted after the treaty of Kakhlov Reinsdorfe (1774). Henceforth Kerc was a Russian fortress of the second class; during the Crimean war it was occupied by the Allies in May, 1855.

The town, which is world-renowned for its monuments of the Greek, Roman and early Christian periods, had no longer the same importance in the Mahomanian period and has therefore no Muslim buildings of importance.

KERESÓN (ancient Kérès, Cerasa), on the maps Kerasos, a town and harbour in Asía Minor, on the Black Sea. It is the chief town of a kaght of the wilayet and the sandjak of Trabzon, 70 miles west of the last town. The population is 3,420 (3,388 Muslims; 596 Greek orthodox and 944 Armenians). It is built at the end of a rocky cape. The botanist Tournouer found still there the forest of cherry-trees which are said to have given the town its name, for it was from there that Lucullus imported them to Europe. This source of revenue is now replaced by the export of mus (5,000,000 lb. produced annually) and of beans (a million and a half, 2,350,000 lb. annually). There are ruins of the ancient walls, of a citadel and of a citge-cape. The remains of an amphitheatre may be seen some distance off. The ruins of a road, in the north of the town could be cleared away at small expense and the area made into a harbour which would facilitate the export of the produce of the provinces of the interior. The town contains 2 mosques, 1 school, 9 Greek churches; 2 Armenian churches; it has also barracks and an arsenal. — The Keresos of Xenophon lay in the valley of the Kerési-indeect; the present town is built on the site of the one founded by Panaeces I, grandfather of Mithridates VII, King of Pontus, who called it Pharsanias after himself.

The kap of Kerésin includes 138 villages and a náhiya; it has a temperate maritime climate; mountains of volcanic origin, covered with forests, cover the interior (mines yielding argentiferous lead, iron, copper and antimony). The total population is 45,250 (51,704 Muslims and 11,884 Greek Orthodox).

KERKHA, a river in Khuzistan, whose sources lie to the east and south of Nihwende in Irák 'Adajmat. The Çashm-ı Kapım is regarded as the source proper and rises in the Kúh Chīlī Nahjilgham. The map shows a little stream called baran Kunch, here, which recieves the Kérs Salm from the east, near Nihwende the Ab-i Kulan from the east which rises in the Kúh-i Feryat and next the Sarv-e Rúd from Dowlatabad. In this district the river is known as the Gamanā, more accurately Gamanā (corrupted to Garas). The direction of the river, at first N. W., gradually changes to the west. Before it reaches Buvin it is joined by the Shahj Rūd reinforced by the Kangar Khājū. It then turns to the south and is joined by the Kala Şil, the river of Kirmanšāh and later by the Ab-i Karīd, which itself has a number of important tributaries. While the tributaries so far mentioned are all on the right side, on the left it has the Kughānā Rūd, which is a tributary the Matbaran Rūd on the right and the Rūd Khvorsmāl with the Rūd Kūllā on the left. Next come, also on the right, the Lailūm Rūd and the Ab-i Zāl. The direction of its course now changes from southern to westwardly for a short stretch and then to south-west. On this latter stretch the river is called the Kerkha (Kerkh), a name which it temporarily exchanges between Lailum Rūd and Ab-i Zāl for the name Ab-i Salmara. This name preserves the name of the town Salmara [q.v.] which lay west from the river and some distance from it. After the confluence with the Ab-i Zāl the river again turns southward; as soon as the region of Pā-i-pul is reached we have seen linking it with the Ab-i Diz and its tributaries, the Nahr Tabul Khan and the Nahr Dabgāli. The ruins of Salmā lie on one of the eastern watercourses which is later called K. Shawer. The Kerkha ends its course in the region south of Nahr Hāshim, where it receives the waters of the Shatt-al-Djam. At an earlier period the river ran north-west from here to Hawāza (Hawzāin). Among the roads which follow the course of the river from time to time, we may mention the great highway connecting Hamshāh and Mesopotamia in the region of Buvin, and also the road from Halwān to Salmara.

The ancient geographers called this river the Chexaip. The name Kerkha is not found in the Arab geographers; according to Rawlinson, it first appears in a sixth century Persian text. It is, however, probably older. Ibn-al-Afhar mentions a
Kerkhass under the year 553 (1155). If the reference is to this river the name must go back to the 9th century. Ibn al-Fākh, who usually avoids geographical details as much as possible, must have taken the name from an older contemporary source.

Kerkhass is usually called the "river of Sūs", e.g. as early as Ibn Khordādhbih. The geographers have no reliable information regarding its sources; Ibn Khordādhbih says it rises in Dinawar and Ibn Wādiḥ, at Hamadhān, which is true, at least for the tributaries of the Gamasīb; if we take these mimes to refer to provinces. The river, according to the Arab geographers, flows into the Dījah of Libān. Mention is made of the fact that at high tide the river is about two mēl broad at Sūs. Accordingly, Ibn Wādiḥ, the river was called Hinduwān. Probably the "river of Baṣīmā" or "Dījah of Baṣīmā" which drove 7 water-mills and ran a bowshot from the town of Baṣīmā, mentioned by al-Muqaddasī and Yāqūt, is identical with the Kerkhass.

(P. Schwarz)

Kerkina (Kerkennah), a group of islands off the eastern coast of Tunisia on a level with Sfax in 34° 53'—34° 50' N. Lat. A line of this sea about 25 miles broad and full of shallows which make navigation impossible for ships of large tonnage separates them from the coast. The islands are two in number — Sharqi (Sharqi; the Cercinia of the ancients) to the N. E. and Sharbi (Cercini) to the S. E. The first is 15 miles long and 4½ miles broad on an average. The coast is much indented and fringed on the north with small islands. The second, more massive in form, is 10 miles by 4½. The strait which separates them is only 1,000 yards across so that in ancient times it was possible to join them by a bridge. Barley, wheat, lentils, the vine and large areas of "huifs" (Hygro smaragdum) are grown on the islands. The population, which consists of Berbers mixed with foreign elements and has never been organised into a tribe, amounts to 3,665 people. The natives live in numerous villages especially on Sharbi or scattered in isolated dwellings. They follow agriculture and stock-breeding, make ropes, mats, basket-work, etc., but the main industry is fishing. The shallows adjoining the islands are very rich in fish and sponges are gathered in abundance.

Traces of ancient buildings have been found in Sharqi; the episcopal register of Byzacena mentions an episcopus Cervinianus. In the middle ages the possession of the Kerkenna islands was on several occasions disputed between Christians and Muslim. The Normans of Sicily seized them in 1040 (1145—1146) — according to al-Idrisi in 548 (1153—1154) — but held them for only a short time. In 1289 they were ceded by the Pope to Roger Doria who built a castle there. The descendants of Doris ceded them to the King of Sicily who ceded their government to Ramon Mantineri in 1341 A.D. They were finally abandoned by the Christians in 1335. The Sicilians, however, once more made a descent on them in 1424 and carried off 3,000 prisoners.

(K. V.)

Kerkür, a heap of stones, especially a sacred heap of stones. The cult of heaps of stones is extremely ancient and distributed all over the world. It seems to come not from an act of lithotaxy in the strict sense but from a rite of transference or expulsion of evil; the individual, picking up a stone, causes the evil of whatever kind that afflicts him to pass into it — as the case may be, fatigue, physical or moral suffering, sin, the dangerous power that attaches itself to a man in certain sacred neighbourhoods, or all these things together — and gets rid of it by throwing it or depositing it with the stone on a place suitable for absorbing it; the accumulation of these expiatory pebbles forms the sacred piles of stones which rise all along the roads, at difficult passes and at the entrances to sanctuaries. Alongside of these, the throwing or placing of a pebble or the building of a little pyramid of stone often becomes one of the obolatory rites and the rite losing its primitive character has been sometimes taken for a true offering-rite (cf. R. Dussaud’s view, La Materialisation de la prière en Orient, in the Bull. et Mem. de la Soc. d’Anthrop. de Paris, 1906, p. 215—220). The kerkür are often built at the place where a man has been killed and buried; this has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but the casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, proximity of disturbing magical forces). It appears therefore that we always find rites of purification in the origin of the kerkür.

Pre-Islamic Arabia knew the site of casting stones and sacred heaps of stones. The rites of the heathen have preserved evidence of this. It may be asked, if there is not a rite of this kind in the origin of the lapidations at Mas' (for other explanations see the art. Yathrib, ii. 201), and in any case, as G. Dumontynes (Le Pelerinage de la Mekke, Ch. i.) has recently shown, the mixed
stones or ruins which stand at the moonlight marking the graves of Mokka are exactly comparable to the kerkuw which are found from Central Asia to North Africa along the roads at points where one begins to approach the great sanctuaries; there are also examples of this practice to be found equally in Christian countries.

Islam found the cult of piles of stones in all or almost all the lands that it conquered and although orthodoxy looked askance at it, it had to accommodate itself, as to so many other popular practices, which owed their origin to paganism in the remote past. The kerkuw are especially numerous in certain regions, Syria for example, but nowhere has their cult been so developed and so vigorous as in North Africa, especially in the south of Morocco, where it has been especially studied by E. Doutré. There, one may say, there is a pass, or ravine or cross-roads which has not its little pyramidal of stones or its great kerkuw to which every passer-by adds his pebble, not a rustic sanctuary but has its sacred piles of stones.

Sometimes the kerkuw itself, as in other cases a spring, a tree or a rock, has given rise to a sanctuary which has become islamized in a marabout fashion. It is also very common to find under the angis of a saint several of these cults combined. Strange sanctuaries which perpetuate the ancient rites of paganism, still vigorous after twelve centuries of Islam.

Bibliography: The bibliography of the subject is very extensive. What is essential from the general point of view is given in Perret, *Golden Book,* third edition, part vi, *The Shape* of Religions, p. 8-30, where also are given a certain number of references to Muslim countries; from the Muslim standpoint in Doutré, *R形成了racis de l'Islam,* Paris 1903, p. 58-108; de Maga, *Religions d'Arabie,* Paris 1928, ch. 2. Since the publication of this last work, E. Wernertsch, *The Moorish Cults of the Sahara,* Helsingfors 1926, p. 162. (Hernk Bassett)

KERMAT (See KERMAT)

KERMES (See KERMES)

KERMIS (See KERMIAN)

KERRI, a village and district on the right bank of the Nile, fifty miles north of Khartoum. In the xvi century the government of the surrounding territory was conferred by the Fendi ruler, Umaro Danaka, to Abdul Ali, (d. 1522-1562) of the Arab tribe of Khartoum. His descendants, the Abdallaha, maintained their position as a semi-independent dynasty with the title of Mandali or Mandjali until the Egyptian conquest, but transferred their seat from Kerri to Halfaya al-Malik after the rise of Sudan in the latter part of the xvii century.

KERSH (See Kerch)

KETAMA (or KETMKA), one of the great Barbary families; when Islam was introduced into North Africa, they occupied all the northern part of the modern department of Constantine, between the Awaâ (or v.) and the sea, that is the region containing the towns of Tesla, Setif, Béchtha, Nams (Nikâwâ), Tigniss (Tikissa), Mila, Constantine, Skikda (Philippeville), al-Kiff (Cato), Djelfâli (q. v.), Belabes, and the part of Kabylia in the department of Algiers, i.e. the region between Wed-Saadi and Tisse-Seb. One legend flattering the national pride makes them descended from the Hunyantis brought there by the Iblis. Kantù, the eponymous ancestor of the race, was said to be the son of Berenice. He had two sons, Gharan and Ixîlûa, from whom are descended all the tribes of the Kutama. They do not seem to have played a part in the civil and religious wars which desolated North Africa from the time of Uqba to the days of the Alghabids; we do not find them among the Kharifis. When Uqba bint Amr bint Khaqan bint Abul Ali Allah bint Al-Shiit (q. v.) settled in Kelifa she succeeded in maintaining his position there in spite of the efforts of the Alghabids. From there he was able to extend his conquests and to deliver the Mahdi who was a prisoner at Sâmilâ. The empire of the Fatimids was then founded with the help of the Kutama. It was they who furnished its main strength and supplied the armies of conquering Egypt. But these continual efforts exhausted them. Those who remained in the Maghreb after the death of al-Mu'izz were forced to submit to local rulers, such as the Kharifis tell us. In our day the principal representatives of the Kutama are the Zaoukas of the Djerba and the population around Djelfâli and in Little Kabylia. We do not know at what date Islam's doctrines disappeared from among them but long afterwards their attachment to this teaching was regarded as a subject of obloquy and for this reason the powerful tribe of Seddikians of Ketaoua origin, was attached to the city of this family. At the present day all the Berbers of this region are Sunni.

KETKHADD (or Ket Khadd, "house, slave, master, lord"), originally meant the name of the house or head of a family; the name came to be given in Persia in the villages to the headman or bullman, and in the towns to the "dixénaire de quartier" (Charid, *Voyages," 1811, iv. 77) or "district titheman," a kind of police officer whose duty it was to inspect his district and who was responsible to the khâlîfar (q. v.). The administrative reforms recently introduced into Persia have aimed at making the ketkhudâ the representative of public authority (mayor) in the bâstûn (village), the smallest territorial division. Unfortunately, these officials, whose duties were formerly confined to the levying of dues, are powerless in face of the great landed proprietors (A.M. U., June 1914, xxvii, 1924) whose stewards they are and who appoint them; there are, however, some villages where this agent is appointed by the governor or even elected by the inhabitants.

The word has passed into Ottoman Turkish where it has been corrupted to kotây, kotâya and means the "steward of a house."
is the chief or syeite of a workman's guild. The 
\textit{kaba} kadim is the first lady of the palace, the 
housekeeper who has charge of the domestic ar-
rangements and the servants. The \textit{heset} kaba is 
the representative, the agent of the governors 
of provinces at the Ottoman Porte. The name \textit{heset} 
kaba is used to be given to an official whose function 
corresponded to the minister for foreign affairs in 
modern constitutions; \textit{kab} kaba was the inspector of the 
Imamates, the chancellor of the Agia and 
his chief of staff, who could only be dismissed 
without the consent of the whole edjah; he himself had 
an agent with the Agia who had to trans-
mit his chief's orders to the commanders of 
fortresses and was called \textit{kaba-pers}, "the inspec-
tor's lieutenant".

1912, p. 50, 55. (CL. HUART)

\textit{KH} (the seventh letter of the Arabic 
alphabet, representing the harshest of the 
gutturals, with the numerical value 660. It be-
longs to the sounds peculiar to the Arabic 
alphabet (in which it is distinguished from \textit{k} by 
a diacritical point), in its place the Hebrew and 
Arabic scripts do not distinguish it from 
\textit{k}.

In Hebrew it is denoted by a sign which slightly deviates from \textit{k}.

In Assyrian script the sound corresponding to \textit{k} is usually distinguished from the softer 
gutturals.

Semitic languages (Wright, Zimmer, Brockel-
man, Cohen etc.); A. Schade, \textit{Semantik der Lan-
deskreise}, Liéden 1911, p. 19 and note 46.

\textit{Khabar} (a), plural 
\textit{khabar}, \textit{khaber}, \textit{khabar}, \textit{report}, 
\textit{news}. The word is not used in any special 
context in the Karir. If it is used in the Hadith it occurs 
among other passages in the tradition which 
describes how the djinn by eavesdropping obtain 
knowledge from heaven (\textit{khabar} man \textit{alam}) 
and how they are piloted with order messages to 
prevent them from doing so (al-Rabbihi, \textit{Åfaha}, 
\textit{bili} 295; Muslim, \textit{Sahih}, trad. 149; al-Tirmidhi, 
\textit{Tafseer}, Surah xxxiv, trad. 1).

In his collection al-Rabbihi has a chapter en-
titled \textit{Khabar al-\textit{alah}}, which, as the meaning indicates, deals with the validity of traditions regarding 
\textit{usul}, \textit{hadith}, fasting, the law of in-
eritance, and judicial procedure, which are only 
given on the authority of one man.

Al-Ghazali gives the name \textit{khabar} to the 
traditions that go back to Muhammad. He distinguishes 
the sayings of the Companions by the term \textit{khabar} 
(see his \textit{Fusus}, passim). On such similar traditional 
distinctions are Lane's \textit{Lexicon}, s.v., and \textit{Dor.
Tecnic Term}, ed. Sprenger and Nussau Lecce, s.
\textit{Khabar} is further often found in the titles 
of historical works; see Brockelmann, \textit{Gezeh. d. arab.
Litt.}, Index II.

\textit{Sikh} al-Khabar was the tenant of one of 
sultan's officials in provincial capitals whose duty 
was to report to his master all new happenings, 
the arrival of strangers etc. The postmaster was 
often given this office; see Dory, \textit{Sulp.}, s.v., and 
the literature there given. — As a technical term in 
\textit{grammar} \textit{khabar} is predicate.

\textit{Khabr}, a term in prose, indicating the 
expression of the second letter when the end of 
a word begins with a final \textit{khabr} (see the 
\textit{Arabic} list). It affects \textit{k} suffixes (\textit{khabr}), 
\textit{khabur} suffixes and \textit{khabur} suffixes (masculine 
\textit{khabur}, feminine \textit{khabur}, \textit{khabur}). It is found in the metres 
\textit{mustad}, \textit{yak}, \textit{raj}, \textit{umur}, \textit{is}, \textit{arab}, \textit{masul}, \textit{khabur}, \textit{mushaf.} 
\textit{Khabr}, the name of two rivers.

1. The larger \textit{Khabr} is one of the chief 
affluents of the Euphrates, which it joins at Kar-
\textit{shea} (q.v.). In classical literature the name is 
written in various ways: \textit{Arqa}, \textit{Arqa}, \textit{Arqa}, 
\textit{Arqan}, \textit{Arqa}, \textit{Arba}, \textit{Arba}, \textit{Arba}, \textit{Arba}, 
\textit{Arba}, \textit{Arba}, \textit{Arba}, \textit{Arba}. Xanpodus calls it \textit{Arqa}.

It takes its origin in the northern Mesopotamian 
mountains (the Ida M. and Marsus M. of the 
classical authors), flows through the plain of 
Mesopotamia, passes between Dhabl Abd al-\textit{Azn} 
and the Sinjar mountains, where it takes a 
southern direction which it changes in the last 
part of its course into a south-western one.

Its springs, as well as those of its numerous 
affluents, are chiefly connected with three 
important towns, Ra' al-\textit{Ain} (Rehshai'a of the 
Syrians) in the Northwest, Mardin in the North 
and Nasibin in the Northeast. The springs at Ra' 
al-\textit{Ain} are said to be three hundred in number; 
they were shut off by iron grills, in order to 
prevent people from being drowned in them.

Downstream from Ra' al-\textit{Ain} the Khabr is 
joined by the river of Mardin, which by the Arab 
geographers is called \textit{Sawri}; on Sachau's map it 
bears the name of Nahr \textit{Zagan}. Just before passing 
between Dhabl Abd al-\textit{Azn} and the Sinjar 
mountains it is joined by the river of Nasibin, 
which in classical literature is called Mygdonius; 
the Arab geographers apparently mean this river 
when speaking of the Hiraus; on Sachau's map it 
is called Diaghldgela. The course and the 
occupations of this and other affluents are still 
uncertain.

The Arab geographers mention several more or 
less important places situated on the Khabr 
between Dhabl Abd al-\textit{Azn} (classical Ganzaita) 
and Karshia, such as \textit{Shih}, (upper and 
lower T.), \textit{Tahin} (also on Sachau's map), \textit{Arsha} 
or \textit{Arsha} (also on Sachau's map), \textit{Shiha}, 
\textit{Shamshiyat} (probably Sachau's Shamshin), 
\textit{Kunik} ("the custom-house"), \textit{Al-Ghuri} ("the pool"), 
and \textit{Suwar} (Sachau's \textit{Suwar}). At \textit{Kunik} there 
was a bridge of boats. "Much cotton was grown here 
and by it lay the small lakes of deep blue water 
called Al-Mahbath, said to be unfoodtable" (Le. \textit{Strange}).

The whole region through which the Khabr 
flows, chiefly in its lower course, was renowned 
for its fertility. Its trees are mentioned in Arabic 
poetry, its fruits were exported to the towns of 
the Iraq. But al-Jarir already speaks of the 
plundering raids of the Beduins which cast a shadow 
over these natural riches. Sachau calls the tribes 
remaining in the plain near Sheddadha Dhabl. 
When he travelled there (1899), the large fertile
valley was devoid of towns, villages and human beings in general.

II. The History of Khabur, one of the affluent of the Tigris which takes its rise on the mountain of Southern Armenia south of Lake Van and west of Lake Urmia. It passes between the mountain ranges which are usually called Djaal Hasaif (North) and Zakhla Dagh (South). The latter mountain derives its name from the town of Zakhla (classical Aboit). The Khabur joins the Tigris between Maghara and Marra. The Arabic geographers often call it Khabur al-Hasanaya, after the town of this name. Here the river was spanned by a magnificent stone bridge which was looked upon as a miraculous piece of masonry. Al-Hasanayn probably survives in the hamlet of Hasun Abbe.

KHADIDJA (Khadija, Al-Khadija). Early actions from the root khadi ta 'to leave in the burch'; a technical term in Arabic grammar, applied exclusively to Alah when He withdraws his favor or help from man. The disputes regarding it first appear in connection with the quarrel over Judas [q.v.]. A starting point is found in Sura iii. 154: "but if He abandon you to yourselves (yukhain), who will help you after Him! Let the faithful therefore trust in God!" On this Alah's view is: "The Companions deplore from this verse that he is exclusively a result of Alah's help (cf. John, vii. 35), while unbelief is a result of Hiskhadija. This is obvious as the verse points out that the matter is entirely in God's hands."

A more detailed exposition is given by Ibn Al-Hajj. "Right guidance and assistance consist in God's preparing (ta'zid) the believer for the good for which He has created him; while falsehood consists in His preparing the falsiy for the evil for which He has created him. Linguistic usage, the qiyas, the force of logic, and the attestation of the facts and those in the past who handed down traditions and the companions and successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligences, namely such as belong to the followers of blindness and muteness, like Al-Najjari, Thumama, Al-'Alif and Al-Dilahi, are all unanimous. Then follows this reasoning: Alah has given man two forces, hostile and opposed to one another, zanat (power of discrimination) and hubb (passion, desire). When Alah protects the soul, zanat prevails by His help and power. But when He leaves the soul to itself (khadijat), He strengthens the hubb with a strength which amounts to sending astray (i'ad).

Khadija is therefore, according to Ibn Al-Hajj, the opposite of hubb and zanat, and the conceptions approach that of 971. The Makkanis (as already indicated by Ibn Al-Hajj's words) see in it a contradiction to Alah's justice: according to them, Alah does not urge a man to evil. In their terminology, Alah therefore means the refusal of divine grace (msa al-'ilah), while, according to the Ash'aris, khadijat is the creation of the ability to disobey.

KHADIDJA, Muhammad's first wife, was a daughter of Khawilad of the Kuraish family of Al-Shaar. The authorities are unanimous in saying that when she made Muhammad's acquaintance and took him into her service she was a well-to-do merchant's widow who was carrying on business independently. She had been twice married previously and had children of both marriages. The one husband was a Mal-Batini, the other a Taimuri, Alu Ha, whose real name is variously given; but this Alu Ha is also mentioned by others among the followers of Muhammad, which if both stories are true—would make Khadija a divorced woman. When she discovered the brilliant qualities of her young employee, the story of this is adorned with all sorts of legendary features—she proposed marriage to him according to the generally accepted story, her father was dead by this time, according to another, still alive and opposed to the marriage; so that she only obtained his consent after making him intoxicated—a favourite motif in fiction (cf. the art. MUHAMMAD). Most authorities make Muhammad twenty-five at this time and Khadija forty, which, in view of the fact that Arab women aged early and that she bore him at least five children (see the art. MUHAMMAD), is not even probable, although in later times extraordinary capabilities in this direction were ascribed to the Kuraish women (cf. al-Dilahi, Ta'rif Ummah, ed. van Vloten, p. 78). Otherwise we do not need to doubt the essential accuracy of the tradition, for the alteration in Muhammad's circumstances has been traced to it in the Kuran (xxvii. 6 sq.) and the fact that in spite of his, in marked similarity he was content with one wife as long as Khadija lived is best explained by her social position which she perhaps used to insist on this condition. Her wealth must have been a great help to him during his struggle and her death (which is said to have taken place three years before the Hijja) after she had probably suffered.
considerable losses through the hostility of the great merchants, contributed to make his position still less enviable. But her personality seems to have been of even greater weight with her husband; in any case tradition draws a very attractive picture of the moral support which she afforded him during the excitement and agitation of the first revelation. That Waraka b. Nawfal [3, v.] was her cousin must have helped to make her sympathetic to Muhammad's aims.

(KF. DURIH.)

Khadim (A.), servant; in Turkish often used with the secondary meaning of *uncle*. The word is applied to male and female, freemen or slaves alike; as to the latter see the art. *Ami*. The collective is *khadami* and the plural *khaddam*. Khadim al-Farrūqī al-Gharjīfī (servant of the two sacred areas i.e. Mecca and Medina) was one of the titles of the Sultan of Turkey (see Barthold, IH. vi. 1916, p. 379, 499).

There have always been free servants alongside of slaves in Islam. Anas b. Mālik [4, v.] entered Muhammad's service as a youth (al-Bukhārī, Ḥadīth, bāb 74 etc.) and his records it to his master's credit that the latter had never said a harsh word to him nor ever even asked him for an explanation of his doings (al-Bukhārī, Waṣyā, bāb 25). Servants were used on journeys especially, and put up the tents, etc. These servants are called farīḥ (lit. spreaders of the carpets), a name which is, however, given to servants who look after the beds and the house generally (Lane, The Thousand and One Night, London 1859, ii, 202, note 16).

In Egypt in Lane's time there was an organisation of servants. They were under special shahāds to whom anyone who required a servant had to apply; these shahāds were responsible for any dishonesty or breach of trust by their people (Lane, Memoirs and Customs, London 1899, p. 159). There were also free female servants who performed the lowest household duties (cf. etc., p. 147, 157) for a very small wage (p. 168). Some of the male servants used to shave their beards (p. 127).

In Turkish houses of the upper classes these people, who are usually addressed by their name followed by Agha, work as cooks, gardeners, jussiters, etc., and they have to attend to the women's apartments in the house with them. They communicate by the swivel-box (delik). If they are married they do not live in their master's house.

The women's servants in the konak live in the women's apartments and have very little personal freedom. They sometimes belong to impoverished Turkish families or are the children of former servants and slaves. They are called hasefe (from ḥastaf) or kalıfī (from kalifā') and the men ḥadīṣ, aṣfīṣ, hameṣṭak (ḥameṣṭak). The servant girls (ḥameṣṣī = hameṣṣī) are usually Greeks or Armenians.

Uniformed officials in the imperial and official services were divided into various corporations (chamberlains, janitors, musicians) and were included under the general name bābānu = ḥadīṣī. (Information supplied by Mr. Kranendonk. On such corporations see also v. Harten, Carlthinke und der Besenmei, Pest 1822, ii, 395 sqq.)

In North Africa, especially in Algeria, conditions have become considerably influenced by European customs. In place of khādīm, ḥajab, phr. āṣhab, it is commonly used; this honourable designation is applied to the clients of prominent Moroccan families who are employed in various duties from the lowest to the most confidential missions. They usually receive no regular salary but live on the bounty of their master. They accompany him on the road, look after his mount, and order illumination for trips at night, etc. If their master is a great khādīm or the head of a brotherhood he appoints one of his āṣhab to accompany travellers who are passing through the areas over which his authority extends. This is a sign that they are under his protection.

Al-Khadir (Al-Khādir), the name of a popular figure, who plays a prominent part in legend and story. Al-Khādir is properly an epithet ("the green man"); this was in time forgotten and this explains the secondary form Khīr (about "the green"), which in many places has displaced the primary form.

Legends and stories regarding al-Khādir are primarily associated with the Kur'ānic story in Sūn xviii. 59-61, the outline of which is as follows. Mussūs goes on a journey (al-Bukhārī, bāb 35), the outcome of which is the Madīnāl (al-Bukhārī, bāb 42). But when they reach this place, they find that as a result of the influence of Satan they have forgotten, the fish which they were taking with them. The fish had found its way into the water and had swum away. While looking for the fish the two travellers meet a servant of God. Mussūs asks that he follow him if he will teach him the right path (ṣuṣr), and he comes in an arrangement but the servant of God tells Mussūs at the beginning that he will not understand his doctrine, that he must not ask for explanations and at a result will not be able to bear with them. They set out on the journey, however,
during which the servant of God does a number of apparently outrageous things, which cause Mith in his anger to lose patience so that he cannot refrain from asking for an explanation, whereupon the servant of God replies: "Did I not tell you that you would be lacking in patience with me?" He finally leaves Mith and on departing gives him the explanation of his actions, which had their good reasons.

The servant of God is called al-Khadir by the majority of the commentators. Others, however, identify him with Mith's servant (see below). Both interpretations have their roots in Oriental legends. The Qur'anic story may be traced back to three main sources: the Gílgamesh Epic, the Alexander Romance, and the Jewish legend of Elijah and Rabbi Joshua ben Levi. The two last are, of course, again closely related to one another: at the same time it should be noted that the fish episode is lacking in the epic and is only found in the romance (cf. R. Hartmann in the Z. d. A. xxiv. 397 sqq.).

The main features which the three sources have in common with the story in the Qur'an are the following:

The Gílgamesh Epic. Overcome with melancholy at the death of his friend Enkidu, the hero Gílgamesh sets out on a series of travels to look for his ancestor Utnapishtim (Khasiástra, Níyársthómu) who lives at the mouth of the rivers. Gilgamesh wants to ask him about the plant of life which will enable man to escape the power of death.

The Alexander Romance. The fish episode (which we are here concerned with) which shows Alexander on the search for the spring of life is found in greatest detail in Syriac literature, in the Lay of Alexander (cf. C. Humann, Das syrische Alexanderlied, in the Z. d. D. M. G. Ix. 169 sqq., line 188 sqq.). Alexander is accompanied by his cook Andreas (cf. the article Andreas). During the laborious journey through the land of darkness Andreas on one occasion was washing a saltfish in a spring; the contact with the water made the fish live again and it swims away. Andreas jumps in after it and thus gained immortality. When he tells Alexander his adventure the latter at once realizes that this was the well of life. All attempts to find it again failed: Alexander is denied the immortality which becomes the lot of the unfortunate cook, who does not know what to do with it.

The Jewish Legend. (pointed out in Jellinek, Ket Ab-Middarat, v. 153-155) tells how Rabbi Joshua ben Levi goes on a journey with Elijah under conditions laid down by Elijah on those above the servant of God in the Qur'an. Like the latter, Elijah does a number of apparently outrageous things which affects Joshua as it did Mith. Zútr, Gíggomelte Verläßlich, x. 130, (not accessible to me first pointed out the similarity of this story to the Qur'anic legend. A comparison of the main features of these three sources with Sára xviii. 9 sqq. suggests the following conclusions, questions and hypotheses.

The chief figure in the Qur'anic story is called Mith. Some commentators doubt his identity with the great prophet (see below). There is not, however, the slightest hint of another Mith anywhere in the Qur'an. On the other hand, we have no legends of Mithá which make him, like Gílgamesh and Alexander, go on the great journey. We might suggest the following explanation of the difficulty. The figure of Joshua ben Levi, with which Muhammad first became acquainted through the Jews and which does not again appear in Muslim legend, was identified, as we shall see, with Joshua b. Nînîn. This identification may have resulted in confusion of his master Elijah with Joshua b. Nînîn's master Mithá. Mithá thus represents Gílgamesh and Alexander in the first part of the Qur'anic story and Elijah in the second.

The figure of the travelling-companion is not connected with the Gílgamesh epic where it is not found, but with the Alexander romance and the Jewish legend. It probably comes in the first place from the romance. This is suggested by the fact that the companion is called fard (here practically "servant"), a term that points to Alexander's cook rather than to Rabbi Joshua; the fish episode, which also is only found in the Alexander romance, points in the same direction.

The Madjmá al-Bahraín is given as the goal of the journey. The expression has no direct original either in the epic or the romance, although there are points of contact in both. Utnapishtim lives in ßá marál, i.e. at the mouth of the rivers. It is not quite certain what this expression means, but it is probable that the place in the extreme west is meant where the sources of all running water are. This, however, still leaves a link in the Qur'anic expression unexplained. This is still the case, if we attempt to trace it to the Alexander romance where (i.e. in the Syriac Alexander legend; see Burgd, op. cit., p. 259) Alexander with his army crosses a strip of land between the eleven right seas and the ocean. It is also possible that the expression goes back to none of these but to another story unknown to us, which perhaps never found its way into literature, in which there was mention of the meeting-place of two seas. According to western Semitic cosmology, this is the end of the world where the oceans of earth and heaven meet.

We can likewise only guess at the origin of the rock (verse 63). It also belongs to cosmology (see A. J. Wensinck, The Ocean in the Literature of the Western Semites, in the Verh. A. a. N. K., No. 2, p. 259 sqq.). It is found neither in the epic nor in the romance, again an indication that the Qur'anic story borrowed from other sources also.

The servant of God at the Madjmá recalls Utnapishtim-Khasiástra. He is called (verse 64) one to whom God's mercy had been shown, to whom divine wisdom had been granted. This sounds almost like a translation of the name Khasiástra and the granting of divine wisdom is perhaps an echo of Utnapishtim's immortality.

The text of patience to which he subjects the newcomer comes from the Jewish legend only; the servant of God in this respect thus represents Elijah.

The commentators, Hâdît, and historians have collected a mass of statements around the Qur'anic story, additions which, like the story itself, came for the most part from the three sources already mentioned. The first question discussed is whether the principal character is Mith. b. Íróm, or
The test of patience is embellished by the commentators with a wealth of detail. It would take up too much space to go into them here; cf. the commentaries on Sura xviii, 59 sqq., and the works on history and tradition mentioned in the Bibliography.

As may be expected from what we have said above, another branch of tradition lays particular emphasis on the connection between al-Khajir and Alexander's search for the spring of life. Friedländer, however, goes much too far when he says (Dis Chaldei-Legenden, p. 108 sqq.) "that originally Chalduir had nothing at all to do with the puzzling servant in verse 64— who belongs to quite a different cycle of stories—but with the servant of Mosen (Alexander) who has charge of the flock in verses 59 sqq., and that he is identical with Alexander's cook whom we know so well from Psalms and the Syrian homilies".

For Khajir is, as we have seen and will see further, connected with Usafidat as well as with Alexander's companion.

There is no translation of the Alexanders romance in the Arabic literature known to us (cf. Weymann, see Bibliography). On the other hand, there are a number of, in part unedited, versions of the Alexander saga, which have been examined by Friedländer. It would take us too far to go into the differences between these versions with regard to our subject. These sources show their independence of the Kuran not only by the fact that they make Khajir the companion of Zeus ('Kiz, but also by the completeness of any reference to the facts of the Kuran. Al-Khajir usually appears as the commander of Alexander's vanguard on his march to the spring of life. In al-Sar's description he is called the king's vizier and has become the principal character, throwing the king himself into the background; in 'Usafir he is Alexander's cousin, conceived and born in similar circumstances to him and at the same time. The usual account of the journey to the spring of life makes Alexander and al-Khajir go their ways separately; in some versions, the latter has the fun with him and discovers the miraculous well through the fish's becoming alive when it touches the water; in other stories, on the other hand, there is no mention of the fish and al-Khajir recognises the spring by other signs; in others it is the fish with which he diverges, without knowing its virtues (e.g. al-Tahari, l. 414). In one version in Nişâfî, al-Khajir does not go with Alexander but with Eifah to the spring, out of which both drink and both become immortal.

III

The descriptive character of the name al-Khajir is so obvious from its meaning that tradition could not but give the hero's real name, as well as his genealogy and date. We find him most frequently called Balya b. Malik. In al-Manṣûrī (Ma'rīfi, ill. 124) the latter is called a brother of Khajir and thus a given place in the South Arabian genealogy. This makes it probable that Malik is identical with Malkam (I Chronicles, viii. 9), who is also included among the
South Arabian patriarcha. This genealogy is next;

translated to Shem through Yablagh (Shelaj) and

and Gna (Elah, ed. de Goethe, i. 415; al-Ma`alibi, Mafraj, i. 92; al-Nasawi, on

Muslim's Sahih, p. 135). Is this Bible (الب Elemental) perhaps not a corruption of Elia (اليا), which is identical with a Syriac form of the name Elijah. On the other hand, Elijah is also given in the Muslim form liyaz as al-Khadir's proper name and also Eliaja, Jeremias (cf. God's words in Jabala, p. 887), Khajdun (al-Tahart, ed. de Goethe, i. 415; al-Djazarkani, Tafsir al-Khadir, i. 106, and al-

Khadir's Chahardzam, p. 335, under Chahird). Ibn Hajar also gives the following genealogies (Jabana, p. 823 ap.): (1) He is a son of Adam (الائم), with this is connected the story (Jabala, p. 887 ap.): Abi Huan al-Sulamit, Khulul al-Mu`ammar, p. 1) that al-Khadir took care of Adam's body and finally buried it after the flood; (2) He is a son of Kazli called Khajdun; (3) He is al-Mu`ummar (the Long-lived) b. Mutuk b. `Abd Allah b. Naar b. al-Azd; (4) He is Ibn `Abd Allah b. Sur b. `Abd Allah b. 'Isa; (5) He is the son of Pharaoh's daughter; (6) He is a Persian, or his father was a Persian, his mother a Greek or vice versa; it is also said that he was born in a cave, fed there on the milk of wild beasts and finally entered the service of a king (al-Damani, i. 315; Ibn Hajar, p. 804 ap.); cf. also his meeting "on the market-place of the town Tartus" with the man who asks him for alms (al-Damani, i. 315; Ibn Hajar, p. 804 ap.).

This does not, however, exhaust the traditions about his name and genealogy. We shall briefly quote here the following from Matsu, Preliminary to the 57: Al Khalid, queen Fabulak, Moslemo eunuch faun, in Phinax filius Elazar, fig Aaron; cujus anima per metempsychosis unigravit primo in Elymus, demul ex Elys in S. Gregoriam, quem propuerum Mahometani omnes summo honoris source praeclarit. — The latter identification is probably due to a confusion with St. George, with whom al-Khadir has certain points of resemblance; cf. therein Clemens-Gaukens in the above archeological, vol. xxvii. ap., and Friedlander, sp. cit., p. 225. Clemens-Gaukens further pointed out the relations between the consonants -h- and the North Semitic group -ph-.

The name has also been taken as a corruption of Khosaitas (Guyard in the R. E. S. U. I. 344 sqq.) or connected with Ahamar, the wandering Jew (Lilachares in the Z. A. V. ill. 116).

Very varying dates are given for al-Khadir's period. Sometimes he is called a contemporary of Abraham, who left Babel with him (al-Tahart, ed. de Goethe, i. 415); sometimes he is put in the period of Abraham; he is a contemporary of Alexander and lived down to the time of Midr. (Ibn Hajar, Jabala, p. 886); according to others, he was born in the period of Nabiys, b. Anas (i.e. Isinah b. Amai) (al-Tahart, sp. cit., p. 415 sqq.). The divergence of these statements is partly connected with his immortality (see below).

More important are the explanations of the name given in the original sources. He is said to have become green through diving into the spring of life and thus got his name (Ethiopic Alexander romance; cf. Friedlander, sp. cit., p. 235 ap.). As already mentioned, he lives on an island (al-Shanari, sp. cit., p. 317); he is also said to worship God on the islands (al-Saw, see Friedlaner, sp. cit., p. 183; al-`Ubaydi, p. 192). This may point to al-Khadir's having originally been a mariner being. The following circumstances point in the same direction: he is frequently called the patron of seafaring people (e.g. Tafsir al-Khadir, i. 107); he is said to be appealed to on the Syrian coast by sailors in stormy weather. In India he has become a regular river-god under the name Khadir Khad (q.v.), who is represented sitting on a fish. Clements-Gaukens and Friedlander sought the origin of the figure mainly in this direction, the latter on the assumption that the Greek Glaucus legend reached the Muslims through a Syrian intermediary (sp. cit., p. 107, 265). But apart from the fact that we know nothing of any such intermediary, a connection between al-Khadir and Glaucus would only explain one aspect of the former, nor would it tell us anything about the origin of the figure, indeed one may doubt whether it is right to seek for the origin of a figure so complicated as al-Khadir, who has characteristics in common with Umamith, with Alexander's cook, and other figures.

There are other things to be considered. In a number of Arabic explanations of the name, al-

Khadir is conceived not as belonging to the sea but to the vegetable kingdom. He sits on a white skin and it became green (e.g. al-Nasawi on Muslim's Sahih, p. 135; cf. al-Tahart, Tafsir, yr. 168). "The skin," adds al-Nasawi, "is the earth." Al-Djazarkani (106) is still more definite. "The skin is the earth when it puts forth shoots and becomes green after having been bare." According to Umara, al-Khadir is told at the spring of life: "Thus art Chahird and where thou feast thou in it, the earth will become green." (Friedlander, sp. cit., p. 145). Wherever he stands or performs the sacred, it will become green (al-

Nasawi, sp. cit.; al-Esai, Masarat al-Khadir, i. 336). These are statements (especially the last) which remind us of a Messianic passage in the Old Testament: "Behold the man whose name is the branch and he shall grow up out of his place" (Zachariah, vi. 13). Al-Khadir is really connected with two Messianic figures — with Elijah (cf. the art. Eljah) and with Jesus; these three form with Idris (q.v.) the quartet of those who have not tasted death (Tafsir al-

Khadir, i. 107).

The variations in the character of al-Khadir result in different views regarding his nature. If he is a prophet (see Jabala, p. 883 app.), it raises doubts whether he is to be included among the Apostles (al-Nasawi, sp. cit., p. 135). He is, however, also human, angelic, mundane and celestial (al-Tahart, ed. de Goethe, i. 344, 790). Characters of the highest purity as well as Sufi circles regard him as a saint (wali). According to one Sufi view, every age has its Khadir, i.e. so far as the Naqth al-mubinyya for the time being is al-Khadir (Jabala, p. 891). As wali, if three times appealed to, he protects men against theft, drowning, burning, kings and devils, snakes and scorpions (Tafsir al-Khadir, i. 107; Jabala, p. 903). Sky and sea and all quarters of the earth obey his word; he is God's khalifa on the sea and his wali on land; he can make himself invisible at will (Umara in Friedlander, sp. cit., p. 145). He flies through the air, meets Elijah on the dam of Alexander and makes the pilgrimage to Mecca with Alexander every year (cf. Jabala, p. 904 sqq.).
Every Friday he drinks from the Zamman well, and Solomon's pond and waters in the well of Siloam (Tell el-Azim), p. 107; Friedlander, ep., cit., 185; 187. He can find water below the ground and talk the languages of all peoples (al-Suli in Friedlander, p. 184).

His immortality is particularly emphasized (cf. Rackham's poem "Childher"; Umar in Friedlander, ep., cit., p. 145; Abu Hadi at Sidjestan, Khotab al-Mu'man, p. 1; jisba, p. 887 sqq., 892, 895). According to the jisba, p. 282, he was given immortality after a conversation with his friend, the angel Raful, in order to establish the true worship of God on earth and maintain it. Ibn Hadjar describes a meeting between al-Khadir and Muhammad in various versions (jisba, p. 899 sqq.). On meetings with individuals who lived at a later date, see ibid., p. 905 sqq.; on the table which was set down to him from heaven see ibid., p. 919; on his presence at the battle of Kafira see Mrudj al-Dhahab, iv. 216.

He lives in Jerusalem and performs his jak in every Friday in the mosques of Mecca, Medina, Jerusalem, Kaba, and on the Mount of Olives; his food is ka'bah and water-parsley (Tell el-Khamsa, i. 107; jisba, p. 889 sqq., 904).

On his marriages we have as early as classical Hadith (Ibn Mada, Zab, h. 23) a legend also mentioned by al-Thalabi, jisba, p. 193 sqq., which in its main features must have come from Christian sources. It is the motif of the pious youth married by his parents against his will who persuades his young wife to preserve her virginity (cf. the Syrian Acts of Thomas, 4th and 5th). The story links up with that of Tharsos's daughter.

KHARAJA KHIRI MAHI. (See Khamra.)

KHAPDAJA, a subdivision of the Hwazin tribe of Ujjal which remained as powerful Bedouins longer than most of the other tribes which inhabited the Arabian peninsula at the dawn of Islam. The genealogists give their affiliation to their kindred clans as Khafadjah b. Asir b. Ujjal, and they were subdivided into eleven branches: Mu'awiya ibn 'l-Karay, 'Abd ibn 'l-Nawaira, Al-A'm, 'Abd ibn 'l-Aghbar, 'Ali, 'Ali ibn 'l-Hashim, 'Ali ibn 'l-Hassan, 'Ali ibn 'l-Husayn, and 'Ali ibn 'l-Husayn. They had their territory in the time before Islam to the south-east of al-Madina and owned one of its wadis, among which Jarzun Lobi and Sha'ara are mentioned. A hundred years later we find them moving much farther east and at war with the tribe Hanafi in the Yamama (424, vii. 322). Probably the Kharajis' movement in the Yamama in the eastern part of the fourth century of the Hijra caused them to move further south towards the borders of the 'Iraq. Here we find them towards the end of the fourth century established as masters of al-Kufa under their amirs Thumlu and his son. They may have been at last allies of their cousins the Banu Yassist (not Bouid as in Westenfeld's Tabellen, or Yassid as otherwise stated) who established themselves as rulers of al-Mawil and the surrounding country. They were rather in opposition to them. In the year 391 (1000) Karawagh attacked them in al-Kufa and they were compelled to leave the country and move among the Euphrates towards Syria, where they remained not only till the following year, when the 'Abbassid general Abul Djaffar al-Kharajid called them to his aid when the 'Ukaili besieged al-Madina. This brought them again back to their ancient dwelling-places and as the Bagdad government had probably supplied them with arms they utilised these a few years later, in 402 (1014), in an attack upon the caravans of pilgrims. They had seized the wells at Alakia to the south-west of al-Kufa a short distance into the desert, and prevented the pilgrims from approaching to the water and then fell upon them, slaughtering and plundering, making many of the survivors prisoners. Emboldened by this success they demanded the lands to the right of the Euphrates which had been in the hands of the 'Ukaili, and marched under the command of Sulfin, Ulwan and Radjul, sons of Thumlu to al-Anasir, laying the whole neighbourhood waste and besieging the town. An arm sent against them from Bagdad and supported by the 'Ukaili drove them out and Sulfin was actually captured, but released upon the intercession of Abu al-Hasan ibn Mazyad al-Ansili. No sooner had he been released than in the following year 403, news was received at Bagdad that they were plundering the country round al-Kufa under Sulfin. An army was sent against them which was aided by Abu al-Hasan ibn Mazyad and they were surprised at the river al-Ku'man. Sulfin escaped but his brother Muhammad was made a prisoner, but this defeat did not render the fact that many of the pilgrims who had been captured in the year 403 were liberated and returned to Bagdad, where they had been believed to have been killed. Meanwhile the 'Ukaili Amir Karawagh had been captured and released and he now tried to make peace with the Khadajah, trying to join Sulfin ibn Thumul, but after they had joined they were attacked by troops sent from Bagdad and routed. They both asked for pardon which, strangely, was readily granted. This gave a few years of comparative peace but in 417 (1024) Dabulis b. All b. Mazyad al-Ansili and Abu al-Fytan Muzni b. Hassun, now chief of the Khadajah, made a plundering expedition against the lands which belonged to Karawagh in the Sawad [q.v.], assisted by troops from Bagdad, and they encountered him near al-Kufa of which he had made himself master. Karawagh fled towards the North and was pursued by the combined tribes of Ansar and Khadajah, who actually took possession of al-Ansar, but after this success the two tribes dispersed again to the pasturing quarters. Then the Huoward marched, with his followers to al-Ukman near Bagdad, and the land round it; when pursued by Dabulis they turned North and attacked al-Ansari. The inhabitants defended themselves for a while but
as the town was not protected by walls the Khafādja entered plundering and burning. When they learned that Karwāsh was coming to drive them out assisted by troops from Bakhdad they left the town, but soon returned and looted the town for the second time. When finally Karwāsh was able to drive them out he spent the winter in the town and instructed walls to be built to protect the town from further surprise attacks. Now Manūr swore allegiance to the Būyid ruler Abū Kallājīr and marched south to al-Kūtā where he had the Khafādja said in the name of Abū Kallājīr, for which he received jurisdiction over the waters of the Euphrates. This had the result that in 420 Dubais severed his allegiance to Abū Kallājīr as he was afraid of the depredations of the Khafādja. In the following years the Khafādja held sometimes with one party and again with another and when in 425 (1035) Dubais had a quarrel with his brother Thubāt they sided with the former but quarrels also arose among the Khafādja chiefs during which 'Alī b. Thumāṭ was killed and his nephew at-Hasan b. Abū 'l-Barakat became chief of the tribe. When in 428 (1036) the Ḥabīb Bārīa Ṭūghtī rebelled in Bakhdad, the general of the Caliph, al-Bassirī employed among others the tribe of Khafādja to quell the revolt, as a result of which Ṭūghtī was executed. We do not hear much about the Khafādja for some years, but in 446 (1054) they again made an incursion upon al-Jumārīn, belonging to Dubais, which they plundered; al-Bassirī came to his assistance and the Khafādja retreated into the desert. They were pursued and their stronghold Khafālū was besieged and raised to the ground, except the citadel which was a strong building of cement. When al-Bassirī rebelled against the Caliph in the same year he took al-Anbār after a prolonged siege and we find that among the prisoners he took there were 100 men of the tribe of Khafādja. Again followed a period of comparative peace, but when in 485 (1092) the pillar of salt from Bakhdad had passed al-Kūtā they were attacked by the Khafādja. The news having been received at Bakhdad the Khafādja retaliated. The result of this attack was great slaughters among them and this was the cause that in future they were no longer powerful enough to do serious damage. A few years later, in 494 (1105) the Khafādja came into conflict with the Taiṣī tribe 'Ubāda over some stolen camels and while the latter could muster about 500 warriors, the Khafādja were unable to place a similar number into the field, but they were assisted by Sādāq b. Manṣūr [q.v.], the chief of Aaṣī, and were victorious. This success was however of short duration as in the following year the tribe of 'Ubāda, now assisted by Badrīn, son of Sādāqī, seditiously routed the Khafādja who were compelled to forsake their pasture grounds and wander north towards Syria, while 'Ubāda in future occupied the lands adjoining the Sawādī. Again in 520 we hear of Khafādja being sent in broods into the ʿIrāb, but the troops sent against them were sent after them killing large numbers. How weak the Khafādja had become is evident from the fact that in 526 (1131) they assembled in the neighbourhood of al-Hilla and al-Kūtā, asking for the relief-food and dates which had apparently been granted them. The governors of the two towns refused to grant their request and Kāisp, the governor of al-Hilla sent 250 soldiers to drive them off, a similar corps being sent by the governor of al-Kūtā. They pursued the fleeing Khafādja along, the river Euphrates as far as al-Rahāf al-Shām, where the Khafādja made a stand as they could not retreat any farther and in the fight which ensued Kāisp, the governor of al-Hilla, was slain while Arghāsh, the governor of al-Kūtā, took refuge with the governor of Ṭabarīn. Khafādja then pleaded for forgiveness stating that they were constrained to fight by being driven to extremes. Their excuse was accepted as the waste Ibn Hubayr who had marched out against them saw the futility of pursuing them into the desert. The last time we hear of the Khafādja is in the year 588 (1192) when they came to the assistance of the governor of al-Baṣra, who in the latter was threatened by the troops of Ṭāhir. In addition to the events narrated we find that Khafādja were among the Arab tribes who assisted in the siege of Tiberias in 507 (1113) when Baldwin had taken refuge there after an unsuccessful raid upon Jalabat.

According to al-Kalqaspandī a branch of the tribe of Khafādja was settled in Lower Egypt. Among the poets of this tribe in ancient times was Tawbā b. al-Humayyorī, celebrated on account of his love for Laila al-ʿAbyyatī and the elegies which the latter composed upon his death when he was killed in a raid.

Al-Khafādja, Ahmad b. Muhammad b. Umar al-Khafādja, called Sīhāb al-Dīn al-Misri al-Ḥanāfī, was born near Cairo about the year 979/1071 and received his earliest education from an uncle on his mother's side, Abū Bakr al-Shanawwānī, whom he calls himself the Sibwātī of his age, and under him he studied both Ḥanafī and Shī'ī law; the philosophy of the Prophet entitled al-ṣīla'ī/ṣīla'ī, and al-Khāyānī, he read under Ḥabīb al-ʿAṣlīnī and al-Mukarnīsī and he even studied medicine under Dāmāt al-Bāṣrī. Later he made the pilgrimage to the company of his father and took the opportunity to hear the lectures of the learned men in the two holy cities. After his return from the pilgrimage he made his first journey to Constantinople, where he found several teachers of outstanding merit, among whom he mentions Ibn Abū al-Abnak, Mustafā b. 'Abd al-'Aẓīm and the Jewish Rabbi Dāmāt under whom he studied mathematics and the books of Euclid. His principal master, however, was Sa'd al-Dīn b. al-Hāsan, and when the latter died and his other teacher soon followed him in death, Constantinople became devoid of men of learning. He had meanwhile gained favour and received the post of Kāfīr of the province of Kūmānī and rising in rank he became Kāfīr of Şūbā under Sa'd al-Muraddī, who finally appointed him to the same office in Sūba. These offices enriched him considerably and he was ultimately sent as Kāfīr 'Aṣār to Egypt. This post, however, he did not hold for long as through intrigues at Constantinople he was dismissed. This decided him to make another journey to Constantinople and on travelling there he passed through Damasus and Halab, in
both of which cities he was entertained by the men of learning. His expectations in Constantinople were not fulfilled and he gave vent to his anger in the literary outburst which he entitled al-Maṣfād al-Rāwīyya. Instead of making matters easier for himself he incurred the hatred of the Mufti Yalay b. Zakkiyya and was ordered to leave the city immediately. As an acknowledgment of his worth as a scholar he received the appointment of an ordinary Kâdi at Cairo, but he seems to have devoted his remaining years to study and to the composition of his works. He died in Cairo on Tuesday the 12th of Râjâd 1069 (3 June 1659). Al-Khâfaḍîa enumerates most of his works in his autobiography; many of them of considerable size, while he himself tells us that many of his treatises were never collected in book-form. His most extensive work is a commentary upon the Tafsîr of al-Baghdâdi, which he entitled ‘Aṣâfﬁt al-Kâdi, and which had been printed in Cairo in four large volumes. The work follows the usual tedious method of explaining almost every word, and for traditions and explanations it advances the statements of a large number of other authors who have treated upon the same subject. The same is the case with his second largest work, a commentary upon the Sâb‘a‘ of the Kâdi ‘Yâfî, entitled Nasîs al-Râf‘yâq, which we have seen, he studied under Ibrahim al-Aynî. Here again he quotes all accessible literature dealing with the biography of the Prophet, giving the various authorities who have recorded the same traditions. Neither of these works contain anything original, because the subject did not call for anything new. All that was required of the author was to bring together every detail upon the subject he could find in the works on hand. This work has also been printed in Constantinople 1267 a.m. in four volumes. Of an entirely different nature are his two biographical works: Khabar ‘l-Zawâ‘il f. wa al-Hâfîz min al-Baghdâdi and Khabar al-Ashraf wa-Nasir al-Hâfîz al-Daragî. The titles prepare us for the style in which these two books are composed, the evil influence of the Tafsîr of ‘Alî al-Qalili and the Khabar of ‘Imâd al-Dîn is in both works apparent; we get instead of biographies an exultation of verbosity without any noteworthy information and in most cases we can only infer that the persons named lived during, or shortly before, the time of the author, but the arrangement according to countries gives us the information where the persons lived. For biographical details both works are useless. We get however a fair amount of contemporary poetry enabling us to judge to what miserable depth the art of rhyming had sunk. While the first named work exists only in manuscript, the ‘Râdîsîa has been printed three times in Cairo (1273, 1294 and 1350), which shows us that the work is appreciated in Egypt. The most valuable portion of this work is an autobiography of the author (in which he has permitted to state when and where he was born) and the ‘Alîbâd al-Râwîyya which is directed against the learned men of Constantinople. The autobiography has furnished the material for the account of his life above and in the work of al-Muhâji, and has ‘Aṣâf‘a‘ al-Afnî. Of more value are his Tanbih al-Mubâkh and his Sâb‘î al-Dânî. The former is of a work of the class called ‘aṣâfî in 30 volumes (mâjâl), and he tells us, in the introduction to his al-Shârîf, that al-Hâfîz al-Kâdi or even Thâhâ would acknowledge its excellence if they were able to see the book. Its value consists in having preserved extracts of other works now apparently lost or undiscovered. It is interesting to find him quote from the Nâdhû al-Munzûl of al-Ushârûdîn (printed in Damascus 1340), the Muhâjir of Ibn ‘Hauw, the Fihrist of Ibn Nâzîm al-Ansârî of al-Kabûrî, and Al-Bakrî, considering the rare manuscripts of these books are. The book is in fact a curious collection of odd information from all kinds of sources. Apparently there are two editions of this book, one Cairo 1284 and a second without date printed in Tânîs. The ‘Aṣâf‘a‘ al-Afnî is not the Tanbih al-Dânî of al-Shârîf, as is indicated by the title, a work dealing with words of foreign origin in the Arabic language. The author has used for this purpose the Mu‘annâb of al-Munzûl [q.v.] and similar works, but is not content with explaining, or simply mentioning, words of foreign origin, as he also gives ample specimens of vulgar errors in correct Arabic speech. Close reading of this book is a commentary on the Durr al-Qâdarî of al-Hâfîz, which has been printed together with it the Durrata in Constantinople, 1299. In this work he not seldom corrects al-Hâfîz and frequently gives useful additional information and this work together with his ‘Aṣâf‘a‘ are probably the best of his compositions. His Diswa‘ is mentioned by al-Muhâji and his actually been preserved in manuscript in Copenhagen, but my knowledge of his poetry is confined to what al-Muhâji quotes or that, he himself says in his own work. It is not of a high standard, but his whole works are typical of his period and vividly reflect what we may expect from his contemporaries.

KHÂFA‘I KHÂN (MUHAMMAD HÂZîM NâZÎM AL-MUKHTAR), historian, his title of Khâfa‘i Khan was given him by Muhammad Shah and is derived from a family connection with Khâfa‘i, a district of eastern Persia, famous for its distinguished men. He was a son of Khâfa‘i Khan a confidential servant of Murâd Bakhsh, youngest son of Shah Djiha. The place and date of his birth are not known, but it seems probable that he was born in India, and in a statement in his history (i. 739) implies that his birth took place about 1643. The statement is that 74 years after the death of Shah Djiha’s minister, Sai’d Allah, he was 52 plus the age of discretion (141). In other words he was 66 Muhammadan years old in 1728 (1066 + 74 = 1140 A.H.). His father was Khâfa‘i Khan, a confidential servant of Shah Djiha’s youngest son, Murâd Bakhsh, and was severely wounded at the battle of Samurgh. Khâfa‘i Khan possibly, like Bernier’s friend Danielmand, began life as a merchant, or as an official’s clerk, and it was in one of these capacities that he visited Bambay in 1669. He had an interview with an English official (ii. 424, and Elliot-Dowson, vii. 350). He served under Aurângzeb, Bahâdur Shah and Muhammad Shah in the Deccan and in Gudjarat, and was long stationed at Sârad. He also lived at Ahmadshah, which he defends against the structures of Deobâd and at Khâka, in Sîrâj’s country, and in the beginning of Bahâdur Shah’s reign he was commander of Campûr (1771). Probably he ended his days at Haidarábâd in the service of Asfâl Djiha Nâzîm al-Mulk (hence our author’s title of
Nisân al-Mulkî) about 1732-33. He was an intimate friend of Shah Nâšir, the author of Ma'âlih al-Dawârî (who was also a Hâjibastâi officer) (v. iii. 689 of the Bibl. Ind. ed. of that work, and Khâfî Khan, ii. 678).

Khâfî Khan wrote a history of the Indian branch, of Timurid dynasties, and called it Mushâhk al-Usâmah (the Choice Compendium). It is a standard work and is much admired, especially by Orientals, for its style, and its accuracy and impartiality, though it is often too grandiloquent for modern taste. Still, it is by far the most interesting of native histories of India, with the exception of Babur's, and ought to have been translated long ago. At an introduction, beginning with Turâk b. Yâphet, and describing the origins, etc., of the Tartars and Mongols, it gives short biographies of Timur, his third son, Mirâm Shâh, and the descendents of the latter, who were the emperors Babur's ancestors. These are followed by a history of the emperors of Agra and Dîhlâ, beginning with Bâbur, of whom there is a tolerably full account, and ending with the beginning of the 14th year of Muhammad Shâh. Bâbur conquered India in 1526, and the 14th year of Muhammad Shâh was 1732, so that the history covers a period of over 200 years. The last ten years of the history are given in a very abridged form. The most valuable parts of the work are the accounts of Shah Jâhân and Awrangzîb, for both of whom he had a high admiration. The history has been published in the Bibliotheca Indica (2 vols.), but the edition is not complete, for it wants the first part or volume. This last, however, is very rare, and perhaps does not exist in its entirety. There is only a portion of it in the British Museum. The author refers to it in vol. i. p. 49 of the printed edition. Khâfî Khan also wrote a history of the minor Muhammadan dynasties of India; but this too has disappeared, though a small portion is preserved in MS. in the India Office Library (Kethâ, Cat. 88, 407). It was apparently of little value, being mainly an abridgment of Fârâhî.

The charm of Khâfî Khan's history consists in his digressions and his frequent use of his own observations, and of information derived from his father and grandfather. He is a somewhat bigoted Muhammadan, and he is extremely curious about Shah Jâhân and Awrangzîb. That he was sure over Awrangzîb's treacherous capture and subsequent execution of his younger brother, Murid Bâkhsh, the capture he represents as a clever manoeuvre (it certainly was to the public advantage), but he is evidently half ashamed of it, for he declines to give the particulars. In his account of Murid Bâkhsh's attempt at escape, and his trial and execution, which he got from his father, he does not plainly set down Awrangzîb's responsibility, and continues to pay him a compliment for his generosity in rewarding the man who declined to prosecute Murid for the murder of his father. He also deals lightly with Shah Jâhân's conduct to Khamraw, and to his competitors for the throne, and never musing about his debocheeries. Still he is far more honest than Abu'l-Fulât. His accounts of Shah Jâhân's and Babar's are very fair, and in the latter of them he has a very interesting account of Nur Dâshân. He also got it from a very old man, who as a child had accompanied Nur Dâshân's father on his journey from Persia to Afghanistan and India. Khâfî Khan, too, though, like Tâzik, he may tell us too much about emperors and their wars, does not omit the more interesting subject of plagues, and famines, and of internal administration.

Bibliography: Elliot-Dowson, History of India, vii. (which contains a very full abstract, by Prof. Dowson, of the 2nd volume of Khâfî Khan); Colonel Lees, Materials for the History of India (Hertford 1868), p. 37 sq.; there is a manuscript translation of vol. i. by Major Gordon in the British Museum (Add. 26, 617). (H. Revenige).

Khapî, the eleventh metre in Arabic prosody, containing three sâhîf and five fârûd:

\[
\begin{align*}
\text{I} & : & \text{fârûd} & \text{mutâfîm} \\
\text{II} & : & \text{sâhîf} & \text{fârûd} \\
\text{III} & : & \text{sâhîf} & \text{mutâfîm} & \text{mutâfîm}
\end{align*}
\]

All the feet lose their second quasiletter when the last quasiletter of the preceding foot is retained and vice versa. The foot \text{fârûd} is often changed to \text{fâlûd} (= \text{futûlûd}) by taqdîs. (Motl, Ben Chineker.)

Khaiwar, an oasis on the road from al-Medina to Syria, 100 miles from al-Medina. Dougherty, who stayed in Khaiwar from November, 1877, to March, 1878, describes Khaiwar as a group of wide, watered valleys, which lie together like a palm leaf on the edge of the lava region (Hara) and all run into one main valley. These valleys are gashed in the lava-field, beneath which lies sandstone which, wherever it crops out, has a burned and discoloured appearance. The oasis lies 3,300 feet above sea level and Dougherty puts its population at about 1,000 souls. The bottoms of the valleys are covered with rushes, the springs have a slightly sulphurous taste and are surrounded by incrustations of salt. In spite of its many palm trees, the land has an uninviting aspect and great stretches of ground lie untilled. The computing height of al-Hisn, illustrated by Dougherty on p. 104, consists of a great basalt rock, which rises out of the Wâdi Zauukiya, like an erecte block. The modern settlement is built on its south side. The length of the walled platform of the citadel is 200 paces and the breadth 90. The floor is deep mud, which may be partly of the old clay buildings that have melted away upon the uneven rock. In digging, potsherds, broken glass, eggshells and horse-dung are brought to light. Two ancient pyramids of clay bricks, the lower parts of which are cased with stone, enclose an ancient covered well, which was used to supply the garrisons.

The name Khaiwar is said by Vâlût to have meant "castle" in the language of the Jews who lived there; according to Sulîh b. Muhammad al-Khâfî, it took its name from Khaiwar b. Kûniya b. Mûhâbî, who was the first to settle there. The ancient Khaiwar, according to the old Arab geographers, lay in a very fertile district which was rich in palm and luxurious cornfields, and was situated on seven castles: Hijâm al-Nââm, Hijâm al-`Uspûl, Hijâm al-Shariq, Hijâm al-Nââm, Hijâm al-Sâltûm, Hijâm Wâshî, and Hijâm al-Mâthâ, at the further boundary Hijâm Wâshî, in which there were palms and other trees and which later belonged to the Prophet Muhammad, and the greatest stronghold
of Khaibar, Ḥun al-Kanṭir, which 'Alī b. Abī Ṭalib, afterwards Caliph, captured, the lower part of which was occupied by the mosque of the Prophet (also called al-Manṣūra), built after the conquest by Ṭabūb b. Muqā. The spring in the fort of al-Shībāq was called al-Ḥamma. The Prophet called it Ṣimāt al-Muḥabbah ("the angels' share"). It was used to irrigate the adjoining lands. The water flowed away in one channel and the other third in another. Both had the same direction. If three pieces of wood or three dates were thrown into the well, two went into the channel containing two-thirds and one into the other. No one could take more than a third of the spring water out of this channel and if anyone stood in the channel which took two-thirds in order to send more water into the smaller channel, the water overpowered him and flowed past him so that none went back into the second channel to increase its share.

The oldest mention of Khaibar in inscriptions is in the bilingual inscription of 568 A.D. of Harrān in al-Ladēza, which E. Littmann has given the correct interpretation in Observations sull'iscrizioni di Harrān e di Zibal, in R.S., 1912/13, p. 193 sqq. The inscription bears the date "in the year 563 [viz. of the era of Boṣra], a year after the expedition of Khaibar"). According to Ibn Kurābā, Khaibar al-Muḥabbah, ed. Wattenfeld, p. 315, this expedition took place under King al-Malik b. Abī Ṣanāmīr (al-Harīrī b. Ḍabāla), who reigns from 528 to 569/570 A.D.; the inscription now gives as the exact date for this event the year 567 A.D. Much more serious for the history of Khaibar and its Jewish population was Muhammad's campaign, but set aside the beginning of the year 7 A.H. (628 A.D.) with about 1500 men against Khaibar, presumable with the object of obliterating the unfavourable impression made by the treaty of Hudaybiyya and of offering his followers a rich substitute for the booty they had lost. The Jews of Khaibar had apparently prepared for Muhammad's attack, but they were not united among themselves. The population was not a solid body, living together within one area, but was scattered among the surrounding valleys, where they occupied in little groups fortified houses in the midst of rich palm groves and cornfields. Every settlement had its own particular name. The valley was divided into three territories, called al-Naṭāb, al-Shībāq, and al-Kaṭiba. This strategically unfavourable mode of settlement was from the first a disadvantage, and the position of the Khaibars became still more precarious when they were, the Ḥaṣāṭin, left them in the lurch, and their 4000 auxiliaries left Khaibar for their homes, Muhammad thus had a free hand. The advance was carried out by night and in the morning the Khaibars found the Muslim troops confronting them; they had taken up their quarters behind the Ḥarrā on the edge of the desert. It took Muhammad about six weeks to conquer the whole district of Khaibar. Every strong house, every fortified post had to be besieged and stormed frequently after heavy fighting. The castle of al-Naṭāb was the first to be attacked; it resisted for over a week. In revenge for the appraoch of its defence, Muhammad had the splendid palms and around it cut down. 400 were destroyed. Before the battle of Ṣaḥār put a stop to further devastation. Al-Shībāq was next stormed. The successes of the Muslims had already much weakened the strength of the defence. Treachery had placed al-Naṭāb in the hands of the Prophet, and as engines of war had also been captured, in the use of which a Jewish traitor instructed the Muslims, the resistance of the Jews diminished considerably so that the other strongholds fell more quickly. The last Outbreak of the defence, al-Kaṭiba, fell almost without resistance. The Jews were sentenced to lose all their property and were left with their wives and children and allowed to till the soil which they had previously owned. Half of the harvest had to be handed over to Muhammad. This tribute continued to be paid until the Caliph 'Abd al-Malik b. al-Ḥajjāb drove the Jews out of Arabia. In later years, however, the Jews returned in certain numbers to Khaibar. Benjamin of Tudela says that in 1123 A.D. a Jewish colony, 1150 strong, which must have formed a closed community, lived in Khaibar. Not too much stress need be laid on his statement. Burckhardt, who saw Khaibar at the beginning of the sixteenth century, mentions that the Jewish community once settled here had entirely disappeared.

(ADOLF GROHMANN)

KOHAIBAR PASS, the northern route between Afghanistan and India, leading from Kabil to Peshawar. The pass runs from Kshka to Djamird and is about thirty-three miles long, its centre lying in 34° 6′ N. and 71° 2′ E. Its highest point, Landi Kotal, is 3,378 feet above sea-level. Alexander the Great probably sent the division of his army under Hephaestion and Perdiccas through the Khaibar, while he himself followed the northern bank of the Kabul river and crossed the Khaibar valley into Badgaw and Zawal, Mahmūd of Ghūsina used the pass only once, when he marched to meet Djamird in the Peshawar valley. The Amir Timur used it when invading India in 1398 and when retiring in 1399.

Kabir invaded India by the pass in 1345 and Humayun, after capturing Kabil, on his return from exile, traversed it. It was the route regularly used by Akbar and his successors between the Punjab and Kabil, and Djamirdhān, first fortified by Humayun, was named after Akbar. The pass was held in Mughal times, as now, by the Afrits, a turbulent tribe extremely jealous of foreign encroachment, and in the reign of Akbar their hostility was accentuated by the establishment in this region of a heretical and fanatical sect, the Kwašantya (1517), who commanded the adherence of the Afrits, Vīharī, and other tribes. In 1588, on the death of Mirāz Muhammad and Amīn, ruler of Kabil and younger brother of Akbar, Kāpsī Mān Singh, marching to take possession of Kabil in the name of the emperor, was obliged to force the pass, an operation which was performed with
difficulty, and the suppression of the Rawshantyaz cost much blood and treasure. In 1672 the tribes attacked Muhammad Ahmad Khan Awrangzib, governor of Kabul, in the pass, annihilated his army of 40,000 men and captured the women and children and the imperial treasure and elephants.

Nadir Shah, advancing by it to attack Nadir Khan, was defeated and his army driven back by the forces of Ahmad Khan. The chief of Bahr was captured, Nadir Shah was taken by the engagement, and Ahmad Khan overthrew him near Djamud. Ahmad Shah Durran and Shah Zamun used the pass on several occasions when invading the Punjab.

The British first used the Khair Pass in 1839 in the attempt to establish Shah Shinde in Afghanistan, and have since used it on several occasions, more than once suffering disasters in traversing it.

By the treaty of Gandamak (1839) between the British and the Amir Yākūb Khan, the control of the pass was left to the former, who have exercised it latterly by maintaining an experienced political officer for the pass, at whose disposal are the Khair Rifles, a large corps of Afghaunis under British officers. The arrangement has not been entirely satisfactory, but was probably the best that could be made with so turbulent and treacherous a tribe.

Bibliography: Ali Tabari, ed. de Goeje....

Khair Al-Din, a famous Turkish architect of the time of Sultan Walla Haydarii (1457–1512). As a result of the habit of Turkish historians of mentioning favourably every pious founder, writer of chronographs, and calligrapher, but only exceptionally giving the name of the creator of a masterpiece of architecture, or even giving any biographical notice of him, Khair Al-Din's activities are veiled in obscurity. It is certain, however, that he is a historical personality. He is said to have been the son of the architect Ustad Musah. His masterpiece is the Haydari Mosque, a vigorous piece of architecture, in Constantinople (built between 1501 and 1507) (on which see Elwey, Syiğat-nâme, Stamh 1514, l. 141; Sâ'd al-Din, Tadhkireh, Stamh 1428, l. 251; Humner, Constantinopolis und die Byer, Pest 1822, l. 403; Khartosts Baysant, Konstantinopolis, Athm 1850, l. 421).

The popular Turkish view of the importance of Khair Al-Din, who is considered the real founder of Ottoman architecture and is approached by none of his predecessors (Elwey b. Ali, Meloued al-Madina, Masi, etc.) or his successors (M. Khaim, Kanmil al-Din) down to Sâ'd (q. v.), the greatest of Ottoman architects and one of the greatest of the world's architects, is confirmed by his masterpiece, the Haydari Mosque.

The scheme of two half-domes supporting the principal dome is modelled; it is true, on the Aya Sofya, but dominated by another conception and deliberately developed further. Fious legends are associated with the building.

There is also a little mosque by him which bears his name, not far from the tomb of the Grand Vizier Sinâl Pasha at Pamâk Kapiâ. His tomb is in front of the khâlil's caravanserai.

Barbarossa, the famous Turkish corsair and Beylerbeyi of Algiers and brother of 'Arabî (q. v.). In spite of the statement to the contrary by Haibo, it is he who is referred to by the epithet Barbarossa (Barbarossa, Annalhuru) in the diplomatic correspondence of the French court. Born at Metellin about 888 (1483) he was at first a pirate under the command of his brother and acquired a great reputation for skill and bravery. When 'Arabî set out on his expedition against Tlemcen he left his brother the governorship of Algiers, which he had just taken. When the news of the death of 'Arabî arrived, Khair al-Din was unanimously chosen by his companions to succeed him. But he soon found himself in a very critical position. The towns of Cherchell and Temis had rebelled; the Kabyls of Ibn al-Khalil, king of Kako, assailed him; and to Hammu, king of Tlemcen, he had invaded the Chelif valley; finally the Algerians, tired of the cruelty of the Turks, were only waiting an opportunity to throw off the yoke. Thus feeling unable to cope with all his opponents with the forces at his command, Barbarossa sought the help of Selim, Sultan of Constantinople. He paid homage to him for the lands conquered by his brother and promised to pay him tribute. The Sultan, who had just conquered Egypt (1517), eagerly seized this opportunity of placing the shores of the Western Mediterranean under his sway. He accepted the homage of Khair al-Din and gave him the rank of Pasha and Beylerbeyi (cf. the article E. N.) At the same time he sent 2,000 men with artillery to Algiers and authorised the enrolment of volunteers, to whom he granted the rights and privileges of the Janissaries (q. v.). 4,000 Turks or Levantins thus came to serve under Barbarossa and formed the pasha or milizia of Algiers.

The arrival of these reinforcements enabled Khair al-Din to meet the dangers which threatened him. A conspiracy of the Algerians who had agreed with the tribemen to set fire to the fleet and massacre the Turks was put down and the heads of the ringleaders fixed on the gates of the Pasha's palace. A Spanish force under Ugo de Moncada was repulsed. The Christians landing at the mouth of the Harroub (al-Harşâ) had taken up their position on the heights of Kudrât al-Sulih and began to bombard the town. Barbarossa succeeded in drawing them out of their entrenchments by attacking their ships drawn up on the shore and forced them to re-embark (1549). In the east, on the other hand, he was less fortunate. A Tunisian
army was advancing on Algiers. He set out against that and met the enemy in Kabylia on the territory of the Fislet Ummell. In the middle of the battle, the Sultan of Ktilo, secretly won over by the Hassafs Sultan, deserted and turned against the Turks. The latter were cut to pieces and Barbarossa, with his rear to Algiers, turned back, and retired into Djedjeli (in gu). During this time the Kabyles laid waste Obidja and occupied Algiers, while Checcell and Tenes again revolted (1520).

Taking refuge in Djedjeli, Khaire al-Din began to reconstitute his army and to gather reinforcements. He resumed his old trade of pirate and from 1520 to 1524 he ravaged the coasts of the western Mediterranean, assassinating considerable booty and gathering numerous adventurers around him. He was soon strong enough to seize Collo (1521), Bence (1522) and Constantine. He also recruited the help of the natives of Little Kabyla by making an alliance with "Abd al-Aziz, chief of the Baiz Areba, ruler of the Sultan of Ktilo. Thus he was able to 1525 to resume his interest against Ibn al-Kaib. Defeated at the Wadi Boudan and again at the pass of the Banib Alhga, the latter was killed by his own soldiers. Militja and Algiers were occupied by the Turks, the rebel chiefs of Tenes and Checcell were put to death and the inhabitants of Constantine, who had in 1527 expelled their kadi and massacred the Turkish garrison, severely punished. Finally, Hassan, who had succeeded the al-Kadi, tendered his submission and agreed to pay an annual tribute (1528).

The capture of Peñón, a Spanish stronghold on a island within canning-shot of Algiers, completed the devastation of Turkish power. In the beginning of May, 1529, Barbarossa began the bombardment of this fortress, a garrison of which the Spaniards had neglected to strengthen; it was taken by storm on May 27 when there were only 25 unwounded defenders left. Khaire al-Din had the governor, Don Martin de Vargas, put to death and ordered the outer walls of Peñón to be razed to the ground. The debris were used to build a mole joining the island to the mainland. This jetty protected the Cockade from the west winds and enabled the corsairs to leave their ships in shelter which they had previously been obliged to draw up onshore during bad weather. This created the harbour of Algiers, a refuge and base for operations for the Spanish fleet. Disturbed by this new success of Khaire al-Din, the Spaniards tried to secure a landing place on the coast by taking Checcell, but the expedition was against this town by Andrea Doris ended in failure (1531).

Now definitely installed in Algiers, Barbarossa set himself to increase still further his military force by recruiting, along the coastaries, whose insubordination and insubordination were in dangerous, bodies of troops personally devoted to him. He formed a gama of 500 renegades, for the most part Spaniards, raised 7,000 to 8,000 Greeks and Albanians, enrolled Kabyles, and entrusted the command of this new force of his artillery to one of his companions. He thus found himself able to undertake an expedition against Tunis, with the inhabitants of which he had long had secret negotiations. By taking this town he wished to anticipate the designs of the Spaniards and secure himself the control of all the eastern shore of Africa. The Sultan, to whom he had communicated his plans, gave him the required au-

thorisation and sent him auxiliaries. Leaving the government of Algiers to his Khalifa, Hassen Agha, Barbarossa entered Tunisia, seized La Goulette (Aug. 16, 1534) and from there advanced on Tunis. Military Hassen, who tried to stop him, was defeated in a battle fought near the gate of al-Djezza, and fled to the sea (Aug. 18). The Turks entered Tunis and plundered the town. The rest of the kingdom submitted without resistance.

Barbarossa's success was, however, of short duration. In the month of June, 1535, Charles V appeared on the coast of Tunis. On July 14th the Spaniards captured La Goulette and on the 20th became masters of Tunis. The Christian slaves, whom Khaire al-Din had refused to massacre, burst their chains and joined the attackers. Fearing he might be surrounded by the enemy, the Beylerbey fell back on Bence, where he found his fleet, which he had sent there on receiving news of the preparation of the Spanish expedition. From there he sailed for the Balsares Islands, sacked Mahon and brought back to Algiers 6,000 captives and considerable booty.

A little later, Khaire al-Din went to Constanti

nople by order of Sultan Selim III, who in 1535 had appointed him Najdul-Begada, and wished to entreat him with the direction of the naval campaign against Charles V and his allies. He had not to return to Algiers, where authority was exercised in his name by a hatturqa. At Constantinople Barbarossa devoted himself entirely to his new office. He reorganised and increased the Turkish fleet and took an active part personally in the naval war. In 1537 he ravaged the coasts of Aputa, tried unsuccessfully to take Brindisi by surprise and took part in the siege of Corfu. Not having been able to capture the latter place, he turned his attention to the Venetian possessions in the Aegean Sea and occupied the islands of the Dodecanese. The following year he completed the conquest of the Archipelago by taking Scutari, Seyros and Carpathios; then he made a descent on the island of Crete, where he burned two towns and 50 villages. In the Ionian Sea he gained two victories over Andrea Doria, at Preveza and St. Maura. In 1539, with the help of his lieutenant, Hassan Corso and Dragut, he recaptured Castellamare in the Gulf of Cattaro and Malvasia and Naxos in the Morea. The Venetians were forced to submit to concluding a truce with the Porte.

These successes secured Barbarossa a position of preponderating influence in Constantinople. Honoured by the friendship of the Sultan, he persuaded Selim II to continue the war in the Mediterranean. He was also decidedly in favour of the French alliance. From 1534 he had been in correspondence with Francis I; after the conclusion of the treaty of Bagdad, he was the confident of the ambassadors of the 'Christian King' and leader of the French party in the Grand Divan. Charles V endeavoured to win him over to his cause by secretly offering to recognise him as sovereign of the whole of North Africa in return for a payment of 1,000,000 scudi. Barbarossa, while pretending to lend himself to the Emperor's plans, at once revealed them to the Sultan. The disastrous end of Charles V's expedition to Algiers (1541) still further increased Khaire al-Din's prestige, although he had taken no share at all in the defence of the town.

Hostilities suspended since the truce of Nice (1538), began again between Francis I and Charles
V (1541). Barbarossa was given command of the Turkish fleet, which was to co-operate with the French forces. In 1543 he operated along the Italian coasts, took Reggio, ravaged the coasts of Calabria, then, after joining the Duc d'Enghien at Marseilles, laid siege to Nice. The town of Villefranche, where the Turks landed, was taken and destroyed. November 1543, the castle would not now take the arrival of Doria’s fleet and the Marquis del Vasto’s army forced the Turks to withdraw. A portion of their fleet wintered at Toulon while the rest went along the Catalan coast and sacked Palamos and Roses. The peace of Crespy (1544) ending the war, Khair al-Din returned to the Levant, pillaging the islands and shores of Tuscany and the Kingdom of Naples.

After this campaign, Barbarossa retired to Constantinople. He had great wealth in this town, including several palaces on the Bosporus.

He died on July 4, 1546, at the age of 63, and was buried in the mosque which he had built at Büyük Dere (see the art. HERE). By his will he ordered all his slaves under 15 years old to be liberated and left the others, 800 in number, to the beaupère as well as 30 armed galleys. The bulk of his wealth was divided between his nephew and his son Hasan, whose mother was a Morena, and who, on three different occasions filled the office of governor of Algiers (see the art. HASAN PASHA, above, ii. 281).

Barbarossa was not only a successful corsair and a remarkable soldier; he also possessed certain of the qualities of a statesman, an indomitable resolution which enabled him to surmount the greatest difficulties, and a very accurate sense of the conditions on which: the establishment of a permanent state in Barbary depended. He understood that Turkish rule, being restricted to the coast, naturally tended to be precarious; he therefore tried to make himself master of the interior. His ambition was to make in one vast state, of which he would be the sovereign, the whole of North Africa. If circumstances did not permit him to realise this plan, at least he finished the work begun by Arzish, and he may be regarded as the real founder of the Regency of Algiers.

Khair al-Din Pasha. (See Cenkeriki.)

Khair al-Din Pasha, a statesman of the time of Abd al-Hamid II. He was of Circassian origin, but spent his early years in Tunis, where he rose to important offices as a result of his brilliant abilities. He ultimately became grand vizier. His great aim was to achieve a closer relationship with Turkey, which was recognized in 9 frirman of Sultan Abd al-Aziz. As a result of a quarrel with Sadiq Pasha, then Wali of Tunis, he left the Tunisian service and retired to Tunis in 1854 (1877) Abd al-Hamid summoned him to Constantinople and appointed him president of the commission on financial reforms and later of the Council of State. In the difficult period after the loss of the Rum-Turkish war he was appointed Grand Vizier in 1895 (1878), the eighth in the short period. Abd al-Hamid had then been reigning.

Khair al-Din was very liberal in his views and endeavoured to further the reforms movement now beginning by introducing improvements, especially in the administration of justice, and tried to strengthen the Grand Vizier’s power as much as possible in opposition to Abd al-Hamid’s wish to make the Grand Vizier a mere instrument for the execution of instructions given by the Yildiz Khans. He brought upon himself the opposition of the ulama, who would only allow the Grand Vizier the right of presiding at the council of ministers. After only eight months of office he was dismissed. He died in Constantinople in 1880 (1889) at the age of nearly 70 and was buried in Ayvah. He bore the reputation of being reliable, fearless, steadfast and liberal. He wrote an Arabic work entitled Akhbar al-Mudhit fi Mafsifat Ayyubi al-Mudihit, said to have also been translated into Turkish and French.

(Khail al-Din)

Khairaaln是指在India的西布（Districts of Sitapur，United Provinces, India. Population (1901), 13,774. It was formerly a place of importance, and is said to have been founded by one Khaira, a Fast, in the 4th century. It is, however, most probable that the name was given by Muhammadans to an older town on the same site; and it has been identified with Mathura replacing Mathura, an ancient holy place. A number of temples and mosques are situated here, some of them dating from the reign of Akbar, but none of much
interest. It has been a municipality since 1809. Trade has suffered owing to the rise in importance of the railroads, but there is a daily market, and a small industry in cotton printing.

At the time of Akbar the Sakhir of Khairabad consisted of 32 mahals or parganas, but many of these lay in the present districts of Kheri and Hardoi. This pargana consisted of the Southern portion of the country lying between the Gond and Zarayan rivers. It was bounded on the north by Hargram, on the east by Lakarpur and Biswan, on the west by Surjpur and Ramkot, on the south-east by Machkotha, and on the south-west by Pirmar. The whole of the Southern half of the pargana is a high lying tract with a high soil and good natural drainage producing in favourable seasons fine crops of wheat. North of the road from Surjpur to Khairabad and from the latter to Biswan, the land is lower, the soil being softer and liable to flooding from numerous jalls and water-courses. However, the cultivation is generally poor, the majority of the tenants belong to the inferior cultivating classes; the holdings are large; the cattle are wretched; many of the landlords are heavily in debt and means of irrigation are deficient.

KHAIROPUR, a state in Sind, lying between 26° 16' and 27° 45' N., and 70° 30' and 72° 14' E. The state has no separate history until the fall of the Kalhora dynasty of Sind in 1783, when Mir Farukh Ali Khauro Talpur, a Balush chief, established himself as ruler of Sind. Subsequently his nephew, Mir Suharsh Khauro Talpur, founded the Khairpur branch of the family. His dominions at first consisted of the town of Khairpur and its environs, but he enlarged it by conquest and intrigue until they extended to Sabalankot and Kangaon on the north, to the Dhaissam desert on the east, and to the borders of Kachh Gandiva on the west. About 1813, during the troubles attending the establishment of the Bakhra dynasty in Kachh, the Khairpurs withheld the tribute which they had hitherto paid to the rulers of Afghanistan and became virtually independent, but jealousy between Rustam, who had succeeded his father Suharsh in 1811, and his brother Ali Murtuza, caused unrest to the crisis which led to British intervention. In 1852 the individuality of the state as a political entity was recognised by the British government, which secured for itself the use of the Indus and the road of Sind. The Mirs of Sind were both for the passage of British troops through their dominions during the first Afghan war, but Ali Murtuza of Khairpur supported the British policy, and after the battles of Miran and Daha, his state retained its political existence.

Sibliography: E. A. Langley, Narrative of a Residence at the Court of Mirs Ali Murtuza, Londres, 1876; Sind Gazetteer, 1876; Imperial Gazetteer of India, 1904-1909. (T. W. Hart)

KHAIROLÜLLAH EFENDI, an important Turkish historian. Born in Constantinople, of a family which had over 160 years unbroken service with the Sultans, the son of the famous 'Abd al-Hakim Efendi (d. 1270 = 1853/1854), a theologian and physician, who was three Serd-
KHAKANI. [See FATH 'ABD MEXH.]

KHAKANI (Abd al-Jabbar ibn MANSUR HAKAN), a Persian poet, born in Gauda (Khesarpol) in 1000 (16th Century), the son of a carpenter, Ali, and a Nestorian woman whom he had purchased from a slave-dealer. His grandfather was a weaver. His uncle KAFI b. UDHAM, who was his benefactor, was a physician and druggist. He was taken charge of by him when his father, sunk in poverty, abandoned him. Trained in the school of Abu 'L-ULA, the latter accepted him as his son-in-law and obtained from the Khakan Mandehir permission to give him the name of KhAKANI. Later they quarrelled most bitterly and exchanged scathing epithets (between 552 and 554). It was then that the poet quitted his native town to go to Bakhchis where the Shahrishah Agha Sidat, son of Mandehir, was settled. Obtaining, not without difficulty, permission to perform the pilgrimage to Mecca, he was well received on his return by the governor of Mosul, Djandali Al-Din, which earned him the disfavour of his patron and imprisonment in the fortress of Shahrishah. Refusing to Tibat after the death of his wife, he died there probably in 595 (1200) and was buried in the cemetery of Surkh Ab. Although the majority of his biographers say that his name was Ibrahim, it should be noted that his father called him Babai "the substitute" because he had come to replace the great mystic Hakim Sunbi.

The Tibat Al-Abiyya' "Gift to the two 'Abiyya"; a poetical description of his journey to Mecca and back, was autographed at Agra by Mirza Abu 'l-Hassan (1855). His Dilmun entitled Khakaniyeh was lithographed at Lucknow in 1293-1295 (2 vols.); it is arranged in the order of subjects: religious and moral poems, panegyrics, poems with refrains, funeral elegies, short mystical pieces, epigrams, satires; 44 stanzas were annotated at the beginning of the 19th (XXth) century by Muhammad b. Daraj shah-Adab (= Mandu, capital of Malwa in India).

(Ch. Huart)

KHAKANI, a Turkish poet of the second half of the 13th century. His proper name was Muhammad Bey and he was a descendant of Ayas Pasha [q.v.] who was Grand Vizier under Sultan I. His life was not eventful; according to Sagi''d al-'Oum, he was暴风祸乱 and unfortunato. Khakani owed his fame to a not very long mukhabbar of Hilya-iskari, written in a triplicate metre. This poem is in prose and is an expansion of an Arabic text known as al-Hilya al-Nahaymiya containing a traditional account of the prophet's personal appearance; each of the enumerated features is commented on by the poet in twelve to twenty lines.

According to Nadij the poem has acquired the same degree of popularity as the Manesli Shair of Sulaiman Celebi. It was printed in Constantinople in 1624 and almost the whole
of it is incorporated in vol. iii. of Dāvūt Pasha's Khashsēl (Constatinople 1921). As Khabān states at the end of his poem, it was completed in 1007 (1598–1599); at that time he had already attained a great age. The poet Dīwān (d. 1056) wrote a maqṣura to the Hilye. Of other poems by Khabān — he is said to have composed a Dīwan — are only known a mathnawi called Mīṣaf al-Furqānān on a ghazal, both in a Gotha MS (Cat., p. 171). He died in 1015 (1605–1607) and is buried in the cemetery of the mosque of Edârâne Kapî.

Khabān is a striking figure in the transition period between Ottoman poetry after Bâlîk, which is characterized by a scepticism of earlier times for reasons.

KHÔL (x.), maternal uncle. The khôl, although, according to the traditional patriarchal family law in Armenia, not actually considered a relative of his sister's son, was in popular regard superior to the latter's father and his father's relatives. It usually took a good deal of effort to find on the side of one's paternal relatives against those of one's mother, and to avenge the death of paternal relatives also on one's khôl's side. Special stress was generally laid on the noble blood of one's khôl because the sister's children in particular were considered to inherit all noble and good traits of character of their khôl's.

The Muslim law, which, following the old Arab family law, paid most attention to paternal relationship, however forbids (on the authority of Sâbīr b. 87) the khôl to marry his sister's daughter because the blood-relationship is too close. The word khôl, which often has the more general meaning of "maternal ancestor," does not seem to go back to the original Semitic name of relationship.

KHALÂ' [See KHÂN-]

KHALADI, a Turkish tribe; the Turkish name was probably Khalâ (see below). As early as the fourth (tenth) century we find the Khalâd living much farther south than the other Turks, in the southern part of the modern Afghanistan between Seistan and India. They are also known than to have some other "in ancient times" (U. hâdûn al-anâsir) (al-Iṣṭâḥârî, ed. de Goeje, Râhî. Geogr. alt., i. 234). The word is variously vocalized in Arabic manuscripts, e.g. al-Khalâd in al-Iṣṭâḥârî, p. 283 nos.; Khalâ also in M. Longworth Damer (see the art. ALGIRIÎI); J. Marquart (Ermaulî, Berliûn 1901, p. 253) connect the Khalâd with the Khâvars of the Byzantine sources and the Khâvars of the anonymous Syriac narrative of the year 554–555 and proceeds to deduce an original pronunciation Khabâdi. In fave of Khalâd we have two later Turkish popular etymologies, given in the legend of Oghâs Khâtê (see the art. OGHÂS KHÂTÊ): hâlâ dâ "remain hungry!" in Râshîd ad-Dîn, text and translation in W. Radda, Kidrât Kûtîh, vol. I, St. Petersburg 1891, Introduction, p. 221, and hâl dât "remain open!" (imperative) in the anonymous legend preserved in the Ughâr character (ibid., text p. 240, translation p. xii.). The Khalâd are never mentioned as an independent political unit but always as mercenaries or guards of foreign rulers; their leaders, like those of other Turkish gaids, sometimes succeeded in founding independent dynasties, especially in India, where the pronunciation Khalâd for Khalâd prevails (see the articles following). It is usually assumed that the Ghâzis speaking Ghâzis of the present day in the upper valleys of the Tarânak, Arghandâb and Afghanistan are Afghanâns descendants of the Turkish Khalâd. This assumption is disputed by M. Longworth Damer (see the art. AFÎGHANISTAN and KHALAZI), although he grants that the Ghâzis have a good deal of Turkish blood. (W. KARVITZ)

KHALAF b. 'Arâf al-Mâlik [q. v.]. [See the article WAJHÎWAL]

KHALDI, the adjectival form of Khalâd, the name of a Turkish tribe which migrated from Turkistan at a period which cannot be precisely ascertained and settled in Western Afghanistân. From long residence in this country they were regarded, even as early as the end of the thirteenth century, when Fîrûz Khalâd ascended the throne of Dîhlâ, as Afghanâns. They here a high reputation as statesmen and soldiers, many served the early kings of Ghâzî and Ghîrû, and many afterwards attained to the highest rank in India, as for instance, Muhammed b. Bakhtîyâr, the conqueror of Bengal, Fîrûz, just mentioned, who founded the dynasty which reigned at Dîhlâ from 1290 to 1320, and Muhammed, founder of the Khalâdi dynasty of Mâvâ (1436 to 1531), who was descended from Nâsir al-Dîn, the eldest brother of Fîrûz, the Lodî, the dynasty founded by Bahîl, which reigned at Dîhlâ from 1451 to 1526, were a clan of the Khalâd.

The late Major H. G. Raverty objected strongly, but with little apparent reason, to the identification of the Ghâzis with the Khalâd. Their identity cannot be conclusively ascertained, but the Ghâzis claim a Turkish descent and are found in the region where we should expect to find the Khalâd: the corruption of the name is not unnatural among Afghanâns, and if the Ghâzis are not Khalâd it is difficult to say where the latter are to be sought, for no trace of them is found elsewhere, and there is no record of their extermination.

KHALDI or KHDONI, the dynasty of Dîhlâ, was founded by Dîhlâ al-Dîn Fîrûz (see the art. DÎHLÎ) of the Khalâd or (Ghâzî) tribe of Afghanistân and is said, though some descent has been claimed for this tribe but they had long been domiciled in Afghanastân and were regarded as Afghanâns.
Lajlul al-Din. First ascended the throne in Kılıchb in June 13, 1296, and was murdered at Karra by his nephew and son-in-law, 'All al-Din Muhammad, on July 12, 1296. 'All al-Din ascended the throne in Dilih on Oct. 5, 1296, and captured the two sons of Lajlul al-Din from Kılıchb. Arkhul Khan, governor of Mulbbn, and Khud Khan, who had been proclaimed emperor in Dilih under the title of Kılıch al-Din Hrasnhr. Having blinded his two cousins and imprisoned their mother, 'All al-Din punished with death and confiscation those amirs who had deserted his uncle for himself. He annexed Gujjar, Ramathamhor, and Citoor and in a series of expeditions to the Dakhân commanded by his favourite amir Khud Hraznhr, expelled Malik Nāthb, the Kings of Warnagul and Djarvāngul were added to the empire. Five rebellions which occurred early in his reign were crushed with merciless severity and vigorous laws were passed with the object of suppressing disaffection. 'All al-Din was descended from a design of declaring himself a prophet and promulgating a new religion, one of the most famous decrees of his reign, were those by which he regulated the price of all the commodities of life and its most disgraceful act was the massacre of between twenty and thirty thousand Mughul converts to Islam, suspected of disaffection. After 'All al-Din's death on Jan. 2, 1316, the emir Malik Nāthb, having set aside Khud Khān, the heir apparent, raised to the throne Shihâb al-Din 'Umar, 'All al-Din's youngest son, a boy of five or six years of age, and attempted to blind Khud al-Din Mubâhr, the second son, but the prince escaped the emir's emissaries and persuaded them to murder their master. Khud al-Din Mubâhr then assumed the regency, and, on April 1, 1316, blinded and imprisoned his younger brother and ascended the throne. The new emperor gained a fleeting popularity by the release of all his father's harsher measures, but his debauchery soon converted the love of his people into contempt. Like his father, he was addicted to unnatural vice and was entirely ruled by Khusraw Khan, a vile favourite belonging to one of the scavenger castes of western India. A rebellion in Gujjar was suppressed and in 1318 Khud al-Din marched to Dewagir, where he put to death Harâlp Dewsan, son-in-law of Ramchandna and appointed a Muhammadan governor to Dewagir. On his return the emperor caused his three brothers, Khud Khân, Shâdî Khân, and Shihâb al-Din 'Umar, to be put to death, and, after scandalizing his court by indecent debauchery, proclaimed himself supreme pontiff and viceroy of God under the title of al-Wahlk al-lilîh. Khusraw Khan, who had been recalled from the Dakhân under a just suspicion of treasonable designs soon regained his master's confidence and on April 14, 1320, caused him to be murdered in the palace and ascended the throne under the title of Nâsir al-Din Khusraw. His brief reign was marked by the advancement of his progiate castefellows and an attempt to restore the predominance of Hinduism in Dilih, but Malik Fahs al-Din Qâwân fled from the capital to Mulbbn and persuaded his father, Ghân Malik, governor of that province, to march to Dilih for the purpose of restoring the supremacy of Islam. Khusraw marched out to meet him but was defeated at Nandara and captured and beheaded. On the following day, Sept. 9, 1320, Ghân Malik was proclaimed emperor under the title of Ghâyib al-Din Taqabb-Shah.

KHALDI (Kutal), the dynasty of Mâlbâ, was founded in A.D. 1436 by Mâhâdâl Khâlîd, of the same tribe as the Khâlîd of Dilih [q. v.]. Dilih Khân, founder of the Ghori dynasty [q. v.], had been accompanied to Mâlîb by his cousin, Malik Mughal, and on the deposition of Dilih Khân's grandson, Ghâzâl Khân (Muhammad Shâh), Mâhâdâl offered the crown to his own father, Malik Mughal, who declined it in favour of his son, Mâhâdâl's long reign was at first disturbed by rebellions on behalf of the late dynasty, fomented and supported by Ahmad I of Gujjarâl and the râqî of Citoor. After the suppression of these he was engaged in almost continuous warfare with Gujjarâl, Citoor, Khâlîdeh, Khera, the Dakhân, Dilih and Djarvângul, and was usually successful, except against the Dakhân. He died on May 30, 1469, and was succeeded by his eldest son, Ghâyib al-Din, a mean-spirited monarch who occupied himself chiefly with the administration of his harems, for the management of which he drew up elaborate regulations, leaving the affairs of the kingdom in the hands of his advisers and, latterly, of his elder son, Nâsir al-Din, whom he made his prime minister. The later years of his reign were troubled by quarrels between Nâsir al-Din and his younger brother 'All al-Din, who was supported by Malik Khâjûd, the mother of both princes. The King, too feeble to keep the peace, fell alternately under the influence of either faction until, in the autumn of 1500, Nâsir al-Din captured Mundâ, put his brother to death, imprisoned his mother, and seized the crown. A few months later (Ghâyib al-Din died, poisoned, it was suspected; at the instigation of his son, Nâsir al-Din's warlike qualities found employment in the suppression of rebellions among his amirs, due to his harshness and in war with the 13th Râyânum Sinâh of Citoor. His later years were disgraced by debauchery and cruelty, his victims being chiefly his most faithful servants. He nominated his second son, Shihâb al-Din, his heir, passing over Shâdî Khân, the eldest, but, Shihâb al-Din rebelled and fled from his father's father, and Nâsir al-Din was succeeded on his death (May 3, 1511) by his third son, who ascended the throne as Mâhâdâl II. Mâhâdâl was brave to rashness, but possessed no other virtues and was entirely devoid of political wisdom and administrational ability. He first forfeited the allegiance of his amirs by the elevation of unworthy favourites, one of whom avenged his dismissal by proclaiming Mâhâdâl's eldest brother, Shâdî Khân, king, under the title of Muhammad Shâh, Muhammad, the creature of a faction, seigned nominally and intermittently from 1510 to 1515, and issued coins. The adherents of Shihâb al-Din, Mâhâdâl's next eldest brother, also rebelled and proclaimed their leader king, and on his death professed allegiance to his son, whom they styled Khâjûd II. After the removal of these pretenders, Mâhâdâl II became a mere instrument in the hands of Hâyâ Râyâ, a Râyânum whom he raised to the position of prime minister of the kingdom and who could command a force of 40,000 horse. He made spasmodic attempts to free himself from his insignificant.
position but the result of these was to throw the Ridda into the arms of Sangrama Simha, raja of Citor, and Mulwa would have become a Ridda state but for the first apprehensions of a coalition of the neighbouring Mussulman states. In 1517 Mulwa II was compelled to improve the aids of Mugharif II of Gujjar to the Ridda and, having been restored to his throne, resided as a vassal of Gujjar. After his restoration Mahmud II, aided by effective force from Gujjar, made war against Citor but was totally defeated and made prisoner by the raja Sangrama Simha, Bubber's Raas Singh, who, from motives of policy and generosity, restored him to his throne. His ingratitude to Sangrama's son Ratan Singh and his foolish encouragement of a pretender to the throne of Gujjar, where Mugharif II had been succeeded by his son Bahadur II, drew on him the wrath of Bahadur Shah, who invaded Mulwa, captured Mandu, and imprisoned Muhammad, who was slain on April 13, 1521, by his guards, who suspected an attempt on his life. The Khalid dynasty ended with Mahmud II, and Mulwa became for a time a province of the raja of Citor.

(T. W. Haig)

KHALID bin and ALI AL-KASHEF: governor of the Irak. The Kashef family to which Khalid belonged was a branch of the tribe of Bajjas [q.v.], his mother was a Christian. In the year 89 (707/708) or 91 (709/710) he was appointed governor of Makkah by the Caliph al-Walid. Here he remained during the life times of al-Walid; after the accession of Sulaiman in 96 (715), however, he was dismissed and lived in retirement until in Shawwal, 105 (March, 724), he was appointed to the governorship of the province of Yaman. He was dismissed and his place was given to Abd al-Malik. He held all the other governorships which subsequently fell to his successors, and he was an intimate friend of Ali, the son of Muhammad, and was with him when he was killed in the battle of the Camel. He was a man of great ability and was known for his justice and fairness. He was a great supporter of the principles of Islam and was a man of great piety. He was a great patron of the arts and sciences and was a great patron of literature. He was a great patron of the arts and sciences and was a great patron of literature.
where Khalid commanded the right wing of the Mekkan forces, and by his intervention at the right moment decided the battle in favour of the enemies of the Prophet he first displayed that brilliant talent for leadership to which in later days Islam owed so many successes. After Khalid had gone over to Islam with Amr b. al-'As at the beginning of the year 8 (629) he took part in the unsuccessful campaign against the Byzantines, and after the defeat at Mu'tah it was with difficulty that he succeeded in bringing back the defeated army to Medina. As a reward the Prophet gave him the title of honour "Sword of God", and in the same year he became part of the entry of the Muslims into Mecca. After the capitulation of the town he is said to have destroyed the sanctuary of the heathen goddess al-Uzaz by order of Muhammad.

He was soon afterwards sent as ambassador to the Banu Dzidzitas (q.v.) and in Radjah of the next year (Oct./Nov., 630) he undertook an expedition against al-Qahtan, the Christian king of Dhuln (see the art. AYAW AL-STRKJIN). At the beginning of the year 10 (summer of 631) Muhammed sent him to Nadarun to convert the Banu b-Harith b. Ka'b to Islam, which was also done without bloodshed. In the following year he was sent by Abul Bakr against Tulubb b. Khwareid and defeated him at Bostah (see the art. ASAD) and next turned his attention to the Banu Tamim who dwelt in the vicinity. One clan, which was under Malik b. Nusairan, was at feud with the others. When the latter submitted, Malik also laid down his arms but was nevertheless taken prisoner and put to death and Khalid then married his widow. When an accusation was laid before the Caliph against Khalid he is said to have excused himself by saying that the incident was due to a misunderstanding. He said he had ordered warm clothing to be given to the prisoners and had therefore said to the soldiers: "azqā 'awāhims" which was interpreted by the Beduins to mean "kill your prisoners". In any case Abul Bakr was satisfied with administering a reprimand to him and kept him in office in spite of vigorous protests from 'Umar. Soon afterwards Khalid took the field against the foal prophet Musaylima. At Al-'Araqib, on the frontier of Al-Hira, he met the man, defeated and killed, whereupon his followers surrendered. (beginning of 12 = beginning of 633).

Khalid was then sent against the Persians. In Rabih I, 12 (May-June, 633), or perhaps some months later he conquered Al-Hira and soon afterwards occupied the whole Euphrates area. The Byzantines are said to have finally crossed the Euphrates and to have been defeated at al-Fird (Isha 'i-Kasba, 12 = Jan., 634) and in Muharram of the following year (March/April, 634) or, according to others, not till Rabih II (June) Khalid set out on his campaign against Syria. In Dzumah 1 or II (= summer of 634) the Byzantines were completely defeated at Adhaiman and retired to Damascus. Defeated again by Khalid, they were surrounded and besieged and in Radjah, 14 (Aug./Sept., 635), Damascus had finally to surrender. About the same time Khalid was deprived of the supreme command and replaced by Abu 'Ubayda b. al-Jardah (q.v.) but continued to take part in the military operations in Syria. In the battle of the Yamak on Radjah 12, 15 (Aug., 636), he commanded the cavalry and contributed largely to the victory of the Muslims. Himy was recaptured soon afterwards. Khalid then advanced against Kinnasir and after he defeated a Byzantine army under Muzayn the town had to surrender and Khalid took up his quarters here for the time. He was for a time governour of a part of Syria but was later dismissed. He died in Himy or Medina in the year 21 (641-642). A. Muller (Der Islam, 1, 257) has admirably described him as follows: "He was one of those characters whose military genius was the whole of their intellectual life; like Napoleon, he cared for nothing but war and did not want to learn anything else."

**KLALID ZIA, UMAHI-ZZOR**, the leading writer of prose and fiction in modern Turkish literature. Born in 1579 (1866) in Constantinople of a prominent family which came originally from the carpet town of 'Usbâq — hence the epithet 'Usbâq-zzor — he spent his youth in Constantinople and Smyrna. He received his education from the Mechtarists in Smyrna. This laid the foundations of his love for and knowledge of the west. He translated industriously, from the French and made literary attempts of his own. The collection called Nâfi' in 6 volumes contains stories of his own alongside of translations from the most important French writers of fiction. In Constantinople he founded the paper called 'Namvaks and published the introduction (Mehlihat) to his never finished OberDNen Shara Sayyidlin Ediény (Literary Current from West to East) in Constantinople in 1303 (1888). In Smyrna he continued his literary activity with the foundation of the periodical Khamezu in which his novel Safiye and his Mehirâb ("Poems in Prose") appeared in 1307 (1889); their unusual form evoked a storm of indignation until Ekrem defended them (specimens in Biceran, Twosey shiromh, St. Petersburg 1909).

In Smyrna he published in five series his Khâlid Khâlid which contain various literary productions, e.g. Bir Maqam-i namaz (Fanalêldeh; "The last Leaves of a Notebook"); Bir Federudzulî Târîkhi-Muhabbat ("The Love-Story of a Marriage"); Ilhâmy, Tazhânî (his Mehirâb 1st reappeared in 10) and Misrânî SâIH ("Voices from the Grave"), Smyrna 1307 (1889). At the same time he published a whole series of popularly written scientific treatises, with which he endeavoured to spread European learning, for example: Hamel oeware'a, Hamel itenow-ba Tillêü; Modhâl b-khalil; Mehirâb o-ayîr; Yaa'mi SâIH, Humo Nadirîn, Hizâl Oyananî; Hikmat Oyananî;

(K. V. Zettlestren)
With Seyfi, Khalid is the founder of the modern literary novel. He worked especially at the short story, of which he seems to be the greatest master. He is an artist and a poet. He is marked by great sentimentality and a pessimistic outlook, which only later gave place to a more reconciled attitude. He is an acute psychological observer. But he is also a student of the Westerner, a Frenchman in Turkish dress. He has not unjustly been called the Turkish Alphonse Daudet. His writings contribute little to our knowledge of the Turks. In spite of the Levantine influence he is strictly modern. He tells a story, vividly and attractively; his style is clear. But his language is still markedly laden with Persian and Arabic words. He paid most attention to style, which owns much to him; for it is he who created the language of modern Turkish fiction.

He has taken no part in the recent nationalistic development in Turkey. He has remained the old cosmopolitan.

AL-KHALIDAT, full form AL-Djeide, AL-KHALIDAT, probably with allusion to the Arabic ëzîl, the Eternal Islands, are usually called Djeide, al-Sâdîs Iles de Bîlsy by the astronomers, a translation of the Greek Mêdîm Nêrîs which probably came to the Arabs through the translation of Poleney. Al-Bakri also knows the Latin name Portunatum Insulae in the form Furiousland. They are the Canary Islands. Al-Bârid and al-Ifrîb speak of six islands, Al-Makhrîr, seven, and al-Ifrîb mentions two by name, Makhrîr and Jîlghâs; according to Dâzi and de Gueîce, the former corresponds to the modern Tenente, the latter to Gran Canaria. According to al-Bârid, they are nearly 500 parasars (600 miles) from the mainland, while Al-Makhrîr says that on a clear day they are visible from Salé.

The meaning of the name given by al-Bakri points to the flourishing vegetation of the islands. Toes and shrubs lining firths all kinds of pleasant fruits, which being necessary to plant or tend them, and the soil yields grains instead of weeds.
and valuable fragrant herbs instead of thorns". On Masʿūdī as well as on Laythīns there was a high, pillared building (parvānā) of bone since, a hundred wells high and crowded by a figure of household servants with his hand to the high sea. In Masʿūdī this red column stood on a round hill; the column on Laythīns would not be climbed. These were regarded as warnings to shipping to sail farther to the west (al-Maḥṣūrī says that each of the seven islands had a similar column; according to him, they were idols [qājas] in the form of men. He distinguishes the Dīżār al-Saʿāda from the Dīżār al-Khaliḍī and says that the former were north of the latter and the first of them is Britain).

Among legendary features of the Arab descriptions of the islands we may mention the following. Since in Prolemy and the Arab geographers who follow him the longitudes are calculated from the meridian of one of these islands (cf. the older Arabic calculation from the mouth of the Tigris), it was thought that there was a race of astronomers living on the island; accordingly al-Maḥṣūrī says that the "Christian Magicians" came from the Dīżār al-Saʿāda, but, as he includes Britain among them, he is apparently thinking of the Druids of the Celts, Dhū l-Karnān [q.v.], i.e. Alexander the Great, is said to have reached the Khaliḍī. The Hīṣāyīt Adād Abī Kāri is said to have built the column in Masʿūdī and he also is given the epithet Dhū l-Karnān. The column of Laythīns is said to have been built by another South Arabian of the legendary past, Tālib b. Yūsuf the "Marabīt"; his tomb is said to exist there in a temple of marble and brilliantly coloured glass. The stories regarding "terrible wild beasts" on the island of Laghūs given by the author of the "Book of Marvels", which al-Idrīsī hesitates to repeat, are probably the same as those given by al-Kaṣwānī on the authority of Abī Manṣūr al-Andalusī in his description of the Westerners. There is also a description of a column on an island called Madjama al-Yaʿra.

We may assume that there was trade (indirect) between the Cannan Islands and Arabia even in the days of the ancient Arabs, if "darken of the dragon's blood" came from Dracunculus Draco; probably, however, it came from another (Indian) plant.

KHALIFA, "successor, viceroy", title of the supreme head of the Muslim community, the Imam [q.v.], as successor or viceroy of the Prophet (khilāf al-rasūl Allah).

I. The word appears, frequently both in the singular and the plural (khilāfī, khilāfīn), in the Korān; in the latter case, the persons referred to as such are "successors"; as entering into the ideology enjoyed by their forefathers (e.g. vi. 165; xxxiv. 54; xxi. 62; used of the righteous, vii. 67, 73, of the idolatrous tribes of Ad and Thamūd); the singular is used of Adam (li. 23), either as successor of the angels who lived on earth before him; as representative of God, and of David (xxvii. 23). "We have made thee a khilāf in the land; thy judge between men with the truth, and follow not thy desires, but they cause thee to err from the path of God." In none of these verses is there any clear indication that the word was intended to serve as the title of the successor of Muhammad. Muslim historians commonly assert that it was first so used by Abī Bakr; it is doubtful, however, whether he ever assumed it as a title (Canturi, Annali dell' Isla 111 A.II., s. 62, 134). But from the reign of Umār, it has been the ordinary designation of the Aṣma al-Muqaddas [q.v.]. The designation khilāf al-rasūl Allah, "successor of the apostle of God", implies assumption of the activities and privileges exercised by Muhammad, — with the exception of the prophetic function, which was believed to have ceased with him; the latter phrase, khilāf al-rasūl, "vice-regent of God", implies a bolder claim, and is said to have excited the indignation of Abī Bakr, but it was used as early as 35 A.H. by Hāshim b. Thābit in an elegy he wrote on the Khalīf Uṯmān (ed. H. Hirschfeld, xx. 9), which occurs quite common under the "Abūbasīs and later princes" (Goldziher, Muḥammadanische Studien, ii. 61).

In the course of Muslim history, however, the term khilāf has not been confined to such exalted reference. As early as the first century of the Hijra, it was used in the Aphrodisian papri for the "aarchedur" or agent at the capital through whom the local officials of the finance-department made payments of taxes (Greek Papri of the British Museum, vol. iv., pp. xxv. 35); C. H. Becker, Islamitische Studien, p. 257). It has frequently been used as a personal name (see Index to Tahāri, etc.). In the religious orders, especially among the Kudiriya, the Khalīfa is the delegate of the Shāhīd of the order and invests in a certain amount of power and represents him in countries remote from the present seat of the Imam. Among the Tijāniya, the Khalīfa is the inheritor of the spiritual power (harakād) of the founder of the order, whom alone the title Shāhīd is applied (C. Dupont and X. Coppetouli, Les confréries religieuses marocaines, pp. 104—105; Alger 1876; L. Rau, Moscheen und Moslems, p. 78; Alger 1884).

In the Mahḍī movements, the Khalīfa is the successor of the Mahḍī; Mr. Bellman was thus Khalīfa of Suyūdī Muhammad Mahdī (b. 970 a.H.) the founder of the Mahḍīwān [q.v.]; Abī Alī was the Khalīfa of Muhammad Almād (the Mahḍī of the Sudan), and the son and successor of Ḥabīb Ḥabīb Kānī (s. i. p. 206) is so described by his followers as the present-day. However, people have also received this designation, e.g. in the household of the Emperor. Lastly, Khalīfa denoted a woman who exercised surveillance over other women-servants, (Gelbāndi Bahli, Ḥamāyūnān, translated by A. S. Beveridge, p. 736). In more modern times, the word khilāf was commonly applied in Turkey to any junior clerk in a public office (G. M. d'Ossun, Tabulation générale de l'Empire ottoman, iii. 277), and is still a title of respect for an assistant teacher in a school. In Morocco, it indicates the deputy of the governor of a town (K. Mekki, The Moroccan Empire, p. 224). In modern India it is used even of such insignificant persons as a working tailor, a barber, a fencing master, or a cook (H. A. Roser, Glossary of the
KHALIFA

Theo& and Caum of the Punªh, ii. p. 490.

Lahore 1914.

In Tojo and neighbouring parts of W. Africa, also (Khalifa) denote a Muslim
head of state among the Muslims generally (Die Welt
des Islam, ii. p. 200).

Biography.

expression de droit de Dicre pour désigner
les chefs dans l'Islam (Z. v. B. R. XXX, 1897); D. S. Margoliouth, The State of the little Kha-
lifa (A Volume of Oriental Studies presented to

ii. As a distinction can be drawn between the history of the Khalifs, or of the political institution
of which the Khalifs was the head, and the theories
connected with it, and as the former was chronolog-
ically prior, it is proposed here to deal with it first.

i. History.

The immense wealth and power acquired by the early successors of the
Abbasids, through the conquest of such provinces of the
Roman Empire as Syria and Egypt, together with
the dominion of the Persian king, raised them to a
status and a dignity which gave to the humble
title they bore a new significance; so even before the
Arab conquests had reached their limit, the
Khalifs had become one of the most powerful and
wealthy monarchs in the world. As Amir al-Mulim
(Idr.) he was commander of these conquering armies
and as he described himself as Imam (q.v.), he took the foremost place in public worship and
devoted the Abbasids (q.v.) in the mosque as
Khalifs he claimed from his Muslim subjects some
of the reverence that had previously been paid to
the founder of their faith. The civil war was thus
broke out in the reign of 'Ali b. Abi Talib laid the
foundation for those rival theories as to the qualifica-
tions of the Khalifs, which took definite shape in
public and sectarian doctrines. Under the
Unsuiyad (q.v.) the religious associations of the
office of the Khalifs were not emphasised, though
many of them kept up the practice of leading the
public worship, for (with the exception of 'Umar
b. 'Abd al-Aziz (q.v.) religious considerations appear
to have had little weight with them, and
it was mainly by means that the foundations of
Muslim dogma and the systematisation of the Sharia
(q.v.) were laid, with little regard to the guidance
from the Khalifs in Damascus. The claim of the des-
cendants of 'Ali to the leadership of the Muslim
world found expression in the formation of the
Shi'a party (q.v.), but for some generations their
efforts met with no political success. The 'Abbasids
(q.v.) came into power largely through their pro-
tended support of 'Ali claim, and largely too through their professions of religious zeal. In
Baghdad the Khalifs took on a new character; the
Khalifs became a generous patron of the 'ulama' and
they emphasised upon his function as protectors
of the religion of Islam, and under his fostering
care the capital took the place of Mecca as the
chief centre of theological activity, and the great
schools of law (see the art. Juris) received definite
shape. The Khalifs was no longer regarded as a
more secular monarch, as many of the Unsuiyads
had appeared to be in the eyes of devout Muslims,
and the care with which he was regarded was en-
hanced by the elaboration of court etiquette and
ceremonial. The Unsuiyads, especially in their early
days, had generally been readily accessible to their
subjects; Ma'awya (q.v.) had preserved in a great
number the frank, familiar manners of an Arab
chief of pre-Islamic times; and moved among other
Arab chiefs as princes inter pares. But in the new
capital, the traditions of the Persian monarchy re-
surprised themselves, the 'Abbasid sat on his throne in
adulation, surronded by his guards, the eunuch
courageous with drawn sword by his side. At the
same time he emphasised the religious aspect of his
office by wearing the mantle of the Prophet, and
his relationship to the Prophet was reinstated in
official documents, and in the lamentations of
eulogists and court flatterers.

From the 9th century onwards, the direct con-
trol of the Khalifs over the administration weakened
in consequence of the increasing delegation of power
to the Waqf (q.v.) and the growing elaboration
and efficiency of the government offices (q.v. arti-
tles). About the same period began the decline of
the temporal power of the Khalifs, in conse-
quence of the break-up of the empire and the
rise of independent principalities in the various
provinces, and at last his authority hardly exten-
ded beyond the precincts of the city of Baghdad.
Concurrently with this decline of his temporal
power, increasing stress was laid on his position
in the religious order, as Imam (q.v.) and as the
defender of religion, and the persecution of heretics
and of the adherents of non-Muslim faiths increased.
By the year 946 all effective power had passed
out of the hands of the Khalifs, and there
were to be seen in Baghdad three personages who
had held this high office, but now deposed and
blinded were dependent for their livelihood upon
charity. From this period until 1055 the Khalifs
for the most part were but a puppet in the hands of
the Buyids (q.v.) and the Seljuks (q.v.) success-
ively. But still, in spite of his entire lack of admin-
istrative authority, men could not forget the great
position once held by his ancestors, and the impor-
tant Khalifs was still regarded by theologians as the
source of all authority and power in the Muslim
world. Accordingly, there were to be found independ-
ten rulers who sought from him titles and
diplomas of appointment, e.g. Mahmud of Ghazna
(q.v.) when he renounced his allegiance to the
Seljuk prince in 997, received from the Khalifs
recognition of his independent position, together
with the titles Yamu al-dawla, Amir al-imam and
about a century later, Yamin b. Taghliba, the
founder of the Aminovit dynasty of Spain, received
the titles of Amr al-Mulimina from the Khalifs
Ma'ani. When in 1175 Saladin (q.v.) assumed the
sovereignty of Egypt and Syria, he was con-
firmed in this rank by the Khalifa, who sent him a diploma of investiture and robes of
honour. The founder of the Kasnids (q.v.) dynasty
in the Yemen, Niz al-Din 'Umar, likewise asked the
Khalifs for the title of Sultan and a diploma of
investiture as his lieutenant, and Muzaffar in 1223
sent a special envoy with the required document.
This same Khalif had in 1239 responded to the
request of Hunnish (q.v.), the Turkish ruler of
Northern India, for the title of Sultan and for
confirmation in the possession of his dominion;
and succeeding kings of Delhi continued to put
the name of Muzaffar, the last Khalif of Bagh-
dad, upon their coins for more than thirty years
after the unfortunate prince had been put to
death by the Mongols.

In contrast to this recognition of the Khalifs in
Baghdad as the legitimate source of authority,
in the establishment of two rival Khalifas; in 928 A.bde al-Rahman III of Spain assumed the title of Khalif, which continued to be borne by his descendants; these Emirs of Spain, like their predecessors in Damascus, were styled the "Fatimid Emirs of Egypt." But as the second style is the more accustomed one, the Fatimids of Egypt in the Middle Ages are usually styled by that name. The first of the Fatimids in Egypt was Caliph of Kairouan in 909, was Shafi'i, and was serious rivals to the "Abbasids in Baghdad until the destruction of their dynasty by Saladin in 1153.

In 1153, Ibadgi [q.v.] established Baghdad and put to death the Khalifa Mustafí, who perished, leaving behind him no heir. The establishment was without parallel in the history of Islam, and for the first time the Muslim world found itself without a theoretical head whose name could be mentioned in the "Kufi" in the mosques on Fridays. Two members of the "Abbasid family, who had escaped the massacre in Baghdad, took refuge one after the other with the Mamluk Sultan of Egypt; the first, an uncle of Mustafí, was invited by Bakbar [q.v.] to Cairo, and was installed with great respect in 1161. Baibars is said to have conceived the idea of re-establishing the "Abbasid dynasty in Baghdad and left Cairo with a large army, but after he had reached Damascus he provided the Khalifa with only a small body of troops, which was destroyed by the Mongols on its way through the desert, and nothing more was ever heard of the Khalifa. The second caliphate arrived in Cairo in 1162 and was similarly installed as Khalifa, but no attempt was made to repeat the rash experiment of re-establishing Baghdad, and the Khalifa was kept a virtual prisoner in Cairo, though treated with outward marks of respect. For more than two centuries and a half, his descendants one after another continued to hold this shadowy office in Cairo, dependent on the bounty of the Mamluk Sultan, who found the Khalifa useful as lending a show of legitimacy to his rule. Each new Sultan was ceremoniously installed by the Khalifa, to whom he in turn paid allegiance. But not a single one of them (with the exception of Mutsafi, who was the plaything of rival political factions in 1231 and for six months was styled Sultan) ever exerised any function of government or enjoyed any political power. Mutsafi [q.v.] describes the Khalifa as spending his time among the nobles and officials, paying visits to thank them for the dinners and entertainments to which they had invited him ("Histoire d'Egypte," ed. E. Blochet, p. 76).

The rest of the Muslim world outside Egypt for the most part ignored the existence of the Abbasid Khalifa in Cairo. From the 14th century there had been Semi-Khalifs in the Maghrib, and from time to time vassal princes in the eastern lands of the Muslim world assumed this title, Sultan, Tashrid, Turkomans, Uzbegs and Ottomans. But a small number of independent princes, desiring to legitimise their claim to the obedience of their subjects, asked for formal recognition of their position and a grant of titles from the Khalifa, as e.g. the first two princes of the Safavid dynasty in southern Persia (1323-1384); Muhammad ibn Tughluk (1325-1353) and his successor, on the throne of Delhi, Farruq Ali (1353-1358); and Bayazid I [q.v.] is said to have applied in 1394 to the "Abbasid Khalifa in Cairo for a formal grant of the title of Sultan (v. Hammer, "Gesch. d. Osman. Reiche," i. 195), but doubt has been cast upon the accuracy of this report. For, from the latter part of the 14th century, when after the conquest of Adrianople, Philipopooulis, his father, Mustafí I, was slain (the chosen Khalifa of God was only i. 93, l. 22), it is no longer uncommon for the Ottomans to substitute for other contemporary Muslim potentates, to claim for themselves the Khalifa and to find this claim recognised by their subjects and their correspondents. The qualification of belonging to the tribe of Karsh was ignored and the title "Kufi" was used in place of the "Kufi". "We have made thee a Khalifa on earth," and this and similar verses (e.g. vi. 165, xxv. 37) are commonly quoted in the Moslem literature of the period. When Selim [q.v.] made his victorious entry into Cairo in January, 1517, and made an end of the "Abbasid Khalifa, by transporting the last representative of it, Mustawakkil, to Constantinople, he had already been accustomed to the use of the title Khalifa as applied to himself, and to his ancestors for a century and a half. The legend that Mustawakkil made a formal transfer of his dignity to Selim was first published by Constantine Mouroudes d'Ossian in 1788 ("Recherches sur l'Empire Otoman," i. 269-270, ed. 8vo., Paris, 1788-1824). None of the contemporary authorities who record the conquest of Egypt make any mention of such a transference of the office, and after the death of Selim, Mustawakkil was allowed to return to Egypt and was Khalifa there until his death in 1543. For the next two centuries, there were only two Muslim potentates whose extent of territory and power could add dignity to the title of Khalifa (in contrast to the incommunicableness of it by insignificant princes) namely, the Ottoman Sultan and the Mogul Emperor in India. With the fall of the Mogul empire in the 18th century, the Ottoman Sultan became manifestly the greatest figure in the Muslim world, but even his power was being threatened by his aggressive neighbours on the north, and after the war with Russia (1768-1774) he was obliged to surrender territories on the north shore of the Black Sea and recognoised the independence of the Tartars of the Crimea. Catherine II claimed to be the patroness of the Christians of the Orthodox Church dwelling in Ottoman territories, and the Ottoman gilipotanetiastes who negotiated the treaty of Kuchuk Kainarjii in 1774, took advantage of the name of Khalifa, to make a similar claim for the Sultan, and get inserted in the treaty a clause providing the religious authority of the Khalifa over the Tartars who had ceased to owe them allegiance as a temporal sovereign. From this period onwards, it became the common practice for Christian emperors, particularly the Huns and the Turks, to call themselves "Khalif". This is because a Christian emperor who had assumed the title of "Khalif" over the Tartars, became the spiritual head of all Musulms (just as the Pope is the spiritual head of all Catholics), and to exalt him with the possession of spiritual authority over his "re-ligious" subjects, they might not over him civil obedience as Sultan of Turkey. There is reason to believe that this widespread error in Christian Europe resulted upon opinion on the part of the Huns. Particularly in the reign of Sultan Abu al-Jamal II (1806-1909), the title was held upon his position as Khalifa, and in the Constitution promulgated at the beginning of his reign it was affirmed that "H.M. the Sultan, as Khalifa, is the protector of the Muslim religion." He appears to have sent emissaries

2. Political Theory. As stated above, the theories of the Khalifas were largely an outgrowth from the political circumstances of early Muhammadan history, but speculation has elaborated many forms of the doctrine that have failed to secure themselves expression in actual historical facts. Al-Shahristani (ed. C. C. U. p. 221) says that no article of faith has given rise to such bloodstream and continuance in every period of Muslim history as this. (b) The nationalistic source doctrine first found expression in the Khalifas, which emphasized prominently two essential characteristics of the Khalifas: one that they must be of the tribe of the Kureish (Kur ra'is al-Mumal; ill. II. ita. 547 2495); and the other, that the Khalifas receive no submission, for whom they rebel against the Khalifas, rebels against God (ibid. III. 2580, 2589, 5060). This claim on obedience to the despotic power of the Khalifas as a religious duty was imposed upon the faithful by the designation that were applied to him: from an early date, the Khalifas of God, and Shadow of God upon earth. The first systematic exposition of the generally accepted doctrine is found in Mawardi al-Ashab al-Suffahiyun (ed. R. Engler, Mainz 1853; Cairo 1498, 1547; trans. S. Fugazi, Alger 1575). Mawardi insists upon the following qualifications in the Khalifas: (1) the title of the Khalifas was a religious title, thus giving the Khalifas full age, good character, freedom from physical or mental defects, competency in legal knowledge, administrative ability, and courage and energy in the defense of Muslim territory. In spite of the fact that the office became hereditary in two families successively, the Umayyads and the Abbasids, Mawardi maintained that it was elective, and was thus able to reconcile the doctrine of election with the historic fact that from the reign of Muhammad (686 686) at least, almost every Khalif had nominated his successor. The fiction of election was preserved in the practice of jun'ah (q. v.), the taking of the oath of allegiance, first by the nobility of the court and then by the general assembly before whom the new Khalif was proclaimed. The functions of the Khalifas were defined by Mawardi as follows: the defense and maintenance of religion, the decision of legal disputes, the protection of the territory of Islam, the punishment of wrongdoers, the provision of the frontiers, and guarding the frontier, the wages of soldiers and others who refused to accept Islam or submit to Muslim rule, the organisation and collection of taxes, the payment of salaries and the administration of public funds, the appointment of competent officials, and lastly, personal attention to the details of government. About three centuries later Ibn Khaldun (q. v.) approached the subject in a more critical spirit and discussed the institution of the Khalifas in his Muqaddimah (chap. 25-8), written between 1375 and 1379; he faced the facts of history and recognized that, with the disappearance of the Arab supremacy, there was nothing left of the Khalifas, but the name. His account of the origin and purpose of the institution agrees with that given by
Mawardi, the Khalifa is the representative of the Prophet, the exponent of the divinely-inspired law (shaf' a), and his functions are the protection of religion and the government of the world; he must belong to the tribe of the Kūrāsh and possess the other personal qualifications laid down by Mawardi. But there were other logicians who frankly faced the fact that force had taken the place of theory in the Muslim world, and worked out a constitutional theory according to which such writers Bāzār al-Dīn Ibn Dāma (d. 733) is a typical example in his Tuhfet al-Adāmah fi Tuhfet Millat al-Adāmah (K. K. Hof- hild, Wien 1850), he lays it down that the 'Imām may obtain his office either by election or by force; in the latter case allegiance must be paid to an 'Imām who by force of arms seizes the office, and such usurpation is justified in consider- ation of the general advantage and unity of the Muslim community gained thereby (59:7–8). Another school of logicians abandoned all such attempts to justify the sacrilegious course of Muslim history and based their doctrine on the Hadith that the Khalifa endured for only thirty years, i.e. up to the death of 'Ali (A.V.E., lII, 315:2). This was the view of al-Nasafi (q.v.) (d. 472) (see al-Asfār, London 1899, p. 5), and it was adopted by seven of the eight Tūnūsī school of the 12th century, Ahmad ibn Hāshim (d. 1549), whose Mawākid al-Adāmah became the authoritative code of Ottoman law. (4) The Shi'a theologians made the doctrine of the imamate a cardinal principle of faith; they laid stress on legitimacy, and confined the office of the Khalifa not merely to the Kūrāsh but still further to the family of 'Ali, with the exception of the Zaidīs (q.v.), who rejected the doctrine of election, and held that 'Ali was directly nominated by Muhammad as his successor and that 'Ali's qualifications were inherited by his descendants, who were pre-ordained by God for this high office. Muhammad is said to have communicated to 'Ali certain secret knowledge, which was in turn handed on to his son and was thus carried on from generation to generation; such 'Imām possesses supernatural faculties which raise him above the level of the rest of mankind, and he guides the faithful with infallible wisdom, and his decisions are absolute and final. According to some, 'Ali owed this superiority to a difference in his substance, for from the creation of Adam a divine light passed into the substance of one chosen descendant in each generation and has been present in 'Ali and in each one of the 'Imām's that succeeded him. The sectarian development of Shī'ī doctrine was considerable, see art. ISLAM, ASH'ARĪYA, ḪOJJAT, FATWA, ZAN'IYAYA. (Bibliography: al-Shahrastānī, Kitāb al-Mīlāh wa-n-Nībāl, p. 108 sqq.; Ibn Khallikān, Futūh al-Gawhār, p. 500 sqq.; 7. The annihilation of Shi'i doctrine was taught by the Khwarazmīs [see Shī'īYAYA], who were for condemning the office of Khalifa or 'Imām to any one tribe or family, held the 'Imām to have been slighted, though they were a non-Arabic and even a slave; they further separated themselves from other Muslims in maintaining that the existence of an 'Imām is not a matter of religious obligation and that at any particular time the community can appoint all the obligations imposed upon them by their religion, and have an entirely legitimate form of civil administration, without any 'Imām being in existence at all, when under special circumstances, it may be found convenient or necessary to have an 'Imām, then one may be elected, and if he is found to be in any way unsatisfactory, he may be deposed or put to death (al-Shahrastānī, op. cit., p. 55 sqq.). All the above classes of political theory found expression in some form or other of actual political organisation, but there were also statements of the doctrine of the 'Imāms that never emerged out of the sphere of speculation, especially those elaborated by thinkers of the Mu'tazila school e.g. that the office of 'Imām should not be filled during periods of civil war but only in times of peace; that no one could be 'Imām except with the unanimous consent of the whole Muslim community (al-Shahrastānī, op. cit., p. 311; Ghali, Hierarchischer Einfluss auf musulmānisches Chafifat-Themen, in Ders. Islam, VI, 173–7). Bibliography: The Hadith can be most conveniently studied in al-Suyūtī's Kāna al-Commissar, Haiderabad 1313–1314, Muslim expan- sion (see above); 'Abd al-'Azīz al-Mālikī, al-Munawwī fr 'Imān al-Imām (Commen- tary) 1839; Id., al-Imām wa-n-Murād wa-n-Adāmah, 2 vols., Cairo 1320; al-Shahrastānī, Kitāb al-Mīlāh wa-n-Nībāl, ed. KHALIFA SHAH MUHAMMAD, author of a collection of letters in Persia, entitled \textit{Dhulun al-kamisah} or \textit{Infallible Khalifs} and \textit{Khalifs}, while he was a student at Ksarbi, and collected by him at the request of his friends in 1875 (1292/1293), it is much appreciated in India, and has been printed several times.

\textbf{Al-Khalil}, the ancient Habub, so called after the "friend of God" (Amir), Abraham (see the 50th psalm), a town in South Palestine (also called Hadban, Hadab, Masul or Beulah). It lay in an excessively fertile valley between the heights of the Jabal Naqra (the bedrock in unknown) and extent for its columns in fruits. According to a widely disseminated legend, Muhammad is said to have granted the four districts Habar, Sahmaran (so Yehuda, II. 194; in Nabo, 1553, ed. Kaswan, 1823, p. 45, 51; Num. 11. 24, 25, 26, 27, Sahmaran, Yehuda, in al-Kalqanani, Sahi, 1403, ed. Cairo, xlii. 219, c. 155; al-Radd), Bait Amarn (L. Abn. St. John's Kirk, ili. 45, etc.; Khartoum, ed. Ennol, 1927) and Bait Isham as a gift to the oil and hemp dealers. Tammi b. Al-Dar, a convert in Islam, and to his descendants. To Tammi al-Dar is traced the custom of having the plates continuously lit in the mosque (Clement, Comment. ex Arch. Orienti. vi. 210-215). Al-Khali is still called the nest of the Tammi. There is no doubt, however, that the alleged letter of the Prophet to Na'am (so Ams), Bait Al-Dar, the brother of Tammi, is a later forgery intended to confirm the claim of the Tammi (Clement, "Letter of the Prophet to Na'am", xlii. 298, s.a., ii. § 69). Our only information regarding the history of the town in the early centuries of the era comes from a few scanty Frankish sources of which the most important is the full account of the excavation of the sepulchral caves by Christian monks in the year 1199-1200 (publ. by Riant in the Konsol de l'Ordre du Crusader,Hist. unit., vol. I. 200-216). According to this (p. 209), the Jews showed the Arabs the entrance to the sanctuary, which had been walled up by the Byzantines, and in return they received permission to live on its premises in all-Rah and to build a synagogue before the entrance in the "Abrahamian". When the Byzantine church was turned into the Masjid, the entrance cannot be exactly ascertained, the first information regarding the mosque is given by al-Jahribi and Ibn Hawkal in the tenth century (not the eighth, as wrongly stated by Le Strange, Palestine, p. 369, and Vincent, Al-Khali, p. 150). According to al-Masudi (who is the first to give a more detailed description of al-Khali), Abraham's tomb was covered over by a dome built in Muslim times (according to Madjdi al-Din, translated by Smeets, p. 21, it was already done under the Umayyads). The tomb of Isaac was in a vault covered over (see also Ibn Hawkal's) and Jacob's was on the opposite side. This list is also the first to mention the rich endowments which were given to the sanctuary by pious princes from remote times, and the hospitals, reception and provision of all and relics which theTammi in the hospice gave to pilgrims, but he thought that purely religious reasons it better to obtain from there the Moslem theologian al-Abd al-Malik al-Fakih (d. 737 = 1336) later denounced the eating of these lentils (which were known as \textit{shub al-khali}) and issued a warning against praying inside the mosque (instead of in front of it, as the exact site of Abraham's grave was not known). He is particularly rigorous against the dances associated with the "prayers of al-Khali" (this is the name \textit{khali} is given a band intended for parades, which one could see every day in the sanctuary (Goldhaf, Z.D.P.P., 1894, pp. 115-120; cf. also Schreiber, Z.D.M.G., lvi. 61 sqq.).

Half a century before the beginning of the Crusades Nazi al-Khali was given the town (1047), which in those days lay on the north side of the Haram only; in his journal he gives a minute description of the sanctuary. According to him, a gate was first made in the middle of the northeast wall by the Fakhi Caliph al-Mahdi (1018 a.d.). The Haram had previously been inaccessible. The covered part of the sanctuary (\textit{majus}) which contained the graves (\textit{masjeda}) of the patriarchs, was richly decorated and provided with numerous niches (\textit{musala}).

After the capture of al-Khali by the Crusaders, Godfrey de Bouillon granted the seigniorial rights of al-Khali in 1099 to Godfrey d'Avranches (d. 1102). He was followed by Hugo de St. Omer, Bouchop, Robert (Rorgias), Gervase de Mahon and hastily Baldwin, in whose time (1119) the graves of the patriarchs were discovered (see above). He and his successors were apparently simply governors of al-Haram and were at first under the King of Jerusalem, and later, from about 1155, under the Lord of al-Karak. In 1168 al-Khali was made a bishopric.

All of Herat, who visited Jerusalem and al-Khali in 560 (1171/1172), says that he made the acquaintance of a Christian knight in Bait Lura, who had once visited the sepulchral caves of the patriarchs, when a boy of thirteen, with his father; these, he said, were afterwards restored by command of King Bernard (Baldwin II) by a knight named Bait Lura (Godfrey, son of George). It was perhaps a King Baldwin II's initiative to build the buildings of the Haram area, in which the formerly flat rock of the masjeda was replaced by a system of arches with sloping roofs (Vincent, Al-Khali, p. 166).

After the battle of Hattin, al-Khali again passed into the hands of the Arabs, according to a supposition of Madjdi al-Din (ed. Bilbaki, p. 56 below; transl. Sauvage, p. 10), which is not quite improbable (cf. Vincent, op. cit., p. 242-250), the work which stands beside the niche (\textit{masala}) in the Haram and, according to a still extant Kufic inscription, was originally donated by the Fakhi Caliphs of Damascus in 354 (1091/1092) for the martyrion (\textit{masjeda}) of al-Husain b. Ali in As-Salih, was brought to al-Khali in order of Salih al-Din (appar. 358 = 1152 after the resting of the walls of As-Salih) and put up in the Haram (von Berchem in the Franzoische-Englandischen Zeitungen, Berlin, 1915, p. 205-210, Vincent, Al-Khali, p. 219-250). After the death of Salih al-Din, al-Khali passed to al-Nasir Daud of al-Karak; it was, it is true, taken from him with other towns in 1244 by the armies of the Bulgha al-Salih Aybak, but it remained with the last years with the help of the \textit{Ayyubids}.

To this period belong two full descriptions of the Haram, that of Abu `Ali Fakih (d. 1247), who has written in 1252 a copy of \textit{al-Bayut} (1470) and Madjdi al-Din (1496), and

al-Maghāzī b. Nāṣr, etc. All the biographers agree in attributing to him the discovery of Arabic prosody and its rules, and it is said that he published other attempts made to correct it, and it is his system (but still holds) to this day. However, there has only survived to us of his works on the subject the specimen verse reproduced in various treatises.

Al-Khalīl was also the first to compile an Arabic dictionary: Kāḥil al-‘Ālam. He seems to have followed the alphabetical order of the Sanskrit grammarians which begins with the gutturals and goes on to the labials: ṣin, ḍh, ḍh, ḏh, ḍh, ḍh, ḍh, ḍh. The title of this dictionary was: Dictionnaire arabo-sanskritique, 2 vols. (Berlin, 1807, vol. 1; 1808, vol. 2).

This work has attracted to Al-Khalīl the attention of all his present form, and in fact: 1. Al-Khalīl, Dictionary of the Arabic Language, 3 vols. (Berlin, 1807, vol. 1; 1808, vol. 2; 1809, vol. 3).

The book, as far as I know, is the first in its kind to be published in Europe. It was an important step in the development of the study of the Arabic language, and it was widely praised and highly regarded. The dictionary is still in use today, and it is considered one of the most important works in the field of Arabic studies.

Al-Khalīl was also a poet and a scholar, and he is known for his contributions to the field of linguistics. He is considered one of the greatest linguists of his time, and his work has had a lasting impact on the study of the Arabic language.

Al-Khalīl's works have been translated into many languages, including Latin, French, and German. They have been used as textbooks, and they have been studied by scholars all over the world. His work continues to be studied and admired, and it is considered one of the most important contributions to the study of the Arabic language.
KHALIL, PASHA, name of three Turkish Grand Viziers.

1) CONOFEULL, KHALIL PASBA in the reign of Murad III, vide CONOFULL.

2) KHALILZELI KHALIL PASBA, Grand Vizier under Ahmad I and Murad IV. He was an Armenian by birth, born in a village called Karabik in the neighbourhood of Kars. He was the son of the vizier, Oskan, and his name in the Latinized form is sometimes given as "Okmadi." 1606, that he came from Murad's is incorrect). The date of his birth is not given, but must be about 1560. Having been educated at court as a young child, he entered the service of the Janissaries and fought bravely under the Grand Vizier Murad in the campaign against the Turks in Anatolia. Next year Khamis was appointed to the office of vizier in his own right. In this office he was very successful and captured many Maltese and Florentine ships, especially in 1613, 1609, when they took on a battle with the Maltese near Cyprus, a big and famous galloon, called by the Turks "Ezra Lechamovro (in Europe known as "the red galloon"). This success procured him the rank of vizier. From the end of 1620 to 1621, he was replaced by Omeragainst his enemies. In 1623, 1624, he went on an important expedition, first raided Malta, and then went to Tripoli in Africa, where he was captured and killed a morass called Tarsan in 1624. During his admiralship Khalil displayed much diplomatic skill against Spain with Holland and Morocco. Therefore he was appointed Grand Vizier to enter into relations with the Persians and became a powerful protector to the first Dutch ambassador, Haga, who arrived in 1614. Ever afterwards he showed himself a friend of the Dutch interests, although the planned confederation did not materialize.

In Muharram 1068/January 1657 he was appointed Grand Vizier in succession to osobin Mahmoud Pasha, who had been unsuccessful in his war against Persia and to the dispossession of the latter's chief subject, Amuradji Zadeh. In February of that year he showed his liberal-mindedness by protecting the Christian refugees in the capital against an attempt of the sultan to expel the Christians from the city. In the same year the Avarsian army of Count Courbi after the Indian campaign was set to confront the Pasha. His negotiations left Constantinople and its environs, but Russia, Khalil, however, seems to have been interested in maintaining good relations with Russia, France, and England and pacifying the Alg applying him. He did not play a prominent part in the events of 1657, but when after Ahmad's death (23 Ibram 723, 21 October 1657) and the sultan, the throne was restored, he was replaced by Sheikh Ali Pasha, a faithful friend of the Pasha. In the beginning of 1658 he took command of the army sent against Persia. The vanguard of the Turkish army was defeated in the plain of Sarab, but Khalil, marching against Ardebil, invaded the 5th of

KHALİL, PASHA — KHALİL SULTĀN

negotiate a peace treaty, which was signed on the same plain (6 Shawwal 1277/6 Sāmā 1618) on the same conditions as the earlier treaty. On his return to Constantinople, he was dismissed from the office of Grand Vizier and had even to take refuge with the grand šāhiğ Mahmaūd of Skutari, one of whose adepts he was (1 Safar 1018/18 Jan. 1609).

Sulṭān ʿOğuzān reproached Khalil, that he had not helped him to succeed to the throne immediately after Ahmad's death, but, on the insistence of šāhiğ Mahmaūd the grand vizier was appointed Kapudan Paşa a third time. With an interruption of six months in 1621 he occupied this position successfully. In May 1622 'Oğuzān II was murdered by the Janissaries and Mustafa restored. During the reign of terror of the Janissaries and their chiefs that followed, Khalil did not sympathize with them and even refused three times the Grand Vizierate offered to him by al-Walid Sulṭān (5 Febr. 1623). Two months before, he had been the object of a hostile demonstration by the Janissaries who accused him of protecting their enemy Abūl Fazl (q.v.). Still he had great influence and protocol in December 1622 the Polish ambassador against anti-Polish demonstration. But, after Mīr ʿUsūn Paşa had become Grand Vizier, he was dismissed from the office of Kapudan Paşa and banished to Antakya, where he went in April 1625, not without opposition, especially from the Sipahis, for he was the most popular of the then living viziers. After Mīr ʿUsūn Paşa, who in Erzum had rebelled against the Government claiming revenge for 'Oğuzān's death, was a former protegé of Khalil's, who, as Kapudan, had given him the command of a galley and, as Grand Vizier, had appointed him governor of Marash; his rebellion, however, was contrary to Khalil's advice. Three years after the removal of Mustafa (4 Dhu'l-Qa'da 1034/4 August 1623) and the succession of Murad IV, when Abūl Fazl's rebellion continued, it was due to this fact, that Khalil was appointed a second time Grand Vizier — in succession to Ḥāfiṣ Abūl Fazl (q.v.) — in a large assembly in accordance of the highest weight, as it was hoped that he would succeed in pacifying his former client (Dec. 1626). Three days after he crossed the Bosporus, visited his old friend Şahīl Mahmaūd, and reached Aleppo in March 1627. July the army went to Ṭūṣār Beqer. At first an expedition was sent against Akhisar, threatened by the Persians, while Khalil tried to obtain Abūl Fazl's submission and collaboration in this enterprise. But Abūl Fazl, fearing an ambush, declined and, having at first adopted a conciliatory attitude, he manoeuvred the Janissaries at Erzurum, Khalil was obliged to march against him and began in September the siege of Erzurum. After 70 days, however, in November, an extremely severe winter began. The army was obliged to retreat to the Tağāt with heavy losses occasioned by snow and cold. This campaign was the cause of Khalil's dismissal; he returned to Constantinople, where he kept his position as vizier (8 Shawwal 1037/6 April 1628). In the next year (1039/1629) he died.

Khalil Paşa is praised by the Turks as well as by the Turkish authors for his moderation and love of justice. His personality contrasts favourably with the other Turkish statesmen of his time, nearly all of whom died a violent death. He is described as a religious man who accounts for his friendship with Mahmaūd of Skutari; he also built in Constantinople a mosque in the neighbourhood of the mosque of Muḥammad Fātih. There exists an anonymous biography of Khalil Paşa, the Tarīḫ-i Khalil Paşa va Ǧemâl-NAME Khalil Paşa. The MS. and by von Hammer is now in the National Library at Vienna (Fligel; Die Arab. Pers. u. Tür. Handschriften der K. K. Hofbibliothek in Wien, ii. 253, 254).

3) Abūl Ǧallāl Khalil, Paşa, Grand Vizier under Aḥmad III. He was an Albanian from Elbasan, born about 1655, and had entered the Bosnian corps where his elder brother Šeîh Ağa was Bostandji Beqer. Having served sometime in Reghed, he returned to Constantinople as Khâjâh and became Bostandji Beqer in 1123/1711. In Muḥarram 1124/ January 1716, when the war against Austria was in preparation, he was appointed Beylerbey of Erzurum and sent to Nīsh to fortify this place. Six months later Khalil became Beylerbey of Dëvar Beqer and in Shavval 1130 (1st July 1716), when the Grand Vizier Dâʾūd ʿAlī Paşa [q.v.] had entered Belgrade for the Austrian campaign, he became commander of that town. Dâʾūd ʿAlī having been killed in the battle of Pârosvan (Aug. 5, 1716), the Sultan appointed Khalil Grand Vizier, while the Sultan's favourite and future Grand Vizier Dâʾūd Fârūq [q.v.] became his ʿAlī Mağbash. The latter, however, was by far the more influential. After Temesvár was lost (13 October) a mutiny was feared and the army returned to Adrianople. In the next year the campaign was reopened and Khalil marched to Belgrade, where the Austrian army, under Eugen of Savoy, was already awaiting the Turks. In the battle of Belgrade (16 Aug. 1717) Khalil was completely beaten, which was due for the greater part to his own inexperience and his bad advisers. Belgrade was occupied by the Austrians and the Turks retired to Nīsh. Khalil was dismissed in October 1717 and had to hide himself for two years, after which he was restored in the Sultan's favour. From 1133—1140 (1721—1727) he was banished to Myistane, then he was given successively the command of several towns in Greece and Crete and died in 1136/1723. He is described as a mild, pious man, but seems to have had so little reputation, that the European historians writing on the battle of Belgrade were not aware of his existence.
KHALILI. Ottoman poet and mystic of the time of Sultan Mehemmed II. Belonged to the neighbourhood of Deyzebak and came to Ibriz to study theology where he formed an attachment for a youth and so encountered to this homosexual passion then so prevalent particularly in the most cultivated circles that he entirely abandoned his studies and gave expression to his woes in a book which is known as the Feth-Names (Book of separation). The title Feth-Nameh is equally well known, which Sehit gives first and which is the title of a book by Khalil Hacib, "All of Monastic. The poem, which reminds one of the Huseyn-names of Dede Celebi (d. 1514) with its sincere unaffected verse, bears witness to Khalili's deep passion faithfully described. The book was finished in the year 1566 (1466/67). It is written in simple and lyric metres, a varied alternation of masnavi and azmat. Many biographers of poets interpret the poem as purely Sehit, which does not seem to be correct.

Khalili died in 290 (1485) as superior of a monastery in Ibriz. His Lütfas has not yet been printed. A number of his poems are contained in the Lütfas ʿal-Nuriyeh compiled by Uğdhâlin Kudâli in 916, according to Brunn-Rasul. Bibliography:

17. Rasul, Dede Celebi, Constantinople. 1834, p. 147; Sehit, Dede, Constantinople. 1835, p. 1321; Brunn-M. Tahir, Ottoman Miniatures, Constantinople. 1335, p. 159; Burchi, Cumhuriyeti ve Kudâli, Constantinople 1905, p. 1906.

J. Hammer, Geschichte d. sum. Dichter. I. 225; Gilbo, A History of Ottoman Poetry, ii. 379; Pertch, Katalog der turkischen Handschriften in Göttingen, p. 370; N°. 377. (The English manuscript of the year 1855 is contemporary with the poem.)

KHALIL (m.) is the term applied in the Kur'an (Sura II. 159; ii. 56; iv. 3) to God's creative activity, which includes not only the original creation ex nihilo but also the making of the world and of man and all that is and happens. The verbal form and alshahid and shahid are of the most frequent occurrence.

Among the most beautiful names of Allah in the Kur'an (cf. Sura ii. 12) are al-Khalil (Sura ii. 62, et passim), al-Khalil (Sura xv. 86, xxvii. 80, et passim) (beside Sura iv. 36 only ii. 31) and al-Musawwir. Epithets like the Almighty, the All-knowing etc. are also applied to the Creator. Their meaning is of a rule clear. The only obscure expressions are (cf. H. Grimm, Muhammad, ii. 44, 47) *Allah created it* (Sura xv. 31; xxix. 2—7; xvi. 39; xvi. 41; xxvii. 107; xxvii. 107).* If we insist in supposing genuine speculations in the Kur'an it may be recalled that in the Greeks digested or personalised truth conceptions with higher reality (cf. St. John's Gospel, xiv. 11, also S. v. d. Bergh, Die Systeme der Metaphysik der Araber, p. 287 sq.)

Allah is the Creator of all things (Sura vi. 57, et passim). He creates what He will (Sura xxvii. 82, et passim) but the Qur'an describes at his height the creation of man from dust, earth or clay, drops of semen and congealed blood (Sura xxv. 11—15; xxv. 3; xviii. 172, et passim) and the resurrection of the dead on a scale of judgment, a new creation not more wonderful than the first creation (Sura ii. 26, et passim). How important the creation of man is is evident from Muhammad's coming forward (in Sura xxxi. 1,
generally regarded as the earliest revelation) in the name of his Lord. "Who created, created man from congealed blood": Everything else was created for man (Sura ii. 27. et passim), especially the animals (Sura xvi. 5). The same thing is shown in the stages of the creation: it is regarded as taking place from the lowest upwards. In six days the world was completed, the earth first in two days, all that is in it in two more days and in the last two days the world of the seven heavens. Allah is only formally called the Creator of heaven and earth (Sura vi. 101. et passim) and it is announced as a secret (Sura xli. 59) that the creation of heaven and earth is greater than the creation of man. According to the usual explanation heaven and earth were created out of absolutely nothing but man was made from dust.

There is no creator but God. He is the One (Sura xxii. 71. et passim; Sura xxiii. 14. is no exception). He has begotten no children, only created things and beings, none of whom are like Him (Sura xxiii. 14.). But passages like Sura xvi. 202. 203. 204. 205. 206. where it is said that Allah, after forming man, breathed of his Spirit (Ruh) into him, make the difference between the Creator and creatures appear less rigidly marked.

The creation of man is above all work of divine power, as, in as far as that which has been created is not the man, of divine goodness. Reference to the harmony of the heavens (Sura liv. 31) and the beauty of the human form (Sura xxi. 30) are rare. Finally we may mention that God created all things once and for all (Sura i. 41; 46. 49. 50. 51.). Here is here perhaps a synonym for being and being and earth "for a definite period" (Sura xlv. 20. et probably to the last day.

The earlier traditions added very little to this (as Prof. Wellman kindly informs me). Before the creation Allah was in the cloud (al-Tiridzî, Tabari, Sura al-bayyinah. 87. 88.) and He created in darkness (ibid. al-bayyinah. 18. cf. Sura xxxix. 8.) He wrote a book before the creation (al-Baghdarî, Tâhir-i-Nezîrâ, 105.) The fâlism was the first thing created (al-Asfuri, Râzî, Sura al-bayyinah 117.). Allah created man after his own image (Muhammad, Hizb, IV. 115. etc. Sura xxxvi. 5. 34. 35. 36. 37. 38.)

In the later tradition the process of creation is elaborated with speculations regarding the throne, primeval water etc. and influenced by ideas of Hellenistic and Oriental origin regarding the manifestation or emanation of God in the world.

The Neo-platonic expression put in Allah's mouth is often quoted: "I was a hidden treasure not wished to be known and therefore I created the world." Knowledge (Isha) or intelligence (Isha) is therefore said to have been the first creation.

Just as God's superiority over man and the world is particularly apparent from the Qur'an, so God throughout the theology of Sunni Islam the distance between the Creator and the creature emphasized. In general it is concluded from the transcendental character of this world that its Creator is eternal. In favour of God's omnipotence axioms in Nature (cf. Almin) in Hasting's Encyclopaedia of Religion and Ethics and freedom of action on the part of man, if not absolutely denied, are suppressed as unnecessary as possible. (Ishsan, 9. v.) one of the first Ugilians, wished to define God simply as the omnipotent, Wiccan, Ibn Humar (Kühle Al-Fattâh, 192. 193. 194) asserts that one can only show with regard to God that He is the Eternal, the Unique, the True, the Creator (al-Umm, al-‘Alîy, al-Makîn. al-Karîm. 39. v. 165. 49.) for only by these qualities is He absolutely distinguished from this world.

But arguments against this sharp distinction were raised particularly under the influence of Christian dogmatism and philosophical speculations, from three sides i.e. by the Mu‘tazilites, the mystics and the philosophers. The Mu‘tazilites emphasized the wisdom of God in His creation much more than His omnipotence and His will. According to their teaching God only creates what is good and man is the creator of his own actions. NāṣI said that God could only create what is good and His creating is thought i.e. not an act of volition in the proper sense. According to others, like Abn-I-Hadîlî and Mu‘ammad, God's will is a kind of intermediation between the Creator and the created world. Al-Qâdhî teaching that God cannot destroy the created world (arguing on Platonic lines, like Plato etc.).

In contrast to this assimilation of the world and of human activity, mysticism appears as a deprecation of all this that is worldly — but only of the material world. While the mystics regarded this world simply as a ladder for God, they could intensify their spiritual life of the soul up to the feeling of godlike creative activity (cf. L. Masson, La Poésie d'al-Hallâj, p. 513 sq.).

Two schools may be distinguished among the philosophers: one older, more neo-Platonic (e.g. the Al-Qanîn al-‘Azîz) according to which the emanation of a series of spirits precedes the creation of a temporal material world; and a second more Aristotelian school (notably Ibn Sîn’ and A. Kishî) which makes the development of the intellectual and material world proceed by stages, but without beginning and parallel, after the first spirit has emanated from the divine being. Both schools regard God only as the first cause between Whose acitivity and this world there are many intermediaries.

The attitude of orthodox Islam to these tendencies developed in very different ways in course of time. The Mu‘tazilite doctrine that the khalîl al-‘Alî could only be accepted in a modified form: a khalîl (Ash’arists) or an ‘alîy (according to al-Murshidi) was ascribed to man instead of khalîl. The philosophic assumption of a world without beginning was decisively rejected, but the theory of the spheres connected with it was adopted while the spirits of the stars were interpreted as angels of heaven. It was very easy to make common cause with mysticism, which, of course, always insisted that there was no creator except Allah. The creation of man in God's image and the breathing of the divine spirit into him were of more importance to the mystic than the creation of the material world and of human activities (see also the nashîb and kâfîr) (cf. Marzouk, cf. I, p. 596)

In the struggle then against the Mu‘tazilites and philosophy, the Sunni doctrines developed its part in alliance with mysticism — and with the greatest success in the Ash‘arî school. According to the latter, Allah is the Omnipotent from eternity, Who can create it if and when and what He will not has no need to create. Who with the creation of the material world at the same time plans limits of time and space to it and every moment creates the world anew. Allah is
also the eternally Speaking as regards the word of creation, especially the word of creation in the Kojia. If the eternality of the world is taught contrary to the Mu'tashit view, there is no creation, as regards the activity of creation is called God the eternally creating; and therefore, these three modes of the eternally Speaking (created, speaking, and existing) are regarded as temporal relations, are distinguished from the eternal qualities of His Nature. In this respect the system of al-Matbeit differs from the teaching of the Ash'ari school: he assumes as an eternal quality in the divine being al-shafa, creative production. This means an approximation to the teaching of the philosophers that, because there is no cause without effect, God as the first cause created the world from eternity, and thus is really an eternal Creator, Whose being and actions are alike unalterable. Some philosophers and certainly many mystics got over the difficulty of this doctrine by the assumption that before the manifestation of His creation "the eternal Creator" was concealed in God (cf. Massaguin, op. cit., p. 657). Thus the meaning of His eternal speaking acquires another character, the belief and gnostic speculation in al-Shafat. On the one hand it teaches quite definitely the temporal creation of the world as an act of divine freedom. After eternal free deliberation out of pure goodness He created this world and He is creating it down to the last day. Fir is also the originator of human activities; man has only a kath. On the other hand, however, al-Ghazali is fond of adopting mystic theories of intermediation. God and man are not simply to one another: in the relation of Creator and creature. The world is divided (as in al-Majalla al-Saghir, on Sur., xxvi. 4.) into the al-ilm al-shafa, i.e. the material spiritual world, and the al-ilm al-wala, the non-spatial world of the angels and the human spirits (the former in the 12th, w. 4. v. 20.); it is also called al-ilm al-shafa wa al-ghazali, the latter al-ilm al-wala wa al-ghazali. As a number of the world of spirits (al-Majalla al-Saghir, on the traditions that Allah al-e-Khalqah created Adam in his own image), man in his being, qualities and actions shows similarity to God. The human will acts in his body (microcosm) like the Creator in the macrocosm. Besides the above-mentioned division into sensible and supersensible world, al-Ghazali also gives the threefold division (al-Shaykh, p. 2. v. 20 etc. There is mention of the 'kingdom of the heavens and of the earth and what is between'): al-ilm al-shafa wa al-ilm al-wala wa al-ilm al-shafa wa al-ilm al-wala (cf. the art. DAMAARAN). Man thus appears as a citizen of three worlds, corresponding to the old triad: body, soul, spirit, as it was developed by theosophy in the different hierarchies. On such, al-khalqah and al-ghazali cf. KALAM. ANGI, KEUST. In St. Paul, Ep. to Col., I. 18. According to al-Ghazali, the human spirit, related in God, will survive not only this material world and the spiritual world of the angels and God but also the spiritual world of the highest angels.

In spite of the authority of that "father of the church in Islam", the development of the idea was not yet finished. Ibn Rushd then advanced against him (Tubabat, 350) the doctrine that the world had no beginning; many theologians (from al-Razi, d. 605 - 1209, onwards) followed more closely the conceptions of the so-called Aristotelians, and extreme mystics, like Ibn al-`Arabi, i.e. the distinction between al-`Ilah (the Creator) and al-`Ilah (the creature) disappears in the absolute primordial being (cf. the art. AL-MATBEIT AL-ILMUL). Bibilography: There is no comprehensive work on the subject. Besides books mentioned in the text we may mention: M. Worms, Die Lehre von der Urfreiheit auf der Grundlage der mittelalterlichen arabischen Philosophie im Orient und ihre Befreiung durch die griechischen Theologen (Biblioth. Gesch. d. Philosoph. der al-A., ed. by Beier and v. Bertling, ii. 3, Münster 1900); A. Kohler, Das Schöpfungsproblem bei Al-Kindi, Abdullah, Almbrich, Magnus and Thomas von Aquin (b.d., i. 5. Münster 1913); T. de Boer, Die Tidehre der Philosophie nach Al-Ghazali und ihrer Auslegung durch den NAC., Bonn 1894; 40, De Wijzingers in de Islam, in the Volksuniversiteitsbibliothek, xiv. Haarlem 1912, Sec also the articles ALLAH and ABBAS.

KHALISH, the name of a tribe. River rising from it into the Bahr-Ner on the frontier between Mancharia and Mongolia. The river Khalish is mentioned in the 11th century in the *Secret History of the Monguls* (Russian translation by Palladii in Trudi Ross. Obshchestva Anti-Pekchini, iv., St. Petersburg 1866, p. 90, 91; 102 and 118 (the edition of the text promised by Pelliot has not yet appeared); in Rashid al-Din, ed. Berzin, in Trudi Vost. Otd. Russkago Aegis. Obshchestva, xiii., St. Petersburg 1888, Pers. text, p. 210, vol. xvii., ibid. 1889, Pers. text, p. 235). Since the 11th century the same name Kahlis has been given to the north-eastern part of Mongolia (from the western frontier of Mancharia to the eastern frontier of the district of Khuban, and from the Russian frontier to the Gold desert) and its population. Seunsg Seutzen (Gesch. der Ost-Mongolen, ed. L. J. Schmidt, St. Petersburg 1838, p. 104 and 105) speaks of twelve tribes of the Khalish; a distinction was made between the "neuere" and seven "routen" tribes (op. cit. p. 205, and p. 104 and 285). Seunsg (full name and title Geuschesid Dacaur Khan Tuthild) was considered the successor of all the chief of the Khalish; he was grandson of the last ruler over all Mongolia, Heyan Khan (d. 1253); on the genealogy see A. Pusadev, Mongallas i Mongool, St. Petersburg 1879, p. 472. The four saini (q. v.) into which the Khalish were nominally divided the Mongol emperors long since deprived the chiefs of any power) have taken their names from the different branches of this dynasty; they are the saini (from E. W.) of Tsensit-Khan, of Taghtor-Khan, of Sayin-Noyan (after 1275) and of Tseaksin-Khan. Another division is also mentioned in early as the occasion of the marriage of the Khalish to the Emperor K'ang-HI in 1691; Mongol inscription in Colon-Neor in text and Russian transl. publ. by A. Pastelev, op. cit., ii., St. Petersburg 1899, p. 291 292, 293; Geusen is said to have had 7 sons, whereas the population was divided into seven divisions (Geusen, written Bülhülu in Arabic); it is not known whether there was a connection between this division and the "saini" of the four tribes. Since about 1255, Bulhulum has been distinct among the Khalish; at that date a grandson of Geusen, Azat-Khan, was reigning, called Alon Gheshego Taidji in Seunsg Seutzen, p. 253.
KHALKHAL (*anak*, the name of a place in Adharbajan. Its position nearly corresponds to 35° N. Lat. and 45° East. Long. It does not occur on modern maps, but see the map in G. Le Strange, *The Land*, etc., facing p. 87. It was situated in the mountains which in this region were bare with fortresses. Yezd passed through this region when he fled before the Tatars. In 617 = 1220 A.D.

According to Ahmad. Allah. Mostawfi, it was formerly a large town, which in his day had sunk into a mere village with about a hundred hamlets belonging to it. It was the seat of the government of the province, after Firuzabad had gone to ruin.

There is another place of the same name situated at the mouth of the Oxus on the Caspian.

KHALWA, KHALWATI, see [*Sefatibawah*].

KHAMAR (A.), wine. The word, although very common in early Arabic poetry, is probably borrowed from Aramaic. The Hebrew *yemah* has in Arabic (*yamah*) the meaning of black grapes. The question has been fully treated by L. Gudin in his *Della notazione dei popoli asiatici in Mesopotamia e in Persia*, *J. R. Soc. Litt. Leiden*, series iii. vol. iii. p. 609 sqq.

Arabia and the Syrian desert are, in contradistinction to Palestine and Mesopotamia, not so well fitted for the vine; there are, however, exceptions, among which may be mentioned *al-Yahid* (see H. Lamanghi, *H.G.*, p. 35 sqq.; M. F. Q. E., viii, 146 sqq.). Elhaim and other parts of Yemen. Wine, probably of an inferior quality, is also mentioned in Midlands (see below). Usually, however, it seems to have been imported from Syria and Iraq; in early Arabic poetry the wine-trade is chiefly connected with Jews and Christians, who pitched their tents (*katib*, also a term borrowed from Arabic) among the Bedouins and provided them with a sign, usually his chnamer. In it little urchins were held, in the company of female singers who often also belonged to the establishment. The wine was kept in jars or skins, provided with a mouth-piece which was closed by means of a string.

In the days of Muhammad (the people of Mecca and Mecca used to indulge in drinking as often as an occasion offered itself, so that drunkenness often became a cause of scandal and of indigence in a second vice, gambling, which together with wine, incurred Muhammad's condemnation. Tradition has not refrained from describing how Hamza b. Abi Mutallab, Muhammad's uncle, in a fit of drunkenness mutilated Allah's covenants. (Boehm, *Shahr*, b. 13; Khayat, b. 77; Muslim, *Ahb*. Trad., i. 27; *Miskin*, b. 10); Abū Dī'ār, *Ahb.* (b. 19). And the commentaries on the Koran relate how Muhammad's companions held drinking-parties which caused them to consult finally an ideal prayer (see al-Tahawi, *Tafsir* ed.-*Sūrah*, niv. 44; Muslim, *Fad'il al-Sūrah*, trad. 44; cf. 45; Abū Dī'ār. in *Ahb.*, b. 185 sqq.)*.

The prohibition of wine was not in Muhammad's programme from the beginning. In *Sūrah* xiii. 69 we even find it punished as one of the signs of Allah's grace unto mankind. "And of the fruit of palm-trees, and of grapes, ye obtain an imbibing liquor, and also good nourishment." But the consequences of drunkenness manifesting themselves in the way just mentioned are add to have compelled Muhammad to change his attitude. The first revelation giving vent to these feelings was *Sūrah* ii. 216: "They will ask thee concerning wine and gambling (now killed). Answer, in both there is great sin and also some things of use unto men: their usefulness is greater than their use." This revelation, however, was not considered as a prohibition as people did not change their customs and the order of prayer supposed to be disturbed in consequence thereof, a new revelation was found, viz. *Sūrah* iv. 46: "O true believers! come not in prayers when ye are drunk, until ye understand what ye say." But neither was this revelation considered as a general prohibition of wine; until *Sūrah* vi. 92 made an end to drinking: "O true believers! save wine and beer and some pillars and divine arrows, are an abstention, of the work of Satan; therefore avoid them, that ye may prosper." This sequence of revelations regarding wine is the accepted one among the traditionalists and commentaries of the Koran (see Abū Dī'ār. *Ahb.*, b. 334 sqq.; *Tahawī, *Tafsīr*, b. 58; *Sūrah* iv. 46).

The prohibition of wine may, however, also be looked upon from a wider aspect, as Islam is not only the only monothistic religion which has taken a negative attitude towards wine. It is well known that, according to the Old Testament (Numbers i. 7 sqq.), the Naxumite, who had wholly devoted himself to Yahweh, had to abstain from wine and spirits, just as the priests before administering the sacred rites (Lev. x. 9). The Nabataeans, according to Disdiers Scultus (vi. 94, 95), likewise abstained from wine and one of their gods was called in their inscriptions "the good god who drinks no wine." Likewise, the abstinence from wine belonged to the rule of many Christian monks. All this has its roots in remote Semitic antiquity which carried a demoniac character to wine and spirits. The same is true for music, especially singing, which is also prohibited by Islam. It is not improbable that negative feelings of this kind may have worked together with the motives mentioned above, to induce Muhammad to prohibit wine.

The prohibition of the Koran has been taken over by the doctors of the law; all *mubākhar* and, also the *shayf*, call wine *haris* and the wine-trade is forbidden. See also the exposition of the Shi'ite view, see A.-Nawawi, *Shahābī*, ed. d. Berg, iii. 247, for that of the Ibn-Khalka *Akhbār*, vi. (Calcutta 1855), 604 sqq.; for that of the Mālikī *Zakūkī* in his commentary on *Ahb.* (Cairo 1858), iv. 256; for that of the Shi'ite *al-Tabīb*, (Calcutta 1839), p. 404. Theology reckons the drinking of wine among the gravest sins (*khaddar*).

It's to be has many utterances regarding this theme. Wine is the key of all evil (Abū Dī'ār. in *Ahb.*, b. 409; Ibn Ḍahab, *Ahb.*, b. 91; Muslim, *Ahb.*, trad. 37, 75, 76 et seq.). Canard is he who drinks, buys, sells wine or causes others to drink it (Abū Dī'ār.,
Who drinks a draught of wine on purpose shall have to drink purgative on Dussehra (Tayziist, No. 1134).

The Prayers of men who drinks wine is not acceptable (Naskz, Aykdrba, hal 45; Phutini, Aykdrba, hal 3); and faith is incompatible with drinking it (Bukhari, Aykdrba, hal 17; Nasai, Aykdrba, hal 62, 64). It is also inadmissible to use it as medicine (Muslin, Aykdrba, trad. 12; Ahmad b. Hanbal, li. 317, 317 par.; and it is prohibited to use wine for manufacturing vinegar (Tirmisht, Broa, hal 55; Ahmad b. Hanbal, lii. 119, 286 bis). But times will become ever worse and there will be people who declare wine allowed (Bukhari, Aykdrba, hal 6; Nasai, Aykdrba, hal 41 etc.) and so it will be drunk by the generation of the last days (Bukhari, Aykdrba, hal 7; Ahmad b. Hanbul, il. 176, 202, 233 seq.).

The prohibition of wine, although unanimously accepted, gave rise to discussions between the juridical schools, dissensions which are reflected in hadith, in a historical dispute. The discussions start from the question: what is wine? It is said: when the use of wine was peremptorily prohibited, the people of Medina gathered out in the streets all the time they possessed of the appreciated liquor (Ahmad b. Hanbal, il. 132 seq.; iii. 20, 189 seq.; 417, 286 bis; iv. 335 seq.). Ibn Umar declared, on the contrary, that at the time of the prohibition, there was no wine in Medina at all (Bukhari, Aykdrba, hal 2). And Ibn Mulk (ib.) says that there was scarcely any wine from grapes in Medina, when the prohibition was revealed; people used wine from beer and tamar (two kinds of dates). In another tradition (ib., hal 3) wine from ‘afid and saquma (two other kinds of dates) is mentioned. Umair is represented delivering a discourse which was meant to settle the question; according to his son “Abd Allah he said: Wine has been prohibited by the Koran. It comes from five kinds of fruit from grapes, from dates, from honey, from wheaten and from barley; wine is what obscures the intellect (see Bukhari, 895). But as Bukhari, Aykdrba, hal 2). The question remained, whether beverages prepared from grapes in a different way were prohibited. There was no kind of syrup.

When Umair visited Syria, the population complained of its unhealthiness and heavy climate and they added: This drink alone will lead us. Then Umair allowed them to drink honey. Then they said: ‘Honey cannot lead us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: Well. Then they cooked it till twice thirds were evaporated and third of it remained. They brought it to Umair, who put his finger into it and licked it. Then he said: This is il’al like ganeb (wine). (The pitch with which they encased their skins). Then he allowed them to drink it (Muslin, Aykdrba, hal 142). According to the first chapter of the same book, however, Umair himself one man who had become drunk on this il’al. Juice from grapes, prepared by pressing them only, is considered as wine. Tariq b. Saumad al-Hajjami said to the Prophet: We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Tariq asks whether the juice may be given the sick to drink, Muhammad answers: It is no medicine, it is sickness (Ahmad b. Hanbal, li. 289 seq.). And not only those who drink fermented wine are cursed by Muhammad, but also those who press grapes and give them pressed in order to drink the juice (Ibn Madin, Aykdrba, hal 6).

Another question of importance arose, in connection with the spirtus. Had they to be considered as wine or not? All the maghribi’s, except the Hanafi, have answered the question in the affirmative sense. They have consequently extended the prohibition of wine, in accordance with the intention underlying it. Tradition, which is the best source for the history of the origin of several institutions, shows that the question has been by the much debated umma. The standard hadith which is found very frequently in the classical collections runs as follows: (I pick out Muslin’s version found, trad. 20, because it contains important details): Some men of ‘Abd al-Kafi went to the Apostle of Allah and said to him: O Prophet of Allah, we are a tribe belonging to Rabi‘i’s between us and yourself dwell the inmates of Mecca, so that we can only reach you in the sacred month. Tell us therefore what we have to tell our tribespeople which will open Paradise for us if we bring it to you. The Apostle of Allah answered: I order four things and I forbid four things. Serve Allah without associating anything with him. Perform Salat, deliver zakat, fast the month of Ramazan, and deliver the fifth part of bounty. And I forbid four things: ahdab, baqqam, bakkam, and saquma. They asked: O Apostle of Allah, how do you know what the saquma is? He said: Well, it is a palm trunk which you hollow out, then you poor small dates into it and upon them water. When the process of fermentation has finished, you drink it with the effect that a man hits his cousin with the sword. Now among these men there was someone who had received a blow of the sword in this way. He said: I had concealed it out of shame before the Apostle of Allat. Then I said: But from what vessels should we drink that? O Apostle of Allat! He answered: From leather skins, the mouthpieces of which are smeared with pitch. They answered: O Prophet of Allah, our country teams with vessels so that no single skin can be kept whole. Then the Prophet of Allah answered: Even though the nice should eat them, even though the nice should eat them, even though the nice should eat them.

The tradition did not meet with general approval. It is said that the Aqide and other people complained of their difficulty in finding the skins necessary for preserving drinks without their becoming fermented. Therefore the Prophet is said to have withdrawn his prohibition, wholly or partly (Bukhari, Aykdrba, hal 8; Muslin, Aykdrba, trad. 63-66 etc.). In some versions of this tradition there occurs the restriction, that all fermented inebriating drinks remain prohibited. Innumerable are the traditions which only contain the rule: All drinks which may cause drunkenness are prohibited in any quantity (bali minid paraz batnakun mujud ‘ala), and this rule has passed into many branch of law (Ishakbi, Magzah, hal 60; Muslin, Aykdrba, trad. 67-75; Ahmad b. Hanbal, 1451; li. 16 bis; lii. 87; liii. 23 seq.; vi. 39 etc.). Of special traditions prohibiting fermented drinks may he mentioned the following: It is forbidden or disapproved of to
self-tanners if they are to be used for preparing
nāfīḍh [Nasrī, Alā'ī, tab. 41, 52]. It is pro-
inhibited to mix together different kinds of fruits
so that the mixture should become intoxicating.
This tradition occurs frequently; see e.g., Bahbūlī,
Alā'ī, tab. 112; Muslim, Alā'ī, trad. 10–30;
Nasrī, Alā'ī, tab. 4–77; Ibn Sa'īd, III, 369;
Ahmad b. Hanbal, II, 276; ii, 49; iii, 244, 292.
Be careful that these kinds may be used separately
for preparing a non-intoxicating drink (Muslim, Alā'ī,
trad. 81–83; Nasrī, Alā'ī, tab. 16–18 etc.)
It can easily be seen that the difficulty in
this matter was caused by two circumstances.
People were afraid to prepare, to prepare from all kinds of
dates, from raisins and other fruits, drinks
which only became intoxicating when they were pre-
served a long time; and probably also when they were
prepared after special methods. Where was
the line of demarcation between the allowed and
the prohibited kind? Several collections of tradi-
tions went so far as to mention nāfīḍh among
the drinks prepared by Mahāmūd’s wives and
drunk by him (Muslim, Alā'ī, trad. 29–69;
Ahmad, I, 232 sq., 249, 287, 320 sq., 336, 355, 369, 374; ii, 33, 340, 304, 313 sq., 326,
379, 384 etc.). Ad-Dālī (Alā'ī, tab. 10) and
H. M. b. Ad-Dālī (Alā'ī, tab. 12) have preserved
a tradition of the subject, which is instructive. I
translate Ibn Māḥfīz’s version: Says 'Aḥmad:
“We used to prepare nāfīḍh for the Apostle
of Allah in a skin; we took a handful of dates or a hand-
ful of raisins, ground it into the skin and
poured water upon it. The nāfīḍh we prepared
in this way in the morning, was drunk by him
in the evening; and when we prepared it in the
evening, he drank it the next morning”. In
other traditions of the same hadīt Ibn 'Abdālā
says that the Prophet used to drink this nāfīḍh even
on the third day, but what was left there was
poured out.
All this could, however, not persuade the
majority of the fiqhīs to declare nāfīḍh allowed;
three of the fiqhīs in this respect as well as the Shī'īs pro-
hibited the use of nāfīḍh. The Hanbīl school,
on the other hand, allows it, when used with moderate-
ness, for medicinal purposes.
It would take us too far to give here a detailed
survey of the opinions of the fiqhīs on all nāfīḍh-
kind; it would be superfluous, to state in detail at
least, because the more important differences re-
gard chiefly nāfīḍh only. The following rapid
survey is based on the Fārūq-i-Iṣḥāqī, st.
504 sqq. (cf. Naṣirī’s Minhāj, Cairo 1879, p.
192 sqq.).
Allowed according to the lāzimī is every non-
intoxicating sweet drink.
Prohibited (harām), according to the 'ālimī,
are wines and a number of every kind. As to wines
there are six cases to drink it in any quantity
or to make use of it is harām; to deny this is
harām; to buy, sell, possess it etc. is harām; no
responsibility (fuṣūl) rests on him who spills or
destroyes wine (mattā), when wine is a posses-
sion (madā'), an unsatiated point it is wegīt
just as blood and urine: who drinks any quantity
of it is liable to punishment.
Several kinds of products prepared by means
of grapes (bābdīl, mawṣū'm, etc.) are prohibited
according to the majority (lāzim) of the fiqhīs.
Allowed, according to the majority of the fiqhīs
are fīlāt (vatic supra) or mānīlūt and nāfīḍh.

From date with the restrictions mentioned above.
So juice from grapes when the process of
cooking has made to evaporate two thirds. Mu-
hammad b. al-Sabī'ī, q. v. has a dissenting
opinion on this point.
As to the punishment of him who drinks
wine, harām calls us that Muhammad and Abū
Bakr were wont to indict four offenders by means
of palmbranches or sundals (Ibn Khāṣīb, Fīrād, 
liv. 2–4; Fīrād, trad. 35–37). Under 'Umar’s caliphate,
however, Khālid b. al-Walītd referred to
him that people were indulging in prohibited
drinks. Thereupon 'Umar consulted the experts
which advised him to fix the number of blows at
eighty, a number suggested by the Qur'ān which
prescribes that those who argue massively of 
wine, without being able to prove their accusation
by the aid of four witnesses, shall be punished with
eighty blows (ṣūra xiv. 4).
Repeated drinking of wine, according to some
traditions, was punished by death at Mahāmūd’s
order (Abū Dārūs, Ḥadīth, 863 sq.; Ibn Māḥfīz,
Fīrād, tab. 37; Ahmad b. Hanbal, ii, 136, 169, 191;
iv, 91, 193). It is, however, added in some
traditions that capital punishment in such cases
is not according to the sense of the Prophet
The different ṣī'ahīs in this respect (Umār’s view):
drinking wine is punished with eighty blows;
if the transgressor is a slave, this number is halved
ever reduced to forty, because in the Ka'ba
the punishment of the handmaid’s wine is fixed at half
the amount of blows with which the free woman
is punished (sur. iv. 39). The Shī'ites however,
sticking to the practice ascribed to Mahāmūd and Abū
Bakr; with whom the number of blows
is consequently forty, resp. twenty (see Zarqānt, iv,
42: Nawānī in Muslim, iv, 130).
The prohibition of wine and spirits (according
to three of the four madhābi) is one of the
distinctive marks of the Muslim world; its
consequences cannot fully be overrated. This is
not seriously affected by the fact that trans-
gressions have been numerous, according to li-
terary evidence. The prohibition of wine, not
uncommon in pre-Islamic poetry, remained one of
the favourite topics also of Mahāmūd poets (cf. the
wine-song by Ibn al-Ma'mūn, Abū Nīkār, etc.)
and at the court of the Caliphs wine was drunk at
reveling parties as if no prohibition existed at
all (see e.g. The root: Nights; wassīm). Even
the common people could not always and every-
where refrain from their national drink, dating
of several kinds; the callīq 'Umar b. Abī-
Azīz deemed it necessary to promulgate a
special edict in order to abolish this custom
(cite v. Kreuter, Culturröfirstische Studien,
Leipzig 1873, p. 68 sqq.).

Wine has a special place in the literary pro-
ducts of the my tro, where it is one of the
symbols of ecstasy. In the first place, they only took over
the language of their Christian and non-Christian
predecessors. As early as 8th century of Alexandria ec-
tasy is compared with intoxication (see especially his
De Vita Contemplativa), Among the Byzāni,
language may have been a reflex of practice; but
this cannot be said of Sīrī’s in general, who on
the contrary, cling to the ecstatic methods of the
vāṣa'irāt. As to Hāfiz’ wine and love-drug,
it is an unsettled point whether they are merely
metaphorical (or not).
KHAMS(Á) (A.), the number five. This number has a magical character, from the fact that it is the number of the fingers of the hand and that it is found in certain Muslim dogmas (five foundations of belief, five religious duties, five daily prayers, prescribed by the moon). The hand, stretched out with the palm open and the fingers spread, is a symbol that protects against the evil eye. The North African frequently finds among Jews as well as Muslims, a hand painted on the door with the fingers spread out. Amulets in this form are made of gold and silver, called kham, thums, by the natives and hands of Fatawa by Europeans. Thursday, the fifth day of the week, is favourable for magic rites against the evil eye and is the day chosen for pilgrimages to the tombs of famous saints to destroy the effects of the evil eye.

KHAMSÁ, Khamsa, the same word as the preceding, pronounced in the manner of the Arabs of the East, the Persians and the Turks; the name given to collections of five poems of which the most famous are those of al-Nasfí, also called Panfilj-gandhi “the five treasures”: Músafír al-Ábír (539 = 1184), Khansum u-Shiraz (570 = 1180), Leilá u-Mádân (584 = 1188), Hafsíathan (593 = 1192), Ismán-láh (597 = 1201); of Amir Khisraw of Dihír; Móza'íb al-Álwar (609 = 1210), Shírzíy u-Khãrum, Madáín u-Leilá (same year), Ayámí Shámdí (609 = 1300), Haftí-sáhír (701 = 1302); of Khisraw Khíratu; Khwání u-Álnáwar (finished in 1344), Hísáá Húmíyíní, Káwání, Gúl u-Násuáí, Zámuá-náwarí; of Khábi, unfinished; we have the Qasíyúu bowl, Ahsãíb al-Ábír (about 1345), Leilá u-Mádâní (389 = 1485), Láhrahí, Khání u-Álwarí about 1351, Hásíbí, Khání u-Mádâní (about 1485), Láhrahí, Khání u-Álwarí, about 1351, Hásíbí. This poem, including the Khání u-Álwarí (886 = 1485), Shírzíy u-Khání (888 = 1488), Leilá u-Mádâní (889 = 1489), Khári, translated by Schürmann; of Hálik, probably unfinished; containing: Leilá u-

Magúrín, Hafsíthan, Shírzíy u-Khání, Khání u-Álwarí (between 917 = 1510 and 927 = 1521); of Fádi Múksií, Ahsãíb, Súlimán u-Hísáá, Nazání, Hísáá Húmíyíníu, Khání u-Álwarí (1005 = 1595), unfinished; of Haíín b. Sayíd Fádî Allah: to the glory of Muhammad and the four first caliphs (of 1038 = 1628 to 1039 = 1630). The Khání u-Álwarí of Múli Múksíí, Khání u-Álwarí is a distaste against five persons at the court of Gúbrásu. The author died at the beginning of the reign of Aârangháh (about 1600 = 1650).

