THE
ENCYCLOPAEDIA OF ISLĀM
ADDITIONS AND CORRECTIONS

P. 304, Bibliography of the art. Ezteba, add: Quirinius Main, La Colonie Eritrea, Torino 1891; Nicolello Alimari, Da Assab a Cusana, Rome 1897; Anonymous, Tre Ann. in Eritrea, Milano 1901; Penne, Per l'Italia africana, Rome 1896.

P. 1044, l. 42, read: "three" instead of "two"; l. 43, add: the edition of the Kūthā forming the introduction of the Kūthā al-'Umm, ed. Bulûk 1312.

P. 1918, l. 1, read: "reliable" instead of "reliable".

P. 1926, l. 31, l. 7-8, l. read: "known" instead of "know".

(End.)
ADDITIONS AND CORRECTIONS

P. 262\(^b\), l. 20; read: "Note 1" instead of "Note 19".

P. 265\(^a\), l. 8; read: "Bahimmākām" instead of "Khimmākām"; l. 33 a. f., read: "Makram" instead of "Makrām".

P. 266\(^a\), Art. Harra, Bibliography, add: Schwarzlose, *Die Waffen der alten Araber*,First Index.

P. 267\(^a\), l. 15; read: "Baghūl" instead of "Barghūl".

P. 269\(^b\), l. 5; read: "125 r." instead of "125 q.

P. 270\(^b\), l. 4; read: "d'Alcandate" instead of "d'Alcandide".

P. 282\(^b\), l. 17; add: Vaudal, *Le poële Flaman*, Paris 1885, p. 52-60.

P. 286\(^b\), l. 19; read: "MANAKS" instead of "AL-MANAKS".

P. 288\(^b\), l. 29; read: "Tabarca" instead of "Tabarcuu".

P. 290\(^a\), l. 15 a. l.; add: cf. R. Basset, *Notes sur les Mille et une Nuits*, ill., Rev. des Traditions populaires, 1897, p. 146-152.

P. 293\(^b\), l. 7; add: The romance was published in Tatar Kasan 1867; l. 15; add: Three chapters of a Malay adaptation of this romance have been edited (without indication of MSS.) and translated by P. P. Boorda van Eyslagh (Tijdeur der padi shahru khamm Hatta Tapi in Utrecht und mit Malthischen Geschichten, 1833, appendix to his *Malische und Niederdeutsch Woordenboek*, Batavia 1824-1825; Durch transl., in *De Oosterling*, 1835, l. 322 sqq.; cf. also l. 1. d. de Holland, *Handeling bij de boekeeving der Malthische taal en litteratuur*, Brede 1833, 6th ed., p. 16); A. A. Malcy, *La Quaidak hisyorite*, Alger 1914; l. 28; add: cf. also R. Basset, *Biblio. des anc. arabes*, extr. des Annales universitaires de l'Algérie, sept.-déc. 1913, p. 2.

P. 295\(^b\), l. 5-6; read: "Mujalal" instead of "Muqalal".

P. 299\(^b\); Art. Haray, l. 6-7; read: "Mujalal" instead of "Majallāt".

P. 300\(^b\), l. 6; read: "Kadjār" instead of "Kājār".

P. 307\(^b\), l. 17 a. l.; add: G. Marpisi, Les Arabes en Bérénice, Constantin 1913, I. partie, Ch. 1.

P. 314\(^b\), l. 16-17; read: "Moham Lal" instead of "Mohanhal".

P. 320\(^b\), l. 15; add: see also Max van Berchem, *Voyage en Syrie*, Cairo 1915, p. 135 sqq.

P. 321\(^b\), l. 6 and 27; read: "Wellsted") instead of "Wellsted"; ult.; read: "Otroikāda" instead of "Urtikāda".

P. 396; l. 39; add: Besides the works quoted in the article: Bargès, Compliment de l'histoire des Rom Zeyquen, Paris 1887, p. 205-217.

P. 397\(^a\), l. 31; add: R. Basset, *Notice sommaire des cat. orientales de deux bibliothèques de Lisbonne*, Lisbon 1844, p. 4-6.

P. 400\(^b\), l. 3; add: cf. also Dom, *Recherches*, l. 21-40.

P. 473b, l. 24, read: "xvill." instead of "xvill."

P. 42a, l. 29, add: "On Ibn al-'Iraqi, cf. also the observation by Mirzâ Muhammad  Karwatî in the Persian Introduction to his edition of Dâwîm's Twarîkhi Jâhadîn-nawās, l. (G.M.S., xviii), 34 sq. (see also Kitâb, Unûdî al-Tâlih fi Anâhî Al Âlî Tâlih, Bombay 1318, p. 159 sq.). According to the same author, ibid., p. 14, the proper title of the Kitâb al-Faâri is Muzayat al-Faâri fî Tawârîkhi al-Kâmâra fi, of which the history of the Abâlâhâs by Hindâshâh b. Sandîq, entitled, Kitâb Tafrîkîh al-Safa, is an enlarged Persian translation. The Bibl. Nat. of Paris possesses a defective manuscript of the latter work (No. 373 in Blochet, Catalogue des Mss. persans, l. 251), but several copies exist in Tehran.

P. 42c, l. 40, read: "Ashâfî" instead of "Ashâfî".

P. 433a, l. 13 a. f., add: Joumaînî, La Turquie, p. 243-252; La Jonquière, Histoire de l'empire ottoman, p. 311-313.

P. 447a, l. 18 a. f., read: "Âhû 'I-Nâjîm" instead of "Âhû 'I-Nâjîm".

P. 491b, l. 10 a. f., read: "al-Alumârîyâ" instead of "al-Alumârî".

P. 560a, l. 30 a. f., The equation is to be read as follows:

\[
2.09 \times 6 + 2 \times \frac{2.09}{6} = 18.81 = 4.72 \times 4 = 18.81
\]

P. 565c, l. 18 a. f., read: "ittihâd" instead of "ittihâd".

P. 566b, l. 8 a. f., read: "329 sq." instead of "322."

P. 596b, l. 24 a. f., read: "mâinâ" instead of "mâinâ".

P. 596b, l. 17, add: Guadeloupe-Demoubyens, Le Pèlerinage à la Mekke, Paris 1923.

P. 594b, l. 24 a. f., add: E. Chaunu, Recherches anthropologiques au Chaco, Lyon 1885-1887.

P. 601b, l. 5, read: "amârî" instead of "amârî".

P. 613b, l. 8 a. f., read: "163 sq." instead of "163."

P. 617b, l. 29 a. f., read: "âdî" instead of "âdî"; l. 2 a. f., read: "âdîlîchâ" instead of "âdîlîchâ".

P. 618b, l. 20 a. f., read: "Dreumestel" instead of "Dreumestel"; l. 9 a. f., read: "Winogradov, Frolovîa" instead of "Winogradov, Frolovîa".

P. 791b, Art. Kâmitt, l. 18, read: "sâvel" instead of "sâvelant".

P. 757b, l. 27 ah infra, read: "mukfrâ'îâ" instead of "mukfrâ'îâ".

P. 822a, l. 21-22, read: "In November 1923 Turkey abolished the Sultanate and on October 30, 1923, declared itself a Republic."

P. 883b, l. 18, add: Orientale Moderna, Rome 1932 sq.

P. 1096b, l. 18, read: "Köprüşi" instead of "Köprüşi".

Vol. I., 1072b, l. 7 sqq., read: "Do'an [Daw'an]" instead of "Do'an [Daw'an]"; l. 28-30, drop "Hamadî mentions, etc."; l. 36-37, read: "p. 86, 61, 61, 87, 87, 87" instead of "178, 18, and 181, 18"; l. 38, add: Sprenger, Die alte Geographie Arabiens, §§ 254-256, 310, 439; van den Berg, Le Hadramaut, p. 13, 23 sqq., 48; de Goeje, Recueil Colon. Internat., 1886, l. 106 sq., Landberg, "Hafishâkî", see Index.

46 GREAT RUSSELL STREET
EBU, the Ottoman-Turkish pronunciation of Abu (q. v., L. 738 of v. 393). ECUJA, the capital of a district in the eastern province of Seville in Spain with 25,000 inhabitants. It is picturesquely situated on the left bank of the lower course of the Guadalquivir, which is navigable below it to a torrent valley, whence it is called El Sartén de España. The city's history dates back to Roman times when it was a Roman colony. In the 8th century, it was conquered by the Moors, who called it Badajoz. The city was captured by the Christians in 1265. It was later controlled by the Knights Templar and then passed to the Moors again before being captured by the Christians in 1469. It was granted to Ferdinand III of Castile, and was repopulated with Christians in 1470.

The city is known for its beautiful old town with narrow streets and charming squares. It is also famous for its historical landmarks such as the Alcázar of Seville, the Cathedral, and the Giralda Tower.

Bibliography:
- Yáñez, Miquel: l. 168, Diccionario de Geografía, p. 168, 352 sq. (according to Bolmont Bey).

EDF, the Ottoman-Turkish pronunciation of Abu (q. v., l. 738 of v. 393). EDESSA, a town on the west bank of the Nile, the Apollonopolis Thebana of the Greeks. EDESSA, a town on the west bank of the Nile, the Apollonopolis Thebana of the Greeks.

EDFU (Opet, Uri), a town on the west bank of the Nile, the Apollonopolis Thebana of the Greeks and Romans, about halfway between Thebes and Assuan. The city is famous for the Temple of Horus, which is one of the largest and most well-preserved temples in Egypt. The temple was built in the Ptolemaic period and was dedicated to the god Horus. It is known for its beautiful carvings and inscriptions.

THE ENCYCLOPEDIA OF ISLAM, II.
The number of gates and their names in Evliya, I. 428 and 438, Hamper, Gerass. d. Orient. J. 417, 700 differ from these. The Plan Triangolare illustrated in Sayger-Denardin is probably identical with the Gerass K., in Ziircher, p. 6 et seq.

The New Imperial Palace or an island formed by the Torunja, Mecmennim II, in 1452 and Selim I, (1513-1520); later Selim added individual khasas and other buildings. By the beginning of the sixteenth century it had begun to fall into decay; in 1529 the peace with Russia was signed there; on the 17th January 1578 the Turkish troops reentered the town but the Russians blew up the main buildings. The outlook tower dating from the sixteenth century still remains.

We learn from the accounts of European travelers of the seventeenth and beginning of the eighteenth century that the Serai was similarly planned to the Old Serai of Topkapi in Constantinople, c.f., the last account in v. Mollies, Briefe aus die Türkei., 2nd ed., p. 350. According to Evliya the New Serai occupied the hunting-ground of the Greek emperor; a matter of fact the site for an additional citadel with a grim castle of Constantine on the Torunja where in 1537 the wedding of the Bulgar Crown Prince Michael to a Byzantine princess was celebrated (Kantakuzen, Hist., I. 506). The Old Serai lay near the Selimye on the "planeterre square" (Kanak-Molos) and is said to have been built by Murad I in 1076 a.n. (according to others in 820 a.n. by Mecmennim); it was afterwards — according to Evliya — in the reign of Selim III and adopted as bazaars for the Djamoglu, and likely similar buildings elsewhere (the Galata Serai, the Serai in Brusa, etc.) and is known to have been used as such to the end of the eighteenth century.

The Mosques. The old churches were apparently left to the Christians at the conquest with the exception of the Ceoloi Djami, which is considered the oldest mosque; another mosque, the Kilitar Djami, situated like the palace within the walls, with an ancient consecrated fountain, was turned into a mosque by Mecmennim II. Gerash in 1378 counted 15 Greek churches.

The oldest mosque is that of Bayazid Vladimri, also called Kupeli Djami, near the Mecit bridge on the Muratca, 702 is given by Haydilli Kilisla, Turlesim, as the date of its erection while the author of the Enits al-Musulmonin gives 802 a.n. Evliya says it was completed by Mecmennim Celebi.

The second oldest mosque is the "Old Djami" (Eski Djami, formerly also called Ulus Djami, begun by Mir Suleiman Celebi, continued by his son Mustafa and completed by Mecmennim I, though some authorities say it was only finished by Murad III, it was burned down on the 14th Roder 1359, (July 1749) and restored the following year.

Murad III built three mosques, the largest of which was the Caragase, so called from the three balconies on two of its four minarets; it took ten years (841-851 a.n.) to build (Enits al-Musulmonin). The same Sultan built the 12th to 14th Djami (in 838 a.n.), in the forecourt of which is the mausoleum of the two princes Hasen and Armin, sons of Murad III, and a year later (850) the Muratciv, originally a Moslem monastery.

From this earlier period the following mosques date:

1. Erus (Anchs) Kadi Djami, on the
1. the bridge at the Serraj-el-hane, built in 825 (A.H.) by Sulaiman al-Din Fakhri, collapsed at the beginning of the xviiith century and was rebuilt; 2. the bridge of Bayazid II over the Tana, with 8 arches; 3. the bridge near the mosque of Bayazid I, dating from the fourteenth period and repaired by Sultan II in 595 A.H.; 4. a bridge of the year 1710 A.D. at the tomb of the saint Serafin; 5. the Mihal bridge, of the Byzantine period, repaired in 825 by Mahomed I and in 1050 A.H. by Kessaboglu Mustafa Pasha; 6. the New Bridge of Ekmeliuflsu Ataham Pasha of the year 1527 A.D.

The aqueducts were built by Sultan I and restored in the beginning of the xviith century (V. Hammer, Gesch. d. Osman. Reiches, iii. 66).

of Phocaea had undertaken the defence of the town against the Turks (Pachymeres, ii. 337 et seq.). When Sultan Othman dispossessed the Karaglioğlu about 1345, Edremit passed with the other lands of this dynasty under Ottoman rule. In 1403 Timur's conquests on their return march from Hara to Mavresia made a raid on Edremit. It was not known that the town was transferred from the west to the Ottoman Empire: Topalamak, in the 5th Abul, Wien, vol. iii, 1822, 23 et seq.; Zeitschr. d. Ges. f. Geschichte in Berlin, 1858, 290 et seq.; Caimen, Le Turc en Asie, i. 273 et seq.; A. Philippson, Nieder l. Forschungen in West. Kleinasien, i. 30 et seq.; (J. H. Mortmann).

EDRIS. [See text.]

EFENDI, an Ottoman-Turkish word borrowed from the Byzantine Greek Εψέντις (Efendi), derived from the ancient Greek εψέντας: "air, master", a legal term (used by Phrynias, Polybius and even Euripides with this meaning). This name is given to the Ottoman-Turkish who has different education; ordinary people and subordinate officials were called Aks (i.e. by elision of the velar) when they have completed their literary education, Edremit (abbreviated familiarly and jokingly to Efendi, "Sir", "muser"), the Khalif of Constantinople is also called Iskandar Efendi. The Kâf-i Efendi (for Reis-i Kateb = "chief of the scholars") was before the reforms the Secretary of State for Foreign Affairs. The Sultan also holds but not exclusively the title Edremit = "our Lord"; the Arabs of Egypt apply the malicious expression Edremit to the Khedive. This term is purely Turkish and has penetrated everywhere that Ottoman influence has made itself felt.

EGERDIR, the capital in a Kaza of the Sanjak of Hamidiya in the Wilayet of Egridir, situated on a tongue of land at the south-west of the lake of Egerdir, with a few thousand inhabitants, all Muslim, on the borders of Kura, Turkish Nish. No road with a monastery lies about 1000 Turkish-speaking Greeks. The town presumably fell into the hands of the Seljuk Turks at the same time as the district of Isparta, which Egridir Arslan III conquered (1600-602 A.D.) (see Hainmu, Renard, etc., l. 857; its citadel which is now destroyed is said to have been built by Kaigudat I. After the break-up of the Seljuk empire, Egerdir became the capital of the Turkoman Hamidiya, one of the four rulers of this dynasty, Pelah al-Din (beginning of the 14th century) gave it the same Pelahkhe, or Pelahkhe (Allu 'Efid, Geography, trans. by Keizland, ii. 2, 134). In 1788 or 1784 a. d. the last Hamidiya sold his kingdom to Murtada I. and Egerdir passed under Ottoman rule. Timurlik conquered the town and the island of Nisandel on the 17th Shabita 825 = 18 March 1403, (5th al-Din, according to Shreif at-Din on the 5th Rej), in his march through Austria and gave them to the Karaglioğlu whom he restored; the latter had to return them to the Ottomans in 1425 with the district of Hamidiya. The town has no less than 50 large and 18 small mosques and also a small library with 218 manuscripts; the name was originally pre-Osmans Egridir (Dhu Bat'a, l. 267; Ibn Battuta in Not. e Jese, xii. 350, 354). Bibliography: Sa'd al-Din, l. 211 et seq.; Hüdaii Khalifa, Dhibanmunna, p. 640; Sarre, Reise in Kleinasien, p. 142 et seq., cf. the article Anfrioglu. [J. H. Mortmann.

EGRI, the capital of a Kaza containing about 96,000 people in the Sanjak of Kharput in the Wilayet of Ma'adin al-Kur, occupies a picturesque site about 3000 feet above sea-level in a wooded hollow, where the river widens, on the right bank of the Kura, or western Euphrates. N.W. of Arab-kur surrounded by a crescent of hills 1200 feet high, down whose sides fall numerous streams. The town is believed to have been founded in the 12th century by Armenians from Waqrabk (see St. Martin, Memoire sur l'Arménie, l. 189). So recent a writer as Von Maltzahn still describes it as a stronghold of the Armenians, who in its youth for Constantinople and return with the wealth they have amassed. More recently the population estimated by Caime- en 1840, 5000; by Yerimos in 1880, 8100; Hadji Khalifa, p. 332. In 1896 there were massacres of Armenians in the town.

Bibliography: Hüdaii Khalifa, Dihammona (Constantinople, 1145), l. 625; Kiter, Erdhathen, x. 750-752; H. von Maltzahn, Briefe Über Zustände ... In der Türkei, p. 378 et seq.; (W. v. Jor, in the German Journal, 1806, ii. 353, et seq. (R. Hartmann).

EGRI-DAGH. [See ARSLAN l. 420.]

EGYPT.

The name Egypt — the etymology is more correctly preserved in the German form Ägypten — is derived from the Greek Egyptian, of which only the abbreviation Ägypten survived into the Muslim period as the name of the inhabitants of the country. The land itself is known by the old Semite name the Aramaic form which is Mist, from this the colloquial language has made Mile. The Muslim conquest began at the end of the year 18 = 639. From that year to the present day Egypt has been one of the centres of the political, cultural and religious development of Islam. Where else has Islam come into such contact with modern Europe as in the land of the Nile. It is a very difficult task to give a survey of the multifarious aspects of Egyptian life in the purely-Muslim period but with this modern development it becomes well-nigh impossible. If in
spite of this an attempt is here made to give a comprehensive survey, it is only possible by making an essential distinction between medieval and modern Egypt. The modern period in Egypt begins with the French expedition of 1798 and with Muhammad 'Ali. There are many connecting links between the old and the new period but it is nevertheless an entirely new Egypt with entirely new aspects which must be treated in quite a different fashion in such an article as this, that arises in the nineteenth century. The invasion of the Nile valley by European civilization has been for the latter of immensely greater moment than even than Adrianople was. An entirely new period begins with the Khedives, in contrast to which perhaps the whole history of Egypt and certainly the Muslim period forms a distinct unity. The subject has been divided with reference to this distinction. Here we shall only discuss medieval Muhammadan Egypt (639-1798) and refer the reader to the article Government for Egypt under European Influence.

4. The Historical Development.

As all the dynasties and important men are dealt with in separate articles, the object of this article is only to give a general survey and detail the historical aspects and events which cannot or ought not to be given in the separate articles.