Turkish poetry also contains a certain number of works of the same kind as those of Hâmid Allah, Celebi, of Hamdi, son of Shaikh Ab Shams al-Din, of 914 = 1510; Fâmi Kází, Shírzíy u-Ahír, Ismán l-Addír, Khání u-Álwarí; of Mûkûd of Kalûkûndîn, contemporary of Bâkî; of Bâhshî, d. 997 = 1784; Wânim u-Álwarí, Wânim u-Álwarí, Hún u-Násr, Shírzíy u-Álwarí, Shírzíy u-Mádâní; of Sâím b. Sâím, surname Aâsi and son of Newî, of 1044 = 1634 (really only contains four poems, the fifth being the Divan of the poet); Shírzíy u-Álwarí, Hafsíthan, Khání u-Álwarí, Shírzíy u-Álwarí, Shírzíy u-Mádâní; of Râdún, i. d. 930 = 1524, mentioned by Sehí, probably never existed. That of Nâqiri is in prose.

Mr. ‘Ali Shír Nâwí has also collected under the same title five poetical compositions in Eastern Turks (Catalogue Qurtbî, Jan., 1916, p. 233; E. Blochet, J. A., 1916, Series 11, vol. viii, 400). The name Khâní u-Mâdâní is given to a biography of Shírzíy u-Mádâní in five parts (Bell, J. A., 1851, Series 3, vol. xvii, 303).

KHAMSÁ (abbreviated from minhaš al-khamsa = the five provinces), the name of a province in Pârsâ of which Zanjan is the capital; Sûfâniya also forms part of it. It is a small administrative division forming four quadrants, each being a large district of 184 ‘Arâm. Adjacent: it lies between the provinces of Ábdâkarshân and Kazân and has 11,450 inhabitants. It appears in the Budget with the following statistical revenue in cash: 819,880 kuruş, in cereals 10,340 kuruş (of 649 lb.), in straw 9,000 kuruş; value of payments in kind 978,100 kuruş. Local expenditure, including the remissions of taxation, 19,119 kuruş. The five towns which gave the name of this district are Áhadh, Qasmân, Sháhân, Arman-khân and Tërmân-khân. The country is inhabited by the nomadic tribe of Áhadh.

Bibliography: [E. Dunne], Voyage en Perse, ii. 213–214; Jâbûr, Voyages en Arménie, p. 17; G. Costam, Pittura, l. 437, 486. [CE. HEAY]

KHÂN (v.), a Turkish title originally a contraction of Khârshân, Arabic Khârshân [q.v.]. In this meaning it occurs alongside of Khân as early as the Orçhân inscriptions of the 8th century A.D. in the Tönubük inscriptions in W. Kauff, Die alttürkischen Inschriften der Mongolen, and Series, St. Petersburg 1899, p. 3, and...
the quotations in the glossary, p. 92. In the Muslim period the word Khán seems first to appear towards the end of the 9th (9th) century on the coins of the 16th Khán (9-10) and particularly in the 9th (9th) century in the texts relating to this dynasty (cf. the quotations loc. cit.). Not till the Mongol period is a distinction made between the Khán or Khuń as supreme ruler and the Khán as ruler of a separate portion of the whole empire.

In course of time Khuń and Khán were completely ousted from the popular language by Khán. In the last centuries before the Mongol conquest, the Turkish Khán like the Arabic Míshír and the Persian Khán was used as a princely title in contrast to the supreme title Sultan, Sultan only retaining the meaning in Western Asia and Egypt, in Central Asia in the various kingdoms into which the Mongol empire broke up Khán was the real sovereign title and Sultan the title of each individual member of the dynasties descended from Cingi Khán in the administrative system of the modern Anatolian kingdoms founded by the Safáwids the Sultan was the governor of a smaller district, under the Khán, who was governor of a large province. (W. Barthold).

KHÁN DJÁHÁN LÓDI. An Afghan favourite of the emperor, Dlánghír (q.v.), who called him his son (farzand). His original name was Pir Khán, and he was a son of Dlánghír Khán and descendant from the Dálaw Khán Lódí, who was supreme in the Punjab when Ikbar entered India. Pir Khán first had the title of Safá洁净 Khán, and afterward that of Khán Djáhán. When Dlánghír died, he behaved badly, made the mistake of not recognising Shah Dlánghír, and of not even awaking his autograph letter, and sold the Baniglah of the Deccan to Nísán al-Mulk. The result was that he was superseded by Maházat Khán, and though he got another appointment, and came to court, he was no longer a favourite, and became apprehensive that he would be arrested. So he fled at sight from Agra with his family and dependents. He was pursued and attacked at the Cambal, and many of his people were killed. He continued his flight towards the Deccan, but eventually was killed in Central India in the fourth year of the reign of Shah Dlánghír, to whom his head was sent.

Bibliography: Tsvésh Khuń Lódín Lódí; Dlánghír, Memoirs, transl. by A. Rogers and H. Beveridge, i. 67 etc.; Elliot-Dowson, Hist. of India, v. 67, vii.; Ali Maksai, transl. Blechmann, p. 532; Núshábaní, i. (Elliot-Dowson, viii. 20); Khái Khán, Muntazáb al-Usúd. (H. Beveridge).

KHÁN KHÁHÁN, "Lord of Lords," a title given by the Khán emperors to their Mohammedan kásán. It corresponds to the Turkish Scháhpáshá. It was in use in Ikbar's time, the title having been given to Dálaw Khán, son of Dláwin Khán. The most famous Khán Khán Khán's were Ak hern's ministers, Basím and his son Amir al-Raábim. - Khán Dárynán, "Lord of the age," and Khán Dlánghír, "Lord of the world," the similar titles.

KHÁN-1 DJÁHÁN MÁKBUL KHÁN, originally a Hindu by name Kámúr or Kárts, became a Muslim on entering the service of Múmmád b. Taghlájí (q.v.), who gave him the title of Káwán al-Málik and made him governor of Múlták; he afterwards became a powerful and distinguished himself by his administrative ability. On the accession of Fáiruż Sháh Taghlájí (q.v.), he was raised to the position of viceroy and enjoyed the confidence of his royal master for 18 years until his death in 766.

KHÁNA (pl. house; from the root 6א, 3א, "to dig," aspirated form from הונא), means: locale; local, a square on a chessboard. It is found in numerous combinations such as Núshábaní, káháná-ába, "library;" mística kháná, "regimental land;" fábábákháná, "kettledrum band," in the time of the Mamluk Sultans of Egypt; jábábákháná, "arsenal of artillery;" bedís-káháná, "water-cloth," etc. and is also found in Indo-Aryan hybrids such as gábákháná, "sports meeting" in which gym is an abbreviation for gymnastics (Vule, Pleonóm-Termin., etc.).

Khánbálik (usually written Khán Bilbí), the "King's town," the name of Peking as capital of the Mongol Empire; after 1264 in Eastern Turk and Mongol and afterwards adopted by the rest of the Muslim world and even by Western Europe (Casablanca, variants in S. Hallberg, L'Etrange Orient, dans la littérature et la carteographie de l'Orient, Gotteborg 1906, p. 103 sqq.). According to Rashid al-Din (ed. Berezn, Travels Out. Scl. Arch. Arch., 892, Persian text, p. 24), Peking (Chinese then Chongkóu, i.e. the prince's capital) was called Khánbálik even earlier by the Mongols, apparently as one of the chief towns of the Kin dynasty (cf. the art. Khán Khuń). As everywhere in the Mongol Empire, Muhammadans enjoyed considerable prestige in Khánbálik also. Muhammad Valávásh b. Muhammad al-Kháwáríní (W. Barthold, Turkestan etc., i. 139), who died there in Rábi I, 652 (April 21-May 20, 1254), was several times confirmed in office as governor of North China (Rashid al-Din, ed. Bichot, p. 95 and 309). On the assassination of the civil Ahmad Fáwílí in 1281 and the events that followed, see ibid., p. 508 sqq.; Marco Polo, ed. Yule-Constant, i. 415 sqq. On the town and its situation on the Imperial Canal cf. Rashid al-Din, ed. Bichot, p. 533 sqq.; on the distances between Khánbálik and other towns by the land routes see Weissen, ed. Hammer, p. 24, Indian ed., p. 121; N. E. Zill, p. 125 sqq. (al-Limari); Sháhat-al-Din Yásid, Zafír Núshábaní, Indian ed., ii. 219 sqq. The name Khánbálik for Peking was also retained after the decline of the Mongol empire in Central and Western Asia and in Europe. On the five month's sojourn (Dec. 1420-May. 1421) of the embassy of Sultan Sháh Rukh in Khánbálik see N. E. Zill, xiv. 329 sqq.; the original narrative, which survives in one MS. only (Elliot 422 in Oxford, Bodleian = Khaft al-Zawábir of Hágbír Ahrú, c. 390 sqq.), has so far not been fully investigated (brief account in W. Barthold, al-Maṣjarári, p. 27; M. Z., i. p. 107). There was a mosque in Peking even in those days, Khánbálik is mentioned as late as the early years of the xvith century in an anonymous history, written in Khágíhár (Zep., xv. 254). In the reports of the Russian Ambassadors of the xvith century, the form Kambats is used, under Western European influence (Jn. Amasew, Pothenáme... arríwša parostrámía Níh. Şafarýxw, in the Zep. Gógr. Oktb., xx v. etmog., xvi, 8, v. 1).
His grandfather Mir Khawānd seems to have been originally an inhabitant of Balkh. He entered the service of Bādī al-Zamān, eldest son of Sultan Husain, and was with him in 1502 at Poil Criqgh and heard him tell of his adventures after his defeat at that place by his father, five or six years before. After Sultan Husain's death in May 1506, Khawāndamīr was with Bādī al-Zamān at Mārūl in northern Persia. In the spring of 1507, when there was an idea of opposing Shahānšāh's advance, Bādī al-Zamān and his brother and co-ruling Mu'āshī directed Khawāndamīr to go to Kandahar and induce Shāh Bāgh Beg Arghūn to join them. He got as far as Herat, but delay was caused by the death of Bāgh Begān, daughter of Bādī al-Zamān, which suited his purpose by the near approach of Shahānšāh, and so he did not go to Kandahar. He also once went on a fraticide embassy to Khusraw Shāh at Kandahar. A feeble attempt was made at Mārūl to encounter Shahānšāh, but the princes ran away, and the gaūlāt Dūl Tūnūs Aghūn was slain. The march upon Herat followed in March 1507, and Khawāndamīr and his brother's son 'Uthmān, who was inspector (muhabbūt) for the city, were deputed by the inhabitants to interview Shahānšāh at his camp, and to obtain terms of surrender. The nephew went and succeeded in having an interview, though he was stripped and pillaged on the way. Khawāndamīr remained in Herat after its capture, and he has given an account of how he and his friends were welcomed by the Uzbeks. He was also in Herat when Shāh Ismā'īl defeated and killed Shahānšāh and took possession of the city in 1510. But in 1520 (1514) we find him in retirement at the village of Faṣḥ or Basīt in Ghurāstillān in northern Persia (not in Georgia, as Elliot has it; see de Sacy on Ghurāstillān in Mînses de l'Orient, i. 321), where he occupied himself in writing his books. He now attached himself to the worthless Muhammad Žamān, eldest son of his old master, and shared his fortunes for a while, at Balkh, etc. But when Muhammad Žamān was preparing to go to Kandahar, Khawāndamīr obtained leave to return to Faṣḥ. He must have afterwards settled in Herat, for he was there in July 1547, when he left it to go to Kandahar. But did he stay long in Afghanistan? For he went off to India in March 1544. He was in Agra and presented himself before Bābār in September, and he accompanied him to Hīndūkush and was with him at the truce, or junction of the Sardjū and Ganges (Ḵawāndamīr, i. 4, end of 4th part of vol. 2). Bābār died in the end of 1530, and Khawāndamīr afterwards served his son, Humāyūn, and wrote a panegeyic on the latter's buildings and devices, which he called the Ḵamāsā Humāyūnī, or the Humāyūnīsūnu (there is a MS. of it in the British Museum), and an account of the book, accompanied by extracts, is given in Elliot's History of India, v. 185). It is commonly said that Khawāndamīr died in 941 (1534—1535) during Humāyūn's expedition to Gujrat. But Parāṣāgh's account shows that the death, caused by dysentery, occurred on the return march from Gujrat. This was in 942, and Khawāndamīr was alive in that year, and made a chronogram announcing the death of his friend and fellow-traveller, Shāh Bāgh, the saddle-maker (cf. Bābānī, Khawānd's translation, i. 450). Khawāndamīr probably died in 942 or 943 (1535—1537). At his own request he was buried in Dīhil, near the tombs of Niṣām.
al-Din Awliya and Amir Kharaw. His age was then probably about 60.

Khwandamir was a voluminous writer. His first work was the Khudādh al-Abhar (or, the Perfection of Narratives). It was written in 905 (1499-1500) and dedicated to Ali Shem, whose library furnished him with the necessary materials. It is a youthful work, and naturally there is little in it that is derived from personal knowledge. It is in fact a preliminary sketch for the Hijāb, but, in some places, e.g., in the account of the capture and death of Yāghūr Muhammad it is fuller than the latter work. Khwandamir's most valuable work, and the one only that has been printed, is the Hijāb al-Khurshidī. It was begun in 1511 and substantially finished in 1523-1524, though he made additions to it after visiting India. The Hijāb al-Siyār — so called after his second name, Habīb Ullah — is a General History from the earliest times down to near the end of the life of Ismā'il Safawī I. Naturally, it is chiefly valuable for the author's own time. The best parts are the lives of Sultān Husan of Herāt and of Ismā'il I. Incidentally, he gives much information about Shaibānī and Bābur, and his account of the latter is the best source that we have for the two great gaps in Bābur's "Memoirs". He is a conscientious author, for he wrote the Hijāb al-Siyār three times over. He is also accurate, and often writes from personal knowledge. His great fault is his style. It is tedious and rhetorical, like the Ansārīl Shāhīs of his contemporaries Hīrī and Wā'īf, and is sprinkled with tage of verse. He bestows too much praise on Sultan Hūsain and Ismā'il Safawī, and he is also sometimes unnecessarily prolix. For instance, he writes with sententious detail of the adventures of Muhammad Zandī. The Hijāb al-Siyār has been lithographed at Tihrān and Bombay. Khwandamir was also the author of the 7th vol. of the Rawżat al-Safā. The Bibliography: Elliot's History of India, vols. 4 and 5; H. Ferté, Vie de Sultan Housain Baïkaya, traduit de Khondimir (Paris, 1893); Men Beveridge, Traduction de Bâbur's Memoires (Indian Texts Series, London 1910, 1921); T. W. Haig, The Turko-Tatar Dynasty of Khwandamir (Indian Antiquarian), Bombay 1918.

KHANFU, in the third (18th) and fourth (19th) centuries the Arabic name for the most important export of China, the centre of trade by sea with the western Asiatic peoples. As is now generally believed, this town is "undoubtedly Canton" (cf. above, §24). On the other hand, it had to be used by (J. Kliproth, J. A., 1824, v. 40, l. 409, l. 55, 6, 1215, F. R. Charney, Mina de l'Empire persan, 1845, l. 386-394; Rieu, Cat., of Persian Ms., 1918, 709 sqq. (H. Beveridge)).

KHANSHÉD, the region bounded on the north by the Nahradā, on the south by the province of Herāt, and on the south by the Adjanta Hills, and on the west by the kingdom of Gaudārī. It became an independent state in 1358, when Ahmad Fārūqī, entitled Rāja Alī, or Malik Rāja, having joined the rebellion of Bāhirān Khurshīdān against Muhammad Bahman 1 of the Dālūn, was obliged to flee from that country and established himself in Khanshed, which owns its name to him and his successors, who long enjoyed the royal title and were content with that of Khān, whereas their principalities was known as "the country of the Khāns". The country, surrounded by powerful neighbours, was too small to be entirely independent, and its rulers owed some degree of allegiance at first to Mālwa and afterwards to Gaudārī, but the mutual jealousy of these two states preserved Khanshed from absorption in either. Mirām Muhammad 1, the eleventh of the Fārūqī Khāns, was closely related to the ruling family of Gaudārī, and was elevated to the throne of that kingdom in 1537, but died on his way to Ajmalīdān to assume his new dignity. His promotion encouraged his successors in Khanshed to use the title of Shāh. The administrative capital of the country was Bakhshāpūr, but the fortresses of Asrīr afforded a safe refuge to its rulers when danger threatened. It was captured by Akbar in 1601 from Bahadūr Shīh, the seventeenth and last of the long line of Khāns, and when prince Dīnyūlī was appointed viceroy of the Moghul Dakān, which included Khanshed, his father bestowed upon the province, in his honour, the fanciful name of Dānīrī, by which it was known, in official records, as long as the Moghul empire lasted, though the newer name never displaced the older, and is now almost forgotten.

Bibliography: Muhammad K̲h̲ān Fārūqī, G̲a̲h̲ī̲v̲a̲m̲ T̲a̲h̲m̲ā̲h̲, Bombay 1832; An Arabic History of Gujarāt, ed. Sir E. Denison Ross (Indian Texts Series), London 1906-1921; T. W. Haig, The Turko-Tatar Dynasty of Khwandamir (Indian Antiquarian), Bombay 1918.

CANTON, in the third (18th) and fourth (19th) centuries the Arabic name for the most important export of China, the centre of trade by sea with the western Asiatic peoples. As is now generally believed, this town is "undoubtedly Canton" (cf. above, §24). On the other hand, it had to be used by (J. Kliproth, J. A., 1824, v. 40, l. 409, l. 55, 6, 1215, F. R. Charney, Mina de l'Empire persan, 1845, l. 386-394; Rieu, Cat., of Persian Ms., 1918, 709 sqq. (H. Beveridge)).

CANTON was plundered by Arab and Persian pirates (e.g. E. Chavannes, Documents sur les Pou-blis (Thrie) occidentaux, St Petersburg 1903, p. 173). This event is not mentioned by the Arabs. Arabic sources (Abū Zaid al-Strāfī in Hamdom, Relation des voyages faites par les Arabes depuis quarante ans dans l'Inde et la Chine, Paris 1845, l. 63, text); al-Masʿūdī, Muqaddas, l. 305; Ibn al-Athīr, vol. 221) report the destruction of Khanshed by the Chinese rebel Hung-chin in 664 (877-878) when a great number (120,000 or 300,000) of Muslims, Christians, Jews and Zoroastrians perished. According to the Chinese annals, Canton was taken by Huang-chin in 879: in this connection also the importance of this town for foreign trade is mentioned (P. Pelliot, Trang Foc, 1923, p. 410). The statements in Ibn Khordudbih (J. G. A., vol. 60, text) regarding the location of Khanshed (four days' journey by sea and 20 by land from the most southerly Chinese harbour Lihchou, now Hanau) can, as F. Hirth and W. W. Rockhill (Chos Yu-Koa, St Petersburg 1914, p. 22), with support from al-Lidrīsī) observe, only refer to Canton. The name of Khanshed (Chinese Khansheng [fuzhou] in 1917) is now regarded as correct, though the manuscripts frequently have Shih for Chih and mon de Goeje (J. G. A., loc. cit.) is inclined to prefer the reading Khushik (for Hong-Kong). According to the Arab authors, the town brought the government 50,000 drachms a day (about £20,000).

Boysen, op. cit., text, p. 41). After the arrival of a foreign vessel, munchee were sent to it by the
Empires, to pick the finest merchandise (ibid., text, p. 73 np.;) the road between Kshāsā and the capital Khurād (Sh-i-mušu) took two months to traverse (ibid. p. 77 and 103). The prince (sādābād), i.e. governor of Khurād, bore the title Dīkh (ibid., p. 38; according to Rainaud, note 1, ii. 77, for Chinese Ch-fa). See also the article especially p. 840—842).

W. B. HINTON

Khānikān, a town in the 13th, on the Hulwān-cai. The statement that Nu'mān V, king of al-Hira, was kept here a prisoner till his death by order of his overlord, the Sasanian Khosrow II, suggests that there was a fortress here in the Sasanian period. The bridge of Khānikān must also go back to Sasanian times; it is built of brick and plaster in several arches across the river-valley. The number of arches is said to be 64, each 20 ells wide. At the Muslim conquest a battle seems to have been fought at Khānikān for a "day of Khānikān" is mentioned in Ibn al-Falāhi. Under Arab rule Khānikān was a small town which, from its position on the traveller's route, was the centre for the whole train of caravans of the times. It was an unresting station on the road from Baghdad to Khurāsān. Ibn al-Mu'tahh praised the wines of Khānikān. According to Muṣ'ab, a nephew of Khānikān yielded a considerable revenue to the state. Lastly the Ītāt were deported to (the region of) Khānikān after their rising in lower Mesopotamia had been suppressed in 219 (834).

The place was often mentioned in recent years as a junction connecting a branch of the Baghdad railway with the Russian system proposed by the Russians in 1875.

(P. SCHWARD)

Al-Khansā' is celebrated as the greatest poet of the Arabas; her proper name was Tumādīr, daughter of 'Amr b. al-Shārid of the tribe of Sulaim, from which tribe originated among the others the celebrated poet Zuhair b. Ahi Sulaim. Her father must have been a man of considerable reputation and wealth, for an account preserved in the Kādh al-Awāsim of al-Maqrī (ed. Haidarabad, ii. 168 sq.), tells us that his father visited the fair of Kāthnār with his sons Muṣ'ab and Sakhir in the 33rd year of the Elephant and transferred some land property at al-Wahba in the Mithāl of Waṭibḥ to Muṣ'ab and al-Shārid, the grandsons of the poet Dāmir, and al-Akhbār says that the document then drawn up was still in the possession of the descendants of Muṣ'ab in the time of the caliph Hārūn al-Rashīd. Assuming the document to be genuine (which I doubt) the brothers of Al-Khansā' 15 years before the Hijāra, in 607 a.d. were already old enough to take part in the affairs of their father, but the year of the Elephant was probably much earlier than the date generally assigned to it by Muslim authorities.

The earliest event in the life of Al-Khansā' of which her biographers make mention is the proposal of marriage made by the aged Dārid b. al-Ṣimma, who was killed in the year 9 a.h. The latter was bound in close friendship to her brother Muṣ'ab, both having promised to one another that the one surviving would mourn in an elegy the one who died first. Al-Khansā' was then a young girl and as the proposal came through her brother we may assume that her father was still alive. It is significant for those times that she was permitted to consider the proposal of marriage, and after seeing Duraid her decision went against him. She even composed some verses against the rejected suitor in which she mocks him and his tribe and incidentally mentions that she had previously refused another man of the family of Bahr, who is not otherwise known. After this she married a man of her own tribe of Sulaim called ‘Abd al-‘Uzza (or, according to Ibn Kāitha, Raviha li. ‘Abd al-Uzza), who was the father of her son Abd al-Sadjara, Abd Allah, who took a prominent part in the apostasy after the death of the Prophet, and did not come into al-Medina till the reign of ‘Umar. This ‘Abd al-Uzza probably died early and married another man of his tribe, Mirdas b. Abi ‘Amr, by whom she had three sons, Zaid, Muṣ'ab and ‘Amr, and probably her daughter ‘Amra, who was her youngest child.

There is considerable difficulty in reconciling the chronological data and to arrive at even an approximate date for the birth of Al-Khansā', but as between her sons Abd al-Sadjara, a prominent minister in the 13th year of ‘Umar's reign, and the 17th year of his, we may fairly assume that Al-Khansā' was born between 40 and 50, probably even older, Al-Akhbār b. Mirdas, who was one of the poets of the Prophet, was certainly not her son, but the issue of an earlier marriage of Mirdas, Al-Khansā', an enterprising man, had attempted with some companions to cultivate some swampy ground near a spring, and as a revenge the spirits which inhabited that place contrived to kill him slowly, i.e. he most likely contracted a fever in this unhealthy place.

The burning-point in the life of Al-Khansā', however, was the double bereavement, the loss of her two brothers Muṣ'ab and Sakhir. Muṣ'ab, in accordance with Arab custom, went out with 14 companions to make a raid upon the tribe of Murra. He had had a quarrel with a man of this tribe, ‘Alāhim b. Harmala, at the fair of ‘Ukāk, and after some unsuccessful attempt he invaded the land of the Murrīs in which he was slain by Duraid, the brother of ‘Alāhim. The duty of avenging the death of his brother fell upon Sakhir and he succeeded in murdering first Duraid, who had slain his brother Muṣ'ab and was slowly recovering from the wound he had sustained in the combat; then another Sulaim, brother of ‘Alāhim, was killed by the former’s brother ‘Alāhim. Not content with this double revenge for his brother, Sakhir continued his raids upon Murra till he was fatally wounded by a man of Fāk‘as, an Avasi clan allied with the tribe of Murra. He lingered for a long time in his tent, apparently becoming a burden to his wife, and finally succumbed. All these events happened before the rise of Islam, but Al-Khansā' lived long enough to see the final victory of the new faith and she is said to have been revered both by the caliph ‘Umar and by ‘Alīhi, for her unreasoning mummery for her brothers, especially Sakhir. The new religion had no real influence upon her and her poems.
Fortunately several manuscripts of her elegies have been preserved and the indelible labours of Cheikhao have put us in possession of a very complete collection of her verses. Naturally, we find among the verses recorded in this edition many which have become ascribed to al-Khānsa, because of her paramount reputation as a poetess of elegies, but there is no doubt in my mind that we have many poems which are perfectly genuine, especially as the tradition of the undoubtedly genuine pieces emanates from members of her own tribe among whom the verses were collected at a very early date. It is significant that in these genuine poems we find expressed the true sentiments of the Qahtaya: there is no mention of a future life; only the blood of the slain demands retaliation and the despair is over and again expressed that no one can replace the departed, whose many manifold virtues are extolled and eulogised.

Both the biography and the merits of her poetry have been critically and elaborately dealt with by Cheikhao, Gabrieli and Rhodokanakis so that it is easy to get a fairly complete estimate of her life and work from these authors. Whether al-Khānsa's introduction was due to features into the murjīja or not is very difficult to say, but it is almost certain that her verses inspired many later elegists, among whom figures her own daughter Amara. If we contrast the two verses with those other elegists among her contemporaries — I will only mention Mutanmnin and Abī Hūrārī — we will find that hers do not possess the poetical beauties which are found in them, but we have in the contrary her poems which are also much shorter, a far more genuine mourning; on the other hand, there is a certain monotony in the repetition of the same thoughts and ideas.

Khanasa al-Aghlabi, s.v. 136 sqq.; al-Tahir, 1905 sqq.; Ibn Kastān, Khanasa al-Aghlabi, ed. de Goeje, p. 87 sqq.; in addition verses of her and notices on al-Khānsa’ are found in almost all works dealing with older Arabic poetry from the Harra’ and the Katib al-Aghlabi onwards and single poems are found translated in several European anthologies of eastern verse, before the appearance of the edition of the Dictionnaire by Cheikhao.

Khatib, in the Nukhbat al-Khawāṣim, ed. Strabo, p. 10, 20, and 261, vol. 2;
Khanasa, vocalised Khana, by B. Khatib, (ed. Dehénery and Ganquinetti, p. 28 sqq.) and connected with the name of the celebrated poetess (see the art. al-Khana). — a town in China, capital of the kingdom of the Song dynasty overthrown by the Mongols, Chinese formerly King Shen, now Hsing-ho-fu (cf. above, i. 455). The town is frequently mentioned in the Mongol period and described as one of the greatest commercial cities of the world in those days; Muslim and Christian sources agree in saying there was a large number of Muslims there, as many as 40,000.

Khanasa (C). Her Works — In the full description of Quinsey in Marco Polo, ed. Yule-Consiter, ii. 215–215. On the foreign colony in Hang-ho-fu see also Hirth and Rockhill, Chao T’ieh-na, St. Petersburg 1911.

Khanasa (D). Her Works — In the full description of Quinsey in Marco Polo, ed. Yule-Consiter, ii. 215–215. On the foreign colony in Hang-ho-fu see also Hirth and Rockhill, Chao T’ieh-na, St. Petersburg 1911.
They had been previously accustomed to a tax of this kind in these regions under Byzantine and Persian rule and the old methods of administering it were retained by the Arabs in many details. The tribute was paid mainly in kind. Definite contributions of corn or other foodstuffs were levied on villages or in some cases on districts. The Muslim officials turned these into money. Very considerable revenues reached the Muslim treasury in this way, especially in the first century A.D.

At the beginning of the Abbassid period we find different scholars (e.g. Abû Vîlûs, al-Khayyat and Walîyâ al-Adam) still endeavouring to collect the traditions and legal enactments on the hajjaj and arranging them in special chapters in their books. The Caliphate's official collection of the hajjaj in these days were still a very important subject. But after the peoples of the conquered territories had generally adopted Islam they began gradually to drop payment of the hajjaj. It was thought that with the payment of the tithe of the yield of one's fields (see the art. 'Aâsu) enough had been done and the hajjaj in the end fell everywhere into desuetude. In the later Fireh-books we therefore only find the regulations regarding the poll-tax still given in detail, while those for the hajjaj are only dealt with cursorily or even not at all. Only in al-Mawardi's special work on the Muslim system of administration do we find the regulations for the hajjaj still dealt with in considerable detail.

(KHÁRAK, an island in the Persian Gulf, the Arazia of the classical geographers. In the Arab period the island belonged to the Persian province of Arzah Khurra, and it was so still described by al-Balîqî. Al-Masûdî allows it more closely to Djanathnā which lies opposite it on the mainland. For shipping it was an important calling-place on the way from al-Baṣra to India and also to 'Urmâ, the Khordâlâh therefore gives a description of it. In his time Khârāk was 50 parasangs from al-Baṣra, had an area of a square parasang and was cultivated, yielding cereals, grapes and dates. So recently as the end of the twelfth century, Niebuhr was impressed by the subterranean works partly cut out of the rock. That there was a large number of inhabitants and that they were Muslims is shown by al-Isâkî's mention of a pulpit-mosque on the island. In Yâkî's time there was also a place of pilgrimage to Khârâk, the alleged tomb of a son of 'Ali. The pass-tale-sheey of Khârâk is often mentioned. The pearl-fields here are very deep; it is therefore natural that complaints of a poor harvest are made but occasionally very valuable specimens are said to have been found here.

In the eighteenth century, the island was for a time in the possession of the Dutch East India Co., a certain Baron von Kniphausen planned foundations on the island for them and built a factory behind their walls. Later a town grew up in which Arabs and Persians settled. The Dutch E. I. Co. seems to have abandoned the island at the end of 1765 as its occupation proved too costly.

(H. SCHWARZ)

AL-KHÁRAJ, Muhammad b. Ahmad b. Abi Bishr Abû Bakr b. Aba' al-Dîn. He was brought by a Kha'ir b. 'Abdullâh ibn 'Abd- al-Malik Muhammad ibn Ahmad ibn al-Khayyat. For him he wrote the work entitled al-Taqhib (see below), Al-Khâräj died in Merw in 533 (1138/39). According to al-Balîqî, al-Khâräj devoted much attention to philosophical problems as well as to astronomy.

Al-Khâräj treated of cosmography in two works, extant in numerous manuscripts. The shorter al-Taqhib fi 'l-ilm al-Halâ' is dealt only with astronomy while the fuller Muntakhab 'l-ahbâb fi Taqhib al-Mu'tahâb (on this see Hüdâît al-Khatî, No. 13, 124) also deals with conditions on the earth.

Very lucidly and with excellent illustrations al-Khâräj expounds the theory of al-Khârîjî, also called Ibn al-Hâjîhâm, according to which the planets are supported not by imaginary circles but by massive revolving basins. This assumption avoids the difficulty that in the motion of a planet the ether is pressed in front of it and leaves a vacuum behind it.

Al-Khâräj's and Ibn al-Hâjîhâm's works were drawn upon later by Muslim astronomers and cosmographers to the extent that the West utilised Ibn al-Hâjîhâm's work Fi Hâyat al-Allîm in Hebrew and Latin translations.

(E. Windemann)

KHA'RĐJE, one of the southern groups of oasis in the Libyan desert. The expression al-Wâdâ' al-Khârđje is the Greek word ὥδης of the Greek writers, the word ὥδης being a transcription of the Coptic OTÀQ.

The oasis of Khradje consists of a large valley which runs from north to south for about 100 miles and averages 12 miles in breadth. Khradje was reached until quite recently from Eshâ or Fardsî; from the latter place the journey took four
days by mail. A narrow-gauge railway (100 miles) now connects Farafra with the little town of Khadja, the present capital of the Great Oasis. In 1910 the town had about 1,700 inhabitants; the principal places, besides the capital, are Bahr, 'Silah, and Qurna. Dates are the principal article of commerce in this region. There are about 70,000 date-palms which produce the best fruit in Egypt. The cultivated area is about 4,500 acres, but in recent years artesian wells have been dug with the object of putting a greater area under cultivation.

It is somewhat difficult to get accurate notices of the cases in the Arab writers (see the articles AL-SHABA, UKHUL, EL-MAZRA). None of them had visited it and their terminology varies with their informants; we feel nevertheless that the ancient tradition still survives with them, which divided the Oases of the Libyan Desert into Little (= Bahrja), Inner (= Ukhele) and Outer (= Khadhja). In the notice he gives of it, al-Ma'ṣrī is very hasty, for he repeats practically the same generalities for the Inner Oases as for the Outer Oases. One thing that all the geographers emphasize is the remarkable fertility of the Oasis in general. Al-Ya'qūbī mentions especially the lands watered by running water at Khadhja, on which the grape and rice were grown in addition to palm-trees. This impression of great prosperity is all that one gains from the fairly long but confused text of al-Dimashqī; it is crammed with names of places. Al-Bakrī distinguishes two Inner Oases and al-Ma'mūn uses the same expression of al-Walīmān al-Makrit, but only when he is using an official document of the reign of Sulayma al-Dāni. As a matter of fact the oasis of Khadhja may well be divided into two distinct groups.

We are badly informed as to how the cases were settled in the Umayyad and 'Abbasid period; one Zara has the name of Abahayla (the present Minha), the ancient Ptolemais-Pool) and of al-Wahl; it seems very likely that it was the oasis of Khadhja that the Nabians ravaged in 329 (= 939). At Sittī munitions, for the end of the Fatimid period, the title of al-Wahl, but in the course of the notice of the oasis of Bahrja. Under the Mamluks, according to the Fadi Allah, to whom al-Kalqashanī adds nothing, the Sultan's government was not represented by any official. The cases were all granted as benefices (ḥizbā) to officers who administered them as best they could. Later the revenues of the cases were earmarked for the Sultan's private purse. A description of the oasis of Khadhja and more particularly of its ancient temple is given in Brugsch, Reise nach der grossen Oase al-Kharga, Leipzig 1878. The Survey Department of Egypt has published a fascimile-containing a topographical and geological memoir of the region (Hall, Kharga Oasis). Bibliography: Al-Bakrī, Sīrat al-Ma'mūn, ed. de Slane, Algiers 1911, p. 15; Description de l'Afrique, transal. de Slane 2, p. 38; Abu Sittī, fol. 97; al-Bakrī, ed. 1228, Cairo 1535—1540; III. 393—394; Ibn al-Dimashqī, Khadr al-Talib, Cairo 1895, p. 173; al-Ma'mūn, Khadrī, ed. West, Matières pour servir à la géogr. de l'Egypte, p. 219—225 (with a very full bibliography). (G. Wirt)

AL-KHARĪD or GHAR AL-KHARD, a valley in al-Dawāfī in South Arabia which contains one of the few perennial streams in Arabia. According to J. Haldavy, the river rises in the Bilād Arabia near Shurā' in several springs, some of which are hot and contain minerals, and flows at first through a wide, flat plain bordered by low hills. About 300 yards from its source it becomes much broader and exceedingly full of fish. The people of Shurā' supply the market of Sīmā' with fish from the Khardī so that it is of considerable importance to them. The river also irrigates the oasis of al-Dawāfī. The water is held back by great dams and kept for the dry season when it is fed off on to the fields every day by numerous channels. The river feeds its rich vegetation mainly to the Khardī; it could hardly retain its course without this important water supply. According to E. Glaser, there is no water in the Khardī until Bāt Ummahā; this place lies in the extreme north of the Bilād Arabia. It drains the whole district of Sīmā', Khawāl and Sanīli and is the most important stream of the Eastern Sarāt; in the land of Bīth Hanūn it joins the second great wādī of this region, the Wādī Ṣawr, and then flows through the valley of al-Dawāfī. The natives told J. Haldavy that the Khardī after twining and turning round the Balād Hamdān disappears below sand, and only reappears again in Ḥaqaswānī, a feature which the Khardī, however, shares with other rivers of Arabia.

KHĀRĪDITES or Khashra, sing. Khārīdī, the members of the earliest of the religious sects of Islam, whose importance particularly, from the point of view of the development of dogma, in the formulation of questions relative to the theory of the Caliphate and to justification by faith or by works, while from the point of view of political history the principal part they played was disturbing by means of continual insurrections, which often ended in the temporary conquest of entire provinces, the peace of the eastern part of the Muslim empire during the two last years of the Caliphate of 'Abd All and during the Umayyad period, and involuntarily facilitating first Mu'ayyid's victory over 'Atī, then that of the 'Abbasids over the Umayyads.

I. The Origins of the Khārīdī Movement.

Opportunity for the schism was given by the proposal presented to 'Abd All by Mu'ayyid during the battle of Shīfā (Saifār, 37—37, July, 657, cf. above, l. 284) to settle the differences arising out of the murder of 'Uthmān, which had provoked the war, by referring it to two referees who would pronounce judgment "according to the Qurān."
While the majority of Ali's army readily adopted this proposal, either because they were tired of waiting or because "Kaurava" on "Kauravas" hoped there would emerge from this Kaurānic judgment the justification of the immunity they had committed against. 'Uthmān which had ended in the latter's assassination, one group of warriors, mainly of the tribe of Tāmit, vigorously protested against the setting up of a human tribunal above the divine word. Loudly protesting that "judgment belongs to God alone." (Allāhumma ʿalā bi-r-rāḥīmā) they left the army, and withdrawing to the village of Ḥaḍārūṣ (q.v.), not far from Kūfa they elected as their chief an obscure soldier, 'Abd Allāh b. Wābah b. Rāhābī (I. 32). These first dissenters took the name al-Hārūsīyāt or al-Muṣ奋斗目标 (I. e. those who reject the above phrase; cf. I. S. O., viii. 769, note 1), which is often applied by an extension of meaning to the later Khāwrīdāj also. This little group gradually increased on account of successive defections, especially when the arbitration ended in an verdict quite contrary to what the Kaurāma expected (probably in Ramadan or Shawāwī, 37 = Febr. = March, 653); on this occasion a large number of partisans of Ali, including a number of Kaurāma "went out" (Mawāḍa: secretly from Kūfa (to which the army had gone during the truce) to join the camp of Ibn Wābah, who in the meantime had gone to the Lijāh country on the left bank of the Tigris, to a place which commanded the exit of the roads from Fars and the bridge-head, at which in those days stood the little village of Baḥrādā, which later was to become the capital of the empire. The rebel camp lay along the Nežārān canal. It is to this episode of the truce of Kūfa that the sect of the Khāwrīdāj owes its name (those who went out), more probably than to a general spirit describing them as having gone out of the community of the faithful, as it was later interpreted, probably at quite an early period (of the name of the Jewish sect of the Perseians, which Ed. Meyer, Uebersicht und Anfänge des Christentums, ii. 283—284, derives from the incident of their separation from the partisans of Judas Macchabaeus in 1 Esdr 14 = 144, quoting in support of his explanation the name of the Khāwrīdāj). Another name given to these first Khāwrīdāj (which has also been extended to their successors and seems to be the one which they gave themselves) is al-ARDS (plural of ARD), the "rebel" i.e. those who have sold their soul for the cause of God (this idea is found in several contemporary verses).

The extreme fanaticism of the Khāwrīdāj at once manifested itself in a series of extremist proclamations and terrorist actions; they proclaimed the nullity of Ali's claims to the Caliphate but equally condemned 'Uthmān's conduct and denounced any intention of avenging his murder; they went farther and began to brand everyone infidel and outside the law who did not accept their point of view and drawn Ali as well as 'Uthmān. They then committed many murders, not even sparing women. Little by little the strength of the Khāwrīdāj army grew by the accession of other fanatical and turbulent elements, including a number of non-Arabs, attracted by the principle of equality of races in the faith that the Khāwrīdāj proclaimed. "Ali, who had so far tried to avoid dealing with the rebels, in order to avoid a war in his year so long as he had to face the army of Mu'āwiya, after the rupture of the preliminaries of peace was obliged to take steps to avert the growing danger. He attacked the Khāwrīdāj in their camp and inflicted a terrible defeat on them in which Ibn Wābah and his followers were slain (battle of Nahrawān, Safar 9 = July 17, 658). But the victory cost Ali dear. Not only was the rebellion not at all suppressed and was prolonged in a series of local risings in 39 and 40, but—Ali himself perished by the dagger of the Khāwrīdāj 'Abd al-Rahmān b. Mulājam al-Muṣ奋斗目标 (id. i 284), the husband of a woman whose family had lost most of its members at Nahrawān. The tradition that a conspiracy of Khāwrīdāj had aimed at killing simultaneously Ali, Mu'āwiya and the governor of Egypt, 'Amr b. al-As was almost certainly apocryphal.

It should be noted that the narratives of Arab historians on the origin of the Khāwrīdāj movement are very confused and contradictory, and seem to have lost sight of the real connection between it and the arbitration; on the other hand the nature and date of the latter are quite uncertain. The reconstruction which is given above is that proposed by the writer of this article against the view of Weilhusen (followed by Lammens and Caetana) who thinks that the Khāwrīdāj rebellion and the arbitration are independent of one another and even dates the battle of Nahrawān before the verdict of the arbiters.

II. The Wars of the Khāwrīdāj under the Umayyads.

The wise and energetic administration of Mu'āwiya succeeding the feeble and vacillating rule of Ali prevented the agitation of the Khāwrīdāj from breaking out, but as it did not succeed in extinguishing it any more than it succeeded in suppressing the feelings and aspirations of the Shī'a. Our sources mention several risings that broke out in Kūfa and Basra during the twenty years of Mu'āwiya's reign (40—60 = 660—680), but they were promptly put down and only served to increase the full of martyrs, the worship and avenging of whom became one of the features of the Khāwrīdāj movement. It is at Basra in particular, under the governors Ziyād b. Abīh and his son 'Ubayd Allāh, that we find most risings and suppressions of risings. These instructions, of which the most formidably was that of Mirdas b. Qātaba b. 'Abd Allāh (q.v.), settled the tactics of the Khāwrīdāj, whose raids henceforward took the form of guerrilla warfare and owed their successes mainly to the rapidity—which soon became legendary—of their cavalry (the names of some of their horses are preserved in Arabic words on hippology). They mobilised unexpectedly, swept through the country, surprised undefended towns and then retired rapidly to escape the pursuit of the government troops. The centres of concentration of the Khāwrīdāj were the marshy country of the Bağhī around Basra (cf. AL-SARQA) and around Dākhū, on the left bank of the Tigris, where their movement had originated, from which they could, if defeated, rapidly gain the mountainous lands of the Armenian plateaus.

It was only with the great civil war that broke out after the death of Yazid I, that in the midst of the general disorder the Khāwrīdāj movement assumed serious dimensions and contributed more than anything else to render pre-
lations the pretenders 'Abd Allah b. al-Zubair's (q. v.) hold on the territory that he had at first been able to subdue. After the fall of Ibn Zubair, it was the Umayyad governors who had to wage a hard struggle with these indomitable rebels, enemies alike of victors and vanquished. It is at this time that we begin to distinguish among the Khawarij a half political and half theological subdivisions the nature of which is not at all clear, for the tradition which makes them appear at the same time quite suddenly at Basra on the one hand and of Yathrib has probably altered the real succession of events. In any case we henceforth find the Khawarij marching out throughout the eastern part of the empire (Syria was always free from them) and Africa only knew them under the 'Abbasids into serious rebellions at the head of which they placed individuals who had given their names to the 'Abbasid or 'Afridi sect [see ABBASITES], the 'Abbasid or (better) 'Abdar [see ABDARDS AND AL-ABBASITES], and to the 'Abdar [q. v.]. Of all these movements the most dangerous to the unity of the Muslim Empire and the most terrible on account of its ferociously uncompromising character was without doubt that led by 'Abd Allah b. 'Abdar [q. v.] which gave the Khawarij, temporary control of Kirmān, Exo and other territories, constituted a permanent threat to the security of Basra and surrounding country, and which Jalal ad-Din b. Abi Shuja at first, and later Jājjār b. Yussif only overcome — in 28 or 39 (568 or 609) — after long years of effort which ended in the defeat and death of the last and most remarkable of the 'Abdar leaders, the valiant 'Abd Allah b. al-'Abdar [q. v.]. Less serious and less extensive and prolonged but quite as terrible as the 'Abdar movement was the insurrection which was called after Shabib b. Yathrib al-Shabib [970-71, 696-697], although he did not begin it but was only its most distinguished leader; it began in the high Tigris country between Mār, and Nishān and its object was the conquest and subjugation of Kūfah. The partisans of Shabib who advanced only in little bands of several hundred horsemen, but who often gathered round them large bands of multitudes, moved terror through the Tigris, and having several times defeated al-Hārīj's troops were only destroyed by the help of an army of picked troops summoned from Syria, Shabib himself perished, drowned in the Tigris, while trying to reach the mountains of Kirmān; his successors caused a certain amount of trouble to the governors of Yathrib and Baghdad, but never again were a serious danger. Arabiah was the scene of Khawarij activity, where during the government of Ibn al-Zubair, between the years 65 (684/685) and 60 (901/902) their leaders 'Abd Allah b. al-'Abdar exploded. An amir and Abū 'Ubaydah B. Jathlam, the town of al-Tifin, and were restrained by religious scruples from taking the holy cities. They were only destroyed after the intervention of al-Hārīj, but they left the seeds of future movements, especially in the eastern part of the peninsula. Owing mainly to the energy of al-Hārīj, Khawarijism seemed definitely quelled. Another factor contributed considerably to its failure, namely the fanaticism and intolerance of the rebels, whose religious disputes ended in splitting their ranks and sometimes resulted in the removal of their adhes leaders on the charge of having on some occasion failed to observe the absolute irreconcilability of their principles. Another cause of weakness may be recognised in the eternal feud between the Arab element and that of the Masa'il which brought fatal consequences along with it, especially among the descendants of the 'Abd Allah b. al-Fadillah. But under the last Umayyad in the midst of the irreparable collapse of the central government, the Khawarij raised their heads, and resumed their exploits, this time not in little bands but in large bodies. While the two most serious risings of this period, those of al-Jahāl b. Mūsā al-'Abkar [q. v.] in the Djaza' and the Ḥaḍramaut and that of 'Abd Allah b. Yāsīn, named 'Abd Allah b. Yāsīn, 'Abd Allah b. Yāsīn and 'Abd Allah b. 'Abdar, commanded Mārās al-Hārīj and of 'Abd Allah b. Yāsīn in Arabiah (in the course of which Mu'āwīya itself was occupied), ended in defeat, it is nevertheless true that the anarchy which they provoked destroyed the eastern rampart of the Umayyad power and enabled the 'Abbasid insurrection to penetrate more easily to the heart of the empire. Under the 'Abbasid Caliphate, the Khawarij movement may be said to be practically extinct in the Ḥaḍramaut and adjoining regions. Except for a few local risings, promptly suppressed, Khawarijism no longer presented any serious danger and only survived as a religious sect, without, however, any noticeable vitality or wide dissemination. In Eastern Arabia, on the other hand, in North Africa and later on the eastern coast of Africa, one of the principal branches of the Khawarij, that of the 'Abdāya (Abdāya), played an important part in politics, and even after this is the case, it continued to be of importance from the religious point of view. It survives in our day with its dogmas, its rites and its special laws (cf. ISLAMITE and AL-MASA'IIL). III. THE POLITICAL AND RELIGIOUS THEORIES OF THE KHAWARIJ. The Khawarij, who, as we have seen, never had any true unity of military and political action, did not have either a uniform body of doctrines. Their teachings seem to us like the particular views of a number of independent sub-sects (the collections of statements number not less than a score including principal and subsidiary together), some of which represent theological schools as well as political movements, of a collectivist character, while others confine themselves to expressing differences of individual opinions among the theocrats of the sect. One article is common to all: it is that which treats of the question of the Caliphate, a question which has been the starting point of all the religious divisions in Islam. On this question the Khawarijs are opposed equally to the legitimacy of the Shafi'i and the legitimacy of the Mada'in. On the one hand they assert what Wilhelmsen aptly calls their "non-conformity" i.e. the obligation on believers to proclaim illegitimate and ipso facto deprive the "impossible" who has gone off the right path (this is how they justify their abandonment of 'Ali after his acceptance of the arbitration); on the other hand they declare every believer who is morally and religiously irreplaceable to be capable of being raised by the vote of the community to the supreme dignity of the imamate even if he were a slave slave. The result is that each of their leaders has been re-
cognised by them as Amīr al-Muqtadda though some of them had, among other things, the qualification of Kūraish birth. Consequently the only other caliphs besides their own that they recognised as legitimate are Abū Bakr and Ummar (the latter is particularly venerated by them); 'Uthmān only during the first six years of his reign and 'Abbās till the battle of Badr.

Another capital article of Kharijīh heterodoxy is the absolute rejection of the doctrine of justification by faith without works. They push their moral strictness to the point of refusing the title of believer to anyone who has committed a mortal sin and regarding him as a muwāqit (apostate): and their extreme wing, represented by the Ahrānī, says that he who has become an infidel in this way can never re-enter the faith and should be killed for his apostacy along with his wives and children. Of course all non-Khārijī Muslims are regarded as apostates. Here we have the principle of ʿīlāf (religious murder) which we find applied from the beginning of the Khārijī movement, even before it had been formulated in theory, and which in its applied form disturbed the war of the Ahrānī. This ferocious principle forms a strange but ill-logical contrast with the spirit of toleration shown by the Khawārijī to non-Muslims and which in some of their schools goes so far as to recognise as equal to Muslims in every way those Jews or Christians who will pronounce the ʿashūdah with the modification: "Muḥammad is the Apostle of God to the Arabs and not to us." The tendency to the levelling of the Arabs and the Mamlūk (which was already a result of their attitude to the problem of the infidels) was pushed so far by one of the tenets of Khārijī doctrine, Yazīd b. Abī Aṃīn (founder of the Yazīdīya), that he says that God will reveal a new Kurʾān to a prophet among the Persians and that he will found a new religion for them, divine in the same sense as Judaism, Christianity and Islam, which will be no other than that of the ʿAbdūn mentioned in the Kurʾān.

The same Puritanism which characterises Khārijīs in its conception of the state and of faith is found in its ethical principles: it demands purity of conscience as an indispensable complement to bodily purity for the validity of acts of worship; one of its sects goes so far as to remove Sūrah al-Fātīma from the Kurʾān (Sūrah 18) because its contents are worldly and frivolous and make it unworthy to be the Word of God. If, on the other hand, they seem to be less strict than the orthodox in the punishment they inflict on adulterers, for whom they do not allow stoning, this is due simply to the fact that they do not recognise the authenticity of the famous verses adding to Ummar the prohibitive text of the Kurʾān (cf. Nöldeke-Schwally, Gesch. d. Qurʾān, I. 245–253).

Outside of general principles and a few particular cases, the law and dogmas of the Khawārijī are not known to us in their totality except for the Bāḥrīya, whose survival to the present day has preserved in its integrity their religious tradition. The Bāḥrīya represents (as does the Sunnīya on the other side) a comparatively moderate school and their present views, in dogma as well as law, have been to some degree influenced by other Muslim schools. Attention has recently been drawn (C. A. Naffīna, R. S. O., vi. 455–460) to the very close connection between the dogmatics of the Bāḥrīya and of the Muṣṭaḥ. It may also be supposed that it was the latter which, in certain points at least, received a stimulus from Khārijīs. What seems beyond doubt is that, as Wellhausen points out, Khārijīs played a very important part in the development of Muslim theology either directly or by the impulse which it gave to reflection on the problems of the faith.

Although Khārijīs seems to us an essentially popular movement in its origins, we must be careful not to think of it as devoid of intellectualism. On the contrary, the very radicalism of its theories must have exercised an attraction on many cultivated minds, such as similar doctrines have done in other times and countries. It is particularly at the time of the early Abūbasār, under the influence of and, at the same time in opposition to the refined and sceptic culture of the period, that we find many scholars and men of letters who were thought to cherish Khārijī views, without this preventing their frequenting high society and enjoying the favour of the court. The best known of these Khawārijīn and poets was the famous philosophe Abī ʿUṣfī Durānī, b. Abī Maḥmūd (q.v.), whose verses, familiar in the courts of the palace, at least, rather piquant anecdote is recorded by Ibn Khallīkān (L. 107 of the 1310 edition; the poetic quaestio should be corrected from the Amīli of al-Murādī, ii. 85–89). Poetry and eloquence were also cultivated among the Khawārijī, which is explained by the fact that the majority of their leaders, especially in the early days, belonged to the Beduin element in the military camps of Kūsa and Bāṣra. Collections were compiled of the ʿadhāb pronounced by the Khārijī leaders, and what survives of them, besides giving an excellent idea of their views, gives us a fairly high opinion of their oratorical talent. We also possess numerous fragments of their poetry (which had also been collected in particular stimulus), especially of those of Ṭāhir b. Ḥijrān (q. v.) who is at the same time considered one of the founders of the Khārijī (Rīh). A long list of Khārijī authors, poets and jurists was prepared by Dābī, Bayān, 1313 A.H. E. 151–152, i. 156–157.

The wars of the Khārijīs had been recorded from the beginning of Arabic historiography in several works which have not come down to us in entirety; we know, however, the substance of the more important among them, the authors of which were Abī Mūhammad, Abī ʿUṣfī and al-Maḥdī from the extracts which have been preserved in the historical sources given below.

Bibliography: Sections I–11: al-Muharrar, al-ʿArab, Night, and various authors. This work, in no sequence or order, are abundant literature ad historical references to our subject; they have been translated by O. Roscher, Die Khurāṣchümschirz aus dem Kāmi, Stuttgart, 1942; al-Ṭabari, ed. de Goeje, i. 331–349, ii. 349–366; al-Fārābī, Annal. ʿAbd al-ʿAzīz, R.S.O., vi. 488–497; (resume and specimens of the text for the period of the caliphate of ʿAṭī, errata: ibid., p. 925); de, ed. Allwardt, p. 78–96, 125–126 (for the period of the caliphate of Abī al-Malik); al-Maḥdī, Noldeke, ed. Barbiere, C. A. Naffin, vol. iv. 81, passim; L. Cantoni, Annali dell' Istituto, 182, i. 547–556, 2. 76–151, 168–172, and passim (translation by the author of this article of the historical texts for the period of the caliphate of Abī and of other material relating

(i. G. Levi Della Vida)

**KHWARIZM or KHARIZM, A Country on the Lower Course of the Amu-Daryâ [q.v.].**

Being a fertile delta area, Khwarizm must from the earliest times have had importance for the political development of the whole of Central Asia, in spite of the objections made by Noldeke (Z. d. M. G. I., iv. 434 sqq.), J. Marquet's view (Berlin 1904, 185 that the 'much-contested Aria' of Khwarizm, the home of the Avesta, is identical with Khwarizm, is much in its favour. According to Herodotus (iii. 117), the valley of the river Aria, which was of international importance, before Persian rule belonged to the Khwarizm, from which it may be deduced that the nation of Khwarizm was even then of importance in the history of Central Asia. According to Hekataios (Fagan 172 and 173), the land of the 'Chorasmian' lay between Pardis; the capital is called Chorasmia (Kasrak), According to Herodotus (vii. 66), Panthais and Chorasmians formed one division in the army of Xerxes under a common leader. Whether, as Herodotus (iii. 93), says, Chorasmia was combined to form one satrapy, not only with Parthia but also with Sogdiana and Asia, is more than doubtful.

In the time of Alexander the Great the Khwarizm was no longer subjects of the Persians, but had a king of their own; and when the Persian yoke was cast off is not known. According to Arrian (v. 15), Alexander received in Bactria in the spring of 330 B.C. a visit from the Chosrovian king Pharamasius, who appeared with a train of 5000 horsemen. The latter is said to have claimed that his territory stretched to the west as far as Colchis on the Black Sea. Curtius (vii. 1, 4) only mentions an embassy from the Chosrovian, king, whom he calls Phraates.

Nothing is known of the later political history of Khwarizm down to the 8th century A.D.; the geographical situation is equally uncertain. According to Procopus, the Chosrovian lived on the east bank of the Oxus, which corresponds to the situation of the later capital Khâsh [q.v.]

Kat (the modern ruins of Shakh 'Abbâs Wâli); on the other hand the oldest Chinese name (given in the Annals of the Earlier Han) for Khwarizm, Yâo-Chien, suggests the town of Kârgâr (now Kunia-Urgench). According to the native tradition given by al-Biruni (Alhâd), ed. Suchan, p. 35), for the first time in the time of Khwarizm, the town of Ghâpan near the Caspian Sea is not in keeping with the facts.

What al-Biruni tells us about the beginnings of civilization in Khwarizm 960 years before the Seleucid era (1293 B.C.), of the coming of the Sâvâs and the founding of the rule of his son Kai-Khwarazm 92 years later (i.e. 1200 B.C.) and regarding the descent of the local dynasty from this hero of the national epic, is, of course, quite legendary. His statements regarding the genealogy of this dynasty cover the period from 304 to 933.

We are told what princes ruled in the time of Mahammad's mission, and which was installed by Kaitbla b. Muslim after the conquest of the land about 93 (712). The son of this ruler is called Shahwara. In the Chinese annals of the Tang dynasty (T'ang-shan), an embassy sent to China in 731 by Sînân-eh-nun, the king of Khwarizm, is mentioned (E. Chavannes, *Documents sur les Turcs scythes*, St. Petersburg 1905, p. 145); this agreement confirms the reliability of al-Biruni's account; very improbable on the other hand is what he tells us (op. cit. p. 36, v and p. 48, v) of the manner of scholar and priests and the burning of books. His references to the calendar and the festivals of the Khwarizm show that in Khwarizm down to the 9th century and among the Zoroastrians to the 13th century A.D. a very ancient Iranian culture had survived. These Zoroastrians were at this time (i.e. in 1000 A.D.) when the Chronicle was written) not to a lesser degree adherents of their faith, and had only some knowledge of the external rites of their religion. Besides Zoroastrians there were also Christians in Khwarizm; the latter belonged not to the Nestorian Church like most Christians in Persia and Central Asia, but were Greek Orthodox (Melkites; cf. al-Biruni, op. cit. p. 288, v). Adherents of other religions, e.g. Jews, are not mentioned, although Khwarizm appears in the well known "list of cities" (on which see Grundr. d. islam. Phil., ii. 118 and Marquart, *Erdm. p. 7) as a foundation of prince Nazarse, son of Yazdegard I (399-430) and his Jewish wife. Whether, as K. Ingrandes (Zach, *Ann. Nostr. Persan.*, 1914, p. 2, p. 293 sqq.) assumes, the Jews mentioned by al-Tabari (vii. 137, 139) were Jews is rather doubtful (cf. the expression Afsâd al-Nâsl in al-Tabari, i, 840, 43). An idea of the Iranian elements was spoken in Khwarizm may be gathered from the expressions relating to the calendar, names of festivals, etc., given by al-Biruni; a few words are quoted in other sources, likewise khwar Khwarizm, meaning cattle food, in al-Schakhr, p. 304; *wad* meaning truth in Vâgil, ii. 488, v. From Ibn Fa'îl, Khwarizm is described by the Arabs as a particular unintelligible language for the inhabitants of other countries (al-Jâhîr, p. 304 below). *al-Khâṣîd, 335, v). In the 6th (xvii) century written documents in this language still existed (al-Râthab, ed. Morey, p. 849).
In the history of the conquest, mention is made, in addition to the strongly fortified capital (like al-Britānī, al-Fābarī) also mentions three fortresses of the town of Hindan and of Khānqāh-i-māʾī not mentioned again later, where a brother of the king ruled. After the conquest, according to al-Britānī, only the royal title (al-khāfī) remained in hereditary possession of the native princes; the real power (al-walī) was sometimes in their hands and sometimes in the hands of others. In 119 (748) mention is made of a rising of the people of Kūrād (near the sea of Arab) (al-Fābarī, ii. 1525). In Gurgānd (Arabic Gurdānī) there was a separate kingdom independent of the Khānqāh-i-māʾī; nothing is known of the genealogy of these chiefs and the origin of their rule. The statement of Ibn Fāḍlān, misunderstood by Yākub (ed. Wāzānafāzī, ii. 454, 455) only shows that Gurgānd no longer belonged to the Khāzān region by 922. In 385 (955) the ruler of Gurgānd, Māmūn b. Mūhammad, succeeded in overthrowing the old dynasty, placing its lands under his rule and thereby restoring the political unity of the Khāzān region. The title Khānqāh-i-māʾī passed to the ruler of Gurgānd.

Māmūn died in 387 (997); he was succeeded in turn by his two sons, Abī and Māmūn II: an Arabic inscription of the latter has been found in the ruins of Gurgānd (recording the erection of a minaret of the year 408 (1019) (published by N. Katānī, Zapiski vost. uch. obsh. al-Turk. iv. 915 sqq.). The rebellion of this king's army when he had Sulṭān Māʾūnī's name introduced into the inscription on the latter's decision, his assassination and the resultant conquest of the Khāzān by Māʾūnī in Sāfar, 408 (July 1017), are fully dealt with by al-Ṣaṣāḥ (ed. Madīnī, p. 838 sqq.) following a lost work of al-Ṣaṣāḥ (cf. W. Barthold, Turkistan ii. 289 sqq.). Rule over Khāzān, with the title of Khānqāh-i-māʾī, passed to Alīnāhmān, who was appointed by Māʾūnī on him and his sons to the fall of this dynasty in 432 (1043) see the article Alīnāhmān. The victor, Shāh Nāhir, ruler of Dārā, was overthrown two years later by the Samudī prince (this is the right pronunciation in Māʾūnī's handwriting, the Sāmūdī Arab spelling Sāmūdī does not correspond to the Turkish pronunciation) Caghār Beg (q. v.). Khāzān remained under the sovereignty of the Samudī dynasty till the death of Sulṭān Sahnār (q. v.) in 552 (1157) with a few interruptions during the reign of this.

A new dynasty was founded in Khāzān in the last years of the 12th century A. D. by Khūt b. Dūr Mūhammad (q. v.) to whom the administration of the country had been entrusted, first by the governor of Khūt and last by Sulṭān Sahnār. On his son Aṭās, the founder of the power of his house, see the article Aṭās. Atās remained till his death, its name at least, the vassal of Sulṭān Sahnār and had also to pay tribute to the Karā-Khitān (q. v.). Under the next rulers Il-Aśās (1155–1172), Tānimān (1172–1200) and Māʾūnī (1200–1232), Khāzān presented the power of a great power. The last ruler of Persia of the Sāmūdī line, Toghrū, fell in battle against Tēkhē in 990 (1594). Henceforth the Khāzān region could regard himself as the successor of the Sāmūdī Sulṭān in their dominion over Western Asia; and even assert such claims against the caliph himself. The yoke of the Karā-Khitān was only finally cast off by Mūhammad's victory over the last Gūrkhān in 607 (1210).
succeed in 1379 in conquering Khwarizm. During the wars between Timur and Tokhtamish the Khwarizmians were allied with the latter; coinage was struck in Khwarizm as early as 735 (1334-35) with the name of this Khan. In 1388 Khwarizm, where Tokhtamish had left a prince of his own house and a representative of the native dynasty, Salam-Quzzan, was reconquered by Timur. The capital Urgench (frequently, like Khiva before it, called Khwarizm after the country), was sacked and levelled to the ground, and only a small settlement is now to be seen. Khwarizm never recovered from the blow. In 1391 Timur had a part of the town in the "Khan's quarter" (this quarter was the property of the Caghatad Khan); it was rebuilt, but the town remained limited to this quarter.

In the 14th (13th) century Khwarizm was sometimes in the possession of the Khans of the Golden Horde and sometimes under Timurid rule. A member of the native dynasty, Uzunbakan, was a vassal of Jenghiz Khan. After the city of Vazir was captured by this Khan, though it remained a vassal of Urgench, the inhabitants of the town of Vazir were killed by the conquerors. In 1506 the town was completely destroyed and the inhabitants were put to the sword. In 1519 the town was again captured by the Samarkand section of the Khwarizmians. The town was restored to the Emirs of Khwarizm in 1521, when the town was taken by the Emir of Khwarizm.

In the year 916 (1510) after abandoned on account of the drying up of the river that once flowed through it. The Khan of Khwarizm in 1510 was the Emir of Khwarizm. After the city was captured by the Persians, the town was again captured by the town of Khwarizm. In 1521, when the town was taken by the Emir of Khwarizm, the town was restored to the Emirs of Khwarizm.

After the extinction of the dynasty the town was occupied by the Emirs of Khwarizm. The town was occupied by the Emirs of Khwarizm.

During the war between Timur and Tokhtamish the Khwarizmians were allies of the latter; coinage was struck in Khwarizm as early as 735 (1334-35) with the name of this Khan. In 1388 Khwarizm, where Tokhtamish had left a prince of his own house and a representative of the native dynasty, was recaptured by Timur. The capital Urgench (frequently, like Khiva before it, called Khwarizm after the country), was sacked and levelled to the ground, and only a small settlement is now to be seen. Khwarizm never recovered from the blow. In 1391 Timur had a part of the town in the "Khan's quarter" (this quarter was the property of the Caghatad Khan); it was rebuilt, but the town remained limited to this quarter.

The city of Vazir was captured by Uzunbakan, a vassal of Jenghiz Khan, in 1406. The town was again captured by the Samarkand section of the Khwarizmians in 1419, when the town was taken by the Emir of Khwarizm.
Turkomans (of the Votum tribe); only 40 — according to another account, 15 — families are said to have been left (MS. of the Asiatic Museum, 390 ob. l. 556). In 1770 the Janak Muhammad Amin succeeded in conquering the Turkomans and restoring the prosperity of the town and country. The destruction of the old and the foundation of the new Khiwa ought probably to be connected with this event.

In 1604 the Janik Lützzer, the grandson of Muhammad Amin, assumed the title of Khan. When he fell in 1606 in the war against Bukhara, his brother and successor Muhammad Rajim (1806—1825) again placed Gengiz on the throne for a short time, but in the same year took the title of Khan for himself. By the subject of the Aral country in 1813, the political anarchy of Khiwa was restored and was only broken for a brief period again by rebellions. In 1822 the Turkomans in Marw rebelled against Bukhara and submitted to the Khan of Khiwa. Under Muhammad Rajim's son Allâh Kull (1825—42) the principality of Khiwa attained its greatest extent. It stretched from the mouth of the Sr. Darja in the Sea of Aral (about 46° N. Lat.) to Ka'fa Mawer on the Kuskh (13° 30'). The ancient Urgench was restored in the same reign. The Russian campaign against Khiwa in 1839—40 was unsuccessful, but the Khan had soon afterwards to fulfill all the demands of the Russian government, although Khiwa at this time entered into negotiations with England. In the official history of Khiwa the English appear as a "section of the Russian people whose land lies north of the Russian Empire" (MS. of the Asiatic Museum, 390 ob. l. 380). During the following years Khiwa had to fight against Bukhara (to 1845) and against the Turkomans. The Khan Muhammad Amin (Madumam, 1846—55) fell fighting against the latter in 1853, as did his successor 'Abd Allah in the same year. To the time of Muhammad Amin belongs the most important building in modern Khiwa, the blue mausoleum over 160 feet high (picture in F. v. Schwartz, Turkistan, Freiburg i. B., 1900, p. 205). Saiyid Muhammad Rajim Khan's reign (1804—1910) saw the conquest of Khiwa by the Russians (1879) provoked by the intrigues of the government of the Khan, and the deposition of his foster brother 'Abd Allah (of the Amin-Darja) was left to the Khan, and even in these he was to consider himself "the obedient servant of the Emperor of all the Russians." The Khan of Khiwa was later given the title of "Highness," but his position was never equal to that of the Emir of Bukhara (cf. above, l. 783). Saiyid Muhammad Rajim and his successor Khan Askandiyar (1910—1918) several times appealed for help to the Russians against the Turkomans. During the negotiations between Russia and the Turkomans of Marw, Khiwa made an attempt to act as intermediary (1881—85) in the hope that Marw would not be united to Russia direct but handed over to the Khan of Khiwa as a vassal of Russia. During the fighting of the Revolution period, Khiwa has again been ravaged several times by the Turkomans. After the depression and secession of the Khan Askandiyar by the Turkomans, Djumaid Khiwa, Saiyid 'Abd Allah (1918—1920) was chosen ruler; after the deposition of this Khan and the assumption of Djumaid, a "Republic of Khiwa" was founded, only nominally allied to Russia.

Khiwa in the sixth as in the seventh or eighth centuries was again a nest of robbers, but nevertheless, in contrast to those earlier centuries, more was done than in Bukhara for the promotion of culture and social progress. The development of the country was facilitated by the building of great canals; there were more bridges on the main roads than elsewhere in Turkestan. Khâlî Saiyid Muhammad Rajim founded a splendid library and made it also accessible to Russian students. The history of the country which was compiled for the government before the Russian conquest surpasses in fullness and reliability anything written in Bukhara or Khokand. Little has yet been done by the Russians for the exploration of the country, its history and its present conditions, although many features have survived there which may be looked for in vain elsewhere in Turkestan. In place of the villages in a street usual in Turkestan, the landowner's house stands in the middle of his piece of ground as was usual among the original inhabitants of Turkestan, the Tadjik. The driven (torshâh) site in the vehicle itself as in Kâshghar and not on the horse as in Tâbâkh, Khokand, etc. The canals are given in the Turkish dialect of Khiwa as among the Turkomans the obviously Aryan names ame and yeg ("great and little canal"); the buildings surviving among the ruins of old Urgench are among the oldest and most beautiful in Turkestan and have not yet been fully described.

On the histories mentioned there (especially following the MSS. of the Asiatic Museum, 390 ob and 390 od) composed by order of Hittner and his successors of, also Malomaj, Kh. Saaid. The titles are given. The first work, Fardow al-Ittân, was begun by Shir Muhammad, called Mud'în, by order of Hittner and interrupted by the death of the Khan in 1806, when the author had not yet come down to Nâdir Shâh; the work was afterwards being continued by order of Muhammad Rajim Khan down to 1812; the author was then ordered to translate the Rawâjît al-Şafî of
Mirkhodji into Turkish and died in 1244 (1828/9) before the completion of this work. The history of Khywa was not resumed till 1255 (1839/40) by order of Allah Khull by the nephew of Mu'min, Muhammad Ridjulla, called Agahli; the history of the country was afterwards brought down to 1874 by this same Agahl under different titles (each reign being dealt with in a separate work).

(W. BARTHOLO)

AL-KHWARIZMI, MUHAMMAD b. MUNCHI; in al-Tasvir (ed. de Goeje, ill. 1555) al-Khwarizmi was still called al-Maghul, the descendant of a magus, and al-Katrabulli, a district west of the Tigris near Baghdad.

The accounts of his life are very scanty and unreliable in as much as we do not know in many cases whether the references are to him or to Muhammad b. Munjir al-Baym (cf. H. Suter, Nachrichten aus der Mathematik etc., in Abhandl. zur Gesch. der Math. Wissenschaften, 1902, iv., note 19, p. 158). We do not know the year of his birth and the date of his death is uncertain. According to H. Suter, he died between 220 (833) and 230 (843) according to C. A. Nallino, after 232 (846). He flourished in the reign of al-Ma'mun, was one of his astronomers and probably took part in the measurement of his degree in his reign. He used to retire into al-Ma'mun's library to study. According to al-Tabar (op. cit.), al-Khwarizmi was one of the astronomers whom al-Walig did not allow to stay in his house until it was decided to prolong the result of it. They promised him a good life but he died soon afterwards. Al-Khwarizmi's labours were devoted to mathematics, geography, astronomy and history. He wrote a Kitab al-Tafrih which is given as a source by al-Ma'mun and al-Tabarili probably took it from it a passage about an event in the reign of al-Ma'mun in 210 (825/826) (see C. A. Nallino, al-Hamawi et al. P. 12). His works, which are in part important and original, reveal in al-Khwarizmi a personality of strong scientific genius.

The writings of al-Khwarizmi were composed during the period of great activity in translating from the Greek, although al-Hajjaj had been contemporary for part of his life. In his achievements in algebra therefore al-Khwarizmi is particularly dependent on the work of the Hindu astronomers and of the school of Gundishpur. Greek sources were secondary for him. It was probably rather different with astronomy and geography. A list of the writings of al-Khwarizmi is found in the Fikrist of al-Khath al-Nadim (p. 275) and in Ibn al-Khti (p. 296). In the Fikrist Sanad b. Alhass immediately after al-Khwarizmi. Karpinski (cf. op. cit.) believes, probably rightly, that the works entitled al-Hash al-Haqq, al-Djmus etc. are in the Ikhwan and at-Dhikr, referred to in the Attribution to Sanad are really by al-Khwarizmi.

His most important mathematical work is the so-called Algebra, Hisab al-Djame wa al-Makhtah (according to J. Ruskia, Processes of Calculation in Integration (or Equation)). Here we have not an algebra in our sense but an introduction to applied arithmetic based on numerous examples worked out. At the same time the book contains very useful matter: a. processes of integration and equation; the simplest forms of equations, a surveying and mensuration; c. testamentary regulations for division of inheritance. The book was translated into Latin by G. of Cremona, R. of Chester and others (see Bibliography under Rusek and Kar.

(plain). Through misunderstandings and corruption of the name al-Khwarizmi arose the words which ended in our "argurism", which means any recurring method of calculation that has become a rule. There are references to Arabic commentaries by Siku Hamilton (Suter, N. 140), "Abd Allah b. al-Saidanun (Suter, N. 152), Abul I-Waf (Suter, N. 167). The second mentions (op. cit., p. viii) a certain al-Musilahit. The influence of his work was very considerable and it was later used by al-Khwarizmi Shulbari b. Aslam (Suter, N. 84) and the examples used by him, such as 3x(1-3x = 39, continually recur, e.g. in Abu Kamil, al-Karkhait, 'Umar al-Khayami, and of the Christian writers we find Leonardo of Pisa, for example, influenced by al-Khwarizmi.

There also survives, but only in a Latin translation, an astronomical work by al-Khwarizmi, Argurismi de Numero Indorum (ed. by Bald. Boncompagni in Trattati di aritmetica pubblicati da B. N. Roma, 1857, N. 1). J. Ruskia has shown that it corresponds to the Kitab al-Djami wa al-Tajrihi (perhaps we should add al-Ihadi al-Iad) i.e. "the Book on Addition and Subtraction after the Indian Fashion", or "with Indian Numerals"; (cf. J. Ruskia, op. cit., p. 18).

Muhammad b. Ibrahim al-Fazari had translated the Sidur into Arabic. It was called the great Sidur (on which the term of al-Khwarizmi is based), and in the introduction by H. Suter, Dies astronomicum Tatius etc., p. 32). Al-Khwarizmi prepared two editions of this Sidur, perhaps also earlier a synopsis of this. The book of tables that resulted he called, as Ibn Yussis tells us, Fi Zul (see C. A. Nallino, al-Natafri Opus, l. 157). Like all Zul books it contains not only tables (Argumenta) but also an astronomical introduction of some length, a kind of theoretical astronomy.

This excellent book of tables was edited and republished by the Marla al-Majrit, as Ibn Abi Usblahi's (ii. 39) mentions. This version may be the basis of the Latin translations. In the book we have trigonometrical tables in which the word gual = gual is always used for "sine", while it only occurs occasionally in the later Tabul dei Curtas (cf. H. Burger and C. Kohl, Aest Aestiva, Tabul der Werke über den Transversum, in Abhandl. zur Gesch. der Naturwissenschaft und Mechanik, 1924, viii.). It is therefore possible that the whole work was introduced into al-Khwarizmi by the Marla (cf. C. A. Nallino, al-Natafri Opus, l. 154). Al-Khwarizmi probably dealt with the appearance of the new moon in another work (cf. C. A. Nallino, op. cit., i. 269). Vagel mentions (Majdam, l. 161, n. 1) Muhammad b. Mund al-Khwarizmi as Sallam al-Zul (author of the book of tables) a proposal of a statement regarding the rise of the earth; but no such statement is given in the Zul.

Al-Khwarizmi composed two books on the astroglabe: Kitab al-Amad bi-l'Alpur ("On the Mother of Using the Astrolabe") and Kitab "Alpur ("On the Art of Making the Astrolabe"). Neither has survived either in Arabic or Latin. In al-Farghali's book Fi Samul al-Khwarizmi (p. 154) "Zul" ("Making of the Astrolabe with the Help of Geometry"). Berlin MS. Catalogue, No. 5790) many astronomical problems are solved with the help of this astrolabe, the first begins with the words: "Muhammad b. Mund al-Khwarizmi says..." (cf. J. Frank, Die Verwendung der Astrolabe nach al-Khwarizmi, in Abhandlungen zur Gesch. der Natur-
we know nothing about his book on sundials (at-Ra'āshīma) except that he wrote one.

Al-Khwarizmi also dealt with astrological questions from the practical side; for example, according to a story of Abū Ma'shar, he investigated how far the conjunction at the time of Muhammad's birth indicated his future as a prophet (Hammāt al-Ifshādat, Ta'rifāh, ed. Gottwald, Lib. vii., Ch. iv. text), p. 153 sq.; transl. p. 153).

Al-Khwarizmi further prepared an atlas of maps of the heavens and the world at the instigation of al-Ma'mūn, probably with other scholars. This atlas, the Atlas starīj al-adām ("The Work on the Shape of the Earth") preserved in manuscript in Sansburg, or, as Abu'l-Farād calls it, Kitāb Rasm al-adām al-Mo'mūnī ("The Book of Drawing of the Inhabited Quarters of the Globe"). C. A. Nallino has already shown that this is the text that accompanied the maps. In preparing the maps — in the two editions — Ptolemy's Geography was used but edited and enlarged in a very independent way.

genological succession cover the period from 639

The governors of Khwarizm under the Mongols do not seem to have borne the title Khwarizm-shah, nor the princes of the house of Sufi, whose independent rule (founded not before 764 = 1360/1361 and not later than 765 = 1363/1364; cf. Bull. de l'Acad. etc., 1921, p. 242), only continued a short time (till the conquest of Khwarizm by Timur in 781 = 1379); but later several governors of Khwarizm of this house are mentioned at a later date including Cin Sufi, whom the land was conquered by the Orzeg in 911 (1505), and Sharif Sufi, who, according to Haider Razi (cf. above, i. 248), ruled in Khwarizm for a short time (about 917 = 1511) (W. Barthold, Soziologie al Arabischem Mose, etc., p. 89; in the German edition, Nordrichten über den Arab.-S. etc., p. 56, the pertinent remarks are omitted). On the other hand the name Shih Muqil, governor of the Sufi Shah-Rukh b. Timur, is Khwarizm from the end of 835 (1433) to his death in 839 (1436), is called Khwarizm-shah in the Maghribi Faris (Maghribi), formerly in the possession of the Institute for Oriental Languages; cf. Collections Scientifiques, etc., i. 537, now in the Asiatic Museum, p. 337. He was followed as Khwarizm-shah by his son Nasir al-Din Sultan Ibrahim, who was driven from his capital by 834 (1431) by the Orzeg under Abu 'l-Khair (cf. above, i. 95 sq.).

The title Khwarizm-shah is sometimes given in historical documents and literary works to the Orzeg rulers of Khiva; but they themselves seem to have laid no claim to it. Abu 'l-Chazi (cf. above, i. 86 sq.) only gives the title Khwarizm-shah to the dynasty destroyed by the Mongols (ed. Derenvaux, p. 137); otherwise he (p. 277) only uses the expression Khwarizm-shah as the personal name of one of his brothers. Even when Anasih, son and successor of Abu 'l-Chazi (1665—1667), took the title 'Shah' after the conquest of Meshhed, the word Khwarizm was not added to the title.

**KHALLUKH.** [See Gulrukh].

**KHARPUT,** a town in Turkish Armenia, built on a rock to the north of a great plain in the area bounded by the west and south by the Euphrates, in the north by the Musul Shim and in the east by the chain of the Armenian Taurus; the site of the town itself lies in the Antitaurus. From the time of the Loocheon this territory formed part of the Armenian districts incorporated in the Roman Empire and from the time of Justinian to the Roman province of 'Fourth Armenia' which occupied the lands of the Armenians (Turcikg) and which the earliest Arab geographers still
know under this name. This district is often reckoned to belong to the old Armenian province of Sophene. Hübschmann was therefore inclined to identify it with the district of Anzitene (Arm. Hanüç), probably Hainüt, Yākūt, iv. 993). The identification of Kharpü with Ḍarzabā (should be Ḍarbān) is strongly advanced by Zhidma (Z.D.M.G., xxxi. 449) capital of Sophene (Strabo, xi. 527) previously suggested by Sutter could then no longer be maintained. Lehmann-Haupt, however, has come back to the older view (p. 515). In any case the town can be regarded as identical with Zīūtā Castlekūm, the capture of which by the Persians is mentioned by Ammianus Marcellinus (xix. 6, 1). Arab writers still know the town by the name of Ḥisā Ziyād (Yākūt, ii. 276) probably with assimilation to the well known Arab proper name; in the same way in Persian we read the forms Ḍarzā (Land, Anvād. X.v., ii. 61, 4) and Ḍāna dā Zīlā (Baur, Chnuns). The form Kharpū is of Armenian origin; it comes from the Armenian Kharrberd (or Karberd), which probably contains in any case the Armenian word kār meaning 'castle', although the first element cannot be accurately identified. The Arab writer Khartābad (Yākūt, ii. 417). The form Kharpū (vulg. Arm. Kār'pūn) is found as early as the sixth century in the Byzantine author Cedromus (ed. Bekker, ii. 419, 13) in the form Kār'pū. This is the present Turkish name but in the time of Elyasī Celebī the taxation registers still read Ḥisā (sic) Ziyād. Among the popular etymologies given by Elyasī we find Kārberd i.e. 'the idol', which the Christians are said to have once worshipped there and which is said to be buried in a monastery on the island in the lake of Gümüş. On the west side of this island the Greek historians of the thirteenth century call the town Quart-Pierre (William of Tyre) and by other forms. According to al-Dimashqī (ed. Mehren, p. 190) Ḥisā Ziyād was the castle only and Khartābad that of the town.

The town is not mentioned in the first three centuries of Islam. Lying as it did on the frontier between Armenia and Byzantium it must have frequently changed hands. Its situation must then, as later, have kept it in a position of more or less dependence on Deyār-Bakr. In the fourth century Khartābad was still under the Greeks. In 567 (577/78) the, Hamban Abū Taghlibī driven out of Mesopotamia by 'Abd al-Dawla was able to make a stand in Ḥisā Ziyād where his brother-in-law a vassal of the caliphs supported him (Inb al-Athir, viii. 516; Well Kech, des Chit, ii. 25). In the sixth century we find the Utirākīd Balāk in possession of the town but it is not clear from whom they took it: in 500 (1160) a certain Muḥammad b. Djabūr al-Turkmūnī is mentioned as lord of Ḥisā Ziyād (Inb al-Athir, x. 296). But a little later we find it the residence of the Utirākīd Balāk (q. v.) b. Bahāram b. Utirūk who in 1122 imprisoned there the Crusaders Joselin and Walerus and in the following year King Baldwin in addition. Some months later (Rah. i 517 = May 1123, according to Inb al-Athir), the, Armänians succeeded in the absence of Balāk in taking the castle and liberating the prisoners. But Balāk returning soon afterwards regained his residence (Rah. 3, 517 = Sept. 16), according to Kanāl al-Din), and Baldwin again forced their hands. On this occasion the great tower of the fortress was thrown down (Rev. Hist. des Croisés, Doc. Arm. ii. 133). Balāk was succeeded in the lordship of Khartābad by the Utirākīd of Ḥisā Kāla; an inscription of Ḍabā al-Dīn Karā Arūs (p. v.), dated 561 (1160/61) was found in 1899 in the court of the great mosque (cf. van Berchem, in Ada. G. W. Gr., N. F. C., ix, No. 3, p. 142 sqq.). After the death of Nūr al-Din, son of Karā Arūs, in 581 (1185/86) his brother Imād al-Dīn Abū Bakr seized the fortress and founded a collateral line of the Utirākīd there, which continued there under the memory of the Ayyūbids and later of the Seljuqs of Rāmū. The frontier with the lands of the latter was formed by the Euphrates after the extinction of the Dārākhchānids of Mālaṯa. During this period Khartābīt was captured for a brief period by the Sultan of Kīršīm (in 625, Lūlwālī, Lūlwālī, ii. 180) then by the Mongols, after their capture of Amlī (1236) but soon afterwards in 634 (1234) took place the conquest by 'Abd al-Dīn Kalbāš, a conquest which had been foretold to him by the mother of Ibn Bībā (Houtouma, Recueil de l'A. C. d'Éth. des Seljouks, iv. VII, 194). This passage (p. 210) mentions a certain Sūrāshī of Khartābīt who hid in its desert the Kīršīmā. But as van Berchem has shown, the Utirākīd line must have existed down to the sixteenth century though it is not clear if they remained at Khartābīt (van Berchem, op. cit.). In the troubled period that followed the decline of the Seljuqs, Khartābīt seems to have been abandoned in the lands of Kāš Burāḥa al-Din of Sūṣa who took refuge there about 800 (1397) during his flight against Nāṣir al-Dīn of the dynasty of the Arūs Koryunī (Sūṣa al-Dīn). According to Elyasī Celebī, Timūr himself was not able to take the town until his return from Asia Minor; after Timūr it was the Dārū al-Kūdī dynasty that held Khartābīt. Frequently, Lūlwālī, Hama take it from them temporarily in the reign of Malik Arūs (585-596); it was at this time that Joseph Barōta visited Khartābīt (Viaggi, Venice 1545, p. 48 sqq.). In 915 (1507) Sūrāshī Imaṭī took the town but soon lost it to Bīrīḍ Muhammad, general of Selim I who took Khartābīt after his reconquest of Deyār Bakt in 921 (1525) (Rasten Pasha, Tavārīkh, ed. Forrer, p. 43; Elyasī Celebī). Henceforth the town was included in the Ottoman empire as capital of a sanjak in the eyalett of Deyār Bakt (Başlud Khatib, Zīhānānī, p. 439). The sanjak-bey was usually Kurd. At the beginning of the sixth century the Persians moved their residence from Khartābīt to the little town of Moṣṣerī lying in the plain close to the hill of Khartābīt to the S.W. Moṣṣerī is written Meṣere, as if it were an Arabic word but it seems to be mentioned as early as by Ptolomy in the form Mezōn (Hübschmann, e. c.). In the reign of 'Abd al-Maljīd, Rashīd Pasha, after a journey of inspection in Kurdistan suggested Meṣere as the capital. He had barracks built there. Under 'Abd al-Aznār, Meṣere definitely became the residence of the governor and Khārpirī-Meṣere became officially known as Moṣṣerī at. Arīs in honour of the Sultan. This name, which was given it by the Well İsmail Pasha was next extended to the whole sanjak and in 1296 (1879) Moṣṣerī al-Aznār became the name of a new willyet formed in that year with Kharpū-Meṣere as its capital. The sanjak was composed of the sanjaks of Kharpū-Meṣere (including the old province of Sophene as a markaz-kājād) and beyond the Euphrates the kājād of ʿArabpir, Edin and
Kharfit — Khartum

Kahan Ma'den, and those of Malaja and Derasim. The rock of Kharfit rises to a height of about 1200 feet above the surrounding plain. The upper part is occupied by a mediæval castle, at one time Balak's residence. The castle has only one gate; its walls have several inscriptions not yet published (Lehmann-Haupt). The town itself is also fortressed (dijk balak) but its ramparts have been for long neglected. Elweyda mentions the Ulj Djemel as the largest mosque and also Aslanli Djemel, it is probably the latter that has the inscription mentioned above. The population of Kharfit-Mesore was estimated about 1900 at 28,000 inhabitants (in 1845, Brandt had put it at 9,000) with a majority of Muslims (Turks and Kurds) and a considerable minority of Armenians. There was an important American mission there which took an especial interest in Armenians of whom a great many had become Protestants. There were also Syriac Christians. The Armenians of Kharfit suffered very much from the massacres of 1890 and during the war of 1914-1916 so that the Christian element must now be very small. Elweyda states the principal industry was saddle-making. The road is also noted for its manufactures of silk but the cultivation of silk in the districts has diminished (Calot). The surrounding plains is well watered and very fertile and contains a large number of villages; at the beginning of the 19th century there was even talk of over-crowding. The nearest port is Kerma [q.v.] but the great road to Samgna via Sobia and Amani is more used. The roads to Dykar Bakr and Malaja are also very old.

Kharrat, Abu Sa'id Ahmad b. Isk, an independent mystic, of the doctrine of Jumma, died in exile in Cairo in 828 (899). His Kitab al-din has survived (MS. Shahab al-Fahl, 1374).

to Soha, across the desert, and then southwards along the right or east bank of the Blue Nile.

Khartum was selected as their base by the Egyptians on account of its position at the junction of the two principal waterways. It became the capital town in 1823, but building in brick was not begun until 1839; as the centre of government and trade activities it became also the centre of the slave traffic.

In 1862 Sir Samuel Baker left Khartum to discover the sources of the Nile, and again in 1870 he went south to attempt to stop the slave trade, in response to pressure put upon Egypt by the Powers in Europe, and to open up the territories of the South. Here too Lord Kitchener, General Gordon, and the Mau-Mau rising. His appointment as Governor General of the Equatorial Provinces, a post he vacated in October, 1876. With considerable reluctance he returned in February, 1877, to be Governor General of the Sudan, but resigned in December, 1879, in despair of effecting any improvement in the administration. When the Mahdist rebellion broke out, Gordon once more returned, in February, 1884, to be Governor General, and taking an active part in the defence of the town against the Dervishes he met his death on the steps of his palace on January 26, 1885, the British relief force arriving two days afterwards, too late to be of any assistance.

Khartum was abandoned by the Dervishes in favour of Omdurman, and was re-occupied after the defeat of the Dervish forces on September 2, 1898, by the British and Egyptian armies under Lord Kitchener. On the re-conquest of the Sudan the rebuilding of the town was at once commenced, a new palace of three stories being erected on the site of the old one, and in the extensive gardens still flourish one rose tree known as Gordon's from its association with him.

Khartum has been reconstructed on a plan designed by Lord Kitchener, with a view to future development and military requirements. A series of barracks for native troops have been built at intervals along the old earth works used during the siege. The barracks of the British garrison are situated at the east end of the town, fronting the Blue Nile and adjacent to the bridge which carries the railway line from the south into Khartum. This railway runs southward along the Blue Nile for 170 miles, and then turning west eventually crosses the White Nile and passes through the gun gardens into Kordofan.

The river front of Khartum extending for some two miles, with its conspicuous fringe of date palms, is a distinctive landmark in the flat and treeless country, is reserved for official buildings and residences, with few exceptions. An embankment wall along a considerable part of it protects the bank from erosion by the river, which rises during high Nile to some 30 feet and has a swift current. Along this wall runs a continuous two-shaded public road bordered on the inner side by wall kept gardens. Behind are situated the banks, the headquarters of the trading companies, shops, the market, and residences; further inland the butts or regulations are relaxed to enable Europeans and better class natives to occupy less expensive houses. The poorer natives live in villages outside and to the south of the line of existing barracks. A fine mosque, inaugurated by the ex-Khedive Abbas Hilmi in December, 1901, was built of local stone with funds from Egypt.

The Anglican cathedral was consecrated in January, 1912, by the bishop of London. There is a Greek church, a Capuchin church, a Roman Catholic church in the Austrian Mission, a temporary church in the American Mission, and other places of religious worship. Gordon College, built and endowed with funds raised by Lord Kitchener, provides advanced and instruction. There is a government elementary school and various mission schools. A first class civil hospital affords medical and surgical help for patients from all parts of the Sudan and has a high reputation among the inhabitants. The river side gardens. Electric light was first used in 1908 and an excellent water supply laid on in 1909; steam tramways and ferries are now being taken over (1925) by a group of English firms who will also build a bridge to Omdurman.

The population of Khartum, about 23,000, is mixed. British and Greek subjects form the largest European groups. Syrians and Egyptians have migrated from the North, but the great majority of the inhabitants consists of natives of the Sudan, Arabs from the northern provinces and Blacks from the South.

KHASHABAT (plural of al-khashaba, pole), was the name given to the light-houses in the Persian Gulf near Abshar: they are mentioned in al-\'Ibari's Ma\'asir, ed. v. Vloten, p. 324 as columns placed in the sea, on the tops of which lamps were lit at night. According to Nasir-i Khuraw (Safar-nama, ed. Schefer, text p. 90, transl. p. 246), they consisted of four columns of teak which rose 60 feet above the sea; there was a platform on the top with a little house for the watchman. The latter lit the lamps which were surrounded by glass to shelter them from the wind, and also guided ships to the ships and were also used to signal the approach of pirates. Places at which these light-houses stood are given in Bibli. Générale, Arab. iv., Glas, p. 325, and in E. Wiedemann, Über Leuchttürme bei den Mamluken, Arch. f. Gesch. d. Naturwissenschaft. d. d. Technik, h. 1909, 151-4, and A. Mei, Die Renaissance des Islam, 1924, p. 479. (E. WIEDEMANN)

محمد حسین خان، سیاست‌مدار و رئیس‌جمهور عثمانی بود که در طول دوره‌های مختلفی از تاریخ تا منجر به عزلت و مرگ برای چندین بار از دسترفته و به قلم‌دره دوباره برگشت. او در دوره‌های مختلفی از تاریخ عثمانی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مداران مؤثر و جذابیت شناخته می‌شد. او در تاریخ کلی به عنوان یکی از سیاست‌مار
that Islam and the other religions are contrasted with one another in ḫṣāḥ and ḥṣafī, opposite views in the latter of the ḥṣafī (see the article ḫṣāḥ), as ḡamād and ḡamāt but there is only one verb for each, ḡamād and ḡamāt, which points to the antithetical character of this distinction, and in reality the rule is often not observed; in other branches of learning also ḡamād and ḡamāt are used promiscuously, as indeed are ḡamād and ḡamāt also. The works which deal with the ṣafīū (see the art. ṣafīū) discuss the question whether the ṣafīū can err and in matters of difference of opinion only one can be right at a time, as in the law. This point, the Mu'tazilīs (q.v.), asserted that every ṣafīū is right, and even celebrated orthodox teachers held this view, e.g. Abū 'Abd Muhammad b. al-Ḥasan al-Ṣalābī, Ibn Sarrādī, Abū al-Ḥasan al-Maznī, al-Abū al-Ḥassan, and his school, al-Ṣakhālī, al-Ghazālī, Abū Ḥanīfa adopts a middle view. The champions of the orthodox view believe, in keeping with this, that Allah has already come to a definite decision before every ḡafārī, and that the correctness or otherwise of the decision of the ṣafīū results from its agreement or not with that of Allah; those of the Mu'tazilīs assume either different decisions, or, Allah decides coinciding with the decisions of the ṣafīū, and are valid for them and their muqtabila (q.v.), so that all differing decisions of the ṣafīūs are equally justified, or they consider one decision more justified than the others and believe that Allah has taken no decision in such cases at all. If He did so, would express quite a definite one: this supposed decision by Allah is then compared with those of the ṣafīūs and the muqtabila who agrees with it is considered in the right in every respect; but those which differ from it are considered in the right with respect to the basis, the ḡafārī (ṣinā'ī al-ḡafārī), as the ṣafīūū makes to find the decision, in the way with such respect to the result, the decision which (ṣinā'ī al-ḡafārī). The representatives of the orthodox view, who are essentially in close agreement with this form of the Mu'tazili view, make the same distinction (the opinion is rejected that the ṣafīūū who makes a mistake is completely in the wrong); the other Mu'tazili view, however, is in sharp contrast to this. But this difference only exists in questions of the derivation of legal rules from the ṣafīū (ṣinā'ī) and only in the case when no clear decision is given in the ṣafīū; if there is one, but it has not been regarded by the ṣafīūū he is, of course, wrong. In the domain of the ṣafīū (ṣinā'ī), in ḡamāt (q.v.), particularly in religious conclusions (ṣinā'ī), according to the general consensus, only one view can be right in a case of differences of opinion. Only a few Mu'tazilīs, on whose representatives Abū al-Ḥasan 'Abd Allah al-Abū al-Ḥassan, and al-Ḍāḥī, are cited, assert that here also in dogmatism every ṣafīūū (the word is used in a wider sense, meaning everyone who does all in his power to solve a problem) is right; while al-Abū al-Ḥassan adds as long as he can be still described as a Muslim, and al-Ḍāḥī without limitation. Tradition on this point is no longer certain, as is apparent in differences in detail and in a certain suspension; in this Mu'tazili teaching, however, — as in the polemics regarding the ḡafārī, —
The other meanings of khatā' come into consideration so that it is doubtless correctly explained that by "being right" it is not used against the actual facts, but that the snažātāh has duly fulfilled the task imposed on him and therefore cannot be punished (while according to the orthodox consensus every non-Muslim is doomed to the pains of hell eternally), that (to) which his āyāratā leads him is the right for him by Allah's decree itself. This ambiguity in terminology must have contributed to the ambiguity in tradition. That, taken purely logically, several differing views could be right at the same time has never been asserted. — The snažātāh in the wrong is not punished for his error and is not considered as being in a religious error (qāṣārī), but is regarded as excused and is rewarded as he has done everything that is demanded of him if he has really used all his energy for the derivation of the legal rule; if he has not done this he is punished for his error; others say that every error of a snažātāh is a sin; but this view is rejected. All this holds only of the snažātāh's of the Sunnis; those of the twelver Shi'a are illegitimate.

2. Unintentional action (opposite rā'as); this word comes from Kārān, iv. 94 sq. (cf. the art. Kātā, section i. 1; passages like ii. 356 and xxvii. 5 may have also influenced this); it is of interest here so far as it is illegal; it may be more accurately defined as an act contrary to law, in which the intention of committing an illegal act is lacking, while the act itself may be deliberate; any negligence is left quite out of the question in the juridical appreciation. The Mu'tazilites asserted that one who has not been penalized by Allah for it, for punishment is only conceivable for a deliberate illegal act; other doxy on the contrary teaches that while khatā' is not a sin (qāṣār), any negligence, however, is something deliberate, and the khatā', as its result, is liable to be punished (it is regarded as belonging to the snažātāh mutāhā, happenings only indirectly intended, in themselves not delictuous, for which man can equally be made responsible): but Allah, in his mercy will overlook the punishment in the next world; the khatā' is thus considered as an ameliorating — often even exacerbating — circumstance in the infliction of punishment in this world (ṣaḥākāa, q. v.). It cannot be punished by ṣanād (q. v.); but not all of Allah's rights are dropped: anyone who, contrary to the provisions, kills an animal in the forest (qv. q. v.), the sacred territory of Mecca, whether with or without deliberation, or from khatā' (unintentionally), has in the opinion of all four schools (qv. v.) to make the prescribed amends (ṣā'ad); ʿulama' al-Shāī'î alone in this case also considers khatā' as an excusable. This is doubtless connected with what is ultimately a pre-Islamic idea, that Allah has an especial right of ownership to the forest, its plants and animals (cf. Gaudenfrey-Demouilleyes, Le Pèlerinage à la Mekka, p. 7-10). It follows that an unintentional infliction of the right of property is to be intended for like an intentional one; the difference of this is also found in the following difference of opinion; Malik and Ahmad b. Hanbal do not require a special compensation if the animal has an owner — who, of course, must be compensated — does not belong to Allah; Abu Ishaq and al-Shāfi'i demand it in every case, so that they extend their area of applicability. In khatā' there also is a full liability for any injury done to another; here ṣanād (q. v.) is a special case; its application is excluded when khatā' is present; instead the ṣaḥākā (q. v.) is to be considered (q. v.). Further details see the article ʿaṣṣār, Section i. 5, where the variations of ṣanād in the meaning of an unintentional act are given. From them it will be seen that this terminological use of the word is based on the two meanings "error" (in the case of khatā' ṣaḥākā) and "failure", "accident" (in the case of khatā' ṣanād) and is no more uniform than the uses dealt with under 1.

Bibliography: The dictionaries, their statements are collected in Lane, Arab.-English Lexicon, vi. 761; on its use as a technical term see Dictionary of the Technical Terms used in the Sciences of the Muslims, Bibl. Indica, Old Series, i. 401 sq.; Dodscherzschia, Definitives, ed. G. Flügel, p. 194; for further details the works on Ibtā and the Fiqh-books are indispensable. See also the art. Kātā.

KHAṬAI, the "sinner", pseudonym (qâvâhili) of Shīb Iṣâbān's (q. v.). Of his Persian poems we only know as far as the situation permits to quote in the anthology compiled by his son Shīb Mīrā (q. v.) and some other lines. On the other hand his Turkish ʿādam is known from several manuscripts, although these are rather scarce and differ considerably.

E. G. Browne (Persian Literature in Mediaeval Times, p. 12-13) has discovered the curious fact that the founder of the Safrican kingdom wrote mainly in Turkish while his rival Shah Sehm used Persian for his poems. Khaṭai's is now rightly regarded as one of the precursors of the literature of the Turkish dialect of Aḥbaruṣādigeen. His language, however, judging from the oldest Paris manuscript, is rather artificial; alongside of the true Aḥbaruṣādigeen vocabulary we find parallel forms from Eastern Turkish: ʿibāra, ʿibārāt, the accumulative of stems in comonomats; in ʿārā.
which deviates far from the Shi'a canon. It throws a new light on the esoteric foundations of the political power of the Safawis (cf. the sources like the Safavi: the Safavids, Safavi: and the history of the youth of Ismail I published by Sir E. A. Ross in 1895, p. 49-340).

Von Hammer (Gesch. d. pers. Dicht. 147, 171) mentions a myth of Persian origin which had gone to Persia to receive from the hands of Shah Ismail I the Dautun of Djalal al-Din Rūūsī which the Safawī monarch had taken to Persia. V. Hammer quotes four verses from it in translation.

**Gibb:** History of Ottoman Poetry, ill. 106; V. Minorsky, Materiali . . . . . . (All-Tibb), Moscow 1911, p. 108-110; on: Nuits de la sevte des Aslı-Egudi, in R. M. M., 1924, p. 57, 86; according to Balinger, Zür Gesch. der Safawīā, in the U. M., 1921, p. 122, the MS. of Conmandeprem is preserved in the Univerky-library; cf. All-Emir Efendī, Zāhdik al-nāsirī, maghfārān, 1, 79. (V. Minorsky)

**KHAṬAK.** The Khaṭak are a Pārābān tribe belonging to the Karakhī division of the Afghan tribes and live in the North-West Frontier Province of British India and adjacent localities. Their origin is much disputed (see the art. AFGHANISTAN, above, l. 150). At the beginning of the Muslim period, they occupied the Sulaimān Range and the northern part of the plains between these mountains and the Indus. The history of the Khaṭak was written by Khubbāl Khaṭ (q. v.), a regent chief of the tribe in the time of the emirs of Awrangzēb, Akbar, Shahjahan, Yalābāg and Makhād who are their chief septs. They are warlike and for centuries have been at feud with their neighbours and with one another; active, industrious and good cultivators, they are also good carriers and traders. The Khaṭaks are all Shi'ah and speak the western dialect of Pashto.

**Bibliography:** See the art. Khofk, (V. E. Windisch)

**KHAṬAM.** Khaṭām (Khatām). \(\text{K} \text{h} \text{t} \text{m} \text{ } (\text{F. mut.), seal, signet, signet-ring, the impression (also ẖāmat) as well as the usual ẖatam-matrix; it is applied not only to seals proper, engraved in incuse characters with retrograde inscriptions, but also to the very common seal-like objects with regular inscriptions of a plain or auspicious character; for the latter which are amulets and further readily distinguished from seals by the absence of a personal name see the article ẖalīmān; indeed anything with an inscription stamped upon it may be called ẖāmat. Here we are only concerned with seals in the strict sense of the word. The word ẖaṭām is said by Nādīrī, Mandānisūr: Gīrusūrī, p. 112 to be of Aramaic origin, and in this he is followed by Fraenzel, Aram, Frendre., p. 532, who also recognizes a loan word in ẖarōm, seal-clay.

The part played by the signet-ring in the east cannot be better illustrated than by the following quotation from Lane (Modern Egyptians, 2: 1866, p. 31). Describing the dress of a Muslim Egyptian he says:

*On the little finger of the right hand (it is allowable to wear it on a finger of the left hand) is worn a seal-ring (ẖaṭām), which is generally of silver, with a censer, or other stone, upon which is engraved the wearer's name; the name is usually accompanied by the words "servant" (signifying "the servant, or worshipper of God"), and often bears other words expressive of the person's trust in God, etc. The Prophet disapproved of gold; therefore few Muslims wear gold rings; but the women have various amulets (rings, bracelets, etc.) of that precious metal. The sealing is used for signing letters and other writings, and its impression is considered more valuable than the seal-manual. A little ink is dabbed upon it with one of the fingers, and it is pressed upon the paper; the person who uses it having first touched his tongue with another finger, and maintained the pressure while the paper which is to be stamped. Almost every person who can afford it has a sealing, even though he be a member of the class of the poor.*

The use of seals dates from remote antiquity in the east and they have never been supplanted by the spread of a knowledge of the art of writing and the use of the signature as has happened in the west. In the east the seal takes the place of the signature and it is the former that gives validity to a document even if the latter is also used. The seal is also much used as a guarantee that property will be kept intact and thus takes the place of locks and keys. Goods are simply roped up in a packet and the kraft sealed with the owner's seal; a plan which is Chardin, for example, appeared more simple than the western system owing to the practical impossibility of counterfeiting a seal. It is also used for the property in a mark of ownership (e.g. books and bindings) and in this sense corresponds to a coat of arms in the west. The possession of another person's seal is evidence that the latter has delegated his authority. There is abundant evidence of these usages in the east from very early times, Fazlānī, for example (Grai. ii. 42), gives Joseph his signet,
as a sign of authority, just as the Sultan of Turkey did his grand vizier. Jostein (T. King, xxii. 8) gives a letter in Arabah's name and says it is with his consent to give it validity. The books of Esther and Daniel give similar examples of the power of the Persian king's seal. Herodotos (I. 195) tells us that every Babylonian carried a seal and the abundance of seals, usually cylindrical in form, that have survived from ancient times in Mesopotamia, illustrates this statement. Seals of the Sasanian period still exist in large numbers, whether made for mounting in rings or pierced for suspension. In South Arabia also the Himyartites have left as numerous specimens of their sigils.

No seals of the pre-Muhammadan Arabs are known. The earliest Arab seals come from Egypt with pepyri and belong to the period soon after the conquest. Whether we accept or not the story that only seventeen men in Meca could write in the time of Muhammad, we must suppose that seals were in common use in this important commercial centre as in other parts of the east. Tradition in any case has a certain amount to tell about the Prophet's šulhuk. Al-Bukhari, Šulhuk (Bukh. 1926), vii. (Nabat) p. 48, says that the Prophet wished to write to the Byzantines. He was told they would not read his letter unless it had a seal so he adopted one of silver with the inscription Muhammad rasūl Alla. According to al-Mas'i, he adopted this ring in Mecmur of the year 4 A.H. The Prophet is also said to have originally possessed a gold, but gave it up when he forbade the wearing of gold rings and silver and brocade (Bukh. ibid., ibid.). Women did not observe the prohibition of gold rings and silver for example wore them (ibid.). The Prophet wore his signet on his right hand and used to take it off when he went to the provy (al-Tirmidhī Šulhuk (Bukh. 1247), vol. i, N. S. p. 224). Opposite differs so as to the proper hand and finger for the ring and there is no established rule. Later stories illustrate the Prophet's disapproval of metals other than silver for signet-rings. He is reported to have said that a brass ring savoured of idolatry, that ebony was emblematic of sins condemned to eternal fire, while words could not express his horror of gold rings meeting the wearer of one, he cast upon him a terrible frown and turned away as if he had encountered a dog or an invalid. The Prophet's seal was handled much used by his successors, who had however also their own seals, until 'Othmān lost it in a well at Aria, or in Zenazm, or according to others in the Tigre near Mayyil. The Prophet's interdict has been generally observed and it is exceedingly rare to find signet-rings of the more precious metals or mounted with the more valuable precious stones, upon which there was no embargo.

The earliest known seal of a Muslim is that of A'vas b. al-As, conqueror and governor of Egypt whose signet was a bull (Rainer, Führer, etc. NO. 356). Whether this is due to local influence or the reparation of an animal was not unusual with the pre-Muslim Arabs it is impossible to say. Other Arab seals bearing animals are known of this period, but the rigorous avoidance of images of living things was soon applied to seals also, for we soon find seals in Egypt of the Muslim type, although as late as 862 A.H. we find the governor Kūra b. Sharik using a bull (Rainer, Führer NO. 392). The seals of Abū Hā'im b. Vahlī (NO. 572) and of the head of the Treasury Rāhīl b. Khaṭṭāl *who trusts in God* (NO. 377) are already of the style that became stereotyped. A notable seal from Egypt is that of the tax-collector Nāṣr b. Muslim which bears his name in Greek and Arabic (NO. 586). Bilingual seals are again found in Syria and Asia Minor in the tenth century (cf. Schlussberger, op. cit., and Halli Edhem, op. cit.). Here also under Byzantine influence we find double-sided impressions of seals in lead (evas). of these the most notable is that of the Kukuyah All al-Dawās of 430 A.H. with a horseman on the obverse (Halli Edhem, NO. 30). Another remarkable seal from the same region is that of the Hamīnayd Muhammad b. Sa'īd al-Dawās, Abu T-Mustür Sharif, with obverse a beast of St. Theodore and his name in Greek characters (op. cit., NO. 31).

The materials of these early impressions are the same as in later times, a special kind of clay (jauhar), or lead, appended by cords to the documents as in the medieval west also. When the seal is stamped on the documents itself, it is done with a special thick kind of ink and the paper is moistened before receiving the impression; red wax is also used where the climate permits its use. In medieval Europe, there are instances recorded in the case of bulla of the precious metals, silver and even gold for very special occasions (Reinaud, op. cit., p. 112).

Charles White (op. cit.) deals very fully with the use of seals among the Turks and the guild of engravers in Constantinople. The latter have, he says, a special quarter in the bazaar called after them babikeeper. The members of the guild are Muslims (in contrast to the dealers in stones, who are usually Jews) of fair education conversant with Arabic, Persian and Turkish. A few can decipher the Kufic character. Their training is a long one. Apprentices after a good education take lessons from the best calligraphers of the day and thus serve seven years with a master-engraver.

When their indentures have expired, they become journeymen (kafta), until they have saved enough to become masters of their own and be admitted into the guild as master-jewellers (nīsib), the number of whom is limited to fifty. Their shops are regularly searched by the police lest they be tempted to put their skill to illegal uses such as the engraving of false coins. Such great care is taken to ensure the genuineness of a seal that the trade are forbidden to engrave two seals exactly the same for the same person. When a seal is lost, the owner has some trifling alteration made in the new one, such as a change of ornament or the date, so that the forgery can be detected if his first seal should fall into evil hands.

The Turkish engravers date the origin of their art in the time of the Caliph 'Ogām and say the first engraver was a certain Muhammad al-Hājdī who engraved seals for 'Ogām and All bearing their names with the additional epithet 'abd al-'Abbās; the rings were of silver and the stones bloodstones.

White's account of the seals of the Sultans and dignitaries of the Ottoman empire follows D'Obadion.

The Sultan has three seals of different sizes all of emerald set in gold with the same inscription, the tughrā (q.v.) and a religious legend. The first is a small seal always carried by the Sultans and handed to his secretary as required. The second is somewhat larger and is entrusted to the grand
treasure of the harem, who uses it for all matters relating to the harem—the Mogul Emperor Akbar similarly had a special seal for all documents relating to the harem. The third imperial Ottoman seal is the seal of state confined to the grand vizier of the day, who is supposed to keep it in his bosom day and night. The head of each department of state has also his own seal for matters relating to his office.

Persons of distinction do not usually wear signet-rings on their fingers. Great dignitaries have a confidential seal-bearer (mahradeh-bashi) who carries the signet in a small bag in his breast pocket and presents it in ink for the stamp or clean if wax is used. People of humble rank carry their seal in the breast pocket or suspend it around the neck. The impression of the signet stands for a signature although for documents of importance the latter is also necessary. In the case of the Sultan, the seal used and the presence or absence of the signature vary with the importance of the document, as does the format of the latter.

Chardin's account of the seals used by the Shah of Persia is similar. There are three seal-keepers (mahradeh-bashi) who only affix the seals, which are kept in a box in the palace sealed with the king's own seal. Friday is the usual day for sealing documents; the mahradeh prepares the seal and plate, which on the palace paper makes the impression on a sign from the Shah who does not usually do it himself. There are three great seals, used for military, civil and foreign affairs, and two small seals used for the palace accounts etc. The same inscription is in the centre of the three large seals, bandah, Shah-wilajat Sulaiman ii. 1608 (A.H.); the small seals have din in place of wilajat. One of the large seals has a quadrant round it and another has the name of the 12 Shahs Isma'els. At the king's death his name is erased and that of his successor engraved on it. Of the general use of seals Chardin observes that it would not be easy to steal one as they are worn round the neck and only taken off in the bath; they are also worn on rings. It is rare to find a seal counterfeited than a signature in Europe. The seal engravers used a drill and a small wheel with emery.

Abu l-Fadl in his Kitab-i-Khusrao devotes a special chapter to the Emperor's seals, which are used in the three branches of the government—"indeed every man requires them in his transactions." (Here we may note that English officials in India in the xviii and xix centuries found it necessary to have a seal with their names in Persian characters.)

At the beginning of his reign, Akbar had a circular seal bearing his name and those of his ancestors back to Timur in the xvi century; later he had a simpler one with his name only in the xvi century character. The former was at first used for letters to foreign kings and the latter (known as wali) for home affairs but the distinction was not maintained. A second seal used for judicial business was lozenge-shaped (mehraba) and bore an appropriate verse in praise of justice, round his majesty's name. For other business a small square seal with the legend Aliab Abor, jalu jalu, was used and the same as already stated had its own special seal.

The great figures of Muslim tradition had, of course, their seals. That of Salimun b. Daud is particularly famous and plays an important part in many of the stories of his miraculous exploits.

It was held in particular awe by the djinn. Djamshid, the Solon of Persia, according to Sa'di, was the first person to wear his signet on the left hand. In Firdawsi's story of Solon he escapes from captivity in Rûm, he reveals his return in giving an impression of his signet to the grand mobed.

Cuming to more historical periods, we have a record of the seal inscriptions of all the early caliphs (e.g. in Mas'udi, Kitalh al-Tawbik, under each caliph; collected by Hammer-Furst and von Miill); specimens of the seal impressions of several early Caliph still exist (cf. Halli Edhem, ep. cit.). Timur's seal bore his special mark, three small circles arranged in a triangle, and the motto razi razi and an impression still exists in the Bibl. Nationale (de Sacy, ep. cit.). In these operations a ring of "mort' fum or" bearing his signet, which was once among the presents sent to St. Louis by the Shah of Djasal. Specimens of the seals of Sultan of Turkey and other high Turkish dignities are given by Hammer-Furst (ep. cit.). Of these the most remarkable is the original seal of Sultan Mustafa II of 1106 A. H. found on the battle field of Zenta (1667) where his heir, the Grand Vizier Emlab Mohammed Pasha, was killed. A special medal was struck by the Austrians to commemorate this trophy. The jughar is a feature of the imperial Turkish seals; it is said to be an imitation of the impression of the hand, because Urkhan's sign-manual was impressed of his hand in red ink. Timur is also said to have used this primitive signature, but we know that he was not illiterate. The jughar is also traced back to the Prophet himself.

Muslims have followed the example of the Prophet in having simple inscriptions on their seals. Sometimes the name stone is used, and sometimes it is accompanied by a brief pious inscription, often indicative of humility; if the owner has the name of a person mentioned in the Koran, the reference is frequently worked into the seal inscription. The name is given in a simple form and titles are as a rule avoided in keeping with the general simplicity of the signet; for examples of legends see Reinhard and Reisner; in later times in Persia and India seals became much more elaborate and the seal of a minor official of the Mogul court at the end of the xviii century often has several lines of ornate inscription and forms a striking contrast to the seal of example for the great Siwan Pasha, five lines Grand Vizier of Turkey with its modest inscription "O God Thou art full of mercy, pardon poor Sinan, son of Ali"

The commonest materials for rings are silver or copper; and if a stone is mounted in it with the seal, it is one of the less valuable stones, cornelian, garnet, jacinth, agate, coral; the turquoise is not uncommon and one often sees them carved as amulets with inscription inlaid with gold. When not worn on a ring the seal is mounted on a handle and carried in a bag; sometimes the stone itself is placed for suspension and worn round the neck. The shapes of Arab seals vary, oval is naturally the commonest but they are also square, hexagonal or octagonal; round is not common except for the largest sizes.

The art of the seal engraver was at its best, like that of calligraphy, in the xvii and xix centuries. Its decline in the xviii was followed
by the practical extirpation of the art in the sixtb.

The names of few celebrated engravers have been preserved. Algun at the court of Tumur was reckoned a master of his art. Abu l-FAIL q 1 gives the names of four masters of the craft at Akbak’s court, each of whom was a specialist in a particular form.

[1. ALLAM]

KHATHAM, an Arab tribe (the name is nipotpe although in several European editions of Arabic texts we find it wrongly vocalised as a dip sole). They inhabited, at least from the sixth century a.D., the mountainous territory between al-Tawf and al-Najjarin along the caravan routes from Yemen to Moskva. Historiographical theory on the migrations of the tribes which is bound up with their genealogical systematisation, makes them settle at the time of the separation of the suns of Meccah, in the mountains of al-Sana (q.v.), from which the Alaw are said to have driven them at the time of the migration of the South Arabian tribes from the burning of the dam of Meccah, to the lands they occupied in historical times (al-Bakri, Muittam, ed. Wustendorf, p. 28, 36, 41—42. Wustendorf, Die Wissenle v. Wissenl, Erbauunet d. ar. Sittvet, bay. G. W. Güt, xiv. 36, 53; 58 = Masaffdd, ed. Lyall, p. 113—114, following Ibo Al Rawi = Tikt, Muittam, ed. Wustendorf, i. 404; ii. 390—327; Wustendorf, Register v. d. genealog. Tabellen, 130—131). According to this theory the Khatham (like the Badja, q.v.) who figure everywhere as their brothers were part of the Isma’ilet tribe, their descent being Khatham b. Amma b. Nafir (llm Hidur, Sana, ed. Wustendorf, p. 49, 25—50; ilm Hidur, Sana, ed. Wustendorf, 50, 25; [Pseudo-Baliki, ed. Hidur, iv. 110—111, who all attribute this view to the genealogists of the Muyar] But another theory connects them with a branch of the Saba according to the genealogy: Amma, named Khatham b. Amma b. Ibrah b. "Amur b. al-Ghawth (the latter is also the father of the Alad tribes) or more simply Khatham b. "Amur b. al-Ghawth (llm al-Khalil, Jami‘at al-Andal, MS. of the Escorial, fol. 447, 1179, who is followed by Abu Duraid, Muittam, ed. Bentzenfeld, 302—303, ii. Ikhatala, p. 50, 26; in Ihm Hidur, p. 50—51, 27; in Alhad, xv. 151; Wustendorf, Geneal. Thesell, 9, 15; Haidur, Jami‘at al-Andal, ed. Müller, p. 116, 11, gives the isolated genealogy: Khatham b. Rabih b. "Amir [31] and nih Hidur, p. 50, 26 makes Amir the son of Saba, cf. Reiske, Prima Tempes, p. 173). These contradictory statements seem to indicate that, like so many other tribes, the Khatham do not represent an ethnical unit but rather a confederation of clans of different origins. This seems also to be deducible from the etymology of their name, which connects it with the verb takhatam "to smear oneself with blood" on the occasion of a pact of alliance (on this custom cf. J. Pedersen, Der Eid bei den Semiten, p. 21—22, 25—26 and some authors he quotes). Other etymologies which make Khatham the name of a mountain or of a hill are not worthy of consideration (llm al-Khalil, fol. 102r=llm Duraid 302, 28 = fol. 302, 26. [from below] Hamid, ed. Freytag, 72, 375; [in the same manuscript] 75). In any case we always find the Khatham associated with tribes of the south either in alliances made on the occasion of expeditions (e.g. Ab al-Ghafl, p. 17, zili. 47, 29; xviii. 35—36) or during the sida (al-Tabar, de Geofe, l. 1985, 29); or latterly in the grouping of the tribes stationed in the military camps of Basra and Kufa (al-Tabar, l. 3495, 3174; l. 1222; but l. 1333, 27—84 we find them also grouped with the Khän, Kafs Alkah, Musma and even Kuragh, all tribes of the north under the general denomination Ab al-Alays. It seems that at this time [1095 A.H.], the territorial principle had prevailed over the ethnic one. Their principal clans were the Khathan, Kalb Alkah and Alkah, the later according to the South Arabic genealogy was of another origin (Alkah b. Rabih’s Nafir) and was late in entering the tribe (cf. al-Bakri, p. 55—56).

We have no authentic information on the Khatham for the remote period in the history of the Arabian peninsula (the identification proposed by Blum, Z.D.M.G., xxii. 625; xxiii. 601, note 6 with the Arap, Arap, Arap, of Ummayy and Pliny who are to be distinguished from the Khatham of Hadrusamu, is quite untenable). From the sixth century we find them inhabiting along with other tribes of diverse origins, the districts of Baha, Turaba, Durrah, Tabalah; this last was the centre of the cult of the God Char ‘l-Khalasa (on him see Wellhassan, Resto, p. 45—46), whom the Khatham, like the Badja, Daws, Bahlia etc. worshiped (llm, l. 701; l. 661, 705, l. 62a, 62b, [Ab al-Ghawth, l. 152, 576, 576, [where there are numerous references to the neighbors of the Khatham and to the assignation of the part of the territory of Baha at the end of the first century A.H. to some members of the Omayyad and Hijazite families: Haidur, 135—136; lhm al-Khalil, Khatham al-Amm, 34 pp.).

Among the numerous guerrilla war in which the Khatham were involved (cf. Ab al-Ghafl, vii. 113; xii. 47, 21—22; xii. 255; xviii. 35—36; [Ab al-Ghafl, ed. Bentzenfeld, 46; Yûkî, ii. 753, 25; iv. 56, 10—17;
Hamdani, 170, as the best known is that of Fa'il al-Ri'ih in which their chief Anas b. Mudrik (or Mudrika) allied to the greater part of the Madhamid, defeated the Banu 'Amir b. Sa'd's commanded by 'Amir b. al-Tufil (q.v.), who lost an eye in the battle (Ma'dhii, i, 223; Ibn 'Abbar, ed. Tornberg, i, 474; Ibn, ed. 1259, iii, 102, 103; Ibn al-'Alawi, ed. Lyall, Intro., p. 82-83, Nos. x, xi. [As Musa Qulfi, Nd. cii.], xii, xiii, xiv, xv, xxvii, Suppl., Nos. 1, 15]. Anas b. Mudrik's fame also as a poet was the hero of another enterprise of the Khath'am like that against the Banu Dhuqamh (Ag'hanii, ix, 17) and that in which he killed the famous poet-bridegroom Sulak b. Sulak (Hamdani, 415-416; Ag'hanii, xviii, 135-138). Ibn Kuta, Kita, al-'Alawi, ed. Goeje, 211). The biographical notes on Anas, who lived for several years after the introduction of Islam, have been collected by the author of this article in Castani, Annali dell'Islam, iv, 499-500 (year 40 A.H., § 347). The position of the lands of the Khath'am enabled them to play a part in the Byzantine administration against Makkah. They tried toobook the advance, but beaten by him, they were forced to guide the enemy's army as far as al-Taff (see the sources collected in Nössdeke, Gesch. d. Pers. u. Arab., p. 206-217). The spread of Islam at first left them indifferent (no heed need be paid to the story in al-Tahāri, l. 1079-1080, of the Khath'am 'abbinga' of Tabāba, Fātimah bint Murr, who saw a "divine" light on the face of 'Abdallāh b. 'Abd al-Mu'tallib, the future father-in-law of the Prophet. The only interesting feature of the story is the epithet Jundaln, abdulkaardhari, conferred on the Khath'am). Their first contacts with Muhammad were certainly hostile (Wilkidji, trans. Wellhausen, 387; al-Tahāri, l. 1730-1731), but they ultimately sent him an embassy and recognized and accepted a letter from him which declared all the blood-relatives previous to Islam abolished (Ibn Sa'd, 2, 34, 78; Annali dell'Islam, iii, 330, year 10 A.H., § 28, cf. also § 23, p. 326-347). On the death of the Prophet, only a section of them rebelled (Annali, ii, 575-574, 581, 585, year 11 A.H., §§ 87-88, 98. 1043). The destruction of the sanctuary of Dhu l-Khālija by 'Abdallāh b. Dzair al-Ri'ih must have broken their resistance along with that of other tribes who were gathered round this turbulent centre (al-Tahāri, i. 1985 sqq.). During the wars of conquest we find them in the army of Syria (Ibn 'Askihi in Annali, ii, 388, year 15 A.H., § 606, cf. also al-Tahāri, l. 387, 13408, 4-7) as well as in those of the 'Irak (al-Tahāri, 2188, 11-12), and as we have seen, formed the part of the tribes quartered at Basra and Kufa.

Several Khath'am women were married to Kuraishī. One of them played a rather an important part in the early history of Islam: Amin bint Umaiya is one of the first women converted to the faith of Mahammad, who took part in the emigration of the first Muslims to Abyssinia. She was successively the wife of Dzair b. Abi Bakr, Abi Bakr and 'Ali, which gives special prestige in Muslim tradition (Ibn Sa'd, 205-209 and cf. Annali dell'Islam, ii, 211-239, year 38 A.H., §§ 269-295). Her sister Safiyya was the wife of Hamza b. 'Abd al-Mu'tallib (Annali, loc. cit., § 325, Ibn Sa'd, vii, 2009), a daughter of Anas b. Mudrik, Annak, was the wife of Khālid b. al-Walid (Ibn Hajar, Isbat, Cairo, viiii. 6, No. 39; Annali, xiv, year 37 A.H., § 412, x. 499). The Khath'am poets were few in number; the most notable was Ibn al-Dumaiya (Ag'hanii, xv, 151-157), Ibn Kutala, Kita, al-'Alawi, p. 458-459, etc., who flourished probably at the end of the first or at the beginning of the second century A.H. and who is famous for the sacrilegious revenge he took for his wife's unfaithfulness.

G. Levi Della Volta.
capital sins which occurs in Hadith: "The Apostle of Allah said: Avoid the seven capital sins (urmān-ghaza'i). When he was asked what they are, he answered: Polytheism, sorcery, killing those who may not be killed except for a lawful reason, committing incest, causing the possession of orphans, unchaste, fleeing from battle against the enemy, and abstaining heedlessly. Faithful and good people" (Muslim, Jāmī, trad. 144: al-Bukhārī, Ḥadīth, ḥāth 23). In other enumerations of the seven capital sins, there are different reasons for this scheme of classification and ethics as the chain of transmission and the like are heavier than those enumerated in the tradition just mentioned. Al-Nawawī in his commentary (ī. 170) cites a passage from Abū al-Muhammad B. Abī al-Salāmī as the contents of which are the following. Whosoever wishes to know whether a sin belongs to the class of the light or to that of the heavy ones may compare its character with that of the capital sins. If it is lighter than the lightest of capital sins, it belongs to the light ones; in other cases it belongs to the heavy ones. Who, e.g., desecrates his Lord's thrower of the qanā'ī into the mihrāb has committed one of the heaviest sins, though the law does not characterise it as such. Likewise, if a man should hold on a woman in order to give his companion opportunity to violate her, or if he should detain a man in order to give his companion the opportunity to kill such a man, such a deed would bear a much more sinful character than the spoiling of the possessions of orphans, though the latter figures among the capital sins. In the same portion of his commentary al-Nawawī speaks of the strongly deviating opinions concerning the distinction between light and heavy sins. He cites the following of Ibn 'Abīi: "Everything which Allah has prohibited, when committed, is a heavy sin." And other theological authorities have said: "Every action contrary to the law is a heavy sin with a view to Allah's Majesty." Yet the great majority of the theologians are unanimous in making a distinction between heavy and heavy sins. Although they recognise the view just mentioned to be right with respect to Allah, yet there is a gradation with a view to distinguish sins considered by themselves. Accordingly, the law distinguishes light sins, which are atoned by the five sini, by the ‘umrāh, by the ḥajj, etc. But how are light sins to be distinguished from heavy ones? Several answers on this question are given. According to one view, every sin is mentioned in connection with Hell, with Allah's anger, curse or punishment belonging to the heavy ones. Another view: Every sin committed with signs of fear or circumstantial or with levity belongs to the heavy ones; but sins due to slips of the tongue, to a relaxed control of the passions and the like are to be reckoned among the light ones. Such contradictory definitions induce Abu Tālib's al-Wālidī to state that there are certain sins that are called heavy by law; others that are called light; and others that are not provided with either of these epithets. Frequence therefore commands men to ask all sins lest he prove to have committed one of the heavy ones. — The scholars say: Preventing in committing light sins makes them heavy; and on the authority of Ḥanāfī and Ibn 'Abīi the sentence is hazar da'w. "No sin is heavy if forgiveness is asked, nor is light if the transgressor perseveres in it." Thus for al-Nawawī.

This theory concerning light and heavy sins and their forgiveness, which may be called representative of the views of orthodox Islam, was not shared by two sects of so divergent tendencies as the Ḥanāfī (q.v.) and the Mu'tazilite (q.v.) here. Both hold the position that the consequence of heavy sins will be eternal punishment. This position is connected with the question concerning the relation existing between faith and works. While orthodox Islam, theoretically at least, demands the practice of all the rights of faith, these sects lay stress upon works as the criterion of a man being faithful or not; their most consequent opponents in this respect were the Murājī (q.v.). The line of distinction which orthodox Islam draws between Muslims and Kuffār was removed to the right by the Ḥanāfīs and the Mu'tazilis, so as to add to the damned also the Muslims who were guilty of heavy sins. The echo of the fervent debates between the parties is still heard in the commentaries on the Sunnah. Al-Bahālī in his commentary on Sunnah (ī. 75) (see above) speaks: The "envelopment" mentioned here can only refer to Kuffār; consequently those who have committed heavy sins do not fall under this description of this verse.

Verses like Sūrat Sīrah: 55: "Allāh forgives sins in their totality" and Sūrat n. 324: "He forgives whomsoever He pleases and He punisheth whomsoever He pleases." An opposition of sins is not necessary and that heavy sins are also pardoned (Fakhr al-Dīn al-Rāzī, Muṣbāb l-al-Shāqī, l. 2a). Al-Bahālī in his commentary on al-Rāzī (q.v.) points out that it is not true for the forgiveness of sins āmūl (q.v.) is necessary; it is only required for fātāhā (q.v.). Still, however strong this assertion may be, al-Rāzī in his commentary on Sūrah: 54: "Perhaps He will pardon sins in general and perhaps He will punish in Hell for a time and pardon afterwards.

Al-Zamakhshārī, who was a moderate Mu'tasilli, combats such views. Commenting upon the word "He pardoned whomsoever He pleased" (Sūrah: 324) he remarks: "On account of āmūl, for He is not disposed to grant forgivenness except to those who repent." And he criticises against the interpretation of the verse which puts it into the mouth of the Abūhāsir: "He granteth heavy sins to whomsoever He pleases. He pleases and He punisheth whomsoever He pleases on account of light sins" words, indeed, to bring a Mu'tasili to despair. As is to be expected, the orthodox view of heavy sins being pardoned is also to be found in Hadith. The Prophet said: "Disbri visited me and cheered me with the assurance: Any member of thy community who dies confessing Allah's deity will enter Paradise." I said: "Even if he has committed adultery and theft?" He said: "Even if he has committed adultery and theft." (Muslim, Ḥadīth, tr. 153). Al-Nawawī remarks in his commentary on this tradition: This is a false gloss for the sense of the Sunnites that those who have committed heavy sins will not suffer everlasting punishment in Hell as they will be taken back from Hell if they have entered it; and that they finally will enter Paradise and remain there for ever." All this is elaborately treated in the traditions on intercession (see the article Sunnah; x) where it is stated anew that Muhammad intercedes also on behalf of grave sinners, and that through his intercession they are allowed to leave Hell. Immovable are the traditions in which Muḥammad mentions forgiveness of sins on account
of good works of every kind. In some of these traditions the qualification occurs: *except heavy ones*; this clause represents the common orthodox view (see above) that light sins are repaired by good works of every kind, that heavy ones require *istighfar* and that *shirk* requires *taubah*. *Shirk*, polytheism, is consequently the heaviest sin; the lightest is the so-called *hadith al-amā>. i.e., sinful thoughts which do not issue into reality; it is ever said that no account of these thoughts is taken in the computation of sins on the Day of Resurrection. The idea is expressed in the following tradition: *The Apostle of Allāh said: Allāh does not take into account what the members of my community think as long as they do not pronounce it or carry it out* (Muslim, *Taubah*, tr. 207–208). This tradition, which also occurs in other forms, is another proof of the mild attitude taken by orthodox Islam towards sin, an attitude which forms a counterbalance against the severe doctrine of *ṣadār* (q.v.). The tradition just mentioned and the above from which it arises are the more remarkable because Muslim theology is very strict in matters regarding the manifestation (cf. the art. *Nūr*). On the other hand, scrupulosity regarding sinful thoughts is highly praised. Once Muhammad’s companions said to him: *We find in our inner self thoughts which we would have scruples to pronounce!* He said: *Do you find them really?* They answered: *Yes!* Then he said: *This (scrupulosity) is pure faith* (Muslim, *Taubah*, tr. 209). In connection also with the following *hadith* may be mentioned. *Anas said: Verily, you do things, which, in your eyes, are more insignificant than a hair is thick; just as in Muhammad’s lifetime we considered them as capital sins* (al-Bukhārī, *Kitāb al-Ḥanāfī* 32). Finally, one tradition must be mentioned which could be called a step in the direction of the attitude of Khaḍirīs and Muʿtazīls regarding heavy sins. *The Apostle of Allāh said: Who commits fornication is not a believer at the same time, nor is he who steals or drinks wine* (Muslim, *Taubah*, tr. 101; cf. tr. 101–105; cf. al-Bukhārī, *Hadīdī* 7, 6, 20 etc.). Al-Nawawī in his commentary is anxious to prove that the words “is not a believer” do not imply a total, but only a partial lack of faith, and he states that the *‘amara* of the people of the truth” is that those who commit fornication, theft, murder or any sin considered as one of the *ḥarām*, except *shirk*, are not for this reason infidels; no, they are believers lacking in faith; if they repent, their punishment is abolished; if they die, persevering in heavy sins, they are left to Allāh’s pleasure. If He pleases, He forgives them and makes them enter Paradise at once; and if He pleases, He punishes them and makes them enter Paradise afterwards. — Similar views and, their opposite lie also at the bottom of the much debated question whether faith is liable to increase and diminution.

In ethical and mystical literature we find a more systematic and elaborate classification of sins; cf. Abu Tālib al-Makki, *Kāf al-‘Uqūl* 85; al-Ghazālī, *Iḥyāʾ*, vol. iv., book i. (on repentance). Abu Tālib recognizes four classes of sins, a division which was borrowed from him by al-Ghazālī. Those of the first kind are called *ṣināq al-‘iḍā*, sins such as haughtiness and pride, boastful, arrogant, love of praise, love of life, ambition, despotism; those of the second class are called *ṣināq al-‘ishbīn*; it comprises such sins as envy and deceit; those of the third class bear the epithet of *‘anām* (al-‘abārīn); these are avility, covetousness, rage and lust; the fourth class comprises those sins which remind of the three great sins of *prayer* (ṣawā‘ir), such as wrath, fighting and murder. Al-Ghazālī rejects the view of those who do not recognize a practical difference between light and heavy sins. He mentions the enumerations of heavy sins varying between four and eleven, and cites Abu Tālib al-Makki’s view that “there are 17 heavy sins, four in the heart, to wit: polytheism, persevering in sin, despair of Allāh’s compassion, and *ṣināq al-‘iḍā*; four in the tongue, to wit: false witness, abusing the *rābīʾ*, false oath, and sorcery; three in the belly: drinking water and intoxicating drinks, spoiling the goods of orphans, and usury; two in the genitals: fornication and pederasty; two in the hands: murder and theft; one in the feet: fleeing from battle; one in the whole body: disobedience regarding one’s parents.

The mystics, notwithstanding such classifications, see sin in a more general light. It is man as such who is a sinner. It is necessary for him to know Allāh in His highness and to know himself in his baseness. For the soul is like a mirror disfigured by rust, which has to be cleaned and polished, so as to be able to reflect the higher world. This polishing process dominates the life of the mystic and gives rise e. g. to the *mujāhida*, the daily examination of one’s self with a view to sins committed and his means to avoid them in future (Iṣāq, vol. iv., book viii.; cf. Asīn Padūnī, *Li-Înān al-‘Aṣl al-Ghazālī*, M.T.O.M., vii. 90 sq.). It is this consciousness of sinfulness which lies at the root of the moral attitude of the mystics and which has inspired so many sayings expressing their fear to appear before Allāh after death (cf. R. Hartmann, *Al-‘Aṣl al-‘Abī*, *Darstellung der Sicheln*, p. 11 sq.).

Two deviating attitudes regarding sin taken by the mystics have still to be mentioned: that of the *‘āṣī* and that of the *Muʿtazī* the former have turned their back to the ethical rights of the mystic and maintain that the activities of law and morals have no longer to be borne by him who participates in true mystic life. For a full description see the art. *TAWASSUL*. — The *Muʿtazīs* (q.v.), on the other hand, start from the conception that the mystic has to avoid all that may confer on him the praise of mankind and their admiration. They therefore do not shun actions which expose them to general reproval or disdain, actions which in their case are not the outcome of their lagging in sinful inclinations and which, without the purpose of incurring blame, would lose nothing of their sinful character.

(A. J. Wusseh)

**Khaṭīb** (pl. *khaṭībīn*), was, among the ancient Arabs, the name for the speaker or orator of the tribe. The *khaṭīb* is therefore often mentioned along with the *ḥabīb*, the poet (Ibn Hitham, *Sirr*, ed. Wustenfeld, p. 934, see below, 938, 3 from below *Yākūt*, ed. Wustenfeld, iv. 484, 4 sq.), like the *ṣināq* and the *ṣawā‘ir*, one of the leaders of the tribe. The character and significance of his office is clearly explained by Dībāq, *Khaṭīb al-Bayān* wa l-Tahṣīn, Cairo 1333, vol. i. 1–3. The distinction between *khaṭīb* and *ḥabīb* is not
 absolutely definite but practically is that the "khatir" uses the poetic form while the "khāthī" expres- sion himself (i.e., in prose, often) however, also in odd (c.f. Dājīxy, op. cit. p. 262). This speech is interspersed, in some "khatir". (Al-Iṣṭalās ed. Sacy, 1832, p. 43). According to Dājīxy, there were a few "khatir" who were also "khāthī" (l. 27). In the Dājīxy the "khatir" is said to have been more highly esteemed than the "khāthī" but when the numbers of poets gradually increased and the latter's art declined and they became beggars, the "khāthī" obtained more prestige (l. 136; ill. 227). The "khāthī" is also associated with the story-teller, the "ābā", and with the "ūsāl al-ūbād" (Dājīxy, l. 167 sq., and passim); the office was sometimes hereditary in the same family. The "khatir" did not form a guild or caste; they were the men who had the ability to be "khatir". They appear not only as the head of a "mahbūr" to negotiate as representatives of their tribe, as we know from the Sir (cf. Goldziher, Abhadd., sur arab. Philol., i. 20), but also, like the poets, they were also the leaders in the wars of the enemy (mafrūkhār). The "khāthī" had to be able to extol the glorious deeds and the noble qualities of his tribe and to narrate them in perfect language and to be likewise able to expose the weaknesses of his opponents. He had therefore to be "fāthī" and know how to employ "nāba" and in this way to overcome his opponents (cf. The Mafrūqīyan, ed. Lyall, xvi. 22 sq., xvi. 92; al-Kušānī ed. J. Barth, t. 26; Ibn Kathīr al-Ḳusayy, t. 37; Ibn Khodākhshūn, S. B., Al. Wānī, 1903, xvi. 19; K. S. ed. Wight, p. 20). Lampeons give the following characteristics of a poor "khāthī"—his pronunciation is bad, he turns towards the stammerers, should, strokes his beard, twists his fingers, a sign of cowardice (Hanafi, ed. Freycinet, p. 6 verso; 5, 2; K. S., ed. Wight, p. 20, 7, 9 sq.). It is in keeping with the character of the ancient Arab "khāthī" that he is included among the fighting knights and nobles (al-Ḳusayy, op. cit.; Dājīxy, l. 334 sq. l. 172, sq.), indeed, "khāthī" itself is used as a name for a brave warrior (Dājīxy, l. 129). When the "khāthī" makes a public appearance his insignia are a lance, staff or bow (al-ṭabbāṣir), just as a man taking an oath carries tokens of masculine laurel; he often strikes the earth with it (cf. al-Ḳusayy, l. 37. 6; Labīb, Dājīxy, ed. al-Chalīla, 7, 15 (l. 27, 45; P. 45); Dājīxy, l. 197 sq., ill. 3 sqq. 61 sq.).

In the earliest days of Islam the "khāthī" retained much of his old character. "The prophet gave forward as a "khatir" after the conquest of Mecca (Ibn Ḥiṣnān, ed. Wastenfold, p. 323, 3 from below) and spoke publicly with ceremony and authority. But the "khatir" now became solely an address to the Muslims, not a part of the war against the enemy and mafrūkhār was no longer part of the activities of the Muslim "khāthī". But it is quite in keeping with the nature of early Islam and with that of the Arab "khāthī" that the ruler himself was a "khatir" and that he not only made edifying speeches from the minbar as "khāthī" but also issued orders, made decisions and pronounced his views on political questions and particularly questions of general interest. This was the case under the first four caliphs and the Umayyads (c.f. Dājīxy, l. 190), and the governors appointed by them also acted as "khāthī" (e.g. al-Ṭalbagī, ed. Hontana, ii. 518 infra). Dājīxy, l. 179 middle, etc.); the local governors appointed by the latter were also entrusted with the control of the minbar and of the pula (al-Ṭalbagī, ii. 259, 267 sq.). Distinctions against and curses on the enemy were part of their "minbar" speeches, e.g. the curses on Ali and occasionally on the Tābiy and al-Ṭalbagī (Dājīxy, l. 165). "Khāthī" was therefore still synonymous with "khatir" and the poet of the Khârijī says: "There will be no peace so long as there is a "khatir" from Dājīxy on the minbar's of this world" (Dājīxy, ill. 135). An inheritance from the ancient Arab spokesman is the staff or lance which the Muslim "khāthī" holds in his right hand during the "khāthī", a custom which provoked the scorn of the Persians (Dājīxy, ill. 335). But the close connection between the "khāthī" and divine service gave the Muslim "khāthī" a specifically religious character. After the conclusion of the wars of the first generations, this element became more predominant and in the time of the "Abbāsids, as early as Harūn al-Raṣīd, the caliph left it to the "khatir" to deliver the sermon at the service while he himself was simply a listener (Dājīxy, l. 161). But in theory the leaders of divine service such as the great muqarras are representatives of the caliph (cf. Ibn Khaldīn, Muḥaddīsin, Cairo 1932, p. 173).

The Egyptian Fātimīs still occasionally preached themselves (behind a veil), namely 3 times in the month of Ramlūn and at the great festivals (Ibn al-Ṭaghibīrī, ed. Juybīlī, ii. 482—486; ed. Popper, p. 331 sqq.; al-Makrīzī, Kīfāt, Cairo 1334, ii. 322, 327, 329). On this occasion his highest dignitaries stood on the steps of the minbar (cf. p. 327, 329), while on the other hand the "khatir" of a district often stood on the minbar if the "khāthī" was preaching, a custom which testifies to the original high rank of the "khāthī", but was later condemned by strict authorities on morals (Ibn al-Ḥalīlī, Kīfāt al-μuṣādīr, Cairo 1520, p. 74). Special "khafīf" were everywhere appointed. There were three of them in Cairo during the early Fātimī period (for the "khatir" and all Aṣhar mosques); cf. al-Makrīzī, Kīfāt, ii. 348 sq.: as a rule it seems to have been the harbour office of a kāfī; cf. op. cit. p. 224, a note. On the "Id al-Ṭūlā, a special "khatir" pronounced the ṣafār or minbar with 9 steps in the sanctuary of the Hāsin in Cairo, while the chief "khatir" conducted the ṣafār; the "khāthī" on this occasion was given a silk robe and 30 or 50 dinars (al-Muṣṭafī, Kīfāt, ii. 224 sq.). On other occasions also the "khafīf" received a robe of honour (op. cit. p. 387 infra). The "khāthī" usually was also the conductor (ṣūrār) of the Friday ṣafār at which he preached and, according to Abū Ḥanīfī and a number of Ulumīs, he must actually do so unless there were special reasons for a deviation from the rule. The daily ṣafārs are as a rule conducted by the chief "abād" (al-Ṣawārīdī, al-Ḳāsimī al-Naṣīfī, ed. Eßer, p. 483, 4 sqq., tr. Tawfiq). According to al-Shāfīʿī and Mīrī, the Friday service with "khafīf" can only be held in one mosque in each town, if the size of the town does not make it impossible, while Abū Ḥanīfī has no such rule. The "khāthī" was therefore delivered, for example, in Cairo after the end of the Fātimī period in the Hāsin mosque only, because Salāhī appointed a "khatir" chief ṣūrār. This state of affairs was altered by Bāhārī when he appointed a Ḥasanī chief ṣūrār (al-Ḡaṣrī, Kīfāt, ii. 333). Abū Ḥanīfī on the other hand allows divine service
in which a ʿkāfī was taken part only in a large town (miṣrī), in which the ruler or his deputy is present in person. The other schools are less rigorous on the point. But the Imam-ʿkāfī of the Friday service is, according to the other schools also, in theory the representative of the highest ʿilm. Several Imāms can be chosen, if necessary with their exact functions defined. According to al-Maʿmūn (p. 172), the ʿulāmāʾ appoint the Imāms of the larger mosques, in keeping with the theory of their representative character. But, according to al-Kākāshī (Ṣafī al-ʿĀqīl, Cairo, iv. 39), each mosque under the Mamluks had its own ʿkāfī while the ʿulāmāʾ only concerned himself with the larger mosques. This office of ʿkāfī was of the most important mosques, which were very distinguished ones. Thus, according to Ibn ʿAbd al-Zahir, the Shāfiʿī chief ʿkāfī himself was ʿkāfī of the great mosque in the city of Cairo (cf. F. R. Jacques, Zoudhar biārkhī Muhammad, 1892, p. 92) and it was regarded as a special distinction, anxiously coveted, when Salādīn after the conquest of Jerusalem chose the ʿkāfī Muhayn al-Dīn Abū l-Muʾallā to act as first ʿkāfī in the Aṣṣū mosque (Ṣafī al-ʿĀqīl, Kitāb al-Riāḍat al-fatār fi ʿAkhbār al-Dawlatī, Cairo 1288, ii. 108 sqq.). The document confirming his appointment under the Mamluks is further evidence of the ʿkāfī's dignity (cf. al-Kākāshī, op. cit., ii. 222–225; R. U. U. Māram, Kitāb al-Taṣawwuf al-Sināʿī, Cairo, 1313, p. 126 sqq.). He is the natural authority to whom new converts announce their conversion to Islam (Ibn al-Hādī, Kitāb al-Maḥbūl, p. 76), the people touch his robe al-ʿlaʾirwad, etc. (al-Shaṭṭānī, Kitāb al-Maḥmūd, i. 160). According to al-Ḥādi al-Mawardi (p. 85), the ʿkāfī ought preferably to wear black clothes, according to al-Ghazāli, white, when the first mentioned would be ḍāda (ṣiṣ), Cairo 1522, p. 134, 109 sqq. His insignia are al-ʿaṣfī, the "two things of wood," i.e. the minbar and the staff or wooden sword which he has to hold in his hand during the sermon; according to the Fiqh books also. According to the law of 1011 applied to al-Āṣir after 59, every one who has passed through the second of the three divisions of the institute can become a ʿkāfī. While in al-Āṣir itself only one ʿkāfī is appointed (al-Zayjštī, Taṣawwuf al-Āṣir, Cairo 1320, p. 207), there were in 1909 in the mosque of the Prophet in Mecca 46, in Mekka 122 ʿkāfatī, besides their deputies. They enjoy certain foundations and the office is on the whole hereditary (al-Banānī, al-ʿAbī al-Ḥadīfī, Cairo 1329, p. 101, 242).

This latter meaning is probably derived from the earlier meaning of the lines which a diviner (ziyā) drew in sand and from which he prophesied the happy or unhappy issue of an undertaking about which he was consulted. For this purpose the diviner accompanied by an acolyte drew with utmost haste, so that he could not possibly remember the number, a quantity of lines in the sand. Then he slowly wiped out two lines at a time, while the acolyte repeated the words: "Ye two sons of Ḥaṭṭān, hasten with the explanation!" If in the end two lines remained it was a sure sign of success, while one line meant disappointment. This being ancient priestcraft was prohibited by Islam, but another mode of divining survived for a long time and may be practised to the present day. The diviner in this art of Ḥaṭṭāt made only three lines in the sand and then used corns of barley or date-stones which he flung upon the lines, and from the way they fell upon the lines he prognosticated the good or evil result of the enterprise (cf. Ibn al-Maghili, Niṣībī, S. 302; Liṣān, v. 1375–1382).

Further Ḥaṭṭāt means essentially "handwriting" i.e. the Arabic script with its development and various styles; so we find it used in a verse of Imrā' al-Ka'b (ed. Aḥmad, 653, v. 1): "Like the writing of the Fezzari on Yamamīt's palm-leaf." Similarly, "Abd Allāh ibn 'Abd Allāh (Muḥammad ibn Ḥaḍīra, ed. Lyall, 114, v. 5) says: "As if the ink is moved about in the writing from the inkstand..." Later poets contain the mention of Ḥaṭṭāt for writing more frequently and the verse of the Islamic poet al-Shalmi (ed. Naṣir, p. 26, v. 1) says: "As in Talmud a Jewish rabbi writes Hebrew with his right hand and then draws straight lines across (the paper)." From this verse it becomes clear that not only Arabic writing, but any script is named Ḥaṭṭāt.

In modern language the word Ḥaṭṭāt is used for manuscript copies of books in opposition to printed books. The history of the development of the Arabic script need not be enlarged upon here as the subject has been dealt with in an earlier article (of the art, ARABIA, above, vol. 1). The scribes (kāhir, q.v.) developed a science about the correct formation of the letters, while cancellers in their turn invented a science by attaching special virtues to certain combinations of letters (cf. Tiḥkāpya Za'yar, ed. Hāṣida, ii. 75–80; al-Salih, id.-ibid., iii. 2–171, and elsewhere; and for the supposed mystical interpretation of writing principally of the books of the Harīfis). Cf. further the art, KHALIFA: HUMAYUN.

is simply a collective name for the villages in Umair, while Ibn al-Anbārī uses Al-Khatt as the name for the coast of al-Bahrain. In contrast to those widespread applications of a fairly general term there is a narrow one, according to which Al-Khatt was a particular settlement on the coast which belonged to the "Abd al-Kaṣīm. A. Spronck has observed this usage by al-Halabīs among others, and there is much in favour of locating Al-Khatt preferably in the Gulf of al-Bahrain. The place was in any case noted as a market for the famous Khīṭī lance-shafts imported from India and sold to the Bedouins. The name Al-Khatt seems to be old. If A. Spronck is right in connecting it with "regio Atene" and "Chantini" in Plant Īās, Nat. Hist. vi. 28, 147, and the "Ata viceta" in Prolemy, the name dates back long before the Muḥammadan period.

(Adele Groomans)

Khatt-i Humayūn, "imperial rescript," an ordinance referring to reforms in the organisation of the Ottoman empire, promulgated by the Sultan. The expression was primarily applied to the Sultan's (it is written by the sovereign himself) at the head of the document; later when the charge of the īmārāt (q.t.) was left to an official called īmārāt, the term was strongly extended to the whole document itself. The expression is synonymous with īmārāt īshar but the usage in Iranian administrative law is to apply the latter only to the īmārāt īsharī of Ġūlkhānā, a constitutional charter granted by Sultan 'Abd al-Majid (Shāhān 26, 1255 = Nov. 3, 1839), while the former is generally applied to the īmārāt hamzūyīn of the first third of Djiūmāyī I, 1272 (Feb. 15, 1856). The latter addressed to the grand vizier Muhammad Amīn 'Aṯīr Paşa had been obtained by the united action of French and English diplomats at the end of the Crimean War. By this document, the Sultan acknowledging that this subjects were united among themselves by cordial bonds of patriotism (wotanīrāt, an expression that appears for the first time here but did not catch on) declared he would maintain the guarantees promised by the charter of Ġūlkhānā for the security of persons and property without distinction of class or cult, as well as the privileges and immunities enjoyed by non-Muslims: he accorded authority to repair churches and other buildings belonging to the various communities, put an end to the use of insulting appellations in administrative documents (for example of the term ṣarūy) and presented its subjects with titles (the term ṣarūy attributed to tributaries); proclaimed all his subjects eligible for public offices; instituted mixed tribunals composed of Muslims; announced the coming codification of penal and commercial law, and better organisation of the police; the application of recruiting to non-Muslims with the right of buying oneself out, the reorganisation of the provincial councils, the right of foreigners to possess landed property, reforms in the levying of taxes, the making of banks, roads and canals. This law remained in force until the constitution of Miḥāṣ al-Paṣa in 1876.

Khatt-i Shārīf. [See Khatt-i Humayūn.]

Khattābiya, name of a sect. Reckoned among the Shī'ite extremists (ghulāṣ), called after Abu l-Khāṭṭāb Muhammad b. 'Abd Zainab al-Ṣa'dī, who is said to have asserted the immanence (juhūl) of the deity in the Imām Dījāfīr al-Sādīq (83-148 = 702-765) and afterwards in himself. He obtained a following in al-Ṣafī, where he was attacked by 'Abd al-Muṣṭaṣ, who was governor for some time till 147 = 764/765; he armed his followers with stones, reeds and knives, assuring them that these would prevail against the enemy's swords and lances. This promise proved deceptive; his followers to the number of seventy were slaughtered, and himself was captured in Dār al-Kirīn on the bank of the Euphrates, impaled, his trunk afterwards hanged and his head sent to Baghūd. This disaster did not terminate the existence of the sect, some of whom maintained that neither Abu l-Khāṭṭāb nor his followers had been really killed, the appearance having been delusive. Their numbers are computed by the best informed writer about 500. A. Shīfī thought the location being the Sawīl of al-Ṣafī and Varmān they had, however, no power or force. There is a certain allusion to their doctrine in Ibn Kuttābī's Maṣā'īs, which is somewhat earlier, and in the work of al-Muṭahharī b. al-Ṣahābī, who is some fifty years later, but they seem to have done nothing which attracted the attention of the historians. After Abu l-Khāṭṭāb's death his followers are said to have transferred the imamate to Muhammad b. 'Anṣārī b. Dījāfī al-Sādīq, and are thus to be reckoned among the 'Umāmīs.

The statements about their specific doctrines are scanty and to be accepted with caution. They held, it is asserted, that Muhammad was the prophetic office from himself to 'Ali on the day of the Fons; and it would seem that Abu l-Khāṭṭāb must have asserted that similar transference had taken place from Dījāfīr to himself. Both Shīfī and Shīfī writers maintain emphatically that Dījāfīr repudiated the claims made for him by Abu l-Khāṭṭāb, whose relation to him seems to have been similar to that of al-Muṭahharī b. Abī 'Uṯmān to Ibn al-Ḥamāsīyī.

Of his other doctrines the least esteemed is that he taught absolute ruthlessness in dealing with oppressors. Men, women and children were to be massacred, his argument being that the same was employed by the Aṣkālānī. False witness was lawful in dealing with them. Al-Muṭahharī asserts that in consequence the evidence of members of this sect was not accepted in the courts.

The later historians know far more about the sect than do the earlier. With al-Muṭahharī the Bīnāyūn are a separate sect, but al-Shirāstānī makes them a subdivision of the Khāṭṭābīyā. The later writer makes another subdivision, the 'Umāmīyī, who figures in 'Abd al-Kirīn's work as a subdivision of the Qāhījīyī. Al-Shirāstānī also treats the Mu'mamīyī as a branch of the Khāṭṭābīyā, but Ibn 'Hāmīn evidently regarded them as
independent. By the time of al-Maqrizi the number of subdivisions had reached fifty, and Abu 'l-Khati'bi's father's name was variously given as Abu Thawr and Abu Yarar, probably through misunderstandings of the name Zainab. The sect is charged with repudiating the whole of the moral law as well as the whole ritual of Islam. Transmigration also appears among their supposed tenets. Since the sect appears to have left no literature, it is difficult to check these statements.

KHAṬŪN (Khan), a title of Mongol empresses and princesses, and of ladies of high rank; later simply "lady." The term is an old one. As early as the sixth century of our era we see the Chineseannals that it was given by the Turkic name of the wife of the khan; the Chinese transcription is Khotun (Stanislas Julien, Notice sur les Touwaïtis, T. A., Sur. iii., Vol. iii., p. 331 n. 4); date c. 552-581). It is found in the form Khotun, in the inscriptions of the Ottomans, [cf. R. Thomson, i.e., ii., p. 194; iv. 44; iii. 112; Agha Amīr, mother the queen ilbihe], and in 25, 106 and 31, p. 108; L. G. G., p. 112, p. 164, note 54). The Chinese princesses destined for a Uighur Khātun took the title Piibila Khotun after their marriage (Devéria, Insirc. de l'Orient, p. xxxiv, No. 3). Tahur, Annalels, knows Khotun as the name of the wife of the Khātun; in the reign of the Šāhān Shīrūn-Gūr, we find one reduced to slavery in the course of an expedition (i. 860); another was won over by presents in the reign of Khusraw II Parviz, to surrender Bahānī Cūban and repudiating for doing this (i. 1001). In the Muslim period in 286 (873) Jamāl b. Ahmad invaded Turkish territory and captured the king and his wife Khotun (iii. 2138). The form Afla is found in the Turk. Arab. Glossar, pahh, by M. Th. Houtsma, p. 85; from Afla comes the Ottoman Turkish form Hafsa. The Arabs have retained the form Khotun and given it the plural Khotunāt.

The form Khotun means a married woman, wife, and is found in Kirghiz, Kuma and the dialect of Kazan (Radloff, Öbots., vol. ii., col. 284). Khotun in Ottoman Turkish simply means "lady." It first appears in Khotun as a title borne by queens or daughters, mothers or sisters of queens (Khotun al-Muhammad, quoted by Max von Berchem, Corpus inscr. arabo-turc. [M. L. A.O., vol. viii.], i. 247, No. 2).

Proper names of women:
1. The mother of Sulṭan al-Malik al-Islāmī, Sulṭan al-Dīn Abū al-Abī Arīb, was Khotun, died in 977 (1570).
5. The daughter of {[\text{?}]} al-Dīn Anār, who married successively Nīr al-Dīn Māmūn b. Zangī in 541 (1437) and Sulṭān al-Dīn in 572 (1764), she died in Dīn b. Kāda, 531 (April 1531) after building in Damascus the madrasa al-Khātūnīya, which was later destroyed, as well as a devotional monastery (mendbūda) outside the city of Dīn b. Naṣrī (H. Sauvage, Description des Dames, in the T. A., 1854, Series 9, vol. iv., 256, 305, v. 737; Ibn Baṭṭūta, 212; Abū Shāhī, Histoire orientale des Créoles, p. 51).
6. Khātun al-Safarīya, grandmother of the Šāhān Šīrūn Māmūn b. Shāhān, mother of Sulṭan Sanjar, died at Merev in 515 (1121) (Ibn al-Abī Arīb, x. 312). In the Persian historians know her as Turkmīn Khātun (Hand Allah Mustaufī, Tūrkrik Gesiide, ed. and transl. Cantin, i. 759; ed. Browne, p. 444, 458). She got the name Safarīya from the fact that she was asked in marriage during the campaign of 473 (1081).

In the majority of these cases the real proper name has been forgotten by the historians, only the title has survived. (Cf. Hayat).

KHAWARNAK, a place situated about a mile east of Naqš (q.v.), in Mesopotamia. Inhabited at first by the tribe of 'Ayūd, a palace was built by the king of the Overlordship chief Nūrūm (after 416 A.D.) for his Shāhâb al-sāzārī. It was there that Parwī heard the news of the defeat of Dhu Kīr. The palace was enlarged and enlarged by the early 'Abbāsid, it was enlarged and enlarged into the sixth century. The pre-Muhammadan Arab poets frequently quote Khawarneak as one of the "30 wonders of the world", along with the neighboring castle of Sadrī (perhaps Ukhţūn, q.v.). Khawarnak is also celebrated for having given rise to the proverbial expression "the reward of Shimma", the Greek architect who had built it and who was executed by Nūrūm. The name Khawarneak seems to be of Iranian origin (huwarne "with a beautiful road" according to Andreae or Khawarneak, "place of feasting" according to Wilkins) although the Khātun e. the village Khātun e. the village Narbākī and Noldāke with a Kathrynian Hebrew word meaning "arbour, plantation".

KHAWLĀN, i. the name of a South Arabian tribe. This tribe is mentioned as early as the South Arabian inscriptions (Glasser, 1076, viii. 81, and Halesy, 1872, vii. 82, p. (1872), there
is a reference to its territory in the inscription Glaser, 119, 2, and a clan of the name is mentioned in Glaser, 204, 2. All these passages justify the suggestion that the tribe of Khawlan was already settled in this region in the first millennium B.C. where it still — in part at least — dwells in the land between Şan‘a‘ and Mārib, which al-Ḥamadānī calls Khalwān al-ʿĀliya and which with Ṭīl Lūmrā was one of the great granaries of the Yemeni, where dūra, hayfe and wheat in particular flourished exceedingly. The Khawlan tribe now belongs to the great tribe of Bihāl which can put about 50,000 armed men into the field. E. Glaser explored this tribe's country in 1855-1856. The Arab genealogists give as the eponymous hero of the tribe Khawlan in., b. Anmar b. Mālik b. al-Ḥārīh b. Murra b. Udād b. Zaid b. Anmar b. Ghāthib b. Zaid b. Khalībān b. Sabih. Some say the ancestor was Khawlan b. Anmar b. al-Ḥādī b. Kūfīa, after whose ancestor they are also called Khawlan Kūfīā. The distinction between the Khawlan al-ʿĀliya and the Khalwān Kūfīā is, however, not genealogical but rather regional; for the former also belong — at least according to Ḥajjām — to Kūfīā. The distinction comes from the fact that originally the whole tribe of Khawlan was settled in Mārib and Ṣawr where in the course of time a portion of them migrated to the highlands east of Şan‘a‘ and received the name Khalwān al-ʿĀliya, while the remainder stayed in Mārib and not till a later date did a new migration take place to the region of Şan‘a‘, which is still the most important town of the northern Ḥamadhān territory. As early as C. Niebuhr's time there were two districts of this tribe which were, as they still are, under independent Shībḳas. The last named according to Niebuhr a 4 days journey from the port of Ḥali halfway between Şan‘a‘ and Mecca, which according to E. Glaser extends W. and N. W. of Şan‘a‘, is Zālib. Ḥamadhānī's statement is worthy of note, that here pure Arabic was spoken only in the highlands while in the valley and al-Kurād a light variant of jargon was the usual language. The name Khawlan in this particular area is still associated with two other features, the peak of Khawlan (Ura Khawlan), a mountain top, which can be seen from the Djebel Ṭākhā, and Iṣāl Khawlan, the name given to the summit of the Djebel Ḥaḍar. In Khawlan of Şan‘a‘, Niebuhr only mentions the villages of Aḥdārat al-Muṣlim (ʿAbād al-Muṣlim), al-Hūlān (Ḥawalān), ed-Dhīb and Ṣakd ed-djumma (Ṣakd al-Ḥamāma). The guildsmen of al-Kūfīa which belonged to the Banū Ma‘nār b. Zābira b. Khawlan, probably — with other considerations — induced A. Sprunger to connect Khawlan with the Biblical Hawald. Niebuhr also had already done this. In Khawlan of Şan‘a‘ Niebuhr mentions the villages of Bāt Ṭuḏbīd (Bait Ṭūḏbī), Bāt al-Ḵālid (Bait al-Xīd), Bāt al-Ḫurayd (Bait al-Khurayd), Bāt al-Naim (Ṣurjān), Surjān (Ṣurjān) and Bāb al-Barrāh (Bāb al-Barrāh). In Şabbā of the year A.H. (Nov. 631 A.D.) envoy of the Khawlan appeared before Muhammad in al-Medina and professed Islam on behalf of their tribe. They were instructed in the teaching of Islam by the Prophet himself and promised to destroy their idol Aʿūn Ana, then received the usual gift of honour of 12½ ounces of silver and returned home. After the death of the Prophet they at first joined the general movement of apostasy, but Ṭa‘lā b. Manṣūr whom the Caliph Abū Bakr sent against them with an expeditionary force, succeeded in regaining them for Islam in the course of the year 11 A.H. (653 A.D.). Politically they were on closer terms with the government in al-Medina than the other tribes of the Yemen, which was probably the result of their relations with the Persian rulers in Şan‘a‘. They afforded shelter to the two Persian princes Dīnjāhān and Fatīh, who were driven out of Şan‘a‘ by the rebellion of the Arās under Ḥālī b. ʿAbd Yaghūth b. Makhīth and supported them till help came from al-Medina.

Members of the tribe of Khawlan after their lands were finally given back to them after the subjection of the Yemen in 13 or 14 A.H. played an important part among the Southern Arabs who took part in the conquest of Egypt and settled there. We frequently find Khawlāns in important positions in Egypt; in Old Cairo (al-Fustāq) they gave their name to a quarter, and the name generally is not rare in the papyri and on Arab tombstones in Egypt.

request of his patron, Nawab Rashid Khan, cr. according to one MS., for the two brothers, Nasaw Rashid Khan and Nawab Muhammad Ishâk Khan, sons of 'Abd al-'Ali Khan (Nawab of Bengal, 1757-1761 and 1763-1765); an account of the contents of this work, which is made up partly of historical legends and partly of fantastic tales, is given by Khân, 'A. of 'Arâf, 'A. de 'Arâf, MSS. of the Bodleian Library, No. 456, Khâyât died in 1775 (= 1759-1760).

KHAYât-I ZILL, also called ZILL-I KHAYât, shadow-play. The shadow-theatre which combines the mimetic art with music, painting, and poetry and which with its transparent figures made of painted leather is able to produce on the lit screen illuminated from behind an illusion which means much more to the contemplative Oriental than our realistic composer art of the stage, seems, as far as we know, to have come from China to the West. It certainly does not originate in classical antiquity.

The earliest notices available to us refer to India where, however, the shadow-theatre is now extinct. The Javanese wayang, which works with predominantly Indian materials, is, however, a proof of its former existence there.

The Turks seem to have received it from the Chinese through the intermediary of the Mongols. In any case points of contact can be established between the Chinese shadow-play and Islam.

From China and India the road to the Muslim lands lay through Persia. Among the Persian poets we find numerous passages referring to the shadow-theatre, but they give very little definite information about the play. In modern Persia the shadow-play survives in the Kâhâ-yâd Khâtûns.

The shadow-play was highly developed very early in the Arabic sphere of culture, notably in Egypt. The shadow-plays of the physicians Muhammad b. Dânâyî (d. 1312) are the only remains of dramatic poetry of the Arab middle ages that have survived to us at all.

The shadow-play attained a very high development and popularity among the Turks. The borrowing of the Turkish play from the Egyptians in spite of many resemblances cannot be well ascribed to the Turks as the Turks had evolved at least as early as the sixteenth century a word of their own for shadow-play, 'abârâr.' If the meaning "puppet" of the Chinese shadow-play for 'abârâr' given by Houtsma in Türkisch-Arabisches Glossar, Leiden 1894, p. 43 and 87, is correct, it seems exceedingly doubtful; for the word which still survives in Eastern Turkish as kamurâs and kâhâ-yâd has no reference at all to the shadow-theatre.

The shadow-play in Turkish is seen - if it ever existed at all - to be quite extinct and to have been completely replaced by the puppet-play, 'abârâr and lâsîr khâtûns.

Among the Ottoman Turks it is called Kâhâ-yâd (9-7) and down to recent times, when the cinematograph began to offer deadly competition to it, was the most popular entertainment in Istanbul, not only for the women and the lower classes but also for a great attraction for many of the upper and educated classes and even for many Sultan. Wherever the Turkish element is large enough to ensure a shadow-player some sort of a livelihood, the shadow-play is to be found.

The play spread from Turkey to non-Turkish lands. It seems to have established itself with special firmness among the Greeks and down to quite modern times (notably in Athens, the Piraeus and Salamina). In the same way it was very popular among all classes in Romania.

KHAYâtî, properly HUSAYN BAY, also known as BUKHAI MISTI, an important Turkish poet of the time of Sultanân the Great. Like the poet Iyâtî he belonged to the little Ermelian town of Wendar Yenidje. Like Sheikllli, he was precocious and developed his poetic talent very early. As a boy he was in the service of the Haidert dervish and mystic Abu 'Ali Mesi, by whom he was introduced into mysticism which left traces in many of his poems. In the wanderings of his youth, he came with him to Constantinople where he was removed from the influence of this dervish by the intervention of the authorities.

His poetic abilities ultimately won him the favour of the Dehdez Iskander Celdehi and then that of the Grand Vizier Frank Haddi Pasha, who introduced him into the circle of poets around Sultanân. The Sultanân granted him his favour and confidence; he became one of the intimates of the Sultan: the highest honour that could be attained by an Ottoman poet. After the execution of his patron (Iskander was hanged in Baghdad in 1535 and Haddi strangled in the Serâat in 1530), with the declining influence of the once powerful poet-favourites, Khâyâtî fell upon evil days, as he had never been able to save the presents and other tokens of favour which he had been overwhelmed, but he was finally given sandjâb by the Sultan and the title of Bey. He died in 1664 (1550-1551) in Adrianople where he was buried.

Khâyâtî, who was of an amiable friendly character and throughout his life retained a dervish-like humility and frankness, just as he retained his membership of the Haidert order, was one of the best poets of his time. None of his contemporaries surpassed him in poetic vigour and illusion. His language is, however, now antiquated. He often worked in the lyric field (ghâzal, šarhâ). Careless of the fate of his work as of this world's goods, he left the task of arranging his strongly mystical poems into a dâvâm to another. His son Omar Bey (d. 1610) was also a poet.

Tahir, 'Arâfshâd Mûsâ, Con- stantinople 1358, ii. 380 (Tahir confuses him with the Khâyâtî of the time of Selim I and makes him one individual of them, attributing the latter's Lâzîm-é-Mistânî to him); Sâdi, Kâmâ il-arânî, ii. 2071; Thârîyî, Şârîfî, Östânâmî,
a Khazar princess; the Emperor Leo IV. (775—
780), the son of this marriage, was known as "the Khazar". About the same time the governor of Armenia, Vazih b. Usaid al-Sulami, is said to have married a daughter of the Khazar king at his request and married her to the Caliph al-Manṣūr (754—775) (al-Baladhuri, p. 210). The marriage was received in the Russian translation by K. P. Katten, in St. Petersburg 1862, p. 92; cf. Marquart, op. cit., p. 5) connects the invasion of Georgia and Armenia by the Khazars in 147 (764—765) with the death of this princess; the lender of the Khazars is given by him as Rašf Tarkhan; in al-Yaḥṣibi (Thālīḥ, ed. Houtema, ii. 446) Rāš (in the MS. Hašš) Tarkhan, in al-Nabātān (ii. 388, q.), Asarṭān al-Khawāsir. There was, therefore, a Khawāsir at the head of the Khazar force that invaded Muslim lands while at a later date in the body-guard of the Khazar king there were Muslim soldiers from Khawāsir, who had bargained for the right "to remain central whenever the Bey of the Khazars waged war against Muslims" (Marquart, op. cit., p. 5, from al-Maʾṣūfī, Murād, al-Dihab, ii. 10). The frontier provinces of the caliphate were raided by the Khazars for the last time in the reign of Hūrīn al-Raṣjid in 183 (799); this invasion also is said by al-Taʾlāt (ii. 647, q.) to have been brought about by the failure of a proposed matrimonial alliance between the daughter of the Khazar king and the Hamzeči b. Yahyā (cf. above, i. 665 and ii. 36). It was in the reign of Hūrīn also that, according to al-Maʾṣūfī (Murād, ii. 8), the conversion of the Khazar king to the Khawāsir sect of the nomads to Judaism took place; cf. the discussion of the sources in Marquart, op. cit., p. 5 sqq., and the alleged letter of a contemporary and subject of "King Joseph", since published by S. Schacht (The Jewish Quarterly Review, New Ser., iii. 183 sqq.; following him, F. Kohlmann, Zion, Min. Nat. Preuss., 1913, Nov., p. 150 sqq.). We have again later an account of the conversion of the Khazars to Christianity (the missionary journey of the Slav apostle Constantine of Cyril between 851 and 865; cf. Marquart, op. cit., p. 15 and 22) and two reports of their conversion to Islam. According to Iban al-Aʿṣ (v. 418), the Khazars and later their king were converted to Islam under the condition of being permitted to defend themselves with the help of the Muslim Khawāsir against an attack by a Turkish people; this story, which we find as early as in Ibn Makkawī (H. F. Amadou and S. Margolith, The Eclipse of the 'Abbasid Caliphate, Oxford 1920—1921, text ii. 203, transl. v. 223), is undoubtedly taken from the lost work of Thābit b. Sulm and we must agree with Fr. Westergen (in Zion, Min. Nat. Preuss., 1908, March, p. 6) in referring it to the known campaign of Swayatnā (cf. above, i. 789). What al-Muḥājjarī, ed. de Goeje, p. 361, 1, tells us about the adoption of Islam as a result of the campaigns of al-Maʾṣūfī does not refer, as Marquart (op. cit., p. 3 and index), supposes, to the conversion of al-Muḥājjarī, p. 288, sq., shows, to the ruler of Gurgānī (Arabic Djarjānī) and afterwards (after 995) of all Khawāsir, Abu l-ʾAbbas Maʾṣūf b. Muhammad. In neither case is the change of religion historical. Al-Baladhuri's story (p. 203; Marquart, op. cit., p. 473) of the rebuilding of the town of Shamskhor (Arabic Shamskhar) with the name al-Mutawakkihīya by Rogba the Elder (cf. Noth al-Saʿūdī) is more important;
He is said to have settled Khazars there who had come to him "from an inclination towards Islam".

The danger which threatened the Khazars as a result of the movements of peoples in the 8th century caused the embassy to the emperor Theophilos (829–843) and the building of the Khazar fortress of Sarkel on the Don by the Greek Petronas. This story in Constantinople Varphysorgenatos (De administr. imperii, Chap. 43) is connected by Marquart (ep. cit., p. 258) with Ibn Rusta, p. 143; i. Ibn Kha\[
\]râb al-Khābā's story (ed. de Goeje, p. 162 sqq.) of the alleged mission of Sallâm al-Fârîbânî is quoted by Marquart (ep. cit., p. 476) as proof that "the Khazars were on friendly relations with the Caliph at this time," but it should be pointed out that the Caliph there does not communicate direct with the Tâ'khan, king of the Khazars, but through the intermediary of several Caucausian princes. About 240 (855/56) the Canarâk (Arab. Sanâ'arâk), who had died before Bagdad, applied for assistance to the kings of the Byzantines, Khazars and Slavs (al-Yâqût, Tâ'kîrâ, ii. 598; transl. in Marquart, ep. cit., p. 415 sqq.). The attitude of the Khazar ruler was equivocal on the occasion of the raid made by the Russians on the lands on the Caspian Sea recorded by al-Mas'ûdî (Muṣâfîr, i. 185 sqq.; new transl. in Marquart, p. 330 sqq.). Various suggestions have been made regarding the date which is not definitely given; according to Westermââl, Miss. Nar. Power, Feb., 1906, p. 386), the raid did not take place till 925 but this is probably too late. The Russians were allowed a passage through Khazar territory on condition that they gave half their plunder to the Khazar king; on the way back they were fallen upon and almost wiped out — with the approval of this ruler who "could not prevent it," although he had informed the Russians of the danger awaiting them — by his Muslim mercenaries and the inhabitants of Hilî, Muslim and Christians. Whether the more important Russian raid of 332 = 943/944 (cf. the art. Arab., iii) was undertaken by agreement with the Khazars or against their will is not recorded. According to al-Mas'ûdî (Muṣâfîr, ii. 22), the Khazars had no ships; on the other hand, according to Hilî al-Sâhî (ed. Amertox, p. 217 infra), the dams built at Derbend (q. v.) were intended as a defence against the ships (marvâdâh) of the Khazars.

The relations between the Khazar empire and the Byzantine must have been affected by the persecutions of the Jews under the Emperor Romanus Lecapenus (919–944): the only direct evidence of this is in the document of doubtful origin published by S. Schechter (cf. above). The reception in the Khazar lands of many Jews driven out of the Byzantine empire at this time is also mentioned by al-Mas'ûdî (Muṣâfîr, i. 8 sqq.). To about the same time belongs the Rišâlî of Ibn al-Falî (ed. i. 829, and ii. 398) — probably the only Muslim description of the Khazar kingdom and its capital Hilî by an eye-witness; the Rišâlî may be taken as the source of al-Istakhri (p. 220 sqq.) and Ibn Hâwâlî (p. 278) and also of al-Mas'ûdî; cf. the reference to Ibn Fa'îlîn in Yakût, Mâṣâwa, ed. Wûstemfeldt, ii. 436, 460. The information there given on white and black Khazars (fora khazar), the nominal rule of the Khâddhû and the actual rule of the viceroys (his title is variously given) on the one hand, has been several times cited since Prisse (Petr. Mem. membra Chalcarum, St. Petersburg 1832, in Mem. de l'Acad. des Sciences, vol. viii.). The most important source of revenue was the import and export of foreign goods; the land is said to have produced no wars of its own (Ibn Hâwâli, p. 285, 286: "with the exception of things needed in the land itself."

Even the material for clothing was not provided in the land itself but imported from Gurgâni, Tabaristan, Adharbâjân and Rum; Judaism was the predominant religion because the Khâddû, the viceroy, the prince of Samandar in Dagestân who was related to the latter, and the high officials all professed it; in numbers, however, the Jews were less than the Muslims and Christians.

In 1012, over 10,000 Muslims, a principal mosque with a holy minaret and 30 mosques. In the year 310 (1022/3) the king received a report that a Muslim country a synagouge had been destroyed (the name given in Yakût, ii. 448, is not clear; cf. Marquart, ep. cit., p. 4 and 347 sqq.). He therefore had the minaret destroyed and the muṣâfîr killed. He left the mosque itself unharmed for fear that all the synagogues in Muslim lands should be destroyed.

On the extent of the Khazar power, see what is now Russia, on the campaign of Swjatoslaw and its consequences see above, i. 789. Earlier (in the ninth century) even Kiev was subject to the Khazars; in this connexion the author of the oldest — composed about 1095 (according to the critical edition by A. Schachtman, Introduction, p. xxii) — Russian Annals observes that in his time the Khazars were under the rule of Russian princes (A. A. Shakhmatov, Pozdetanosamâhâlât, Petrograd 1916, p. 17). In any case it is evident from the annalists that they did not consider the Khazar kingdom destroyed even by Swjatoslaw's campaign; in the legend of the attempts by the adherents of various religions to convert prince Vladimir, "the Khazar Jews" are also mentioned as foreigners not subject to the Russians (ibid., p. 104). The original home of the Khazars on the lower Volga and in Daghestân was not conquered by the Russians at this time; the subjection of the Khazars mentioned by the annalists can only refer to a part of the Crimean peninsula and the peninsula of Taman' opposite it, where by the Russian principality of Tumtarakan' first mentioned in 1023. The region may well have been the "Khazaries" which were conquered by a host sent by the Emperor Basil II in alliance with the Russians in January, 1015: its leader is called Sven, Greek Synesios, said to have been a brother of "King" Vladimir (according to Codresens, 464; Migne, Patr. Græca, vol. xxiii): the Khazar king (archon) of this region was Georgios Taulos, apparently a Christian (Taulus is the Turkish title Çâw). In 1022 the ruler of Tumtarakan' was Matišlav, a son of Vladimir (Shakhmatov, ep. cit., p. 186); in the next year Matiaslav, in alliance with the Khazars, undertook a campaign against his brother Yanoslav. The Khazars are mentioned for the last time as neighbours of Tumtarakan' and intervening in the civil confusion in this principality in 1038 (ibid., p. 255). The Muslim sources give us no information regarding the end of the Khazar kingdom. Ibn al-Albâni (ii. 270) makes the Kurud Faqîl, ruler of Gandja (q. v.), make a raid on the Khazars in 422 (1030) and he attacked and slain them on the way back. This was Pâhlî b. Muhammet, the Shimalid dynasty; cf. above, i. 406 and ii. 1298 and see E. Sachau, Ein Verzeichnis musulmanischer Dynastien (Akhdari. der preuss. Akad. d. s.
Wissenschaft. 1923, phil.-hist. Kl., Nr. 1, Nr. 23). According to Marquart, this is the last mention of the Khazars in the Literary Alvertis and in history generally (W. Bagd. and Friedenst. in Archiv. des. Religionsk. und Geschichtsk. in Zentralblatt. für Geschichtsk. 1914, p. 56). But a raid from Gundja against the Khazars is very improbable on geographical grounds; the Khazars are probably mentioned here in error for the Georgians or Alghans, as in al-Bundari in Rec. des. Ouest. 1915, p. 31. Similarly (confusion with the Ghana or Qiipa's) is probably explained by the mention of the Khazars in Qhitik in 717 (cf. above, r. 943). In the 9th and 10th centuries the town and country of Sa'kun (q.v.) or Sa'kun is mentioned north of the Caspian Sea, probably on the Volga. J. Marquart, op. cit., agrees with the suggestion of Fr. Westergaard (Bull. de l'Acad. des Sciences, St. Petersburg 1890, p. 291) that Sa'kun is the site of the former Khazar capital but rejects the view of the same scholar that the Sa'kun are simply the Khazars under another name. According to Abū Ḥāmid al-Qāmī (in Dīn, in Mzd. Asīr, vol. 1710) al-Kāsī in the 9th century of the Kalbīs. (Arab. Lughāt al-Turk, Constantinople 1333—1914—1915) is identified with Sa'kun, a 7th day's journey from Muslim. On the other hand, Sa'kun in the 11th century of the Mallūnīs (Kāshī, Dīn, al-Ghūrānī). Ined. in the Introduction to the Astronomical works of Abū Ḥāmid (1123—1177) and Abū al-Hasan (1187—1237). 1199 sq.) and a ring of 8 cells (about 13 feet) in diameter with which, according to al-Nawawi, he ascribed the obliquity of the sun to the earth. Abū al-Hasan, in his Book of Astrology, mentions several works of curators of data. He found it smaller than his predecessors had done (Cod. Leiden, Catalogus, Nr. 1966, fol. 119). Mention is often made of a work highly praised by Ibn al-Kīfī, "The Book of Tables of Planes." (Arab. Al-Sa'ūdī for the astrolabe), which consists of several manifold's with a long introduction. In it, according to al-Būrānī, it a-Ma'ūl-Allāh, p. 321; Chronology, p. 32), there is most probably an explanation of the progressive and retrograde movement of the spheres. It is perhaps a part of this work that is mentioned by al-Bīrūnī (Khitik al-Itmilī). In Cod. Leiden, Catalogus, Nr. 1966, fol. 197), it is almost identical with the work quoted by Nāṣir al-Dīn in his Khitik Šāhī al-Kāfīrī ("Book on the Figure of Transversals") in Mzd. Asīr, Miṣrī, al-Ma'ūl-Allāh, di'at. Ma'ārif al-Mubānī, p. 198. (partial investigations into some of the partial inclinations and of the sarafū in the spheres recta") (Treatise on the quadrature, ed. and translated by Alex. Pach. Carabaddo, 1871, text p. 115, transl., p. 150).

The following were probably mainly the results of astronomical works: 1. Al-Ma'mūdī, al-Kāfīrī (see Introduction to the Astronomical works) (see al-Bīrūnī, al-Asār al-Nabī, p. 202; Chronology, p. 133); in it Abū al-Hasan also discussed questions of chronology and gives methods of determining the sign of Muḥarram. 2. Sirr al-Alamī (Hādhāj al-Pahalī, Nr. 7190). In one of these two writings Abū al-Hasan probably deals for the first time with Ibn al-Haṭṭāb's theory of the structure of the world mentioned by al-Khwārizmī. In it he apparently relied on the hypotheses of Ptolemy, which Tabātā b. ʿAbdārāhī had translated (cf. Hādhāj al-Pahalī, Nr. 13,124). Abū al-Hasan also evolved a form of the world which differs from that with the eccentric spheres and the epicycle; in his doxography the earth is always the same in spite of the difference in its rotation. He thus gets two regions on the earth, a northern and a southern which do not differ in heat and cold (al-Bīrūnī, al-Asār al-Nabī, p. 255; Chronology, p. 240).

Like almost all astronomers, Abū al-Hasan also deals with astrology; he was learned in the doctrine of jumā.

Abū al-Hasan was also interested in philosophical problems, as is evident from a commentary on the beginning of the work of Aristotle on the heavens by a certain Abū Zaid al-Balbākī, who wrote it to Abū al-Hasan (Ibn al-Kīfī, p. 46.3)

(W. Bartz)
phical knowledge worthy of his talents which enabled him to compose the books mentioned below.

He later became associated with the Sultan of Karbasa, Mu‘izz al-Din Abu ‘Harthu Sandjar b. Malikshah b. Ali Arslan (517-552 = 1117-1157); he had previously been governor of Karbasa for twenty years (517-537). Al-Kazimi enjoyed the favor of this prince and his nobles; at the same time his style of life remained as exceedingly simple and modest, as that of al-Biruni.

Two works of his are known and have survived:
1. Al-Qal̄ī al-Muṭak̄a al-Sandjarti. This book of tables gives statements of the positions of fixed stars for the year 509 = 1115/1116 and also for oblique ascensions and time-equations for the latitude of Marw (37° 40’), which was in Samawil’s kingdom. This work was used by C.A. Nallino in his Al-Battani Onis Astronomiun; cf. e.g. vol. 1, p. 78, and the Index.

2. Kitāb Miḥān al-‘Arba‘a (finished 515 = 1121/1122). Its contents are discussed in the articles Al-Karaṣṭānī and al-Biṣṭān. Al-Biṣṭāni says that he rediscovered the book; it amounts from it is mentioned in a manuscript in the Bodleian Library.

Bibliography: Zahir al-Din Zaid al-Baiḥaki, Ta’rīkh Hijāz wa-al-‘Ilm (Beil. MS.; Ahlawi, Catalogus, No. 10,525), contains the life of al-Khāzīn (E. Wiedemann, Reiter. XX, Einige Biographien nach al-Baiḥaki, No. 103, in the S.B.P.M.S. Erg., 1916, xxil. 733); H. Suter, Die Mathematiker und Astronomen der Araber, No. 293 and Appendix, p. 226. A considerable part of the Kitāb Mīḥān al-‘Arba‘a is published by N. Khamlichi, Analyse et Extrait du Book of the Right of Wisdom etc., in J.A.O.S. 1859, 7, 1-23. Other parts have been edited by me in Reiter. XXVI. Über die Zusammenstellung von Liqā‘ūn, in the S.B.P.M.S. Erg., 1908, xl. 105-132; Reiter. XXVII. Uber die Lehre vom Schwanzen, die Heilige und die Konstruktion der Quastūn, ibid., 1908, xl. 133-159. Here also the parts published down to the present day are discussed again also Reiter. XXXVIII, Uber die Stundengege, ibid., 1914, xliv. 27-38; Reiter. XLVIII, Uber die Waffe der Weisheit von al-Chehcharti und über die Lehre von den Proportionen nach al-Bīrūnī, ibid., 1916, xlvi. 11-15; E. Wiedemann, Uber die Kenntnisse der Muslime auf dem Gebiet der Meteorologie und Hydrostatik, in Archiv für Geschichte der Naturwissenschaften, etc., 1916, ii. 294-308; id., Uber den Wert der Edelstein bei den Muslime, in Is., 1911, li. 345-358.

(= Wiedemann)

Al-KHAZARIDJ is the name of the tribe who with their brother-tribe al-Aws were occupying the region of al-Madīnā and more northward in Ḥabash and Ta’tim at the time of the beginning of Islam. On account of the important part which they played in the successful rise of Islam both tribes are designated by the honorific name of al-‘Amir “the Helper.” It is the unanimous statement of genealogists and Arab antiquaries that the Khazaridj, together with the Āws and the Qaṭāfin in Syria, migrated from South Arabia to Arabia at an early date and as the reason for their migration from their ancient homes is given the burning of their camels at Ma‘rib the exact date of which cannot be determined; it can be approximately dated in the fifth century of the Christian era. The genealogies of the divisions of the tribe are fairly well established because the different clans were registered in the Divān introduced by the second caliph ‘Umar b. al-Khaṭṣah, as they were entitled because of their help to ‘Isām to the second category of pensions allotted by the Divān. As regards the earliest names in their pedigrees: al-Kharidj b. ‘Amr al-‘Anṣa‘ b. Thā’lana b. ‘Amr Musaṣikīya, which they share with the Āws b. al-Aws, we may be more sceptical. When the tribes of al-Aws and al-Kharidj in their migration reached Yathrib, which later received the name of Madinat al-Nabī, they had already there a number of Jewish tribes among which the Bātūl ‘Kainākūt, Karain, the Nadr and nearly fifty more clans are known by name. The latter possessed in Yathrib and its neighbourhood over 70 castles, named ʿAṣār (plur. of ṣutā), which formed one of the distinctive features of the city and which granted the inhabitants a measure of security not known in any other town of Arabia. If we had not, repeated affirmation of Arab antiquaries that these buildings were constructed by the Jews, we might think that they were built on the model of similar buildings in the Yaman and introduced by the immigrants. The Khazaridj settled at first on the outskirts of the town like the Āws, but as their numbers increased more rapidly than the resident Jewish population of the town, they soon asserted their rights and made themselves masters of some of the Āṣār. The immediate cause of their first war with the Jews is stated and it was that a prince of the Jewish family Zahir, named al-‘Āṣiṣ, intended to enforce the jizya on a Jewish woman with a bride from the tribe of al-Aws for which the prince was slain by the brother of the bride. (That the name al-‘Āṣiṣ is fictitious is apparent; it is nothing but the Greek word ἄσις). The consequence was that the allied tribes asked and received help, either from the Qaṭāfin in Syria or from Yamīnitis from South-Arabia, and by treachery murdered many of the most prominent Jews. Being now in possession of a large portion of the town, the allied tribes fell out among themselves. The peculiar formation of the town, consisting of a number of detached settlements with the castles among them, made it possible for such warfare inside the township to continue for a long time, and as neither the Āws nor the Qaṭāfin were very numerous, each in turn made alliances with the nomadic tribes in the country surrounding Yathrib. The Khazaridj were stronger in numbers and to equalize this the Āws made alliances at various times with the tribe of Sulaim and were generally also assisted by the Jews; it was only after the fight at al-Bu‘rīth in which the Khazaridj were heavily defeated that something like equilibrium prevailed in Yathrib. However, the intermittent fighting between the two tribes and murders, with the consequent retaliation, continued. The momentous change was brought about by the Hijra of the Prophet from Mekka to Yathrib where he arrived at the suburb of Kūbā on Ramadān 112 (Tuesday, June 29, 622) and engaged the hitherto antagonistic tribes to assist him in his struggle against his fellow-citizens of Mekka. We get a fair estimate of the number of fighting men in each of the two tribes by the list of participants in the battle of Badr, for Ibn Sa‘d in his Ta’kabbul (vol. xi) gives in the names of 63 members of the tribe of al-Aws and 75 names of those drawn from al-Kharidj. With the whole community accepting Islam, the Jewish
element in Yaḥrib soon lost all importance and the clans of Ḳaṭṭaṣ and al-Nejd were practically exterminated. Though the early converts from Mecca were always held in higher estimation, the Ṣaḥāba during the remainder of the Prophet’s life were the mainstay of his power and it was not unnatural that upon his death, when he had not appointed a successor, the Khazrajites felt by their numerical superiority that they were destined to be the heirs of the State created by the Prophet and it was only due to the timely intercession of ‘Umar that the choice of the ruler of the State did not fall upon Sa’d b. Ubadah. That the latter felt that he had been unjustly deprived of a position of prominence is proved by his irascible attitude after his rejection and his removal from al-Madinah to Ḳawrān, where he died in the year 15 (637).

The Khazrajites were divided into a number of clans of very unequal numerical strength at the time of the Prophet. The most numerous were the Banu ‘l-Naḍḍār, while the other clans were approximately in the following order: al-Ḥārith, Ḣajāḥ, ‘Awf and Ka‘b. It was also from the ranks of the Khazrajit that the poets of the Prophet derived their origin, namely Ḥassān b. Ṭaqīb [q.v.], Ka‘b b. Mālik and ‘Abd Allāh b. Rawāḥa. During the rule of the Umayyads, the descendants of the early followers of the Prophet continued to hold prominent positions and most of them were strong supporters of the Umayyads with the notable exception of al-Nu‘mān b. Batāh [q.v.] who as governor of Hims unsuccessfully took the side of ‘Abd Allāh b. al-Zubair and lost his life. We also find numbers of the tribe of al-Khazraj among the early settlers in Egypt and the descendants of ‘Abd Allāh b. Rawāḥa were for centuries men of note in Muḥammadan Spain; they were settled principally in Saragossa in the North. If we come to consider the large amount of immigrants from al-Madinah and the South of Arabia to Egypt we may not be far from the truth in assuming that the language of the Khazrajit, from their Southern Arabian origin, had also influenced the Arabic dialect of Egypt so that they pronounced the letter ǧīm, unlike Eastern Arabs, hard like ẓ. Bibliography: Ibn Sa‘d, Ṭabari, ed. Sachau, III/1; al-Sa‘ūdī, Khayṣyāt al-Wafā’, Mecca 1310, p. 73. (This work is useful for fixing with much detail the ancient settlement of the Khazrajat in Yathrib; A. J. Wensinck, Mohammed en de Einden van Medina, Leiden 1908; Kowalski, Dictionnaire des Tribus des Arabes, Introduction; H. Lammens, Medina à la veille de l’Islam, Barlett; and almost every work dealing with the life of the Prophet and the early history of Islam. Watson, Tabletten und Register; al-Kalḥashond, Niḥāyat al-Arab, Baghdad 1322; al-Nu‘mān, Niḥāyat al-Arab, II 376—377. (F. ZEekiow.)

KHADIRI (Khaḍir). Arabic nhadhir meaning 'lame' is one of the titles occasionally given to Muḥammadan rulers since the Middle Ages (cf. the xvi cent. Turkish historian ‘Av, Kawkab al-Khaḍīrāt, Constantinopoli, v. 17). This title was conferred in 1667 by the Ottoman Sultan ‘Abd al-Aziz on Imām Pasha, the viceregal of Egypt. Though, since the reign of 1821, the function of Pasha of Egypt was already hereditary in the family of Muḥammad ‘Abd al-Aziz, the title Khaḍīr only remained a title indicating that his rank was higher than that of the other Ottoman governors with the title of Pasha. During the preliminary negotiations Imām proposed the title of al-Aziz (cf. Kur‘ān, xii, 59), but for several reasons (e.g. the occurrence of this word in the Sultan’s own name), the title of Khaḍīr (in official documents Ḳhāḍīr Miṣr; the form al-Khaḍīrī is also often found) was chosen, which had been used already by Muḥammad ‘Abd al-Aziz (see below 2, and Dicoxy, The Story of the Khidirian, p. 59). The term Khedive is, however, generally applied to all members of the dynasty founded in Egypt by Muḥammad ‘Abd al-Aziz, until the establishment of the English protectorate over Egypt in
1914. The new rulers then assumed the title of Sultân, which was replaced by that of Mâlik after the protectorate had been abolished on February 28, 1922. The title of Viceroys often applied to the Khedives in European literature was already used in Muhammad 'Ali's time.

The following members of the Khedival dynasty have ruled Egypt under the sovereignty of the Sultân of Turkey:

- Muhammad 'Ali: 1805 – 1848
- Ibrahim: 1838 (June – November)
- Abd al-Mu'min: 1848 – 1849
- Sa'id: 1854 – 1863
- Isma'il: 1863 – 1879
- Tawfiq: 1879 – 1882
- 'Abd al-Hamid: 1882 – 1914

They were succeeded by:

- Ahmad Fu'ad, Sultân from 1917 to 1922, King (as Fu'ad I) since 1922 (March 26).

Genealogical tree of the most conspicuous of the numerous members of this dynasty:

```
Muhammad 'Ali (1805 – 1849)
  └── Ibrahim (1838 – 1849)
      ├── Tawfiq (1879 – 1882)
      |   └── Husain Kamel (1852 – 1917)
      |       └── 'Abd al-Hamid II (1882 – 1914)
      └── 'Abd al-Hamid (1854 – 1863)
           └── Mustafa (1835 – 1875)
                └── Ahmad Fu'ad I (1867)
```

The firman of 1841 regulated the order of succession according to seniority in Muhammad 'Ali's family; by the firman of 1866 this regulation was replaced by the right of primogeniture limited to the descendants of Isma'il Pasha. A decree of April 23, 1922, has recently settled the order of succession of the kings of Egypt.

Though really of Albanian origin, the Khedives have always been regarded in Egypt as "Turks," nor can they be said to have become a really national dynasty. The remark has been made that its various members have exhibited as many different kinds of character (Husenidze, Gisichüre Aşkij-işi, p. 199). The first five of them ruled with the absolutism of Oriental despots, but after the English occupation they had much less opportunity of developing an attitude of their own. The title which bound this dynasty to Turkey always remained strong enough to make it possible that, soon after the Turkish revolution of 1908, an Egyptian Prince, Sa'id Hamid Pasha, could become Grand Vizier in Constantinople.

During the Khedival period Egypt has been what is generally called "Europeanised," viz. a great many technical, juridical, economic and social institutions have been introduced. The same thing has happened; during the same period, to other Muhammadan countries and with the latter Egypt shows the common feature that the models after which the Western institutions have been fashioned were nearly all French. But the particular form of the "Europeanisation" of Egypt — its revival under a nearly independent dynasty, the marvellous development of its economic productivity and its weakening to a point which brought the country under the control of a European Power — was quite different from the corresponding process in Turkey, Algeria and other Muhammadan lands. At the same time Egypt has remained the chief centre of Muhammadan civilization and education and its rapidly increasing population now amounts to half the Arabic-speaking world (Massignon in K. M. M., liv., 75 eep.). The main point of view from which in the following lines the condition of Egypt since the beginning of the nineteenth century will be traced is the way in which that Muhammadan country has reacted to the process of "Europeanisation" and the results which have been the outcome of it.
discussed throughout the eighteenth century, but the traditional good relations with Turkey had been one of the reasons that prevented its execution. Finally, it was due to the initiative of Napoleon Bonaparte, seconded by Talleyrand, that the French Director's favor to the expedition on March 5, 1798. As to Turkey, the unusually energetic measures taken by the Porte in 1798 against 'Ali Bey proved that, even at Constantinople, there had been a presentiment of the coming events. In Egypt itself nothing indicated that a foreign invasion by a European power was seriously apprehended.

The French fleet, consisting of about 400 ships and a landing-force of 35,000 men, commanded by Bonaparte, landed near Alexandria on July 2, 1798. Alexandria was occupied without difficulty and the French immediately began their march on Cairo. The resistance organized by the Mamlûk Beys Murâd and İbrahim near Embûi on the Nile was soon broken in the battle of the Pyramids and on July 24 the capital was occupied. Murâd Bey fled to Upper-Egypt and Ibrahim into the Delta. The panic that for a moment had overcome the inhabitants of the capital soon disappeared, but they were far from showing confidence in the French "liberators" and "friends of Islam," as the French soldiers had been styled in a proclamation. Bonaparte soon had to adopt more severe and more Oriental methods against revolts of populace. A month after the landing the destruction of the French ships in the bay of Alî Kîr by Nelson (August 1) completely changed the character of the French enterprise and was the first of the blows struck by England, resulting in the final evacuation. The Porte, though reluctantly, declared war on France in September, but not before the middle of the next year (1799) did Turkish troops appear in Egypt. In the meantime the French had established a regular administration in the country. The Egyptians, however, maintained their ironical attitude towards the actions of the French, as well towards their cautious respect of local religious customs as towards the scientific investigations of the scholars accompanying the expedition. Besides, they soon were disappointed when they saw that the French also demanded the payment of land-tax, and the Muhammadan money naturally did not like to see that the foreigners made a large use of the native Christians (Copts, Greeks, Syrians) as subordinate officials. On October 21, 1798, a rather serious revolt broke out in Cairo, which was only suppressed on the following day after a bombardment of al-Azhar. In order to prevent the invasion of a Turkish army, Bonaparte undertook in February, 1799, his famous expedition to Syria. Having failed to take 'Akkâ, defended by Dżâzzar Pasha (July 1), he had to retreat in May. A month after his return, the first Turkish troops (among whom was Muḥammad 'Ali as an officer in the Albanian corps), transported by English ships, landed at Alû Kîr (July 14, 1799). They were utterly defeated and on August 2 the Porte took their last refuge, the forrâs of Alû Kîr. After Bonaparte's departure (August 22), the French maintained themselves another two years under Küßer (murdered in June, 1800) and Memon, but in August, 1801, their last resistance was broken by the allied English and Turks and they had to evacuate Egypt.

Apart from the immediate political results—the destruction of the Mamlûk power and the return of Egypt to Turkey—the results of the scientific work of the French expedition (centralized in the "Institut Egyptien," founded by Bonaparte on August 31, 1798, in Cairo, v. Brébier, L'Égypte de 1798 à 1900, p. 65—80) published in the eight-folio volumes of the Description de l'Égypte (cf. the Bibliography) were enormous. The researches on the "present state of Egypt," constituting the basis of all European knowledge of modern Egypt (e.g. the elaborate researches made by Lapicque on the possibility of a canal between the Mediterranean and the Red Sea). The immediate influence, however, of the French on the cultural development of Egypt was almost nil. The gap between Eastern and Western civilization was too wide to allow of any tangible results during the first period; this impression is given very strongly by reading al-Djâfarî's account of the foreign occupation.

After the departure of the French army, a struggle began between the Turkish authorities and the Mamlûk Beys who wanted to regain their ancient power. The Mamlûks were protected by the English; after Murâd Bey's death their most important leader became İbrahim Bey Berestî. The Turks on the other hand naturally wished to take advantage of the opportunity to loosen their grip on the country, but their administrative methods and the inability of the successively appointed milîts to withhold their own troops from mutiny, for want of money, gave to Bardûs and his party a temporary advantage. His protectors, the British, had left Egypt in March, 1803, but one of his chief supporters was Muḥammad 'Ali with his Albanian regiment. His aid enabled Bardûs and the old Ibrahim Bey to maintain themselves in Cairo, while the milîts of the Porte exercised authority only in certain parts of the Delta. A last Turkish war, Khânshîr Pasha, could resist for some time in the Cairo citadel, but finally Muḥammad 'Ali, by his ever increasing influence, removed him.

After the rather negative results of the beginning five years the second period proved to be of enormous importance for the country. From a political point of view the most notable effect of Muḥammad 'Ali's reign was that he gave Egypt a dynasty of its own. Although what Muḥammad 'Ali did for the country was only a way of realizing his own ambitions, the history of Egypt has been deeply influenced by his measures. He unchained forces which determined its destiny, and settled the fate of the dynasty itself. They may be summed up as follows: firstly, the mobilisation of the national forces of the Egyptians themselves and secondly the introduction of European instructors and European methods. From a cultural point of view it may be remarked that from the beginning of Muḥammad 'Ali's reign until the English occupation Egypt was much more exposed to Ottoman-Turkish influences than was ever the case before; personal and independent as the régime of the viceroy may have been, the administrative methods and the taste of himself and his surroundings were impressed by the traditions of the Ottoman Empire (as an instance may be cited the reconstructed Alxbërşî Mosque built by Muḥammad 'Ali in the Citadel of Cairo in 'Aṣmiyya style). The great expansion of Muḥammad 'Ali's power between 1853 and 1860 was one of the natural historical consequences of Egyptian political power which always has implied the annexation of Syria (see the art. EGYPT); Muḥammad
Ali's Great Power policy itself, however, was not very important for Egypt. The conquest of the Sudan was of far more direct and future profit for the country. In 1841, at the end of this period, closed by the Imperial Egyptian campaign of "Rahid" to the Sudan, 2, 1857 (May 23, 1841), Egypt's international position was quite changed. To outward appearances it had become again a Turkish province, but in reality the fact of the intervention of four great European Powers (except France) showed the beginnings of political dependence upon Europe and especially upon England. The occupation of 'Aden by the British in February, 1838, was already a clear symptom of the new situation. Muhammad 'Ali was always fully aware of this fact (Cromer, Modern Egypt, I, 16). He remained himself a staunch friend of France, though this friendship proved to be of little avail to him. But as long as he reigned he was able to averit foreign intervention from Egyptian internal affairs; it is for this reason that he never gave his consent to the placing of the Suez Isthmus.

The last years of Muhammad 'Ali, and the short reign of Ibrahim [q.v.], belonged with the reigns of 'Abdah, Said and Ismail (cf. these articles), to the third period. During this period Egypt became more and more detached from the Ottoman Empire and it was drawn more and more into the sphere of European politics and economics. No territorial expansion took place except in the South (Abysinnian war in 1872; acquisition of Sawakin and Muqawara from the Porte in 1854). Egypt's relations with Turkey in this period were rather a personal character, inasmuch as the Khedives sought to gain special favours from the Sultans to return for an increase of the tribute. But whenever the Ottoman government tried to exercise real influence on Egyptian affairs — as in the beginning of 'Abdah's reign — the results were illusory. Even the Sultans' prohibition of Ismail's contracting new loans without his assent could easily be ignored. The Egyptian army was only theoretically a part of the Turkish army (Egyptian troops, however, participated in the Turkish wars against Russia) and it was only due to special circumstances, that, in 1870, the Sultans had an opportunity of deposing Ismail. In the interior the viceroys reigned with unlimited autocratic power after the traditional Oriental fashion. With the exception of 'Abdah, who showed himself an enemy of Western civilisation — especially in its French form — they encouraged the introduction of European arts and sciences and institutions. The result was that Egypt became soon more "europeanised" than any other Muhammadan country. It is well known that all these works, far from increasing the prosperity of the country, brought about its financial ruin. The cause has to be sought not so much in the proverbial but much exaggerated prodigality of Ismail as in the system that prevailed in the execution of the reforms. This system was based on the careless Oriental administration methods, the disastrous effects of which were doubled by the readiness shown by the Europeans in granting financial facilities. Moreover, many of the European agents were more than unscrupulous adventurers, whose only aim was to get an enormous indemnity for alleged branches of contrato by the Egyptian government. A great many public works remained unaccomplished on account of difficulties of this sort. The first result was an ever increasing floating debt (the first beginnings of this disastrous development are very clearly depicted by von Kremer, ii. 25). The main difficulties, however, were brought about by the different loans contracted in Europe by Said and Ismail (1855, 1856, 1865, 1872); they grew to an extent which the country was unable to bear.

The greater part of the bondholders of these debts were French and, to a less degree, British. So France and England, the ancient rivals in Egyptian affairs, became the leaders of the foreign intervention; representatives of both these countries took part in the "Dual Control" over the revenues and expenses of Egypt since 1876, interrupted only by the period in which an Englishman and a Frenchman were ministers (August 28, 1878—April 5, 1879). France's financial interests were unquestionably the greater, but England was already by far the more influential by its trade and by its political situation; moreover the British occupation of Ermoupolis in 1857 and of Cypros in 1878 strengthened England's position considerably. Still up to the English occupation of 1858, Egypt's formal relations with countries other than those of an independent state, limited only by the capitulations and, since 1876, by the mixed jurisdiction (see 2). The Khedives, also from 1875, was able to conclude treaties with other powers (except purely political) at the opening of the Suez canal (1876), Ismail was treated as the equal of the European sovereigns who came to attend the ceremonies. As the European personnel in the Egyptian administration increased, however, the influence of the French and English consuls became gradually considerable.

The condition of the people of Egypt had become more favourable in the beginning of this period, especially after the abolition of the slave monopoly, but the jelili's profited little by the favourable economic circumstances and, especially after the end of the heavy and ruinous taxation began which was the only means whereby the government could meet its obligations. There began a period of profound anxiety which was only to end towards 1890. This unsatisfactory situation was one of the causes of the first national movement. This movement had originated in the indigeneous middle classes, which had already come into existence under Muhammad 'Ali, by European as well as Oriental influences (Djimm al-Din Afghani); these classes had gradually become an important factor in social life, although for the time, orthodox religious circles still stood aloof, as the modernist views of the first nationalists and their sympathy with freemasonry were antipathetic to them. The nationalists criticised Ismail's financial policy, his favouritism of European elements in the country and his predilection for the Turco-Ottoman class to the detriment of the native Egyptians. The treatment of the indigeneous element in the army especially had excited their indignation (the attacks were levied against the Shiit and against Abyssinia in 1875 consisted exclusively of jelili's). Public opinion began for the first time to manifest itself in 1877. In that year the nationalists published some newspapers (e.g. Miṣr and al-Vagān) and the device of Miṣr i-l-Misriyya was heard for the first time. Notwithstanding repressive measures, the nationalist papers published sharp criticisms of the government;
a special subject of their criticism was the participation of Egyptian troops in the Turkish-Russian war. The "coup d'état", of April, 1879, which caused the fall of the ministry of Nihib Pasha, with the two European ministers, was the first palpable result of the nationalist act. It seems certain that the nationalists encouraged the deposition; they were anxious to exclude foreign intervention as the only possible salvation. Thus the absence of a really strong and able power in the country — for "Arab's" party was weak through inexperience and incompetence — had made possible the intervention of England. The chief cause which made it desirable for England to get a strong position in Egypt was the geographical situation of the country on the route to India. This desirability had much increased since France had taken possession of Algiers and Tunis and after the opening of the Suez canal, which was in England's interest to keep free from powerful foreign influence. The development of Egyptian affairs had provided a wide arena for an English intervention, France, whose political interests were less engaged, shrunk back from the responsibility at the last moment; Egypt's history after 1882 shows how England has assumed this responsibility.

Theoretically, the international position of the country remained unchanged after the occupation; Egypt now enjoyed a double sovereignty, a financial tutelage; a threefold jurisdiction; a foreign military occupation and was the scene of the clash of two civilizations. The British policy had in the first place to face what Lord Cromer calls "internationalism", meaning by this term the intervention of other powers, especially France, in Egyptian administrative affairs on the basis of former agreements. Only in 1904, the year of the Anglo-French agreement, did England practically get a free hand in Egypt. The men under whose direction the position of the English was consolidated in the Nile valley was Lord Cromer, British Consul-General from 1883 to 1907. Notwithstanding his comparatively modest official function, Cromer became the most powerful man in Egypt. He governed by the system of "governing the governors of Egypt"; his chief aids were the British advisers in the different ministries. It certainly was an advantage for Egypt that its interests had now become to a large extent identical with those of England. Thus England succeeded in a new loan guaranteed by the greatest Powers and by very severe measures in the interior in putting the finances on a sound basis, so that in 1904 the power of "Calé de la Désert" could be considerably limited, so as to give back to Egypt its financial liberty. The public debt, it is true, was not much less in 1914 than in 1883, but the economic prosperity of the country had greatly increased (see 3). As to Turkey, its influence on Egyptian affairs became ever less. The sending of Ghafir Ahmad Muhktar Pasha in 1885 as Turkish High Commissioner had no political results, though the unofficial panislamic propaganda carried on by the Pasha was considerable. The Sultán's appointment in 1898 and in 1906 to assert his authority on the Sinai peninsula were complete failures. During the Turkish-Italian war England did not even allow Egypt to send troops to Tripoli. On the other hand, Turkey could not sympathize with the nationalists, the Young Turks (many of whom had found an asylum in Egypt during the Hamidi regime) after 1908, even less than Sultán 'Abd al-Hamid. France's opposition to the English occupation was more influential on account of the strong French sympathies in the country. After 'Abdús Hilmí's accession a revival of French cultural influence took place, against which the English occasionally had to take measures (deposition of Nihib Pasha in 1894). It was from France that, until 1904, the nationalists always hoped for support. The position of the Khedives was of no political influence; 'Abdús Hilmí was no more successful in his nationalist attitude in the first years of his reign than later on in his entertaining good relations with Constantinople.

The Súdán, the possession of which had been most important for Egypt's prosperity and its international position, theoretically was, like Egypt, a province of the Ottoman Empire, by a decree of 1831 Muhammad Ali had married the government over three regions "without hereditary rights". Under Ismaíl the Súdán had been governed for Egypt by English governors (Baker and Gordon). But, since the revolt of the Mohádi Muhammad Ahmad (q.v.) and especially the taking of Khartóm (January 26, 1885) had interrupted the Egyptian domination, the Súdán affairs were entirely directed by British policy; the same is true of the reconquest; the nominal chief of the Egyptian army was the Khedive, but after the reorganization of this army in 1885 all higher ranks were occupied by British officers. After the reconquest (1898) the English policy did not allow the return of the Súdán to Egypt; by the Anglo-Egyptian treaty of January 9, 1899, an Anglo-Egyptian condominium was established in the Súdán. In this treaty the rights of the Powers were not taken into account and the Khedive, though the Súl táh's vassal, acted as an independent sovereign. The consolidation of the British power in the Súdán, on the other hand, has strengthened considerably England's ascendancy over the Nile valley.

After 'Arab's defeat the Nationalist move-

ment was crushed for the moment and until the end of Lord Cromer's days it never became again a political factor of importance. During this time a new generation grew up and found a leader in the young Kamí el-Pasha (q.v.; died on January 10, 1908, at the age of 34), who founded in 1899 the paper Al-Muṣawir and became in 1917 the first president of the National League (al-Wasáf). This second generation of nationalists stood likewise under French cultural influence. Intellectually they were much better equipped than their predecessors; when they began their renewed campaign of "Egypt for the Egyptians", they showed much moderation and rejected revolutionary ideas. After Lord Cromer's replacement
by Sir Eldon Gorst (1907—1911) the attitude towards the nationalists became one of the chief problems of British policy. In 1906 the incident of Dernaogai had proved that anglophobia was still widely spread and, though the culprits were punished in an exemplary way, the new British representative adopted a much more conciliatory attitude towards the nationalist aspirations. But this new policy had not the desired results; in 1909 freedom of the press had to be restricted again and al-Azhâr had to be closed for some time on account of the anti-English demonstrations of the students. Then happened on February 20, 1910, the murder of the Coptic Prime Minister Bitrûs (Ghiâlî Pasha) (one of the members of whose cabinet was Sa’d Zaghîlî) by a young Mulânâmânî nationalist. This event brought about a breach between the Christian and the Muhammânî element, in the nationalist party, which soon threatened to lead to serious disorders. In the same year the General Assembly rejected the prolongation of the Suez canal concession after 1968. So, with Gorst’s retirement and his successor by Lord Kitchener in 1911, the British policy made place again for a stronger rule which lasted until the declaration of the English protectorate over Egypt on December 18, 1914. Next day ‘Abd Allâh el-‘Ilmî was declared to be deposed and replaced by his uncle Hasan Kâmil as Sulîmân. A ‘furûsh‘ of the ‘Ilâmî al-Islamî of Constantinople declared the new ruler to be a traitor to the cause of Islam whom it was obligatory to fight and who deserved death (text in Jacob, ‘Hilfsbuch für Verbrecher über das Osmanisch Türkische, ii., Berlin 1916, p. 46).

During the war Egypt was merely a link in the strategic organisation of the British Empire. From November 6, 1914, the country was at war with Turkey, but the defence of Egyptian territory was only in British hands. The sitting of the Assembly were suspended and martial law was proclaimed. The result of the war was the definite loosening of the ties with Turkey by the Treaty of Lausanne (May 25, 1923), to which Egypt, however, was not party. A much more important consequence of the war was the renewed growth of nationalism. Several causes had combined to excite opposition against the British protectorate, such as the heavy requisitions imposed on the people and the growth of the number of British officials. The Wilson principles too stimulated the Egyptians to claim political independence. The nationalists, this time, were supported by a much greater part of the population than before; the Copts had joined them again and even the circles of al-Azhâr encouraged the nationalist propaganda. Its leader became Sa’d Zaghîlî Pasha, before the war Minister of Justice and at that time known as a man of moderate political views. The indifference, however, which the Egyptian claims met in London caused the Egyptians to abandon moderate measures. A struggle of three years followed between them and England in which nationalists made use of disturbances (breaking up of railways, anti-European outbreaks), passive resistance (strikes, boycotting of the Minfer mission) and the discredit of the English administration. The British armed military force (martial law was maintained) and deportation (Zaghîlî twice); at the same time Bolshevik agitators and partisans of the return of the former Khedive ‘Abd Allâh were at work. Finally the English government changed its attitude; it declared the British protectorate abolished and recognised Egypt as a sovereign and independent state (February 28, 1922). The settling of some important points, however, remained reserved (e.g. the defence of Egypt and the Sudan question). Though by this attitude on the part of the English government the difficulties seemed to have been solved, this was not the view of the nationalists. The events after February, 1922, have shown that the struggle between the Muslims to full independence and British intervention in Egyptian affairs has in no way become less violent and less dangerous for the peaceful development of the country.

2. Government and administration.

After the departure of the French the number of Mamlûk Beys had been completed again to twenty-four, but the shock their government system had undergone by the occupation had deprived them of all power of resistance against the strong will of Muhammâm âlì. The French occupation had lasted too short a time to permit the establishment of new governmental traditions. For tax-collating the French had been compelled to make use of the existing institutions; their chief innovation was the creation of a ‘dîwan in Cairo composed of ten shâlikhs (with careful exclusion of representatives of the Mamlûk class) to look into matters of government. Bonaparte was provided with a Kethkhûdû (Kikhyà in Egyptian Arabic), as had been the custom with the Turkish pasha’s before.

As has always happened before when Egypt got a strong ruler, the government system of Muhammâm âlì became again extremely centralised. All feudal powers were abolished (massacre of the Mamlûks), the only great vassal being the viceroy himself who reigned in the name of the Sultan. The character of his reign was still very oriental and very “Turkish” at the same time in which this absolutism collapsed was no longer Oriental; Egypt did not fall back again into the hands of a number of feudal chiefs. For the country became ever more interwoven with European interests, which at last, though allowing the survival of the Khedivial dynasty, put the government into the condition of a constitutional monarchy, in which, however, the check to absolutism was not formed by a representative body of the people, but by the representative of a European government.

The relation of vassaldom towards the Porte has in practice never bound the hands of the viceroy in matters of interior administration, not even since the ‘armût of May 24, 1841, the dispositions of which have theoretically formed the base of Egypt’s juridical international position up to 1914 (French text in Ahmad Lutfi, Türkiî-i Dârîvwî ‘Alîye-i ‘Othâmîvât, Constantinople 1902, vi. 140; Turkish text in Nordaoughian, ‘Ismâyîl, ii. 335). Its provisions for the interior administration are only: the application of the Khâzîrî Sharî‘ of Gûlûkînî (1839), the paying of a tribute on the tin revenue (fixed at 80,000 pears in a separate ‘armût of the same date and raised to 150,000 pears or 750,000 Turkish pounds in 1866), the coinage in the Sultan’s name, the reduction of the army to 18,000 men (this limitation was removed in 1872), the viceroy being authorised to
confer military grades up to the rank of colonel, and the prohibition of the construction of men-of-war without special permission. The firman's after 1841 only contained slight modifications and the one of June 8, 1873, assumed all former dispositions. The firman's granted to the Khedive Tawfiq and 'Abdallah Hilmi on their accession contained nearly similar prescriptions.

Muhammad 'Ali's general government was made up of a system of dvānā and magฮdney (the members of which were appointed by himself), forming together the central government. The most important was al-Dvān al-Khādir in the citadel of Cairo, presided over by the khâdīyeh; it was at the same time a supreme court of judicature (Lane, i. 130). Besides there was a Maghībd al-Mafhūmār (general government), a Maghībd al-Dhikhrīyyeh, Maghībd al-Tawfīqīyyeh, a Dvān al-Ta'āshīrīyyeh, etc.

All these bodies had occasionally jurisdiction and executive power. The khâdīyeh jurisdiction was exercised by a Ḥanafite ḥādī, sent every year from Constantinople, in the mukkama of the capital. There was also a council of ḥanāfīs, but this more national element, which had exercised a considerable influence in the time of the French occupation, soon lost its influence under Muhammad 'Ali. The number, the names and the attributions of the different dvānās were, however, far from stable (see Zaidān, Maghībd al-Shāfi'i, i. 24). Sa'id Pasha changed three of the dvānās into ministries (mvāvār) under a mābār, viz. the ministries of Foreign Affairs, Finance and War, and the place of the Khâdir was taken by a kind of chancery called Mālīyyeh; the working system of these bodies was still very imperfectly organised (cf. the description by von Kremmer, ii. 9 sqq.). Ismail created the Ministry of Finance, a Ministry of Public Instruction ("Alt Maharākh Pasha") of Public Works and of Commerce (1876), the central direction being given by a Maghībd Mustamī. The latest administration did not yet form an independent ministry. Although in the beginning this Khedive succeeded in keeping a strong hand on government, the different personalities of the ministers began to exercise influence; especially towards the end of his reign, when for a short period even two Europeans were members of the cabinet of Nahād Pasha. At the same time a number of high European officials in Egyptian service had obtained influential positions in different departments. In 1866 Egypt had been granted a kind of representative body (Maghībd Niyyāth, opened November 25, 1866) elected by the communis, but as this germ of an Egyptian Parliament only possessed a limited power of advice and was convened only once a year, it did not yet play a role in the government. Only after 1879 did this Maghībd become a real parliament "with an opposition".

The constitutional regime inaugurated by Ismai'l in 1878 by his declaration that henceforward he would reign by the means of responsible ministers did not last long. After his deposition it was hoped that the Khedive Tawfiq — who gave a constitution on February 7, 1882 — would be able to work with his parliament, but these hopes were annihilated by the 'Arid revolution. England, after the occupation, interfered in government matters through the mission of Lord Dufferin, whose well-known report was presented in February, 1883. It was followed in May of the same year by a new Organic Law, which restored the full legislative power to the Kedive, instituted a legislative council of 30 members and a general assembly which was an enlargement of the first body but with very limited powers. This system worked for 30 years; it enabled the English to direct the government of Egypt by means of "advisers" in the different ministries. In 1913 the two bodies mentioned became one single legislative assembly with consultative function, consisting of the cabinet ministers, 66 elected and 17 nominated members; this assembly, however, did not meet, after martial law had been proclaimed in 1914. Finally, after the declaration of Egypt's independence (February 28, 1922), a commission of 30 members was charged with the elaboration of a constitution, which was promulgated by the king on April 19, 1923. This constitution has established in Egypt a representative parliamentary, monarchical government. In outward appearance almost everything that could suggest that Egypt had ever had any other than European traditions had vanished.

Muhammad 'Ali's reorganisation of the provincial administration began in 1813 and consisted of a reduction of the number of provinces (see the art. 'Egypt, § 20) and the establishment of a highly centralised administration. In 1840 the number of provinces (naddīrīyyeh) was only seven: Buḥaira, Manfūtā, Daqāḥik, Shāriyyeh (besides the governorships of Cairo and Alexandria) in Lower Egypt, and Faiyūm, Minyā and Ismā'īl in Middle and Upper Egypt. Each province was governed by a mādīr; it was subdivided in māshārāt, and further into mānīs. Each mānī was subdivided under a šāfiq, these again into naṣībāt under a shaykh al-balad (whose title and functions were taken over from the preceding period). In each naṣībāt there was an official called khānél for agricultural matters, a šarīf for the tax collecting and a šabīl or mūdīn, who was a deputy of the kādī. The mādīr's were always "Turks". The khānél's and the šarīf's were all Copts; most of the other officials were indigenous Muhammedans. Under Muhammad 'Ali's two successors the centralising control slackened and abuses entered freely. Then Ismai'l proceeded to a new division of Egypt into three great sections: al-Bahāri, with the mādīrīyyeh's Buḥaira, Dīrās, Kalyātib, Shāriyyeh, Manfūtā, Gharbīyyeh, and Daqāḥik; al-Wasṭī, with Bani Suvūr, Faiyūm and Minyā, and al-Sa'dī (q. v.) with Asyūt, Dīrās, Kenēs (Kenneh) and Ismā'īl (East). Besides these, there were the governorships (mādīrīyyehs) of Cairo, Alexandria, Damāsq, Rashīd (Rosetta), al-'Arbah, Port Said, Sūwās (Suez) and Sawwākīn. The existing subdivisions were maintained; only over each naṣībāt there was put an 'awwa, who was to be assisted by the shaykh al-balad; both were chosen by the inhabitants. The function of khānél was abolished on account of the greater agricultural autonomy granted to the provincial representative bodies (cf. § 3). Each māshārāt and each mādīrīyyeh got such a house of nobles composed of notables. It was after the fashion of these bodies that in 1866 the Maghībd Niyyāth was created in Cairo (see above). A no less important innovation was the replacement of "Turkish" mādīr's by native ones; it was some time before the population became accustomed to obeying high officials chosen from their midst. The administrative system described is maintained in its main features up to the present day.
As in former centuries, the administrative system was closely connected with the land policy. Muhammad 'Ali abolished nearly all private property of the soil. All arable lands were distributed by his cadastral administration among the 'fellahin' (each getting 3—5 feddans), who were to be only usufructuaries. They could in no way dispose of the soil and had to pay 'arkada'; their land was called 'arkadi'. The taxes were collected by officials (see above) and the tax-farming system (distain) was abolished. The former tax-farmers were indemnified by being allowed to keep as much rent the tax-free ground (called 'ayya) which they had already possessed under the Mamluks, and by an annual rent. In course of time this 'ayya land has returned to the public domain as 'arkadi or has become full property (milk). Also other kinds of exceptional private property (riqa'ib) entered gradually the category of 'arkadi. A new kind of lands were those called 'irda', uncultivated grounds given by Muhammad 'Ali to notables and high functionaries for them to cultivate. The 'irda' were free from taxes and could not be sold. Under the same conditions large properties were granted as 'shelidi' (from Turkish eftek) to the members of the viceroyal family and some high functionaries; these became under Isma'il the great 'irda' authorities. Now all the categories of land enumerated have gradually become full property. The limitations to the property rights of holders of 'arkadi lands have been abolished by different laws, especially the mahkama law (see below). So there has been an evolution from a state in which nearly no private property existed at all to the present situation where milk property has become the rule. Foreigners have officially been allowed to possess landed property in Egypt only since the Turkish law of June 10, 1867, but Muhammad 'Ali had already given 'irda' lands to several foreigners; still the portion of Egyptian soil actually possessed by Europeans is rather small. The Egyptian property law is now to be found in the Code and the Mixed Civil Codes. As to the original 'wadi' land, a considerable part of it had been confiscated by Muhammad 'Ali and now belongs to the mild category.

The financial administration of Egypt is better known than any other branch of government, through the elaborate investigations made by European experts, beginning with the report of Mr. Cave in 1876. The collection of the chief revenue, the land-tax (cf. 3), always brought with it many abuses, especially the collection in advance under 'amal in order to meet the exigencies of the public debt. The mahkama law of 1871, changed many times and abolished in 1880, was a curious example of financial policy, as it exempted those who paid six years in advance for ever from the half of their future tax obligations. Another important branch of revenue, the custom duties, were still farmed to mahkamas in the beginning of the 19th century. Since Europeans officials have been introduced in the financial administration, these revenues have come in more regularly. A feature of financial administration under Isma'il has also been the amalgamation of the administration of the Khedive's own domains ('irda sahia) with that of the government.

The first impulse to the reorganisation of jurisdiction was given by the institution of the mixed tribunals in 1876, obtained by Nubar Pasha after laborious negotiations with the powers. As in Egypt the jurisdiction of the foreign consulates had increased far beyond the limits laid down by the capitulations — as a result of the inefficiency of the indigenous jurisdiction — a reform had become an imperative necessity. After the creation of the mixed jurisdiction, consular jurisdiction became limited to processes between foreigners of the same nationality and penal jurisdiction over such consuls' nationals. The mixed judges were to be Egyptian officials, but as the majority were subjects of the different western states possessing capitulations and as the mixed tribunals were given competence to judge even the Egyptian government, they assumed the character of a foreign power in the government, a very clear symptom of Egypt's 'sectarianisation'. On the other hand a serious resistance of the Porte had to be overcome, as Turkey did not like to see the official establishment of so independent a jurisdiction in one of her provinces. By a ferâns of 1872 (Nordrneuaghian, lii. 340), however, the authorisation was given by the Sultân. Seven years after the institution of the mixed tribunals there were organised new indigenous tribunals after the same pattern, by the decree of June 4, 1883, replacing the jurisdiction of the administrative authorities and their 'qasibs'. The codes applied to the two kinds of jurisdiction are nearly identical and harmonised chiefly after the French codes. The new indigenous codes were likewise published in 1883 (the penal code and the code of criminal instruction were renewed in 1904). On the penal code thus existed under Sa'id Pasha and was a very confused compilation, see von Kremel, ii. 55—66. The jurisdiction of the personal status of Mahummadans is reserved to the mahkamas of the Hanafite mahkham, which were reorganised by a decree of 1897 (and later on again in 1909 and 1910). There exists, however, a codification in articles of the Hanafite law on marriage, hawala and succession, made for the information of the judges of the mixed courts; a French translation of this compilation, in 647 articles, has been inserted in the recent edition of Egyptian Code and Laws by J. Warthelet and R. G. Brunton (Brussels 1929). The Arabic text was published in Cairo in 1917. Kâbi' Pasha, late minister of Justice, had also collated, for educational purposes, the dispositions of Hanafite law concerning property and obligations (Arabic edition, Cairo 1909), but, unlike the Turkish Mehfillâ, these codifications of Mahummadan law have no exclusive authority with the Egyptian mahkham.

The different Christian communities have their own jurisdiction in matters of personal status.

3. Economic Development

The great economic creations of Muhammad 'Ali were the introduction of cotton cultivation and his monopoly system. These, supported by his highly centralised government system, procured him the means of pursuing his vast political schemes. In itself the economic system was quite Oriental, but, in two ways, it brought about relations with Europe. Firstly the viceroy sought to apply European methods, and for that purpose brought European experts to Egypt, secondly the products of cultivation were sold to Europe and the commercial relations with Europe thus created had some most important consequences after the monopoly.
system had been given up under 'Abd al-l, Vee commercial relations then developed between the European buyers and the Egyptian cultivators, nearly always by the intermediary of other elements. This change, however, was accompanied by conditions which have proved highly prejudicial to the peasants and independent development of the country. Firstly European ideas of credit were introduced into a country where it was then known only very limited credit operations. The European merchants and their auxiliaries began to give large advances on the payment for the expected crop; the inevitable consequence was that the peasants got into debt and that the merchants lost their money. Here we see, on a lower plane, exactly the same symptoms that brought about the heavy debt burden of the state itself, due to exaggerated confidence in the prosperity of the country. The Egyptians evidently did not know how to use credit, as their economic traditions had not made them acquainted with the accumulation of capital.

Secondly the import from Europe brought wares of the kind of which the population stood in no great economic need, but which were nevertheless bought in large quantities. In the first place mention may be made of cotton manufactures that came chiefly from England. So, notwithstanding the increased production, the country was not able to enrich itself, on the whole the population remained poor and in debt, as was the treasury. But indissoluble economic and financial ties had been formed with Europe and particularly with England. A glance into the import and export trade about 1850, as given by von Kremer, is enough to show how much England was commercially interested in Egypt and explains why it was England which, when the financial and economic crisis came, undertook the most active intervention resulting in the military occupation. After 1882 Egypt became economically still more dependent on England by the extension of cotton cultivation, though, on the other hand, English control prevented the country from falling back again into a state of unproductiveness. So here again we see how the work of Muhammad 'Ali by French engineers was finished. This work was followed by the famous dam of Aswan (finished in 1902 and raised in 1912), which had already more than agricultural significance, as it made it possible to hold back within a certain measure, the water necessary for the irrigation of the country below. The same applies to an even greater extent to the huge dams projected after the war in the Blue and the White Nile above Khartum for the irrigation of the Sudan (the first was opened in 1926); during the post-war disturbances in Egypt England's power over the Nile waters became one of its most powerful means of coercion in the struggle with the nationalists. In Egypt itself the irrigation administration is now almost entirely in the hands of Egyptian officials. Apart from the three great works for banks and dykes the feluca farmers themselves still apply for the greater part, the primitive irrigation methods of the zaire and the shabr, while only on the larger estates modern machines have been introduced.

Besides the care for irrigation, the cultivation of Egyptian economia has not yet been written as was done e.g. for Turkestan by Reinhold Junge in his book "Das Problem der Europäisuerwirtschaft orientalischer Wirtschaft, dargestellt an der Verhältnisse der Staatswirtschaft von Russisch-Turkestan, Weinari 1915"). So, after the foregoing sketch, we shall point only to a few prominent features and figures.

Egyptian cotton has not only remained an almost exclusively agricultural country, but it has developed its agrarian character to an extent which has surpassed all former estimates. In the Mamluk time the country had produced scarcely enough wheat for its own livelihood; it was Muhammad 'Ali who, in his typical centralising way, gave a new impetus to the awakening of Egypt's productive power.

The cardinal point was the care for good irrigation. It was very much neglected in the previous centuries. The French had only had time to make a thorough study of the existing canal system, then Muhammad 'Ali took up the problem energetically. He wasted many thousand lives in the improvement and digging of new canals, the best known of which is the Mahbudiya canal from Alexandria to the Rosetta of the Suez Canal. His irrigation works not only brought about a territorial extension of agriculture, but he created for the first time the possibility of perennial irrigation by canals containing water during the whole year. Besides, he entrusted the control of all irrigation works and the distribution of the water to special officials (the khazins, see 2), leaving no liberty to the peasants themselves. This canal digging activity was continued by Ismail (the Turaifluy canal in Upper Egypt and the Ismailiya canal, linking the Nile with the Suez canal). In his reign the centralised control of irrigation was supersed by the local and provincial council, acting under the supervision of government engineers, but at the same time abuses in the water distribution by the local authorities became frequent. This situation only improved when, after 1883, English officials were charged with the control. Care for the irrigation became one of the first principles of the English administration; from the loss of 1884 an amount of £1,000,000 was reserved for this purpose, while all other expenses had to be reduced for lack of money. The results of this policy have entirely fulfilled the expectations. It was also by English engineers that the barrage of the Nile near Assiut — already begun under Muhammad 'Ali by French engineers — was finished. This work was followed by the famous dam of Aswan (finished in 1902 and raised in 1912), which had already more than agricultural significance, as it made it possible to hold back within a certain measure, the water necessary for the irrigation of the country below. The same applies to an even greater extent to the huge dams projected after the war in the Blue and the White Nile above Khartum for the irrigation of the Sudan (the first was opened in 1926); during the post-war disturbances in Egypt England's power over the Nile waters became one of its most powerful means of coercion in the struggle with the nationalists. In Egypt itself the irrigation administration is now almost entirely in the hands of Egyptian officials. Apart from the three great works for banks and dykes the feluca farmers themselves still apply for the greater part, the primitive irrigation methods of the zaire and the shabr, while only on the larger estates modern machines have been introduced.

Besides the care for irrigation, the cultivation of Egyptian economia has not yet been written as was done e.g. for Turkestan by Reinhold Junge in his book "Das Problem der Europäisuerwirtschaft orientalischer Wirtschaft, dargestellt an der Verhältnisse der Staatswirtschaft von Russisch-Turkestan, Weinari 1915"). So, after the foregoing sketch, we shall point only to a few prominent features and figures.
resistance of the population. At first there was planted an indigenous wild cotton (Nakou) in 1848. Sea Island seed was introduced. This cultivation soon developed to an enormous extent; the area of the cotton land increased proportionally much more than that on which cereals were grown. The difference was, however, that the bulk of the cotton crop was destined for export and the cereals—wheat, barley, maize (pouvoirs) and rice (in the Delta)—for home consumption. After the abolition of the monopoly system the development of agriculture prevailed and after the occupation the English—for many years previously already the chief purchasers of cotton—increased the cotton cultivation to a still larger extent. Between 1885 and 1888 the cotton growing area was doubled (from 300,000 to 1,630,000 feddans); cotton then covered a larger area than cereals. After that period a stagnation set in; during the war the cultivation of cereals had even to be discouraged (in 1919 the proportion was: cotton 1,573,800 feddans and wheat 1,274,000 feddans; it was even forbidden to plant more than one-third of the cultivable area with cotton.

Another agricultural product introduced by Muhammad Ali was hemp, which had to provide the cordage for the ships of his fleet. Sugar-cane was likewise a new product, and was first planted by Ismail on his domains in Upper Egypt (since 1857). This crop has not produced such remarkable results as the cotton. Among the ancient crops flax has much decreased; so has the formerly flourishing tobacco culture, which was entirely prohibited in 1892. After the war experiments have been made to introduce this crop again.

Apart from the produce in kind, agriculture provides also important revenues to the treasury in the form of the land tax. This tax has constituted the bulk of the government revenue and has weighed heavily on the fellah class. Muhammad Ali levied the land tax in kind; those who failed to pay for more than three years lost the land granted to them. Afterwards the fellah's had to pay a tax and under Ismail they were often obliged to have recourse to usurers in order to fulfill their tax obligations; sometimes the government itself called in the usurers-money-lenders to that purpose (as in 1878; Cromer, i. 38). Later the Agricultural Bank rendered the same services, the results of which were in many cases a sale of property by decrees. The so-called "fellaha law" of 1912, prohibiting the lending and sale by decree of landed property of less than 3 feddans, has proved to be only a partial improvement.

Industry remains of as little importance to Egypt as in previous centuries. The petty native industries (spinning and weaving looms, pottery, forgery, etc.), just as they had developed under mediatorial conditions, still existed in the beginning of the 19th century. Muhammad Ali included those too in the monopoly system; those who worked on their own account were punished in a drastic way (see Lane, i. 141). At that time the ancient guild organization still existed, although it had decayed considerably after the Turkish conquest (see Thorning, Turkische Bibliothek, svt. 80). During the 19th century, however, the competition of the imported European wares caused a still greater decline. In 1888 the guilds were officially abolished, though up to the present day their archaic form of production has survived. Among the new industries should be mentioned the factories for sugar refining in Upper Egypt and the flourishing cigarette industry in Alexandria (since 1873), which now works only imported tobacco. Cotton spinning, however, developed little in Egypt itself; there exist, however, spinning factories (Filature Nationale d'Egypte). Nearly all new industries (also brewing, soap, confectionery, rice peeling mills) are in the hands of Europeans. They first employed Egyptian workmen, who have now been gradually replaced by natives. The latter have already learned the European forms of socialism.

The traffic possibilities have kept pace with the economic development. Next to the ancient traffic route, the Nile and its arms, the new big canals have rendered possible the extension of inland navigation. The Suez Canal, though lying entirely on Egyptian territory, has hardly any importance for the Egyptian traffic. During its execution (1859-1869) Egyptian labourers were employed and the viceroy, Sa'id Pasha, by furnishing half of the capital of the society, had created, at least for his dynasty, the possibility of future profits. But after Ismail had been obliged to sell, in 1876, his shares to the English government, the new considerables profits of the exploitation are of no benefit to Egypt. As, after 1885, the canal has to return again to Egypt, the Egyptians have done what they could by refusing in 1910 to the prolongation of the concession. Besides, the canal has put Egypt under other international obligations. The Suez canal treaty of October 29, 1888 (ratified by England in 1905), declares the canal to be open in peace, in time of war and in time to all kinds of ships and charges with the control of its execution the representatives at Cairo of the different contracting countries. But England, as occupier, has always taken all measures for the defence of the canal, especially during the war, when a Turk-Croatian offensive was threatening from that side. After the declaration of Egypt's independence the defence of the canal has remained one of the points of dispute between England and Egypt. In the overland traffic railway canals now take by far the first place, as the canals make other land routes superfluous. Railway building was begun under Abbas Pasha in 1852 and in Ismail's reign the greater part of the Delta system and in Upper Egypt the line up to Assiut were completed. Only after the occupation was this last line continued up to Assuan, but between Assuan and Wadi Halfa, where the extensive Soudan system begins, there is no railway communication. During the war a line was built to al-Kantara on the Suez canal which communicates with the other new line coming from Tanta. The Egyptian railways have been subjected until 1904—as a consequence of the financial difficulties—to a special international administration. Since Ismail's reign, the railway service is managed by Egyptian officials and engineers.

If, finally, anything proves clearly the new orientation of Egypt's economic—and consequently cultural—orientation, it is the foreign trade. The commercial relations which the country, e.g., possessed in the beginning of the 19th century, were the remains of the great transit-trade, the Indian products that had flourished in the Middle Ages, but was limited at the time to the products of the Sudan and South Arabia. Under Muhammad
Ali's system of government trade or monopoly, Egypt, for the first time since antiquity, began to produce again for export. This system, however, gave much offence, as well to the Muhammadans who were treated less favourably by the viceroys than the European merchants, as to these merchants themselves. England even concluded in 1832 a commercial treaty with Turkey directed against the economic policy of Muhammad Ali. Under Sa'id Pasha the export of cereals was still more important than that of cotton, but since his successor cotton has been leading; at that time it was particularly the civil war in America that had caused a great increase of the cotton export of Egypt. Since the middle of the century the chief purchaser of raw cotton has been England, which country, accordingly, was then already the most interested in the maintenance of cotton cultivation by the development after 1852. Egypt has become, after America and India, the chief cotton exporting country of the world. The export figures are easily accessible in the literature on the subject; they are based chiefly on the custom-house statistics of Alexandria. Not so well known, however, is the manner in which trade has developed since the abolition of the monopoly system. Probably the foreign purchasers used mostly the services of intermediary agents, Syriacs or Copts. It seems that methods were often adopted which had a detrimental influence on the development of trade, especially as in the form of advances to the peasants or the purchase in advance of the crops too great risks were taken, with the consequence that both producer and buyer suffered loss. The export of cereals has been much less constant than that of cotton (between 1910 and 1920 the proportion was 50%); there have from 75% (as in the war) when wheat had to be imported. Among the exported industrial products sugar and cigarettes are the most important.

The import from abroad consists and consists for the greater part of cotton goods and textiles from English factories, next coal (from Turkey), iron, tobacco, machinery. After England the chief importers before the war were Turkey, France and Austria (clothes and furs). These European imports soon became indispensable to the population and have contributed in a large measure to the material side of Europeanisation.

It is clear that, since the beginning of Egypt's commercial development, England's part in it has been greater than that of any other country. Before the war this part was 37% while in 1919 it was nearly 60%. With a few exceptions, the Egyptian trade has always shown a favourable balance of trade. It is difficult to determine how the country has profited by this circumstance. A great part must have been used for the public debt obligations. In any case the riches which have flowed into the country have found a very unequal repartition, for the peasant class is still poor and indebted. And next to the rich landed proprietors (especially the Turco-Egyptian Pasha-class; see 6) the Europeans too are in a more favourable position, as the exploitation liberalized them from all taxation, while the import tax allowed by the capitulations never more than 5%.

The inland trade too was monopolised under Muhammad Ali; he forced the sallahs to buy from him at high prices the grain which they had been obliged to sell at a much lower rate. For Sa'id's time the inland trade has been described amply by von Kremer (II, 214 sqq.). Here, notwithstanding the intrusion of European commercial methods, many ancient features have still been preserved. A special mention should be made of the sallah system, which is still very lively (as at Cairo in Khan el-Khalili), though the old charm of bazaar life and the quality of the wares are no more what they used to be.

4. Population

The rapid growth of the population of Egypt since the beginning of the 19th century firmly proves that the conditions of life have considerably improved. From the time of the French occupation to Sa'id's reign the population has nearly doubled (from 2,460,000 to 4,476,440), if the estimates can be relied upon. The increase has continued in the same proportion until the end of the century (in 1897 6,315,919 and in 1917 9,734,403) to diminish a little after that time, the figures being 11,287,339 for 1907 and 12,750,918 for 1917. As the cultivable surface is comparatively small (33,607 K.M.² according to K. M. M., iii, 119), the density of population is considerable.

Actually about 92% of this population constitutes the homogeneous indigenous basic element whose tongue is Arabic. To it belong the cultivating classes (the sallahs) and the native townsman. About 90% of these are Muhammadans; the other are Christain Copts (854,778 in 1917). The non-indigenous element is composed of Turks, Oriental Christians and Jews, and Europeans. As in other Muhammadan countries the differentiation of religion and race corresponds to an analogous differentiation in social function.

The sallahs, the real native stock, live in villages situated on the Nile and on the canals in such the same primitive conditions as centuries ago. Muhammad Ali's economic measures impoverished them extremely and since the days of Isma'il the sallahs have often been the object of the commiseration of European authors on account of the heavy taxes imposed upon them and the brutal and abusive methods of the tax collectors. But the steady increase of the population in those days proves that, hard as their plight may have been, conditions of life were more favourable to them than in foregoing centuries. The Egyptian peasant always has shown a traditional aversion to tax paying, if not urged by the government, while, on the other hand, their inability to accumulate capital has kept them as a whole in an inferior condition. When Muhammad Ali began to form sallah regiments, their dislike to military service made them often try to escape by self-mutilation; still the sallahs have proved good soldiers if conducted by able officers e.g. in the Sudan campaign of 1897.

During the 19th century the settled population of several parts of Egypt still reckoned themselves to belong to Arabic tribes. The lowest class of agriculturists have no property at all and work as labourers on the larger estates. Next come the smaller proprietors (under 50 feddans). The best situation is that of the sallah al-balad (see 2), the "squirearchy", as Lord Cromer calls them.

The khalifal period has been most important for the indigenous element, as it has allowed them gradually to take a larger part in the public life and the administration of the country. In the
previous centuries the natives had supplied almost exclusively the ranks of the 'Ummā; since Muḥammad 'Ali— who still only admitted the "Turks" to higher positions—a kind of middle class had begun to be formed, and under Sa'īd—who has the reputation of having been a friend of the fīlāh—their rise in the ranks of the military and the civil administration was encouraged. So towards the end of ʿAmārā, something like a public opinion (for the greater part turcophobe; see 1) was born. Some of the most conspicuous representatives of this native Egyptian intellectual class were ʿAli Pasha Muḥārak (q.v.) and the mathematician Muḥammad al-Falakī (q.v.). One of the concessions to the indigenous element was also the substitution of Arabic for Turkish as the official language under Saʿīd Pasha. These beginnings of nationalist development, however, had mainly been stimulated by European influence and had no root at all in the conscience of the masses (see 2). Only the revival of the 20th century commenced to break up the understanding of larger classes of the population. The fīlāh, however, have been only reached by nationalist propaganda as far as they live in the neighbourhood of the towns.

The four orthodox Muḥāmmādī rite is officially organised. The dominant ʿaddād is that of al-Ṣaḥḥa and a part of the inhabitants of Upper Egypt are Mālikīs. As, however, since the Turkish conquest, jurisdiction has always been exercised according to Hanafi law, the latter ʿaddād is now merely always followed in all not purely ritual actions. The ʿaddād obligation has been performed during the last years by an average of 16,000 Egyptians. Besides the official Sunnite festivals there are celebrated a number of local festive days according to the ancient Coptic calendar, which has survived as the agricultural calendar of the fīlāh. The celebration of these days has become a time immemorial to the annual return of certain natural occupations, in the first place the movement of the Nile. Very famous was the big festival of the opening of the River near Cairo (q.v.) in August. Many festivities have been connected with Muḥammadan saints whose maṣfūda or maṣfūda are celebrated (e.g. Shiʿa Ṣaʿd b. Ṣaʿd; in Ẓawī, Shiʿa Buṭṭūm in Cairo). The number of maṣfūda is immense; many saints are even anonymous. Most places where they are venerated must be pre-Islamic holy places. A very full description of Egyptian popular religion and local uses is to be found in the Kāḥkit mājudāt of ʿAli Pasha Muḥārak (esp. part viii.—xvii.; cf. Goldscheider in W.Z. X.M. iv. 351). The most wide-spread mystical congregations are mentioned in the same work (il. 129; also R.M.M. iii. 123). Since 1550 these congregations are under the authority of the Shiʿa al-Bakri who, since 1811, is at the same time Nakūb al-Ṣaḥḥa.

The "Turkish" element of the population, though numerically far inferior to the indigenous, has occupied the foremost place throughout the period of Muḥammad ʿAli's dynasty. The dynasty itself was the chief representative of this class, together with the high officials in the army and in administration. They were the bearers of Turkish political and cultural tradition, but, as to their origin, were composed of all non-Arabic elements of the Ottoman Empire. Those of Circassian descent were already numerous from the Mamluk period onward. Until the English occupation the number of "Turkish" families was occasionally supplied from other parts of Turkey. Apart from being the ruling class, the Turkish Pashas were also, by the favour of the viceroys, the great land proprietors (see 2). Many of these "Turks" however, have now become assimilated in Egypt (Cromer calls them Turco-Egyptians) and have shown sympathy with the nationalist movement. The Prime Ministers ʿAbd al-Rasūl Pasha (q.v.) and Riḍā Pasha (in the days of the ʿArab movement and immediately afterwards) are typical instances of this kind. The "Turkish" grandees have been for two or three generations the most Europeanised part of the Egyptian Muḥāmmādīs and appear to be for the greater part agnostics.

The nomads inhabiting Egypt are now about 600,000 in number. They consist of pure Arabs in the Sinai peninsula, in the Delta and in Upper Egypt. The Berber tribes of the Lybian desert have been established, except those living in the Provinces, in the Red Sea. The nomads are the ʿAḥṣād and the Ḍejāt (see these two articles). During the Khedivial period the government has always been strong enough to protect the population against the raids of these Beduins.

Muḥāmmādī is also the negro element whose social position is that of slaves. Slavery has been an acknowledged institution in Egypt up to 1877, when, by an Anglo-Egyptian convention, the slave trade was forbidden on Egyptian territory. A new slave convention of 1895 made interference with personal liberty a criminal offence, and art. 3 of the constitution of 1923 guarantees individual liberty to all Egyptian subjects. Practically slavery subsisted much longer and may not yet have wholly disappeared. The severe measures against the slave trade, however, have made the import of fresh slaves from the Sudan nearly impossible. Most of the negro slaves were females; the other were emaciated. The influence of negro blood on the racial characteristics of the Egyptians during the 19th century is still noticeable. White female slaves (mānūḥa) were still imported in the first half of the century, from the Caucuses and from Abyssinia.

Of the other foreign Muḥāmmādīs the alumni of al-Azhar form a noticeable part. Muḥāmmādīs from North Africa and Syria are the most numerous among them; occasionally they enter the corps of the Egyptian "wāṣmā". The Shiʿites only consist of a small Persian colony in the towns, amongst whom, even ʿAbbās are to be found.

The call for the emancipation of Muḥāmmādī women in Egypt was raised at the end of the 19th century by Khāliʿ Amīn (d. 1908), an Egyptian of Kurdish extraction, who in 1899 by his book Tafsir al-Maʿrūm and, some years later, his Al-Maʿrūm al-Qasīda (dedicated to Saʿd Zāghī) raised strong opposition and equally strong sympathies. Feminism has also been defended by Muḥammadan women themselves, as Malāk Hīdī Naṣīf (born 1886; she wrote Naṣīf's under the pseudonym of Ḥāṣibat al-Bāṭil). It was likewise strongly supported by some very able Christian Syrian women (see Orientis Moderni, vi. 131). A result of this movement was the progress of female education (see 5 and Martin Humann, Die Frau an der Schule, Halle a. S. 1909).

The Copts (see under art. 219), with the exception of the Coptic remnants in Upper Egypt, form a lower
middle class living for the most part as handi-
craftsmen in the towns and supplying the government with lower administrative functionaries. Lane
estimated their number to be 150,000; so that their proportional increase has been greater than that of the Muslims. While in the latter the Copts—
though Christians—have many institutions in common, such as circumcision and the veil of women; the formerly obligatory dark colour of the turban and clothes has only been maintained by the Coptic clergy. In Muhammad 'Ali’s time the lower technical functionaries in the provincial administration were Copts (see 2). Other notable
Copts of his time were quite influential—as they had been likewise in the days of the Mamluks—but such were Mu’allim Djiraja al-Djushari (d. 1811)
and Mu’allim Ghālī (d. 1821). They held the function of rāz al-kuttāb, but at times had to suffer from the Vagha’s despotic rule. El-Zaidān gives their biographies after a Zawālā al-Umnāt al-Kutṭābīn by Ya’qūb Bey Nakhlā Rūfūlī, Bīrūs Ghālī Pāsha (born 1847, murdered 1910) was the first Coptic Minister. His assassination put an end to the collaboration of the Copts with the Muslim nationalist (see 1). Asyūṭ is nowadays
the great Coptic cultural centre.

The Armenian community in Egypt is small and consists for the most part of shop-keepers. In the 19th century some notable Armenians have occupied high positions in the government. The most conspicuous are Boghos Bey, a former tax farmer, who became a councillor to Muhammad ‘Ali (Masqatir al-Sarh, I. 326), and Nabiš al-Pāsha, several times prime Minister before and after the English occupation. These intellectual Armenians have been an important medium for the spread of French cultural civilization

Syrian Maronite Christians (Akhawān) have been in Egypt since the Mamlūk times; in Ismā‘īl’s time they became the most useful element in the reorganised administration by their knowledge of languages and their aptitude for assimilating European procedure (Gromer, II. 217). They hardly ever entered the higher offices. Other Syrians have immigrated to make their fortune by trade, and sometimes to be ruined again as a consequence of the economic difficulties of the time. A typical instance of this kind is Amin Shaml (1828–1897, biography in Masqatir al-Sarh, II. 169); he was a Syrian immigrant, gained and lost enormous wealth in the cotton trade and ended his life as a prolific writer and publisher adapting himself to circumstances in a remarkable way. Syrians are to be met everywhere as the promotors of modern intellectual life in Egypt, as publishers, journalists and authors; they are found likewise as those the first nationalist propagandists (e.g. Said al-Naqqāsh; see the Bibliography). Some of their characteristics have made them, as a class, especially hated by Muslims.

The Greeks form a transition to the European element. Their significance for Egypt is exclusively economic; an enormous commercial activity is displayed by the Greeks in Alexandria. Greeks of the lower classes are everywhere to be found in Egypt as bābālīs and occasionally as masters. As elsewhere in the former Turkish Empire the Greeks in Egypt keep to their particular Greek form of western civilisation.

The Jews are half natives and half foreigners; their number towards the end of the century

was about 50,000. They nearly all live in Cairo and Alexandria and are largely engaged in banking business. They played a part—not unlike that of the Syrians—in the first nationalist manifestations of 1877. One of them, Jameh Samman, was the personal secretary of the first Arab theatre in Cairo, published in 1877 a kind of paper in vulgar Arabic in which lie criticized the Khidrī. Subsequently he was expelled (Sahy, La Génère, etc., p. 127). Since 1840 there have been Jewish schools in Cairo.

The steady increase of the number of Europeans is more a consequence than a cause of Egypt’s "Europeanisation". Many Europeans are only foreigners by their passport and constitute the well-known class of Levantines, prospering under the immunities still granted to them by the capitulations. The Europeans who have served the Egyptian government in the execution of reforms and technical works have belonged to different nationalities. French (de Sèves-Sulaiman Pasha, the creator of Muhammad ‘Ali’s nihān-troops; Côt Bey, the organizer of the medical school; Ferdinando de Lescceu, and others), Swiss (Dor Bey and Münzinger), Austrian (Slatin Pasha in the Sudan; Blum Pasha, financial adviser under Ismā‘īl) and English (Baker and Gordon as governors of the Sudan). An influential class is formed by the foreigners who, though theoretically Egyptian officials, hold or have held functions in institutions such as the mixed tribunals and the Debt Administration, and especially the high British officials in the ministries and other departments (after the occupation). The cultural influence of the English cannot be said to have been considerable as yet. Even the knowledge of the English language is less wide spread than that of French, in accordance with the traditional preponderance of the French form of European civilization in the country. Lastly, mention has to be made of the numerous European adventurers who came to Egypt in the days of Ismā‘īl and Ismā‘īl and, by pretended schemes of commercial or technical enterprises, tried to extort money from the too careless viceroys.

5. Education, Science and Literature

Education continued during the 19th century along the traditional Muhammedan lines, while, on the other hand, a European system of education was introduced by Muhammad ‘Ali. It has not yet been possible to fuse the two systems into a whole.

The ancient Arabic kuttāb have continued to exist all over the country until the present day, without any government control (except as far as they were paid from the sāḥi’s administrated by government) until the law of 1876, which introduced arithmetic. The other pole of religious Muhammedan instruction is represented by al-Azhār (q.v.), which institution, after having been neglected by Muhammad ‘Ali, has been an object of the solicitude of the later Khidrīs. In 1924 the number of students at al-Azhār was given as 10,357, of whom 9,758 Egyptians (lecture delivered in August, 1924, by Muhammad ‘Ali Bakr Bishālī on The University of al-Azhār, published at Cairo). Other modern universities or emirates are those of Alexandria, Tūnīs, Beanük and Dimāsak. Besides, there exists in Cairo a special school for the training of kāfīs.
In 1824 the government took some measures for gradually bringing about an equalisation between the diploma of al-Asrar and the government school (Oriente Moderno, v. 9, No. 3). Elementary and secondary schools exist among the Christian communities, in the first place the Copts.

Muhammad 'Ali introduced European education, mainly in order to provide the military officers and the officials of his army manufactures with the necessary technical knowledge. One of the means followed was the so-called *Mission Egyptienne* (al-Baṣīṭah al-Misriyyah) to Paris. It began in 1826 with the sending of 40 young Egyptians but was abandoned about 1870. Its results were not as satisfactory as was hoped, chiefly on account of the military regime to which the students were subjected and that did not cultivate their individual and social independence. Still, some prominent Egyptians have owed their education to this institution. Apart from the purely military schools founded by Muhammad 'Ali in Cairo and Alexandria (in which native Egyptians were not admitted), he created in 1825 the Medical School, under direction of Clot Rey. In 1836 a *Magistère al-Maṣūf* was instituted, in which French cultural influence was predominant. At the same time about 50 elementary and secondary schools were opened all over the country, (the latter modelled after the French lycées); they were more specially intended for the instruction of the Egyptians themselves and the language of instruction was Arabic; but often strong coercive means were necessary to induce parents to send their children to school. Abraham closed all schools, according to Dor, not as a reactionary measure but with the intention of reorganising and reopening them. Under Sa'd the Medical School was opened again by Clot Rey, but under Isma'il a great many new colleges and educational establishments were created, most of them in Cairo (one of the best known is the lycée Dār al-Ulm). The leading spirit was Ali Pāshā al-Muḥarrak [q. v.], then Minister of Public Instruction. To him also is due the already mentioned law of November 8, 1867, which distinguished primary, secondary and advanced schools and started from the principle of unifying all Egyptian public instruction into one whole. Still, though the educational activity of this time may have spread much technical knowledge, this "illuminisation" (Dor) of Western science affected only a small minority of the population. Moreover, the educational methods did not encourage free individual development, and owing to the lack of money—which caused many schools to be closed at the end of Isma'il's reign—the native teachers received very insufficient salaries. The result was a considerable enlargement of the gap separating the mass of the illiterate population from the Turco-Egyptian and Egyptian intellectual classes. This circumstance is to be regarded as one of the causes of the failure of the first nationalist movement. During the first decades of the English occupation little was done for the spreading of education (see Cromer, p. 344 sqq., and Yollers' critical remarks in Historische Zeitschrif, 1900, p. 79 sqq.). Two girls' schools were reported about 1875, but the real progress of the education of Muhammadan girls has only begun since the end of the century (see 4). At the present time there exist for these girls *surūtā* government schools and private schools (these for the greater part in Alexandria).

The Egyptian University (al-Aqṣāmiyya al-Misriyya) was founded at Cairo in 1905 by means of large subscriptions and gifts and was started under the presidency of Prince 'Abd al-Fattāḥ Pasha, afterwards King. During its first years' only courses in literary and historical subjects were organised, given by Egyptians and European teachers and by European Orientalists, especially invited to that purpose (the lectures have been published at Cairo). This University has sent in the first years groups of young Egyptians to different European Universities with the object of appointing them after their return university teachers in Cairo. In 1924 this university passed under government administration; since that time several projects have been elaborated for the extension of its organisation and activity (Oriente Moderno, v. 110, 414). As was to be expected, the new university has encouraged research the results of which have not seldom been in strong opposition to the spirit of orthodoxy prevailing in al-Asrar.

Apart from the already mentioned educational establishments the many foreign schools, among which the missionary schools — first American Missionary school in Cairo in 1855 — in Cairo and Alexandria, sometimes subsidised by the government (as under Sa'd Pasha), have equally exercised an influence on the intellectual education of the Egyptian upper classes.

The introduction of *printing* into Egypt is closely connected with the educational programme of Muhammad 'Ali; the printing-press which the French had brought with them for their own use has left no traces. About 1824 the first printing office was founded in Būlāk; it began to produce Arabic and Turkish books for the newly opened government schools. Already in these first years began also the important activity of printing and publishing classical works of the Arabic, Turkish and, to a less extent, Persian literature. One of the first works printed seems to have been the grammatical treatise at-ʿAlī Ṭūrjīya (in 1230/1824; see Zhenker, Bibliotheca Orientalis, v. Leipzig 1846, p. 19), used in al-Asrar (von Kremmer, i. 285). The greatest printing activity of this kind began about 1850, not without encouragement from Europe; this productivity, to which so many European library catalogues bear witness, has been, however, more to the profit of European Oriental studies than to the scientific and literary development of Egypt itself (Brockelmann, G. A. L., ii. 421). The same can be said of the "Bibliothèque Khédive" founded in 1870 by 'Ali Pasha Malehak. The origin of printing in Egypt is also connected with that of the press, since in 1828 the official newspaper *al-Waṣīfah al-Misriyyah* began to print on another press in the Citadel. About 1875 the printing office at Būlāk (belonging to the Dār al-Ṣaḥāba, as were also the paper factories at Būlāk) was still the most important; besides this establishment there were five private printing and lithographic shops in Cairo and Alexandria. After 1876, however, printing has gained enormous importance by the services it rendered to the then beginning development of the Arabic press, mainly by the initiative of energetic Syrians and under the influence of the first nationalist movement.

On the Arabic press — which was to be more important for the intellectual development than the printing of books — see the article *al-Aqṣāmiyyah* (especially on the press movement of 1878: M.
The religious Muhammadan Arabic literature, so far as it is a continuation of the tradition of previous centuries, has produced only a few remarkable figures and these only in the first half of the 19th century, the most conspicuous being al-Hajjari (q.v., d. 1861). A very important branch of the Muhammadan literature was, however, the literary activity of Muhammad 'Abdulah (q.v.) and his school, who initiated a theological modernism in Islam. While following the methods of old Islamic science but with independent interpretation of the Holy texts, they tried to prove that Islam is still a living religion and in no way opposed to modern civilization. A great many of Muhammad 'Abdulah’s articles have appeared in the review al-Manār (published since 1897 by the Syrian Sāyid Rashād Rihā). Though obviously these modernist views — styled by Goldziher "Kulturfreiheitsbemühungen" — have originated under the influence of the introduction of modern civilization, it cannot be said to have come under the influence of western thought itself. It has met with strong opposition from the conservative circles of al-Aṣbāb, the press organ of which is al-Aṣbāb.

Poetry (as literary form) has never abandoned the classical Arabic forms and, though several poets have earned renown in their time, it is, with few exceptions, largely confined to the old style for Western literary methods, the models of which have been made accessible by an extensive activity in translation. The first works translated were French scientific books for Muhammad 'Ali’s schools; since Sa‘īd Pasha’s reign a great many European scientific and belletristic works have been translated; e.g., the translation of French historical and geographical works by Rif‘a‘i Bey al-Tahtawi (1801–1832) have been much contributed to the spread of knowledge of European literary methods. Prose writing has seldom been used for the composition of novels and plays after European fashion. But there has sprung up an extensive semi-scientific literature on political and social questions, to which belong, e.g., the works of Ḥusayn Kamīl and the other nationalist literature; also the treatises on feminism mentioned in 4.

This literature has been published partly in the daily press and the numerous periodicals, partly in books; a large part has been contributed by Syrian and Jews.

In contemporaneous historiography the work of al-Dhahabi (q.v.) holds a prominent place; it was composed in the traditional style of historical writing. Later books on Egyptian history, such as Farid Bey’s history of Muhammad ‘Ali and Isma‘īl al-Aṣbāb’s history of Egypt under Isma‘īl (see the Bibliography), follow the methods of European historiography and use European sources. The above applies to the important historical and biographical works of the Syrian Ṣarghul Zaydān. In ‘Ali Pasha Mubarak’s Kāmil Zafarā (see above, 5), 20 vols., Bulāq 1840 (1839); Lord Cromer, Modern Egypt, 2 vols., London 1898; Sidney Low, Egypt in Transition, London 1914; W. L. Bell, Egypt of the Egyptians, London 1915; Schweinfurth, Auf unbekanntem Wege in Ägypten, Berlin 1923.
KHIDIR BEG, an Ottoman scholar and poet, the first judge of Constantinople. He was born on the first of Rabi’ I, 1380 = 6th Aug. 1407 at Siwârah, the son of the local judge Djalal al-Din and belonged to a famous family which traced its descent from Shihârah Najar al-Din. On the conclusion of his studies, which he conducted mainly under Mollâ Mehmed Yakha, he married his daughter he afterwards married, he became a judge in his native town, and later Müddere. He was next appointed professor in Brussa, then judge in Annieköl and finally called to a teaching appointment in Adrianople and after the capture of Constantinople was appointed its first judge. His sons were the Müftî of Brussa, Ahmed Pasha (d. 901 = 1495, buried with the Zeinûdî in Brussa). Sinân Pasha [q.v.] and Yakâh Pasha, judge of Brussa (d. 941 = 1486, buried in the mosque of Mollâ Fenâ). All three distinguished for intellectual gifts and considerable literary attainments.

Khidir Beg himself was a great authority on Muslim learning and had a wide knowledge of the literature of the three great languages of Islam. He composed a homiletic poem in Persian verse, al-Nûbâa al-‘Abbâdis [Stambul 1258, 52 fol. (q.v. 7, A., Ser., iv., Vol. iii., 1854, p. 222)] which has been often commented upon (e.g. by Dr.Âbd b. Mûhammâd al-Kârî, Cairo 1297, 87 fol.), and a number of other, mainly poetical works. Khidir Beg died in 863 (1458/1459) in Stambul, where he was
buried in the Eiyûb cemetery. He founded the little mosque of Hâdiçî Kâddû, called Hâdiçî al-Âliwâni, i. 85 sq. (with biogr. notes), cf. thereon: J. v. Hammer, G. O. K., ii. 62, No. 158. On his tomb cf. Hâdiçî al-Âliwâni, i. 218 sq. The village of Kâddû, opposite to Stambol on the Asiatic side, where Mollâ Khîrî Beg had great estates, still bears his name ("the judge’s village").

(Frânz Badinger)

Khîrî Khân, Saîlîyî, of Dîhi, founder of the Saîlîyî dynasty (1414-1451), was the son of Malik Sulâman, adopted son of Mîrâm Dîwâlî, one of the amir’s of Fîrûz Tughluq. Khîrî Khân succeeded to Mîrâm Dîwâlî’s sif of Mîlûnûn, but was expelled in 1356, during the usurpation of Nasrât Shâh at Dîhi. When Timûr invaded India in 1398 Khîrî fled to Mewât, but after the capture of Dîhi waited on the conqueror and received from him a grant of the sif of Mîlûnûn and Dîpsûlûn, where he remained independent during the remainder of the troubled reign of Mahommed Tughluq. On Nov. 12, 1405, he defeated and slew, on the banks of the Satlîj, Malik (Hîlûl Khân), Mahommed’s minister, who was attempting to recover Mîlûnûn, and having extended his territory towards Dîhilî, formed a party in the capital. In 1412 he unsuccessfully besieged Mahommed in Dîhilî, but returned in 1414, after Mahommed’s death, and besieged Dîwâlî Khân Êlûdî who had been acknowledged by the amir’s at Dîhilî as their leader, but surrendered the city on discovering a plot to admit the besiegers. On June 4, 1414, Dîwâlî Khân was imprisoned in Hîshîl-i Fîrûz, and was shortly afterwards put to death.

Khîrî Khân refrained from the use of the royal title and contented himself with that of Râžî-i Shâh ("the Exalted Standard"). He is said to have renounced tribute to Timûr’s son, Shâhrûk, to whom he owned allegiance.

He first recovered the revolted provinces of Katehr (Rahkhîjîn) and the Gangân Dîsh, and in 1416 he asserted his authority in Gwâlîor, suppressed a rebellion of Turks under Tağhû Ta’âlî in Sîrinînd, and relieved NÎgâw which was besieged by Ahmûd of Gudjûlî. In 1417 he completed the suppression of the rebellion of the Turks and in 1418 and 1419 was engaged in restoring order in Katehr. In the latter year a rebel who pretended to be Sârâng Khân, Khîrî’s ancient enemy, who had expelled him from Mîlûnûn, appeared in Mîkêwîrâ, but was defeated near Rûpûr and fled to the mountains, and in 1420 was put to death by Tağhû Ta’âlî. Later in the same year it was again found necessary to send an army into the Dîsh and Katehr, and Tağhû Ta’âlî rose in rebellion in the Sîrinînd district. In 1421 Khîrî Khân led an expedition into Mewât and to Gwâlîor, whence he returned by way of Istar. Here he fell sick and returned to Dîhilî, where he died on May 20, 1421.

Kullîa (Ar. "kulla", Arabic word derived from kullà’s to divest oneself of one’s robe), a robe from the wardrobe of the sovereign, which he no longer wears and which he bestows, as a gift, on the person whom he wishes to honour (SYN. tûfîf: pl. tûfîf). Ibn Khallûk, transl., iv. 117; Abu ‘l-Fidâ’, Anâ’isî, v. 59; Mâkhûfî, Kikvayî, quoted in Histoire de l’Inde, part 4, p. 70, note 18; Shâhâb al-Dîn, Masûlîk al-Ăhârî, in N. E., xiii. 370). This garment is of course rich and sumptuous and of great value. It is also given as a sign of investiture to an official. Sometimes a sum of money is given instead. Thus it was that in Turkey the name khîlî-at-bekâ, "the price of a robe of honour", when formerly given to a certain sum of money distributed to the officers of the Janissaries on the Sultan’s accession (Barbier de Meynard, Dict. turc., i. 709). The Mowarîns of Persia used to send a robe by a special messenger to governors of provinces whom they wished to honour and who wore it on special occasions. In return the latter treated the messenger handsomely and bequeathed presents upon him. In Central Asia these are made of cloth of gold of the ladies of Kashân, shawls, of silk of all colours. At the distribution, the individuals who receive this favour put on the khîlî. (Pers. and Turk khâlây) over the clothes they are wearing.

In Egypt, under the Mâlikîs, these robes of honour were arranged in classes (masâlik, nîrbe), according to the rank of the individuals for whom they were intended, and who formed three classes, (1) men of the sword, (2) men of the pen, i.e. officials in the civil service, (3) scholars. A sword enriched with gold was added to the present, taken from the sîx-khâhîs (arsenal) and hung with a hood of velvet, covered with a muskûb (Pers. hâshâb) covering of gold and red cloth from the shîx-khâhîs (royal stables). Fuller details will be found in the MâlikîÂhârî, quoted by Quatremère in L’Histoire des Mannouks, part 4, p. 72 sq., note and in Guadry-Demobney in La Série à l’époque des Mannouks, Paris 1925, p. lxxxix. sqq. — On the use of these robes as a sign of authority cf. G. Moloni, Scritti vari metallici, in R. S. O., iii. 1910, p. 533 sqq.; F. W. Buckner, Two instances of Khîlîat in the Bible in Journal of Theological Stud., xxiii. (1922), 197 sqq. — For India, especially Lahmaw, see Mrs. Meir Hassan Ali, Observations on the Moroccan of India (1832; 2nd ed. 1917), p. 149; F. W. Buckner, The political theory of the Indian Mutiny in Transactions of the Royal Historical Society, v. (1922), 81 sqq.

Khîlîa. [See Khîlîya].

Khîlî (See Khîlî).
flame (besa) which makes the Shii" said al-
Hujwiri "not the religious dress" (karfa). This
dress was the outward sign of the vow of poverty
taken by the Shii; it was originally as a rule
the colour of mourning. Certain mystics,
however, did not like to wear a special costume,
saying that if a distinctive mark of this kind was
adopted for God's sake, it was useless, for God
knows best what is; and if it is for the people,
one cannot escape from this dilemma — either
the veneration of the dervish is true and then it is
pure orientation, or it is pretended and it is hypo-
crisy. Nevertheless the distinctive dress was generally
adopted. It could not be obtained by the novice
until the expiry of the three years necessary for
his education. The investiture of the mureš bi
the kharfa by his tutor (Shaiikh, etc.) had a ceremo-
nial character. "The donning of the robe," says
Saizawardi in the *Andwir al-Maw'ruf*, in the
tangible sign that the man is entering upon the
way of truth, the symbol of his entrance upon the
mystic path, the sign that he is abandoning him-
selvelf and giving himself entirely in the hands of
the Shii". There are two kinds of robe: kharfa al-
atabā and kharfa al-hayra (robe of poverty and
will), which was the kharfa which the Shaiikh,
being fully conscious of the duties which this investiture imposes on the part of the
passive obedience to which one condescends in
accepting it; and kharfa al-tabarruh (robe of
benediction) given ex officio by the Shaiikh
to persons whom it is thought would be useful
to be mentioned in the mystic path, without their
fully realising the significance of the investiture.
The first is naturally superior to the second
and distinguishes the true Sufi from those who
only resemble them in external appearance." (E.
Robich, *Histoire de l'Ordre des Hidjama in Mus-
lims*, X, 1909, p. 176 et seq.)

*Khirka sherif*, the "sacred temple", the
name given to the dervish of the baṣíra
(Ordre d'Ordre) reconstituted as a relic and kept in
Constantinople. The day in which visiting it is a festival (the 13th Ramiḍ of each year). It was formerly
kept in a special chamber of the sarai, where it was
preserved in a chest of medium size covered by a green velvet cloth with a broad fringe of
gold and silver. The ceremony of the pilgrimage
was performed in the following manner. On the
appointed day the ministers, the ulema, the
generals of the janissaries and of the other troops,
met on the evening before by letters carried by
the post, assembled before midday prayer in
front of the gate of bliss (baṣir al-Sabab), the
second gate of the sarai; the ministers and the
ulama seated themselves on the right, the soldiers
on the left and awaited the arrival of the grand
vizier. The latter, as soon as he had been informed
of the arrival at Ayasofya of the Sherif of the
Baṣir, brought the *baṣir al-Kaṭiri*, prepared specially
for the purpose. Together they all performed the
midday prayer and proceeded there-
after to the imperial palace.

After having passed by the *ord-ord-ay* and
having obtained permission to proceed, the pro-
cession entered the chamber of the *Khirka sherif*.
The first and the second janissary of the Sultan
seated themselves before the chest containing the
robe, and each recited an "n'hi" (tenth) of the Kur'ān.
The Sultan, in person opened the chest and autho-
rised those who were with him to place their
foreheads (jina sar-dubuk) on the relic, first the grand
vizier, then the Shaikhs of Islam and the other
dignitaries, after which each one returned to his
place, where he remained standing. The shaikh
(heads of religious orders) placed themselves before the chest, and prayed (wā'iqah) and placed their foreheads on the relic. They went out with the
same ceremony and mounted their horses outside
the *ord-ord-ay* (the middle gate). This rite was an
occasion for distributing pastries called bawdzah to
the Janissaries and to the other troops.

The relic is a mantle with long sleeves, a white
cotton caftan. After the reception was finished,
the grand vizier and the general of the *shabash-
awi* wiped it with a piece of muslin (bawdzah) and
gave this muslin to their followers. Then they
washed it in a golfer of gold the spot where the
forehead had been placed and dried the wet spot
by fumigations of fumes and of ambergris.

In 1265 (1654) the mantle was moved to a
mosque specially built for it by the Sultan Mihali,
the mother of the Sultan 'Abd al-Madjli. This
monument which 'Khirka sherif dawwa stands
in Stanbol in the Yeail woods quarter, to the west
of the monument of Fāhr on the south slope of
the fifth hill. Situated in the middle of a large garden
enclosed by a railing of iron, it is a type of
construction unique in Constantinople and marks the
tendency to follow European models; for it is the
application of ironwork to the construction of
religious buildings. It is an elegant octagonal
building surrounded by a cypresses and flanked by
pavilions to which it is joined by glass galleries.
A beautiful border of iron runs along the roof.
A fluted minaret supports a light balcony of
hammered iron.

*Khita*. (See *Kara khita*).

*Khitān* (A), circumcision. According to the *Kitān al-Arāb*, v. *Khitān*, the term is exclusively
used in connection with the circumcision of males,
whereas in the cases of females *khitāt* is the proper
word. If this statement should be exact, the
expression *al-biṣḥuš*-*ha* means "two circumcised parts" (i.e., that of the male and that of the female) would be a dual *al-biṣḥuš*. This expression occurs in the tradition "*if the two circumcised parts have been in touch with one another, they are not necessary" (Bukhari, *Sahih*, Bk. 28, Muṣtin, *Han-
authul, 88; Abu Dáhī, *Fāṭih*, Bk. 81, 82).

Some words connected with the root *kh-tn* denote the father-in-law, the son-in-law, the daughter-in-law (*al-biṣḥuš*, *harba*), or marrying (marriage). Some of
these words must have belonged to the primitive
Semitic language, as they occur also in the same
or cognate forms in north Semitic languages. We
shall have to discuss the relation between this
class of ideas and *circumcision* below.

_Circumcision_ must have been a common practice
in early Arabia. It is mentioned, not in the Kur'ān,
but in old poetry (I am indebted to F. Krenkow's
kindness for references to the Dynasties of the Hudaib, to Farasand and other poets) and to busall. The early language has also a special word for "uncircumcised" (agaioi, Hebrew 'orei).

In busall it is said that Israil was circumcised in his 8th year (Bukhari, Anbiv, b. 8; Muslim, Faddl, tr. 151). This tradition is based on the Biblical report. Ibn Sa'd has preserved a tradition according to which the patriarch was already circumcised at the age of 13 (Tahzib, II, 24).

This tradition is apparently a relic of the practice of circumcision in the first centuries of Islam. We may confront it with the statements concerning the 'Abda of the Prophet. According to some traditions (Abd al-Malik b. Hanbal, l. 273) he was 15 years old when Muhammad died. In other traditions it is said that he was already circumcised at that time (Bukhari, Istiklim, b. 51; Ahmad b. Hanbal, l. 264, 287; Tafsir, N°. 2639, 2640).

Circumcision is mentioned in busall in the story of the Emperor Bithuris's, bones. Herodotus relates how the emperor the message of "the king of the circumcised.

Then and there an envoy of the king of the Umayyads arrived who announced the death of Muhammad's preaching of Islam. This envoy appeared to be circumcised and he informed the emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in busall that circumcision belongs to the pre-Islamic institutions. In the traditions which enumerate the features of natural religion (safsitra) circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of moustaches, the use of perfumes, the use of perfume bottles. Perhaps the custom of circumcision is implicitly understood here. In a tradition preserved by Ahmad b. Hanbal (v. 15) circumcision is called muumna for males, honourable for females. The custom of circumcision is also testified by the nickname "the muqattat al-abshur, i.e. "son of the woman who was circumcised as a female", which is given to some Muslims.

There are differences between the several verbs of the verb "circumcise" concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage at Nawawf in his commentary on Muslim, Tahâh, tr. 50 (ed. Cairo 1883, L 325) has devoted to the subject, also because it contains a description of the operation.

"Circumcision is obligatory (mu'afsa) according to al-Shafi'i and many of the doctors, synonymous according to Mâlik and the majority of them. It is further, according to al-Shafi'i, equally obligatory for males and females. As regards males it is obligatory to cut off the whole skin which covers the clitoris, so that this latter is wholly dememarated. As regards females it is obligatory to cut off the skin in the highest part of the vulva. The sound (muqâl) view within the limits of our school, which is shared by the large majority of our friends, is that circumcision is allowed, not obligatory in a youthful age, and one of the special views is that the skill is obligatory to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is mu'afsa (recommended). Further there are two views regarding the question whether in the "seventh day" the birth is included or not."

The treatment of circumcision has not a prominent place in the books of law. More important, however, is the view attached to it in popular custom. "To the amalated mass of Muslims" says Snouck Hurgronje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstention from pork together with circumcision, have even not become to a certain extent the criterion of Islam. The exaggerated importance of the two precepts finds no support in the law, for here they do not even stand on the same level with numerous other precepts, to which the mass attaches less importance." (De Is- lam, Baarn 1912, p. 501; Verkr. Geschichten, I, 402; cf. IV, 377). In Java circumcision is generally considered as the ceremony of reception into Islam and therefore sometimes called nizamul-badkashih (rendering Muslim). Apart from this term many other words denoting circumcision are used on Java (v. L, IV, 205 sqq.).

In Atchi circumcision of infants only is considered as the ceremony of reception into Islam (Snouck Hurgronje, The Abuhassan, I, 398). The importance attached to circumcision appears also from the tradition according to which Muhammed was born circumcised (Ibn Sa'd, Tahâh, l. 64). In North Africa a child born with a short foreskin is considered as a blessing (Doutte, Marrakech, Paris 1905, p. 3-3).

At Makka, where the rite is called jebur, children are circumcised at an age of 5-7 years, girls without festivities, boys with great pomp. On the day preceding that on which the rite will be performed, the boy, who is clad in heavy, costly garments, is paraded through the streets on horseback, several footmen walking on both sides in order to prevent him from falling and to refresh him by means of a perfumed handkerchief. He is preceded by men with drums and drums who accompany the al-sabir's song by others. Nearest to the boy goes an elderly black household of his father's, bearing on her head a hazire burning with charcoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of maw and comes back to its starting-point a little before sunset. The female members of the family pass the evening with their friend; the party is enlivened by female singers.

Next morning, at sunrise, the bedroom performs the operation. The foreskin is pared off together by means of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which is usually healed in a week. The operation is followed by a brief fast. It is to be observed that Hajjami is who still clinging to their native customs, circumsice their children on the 40th day after birth (Snouck Hurgronje, Mekka, l. 344 sqq.).

In Egypt boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and
attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kercel is used to cover a part of her face; and in order to prevent the public from seeing her, in black le is preceded by musicians. The first person of the procession is usually the servant of the barber (who performs the operation), who bears his saw, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and ivore, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lane, Manners and Customs of the Modern Egyptians, Chapter on Infancy and Education).

D'Ohagne in his Tableau de l'empire oumman, Paris 1787, vol. 531 sqq., describes circumcision as practised in Turkey under the heading “Circumcision, sanât,” a designation which is also enshrined in the word sanât-kâli for the barber who performs the operation. It takes or took place in the presence of the uncle of a teenager who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of D'Ohagne's work shows children dressed for the ceremony; plate 21 adorned victims who are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D'Ohagne gives a translation of Mahomet III letter of invitation to the dignitaries on the occasion of the circumcision of the circumcision.

In North Africa boys are circumcised at age varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Izaq, as cited by Douttil, Merkadya, p. 33, at Algier a stone knife was used for the operation. Nowadays this custom seems to be no longer known. It reminds us of Joshua v. 2 sqq., where it is said that the foreigners of their entering the Holy Land were circumcised by means of stone swords or knives; more populations of the Dutch Indies also use a stone knife of the operation (Wilken, p. 222).

In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest being the express of the ceremony.

On Java circumcision of boys is often combined with the shatara or kalimudh ceremony. On the different designations of circumcisors in this part of the Archipelago, see Snouck Hurgronje, Forschungen Geschichten, iv, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14-15 years) than in circles which are in closer touch with Muslin law (10 years or younger). Before the preparations begin, the boy is taken in the tomb of his father or ancestor, where flowers and incense are offered and prayers performed. Then a part of his (harem) is made before the feast or pesta, and a small room (kubang) is prepared where the operation is to take place. In this room several objects and dishes are prepared which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several categories of awe-inspiring beings. Festivals such as wayang, layakan, gandeng are preceding of follow the ceremony. The gandeg always takes place in the preceding night and follows upon karman, the recitation of some chapters of the Karim by the boy.

On the day preceding circumcision a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of ears which have the forms of ago's or other animals. They wear the bedouin's dress, and are hung with gold and diamond ornaments, the visible parts of the body being smeared with hark. This occurs also that the boy wears the hindu's dress. Just as in North Africa poor parents have for their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a vasri who has many children, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgronje, Forschungen Geschichten, iv, 205 sqq.

Girls are not always circumcised on Java. The ceremony is called suna (sunas), whereas the Sundaneses en it by the word “ringing of teeth,” a fictitious filling of teeth takes place the day before circumcision. Girls are circumcised on Java at an age varying between 2 and 8 years. During the last decade the ceremony has been covered under a mysterious veil in some circles. Parents, however, who cling to the suna, do not share this tendency.

In Achiin boys are usually circumcised by the musfin (probably = musfin), at the age of 9 or 10 years, immediately after finishing their Karim study. The operation (for details see Snouck Hurgronje, The Archipelago, i, 399 sq.) consists in a complete circumcision; for some parts of Java it is rather an incision. The boy here also has to diet himself. In Achiin the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy, e.g. to arrange a krama’s performance or to visit a sacred tomb. In this case the boy, dressed as a bride, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Girls are circumcised in Achiin soon after the jetan (the ceremony of taking the child from the house into the open air for the first time), consequently at a very young age. The operation is performed without any further ceremonies; even the father does not know when his daughter is to be circumcised.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literature, the Egyptians, the Arabs, the Jews, the Egyptians, the Romans and Amazons (see Jeremiah, iv. 25). In the Indonesian Archipelago it was already practised before the rise of Islam in that part of
The laws mentioned above may be arranged in certain groups.

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other. It may be observed that among some Muslim peoples girls are circumcised at a younger age than boys, and with less or hardly any festivities; often the circumcision of females is covered with a veil of mystery; sometimes no males are allowed to assist at it (Wilken, Vortr., Gelehrtenkongress, iv. 235).

A. The rite is sometimes repeated (Wilken, loc. cit., p. 207). In the Muslim world we have the instance of Malayans who in their country were not circumcised in the way prescribed by religious law and submitted to the operation a second time when arriving at lpidza for the pilgrimage (Scoones, Hargreaves, Medea, ii. 312).

The children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair (Cahen, et Donu, Merrick, p. 351), the filling of teeth, the use of the yoni-vessels of the K'uru. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter-of-fact evidence, are supplemented by reports of travellers. In Central Arabia, it is said (e.g. Batamini, Ribbi, p. 213, note), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation, if he utters a cry of pain the projected member is abandoned (Scoones, Hargreaves, Medea, i. 141). From a report of the passage just referred to, it may, however, be seen that the author doubts whether any of the travellers' reports is based on eyewitness; according to him they are handed down by townspeople. Be this as it may, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated on the lap of a woman who has many children (see above and Wilken, loc. cit., p. 225).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g. the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, loc. cit., p. 220); the value attached to circumcision as the ceremony of reception in to the Muslim community; cf. the Old Testament designation of circumcision as the "inward circumcision" (Genesis xxii.; see also Wilken, loc. cit., p. 227).

4. Many accessory rites express the intention to avert dangers: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt, the drums and sacrifice, the recitation of prayers; possibly the display of charity and the slaughtering of victims may also be viewed in this light.

In the literature on the subject different views regarding the origin, the original significance and the gradual extension and modification of the rite are to be found. For several reasons it seems unnecessary to review these opinions here. An exception may, however, be made for Wilken, who bases his opinion partly on that of Ploss, and for van Gennep (Les rites de passage, Paris 1909, esp. the fourth chapter).

According to Ploss the rite is meant as a surgical operation, serving to remove or to prevent phimosis, as it was believed that this anatomical deviation and perhaps the foreskin in general, was an impediment to the sexual function. Consequently the operation could take place at any age before marriage. Ploss' theory seems to find support in the reports of some travellers (Wilken, loc. cit., p. 224 sqq.). Wilken combines this view with an extension in the religious direction. If the aim of circumcision was the promotion of fecundity, the rite became a religious one, because begetters was a precept of religion among many peoples.

Ploss' and Wilken's theories do not regard, as may be seen from the short resume just given, the circumcision of females. According to Wilken the rite is in this case originally nothing but a surgical operation serving to prevent abnormal deviations of the genitals.

These theories are open to several objections. The conjecture of a different meaning of the rite in the case of males and females, can only be admitted if a common explanation appears to be impossible. Further the rite is practiced among peoples who do not know of a connection between sexual intercourse and the birth of children. Another objection regards Ploss' and Wilken's method as such. It may be observed that so many ideas into the origin and development of widely spread rites such as the one in debate, has scarcely ever led to satisfactory results, because such rites, if they may have originated from one clearly definable idea at all, sooner or later have become receptacles of other more or less cognate ideas; a process which has covered them under such a mass of tangled-wood that it is no longer possible to find a thread of evolution.

During recent years ethnologists have, therefore, given up the genetic method, in order to return to the descriptive one, hoping thus to be able to set the important sides of the rite. In the best light. This method has been applied to sacrifice by Hubert and Mauss, to circumcision by van Gennep.

In his Rites de passage van Gennep has shown that a great many rites may be described as rites of transition from one state of life into another one. Circumcision must be placed on the same level with the first shaving of the hair (Cahen), the filling of teeth, with initiations of various kinds, etc.

This point of view accounts for many of the features of circumcision mentioned above. It accounts for the fact, that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that it shows a deeply rooted connection with marriage; that it is considered as the rite of reception into a religious community;
that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions and so on.

(A. J. Waddick)

KHYWA. [See KHYRAN.

KHLOT, an Arab tribe of Northwestern Morocco. Its name in literary Arabic and in modern Arabic is Khol. In his famous book of regular metathesis, but the primitive form of the word is found in the adjective Kholi bin Kholti.

The Kholt who came into North Africa with the Hilali invasion in the fifth (eleventh) century formed a part of the group of mixed Arab elements, known as the Qarawiya from the name of the ancestor of one of them. According to Ibn Khaldun and other Muslim historians, the Kholt were the Banu 'Aqil al-Murtada. In Little Africa, the Kholt spread through Central Maghrib, settled there and took part in all the fighting which devastated Barbary. After the Almoravid conquest, they tried to rebel but were quickly put down. A little later, the Banu Qa'iyah rivals of the Almoravids, had no difficulty in getting them as allies after the taking of Bougie [q.v.]. But the Almohad Caliph al-Mansur, who was his enemy, repulsed their Arab allies and transported the Qarawiya to Morocco to the coast of the Atlantic. The Qarawiya settled in al-Hulayt and al-Gharbi, the Qarawiya in al-Tamanet (the present Shawia), a country which had been empty since the extermination of the Berber Berghayas by the Almoravids. Al-Mansur thought he would settle these tribes permanently and make them auxiliaries for the jihads in Spain. His attempt was doomed to failure.

Under the successor of al-Mansur, the intrigues of the Almohad Shaitans found excellent allies among the Qarawiya (Kholi and Safiyya) and the jealousy between the Kholt and Safiyya aggravated the internal dissension still further. In 1224 (822/23 AH), the Kholt took the side of the pretenders al-Mu'min against the Caliph al-Mu'ayjid supported by the Safiyya. In 1225 (828/29 AH), al-Mansur was proclaimed Caliph. In 630 his son al-Radiq succeeded him but he was forced to take strong measures against the chiefs of the Kholt on account of their robberies and other misdeeds. The Kholt rebelled and took the side of the pretender Yahya b. al-Najj. The Safiyya made peace with al-Radiq. They attacked the Kholt on the banks of the Oum al-Rabi and wrought terrible carnage among them. The Kholt, in return proclaiming as Caliph the pretender Isma' Hadda al-Arabi. But al-Radiq proceeded and routed them, took their chief prisoners and beheaded them (635 = 1237/38). Weakened and compelled to submit, the Kholt took part in the expeditions of the Caliphs but their rivalry with the Safiyya was not extinguished and proved fatal to the Almohads. In 1249 (848/89 AH), at the siege of Damietta held by the Egyptian emperor in the winter of 1249/50, the rivalry resulted in the death of the Caliph al-Said and the defeat of the Almohads.

The rise of the Mauritides in Morocco again made the Kholt feel the hand of the conqueror. Sultan Abu 'Abd Allah took steps to punish them for their rebellion (707 = 1308), but he used their help to destroy the power of the Riyah Arabic. The Kholt, installed in the latter's territory, in Aqzil and in Hulayt formed part of the madhhab [q.v.].
The numbers enumerated in India at the Census of 1891 (Census of India 1921) were:

The Pandjhas Khodjas do not own allegiance to H.H. the Aga Khan, but hold religious beliefs similar to those held by the Bombay Khodjas (Census of India 1921, vii, p. 150 sq.). They are, like the Bombay Khodjas, converted Hindus, who are mainly engaged in commercial occupations, but they have some inns in Hindi and follow Hindu customs.

Allied to them are the Panji, a parcel of whom there are about 6,000 in the Punjab. The Pandjhas Khodjas derive their origin from Khodja Saiyid Sadr al-Din, who came in the 15th century as an Ismaili preacher from Khurasan and lies buried in Trinda Gurgal in the Pakchit of Gohławat in the Bahawalpur State. He presented his doctrines to the Hindus in a form which would appeal to their Hindu traditions. It is reputed to have been the author of the Dar-Ashtar, in which the missions of the Prophet Muhammad are depicted in the Hindu scriptures as being foreshadowed in the Hindu scriptures. The first five incarnations are treated as a Hindu would treat them. The tenth incarnation (Shri Sita Ramdas, "unspoilt") which the Hindus expect in the future is described as having materialised in the unrevealed Isma'il of the Tehsil. Both the Dar-Ashtar and Sadr al-Din’s hymns are used up to the present day by the Pandjhas Khodjas as well as by the Aga Khan's Indian followers and their offshoots in East Africa. For practical guidance the Pandjhas Khodjas look to the Talkis and Catsbya sects and other sects, whose religious beliefs are not, however, necessarily identical.

The Khodjas of the Bombay Presidency and their offshoots in East Africa form a much better organised community and are in direct touch with H.H. the Aga Khan. Their religious ideas are in origin the same as those of the Pandjhas Khodjas, but their living contact with the Isma'ilis in the period of the Aga Khan has isolated them from the influence of Muslim religious orders. Several have taken place from their ranks from time to time, but notably in the seventh decade of the 19th century, when a section of them attempted to declare the whole community Sunni, and more recently, in 1904, when a small number under the leadership of men educated on Western lines declared themselves to be Khudaamabadda (q.v.) Shias (what may be called the orthodox school of the Shias' faith). They have built a separate mosque and made a separate burial ground in Bombay (called the Akhun Bigh), but they maintain social intercourse with the main body of the Bombay Khodjas.

The Khodjas are mainly governed by customary law. The Bombay High Court has held (1847) that the Muslim law of succession does not apply to them and that, under Hindu law, their female relatives are excluded from immediate succession (Sayam Man Ali's case; cf. Sir Erskine Perry, Cases Illustrative of Oriental Life and the Application of English Law in India, London 1853, p. 170).

The Bombay Khodjas have a tradition of an

Her that Sadr al-Din, viz. one of the Dervish Gurus, who is supposed to have lived in the 12th or 13th century of the Christian era. About 1591 A.D., their Indian Ascot, 'Abd al-Salman, wrote in Persian, 'The guidance of the Indian Khodjas', a book called the Pandjha Zivkaz. This book, which was called the Church of the Khodjas, and which in its old Sindi form is revered as the 26th in the list of Khodja Piras or saints (cf. with this the personification of the Sikh scripture as the Granth Sahib).

The marriage, divorce and funeral customs of the Bombay Khodjas are different from the general law and customs of Islam. The marriage customs have traces of ancient Hindu ceremonies. The actual nikah ceremony, used until recently to be celebrated by Sunni khans. A marriage certificate in due form is issued in Gujrat, with the names of the four archangels, Jiblal, Isfand, Garib, and Mika'il, in the four corners.

No divorce is permitted without the gnawer's sanction, and the gnawer's usual requirement is that of both parties. A second wife is not allowed in the life-time of the first without the gnawer's sanction, which is, however, usually granted if Rs. 2,000 are deposited for the first wife's maintenance. A curious custom followed on the approach of death is that of samkarshap or the sprinkling of holy water to the reading of the Damar Ashtar.

The organisation of the community is in the form of a complete local centralisation round the sacred person of the Aga Khan, but of complete congregational independence in administrative matters, including even questions of succession. Every congregation has its own jamaatkhana (pronounced in Gujrat, jamaatkhana), which is both a meeting house and a mosque. The officers are the muhadd (treasurer, chairman) and the bashaw (secretary, assistant). They are sometimes appointed by the Aga Khan, but are frequently elected. Offerings for the Imam are collected through them: these comprise the fixed Darsat (or tithe (the Momin to split from the community in the 16th century and mainly on their refusal to pay this) and various minor dues on special occasions, either receiving (as the festival of the new moon) or occasional (as the sites of birth, marriage, burial, etc.).

Very little is known of the present day organisation of the followers of the Aga Khan in Persia, Central India, or in the North-West Himalayan frontiers. In point of doctrine they keep to the pure Isma'ilyya (q.v.) doctrines (see the art. ISMA'ILIS) of the Nizari branch, as opposed to the Musall'A branch of the Egyptian and Arabian Musall'A and of the Bohrani of India, who are derived from them.

KHODJA EFENDI, SAD'D AL-DIN a. HASAN DUN I. HABIB MUHAMMAD b. HABEEB ELI AL-DIN EL-QARNINI, usually called Khodja (Sad' el-Din) Efendi, a famous Ottoman historian and writer al-Tabriri. He was born in 943 (1536-1537) in Istanbul, the son of a certain Jibril Efendi who had immigrated from Persia and served as a chamberlain to Sultan Selim I during the last seven years of his reign. Hasan Efendi told his son all sorts of anecdotes of the life of the Sultan which Sa'd al-Din worked into a Selim-name and then added it as an appendix to his famous history (III. 241-401) (cf. Fertig, Tabir-i Haz. Berlin, p. 243, No. 212; Flügel, Gesch. des Islam, in Wien, i. 310, No. 987; thronen J. v. Hammer, G. O. E., ii, p. vi. 101; ii. 643; ii. 203, 59, and his Lettere e suoi orientali in Bibliotheca italica, ii. (1826): the Selim-name was translated (with- out the introduction) into German by H. v. Dressel, Denkwürdigkeiten aus Alten, I. 390-502 [Berlin 1831]). Sa'd Efendi had associations with the famous historian Ali ibn Subuh (1531-1556) and was the pupil of the famous jurist Abu 'l-Sa'd al-Razi, in Damascus, 981 (1572-1575) tutored Khodja Efendi, whom his popular name, the one by which he is still generally known) to the heir-apparent Murad, then governor of Magnesia. On the accession of Murad III in Dec. 1624 he remained his trusted adviser and retained the rank of Khodja, viz., tutor to the Sultan, under Murad's successor Mehmed III. In Selah 1006 (1590-1591), he became Sa'id al-Din and died in this office two years later in Istanbul on 12 Rabii 1, 1008 (Oct. 2, 1599), just as he was preparing to celebrate the birthday service ( harming ) in the Aya Sofya. Four of his five sons, with whom attained high rank (Malinos cf. Shipkova, ed. 1744, and Mehmed Aksal, cf. ibid., i. 350 sqq. becometh Malinos, and Ahd in the Acebuch, Alf. 1751). Sa'id Efendi, together with Khabar Aches, and Sibhi (cf. ibid., ii. 390 sqq. high seeker, Ma'ulad Mirdas, young as "guardian" (cf. ibid., i. 365 sqq.), bore his father's coffin to Ayleh, where he was buried in the school for the recitation of the Koran.

Sa'd al-Din was the author of the famous Ottoman history known as the Tabir-i-Turkı, which although not written by the imperial command (S. was not the so-called imperial historian, Wed's Nawi, ed. Abu Micol. see anem, Gerber, i. 241), is still generally regarded as an authoritative source for Ottoman history and not only consulted all earlier chronicles of the house of Ottomans, called Turkı, but also constitutes all earlier chronicles of the house of Ottomans, called , to oblivion, but even made them appear contemptible (cf. Haidji Khadir, Akb. al-Turkı, i. 112, No. 2158, and J. H. Mordieman, in B. L., x. 160). Sa'd al-Din's work dealt with the history of the imperial Ottoman house from its foundation to the death of Selim I (Ed. 21, 1520), copying from the earlier historians and written in a style often bombastic and extravagant. The work was finished in the reign of Selim II (1560-1574) and was strictly speaking intended as a supplement to the Persian Mīrzā Muhammad al-Muqaddas al-Qārkī, of Muslib al-Din, Muhammad al-Lūlū (d. 579 = 1571), which Sa'd al-Din translated into Turkish (MS. in Vienna, cf. Flügel, ii. 80, No. 5433), was disseminated and read in numerous manuscripts until it was made generally accessible in a printed edition in 1279 (1861) in two large volumes (586 and 519 pp., 500 f. J. F., 1863, ii. p. 262). MSS. of the book were oftentimes produced (e.g. one in the Vatican) are common to European libraries. The most important and most interesting for a student of critical studies may be mentioned: Berlin, No. 3573; London, No. 6. 886; Leiden, Cat. No. 37; London, Rien. Cat. Turc. MSS., p. 335 sqq., Malind, Bibliotheca, No. 3243; Munich, No. 76-81; Oxford, Cat. No. 61, 71; and Paris, No. 62-79; St. Petersburg, Uni-Bibli., No. 1 and 2; Cat. von C. Salamenti and V. v. Rosen, p. 21; Rome, Vatican, a splendid MS. formerly belonging to the Swedish Queen Christina (cf. J. v. Hammer in Biblioth. ad., ci. 41, 113 and P. Horn in Z.D.M.G., ii. (1867), p. 45 sqq.; Uppsalas, No. 243; Vienna, Bibli. Nit. Marciana, No. 30, 85, 1345 and 1344; Vienna, Nat-Bibl., Flügel, ii. 214; Komarini-Akademie, A. Karafi, Litt. in Wien, i. 310, No. 265. — The book found early recognition in the west and parts of it have been frequently translated; cf. W. Schawer, The Reign of Sultan Orkum, London, 1652; N. Brusatti, Chroniche dell' origine e progresso della nazione ottomano comperata da Selim I (Turc., part. i, of Vienna, 1849, Madrid 1652 (cf. W. B., 1910), 110 and lit., xlii. (1822), 226 sqq.). Sand endl. Annales Toscans ouvrent à M. Tietzen a Latine card. J. Kolb, Kolb, Vienna 1755, foll. incomplete, cf. Pernitz, Türk. Hist. Berlin, p. 243, note IV. 401, xlii. (1919), p. 115 sqq. parts transl. by J. H. García de Tansy in J. A. iv. 347; vili. 300. 301, xii. 155; The Capture of Constantinople, ed. E. J. W. Gibb (with a biography of Sa'd al-Din), London 1879.

A MS. of a French translation of the Todi al-Turkı was prepared by Antoine Gaultain in 1710; the MS., the first volume of which seems to be lost, is preserved in the Bibliothèque Nationale Paris as MS. anc. fr. 6074.

Sa'd al-Din's son, Mahmud Aksal Efendi, is said to have continued the history written by his father; cf. Russel Mahmud Tasir, Daghstan-en, 22 sqq., Hidji Sabri, Istanbul (unprinted, Vienna MS., No. 1228 = Flügel, ii. 378, cf. Z.D.M.G., iv. (1860), 544 sqq; ill. 127 v. 4. (cf. Flügel, ed. cit., xii. 378, sqq.; Mahmud Tasir, Daghstan-en, ill. 18 sqq.; J. v. Hammer, Geschichte der usarmen, Daghstani, 98, 99, d. G. O. E., i. 306, i. 287, ii. 262-269; Hidji Khadir, Khatib in Daghstani, xii. 21, 2045, xii. 215, 615, xii. 7, 7444; Hidji Sabri, (biography of the Makh), Istanbul 1834, p. 424 sqq. (with specimens of MSS. and Pente of Sa'd al-Din; his two
KOHLAND, Arab. Khawāzand, later written Khooland (which is given a popular-stingly, xîb + kand = town of the bow), a town in Fargānā, cf. above, II, p. 64, 66 where see also for the other spellings and the foundation of an independent Ozbek kingdom with Khooland as capital in the twelfth-thirteenth century. The accession of the first ruler Shahrishk was followed by the building of a citadel; another citadel later called Eski Ushā was built by his father, Abd al-Karim (d. 1746). Abd al-Karim and his upholder and successor Irdinār sit are several times mentioned in the history of the Attila Muhammad Rahim, afterwards Khan of Bukhārā (d. 1759, cf. 1, p. 782, Mal). Irdinār, Falak al-Anār, M. S. of the Anat. Mus., 2, 281 (especially fol. 33 v, 1435 v, 1787 v). When the Kulman empire was destroyed and the frontiers of the Chinese empire advanced up to Fargānā (1758), Irdinār also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klejnke, Magazin für Asiatik, 1, 1829, pp. 81 sqq. from the Tāz rāza-yi Isfand, Irdinār was later a member of a coalition of Muhammadan rulers of Central Asia, which called itself Almājī Shīḥ Kūntū (cf. I. p. 169, 202 sqq.), the ruler of Afghanistan, for help against China. The alliance had no further results, although Almājī Shīḥ in 1763 appeared in Turkistan at the head of an army and occupied the territory between Kohtān and Turkistan (at the same time an invasion of the land of the Kān-Kirgin was made from Khooland, Klejnke, op. cit., p. 85), but he had soon to retire against the account of the claims of his enterprises in other directions. Abd al-Karim's grandson, Nār Būra Beg (probably reigned 1188–1233 = 1774/5–1798/9, cf. L. Zimin in Forschungen Turkei, Knjaža Jugoslavie, xviii, 102, and Waldow, ibid., xx, 112 sqq.,) was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian general, Filipp Yermezov, who was taken prisoner by the Kirgis in 1774 and sold in Bukhara and in 1782 returned to Russia via India and England. According to his travels (V. Yermensow, Strueltreuewysa u Bokhara, Kütuh, Perti in Judit 4, (St. Petersburg 1794, p. 50 sqq.), Nārbūrā was already entitled Khan "by the Chinese," was allied with China and at enmity with Bukhārā. No mention is made of prominent buildings in the capital (the moderate Altī was built in the reign of Nārbūrā; on the other hand, a high pillar (apparently a minaret), said to be over 250 feet high in the market-place in Marghūna, is described. According to Filipp Narasow (see below), this "tower" was visible for a distance of 50 versts (over 30 miles). Nārbūrā's two sons, 'Alīn and 'Umar, are the real founders of the state and city of Kohtān as we later know it. The chronology of these reigns (1185–1227 = 1795/6–1821/2) is not sufficiently established; even the year in which 'Alīn was assassinated and 'Umar raised to the throne is variously given in the sources. According to the Turkištā Shahrishk (cf. Pantsov, p. 106) 'Umar died in the year 1227 = 1821/22 (in the cycle reckoning the year of the horse = 1822 is given); according to Nalšikin (Russ. original, p. 101, French translation, p. 123), who here follows another source (the Memāliḵ al-Mulk al-Qawā'id fī Ḥukm Khan, 'Alīn was not murdered till the spring of 1232 (i.e. 1811, not 1810 as in Nalšikin), on the other hand Nalšikin himself in another passage (Russ. orig., p. 153, French transl., p. 225) puts the building of the chief mosque of Kohtān by 'Omar Khan in 1321 (1815/16). The Russian interpreter Filipp Narasow, who was in Kohtān in the winter of 1813/14, calls the ruler of Kohtān Amir Wallanā (Zapiski pevstva eurasiiskh narodov, 2, St. Petersburg 1821, p. 59 sqq.). This is probably for Wallat al-Wallā, not Wallat Myanis, as in Klejnke, op. cit., p. 43. The ruler at this time was only twenty-three years of age; this statement can only refer to 'Umar, not to the much older 'Alīn; according to 'Abd al-Karim al-Bākhārī also (cf. Schelkus, p. 102), this embassy and the words of it (the master of the Kohtān envoy by a Russian soldier in Petrograd) both took place in the reign of 'Omar Khan. According to 'Abd al-Karim, p. 99, 'Alīn had already been killed in 1224 (1829), which cannot be right, as we have a document of his dated Dhu l-Qa'da, 1, 1225 (June 1225) (Forschungen Turk-Streifen, Samml. Arbeids, iii, 165, sq.). The change of rulers must therefore have taken place between 1810 and 1813. In the oldest known document of his reign, dated 1213 (1728/9), 'Alīn still regards himself as the representative of his uncle Khan; later he appears as an independent ruler with the title Khan or Amir after the conquest of Tākhān, his power was at great as that of the Anu of Bukhara. In 'Omar's reign in 1814 (cf. Narasow, I. p. 110 sqq.; French transl., p. 134 sqq.), the town of Turkistan with the parts of the Kirgi steppe.
belonging to it, was incorporated in the kingdom of Khojand. Omar therupon took the title of "Amir ul-Muminin. There were several wars with Bashkirs regarding the possession of Ura Tobe in the reign of both "Amirs and "Omars. The town indeed remained a bone of contention between the two states right down to the Russian conquest. The memory of the Kalb-Asili allah is said still to survive in the children's game "Ura Tobe is mine" ("Loz' Nasamolov) (I., 1913, p. 195).

"Omar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, "Amir had made up his mind to break the power of the Ozbek families and therefore surrounded himself with mercenary troops from the highlanders of Karategin, Darahz and other lands (Trekobi Tarkhizi, p. 42-3). The war against the neighb was as frequently elsewhere, combined with a war on the clergy, especially the dervish orders; the historians on this account describe "Amir as a godless tyrant (gulim); on the other hand they praise the piety of "Omar, who, as the present lord of Bashkirs, has it his pleasure to perform the prayer twice a day. Ozbek, who is also used as a modern and therefore is known as Medrese-i Ozbek" (picture in Fr. v. Schwarz, Turkistan, Freiburg i. B., 1900, p. 239). "Omar was also fond of poetry and wrote poems himself under the pseudonym (nehbabi) Amir; verses by the Khan himself, his officials and favourites were collected in a special anthology (afterwards printed) entitled Mevridat al-

In spite of the great extent of his kingdom, the authority of the Khan was not firmly established; his vicious life and cruel rule had aroused general discontent. Near Allah, Ann of Bukhara (q.v.), is said to have been asked by people in Khojand itself to put an end to the rule of this blood-thirsty and godless tyrant. The Khojand army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom), Madali was killed while trying to escape (1258-1262). The conquerors were driven out again in the same year and Shir "All, a cousin of "Ali and "Omar, was placed on the throne; but down to the Russian conquest, the independence of the town was never restored for a single length of time. The reign of Shir "All (1262-1285) and his sons Khudayar (1285-1286 and 1286-1287) and Mallit (1287-1289) and several short-lived rulers were a period of continual conflict and bloody fighting, instigated by the tribes of the Kipchak tribe and the "Sarts", i.e. the native population. Khudayar, who was still a minor, was raised to the throne by Musallam Khul, the chief of the Kipchak, the Kipchak drove the Sarts out of their houses in the capital and took possession of the country; the Sarts were only allowed the water necessary for their fields for payment of a fixed sum. In 1269 (1252) Musallam Khul was overthrown by Khudayar and put to death; the land again passed to the Sarts. Mallit then relied on the support of the Kipchak and instead of them the lands taken by the Sarts. The Khudayar princes usually took refuge in Bukhara. Under these circumstances Near Allah was able to advance as far as Khojand in 1275 (1258), his successor, Musallar, in 1279 (1262) and again in 1288 (1265) to occupy Khojand itself. The struggle against foes at home and abroad was waged with medieval cruelty. Madali's father-in-law, Musallam Sharif Allah, governor of Tashkend, was bound to a horse's tail by order of Khan Shir "All and dragged across the steppe; after the capture of Ura Tobe by Khudayar in 1265 (1248) a tower of skulls (delle-mine) was erected on the heads of the enemy killed.

In spite of all this, the kingdom retained its former extent down to the Russian conquest. The Russian troops had been in contact with the troops of the Khan of Khojand since 1260 in the upper course of the Sir Darva, about two hundred miles from the mouth and in the northest since 1280 between the Cu (q.v.) and Il. All these regions were still under the governor of Tashkend, who was also responsible for the maintenance of agriculture; the governor Mirza Ahmad (1853-1858) is said to have carried irrigation works from the town of Turkistan to the valley of the Cu. It was only shortly before the Russian conquest in 1865 that Tashkend passed into the possession of the Amir of Bukhara. From 1866 the kingdom of Khojand became limited to Farghiana and remained nominally independent within the boundaries of the latter, even after the treaty with Russia in 1868. To this period belongs the digging of the Ulugh Nahr canal (Mids among, Riebliche in das Farghiana-Plateau, St. Petersburg, 1881, Appendix, p. 214) and several dakhans (the rude or palisades of the Khan, frequently reproduced, s. g. in Fr. v. Schwabe, Turkestan, p. 214, and later in W. Masalovky, Turkestansky Arx, St. Petersburg, 1913, p. 704 and 7053). the
Medres-e Hākin Ayin and M. Sulṭān Marād Beg, built by the mother and the brother of the Khān, reproduced in M. Ostroumov, Islām va qo‘shqor (p. 154) were erected at this time.

After the deposition of Khān Khabdar by a popular thing and the new troubles thereby provoked, the remainder of the kingdom was incorporated in Russia as the “territory of Khorāsa.” Khokand still continued to be the largest town (113,636 inhabitants, according to the census of 1911) under Russian rule and the most important trading centre in the territory; the newly founded town of New Marghab, later Skhodino, now called Khorāsa, was the residence of the government. This last town Khokand played a part on the political stage was in 1917, when an “autonomous government,” of Turkestan was formed there; in the next year the victory of the Red Army put an end to it.

For the war of 1875-1878, see especially: A. I. Bryunov, Na pamyat’ Frunze, Novy Marghab, 1901, pp. 27-70; N. P. Karamoff, Samoodskoje Palabari (Khozkimy Pogromniki Deblat), ibid. 1902, p. 19-20. On the fighting of 1917-1918 N. Tyuryskii, Khokandskaya Tashkentskii, Tashkent 1922; also the newspaper Tug’h Tashkent, then published in Khokand. (W. Barthold)

KHOJ. (See KHINO.)

KHOMAIR (KHMIR): A people of northern Tunisia. Khomair has as its boundaries, to the north the Mediterranean Sea, to the east to the south the Wadi Ghriba, a tributary of the Medjerda, to the west the country of the Neufs and the Chahla. The area of this region is about 350 square miles. It is a country with a very hilly surface; occupied by a mountain mass stretching as far as in Algeria. Although the average altitude hardly exceeds 3,000 feet, these heights cut by darcy ravines and steep gorges, give to the country a very rugged aspect. Khomair is for the natives “the mountain” par excellence, Djebel Jleubes. The sandstone formations which constitute nearly everywhere the subsoil are favourable for arboriculture. The forests of cork-oak and of Tamarisk occupy here an area of a hundred thousand hectares. The rainfall here reaches 60 inches a year. The water filtering through the sand-dunes reappears on reaching the impenetrable mass of springs and rivers towards the valley of the Medjerda and especially towards the Mediterranean. Agriculture can scarcely be practised except in the alluvial plains of Tabarka. Everywhere, besides a border of dunes stretches between the coast and the forest, and partly arrests the waters coming from the interior. Deposits of iron, of lead, and of copper have been recognised at different points.

The population of Khomair is about 6,500 individuals. The natives called Khamir or Khomair are divided into three tribes: Khamir of Tabarka, Atafia, Tidimka, Sténa. The rearing of animals, even, sheep, and goats is their means of livelihood. Only those who live around Tabarka devote themselves to agriculture. The women manufacture coarse cloth, and household utensils in common pottery. Lastly, few families are employed by the administration for the exploitation of the forests of cork-oak. The Khamir are settled, well settled. They live in huts of round or branches, usually situated on the slopes of the mountains or in the neighbourhood of the river. Some of them have retained the use of tents. Near Tabarka there is also a small colony of Zewa, the descendants of Kabyl of the Borgia district, settled at this place in the xviith century by the Bey Hamada. They cultivate vegetables and fruit, live in stone houses, and enjoy a comfort much in excess of the other natives. The Europeans, who are few in number, are found in the centres of ‘Am Drahem (q.v.) and Tabarka (q.v.).

The Khamir may be regarded as the descendants of the ‘Anbaita, who occupied the northern coast of Tunisia and of the province of Constantine, at the time of the Muslim conquest of the country. Their existence has been reinforced by other Berber elements, driven from the centre towards the north after the Hittite invasion, and finally mixed with Arab blood. In spite of their Berber origin, the Khamir have for a long time been Arabised. They have given up the use of the Berber language which has only left traces in their dialect and have given themselves an Arab descent. They claim, indeed, as their ancestors, a certain Khomair ibn ‘Amur, of Arab origin, whose descendant ‘Abd Allah ibn Khomair, is said to have established himself near ‘Am Drahem. According to another tradition this personage is said to have attached himself to the tribe of ‘Amir or ‘Amir, who at the time of the conquest, and soon after the Arab invasion, founded the emirate of Maghreb, from which ‘Abd Allah is said to have migrated into Tunisia some centuries later. The different Khamir tribes are said to be descended from the sons of ‘Abd Allah, whose ‘Amur is still at the present time the religious centre of this district. Twice a year in spring and in autumn, a much frequented Zaytuna is celebrated there. It has also been held that the Khomir had for a long time inhabited the south of the Regency under the confederation of the Shahida, and that, after the destruction of this confederation, in the xvith century they fled for refuge into the mountains of the north.

In the shelter of their forests and of their mountains, the Khamir retained until the end of the nineteenth century an almost complete independence. Their political organisation was very rudimentary. They did not possess Khils and their disputes were brought before the djema. The tribes were often at strife with one another; they, however, sometimes formed federations to combat the populations of the valley of the Medjerda, or to resist the attacks of the Berbers. The latter, under whom they nominally were, never could make them pay the taxes. Installed in the island of Tabarka, the soldiers and the officials of Tunis found themselves forbidden access to the country. The Zewa settled on the coast by Hamada, in order to prevent the incursions of the mountainous, were content
time the province of this name includes less than half of ancient Khorasan; the rest of the country, to the west of a line starting from Sarakhs in the Persian Gulf and running directly to the south and passing half way between Meshghad and Herat, belongs to Afghanistan; the region which extends from Merv to the Oxus or Russian territory, Meshghad has revealed the capital of this shrunk province. The chain of mountains which run along the southern border from 11,000 to 15,000 feet high. Water is scarce in this province. The country offers the appearance of a group of isles, watered by intermittent rivers and by wells situated along their suburban courses. The population is sparse and mixed.

At the time of the Muslim conquests in 642, Khurāsān was particularly much the territory of the Euphrates Huns (Hājāt, Bālāhārān, p. 405, 15; Tabari, 1, 2885) so that the present Persia territory to the north was marked by the town of Merv al-rāk, under the command of ʿAbdulrahmān ibn Banū Rāk, invaded Khurāsān by way of Fahāla (Fahālah whence the Fatimids originally came), conquered Tokhtrāsān and brought about the expropriation of the inhabitants of Bālgh (cf. Sebūs, p. 137); According to Ibn Khurraša (Mukhtāṣr, p. 293), the inhabitants of this province were converted very quickly to Islam at all times arrogant and unhappy, they often rebelled against the central authority. During the civil wars between ʿAlī and Muʿāwiya, the Arabs were driven from Nafāshā (Tabar, I, 1249, 3350; Bâlāhārān, p. 408) and the Chinese installed a Turk as governor of Tokhtrāsān, ʿAlī sent Khurāsān to submitted to the inhabitants of Nafāshā to submission (Khurraša, p. 162).

As soon as Muʿāwiya was the undisputed master of the Empire, he appointed ʿAbdalrahmān ibn Banū Rāk as governor of Bajja and bade him reconquer Khurāsān; the latter in the year 47 (662) named Kūsh ibn ʿAlī-hājāt as his lieutenant, but in the year 43 (663) he sent ʿAbd al-Rahmān b. Samura, who had already governed Sūdāstān under the Caliph ʿUthmān, to reconquer Bālgh and Kūstān. The first of these two towns was retaken in the year 51 (667) by ʿAlī b. Ziyād. In the year 95 (708) the Türkhs Nārān of Bālghārān rebelled, took the yabghū (yabghū) of Tokhtrāsān prisoner but in the following year was conquered by Khurram ibn Khurram and put to death.

The war in Khurāsān that ʿAlī and Muslim and the 'Abbasid propaganda recruited the troops which overthrew the caliphate of the Omayyads. A ḍaimā, without doubt made up after the event, claims that the Prophet declared: "When you see the black flags coming from Khurāsān, go to meet them, for in their midst you will find the Mahdi" (Mushkhs b. Tāhir al-Mukhtās, Idris de la Creation, ed. Huart, ii, 156). An attempt was made in this an indication of the coming of the restoration; but even by the time of this author it was explained by the revolt of Ani Muslim (al-Maṣūṣ, ii, 157). The internal disputes between the invirgins. Arabs had for a long time been divided, the Anf representing the Usmanite, the 'Amir and the 'Abd al-Rahim of the race of 'Amr
fought for supremacy; the first seemed to triumph with the family of Mahallah, which remained for a long time in power. Najar b. Saiyad had called the attention of the Damascene rajjish to the Abbasid movement without obtaining reinforcements. When Abu Mas'in, gathering around him the Shii, established a camp not far from Merv, he was then able to intervene successfully in the battle fought by Najar in the streets of this town against Ibn al-Karmal and to put Najar to flight (130 = 749). The whole country was then subdued.

Khosrau really recovered its independence with the foundation of the Tahirid dynasty by Tahir b. al-Husayn, nominated in 205 (820) governor of the eastern regions by the Caliph al-Ma'mun. It was joined to his possessions in Sijistan by Amr b. al-Laith al-Sulh in 283 (896), then it was annexed to Transoxiana by Isma'il al-Samani in 287 (900); it was occupied by the Sultan Mahmud b. Suluk-takin al-Ghaznavi in 384 (994). Toghrilbeg the Seljuk seized Naisabur in 429 (1037) but the inhabitants revolted in 430 (1038) when the Sultan Mas'ud reconquered Khosrau, but only for a short time, because Toghril-beg finally conquered the Ghaznavid lands in the following year. By the death of the Sultan Sanjar in 552 (1157) the Ghurids recommenced their incursions and devastated anew the country, a part of which recognised the authority of Alib b. al-Mu'tadid, the slave of Sanjar [q.v.]. Anarchy and brigandage favoured the expeditions of the Karzaurids and of the Ghurids, and the country finally remained in the hands of the former. The conquests of Chinshir-Khan completely destroyed their independence in 617 (1220).

At the death of the Mongol Khan Abu Sa'id in 1376 (1290), Khosrau saw the dynasties of the Kert and the Serbids [q.v.] give a certain life to the country up to the time of the campaigns of Timur (1383-1385). It was the centre of the empire of his son Shah 'Ali Shah. Shahbuz-Khan Ozbek conquered it in 1457 after disputing its possession with Shah Isma'il I. With the exception of Naisabur and of Meshed, it was incorporated into Afghanistan by Ahmad Shah Abdali after the death of Nadir Shah about the year 1706 (1747). In 1746 (1835) Kermans defended Herat against Abbás Mirza, the son of Fath 'Ali Shah, who was supported by Russia and concluded with England, who had sent an expeditionary force to occupy the chief towns of Afgahanistan, a treaty which was signed by Lieutenant Puttenger. In this treaty he recognised the sovereignty of Shah 'Ali. [q.v.]. From this time Khosrau has remained in two sections, the boundary of which starts from the Hari-rud at Sarakhs and runs to the south to the south, on the east side of the Persian province of Sijistan as far as Lake Hamun.

(CL. Huart)

KHORASAN (DANGZ), a Turkish dynasty. The establishment of the Klink Khosrau in Tunis was a consequence of the Hilid invasion. Imitating the Zirid Sultan al-Mu'izz, he did not protect them against the brigandage of the Arabs, the inhabitants of Tunis in 457 (1060) asked the Hamudid sovereign of al-Qal'a to send them a governor. This prince chose for this office 'Abd al-Haqq b. 'Abd al-Azzar b. Khosrau, a personage originally from Tunis according to certain authors, but belonging, according to Ibn Khaldun, to a Zanbidi tribe. 'Abd al-Haqq gained the support of the inhabitants by his good administration, and succeeded in putting an end to the plunderings of the Arabs by signing a treaty with them. But he had to fight the Zirids who wished to recover Tunis. Besieged by Tamun b. al-Mu'izz, he was forced to recognize him as sovereign. On his death (488 = 1095) his power passed to his son, 'Abd al-Azzar, and after him to his grandson, Ahmad. This prince was, according to Ibn Khaldun, the most notable representative of his dynasty. He put to death his heir Isma'il, got rid of the council of doctors which 'Abd al-Haqq had associated with him in the government, and ruled as an absolute monarch. He surrounded Tunis by a fortified wall, and concluded a treaty with the Arabs, to ensure the provisioning of the town and the security of travellers. He constructed for himself a palace and surrounded himself by men of letters. The Zirids, however, had not disdained. They supported Mubāhir b. Ziyād, the chief of the Arabs, who were installed in the ruins of Carthage, which Ahmad had attacked and obliged the governor of Tunis to submit to their demands (510 = 1116/1117). Four years later the Hamudids, not wishing to allow their authority to be lessened for the benefit of the Zirids, came to their turn to besiege Tunis. Ahmad saw himself forced to recognize the sovereignty of the Sultan of Bougie. He kept, however, the government until 522 (1125). At this time he was deprived of power, imprisoned at Bougie and replaced by a Hamudid official. After an interval of twenty years, the Tunisians having expelled their governor, the Banū Khosrau regained their power. 'Abd Allah b. 'Abd al-Azzar was chosen by them as Amur (453 = 1149/1150). He died in 552 (1157) while the Almohads besieged the town. His nephew 'Ali b. Ahmad replaced him, but at the end of five months, had to capitulate and make his submission to 'Abd al-Mu'izz. Sent to Marrakesh with all his family, he died during the journey.

KHORSABAD, the name of a place noted for its Assyrian excavations, situated on the plain to the northeast of Mosul, at a distance of 12 miles (5 hours by caravan) from the town and eight miles from the Tigrit at the south-west of the foot of the Zagros Mahal, and on the left bank of the Kherweer. At this place the village of Khorsabad was situated in the year 1843; inhabited by the Shahak [q.v.] it was deserted about 1849, the first explorer sought, and repopulated the inhabitants in another place in the plain, so that
Khosrav Begg, also called Ghiyat Khosrew, was the son of the governor of Bosnia (1806-1870), later of Skutari (Albania) Nast, Beg, who had married a daughter of Bayezid II in 394 (1489) (cf. Die autonomen anonyme Chronik, ed. V. Giese, Breslau 1922, p. 234, 1st col.; also J. V. Hammer, G. O. R., iii. 302, and Sراجی, چیزه، 555, s. v. ناصحی, Beg). He is therefore sometimes called سرخه. Thanks to his connections, Khosrew Beg was appointed governor of Bosnia at an early age in 374 (1518) and then transferred in 397 (1524) in the same capacity first to Skutari (Albania), later to Berat (Wahidow, Serbien), after 394 (1528). Khosrew returned to Bosnia, was later temporarily disgraced, dismissed, but restored again to office. He lived in Serajevo [305], where he died in 508 (1654) and was buried in the mosque built by him in 538 (1630). One of Ghiyat Khosrew’s mosques was called مکیه.

Ghiyat Khosrew Beg attained fame for his numerous conquests in the frontier lands of Turkey, notably in Bosnia; but he also ravaged Hungarian territory with his raiding parties (cf. J. V. Hammer, G. O. R., iii. 189), when he plundered and occupied the country round Eskié and Postaja. Ewliyah Celahi gives the number of his conquests as 170 fortresses, no doubt with the usual exaggeration. Ghiyat Khosrew however is still more famous, especially in his own district, for his charitable endowments which Ewliyah Celahi probably with less exaggeration puts at 300. In Serajevo alone his charitable foundations are very numerous. Besides the mosque which bears his name, he built opposite it a medrese, also baths for men and women, and a hospital with 90 roofed shops, a kümbet with 60 roofed store-rooms. In a foundation grant (مکیه) of the year 538 (1528) the various foundations are detailed. The property which Khosrew left for the maintenance of his buildings and for public kitchens was enormous. In money, gold and silver vessels and jewels alone, it amounted to 3,000,000 ducats, an enormous sum for those days, which although the foundation has been reduced in course of time to lessthan a quarter of its former size, still yields an annual income of £ 2,500 a few decades ago. The estate and the house-property of the endowment still exist. Khosrew Beg therefore created for himself in Bosnia a permanent memorial of gratitude and remembrance in the hearts of the people, who everywhere revered him as a saint and great benefactor.
KHOST. There are two places of this name in Afghanistan. One is in the Oxus basin, near Andarak, in which is now called Afghan Turkistan, and is on the borders of Badakhshan. It lies S.E. of Balkh, S.S.E. of Balkh, N. of Kabul, and at the back of (i.e. north of) the Hindu Kush mountains. This place seems little known, and is seldom marked on the maps, but was of importance in old times. Yakh (Barber de Meynard’s translation) calls it “lie chef lieu d’un petit pays fertile et boisé,” and it is several times mentioned in Babur’s Memoirs. He spells it Khosat, and it seems to be identical with the Khoost of Kazvin and the Khalish of other writers. In S. Zain’s translation of Babur’s “Memoirs” it is called Khoost-i Badakhshan. Two of Babur’s daughters were born at Khoost, one of his chief wife Maiman, and the other of Bibi Begum. Evidently Maiman was closely connected with Khoost. Her brother Muhammad ‘Ali Tagheli was a Mirzad of Khoost, and Raisi Babri at his time was called the ‘Turk-i Humayun (L.O. MS. No. 243 of Ethel, p. 261), mentions that Humayun (Maiman’s son) visited his maternal grandparents at Khoost. We also find him making special mention of the place when sending presents from India (see the Zakhrist-Khoda of his ecclesiastical judge S. Zain, who notices that the people of Khoost were distinguished for piety). This seems to point to Maiman’s family, for she was descended from the famous saint Aymul Djami. Yakh says that Khoost was the birthplace of an early traditionalist (Barber de Meynard, p. 219). Hui Batijn also speaks of the many cells of religions in the Hindu Khoost. It is probable that Khoost has been ruined by the Turcomans and Uzbeks. For references to Khoost see Guy Le Strange, The Lands of the Eastern Caliphate, pp. 470 and 471, Tabriz-Khoost translation, p. 123 and note, Vanden’s “Geschichte des Landes,” Canto, 65, p. 362, and Khoost in Ethel, 1, 454, where there is an account of Dost Singh and his Khadiv gaining a victory over the Uzbeks at Khoost, and of their erecting a wooden fort there, as timber was plentiful. See also Rasmussen, ii, 465; the year was 1843 (1905 A.D.).

The other Khoost is a valley in the S.S.E. of Afghanistan, and borders on the Peshawar district. The inhabitants are warlike and have given trouble by making raids into British territory. See Raverty’s Notes on Afghanistan, p. 75; Clement Markham in Proc. Geog. Soc. for 1879, p. 49; the Official Report of the Second Afghan War, London 1909, and The Times of March 28, 1913. There is a third Khoost in Baluchistan, 33 m. E. of Quetta, which is the seat of a coalfield (Imperial Geographer of India, iii, 158 and iv, 306). Khoost in Persian means an island, and so may have the same import as Andarak. (U. Bevan)
Khotî (ii, p. 738); on the conquest of the country by Khâibîr, the ruler of the Naimân and the persecution of Islâm instituted by him, see ii, p. 739.

According to Djuwainî (Tu'rekh-i Zibâbâ Gahwa, ed. Mîr-i Mubârîk Kâtarî, i. 49 and 52 sqq.) he had the Imam 'Alî al-Dîn Khozain nailed to the door of his house. Nothing was known of this martyr by the time of Habaiq Mirî (cf. ii, p. 232 sq.), his tomb was also unknown (Tu'rekh-i Râshîdî, trad. E. D. Rene, p. 298). There was therefore no native historical tradition in Khotî; the references to Khotî in the Arabî and Persian geographical works are extremely scanty; even the site is wrongly given by San'înî (i. 3. Marc. vol. x. Gîhî Mem. Series, i. 1859) and by Yâ'qîb (i. 403) who follow him.

In the 10th century Khozain according to Marco Polo (ed. Valesi, 1. 188 sqq.) was under the rule of the Emperor of China, not like Yâ'qîb under the rule of prince Kâtî 'Ali (cf. above, i. 844). Khozain later seems to have regained the political history of Khâibîr and other towns of this region, belonged like Kâthîgar in the xvth century to the state of the Khâibîr (saints), had to submit to Kaunmuck and later to Chinese rule, after the events of 1280 (1863-1864) to the rule of the invader Vâ'îbî Beg and returned after his death (1877?) to its allegiance to China. On a history composed in Khotî quite recently (finished on 23rd Shabrâh 1311 = Feb. 24, 1894) dealing with events since 1280 (1863) cf. Bidârîn-i Pântî, etc., 1911, p. 203; and see also the section on the Khâibîr of Khotî in the Tu'rekh-i Enâmî, ed. Pântî, p. 161.

In the modern town the silk industry, much cultivated here in the earliest times, still survives. The number of inhabitants is very variably given; according to Komîxîr, Khâibîgarî, Tashkent 1903, p. 275 only 15,000; according to G. and P. Sykes, Through Deserts and Cities of Central Asia, London 1920, p. 246. 30,000.

Hartmann, Cheirâch-Tüxchânt, Halle 1903, p. 93 sq. — On the rule of saints in Khâibîr and the relation of the Khâibîr to this see M. Hartmann, Zentralasien und Tibet, Berlin 1903, i., p. 195 sqq., index.

KHBÂBAH, h. Amir al-'Amâlî, and the first martyr of Islam. The main features of his story common to all versions are as follows: After the battle of Uthîr (on the chronology see below) a small body of ten of the Prophet's followers was sent out and surrounded between Mccâ and Thâmîn by 100 (or 200) Lîyânîs who belonged to the Hâfi'îs. The leader of the hard-pressed little band, 'Aşîm ibn Thâfîr al-'Amâlî (according to others the leader was al-Marîthi), proudly refused to yield. He and six others were killed whereupon Khubâbîd, Zâbîl ibn Dastîmâ and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mccâ and sold. Khubâbîd fell into the hands of the Banî b. Hârîth b. 'Amîr b. Nâwâl b. 'Abî Mâmâs who on the expiry of the second period took him out of the Hârîth b. Thâfîr, bound him to a stake and killed him with lances (mabârâk) in revenge for al-Hârîth b. Khubâbîd whom Khâibîrî had killed in the battle of Baldr. Before he was tied to the stake, Khubâbîd asked for time to perform two rakah's which was a custom for martyrs, comparable to the last prayer of Christian martyrs. Khâibîrî is said to have recited two verses at the stake to the effect that he as a Muslim martyr cured nothing about the treatment of his body as Allah was able to bestow his blessing upon his ascended members. Kâthî'î formulat uttered by him besides these verses have also been handed down in which he appealed to Allah for vengeance on his enemies. These present are said to have shown great repulsion at this verse of the dying man; it is related that Abû Sufyân hurriedly pressed the little Mâ'wîya to the ground to protect him from the consequences of the ill-omened words; and Sohîl b. Khâibîrî fell into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death 'Aşîm prayed to Allah asking him to communicate news of the event to his Prophet in Medina, which actually happened. His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain according to al-Wâsîkârî, p. 155; however, Muhammad received news of the event at the same time as that of Bîr Mâ'înî and according to Ibn Hâshâm, p. 644, it was not 'Aşîm but Khubâbîd who prayed to Allah asking him to cause Muhammad to be informed. — According to al-Zubârî and Yâ'qîb (see the latter's brief account in al-Wâsîkârî, p. 156) the ten men were sent out as a party to Vij upon the Mccâ; according to Ibn Hâshâm, p. 642, al-Wâsîkârî, p. 157 and Ibn-Salîd, ib. 32, sq. 32, ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides.

This story is too much like that which has been woven round the drama of Bîr Mâ'înî, which happened at the same time. Al-Wâsîkârî tells us under the year 6 A.H. that Khâibîrî was not yet at that time a prisoner among the Mccâns (p. 227). The only certain chronological statement that can be made is that the event took place after the battle of Uthîr = 'Aşîm fought there. In the official Sâra, the incident is recorded under the name Yawm al-Râjîl, and put by Ibn Hâshâm in the year 3 and by al-Wâsîkârî in 4 a. H.

The figure of the proto martyr Khubâbîd lent itself readily to embellishment. The daughter of al-Hârîth (according to others Mâ'îya, a xilifant of Muhammad, Abî Hârîth), in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mccâ. — When his martyrdom approached, he asked for a knife with which to remove the hair on his private parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Khubâbîd noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. — The verses above mentioned, which he is said to have uttered at the stake have grown in Ibn Hâshâm to a whole poem. The same author (p. 644 sq.) gives the lemmis for him. For how his corpse was taken from the Kûrânh and swallowed up by the earth, see Tabârî, i. 1458 sq., = Zâhîh, i. 862.

Bibliography: al-Zubârî's or Abû Hanîfî's tradition in 'Alâmî b. Thâfîr, Ma'âmûn, ii. 294.
do not go back exclusively to Sulthan Murad I, but that it is derived from a title borne by the high official who had his headquarters at Bursa. The religious buildings in the town of Bursa bearing the name of Khudawendigir are such as the Eyüp Sultan or the Khudawendigir Dönmü (Eyüp Sultan, Kılıç Ali, Cengiz, Lütfi, 1273, 1277) and the Medrese-i Khudawendigir (Eyüp Sultan, iii. 17) are however connected with Murad I.

(Al. H. KRAMER)

AL-KHUDJANDI, HEMIN b. AL-KHURASAN MAJIDJAN DIED ABOUT 391- (1000). He lived in Al-Rai in the time of the Buyid Fakhr al-Dawla (366-387 = 976-997). He gave the latter's name to the sextant (not the sextant in use since) which he made (al- 'asid al-bahri). This consisted of two parallel perpendicular walls A and B 12 feet apart, which reached 30 feet above the earth and 30 feet below it (resembling an ell at 18 inches). At the south end and perhaps also at the north end of the south wall was a dome with an orifice. Around the latter a semi-circle with a radius of 60 feet was described, which was formed by the carefully polished surface of a wall erected between the two walls. The sextant reached from 30 feet below the earth's surface to the latter and every 10° was marked. The rays passing through the orifice were caught on a white plane which moved along the circle. The greatest altitude of the sun was thus obtained. Al-Khudjandi calculated with the sextant the plane of the eclipse in 384 (944). As cloudy weather prevailed, the observations which were made in the days before and after the culmination of the sun in Cancer and Capricorn had to be approximated for the calculation of the eclipse. By exact calculation and interpolations, it was successfully done. The plane of the eclipse proved slightly different from earlier calculations at 23° 32' 21". This figure differs by 17 minutes from the true value then in use. From al-Biruni we learn in the Mat'a'a Cennet al-Butu 51 his value was falsified by the fact that the instrument used for one of the two calculations had been damaged. Al-Khudjandi explains its great length that, as the astronomical values were variable, there is no fundamental reason against a variability of the plane of the eclipse also.

Al-Khudjandi also constructed the instrument called al-ta'la al-gahšin, "the comprehensive instrument" (cf. J. Franck, Über eine astrologische arabische Instrumente, Zeitschr. f. d. J. astronom. und. astrolog. Anzeigen, 1921, 1922). It is a universal instrument, filling the place of both astrolabe and quadrant, but at first could only be used for one latitude. Hilat Allah b. al-Humay al-Baladi Abu 'l-Khair al-Asturlahi made it applicable to all latitudes (cf. Ibn al-Rabi, p. 339 and H. Suter, Nr. 477).

The height of the place is said to be 1,500 feet above the sea (Ritter, Erdkunde, viii. 11). The river of Khulm, Ab-i Khulum or Khulumad seems to be the Artesium of the ancients (Pauly-Wissowa, Realency., iii. 1905). The Khudzdab (p. 33) mentions a nabeel Disjabad in the neighborhood of the town; can this be the same as the Khulumad? The fall of the river of Khulumad amounts to 60 feet in each mile. On the upper course of this river the village of Duff is situated; the steam itself runs to the West and parallel to another water-course, the Ghart, to join the Oxus after passing Haibak and Khulum. Hereafter may be commended the description in Burnes's Travels (iii. 176): Heibak and Khoolooam stand on the same rivulet, the water of which is damped up on certain days, and allowed to run on others. The gardens on its banks are rich and beautiful, and among the fruit-trees, one again meets the fig, which does not grow in Cabool.

The town of Khulum is reckoned by the geographers to Takhtkhristan, or, in a wider sense, to Kurushan (cf. Yaqut, Mabian, iii. 518; Takhtkhristan is now called Takht-i-Khulum). The people seem to consider Khulum as a locality belonging to Badakhshan (Geographie d'Europe, par P. A. Jomard, 1846, p. 474). The town belonged to the "sultanate" (cf. "Sultan Khulum") and "Khan" (Yaqut, ed. de Goeje, p. 288); its dependencies were numerous (Muradkhan); we find mention of Khantranj (Vakif) and "Muzur" (Burnes; Maizier). The climate is, according to the mediæval authorities, healthy, but breezy during the summer; the place was inhabited by Arabs from the Ard, Tamto and Kais, who had settled there at the time of the conquest. Two theologians, Abü l-Awliya Sa'id and Uthman al-Khallal were, according to Yaqut, natives of Khulum.

As regards pre-Islamic times, it has been supposed, that the Aroosha mentioned by Asrical, Avicenna, li. 29, was in the neighbourhood of Khulum, but this cannot be proved (comp. Grundzüge der Iranbibl., ib. 474, note 3; Pauly-Wissowa, Realency., iii. 2659). Next, the Chinese traveller Hsian T'angla mentions the kingdom of Huuln (Khulm?); it is measured, according to his account, 2,800 li in circuit; the circumference of the capital is 5 to 6 li. There were more than 10 Buddhist monasteries, and above 800 monks. To the West of Huuln was Fuhu (Khukh), but, though this identification seems to be correct, the transcription, according to Watters, "seems to require an original like Boiskar or Rokhara, the name of the country which included Baluch." Comp. S. Beal: Sochk-i: Buddhist Records of the Western World (Popular Edition), i. 43; Th. Watters: On Yuan Choung's Travels in India (1904), i. 106, 109. Later, Khulum sometimes is mentioned during the struggles which the Muslims waged against the Turks of Central Asia, e. g., in the year 1500 (708/709), in the war of Khatola b. Muslim with them; in 119 (737), when Aas b. Abdallah was in the field against the Khulun, the latter tried in vain to take the town. Khulum is also met with in the assessment-list of Abd Allah b. Tahir of the years 111/112 (820/827—825/826). It is noted there for the sum of 12,300 rupees. On two maps, Marquard, Brünnh., 52, 219 sq., where the place is not given. In 656 (881/882) the rebel Abnād b. Addamkhul Khudzmat, after beating the army of Aba Talla, the general of Abi b. Al-Latih at Sorkhak, defeated him a second time near Khulum (Ibn al-Athir, vii. 209).

In the beginning of the 19th century, Khulum is described as having a mixed population consisting of Tadik's, Usbecks and Khatolis. Under the reign of Khatola Ali Beg (an Usbeck prince of Baluch, nominally tributary to the crown of Khatol), the town, then an important place, was liable to be harassed by the nomads of its neighborhood. Because of this, the sort of government, which seems to have been at Khulum, was transferred to the locality of Tsh Khurgan, situated on a distance of ca. 4 English miles from it. When Moorcroft visited these regions (1824), another calumny also had befallen Khulum. The year before, Murad Beg, the prince of Khatol, had forced the inhabitants to migrate to Khudzmat, such compulsory removals being not uncommon during his reign. Since that time, Khulum proper has decayed, and its place has been taken by Tsh Khurgan.

This Muhammad Murad of Khudzmat had held a command of minor importance under Ali Beg; but after the death of the latter, Murad attained so much power, that he became in reality an independent ruler in the regions north of the Hindu Khukh. New Khulum (Tsh Khurgan) had, at the time Burnes travelled there, some 10,000 inhabitants; it was the frontier-town of Murad's state. The sons of Ali Beg, in their turn, had become vassals of Murad, and reigned in his name over the district, whose capital was Khulum, and which comprised moreover Haibak, Ghurt, Andarush, Talishan and Haddak-Inam.

KHMĀRAWAIH. B. AHMAD B. 'ULAIJN. D M 250 (864) was appointed by his father Ahmad his deputy in Egypt as early as 269 (883). Before his death, while on a campaign in North Syria, Ahmad at the request of his generals, designated Khmārawaih as his successor and died shortly after in 1255 'l-Kā'ba: 270 (May 884). His older and younger brothers both rebelled against his rule, and he was regarded as cruel and untrustworthy. On his deathbed Ahmad had shown an inclination to make peace with Muwaffaq, the all-powerful brother of the reigning Caliph al-Mu'tamid; the latter had readily considered the proposal. The negotiations were interrupted by Ahmad's death, for his great prestige had induced his enemies to consider peace negotiations on a basis of his appointment as governor in Egypt. When the negotiations fell through, two partisans of the Caliph, Ibn Khindād, who had previously been appointed governor of Damascus, and Abū l-Bālā, the governor of Northern Mesopotamia, went with their troops to Syria and sought Muwaffaq's support, which he promised them. The governor of Damascus joined them, and invaded, over Antioch, Aleppo and Hims to Ibn Khindād. Khmārawaih now sent troops to Syria who put down the rebellion in Damascus and advanced as far as Shābān (q. v.) on the Orontes. The winter forced the two parties to go into winter quarters. Al-Mu'āwīyīn's son Ahmad now arrived in Syria in command of the Caliph's army, Ahmad along with Ibn Khindād attacked the quarters of the Egyptian army, inflicted a severe defeat upon them so that they fled to Damascus; driven out of this city they retired to Rumān. Ahmad however, now quarrelled with the Caliph's two generals and was left with only 4,000 men. Khmārawaih hastened to the mainland, reached Raʾiyy from Egypt with a large army (70,000 men it is said), the armies met at Shuwayl 16, 27 (April 6, 885) in the famous battle of al-Tawārīn (north of Jaffa). Khmārawaih, who had never been in battle before, did not resist long but fled back to Egypt with the majority of his army. Ahmad's troops then fell upon the camp and were plundering it when a body of Egyptian troopers that had been kept in reserve attacked them. Ahmad thought that Khmārawaih had returned with his troops and fled precipitately to Damascus. When the governor shot its gates against them, the troops went on to Tarsus in Southern Asia Minor. A great part of the army had already been taken prisoner and carried off to Egypt. On this occasion Khmārawaih showed his extraordinary fair and peaceful character. He gave the prisoners the choice of returning to the Arab without a ransom or of settling in his kingdom. Ahmad returned to Mesopotamia.

One of his own generals rebelled against Khmārawaih but was defeated by him, as he had now regained his personal courage and he was also able by his bravery to conquer Ibn Khindād, who had taken up arms against him. He now began negotiations with Muwaffaq and in 273 (886) was recognised for a period of 50 years as governor of Egypt, Syria and the marches against Asia Minor and Armenia for a trilling tribute. In 275—277 (886—890) there was again fighting between Khmārawaih and rebel governors, which ended in Khmārawaih being also recognised as monarch of Mesopotamia. In Rajab of the year 279 (Oct. 892) the Caliph al-Mu'tamid died and was suc-

ceeded by Muwaffaq's son Ahmad, with the title al-Mu'tamid. The latter confirmed Khmārawaih in his office and the latter became ambitious to be closely related to the Caliph. He offered him his daughter as a daughter-in-law, but the Caliph married her himself to attain his end. Khmārawaih had to make decorative formal sacrifices. The story of the princess is said to have been 5,000,000. On this occasion the contrast between the rich provincial governor and the poverty of the central government which represented the Caliph was striking. It was impossible for the latter to collect money from the provinces as the independent governors kept all the revenues for themselves and paid only a moderate tribute to him. It is related that when the princess came to Baghdad, the Caliph and his chief eunuch sought for candles in order to receive her in a fitting manner. The chronicles record that he could only collect 5 silver and gold plated candlesticks and then heard that the princess was accompanied by 150 servants each of whom carried a gold and silver plated candlestick. He then said to the chief eunuch: "Come let us go and hide ourselves, lest we be seen in our poverty". The princess Ḳaṭī' b. al-Nāṣir was noted for her wit and beauty and must have ruled the Caliph as anecdotes show. Once when the Caliph entered her room, she said: "Ah, my father is dead!" Asked how she knew, she said: "Hereafter when you come to me, you sink on your knees and touched the earth with your forehead to greet me, but now you say simply "good day."

Khmārawaih's extravagance in daily life and on the occasion of the wedding of his daughter naturally did great harm to the finances of the lands he governed. As an example of the boundless extravagance, which he displayed in the maintenance of his court and in the erection of costly buildings, the palace is mentioned, in the court of which he erected a basin of quicksilver supported by pillars, to alleviate his insomnia. He lay on cushions, filled with air on the surface of the quicksilver, and tied to the pillars, and was greatly rocked to sleep by their motion on its surface. It was a particular misfortune for Egypt that Khmārawaih fell a victim to a plot while still young. He learned that his favourite wife was deceiving him with one of his servitors and, on the latter, to escape punishment, resolved to kill his master. He and several conspirators fell upon him and killed him. On the whole, he procured a period of peace for his lands. Egypt itself was spared from war during his reign. Nevertheless as a result of his extravagance, the country was so injured that his son who followed him steadily lost power. The family of the Talihūn had ceased to reign by 292 (905).

Bibliography: See the article AHMAD B. 'ULAIJN, where the main sources are quoted and especially also the critical discussion, marking a great advance on Winternitz (Monothletism in C. H. Becker, Geschichte der Byzantinischen, ii. 149—153 and 152—191). Also Ibn al-ʿArabī, Khamārawān, vii. passim, in Indications et Observations, de Challifon, ii. 454—454, 468, 481. Quatremeres, Monumens des antiquites de l'Egypte, Paris 1811, ii. 462—475 (translation of the chapter al-Kā'ba of the Kitāb of Maqrizi, where details of his life are given and Ibn Khallilkān, transl. de Sasa, i. 498—500). (M. Schwabesm)
KHMURARADJ, in Turkish "commander", a body of regular troops, formerly in the Ottoman army. It was composed of 500 men provided with military fatigues, the Count of Bonneval becoming the chief (January 24, 1734) with the title of Khmurarak-ı-bâdiji, in the reign of Sultan Mustafa III., began to enlarge it by 500 paid men. The force was increased to a thousand men by Sultan Selim III., latterly it was commanded by an Englishman named Inigo Mustafa. It was disbanded in the reforms. This body was included in the hentâb-ahl, "slaves of the Ports", and thus attached to the personal service of the Sultan, was called, as one would say in-day, of the Imperial Guard.

(KL. HUART)

KHUMIR. [See KHMIR.

KHURDADH (v.), the name of the third month of the movable Persian solar year, also the name of the sixth day of each month. The 6th Khurdâd, or the day on which the name of day and month were the same, was called Khuradâd-î-kadâr. To distinguish the day Khuradâd from the month of Khuradâd, the former was called Khuradâd-kadâr, the month of Khuradâd, the latter Khuradâd-mâzâr (monarch of Khuradâd).

(M. PLEISNER)

KHURRAM (v. "joyful") the name of the favourite (hâkib) of the Ottoman Sultan Sultan I., the Legislator, better known in European historians by the name of Roxolana. She was a slave of Russian origin. ("altra donna di nazion Rossa, giovane non bella ma graziosa") in the report by Pietro Bragadin (1560). Marzio Scanto, alli, who was the mother of three sons, Sultan Selim II., princes Murad and Mustafa, all died of a mysterious disease on 11th May 1555. She was anxious to secure the succession of the throne for her eldest son and is accused of having brought about the execution (1555). She was the eldest son of Sultan by a slave girl. It was owing to his superior intelligence and capacity that she was able to remain the Sultan's trusted adviser till her death in 1555, but her genius for intrigue urged her to crimes; she brought about the overthrow and execution of two grand viziers, Ibrahim Pasha and Ahmad Pasha. Her son-in-law, Rustam Pasha, by birth a Cretan, was through her influence appointed grand vizier in 1554. She was buried in a vault specially built for her in the court of the Selimânedî Mosque in Constantinople. Several pontifical revenues and charitable endowments were built or instituted at her expense in Constantinople; these were the imperial mosque, the hospital, and the school of the Evkibospâli in the Aya Eufrosini quarter.

Khurram Begum was the name of the wife of Muslim Sultan, son of Khâzim Mirza, son of the Timurid Sultan Abu Said, ruler of Badakhshan, died at Allahabad in 1597.

Khurram is also the name of an alleged king of Khurram, last of the Shah-durr of Faridkot, in 1731, and of his assassination in 1747 (Ghid, Ottoman Poetry, III., 370, 371).

Mirza Khurram was the proper name of the Mogul Emperor Bahadur Shâh (d. 1748) which he bore before his ascension in 1737 (1748).

Pakhtawâr Khurram Khan Sharâfâni, a general of the Mughals, is credited to be the son of Bakhtawar Khan, a general of Babur, after the death of his father, took charge of his son, and, on his return from Badakhshan, went to him, but was killed in battle (Baz, Muntazir, v., 203; Khurram, ed. I. E. B., p. 322).

(KL. HUART)

KHURRAMABAD, capital of the province of Lûshistan with 6,000 inhabitants, situated in 33° 32' N. Lat. and 48° 15' East Long. (Greenwich) about 4700 feet above the sea-level between the rivers of Khîrmand and Kirmānšâh on the river of the same name. On an elevated ridge of rock between the towns and the river he locates a castle Khushâb, or "black castle", in the modern age the residence of the governor, with annexes called Fakâh, or M-model built at the beginning of the government of the lâs, which dates from the time of Mahmûd, grandson of Malik Shih. The town was visited by J. Rich and H. Kaimbino. The town is noted for its hâkib and others know two places of the same name near Bald and near Balak.

(KL. ROHDA)

KHURRAMIYA, a tract whose name is derived from the Persian word Khurram "agreeable", on the ground that they regarded everything that was agreeable as lawful. This is said to be derived from the name of a district of AFSâb, and was named from the khan of this district, in Bokhâr, where the seat may have arisen. According to Mahdî, Murghâb, vi., 386, they came to prominence after the execution of Abul Muslim of Khurram in 1346. At the same time, they were known as the khan of the Bokhâr district. The khan of Bokhâr rebelled against the Afghan government and entered into alliance with the khan of Bokhâr (the mother of the khan of the Bokhâr district) for a "village between Khurramabad and Afsâb"; he maintained his influence from 301 till 243, when his fortress was taken by Afghan, and the khan of Bokhâr was subsequently captured and sent to Multan. After his capture, he was tortured and put to death, displaying remarkable fortitude under torture (Mihrâb, ed. af-Khalilî, p. 75). His daughter was taken into
Mu'tazil's haran (Arabic al-Awār, 1. 369, 2). Many of the during the time of the 2 (356) members of both Abū Tammūn and Muslim are devoted to theologians, who are said to have served the cause of Islam. In Māshhūr b. 252) asserts that the followers of Bāhāsh make the founder of their religion a prince of the royal line of the Persians, called Shāhānshah, whose father was of the Zoroastrian sect, whereas his mother was the daughter of a Persian king. This would seem to be another form of a story told by Ibn Isfandiyār (transl. v. 94; Brown, p. 257): that one Sharwān of the house of Bāhāsh (called by Tabari, ii. 1295, §2: Sharwān b. Bakhshāsh b. Bāb) was the first person who took the title "King of the Mountains". He adds that they have a feast on their mountains which is marked by gross licentiousness; but for all that they keep the ceremonies of Islam. The attempts made to connect them with the old Persian Mazdakites are probably without historical basis. (D. S. Margoliouth, the last prince of the line of Dāūd b. Shīh which ruled in the province of the Sand 256; he was the son of Dāūd b. B. Fārābū and held the title of Fārābūsh Mardān; he was descended on the female side from the Nābālidūn (Arm. mānagū "patrician") of the Sand and reigned from 132 to 130 (724–726). His paternal uncle, Śkyūs, the regent of the kingdom, wished to hand over the power to him when he attained his majority; he was prevented from doing so by a conspiracy among his own sons, and Khusraw was not able to reign until he gained a victory over his cousins at the battle of Dāshānīk, between Tabaristan and Persia. He acquired the castle of Kinja and built a fortress called 257) near Hira; he established a market around the latter and built a reservoir. After the assassination of Abū Muslim, Sambūx handed over his treasures to the care of Khusraw when he rebelled against the Caliph al-Mansūr. After his defeat he wished to take shelter with Khusraw but was assassinated on his way by one of the consouls of Khusraw, Tās, in revenge for an insult. The Caliph demanded that the treasure should be surrendered to him but Khusraw refused, computing however to pay tribute. Thinking of the large sums that Tabaristan might yield him, al-Mansūr determined to conquer it; the town of Amuīn surrendered; Khusraw placed his women and children in the castle of Alīga Kūrgān, called by the Arabs Khurāb al-Taš, thesit of the vault. While he himself went to raise troops in Gīlān and Dāshānīk, the garrison of the fortress having been decimated by plague gave itself up to the invaders. Khusraw in despair poisoned himself and Tabaristan passed under the sway of Islam. The date given by Tabari and Ibn al-Athir, 2 (753), is wrong. The last coinage known of Khusraw II belongs to the year 148 (765) corresponding to the year 114 of the era of Tabaristan.

(C. R. Huart)

KHURRAMIYA — KHURYAN-MÜRYAN, the name of a group of islands in the bay of the same
name on the south coast of Arabia, consisting of Hellamya, Karzaw (Karzawi or Karzawt), Sada (Sawaddiya), Djebelia and Haïski. The first of these alone is inhabited; but the number of dwellers on it has greatly diminished in spite of the fact that the inhabitants of Sada had all migrated to it. Vegetation on Hellamya is also scanty; a few maritime shrubs, some succulent humurs, and mimosa here and there fulfil the monotonous landscape. In the centre of the island a peak rises to a height of 1,510 feet above sea level; in front of it in the west lies a high plateau. The water is usually brackish, the best being found in a well dug by European sailors. The same is true of Sawaddiya. Djebelia is quite waterless and deserted and inhabited only by shepherds; so that the island possesses extensive deposits of guano. Djebelia was once inhabited as a few tombs on it show. The most westernly island of the group is Haïski, which is only 30 miles from the coast and is commanded by two peaks 300 feet high; it also is devoid of water and vegetation but occupied by numerous flocks of pelicans and goosanderes.

This group of islands which was early identified with the so-called seven insular sands of Zeina, which form the frontier mark between the kingdoms of the Parthians and the kingdom of Harâmât, so that the Parthian frontier would be located in the lowermost corner of the Khûrây-Mârýân Bay or in about 56° 45' E. Long. (Greenwich). The inhospitability of the land made the inhabitants dependent on the sea and they naturally became a race of fishermen. Idari (I. 1164) already knew that the inhabitants of the Khûrây-Mârîyân islands, who were then politically under al-Sijjâr, were very poor in winter and only managed to make a moderate livelihood in the sailing season. They used to sail to Umân, Asem and the Yemen. Their main source of revenue was tortoise shell which they traded to the Yemenis and occasionally very beautiful amber, for which they had some high price. Khalil Idris sells the bay containing the island A'awaj (Bay of Herba). It was the Portuguese who first directed the attention of Europeans to the islands. In 1503 the Khûrây-Mârîyân islands were discovered by Afonso d'Albuquerque. As the Caria-Muria islands they continually appear in Portuguese sources, while Sawaddiya appears as al-Dadhi Haïkhi as Itkam and Karzawit as Rodonde. The island later passed into the possession of the Sultan of Mâkát, who ceded them to the English on July 14, 1844.

KUHSHAL KHAN, warrior and poet, forebear of poets, father of fifty-seven sons, was the famous chief of the Khâtak [q. v.] tribe of the Pathans during the reigns of the Muslim emperors, Shah Jâhân and Awârangâz. Born in the year 1023 (1613), he succeeded his father as chief in 1050. His father's seat was confirmed by Shah Jâhân together with the charge of the regency for the royal infant. The Khâtak chief was a tribal chieftain of the Pathans. After the death of Shah Jâhân he fell under the displeasure of Awârangâz and was confined in the fortress of Gujjar for seven years. While in captivity, he wrote many of his poems. On release Khusâhâl Khan returned to the Khâtak country, of which Akbara was the chief town, and later on we find him in alliance with the Afridi waging a determined war against the Mughals. Affairs at Panjkâr became so serious that Awârangâz appeared on the scene in person and for about two years remained encamped at Atâk. The Pathan confederacy was broken up and Khuhsâhâl resigned the chieftainship to his eldest son. He died in the seventy-eighth year of his age. From all accounts he was a voluminous author of poetry and prose in Persian and Fâsht. His poetry is of the patriotic and popular type.

(K. R. Whitehead)

KUHSHADAM AL-MALIK AL-Zâhir Sayyid al-
Din al-Nâqî (so called from his first master), Sultan of Egypt and Syria, reigning from 865—872 (1461—1467). He was the first Sultan to come from the Sultanate of Rûm (in Asia Minor) which however many also say of Bajazids II [q. v.] and Sultan Lâdik (866—868 = 1466—1468). Purchased as a slave by Sultan Shahâb (I. v.); he was enrolled in the corps of Qâlâbids [q. v.]; under Shahâb's son Ahmad, who reigned only a few months, he became a member of the bodyguard (alâshid) and only by the reign of Sultan Çâsûn [q. v.] did he become an amir of 100 Mamûls in 866 (1464) and one mamûl (leader of a company). In 850 (1446) he became commandor of 1000 Mamûls in Damascus, in 854 (1450) got al-Hâjib al-Ma'sûfahb (president of the military court) in Cairo. Three years later under Sultan Isâh, he was War Minister and in 850 (1450) he commanded an expedition against the prince of
Khushnud’s lands he devastated most cruelly without meeting his troops. At the son Ahmad (see under INDI), appointed him Aztek. To the Ashraf (Sultan Ashraf Ata’s Mumtaz) were however dissatisfied with Sultan Ahmad, conspired against him and offered the throne to Djin, the governor of Damascus. The Zuhairya (Sultan Zahir Chakmak’s Mamfuka) however preferred Khushnuddin. They then hurried to elect the Aztek Khushnuddin Sultan before Djin’s arrival, took Ahmad prisoner and sent him to Alexandria. While this latter event was taking place at the vicinity of Cairo, there were letters left for him to die but recognize Khushnuddin and return to Damascus. As he did not feel safe for long there he sought refuge with Hassam al-Tawil, Sultan of the White Sheep Turkomans, where he was murdered not long afterwards. Another influential anti of the Zuhairya, the governor of Djin, Djin, to whom the Sultan owed everything, was murdered by his orders. He thus deprived the Mumtaz of their leaders and was able to play one corps against another. The Mumtaz were also weakened by the campaigns against Cyprus, which were a result of the Sultan’s policy. The later had supported king James against his sister Charlotte who in his last time was expected help from the Knights of St. John of Rhodes. The governor of Tripoli was arrested by Ina at the end of the year. With a campaign against the Qin, but on account of the change on the Egyptian throne only engaged in it for a short time. The armies, which had been sent with a corps to Cyprus to support James soon returned on account of the disturbances which broke out after the assassination of Djin. Only one of the armies with a small body of troops was left in Cyprus. The capital Famagusta had surrendered to James, who was now master of practically the whole island. He therefore no longer required the assistance of the Egyptians, who had acted arrogantly and impudently towards him. To get rid of them he had them attacked in the sea by the people of Famagusta and then let upon them himself. To the Sultan it represented the expression of a feeling among his subjects, of which he was quite ignorant. Queen Charlotte, revealed the truth to Khushnuddin to get his assistance and also gained his favour by promising a ship that had been captured by the Knights of Rhodes, but the Sultan was glad to live at ease with James, especially as the latter paid him regular tribute. He was in close alliance with his vassal, the Sultan of the White Sheep Hassam al-Tawil, because he had to rely on the help of the Egyptian Sultan in his continual struggle with the Sultan of the Black Sheep and the governors of Alexandria in the house of Djin. It-Khidir. Hassam, whose relations with the Ottomans Sultan, Muhammad. It was also the son of the brightest, therefore remained faithful to Khushnuddin in the midst of all the intrigues and fighting, Muhammad II had overthrown Hassan’s representative, the Bosnian emperor of Trebizond, Hassan in turn along with Khushnuddin supported Djin, ruler of Karaman, who was at war with the Ottomans. He and the Sultan also aided the princes of Almodin, Rasaghi and Rustam, successively against their rival for the governorship, Shihh Sutur, who sided with the Ottomans (see §4135). Although it never came to actual fighting between the two Sulthan, there was always a latent enmity. While Khushnuddin was able to keep the Mumtaz of his predecessors in check, his own Mumtaz committed countless outrages on the people. The Sultan’s finances were always in a muddle; he endeavored to secure money by the rule of offices as well as by visits to his subjects (cf. §4144). The Sultan fell ill in 1472 (1472) and died in ten days. He was not really a great ruler but he managed to keep Egypt at peace during his reign. Egypt was spared sporadic invasions. He was averse to reforms and adhered strictly to the old customs in contrast to the turbulent Khidir. Bibliography: Ann 1926, Bulb 3311, 70-84; Ynt, Geschichte der Chalifen, v. 240- 515; Maie, The Mamlukis to Share Dynasty of Syria, p. 195-217. (M. Sonnenbom)

KHUSRAW [See also KAMRAN, KHAIR, KARWAL] KHUSRAW FRUZ, AL-MALIK AL-RASHID ANI Pump, D. Ali Kaliya, in a Balam. After the death in Djinudd 440 (Nov. 1048) of Ali Kaliya (p. x), Khushnuddin (see. Khushnuddin) was recognized as Amir of the Balam while his brother Abu Mansur took the Sultanate. The Amir of Shiraz, soon after, wrote to Khushnuddin that he was under Abu Sali Khushnuddin Shah, who was his brother, against Shiraz; the town had to surrender and Abu Mansur was taken prisoner (Shawm 440 = March-April 1049) but released after some time. In 441 (1050) he was re-captured and took Shiraz and seized a part of the Al-Awla but—f Wahf II of the following year (Aug.-Sept. 1050) Khushnuddin invaded Al-Awla and soon conquered Akbar Makan. In Muljara 445 (May-June 1051) Al-Awla was invaded by Arab and Kushe. After they had sacked Surakh, they were put to flight by the troops of Khushnuddin. The latter then left Akbar Makan, because Abu Mansur in alliance with the Karmch of Heratasp intended to march on Tunis. Khushnuddin Fruz succeeded in anticipating him and when the advanced patrols met, Abu Mansur and Heratasp had to withdraw. After a bloody battle Khushnuddin also took Khammarra, while Abu Sali took the two towns of Ijzalak and Shiraz. In the meanwhile Abu Mansur had applied to the Sultan prince Toghlil Beg; the latter sent him reinforcements and after a two days’ battle Khushnuddin Fruz had to retire to Lash (r. 1054). In 444 (1052) the troops conquered Ijzalak; the governor there, Abu’l Ali also his brother, saved himself by flight and went to Ijzalak to Toghlil Beg. Khushnuddin Fruz then made peace with Heratasp; in the following year Abu Mansur again became lord of Shiraz and drove out Abu Sali; in Muljara 447 (April 1055) a Nadari chief named Filiik asked the town and drove out Abu Mansur. Although Filiik declared he would submit to Khushnuddin Fruz and Abu Sali, they did not trust him and Abu Sali joined with Abu Mansur and marched on Shiraz. After a long siege Filiik had to fly, and the two brothers occupied the city in the name of Khushnuddin Fruz. In the same year the Balam dynasty was overthrown. Under the pretext of making the pilgrimage to Mecca, Toghlil Beg asked permission to enter Baghdad, which was granted him by the Caliph al-Kalam. On Rabi 22 (Dec. 19, 1055) the multitude in his name and three days later he took his ceremonial entry into the capital. But as the people of Baghdad rose against the foreign troops, Toghlil Beg in spite of the Caliph’s protest had Khushnuddin Fruz
arrested as the alleged fomenter of the strife. He
died a prisoner in the citadel of al-Ra‘i in 45
(1058/1059).

Chalifen, iii. 50 sqq., 94–97.

Khusraw Malik. [See ii. 127.]

Khusraw Pasha, the name of two
Turkish grand viziers.

1. The Roman Khusraw Pasha, grand vizier under Murad IV, brought up in the imperial
palace, was the son of the office of Stilicho and of Agha
of the Janissaries (from 1623/1624) and later in
Rajtab 1626 (March–April 1627) he received the
rank of Wazir Vek банков不停. In November
1627 after the failure of the grand vizier Kehay Pasha
[q. v.] he surrendered the rebel Pasha at Gumman, a council called by the Sultan decided,
on the proposal of the Shadkh al-islam Yahiya
Behendi, to depose Kehay and to appoint Khusraw
Pasha as his successor. The latter was a "novus
homo", and his rank was not yet sufficiently high.
He was therefore at first nominated with Deyar
Bakr, and if once be left the capital. The great
sum of the Empire was only sent to him when
he was at Capri (Shaban 1627/March 1628). The
campaign had been well planned and the new
grand vizier arrived at Zemun before Altas expec-
ted him. The latter surrendered after a fourteen
days' siege (18th September) and he returned with
Khusraw Pasha to Constantinople along with the
Persian general Shams Khan who had been taken
prisoner. The victorious entry of Khusraw into
Constantinople (25th December) — celebrated by
the festivities of the poet Nefi — was followed by
the pardon of Altas (afterwards nominated Wali
Behendi) and by a period of absolute power of
the grand vizier; he resigned by terror, relying for
support above all on the troops of the Sipahis
and the Janissaries, to whom he guaranteed anew
the pernicious privileges which a short time before,
had been abolished. At this time the young Murad IV
had not yet sufficient power to counterbalance the
influence of his grand vizier. The latter, again left
the capital — which he never to return — in July 1628
as actor of a new military expedition, against
Per sia. Rajtab Pasha, the future grand vizier, re-
mained as Wazir-magazet at Constantinople. The
Army went to Aleppo, Deyar Bakr and Myslop,
where the inundation of the country caused by
torrential rains, forced it to wait for seventy
days until the end of January 1630. Great military
preparations were made for the capture of Baghdađ
but in the meanwhile Khusraw Pasha himself
marched eastwards. He crossed the two Zab and
advanced upon Shahrizur [q. v.], while the Kurd
chiefs came and offered submission to him. Then
after sending several bodies of soldiers against
Lower Mesopotamia he advanced to meet the
Persian Sultan Zainal Khan who was at Hamadan.
Zainal Khalil Pasha placed an encampment in front
of his forces in the vicinity of Marjuk (on the Hamadan road). He was killed by
eight hundred Pasha, begger of Aleppo, by the order of Khusraw; the loss of this battle cost him his
head. The grand vizier arrived in person at Myslop
on the 5th May 1630; thereafter he destroyed Hamadan and arrived on June 10th before
Hamadan. This town which had been abandoned
by its inhabitants was completely sacked.
Khusraw Pasha still continued his advance as far as Dergam (on the Karun route); he then turned back towards
Baghdađ, the goal of the expedition. He passed by the Derun village and by Karaj Shahr [q. v.]
and arrived on the 6th September before Baghdađ.
The siege began a month later. Khusraw
Pasha was present as a scribe in the
Ottoman army and he describes the siege in the Počukte [p. 206].
A general assault took place on the 9th November
but had no result so that Khusraw had to retire on Myslop leaving garrisons at Hamadan and other places. At Myslop, when he arrived on November 3rd, he learnt of the capture of Shahr-izur by the Persians; soon the Turkish garrisons left in the neighbourhood of Baghdađ were also put to flight. Khusraw then returned to Mardin in order to spend the winter there; the following
year was passed in inactivity, due to the indecision of
the grand vizier and the discontent of the
Sipahis and the Janissaries. The Mucke of Terfess (179–188) contains four documents
issued by the Sultan and addressed at this time to
Khusraw to testify that he was pleased with him and to encourage him. But at last the Sultan
was convinced of the lack of capacity of the
grand vizier; he deposed him (25th Oct. 1631)
and nominated in his stead the former grand vizier
Haji Ahmad Pasha [q. v.]. A Cush was sent to
the Deyar Bakr, and the Deyar Behendi.

2. Muhammmed Khusraw Pasha, a states-
man and a grand vizier in the reigns of the Sultans
Mahmut II and 'Abd al-Majid. He was by birth an Aghkhan slave and served first in the regiment as servant of the Calym. Hafit Sahid. In 1807 (1796) he left the palace as Haikar and to his computation Kudik Husain Pasha, just appointed Kapadan Pasha. He gained promotion quickly in his military and administrative career and became in 1808 (1797) Hafiz of Kazan. He accompanied the Turkish fleet which in March 1801 landed in Egypt under Kudik Husain Pasha and afterwards became commander at Alexandria. In September of the same year he was appointed wali of Egypt, after having been raised to the rank of wali. Khusaww Pasha made his ceremonial entry into Cairo in January 1803 and immediately began military operations against the Mamluk boy. His innocence and swarthy, which had caused him to dismiss his own troops, brought about his failure. The Mamluks gained ground and the wali was not able to maintain his authority over the Albanian troops, under the command of Tahir Pasha and Muhammad 'Ali. The latter encouraged the revolt of these troops and on the 31st May 1803 Khusaww was forced by them to leave Cairo and to, enmarch himself in Damietta. At first he fought with success against the Albanian troops who were marching with the Mamluks, but in July 1803 the allies commanded by Muhammad 'Ali and Qutuzn Bey Bardiz took Damietta and Khusaww was taken a prisoner to Cairo. Meanwhile the French had replaced him as wali by 'Ali Pasha Djem'ed. An attempt to escape from Cairo failed. On the 13th March 1804, the Albanian troops bent the Mamluks in their turn and Muhammad 'Ali proclaimed Khusaww once more wali of Egypt, but two days later through the influence of the relatives of Tahir Pasha who had died in the meanwhile, the arrangements of Muhammad 'Ali were upset. Khusaww was taken to Rosetta, where he was given leave to embark for Constantinople. From this Egyptian period Khusaww always had an ineradicable hatred for Muhammad 'Ali, whom he considered, not without reason, as a principal author of his failure.