Survey of

18-21 Conquest by 'Amm b. Al-Ashraf

21-38 Governors for the Coptic Caliphate

38-132 Governors for the Umayyad

132-254 Governors for the Abbasids

254-492 Dynasty of the Tulunids

492-623 Governors for the Abbasids

623-958 Ihwanid dynasty

958-967 Fatimid dynasty

969-1411

969-1269 Ayyubid dynasty

1269-1323 Baybars Mamluks

1323-1517 Barsiy Mamluks

1517-1798 Ottoman Pashas and Mamluks

1212 Napoleon's Expedition

Beginning of the modern period

1798

The great conquests in Syria and the Turk displaced the capital Medina to the outskirts of the new empire. Byzantine Egypt constantly threatened the young empire and even Medina itself lay perilously near the Byzantine naval harbour of Kyrenia (Kyrenia, 502). Egypt with its rich coast-supplies must also have appeared an extremely desirable acquisition to the central government. The Turks did not, however, at least a regular traffic in corn to the Umayyads began immediately after the conquest. It is most improbable therefore that there is any historical foundation for the Arab story that Egypt was conquered against the wish of the Caliph. By the year 12 (639) the raiding policy of the early years of the conquest had already been abandoned for one of permanent occupation. The state of affairs in Egypt at that time invited the Arab conquest. The ten years of Persian rule had been followed by a strong Byzantine reaction after the victories of Heraclius. The latter helped by his emissaries to terminate the vassal state between Monophysites and Dyophysites and at the same time gave the reconstituted empire an alliance with the Persians, but it was too late, the Monophysite Egyptians, who apparently never grasped the Monothelite principles for compromise, believed that the hated creed of Chalcedon was to be forced upon them. As at the same time the financial state of the empire was very great and the administration of church and finance were in the same hands, it may be imagined that the attachment of the Egyptians to Byzantium was not very great. In 631 the emperor Heraclius had sent Cyrus, previously Bishop of Chios in the Caesarean, to Alexandria as Patriarch and at the same time head of the civil administration. For ten years this man sought by every means in his power to persuade the Coptic church to adopt the Nicene creed and at the same time to increase the revenues of the treasury. The portrait of Cyrus is painted blacker and blacker by later Coptic tradition, for not only did he indifferently pave the way for the Arabic but he was the governor of Egypt who concluded the most important treaties with the Arabs. It is from Cyrus that the essential features of the half-legendary character of the Muhammadite [q.v.] of Arab tradition are derived. The conqueror of Egypt was 'Amm b. Al-Ashraf [q.v., l. p. 334] and after him. He had already distinguished himself in Syria and now appeared unexpectedly in December 639 on the eastern frontier of Egypt from which the troops had been withdrawn and the Sultan, month later (Muhammad, 19 = January 640) captured Fustat with only 3000-4000 men. 'Amm could not risk a decisive battle till he had been reinforced by about 5000 men under the leadership of Zabair, the celebrated companion of the Prophet. With these he defeated the Byzantium under the Augustalis Theodosius in the battle of Haliopolis (Rajab 19 = July 640), which was immediately followed up by the occupation of one of the suburbs of Babylon [q.v., l. 556]. The garrison of the town held out for some time longer, Cyrus who was within its walls entered into negotiations with 'Amm in spite of considerable opposition in his own camp and then left Egypt to have the treaty proposed with 'Amm ratified by the Emperor. Heraclius was accordingly enraged. Cyrus was accused of treason and banished; soon afterwards Heraclius died (93) and Salih 20 = 10th February 641). As his death seemed to destroy all hope of relief, the citadel of Babylon capitulated on the 20th 'Abd al-Malik. 1 = 13th May. Here he met with a vigorous resistance and, although able to occupy the surrounding country temporarily, saw for the time being only capturing the strongly fortified garrison. We are not well informed as to the gradual expansion of his power in the rest of Egypt. Meanwhile affairs had taken a sudden turn in Constantinople. Cyrus was sent back to Egypt to get the most favourable terms
possible from 'Amir, Cyrus returned to Alexandria on the 2nd Shawwal 20 (18th Sept. 641). His further course of action is not quite clear. In contrast to his previous attitude he now suddenly courted the support of the Copts and it is not improbable that he wanted to establish an Egyptian primary under Arab suzerainty. In autumn he announced, unknown to the Alexandria, the final treaty of surrender with 'Amr by which the city was granted to the Greeks by the sultan (Shawwal 21 (17th Sept. 642). On payment of a certain tribute the inhabitants were guaranteed liberty of life and property as well as the free exercise of their religion. At first they were very indignant at this treaty but ultimately bowed to necessity. The Greeks abandoned the city and it was surrendered to the Arabs at the expiry of the appointed period. Cyrus died before the surrender took place. To protect his rear, 'Amr undertook an expedition in the following winter (22 = 642-643) against the neighbouring Pontopilla (Burja) and thus concluded the conquest of the land. It was not Alexandria but Fustat, the city which had grown out of the camp, that became the capital of the empire [see the article on Cairo, p. 816, et seq.]. Once again the Byzantines were stirred to activity. In 25-26 (645) a Byzantine force under Manuel suddenly appeared in the neighbourhood of Alexandria and the city rose in rebellion and welcomed the Byzantines. At this time 'Amr was no longer at the head of affairs in Egypt but he had to be summoned there, as his successor was not able to cope with this unexpected development. His military genius once more triumphed; in a short time he drove the Byzantines out of the country and conquered Alexandria for a second and last time on this occasion by force of arms. - 26 (646).

The last step in the conquest was to secure the southern frontier. Egypt has as on the whole natural boundaries, the sea on the north, the Libyan desert in the east and the Arabian desert and the Red sea in the west. It was only the southern frontier that was defined by an expedition under 'Abdallah b. Sa'd who had replaced 'Amr as governor for a time before the second occupation of Alexandria and filled the post a second time till shortly before the capture of Ombos. In 31 = 651-652 he advanced against the Christian kingdom of Nubia, south of Assuan, reaching Dongola (Dinukla in al-Khaldi, ed. Gussa, p. 3 and 39) and in Ramadan of the same year concluded a treaty with the ruler of the Nubians which has been preserved (Kihl, 1: 206, 12 of ed.; ed. Zeltner, Die Arab. Chron., 291, 311, 313, 315). By its terms an amicable exchange of commodities with Nubia was instituted. This agreement was sealed by (p. v., 665 of ed.) which - it may be added here - is probably derived from the Latin pactum. The Latin period (Philip II) formed the southern boundary of Egypt. The most northerly point in the Nubian kingdom was called el-Kag.

When in the reign of the Caliph Othman the quasigovernmental orders broke out between the Persians and the Arab troops, 'Abdallah b. Sa'd had to leave Egypt and it was from Egypt that the summons of Othman b. Hisham to Mu'awiya (35 = 656) was sent under 'Ali's rule till it was taken from him. 'Amr b. al-'As (62 - 653), the 'Abdalah-caliph Mu'awiya's general (38 = 655), henceforth it remained in the possession of the Umayyads except for the brief period of the nominal suzerainty of the Anti-caliph 'Abdallah b. al-Zubayr, who held Egypt from 63-65 (683-684). Of the governors of this period: 'Abd al-Aziz b. Mu'awwana (645-666), the brother of the Caliph 'Abd al-Malik, was of special importance for the country; he ruled the land practically independently from his headquarters in Homs. It was he who gave the administration the character it long maintained. The later governors of this period are of more importance for economic than purely political history. When the dynasty was overthrown, Egypt was the last refuge of the unhappy Umayyads, who met his end here. This event made such an impression on the Coptic Christians that it has found a place in the Coptic Apocalypse of Daniel where Merwan appears as the twentieth King with the number 666 (M + 4 + r + r + o + e + d + y = 666). Several of the Umayyads give a very remarkable account at great length of his end from the mouth of an alleged eyewitness, who presents a marked contrast to the brief statements in the Muhammadan chronicles (ed. E. P. 179 of ed.; ed. Seyfried, 173 of ed.; ed. Seyfried, 117 of ed.). The text of these Umayyad "Turkm and in the Apocalypse of Daniel the conqueror of Merwan is Pitonoga. It is important to note these Christian echoes of the tragedy because the passage of the Caliphate from the Umayyads to the Abbasids seems from the Muhammadan historians to have made no particular impression on the Egyptians. From the point of view of economic history also this transition was of importance.

Under the 'Abbasids the country was ruled by governors, who till the year 742 = 856 were usually Arabs. In this year the last Arab governor left the country, which was henceforth to be governed by Turks only till 'Al-Jalik b. Tahir founded the first Turkish dynasty. 'Al-Jalik was the only Caliph to visit the Nile valley and even the feudal vassals appointed by Mu'awwana and successors between the Caliph and the governors rarely visited Egypt. The most important historical, movement which, though in the main unfulfilled in the pre-Ahmad period, went on down to the Mamluk period, was the spread of Arab culture and the Muslim religion in Egypt. These were not identical developments; for the Egyptians who remained Christians soon began to adopt the language of the ruling classes also and by the fourth century A.D. we find that the Coptic ecclesiastical has to write Arabic if he wishes to be understood. Arab culture was spread by various means; by road and dwelling Arabs, who were concentrated in the capital of Fustat, the Arabs who held the higher offices in the empire, speaking provincials. It was the spread of Arab culture that, at the end of the seventh century, expanded the province. The introduction of the Arabic language in the government offices led to the taking places in 87 (709-708) — in reality both Greek and Arabic were used down to the beginning of the second century — did not affect 1/2 of the population. The chief factor in the spread of Arab culture which gave it so much greater effect than the preceding Helenism was the gradual settlement of the country districts by Arab nomads. Unlike the Greeks who were town-dwellers and built up civic communities of great importance in the history of civilization the Arabs had not from
advantage of their good relations with the Arab rulers to win many Malikites as possible over to their side. For example, they succeeded in getting a double poll-tax levied on Malikites which caused many to become Jacobites. This fund was afterwards used by Islam against Christians of both sects. As the Arabs were at first aided by the Copts as their deliverers from the Byzantine yoke, it naturally followed that even in the early years after the conquest numerous conversions to Islam took place, but on the whole active proselytising was hardly noticeable in the early decades after the conquest. The Arab government, even regularly appointed a patrarch and ‘Abd al-Aziz and others allowed the building of new Christian churches which was quite contrary to the later practice and the Sharia. We get the impression from Christian Arabic sources of the time that the Arabs were only concerned about the money they exorted from the Christians but there were of course at the same time occasional attacks on their religion also; thus, for example, al-Asbagh, the son of ‘Abd al-Aziz forced the Christians to take part in the ‘idāt. The Arab government also found itself forced on economic grounds to take steps against the monastic system which deprived the land of the best of its youthful vigour and it was natural that the Christians had to pay a very considerable tribute, which ceased when they adopted Islam. In spite of official recognition the Christians were sometimes badly treated by the Muhammadan population. All these reasons explain the rather rapid progress of Islam in Egypt and make it seem remarkable that as late as the eighth—ninth century there should have been popular risings on account of the number of Christian officials in the Divan (Makriti, Khatiri, p. 532 et seq.). This war on Christian officials lasts throughout the whole history of Egypt. At the end of the first century A.D. we still find Christians in the highest offices in the civil administration. ‘Amr II’s attempt to replace the lower officials also by Muslims (Quraysh, ii. 340) was premature in failure. In the course of centuries Christians were gradually replaced by Muslims throughout the public offices, but the mechanism of administration was so complicated that its management remained for centuries practically that of the Christian Copts. As late as the Fatimid period we still find Christians and Jews, who at most only formally professed Islam, even in the office of waqf. That the divāns at this time were full of Christian officials is clear from al-Salafi’s polemic in his account of the Divan al-Insān (Salāfī, Divān al-Insān, iii. 564). It was predestined to fail. In the course of centuries Christians were gradually replaced by Muslims throughout the public offices, but the mechanism of administration was so complicated that its management remained for centuries practically that of the Christian Copts. As late as the Fatimid period we still find Christians and Jews, who at most only formally professed Islam, even in the office of waqf. That the divāns at this time were full of Christian officials is clear from al-Salafi’s polemic in his account of the Divan al-Insān (Salāfī, Divān al-Insān, iii. 564). The similar state of affairs in the Mamluk period has already been discussed. In all cases one can see that the government for the time being protected Christians — probably for some reasons — but it had occasionally to make concessions to the fanatism of the mobs, individual rulers also as, for example, the Faiq al-Hakim, had sometimes the same views as the mobs. We can only observe that the demands of the Shiā and the demands of the Christians gradually won greater influence in everyday life, for example the prescription of a distinctive dress for Christians and Jews, the interdiction of riding on horseback, of building new churches etc., but even in times of great excitement these orders were only put into execution for a brief period; for otherwise popular anger against their neglect would not have con-
solidly broken out again. Merchants who dealt with these matters in several passages of his book mark two important dates in the progress of Islam in Egypt. The first of these is the period which followed the great Copt rising in the reign of Mamluk. At this time the gradually increasing pressure of taxation had so alarmed the Copts that several risings took place, which were ultimately put down by Mu‘izz and his generals (see Becker, "Der Islam vor Geschichte der ägypten", p. 129 et seq.). From that time on the Copts, began to adopt Islam and the Arabs gained power in the country. At a much later period we find the Copts coming a crisis not only in the capital but throughout the country in the reign of Nāṣir b. Sālamān in 720 et seq. = 1320 et seq. Churches were destroyed, Christians arrested and in one of the smaller towns such as Kalyub, 450 Christians became converts to Islam in the day (Wattenfeld, "Marx’s Geschichte des Ägyptens", p. 84); this place may be taken as typical of the rest of the country. The last resistance of the Christians seems thereby to have been broken and the advance of Islam reached the stage at which we now see it. It is only in Old Cairo and certain districts of Upper Egypt that Coptic communities of any size have survived. According to a calculation in Becker’s "Religions", p. 133, based on the yield of the jīyān, the proportion of Muslims seems by Salādīn’s time to correspond to what it is to-day. But this is probably not correct, for the average assessment of jīyān is too low. It is known from papyri recently discovered to be much higher than the amount there taken on the authority of the S°bād’s so that the number of Christians in Salādīn’s reign could not be placed at a much higher figure. It is not till the late Mamluk period that we can say that the process of conversion to Islam is concluded although it had made great progress as early as the beginning of the Tālimid period.