Thereafter, Khusaww Pasha began a long career as wali of a great number of alawis, from the beginning of 1812 to 1817 he was Kapadan Pasha and again from December 1817 to February 1827. During this latter period he took part in the taking of Missolonghi (April 1826). When the news of the massacre of the Janissaries reached him, he had all the Janissaries in the fleet thrown into the sea in order to show his zeal for reforms. On May 9th 1827 he became Ser-asker at Constantinople, an office which he kept until 12th November 1836. During this time his power was unlimited. Although he had little education (he never learnt either to read or write), he was one of the few who was in favour with Sultan Mahmod than he, on account of his great zeal for reforms. It was he who was the first to present the Sultan with a body of troops trained according to the European method. Moreover as minister of police, he was able to maintain perfect order in the capital in spite of the troubled situation in the Empire. The population knew him and feared him under the name of "Topal Pasha". "He was the very genius of intrigue of Turkish officials" (Rosen). He resembled around himself a large coterie of dependants amongst whom some gained the position of daimid, for example his adopted son Khalil Pasha. Von Mohlke, sent in 1835 to Constantinople as instructor of the new Turkish troops, has given a description of the Ser-asker who, by this time, had attained a considerable age. He was an old man, very active, with a red face and white hair (there is a portrait in the Tavuslawi-Lawfi, vol. viii., Constantinople 1835, p. 56). He had become a discreet instrument in the operations of the Turkish armies against the Egyptian troops of Muhammad 'Ali. By his jealousy he thwarted the plans of the Turkish generals Husain Pasha in Syria (April 1833) and Ra'id Pasha (battle of Koutya, 24th Dec. 1833) so that the failure of the Turks must be largely attributed to him. In the period of upheaval which followed, he took very little part in the diplomatic intrigues, he never showed a very definite sympathy either with Russian influence or with that of France. The fall of Khusaww in November 1835 was ultimately due to the influence of the conservative party, and also to the plagues which had been ravaging Constantinople during these last years. He returned, however, to the head of the Government in March 1838 as chief of the cabinet with the title of velia asker and velia modifiedi wali; in this cabinet the young Ra'id Pasha was minister for foreign affairs. This ministry continued the organisation of the civil service (tirast-i kauriya). In 1839 he broke out anew with Muhammad 'Ali, which led to the catastrophe of Nisib (24th June 1839). During this time Khusaww was able to maintain tranquillity in the capital even at the time of the death of Mahmod II, which took place on June 30th 1839. Thus on the accession of the young, Sultan Abd al-Majid, Khusaww was the person indicated to fill the office of Grand Vizier, an office which was re-established, not having been temporarily abolished. The situation of the Empire was at this time very critical because of the defeat of the army and the loss of the fleet which had gone over to Muhammad 'Ali. During this time Khusaww was the soul of the resistance to the viceroy, his ancient enemy, but he took very little part in the diplomatic negotiations with the Powers, negotiations the object of which was to save Turkey. It was Ra'id Pasha who directed foreign affairs and who took the initiative in the proclamation of the famous Kauriya of 1st November, 1839. Khusaww was not the man to appreciate such a measure and played a very passive role during the ceremony. Little by little the intrigues of Muhammad 'Ali at Constantinople succeeded by Khalil Pasha who had become Ser-asker succeeded in weakening the position of the grand vizier; the Sultan dismissed him in June 1840 and banished him to Kordedjo. At the end of a year, however, the conservative influence was re-established in Constantinople, so he was recalled and he held the office of Ser-asker again from January 1840 to December 1847. Finally he retired for good, and this, the last Turkish grand vizier of the old school, died in the 13th Humadi, 1271 (4th March 1855) aged nearly a hundred years, without leaving any children. He was buried in a special mausoleum at Koutya; at this place there is also a house which he founded. During his life-time he had amassed enormous wealth. Many of his old slaves and servants rose to positions of high dignity in the civil and military service.

(3) Ǧaḥrūṯ al-Kānwāl, the poems which were written during the 34th to the 43rd year.
(4) Baḥrīn-Šafīyī, select remnants or poems of old age.

Selections from the preceding four Ǧu’lūs have been lithographed with the title of Ǧaḥrūṯ-ul-Amr Khāṣrā in the press of Naval Kishore, Lucknow.

(5) Nīḥāyāt-ul-Kandāl, a collection of Ghashī (lyrical poems) and Rūḥī (quatrains);
(6) Ṣafī al-Furqānī, a poetical account of the campaigns of Ḫuṭnī al-Dīn Firdūsī Shāh II during the first year of his reign, i.e., from his accession, 682 (1290), to his return to Delhi in 690 (1291);
(7) Ṣaḥīḥ al-Šāhīn, a moral and religious poem, written in imitation of the Makhzīn al-Awār of Niẓām;
(8) Ǧiḥān-ul-Kāhrāmān, an imitation of Niẓām’s Khurṣī wa-Shāhīn;
(9) Maqālīn wal-Qāšānī, an imitation of Niẓām’s Lāzīl wa-Maṭbūṭīn. It has been lithographed, Calcutta 1244, Lucknow 1286;
(10) Aḥmad-Šahmadī, a counterpart to the Iskandār Nāma of Niẓām;
(11) Ṣafī al-Šaḥīṭ, a poem on the loves of Bahram, written in imitation of Niẓām’s Haft Paḵrān;
(12) Tīrū al-Sayyidīn, a poetical account of the meeting of Sallān Muḥāammad al-Dīn Kaikhūlātī and his father Naṣīr al-Dīn Aḥmad Khān, Sultan of Bengal, which took place on the bank of the river Ghaghrā in Oudh, 688 H.; lithographed, Lucknow 1259;
(13) Naḥ Sināḥ, a poetical description of the court of Kaḥṣ al-Dīn Muḥāammad Khān, with an account of the principal events of his reign;
(14) Darwāzān Khwāja Khān, a poem on the love adventures of Khāja Khān, son of Sultan ‘Alī al-Dīn, with Daur Khān, the daughter of ‘Alī Kurn of Gūjrat;
(15) Tīrū al-Khurṣī, a work on Rhetoric, lithographed in the press of Naval Kishore, Lucknow, in 1914 an attempt was made under the guidance of the late Nawwār Hājjī Muhammad Ḥaftī Khān, the then secretary of the M.A.O. College, Allahābād (now Allahābād Muslim University) to publish well-edited texts of the Khurṣī Khuṣṣā, owing to the death of the Nawwār, only Nos. 9, 10, 11, 12 and 14 of the above list could be lithographed.

Bibliography: Muhammad Ǧaḥrūṯ, Twīlīgāt Fīrāqgāh, vol. 2, p. 733; Ǧaḥrūṯ, Maṣāḥfat al-Awālīyā (d. 725 = 1324) for whom he had the greatest regard and sincere devotion; and it is said that when he was accompanying Ḥaftī al-Dīn Taghhlīkī Shāh in his march to Bengal, the news of the demise of his spiritual leader reached him, on hearing it he hastened back to Delhi, gave up the royal service and distributed the wealth he had to the poor, and took up his abode at the tomb of the saint, and died six months after in Delhi, 725 (1325).

He is the author of the following three works;
(1) Twīlīgāt al-Ṣafār, the poems which were composed from the poet’s 35th to 19th year;
(2) Wūṯ al-Ǧaḥrūṯ, the poems which he composed from his 20th to 34th year;

(M. Ḥusayn Ḥusain)
one of the early Shi'ite doctors, may be given here. One of the conditions for the validity of the Friday-service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the khutba must be recited by a man of the Kur'ân in the first khutba or, according to some doctors, in both. It is commendable (umsa) for the khâthib to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the qulul is pronounced by the mu'adhdhin; to lean on a bow, a sword or a staff, to direct himself straightway to his audience; to pronounce the 'a'dâ' in behalf of the Muslims; to make his khutba short.

Regarding the khutba's on the days of festival the same author says (p. 42) that they are like those of the Friday-service, except in the following points: the khâthib must open the first with nine takbirs, the second with seven. On the 'id al-fitr he must instruct his audience in the rules for the salât al-fitr, on the 'id al-adha in the rules for the sacrifice of this day. It is allowed to him to pronounce the sermon sitting.

Regarding the khutba's of the service during an eclipse, al-Shârîzî (p. 43) remarks that the preacher must admonish his audience to be attentive and in the service in times of drought he shall ask Allah's pardon. In the opening of the first khutba nine times, in the second seven times; further he must repeat several times the salât on Muhammad as well as takâfîq, recite Surâ ix., elevate his hands and say Muhammad's 'a'dâ' (which is communicated by al-Shârîzî in full). Further he must direct himself towards the qibla (p. cv.) in the middle of the second khutba and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker, was the first to point to the relation between the Mahammadan pulpit and the judge's seat in early Arabia. This explains why the khâthib must sit down between the two khutba's; it explains also why he must lean on a bow or sword; for these were the attributes of the old Arabian judge. It is not easy to see why the khutba precedes the service on Friday, whereas on the days of festival and the other special occasions salât comes first. 'Utibî tells us that Marwân b. al-Hakam was the first to change this order of things by pronouncing the khutba before the performance of the salât on the days of festival (e. g. Bukhârî, I, 656, and 6 and especially the pathetic picture in Muslim, I, trad. 9).

It is also said that Marwân was the first to hold the khutba on these days on a pulpit, the old custom being a service without minbar or mabârak. According to other authorities (cf. Musliim, I, trad. 38, 73 and al-Nawawî's Commentary) the khutba before the salât was an institution going back to 'Umar or even to 'Umar. The common opinion of traditionists, however, that it was an innovation due to the general tendency of the ʿUmayyads to favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the khutba in a sitting position, must be looked upon as an endeavour to go back to the pre-Islamic judicial sites concerning minbar and khutba.

Regarding the prayer on behalf of the faithful (dâ'â' il-'ommânîn) it must be observed that in this prayer before the Friday-serâ' it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially in times of political troubles, the same mentioned in this dâ'â' betraying the sultan's political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the name at this occasion exposed the khâthib to suspicion on the part of the ruler. In countries where Muslims live under non-Muslim rule, even a prayer-for the worldly prosperity of the ruler may expose the khâthib to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, Islam and Phenomena, p. 13 sqq. = Verz. Geschr., II, 430 sqq. = Verz. Geschr., I, 214 sqq.). The custom of mentioning the ruler in prayer is found as early as the fifth century n. c. in the Arabic puppets of Elephante (Pap., I, xxxii, 26; cf. also Harmack, Mission und Ausbildung des Christentums, i, 286). Several of the characteristics of the law occur also in accordance. The khutba's of Muhammad usually begin with the formula asalânâ (Bukharti, Daim's, bâb 39). Side by side with the hamdâla (Muslim, Daim's, trad. 44, 45) the abdâh is common (Ahmad b. Hanbal, ii, 302, 343: 'A khutba without the abdâh is like a mutilated hand'). In a large number of traditions it is stated that Muhammad used to recite passages from the Kur'ân (e. g. Muslim, Daim's, trad. 42, 54; Ahmad b. Hanbal, v, 66 sqq., 68, 93 sqs.). The khutba must be short, in accord with Muhammad's saying: 'Make your salât long and your khutba short' (Muslim, Daim's, trad. 47). Just like the salât the khutba must be right to the purpose (Daim's, trad. 44). The audience must be silent and quiet; 'who says to his neighbour Listen!, has spoken a superfluous word' (Bukharti, Daim's, bâb 30). The two khutba's pronounced by the standing khâthib, who sits between them, are based on Muhammad's example (Bukharti, Daim's, bâb 27; Muslim, Daim's, trad. 33, 33; Ahmad b. Hanbal, ii, 35, 91, 94). During the abdâh Muhammad used to sit on the minbar; the sultan was spoken when he had descended (in order to hold the khutba standing); this order was observed by 'Abd Bâkî and 'Umar (Ahmad b. Hanbal, iii, 449 bâb). Neither the term khutba nor the verb khutaba is found in their technical meaning occurring in the Kur'ân. Even in the passage containing an admonition not to abstain from the Friday service for worldly profit, it is only the salât which is mentioned (Surâ ii, 8—11). It would be wrong to conclude from this silence that the khutba did not yet form a constituent part of worship in Muhammad's time. Still, it is not probable that the different kinds of prayer were accurately regulated from the be-
gaining, (which) has preserved descriptions showing that Muhammad’s khitabs often did not have much to do with the regular sermon of later times. Abü l-Dard, Al-kab‘ al-sālih, bkh 13: Muhammad had sent Abü Djamā b. Ḥišāṣīn as a collector of the zakah to the class of Lahit. When a man made difficulties concerning the payment of zakah, Abü Djamā knocked him on the head. Thus his claim was cast out to Madīna and Laith before Muhammad annexed a claim on retaliation. After a discussion they agreed upon a blood fine to a certain amount. Then Muhammad asked them: to-morrow I will hold a khitab and propose to my people the amount you have agreed. At night Muhammad pronounced his khitab saying: These men of Laith have come to me in order to claim retaliation. They did not accept several proposals, but finally have agreed to such an amount. Do you agree with it? They answered: No. Then the Madīnites were angry with the embassy of Laith, but Muhammad persuaded them not to importune them. Finally they received a greater amount after Muhammad had agreed on it with them in a second khitab. — This kind of khitab apparently is a sample of the addresses of the early Arabians rulers to their people and has scarcely anything to do with a sermon. Still, it is by the same time between the life and death that appear from the following traditions. — In a tradition on the authority of Abü Sa‘īd al-Khadr it is said that Muhammad on the days of festival used to open the service with the al-zahr: then he pronounced the khitab *and* his khitab usually consisted in the command to participate in some mission or expedition* (Alamāna b. Ḥunayl, III. 56 sq). A similar statement is to be found in Muslim, Tafsīr, trad. 97: *When Muḥammad had concluded al-zahr* on the days of festival by the tasla‘, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement he gave his orders on it; he used also to say: give alms, give alms, give alms; then he went away. This state of things lasted till the time of Mas‘ūd.* There is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muhammad’s time. Yet, it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Mas‘ūd, who had been a *khalīfa* built on the wasla‘. The following instance refers to the Friday-khitab: *Abū Riba’s says: I addressed the Prophet while he pronounced the khutbah, saying: Oh Apostle of Allāh, I am a stranger who wants information concerning his religion which he does not understand. Therefore the Apostle of God abandoned his khutbah and came to me. Then a chair was brought (it seems to me that its legs were iron); the Apostle of Allāh sat down on it and began to teach me what Allāh had taught him. Then he finished his khutbah.* (Musāli‘, Dīwan’s, trad. 91). This tradition, interesting though it may seem, betrays the tendency to accentuate the absence of a sermons. Other traditions of this type give an equally simple picture of the Friday-service, e.g. those in Muslim’s chapter. Dīwan’s, Nq. 54—59, which represent Muhammad pronouncing the khutbah, when a man enters, Muhammad at once directs him the question: Have you performed the two rā‘id’s?

Apparently the tendency is to show that Muḥammad laid so much stress upon the two non-obligatory rā‘id’s, that he even interrupted himself in his khutbah in order to accentuate their importance. However, uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muḥammad’s lifetime. This order consists of three elements: the *early* Arabians khutbah, Muḥammad’s *mnemonic* and the example of Jews and Christians.

In his study on the history of Muslim worship C. H. Becker has endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. The main features of his position are the following. The first khutbah corresponds to the first part of the mass (*Vespermissa*). Al-khutba and khitab are an echo of the responses between the deacon and the priest who administers the mass. The obligatory recitation of the Kisra corresponds to the recitation of the scripture. Concerning the two khutbah’s he states that this duality is subject to tahrīf on the part of the fājlā’s; it has found its way to the service on the days of festival coming from the Friday-service. The second khitab corresponds to the sermon and the general prayer.

This view was combated by Mittwoch who found in the Jewish liturgy features corresponding to al-khutba and al-khutba, to the *benedictio*, the recitation of the Torah (first khutab) and the recitation from the Prophets (second khutab). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy have exercised influence on the final constitution of the Muḥammadan service.

Instead of a history of the Muḥammadan sermon which has not yet been written, a few notices only may be given here. Muḥammad’s first and second khutbahs in Madīna are in Ibn Ishaq’s Sīra (ed. Wustenfeld, p. 340). It may follow here in translation, not because of its being considered genuine, but as a standard specimen. *The Apostle of Allāh praised Allāh and said: Allāhu ‘akbar.* Oh people, provide for yourself (by good works), and instruction. By Allāh you will become richer, and everyone of you will take his cattle without shepherd. Then his lord will say to him, speaking without a dragon’s mouth and without a screen. Has not my Apostle come to you? He preached to you and I provided you with money and gave you abundance. What have you provided for yourself? Then you will look to the right and to the left, without perceiving anything (which can aid you); then you will look after you, but not perceive anything heading Hell. Therefore, whoever will be able to avoid Hell, even though it were on account of a piece of a date (given as alms), he should do it, or on account of a good word, if he should not possess a date. For good deeds are rewarded ten, nay even seven hundred times. May peace and God’s mercy and blessing be upon you.*

Muḥammad’s last sermon is communicated in Bukhāri’s collection, Dīwan’s, bkh. 49: his exposition when he preached is described in Muslim, Dīwan’s, trad. 49. An incomplete description of a Friday-service with a translation of two khutbah’s in Lane, *Muhammad and Customs*, Finsler and London 1895, p. 99 n.99.
A collection of sermons delivered at Al'i is in the former Royal Library in Berlin; among them is Khutba without the latter alif. As the office of the khatib became a regular function, the khutba became to the khutba what a calligraphed document is to the professional scribe; the one displayed his art in flourishful initials, the other in thuluth prose. Collections of sermons are often arranged following the calendar, viz., four sermons for every month and additional ones for the days of festivals, the Prophet's birthday, and his Ascension; see Ahl al-Muridi, Farsadche de ar-Ruh, iii, p. 437.

It is customary to hold the khutba in Arabic. This rule has often been broken in Turkey.

(A. J. Wessinck)

KHUTTAL, a district on the upper course of Amu-Daryr between the rivers Panj and Wakhsh, called Dyrybath and Wakhshah in the middle ages, sp., according to the data given in the geographers; Shafi al-Din Ya'qubi, Zafr-Nama, Ind. edition, l. 388; Misk, must have corresponded approximately to the modern Balasat, although we already find the latter mentioned in the Zafar-Nama (l. 80), Ya'qubi (l. G.A., l. vii, 292) says the largest town of Khuttal is Wakhshah, the modern Peshawar which really lies outside of Khuttal (west of the Wakhsh). Khuttal was a district specially noted for its houses (cf. B.G.A., l. iii, 325 infra and vi, text, p. 180).

The pre-Islamic titles of the rulers of Khuttal, Khuttal Shah and Shur Khut talla (B.G.A., text, p. 40), seem to have been no longer used in the Muslim period. The last battles of the Arab conquerors mentioned in Tabari (iii, 71) are of the year 753 (750/751); the king (matthe) of Khuttal had to leave his country and go first to Farghân and then to China. The Chinese accounts of the title granted to the king of Khuttal in 753 (E. Chavannes, Documents sur l'Asie orientale, p. 108 and 216) are thus explained. A genealogy of the "later rulers of Khuttal" has been compiled by Marquart (Ebrah. p. 302); in his opinion the kingdom of Khuttal later became divided into several small states; but in the time of the Safawids a ruler Ahmad b. Hasir is mentioned as amir of Khut tall (Gardth in Barthold, Turkestani, i, 9, account of the events of 999—947). Mukmah, (B.G.A., iii, 337 a) also mentions another of the rulers from whom the Sanamids received no taxes (khurrafi) but only presents (hajjat), the amir of Khut tall.

After the fall of the Sanamids, Khut tall belonged to the empire of the Ghaznavids (see ii, p. 154) and being on the frontiers was exposed to frequent raids from the land of the Ilk-Khans (cf. ii, p. 465). Under Sultan Mu'ayyid (1227—1257) to the sovereignty over Khut tall were made, notably by Ali Temur (q.v.) (Baha'i, ed. Morley, p. 348), a separate ruler of Khut tall is not mentioned at this period. On the other hand in the al-Adil (b. 25) in the account of Sultan Alp in Ardash's campaign of 1356 (1064) an amir of Khut tall who had shut himself up in his fortress (its name is not given) is mentioned; it was only after a long siege, in which the amir himself was killed, that the fortress was stormed. In another passage (b. 155) Ibn al-Adil tells of a campaign by the lord of (Ilkhan), the Shuda Faraghi in 1253 (Aug. 1253), Tummi; this ruler is also mentioned in the Sanamids before him, and it is claimed descent from the Persian Faraghi Gec (cf. i, p. 586). There is no further mention of a native dynasty in Khut tall after this. It probably belonged to the kingdom of Ghorids (ii, p. 166—164); we are definitely told of this of the district of Wakhsh on the lower course of the river of the same name (Tubadzhi Nima, transl. Raverty, p. 446). Among the many smaller principalities into which the Ghurid kingdom broke up, the kingdom of Khut tall is mentioned (ibid., p. 436 and 450; Nasr, ed. Houzada, p. 397; cf. W. Barthold, Turkestani etc., ii, 400).

In the second half of the xv. century Khut tall was one of the many small Turki-Mongol kingdoms into which Caghazai's empire had broken up (cf. i, p. 518). In 1372 by command of Timur, the king of Khut tall, Kar-Khwarazm was put to death for treacherous negotiations with Khurram (Sharaf al-Din Ya'qobi, Zafri-Nama, Ind. edition, l. 243). Khut tall later was one of the dependencies of Iltihal (cf. ii, p. 316); when, in 903 (1497/1498) the Reg Khwarazm Shah had seized dominion over 1518, he granted Khut tall to his brother Walli Reg (Iltihal, ed. Beveridge, ft. 57); Walli Reg was killed in 910 (1504/1505) by Shahshah, the founder of the Osman kingdom (ibid., ft. 125). Under the rule of the Osman the name Khut tall for the region was omitted by Khurram. The district of Khut tall is mentioned in 1535 as the chief town of Khwarazm and Wakhsh, (Begun in B.A.K. II 1044 = Sept.—Oct. 1034; cf. Zapata, ac. sv. 233) (Ind. Office MS. 560—575; ft. 223a and 258a); the name Khut tall is already used in the history of Khut tallib Allah (1702—1715); the work was begun in his lifetime (F. Teulé in Z.D.M.G., xxxviii, 243; esp. text, p. 29).

(W. Barthold)
KHUZAYA b. 'Amr, name of a South-Arabian tribe, a branch of the larger tribe of Anifa. The genealogists with few exceptions are unanimous in tracing its pedigree through Anifa, unnamed Luhayy b. Luḥayy b. Khaththa b. Muqatta'a. They agree further that they, together with the other branches of the Anifa, left South Arabia at a remote time and wandered with them to the North. When they reached the territory of Mecca, most of them remained and continued their journey, the Ghassan to Syria, Anifa to Damascus, but Luhayy remained with his clan near Mecca and thus separated (muhanasa) from the remainder of the tribe. The city of Mecca and the sacred territory was at that time in the hands of the tribe of Quraysh and we may fix the time approximately in the fifth century of the Christian era, though Arab antiques, by assigning exceptionally long lives to some of the chieftains, date their arrival near Mecca several centuries further back. According to the same antiques the Quraysh, the city of Mecca was granted this territory to lose much of its splendor and in addition by extortions from pilgrims had caused the pilgrimage to have fallen greatly into disuse. The leader of the Anifa b. Tha'alaba b. 'Amr, had asked from the Quraysh permission to stay in the sacred territory till his foragers had found suitable pasturage-grounds elsewhere. This permission the Quraysh would not grant and as Tha'alaba said that he would stay, whether they allowed it or not, it came to fierce fighting which lasted several days and ended in the utter defeat of the Quraysh. Only Meckha b. Anifa al-Quraysh who had had also from the fighting was allowed to leave the city peacefully, and founded a new settlement with his family and followers at Kurna and Hily, where his descendants still reside in the third century of the Hijra. Having become complete masters of Mecca and the sacred territory, they permitted the descendants of Jami', who were few in numbers and had taken no share in the quarrel, to remain peacefully among them. The very next year of the conquest brought epidemic fevers to the new population, and according to some historians it was not till this time that the other clans of Anifa migrated further afield. With a view to establishing a legal claim to the custodianship of the sanctuary, no doubt, Rabia b. Khaththa b. 'Amra married Fuhaira the daughter of Anis b. Anam b. al-Khabita b. Mundhir, who had been the last ruler of Mecca, and thus became the richest man in the city. From this latter account it becomes almost evident that the two tribes were at that time equal in Mecca and that the rise of the Khura as was more violent than is generally concluded from the first account. There can hardly be any doubt that here the same process occurred as it happened continually, that the tribes outside a town by gradual pressure upon the more peaceful and prosperous town-dwellers became in time the masters of the stations, only to suffer the same fate a few generations later. Rabia is credited with having re-introduced the rites of the pilgrimage, especially by caring for the welfare of the numerous pilgrims who visited the sanctuary, but he is also credited with having been the first to have placed the idols round the Ka'ba and especially with having brought the idol Hubal from Hit in Mesopotamia which, with other idols still existed at the time of Muhammad. Rabia and his descendants remained custodians for a very long time (Arab historians mention 300 and 500 years — which figures must be highly exaggerated). The last ruler was Hulail b. Hubayya b. Sallu b. Ka'b b. Anmar, who gave his daughter Hubayya to marriage to Khurayj, the head of the small clan of Khurayj, a branch of the tribe of Khura, Hulail when he grew old made it a practice to give to his daughter or his son-in-law the keys of the Ka'ba to perform such duties as were the privilege of the custodian of the sanctuary. When Hulail died he left his office to his daughter and his son-in-law, but when the latter wanted to claim this right, he was strongly opposed by the whole of Khura, who forcibly took the keys of the sanctuary from Hubayya. Khurayj who had many friends among the Khura who were settled in the vicinity of the sacred territory, as also among the Khura, came to an arrangement with his friends that at the next pilgrimage period they might have the completion of the rites of the pilgrimage should come to open quarrel with the Khura, and in the end it resulted in fierce fighting in which many were slain. To settle the dispute both parties agreed to submit to the judgment of Ya'qub b. 'Awf al-Kilab. Both parties were invited to meet at the port of the Ka'ba and when Ya'qub had ascertained the number of clan of Khura to be greater than that of the partisans of Khurayj he gave judgment in favor of the latter. He was in consequence given the custodianship of the sanctuary, and with it the rule of the city of Mecca, while the Khura were permitted to reside with the Khurayj in the precincts of the sacred territory. Thus the end of the rule of the Khura was the commencement of the rule of the tribe of Khura, and as the conquest of Egypt and the West was principally accomplished by warriors recruited from Western Arabia it is not surprising that we find descendants of the tribe of Khura prominent in the newly conquered lands, especially in Spain.

That there was a great deal of confusion in the genealogies of this tribe is evident from their being at times not classed among the South-Arabian tribes at all, so e.g. the Khura 'Uyayn gives the genealogy: Khura b. Louayed b. Kama b. al-Yazid b. Mundhir who, Schallari in his commentary on the depositions of Rabia. The Arab genealogists dispute to explain by saying that Khaththa b. Tha'alaba married the widow of his father Kama, who was also the mother of Louayed, in which case the genealogy would not trace their origin from North and South-Arabian tribes. As regards the divisions of Khura there is a great amount of divergence, some genealogists mention the clans of Ka'b, Mullah, Sa'd and Sallu, while other know only 'Adiy, 'Awf and Sa'd.

The great number of names of men who claimed descent from this tribe must make us believe that they were more numerous than we should conclude from the comparatively few names mentioned as companions of the Prophet, and it may be that by the time of the rise of Islam they
had gradually been pushed by the more energetic
Romans into the surrounding country out of the
precincts of the city of Mekka itself.

KUZISTAN, the land of the Khus (Haus),
Kesava of Polam, a province of Persia
now officially called Arabistan, "the country of
the Arabs," because its desert plains have been
overrun by the nomad tribes of the Khus (Bedouin
pronunciation Cab) and the Banu Lihm. The
present boundaries of the province are: to the
North, the mountains of the Zagros chain; to the
West, the Kerke [q.v.]; to the South, the river
Dijarai or Tobi and a line drawn across the desert
from the confluence of the Kheri [q.v.] and of the
Kerkeh with the Smaj al-Arab [q.v.]; to the East
Kurdistan. The principal towns are Shush (Tunst of
the Arabs), the seat of the governor, Busof, Hauza (Suq al-Abwa, "the market-place of the
Cosseans"), Ruhkhor, Muqanannas, Behbukan;
the mountains are inhabited by lit tribes, namely
Fell, Bahghiyara, Kuhghait and Mamanu.

Under the Safedids this province was included
in those of the South (Nim-rat); the Christians
who inhabited it formed an ecclesiastical province
called 8791 Huzayf; the capital was Bishr Lzapil,
later called Gundishapour. Conquered by the Arabs
in the year 19 (640), it was defended by the
Saizia Hormuzan, who after the capture of Suq al-Abwa (Hama Tafaham: Hadjikhan-wakir),
and his defeat at Ruh Hormuzi on the Oxus, was
besieged in Shush for 6 months and gave himself
unconditionally to the Caliph Omar. It was
occupied by Muluz al-Dawla Ahmad ib. Burash
before the capture of Baghad in 334 (945) and
during the reign of the Mongol Hukuk. For the
Arab geographers Khuzistan has for its
boundaries, to the West, the canton of Wasif and
Dir al-Rubuli; to the South, the shore of the sea
from "Abbadan te. Mehristan; to the East, Firs
and "Ish-Adjami (the boundary is marked by the
Tobi); to the North, the course of the Kerkeh
and the mountains of the Luh. Important towns
were: Suq al-Abwa (quajaz), Sura, Dandhibajah,
Tuscar, Askar Moktan, Ruh Hormuz, Davrak
(later Tobi, Kofskiz, Khboh, Hsun Mahdi). Climate
warm, air unhealthy and of bad character; inhabitants quarrelsome and greedy,
copper-haired, slight figure, beard scanty, hair
bushy. Probably they were the residue of the
negroids who formerly were the population of the
province. They still spoke at the time of the
Arab conquest a peculiar language (khmar) which
was neither Indo-European nor Semitic — perhaps
it was the remnant of the language of the
Aznanis or Elamites; the remains of it are said to
be preserved in the gaitas of the Dzu-cal. After
the wars with the Romans the people of Mesopo-
tamia were transplanted there; in the reign of
Shirak: 1 the magnificent bani of Tustar was built
by the prisoners of war taken after the disastrous
expedition of the Emperor Valerian. Industry,
developed in the country under the influence of the
warseromky carried off from Byzantium into India. At
the present time the country is rich, and a few in-
habitants maintain themselves in a few large villages;
the plains provide pasture for bodies of nomads.

KIYAV. [See KETJIDJU.]

KIBLA, the direction of Mecca (to be
exact of the Ka'ba or the place between
the water-spout [wadi] and the western corner),
which has to be observed during the fidai.

I. From very early times the direction at prayer
and divine service was not a matter of choice
among the Semitic peoples. There is already an
allusion to this in 1 Kings, viii. 44 and it is
recorded of Daniel (Dan. vi. 11) that he offered
prayer three times a day in the direction of Jeru-
salem (which has remained the Jewish text to
to this day). As is evident from the names of the
quarters of the heaven, the whole life of the
Semitic peoples was turned eastwards. The
Es- suses prayed in the direction of the rising sun
and the Syrians Christians also turned eastwards at
prayer. (Ancient Sasanian Documents, ed. Careton,
p. 24, 607; Acts Martyrum mundi, ed. Assemani,
il. 125). It may therefore very well be assumed
in agreement with the tradition that Muhammad
appointed a "Kibla" at the same time as he in-
mnstituted the "Gad." It is certain that in the period
immediately following the Huldja the direction
taken by the Jews was also used by the Muslims.
Tradition places the alteration in the Kibla to 16
or 17 months after the Huldja, in Ra'dah on
Shaban of the year 2, probably rightly, for in
this period we have the important change in
Muhammad's attitude to the Jews. Disappointed
at the slight success of his preaching among the
Jews of Yathrib, he began to turn more and more
to the old Arabian tradition and made the religion of
Nabism the basis of all monotheistic religions.
The Ka'ba was brought into prominence as a reli-
gious centre and the Ka'ba began to be talked of as a Muslim site. At the same time a beginning
was made with the eviction of the Jewish tribes
de Yathrib. The alteration in the Kibla is a not
unimportant fact in this series of events and this
train of thought. The Ka'ba, verse 414, indicates
that this: "The fools among the people will
say: 'What has induced them to abandon their
former Kibla? Say to Allah the right and the
west. He guides whomever he pleases.
unto the sight path. Thus have we made you an intermediate community, so that ye may be witnesses for mankind while the Prophet is a witness for you. We only appointed you, previous to the Prophet to distinguish him whose path the Prophet from henceforth follow. So turn back on your heels. Verily this is a grievous sin from which he who is free who is guided by Allah, but Allah will not allow your faith to be of no avail for He is gracious and kind. We see how thy face turns to all the quarters of the heavens so we will cause thee to turn to a kibla pleasing to thee. Turn thy face toward the holy, soundful; turn thy face to it wherever you are. Whatever signs thou wouldst give to the people of a scripture, they will not follow thy kibla."

The phrase placed by Muhammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by a new command from the Jews regarding Muhammad's dependence on the proscriptions of their religion (sūrat an-Nisā', v. 123; 49; col. 2). In the second instance, the word kibla is considered to be that of ḥadālah (sūrat an-Nisā', v. 13; 48; col. 2). Here we have a glimmering of the real truth of the matter, namely the connection with Muhammad's new political-religious attitude. Following one tradition (Bukhari, Sahih, B. 32; Tafsir, B. 2; 4; 14) the revelation of the above quoted verses from the Kā'bah was communicated to the believers in the morning of the ḥadālah in Kā'bah; according to another story Muhammad had with a portion of the community performed two raka's of the Zūlī-Ṣalāt in a mosque of the Bani Salima, when he turned round to the direction of Mecca (Baladhuri, on Surah II, 139). The mosque received the name of Masjid al-Ṣālihiyyah, "the mosque of the two kīla". If it may then be considered established that Muhammad and his community turned towards Jerusalem in the ṣalāt during the early years of the Hijra, the question still remains what was his kīla before the Hijra. In Tradition two answers are given to this question and a third deduced by harmonizing the two answers. According to one, Muhammad in Mecca observed the Kā'bah to the Ka'bah (Talibi, Tafsir, B. 4; Baladhuri, on Surah II, 139); according to another the story the kibla had always been Jerusalem (Talibi, Tafsir, B. 3; 8; col. of de Goeje, v. 180; Baladhuri, Futūh, p. 2); according to the third (Ibn Hījām, p. 190, 225) Muhammad in Mecca was careful to have the Kā'bah and Jerusalem in a straight line in front of him at the ṣalāt. The first view is influenced by the theory of the "religious" of Islam to make both the Kā'bah and Jerusalem in the light of history, one does not quite understand how it could have arisen. Therefore it does not like to acknowledge Muhammad's dependence on Jewish practice. This view is therefore, in my own opinion, the most probable. It is further mentioned as a distinguishing peculiarity of ʿAbd al-Malik b. Marwān that even in the period before the Hijra he would not turn his back on the Kā'bah (Ibn Hījām, p. 243); this tradition would lose its point if the old kibla had been in the direction of the Kā'bah. Besides these traditional views, others have been put forward in recent years. According to Th. Amund, Die Ver- sprung des Islam und das Christentum, Upsala

and Stockholm 1926, p. 4 (cf. Daul, Mohammeds Liqā, p. 112) the original kibla was to the east, Amund leaves his view not on the material of tradition but on the general agreement between early Muslim and Christian religious usage. Schwab said that the Jerusalem kibla was introduced into Mecca, it is true, but not as a specifically Jewish institution, perhaps a Jewish-Christian one (Geschichte des Orients, I, 175, note b). The direction of the kibla was, or is, not assumed at the salāt only and with the points of the time (Bukhari, Sahih, B. 28; al-Adabi, B. 131; Nasai, Sahih, B. 120; Tirmidhi, B. 96), but also at the ʿalā (Bukhari, Darmo, B. 24), at the šalāt or ʿalā (Bukhari, Husayri, B. 20) and after the sun-drawing at the central Diya (Bukhari, Hāfiz, B. 140–142) the head of an animal to be slaughtered is turned to the kibla and the dead are buried with the face towards Mecca (Lane, Manners and Customs, Baladé and London 1599; Snouck Hurgrono, Verz. Geneal., B. 245, p. 409).

For the Hijra is forbidden to turn towards Mecca when relieving nature (Bukhari, Hāfiz, B. 141; Muslim, Tāhāra, B. 61; Nasai, Tāhāra, B. 18–20). On the question whether it is allowable in doing this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Bukhari, Hawī, B. 144; Dānajj, B. 40; al-Ṣālihi, B. 20; Muslim, Tāhāra, B. 59, 61); cf. Dānajj, B. 18; the term kibla in the community is all al-Kibla wa al-Laylih. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus kibla (pronounced kibla) means in Egypt and Palestine, south in the Maghrib, east.

In the mosqués the direction of the ṣalāt is indicated by the Mihrāb (v. v.); in classical Ḥadīth, this word does not occur and kīla is used to mean the wall of the mosque towards which one turns. At a ʿalā outside a mosque, a mirāb (v. v.) marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the kīla (Lane, op. cit., B. 229).—It should be noted that many mosques are not accurately but only approximately orientated (according to the qibla). It sometimes happens that this error has been later corrected by the drawing of lines on the floor of the mosque. For example, the case in many mosques of the Dutch East Indies where the faithful at the ʿalā take their direction not from the miṣqāt but from such indicators (information kindly supplied me orally by Prof. Snouck Hurgrono).

The laws relating to the kīla are here given very briefly only and according to the Shafiī school as laid down in al-Shafiī's Kāf al-Taibī (ed. Juyubī, B. 20). The adoption of a kīla is
a necessary condition for the validity of a pilâr. Only in great danger and in a voluntary walk on a journey can it be neglected. But if one is on foot or can turn his head round, it should be observed at the hukm, wakil and negált. One should turn exactly in the direction of the kibla, and one who is near it can do so with certainty, and one who is remote as near as he can judge. According to others, in the latter case only the general direction (qibla) is obligatory. Outside of Mecca one turns towards the minârât within a mosque; when not in a mosque one follows the direction of reliable people: only a man who is in a deserted region is allowed to ascertain the direction himself by means of certain indications. For details of the laws see the Bibliography.

II. In terms of astronomical geography the direction of Mecca in any particular spot is identical with the tangent at the point M on the circle M (fig. 1). It will turn with the meridian southwesi which holds for by far the greater part of the Muslim world. Once during the day as a rule the shadow of the pointer falls upon the kibla or on its prolongation beyond the foot of the style, which is called mukázâ, shâbbâ or shād. The minârât (callers of the hour) made this moment known from time to time by calling aloud, and in the same moment every other shadow pointed to Mecca. The shadow itself was called shâd before the asawâl and jât in the afternoon. For large towns (e.g., Cairo) Muslim astronomers calculated the daily altitude of the sun for the moment at which it came into the direction of the kibla on its daily course.

Every shade of any size (hook of tables, from the Persian abâb, Arabic shabâ [chord because the tables of sines or chords were the same]) deals with the calculation of the kibla. Arabic literature is not very rich in special treatises dealing with the ascertainment of the kibla. If the difference between latitude and longitude of the place in question was not great, a method of approximation, known even to the early Arab astronomers was used which gave results sufficiently accurate for practical purposes. We find this method already used by al-Battâni (929), Ibn Yûsuf (1009) etc. The process is as follows: the difference between the longitude of Mecca and that of the place in question is counted off westwards on the Indian circle (i.e., on a horizon circle) starting from the south point and eastwards from the north point (i.e., the two equal arcs $S$ and $N$ on fig. 2) and the two points thus reached $A$ and $B$ are joined by a straight line $A B$. Similarly the difference of the two latitudes is measured southwards from the west point and from the east and the two points thus found are joined by a straight line $D E$ which cuts $A B$ in $K$. A straight line from the centre of the circle $N$ of the circle gives the direction of the kibla.

There are in Arabic literature numerical formulas for the finding of the angle $a$ (mukázâ) by this method of approximation. For Cairo Ibn Yûsuf gives:

$$\phi_1 = 30^\circ; \quad \phi_2 = 21^\circ; \quad \phi_1 - \phi_2 = 9^\circ;$$

$$\lambda_1 = 55^\circ; \quad \lambda_2 = 67^\circ; \quad \lambda_1 - \lambda_2 = 12^\circ;$$

$$A G = \sin (\lambda_2 - \lambda_1); \quad A G = \sin (\phi_1 - \phi_2);$$
while he finds by the exact rules of spherical trigonometry $a$ to be 55° 0' 15". — The Persian astronomer 'Ali Shihab Ohal al-Muqaddasji deals in this way with the case of Hamadan. He puts:

$$\phi_1 = 55^\circ 0' 15''; \quad \phi_2 = 15^\circ 30''; \quad \lambda_1 = 83^\circ; \quad \lambda_2 = 77^\circ 10'$$

(reckoning the longitudes from the "Fortunate Isles"; $\lambda_1 - \lambda_2 = 5^\circ 50'$. From the construction of the figure we get $a = 23^\circ$, while worked out exactly by spherical trigonometry $a = 22^\circ 15'$. We see then that this approximating method of calculating the direction of the kibla is very useful for small differences of latitude and longitude but of course breaks down when this is not the case. Fig. 2 gives the construction for Hamadan.

In contrast to this approximate method Ibn Yunus in ch. xxviii. of his al-Zij al-Kabir al-Fihristi ("The Great Fihristi Tables", Oxford, Hunt, 3311) gives quite an exact method of finding the kibla and by three different methods, of which the first is very remarkable inasmuch as the transcription of the text of Ibn Yunus gives us in modern language the cosine and sine equation of spherical trigonometry. The author shows that:

$$\cos \alpha \cos X = \cos \phi \cos \phi_2 \cos (\lambda_2 - \lambda_1)$$

$$\sin X = \frac{\sin (\lambda_2 - \lambda_1) \cos \phi_2}{\sin \phi_1}$$

If the two latitudes $\phi_1$ and $\phi_2$ refer to different hemispheres, the product $\sin \phi_1 \sin \phi_2$ is negative hence the double sign in the cosine equation. The other solutions go back to the division of any spherical triangle $\alpha \beta \gamma$ into two right-angled triangles.

An exact and mathematically interesting calculation of the "aspiral" of the kibla is given by Abu l-Wafa' (d. 998) in his al-Madridi (MS. 2494 Paris) for the city of Baghda.d. He finds $a = 13^\circ 49^\prime 9^\prime 15''$. Abu l-Wafa' s method of ascertaining the kibla (by the rule of the shadow) is very similar to that which had previously been made known by the Persian mathematician and astronomer al-Farabi b. Hatim al-Nairizi (d. 922/923), except that he found for the "aspiral" of the kibla at Baghda.d $a = 20^\circ 7'$ which is remarkably far out.

A next study of a purely constructive but exact method of ascertaining the kibla was given by the important Muslim mathematician Hasan b. al-Isma'il b. al-Haitham (d. 1033). It is as follows: the circle $C G D$ (fig. 3) with centre $H$ is described on a horizontal wooden plane with any radius. Two diameters are drawn at right angles $A G$ and $B D$. From $A$ cut an arc $A C$ equal to the latitude of Mecca $= \phi_1$ on the circumference of the circle, which represents the horizon of the place for which it is desired to ascertain the kibla. Similarly the arc $C K$ at the other end of the diameter is made equal to the latitude of the place $\alpha = \phi_2$. Finally the arc $A N = \lambda_2 - \lambda_1$ indicates the difference in longitude of the two places in question. The perpendicular $C T$ is then dropped on $A H$ from $C$ and with the radius $H T$ an arc is described from the centre $H$, which cuts $B N$ in $E$. If $E F$ is then drawn at a right angle to $A H$, on the radius $H E$ the section $E F$ is cut $= C T$ and a perpendicular to $H K$ erected at $K$ and $K M$ made $= F H$. From $M$ the perpendicular $M Q$ is dropped on $B H$ and $F S$ is cut off $F H$ so that $F S = M Q$. The angle $E S F = a$ is the "aspiral" of the kibla.

The proof of the correctness of this construction is given in our author by transferring the area of the triangle pole - Mecca - plane (91) in the plane of the horizon of the place $\alpha$ for which the kibla is being ascertainment. The correctness of Haitham's construction can however be easily proved as follows. If the radius $H A$ of the circle be taken as $a = 1$, the following are the successive equations yielded:

$$H T = \cos \phi_2 \cos H \ell = \cos \phi_2 \cos (\lambda_2 - \lambda_1) = K M$$

$$C T = \sin \phi_2 \cos K L = \sin \phi_2 \sin \phi_1 \sin \phi_2$$

$$K L = H K \sin \phi_1$$

$$M L = K M H \ell = \cos \phi_2 \cos (\lambda_2 - \lambda_1)$$

$$E F = \cos \phi_2 \sin (\lambda_2 - \lambda_1)$$

If $\ell$ further follows from the two right-angled triangles $H K L$ and $E F M$ that:

$$M Q = \cos \phi_2 \cos (\lambda_2 - \lambda_1) \sin \phi_1$$

Finally:

$$\cot \phi_1 = \cos \phi_2 \cos (\lambda_2 - \lambda_1) \sin \phi_1$$

or:

$$\cot \phi_1 = \sin \phi_1 \cos (\lambda_2 - \lambda_1)$$
but the latter formula is simply the well-known cosine equation of spherical trigonometry, applied to the spherical triangle $\triangle PAM$ in fig. 1. This formula at once gives the angle $\alpha$. A full discussion of all possible cases of the situation of the place $\Pi$ with reference to Mecca cannot be entered into here; the author gives no numerical examples.

The ascertainment of the azimuth of the $\kappa\beta\nu$ma of the $\kappaibl$$a$ as given by al-Biruni (d. 1048) in al-Kitaab al-Mahd$\nu$fi (Berlin, Ms. Orient. 275, Makba 3, 6, f. 132) is of a similar geometrical nature to that solution already given to the problem by Ibn Halhalm, mentioned above, although of much greater length. The late Arab astronomers, as far as we can judge, had made no progress beyond those of the middle ages in their $kibla$ calculation. We know the method followed by Muhammad b. Muhamm$\nu$d al-Dhahab$\nu$i (d. 1345) in his Mutekabb$\nu$li in the $kibla$; it is the approximate method already known to us. The Samarqand astronomer 'Umar Beg used spherical trigonometry for ascertaining the $kibla$.

To the 15th century belong two pamphlets dealing especially with the direction of the $kibla$, namely one by Mirjam Celebi (d. 1424/1425) entitled: Kita$\beta$b al-Fikr $\nu$al-Kibla (Constantinople, Library of the Aya Sofia, 2628) and the other by Khali$\beta$l Qara al-Din Ahmad al-Na$\beta$hi al-Hab$\beta$bi al-Shuq$\beta$ri (d. 1560/1564): Ni$\beta$thab$\beta$li $\nu$al-Kibla (Cairo). These two works begin with various horizon operations (al-fikr $\nu$al-fikr$\acute{\imath})$ such as ascertaining the four cardinal points, the azimuth etc., after which comes the trigonometrical calculation of the $kibla$. In the first of the above-mentioned treatises the almost-mentioned approximative method is again explained (for the $kibla$ of Constantinople).

In modern times the $kibla$ has become a subject of orthographical studies. Thus J. I. Craig repeatedly mentions a "Mecce retro-axiomatic projection", the object of which is to make a map on which the true direction of the $kibla$ can at once be read for any point on it. On such a map meridians are drawn to be parallel equidistant straight lines. If one combines with this quality of retro-axiomatic accuracy in defining the distance from the centre in such a map in addition to the azimuth of the $kibla$, the shortest distance of every place from Mecca can be read. C. Schoy has published a sketch of the map, in which of course the straightness of the meridional lines is dropped.

A table of plans with the corresponding latitude of the $kibla$ is given in the Gotha MS. Arab. 1483, which is a fragment of the astronomical tables of Ibn al-Sagh$\nu$r (l. 1375/1376).

( C. Schoy)

AL-KIBRIT, sulphur. It is numbered by al-Kaswini among the oily bodies along with quicksilver, the various kinds of tar, sulphur and asphalt. Other writers include it among the others, the vegetable bodies, with the two kinds of arsenic (sulphide of arsenic, orpiment, and calomel), salt-ammonia and quicksilver.

Among the Arabs, as before them in Pseudo-Aristotle, three kinds of sulphur are distinguished, the red of fine quality, the pure yellow, and the white; the latter would be the so-called "salt-sulphur", which smells of sulphurised hydrogen. Red, probably quite mythical, sulphur is said to be found in the west in the vicinity of the sea and to be very rare. A man possessing unique qualities is therefore called "red sulphur". Flowers of sulphur were obtained from fumaroles by roasting. The important uses of sulphur were for explosives in fireworks and for the colouring of metals. One series of metals becomes black with sulphur, e.g. lead and silver; sulphur silver is used in niello inlaying; the quicksilver also becomes black at first but on being heated red (zinabar). Sulphur had many uses in medicine (cf. Ibn al-Fa$\nu$r, al-Kaswini etc.).

In its natural state sulphur is found in three forms; all these were known to the Arabs.

1. In gypsum, chalk beds etc. lumps of sulphur occur; in this form it was exported from al-Qibl$\nu$ in the land of the Jordan (al-Mukaddas, p. 184); it was also found in this form in Fezra, Ballist$\nu$ and in Sicily.

2. It is found in volcanoes, extinct as well as active, e.g. on Etna, Venamund etc.

3. It is obtained from sulphur springs; for example there are hot sulphur springs at Dawer al-Furs in Kulistan, at which yellow sulphur is found (Gay Le Strange, The Lands of the Eastern Caliphate, 1905, p. 243). Information on the occurrence of sulphur in the east is given in C. Hütter, Handbuch der Mineralogie, part I, 1904, p. 50 and 87; E. Damayet and O. Tietze, Die mittel- in den Mineralien, part I, 1915, p. 90; O. Staschin, Die wichtigsten Lagerstätten der "Sicht-Eisen", 1. 1911, p. 251.

Among the alkaline sulphur there are numerous epithets (cf. J. Ruska and E. Wiedemann, Behr, "Alchemische Diskussionen", in S.B. M.M., Erl., 1924, p. 17-26). It is described as the yellow, red, or white, or was, its colouring properties procured it the name of the "colouring spirit" (al-ash al-safir). The asphyxiating small
of burning sulphur gave it the name of al-karmat (the asphatory). It was also called the "ruber of the eagle" (farih al-tarb) i.e. of quicksilver which occurs with sulphur to form solid cinnabar. Some other epithets are given in Elms al-Din al-Dimghiti (op. cit.); e.g. "sulfurבן" (ב"סף al-dibha), "sea-lard" (farih al-dibha), "pomegranate-seed" (farih al-rummāna), "liquid sulfur" (al-karmat al-dibha) etc. See M. Berthelot, "La chimie au Moyen Age," i. 14: Forghaie in Kitāb al-Farruṣūr al-mustaf fī Suwar al-Dīrī (Berlin, Ahwâlar's Katalog, No. 183681).

According to: the natural philosophers sulphur is composed of atoms of water, earth and air. Mixed and exposed to great heat they become coherent and form an oil which on cooling down becomes solid.

According to the teaching of the alchemists, sulphur along with quicksilver plays the main part in the formation of the most varied substances, especially metals. Have however sulphur and quicksilver are only general terms which have nothing to do with ordinary sulphur or quicksilver.

(K. Wiedemann)

KIBT, the Copts, the name given by the Arabs to the Christians of Egypt. According to Arab writers, the name is derived from the name of a king of ancient Egypt, Kep, who is said to have been a descendant of Noah. It was thought in Europe that this name derived its origin from the town of Koptis or that it was a corruption of Fangir, one Coptic manuscript alleges that the Greeks called the Egyptians Koeti because they had their children circumcised. It is now generally agreed that the word Kibt is a corruption of Al-Chupas (Kalkkanisli, i. 222; iii. 415; transl. Wasmund, p. 119; Majdali, ed. Wiet, i. 69; 32; Vanbe, ^Novellae^ Archaiol, p. 6; Quatrenn, ^Novellae^ Archaiol, p. 30-31, *Egypt (collection) UF, p. 2: 13; *Muns. (Ht. de l'Egypte), p. 5-6; *B.L.E., 1894, p. 201; Butker, *Copt. Chronicon*, p. 373; Lane, Muns., ii. 373; Stern, *Copt. Gramm*, p. 1; Steinmon, *Kopt. Gramm*, p. 29; ibid., v. 1.

The Copts and the Arab Conquest. When the Arabs conquered Egypt in 640, for nearly twelve centuries the country had been under foreign domination. Egypt had ultimately sunk to the level of a colony administered by the prefects of the Byzantine Empire. The hatred of the Egyptians for their masters, nourished by bondage, must have increased to such a degree during the Byzantine period that it restored to the natives the feeling of their lost nationality. Under the sulphur of Umar and, somewhat against his desire according to Muslim tradition, the Arab army conquered Egypt (Majdali, ed. Wiet, iii. 143-156; v. 14-391 (Caetani), Chron. (graph), p. 219-220, 227-228, 240, Rev. historique, xxiv. 275, 277; *Dict. (d')arch. (christ),* v. 1474-1479; ibid., v. 65. It seems little likely that the Arab general 'Amr b. al-Mu'ayd wished to confront the Caliph with the full; accomplishes Caetani, *Annali*, v. 29-86; ibid., v. 339; v. 51; for the opposite view: J. Maspero, *Organ*, (de l'Eglise byzantine*, p. 9; Rev. historique, xxiv. 309-310).

Indeed the conquest of Egypt took place at a moment when the Byzantines rejected by the Persians, were unable to create any diversion and when the Byzantines, cut off Egypt, were enabled to come to its assistance. The Greek army in Egypt was defeated, because the policy of which it had played, had not prepared it for war and because, moreover, it was composed mainly of Copts. Besides, in the sixth century a certain number of high officials were of native origin. The native population, long exposed to humiliating treatment by the Byzantines, did not render them assistance in this new conflict, and the Greeks could not even count upon their neutrality. [J. Maspero, *Organ*, p. 5, 16, 43-43; 49-50, 83-84, 95; Amelina, Acta (d.) Martyr., p. 39; Rouillard, *Administration* (de l'Egypte byzantine), p. 14, 164, 163; J. Maspero, *Hist. (des) Pat'arches d'Alexandri*, p. 39). The manifestations of Egyptian nationalism, which date from the fourth century, took an unexpected development after the council of Chalcedon. In the absence of a well-defined Christian dogma, these conditions are good grounds for thinking that the Egyptians were Monophysites, because their bishops had founded the doctrine and Sevons of Assyrian says that the Chalcedonian thesis had not been able to penetrate into a certain convent "because all the monks were Egyptians" ([Patriarches] *Oriens*, l. 498; cf. J. Maspero, *Hist. Patr.*, p. 16-17, 24-25, 49-54, 53; *Annali*, iv. 65-86). In fact the Egyptians almost welcomed the Arabs as liberators. "It was no little advantage for us," writes Michael the Syrian (transl. Chiart, ii. 410; cf. also p. 222), "to be delivered from the cruelty of the Romans, from their miseries, from their cruel zeal against us and to find ourselves at peace" (cf. *Annali*, iv. 85; J. Maspero, *Hist. Patr.*, p. 259; Basset, *Mélanges orientaux et européens*, p. 2). The same writer (l. 432-433) who, although late, is habitually well informed, definitely assures that the patriarch Benjamin i gave the Arabs in return a promise from the latter would go to the Jacobites their church. The bishops of Nikon, always very accurate in the facts which he recounts, regards strange defections amongst the native leaders, and declares that certain garrisons refused to fight against the Muslims and even rendered them assistance ([Patriarches] *Oriens*, transl. Zöllner, p. 357, 559-561, 565, 570, 573, 585; cf. Ibn Abd al-Hakam (ed. Torrey), p. 58-59, 73; Estechius (ed. Chelchou), ii. 24; Alb. Silk, F. 80; G. O., xi. 563; Majdali, ed. Bollh, ii. 492; Mesalle, p. 257-254; J. Maspero, *Organ*, 126, 131-132; Rouillard, *Univ. Stim*., 220. Rev. Historique, xvii. 303-304). Indirect evidence is also furnished by the numerous "badīh" of the Prophet in which...
he recommends the Muslims to treat the Copts well (Magrit, ed. Wiet, i. 99). The historical romance, Fadil al-Dhahabia, also shows that the Greek-speaking Copts were mostly Greeks, that the enemy contingents comprised Arab Christian elements and that the natives were often dismissed (Ismail, Al Magrit, ed. Wiet, iv. 2, 125; Admelluzzo, Aretz, p. 13-14, 30, 38, 103, 84, 7-fl. A. A. 1857, l. 24-26; Diction. arab., i. 1025-1104). Mahmut is believed to have ordered the Arabs to be killed to the last man because Husan, the slave of Abuham, and Mahmut, the commander of the Egyptian troops, were Copts (Ibn al-Hajji, p. 2-4; Schaller, l. 12; Magrit, ed. Wiet, l. 97, etc. Muhammed Khan al-Usmaal, ii. 270, 316; v. 310). Finally, the conqueror of Egypt was determined to seize his fortune, because, in the course of a former journey, he had been present in Alexandria as the gates of the city and the ball, which, thrown at hazard, was to point out the future sovereignty of the country, fell upon him (Magrit, ed. Wiet, iii. 125-126; Mardin al-Dhahabia, i. 241-242; this without denying the existence of such divinatory proceedings; Michael the Syrian, iii. 371; K. M. M., vi. 85; Haurt, Piece arabe, p. 60).

Another factor, the help of neighboring Arab tribes of Egypt, also played a part, but it is impossible to estimate its value. A number of Arab tribes led a nomadic life on the coast from the Red Sea, from Sinai up to the Sudan, and it has been noted that Strabo describes Kopts as a town under the Arabs (J. Masson, Organon, p. 53, 66; Laguicer, L'atavisme musulman, M.F.I.O., xii. 432-447: Vidal, ii. 7).

The Islamisation, its Progress and Causes. The Arab conquest imposed upon Egypt a new state, of which the Copts claimed to give the accurate title (Tabah, i. 258; Al-Khallali, iii. 324; Histoire de l'Arabisation, ii. 166-170; Lampe-Poulo, Egypt in the Middle Ages, p. 7; Clermont-Ganneau, K. A. E., v. 196-204). Mardis, The Trinity of Mir in Tabah), which must be compared with the similar device worked out in other countries (Ali Yusuf, Kitab al-Dhahabia, trad. Ramadan, p. 554, 567-569; Yacoub, la. 83; Alkhaldon, Al-Hiss, p. 357, 359; Sauvageau, Histoire de l'Egypte et de l'Egypt, iii. 344-345, 352, 702; ii. 22-2S, 241-242, 239, 381, 561; iv. 94, 45, 354; v. 458, 469, xii. 178, 256; J. A., 1862, l. 101-102; 1894, i. 222-232). Gabelay, Egypt and the Copts, p. 29-30; Masselot. Cairo, i. 126, l. 134-135; Mock, iii. 609, 610, 674, 682; B. I. F. O. A., iv. 211; Mair, Cialophore (1915) p. 155, etc.). The Christians of Egypt were treated like the other non-Muslims (Al-Madhatik of the growing Arab Empire. They had to pay a personal tax (al-fakfa) fixed in Egypt at two dinars for each adult male, in recognition of which they enjoyed the protection of the Muslims (El Tawfik). This statement is found throughout the Arab literature, but the papacy shows it is inaccurate, inasmuch as the tax was proportionate to one's fortune (Ref. Historicus, cxxx. 290). In a word, this regulation was as foul as the prototype of the modern protectorate; the Muslim government ensured the Christians of the protection for themselves and for their property, those who did not receive a share in the distribution of the spoils were not obliged to give military service.

The treaty in Tabah units two important articles in the other treaties: the rule laid down in regard to dress and the question of religious buildings. The situation of the Christians in Egypt will be here examined in detail in chronological order, but for the sake of clearness it is better to examine these two questions separately.

The alleged edicts of Caliph forbid the Christians to adopt in their garments and in their turban the same colour as that of the Muslims; they had to wear a distinctive piece of material (al-guip) as well as the belt called amru. (J. A., 1853, li. 111, 115; Butler, Capt. Chorouck, v. 105-104). It seems, however, that such a regulation was really much later and owes its origin to Harun al-Rashid (J. A., 1894, ii. 117, below l. 109; however, however, Lampe-Poulo, Egypt, p. 97; but the most celebrated edict, and one that is recorded by the historians of Egypt, emanated from Musawakkil (Yacoub, Hist. E. 504; Eunychian, l. 91; Tabah, iii. 1299-1300; Ali Suli, E. 52; Kallahzami, i. 236; iii. 366; Mares, P. 1, 494; Remondot, Hist. prat. des E., p. 293-300, 686-689; Lampe-Poulo, Egypt, p. 296; Lampe-Poulo, Egypt, p. 39; Lampe-Poulo, Egypt, l. 137). These measures were revived by Abu Zakariya, who made them more severe; by Badr Djalawi in 470 (=1086); by the caliph al-Mustasim in an ephemeral fashion; and lastly by Shahrul (Yacoub, al-Aunutik, ed. Chicoe), l. 137, 195, 202-203; Ibn al-Azir, x. 11, p. 569, 411; Kallahzami, l. 340-360; Yacoub, l. 247; Mair, ed. Hayal, ii. 246-248, 495-496, 507; Blocher, Hist. d'Egypte, p. 101, note; Quatremiers, Mem. sur l'Egypte, p. 447; Wessensfeld, vollud, p. 189; Remondot, p. 463, 549, R.C.C. i. 1906). We only know of the occurrence of a extreme decree (Remondot, p. 597), but in 700 (=1301), Sultan Malik al-Nasir, at the suggestion of an African, vigorously assailed the ancient antinomies [Kallahzami, l. 557-559; Maknouf, l. 489-499; Quatremiers, Histoire des sultans Montebello, ii. 8, 117, 495; Ibn Nasir, l. 143; Remondot, p. 602, 603; Lampe-Poulo, Egypt, p. 501; Ali Pasha (Madras, Al-Jebei), i. 321; l. 104; J. Masson, Hist. Prat., p. 278). The Copts however fought bravely, and the weight of Ibn Taimy (Z. D. M. G., ii. 399, 500). The decree was not long in force since it was necessary to revive it in 721 (1323), in 735 (1335), in 826 (1427), and in 848 (1440) (Ali b-Madhatik, ed. P. Egger, vii. 186; Ibn Ishaq, l. 205; Schaller, l. 190). From these successive revivals it is certain that these regulations quickly fell into disuse (Guerin-Frey-Demasse, La Syrie, lxxxvili. 95). The Ottoman governors revived them once more (Ali Pasha, i. 57; Djaher, French
The Coptic clergy have kept to the present day the custom of wearing black turbans.

The question of religious buildings received more attention from the Muslim rulers. The conditions laid down by 'Umar and his successors: The Christians are forbidden to build any new church or renovate and it is further forbidden to rebuild edifices which had fallen into ruins (F. A. 1838, ii. 110; Makri, ed. Wint, v. 117, ii. 3; Ibid., ii. 761). In practice, in return for a money payment the Christians were allowed to repair their churches and their convents and even erect new buildings. On their settlement in the country the Muslims converted some churches into mosques; this was the regular practice under the Umayyads in the whole Muslim Empire (Cassian, Chronographia, p. 1065, 1173; van Beuningen and Streygowski, Annuaire, p. 51-52; Thiersch, Phænix, p. 212). The Christians of Egypt had earlier installed certain churches in temple of the Ptolemarchs (Hist. arch., iv. 2455 sqq.). Even when they built a completely new mosque, the Muslims took the materials from the churches, especially the columns (P. O., v. 512-515; Makri, ed. Wint, v. 6; Denebourg, Comma, ii. 151, i. 4). This was in the eyes of the Muslims the right of the conqueror. It seems, however, that the legal theory of "new churches" was scarcely dates back to the second (viii) century, for during the first century the Christians could build and assume as they desired (Evteiusch, II. 47: P. O., v. 508; v. 24, 48, 119; ibid., v. 399-400; v. 400-401; Absal, loc. cit. 23, 29, 53; Makri, Bulla, ii. 462; Rüsmardt, p. 178, 179, 184; Marcel, Egypt, v. 85; Lane-Page, Egypt, iv. 26; H. P. T. A. C. iv. 431; Chronographia, p. 520, 589, 618, 758, 775, 825-826, 929; Ibid., ii. 8). This liberal official attitude was not in accordance with the sentiments of the mass of the people and a permit to rebuild in 117 (733) caused a riot (Makri, ed. Wint, v. 91). Numerous Christian buildings were demolished in the course of the struggle against the last Umayyad (Absal, loc. cit. 83, 78), but these were acts of war. Under popular pressure towards the year 770 (766) the governor 'Ali b. Salamah ordered the churches founded since the Muslim conquest to be destroyed, a measure resented by his successor after a consultation with jurists (Kohl, ii. 131-132; Absal, loc. cit. 23, Makri, ed. Wint, v. 117-118; Alitt, ed. ii. 511; Lane-Poole, Egypt, v. 327) and building on the same scale went on, in spite of the protestations of the people (Evteiusch, ii. 83-87; P. O., v. 418-449, 465; Kindl, iii. 544-555; Ibn Sa'd, ed. Talicqas, s. 32-33). With the Fatimids a great era of prosperity opened for the Coptic churches and the convents — except under al-Hakim, which will be discussed later. Besides, the decision was taken by the Christians who filled the government offices (P. O., iii. 387-388, xi. 561; Vach, p. 216, 229, 231-234; Absal, s. 17, 24-25, 27, 30-37, 39, 41-44, 45-48, 50, 51-52, 66-67, 68-78, 81-82; Ibn Mayyaz, s. 79; the Dukair, iv. 78-79; Makri, Bulla, ed. ii. 383; Rüsmardt, p. 385; Whittemford, Particolari, p. 134; Lane-Poole, Egypt, p. 110-119). More strict in regard to the Copts, the Ayyubids began by despoiling the churches of a part of their revenues and while authorizing certain restorations, they did not hesitate to go away with buildings which annoyed them. Besides, the wars with the Crusaders brought about the ruin of many churches. It is from the Ayyubid period that the rule of the convents dates (P. O., xi. 617; Absal, loc. cit. 87, 98-99; Hachis, Hist. d'Egypte, p. 518, 559-570; Marcel, Egypt, p. 25; Amelinais, Ave, p. 222; Ibid., p. 44). But the real ecclesiastical dates from the reign of Malik Najm Muhammad b. Khallâf, after being withheld in 728 (1321) the bull rushed to attack the Christian buildings throughout the whole country. In 721 (1324) sixty churches were desecrated and according to Muslim writers mass convents were henceforth deserted (P. O., xi. 600; Makri, ed. Wint, v. 208-209, note; Bulla, ed. ii. 511-517; Quadrimum, Manuskript, ii. 119, 209, 211; Sabatini, p. 733; Al' Alâ'î, ii. 35; ibid., 98-101; L. V. H., ii. 23; Quadrimum, Min., ii. 225-249; Lane-Poole, Egypt, p. 301, 310-317; Bulla, ed. ii. 427-428; Lane-Martin, ii. 500-502; Ibid., ii. 8). Churches were again demolished in 753 (1354) and a large part of their revenues was confiscated. In the second half of the nineteenth century the regulations of the Caliph 'Umar are said to have been at different times solemnly revived (Makri, ed. Wint, v. 296; Bulia, ed. ii. 499-500; Sabatini, p. 36-40, 118-119, 145; Ibn 'Isa, f. 106-207; II. 55; Bulla. Soc. Géogr. d'Egypte, xii. 791; Al' Alâ'î, i. 28; Bull. Roy. GEogr. d'Egypte, xii. 791; Al' Alâ'î, ii. 38; B. I. A. 1907, p. 167). Under Ottoman rule the authorities permitted the restoration and even the foundation of churches, although amongst Muslim legal circles less liberal doctrines were still upheld until the beginning of the nineteenth century (Al' Alâ'î, II. 85-85; Dibaritt, v. 29; ivi. 246). After elucidating these two points, we can now review in chronological order the main events in the history of the Copts under Islam. The chief concern of the Caliph was to make no change in the administration of Egypt. He appointed a governor general sometimes the position was held by two officials, the one undertaking the political administration, the other financial; the political governor had under him two subordinates, a prefect of police and a chief. The military occupation was reduced to a certain number of posts (mâhâsa) scattered along the Mediterranean coast and on the desert frontiers of the Delta. Under 'Abd al-'Azîz b. Murad (65-85 = 685-705) there were 30,000 men. The country remained divided into pagarchies called mahr, transcribed of Xosr; at its head was the mahrul-mahr, the minister of wayges; the subordinate officials also bore Greek names; these are the (asalas) (mârâsi); the mahrul-mahr, the origin of which is not known, the (shîrul-saghir), the chief of the army. — Cf. Ibr. 'Abd al-Hakim, Dhim. 48, 58; Kindl, p. 448-449; Makri, ed. Wint, i. 114, 373; Bulla, ed. II. 259; Michael, iii. 475; J. Mai, Copt, and Wint, Mai, in C. M. d'un levées de l'Egypte, p. 370-371; Bulla, ed. iii. 45-56; II. 354-355, 461, 551 sv. 95-96; Bell, Afr. Papyri, iv. 297, 325, 333, 347; Z. A. c. xii. 65, 78, 447; W. B. K. M., ii. 344, i. 76; Al' Alâ'î, ii. 260-269; B. I. A. i. 155-161. The absolute impossibility which the Arabs found of governing by means of their laws was sufficiently established by the papyri. The
Arab occupation lived by the institutions which it found in Egypt and allowed itself to be administered by Copts who were superseded and docile. According to the papacy and the authors, all the provincial officials were Copts during the second decade of the occupation—until the end of the Umayyad Caliphate (P. E. R. M., i. 44, 45, 48, 57, 64; MaKTat, ed. Wiet, i. 249, n. 3; Michael, ii. 475; Lane-Poole, Egypt, p. 151; AnvALL, v. 319—455; Chronographia, p. 253, 268, 758, 911, 1091, 1181, 1864; Muir, Caliphate, p. 167; PAP. Schott-Reinhardt, p. 21, 37, 40; P. E. R. M., l. 6—7; BELL, A. E. P., p. xxiv; Z A. E., xx. 72—75, 77; BELL, ii. 85—95; 357—328, 274, 361, 364—365, 381; J. Maspero and WETT, MATTHiAUS, p. 10—12, 174, 220; MonnART DE Villard, Scultura ad Abakha, p. 23; ibid., ii. 8, 12—15). The fiscal organisation was also modelled on the Byzantine, without regard for the rules otherwise laid down by the Muslim doctrine. The Christians, old men, women and children excepted, had to pay from 40 dinars to 4 dinars, to provide for the upkeep of the army, corn, oil, honey, cloth and to procure a lodging for a period of three days for every Muslim. The Copt officials continued to collect the Annum, corn which was sent to Medina (MAKAT, ed. Wiet, i. 332—333; BELL, d. ArabiHANT, ii. 178; J. Maspero, ORGAN, p. 112; Becker, Beitrag zur Gesch. Agypt., ii. 84—85; PAP. Schott-Reinhardt, p. 42 sqq.; BELL, A. E. P., p. xxv, sqq.; s). BELL, ii. 231—234, 271, 277—279, 482, 382, 384; J. Maspero and WETT, MATTHIUS, p. 55; Chronographia, p. 241; J A. E., 1885, p. 440; BOURDIIOT, Anc. manusc. anc. titres et ports de Satn., p. 6 sqq.; M. F. E. E., Egypt, v. 4). At the very first, the Copts were happier than under the Byzantine régime; the eldest bishops with the patriarch at their head once more took possession of their sees. They lived in such peace that they played no part in the grave events in which the Muslim troops of Egypt participated— the assassination of 'Omar, the duel between 'Ali and Mu'awiyah, the rivalry of Ibn Zubair. The Arabs did not persecute anyone on account of his religious ideas (P. O. I. 495—497; v. 12; Renouard, p. 160; B A. E. E., 1885; p. 340—361; ANVALL, v. 4). It would, however, be wrong to extend this observation to the Umayyads and especially to contrast the tolerance of the Umayyads—"who did not seek to make proclamations", with the spirit of persecution which is said to characterize the "Abbasids (DICT. ARAB., iii. 2829, 2841). No doubt the Jacobites had cause to rejoice at being given back the churches formerly confiscated by the Melkites; besides, although it did not compromise for the converts to Islam, the admission to the Monophysites must be noticed of a few Melkites, with the object of escaping the double grypha, which was imposed upon them by KURRA b. SHARKI, his principal adviser, naturally a Jacobite (P. O. I. 341; QUATREMÈRE, Miss. ii. 391 IZI, ii. 364; Chronographia, p. 1001). It is, however, in accurate texts that the Byzantine governors were not always kind to the Copts (P. O. I. v. 13—16, 54—55, 86—87, 88, 28—29, 34—35, 332—324; ALLI, Saliq, i. 83—84; Chronographia, p. 1024, 1091). It is necessary to add that it was a question of taxation which became more and more severe and not of religious persecution in the narrow sense of the word. Besides, the Copts, with very rare exceptions which will be noted, were never put in the position of having to apostatise to save their lives, and we do not find throughout the whole history of Islam a single measure that can be compared with the persecution of the Christians in Byzantium. All the historical statements to oppose Byzantine toleration to Muslim fanaticism (M. F. E. E. S., i. 109; MUIR, Caliphate, p. 358—363). Finally it may be mentioned for this first period that Christian annals were compiled in the monasteries, and that the monks took good care to describe as persecutions measures which deprived them of the advantage of remaining a privileged class (Marcel, Egypt, p. 55). Under the Umayyads as well as under the "Abbasids the Christians enjoyed liberty of worship. The governors only took care to have their Coptic inscriptions and prayers translated for them so that to be sure that they contained no insults to Islam. The bishops were allowed to meet in council; the government watched over these councils, especially in the case of the election of a patriarch. It opposed also into the relations which the clergy were allowed to enter into with a foreign power. The Christian writers praise the liberalism of the Caliph HABIB, but at this time the fiscal system was well established and applied without favour (P. O. I. v. 24, 28—29, 34—37, 51, 56, 68, 72—73, 104; v. 371; Renouard, p. 190; Chronographia, p. 822, 864, 925, 1337, 1349, 1474; Rev. archeologique, clxxxviii. 285—286). We shall now give a chronological exposition of the measures which have been prescribed. In the year 70 (689) the religious edifices on the outside of the churches were destroyed. Since the monks at first had been exempt from the grypha many Copts assumed the robe in order to escape the tax. But these monks, according to the testimony of Byzantine authors, possessed considerable wealth. From before the year 86 (705) the monks were subjected to a tribute and forced to pay one...
tation, but not especially on the Copts, since it was on this account that the Arab revolted in the Delta in 78 (794); 180 (802); 193 (807); and in 214-215 (829-830). At this latter date, the Christians of the central part of Lower Egypt, called Bashmuitites, entered into the struggle. The physician from the Khânjat at a later date remarked upon their ferocity and their stupidity. Their conduct scandalised the Christians themselves, and the Coptic church arose in vain to calm their insurrections. The Caliph Ma'mûn, at the time in Syria, was induced to come to Egypt; very liberal, he charged an ecclesiastic of his suite, the patriarch Denys of Tell-Mahbûr, with the task of obtaining by kindness the submission of the rebels. The Bashmuitites would not yield; they were crushed by Abuâbin and a large number were massacred. A number of survivors, including women and children, were transported to the region of Baghdad where some of them covered themselves with glory fighting against the Umayyads (Kithani, p. 190-192; Eutychius, ii. 120, P. x, 485-502; Ibn Kâhîb, p. 129; Michaelis, iii. 76-84; Maârûf, ed. Wiet, i. 803, 334, 337-340; at 3 n. 7, 141, 186; Bulâq, lli. 9; Renault, p. 172, 174-176, 279-281; Maârûf, Hist. Chiffres et Chronolog., p. 55-56, 60; S. O. S., viii. 189; C. I. A., Egypte, iii. 81, Ibid., § III.).

Finally the Copts decided upon open rebellion, principally on the Delta, for more than a century. The first insurrection took place in 107 (745). Rebellions followed in 121 (739), 157 (759), 173 (782), 190 (792), 215 (797). Lower Egypt was then conquered by risings which have nothing especially connected about them which must be said in passing — show already the numerical weakness of the Christian element. They lasted from 194 to 211 (809-816) and were a repercussion of the struggle for the Caliphate between Amin and Ma'mûn; the chief part was played at Alexandria by the Spanish Arabs exiled from Cordova (Kithani, p. 129-131, 214-217, 333-334; v. 118, 185; Michaelis, i. 803, 334, 337-340; Maârûf, ed. Wiet, i. 803, 334, 337-340; ii. 3 n. 7, 141, 186; Bulâq, lli. 9; Renault, p. 172, 174-176, 279-281; Maârûf, Hist. Chiffres et Chronolog., p. 55-56, 60; S. O. S., viii. 189; C. I. A., Egypte, iii. 81, Ibid., § III.).

The Coptic risings began under Umayyad dominion, but not especially on the Copts, since it was on this account that the Arab revolted in the Delta in 78 (794); 180 (802); 193 (807); and in 214-215 (829-830). At this latter date, the Christians of the central part of Lower Egypt, called Bashmuitites, entered into the struggle. The physician from the Khânjat at a later date remarked upon their ferocity and their stupidity. Their conduct scandalised the Christians themselves, and the Coptic church arose in vain to calm their insurrections. The Caliph Ma'mûn, at the time in Syria, was induced to come to Egypt; very liberal, he char...
well known that Khunrath [p. v] enamoured with art took pleasure in visiting the convents; it is reasonable to believe that the Copts knew how to profit by this. Under the Ilkhāhidīs the influence of Christian officials appears. The government did not make peace for nothing during the popular troubles which burst forth at Fāsīra in 349—350 (950—951) on the news of the victories of Nicphoros Phocas. On the contrary a rescript from the Caliph dated 318 (935) had already prepared a pacification throughout the whole Muslim Empire, by showing that the clergy should not be imposed upon by the bishops, monks and necessities of men. The Ilkhāhidīs honoured by their presence the public celebrations of Christian festivals. A contemporary Muslim traveller, Mas‘ūdī does not appear to be shocked by this (Appendix to Eustachius, l. 392; Abū Yūnus, it. Fagman, p. 185; P. O., xvi. 244; xvi. 717, 779—780, 782—783, 799; Abū Salīh, f. 49—50; Mas‘ūdī ad-dawārī, l. 303; Maqrīzī, ed. Wirt, vi. 245; Bilāk ed. li. 152—153, 444; Renanolu, p. 324; M. ed. Egypt, p. 83; Schuberg, Nicphor Phocas, p. 125; Lane-Poole, Egypt, p. 66, 85—86; Becker, M. d. Ägypten, l. 623).

This attitude of the Ilkhāhidī government is confirmed by the precipitate measures of the first of the Ilkhāhidī caliphs, Mu‘tazz, who forbade these public rejoicings. This exclusion endured for only a short time and from the accession of his successor, Aztū, Christian ceremonies recommenced with more pomp than in the past. Thus it was during the time of the Fātihūn, with an eclipse under Ilkān, the favour which the Christians enjoyed is attested by one of their first acts, the transfer to Cairo of the office of patriarch. Aztū had a Christian wife whose two brothers he himself appointed patriarchs of Jerusalem and of Alexandria respectively. Being liberal, he encouraged controversies between Christians and Muslims and he refused to prosecute renegade Muslims. The resentment in Muslim circles must have been terrific. It explains and in part accounts for the excesses of Ilkān who in part avenged himself upon the Christians with his hatred of the direct object of abating their growing influence (see the definitive statement of Maqrīzī, Bilāk ed. li. 31, 499). But it must be remembered that Ilkān was a ferocious persecutor. He threw to wild beasts the patriarch Zachari, whom, according to Christian chronicles, they did no harm; this act of brutality was perhaps committed at the instigation of a monk. He prohibited the celebration of Christian festivals, forbade the Christians to possess slaves, to have Muslims in their service, he seized the property of the Church and he caused a considerable number of priests to be burnt. Thus he passed on to the destruction of the churches with such rage that he is said — but this without doubt exaggerated by Muslim writers — to have destroyed between the years 403 and 409 (1014—1015) 30,000 churches in Egypt and in Syria. He had decided upon the exile of all the Christians, but the decree was rescinded before it could be put into action. A measure of general dismissal of the Christian functionaries resulted in a complete check. In spite of everything the judgments of the Synaxes on this Caliph are not malevolent (P. O., 3. 289). Zahir inaugurated his reign by a measure of justice, authorizing the Christians to return to their religion, who had been barred by the blindness of Ilkān had become converts to Islam (for a condemnation to death see however Yakhib, p. 238). Under the Caliph Mustafār, the title Yakhib made the Christians submit to numerous vexations; he ordered the closing of the churches and the incarceration of the patriarch Christodoulos, under the pretext that the latter had instigated the King of Nubia not to pay the agreed tribute to Egypt. These incidents which were terminated by a heavy fine inflicted upon the patriarch were perhaps not quite unaccompanied with the fall and the putting to death of the Tabiler Zakhīr. Under the Caliph Amīr who liked to be entertained by the monks of the convent of Nafisah in the suburbs of Cairo, the tendency is to liberation. Credits were provided in the budget for Christian ceremonies. Towards the end of his reign a monk Abu Naṣīf played the part of a kind of prime minister to him; this monk who assumed the arrogance of a grand seigneur had the effrontery to go even into the mosque and insult the Muslims; this action cast him his life. Hīdīt, who like his predecessor, loved a sojourn in the monasteries, had as his vizier an Armenian Christian, Bahārī, who received the title of nāfi‘ al-dīn, "the sword of Islam", the advice of his counsellors of the very name of the Caliph carried by all his command, Bahārī, all powerful, made a large number of Armenians come to Egypt and contributed to the restoration of many churches. The Muslim revolt burst forth and overthrew the ministry, his successor Jāhāza, favoured a violent reaction against the Christians, driving them from the administration, bringing about confiscations, ordering even summary executions, but the country was to be troubled by the rivalities of the vassals of the Caliphs, who fought for power with armed force and the Christians suffered from this state of affairs neither more nor less than the Muslims. It is in this sense that we must interpret a very touching Copit document, the inscription of the jar found at Dair al-Madan, dated 872/1465 (H. d. S. v. Armen, la Solitude, l. 217—219, R. F. A. O., li. 19—75; Dict. arch., l. 1707—1712; ill. 2860; Cruv. Copit, Monuments, N. 8704). The inscriptions which commemorate should not be regarded as a persecution of the Christians, any more than we would charge the government with the plundering of the convents of Soetes and the massacring of the monks by the Berbers, under the early Abbasids and in the time of the Fātihūn Mustafār (Ibn Rāhīm, p. 148; Renanolu, p. 443; Quatremère, Minā, l. 400). Churches and convents were destroyed wherever there was fighting and naturally Christian buildings were not spared in the burning of Palmyra by command of Shārūn (p. v), who had a church restored at Kar. The Christian troops who accompanied Shārūn quelled with the Fātihūn, Turks or Armenian troops and then the Copts; just as the soldiers of Shīkhūth [p. v] violated the tombs of Shem and the White Convent. The history of the Patriarchs records the execution of a Muslim who refused to apostatize. This can hardly be an isolated case at this time (Yākhib, p. 195—197, 199—205, 253—256, 279; Ibn al-Khalīsī, p. 1—36; Abu Salīh, ll. 25, 43, 45, 68—66, 81—82; Ibn Rāhīm, l. 135—136; Ibn Mayyūs, p. 31—33, 77—78, 82, 83, 84; P. O., li. 288, 356—357; Kahlauhūs, vii. 2601; Maqrīzī, ed. Wirt, iv. 260—262, 253—254, 240; Bilāk ed. li. 338; il. 297—298, 405—406, 507—510; Abu 7-Mahāsin, ed. Pepper, ii. 65—101; Remondot,
They were indispensable in the management of business and some Muslim writers had the courage to recognize this, while deploiring their ignorance. In order to satisfy public opinion, the government from time to time decreed their dismissal, and a month after the decree, the Copts whom they found indispensable, retained their offices. These periodic dismissals took place in 678 (1278), 683 (1283), 700 (1341), 741 (1381), 753 (1395), 822 (1410), 823 (1412), 852 (1447) (F. O. viii. 777; Ibn Faḍl Allāh, Tarā'ī, p. 63; Kulasjahidi, vii. 56; Maqdisī, ed. Wiet, ii. 88, 93, 110, 111; ibn al-Ṭālib, ed. ii. 43, 75, 95, 237, 239, 497, 498, 507; Quatrèmère, Studeira, ii. 431, 517, 213; Abu l-Maḥāsin, ed. Fikret, vi. 440, 450, 464, 468, 559, 605, 718, 724, 819—820, 823, viii. 160, 269, 272, p. 277, 587; Sakhlwī, 215; Ibn Iyās, ii. 93, 201, 268; ii. 48—49, 67, 80, 171, 197, 355; Allāh Būghī, i. 27; vi. 40; Marcel, Egypte, i. 735; Quatrèmère, Mem., ii. 325—225, 242, 247, 261—262, 288; R. P. F. A. O., i. 136—137, 175, n. 4; R. O. C., xii. 196; Gaudéfoy-Demombynes, La Syrie, xvii.; Wiet, Les secrétaires de la Chancellerie, reprint from M. R. Hussey, 222; C. I. A., Jerusalem, i. 334—335 (i. 132); ibid., i. 685, 846).

The government during normal times maintained constant relations with the Coptic Patriarch, on whom the Mamluk chancellory bestowed pontifical titles. He forbade him to enter into secret engagements with the Negus of Abyssinia. There were incidents in regard to him also in 822 (1447) (F. O. vi. 440, 450, 464, 551; Kulasjahidi, vi. 85, 100, 395—405; Sakhlwī, p. 210; Abu l-Maḥāsin, ed. Popowski, i. 578).

At the same time popular manifestations forced the government to take more serious measures than a simple dismissal of officials. Besides, the most severe measures were continually passed with the object of exciting a rancour; for the Christians were more especially molested at times of financial crisis for the government. One single incident stands out as worthy of attention. In 700 (1301), a date often already cited, the Mamluk government caused the greater part of the churches to be shut throughout the whole of Egypt. It exempted the town of Alexandria, perhaps in order not to provoke foreign interference, for the Melkites also suffered by this order and two ambassadors sent by the Byzantine Emperor and the King of Aragon, obtained the re-opening of some of the churches (F. O., i. 367; ii. 356 (1477); xix. 449; Maqdisī, ibid. ii. 89—92; 330, 593; Quatrèmère, Studeira, ii. 65; Renardot, p. 604—605; Quatrèmère, Mem., i. i. 232—224, 237; Ibn Iyās, ii. 35; Marcel, Egypte, 165; i. 440, 1887, ii. 310; J. Amauro, Hist. Fatt., p. 379).

The Muslim writers relate the story of the sacrifice of a virgin thrown into the Nile to obtain an abundant harvest, a custom which the Muslims had abolished (Sakhlwī, p. 12—13; Lane, Mmns., ii. 239—230; Bull. m. Khalīl, de Gérin, vi. 138—159; J. Amauro and Wiet, Mémoir., p. 216—217; Chronographe, p. 245). It is hardly likely that the Christians had retained a human sacrifice, for which, besides, there is no evidence in classical texts (Maqdisī, Hist. des peuples de l'Orient, i. 24, n. 2; Fréjou, ii. 35; Œuvres, ii. 38—40); in analogy with sacrifices following military expeditions, Antiochus,
Acan, p. 30, n. 4.) Special mention is made among the Christians of Egypt. of a liturgical rise to secure the rise of the Nile (Dict. Arch., iv. 2561-2562). In the Mamluk period the Christians had still retained the custom of throwing into the Nile a little caiseta containing the finger of a martyr. This ceremony gave rise to abuses, forbidden from 702 to 723 (1303-1337) was definitely suspended in 755 (1354) and the Church of Shubra-Demnaüli, where the festival took place in a suburb north of Cairo was destroyed (Hist. De l'Afrique, transl. 1785: Mamlûk, ed. F. van Leiden, ed. Wiet, i. 392-406; Rollin, ed. ii. 500; Quatremère, Storia monetaria, ii. 8, 213-314; Remando, p. 606; Sabatier, p. 12; Ibn Jâ'âm, i. 206-207; B. L. Egypte, 1907, p. 67-68; B. F. A. C., i. 176).

The Jacobite patriarchate in 1444 signified its adherence to the Council of Florence two centuries after a fruitless attempt at reunion with Rome attempted by the Patriarch Cyril III. The Coptic Church was united to Rome for a century and a half by a loose bond, and it appears as if the most of the people did not trouble about it, in spite of the correspondence exchanged between the Papacy and the Patriarch of Alexandria, and in the Secret of that of the Council of Memphis in 1582. In any case it was with the support of the Ottoman Pâsha that the Coptic Church dissolved all relations with Rome (Remandoi, p. 611-612; Macari, p. 346, 300, 303, 343-343, 335; B. L. Egypte, 1904, p. 197-211; Macari, p. 334-340; Recovron, xxxvi. 163-164).

Under the Ottoman Pâsha, the financial administration remained largely in the hands of the Copts. Christian popular festivals, especially in the country, were held with the approval and even with the participation of the Muslim elements. This period saw the sosiate flourish, about which the archives of the convent of St. Saviour of Jerusalem give so many particulars (Castellani, Catalogo dei fondan, Jerusalem, 1922). The Copts had to endure these sums inflicted on the slightest pretext, the sum paid to the chizen of the churches until the sum was completely paid. The first governors created the payment of the special impost due from tributaries. In the first half of the sixteenth (critch) century the assessment of the dînars was even increased. Then, we come to a period of anarchy, when "nothing happened worthy of being recorded except irritating and arbitrary acts of the Emir." (Acheson, p. 218, 219). These troubles had economic reactions which affected the whole of Egypt, but it does not appear that the Copts suffered from them more particularly (Vandelle, Relatio, p. 93, 110, 189-190; Bib. d. Arabiennes, ii. 6-9, 12-15, 19; Marché, Egypte, p. 234; Djabarti, ii. 10, 114-116; iii. 132, 157, 14, 24, 208-209, 217-219; iv. 13, 17, 23, 27, 217-218; Savary, Lettres sur l'Egypte, i. 393; Am Flâha, vii. 54-55; Ch. Rosa, Les origines de l’Église d’Egypte, p. 41-42; B. L. Egypte, viii. 166-167).

Rycke says that on the arrival of the Franks, the Copts were "poor, brutalized and engaged only in the most ignoble callings"; they were "tax-collectors, spouses, managers of the business affairs of the Mamlûk." (Egypte, Un. pitt. ii. 27 sqq.). Bonaparte did everything to prevent the Muslims from thinking that he favoured the Christians, who had nearly been massacred at the landing of the French. To "secure himself the friendship of the people" Bonaparte forbade the Christians to wear the turban or to break the fast of Ramadan in public. After the revolt in Cairo the Muslims tried to put the blame on the Christians, who had not always been prudent. After various grievances the French administration created a system of taxation which "almost enabled them to do without the Copts." The latter assisted in pointing out the inconveniences of it. Besides, Copts had already been enrolled in the French army (Egypte, Un. pitt., ii. 148, 152, 129, 129, 129; Djabarti, vi. 15, 26, 34, 40, 52, 53, 95, 97, 119, 151, 175-178, 208, 210-211, 214, 216-217, 253, 355-355, 355, 207, 397, 207; vii. 30, 48, 200-211; B. L. Egypte, viii. 36).

The departure of the French made Muslims rejoice inevitably but an official circular ordered that the Christians were not to be molested in whom "it was not of practical importance to have joined the French." The Copts were again employed as tax-collectors, but it must be noted that the government was still able to extort money from them, and that in 1820 (1815) the poll-tax was again levied (Djabarti, viii. 38, 48, 48, 52, 56, 77, 177, 300, 306, 308, 318, 320, 393, 397, 405; viii. 149, 201, 283; ix. 17, 85, 51, 91, 111, 114, 146, 166-167, 180, 384-387; Macari, p. 398-398).

This exposition shows the rapidity of the alienation of the Copts. The energetic suppression of the first revolt weakened the power of resistance of the Christians, who from the third (ninth) century no longer had a majority in Egypt. According to the text of the treaty made after the Arab conquest, there were six or even eight million Christians subjected to taxation; as women, old men and children were exempt from it the lowest figure would give 24 million as the total number of inhabitants in Egypt, which is excessive. The reassessment of the year 118 (130) is said to have given five million Copts liable to taxation, a number which we also consider greater than the reality. In practice the poll-tax collected under Mackwiya (41-60 = 661-680) five million dinars, a figure which was reduced under Hakim al-Rakjî (109-122 = 780-800) to four million dinars, the highest figure, giving 20 dinars a little later to three millions. Besides, at the end of the first (viiiith) century the governors wished to put an end to the conversions which were impoverishing the Treasury, and that if the Caliph 'Umar II had not been opposed to it, the new converts would have had to continue to pay the dînars. Ausous to adhere to taxing the Copts "sometimes even tried to attach themselves to Arab tribes; a legal scandal on this point made some stir (Kindo, p. 397-399, 432-432). In this connection we may go back to the preceding paragraphs and reflect that each government measure was of any importance brought about conversions on a large scale. We may recall the tragic visit of Murwân II, when 24,000 Copts were made, the great persecution of Hakim, the dismissals of officials under the Mamlûk, that the wish of the Copts to be assimilated to the Slavonic language were registered. Nothing can better show the dissipation in the number of Copts in the Mamlûk period than to give that in the number of episcopal sees. The Council of Alexandria in 1591 brought together almost 100 national bishops; at the end of the seventh century there were still over sixty. In the eighth century there were only 40 sees (Ibn 'Abî al-Hakam, p. 70, 87; Eutych-
From their marriages with native women were born delicate children, and the race was rarely propagated as far as the third generation. Without insisting too much upon its importance we note in regard to this fact an Arab saying which attributes a special fecundity to Coptic women. To sum up, agreeing with Massoughian and all the Orientals, we may estimate that 92% of the Egyptian population is of Coptic origin. On this particular point we know nothing so erroneous as the chapter devoted to Egypt (p. 376–518) in Recherches et Histoire by Eug. Pettit (Iseri, Die de l'Afrique, 1865). Ibn Mayarray, p. 1–2, 34, 36; E.F.A.O., ii. 16–23, 36; Kahloun, Hist. des Berberes, 1–29, 410; Makrizi, ed. Wiit, l. 2, 6, 11, 13; iii. 45–46; iv. 33; 36; Sarras, ed. ii. 4, 12, 14; Qutemere, Mem., ii. 37–9; Qutemere, Mem., ii. 29–31; Lanne, Museum, ii. 37–9; 92. Here are the figures from the last three official censuses:

The following are the provinces containing the largest number of Copts:

1. Asyut: 1,504,662
2. Gizeh: 1,124,562
3. Minya: 797,408
4. Kenzi: 537,577

In a notice on the Copts, it is necessary to indicate briefly the foreign elements which have mingled with the native population since the Arab conquest. The first conquerors settled in the country and by the beginning of the second (eleventh) century the Arabs of Kair were established in the present part of the Delta and the beginning of the next period is marked by the arrival at Alexandria of the Spanish exiles from Cordova, Upper Egypt, especially in the eastern mounth, who were almost intact the population which had previously inhabited it. Under the Caireen and under the Mamluk, who also recruited Berbers, Turks, Persians, Turks and Armenians, the Arabic of the Pharaonic and the Caireen, the rule of the Ayubids and that of the Mamluk, carried on, on a large scale, conquest, arbitrary, and especially the period of the Turks and Circassians. Egypt was then populated by foreign mercenaries, who, in other regions, who would have prevented the native stock from disappearing pure. But these foreigners were often exterminated in the course of the revolutions and those all foreign and particularly the Mamluk proved unfruitful in the land of Egypt. When they married foreigners they had no children by them, or the children died before reaching manhood.

Summing up the stages of the elimination of the Copts in a few lines, we may say that the Christians were no longer in the majority by the third (eleventh) century. Two hundred years after the Arab conquest and it can be estimated that by the viiith (seventh) the Christians were hardly, as in our time, a tenth of the total population of Egypt. It remains to account for the causes of this strange and rapid conversion of a race which had been able to recover on so many occasions, whom the persecutions of Decius and Diocletian had not subdued and whom the Romans were never able to settle. On the part of the Muslims, however, persecutions in the sense understood in Roman times, were extremely rare. It is undeniable that there were martyrdoms which cannot be explained away; but the vast majority of the executions ordered by the Government have particular characteristics on which it is necessary to insist. The Muslims have never wasted on two points: the death penalty was ordered in the case of a public insult to the Moslem religion and in that of conversion from Judaism to Christianity. This observation must, for Egypt, be applied to the majority of European monks martyred in Egypt; the latter were, besides, in the eyes of the government, more or less suspected of espionage. That the church should honour them as martyrs is to be expected, but it would be wrong to call this persecution. Indeed the records of Egyptian martyrs, which contain innumerable lists for the Roman period, are exceedingly poor for the Muslim period and Christian epigraphy furnish no further light (e.g., 2, 802; 317, 318, 614, 203–217; 328–370; 554; 816, 977; 2, 8). Makrizi, ed. ii. 574; Renandot, ed. 42, 545–555; Mallet, Diction. de l'Afrique, ed. 1773, p. 95; Qutemere, Mem., ii. 374–325; T. A., 1885. It is the best of all: Lanne-Poulet, Egypt, p. 47–48; E.F.A.O.
The Christians of Egypt did not then become Muslims, in order to escape persecution, although this has been asserted (Amidinian, Hist. p. 1). Nor did they "go over," as had been recently but wrongly asserted, by this attraction exercised by a new religion upon masses startled by the narrow formalism of their churches (H. Michael and Moir, Abd al-Rasid in travel, of Shaikh M. Abdi, Risalah al-Tunghid, p. xlviii). It is more just to believe that Christianity made no change in the spirit of the race, that it did not penetrate into the life of individuals and that their souls never were sincerely and thoroughly Christian (Lefebvre, Revue des Ouvrages, p. 129). This cannot be denied, but the truth is one cause for conversion lay in the social measures imposed upon the Christians by the Muslim law. "What the Arabs wanted was to be rid of rich people and money money" (Becker in Ibis, ii. 364; cf. R. M. M., Hist. 158). We have seen, the Copts at first enter convents, flee from their villages, become zealots, not in an access of faith not in order to defend their oppressed consciences, but in order to escape demands of the fiscal system. The history of the churches of Egypt: the Muslim domination is a sad story of money, besides, at all times the Simonian heresy was the favourite sin of the Coptic Church (Michael, iii. 82; Bib. d. Arabesques, i. 257-255; Abd Sellit, fol. 31; Bouchet, Histoire d'Egypte, p. 409, 358; Remondol, p. 160, 325, 373, 379, 384, 399, 434, 510, 573, 579-584, 588, 590-591, 593, 599; Quattrucco, Mimo, ii. 444-445; R. O. C., xix. 381; J. Maspero, Hist. Papyr. p. 272-274).

From ancient times until the present day the Egyptians have been celebrated for their love of money, and their hatred of paying taxes. A passage in Ammianus Marcellinus, a letter of Hadrian, has often been quoted. But in regard to this miserable question of money, sufficient attention has not been drawn to one of the crimes of the paxchristian Peter, the Martyr; these rules imposed penalties upon apocrypha who were desirous to re-enter the Church, just one of these, to say the least strange, "excluded from all censure Christians who had paid not to be prosecuted and had thus at least shown their 'contempt for money'" (Alme-Girou, Légendes coptes, p. 198). Dict. archéol., t. 110, 1108, i. 245, 2422; J. Maspero, Organo, p. 15, 42; clot. Bet, Apocryph de l'Egypte, p. 287; Roullard, Addition, p. 6, 238, 105 sqq.). Thus it is that the Christians became Muslims in order to gain the benefit of an inheritance or to enjoy their property in complete tranquility (Abd Sellit, t. 39-40).

It was in the offices of state that the Copts were particularly able to enrich themselves or satisfy their passion for governmental intrigue. The Muslim historians assure us that the Copts denounced the revenues of the state and complained of the severity of their superiors in regard to accounts. It was almost with the object of not losing their lucrative posts, during the period when the Muslims were raging against their presence in the offices of state, that the Copts were more willing to become converts when they had not been able by bribing their masters to obtain the withdrawal of the edict, which disposed them from office (Vignel, Édits, ii. 247; Maspero, ed. Vamb., i. 355; i. 243; Quatrefages, Sultane musulmane, ii. 179, 258; Bib. d. Arabesques, ii. 188, 191; J. Maspero, Hist. Papyr. p. 146, 178; C. d. E., Egypte, ii. commentary on No. 589; M. E., Études, ii. 8). The Coptic tax-collectors who seemed to avenge the poor Arabs the fact that the Coptic nation alone was liable to poll-tax used a secret system of keeping accounts in order to make themselves indispensable, or was in vain for example that Napoleon tried to do without them. Maspero says "All definitely suppressed this secret method of accounting at the same time as he imposed a check upon their embezzlements" (Bib. d. Arabesques, ii. 19; Vulp, Vies, Egyptes, 1835, i. 14, 176; Egypte, M. p., ii. 7, 165; Llibert, vill. 240, 245-243, 248, 275-278; i. 30, 123; B. E. E., 1859, p. 285 sqq.; Monast., p. 360 sqq.).

This general attitude of the Copts has not been without influence upon the verdicts of Muslim writers; for example one should read the opinions quite devoid of favouritism of the physicians Toul and Suyudi, and of the Spaniard, Ibn al-Aznan. The travellers and writers of the west are, in their turn, very severe upon the Copts. It may be recalled here that the word hristi was seen in Turkish used as an insult and applied to mountebanks (Nowart, i. 293-294; Maspero, ed. Vamb., i. 193, 406-407, 213, 215; Hill, ed. i. 340; Kalkhashid, iv. 43; Quartumere, Maminibb., ii. 247; Clet hey, Apophrases sur l'Egypte, ii. 137 sqq.; Lane, Mammari, ii. 273 sqq.; Butler, Copt. Church, ii. 533-335; Basor, Mission africaine, p. 286-287; Atti del Congresso de Figee, du Caire, ii. 245-247; d'Harcourt, l'Egypte et les Egyptiens, ivanb, Relations, p. 41-43; R. M. M., ii. 105; hamlet, Lettres d'Egypte, p. 153, 174-175).

One last question arises: Has the wholesale conversion of the Copts to Islam had any economic consequences? It has been said that the Muslims of Egypt were not productive, relying upon the undocumented fact that the industrial centres were largely populated by Christians. The question is difficult to decide. It is stated that at the Mamluk period the greater part of the native industries had perished; and special mention is made of the disappearance of centres of the weaving industry which the early historians and geographers mention. A. Tannour, A. Tannour, Asynu, Reinecke, Daliit, A. Seville, Timaga, Tuma. It cannot however be believed that the entire Christian religion could make the artisans abandon their occupations, and it is necessary rather to blame, after the terrible economic crisis of the seign of the Fatimids Mustansir, the excessive and extortionate taxation of the Ayyubids and especially of the Mamlukes. The Copts, moreover, had made themselves famous by a particular industry which has not yet completely disappeared; the ship-building yards were at the beginning of the Arab occupation prosperous to such an extent that in the establishment of an arsenal at Tunis, the governor of Egypt, Abd al-Azn, b. Marewa sent 3,000 Copt ships. A recent enquiry has shown how rich the technical language of the boat-builders of the Nile still owed much to the ancient national language (Bell, Apocryph de l'Egypte, xvi. 44, xxii. sqq.; J. Maspero, Organo, p. 56; Z. d. e. xxi. 147 sqq.;
During his sojourn in Egypt (217-852) the Caliph Ma'mun was accompanied by an interpreter, whose services were by no means unnecessary (Makrit, ed. Wiet, i. 340; Quartemère, Rec., p. 34; 143).

The Patriarch Joseph (841-850) addressed the bishops who had become themselves his accusers in Coptic and some of the Muslims understood his discourse (F. O., ii. 525; Quartemère, Rec., p. 34).

The clergy in the ninth century had learned Arabic well, for a Muslim, who wished to be converted was instructed by a priest who expounded to him in Arabic the Coptic text of the holy scriptures (Quartemère, Rec., p. 34-35). Let us note in passing a Christian stele in Coptic and Arabic, dated 625 A.D. in Antiquités, xii. 285-286.)

The Coptic medical papyrus published by Chassinat (M. T. k. O.-A., xxvi) frequently employs Arabic terminology, transcribed in Coptic characters and in some places in Arabic script. It was written between the ninth and tenth centuries by an author who used both languages with facility and a note might even lead us to suppose that he was more familiar with Arabic than with Coptic. He frequently gives the preference to Arabic terminology over Greek or Coptic, quotes numerous Arabic physicians, and even uses an Arabic translation of Galen, although he knew Greek (Chassinat, Pop. Méd., p. 4). On account of certain transcriptions, Chassinat would date about this time the alchemical fragments which Stem put to the fifth or even to the sixth century (ibid., p. 5). But according to Makriti (about 325 B.C.) the Christians of Egypt still spoke Coptic (Ma'hadhat, p. 203), which is confirmed by a fragment of Coptic poetry of this period (Ant. Byzant., xii. 244 a. 3). The celebrated passage in Severus of Antioch is well known. "I have begged the assistance of Christians who have translated for me the facts which they had read in Coptic and in Greek into Arabic, which is now spread to such an extent throughout Egypt that the greater part of the inhabitants do not know Greek and Coptic." This statement is absolutely accurate on the first point, as we possess in Coptic the biographies of patriarchs that Severus has faithfully translated (P. O., i. 415; Quartemère, Rec., p. 35; Ludwig, Constanzer papyr., p. 94; M. R. O., i. 110; Chassinat, Pop. méd., p. 6). This is the fourth (ninth) century the Coptic clergy wrote in Arabic, when they wished to be understood; this is especially the case in regard to Severus and Eutychius (Becker, Rec., p. 131; Ibid., ii. 7).

It is from the same period that an Arabic text written in Coptic characters dates (B. I. F. A. O., i. 91; Chassinat, Pop. méd., p. 5; 23). Besides, the Coptic language began to be corrupted; this was the case with a document relating the persecutions of al-Hikmi (Quartemère, Rec., p. 247 a. 999). It seems however, too much to assert that in the sixteenth century, or perhaps earlier, Coptic was no longer written. (Dict. Arch., ii. 282 a.)

The geographer Bakri (1494) even asserts that around Tripoli in Barbary, the Copts still spoke Coptic (Bakri in Quartemère, Rec., p. 293). Al-Husnai prepared in Arabic his grammar of the Coptic language, but noted that from his time two dialects the Bahairí and the Sajidi were still used (Quartemère, Rec., p. 30-31);"
of Severus of Aschlinn, still used biographies written in Copite (ibid., p. 177), Renanot, p. 418) Abū Sallīh, who records a Copite inscription dated 1043 says that in the eighth (xiith) century educated men among the clergy still knew Copite (Abū Sallīh, f. 41, 45); this was so in regard to the patriarchs Cyril II (1070–1090) and Gabriel II (1132–1145) who wrote as elegantly in Copite as in Arabic (Renanot, p. 407, 501; Quatremère, Revue, p. 292; Butler, Coptic Churches, ii, 84). The latter translated into Arabic the liturgical books (Michael, ii. 355, Renanot, p. 467). The invention of the patriarch Marousius (1101–1137) was celebrated in Greek, in Copite and in Arabic (F. O., i. 231; Renanot, p. 488). The latter: Mark of Kenlib (d. 1666) in spreading his doctrine expanded the Holy Scriptures in Arabic from the Copite text (Abū Sallīh, fo 9, sqq., 145; Makrizi, Hīthāb, p. 456; Quatremère, Revue, p. 36; Graf, Ein Reformierung innerhalb der Kirch. Kpt. im zweiten Jahrh.). At the end of the xiith century a converted Jew became fluent in the Copite language (Renanot, p. 525; Quatremère, Revue, p. 36–37), Abū Sallīh mentions that in his time at Emaţ Christians marched in front of wedding processions even Muslim ones, and shared ceremonies in Sadik Copite (f. 1021; Quatremère, Revue, p. 3). We have already mentioned the Copite inscription of Dair al-'Aţān, dated 1156; we may here note that the tomb of opposite al-Awān, dated 1173 which refers to the excommunication of Turān Shāh into Nūhīa (Dict. Arch., ii, 2879).

These two texts support a remarkable way a passage in Abū Sallīh who says that in 1159 Copite was still being studied (Abū Sallīh, f. 45). The story of the martyrdom of John of Shamlūn, which seems from the beginning of the xiith century clearly marks a decline, for we find many Arabic words in it (Quatremère, Revue, p. 401; B. J. E., 1885, p. 356; J. A., 1887, i. 120–121; B. I. F. A. O., i. 113 sqq.; Chassart, Pap. Médicis, p. 6; An. Bull scand., xii, 245). The translation of the sacred books was continued and while its services were always celebrated in Copite, the lessons were explained in Arabic (Villelmon, Observations liturgiques, repr. from Le Miṣne, xxxvi. 49–50, 65, 111–112). Perhaps the clergy no longer understood Copite; the patriarch Michael V (1165–1166) was not able to sell either Copite or Arabic (Renanot, f. 1541; Quatremère, Revue, p. 37). The latest Copite inscriptions are of this century, those of the White Convent in the xiiiith century; those of the painter Mercer, one of which is dated 1301 at the Red Convent; the other 1318 at the Convent of St. Simons; and lastly the bili- ngal inscription (Copite and Arabic) on a rock between Aswan and Kham-Dumha, dated 1377(Dict. Arch., ii, 2870–2871, 2878–2879; J. of Theol. Studies, v, 534–555; M. F. O., v, 1, 137; B. I. F. A. O., vi, 3–4; Moret de Villard, Les Convents près de Scylax, p. 28 sqq). While an ecclesiastical diploma was in 1256 prepared entirely in Arabic, an ordin- ary diploma of 1353 was still written in Arabic and in Copite (Bull. de l'Inst. archéol. imp., xi, 177–185; Proc. of Bibl. Arch., xx, 270–276). The latest in date of Copite manuscripts is of 1393 (Sterne, Copt. Gramm., p. 2). The decline is quite complete and it is clearly wrong to say that towards the end of the reign of the Mamluk Sulṭān an order was made to close the Copite schools and that the teaching of the language was forbidden (Egypt. Univ. Pict., iii, 159). At no time indeed does such a measure seem to have been taken. We may note here that Aḥṣanīna has "received" a very singular fashion the imprint of Arabisation by means of the Arabic literature of the Christian Copts in Egypt" (R. M. M. C., i, 93).

The celebrated passages of Makrizi are well known which declare that in the majority of monasteries of the district of Assiūt, Greek and Copite were both known and that Copite was still spoken. Some people naturally have been led to say that this assertion is an exaggeration. In our opinion one can go further; it is probable that Makrizi quots this on this occasion an early writer, Shihabot for example (f. 350 = 999); it must not be forgotten that Makrizi is a compiler who often does not give his sources (Makrizi, Hīthāb, ii, 307; Quatremère, Revue, p. 43; Dict. Arch., iv, 238, 2436; Lane, Munnw, ii, 282; Stein dorff, Kopt. Gramm., p. 3; R. O. C., xiii, 192, 194; Lazenec, Cino. pakhādīm, p. 69; Chassart, Pap. Médicis, p. 6). — Chassart holds that the copy of the Tōthōmes, a Coptic text written in Arabic characters, can scarcely be of an earlier date than the xiiith or xiiiith century. It is also evidence that Copite had been completely neglected for, in order to learn the language, it was necessary to have recourse to the Arabic alphabet (B. J. F. A. O., v, 91 sqq.; Chassart, Pap. Médicis, p. 23–24).

There remain to be noted certain isolated facts which show that a few Copts, until the middle of the last century, still used the ancient national language (Vaussêb, Relation, p. 361; Quatremère, Revue, iv, 293; Dict. Arch., iii, 2832; iv, 2486; K. M. M., iv, 77; Egypt. Univ. Pict., iii, 1177; Zeitich, J. s. 341, 342; Maar, cxix, 87). As to the care which the Coptic clergy took of their collections of manuscripts reference can be made to the work of Hyvernay (Rev. hés., x, 423–428).

In brief a rude blow was dealt to the national language from the time that the Arabs firmly established the use of their own language in government offices. The conversions on masse which had taken place from the first century induced the new Muslims to learn the language of the Kur'ān. Step by step the Arabs passed from the reign of a military occupation to that of a co-occupation, and, doubtless, this was the principal factor in Arabisation. The result of buying and selling to the townpeople forced the Copts to learn the Arabic language, and even to write it. The Coptic language survived for several centuries, living ground in each generation, by quite disappearing from everyday life, being restricted to the church services and was not understood by the people at least from the viith (xiiiith) century (ibid., ii, 7). The Recueil published by G. Mazarro may be the latest document of spoken Coptic (Romana, xvii, 481–512; Chassart, Pap. Médicis, p. 38).

It is quite natural that a certain number of Coptic words have survived in the Arabic of Egypt, but it is wrong to think that Coptic grammar has in any way influenced Egyptian Arabic (Z. E. M. G., i, 653–656; Stern, Kopt. Gramm., p. 4–5; B. I. F. A. O., ii, 212–216; and the authors quoted in B. I. F. A. O., iv, 33–38).

Christian Literature in Arabic. Literature in the Coptic language consists almost
entirely of religious works, translations of the Old and New Testament, and Lives of the Saints for the most part translated from the Greek. This literature has been chiefly handled by J. Maspero, who admits however that Greek has supplanted Coptic among the educated circles of the Christian population and that Egypt produced works of value in the Greek language under Byzantine rule. Coptic literature proper did not have the time to develop, and after having lived in translations, perished without producing a single original work (J. Maspero, Hist. Patr., p. 17-18, 24-27, 33. 81; E. Th. A. O. , iv. 194-195).

Coptic literature, confined to the liturgy and to the moral education of the people consists of ecclesiastical works, lives of saints and of pious individuals, which were compiled in the monasteries and which we must deal with as some of them are translations or adaptations of them in Arabic. It has the faults and merits of a popular literature.

The chief sources of the lives of the monks in their convents, with their familiar apppellations, in which demons and even Christ appear frequently and often in a laughable fashion, have in every way a very unmistakable character. In this literature always written for education and for an uneducated class, the marvellous always plays a prominent part — the marvellous of a quite naive kind, and it is surprising to note, to what extent miracles, clumsy imitations of those of the prophets, increase in the stories of the Copts (Dict. art., ii. 232-233, 238-239, 256-257; E. Th. A. O., 1895, p. 336; 1896, p. 306; 1898, p. 355; Chéneau, Les sources d'Egypte, ii. 142; Gayet, Compt. d'Egypte, p. 4; J. Maspero, Hist. Patr., p. 57; Ladouze, Études paléograph. , p. 141-145, 217, n. 1, Anc. E. O. , cl. 148).

In agreement with Casanova we believe that the Arabic translations of Coptic works were made at the time when the Fathimids had shown favour to the Copts, especially in Egypt, and when there was a kind of renaissance of Christian literature, a renaissance which was manifested by the number of works written in Arabic. Of all this hagiographic literature in Arabic, the Lives of Shenut, Pachomius, Piontius, and of Victor, son of Romano, are the best. These are panegyrics, not chronicles or biographies. It is convenient, to place here the Apollonius of Naxos in the fifteenth century by Michael of Makri, of which a contemporary recension has been recently republished under the title al-Amīn al-Sālih. Certain quotations from the liturgical and ecclesiastical texts enable us to pass in review the old writers who enjoyed popularity among the Christians in Egypt. The latter translated into Arabic the canon, sermons and homilies of St. Athanasius, of St. Basil, of Epiphanius the Syrian, of St. Epiphanius of Alexandria, the canons of Pope Clement, the sermons of Cyril of Jerusalem, of Gregory of Nyssa, of Gregory of Nysea, of St. John Chrysostom, homilies by St. John of Damascus etc. (B.T. P. A. G., l. 20; Ladouze, Études paléograph. , p. 64-66, 116; Anc. E. O. , xl. 91-113, 157-154; Haase, Altechristl. Kirchengesch. , p. 115).

Without producing a writer of the class of Farlawi, the Copts have left us a history of ancient times, but it was the Muslims who wrote it. Ibn 'Abd al-Hakam, in his Fathā 'Abīs, Mazādî in his Marâfi al-zajahiyyah and notably in his Aḥrâr al-samâ'î, later Ibn Wafî al-Shâh, so often quoted by Maspero. We know also these legends from the Egypt de Monnuill fts de Gaphyrou (Muqaddû b. Ḍâhil) and the anonymous Aḥrâr al-Qal'ah (G. Maspero has clearly brought out that the documentation of these works was mainly Coptic (Journ. des Savants, 1899, p. 69-86, 154-172, 277; Altle, ix. 20).

Nevertheless the Christians in Egypt produced a certain number of historians of note who do not make a bad show by the side of the Muslim annalists. They are very valuable for the history of their own country, and much use of their works has been made in this article. The first in date, 'Abn al-Muqaddû (d. 940), in al-Sibîl, al-Bârî and the Melkite patriarch of Alexandria, wrote, besides medical treaties, a history which extends from the creation of the world to events contemporaneous with the author. Melkite praises his work, in which innumerable sources have been utilised. A continuation of his history written by one of his relatives, Ṣâ'īd al-Andalûsî, deals chiefly with contemporary events in Egypt and in Syria. An account of the years 348-425 (940-1034) is given there. The first fanatical in 'Abn al-Muqaddû, bishop of Ahenan, about the year 995. He was a very fertile writer, since, according to Ibn 'l-Burakî, he composed twenty-six ecclesiastical and apologetic books, among which a History of the Patriarchs of Alexandria which was continued by the deacon 'Abn al-Muqaddû b. Mârûs (about 1087). Although an Armenian, Ibn al-Fuqara cannot be omitted from this list, since he wrote in Egypt from native sources, especially Muslim ones. His History of the Monasteries contains information of every kind, geographical, archaeological, historical and ecclesiastical. With the help of this book, compared with Muslim works, it is possible to estimate the favour the Christians enjoyed at the Fathimid court. Towards the end of the thirteenth century, Ibn al-Kâhîb (Abu Shukr Úthîr) produced a general chronology which starts from the creation of the world; he also wrote the History of the Councils and a lexicographical work. His contemporary, al-Mâlikî (George b. Abî l-Fakhir) wrote a general history, following the method of nearly all Arab writers. So far the second part, which, after summarising 'Abn al-Fâhrist as a beginning, deals with events following Islam, is the only one known; in the first, the author made use of Egyptian, Apagran and Mâlikî, and different Greek writers. Al-Mâlikî, an official at the court of Baibars I, a descendant of officials in the service of the Ayyubids, died at Damascus in 673 (1274). His work was continued until the year 750 (1349) by Mâshâdî b. Abî l-Fâhrist, who belonged to a family of ecclesiastical writers. His history, al-Nâzîrî al-sâ'dî, which comes much to Nîmis, is as to the part still unverifieable, very like the anonymous history published by the Jesuits under the title, Édit. a. Grec. des Manuscrits-11th. Lastly we must note Ibn al-Fâhrist, who wrote in the eighteenth century a History of the Copts (Graf, Reformationsgesch., p. 18; 17-18; 23; Mâksûr, xl. 688-705, 745; Mâshâdî, Taqâd, p. 154; Ibn Abî Uqârî, ii. 86-97; ii. 345-354; Haase, Altechristl. Kirchengesch., p. 30-31; 33; Graf, Christ. u. Lit., p. 40-45; P. G. , cl. 383.)
Besides the two historic, the Arabic Christian literature in Egypt possesses philologists of the first rank. They appeared at the time when the Coptic language, no longer in everyday use, ran the risk of being no longer understood by the ecclesiastics. Nourished on Arabic culture, these writers took for their models Arabic grammarians. An analysis of all these works, grammars or "scales" (in Arabic "sullam") have been ably made by F. Mallon, whose conclusions are here summarised. The first in date is the Coptic grammar of Athanasius of Kith who lived in the 6th century. The "scale" must have existed at this time for John of Semnana, who wrote in the middle of the thirteenth century, wrote his own work to take the place of the older ones, which through abbreviation to be complete were too voluminous. Confined to the liturgy, it is arranged in a determinate manner, for it classifies the words according to the order in which they occur in the sacred books; it is entitled "sullam homos", the "scale ecclesiastica". John wrote in addition a grammar in which he gave the name of "preface", "anaphora". At the same period lived three brothers, all famous, the sons of Al-Assel, one, Abu 'I-Faqi al-Kalbi, known for his "Collectio de Canonis", the second, Abu 'I-Faqi al-Dakak, who was an exception in that he wrote a liturgical work, the third, Abu l-Muhiyih, the author of the "Sullam maghafi", a scale in which the words are arranged according to their rhymes after the manner of the Arab dictionaries. The grammar of Ibn Khash Kaki, of John of Kalyb and of Ibn al-Dakak, who lived probably in the second half of the 8th century, are still in existence. They were immediately followed by Abu l-Rahih, already mentioned as a historian; his Preface is very inferior to the preceding ones (M.F.O., ii. 111-136; iii. 213-216; v. 57-90). Quatremerre, Recueil, p. 29-31; Vellecour, "Observations Litteraires". A. El, "Le Musulm., xxxii. 3-4; Mallon, Grammaire Copte, p. 1-77. Munir, op. cit., p. 370.

The authors of these dictionaries were not the first, but amongst the whole group of lexicographers, who have just been mentioned, the greatest authority of Abu 'I-Barakat. b. Kakeh, stands out. He was the first of Christian writers in Egypt to be known in Europe, thanks to Kircher, who published his "Sullam Kahri", or Scala Magka and to Vasilac who reproduced his "Lamp of the Darkness" in his "Histoire de l'Eglise d'Alexandrie". These are the chief works of this ecclesiastical whose literary activity lay in the first half of the fourteenth century. In addition he collaborated in a "Grammar of the Manafi" of the Manafi' Emir Birotir of Damascus whose secretary he was. The "Lamp of the Darkness" is an encyclopedia of ecclesiastical sciences, containing in dogma, religious history, liturgy and discipline, all that a Coptic priest could wish to know. This work contains very valuable lists; those of the seventy disciples, the patriarchs of Alexandria, the saints of the Coptic year, and, above all, an important bibliography of Arab-Christian authors (Dict. de Thid. Catholiques, viii. 2293-2320). The greater part of Arabic Christian literature was intended to be read to the people during the service, and its form shows signs of this. They are somewhat analogous to the sermons of the Middle Ages, written in a macaronic style, addressed to an illiterate audience, to whom Latin was not known. Let us add in this that these works are translations from Greek and Coptic, often word for word, and that the Arabic phraseology is clumsy. But it is a matter for astonishment that the editors of Christian manuscripts have thought that they must keep faults of orthography, which the Muslim copyists as well as the Christian ones had made and have thrown the blame for them upon the author. The result has been irremediable and with only rare exceptions, the editions of the Paralogge Orientale and of the Corpus chrestianorumorientalium have been unintelligible. Another inconvenience is that the result has been regrettable erroneous estimates of the Christian writers (Z. D. M. G., ii. 453-471; R.E.F.A.O., iv. 1401; Amelinaus, Acta, p. 91; R.C.O., xxiii. 385-386).

Bibliography for the literature:

The author owes several essential references to the kindness of M. M. Nadi Alain-Given and H. Munier. He expresses his especial thanks to W. E. Cron who in view of this article undertook long and fruitful researches.

(K. W.)

KIDAM in said (1) of anything which is antecedent to another in time (Ikapabion, opp. ikabid); (2) of the temporal, newly arisen, which no time has preceded; (3) of the absolute, i.e. in its nature without beginning (kidam in this sense is usually synonymous with an, ana); but some, e.g. Dphl, ab-kDNm Ab-Kuwa, ii. 30, endeavour to show that there is a subtle distinction. In the last (3) sense, according to orthodox belief, the name ab-Kidam can be applied to God alone. The question whether God's thought in relation to the (not yet) created world can be conceived as a simple relation or in a concrete part of his eternal presence and the world is thus eternal in God was answered differently.

It was the custom in philosophical language to talk of the eternity of the real world. If the creation of the world was not denied, an eternal motion was taught and God called the first cause and the world eternally caused as a whole. In this reasoning one could appeal to the multiplicity of meaning of the conception "eternity" in Hebraic tradition especially to the Aristotelian distinction between eternity and eternity (cf. Cat., 1490, 26 sqq. and Metaph., 1038, 9 sqq.). Thus in general a distinction was made between a temporal (vanntl) and an essential (abntl) priority and posteriority but 3 to 4 varieties were distinguished, viz. — in addition to an order of precedence in time, one in order of place (vam), its rank (henum), in nature (bama), its causality (hahem) and in knowledge (bela).
KIFT (Koif, Kaff, the old Koitu), name of a place in Upper Egypt, nowadays insignificant, according to Baudefeur, Egypt, it has 5,034 inhabitants only, situated under 26° north lat. on the east bank of the Nile, but at a certain distance from the river, where the latter comes nearest the coast of the Red Sea. This situation explains the importance of the place in antiquity, when it was the ware carrying from India, and the Copts, who trade in the same. The territory communicated with India is still mentioned by Yaqūt, who speaks also of the surrounding orchards. The territory was a waqf belonging to the Asghār (Alids) and the inhabitants were Shī'ites.

AL-KIFTI, Music of a family of officials of pure Arab origin, several members of which filled high offices under the Ayyūbids. The honorary title al-Kāfī al-Anṣārī was borne by Ahmad b. Abd al-Wahīd, whose son Yūsuf, afterwards al-Kāfī al-Dhahāf, was born at Kift in May 1171 (March 29, 1233). He succeeded his father in the administration of his native town, but had to leave it in 1173 (1174/1175) on account of the rising of a Fatimid adventurer. After filling several offices in Upper Egypt, he was summoned in 1183 (1187), after the conquest of Jerusalem, to Saladin's court in the field, to assist his viceroy al-Fiṣḥī. When, on Saladin's death, his brother al-Malik al-Ṭūsī deprived him of his nephew's inheritance and occupied Jerusalem in 1192 (1193), al-Kifti, along with other officials, left the town in 1202 and went to Hārān, where he entered the service of Saladin's son Asafar. But he soon decided to leave Syria and under the pretext of the pilgrimage went to Mecca, thence to Yemen, where the Arba'īn Sonqar, the guardian of the minor Ayyūbī al-Nasir, gave him the vestments in 1205. But he soon gave up this official and retired to Dībīl; in Yemen in 1224 (1227).

His son "Ali, born in Kift," or July of 1226 (winter of 1172) at Kift, followed his father and grandfather in the official service, but his inconstant nations were rather towards scholarship. After studying in his native town and in Cairo, he went with his father to Jerusalem, where he was able for several years to gratify his inclinations. But his father had to leave Jerusalem, and he could not have stayed much longer, certainly not till 1228, as Yāqūt, Ittihād, v. 4855; says: But the son went to Aleppo, where a patron of his, the former governor of Jerusalem and Nābulus, Fīrūz al-Dīn Māmūn al-Kāfī, had become vizier to Saladin's son al-Malik al-Zahir Ghaṣn. The latter took him into his service as secretary and he received thanks for careful administration of the tax. After the death of his patron on Ramadān 13, 610 (Jan. 26, 1214), the Sāliḥī appointed him his khitān. Although he would have preferred to devote himself to study, he had to take over the vicariat at the organization of the tax. After the visit of the Mongols in 1217-1218, he retired into private life, but had again to return to the head of the Dībīl in Safar 615 (April, 1219) and held this office till the end of Dībīl 1228 (April, 1231). He then already had the title al-Kāfī Ḥakam al-Walī, as his protector Yaqūt tells us in his Muqaddimah al-Ḥanifiyyah, iv. 152, a passage written before 1224 (1227). After five years' leisure he again took on the office of vizier in 633 (1236) and held it till his death on 12th Ramadān, 646 (Dec. 31, 1248).

Before affairs of state entirely took up his energies, he had displayed considerable literary activity. In the Afdal, v. 4854, Yaqūt gives a list of his works written before 620, some, however, not quite completely by him: this list was copied almost word for word by al-Sallāḥ, in his al-Waḍayyīh, ed. Frélicher, in Abūl-Fadlā Fadl al-Sawdatī, p. 234, and preserved by us from him with most corruptions in his Fīrūz 1196.

His historical works are all lost: they included a history of Muḥammad b. Sāḥibīnī, in al-Kūnah corrupted to waḥṣāṣī, not recognized by Sīstābīn, Prolegomena zu einer Ausgabe der im Brit. Mus. zu London verwahrten Chronik des seldschuksischen Brekis, p. 31, No. 2) and a history of the Seldjūqs from the beginning to the end of the dynasty, which must have been of considerable value. Of his works on literary history, only the posthumous work on poets with the name Muḥammad has survived to us (see de Slane, Cat., ed. de la Bibliothèque Nationale, No. 3333). Of his history of the grammarians we have only the synopsis by al-Dīnārī (748 = 1347) in the latter's autobiography, see Cat., ed. de la Bibliothèque Nationale, p. 31, No. 12; and a history of the Seldjūqs from the beginning to the end of the dynasty, which must have been of considerable value. Of his works on literary history, only the posthumous work on poets with the name Muḥammad b. Ṭūlūn (1224), see Ibn al-Qīṭī Turkī al-Ḥamnāmī, auf Grund der Vorarbeiten von Lippert, ed. by J. Lippert, Leipzig 1903, repr. Cairo 1926.

KILAH — KILD AL-BAHR

KILAH b. RAUDA, an Arabic tribe which was one of the principal branches of the large tribe of 'Amr b. Sa'da. Their original homes were in the Hima Darruya, which corresponds roughly to the country North and South of the present Wadhali capital al-Riyadh. This district was considered one of the best in Central Arabia and we are told that the Kilah occupied nine tenths of it. At a much later time than the rise of Islam they wandered North into the confines of Syria where they gained possession of the towns of Hit, Hail and others and where their rulers were known as the Al Mirdas [q. v.]. A large tribe like the Kilah was divided into many clans and we have notices of ten large divisions: 1) Dja'far b. Kilah with four divisions: Mallik, al-Alywa, al-Kha'li and 'Utba. 2) Abū Bakr b. Kilah with three divisions: 'Abd, Ka'b and 'Abd Allah. 3) Malwiyah al-Dihaib with thirteen divisions of whom five had names used for the Ziyad: Uthman, Masud, Muhammad, Quraysh, Suhaib. 4) Thabit b. Shurhabil who killed al-Husayn at Karbala was a member of the division of al-A'war. 5) 'Amra b. Kilah with four divisions: Al-Aqsa, 'Abd Allah (one of the principal chiefs of the whole tribe), Thabit and Asad. 6) Surah al-Kilah with three divisions: Asad, Aqsa and Nufair. 7) 'Ali 'Abd Allah b. Kilah and the division which is all derived through Wad and of which seven are mentioned by genealogists. 8) Amr b. Kilah with two divisions: Nufair and Abū Awf. 9) 'Abd Allah b. Kilah with three divisions: 'Amir, Aru and al-Saw. 10) Ru'a b. Kilah with three divisions: Bidjar, 'Urwa and 'Uthman. 11) Ka'b b. Kilah with four divisions: Amir, Wadh, Razid and Awa. The most prominent clan in the time before Islam were the Banu Dja'far, who were powerful enough to have under their protection for a long time the tribe of Ghassan and also gave support to the tribe of 'Abd in their long struggle with the Banu Qays b. Abd al-Rahman. The most remarkable deed recorded by the tribe of Kilah was their signal victory over the confederate tribes of Juhayna and 'Abd in the battle of Dhu al-Hijja, where they with other 'Amir tribes secured a signal victory which is reckoned as one of the three great battles in the time of paganism of which Arab authors have any record. We find them still in their old settlements in the first centuries after the Hijra, but they were quite submissive to the governors sent to throw from al-Madina or Damascus. In the year 231 H. Bughil, al-Kahar was forced to capture 1500 of their men as they by that time had reverted to their ancient bukhala life of making predatory raids upon the neighbouring country.

Among prominent men who came from this tribe the poet Lahdi [q. v.] is probably the best known, but it is astonishing how few of them are recorded as traditional scholars.

Bevan, passim, especially pp. 655 sqq., and 662 sqq.; Wasan, General Tabakat and Register, ii. 261; Tabari, ed. de Genou, passim; Ibn al-Atir, Kamil, passim. (F. Krenker)

KILAH-1 NADIR (Kaluq in Arabic), a town in Persia (Khuzistan) on the Rasu-Perzian frontier to the north of Mecca and to the north-east of Sarakhs.

It is a natural fortress perched on a spur of the Kermani mountains. When Arghun rebelled against the election of Taklidur Ahmad as Mongol il-khan, he took refuge after his defeat, in this fortress (680/1281), the entrance on the west side of which is still known as Darband-e Arghun. It is also pronounced Arghun (probably by a proficiency in the language). It was besieged by Tamerlane without success. The conqueror withdrew, leaving troops to blockade it, and it surrendered finally after a pestilence. This was the first place which Nadir Shah, who had begun as a brigand, made his centre of action; later he built a palace there and a treasury for the spoil of Delhi.

KILD AL-BAHR, a fortress and small town at the narrowest part of the Dasht-e Lelles.

The reader is referred to the article KAL-e Sultaniye where the fortress on the Asadie side opposite Kild Al-Bahr is fully dealt with, and here only the minimum necessary is given. The castle of Kild Al-Bahr was planned and armed along with the Asadie fortification in the years 1402/1453 by Vakil Bega, sandjak-bey of Qandilgoli, by order of Mehmed II (Kirkachali, ed. C. Murer, book iv., chap. 14 and book vi., chap. 31, also: Chakabevitski, ed. E. Bekker, p. 113; Reinaud, J. v. Hammen, G.O.R.I., ii. 73). Sultan Ghiyath al-Din in 1258 renewed the fortifications which had fallen into decay, in the interval and they were fundamentally remodelled and extended with those of Kala-e Sultaniye in 1305/1370 (1305/1666). The farther history of Kild Al-Bahr is practically the same as that of the Asadie fortress of Kala-e Sultaniye [q. v.] 1500 yards away. The ancient picturesque satmted fortress of Kild Al-Bahr with its old round tower was strengthened in later times by the addition of the modern fort of the same name with an adjoining battery, the small earthworks of Yeni Mechchian and the large bastion which flanks Namdaghi. Rebuilt the old tower of the fortress lies the insignificant village of the same name on the slope of a hill, which suffered a great deal during the fighting in the Dasht-e Lelles in the Great War.

The ceremony of the sword, also called sabîlul asasif or sabîlil shawâdir, was the ceremony of investiture of the Ottoman Sultan, which took the place of coronation. The ceremony generally took place shortly after the sâlih, or marriage, to the new Sultan. The latter, leaving his palace, went by horse with great pomp to the faubourg of Ayîbûh, where he disembarked and went to the türbe of Abû Ayîbûh al-Ansârî (q.v.), accompanied by the Shaikh al-Islâm, the Kâdî 'Asker, the Grand Vizier, the Na'îb al-Asghâf, and a limited number of other high dignitaries. In the türbe the Shaikh al-Islâm after a short şarâc of two rakâ'as proceeded to the girding on the sword (in Turkish, šâbîl şawâdir). After it, the Sultan returned on horseback through the town, always entering by the Adrianople gate. Tradition held that the new sovereign should visit the great mosque and the türbes which contained the tombs of his ancestors.

This is how the ceremony is described by d’Ohsson in *Tables de l’Empire Ottoman*, I, 305 sq., and von Hammer in *Die ottom. Reichsstaatsverwaltung*, following Tâhirî, Zadî Muhammad, I, 454. This description differs little from those which have of the middle of the sixteenth century (Dicq, *État présent de l’Empire Ottoman*, Paris 1676, p. 10, 19) and from the way in which the šâbîl al-asasif was performed in the sixteenth and seventeenth centuries. In the sixteenth century the part of the Shaikh al-Islâm was taken by other dignitaries such as the Na’îb al-Asghâf, in 1555-1589 at the accession of Abdul-Malîk (cf. Abdûl-Latif, Ta’ârîkh, vii, Constantinople 1302, p. 51) and later the Celebi Efendî of the Memlûkes at Konûya (cf. Celbi). On the last occasion on which the ceremony took place, in August 1918, after the accession of Muhammad VI it was the Shaikh of the Shamsîa who performed the rites (cf. the detailed description by Kâzım Asghafl, *Tâlîf şâbîn i arsânîda*, Constantinople 1334, p. 24 sqq.). Several Sultans did not have the ceremony performed, such as Mustafâ II in 1695 and Murad V in 1876 (Oğuzmân Nuri, *Abd al-Hamîd ve-demr-i Sulhnamet*, Constantinople 1327, I, 39 sqq.).

The origin of the ceremony of the sword is obscure. Tradition, as recorded by d’Ohsson, says that Ak Şams al-Dîn, the holy man who discovered the tomb of Abû Ayîbûh performed the ceremony for the first time in the case of Muhammad II. But nothing of this is mentioned in the Turkish historiographers (cf. especially Ewîsî Celebi, *Seyyidname*, I, 401). These rather give the impression that the essential part used to be the polite visit made by the new Sultan, first to the türbe of Abû Ayîbûh and then to the türbes of all the other Sultans since Muhammad II (cf. e.g. Selenik, Ta’ârîkh, p. 132 for Murad III in 1575; and Na’îma, I, 195 for Ahîmad I in 1604). The first Sultan for whom the ceremony of the sword is definitely recorded seems to be Mustafâ I in 1617 (Na’îma, I, 320; Poëvecî, ii, 361). It must be concluded that in any case not so much importance was attached to the ceremony in the early centuries as in later times. The ceremony itself has however an ancient tradition; d’Ohsson (I, 300) makes it go back to customs followed by the Manûslî Sultans of Egypt, who were girt with the sword by the ‘Abhîsîd Caliphs. Such a ceremony is described for example by Abû-Kalâjahîndî (Sûlûq, iii, 265 and 289, according to Gandacor-Demoulin, *La Syrie et l’Époque des Manûsî*, p. 24).

In Egypt the Sultan was at the same time robed by the Caliph in a black abî’sî (q.v.); this ceremony therefore has many points of resemblance to the formalities practised by the Caliphs of Baghdad when they wished to honour and recognise the services of their great vassals, such as the Bâyâtîs and Seljûqs. Only in the Abûalâhîd period did we find no mention made of the sword (cf. Ibn al-Asbîh, viii, 286). It is certain therefore that the ceremony of the šâbîl al-asasif rests on a very ancient tradition; it is moreover interesting to note how the Shaikh al-Islâm (q.v.) here has in a way assumed the office formerly exercised by the Caliphs.

As to the sword itself, it is described by von Hammer (I, 3) as the “sword of the Prophet,” while Ahmed Lütfî (I, 3) describes it as the sword of the Caliph ‘Umar al-Fâhrî. These statements can only be based on a pious fiction. It is further to be noted that the expression sabîlul asasif, originally means putting the belt of the sword around the neck, which seems to go back to ancient Arab customs (cf. al-Sharî’î’s dictionary, *Alârî* al-Mansûrî, p. 1029).

*J. H. KRAMER*

**KILDÎ ‘ALÎ PASHA.** [See OCHIÂLY.]

**KILDÎ ARSLÂN,** the name of several Seljûq rulers in Asia Minor.

1. Kildî Arslân I (known as Sultan I) was, according to Matthew of Edessa (ch. 225), not born till after his father had overthrown Sharâf al-Dawal (478 = 1085) but this seems hardly credible as he left an eleven year old son at his death in 1107. It is certain however that he was still very young when his father fell in battle with Tutush (479 = 1086). This explains why he played a subordinate part in the war with the Crusaders, in which the Christian chroniclers do not once mention his name but always talk of Solomonus or of the Sultan. Only a short time before he had returned to his father’s capital Nicea, for after Sultan I’s death the administration of Asia Minor, Aniûtâya, Edessa and Hîshab was re-arranged by Malikshâh and the young Kildî Arslân was taken by him to ‘Irâf. After Malikshâh’s death in 485 (1092) Kildî Arslân was granted permission by Bâkîyshâh to return to Asia Minor and according to Byzantine sources he married a daughter of the powerful emir of Smyrna, called ‘Trachas, which did not please the Greeks so that they set about — and with success it is said — estranging him from his father-in-law. When the Crusaders advanced on Nicea, Kildî Arslân had been clever enough not to allow himself to be shut up in the fortress, but took part in the battles fought between the Turks and Crusaders, although, as already mentioned, he had not, unlike Turkish emirs, notably Danishmand (Tânûmanus) held the command. The relationship between the Seljûqs and the Danîshmandiya was already not of a friendly nature although for some time they united against the common foe. They were quarrelling about the possession of the town of Malatya, where an Armenian named Gabriel was ruling under the suzerainty of Tutush. Kildî Arslân was actually besieging the town, when the Crusaders advanced and when he had retired for this reason Danîshmand ravaged the country round the town. Gabriel therefore appealed for help to Bâkîyshâh but when the latter hurried up he was taken prisoner by Danîshmand and Malatya had to surrender to the latter (1101). The attempts of other Crusading armies
to relieve him and the only course left for the Christians was to purchase his liberty for a very high ransom. Kilij Arslan, as the Christian chroniclers tell us, claimed a portion of the ransom for himself, which gave rise to a new quarrel with Danizhanid to the great vexation of the Muslims, who knew how much the cause of Ilyas suffered thereby. When Danizhanid died in 1106, Kilij Arslan seized the opportunity to get possession of Malatya by a treaty. At the same time he also became master of Maryafsärkin, appeared with an imposing army in front of Edessa but when he could do nothing there he went to Harran where he fell ill. He thereafter returned to Malatya and there received an invitation from the people of Mêşil to help them in their struggle with the Seljuk ruler Muhammed or more accurately his general Djarwali Saka'a, who at the latter's command had taken prisoner the rebellious lord of the town Djarmanish. Kilij Arslan headed the appeal and appeared in Xôr in Mêşil, established himself on the throne there and had his own name mentioned in the külpên against that of Muhammad's. He returned at once, after leaving his son Mallâhshû under the guardianship of an emir in the town, to resume the struggle with Djarwali, who had in the meanwhile received help from Kaysên of Damascus. On a hot summer's day (June 3, 1107) the two armies met on the bank of the Khabab, and it was very soon apparent that Kilîj Arslân had lost the day. He threw himself in his heavy armour on horseback into the river, but the horse sank beneath this burden and Kilîj Arslân was drowned. His body was afterwards recovered, taken to Maysfarûk and buried there in a specially built külpên.

His son Mustûfû's wish to move it to Konya was not carried out.

**Bibliography:** See the article Ṣalâh al-Dîn.

1. **Kilîj Arslân II.** A. Maxuti, reigned from 1155-1192. In the lifetime of his father he was appointed by him lord of the towns conquered in the southeast of Asia Minor and succeeded him on his death, thrusting aside his two brothers. He also succeeded — but only after several years — in putting an end to the Danizhanid dynasty in the peninsula and securing sole supremacy for the Seljuks. He was not able to go into the details of this struggle here but only mention a member of the ruling clan, Dhu 'l-Nun, brought in as a more dangerous enemy, the famous Ûṣûl al-Dîn, against him. He was not on good terms with the latter even at the beginning of his reign because they could not agree about the possession of several places in the south-east of Asia Minor. Therefore when Ûṣûl 'l-Nin, after Kilîj Arslân had seized his lands appealed to Ûṣûl al-Dîn, the latter was quite ready to take up his cause. He invaded Asia Minor with an army, occupied Maryafân, Kaisam, Behseni, Marazli and even Siwâs (1173) Kilîj Arslân then began negotiations for peace, for which Ûṣûl al-Dîn was not disinclined in view of his continued war with the Christians but he insisted on rather harsh conditions and made Kilîj Arslân the proposal that he could not consider him a Muslim in view of his friendly relations with the Byzantines. But the peace was concluded, although the garrison sent to Siwâs remained there till Ûṣûl al-Dîn's death in 1174. Kilîj Arslân thereupon seized all the towns which the Danizhanid had previously held, with the exception of Malatya, where a member of this dynasty held out till 1177 when Kilîj Arslân was able to capture this much contested town after a four months' siege.

The relations between Kilîj Arslân and the Byzantines were by no means always of a friendly nature. The Turkish emirs in the frontier lands used to harass the Christians from time to time when the opportunity occurred, e.g. in 1159, when Manuel hurried back to Constantinople from Cilicia by forced marches, so that Kilîj Arslân, who was considered personally responsible to the Emperor, was entertained in regal fashion by the Emperor (probably in 1158). Long negotiations were carried on in which the relations of the Seljuk to the Danizhanid were discussed. Nevertheless the conduct of the Turks continued later to give rise to many complaints and when Ûṣûl 'l-Nin, after his protector Ûṣûl al-Dîn had died, was in Constantinople, the Emperor Manuel, who in any case had unwillingly seen the Seljuk claim to sovereignty, in Asia Minor to the disadvantage of the Greek policy divided et impera, resolved to undertake a campaign on a large scale against Kilîj Arslân. The latter was cunning enough to avoid a direct encounter with his impetuous and chivalrous opponent, but when the latter was encamped in Muriokiphalon (Pass of Cardak) the Turks suddenly fell upon him and inflicted a decisive defeat on the army (572 = 1170). Kilîj Arslân duly trumpeted this victory through the Muslim world as evidence of his ardent zeal for the faith, sent a portion of the booty to the Abbasid caliph and was celebrated as a hero of the faith by poets such as Dhu al-Ta'awûshî. An enterprise against Nikûz at the same time in the interest of the Danizhanid was equally unsuccessful and a nephew of the Emperor Andronikos Vatatzes fell in it. Henceforth the Greeks left the Turks in peace.

Some time afterwards Kilîj Arslân quarrelled with the all-powerful Ûṣûl al-Dîn, first about the ownership of the fortress of Rusûlân, which Mašûd had conquered but had lost to Ûṣûl al-Dîn. When Kilîj Arslân was preparing to occupy the town, Ûṣûl al-Dîn sent troops thither under the command of Taqû al-Dîn 'Omar b. Shahkuğhan, who drove out the Turks, because Kilîj Arslân had no wish to involve himself in a war with Ûṣûl al-Dîn for the sake of a not very important fortress (575 = 1179/1180). Soon, however, the conduct of the Orkûsh of Hîrû Kâsa who had married a daughter of Kilîj Arslân named Seljûk Kâshân, gave rise to further disagreement between the two rulers. Kilîj Arslân was incensed against Ûṣûl al-Dîn Muhammed (the Orkûsh) because he neglected his daughter for a songstress, so that Ûṣûl al-Dîn out of fear of the wrath of his father-in-law appealed for help to Ûṣûl al-Dîn. The latter ordered Kilîj Arslân to leave Ûṣûl al-Dîn alone and when Kilîj Arslân refused to do so Ûṣûl al-Dîn himself marched with a force on Rusûlân but was dissuaded from continuing the war by the representations of the sultan persânas of Kilîj Arslân, Ishbûlûk al-Dîn Ùjas. As to the Seljuk princes, it may here be mentioned that she later came to Baghdad and died there in 580 (1183) as we know from an epitaph which Nizâbûr copied in his journal.

If Kilîj Arslân had good fortune in all these matters, grave disasters overtook him and his kingdom at the end of his life; firstly the passage of the Third Crusade, in which even his capital
Konya was occupied in 1190, and secondly the quarrels of his numerous sons. The latter, nearly a dozen in number, if we include a few other relations, had long festered; but when their father became old and weak, conducted themselves as independent rulers. One of these, Kuyb. al-Din Malikshah, lord of Siwâl, was able to arouse Kiliç Arslân’s suspicions of the Farwânis, who had been Kiliç Arslân’s greatest support, and had him murdered (1183). He then forced his father to install him as heir to the throne, and henceforth acted as if he were sole ruler. The aged Kiliç Arslân escaped from his tyranny and sought refuge with another of his sons, and finally reached his youngest son Ghiyâth al-Din Kai-khusraw at Bârlik where he fell ill and died (August 1192). Ghiyâth al-Din had the body brought in a litter to Konya, giving out that his father was ill, thinking that in this way he would himself gain possession of the Seljûq capital, which he did for a time (cf. the article KAIKHSURAW). He had his father’s body interred there and the tomb with it is now still existing.

**Bibliography:** see the Art. SELJÜQUIDS.

The Chronicle of Michael the Syrian is particularly important here, as the author was personally acquainted with Kiliç Arslân.

3. Kiliç Arslân III b. Rukan al-Din Sulaimân had homaged paid him as Sulân after the death of his father in 600 (1203) but had to give way only a few months later to his uncle Ghiyâth al-Din Kai-khusraw.

4. Kiliç Arslân IV b. Ghiyâth al-Din KAIKHSURAW II is better known by his hash Rukan al-Din. He has already been dealt with in the article KAIKHSUR. II (cf. ii., p. 637) down to the time when his brother, joint Sulán with him, sought refuge with the Greek Emperor (659 = 1261). Henceforth he was sole Sulân but the real power lay in the hands of the Farwânis, Mu’tân al-Din Sulaimân (q.v.). When he became incommode to the latter he was transferred to death by order of the Farwânis (664 = 1266).

**KILLIZ,** a town in Northern Syria between Halab and Ainâtib. It was apparently already known to the Assyrians, for a cuneiform inscription (Harper 1037, Brit. Mus. K. 10373, obv. 3) mentions a town Kiš-sâli. In the Roman period the town was called Cillas sine Urmagancea (Itin. Ant., ed. F. P. B. P., p. 84) It must have been quite insignificant in the middle ages; it is mentioned in the rising against the patriarch Dionysius of Tellmasé in 817 A.D. (Kišlîa should be read in Barheb., Hist. eccles., ed. Abbeele-Lamy, L. 339, 342; 1. Kâlas and Shâles and in Michael the Syrian, ed. Chabot, Chron. syr., iii. 23; for Halît) Ghiyâth calls Killîs as he writes it a village of the nahiya of As’a; almost all the other Arab geographers do not mention it. The modern town has about 20,000 inhabitants including 15,000 Muslim (Chinet 1891); the Arabs still call it Killîs and the Turks Kiliß. According to M. Hartmann, the ancient Killîs was at the modern Tarzûne Khân (1 hour’s journey W.S.W. of the modern Killîs) where large stones are still found; while tradition still assigns the little garden Dîn bâkhtî (30 minutes east of Killîs) to be the old site of the town or of a part of it, as the name Killîs is supposed to survive in Herz. and there are traces of an old site here.

**KILY,** the salty (alkali, soda and potash) obtained from the ashes of different plants, especially those which belong to the salt-lolaceae and allied families; it often means the ash itself and the lye obtained from it. Among plants special mention is made of al-bânînî which therefore cannot here be sorted. The best ash is said to be that of al-bânînî which is defined as al-bânînî nîrûn. Ummân originally means saltwort but now it seems to be identical with archisemum glaucum or anabasis argentea or stellaris rosmarinus. Hûrî and ash-nân seem to be often nomina generalis, even in old Arabic. Seetzen in several passages in his Reisebeschreibung (e.g. vol. iii., p. 68) mentions the obtaining of alkali but always from saline plants (the reference is therefore to soda).

Al-bânînî usually means sodium carbonate, soda, as the saline plants contain sodium salts. But another carbonate is also obtained, potassium carbonate (potash); for example, al-Râzî in the Kitâb al-Avrîr mentions a salt of ashes (mîlîh al-rumîdimî) which is obtained from oak ashes. In alchemical works ashes of poplar trees and firs etc. are mentioned. There is also al-bânînî al-mîlîh (="al-bânînî") which is either a lye or ash from less; it is the ash of tartar; we also have tartar = potassium carbonate (see Berggren, op. cit., p. 441).

A sharp distinction between soda and potash was not possible. Different ashes yielded different amounts of both which could only be distinguished at best by the taste and therefore with little certainty. In place of al-bânî the Mu’säfî al-Ultâm (ed. von Vloten, p. 259) speaks of mîlîh al-bânî. According to J. J. Hees in Nœckl it is called dibû, i.e. dibûn.

On the preparation of dibû the Tâffî states that it is precipitated to al-bânî (probably by steaming).

Al-bânî, i.e. the lye, is primarily used for washing. According to alchemical works lime can be added to this lye, it then becomes stronger and more suitable for soap-making. The ancient Egyptians, Greeks and Romans used the ashes obtained in this way for cleaning and washing and had no soap (cf. against the contrary vies the very full discussion by Blümmer in Paus-Wissowa, Reis-Ergebnissen, xii., p. 145 sqq.). On the other hand the Arabs made and used soap probably usually the hard soda-soap, the Mii-alu soap made from potash is soft soap. Ibn Durâid (321 = 933) is the first to use the word, Ibn Abi Mansûr Muwaffâk
several times in his work (composed in 1686–977, Principles of Pharmacology; K. Kobert, Historische Studien, ill., 1893, p. 1–278) mentions soap (şiş-bür) and also the hard kind. We learn through al-Mas'udī that the soap (al-rubbūt) made in Raqqā was a dry soap (read dūğūt) like bees-wax. It was made into cubes so must have been firm (cf. Deyy, Stoûl, i. 847). A full description of the manufacture of soap in Tripolitania is given by L. Rawolle (Aegyptische Beschreibung der Reise, etc., Langnugen 1582, p. 38[39]). Sen- weed was burned there, hard soap was obtained; one could stamp it or walk upon it. Whether kāf or soft soap was made or not is not certain.

Soap is also used in the manufacture of glass; it brings sand to the melting point, purifies and makes it easily take a turn. Glass-makers (al-saţlaqīs) use it; only sodium carbonate could be used for glass-making as the glasses of potassium are very difficult to melt and part. That many ancient glasses contained potassium is natural. The al-producing obtained from al-Būr (or amêghīs, the al of the dyers; the name: šakk al-Ultur is connected with this, the alum of safron and the passage in the Tawíf: it is a grain with which one treats safron as well. The reason for this statement is that alum is used in many dyes as a colouring matter; this is not however the case with alkali carbonates; they are used in safron to dissolve the dye-material which is practically insoluble in pure water.

From what has been said above it will be clear that it is not correct to call soda (alkali) after the Arabic word al-būr. Medical and other uses are discussed in al-Kawārsī, Ibn al-Baitār etc. It should further be noted that the accurate botanical identification of the different plant-names is extremely difficult.

KIMĀR (usually written: Kimik and wrongly vocalised: Kaimik), name of a Turkish people on the lower course of the Irtish. Ilū Khurâshchik (text in B.G.A., vi. 26 and 34) mentions a road thither (80 or 81 days) from Tart (now Awliyát Attā) or Kwâsâ, seven farsāgh distant, and Gurdâsh (in Barthold, Obit, 2 pésudâb 8 Srobaarpā Asty, p. 82 4) fully describes another route from Fârâb (Qurâf) (cf. Velxen, the modern ruins called Dáškent south of the mouth of the Srâ-Daryâ). According to Muğâbâr and Muğül (B. G. A., iii. 274) a portion of the Kimik at the end of the 19th (19th) century were already dwelling in the immediate neighbourhood of the Muslim territory in Turkistan. The historical importance of the Kimik lies in the fact that they sprang from them the later very numerous people of the Kıp-şâk (called Kusai in Europe and Polovetz by the Russians), originally only a tribe of the Kimik. From the 9th (9th) century (the mention in Idrisi naturally comes from written sources) the name of the Kimik disappears and is not again mentioned in the Mongol period. Cf. also J. Marquart in Ostfriulische Dialektstudien, 1914, index, s.v. Kimik; on the pronunciation, p. 99, note 1.

(W. Barthold)

KIMĀR, g a m e s of chance. The Kūrān prohibited games of chance, under the name of māṣir, at the same time as it forbade wine (fi. 167; v. 193); they are, it says, a great sin. The pagan Arabs gambled a great deal; say the commentators and staked in play their families and their property. Zamākhuṣā interprets māṣir by bihār, and applies this name especially to the lottery with arrows. There were ten inscribed arrows; a victim was divided into ten parts; the arrows were drawn by lot and to each of them corresponded a part; or sometimes twenty-eight parts were made, one part was allotted to the first arrow; two to the second, three to the third and so on up to the seventh; the three last arrows got nothing and paid the cost of the game. This lottery was practised chiefly in Mecca. According to a tradition of the Prophet, the prohibition also applied to kābatān (dice); "These accursed dice belong to the ways of Persia"; and according to a tradition of Ali bin Abī Talib, backgammon. According to Ibn Sīnā, it is extended to everything in which there is a stake or a bet (qīfār).

As regards chess, it should be noted that certain forms of this game, and these the less usual, necessitate the use of dice and can be regarded as games of chance; backgammon, on the other hand, is always played with two dice (see SHATRANJ). The Persian dictionary of Vallée also classifies among the bihār horse-racing, because betting takes places on it. It was in favour in the time of Arab paganism up to the beginning of Islam and under the Omeyyads. The historian Maṭū'all quotes about this a curious and ancient piece of poetry (Marāwîg, viii. 377).

Cards are called amongst Orientals "the leaves of fate", warâṣ al-šakira (see kimbē biqâhâ); their origin or at least their diffusion, is more recent than that of the games which we have mentioned. The Arabs have never taken to them; but the Persians were great lovers of them and painted beautiful packs (for example a Persian pack of cards bought by Prisse in Egypt and bearing sabres, crowns, helmets and other signs, "Magazin Pittorique", 1846, xiv., p. 365). The use of cards was known in Italy at the end of the thirteenth century, and spread throughout Europe during the fourteenth century. It is said without any good reason to have come from the Arabs. The use which is made of cards for fortune-telling is not without an analogy in the proceedings of geomancy, an ancient superstition in vogue in the north of Africa. We must recall in this connection the opinion of Bittell whose work is the authority on cartomancy. This student of magic attributes to the Egyptians the invention of checked
cards, which he calls the book of Thoth; this "book" composed of 78 sheets of gold-bearing hieroglyphics was the only thing which escaped from the fate of the library of Alexandria in the time of Qamit; it passed afterwards from the Arabs to other nations, who received it at the same time as the books on philosophy. Cards are certainly connected with the Chinese games played with tablets bearing figures or symbolical or moral characters which are grouped by families; such games were known in China from the twelfth century.

The Persians have always had gaming-houses which they call *kimrat khnas* (*kimrat is also found with the simple k*). The new ruler of Persia, Rizk Khans, had them closed on his accession (Nov. 1925). *This world—says the poet Sa'aid-i-wishing to express the sentiment of the uncertainty of fate—is the gambling-house of the gods*.

*KIMIYÀ*, alchemy.

Introductory. The name. In modern chemistry, by a qualitative analysis of the substances occurring in nature the elements composing them are ascertained and by a quantitative analysis their proportions are obtained. From these elements the substances themselves and countless others can be built up by a synthesis; this is done as a result of theoretical considerations which are based on observations. They enable the elements to be combined and their formation to be ascertained in keeping with the facts and even the structure of atoms to be investigated. These purely scientific investigations then lead to inquiries on the obtaining by technical means of practically important substances and the manufacture of corresponding new substances.

In *kimya*, alchemy, one starts off on the other hand from theories propounded *a priori* and isolated facts often wrongly interpreted and endeavours to manufacture precious metals and jewels, either by mixing or by using a suitable way bodies that occur in nature or by applying an elixir to them. If the study of *kimya* was at first less fruitful for the development of knowledge than that of astrology, this was because the latter was able to use the achievements of a more advanced branch of knowledge and was able to advance by means of its investigations, while this was not the case with *kimya*. It was only from its study and practice that methods of work developed and a more thorough knowledge of the substances occurring in nature and those obtained from them, was obtained; and this knowledge was later put to scientific use. It formed the starting point for the science of chemistry, especially when analytic methods of separation became more generally known.

*Kimya* is in Arabic not primarily an abstraction but means a substance, the means by which the transmission of metals is affected; it is therefore synonymous with *shir*. The word is usually derived from *kim-it* or *kim-it*, the black (A. Windemann, *Das ale Apotropa*, Weidelberg 1920, p. 14); according to H. Ures (*Antike Technik*, Leipzig 1926, 2nd ed., p. 123), it comes from *kim* malten metal. In the *Mas'ar al-Ilham* (p. 256) it is derived from *kim*, to conceal, while according to al-Safadi, it comes from the Hebrew and is composed of *kim* and *yit*; according to him the word means that this science comes from God.

*Kimya* thus comes also to mean a method by which one endeavours to obtain something, e.g. in *kimya* *al-imra*, *al-ghara*, *al-ikhlan*, i.e. means by which fortune or advantage is attained or hearts are moved (Hidjdi Khali, ed. Flucks, v. 253); in this sense it is found in the titles of works by Arab mystics.

Alchemy itself is called *iman al-kimya*, *iman al-ikhlan*, *iman al-imra*, *iman al-shir*, *iman al-ikhlan*, *iman al-ghara*, *iman al-shir*, *iman al-ikhlan*. Other names are the science of the stone (*khadjar), of the key (*khadjar*). It is also known as the science of the balance of the scales (*shala* or *shala*); a much used work of *Manbhur b. Hasya*, one of the first of this kind is called *Kihul al-Mamalatin*, while one of the last prominent alchemists, al-Djaladi (d. about 1530), also wrote a work on *Jim al-Minaw*, *Vera. Nr. 4185*. *Kimya* does not get this name, as might be supposed, because scales are used in it but because in its problems the relations and considerations of the right measures and proportions of the lower world, of the elemental qualities to one another and of the lower to the upper world are discussed. Only when a correct equilibrium is attained can the desired results (see Berlin, *Vera. Nr. 4185*) be obtained. Just as the body is only just when its qualities, its humours, are in the right proportions to one another, so it is with the precious metals. The alchemist is called *kimyadi* (*kimyad*, *kimyad*, cf. Dast, *Sufy*); *kimyad* (Jim al-Kifti, *Tarikh al-Hukama*, ed. Lipper, p. 188, &c.); *iman* (Fihrist, p. 351); *shir* (*Al-Ahbar*, text, p. 35. 11).

Alchemists and their writings. Just as in the middle ages alchemical knowledge was sought in Enoch, Homer, in the Greek myths, etc., so according to Maimonides, God taught the science and he taught his son Seth; Abraham, Idris (here = Enoch), David, Solomon and Korah, who however had got his knowledge from Moses possessed it. Muhammad and the Caliph Ali were said to have been acquainted with alchemy (E. Wiedemann, *Beitr. z. Gesch. der Naturwissenschaften, 10*).

The Arab alchemists relied very often on works which were ascribed to Greek authors and as usual these included many pseudographic works. We may mention Hermes Trismegistus, Ostanos, Zosimus, Krates, Democritus, Cleopatra, Marius, Apollonius of Tyana, Aristotle, also Pythagoras, Archimedes, Euclid, Plato, etc. A list is given by M. Steinschneider in the *Z. D. M. G.*, l. 356 (1896). — Some of the Arabic texts ascribed to such authors have been published by Bethel (et al.). The knowledge of these writings was probably in part disseminated through the Syrians; indeed it is recorded that the teacher of Khall, a Vasil, to be mentioned below was a monk named Marjanus and translations were prepared for him by Iqbal al-Salim.

In Arabic literature a large number of Muslim alchemists and their works are cited. The list is however not nearly as long as that of the astronomers and astrologers, who played a very different and scientific part and therefore were generally noticed.
The author probably gives most names (p. 351); according to Stapleton, al-Khāliq gives another; al-
Aṣfānī quotes a few works with an appearance of them; M. Berthelot (iii. 41 sq.) has given a name of numbers and books from al-Wafī fī Ta'bird al-Kāfi of Muḥammad b. Aḥmad al-Maṣmūdī; al-Dīnjākī mentions those who seem the most important to him in the introduction to his al-Miṣrāfī fī 'Ilm al-Miṣrāfī, *Lights of the Science of the Key* (Leiden, Cod. 935) finally there are numerous references in the section Kāfī al-Qāmin on alchemy in Hājīd al-Khālidī. The writings quoted at the end of it (in Flügel's ed., v. 284) are in any case those most read in his time. It is remarkable to find among them one by Ibn Sinā (Miṣrāfī al-Dīnjākī, *Mirror of Wonders*).

We now give a list of the best known Muslim alchemists with one or more of their principal works:

Khalīl b. Yaṣīd, an Umayyad prince (d. 85 = 704); to him is erroneously ascribed Fīrākat al-Sīḥma =
*Paradise of Wisdom* (Brockelmann, Geik. d. arab. Lit., i. 67) [see below].

Dīnjābī b. Ḥayyān [q.v.] who is not identical with the Geber who wrote in Latin — Berthelot distinguishes them as Dīnjābī and Geber — is the author of numerous works; a number of them have been published by Berthelot, pf. cit., iii.; but according to some he was a mythical personage. J. Ruska however has shown that he was by no means mythical [see below] cf. Brockelmann, i. 240 sqq.

Ibn al-Walīqīya [q.v.] (c. 870) wrote, in addition to al-Palīka al-Nahātiya, which contains some interesting information along with a good deal of nonsense, is probably read from the pen of Abū Ṭalīb al-Zayyāt, alchemical works, which were used for example by Shama al-Dīn al-Dimashqī in his Cosmography (Brockelmann, i. 242).

Aḥl Bāhr Muḥammad b. Zakariyyā al-Rāzī (Rhases), the celebrated physician (c. 288 = 900), wrote, besides alchemical works the Kāfī al-Aṣrāf (Brockelmann, i. 233 sqq.); this is now being edited by J. Ruska.

Ibn Uṣālīt al-Tanmūt (eighth or ninth cent. wrote) the Miṣrāfī al-Sīḥma al-'āmm (cf. Leiden, Cat., No. 1374; Brockelmann, i. 241 sqq.).

Al-Farkhī [q.v.], the famous physician (d. 339 = 950), wrote, *On the necessity of the art of arts, i.e. the Khair* (Brockelmann, i. 210 sqq.).

Maslama b. Aḥmad al-Majrīlī (d. 398 = 1007) also, distinguished as a mathematician and astronomer, was the author of the Kāfīh al-Uṣūl (Brockelmann, i. 243).

Abū l-Hakīm Muḥammad b. Aḥdab al-Malik al-Sālībi al-Khawārizmi al-Khash (d. 425 = 1034) wrote:

_The Essential of the Art and the Help for the Workers_, *Al-Sāliha wa-l-Sawha al-Sawha* (s. H. E. Stapleton and R. Asa, ed., cit.).

M. Yaʾṣīyī al-Dīn al-Ṭūhra (d. about 515 = 1122), the celebrated physician and poet often mentioned by Ibn Khallīkūn (s. Bibliography), wrote for example the Kāfī al-Atwar wa-l-Miṣrāfī, then Miṣrāfī al-Kahramān and Aḥwāl al-Sīḥma, Paris, No. 2144, probably also al-Dīnjākh al-Mukarrīr fī al-Sawha al-Ṭūhra, Berlin, No. 10361. — According to Gildemeister he was the Alchemist of the west (Brockelmann, i. 243 sqq.).

Abū l-Ḥasan b. Miṣkī b. Arīb al-Raʾis (d. 593 = 1197) is the author of the Sīḥma al-Dīnjākh, the "gold-sphere," which was often annotated (Brockelmann, i. 496).

Abū l-Raṣīm Muḥammad b. Aḥmad al-Īṣāqī al-Sīmātī (c. 700 = 1300). From his pen comes the al-Mukarrīr fī al-Sawha al-Dīnjākh, on which al-Dīnjākhī wrote an introductory commentary (Brockelmann, i. 496 sqq.).

Alī b. Ahdāmī b. Aḥdab al-Dīnjākhī (c. 1342) writing and commenting was much used later as is evident from the numerous manuscripts that still exist. They all move in mystically speculative channels (Brockelmann, ii. 138).

Abū l-Ṭāḥar b. Tammūz al-Īṣāqī (d. 762 = 1360/1361) (Brockelmann, i. 534).

Unfortunately we still lack a compilation for the alchemists such as H. Suter has prepared in masterly fashion for the Arab mathematicians and astronomers. For those who were also physicians the works of Wūstesfeld and Leclerc on Arab physicians and Arab medicines give much information. For the earliest history of Arab alchemy it is of great importance that J. Ruska has shown that the stories of Khalīl b. Yaṣīd b. Muʾawīya and Dīnjābī al-Saḥīkī are simply legends, at least so far as they are concerned with their part as alchemists and with the latter as teacher of Dīnjābī b. Ḥayyān; on the other hand Dīnjābī b. Ḥayyān, as is becoming more and more evident, was in reality the great founder of Arab alchemy and al-Rāzī his most important successor (Ruska and Holmyard).

The theories of the Alchemists, The formation of minerals, following Aristotelian views (cf. e.g. the very lucid account in the Fils-e Akbarī, text i, p. 33—36, transl. i, 38—41 and also the writings of the Muḥammad al-Saḥbak, see, cit.) was imagined to be somewhat on the following lines. Under the influence of the hot of the sun watery particles rise into the heavens, which are cold and moist, out of the water which is moist and light. When they mingle with the air, which is hot and dry, vapours (dīnḥāʾ) are formed; out of the earth which is hot and dry there arise from the same cause particles which, mixed with the air, form smoke (dābūsun). Dīnḥāʾ and dābūsun thus together contain the four elemental qualities (cold, hot, dry, and moist). Their mixture over the surface of the earth produces clouds, wind, rain, snow etc. and under it earthquakes, springs and minerals. The dīnḥāʾ is regarded as the body and the dābūsun as the soul of the substances. According to their quality and quantity different bodies are formed, including jewels; according to many alchemists the astronomical constellations play a part in this. If dīnḥāʾ predominates in the mixture, and the warmth of the sun produces a contraction after the complete mixture, quicksilver is formed, if both are present in almost equal quantities, a viscous, fatty, moist substance is formed; if this mixture, particles of air eminate from it unless cold brings about a contraction. This mass is inflammable. If there is a small preponderance of dābūsun, sulphur is formed; red or yellow, white or grey; in other cases we get arsēnāt and mephitis. The substances thus formed, quicksilver, which is also called the mother, and sulphur which is also called the father of the seven bodies (metals) are their sole components. Differences in the kind of body are due to differences in the purity of the components, to the mixture being made in a particular way, and to
the components affecting each other in different ways; the heat in the depths may change; cold may supervene etc.—The components are found in the parent body and in the proper proportions first in gold and then in silver; this is less the case with the other metals, which were therefore described as diseased gold and silver; tin is considered as lepros silver and quicksilver as ap- pellastic silver.

When the alchemists however speak of sulphur and quicksilver, they frequently do not mean the substances usually known by these names. Thus Dżahār distinguishes (Berthelot, op. cit., iii. 207) an eastern and a western quicksilver; but what he means by these is not clear from his statement.

The opinions just outlined vary much in individual points of detail but must have been assumed in principle by all Muslim scholars, without essential alteration; for example al-Akṣāfī briefly defines alchemy as follows (E. Wiedemann, in the Journ. für prakt. Chemie, Ser. ii., vol. xxvi., 1907, p. 166):—the doctrine of alchemy is a science by which one endeavours to take their qualities from minerals and to give them qualities which they did not have.

The Arab scholars were however divided into two schools, one of which assumed the possibility of a transmutation of metals and the other denied it. The former took up the position that the metals and minerals likewise differ only in their accidental qualities, i.e. that they belong to a same and that it is possible, although difficult, with the means at man's disposal, to make the corresponding changes. To this school belong al-Fārābī and the alchemists above mentioned. As evidence for the possibility of alchemy numerous phenomena that had been observed were adduced, notably the continually asserted cases of spontaneous generation, according to which animals were produced from the most different inanimate objects (cf. E. Wiedemann, Die Lehre von der generatio spontanea, Naturwissenschaftliche Wochen-schrift [N.F.], xx. 381, 1916), and the hatching of hens' eggs in incubators in Egypt, or the manufacture of glass from soda and sand, the dissolving of stone (probably with vinegar, cf. O. Rescher, Der Islam, vol. 1, p. 193, who quotes passages from al-Baladhuri), the manufacture of bronze from copper and tin from burnt coal, reduced zinc oxide, the dicing of glass by adding various materials. From these processes bodies are frequently produced which bear no similarity to the original substances.

The opponents of alchemy regard the metals as being different in their essential qualities—as not belonging to the same same and it might be possible to imagine the transmutation of a metal in theory but it could not be carried out for fundamental and practical reasons. Ibn Sinā (Ḥājjī Khalīfa, op. cit.) reasons as follows: "Even if it were possible to stain silver with the colour of gold etc., in such a way that something was taken from or added to the dyed body, I do not see from this the possibility of transmutation of metals. For probably the things observed do not correspond to the fundamental qualities which settle the nature of the body, but are accidental things, only necessary to characterise of the body. Flat the fundamental qualities are unknown; one can therefore not look for them, produce them, destroy them."

Other writers emphasised that the time available to alchemists for their researches is too short, for very long periods of time have passed in the interior of the earth during which the elements etc. were being cooked sometimes under the influence of certain constellations, until they were transformed into precious metals (cf. al-Dżahār, who also wrote a work on al-Kimya'; Journ. für prakt. Chemie, loc. cit., p. 73).

One of the most notable opponents of alchemy was al-Kindī ([q.v.]) whom Muhammad b. Zakariya al-Rāzī attacked with as much vigour (E. Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, l.), and even in the xivth century and later when Muslim learning had considerably declined and it must be assumed that criticism had become much weaker, alchemy was still vigorously attacked. This is seen from a section in the Cosmography of al-Dimashqī (d. 727 =1327), who devoted some time to the refutation of alchemy (ed. Meher, text, p. 58, transl., p. 64). The ardent alchemist al-Dżahār considered it necessary to add to his commentary on al-Mukhtasār a chapter entitled: "On the possibility that the accident may disappear, which has entered into the specific kind (maw'āl) so that the body again assumes its specific kind by art, further, on the proof that the art, its practice and the certain proof for it is possible and finally on the refutation of him who ridicules it and says it is useless" (Leiden, Cat. Or., iii. 204). The great historian Ibn Khaldūn (op. cit.) also vigorously attacks alchemy and its representatives (see Wiedemann, Beitr. zur Gesch. der Naturwissenschaften, l.).

This refusal to have anything to do with alchemy was largely due to the repeated failures of the alchemists, which brought scorn and ridicule on their heads, and vigorous attacks on the pernicious study of alchemy. Ibn Khaldūn observes that it was usually poor people who studied alchemy. Ibn Sīnā, who denied the reality of the elixir, possessed great wealth, while al-Fārābī who believed in it was one of the most unfortunate of men and did not always have sufficient funds. "Abd al-Latif says: "Verily, most alchemists have been ruined by the work of Ibn Sīnā and by alchemy."

There are also two proverbial sayings: "Three things cannot be attained by three things, youth by age, health by medicine, and treasure by al-Kimya'" and "He who studies astrology is not secure from poverty". To conclude, al-Ṣafadi gives very scornful remarks on alchemy and the fruitless endeavours of its followers.

The alchemists however consolled themselves with the reflection that at any rate the knowledge of alchemy had once existed but had later been lost, but it would certainly be found again (see E. Wiedemann, in the Journ. für prakt. Chemie, Series ii., vol. xxvi., 1907, p. 123; Ibn al-Fāqīh, ed. de Goeje, B. G. A., v., p. 205; Yāsīstī, ed. Wüstenfeld, iv. 204; al-Kaswī, ed. Wüstenfeld, ii. 164).

Among the alchemists we must carefully distinguish the men who were convinced of the possibility of the transmutation of metals, and went about their task in good faith and the swindlers. The serious students were in part philosophers who derived their doctrine from the elixir by pure deduction from Aristotelian views; of these the most notable was al-Fārābī. Others cultivated simple assumptions with mystic, gnostic, neo-Platonic etc. ideas and then wrote works of
which it may be said to be very doubtful whether the authors themselves understood them. As the latter admit, puzzling expressions are deliberately used, but these vary from school to school, simply, we are told, to prevent the masses and the rulers from making gold artificially, which would be very harmful. Each successive writer seems to try to surpass his predecessor in obscurity and the commentators do not make the originals any clearer.

It is often difficult to understand how intelligent beings could have written such things. They claim to have acquired their knowledge, as was indeed common among Muslim scholars, on distant journeys. The study of alchemy has had one undeniable result, in as much as the representatives of the mystic movement in Islam studied alchemy as the "great name" (see al-Dimiṣhqi, op. cit., text, p. 51, transl. p. 56). To this school may be said to belong more or less the Pseudo-Khalid b. Yarah, ibn al-Walā'iyahs, ibn Umar at-Tunmi, ibn Arfa' Ra'a, ibn al-Qāsim or Ibrāhīm al-Ṭūkār, and others. Many of these men, however, made experiments, at least, according to al-Ṣafaddi, the Imām al-Hārīmain (al-Diwān) was burned to death by a jet of flame. Another group of alchemists describe experiments in their works, but it is not always certain whether these were actually made or whether they are purely imaginary; the latter is of course always the case when a real elixir is said to have been made and effects even described. Of this nature are the works of Ḥabbār b. Halyun, the Kitāb al-ʿArūs of al-Rāzī, that of al-Ṭaghārī, al-Dīwān al-Munir, etc., that of al-Kāḥi and the Arabic writings on which are based the works of the western scholar known as Geber. Frequently as in al-Rāzī the arrangement in these books on alchemy is such that the substances and apparatus are first described and then the various experiments are detailed, arranged according to the methods of treatment like sublimation, calcination, dissolution, etc. and not as with us according to the substances investigated; we thus see what great stress was laid on method.

Whether the alchemists ever had any laboratories on a large scale with a staff of assistants is not yet known, but it seems very likely that these were often described later, as they expected special arrangements for many purposes which could only be set up in a special room. At any rate this was the case with alchemists who worked for princes, who frequently employed an alchemist just as they had a court astrologer. The unsuccessful efforts of two may there be mentioned; al-Qarabūs (198–218 = 813–833) and an alchemist of the same period, Muḥammad bin Ṭumānī (181–201 = 825–846), who had no success. *"Ali as for you; there is nothing in al-khamsa.*

The latter replied in excuse that the jugglers swindled him whereupon the Caliph declared himself satisfied. Others did not fare so well, as is shown by the story, whether true or not, that Abū ʿUmar Manṣūr b. Ḥabīb, a physician, beat al-Rāzī so severely that he blinded him. It is more probable that, as al-Halâq records, his eyes were affected by the vapours which arose in the preparation of the elixir and that he had himself treated by a physician for a large eye. He thought that this was true of the grand and became himself a physician. Al-Maʿṣūmī also talks of grave injuries caused by vapours (see K. Wiedermann, *Beitr.* zur Geschichte der Naturwissenschaften, ii. 547). They resulted in loss of hearing or sight, and loss of colour in the face (in heating vitriol for example sulphuric acid escapes). Poisonous vapours are also mentioned by other writers (E. Wiedemann, *op. cit.* xxv. 127).

Alchemic swindlers. Alongside of these alchemists who are to be taken seriously, appeared a great number of swindlers who took advantage of the credulity of high and low to make money easily. In North Africa, according to Ibn Khaldūn, it was particularly students of law and theology who used to deceive the people of the villages in this way. These swindlers either claimed they could make gold out of any material but without ever producing it, or they brought gold into contact with the stuff to be transmuted into the apparatus itself, or they fastened it to the lid of the crucible with wax, or they coloured ordinary metal with sulphur or by preparing coatings for them, so that they looked like gold. A series of illuminating stories is given by al-Dīwānī (E. Wiedemann, *Journ. für prakt. Chemie*, loc. cit., p. 82 and E. Wiedemann, *Über das Goldmaeher*, etc.). One is a delightful story of how the so clever al-Malik al-ʿAdl Nūr al-Dīn Zājkī (341–459 = 1246–1173) was swindled. The great Muḥammad ibn ʿAbd Allāh b. Abī l-Walīd b. Sallān b. Sinān (387–458 = 1298–1368) is accused of having been brought up on the translation of the *Alīnā Ḥiṣnī* (i. 201).

These swindlers naturally did a great deal of harm to the prestige of alchemists in general, so much so that according to al-Kazwīnī (ii. 98) they were the lowest grade of students.

Methods of solving the problem of alchemy. It was thought that the solution of the alchemical problem might be reached by one of three ways (cf. E. Wiedemann, *Journ. für prakt. Chemie*, loc. cit., p. 105; from al-Akharī). Whether and in how far they were ever really systematically prosecuted, research has not so far been able to ascertain. The methods were the following:

1) A staff is made from the view above mentioned, that all metals have arisen out of sulphur and mercury, which were bound together and as described. The alchemists proceed similarly, but in place of these two bodies many others are also taken, of which they suppose that they contain the fundamental materials and endeavor to increase the heat on account of the shortness of the time available beyond that prevailing in the earth. 2) They go back to the mutual (of course quite unknown) relation of volume and weight of the components and combine the metal so that a body is formed which in weight and volume is like the desired metal. In this process heat must be paid to the balancing of the qualities. These two methods, so far as their principles are concerned, may be called scientific, although they are hardly so in practice. 3) The third method starts from the view that the ignoble metals are dissolved precious ones. A remedy was prepared which was called elixir (al-khamsa) or al-farrīrī, i.e. that is, the fugitive (cf. E. Wiedemann, *Beitr. zur Geschichte der Naturwissenschaften*, ii. 347). It was also called from its material the "honoured stone" (al-khāfiyya al-maharram); in place of the stone there
was also a "substitute (badal) for the stone", out of which a more deeply hidden elixir is obtained; there was also a substance similar to the stone and its substitute. The elixir etc. also contained healing virtues to a high degree.

The most fabulous stories are told regarding the elixir's power to attain desired transmutation; one single drop of elixir is said to turn 60,000, 300,000 or 3,000,000 methkal into gold. — or even as much as is between heaven and earth (cf. Hadithi Khalifa, et al., p. 276) (cf. also the statements in O. Roemer, Der Islam, ix. 33).

That "al-khim" was practised down to modern times is shown for example by the statements in Snouck Hurgronje (Mekka, ii. 215, and E. W. Lane, Manners and Customs of the Modern Egyptian-Egyptian, London 1860, p. 264). There is also a play by Fath 'Ali Akdnadr "The Alchemist" (cf. F. Jacob, Tschirkische Volksliteratur, Berlin 1901; see also Barbier de Meynard, Journ. Asiatique, Ser. viii., vol. ii. [1886], p. 5).

The substances used. The substances used by the alchemists are given in their writings; varieties of the individual bodies are detailed, for example a whole series of varieties of sulphur is given and of kinds of mercurials, etc. In many cases there are at the same time told which are the goods and which the bad varieties.

The Mafath as-SifUm distinguishes, as usual in other books: 1) metals: gold, silver, copper, the two kinds of raat (lead and tin), sinnat al-hadd al-alum, usual lead; quicksilver is sometimes given in place of the latter; 2) evaporating substances (ru'ah): sulphur, sirrid (realgar and orpiment), nifikh (usually sal ammoniac but also ammonium carbonate), quicksilver; 3) all other mineral substances (in the Mafath as-SifUm called drugs).

Al-Razi divides the substances first into animal, mineral (inrath) and vegetable drugs. The mineral drugs are divided into the 7 bodies (metals), 13 stones (including precious stones), 5 vitriols, 6 kinds of sirak (borax, saltpetre etc.), 11 salts. The animal are hair, brains, eyes etc. Only a few vegetable substances are used by him, namely nihhun (alkali plants) and cinquefoil, chaste-tree, (bangun badj, ater agus, exot, etc.). The use of fruit and an antineuritic.

Al-Razi divides the substances into 4 groups, the reason for which is not quite clear.

Al-Khali divides the substances into 12 stones which latter include sulphur, sirrid and nifikh.

Al-Dimashqi deals successively with quicksilver, sulphur, and then the minerals which include mythical stones and a few drugs.

Al-Sarwiti classifies the substances he deals with into metals, stones and oily substances.

A very peculiar division with regard to the preparation of the elixir (see Stapleton and Aroo, cf. al.) is the following: Quicksilver, sal ammoniac etc. are spirits; sulphur, sirrid etc. are souls; gold, silver, iron, magnesia are bodies. To prepare an elixir one must have a part of spirit, two of soul and one of body. An elixir which contains no spirit or no soul or no body is useless. Soul and spirit may however give colour even if body is absent; but this disappears on smelling. If all these are present it is proper.

The alchemist gives the separate substances he uses a great number of epithets (cf. E. Wiedemann, Einf. zur Gesch. der Naturwissenschaften, s. 82) by which he refers to them in his works which makes it unusually difficult to understand them. The metals are called after planets to which they are subordinate. Mercury thus belongs to karishin. In the MSS. the name is often replaced by the sign of the planet. But the metals have countless other names. For sal ammoniac we frequently find mishk (angels).

The works on jewels, drugs etc. are of alchemical but also of purely chemical interest. A number of Arabic sources with full references as possible are given in the articles quoted in the Bibliography.

Apparatus used. We know a good deal about the apparatus used by Arab alchemists. In the first place we have lists of the apparatus used, sometimes with descriptions, e.g. in the Kitab al-Ardir of al-Razi, in the Mafath as-SifUm, in the work of al-Khali, in al-Dimashqi, al-Mustir al-Taghir, which frequently agrees with the Kardhni text published by Khrishnlot, et al. Information is also given in various passages especially about distilling apparatus. The apparatus used is essentially the same as that used by the Greeks; a furnace for example is called, although perhaps without reason, the furnace of Zosimus (Gotha MS., No. 1349).

The apparatuses used for heating are of course of various forms. Various names and forms were given to the furnaces. The draught was regulated as required; its strength was judged by a leaf thrown into its current. The bellows were used to kindle the fire, but there were also furnaces with a self-acting draught. For special purposes, such as the treatment of glass, the manufacture of precious stones, the furnace was of a suitable form. For melting either an ordinary crucible was used or one crucible above another; in the latter case the upper one was perforated in the bottom. The molten metal in the upper crucible flowed into the lower one and the slack was kept back. Tongs etc. were used to pick things up; and the alchemist complains that he very often burned himself in using them but without obtaining any results. Moulds were used for casting. To hold the substances that are heated, boxes, bottles, stills, (al-udn whisk) a leaven pumpkin closed with a lid were used. The capital (tahk, tahk) was put on the still. Thus the alembic [q.v.] is made and if the still is closed at the end it is called "bhind". If it is open and has a spout, still and capital together correspond to our retort and are used for distillation (nakir). A khalil, our receiver, is then placed over the end of the spout. Al-Razi and al-Taghir frequently point out that the vessel to be heated must be of uniform thickness and have no flaws, or they might easily burst. The kurtibes etc. were heated either on an open fire or in the hot air rising from one or in the steam rising from boiling water or a water bath.

To solder and polish the places where different parts of the apparatus are joined, clay of wisdom (of philosophy san as-SifUm) was used, which was made of pure fermented clay, usually mixed with finely chopped hair and salt. There are numerous recipes for its manufacture. Different kinds of clay are given the names of the planets (Gotha MS., No. 134). The vessels of the vessels to be covered, as was still the custom, with as in the sixteenth century, were also covered with clay to distribute the heat evenly and thus diminish the danger of explosion.
To break up substances the mortar (kānum) and pestle (dāfēf) were used and for grinding them a hard, flat slab (jīyā) and a grindstone (jār). Processes used. In their experiments the alchemists used a large number of processes, which again had many variants. The following is a list, of course not quite complete, divided into eight groups: it is taken from al-Khwārizmī (Mā'ālik al-Ummîn), Hājurī Khâliba and alchemical writers.

1. Ṭakhlīkh, the treatment of bodies in general.
2. Ṣakhr, grinding etc.; ṣafīl, breaking into pieces, ṣamamī and tawfīl, mixing. 3. Ṣalt and ṣalīf (dissolving) are probably synonyms. These mean methods by which the body is either dissolved in our sense of the word or simply divided into very fine particles. Varieties are dissolution in corrosives, in water (i.e. in a moderate heat), in moisture, by pounding with the pestle (dāfēf), by boiling, with the blind ṣanāfī (i.e. at a high pressure and temperature), with cottonwool and the anvil (the substance is wrapped in a roll of cottonwool and beaten on the anvil) by dripping (taqāfīr). Many alchemists distinguish the following varieties of ṣalīf: the substances are dissolved as moral or they hang up in a sieve-like bag and the steam rising from water dissolves them (cf. al-Kāhī and al-Tughrî). 4. Ṭuṣīma, solidifying (over the fire without anything being burned); ṣamamiya, stewing (in oil) etc. or dry; ṣaṭṭī and perhaps also mafiyya, to solidify; the following varieties are given: with dryness, with the bottle, the kettle, burling (dāfēf which plays a great part generally; bottles for burling are for example mentioned), with the blind ṣanāfī; ṣafīlī, a kind of ṣafīl, changing into bodies. 5. Ṣafīl melting; ṣaṭṭī, allowing to flow from the upper to the lower crucible. 6. Ṣaṭṭī, allowing to drip, distilling and filtering; ṣaṭṭī, vaporizing; ṣakīra, stubborn, a kind of sublimating. 7. Ṣakīrīa, certification, making soft like wax; ṣaghīr, calcination; ṣafīlīa, to turn into rust; ṣāhkī, malaginating. 8. I do not know the meaning of ṣaṣarī, balancing; ṣaṣarī, straining, which is connected with certification.

Weighing was, of course, a process of special importance and frequently used; for it must be. I have been very soon recognised that substances could not be mixed in any proportions one pleased. They must always occur in the proper proportions (on weighing see the article Mist). Statements on the proper proportions are not very frequent. In the Mā'ālik al-Ummîn we are told that to make cinnaol, one should take 1 part quicksilver and 1 part sulphur; the proportion calculated from the atomic weights is 200 : 32. It should be noted however that for the reaction to take place amonosty a considerable superfluity of sulphur is necessary. Another interesting quantitative statement (Ya'kū, li. 439) is to the effect that 1 part of silver is obtained from 100 parts of lead in the making of litharge. Al-Kāhī gives a long list of the smallest quantities of all the different substances that the alchemists use (cf. cit., p. 57 sq.).

Synthetic and analytic methods. There were no general methods to produce definite bodies; a whole series was however obtained artificially, e.g. verdigris from copper and vinegar, white of lead from lead and vinegar, cinnam from the beating of lead, also litharge, iron rust from iron, etc.; in these cases it was known that the substances concerned must contain the metal.

It was the same when copper was obtained from minerals found in nature such as the varieties of malkhāt (Zubaytûs, al-Dimashqī, text p. 83, transl. p. 97).

There was no analysis in our sense of the term. But there were a large number of rules for the chief of police (mawsūs) by which he could tell the apparently very common adulterations. Thus mineral adulterations of indigo were ascertained by burning. There are writings on this subject by Abu l-Fadl Dīnārī and Shīkh al-Dīn al-Masʿūdī. Ibn Ṭanāsī and al-Nabārī (E. Wiedemann, Recl. zur Gesch. der Naturwissenschaften, xxv., ill. and xl.). Gold and silver are tested for purity by the touchstone or by purely chemical methods.

Technical processes. Very little has so far been accurately learned regarding chemical technical processes. A few indications may suffice here.

In the first place we do not know much about the methods by which the metals were actually obtained. Gold was got by washing; in some places it was dissolved by quicksilver, the latter of course being regained by distillation (see E. Wiedemann, op. cit., xxv., 83). Quicksilver was obtained by distillation from cinnober (either out of iron retorts or by the addition of splinters of iron) (E. Wiedemann, Fourn. für prakt. Chemie, op. cit., p. 111). On the manufacture of steel and especially its damascening, the providing with figurines, there are a series of works, e.g. one by al-Kindi. According to a modern Oriental writer, Thābib (al-Majāzī, 1900, iii. 577 and 700), damascening is said to depend on the presence of titanium in the metal; but these statements are as a rule of an empirical and thumb nature (E. Wiedemann, Recl. zur Gesch. der Naturwissenschaften, xxv.; L. Beck, Gesch. des Eisens, vol. I.).

For a series of artificially prepared inorganic substances see above.

The methods of obtaining different scents from plants were very highly developed. These were especially cultivated in Persia and in Damascus and followed the processes of the ancients. In the district of Sippur special taxes were levied on the buildings in which the essences were prepared (E. Wiedemann, in Diergart, Beiträge, p. 234). The scents were partly extracted from the flowers or leaves by means of cold or hot oil and fat and then subjected to further processes. A great variety of oils, — olive, sesame, etc. — was used in the process (cf. Ibn al-Hafrūr under dānā). Water was poured on the different substances and they were put in retorts. These retorts were arranged around a shaft in circles, which were placed above one another in tiers. Hot air from a fire or steam from hot water heated the retorts. The steam developed in the retort carried off the sweet scented etheral oils and was precipitated with them into a receptacle (pictures in al-Dīmashqī, Naṣīḥat al-Dahr, text, p. 194; E. Wiedemann, in Diergart, op. cit.).

The important sugar industry, about which we possess fairly full information will be dealt with in the article sukkas (cf. E. A. von Lippmann, Geschichte des Zuckerbaus, Leipzig 1910; E. Wiedemann, Recl. zur Gesch. der Naturwissenschaften, xlii., iii., iv.) and the glass industry under Ẓawāḥīr.
On the manufacture of the usual inks, sym-
pathetic and gold inks, of lacquers and solders, and of cements, a number of works exist which still are not available; so far as I can ascertain, they contain purely practical rules.

A very great part was played by the processes by which drugs, pearls, jewels, etc. were imitated. This was done to a very great extent as we know from al-Khwārizmi’s Mīlam-al-Ilμma. Many of the processes given by the different authors are simply pure inventions. Of particular interest are the statements by al-Djawhari in his Kaṣf al-Asrār (cf. E. Wiedemann, op. cit., xxxii. and Mitt. d. Gesell. d. Medizin d. Naturwissenschaften, 1910, ii. 386) and those in the handbooks prepared for the alchemists.

A proper history of ʿilm ʿalami and an account of its place in Muslim culture will only be possible when we are much better acquainted with the works of its representatives than at present, and also have a better idea of the sciences connected with chemistry, pharmacy, knowledge of drugs, etc., mineralogy, etc. As to chemistry a start has to be made almost from the beginning, as has been done by J. Ruska and E. L. Holmyard. It is important that the processes described should be translated into modern technical terms as Darm-
städter endeavoured to do for the Latin Geber.

Catalogues of the Libraries, especially that of the Berlin Library. The Sultānīya Library in Cairo is also said to be very rich. There are also the alchemical writings themselves so far as they have survived. The Latin translations of Arabic works on ʿilm ʿalami are not here quoted (on them cf. M. Steinschneider, Die europäischen Überlieferungen aus dem Arabischen bis Mitte des 17. Jahrhunderts in Sitzungsber. d. K. Akad. der Wissenschaft, Vienna, Philos-Hist. Kl., calix, 1904 and clx., 1905).

far ibn al-ʿAlī al-Dimashqī (xxiii.); Über Verfäl-
bildt und Salmiah, S. B. Akad. Heid., 1913, essen 5; do., Arabische Alchemisten, i, Chīḥd Ibn Yūnīs Ibn Muʿamīya, Heidelberg, Akten der von Perthes Stiftung, 1924, No. 6, p. 31 sqv.; ii. Dīfīr al-Sūlīq, die sechste eddīn, ibid., 1924, No. 10; review by O. E. von Lippmann, Chemiker Zeitung, No. 1 and 31; R. Wind-
KINLITIDE, Ar. Ibn al-Haqqānī (cf. Z.D. M., G., xiv. 544 and Gibb, H.O.P., ii. 199 note) a Turkish family of scholars and poets (cf. J. von Hammer, G.O.R., iii. 736), of which the following are the most important members: I. KINLI TEKIR, ALI b. AMIRULLAH, Ottoman jurist and author, was born in 916 (1510/1511) in Sparta, in the district of Hamideli (q.v.) in Anatolia, the son of the kāfi Emirullah (Mehevel) who died in 967 (1559) and grandson of Abū al-Kādir Hafiz. He filled judgelips in the following towns: Damascus, Cairo, Brussa, Adrianople, and from Dūjadī (278 Oct.-Nov. 1570) in Constantinople, was appointed kāfi-jashar of Anatolia in Muḥarram 979 (May-June 1571) and died on 6th or 7th Ramlī of the same year (Jan. 23/24, 1572) in Adrianople. His brother was the poet Muḥammad, who was kāfi at Rhodes and elsewhere and is said to have died in 944 (1537). Of Ali's sons mention may be made of Mehmed Fehmit Efendi, also distinguished as a poet, who died when only 32 on 28th Shawal 1004 and Hasan Celebi (see below), the famous biographer of poets.

Mohamad Ali b. Din Ali was a very industrious writer. He wrote glossaries and commentaries on a series of theological works. He became famous by his ethical work Al-Maṣā'īl written in 952 (1564) for the Beylerbe of Syria, "Ali Paşa", the original MS. of which is in the library of Râghib Paşa in Stamoul (No. 966). This work (cf. Hâdâjī Khalīfa, Kāfîf, i. 205, No. 280) was printed in 1526 (217 + 52 pp.) in Shawal 1542 (Feb. 1852) at Beirut (cf. F. y. A., 1843, ii. 40, N. 68; Zieseler, i. 1357, where 'alami is an error for 'ala), and besides translated in full or in part; cf. MS. in the MS. transl. of the Venetian doctor Giovanni Medio in the Bonn University Library, No. 47 in G. Umbreit, Katal., p. 114, thereon G. B. Toderini, Letteratura Turchica, Venice 1787. 195, as well as R. Reitner, Stimmen aus dem Mongoliantum, Hirschberg 1850, 1, 59g, 403 pp., and also, Das Capital von der Freiheit, Breslau 1848, p. 75, 98, 128. MSS. of the Ethics of Möller (q.v.) are numerous; cf. Flügel, Wiss. Katz, i. 304, ii. 297, Fortsch. Mitt. Thür. Hist., p. 168 sq., where further details are given.

Another work in his collection of letters (Mu'ashīf, cf. Hâdâjī Khalīfa, Kāfîf, viii. 185) is in the five sections of which, in a part in which he was decaying, he gives masterly specimens of the different kinds of literary composition. There are MSS. of this work in the British Museum (Riis, Turk. MS., p. 94), Vienna, Nat.-Bibli., No. 279 (Flügel, Katal., i. 366 sq.; Vienna, Konulasski, Kad. No. iv. 24, Kralji, Katal., 28 sq.).

Bibliography: The fullest biography is in the MS. Tadhkira of his son Hasan Celebi; 'Ali, 'Abd al-Muqit al-Mu'ashīf, p. 164-168; 'Ali, Kūsā al-Muṣṭafī (cf. J. v. Hammer, G.O.R., ill. 735, No. 57); Peter, Tâbâra, i. 435; Siğdîlî el-Meşhūd, iii. 501 (with erroneous statements regarding the Kînli Teke family); J. v. Hammer, G.O.R., ii. 341, iii. 131; do., G.O.R., iii. 736 (also contains mistakes regarding individual Kînli Teke's), iv. 603 (where the brother of Möller 'Ali, Möller 'Abd al-Rahîm, Kermani Celebi, mentioned in Hâdâjî Khalifâ, Fihdih, i. 7 sq. and died in 1000 = 1591, is wrongly given as the author of this or another collection of letters; cf. thereon, W. Pertzsch, Verl. Turk. Hist., p. 471 on No. 491); Brunot, Mehevel Tîhir, Othmânî melîfîfî, i. 400 (with an exact list of writings); F. Wüstenfeld, Die Geschichtsschreiber der Araber, No. 532, p. 248 sq.

II. KINLITIDE HASAN CELEBI, AN OTTOMAN BIOGRAPHER OF POETS.

Hasan Celebi was the son of the Möller 'Ali mentioned above and was born in Brussa in 953 (began March 4, 1456), where his father was judge. At the age of twenty he became assistant muiṣlisım to the famous Ali Su'ud (q.v.), in 975 (1567/1568) professor, in 990 (1582/1593) 'guardian' (sāhib) of the mosque of Mehevel the Conqueror (cf. J. von Hammer, G. O.R., vii. 186), five years later professor at the Soleimânîya mosque, at which his father had once been first melîfîfî (cf. J. von Hammer, G.O.R., iii. 349). In the year 999 (1592/1593) he became kâfi of Aleppo, then of Cairo, Anatolopol and Cairo again. In 1007 (1598/1599) he went as kâfi to his native town of Brussa, then to Gallipoli, became kâfi of Eiyûb, and in 1011 (July 1602) of Eski Zaghira. He died, the holder of an arpašîh (q.v.) on Shawal 12, 1012 (March 15, 1604) at Rosetta (Rashid) in Egypt.

Hasan Celebi achieved fame by his comprehensive dictionary of poets in three sections (qafj, Tadhkira al-Safar, a work which according to Hâdâjî Khalifâ's view (Kâfîf, i. 262, No. 2817) surpasses all previous works of the kind in the beauty of its language and the compactness of its matter. The Tadhkira (finished in 944 = 1536 and dedicated to the great Sa'd al-Din (cf. Kâfîf, Kâfîf) gives biographical sketches of nearly six hundred poets with specimens of their work. This most important work, of which many manuscripts exist, has not yet been printed. A definitive edition of this, the best and most comprehensive of all Ottoman anthologies, is urgently desirable.

FRANZ BAUNGER

KINĀNA R. KHURÁMA B. MUDIRKA R. AL-YAS R. MUDIR is the name of a large Arab tribe which had its camping grounds at the beginning of 11a in the territory round Mecca, extending from the Thāthām in the South-west of the city, where they bordered on the lands occupied by the rival tribe of Hasdātī, to the North-east of the city where their grounds joined those occupied by their nearest relatives the tribe of Asad of Khurāma. They were very numerous and their chief
importance in the eyes of native genealogists lies in the fact that the Kūraḫī, and consequently the Prophet, derived their origin from this tribe. In view of this fact we have considered them an abundance of notice of their subdivisions and of men of note who traced their descent from them. While the later genealogists name as a rule only six large clans, Ibn al-Kalbī in the Ḏjarwarat al-Nasāb mentions the following fourteen sons of Kīnāna: 1) al-Nādir i.e. Kāla who is considered the ancestor of Kūraḫī Ḏjarwar (q.v.); 2) Nuṭṣair; 3) Mālik; 4) Milkān (so this name is vocalised in the good MS. of the Ḏjarwarat, while Kālkhāndī insists on the pronunciation Milkān); 5) Amīr; 6) Amīr; 7) al-Hārīth; 8) Arwān (or Arwān); 9) Saʿīd; 10) A[w]; 11) Ḍarīm; 12) MA+hāmra; and 13) Ḏjar- wal. All these thirteen tribes are stated to be the offspring of Bara bint Mārr, the sister of Tamīn b. Mārr, for which reason they are brought into interaction with the tribe of Bara bint Tābīn. The fourteenth son of Kīnāna named 'Abd Manṣūr was a son of al-Quhārī bint Ḍuaina b. Bilāl of Kālaähf for which reason this clan is often reckoned as belonging to Kālaähf itself. The later genealogists as a rule only mention al-Nādir, Mālik, Milkān, 'Amīr, 'Amur and 'Abd Manṣūr of most of which there have been multiple subdivisions. No divisions of Milkān, 'Amur and 'Amīr are mentioned except al-Kālaähf as a branch of the last named, while al-Nādir as ancestor of Kuraähf is dealt with in the article referring to Kuraähf. Milkān was divided into the clans Thālūbā b. al-Hārīth and Milkān, with the subdivisions of Fīrās b. Ghanām b. Thālūbā, and Mukhāṣṣa b. Amīr b. Thālūbā, and Fuxāb b. 'Adh b. Amīr. The 'Abd Manṣūr were perhaps the most numerous and are split up into a number of clans: 1) Ghifīr; 2) Bakr with the subdivisions of Dhīlī and Maltī; 3) Ḏarīm; 4) Muttālī, who were renowned as guards; 5) Mārn b. Bakr. It would be absurd to assume that these names mean actual sons or descendants of Kīnāna, but for the early period of Islam they are important as indicating the mutual relationship in which the various clans of Kīnāna considered themselves to be and were possibly entered in the Džwār created by 'Umar. At this time many of the tribes seem to have been to a large degree in single persons very soon became doubtful and only the descendants of men who had played an important part in the rise of Islam could trace their descent with some degree of certainty. The clans of Kīnāna which in later times, i.e. in the sixth century of the Hijra were settled in Upper Egypt near Ikhami or in the Western Delta had no knowledge of their origin except that they claimed to be descended from the original stock and had immigrated into Egypt at various periods, the last immigration having been in the vizierate of 'Ālā' b. Ruzzīk (549–556 A.H.).

As close neighbours of the sacred territory, the tribe of Kīnāna played no unimportant part in the history of the city of Mecca in the time before Islam and the clansmen outside the city gave the final decision when the branch Kuraähf wrested the rule of the city from the tribe of Kuraähf, for it was their chief Ya'qūb b. 'Awf b. Ka'b b. 'Amīr b. al-Laqīt b. Bakr b. 'Abd Manṣūr who was chosen to give his final decision which was in favour of Kuraähf; and he received on account of his decision the nickname al-Shuďdīkī hār the Crasher because he crushed the dispute. Their attitude towards the Prophet as a united tribe is not recorded, but one of their clans the Bashār Fīrūs was among the chief supporters of 'Alī at Šīfīn. The last time šabāb mentions them in his Amālaḥ is in the year 230 A.H. when they were in part still encamped near Mecca, but were too weak to resist the depredations of other tribes who had become more powerful. At this time a large section had their camping grounds in the Hawāwī and near Šarqkhal. Though not important as a tribe, the names of men of note as traditionists etc. are very numerous, too numerous to be mentioned in detail.

After a fierce fight Shurahbil was killed but his adherents permitted his family to return in safety to Yanan. The final result however was that the authority of the various princes was very much reduced and the tribes regained their independence. Meanwhile Hujr had not taken part in the quarrel and had ruled in tyrannical fashion over the tribe of Asad and the Byzantine annalists know of raids which Hujr (Ogurus) and his brother Ma'di Karib had made upon the Roman border about the end of the fifth century. Hujr was treacherously murdered by the Asad. He had been absent from the tribe, and when they refused any longer to acknowledge his authority and pay the tribute, he marched against them with an army probably drawn from the tribes over which his other relations ruled. His camp was surprised by the Asad and he was killed while his son Imru ul-Kais managed to escape. This event practically ended the lordship of the Kinda kings over the Arab tribes and the years which followed were occupied by Imru ul-Kais in attempts to regain at least part of the heritage of his father. After many unsuccessful attempts he finally went to Constantinople to seek help and auxiliaries from the Greek emperor in which he was disappointed; and according to legend he was actually poisoned by emissaries of the Emperor at Ancira.

But it was not only this family which gained the tribe the name of the Royal Kinda, for we find until late into the Muslim period men of note who held prominent positions at court as nobles of great importance and they were also prominent in resisting the early missionaries of Islam. Kais b. Ma'di Karib had been a man of eminence at the dawn of Islam and poems by al-A'shâ testimoni to his importance. His son al-Ash'â became a convert to Islam but apostatized; he was defeated by the army sent by Abû Bakr, made a prisoner and pardoned. His descendants were holding important posts during the rule of the Umayyads. Among other prominent men may be mentioned the false prophet al-Mu'manaa' [q.v.] and the Kinda Shurayl [q.v.]. Other persons named al-Kindi because they were clients (mawla) of the tribe as e.g. the philosopher Ya'bith b. Ishâq al-Kindi [q.v.]. A district in Syria and also a quarter of the city of Basra was named after this tribe and it is stated that the poet Abû Nuwas was born in the Kinda quarter of Basra.

Among the branches of Kinda are mentioned the clans of Sakhan b. Ashras and al-Sakhtâk, from the former were descended the Tuğûtah who were among the earliest settlers in Egypt and were principally concerned in the revolt against the caliph 'Uthman, one of their clan being actually named as the murderer of the Caliph. The clan of Tuğûtah later attained great influence in Spain and the Banu Sumbil in Almeria, the Banu Dhu 'l-Nias in Malaga and the Banu 'Aqra in Badajos each in their turn exercised in these districts royal authority till they fell before the power of the Almoravids.

(F. Krenkow)
grasps its object in an active and instantaneous manner.

We also possess by him, like his principal works only in a Latin translation, a little work on the cause of the blue colour of the sky, in which it is explained that this colour is not really special to the heavens, but arises from the mixture of the blue of the sky with the light of the atoms of dust, vapour, etc. in the air illuminated by the light of the sun. A work on ebb and flow, also preserved in Latin, is remarkable because the author tested experimentally the principles of the theory, an erroneous one, however.

Primarily a natural philosopher, al-Kindi also discussed the doctrine of the soul and of the intelligence (nafs). According to him the world as a whole is the work of an externally active cause, the divine intelligence, whose activity is transmitted in many ways from above to the world. Between God and the world of bodies is the world of souls, which creates the world of heavenly spheres. The human soul is an emanation from this world-soul. In so far as the human soul is combined with the body, it is dependent on the influence of heavenly bodies, but in its spiritual origin and being it is free. For only in the world of souls, we are neither free from and nor immortal. If then we wish to attain the highest, we must turn to the eternal possessions of the intelligence, the fear of God, knowledge and good works.

In al-Kindi's treatise De Intellectu, edited by Nagy, we meet for the first time the doctrine of 'asab in a form that is significant of the whole course of Neo-Platonic-Aristotelian philosophy in Islam. Following Alexander of Aphrodisias (De Anima, ii) a fourfold intellectus is distinguished: (1) which is always in acta; (2) which is in potentia in the soul; (3) which is realised in the soul by the first (1); (4) in its correspondence to the threefold 'asab of Alex. Aphr.: 'asab al-nafs, 'asab al-khwaraz, and (4) an intellectus demonstrativus. According to a suggestion of P. Duham's (La Société du Monde, Paris 1916, iv. p. 405) by the latter is meant the animus sensitivus, about which Alex. Aphr. speaks in this context, but which he did not call 'asab nor could have called it so. Al-Kindi seems to me to mean by his fourth 'asab the effective participation of the third, i.e. Aristotle distinguishes between the possession of acquired virtues and its practice, acquired knowledge and mental activity. The fourth would therefore have to be distinguished from the first 'asab in later Arab terminology as 'asab 'ilā 'asab from 'asab sawā'.

(1) Dr. Boer

AL-KINDI, Abū 'Omar Muḥammad 'Abd al-Yūsuf, an Arab historian of Egypt, was born on 10th Dhu 'l-Hijjah 283 (Jan. 17, 897) at some place not exactly known in Egypt and belonged to the Tujib, a clan of the Kinids, who had come into Egypt with 'Amr b. al-As. He studied Tradition under Ibn Kudai (d. 312 = 924) and Al-Nashi' (d. 302 = 914; q.v.); towards the end of his life he is said to have himself been a teacher of Hadij. But his main interest was in the history and traditions of his native land. He seems to have written all his life in al-Fustū, where he died on 3rd Ramaḍān 350 (Oct. 15, 961).

His two principal works are the history of the governors of Egypt (Iwmiyya Warātī Mīṣr o simply 'Umarī Mīṣr) and the history of the judges of the country (al-Kidā). The former deals with the governors ('amārī al-qalāb) and includes the chiefs of police appointed by them (wali, wāli al-qalāb or al-ṣūr). The latter excludes other officials; these bare lists are only occasionally interrupted by brief notes on the domestic and foreign policy of the country. The author brings the history of Egypt down to the death of al-Mu'aṣir in 335 (946); an unknown author continued it till the coming of the Fatimids in 362 (972). Sections of the book were first published by K. Tallquist in Ibn Saidī's Kitāb al-Mu'āṣir, Leiden 1869 and by N. A. König in The History of the Governors of Egypt, New York 1908. As a supplement to his first work al-Kindi wrote the history of the judges of Egypt down to the appointment of Hakim in 861 (245). Here in connection with the lives of the judges he not infrequently gives us important legal decisions laid down by them and thus gives us valuable data for the history of Muslim law. Al-Kindi seems to have brought the work down to his own time in a second edition, but this has not survived. Instead of the latter we have two continuations, one by Ahmed b. 'Abd al-Rahām b. Burd to the year 366 (977), and an anonymous one for the years 347-424 (959-1033), the beginning of which therefore covers part of the ground of the original versions; both are bare chronological lists. This work has been edited by R. Gotthall, The History of the Egyptian Qadi, Paris 1908. Both works have been brilliantly edited by Khuwayn Gushtir, The Governors and Judges of Egypt of the Period of the Umayyids (al-Walāb) and the Period of the 'Abd-al-Mu'tads of al-Kindi together with an appendix derived mostly from Kuf al-Iti' by Ibn Hajar, G. M. S., i-ix., Leiden 1912.

Of other works by al-Kindi we know mainly
from quotations in al-Mahtisi al-Khatib and in Ibn Dukhmal, Kitab al-Lizzat al-Gharbi or al-Aynid al-Gharbiyat (?), a K. al-Kh即将 "l-Tarawwudh (on the fight for the throne made by Ibn al-Zakayr's governor Ibn Djalal for the defence of al-Fashtah, a K. al-Khatib, A. Ahmed Mustafa al-Mu'ayyad al-Ayman and a K. al-Mawali. A Street al-Sarri b. al-Hamam is only mentioned by al-Mahtisi, Vakif in the irshad al-Arab, ii, 156, a quidestory by al-Kindi beginning in 280 (894) and Ibn Dukhmal (iv, 18, 4) gives him as a source for an event of the year 290 (903). Al-Sayyid wrongly ascribes to him the short Kitab Fatha li Mi'raj, which his son 'Omar composed for the Ishshidhat Kafur (355-357 = 966-968). It has been edited by J. Oestrup ('Umar b. Muhammad al-Khatib's Book of Egypt, udquist og overord) in the Bulletin de l'Institut Royal de Danemark, Copenhagen 1896, No. 4. But al-Kindi himself did do a large work with a title which the son quotes several times, according to Nallino, Opus Astron. et Battani, ii. 345.

Bibliography: in the article; short biographies of al-Kindi are only given in the still unpublished Ms. of al-Mawali and the Ta'rikh al-Islam of al-Dhahabi.

C. BROCKELMANN

AL-KINDI, ASB AL-MASRY B. ISA'AK, the fictitious name of the author of a celebrated Arabic apologia, for Christianity, the Risalah al-ltin "Abdallah b. Ismail al-Hujjami. The text (ed. 1880, p. 475 cf. p. 2) is a contemporary account of a controversy held about the year 204 (819) before the Caliph al-Ma'mun on the relative values of Islam and Christianity, it contains theological statements and a terminology probably posterior to the year 300 (912), for example in particular the allusion to the refutation by Tabari (d. 310 = 923) of the thesis of the Hanbalis Barbaharii (d. 329 = 940) on the inscription of the name of the Prophet Muhammad on the base of the throne of God. The adaptation to Christian theology of the ideas of the Islamic Khulam as in the distinction between al-fista al-Khatib and al-fista al-Khatib, would make one to identify this "Kindi" with some Jacobite author with pre-Averrois tendencies, for example with the celebrated Vakif b. Adham (d. 384 = 974). The text was used and its author's work, as quoted by al-Biruni, under his assumed name of a Nestorian Khidr, son of "Isaac", addressing to a "Hadjime son of Ismail".

This apologia, often aggressive in tone, is a very remarkable document. It contains the first known outline of a critical history of the gradual formation of the present text of the Qur'an. The Arabic original, written in Syriac characters (Kurshun MSS.: Paris, Catal. Zetzner, 204, 205; Gotha, Cat. Moller, 180) was translated, then contained as a part of the translations. translated into Latin about the year 1141 by Peter of Toledo (MSS. Lat. Paris, No. 3393: 3049, publ. in Bibl. Islamica, 1543, ii. 1-20) and re-emerging in the xviith century, by Sir William Muir.

KINKIWAR, KANKIWAR, KANGAYAR, a little district with a town of the same name and about 30 villages between Hamiyan and Karnasir. The town has about 2,500 inhabitants; in its vicinity is a famous castle, Kasr al-Luqia or Kasr Duslan, the "robber castle"; it is said to take its name from the fact that several animals were stolen from the Muslims at the conquest; Tab. i. 2649.

Bibliography: A. G. A., 195, ii, 256, iii. 363; Barbier de Meynard, Dict. de la Perse, 450-451; Le Strange, Landi, p. 188 sq.; Flunian, Voyage, i. 406 sqq. (J. RUKA)

KINNASRIN, a town in North Syria at the point where the Nahr Kuwaw enters the swamps lake of Il-Math. In ancient times it was called Xasak, Chalais al-Balam and later Apurlo (Diodorus, Biblii., xxxviii. 43); perhaps it is to it that the note in Stephen of Byzantium refers, according to which a town named Chalax was founded by the Arab Massa. In the late classical period a part of the Syro-Abdian lines was called τη Χαλάξους in Malalas, p. 296 sq.). In this region the Arabs very early immigrated into Byzantine territory; at al-Hujjar (the later Hujjar bani J-l-Ala) in the district of Kinnasrin in 554 A.D. the Gassanid al-Harith won a decisive victory over the Lakhmid al-Munhtir of al-Hra (Noldeke, S. B. Ak. Berlin, 1887, p. 18; according to Herodotus, lxi), al-Hujjar is the modern Kasr Ibn Wardan). The Syriac name Kinnasrih is not to be confused with the monastery of Kinnasrih on the Euphrates also written as Kamis (ed. G. Hoffmann, Auszlige aus syr. Akten, 1945, p. 161 sqq.) occurs several times in Syriac texts before the Arab period (Weitl, Catal. Syr. MSS. Bibl. Mus., ii. 537, 707; Severus of Antioch, Epist., p. 117 ed., p. 104 transl. Brooks); also in the Talmud (Babyl. Talm., iii, 366, ed. Goldschmidt: Provence of Karnashurai). In the last struggle between the Byzantines and Sasanians, the town was taken in 573 A.D. (Michael the Syrian, ii. 312) and in 608/609 A.D. by the Persians. At that time Arab tribes were already dwelling round Kinnasrin, Halal, Manbadi and Nillas (Wellhausen, Skizzen u. Vorarbeiten, vi. 67; Lammens in M.F.O.B., i. 52). In 637 Abd al-Malik took the town (al-Hulghar, Futtab, p. 137, 139, 144 sqq.). It then became the capital of an administrative district (al-Hulghar, ed., 164, 189 sqq.).

The Caliph Yazid I in his reforms in the administration of Syria added to the four military provinces already in existence (rabi' al-Mahtisi, al-Urdunn, Dimaqth and Himis, a fifth the djund of Kinnasrin, which he separated from the djund of Himis (al-Halghar, 132; following him Wujuk, Wujuk; iii. 747; Lammens, Le Califat de Yazid Ier in M.F.O.B., vii. 1914-1921, p. 446 sqq.). Besides its capital, it included Halal, Anakjaya and Manbadi. After the time of Harun al-Rashid, in which the "Awala were again separated from the djund of Kinnasrin (in 170780), the districts of Kinnasrin, Halal, Ma'arrat al-Ne'm'an, Ma'arrat Mazar and Sarmin (Le Strange, Palestine, p. 36) belonged to it. Various changes in the frontier seem to have been made later. Thus Ibn Khirdalibhi (B. G. A., vi. 755, 395 sqq. A.D.) in addition to the "places mentioned by 'Isyar Bani J-l-Ala".
and Martakhtwan also includes the towns of Dulkir and Rafts in the north, which, according to other authors, belonged to the A'wlan, and al-Makdisi includes in our district the places of Anfikia, Balla, Samalash, the two Ma'arras, Marbidi, Bala, al-Tim, Kinnasrin and al-Sawda'ya (B. G. A., iii. 54; the list given in ii. 154 sq. which is the only one noticed by Le Strange, p. 39 and Gilbemester in Z. D. P. F., vii. 147 is very defective). On the other hand al-Khamisya and Kafarag are, probably rightly, included in Hank (in spite of Le Strange, p. 40) although the former in Iskathir’s time belonged to the province (canal) of Kinnasrin (M. Himmet, 145). Kinnasrin which seems in ancient times to have surpassed Beeina in importance, later became more and more overshadowed by Halab; the Arab geographers are practically unanimous in saying that it had formerly been a strongly fortified and flourishing town but in their day was already quite ruined, depopulated and had sunk to be a mere village. According to Ya'qubi the inhabitants had left the town on the approach of the Byzantines (311/963); some fled across the Frat, the remainder were settled by Saif al-Dawla in Halab. When in 355 (966) Nichophon Phocas advanced on Halab, the Hamazand retired to Kinnasrin but, when he could not make a stand there, destroyed the town. It was again populated under the Emperor Basili II, burned again in 389 (998). Rebuilt by the Banu l-Husayn of the tribe of Tustak, it was laid waste again by the Byzantines (422 = 1030) and once more destroyed by Saif al-Dawla Tactus, after the Seldjuk Sultans. By Kaykhusraw it was restored and rebuilt it. Henceforth Kinnasrin was unimportant. In the Crusading period it was several times used as a depot for military stores (Rohricht, Gesch. der Königreihe Jerusalems, p. 131, 139, 140). It never seems to have fallen into the hands of the Franks, who wrote the name Cenevrae (William of Tyre, xiv. 7). In Yaquti’s time there was only a khan for caravans and the Sultans’ tax-collectors there.

The modern Kinnasrin, also called Eski Halab by the Turks, still has great rains of the ancient walls and those of a citadel on an eminence to the north east. A chain of hills in the north of the town is crowned by the sanctuary of Nabi ‘Isa in which fragments of Kinnasrin inscriptions of the 1st century A.D. have been found.

KINTAR (from the Latin centumvir c. German Zentner and English hundredweight), an avoirdupois weight in the ancient Arab weight system mentioned as early as Kur'an iii. 12, 68. Out of the wealth of tradition regarding the amount of this weight, we may select as the most usual and the one in keeping with its literal meaning, the equation 1 dinar = 100 roshi, which however, is very indefinite. The term roshi is, following its use in the Kur'an, chiefly applied to a considerable sum in gold coins usually 10,000 dinars = 85 lbs.

On other weights (mas'ud and katru) see KAFF.

Bibliography: The authorities mentioned in the article HARRA, especially Sauvage, Mateniac, in J. A., 1884, iv. 261. (E. V. ZAMBURA)

KIOSK. [See KÖŞK]

KIPÇAK, a Turkish people; usually also written Kipçak or Kiltak, the forms Kılıçhack and Kılıçhok are also found. In later popular and learned etymologies (first in Qaşgi al-Din, Dāmis al-Tawadb, ed. Beresan = Turiy Fust. Oid. Arma, Oudk., vii. 23, later in Abu 'l-Kitāb, ed. Tâbāncheh, 109) Kipçak is connected with bokçu or bokö and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oghuz Khaan (cf. Muyza, ii. p. 168) and to have been given a separate territory as a feth. Gardizi (text in W. Barthold, Oltet ve şifredede'nin Sıddetnmin Anıni, p. 82) mentions the Kipçak along with the Imak as a division of the Kimak, who lived on the Irtish; although the earlier anonymous authority of the İmtihal al-Atıhan (1. 196) say that the Kipçak had separated from the Kimak and dwelled to the north of the Peçenegen. Ibn Khordāshih (ed. de Goeje, p. 31, 9) and, following him, Ibn al-Fahri (ed. de Goeje, p. 329, 3) mention the Kipçak along with the Kimak as a separate people. Mahmud Kâshghâri (L. 273) describes the Yımak (sic) on the Irtish as a subdivision of the Kipçak not of the Kimak. In another passage of the same work (iii. 23) we are told that the Yımak are a Turkish tribe (dül min alt-turk), the same as we call Kipçak (or hâmam al-khirsyye izim); the Kipçak themselves thought that they were a separate branch (hâmama altirÁf Kipcak al-umum numahcan hâmam izem). The Kimak mentioned by Mukaddas (p. 274, 3) at Şumtan must have been Kipçak. In connection with the advance of the Kipçak from north to south is the appearance (first in the 11th century in the Dīwan of Ağar Khurāv; cf. Browne, Lit. Hist. of Persia, p. 277) of the name Dağlı Kipçak for Mas'ud al-Khâsq, cf. above, ii. 168. The Kipçak (Kılıçhak) are already mentioned by Balaki (ed. Morley, p. 97) as neighbours of Khwârizm. According to Mahmud Kâshghâri (L. 273 and iii. 23) the dialect of the Kipçak had the same phonetic peculiarities as the
translation

*Kiiran* (l. c.) is defined by the Moslem al-\*Umm, p. 332 (cf. also E. Wiedemann, Beltrage \*fiber die Astronomie nach den *Moslethul* al-\*Umm in *Sittenbeob. der Phy. und Med. der alten und neuen Welt*, XLI, 1915, p. 338) as the conjunction of Saturn and Jupiter if the word is used without any qualification, but if the *kiran* of two other planets is meant it is defined by giving the names of the two planets concerned. In the *Klaib* Ta'fim *al-\*Amm* it is more particularly in Chap. II, of the last book of the *Klaib* al-Mulad, treating of the *kiran* or the upper planets, al-Biriini, whom we here learn to be a convinced astrologer, deals very fully with this conjunction; according to him Saturn, being near the Taurus is the key of the fixed stars, has the greatest astrological influence. The *kiran*, which is next and similar to it. From the course of the two planets (cf. e.g. C. A. Nallino, *al-Battani*, ii. 103, *kira* raturum quique planetarum in singulis mundi 2000) it is found that if a first *kiran* takes place in Aries, the second will be in Libra, the third in Leo and the fourth again in Aries and in cycles of about 20 years; and this occurs after Saturn has passed through eight zodiacal signs, which together form a triplicity. But it is not exactly 8 zodiacal circles but these and $21^1/2 = 243^1/2$, the position of the conjunction shifts by this $21^1/2$ between every two conjunctions on the zodiacal circle. After this has happened 12 times, the $21^1/2$ has grown to $30^1/2$ i.e. the size of a sign of the zodiac and the *kiran* enters upon a second triplicity, beginning with Aries, this is the case after $12 \times 20 = 240$ years. The *kiran* which takes place 24 years after the first is called the *middle* *kiran*. If the *kiran* has gone through all four triplicities which begin with Aries, Taurus, Gemini and Cancer, for which 4 $\times$ 240 = 960 years are required, then the *kiran* again enters Aries. It is then called the great *kiran*.

In all observations, geocentric observation is assumed; i.e. the planets go round the earth. According to al-Biruni the word *kiran* is especially used for the conjunction of Saturn and Jupiter in Cancer. Here we can only refer the reader to the very full calculations given by al-Biruni. From the same stem as al-kiran with corresponding meanings come al-*isfida* and al-*isfiara* (see C. A. Nallino, *al-Battani*, ii. 249, p. 349). Al-Battani only uses the term al-*isfiara* for the conjunction between sun and moon. — On *kiran*, or *isfara*, as a technical term of *isfiara* see this article (ii. p. 453).

(E. Wiedemann)

**KIRAT** (from the Greek *karpos* or *karpous* = seed, grain of corn; the seed of the olive tree, *Ceratonia Siliqua* L;), a unit of weight in the Muhammadan apothecary's measure and coinage.

(1) Apothecary's weight. The name and the weight had long been adapted from the Byzantines by the Arabs before Islam. The Constantinian weight system founded by the Arabic in Syria and Egypt and left unaltered by them was as follows (the Arabic names are given beside the Latin):

These seven denominations have survived apart from inevitable variations to the present day. The raff of this system of about $1/10$ leg, its $1/10$ part
the valley of the Teke and to throw these lands open for Russian colonization. An autonomous territory of the Karakirghiz, or Kirghizistan, has now been constituted with Pishpek as capital (the term "Kara" was never adopted by the people themselves and is now definitely repudiated).

Until recently in both Russia and Western Europe the name "Kirghiz" meant particularly the Kazak; they are sometimes called also "Kirgin-Kasak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cosacks). On the separation of the Kazak from the Obesg, cf. the articles AND L-KHAZAR AND KAZAK. The whole of the Kazak people was for long under the rule of one Khas who therefore had a considerable military force at his disposal; Khán Kásim (d. 924 = 1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Obesg in the sixteenth century, the Kazak still had a strong nomad kingdom at the end of this century under the rule of Khas Tawakkal, who, during the last years of the reign of Khas 'Abd Allah b. Jakandar (q.v.), was able to make a successful incursion into Māwarrah al-Nahr and even still hold the town of Tashkent. In the sixteenth century the power of the Khans only rarely extended over the whole people; but about this time Tashkent and Farghāna were usually in the possession of the Kazak, sometimes under nominal recognition, of the suzerainty of the Khans of the Oguz. At this time the Kazak divided themselves into three "Horde" (called by the Kazak themselves ġirān "hundred").: The great horde (ihat ġirān) occupied the most easterly, the little (khis ġirān) the most westerly part of the so-called "Kirghiz steppe"; and between the two the central horde (orta ġirān). Towards the end of the sixteenth century this division was already an accomplished fact. Khan Tyawka, celebrated as the law-giver of his people, in 1594, a Russian embassy was received by him in the town of Turkestan and in 1598 one from the Kalmasch, still ruled all three Hordes and had a representative in each of them. In 1577, unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the town of Samarkand, Tashkent and Turkistan were conquered by the Kalmasch. For a short period after this the suzerainty of the Khan of the Little Horde was recognized by all the Kazak and the agreement was sealed by the sacrifice of a white horse; but the treaty had no practical results. In 1730, Abu 'l-Khair negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the eighteenth century, but it was not till the nineteenth century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirghiz steppes on the Sir Daryā, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Kazak were published in 1823 and again in 1888. Even after the abolition of the Khan's authority, the descendants of Conga Khas or "Suljans" exercised a considerable influence over the people as a "nobility" (q.v.) and "white bosses", of which their authority has been gradually destroyed by the measures of the Russian Government. The last popular leader of the Kazak, Kemsari, who fought against the authorities in Siberia and Orenburg from 1842, was killed in 1847 in the mountains of Ala Tau; several risings were stirred up down to 1873 by his son Sadik (so-called by the Russians, properly Sjaldik). Another son, Ahmad, later wrote the life of his father's nearest relatives and of his brother Sadik, entitled: Sadiklin Kibarai i Sadik. Biographicalkij istor. sultanu Akhmeta Kesarina. In 1877 the work was published in Tashkent, Tashkent 1889. Review by V. Rosen in Žup., iv., p. 122 ff.

The most southern part of the Kirghiz steppes was conquered in the sixteenth century by the Obesg of Farghāna and Khiva and partly colonized; the advance of the Russians in this part was therefore assisted by the Kazak. After the foundation of the general-governorship of Turkestan (1867) and the general-governorship of the Steppes (1882), Semirečy belonged at first to the latter, but was later again united to Turkestan, the government of the Kirghiz steppes had less unity than before. On the other hand after the revolution an administrative unit was established called at first by the Russians the "Kirghiz Republic" and by the people themselves "Kazakstan"; since 1924 this "Republic" has included a vast territory, little smaller than Russia in Europe, of course less thickly populated. According to the latest Russian figures before the revolution the Kirghiz numbered about 4,000,000 compared with about 500,000 genuine Kirghiz. The present numbers of the population cannot be very different from these. Colsoshnikow's (see below) reckoning, by which the Kazak and true Kirghiz would now be about 8,500,000 together is certainly much too high. In the northern part of the Kirghiz steppes between 1720 and 1723 the population is known to have declined by 31.2%. According to figures in the official publication "Rossiiskaya Kirgizia" (1924, No. 8-9, p. 4), the population of the "Kirghiz Respublika" is 65,526,000 including 4,008,310 Kirghiz (61.3%).

on the southern slope of the Istrangja mountains, which run parallel to the coast of the Black Sea from the northwest to the Southeast. It was conquered from Byzantium during the reign of Murad I, a few years after the capture of Adrianople and after the great defeat of the Serbians near this town (766). The chronology of the conquest is very uncertain, for neither the early Turkish chroniclers nor the Byzantine mention it. Hadji Arslan (Chronologia historia, Venice 1697, p. 116) and Salahaddin (Zayd el-Tanurik, p. 3) say that Murad, after having definitely established his residence in the new palace of Adrianople, commanded in person an expedition in the territory to the east of this town; on this expedition Kirk Kilise was taken, as well as some other places in the region of the Istrangja, such as Wuse and Buşar Ağa. Hadji Arslan places these events in 760-761 (May 157 to 1578). The identification made by von Hammer (G.G.R., I, 175) with the ancient Tatpadis (see Panly, Rekonstruktion der classischen Altertumswissenschaft, Stuttgart 1852, II, 604) would appear to be very questionable. Leoclavius (Pandectae historiae Turcicae, Paris 1650, p. 473) says that the town of Kirk Kilise was called by the Greeks Sarrakele and that it was, in his time, the capital of the Sandjak of this name, Ewliya Celebi (IV, 79) says that it was the most important Sandjak of the vilayet of Adrianople; he gives a short description of the town. It may be concluded therefore, that formerly Kirk Kilise was not a place of importance; under Turkish rule, however, its situation on the route from Constantinople to Shumla and to Prusia made it gain importance. As regards the name, "the holy churches", the numerical form which is found here is also met with in other geographical names (e.g. Kirk Agha); it is perhaps permissible to find in this an allusion to the holy saints who play a certain part in geographical nomenclature, both Christian and Muhammadan (cf. Goldschower in R.R.E., ii, p. 520).

About the year 1900 Kirk Kilise had about 15,000 inhabitants, of whom Greeks formed the greater part; after them came Turks and Bulgarians. There were eight dëmen, one of which is attributed to the Sultan Bayedli I and two tokis. The most important local industry was the weaving of wool. Under the new administrative system of the sixteenth century Kirk Kilise remained the capital of a Sandjak in the vilayet of Edirne; the Sandjak stretches along the two sides of the Istrangja and contains seven dâtes. All this district is fertile and contains many streams, especially to the south of the Istrangja; the rivers, of which the most important is Erkenê, all belong to the basin of the Marit. Agricultural products are grain, all kinds of fruit, and especially tobacco and wine. The pastureage is very suitable for the raising of cattle.

After the Balkan War had broken out in October 1912, the Bulgarians occupied Kirk Kilise during the last days of this month, during their advance on Catalja, to which the Turkish army had retired. As a result of the recapture of Adrianople by the Turks, Kirk Kilise was restored to Turkey after the war and remained Turkish after the victory of the Turkish nationalists, in 1922 (Treaty of Lausanne 24th July, 1923). Kirk Kilise is now, with Adrianople, Rodosto and Gallipoli, one of the chief towns of Eastern Thrace.

KIRK WAZIR. [See SHAHIZADE, II.]

KIRKUK, a town in Mesopotamia, in 44° 25' E. Long. and 35° 45' N. Lat., the largest town in the district bounded by the Little Zab in the north-west, the Djilab Hamrun to the south-west, the Diyâlû to the south-east, and the chain of the Zagros to the north-east. This territory, which even in the days of the ancient Babylonian empire and later in the Assyrian empire was much exposed to the raids of the hill-people of the north-east, was called under the Sassanids, Garmisan (Moses of Khurem) and in Syriac sources Beth Garmê; the town of Kirkuk is called in these sources Karkha de Beth Sêlûkh. The proof of this identification was given by G. Hoffmann (Ausbeute aus syrischen Akten parthischer Martysius, Abb. für die Kunde des Morgenlandes, vii, n. 3, p. 146, sqq.). In the history of the martyrs of this town (cf. cit., p. 43 sqq.) its foundation is attributed to the Assyrian King Sancalû who had it built as a bulwark against the Medes. Seleucus in a later date built a tower in the citadel; hence, the town bore the name of Seleucus (Sêlûkh), which in Arabic the citadel was called Sabûb or Ushûb (cf. Marquart, Erdossier, p. 21). Under the Sassanids the town became a celebrated centre of the Nestorians; the Metropolitan of Beth Garmê had his residence there and it was here that took place the persecution of the Christians under Varded-ur II (438-457) described in the martyrology above mentioned.

While the Christians continued to call the town by its old Syriac name, or in Arabic al-Karkh (Elîyû of Damascus in Assemâni, Bibl. Or., in fol. p. ccxxvii; cf. Hoffmann, loc. cit., p. 272) it is not clear what name the Arabs gave it. We find Bâlûc as a part of the province of al-Mawṣûl in Ibn Khurdâbî (p. 94); al-Balûdhusî, p. 205; Yûkût, iv. 683) but none of the townswomen can be identified with Kirkuk. Ibn Khurdâbî (loc. cit.) knows a town Khûnûa Sûha in Bâlûč (a conjecture of de Goeje which applies also to Tabari, i, 540). Hoffmann, loc. cit., suggests a connection with the town of Karkûs in Yûkût (iv. 257). The identification is made more difficult by the fact that the Arab geographers always describe the road from Baghdad to al-Mawṣûl as following the Tigris; the old road which is also the modern road by Kirkû, Ta‘bû, Kirkûk and Irûl does not seem to have been much used in the early centuries of Islam.

In the sixteenth century the region of Kirkûk belonged to the territory ruled by the Beşteginid dynasty which had its capital in Irûl [4., v.e.]. After the death of Mu‘azzar al-Din Kûkûrî in 1332, the lands of this dynasty passed to the ‘Abbasid Caliphs to be conquered soon afterwards by the Mongols. The name Kirkûk is found for the first time in the history of Timûr by Şaraf al-Dîn ‘Alî Yârî (transal. Péris de la Croix, Delft 1725, ii, 259), where we are told that after the conquest of the ‘Irûl, Timûr set out for Dyûr bêzx, going via Ta‘bû (Tabûk among the Arabs), Carcorn (Kirkûk) and Alûûn Cüprü (Altun Köprü), which he left on December 20, 1403. Next comes the rule of the A’l-Kûnû of the
conquest of Mesopotamia by Shah Ismail I in the early years of the 17th century. When finally Mesopotamia and the Irak had passed into the hands of the Ottoman Sultan Selim I and Saladin I, by the first Turco-Persian peace concluded at Amasra (May 29, 1555), Kirkuk resumed its former role of an important bulwark against an enemy from the east. It appears also that from this time onwards the devolution of the banks of the Tigis encouraged the development of the ancient commercial and military route between Baghdad and al-Mawil (Ewthik: Celebi, however, took the road along the Tigris, cf. Syriaca-Jah, v. p. 6). Kirkuk again was occupied by the Persians after the fall of Baghdad in 1635, but was retaken by Khatra Phaga [q. v.] in 1640. In 1638 Murad IV passed through it on his way to recapture Baghdad. The real masters of the country however were the local Kurf chieftains in the province of Ardakhan (Hadj Djalifa, Zakhom-Nuswe, p. 435). But little by little, Ottoman power was established there through the energies of the pasha of the sultan (q. v. or Shebrisir). This sultan contained thirty-two sandjaks one of which was the sandjak of Kirkuk and this town became the official residence of the Pasha of Shebrisir, after the town of this name was destroyed (Zakhom-Nuswe, I. c.). In 1722, Nadjr Kuli (the future Nadjr Shah) besieged the town in vain; the following year there was a great battle near Kirkuk, where the Turks were completely defeated under the grand vizier Topal Ghiyatus Pasha, who was killed in it. In 1743, Kirkuk again fell into the hands of the Persians, but was restored to Turkey by treaty of 1743. The town remained in the Ottoman empire until 1918; under the modern Turkish administrative system it was the capital of the sandjak of Shebrisir (although the site of the old town of this name was hitherto in the new sandjak of Salamis) in the province of Mousul. Kirkuk had just been occupied by the English troops when the armistice of 1918 was concluded. It remained under the English and in 1920 passed under the government of the kingdom of the Irak. It was not till 1920 that it was definitely incorporated in this kingdom after the agreement came to between Turkey and Great Britain regarding the fate of the old province of Mousul.

The modern town is surrounded on an acropolis about 300 feet high, which forms a little town by itself; on the south and east side of the plain lies another larger quarter. These two are separated from a quarter on the west by the Khash Cula coming from the north-east and running southwards, under the name Aihal Sula, to reach the Tigis below Saimara. The population must now be 20,000 at most. The Turks are the dominant element, or to distinguish them from the Turks of Asia Minor, Turkoman. This Turkish population was probably there long before the conquest by the Ottoman Sultans but it is uncertain whether its origin is to be traced to a Turkish garrison placed there by the Caliphs in the ninth century or to an immigration in the time of the Seljuk and Begtugulids. In any case the town was always a bulwark of the Ottoman empire and a centre of its culture (cf. Turk yaras, 1915). In Turkish the name of the town is pronounced as Kirkuk, although the correct official form is Kirken (Shah. Qamis ni-s-Deras, v. 3846). The Christians to the number of 1500 families (Rapport du Commissaire de Misr quoted in the Bibliography, p. 52), also speak Turkish which they write in Syriac characters; they all live in the city. They are called the "Chaldean" Catholics (Kirkuk is the site of an archbishopric, or Mousul) and descendants of the old Nestorians, although according to their own tradition they immigrated in the Seljuk period. Since 1605 they have had a new cathedral. Arabic is spoken mainly by the Jewish population which is quite considerable. Finally there is a strong Kurdish element. The Arabs was at one time surrounded by a wall; it contains the mosque of Ubu Djami, an old church, and on the slope of the hill there is a mosque called Mîr Danîl. Quite recently excavations have been begun in the hill which promise to throw much light on the history of the town in the Babylonian period. Another Christian monument is the tomb of the martyr Mîr Talmagem, who is known from the martyrology above mentioned; this tomb is in the east of the town.

Kirkuk is of some commercial importance; it is the market for the cereals and animals raised in the surrounding country and it is an important connection with Bagdad (via Tarm and Kifr) and via Mousul (via Mina Kahr and Kibril). A railway line is being built along this route. There is the eastward road to Salamis and, on to Persia. Between Kirkuk and Salamis is the land of the Hamawand Kurds, who were formidable brigands in the Turkish period. The country round Kirkuk is still a little hill but in the rest of the town the Mesopotamian steppes begins, mainly inhabited by Arabs. The immediate vicinity produces a great deal of fruit. Here we have most of the northerly palms in Mesopotamia.

The wealth of sulphur, naphtha, and bitumous products contained in the soil of the whole district of Kirkuk has been known and exploited since ancient times. The bituminous springs are specially well-known, two hours north-east of Kirkuk, called Batha Gurgur where bluish flames rise out of the ground.

KIRMAN, the name of a Persian province and of its present capital. The name of the town was derived late from that of the province. The usual pronunciation is Kirmân, although, according to the tradition of Arab scholarship (Yakti, iv. 265) the form Kirmân is more correct; the name, in any case, goes back to the form Carmania, which is found in Strabo (xv. 3, 15), and which in its turn is said to be derived from the name of an ancient capital Carmania (Procopius, Geography, vi. 8; Ammianus Marcellinus, xxiii. 6, 48). According to Marqasi
The province of Kirman is as a whole well-defined. Situated to the south-west of the great central Iranian desert (Dasht-i Lut, or, in the middle ages, Mafzaq Khurasan), the province is bounded on the east by the sea, on the west by the desert, and on the north by the mountains which separate it from Makran. This geographical situation quite naturally leads to the subdivision into five principal districts: that of Kirman to the north (in ancient times: Barazan), of Sirdjân to the east, of Djaruft in the centre and of Bam and of the town of the east (Makli, p. 460). On the south, Kirman is bounded by the sea, but this part is of little interest for the province; the only important port, Hormuz, is sometimes considered as belonging to Kirman and sometimes to Fars; but this part has often been in different hands from its hinterland. The lords of Kirman have only once extended their dominion over the opposite coast of Uman. Chains of mountains stretch across the province from the north-west to the south-east; to the north the highest chain is found which forms a part of the Khabur and has summits like the Kuh-i Salâr. There is in the north-west of Bam, an altitude of about 15,000 feet. This chain separates the district of Kirman from that of Sirdjân; its continuation towards the south-east is called Djaruft or Bârīn. Further to the south-west, there are other parallel chains. In the middle ages, these mountains were inhabited by savage tribes like the Baljâ (see NALUZ) and the Kafe; the latter inhabit the mountainous region to the south of Djaruft, along the coast, on the Makran side. Kirman has no important rivers; the cultivated districts receive their water from the mountains; the most important of these streams is that which flows across Djaruft, called Khalili Râd (formerly Duj Râd) without ever reaching the sea. Thus Kirman contains within itself all the geographical features which are typical of the whole of Persia. The Arabic geographers, beginning with Ya'qûbî, treat Kirman as an independent geographical area (Hilâm). They classify three-quarters of its surface amongst the warmest regions (qurarn); the cold districts (jârin) are found mainly around Sirdjân (Istakhri, p. 165).

From the point of view of traffic, Kirman lies on the great roads leading from Fars to Sistan and Khurasan, and to India, and on the route for commerce and pilgrimage, which leads from the sea (Hormuz and later Bandar 'Abbas) to the north-east of Persia and beyond. This situation has exposed the province during its history to invasions from all sides: — a circumstance which has made it frequently change its political ownership, and which has been adverse to the development of its prosperity.

At the present day the desert part of Kirman is more extensive than in ancient times; in the first centuries of Islam there were still forests in which lions roamed around Djaruft (Hamd Allah Mustawfî, Nasîkat al-Kabîrî, p. 140). Now there are almost no trees except the date-palms which are found in large quantities around the villages and the towns. Irrigation is very laboriously practised by the subterranean hâmât. The principal agricultural products are corn, barley, and opium. The higher regions produce in autumn millet, cotton and beetroot. In the ghorân or goram rice and maize are cultivated in summer and the environs of Bam and of Khâbi produce kermâ; besides, all sorts of fruits are found in great abundance — its dates especially are noted. The chief animal products are wool and goat skins (khorâb) which are used for the manufacture of celebrated shawls. The mineral wealth of Kirman, was exploited in the middle ages. Marco Polo speaks of the tin mines of Kirman, the mines for which have now been abandoned. The mountains contain iron also, which formerly provided material for the armorer's arts; in the west of Djaruft silver was found. Oxide of zinc, called nijâd, was prepared from the mineral found near the town of Makli (p. 459 and 470 speaks of Hâsîn al-Maklûb, see de Goeje in R. C. A., ix. 346).

Kavehni (i. 172) seems to refer to the existence of amalgamite.

History. Under the Safawîs the province of Kirman had been governed by a governor holding the title of Dabâh (Ibn Khwâjudî, p. 177); thus Bâhram V was before his accession Kirman-Shâh (q.v.) and the semi-legendary tradition of the Safawîs is also acquainted with a Shâh of Kirman under king Kâl-Khwâzu (ed. Vullers, ill. 1273). Râfîzâd, on the other hand, speaks of a mardân of Kirman (p. 361). Already, before Islam, Arab nomads had immigrated into Kirman and according to Jâlari (Nâdîs, Gesch. der Perser u. Araber, p. 57) it was Shâhpur I who, after his expedition against the Arabs, had driven out from the desert the people of the tribe of Bakr b. Wa'îd. While submitting with some reservation the historical truth of this, Nâdîs prefers to think there was an immigration of Arabs into Kirman in the period before Islam. The capital of the province at the end of the Safawî period was Shirdjân (Sirdjân).

450-750. The Arab conquest of Kirman as recorded by al-Ramînî (ed. de Goeje, p. 315, 391 seqq.) was begun by al-Râbi b. 'Aziz, who was sent by Abd al-Mâsîr al-As'ari, from 638 governor of Bâzâr under the Caliph 'Umar; he conquered Shirdjân and made terms with the inhabitants of Bam and of Amedûghâr. Another Arab invasion was made about the same time by the governor of Bâzâr al-As'ar, and the Mzâshân of Kirman in the island of Alarâkwan (which, however, belonged to Fars). But its pacification was only temporary. In 29
(649—650) Yazdagird fled from Isfahan to Kirmân, where the majority of the inhabitants were still loyal. Then 'Abd Allah b. 'Amir b. Kasa'i sent Madilâshbî; b. Mas'ûd al-Sulami with another general to pursue him. The Arab army perished in the mow at Haiman before reaching Kirmân, and Yazdagird was able to continue his flight to Khurāsân, where he met his death (the flight of Yazdagird has perhaps influenced the story of the end of the Khosrau Drîz whom the Shahnameh. ed. Vullers, ill. 1755, makes take to flight and perishes in Kirmân). Madilâshbî, appointed governor of Kirmân by Ibn 'Amir, succeeded at last in re-conquering the chief town as far as the mountains of the Kafs; a counter-attack by the Persians from Hormuz was defeated. The historical data recording the conquests of this period are uncertain. Further information is found for example in al-Ya'qûbi (Kitâb al-Hadâ'în, p. 266). After the conquest many inhabitants fled to Sixtar or to Khurāsân or withdrew into the mountains where they for long retained their Zoroastrian creed. The mountain people themselves kept for three centuries more their independence. This province being at a considerable distance from the centre soon became the theatre of the activities of the Khârsâgī. A certain number of the inhabitants had joined as mawādî the Arzâr Khârûsâghī who had already by the year 653, under command of Kastâr b. al-Fudâ'î, [564] taken their centre was Dijânât. They remained there until about the year 699, when the general al-Mahallâb succeeded in defeating them, after the separation of the Arab Khirâtâ and the mawâdî had weakened them. During the succeeding century, Kirmân was a hotbed of rebellions and a favourite asylum for rebels. Thus 'Abd al-Khâra'm b. al-Akhâfi (q.v.) the enemy of al-Hâjilî took refuge there for some time after his defeat (after 701). Twenty years later, Kirmân was one of the provinces over which the usurper Yazîd b. al-Muhâhidî (q.v.) had established his domination, which came to an end in 730 (720). From this time the Umâyядs (of whom we know several coins struck at Kirmân) seem to have exercised a sufficiently efficacious control over the province of Kirmân, which moreover had been exhausted by war; — it was from here that their last army set out to force the attack of the partisans of the Abbasîs under Kâshâbî. The principal sources for this period are al-Râdîjâni, al-Tabârî, al-Ya'qûbî and al-Mas'ûdî.

700—1044. Under the first Abbasîs Kirmân was not the scene of important events; the province had to suffer during this time the incursions of the Zijj, coming from India, until they were driven out during the reign of al-Ma'mûn. There are 'Abbasî coins struck in Kirmân in the years 165 and 157. Soon afterwards the province began to play a role, mostly passive, in the different Persian national movements, which gave rise to several dynasties. The first dynasty was that of the Saffâzân, Ya'qûbî b. Latîh had obtained in 255/865, the governorship of Kirmân from Muhammad b. Thîbîr, the governor of Khirâtâ. Ya'qûbî had to quell the opposition of the mountain people around Dijânât; he and his brother 'Amir seem to have left a favourable impression in the province (see also, History of Persia, ii. 16 according to the Chronicle of Alî al-Dîn); but their reign was too short to leave more permanent traces. 'Amir succeeded his brother in 879, and, on his death in 903, the role of the Abbasîs, or rather anarchy, was re-established in Kirmân. In 913/927 Kirmân received a new master in the person of Abî 'Ali b. Hâyja (q.v.), a former brigand, from Khurāsân, who looked upon the Shâhânshah as his survivor (Magîân, p. 472). He soon found himself in conflict with the Byzantian Ahmad Mûsâ, al-Dawla, who attacked Kirmân in 915 and took Shâhârân. But Ibn Hâyja who had chosen for his residence Barâdash (the present town of Kirmân) had himself appointed governor for and tributary to the Byzâds. The quarrel which broke out some decades later between Ibn Hâyja and his son al-Yâsî brought about the ruin of them both and resulted in the occupation of the province by the Byzâds in 957 (968). Soon after the death of 'Adîn al-Dawla began to fight among themselves for the province, and a very confined period followed, during which even the Ghurâwids were for some time masters of Kirmân (Magîân L) conquered it in 1032: see also the article Kâshâbân). The Byzâds were the first to fight with energy the mountain tribes of the Kafs and Bâllân. Sources for this period: al-Tabârî, al-Ya'qûbî, Ibn al-Athîr, Ibn Miskawâshî, Hamd Allah Ma'sûfî, Turâshî-Ghiânî.

1041—1222. The province was able to breathe as long as in 1041 a branch of the Seljûqs founded there a dynasty, which reigned until 1189. For the history of the members of this dynasty see the article Barâdash V. The founder was Kâwûr khârî-ârâz b. Beg, the son of Cagîti b. Beg. In 1040 (1048/1049) he seized the capital Barâdash and subdued the mountain people of the Kafs and of the Shâhânshân (q.v.), a Kurân tribe to the south-west who for some time had been terrorizing the governors of Kirmân, Kâwûr finally conquered the territory of 'Umayn on the other side of the Persian Gulf. He made two attempts to reach the Great Seljûqs, Alp Arânî and Malik Shâh; the second attempt cost him his life (1065/1074) and nearly ended his dynasty. Kirmân prospered most during the long reign of Arânî Shâh (1104—1144) who was also ruler of Fars, and this state of things continued under his son Muhammad Shâh (1142—1156). Under the last Seljûqs of Kirmân anarchy again reigned until the Ghurâz (q.v.), who came from Khurāsân, completed the desolation of the province. A chief of the Ghurâz, Malik Dinâr, reigned in 581/1185 the rule of Kirmân; his residence was in Zârânî. Soon the turn of the Shâhânshân came; their chief khârî al-Din and Nishân al-Din took Barâdash in 597 (1200) to the great joy of the inhabitants. But as the Ghurâz continued to resist under 'Adîn Shâh, the son of Malik Dinâr, some years of confusion followed; the result of this was that the 'Abîs b. Zangi, the Atabak of Fars, made himself master of Kirmân in 600 (1203). In 607 (1210), the province was conquered in the name of Khârûshâ-kâlah, in 1220 the semi-independent governor of Kirmân was Shâhâb al-Din Zawânî, who took the title of the Khârûshâ-kâlah. Muhammad refused to admit the son of this latter, Ghûyân al-Din, when he was facing before the Mongols. Sources for this period: Ibn al-Athîr; Ibn Tahshîshî; Alî al-Dîn (of Bibelographie); Ibn al-Balkhi, Ferânumî; Ibn Shâhîn, Qâshârî-Ghâshî; Hamd Allâh Ma'sûfî, Turâshî-Ghiânî; Rûmâni, Khâbâ al-Sûfînî.

1222—1522. Soon afterwards in 619 (1222)
Kārim Kāhn, Lutfʿ Ali Khan [q. v.] seeking before the Kāfir Agha Muhammad Kāhn had retired to Kirmān in 1794 where a part of the inhabitants remained faithful to him. In the same year the capital had to surrender and Lutfʿ Ali Khan, although he succeeded in escaping to Bushār, was betrayed and handed over to Agha Muhammad. The terrible vengeance of the Kāfirūn, who according to the authorities, sold 20,000 women and children into slavery and blinded 35,000 male inhabitants, deprived the province of all strength and prosperity; it did not begin to recover until a century had elapsed.

Sources: Khwāndānī and the Persian histories of the Safavid and the subsequent dynasties (see Grünfeld der Pers. Phil., ii. 388 sqq., 592, 594).

From 1794, the Kāḏārs [q. v.] governed Kirmān usually by governors who belonged to the same dynasty. During the years 1839—1843 a certain Agha Kāhn made many fruitless attempts to free the province from the power of the Kāḏārs. From this time there were no further notable events in the history of the province. In proportion as Persia became an important element, although passive for the moment, in world politics, Kirmān entered little by little into the sphere of influence of Great Britain. This situation found expression in the Anglo-Persian convention of 1827.

The principal towns and districts. The province of Kirmān is more divided into districts. Three of the chief towns mentioned by Maǰrūd (see below): Sīrāf, Dīrāf and Nārmāšt are no longer in existence and are now only names of districts. Many of the towns and villages named in ancient geographies have also disappeared or have not yet been identified.

The northern part includes the capital Kirmān [q. v.]. On the route from Kirmān to Yaḍd still stand Zarrāni and Brīf and, to the northeast of this route, on the edge of the desert we still have Kûh-bānān (the Cabotin of Marco Polo) and Kāčar, Kābīsh, a historic site to the east of Kirmān; in a much lower country, is famous for its dates, Māḩān (now Māḩān) to the south-east of the capital is noted for the sanctuary of the track, and the boxen of the citadel, which has been described by Sykes (10,000 Miles, etc., p. 434 and following), who found some inscriptions there. In the neighbourhood is the village of Sāliyābād. The plain is much more fertile than that of Kirmān and contains many villages.

The principal town on the west side was the old capital Shīraz, (often Shīrāz), situated very close to the province of Fārs. This town was larger than Shīraż in the time of Maǰrūd, but it was destroyed in 1396, after a long resistance against the armies of Timur. The site is marked at the present time by a limestone rock rising in the plain to a height of 300 feet, called Kāl-i Sāng. This rock, formerly the citadel, has been described by Sykes (10,000 Miles, etc., p. 434 and following), who found some inscriptions there. In the neighbourhood is the village of Sāliyābād. The plain is much more fertile than that of Kirmān and contains many villages.

Bam [q. v.], in the eastern part of the province, is still in existence. The road from Shīraż, near the salt pan by Kūh-e Bāb, and from this last place a road ran (and runs) to Dīrāf, Nārmāšt (also Nārmāšt) situated at a short distance from Fārs in a south-west direction, was formerly an important market for commerce with India; at the present time the same only marks a district. The village of Fāḥilād which is in this district was a fortress in the time of the Afghāns.
KIRMAN

Diiruf, formerly the capital of the southern part of Kirmân, occupied a site now called Shahr-i Dašīkârī. In the time of Marco Polo the town had already been supplanted by its former quarter Kirmân called Camudî by the Venetian; it was an important market. Resting his belief on a passage in Idrissi (transl. Reinhard, p. 423) Sykes (op. cit., p. 445) thinks that the earliest capital Carmania must be looked for between Diiruf and Fahladh. On the road from Diiruf to Hamze are Walkhâyq or Gulhâyq, which is still the name of a village.

Population. The inhabitants of Kirmân are described in general as possessing a dark-brown colour and a slight physique because of the heat (Iyâkhtu). In the guitarindeed, the summer is very hot and unhealthy (Sykes). The most ancient inhabitants of Kirmân were probably represented in the Middle Ages by the mountain peoples called the Kufs in the mountainous districts of the south and the Bâris (transl. in Herodotus, iii. 93) in the mountains to the south-east of the town of Kirmân, still called Bâris Kûsh. Maqdîsi (p. 471) says that the language of the Kufs and of the Bâris was unintelligible. These people probably exterminated in the course of history or became mixed from the time of the Bilinga and of the Seldjûks with the Iranian element. For the Bâris, who were mentioned from the north-west (Hâzâhûr and Tabart do not yet mention them) and who were established in Makan from the twelfth century see the article Bâris. As regards the settled population it seems to be of Iranian stock; Strabo already says that their customs and their language are similar to those of the Medes and of the Persians (xv. 2, 14). From the time of the Sâsânis the part of the inhabitants was composed of Nestorian Christians; the bishop of Kirmân was under the authority of the metropolitan of Fars. The conversion to Islam was slowly affected; according to Tabart the mountaineers had been Islamized under the Abbâdshîd; later they showed great sympathy for the Shi'a (Maqdisi). Yakût (e. v. Kûsh) insists upon the fact that while having no religion, they venerated 'Ali b. Abî Tâlib. The Islamized population was very exposed to sectarian influence and in this respect those of the Shî'is, and later that of the Ismâ'îlis. From the theological point of view the inhabitants of Shahrud belongs, according to Maqdîsi, to the abî al-shâhid and those of Diiruf to the abî al-râ'î. The advent of the Safawids at last established the official form of Shi'a, 'isâm-âsâkheriya to which the great majority of the population still belongs. In the sixteenth century the sect of the Shâhî (c. v.) gained many adherents in the province of Kirmân, so that it became one of their most important centres. Sykes reckons their number at 7,000. The Bâris are a little less numerous. Finally Kirmân is one of the districts where the adherents of the religion of Zoroaster were able to maintain themselves as a community under the spiritual direction of their ancient sacrificial hierarchy. Tavernier (p. 390) says that in his time (about 1650) their number was still more than 10,000 in the town of Kirmân, after the great emigration to India. They had a temple at a distance of four leagues from the town; they were for the most part Persian merchants. During the middle of the eighteenth century there must have existed at Kirmân a school of dâstâr's whose influence was considerable. According to Khânîkoff there were still 12,000 Parsi families at Kirmân before its destruction in 1794 by Agha Muhammad Shâh. About the year 1805 the number is given by Sykes as 1,700 souls (see also the article Parsi).

The Persians of Kirmân, like those of Yazd, speak the archaic dialect called Gâbri, which has been studied, e. g. by Houtou Schindler and Browne (cf. Grundriss der ir. Phil., i. 351 sq.) and more recently by O. Mani (Die Mundarten von Kirmân, etc., ed. by K. Hadank, Berlin-Leipzig 1926). The other dialects spoken in Kirmân do not seem to have ever been specially studied; they belong to the southern group represented e. g. by the dialects of Fars and of Kâşân (see Geiger in Grundriss, i. 2, p. 423). Maqdîsi remarks that the language of Kirmân resembles that of Kâšân.

The nomads who form a strong minority of the population of Kirmân are probably the descendants of the Arab, Turkish and Kurd invaders.

The total of the population of the province was estimated at $2,000,000 about the year 1800 (Sykes).

The town of Kirmân situated in the north-east part of the province (50° 17' lat. N. 56° 59' long. E.) has been identified in all likelihood with the town and the district which Arab geographers call Bardast (Yaftân hâs Bardast) or Gouâsîr (see also Maqdîsi, p. 460). The two forms might represent the form Beh-Ardash, which is, according to Hamza Isfahânî (ed. Gottwald, p. 46) the name of a town built by Ardashîr, the founder of the dynasty of the Sâsânis. The building of the Kašā'i Ardashîr, the ancient citadel to the east of the town, which, in the Middle Ages, must have been just outside the gate of the city, is also attributed to Ardashîr. But the town was thought to be later than that of Bay and Dîruft (Sykes, following Afûd al-Dim). A district to the south-west of Kirmân still bears the name of Bardast. In the ninth century, when Ibn Iyâs had just occupied it, it was not yet very large. In the eleventh century Yaftân describes it as the largest town of Kirmân. The name of Kirmân was given to it as capital of the province of that name. The official honorary name of the town is Dîr al-'Amân.

The town is situated at the meeting place of three valleys at a height of about 6,000 feet, 12 miles to the north of the Dîrâjar chain of mountains. The surroundings consist almost exclusively of steppes and possess very little cultivated land. Between Kašâ'i Ardashîr, already mentioned, and the town is a ruined citadel at a lower elevation, Kašâ'i Dukhtar, which must have been formerly in the town. All the plain to the east and to the south of the town has a large number of remains of buildings. There are found here very beautiful pieces of façades and other archaeological remains. The town itself is surrounded by a wall of baked clay with four gates. A quarter outside the walls to the north-east is that of the Zoroastrians, Mahâll-i Gehr. The citadel is situated on the western side. Hamîd Allah Masûfî (Nâzâq al-Kifî, p. 140) speaks of a mosque built under 'Umar b. 'Abî al-Fâ'îsîr, but the most ancient mosque is at the present time the Maşîdjî-dî Malik built by the Seldjûk Tûbî Shâh (1084-1096); this mosque was already in ruins in the 7th century, but has been restored. The other two important mosques are the Maşîjid-i Dâsimî built, according to an inscription, in 1349 by Mubârîs al-Dîn Mu'âsîr.
and the Masjid-Pir-Mümrir, erected by the latter's brother Imam al-Din. A monument destroyed by an earthquake in 1896 was the Gumbad-i Saba, a building of cylindrical form covered with mosaics of a greenish blue. According to information given to Sykes it was the tomb of one of the members of the dynasty of the Khatligh Khans, built in 640 (1242). After the destruction of the town in 1794, it was rebuilt under Fath Ali Shah, but it is only begun to prosper under the governor Wakil al-Mulk about the year 1860. (A plan of the modern town is given opposite p. 188 of Sykes, 40,000 Miles, etc.). The number of inhabitants increased in the last part of the nineteenth century. Schindler in 1878 gives the figure as 41,700 and Sykes in 1900 as 49,120. The great majority are Shirs; next come the Shaikhs (6,000), the Bāča (3,000), and the Zoroastrians (1,600). The Jews form a very small group of seventy souls. Kirmān owes its very great industrial reputation to its shawls, but this industry has been surpassed by that of carpets in wool and in silk. The workers are almost exclusively men; Sykes estimates the value of the exports at £40,000 annually. Another important industry is the manufacture of felt.

KIRMAN, KAMAL AL-DIN ABBAS L-‘AZZI MAHMUD B. ‘ALLI OF KIRMAN, known as KHWAJU KIRMAN [the name ‘Alamgir is a diminutive form from ‘Alamgir; cf. Grundzüge der Iran. Phil., i., 185; another instance of this formation, not noticed there, is ‘Erıb from ‘Erıbi, Djalal al-Din Rumi, Mafzavi (ed. Nicholson) i. line 2169], a Persian poet, born, as stated in the epilogue of his Gul u-Nawbar, Shamsal 5, 679 (Jan. 28, 1281) at Kirman. He died at Shiraz, probably in 753/1352; the date 742, given by Dallatahān, is erroneous. Men of letters gave him the surname of Nakhšiān ‘Ishāqī (or ‘Isānān) (Dallatahān, Tabakh, p. 249; Vullers, Lexicon, ii. 1501). Biographical details are about him. He belonged to a distinguished family, and seems to have travelled widely. That he stayed some time at Baghdād, appears from the lines from his Humay u-Humayūn quoted by Dallatahān, ed. cit. Kirman was a master of Rukn al-Din al-Samānī (736/1345) and lived some time as a mystic in Shirbadh (in Khurāsān, cf. Ritter, Erdkunde, viii. 396).

His first patron seems to have been the Mongol ruler Mubārak al-Din Muhammad of Yāzd (713/1314 — 759/1358) (deposed), died 765/1364. Afterwards, Kirman was in the service of Amir Shāh Abū Ḥabīb (viz. Djalal al-Din Shāh Abū Ḥabīb, prince of Shāhīd till 754/1353; killed by order of Mubārak al-Din in 757/1359). The poet died at the court of Abū Ḥabīb. A son of Kirman is mentioned in his Kowmālānma (see below).

Works: Khwaju Kirman wrote a Khamsa, in imitation of Nīfānī, as is the case with many of the later Persian poets, and a Dīvān. The Khamsa consists of:

1. Humay u-Humayūn, a romantic poem, in the metre of Nīfānī’s Isandhārinānā (i.e. matlāb, because it treats of a subject from Persian heroic tradition). It contains 3202 dhahī, it was composed, according to the epilogue, at Baghdād in 732. The prologue contains the mouth of the Ilkhān Abū Sa‘īd and his wazir Ghiyāth al-Din Mubārak; it states, that the poet was induced to compose the work by the high dignitary Abū ‘l-Fath Madjal al-Din Mubārak. This maftūh describes the adventures of Humayūn, son of Shīh Hüsayn, and his love of Humayūn, prince of China. Notwithstanding the intrigues of the princess’s father, the Faghān, the lovers are united, Humayūn’s father perishing in battle by the hand of Humayūn.

2. Naw cors u-Gul, also a romantic poem, in the metre of Khwānīr u-Mīrūn, containing 3615 dhahī. It was completed in 742 (chronogram), dedicated to
Kirmâni — Kirmânhâsh

Tadj al-Din Ahmad 'Irâsî (a wazir to the Mucaffarid Mubârak al-Din), and relates the love-story of Nawrâz, son of king Firuz of Kirmânsh, and Gul, daughter of the emperor of Kirmân. With the main narrative are interwoven three minor stories, told to the prince to console him in his love-sickness.

3. Kirmânshâh, on ethics and religion, in the metre of the Ṣafiī Khâjah, composed 744 (chronogram); this year is given as the date of compilation of the Kâma'm (Rieu, Cat., p. 620). In the prologue, the Muslim saint Abu 'Ishaq Ibrahim al-Kashânî († 430/1045) is praised; in the epilogue the poet addresses Amir: Shâh 'Abî 'Ishaq, the ruler of Shirâz, and also his own son Mujâhid al-Din Abu Sa'id ʿAli. The poem is divided into 888's, in one of the manuscripts numbered from 1-12.

4. Rûmâdat al-Arwâr, mystical; a counterpart to the Muqaddam al-Arâr (Dawlatshâh, p. 251); composed 743 at Kâšân, according to the epilogue. It is divided into 80 maqâmât. The dedication is to Shâh al-Din Mâhmûd b. Sânî (killed in battle 746/1345, as wazir of Abu Ishaq of Shirâz). The Rûmâdat passes for the first poem of the Kâma'ma.

5. It seems not to be possible, to determine with certainty which of the other works of Kirmânshâh should be reckoned as the remaining part of the Kâma'm. It may be, that it is the poem entitled Muqaddam al-Kâfir wa-Muqaddam al-Shâhâb, which is found in the manuscript No. 332 of the Library of the king of Oulh. This poem, consisting of 28 maqâmât, appears, from the headings given in the catalogue, to treat of religious topics.

After the Kâma'ma, we have:

6. Gâvârshâhâ; the aim of this poem, also a maqâmâmây, is the praise of Bahâ' al-Din Mâhmûd, who was wazir to the Mucaffarid ruler, and claimed descent from the renowned Nâgin al-Mulk. Besides the wazir, his ancestors are also praised in the work. The date of its composition is 746 (chronogram).

7. Divvân Dâwalshâh (or his authorities) say, that the divvân of Kirmânshâh numbers 20,000 verses (cf. also Sprenger, Cat., . . . Oulh, p. 472); it contains šâhid's, mostly panegyric, e.g. on the Mucaffarid Mubârak al-Din and Shahâb 'Abî Ishaq; and also on the persons, landed in the Gâvârshâh, and besides on other great men, as for instance Shâhâbad b. Minhâzh. A letter to a Shâhshâh, ruler of Shâhârân and Shamsâbâh, from the part of the great wazir Rashid al-Din is extant (Brown, Persian Literature under Tartar dominion, p. 83); the person, praised in the Divvân of Kirmânshâh may have belonged to the family of Rashîd al-Din's address.

Further, the Divvân contains gûzâr, muqaddamât, rubâyât, etc.

Finally, a tâṣâhûl of this poet (restrain: šâhid dîjâhan gûzâyast u mânâ a dîst | zar bi mânâ mâyak hurst, hama hûst) occurs in the Leyden manuscript 274, fol. 463 verso — 464 verso.

The little that is printed of Kirmânshâh's poetry will be found in the works, cited in the Bibliography. From these scanty extracts, it is impossible to form a judgment on his merits as a poet; therefore, the opinion of Sinor, who has the opportunity of reading a great part of the Divvân, may be repeated here: "his verse, while graceful and pleasing, lacks any conspicuous distinction or excellence."
with this event it was for under Ajud al-Dawla that the Bâyids became masters of the province of Kirmâshâh [q.v.]

Kârmâshâh was peacefully occupied by the Arabs after the taking of Ijâlân (in 640; Bâlgâhâr, p. 301). The district of Mâh, belonging to the province of Lîjâhâr, was then granted as an appanage to the inhabitants of Kûsâ and Bâgâ. The upper part became Mâh al-Kâsa with Dinawar as capital; the lower part was Mâh al-Hâzâr with Karminsî in its capital (Bâlgâhâr, p. 301). Kârmâshâh, p. 225) in Dinawar [q.v.], was however a much more important town than Karminsî (cf. especially Schwartz, p. 479) and the geographers of these times mention it mainly as a stage on the road to Baghâdâd—Kârmâshâh—Hâlîwân—Kârmâshâh—Bûsînân—Hamadân. Another important road ran from Karminsî to Nîhâwân. The town is described in this period as pleasantly situated in a very fertile plain. It was ruled successively by the Abâbâlsâs, Bâyids—in their time it must have formed part of the territory of the Kurd dynasty of the Hasanawîs [q.v.], although it is not mentioned in the Kurd chronicle of Sharaf al-Dîn—and the Schîfa; in the Mongol period it had sunk to a mere village (Hamd Allah Kâzîmini).

The importance of Kirmâshâh began under the Safawîs after it had become a frontier bulwark of the Safawîs. The inhabitants had stationed themselves in dangerous proximity in Mesopotamia, especially after the time of Murad IV. The Turks several times occupied it in their wars with Persia, for example in 1630 during Khusrâw [q.v.] Pâshâ's expedition. It was then a fortified town with a brick wall; see the description in Ewliyâ Celebî (iv. 353) who attributes its foundation to Shâh Ismâîl, which probably means that he fortified it for the first time. After the fall of the Safawîs (1722) the Pâshâ of Baghâdâd succeeded in occupying Kirmâshâh, but he was driven out by Aghâfīr Kâhû. In 1731, the Turks again occupied it to be expelled by the future Nâdîr Shâh. The treaties of peace of 1732 and 1736 left Kirmâshâh to Persia (cf. von Hammer, G. O. K., viii. 404 sqq.). In 1754 Mirzâ Muhammad Taqî Kânî became its governor for Nâdîr Shâh. He later made himself independent until Kârim Khân Zâmi took the town in 1766 after a siege of two years. Under the Kâdirîs Kirmâshâh increased in importance; in 1790 it had about 6,000 inhabitants (Buchanants, quoted by Ritter); but by 1810 there were already 12,000 houses (Kimnîr, in Ritter). Under the governorship of Muhammad 'Ali Mirzâ, son of Fâth 'Ali Shâh, who lived at Kirmâshâh as an almost independent vassal, the town became a formidable bulwark against the Turks. After the Turco-Persian peace of 1823 'Ali Mirzâ was sufficiently powerful to annex to his province the large district of Zohab which ought to have been restored to Turkey. A complete list of the governors of Kirmâshâh under the Kâdirîs to 1905 is given by Râhîbî (see Bibliography). As recently as April 1915 the town was occupied by Turkish troops; they conducted propaganda on behalf of the Central Powers there until they were forced to retire in March 1917.

Kirmâshâh at the present day is rather the unusual case of a province; the town is called more correctly Kirmâshâh. About 1805 it had a population of about 60,000 (Râhîbî) and owes its prosperity to its position on the great trade route of considerable antiquity (al-Djâahda in Ma'dîrî) from Baghâdâd to Hamadân (Kirmâshâh is 100 miles from each of these two towns); the traffic through is enormous. The same road is used by the Shîa pilgrims who visit the sacred places of the 'Istâbû Hâmashâh posses no ancient buildings; the ramparts have been demolished and the most remarkable building is the arsenal, which is also the residence of the governor, built beside the great Toâ Mâdîrî. The town contains a large number of caravanserais; there is not much local industry, the manufacture of carpets having disappeared. The majority of the citizens are Kurds, then come Persians, Turks, Jews and Christians. The surrounding plain is very fertile. Ewliyâ (loc. cit.) and Hâdîjî Kâlîfî (Dhî-Ba'nâmâyî, p. 302) make special mention of the cultivation of saffron.

The province lies between 34° and 35° N. Lat. and 44° 30' and 45° 30' E. Long., the capital is almost in the centre; in the western part are Kerînd and Kaş Shîrîn [q.v.] and in the eastern Asadshâh, Kangûâr (formerly Kaş al-Lu'ûs). Bûsûnât [q.v.], Nîhâwân [q.v.] and the ruins of Dinawar [q.v.]. It is rich in monuments of the Achaemenids and Sâshânids, which are mentioned with more or less detail by the old geographers, such as the famous sculptures of Tâq Kâstân, three miles east of Kirmâshâh, to which the geographers give the name Shâblîh or Shîbalîh from the horse of the king Khusrûw and the plateau (dahîbîh) where Khusrâw Parwîz is said to have received the submission of the kings of the earth in a hall of audience with 100 columns (cf. also Shâbîru).

It is one of the richest provinces of Persia. It exports wheat and rice and grows for its own use, maize, clover, castor-oil and cotton. It has a population of about 300,000 and is divided into nineteen districts (bulûtâk), many of which are named after the tribes which inhabit them. Rahîbî gives forty-four names of tribes for the province (cf. also Carzôn, i. 557) who are for the most part Kurds. The largest Kurd tribe is that of the Kâhlîr (mentioned in the Kurdish Chronology of Sharaf al-Dîn) to the south-west who have given their name to a district. Another important Kurd tribe is that of the Sindjârîs west of Kaş Shîrîn. Their winter pastures are east of Kirmâshâh. Of O. Mann (Die Mundarten der Luristan im südlichen Persien, Berlin 1910, p. xxi.) although the Lûk in the proper sense of the word live in Luristân. In the south of the province there are tribes of Kurds. The greater part of the semi-nomadic population are 'Ali Lîhî (q.v.). Besides the two groups mentioned above there are several small tribes of Arabu and Turks which have become allied to the great Kurd tribes.

[J. H. Kramers]

KIRMĀSTI, capital of a kāšān of the same name in Anatolia, 15 miles S.E. of Mihkāli, (cf. J. H. Mordwimann, in Z. D. M. G., lxxv. [1911], 101) and 40 miles S.E. of Bursa with about 5,000 inhabitants, 3,000 of whom are Muslims. The town has 14 quarters with 800 houses and lies on both banks of the Eridanos Cağ (Rhineadsa). The origin of the name often wrongly written Kirmāši, which points to a Greek name, is uncertain, nor is it known what ancient town was here. Perhaps the Karmastas in the Troas (cf. Panay-Wissowa, l. 743) mentioned in Xen. Hist., iv. 8, is to be connected with it. In the Byzantine period Aosta is said to have been here where the war of the Alans (Commune) under Ambrose were defeated in 1113 by the Seljuks (cf. Anna Comn. l. 279 sqq.). In any case there is a church to K. a Byzantine castle in ruins which resembles that 6 miles farther up the river Eridanos Cağ at Keselerlak and presumably was intended with similar defences at Ulubad (Lopadion) and Bursa to keep back the advance of the Ottomans. In the town which has 6 mosques, including one large very old one with a turbe and 14 madjīds there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not seem yet to have been studied. The history of Kirmāstt under the Ottomans is quite obscure, as there are no records. Ewliya Celebi (v. 290) and European travellers (cf. W. Hamilton, Researches in Asia Minor, l. 77, 80, l. 93; London 1842) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāsta, which did not suffer from the Greek occupation, was recently (1925) renamed Mihkāli. Kemal Paşa in honour of the Turkish President Kirmāist is the birth-place of Seyyid-i Wilayet (d. 1529 = 1522 in Sumbali), vizier of the historian Asbih-i Tashkûnd, known from the Memālik-i Taṣrīḥ al-Namāfra, p. 352, 13; known from the Memālak-i Taṣrīḥ al-Kirman (l. Seyyidili Ebn-i Wefld); cf. Pertash, Turc. HSS. Goska, v. 137, No. 166 and Ternberg, Catan. Uppsal. p. 211, No. 741. For st. 1.

Two hours' journey from Kirmāst are two hot mineral springs, called: Dümblüldak and Ahradja.

KIRISH. [See GERMEL].

KIR-SHEHİR, (Turkish kir-shehîr — "town of uncultivated lands"), a town in Asia Minor, capital of a Sandjak in the province of Angora, 97 miles (33 hours) S.E. of this latter, on a river called simply Kırish, a tributary of the Kıril-Kirmi, which flows at a distance of two hours from the town and is crossed by the stone bridge of Kırish with thirteen arches (about 110 yards). Its height is 3,390 feet. The houses are scattered among gardens which extend in length to a distance of 10 miles and in breadth to that of 3 miles; these gardens are situated in the North the name of Or, in the West of Çafir-Cašr, in the South that of Deinek, and in the East that of Kandım; it has an abundant harvest of fruit, especially of grapes. The population consists of 8,642 inhabitants of whom 7,794 are Muslims, 657 Armenians and 17 Greeks. There are 25 great mosques (Seldzjuk mosque of Deideley); 10 small mosques, 4 madrasas, a civil preparatory school, a secondary school, 2 primary schools, a church. Several Muslim saints are buried there: the poet Ashikh Pasha (d. 825 = 1425), Ashikh Oren, Shuvish Sualimwan. At the suburb is held the fair of Yapraklı; it has hot springs: Tercem (Beyaz) or Karghan-Kayna, ferrengi, used as a cure for scurvy, a quarter of an hour away; Kāra Kari, sulphurous wells, a cure for nervous disorders, 8 miles away. Manufactures of carpets of wool and moltu (hitl) for the salt (sadqije'da, q.v.) and for the room (fahtı), for curtains (yar-bil, yar-bil gilim), for wallets (hiwi), in three qualities: striped (hilabas); the same in a finer quality: haram, woven mats; chairs, arm-chairs, cupboards of walnut wood. To the west the mountain of Emir-bura, in the middle of it facing south the immense cave of Göbek-İla.

The Sandjak is divided into four Kāšāns (Kirsheh) to which are attached two nahiyya, of which one is Hacidi Bektaš (q.v.), Kusin (capital Ma'den). Medjidiye (capital Beyali, Kurd village), Awanos (Ahatin). It does not include any high mountains; it has a chain of hills called Bahr and Dagh which extends for 14 miles in length in the vicinity of the capital and terminates in Kür. Bell. Millstones are obtained from the hill All Korhi. Two lakes, one quite near the town at Shehli Baghli, Dib-Sia Göl (the lake without a bottom), and the second in the canton of Medjidiye, Yanar Göl, near the village of Vanarnglu, which has given it its name. Total population, 119,139 inhabitants, of whom 116,999 are Muslims, 1,794 Greeks, 246 Armenians. Agriculture is only slightly developed. Roads suitable for vehicular traffic are hardly made completed: towards Cesarea and Angora, 80 miles; towards Ma'den, 40 miles; towards New-Sheher, 55 miles.

Kirthăs (A.), paper. This word is found in the Kur'ān (vi. 7) with its plural harāshī (vi. 91) where they can only mean papyrus. The Egyptians wrote on the ḫāṣīr manufactured from reeds called hardi (Fīrārs, l. 21). Chinese paper, wārkū, is made from vegetable fibre, handhār, after microscopic examination has indeed shown that this paper is made, not from cotton, but from various fibres (F. A. 1925, cvii, p. 159 qv); while this paper of Khorasan is manufactured from linen fibre, kātāw, by Chinese weavers in imitation of that of their own country (Fīrārs, ibid.). More details are found in the article KIRSH.

Kāfīda in Ṭabar, Tafelr., vii. 90, translates ḫāṣīr by ṭābīr which tells us nothing.

[CL. HOYDART]

born at Kīfa; died at Rāhīnā, not far from al-Ray, about 189 (805). The following dates are also given for his death: 170, 180, 182, 183, 185, 193, and 197.

After having studied in his native town, he came to Baṣra to study with al-Khalīf b. Ahmad (see this article) who advised him to go and study language amongst the tribes of the Ṣaḥābah. Of his return to Bāṣra, he found that al-Khalīf was dead and had been succeeded by the grammarian Yūsūf b. Ḥabīb al-Baṣrī, who after several discussions on grammar, gave up his place to him. Nevertheless, he took up his permanent abode at Baghdad where he taught chiefly Kūrānīc dialect, first in accordance with the method of his master Ḥamza al-Zayyāt, and afterwards he followed a method of his own; he is the seventh still, and because of that he is counted amongst the seven canonical readers.

Hārūn al-Rašīd intended to him the education of his sons al-Amīn and of al-Maʿmūn. In spite of the opinion of the Imām al-Shāhīrī who praised exceedingly his grammatical knowledge, al-Kīṣāt was especially weak in grammar, and his partisans admit that he only latterly concerned himself with this science. In any case he had numerous adversaries, whom he dealt with in a fashion neither honest nor just, notably Ṣīwāwī, al-Yāṣīḥī.

Of his numerous works, it appears that we have no more than one, Kīṣāt fi ḥālīn al-ʾammā, "a treatise on the mistakes of the vulgar language," which seems to be the oldest work composed on this subject and was published from the Berlin manuscript No. 7103, by Brockelmann in Zeitschr. f. Assyriol., xii. (1898), 29–46 (cf. below Nöldeke, ibid., p. 111–115).

**AL-KĪṢĀT, the author of the two Kīṣāt, Kīṣāt al-ʾAnbīyāyīn:** is identified by Ḥādīthī Khānī, iv. No. 9437 with the grammarian and Kūrānīc reader Abū ʿl-Ḥaṭīrī. (see the foregoing. This identification, first adopted by Herbelot, Bibl. Orientale, 1861, but rightly disputed by Lidsbarski, following Persisch und Arab. in his De prophetis quae in dicuntur legenda Arabis (Leipzig 1865, p. 25) was again accepted by Wellhausen in I. Eisenstein's dissertation, Die Prophethenlegenden des Muḥammad ben Abdallah al-Kīṣāt (Berne 1898), v. L., on the assumption that the work was not actually by this celebrated scholar himself but had been ascribed to him. The evidence of most manuscripts is however contrary to this view; they sometimes call the author (Abū ʿAbdallah) Muḥammad b. Abdallah, sometimes Muḥammad b. Abū ʿl-Hārīrī, sometimes Ṣuḥābī b. Muḥammad (sic). Besides it can hardly be doubted that the author is identical with the author of the Kīṣāt al-Malākūt (Haddījī Khurāsānī, ir. 8075) or simply Kīṣāt al-Malākūt (ibid., ir. 10572) whom Haddījī Khurāsānī calls Abū ʿl-Fārī Muḥammad b. Abū Abdallah al-Kīṣāt, and of the Kīṣāt Bad al-Dunyāy, whom he mentions by name without the suffix, ill. 991. This latter work is lost but perhaps it was only an independent edition of the first part of the main work, which in the manuscript is sometimes also called Kīṣāt Bad (Kūrānīc) al-Dunyā wa-ʾl-ʾAwālāt. The period in which the author flourished is nowhere mentioned. Contrary to Eisenstein's view (Diss., p. 69) nothing can be deduced as to this or the grammarian's authorship of the book from the statement of Haddījī Khurāsānī, ib. 9477 that Sahl b. Abdallah al-Tantūrī (10572) wrote Kīṣāt Bad (Kūrānīc) al-Dunyā wa-ʾl-ʾAwālāt; for Haddījī Khurāsānī does not say that this work was the basis of that of al-Kīṣāt. Al-Thaqlaī (10572) does not mention al-Kīṣāt but an investigation of the sources and the authorship of the two authors has still to be made, so that nothing can be deduced regarding the age of al-Kīṣāt. From the whole character of his literary activity one must agree with Alwārī in putting the author in the 5th century A. H.; while al-Thaqlaī's work grew out of Kūrānīc exegesis and is intended for learned circles, al-Kīṣīt is a typical representative of the class of ʾḥalītī; he relates the legends to edify and especially to entertain the reader. He therefore quotes only the oldest authorities, like Kaʿb b. al-ʾĀṣ, ʿAbdān b. Wāḥbih, which, although he likes to appear scrupulously accurate; but his quotations are not of the highest value for literary criticism. The work, which exists in numerous manuscripts (for those describe in G. A. E. L. 330, may be added: Gothic, Pers. Vers., No. 1839; Brit. Museum, Ellis and Edwards, A descriptive List, p. 34, Ort. 5820; E. G. Browne, A supplementary Hamilton, No. 1012; Princeton, Littmann, No. 28; Cairo, Fihrist, v. 113; Damascus, Zaīyā, No. 74, 59); being a popular work was not always carefully treated by the copyists, but often arbitrarily abbreviated; it has also been translated into Turkish, by H. L. Fleischer, Catalogus cod., see. ed, ibid. Dresden, No. 128.

**KĪṢĀT, HĀRĪM MAḤRĪD AL-DĪN ABĪ ʾIRĀQī** (or ABū ʿl-HĀRĪRĪ) KĪṢĀT, a Farsi poet of the second half of the fourteenth century A. H. belonging to the first period of Persian poetry. He was
born in Merv on Wednesday 260 Shawwal 341 (March 16, 953) and according to most authorities died in 392 (1002); one source however (Wallib, quoted by Ethel), says that he reached a very advanced age. A few of his poems have been preserved in the dump taqhdira; they have been published by Ethel (Die Gedichte des Khwāja, 2 Bd. in 8. Jassy, 1874, p. 133-149). These poems illustrate the whole repertory of Persian poets of the time; the best known is that of Khwāja in which the poet gives the date of his birth as above and says that he composed it at the age of 50; this, taqhdira is picturesque and ascetic in tendency. The taqhdira describes him as a poet who celebrated the praises of the Prophet in numerous poems (a shifa of this kind is given in Ethel's article). He is also said to have written taqhdira in praise of the Sūnānī and of Sultān Muhmūd of Ghur. He must have been a celebrated poet in the Sūnānī period; the later taqhdira's however (such as Dawlawath), do not mention him.

The Khwāja of Nāsir-ı Khwarazm contains several passages in which the latter speaks contemptuously of Khwāja Ethel (Grundriss der iran. Phil., ii. 281-283) has concluded from this that Khwāja must have been still alive in the time of Nāsir (c. 1040) so that he must have lived to a great age. Ethel further seeks the cause of the antagonism between the two poets in their theological views, Khwāja being a 'Tawwīl' (Islamic-orthodox) Ethel and Nāsir-ı Khwarazm a 'Sevecan' (taqfa). But Browne (A Literary History of Persia, i. 156-164) holds that Nāsir's influence is only intended to maintain his superiority as a poet, that Ethel's conclusions cannot be accepted, even that regarding Khwāja's age, because there could be nothing astonishing in Nāsir-ı Khwarazm's attempts to surpass one of the best known poets of the preceding generation.

KISĀS (A.); synonymous with kawād, retaliation ("settlement", not "cutting off" or "prosecution"), according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case یہیش and یہیش (blood-vengeance) and in the latter یہیش and یہیش (blood-vengeance.

2. Muhammad takes it for granted that the blood-vengeance of Arab paganism — in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the deor himself, forms the essential feature of the vengeance (cf. Procksch, op. cit., p. 6 and note 5) — is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Kurān xvii. 35; xxv. 68; vi. 152 (cf. KAT, i. 1); in these passages only the ḥaṭaṭa or can be understood by the right to kill another; already in xvii. 35 the avenger of blood is forbidden to kill any one other than the guilty one; ii. 173 sqq. (before Ramadān of the year 2): "To you who are believers the یہیش is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother he shall be dealt with equitably... and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In یہیش you have life, you of understanding..." (the first verse says that a freeman can only be slain for a freeman, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a freeman, but this is not expressly stated and must be deduced], naturally of course only the guilty one and that in all other cases the payment of compensation (dīya) takes place. This is an extension of what is presumed in the earlier passages; the treatment of the freeman in relation to the slave is a matter of course according to old Arab views and that of the woman, which cannot be completely explained from them, represents an independent decision of Muhammad's based on them [there is quite a different interpretation of the verse in Procksch, op. cit., p. 75 note 5]. The commentators had difficulty in reconciling the passage with later developments [cf. below 4]. Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 (see below). By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of یہیش with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved; v. 49 (after the first encounter with the Medins Jews but before the outbreak of open hostilities) "and we have prescribed for them (the Jews) in it: (Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and یہیش for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins) ..." (this verse of course does not cancel it). In the years 3-5 with iv. 94 sqq. there came the distinction between deliberate and accidental killing (of KAT, i. 1); in this the application of یہیش is excluded; in i. 190 (before the campaign of the year 6) یہیش is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the شر, the records of the life of Muhammad, are in agreement with this. In the so-called ordinance of the community at Medina, which belongs to the early Medinas period it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority). — Muhammad is therefore required as a condition for the carrying out of یہیش, retaliation takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the murderer and can only take an active part against him. Here the یہیش is brought from the sphere of tribal life into that of the religious-political community (amma) which finds an echo in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood
split for the sake of Allah, but is throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, no one is to be prevented from avenging a wound. A limitation of *hizāq* logical from the standpoint of the sharia lies in the fact that the believer is forbidden in the ordinances of the community to kill a Muslim on account of an unbeliever. On two occasions when Muslims had killed heathens who had however treaties with Muhammad, he did not allow *hizāq* to be made "because they were heathen" (this does not in any way follow from the ordinance of the community) and even paid the compensation himself; his utterance regarding the possibility of *hizāq* a propos of the second of these cases is however illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undeniably had the claim to *hizāq*, but in one case he cursed the murderer—again an illogical attitude. Muhammad in his turn after the capture of Mecca in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaying of a nephew of his, which had taken place during the heathen period, in return for the marriage of one of his daughters to the murderer. Thus he laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. Kātīl, i. 2). But Muhammad also intensified the operation of *hizāq* and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between *hizāq* and compensation; the prescription and execution of murderers who were also *muʿādhdhin* (q.v.; cf. Kātīl, ii. 5) is however to be interpreted differently; from everything it is clear that Muhammad also supervised the carrying out of *hizāq*.

Taking the evidence of the Kurān and the Sira together, it is evident that Muhammad did not recognise the blood-feud, but allowed *hizāq* to survive as personal vengeance, only he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all impossible sanctions by which it was brought into character to the punishments that Muhammad gave at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (hadiths) that one must be genuine according to which Muhammad had a Jew, who had smashed the head of a Muslim *gāfira* (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when Kurān ii. 173 (cf. above § 2) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as *hizāq* for a woman, without observing that the tradition referred to an unbeliever while the Kurān passage was only concerned with Muslims. But this Kurānic prescription regarding the woman was very early neglected and interpreted differently. When Ibn al-Hajj al-Bubul, Abi 'Azzī and 'Irkhān are quoted as representatives of the Kurānic view that a man cannot be put to death for a woman (Zamakhshāri on Kurān ii. 173) but Sa'ūd b. al-Munayyib, al-Sha'bi, Ibrahim al-Nakhlī and Ḥādūs had held the opposite view (ibid.) and the latter opinion prevails in the law-schools without any opposition (Zamakhshāri's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that *hizāq* could be inflicted on several, on account of one individual, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the *hizāq* is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muhammad's. There are also varying opinions as to whether a man can be put to death on proof by *jihāma* (cf. § 5) and ancient authorities are quoted for both; the historical truth is perhaps that Muhammad wished to apply *jihāma* in a case of bloodshed and when it could not be resolved by deliberation itself; besides it is said (certainly wrongly) that he confirmed *jihāma* as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only *hizāq* and no possibility of paying compensation (this is wrongly cited in explanation of Kurān ii. 174) and that Muhammad granted the blood-avenger's request to abandon claim to *hizāq*, laid great stress on forgiveness, and even asked him to do so (cf. above 3; in these historically certain cases, however, his attitude was influenced by purely political considerations); finally we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned and need not therefore be quoted, especially the hadiths on this subject a collected in Guillaume, The Traditions of Law, p. 207 et seq.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islam in the early period, we must notice in contrast to Muhammad's period the important change in the treatment of women, which marks an undeniable advance, just as the request for forgiveness is evidence of a looser point of view.

5. The *hizāq* fe 'l-mafī according to the Shāfiʿī. In the cases of illegal slaying noted in the article Kātīl, i. 5-7 *hizāq* comes into operation, i.e. the next-of-kin of the slain man, who in this capacity is called *maša* 'l-dām (avenger of blood) has the right to kill the guilty man under certain conditions. From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations—disputed in the beginning of the centuries—prescribed for the case when the avenger in any way mutilates the murderer. Here only occasionally the idea of punishment by an authority for the sake of justice crops up (thus in all cases of culpable; illegal slaying in which *hizāq* cannot take place, taʿṣir intervenes; the competent authority is therefore regarded as the wali of one who has no wali; therefore anyone who kills a dhimmi, muʾāhdin (an unbeliever
connected with the Muslim state by a treaty) or a 
*musta'min* (an unbeliever who enters a Muslim
country after being given a safe conduct) first,
according to Malik, be put to death and the call
has no right to abandon claim to the [he]. On the
other hand, however, it is laid down that anyone
who kills a *musta'sal* slave goes free.

1. From the above-mentioned words, it is
obvious that the point of view is found at all in a step in
advancing, for Muhammad's decision in this connection
(cf. above 3) were only dictated by the demands
of the individual case; in other matters also in
certain points were a looser attitude adopted,
at least in some of the schools.

For the application of *fiżāī* the fulfillment of
the following conditions are necessary: 1) The life
of the person slain must be absolutely secured
by the *gāfers*; this is the case with a Muslim,
*al-šumā'ī* and *ma'dhāb*, at least so long as they
are in the *Dār al-ikhlās* [q.v.], and *Dār al-
*ṣadha* [q.v.]; in the case of the slaying of a
Muslim prisoner in the *Dār al-ṣadha* [q.v.] it
is unanimously agreed that there is no *fiżāī*.
For the slaying of another Muslim, there is no
*fiżāī*; according to the Hanifi school; there are
the corresponding regulations for the *al-šumā'ī* and
*ma'dhāb* against the *musta'min*, *ma'zad* and
*ḥarāb* [but *fiżāī* may be inflicted on a *ma'zad*
if he kills another *ma'zad*]; and Malik makes
*fiżāī* the general rule if anyone kills a *ma'zad*,
without the authority of the Imam. This point
of view is to be distinguished from the conception
of the illegality of the slaying (cf. *Kats*, i. 5)
which although the two ideas have a certain amount in
common; the killing of a *musta'min* is illegal but
there is no *fiżāī* (apart from the special case just
mentioned). 2) The slan man must not be a
descendant of the slayer, nor the slave of the slave
of one of his descendants, nor must there be a
descendant of the slayer among the heirs of the
slave man. 3) It is further taken for granted
that the man when he committed the deed must be
of years of discretion and be in full possession of
his faculties. 4) The further conditions are discussed
(cf. below). — Any alteration in these relations of
the doer after the deed has decided no difference to the
old blood-guilt (it is, however, to be noted that
the adoption of Islam by a *ḥarāb* wipes out all
previous blood-guilty; with the exception of hunayn
(in which case *fiżāī* cannot be inflicted), nor does
for example, an alteration in the relations of the
slave man after the doer has decided on the deed
but before it is actually committed (but there
are various views on this point). If one of several men
who have slain someone jointly cannot be put to
depth for one or other of these reasons, the others
also have no right to *fiżāī*; this is also the case if a further
reason for killing leads to the action of the slayer.
If the slayer dies before *fiżāī* is carried out, all
claim by the avenger of blood-gees according to
*Abā Haifa* and Malik; according to *al-Shaif* and
Ahmad b. Hanbal compensation can still be
claimed.

Malik, *al-Shaif*, and Ahmad b. Hanbal further
say that before *fiżāī* can be allowed, in addition to the
conditions mentioned the slave man is at least the equal of the slayer as regards Islam
and liberty, so that they certainly uphold Muhammad's intentions, while the Hanifi
school interpreting differently the evidence cited—
take no account of this and therefore occupy an
undoubtedly higher position. A particular view of
Malik's has already been mentioned. According
to Malik the slayer can further be put to death,
if he has deliberately slaughtered his descendant
and this view is also admitted in the *Shafi* school.
Several may be put to death for the killing of
one, according to Abū Haifa, Malik and *al-Shaif*,
if they have done the deed together. But in the case
the part taken by each was such that if he had
acted alone, the result would have been the same
(Malik alone excluded *inā'; cf. below) on the
basis of which, according to him, only a single
individual can be put to death. There is unanimity
on the point that anyone who has killed several
people is liable to *fiżāī*; on the question whether compensation has also to be paid there are
different views.

*fiżāī* can only be applied after definite proof
of guilt is brought. The procedure of proof in a
murder trial is essentially the same as in another
case; in *fiżāī* it is faster there is however also the
old Arab institution of the *sulamu* (cf. *Kats*
and Goldziher, *Zeitschr. für vergl. Rechtswiss-
schaft*, 8, p. 412 sqq.; Wellhausen, *Recht arabischer
Heidentums*, 4, p. 187 sqq.) which Islam allowed
to survive (cf. above) according to Malik, Ahmad
b. Hanbal and al-Shaif's earlier opinion, *fiżāī* can
be inflicted on the accused (but according to Malik
on one only) if the *sulamu* is performed and the
other conditions are fulfilled, according to Abū
Haifa and the later view of al-Shaif, which
became predominant in his school, he has only
to pay compensation; among the Shafi', with
the limitation that he may be put to death if
in the course of the trial the accuser swears to
his guilt twice with fifty oaths each time. If the
person entitled to inflict *fiżāī* does so without
previous judicial proof he is punished with *ṣa'd.*
The execution of *fiżāī* is open to the averger
of blood and according to Abū Haifa consists in
beheading with the sword or a similar weapon;
if the avenger slays in another fashion he is
punished with *ṣa'd*, but not imprisoned; according
to al-Shaif.

Malik and al-Shaif's the guilty person with
certain limitations is killed in the same way as
he killed his victim; both views are given by
Ahmad b. Hanbal.

*fiżāī* takes place — among other conditions
— only when the next of kin (*wali*) of the slain
man or the owner of the slain man, if he was a slave,
demands it; if there are several (equally
nearly related) avengers of blood all must express
this desire; if one of them remits *fiżāī*, the refusal
affects all. Views are divided on the case where
the avenger of blood (or one of several) can give
no definite expression of opinion. The *wali*, or
the wounded man before he dies if the case occurs,
is permitted to remit the *fiżāī* and he is even
evenly recommended to do so, either in return
for the payment of compensation or for another
thing equivalent or for nothing. There are many special
regulations on detailed points and many differences
of opinion between the schools of law.
permission has inflicted an injury, not fatal, which could be inflicted on the dead person in an exactly similar way (what is meant by this is very fully discussed in the Fih book). He is liable to be punished by flogging on the part of the wounded man, (except that Malik makes it be inflicted by an expert), if the conditions necessary for carrying out the qiyas of a 'mafi' are present with the following modifications, according to Abu Hauwa. The qiyas of 'mafi' is not carried out between man and woman or slaves among themselves, but it is carried out according to Malik, al-Shafi'i and Ahmad b. Hanbal; Abu Hauwa and Malik further, allow no qiyas of a minor to a slave, between free men and slaves. According to Malik, al-Shafi'i and Ahmad b. Hanbal, this qiyas is inflicted for one on several, but not according to Abu Hauwa. A sound limb may not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no qiyas. In the case where he losses it after committing the deed, there is a corresponding difference of opinion as in the case of his death before the execution of qiyas of a mafi.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted or if the person entitled to qiyas voluntarily remits his claim, compensation may nevertheless be demanded; for one individual slaying the other (kafriy s. q.v. is to be paid to the avenger's(s) blood, in an unlawful but not mortal wounding, according to the particular case either the full dinaa, or a definite part of it, or a contribution defined by the law (kafriy s. q.v.) or a percentage of the dinaa laid down by the judge (the so-called jam'at] to the injured person; all this of course on the supposition that the slain or wounded man was a free man. If he is a slave his value must be made good. If the culprit is a slave, its owner has to pay these contributions for him; he can however escape by handing over the slave (parallels in the Romano-Celtic institution of ino maxa dedit; cf. e.g. Girard, Nouvelle Revue Historique, 1887, p. 440 sqq.);

8. Of the regulations of the Shi'a Fih books, which need not be gone into fully here as they are essentially the same as the Sunni, we need only mention that among the Twelve Imamis, for one individual slaying the other, it is taught that if a man has killed a woman, his can be carried out but if the whole of the woman, the relatives of the man the difference between the blood-money on each side; an isolated explanation explains: Karri, ii. 173 in this way. Here we can scarcely have a late effect of the Karimite rule regarding women, as similar calculations are also made in other cases.

9. On the practical carrying out of qiyas, cf. Kati, ii. 10, in which we may note that breaches of his regulations are recorded of even the Prophet's companions.

Bibliography: The Fih books; the works already quoted under Kati: the article qiyas in T. P. Hughes, A Dictionary of Islam. For the Arabic expressions not further explained see the separate articles.

J. Schacht

KISHIM. a) A long island in the Persian gulf (also called jamate because of its shape), off the coast of Laristan, often known as al-Mad'in. In length it is about 77 miles. It is separated from the mainland by a strait, called Clarence Strait, the breadth of which varies from one to seven miles. It is composed of rocky and barren hills. The latter to the West form an elevation called Khirdu Kuh (mountains of Khirdu). Vegetation is rare; mines of sulphur and of salt are found here; the population of Arab origin, amounts to 15,000 inhabitants. It was ruined by an earthquake in 1834. The chief pursuit is coral and pearl-fishing. Ilkhans (in Alu-I-Feis, Tahsin al-Halili, ed. Reinaud, p. 373) mentions a great whale-boat in the sea near here; the name that it now bears is that of the capital, a small town with 5,000 inhabitants, situated at the western point; an old Portuguese port is still to be seen there; in the Middle Ages it bore successively the names of the island of the Band Kawan (Jesuit, p. 107); Barkawan (Ibn Hawkal, p. 183); Ibn Kawan, Abarkilan, Abarkhawan (Balshir, p. 396); Lafi (Jesuit, p. 32, 118); Yakut, iv. 541 from the name of a place still found at the present time on the Northern side. The English founded, at Badiidi, the factory of Basodone, situated at the coast of the gulf, identified by Vale with Warwella near Kandus (J. Marquart, Erzairke, p. 70, 231).

C. Huart

KISMET. (A, T.; this word, the Arabic meaning "distribution" of which is a synonym of ihtisam later came to mean lot, portion and developed as a third meaning "the lot which is destined for every man". It is this meaning of the Turkish that is best known. In Turkish however kismet is not so much an expression of theological doctrines concerning predestination (cf. Kitab) but of a practical fact, which accounts for resignations the blows and vicissitudes of fate. The same sentiment is often expressed among Persian and Turkish poets by the words fazal and kirm to express the irrational and inevitable influence exercised by the spheres.

In Turkish, kismet is also another word for the judicial office called hatshiwi, especially in the expression kismet-i celik, i.e. the authority charged with the supervision and maintenance of the eyalif instituted by the Sultan (cf. Sani, Kaddi Turt, s. v.).

KISRA. The Arabic form of the name of two Persian kings of the Sassanian dynasty, Husrvar [q.v.], to become a general name for all the Persian kings, then it was given a broken plural akhira (other forms: absar, acsir, akstira). The only remaining monuments of the town of al-Mad'in (Scelucia-Ctesiphon) before its recent destruction

THE ENCYCLOPEDIA OF ISLAM, II.

KISSA (A1. plur. Kiṣa) does not occur in the Kur’ān. The Kur’ānic noun from the root ḫ-, perhaps an infinitive, is ḫṣaṣṣa which occurs 5 times: iii., 35; vii., 175; xiii., 3; xxi., 25; and the title of xlviii. The root does not mean simply "narrator", as usually translated, but has a particular meaning and usage which have conditioned the whole after usage of ḫṣaṣṣ. It will be for clarity in this connection to look shortly at the usual Kur’ānic expressions meaning "narrative", "narrator".

In Māghānī’s earlier career (for such broad considerations the order of the Kur’ān is sufficiently significant), he used exclusively the root ḫ-t-t; thus ḫābilah (meaning strictly a "new thing", "news", "an event" as opposed to ḫālid) occurs 17 times in all: e.g. lvii. 20; lxxii. 20; lxix. 31; lix. 15; lix. 15; lxx. 15; lxxi. 15; lxxvii. 15; lxxviii. 15; lxxx. 15; lxxix. 15; lxxx. 15; cxvii. 15; cxviii. 15; cxix. 15; cxx. 15; cxxi. 15; cxxii. 15. In lxvi. 3 ḫātilah is combined with root n-b- the occurrence being after that only twice: ixxiii. 3; lxvi. 3. In Māghānī’s later career root ḫ-n-t preponderates by far: ḫtān occurs 46 times and ḫnt 4 times, apparently in much the same meaning, but al-Rāghib in the Mufaradāt (p. 499, l. 5 from below: Lane, p. 2753a) says that ḫntaḥa is more intensive than ḫtāḥa; ḫnt occurs; the nouns now occupy the same in the chart 17 times and in the plur. 11 times. Of the root ḫ-h-r the verb does not occur and the 52 noun usages are curiously scattered from Sūrat il. to lxvii., with two isolated, and apparently early, in cxiv. 4 (Ḡihhā) and e. 11 (Ḡihhār). Of these 52 occurrences 45 are ḫhir, well informed.

The root ḫ- is much more difficult. Leaving aside ḫṣaḥa [q.v.] "tallo" (ii., 173; 175; 190; v., 49), the fundamental and primary meaning is given in xviii. 63, ḫ-at-tāḥidā; allāh ṣāḥibāni ḫṣaḥa, "as they two went back in their foot-prints, tracing them", and in xxviii. 10 where the mother of Moses says to his sister, ḫṣahibā, "trace him up". This meaning persists in all the Kur’ānic usage, e.g. the similar development of root ḫ-n-t, "to follow, imitate, recite from, relate a narrative (narrate)", Kur’ān, v., 30; xxvii. 2, etc. So ḫṣaḥa means "he traced out, step by step, the facts in the case of some one or something and (or) he meant to set it all down upon it. The lexicons all add the explanation allāh ṣāḥibāni ḫṣaḥa which Lane (p. 2548e) renders, "in its proper manner", perhaps better, "straight on, point by point" (ṣūrāyla ʿallāṣ Hadīth in Liʿlān, viii., p. 341, l. 3 from below). This statement is made by Allāk to ḥālā, to the Prophet (mostly), Kur’ān, iv. 162; vi. 57; vi. 6, 99; xi. 102; 131; xii. 31; xvi. 141; xviii. 12; xx. 99; xl. 78; by the ḫurān, xxvii. 78; by Moses to Ṣa‘īd of Midian, xxvii. 25; Jacob tells Joseph not to recount his dream (raʾya) to his brothers, xii., 5; Allāh tells the Prophet to state the case (faṣṣāṣ-baḥṣ) to the people, vii. 175; messengers
trust the Vocabulary of Pedro de Alcalá (Dócey, Supplement, ii, p. 352a, b, under ḥaṣṣaṭ ṭuṣṣāt; cf., too, ‘historian’ in Redonius’s Turkish and English Lexicon, p. 1458a; (ii, ‘request’, ‘petition’, ‘claim’), laid before a superior; a number of examples of this are given by Quatremère in his Sultans Mamlûks, i, i, p. 236, note 111; there was an official for the purpose of dealing with these called ḥiṣṣa-dîr; see, too, Gaudey-Froy-Demonhyes, La Syrie, p. xlvii. This second meaning is almost certainly more original and goes back to the shān, aum of the lexicons. It is worth notice also that ḥaṣṣaṭ similarly retained two separate meanings: (i) the professional reciter of ṭaḥlīl, ṭalaṣṣaṭ, ṭaḥrīr, and (ii) a police-agent, detective, ‘traced’. For the section relating to Imām (loc. cit.) refers to the Heslian text of *The 1001 Nights*, vol. vii, p. 313, L iv from below, derived here from one of De Secy’s Egyptian MSS. Although the printed text of Zoetenberg*’s Egyptian Recreation is quite different (II Calcutta, ii, 246; J Bülak, l, 500). In the grammatical usage ḥamra ṭaḥṣil – ḥamra ṭaḥṣil the meaning ṭaḥṣil is explicit: Zamakshari in the Mafqūṭ, p. 54, ii, 8 sqq., explains such a prefixed ṭaḥṣil as meaning ‘the case, and the event, is …’ (al-ṭaḥṣil wa-līdāḥīth ūs.).

In rubrics of Bahkriti’s *Ṣūḥāb* ḥuṣṣāṭ occurs several times and always apparently in the sense ṭaḥṣil or amr, ‘the matter, affair, case of’; see ed. Bülak, 1314, l, 182; v, 72, 129, 171, 173, 174.

In the Fīrād (*c. 400 a.h.*) ḥuṣṣāṭ does not seem to occur; certainly it is not there one of the normal words for ‘story’ in any sense. These are ṭaḥlīl, ṭaḥṣil, ṭaḥrīr, ṭuṣṣāt, ṭaḥmīl, ḥaṣṣaṭ, ḥuṣṣāṭ, ṭaḥṣil. For the ṭaḥṣil it is used only in the exact sense of a verbal reproduction (ṭuṣṣāt above). Undoubtedly the ḥuṣṣāṭ had been in use for more than two centuries, but their labours had not reached literary form and recognition.

In a very few more years that had taken place. There are two books with which the word ḥuṣṣāṭ is peculiarly connected, the so-called ḥuṣṣāṭ al-anbāḥ (commonly rendered ‘Stories of the Prophets’) of al-Kisṣīt (q.v.) and of al-Thalâbi (d. 427 a.h.; cf. on both Littbarski, De propheticis legendis arabicis, Leipzing 1893). Yet in the rubrics of the first book ṭuṣṣāt is the word used throughout except of the ḥuṣṣāṭ Huṣṣar wa-Mīråt (ed. Eisenberg, p. 45) and there is no mention of ṭuṣṣāt in the introduction. The second book begins: ‘This is a book which contains the ṭuṣṣāt of the prophets mentioned in the Kur’ān with commentary’ and then quotes Kūr, xi, 131, and each (piece of information) We trace out (or give in detail, or explain, ṭuṣṣāt for time of the information (amr) concerning the Messengers, that by which We establish thy heart’. Five rubrics are then given why Allāh recounted to Muhammad such records of the past, apparently interest in the ṭuṣṣāt, for some people, required justification. Thereafter ṭuṣṣāt is used regularly in the rubrics and it is probable that Thalâbi understood by ṭuṣṣāt al-anbāḥ very nearly, ‘The Records, or Accounts of the Prophets’, records from the Kur’ān and from ṭaḥṣil. While it is plain that Thalâbi was not regarded as a very careful traditionalist (see Murtaḍâ al-Zabīlī, Ḥaḍīf al-Sudâ, vol. iv, p. 556, but contrast Ahlwardt’s judgement on his Kur’ān commentary in the Berlin Cat., i, 295) yet a gulf still separated him from the utterly unschularious professional ṭuṣṣāt who made a living out of the pious gullibility of the masses and drew as freely on their imagination as did the popular entertainers with secular amār and ḥuṣṣāṭ. It is unnecessary to give details on these as Goldzweig (focusing on the ḥuṣṣāṭ al-anbāḥ of al-Djawiṣ, d. 597 a.h.) has already dealt with them in his Muḥādithiyya Studies, vol., ii, p. 267 sqq. (also his Richtungen der etl. Koranerklärungs, p. 58 sqq., 61). They began as stirrers up of religious enthusiasm before the Muslim armies, like the poets in the old days, making free use of mīlāḥ, or rhymed prose. Thus they naturally became popular exponents of the Kur’ān and public humiliates, passing into story-tellers for religious purposes. From these the professional class must have quickly developed and it is certainly strange that there is no mention of them in the first half of the eighth *Majāles* of the Fīrād where the variety of story-tellers are dealt with in detail. Further, there is only one trace of them in the Amīḥal of al-Daʿdim (d. 518 a.h.) in a medallial proverb, ‘qiyāl li-yuḥallul ʿīsā, ʿāša ṭuṣṣāṭ ʿallāh, one ṭuṣṣāt does not love another’ (Cairo 1310, ii, 514; ed. Freytag, ii, 304, N9, 180). But in the ṭaḥṣil of al-Ghazzāl (d. 505 a.h.) there is a number of references. In Book I of the ṭaḥṣil, in the section which deals with the perversion of religious expressions, it is pointed how ṭaḥṣil and ṭuṣṣāt have been twisted by folk-teachers (muḥādith) to apply to ṭuṣṣāt, poetry, ʿāshā (q.v., cf. also Macdonald, Religious Attitude, p. 173) and ṭuṣṣāt (“overmastering outpourings”); Dōcey, Supplement, ii, p. 594). ṭuṣṣāt are a būta and evidently not one to be approved. The ṭuṣṣāt appeared only in the troublesome times (al-Sūr) after ‘Umara, i.e. under ʿUmayr and ‘Ali. ‘Ali excluded them from the mosques but made an express exception of Ḥasan al-Baṣrī because of the truly edifying and terror-striking character of his ḥaṣṣāṭ. A ṭaḥṣil for ʿĪsā may be more edifying even than reciting the Kur’ān, according to traditions from the Prophet, but such traditions do not apply to the ṭaḥṣil of the ṭuṣṣāt who give the name of ṭaḥṣil to their ṭuṣṣāt and are occupied with ṭuṣṣāt which based nothing but controversies and which are quite different from the ṭuṣṣāt of the Kur’ān. So al-Damūrī in his Ḥaḍīf al-Ḥayawātun (Cairo 1313, ii, 170), giving the story from Tamīm al-Dārī about al-Ghazzāl, the strong beast in attendance on al-Dādālīlī in his island, says that Tamīm was the first who ṭaḥṣil ʿala ʿīsā. So there are ṭuṣṣāt the listening to which is for edification and there are ṭuṣṣāt which are the reverse. The difficulty is to distinguish; truth may easily lead to falsehood and the useful to the harmful. A long statement as to this is quoted from Ahmad b. Ḥanbal (ed. with commentary of Murtaḍā al-Zabīlī, Ḥaḍīf al-Sudā, 240 sqq.). Again in the section which considers how the pious should pass their leisure time on Fridays, there is a warning against the frequenting of the ṭuṣṣāt (iii, 277 sqq.). It is worth noticing that the commentator Murtaḍā (d. 1205 a.h.) uses ṭuṣṣāt, ṭaḥṣil and ṭaḥṣil ʿūṣāt quite indiscriminately. So, too, Ibn Ḥantium al-Dalālīlī in his Ḥaḍīf ʿalā Abū Shujāʾ’s *maṭaʿ* on canon law, written in 1258 a.h., speaks of ṭuṣṭ ṭaḥṣil ʿūṣāt like the ṭuṣṭ of Antar and of al-Dalālī (Cairo 1307, ii, 131, sq.)

But Massingham in his Essays (pp. 144 sqq., 22) has shown that, in spite of this condemnation,
the labours of the mystics of Islam and of the šīa among them were what gave to Islam its permanent type as we know it to-day. Their spontaneous movements, preaching to the populace directly in their home-defined words pointed with religious devotion, was the first apologetic and catechetical of Islam. They naturally shocked the Christians and theologians and religious authorities generally. They were sincere and terrify in earnest and the šīa who worried Ḥaḍra by holding forth in the court of her chamber until she sent to Ibn ʿUmar who drove him away and broke a stick over his back, may have been like an over-raging street-preacher with us (fiṣṣa, ill. 279). All depended on the character of the man, as the exception of Ḥasan al-Baṣrī by Ṣaḥḥah. In Ṣaḥḥah the daily preaching in the mosques is still of this character. It cannot, he becomes apparent that ḍīṣa has come to be one of the most popular words for "story" and especially for "religious story". In the index of books-letters in Al-Ḥāzim's Berlin Catalogue (π. 495 - 496b) it occurs 216 times; of these 27 arc in the form ḍīṣa(s) glossed... on which confer the cases from Bahā Kilab above. These are mostly religious stories and but quite a large proportion are non-religious and of the Arab Christian type. In the same index ḍīṣa occurs only 48 times and there are very few uses of ḍāḥiḥ simply as "story".

Bibliography has been given in the article.

(D. R. Macdonald)

KIST (ṣerāt; sectarius, sètir, Sèter, etc.), an Arab measure of capacity for fluids equal to about a pint. In the early period of Islam the use of measures of capacity seems to have been more general than in the later period for in the mounds of ruins in Egypt, we find numerous broken bottles with the official stamp indicating their capacity expressed in ḍīṣa. We get an idea of the volume from statements such as a ḍīṣa of oil weighs 18 ḍīṣa, a ḍīṣa of wine 20, a ḍīṣa of honey 37; assuming a troy ounce of 27.5 grams and taking into account the specific gravity of the liquids above mentioned, we get a value of c. 0.25 litre for the early ḍīṣa (the old French sèter = 0.146 litre).

A multiple was the ḍīṣāya (amphora) = 46 ḍīṣa (c. 25 litre). — CL also the article ḍāḥiḥ.

KISWA. [See KĀʻBA, MAHMĀL]

KITĀ (Ar.), pl. ḩāfīʼ, "piece cut off", "section", means in the geometry of the Arabs (a) a segment of a circle, the part cut off by a chord; (b) a segment of a cone, the part cut off by a plane; (c) a section of any other figure (parabola, ellipse, etc.). From the same verb ḩāfīʼ come three other geographical expressions, ḩāfīʼ (so written in the Dict. of Tech. Terms, ed. A. Spranger, etc.) šāfīʼ (so in the Cath. Lexicon, 389, 1, ed. K. Bihmorn and J. L. Heiberg, and in the Mafṣṣāb al-ʿĀlīm, ed. van Vloten) = sector of a circle, i.e. an area bounded by two radii and the portion of the arc of the circle between them; ḍāfīʼ or better ḍāḥiḥ ḍāfīʼ, a line cutting through the circle, i.e. a

...sect; ṣūf = section (through a body) e.g. ṣūf al-muṣaḥḥaṭ al-mustadrī = ennic section.

Bibliography: Besides the above mentioned works of The Elements of Euclid in the recension of Naṣr al-Din al-Ṭahā, Rome 1594, and Traité du quadrilatère, attribué à Nasīḥīdān al-Ṭūsī, ed. trad. Paul, Paris 1849, Cavathoevy, Constantinopol 1569. (Next quadrilatère is the translation of aṣghar al-ḥāṣa, where aṣghar is apparently an intensifying form of ḍīṣa, i.e. the polysemous figure).
writings in a foreign script, and there is every evidence that the ancient poets were at least acquainted with the appearance of manuscript books adorned with illuminated title-pages. In a verse by Tuḥṭ al-Ghanawi (c. v. 3) the poet refers to a written seal-contract which he calls a Kāthā. At the same time the word appears to have also the meaning of a book as a literary product and though I believe that poems etc. were committed to writing very early, some elapsed time after the Kurān had been fixed in writing in book-form before any other works were committed to paper or parchment and it is very difficult to say which Arabic work was first written in this form. The collectors of the traditions of the Prophet for a long time insisted upon the Ḥadīth being handed down orally, and the same was probably the case with the commentaries of the Kurān by Ibn 'Abdās. This must have been fairly comprehensive and al-Baghwā in the Ma‘ālim al-Tanzil states that he received the book through three different channels. The books on the Maghābāt or biographies of the Prophet also were very early committed to writing, but as all the earlier works are lost, except in extracts, it is difficult to say that they were books. This much however is certain, that the Dīwān of the poet Labid existed in written form before the end of the first century of the Hijrī from the verse of al-Farābī (Nasā’īd, ed. Ilīrān, i. 201. 6) where he states that he possesses his poems in a complete book. After this, books were written in the land of Ṣafīn with feverish activity, to which the thousands of titles of lost works found in biographical works bear witness. Finally, one work has had the distinction of being simply called al-Kīthā, namely, the great grammatical book of the Basrī Shāhān (Ṣayyabī) and it is certainly the most extensive work of early Ṣafīn which has come down to us.

The Arabic lexicographers try to find an etymology of the word from others meanings of the root in the language which can easily be consulted in the existing dictionaries, but it would be vain to seek the derivation there for a word which had been imported from the North with the art of writing.

Kītābhānā, Library, is a Persian word for which we find also the Arabic makkāba, which is applied to public libraries founded and endowed by princes and private individuals for the benefit of scholars, sometimes for those of a special sect or for some particular study. With the zeal for literary pursuits and the ever-increasing composition of books, after the period of conquests, men of literary tastes accumulated handsome private collections of books and from the example of the Kūfī philologist Abū ‘Amr al-Shāhībātī, we can reasonably assume that it was a custom for authors to deposit copies of their works for reference in the mosque of their town or quarter. The earliest record of anything like a public library is connected with the fame of al-Kūfī.-bin-Wāṣīt and Muṣ’īyā, who devoted his life to the study of Greek sciences, particularly alchemy and medicine. We are told that he caused such books to be translated, and when an epidemic occurred at the beginning of the reign of Umār b. ‘Abd al-‘Azīz, he commanded the books to be fetched out of the library (kāthānā) to be made available for the people. However, the first public library on a large scale was the Dīwān al-Khānā (Temple of Wisdom) inaugurated by the Abūṣaydālī caliph al-Ma‘āmir in Bagdad. To make this library as comprehensive as possible he had valuable Greek manuscripts purchased in the Byzantine empire and translated by a number of competent scholars into Arabic. This library contained books in all the sciences cultivated by the Arabs and it flourished till the city was taken and sacked by the Mongols in 656 A.H. Equally in importance was the library of the Fāṭimid rulers of Egypt in Cairo, which contained untold literary treasures and we learn that in the year 435 = 1043/1044 the wāzir Abū l-Kāṭānī ‘Ali b. Abī al-Dardār gave instructions for a catalogue of the books to be made and the bindings to be renewed, and he appointed Abū Ḥamāf al-Kūfī and Ibn Khallāf al-Warrāṣī to superintend the work. This library remained intact till the death of the last Fāṭimid caliph al-Aḍil, when Sulaymān al-Dīn ordered it to be dissolved and the Ṣafīn al-Fāṭimid (q.v.) bought most of the books and deposited them in the library of the Fāṭimid Madrasa which he founded, where they were soon neglected and by the time of al-Kalākashidī most of them had disappeared. This library is stated to have contained 6,500 volumes by exact sciences, alone such as mathematics, astronomy etc. and among its treasures was a globe of copper stated to have been constructed by Ptolomeus and bearing an inscription stating that it had been acquired by Khalīf b. ‘Abd al-Muṣ‘īyā. The third great library was that of the Umayyad caliphs of Cordova, which was also dispersed after the Almoravid conquest of Spain early in the fifth century of the Hijrī. Among the minor libraries was one founded by the Ghaznavī Sulaymān Maṣrūdī, most of whose treasures were later transferred to Baghdād. We are frequently told of valuable private libraries which were placed at the disposal of learned men as e.g. in the biographies of al-Ṣafī (q.v.) we read of his large collection of books which were bound in tasteful leather-bindings in red and yellow leather. Al-Ṣafī (q.v.) records in the biography of Ghur al-Narmat al-Ṣafī that he founded in Bagdad a library of about 300 volumes for the use of students and that this library was shamelessly robbed by the librarian who had been placed in charge. But even earlier we read of Abu Tāmīs, detained by wintry weather in Hamadān selecting from the books, which he found there in libraries, the contents of his celebrated poetical anthology, the Ḥumāya. A great impulse was given to the foundation of libraries by the wāzir of the Saljuq Sulaymān Malikshāh, Nīṣān al-Sulṭān, when he founded in Nishāpūr and Baghdād and other places colleges or Madrasa’s for public instruction. These colleges were not only endowed with funds for the salaries of the professors, but also provided with the most precious manuscripts of works dealing with the sciences taught at these institutions. When early in the seventh century of the Hijrī the Mongols swept over Persia we read that in addition to the loss of human life and the destruction of other valuable property untold quantities of priceless books were wantonly destroyed. The Alż̄īţīv ansa of Egypt and Syria emulated the example of the great Saljuq wāzir in founding colleges, but from a remark of al-Kāshānī, neither they nor those in charge of these Madrasa’s appear to have had a proper conception of the value of great public libraries (Ṣafī al-‘Āṣwā, i. 467). For the centuries which
follow we still find learned men endowing mosques and colleges with their books, where they were deposited as Waf'd or inalienable property, but the custodians with incredible dishonesty in most cases not only did not prevent, but actually connived at the loss of most of these treasures. How many a manuscript which once was deposited in these libraries for all eternity has found its way into private hands, or into the large libraries of Europe! In addition to this in most cases a fearful neglect set in soon after the foundation of the library and instead of being the source for enriching the knowledge of students the books became the breeding places of worms. As the control over the guardians of the libraries was rarely as strict as it should be, the books entrusted to their charge fell frequently into such a condition that they could no longer be used without falling to pieces. A striking example are the books which formed part of the Imperial Library of Delhi now deposited in the India Office in London; though the volumes may contain many valuable works, worms and long neglect have almost driven the librarian to despair in his task of making the books again accessible to students. In more recent times this state of things has improved; the Khedival (now State) Library in Cairo has but the way in again collecting the treasures in books which have survived several centuries of neglect, and its treasures are available to students who can afford to visit Cairo. Inestimable are the treasures in valuable books deposited in various libraries in Constantinople of which catalogues have been printed, though these are in many cases very inaccurate. Many valuable libraries exist in Medina and in the 'Iraq and it is occasionally possible to those who possess Muslim friends in those countries to obtain information about rare manuscripts existing there. We also have incomplete catalogues of the Zāhiriyah library in Damascus and the libraries in the great mosques in Fās and Tunis, but as yet it is very difficult for European students to make use of the treasures deposited in these libraries. We in India also find a new era for the library is being restored upon the lines preserved in the State Library in Haidarabad, the Khudai-kashfi Library in Nankinpol, the Library in Rampore and the Mulia Fāqīr Library in Bombay. I have been told by those who have visited the Imām Yahya in Santal in Vāman that his extensive library contains many very ancient manuscripts of which some are as good as lost to the world for the present. The Shāh's shrines at Kārbalā and Najāf have also valuable libraries, but the hope that these together with manuscripts from other centres in the 'Iraq might be collected into one central State Library is probably very remote. The very fact that continually valuable ancient manuscripts are brought to Europe from the East is a proof that far more ancient manuscripts are preserved than might be expected from the neglect of many centuries, but the excellence of the paper and ink used in early times for writing has preserved many a volume which would have perished, and in addition it is also probable that as the dissolution of the large libraries their contents found their way into private hands from which they gradually reappeared. Testimony for this is also that in the East exist many very valuable private collections of ancient manuscripts as e.g.

the library of the Sāyid Sāde al-Dīn in Baghīd and of Aḥmad Taimūr Fārābī in Cairo, besides others known to us. Unfortunately the owners are in many cases the two named excepted, very unwilling to give any information about their possession. As it is more and more realised that the remains of ancient literature, whether Arabic or Persian, should be made accessible, the owners commence by having some of the rare works made accessible by the press and when the value is fully recognised we may hope that within the next fifty years much may be in the hands of the students which is now guarded in Eastern libraries.

The 'Arrangement of libraries. In the fourth (tenth) century there were already buildings devoted solely to libraries and erected specially for this purpose. For example Şāhīr b. Ḳarbalā, the vizier of Bahā al-Dawla, built in 581 (991) in Baghīd in the Karkh quarter a Dīwān al-Ḳuttah, which contained over 10,000 volumes of al-Maṭārī, Kāmil, i. 246; Yāḥyā, Muḥṭar, i. 799). The geographer al-Ḳanḍūzī (p. 449) found in Şīrāz a huge library which had been built by the Bayt Aḥmad al-Dawla (538–572 = 940–973). This library was a separate building and consisted of a great hall and a long vaulted building along the three sides of which were a series of rooms (ḥāshiyyāt). Along the walls of the central vaulted room and along the side-rooms were cases of carved wood three ell high and three broad, with doors which were let down from the top. The books lay on shelves one above the other. The cases used in the Fāṭimid library in Cairo were somewhat different (Makristī, Kāmil, Cairo 1370, i. 409); the bookcases being divided by partitions into separate compartments (ṣālah) each of which was closed by a door with hinges and locks. Open cases which also were divided into small compartments, are illustrated in a miniature by Yāḥyā b. Ṭabāqī Mahāmīd of the year 834 (1237) in the Paris MS. of Ḳartī (MS. Arabe., 5847), which shows a library in Bagh (Blochet; Les cabinet d'ais des MSS. orientaux, Paris 1925, Pl. 10). Unlike our custom, we find in the books lying one above the other in the small compartments, as is still usual in the East. This explains the Oriental custom (which is only occasionally found in the west) of writing a short title of the works on the upper or lower edge.

The books were systematically arranged, classified according to the various branches of knowledge. Copies of the Qur'an had usually a special place; in the Fāṭimid library for example they were kept on a higher level than the others. The various books were often present in several copies; this made it possible not only to lend the same work to several readers but the scholar was also enabled to read corrupt passages at once in a manuscript by referring to another copy. The Fāṭimid library of Cairo for example had thirty copies of the Ṭwīrī of al-Tahārī and if the figure is not wrong actually a hundred copies of the Dā'ishara of Ibn Duraid.

The catalogues consisted either of several volumes in which (probably according to the various branches of knowledge) the titles of the books were arranged, or, as in the Fāṭimid library, a list of the books within was fastened to the door of each room.
Libraries usually had a director (μαθητής) and one or more librarians (μαθηταί) according to the size of the institution, also copyists (μαθηταί) and attendants (φόρτωται). We find that some of the most celebrated scholars were librarians; thus the historian Ibn Miskawaihi was librarian to the vizier Abu l-Fadl b. al-Amid in Rayy (Ibn Miskawaihi, Ta'jilir al-Umam, ed. Amadot and Margoliouth, Oxford 1922, text, ii. 224, transl. v. 237); al-Shahrazuri (d. 1000), the author of the book of commentaries was librarian of the Alhambra Library in Cairo under al-Ākhyt (Ibn Khalil, Wafayat, l. 338).

The books were acquired partly by purchase and partly by the copyists attached to the libraries copying manuscripts. Maqrizi has preserved for us the budget of a library (i. 459), according to this, the Caliph al-Ḥākim (286-411 = 996-1020) spent 457 dinars a year (c. £150) on the Dar al-Um founded by him. This was allotted as follows:

Libraries were open to everyone free of charge. Paper, ink and reed-pens were supplied by the authorities. Some private libraries even provided for the maintenance of scholars who had come from a long distance. A deposit had usually to be made if books were taken outside the library buildings, at least ʿAqūl (Maʿṣūm, iv. 509 sq.), d. 620 = 1220) praises the liberality of the libraries in Marw where he always had two hundred and more volumes to the value of two hundred dinars in his house without a deposit. Instructive in this connection also is the waqf document of 21st Safar 799 (Nov. 24, 1396) by which Ibn Khalil bestowed his Kitāb al-Thawr on the library of the ʿEṣlām al-Ṣamawyl in Fāṣ; according to it, this manuscript was only to be lent out to trustworthy, reliable men for two months at most in return for a substantial deposit; for this period was long enough to copy or study the borrowed work; the director of the library was to take care that this rule was observed (Lavi-Provencal in ʿAl. ʿAl., viii. 1923, p. 164).

But at the same time we find in Muslim lands purely reading libraries. One of those was the library of the Madras al-Mahmūdīya founded in Cairo in 797 (1395). By the will of the founder the ʿUthmān Ṭāhir al-Dīn Mahmūd b. Ṭāhir (d. 799 = 1397) no book was to leave the rooms of the Madrasa. The manuscript of the Taqīd al-Umān of Ibn Miskawaihi (Gīth Mem. Ser., vii/b) published in facsimile by Castani belonged to this library; in the waqf document on the first page of this manuscript dated 13th Shawwāl 797 (June 3, 1395) it is written: "The above-named donor makes the condition that neither the whole work or a single volume of it shall be lent from the library either against a deposit or without one." Nevertheless by the year 826 (1423) when the books were checked, it was found that 400 volumes (exactly a tenth of the total) were missing, whereupon the then director of the museum was dismissed (cf. Ibn Ḥajār al-ʿAskālānī in Quatreniers, op. cit., p. 64, 701; Maqrīzī, Kitāba, ii. 395).

If we think of the above statements, which are true even of the fourth (10th) century, it can safely be asserted that Muslim libraries were in every respect centuries in advance of those of the west. There was a general need for public libraries felt in Muslim lands much earlier than in the west.

Kitman. [See Taqīya.]

Kīṭāb [See Kitāb al-Ḳāsimī]

Kiyaṭa. [See ʿAbd al-Kāhir.]

Kiyaṭa is an infinitive of the 1st stem (form of name of office or trade, Wright, i. 1142) of root ʿṣ-ṣ-f, meaning "trace, follow traces, follow".
The root does not occur in the Korân except as a variant in xvii. 39 (Badawi, ed. Fleischer, i. 539 sq.), but the cognate root ِفُجَع, with the same meaning, occurs five times. Technically in old Arabic ِفُجَع (pl. ِفُجُع) was used not only of one who followed and interpreted actual texts on the ground, but also of one who professionally established Nishân between individuals by likeness, primarily likeness of the feet. This ability was ascribed peculiarly to the tribe Mudilî, who were called simply ِكَزَاب (Ibn Katala, Maârij, ed. Wustenfeld, p. 32 ii); so ِمُدِلَّرْمْيُقْانَزَتْ (Munzi). Other synonyms are ِمُدِّيْسُغَانَزْت, lit. "a lover" (Liân, xii, 202, v, where cf. whole article for ِفُجَع in general; Goldthwaite, Mus. Studien, i. 185) and ِمُذَنَّر, lit. "a confectioner, gusser" (Goldthwaite, p. 184, note 9, who refers to ِكَزَاب, x. 38). In a story given from Muhammad al-Anbârî by Freytag (Christenmachth, p. 31 sq.) ِفُجَع is in the infamy of the Prophet tells by his ِكَزَاب [q. v.], that he is a foster-child and foretells his future eminence. And the Prophet himself in tradition (Dabîsirî, Faridat, b. 173; Muslim, Râds, tr., 36, ltd.; al-Shâfî, II. َّٰل-۹ٰرَّ) describes a case of kinship by resemblance (شُوآ). In the same passages are other traditions giving prophetic sanction to the practice and the synonyms ِفُجَع, ِمُدِّيْسَغَانَزَتْ and ِمُذَنَّر: it is plain from them that the ِفُجَع must special attention to the feet, as natural in a race of travelers. From the fact that a poet in the ِكَزَاب (ed. Freytag, p. 304) is named simply ِيَبَسّ b. ِكَزَاب the profession was evidently one of distinction. From the beginning, also, it had in it a certain mystery: it was an innate power belonging to certain individuals or the peculiar inheritance of a tribe. It, therefore, attracted the special attention of Mu'tazzilites who felt driven to accept certain facts as to it but had, on their principles, to seek rationalistic and philosophical interpretations of them. Al-Mâzînî in his ِمُرِّدَت gives to it and some allied phenomena a whole chapter (ii., Paris ed., iii. 333 sq.) and refers to other books of his where he has treated the same subject more completely. Kazwînî in ِبَحْرَةَ الْمَبْلَغِ (ed. Wustenfeld, p. 18) treats it similarly to psychical power in those who possess it and places their "souls" (عُنَّف) in the class of the ِمُؤْبَجَةَ ِفَجُعْتْ (super-souls), among which are those of the prophets, the wait's and ِكُبُّنْ: all these possess a certain instinct of insight. In canon law ِفُجَع of necessity plays little part. The services of a ِفُجَع are to be called in only when the paternity of the child of a female slave is in doubt as between a former and a present owner (Juyboli, Hanûbât al-Islâm. Génera, p. 187, v): for further details see Sachan, Mus. Rechts mach Schrift. Lehre, p. 89 sq.; Badawi, ِكُفَرْحَة* on the ِكُفَرْحَة* of Ibn Katala in the text of ِكُفَرْحَة* of Ibn Katala, Cairo 1307, ii. 184, it. al-buhab matam al-makhlûl (see ِكُفَرْحَة*). Nawawi, Minâdî al-qilânân, ed. van Berg, iii. 450 sq. In present day folklore usage ِفُجَع has become chemicum and physiological, called also ِلَمَعَة ِفُجَعْتْ and ِلَمَعَة ِفُجَعْتْ (Boeht, Dictionnaire français-arabe, vol. i. p. 154); Doutte, Magie et Religion, p. 370 and references there. Very strangely the word has come to mean in modern Egyptian colloquial, "style, fashion," ِفُجَع, "a stylish person" (Sipow, Vocabulary of the colloquial Arabic of Egypt, p. 365, who gives no other meaning). This apparently connects with Turkish and Persian usage of ِفُجَع in sense "appearance, form, gait, costume" (Redhouse, Turkish and English Lexicon, p. 1301; Strohauer, Persian-English Dictionary, p. 9973).

Bibliography: The principal treatments of this subject are in Robertson Smith, Kinship and marriage, p. 109 sq; Goldthwaite, Mus. Studien, i. 184 sq; Doutte, Magie et Religion, p. 370; Doutte, Symbol, ii. 4206, 4206; see further references in all these. (D. B. Macdonald)

Al-KÂYÂMA, "the Arising" (of man at the resurrection), and al-Sâ, "the Hour." (Or Day of Judgement), come for theologians under the general term al-Muâ'd, "the returning," i.e. the return to life after death; and they rank among al-samâ'îf al-kadhîf, things on which traditional teaching is based, as the prophetic office, or which for their authority go back to the prophetic office, as this Return and such causes of eternal happiness and misery, connected with it, as faith and obedience, unbelief and disobedience (Mawâkyf al-îlî, Bâb al-âli, x. 66, 354 sq.) - a schematic statement of the order of events in Muslim eschatology. i. The Signs which will announce the coming of the End, especially the appearance of the Antichrist, al-Dašîjîlî (see above, i. 888 sq.), who will lead almost all men astray, followed by the descent of ِبَلَش (see above, ii. p. 524 sq.), and the Mahdi [q. v.] (or ِبَلَش is both), who will kill al-Dašîjî. A period of faith will follow. ii. The First Blast of the Trumpet; all living things will die. The Interval. The Second Blast of the Trumpet; bringing all living things to life again and uniting them at the Place of Gathering (al-makâyhar). The long standing there (al-maâfiq) in the presence of Allah and the Sweat (al-arâd), III The Judgement begins. The questioning of each individual directly by Allah. The Books of Record. The Weighing of the deeds of those as to whom there might be doubt. Adjustment of eminities and requisit of wrongs between man and man, and man and beast. IV The Bridge over Hell to Paradise (al-Sâdit). V Intervention (see ِمُرِّدَت), The Tank of Muhammad. V The Fire (Hell and Puratory; see ِمُرِّدَت above, i. 998 sq.); the Garden (Paradise; see ِمُرِّدَت above, i. 1014 sq.); a Limbo (according to some theologians). - ِبَلَش of al-Ghazâlî, Cairo 1334, iv. 456-453; ِبَلَش, commentary on ِبَلَش, x. 447-530.

For Muhammad, a revivalist preacher seeking to strike terror in his hearers, the doctrines of the Resurrection and of the Judgement were of the first importance, and the Karân, in consequence, is full of references to them. The word ِبَلَش occurs once only (Kur. xxvii. 25), and evidently has not: this application there: it may mean the place of Muhammad's resurrection or Mecca to which he will return from exile (Badawi in loc.). But the verb is used very frequently; in Kur. iv. 15, 35; xxii. 104, 106, 26; xxxi. 15, of Allah's bringing men back to the resurrection, in contrast to his first production (ِبَلَش); in contrast to his ِلَمَا (in Kur. xxvii. 16, 17; in contrast to his ِلَمَا in Kur. xxvii. 13. The same verb is used in the stated processes of creation in the earth in Kur. xxvii. 65, xxix. 13; and of man being brought back to the earth at death and burial, Kur. xx. 57, ِبَلَش, only in the phrase ِبَلَش of ِبَلَش, occurs 70 times, e. g. ii. 79, 107, 169, 208; iii. 48, 71, 155;
wholesome terrors — passing into descriptions of the Fire and, in contrast, of the Garden. In the Qurān it is a Judgement of individuals and not of peoples or of religious bodies in masses; this, as Wellhausen pointed out, shows the Christian, as opposed to Jewish, theological influence upon Muhammad. Later traditions and still more the theologians were going to change all that. In accordance with the “agreement” (iṣnād) of Islam. As examples of these multitudinous, longer or shorter descriptions, refer to the Qurān vii. 23—31; xxxix. 67—74; xxii. 1—7; xxvii. 101—end; xxxix. 66—end; lix. 1—xxxvi. 1—xxxvi.; xxix.—cf. Naturally, the most picturesque details are in the earlier and more poetical sūras. The descriptions of the Garden change with Muhammad’s changing circumstances and age; cf. Josef Horovitz. Die Koranische Paradise, Jerusalem, 1923.

In these descriptions there are certain references and allusions which (i) tradition has developed more precisely and elaborately, of which (ii) the systematic theologians have made chary use in their short eschatological statements but which (iii) the writers for religious instruction have expanded in intolerable and contradictory detail. Thus (i) the phrase “the road to Hell” elaborately described, “over the back of the bull.” (ii) The noun ṣahhāf does not occur in the Qurān, but four times (vi. 37; 30; xxxiv. 30; xxxv. 24) there are allusions to man standing in the presence of Allah on the Day. This has become the awful speech which al-Qisṭās develops so fully in his

In the overwhelming theocratic theology of Muhammad the doctrine of the Resurrection and Judgement was only second to that of Allah’s creation of the world, was a necessary consequence to it and could be proved by it. Allah as Creator meant Allah as Ruler and Allah as Judge. But a Judgement meant a Resurrection and all the analogies of what we call nature pointed to the possibility of such a return and repetition of life, if under other conditions. So Muhammad was primarily a preacher of this truth to come and of the need of repentance and self-surrender to Allah before it should come. For the Arabs of his time the Resurrection was, if anything, a harder doctrine than the Creation. Muhammad proved the one by the other. He had also a foothold for this in the primitive Arab conception that the dead had a continued and conscious existence of a kind in their graves; cf. among the Hebrews, Job, xiv. 20—22. Through Muhammad this belief passed into Islam and is the basis of Islam of the doctrine of the two Judgements (see below), of punishment in the grave (ṣanāḥ al-ḥab); see Munkar and Nānat), and of bliss in the grave, i.e. that the grave for each individual is a preliminary Hell or Paradise. This doctrine does not seem to have any sure Qur’ānic basis although texts from the Qur’ān (vi. 93; ix. 102; xix. 15; XI. 49; xvi. 25) are used by the theologians in support of it (Mawābiṭ of al-Dādi, p. 591; al-Tafṣīlāt on ṣafah al-Nasāf, Cairo 1831, p. 109; al-Bukhārī in heading to section cited below). It is possible that there may be a reference to it in Qur’ān xxxv. 21 where Muhammad seems to have been warned not to preach to the dead in their graves, as (e.g.) he preached to the ḫīṣān. But that was taught by Muhammad seems certain from the mass of traditions on the subject (Ṣaḥīḥ of Muslim, ed. Constantinople 1539—1533, viii. 160—164; Ṣaḥīḥ of Bukhārī, Bālāk 1415, lii. 97—100; Ṣaḥīḥ of al-Bukhārī, Bālāk 1415, lii. 97—100; Ṣaḥīḥ of al-Bukhārī, Bālāk 1415, lii. 97—100). In the Qur’ān from beginning to end is full of lurid descriptions of the Day with picturesque details of its certainty, its nearness and its over
account between Allâh and every man (âdâh and other terms; cf. C. C. Torrey, Commercial-theological terms in the Koran, Layden 1892, p. 9 sq.) and there are books written by recording angels (âdâh, bâhilâl), i.e., 11-15; Isxvi. 10-12; Isxvii. 7-18). Each man has a book of his own deeds or there is simply the Book (xix. 55, xxiii. 3 xlvii. 14, 15; xvii. 47; xli. 19, 20, 25-7; Isxvii. 7-18). Allâh himself is a witness (âdâh, often) or he is watching in a lurking place, like a hunter waiting for game (Isxviii. 13, 59, bâhil-mi’râj); or its personification, is such a mirâj (Isxviii. 31), a dubious phrase which gives the commentators much trouble. (7) Again, lâkâhannâ (occurs 77 times) is brought as though it were moveable (Isxix. 24) and there is a description of it (xlvii. 7, 8) as buying and selling and almost bursting with rage as though it were a wild animal. What this became in tradition is seen in the Sâhib of Muslim, viii. 149 sq.; Mäshhîd al-wuna, Cairo 1310, ii. 154-155; Mâzikât al-mâshîd, Dibîl 1327, p. 428-430. Al-â Hassan develops the idea still further, for pros edification, in his Dhurr, p. 56 sq. (8) In Kâran xiv. 9 there is a very obscure expression. “Then look for the day when the heaven shall be plaited smoke” (âdâh is min âshîr). Bâhilî (Fleischer’s ed., ii. p. 245, ii. 22 sq.) gives as a possible interpolation a reference to smoke as one of the Signs of the Day; for the traditions on this see Sâhib of Muslim, viii. 149 sq. 204 sq. 208. (9) For a supposed Kâranic allusion to the descent (musaıd) of Isâ as one of the Signs of the Day see above Isxvii. 55 and add: to the references there Sâhib of Muslim, i. 93-95, 107 sq., viii. 175-180. (10) Another of the Signs to which allusion is made in the Kâran (xvii. 84) is the Beast of the field (îlâhûâ kâri min al-ârîj); cf. Sâhib of Muslim, i. 96; viii. 179. Bâhilî (ed. ed.) identifies it with alâshâ, “the searcher out,” described in a tradition in the Sâhib of Muslim (viii. 203-206) as in attendance, according to Tamir al-Dârî, on the false Mâshhîd al-Dâhillâ, apparently the Antichrist, in a certain land; see also, Lisan, viii. 327; Damûr’s Bayat al-bayyân, Cairo 1313, ii. 170. (11) On al-Dâhillâ, who is not in the Kâran at all, see traditions in Muslim, vii. 161, 194-208; p. 189 thirty lying Dâhillâs will come before the end; Bâhilî, ix. 159 sq. See also, nipples, above i. 385; the name is evidently Aramaic, not Arabic. (12) The Yâhû (âhû) of Muhammad also plays an obscure part in the picture of the Day, although it does not occur in the Kâran. There is doubt especially as to the end of the Sirât at which it should be placed; in later collections of traditions (Mâshhîd, ii. 139; Mâzikât, 415) it is grouped with the Intercession and after the Reckoning and the Weighing. See also, Bâhilî, i. 45. (13) In the story of Dhu lahârîn in the Kâran (xvii. 83-98) he builds a great wall to keep back Va’dîjî and Mâshhîd. But that will hold them only until the Day; then it will be made as dust (verse 98) and they will come out (Kau, xxxi. 96). For this, among the Signs, in tradition see Sâhib of Bâhilî, ix. 61; Sâhib of Muslim vi. 165 sq. and often.

There is thus very little in the Kâran as to the Signs preceding the Last Day; but such picturesque and accidental references as there are have proved useful in the later development. The systematic theologians have been by far the most fruitful in this. Nasa’î in his ‘âshîr gives only five: the appearance of al-Dâhillâ; the Beast of the field; Va’dîjî and Mâshîd; the descent of Isâ; the rising of the sun in the west. Taftâzânî in his commentary on this passage (p. 145) gives ten: the Smoke; Dâhillâ; the Beast; the rising of the sun in the west; Isâ; Va’dîjî and Mâshîd; three eclipses, in west, in east and in Arabia; a fire which will break out in al-Yamara and drive men to the Place of Gathering; cf. a similar list in the Sâhib of Muslim, viii. 179. But the traditionalists have luxuriated in tenetious details. A section of tradition is devoted to al-âshîr as ‘afir or n’ir , “trials and signs of the Hour”; Sâhib of Muslim, viii. 215-216; Sâhib of Bâhilî, iv. 40-61; ‘Ismâ’îl, ii. 138-142; Mâzikât, p. 392-410. To give any full analysis of these would be impossible here. Reference may be made for this and for details on the Resurrection and Judgement to Hughes’ Dictionary of Islam, p. 536-549. This is largely based on Sale’s “Preliminary Discourse,” Section 4, p. 76-103 of ed. 1856, and he, in turn, was greatly indebted to the learning and research of Edward Sale and Robert Boocke, in his Persia, iii. p. 235-312 of ed. Oxford 1655-55, who gives Arabic passages and terms at length. These details were then taken up by the writers for religious edification and an immense literature was based upon them. Even among mystics in Islam religious conversion has normally been wrought by fear of the wrath of Allâh; in consequence their books are full of pictures of the horrors of death, the resurrection and the judgement. This is the whole bearing of the last Book of al-â Hassan’s Durr (lv. 361-409) on “Taking thought of death and that which comes after it” (Ladîr al-maut wa-Îdîr al-dâhilâ), until it ends in a few pages on the Bentivision in Paradise and the wickedness of Allâh’s mercy, for luck! Lâb hidîl al-bâhilî.” His smaller treatise al-Durr al-fâshîra, on the same subject, goes still further in this direction.

Yet in this mass of traditions certain drilts of influence and development show themselves, theological and historical. Reference has already been made to the development of the doctrine of two judgements, a custom on the death and burial of the individual and the greater on the Day itself. It is difficult to say whether this was in the mind of Muhammad, but it was a natural development of the doctrine of the Punishment of the Grave which is so strongly represented in traditions. The doctrine, also, that the Fire itself will be a temporary place of purgation for “certain rebellions ones of the believers” would naturally grow out of this. It, too, is represented in tradition and has become fixed in theology (Taftâzânî on Nasa’î, p. 114-119). On the whole question, see Immortality in Muhammadanism by the present writer in E. H. Saul, The Religion and the Future Life, New York 1922, p. 311 sq. This leads naturally to the relation of faith and works and of sin, greater and lesser, and that involves a classification of different ranks even among the saved believers. On the whole question, see IMAS, above, i. 474 sq. Some believers will enter Paradise without any punishment or even reckoning (fâshîr); there will be 70,000 of these (Muslim, i. 130-135). Then there are the “âshîr,” whose spirits (âshîr) seem already to be in Paradise (Muslim, vi. 38).
and a man who is killed in defence of his property is a šahid (q.v.) and his slayer is in the Fire (Muslim, i., p. 87). But the theological question which seems to have weighed most heavily in the Muslim world when traditions were being formed was that of Intercession (ṣafā wa ḥijra, q.v.).

The historical influences are equally plain in these traditions. Some may go back to Muhammad himself full of forebodings as to the future of his people; the times must be evil before they are better. Such are those which tell that the Hour will not come until no one in the world says "Allah! Allah!" — i.e., there is no faith left (Muslim, i., 89-91). But others are clearly connected with the later civil strife. The traditions prophecying the murder of 'Umayma run into prophecies of the Hour (Muslim, viii., 170 foot) and show the deep feeling of despair produced among the pious by the civil wars and the growing unbelief. Again, when the dream of the speedy conquest of Constantinople failed, the belief rose that that conquest would be one of the Signs of the End. As soon as the cry of Muslim triumph was heard in that city their armies would be recalled to face Antichrist, al-Dalīd al-Ma'ṣūm (Muslim, viii., 187 sq.). Then 'Isa would descend. So some traditions see the whole world plunged in unbelief before the end, and others make the crowning conquest of Islam introduce the end.

The theologians have seen, quite clearly that it was impossible to construct out of these materials a consistent narrative of what would take place on the Day. So they have abandoned the attempt and contented themselves with saying that such and such things — the Širīḥ, the Weighing, the Tank, etc. — are Realities (ḥašš) and leave generally untouched what kind of reality is meant. Philosophically, they knew very well, there are different kinds of reality (Nasa'i and Tafsīhān, p. 110 sq.; Idrīs, p. 592). They thus abandon picturing the Day to such religious writers as have elaboration for their object and not fact. Apparently the distinction was quite clear in their minds, and it goes back to the fundamental principle in Islam of the economy of teaching ("Speak to the people according to their understanding" — a saying ascribed both to 'Ali and to the Prophet) which was the ultimate source of the medieval doctrine of the two-fold truth. The situation may be illustrated by al-Ghazālī's method which was at least three-fold. In the last book of the Ḥiyā' and, still more, in the Durra his rank object is to strike terror; these are all Realities — very dreadful Realities! Yet his philosophical conscience troubles him and even in the Ḥiyā' (Book of at-tawba, "Repentance", iv. 30 sq.) he teaches that words applied to concrete things in this world can be used of things in the world to come only by metaphor, as ʿamal, and he defends this by Kūrān xix. 42. But in his Ṣafā (Cairo 1330, p. 96-98) he is a sober scholastic — the Mihkā, and the Širīḥ are Ḥašš by revelation and the reason cannot deny them; in his Maqāna (Cairo 1363, intended for theological specialists) he develops to a certain extent the philosophical buttomning of these ideas — the Intercession (p. 28), the Reckoning and the Širīḥ (p. 36), the pleasures of Paradise (p. 38 sq.) which will be sensuous, imaginative, rational (ḥiṣā, ḥašš, ʿamal). The feeling left in the mind is that there are still more distinctions, explanations and refinements behind the two Maqāna's, and that feeling is strengthened by his Mīṣāk al-ansūr, see the translation of this by W. H. T. Gannih in "Asiatic Society Monographs", vol. xix. Further, al-Ghazālī developed the doctrine of a Limbo for those who, by reason of youth, mental affliction, historical and geographical situation and environment, had not been able to become Muslims and, therefore, had no works of obedience, in the technical sense, to their credit. There was nothing against them and punishing them in the Fire would be unjust; but there was nothing also for which they could be rewarded. He found a place for them, therefore, in the Kur'ānic ṣafā wa ḥijra (vii. 44-46) which he explained as "Limbo". Hence those in the Limbo look down on both Heaven and Hell and their inhabitants. Such a conception was beyond the ken of very far from Muhammad's mind, but as a theological fiction it was sufficient for al-Ghazālī's purpose. For the four-fold classification of man which thus resulted see his Ḥiyā', iv. 96-108. For this particular class see his Fiqāt al-tafṣīh, ed. Cairo 1319, p. 75 sq. and Ḥiyā', iv. 27 sq. the Ḥiyā', viii., p. 564—568 gives different views on the subject and there is an attack on al-Ghazālī's position in Les Progrès Théologiques de Soumaïa by J. D. Lecanis (Algèr 1908), p. 106 sq. On the whole subject see Miguel Asín, La Escotología musulmana en la Divina Comedia, Madrid 1919, p. 99 sq. The treatment of eschatology by al-Idris in his Mirdad is of the dryest scholasticism, in startling contrast to the picturesqueness of the materials which he uses. Like al-Ghazālī he makes no use of the Signs; they were history, apparently, and not philosophical theology. He begins with the possibility of a Return to existence of a nonentity (sulūq) and fights that out with the different unbelieving philosophical schools; the different elements that follow suggest to him only dogmas to be demonstrated, and even the doctrine of the Intercession of Muhammad interests him only by its connection with the Mu'tazilite heresies. For eschatological ideas as developed among the mystics see Luis Masségués, La Passion d'al-Hallaj, Paris 1922, ii. 664—698.

Bibliography has been given in the article.

(D. R. MACCROSSAN)

KĪYĀS (A.), infinitive III of ṣanā, dedication by analogy. The term is used with a multitude of meanings: cf. the lexicons, especially Dīfty, Supplem., n.v. Here we shall confine ourselves to ṣānā as one of the "roots" of the ṣānā, i.e. the deduction of legal prescriptions from the Kurān and the Sunna by reasoning by analogy. — The death of Muhammad deprived the community of the means of obtaining revelations and at the same time of its guide in matters political and religious. At first they relied on the book of Allah and the example of the Prophet. The Kurān and the Sunna became the guides of the community. The expansion under the first Caliphs, the growing interest in theological and juridical speculation, the new world, intellectual and material, raised questions previously unthought of; the answers to which could not be found in the Kurān or in the Sunna. Men thus found themselves forced to take decisions or to regulate their conduct from their own opinion. The beginnings of this process were certainly not theoretical in character. In the second half of the first century A.H. ṣānā began to develop at the same time as ṣānā.
This parallelism gave rise to a rivalry between the "historical" and "rationalist" schools, the al-\*al-fadlî or al-\*al-fadla and the al-\*al-fârî or \*al-fârî [q.v.]. The earliest founders of masâkhîb's compiled their manuals of law, either by oral communication like Abî Hânîfâ (d. 150 = 767) or in writing like Mâlik b. Anns (d. 179 = 795) without much worrying about "questions of general principle. Al-Shâbî (150—204 = 767—820) was probably the first to give an outline of the "roots" (muṣâba'a, or šay' [q.v.], of the value and function of the Kur'ân, sunna, tafsûr, and šay's in the theological and judicial system of Islam. "Kiyyâh" he says "is med. in the cases which are not dealt with by the Kur'ân nor sunna nor tafsûr" (Râhîl, p. 65). For him, šay's and tafsîr [q.v.] are two terms for the same idea [q.v. n. 66]. It might be added that there are other terms, more or less synonymous. We have already mentioned ra'y, a word which is often used as a synonym of šay's, but which assumed the meaning of "pure reasoning", whereas Kiyyâs has always a more limited meaning in that it is applied to a particular method of reasoning, which otherwise ought to be applied to the other roots of šâfî also. As more or less synonymous terms, we may mention irţânîh, irţânîh [q.v.], mašhûm [see below], tafsîr [see below].

The attitude defended by al-Shâfî and not long in arousing fervent discussions. Among its opponents may be mentioned the first place Dâ'd al-\*zkîrî [q.v.], who, although rejecting the employment of šay's, approached the method of analogy when he relied on the mašhûm of the sacred texts.

Al-Bukhârî, himself a Shâîh, included in his collection of traditions a chapter entitled "That one must adhere to the Kur'ân and to the Sunna." The term mašhûm of Îthâb 7 begins thus: "Traditions relative to the disapproval of ra'y and to the practice of šay's: Equally significant is the mašhûm to the ninth šâfî: "How the Lord sent his Apostle, without ra'y or tafsîr." This last term is explained by šay's in the commentary of al-Kantâflî. Al-Dârînî collected in his Sunna a number of traditions disapproving of the use of ra'y and šay's in cases in which neither the Kur'ân nor sunna settle the problem (Introduction, Îthâb 16, 21). Among traditions we may mention that which traces the origin of the use of šay's to Ibn Isâ (cf. Sûr â 11).

On the other side, the supporters of šay's rely on the hadîth which tells how Muḥammad when sent Mu'âdh b. Dâbîl to the Yemen as khaṭîb, asked him "How will you decide when a question arises?" He replied: "According to the Book of Allâh." — "And if you do not find the answer in the Book of Allâh?" — "Then according to the sunna of the Messenger of Allâh: and if you do not find the answer neither in the sunna nor in the Book." — "Then I shall come to a decision according to my own opinion (maṣbûlîh ra'y) without hesitation." Then the Messenger of Allâh said to Mu'âdh: "Chew this with my hand saying: "Praise be to Allâh, who has sent the messenger of the Messenger of Allâh to an answer that pleased him." (Alâb Dâ'dî, âfûrga, b. 11; Tirmâdî, Abûnâ; b. 3; Dârînî, Introduction).

In spite of the opposition already mentioned, šay's has found its place among the šûlî al-fârî.

In some traditions (Nâsîrî, Abû al-Kâdzîrî, b. 11) there is mention not only of the Kur'ân and sunna, but also of the "usage of pious individuals" (al-Shîhâb) taking precedence of šay's among the šûlî. "The usage of pious individuals" has taken the place usually accorded to tafsîr [q.v.] which is the third "root", šay's occupying the last place.

Although it is admitted, šay's is nevertheless surrounded by restrictions. Here are some examples. The opponents of šay's quote Sûr â 62: 52 and if there are differences of opinion between you and your chiefs, try to settle them, relying on Allâh and his Messenger: "Allâh and his Messenger," according to them, means Kur'ân and Sunna which is the verse therefore passes over šay's silence. Bîrînî replies to this objection: "Setting the differences by referring them to the texts is done by mašhûm [see below] and by deduction" i.e. by šay's.

This verse has given rise to a full exposition of the limitations of šay's on the part of the commentator Fâkhîr al-Dîn al-Razî, who lays down the rule that the Kur'ân and Sunna have precedence absolutely over šay's. Only when it is impossible to use these "roots", the use of šay's is permissible, cf. the tradition about Mu'âdh (translated above) and the example of Ibn Isâ, who argued instead of obeying the commandment of Allâh (see above). The text of the Kur'ân is established by sunnât, while šay's is only mašhûm and following one's sunna (individual opinion) is what the khaṭîb do (cf. Sûr â 67). If traditions require to be verified by the sacred text, šay's does not more so. The Kur'ân is the word of Allâh, while šay's is the work of the feeble intelligence of man.

See also the articles Sûr, al-Shâîh's and Šûlî.

(A. J. Wânsinck)

Kiz, in Turkish, "girl"; the word is common to most dialects (Radloff, Opl. ii. col. 818); it is also found in the Cigkân inscriptions where gioc-ghîl "daughter" is opposed to ioc-ghîl "son" (W. Thomsen, i, 4, 7, p. 99).

Kâez-bazî, the "master's tower", is the name given to an old tower now surrounded by a light-built castle, built on a rock at the entrance to the Bucephalus between Sciss and Haiâh-paşa, Europeans wrongly calling it "Leander's Tower", erroneously applying to it the legend of Hero and Leander, the scene of which is probably the
KIZIL-BASH (r. "Red Bash") is the name given by the Turks to the confederation of seven Turkoman tribes, Ústúrú, Sháhshá, Tekélí, Bahrán, Luku 'l-Kadír, Kadjar and Agháf, who placed the shaikhs of Ardabíl on the throne of Persia and helped the Sáfí family to found the dynasty of the Safawíds (q.v.). The latter had given them as a head-dress the red turban worn by the disciples of its ancestors.

This name was taken by J. Morier for the title of one of his novels, The Kizilbash, a tale of Kárunán, 3 vols., London 1828, the period of which is the reign of Náhirí-Sháh.

The name of a religious sect found throughout Asia Minor and regarded as Sárí by the Muslims; it is closely connected with the Nújarríts of Syria. Its adepts call themselves 'Álavis, i.e., followers of 'Álī. Some are Kurds; the others are for the most part Turks and only speak Turkish. Unlike the Muslims, they do not shave their heads and let their beards grow freely; they do not observe the canonical prayers (jáms) or ablations. They drink wine and do not observe Ramadán. They fast for the first twelve days of Muharram and lament the deaths of 'Alí, Hussein, and 'Abdulláh. "All is an incarnation of God who had already manifested himself in other incarnations, such as Jesus. God is one in three persons; below him are free angels, intermediaries between the divinity and man, twelve ministers and forty saints. They have a reverence for the Virgin Mary and recite litanies in her honour. They celebrate a service during the night. The priest who officiates sings prayers in honour of 'All, Jesus, Moses and David, accompanying himself on musical instruments. He holds in his hand a willow wand which he steeped in water; this consecrated water is then distributed among the houses. During the ceremony these present publicly confess their sins; the priest imposes penances, such as fines in money or kind. The lights are then extinguished (hence the Turkish expression "ttráb-şahim-yer", "extinguisher of torches", by which they are popularly known) and they abandon themselves to lamentations and weeping for their sins. The lights are again lit; the priest pronounces the absolution (which may be refused, at least for a certain time); he takes pieces of bread and a cup of wine or similar liquid and after consecrating it steep the bread in the wine and distributes it among those present. Those whose neighbours cannot report favourably upon them are excluded from it. Among the Kurds a sheep is also sacrificed and its flesh is distributed at the same time as the bread and wine.

They have a hierarchy at the head of which are two patriarchs regarded as descendants of 'All and invested with divine power; one of them is the Shaikh of Khuíbír near Sáwh, who lives in a tezkî built in the wilds. He is recognised as Sáfi Shaikh by the government. Below him are bishops and at the bottom of the hierarchy, priests (dold), intermediaries between God and man. The Kizil-bash observe several Christian festivals, Easter, which falls on the same Sunday as that of the
Armenians, proceeded by a week’s fast, and that of St. Sergius celebrated on February 9th. They do not permit divorce. Like the Muslims they have a religious veneration for certain trees; they reverence the sun, moon, and the sources of water. Their principal sanctuaries are the site of Khnýär, those of Sewlidji, F’r Sultanji, Validzâk, and Hâjjî Bekâk. Their religion seems to consist of survivals of pagan beliefs mixed with forms of Christianity covered by a cloak of Islam. They seem to number over a million (Kârds of Deresi, Malagat, Terîdzâ, Erzindûz, part of the wilayets of świs and Bitts, Turks of the wilayets of Ma’nutter al-Arz, świs and Angora).

In Afghanistan, the name is given to immigrants of Turkoman stock who form with the Tadjik and Hindkhi the principal representatives of the bourgeois class; they came from Persia in the train of Nadir Shah who settled them in Kâbul and several other towns as garrisons. They keep themselves aloof from the rest of the population; at Kâbul the court and government officials are recruited from them; at Herât they are engaged in commerce. They speak Persian, when speaking Turkish among themselves. Their number is just at 75,000.

Itzil-Irmâk (t. “Red River”), the ancient Halys (“Alas”), Alg (“Alas”), the largest river in Asia Minor. It rises in the mountains which separate the wilayet of Swis from that of Erzerum, waters the towns of Zarn (4,530 feet high) and Swis (4,160 feet high), then enters the province of Angora where it meets the mountain of Ardîsh and the Ködï Dîrân range which force it to make an immense descent of over 160 miles. Its course is at first south-east, then it turns northwards, and finally it reaches the Black Sea below Bâit in the middle of marshes. It is nearly 600 miles long. Its waters are of a dark yellow when they are in flood, diamine abundantly in the summer; its banks are wide and its banks large. Its principal tributaries on the right are the Khân-i-siyû and the Deûlûj-Çà; those on the left are the Sârîmû-Çà, which flows by Kaypîzî, the Dewêk-Cî from Tozî, the Gûj-Irmâk which comes from the Ilhâs-Dîrân (the ancient Olgassan) and waters the town of Kaftamîst [q. v.]. — According to Strabo (xii, 561), the river Halys (Alas) took its name from the mines of rocksalt, the produce of which was exported in the form of large blocks; these mines thirty miles to the north of Yîrgâhê near the village of Sîrî-Kînîzî, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonOUS peoples of Asia and those who had come from Europe to colonize the country. Herodotus (i. 72) makes it a frontier between Lydia and Media. It seems to have been known to the Arabs by its ancient name, if it is that is referred to by the name Aâs in a verse of Abu l’-Aâs al-Ma’ârî (S. de Saty, Cestromatia or, ii., text, p. 45, transl. p. 109, given by mistake “Alas”, an error reproduced by Defremery, Ministres d’Histoire Orientale, ii, p. 221).

Bibliography: Ali Beywad, Dîzgarh-Isînî, p. 609; Hâjjî Bahâlî, Zîcham-maaml, p. 626; Ch. Texier, Asie Mineure, p. 538; V. Cunet, Turquie d’Asie, l. 19, 272, 639; iv, 433; Fr. Asperger, Erminische Alterthumsbände, i, 185 sqq. (Ch. Huart)

Itzil-İşem (t. “Red Sand”), a desert between the Sir-Dârây and the Anî-Sârây, cf. above, p. 741, Kar-İşem. The country is less uniform, especially in the central part, than in the Kar-İşem; the desert is crossed by several ranges of hills. The Itzil-İşem becomes more and more inhospitable as one goes southwards. The region called Adam-Kirîlgh (where man perishes) between the Anî-Sârây and the cultivated region of Bakûsûh consisting of sandhills (barakân) is considered especially uninhabitable and dangerous. In the summer there is absolutely no life in the desert, in the winter a few springs are visited by the Khrit (Kazakh). In the middle ages also, we are told, a camp could be conducted from Djend against Khârîmiz (e. g. through the Khîl-İşem in winter only when the desert was covered with snow) (Beilâpî, ed. Morley, p. 852 sqq.). As usual, the desert sands are encroaching on the cultivated lands as a result of the nomad life of the inhabitants and the resulting destruction of the scanty supply of wood. In the second half of the 16th century several villages on the lower course of the Zaraîshân have become buried in sand.

Itzil-Uzen (in Turkish “sârî” “Red River”), the ancient Amaduni, a river which flows through Afâr bir-dûân and enters the Caspian Sea, forty miles east of Eznell, after having received the Persian name of Safâlî-Bûdî, “White River”, at its junction with the river Shâh-Bûdî at Mandjil. Its source lies in the province of Ardîlû, and it begins by crossing ‘Irak-adjûn to the north; its right bank tributary is the Zenûlû, on the left it receives the Karagû at Myâkin, then it runs along the southern slopes of Elburz, describing a great arc 125 miles long and crosses this range through the defile of Rûshûr and the narrow valley of Kustam-Bûdî, a kind of collier through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahî al-Abîdân, “White River” (transl. of the Persian Safâlî-Bûdî); cf. Dimâhûlî, Cosmography, transl. Momen, p. 145; at one time the Turks called it the Hûmû (Itzil-Îshla), Zîcham-înum, p. 145.)

Köç Hisâr, the name of several places in Asia Minor. The meaning — if it is not
simply a corruption of Ködja Hisar — in "castle of the ram" and it may be compared with proper names like Köyun Hisar, Tutcja Hisar, Keci Hisar.

1. Köc Hisar is a small town on the Dervis Cey, twenty-five miles north of the town of Kafr. It is on the high road from Constantinople to Boli, Amasia and Erzurum, between Karadjia Yufa and Tusa. According to Evliya Çelebi, this Köc Hisar was captured by Othman in 1508 (1538) and completely ruined, but this statement is not confirmed by any of the old Turkish chronicles. The country of Kasımpaul must at this time have still been under the dynasty of Isfendiyar-Ughli. In the xvith century there was a fort outside the town.

2. Köc Hisar, a little town, capital of a bej in the sandjak of Konya ninety miles north-east of Konya and 115 miles east of Kasımpaul on the eastern shore of the great salt lake called Tuz-Gölü, in the central plateau of Asia Minor. The town surrounded by gardens and vineyards is an oasis in the great desert; it lies on the unfrequented road from Konca to Ahmas. A little is done in weaving kelim and saddlades there; the bej used to be called Esbekashan.

Bibliography: Hadiji Khalifa, Izhannamev, p. 690; Evliya Çelebi, iii. 194; Ritter, Erdkunde, xviii. 63, 970; Sani, Kumlis al-A'lam, v. 3713; i. 755.

3. Köc Hisar, a little town, capital of a bej on the right bank of the Kizil Irak (g.v.), 20 miles north-east of Sivas on the road from Sivas to Zara and Erzurum. The ruins of an ancient encircling wall still exist and in the neighbourhood are many artificial caves, dating from a very remote epoch.

Bibliography: Hadiji Khalifa, Izhannamev, p. 637; Taeschner, Das anatolische Wegenetz, ii, plate 26; Cui nit, La Turquie d'Asie, i. 695.

4. Köc Hisar, a village ten miles south of Mardin, famous for the battle fought in 1515 between the Turkish General Kök Microwave and the Persians under Kar Ehsan (g.v.). The earliest Turkish historians do not mention the place in connection with the battle. Manedjliham Bashi, iii. 460, calls the scene of it Eski Köc Hisar.

KOC BEG, also called Gürçalji Köci Mus appropriations Beg, the historian of the decline of the Ottoman empire. Köc Beg belonged to the Gurca (Koryta) in Macedonian (Greece, cf. H. Gelser, Von. Ill. Beyg and aus Makomren, [Leipzig 1904], 201 sqq.) and was therefore probably of Albanian descent. Other statements, which as a rule make him a native of Gümtidjiya are wrong. He came when still young to Constantinople, was brought up in the Serai and in the service of the Sultan Ahmed I to Murad IV. He was in particular favour with the latter, whose trusted adviser he became. In this capacity he wrote for his sovereign the famous tracts, Kiçi-Goci Beg, in which with ruthless frankness he exposed the causes of the decline of the Ottoman empire. He finds the main reason for increasing decay in the neglect of and breaches of the old principles of the constitution. Köc Beg, the Montesquieu of the Ottomans, gave an excellent political and statistical exposition of the decline of Turkey as a world power in his memoir, which clearly reveals all the disorders that had entered the body politic from Murad III to Murad IV. The document composed in 1640 (1649) did not receive special attention till a later period. It has been several times printed, first edition 1677, 1680 (cf. I. A. A., 351, N. 153, and without place), edited by Ahmed Wefik Pasha 1279, 8°, 32 pp. and Sambil, 1303, 8°, 124 pp. — W. F. A. Behaner published a German translation in Z.D.M.G., 36, 1651, 272 sqq. (also Z.D.M.G., 31, 141, and 16, 271) and J. Thiry a briefly Hungarian one in Türk. Zenitettis, vol. ii. 1896, p. 406 sqq., Budapest, 1896. The book entitled Canem de Sultan Sultannamev, reprezentat a Sultan Memied IV pour son instruction, traduit du ture en francaise par M (Pere de la Croix), Paris 1725, 140°, is said to contain a French translation. A Russian translation with Turkish text was given by Vassilj Dmitrievič Smirnov in Knyazhoye Gomohodiskoye (i.e. d'autres livres écrits par un XVII. siècle, St. Petersburg 1873). Köc Beg according to the Gürçalji Ghafnana, v. 63, presumably following Nami, composed a Sultan Kebedhun (1640/1649) a further tractate, Kocih, probably of a similar nature. He was the teacher of the great Ottoman historian Na'mn (g.v.); he died at the beginning of the reign of Sultan Mehmed IV (1668/1682) and is said to have been debarred in his native town. His brother Kubartem Beg is said to have fled to Russia and to have become a Christian there.