The history of Muhammadan Egypt as an independent state begins with the Tālimids (q. v.). Their ascendancy had been preceded by a period of decline in the economic prosperity of the country and its resources had been recklessly exhausted by the government (cf. "Religions", p. 136 et seq.) The government or, more often independent finance-administrators were similarly extravagant. The resources of the country were partly in Damascus and partly into the pockets of successive governors without the country itself benefiting in the slightest from them. This state of affairs was changed on the foundation of an independent dynasty. The income now remained in the country. Where independent of the central government, Aymār b. Tutan (q. v.) no longer made a point of plundering the country but rather tried to make it yield a permanent revenue and increase the glory of his dynasty, from being a dependency Egypt developed into the centre of a great empire, the government increased and general prosperity increased as at all times when the country had a strong government. For the first time for centuries Syria was again ruled from Egypt and the whole history of antiquity as of the later Muhammadan period shows that the destiny of these two countries are closely bound up. In this direction lies the natural expansion of an independent Egyptian kingdom. In one point, however, the Tālimids showed themselves true Persians. While the contemporary Persian dynasties were creating a national civilization, the Tālimids were content to be imitators. Just as at one period the German rulers had each to have their little Versailles, the capital of Egypt was modelled on Samarra and Bagdad. This fact has been much exaggerated and Frang-Cali denied any genuine development in art or culture during the name of the "Supremacy of Cairo", "Rev. Roy. As. Soc.", 1913, p. 23 et seq.). What is undoubtedly true in this, is that a new period in the history of Egypt begins with the Tālimids and that Egypt did not escape the general development of Muslim civilization.

In tracing the history of Egyptian civilization from 128-1212 = 659-1278 the period may be divided into four very distinct periods: the Arabic, the Arabo-Persian, the Perso-Turkish and the pure Turkish; throughout which is must never be forgotten that the backbone of the populace was Arabized Copts. The pre-Tālimid period may be described as the Arabic. The Arabic-Persian period covers the rule of Tālimids, Mamluks and Khaybars. The influence of Persian culture becomes more marked. In spite of their Shi‘ite creed the Fatimids make no break in the development of culture. A new stage begins at the end of the Tālimid period with Salādīn and the Aybūdūs. They brought the spirit and culture of the great Sūqūd empire to Africa also. In art and industry, in political and intellectual life, indeed even in calligraphy the dawn of a new era may be observed which we shall discuss in detail below. This second Perso-Turkish period covers the whole Mamluk period as the Mamluks regarded themselves in everything as the successors of the Aybūdūs, whose political ambitions and even the titles of their court officials they inherited and maintained. The fourth and last period is that of Ottoman rule in which Egypt is a Turkish province. The successors of the Mamluks created nothing of value to civilization.

From the point of view of political history we get quite another picture. The epochs 18-738 = 659-888 and 923-1212 = 1327-1278 serve as prologue and epilogue in the great period of Egyptian independence. The latter falls into three periods of which the Tālimid is the middle one. The pre-Tālimid period is characterised by the struggle of the Turkish governors for independence from the central government of the Caliphate. The independence of the Tālimids, became possible by the great slave rising after the suppression of which the brief glory of the dynasty was soon at an end. Tālimid and his successors had to deal with less resistance, the Mamluk kingdom being a parallel to the Hamunid and Buyid kingdoms, political entities which it came possible on the dissolution of the Mamluk empire. This is the period of the struggle for the right to exercise sovereignty over the Caliph. The two Egyptian dynasties only lasted into the fourth century A.D. They had but a national or a religious form in the country. They were based on the ability of their founders whose kingdoms was held together for some time longer after their death by the community of interest of those who had assisted them. They are real examples of the wonderful chances in a soldier’s career in those days whose rulers were promiscuous generals and yet something different from the Pratertorial rulers of the Mamluk period. The idea of tightful
succession had not yet been quite obscured by license and opportunism. Besides the soldiers we have a further important factor in the manner. A phenomenon like the Mu'izz al-Din family, whose members without the slightest military power at times unofficially ruled Egypt purely by their economic, and a characteristic of the period. The bureaucracy and the tax-farmer, those inheritances from the ancient world, had not yet lost their power before the all-destroying military of the Manilnik period. The pre-Fatimid period differs markedly from the post-Fatimid in its internal structure as well as in its political attitude although the two have many features in common.

The character of the Fatimid period itself is quite different. For the first time Egypt had a dynasty full of vitality founded on a religious basis. Egypt itself was, however, not Shita and the easy manner, in which Saladin restored orthodoxy, shows that the creed which had been forced upon the country had only been formally adopted. But the prestige of religion was of inestimable value for the preservation of the dynasty and for controlling the ambition of the generals which could only find an outlet by becoming at most mayors of the provinces. Mu'izz had not come, like the Fatimids and al-Bashir, as the representative and envoy of a legitimate suzerain to the country but as the autocratic ruler of a powerful kingdom for whom the way had been prepared by his generals. The first Egyptian Fatimid had thus not to gain his position gradually by force of arms but was with all the prestige of a ruler of North Africa and surrounded by the halo of religion and the regal splendor of an Imam and Caliph. The Fatimid kingdom was organised on the model of the Abbasid or rather after still older Persian prototypes. They had nothing to learn when they arrived in Egypt but understood perfectly how to reconcile modern administrative system of the country with their assumptions of hierarchy. Not only were they themselves in various excellent rulers but they took care to surround themselves with statesmen of great ability, whose authority offered the almost insurmountable barrier to the encroachments of the military. In the long run the fate of the Abbasids naturally overtook them also. The Manilnik system arose out of their troops but it was only through Saladin and his successors, more particularly through the military and the abolition of the hereditary intermediaries between the rulers and the people that the Manilnik became an all-powerful power and a scourge to the citizens.

The contemporary political problems of the Fatimid period also were quite different from those of the preceding epoch. It is true that there again was a struggle between Syria and Egypt but in the reign of the sultanate of Egypt — it was no longer however a war against a powerful Caliphate but against the Tayyids and Saladin, between the latter and the Fatimid kingdom a number of small, independent kingdoms some of which died with the East and some with the West. It was not a war between Abbasids and Fatimids for mastery in the Empire. It was an insignificant episode from the point of view of the history of the world but to the Fatimids it was the culmination of their highest ambition when the Empire was pronounced for them and their "Holy fathers." For a brief period (649-650) even in Baghdad, the capital of the Abbasids, by the ephemeral emperors Bu'dah. At its zenith the Fatimid empire was the only great Muhammadan power in the eastern Mediterranean. Here we have the historical antagonism of two great powers — which extended as far as Sicily and South Italy — namely, that of Byzantium and Egypt. They created the pre-eminence of Egypt, which was still further increased by Saladin and survived into the Manilnik period. This golden period in Egypt's history lasted from al-Mustansir to al-Mustansir and has been described so in glowing colors by the Persian Nasir-i Khosrow, shortly before its economic and political collapse in the reign of the last-named Caliph. No other land in Islam could then compare with Egypt. It was only under the great Saladin, that the victory regained its premier position. Syria was lost to the Fatimids before the Saladin invasion. It had still been held by Egypt, Syria might have been able to make a powerful defence against the inroads of the Crusaders had they been shortly to break in upon it, but an infectious plague and the small Attigeb stamets could not do this successfully.

Fatimid power began to decline rapidly everywhere after the famine and rebellions in the reign of al-Mustansir, Bu'dah al-Mansuri [q.v., i., p. 560] and his son al-Abdal [q.v., i., p. 146] could only temporarily check its decline. The government raised the country; another factor was the invasion of the Crusaders and Amaurich stood at the gates of Cairo when the war of the Fatimids was about to end. This period of recrudescence, which was in the third period of Egypt's prosperity under the Ayyubids [q.v., i., p. 224 of this vol.] and the Manilnik [q.v.].

Saladin restored the glory of Egypt anew. The features of the new epoch outlined above are only the expression of a new period in the political history. The well-nigh inexhaustible natural wealth of Egypt enabled every new ruler to devote himself to foreign politics on a large scale, if only he knew how to bring order into domestic affairs. The tasks, which wrecked the declining power of the Fatimids, the suppression of rebellions at home and the repulse of the Crusaders, were successfully accomplished by the Ayyubids and their Ayyubids.

The struggle between East and West now centres round Egypt and the name Damietta [q.v., i., p. 115 of this vol.] in the most important events in the history of the latter Crusaders. Kelying for support on the religious reaction of the Sufi period, the Ayyubids were the true Saladin, who recognized the purpose of their dynasty in war against the enemies of Islam. They reunited Syria and Egypt and held it for a long period. But this glorious dynasty unfortunately lacked any cohesion among the numbers of the family, split into numerous lines, the main object of the dynasty seemed to be extermination itself in internecine warfare. Whoever held Egypt had the advantage, as it was the centre of the kingdom. Saladin, al-Afdal and al-Kamil were essentially Egyptian rulers. The power of the Ayyubids lay in the (Ghuss [q.v.]); here lay the possibility of an ethnic basis for the dynasty but it was destroyed by the rivalry of the individual families. Unity no longer lay in the ruling family but in the aristocratic leadership of the troops or the kingdom consisting almost entirely of slaves (Manilnik). White those who fought under the Ayyubid flag were not all Turks but included Slaves and Greeks, the Turkish element consider-
ably predominated. As they were constantly at war with one another, the various members of the dynasty became more and more dependent on the good will of their generals and ultimately became mere playthings in the hands of ambitious commanders. It thus created a great state when in the end the rulers, whose power had now become purely nominal, disappeared from the scene and those who had for long had the real control of the government now openly assumed responsibility for its government.

The idea of a dynasty slowly disappeared. Although associations with the Ayyubids remained throughout the whole political system and although Kâlabi, among the Bahri Mamluks, was able to found a kind of dynasty, with the Circassian Mamluks the government was a military oligarchy not only in principle, but in practice. The development of the military sake gave an entirely military character to the government. It was a feudal state, based not on the possession of land but on rent, relying for its defence not on foreign vassals but on permanent interest in the military order. The Mamluks had no relation to the state; they were not free. The Mamluk aristocracy was a kind of stratum above the Egyptian people proper, which was at times plundered in the most shameless fashion. Constantly quarrelling with one another, ruling the country as they pleased, ethically a body of foreigners, unscrupulously in no proportion to the native Egyptians, their survival for several centuries, particularly their emergent bearing, and their great architectural activity, which required enormous financial resources, appears at first sight a paradox. It should never be forgotten that it was the Mamluks, who under Baibars formed the barrier which checked the advancing tide of Mongol invasion. The battle of Ain Jalûla was on chance, success, for Kâlabi and other Sulzjans again and again repelled the Mongols (Ikhshûn). This is the great debt that the world owes to these slave Sulzjans, for they saved Egypt from the fate of Târik, and it is due to them that the Nile valley has had a continuity of development in culture and political institutions unlike any other Muslim country. Besides this great feat the final expulsion of the Crusaders seems an insignificant and easy success. The subjection of Nubia also was of less importance for the history of Egypt than for that of the Sudan. On all sides the same great power of expansion can be traced. The Egyptian government stood at the centre of international interest as a powerful vassal. Its relations with the Golden Horde were not of their common opposition to the Ikhshûn, but Byzantium and other European kingdoms also sought the friendship of the powerful Mamluk Sulzjans. During the same period one splendid building arose after another in Cairo in spite of the fact that the constant wars were consuming immense treasure. The old buildings which at the present day still give Cairo its characteristic appearance are almost all Mamluk. Whence came the power and the money to do all this in a state with such a precarious constitution? It was probably in the first place the unusual ability of a series of great rulers like Baibars, Kâlabi, Naîr, Qânûnî, Kut-Bey, that brought the land this prosperity. In a state organized like that of the Mamluks, where every one was a marshals's baton in his kinsman, it was only men of unusual ability that came to the top; there was a kind of survival of the fittest in the system. In spite of their fondness for quarrelling with one another at home, they developed a strong esprit-de-corp in face of danger from abroad. The Mamluks, moreover, were mainly Turks or Circassians, that is to say, unusually powerful members of naturally warlike peoples, selected for their ability. The rivalry among the individual amirs further provided an excellent military training. It was the custom for every amir to build a large house out of Bizantion to offer a home in Cairo to the 'Abhâsîs, driven out of Baghdad by the Mongols. The claim of the Mamluk Sultan to the throne which were by no means sound, were raised above all suspicion by this step. This further crop raised their prestige in a way which can hardly be understood at the present day. The great Mamluks by no means lacked the qualities of rulers. From time to time something was done to improve the state of the country, canals were made, or roads undertak en. The Arab feudalism element had become very strong in the country alongside of the Fellahs, and environs steps had to be taken against it from time to time. Water agriculture was necessarily fundamental. The splendid culture of this period could not possibly have been maintained out of the income from the land alone, although the rural population was very heavily burdened. The great source of the government's revenue was the Indian trade which passed through Egypt as will be discussed below. When it ceased, the decline of the Mamluks came to an end. When the Portuguese obtained a footing in the Indian Ocean and the Red Sea and directed trade with India round the Cape, a blow was struck at the very heart of Egypt's prosperity. Fortune had willed that in the same decade the Turks began to threaten the Nile valley like some inexorable fate. Egypt thus became a Turkish province and its golden age was over. The whole eastern Mediterranean began to sink into the background by the transfer of the world's trade to different routes and the discovery of America. The mists of civilization had shifted. The period 1517-1798 is for Egypt one of stagnation; the great events in the world's history had their scene elsewhere.

Selim I entered Cairo on the last day of Rabûs 1 of the year 943 (29th April 1543). The last Mamluk ruler Tuman Bey had previously been hunged at the Bûl Zuwaibi. Selim and his successor Sulaimân organized the constitution of the country with great caution. The holder of the new Pashalik was not to be too powerful nor was the Mamluk constitution of the military upper classes to be completely suppressed. The Pashas and six bishops of the Levant under Beys with two Irânis and supreme councils were to form the balance. The Mamluk system thus found new scope for its energies. For about a century, the Pashas had some real authority and initiative but after a few unfortunate experiences the Porte began to change its representatives every few years thereby making it impossible for them to have any permanent influence. An endless series of Pashas sits before our eyes, whose authority gradually becomes weaker before the power of the Beys; mutiny, deposition or assassination became daily events and ultimately the Porte was forced to send only Pashas, who were acceptable to the Mamluks and who soon sunk to be mere figureheads. The Şihâb al-Qalb, the governor of the
the first attempt to investigate more closely the constitutional elements of these cycles of legends (Nov., degli Studi Orientali, ii. [1900], p. 97 et seq.; li. [1910], p. 177 et seq.; lv. [1911], p. 47 et seq. and p. 267 et seq.). All accounts of cities and monuments are full of such tales whose existence only can be mentioned here.

In the Arabic geographers and historians we find the administrative unit in the older period the hāra, a district taking its name from its principal town, and in the post-Ptolemaic period the province (a'īal) or more usually placed (āmil). In the modern period the a'īal have been given the name musāfirs. The comparison in Milman, A History of Egypt under the Roman Rule, p. 216 makes it appear that the most important administrative districts of a higher and lower class have remained unaltered from Roman times to Muhammad 'Ali, but closer investigation shows that the similarities between ancient and modern times are accidental. The political configuration of the country has undergone considerable alterations in the course of centuries. The ancient division into nomes was followed in the Roman period by that into pagi and pagarchias, which in their turn under the Byzantines became entirely remodelled in a more complex fashion with the increasing influence of the great landlords. The best account of the conditions in this period is to be found in Mathias Gelzer, Studien zur byzantinischen Verwaltung in Ägypten (Leipzig: Hirt, Abhandlungen, iii.). Islam developed the Byzantine system as it found it. The first accurate information is given by the Ambelu papuzy of the end of the first (beginning of the eighth) century. They yield the following picture, Egypt was at this time a province of the Caliph's empire governed by a muqādās-e-āmil. Upper and Lower Egypt were separate administrative divisions but not, as might perhaps be expected, so that all subdivisions fell into one or other of these two. The heads of theses, which appear as real administrative units and corresponded to the Byzantine pagarchias, were all directly under the governor general. The ancient nomes was now purely a geographical term. The villages (bawār) into which the hāras were divided, were ruled by the (po) (po), C. L. H. E. A., Arab., M. M., pl. M. M. (for further details and bibliography see Der Islam, ii. 364 et seq.) who were under the government of the hāra. We have no detailed account of the further development of this system and the few notices that exist have not yet been systematically studied. The division into hāra remained the basis of the administrative system down to the Fatimid period. We do however find larger areas containing a number of hāras referred to under a single name, such as Das, Das, Lower Egypt, which is sometimes also called Aiz. Das, Das, Lower Egypt, which is sometimes also called Das, Das, was divided into Das, Das, (the land between the two Nile arms) and Das, Das, Das, the fertile Delta land west of the Rosette arm and Das, Das, Das, Das, Das, Das, Das, Das, Das, Das, Das, Das, Das, Das, the Delta land. Upper Egypt, Das, Das, was divided into Upper and Further. But all these names are those of geographical rather than political divisions; and their demarcation varied. The hāras themselves were by no means indissoluble in their boundaries. They were sometimes broken...
up or combined with others. Their identification has further been rendered much more difficult especially in the Delta by the considerable shifting that has taken place and advances of the Nile. Valuable preliminary work in this direction has been done by A. R. Guest, *The Delta in the Middle Ages* in *Journ. R. As. Soc.*, 1912, p. 941 et seq. The number of ḫawāṣir is variously given and certainly varied from time to time. According to Makrizī (Ḳīṭāb, i. 739, 20), there were 25–35 in Lower Egypt, 31–37 according to Guest's investigations. The figures for Upper Egypt vary between 28 and 30. Lists are given in Makrizi, i. 72 et seq., ed. West, i. 30b et seq.; Bibli. Geogr., Arabic, v. 73; iv. 81; ii. 331; Ibn Dubākī, 18, 128, 42; Kalkasjah, untam. Watenfeld, p. 95 et seq.; Yāḥyā, iv. 540. To these must be added the so-called ḥawāṣir of the ḥawāṣir of the Red Sea and the Sinai peninsula (Kalkasjah, ibid. i, 100 et seq.). The census (see Bābists, i. p. 387 et seq.; Dakīlah, i. p. 899 et seq., and Yāḥyā) and it was a separate government. In Makrizī, whose authority is al-Kuṭbī, the number of ṣawāṣir in each ḥawāṣir is given. According to a statement of the year 455 (1065) the number of ṣawāṣir in the whole of Egypt was 4,395 of which 1439 were in Lower and 506 in Upper Egypt (Ḳīṭāb, i. 739, 20; Ibn Dubākī, v. 43). There were said to have still been over 13,000 flourishing ṣawāṣir a century after the Arab conquest but this statement seems to be an exaggeration (Makrizī, ed. West, i. 312). The number is said to have afterwards diminished rapidly.