KOCJA III, the name of a sandjak, or the old territorial division of the Ottoman empire. This sandjak covered the north-west part of Bithynia, including the whole of the shore of the Gulf of Nicomedia. In the north it was bounded by the Black Sea, in the east by the Bosphorus and the Gulf of Nicomedia, in the south by the sandjak of Brusa and in the east by that of Boli; on this side the Sakarya forms the natural boundary but in the administrative division the eastern bank of this river was included in the sandjak. The name Köcja III is connected with Aşık Köcja, the famous guzid and companion-in-arms of Oğuzm. In the last years of the latter's reign, Aşık Köcja and his companions such as Kara Muralaid made guzid into this territory and thus paved the way for the conquest of Erizmid and other towns by Oragh after his accession. When the towns of Erizmid fell into the hands of the Turks (c. 8230 =1529: the date is uncertain, cf. text), Aşık Köcja was already dead but his son Ilia was given as a fief to his comrades-in-arms who had to defend the territory from the Greeks. Salladesm
The central Afghan highlands are practically unexplored.

Bibliography: See s.v. Afghanistan.

KÖH-I NÜR, a diamond, now weighing 1061/2 carats, but originally much larger; the early history of it is obscure, and authorities are not agreed as to whether it may be identified with the diamond mentioned by Bābur in his Memoirs; but about 1656 it was presented by Mir Dastən [q.v.] to the Mughal emperor, Shāh Džahan, and was seen in 1655 by Tavernier in the treasury of Awarānū; in 1739 it was carried off to Persia by Nūr Shāh, who gave it the name it now bears. Nādir Shāh's grandson, Shāh Rukh, gave it in 1754 to Ahmad Shāh Durrušān, whose grandson, Shāh Shojisād, who was in exile in Lāhūr in 1813, had it surrendered to it to Mahārasingh Ranjit Singh. On his death-bed in 1839, Ranjit Singh is said to have expressed a wish that the diamond should be sent to the temple of Jījāmāth in Orissa, but it remained in Lāhūr until the annexation of the Pandžāb in 1849 by the East India Company, who presented it to Queen Victoria.

KÖHÄT, the central district of the North-West Frontier Province of British India, lying between Peshawar and Bannū, with the river Indus as its eastern boundary. The district is a broken hilly tract and the area is 2,604 square miles. As a whole it lies at an elevation of about 2,000 feet; the rainfall is very capricious, the average annual fall at the town of Köhät, the administrative headquarters, being 18.6 inches. There are three talukdas, Köhät, Tari and Hangū. The tract is divided between the Bangash and Köhātsch branches of the Pāshān race, the Bangash occupying the Mīrānī valley and the western portion of the district, while the Köhatsch are found on the eastern side down to the Indus. The total population at the 1921 census was 214,123, and the language commonly spoken is Prainī. The only town is Köhät. The district contains the military outposts of Thal and Fort Lockhart. A large and increasing trade with Thar and Kölāb passes through the Khusbāgalh-Köhät-Thal railway; imports and exports, apart from this through-traffic, are small, with the exception of salt which is the chief export. The thickness of the rock-salt at Bahādar Khel exceeds one thousand feet, perhaps the greatest amount of exposed salt in the world.

Bibliography: Imperial Gazetteer of India. Provincial Series, North-West Frontier Province, Calcutta 1908, p. 167 sqq.

KÖHRÜD, arcuised form of Köh-rūd, "river of the mountain", a village seventy-five miles from Isfahān on the road from Kāfschān [q.v.] in a valley in the midst of trees and orchards, which separates the two slopes of the mountain is here; Oliver St. John in 1871 from this applied the name to a chain of mountains which separates Iskā-Adīm from Fārs and stretches into Bālūchistan (chief peaks: Shīr-kūh
south of Yazd c. 12,000 feet high and Hazrat-leth south of Kirmān c. 13,500 feet high).

(Ch. Huart)

Eṣṭal [See Koy] KOKBURI, Amīr Saʿīd Muẓaffar al-Dīn b. 'Ali b. Bogydrān, lord of Ibbil, the most celebrated of the Baghtugiahs. Kōkbūrī was born in Māhāraz 349 (April 1154) and was 14 when his father Ibbil was killed by his brother Yūsuf, the Ḍārāb Mūjībdī al-Dīn Kāmīrī, succeeded in obtaining the succession of the latter to the throne under his guardianship, whereupon Kōkbūrī left Ibbil and went first to Baghdād and then to al-Mawṣil. Here he was welcomed by the Zandīd Saʿīd al-Dīn Ghārī b. Mawdūdī, who took him into his service. Later Saʿīd al-Dīn, or according to another statement, his brother and successor 'Isa al-Dīn Masʿūd granted him the town of Ḥārān as a fief. As a faithful follower of Saʿīd al-Dīn he received from him Edition in 578 (1182/1183) and later also Summat. In 584 (1188) he was imprisoned by Saʿīd al-Dīn on an old charge but was released again because the latter feared that the people of Mosopotamia would desert him, if he dealt too harshly with Kōkbūrī. After Yūsuf's death in 586 (Oct. 1190) Kōkbūrī received Ibbil and Shirāz in exchange for his former possessions, which Saʿīd al-Dīn gave to his nephew Tāb al-Dīn 'Umar. Kōkbūrī left no family; he willed his lands to the 'Abhābī and Masānjūdī. He died in Ramdān 630 (June 1233). See also the article BROTHERSIN and Ibbil.

(K. V. Zettersteißen)

KOKČA. [See Badakhshan, i. 552]

KOMIS, a province in Persia, the Kosir of the ancients (Polybius, Excerpta, x. 25) between Ibbil-Adjam, Khosrāv and Tāzirān; capital Dāmāgan; other towns Īrān and Bīrāz; the coton of Semvat is sometimes included in it. Through it passes the trade-route between Ray and now Teherān) and Khosrāv, Mekādāsī (p. 355) places it in the Dilmūn country. Industry flourished there in ancient times; there were manufactured blankets used both as cloaks and for beds (Doyen, Dict. des noms des vêtements, p. 383) which were exported abroad; cotton handkerchiefs with embroidered designs, small and large, single or double (semsalihī, musbatūhī), sometimes of the value of 2,000 dirhams; Muslims for hanging down on the shoulders from turbans (faūtānī) and fine woollen robes (Mekādāsī, p. 367). In the time of the Seleucids and Arsacids it formed one of the six divisions into which the ancient satrapy of Parthia was divided; it included the old capital of the Parthians, Hecatompyle, identified with Damāgan; it was the property of the family of Marmān.

(Ch. Huart)

KONAK, a Turkish word (derived from konak, "to settle, to establish oneself", reflexive from konak, "to place"), meant at first a hostelry (Meninski), a caravansaray and then by extension of meaning a relay, a stage, the distance at the end of which one stops to spend the night; later it acquired the sense of large house, hotel, palace; the term was commonly applied to the mansion of the governor of a province, or the place where the administrative offices are installed (in Eastern Arabic, mawṣūʿa, from the Pers. mawṣūʿa).

KONG, the word Kong is a corruption of Kpon, the native name for a place in the north of the present French colony of the Ivory Coast, near the watershed between the basin of the Comoé and that of the Nai, a tributary of the Bandama.

The town was founded at a comparatively early date by some Senufu of the tribe called Falafals, who still retain rights over the soil but except for this privilege are now of very little importance. These Senufu were and have remained pagan.

From the 18th to 19th century onwards a number of Muslims who claim to be of Sarakole origin, known by the name of Dyula, which they say is their real name, and speaking a dialect of the Mandingo language, settled in small groups in the region of Kong, where they devoted themselves mainly to commerce. According to their traditions they came from Missina and had founded several settlements on their way, notably one where now stands the town of Boko-Dyulasso. At first these Dyula had no political influence in the country. Favourably received by the native Senufu to whom they brought an element of prosperity by their experience of the world and commercial aptitude, they gradually acquired an undisputed influence.

Towards the end of the 19th century a chief of one of their factions called Sekn Watara seized by force the village of Kpon or Kong and made it the capital of a state which was not long in incorporating all the country between Boko-Dyulasso in the north and the outskirts of the dense forest in the south, but did not go beyond the Comoé in the east and the Bandama in the west. The different provinces of the kingdom were governed through Dyula chiefs the majesty of whose residence at Kong beside the sovereign, while others lived among the Senufu tribes who had become their vassals.

The kingdom of Kong does not seem to have played any considerable military part beyond its territorial limits, the Dyula being in general little warlike in disposition. But its influence was great both at home and abroad, not only from the political point of view but also as regards the development of civilisation. The old village of the Falafals had been transformed by Sekn Watara and his successors into a regular town, which had about 15,000 inhabitants when it was visited in 1888 by the explorer Binger. It was at once an important commercial centre and a focus of Muslim culture, the influence of which was felt in the
neighbouring provinces, especially in the south in the districts of Gimini and Dyamala. Alongside the wretched huts of the Semmo the Dyula had built houses with pylons and terraces in the style called Sudanese, resembling those of Dyenne and Tumbuku, and the mosques with double pyramidal minarets dominated the different quarters of the town. The number of literates, able to read intelligently and write Arabic correctly was relatively high. A well supplied market attracted to the town people from outside it and weaving, dyeing, and basket-making were busy industries.

The fame of Kong was wide spread in the Nigerian Sudan. Mungo Park heard of it on his first voyage in Africa: revealed its existence and name to Europe and at the same time, relying on inaccurate information, gave currency to the idea of an important chain of mountains called mountains of Kong, alleged to lie near this town. In reality, the range of which he had heard is over 300 miles to the south-west of Kong and forms the extremity of the eastern branch of the Mambay of Futa-Djallon.

The first European to reach Kong and bring back an accurate report on the region was the French explorer Binger. Coming from Ramako, he reached Kong on February 20, 1889 and stayed there till March 11. In December of the same year Trench-Laplène, resident de France aux Etablissements de la Côte d’Or (now Colonic de Côte d’Ivoire) arrived in Kong, coming from the south via Bamnuku and persuaded the king Karazmuko-Ule Watara and his dignitaries to accept an agreement placing the State of Kong under a French protectorate. This treaty was signed on January 10, 1890 in the presence of M. Binger who had rejoined Trench-Laplène at Kong five days before. M. Binger, at the head of a mission, which included three other Frenchmen, again visited Kong in 1892.

Two years later Captain Marchand went there and learned that the town was threatened by the conquering Samori. The latter, at war with the French, had informed the king and the notables of Kong that they had to submit to him. Karazmuko-Ule had replied to this ultimatum with soft words and the despatch of a kind of tribute. Nevertheless he desired to remain faithful to the treaty concluded with France and he begged Captain Marchand to get the French government to send troops to protect his kingdom from Samori. This is how it came about that an expedition called the Kong column was concentrated at Great Bassam in August 1894 and sent under Lt. Col. Monteill from the Ivory Coast. Its advance was hampered by the hostility of the tribes of BaCollé, a land south of Kong. Encountering the Samori’s army in March 1895 with his effective reduced by half, Capt. Monteill was obliged to retire without inflicting a decisive defeat on the enemy or being able to advance as far as Kong.

Once freed from the French offensive, Samori wished to punish Kong for having provoked it and decided on the gradual and systematic destruction of the town. The king, the notables and the greater part of the population fled to Bobo-Dylasso, the remainder were massacred or reduced to slavery. The mosques were razed to the ground, the houses pillaged and set on fire and in 1896 there were only a few ruins left of the once great and wealthy town. The kingdom of which it had been the capital, broken up and dismembered, was annexed by Samori who had made his capital at Dabakala in the province of Gimini, S.S.E. of Kong.

In January 1898 a detachment of French troops coming from the north occupied the site of the town and built a station there. This was besieged a little later by bands of Samori’s soldiers and relieved at the end of February by Commandant Caudrelier. It was then that Samori left the district to take refuge on the Bandama and later fled to the south-west. He was taken prisoner soon afterwards on September 29, 1898 near the Liberian frontier by Captain Guerra and Gaden.

Once peace was restored to the country, the French authorities endeavoured to bring back the people of Kong to their town and to make them rebuild their houses. Karazmuko-Ule had died in the meanwhile. His successor agreed to return to Kong with several Dyula families and they gradually arose on the ruins of the ancient town, beside the French station, new houses some in the Sudanese style like the old ones, others of humber style, simple huts with thatched roofs. A market was built and a mosque. But the majority of the survivors of the old population of Kong preferred to remain at Bobo-Dylasso or in its vicinity and although it is slowly growing, the new town of Kong has only 5,000 inhabitants in 1925. The ancient kingdom however has been gradually restored and is administered as before under the suzerainty of a prince of the Watara family through Dyula chiefs, called chiefs of districts. But it is under the authority of the French administrator; the suzerainty of the prince is only nominal and the native Senufo tribes actually enjoy an independence such as they never had under the old regime.

(Maurice Delavosse)

KONYA (the ancient Iconium), a town in Asia Minor on the railway from Bagdad, the capital of the province of the same name, in a barren plain. It is 5,000 feet above sea level, of its 44,000 inhabitants, 39,000 are Muslims, 1,500 Greeks, 3,000 Armenians, 50 Protestants, 150 Catholics. The streets are broad and unpaved. The houses are built of terre pisé, except public and special buildings, 44 mosques, 142 apartments, 12 libraries, 2 bookstores. The Greek church, the Armenian church, 68 schools, 7 caravanserai and 8 baths; the exports are wheat, barley, maize, cotton and Angora wool; salt petre and tobacco (manufactures of the state). It was formerly the capital of the Seldjiks of Rum of whom monuments still survive. It was girt with walls by Alsh al-Din Kaki-Kubad I and the stones of these walls have been used in the erection of modern buildings. Teniers and von Moltke were still able to record that 108 towers of the walls were still standing. Ruins still exist of the palace of the Seldijks and of the citadel (610 = 1213/1214). The mosque of Alsh al-Din begun by 'Izz al-Din Kaki-Kubad I in 616 (1219–1220) and finished in 617 (1220–1221) by an architect of Damascus, Muhammad b.
KHWâDÂN; in front of it is the tomb of Ghiyâth al-Dîn Kâhl-Khusraw I built by the architect Vâsûf b. 'Abd al-Ghâfir and containing a minbar in black wood adorned with arabesques, the work of an artist from Akhârî, made in (550/1155).

The college of Karâtîs is adorned with façades (640-1251/1252); the modrâse called 'alîî ma'nâtir, "with the slender minaret," has been recently destroyed by an earthquake; mausoleum of Shâhîl 'Sâdir al-Dîn (d. 673 = 1274), of 'Âshî or al-Dîn 'Ali surnamed 'Sâhir 'Attî (d. in 684 = 1285) who was minister of Ghiyâth al-Dîn Kâhl-Khusraw III, and of 'Abd al-Dîn Talhâzî. We may also mention the Sufi-iî modrâse "college of glass" of 640 (1242/1243) and some monuments of the time of the Kâramân dynasty. The tombs of Djalîl al-Dîn Rûmî [q.v.] and of all his successors, the grand masters of the Mawlawiyya order, down to the present day is surmounted by a cupola in the form of a pyramid in eight tiers covered with tiles in blue enameled. A few remains of the Roman period are collected in the zavvûrîa or "cloth market," and lions called Phrygian but probably Hittite.

The Emperor Frederick Barbarossa spent a week there in the reign of Kilîd-arsîdîl-Îlm in (May 18-26, 1190) a fortnight before he perished in the waters of the Caïcredus. It was the scene of a victory of İbrâhîm Pâsha, son of Muhammad Ali, over the Ottomans (December 21, 1832). A kind of apricois called 'amâr al-dîn is grown there of which a tart called by the same name is made, as at Damascus; a kind of blue flower called 'āzhîn ilâyî, "flower of the vineyard," is used to dye cloth blue. Lime water is obtained from the springs at Mérâm one hour's journey to the west (gardens and promenades at the foot of the mountains), which improves by being matured (in jandîl).

Hattâ, Rûbûl, I. 281; Tekser, Advî Mi'nîsî, Paris 1882, p. 661; V. Quinet, Turquie d'Asie, I. 818; Cl. Huart, Komîa, le ville des derives tourneurs, Paris 1897, p. 132 sqq., 158, 169, 183 (drawings and photogravures); Fr. Sarr, Reise in Kleinasien, Berlin 1896, p. 28 sqq. and Pl. XVI.-XXX. (photographs). (Cl. Huart)

**KOPAK,** a Persîan and Transoxiana coin. Kopahi stanîrs are mentioned in the Šîrâqshâmîa (the life of Tîmîr), and Bâbûr (Moheer, G. M.S., p. 185) speaks of 300 ~kopak Kopâk (see also P. de Courtelle's translat. I. 426). P. de la Cisine, as quoted by Quatremère (N. E., xix. 74, a), says that dinârs cophies are gold ducats worth 7-10 French money. See also Tavernier, History of Russia, and Moray's English Dict., v. Kopak. Though the Transoxiana and Persian Kopak was a gold coin, the word may still be etymologically identical with the Russian Copeck, just as dinâr and denarius degenerated from being gold and become silver coins.

(H. Beveridge)

**KÖPRÜ** (in Turkish *bridge*; East. Turk. *X-kuû*) also called Vezir-Köprû, "the vizier's bridge" (from the famous grandvizier Köprû Mümmend Pâsha, of Albanian origin; see below Köprûlî), capital of a kâfî in the sandjak of Amasia in the province of Strâwa on the river Astawulûs, a tributary on the right of the Kizîl-Irmâk; It has 8,000 inhabitants.

Mainly Moslima, 17 mosques, 2 libraries, one of which is a wâfi founded by Köprûlî-sâde Fâjid-paşa, 6 modrâses, numerous charitable buildings erected by Köprû Mümmend Pâsha, 6 caravan-serais, five baths, and three derhvîsî monasteries. The houses are covered with red tiles and the chimney tops have a metal cap like the minarets of Turkish mosques. It contains the palace of Hâszîl Yûsuf-ağha and in the citadel, the mosque of the same; monasteries of the Kâdiriya and of Khalwetîa derhvîsîs; eleven caravanserais, two imakets (poor kitchens) and eight schools. The best baths are those of Almâd Pâsha. The Mesestan (central market) was built by Yûsuf-ağha. The ports of the town are Bâfra and Sinope on the Black Sea; a road suitable for vehicular traffic connects it with Şambûn.

Köprû-ya is the name of a river which rises in the Tawshân-Dîgh and flows into the Kîlî-hamît [q.v.] near Vezîr-Köprû. It is also the name borne by the ancient Erymedon which flows into the Mediterranean sea in the Gulf of Adalia; at its mouth is a small town of Köprû-hamîr.

**Bibliography:** Ali Dîwâ, Dîdîh-i-nâmî, I. 643; Sâmi Bây, Komîa, le ville des derives tourneurs, Paris 1897, p. 18 (view of the bridge).

**KÖPRÜLÛ,** a family of Ottoman viziers. This celebrated family which provided the Ottoman empire with its most prominent statesmen during the period of its commencement of decline, was probably of Albanian origin. In his Mémôres, contes-diverses relations très curieuses de l'Empire Ottoman (Paris 1684), Sieur de la Croix says the founder of the family was the son of a Greek or Arab priest, a statement adopted by L. von Ranke. It is more probable that the ancestor of the family was an Albanian who migrated in the 18th century from his native district to the town of Köprû Merxîmî in Anatolia. Köprû, now usually called Wezir Köprû, was at this time an important settlement, which had a long history (cf. Hîdîdî al-Khîlîfîa, Dîdîh-i-nâmî, 635, 640, and 647), where Kesi Gâhîr [Kusa beve in J. von Hammer, G. O. R., vi. 3] is given as the old name and also Ewliya, Şeyh-i-nâmî, ii. 399), and only began to lose its importance at a later date (cf. M. Rûmî, Yezîd, through Asia Minor, London 1818, p. 295). Near it lies Taşk köprû which gave its name to the famous family of scholars, the Taşk Köprûlûs. To distinguish it from the latter Köprû was later renamed Wezir Köprû in honour of the Köprûlû family. Here Mehmed Köprûlû, the grand vizier of this Albanian immigrant, was born, the first to make the family name famous and widely known. The number of important men who came from this family is not small. A certain Bahşîlî Hüsain (of Raşgrad, d. 1094 [1683] at
Köprülü (2066) composed a "Tarihi-Salatice Köprülü," a history of this family, the original manuscript of which is in the Köprülü Library in Stanbul (NP, 212). It contains details of the ancestry of the Köprülüs. Among the most important members of the family are the following:

1. Köprülü Mehemmed Paşa, grand vizier of Turkey, or better, administrator of the Empire, born it is said in 991 (1583), died November 1, 1661 at Adrianople. In his youth, he was a humble scullion and then cook in the imperial palaces; entering the service of the grand vizier Kossaı Paşa, he became his page, and then rose to be chief marshal in the service of the grand vizier Kara Mustafa Paşa [q.v.], a native of Marmara. He then rose steadily up the ladder of the higher offices of state. As a paşal of two tails (1652) he was appointed governor of Damascus, Jerusalem and Tripoli and in 1661 (1652) became visier of the cupola. Soon afterwards however he was granted the unimportant governorship of Kastambul and retired in chagrin to his native town. After a brief imprisonment at the hands of the rebel Wasil, Ali Paşa, against whom he had taken the field, he was liberated by the grand vizier İskit Paşa and appointed by him governor of Tripoli. While he had entered upon the duties of the office he was deposed of it and retired again to Köprülü. Then the grand vizier Mehmed Paşa, "with the crooked nock" [çeşid butun] took him to Stanbul where he was soon to become his most dangerous rival. By this "il-Hiçjila" 3, 1680 (September 22, 1656), he had received the seal of the empire. He attacked religious zealots with great energy (cf. J. von Hammer, G. A. R., vol. 5, pp.), had the ringleaders in previous risings executed without mercy and purified public life. In reorganising the shattered finances of the State, he was incorruptible and inexorable and in doing this made many enemies. He renewed the courage and lowered national feeling of the Ottoman people and endeavored to revive the ancient glory of the Ottoman arms by the war with the Venetians. He fought in the Dardanelles in 1669 (1657) with Admiral L. Mocornag, a battle which ended in the loss of the Ottoman fleet and the capture of the Venetian flagships. Mehemmed Paşa endeavored to compensate for this by the conquest of Tenedos and Lemnos; and in the following year 1648 (1657) Transylvania was conquered. He next turned his attention to Persia where he occupied the town of Yanova, then suppressed threatening risings in Northern Syria and in Egypt; built the new fortresses on the Dardanelles (cf. the article "Dardanellai") and planned fortifications for the frontiers generally (cf. J. von Hammer, G. O. A., vol. 86, p.). He succeeded in considerably enriching the state treasury. Before his death on 9th Rabii I, 1672 (October 31, 1661), he recommended on his deathbed to the Sultan his 26 years old son Ahmed as his successor in the grand viziership. He was interred behind the School of Tradition inside the burned pillar.

A brother-in-law of Mehemmed Paşa was Köprülü Mustafa Paşa (died 1674-1683; cf. "Sülâb-on-İshıık") whose son the chief marshal Köprülü Ali Bey was executed in 1684 (1702) (cf. Reisât, Tâhirî, 1, 261, and J. von Hammer, G. O. A., vol. 49). From them was descended the literary historian Köprülü Mehmed Paşa, born 1306 = 1800 (cf. on the genealogy of Ali Emir in "Dâhilâ Tarih" Edelhiz, Mârqad-i of 30th vol. (p. 79 and 31st vol. 1334 (1914) [p. 162, 277] and M. Hartmann, "Dichter der neuen Türkei" Berlin 1919, p. 91). The "Mehmed Paşa, the histories by Nezât, J. v. Hamment, Zinkoïsi, and especially Sir Paul Ryvaut and Richard Knolles also Andrea Valieris, "Histoire de guerre et de campagne de Vénétie, Venice 1679, 52" (where it is stated, as in G. Brunoni, "Histoire des quatre guerres entre Vénétie et Turquie," Venice 1673, l. 292, that Mehemmed Köprülü was en renaissant le règne de son frère); the historical novel "Histoire des Grands Vizirs" de M. de Noèvroye, in "Histoire de l'Empire des Ottomans," Paris 1676, is quite fictitious (where for the first time we have the old-repeated table that Mehmed Köprülü was of French origin); M. Bruschi, "Gli Ascolti sulle prime viaggio in Turchia," Vienna 1805, l. 290, and C. Brünner, "Die Geschichte des Osmanischen Reiches," Leipzig 1877, p. 77, etc., (brilliant summing up of the personality of Mehemmed Paşa); "Ottomanische Geschichte," M. N. v. Rubel. 20th ed. St. Petersburg, 173, etc., Ahmid Raffi, Köprülüler, Stanbul 1331, 1 part, 143 p. 2. Köprülüler Fâji build Ahmed Paşa, son of the preceding, Ottoman grand vizier, born 1045 (1635) at Weizd Köprülü, died 20th Shaban 1087 (October 20, 1676) near Adrianople. Mehemmed is said to have been unable to read and write, therefore he wished his son to become a scholar. The young Ahmed, while still a child, was entrusted to the famous historian and later Khalil al-timn Kara Cehnî Ahi al-Atîq (q.v.); he signed his autobiography and when only 10, held the office of a mufti in the mosque of Mehemmed the Conqueror. For ten years he had held this position before he decided to enter the civil service. Three days before his father's death he went as governor to Erzurum and in the following year to Damascus in the same capacity. From here he conducted a successful campaign against the Druses (cf. J. von Hammer, G. O. R., vol. 93) but in consequence of his aged father's increasing decrepitude he was recalled by the Sultan to the capital where he was given the rank of "ujące mabdi" and later the Sultan the capital where he was given the rank of a designation. On the 7th Rabii 1672 (October 30, 1661), he was given the imperial seal immediately his father died. He was then only 26. For fifteen years he filled the office of grand vizier with ability and strength and surpassed his father in education and statesmanship. He undertook numerous campaigns during his tenure of office. His first was against Hungary, when he took Belgrad (1656, September 29, 1666), besieged several fortresses, roused Zerzavia to the ground and finally suffered a reverse at St. Gotthardt on the Rand on August 1, 1664 at the hands of Count Montecuccoli. At the end of May 1667 the Croatian was begun which he conducted in person and ended with the occupation of Candia at the beginning of October 1669. Shortly before then he had placed two of his brothers-in-law in the two most important offices in the empire; Köprülü Mustafa Paşa was made Grand Admiral ("Köprülü Paşa," q.v.) while Kara Mustafa Paşa [q.v.] had been appointed "Kârol-îmâd" to the imperial camp. (J. von Hammer, G. O. R., vol. 277.)
Kapadua Pasha Saiyid Mehmud Pascha is mentioned as a third brother-in-law (cf. J. von Hammer, G. O. R., vi. 345) whether rightly or not is uncertain.

In the summer of 1672 (1083) he turned his attention to Poland and took Krapina and Podolica after a several days' siege, celebrated by the poet Reh, on 5th Dhu-l-Hijja, 1085 (August 28, 1675). On the other hand the grand vizier lost the last battle, that of Choita (Polish: Chocim, Turk.: Chottija); the fortress was lost in November 1675 (Radjab 1084). Ahmad Pascha had to take to flight. While he was able to make up for the loss of the battle of St. Gotthard by a satisfactory peace of Varsau (August 10, 1664), he had to prepare for a new war the next year, which ended with the capture of Chottja and the taking of Ladysyn. On the way to the imperial camp, Filji Ahmad Pascha died after eighteen days, illness on 22nd Shaban 1087 (October 30, 1676) at the farm-place of Karu Hilier near the bridge of Erkeme (between Bursah and Adramipline). The body was brought to Stambul and he was buried beside his father. His early death is said to have been caused by over-indulgence in spirits and to dyspepsy caused thereby (cf. Edits de la Crux, État général de l'Empire Ottoman, ii. 28). At the siege of Candia he had been liable to epileptic fits, and already looked a tired old man, weary of life. He afterwards indulged in all kinds of vice, surrounded himself with women (he is said to have had 80 wives, including slaves) and liked to drink Polish brandy which the doctors had prescribed for him.

Ahmad Pascha-certainly surpassed his father in intellect and intelligence and still more in his love for the arts and sciences, which he encouraged even when in the field. In Stambul he founded a comprehensive library (cf. Mouradoglu D'Olsson, Tableau, ii. 438) which is still in existence. (Catalogue, Déter, 248, 42, 4, n.d.) as a monument to his fame. His seal-bearer Hassan wrote his life under the title Djamshid al-Aghbar, and his campaigns were several times celebrated in verse and prose (cf. V. Balinger, Die Geschichtschreibung des Osmanen, Leipzig 1897, p. 211 sqq.).

Contemporary European writers are unanimous in praising the beauty and keen penetrating intellect of this distinguished statesman.

(to be read with caution); II. Köprülü Mâffet Pasha, son of I and brother of II. He was born in 1637, the second son of Mehmud Pasha. He was appointed vizier of the empire in Djanma II, 1091 (July 1680) and became successively vezir-in-fact (commandant of a fortress) of Bender, Silistra, Balta Dagh, the Dardanelles, Chios, etc., thus in Dhu Il-Hijja 1098 (October 1687) was appointed the grand vizier's deputy (sûretâ) and ultimately received the seal of the empire on 24th Muharran 1101 (November 7, 1689) after once again being vezir-in-fact of the Dardanelles and of Candia. He was by this time 52 and was reputed to be a strict observer of the laws of Islam and an enemy of the Christians. His mind inclined more to learning than to military affairs. Quoique grand vizir, says a contemporary Italian relation, 1r un autre souffre aimable, ministre du vient, ministre des chrétiens, veillant dalla sua fede, avere scrupolo, caro, buono e bravo, stimato per un santo e dolore della sua legge, politico ma non essere pratico di guerra (cf. J. v. Hammer, G. O. R., vi. 547) which gives a very clear idea of his character and qualities. His aim was to make the grand vizier as independent as possible, whereas he reduced the number of viziers of the cupola and stimulated his officers whom he did not like. He was anxious to improve the finances of the State, such as publicly farming out the tobacco tax and regulating the currency, showed his clear insight into the needs of the kingdom. He had the superfluous silver of the imperial palace melted down and gave his own to the mint, contenting himself with pewter. In the summer of 1695, he went with the army against Serbia, reoccupied Belgrade (October 18, 1695), took Essen (Hung. Eszék) and fell on September 19, 1694 before Slanakamen, near Belgrade. His body was not found. Like his brother he was called the virtuous, Filji. He was a distinguished statesman, who clearly recognised the needs of his day and therefore introduced various innovations, the starting points of which time proved.
KÖPRÜLU — KÖR ÖĞHLU

reducing and remitting the poll-tax (cf. J. v. Hammer, G. O.R., vii. 44). He founded a large number of buildings for pious purposes, for example mosques in Stambul, Adrianople, Giudecca, and Lepanto, built schools, colleges, waterworks and wells of all kinds (cf. J. v. Hammer, G. O.R., vii. 47 sqq.). The execution of his counsels by Khrillumović Ali Beg, because of a secret passion, it is said (cf. Rughi, Turizm, i. 264) the study in Rantstutz's Geschichten der osmanischen Römiscz, Hamburg 1745, p. 618 sqq., is quite absurd) affected him deeply. An incurable disease finally forced him to tender his resignation, which was accepted Dec. 12th (Rahi II, 1114; Sept. 5, 1702). He retired to his estate on the heights of Ibelin Tepa near Adrianople and died almost immediately afterwards at his country house near Silivri on 29th Rahi II, 1114 (September 23, 1703). He was buried in a special tomb on the "Sulhan's market" in Stambul.

KÖR ÖĞHLU (v.): a son of the blind man); the hero of a popular romance is power mingled with verse of which there are Persian and Turkish recensions. He was, it is said, a Turk of the Teke tribe named Köçai; the son of Mirzâ Serîf who lived in the reign of Şâhi 'Abdû II (1051-1072 = 1641-1660). He was born in the north of Khorasan and lived there in the second half of the 17th century of our era. In the valley of Salmâ (Adarabânî) are still shown the ruins of the castle of Candî-bel built by him. He used to plunder the caravans on the road from Turkey to Persia via Erzerum and Khorasan. He is the national hero of the nomad tribes of Persia and Turkoman origin. Poetical versions of the story of his exploits are sung at the festivals to the accompaniment of music. His horse Kürk shares his fame; the song lamenting his death is always sung in existence. Nomadic singers called "atâk", "lovers", sometimes accompanied by jugglers and rope-dancers wander through the towns, villages and encampments of Transcaucasia and Khorasan and recite this epic in sections called muqâllâ or wazaea. They are known as kuşçu ve ağa, "reciters of Köçai-Öghlu". The Turkish recension puts the scene
of Kör oglu's explains in Asia Minor, locating them around Boll (the ancient Claudiiopolis in the province of Kastamoun). His name is derived from the fact that the lord of the district (the Persian version, Sultan Murad, sovereign of a part of Turkmenia and in the Turkish the Deyo-boy of Boll), furious at seeing that the head of his sultans, the father of our hero, sent him to pick the best out of the horses brought to him in tribute, had chosen a thin one, and had his eyes gouged out. The area of the adventures of Kör oglu in the Persian version is very extensive for it includes successively Khorkaam, Astrabadigan, Erivan, Nakhchivan, Anatolia, Kocy, Syria, and Egypt. The Turkish version does not go beyond the district of Boll.

(Ex. HOANT)

KORA, an ancient decayed town, situated at 26° 7' N. and 80° 22' E. on the old royal road from Agra to Allahabad (Allahabad), now in the Fathpur District of the United Provinces of Bat平台, and under the Sultan of Delhi it was the capital of a province, and in Akbar's time it was the head-quarters of a saradar in the wilayat of Allahabad.

A copper coin of Akbar is known of Koya mint. The place was also a mint-town of the later Moghul emperors from the time of Râmâl Dâm-dât onwards.

(R. B. WHITENER)

KORAH. [See KORAH.]

KORAN, the (al-Korân), the sacred book of the Muhammadans contains the collected revelations of Muhammad in a form fixed by community to writing.

1. Even among Muslims there is no unanimity regarding the pronunciations, derivation and meaning of the word. Some pronounced it Korân without hamza and said it is properly pronounced as kerân elsewhere, like kerân and brightener, or they derived it from kerân, to tie together. Others rightly begin with kerân with hamza and explained it either as an infinitive in the sense of a past participle or as an adjective from kerân, to collect. It is really very easy to see an infinitive in it as it occurs as such in Suras lxxv. 17 (cf. Tabari, ed. de Goeje, s.v.). The exact meaning must be sought in the usage of the Korân itself where the verb kerân's frequently occurs. In Surah xvii. 95 it certainly seems for "to read," but the most frequent meaning is rather "to recite, to discourse," which does not necessarily pre-suppose a written text. Thus Allâh says, lxxv. 17: "Move not thy tongue too quickly with it for it behoves us to collect and recite it!" Similarly the word is used of Muhammad who recites the revelations made to him, xvi. 105; 47; 207; lxxvii. 171, cf. the 24th form in lxxvii. 6 or of the believers when they recite the revelations at prayer, lxxvii. 20. Cabras claims that in the Quran, the unique, al-Kurân in reading, lxxvii. 259. We thus come to the meaning, literally, "that which is uttered, i.e. what Muhammad heard from Allât and repeated" ("follow our recital", lxxv. 18).
sent down, and in xxii. 34 to its revelation. On the text see fawā'id see that article. A term peculiar to the Kūrān, the origin and original meaning of which is still obscure, is Sūrat. It is used only for the separate revelations, while Kūrān has sometimes a more comprehensive sense and is found in the Mecca as well as the Medinan sections; for further details see the article Sūra.

Smaller sections of the Kūrān were called ḥājir, plural ḥājdīr. It means properly, like the related Hebrew word ḥār, a token of belief (ii. 249; iii. 36; xxv.-197); and especially the token of Allāh's existence and oneness which He revealed, xii. 105; xiv. 35; xvi. 79, as mentioned above (ii. 247). This gives us a very instructive glimpse into Muhammad's ideas and consciousness. In Mecca the demand of his opponents that he should give proof by some miracle of his credibility as a messenger of Allāh caused him serious difficulties. The gift of performing miracles, possessed for example by Jesus, was denied him but the revelations offered him a very good substitute, the divine origin of which he was firmly convinced (vi. 155; vii. 202; xx. 135; xxix. 49 sq.). They were the only convincing miracles and thus received the name ḥājdīr. They were sent down from heaven (ii. 95; xxvi. 87) to the Prophet of Allāh (ii. 253; iii. 51; al. 5) and proclaimed (xxviii. 77) by the Prophets before him (xxviii. 14; former times by the Prophets (xxviii. 59); "Allāh proclaims his Acts" (ii. 183); the believers recite them in the night" (ii. 110); "the unbelievers dispute them" (xxiv. 40, etc.). The one noteworthy point is that Muhammad when he expresses himself more definitely does not use the word like ūrūd of the revelations but only of the smaller parts of which they consist: e.g. "Sūra which we have sent down with perspicuous Acts" (xxvi. 10), "a scripture which we have sent down so that they may reflect on it" (xxvii. 48); these are the Acts of the wise scripture" (i. 4; xxi. 1; xxvi. 11; xxvii. 12; xxviii. 1); "who are the Acts of the Sūrat and of a perspicuous scripture" (xxviii. 11; cf. xxvii. 1); a scripture the Acts of which are firmly linked together" (xxi. 1; xii. 2) and especially in the scripture and unambiguous Acts and others which have several meanings" (ii. 5); and "if we abrogate an Act or discontinue it to obviate, we put a better or a similar one in its place" (ii. 100); "if we exchange one Act for another", etc. (xxvi. 103). Unfortunately one cannot see from such passages how large or small these component parts of the revelations were. Later scholars took them to be verses in the technical sense but this does not agree with xxvii. 88 and other passages where the reference is clearly to divisions required by the sense without it being possible to define their length more exactly.

2. From what has already been said we can see how Muhammad regarded the origin of his revelations. They came from heaven, and were taken from a well-guarded tablet (lxv. 21, etc.) a concealed book only to be touched by the pure (lv. 76), the "mother of the scripture" (the original scripture, xliii. 6; otherwise iii. 5). The book is called "an admonition on noble, lofty, pure language through the hands of noble writers" (lixvii. 2) (lxvii. 2; cf. iii. 3, where Muhammad swears by a scripture written on an enrolled parchment, and li. 2; "by the red-pen and what it writes", xxvi. 4 sq.; with the red-pen he taught men what they did not know). The Prophet did not become acquainted with the whole of this book but only with isolated sections of it, which were given to him in Arabic dress: "Precisely", it is said in xvii. 26, "what is communicated is that of Allāh's scripture; no one may alter its words", and in iv. 162; xii. 76, he says expressly that Allāh told him of some of the Prophet's books beyond all. Nevertheless, we can obtain from the revelations given by Muhammad an idea of the heavenly scripture, from which they are taken, for it is apparent that it contained a similar mixture of instruction dealing with the being of Allāh, the creation of the world and especially of man, good and evil spirits, the coming judgment, paradise and hell, and the experiences of the older prophets, and in addition all sorts of regulations regarding the worship of Allāh, and the life of the community, including quite special laws (iv. 124, 126, 139; xxviii. 6). The field of cosmology is touched on in the reference to the twelve months (lxv. 30), the temptation of man by Satan in xii. 4. But further perspectives are opened up when it is said that the heavenly book comprises all that has happened in the universe and will happen (lxix. 3; xcvii. 37; xcviii. 3; xlv. 50; lvii. 38). The same is said of the Prophet's scriptures (lx. 4; lix. 47; xxv. 37; etc.); even if the Muslims had remained in their houses at the battle of Chalid, those who were destined to die would have been attracted to the places where they were to fall (i. 148); (cf. my essay in the Haupt festellungen). The Kūrān contains only a few and very obscure hints regarding the process of communication of the revelations; it is wrapped in a secrecy which Muhammad either could not or would not illuminate. It is not from the Kūrān but from reliable hadiths that we learn something about the half-dissolved ecstatic conditions, with which he was overcome (cf. the article MÜHAMMAD); the revelation ix. 12, xcv. 1, at most might contain only a slight reference to them. The main thing was however, as already observed, not what he saw but what he heard, which is also underlain by the description of the visions (xii. 10; lxii. 139); that he had visions is evident from lii. 3 sqq.; lxiii. 23 sqq. It was the voice of Allāh that with a few exceptions talked to him in the stereotyped "we" and stamped even what the Prophet had to say by a prefixed fas "say!" as a divine utterance. But he did not hear this divine voice directly — for this his conception of Allāh's superiority was too great. But through the intermediary of the "spirit" or of an angel, according to the later passage li. 91. Gabriel: "The trustworthy spirit, brought the revelation down into the heart of Muhammad (xxvii. 149 sqq.); the spirit of holiness brought it down from Muhammad's Lord with truth" (xvi. 104); "Allāh sends the angel down with the spirit of (Izzō) his word to whom He will" (xxvi. 5). The Lord of the throne sends the spirit and He wills to whom He will of his servants so that he may admonish" (xi. 15); "We have revealed to them a spirit of our own" (iilii. 59) — all somewhat obscure expressions, which are not made any clearer by the fact that the spirit is in other passages (xxvii. 38; xxvii. 4) associated with the angels, but which at least show that the Prophet had formed some idea for himself of the
example only a few scattered indications regarding the great pilgrimage so that it would not be possible to reconstruct the whole ceremony from the Kur'an without the help of traditions. In such cases one must always consider the possibility that traditions endowed all sorts of later customs; and that this actually happened we see from the instructive example of the settling of the times of daily prayers. According to tradition, the angel Gabriel taught them to the Prophets but the Kur'an talks only of two obligatory periods of prayer, to which is added the afternoon prayer (cf. 2: 187). When there is mention of the five times of prayer in Muhammad's letter (see Nishāh 653), this is probably an indication of a later recasting of the text (cf. Zuhd ibn Ma'jah, i., 159). That Muhammad knew quite as well that the full contents of the heavenly book had not been communicated to him is evident from the passages mentioned above, according to which Allah had told him of some of the Prophets but not of others.

Of special significance for Muhammad's own conception of the revelations is the distinction which he makes between them. Thus it is said in ii. 5 of the Kur'an: "If it is not unambiguous and which are the mother of the scripture (i.e., firm foundation, otherwise in xiii. 3) and others which are ambiguous; those in whose hearts there is a tendency to turn aside to the ambiguous because they seek vexation and (arbitrary) exegesis; yet we know the exposition except Allah; but those who are strengthened in knowledge say we believe in it, everything comes from our Lord." The obvious passages which to the pain of the Prophets produced criticism and quarelling, are ascribed to divine inspiration equally with the clear passages. But there are cases where the divine revelation not only elucidated principles of the earlier religions of revelation but even regulations which Muhammad himself had proclaimed. How he reconciled this with the idea of an original scripture in heaven, the contents of which were revealed to him, is not easy to see, if he ever really reflected on the point at all; but in any case the idea itself that Allah revoked and altered the announcements of His will caused him no difficulty. This is the doctrine, later thoroughly discussed by the theologians, of asābīh and masā'ib, the abrogating and abrogated.

There were special works on the subject, e.g., by Abū Ja'far Simūn Allah ibn Bābīna (d. 410 = 1019) and 'Abd al-Khālīq ib. Tāhir (d. 440 = 1048). The terminology goes back to n. 100 where it is said with reference to the alteration of the direction at prayer: "if we abrogate an aya or command it to oblivion, we offer something better than it or something of equal value." cf. also xvi. 193: "if we put one aya in the place of another — and Allah surely knows what He sends down — they say: 'thou art simply tampering'," but this verse may also refer to unintentional variations in the repetition of earlier pronouncements.

If Muhammad did not have quite a clear conception of these points of view, he was at all the more sensitive when the Meccans pointed out that his wisdom was communicated to him by mortal teachers, some of them foreigners (xvi. 105; xxvi. 35- ; xlv. 13). His defence on this point is very weak and he really conceals the justice of the charge. Why he learned in this way was probably.
transformed into indelible divine words when it re-schooled in his life of obscured mentality.

4. Among the most far-reaching of Muhammad's conceptions was the idea that not only his mission but also the revelations of the earlier Prophets and the Holy Scriptures of the Jews and Christians were based on the original heavenly scripture so that they coincided in part with what he himself taught. The Qur'an was sent down in purgatory Arabic language and it is in the scriptures of the ancients; is it not a sign that the learned men of the Jews knew it?" (xxvii. 195 sqq.) The Qur'an thus confirms what was earlier revealed (lii. 75; vi. 93; xxxix. 29; xl. 11, etc.). The law is given in Moses, the Gospel to Jesus, the Good News is the Falsafat which Moses received (iv. 163; xvii. 57). They came out of the heavenly book and therefore the Jews and Christians are called 'Abd al-Kur'ah, the people of the (original) scripture. From such statements alone it can be seen that Muhammad had no idea of the real contents of these books and that he can never have read them, so that it is labour lost to try to ascertain what is meant by the "Seal of Abraham", which are mentioned alongside of the Leaves of Moses (iii. 37 sqq.; lxxxvii. 18 sqq.), or the books which the Prophet brought according to xxvii. 23. The Qur'an expressly confirms this position of the Prophet by the word 'anum (from anna), like ilbah from ibnah according to Wensink, Acta Orientalia, vii. 291, rather ilmah, cf. however, ii. 75; i.e. a layman, who could not read the holy scripture of the earlier religions of a revelation (lii. 73; iii. 19, 69). "Allah has sent amongst the un instructed a messenger from their midst, who proclaims his lord to them and teaches them the scripture and wisdom" (lxii. 2). "Thus did not know what scripture or belief was" (xllii. 52; cf. xxii. 47). This idea of the essential identity of his teaching with the earlier books of revelation, is found all through the Meccan period and in Medinah also he still adheres to it although with some modifications. He now regards the earlier religions in a more critical spirit and emphasizes their difference from his own. The Jews only received a part of the "scriptures" (lxii. 22; iv. 48) and, what is more important, there are in their laws regulations which have only a limited validity like the observance of the Sabbath which is only binding on them (ii. 61; xvi. 150, 152) or the forbidden foods which were intended as a punishment for the Jews (iv. 158; vi. 147; no doubt a medical interpolation; otherwise in v. 7). The main point however is that he declared himself against Jewish criticism by the assertion that in their scripture the Jews had forgotten (v. 16) or concealed (iv. 169), or actually corrupted all sorts of things. "They have perverted the words from their places" (iv. 48; v. 16, 45), and a similar charge is raised against the Christians because they worship Jesus as God and have introduced monasticism.

5. Although Muhammad owed not only his general religions and moral ideals but certainly also the idea of God's revelation through prophets sent by Him to correct both Jews and Christians, or probably more correctly with the numerous sectarian adherents of these religions settled in Arabia — his series of prophetic, strange to Judaism proper, in which the regular prophets of the scriptures are lacking, recalls somewhat the Clemantine writings for example — his teaching developed in the early period, not according to biblical models but in the style of the pagan Arab soothsayers with their oracles, formulae for blessings and curses, etc. In the introductions to the oldest single, he3wars by the most remarkable things, by the very and olivétre and by Mount Sinai (xxv. 1), by the heavens and the signs of the Zodiace, by the dawn and by the ten nights, by the double and the single (xxxix. 47 sqq.) etc. He also uses a form which found with these soothsayers, which gives it a distinction from the Qur'an a distinctive character. While he rejects with indignation the ascription of his opponents that he is a poet (xx. 51; xxxvii. 35; lii. 30; lx. 41; cf. also the verdict of the poets xxvi. 224 sqq.) and his discourse really have nothing in common with the productions of Arabic poetry of the time, highly developed as regards language and rhythm, he used after the fashion of the soothsayers, rhymed prose, sug', which consists in two or more short sections of the utterance being linked together by a rhyme. In view of the constant suffix forms and endings and wealth of the vocabulary of Arabic, such sentences can be formed without much trouble especially as the finer rules of the rhymes of poetry do not apply to it. Muhammad also used the sug' form with great freedom, frequently repeated the same rhyming word and made the rhyme rhyme. In his later revelations he became still more negligent in their application (cf. the material collected by Vollmer, "Volesprache und Schriftsprache in alien Arabien", 1905, p. 15 sqq.; Noldeke-Schwarz, "Geschichte der Koran", t. 30 sqq.) so that Muslim scholars assert, not quite without justice, that the Qur'an is not composed in proper sug'. Nevertheless this form may be used with caution for critical excisions (e.g. xxxiv. 31—34; lxxxiv. 10 sqq.) or emendations (e.g. lxxvi. 43, qasab hind rub' al). Rhymed prose was of importance for the style of the Qur'an as it enabled Muhammad to use peculiar (e.g. xxxvii. 150; xxv. 2) or rare words (e.g. lxxii. 18 sqq.) or even had a definite influence on the contents (e.g. the nineteen angels lxxx. 30, the eight, lxx. 17, the dual form, iv. 50 sqq., etc.). Among other articles Muhammad occasionally uses the refrain (e.g. vii. 191) without however actually reaching a regular strophic formation. Among the rhetorical articlss may also be mentioned the frequent similes, as Muhammad attributed a special value to them and reflects on Allah's use of them (xxxvii. 50; xxv. 35; xxiv. 41; li. 21; and notably li. 24). The sug' are as a rule simple comparisons which are not infrequently very effective and much to the point (e.g. xili. 15; 18; xxiv. 59). In so far as they are taken from nature, it is made to appear in vii. 56; xili. 18, as if Allah had so foreordained the processes of nature as to express a moral lesson. In other cases the sug' are taken from history, as warnings or implications (iv. 47; lii. 57; lxxv. 10 sqq.). A remarkable simile is found in the "Light Verses" (xxxv. 33) which is practically isolated in its strongly mystical colouring. On one occasion a simile is spun out into a regular parable (xxvii. 38 sqq.), but it is rather spoilt by the confusion of the picture and the thread to be illustrated by it. That Muhammad at any rate later heard something of the parables in the
Gospels is shown by xlvi. 39, from which how-
gover it can once more be seen that he possessed no real knowledge of the New Testament.

6. The language in which Muhammad de-

...erived his revelations was, according to the most 

...nacular assumption, the Arabic dialect of the 

...eople of Mecca. The view put forward by Volck, 

...hat it was a purely popular speech, distinct from 

...arabic with its strict grammatical rules, so 

...at the present text only came into existence as 

...as the result of a later revision, has been rightly 

...buted by J. Geyer and Nöldeke, as there is 

... no support for it either in the oldest traditions 

...evidence of language, although the inadequate reproduction in an alphabet of con-

...sons does not exclude the possibility, that the 

...onunciation on the lips of the Prophet may 

...ave offered all sorts of shades of variation. It 

...irther be asked whether Muhammad may 

...not have used the language in general use among 

...s, but this could only be settled if we had 

...ther specimens of language for comparison from 

...e of the day. The style is quite dif-

...ent in the earlier and later parts of the Kur'an, 

...h it bears everywhere undeniably the stamp of 

...e Mekkan style. The perfect purity and per-

...ection of the language of the Kur'an is an 

...mprobable dogma, the acknowledgment of which 

...is not however easy to a reader with some stylistic 

...rning and a certain amount of taste. In the 

...est revelations one is carried away by the 

...if, and grotesque presentation, sometimes 

...o a warmer feeling, so that it would be 

...edicative to lay much weight on faults in language 

...r logic. In the later sections also higher lights 

...e not lacking, for example, when the Prophet 

...presses his admiration for the wonders of 

...ration and of life; but as a rule his imagination 

...nished itself and gave place to a pro-

...eleuca in which the slips in reasoning and style, 

... exhaustive catalogue of which has been 

...made by Nöldeke, Neue Beiträge zur semitischen 

...prechungsschafft, p. 349, makes quite a bad 

...mpression. The Prophet becomes fond of wearisome 

...pitations of long stories interspersed with religi-

... and moral platitudes which have an unpleasant 

...fet, for example, "the most beautiful 

...es" Sura xxxi.) or metaphysical speculations, or 

...es which prove little to those who do not 

...hare his premises. As an example, the naive 

...uation xxxi. 39 may be quoted, in which he says 

... he was not present, when 

...e events narrated took place, a proof that it 

...must have been communicated to him by revelation.

...e would, however, not forget that the really 

...ctive element in his preaching lay not in his 

...ess; but in the unusually suggestive power of 

...ersonality and also that many weaknesses 

...s may be explained by the fact that 

...ip like the Alexandrine translators of the Old Tes-

...un had to create a language for 

...s and remote to his countrymen, a task 

...he had apparently, no special gift.

...What was the exact state of the Kur'an 

...e death of Muhammad? Is a question 

...not be answered with absolute certainty. 

...uid only is certain and is openly recognised 

... by tradition (al-Suyūtī, ḍhikā, i. 77), namely that, 

...ere was not the existence of any "official" rev-

...ations in final form, because, so long as he 

...as alive, new revelations were continually being

...is could be written down (or, causes to be written down!) and they 

... are dictated in him. morning and evening!" It 

... such remarks refer rather to the matter collected 

... by the Prophet, than directly to his Discourses 

...when Muhammad (cf. 66) challenges 

...suals like his own, this undoubtedly presupposes that these 

... available for comparison in writing. This is still 

...id, or non-technical secular literature, which 

... have not been necessary if these had only 

... by the Prophet, than directly to his Discourses 

...when Muhammad (cf. 66) challenges 

...suals like his own, this undoubtedly presupposes that these 

... available for comparison in writing. This is still 

... by the Prophet, than directly to his Discourses 

...when Muhammad (cf. 66) challenges

which leaves much obscure. The most popular view (see Nöldeke-Schwall, ii. 156 n.) finds the stimulus to the first collection of revelations in the circumstance that many who knew the Qurʾan (qurʾa; reciters; on the later meaning "pious ascetics", see Goldscher, Keilinschriften über den Israʾil, p. 159) had perished in the battle with the false prophet Musaʿlima. This aroused in ʿOmar the fear that all knowledge of the revelations might be lost wherefore he, although with some difficulty, induced the caliph ʿAbd ʿAbd to begin the collection of the scattered discourses. The word was entrusted to the already mentioned secretary of Musaʿlima, Zaid b. Thālith. He collected everything that was written on different, often primitive (cf. above), materials, and what people retained in their breasts (i.e. memorized) and wrote it on separate leaves (ṣaḥīf, pl. of qābih, written leaf), which he gave to ʿAbd ʿAbd. After the latter's death, this book passed into the possession of ʿOmar who entrusted it to his daughter Ḥafṣa, the widow of Musaʿlima. In this story the first thing that strikes one is that there is no reference to the official transcripts made by order of the Prophet himself, although they would at any rate have reduced the danger threatened by the death of the qurʾa. CastaniMoreover (Annales dell' Israʾil, i. 110, p. 715 infra) has called attention to the fact that those who fell in the battle with Musaʿlima were, according to the lists, when they had been handed down, mainly new converts, none of whom could be expected to have an extensive knowledge of the Qurʾān. If the whole story is thereby rendered uncertain, it becomes more important to note that there are other traditions, according to which it was ʿOmar himself who ordered and supervised the collection (Iṣrāʾīl, i. 73) and indeed we are even told (Ibn Sād, i. 212, a) that ʿOmar died before the task was completed. As it is easier to understand how such a plein work could have been annotated than that it could have been transferred from ʿAbd ʿAbd to his successor, the second story is perhaps somewhat more probable, although the mechanical way in which ʿOmar is said to have tested the genuineness of the separate parts (if they were known to two authorities) does not sound very trustworthy. Zaid's participation in the work remains uncertain. On the other hand, the realistic feature that the Safāf came into the possession of Ḥafṣa. But this very point raises other difficulties. If the Safāf was to be an authorized standard code it is difficult to understand why it was given to a woman. W. D. thinks that Ḥafṣa was to take care of it but this could have been more safely done in other ways; and if it was to be a standard MS. from which copies could be made, it was quite inconvenient to leave it with Ḥafṣa, as not every one had access to the widow of the Prophet. There is no mention of any reference to any authorization. The whole business was done in a spirit of great freedom, as we bear of several variant versions of the Qurʾān from the pre-Olmecian period. The only solution of the difficulty may be in the hypothesis suggested in the next section, that a distinction should be made between the simple material collection of the Safāf and a regular arrangement and editing by Zaid of the texts contained in them. If this is so, the "leaves" would lose any real importance and it is not
difficult to believe that they might be given to Omar's daughter as a gift of honour.

9. The men to whom particular editions are ascribed were the already mentioned Ubayy b. Ka'b (Ibn Sa'd, II. 105; II. 59-63), 'Abd Allah b. Mas'ud (see Ibn Mas'ud), Abi Musa (see Ibn Sa'd, n. 114-116). All these recensions gradually disappeared after the authorization of 'Uthman's Kur'an; but several very valuable items of information regarding the first two are given in the Fihrist, ed. Pagels, p. 26 ff. and in add. S. n. 82, which throw some light on the oldest phases of the history of the Qur'an. They are all ascribed to 'Uthman's Kur'an in somewhat different order and with the important difference that Ubayy had (two additional suras (prayers recalling Sura 1) while in Ibn Mas'ud, Sura 23, and exix. and probably also Sura 1 were not given. Besides these recensions there was a further one, on which 'Uthman's edition was later based, and which is associated with the Za'id already mentioned. If, as Schwally does, we tried to identify Za'id's edition with the qasf, it would be difficult to understand the divergencies of the other recensions in view of the former's prestige. Besides, the name "the leaves" suggests a loose collection of separate leaves, and not a definite arrangement of the portions. This is definitely expressed in another tradition, according to which Za'id collected the suras with much difficulty in no particular order (Noldeke, Geschichte der Qur'an, p. 195). These difficulties are not easily disposed of by the assumption that Za'id after collecting the qasf prepared an edition of his own with a definite order of the suras, which added a fifth to the already mentioned four editions, one by which the others did not feel themselves bound. The suras in it were, as in Ibn Mas'ud and Ubayy, arranged on the principle of decreasing length; but it was only a general principle (takis from Jewish examples); the details of which were left to the individual. Za'id's version later received authoritative importance, when it was used as the basis for 'Uthman's Kur'an. A further light might be thrown by a phenomenon which, although in itself exceedingly obscure, seems to merit some significant deductions. We refer to the mysterious letters, discussed more fully below, which are found at the beginning of about a quarter of the suras. In this connection Noldeke and following him H. Hirschfeld and more recently especially H. Bauer, Z. D. M. G., xxv. 1. 127, have called attention to the fact that some of these letters are repeated before several suras and that these suras form little consecutive series. Thus IlM is found before sura 116 (according to Bauer originally before xxxix. also before xxxvi. with following Sura 116, B. before s-xii. before xxxv. before xxxvi. before xxxvii. but without s). But the next question is whether such axioms refer to the whole sura or only to some immediately follows, to which the rest may have been later added; e.g. the introduction x-x, which only fits the story of Zacharias and Marius while, on the other hand, the formula s-xvi. is adopted in s-47, 52, 55 and 57. In brief we are not unfortunately usually confronted with questions which cannot be answered with certainty, however important the correct answer would be for an understanding of the Kur'an.

11. With the reign of 'Uthman we enter upon more solid ground. According to a statement of Ibn al-Athir (ed. Tornberg, ii. 66) the four
recessions mentioned above found acceptance, each in a particular region: Ubuyj’s in Damascus, Mi’dad’s in Hijaz, Ibn Mas’ud’s in Kufa and al-Ash’ari’s in Bagha; support is given to this statement by the fact that the two last named held offices in the provinces mentioned. That the existence of several different versions would produce necessity, is easily understood. We are told in a widely disseminated tradition that the general Hujiibna thought that the quarrels among his followers about the correct form of the sacred book, while on a campaign in Armenia and Asfarabadi, were dangerous and asked the Caliph ‘OTHMAN to try to abolish this unfortunate state of affairs, so that believers might not quarrel like Jews and Christians over their scriptures. The Caliph recognised the justice of the request and asked Hafa to let him have the गुह/ for a time, so that copies might be made of them (नेत्राहास नै तीसराहा). Hafa agreed, and the Caliph entrusted the task to a commission consisting of Zaid, already mentioned, ‘Abd Allah b. Zuhayr [q. v.], al-Harith b. ‘Abd al-Rahman b. al-Harith [q. v.], and Ibn Sa’d [q. v. 952], and ordered the two scribes (लोहे, v. 39 sqq.) and al-Harith b. al-Harith [q. v. 39 sqq.]. Other individuals are also named but the usual tradition appears the most reliable and in any case it may be considered practically certain that Zaid, on account of his previous services, shared in the work. From the attitude which ‘Abd Allah and his father al-Zabair soon afterwards took up towards the Caliph, one might perhaps suppose that the members were chosen, not so much by the Caliph in person, as by a wider circle. Besides it is not easy to see clearly what their work really was. If they had only to make copies of a standard text, reliable scribes would have sufficed so that the men named would at most exercise some sort of supervision over the work. According to the tradition, they were to retain the Ka’b al-Aryah dialect in cases of doubt, but this probably only reflects a later notion of the dialect of the Kur’an. Further they could not have made clear fine distinctions of pronunciation with the imperfect Arabic alphabet. At any rate the most important point is that the version of ‘OTHMAN was based on the गुह/ or as just explained on Zaid’s edition of them, so that we can in this way gain some idea of the contents and form of this basic manuscript. We are next told that of the copies then made, one was kept in Mecca, while three were sent as standard texts to Kufa, Basra and Damascus; that is practically to the regions in which the four differing versions above mentioned were current. Mecca however is added and other authorities give a large number (cf. Noldeke-Schwally, 111 sq.). The authorised edition was readily accepted everywhere; the people of Kufa said: ‘We are said to have to give up Ibn Mas’ud. Against the accuracy of the whole story, it might perhaps be urged that a knowledge of the Kur’an and interest in its correct form must really have been much too slight among Muslim soldiers in this period of the great wars of conquest to give rise to dissensions in the army. But on the other hand, it may be recalled that in the fighting which soon afterwards broke out between ‘Ali and Mu’awiyah, there is mention of Kur’an-readers (सर्वर्थो), not only among ‘Ali’s troops but also among the Syrians (al-Dinawari, ed. Guirges, p. 175, 204; cf. the article सर्वर्थे); the very fact that there were different versions of the Kur’an in Syria and in al-’Iraq must have given rise to comparisons and disputes. Whether the Caliph, as we are told in the different traditions, had the azaan differing versions burned, torn up or obliterated, has been doubted by Schwally and not without reason, especially as such steps would have been quite ineffectual against the Kur’an-reciters who carried the sacred texts in their memories. In any case the alleged destruction cannot have been completely carried out, for according to al-Mutarrisi (in Lane, s.v.), Sulayman al-’Ammah could recite the whole of the Kur’an (cf. जीवन) according to both ‘OTHMAN’s and Ibn Mas’ud’s versions and the author of the ‘Isha’it even asserts that he had seen a two hundred year old copy of the Kur’an according to Ibn Mas’ud (cf. the obscure statements in Noldeke, Gesch. d. Qorans, 1st ed., p. 270 sqq.). Even without any such drastic measures, the new version must have gradually driven out the variants because of its official authority and the general desire for uniformity. It was in this way that there came into being the authorised Kur’an, which has remained generally authoritative to the present day and in spite of all vicissitudes has formed, with the Sunna, the solid foundation for Muslim life and thought. It differed from Ubuyj’s Kur’an by the omission of the two sūras only found in his version, while it was a little longer than Ibn Mas’ud’s Kur’an, which omitted Sūra exi. and exiv. and probably also Sūra I (see Noldeke-Schwally, ii. 39 sqq.). While its order generally, with the already mentioned exceptions was based on the principle of decreasing length, the first sūra, the celebrated अफजिस, stands outside of this arrangement, apparently because it was intended to serve as an introductory benediction and prayer. It is specially noteworthy because of its lack of any distinctively Muslim thought and the presence of Jewish and Christian terminology. Sūra exii. and exiv. are not the shortest and are thus not in their proper place, but it is hardly necessary to lay much stress on this point. Although they are made into utterances of ‘Allah by the prefixed अल, these formulations for protection against evil powers (cf. xvi. 100; xili. 36) are very different in character from the rest of the Kur’an. In these circumstances the omission of the three sūras in Ibn Mas’ud becomes significant and the question arises whether they do not represent a secondary arrangement of the sūras about the origin of which nothing definite can be said, whether the work of the Prophet himself or others.

12. This leads to a further and very important question, whether all the रेलेसिभ in the authorised Kur’an come from Muh’ammad himself or whether foreign matter has been added or passages forged for particular pur-

poses. As a matter of fact, there has been no lack of such assertions, in the Muslim world and by modern scholars. The arguments brought forward on this point, within itself, are however of no real importance as they are based on purely dogmatic premises. For example, some of the puritanically-minded ‘Kharidjus are said to have rejected Sūra xii, as a love-story unworthy of the Kur’an (al-Shahristani, Kitāb al-Milal wa-l-Nihal, ed. Caetani, p. 95 sqq.). But it so undeniably bears the stamp of the Prophet’s style that the forger must have had an astonishing power of imitation: forgery is all the more improbable as
the Sûra was found in Ibn Masûd and in Ubayy and must therefore have been very old. The fact, that some reject as false passages those in which Muhammad curses his opponents is due to the more refined religious ideas of the Mu'tazila and perhaps to Christian influence. But in general it is the Shi'a who have pronounced against the integrity of the 'Othmanic Qur'ân. This however was only a result of the fact that they missed very much in it pronouncements on the prominent position of 'Ali and his family and their claims to sovereignty added to the coming forth of the heathen Imâm at the end of the world, and they usually insisted that all this had been most maliciously suppressed by the godless 'Othman. In support of this assertion, they very cleverly put to the undeniable lack of coherence in several Sûras, but the situation is not improved by filling the gaps with references to 'Ali. But not only are odd verses said to have been suppressed but whole Sûras, which glorified 'Ali, only two of which have been published, the Sûras al-Nâsîr 'Ayn and al-Walîyâ (see Nöldeke-Schwally, l. 102 sq.): Goldscheider, Die Richtungen der Islamischen Koran-Auslegung, p. 271). As there is no agreement among the Shi'a themselves regarding the genuine form of the book of revelations, the attempts made by them to produce the complete text have regularly failed, and they have therefore retired to the safe position, that the authentic text is secretly transmitted by each imâm to his successor, to be communicated with the true exposition to the believers ultimately on the coming forth of the hidden imâm. Till then, faute de mieux, they use the 'Othmanic Qur'ân and make shift with their exegetical powers, which enables new interpolations to be made unrestrictedly, and arbitrary alterations in the text, which however they refrain from in all passages used liturgically.

Several modern scholars have endeavoured in a different fashion to prove the occurrence of passages in the Qur'ân which are not genuine. Thus de Sacy (Journ. des Savants, 1832, p. 533) suggested that 'Omar's doubt about the death of Muhammad would have been impossible if the verse quoted against it (ili. 138) by Abû Bakr were genuine, so that it must have originated with Abû Bakr. G. Weil agrees but, as a logical result, he rejects a series of verses of similar content (ili. 182; xxxii. 35 sq. ; xxix. 57; xxxix. 31 sq.). But it is just this increase in the number of passages attacked (which even yet is not sufficient, cf. e. g. vi. 163 and notably, xxxii. 53) which makes criticism unreliable and what is to be deleted is in perfect keeping with what Muhammad says on his purely human nature. The question is mainly attacked from the wrong reason, for the fault is not in the Qur'ân but in the tendentious tradition, which in reality is attacking the belief that crops up in a disappearance off and return of the Prophet; cf. especially the antitheses between the worship of Allâh and of Muhammad, Weil's doubt regarding xxii. 1 and xvi. 118, he is not better founded, nor are H. Hinrichsfeld's objections to v. 73: 101: Is. 6 and all passages in which the name of Muhammad occurs. When Weil in particular asserted that 'Othman falsified the Qur'ân by all sorts of omissions, this is refuted, like the Shi'a's charges before mentioned, by the simple fact that nowhere in the oldest records is there any hint of such a thing although his opponents collected a long list of charges against him.

Another question is raised by the additional Sûras in 'Ubayy's recension, which, according to Abî Hârîrâ, i. 82, are also found in Abî Mûnâ's version and in the Qur'ân of Ibn 'Abî Absâf: do we really have in the authorised Qur'ân all the revelations in existence at the death of Muhammad? Although by the completion of the collection, the utterances that came from the heavenly book and Muhammad's own words were rigidly limited, there are references in the traditions to several utterances which really belonged to the Qur'ân but were not included for various reasons, including some that are not to have been in the Qur'âns of 'Ubayy and Abî Mûnâ, e. g. Nöldeke-Schwally, l. 234—361; l. 44 sq., and therefore in Tabari, ed. de Goeje, l. 1627 sq., and the glossary under 't, we need not reject this statement off-hand. It would really not be surprising if the difference between the two kinds of pronouncements was at first not rigid, especially in so far as they were only preserved by memory. But nowhere is the genuineness of the revelations said not to have been accepted conclusively proved; of some the falsity is much more probable and it must be further remembered that they would not contribute any real addition to the Qur'ân. The best known is the so-called "verse of the stoning" (âyat al-râğbûn) according to which incontinence in women not virgins can be punished by stoning. As regards matter it might well belong to Sûra xxix.; but it is in direct contradiction to its second version on the other hand it cannot be included among the authenticated, as, according to the traditions, 'Omar punished this crime in this drastic fashion. It seems therefore to be a secondary verse intended to authorize the more severe punishment.

If a critical examination of the Qur'ân on these lines leads to a satisfactory result, it must not be taken to mean that the canonical Qur'ân gives an absolutely true and faultless reproduction of the utterances of the Prophet. On the contrary it undoubtedly contains not a few explanatory additions (cf. e. g. the probably secondary kahîr, ii. 216) and haphazard interpolations (cf. e. g. A. Fischer in the Nûldeke-Festschrift, 1900, p. 33 sqq., whose arguments however are hardly cogent). Transferences of sentences may also have taken place, cf. the striking example quoted by Goldscheider, xxiv. 604, which breaks up the context. But this is something quite different from a deliberate and tendentious falsification of the revelations, against which protests would certainly have been raised at once.

The Sûras were originally separated from one another by the hamala ("in the name of God, the Merciful, the Compassionate") placed at the beginning of each (see vol. i. p. 672). It is only lacking in Sûra is., probably because Sûra viii. was originally joined to it. In the text itself, the formula is found in xxiv. 30 at the head of a letter from Solomon to the queen of Saba', a proof that the Prophet regarded it as a regular form of introduction. In keeping with this, is the fact that it often occurs in his dispatches (Ibn Sa'd, ii. 25—37 passim) and according to Ibn Hishâm, ed. Wüstensfeld, i. 341, at the beginning of the ordinances of the community. But he also used the older formula: "In Thy name,"
KORAN

Al-Asbat (the Sa'd, vol. 19, 41; cf. Ibn Haldún, p. 747; in the treatise of Hambal.) It is therefore

Prophet himself had caused to be written, and was the beginning of all the sūras.

This was the sūra in which the Prophets of the Qurʾān's Kurʾān was

probably already the present one. That there were variations however is evident from the story of the

revolution against 'Omar (al-Tabarî, ed. do Goeje, i. 2953) in which we find the tenth Sūra quoted as the seventh, which agreed with the

orders of the Meṣḥda and Uthay. According to the

Ikhān, l. 79, the 'Abbas also described the tenth

Sūra as the last of the seven "long ones"; but this

parish refers not to its position in the Kurʾān but to relation to the actual long sūras. In any

case al-Tabarî in Taṣfîr (see Z. D. M. G., xxxv.

608) quotes a tradition going back to the Prophet himself, according to which the Kurʾān was di-

vided as follows: the seven longest sūras, al-ṣāिy and n., the asrān (sūras of about two verses), the muḥakkat and al-qurʾān fiṣrāl, the short sūra which begins with sūra. The name as-muḥakkat appears to be the very variously explained "sura muḥakkat" of sūra 87 in which Gieger and Nöldeke see the Aryan word stem, Hebrew midaš.

15. Immediately following the basmâ we have in 29 sūras the mysterious letters already mentioned (al-fāsidhā) which have challenged the ingenuity of Muslim and modern European scholars alike. The sūras in which they occur belong with the exception of sūra ii. and iii. to the later Mānas period. There are 34 letters in all that occur, sometimes singly, sometimes from 2 to 3 together, some occur only once, others are repeated twice or three times. All attempts to explain their real significance had been lost as the great variety of explanations published shows (see Ikhān, ii. 10 qyq.; E. D. M. G., xxxiv. 603 qyq.). Some Muslims see in them simply letters of the alphabet, intended to call the Prophet's attention to the approach of a revelation, while others tried to explain them from the old numerical value of the letters (cf. vol. I. p. 68 qyq.); or they were read with the names of the letters ya, in, mu, etc., and all kinds of mystical names were found. The most popular explanation was that they were abbreviations which had to be expanded, thus for example bāʾ qāʾ would stand for bāʾ qāʾ, bāʾ qāʾ, bāʾ qāʾ, bāʾ qāʾ, bāʾ qāʾ, and nūf. But this offered such a wealth of possibilities that the attempts to solve the problem degenerated into a kind of gamelan which became all the more varied when some proposed to place the letters from different sūras together and read for example: dāʾ, ṣād, and n., as al-kūdhān. It is no wonder then that in the end, like al-Suyūṭi saw in the letters a mystery, the solution of which Alīs kept a secret to himself. Modern scholars have in part repeated these old suggestions. Nöldeke, abandoning his earlier view, suggested that the Prophet attached no special significations to these letters, but only intended to give a mystic reference to the heavenly original text. But in this case they should have been found before all the revelations and not only before a smaller part of them. The most popular of these theories recently has been that of abbreviation, but this has developed into the same kind of gamelan as among the Muslims; rarely sometimes anyone except the ingenuous in-

ventor. Quite recently, H. Bamer in the essay al-

ready mentioned, has sought a safer basis for interpretation, starting from the fact that some sūras take their name from the introductory letters, as xxvii., xxviii., xxvili., l. and lxvii., the two latter however with variants. Now as the names of the sūras are catchwords taken from the sūras concerned (see below), he supposed that these letters are something similar. But this conclusion is by no means certain and his ingenious attempts to find the passages concerned in the sūras are, as a rule, not very convincing and it should be remembered also that he cannot apply this explanation to the letters that occur before several sūras, but has to be content with seeking an internal or external relation between those sūras and the letters. The same may be said against Gossens's attempt in Der Ikhān, sull. 191 sqq. H. Hirschfeld revived Nöldeke's earlier explanation that the letters were originally marked put on by the owners of some of the manuscript copies made by Zakā to show they were their own property, except that he regards the group of letters not as single names (e. g. dāʾ for Taḥā') but names of several owners (e. g. ṣād for Taḥā' and Abī Hāṣara). In comparison with earlier suggestions, this strikes one as very moderate and unconvincing. Nor is it refined by Nöldeke's argument that such abbreviations are not to be expected in the beginnings of written Arabic literature; for it is not at all improbable that the people of Mace in with their highly developed trade may have marked, e. g. in the annual trading-caravans the goods of individual citizens taking part in them in some such way, and that this custom was adopted in another branch of life, where it was even more necessary to mark each copy, document or some such thing. It might also be possible that there was an imitation of the Jewish practice, cf. the article "Abbréviations" in the Jewish Encyclopedia. In any case this hypothesis would agree very well with the above discussed connection of the letters with small private collections of copies of the revelations. But even this view does not lead to any final result, as the expansion of the letters to names offers so many possibilities.

16. Among the secondary elements in the Kurʾān are the names of the Sūras. These are catchwords which refer either to the beginning of the sūra (e. g. lxxii., dāʾ), or to some subject dealt with in them (e. g. "The Cow" in ii. 63 sqq.; "The House of Īmān" in iii. 30; "Hūd" in xi. 52 sqq.). That they were generally known in the first half of the eighth century is certain, as some of them are mentioned by John of Damascus (in Migne, Patrologia Graeca, xxiv. 769, 772; xi.: "the Cow" (Sūra ii.), "the Woman" (Sūra ix.), "the Table" (Sūra v.), and in addition a name no longer found, "the Camel", which might refer to vii. 71-73, xi. 67 sqq. or xxvi. 155 sqq.). This however does not prove that they were already adopted in the manuscripts at this time; and that they do not all come from Muhammad himself, as John says, is evident from their varying (Sūra ix. for example is also called al-Tawâbah; cf. Ikhān, l. 66 sqq. and the above notes on Sūra xlii. and lxvii.). Besides, they originally ran, the sūra in which the cow is mentioned," etc. and appeared in the manuscripts not as a separate but as subscriptions (Nöldeke, Geschichte des Korān, p. 328). The two non-canonical sūras of Uthay had similar names, Sūra as-Sād and Sūra al-Maṣād.
The words were divided into "verse", which were called jāzāt, following the linguistic practice of the Qur'ān already mentioned. They are generally arranged according to the rhymes, but as the divisions were originally not marked in the manuscripts, there is a difference of opinion about their divisions and numbering (see Ilībā, l. 83 sqq.; Nūdike, Geosc. d. Verum, p. 300).

17. Although the 'Othmanī Qur'ān prevailed over its rivals, it did not provide for the Muslim world a real recitārion, and yet one would think that, if ever one was necessary, it would be for such a hook as the Qur'ān, as Allah speaks in it everywhere. Even 'Othman himself, according to one story (al-Tanār, Taṣřif, w. 24), did not adhere to the text authorised by him, but read Sūra ii. 100 with an addition not now found in it; and if this is correct, it is no wonder that others took still greater liberties. Various circumstances contributed to the continual variations in the form of the text. First there was the carelessness of the few trained抄ist; even the copies of the Medina standard text (al-Imām) sent to the provinces are said not always to have been identical with it, and lists are given of Medina, Damascus, Ḥāṣa and Kūfā readings, to which a few from Mecca are added. These refer however only to minor points, which are of interest for the history of the language and orthography, but not for the matter. The cause of variation in the text was of greater importance, namely, the different readings which the Qur'ān retained in their memories and would not always abandon, even when they had a written Qur'ān before them. These are primarily readings which were found in old manuscripts and had thus gained currency. Finally there was a third factor, the deficiency of the Arabic script. It lacked not only signs for the short and, to some extent for the long vowels, the pronunciation of which was left to the reader (which meant, for example, also the choice between active and passive) and for double consonants, but different consonantal sounds were expressed by one character, e.g. d and ḍ, l and ḍ, etc., and in the degenerate Arabic script, very different letters had come to assume the same form, so that for example x and c, c, t and āu and at the beginning or in the middle of a word a and also were indistinguishable. In any case the same was little affected by such however possibilities, e.g. xxviii. 9, where it was a matter of indifference whether one read sa'īn or sa'īn, but in other cases a different pronunciation was a matter of moment, e.g. v. 8, where the alteration of a case-ending modifies the rule about ablation before prayer. Such possibilities afforded a means by which perplexed spirits could get rid of various passages that offended them, e.g. xxii. 10 where in place of the troublesome ḥudūdāt, ḥudūidāt, or ḥudūdāhū was read. In this way arose a perplexing confusion of readings and in place of the striving for uniformity that one would have expected, people became accustomed to unlimited liberty in these matters; so that they did not hesitate to substitute for particular words, their synonyms or to insert short explanatory additions. This freedom was all the more emboldened in its development, as the Umayyād caliphs had little feeling on such questions and preferred to take care that passions were not aroused by state interference in such matters.

18. Gradually however, the situation came to arouse misgivings. As by this time the state of affairs just described had extended to such an extent that the preparation of a correct text was not to be thought of, and there was, besides, no authority who could enforce the adoption of one, the endeavour was made to eliminate the worst defects by more general principles. Not every variant was allowed, but only those which were based on recognised authorities, preferably such men as had received their reading from the successors of the companions of the Prophet. At the same time the overwhelming mass of small details left the art of reading the Qur'ān, lathero transmitted orally, to be replaced by critical writings. The first book of this kind is said to have been written by a Jewish convert to Islam, Ḥabīb b. Miḥs (d. 250 A. H.). Of later works dealing with variant readings, special mention may be made of that of Abū 'Ubayd al-Kādīm (d. 857 a. H.; Brootelmann, Geosc. d. arab. Lit., L 106, 185) and of the celebrated Tāhir b. Ḥajjām. The measures taken were however too indefinite to be really effective and the attempt was therefore made to limit the number of authorities, for example by emphasizing the importance of ten recognised teachers. The number seven however was especially popular in this connection and support was found in it in an alleged saying of the Prophet regarding the seven urbūf in which the Qur'ān is revealed and which all possess divine authority. Although seven in this tradition is probably only a round number meaning "several" and it was quite uncertain what the word urbūf really meant, the number was taken literally and urbūf was given the unauthorised meaning of variant readings. The complete historical inaccuracy of this assertion was sharply criticised by several scholars, but it found wide acceptance, especially after Abū Bakr b. Muṣṭafīd (d. 936 a. H.) had chosen seven from among well known teachers and declared them authoritative Qur'ān-readers, and with each of them two men were associated as transmitters (sunnīs). The seven were Nāṣir, Ibn Kāthīr [q. v.], 'Abd 'Amr al-ʿAlī, [q. v.], the Aṣīr, 'Abd Bakr b. 'Āṣim, Ḥassan and the famous philologist al-Kāsīrī. The selection was quite an arbitrary one, but the method of proceeding with which by Muslims, e.g. in the case of al-Mālikī, of declaring seven or ten as authorities and equally trustworthy had decided practical advantages as it averted endless and passionate disputes. There was of course no lack of protest by prominent scholars who tightly objected to the unjustifiable exclusion of other equally authoritative teachers. In the 13th century, however, the exclusive authority of the seven canonical teachers began to prevail and their readings were specially dealt with by several authors, among them 'Abd 'Amr 'Othman al-Ṭarīqī (d. 1253 a. H.), whose Kitāb al-Ṭarīqī displaced the Muṣṭafīd's work, in Abū 'l-ʿĀṣim Kārim al-Shūṭīnī (d. 1194 a. H.) verification. But a number of scholars with critical ability did not hesitate to take issue with the readings of other readers not included among the celebrated ten, especially those of Yahūb al-Ḥas̄anī. What degree of liberty in selecting readings was claimed by the older critics is seen from the rules laid down by Muhammad al-Dījāzī (d. 1249 a. H.; Brootelmann, ii. 201) who is followed by al-Ṣayyūtī (1192, l. 94), every reading which is in consonance
with the Arabic language — although only in some cases — and with the Ottoman manuscripts of the Koran, although only as a possibility — and whose chain of tradition is fallacious, is considered a correct reading and must not be rejected but belongs to the seven shakh, in which the Koran is revealed, whether it comes from the seven or the ten or from other recognized Insans, but if it does not fulfill one of these three conditions it is to be considered as weak, arbitrary or false, whether it comes from the seven or from any one who is older than they. But this freedom was only exercised in learned works; in all public readings before the people the readings of the seven canonical readers were observed. At the present day only two methods of reading are in general use, that of Hafiz, sahib of Asim and in Africa, except Egypt, that of Nafi'. This is the extent to which Muslim textual criticism has prevailed. A proper critical edition of the Koran making use of all available material is a task which still awaits modern scholarship.

20. This work on the text was considerably facilitated by the introduction of different means of restricting the ambiguity of the old script. Diacritical points were introduced to distinguish letters of the same form, marks indicating the pronunciation of the vowels, mutation, the feminine ending -et, the consonantal pronunciation of aff, and the sign for the doubling of a consonant. As is usual in such cases, all recollection of the period of their introduction has been lost; among the Arabs. It is certain that they are based on an imitation of the Syrian practice and recent finds of coins, inscriptions and particularly of papyr; have thrown some light on the question. These show that at the beginning of the 8th century the diacritical points were in use, at any rate to some extent; but they were certainly older and had perhaps been already introduced in the pre-Islamic period. The vowel signs were originally dots in varying positions and were only replaced after the middle of the 8th century by the signs now in use, modelled on the semivowels, as in Old Persian (for further details see i. p. 384; Nöldke, Gesch. d. Coranins, p. 305 seq.). In some the use of these signs in the manuscripts of the Koran aroused misgivings. According to the ‘Ithbah, ii. 202, the Medine Malik b. Anas (d. 795 A.D.), for example, only permitted the use in copies intended for students and did not permit them in the large manuscripts used in public worship. Others, on the other hand, permitted their use without hesitation, as the signs from their form could not be regarded as a component part of the sacred book. To make the distinction clearer, the vowel signs were originally distinguished by another colour, while the diacritical points were written in black as parts of the letters. On the incorporation of the names of suras into the Koran, see above; on the different marks for separating the verses, especially for every 5 and 10 verses, see Nöldke, Gesch. d. Coranins, p. 324; see also ibid. on the nguda, the mark for the passages in the text where one should prostrate oneself.

20. In editing the Koran, no attention at all was, as we have seen, paid to historical order, a result of the composite character of many suras, which also made an arrangement according to their contents impossible. Instead, the suras were arranged, although only approximately, according to their length, which however only led to the inconvenient result that the very earliest suras, being the shortest, were put at the end. But an chronological arrangement is of fundamental importance for the understanding of the text, the commentaries were faced with a task, the necessity of which had already been recognised by the Muslims. The main thing was to establish whether the suras arose in the Meccan or Medinan period, or whether they were composed of pieces from both periods. This problem has on the whole been solved, although views differ on many points of detail (cf. Thab, i. 15 seq.). In practice this question can be satisfactorily answered in most cases, if a series of criteria are used, some of which may be outlined here.

When Muhammad disputes with his countrymen about the resurrection of the dead or the oneness of God, when he refutes the assertion that he is a magician, a poet or one possessed, when he fights against the custom of burying newly born girls alive, we know that we are in Mecca. The difficulties only begin when we try to arrange the separate pieces of this group in their chronological order, for there is an entire lack of distinct references to definite events; and even if there were any, it would help very little as the chronological statements in the old traditions of Muhammad’s life in the Meccan period are quite unreliable. A rare exception is formed by Sura xxx. with the mention of the defeat of the Byzantines by the Persians, probably in the year 614 a.p. More uncertain, although not improbable, is the connecting of Sura Ixxx with the emigration of some of the Prophet’s followers to Abyssinia. There is the further difficulty that Muhammad, untententiously, delivered his orations in a kind of chiascuro and it is exceedingly rare that personal names are mentioned (vii. 35; xxx. 37). The traditions however are everywhere able to tell us exactly who the anonymous individuals that appear in the Koran were, but these identifications are certainly due to horror of a vacuum and are often definitely wrong. We have therefore to rely essentially on internal criteria. G. Weil laid the foundations for a classification of the Meccan Suras by dividing them into three classes. He was followed by Nöldke, who in turn is followed by H. Grümme, although with certain variations in the order which are not of great importance, and show that generally accepted results are not to be obtained in this field. The most certainly recognizable is the first group, a series of short addresses full of ascetic passion, glowing imagination and no little poetic power. These are such distinct features that it is certainly a mistake when Lumina, Fatima, p. 654, wants to divide the Suras 21 to 33 of the latest Medina period. Characteristic of the group are also the already mentioned conjuration formulas, and the peculiar phrase occurring thirteen times san nabi raha, "thou rarely knowest not; and your raha, xili. 16, lxxx. 3; also belongs here, in which case xxxi. 63 is perhaps a verse that has been separated from its context: Lastly Snouck Hurgronje, De Gids, 1886, ii. 259 seq.; iii. 709 called attention to the very important point that Muhammad did not from the very first proclaim strict monotheism as the principal thing but the approach of the Last Judgment, from which he was to save his countrymen. The assertion
that there is no god but Allah, appears sporadically from ix. 99 onwards; and it must certainly have taken some time before there was a definite break with the idolators (Sura cix.) and before he met them with the declaration of the oneness of God (Sura: cxii.). It is not till the second group that everything centres round monotheism; and for this reason the polemical passages lii. 25 sqq. and liii. 29 sqq. directed against the daughters of Allah are probably a little later than the adjacent verses. Starting with the assumption that the Qur'an gives a complete picture of Muhammad's preaching, the Muslims have discussed the question which Sura is the oldest, probably containing his call to be a Prophet (see above). The majority decided for Sura cxvi. 1-5 (see Is. 52:1, 5-9) and many modern critics have followed them in this. Properly understood, the passage really does fit this view very well; but it is not absolutely certain and, as already mentioned, we must deal with the possibility that it is just of the earliest revelations that much may have been lost before people began to learn them by heart or record them in writing.

Of the next two clauses, the third is probably the easiest to define. It is the weakest part of the Kur'an, in which Muhammad's imagination apparently became exhausted, and he was forced with straining assertions of his earlier ideas and especially with the tales of the prophets. The form becomes discursive and more prosaic, in which group resembles the following ones. The passages belonging to it show clearly that Muhammad would have become intellectually bankrupt if the migration to Medina had not aroused him to a new effort. The transition to this group is formed by the second. The opening enthusiasm gives place to calm and the Prophet's aim is to influence his hearers by proofs, which to tell the truth are often not very convincing, such as descriptions of phenomena of nature and in the life of man, in which occasionally we have a flash of the old poetic fire. Considerable space is occupied by the stories of the experiences of earlier prophets, which were intended to warn his enemies and to encourage himself, because he constructed them with great daring on the model of his own experiences. The introductory conjunction formula: become rarer and rarer and completely disappear in the third group. To the second group belongs the remarkable episode in which Muhammad is fond of using for Allah the name al-Rahman, unknown to the Meccans. In the Sūras of the first group it is found once only, in Sūra iv. 4, rarely in the third and nowhere in the Medina sections.

Instead of this simple grouping, which excellently characterises the Meccan Sūras, H. Hirschfeld has proposed another, quite artificial, system, in which the Sūras following cxvi. 1-5 are arranged under the following heads: declarative, narrative, descriptive and legislative. The result is not so very different from Nöldeke's, but the system is somewhat arbitrary in its application, e.g. when xlii. 9 sqq., where the change of rhyme alone proyes nothing, is cut off and added to the legislative series.

21. In the revelations of the Medina period, the question is much easier to settle. Everywhere that we find Muhammad attacking the Jews or the mu'min al-islām [q.v.], that he sums to the holy war ("on the path of Allah") or where he lays down criminal or civil legislation, we are in Medina, whether we are dealing with whole Sūras or small sections or single verses, e.g. vi. 147 sqq.; xxix. 1-10; lixiv. 31-34. The references to events known to us from the Sūra in the Medina period, the battles in Muhammad's wars, his discourses etc., afford us a particularly safe means of arranging the Sūras chronologically. There are also kinds of details in which an investigation of the pertinent passages reveals at least their relative order, e.g. his opinions on wine and his varying utterances on the attitude to other religions and on the holy war. Such details are very suitable for the subjects of special studies and very often yield very important results. Snouck Hurgronje has clearly, revealed one point of fundamental importance in Het Mekkaanse Boek, p. 33 sqq. In the Meccan Sūras it is often said that no prophetic admonisher had been sent to the Arabs before Muhammad as to other peoples (xxx. 2; xxxiv. 43; xxxv. 5). Abraham occupies a prominent position among the prophets (xla. 42); he is however only a prophet like the others and has nothing to do with the Arabs. What is called jāmîl [q.v.], in contrast to the polytheists, just as Muhammad himself is called a mu'min; and when there is a reference to the wilāyat firdaws (vi. 162; xvi. 124), it may also be understood of monotheism, cf. the words of Joseph in xii. 38. Abraham on the other hand gains quite another significance in Medina, after the definite breach with the Jews had been made. In direct contrast to the previous neglect of the Arabs, we are now told that Abraham lived in Mecca and founded the sanctuary of the Black Stone with his son Isha'm: ii. 119-123; iii. 89-91, a legend (2 invented by Arabian Jews) which had never been heard of in Mecca (xxxviii. 57; xxvii. 97). When Abraham is now called a hāfiz [q.v.], the word is used not only in contrast to the polytheists but also to the Jews and Christians; iii. 60; iv. 124; cf. iii. 129, and the wilāyat firdaws is now the original pure religion, which Muhammad wishes to introduce (i. 124, 129; iii. 89 sqq. iv. 124), for Thora and Gospel were only sent down after Abraham (iii. 38) and the Jews and Christians corrupted the original religion (see above). This certainly shows that passages like xiv. 30-40; xxii. 27, 77, could not have arisen in Mecca, but only later in Medina, which may perhaps also be true of iv. 163, and xvi. 124 above mentioned. Less certain is another criterion of criticism pointed out by the same Dutch scholar (De Groot, 1850, ii. 460). He sees in Muhammad's polemics against the Christians a result of the breach with the Jews and therefore thinks that all passages in which they occur must be Meccan. In the great majority of cases this dating is certainly right, but there is at least once such passage which can only be Meccan. In one of the frequent verbal duel between the Prophet and his polytheistic opponents allii. 57 sqq. the latter endeavours to involve him in the difficulty that Jesus, whom he himself takes as a model, is actually worshipped as God by the Christians; and Muhammad sharply repudiates this view for. "Jesus was and only professed to be a man," Muhammad was however in the Meccan period, always convinced of the full agreement of his teaching with that of the Jews and Christians; but we must remember that,
as already mentioned, the main thing with him at first was not monothelitism but the proclamation of the inerrant judgment, an idea which he certainly adopted from the Christians; what they thought about Christ was quite subordinate to this and it is also possible that the very Christians with whom he was in contact at this time had heretical views with regard to ecclesiastical Christology. He would soon learn that there were differences on various questions among the "people of a scripture" (xxvii. 57; xxviii. 46; xlii. 18) and that strict monothelitism had become to him the central element in religion, he had at once to reject orthodox Christology as a degeneration of pure Christianity. Passages like xix. 35-41 may thus have already originated in Mecca.

Just as the first revelation received by Muhammad was sought among the Meccan sirs, so did the Muslims seek the last among the Medinees, especially as this question was of some importance for possible abrogations. But the Muslim statements vary rather much: cf. Ibnabías, i. 33 sq. Sura vii, or ix. or cx. is given as the last sira; ii. 278 resp. 281 or iv. 173 as the last verse, while others say vi. 5 or ix. 29 q. The last is connected with a tradition which says that Zaid in collecting the surs, the last two verses last. Much more attractive is the view that vi. 5 is the last, which is probably rightly connected with the farewell pilgrimage (cf. the emphasized "on-day") regarding contents, it would be very suitable as a final verse, although the meaning is that Muhammad's mission was completed, but that Allah's cause had been victorious. The claims of the other verses suggested as the last verse are not capable of any further proof.

22. For the Muhammadans, the Qur'an is not the sacred book in the usual sense but something of much greater significance. It is, as already mentioned, the faithful reproduction of the original scriptures in heaven. This sounds rather strange, when we remember that this heavenly book, according to the passages above quoted, only because Allah's grace an "Arabic" Qur'an, intelligible to Muhammad and his people, as the scriptures of the Hebrews (xxvii. 94-95) were closed to them; but this distinction gradually disappeared for the religious conscience. After the conception of eternity and the uncreatedness of the word of God had become known to Muslim theologians through the polemics of Christian theologians (cf. C. H. Becker, Zeitchr. f. Assyrv. xxvi. 186 187), it was applied to them by the copy in heaven and then finally by the strictly orthodox school to the Arabic copies of the Qur'an and expressed, epigrammatically in the sentence, "What lies between the two covers, is the word of God."

The Mu'tazilis and the more free-thinking theologians raised a protest. It is true, but after Allah Himself, in the last version of his dogmatics, had championed the view that the written or recited Qur'an is identical in being and reality with the uncreated and eternal actual word of God, the victory was won by the orthodox school.

(F. Buld)

KORDOFAN is a province in the Anglo-Egyptian Sudan which lies roughly between Latitudes N. 12° and 10°, and Longitudes E. 32° and 47°. The word Kordofan or Kordof, as it is often pronounced locally and written in old documents, does not occur, we think, in any Arabic historiography or geographer of the middle ages. It is generally supposed to have derived from a small hill of the same name, some ten miles S.E. of El-Obeid (Lat. N. 13° 14', Long. E. 30° 14'), but the meaning of the word, the language from which it is derived, and the territorial limits to which it was applied before the last century, are all uncertain. In the
Takabbol and Dadifulla (1845) the name occurs in the lives of three holy men of the seventeenth century; one of them, called al-Kordofani, came from Kurus which is south of Tiffail and another from Zalaqa which is west of Nahid. Burckhardt, whose knowledge of it was mainly obtained from merchants in Sheefli (1814), refers to Kordofan frequently as if it were a region comparable to Darfur or Sennar. In the seventeenth and eighteenth centuries it seems, therefore, to have included a broad corridor running between the southern Nils mountains and Dar K Сообщали, to this day Arabic north of Lat. N. 14° 30' south of "going to Kordofan". After the Egyptian conquest from 1811 the home of the people of one of the greater administrative areas into which the Sudan was divided and for the next sixty years it covered a region ranging from the near the White Nile westwards to Darfur, and from Dongola province in the south to the line formed by the Bah el-Ghazal and the Bah el-Arhab. After the Khatia's defeat in 1899 the province was reconstituted for a few years on the old lines but it has since been reduced by the formation, first, of the White Nile province and, later, of the Nils Mountains province. As at present defined, Kordofan province covers an area of about 110,000 square miles with a population estimated in 1925 at less than half a million. Al-Obeid is the capital and the chief local centres are at Bire and Siddi (south), Umru and el-Rahid (east), and Nahid, el-Arhab, el-Oaib and Muglad (west). The capital of the Nils Mountains province is at Talodi.

In this vast area there is considerable variability of soil, rainfall, fauna, and flora, and the inhabitants are perhaps still more diverse, the region in these respects being typical of a series of African territories between the same parallels of latitude, though unlike some of these Kordofan has never formed the centre of an independent native state. The middle zone through which a railway passes to al-Obeid, has been one of the most important economically and as a pilgrim route from Central and Western Africa. Before the Egyptian conquest the Darfur slave-trade made its trade chiefly in small children, passed through this area, and during the Egyptian rule it was the centre from which slaves were enrolled for the army frontiers of the Nils mountains. Gum, ivory, ostrich feathers and a little gold have also been traded through this region for many centuries, but only the first of these commodities is of importance to-day: large quantities of the finest gum are exported from Kordofan to the world markets, also cattle to Egypt from the Bahi El Shaman district in the south-west, and from the eastern district grain (דונלד) to Arabia. The opening of the railway, the sinking of deep wells, and the clearing of motor roads have given a great impetus to the development of this country. North of this area the rainfall is light, semi-desert conditions prevail over large areas, and the country is divided into a region ranging from the savanna-wooded valleys except for a few hills still occupied by much reduced communities of Nilsitic Nils and a few cases, like Bireia, where gardens can be cultivated. In the southern third, on the other hand, and particularly in the Nils mountains, natural conditions are much more favourable to the production of crops like cotton and the breeding of cattle and horses; this part of the country has been tranquil for some years and is steadily increasing in wealth as communications improve.

The population is formed of the most diverse elements. In the north and centre Arabic is universally spoken and Islam of the usual African type is the religion of the people; in the south, Arabic is now spreading along the trade-routes, but most of the people on the hills have still kept their own languages and forms of religion. Most of the Arabic-speaking people whose conversion to Islam is not very recent, claim Arab pedigrees but it is impossible to any what amount of Arab blood is still flowing in any particular district here or elsewhere in the Sudan. The Arabs intermarried with the black and intermarried freely with the nomads, Libyans, Nubians, Beja or what not, according to their own traditions which are confirmed by the customs and appearance. The Kababish, for example, in the north of Kordofan, who are counted, probably with right, one of the most 'Arabian' of the tribes, infuse their women according to the Sudan ('Harmonic' site) and observe the marriage customs which are characteristic from Dongola to Sennar, and the tribe is a happy amalgam of heterogeneous elements, different sections speaking different languages and some of them, like the Raha, are, or until recently were, strongly opposed to Islam and are the more characteristic wedding customs of their Muslim neighbours, yet they can hardly be considered more Arab than the Kababish. It is obvious that the term Arab when used in the Sudan as an ethnic term must be understood with a difference. This difference must be still further accentuated in the case of the mixed communities in the centre of Kordofan and on the more advanced Nils hills where Arabic is spoken and Islam practiced as it is understood on the Nile. When one turns from these to the naked Pagan the hills, one enters a sphere which is quite as heterogeneous as the sphere one has left: the term Nils which is applied by the Arabs here to any black pagan suggests a relationship which has no existence in fact. In a recent study Meinof has enumerated 27 languages spoken on the Nils hills and has traced them to three distinct African language groups which reach back to remote prehistoric days. It may be added that Meinof's list is probably incomplete and that the inhabitants of different hills also differ profoundly from one another in physical type and the acquired knowledge and dexterity observable in primitive crafts and pursuits.

Bibliography: MacMichael, The Tribes of Northern and Central Kordofan, 1917, and A History of the Arabs in the Sudan, 1922, contains bibliographies of the early literature and a great deal of new material bearing especially on the Arabic period. Meinof in Einige Studien zur nach Kordofan, Hamburg, 1915, gives a useful resume of recent work on the southern languages and, among other things, does away with the view that the languages belonging to the Nubian group are of recent origin there by showing that the southern group must have broken away from the Nilotic group before the adoption of Christianity had brought Greek and Coptic loanwords into the language. References could be made also to the official publications of the Sudan Government, to papers by C. G. and
KORÜD, eldest son of the Ottoman Sultan Bayazid II, was appointed to the governorship of the province of Teke in Asia Minor; inciting the enmity of the grand vizier Ali Pasha, who preferred his brother Ahmed Sultan to him, he decided to quit his father's territory after the grand vizier had seized certain estates in his province; obtaining sanction to set out on the pilgrimage to Mecca, he embarked in Muharram 915 (April 1509) with 87 persons in his train on five ships commanded by Ka‘âs Alkâh; after a voyage of five days, he landed at Alexandria and was accorded a magnificent reception in Cairo by the Mamluk Sultan but the latter refused him passage through his territory for fear of displeasing the Ottoman Sultan. Körükthereupon resolved to come to terms with his father's vizier and was restored to his governorship. While he was on his way back to Cilicia his flotilla was attacked and defeated by the Knights of Rhodes; the prince was forced to land on the nearest coast. In passing through the province of Teke, he had his baggage plundered in the vicinity of Elbeyli by irregulars commanded by Karâ-âhîji, called Shih Kâli (cf. Der Istilâm, xi. 85 sqq.). Suspecting intrigues on the part of his brothers, he went in disguise to Constantinople and stayed at the mosque of the Janissaries, but the latter took the side of Selim and distracted Körük's incapacity. The forced abdication of Bayazid made him abandon all hope of succeeding him (89 Safar 918 = April 25, 1512). After the massacre of the imperial princes, Körük was in terror of his life; Selim, setting out unexpectedly from Hissar under a pretext of going hunting, arrived five days later in front of Magnesia and was victorious in the engagement of Körük’s [q.v.], in which his brother was governor. Körük fled from his palace by a back-door accompanied by Ilyâs, whom alone he trusted. After hiding for twenty days in a cave, they took refuge in the province of Teke in disguise but were betrayed to the governor Kâsin Beg by the Turkmen, who were surprised at the handsome trappings of the horse lent by Ilyâs to one of them who was sent to procure them provisions. Körük, taken prisoner and separated from his companion, was strangled during the night by Kâpâddjâshi Selim’s men by order of Selim (Nov. 914).

Körük was a poet and musician. He assumed the poetic surname (waddi’s) of Harîm and composed melodies, one of which is still famous under the name  ‘Uthîr’ Rû’i “food of the spirit”. He surrounded himself with men of letters and scholars, and was the patron of musicians in whose company he delighted. At his court he had the poet Chânû of Drussa, called Dîlî BirBâr “the mad brother” on account of his whimsical gaiety, who later wrote a funeral elegy on his death (von Hammer, Gezer, ii. 43; Dichtkunst, ii. 201). This did not prevent him also mixing in legal circles and preparing a collection of forensic entitled Körükâbîyâ.

— His name means in Turkish “terrifying.”

Bibliography: Sa’d al-Din, Târîh...

(İzmir) KORÜD DEDE, the legendary controller of Oghuz Khân and reputed author of the book of Dede Körük. Körük Dede is said to have been the sage advisor of the emon of the tribe and first ruler of the group of peoples, to which the Anatolian Turks at first belonged, Oghuz Khân, for whom he composed a book in the simplest antique style with wise sayings and admonitions, intermingled with all kinds of traditions and counsels. Whether Körük Dede was a historical personage or not can no longer be ascertained. A. Diwâjâv in the article discussed by W. Barthold in the M. S. O. S. I. (1898), p. 2, p. 154 and (1901), p. 2, p. 183, has dealt with the theme of the same Körük who under the name (ata = father) in the Russian district of Kamanlûk not far from the mouth of the Sh-Daryâ. There is perhaps some connection here. The book, usually called simply Körük-i Dede Körük, is regarded as a part of the epic of Oghuz, the Oghuz-name and in its present form is believed to be barely older than the 18th century. It can be shown to have arisen in Eastern Anatolia. The Körük-i Dede Körük was published in 1332 in Stambul (172 p.) from a modern Dresden copy taken from an older Berlin MS. (cf. W. Perisch, Katal. der Türk. HSS, No. 303, p. 237 sqq.). On the contents cf. W. Barthold in Zapiski vostokoveda vostokoveda imperii rusk. arheol. obščestv, viii, 1893/1894, 203–218; vii, 1897/1898, 175–194; viii, 1899, 293–298; i, 1902, 139 sqq.; cf. also Abid al-Halîfî in the Türkçî: Meşhûrât, i, Stambul 1925, 212 sqq.

Bibliography: T. Bâhîngir, Die Geschichtschreiber des Osmanî, Leipzig 1947, p. 3 sqq., where the older literature is collected; also K. A. Lecointre’s article ‘Körük e tarihi llegen, in the Zapiski stc. ex. 40–45 and Mejmûd Dâwud’s article ‘Körük Ata in Derge-şâh, No. 15, Stambul 1337.

(İzmir) KÖSE MIKHÂL (v. “Michael the beardless”), an Ottoman general, a Greek renegade, was lord of Kharman-Kaya, a fortified town situated at the foot of Mount Olympus in Mydia, to the west of Edremit, when he was made prisoner by Prince Oğuzhân, the future Sultan, during an attack made by the Lord of In-Oni (695 H./1297 A.D.). When Oğuzhân had succeeded his father Or-Teremir, he became the intimate friend of the sultan, who on his advice selected Lefke, Vedeliçe, Ak-Hidayet, Jefer, Tekfur-Mihir, Modreni, Bişdeği (699 = 1300). Con-verted to Islam (706 = 1306) he was entrusted with the direction of the campaigns of Orhan, was a member of the council of war which accompanied
called after her (Wahide Kâme), collapsed on the morning of March 31, 1926), a Friday mosque bearing her name in Scutari and a mosque begun by her but finished by the younger Wahide in Sinanlül (Wahide Dârên-i) and to the carrying out of waterworks in Egypt, to the support of the pious in Mecca, to providing for debtors who had no means of payment, and to supporting widows and orphans (Na'ma, Târîkât, ll. 296, 310). J. von Hammer, G. O. R., v. 547, etc. (further details are given to show her benevolent disposition).

Bibliography: The histories of J. von Hammer and Zinkeisen, where the Ottoman (especially Na'ma and Hâjîdidi Khâfits) and European sources (Kelâmînî of the Venetian battl) are utilised; cf. also Ahmad Rasîf, Kântüfî Siyâxî, 2 vols., Stambûl 1532 and 1924.

FRANZ HAERINGER.

KÖSE. [See KYSEK].

KOSHK (Ottoman Turkish pronunciation of the Persian koshk; the Arabic derivative gamaa, pre-supposes an unattested form *gamaq, gamo, "corner"), isolated pavilion in a park, kiosk. This name was given to the country houses of the caliphs (as opposed to the houses in the town), such as the Dîdarî and the Khâtîkî of Sâmarrâ, the plan of which has been given by Ernst Hirschfeld (Ueber die Kioske des Dîdarî des Kântüfî von Savaryen, 1814, v. 103).

There were in Cairo a certain number of these pavilions, also called qasr (pl. qasir), at the cemetery of Kántıfî (Kântüfî, Khâfits, ii. 453); these two expressions are synonymous, as is shown by a passage in Ibn Batütsa, iii. 272.

(EL. HUART).

KOSMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic *wâlî* [q. v.]. The term corresponding in Eastern Turkish to the Western Turkish *gumed* is *gumâs*.

In the oldest sources used in the Kotadân Bûlûk (comp. 1069/1070) *hâsîb* still has the quite general meaning of "poem, verse", e. g. in Radloff's Selâmî, St. Petersburg 1841, p. 1, l. 2 from below: *hâsîb-i Cemâel-i Çelingi, yet has this composed this book, this poem"; ibid., p. 5, l. 4: *hâsîb-i Cemâel-i Çelingi, yet has this composed this book, this poem", ibid., l. 2: *hâsîb-i Cemâel i Celingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel-i Çelingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel i Celingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel-i Çelingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel i Celingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel-i Çelingi yet has this composed this book, this poem", ibid., l. 4: *hâsîb-i Cemâel i Celingi yet has this composed this book, this poem", ibid., l. 4. The Persian musician and scholar 'Abd al-ka'dar of Marâkşh (xii-xiv century, cf. E. G. Bandy, A History of Persian Literature under the Tartar Dominions, Cambridge 1920, i. 246, n. 38, in his work entitled Mâsqâl al-Sâdîd does not yet discriminate between *hâsîb* and the quantitative *quaran* (see Râfi'î Yâhia, Zâvîât an-nâmânân fâlî tehtabîrâr, Milh, tehtabîrâr, 1861, 161). On the other hand a verse by 'All Shir Nâwî (d. 1501, q. v.) quoted in Pau d'Couretze, Dictionnaire Turco-Oriental, p. 432 anyone, and in Radloff, Versuch einer Wörter-Liste der Türk-Dialekte, ii. col. 640 the *hâsîb* is definitely contrasted with the *tawîb.*

Later we find poems and songs composed according to the rules of Turkish popular poetry expressly called *gumâs, gumâs*. The characteristics
features of this poetry are the following.

1. Strophic structure. The strophes are usually quatrains. The Köşkım poems contain at least two strophes.

2. Syllabic or accented syllables rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order and are repeated. Later in the strophe, after a definite number of syllables, we always have necessity a caesura in the middle of the line. In the later Köşkım strophes the most popular lines are hexasyllabic divided into 6-5 with one caesura or 4-4-3 (with two caesura). There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the Köşkım strophe is usually adok or azak. 4. Alliteration of the initial syllables of the lines is not maintained among all Köşkım poets. In the 18th and 19th century, the forms of the poets of popular verse, Mémoires de la Comte, Orient du l'Asie, Poland, No. 5, Cracow 1922; in Polish with a French résumé, p. 157 sqq.

In earlier times the Köşkım songs were usually sung by the bard (segreg) to the accompaniment of a musical instrument, especially the baglama [sic] beloved of the Turks, at court festivities or in the camp of the army. The Köşkım poetry was always indistinguishably cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like haşhaş, dedeş, etc. In Köşkım, Türkmanu, some cultivated among the Askarbadźđan and some among the Ottomans Turks all belong to the Köşkım. The songs of popular mystics called执勤 and metes from the time of Yulius Emir (XIII-XIV century) are composed according to the rules of the Köşkım (see Kuprulínáde Mehmíd Fuða, Türk edêvêbênda xhe Íla wiisemngënd, Constantinople 1918, p. 334-335). The Köşkım popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers (Agalaš, also called xuz defter, or xuz defter, of them like Agalaš, Agalaš Krem, Agalaš, Gharif, Dardili, Õwê, aräz, Õwê), attained great fame and the collections of their songs in life stories are among the most popular books among the Turks (cf. Kuprulínáde Mehmíd Fuða, Türk edêvêbênda Agalaš, Turunz, Manche, etc. in Materialer til Mufti xemátdën, No. 17-18, 1920). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, Chansons des Janissaires (15e 16e), in Ménagé René Lezé, Paris 1925, ii. p. 133-175.

The term Köşkım (but not the kind of poetry to which it was applied) seems to have fallen out of use and if the modern Abd-Razíljan poet Dnjawd who died recently called his collection of songs Köşkım, this is probably simply to be explained by an archaizing popular movement in modern literature. The name has survived in the form xelben Köşkım among the Altai Turks (Tatara). The Altai xelben (on them cf. W. Kuschen, Über die Xelben der gemachten Reise in den Altai-
of the Turkish and was decapitated with the nobles who accompanied him by order of the dying Sultan. Three monoliths erected on the battlefield mark the places where Mihály twice escaped from the janissaries and where he was killed (Sóla-kádár). A mausoleum was built on the spot where Murád died; the body of the Sultan was however taken away and buried at Herissa. — In Şébénna 852 (October 17, 1448, Eve of St. Luke) a Hungarian army, commanded by John Hunyad and also Wallachians and German and Hungarian mercenary soldiers, met against the army commanded by Sultan Murad. The battle was fought at first indecisive, turned in favour of the latter as a result of the treachery of the Wallachians and the flight of Hunyad, it ended on the 19th with the glorious but fruitless defence of the German and Greek auxiliaries behind a barricade formed of wagons and artillery.

The name Kosowa was given to a wilayet formed after the Russo-Turkish war of 1877: it was bound on the east by Bulgaria, in the west by Montenegro, Bosnia and the wilayet of Scutari in Albania, in the north by Serbia and in the south by the wilayets of Monastir and Salonika. It was divided into six sanjâq: Găilieş (capital of the province), Friştita, Prieroz, Veli-Băța (Novi-Bazar), Târgujiu (Plevna) and Ştefăni; at a later date the sanjâq of Veli-Băța was changed into a see and a new sanjâq made called Sârăc, (Ştrasnile) with Köşk (%1, 1329, p. 332). This territory was ceded to the Serbs by the Treaty of London (May 30, 1913). It is now part of the kingdom of the Serbs, Croats and Slovenes.

(KL. BAALBEK.

KOSTA b. LUKA, BAALBEK. Our authorizations for his life are Ya'qob b. Nadim (Fihrist, p. 205), Ibn Abî Uṣîbîs (i. 244, who quotes a very large number of works, mainly religious), Ibn al-Kift (p. 272), Abu l-Faradj (text, p. 742, translation, p. 197). These give as their sources Salim b. al-Husayn, Ibn Nadim b. al-Husayn, 'Ubaid Allah b. Dhibîr and others not mentioned by name. There are also references in other passages of the Arabic biographical and bibliographical works mentioned above. For those which we have still below, see the indexes.

Kosta b. Luká belonged to Ba'albek (the Hélopolis of the Greeks) in Syria; he was of Greek descent and a Melkite i.e. an orthodox Christian. In this capacity, for example he disputed with a Nestorian cleric regarding the duality of the natures in Christ (cf. G. Graf, Die christlich-arabische Literatur, in Strassbicher Theolog. Studien, vol. vii, 1905, p. 35 sq). We know the years of birth and death of many Arab mathematicians but not of Kosta b. Luká. We have however the following chronological data for his life: For the Caliph Mustan's (855–866) he translated the work "On the lifting of heavy burdens" (Bahr-ul-ва) of al-Abar, and the Spherics of Theodorus; he wrote an introduction to geometry for Abu l-Hasan, Abu l-Yahşu b. al-Mutawakkil's (847–865) court and died in 888–889. To Isma'il b. Balâl, Mutamid's vizier (870/872), he dedicated his work on the use of the sphere with an axe. He was still alive in the reign of al-Mu'akdr, which died about 912, as he can hardly have begun to translate before he was 25 years old; it would result from the above data that he was born about 820 and lived he 70 or 80.

Kosta b. Luká was regarded as a talented and very brilliant physician and a sound scholar in many branches of learning, such as philosophy, astronomy, geometry, arithmetic and music. It was impossible to find him lacking in any aspect of his knowledge. According to the Fihrist, it was the general opinion that Kosta b. Luká ranked higher than the celebrated physician and translator Ḥunayn b. Ḥabîb (d. 873). But, according to the same source, there were others who held the view that Ḥunayn was the better. If in any way both were brilliant scholars, modern opinion holds that Kosta b. Luká was a great writer of Greek, Syrian and Arabic; he had a perfect knowledge of Greek and was an excellent translator, especially of medical works; this was natural as he was a physician. His Arabic style is famed as well as the way in which he arranged his works; his concise presentation is justly praised; its lack makes difficult the study of the works of others, namely those of Ibn al-Hajlàm.

Kosta b. Luká left his native district in the 'Abbasid period and went to Asia Minor. His book list would have acquired a number of Greek writings and returned with them to Syria. He was summoned to 'Iraq, probably by one of the Caliphs, to translate works there. At the same time he revised many existing translations; Kosta b. Luká thus rendered great services to the East in making accessible classical learning. The Muslims therefore say that the reason that many branches of philosophy are studied in Muslim lands is that Kosta b. Luká introduced them; his return from this journey towards the end of his life Sanahûr, an Armenian prince took Kosta b. Luká to his land, where he lived till his death. The Armenian Patriarch Abu l-Ghaţif was a learned and distinguished man for whom Kosta b. Luká prepared many excellent works on the most difficult subjects. It is evidence of the great prestige enjoyed by Kosta that a cupola was erected in his honour over his tomb, as was only done for princes and high religious officials.

Ibn al-Salah celebrated Kosta's merits in verse (Ibn Abî Uṣîbîs, ii. 166).

Of his relations to his contemporaries,
we know that he wrote medical works for some of them as translated medical books, for example even for Christian officials. Among such were Abu I-Chajaf al-Batir, al-Batir al-Fatani, al-Hasan Muhammad b. Ahmad, the secretary of the Chief Patriarch, Abu Muhammad al-Hasan b. Muhammad, the chief Kili, Abu Ali b. Banu Kili. It is probable that Kosha b. Luka also met the philosopher al-Khulth al-Gallaf's, as Ibn al-Kili specially mentions that the two had met. Of a certain Abu Jall b. al-Mumaidhali (astronomer or astrologer), we unfortunately know nothing; Kosha b. Luka sent him a letter from Armenia on the subject of Muhammad as a prophet (for his relations with other men see the sources). The literary activity of Kosha b. Luka covered the most varied fields, as in the case of the Banit Musa, Isbaha b. Hama and Chalil b. Kura; it does not seem however to have been quite so comprehensive as in the case of the two latter; but it should be remembered that we are extremely well informed about the latter. Isbaha b. Hama, for example, himself prepared a list of his translations from Galen (G. Bergmann, Human b. Isbaha über die syrischen und arabischen Galenischen Übersetzungen, in: Arch. zur Kunst des Morgenlandes, xvii, N. s. 2, and a record of his Udhil's works was made by a relative.

A list of translations of Greek works written by M. Steinschneider in Z. D. G. G., vol. 1, 1896, on the index of names under Kosha b. Luka as the order is that of the Greek authors. The titles of a series of very valuable medical treatises are given by Wustenfeld and Leclerc (op. cit.). Only a few of these seem to have survived, for example that on the treatment of the body in jaundice (K. fi Tadjil al-Abd b. L-Safar etc.), on phlegh (K. fi l-Balzg), and tumours (K. fi l-Safar). None of these writings has so far been utilised. He also dealt with problems of hygiene, for example, baths (K. al-Husna), and the standards for foods. (K. al-Hasna al-Aghdha).

In addition to these and similar works on medicine, philosophy, science, mathematics, Kosha b. Luka also wrote on the following subjects: K. fi Khiyali (on the staining of khyali, a coarse linen, and its alteration by sprinkling, K. fi l-Abdi l-Tarkhat al-Khidja wa-Taghiyurtin min al-Rahidi). Other works deal with the causes of wind (K. fi l-Murahid wa-Aswaf al-Kili), and on date wine and the drinking of it in fasting (K. fi l-Nabah wa-Rakhtis b. al-Wali), and how to avoid poisoning (K. fi l-Daf al-Sumlan).

In the field of philosophy his principal work deals with the distinction between soul and spirit, pneuma (al-fork m al-falati hayah nas was tawfiq). The graveness of the work has been disputed. The difference between soul and pneuma lies 1) in their nature: the soul is corporeal, the pneuma incorporeal; 2) in their qualities: the soul occupies no space, the pneuma does; the former cannot be but latter can be enclosed by the body; 3) in the condition after death: the soul is immortal and the pneuma mortal; 4) the pneuma is the instrument of the soul for communicating the function of life to the body and for actual perception. It controls most processes of the body, such as breathing, the pulse, sensation and movement. The pneuma goes to the eye in the hollow nerves. In its finest form, it is active in the higher processes of the mind, imagination, memory and reason. It is of special interest to explain, as Kosha b. Luka endeavoured to do, the physiological processes; here he shows his medical knowledge.

Kosha b. Luka dealt very fully with occult subjects; his most important work in this field, which survives in a Latin translation, is on natural affinities, or more fully "Letters on inscriptions, compositions and appendages for the neck (anuils)", in which he gives directions to be facts and discusses them more fully (cf. Thomsidique, op. cit.). He interprets them however by autouggestion and in the case of anuils thinks they have effect because they have an encouraging and strengthening influence. It was probably through such studies that he came to deal with the subject of sand figures in his K. fi Amel al-Aulat turamus al-imam al-Dinawari wa-Tamam b. al-Mishkat, "On the use of the instrument on which the 'amarns' are marked and with which the mamluks are obtained".

In mathematics Kosha b. Luka, like many others, dealt with the difficult and obscure passages in Greek works. His treatise on the proof of the well-known rule of the two errors (Kili b. l-lakabah sallal Allah al-Halal al-Khusb), is a pure algebra, that on numerus ad numeri (K. fi l-Fikr al-Madhit al-abd takhala) on the al-Tulafi calculation (coincidence) are on the way to algebra. K. fi Husayn al-Tulafi b. Luka al-Qushayri on the 'Muhisha'ha. From a treatise by Ibn al-Haddim (Fi Musala il-Tulafi, "On the problem of coincidence") this on method of calculation, E. Wiedemann in S. R. F. S. L., 1927; St. Petersburg. Rosen, Catalogus, N. 192, 1938) we see that it deals with problems like the following: two men A and B came to the market and wished to buy an article. Neither has sufficient money; A says to B, give me 2 of what you have then I can buy it. From the title in Kosha b. Luka, it is evident that he solved the problem with equations, while Ibn al-Haddim took a more roundabout way. We know practically
nothing of any geometrical work by Köstān b. Lūkā. He wrote an introduction to geometry in the form of questions and answers (K. Mundhāt uss \(\text{-}i\)n al-Hārāmāt 'allā: al-Māshīrīn wa l-Dalā'il). He also dealt with cones and spheres etc. To this part of his work probably belonged the text (K. Mundhāt uss \(\text{-}i\)n al-Hārāmāt) which cannot be divided (like the point) (K. Mundhāt uss \(\text{-}i\)n al-Hārāmāt). It is said that he was also a poet (K. Mundhāt uss \(\text{-}i\)n al-Hārāmāt). We know more however of his astronomical work. He wrote a treatise (Oxford, Ori, 879, No. 2), "On the form (structure) of the spheres (K. Mundhāt uss \(\text{-}i\)n al-Hārāmāt)." It must have been composed at the same time as, or very little later than, the famous Astronomy of al-Farghānī (d. 861); from the scientific point of view it is on a much higher level than the latter and goes more into details; excellent diagrams make the subject clearer. It also deals with problems not in al-Farghānī, for example the measurement of the degrees between Tadmor and al-Raṣṣā and a method hitherto ascribed to al-Birūnī of measuring the circumference of the earth. Köstān b. Lūkā's work seems to me to have been used as a foundation by numerous later writers.

Köstān b. Lūkā devoted a good deal of attention to the construction of astronomical instruments; the first work to be mentioned in this connection is K. al-'Amāl bi l-'Ukār uss \(\text{-}i\)n al-Mundhāt. Whereas working with other instruments etc. on a ball-shaped astrolabe, K. al-'Amāl bi l-'Ukār uss \(\text{-}i\)n al-Mundhāt, are by Köstān b. Lūkā need not be discussed here (cf. H. Seemann and Th. Mittelberger, Das kugelförmige Astrolab, Abhandl. zur Gesch. der Naturw., part VII, 1925, p. 46). In keeping with the spirit of his age Köstān b. Lūkā also wrote an introduction to astrology (K. al-Mundhāt uss \(\text{-}i\)n al-Nadzīrīn). The "Paradise of History," K. al-Fīrdaus uss \(\text{-}i\)n l-Zaire, composed in Armenia perhaps was similar in nature.

Of writings on medicine may be mentioned those on the burning glass (al-Muqāwāt al-muqāwāt) and on the causation of diseases (al-Maṣāṣī) which was certainly used by the Archbishop Eliya for his book of the same name (cf. Th. Ibn. Class, Über die Wege etc., Inang. Diss. Erlangen 1906, p. 97). Of special importance is the translation of Hero's Ṣūrūj (K. al-'Amāl bi l-Asār uss \(\text{-}i\)n al-Asār) on the raising of heavy bodies): it has been edited with French translations by Curca de Vaux, J. A., 1803, l. 386-472 and li. 154-209, 420-514 and German by L. Nix and W. Schmidt in Hermes ochrona omnia, 1/4, further bibliographical references were given in these editions and also in C. Brockelmann, G. A. L., 204. Not the least important point about this work by Köstān b. Lūkā is the insight into Greek mechanics that it gives us.

Bibliography: For the Arabic sources see at the beginning of Wüstenfeld, Die Geschichte der arabischen Arab., No. 600; L. Loche, Historie de la medicin arab., l. 1870; p. 157; H. Suter, Mathematiker-Vereinigung im Fiskal etc. Abh. zur Gesch. der naturw. Wissenschaften, vi. 1891, p. 43; do., Die Mathematiker etc., ibid., x. 1900, p. 40 and appendix, xiv., 1902; C. Brockelmann, G. A. L., l. 204; L. Thorndike, A History of Magic and Experimental Science, l. 1923, p. 545 sqq.

KOTEL (from the Armenian Ողջ, "wall, side") Frantz Houdry, Diction. norm., p. 213) in Persian means a mountain pass, a neck between two peaks. This word, which does not appear in any Persian dictionary, is borrowed from Eastern Turkish, which took it from the Armenian; it is found in the Batūr-nāma, ed. Iminsky, p. 99, l. 23; p. 100, l. 11; p. 172, l. 18; p. 166, l. 22; cf. Radloff, Öfl., u., coll. 1277; Pavet de Courteille, Diction. turc-viént., p. 463. (Cf. HUARY).

KÖY, the word used in western Turkish for village. It is the form in which Turkish has borrowed the Persian gāv (cf. Bittner, Der Einfluss der Arabischen und Persischen auf das Türkische, S. B. Ak. Wiss. ca., No. 3, p. 103) or perhaps more correctly käy (Nuller, Lexicon; Burckhardt, "Köy," p. 250) meaning originally path, street. In the geographical nomenclature of the Ottoman empire we find many place-names combined with käy, like Boğaz köy, Eremit köy, etc. It seems that these names are not found before the end of the Seljuk period. Köy in the sense of an open village is opposed to həkəpə meaning a small town. In eastern Turkish place-names we always find the word köy used for a village. Sometimes this last word seems to have been replaced by köy (cf. e.g. Köter, Erevanli, xi. 221 sqq.; Köy Kond, near al-Mawli, becomes Kālī Köy). (J. H. Kramer).

KÖYUN BABA, lit. "father of sheep," a Turkish saint. He is thought to have been a contemporary of Ḥājjī Bektaş [q.v.], and it is said to have received his name from the fact that he did not speak, but only bled like a sheep five times a day at the periods for prayer. Sultan Bayezid II, called Walli, built a splendid tomb and dervish monastery on the site of his alleged grave at Oğhmandık (near Amasia, in Anatolia) which was one of the finest and richest in the Ottoman empire. Ewliya Celebi in his Travels (Səyəxanname, li. 180 sqq.) describes very fully the great Bektaşi monastery there, at which he was cured of a urinary disease and which was initiated into the order. Cf. J. von Hammer, G. O. E., l. 608, on Ewliya's pilgrimage to the tomb of Köyun Baba. Nothing is known regarding the life of this remarkable saint not even whether he really existed.

That he is represented as a disciple and contemporary of Ḥājjī Bektaş means nothing, as almost all early Ottoman saints are credited with having enjoyed this privilege. The sanctuary itself does not seem to have been examined; but see moreck in Z. der Est. xxiv., 1899, p. 376.

(FRANZ BARINGER)

KOYUNDĪ, a little village, which was built on the great group of artificial mounds, that cover the ruins of the royal palaces of Nineveh, opposite the town of al-Mawli, to the east of the Tigris. The name of this village is not found in the middle ages nor in the Turkish authors of the 18th century; it has been thought, however, that the name is connected with the dynasty of the Kura Köyundī, which reigned in this region.
in the 25th century (von Oppenheim). After being for the most part destroyed by Kurds in 1836, the village was moved to the alluvial plain between the mounds and the Tepa, after archaeological excavations had begun in 1845.

The Arab authors of the middle ages, from Ibn Khordadhbi, know the site of Nineveh under the name of Nainaw (the vocalisation of Wain) or 8f; nowadays it is also pronounced Nainaw and connect the place with the story of the prophet Yūnūs in Mattai. Al-Makhdari also calls it Ninawa (Nebi, likewise speaks of Kāf's Naima; perhaps the name was changed under the influence of the Arabic word meaning the fish of Yūnūs) and he mentions near it the mound of Tell al-Tawla, on the top of which was a mosque surrounded by houses of nūṣ̄ūṭṣūṭ. This last place is the present village of Nāfū Naima, to the south of Koyunjik and also within the bounds of the ancient Nineveh. This village is separated from the ruins by the little stream of Khewars (the name is already found in Al-Makhdari) and was called Naima in the time of Nebi. Ibn Dujan (ed. Wright, in Goeje, p. 236) says that the ancient walls and the gateways can still be distinctly seen and Ibn Bagīja says the same thing in almost identical words. In the 9th-century Nineveh was inhabited by Christians (Abū 'l-Faraj Bāthbāra, Fārīk Maskhātar al-Din, ed. Schlagen, p. 395). The mounds of Nineveh have also been used as a inexhaustible quarry for building materials for the inhabitants of Mosul.

Excavations were begun in 1842 by the French consul Botta, already famous for his work at Khorsabad. A. H. (afterwards Sir Henry) Layard then took in hand the excavations, first from 1845 to 1847, and again from 1849 to 1851, employing Arab and Nestorian workmen. A great many of the objects discovered were taken to London. Since then excavation has definitely ceased, all the trenches have been filled up so that now the ruins present the same appearance as before the discoveries.

(K. H. KRAMER)

KRAN, a modern Persian silver coin, now worth about fourpence. When Fath 'Ali Shah (1821-1850 = 1797-1834) of Persia reorganised the currency at the close of the 30th year of his reign, he instituted a new silver unit, the Bāš (from bāsh, a century, decade, any period of years, in this case thirty) to take the place of the old silver rūfīl, 'ishābāt and others which ceased to be coined: 1 tomān = 10 krahs = 100 shahāls.

The krahs at first weighed two mithkals (1.8 grammes = 142.8 grains) but was soon reduced by Fath 'Ali Shah to 1/2 mithkals (0.9 grammes = 106.4 grains) and again by Mahammad Shah to 50 mithkals (1.75 grammes = 88.7 grains). At the beginning of Nāšir al-Dīn's reign, the krahs was further reduced to 28 māhdūs (5.37 grammes = 82.1 grains) and in order to check the export of Persian silver to Russia and India it was again reduced to 36 māhdūs (4.883 grammes = 77 grains) in 1857. The standard of fineness was normally 900, but both weight and fineness varied considerably at the different provincial mints with the prosperity of the provincial authorities. In 1857 (1894) the provincial mints were abolished and all the coins were henceforth struck at Tehran with modern European machinery under the supervision of an Austrian mintmaster, Bergrath von Feuchten. Since this date the two-krahs piece (do bāsh krahs) has been the common silver coin; the one krahs is not uncommon. Five krahs pieces, half and quarter krahs have also been occasionally struck but are rarely seen in currency. The weight of the krahs continued to be reduced (in 1527 = 1900, it was 4.54 grammes = 71 grains, just half its original weight) and the fineness has also suffered. On the coin the denomination is expressed in multiples of the dinār (1 krahs = 1,000 dinārs) except that the quarter-krahs is called a rūfīl. On a few krahs pieces of Nāšir al-Dīn Shah, on those of Mahammad 'Ali Shah (1234-1247 = 1907-1909) and of the first two years of Ahmad Shah (1237-1238 = 1909-1910) however the name krahs is found on the coins.

extended to the northern shore of the Black Sea. The first Muslim expansion to the Crimea was undertaken shortly before the Mongol conquest by the Turks of Asia Minor under Sultan 'Ala al-Din Kulubbah (648–664 = 1249–1266) (Reconquista des sept siècles et des Quatre-Cents, ed. Houtman, 230 seq.). In the reign of the Khân of the Golden Horde, Berke, about 1265, 'ïz al-Din Kal Kâwûs, who had been driven out of Asia Minor and liberating from Byzantine imprisonment by Berke, was given the towns of Solîgâ and Suzuk (Sudak) as a fee (Reconquista, 1965, 487; above, i, p. 708). In the course of these towns he was followed by his son Iyâbîyh al-Din Mandân (Reconquista, iv, 355).

Tatar coins were struck in Crimea, as the town is always called on the coins, from 686 (1287/88). In Arabic sources of the Mongol period the name is always written al-Kîrim and is vocalised by Ibn Batûtah (ed. Defrémy-Sanguineti, ii, 359) as *Karam*. In the report of the first Egyptian embassy to the court of Berke (text in Tiesenhausen, Sromk, etc., p. 54), Kîrim is described as a *village* (jarga) inhabited by different peoples (Kipisz, Russians, and Alban); on the other hand Ibn Batûtah calls it a "large and beautiful town". In 686 (1287/88) an architect and 3,000 drams were sent from Egypt to build a mosque in Kîrim to honor the name of the Egyptian Sultan (Moghrî, text in Tiesenhausen, Sromk, p. 424); among the ruins of Old Kîrim there have actually survived ruins of a mosque built in the Egyptian style. The mosque built by Khân Uzbeq in 714 (1314/15) is in quite a different style of architecture.

Even the earliest rulers of the house of Girei (cf. above, ii, p. 171 but better, perhaps Girei) lived in the town of Kîrim and struck coins there. During the civil troubles of the second half of the 15th (16th) century under Mengîlî Girei, the town is said to have been completely destroyed; but we find coins struck in Kîrim as late as 923 (1517) in the reign of Muhammad Girei (O. Retowski, Die Münzen der Girei, Moskau 1905, p. 71). On the ruins of Old Kîrim, which have been several times explored and described but have suffered severely from deforestation, cf. especially P. Kowalczyk, Krimskie Sromk, St. Petersburg 1857, p. 340 seq.; W. Seinrow, in Zasp., i, 378 seq. Excavations were begun there in 1925 under the auspices of the Association for Oriental Studies and continued in 1926.

Under Ottoman sovereignty (from 880/1475) the name of the former capital was extended to the whole peninsula and its population (Krim Kahlîf, Kîrim Tatarlar; cf. W. Rudloff, Versuch eines Worterbuches der Türk-Dialekt, ii, 745). The peninsula with its population of different stocks (this was the only place where remnants of the Goths had survived) and its monuments of ancient and early Christian culture became in this period almost completely influenced by Islam and Turkish culture. For the history of the Crimea in this period and the pertinent literature see the articles Magia, 399/20, and Krim.

After the final incorporation of the Crimea in Russia (1783), the Muslim population was expressly guaranteed complete religious liberty. The text of the edict then published was later incorporated in the articles of the Russian code relating to religious liberty. A special office of Mufti for the Crimea was created, completely independent of the Mufti of the Volga area in Ufa, and as in Ufa a "spiritual authority" was appointed. On the other hand under the influence of Greek ideas then favoured by the government, Greek culture was encouraged at the expense of Turkish. The kingdom of the former Tatar Khân was now called the "Tatar territory" (1784, abolished 1797; later (from 1802) "Turcic government". The capital of the government was Ak Mechet, which had been burned by the Russians in 1736 and now received the name of Simferopol; other towns arose on other sites with Greek names, notably the naval base of Sebastopol. Old Kîrim was now called Lewopolis (Lewopol), but this name never became popular. Russian and Greek immigration and the migration of a large part of the Tatar population to Turkey has wrought a complete change in the character of the population. The Musulmans (according to the census of 1913, 1923, 1924, only 206,113) are now small in numbers compared with the Christians (less than one third of the total population).

After the revolution of 1917 the Muslim population, as everywhere in Russia, endeavoured without particular success to constitute themselves into an independent community on a religious basis, acting independently of the authority of the state. The territory north of the isthmus of Perekop was later separated from the former "Turcic government" and joined to the Ukraine republic. The peninsula now forms the "Autonomous Socialist Soviet Republic of Kîrim".

Even before the Revolution, the educated "Kîrim Tatars" disclaimed this name given them by the Turks; (the name of "Tatars" also occurs in native documents). They wished to be known simply as Turks and their language to be called Turkish (it is really very much influenced by the literary language of the Ottoman empire). At the present day the language of the literature, produced mainly in Simferopol, is called "Turkic", even officially, in contrast to the "Tatar" language of the Volga territory.

Held, soll—xiv, 271 seq.; xvi, 320 seq. (W. Hertneck)

KROVA, a town and fortress in Albania, once the headquarters of Shandberg [i.e., Kroya (Turk. Ak Hüseyn); sometime also called Akse Hüseyn or Ab Serijs has had a stirring history. It is believed to be built on the site of the ancient Auribeas. Its history in the middle ages has still to be investigated. It is said to have been founded by the Neopasins noble Carlo Theopis, whose ancestors had held the land between Tirana and Durazzo about the middle of the 11th century. The remains of the ancient defences seems to be of Italian origin. Kroya only acquired renown when the Albanian patriot George Kastrioti,
The administrative district of the Kuban—before 1918 the province (oblast) of the Kuban Cossacks—also included the valleys, further north, of the Bakshe, Kefis, Sadika, and the left-bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this great province, which is divided into 7 arrondissements (Yeya, Temürük, Kayakazski, Ekaterinodar, Malikop [in Turkish: "much oil"]), Lob, Batukh-pashinski), was estimated at about 30,000 sq. miles.

Kiproth, Tableau du Comices, Paris 1847, p. 83, estimated the tribes of the Kuban at about 100,000 families. According to the Russian Encyclopedia, the native population about 1861 was 200,000 men (!) but as a result of emigrations and massacres, this number had fallen to 90,471 about 1885. Russian colonisation which was begun by the Cossacks about 1861 had reached 1,500,000 by 1894. In 1916, official statistics put the whole population of the province at over 3,000,000.

The number of "highbearers" and "sunnis" included in this total had also increased and reached 139,000. The native elements indicated by these official terms which lack precision, included the remainder of the Cerek and Abaz tribes (q.v. related to the Abijhaz, q.v.) and Turks of Kab-Cai. The latter (about 15,000 in 1879) lived in the villages (ошеК) of Kari-Djurt, U-Ukalan and Kharvad, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghai). They were at one time under the Cerek princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was re-organised on an ethnic basis; besides the Kabardak-Balkar region (the Terek) two autonomous (within the Soviet system) areas were created on the Kuban: 1. Kirov-Cai-Cerek, east of Ubrup with its capital Batukh-pashinski; it has about 150,000 inhabitants of whom 43% are Turks, 25% Cerek and 12% Cossacks; 2. Adygea, a strip of territory along the Kuban and Laba; its capital is Tokh-tumakhi and it contains about 70,000 Cerek. The new divisions do not correspond to old administrative divisions.

The basin of the Kuban has been inhabited since the Eneolithic age. The oldest tombs at Mailkop go back to the second (according to Rostovtzeff, to the third millennium B.C. Scythian tombs of the fourth and fifth centuries B.C. are very numerous (Kalrines, Vorontskaya and Sarmatian tombs from the second century B.C. to the first A.D. The Greeks called the Kuban Hypsaius, Varzanos, Antiochus. In Byzantine authors we find Kazaks, Kazaks (Margarian, Oituroc, Siraffin, p. 32). The spread of Christianity among the Adyge (Cerkes) according to local legend dates from the emperor Justiniani (527-565); cf. Ehova Nogmov, Estoria i Geograzia, Tiflis 1861, p. 43.

The Arabs were not well acquainted with the district. According to a bold conjecture of Marquart (ibid.), p. 37, 161, 164, Kuban is to be read for Ubrup (Кубан), which according to Garditz (quoting Djain, c. 301 = 914) formed the southern boundary of the Madjar (Madyara) and to the south of which (on the left bank) lived (Bar Rustia, p. 159) the Twiss, probably an Alba...
tribe [q. v.] (cf. the southern Ossete tribe of Tsal-ti and the name of the Altai: As). On the other hand, Mas'udi (M. al-Dhahabi, ii. p. 45—46) says that the immediate neighbours of the Alans were the Kalak living between the Caucasus and the Black Sea. The Kalak (a parallel form is al-Kishil, Mas'udi, Kt. al-Tamhda, p. 157) are the Cerkes, whom the Russians nickname Kazaks, and with whom the Russian principality of Tsemgara (on the peninsula of Taman in the xiv—xvth century) had continuous relations.

The later history of the territory of Kuban is at first the story of the struggle between the Russians and Ottomans and more particularly the Khans of the Crimea for the possession of the fertile plains southeast of the Sea of Azov and later of the struggle of the Russians with the warlike tribes of the left bank of the Kuban.

In the xvth century, Moscow's interest in the northern Caucasus was stimulated by the marriage of Ivan the Terrible with the Kabardin princess Maria Temrikova (in 1561). Soon afterwards Sulthan Selim II sent Khâsin pasha to Astrakhan and Dauwlet-giri of the Crimea invaded the Cоurts which preceded before Azov, a former Venetian and Genoese colony which the Ottomans had taken in 880 (1475). A long series of struggles began for the possession of Azov (cf. Azik) and the Cerkess principality of Kabardina (to the east of the Kuban on both sides of the middle course of the Terek). Down to the beginning of the xvinth century the Khans of the Crimea had the upper hand and by about 1717 the Cerkess had been converted to Islam (Nogmow). By the Russo-Turkish treaty of 1739 the two Kabardinas were proclaimed independent to constitute a buffer state between the two powers. By article 21 of the treaty Kulek-Kairamlî [q. v.] 1774, Great and Little Kabarda were placed under the suzerainty of the Khan of Crimea whose independence was recognized (art. 3). In 1783 the Turks occupied Terek but by the edict of April 3, 1783, Catherine II proclaimed the accession of the Crimeans, Taman and the Tyfirs of Kuban. On Dec. 28, 1783, the Porte recognized the course of the Kuban as the frontier. Between 1787 and 1794, the movement in the western Caucasus led by the religious leader Shahid Mangir found the Russians considerable trouble but the Russo-Turkish treaty of Yassy (a town which owes its name to the As = Allah; cf. Tomschek, in Pauly-Wissowa, i. 1825—1826) confirmed the frontier of 1783. The treaty of 1829 (art. 4) moved it southwards to the roadstead of St. Nicholas (between Poti and Batumi) but the territory within these bounds was only effectively occupied 32 years later after a stubborn and heroic resistance of the tribes of the Kuban.

The line of defences of the Caucasus had been planned under the Emperor Anna (1730—1746). In 1777 the line started from Azov and went by Staropol, Georgievsk to Ekaterinograd (on the Terek). In 1792 it began at Burgaz (north of Anapa) and following the Kuban for a while left it to go to Georgievsk (1794) and then 1798 to Ekaterinograd (cf. the map in the Abr brief. arkhîgov. kommun. Tifin 1885, i.). In 1834 General Wielamow established a military gordon on the left bank of the Kuban as far as Gelemilja (on the Black Sea). In 1856 Novosicassk (Tiansen) was founded on the site of the old Turkish fortress of Sulik-Kala. After things provoked by the operations of the allies in the Crimean War, General Wielomow in 1861 carried out an enveloping manœuvre with the object of making the highlanders descend into the plains and of driving the rebels towards the coast to force them to emigrate to Turkey. According to native sources (H. Bann, in the Revue Politique Internationale, Nov.—Dec. 1918.) 75,000 (?) refugees left the Caucasus in 1864; Russian sources gives the number of emigrants at 13,586 from 1871—1883. In 1864, the Russians reached the passes of the chain of the Western Caucasus.

Bibliography: Cf. the articles ARAKHAN, AZIK, CERKES, Archaeology: Mins, Scythians and Greeks, Oxford 1913, p. 634—638 gives a complete bibliography: Rostovtzev, Scythians and Greeks in South Russia, Oxford 1922. All the passages in classical authors relating to the Caucasus in B. Laytishev, Sichilu and caucasia: a critical apparatus of sources and literature, in Zeh. Russ. 42, 1891—1893. Similar passages in the Arabic geographers have been transl. by N. Karaulow, Sberih materiali, etc., Karakhan, Tifis, xxxix, xlx, xxxi, xxxviii, etc. (map). For the general bibliography see Minarro, Bibliographia caucasica et transcaucasica, St. Petersburg 1842—1876 and Durov in vol. iii of 'istoria svetna na Kaukasa, St. Petersburg 1885—1888. There is an account of the Russo-Turkish wars and geogr. information in the Grande Encyclopedie russe, ed. Brochhaus and Efron. Statistics for 1916 in the official publication Kankaski Kalender, 1917. Situation after 1923 in: the publication of the Foreign Office Bulletins, A description of the various political units, London 1924, and in the Encyclopaedia multiglæ, St. Petersburg 1926, under rubric Adige (N. F. Yakowlew). On the Cеркесс [q. v.], language cf. also Prince N. S. Troubetzkoy, Langues caucasiques septentrionales, in Les langues du monde, ed. by A. Mellies, Paris 1924, p. 330, 341 and N. Yakowlew, Tables phonetiques de la langue cabarde et Glossaire des exemples, fasc. i and ii., of the Traite de la section des langues du Caucas septentr. de l'Institut Oriental, Moscow 1923. For the Turkish dialect cf. Kary-Cal cf. W. Frohle, Karatchaisches Wörterverzeichnis, Keleti Szemle, x, 1911. (V. Moisiuk). KUBBA (now Kula), a district in the eastern Caucasus, between Bakti and Derbend [q. v.]. The district of Kuban with an area of 3,500 square miles is bounded on the north by a large river, the Samur, which flows into the Caspian, on the west by the "district of Samur which belongs to Dschistam [q. v.], on the south by the southern slopes of the Caucasian range (including Shat-Baghi, 3,997 feet high, little Dagh 1,900) which separate Kubba from Samokha (cf. the article SAFAWAN, on the S.E. by the district of Bakt and on the east by the Caspian. The area between the mountains and the flat coast land is called Dagi (Valliers, 497 fig., "lani proclamation, principale des provinces") which the plain between the rivers Yalandja and Beldek is called Maluk. (After Shashina lies further south (cf. SAFAWAN). The other cantons are Barak (so-called after a member of the Barmaie family, who sought refuge here in the reign of Hürat)
Al-Raishli, Shihabzda, Tipl, Khinallugh, Budag, Yusufjai-bagh, Sir, Anakhi-dars, and (sometimes) Kabistan (Abd, iv, 650).

The population in 1896 was 75,000, 35.1% Tm. (q.v.) speaking the Iranian dialect of Tm., 25.7% of Khoraghi at Turk, 24.9% of highlanders of the Kūb (q.v.) group, 2.7% of highlanders of the group (q.v., Tm. group, formerly Khinallugh, Dijik, Kita, and Budag, with whom the Udi of Shekka, [q.v.] seem to be related), Muslims form 94% of the population (76.5, Sunni, and 17.5 Shi'a) Jews, Russians, and Armenians together number several thousands. The town of Kūb (16,500 inhabitants) was established about 1750, lies on the right bank of the river Kūlsan; on the left bank is the Jewish quarter of the town. Near the mouth of the Kūlsan is the roadstead of Nakhud (called Niswātia by the Russians) which played an important part in Russian military operations in Transcaucasia.

The history of the district of Kūb (which at first must have formed part of the ancient Caucasia) is mixed up with that of Shirwan; Shubār (now a ruined site on the river Kūlsan, Russian Shubār) had been an important centre inhabited by Christians (Mukadda, p. 376) before Shubār became the capital of Shirwan. On the banks of the river Kūlsan may still be seen ruins with a wall running from the sea to Bār Dagh. Near the town of Kūb is the tomb of Shubān-shah Kāl-bi Kajūbad (d. 774 = 1373).

It was only in the xviii centry that Kūb enjoyed a period of independence. In the time of 'Abd al-Rasā'ūl Sāfawī, a member of the family of the 9smt of Kaitak (cf. Dijik, [q.v.]) called Humān Kāhā arrived at the court of Iḫānān. He became a Shīa and gained the favor of the 'Abbās, who appointed him Khan of Kūb and of Suliyyān (at the mouth of the Kūlsan). Humān Kāhā built the castle of Kūlsan. His grandson Humān 'Abī b. Ahmad, with the help of Peter the Great, regained the ancestral estates of the Sāfawī but his position was threatened by the alliance of the 'Abbās, prince of the Kaitak-Kumākh, with Hāgādī Darā, religious chief of Musūr, who with the help of Turkey played a considerable part in Dagestan from 1712. Nādir Shīh restored Suliyyān to Humān 'Abī, after the death of Nādir, local dynasties arose everywhere. At this time Humān 'Abī moved his capital from Kaitak to Kūb where he built a town and annexed Shubār and Kūlsan. He died in 1171 (1758). His son Fath 'Ali Khan, who succeeded him, sought the help of the empress Catherine II, who in 1789 (1775) sent General de Modene to Dagestan, under a pretext of avenging the death of the ambassador Gmelin, who had died on June 27, 1774 in captivity with the 9smt of Kaitak. With the help of the Russians, Fath 'Ali re-established his authority over what he could regard as his hereditary fields (Dagestan, Kūb, Suliyyān). He also took Suliyyān and the Khan of Bakt appointed him his son's guardian. The influence of Fath 'Ali Khan gradually extended beyond the bounds of the district. In 1793 (1778) he sent 3,000 men to Gilān to restore Hūyayt Kāhā, who had been driven out by the Kūlsan [q.v.]. In 1802 (1788) he seized Ardabil, whereupon the Shah-sewāl (q.v.) recognized his authority. The Khan of Kūs Dagh and of 'Abbās fought his support. Fath 'Ali is credited with ambitious designs on Adharbasīdān. To reconcile

with those of the King of Persia, Fath 'Ali met the latter at Shāmā (Shamkhor) but soon afterwards fell ill and died in 1205 (1789).

The political and military ascendancy of Fath 'Ali Khan undermined by his successors. His young son, Qābī 'Ali (from 1793) had a very adventurous career. This young Khan relied on the support of the Kūs Dagh and Count Zaborowok of Terblond on May 4, 1796 and entrusted the government to his sister Petti-Bajāhī Khāsūn. Taken prisoner by the Russians, Qābī 'Ali escaped and renewed the struggle. On the accession of the Emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Qābī 'Ali returned to Terblond. In 1804 he and the other Khāns sent a delegation to Alexander I, but by 1805 we again find Qābī 'Ali retesting against the Russians to whom he caused continual trouble till 1820 (1814). The Khāns of Jenāb were occupied by the Russians in 1815 and by the treaty of 1825 Persia renounced her claim to the eastern Caucasus. From this incorporation in the Russian Empire, Kūb became a "government" of Shirwan (later of Bakt). Since 1919 Kūb has been part of the republic of Adharbasīdān, at first independent and then Soviet; this is not to be confused with the Persian province of the name [q.v.].

Bibliography: cf. the articles ABBASI, VOMER, SHIETTE, and SHIRWAN. See especially the work of the local historian 'Abd al-Kāfi Khān, (a descendant of the Khāns of Bakt, who were related to Fath 'Ali Khān), the ChōdāChristian 'Abd al-Malik b. Marān. Jew, Christian and Muslim alike revered the sacred rock which they regard as the birthplace of the world. It is even said to be 13 miles nearer heaven than any other place. The Moslems set it next to the Ka'bah in order of sanctity.

Although there is no specific mention of the kūs in the O.T. it is referred to nevertheless in the Talmud and Targums. Here Mèlchisedek set up his altar; here Abraham sacrificed; here was the Bethel of Jacob; here was the thresholds of Arawn the Jewihtque (II Sam., xxiv. to sqq.); here David worshipped; and here were the altars of Solomon, Zerubbabel and Herod. But Mūjammād tradition has greatly magnified all this legendary material. Angles visited the Rock 2,000 years before Adam was created, and Noah's ark rested here after the Deluge. It is said to be actually one of the rocks of Paradise, and that here on the Resurrection Day the Angel of Death, Israel, was crucified. Previous to this the Ka'bah will come from Malakia as a bride into the Sakhra. They assure that it rests on a
The Qubbat-al-Sakhra, the Dome of the Rock, is known to Muslims as the Dome of the Koh-i-Nûra or "Stone of Light" and is considered one of the most sacred sites in Islam. It is located on the Temple Mount in Jerusalem.

The Dome of the Rock is believed to have been built by the Umayyad Caliph Abd al-Malik in 691 AD. The structure is a magnificent example of Islamic architecture and is known for its golden dome and intricate mosaics.

The building is located on the site of the ancient Temple of Solomon, where according to Islamic tradition, the Temple of the Prophet Solomon stood. The Dome of the Rock is considered by Muslims as the third holiest site in Islam, after Mecca and Medina.

The structure is 29.2 meters high and has a diameter of 26.7 meters. It is covered with a single golden dome that is 30 meters in diameter and weighs 130 tons. The dome is supported by four massive piers, each of which is 10 meters in diameter.

The interior of the Dome of the Rock is decorated with intricate mosaics and calligraphy. The walls are covered with mosaics depicting scenes from the life of the Prophet Muhammad and the stories of the Ka'bah.

The Dome of the Rock has been a symbol of Islamic architectural achievement and cultural heritage for centuries. Its beauty and significance continue to draw visitors from all over the world to this magnificent monument.
In Europe, the dome was the symbol of the order and appeared on the Grand Master's seal. A polygonal type of building reminiscent of the Dome of the Rock appears in Raphaël’s Marriage of the Virgin at the Jewish Temple (de Vogue, ibid., p. 78, note).

In 1187 Saladin captured the Holy City. The Golden Cross on the dome was knocked down amid the cheers of the Muslims and all its iron rings, which formed an eagle casing on the Rock, removed. In the cave below, pages were made in its place, led by the 700 of Damascus. (For a contemporary account see Ibn al-Aljal, ibid.) The lengthy inscriptions copied down by John of Westburg must have been destroyed at this period, since no trace of them now remains. Instead these can now be seen inside the Chapel the inscription set up by Saladin to record his restoration (text in de Vogüé, ibid., p. 94 sq.). These have been other restorations since. In 1447 part of the roof was destroyed by fire, as many is it said by certain young noblemen hunting there for pigeons with a lighted candle. A complete renovation took place under Selimah the Magnificent (1556-66). Until recently the little was done to remedy the ravages of time (Ordinance Survey of Jerusalem, 1885, p. 32). Nowadays the authorities are anxious to maintain the building in a condition worthy of its past splendour.

The building itself is of harmonious proportions and stands, along with some minor edifices, on an irregular platform, 10 feet in height, paved with limestone slabs. The Seljuk is almost on a level with this pavement, the highest point being only five feet above it (or c. 2.440 feet above the Mediterranean). Six flights of steps leading up to the platform end in elegant columns or arcades called kiosk (Balconies); because here on the Resurrection Morn all things will be duly weighed in the balances of Justice. The building is in the shape of a regular octagon, with side 66 feet in length. The diameter within it is 152 feet; that of the dome at its base being 66 feet. The dome, 99 feet high, is wooden, covered outside with lead, and inside with stucco, beautifully gilded and richly ornamented. The exterior of the building was formerly covered with marble but this has partly been displaced by the Kajihat porcelain tiles added by Seliman the Magnificent in 1592. Indeed, during the xviiith century, the whole edifice was restored and embellished so that the external incrustation of the walls, the beautiful stained glass windows, and numerous other decorative effects throughout are characteristically Turkish. Karakastic passages wonderfully inscribed in interwoven characters form a frieze round the building. There is a perfect harmony in the colour scheme. The pavement is remarkably fine, and so is in the case of one window near the Western Doorway. In the interior four massive piers and twelve columns surround the Seljuk in the centre. The dome rests on these. Another series of supports consists of an octagonal screen composed of eight piers and sixteen columns, two columns occurring between each pair of the six-sided piers. In this way the interior is divided into three concentric parts. The outer octagonal aisle is 73, the inner, 40 feet wide. The doors face the four cardinal points: North, South, East and West. (Gate of the Chain); West, Bab el-Charib (West Gate). The so-called (Arabic) doors have very artistic old locks and are covered with bronze plates stamped with a Kufic inscription (dated 316 A.H.). The building consists of basement (16 feet high) with the aforementioned doors; a story of plain masonry (20 feet high) with seven round arches on each side, 38 of which are pierced for windows, the rest being blind, and, lastly, the wonderfully proportioned dome above. The pavement is laid with marble mosaic fastened down by clamps run in with lead.

The Rock, about 50 feet long by 42 feet wide, is almost semicircular in form, the curved sloping side lying to the East, and the higher straight side to the West. Geologically it forms a portion of one of the harder grey beds of the Jerusalem platean, and has been left practically in its rough unshaven state throughout the ages. In visiting this sacred spot the devout pilgrim has to be careful to keep the Seljuk on his right hand, so that he performs the circumambulation of the holy relic in the opposite direction from the circuit of the Ka‘ba. Ibn ‘Abd al-Rahman (in his Bab el-Durur, transl. in part by Le Strange in Pal. Quart. Soc., 1887, p. 99) states: “Now when thou enterest the Seljuk make thy prayer in the three corners thereof, and also pray on the slab which rivals the Rock itself in its glory for it lies over a gate of the gates of Paradise.” This slab is a part of the marble pavement near by the Bab el-Durur and is supposed by some to mark the place where the prophet Elias knelt in prayer. Others believe it covers the Tomb of Solomon (Kobab Sulaiman). All, however, assert that it was originally part of Paradise, and is generally teased the Flagstone of Paradise (Halajat el-Durur). A tradition has it that Muhammad drove into this slab nineteen golden nails which are destined to drop out periodically. When all have fallen through, the end of the world has come. The Devil almost succeeded in removing them but the angel Gabriel intervened in the nick of time. Nowadays three nails remain in place, while one has sunk a little. It is with humble steps one approaches, therefore, that the pious pilgrim treads this holy place last by dislodging one of the nails he should hasten the day of judgment.

On a detached piece of a marble column on the S.W. of the Seljuk, covered by a rude shrine which also contains hairs from the prophet’s beard, it is to be seen the Edaww Muhammadi (or Footprint) which he left behind him on the night of his ascension to heaven on his steed al-Burāq. During the Crusades when the Christians occupied the Khubbat al-Seljuk this was known as the Footprint of Jesus. The round hole in the middle of the Rock was where the prophet’s body pierced its way upwards. And near by is shown the very Saddle of al-Burāq in the shape of several marble fragments. There is also pointed out on the West side of the Rock the impression of the Handprint of Gabriel (Nabi Sayyidin Al-Dhātal) where he held down the Rock when it was about to receive Muhammad. Directly opposite are preserved the banners of Muhammad and ‘Umar, and the booklet of ‘Abd al-Malik. The caves containing these relics are dust-covered. Once a year this dust is carefully gathered and sold in minute quantities as a panacea of miraculous power. A slight depression in the pavement on the East side of the Rock is pointed.
The Footprint of Idra. In the N. E. corner is the recess known as the Prophets' Kîlôa (Kubbât al-Aubiya). There are also several ancient Qur'âns and a dwarf screen known as Tekhîl Snaf 'Ali (the imitation of the sound of 'Ali').

The entrance to the cave is beneath the canopy by means of the Bûb al-Maghârûn, at the S. E. corner of the Rock, the pilgrims humbly descending the seven steps with the following prayer on his lips, known as the "Prayer of Solomon": "O God, pardon the sinners who come here, and relieve the infirm. The seven steps of the cave are six feet, and on the roof may be seen the imprints of Muhammad's head. The floor is paved with marble and the sides are whitewashed. It is said to be able to hold 62 persons (Ibn al-Fâkhî; B. G. A., v. 100).

A projecting piece of rock known as the Tongue of the Rock (Littan al-Sakhra) is so-called because it greeted 'Umar on one occasion. There is also to be seen the slender column supposed to uphold the Rock. The guide points out on the right the Mishrûh Suknâmat (Solomon's prayer-niche); on the left, the Markâm al-Khalifât (Abraham); on the N. corner, the Markâm al-Khidr with the Mishrûh Da'dâl, opposite.

On the S.E. of the Sakhra a staircase leads upwards to the gallery of the dome beneath the crescent on the summit may be reached. The sulayk pronounced on it by Muhaqit (F. P. T. S., ii. p. 46) still holds good at the present day. At dawn when the light of the sun first strikes on the Capula, and the Drum catches the rays, then is this edifice a marvellous sight to behold, and one such that in all Islam 'I have never seen its equal'.

Kubilai (usually written Kubilî; but also "Kubîlî"), Mongol emperor (1260-1294), brother and successor of Khân Möngke. He was probably born in 1217; when Möngke Khân returned in 1225 to Mongolia from his campaign in Western Asia, Kubilai, who was then eleven years old, had just gained his first trophy of the chase; after the Mongol fashion, Möngke Khân himself smeared his thumb with flesh and fat (Bâshâl al-Dîn, ed. Bârân, Tawd. Fast. Oth. Arch. Okt., xv. 147, text). In the reign of his brother he was governor of China. On the death of Möngke he devoted himself to the conquest of the kingdom of the Sung dynasty, which was only completed in his own reign (1279), whereby the whole of China, for the first time since the tenth century, was again united under one ruler. After a victory over his brother Arigh-Baga who was proclaimed Emperor in Mongolia (cf. the article Heikeki), Kubilai remained in China and transferred the capital of the Mongol empire to Peking (Khanbâlîq, q.v.). In spite of great achievements at home (Imperial Canal, new code of criminal law, Academy) and abroad (great, although unsuccessful, campaigns at sea against Japan and the island of Java, such as had never been undertaken in the history of China, before or after), his reign was for China a period of oppressive foreign rule. Kubilai was, like most Mongol emperors, favourably disposed to the Jains and the Muslims; only for a time (seven years, 1282-1289, of which the first four years are described as a period of severe persecutions) as a result of the events connected with the assassination of the minister Ajîmbâd (see Kânnâlî) did the Muslims fall into disfavour with him.

Kubu, a district with self-government under the suzerainty of the Dutch Government in the southern part of the delta of the Kapusar river, for administrative purposes it belongs to the Pontianak division of the residency of "Westrafdering van Bornes". In the north it is separated from the kingdom of Pontianak by the great Kapusar river, in the east it is bounded by the districts of Tayan and Simpang, in the south and west by the China Sea. The ruling family is of Arab
Kocak, a town in Persia, is the northerly part of the province of Khorasan [q. v.] on the upper course of the Atrek [q. v.], perhaps the ancient Azakh or Araska, in the older Arab geographers Khabshashin, later Khabshan, e.g. Mahdai, B.G. A., iii. 319, 4, and Biharî, ed. Morely, p. 767; also Yaqut under Sistan (l. 243, 3a) according to Samhâni (C. M., xix., f. 319p), according to Yaqut, f. 487, al., the usual local pronunciation was Khabshan, Khabshin, etc. and also the form Khabshun (Samhâni had himself been there). The origin of the pronunciation Kocak is traced by Rashid al-Din (ed. Quatremère, p. 183) to the Mongols. The ruins of the ancient Khabshun (this name is still borne by a large village) lie 3 farasq west of the later town, which was destroyed in the sixth century by a series of earthquakes. Towards the end of the ninth century Ghazan, afterwards Ilkhan, when governor of Khorasan built a Buddhist temple in Kocak. (C. d'Oxholm, Histoire des Mongols, The Hague and Amsterdam, 1834/1835, iv. 148, quoting Rashid al-Din). In the reign of Abbâs I. (q. v.) a Kurd principality (tribe of the Zafarâli) was founded with hereditary Ilkhan at its head. Like most towns of Persia the town house, Kocak also has the tomb of an Imámzadeh, Ibrahim b. 'Ali, son of Abbâs Mirzâ, who is buried in Mashhad. On the hill now called Nadir-Tepâ near Kocak, Nadir Shah was killed in 1160 (1747). In the reign of Nadir Shah (after his campaign of 1740 against Bukhârâ) a few leaves of a copy of the Koran written by the Timurid Balsamzâger Ghiyath al-Din [q. v.], preserved in Samarkand (according to others in Shahri Saru i.e. Kars) were brought to Kocak. Shah Nâsir al-Din in 1283 had two of the leaves brought to the Museum in Tehran. In the suppression of a rebellion of the Ilkhanî by Abbâs Mirzâ [q. v.] the town suffered severely, and the great earthquakes of 1852, 1871, 1893 and 1895 still more disastrously to it. When Curzon visited it in 1889, the population was under 12,000; but we are also told that 12,000 perished in the earthquake of 1895 and about 10,000 were left. The present Kocak is only a village, the last earthquake about 8 miles east of the ruined town.

Kocak Bairam. [See ii. Al-Fitr.]

Kocak Kainardje (v. "small hot spring"); a town in Bulgaria, 45 miles to the South of Sliastria, was until the treaty of Berlin (July 13, 1878) a part of the Ottoman
Empire. It was in this town that a treaty of peace between 'Abd al-Hamid I, the Ottoman Sultan and Catherine II, the Empress of Russia, was signed on the 12 Dhul-Hijjah, 1298 (July 21st, 1774). The Russian army, having appeared before Shumil and the troops of the grand vizier Mutluri-Tekke Muhammad Pasha, having abandoned it in a body, the latter decided to send envoys to Czar Paul, by whom was arranged a engagement on July 17; but the signature was postponed for five days in order to make it coincide with the date of the treaty signed by Peter the Great after his defeat on the Prithe (July 22, 1731) and the town of Kučük Kainarje was chosen because it was the place where the General Weis- man had perished. The treaty consisted of twenty-eight articles which established the political independence of the Tartars of the Crimea, of Bessarabia, and of Kuban, while reserving religious supremacy to the Sultan (a phrase which gave rise to the idea of the Caliph-Prince, which became so widespread throughout European literature, and also KIA). It restored to the Khan of the Crimea all the lands conquered by the Russian Army, except the forts of Ker and Yev- kala, the restoration of the conquests of the Russians except the two Kuban, Asof and Kil- burun. It restored prisoners to liberty without ransom; and provided for the free navigation of the Black Sea and the Mediterranean. It established freedom for commerce, security for travellers and in particular for the pilgrims from Jerusalem (this article later allowed Russia to intervene in the affairs of the Holy Land). The Porte acknowledged the Empire of Russia's title of sultan and her right to build a church at Terra. The question of Poland, which had been the chief cause of the war, was not dealt with in the treaty, by two additional secret clauses (Martens, Recueil des traités, li. 267) the Porte promised to pay an indemnity of 15,000,000 roubles, 7,500,000 passaric, worth at this time four million roubles, within three years. Russia on her side undertook to recede from the Archipelago as quickly as possible. This treaty contributed largely to strengthen Russian influence.

(From 1. H. H.)

KUCÜK KAHN, a Tartar Khan of Siberia, in whose reign this country was conquered by the Russians. Aqui Yaghmaid (ed. Denison, p. 177) is the only authority to give information regarding his origin and his genealogical relation to the other descendants of Shing Khan. According to this source, he reigned for forty years in "Taran," lost his sight towards the end of his life, was driven from his kingdom by the Russians in 1593-1595, took refuge with the Nogai (Nogaji) and died among them. References to Kutan are also found in the work of the Ottoman Turk Safi said to have been written in 990 (1582) (Loidsen MS., No. 917; transl. without a reference to the MS. by Ch. Scherer as an appendix to his translation of the history of Central Asia, Historie de l'Asie Centrale, by 'Abd al-Karim Bukhari, Paris 1878, p. 303 sqq.). Kutan's kingdom and its capital are there called "Trans"; the Russians had taken this town during Kutan's absence. Kutan returned and drove out the Russians after a long siege (1-2 years), but (his) latter carried off his son a prisoner to Moscow. These stories seem to show that Safi's work was probably composed later than the year given in the title (Scherer, loc. cit., Trans, p. iv., even gives the year 990 A.H. as date of death of the author).

The name "Kater" for the capital of Kučum (near the confluence of the Tobol and Irtysh) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Kutan did not inherit his kingdom from his father but had expelled his predecessor Yag 아니다 in 1565. Yaginda is still mentioned as king of Siberia, while in 1565 we find Kutan. In 1585 Kater was conquered by Russian Cossacks under Vernak; the Cossacks owed their victory to the use of firearms, then still unknown in Siberia. Kutan's son Alexander (Makariev-Kal) was sent to Moscow. It was not till Yemelian fell in an unexpected attack (1584 or 1585) that Kater was restored by the Russians; but by the year 1587 we find troops, who had just arrived, building the Russian town of Tobolak near this town. Kutan did not suffer his last defeat at the hands of the Russians till August 20, 1593. He is said to have been slain by the Nogai, whom he had taken refuge, out of revenge for his father's raid on them. The document used by Radloff (in Siberien, Leipzig 1893, p. 140-150) deals with an embassy from Kutan to Bokhara and the order by 'Abd al-Lah Khat [q.v.] his governor in Khwarizm to send teachers of religion to Siberia, which is not well known. Radlow in his work on the same subject is to be found in any historical sources.

KUDZA, a group of tribes. When Jakyy was first preached, the genealogical division of the Arab race into three main branches, Mojar Ma'add, Kudda and Yemen, had just been completed. The poets refer to Kuda as a well known principle. Agreement has not been reached regarding the fourth group, claiming descent from a common ancestor, named Kusahaan. This group comprised several important tribes, settled in the northern Hijaz and leading a nomadic life between Arabia, Iraq, Syria and Egypt.

Without protest, the Kudza had allowed themselves to be classified with the Yemen group. Wellhausen (Das arabischen Reich, p. 113) observes that this grouping was no old. This is quite correct but does not suffice. If the Kudza had allowed it, it was because their grouping corresponded with those of the Yemen. They might have perhaps stopped there if the matrimonial alliances of the Safyandid caliphs with the Banu Kabi [q.v.].
had not upset the political equilibrium of the Arab tribes. Kalb formed the main nucleus of the Ka'bah's and Mecca's genealogical fiction was intended to secure it the name of the first place among the Arab tribes of Syria. At any cost the Ka'bah's Yemeni bloc had to be broken up. Several Ka'bah's tribes had for long lived alongside of the Mo'dari and contracted temporary alliances with them. This could be usefully exploited. Evidence of the importance attached to the discussion of these questions is the fact that they were raised in the presence of the Prophet.

Now nothing could be more unavailing than the grouping of the Bedulu tribes. To understand how down to the Omsaysa and in spite of the institution of the 'Onma, the ethnographical connotations of the Ka'bah's had remained boiling, it is insufficient to read in the Nafah’s ‘Umar ibn ‘Umar ibn Sa'd, p. 804; cf. Djabur, ‘Alamud, iv. 107 below. They were unable to produce chancers or base the arguments on historical documents. Vagueness traditions and especially poetry were appealed to. Did not the poet contain the ‘archives of Arabia”? ‘Onma al-Ka'bah. In this connection the author of the ‘Agabi, vii. 77–78 speaks of verses fabricated by the Ka'bah's anxious to connect themselves with the Yemen group. Apocryphal poetry is the core of the whole of pre-Muslim history. A vast and diverse mass was displayed in this field. But it would be a great injustice to charge this exclusively to the genealogists of the Ka'bah. In fact the Ka'bah seem to have preserved the suspicion always to be felt by the Omsaysa they were better able than some others to do without alliances. The supremacy assured to the Ka'bah in Syria freed them from the necessity of seeking allies among the Mo'dari, to say nothing of their antipathy to the Ka'bah with whom they were at open conflict. In their verses Djabur and Fa'arazah appeal to an old alliance between Tamm and Ka'bah. The latter tribe had probably lost all recollection of it. But they could not be displeased to see their importance recognized by the best poets of Ta'am, the great Mo'dari tribe, whose friendship was also sought by the Ka'bah.

The Ka'bah were only represented in small numbers in Egypt. In 102 A.H., a Kalb governator of Egypt reconstituted a distinct group with various Ka'bah clans, which had made scattered among the Mo'dari and Yemeni tribes in his province. Besides Ka'bah and its numerous subdivisions, the following are the main tribes of the Ka'bah group: Ta'ah, Ta'ah, Fal, Fal, Kain (Bani ibn Kain or Bahlis), Bahlis, Mahra, Khayban (to be retained in the text of ‘Agabi, p. 72, 1). For these tribes the reader is referred to the separate articles on them. Their allegiance to the Syrian frontier or their settlement in Syria had encouraged the spread of Christianity among them. We therefore find them at the Arab invasion at first taking the side of the Byzantines.

to Sulpicius Severus by order of Titus, according to others against his desire (see Willamowitz, *Kultur d. Gegenwart*, i/viii. 170); Windisch, *Theol. Jädeder*, 1914, p. 519 sqq.) and for the last few nights the city had looked like a sea of fire. The Roman soldiers,adden by the stubborn defence, continued the destruction after the capture of the city and plundered without mercy. But it is certainly wrong to think of the conquerors as being ranged absolutely level with the ground. The eastern part of the city had suffered most, notably the area of the Temple, but a considerable piece of the city wall with a prominent tower was left at the south-east corner and on the western side Titus left the city wall and the three great towers of the palace of Herod intact, to serve as a shelter for the Roman camp. Many of the old houses must also have been still standing, or at least have been in such a condition that the Jews, who were gradually returning, could find some sort of shelter in them.

For the first half century after the fall of Jerusalem we are completely without information about the unfortunate city, Risings continually flared up in the country round but nothing is said about the capital. At the beginning of the reign of Hadrian, peace was ultimately restored but later (132–135 A.D.) another revolt broke out when the Emperor forbade circumcision and wanted to build in a new city upon the ruins of Jerusalem. After the rising had been suppressed with difficulty, he carried out his plan and a purely pagan city area which was called Colonia Aelia Capitolina. While on the north side it observed the boundary marked by the so-called third wall, it left out the southern half of the original city and in the south-west a part of the upper town; these remained the bounds for the whole period following except for a brief interruption under Salath al-Din. The new city had the same buildings, baths, theatre, sanctuaries (see *Chronicon Paschale* and on ii, Vincent and Abel, *Jerusalem*, ii, 6 sqq.) and was divided into 7 parts, each under an administrative official. The Emperor had a sanctuary built in honour of the Capitoline Jupiter as the principal god, for which the grand manner of ruins there formed a rich quarry (cf. Eusebian, *Dem. evangeli*, viii. 3). According to *Die Caisson*, lxx. 122; Hieronymus, *Conv. in Evang., xi. 8*, etc., this temple was built exactly on the site of the old Jewish temple, which Vincent and Abel, op. cit., ii 15 sqq., doubt, but without sufficient reason. That the "rock" which had formed the old altar for burnt offerings, remained, practically untouched is evident from its later history, but unfortunately we do not know if it was actually used in connection with the worship in the new sanctuary. With the help of a few coin-types we can form some idea of the appearance of the temple of Jupiter, and we also know that two statues of Hadrian (probably one of the Emperor and one of Antoninus) were erected near it: this temple of Jupiter rises quite high which are difficult to answer, this is small and more true of the temple of Aphrodite built in Jerusalem on the site of which was later built the Constantinian Church of the Holy Sepulchre (as presumed remains of this temple, see Schmalz, *Mater Ecclesiarum*, p. 351). According to Eusebius, wicked men, inspired by demons (pagan deities) had done: everything they could to conceal and to pollute this place by covering it with bawdy verses with earth brought for the purpose and building a temple of Aphrodite with its impure cult. Whether this was the real reason for the building of the temple of Aphrodite is very doubtful. For even if we grant the possibility that a recollection of the place of the Crucifixion and of the tomb of Christ had been preserved among the earliest Christians, it is unlikely that Hadrian to whom the building may, with most probability, be credited paid so much heed to the Christians that he would deliberately insult them so deeply (cf. P. Mickle, *Die Konstantinbahrein in heiligen Land*, 1923, p. 36 sqq.; Dalmann, *Palastinajahrbuch*, ix., 102 sqq.). At most it can only have been an accident. On the other hand we may ascribe to Hadrian's rebuilding of the city the broad pillared way which runs through Jerusalem from north to south on the mosaic map of Madaba of the 5th century (see Guthe, *Z. P. F.*., xviii. 120 sqq.; Giese, *Das Heilige Land*, 1912, p. 214 sqq.); of the pillars of which a series of remains have been unearthed (cf. Vincent and Abel, op. cit., ii. 23). It debouched on the north into an open square with a single pillar standing alone, after which the North Gate in the middle ages was known as the "Gate of the Pillar" (Bab al-Mumid or B. Ambd al-Zafr). Jews were forbidden under pain of death to enter the now city. This prohibition remained in force under Antoninus Pius, but they were again allowed to practise circumcision. As the Christians were not affected by the prohibition, their numbers must have increased in the centuries following Hadrian's reign. Their place of worship in this period was the Church of Sion on the southern peak of the next hill, which was therefore regarded as the mother of the other churches in the Holy Land. It was at first a small building, which was not replaced by a large basilica until a later date. In the same period pilgrimages to Palestine, especially to Jerusalem, began to become more numerous (cf. Windisch, *Z. P. F.*., xviii. 145 sqq.). The faithful came thither from all countries, and especially when the earlier absences and dangers had been diminished by the conversion to Christianity of Constantine I, numerous loads of pilgrims followed the example of the Emperor and other, Helenus, who visited Palestine in 326. The appearance of Jerusalem about this time (335) is described to us in the work of the so-called pilgrim of Bardanes, the exact character of which cannot however be readily defined. We learn that the two Hadrian statues were still standing and perhaps also the Temple of Jupiter, although the words "the street on which was the temple of Jupiter" are not clear (cf. in media via se huius templi fetus solemn sacellum facturus). If this was the case, the temple must have very soon afterwards been taken down when the Emperor began to build his church. The *pfrorsus over which the Jews were allowed to steep and pour oil on any day of the year, is probably the stone over which the altar for burnt offerings had stood, which therefore must have been lying exposed in those days. If it did not take place earlier, the complete desolation of the site of the temple must have begun at this time, when the Christians, remembering Christ's words (Matt. xxiv. 2), rejected any thought of rebuilding the temple. Eusebius (*Hist. Hier.*, *Latina*, 1. 52) expressly mentions it. But there was not true, at least about 348, of the outer enclosures of the site which Cyril (*Patr. Grec.*,
devoted continual attention to the embellishment of the town. Thus the Empress Eudocia, who visited Jerusalem in 460, built a church of St. Stephen and a church at the pool of Siloah. A still more dazzling epoch came with the reign of Justianus who was fond of building. He had churches and hospitals built in the country round, including a nosokomion in the capital (cf. Cyril in Z. D. F. V., xxxvi, 305). He also bestowed a splendid church of Theotokos on the city, of which Procopius gives a florid but by no means lucid description (De Aedificiis Justiniani, v. 6). According to him the church was supported by pillars and had a roof of many turrets. From a statement by Theodotus it seems to have been in the shape of a cross. One very important statement in the description of Procopius is that the ground was not large enough for the intended building, so that the Emperor had vast suburbs made on south and east until the ground reached the level of the adjoining rocks. This is in favour of the assumption often made that this church was the predecessor of the mosque of Al-Aqsa, the oldest part of which undoubtedly belonged to a church.

The part of the site of the Temple which lay in ruins and which would not be built upon for reasons already mentioned must therefore have stretched far to the south that the remaining area was too small to be large a church (cf. R. Hattman, Z. D. F. V., xxvii, 185 sqq.). Others like H. Dussaud, Echos de l' Orient, 1912, p. 148 sqq. 334 sqq.; K. Schmutz, op. cit., p. 385, look for the site of Justinian's church in the Jewish quarter southwest of the Temple area.

A sudden end was put to this idyllic state of affairs by the devastating invasion of the Persians in 614 A.D. When they were before Jerusalem, the Patriarch Zacharias, who, like Jeremiah of old, saw in the attack a punishment for the immorality prevailing in the city, advised surrender but the people would not listen to him, although the Byzantine troops in Palestine were leaving the city to its fate. With the help of their siege machinery the Persians entered the town and bathed the earth in the blood of old men, women and children. The churches were destroyed and the cisterns plundered and pillaged. The Jews, who had as a rule been on good terms with the Persians, are said to have used the occasion to avenged themselves on the Christians. The Patriarch was sent into banishment with other dignitaries and the palæstra, the Holy Cross, to the horror of Christianity was carried off by the victors (cf. K. Schmutz, op. cit., p. 691; P. Pectore, Les Prières de la France Jerusalem par les Pères, Milligan de l'Université de Beyrouth, ix. 1 sqq.; Eutychius in Vincent: and Abel, Jerusalem, ii. 242). The change only came when Heraclius began his marvellous campaign of conquest which led him far into Persian territory. Kavath H. Shiree, who ascended the throne on the assassination of his father in 638, sought peace and withdrew all the Persian troops from Byzantine territory. As his brief reign complete confusion reigned in Persia so that the war could not be continued. The Holy Cross was sent back in its case which the Persians by God's providence had never opened and restored to its former place on September 14, 629; in the meanwhile a monk named Modostes had been showing great energy and succeeded in restoring the destroyed church, including the Church of the Holy Cross.
Sephulchre built by Constantine, which was restored to its former size and decorated so as the modest means allowed. The remains of the Cross did not however stay in Jerusalem, but were sent in 633 by Heraclius to Constantinople, when he was doubtful of being able to defend Syria. Nevertheless a piece seems to have remained in Jerusalem, as the continuation of the festival of the elevation of the Cross shows (Vincent and Abel, op. cit., ii. 227).

But scarcely had the Christians in the Holy Land begun to scheme a little more freely again after this first visitation than events occurred which were destined to have far more fatal consequences. The political-religious conspiracy formed by Mahamud, little heeded outside of Arabia up to the time of his death, became a few years later with startling suddenness a danger threatening the neighbouring countries.

Although Jerusalem lay outside the regular orbit of the Prophet's interests, he mentioned it several times in the Koran, a natural result of his ineluctable love for Jews and Christians. As he had no idea of the actual appearance of the town, the cursory mention of the mikhal (Sura, iii. 226, v. 12) is of no importance, but Jerusalem became of real significance for him in the period when, following the example of the Jews, he turned at prayer in the direction of the holy city. The tradition is certainly right which says that the earlier figure mentioned in Sura ii. 136, 138, which he exchanged for the sanctuary at Mecca after the breach with the Jews, was Jerusalem, whether he already used this direction in the Meccan period or only introduced it after his migration to Medina in order to win over the Jews there (cf. the article MUHAMMAD). In the former case which is more probably right, Jerusalem must from the very beginning have been of considerable significance to him as a religious centre. According to the usual explanation, moreover Sura xviii. 1 with the expression sadjid al-askah indicates Jerusalem as the goal of the Prophet's ascendant journey, not however the later manner of the name but the site of the first Temple of Solomon. The correctness of this interpretation is however not certain for there is a certain amount of support for Horovitz's (Jr., i. 159; following Schrölke, op. cit., pp. 147 et seq.) conclusion that Muhammad was rather thinking of a place in heaven in this phrase (see MUHAMMAD). But the traditional view, which must have arisen very early, gained the greatest importance for Jerusalem, for on it is based the classing of the sanctuary at Jerusalem among the three most holy places of prayer in the world; indeed it is sometimes even given the preference over the other two.

The Muslim armies that crossed the frontier of Arabia after the death of Muhammad entered Palestine as well as the lands of the Byzantines. With the defeat of the Imperial troops at Adjudah (q.v., and add to the Bibl. Marzli, Merced al-Zahab, v. 225) in July 634, which the Byzantine general Aretas had to take shelter in Jerusalem, Byzantine rule in Palestine began to totter and its fate was settled on the Yarmuk in August 636; the fortified towns then surrendered one after the other to the victorious Arabs. Two different accounts of the taking of Jerusalem have been handed down. According to the most usual version, the Arab general Abi 'Ubaida in 17 (638) asked the Caliph 'Umar to come to his headquarters at Jarba (q.v.), as the people of Jerusalem would only capitulate on condition that 'Umar himself concluded the treaty with them. According to the other story, which de Goeye, Minutery sur la conquête du Levant, 1864, p. 110 sqq., rightly prefers, the Caliph came to Jarba of his own accord to arrange the affairs of the conquered regions and from there (according to Baladlidi, ed. de Goeye, p. 139) he sent Khalid b. Talhah to Jerusalem to besiege the town and the terms made by the latter for the surrender were then approved by 'Umar. These terms, which are preserved in several versions (e.g. Tabari, i. 2404 sq.; cf. Baladlidi, p. 139; Yaq'ubi, ed. Houtsma, ii. 167; cf. de Goeye, op. cit., p. 122 sqq.) were quite mild. The Christian inhabitants were granted security for their lives, property, churches and cemeteries, while the Jews were not to live among them; the churches were not to be used as dwellings, and not to be torn down or reduced in size, and the Christians retained their religious liberty; in return they were to pay the dhima and assist in waging off the Byzantine troops and invaders. The statements on the date of the taking of Jerusalem also vary; Tabari for example gives Rabih II of the year 16.

Further details of 'Umar's conduct at the capture of Jerusalem are given by various Christian and Muslim authors. Theophanes (ed. de Boor, i. 339) who wrote towards the end of the eighth century, records under the year 627 that the Caliph on the conclusion of the treaty, so favourable to the Christians, entered the holy city wearing gold robes — according to this authority a sign of his devout hypocrisie — and demanded to be led to the site of the Temple which he then made a place of pagan worship. Writing in the tenth century, the Egyptian Christian Eutychius (Jim al-Maltz, ed. Porroche, ii. 285 sqq. and in Vincent and Abel, Jerusalem, ii. 243) tells somewhat more fully how 'Umar refused to perform his gaita in the basilica of the Church of the Resurrection and instead said his prayers on the steps at the entrance in order, as he explained, to prevent the Muslims from using the authority of his example to turn the church into a mosque and that he gave the Patriarch Sophronius a document confirming this. At his request, Sophronius then joined out the "rock" covered with debris on the site of the Temple as a suitable site for his masjid. The Caliph at once began to clear off the rubble and as the Muslims followed his example the rock soon came into sight. At the same time he gave instructions that the masjid should be so planned that the "shootters" had the rock behind and not in front of them. It is apparent that the story is intended to confirm the salvific right of the Christians to their churches by the authority of the great Caliph. There is naturally no such tendency in the Muslim historians — the earliest is al-Muharrais in the tenth century with whom Shihab al-Din al-Maladi, Shams al-Din al-Suyuti and Mustafa al-Din (see below) are in substantial agreement: — who on the contrary tell the Christians in a less favourable light. According to them, the Patriarch, who appeared here more correctly in the place of the Patriarch, as first tried to deceive 'Umar when he demanded to be taken to David's masjid, by showing him the Church of the Holy Sepulchre and the Church of St.
But the Caliph saw through the deception, as the Prophet had described to him the place as he had seen on his nocturnal journey; he was ultimately taken to the site of the Temple, which he recognised as the right site; but it had first of all to be cleared of debris. In another story, recorded as early as Tabaqat, i. 2406, Ka'b b. al-Â`Amr [q.v.] a Jewish convert to Islam, played a part which gives the story a point directed against the Jews. When `Umar entered the Temple area he summoned Ka'b to obtain his opinion regarding the choice of the place for the masjid; but when the latter proposed that the place of prayer should be placed behind the Rock (north of it) the Caliph declined as he saw in the proposal a concealed attempt to plan the masjid for the benefit of the Jews, so that the kiblah would actually strike the site of the old Temple.