It is obviously in the steady decline of Egypt's prosperity that we find the reason for the gradual alteration in the political division of the country. The administrative units were gradually reduced in size because the decline in revenues and the decrease in population fail to the combination of districts each of which was a period of more intensive cultivation required separate arrangements for its administration. At the end of the Fatimid period the old ḥawāṣir were replaced by ṣawāṣir. As Manṣūrī still knew the old arrangement and we possess a list of the new ṣawāṣir of the end of the reign of Manṣūrī (Aḥn ṣolṭān, ed. Fawâṣīr, fol. 7, 8), this new arrangement probably dates from Bulān al-Maqrīzī, the fourth governor of the Fatimid kingdom after its collapse. It is clear that there was any thorough reorganisation of the political divisions of the country at one time, but after the catastrophe under Manṣūrī the great seaborne land had received made its effects appear startling suddenness in the administrative practice of the country also. The ṣawāṣir, which is occasionally used as a synonym of ḥawāṣir, was not a wider denomination than the ḥawāṣir but its equivalent. In place of the 50–70 ḥawāṣir we suddenly find 25 ṣawāṣir into which Egypt was divided. (Ḳīṭāb, i. 73, 26 et seq.). Ten of these were in Upper and twelve in Lower Egypt, but the process did not yet come to an end, the land continued to decline and the administrative units increased in extent but decreased in number. The celebrated cadastral survey of Mahmūd b. Kallām, the so-called Ṣawāṣir of 715 = 1215, mentions only 15 provinces, 9 of which were in Upper Egypt (Ḳīṭāb, i. 749, ed. West, i. 312), and when Egypt's prosperity was at its lowest ebb under the Ottomans, the number halved again as low as 12 (V. Hammer, *Geschichte des Osmann. Reiches*, ii, 653) or 14 (de Sacy, *Institut Royal de France*, l. 97), at the time of the French expedition there were 16 including Damietta and Rosetta. The variation in the number of provinces is not of course always directly connected with the prosperity of the country, for in Lower Egypt we find on the other hand the period of the most prosperous and despotic sovereignty there and Rosetta as many as 12 or 15 with Ḫanqah which he counts in Upper Egypt, although he is writing after the abdication of the Ṣawāṣir, but the main reason for the replacement of the numerous ḥawāṣir by a few provinces was undoubtedly the economic decline and demoralisation of the country. A parallel is offered by the history of the political administration of Egypt in the sixteenth century. Writing in the 960s Alfred von Kramer (*Egypten*, ii, 8) mentions the combination of several provinces called Muḥtāriyya since the beginning of the Khālidī period, into one from motives of economy. It is only in quite recent times that these provinces have come to human much than the ancient ḥawāṣir; for their subdivisions called maḥdīs correspond to the ancient ḥawāṣir and the modern muḥtāriyya are simply the ancient ṣawāṣir. To make a general survey possible, we have chosen from the numerous lists of provinces of that of the Ṣawāṣir, that of the Napoleon period and that of the present day but it should not be forgotten that in the intervals considerable variations have taken place. The large cities of Alexandria and Cairo and several fortified towns on the frontiers have always occupied a separate position as can only be briefly indicated here. At the present day the following governments (nāṣirīyya) still exist: Cairo, Alexandria, the coast and the Sinaī under the Ministry of the Interior and al-ʿArabī under the Sinaī, under the Ministry of War (from the Ḍaʿūrīyya Muṣir wa-Muṣirīn, published by the Egyptian Ministry of Public Instruction, ed. i, 131 et seq.). At an earlier period Damīrū, Rosetta, Damietta and the sluice on the Red Sea occupied a similar position.

A history of Egyptian administration cannot yet be written but a few indications may stimulate further work on the subject. For no period do we have an absolutely clear picture and the Arab period is particularly obscure. The organisation of finance formed the centre of the whole administration, for punctual and abundant revenue from taxation was the main object for which the country was governed. With the money thus obtained the army and the officials were paid and authority maintained. The financial system was from the very first exceedingly complicated and its administration in detail was only understood by Copt officials. Throughout the centuries of the history of Muslim Egypt were regarded by thefellahin as blood-suckers and by the ruling military classes as swindlers. In addition to this most important class of officials, we find in the period of prosperity under Caliph and Sultan a whole series of courts and high central administrative offices about which we are much better informed than about the actual mechanism of the machinery of government.

In the early centuries of Arab rule two political functions were sharply distinguished, the government and the treasury. The governor, Amir, had control over the military and police only—the latter under Şahih al-Kurra—and was appointed Şahih al-Kurra and Tim_BY]. Alongside him was the head of the treasury the Ṭamh who was appointed Şahih al-Kurra. These two officials had to keep a strict watch on each other. As head of the military and executive they were the first, but they were equal in rank and the administrator of the treasury even had the greater influence as an ascendant in al-Kindi, ed. Guest, p. 109 clearly shows. The two offices were only occasionally combined (cf. Belrad, ii. 154).

Ibn Ṭīlīḥ did not become master of the situation until he had obtained control of the taxes also. This division of authority extended throughout the financial system. Under the Arab Amils there were, down to the beginning of the 'Abbasid period, two Copt chief secretaries to the treasury, charṭūrīs, who did not, however, for example, control the districts of Upper and Lower Egypt respectively but administered both jointly. At the beginning of the 'Abbasid period we still find two officials at the head of the treasury but it seems that they administered the two divisions of the country separately. (Severus of Aphrodisias, Hambour, ed. Seybold, 106, 108; the vulgate text of Severus has a different reading.) The receipts for corn delivered to the state granaries also were signed by two officials (Zeitschr. f. Ausserl. xx. 101).

This system taken over from the Byzantines survived for centuries. Even in the Fatimid period and later we still find in addition to the chief of the treasury or to a Mustaṣṣir a Nāṣir, a comptroller, who had to countersign all documents (The Masuar, p. 74: an example is given in Kibrî, i. 82, 85). In the first century A.H. the old eparchy with its doṣr at its head was still retained for financial purposes; below the doṣr were Ṭeyyarīyās, who resided in the province of Fustat. Their duties are not quite clear and in particular it is uncertain what relation the doṣr had to the governors, Şahih al-Kurra or vezīres. We find the governor writing to him and demanding the taxes. He had in appear from time to time at the seat of the government to render accounts and had a representative (dānāirārī) permanently there. The officials (see above) and the clerks were local officers. The collection of revenues in kind were called hawāshî (Ppp. Scbdlk. Rel.). It was done by the community. The Asphrado, ppp. (Ppp. Scbdlk. Rel. i.; Fitz. Ppp. i. iv. x., xxx. 66, 188.), of which information about the taxes at the end of the first period and at the same time of the older period also. The government expected two kinds of taxes from the Şahih al-Kurra, the Ṭamh and the federation. Both were levied on the subdivisions of the hāstim by the central authority in accordance with returns prepared and sent in beforehand, and were communicated to them directly in a document (kawāriṣ), which had, however, to pass through the hands of the Şahih al-Kurra. The Ṭamh, i.e., the regular principal taxes were divided into 1) cawāriṣ jizzārī = jizzārī, a tax paid in money only and 2) cawāriṣ ṭarîbât ul-plan, a tax paid in kind, wheat or barley. The amount of each tax was fixed by the central authority. The system of taxation was therefore a collective one throughout and it was the business of the local officials to distribute these assessments. The jizzāris were provided for out of 1) a land-tax (jizzārī 75%), 2) a poll-tax (kfarīrī, 'āshāmāf); 3) local rates (jizzārāq). Artisans etc. who did not possess land contributed to the land-tax also. The poll-tax was not at first a general one but it is not yet clear what basis it was levied. Besides these taxes in money there was the embula, which was, however, occasionally paid in money also (dānāirārī = dānārī). A portion of it was to be applied to local purposes in the form of provisions (jizzārī) and the remainder sent to the storeshouses in Babylon or Alexandria. The "extraordinary" taxes were quite as regular as the jizzāris. Materials for shipbuilding, tools, or skilled workers and sailors and their pay were demanded from the hāstim. The hāstim had to prepare and provide these and ultimately even to buy them. Substitution by the payment of an equivalent in money was not desired but probably the individual members of the community paid their share in money. All these taxes came under the heading of liturgy. The state as affairs as depicted in the papyri does not agree at all with the statements of the Arab jurists on jizzāris (q.v., i. 1. 1851 et seq.) and ṭarîbât; the points that arise out of this are discussed in these articles. In contrast to the interpretations of the jurists as old historian already by Makīrī Kibrî, 77, 8 seq. (ed. Wies, i. 323 of 6) gives an excellent account of the system, which well illustrates the collective character of the taxation and is quite reconcilable with the evidence of the papyri. At a later period Maḥkādī, (ed. de Goeje, 2nd ed., p. 212, 11) tells us that there really was no proper ṭarîbât in Egypt, but that the soil belonged to the government and the peasant only filed it; the rent was taken in kind by the officials after the harvest, and the remainder was the peasant's share. Although the word ṭarîbât regularly appears in Egyptian documents of the 'Abbasid period with the double meaning of tax in general and land-tax in particular, Maḥkādī's statement is substantially correct because ṭarîbât and rent were combined in Egypt (Zeitschr. f. Ausserl., xx. 719)
To understand the whole agrarian system of Arab Egypt it must be remembered that at the time when the Arabo-Assyrian authority in Egypt, the government was nowhere directly in touch with the actual tax-payers, the peasants, but owing to the Byzantine system of patriarchs an intermediate class of powerful patriarch but came into existence guaranteeing the taxes and those were recognized as landowners. The peasants themselves were bound to the soil and could only change their abodes after obtaining permission. Throughout the early period of Islam we find the struggle to keep these colonists (ṣafṣaf, ṣafṣaṣ) out of certain lands and in how far these great landowners were replaced by regular officials or if they—and this is more probable—remained in existence as private tax-farmers and guarantors till they were gradually replaced by Arabs. In any case the administrative practice of the Fatimid period—and probably we have here the survival of a much older system—recognized three classes of tax-collectors (tābiʿ-manāt). In the public general revenues (ṣafṣaf) on certain sums being guaranteed as rent and taxes, which was practically dānum or tābiʿ-manāt and technically known as ṣafṣaf. These ṣafṣaf originally comprised probably only the government revenues and the ayyah districts (mawār), but, as far as can be seen, more valuable estates were gradually added to them. In the long run it is still doubtful if the firming out of the ṣafṣaf was separated from the administration of other estates. In any case the difference between an official tax-farmer and a private individual, who under the protection of the state guarantees taxes on the land he rents from the state, was not very great especially as the ṣafṣaf included not only the soil but the men who lived on it also and even whole villages. At a later period all the land became ṣafṣaf and ṣafṣaf came to mean the meaning of military tax. This process which has already been investigated by Silvestre de Sacy (cf. his still important work Sur la Nature et les Révolutions du Droit de Propriété territoriale en Egypte, Institut Royal de France, 1871, v. vil.) shows several stages. Under the Abbasids and the dynasty of independent governors the lotting of the names took place annually by a kind of public auction in the summer and afterwards in the Tulfārīd Mosque. The allotment was for a period of four years to make up for failure of harvest and other contingencies. This rent was the ṣafṣaf. Some, specially in improvements, maintenance of canals etc. were allowed to be deducted. The remainder, often very considerable, was the profit of the issue. What the relations of the latter with the local authorities were is not known. Every 30 years a new survey was made (Khitāf, l. 82). At the beginning of the Fatimid period this system remained unaltered, and any one could still be a candidate, but by the later Fatimid period the military formed the great majority. We read of ṣafṣaf-manāt which yielded good return and the soldiers' estates which yielded a poor return (Khitāf, l. 83, sn.). The brunt was called ṣafṣaf. The leases were for 30 years. These conditions the existence of which in Egypt can be dated 502 = 1107-1108 can be shown to have existed in Iraq for centuries previously (V. Krumm, Rekonstruktion des Arabischen Reiches, p. 71). In Iraq as in Egypt the powers of influences and these were in the long run the soldiers' estates gradually paid less and less in taxes and thus these estates took the place of military fedd while the tax or rent due on the land was to be looked on as reward for service. According to Malikī (Khitāf, l. 95, sn.) Nāṣir al-Mulk took the decisive step in this direction (cf. also Bāzār, al-Hàrîm, p. 58) and from the year 450 = 1057 on his example was generally followed. His probably only legalized the actual practice. A great period of prosperity is thus said to have been brought to these estates. This may be true for the districts held in ṣafṣaf by the Emir but for the countless small feds this step spelled ruin. For it was not merely a question of a rent which the state had confirmed but the individual feds and districts passed into the possession of the ṣafṣaf-holders who now took over the ṣafṣaf as the true treasury in the districts concerned. This practice was probably brought to Egypt by Salāḥ al-Dīn or one of his successors. In 515 = 1121 one could still trace a clear distinction between tax-farming and military ṣafṣaf (ṣafṣaf, l. 83). As the troops did not pay anything it had grown up which was remitted in that year. These very ṣafṣaf show it was not yet a question of real military feds which soon afterwards became quite usual. Of course a large share of these estates or their yield still remained at the disposal of the government, for the ruling power for the time could not entirely give up the great rents derived from agriculture. An interesting register of distribution is given in the Khitāf, l. 85, 5 for the Alīyid period after Salāḥ al-Dīn. From time to time the new conditions of allotment were put out of new surveys. The first read in the Māmilık period of an arrangement by which a certain number of villages (ṣafṣaf) of the land to be allotted were reserved for the Sultan, 10 for the Emirs and 10 for the soldiers. We are best informed about the so-called Ḥāʾib Nāṣir, the survey of Muḥammad b. Kānīn al-Fāṭimī of the year 715 = 1315 (Khitāf, l. 87 et seq.). Here the proportion was 10 to the Sultan and 20 to theAPPANAGE. The ṣafṣaf in the country were included for the first time in the ṣafṣaf but a large part of the large towns they were allotted separately. The ṣafṣaf became more and more absolute master of his land, the liftīn's book gives a much later system of division from the end of the Māmilık period. In the Ottoman period the minimum of a ṣafṣaf and its lot was of the direct owner, for which see the Sixt 3. The charters granting feds were called ṣafṣaf in the early period and in later times wakf. In Malikī's time all Egypt was divided into the following seven classes of lands (ṣafṣaf, l. 95, sn.): 1. those belonging to the priyāτ, Ḥāʾib al-Māmilık (this ṣafṣaf replaced the vilâs in the reign of Ibn Qādī, Kallāshah, Wustenfeld, p. 157) and appertain to the Ḥāʾib al-Māmilık (established by Barqūk, Sidāq, p. 156); 2. feda of the
The text is not entirely clear due to the quality of the image, but it appears to discuss the administration of Egypt, mentioning military officers, the Al-Mamluk state, and various officials and their roles. The text seems to be in English and refers to historical conditions in Egypt, particularly regarding the organization and governance of the region.

---

EGYPT. 15

...ania and soldiers; 3. wakels of the most varied description; 4. Al-Ahdab: a particular kind of wakel; 5. Al-Ahmid: a native purchased from the treasury which had become private property (the rent from them again became a rent); 6. Kalil, the administrative district of the Faiyum period; it is said that Ibn Tulun abolished the mucki (ibid., 236, et seq.)... The revenues of the state were lawful or unlawful with reference to the Khedives. On the lawfulness of the article 514, the souldiers, were mainly the civil mucki, i.e., a vast amount of small taxes and all sorts of monopolies. The list of the mucki abolished by Saladin in 1212, i.e., 164, gives a good idea of their nature in the Faiyum period; it is said that Ibn Tulun abolished the mhetti (ibid., 157, et seq.) but even Ibn Tulun had to abolish most oppressive abuses of this kind (ibid., 157, et seq.). The abolition of the mucki was a great move by powerful rulers who wished to be assured of popular favour (Ibn Tulun, 157). These taxes were called on the opposition to the bishaddi taxes; the fortune was reckoned by the bishaddi and the latter by the solar year. Ibn Mulahib, the greater antagonist of the Faiyum is said to have been the first to introduce this kind of tax into Egypt (ibid., 157, et seq.). Accounts of the monopoly and other unlawful sources of revenue in the Faiyum period are given in Ishaq, 107-111; Ibn Mammam, 110-112; Kalil and Wustenfeld, 150-151. The warehouses of books, weapons, clothes, etc., which are detailed in Yalkut-Wust, 175 and Ishaq, 112, formed an important part of the Faiyum administration.

But these officials in the Faiyum formed only a part of the hierarchy of officials in the Faiyum period. The latter may be subdivided as follows: 1. Military Officers (Arabk al-Sarri): 1. Officers in the army such as visir, chamberlain (Shihab al-Bah), field-namshali (Zahab al-Bah), etc. 2. The household with numerous officers in more immediate attendance on the Caliph. 3. Civil Officials (Arabk al-At: 1. The ecclesiastical officers (chief hakim, chief dai, maltab, the head of Baal M-M, Amr, 2. The Koran-readers, 3. The court-poets. All these officials lived in the court. Other classes were outside like the governors. Hence we have followed Yalkut-Wust, 157 et seq. For other officials in the provinces see Ibn Mammam, 7 et seq. The Faiyum system of state and court officials developed into the complicated system of Manilk during the period which differed in details. Our sources for the latter are excellent (cf. Ishaq, 204-209 and Ishaq, 204-209; Kalil, 204-209; Wustenfeld, 157 et seq. and 209; Ibn Mammam, 234-269, 204-269; and Yalkut-Wustenfeld, 157 et seq.).

Our sources are for the latter are excellent (cf. Ishaq, 204-209 and 209; Kalil, 204-269; Yalkut-Wustenfeld, 157 et seq. and 209; Ibn Mammam, 234-269, 204-269; and Yalkut-Wustenfeld, 157 et seq.).
through-trade but had a splendid opportunity for realizing its own raw produce and the products of its industry. The importance of these geographical factors was much more apparent in the middle ages than at the present day; with the growing influence of intercourse with foreign countries and the progress of invention. In the middle ages the annual rise of the Nile affected the whole life of the country as may be seen from the example quoted in *Beside*, i. 47 et seq.