If we examine these traditions more closely, we see that they all agree that `Umar had a Muslim place of worship erected on the deserted Temple area. That we are on firm historical ground here is corroborated by Bishop Arcullus about 670 (Hieron Hierosolymitana, ed. P. Geyk, 1758, p. 236 sq.; cf. Arculf, trans. by Mickle, 1917; 19 sq.) who describes this masjid as a very small building.

(Seamantic quadrangulum, quadrato dominus quam subreptis habuit et vagis superbus sanctus sanctisque edificiis religiosus valls fabricati sunt aperit [viz. Fragm. Ramm.]), but it would however hold 3,000 men.

In reality this was a very practical settlement of the situation that had arisen from the conquest of Jerusalem; the Caliph acquired a site long held sacred, without coming into conflict with the privileges granted to the Christians, as they would not build a church on the site of the Temple for reasons already stated. It is further clear that what Eutychius tells us about `Umar's paying on the steps of the basilica of the Sepulchre is an unhistorical intention invented to avert any encroachments by the Muslims. But this bias of the story only becomes evident from a further story of Eutychius, according to which the Muslims 'of our day' (i.e. the first half of the tenth century) overrode `Umar's regulations, when they took possession of the half of the frontcourt on the site to the Constantinian Basilica and built a masjid there, which they called the Masjid `Umar, because `Umar had prayed there. Schmalz (cit. cit., p. 364) thinks a few remains of columns from this mosque can still be seen.

Under the Umayyads the traditions contributed in a peculiar way to increase the prestige of Jerusalem. Their interest in Muslim foundations was not considered as it was not difficult for them to abandon the holy cities in Arabia when the prescribed visit to them met with difficulty for any reason, and Jerusalem in particular, the holiness of which the Prophet, according to the usual exposition of Sura xvii. 1, had recognised, formed a welcome substitute, all the more as it was much easier to reach from Damascus than Mecca or Medina. Evidence of the extent to which Jerusalem was held, was early shown by Mu'awiyah who had himself proclaimed Caliph by a Syriac source published by Nolhac, Z.D.M.G. xi. 90, records that in July 921, Seleucia (660 A.D. = Safin-Rabi' A.M. 20) many Arabs assembled in Jerusalem to make him king and that he ascended to Golgotha and prayed there and next went through Getsemane to the Tomb of Mary, where he again prayed. Arabic sources (Tabari, ii. 42; Maqrizi, v. 147; Ibn al-Athir, iii. 358) say that homage was paid to him in Jerusalem in the year 40, and this must have happened only after `Ali's assassination on 17th Ramadhan, which is less probable than the Syrian story. Ansa al-Malik (65-68 = 684-705) took a further step in this direction. When the Syrian-caliph Ibn Zuhair had become master of Mecca, `Abd al-Malik feared, not without reason, that the Syrians who made the pilgrimage thither, might be persuaded or forced to join him. He therefore forbade them to go thither and when the people appealed to the definite command of the Prophet, he ordered them to go on pilgrimage to the holy Rock in Jerusalem and referred them to a tradition recorded by the famous traditionalist al-Zahrawi (of which Muhammed classed Mecca, Medina and Jerusalem as places of pilgrimage of equal value, say, from what is apparently the original form of the hadith; the last town was to be placed above the other sanctuaries [cf. Ya`qub b. Bal`adhur, p. 143; `Abd b. Zuhayr, ed. Wattenfeld, ii. 816; Ibn al-Athir, ed. Tornberg, ii. 390; Goldscheider, Muhammadische Studien, II. 35 sq.]). To express this esteem for the town in fitting and splendid form, the Caliph had a cupola built on the Rock upon which the Prophet had placed his foot on his journey to heaven, the Kabba b. al-Sukra [q.v.] around which the kiblah was to be performed. That (Masud, R.E.A. i. 199) the Caliph in building it intended to surpass the beautiful cupola of the Church of the Sepulchre is probably quite in keeping with his general aims. Others make Wâlid b. the builder of the Kabba b. al-Sukra, but this is at once contradictions by an inscription that survives, in which however the name of `Abd al-Malik has to be taken to that of the `Abbasid Caliph al-Ma'mun but in such a way that not only does the difference in colour, betray the alteration but the date 72 (691) has fortunately remained intact. According to later writers (Jim Taghibardi, Onalm, etc.), `Abd al-Malik also built the Al-Aqsa Mosque, which was given its name from Sura xxviii. 18; but if the mosque was built out of the Church of Justinian (see above) this can only mean that the Caliph in converting the church into a mosque commuted a direct breach of the promise made by `Umar. In any case the Christians in Jerusalem retained their churches - such as the Church of St. John, the Church of Gethsemane (corrupted by the Arabic to al-Djumula) and notably the Church of the Resurrection, the name of which al-Kiyâma (i.e. anastasis, the Arabic turned in rdiseul into al-Kumama, 'ordinary'). On the south side of this church, there stood in the time of Arcullus a square church of the Virgin which later disappeared. The last Umayyad Caliph Marwan II eased the walls of Jerusalem to the ground in 745 (746) after a rising in Palestine and two years later it was visited by an earthquake recorded by al-Majahib and later writers, which was followed by another soon after the `Abbasid had seized the caliphate. The Caliph al-Manur had the damage repaired, perhaps on his visit to Jerusalem (Tabari, iii. 152, 373) in 140 (758) or 154 (771). But afterwards another earthquake so damaged the building that it had once again to be restored in the reign of al-Ma`dh, perhaps when he visited the city and prayed there in 163 (780) (Tabari, iii. 500) (cf.
The Seljukis put an end for a time to Fatimid rule in Palestine, and their leader Teghrib Beg was recognised as Sultan in Baghdad in 447 (1055). Jerusalem also felt the effects of this when the Turkish general Asfah on his campaign against Filastin in 463 (1070) conquered the city as well as Ramla and the adjacent country, which, as the Seljukis placed as protectorates of the Caliphate, resulted in the Al'Abbasid Caliph being again for a long interval mentioned in the annals of the mosque there. When Jerusalem soon afterwards rose in rebellion, Asfah in 469 (1076/77) had to besiege it again and after its capture, there was a wholesale massacre from which only those escaped who took refuge in the Al-Aqsa Mosque (Ibn al-Athir, s. 46, 64, 65 sqq.). The Seljuk Sultan Tutush in Damascus had Asfah put to death and in 484 (1091) Jerusalem was given to Sukkau, the son of a Turkoman officer. In 489 (1096) the Fatimid Sultan al-Mustarfa again succeeded in taking the city and in holding it successfully next year against Ridwan, son of Tutush. The triumph of the Fatimids was of short duration only, for a couple of years later the Crusaders arrived and made their victorious entry into the Holy City on July 15, 1099.

For the tenth and eleventh centuries, the period of the events outlined above, we have valuable material available in a series of Arabic descriptions of Jerusalem and its holy places. Even as early as the end of the ninth century we have the brief account by the geographer and historian Yaqubi, who, however deals mainly with questions of administration and population only (B. G. A., v., 328 sqq.). The next is Ibn al-Faqih who wrote in 590 (992). After relating the legends and traditions associated with Jerusalem he gives a detailed description of the Haram with its gates and sanctuaries, notably the Mosque of the Rock and al-Aqsa. His measurements are of interest because some of them agree very well with present day measurements (B. G. A., v. 94 sqq.). Soon after Ibn al-Faqih, Ibn Abd-al-Rahman ibn al-Farid (p. 538) in his al-Aqsa al-Farid (Cairo, 1531, s. 274 sqq.) gives a description of the Dome of the Rock, which in many ways recalls that of his predecessor but the figures show considerable divergence. He likewise mentions different sanctuaries in Jerusalem and gates of the Haram. The information in al-Ishsharaj's version of an earlier work must be correct (s. 340 = 951/952) and the same applies to Ibn Hawkal's version of the same book (367 = 977/78). There are references to the al-Aqsa Mosque, unimportant in size, to the Sakhra with the Rock and the cave below, and to David's Mihrab (B. G. A., s. 57, 112). All these writers are thrown into the shade by the great geographer al-Mukaddasi, or al-Makdisi, who was born in Jerusalem (375 = 985/86). He begins with a list of the great attractions of Jerusalem and the advantages of living there but also mentions the disadvantages. He then describes the Al-Aqsa Mosque again. After the earthquakes, the new parts of which stood out clearly from the older parts. There were 15 doors on the north side (a remarkably large figure, which does not agree with the other statements), the central one being a great iron door; there were 11 doors on the east side. Along the north side ran a court with main pillars, built by the Tahirid 'Abdallah (s. 350 = 944). Over the centre of the building from north to south was a pyramidal roof with the beautiful...
remarkably shortened church was built immediately on the east side of the Rotunda in late Roman style, which was intended to serve as a choir for the daily services founded by Godfrey (see Dalman, *Palästina-Fundamente*, iii. 30. et seq.). In this way the plan was simplified, but at the same time complicated by the fact that a cross nave and two irregular side aisles were built in front of the choir. The south side of the cross nave was the main entrance to the sanctuary. A dome was built over the spot where the cross nave intersected the shortened main nave and a bell-tower south of the Rotunda of the Resurrection. In the church thus formed and consecrated in 1149 the kings of Jerusalem were interred. Among the other churches restored we may specially mention the Church of Sion or of the Apostles which was in ruins. A splendid building and one very characteristic of the Crusaders arose not far to the south of the Church of the Holy Sepulchre.

In the eleventh century merchants from Amalfi had built, along with a church of St. Maria Latina, a monastery to be used as a hostelry by poor pilgrims. The first patron was John the Merciful, a patriarch of Alexandrinus, but later it was John the Baptist. In addition to the monks and nuns, the order of the Knights of St. John was instituted here, who devoted themselves not only to tending the sick and wounded but also to the defence of the holy places and fighting the infidels. After the taking of Jerusalem by the Crusaders, a splendid hostelry with over 1,000 beds and a noble church were built. The Crusaders were however not content simply with restoring the sacred places of Christendom. While Umar had left the Christians the undisputed use of their churches and reserved only the area of the temple for Muslim worship, the Crusaders took over the mosques there and turned them into churches. The Dome of the Rock, which from an insufficient knowledge of its history, they called Templum Domini remained practically untouched. But a golden cross was placed on the top of the cupola and the "Rock" kibbuto uncovered in its centre was overlaid with slabs of marble, on which an altar was built. Considerable alterations were made on the Aqsa mosque which was now called Temple Solomonic or Palatium Solomonicum (in the latter name of as early as the 9th century). They added a Church of the Holy Sepulchre to the building, after first being the palace of the Latin Kings was handed over to the newly founded order of the Templars. They put a number of living rooms in the mosque and added a number of buildings which were to be used as latrines and granaries (Idrissi, *Z. D. P. F.*, viii. 125; Ibn al-Mu'tayib, *S. San. p. 164. et seq.*). They also added a Crusaders' Church for the monks there, and the building was never completed (see John of Würzburg, Ch. 5). Apart from these changes, under Frankish rule Jerusalem remained much as it was before the conquest. A strong wall surrounded the town, before which deep ditches were dug at regular places. Four gates faced the four points of the compass, with others at intervals, gave admittance to the city.

Among the descriptions of Jerusalem in the Frankish period the best although short is that in the Book of Roger by Idrissi in 1389. He mentions the four main gates, describes the Church of the Holy Sepulchre, the Haram with the Dome of
the Rock, and the Aqsa Mosque, Gethsemane, the Church of St John and several churches in the vicinity of the town. As he does not appear to have been there himself, his statements are probably based on information supplied by men sent by Roger. A little later in 1175 'Ali al-Herwzi (from Herut) visited Palestine; his description (not yet printed) was translated by Schefer (Archives de l'Orient, 1866, I, p. 587-599). He describes the Dome of the Rock with its four pillars, 12 columns and 16 windows, the iron work round the rock, the cave of the Spirits, the Aqsa and its portico with 16 marble columns and 8 pillars, gives their measurements, mentions the stables of Solomon, and the cradle of Jesus, the Tower of David, with the Mahres mentioned in the Kanzel, Siloah and the Church of the Holy Sepulchre. There are also numerous descriptions by pilgrims, only a few of which can be mentioned here. In 1102 and 1103 i.e., shortly after the conquest of Jerusalem, the Sax. Sacull was there and left a short account of his visit (Recueil de voyages et de missions, publie par la Societé de Géograffhie, 1859, IV, p. 839-846) in which he describes the Church of the Holy Sepulchre, Maria Latina, the site of the Temple, the Church of St. Anne, Gethsemane, and the Mount of Olives. The Russian Abbot Daniel's journal of the year 1106 is also of value (transl. by Leskien in Z. D. P. F., VII. 253-339). He gives brief but vivid descriptions of the country and the buildings and had an eye for all sorts of details which are rarely mentioned elsewhere. He describes in order the Church of the Holy Sepulchre, the Tower of David, the Dome of the Rock (the holy of holies), the House of Solomon (al-Aqsa), Gethsemane, the Mount of Olives and the situation and several features of the city. The most important authorities are John of Wurzburg (Descriptiones terrae sanctae ex vico. relic. cit. et xiv., ed. Toldorl, 1865). On the Jewish side there is Benjamin of Tudela (1165), who does not however deal with the Christian sanctuaries.

The period of the Crusades is one of the least inspiring periods in the history of Christianity. Its pitiful collapse is in striking contrast to the splendid enthusiasm with which it was opened, but even this was overcast by the deep shadow of the inhuman bloodshed at the taking of Jerusalem. The Crusaders owed the advantages they won in the first period less to their own ability than to the political weakness of the caliphate at that time and the newly formed kingdom of Jerusalem soon broke up in confusion in which selfish individual interests were openly displayed and the Christians occasionally fought with their fellow-Christians and formed unexpected alliances with their Muslim opponents. Therefore when powerful personalities appeared on the side of the enemy in 'Isaib al-Din Sanzi and his son 'Abd al-Din and still more when the highly gifted Ayubi Saladin (Salah al-Din) became master of Egypt in 1189 and began to conquer Syria after the death of 'Abd al-Din, the fate of the Christians in Palestine was sealed. The for them disastrous battle of Hattin (p. v.) resulted in Saladin's advance on Jerusalem. When he appeared with his army before the town, the inhabitants, who had appointed Balian of Nablus commander-in-chief, declined the favourable conditions offered them and decided to fight to the last. Saladin however moved his camp to the weaker north side of the city and when his siege artillery began to demolish pieces of the wall, the defenders lost courage and endeavoured to re-open negotiations with Saladin. After Saladin had several times refused to see the envoys, Balian informed him that the inhabitants, if their surrender was not accepted, were resolved to put all non-combatants in the city to death along with the Muslim prisoners, to burn all that might be looted and to destroy the sanctuaries on the site of the Temple. This made such an impression on Saladin and his envoys that the terms were accepted (1187). The inhabitants were allowed to stay on paying a poll-tax and Saladin's attitude was sufficiently amenable that not only was the amount of the ransom reduced but many people were allowed to depart, although they could not pay the necessary money. He also ordered armed soldiers to accompany the columns of emigrants to protect them from attack, while at the same time in some parts of the country Christians were preventing their own refugees from passing through (cf. Ibn al-Akrir, 356-356; Hierliche, Gesch. des Kriegesberges von Jerusalem, p. 451 seqq.). It was mainly the Latin Christians who left Jerusalem while the Greek Christians, the so-called Syrians, were allowed to stay in the city without becoming slaves. It is quite evident from several sources that even after the retaking of Jerusalem by the Muslims a considerable number of Christians remained there and in Palestine generally (cf. Rotermund, Z. D. F. F., XXX. 24 sq.). But Jerusalem lost its Christian character and Saladin actively removed the traces of the period of Christian occupation. The golden cross on the Dome of the Rock was thrown to the ground amid the applause of the Muslims and lamentations of the Christians and replaced by a crescent. The wall round the Rock with the altar was removed. Saladin, as an inscription shows, had the cupola rebuilt (de Vogüé, Le Temple de Jerusalem, p. 91 sq.) but otherwise the building was allowed to remain as it was. The restoration of the Aqsa Mosque cost great labour, as it had not only to be cleared of all traces of Christian worship but the architectural alterations had to be undone. The Christians had also to be removed. An inscription mentions that the worship and the mosque were restored by Saladin's orders (de Vogüé, p. 101). The ambulatory of the Knights Templar in the southwest part of the Aqsa was transformed and given the name "Mosque of the Women". Saladin had a very elaborate and beautiful window ordered by Nür ad-Din for the Aqsa, which was in Halaq, brought to the place for which it was intended. The cross over the Church of the Holy Sepulchre was removed and the bells broken as in the other churches. He spared the Church of the Holy Sepulchre itself but forbade the pilgrims to visit it; this prohibition was however removed in 1192. The great basilica of the Knights of St. John was presented as a gift to the Mosque of 'Umar and the church there turned into a hospital under the name of "Muristan". The convent of the Church of St. Anne, which the Crusaders had to leave, was turned into a large handsomely endowed school, the name of which, al-Salhibiya, recalled its founder (the church however had already been used as a school before the conquest by the Franks). - Toldorl, Typographia eorum Jerusalem, I. 429). The dwelling of the Patriarch northwest
of the Church of the Holy Sepulchre was turned into a hostel for pilgrims (amento). The walls round Jerusalem, which had suffered during the siege, were restored under the personal supervision of Saladin—a deep ditch was dug in front of them—and the towers between the Gate of the Pillar (see above) and the Gate of the Mihraḥ on the west side were rebuilt (Mujār al-Dīn, p. 328). On this occasion a part of the west hill hitherto outside the walls was incorporated in the city (cf. Rotermund, op. cit., p. 21).

After the death of Saladin (559 = 1163) his brother usurped his son's inheritance and seized the power in his own hands and then divided it among his own sons, of whom al-Mu'azzam received Damascus and Palestine. This anti-Christian rule, fearing that the Christians might establish themselves in Jerusalem, ordered it to be destroyed in 1249, and this was done so thoroughly that only the Holy Sepulchre, the Tower of David and the Mosque on the Haram were spared. He further showed his reverence for the sanctuaries on the Haram by building a new wooden tower for the Aqṣā and restoring the arcades on the south side of the Dome of the Rock. From him also probably dates the porch on the north side of the Aqṣā (see de Vogüé, op. cit., p. 163, and thereon Hartmann, Z. D. P. F., xxii. 204). He also built a school for the Hanafis beside this mosque. After his death the Emperor Frederick II, then excommunicated, achieved by his statesmanship, what the armies of the Crusaders had failed to do, by concluding a treaty with al-Mu'azzam's brother, al-Kamil, in 1266 (1229) whereby Jerusalem—except the Muslim sacred places on the Haram—and a narrow corridor to the sea were ceded to him for ten years. The Emperor crowned himself there in the Church of the Holy Sepulchre, without the assistance of any of the priesthood. In this way the Latins again came into possession of the city for a brief period. When the period had expired, a son of al-Mu'azzam who ruled in Karkemish, and, like his father, hated the Christians fell upon the holy city, destroyed the citadel and forced the inhabitants to capitulate. The Christians were relieved by the disputes which broke out between the Ayyubids in Damascus and those in Egypt; they realised the value of their support and the rival princes began to make great promises to win it. The Christians preferred to support the latter, and priests from Damascus and in this way they came once more into undisturbed possession of the holy city (1244). The Egyptian Ayyūbid al-Salih Najm al-Dīn however summoned the Khwarazmians to his assistance and they at once carried fire and sword through Syria, slew a large number of fugitives from Jerusalem, plundered and murdered in the city, desecrated the Church of the Holy Sepulchre, where the tombs of the kings were ruined, and other churches. He had now full freedom of action and, when his allied enemies were defeated at Aqsa, he seized Jerusalem and henceforth the town remained in Muslim hands. This was the real end of the Crusades, the permanent political result of which was a burning hatred between Christians and Muslims which only flamed up before the last war. Not long afterwards, the Ayyubids were succeeded in Egypt by the Mamlık Sālīḥī before whom Syria and Palestine formed one province, after Saljuq had won great fame in 1260 by defeating the advancing Mongols in the battle of Ayn Dālūt (q.v.).

In the Mamlık period, Jerusalem fell into the background after being for a time the centre of interest in the east. What we know of its history in this period we owe mainly to the compiler Mujār al-Dīn 'Ulbūn, who, as an appendix to the earlier history of the town, tells us what various Mamlık Sultāns had done for it. The frequently necessary repairs of the sanctuaries there gave these princes an opportunity of displaying their pious interest and the mosaics on the outer walls of the Dome of the Rock, which had suffered from the wind and rain, in particular needed frequent repairs, which need not be detailed here. We are told of several Sultāns that they lightened the taxes which the town had to pay and that other Sultāns gave splendid copies of the Korān to the mosques. The great Sultan Bašār I (q.v.) had the Aqṣā restored and in 662 (1263) built a Khān northwest of the town which was intended for the relief of the poor. Al-Mansūr Kāli'n (679–689) restored the roof of the southern parts of the Aqṣā beside the Mosque of the Women. Al-Mansūr Lādūn (699–698) restored the miḥrāb of David on the south wall of the Aqṣā. Al-Nāṣir Muhammad in his third reign (709–714 = 1309–1340) paved the back part of the Aqṣā with marble slabs, had two windows filled in and left of the miḥrāb, restored the arcades on the north side of the mixed part of the Haram, and the Gate of the Cotton-merchants, girt the domes of the two arcades on the Haram in such brilliant fashion that in Mujār al-Dīn's time, as after that, they still looked like new (an inscription in the Dome of the Rock mentions this gilding and a renovation of the outer roof; de Vogüé, op. cit., p. 91) the aqueduct which brought the water from the Sulṭān's Pool to the town was also repaired in the same reign. In 854 (1447/1448) lightning set the roof of the Dome of the Rock on fire and a portion of it was consumed whereupon Sulṭān Eş'āq Mumʻāq (842–857) had it repaired. This ruler was hostile to the Christians and ordered all the new buildings in the Sion monasteries and in the Holy Sepulchre to be destroyed. He took away from the monks the so-called Tomb of David and the site where, according to Church tradition, the Apostles were filled with the Holy Spirit and took away a basilica from the Church of the Holy Sepulchre and carried it to the Aqṣā Mosque. The able Sulṭān al-Aṣḥāf Kāfır Bey (873–901 = 1468–1495) who took a great deal of interest in the sacred places of his kingdom, built, as an inscription tells us, the well between the raised part of the Haram and its west wall and rebuilt the school which bears his name at the Gate of the Chain in the Aqṣā and extended it (Mujār al-Dīn, p. 387). In his reign also several aqueducts which led water into the town were restored (ibid., p. 621, 635, 661 n.).

Of the geographical works of the Ayyūbid and Mamlık period, Vikīr's great dictionary the Miṣrīg al-Bayḥānī (ed. Wientzenk, 1806–1873) is in the first rank with its great use of colour sources. In the main article on Jerusalem (p. 590 sqq.) he gives a description of the thermal water supply, the vegetable, the fruit and the Haram sanctuaries, and details the famous men who have lived there. To the sixteenth century belong
the geographical works of al-Dimashqī (Chronology, ed. Methuen, 1886) and Abu 'l-Fishā (ed. Reinau and de Slane, 1840) and Tim Baqtīja's Travels (ed. Defrémery and Sanguinetti, 1866-1876).

To the 14th century belongs Khallat al-Zahhir's (d. 782 = 1382) work, which exists in two synopses, on Palestine and Syria. (H. Hartmann, Die geographischen Nachrichten über Palästina und Syrien in Khallat al-Zahir's Zaharast Khallat al-Mamlukih, 1907).

In the section on Jerusalem he deals with Karāmīe passages and traditions relating to Jerusalem, the Dome of the Rock, the Kufic inscriptions there, the plan of the caliphs' harems, schools, khams and lataf and the Church of the Resurrection.

There are also several works dealing specially with Jerusalem, which are based on Mūsāfīr mentioned above.

To the 14th century belongs Ibn Hīlīl'sLIJN—al-Dīn al-Majālī's work composed in 574 (1181) not yet published, the Mūshir al-Dirāsāt al-Shārīr al-Khwaṣṣ, extracts of which were given by L. Strange in F.R.A.S., New Ser., 1887, x., p. 297-305, which refer to 'Umar's entry into Jerusalem and 'Abd al-Malik's buildings. 'Umm-al-Dīn al-Suyūṭī's Ittāṣ al-Nabūsī fi-Faqīḥ al-Majālī al-Hasa al-miṣṣ written in 825 (1420) quotes it, sometimes word for word; and a synopsis is given by L. Strange, op. cit., p. 298 sqq., with the translations of several passages. It is a mixture of topographical information and worthless traditions.

Of more importance is Māṣūf al-Dīn's work written in 1295 entitled al-Mumtaṣir fi-l-Muraqabah, a text translated by H. Savory, Hist. of Jerusalem etc., I, 1876. The book begins with a series of legends followed by accounts of 'Umar and 'Abd al-Malik taken from earlier writers; then come notes on al-Hākim's destruction of the Church of the Holy Sepulchre, the taking of the city by the Franks and by Saladin and the period following him till 1244. The next section contains a description of the sanctuaries on the Haram and its gates, the schools, the houses, mostly built on ancient remains, the churches, the streets and city-gates and cemeteries, the survey, of which a resume was given above, of the Mamluk Sulṭān who had devoted attention to the city, and a list of the higher officials who had held office there. His simple and lucid description of the seven-naved Aṣār with its pillars and columns, its gable roof and its dome shows that in these days it had practically the same form as at present. This is also true of the cupola of the Dome of the Rock supported by 12 columns; and a pillar and the surrounding octagon with 16 columns and 8 pillars; the measurements given practically agree with the present ones. The pilgrim's descriptions of this period are numerous (see Röhlisch, Bibliotheca Geographica Palestinae, N. 41—172) but give little that is new. Among the more valuable are Burchardus, De Monti Sion, i. 223 (in Laurenz's Peragrinationes medii ævi gratoria, 1864, second ed., 1873, who also gives Ricasula, De Monte Cruce, and Wilbrand von Oldenburg, cf. Roetenmund, Z.D.P.V., xxiv. 1 sqq.), Felix Fabri, 1490 and 1483 (C. D. Hauser, Forschungen Vaterlandes, 1843—1849, cf. thereon the map by Bernhard von Breitenbach in Z.D.P.V., xxiv. 149) and the Bohemian M. Kabátik, 1491 (transl. in Z.D.P.V., xxii. 47 sqq.). An interesting account of the Church of the Holy Sepulchre about 1456 has been published by R. Durrieu in Florilegium dedicato a M. de Vagel, p. 107 sqq.

In 1517: Selim I, the Ottoman Sultan put an end to the Mamluk dynasty, and Jerusalem with the rest of Syria now passed to the Ottoman Turks, who were little capable of restoring the lands they ruled to new life. (One of the most notable of these Sulṭān, Sulaimān I (1520—1566), was not only a great soldier but took a considerable interest in building and Jerusalem's historic site fitted from this time. We have the mosques on the outside of the Dome of the Rock, which demanded continual repairs taken away and replaced by tiles of faience, the blue colours of which, alternating with white, green, and yellow, gives the mosque its characteristic appearance. In the lower parts, marble slabs were used instead, while at the top a dark blue band with an inscription in white ran round the octagon. Perforated sheets of gypsum, filled with piles of variegated glass, were put in the windows. The Sulṭān also had the city-walls repaired and gave them the form they still have to-day. At some places they rest not upon the rock but on the debris of earlier walls. On this occasion a part of the west hill was again cut off from the unpaved town. In Sultan's reign in 1545 the dome of the bell-like bell-tower of the Church of the Holy Sepulchre fell down in an earthquake. In 1555 the little building in the mina'adda over the tomb was removed and replaced by a new one regular in shape. The whole Church was now divided among the different denominations, who zealously watched one another. These feuds and the hostile attitude of the Musulmān for long delayed the very necessary restoration of the dome of the Anagnostis and the bell-tower, until finally in 1579 the work was taken in hand. In rebuilding, by order of the Turkish government, the existing forms were retained and the attempted alterations at the Anagnostis had to be removed. In 1865 a fire broke out in the Armenian chapel, which destroyed most of the western part of the church. The Greeks succeeded in asserting their claim to do the restoration and they entrusted the work to an architect from Mytilene, named Konstantos Kalif, who, by the unfavourable weather in which he performed his task, has acquired a kind of hero-strategic renown. The Sultan who had given authority to the Greeks by a firman was Mahmut II (1808—1839), he also, according to an inscription, renewed the gilding of the Dome of the Rock and had its outside restored. This is the not very edifying end of the story of the Church of the Holy Sepulchre. But for the unfortunate rivalry among different denominations, it would possibly have been decided much earlier to remove the ugly new buildings and the plaster covering the old walls, so that the Church of the Crusaders could be restored by using the old materials.

In the sixteenth century Palestine was again disturbed from the state of vegetation in which it had languished. Napoleon invaded the country and fought the Turks on the old battle-ground of the plain of Yarmūk, but his plan of taking Jerusalem was abandoned. Next Mahmūd 'Ali seized the country and Jerusalem surrendered to him in 1831. The European Powers put a stop to the further advance of his projected son Ibrahim Pasha and when the discontent with Egyptian rule in the land continued to increase, France withdrew her protection from Mahmūd 'Ali and with the support of England and Austria, Sulṭān 'Abd al-Malik once
more came into possession of Palestine and Jerusalem in 1840, and the Turks held it till the World War, which deprived them of the country and opened up a new epoch in the history of Jerusalem. Palestine is now governed under an English mandate and Jerusalem is the capital of the central district, Jerusalem-Jaffa.

In the course of the sixth century, a new life began to invigorate Jerusalem, which altered more and more the medieval character of the city. Jurisdiction passed from the patriarch to the secular authorities, and the city became a center of learning, commerce, and religion. The city was rebuilt and expanded, and new churches and monasteries were established. The Christian churches became more prominent, and the city was transformed into a center of religious and cultural activity.

The Church of the Holy Sepulchre, mentioned above, underwent several changes during the Middle Ages, and was destroyed during the Crusades. It was later restored and became the center of Christian pilgrimage.

The mosque of the Al-Aqsa Mosque, mentioned above, was built by the Umayyad Caliph Walid I in 691, and was later expanded and renovated. It is one of the oldest and most significant buildings in Jerusalem.

The Bibles mentioned above, such as the Biblia pauperum, were important for the spread of the Christian faith in the Middle East.

The Latin Patriarchate, mentioned above, was established in Jerusalem in the 7th century, and was a center of Christian education and scholarship.

The activities of the Crusaders in Jerusalem, mentioned above, led to the establishment of several important institutions, such as the Hospitaller Order and the Knights Templar.

The Bibliography mentioned above, such as the "Biblia Pauperum," was an important source for the spread of the Christian faith in the Middle East.

The most striking feature about Jerusalem and its history is the conflict of different creeds and denominations, for all of which it is a holy city. This conflict has shaped the city's history and has led to the establishment of several important institutions, such as the Church of the Holy Sepulchre and the Bibles published in Jerusalem.

The Church of the Holy Sepulchre, mentioned above, was destroyed during the Crusades and later restored. It is one of the most important pilgrimage sites in Christianity.

The Bibles mentioned above, such as the "Biblia Pauperum," were important for the spread of the Christian faith in the Middle East, and were used by the Crusaders and their successors in their efforts to convert the local population.
Main Entrance to the Church of the Holy Sepulchre
AL-KUFA, a once celebrated city south of the ruins of Babylon, on the western arm of the Euphrates (cf. AL-RAŠ), which later disappears in the swamps west of Wasit. After the battle of al-Kadisiya [q.v.] the Arabs by command of 'Umar built a strongly defended camp on this site in order to control more easily the people of the newly conquered province; while the old capital Ctesiphon was ruthlessly destroyed, and the capital of the Lakhmid dynasty, Hit, only a few Arab miles south of Kūfa gradually lost its former importance. For military reasons this settlement which was called al-Kufrs and the somewhat older Bayja were placed on the west side of the river, so that communication between the capital Medina and the borders should not be affected by any natural obstacles. While Bayja was built quite near an already existing village, al-Khuraila, which later became a suburb of Bayja, Kūfa was an entirely new settlement founded by Sa'd b. Abī Waqṣās according to some in 17 (638), to others not till 18 or even 19. According to the Persian tradition, however, there had been on the same site a town built by the mythical king Ḥūšang of the Pahlavi dynasty, which fell in time completely into ruins and Sa'd b. Abī Waqṣās had to rebuild it: not much importance need be attached to this story. The usual meaning of the Arabic word Kūfa is a round sandhill. The name therefore would indicate that the oldest part of the town was built on an eminence of this kind; other explanations however are given, cf. Yāḥyā, iv. 322. According to the Arab geographers Kūfa occupied an extensive area in the wide plain on the bank of the Euphrates; his position was strongly defended by the city of Bayja; and the principal products of the country round were dates, sugar-cane and cotton. The importance of Kūfa grew with the eastward advance of the Arabs; the general in supreme command there was also the political representative of the Caliph and governor of the province. The two sister towns of Kūfa and Bayja had usually separate governors; but sometimes they were combined; on this, see the article AL-MASR. With the great importance which Kūfa gradually attained for the ruling Arabs as well as for the subject Persians, the number of inhabitants grew very rapidly. In addition to the families of Arab soldiers, merchants, artisans and other workers mainly of Persian origin settled in vast numbers. The original camp consisted simply of tents and other primitive dwellings with a mosque and a few other public buildings, but in course of time it grew into a permanent settlement of clay huts. Finally (according to the usual statements) in the governorship of Ziyād b. Abīth, i.e. after about 50 (670), a regular town with brick houses was built. The people of Kūfa, who were
partly members of different Arab tribes, particularly South Arabian Beduins and partly all kinds of Persian elements, cannot be denied military ability. At the same time the Kifans were distinguished by brilliant intellectual gifts and their considerable achievements in the field of Muslim learning. Among their most striking characteristics however was their deep sense of religious fanaticism and their profound understanding of the teachings of the four schools of Islamic law. This, as is often the case with religious movements, was a disastrous influence in political life, and was responsible in a high degree for the civil wars which interfered so much with the prosperous development of the Caliphate. Even 'Omar to whom the town owed its existence had occasion to complain of the insubordination of the Kifans, who were never satisfied but had always some objection to offer to the governors appointed by the Caliph. When he was induced to yield to their wishes, their demands became more and more insatiable, and during the last six years of his reign, he had to change the governor in Kufa no less than three times. When the opposition to 'Omar's long prepared and secret plan finally broke out in 655, the Kifans were the first to demand their freedom from all fetters. After the battle of the Camel in 656, Ali was victorious over his combined enemies, he went to Kufa, and now it looked as if this town would become the seat of the Caliphate. But when 'Ali encountered Mu'awiya in the plain of Siffin, the 'Iraqis were outset by the Syrians; victory slipped from the Prophet's son-in-law, whose star within his grasp, and after he had declared himself satisfied with the arbitration, the Kifans abandoned him. After the assassination of 'Ali in the year 40 (661), the Kifans had to acknowledge Mu'awiya as commander of the faithful. The caliphs governors of the new caliphate, first Ziyad b. Abihi and next his son Ubad b. Abihi, who received in 53 (674/675) the governorship of Basra, which after the death of Mu'awiya was combined with that of Kufa, were able in a masterly fashion to keep the turbulent people of Kufa in check, and when Husain b. 'Ali [q. v.] decided to accede to the appeal of his many followers in al-Iskandariya and set out from Mecca for Kufa, 'Ubayd Allah's energetic measures easily suppressed the rebellions tendencies of the Kifans. In Mu'arrar 61 (October 680) Husain fell at Karbalah. After the death of the second 'Ubayd Allah, Yazid I, civil war broke out once more. As 'Ali's younger son, Muhammad b. al-Husayn, was not inclined to put himself at the head of the Shi'i party in Kufa, the Kifans paid homage to 'Abd Allah b. al-Zahabi, who had already been proclaimed Caliph throughout the Hijaz, and for years disputed the supremacy with the 'Umairids of Marwa and his son 'Abd al-Malik. In 66 (685) the amorous and adventurous al-Mukhtar, 'Abd al-'Ubayd [q. v.], succeeded in taking Kufa and a regular reign of terror began, which lasted about a year and a half. All who did not openly profess the doctrine of the Shi'i, which was general among the Persians especially, were ruthlessly persecuted until the Arab population appealed for help to 'Abd al-Malik, who had already been appointed Governor of Bataa by his brother, the anti-Caliph 'Abd Allah b. al-Zahabi. In a battle at Harura near Kufa (67 = 687) al-Mukhtar was defeated and slain and 'Abd al-'Ubayd took bloody revenge on the tribes. From this time the Persian elements in the population were more and more suppressed and in the end the old hereditary points of conflict between the different Arab tribes played a much greater part in the political history of Iraq than the national differences between Arabs and Persians. When 'Abd al-Malik had fallen, lighting the Unayzah (72 = 691), Kufa had to submit and 'Abd al-Malik was able to enter the town unopposed. From 75 (694) till 95 (714) the administration of the whole of the 'Iraq was in the hands of the governor Hisham b. Yunes [q. v.], who in order to break al-Asma' founded a new capital in Wasit, from which he could easily control both Kufa and Basra. During the long governorship of Khahid b. 'Abd Allah al-Kasri (105–120 = 724–738) peace and quiet generally prevailed in al-Iskandariya. In 127 (745) however the Khahidis seized Kufa and it took the troops of the Caliph Marwan II. two years to drive them out. Soon afterwards the 'Abbasids appeared in the field. The Umayyad governor of Khorasan, 'Abd al-Malik, was defeated and in 132 (749) the long prepared rising in Kufa broke out. The 'Abbasids had no difficulty in occupying the town; Kufa was made the capital and remained so for nearly two decades although the 'Abbasid rulers usually lived, not in Kufa itself, but sometimes in Khamis, in the North on the Euphrates and sometimes in Antakia. After the founding of the new capital Baghdad [q. v.] by the second 'Abbasid Caliph al-Mansur, Kufa gradually sank in importance, but it retained for a considerable time a large garrison, and the renown for learning, which the inhabitants had won by the first half of the second century A. H., remained down to the fifth century. In spite of the altered political conditions, the sympathy and the old fondness for all sorts of new movements and rebellions tendencies remained undiminished. In 199 (815) a descendant of 'Ali named Muhammad b. Ibrahim, also called Ibn Zubair, appeared in Kufa and tried to assert his claim to the caliphate. The governor was expelled and the pretender won numerous adherents. Although he died in the same year, the dangerous rising was only put down by the efforts of the reign of al-Musta'fin [q. v.]. In 210 (825) Kufa was again disturbed by the 'Aliids. In 250 (864/865) the 'Aliid Vahys b. 'Omar raised a rebellion against the government with all sorts of rabble. The governor had to flee and the rebellion rapidly spread; order was however soon restored. After some time, another 'Aliid set up in the always turbulent city but his rule was of only short duration. In 256 (870) 'Ali b. Zaid, likewise a descendant of 'Ali proclaimed himself there and drove the governor out. He then routed the commander of the government troops, al-Shah b. Mihdi, who had been sent to suppress him; but on the advance of a new army he had to vacate Kufa. When western 'Iraq and Syria were devastated by the Karmaites, Kufa did not escape; in 293 (906) they entered the city and in 312 (924/925) it was conquered and sacked by the famous Karmaites leader, Abu Tahir. It was similarly sacked in 315 (927) and 332 (935). The increasing collapse of the caliphate in the fourth century contributed to the decline of Kufa, although the Buyids, who seized the capital Baghdad in 334 (945), and then gained political supremacy, as Shifs took a special interest in Kufa or rather its suburb Najaf, because the latter was believed to contain the holy tombs. But in the time the power of the Buyids also weakened; in 375 (985/986) the
Kasmijans once more occupied Kafa, and eleven years later it was granted as a fief by Bahá'í al-Dawla. [q.v.] with other places to the 'Ukjilid al-Mukallad b. al-Munsiyib. It then passed to the Baní Masyalit, but when the latter in 1101 (1102) built a new capital, Hillah, which rapidly grew, to the north of it, the former capital gradually lost any importance. When Ibl Diabat visited it about 90 years later, the old walls had been taken down and Kafa showed other signs of decay. From the Mongol period onwards it rapidly fell into oblivion. When Ibn Battutá visited the town, it was for the most part deserted, mainly as a result of the attacks of the neighbouring Bedouins of the tribe of Khajidh. From his description it appears however, that the mosque was still fairly well preserved. Of the old government buildings (jarir al-khurba) which Sa'd b. Ali Wakkaš had built, only the foundations were left. Its declaim at this time is corroborated by the Nuzhat al-Kulub of Hamd Alláh Mustawfi-Kawíni written in 740 (1339/1430). Later we only find Nadjas in its vicinity mentioned, which retained a certain importance as a Slip place of pilgrimage and is now usually called Maghawir Allah, "the tomb of Allah." Niebuhr gives the following description of the country round Kafa: "The land around is all desert and the town has no longer any inhabitants. The most noteworthy object here is the great mosque in which 'All was mortally wounded; but even of this little is left but the four walls'.

On the services of Kufan scholars to Arabic phonology, see the article AKHAND, Literature.

There was also considerable activity in Kufa, as in Basra, in other parts of Muslim learning during its palmy days. Especially after the battle on the Harra in 63 (682) under the command of the Prophet, who were regarded as authorities on Muslim tradition, emigrated to al-Irás and settled in the most important towns. Only two of these traditionists need be mentioned here: the celebrated 'Abd Alláh b. Manzúr, who was one of the earliest converts and was sent to Kufa as a guide and teacher, and the no less distinguished Amr b. Shahrúsh al-Shārhi (d. circa 104 = 722).

KUPFYA (in the dialects of Syria, Kyfry, Cyfete, Bkfr), p. 577; Burchhardt, Notizen auf den Beduinen, p. 277; G. Fesquet, Voyage en Orient, p. 185, an Arabic word borrowed from the Romance languages (Ital. cufita, Spian. cefa, For. coffa, Franch cufita, coffa), the name of a silk handkerchief, which the Bedouins of the Syrian desert, as far as the region of Mecca, wear as a head-dress; it is kept on the head by a cord of camel-hair dyed black and fastened at intervals with cords of bright colours called and (chamalek). This handkerchief is square-shaped, yellow, or yellow and green in colour and is placed on the head in such a way that one corner hangs behind, while two others fall down in front of the shoulders; the square is first of all folded in two to form a triangle, what is called a gore in dressmaking. The corners on the shoulders may be brought over the face to shelter it against the rays of the sun, against the cold wind, against the rain, or to conceal one's features when one does not want to be recognised. The wool of the ends hanging down, much below the edge of the material are twisted into cords like a long fringe (J. B. Fraser, Travels in Koebistan, i, 228). The head-dress used also to be worn by the Mamluk Sultans of Egypt.

KUFR. [See KAFR.]

KUFRA, a group of oasis in the Eastern Sahara, halfway between Cyrene and Wadad. It was for long only known from the account by Kohli, who succeeded in reaching it in 1879. Since then it has been visited by two other Europeans, Marshal de Loglie Lapierre (1918) and Mrs. Rosita Forbes (1920–1921). The group of oases to which the name Kufra is given extends from S.E. to N.E. for a length of about 120 miles between 24° and 26° N. Lat., and 35° and 34° E. Long. The most southerly is about 850 miles S.E. of Tripoli and 600 miles S. of Bengazi. They number five, separated from one another by one or stretches of banks of gravel; Taisebro, in the N. E., Blastima in the centre, Erbema (the Nibiana of Mrs. Forbes) in the S.E. and Sirshum, N. E. of Blastima and to the S.E. Kufra properly so-called, the Kabba of Mohfs, the largest of all. The total area of the group according to Kohli is about 7,000 square miles of which Kufra has 3,400 and Taisebro 2,500.

Kufra lies in the bottom of a depression, the height above sea-level of which varies from 800 feet at Taisebro to 700 feet at Kufra. The sandy soil is mainly of marl and sand covered with dunes in the north, which perhaps are connected with those of the Libyan desert. One chain of dunes extends from the north of Taisebro, another surrounds Blastima. In the central and southern parts, the depression is crossed by saltmarshes lying upon Neumidian sandstone. The hills Djebl Erbema, Dj. Blastima, Dj. Sirshum, Dj. Nevi (north of Kufra) assume a tabular form like that of the gur of the South Algerian Sahara.

There are neither springs nor streams in Kufra, but everywhere at a depth of 6 to 10 feet an abundant water-bearing stratum can be tapped. At various parts the waters forms on the surface of the ground brackish lagoons or even permanent
lakes, of which the most remarkable are that of Erbehna and especially that of Bâsilma, which measures about 8 miles in length. They may be regarded as relics of a former period in which the lacustrine character of the oasis was much more marked than at-day.

These subterranean waters make up for the scarcity of rain and are sufficient to nourish an abundant and varied vegetation. In the dry belt grew the Jâd (convolvulus luteus), and the dîrâ which provide excellent camel food; around the lakes and marshy hollows fields of cereals, wheat, ârâ (organum vulgare), vegetables, orchards of olives, fig, orange and citrus trees form a verdant girdle but usually a very narrow one. The breadth of this zone does not exceed 1,000 yards at Basêlima. Late palms constitute the principal wealth of the oasis. According to Kohl in Basêlima there are 4 millions of them, many of them however growing wild. There are none however in the oasis of Siran. As to the fauna, it is represented by gazelles, many varieties of birds (crows, falcons, and cranes) and reptiles like lizards and non-venerous snakes.

The population of Kufra does not exceed 5,000. Almost all belong to the tribe of Zâwîya, Arabised Berbers who supplanted the Tûbi, the former owners of the oasis. The majority of them are semi-nomadic and only have temporary camping-places. There are only settled groups at Kufra where the village of Dîjâb has 250 inhabitants and where some 300 individuals live around the Sarûmmeda swâyita of 9-altâf. The geographical situation of Kufra gives it a certain commercial importance. It is a stage on the caravan route leading from Cyrenaica to Wadai, a route used since the beginning of the 25th century, the period when Sulîm al-Dîjâbî made it known to enable travellers to escape the brigandage of the people of Tibesti. According to Muhammad al-Dîjâbî there was a market at Dîjâb where business was entirely done by barter. But in all the markets of the Sahara, the principal traffic was in slaves, a trade which gradually tends to disappear.

We knew very little of the history of Kufra. According to Kohl's it was a settlement of the Garamantes and there are still to be seen there buildings similar to those noticed in Fezzan by Dâveyri, which seem to date back to a remote antiquity. In the historical period, the land was occupied by the Tûtubi, who have left numerous traces of their occupation, cemeteries, houses, fortified villages on the tops of hills. Their Sulân lived at Dîjângoudi, in the oasis of Tisertibo. The people were pagans, whence perhaps the name Kufra (kufrâ, pl. from kifir, idolater) given to the region where they settled. They were despoiled about 1710 by the Zîwîya and the Hâshîn, tribes from Tripolitania. The Tûtubi had almost completely disappeared by the beginning of the 12th century, and are now represented by Kufra only by 300–400 individuals. Towards the middle of the same century the Semnâya appeared, who founded a settlement at Tisertibo, then built the sâwîya of 9-altâf in the oasis of Kebablo near the village of Dîjâb. They bought up the best land and the richest gardens. At the time of Kohl's journey they already held a quarter of the palm-trees of the oasis and had begun to plant new groves. Already very important in these days, the sâwîya of 9-altâf is now the residence of the grand master of the brotherhood, in 1895 Sulî al-Mahdî, son and successor of Sulî Muhammad al-Semnâ, the founder of the order, left Dîjângoudi [q.v.] and came to settle in Kufra.

(1. G. Yver) KUHISTAN (F.) or Kûhistan is the Arabic form of the Persian name Kuhistan meaning a mountainous country (derived from khû, "mountain" with the suffix -stân) and corresponds to the Arabic designation al-Lûbah. As the Iranian plateau is very mountainous, we find many more or less extensive areas in it to which the name Kuhistan has been given, as Yâmâl has already remarked (IV. 304). Many of these names have disappeared in course of time. Thus Kâzimî (ed. Wüstemfeld, p. 238) says that the term Kuhistan is used for Media, which other geographers always call al-Lûbah. In the Shâh-nâmeh of Ferdowsi we even find Kuhistan used as the old name of Mîr ważîr al-Nâhîr (ed. Vullers, p. 531), but this is probably a case of an erroneous identification made by Ferdowsi himself (cf. also Vullers, Lexicon, a. v. Kûh.)

The principal districts that are or have been called Kuhistan are as follows:

1. Kuhistân-i Khrísâ. This is the mountainous and partially arable region which stretches south of Nîshâpûr as far as Sâstân in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases, one feature of its geographical unity is the fact that most of it belongs to one of the great centres of civilization that surrounds it. This is the north Nîshâpûr, in the north-east Herât, in the south-east Sâstân, in the south-west Kirmân with Yâzid, and in the west Media. Although Kuhistan has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively low productivity of the soil, has caused it to be little known and neglected and its inhabitants have usually been ruled by a number of independent lords. If it has been reckoned a district of Khurasân, this is only because Nîshâpûr and Herât are relatively the nearest places to it. Kuhistan has therefore never been a very clear-cut geographical term; a modern traveller like Carrun, although he describes the different districts, does not even mention its name.

The geography of Kuhistan is still little known. The mountain chains which in the north run more east to west, assume the direction N.W.—S.E. as one moves southwards. These chains, which have passes rising to over 3,000 feet, enclose cultivated areas of which the principal are, beginning in the north: Turabî and Turâbî-î Hârl (q.v.) now called Turbât-î Sâlik Tâbâk and to the east Dîjân; next comes the district of Dîjân-âb (formerly Vanâskî) and more to the east, that of Khwâ with the old town of Zawzan;
then comes Tūn, with the district of Tabas; on the west of it, which latter extends so far to the west that in the middle ages it was not included in Kūhīstān; next come to the south of these, Kān and Birjand, to the south of which there are no more cities of any importance until we reach Sistan by the Neh route. The rivers of the region are of little importance; irrigation is done by canals. Chorren (p. 222, reading of the Constantinople MS.) says that the only stream he knows in Kūhīstān is near Tabas; the latter is also the only town which he includes, with the neighbouring district of Kūr, in the džūrīm or warm regions.

It is probable that various places in Kūhīstān have a history going back to pre-Muhammadan times, but so far we have no information on this period. To realize this, it is sufficient to glance at the second map given by Harsfeld in his article Khervān in Der Islam, vol. ix. The journey of this writer in 1902 confirmed his first impression. Moses of Chorene does not mention this region in his Geography, in the period of the early Arab conquests we find Kūhīstān under the rule of the Ephthalites. Historians say that it was first conquered in the caliphate of 'Omar by 'Abdallāh b. Banūl al-Khurāsānī; the latter setting out for Kīrīm took al-Tahmasb and Kān, Makrī, al-Māh, Kūhīstān, and Kīrīm, according to al-Baladhūrī) that the Arabs always refer to the district of Tabas—a later called the "two gates of Kūhīstān" (Tabari, I. 2704); a deportation of the inhabitants is said to have concluded a treaty with 'Umar (Baladhūrī, p. 403). In 53 (653) when 'Abd al-Karim undertook the conquest of Kīrīm, he advanced guard under al-‘Aṣfāfī passed through Kūhīstān and defeated the Ephthalites there (Tabari, I. 2885; and Baladhūrī, p. 403, who gives other traditions also). In the years following, Kūhīstān was the centre of a great national revolt under a chief called Kārin (a village in Kūhīstān still bears this name), a rising which was put down by Ibn Kāhin (Tabari, I. 2905; Marquart, Erdmuth, p. 155). In 57 (667) it was again necessary to conquer it; this was done by al-Kāhin b. Ziyād from the Turks (Tabari, II. 116). Henceforth Kūhīstān formed from the administrative point of view a part of Kūhīstān and more particularly of the province which the Arab geographers still call by the old name of Ahrāshān with its capital Nūbārān (cf. particularly al-Vaṣīqī, Kūhīstān, B.C. A., vii. 278, who gives a rather limited definition to Kūhīstān, for he mentions al-Tabasīn, Qūshān and Zawān separately). These remote countries became in the early centuries of Islam the principal refuge of Zoroastrians driven from their homes by the new religion (cf. particularly In staunch's work quoted in the Bibliography). In the ninth century the province was under the rule of the Tabarids (Ibn Kūhīstān, p. 33) and later of the Saffarids. The Arab geographers of the ninth and tenth centuries know it very well. In this period Kūhīstān was the capital and the commercial centre of Kūhīstān, especially for trade through Kīrīm and Kūhīstān. The province was further noted for a very fine woolen there, which Abū Nuwās mentions under the name Ḍīqān (cf. al-Ṭabarī, Kūhīstān, Sāvān, Cairo, 1352, i. p. 79); this industry flourished at Tūn in particular. Prayer-carpets also were made there. In the year 1532, Nasrī Khurāwī passed through Kūhīstān, going from Isfāhān. He went by Tabas, Tūn, Kān and Saffārān, and describes them as large flourishing towns. In the time of the Safavīs, Kūhīstān, the old asylum of the Zoroastrians, became a refuge for the Ismā‘īlī heretics, who for this reason were often called "al-maḥbūb al-Kūhīstānī". They built here strongholds in the midst of the famous citadel of Alamut; there are still many ruins of these places which have not yet been examined (Herold, Kīrīm, p. 273). The Khūtābatīs had on several occasions to send military expeditions to punish the maḥbūb (cf. e.g. Djuvanī, Tūn, p. 134, Al-Jāfīn, li. 47, 49). The coming of the Mongols who exterminated the Ismā‘īlīs at the same time brought about the ruin of Kūhīstān. The region lost all importance and the geographers—like Alī 'l-Fīdā—only quote their predecessors of several centuries before. It is improbable that this is the district referred to by Marco Polo under the name of Tunucain, which Le Strange (p. 352) proposes to identify as Tūn or Kūn. During the following centuries the region must have very often been in a state of anarchy (cf. Istini, transI. 430) when power was in the hands of chief of Arab origin. The Süfis exercised some authority there but after the power lay in the hands of the amirs of Tabas and of Kūn. At this time Kūhīstān inclined towards Afghanistan rather than Persia, until the Khādjas succeeded in bringing it under their sway towards the middle of the sixth century. The chiefs of the ruling families kept their positions as governors for the Shah and received pompous titles from the Persian court. About 1000 the amirs of Kūn no longer lived in this town but in Birjand; they claim descent from the Arab tribe of Khūtābatīs. Some members of this family have also ruled Sīstān. The rulers of Tabas also governed the district of Djuvanī (capital Djuvān). The settled population of Kūhīstān is of a very ancient stock; their houses are also of a very archaic type. Their dialect seems to offer few peculiarities; Ivanov distinguishes in Kūhīstān the dialect group of Türkhis and Djuvanī and that of Kūn, Kīrīm and Birjand. Many villages around Kūn and Birjand are inhabited exclusively by Djuvanī. In some places we also find descendants of the Ismā‘īlīs, who recognize the authority of the Aghā Kūn. There are also small colonies of Būlājīs, while the Sunni Afghan element is relatively strong. The nomads are for the most part Arab Sunnis, still speaking Arabic; they live along the main routes; a few Turkish tribes are found only in the north, as far as Birjand-i Haidari. Finally in the south there are Balufs, who move in summer towards Sīstān.

The towns are very small. Kūn, the old capital, had in 1900 about 4000 inhabitants (Sykes). The land around this town is more fertile than that of Birjand. The commercial relations with the Gulf of Persia is greater than with Meshhīd (export of silk, opium, saffron and mastic). For the other towns like Tabas, Tūn, Saunthān, Turbat-i Haidari, Turbat-i Zawān and Zawān, cf. the special articles.

Bibliography: All the Arab authors in the B.G.A.; Nāṣrī Khurāwī, Safar-nāma, ed. Schefter, p. 95; Ibn Battūta, ed. Defreyne and Sanguinetti, ii. 79; Alī 'l-Fīdā, Tūn.
KÜHISTÂN — AL-KUHŁ

2. The Arab geographers appear to have known two towns of the name Kuhistān in the province of Kirmān. One of them was called Kuhistān Abā Ghānum and was in the district of Dijārbād, between this town and the Dājal al-Kuf (Makdisi, p. 34, 461, 467; Viskiš, iv, 206; Le Strange, p. 318). The other Kuhistān was situated on the road from Tabāk to Bām, 8 farshaks from the former town (ibn Khurṣid, p. 69;ользов, p. 197; Makdisi, p. 473; Le Strange, p. 311).

3. Kuhistān of Kuhā in Afghanistan is a district N.E. of the town of Kuhā and includes the districts of Pandānjāh, Nī<J>ān, Tājān, etc. The population is composed of an element called Talikā, who speak Persian and Pashto and other element called the Kuhistān who speak Pashto (a Dardic dialect) and Parthī (Iranian) (cf. Imperial Gazetteer of India, xiv, Oxford 1905, p. 241).

4. The northern part of the modern state of Swat in the north-west of India is also called Kuhistān. It is the mountainous region around the upper course of the river Swat; it stretches eastwards as far as the Indus and westwards as far as Padhpur so that a distinction is sometimes made between Kuhistān of Swat and Kuhistān of Padhpur. The people of the valleys (estimated to number 20,000) have suffered since the 18th century from Afghan invasions. Under the rule of the Afghans they became very zealous Sunni Muslims; the religious chiefs (khānqāhs) have an enormous influence in the country. Another consequence of the Afghan invasions has been the expansion of Pashto all over the country. This language has gained ground at the expense of the old local dialects. The last — to which the general name of Kuhistān is given — is very numerous and belong to the Dardic group which according to recent research (Margaret神色) seems to belong to the Indian group of languages. The principal dialects are: Gārs (Swat Kuhā), Tārāsh (Swat and Pandānjāh Kuhā) and Māyā (Indus Kuhā).

5. Lastly, Kuhistān is the name of a barran and mountainous region in the eastern part of the district of Kharhā. The population is nomadic and consists of Sindis and Balādis. The population in 1901 was estimated at 22,477 (The Imperial Gazetteer of India, Oxford 1908, vol. xv, p. 353).

(J. H. KRAMER)

AL-KUHŁ is, in the first place, a name for a mineral, siltstone (anhydrous sulphide) and secondly for galena (lead sulphide), for both of which the name siltstone is also used. The word siltstone comes from the Greek σιθίς and according to J. Kuska the words antimony and bismuth are derived from siltstone. In Persian al-kuhl is called sīltūm from the place it comes from. Arabic synonyms are al-mūdūs al-mukral (burnt copper) al-suhamī, kuhl, siltūna, siltūnum, kuhl auxmar, etc.

Although the Majārī al-Ullūm (ed. van Vloten, p. 262) says of kuhl that it is a substance of lead (mercury) and the Fīlā' of Aristotle says that siltstone contains lead, according to E. Seidel (Maclish, p. 185, No. 215) the siltstone corresponds to it is almost always antimony. Compostes naturally occur. According to M. Meyerhof al-kuhl is pure antimony.

In the Nuzhat al-Khālīfāt (ed. Le Strange, G.M.S., xxiii/iv, p. 197) Hamd Allah Mustawfī for the first time gives places where it is found, at Jafāhān, on Daiwine and in Spain. The latter is said to be particularly rich in the second quarter of the month.

Siltstone is still found in Persia and in Spain. In Persia there are mountains called Kuh-i Surān and al-Karwīnic mentions a Dājal al-Kuhā near Bāsij (text, p. 177).

It is to be noted that siltstone can be crushed to a much finer powder than galena; the former is much less hard than the latter. From its principal use al-kuhl comes to mean also the cosmetic made from it and then cosmetic in general. As it has to be crushed to a very fine powder, it means a fine powder in general.

As a cosmetic for the eyes, al-kuhl, after being ground up with other materials, is used to dye black the eyes, brows and eyelashes, or the edges of the lids, especially by women. It probably came to the Arabs from the ancient Egyptians. Siltstone has been several times found in their cosmetics (X. Fischer, Archiv für Pharmakologie, xii, 1892, p. 9). But the Egyptian cosmetics are usually of pulverised galena, with other materials added. According to M. Meyerhof (Der Bau der Drogen etc. von Kairo; Archiv für Wirtschaftslehre in Orient, 1918, part 3/4, p. 218) sulphur antimony and sulphur of lead (kuhl) are sold to this day in Cairo as in ancient times as a cosmetic for the eye. The best still comes from Persia (al-suhami). That brought by the pilgrims is very popular (al-makki and al-khiṣāf). Surya is used as a cosmetic in Teherān also. The imitation cosmetic contains galena (kuhl al-khiṣāf) with zinc (znaradh). In place of galena, graphite, smoke-black, especially that from the cheaper kind of frankincense, from burned almond-shells, etc. is used.

Besides the already mentioned black substances, some of other colours were used as cosmetics (kuhl). In his pharmacological principles al-Muwaffak mentions a very black and one not quite so black, a black violet and even a pinkish and one quite white and also a yellow. The adjective kuhl is therefore used not only for black, but
also for all dark colours, e.g. dark blue, purple, the dark red of the carbuncle.

As a cosmetic, καθαλοῦ is applied by means of a small sponge (πόλος or πολυρά), the point of which is sometimes moistened with rose-water. The cosmetic is kept in a box (μακόβιον). From a picture in Lehrs, this resembles an old-testament, Amenophis, however, is also a sundial. a truncated pyramid (cf. E. W. Lane, Manners and Customs of the Modern Egyptians, p. 29295; and E. Wiedemann and J. Wachsmuth, Über eine arabisch-koptische Sonnenuhr, Archiv für die Geschichte der Naturwissenschaften und Technik, 1916, viii., p. 359). Al-khuľ is very much used as an astringent for the eyes. Ibn al-Baitır and others give particulars on this subject.

Numerous imitations of καθαλοῦ are given by al-Qawwālī in his work: Kitāb al-Mulkaṭa fi ḫaği al-Arbaʿ in the section: "Revelation of the secrets of ophthalmologists"; καθαλοῦ in this connection not used as a cosmetic but as an astringent for the eyes.

Women painted with καθαλοῦ are particularly praised by the poets, so that as do not find it necessary to resort to N. E. von Lippmann's passage (from al-Mutanabbi, ḫiṣṣ and adwān). The name καθαλοῦ for anything round in shape and not entirely flat was transferred quite arbitrarily by Farnèse in the sense of quinquiescence to the spirit of wine as the noblest component of wine, a name which gradually came into general use for it.

The Muslims were not able to obtain our alcohol by distillation before about the 12th century, as they were not able to condense the vapours escaping from solutions of alcohol for lack of suitable apparatus. Alcohol was probably first obtained in the 14th century in Western Europe. (On this cf. the researches of E. von Lippmann, printed in his Beiträge zur Geschichte der Naturwissenschaften und der Technik, Berlin 1913, p. 56-127.)

We have for a later date (second half of the 18th century) from the time of the Maghther Emperor Akbar a description of the preparation of καθαλοῦ (cf. the Ains-Akhari by Abu 'l-Fadl Ali, translated by H. H. Dickmann and J. Jarrett, 1859; b. 1900; and E. Wiedemann, Beiträge zur Geschichte der Zuschriften in Die deutsche Zuschriftenliteratur, 1921, p. 302; see also the same author, op. cit., p. 134).

From καθαλοῦ is derived καθαλοῦ, ophthalmia, on this see — in addition to a number of articles on separate points by M. Meyerholf — the full and comprehensive treatment of this subject by J. Hirschberg in Geschichte der Augenheilkunde, 2nd ed. Die Geschichte der Augenheilkunde im Mittelalter, forming part of Gräfen Stäsmisch, Handbuch der allgemeinen ärztlichen Vorlesungen, vol. VIII., Leipzig 1908. The following is J. Hirschberg's summing up:

Very different estimates have been placed on the value of the work of the Arab ophthalmologists. Want of knowledge of their works has led to their being undervalued in many quarters. But as early as 1490 A. Benedetti (Professor in Padua) said: "The most brilliant ophthalmists at the present time are in Asia, Syria and Media; in other lands, including Italy, they are exceedingly few in numbers." The greatest authority on the history of ophthalmic medicine, J. Hirschberg, then goes on to say that the science of the Arabs will never disappear from the records of the study of ophthalmic medicine and surgery (cf. B. E. P., p. 445).

Bibliography: All our knowledge of the history of animony, stibite and καθαλοῦ and their uses as cosmetics is excellently summed up by E. G. von Lippmann, in Enstehung und Ausbreitung der Alcheimie, etc., Berlin 1919, p. 639, and notices of their use in Muslim lands are very thoroughly studied; Dox, Supplement, p. 446; Vullers, L'empire de l'or, p. 280-287 has a detailed article: Hilte, Über die Gebräuche und die Zusammenhänge der orientalischen Angewandten (al-khuľ), in J. d. D.G., 1851, v., p. 236-242; V. Seidel, Deus Mecha nus ex Hore, 34, the History of the alchemists, S.B.P.M.S. Erg., 181, xi., p. 210; Beiträge, xii., Über Verfalschungen der Drogen, etc., S.B.P.M.S. Erg., 1814, xi., p. 176 and 186; Das Steinbuch der Aristoteles, ed. and transl. by J. Rask, Heidelberg 1912, p. 119, 175. — References to καθαλοῦ are found in the different cosmographies e.g. that of al-Karimi the work of the alchemists, etc., a. references of Ibn al-Baitır and al-Mun awil, in the books on ophthalmology, etc.

KUråN Hpressor, a town in Asia Minor, in the province of Sevuk in the sandak of Kaş Hpressor, the capital of a hpressor on the right bank of the Gileg, on a rocky hill, height 3000 feet; inhabitants 1,500, of whom 905 are Muslims, 604 Greeks and 300 Armenians. The capital of the hpressor has been moved to the village of Muğlas. Near it in Kuse-dagh, a mountain covered with vast forests.

(K. Ru,) Hpressor

KUrå, capital of Hpressor, situated in 35° 35' N. Lat. and 13° 30' East Long. (Greewich). The town was founded in 1814 by the Shah of Persia in Akonin, 9 miles east of Lake Chad in a sandy plain dotted with cowahs' (ananas digitata) called Kuka in Kanuri, whence the name Kanouka or Kikoa, "town of the kuka's,") given it by the natives. It was visited by Denham and Clapperton (1822-1833). Sacked in 1846 by the Wadait, it was rebuilt almost immediately. It had already recovered its prosperity By the time of Harth and Vogel's journey. Rahls (1868), Nachtagl (1871) and Montes (1892), also made stays of some duration there. During all this period, Kuka was one of the most flourishing towns in the Sudan. It was again destroyed in 1894 by Kabah, who transferred the capital of Hpressor to Diko.

Kuka really consisted of two towns: an eastern and a western. The latter contained nearly two thirds of the population and was inhabited by Arab traders. It was traversed for its full length by a broad avenue called Dencal which ended in the market place which lay between the two towns. The most common type of dwelling was an enclosure divided into several courts in which stood bits of earth covered with straw or cubical earthen buildings. The eastern town was the residence of the Sultan and the chief officials. The population was estimated by the travellers mentioned above at 50,000-60,000. An almost equal number were encamped in the immediate vicinity,
Kīkā in those days was a very important commercial centre where the products of the Sūdān (cloth-stuffs, hides, salt, pottery, ostrich feathers, kola nuts) were exchanged for European products brought from Tripolitania. There was also a considerable trade in carobs, honey, and slaves. Unlike most of the custom in the other markets of the Sūdān, coined money was rather plentiful here and business was done with a standard coinage (Maria Theresa dollars). The principal merchants were Arabs, agents of houses in Tripoli and Murāji. Kīkā in conclusion, had a reputation as a literary centre; although education was confined to reading and writing and the knowledge of a few sūras of the Qurʾān, there were not less than 2,000—3,000 students.

Since the destruction of Kubbā’s empire and the occupation of Bornū by the English, the town of Kīkā has been rebuilt but it has not regained its former prosperity, chiefly in consequence of the moving of the capital of the British and the native administration to Maiduguri, a healthier site.

(K. Yves)

Kūla, a town in Asia Minor in the province of Algīn in the sandjak of Sarūkhīn, 150 miles east of Mārūm (Magnesia), capital of a kāzī; it is 2,200 feet above sea-level, has 1,000 inhabitants of whom 5,655 are Muslims and 345 Greek Orthodox; it has 36 schools, four of which are secondary, 30 mosques, 2 Orthodox Churches, 3 baths and 2 caravanserais. It manufactures Smyrna carpets. The town is built of black lava except the mosques, the walls of which are white; it lies at the head of a valley running southwards out of the volcano of Kara-Su. Its citadel is in ruins and it retains numerous marble remains from antiquity.

Kūlab is Rabī’, a chief of the Banū Taghlīb of the pre-Muhammadan period, whose murder by his brother-in-law Ḥassān b. Murra al-‘Allāmi was the cause of a long and bloody war between the two half-tribes Taghlīb and Bakr [q.v.] which was known as “the war of Hassūn” [q.v.] his genealogy was: Kūlab b. Ḥalāl b. ‘Aḥma b. Hārīt b. Murra b. Zuhair b. Dhūyem (Whitfield, General Tabellen, c. 22). Kūlab’s real name is said to have been ‘Abd al-Wil’ and the name of Kūlab ("little dog") to have given to him because of his habit of taking a small dog with him and making it bark by besting it in all the places which he wished to reserve as his own private property; the people who heard the barking of the dog refrained from using the place. This story, the point of which, however, eludes us, is evidently a later invention; the name Kūlab is frequently met with in Arab nomenclature and does not look like a nickname.

Kūlab is represented as having all the characteristic traits of the tyrant, of which the independent and critical spirit of the Bedouns has always had a profound horror; he is said to have been proclaimed “king” (in the use of this title cf. Lammens, Le Berceau de l’Islam, Rouen 1914, p. 210) after the brilliant victory won by Kūlab over the united Yemen tribes and to have ruled not only over the Banū Taghlīb but also over the Banū Shāhīn, the most important section of the Banū Bakr. After a short time he is said to have abused his power and to have usurped the rights of hunting and of pasturage at the expense of his subjects (the usurpation of the Banū is the regular grievance of the Bedouns against tyrants”; the same reproach was made against the caliph ‘Uthmān). Indeed it was because the she-uncle Sarīth (belonging to a Timmi woman al-‘Arnī or to one of her clients of the tribe of Banū Ḥajr, trespassed upon the private property of Kūlab, that the latter put her to death (or killed her young one and injured the mother) and this act of violence was the cause of him by Ḥajr, whose mother was the she-uncle Sarīth.

The details of the story are given in our sources with some variations, most of which are found as early as the work of Abū ‘Ubayda (q.v.). Certain features, especially in the K. al-Aghānī, have been borrowed from Ibn al-Kalbī, and the account of al-Mu‘allad al-Dāhī has also been preserved. It is evident that we are no longer able to ascertain if the history of Kūlab (and in general that of the war against the Banū Taghlīb and the Banū Bakr) contains a nucleus of historical truth along with a mass of features undoubtedly legendary. This is a problem which can only be solved in connection with the general question of the historical value of the whole of the traditions of the pre-Islamic period. Considered by itself, the episode of Kūlab has nothing improbable about it. We should not be too ready to recognize in it a fairy clear memory of an attempt to form a political organisation among the Banū Taghlīb and the Banū Bakr of a kind superior to the ordinary Bedouns tribes; the attempt, similar to that which gave the royal crown to the chiefs of the tribe of the Banū Kinda, must have been suggested by the example of the kingdom of the Lakhmids of al-Hira, not far from which the Banū Taghlīb and the Banū Bakr have their homes. The story of the tyranny and the death of Kūlab must, therefore, have taken form at a very remote period; this is evident from the verses of ‘Abd Allāh b. Mirds and of al-Nāhilī al-Dā‘īd (both contemporary with the beginning of Islam) given in our sources; that of al-Nāhilī in particular, the history of the killing of the camel is already told in detail. An allusion to the power of Kūlab is found only as early as the annals of the Taghlīb (Amr b. Kūlāhān [v. 65]). We have, moreover, contemporary documentary evidence of the accounts relating to the fate of Kūlab in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muhallīk (one of the earliest Arab poets; cf. Ibn Kūlāhān, Sīr, ed. Dr. Geske, p. 165—166; Mah. Ibn Sallān, Taḥāfut al-‘Arab, ed. Helb, 13, lines 11—16 et al.), but their natural authenticity is more than doubtful.

(G. LEVI DELLA VIDA)

KULIBA. See Kulibai.

KULJDA, a town in the upper Ili [q.v.], valley. A Muhammadan kingdom is first mentioned in this region in the vi[th] century; its founder, who is said to have previously been a brigand and horse-chief, is called Osīr in Djuwainī (G. M. S., xvi, p. 57) and Būsāīr in Dīmāl Kurshī (in Barthold, Turkestan, l. 135 sqq.). According to the latter, he assumed the title of Toghrāl Khāzān as ruler. The capital of the kingdom was Almālgāh, first mentioned in this connection and later a great and wealthy commercial city. We owe our information about its site mainly to the Chinese (in Breisebinder, Altertumskunde, Index); it lay south of Lake Sauram and the Tâlki pass, north of the Ili, probably northwest of the modern Kuljda.

Like the other rulers of these regions, the king of Almālgāh had dealings with Çingiz Khān. He was surprised and killed while hunting by Kuljī, the governor of the kingdom of the Karsh Khāzān [q.v.]; but Kuljī could not take the town of Almālgāh. Osīr's son and successor Suqūlī (or Sūqūlī-Tagh) married a granddaughter of Çingiz Khān (a daughter of Duji). On his death (1251-1254, cf. Djuwainī, p. 51; 648 = 1250/51 in Dīmāl Kurshī) he was succeeded by his son whose name (Dīmālshand-Tagh) like the names of the other rulers of this line are given only by Dīmāl Kurshī (Barthold, Turkestan, l. 140 sqq.). Almālgāh in his time (beginning of the vi[th] century) was still ruled by this dynasty. How long this line continued to reign is not known. The silver and copper coins struck at Almālgāh in the vi[th] century apparently belonged to them.

As a great commercial city on the main route through Central Asia to China, Almālgāh is frequently mentioned by European travellers and missionaries.

Like the towns on the Ču [q.v.], the Tālki and elsewhere, Almālgāh was completely ruined by the constant civil wars and other fighting in the vi[th] century (cf. Būsār, ed. Beveridge, p. 1; Murūj Muhammad Ḥādir, 725-1231, Rāshīd al-.toInta, E. D. Ross, p. 304). Muhammad Hādir mentions the ruins of the town and the tomb of Taghōk Timūr Khān (d. 764 = 1364/5); but these ruins lie between the Khorgos, the boundary river between Russia and China and the village of Muṣṭārīfī and have been fully described by N. Pantinov (Kazanšanski Tovartol, Moscow 1910, p. 151 sqq.). Inscriptions from graves of Nestorian Christians have also been found there.

The town now called by the natives Kuljda or Ghulibai (Radloff, Aus Silberien, ii. 536 gives the meaning "Elk"); cf. also Kuljī Khāzān, name of a mountain between the Ču and the Tālki, Turkestan, Král., 42) was founded in 1762, after the conquest of the Kalmačk empire by the Chinese, under the name Ningen-ču-čing; whether, as Radloff (Aus Silberien, ii. 321) says, a town of Kuljda had already been in existence for a considerable time, is doubtful. Somewhat later than this "Tatar" Kuljda, in 1764, the town of Hoi-ču-čing was founded, also called "Chinese Kuljda," "New Kuljda" or "Great Kuljda," the headquarters of the Chinese commander-in-chief (Kumandir). The Chinese government transferred 6,000 families from Khashgar into this region which had been almost completely desolated in the war with the Kalmačks; these immigrants came to be called "Tarmand" (agriculturists). In 1851 a treaty of commerce was concluded in Kuljda between Russia and China, whereby Kuljda was opened to Russian trade. In 1863 Radloff visited both Old and New Kuljda and gave a very full description of them in his Aus Silberien, ii. 355 sqq., 356 sqq.; the population of Old Kuljda is thus said to have been at least 80,000 but this must be exaggerated.

This prosperity was almost completely destroyed by the Muhammadan rebellion of 1863-1866. New Kuljda was taken after hard fighting in 1865 and completely destroyed; so far as we know, this town is still in ruins. After some fighting among the insurgents, the rule ultimately passed to a Sultan of the Tarmand; he is usually called Sultan Ala Khāzān or Abu 1-Atā' (in Russian accounts frequently corrupted to "Ahil-Ata"). In 1871 the sultanate was occupied by the Russians and the Sultan deported to Wyerly; in 1873 he received a pension of 3,000 roubles a year till his death. Kuljda was administered by Russia for ten years and was only restored to China by the St. Petersburg treaty of 1881. The population of Kuljda (i.e. the older town: "Old Kuljda") in 1882 was only 7,602 of whom 4,908 were Muslims. The Chinese removed the administrative offices to Suljdān (about 25 miles N.W. of Kuljda), but Kuljda still remains the most important town in the Ili territory; it also contained a Russian consulate. At the beginning of the 20th century Kuljda is said to have had about 30,000 inhabitants (N. Bogoyavlenskii, Zapadnoi sibirskii Kitai, St. Petersburg 1906, p. 108 sqq.).

KUL-OGHLI in Turkish "son of a slave". The Janissaries being the slaves (ezaf) of the Sultan, the children whom they had by native women, especially in the Turkish States, were given this name. They occupied a special position among the population. While slaves busy ploughing the land, the Christian women-slaves were regarded as Turks, and enjoyed the same rights as their fathers (service in the ranks of the Janissaries, and admission to all the offices of state), those who were born of alliances between Janissaries and women of the country (Moors) were classed with the relatives of their mothers. They could not be enrolled in the Janissaries and could only claim admission to a limited number of offices. They became mixed with the native population, but being related to the Turks they had not to suffer the same vexations as other classes of society. They were in general fine men, with clear skins and well-marked muscular development; they were of a sluggish temperament and a peaceful character.

KULTUM b. 'IYAD AL-KHAIRAKI of the tribe of Kais was chosen by the Caliph Hisham to avenge the disastrous defeat inflicted by the Sufi Berbers on the Arabs on the "Day of the Nobles" (Yazma al-Akbir) in the beginning of 123 a.H. He set out at the head of 30,000 men, to whom he added the garrisons of al-Hiria and the Maghribi, and joined Habib b. Abu 'Ubadah who was trying to stop the advance of the Kalbids near Tiemcen. The tactless attitude of the Byzantines and particularly the arrogance of Baud, nephew of Kultum and his successor-designate, dissatisfied those who had come to assist. The Berber leader Khallil b. Hamid (or Harani) retired before the Arabs to the city of al-Taghrid in the middle of the Maghribi, and a battle was fought at Natdila (v. Nafdara, Bahdara). The wise advice of Habib was not heeded. The Arab cavalry concealed by Baud succeeded after great efforts in piercing the Berber lines but the latter reformatted behind them and overwhelmed the Caliph's troops. Habib and the other leaders were killed. Kultum fought with the greatest bravery between verses of the Qur'an to encourage the others, but finally fell. One third of the army was killed and a third taken prisoners (Dut. 'Ijada al-Kultum 123 = Oct.-Nov. 744). The Berber cavalry's only hope was to take refuge in Ceuta, whence after much suffering they were able to escape to Spain.

KULZUM, a seaport on the Red Sea (Arab: Baha al-Kulzum, [q. v.], Bahia al-Hind or Baia al-Habasha). The name is a corruption of the Greek Kallme (as in Arabic: Kallm, the "sail") at the mouth of the canal, which led from the Nile to the Red Sea. This canal began by Tharros Nubik finished by Darius of Persia, and was further worked by Ptolemy II Philopator and by Trajan. After the latter it was called under the Roman Empire and even shown by the eighth century occasionally in the maps of the coast of Harar to Taramas (Ptol. iv. 5, 24, ed. Muller, p. 713; Hell, The Apocryphal Psalms, N. 736, ed. and 1456 or Augustin anam, and from it in 343 a.H. we find the Eastern Delta called al-Aṣwān, a small island (Monnissen, Rom. Gesch. v. 615; on the date: Eduard Schwartz, N. G. G. W., 1904, p. 234). In the Muslim period, when the making of the canal was wrongly ascribed to Hadi, labor was repeatedly spent on it (J. Maspéro and W. Gies, Materials, i. p. 84, under Khuia, al-Khira). Umar b. al-Khattab ibn y. 643/644 for example had it repaired to facilitate the transport of corn from Fustat to the Red Sea.

KURID encryption, al-Kulzum, ed. Wiesner, i. p. 462; John of Niki, ed. Zotenberg, p. 577; it was called after him Kurid al-Aziz, al-Kurid al-Muhammadi, al-Yusufi, ed. de Goeje, p. 1907, ed. ibid., p. 2465; Ibn Dujjali, ed. Volland, iv. p. 97). According to Abu Sahl (in Etverts, Churches and Monasteries, p. 88) its mouth was at al-Kulzum, according to Mas'ud (Msudi al-Dhabah, i. p. 97) and others (more accurately) at Dhabah al-Timmiit, i. 1 mile from the town, where the Moslem pilgrims from Egypt crossed the canal by a large bridge. The Caliph al-Mansur in 775 had it partly filled in, fearing an attack from his uncle Muhammad b. Abdallah, who had rebelled against him in Medina, so that in Abu Sahl's time it ended at al-Sahir in the entrance to the Wadi Timmiit. Now but fruitless attempts to make it navigable again were made by the Caliph al-Rashid (Masudi, op. cit., p. 92-97). He is however said to have abandoned the attempt out of fear of the Greeks. Henceforth the built up its water flowed into the Birkat al-Dhabah (al-Dhabah, p. 164) till it was completely filled in 1890 for sanitary reasons.

The town of al-Kulzum owed its importance mainly to this canal, for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. In antiquity and in the early Muslim period its only importance was as a point of departure for shipping on the Red Sea, the commonest name among the Arabs for which was derived from it. The cornships of al-Fustat after they had passed the canal sailed from here to al-Qaza and al-Jada. Of the Jewish merchants called al-Rudhamiya, Ibn Khudrakab (ed. de Goeje, p. 153) says that they came from the lands of the Franks to al-Farand; hence they carried their wares 35 farsakh on camels to al-Kulzum, where they were loaded on ships which took their course to India and China. According to the same geographer, al-Kulzum with al-Tir and al-Lub, a district of Egypt (op. cit., p. 84).

The country round al-Kulzum was inhabited at an early date by Arabs. They are already mentioned in the Areas of the hermit Sios (Copio. ad Djihe) and John Kolobus who lived there in the History of the latter, Kuleen (sic)
appears for the first time in the Arabic Synaxarium as the name of the ancient Klyma.

When under the last 'Abbasid governor in Egypt, Ananias b. Ishih, the Bulja rebelled in Nubia, invaded the 'Ala'id and laid waste many towns, al-Mutawakkil sent against them an army under Muhammad b. 'Abdallah al-Kirmani which went from Kufa straight through the desert to the emerald mines, while seven ships with stores sailed from al-Kulzum to 'Ajdabiyah and provided the victorious army with supplies and victuals. In the autumn of 971 the Karmatian leader Hasan b. Ahmad on his campaign against the Fatimid Djahhar took the towns of al-Kulzum, al-Farangi', and Timnas; after his defeat before Cairo (Dec. 23, 971) he retired under cover of night via al-Kulzum to Arabia.

Raynald de Châtillon (in Makrit, Aram) at the beginning of his naval expedition against the holy cities in the winter of 1183/1184 sent two ships from 'Aden, which were to watch the califal of al-Kulzum and prevent the garrison from procuring water (Makrit, Silûla, transl. Blochet in K.O.L. 1900/01, viii, p. 559 sqq.; Ibn al'Athir on the year 576 in Renouf des hist. ar., des evit., i, 658). But soon afterwards the Hafṣid Ḥusayn al-Din al-Luṭ' built a fleet by order of Salih b. Din's brother, al-Malik al-ʿAdli, in al-Kulzum which sailed for 'Ajdabiyah and put a sudden end to the desperate enterprise (G. Schlimmberger, Renouf des hist. ar., iii, 684). The Englishmen also in 1592/1593 (Hanover 1601, p. 129). When al-Dimashqi (ed. Remmen, p. 213) includes al-Kulzum among the lands under al-Kahkh (cf. R. Hartmann in Litt. I, 1911, ii, p. 141), this is perhaps a memory of these events of a century before.

In the time of Ibrāhīmayn, Yâkut and Dimashqi, al-Kulzum was already a deserted town. Makriti found among old documents in the palace of Cairo accounts of the expenditure on the civil and military administration of the town and district and concluded from them that it must once have been most flourishing. According to Ibrāhīmayn the Beduins had occupied and plundered it. The only water-supply he knew of in the vicinity was the well at al-Suwayt, which yielded only a scanty supply of brackish water. Al-Mukaddasī (tenth century) already mentions al-Suwayt (i.e. Suza), which gradually took the place of al-Kulzum, a mile from it (cf. Maspero-Wiet, op. cit., p. 107 sqq.). The view occasionally expressed by some Arab geographers and astronomers (Najm al-Din al-Tha'labi, Ullugh-Bey) that al-Kulzum once consisted of two towns, which goes back to a statement of al-Khristi taken from Ibn al-Wardi (Gildemeister in Z.D.P.V. vii, p. 119 note) and the hypothesis, based on it, of two towns of al-Kulzum in different places, were already shown to be untenable by Quatremère; but it has recently been repeated at the ancient Klyma, as Naville found an inscription near Heroopolis (or Hero, in Tall al-Maskhita) according to which the distance was al-Šan in Klyma M[illa] vi[ci]. (Naville, The Store-City of Pithek and the Route of the Exodus, London 1883), while it is elsewhere correctly put at 68 Roman miles (Müller on Pleolam, Geogr., i, 2, p. 485 sqq.). In this connection, Dillmann has tightly pointed out that it is very doubtful whether the milestone has not been moved from its original position, as all other references leave not the slightest doubt as to the location of Klyma.

The name al-Kulzum still survives for the mound of ruins, Kôm al-Kulzum north of Suez; perhaps also in the name of the well of Kiam (for Kilzim) near Suez (Littmann in Z. D. M. G., ixx, p. 511; suppl. to p. 14, note 2; Moritz arct. Klyma in Panum-Wiame, Konstanzs., xi, p. 887).

AL-KUMA, al-Kuma and al-Kum of the seventh of this kind of poetry created by the moderns. Invented by the people of Faghdāt under the 'Abbasids, it was at first used as a call to announce during Ramāzān the last moment of the night, at which it is still permitted to eat or drink. The singers said to their colleagues at the end of each night: alīma walaḥdha ḍhīma "arīfa! to take thy meal before the dawn of day, ariya!" Later, versifiers were made in this style for vendors of flowers, wine, etc. It does not seem to be true that Abī Naqīt invented the ḍhīma. It is more probable that the form was already in existence before the reign of the Caliph al-Nasir.

According to the prosodists, this kind of poem which is always in the vernacular, should have as metre in each hemistich muṣṭaḍīlīm fādğīlām but, according to the specimen given by al-Jalālī (al-Matraqī), Jīlāl, 1273, ii, 273), al-muṣṭaḍīlīm is a poem composed of strophes of two quatrains in the first, second, fourth and fourth hemistich; the metre is muṣṭaḍīlīm fādğīlām or fādğīlām or fādğīlām, muṣṭaḍīlīm may be muṣṭaḍīlīm = maṣṭūlīm and rarely muṣṭaḍīlīm = muṣṭūlīm. 

Bibliography: see the article KUM WAWA in (Moh. Ben Cherien).
KUMAIT. Zaid, an Arabic poet of the tribe of Asad, born in Kufa about 60 and died in 126. Of his compositions, the most famous next to the Mudaffah (see below) are the Hagginiyat (see below) called because they sing the praises of the Banu Hashim, the family of the Prophet. But the whole of the Banu Hashim are considered worthy of the honour and praise of the poets besides Muhammad, we find only Ali and his descendants. Verses i. 79 and ii. 115 sq., in which 'Abd Allah and his sons are commemorated were perhaps only added in the 'Abbasid period. The Hagginiyat consist of four long and two short ka'asas; a fragment, the larger part of which is a typical ka'asa opening and four quite short songs, three of which have only two verses each. These poems are not of the same period; the oldest seems to be ii. which should be dated about 96-99 A.D.; iii. is not much later; i. cannot be earlier than 105, iv. than 115, ix. than 123, x. than 124, vi. is perhaps as late as 125-126. In his ka'asas Kumaït follows the model of the old poets. Although as a townsman, he is remote from the life of the desert, he describes the camel which carries him to the person celebrated, the wild bull and the falk bird, and he devotes many panegyrics to the 'Alids in the traditional style of Bedan sayids. He borrowed much from the Kur'an as well as from the old poets, and a Kufan philologist of the second century A.D. Ibn Kumaït, composed a Kitâb Sharh al-Kumaït min al-Kur'an (see Pâdrisc, p. 70). The Hagginiyat, the poetical value of which was not highly esteemed by Arab critics, were much thought of in Shi'a circles; from modern scholarship, their importance lies mainly in the moderate wing of the Shi'a at the end of the first and beginning of the second century A.D. While Kumaït regards the first caliphs as usurpers (vi. 10), he declines to curse them, like the fanatical Shi'a; if they did wrong in withholding Fadak from the daughter of the Prophet, they will be forgiven on the day of judgement. 'Ali is the way of the Prophet, whom he regarded as a guide, the 'Alids, whose praisings he sings with enthusiasm, and in which, besides the oldest evidence of this Shi'a's belief, guidance is to the 'Alids alone and they will again consolidate the foundations of Islam. The poet however cannot overcome himself to assist by deed the 'Alids, whose praises he sings as enthusiastically, and in X and XI he reproaches himself for not obeying the call of 'Ali. But he is not afraid to make fierce attacks on the reigning dynasty; he reproaches the Umayyads with having no right to the leadership of the community and in abusing their position for their own ends. When however such attacks came to the ears of the Caliph Hâkîm—a long document is directed against the 'Abd Shams, a long document is preserved in Dhammar, p. 187 sq. Kumaït tried to2 alone for his induction by panegyrics on the Umayyads. Such opportunism is not uncommon among poets and Kumaït himself, calls his conduct zebda (iv. 16); the expression according to Goldscheider, Z.D.M.G. ix. 219, is here used for the first time in the 'Alid sense, and such forced tributes to the Umayyads do not affect his real feelings for the Banu Hashim. The Mudaffah, Kumaït's poem directed against the Yemenn tribes is notable for its length—the expression longer than a poem by Kumaït became later proverbial. It is said to have had 300 verses, of which about a third survive from different parts of the poem. There is no trace of a hostile attitude to the Yemenn in the Hagginiyat, although the poet lays stress on the fact that the Prophet like himself belonged to the Khattit group 9. Between 97 and 101 Kumaît had verses composed in a panegyric on the Mahallit, the champions of South Arabian influence, and the exilidion only came later, probably not until after the composition of the fourth poem of the Hagginiyat. Kumaït is said to have been induced to attack the South Arabians by a lamoon by a Khattit poet on the 'Alids and it is said to have been Khattit b. 'Abbâdith al-Katr, governor of al-'Irak, who was dependent on the support of the South Arabian tribes, who brought Kumaït's anti-Umayyad verses to the Caliph, in order to induce him to take a firmer stand against them. His influence with him was certainly great. It is certain at any rate, that Kumaït continued to lamoon Khatit even after his death; he brought his own destruction on himself by this Yemenn, who heard him raving in his lamoons on Khatit, wounded him so seriously that he died in consequence.

KUMAN. [See KIFÄKH]

KUMBARAÐJIL. [KHUMBARADJIL]

KUMIS, a Turkish word meaning "a drink of sour mare's milk," which has passed in this form into Russian and western European languages; it is explained in Radloff's Worterbücher der Turak-Slavistik, vol. ii., St. Petersburg, 1899, p. 855, under Kuma. The word is found as early as the Kordesh-filk where it is mentioned in the first place among the products of cattle-breeding (kumis, milk, hair, fat, curds and cheese [W. Radloff, Das Kordesh-Städt, Pl. ii., St. Petersburg 1910, p. 397]). Wherever the Turkish horsemen went they carried kumis with them. According to Kutubi, 'ulûm al-Taw̲āshî (cf. Brockelmann, G.-A.L., ii. 48), MS. in Constantinople, Köprülü 1121, f. 694, Balbars 1 just before his death 676 (1277) drank kumis (al-kumis) for several days in the "elegant castle" (al-Kâmr al-Abhâd) in Damascus. In the court ceremonial of Orob princes in the xii. (18th) century, fully described by Ma'âmd b. Wali, Bahr al-Arât fi Mansûhâl al-Shâhâh, Grundriss d. islam. Phil., ii. 361, 364 Ind. Dict. N. 575. Text publ. by W. Barthele in Zift Gen. Ost. 187. De et al. d. u. d. Diglot, vol. xxiv., 1903, p. 295, and in his Italian Dic. al-Kumis (al-kumis) is treated as an important article; it is described minutely, how the kumis has to be pressed from skins (jaha) into cups (kefâl), how the cups are to be taken, who is to take the first, who the other cups etc. In every place where the nomadic people have passed to a settled life the customs associated with the taking of kumis have gradually fallen into disuse. (W. Barthele)
KÜMIYA. In the Middle Ages, one of the most important tribes of the Maghrib; they were at one time called Saffurs and were descended through Fātim from Mādhūs al-Abbāsī. Tradition is that the brothers of Kūmiya, the legendary ancestor of the tribe, were Kūmil and Matkara from whom were descended numerous families, some of whom still exist at the present day. The most important representatives of the Kūmiya, who live in the N.W. of Algeria between Tlemcen and Argelīa (Rasghūn) are the B. 'Abīd, from whom was descended the first Caliph of the Almohad dynasty, 'Abd al-Mūmin [q. v.], born at Tājījera between Houmān and Nedroma; the Nedroma who gave their name to an important town; the Saghāra, now represented by the Miṭhā [q. v.], the B. 'Nī, of whom a section the Miṣṭa still exist. The Kūmiya showed themselves devoted to 'Abd al-Mūmin, who was one of them. They formed the second Ḥirafā in the Almohad army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to ìnhāq [q. v.] by the Zenāya, some of them joined another group, the Uḫiṣūn and formed the powerful confederation of Tārīqī in the N.E. of Algeria.

Bibliography: R. Basset, Nidrīmūhūt et le Tourn., Paris 1901, and the writers there quoted. (R. Basset.)

KUMM, a town in Persia in 'Irāq 'Adjamī near a stream, not however sufficient for local needs, which comes from Dārīshākān (Gulpāngān). It was conquered by Abū Mūsā al-Āsh'ārī in 253 (664); it rebelled in the caliphate of al-Mu'āmin and refused to pay taxes, under the leadership of Yahyā b. 'Imām. Against it the Caliph sent 'Abī al-'Abbās al-Marwāz, who demolished the wall surrounding it and levied a war indemnity of 7,000,000 dirhams. The treaty was broken in the caliphate of al-Mu'tazz (352-355 = 660-668) who sent a force against it, an army under Mūsā b. Bughlī, governor of 'Irāq 'Adjamī; most of the inhabitants were massacred and the chief notables carried off as hostages.

In the time of al-Iṣṭakhri it was walled. Its water supply came from wells and huge cisterns substantially built. Its inhabitants have always been fanatical Shi'a and one of the leaders of the followers of 'Alī. It has many tombs of saints and pious men (444 according to Ahmad Rāzī), including the mausoleum of Fatūma, daughter of the seventh Imam Mūsā al-Kāṣim and sister of the eighth Imam 'Alī al-Ridā. The later Safawīs are buried there.

In the time of Istakhri (B. G. C., i. 230) one stage distant was a little town inhabited by Māzdānis, (Gardāj al-Maẓūfī). The family of the Persian poet 'Abūn, born at Gardā, originally came from Tārīf, near Kumm. (Bibliography: Yāḥū, Mulāqāt, ed. Winterfeld, iv. 15, 175 = Barbier de Meynard, Dic. de la Perse, p. 456; B. G. C., i. 207; ii. 252, 265; li. 300 n. 8, 395; Balkhjūrī, ed. de Goeje, p. 312, 314; Hamd-Allāh Muntawī, ed. de Le Strange, p. 67 = transl. p. 71; Dīmāshqī, transl. Mehteri, p. 449; Kūmil-Kāthī, Dīdān-ansāl, p. 336; ed. de Le Strange, The Lands of the Eastern Caliphate, p. 205, ii. 65, Huxley.)

KUMUKS, Turkish people in the northern part of Daghestān (q. v., especially p. 388 sq.), where also information is given regarding the Lzgang people of the Kāt Kümük or Gümür Gümük and the political conditions under which one section of this people has become separated from its kinsmen and Turkicised. The princes (Shāhmāshāhs) of the Kāt Kümük in the tenth (xvii) century gradually extended their territory from their old capital in the mountain village of Kümük to a north easterly direction to the coast; they spent the winter in the coast plains in the village of Bānū and the summer in Kumük. Since 1049 (1639-1640) the Shāhmāshāhs have resided only in the coast territory with their capital in Bānū or Tekhā (Tekā); they did not come back to Kumük. The burial-place of the last Shāhmāshāh was the village of Tūmendi-Kahan (Russ. Kazansky). At the present time the Kumıkis are the ruling element in the republic of Daghestān, the capital of which is Mag kami-Kala (Russ. Petrovskii). They number over 100,000. The dwellings of the Kumıkīs stretch from Sulak in the north to the river Baghičā (north of Derbend) in the south; they speak an archaic dialect, connected with Kumanic and quite different from the language of their northern neighbours, the Nogais, which became a literary language in the second half of the xvi century. (Bibliography: in addition to the works quoted under q. v., especially): R. Collasse, Zanzan en Kara et à l'intérieur de la mer (Jun. sol., 1900, Univ. University, t. i., Baku 1926, p. 95 sqq.), in it on p. 138 Bibliography down to 1926; cf. thereon A. Samoilov, in Zas, xx, 1915 sqq. (W. Barthold.)

KUNDUZ, the name of a river, town and district in Northern Afghanistan. The district is bounded on the east by Bādakhshān, on the west by Tāshkurgān, on the north by the Oxus, and on the south by the Hindī Kush, and is inhabited chiefly by Uzbegs, who overrun it from the north in the sixteenth century. The river rises in the Hindī Kush, flows northward and is one of only two rivers in northern Afghanistan which reach the Oxus. The town is the trade centre of a considerable district which produces the best horses in Afghanistan.

KUNFUZA, a seaport on the Red Sea, 45 miles from Hālīkhā. The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where is the lighthouse with its one-storied warehouses in an interior line, and the chief mosque and smaller masques with low minarets. On a little island about a quarter of a mile away is a small castle which used to be the residence of the representative of the Sharif of Mecca. The town is now estimated to have a population of 10,000, but S. Langer in 1884 put it at only 2,000. The harbour, which is enclosed by a number of sandy islets and is only accessible by small sandy beaches of medium size, has great disadvantages, notably that the boats cannot land there. Trade and commerce are moderate: Kunfuza exports the myrrh collected in 'Aṣir and also hides and honey; it is used to be frequented by slave-dealers who brought their Abyssinian slaves for sale here, but England's sharp control has made slave smuggling practically impossible. Trade with the
KUNUF, a religious technical term, with various meanings, regarding the fundamental significance of which there is no unanimity among the lexicographers. "Refining from speaking," "the prayer during the past," "humility and recognition that one's relation to Allah is that of a creature to its creator," "standing" — these are the usual dictionary definitions which are also found in the commentaries on different pages of the Koran where kunuf or derivatives from this root occur. There is hardly one of these for which the context provides a rigid definition of the meaning (cf. Sura ii. 110, 239; iii. 15, 38; iv. 38; v. 121; xxi. 25; xxiii. 31, 35; xxv. 12; xvi. 5, 12).

The Hadith gives more definite contexts. The best past is a long kunuf" (e.g. al-Nashir, al-Musnad, trad. 164, 165; Abu Ayyub al-Sulami, Tafsir al-Kur'an, Tirmidhi, Sahih, bkh. 165). Here in the unanimous opinion of all the commentators (see Nawawi on the passage) kunuf means "standing." In the well known hadith: "Alone to theighter on the path of Allah is he who fasts, who stands, who kunuf," the last kw is translated as "standing." (Musnad, bkh. 110) kunuf takes obviously the meaning of "to recite standing" (cf. Abu Ayyub al-Sulami, Shahih Ramadhan, bh. 9: "And he who recites 100 verses, then Kunuf (standing) is enrolled among the Kunufs"). kunuf, however, usually seems to be connected in meaning with awz or is. e.g. in the oft quoted tradition which tells how Muhammad in the past al-awz appealed to Allah for a month against the tribe of Ril and Qahwir and they said: the word was at Bhr. al-Mansur (Witr, bh. 7) in this case the meaning is certain from the explanation yadd asaw (Bukhari, Witr, bh. 7; Dhahabi, bkh. 184). In the parallel tradition, Bukhari, Mustadd, bh. 28, trad. 3 there is added "and till then we were wont to perform the kunuf." Some sources see Goldziher, loc. cit., p. 323) and that this was in the month of Ramadhan.

The rite also appears in parallel traditions in a more precise form; it is said that the kunuf took place in the past al-adal (Bukhari, bh. 59) after the roza (Bukhari, Witr, bh. 7). It is still more precisely defined in a hadith in al-Nasa'i's Tafsir, bh. 32: "... that he heard the Prophet when he raised his head after the first roza at the past al-awz and said: O Allah, curse this and that man (i.e. some of the mujahidin); thereafter Allah revealed: "It does not concern thee whether He turns to them with favour or punishes them" (Sura, iii. 123). The following is another example of kunuf: "When the messenger of Allah lifted his head after the second roza at the past al-adal, he said: O Allah, save Walid ibn al-Awamer and Salma b. Hisam and Ayah b. Abi Rabi'a and the weak ones in Mecca. O Allah, tread heavily on me and send on me years of fasting, like the years of Joseph" (al-Nasa'i's Tafsir, bh. 28). According to another tradition, which also goes back to Abi Hurairah (Bukhari, Adab, bh. 126) the kunuf consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the kunuf was regularly performed at the morning and evening past (pilai and maghribi; Tirmidhi, Sahih, bkh. 177; al-Nasa'i, Tafsir, bh. 30). Tirmidhi gives the following note on this tradition: *The learned differ in their views about the kunuf at the past al-adal. Some of the scholars of the hadith and later generations...*
advocate this *janūt*, such as Mālik and al-Shāfi‘ī. Ahmad (b. Hassān) and isbā所示 say: "There is no *janūt* uttered at the *jālat al-far‘ād* except in a calmness, which affects the Muslims as a body.* In such a case the Imam has to pray for the Muslim armies. *Fā‘al* and *ulā* are also mentioned as *janūt* to which the *janūt* was introduced by Bādhārī, Adīlah b. rāz; Na‘īnī, Tāṣibih b. ḍāhim 39). There is further a difference of opinion as to where in the *jālat the *janūt* should be inserted. ‘Āyim is said to have asked Annas b. Mālik about the *janūt*. Annas replied: "The *janūt* took place..." I asked: "Before or after the *ru‘ūd*?" He replied: "Before the *ru‘ūd*.": I said: "But I have not been told of your authority after the *ru‘ūd" Annas replied: "Then they lied. The apostle of Allāh only uttered the *janūt prayer after the ru’ud for a month. I think, after lie, etc., etc." (here follows the story of Bih Mā’ūnī, see above, Bādhārī, Wīsī, bāb 7). It is even said that the *janūt* is a * bás‘a* Abū Mālik al-Ashīū ‘records a tradition on the authority of his father, that the latter had performed the *jālat al-far‘ād* under the direction of Muḥammad. Annullating a tradition that none of these uttered the *janūt* prayer. He adds "it is therefore also a * bás‘a*, my son" (al- Na‘īnī, Tāṣibih, bāb 33).

Nevertheless it continued to be known as the name of the prayer (in the *jālat* at the *jālat. In the books of traditions a formula is given for the *jālat al-far‘ād* (it occurs often and in different forms, though it is not always called *janūt* but is given names like *a‘da* etc.).} O Allāh, lead me amongst those whom Thou guidest, and pardon me amongst those whom Thou pardonest, and care for me amongst those for whom Thou carest and bless me with what Thou distributest, and protect me from the evil that Thou has decided upon; for Thou decidest, and none decides about Thou. Disgrace will never come upon Him for whom Thou carest. Thou art blessed and exalted, O our Lord" (Tirmīzī, Wīsī, bāb 10). The same formula is found as an introit in the *jālat al-far‘ād* in Nāwawī, Mīṣāḥī, ed. von der Berg b. 83. 455 sq.; Lane, Lexicon, s. v. *jālat*, who gives another.

**KUNYA (A*), properly meaning a metonymical appellation, is however also the technical term for the name of a man (or also of a woman) after his eldest son, i.e. Abū... a name which is omitted from very few Arab personal names (cf. also Lazzān) and in many cases is even the only one known to us. The origin of the custom lies in the value placed by Semitic peoples upon children, especially sons; which again points to the importance placed on the punishments or performance of funeral rites, a duty that was incumbent on the eldest son in particular. There is negative evidence of the connection between the kunya and funeral rites in the fact that slaves as a rule had no kunya and that they, when not adopted into the family, were buried without ceremonies.

In Arabic literature the kunya; if not absolutely a title of honour, is at least regularly thought more highly of than the simple name. According to the *Li‘ād, s. v. the champion who challenged to single combat between the hostile armies called himself by his kunya. When a warrior is appealed to for help by his clan, he is called by his kunya (Kais b. al-Khajām, ed. Komhākh, Leipzig 1914, fragment, 19, l. 38). 'Alīga said on one occasion to Muḥammad: "All my wives have a kunya but I alone have none". Theason he replied: "Assume the kunya Umma Abū Allāh!" (Abū Hāshim al-Masīh, b. 151). From the tradition, otherwise unknown—that childless people could have a kunya. In other cases it did not express paternity but some other characteristic. Abū Khalīda [q.v.] "the bear of the kitter" has said to have received this kunya from his kindness to cats. History does not record why the first Caliph was called "Father of the Camel-fool". The Abu of the kunya often indicates a physical peculiarity e.g. Abū Shāma, "he with the birthmark". In other cases the kunya is given in humorous or good-natured mockery e.g. Abū al-‘Ālavī [q.v.], Abū Laḥab [q.v.]. Finally we may note the many geographical names in the form of a kunya e.g. Abū Simbel [q.v.], Abū Kubās [q.v.], Abū Hubbāb [q.v.], Abū Arūb [q.v.].

In the Oriental dictionaries of all kinds, the kunya are usually classed together in a group. There are also dictionaries which deal exclusively with kunyas.

(A. J. Wensinck)

**KUR, Russian Kura, in the Arab geographers *Awr*, the largest river in the *Caucasus* over 600 miles in length, according to Ḥamād al-Abharī [Sibat al-Kutub, G.M.S., xxii, L, p. 218] 400 barrakhs, Ḥanāfī [G. D. G., l. 199] describes the Kur as navigable and full of fish; even at the present day very little would require to be done to make the river accessible to modern steamers from Mingeche (a little below the mouth of the Alazan) to the Caspian Sea. The Araxes, regarded as a separate river in ancient times, always appears in Muslim sources as a tributary of the Kur. According to Ḥamād al-Abharī (op. cit.), the Kur in these days in addition to its mouth in the Caspian Sea also sent a branch out which flowed into the Sea (‘a‘alba) of Shamlūt. This statement (only found here) must be due to a misunderstanding. In Ḥamād al-Abharī there is no reference to any such sea. He only mentions the town of Shamlūt (Ruus, Shamilu), two barrakhs from Gandja on the road to Tiflis (op. cit., p. 181 sqq.), which in his day as now. The navigation of the Kur has only once played a part in political history, at the destruction of the town of Bardja’s by the Russians in the year 1822 (943/944). In addition to the reference to this event given under the article BARDJA see D. S. Margoliouth, The Russian Conquest of Bardja in 1923-1926, vol. xxvi, p. 53 sqq.)

(W. Barthold)
KURÄ, the sphere. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodorus. They also dealt with certain principles of spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (\( \text{ṣābīl al-ḥathf} \)), the principle of the four magnitudes (\( \text{al-ṣābīl al-ṣawghaṭ} \)) and the principle of the shadow, i.e., of the tangent (\( \text{al-ṣābīl al-tāṭ} \)) following Menelaus and Ptolemy. (On the translations cf. M. Stein- schneider in Z. D. M. G., 1896, p. 161 sqq.; the mathematical principles are discussed by H. Bürger and K. Kohl, Axel Bissenze Zürich Wies über den Transversalensatz in Abhandl. zur Gesch. der Naturwissenschaften und Medizin, 1923, part 7, p. 1–91; references are given there to the earlier literature also.)

2. Al-Kura al-ḥabīb al-kurīb (the globe with the eye) is used in two senses:

a) The globe of the heavens (instead of al-kura) we also find al-ḥabīb in this sense, the egg, e.g., in Mafṣūḥāt al-Ṭālīm, p. 235, in al-Battānī, Oepa Astronomica, ed. C. A. Nallino, 1913, p. 478; cf. E. Wiedemann, Brit. iii, S. B. M. S., Elyt., 1903, xxvii, p. 239 sqq.). The constellations are pointed on a globe. It is placed in a ring which stands on 3 or 4 legs. Such globes have been prepared and described perhaps as early as by Hipparchus, at any rate by Ptolemy. Ptolemy's description is given in the Arabic translations of the Almagest and in separate treatises. One such globe, erroneously ascribed to Ptolemy, was seen in Cairo in 1843 (1043/1044) by Ibn al-Sindibad (cf. Ibn al-KHWARī, p. 440). The globes were made of wood covered with paper with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. Al-Ḥabīb al-Ṭālīnī al-Taʾārīf used a gilt wooden globe (Alu. l-Faqīh, Annals, ed. Reiske, iv, 479, H. Suter, No. 352). The making of such globes and the errors that occur in them have been fully discussed by al-Bīrūnī (Beiträge zur Gesch. der Mathematik, etc. in Abhandl. zur Gesch. der Naturwissenschaften, and Medizin, part 4, 1924, p. 79–93; cf. also H. Schmoller, ibid., in a later part).

The astronomical instrument prepared by al-Ḳura for King Roger was apparently an armillary sphere.

3. Al-Kura al-muḥāfera, the burning-glass (lit. the strongly burning globe). Even the ancients knew the property possessed by rock crystal and glass globes of concentrating light falling upon them, on one point and setting a light and inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Haytham and Kamāl al-Dīn al-Farīd investigated this theory very brilliantly. Ibn al-Haytham starts from the values given in a table of Ptolemy and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling upon a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe at different distances from the axis drawn between the sun and the centre of the ball. He proved that after refraction they all meet at the same point, set in the opposite surface of the globe, in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority however meet at a point distant less than half the radius of the ball, this is the burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon it and looked at through the front of the ball remarkable figures are seen; these were also studied very fully by Ibn al-Haytham. Ibn al-Dīn; they were able even then to reach the same results as Schellbach at a later date.

(E. Wiedemann)

KURĀ (A.), "lot, drawing lots" is regarded by the lexicographers as a synonym of ṭuḥbār, just as most verbal stems of the root ṭ-ṭ-ṭ- are equated to those from s-s-s. The reason for this is that lots were cast in pre-Islamic times with arrows (ṣabān). Muhammad, it is true, forbade drawing lots with arrows as a means of prophesying and as a game of chance (Sunna, 210 ; v. 92), but this prohibition is in turn much limited by two other passages in the Kurā in which drawing lots is described as at least permitted (Sunna, 110).
EINLITT. IN DER STADTATH W. ARAB. SPRACHE, BONN 1864, S. 154 ff.). But, from the fact that arrows were not used, and especially because the well-known legal term Cơ's for permitted decision by lots was transferred to this really illegal form of casting lots, it looked as if with the alteration in the name of this kind of fortune-telling the thing itself had been altered, especially as quotations from the Qur'an and the citing of names of the prophets were used to give it an appearance of sanction.

The Qur'an is still one of the most usual methods of consulting the fates, especially in the Arabic-speaking parts of the world of Islam. Along with the still more common augury by pricking (Jaf) and by drawing an arrow (lāri) it is to be regarded as an augury from dice, inasmuch as in the Qur'an the starting-point is almost always numbers or letters, which are obtained either directly by throwing dice or in a similar way. According to the way in which this number is obtained or the course taken from this number to the oracle, finally uttered in the form of verses, three different literary forms of the Qur'an are distinguished: 1) Qur'an al-Jaf al-Fā'iy (this should be read for Jāmā'iy in Alwand, iii, 567) which is traced to Lu'r al-Sājdī, has most clearly retained the character of an augury from dice, inasmuch as in it a definite poetical interpretation corresponds to each of the possible combinations of three letters of the dice. It is to this variety of Qur'an that the definition of "science of drawing lots" given by Hāfṣ al-Kullāt seems to refer (ed. Flügel, p. 573, no. 941-2). 2) The Qur'an al-Astwā' (or Qur'an al-'Aṣwā') is the simplest form, as in it the answer is given according to which of the names of the prophets the figure falls upon. The most detailed and complicated, but for this very reason the most popular form, which is traced to the Caliph Ma'mūn is 3) Qur'an al-Ma'mūtawwā', which begins with a number of questions out of the daily life of men written in separate circles out of which the one concerned has to be chosen. But before the oracle delivered in verse is learned from the mouth of a king, one has to run through a series of figures which include constellations and birds of fate and end in towns (hence also called Qur'an al-ma'ad al-wā'ī or Qur'an al-'Aṣwā'). This kind of Qur'an offered the greatest scope for the imagination for the allocation and variations; it is just in this account however that it has almost completely lost any character of fortune-telling but looks more like a harmless and entertaining game. This also explains why the word Qur'an in popular usage ultimately came to be used by an erroneous generalisation for all kinds of oracles (e.g. Qur'an al-Ramal in Persia, Gotha, No. 73, s. and Qur'an al-Tawāghī al-Full wa ٕ-Qawṣ al-Fi 'Im al-Ramal' in the Cairo Catalogue, p. 350 sq.).

Although the last kind of Qur'an in particular seems to be comparatively modern — the oldest manuscript only dates from the 8th century A.H. — the idea that there is old material in it, dating back to Hellenistic times, is not to be dismissed offhand. The reference in the Pharasmapr (p. 154, 21) to Greek authors and the fragments of Greek books of fate that have survived from the period of the Diadochi, which contain almost word for word the same answers as the Arabic books now in use make such a supposition very probable.

The importance of the Arabic Qur'an's
for similar literature in the west has been exaggerated, it is certain that the Arabs had a not inconsiderable influence on the Hebrew books of fate and either through these or directly in an antiquated European books of fate.

KURAIHYA: There are a few works lithographed by Doubor, but the bulk of Kuraiya's literature is in manuscripts. In addition to the catalogues printed down to the middle of the 19th century which were used by Flügel in his Lobiische der Muhammadanen, Leipzig 1861, the following three catalogues may be mentioned: Ahwardt, Berlin, ii, No. 4325—4244; Pirsch, Gotha, No. 34, p. 3, ed. 1304, 109, 10; de Slane, Paris, Nos. 2637—2641, 2706, 2715, 3758; Ibn Sula, Mekkah, 8th, 22; Bukhari, ed. Kohn, ii, p. 163 (Bib al-Kuraiya 1/1); Mubarak, Zarqal, ibid., 1304, iv, 413 sq.; Mihâl, ed. v. d. Berg, iii, 119 sq., 324; ii, 324, 404 sq., iii, 99 sq., 102, 122 sq., 379, 395 sq., 404, 461 sq.; Mergoulâ, al-Huda, Calcutta, 1838, p. 833 sq.; (Hajj 1/1 Koraiyya); Das Huda, transl. Ch. Hamilton, ed. v. d. Berg, 1839, p. 505 sq.; Doubor, Magi et religion dans l'Afrique du Nord, Algiers 1900, p. 375 sq.; Stein, Die hebräischen Übersetzungen, Berlin 1905, ii, § 328, 533; Bolte, Zur Geschichte der Leibacher (appendix to: Georg Wicke's Werk, ed. by J. Bolte, i, 1903, p. 276—349); Bolte, Zur Geschichte der Sufiker und Leibacher (in Zukunft's Gesch. Vollkunde, 1, Berlin 1925, p. 185—214). (G. WEIL)

KURAIHYA, the name of a group of the Kaysaniya [q.v.]. This reading of the name is probably to be assumed in Al-Sharqi's Mafahit al-islamiyyum (without diacritical points in the MS. mentioned below) and is also found in 'Abd al-Kâhir al-Qâmil, the author of the Mafahit al-Islâm has Kuraiyya as have 'Abd al-Kâhir al-Baghdadi, Abu l-Maula and Al-Mahri. In favour of the former reading is also the form al-Kuraiyya (transl. KURAIHYA) given by Fethah b. Tahir al-Maqrizi, which may be due to a corruption of the text. This group is said to be called after a certain otherwise unknown Abu Kuraiy (in Al-Sharqi without diacritical points; in 'Abd al-Kâhir al-Qâmil, in the printed text as well as in the Leyden MS, of 331, 6th. I, 9; Ibn Kuraiyya; al-Khwarizmi, al-Baghdadi, Abu l-Maula and Al-Mahri; Abu Kuraiyya; Fethah b. Tahir al-Maqrizi; Abu l-Kuraiyya; al-Darri). It was probably he who spread the Messianic views regarding Muhammad b. al-Hajfriyya [q.v.], which are characteristic of the Kuraiyya. The name of Abu l-Kuraiyya is therefore to be placed in the period after the death of Abu l-Husayn (probably in 81—790).

According to Al-Sharqi, the Kuraiyya believed that their imam, Muhammad b. al-Hajfriyya, was still alive and was living in the mountains of Raŷa [q.v.] west of Medina, with a lim on his right hand and a leprosy on his left, guarding him, while his food came to him morning and evening, until the time for him to appear again. In their view the reason why the imam was kept hidden in this way was that Allah had a special plan for him. Al-Baghdadi describes his stay in Raŷa in similar terms: knowing in him, there was a spring of water and another of honey beside the imam, which provided his daily food. Al-Sharri and al-Mansur b. lillah 'Abd Allah b. Hamra (cfr. id. al-Thamin, B. M. MS. Or. 3976, l. 89 infra) also mention this, without referring explicitly to the Kuraiyya. The last-named author also mentions the idea that the imam holds intercourse with the angels in Raŷa (as does Ibn Hamra) and that in his concealment he is considered the "eye of Allah watching over his creatures". Most of these traits go back to older Meccan ideas. They are nearly all found in verses by Khayyami [q.v.], and al-Sharri b. al-Jumayri (cfr. al-Ash'arî, viii, 82, 83; viii, 39, 40 infra) from whom the writers on heretical sects seem to have taken their information.

Al-Sharqi mentions Khayyami as a champion of the views of the Kuraiyya and quotes the same verses by him as al-Baghâdadî (p. 25, 26 sq.) and al-Sharri (cfr. also al-Ash'arî, viii, 31, 4).
Mekhānīs gained predominance over the other families through their wealth and influence. The ten clans, begun by occupying the centre of the town, the bottom of the valley al-Ḥamīl, into which issued the water of Zāmūn, the hollow in which stood the little house of the Kāsba. This gained them the name of *Abūṭālī, Bīṭālī* or *Kurāțī al-Bīṭālī*. They kept it even after the impoverished clans like the Ḥāṣib, had had to abandon this central position which was considered the quarter of the Kurāțī aristocracy.

The *Kurāțī al-Ẓāhirī* were held in much less esteem. The *Ẓāhirī* or suburbs of the town and the allāḥ ravines of the hills which surrounded it, were left to the Beduins, to foreign camp-followers and to the bedouins. It seems that the "Kurāțī of the suburbs" were mixed with these foreign elements. As regards bravery, they were creditably distinguished from their fellow-tribemen of the *Ṣafī*. They provided the Meccan republic with its bravest soldiers and never failed to make the most of it. The main occupation of every one in the centre as well as in the suburbs was trade. They were "merchants": this phrase reappears with monotonous regularity in the notices of the more illustrious Kurāțī.

The *Ṣafī* and *Ḥāṣib* preserve the memory of several confederations (aḥāl) or secondary groupings formed among the principal clans of the Kurāțī. They have been discussed in the article *Ṣafī*. The *Ḥāṣib* *al-Ṣāfī* seem to be associated with a historical event of which the Meccan chroniclers have exaggerated the importance. This fact must date from the last years of the sixth century, since the Prophet in his youth was present at its conclusion and never failed in consequence to recall it, "the most glorious which history records" (ibn Sa'd, Taḥāfūt, ed. Sachau, i. 32).

Outside of Tihmā, the Kurāțī seem to have had trading colonies at Tāḥā, Durrāsh, Nashān, stages on the road to the ports of the Indian Ocean. Much the most important of these was Taʾīf [q.v.] in the mountains of Sawīt. It was a country resort for the rich bankers of the Kurāțī, who acquired country houses and farms there.

If we examine orthodox tradition, the Beduins before the Hijrī are represented as never missing an opportunity to strengthen the political and religious supremacy of the Kurāțī. The latter was practically guaranteed to them by the possession of the Kaʿba, a kind of national sanctuary and centre of an annual pilgrimage for the western half of the Peninsula. The Christian Arabs themselves do not seem to have entirely escaped this religious influence. The prerogative of ḥalāl was not disputed to the Kurāțī. They owe to it the fact that they were able, in spite of their small numbers and their barren territory, to exercise a kind of spiritual supremacy among the jealous Beduins. It is again the ḥalāl, as we shall see, which explains their glorious destinies on the vast theatre on which the sudden expansion of Islam was seen to play their part in the re-creation of the equilibrium of the intellectual faculties, all intent on the business of life in the neglect of scientific speculation. Nothing is more common than the mention of this ruling quality in the notices of the notables of the Kurāțī. This prerogative, which in the opinion of Arab historians, was born to govern, has even been said to have been proclaimed by the Prophet. *"A Kurāțī", he said,*
"is worth two men of any other tribe". And according to al-Zuhri [q.v.], himself a Kuraish, this saying referred to their sensibilities "the rare quality of their intelligence". In them the Beduins admired the diplomatic ability, the style of speaking, the ready rejoinders always a propin, the precision of their advice. They were able to condense into a few telling sentences, which the Beduins as a rule would recapitulate in his usual prolixity. The purity of their dialect was less generally granted. It was Iltan and in particular the influence of the Kuraish which gained the Meccan dialect its triumph over its rivals in Najd, although the latter had been refined and perfected by several generations of poets.

Although they did not love them, the nomads felt for the Kuraish that respect which is inspired in the inferior for the prestige of a superior organisation, capital and the possession of great wealth. In Mecca alone were the Beduins familiar with the idea — rudimentary, it is true, of a form of government and political solidarity concepts foreign to their individualist mentality, and it impressed them by its novelty. But it is this intellectual superiority which impressed them more than they would have cared to acknowledge, the Beduins declined to acknowledge poetic talent, which they claimed as a monopoly of the nomads. They placed the Kuraish, thyme fairer than those of Taif and particularly of Medina, not to speak of the poets of Najd and not without justice. We know no poet of Mecca before the Hijra whose name is worthy of record. The Kuraish had for the first time in the person of 'Umar b. Abi Rab'ah [q.v.] a poet worthy of a place in the Arab Farnamna already quite crowded. The Beduins did not like the exclusiveness of the Kuraish and the control they exercised over their everyday life. Acting as guides, and convoying to Meccan caravans, and in debt to the financiers of Mecca, they alleged he were exploited by themselves the "sharks" of the Kuraish. It is the eternal complaint that divides capital and labour everywhere. Their grievances united them in the contempt they professed to feel for this corporation of merchants, cowardly and aversive. Their poet's boast of having pierced the winekins, then broke the skulls of these greedy haggler, "sisters of pollenta" (raddaba), the favourite dish of the Meccans. They boasted of being able to humble the pride of the Kuraish, proud in the shadow of their sovereignty, trembling with fear outside the sacred territory. The Meccan custom of relying on the bravery of the "Abjajb" and other Beduin mercenaries, of sending them to fight for them was not calculated to raise them in the esteem of the nomads and a quarter of a century after the death of the Prophet, we still find the Arabs refusing to allow the Kuraish the virtue of bravery.

We may put to the credit of Muslim tradition the story of the general supremacy of the Kuraish being accepted without demur by the Arabs before the Hijra. This legend was put about to make the seizure of the caliphate by the Kuraish appear less shocking. Considering the individuality and mentality of the Beduin, it may have been rather a question of moral supremacy. Did it extend much beyond the frontier of the Hijra? The Kuraish - possessing pasture on both sides of the common frontier could not escape this supremacy. Since the decline of the Himyaric principalities, Mecca had become the largest and most powerful city of western Arabia. The spectacle of this power solidly based on a close alliance of economic and religious interests could not fail to impress the Beduins, who were intelligent observers and very susceptible to the prestige and influence of the capital.

The activities of the ancient Kuraish consisted as we have seen of commercial and financial speculations within and beyond Arabia. In the article MECCA we describe the trade-routes that ran to it, and the agreements concluded by its people with their neighbours in Arabia and foreign countries; next we examine the form of government, the part played by capital and lastly the organisation of the great caravans on which the prosperity of the Kuraish metropolis depended. The reader may be here referred to this article.

II. After the Hijra. With the preaching of Muhammad the story of the Kuraish becomes practically that of Islam. The two histories become one. The Kuraish does not discriminate between them.

On the other hand, after the death of the Prophet, the destinies of the Kuraish were divided independently of those of Mecca. After having bitterly opposed the new religion, the Kuraish nobility gained control of it as being in their best interests. The first eight years of the Hijra were filled with fighting with the Prophet, who had taken refuge in Medina. In the year 4 (al-jahili), the surrender of Mecca without a blow being struck put an end to the institutions by which the tribe had hitherto been governed and brought about its break up and dispersal throughout the Arab world. To the casual observer, nothing seemed to have changed. In reality Mecca had lost its autonomy; it was now politically dependent on Medina and governed by an agent of the Prophet. The Kuraish were under no obligations. The exodus began; the principal families gave the signal for it and came to settle in Medina, which had become the capital of Islam, because Muhammad was there.

The death of the Prophet raised the problem of his successor, the question of the caliphate. Two illustrious Kuraish, 'Abd Bakr and 'Umar seem to have foreseen this eventuality and to have been prepared for it. Upon whom was the political guidance of Islam to fall? Muhammad had left no stipulations on the subject. But his constant partiality for his fellow-citizens, who had fled from Mecca, had aroused the protests of the Ansar, which are preserved in the poems of Husain b. Thabit [q.v.]; there seems no reason to doubt that if death had not suddenly taken him, if he had thought it prudent to express his opinion, it would have been to the "enemies" of the Kuraish in preference to the Ansar that he would have entrusted the destinies of Islam. Throughout his career as a prophet, he had never ceased to proclaim himself a true Kuraish. In spite of the Hijra, in spite of the ensuing rupture and the eight years of war with Mecca, he never for a moment thought of linking his cause with the fortunes of Medina. If this idea had arisen in his very susceptible mind, he would not have been long in rejecting it, when he saw the political incapacity of the Ansar and their lack of preparation. As if he wished to suggest...
to them the superiority of the Kaurish; the Prophet made the Mešinim turn in prayer towards Mecca, the sacred city of Islam and made its conquest a task for the zealous converts.

That the Kaurish had the exclusive right to this succession must have been the attitude adopted by Abū Bakr and 'Omar before the Ansār assembléd in the sāyya of the Banū Sā'īda. What we can gather from the arguments put in the mouth of Abū Bakr is that, speaking in the name of the Kaurish refugees, he insisted upon the priority in adopting Islam, the superiority of their noble blood, their prestige with the Arabs and their relationship to the Prophet. From these premises, the speaker thought he could deduce that his fellow tribesmen had a monopoly of the supreme power. He concluded by proposing a division to the Ansār: "Let us have the duties of an awn and you those of a viner". But after having appealed to the Kur'ān (ix. 101) where the supremacy of the Kaurish is said to be implied, why was an explicit decision of the Prophet not put forward? One would have sufficed instead of all this rhetoric. For a childlike people like the Ansār, accustomed for ten years to anticipate the slightest wish of Muhammad, his will would have finished the debate. If Abū Bakr did not pronounce this word, if, much of his audience appealed to it, we must believe there was no such decision.

The Qur’ān itself has taken this into account when it tried to collect all the pronouncements possible ascribed to Muhammad and all recorded by the Sahih. Let us quote the most characteristic of these traditions: "The Kaurish are the heads of this government", "The Imāms are Kaurish." "Power will remain with the Kaurish so long as two Muslims exist", "The kingship (sulṭān) — and still more explicitly — the caliphate remains in the Kaurish", In the last sentence we have the classical formula as approved by the Shāfī’ī and accepted by all orthodox traditions. The latter however had not dared appeal to the Kur'ān. This book simply makes no reference to the Kaurish monopoly. In reply to the verses quoted in their name, the Meccans, the Ansār rudely quoted a multitude of others, pronouncing their unfitness and faithlessness of all the Ansār rival.

It cannot however be denied that the Prophet had a preference for the Kaurish nor that he had a low opinion of the fitnass of the Ansār for governing. But he was too wise to give voice to such sentiments. He knew too well the causes of dimension that were already at work in the young community to do anything to make matters worse. In the course of his wars with the Meccans, he had let drop remarks like the following: "In good as in evil, the Kaurish are always in the first rank". It is by recording exactly such utterance, and giving them a political significance, which they did not really have, that tradition has formulated šadiqun unseemingly reserving the caliphate for the Ansār. If they had the slightest knowledge of him, the Ansār would not have been able to dispute the Kaurish monopoly nor to propose to Abū Bakr to recognise it on condition that the supreme dignity was held alternately by a Meccan and a Medinah.

This seems also to be the conclusion to be deduced from the attitude of the Khiran. If in the first century of the Hijrā, we want to find strict and logical believers, placing Islam above caste prejudices and ambitions, we have to look for them in the ranks of these dissenters. Their implacable logic never ceased to protest against the privileges claimed by the Kaurish and to give more weight to their protests, they gave themselves caliphic choices from different Arab tribes.

Although they did not hold the same view as the Khiran, the 'Alīfis and Shī'as came inevitably to the same conclusion. This is how in the first century a.h., their most authorised interpreter, Kurrān (iv. v.), argued the claims of the 'Alīfis; if contrary to the Shi'as the supremacy of the Ansār in Islam is no longer the exclusive privilege of the family of the Prophet, it ought to become the common patrimony of all the Arab tribes, not only of Meccan but also of Rāsī and Yemen and above all of the Ansār. These extreme legitimists therefore were ignorant of the alleged veto laid by Muhammad and non-Kaurish.

The creation and monopoly of the Kaurish, the caliphate — while greatly benefiting the Kaurish individually — only served to precipitate the break up and dispersal of the tribe, a phenomenon, the beginnings of which we have already seen just after the fāṣ (8 a.h.). Their cohesion and the prosperity of the capital Mecca were mortally wounded. Now in a quite unsuspected fashion, at least for the Bedouins, the conquests of Islam upset all the economic conditions of Western Arabia. The direct route from India via Mesopotamia was opened up again by the reunion under one rule of the valley and mouth of the Euphrates, and international trade avoided the difficult detour by the Arabian desert. Nothing could be less like the Mecca of Abū Sufyān than that of the Caliph 'Omar. The continental blockade, established by the Prophet after the battle of Badr, was slackened; then his death suddenly stopped business going to Mecca. One after another the neighbouring kings, e.g. that of Qāqā were suppressed — at least there is no further mention of them after the fāṣ of Mecca. Deserted by commerce, the barren valley of Mecca, a strange place in a world where springs of bare hills, could not maintain its former inhabitants, all brokers, caravaneers and traders for generations past. Gradually shops and offices closed and their owners came to Medina, now the capital of the caliphate, to rejoin their fellow-citizens who had made new positions for themselves there. The old Kaurish had foresaw this decline. They had talked of it to Muhammad when their ardent fellow-townsmen had urged them to adopt Islam. These shrill conservatives were reluctant to upset the religious and social institutions to which they were attached. The prosperity of their town, the Alīfis will not fail to provide", the Prophet replied, "He will furnish them ample compensation; he will enrich them of His abundance when He thinks the time has come" (Kur'an xx. 28; xlvii. 77.): Among the less prominent Kaurish families a small number were ready to avoid the promised calamity by taking the position on the spot. Apart from the period of the annual pilgrimage, the town did not begin really to revive until the day when under the Omayyads the Kaurish officials, enriched by the exploitation of the country, came to enjoy their retirement in Mecca, spent their wealth there and as a result attracted thither poets and musicians whose presence was to turn the sacred city into a city of pleasure.
But the attraction exercised by the new capital in Medina was not at first very great. After the election of Abi Bakr, the old members of the Dā'im al-Nadwa or grand council of the Kūraish rejected the udział, the official merchant of Mecca. They under stood the necessity of becoming reconciled to the old friends of the Prophet and to the arbiters of power, while waiting the time when they could supplant those nobles in the art of ruling. The reiterated appeals of the Kurāsh to emigrate in the direction of Allāh and his Prophet, had for long fallen on deaf ears. It required the revolution, the economic crisis produced by the triumph of Islam and the prospect, depressing to business men of “eating their capital” by letting it lie unproductive in their strong boxes. This prospect led them to discover the economic advantages and the spiritual merits of the Hijāz, the migration of the Muslims. But those “emigrants” of the eleventh hour were not destined to find a suitable milieu for their business enterprise among the Afghans. The Ommiyah and Khāshishī Makhzūmīs did not succeed in setting up their offices once more in the oasis of Yathrib. The future had something better in store for them.

This was the period of the conquests which by opening up the eastern provinces to them was to introduce them to a stage of new and manifold activities. Henceforth they were to command armies, to govern provinces and for several centuries, to rule the whole Arab empire. One marvels at the number of remarkable men who sprang from this city of shop-keepers and tried their skill in careers hitherto unknown to them, such as governors and generals. What is no less surprising than the novelty of these roles is the spiritual ascension of character with which they filled them—and this prevents us from regarding the Kurāsh founders of the caliphate as mere novices. The fact is that for them, commerce on a large scale as it had been practised in Mecca before the Hijāz had been for them a long preparation for a political career.

When therefore Muhammad thought of entrusting the destinies of Islam to them, his patriotism had not exaggerated the capacity of his fellow-citizens. He had the ability to foresee that the prestige of Mecca, the influence which it had exerted in the centuries before Islam, had gone to give the Meccans intellectual predominance. But the period of the conquests, the Kurāsh had completed their education. It was to fit them to govern the Arabs, at a time when the latter were dominating the world. They ceased to be Meccans but they remained Kurāsh.” (Wellhausen, Recht arabischen Heidentums, p. 94).

This brings us to say that after the creation of the caliphate, the history of the tribe of Kūraish is separate from that of the town of Mecca. It develops at first in Medina, which by the first century A. H. had become a Kūraish town, and then beyond Arabia, in Syria, Damascus, Bagdad and in the conquered provinces. The history of the Kūraish is that of the Kūraish. The Kūraish becomes merged in that of the Ommiyah, of the various families of Shāfi’i or descendants of Muhammad. On the prince lines, those descended from Abi Bakr and the Alī, after the overthrow of the Alīid caliphate in the first century, alone returned to Arabia, to settle, not in Mecca but in Medina. They founded there several Ḥashimi families, among others the descendants of Ujabar b. Abi Talib [q. v.]. The Ḥasanids were the stock from which descended the dynasty of Grand Sharifs of Mecca. The Ḥasanids held for some time the amanu of Medina. Another ‘Alid dynasty, that of the Zaidids, derived from Zaid, grandson of Ḥasan b. ‘Alī, is still ruling in Yemen. All these ‘Alid families soon multiplied enormously within and beyond Arabia. They produced the innumerable Sharifs who filled the Muslim world. In Arabia some returned to the nomadic life and there we have the spectacle of Ḥasanid sharifs leading bands of brigands, and infesting the main routes.

In the ninth century A. D. the Spanish traveller Ibn Dhu’ayr (Rīḍālī, ed. Wyld, p. 73—74) testifies to the great number of Ḥasanids, Ḥasanids and Dji’sālids scattered over the Hijāz, as well to the depth of poverty into which many of them had sunk. Even before this time, (if we may believe a text quoted by Sponck Hurgronje (Mohammed, I. 42) we would have to admit that as a result of the continual revolts of the ‘Alids and the rigorous measures they provoked against them, the Kurāsh element in the population of Mecca had been practically exterminated. Yathrib (Kūrāsh al-Maktūl, ed. de Goeje, p. 327) who disregarded everywhere in Syria the presence of Arab tribes native to Southern Lebanon, towards Sa’idah, a Kurāsh group, but does not mention whether it was important or not. The geographer Humādī mentions others in Najd, at Tabālis and at other parts of the Yemen. Those of Ḥaḍirān were renowned for their bravery (Dīvar al-Arāb, ed. H. Müller, p. 119, 122, 165, 194, 338). Among the tribes settled in the east of Mecca, Burchardt (Reise in Arabien, transl. Eyre, iii. 307) mentions Kūraish. According to him: "of this famous tribe there are only left 300 men capable of bearing arms. In spite of their great name and ancient time, they are little thought of by the other Bedawins. They camp in the neighbourhood of Mount ‘Arafah." At the present day, apart from the Sharifs, as regards true Kurāsh, we find only the Sajjadi at Mecca, the guardians from time immemorial of the keys of the Ka’ba, at least if we do not accept their problematical descent from the anti-caliph ‘Abdallah b. Zubair [q. v.].

Bibliography. This is given in the article MECCA.

(H. LAMMENS)

KUARASH b. BADRĀN, ‘ALIM AL-DIN ABDUL MA’DJÍ, ITUB U’THA‘IJD. After the death of Badrān in 425 (1033/1034) Kurāsh was recognised as lord of Najīb. In the struggle between his two sons, Kurāsh [q. v.] and Abi Kamil, he took the former’s part. After the death of Abi Kamil in 444 (1052) al-Makrīnī joined the ‘Alids united under the rule of Kurāsh. Soon afterwards 444 (1052/1053) he became involved in a war with his brother al-Makrīnī and another ‘Ukālid, Kamil. The war did not last long and the situation remained unchanged. In 452 (1054/1055) Kurāsh recaptured the town of al-Anbar, which really belonged to the ‘Ukālids but had been seized in Kurāsh’s time by al-Baṣṣārī [q. v.], governor of Bagdad, and had the Śāhiyān road there in the name of the Sāliḥī Toghibi. In the 5th Hijājī of the same year however al-Baṣṣārī advanced on al-Anbar and laid siege to the town, which very soon surrendered to him. When Toghibi entered Bagdad 457 (1055) al-Baṣṣārī left the capital, but when he
In Muhammad's communal constitution they, like the other Jewish tribes, are not mentioned by name, but appear only as allies of different sections of the Awa (Art. 25, 30, 31 and 47). Their attitude towards the Prophet was hostile from the first, like that of the other Jews (see above: article XY in, and p. Ith. in Higham, p. 352, a list of Muhammad's Kuraizi enemies), but no definite break took place until the siege of Medina (Hujjotul-Ka'da, 5 A.H.), when the Kuraiza, who in the beginning had contributed spades and baskets and digging of the trench, withdrew their support. According to tradition Huyay ibn Abjad, sent by Abu Sufyan, had succeeded in gaining the support of their chief, Ka'b ibn Asad, despite a written treaty of alliance with Muhammad. The Prophet sent Sa'd ibn Mu'awil, Sa'd ibn 'Ubaids and two others to ascertain their attitude; they returned after a stormy interview, confirming the Kuraiza's defection.

This affair seems to have been planned, an attack on Medina, together with the Kuraiza and Ghatafan; it was not executed through lack of mutual confidence, and their only exploit was an unsuccessful night-expedition of eleven men. Having failed to reach an agreement with the Kuraiza, who refused to give them hostages in exchange for military support, the Kuraiza finally abandoned the campaign, thus hastening its end.

This traditional version is open to many doubts: the existence of a particular treaty with Muhammad does not seem plausible, as his relations with the Kuraiza were already defined by the communal constitution, it was probably invented to justify the action taken against them. Their support of the Kuraiza appears to have been of a purely negative character, on the other hand it is easy to see how the important position they occupied on the side of the town not defended by the trench practically put Medina at their mercy. One of the fortresses incorporated in the line of defence, Rattid, belonged to Jews (tribe unknown), and formed a dangerous weak point in the Muslims' position. All these circumstances caused much anxiety and hatred of the Jews during the siege, suggesting immediate action against them: on the very day of the Kuraiza's departure Muhammad was ordered by Gabriel not to lay down arms until he had punished the Kuraiza; the siege of their fortresses began the same evening (23rd Hujjotul-Ka'da), and lasted 15 or 25 days, with an active exchange of arrows, stones and strong language, but no casualties.

Having at last decided to surrender, the Kuraiza asked for the same conditions as obtained by the Banu 'Amr, but were told they must yield without condition, giving up all they possessed. They turned to their ally and protector Abu Lubaba b. 'Abd al-Mundhir, hoping through his intercession to emigrate, but he gave them to understand that the situation was desperate, and that inevitable surrender would be followed by destruction. His reputation for having revealed to them their lot, seems to show that Muhammad did not intend the Kuraiza to ignorant how they would be treated; the Prophet's conduct at that occasion is far from being clear, and certainly not blameless.

Having surrendered without attempting any resistance, the Kuraiza were separated from their women and children, and put under custody. The Awa interceded on their behalf, and obtained that
their fate should be decided by their own chief, Sędł Maqūdi; the latter, however, not daring to cross what he knew to be the Prophet's wishes, decreed that all males who had reached puberty should be slain and the women and children sold as slaves. On the march, most of the market-places, from 600 to 900 men were beheaded, the execution lasting all day. It is worthy of note that only four chose to save their lives by conversion.

The women and children were sold at auction, mostly in Madinah, the remaining in Syri Standard and in Najdūd, and the price divided in the usual way of spoils. Their land was partitioned into five portions: one went to Muhammad, and the various families, divided into four groups, drew lots for the rest. Among the captives Muhammad chose for himself Râbi'â' bint Zâhil al-Madārīyah. The exception of cruelly shown to the Kurâma, as compared with the other Jewish tribes, is due to the fact that they had remained alone and defenseless, and to their wandering, sedentary, and altogether unsavory behavior. This last circumstance makes it all the more probable that they ever took an active part in the hostilities against Madinah.

Several passages in the Qur'aan are referred to the Kurâma; see especially viii, 60 and xxi. 46–47.

For references to Bukhârî, Muslim, Ibn Hibbân, Abru Dâ'î, etc., see Wussick, A Handbook of Early Muhammadan Traditions, Leiden 1927, under Kurâma.

KURAMA, according to Radloff (Verzeichnis der Turc-Dialekte, St. Petersburg 1899, vol. ii, p. 324) "a Turkish tribe in Turkistan"; the same authority gives the Kirgiz (i.e. Kazak) word kourma (from kour, *to saw together pieces of cloth*) with the meaning "a blanket made of pieces of cloth sewn together." In another passage (Aus Sibirien, Leipzig 1895, l. 225) Radloff himself says that the Kurama are a "mixed people of Orgebs and Kirgis" and their name comes from the fact, asserted by the Kirgis, that "they are made up of patches from many tribes" (koura *patch together*). According to Radloff, the Kurama are "settled people" between Tashkent and Khodžánd, to be more accurate, on the river Angren (a corruption of Alexander) south of Tashkent. In Kazak sources we find it stated as early as 1875 that the Kurama first arose in the xvith century; the same view was put forward by Astolow (Zusammenhâng ist der kirgischen und türkischen Sproch, etc., St. Petersburg 1897, p. 112) and more recently by L. Zaráhin (Spisok narodnost Jukhskoj Inskosti, St. Petersburg 1925, p. 12). But as early as 1045 (1635–1636) in the description of the war between the Kazak and Orgebs on the Angren we find the "leaders of the Kurama" (kourman kourma) mentioned (Ma'udîl b. Wâlî, Bâdqe al-Kurma, Ind. Oif. 575, l. 1199). Under the rule of the Khân of Khodžánd in the sixteenth century the Kurama is used only as a geographical term and the name of an administrative division. The road from Khodžánd to Tashkent over the Kewâ'ir-Dawân pass was called the Kurama road (Ko-bî Kourma, e.g. T서비스 Shahjâhân, ed. Pantazou, Kâzan 1885, p. 238). The Kurama were ruled by a Bhâd who lived in the fortress of Kewâ'ir (in the written language Kewâ'ir; on Russian maps also Kewâ'ir). This use of the word Kurama was retained for some time under Russian rule. In the division of the territory (oblast) of Shâr-Darya into districts (uezd), what later (after 1886) became known as the "district of Tashkent" was called the "district of Kurama" (Kourmanîsky uezd). The centre of government of the district was intended to be the little town of Toï-Toïfe founded in the reign of Madâli Khan (1822–1842; cf. Khodjâno) (here are the ruins of a medieval fortress examined in 1885 by Professor Venevlevskiy); but the district headman (vezîdâly matâlâ) actually lived at Kewâ'ir on the Shâr-Darya. Under Russian as under Khodžánd rule the district of Kurama was of considerable economic importance as a centre of rice-growing. Russian ethnographers put the Kurama in a class by themselves as descendants of nomads. (Kirgis, i.e., Kazak) who have become agriculturalists (Sârta, q.v.). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

To this day this can be noticed among them; unlike the Sarts, the Kurama live, like the Kazak, in yurts; their wives, as with the Kazak are unveiled. In other respects however the Kurama have advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time Radloff and other students could still distinguish among them the divisions into families. According to Radloff there were five of these: Jâzirâ, Teûin (this name is still borne by a village inhabited by the Kurama), Tama, Džingabul, and Tavakk. This division is now quite lost; where traces of it still exist, marriages between members of one family are no longer — as among the Kazak — considered illegal. The fact that the Kurama are a mixed people can still be recognised; besides the mixture of different stocks among them there has been, according to Zaráhin (p. etc.) a mixture of different social ranks. The Kurama themselves do not use this name although they do with the addition of another ethnic (Kirgis-Kurama, Sârt-Kurama). The number of the Kurama in the district of Tashkent (formerly Kurama) was in 1917 52,335; in 1920: 49,697 (but in recent years there has of course been a decline in numbers of the population in Turkistan generally on account of the great famine). There are further some 9,339 Kurama in the district of Khodžánd. The word with the meaning of "mixed people" is also found in the area where Turkoman languages are spoken, but those Kurama have no connection to the Amurinskaya group.

Bibliography: [in addition to works mentioned above] Kustenko, Tavatnasksu Koura,
those help them, whom they had taken for "urabina" as gods to the exclusion of Allāh!" Here the word must be more or less synonymous with "gods". Probably it has a meaning which is connected with the Arabic "ṣābīl" (see below); the commentators take the same view and the word is explained as "mediators" (cf. the article "ṣābīl").

The word hardly seems to occur in classical Arabic. The "Lūʾa" manuscripts are strong enough: "The characteristic of the community (i.e. the Muslims) lies in the fact that their "ṣābīl" is their blood", i.e. that instead of sacrifice they have offered the blood of their martyrs. And the other: "The "ṣābīl" is the sacrifice of every pious man." We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual to the killing of an animal on the 10th Dhu 'l-Hijja and the whole celebration on this and the following "ṣābīl" days is called "Tī al-"ṣābīl" (cf. "Tī al-"ṣābīl"), in Turkish speaking countries "Kafrbin-"ṣam" (cf. "ṣam"").

In Christian-Arabic this word means the sacristy. — In conclusion it should be pointed out that there seems to be a genuine Arabic word "ṣābīl", plural "ṣābīs", which means the courtiers and councillors in immediate attendance on a king; the word probably comes directly from "ṣābīl" "to be near" (see above). (A. J. WENNING)

KUBUČA, Amīr Ṣāfī KAWA AL-TAWĀLĪ, lord of al-Mawālī. In the year 1598 by Tūtūn b. Alp Arūm, Bābā'īyyīk's uncle (q.v.), against the two rebellious governors Ağ Bahş and Braji was placed with the capture and execution of these two, the amīr Kūbūca who had been sent to their help by Bābā'īyyīk was also taken prisoner. After Tūtūn had his relatives beheaded on 27 Dhu al-Hijja 1098 (February 1985) (cf. BAKAYRA), Kubuca was released by his son Kūkāta, and with his brother Al-Bīrīkīī collected a band of adventurers and occupied Harrān. Muḥammad b. Muslim b. Kūrāyjī, lord of Nājdī nr. Tūtūn then appealed to him for help against his brother Ali who had been appointed governor of al-Mawālī by Tūtūn; Kūbūca made an alliance with Muḥammad but had him murdered after he had seized Ṣāfīr and set out against al-Mawālī, which Ali had to surrender after a long siege (Dhu Ṭa'ā' 1480 = Oct.-Nov. 1096). After the capture of al-Mawālī he disposed of his troublesome brother Al-Būṣūjaī and occupied al-Rahmānī. In 491 (1098) Bābā'īyyīk sent him with a large army to retake Anākīyā (q.v.) which had just been conquered by the Christians. Edessa, which had also just been taken from the Muslims, was besieged by Kūbūca on the way but he had to give up the siege and soon afterwards appeared before Anākīyā. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers: Kūbūca's own conduct is said to have contributed towards the disaster, as his arrogance irritated his commanders so that they only awaited a favourable opportunity to abandon him. In the battle between Bābā'īyyīk and his brother Muḥammad in Ṣubāḥ 493 (May-June 1100) which ended in the defeat of the former, Kūbūca commanded Bābā'īyyīk's left wing: in the following year he was sent to Ṣubaylībājīn. Here he conquered the greater part of the country but when he was nearing the town of Khuwāsī he fell ill and could not continue the campaign. He died in Dhu Ṭa'ā' 1483.
KURDISTAN, ‘land of the Kurds’. The name can be regarded from two points of view: historical and ethnographic.

1. From the historical point of view the term Kurdistan seems to have been invented by the Seldjukis as a name for the province including the lands between Adharvardjand and Kuristan (Senna, Daimawa, Hamadan, Kirmanshal etc.) as well as certain places still existing as parts of the west of Zagros (Shahrizor, Khujidjan-Ko-deh). The capital of the province of Kurdistan was at first Halka (N.E. of Hamadan) and later Sulahzabad of Camaqand (near Bursa). Its 16 cantons are enumerated by Hamil Mustawel, Nushat al-Khulaf (ed. Le Strange, p. 108).

This author also refers to western Kurdistan as Wilayet-i Arman and Djasira (Arbab and Amidiya forming part of the latter). In the Mongol period, we have in general little information about the mountainous region containing Hakkari, Botlan and Armenian Anti-Taurus. It is possible that in the west the term Kurdistan was at first applied to the region of Darru, according to the Sharaf-nama, i. 163, in official documents (parast-matb- e-mashlah) as well as among the Kurds themselves, the term wilayet-i Hormuzabad was applied particularly to the head of Camaqand. But by the time of Timur, the Sharaf-nama, i. 686, speaks of the Amur of Bideh as the most important mountain in all bilad-i Kurdistan. In the history of Selim I (Selim-nama, MS. of the Bibl. Nat. Pers. 423, fol. 109, v.) its author Hakim Idris says that after returning from Tabriz, Selim ordered him to go through the whole country starting from the beginning of the land of the Kurds (bilad-i Arbab), i.e. from Urmiya and Ush at to Amid and Malatya in order to see the princes and rulers of the country of Kurdistan (wilayet-i malik-ewa-bash-i amaliyeli Kurdistan) and to ratify treaties and the possession granted them (malik-e-shahban-i-farsa). Thus the name of the same became generalised and applied to the western part of the vast Kurf region, in Turkey as well as Persia; cf. that in the Sharaf-nama, and the Travels of Evliya-Čelebi, iv. 74-75: Kurdistan dîyarê. Gradually the affairs of Kurdistan were dealt with by the pashas of Diyarbekir, Vâs, Bagdad, Erzerûn etc. (cf. Semî Beg, Khams-i al-Tâm, v. 3540). Towards the middle of the sixteenth century the administrative term ‘wilayet of Kurdistan’ is applied to the level of Diyarbekir, Mûş and Dersim; but as a general rule, official documents from that time onwards there was based on the names of capitals and took no account of the ethnographic terms (I have been unable to consult Mürzimân Khalîl Bey’s article on the scope of the term ‘Kurdistan’ in Yeni-türk, 1925, no. 21). As regards early European maps (cf. the specimens in Khamdian, Rapport sur l’unité géographique de l’Armenie, Atlas Historique, Paris 1920, and the geographical analysis in the Report of the Commission of Enquiry by the League of Nations, c. 1909, m. 147, 1925; vii, p. 23-38 and the map, no. 5, they seem to be based on the Diyarbekir map, on memories of the ancient Corduane and perhaps on Armenian statements about the Kurdi i (cf. KURD. Originaux). I. W. Haythorn has been the geographical application of the term ‘Kurdistan’, it is evident that it has nothing to do with the actual dissemination of Kurdish people (cf. the article kurd). The word Kurdistan in its common acceptance means simply the regions inhabited by Kurds, cf. the Persian expression Kurdistan-i Kerdestân referring to the Kurd colonies in Khuristan. Now the country continuously occupied by Kurds is a strip of territory running from S. E. to N. W. Its length is about 600 miles (Luristan-Malatya) and its breadth averaging 120 to 150 miles is greatest (250 miles) on the line Malli-Altara (cf. Littmann, p. 445-449).

Before 1914, the Kurds were divided among Turkey, Persia and Russia. As a result of the treaty of March 16, 1914 concluded between Moscow and Angora, the majority of the Transcaucasian Kurds are now in Turkish territory. On the other hand by the final settlement of the Mawi problem, Turkey lost the Kurds of this wilayat who are now in Irak. In consequence the position of the present day is as follows:

A. In Persia where the position is best known, the Kurds occupy the provinces of Kirmanshah [q. v.] and Senna [q. v.] as well as the southern part of Adharvardjand (cf. khwâq manâx) and the canton of Bûtân. The Kurds also occupy the mountainous region of the districts of Urmiya (especially the cantons of Ushat, Margaver, Dağı, Torgower, Bâsil), Salmas [q. v.] (the cantons: Sömla [q. v.], Cahir, Khiîl (the cantons: Kotîr, Ablad) and Malatya (where the Kurds live on the slopes of Ararat). We find colonies of Kurds in Khârûn (the khâns of Khârûn, Budjûrû and Dararr), in Kirrus, Fars, southern Luristan, Pahîlî Khîl, Wariûn (near Teheran; cf. Bragg, Asia, ii. 496), Kazwin, Malatya (cf. Rubino, K.M.M., xxiv., p. 259) etc. The number of Persian Kurds may be put as not more than 500,000.

B. As regards Turkey, it is at present (1927) impossible to evaluate fully the repercussions of the war on the geographical distribution of various peoples, such as the flight of the Kurds before Russian troops, the deportation of the Armenians, the expatriation to the Irak of the Sezjatis of Diyarbekir, the punitive expeditions of the Turks into Dersim (1921) and to Kharpûl and Dey Jikk (1925). The map given by Sir Mark Sykes
settled there in the wilayet of Aleppo (especially at Kilis) before the war numbered 125,000 according to the Russian Consul Zimmermann (cf. also Guénet, ib. 124); Harrmann, Das Limes Halbs, Berlin 1834, p. 83, 92, 95, 96, 98, 99, 100 and 105. According to the R. M. M. iii., p. 317 there are 20,000 Kurds in Syria under the French mandate (to the north of the 'Ahasa and at Beilla). There is also a Kurdish quarter in Damasca. On the Kurds of Sidjidi, where the administrative position is modelled on the neighboring Greek districts.

The Kurds had also advanced far to the west. In Balistan (p. 636) there is an important Kurd tribe settled among the Ibhahut (and speaking Ibhahut). Recent researches (Tedesco) have ascertained a certain affinity between Kurdish and Balshi. As regards Afghanistan, the Sharif-Nazar, l. 327, noted the move to Chargistan of a part of the Cigani tribe. Morgansterne, Report of the Linguistic Mission to Afghanistan, Oslo 1926, p. 3. It thinks it possible there are people speaking Kurdish west of Herat.

Bibliography: Cf. the articles Armenia, Boyan, Bogot, Buxi, Buxia, Shabri, Khak, Shabria, Shatui, Shamo, Ajmir and Delamayeva.

There is an excellent bibliography of Kurdistan to 1856, in Lerv, Iskolyomenya, St. Petersburg 1856, i., p. 5—19 (it is not included in the German translation).

The only general description of all the lands inhabited by the Kurds is in the monumental work of Ritter, Erdkunde, 1838, viii., p. 392—400 (Kurds of Khwuristan, 1840, at., p. 412—414, 1600—1608 (Persian Kurdistan), 1843, at., p. 690—720, 769, 1008 (the sources of the Tigris and Euphrates), 1844, xl., p. 128—146 (Western Kurds), 709, 749, 1897, 1926 etc.

KURDS, an Iranian people of Nearit
Asia, living in Persia, Transcaucasia, Turkey and al-Hal (cf. KURDISTAN). Before 1914 the number of Kurds living in compact bodies or isolated colonies (Khozestân, Asia Minor, Cilicia, southern Syria) was estimated to be at two or three millions.

Although many travellers have passed through Kurdistan and there are a large number of important persons dealing with the Kurds from the linguistic, historical, ethnographical and political point of view, we still lack a general study devoted to this people. Its preparation is rendered difficult by the fragmentary and sporadic character of our information and by the diversity of the methods employed by the writers on the subject.

A. Origins.

The classification of the Kurds among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnic elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the development of the Kurdish element took place from east of the Persian Gulf (Central Kurdistan) but there is nothing to prove that the existence in Central Kurdistan, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Kurdi) which later amalgamated with the Iranian Kurds.

On two Sumerian inscriptions dating from about 2,000 B.C., Thuman Dangiia (Revue d'Asie Orientale, v. 99, vi. 67) found a country Kurra-le mentioned (in which word the editor tells me privately the initial is ḫ and not ḫ, and the function of the element ḫ is uncertain). This country was beside the "people of Sîl" (cf. Z. A., xxvii, 250, note 3) which Driver locates south of Lake Van; there is an old form Sîy in the region of Edessa (Syr-Firouz, i. 146). A thousand years later Tiglath Pileser waged war upon the people called Kur-ti in the mountains of Aza, which Driver (ibid., p. 490) identifies with the modern Ḥarû (Susa). The reading Kur-ti is not certain however.

Herodotes in the fifth century mentions no name like this, but, according to him (iii. 93), the thirtieth name of the Acarnanian empire included next to the Armenians a tribe which Nolhkeke (Graum. d. neuzeit. Spr., Leipzig 1885, p. xviii.) and Klopstr. (Alt. Geogr., v. 81) have connected with the name of Bokhâr (sic: Buhâr). The retreat of the Ten Thousand described by Xenophon (401-400 B.C.) made famous the name of Cardines (Kâshâbîy), whose country lay to the east of the Kaniitès (Buhâr). From this time onwards we continually find the name on the left bank of the Tigris near Mansûr and, in classical authors, the country became Cardine (on the numerous forms of this name probably produced by the difficulty of reproducing the Semitic š, cf. Driver, op. cit). In Armenia this district was called Beth-Kurdâ and the present town of Djiçarîn Buh Oma, Gazizî of Kâshâbî. The Armenians had the name Kordkudâ, the Arabs (Balâdîs), p. 176, Taheri, ii., p. 510, Bakûndî (Kâshâbî). According to Vâhilî (v. 56) which relies on the authority of Ibn al-Alhîb, the centre of Bokhâr formed part of the Djiçarîn Buh Oma, contained two hundred villages (al-Thumânta, al-Dijân, Pâshâ-Shîbî) and was situated on the left bank
of the Tigris opposite Khana on the right bank (cf. the full analysis of the texts in M. Hartmann, Ehrthun, p. 33—35). Later, the name which was only applied to the district disappears from Muslim terminology and is replaced by Ljazar Ibn 'Omar, Bolūtan etc. To the Armenians and Arabs the territory of Kardī in the strict sense had a very limited application. We do not know the exact frontiers of the province of Corduvanus, its three towns, Sardis, Sarakha, and Pınaka (= Fīnīk) lay on the Tigris, but the statement of Strabo (II. 12, 4) is remarkable, according to which the term Tigran was sometimes applied to the mountains between the modern Dybrākhat and Mīth. Now, who were the Kardī that figures to our knowledge are lost, in the text at an uncertain date of the Kardūcha, recognised within the authority of King Araxes, not of that of Armenia. When in the first century B.C. Corduvanus was conquered by Tigranes II he had his king Zarzizēnus executed. In 115 A.D. the king of Corduvanus was called Mardβan. According to Huxzhang, Die altarm. Orienslasmex, p. 259 and Avr. Gramm., 1867, vol. 3, p. 518—520, the province of Corduvanus was only replaced by the province of Kardī that is, Kardī under the twentieth century B.C. and afterwards established a powerful kingdom in the region of Lake Van which lasted until the beginning of the fifth century A.D. Lehmann-Bruckner, Makedonien u. alter. Grec. demokrat. Zeit, 1897, p. 122 seq. It seems that the Kardī from the Kardī immigrants from the east, E. Mayer, Gesch. des Altertums, 3th, 1823, § 474 seeks its original home on the central Araxes. As a result of the arrival of the Araratian, towards the fifth century, the Kardī were dispersed and driven towards the mountains (Gzigandos, III. 1—3). But their name survived in the toponymy of the region north of Lake Van (the Byzantine theme Kardī near Trebizond the town of Kardī = Aghīt), etc. cf. Bech and Lehmann, Z.A., 1894, 884 seq. de Goeje, Vide, x. p. 100; Streek, Vide, xiv. p. 113. The parallel for the name Kardī have been sought on the other side of the Caucasus: the Georgians are called Xārtdi-βa-kardī-kov (in Armenian Հայրեն) in Mingrelian, kardī-kov; cf. Adam, Armenia u. dei rōm. Patriarchi, St. Petersburg 1908, p. 358.

Whether we identify the Kardī as Semites or an indigenous people, it is certain that the name of the ancient Kardūcha is at the present day one of the principal centres of the Kurds. It has therefore been concluded that the Kardūcha were identical with the Kurds and this view was still considered authentic at the beginning of the nineteenth century; cf. Grumelius, J. Prov. Phil., II. 464.

Going a step further the Kurds were directly connected with the Xādūlas: Kinake in his commentary on Constantine Porphyrogenetus, De Cerimonia, B. 12 (713, 13) said "Kardī et Kordī vel Castī, Garvyan: idem." A similar opinion is expressed in the title of Larchet's work (1856), Recherches sur les Kordīs Ilirici et sur leurs Ancêtres, les Chaldéens Septentrionaux.

A new turn was given to the problem by the researches of M. Hartmann, Nöldeke and Weisbach, who showed the philological necessity of distinguishing between the names Kordī and Kordī. These scholars at the same time proposed to recognize the Kurds in the ancient Kordūcha, a Cilician writer in Media and Persia (Strabo, xi. 3, 4 and xiv. 3, 4). This hypothesis is confirmed by the presence in Press of numerous Kordī tribes in the Statthelin period (cf. Kardūcha-i Arakhdīs-i Pāk-ātān, translated by Nöldeke, Gottingen 1879, p. 37, 48 and the testimony of Arab writers).

The distinguishing distinction between the names Kordī and Kordī does not, however, decide the important question, how the Cirtī (i.e. Kordī) came to colonise lands west of the Zagros, the country of the ancient Kardī and the mountains of the Anti-Taurus as far as northern Syria. The problem still requires careful research. In the first place, the Medinet and Persian conquests must have brought about considerable dislocations of the Iranian peoples. We have an example of this in the migrations of a part of the Asagarti whose original home was in Sisitān. In the Assyrian period we find these Sagartians in Media (Kishtār or Zabrutī, cf. Streek, Z. A., xiv. 146) and in the time of Darius (Bahallān, Inscr. 2, 90) their capital was already in the Assyrian plain at Arba, where Darius had their chief Girtantakshna executed, whose portrait on the rock of Kīsīn suggests a Kordī type (L. W. King, The Sculptures of Babylonia, London 1907). Between 229 and 171 B.C. we find Cirtī mercenaries taking part in the wars between Kems, the Seleucids and the kings of Parthia (King, L. W., e.g. 229, 49, 91, Polyphant II, 18, 14, cf. Waliszewski, in Puliym., 299, 15, Cyrtis, and A. J. Reimann, Les Musée et Parthia, Rome Archéologique, 1909, p. 113—119). A very interesting state of transition is seen from the Armenian geography of the fifth century, in the case of the province of Kordī (according to Artac, Armenia, p. 418: Kordī is from kordī-ašt where kordī means "Kurd" as ašt means "inhabitant of Atropateni"). In the time of Faustus Byzantinus (fifth century) Kordī was only a canton near Sīmān (Gr. Ποιόν). As a province, Kordī stretched from Diarbekr to Ljazar Ibn Omar and included the following cantons: Korštākh, the three Kordī (Kordī), Biratākh, Arbatākh, Makhatarkhs (Otkušātākh), Gisurākh (Otnisākh), Karashōkh (Satrapākh), Chābūt and Little Bitāsk (Hartmann, Beiträ, p. 93; Huxhachmann, Die Altert. Orienslasmex, 1898, p. 255—269).

We see the changes that were gradually brought about. Of the three districts, Kordīkh, Kordīkh and Tumorīkh, which Faustus mentions in place of the ancient Cordūcha, Kordūkh had become a mere canton of Kordī and Tumorīkh disappeared altogether to the advantage of Kordīkh (Kordīkh) of which simply upper, middle and lower cantons were distinguished.

Huxhachmann (L. e., p. 285) confines himself to
distinguishing between the KordiKh (Kordik) or the Körö (Körö) but in general the linguistic distinction established by M. Hartmann and Nöldeke does not preclude the existence of hybrid or corrupt forms (M. Hartmann, i, p. 92: "es gingen wohl schon früh die Namen durcheinander"). Nöldeke even distinguishes a third group of names: Aramako-Kordik (Arabîc Kordikiyâ, meaning the true Kurds), cf. Hoffmann, Antike, etc., p. 207, note 1659.

We thus find that about the period of the Arab conquest a single ethnical term Körö (plur. Körös) came to be beginning to be an amalgamation of Iranian or Turkic tribes. Among the latter, some were autochthonous (the Körös, the Török), that are in the district of which Alvâ = Elâ was the capital; the Xelâv (== Al-Kussâwilîa) or the canton of Koot of the Sülâm, the Ortûsh (== al-Arun) in the bend of the Enphrate; some were Semites (cf. the popular genealogies of the Kord tribes) and some probably Armenian (it is said that the Mambâkân tribe is of Manmonian origin). In the twelfth century the existence of an Iranian non-Kurdish element among the Kurs has been at least established (the Giurin-Ziir group). In several districts a social stratification based on the politico-scientific domination of newcomers had been existing (at Sukhâmânîya [q.v.], at Sâwêl-Bulâk [q.v.], at Koyî, where we find remnants of the Kuresîn [7] in subjection to the Sâshîk). Systematic investigation may discover traces of ancient peoples overlaid by a Kurdish element giving an appearance of unity.

Genealogies and popular Etymologies. The Muslim sources and Turkish traditions do not help us to solve the problem of the origin of the Kurds. Mardik al-ready (Mardik, cf. Barbier de Meynard, i, 251) speaks of their descent from those Persians who escaped from the tyrant Dabılık. This legend is best known from the version of the Shâh-nâmâ (Macan, i. 27-38; Mahl, i. 71; Vullers, i. 36, vers. 29-38). In 1812 Morier (Second Journey, p. 337) mentions the celebration at Damavand (on 31st August) of a festival commemorating the delivery of Persia from the tyranny of Dabılık, known as the Atoor Kurds ("the Kurdish festival"). On the other hand the Kurds sought Arab genealogies for themselves. Some (Mardik, ii. 253) claimed that their ancestor Rabûn b. Niset b. Maarda, others Mujar b. Nhâr, both surnames of the districts of Dâyra-Rabû's (Mujar) and Dîyâr-Muqar (Nhâr). The Kurds said that their Kürs had separated from the Arab stock as a result of feuds with the Ghassânids and, having retired to the mountains, intermarried with strangers and forgot their mother tongue. Of more interest is a series of ancestors among whom we find Kûr b. Muç (cf. of Maçel the neighbours of the Kûrs) b. Sâwà b. Ahar b. Hâwâw (Mardik, ibid., and of Tumih, p. 88-91) Kurî b. Imamî, b. Mûtâzîh; Imamî b. Müsêlîm, b. Musta; Kurî b. Musta; Muç b. ("Amr). All these genealogies may contain a few grains of historical fact (transmutation of Semites, intermarriages of the tribes of Zagros and of Firs).

Now there is any lack of popular etymologies. The attempt has been made (Mardik, i, 249) to connect the name with the Arabic root kûrûd; the Kûrs would thus be the children of young slaves and the demon Qurûd ("driven out") by Soloman. Very frequently (cf. Driver, J.R.A.S., 193, p. 403) the name Kurdistan is connected with the Persian word gurûd (herd) although this root really had a ğ in Pahlavi and goes back to the root war- (to protect) (Horn, Neuer, ofen, p. 200).

In later times the names of tribes were often explained by those of their epynomes. The Shâh-nâmâ, l. 158, makes all the Kûrs (the Halfânw) and the Kûbî tribes) come from Budjân and Boght; foremen of these former series may be connected with that of Busûm (a tribe of the Mughîn (Andrus in Hartmann, p. 151) while the second recalls the Shâsran of Herodotus, or the "sullen" (Kûrî) Hâfizan-Boght killed by Arkakhân (A. Tagân; cf. Nöldeke, Türen, p. 11). According to another legend, especially popular in the north and west, the Kûrs were at one time divided into two branches, Milân and Zûkân, the former coming from Aria and the latter from the east; the Zûkân were regarded as an inferior race (cf. Sykes, J. R. A. S., XXXIII, p. 467).

II. History.

We have detailed notices of the Kûrs from the time of the Arab conquest onwards. During the first centuries of the Halfân the Kûrs frequently played a considerable part in events and often took the initiative in them. Several Kûr dynasties arose at this time. In the waves of Turk and Mongol invaders seem to have submerged the Kûrs from the 9th to the 12th century A.D.; but the period of the wars between the Ottoman Sultâns and the Şahwî Shiites produced a state of affairs in Kurdistan favorable for the growth of a feudal system, of which a faithful picture is given in the Shâh-nâmâ (1003-1596). The Turco-Persian frontier became gradually stabilised and the Persians fell back behind the wall of the Zagros and its northern extension. Then Turkey began the work of strengthening the authority of the central power within her eastern provinces. Towards the end of the 16th century, the last Kurdish principalties disappeared in Turkish territory (Hakkâri, Bitlis, Sivas, Ismailîya) and in Persia (Arakan). But the great tribes still exist and their cadres assure the preservation of the Kurdish element with its social and ethnical peculiarities. Persia hardly ever interferes in the domestic affairs of her Kurdish tribes while Turkey tries to use the Kurds as a political support for the central authority. Sometimes the Kurds are overwhelmed by the foreign nations and sometimes they have to resist attempts to abolish the remnants of their ancient autonomy. Several risings of the Kûrs took place in the 16th century and towards the beginning of the 18th century a Kûr movement added one
more to the nationalist agitation within the Turkish empire. The revolution of 1908 drew the Kurds into politics, newspapers, magazines and Kurdish societies began to multiply. During the war of 1914–1918 the idea of an autonomous Kurdish was first mooted by the Powers, but the plan has only been partially realised and only so far as the part of the old wilayet of Maxwil attached to the new state of Iraq is concerned.

The Kurds after the Arab conquest.

We shall find it useful to begin by collecting the information given by Arab authors regarding the distribution of the Kurdish tribes.

The term Kurds being unknown before the time of the Seldjiks, information regarding the Kurds is usually to be found in the Arab authors under such heads as: Zawar, Khilat, Armaysi, Adharbadjan, Djibal, Fars, etc. (cf. Dr. Price, Distribution of the Kurds in Ancient Times, J.R.A.S., Oct. 1926, pp. 363–372).

Maxwil (about 332 = 943) and Isfakh (340 = 951) are the first to give systematic information about the Kurds. In the Murâd al-Asbab (ii. 253) Maxwil enumerates the following tribes: at Unawar and Haqamaghi: Shubajik; at Kanganwar: Mbardjan; in Adharbadjan (so the text should be emended): Haqamaghi and Surj (probably Shurj = *Shurjan [q.v.]; cf. the story of Taimam below); in Ilihi: Shubajik, Lamba (Larri), Mardjan, Mushafik, Barik, Kajal (Djalali); Djaliki, Djalik, Musafik, in Syria: Djalik; and at Maxwil and Djaji the Christian Kurds: al-Yahkiliya (*Jacobites) and the Djurjan (Djuqaylan). To this list, the Taimam of the same author (p. 88–91) only adds Baringli (cf. Isfakh, p. 115), Nesghawin, Bidlikhun and Khian (at the present day found near Maxwil) but he gives a list of the places where there were Kurds: the roomini (rumi) of Fars, Kirman, Sijistan, Khurasan, Isfakh (p. 282: a Kurd village: in the Canyon of Anak, Isfakh), a section of the Djurjan tribe and a flourishing town described as Kurd, Yajid, p. 275; Isfakh, p. 125; Djaji, notably Mab Kifa, Mab Bajra, Mab Sakiljan, Mab Kaazdjan, Mab Khurjan, and the two Ighur (i.e. Kazak) Ibn Unawar and Hamaghi); Hamaghi, Shinschil, with its dependencies Djarshid and Sajand (el-Jaran). Adharbadjan (cf. Addis). In Armenia the Araxes and the Kurds lived in houses built of clay and of stone; Mushafik, p. 277), Atrani (one of the gates of Bandar was called Bish al-Akrib and Ibn Miwabi says that at the invasion of the Kta in 324 (202) the local governor had Kurds under his command), Bubakur, Bish al-Abwh (Duabiand), Qalat, Syria and al-Tajmur (i.e. the line of fortresses along the Cilician frontier).

Isfakh, p. 98, particularly mentions 5 roomini in Fars, this term being applied to districts over which the Kurds were distributed (in spite of de Goeje, B.G.A., iv. p. 250, it is preferable to keep the reading rumi-romini [from Persian rumi, *rock*, *crowd*] for it is improbable that one could have given a plural rumini). Each roomini had its town, its Kurd chief in charge of the roomini and responsible for public affairs. These roomini were: 1. Djaji, 2. Baringli, on the Kajal, bordered by Isfakh and Sheiklouq; 2. Luvâli- djan, between Shirs and the Persian Gulf; 3. Djalik, in the Kura of Sisur; 4. Kariyân in the direction of Kirman: 5. Shahriyâr, alongside of Isfakh also called Djaljan after the principal tribe, a part of which had been transferred to the province of Isfakh. As a supplement to the list of roomini, Isfakh, p. 114, gives a list of 53 roomini tribes (juttu, plur. juttu) of Fars, based on the records of the Divan al-Qasmi and reproduced by Ibn Hawâk, p. 185–187 and Makadjan, p. 446: Kirman, Kajal, Mab- dchur, Muhammad b. Bashir, Bajur (Muqaddas); Shahriyâr; Bunâldjan, Muhammad b. Isfakh, Safiâr, Isfakh, Adharbadjan, Shirs, Taeb, in all 500,000 families living in tamga.

Price, The Fars-nama (c. 500 = 1102) says, p. 168, that the Kurds of the old large roomini of Djiliya, Luvâli, Shahriyâr, Kariyâr and Bismâjan, who formed the most brilliant element in the old army of Fars, all perished in the wars at the time of the introduction of Islam, with the exception of a single Alâk, who became a Muslim and left descendants. Other Kurds were transferred from Isfakh to Fars by 'Abd al-Dawla. It is difficult to admit that 500,000 (?) families of Kurds were exterminated, but we must recognize the possibility of regroupings among the tribes of Fars and of their denominationalization. The old roomini of Djiliya (Kiriyan, Luvâli) have been identified by Lars; we do not know how long they have been there. For the rest Isfakh's list mentions a tribe al-Lariya (variant: Lazli) among the Kurds of Fars.

On the other hand the Fars-nama distinguishes from the Kurds the Shabankara [q.v.] clan, who had become very powerful in Fars at the time of the last Bâyids. The Mushâlib al-Asal of al-Umar speaks of the Shabankara under a separate heading and the Shuraf-nama does not mention them among the Kurd dynasties. One of their clans however (Kirman) bears the name of one of the "Kurd" tribes of Isfakh. Everything then suggests that the Kurds of Fars differed considerably from the tribes of Kurdistan (cf. 204–205 and 223–224).

The term al-Zawar (which precisely means to central Kurdish) is (as used in Kurds "summer pasturages") not well defined. According to Ibn Hawâk, p. 250, the king of Zawar was called al-Dajani (i.e. Dardik). Armenian king of Waspurkan). Mushafik, p. 137 regards Zawar as a zauj (of Isfakh): Ibn 'Umar. Later this region which had a mixed Kurd and Christian population extended in area. According to Ibn al-Salt (in Yâkub, ii. 257) al-Zawar began at two days' journey from Maxwil and stretched to the borders of Khurâ, on the Kajal, its side extended to Salmas. Many strong clans belonged to the Bashaw and Bokadi Kurds, the former held Bajur, Bashir and Fanâk, while the latter held Shahriyâr (Gurdi) residence of their muluk Alâ (Shuraf-nama, i. 117; Naqib Ali?), Allah, Bokânnâ, and the Kurds of the region were: the orders of Alâ (i.e. Kirkik, Kajal, Kajal, Kirman, Bokânnâ, and the Khwarizm. The text of Yâkub is not very certain; in any case the reference here may be to Kurd strongholds gradually annexed by the Hamiltons and the Zangi (see below).

The Kurds under the Caliphs and Buayids. Mas'ûd (Murâd, iii. 249) has preserved traditions from the pre-Muhammadan period of bonds between the Arab princes of 'Ommân [q.v.]
and the Kurds. The Muslim Arabs came into contact with the Kurds after the occupation of Tabaristan and Hālīwān in 635 (637). Abd al-Muʿāwiyah marched on Mawālī where the districts with a Kurdish population were occupied (al-Marjāl Rā-Nahlūn, Rā-Ahūrī, Hālīwān, Dārābūr, etc.). The final conquest of the region was completed by Yūsuf b. Qays and ‘Uthman b. Rujah (Rā-Ahūrī, Futuh al-Bulān, ed. de Goeje, p. 331). The Bānaṭ of al-Zawādī in 9 (640) obtained confirmation of his authority on payment of kharijī (Futuh, p. 126). In Susiana in 18 (639) the Arabs fought against the Kurds, who had taken up the cause of al-Hurrānī, Persian governor of Erwāz (Kāmil, ii. 425). In Fars likewise the Kurds supported the Persians in 23 (642) at the defence of Fās and Darbārī (ibid., iii. 322). ‘Omar had sent several expeditions against the Kurds of Erwāz (Futuh, p. 322; Kāmil, ii. 37). On the other hand in the region of ‘Omar the Kurds invaded: the region of the central Kūshār (Saḥmatā, Mā‘āshūmān) the language of which was still Persian in the time of Ya‘qūb b. G. A. [vii. 236]. The Arabs then reached Shahrūz before Isāk (Ibn al-Fahd, p. 130), but the final occupation of Shahrūz, Darābūr and Samāqīn in 24 (643) was only achieved after bloody fighting (Futuh, p. 334; Kāmil, iii. 29). In the south Abd al-Mus‘īd, governor of Baṣra, had put down risings of the Kurds at Bīrūnī and Bahāsīn in 25 (645), but the Kurds, convulsed into Islam, apostatized in masse (Kāmil, ii. 96, 76). Under the caliph ‘Ali the Kurds, along with the Persians and Christians, took part in the rebellion of al-Khārijī near Erwāz and in Fars, but the chief was defeated at Rām-Hurūm (ibid., iii. 309). Al-Mu‘taṣir, who had seized Armenia and Adharbājān in the reign of the Omayyad caliph Abd al-Malik, appointed in 66 (685) a governor at Hālīwān whose task was to fight the Kurds (Kāmil, iv. 187) but the death of al-Mu‘taṣir prevented the plan from being carried out. Under the same caliph the rebel ‘Abd al-Rahmān made an alliance in 83 (702) with the Kurds of Sibār in Fars (ibid., iv. 352). In 90 (708) the Kurds ravaged Fars and were punished by al-Fāhzūf. In 129 (746) the Kurds of Sibār resisted the army of the Kāshānī, Sulaymān, who had rebelled against the caliph Marwān II and had been exiled (ibid., iv. 387; 341; v. 285). The caliph Marwān himself was the son of a Kurdish slave-girl (Tabārī, iii. i. 51) whose eyes and fair complexion he had inherited (Sir W. Muir, The Caliphate, London 1891, p. 429). Under the ‘Abbasid Caliph Mansūr the invasion of Armenia by the Khāzars, 147 (764) resulted in numerous risings. A few years later the Kurds (‘intisbāb al-Abrāz) are again mentioned in connection with the rising at Mawālī and its repercussions in Hamadān (Kāmil, v. 448; vi. 9). ‘Uqba, son of Mansūr, was the son of a Kurdish slave-girl (Tabārī, iii. i. 447). In the reign of al-Mu‘tazī the Kurds of Mawālī, led by ‘Uqba b. Bahlūl and ʿAbd al-Mursī, a scion of a noble Kurdish family, defeated at Bīshāqūr. ‘Uqba took refuge on the mountains of Dasīn where he defeated the troops of the Caliph. A new army commanded by the Turk Ashāb put an end to the rebellion (Kāmil, vi. 360–361). A Kurdish rising broke out in 231 (845) in the region of Isḥākh, Iṣkīh b. Fāṭir, Marbān b. Hālī and Fāṭir, it was speedily suppressed by the Turk general Qābir. The Kurds of Mawālī in 252 (866) joined the Khāhān Mawālī who had seized Mawālī. In 253 (875) they played a considerable part in the Zend Jashārvīl (cf. Nūdkāh, Sketches from Western History, London, p. 145–175: A Serbīk War for the Khāhān 872) led by an ‘Abd al-Khārijī. ʿAlī Muḥammad, called al-Abūn, and in the rising of Ya‘qūb b. Qayṣarī, founder of the Saffārīn dynasty (v. 8). At Abwāz, Ya‘qūb appointed a Kurdish lieutenant Muḥammad b. ʿAbdallāh b. Hālī and who, cherishing ambitious plans, engaged in secret negotiations with al-Khārijī. With reinforcements sent by the latter, Muḥammad marched on Sīs but was defeated by Abū al-Rahmān. The latter, also a Kurd and commander of the Kāshānī levies, had been sent by the caliph to put down Ya‘qūb’s rising (Ibn Khallīkān, Wafayāt, ed. de Slane, iv. 304–308). When Ya‘qūb had departed, Muḥammad, after securing from al-Khārijī further reinforcements consisting partly of Kurds, seized Shūshtar where, according to the arrangement he was to call the Khāhān read in the name of al-Khārijī, but instead his name in the names of the Caliph al-Maʿmūn and his deputy Ya‘qūb b. Qayṣarī. His Saffārī allies dealt with Muḥammad, who was reconstituted by Ibn Khallīkān. Muḥammad retired to Šam but he was dialogued from it by al-Khārijī’s generals. As a result of difficulties with the Dārān Kurds, Muḥammad again sought the help of al-Khārijī. The latter sent him troops which Muḥammad sent into battle but suddenly left them in the lurch and attacked them. To avoid a breach with al-Khārijī Muḥammad agreed to proclaim him Caliph. The death of Ya‘qūb (265 = 879) and of al-Khārijī (370 = 883) put an end to these exploitations (Kāmil, vi. 264). About 281 (894) the Kurds were among the partisans of the Arab Ḥāmān b. ʿAbdallāh (al-Hamāndūs) when he established himself in Mawālī. The Kurd rebellion roused in 283 (897) by Abī Lailī did not last long (ibid., vi. 323; 135; 293 (906) the Christian Caliphate of Mawālī, and taking the chief of the Arab tribe Būlāt, he left the region of Nīrūvān. Abūlābī b. Ḥāmānī, the new governor of Mawālī, pursued them but suffered a reverse at Ma‘ṣūla. With reinforcements sent by the Caliph he resumed the next year the pursuit of 5,000 Ḥādhānī families. The Kurds began negotiations to gain time and to retire to Adhāraf. A’ūdallāh returned to Mawālī and with new troops set out once more against the Ḥādhānī who had entrenched themselves at Ḥatableh-al-Salāq (probably Lāhāgī, cf. Samalvīr, 127). The Ḥādhānī were forced to surrender and the pacification was followed by that of the Ḥādhānī tribes of the people of Ḥatableh-al-Dīn (ibid., vii. 371). In the region of the Caliph al-Mu‘tazī, the Kurds plundered the environs of Mawālī but were punished by the Ḥādhānī government; the Ḥatableh tribe put up a particularly stubborn resistance (ibid., viii. 118). Under the year 337 (943) Ibn Miskawayh, Taqīsī al-Ummān, G.M.S., vi. 105 speaks of the expedition of the Ḥādhānīs against Adharbājīān, on this occasion he had as an ally Dīfār b. Shakhāhī, chief of the Ḥādhānī who were settled at Salma. About this time Dīsam b. Daqīqī appeared on the scene and his adventurous life is closely
associated with the Kurds. He himself was the son of an Arab by a Kurd woman. His followers were Kurds with the exception of a small body of Dailamites. Daisan was a Khāhidjī. He married Aḥbarāḥbūdan after Ya’uf b. Abī ‘l-Sādāj and in 597 (938) used his Kurds to drive out Lāshkārī b. Mardī, one of the lieutenants of the Ziyārid Washqūt. But the Musafīd Muzurānī, a noted šī‘ī, succeeded in taking Aḥbarāḥbūdan from Daisan and the latter took refuge with his friend Ḥāfiz b. al-Dairīn (the Armenian king of Waspiqarān Khuṣik-Gaghīl, son of Derčanī). Then the people of Tarbiz appealed to Daisan but again he suffered a reverse and, with the consent of the Musafīds, fell back to Ṭarzm. In 537, Muzurānī was made prisoner by the Buyid Khwāja al-Dawla and is sent a representative to Aḥbarāḥbūdan. Muzurānī’s brother Wahdūtān then thought of Daisan to whom his Kurds had remained faithful and sent him against Ḥuk al-Dawla’s representative. Daisan was defeated but held out in Ardabil and Bardži’s. When Muzurānī returned from his captivity, Daisan had to take refuge first in Armenia and then in Baghdad where the Buyid Mu’zz al-Dawla treated him generously. As his friends were urging him to return to Aḥbarāḥbūdan, he went to the Ḥamādānī of Maqal and Syria to ask for assistance. In the absence of Muzurānī, Daisan returned to Sālmān in 534 where he had the khāṣbā reign in the name of Saif al-Dawla of Syria. Once more driven out by Muzurānī, Daisan sought refuge with his Armenian friends. Bih al-Darīnī (Derčanī b. Khāhidjī) had to hand him over to Muzurānī much against his will. Daisan was blinded and died in prison in 545 (Ṭaḥfirī, ed. Amirdār, i. 345; ii. 145—151: Kāzīm, vii. 289, 301, 375—377).

During Muzurānī’s captivity in Italy, several independent governors set up in the northwest of Persia. One of them (about 540/951) was Muḥammad Shadālī b. ʿAbdīt the Kawēdī tribe out of which later sprang the great dynasty of the Ayyūbīd. The principal sieges of the Ayyūbīdīs were Dabīl and Gaṇja. The Shāhīzdālīs were allies of the Byzantines and of the Salṭānū. In 465 (1072) Abū Sawār bought Ant for his young son Māntūs. From this time onwards the dynasty was divided into two branches: that of Gaṇja and that of Ant. In 512, Ant was taken by the Georgians but between 520 (1420) and 557 (1161) and again from 1165 to 1174, Ant was again held by the Shāhīzdālīs. The Shāhīzdālīs were enlightened princes and left a number of remarkable buildings. Cf. the articles ARAF, DAVAT, GAńJA, SHADĀLĪ in the Armenian bibliography in Lynch, Armenia, i. 353—357; cf. also Barthold in the appendix to his Russian translation of Muḥāmmad Dīmuq, by Lane-Poole, St. Petersburg 1899, p. 294; Barthold, Perz. anthoi, nos. 202, 203; Matiś Manōš, Anāyakvāni Seriyy, no. 5; N. Mārz, Khāṣb in steve "khāṣb" Zakhari, 1911, xx, p. 124; E. D. Kow, On Three Mūhammād Dīmuq, Asia Major, 11, 1925, p. 315.

In 394 (960) a pretender appeared in Ardabīlī. He was the chief of the Aḵtānī (A). Kurds, while his adversary the Musafīd Ḥusayn b. Muzurānī, who had relied on Ḥāﬁz b. Sādīq, was soon disposed of (Ṭaḥfirī, ii. 179). The Kurds and the Dailamites also played a considerable part in the quarrels between Ḥasān and his brother Nūr al-Dawla and between Ḥusayn b. Muzurānī and his cousin ʿAlī b. Walūhān (Ṭaḥfirī, ii. 219, 249; Kāzīm, vii. 420—423).

About 348 (950) the second Khāhidjī army arose in al-Maṣqil (Lane-Poole, Muḥāmmad Dīmuq, N. S., 57) founded by Ḥasan wāsh (Hasanū) b. Ḥasan (q.v.; cf. also the Ḡarāf-sūmān, i. 20—25), chief of the Barzkūnī (Barzai) tribe who had assisted the Buyid Ḥuk al-Dawla on his expeditition to Khorazm. Ḥuk al-Dawla showed great tolerance to the Kurds and when someone complained to him of their excesses he used to say: “Even the Kurds must live” (Ṭaḥfirī, ii. 281). Ḥuk al-Ḥādīr (viii. 519) praisesh the noble character of Ḥasan Wāsh, his prudent policy and the purity of his morals. When Ḥasan Wāsh died in 569 (979) in his capital Sarmāfīj (south of Būstānī), Ḥusayn al-Dawla overran his possessions (Ḥamānū, Dailam, Nībāwān) to bring it under his authority, but in the end he granted investiture to Bād b. Ḥasan Wāsh (569—405 = 989—1044) (q.v.), who remained loyal to Ḥusayn al-Dawla and even fought against his own brothers who had taken the side of the rebel Ḥuk al-Dawla. The Caliph gave Bād the title of Ḥusayn al-Dawla wa-l-Dawla. The historians give an extremely favourable verdict on Bād; he had his tribe educated, distributed taxation fairly and protected the peasants (Ṭaḥfirī, Abī Shadīlī), p. 287—299, 327; Ibn Maẖzan, p. 429, 449—454; Uṭbī, Kullāt al-Fawāʾil, transl. Reynolds, p. 424). Bād’s successor Zahir (Ṭabarī) only reigned a year and in 406 (1013) was driven out by the Buyid Ǧahān al-Dawla. Ḥasan Wāsh’s uncle Ṭawāfīd, chief of the Aḵtānī tribe, died in 549 (960), his brother Abū Ǧanām in 550 (961) and a little later his son Abī Sāḥib Daisan, the last of this collateral branch was dispossessed of his estates (Ḵasān or Kāzāyī [Ḵasānī] near Būstānī Yavāq on the Zohūrī, Ghanān-ḵāb, etc.). Ḥusayn al-Dawla had to deal with the Kurds on several occasions, but he was much more severe with them than his father Ḥuk al-Dawla. In 568 (978), the Kurd Ibn Ḥaḍīyī with the help of the Ḥamādānī Abī Ṭalḥī became an independent ruler at Ardawān (Ḵawqūm near al-Ḫubārī, Yāḵūt, i. 199) but soon allowed himself to be seduced by the promises of Ḥusayn al-Dawla (Ṭaḥfirī, ii. 392). In 569 (979) the latter launched an expedition against the Kurds of Shāhīzīdī whom he wished to eradicate from Būstānī. Bād Shāhīzīdī, who had business and matrimonial ties with them. The town of Shāhīzīdī was occupied and the Arabs went back to the desert (Ṭaḥfirī, ii. 398: Kāzīm, vii. 546).

Another expedition was sent in 570 (980) against the Ḥakkārī Kurds who were besieged and surrendered, relying on a promise that their lives would be spared. But the leader of the expedition crucified them along the side of the road for five farsāks between Maḥāṭāyī and Mawṣāl (Kāzīm, p. 521).

Even in the lifetime of Ḥusayn al-Dawla, the Ḥamādānī chief Abī ‘Abdallāh Ḥasan b. Ḥusayn (or Abī Shadīlī) Bāqī b. Dīmuq (known as Bāqī) has attained considerable notoriety. As first a sheikh, he gradually rose to be lord of Ardīkhūj, Amlī and Māḏārin. A rising in Qaraṭan introduced him into conflict with Samsān al-Dawla. Bāqī defeated the latter’s forces at Bi-Dāštīya (on the Khūṣir-al-Hamayniya in the canton of Kawqūm = Arīsān) seized Mawṣāl and was planning a march on Baghdad to put Büyük rule.
when he was defeated by Şanşen al-Dawla. He fell back on Mal'at al-Dirikl and, by an arrangement with the captain of the army sent against him, secured possession of Diyarbakr and the western part of Tur Abdin (374 = 984). But he did not relinquish his designs on Mawṣil and in 379 (990) having collected a large number of Bashsharshi Kurds, encamped under the walls of this town and engaged in negotiations with its inhabitants. But the Hashani princes who had just regained session of their hereditary fief, secured the help of the Banu 'Uqail Arabs and attacked the invader. An accident put Bridh hors de combat and he was slain. His body was cremated, but the people of Mawṣil obtained his horn with the usual rites because he had fought against the unbelievers (Amd. Xi. 25, 27, 38, 49; Turāqī 386-400, 410; Fakhr al-Dawla, p. 83-84, 176-178; Abu a-Faraj, Muḥarrar al-Dawla, ed. Pococke, 321-323). In 380-390, Şanşen al-Dawla made an attempt to improve his position and with this object, made an alliance with Fakhr al-Dawla, who was supported by the Kurdi cavalry mobilised at Shurāz. After the failure of the enterprise he sought refuge with the Kurds in the latter betrayed him and he took refuge with Fakhr al-Dawla, who was notorious for his hatred of the Kurds. (Turāqī 386-400, 410; p. 184; on Ibn Fadlān see al-Usb, loc. cit., p. 424-425). The Kurdi dynasty of the Ārānids (Lambois, No. 47) is closely connected with Baddh. After the defeat of Mawṣil, Abu 'Abd al-Mawṣil b. Dunṣa, the son of Bāh's sister and his only wife, withdrew to Hisn-Kairūn (q.v.) where Bāh's Dailamite wife lived. He married her and took one of the strongholds that had belonged to Baddh. He then took prisoner Abu 'Abdallāh al-Hamādi who had defeated Baddh, but treated him generously. Iba Mawṣil established himself in Diyarbakr and by his conciliatory attitude won the sympathy of the inhabitants. The Mawṣilids reigned from 380 (990) to 483 (1090). Their power extended not only over Diyarbakr (Ārānids, Anjura Māls̱ikīn, Hisn-Kairūn) but also to Khitān, Mālgard, Arūsh and the eastem to the northeast of Lake Yan. On the west they held Ura for a time. Abu al-Hasan in 381 (991) invaded Syria and took it from the Byzantine Emperor Basil II. He was killed in 387 (997) by the people of Diyarbakr who had rebelled. His brother Abu Mansūr Mānakūl al-Dawla who after the death of Baddh had seized Māls̱ikīn reigned there till 402 (1012) (Abu 'Abd, Anjura Māls̱ikīn, ed. Reisit, 566). His brother Abu Nasr Ahmad (the Khulīfī) 417-458 succeeded him and reigned from 402 to 453. In 416 (1025) he seized Ura but the Byzantines re-established their power in 423 (1031) (Abu 'Abd, al-Faraj, p. 246). He earned the reputation of being a just and enlightened ruler, and able, though given to pleasure. In 442 (1050) Abu Nasr had to pay homage to the Saljuq Taghūrī. His son and successor Abu 'Abd al-Kanūn, Nasr, called Niṣāf al-Dawla (453-474), shared the power with his brother Sa'd (d. in 457). He added to his possessions Ḥarrān, Sawaštā etc. His successor was Mansūr b. Sa'd, who nominally reigned from 472 to 489 but by 476 (1083) the Saljuq general Fakhr al-Dawla b. Diyar took almost the whole of his lands, which were placed under the authority of the Akhlag of Mawṣil (Abu a-Faraj, ill. 77-79, 87, 123, 125, 240). On the Mawṣilids cf. the special study by Amedroz, T.J.A.S., 1903, p. 123-134.

On the eve of the Turkish invasion we find frequent reference to exploits and expeditions of the Kurds. In the reign of ʿAlāʾ ad-Dawla ʿAlī b. al-Dawla who killed the Emperor Basil II's general and thus stopped the Byzantine advance (Turāqī 386-400, 410; Fakhr al-Dawla, p. 247). Between 366 and 378 the Kurds took part in the struggle between the Byzids and the Diyarbakrs for the possession of Diyarbakr (al-Uthi, p. 295-302; Ibn Isfandiyar, G. al-M., p. 236-237). A few years later we find Maḥmūd of Ghuraz using Kurds against the Karahānsids (al-Uthi, p. 330). The Kurds took part in the civil wars of the Byzids, in the struggle of the Banu 'Uqail for the possession of Mawṣil, etc. In 411 (1020) they fought against the Turkish troops who motined in Ḫamādan. In 415-420 we find them fighting in Ḫars and Khīṭān against the last Byzid, Abu Kašīfa (A. al-Uthi, 100, 134, 226, 227, 239, 244, 247, 254, 265; Turāqī, Ibn Mustamin, p. 348, 376, 381). Thus the Kurdi element was exhausting itself in continual fighting when the Turkish hordes arrived who were destined to modify radically the ethnical aspect of the Near East.

The Turkish Conquest. When in 420 (1029), the Ghurids of the Saljuq dynasty reached Raṣīf, Tāṣār al-Dawla, the Turkish general of the Ghaznavids went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds being captured by the Ghurids sent a message to his men to cease fighting. This caused a rumour and Tāṣār was killed (A. al-Uthi, p. 265). In the same year the Ghurids attacked Maḥmūd and executed many Ḫalabids. The Kurds made an alliance with the ruler of Aḥbaraḫūš (Wahšūdūr) II and the Ghurids had to retreat. Another body of Ghurids after a raid into Armenia returned to Urāna and the lands of Aḥnāt al-Hādīq, Ḫalabids; the Kurds attacked the Ghurids but suffered a defeat. In 432 (1041) the Maḥmūd. Wahšūdūr II and Maḥmūd massacred a large number of Ghurids at Tabur. The Ghurids of Urāna went into Ḫakki, a dependence created by the Ghurids and inhabited by the Kurds but while they were involved in the mountains the Kurds attacked them, killed 1,500 men and took many prisoners and much booty. (A. al-Uthi, 270-279).

On the approach of Tughrilbeg's troops, the Ghurids took flight and pushed onwards. Kurdish guides led them through al-Zawān to ʿIṣṭār. One section of the Ghurids under Mānakūl, Azmūghi remained to the east of ʿIṣṭār while the other under Bāh marched on Diyarbakr and going on pillaged the districts of ʿIṣṭār, ʿIṣṭārāb, ʿIṣṭārūn. (Yaḥṣūr, ii. 270: a town between Mawṣil and ʿIṣṭār) and Fīshābūr. The Marāwānī and Sāliḥī b. Nasr al-Dawla, ruler of ʿIṣṭār, persuaded the Ghurids to wait till the spring before traversing his lands to join the other Ghurids who were settled in Syria. Then by a ruse he seized Mawṣil and with the help of the Bashsharshi Kurds of Fīshābūr, pursued the Ghurids. But the latter did not cease their depredations; they ravaged the district of Diyarbakr and seized Mawṣil (A. al-Uthi, ii. 272-273).

Meanwhile the dynasty of the Ḥanāwūrīs had perished and the power in Ḫalabids had passed.
to a new family the Band' A'nnâ a (cf. Suchan, Ein Verschiednis Muthum. Diarystien, p. 191. Shafii
smâna, i. 321. 'Alîyâr) which is often called Abu l-Shawk. Previously in 340 (1951), during a Turkish
rising in Hamadân, the Bâyût Mâhi'-al-Dawla had recourse to the services of Ibn Abi
l-Shawk, chief of Hulwân (Tafqîrî, ii. 2). The real foundling of this family to be seen has been
Abî 'l-Fâth Muhammad b. A'nnâ (Kâmîl, ix. 159) who ruled 380-401. His son Abu l-'Shawk
slay the last of the Haasanâhâla, Zâhir (Tahir) in 406. The possessions of the Band' A'nnâ included
Shafirî, Kirmângâh (occupied in 431; Kâmîl, ix. 300, 316), Iblawân, Şamghalân, Daşkâ, Khatîh-
âlahân. In 437, Taghrîl sent his brother 'Abdûn Yasnî to provide Qâdirîh. Iblawân drove the
Bâyût Gurgâš out of Hulwân and he sought refuge with the Uijjâlân Kûra. At Kirmângâh there
was a garrison of Abu l-'Shawk composed of Dailâmîs and Shâhâlân Jûran. Kirmângâh was
occupied and Abu l-Shawk died in 438 (1046) at Sirwan. 'Abdûn took Samârîn (Sussanîn I Shasmân) and
subjugated the Dujjâkân. Sa'dûn, son of Abu l-
'shawk submitted to the Sâlihâs. The dynasty lasted till 520 (1116) (Münetçinîmûlah, quoted by Suchan, loc. cit.).

The defeat of the Emperor Romanus IV at Me-
lâged (403 = 1012) delivered all Armenia into the hands of Alp Arslân. Under the Great Sâlih the
there arose in Fars the turbulent dynasty of the Shabâkara (q.v.), but it is very doubtful if this
dynasty, the fortunes of which can be traced from
421 to 756, was strictly Kurdish (cf. above). On
the other hand the small Kurdish dynasties were
the chief factor in the struggle in favour of Turks. In 493 (1100) the last Bagârîs disappeared
in the west of Kûrdîstân, and the Turcophones of KûlîţÎ where the Turc Sûkânâ Kûlî founded
the dynasty of the Shâh Armenian which lasted a
century until the coming of the Ajîyâs. Under the
date 495 (1101) Ibn Al-Atrî (x. 238) mentions the
killing of two thousand Kurds of Surkhâb b.
Badr, a scion of the Band' A'nnâ by the Turkoph-
ouns of Sulghar Kânabûlî. Other Turkommans later
took all the lands of Surkhâb except Shafirî, Daşkâ and Khatîhâlahân. In spite of these crushing
blows the Kurds are often mentioned in the six-
and seventh centuries. In his struggle with Shabir,
Kirmân, Malik Şah employed Turkish and Arab
courts, whom he later rewarded with feasts at
Kûrmân (Kâmîl, x. 33) where there were already
colonies of Kurds (cf. Ma'ûnî, Tûnîhî, p. 88; IIm Khâlidî, i. 316). Ruhê of Kûrds took place at
Bâzîrand, Mordî etc. in 496, 496, 505. In Mâhâmân b. Malik Şah's campaign against
Syria 504 (1110) there took part the lord of
Matraîga, Ahmad b. Wahbîhâ, a Kurd of the tribe of Rawât (cf. Kâmîl, v. 391) and the
'means of Armenia' Sûkman. The campaign was a
fiasco and the Kurds left to lay siege to the Turc Sûk-
Kân (Revue des Hist. des Crûtaine, Decem-
Orientaux, iii. 547, 590).

During this period we often find the Kurds
mentioned in Syria, where they came into contact
with the Franks (cf. Doerebourg, Qosûmân a.
Mûnîkhî). Under Sandjar the province of Kur-
dâستان was formed of the western part of Dijîlât, Sûfûyân, the nephew of Sandjar, became its
ruler with Bakûr (N. E. of Hamadân) as its capital. The province was in a flourishing state.
In the reign of Sandjar also the Kurds took part in the troubles of 513. In 516 a punitive expedition
passed through the Hakkârî, Zûkkan and Baghnavî districts (Kâmîl, x. 374, 377, 420), but shortly
afterwards the Kurds seized the stronghold of the Christian patriarch at Tûr 'Abûlîn (Assenanti, Bibl. Ori., ii. 221).

The Aškhâs of Mawâqî. The Aškhâs, the immediate neighbours of Central Kûrdistan, played an
important part there. 'Imâm al-Dîn al-
Zângî several times invaded Kûrd territory. In
528 (1134) he took Tûma (on the left bank of the
Bokhûn) and to punish the Hamadânîs who had
supported the Caliph Mustârûqî when he was besieged Mawâqî, seized their fortresses, Al-
'Abr, Shihî etc. (Shams al-Dîn in Reeniî, iii.
to Zangi (he must have been a Hakkârî); at this
period this tribe lived south of the territory which
now bears its name; cf. Hoffmann, Aussenp., p.
203). After the death of Abu l-Hâdi, Zangi
intervened in the quarrels among his successors,
seized Aqîhî and dismantled its defences; the
fort of Dûlub received the name of 'Amsâli-
'dîya, in honour of 'Imâm al-Dîn'. In 534
(1139) Zangi took Shahristân from Kûtîjâb b. Arslân
Tâhî the Turkmân. In 537 (1142) he sent a new
expedition against the Hakkârîs and took the
fortress of al-Shalânî (= Aqîhî?) which he rebuilt.
In 538 Irân and Kûsâw were taken (Shams al-
-Dîn in Reeniî, iii. 685). 'Allî, lord of Al-Rîyûbî
(cf. Shamsûmûn, i. 286, Rîyûbî-lulak), Faraž
and Alî (Bik) joined Zangi of his own accord.
The last expedition of Zangi was against the
Baghnavî of Fannâk (Finsî) but the siege of this
town was raised by the death of Zangi (544
(1149) Ibn al-Mülîk, al-Aškhâsî in Reeniî, iii.
36, 114, 129, 158). Kûrdîs Tagîmî Muçîdî (?)
of Hakkârî, who was sent in 547, by the Aškhâs
of Mawâqî against the Aškhâs of Aşharabûlî,
seems to have been a Turk foreign to the tribe.

Later after the death of 'Ali b. Sinî (589) the
Zângîs consolidated their position in Central
Kûrdistan. In 607 (1211) 'Imâm al-Dîn, a younger
son of Arslân Şâh Zangi, received as a fief the
strongholds of Hamadân ('Akbîr and Şahlî). In 615
(1218) the same prince seized 'Amsâli and "the
remainder of the fortresses of the Hakkârî and
Zawâzî" which were ceded to him by Muzaffar
al-Dîn Kûrsâri of Aribîl (Abû l-Fawâd, p. 433,
435). It must have been these events that caused
the Hakkârîs to be driven back towards the lands
at the sources of the Great Zûkkan.

The Urukûs, Aškhâs of Dîyûrîkâr several
times came into conflict with the Kurds (Abû l-
Fîdî, iii. 583; Usânî, i. 321). The Ašbâ'âs Caliphs,
freeing themselves from the tutelage of
their protectors (noted with the Kurds (cf. the
case of 'üs Humadânî in 528 and Kâmîl, xi. 7,
388) and sought to weaken the Turks. In 581
(1185) under the Caliph al-Nâqîr, a minor incident
resulted in a war between the Kurds and the
Turkommans (Kâmîl, iii. 342) which extended over
a vast area (Syria, Dîyûrîkâr, Lûzân, Mawâqî,
Shabirîz, Dijîlât and Aşharabûlî). Two years
later the rivals stopped fighting in order to join
against the Caliph of Armenia, Asoyîrî, Muzaf-
potamian, Syria and Capadocia. The conflict
soon broke out between the Kurds and Turkom-
man. After many fierce battles the Kurds fought
their way back into Cilicia. The Turks practically
exterminated the Kurds of Cilicia and Syria. As
the Kurds on leaving their old homes had entrusted their goods to their Christian neighbours and as the Christians conciliated some Kurds, the Turks finally fell upon the Christians at Thelma (i) and Araboth (= A'ariq?) (Michael the Syrian, in Recueil, Doc. Asiat., iii. 395).

The Ayübiids. The Kurdish origins of this remarkable dynasty are well established (Sahrazad, p. 55-82). The Armenian historian Hayton (Hethum) says on this point: "Postes vero Saraceni universum dominium Egypti et Medi, qui Cordine volgariter dicitur, regni Egypti dominium occupaverunt," Recueil, Doc. Asiat., iii. 225, 343). The grandfather of Salih al-Din Shaddih b. Marwan was a Rawa'i Kari (Rawadi, Rawanda; a clan of the Hadhjib) of Dvin (q. v.).

The important fact is that it was from Dvin that the Shaddi dynasty came out, the memories of which must have been still alive in the time of Shaddih. Ayübi (q. v.) and Shirkhi (q. v.), son of Shaddih, were born in the old home (the village of Adjamskhan). Salih al-Din (q. v.) was born at Taksit but Kurd traditions were certainly familiar to him through his father and uncle. The persistence of Iranian names in the Ayübiid family is significant. Nevertheless the scene of the main activities of the dynasty was Egypt and Syria.

The families of the old Seldjük Atabaks, even when they became vassals of the Ayübiids continued to rule in Diyarbakir (Urtauids), Mawsil (Zangids) and Arbil (the Behtasghis, at first deputies of the Zangids). By the treaty of 857 (1157), with Izz al-Din Zangi, Salih al-Din annexed only Aleppo and Shahrizor (Ibn al-Aarith, al-Atabakhs, Recueil, ii. 334; Kamal, xi. 340). Balikh al-Din, Recueil, iii. 85). In 858, Salih al-Din gave Shahrizor to his Mamluk Kshlaghkh (q. v.) a relative of Ya'kub b. Khashqai. The only independent way by which the Ayübiids penetrated into Kurdistan was that of Khiilti. This district was at first conquered by Tadj al-Din in 877 (1211) (Kamal, xii. 49) but only after the death of Salih al-Din that his nephew Awhad Ayübi installed himself there in 894 (1207). Later Khiilti passed to his brother Ashraf, who assumed the title "Shah Armian." and finally to the third brother Mu'azzar who ruled there till 942 (1534). The peace of this war was broken by invasions of Georgians, of the Khwarizmshah and of the Mongols. The Georgian troops who were operating round Khiilti at this time were commanded by the Armenian prince Zakare and Iwane whose genealogies make them descented of the Ksel Barakehan, i.e. of the Kürd tribe of Bâipartshin; cf. Marr in Zcun, 1911, x., p. 120.

The Ayübiid forces were composed mainly of Turks but the Kurdish element was by no means negligible. In 883 (1187), Salih al-Din addressed an appeal for a holy war to the Kurds on the upper Tigris. The Ughans forces were disband in 884 (1188) but the Diyarbakir detachments and particular tribes are often mentioned. The Kurds were sometimes on bad terms with the Turkomans (Ibn Khatib al-Din, Recueil, iii. 36, 313, 381).

Kurdish were numerous in the civil and military service of the Ayübiids but very often they acted against the dynasty's interests. When Shirkhi died, there were Kurds who opposed the appointment of Salih al-Din as his successor (Ibn Kbal-likd, iv. 494).

An important part was played by the family of Abu 'l-Hajjaj (Hajjibân) hereditary chief of Arbil (I). He directed the defence of 'Akka against the Crusaders and was appointed 'ubâda'i of the army and governor of Jerusalem. In 1196 he was transferred to Baghdad; he conducted an expedition against Hamadân and died at Dâjkûs. His nephew, Kajb al-Din built the Khâsîya madrasa in Cairo. Another Kermel, of the tribe of Hakkân, Sal Künt al-Din b. Âmân al-Malachî, succeeded Abu 'l-Hajjaj at 'Akka. His descendants had a flourishing career; his son Âmân ended his days in the possession of Harûn; his grandson, the Kajî 'Imad al-Din, plotted against al-Kâmil and had to go into exile.

The Shi'ites, Shâh Jâlîl al-Din. In 644 (1247) the Kurds of Zagros inflicted a defeat on the troops of the Khwarizmshah sent from Hamadân to Baghdad. Jâlîl al-Din's operation against Khâtûn (623-626) disorganized the life of the country and the Kurds were decimated by famine (Kâmîl, xii. 307, 308). Defeated and pursued by the Mongols, Jâlîl al-Din took refuge among the Kürds of Diyarbakir and in 638 (1241) he was killed, probably by one of them (Djavunûn, ed. Muhammad Kawsâm, 1930; Kâmîl, xii. 343; D'Ohsson, Histoire des Mongols, iii. 62). In 634 (1237) again the remnant of the Khwarizmshah's hordes traversed and plundered the region of Kharput (Atabakhs, i. 63 p. 477). After the death of Jâlîl al-Din, the Mongol lords waste the region of Diyarbakir and Khâtûn. Another base had descended from Marâgha on Arbil; this latter region was three times invaded. In 645 (1245), Shahrizor was laid waste and in 650 (1252) Diyarbakir.

The Mongol Ikhâns. The Kurds are rarely mentioned under the Ikhâns. As these rulers — at first pagan and later Muslims — were on good terms with the Christians and the latter had sufficient causes of complaint against their Muslim neighbours, the Kurds so recently involved in the wars of the Ayübiids had to remain confined to their mountains and to hope for success for the enemies of the Mongols.

The province of "Kurdistan" formed in the time of the Seldjük, the capital of which was Bahâr (near Hamadân) was conquered by Malik b. Thâlit, father of the celebrated Amir Câbatan. Leaving Hamadân in 655, Hâlâgî marched on Baghdad. At Kirmânumâ the Mongols began to murder and plunder (Ráshid al-Din, ed. Quâtremère, p. 324, 325, 267). Before the capture of Baghdad, Hâlâgî sent troops to take Arbil. The governor of this stronghold, Tadj al-Din Salût (cf. Rashâd al-Din, ed. Blachet, p. 261), submitted to the Mongols but the Kurd garrison refused to follow his example. Arbil was taken with the help of Ashraf al-Din Mawsil, Bahâr al-Din Lutûn (d'Ollisson, iii, 256). The taking of Baghdad resulted in the depopulation of Shahrizor (q. v.) and its Kurd inhabitants, according to Shâhâb al-Din al-Umari, left for Syria and Egypt (cf. D'Ohsson, op. cit., iii. 309, 320, 337). An echo of these events is found in the appearance in Algeria of two Kürd tribes: Lawân and Bahûn (Ibn Khâlidân, Hist. des Berbères, trans. de Slane, iv. 410 and iii. 413).

Returning to Adarsharikhân, Hâlâgî set out for Syria in 657. In the Hakkâri country the Mongols put all the Kurds they found to the sword (Râshîd al-Din, ed. Quâtremère, p. 324). Djavunûn, Diyarbakîr, Mayafarîkîn (held by the Ayübiid Kamal) and Murût were taken in succession.
After the death of the Atshak Badr al-Din Lu'in who had remained faithful to Hilal, his son Saliq went over to the side of Balbar, Sultan of Egypt and received confirmation of his investiture from him. The Kurds around Mervyl at once fell upon the Christians. The garrison of Mervyl consisting of Kurds, Turkmans and Ottomans, courageously resisted the Mongols.

In Syria also the Kurds threw in their lot with the Mamlika. In his letter to the Khans Berke, Balbar boasted of the number of his troops, who were Turks, Kurds and Arabs (d'Olsasson, ii. 355). In the time of Al-Abaq, the Armenian Hayton tells how after an invasion by Egyptian troops (before 677/278) the Kurds took 5,000 houses of Kurds (Gondory) living in northern Syria (Kawarla, Des. Arm. i. 170). But after the defeat of the Mongols in 688 (1288), a body of Muslim troops, made up of Turkmans and Kurds, laid waste Cilicia. The very cases in which Kurds are found allied to the Mongols were generally in distant parts. Under Uldjaiti there were Kurds in the troops that invaded Gillis in 706. A little later a Kurd, Masaq, who had proclaimed himself the substitute of the Shams of his family was executed by Uldjaiti. In 712, Badr al-Din, the Kurf lord of Rabaša resisted the Mongols.

The Kurf provinces were governed by the Mongol Amirs. The fighting in Arbil never ceased. The "Kayâla") Christian highlanders, forming part of the Mongol army and stationed in Arbil, bought a charge against their chief Zain al-Din Bâša and came into conflict with the Kurds whom the Arabs supported. Incidents began in 1297 but the situation came to a head in 1310. With great difficulty the Mongols drove the Christians out of the citadel. The Mongols had summoned the Kurds to help them in the siege but their Amir who were friendly with the Christians, wanted to use the Kurds to prevent the massacre of the Christians by the Arabs. The massacre took place but the Kurds had no share in it (Histoire de Mar Jehanlam III, transl. Chabot, Paris 1809, p. 152-177).

The country between Maragha and Arbil was a kind of high road for the Mongol armies; at this time the country south of Lake Urmia was still full of the most part occupied by Turks and Mongols (cf. MAMMU-KULU).

The capital of the province of "Kurdistan" and Uldjaiti was moved from Bahar to Sulaksâéid (of Camenâli). The extent to which the province which had suffered may be judged from the statement of the Naskir al-Šafa'i (p. 107) according to which its territories were reduced to one tenth of what they were under the Saljûqs.

When the Ikhsan had disappeared, two families of Mongol chiefs of the tribes of Sulaks (q.v.) and Djilmars (q.v.) became rivals for power. By virtue of the division of the fiefs between the two "Hasha" (in 728/1328), (Persian) Kurdistans and Khurasan returned to the children of the Amir Akrasâ at Akraš (I). In 748-785, the Djilars Bayazid carved a fief for himself out of Persian Kurdistans and Iran Adlam (Lance-Poole, op. cit. No. 86 and d'Olsasson, iv. 747).

Table of the Kurf tribes in the time of the Mamlik Sultans. The Mongol conquest had completely eclipsed the political part played by the Kurd tribes but in Egypt where the Mamlik Sultans were cherishing secret plans against the Ikhsan, much interest was taken in the fate of this Muslim element. The Mamlik al-Ashâr of Ghišan al-Din al-Umâr (d. 749 = 1348) shows how exactly the chancelleries of the Mamlik Sultans were informed about Kurf affairs. According to al-Umâr there were Kurds near Akras and Akras and al-Diyâr al-Arab and in Syria and Yemen. The mountain country (al-Djilmars) inhabited by the Kurds began near Hamadin and ended in Cilicia (Hilâla al-Tahtâ). To the west of the Tigris the Kurds of al-Qausa and Mardin were at the mercy of all their neighbours. At Mardin however a certain Ibrâhîm al-'Aqr Bâša (I) had shortly before proclaimed himself independent and had attained considerable power. The author then gives a list of twenty tribes living between Hamadin and the past of al-Djârâ that lies between Mervyl and Karâ (cf. Kusîr in the Shâhâf-mânû).
16. The Hakkârî lived at ‘Amadiya and numbered 4,000 men.
17. Near the Hakkârî beside Mardin were the Djaal al-‘Amrani and the cave of Kabîl Dâwûl where lived the Besîrî (??).
18. Near Dîjûlûnî, towards Mawilî, lived the Bokhtî, rivals of the Hammâtî.
19. The Dassînî had been very numerous but their chief Badr al-Dîn came down to more accessible country, and there were no more than 1,000 Dassînî in the province of Mawîlî. 500 Dassînî lived at ‘Azîr.
20. The Damûlî (??) inhabited the high mountains.

To this information given by the Mazikî the Shâbî al-‘Aţâfî basing on al-Takhtî composed by Tâşî al-Dîn about 748 (1347) adds a list of 35 Kuri chiefs with whom the chancellors of Cairo were in correspondence.

Timûr and the Turkoman dynasties. After the Mongols, the rival Turkoman dynasties extended their power over Kurdistân. This period, of which little is yet accurately known, was of considerable importance for the Kurds. The Marzûqîs of the last dynasty penetrated into the heart of Kurdistân, involved in the melée of political and religious quarrels (cf. the extreme Shî’îs of the Kara-Koyunlû) and provoked considerable movements of the population; it was at this period that the Yezidi Kurds seized the country south of the Lake of Urmia (cf. Kiva Nadîr). In contrast to this, the conquest by Timûr which temporally swept aside the Kara-Koyunlu had only a transitory character.

Many incidents in the history of Hîmî Kâfî and Djastrî between 796—807 (1339—1441) are recorded in the Syriac Chronicles (written at Hîlâm) publ. by Behnach, Kritum secundum XV in Mesopotamia illusor. lib. Bâris 1838.

Timûr had to deal with the Kurds in his campaigns of 796 and 803. After overrunning Baghdad and Dîyârbakr Timûr attacked Djastrî which he soon destroyed. The dependencies of Djastrî were likewise conquered. Timûr next crossed the mountains separating Dîyârbakr from Mînî and gave a favourable reception to Shurî al-Dîn of Bîdîs "renowned for his kindness and justness throughout all Kurdistân". In 803 Timûr returned from Baghîdî to Afdjarâhîn and on the way was attacked by the Kurds.

After the death of Timûr, Kara-Yûsauf Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power. In 810 Kara Yûsauf and Kârakoyunlu returned to Kurdistân and sought refuge at first with Shams al-Dîn of Bîdîs. He gave him his daughter and with his assistance re-established his power.

The battle of Dîlûtirî deeply affected Kurdistân. Malik Kâhlî (Shurîfînî, l. 155) the dispossessed prince of Hîmî Kâfî had regained possession of Shurî and was trying to regain his hereditary throne. Muhammad Beg of Shâbî was fighting against the Persian prince a second Beg of Maysûfîrînî, Kâbîl Beg of Agil, Djanâmî Beg of Tâšî, and Abd al-Malik, son of Fâlî, had declared in favour of the Ottoman. The Governor of Djastrî had succeeded in repulsing the Persians of Mawîlî. Sa’îd Beg Solîrî had taken Arbil and Kirkûk. Some twenty other chiefs were wavering in their loyalty to the Persians. A personal visit by Idîrî to all these chiefs won 25 of them over to the Sultân.

When Shâm had left Tâsarî, Idîrî sent reinforcements to Dîyârbakr and Hîmî Kâfî. Idîrî summoned to his flag the Kurd levies and defeated Kurd Beg, a former Persian Governor of Kurdistân. The Kurds of Dîyârîbâk, resisted the Persian attack until help arrived from Ilyfîkî Muhammad Pâshâ, Ilyfîkî and Idîrî met at Hîmî-Kâfî and defeated the Kurds. Then reinforced by 5,000 Kurds (from ‘Amadiya) the Turks relieved Dîyâr-bâk and took Mârdîn, and Idîrî, emir of the Shî‘î tribe which remained in Persian hands. The Persian commander then executed a successful diversion from Baghîdî and Kirkûk and the people of Mârdîn drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Naspîn-Urfa road. The Persians were defeated and Ilyfîkî forced Sulaimân Kânî who was still at Mârdîn to surrender. The occupation of Naspîn, Dîrî,
KURDS

Malýššiarto, Díyárbar and Singar followed and lātis completed the administrative organisation of the sanjaq. In the province of Díyárbar eleven sanjaqās were put under Turkīsh officials, eight under Kurds (Abrūd, Ḥeyleği). The Sanjaq confirms the investigations of the new order but the latter were always chosen from the other families. Five hereditary sanjaqāt (hājirān-kemālāt) retained their dynasties with the transmission of power direct from father to son (cf. Tischendorf, Das Lesezoon in der mosaischen Staaten, Leipzig 1872, ch. ii. and iv., quoting Aḥmad Ali Muḥammadnāmeh which wrote at the beginning of the sixteenth century).—A similar system was later applied throughout Kurdistan from Malṭiya to Bīyašt and Ṣhahrūstī (cf. below on Şaraf-nāma). and the very interesting remarks of Ewlyś Čelebi [IV, 176—180 and 247—316]; on the 37 sanjaqās joined to Wān by the law of Sulaimān I and the order of march of the local army. Only the province of Kirmānšāh remained to the Persians. lātis was liberalized and the emir's administration was sent him, the spaces left blank for him to fill in the names of the recipients (vom Harper, O. A. R. iv. 749).

[396] 1552 the Turkish army took Tabriz recovered Bagh- 

Bahādūl from Dhu l-Fākhr, a Kurd of the tribe of Māḏūl (Maqāilā). A long series of wars began again. Suṣain Sulaimān led an army against Persia in 1533, 1534, 1535, 1548, 1553, and 1554. In this last year the Baghādūl troops conquered the Kūra of Belbāq and Shahrūstī while the Persians were occupied in Georgia (von Harper, Grab cit., ii. 236).

By the peace of 999 (1590) 'Abdul I had to come to the Turks the western provinces including Adharārālūd, Shahrūstī and Lurān (ibid., i. 539) but in 1010 (1601) fighting was resumed and by the peace of 1021 (1612) Persia regained possession of the lost provinces, except Shahrūstī (ibid., i. 745). 'Abdul II transported 15,000 Kurds to the frontier of Khūzistān to serve as a bulwark against the Turkomans.

Towards the end of the reign of 'Abdul I, Turkish efforts were concentrated on Baghādūl. During Hāfiz Shah's first campaign (1623) his army included the Kurdāstān troops. The Kurds fought bravely. The Persians having defeated the attackers, sent punitive columns to Mārtān. After the death of Hāfiz Shah, the grand vizier Khos- 

raw Fālāwād advanced on Baghādūl in 1039 (1629). Sayyid Khan of 'Ammiyā, Mīra Beg Sülmān and the mixed Kurd-Arabo tribe of Baghillān took the side of Khosraw Fālāwād while Ahmad Khan Ardalān threatened the Turkish flank. Khosraw Fālāwād advanced as far as Susum [q.v.] and Hamadān. On their way back the Turks defeated at Camūšāl and Durtan a Persian force. Baghādūl still held out however and when Khosraw Fālāwād had returned Ahmad Khan Ardalān re-occupied Shahrūstī (vom Harper, Grab cit., iii. 17, 23, 49, 86, 92). Not till 1048 (1638) did Mārtān finally take Bagh- 

ādūl and the treaty was signed with Persia in 1048 (1638) which fixed the Iranian frontier down to the sixteenth century (Ta- 

rātāb-e Veṣeṣrā, i. 686). Persia was now completely behind the Zagros chain.

The great struggle between the Şafaws and Ottomans made the Kurds conscious of their political importance. The Şaraf-nāma has preserved for us an accurate picture of the feudal life of the

Kurd tribes and principalities at the height of its development about 1590 (1596).

Şaraf-nāma. This book by the chief of Bīlās, Şaraf al-Dīn (cf. no. 313) published in 1595 (1596) occupies an exceptional place among the sources for Kurdish history. The history of the Kurds in the strict sense (vol. i. in Vēlāyīmof Zennōf's addition) is divided into four parts (pākāra): the first of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (ṣanā'īn); the second with those whose members have sometimes had coins struck and the Ḫāshūk recited in their names; the third enumerates the families of hereditary governors (bakhštān) and the fourth is devoted to a detailed history of the chiefs of Bīlās. Part i. gives five dynasties, the Mar- wānīs [q.v.] of Dīyābār and Dījāma, the Hadainwāds [q.v.] of Dainwār and Şahrūstī, the Fālāwāds of the Great Lār; the princes of little Lār [cf. see] and the Aysūhāds [q.v.].

As the differentiation between the second and third class of princes is rather subtle and the order in which Şaraf al-Dīn enumerates the dynasties is quite arbitrary it is better to arrange these dynasties according to the geographical position of the seat, taking Dūṣrat-šāh Qubār as the centre. This list will be followed by that of the Kurds in Persia. The sons of the second class (including Bīlās) will be marked with an asterisk (*)..

Şaraf al-Dīn distinguishes as far as possible between the tribes and the families of their chiefs and it is necessary always to bear in mind the bases of feudal organisation in Kurdistan. Chiefs of varied origins rule the Kurdish, Kushtian and Christian tribes, with the help of warrior Kurd tribes (avānār), which are sometimes settled, sometimes nomad or of rather semi-nomad.

Group A. Between Dūṣrat-šāh and Dūstān.

1. The chief of Dūṣrat-šāh* claimed Omayyad origin but gave as their ancestor Khalīl b. Waldī. In such confused genealogies we have a combination of memories of the Kurd alliances of the Omayyads with the local cult of the descendants of the famous general Khalīl b. Walīd [q.v.] whose tombs are shown near Shīr (Hartmann, Scissēn, p. 10, 144). These chiefs were at first Yāšūl and only later became converted to orthodox Sunnites. After the death of Sulaimān b. Khalīl his three sons divided his possessions: Dūṣrat fell to Mīyā 'Abd al-Asā, Gerb to Mir Höjjāl Beg and Fink to Mir Abūl. These three branches each kept their own link in later times.

The Şaraf-nāma refers to the possessions of this family as wilāyāt-i Bokhit (l. 320) and enumerates in detail but without system the 14 nākhs forming this important state: Gūrūlī, Arwaš, Pirvā, Bādān and Tānā (Kalānī) occupied by the tribe Kāf; Fink; Tūr, Haltam (Hūmān) and Şahrī inhabited by Christians; Nīk Asīl; Aramāštī the tribe of which (Brāšy) is the chief among those of Bokht; Kēwar or Kēmāt [v. Dīr-dīr which belongs to Tēstān].

In spite of the careful study by M. Hartmann, Bokhtān, Mittel. d. Ferdows, Geršān, 1890, 2 and 1897, l. p. 1—163, the localisation of some of these places is not quite certain.

The šef of Dūṣrat-šāh replaced the šef of the Dštān and the Tīgī. It did not include the sources of the Bohōn. Towards the east, the neighbours of the Bokhit were the
The ancestors of the rulers of Khīšt, Lāhījārā (Spartah, Ispet; in Einvīo Cilei, Isā’īr) and Māks (Maksa) were three brothers who came from Bālājīn (Kīs) in the time of the Saljūqs (Shahar-Abū). The tribe of the principal sīr was Namiran; this sīr lay along the right bank tributaries of the Bōhnān and stretched as far as Marwānīān.

2. Shīrāq (on the right bank of the Bōhnān below Khīšt and north-east of Sīrī) The ancestors of the “Shīrāwī” chiefs were in the services of the Alīyās and came to Shīrāq at the same time as the “Malkānī” to Hīm-Kāsf. The Shīrāwī played even the role of vassals by the Malikān (Cf. cit., l. 235). The capital of Shīrāq was Kūfīr. The other dependencies were Kāft, Shālahān (also called Garm = Khirki) and Irīn.

3. Rūstāq. The Rūstāq (Rūstāq) tribe is said to have taken its name from the fact that 24 clans, assembled one day to fight in the village of Tāb in the canyon of Kūfīt (now the kāf of Malkānī west of Bīlīs), formed a confederation which later became divided into two sections: Bīlāsī and Kāftwa. Shāfar al-Dīn (l. 361) enumerates the 24 (read 25) clans of the Rūstāq, of which five were old settlers and the others newer-ID: Bīlāsī (10 clans) and Kāftwa (15 clans). The Rūstāq took Bīlīs and Hārūn (Shāfīn) from the Georgian king Tātār (al-Charākat, p. 920-921). Later they were brought from Aqha by two brothers of Shāfīn origin. One became chief at Bīlīs and the other at Shafīn. 13 chiefs of the line of Dīyā al-Dīn had ruled at Bīlīs before 1005 (1596). The only interruptions took place under the Saljūqs (534-576), under the Ak-Koyunlu (871-900), under Shah Ismā’īl (1313-1360) and between 941 and 986. In this last year Sulaymān Sulaibain wanted to exchange the hereditary sīf of Amr: Shams al-Dīn for that of Malātiyā. Shams al-Dīn had to leave Bīlīs but fearful new intriguers went to the court of Shah Tāmāz, who treated him with generosity. Shams al-Dīn died in Persia in 995. His son Shāfar al-Dīn, born in exile in 940, was carefully educated at the court (the Shah even had him taught painting). He ruled several Persian provinces in succession and was appointed chief of all the Persian Khāns. After the accession to the throne of Ismā’īl II, Shāfar al-Dīn fell under suspicion and was sent to Nakhchivan. From there he succeeded in reaching Mān and received from Malik Khān investiture for Bīlīs, to which Māh was added in 991. For the year 1005 (1655) Ewliya Celebi (iv. 81-121) gives on a detailed description of Bīlīs. The last prince of Bīlīs, Shāfar Beg was deposed by the Turks in 1849 (Lynch, Armenia, ii. 149).

4. The rulers of Şāqīn (Hām) were called “Iran” from their ancestor “Iz al-Dīn,” brother of Dīyā al-Dīn of Bīlīs. The “agis” of Şāqīn were at first Shīrāwī, Bīlāsī, Shāftī and Tāmātī. The Rūstāi (as quoted) arrived afterwards; later after the accession of Aran the clan of that district. Kūfīr, Bādīr, Māghāsîn, Āsān, who had at first belonged to Hīm Kāsf, came to join those of Şāqīn.

5. The Suwālīt chiefs claimed a Barmāsīr origin. Their ancestors were adopted by the Suwālīt tribe. The hereditary sīf of the Suwālīt tribe was Gundi (this should be read for Āqīf in Vālimoof-Zeinof, l. 260).

6. The Pārsā tribe in which Shāfar al-Dīn places among the tribes of Persia (l. 328) is said to have been of Suwālīt origin. According to the Shāfar-nāma, l. 328, “it had no definite religion and showed signs of heresy (l. 357).” The tribe was divided into two branches, Khandar Boghlan and Sīrī, and one was under the Aran of Bīlāsī. Kīsīlī received as sīfān Kīs, Malakān and the canto of Ushāq (l. 235) of Māh. They were as proud that they thought of proclaiming their independence. After the battle of Calīfīn the Suwālīt dispossessed the Pārsā from many of their sīfān (l. 235). In the time of Shah Tāmāz, Kīsīlī Beg appointed chief of the Pārsā received Žamān (near Tīfūr). Later Pārsā were transferred to Abshāri where the tribe increased.

7. The Miṣrāːt tribes (Miṣrāːt in the Sultān-nāma) claimed to be descended from the ‘Abīsānī. Their ancestor was a religious man who came from Makkā to Agil and whom discipied the Mārdāt household. The tribe themselves said they were of Arāb origin, being a tribe Kūfīr from around Alippo who migrated about 420 to settle as a result of troubles with the Fātimids (Cf. Lane-Poole, The Muhām. Dynasties, N. 455: the Mārdāt of Alippo). The main one of the three branches, the Būbānak, lived at Agil; it maintained good relations with the Ak-Koyunlu but under Shah Ismā’īl Agil was occupied by the Persians. Of the other two branches of the Mārdāt, one ruled at Fāhī, at Bīgīn (below Kīfī) and at Khārāt and the other first at Bārāndjī and later at Dāmān (south of Aghānān-dān).

8. The rulers of Kamītān are said to have been ‘Abīsānī descent, but their names rather show a Turkish origin (Saljūq). Their šāhid, was called Malikīshī (Maliq-Shāhī, I). There were about 1,000 houses of Malikīshī in the Persian service (in Persia). The lands of the Malikīshī were as numerous that the name Kānsū were becoming almost synonymous with Kamītānish (Shahar-nāma, l. 165). They kept them in the Mongol period, under Timūr and Kārīsīf but the Ak-Koyunlu did all they could to weaken the tribes faithful to the Kān Koyunlu and sent the Turkish tribe to Khārbandān against Camīšānītān. Shabliw Hashim drove out the Khārbandān and submitted to Shah Ismā’īl. The latter put a Persian governor in his place. Şefīn I. restored the hereditary amir Fir Husain.

9. Group B between Diṣəra and Kīlī. Hām-Kīdī (Cf. Kīsīlī-Kīdī). The local tribes (malkānī) claimed to be of Aṣīlāt Kīlī descent, which seems very probable. They perhaps alleged to have received the sīf of Hīm Kāsf from the ruler of Mārdāt. The first chief mentioned by the Shahar-nāma, is Malik Sulaibain who died in 736 (1336). The Ak-Koyunlu seized Hīm Kāsf but Malik Khālī who had taken refuge in Hāmī, later regained possession of his sīf. At a later date the Ottoman dispossessed the sons of Malik Khālī. Among the dependencies of Hīm Kāsf, the Shahar-nāma mentions Sīrī, Bīgīn, Tīr (which sometimes figures among the possessions of Diṣəra, cf. ibid., p. 117, 127, 137) and Aran.

10. Sultanānī, rulers of Marwānī origin (Omont), established themselves at first at Kīlī and
the canton of Cihanli (between the Kulp and the Batman-see before they join) and gradually captured many strongholds and territory as far as the Tigria. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala-Tagh (Niphates). The chief of these tribes was Khandan, but the more eastern
prising was Basyan, 1,000 families of which migrated to Biyazid under their chief Shahanawar. A number of these tribes preferred Yastil doctrines. The Shabistan lived on had terms with their neighbours of Sapan. They were divided into two branches, that of Kulp and Batman and that of Mayafirgan.

12. Zakari (the modern pronunciation attested by Addâl Scher, T. A., 1910, p. 119—139), according to Shafi al-Din, Zakari, is the ancestor of the Arabic Arab. The family of a young holy man from Syria of 'Aid origin arrived in Mardin in the time of Ortoq (d. 316 = 1213), Abu 'l-Faraj, Mikhares, p. 379). The family formed connections by marriage with the Ortoqids and later with the Ak-Koyunlu. There were four branches of Zakari, the principal branches were those of 'Arid (descendants of the Batapdin-40) and Zakari. The two other branches were those of Deyasan (an old Christian convent Dej-Der) and that of Kerekian (between Deyatbar and Mayafirgan) the latter descendants of the marriage of a Zakari chief and a gipsy woman (dakbar-i shiru).

13. Kulla. The ruling dynasty believed it was related to those of Hakkari and Amadiya. Their ancestor Mand (Mantashe) had rendered services to the Ayubahida who gave him the canton of Kupair (near Antioch). He united under his rule the Yastids of Kupair and those living between Ham and Mardin as well as the Kurds of Dijbil and Kifa. Under the Mamlik Sulaiman and under Selim I disputes broke out between the Zakids (Shahid 'Iz al-Din) and the family of Mand, which ended in favour of the latter, but the hereditary rights of this North Syrian shef do not seem to have been on a very solid basis.

Group C. Between Djeautra and Khoi

14. Hakkari [cf. HAKSAN and Shambdin]. Sharaf al-Din does not seem to know the old quarters of the tribe around Amadiya from which the Mangal Attebs had driven them northwards. The emirs claimed to be of Abdâl shef.

The first Amr mentioned in the Saraf-nama is 1332 al-Din Shur (probably simply an arabisation of the name Yusuf-Shur) who held out against Timur in 789 (1387) in the fortress of Vah. Under the Ak-Koyunlu the tribe of Dumbul (of Djeautra) took possession of Hakkari but the Christians of Dij (Djere = Nestorian) went to Egypt to bring back the soin of the ancient family Assad al-Din Zairin Cang (Golden arm). The restored dynasty received the name of Samue (M. Garvest, Grammaria della lingua curda, Rome 1877, p. 4). In the time of Isma'il I, the Shambdin emirs lived in the capital of Bâl (Shambdin); a number of them lived in Western (south-west of Vah) and possession of the satrapy of Kavak west of Western was disputed to the Hakkari by the Rihan. Hakkari rule extended to Albar in the north. The last representative of the Hakkari house, Nûs-Alieth Beg, was dispossessed by the Ottomans after the rebellion of Bâdsh Shân Beg of Bokhâra and in 1545 Halim Khân surrendered Bâg-kal' to the Turks. The tribe of Tawânî (Ibid. I, 97, 100) which still exists is mentioned as living near the Hakkari.

14. The Mayafirgan sief lies north of Hakkari on the river which sent the lakes of Vah and Arsal. The rulers (Marwans) of a branch of Boghân) who originally descended from the Yastîn of 'Abd al-Allah (1312—

The Dumbul are a tribe of Boghân (Sharaf-nama, I, 118, 310; Dumbul-i Bohkak) which for long remained Yastil). The Dumbul later came to 'Abd al-Malik al-Din where they received as sheif Sukkanâshid (Sogmanâshid) north-west of Khoi (now Zaraâul). Under the Ak-Koyunlu the Dumbul had seized the castle of Bâl (in Shambdin) and a part of Hakkari (Ibid. I, p. 193). To their sheik of Sukkanâshid Shân Tashnâk added Khoi. Under Sultan Sulaiman the Dumbul received Köpr [I.e.] and Bângin, later they annexed Shambdin-Serul (the modern Serul) and Byat (the modern Shârul) in his Rastân al-Sharaf (beginning of the 16th century) says that all the Dumbul are Shîns (cf. the allusion in the Sharaf-nama, I, 312) and speak Turkish (I).

17. Brâdost. The ruling family was of Gûrun of Hasrawan descent [q.v.], its lands lay west of Urmia. One branch ruled at Shamal-I (I.e.), another at Tegesew and at Kâl's Dâwid. The remnants of the Brâdost tribe now live south of Shambdin on the Rubâr al-Bâdost (a tributary of the Great Zab, the sources of which lie west of Ushat).

18. Ustân. The chapter which is wanting in the manuscripts must certainly refer to the first dynasty of Shambdin, whose headquarters were Sulaiman in the atophobia of Harki (cf. Shambdin).

19. The history of the Zarâz (cf. the Zar-part of Shahî al-Din al-Umarî) announced in the preface to the Sharaf-nama is lacking in the text. The Zarân. The paragraph is lacking in the manuscripts and we know nothing of the tribe.

Group D. South of Hakkari

21. Amadîya [q.v.]. We have seen that the town of Amadiya was built on the site of an ancient castle under 'Imad al-Din Zangi (541—541).

The local dynasty of Bahduthîn mentioned in the Sharaf-nama seems to have settled in the country after the end of the Zangid (viii—ixth century). The chiefs of Amadiya were known for their fervour in religious studies. The Sharaf-nama gives their names for the Timurid period. Later (under Isma'il I) the Bahduthîns annexed the Zârjî district inhabited by the Kehdl and Sulaiman which had at one time formed a separate sief (shâhîyât al-Sulaimân). In this way the sief of Bahduthîn incorporated the greater part of the mountainous country north of Mawjil (Mount Geras, etc.).

22. Tassûr (Tasûr). The chapter dealing with this important Yastî tribe is lacking in the manuscripts last; in the text we find a reference which shows that the Amirs of Amadîya took Dodik from the shamal-I Tashnu (I. 109) and that in 944 (1544) Sulaiman Sellim I gave the sand dach of Arbîl and the whole siefest of Serûn to Huzîn Beg Dâsemi, a Yastî sheik's (cf. the chapter which provoked a bloody war with the Sûlûn (I. 274—

The latter ended by regaining their patrimony
and Husain Beg was executed at Constantinople. On the region called Dasten, cf. Hoffmann, Aus- züge, p. 232. 207.

23. Sohrūr (*the red ones*), descendants of Kabb, an Arab shepherd of Brehid who had fled to the village of Hudiya in the nether of Awan (in the Sohrūr territory). His son was claimed Amir of Balalāt (east of Rawanduz) and seized the castle of Awan. The capital of Sohrūr, which was embellished by their buildings (Rich, Nuvatān, i. 157) was Harrān. (on a tributary of the Great Zab below Rawanduz). The Sohrūr were still a powerful tribe about 1005 A.D.. but later succumbed to attacks of neighbours and the Balaq (Nuvatān, i. 157) benefited by their decline.

24. Bālaq. This name is really applied to several successive dynasties. Their principal seat lay south of the Little Zab and has as its capital Great Zab, in 1169 (1787) the Balaq built a new capital Sulaimānīs (cf. v. for details).

25. Mūkri, who now occupy the region south of Lake Urmia (for details see Sawai-Sulak) had broken off from the tribe of Balaq.

26. Bāna. The Khābūr Al Dīn chiefs bore this name because they had adopted lamas of their own free will (Pālājī) (for details see Sawai-Sulak).

27. Ardālaq see the articles, Ardālan, Shamshān, Khams, and Sawai-Sulak, Shaik.

28. Gāle Bergh (Sarafmāna, ii., suppl. 36-45, the addition is dated 1092). Their chief 'Abdās Agha of the tribe of Ustādāla received a *spring of water* in Muwīn (cf. Khamsa) from Bēg-bēg Ardūs (900-98). 'Abdās Agha later settled at Bilāwār, a former seat of the Khālūr. His followers were recruited from different tribes. Shah Tahmāp confirmed him in his rule over Bilāwār and the "Twelve Omāq".

29. Kahrār (Kahlār). The chiefs claimed to be descended from Güdār, son of Gir, in the Persian epic. The *isbitat of the Kahrār is called Ghūn (cf. Khams) but some manuscripts talk of *Khalūr and Ghūn* (Sarafmāna, ii., suppl. 6).

There were three branches of the Kahrār, those of Palangī (cf. Khamsa), Lariān (cf. Khams) and Māhān (cf. Khamsa).

The possessions of the chiefs of Darma and Dariang (now Rīdāb in the district of Zoūbā) according to Sharaf Al Din, i. 316, corresponded to the older Huwīn (q. v.). About 1055 the power of Khiyd Beg stretched from Daimawar and Biliawar to Bāghid. Maḥdīshāw and Biliawar (south of the Murwāri pass) formed the patrimony (Kāk) of the third branch of the Kahrār. The Maḥdīshāw branch was nomadic. All this perhaps explains the sanctity of the information given by Bāhlid Al Din. The Ghūn now keep their old patronymy but the Kahrār tribe occupies the region south of the great Bāghid-Khamsanāh road.

Group E. The Persian Kurds.

The plan of the section (Arba) of the Sarafmāna devoted to the Kahrār-Iran is not very clear. The author was writing at a time when the Pome Turkish frontier was not settled.

The principal tribes of Persia were three in number: Sīyāh Māhgh, Īgāz and Zangana. Their eponym were three brothers who came from Luristan or *Gūrān and Ardālan*. Besides those tribes and the lesser ones mentioned by Sharaf Al Din there were 14 tribes (yeomā nār) of Karabagh (in Transcaucasia), about 30,000 men under one ruler, and the Gil tribe in Khorāsān without counting tribes of minor importance.

The tribe of Sīyāh Māhgh. In the time of Shah Tahmāp its chief had become *āmir al-umār* of all the Kurds in Persia (over 24 tribes). A part of the Īgāz emigrated to Qeshmān. The tribe of Zangana (Zenghe) distinguished itself in Al-īrak and Khorāsān.

From 1650 to 1730, *Great Kurdistan*, as it has been described by Sharaf Al Din, was in so far as it consisted of a series of autonomous Kurdish chieftainships, had been already reduced in size by the introduction of Turkish rule in the sandjaks of Diyarbakr and Vān. Not only did the treaty of 1049 (1639) put an end to Persian expansion westwards but Turkey during the reign of the Safavid epigones succeeded in re-establishing its western provinces of Persia as well as Transcaucasia (Von Hammer, G.O.P., iv. 335). Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralization.

As early as the reign of Murad IV, we find Malik Alīādān Dūshā, appointed governor-general of Diyarbakr in 1638, making an expedition against the Yāsidi of Sinjūr. Last (1665 = 1655) the same Dūshā after his transfer to Vān subdued all the Kurds in this region.

In 1666 a Kurd, the son of a šāhī, declared himself Mahbūr but was captured by the rulers of Mawāli and Amālīyūn. The affair ended harmlessly. Sulān Muhammad IV taking the sāmerāt Đālī into his personal service (V. Hammer, iii, 580).

In the reign of the feeble Shah Ḥusain, the Kurds of Al-īrak, in 1719 besieged Hamānār and carried their depredations up to the capital itself. In 1722 by order of Shah Tahmāp, II an attempt to retake Jūshān, which had been occupied by the Afghān, was made by the Kurd chief Pandān (sarīsūn) but it was confined to an attack on the Armenian quarter. The Afghān drove off Pandān, who went back to his lands and submitted to the Turks (Hamaw, A Historical Account of the British Trade, 1753, vol. iii). Fontane deserts the Ṣafawīs. Even 'Abba Şalāt Khan Ardāla submitted to Hasan Pāshā (J. v. Hammer, ii. 211) etc. However, R. M. M., xxix, p. 87). His example was followed by the chiefs of Jūshāqān, Dūnā, Dūshā, Ḥassān and finally by the nāsūhīs 'Ašīr Mardīn Bakhūlūy Ali Mardīn (V. Hammer, iv. 237).

The Afghān. During the bloody and transitory period of Afghān rule in Jūshān, Afghān defeated the Turks (battle of Andjān in 1726) who had in their ranks 20,000 Kurds under Bebek Salamān-Gūrān (Salāmān Bāshā). The Turks attributed their defeat to the conduct of the Kurds, upon whom Afghān had lavished promises; indeed shortly before some of the Kurds had gone over to the Afghān. In spite of his initial success, in the next year 1140 (1727) Afghān had to repurchase his sovereign rights by ceding to the Turks the whole of western Persia including the Kurd and Kuruc cantons.
of Sultan Ahmad III affairs began to change. By the treaty of 1444 (1734) the Persians regained their western provinces and soon Nadir invaded Ottoman territory and advanced up to the gates of Bagdad. The Turks tried to gain his aid with Kurnish troops until in 1753 Topal 'Othman Pasha appeared on the scene with Kurd reinforcements he had raised in Mawill. Nadir was defeated. In 1734, he operated with success in the Caucasus and took Tiflis which had a garrison of 6,000 Kurds. By the peace of 1449 (1736), the old frontiers of 1049 (1639) were restored. In 1743, Nadir again invaded Turkish territory but in spite of Kurd and Arah help was driven back to Senna where he was finally defeated (ibid. iv, 347-348). Nadir was not popular with the Kurds although there is an epic poem in the Ghurani dialect on his struggle with Topal 'Othman Pasha. Among the Arzadans, Nadir replaced Sattab Werdj Khân by his brother who provoked a popular rising (M. M. xliii, p. 88). In 1727 during a revolt of the Turksoman the Kurds of Khorasan (Camiagayz and Karashorin) refused their help to Nadir who punished them and transported them to Mashhad. Nadir was assassinated in 1747, while on his way to punish once more the Kurd rebels of Khorasan (Jones, Histoire de Nadir, London 1770, p. 118-120). The Kurds (Dumball etc.) played their part in the anarchy which followed the death of Nadir but the Porte refrained from intervention.

The Zand dynasty. After the death of Nadir Shah, Karim Khan Zand (q. v.), one of the best rulers Persia has ever had, ruled the greatest part of the country. The Zands were a Kurdish tribe of secondary importance (Shoafvollah, i, 323) living between Hasandja and Malayist in the district formerly called Iqhar. Under Nadir they had been transported to Khorasan but after his death they went back to their old homes (Tahrouth Zendiyana, ed. Beer, p. xii, xviii). With the death of Lutf Ali Khân in 1209 (1794) the dynasty came to an end. The Zand tribe was certainly too weak to be a serious support to the dynasty but Karim Khan, like his predecessors had succeeded in seizing several Kurd tribes from Kurdistan to Shiraz (Ahmadovand, R. M. M., xxxii), Kirum, who live in the northern quarter in Shiraz, O. Mann, Die Fäig Mandarastes d. Provinz Fars, Berlin 1909, xix.).

The Kâjirds. On the death of Agha Muhammad Shab Kâjird (1311 = 1797) Sadi Khân Shâhshah seated the crown jewels and for some time tried to gain the throne (The Dynasty of the Kajar, transl. by Hartford Jones Brydges, London 1833, p. 30, 27-39, 57, 50, 78, 106; R. G. Watson, A History of Persia, London 1866, p. 107, 115, 135). In 1221 (1805) the Persians had intervened on behalf of 'Abd al-Rahman Pasha of Sulaimâniyeh (q.v.) (cf. Rich, Narratives, i, 384; Watson, op. cit., p. 155 and the Mukar Kurd song in the collection made by O. Mann, N. Xvii). In 1236 (1824) as a result of troubles caused by the Kurd tribes of Haidarlu and Biskhan the Persians invaded Turkish territory as far as Bideia and 'Abdul at the same time they advanced as far as Shiraz. The Persians were driven back by the Kirmanshah tribes. The peace of 1228 (1823) signed at Erzerum restored the frontier of 1049 (1639) but the Persians refused to evacuate the district of Zohid populated by Kurds. The fate of Sulaimanîyeh remained in suspense. A new war was about to break out in 1842 when Great Britain and Russia intervened to mediate and in 1240 (1854) a new treaty was signed at Erzerum by which Zohid was to be divided into two parts while Persia gave up all claim to Sulaimanîyeh in favour of Turkey. During 1848-1852, a mixed commission composed of representatives of four powers went over the frontier, but the attitude of the Ottoman delegate Darwish Pasha prevented an agreement being reached. Darwish Pasha not only had the canton of 'Abid occupied by soldims but in a secret memoir (published at Constantinople in 1866 and 1871) developed the thesis that the Kurds of Kermanshah south and west of Lake Urmia belonged to Turkey.

Turkey in the 19th century. In 1826, the ruler of Swâw, Râftî Muhammad Pasha was given the task of pacifying the Kurds and installing Turkish governors in Kurdistan. About 1830 a great Kurd rising broke out in several places. Its leaders were BAHR Khan and Sa'id Beg, ISMâ'il Beg and Muhammad Pasha of Rawanduz. About 1820 (1850) he had declared himself independent and attacked the tribes of Khoznâw; in 1831 he seized Arîb, Alûm-Kûr, Kûl-Sandjak, and Rûnîya. The following year he extended his power towards Mâlâyist, where 172 Christians were put to death. 'Abâr, Zohâr and 'Ashkdy were also taken. In 1835 the troops of Rawanduz penetrated as far as Zîkhî, and Djasaft were re-established Baht Khan in power there. The Yazidis were severely punished on several occasions. Their chief 'Ali who refused to become a convert to Islam was executed (cf. the popular ballad commemorating this event, J. A. 1910, p. 134-136), and a whole body of Yazidis were massacred on the hill of Koyendjik. In 1835 Ottoman troops were sent against Muhammad Pasha from Bagdad. Mawill and Swâw and in 1836 the Mir of Rawanduz was captured by a rave. Râftî and his suppressions continued for several years longer (cf. Poujoulat, Voyages, i, 373; Molle, Briefe, Berlin 1841, p. 259-254).

The Russo-Turkish Wars in 1804-1805, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish Wars of 1828-1829, 1853-1856, 1877-1878, each had far-reaching effects in Kurdistan (the question has been specially studied by Averianov, "Kurd. v. sucohá kazál, Tillis 1900"). As early as 1829 the Russians had raised a Kurdish regiment. As a result of the expatriation of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurdish regiments. On the other hand when the Turkish troops had left for the north, a considerable rising was stirred up in Bokhân by the popular Yezdân-Shî, nephew and a former rival of Bahâ Kân.

The war of 1877-1878 was at once followed by a rising among the Hakkâri Kurds of Bahûlä and Bûbûhâ directed by the sons of Bahâ Kân and later by the rebellion under Shâkih 'Uba'dalî, 8th of the Nâghhândi faction. The Kurdi invaders in 1886 ravaged the Persian districts of Örin, Sâvjû-Balkû, Miyaqo-Ab and Miyaqo and threatened Tehran itself. The chief victims were Shî'as. Russia sent a detachment of troops to protect the Araxes frontier. Persia mobilized considerable forces including the Mûkh [q.v.] cavalry, Turkey, which had barely finished the war with Russia, determined to avoid complications. Finally the Shâkih returned to Shamiyyân whence he was sent to Constantinople. He soon escaped from the capital and via the Caucasus returned to Shamiyyân but he was again captured and in 1883 died in Mecca.

The Hamidiya troops. The weakening of Turkey after 1878, art. 51 of the treaty of Berlin securing for the Armenians the reforms and security against the Kurds and Circassians, the stubborn re-action of the Ottoman government against reforms, and from 1885 the development of the Armenian revolutionary movement with branches in Russia, Switzerland and London brought complications into the hitherto quite peaceful relations of Kurds and Armenians in as much as the latter had hitherto submitted to the authority of the Kurdish feudal chiefs. About 1891 Shâkih 'Abdalla, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurdish regiments, like those of Russian Circassians. The object of the reform was to train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory for later the Hamidiya levies were transformed into regulars (Kahifî infantry). The creation of the Hamidiya in any case by the part given to the Kurds and the ambitions arising made a considerable stir. There was even bloodshed between the tribes.

Armeno-Kurd relations. At the same time relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European comtés) were changing for the worse. The summer of 1894 was marked by bloody encounters at Şîzân which ended by the devastation of five villages and the whole of the canton of Talor (Dalverîk) inhabited by Armenians. The events at Şîzân were the first of a long series of Armenian demonstrations and their savage suppression in which the Kurds took an active part. In 1895 an attempt of a
where (cf. Driver, *Report on Kurdistan*, Mount Carmel, Palestine 1919; this publication is in the British Museum). Sharif Pasha assumed the role of Kurd representative in Paris and on March 23, 1919, and March 1, 1920, presented to the Peace Conference two memorials on Kurd claims with a map of *Kurdistan intégral* (cf. L'Air francophone, 1919, No. 175, p. 192—193). At the same time, on December 20, 1919, an arrangement was reached between Sharif Pasha and the Armenian representatives and the two parties made conjointly declarations to the conference (cf. the text of the agreement in the newspaper *Payshin-صاد*), Constantinople, Feb. 24, 1920; cf. also *Le Temps*, Paris, March 10, 1920). The Treaty of Sevres of August 10, 1920 having created Armenia (Art. 88—92) of the four wilayets (of Trebizond, Erzerum, Van and Bitlis), provided in articles 62—64 for a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia1. If the Kurd population within the limits mentioned above of the Council of the League of Nations *that a majority of the population of these regions desires to be independent of Turkey and if the Council should think that such a situation is fit for independent2*, Turkey agrees to conform to the recommendation and in this case the allied Powers will raise no objection to the voluntary adhesion to this "independent Kurd state" of the Kurds living in the wilayet of Mawjil. As a result of later events the Kurd question reduced itself to the fate of the Kurds in the wilayet of Mawjil. The Turkish representatives hold that *the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs* (Conference at Lamance, speech of Jemal Pasha at the meeting of Jan. 23, 1923). By the decision of the Council of the League of Nations on December 16, 1925 the wilayet of Mawjil was allotted to Iraq but with a stipulation reserving to the Kurds the fulfillment of the rights of individuals. The representatives of the Kurds should be appointed for the government of their country, for the administration of justice and for teaching in the schools and that the Kurd language should be the official language of all these services3.

During the long negotiations concerning Mawjil serious troubles broke out in the region of Shahrizor and Diyarbekir as a result of the insurrection of Shaikh Sa'd Naqshbandi. Shaikh Sa'd was captured on April 16, 1925 and executed at Diyarbekir. Since the settlement of the Kurdish question, the Angora government has enforced a policy the tendency of which is to eliminate from Kurdistan feudal and tribal influences; cf. Gendron, *L'intersecteur kurde*, *Les Routes de Paris*, Oct. 15, 1925.

**Bibliography:** The writer has to thank Mr. F. R. Driver, who with the greatest disinterestedness went at his disposal a large quantity of historical material on the Kurds. A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persian, Armenian, Arabic, and Georgian sources. A systematic

1 Unection de sources like the *Sahlan-nun* of Hakim Idris and his son Abu l-Fathi and the *Ta'rikh-i Alum-daw-yi Abulâ* would yield a rich reward. The basis of our knowledge of Kurd history is certainly the *Shahran-nun* (down to 1005 = 1596). The text was published (mainly from a manuscript collated by the editor himself) by Veilaminoff-Zornof, *Sahran-nun*, vol. I (history of the Kurds), St. Petersburg 1860; vol. II (variants of volumes i. and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1300 = 1596), St. Petersburg 1862. The French translation by E. Charmot: *Chershan-nun* or *Plutes de la nation Kurdis* in 3 volumes and 4 parts, St. Petersburg 1868—1875; includes commentaries (including a translation of the relevant chapters in the *Ishân-nun* of Hâkim Khatib) but is now in many respects out of date and lacks an index. Cf. also the works of H. Baris, *Uber die Kurden-Chronik von Schrafi*, Geschichtliche Skizze d. 33 verschiedenen kurdischen Fürstengeschlechter; Geschichtliche v. 3 Kurden-Dynastien; Geschichtliche d. kurdischen Fürstenherrschaf in Bitlis, which appeared respectively in the *Sitzungsber. d. K. W. Wiss.* 1854, p. 288—376; xiii, 1857, p. 3—28; xvi, 1859, p. 145—250; the *Ms. history of Kurdestan by Muhammed Efendi Shamsi, (1072 = 1662 at Medina, cf. Tilki/al-din, n. Kur) has not yet come to light again (1657). For the histories of the house of Arrakis cf. *al-Abdr* where should be added the history (1034 = 1624) of Khusraw b. Muhammed b. Minisher, cf. Blouet, *Catalogue des manuscrits persans de la Bibl. Nationale*, I, p. 305, No. 498. On the *Risâlah Anâsî al-Abâr*, belonging to the Asiatic Museum of Petrograd cf. ROMANESKOV, in the *Missions Arabe*, new ser., Petropavlov 1915, p. 592. The newspaper *Zori Kormângâr* (of Rawânduz) has published in Kurdish a short history *Anâsîh bâbâr Anâsîh*, (1869). This announcement the publication of the *Ta'rikh-i
dar al-Abdr*, which is a Baalbeki. General information on Kurd history will be found in G. Campanile, *Storia delle regioni di Kurdistan e delle sette di religione viventi*, Naples 1818; Quatremère, *Notice sur les Manikî al-Abdr*, N. E., xiii, 1838; Rich, *Narrative* (cf. *Culair-
Mahtava*). Charmoy in the preface to his translation of the *Shahran-nun*; Lorch, *Sahlan-daw-yu
C. Anthropology, Sociology, and Ethnography.

It is sufficient to compare the photographs of the Milla ("Arab type"), Girda ("Mukri type") Kockü "Biblical Jew type"), Shahmidan ("Nesotian" and "Hakkariti" types) Kurds, that figure in Mark Sykes, The Caliph's Last Heritage, on p. 321, 343, 373, 425—427, with the types of modern Kurds given by Lynch, Armeen, fig. 109 ("Turkman type") and fig. 114 (original and very marked type) to be able to say at once that any idea of finding a general formula for the "Kurd type" is quite illusory.

All these characteristics with their contradictions evidently refer only to individuals that the authors had seen but no one has ever examined all the Kurd tribes. Scientific measurements have been rarely taken; cf. Dahomset, 1, tables 7—8; Khankoff, 1, p. 136, and the Russian works of Dr. Eliseyev, Anthropol. excurzija, Izv. Geogr. Obz., xxiii, and Pravitel. Sov., St. Petersburg 1896, iii, 316, 332; of Dr. Danilow, A. A. Ivanowski (Vienna, in Realen Anthrop. Journal, 1900, No. 3 with Russ. bibliography) and Dr. Pantukhow (cf. C. H., Einige Notizen über die Kürden und Karapachen nach Pantukchow, Ausland, 36, p. 249).

Three things are characteristic of the mode of life of the Kurds: the historical tendency of the Kurds to group themselves on territorial fiefs around strongholds occupied by their chiefs, who are often of origin foreign to the local tribes; the existence of a warrior caste which supports the chief and conserves the ethnic agglomeration formed; the presence among the Kurds of shepherds (nomads and semi-nomads) as well as of agriculturists (settled or semi-settled).

Completely nomad tribes living in tents the whole year round, and spending the winter in the warm plains of Mesopotamia in the veldt of Arabs are now rather rare (cf. the list given by Sir Mark Sykes). The majority of the Kurds are semi-nomadic or settled. The former, following the climatic conditions of the country, live in villages during 5 to 8 months of the year and in summer after the harvest go to the mountains where they occupy strictly defined areas. Even the stages of migration of tribes like the Lijat (cf. SENNA) are rigorously fixed. More often the Kurds of this class confine themselves to ascending the heights adjoinning their villages (called Sardin in the region of Slewod-Bulak).

The settled Kurds seem very often to represent the old population which was composed by the "agorat" soldiers or accepted this domination to assure protection against their neighbours (cf. the article KAWDI-BULAK). Strabo, xvi, 3, 1 noted the presence of agriculturists among the CYRTI OF FARS. At one time the nomad tribes of MISH found shelter in winter in the Armenian villages of the plains but gradually (since 1842) exclusively Kurd villages arose beside the Armenian villages; cf. Correspondence respecting the condition of population in Asia Minor and Syria, Blue Books, Turkey 1879, No. 101: 1880, No. 4 and 23; 1881, No. 6 (Trotter's reports were translated into Russian in Izv. Kerv. Otd. Geogr. Obz., Tiflis 1882, viii, appendix); Lynch, Armenia, 1901, i, 423; Mayersw, Armenia, Brit. Pell. Willetty, Tiflis 1904 (lists of Armenian and Kurd villages). The general tendency of the Kurds is towards a settled existence. In northern Mesopotamia the Kurds have shown themselves fairly skillful agriculturists and for this reason have an advantage over the Bedouin Arab element; cf. the Handbook (No. 57) "Turkey in Asia" publ. by the Foreign Office, p. 1044: "Northern Mesopotamia seems destined to become Kurdish land".

The statements of an ethnographic character (costume, occupation, games, etc.) differ from tribe to tribe in KURDISTAN and a premature generalisation might prove misleading. Only the Kurds of EURIN (living far from the great Kurd centres) have been made the subject of a complete monograph by EGISZATOV (a professor of law speaking from his infancy), KRISTI etikhe, zerk Kurdov; ROSIATÜ, Savan, qawwam, Zap. Kerv. Otd. Geogr. Obz., Tiflis 1891, xvii, 6; cf. also KHALATSEB, Kurdski yezik khor synthesized in Red. Sham, water, p. 26. Kerv., Tiflis 1884, xx, 1, p. 64—90. For the Kurds of SULAIMANIYYA see the remarkable work of Rich. Narrator of a residence, And Sozot, Mentreppia and KURDISTAN in disguise, chap. xvi, for the region of MUKRI and URMIA: ARAKLOP, Kurd in Persia, Izv. Kerv. Otd. Geogr. Obz., xvii/1, 1904; de MORGAN, Miss. scientifiques, Etudes geogr., ii; NITIKIN, Quelques observations sur les

In the Sharran-nama (1196, 177–178, 381; n., sold., p. 43) we find various features showing the plays by women among the Kurds; they enjoyed less liberty than among the Turkomans but interfered actively in affairs and even (among the Katliar) ruled their tribes. On Hallime-ghafin of Hakkar ci. Cinael, La Turquie a Ouest, i, p. 212; on 'Adila-ghafin of Alaba (d. 1424 with the title 'Khan hafin' conferred by the British government). cf. Soane, To Mesopotamia, 1926 and Minorsky, Kurdi, St. Petersburg, 1915; p. 37. Cf. also Rich, Narrative, ii, p. 285 and passim; Jahn, Kawa, 1921, 1925; Hyverna, Du Caumes au Golfe Persique, 1895, p. 174.

D. Religion.

The Kurds themselves believe that their ancestors were medjdat (Zoroastrians), cf. M. Sykes, The Caliph's Lost Heritage, p. 425, and perhaps the name Rabbanan. (Amadîya) may be a relic of Mandaean terminology (išha 'orthodox, layman').

Armenian Christian sources however rather suggest that the Kurds at first preserved some kind of paganism. In the third century Mâr MerKW of Urdu (d. 226) made converts to Christianity at Shahgeg (Shahgeg near Dehâk and Arbil, cf. Hofmann, Auswage, p. 270) of the king and the people who "worshipped trees and sacrificed to the idol of copper." (Rom. 15, Mâr MerKW, p. 26). Ishâyâb built an altar near Thamânne (near Dairam in 'Omar)." At the spot where the Kurds had sacrificed to dîvât). The Kurds whom Mâr Sâbbî (d. 458) converted to Christianity were worshippers of the sun, cf. Hofmann, Auswage, p. 75.

Statements regarding the attempts at evangelizing the Kurds are very beauty but it is a fact that Mâr Vâdût, Mâr Vâdût, in 1544, mentions the Kurds al-Yâghûbiya and al-Dîkân' in the region living near Mawil and Dîshâl al-Dîghî (cf. Mâr MerKW, Ch. xxiv.). After their conversion to Islam, the Kurds frequently supported the Khariji movement (the rise of the Zangi dynasty in the region of Bajat, that of Daisar in Dâkhat 'Abîd). If Mâr Vâdût, ibid., p. 237, the Kurds scattered through Alîgarbâdêfani are known as shi'î = 'Alîshî). There were also Kurds who despised the authority of the Caliphs 'Othman and 'Ali (Mâr Vâdût, ibid., iii. 233). According to the Sharran-nama, I., 14, all the Muslim Kurds followed the Shi'î Sunna rite (Ewîlîyê Celebî, iv. 75, says the same). It is however certain that there were Shi'îs among the Kurds under Persian rule. In the reign of âvedâd there was even a Kurd mokhî. The Shîkayat (q.v.) living among the Shî-âwân Turks became Shî'î; cf. also the evidence of the Sharran-nama, p. 516 on the Dumbullî following Shî'î doctrine (the meaning of the term jurnaa which the same author, l. 117 applies to four tribes of Djarz in contrast to the three Yezidi tribes is not very clear).

On the other hand the testimony of the Sharran-nama, I., 14, is very convincing on the spread among the Kurds of the doctrines of the Denser, Khâshay, Buzîsh tribes and parts of the Bokhtî, Mâhd-flat and Dumbullî, not to speak of the Shîkayat which the Sharran-nama does not mention; cf. Yezidi.

Of the Pêkî tribe, the Sharran-nama remarks (l. 328) that it has no definite religion; from its close connection with the Safawîs, one might suppose that it held extreme Shî'î views.

At the present day, the great majority of the Kurds are still Shi'îs Sunnis. Even in Bemn only the former ruling family of the Khâshgîs was Shi'. The Shî'îs tribes of the provinces of Kirmânshah are for the most part extremist; cf. Mousûrê. Notes sur l'âle Ahl-Heb, R. M. F., 1920, x, p. 597, for the diaries of Mawil see the articles of Mawil and Hebak. As a general rule extremist views, more or less Shî'î, find adherents rather among the Iranian tribes of Kurdistan who are not true Kurds (Ghân, Zêk). On the other hand the Kurds are much under the influence of Shî'îs of the various Sunni orders (especially the Na'hâsân and Khârîya whose headquarters are at Awramân, Sulaimânîa, Mâdît, Shalmanîa, Khurpêt, etc.). Their influence was apparent in the risings of Hdrân (cf. Layard, Discoveries, London 1853, p. 375). "Udabâliyê (1886), Shîkî Sa'dî (1926); cf. Khâyâmîya, and the articles by Nikitine the present mention.

Bibliography: In addition to the works quoted, cf. M. Mâr, Yezidi Smith E. Title, 1910, xx. (the author studies the cultural part played by the Kurd nation in the history of Nearer Asia and thinks he has found among the Kurds [Yezidi?] survival of pagan beliefs; cf. Elton); E. Reinsch, Chervîr pour aborder la pluie (in Kurdistân), L'Anthropologie, 1906, xvii, p. 633; Volland, Ärmenisch in theussen und Kurdistân, Gneuss, 1919; xii. N., 22, p. 341–344 (on caps covered with magical inscriptions); Dravus, Eu'digion des Kurdischen, Bull. School of Oriental Stud., 1922, ill, p. 197–215; Nikitine, La Kurde et le Christianisme, X. H. R., 1922.

E. The Kurdish Language.

Kurdish, like Persian, is a western Iranian language but its descent is different from that of Persian. The history of the separation of western Iranian into a northern and a southern branch has been traced by Andra, Salmann, O. Mann (Die Tajût Mundarten d. Provinz Fars, Berlin 1909, i. xxxvii); Mellet, E. M. E. 1911, xi. xxvii; Lenta, Die nordiranisch-persischen Mundarten d. Perser, Linguistische Berichte bei Freiburg, ii. F. P. Tenen, in
his Dialektologie der westirischen Turfantate, Le Monde Oriental, 1921, xv, fasc. 1–3, has shown that "western" Iranian (distinguished from Eastern Iranian: Soghdian, Saka) shows a considerable interpenetration of its northern and southern branches and this result has been corroborated by the work of W. Lenz quoted above.

In spite of this confusion and the co-existence of heterodox elements in the modern languages of the Persian group, which shows a character clearly distinct from that of Persian. This fact would be more obvious if our Kurdish documents were not of much later date than the period in which the Persian literary language established its supremacy. The main characteristics of Kurdish compared with Persian are as follows:

a. Its specific pronunciation, the frequency of the Semitic ṣ and ḍ even in Iranian words like ʿar (horse), hawt (seven); the velar l (a little different from the Slav and Turkish l), the rolled r distinguished from the weak r; the bilabial tw; two consonants tolerated at the beginning (e. g. hir, ḏeh), and the sonant n and r acquiring a vocalic character (almost ūr ĕr).

b. The fundamental difference in the phonetic treatment of the same Iranian material is illustrated by the following examples:

b. Morphological differences: the survival of the oblique case; determinative suffixes ("definite article") in ḏeh; different personal inflections: 3 pers. pron. poss. šišān, plur. of the present: 1st person in šišā, 2nd and 3rd in šišā; a form of šats (especially in the plural) in ša (cf. the Persian plural in ša), e.g. šat-e "thy friend," šat-e "thy friends"; the passive in ša (cf. Salemann, Zum mittelpersischen Vokabular, St. Petersburg 1900; Meillet, Grammaire du vieux perse, p. 102) and a passive in ša.

c. Syntactical differences: survival of the passive construction of transitive verbs in the present, particularly complicated in verbs compounded with prepositions (hūkūn-šām hū kūsūm "they have cut us off from the mountains" literally: "the mountains [by them] from we; have been cut").

d. Lexical differences: Not only, like the majority of the dialects of the north-west, does the Kurdish oppose bar-, kāp- (and šit-) respectively to the ke-š, ke- (and ū-) of the south-west, but has šit for šāx, šit for šāx, šit for šāxd, šit for šāxd, šit for šāståt etc. The many borrowings from literary Arabic form an element connecting Kurdish with Persian but Kurdish also borrows from spoken Arabic, Ottoman Turkish, Aramaic and Armenian. In addition, Kurdish and Armenian may have borrowed from the same indigenous sources not yet identified.

While then the Kurdish dialects of the north-west and south-west are not separated by an abyss, for all practical purposes Kurdish has its own well-marked type, which differentiates it not only from Modern Persian but from the other dialects of the north-west (Samānī, "central" dialects, etc.).

Kurdish itself moreover includes very different dialects. The majority of the Kurdish dialects are included under the term Kurmanjti. According to the Šahrastān, the Kurdish nation consists of four sections: Kurmanjti, Lur, Kalther, and Gērān. For the tribes the Lurs [p.v.] as far as their physical appearance and their language are concerned gravitate towards the south-west group (O. Mann, Die Mandurden der Lur-Süße, Berlin 1910) and form a unity apart. The Gērān [cf. Zohāb] like their relatives the Avarī (cf. Sena), Zāk [q.v.] etc. speak dialects of the north-west differing considerably from Kurdish (cf. "three" in Gērān: yērī, in Zāk: hērī agreeing with the Samānī hērī, while Kurdish has hērī); the Zāk, according to Andrews (quoted by Christianen) are related to the old Tallamites and this hypothesis is corroborated by traditions still alive among the Avarī (R. Soane, In Dispute to /. . . . Kurdistān, p. 377).

According to the Šahrastān the Kalther occupied the region between Sena, Kirmānshāh and Zohāb. The term Kalther seems therefore to correspond in the Šahrastān, p. 13, to the Kurd group "non-Kurmanjti" of the districts of Sena and Kirmānshāh. These dialects have been studied by O. Mann but this part of his collections has not yet been published. According to the preface of his Türkisch-persische Forschungen (the publication of which has been taken up by K. Hadrau) one volume is to include the southern dialects of the province of Kirmānshāh; Kirmānshāhī, Kalhuri, Lakā, Pakhravandi, Nānakal and Kulyān, the other in the province of Sīrkūr [q.v.]; another volume will be devoted to the dialects of the province of Kurdistān [cf. Sena] and to those of Kirīn [q.v.] and Gūrā; (otherwise Rīād, east of Sena). The people who speak these dialects usually call them Kurd or by the name of the tribe concerned. On the borders of Luristān (in Lāstān) the southern Kurdish dialects are known as Lakī (cf. O. Mann, Kurär-Skizze der Luridialecte S. B. A. W., 1904, xxxix.; Cirkow, Paezemi Journal, St. Petersburg 1875, p. 227). There are Lak at Sālāz [q.v.] and in the Province of Fāra (but the Kurd dialect of Kāllūn-Abād, described by O. Mann, Die Türk Mandurden, p. 135 is not Lakī). The southern Kurdish dialects of western Persia have lost the important features of the Kurmanjti dialect (e.g. the passive construction of transitive verbs). The existence of these non-Kurmanjti dialects may prove to be of some importance in settling the problem of the Kurdistān-Kērmanjti.

We do not know the origin of the name Kurmanjti. Is it a compound of Kurd with the name of another tribe of Medes? In the Kurmanjti area properly so-called two groups of dialects are distinguished: the eastern group (or rather south-east) and the western. Their exact boundaries are not yet defined. Eastern Kurmanjti is spoken in the Makt region [cf. šāvūsh-Kūşq] and in the region of the tributaries of the Tigris: the Little Zāb, Adāsmā [q.v.] and the Dīyānā [q.v.]. It is a very pure dialect and rich from the morphological point of view. The western branch includes the remainder of the Kurmanjti dialects with their local peculiarities (Diyūbashrī, Mārūn, Bāḡīshā, Bahīshā, Hakkārī, Urmiya, Erivan, Erzerum and the Kurd colonies in Asia Minor and Khorasan). The Kords of Northern Syria seem to use various dialects full of borrowings from Turkish (cf. Le Coq's collection).
Ewliya Čelebi, iv. 75; enumerates 15 Kurdish dialects (ויליא).

Garonzi, Grammatica, distinguishes the dialect of 'Amudiya from those of Bidīla, Diljān, Behgān, and Sulaimaniya. Cf. also the scheme of classification in Soane, Grammar of the Kermānījī.

Bibliography: A list of all studies of Kurdish from 1813 to date is given in Lorch, Itilidovnaia, ii. 3., p. 1., and in the Grundzüge d. iran. Philol., i/2, 257—254. The only scientific Kurdish grammars are: Justi, Justi's Grundzüge, St. Petersburg 1880, and Socin, Die Sprache d. Karden in Grundzüge, St. Petersburg, i/2, p. 249—286; these two are mainly concerned with Western Kermānījī. In Eastern Kermānījī the fundamental work is: O. Mann, Die Mundart: der Mukri-Karden, Berlin 1909, i., p. xxxii.—cf.: Grammatika Skinh; cf. also Soane, Notes on the Phonology of Southern Kermānījī, j. r. a. s., 1922, p. 199—226. The only Kurdish dictionary in existence is that of A. Jaba-F. Justi, Dictionnaire kurde-français, St. Petersburg 1875; reading 1887, it sums up all that had been published before this date (the supplement by H. Schindler appeared in Z. d. M. G., 1887), but it is not sufficient for practical purposes. On the manuscript of a voluminous Kurdish dictionary compiled by E. B. Soane and belonging to the School of Oriental Studies, cf. E. D. Ross in the Times, Feb. 19, 1926.

The following is a list of the specimens of Kurdish dialects that are so far available:

B. Scattered Dialects: A. Querry, La dialecte gwernou, M. S. L., 1895, ii., p. 1—13; Gurrut of the Khōljawam in Mazandaran; O. Mann, Die Tjik-Mundarten, Berlin 1909, p. 135—155, Kurdish dialect of Kalān Abdi in Fārīz; W. Ivanov, Khourazi Kurdish, to appear in the publications of the Royal Asiatic Society; this dialect is near to the Kermānījī of Erzilian; cf. also Bāżene, Etudes, phrases in Khorsān Kurdish; H. Schindler, Z. d. M. G., 1887, analysis of a Khorasan dialect; and various books of travel; Brugsch, Reise d. preis-

The Encyclopedia of Islam, II.
The collections of Kurdish stories made by Jaba, Lorich, Prym-Socin, von Le Coq, O. Mann, Makan, and Nikitine give a fair idea of the Kurds as story-tellers. The themes are often taken from folklore common to the Near and East (tablets, fairy tales, stories of gods; cf. Miss M. J. Lewandowski, Ein Kurdisches Märchen, Glashütte 1893, p. 187) more numerous and more interesting are the descriptions of the loves of popular heroes, of the wars of the class, etc. Prym-Socin and Makan have given detailed commentaries on the subject matter of stories of this category. O. Mann illustrated the ballad of the siege of Tbilisi in 1017 (1608) from the evidence of the official history of 'Abd al-Hadi. Many popular subjects are treated both in prose and verse. Some cycles with their variants form regular series like the Me'on Zin, the story of a pair of lovers, the court of the emir of Bohan, of which we have Ahmad Khan's version and a numerous popular variants; Lorich, Mitiages Anatoliques, II, 243-255; Prym-Socin, No. 224, Mann, No. 2, cf. also: B. Chatalian, Kurdische Sagen, Zeitschrift für Verenigungen. f. Volkerkunde, 15, 1907, p. 322-330; 10, 1906, p. 35-46 and 402-414; 11, 1907, p. 76-80.

Jaba's informer (Rezvani, p. 7-9) furnished him with a list of 9 Kurdish poets but the data must be taken with some caution. These poets are:

Ali of Harir, a native of Shirw dostęp, who lived 400-472 (1009-1078), which almost makes him contemporary with Firdawsi? He is the author of a Kurdish dunya, currently known.

Shah Ahmad Mala'i Dari, a native of Dijara where his tomb is still to be seen. He is said to have flourished between 530 and 556 (1145-1180) in the time of a chief named al-Din. But the Dama of Mala'i Dari passed in phototype by M. Hartman, Das kurdische Dichter des Schul Ahmed, Berlin 1904, mentions the name (fol. 1) of the Persian poet Dari, who died in 988 (1582). He may not be earlier than the end of the 13th century. An ode dedicated to Khoja-ko-sha, who is the Shah of Kurdistan, (L. 172) who rules at Tabriz and who is greater than the Shah of Khorasan (L. 177) may refer to this Shah-ko-Sha (q. v.) ruler.

Fakhr Tezir (707-777 = 1302-1372), born and buried at Muku, was really called Muhammad and used the taghita of Mir Haji. He wrote the Hezayyat Shabab, Senjata (Sword), Stories of Harura, the Kudari taghita ("The words of the black cowser of the Prophet") and other poems.

Mali-i Bate (Mulla Abdu), born and buried in the village of Raw in Hakkari (320-500 = 1417-1494), is the author of a Divan and a Masnavi. The latter has been published in phototype by H. von Le Coq (Kurd. Texte, I, 49-66).

Ahmad Khan of Hakkari flourished between 1063 and 1082 (1651-1682) and was buried at Bayazid near the mosque bearing his name. He wrote the poem Mencu Zin, analysed by Jaba; Lorich, Mitiages Anatoliques, III, 242-255 and publ. in 1933 in Constantinople by the editor of the Zin newspaper. His rhymed Arabic Numerous glossary, "Firstlings," has been published by Yassar Dja'a al-Din, who gives its date of 1094 (al-Hujjia al-Hamdiyya, p. 270-297), and in facsimile by Le Coq, I, 1-47, Ahmad Khan also wrote many poems in Arabic, Persian, and Turkish.

Isma'il of Bayazid, an imitator of Ahmad Khan (1065-1121 = 1654-1709), is the author of a Kurmanji-Arabic-Persian glossary "Firstlings," and many ghazals and poems. Shari-y Khan, born and buried in Jumua (1097-1164 = 1688-1748), belonged to the family of the Amirs of Hakkari. He is the author of a large number of verses in Kurmanji and in Persian. Murad Khan of Bayazid (1450-1190 = 1737-1784) wrote lyric poems.

In the Kurmanji newspaper (cf. below) we find biographical information about and specimens of the poetry of the following poets: Shah Pari of Hakkari whose Divan was finished in 1321 (1865); Nabi who is very popular in the region of Eastern Kurmanji, flourished towards the middle of the sixteenth century; a selection of his poems appeared at Constantinople in the anthology entitled Shari-y (by Amin Fathi); Haidji Kadi Khoja, very conscious of his Kurmanji nationality (sixteenth century); Abdullah Beg Mi'ashal al-Dinawi ("Adab"), d. in Sowadi-Balta during the war; Shahji Kady (Rodi) of the family of Talhaz (on the Shirvans, d. about 1910); Tahir Beg Dja'a, son of Khoja-ko-Sha of Alisha, d. about 1920. The contemporary poets are: Ali Khan of Salamantya, Abu al-Khaliq Zahawi of Baghdad, Abu al-Khaliq Fasli, Shah tableau, Shahzadi, of Salamantya, Mustafa Beg Dja'a (a satirical poet), Abu al-Khaliq Dja'a, son of Adila Khanen Kichik ("Adil"), other poets, whose names are found in the newspapers, such as: Shahji Nouri Baha 'Ali, "Abi Beg Shah Salih, Mulli Rahim Murti (Wafih), Kaka Mi'ash (Amiri) Murti, Khoja Murti ("Murnahidi Khanen"), Abu al-Khaliq, Sallin etc.

Jaba's authority (Rezvani, p. 12) gives several authors of textbooks in Kurmanji ("Ali of Tarhanjak after 1550 = 1594) wrote an Arabic grammar in Kurmanji and Mulla Yama of Halkhur wrote three grammatical works on tariif, tarik, and tareekh. To the same category belongs the "canonical" grammar written down about 1783 and published by C. Haart in J. A. 1805, No. 1, 86-99, as well as the works already mentioned by Abu al-Khaliq etc. But as a rule Kurmanji authors writing on general subjects prefer Arabic, Persian or Turkish.

Among those who wrote in Arabic were the celebrated jurists and theologians: Iskandar (d. 585 (1580); Taqi al-Din Shabanzad, d. at
the weekly Żin (*"Life") founded in 1919, which, though published in Turkish and in Constantinople, was dedicated to the propagation of the idea Kurdistan for the Kurds", No. 32 appeared on 1 July 1914, 4336 = Jan. 25, 1930. As to Kurdistan, newspapers, in default of a complete list we may mention Kurdistan, a bimonthly published in Cairo by Ahmad 'Aref (i.e. the tribe of Bedd Khan); No. 2 is dated 15th of Ul. 1-Hijādī 1335; No. 11, 15th Rabī' I, 1335. The first newspaper published in Sulaymaniyah was Ģıqafevə (*"Progress"), later replaced by Ģıqafe Kurdistan, which was edited, before the English evacuation, by Hājjī Mustafa Paşa (13 Nov. between Aug. 3 and Oct. 1923); Zīr-i Kurdistan, organ of the "king of Kurdistan" (Muhammad I = Şahīl Mahmidūd), publ. at Sulaymaniyah by Muhammad Nūrī, No. 1 dated 15th in 1932 and No. 15 8th ill. 1932. Ģıqafe-Hasa, publ. by Şahīl Mahmidūd after his flight (No. 1—x, 8 Ill.; No. 3—12, 1923); see Edmunds A Kurdistan Newspaper, "General" X. A. Soc., 1923, p. 69—-70; Ziyāūnā (*"Resurrection"), official Ģıqafe (weekly) of Sulaymaniyah (No. 1—-18, viii, 1924); Dair-bi Kurrak (Kurdistan Daily), editor of "Kurraj," a weekly review in three languages, publ. at Baghdad by Şituqut-darā and Rūqūd Sanwāl, No. 1—11, March 1923; Zīr-i Kurdistan, a weekly review publ. at Rawanduz by Saidi Husain Mūkrī and 'Abd al-Rahmān Gūr, founded 12th Dhu al-Ka‘da, 1334.
(V. Mūrūrī)

**Kurkū, a town in Khūzistān, on the road from Wālīj to Sīr (Susa). The statements regarding distances given by the Arab geographers are now collected and arranged in F. Schwar, "von im Mittelalter auch den west. Geographen," 1924, iv, p. 356 sqq.; cf. also p. 431. The town was noted for its carpets; there was also a guild of the Sulṭān there. A material called "sk̡unqāzīd" was made there, cf. de Goeje’s glossary in R.B.A., i.e. a v. Abl.: Abruţākhi says that the "sk̡unqāzīd of Fāq [q.v.] is better than that of Kurkū; the latter was a mixture of silk and wool, while in the former wood was used.

**Bibliography:** G. de S. Strange, The Lands of the Eastern Caliphate, p. 244, 246; Schwar, loc. cit., ii, p. 98, where all the important quotations from the Arab geographers are given.

(M. Pletserh)

**Kurrā b. Šark b. Maktadh b. Hārīn al-Hārīnī al-A‘āf al-Kurrd, governor of Egypt**. belonged to the tribe of Kaṭār b. Šahīl and was therefore a north Arabian. His native town was Kīmna in Syria. We do not know whether he had already held a high office before his appointment as governor of Egypt, but it is exceedingly probable, especially as the Mu‘ākīdīs were particularly careful only to appoint to this important office men of proved ability. As conditions then were, only a tried man in whom the caliph had entire confidence could be considered for the governorship rendered vacant by the departure of prince 'Abd Allāh b. 'Abd al-Malik. Kurru entered as-'Fāq on the 3rd or 13th Rabī‘ I, 96 (Jan. 20 or 30, 710) and assumed complete control of the country, including its financial administration. He remained in office till his death on 27th Rabī‘ I, 96 (Dec. 6, 714). Later biased historians have given us a very erroneous picture of the man. He is put alongside of the notorious al-Hājjīq in Bāsh or Yūsuf, which meant that he was of the lowest moral character and is described as
KURȘ. [See KUR Ś.]

KURŚI, an Arabic loan-word from the Aramaic 
σακαυθήσας περεγρύνεις, p. 22), a throne. It is only 
few times in the Kurṣ (ii. 356; xxviii. 33).

Its occurrence in the first of these has given the 
verse the name of the Throne Verse (ṣayat al- 
basīl); the reference is to the throne of God, 
which is large enough to embrace the heavens 
and the earth. In the second passage the refer-
ence is to the throne of Solomon. The use of two 
different words, ṣarṭ and bāṣ, for the throne of 
God, very early troubled the exegetes; some 
have seen in the second the stool placed in 
front of a throne on which a sovereign rests his foot; 
cf. the sculpture of Ptolemy (Ahi Mhâs, Aâlyt, 
according to Sattâr, Tâfîr, s. v.) while others took 
it to be only a synonym of ṣarṭ (Al-Khârî, Al-Kitāb, id.); and one school 
interpreted it allegorically, saying that the bāṣ 
of God is simply his knowledge (Sa'id b. Dhu bi 
according to Ibn 'Abâd, šâhâ). The use of this 
word in the second passage for "a throne on 
which one sits" shows clearly that it is a syno-
nym of ṣarṭ.

The idea of an erection square in shape (which 
is also the origin of the word ṣarṭ) is retained 
in the different meanings assumed by the word. 
The four sides of the rectangle intended to en-
close the letters forming a word or a number of 
phrases is so called. In Persian, these four sides 
are called ṣūqīn or bāṣ and the rectangle itself, 
ṣūqīn-bāṣ (Hairst, Calligraphie, p. 353). The 
Persians use it to describe a frame on which a 
carpet of wool or felt is stretched and under which 
a beast is placed; the legs are slipped under the 
carpet to warm them in winter time (the tâba 
the Tâfîr; Polak, Persien, i. 65; Fraser, ii. 
88). The Arabs apply the same in the following 
objects: At Meca, a kind of gangway or movable 
chair on 4 wheels (now 6) which had nine 
steps and was placed against the wall of the 
Ka'ba so that its upper end was level with the 
threshold (Ibn Djâlîl, Bilâd, p. 91; Ibn Ba'thû 
309; Doyy, Supplement, i. 453); a lectern 
for which the Kurṣ is placed (Makkî, i. 404); 
the stand for an astrolobe; the carriage of a 
halalat; a seat with a back for 3 or 4 persons; a table 
on which a plate is placed (Lane, Modern Egyptiens, 
i. 195); a stand on which a turban is laid at 
night (bāṣ al-śuna); Doyy, Vétements, p. 343; 
11; Lane, Modern Egyptiens, i. 50, 22; a stool 
holder into which is put the lower end of a scimitar 
(J. A., 1850, i. 251); the stand for 
pulling a jumbl (Description de l'Egypte, xiii. 251).

The Moslems give the same to pockets, small 
boxes, square or triangular, which they wear in 
men's cloaks and on account of their shape (Doyy 
and England, Glaces des mots syriens, e. v.; 
Benazerr, p. 384). It is also the support for the 
pan and percussion apparatus in a fust al-zub (manzûl) 
(Hairst, t. c.); a chair of a particular shape on which a 
woman sits when about to give birth to a child 
(bāṣ al-wilâda) (Lane, ii. 275). Figuratively it 
is the capital of an empire, royal residence, seat of 
a patriarch or a bishop (Doyy, Suppl., i. 416; 
Cârche, Dict. arz-franc., e. v.). (C. HUART.)

KUS, a town in Upper Egypt on the east 
bank of the Nile. The form Kûs (Kûs in al-
Farghânî and Ibn 'Abâd) comes from the Coptic 
Kûs or Kûs Berbîth) which a popular etymology 
later connected with the Coptic word meaning 
"to bury." In the Roman period the town was
called Apollinopolis Farva and sometimes Dinietzopolis. In the early centuries of Islam, Kásr seems to have been of much less importance than the adjoining town of Kif (q.v.). Some of the early geographers like Ibn Khüshrab do not mention it although it is found in the tables of al-Khūṣṣūṣ (ed. by van Mūzik, p. 93) and al-Fārāḥi (ed. Gallu, p. 36), who place it in the second clime.

It is only after the beginning of the fifth century of the Hiḍracy that Kásr began to supplant Kif (Māqara, Būlāq 1370, p. 236) to become, in the eighth century, the largest town of al-Sa'ād and the second city in importance in all Egypt (Abu l-Fida, ed. Reinaud and de Siane, p. 290—101.1). This development is not due to be attributed to the changes caused by the Crusades in the great trade-routes from west to east. We can see the beginning of this prosperity in Ibn Djibāil (ed. Wright and de Goeje, p. 64—65) who passed through it in 1185 and describes it as an emporium for all the goods from Central Africa and the Yemen. It was also the rendezvous of pilgrims from Egypt and the Maghrib who went from there to the Hiḍr (cf. the story of 'Abdu'l-Hasan ibn Qasim, ed. Ibn 'Asīr, p. 177). Later this town was called Kásr al-Kafr (Abu l-Fida, ed. v. 291) already calls it the third town of Egypt. In the first centuries of the Manūlik period, the governorship of the maṭriba of Kásr (al-Kafr) was extremely important and coins were struck there. At the same time it was a place of exile for individuals of importance, for example several of the 'Abbasid Caliphs at the Manūlik court. Kásr was also noted as a centre of Muslim learning. The town had six madrasas and produced a number of scholars. A section of the inhabitants however always remained Christian. The Copts had several churches there. From 800 A.H. the town began to decline, especially after the plague of 830 in which 17,000 are said to have died. In the eighth century Kásr was half an hour's journey from the Nile. It is still an important market for simple, aromatic herbs and all kinds of vegetables. The Christian element is considered by the Copts (al-Khāṣṣ al-Qāḍi, 139).

**Kusaila** is a port on the African coast of the Red Sea. There is no reason to doubt that all the references of Oriental and European writers to Kusaila on the Red Sea are to the same place; the contradictions between different authors are simply due to inaccuracies and, in the first place there is not sufficient ground for supposing that there were two places called Kusaila and secondly Kusaila is amanously described as the harbour of Kāsir. If we were to have two places called Kusaila, they would have to be so far apart that one of them could not be described as the port of Kāsir, but the place marked on our modern maps as Kusaila fulfils the condition of having been the port of Kāsir perfectly so far as its position is concerned. The Jews therefore must have used this place which lies a little near west of Lāt. Yālū and is immediately because he makes Kusaila lie near 'Afīlah and then puts the distance from Kūsir at 3 and from 'Afīlah at 4 days' journey. Even in Egypt where they are used to great distances, two places 8 days' journey apart would not be described as near one another. A glance at the map shows that if it is five days from Kusair to Kūsir, it cannot be 8 from Kusair to 'Afīlah. The distance could not be covered in 4 days if the first statement is correct. As a matter of fact from 'Afīlah to Kūsir is according to al-Maqrīzī 17, according to al-Idrīsī 20 days' journey so that it cannot be only 8 to Kusaila.
Even if we put 'Aidhab farther north, as C. H. Becker (cf. *A'Sid) and S. Lane-Poole have rightly done, the contradiction between these figures is not disposed of.

The significance of the harbours on the Red Sea for European trade with India and China and for the pilgrims to Mecca has often been described. At the same time the relative importance of the different harbours varied considerably in the course of centuries (cf. *A'Sid). While Kusair flourished particularly in the 'Abbasid period, 'Aidhab later became the principal port and still later al-Thir. After Selim I had conquered Egypt, he tried again to revive Kusair and built a fortress there. The further history of the town to 1876 with a very full description of its condition in the seventeenth was given by C. A. Klauser, who was Egyptian medical officer there. He calls particular attention to the disastrous effect on its fortunes of the building of the railways to Suez and then to the Suez Canal. While in the eighties the traffic at Kusair along with that of Suez was 'steadily increasing' (v. Neumann), the port is now only important for traffic to and from Egypt; through traffic through the Red Sea has no longer any inducement to touch Kusair; the decline of the town is most clearly seen from the figures given by Sultan Bey at the end of the century in the "Kusär ob Alem."

(M. Plesner).

KUSAIR 'AMRA. See *A'ARA*

KUSAI, an ancestor of Muhammad in the fifth generation and restorer of the pre-Islamic worship of the Ka'bah in Mecca.

His genealogy is unanimously given in all sources as Kusair b. Kâb b. Murr b. Ka'bah b. 'Abd b. Fhîr-Kusaï (cf. Wüstenfeld, General Tabellen, 67 C.), and his life and exploits are recorded by our sources in three recensions which only give us information from such other in trilling details; these go back to Muhammad b. Ka'bah (d. 148), Ibn 'Uthâm (d. 150) and 'Abd al-Malik b. 'Abd al-Mu'tasim b. 'Abd al-A'asib (d. 149). Kusair, represented as the most legendary type of hero who founded a city, as having passed his childhood and youth far from his native land and in obscurity; a younger son of Kâb b. Murr, a descendant of the Ka'bah whose sanctity in Mecca had been replaced by that of the Banu Qât' at-tamâ, he loses his father soon after his birth and is taken by his mother Fatima bint Sa'd b. Saiyâ. She married again, her second husband being a member of the tribe of Banu 'Udhra; to his tribe in the north of the Arabian Peninsula (in the neighborhood of Safâ) according to al-Kalbî in Ibn Sa'd, 156, 25, a place on the Syrian frontier of the Hijaz, near Tabîbî in *Yûsuf, Mahjûm, ed. Wüstenfeld, iii. 77, right into Syrian territory, near Yarmuk (al-Bakî, p. 773): here his original name of Zaid was changed to Kusair from the root 'al-ay, "to go away". Having learned his true origin from his mother, he returned to Mecca where as a result of his marriage with Hubâb, the daughter of the Ka'bah chief Husayl b. Hubaysha, who controlled all the arrangements for the worship of the Ka'bah and the pilgrimage, he soon acquired an important position in the city. On the death of his father-in-law, Kusair managed to succeed him in his offices, either after a long struggle with the Ka'bah, or as a less reliable tradition has it by means of a tricky bargain in which that of Jacobs and Esau, which used to be with (Abd) Qâdhijan, or with Hubâb, or only some more distant relative of his (cf. Ibn Durâdî, al-Ghazî, 177, 72, with 282, line 2; the two complete genealogies are given in the source used by Ibn Durâdî, the *Ja'mhûrîat al-Mu'allâbî of Ibn al-Kalbî). The detailed narrative of the events which brought Kusair to fame is given in the article KUSAIRA in *A'ara*.

Becoming master of Mecca and guardian of the Ka'bah, Kusair rebuilt the latter and organised its worship; he united the clans of the Ka'bah, who were previously scattered, into a solid body which assured them the mastery of the town for the future; indeed it is even said that it was on this account that the name Kusairah (from *kusr*), to combine, replaced the old name Bâ-release. Kusairah is said to have been called *Ma'dhab*, the 'to-unite'. On his death the sacred offices that had become his patrimony were inherited by his sons: 'Abd al-Dîr, 'Abd al-Mu'tasim, 'Abd al-Urazî, 'Abd Kusair, the second of whom through his son al-Hishâm was a direct ancestor of the Prophet. The house which Kusair had built himself quite close to the Ka'bah was henceforth the centre of the civil and religious functions of the Ka'bah under the name Dār al-Nawâd (q. v.); the interesting description of the working of the Dār al-Nawâd that goes back to Muhammad b. Qatîr b. Mu'tâm, c. 100 (cf. Spruner, Leben und Werk d. Mohammad, ii. 265), to Kusair is also attributed the discovery and digging of the well of al-'Aqâl (Kâth al-Thîl in *Crem. Stadt Mecca*, ed. Wüstenfeld, li., p. 107 infra; aulâla, *Paläst.,* ed. de Goeje, p. 28; *Yûsuf, Mahjûm*, iii. 19 sqq.; Bakî, p. 646, cf. 366). From what has been said above it is evident that the Ka'bah revered Kusair as their true founder and the founder of the Ka'bah. The antiquity of this tradition is attested by a verse of al-Abbâs (Bakî, p. 459) and by several of Husayn b. Tabîbî. Later historiography has tried to harmonise this old native tradition with the genealogical system which later became established and according to which Kusairah = Fhîr b. Ma'dhab b. al-Nawâd (Wüstenfeld, General Tabellen, 67) as well as...
as with the tradition quite different in origin and character of the Abrahamic cult of the Ka’ba (q. v., ii, p. 587?) and its vicinages under the Qur’ān [3, v.] and the Kūsān; Kūsāi is therefore to Mecca “what Theseus was for Athens and Romulus for Rome” (Catastān). In the present state of our knowledge it is impossible to say whether he should be regarded as a historical personage transformed into a hero in the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab onomatopoeia: a. Nabiḥ b. Kūsāi al-Sanā‘ī, a contemporary of Muhammad, is mentioned by Ibn al-Mālik, ibid. v. 14–15; Ibn Ḥadjar, al-‘Āzārī, ed. Cairo, v. 257; another contemporary of Muḥammad, whom Ibn al-Mālik, ibid. v. 205 calls Kūsāt (v.) and Ibn Ḥadjar, al-‘Āzārī, v. 312, 313 Khuffār al-Kūsāt. Mention the Jāmī‘ah al-‘Aṣārī of Ibn Khallikān in the Sīra of the latter as Kūsāi. Lastly the same work (M.S. British Museum, f. 162 v.) mentions a tribe Kūsāti b. Makkī b. Tālha b. Būshīr b. Sulaym. The fact that this name is to be recognized in the Vega of the Nabataean inscriptions and probably also in the Kronos of a parchment from Dura on the Euphrates (cf. Camont, Les sources de Dura-Europos, Paris 1926, p. 320) does not justify us in concluding that it is of northern origin, since as we have seen, it is found among different tribes. The tradition which makes Kūsāi pass his childhood in Syria is in favour of the hypothesis which makes the worship of the Ka’ba introduced, or at least renewed, as a result of influences from the north; perhaps in some statements of tradition (e.g. al-Kalbī quoted by Ibn Sa‘d, i/1, 39, 1–11) we have the record of an actual fact, namely, that on the old cult of Hubal, the "idol of the Ka’ba" (cf. Ibn al-Kalbī, A. al-Husaynī, p. 28), there was super-imposed that of al-‘Adhān and al-Malān-Malān, for which we have definite evidence in Northern Arabia in particular.

In any case the figure of Kūsāi soon became legendary; his history, as we have seen, has the characteristic features of the legends of eponymous heroes; his alleged sons are only symbols of the part played by Kūsāi in the religion of Mecca. If it is not quite true that he was the object of regular divine worship (the name Abū al-Kūsāi borne by one of his sons does not necessarily imply the divine character of the father), he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Mu‘āmmadan Arabia, although we know very little about it. The eponymous hero of the people of al-‘Adhān Thakīfī is analogous in character to Kūsāi. The latter's memory remained particularly associated with the Dār al-‘Aṣār, which Lammena, denouncing the suggestion by M. Hartmann, has shown was not the "house of Kūsāi", as tradition has it, but rather a place for the celebration of rites, essentially social and religious in their origins, its proximity to the Ka’ba, with which it is however never confounded, suggests that it was one of these private dwellings built beside Sencitt temples, which, without being identified with the temple itself, came in time to acquire a religious character and certain religious functions. We have an example of this type of house in the "house of Lyseus" in the precincts of the temple of the Palmyrene deities at Dura (Camont, Les sources de Dura, p. 36–37).

Whatever the origins may be, it is certain that at the beginning of the sixth century A.D. the control of the Ka’ba and of the Ka’ba was in the hands of a clan claiming descent from Kūsāi and that the Ka’ba were agreed that he was the founder of their tribal unity. It is to be noted on the other hand that even if this clan included among its members some of the recognized chiefs of the Kūsāi, among others the Banū Umayya, it was far from having complete political and financial control in its hands; the Banū Makhtum for example, one of the most powerful families in Mecca, were not descended from Kūsāi. It seems probable that the Moslem republic was constituted on the initiative and under the direction of the Banū Kūsāi, but that they were forced to admit in their social organization other clans having the same rights and privileges as themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banū Kūsāi; it is a process which presents striking analogies with that which may, we think, be noted in the formation of national unity among the Israelites, as a result of the fusion of the tribes of Judah and Levi with the Ephraimitic tribes.

KUŞDAR, or KUSZAR, is the name of a town in 37° 40' N. and 66° 37' E. and of the district which it is situated in, a long, narrow valley, important by reason of its central position at the point of convergence of roads from Kafr on the north, Kafzûz and Bela on the south, Kuştî on the east, and Makrān and Khārām on the west. Yākā describes it as a small town in a fertile district, which he calls Turāq, producing grapes, wines, olives, and other fruits, but not dates. It is a city of India, or rather, he says, of Syria, situated at a distance of eighty stades from Bust. It was conquered by the ‘Arabs shortly after their conquest of Makrān, and Ibn Hawkal says that it was governed by an ‘Arab residing at Kaškûn, who admitted the name of the Abūnād Khudhī in the public prayers, but Yākā quotes a traveler who describes the district as the abode of the Khudhīs and its capital as the seat of their Khudhīs. In A.D. 977–978 it was taken by Subukgī, and its ruler was captured, but was restored on condition of his agreeing to pay tribute and causing the Khudhī to be restored in Subukgī’s name. At a later date he was again attacked by Subukgī.
owing to his failure to remit tribute. Kusair is now the principal town of the Jhalwar division of the Rajputana Pr. District.

Bibliography: Ibn Hawaik, R. G. A., R. Register of the Tribes of the District of Jhalawar, etc. Wüstenfeld, a. v.; al-Uthi, Turākhā Yāmīnī, Miss., Imperial Geogr. of India, Oxford 1908. (T. W. Hato)

KUSHAIR, an Arab tribe forming part of the great group of the Banū 'Amir b. Sa'āda [q. v.], whose fortunes we find almost continuously shifting in the period before as well as after Isām. They had particularly close associations with the tribes of 'Uqayl and Dā'ā [q. v.], whose genealogical table makes them brothers. Their genealogy is Kusair b. Ka'b b. Rabia b. 'Amir b. 

Kusair, or Kesair, a branch of the tribe of the Banu Sulaim [q. v.]. During the pre-Muhammadan period, the Banu Kusair settled in al-Yamān and were involved in all the wars of the Banu Sa'āda, especially in those against the Tamū, the Shibānī, whose chief Ḥājjib b. Zārāra was made praiser by Makkī b. Salama al-Ẓair al-Makari, called Ubu 'l-Ra'ebah, at the battle of Dā'bala, and against the kings of al-Iltis. (See Nāfārī, ed. Bevan, p. 70, 404–405.) After Muhammad's success in Central Arabia, the Kusair joined the other tribes of the Banu 'Amir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion to Isām (cf. the texts in Caemini, Annals dell'Islam, i, 667 [4 a. 60, § 75]). Later they took part in the holy war against themselves in the wars of conquest in Syria and the Ḥazāran, and settled particularly in the eastern parts of the Arab empire. In the Omaniyāt period, they were very numerous and powerful in Kūhrān, of which several Kusairi were governors (among others Zara'a b. 'Uqba whose family possessed a very highly esteemed bœc of horses). This Kusairi colony had as its founder and common ancestor Ḥatib b. Mā'awiyah b. Kusair, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Ḥajar al-Isbāhānī, al-Ma'mun, in Goldziher, Abhandlungen zur arak. Phil., ii. 97). On the other hand, we find in Muslim, ed. Wright, p. 273, a similar longevity attributed to Ubu 'l-Ra'ebah, the Kusairi chief mentioned above, and indeed almost all the Kusairi of note settled in Kūhrān, recorded by history, belonged to the clan of Salama al-Ṭair, to which Ubu 'l-Ra'ebah belonged, and which seems to have been the aristocracy of the tribe.

The Kusairi did not number many poets of note among them; the best known is Yūsuf ibn al-Ṭahārīya, who lived between the end of the Omaniyat period and the beginning of the Aḥṣāba period.

The genealogical sources and in particular the al-Khalisi also mention other ethno-linguistic groups bearing the name Banu Kusair, two of which belonged to the southern tribes of the Asmac and the Am (And).

KUSAI, Abu 'l-ʿĀṣim Abū al-Qāsim b. Hāwān b. Ṭāhir b. Muhammad, born in 370 (981), died in 455 (1062), was in dogmatic theology the pupil of the Ṣaḥhāra Abū Bakr b. Ṣa'īd and in mysticism a follower of al-Salami and Abū ʿAbd Allāh al-Dā'ūsī, whose daughter Fāṭima (d. 505 = 1062) he married. He was persecuted by the other Ṣaḥhāras, by Ibn Ḥaṣbān and the Ṣaḥhāra official from 440 (1048) to 455 (1062). His best known works are the two treatises, the Ṣaḥhāra istīlāḥat al-rifa'īyin al-tafṣīliyin, written in 458 (1065) to adapt Sālim to Ṣaḥhāra metaphysics, and the Ṣaḥhāra istīlāḥat al-ʿuṣūrin min al-khuluṣin min al-Maṣnūn written in 445 (1054) to clear the memory of al-Ṣaḥhāra from the charge of heterodoxy laid against his nominalist metaphysics (publ. in Subki, Tabaqāt, first ed. Cairo, a. d., iv. 276–288). We also have from Kusairi's pen a mystical commentary on the Qur'an entitled Lajūf al-ṣawārat and a manual of mystic paths, Tavākh ʿal-Mushāhid, the esotericism of which is deliberately obscure. The Ṣaḥhāra, a classical manual of Muslim mysticism was criticised from the Imamī point of view by Ibn al-Ḍā'ūsī (Ṭardī, lith. Teherān 1312, p. 405–406) and published with the Sāḥr al-Anṣaṣ at Cairo in 1930 in 4 volumes. — This is the only useful edition; the little editions in one volume (1318 a.h.) are swarming with typographical mistakes.

KUSKUSS (Kouskous), a dish prepared with semolina. Throughout northwest Africa (Tripolitania, Sahara, Tunisia, Algeria, and Morocco) it is the basic of the food of the people. It is sometimes called jetum, etc., food par excellence. The Berbers of Eastern Algeria also call it me'mun, which has the same meaning; those of Western Algeria, Mrūq; those of the South and of the Sahara, Alāq, also with the same sense. In Tunisia, the name jetum has even become applied to sauces at which this dish is particularly used, known elsewhere as amāda (Eastern Algeria), mubāde (Western Algeria) and mawzun (Morocco). In the Judaeo-Arabic of Africa kuskuss is called kouskous. Kuskuss may be prepared at any time. Some however prepare it in the nights of Monday and Friday, which according to the na'ma are peculiarly auspicious nights. The ceremony of preparation, which has been given a kind of religious character, at which certain rites have to be performed, always begins with an invocation or prayer formula. The women preparing it must not hear or see anything which might be a bad omen. These near her avoid speaking of anything except saints or agricultural prosperity, the wealth of the produce of the land or of the family in which she is.

To make kuskuss, the woman sits on the ground, puts in front of her a wooden dish called gafna or zanar according to the district. Beside her is the bag of semolina and a vessel of slightly salted water. Some add to the water two, three, or four drops of water of Nisān (the rain that falls at the beginning of May), which is kept in a flask) which
has peculiar virtues. She then takes a handful of semolina, puts it in the ḍjasna, sprinkles salt water over it with the hollow of her hand and rolls it under her fingers in the dish to right and left until little pellets are formed, which, like lead drops, she goes on in this way, handful by handful. From time to time she stirs the ḍjasna to separate the little pellets from the large and rolls the latter to make them smaller.

In the meanwhile she is boiling on a brazier, in the ḍhra (a kind of earthenware sacepan) water and meat, if the kuskus is to be prepared with meat, or vegetables (chick peas, turnips, wild-chard) if it is to be made with vegetables, water alone if it is to be with sugar. Finally the required quantity of semolina for the kuskus having been prepared, the woman shuts it up for some time in a bag or bottle of leather. In this little pellets run together as they dry up and form a kind of rough grained paste. The cook then cuts out this paste into a special sieve and taking up her pestle crushes it through the sieve. The round grains that pass through the sieve are the real grains of kuskus; the grains too large to go through are used to make barfūbi (cf. below) or semolina takes called masjīf.

In the meanwhile the ḍhra half filled with water has been boiling on the brazier. The cook then takes the kekhar, a kind of earthenware pot shaped like a funnel without a neck and pierced with little holes in the bottom. The kekhar is placed on the ḍhra, the edges of which are wrapped in cloth to prevent the steam escaping between the vessels. The kekhar is filled with grains of kuskus. The steam in order to escape has to pass through the holes in the bottom of the kekhar and through the grains of kuskus which it cooks. From time to time the cook puts her finger in the middle of it to see if it is done to a nicety. When it is she pours the grains into the ḍjasna, rolls them again with her hand to prevent them forming a paste or clotting, then stews them again in the kekhar. This time as soon as the kuskur begins to give off steam, she puts it finally in the ḍjasna.

Now if the cook wishes to make masjīf or sweet kuskur she powders it with sugar and puts here and there little pieces of butter which melt and impregnate the little pellets of semolina under the influence of the heat. The water is thrown from the ḍhra. If the kuskur is to be made with meat or vegetables the woman adds water to the ḍhra so that the bouillon or ḍjasna may go farther and a little salt. This bouillon is used to sprinkle on dishes before they are served.

Whatever be the number of courses to a meal, the kuskur is always served last. According to the manner of its preparation the kuskur has different names, which vary also in the different linguistic areas. To those already mentioned may be added: 1. masjīf, very fine grained with sugar, 2. ma'war, very fine grained with meat, 3. ṭukkūṭ (Tunia, Constantin) fine grained, eaten cold with butter or fat of any kind, sprinkled with butter milk, in the west called ṭitīl, 4. ma'āsmaya, kuskur with very large grains, 5. barfūbi or barakhab or marquid of large grains swollen by steam and cooked in bouillon or milk — called suk in Southern Algeria, 6. ṭartīb, made with barley-semolina, in place of wheat semolina — in the west called ṭitīl.

KUSUF, KUSUF, eclipse of the sun or of the moon. As regards linguistic usage, it may be noted that al-husuf is used alike for the eclipse of the moon (husuf al-ḥammar) and for that of the sun (husuf al-shams), e.g. in al-Farghānī, Kusuf b. Liğ, al-Bakrī, al-Burānī, but they are often distinguished as al-husuf, eclipse of the moon, and al-husuf of the sun; e.g. by al-Kanzari (on the linguistic usage), it should be noted that according to the Masīfī al-Ulim, ed. van Vloten, the vith form should not be used, although this is very often done; e.g. by al-Kanzari and others).

The eclipse of the sun and of the moon have from the earliest times attracted the livelitest attention. Prolemy, following Hipparchus, studied the theory of eclipses, and following him the Arabs and Syrians, etc. We shall deal first with the eclipse of the moon. It must be premised that the apparent path of the moon — we must adhere to the geocentric view — cuts the ecliptic in two opposite points, which however in course of time come on to the ecliptic. These points are called al-ṣaṣṣawār (Persian ṣaṣṣawār, globe-shape); they are also called al-tinnin, "dragon" (see below). All the planets have of course such ẓaṣṣawār; without an addition the word always refers to the moon. Their positions are given in the Ephemerides. The massive ball into which according to Ibn al-Haibīn the moon is inserted, and which carries it along as it moves, is called ṭafṣ al-ẓaṣṣawār.
The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It was at one time thought that this was a dragon, which ended at two opposite points on the globe of the heavens and had the same motion as the nodes of the moon. Eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the name for the crescent and waning nodes, i.e. the points where the moon passes through the elliptic, "head, abortis" and "tail, al-Quwātah", which were retained long after the "dragon" had disappeared. The sign a" for the length of the node is a distorted dragon. The astronomers credited this dragon with certain influences on the horoscope. But several scholars (c. 650) (1 S. Nau, "Notices d'Astronomie Syriane," T. A. J. S. 10, 1910, vii, p. 15) long ago denied this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Britani's Ta'ifim, etc., the assertion that head and tail have separate natures. The head is hot, suspicious, and indicates increase (of property, etc.). The tail is cold, brings misfortune, and indicates diminution of wealth, etc. Eclipses of the sun or of the moon are caused by the earth coming between the sun and moon or the moon coming between the earth and the sun. Instead of tawârîf or we often have the word "node" (k'alt) and "wala' al-wajh", also in combination with "wâl'da" and "dâ'iru".

The shadow of the earth arising in the first instance, because the sun is considerably larger than the earth, consists of a moon-shaped convergent shadow (the shadow) on one side and a divergent shadow (penumbra) on the other. Only in the shadow is there absolute darkness. As the diameter of the shadow at the place of the moon's path is considerably greater than that of the moon at the same time, under certain conditions, the moon may remain some time in the shadow and therefore be perfectly eclipsed for the period. Ibn al-Haitham, for example, investigated these conditions very fully (F. Wiedemann, Beiträge zur Geschichte der Schatten, 1907, xxxii., p. 226).

If earth, sun and moon were very small bodies, no eclipse would only take place when the sun and moon were exactly in the nodes. But as they are large, eclipses also occur when these bodies have passed beyond the nodes, i.e. they have experienced an alteration in latitude and longitude. A total eclipse occurs when the breadth is smaller than the difference between the diameter of the shadow and that of the moon, a partial eclipse when it is larger than the latter but smaller than the sun of the diameter; if it is however equal to the latter, there is only a contact but no eclipse.

Taking into consideration the shadow alone, the mudhrâ' (core) or iımâmüh (pupils) are the nodes. Thus we call it dâr al-fâtîmât al-nilât - we enter the following: the entrance into the shadow is called bâd al-bâdîfi, beginning of the eclipse; the phase from the beginning of the eclipse to the beginning of totality, called isâqâq (falling, the hûlân of Philemon), the middle of the path covered in shadow is called mawir (middle). The phase which corresponds to complete emergence is called mudâm al-îndîlât (the completion of disappearance); al-makht (stop, stay) means the phase in which the moon is eclipsed; in a partial eclipse there is no such stop. A hâsîf, hâsîf al-makht, a total eclipse without a stop is said to occur when the moon's path is such that the darkened moon touches the cone of the shadow at only one point; thus a total eclipse exists at this point only. In the case of total eclipse, the place where it begins is called waqât al-makht and where the moon begins to emerge from the shadow, âshir al-makht.

A diminution of light but no complete extinction also occurs when the moon moves through the half-shadow. In his classical work on the shadow Ibn al-Haitham (see above) discussed the theory of this question and checked it by observation. In very rare cases, however, the whole of the eclipsed moon does not appear quite black but shows different colours, especially a dark red; this was observed by various early astronomers and minutely described by Ibn al-Haitham (his statements agree with modern observations, e.g. J. Müller, "Liber de arcis," 1992, p. 9, p. 96). Even al-Britani further studied these colours (al-Khatnâb al-Masâ'ûl, ishârâya, bãl, fi sâb, fi jât, fi jât); he also examines critically earlier works and particularly Indian ideas on the astrophysical explanation of the colours (e.g. E. Wiedemann, "Über die verschiedenen bei der Mondfinsternis auftretenden Färbungen nach Britan," in Efter Jahresber für Photographie, etc., 1914).

This light on the completely eclipsed moon is explained by the fact that the sun's rays are diverted in passing through the earth's atmosphere and thus enter the shadow and illuminate the moon. According to the amount of moisture in the atmosphere, these diverted rays are more or less coloured. For the possibility of a solar eclipse, the conditions are the same as for a lunar one.

Solar Eclipse. As the angle at which the moon appears to us is smaller, although only slightly, than at which the sun appears, the moon can never completely cover the sun. Therefore even at a so-called total eclipse of the sun, even if the centre of sun and moon and earth all lie on a straight line, a narrow rim of light still remains. Bright formations, the corona and the protuberances radiate from this. They are described by al-Britani in al-Khatnâb al-Masâ'ûl, ishârâya, viii, xxxi, xi (e.g. E. Wiedemann, "Erscheinungen bei der Dämmerung und Sonnenfinsternis, in Arch. f. Gesch. d. Med., xv, 1920, p. 433). The local times at which the same lunar or solar eclipse appears at different places is obtained from the difference of their geographic longitudes. The calculations are made difficult by the fact that these bodies show considerable parallelism. This partly explains the great differences between the calculated and true values.

It would take too far to go into the details of the theoretical considerations, for example when such eclipse begins, how long it lasts, its periodicity, etc. In the works of al-Farghani, Fushû s. i, 1058, al-Kāshâni, al-Diramîn, al-Ishfak, and particularly in that of Abu 'l-Faradî, Le Livre de l'observation de l'esprit, ed. F. Nau, Paris 1849, also in the Khiitâb Tabîhûni, etc. of al-Britani we find more or less full general descriptions while the works in astronomical theory, like the Dâ'îf (tales) of al-Khârîtûnî, of al-Britanî, the Qâmûs al-Masâ'ûl
To obtain a standard for measuring the amount of the eclipse, the diameter of the sun or of the moon, was divided into twelve equal parts, called “fingers” (iskā or ‘a‘īl al-kāfī). and the number of these that were eclipsed was calculated. In the West one spoke of “digits”. In the same way the surface is imagined to be divided into 12 equal parts and it is calculated how many of these are eclipsed. The latter may be calculated from the former which refer only to length. Al-Battani, for example, gives tables in connection with this. The dioptr of Hipparchus was used to measure the size of a lunar eclipse. Two rods are fixed at right angles, 18 by 10 cm. The one with a small round hole is fixed and the other with a larger round hole can be moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, is measured, and the magnitude of the shifting over the whole surface of the moon and their relation expressed as $a : b$. The amount $g$ in fingers of the eclipse is $g = \frac{a}{b}$. (E. Wiedemann)

**KUTA.** [See §411.]

**KUTÅHIYA** (the ancient Cotyasmus), a town in Asia Minor, the capital of a sandjak in the province of Khudovendjik, on the river Pınarçik, which enters the Sakarya, near it. It is 3,000 feet above sea-level, has 22,266 inhabitants, of whom 4,000 are Greek Orthodox and 3,000 Aramian; it contains 24 mosques, 21 madrasas, 2 libraries, 16 Armenian monasteries, 4 churches, 9 caravanserais, 11 baths, 12 potteries. It is a station on the Bagdad railway. In the sixth century it was the capital of the Gomulioghi; the mosques of this period are in ruins; other notable buildings are the Medrese Medrese (764 = 1364), the Karaman-ı Džami (1364 = 1369), another mosque (1372 = 1431), the mosque of Vâkidz Cezeli (837 = 1433-1444); the great mosque, Üt-Džami, the building of which is attributed to the Gomulioghi, but is not earlier than Bayazid I. It has an old cistern in ruins built on a height. The marble lion and the Byzantine sarcophagi mentioned by Teixier no longer exist. There are tombs called Ak-sita, Sulaim ibn-i Kebisti, Selim-i Saha Bayazid Baghch ö, there are hot springs in the neighbourhood. It was once an important centre for the manufacture of glazed pottery with floral decorations (the so-called: Rhodian: pottery); no attempt has been made to revive this industry but the recent products are not so good as the old ones.

The town formed the dowry of the daughter of the Gomulioghi who married Bayazid I; it was taken by Timurt after the battle of Ancyra (1402). The conqueror left his son Şahbâr there as governor, while he advanced on Ephesus (H. A. Gibbons, The foundation of the Ottoman empire, Oxford 1916, p. 156, 158).

**KUTA,** an independent district (suburba) in Eastern Borneo, belonging to the

---

trade. The numbers of the Bandjarmas immigrants from the south of Borneo are also increasing; their main industry is the collection of forest products. The Buljan come from the Sulak Islands; they used to be pirates but now they have permanent settlements at the mouth of the Mahakan where they live by fishing. The heterogeneous composition of the population is reflected in the language situation. Malay is the official language and by far the most widely spoken; but there is a considerable variety of Malai; one feature is the large number of Javanese words that occur in it. The first contact of the Dutch with Kutai took place in 1635, when the Dutch East India Company made their first treaty with the chief. By treaties of the years 1825 and 1844, the Sultan recognised Dutch suzerainty. The Sultan governs with the help of four notables. The Dayaks are under their own chiefs, whose rank is hereditary with the approval of the Sultan.

(W. H. KAREKES)

KUTAIBA b. MUSLIM, Abd Hafiz al-KUTABI, an Arab general. Kutai was born in 49 (669/670). In the war against Abd al-Rahman b. Muhammad b. al-Aswah (q. v.), al-Hajdajjir recognised his ability, and when the caliph Abd al-Malik in 55 (708) had to fill the vacant governorship of Eberistan, he gave the command to Kutai on the advice of al-Hajdajjir, to whom the government of Khorasan were subordinated. After his arrival in Merw, Kutai was able to make full use of his military gifts and by a series of successful expeditions against the neighbouring Turkish tribes, he extended the frontiers of the Arab caliphate to such an extent that he must be reckoned one of the greatest conquerors of the Umayyad period. In 56 (709) he undertook his campaign against Tughratir, where the lord of Ahriran and Shumshina bought peace. According to some historians, Kutai first attacked Shumshina, the king of which surrendered at once, and next tughratir from which he returned to Merw. In the following year he turned his attention to Bukhara. After he had succeeded in concluding a peace with Nizak, king of Khabdagh, against whom the previous governor of Khorasan, Yazid b. al-Muhallab had continued his campaign, he crossed the Oxus and advanced on Balkh. The people of the town, however, sought help from the adjoining states: the latter barred the routes and for two months Kutai was completely surrounded. He finally succeeded in defeating the enemy and the town had to surrender. But, as soon as he had gone, the people rebelled and killed the governor appointed by him, whereupon Kutai returned and stormed the town. After he had put down all resistance he returned to Merw. In 58 (707/708) a campaign against Bukhara was undertaken, in which he took the towns of Nushkakhat and Kamshana. Fighting was renewed next year but seems to have been indecisive. In any case Kutai returned in 59 (708/709) and defeated the people of Bukhara after a stubborn resistance and the king of Sogdiana had to sue for peace. Nizak then rebelled, imprisoned his son, the king of Tughratir, and called upon several neighbouring tribes to join him against Kutai. As winter was approaching, the latter himself could do nothing more, and sent his nephew Abd al-Rahman to occupy Balkh. In 60 (710/711) he took the field again, and after bringing the troops to terms, advanced on Nizak. The latter fought his way to Farghana, and entrenched himself in the citadel of al-Kurk. After a two months siege, Kutai captured him through treachery and had him put to death, although he had definitely promised him a pardon. In the same year he conquered Shumshina, which had rebelled against him, along with Kais and Nasaf, and installed a king loyal to him in Bukhara (q. v.). In 61 (710/711) Kutai is said to have undertaken an expedition against Seistan, but the ruler there sought peace, and he returned without a blow being struck. Next year he helped the king of Khorasan against his rebellious brother. He then advanced on Shirmak, defeated the forces of al-Shahib and Farghana, which had banded to the help of the Sogdians and seized the town, which was occupied by his troops in spite of the terms of peace. In 63 (714/715) he was sent an army against al-Shahib and advanced most vigorously as far as Khojas and Khabdagh in Farghana. In the summer of 64 (716) he had advanced as far as Khabdagh or Kharun, when the news of the death of al-Hajdajjir reached him. He therefore returned to Merw but in 65 (717) he began a new campaign of conquest against Farghana. Here he heard of the death of the caliph al-Walid and as Kutai feared the vengeance of his brother Sulaiman (q. v.) because he had supported the plan of excluding the latter from the succession, he decided to pay homage to the new caliph. This never incited his troops to mutiny and in 66 (718) Kutai returned to his military quarter. He was killed by the mutinous soldiers (cf. Farighma).

(K. V. ZETTERBERG)

AL-KUTAMI, epithet ("spatule-like") of the Arab poet 'Umar b. Shayaqin b. Aam of the clan of Taim b. Usama of the Taghlib, a contemporary and fellow-tribesman of the poet al-Akhshash and like the latter played a part in the feud which raged in the second half of the first century A. D. between the tribes of Taghlib and the Kais Allam. His own experiences in battle and the glorification of the exploits of his tribe in war form the main themes of his poems. In contrast to al-Akhshash however he does justice to his opponents, while venting particular hatred on the Yamani. His panegyrics are mainly devoted to the Umayyads, c. e. one to Walid I. The date of his death is not known; according to al-Hajdajjir, iii. 5619, he died in 610 A. D. According to several sources he was a cousin of the Khazaria by Irama, but in his poems he shows himself a thorough Beduin, always ready for a fight, anxious about his property in animals, not averse to wine drinking, and looking down upon the townsmen with the haughty pride of the nomad.

The name al-Kutami is also borne by two otherwise little known or quoted poets, one of the tribe of Kallb and the other of the tribe of Dubani, but in practically all references al-Kutami without further names means the Taghibi first mentioned.

Bibliography: Kasw anas, xx. 128; Hamza, ed. Freytag, p. 179; much quoted in lexicographical and Arab works; his Odes with the commentary of an unknown writer was edited by J. Barth, Leyden 1886, mainly from the Berlin MS., Ed. 559. Allahbadi, Kasaw, ed. 348.

(N. 915 and 916) is probably due to a mistake by the author of the Turkish Catalogue, especially as the title is also given there in the above Persian form, impossible in Arabic.

**Kūtb al-Din al-Nairawālī** [See al-Nairawālī]

**Kūtb al-Din,** al-Shirāzī, Mahmūd b. Maṣʿūd b. Muḥammad b. Muṣṭafā (1277–1350), was born in Sīfār 634 (1236) in Sīrāz and died in Tabris on 17th Jamād al-akhir 710 (1311). Like many Muslim medical men, Kūtb al-Din belonged to a family of distinguished physicians; at the same time however, he was not only a prominent medical man, at least as regards his writings but he distinguished himself in astronomy, philosophy, and the treatment of religious problems. This versatility induced Abu l-Fida'ī to give him the name al-muwafaqīnī (*experienced in many fields*). He received his medical training with his father Diyaʾ al-Dīn Masʿūd al-Kūtri, i. e. of Kūtrūn (a town west of Sīrāz), in the hospital of Sīrāz. He lost his father at the age of 14 and then became a pupil of his uncles Kamāl al-Dīn Khair al-Kūtri and Shahr al-Dīn al-Zakī al-Rūshānī (Surūdī hāsī; Rukṣīhāni) and Shams al-Dīn al-Kūtrūn; he then went to Naqī al-Dīn al-Fārābī, studied with him and surprised everyone. It was probably Naqī al-Dīn al-Fārābī who stimulated him to study astronomy. While still quite young he conceived the idea of editing the *Kulliyāt*, the first theoretical part of the *Fusūs* of Ibn Sīnā. He next sought instruction with the physicians in Sīrāz and then studied deeply the works of earlier scholars. He then travelled in Kūtrūn, the two ʿIrāq, Peraia, Asia Minor, and Syria. Everywhere, as he tells us in the introduction to the commentary on the *Kulliyāt*, he sought the acquaintance of scholars. It was probably after these journeys that he became associated with the Tatars rulers of Perse, the Il-Khāns; in what year and under which ruler this happened, we do not know. In any case in 681 (1283–84) he was Kūtbul of Sīrāz and of Malatya (in Asia Minor) under Alpajun (Nikander, 680–687 = 1281–1284). There he was still engaged on the *Kulliyāt*; he must have played a part in politics, as Alpajun sent him with his uncle Kamāl al-Dīn to Egypt to the Mamlik Sūfān al-Mansūr Sāf al-Dīn Khulāsī (678–689 = 1279–1290). He was sent to report the farmer's conversion to Islam, no doubt the result of Kūtb al-Dīn's influence and to conclude a peace between Muslims and Tatars. The latter part of his mission was a failure. In Egypt also he collected material for the *Kulliyāt*. He dedicated the work, probably finished shortly after his return from Egypt, to Muhammad Sa'd al-Dīn, Ahmad Khān's vizier, and calls it *Tabīsī al-Sādiqīya, the present truth*, or *Naḥbat al-Iṣkāmiya, muṣāliku wa-khabārī, a fine style of writing and a gem of the physician*. In his latter years Kūtb al-Dīn retired to Tabrīz. Towards the end of his life he ardently studied Hadith and made critical notes on the subject.
KUTB AL-DIN - KUTB AL-DIN MUBARAK

One work entitled Sherk al-Tadjibra al-Najrīya. As an appendix to the Nihayat, Kutb al-Din wrote the Fi Harakat al-Dharraya wa l-Niyaa bi-ha al-mustawf wa Jamaliyya, "On the motion of rolling and the connection between the straight and the crooked". Other works are al-Tafsir al-I'Ha'a w a work with a very peculiar title: Kuth al-fudud al-ta'lam al-I'Ha'a, "Work on astronomy; I have composed it but blame it not".

Besides the works by Kutb al-Din already mentioned there are also recorded a treatise on diseases of the eye and a commentary on the Urfat al-Ibn Sidh; also commentaries on the work, mainly grammatical of al-Sakhkak and on a work of Ibn al-Hajjih.

After his death Zain al-Din Ibn al-Ward wrote verses on Kutb al-Din, in which he expresses surprise that the skill (fāqih) of knowledge still turns after it has lost its axis (kuth).

KUTB AL-DIN MUBARAK, the fifth and last king of the Khali dynasty of Dihl, was the third son of 'Ali al-Din Muhammad. When his father died, on Jan. 2, 1316, the minister Malik Na'bāt raised to the throne Mubarak's youngest brother, Shihāb al-Din 'Abd al-Rahim, a child of six, blinded his two elder brothers, Kutb al-Din and Shāh Khān, and the soldiers sent to perform the task to put Malik Na'bāt to death. He assumed the regency, but on April 1, 1316, blinded his infant brother and ascended the throne as Kutb al-Din Mubarak Shah. He began his reign by releasing all prisoners, by remitting all the harsher odicuts of his father, including the compulsory tax, and by restoring confiscated lands. He was addicted to the grossest indiscipline and appointed his vile favorites, a scavenger who had been named Hāmīn on his nominal conversion to Islam, and was entitled Khurram Khan, minister of the kingdom. Mubarak sent an officer to restore the royal authority in Godārā, and marched to Derawī, where he slew the rebellious Harpāl, restored order throughout the Dihl and the Peninsulas, and built the...
great mosque. During his absence a conspiracy was formed, with the object of putting him to death and raising to the throne a son of his brother, Khidr Khan, but he discovered the plot, executed the conspirators, and on his return to the capital put all his relatives, including his blind brothers, to death, and married Khidr Khan’s widow, the beautiful Devi of Gujrat.

His court was a scene of the most disgusting debauchery and buffoonery, and he arrogated to himself the style of Caliph and the pontifical title of al-Walid ibn ‘Abd.

Rebellions broke out in Gujrat and Deccan, but were suppressed, and Khurram Khan, absent on an expedition to Madura, mediated rebellion in the region, but abandoned the design as hopeless and, returning to the capital, succeeded in persuading the king that he had been falsely accused.

Mambrin’s infatuation permitted Khurram Khan to surround himself with a large body of troops and to acquire supreme power in the state, and on the night of April 14, 1530, the favourite caused his master to be assassinated in his palace, seized the throne, and married Devi Devi.

The usurper, who assumed the title of Naseer al-Din Khurram Shah, was defeated and slain on Sept. 5, 1530, by the warden of the north-western frontier, Ghayath al-Din, entitled Ghazi Malik, who, on the following day, ascended the throne as Ghayath al-Din Taghkhun Shah.

Bibliography: Wali’s Diya al-Din Baran, Tarikh-i-Firuz Shahi: Nizam al-Din Ahmad, Tabakat-i-Akbar; Khidr Khan, Munibhat al-Tabarissi, and translation by G. S. A. Rankine (all in the Bibl. Ind. Series of the A. S. B.); Muhammad Khan Firdousi, Gulshan-i-Ishqam, Bombay 1838. (T. W. Hare)

KUTB MINAR, a lofty tower of red sandstone, said by Ferguson (ii. 206) and Dicé (p. 165) to be one of the most beautiful buildings of its kind in the world, is situated about 1.5 miles from the modern city of Delhi [q. v.], in the ruins of the first city of that name, — about 160 feet from the great mosque which was erected by Kutb al-Din Albeck [q. v.], in 1193, just after the capture of the city from the Hindum king, Prithviraj. Like the Minaret at Ghazna [q. v.], the Minaret at Kutub at Koll (no longer in existence), it is an isolated structure, from which the sun could give the call to prayer, and is 238 feet in height; it is not attached to the mosque, but stands in the S. E. corner of the southern outer court, which was added in 1225 to Albeck’s mosque by Ilutmish [q. v.]; it is not straight, but tapering, and divided into five stories, above each of which (with the exception of the lowest story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement story appears to have been built while Albeck still recognised the overlordship of Malik al-Din (i.e. before 1205); the second, third, and fourth stories were built by Ilutmish, but during the reign of Firuz Shah [q. v.], the building was surrounded by a high wall, and this king in 1298 had it repaired and added a fifth story. The two uppermost stories, both of which in their present form are probably the work of Firdosh Shah, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the tower is entirely of red sandstone, and is not round but made up of buttresses, which in the base-

ment story are alternately round and angular, in the second rounded only, and in the third angular only. The line of each fluting is carried up unbroken through each story. The inscriptions are partly historical in character and partly made up of quotations from the Koran; they have been reproduced and translated in Epigraphia Indica-Mooslemica, 1911-12.

The tower derives its name from the saint Khusraw Khat al-Din Baktiyar Kakh, who was held in high honour by Ilutmish; he died at Delhi in 1253 and his tomb is not far from the Minaret.

KUTB MINAR, one of the five independent Muslim dynasties of the Dakan, which arose on the ruins of the Bahmani Kingdom, named, like the others, from the title (Kutb al-Mulk) borne under the Bahman kings by its founder, Sultan Kafi, a Khalji, the son of Sultan Kulu, and, after the accession of Muhammad III, was entitled by his son, Mahmu, Khawas Khan. When, in 1490, the provincial governors of Ahmadnagar, Bijapur, and Berar proclaimed their independence of Bidar, Sultan Kafi was still at Mahmu’s court. After the death of Kafi al-Mulk in 1495, the Dakan, before Dakhmeh in 1495, Sultan Kuli received his title, captured the fortress from the rebels, and in 1495 was rewarded with the government of Telangana. He maintained a semblance of loyalty to Delhi until 1522, when he declared himself independent in Golkonda, but never assumed the royal title, though historians usually style him Sultan Kali Kutb Shah. He was assassinated in 1543 at the instance of his son Dzamal Shah, who succeeded him. The names of the Kings of his house, with the dates of their succession, are as follows:

<table>

Each was distinguished by the title Kutb Shah, which, however, was never accorded to them by the Mogul emperors, who invariably addressed them as Kutb al-Mulk. All were Shi‘is, and their religion, the grievances of Mir Dzamal, and the licence accorded to Hindus were Awanjabad’s pretexts, if any were needed, for the destruction of the independent state of Golkonda, effected by the capture of the fortress and the imprisonment of Abu 'l-Hasan Kutb Shah in 1687.
Golkonda was the third in importance of the five independent kingdoms of the Dakan.

(T. W. HAN)

**KUTHA** is a very old town in the *Iraq,* one of the canals joining the Euphrates and Tigrius. The town as well as the canal are often mentioned in cuneiform inscriptions (cf. the references in M. H. U. S.), *Babylonien und Assyrien,* 1920-1925; Indices, v. v. Cata or Kuth and the map by Schwimmer in the first volume). The town is said to be identical with the place mentioned in Kings ii, 24, from which came a part of the people whom the king of Assyria settled in Samaria in place of the deported Israelites. The course of the canal, at least for its eastern part, coincides with that of the modern Kutha Hirtham; on the most recent maps (e.g., J. Carte von Mesopotamien [temporary edition for official use only]), prepared by the Map Dept. of the German General Staff, Dec., 1947, 1:400,000, Sheet 5d) the Hahl Hirtham ends in the Shag-al-Nai; the Arab geographers make no reference to this but make this canal flow direct into the Tigrius (cf. G. W. in *Strongs, The Lands of the Eastern Caliphate,* Map ii.). In other respects also the statements of the geographers regarding the canal vary considerably; and when Streck, *Die alte Landtafel Babylonien,* 1, 28, in his description of the canal relies solely on Ibn Serapion, it must be pointed out that it is not for example (B. A., i, p. 85) makes such confused statements about the canal that one is forced to assume that in the period of the Caliph the canals were not changing, but the canals and their courses in three centuries had a history which is reflected in the contradictory statements of the geographers and has to be reconstructed. But little progress can be made in this direction without archaeological research.

The Arab geographers distinguish two places called Kutha in al-`Iraq, Kutha Rabha and Kutha al-Ta'ir but only give further information about the former. The distances from other places are collected in Streck, *ibid.,* p. 11. The geographers also mention the bridge of boats over the canal at Kutha and the Hirtham legends, which are associated with the town; al-Muqaddasi (B. A., ii, iii, p. 121) actually calls the town Minlat Hirtham and to this day the ruins of the town are located in the Tell Hirtham which lies approximately on the site of the ancient Kutha, and the name of the town comes from that of his maternal great-grandfather. When his mother (her name is very variously given) Yakut writes Bintin Karnaha b. Kutha al-Tamn, *Babha hirah, 910,* *Babha hirah,* 910, *Babha hirah,* 910, *Babha hirah,* 910, *Babha hirah,* 910, *Babha hirah,* 910, *Babha hirah,* 910, and for other names see Eisenberg, *Arheology and the Land of Persia,* p. 66; *Arheology and the Land of Persia,* ibid., *1912,* p. 9 note) was about to give him birth, she had to take refuge from Nimrod in a cave outside the town. Later Nimrod threw her into a fiery furnace; therefore in the time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kutha is also the name of the *faahra* around the town in the district of Ardaghie Hilqah and is in turn divided into two *faahra.* According to al-Muqaddasi (Tomara, B. A., ii, 209), Ur Kuthah (the Biblical Ur Kasdim) from which Abraham migrated is a place min biyda Kutha.

The nissa from Kutha is Kuth or Kuthan. Besides Kutha in Mesopotamia Yakut and al-Bakri also mention a place of pilgrimage of this name in Mecca.

(M. FLENNER)

**KUTHAYIR** R. *`Abd al-Rahman Abu Sa`ibah al-Khuwa`* also called *Ibn An`i al-Dhum* after his maternal grandfather, one of the great poets of the `Umayyad period. From his beloved *`Aza* whose praise he sang was he called *Kuthayir* *Azza.*

He lived as a rule in Medina but also in the *Madqam.* A member of the *Khuwai* he was fond of connecting himself with al-Salt b. al-Nadr b. Khusn, a group which, according to al-Yaqubi (i, 368, 8-11), had joined the Khuwa. He was on this account dispossessed by some. His unpleasing, dwarflike figure also readily provoked ridicule. His stupidity and foolishness are also said to have people caused to ridicule him.

He held extreme *`Azam* views and under the influence of his friend the poet Khidif followed the doctrines of the *kayf* (q. v.) and transmigration (rami mliq, q. v.); but his utterances on these matters seem hardly to have been taken seriously by his contemporaries. He professed loyalty to the son of the *`Alids* as the "little prophet." The Imam (Mahdi) was for him *Muhammad b. al-Hasan* (q. v.) and he was one of those *Kaisains* who expected his return from concealment in the mountains of Radda (q. v.) (see *KAYSINA, KHASABAYAH, KURASYAH*).

But his opinions did not prevent him addressing panegyrics to the Marwanids. The Caliph *`Abd al-Malik* thought highly of his poetry and several times rewarded the poet richly. He devoted an elegy to the Caliph on his death. After a long period of waiting he was admitted to the poet he was able to strike the right note with him also. *`Abd however is said to have distrusted those *Alids* who showed sympathy with Kuthayir. The Muhallabids were also patrons of the poet.

There are contradictory anecdotes about *Kuthayir's* relationship to *`Aza,* whom he mentions in many verses. Critics asserted that, in contrast
to his love was not a real passion but a simulated one.

Kuthaiyir was the sūniah of Djamil, whom he regarded as the greatest of poets and took as his model. The sūniah of Kuthaiyir was Sāleh b. Dāhkūn (e.g., al-shakht, xi. 18, 5; xiv. 155, ḍī bāb, xi. 30 in arru: al-shâb b. al-Jahān al-Sūlī). Kuthaiyir died in the reign of Yūsuf II in 105 (7523), as is often mentioned, on the same day as the theologian Dhrīmah (cf. however Ibn Ḥadījīr, Tahdhib al-Taḥdīhib, Hadhrathshī, 1325—1327, vii. 271). Some scholars of the liūd (nīṣīḥ) century regarded Kuthaiyir as the greatest poet of Islam. Ibn Ḥadījīr (ibid. 1327) said that the people of the Ḥijāz regarded him as the greatest of poets while he was less esteemed in al-Fāṣīh. According to some his talent was best displayed in the panegyric (māshūd), according to others in the part of the poem dedicated to his beloved (nāsīlū) although Djamil surpassed him in this. Many of Kuthaiyir's poems were set to music and sung.

Abu-Zabār b. Ḳāḥir and Ḥaṭāf b. Būtham al-Mawjili collected information about Kuthaiyir (Abhrūr Kuthaiyir, Ibn al-Nadim, al-Fīhirī, p. 111, no. 142, 39). There was also a Kuthāb Kuthaiyir who was in circulation (ṣūr, q. c., p. 306, 11). MSS. of the Dīwān of Kuthaiyir, two parts of which al-Ḳātīl had sent in Ibn Dānāl (Ibn Khāṭīb, Fīhirī, etc., in B. A. E., x, p. 396, 9) and which is also mentioned by Kuthās Kuthaiyir (cf. ibid., viii. 360, 11) do not seem now to be known. The MS, Excerpta, no. 467 (H. D. Derenbourg, Les manuscrits arabes de l'Écrivoir, Paris 1884, p. 473) does not contain the Dīwān, but only one Kuthāb (see P. Schürer, Excerpta-Sammlung zur äußern Literatur- und Sprachkunde, Stuttgart 1923, 1, p. 1—17). A few Kuthaiyir's exist in MS, in Berlin (Ahlwardt, Persisch-n. Nr. 7524, 2; 855, 44; 847, 6).

Kuthaiyir, Kuthīyir, Kutlugh-Khan, t. s a dynasty in Kūrmān [q.v.], in the viii (nīṣīḥ) century, descended from the heathen Kāṣrā-Khāṭūl people [q.v.]. The dynasty, successively vassals of the Khwārizmshāhī, the Gūr Khāns, and the dynasty of Khān of Khān (Ilnūk), lasted from 619 (643) to 706 and never had more than local importance. It maintained close relations with the neighboring dynasties of the Aṭīrūg of Yūnān, the Salīmīs of Yūnīn and the Mīṣʿārīs [q.v.], and came into occasional contact with the Caliph and with India. The founder of the dynasty (from 619/620) was Nāṣr al-Dīn Yūnān wa-l-Dīn Abu 'l-Fawārid Kutlugh-Sultan, Dārūs-Ḫājjīm [q.v.], son of Kūrmānī, b. Abū Īlā, d. in 632. His title Kutlugh Sultan was given him by the Caliph, although his Islam was of a very recent date. He had a son Rukn al-Dīn Khān, Khāñqūh, (or Mahmuð-Khāñqūh), and four daughters, of whom Sawān, Turkan was married to Džagāhūrī Khān, Khān Turkan to her cousin Kuth al-Dīn and the two others to members of the family of the Aṭīrūg of Yūnān.

Burkū appointed as his successor his nephew and son-in-law Kuth al-Dīn Abu 'l-Fath Mūhammad Khan whose father Kāṣimīnī Tāṣūyī, b. Khājīr (variant, Khā.writeString(m), Tāṣūyī) is perhaps identical with the Kāṣrā-Khāṭūl chief captured by Kūrmānshāhī in 607 (1210) by Burkhart, Turkistan, ii. 391. Kuth al-Dīn at the end of a year had to retire into Mongolia on the approach of Rukn al-Dīn, son of Burūg and Dārūs-Khāmn, who after spending some time at the Mongol court received from Ugedi investiture for the heirs of Kūrmān and Narharūghe. He ruled for 46 years. He was not well disposed to the Tājde and men of letters (Sīnu al-ḥarbī). In 650 he had to turn to make way for Kuth al-Dīn who had in the interval been serving in China under Mūḥammad Wajwadī and upon whom Mangi after his accession conferred the purībī over Kūrmān. Kuth al-Dīn was authorised by the Kāṣrā to put Rukn al-Dīn to death as he was suspected of intriguing with the Caliph. He soon suppressed a rising by a pretender who claimed to be the Kūrmānshāhī Dārūs al-Dīn. He severely punished the Kāṣrā and the Badkš. His successors were attributed to the advice of his wife Kātla Khāna Khānut who whose wisdom is highly praised by the historians. Some doubts exist as to her origin; according to the Tājde's Ġūdi she had been the concubine (nīṣābī) of Burkū (according to the Daftar al-Ṣīyar, that of Dīnārī (al-Dīn al-Dīn, brother of the Kūrmānshāhī Dārūs al-Dīn) and another has the Tājde's person from Khār Kūrmān, daughter of Burūg; this fact might explain her feud with the son of Kuth al-Dīn.

Kuth al-Dīn died in 655. His son Hadžīhrī being a minor, the nobles asked the Kāṣrā to entrust the government to the widow of Kūrmān al-Dīn and Dārūs al-Dīn was 'l-Dīn Kutlugh Turkan, who ruled from 655—681 (in 665 her power was confirmed by Ilnūk; cf. Burghart, ed. Quatremerou, p. 402).

Hadžīhrī, when he grew up sought to get into touch with the sons of Ugedi and acted with little regard for Kutlugh-Turkan but the latter, strong in the support of her daughter Fāṭūhah-Khāṭū, married to Aḏāb-Khan, forced Hadžīhrī to retire to Delikt (666). Then the other son of Kuth al-Dīn Seyydmahmūd successfully disputed Turkan's
power and she went to Tabriz, where she died in 631. Her daughter Bint Khâlîfah, who had married the uncle Aqâl al-Din Khâlid, removed her remains to Kirmân. Marco Polo went through Kirmân (about 1272) in the reign of Kâtâb Turkan.

Djalal al-Din Abu Mazâfîr Szayyathâni (651-713) was a great contemporary of the Khâlid Ahlam but could not agree with his state in Pâddah-Khân. She had been brought up among her brothers under the name of Hâsan Shâh (cf. Mîrzâshânâ) to enable her to escape compulsory marriage with a Mongol prince. She became however the wife first of Ahrâz and after his death of his son Kâti Khâlîfah. The latter on coming to the throne in 690 gave Kirmân to Pâddah-Khân. The princess who was a poetess of talent was of a vindictive and passionate nature. At first Szayyathâni governed the province in the name of the Pâddah but she later threw him in prison. He was freed by his wife Khûlânâvidâ Kâderdân, daughter of Mungâ Timûr b. Hûla and the Salghûrân (q.v.) princess Ahrîb, ruler of Fârs, and by his daughter Shâh Alam Kâti Khâlîfah, however handed him over to Pâddah-Khân who had him strangled. His death was followed by the execution of his viceroy who was captured by Szayyathânî. In 694 Baldû, husband of Shâh Alam Khân, became king. Pâddah was handed over to the vengence of the wife and daughter of Szayyathâni. In the reign of Pâddah Marco Polo (cf. Vene-Cordina, p. 83, 91) passed through Kîrmân on his return journeys (c. 1293).

In 695 Muzaffâr al-Dîn Abu l-Ibrezî Mûhammad Szâh Sultan b. Hâlâlî succeeded his aunt by command of Shâh Shân but his brothers slew his viceroy and rebelled in Kirmân. The troops of Fârs and Irân besieged Kirmân for 18 months. Muzaffâr al-Dîn came from Tahtân, forced the town to surrender and executed the ringleaders. His methods must here been summarized, for his new viceroy left him in terror. Muzaffâr al-Dîn, who loved wine, died in 703 as a result of an excess.

His nephew Sultan Kâbat al-Dîn II Sâlah Djâhân b. Szayyathânî succeeded him and ruled for two years and a half (to 706 = 1306). As he was very aged and did not pay his dues regularly to the Mongol treasury, Uqilân depose him and appointed a simple governor to Kirmân. Nâzîr al-Dîn Muhammad b. Burkan Kâbat al-Dîn II retired to Shâhir to Kâderdân, wife of his father. His daughter Kutânâ ghân Khân (alâtâk al-Fâtâ) in 739 (1328/1329) married the wife of Muhîl al-Dîn Muhammad, the real founder of the Mûazzâmî dynasty, who later took possession of Kîrmân (in 744).

Before the earthquake of 1896 there still existed in Kîrmân Kûshân-ye-nâgî (corner of the Mihrân) bearing the date 640 (1243) (i.e. contemporary with Kâbat al-Dîn). This green manurevlâ was the family tomb, for the dynasty (cf. F. M. Strock, 'Ten Thousand Miles to Persia', London, 1902, p. 60-63, 694, 694). Turkan Khân founded the little town of Sar-Sâlay and Kâtûnî to which she brought a great supply. Szayyathânî built the madrasah of Darbî Naw, where he was buried.

(V. Mînorsky)

Kîtruk, means in Arabic geometry 1) the diameter of a circle or of any section of a cone and the diameter of a cone; 2) the diagonal of a parallelogram or of any quadrilateral; 3) in trigonometry, the hypotenuse of the so-called ubnâm triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the last case it is called hâsât al-imâm (hypotenuse of the first imâm), in the second case hâsât al-imâm (hypotenuse of the second imâm).

(H. Sîfîr)

He studied grammar with Shûbak (q.v.) and Mu'azzâm doctrine with the celebrated al-Nâqûsî (q.v.). He was tutor to the children of Ablul少爷 al-Kâsim b. Içâ, who was viceroy under al-Mu'azzâm and was thus allowed to preach in the mosque, where he taught his heterodox views and read the commentary on the Kûr'ân which he had composed according to Mu'azzâm teaching.

As regards language, his authority is rather disputed; nevertheless, as Ibn Kadhîkkân observes, he was the first to compose a work on Arabic words of the same form, which change their meaning according as they are pronounced with one or other of the three vowels. Out of some twenty works attributed to him, we only know the following: 1. Kîtr al-Miûthâfiqân, a collection in press of thirty words which may be read in three different ways and change their meaning with each vocalisation, i.e. kûn-'saw', kûn-'wounded', kûn-'rocky', each group is followed by a philological commentary and examples taken from the Kûr'ân and very often from pre-Islamic poets (Paris Bibl. Nat., No. 845, Tr. Lajoud, Cat. Cod. Aráb., i, No. 483, Berlin, 7077-7073; two copies belonging to the author). The Miûthâfiqân was sent by several scholars, among them Ablul少爷 al-Wâhûhî b. al-Ha'in al-Mu'azzâm al-Mahâlîh al-Râzûnî, whose poems has been published several times in Cairo and edited and translated with a Latin commentary by Ed. Vilmar. (Carmen)
KUTUBI — AL-KUWAIT

AL-KUTUBI, SALAH (or PARID) AL-DIN MUHAMMAD B. SHAMS AL-HALAWI, Arab historian and biographer. The only known sketch of his life is in the Kitab al-Durar al-ahwami fī 'Alayhi al-Ma'ālim al-Mukhli‘a, by Ibn Husayn al-Azami [q.v.] still unpublished, but used by Brockelmann in his edition of Ibn Khallikan's Ta'rikh. Kutubi studied in Hala‘, Aleppo, and Damascus, and made a considerable fortune as a bookseller; he died in Ramadan 764 (June-July 1363), but the best known and the only one printed of his works, a continuation of Ibn Khallikan's Wafayat al-Sulh with the title Wafayat al-Wafayat (Bulaq 1823, 1890), contains a biography which gives the year of his death as 775, which made the editors of the Bulaq edition to write a note on this doubtful point. The contradiction had already been satisfactorily explained in Wustenfeld, Die Geschichts- und Literaturschichte der Araber und ihre Werke (repr. from A. G., H. Gott, 1882, xxvii, 54, p. 178) in the biography the date should read 773.

KUTUZ AL-MALIK AL-MU‘AFAF SAFI AL-DIN AL-MUT‘AZI (so called after Sulaym al-Malik al-Mu‘a‘afa Ailsak), the third Bahri Sulaym (cf. RAMIL) ascended the throne of Egypt towards the end of 687 (1259). He is said to have been a nephew of the Khwarizmshah Qusayr al-Din Khwarizmshah and to have been originally called Malik b. Mandas; he was captured in war with the Tatars, sold in Damascus and purchased and brought to Cairo by Sulaym Ma‘bar al-Din Alshak. In 680 (1282) Sulaym Alshak appointed him his deputy (Na‘ib al-Sulaim). When the Sulaym was murdered in 693 (1295) by his wife Shajar al-Durr [q.v.], the Mamiliak placed his son Nuar al-Din ‘Ali on the throne; Kutuz remained deputy and administrator of the kingdom and guardian of the young prince. These first Mamiliak sulayms were continually threatened by the danger of attack from the Ayyubid Sulayms of Syria who regarded themselves as the legitimate successors of their relatives in Cairo. The Ayyubid Sulaym of Karak, al-Malik al-Muqad, tried to invade Egypt with the help of the Mamiliak of the late Egyptian Sulaym Nadjar al-Din Ayyub. Kutuz collected his forces and met the enemy at Shibliyya near Cairo. Although some of his men over to the representative of the old dynasty, he completely routed the king of Karak and forced him to retreat. Meanwhile, the great danger was threatening from the east, the advance of the Tatars under Huldag [q.v.]. In this difficult situation the ambitious Kutuz thought he had better assume the reins of government for fort which he already held a fort. He deposed the boy sulaym and seized the throne without meeting with serious resistance. During his short reign he won great renown by breaking the power of the Tatars in Syria and saving Egypt from being laid desolate. Huldag had conquered Syria, installed his governors everywhere and demanded the submission of Egypt through his envoys in an arrogant letter which is preserved by the historians. Kutuz, determined to resist to the last, executed the envoys to make negotiations impossible. For the fear of the Tatars was so great that the emirs only reluctantly obeyed him and were inclined to negotiate, although the example of the devastation of Syria was sufficient warning to them. In Shibliyya 686 (1289) Kutuz led his troops to Shibliyya and revived their failing courage. Balkar [q.v.] afterwards Sulaym commanded the vanguard and met the Tatar army at Druze. He was killed in battle on 23 May 688 (1290) where they met the Tatars, commanded by Kerdagh, governor of Damascus. At first the Tatar left wing was driven back. In this critical moment the Sulaym himself took command; inspired by the splendid example of his bravery, the Egyptian forces called for a tremendous attack and put the Tatars to flight. The defeat was decisive. Kerdagh and other Tatar princes fell in the battle; defeated in further fighting as they retreated, the Tatars were forced to leave Syria. The whole country was occupied by the Egyptians and the principalities given back to their owners as fiefs. Aleppo alone, the ruler of which remained in Huldag’s camp, was given to Malik al-Salih, son of Bakr al-Din Lasta of Mual, one of the few princes who had preferred leaving his country to acknowledging the suzerainty of Huldag. But this gave the occasion to Kutuz. He was invited by Balkar to Aleppo himself and now disappoited, planned vengeance. On the homeward journey through Syria, while hunting, he murdered Kutuz with the help of a few fellow-companions. He was then elected Sulaym. In spite of his bravery Sulaym Kutuz was not popular. The needs of his army led to great expenditure and he had to raise the money by harsh taxation and levies. Therefore, according to Makrizi, there was another indignation war, mourning at his assassination. Ibn Taghribirdi tells a different story. He says that the corpse of Kutuz lay unburied for three days and then was interred in Kair by his Mamiliak. The tomb was visited like a place of pilgrimage and his assassination deeply lamented. Sulaym Balkar therefore had the body dug up and buried secretly in another place, which was not made known. Thus he became gradually forgotten.

AL-KUWAIT, a seaport on the Arabian coast of the Persian Gulf, capital of the
ominate of the same name, which lies along the coast from Khor Zubesir; it is bounded on the north by the former Turkish province of Irin and on the south by al-Hassan and stretches for 120 miles. The greatest breadth is nominally 160 miles but the authority of the data does not extend much more than a day's journey in any direction. The soil north of the Gulf of Al-Kuwait is friendly, south, partly sandy, and partly loose; only a small strip is fertile on which the chief vegetation is date-palms and a few fruit-trees of different kinds. The only perennial water-course, a small river, affords the necessary irrigation to the impoverished soil. The coast is low; reefs and shallows are found up to 30—50 miles out and make it difficult for ships of any size to approach Al-Kuwait and Bahrain are however the only good harbours in this part of the Persian Gulf and Al-Kuwait is a harbour capable of taking large steamers. The bay has a broad entrance, leading from the north-west corner of the Persian Gulf; it is 30 miles long and half as broad and there is good anchorage in most of it. The depth of the water in the harbour varies from 8 to 40 fathoms and varies at the top of the Gulf from shallows to a depth of 6 fathoms. Ships of over 30 feet draught have to anchor 2 miles from the town. The town covers a wide area; the streets are clean. Since 1928 the town has been enclosed by a wall 2 miles long and 12 feet high, which was built out of fear of Ibn Salhi and is defended by 5 large and 57 small towers. The climate is hot but not unhealthy; the supply of drinking-water alone leaves something to be desired. It has to be brought by ship from Basra, 3 days' journey distant, and is an article of trade. Coral also is imported. Wool, cotton-tow and hides are exported.

Al-Kuwait is also an important emporium for the coffee caravans which come via Najaf from Yemen and the port from which the fine horses from Najil (Iskyl) are exported to India. The town is therefore of great importance for the commerce of Ghiyath Shamsar and the ruling house of Ibn Hashib as a port for imports and exports. It is the natural port of the interior, and it is in this sense that 'the ruler of this extensive hinterland has always endeavoured to be as good as the ruler of Al-Kuwait. The number of inhabitants is not certainly known. The estimates vary between 18,000 and 35,000; the latter must be too high; when we reflect that the whole coast of Kuwait only contains 37,000 settled inhabitants and 13,000 Bedouins. The former include about 2,000 Persians, who were domiciled here before the conquest of Sawabi by the Turks. The harbour is not only frequented by several hundred smaller ships of its own but has a regular steamship connection with India. Manama, the former capital, and the harbour of Al-Bahrain, offers strong competition with Al-Kuwait for the trade of the interior, but the latter has undoubtedly a great future, especially when it has been connected by railway with Basra, as well as by Al-Bahrain, it is the only important port for the export trade of the Wahhabite kingdom.

We know nothing definite about the foundation of the town, although we are on historic ground: for in the Gulf of Khuzistan little sailing boats now lie to shelter from the winds. terminated the great ditch which Surah Ibn Idris 7-Akif of Hit dug through the territory west of the Euphrates to protect the Sawabi from Arab raids.

In 12 (633) there was a battle here between the Arabs under Khalid b. al-Wahid and the Persians under Hurmaz, in which the latter were defeated. In the xvith century, the Portuguese established themselves on the coast here and the remains of a castle built by them can still be seen, but they never mention the name of Kaykask. Whether the name of the place, al-Kuwait means "the little castle"— owes its origin to this building seems doubtful. It is in any case interesting that the Persians call the place al-Kren, as Niebuhr tells us. Al-Kuwait was therefore presumably only founded at the beginning of the xixth century, whether by members of a central Arabian tribe or by Salah Khan of Khour 'Abd Allah is not certain. The former version, which has much in its favour, is found in the records of the Baniyayn government and the plans of the Turkish general Mubarak Pasha.

In any case the town grew very rapidly. In the beginning of the xixth century, according to Niebuhr, it had 800 ships and 10,000 inhabitants, who were mainly engaged in pearl-fishing and fishing. It grew rapidly and became famous, especially as after the conquest of all-Basra by the Persians in 1776, Indian trade with Baghdad, Aleppo, Smyrna and Constantinople no longer went by Basra but by Al-Kuwait. In 1793 the English transferred their factory from all-Basra to Al-Kuwait, and at the first very modest part at some time afterwards considerable importance for England's position and policy in the Persian Gulf. As early as 1805 Great Britain was to take the Sheikh of Al-Kuwait under her protection to defend him from aggression by the Wahhabites, but the plan came to nothing. In 1815 the British resident in all-Basra moved to Fathiah which belonged to Al-Kuwait. Even then we and Al-Kuwait share a hostile attitude to the Porte and it seems to have been fairly independent. In 1829 the lord of Al-Kuwait had his alliance with the sovereignty of Turkey and to pay tribute, a circumstance which later led to a closer association with the waliyat of Baghdad. The mutual confidences and good relations between the Porte and the Sheikh of Al-Kuwait found expression in the latter's flying the Turkish flag and undertaking the defence of the harbour of Al-Basra in return for a subsidy (1845) and in 1853, placing himself directly under the protection of Turkey and in 1865 and 1866 Al-Kuwait undertook the defence of the mouth of the Shatt al-Arab. In 1861 the lord of Al-Kuwait, 'Abd Allah b. Sahab, in order to join him with Jawal, the chief of the Mawilis, in his expedition against al-Hassan, in which the young Mubarak b. Sahab took part as leader of the land forces, the result of this joint enterprise was the conquest of the territory of al-Hassan, which became a Turkish administrative area under the name Najil. But soon the position of the Porte changed when al-Kuwait was drawn into the new developments of central Arabian politics.

'Abd al-Rahman b. Sahab, the ruler of al-Rijal, defeated by Muhammad b. Rashid, had taken refuge in 1831 in al-Huruf, where he placed himself under Turkish protection and later went to Baghdad and Constantinople. He returned laden with gifts to al-Basra but had soon to renounce his hope that the Turks would restore him to his throne; would not be realized. He therefore decided to settle at the court of Mubarak b. Sahab;
lord of al-Kuwait. His enemy Muhammad b. Rashid, whose kingdom in 1894 comprised over two-thirds of Arabia, but nowhere touched the coast and had therefore no harbor, had hitherto been dependent on the favor of the lord of the various coast-towns, and of the Turkish officials in al-\(\text{H}u\text{m}a\), Mesopotamia and Syria. Most of his arms came from al-Kuwait and from the little Turkish harbour of al-\(\text{A}\text{\textnt{z}}y\) (al-\(\text{U}k\text{\textnt{a}ir} \text{)} in the district of al-\(\text{H}a\text{\textnt{z}}\). But since Abu al-Rahman b. Sa\text{\textnt{d}}\text{\textnt{a}id} had settled in Constantinople, and had settled in al-Kuwait, great difficulties were put in Muhammad's way in both harbors so that he decided he must possess a harbor of his own. As he did not wish to irritate the Turks, on whose goodwill he was dependent for trade with Mesopotamia, he decided to attack al-Kuwait, which suited his purpose better from its geographical position and the fact that from the end of the 17th century it had been the terminus and starting-point for the trading-caravans of al-Riyadh. In addition the Shaikh of al-Kuwait had recently shown himself insubordinate to the Porte on several occasions, so that it was hardly to be expected that Turkey would interfere seriously on his behalf. In 1895 war broke out between Muhammad b. Rashid and Abu al-Rahman b. Sa\text{\textnt{d}}\text{\textnt{a}id} which was to prove fatal for the latter. The Shaikh had made a treaty with the Shaikh of al-Kuwait in early 1897. In 1897 Muhammad b. Rashid was poisoned, but the war with al-Kuwait did not cease but continued under his successor Abu al-\(\text{A}\text{\textnt{z}}y\) b. Rashid, especially as the banished prince of al-Riyadh, Abu al-Rahman b. Sa\text{\textnt{d}}\text{\textnt{a}id}, was working against him in al-Kuwait. Abu al-\(\text{A}\text{\textnt{z}}y\) b. Rashid found support for his campaign against al-Kuwait in the Turkish government, which would have liked to depose the untrustworthy Shaikh Muhammad b. Sa\text{\textnt{d}}\text{\textnt{a}id}, who although appointed Turkish K\text{\textnt{a}m\text{\textnt{a}m} in 1897, paid no attention to his superior officer, the governor of al-Basrah, but under pressure of circumstances asked England to assume a protectorate over his territory, from which he also hoped to gain material advantages. His request was refused at the time. But when in connection with the proposed Bagdad railway the proposal was made to link up a branch-line to the Persian Gulf from the new town of Kerbala, Na\text{\textnt{j}af and Zulfiqar, to Baghdad, and Turkey an allotted line from the Persian Gulf, England, who, in view of her interests in India was attentively watching the development of the Bagdad railway project, took measures to meet eventualities. Lord Curzon, the Viceroy of India, who pursued with all his influence and energy the policy of allowing no other power than England to gain influence on the Persian Gulf, gave the English resident in Basrah, Colonel Meade, authority to construct a treaty with the Shaikh of al-Kuwait, the contents of which were at first secret, but it contained the important clause that the lord of al-Kuwait bound himself not to let or otherwise cede any part of his territory to other governments or subjects of other governments than England, and to receive no representatives of foreign powers without being authorized to do so; for this concession he received a subsidy and was assured of the good offices of the British government, which soon found expression in considerably increased imports of arms and munitions from England and France. The treaty was concluded on Jan. 25, 1899, when at the beginning of 1890

the German Consul-General Steenich arrived from Constantinople to negotiate, as head of the surveying commission of the Bagdad railway, with the Shaikh of al-Kuwait about the terminus and to obtain a concession at Riss Kupana (Kishnam in English maps) on the Gull, the Shaikh had to refuse to enter into negotiations in view of the treaty concluded with England.

In the spring of 1900 the war between Muhammad b. Sa\text{\textnt{d}}\text{\textnt{a}id and Ibn Rashid flared up again. The former fell upon a large caravan of the Shammar and captured several thousand camels. In the autumn of the same year this game was to be repeated on a large caravan, which the prince of the Shammar was sending to Mesopotamia to secure from al-Samawi food, clothing, and munitions for the whole winter. Muhammad's plan failed however. Turkish troops defended the caravan until Abu al-\(\text{A}\text{\textnt{z}}y\) b. Rashid came up with reinforcements and brought the caravan without any loss to Hiyal. In January, 1901, Muhammad b. Sa\text{\textnt{d}}\text{\textnt{a}id took the offensive again, having been joined by a number of places in the south of Ibn Rashid's kingdom as well as by several tribes who wished to shake off the yoke of the prince of the Shammar. But when a body of the rebels was defeated at the end of February, 1901, the rebellious tribes had again returned to their allegiance and Ibn Muhammad b. Sa\text{\textnt{d}}\text{\textnt{a}id's main force in the lurch, the latter was wiped out at al-Satt in March 17, 1901 by the warships of Abu al-\(\text{A}\text{\textnt{z}}y\) b. Rashid. Abu al-\(\text{A}\text{\textnt{z}}y\) then advanced upon al-Kuwait with a large force but halted at al-Hafar on the caravan road from al-Najaf to al-Kuwait, when the news reached him of a general rising in the south of his kingdom from which the garrisons had been withdrawn for the war with al-Kuwait. He was therefore forced to return. A Turkish convoy, which had already appeared in the roadstead of al-Kuwait with Turkish soldiers to join in the fighting had to return without doing anything, as the Indian government sent a warship to protect the lord of al-Kuwait and its commander forbade the landing of Turkish troops. Besides the news of the rising in his rear, another circumstance contributed to the failure of the campaign and the retreat of Abu al-\(\text{A}\text{\textnt{z}}y\) b. Rashid. This was the information that there were English ships in the harbor of al-Kuwait and English troops occupying a post 18 miles inland. No further advance could be made without an open breach with England, especially as Turkey in Sept. 1901 had agreed to the status quo and promised not to send troops to al-Kuwait so long as England did not occupy the place or declare it a British protectorate. But, when in the following year (1902) Turkey instituted military posts in Umm Kafir, Safwan and on the island of Habbah, the result was a diplomatic and military intervention by England, as the Shaikh of al-Kuwait claimed the territory, which was of importance for the development of the Bagdad railway as well as the country up to a point 20 miles N.E. of Khor Abu al-\(\text{A}\text{\textnt{z}}y\).

In 1907 another treaty with England was concluded by Muhammad b. Sa\text{\textnt{d}}\text{\textnt{a}id, and in 1913 an agreement was come to between England and Turkey, articles 6 to 10 of which declared the territory of al-Kuwait, more minutely defined in articles 5 and 7, an autonomous khanate of the Turkish empire and the validity of the treaties concluded with England by the Shaikh of al-Kuwait was
confirmed. Turkey was permitted to have a representative at the court of the Shaikh. At the same time the question of the continuation of the Baghdad railway was discussed and it was agreed that the Baghdad Railway Company should take over the stretch from Baghdad to al-Basrah, but that the branch line to al-Kuwait should be built by an English company. The outbreak of the World War prevented the ratification of this treaty as well as that of another on the Baghdad railway, Mesopotamia and other questions. On the outbreak of war England declared al-Kuwait an independent kingdom under British protection. The points in dispute with 'Abd al-Aziz b. Sa'id, who as Lord of Central Arabia had no less interest in al-Kuwait than the Shammar prince 'Abd al-'Aziz b. Rashid whom he had conquered, were settled in a treaty concluded between Muharrak and Ibn Sa'id in Dec. 26, 1915; Ibn Sa'id withdrew any claim to al-Kuwait and the surrounding country for a breadth of 70 miles and this region was recognized as belonging to the emir of al-Kuwait. Muharrak b. Sabbath died on Jan. 3, 1916 and left three sons, Dhibir, Salim and Najir who began to fight about the succession. Najir gained the support of the settled people of al-Kuwait, Salim of the nomad tribes and with their help fought his brothers and their followers. Dhibir was however regarded as the real successor of his father. After his death at the end of 1916, Salim was recognized as his successor, although his brother Najir had the support of England. In the Great War, Salim was a Turkophile and showed this by facilitating the caravan traffic of the prince of Shammar who was as ally of the Turks. In September, 1917, a caravan of 3,000 camels succeeded in getting through from al-Kuwait to Hayil in spite of the English blockade. Salim died on Feb. 2, 1921. He was succeeded by Dhibir's son Ahmad, who had represented al-Kuwait on Oct. 31, 1919 when the Arab kings were received at the English court.