The amount of revenue from taxation depended on the Nile and the price of flax and bread varied from day to day with its level. In Assuan the rise of the Nile is first noticed in the last week of June and in Cairo in the beginning of July. The flood has almost reached its height in Cairo about the 15th August and is at its height at the end of September. After fourteen days it begins to fall, but half sunk by the middle of November and reaches its lowest level at the end of May. At the present day the difference between the highest and lowest level is 23 feet in Assuan and in Cairo 16 feet (Bashketel, *Egypt*, p. xlvii). In the middle ages the level of the Nile was measured by Nubians (nubian) in eells (kolsh) and finger-lengths. The Atbara built Nubians in Asyut, Debra, Arja, Huwair and lastly the most famous one, on the island of Rihja (see l. p. 821). In the early centuries of Islam 16 eells was the height desired while 12 and 18 were the critical points below and above; for it was possible to have too much or too little blessing in the same middle ages from the 12th to 18th century the level of the land had so risen that 16 eells were no longer sufficient but 17, 18 eells were the normal and floods rose occasionally as high as 20 eells (Kalkashand-Whittemore, 22 et seq.). When the river did not simply overflow its frequently very high banks but was also led by an extensive system of canals which changed considerably in the course of centuries into the land behind. The canals were closed till the Nile had reached a certain height. The opening of the Khedivial Canal was one of the greatest events of the year and was celebrated with old-time ceremony and splendor, like all the Nile festivals which were taken under patronage practically by Idris (ib. 299 et seq.; Ibn Taghrirah, l. 450 et seq.; *Khayr*, l. 476 et seq.). The greatest and most important of these canals have been described in detail by the writers (Kalk-Wit, 23 et seq.; *Khayr*, l. 70 et seq.). After the fortifying wall had spread over the whole land it was allowed to stand on the fields for some time — in a system of tanks — to deposit its fertilizing elements and then run off again. Seed was then rolled into the still moist earth in the most primitive fashion. The harvest was ripened in a few months and the land lay fallow and dry till the next flood. This cultivation of the flooded land only a year was called the winter crop (*agafh al-ghannama*). Its principal products were wheat, barley, lentils (*fena*), peas, chick-peas, beans, fava beans, clover, onions, leeks, and especially *lukewater*. The winter crop is to be distinguished from the summer crop (*fafa* or *faha*) on land permanently irrigable; the latter's products were sugar-cane, melons, dates, sesame, cotton, colocasia, anuberg, indigo, radishes, turnips, lettuce, radish (from *Khayr*, l. 101 et seq.; Ibn Marmaditt, 29 et seq.; ib. also Kalkashand-Whittemore, 33 et seq.; von Kramer, *Egypt*, l. 346).
Vine, date palms and a few other fruit trees also cultivated. In certain places with a plentiful water supply, such as the Fayyum, rice was also grown. Durra was cultivated in Upper Egypt on permanent watered land as many as three crops might be obtained in a year by following a certain rotation. The Egyptian agricultural and revenue year was the Coptic solar year. It began with the month Tit. In Makrā, Kāfīf, L. 270 et seq. (transl. Casanova, 54 et seq.) and Ibn Mammāzī, p. 26 et seq. there is an instructive list showing agricultural duties and what taxes etc. fell in each month. For comparison with modern conditions we may here recommend the reader to the Textbook of Egyptian Agriculture by G. P. R. Fowden and F. Pritchett, 2 vols., Cairo 1906–1910, published by the Ministry of Education. As the land yielded its harvest by the solar year and taxes were paid by the Arab lunar year a whole year had to be dropped after 33 lunar years as 32 solar years corresponded approximately to 33 lunar years. This equation by which no one lost or gained anything as it only existed on paper was called kafrūl-abnana (Kāfīf, L. 273 et seq.). Casanova, p. 65 et seq. The quality of the soil and with it its rent and tax-paying capacity varied considerably. While in the modern period a district is only made between rates, the land reached by the flood and abnana, the land not affected by it (von Kremers, Ägypten, 1769), the middle ages distinguished a whole series of grades of land, which are detailed by Ibn Mammāzī, p. 28 et seq. Kāfīf, p. 100; Kalkhaussdtt, Wüstenfeld, p. 152. The unit of agricultural land was the jūdūd (≈ acca), which was divided into 400 square kāsās of ḫākhān (Kāfīf, l. 103 et seq.). 1 square kāsā at the present day = 16 square yards; 1 linear kāsā = 4 yards. The el, khudr was smaller (at the present day = 2 feet). On the manner of measuring of Ibn Mammāzī, p. 52 et seq. The most important cubic measure was the ḥarīlā, the ancient Attāhā, 106 cubic feet (4.22 cubic yards), but there were Attāhās of different sizes. The standard weight was the kāntīs (44.9 kg) of 100 riḍā. One riḍā is therefore a little less than 1 lb. A distinction was made of kāntīs and ḥirmi kāntīs (Kāfīf, Wüst, p. 324).

Egypt is usually regarded as the typical agricultural country but Mommaseh has pointed out that in ancient Egypt a large section of the population lived in industry. The industries of Egypt were naturally dependent upon agriculture for their raw material, for example the textile industry, the manufacture of oil and olives, which were also exported. Only a few industries depended on imported raw material such as the unimportant iron manufactures of the scrapyard of Timah and Dīlā in Central Egypt. The silk which was frequently employed in the textile industries was also imported (probably from Syria). The imports of leather were limited to the hides of rare animals as the leather trade of Central Egypt had its materials supplied by the land itself. Weaving was by far the most important industry. It was only carried on on a large scale in the towns which we know to have been centres of the Christian population: Timah, Damietta, Babylon, Aṣyūt and Aḥknān. The Arabs themselves had no manufactures. A distinction may be made between the manufacture of woollen, cotton and linen goods. Lower Egypt was the centre of the linen industry, and to some extent Central Egypt also. While the manufacture of woollen goods seems to have been confined to Central and Upper Egypt. Wool was manufactured into veils, garments and carpets in numerous factories between Bahānā and Aḥknān. Besides the celebrated veils 30-40 long which were sold in pairs, imitations of the red woollen goods of Armanī were manufactured. The wool of goats was used for the manufacture of camel-tooth-like stuffs. The woollen goods made in Upper Egypt were exported in large quantities and were famous as far as Farsīn, Cōtin which at the present day is the dominant factor in Egyptian agriculture, was also grown and manufactured in the Arab period and even earlier. Bahānā was the main centre of this industry. In the other garments were made of the cotton grown there but here the industry was only prosecuted to supply the local demand and nothing seems to have been exported. By far the most important branch of the Egyptian textile industry was the weaving of linen, the great centre of which lay in the northeastern and northwestern corners of the Delta, in Damietta and Timah. The rest and Alexandria in the west. Its products were carried throughout Europe and Asia (All Naftali, Les Manufactures d’Étoffes en Égypte au Moyen Age, Institut Egyptien, 10 April, 1903). We possess very full details of the looms of the east. Among Damietta and Timah there were a number of smaller places in and around the modern Lake Menzaleh in each of which produced its local specialties. Common to them all was the manufacture of a fine linen cloth called shuβd of which a single piece cost as much as 100 dinars. In Damietta it was manufactured only in white and in Timah only in colours. In addition the manufacture of brocades and silk applied work flourished in all these places. Timah alone had 5000 looms. The men and not the women wove as was the case even in the time of Herodoti. This industry was therefore not organised in the women’s apartments but in a way parallel to itself which can be reconstructed by a careful examination of the state rolls. It is thought that the whole industry was a state monopoly. This is incorrect. We can distinguish clearly between state and private enterprises. To understand the gigantic scale of some of the state factories it must be remembered that the robes produced there were officially given away as presents in large quantities; the whole court received new garments twice a year; besides, in those days robes were bestowed as orders are at the present day, perhaps even often and more indiscriminately. Besides, a large wardrobe was a form of investment not to be despised in a period when the hoarding of objects of value was a secure way of saving money than investing capital in industry. Such products of the royal looms no doubt at some time or another filled the wardrobes thus formed by disguised nobles. When the robes were finished in these places of manufacture they were sent in Cairo, where those destined for the Caliph were fitted out in one of the women’s apartments of the palace, where 90 girls worked under the supervision of a master. This is the only trace we find of the Byzantine gynaecaeum. The private factories were organised on quite different lines. Outside Damietta on the river bank lay...
large buildings in the upper stories of which were workrooms which the weavers could hire. It was here that the valuable stuffs were prepared. Unfortunately we do not know who let these looms, whether the state or rich private individuals. All sales were conducted by brokers licensed by the state. They were the only persons who sold the men that it was probably they who supplied the workers with material. They kept accurate note that each worker actually used up, the material supplied him for the manufacture of a certain garment. What was saved in material was deducted from the price paid him. When the garments had been woven their further treatment was a highly specialized branch of industry. The last, most folded them, the second wrapped them up, the third laid them in baskets and boxes and the fourth tied them; each required to be paid and made his sign on the box. They were then loaded on ships and sent away to be sold.

The other industries can only be briefly detailed. Egypt did not have the olive tree; it was only grown here and there as a garden tree. All olive oil had therefore to be imported and a cheap substitute to be found for lamp-oil. The Egyptians prepared the latter even in ancient times by pressing certain seeds which contain oil. The following were cultivated for this purpose: mastic, cape, butter, sesame, saffron, mustard, flax and hemp. The manufacture of oil probably never exceeded the demands of local requirements. The remains of crushed seeds were used as cattle food. The only industrial use of oil was in the soap factories which must have been especially numerous in Alexandria. Soap was used in various colours and was a popular article of currency. The manufacture of wax from the sugar-cane was rather more important. Sugar-cane must have been, as at the present day, very often eaten raw but more usually pressed to obtain the sugar which was considered such a delicacy. We have only to read the accounts of various writers of the castles and figures in sugar which were made in thousands and sent by the Caliph to all the Christians. We can understand that this was a very important industry. Sugar was also exported. Although we know nothing of the organisation of these sugar mills, the actual technical processes are well known. In addition to these most important industries there were smaller ones like the manufacture of paper which disappeared with the introduction of paper in the 18th century. We cannot here go into the great number of smaller industries. The individual trades were under the state and organised into guilds.

Great activity in agriculture, industry and commerce presupposes the development of trade. We are unfortunately not well informed about the corn trade. Like all trade in the produce of the soil it was under strict state control but it was probably not entirely a state monopoly. The revenues of the state in kind were however again sold by the state; e.g., for example the state traffic called bhet [t. p. V, l. 648]. Cora was exported to Arabia and Syria and flour also to the former. We knew almost nothing of private commerce. We can read of the frequent rise in prices produced by speculation but the state also speculated in it usually had exactly the same interests as the organisar of private enterprise. Flax played a certain part as an article of commerce went to

The centre of the flax trade lay above the Faiyum in the Nile valley. The Faiyum itself only produced an inferior quality of flax. The corn trade of Upper Egypt had its centre further south at Manuflik near Assiut. Corn, flax and cotton were exported abroad and even to Italy. Foreign trade in general may be divided into three well-marked periods: i) to Nubia and the Sudan via Assiut and Asyut, the thorough trade in Indian goods via the harbours of the Red Sea and lastly; c) the Mediterranean trade.

Arab gold and silver coins were current up to the second century and above it the trade was carried on entirely by barter. Nubians chiefly exported slaves, which after the foundation of black regiments ('sulta') by Ibn Tulun were required in large numbers. There were also considerable export of gold from the Altass gold-washings. The gold coined at the state mint was obtained chiefly from Taku or the Sudan. We do not know how it came to Egypt, possibly via Assiut and Asyut. Egypt exported to the Sudan in return corn and textiles and also glass beads, combs and coral. (cf. Askali, p. 498-499). In the early centuries of Islam Assiut was ally for the most important town in Upper Egypt. In the Fatimid period Kina gradually rose to prominence and ultimately supplanted it, which was probably due to the prosperity of trade with India. (cf. the artice ASISAT, l. 210). The development of Indian trade was a result of the commercial activity of the Egyptians. The pre-Fatimid period the opening of land and the various trade in corn connected with it formed the usual outlet for the investment of private capital. At all periods ships, kites and mus formed a favourite outlet for private enterprise. But under the Ayyubids and Mamluke Indian trade became the favourite form of investment. It lay in the hands of a company who called themselves Karamites and had their headquarters in Kina and Cairo. The etymology of the word is uncertain. The Karamites had a bank which conducted international business on a large scale. An attempt was made on one occasion under the Mamlukes to meet them from their position as intermediaries in the spice (particularly pepper and cinnamon) trade, but it failed. They had at all times to suffer from the encroachments of the state. All goods passing through Egypt were liable to the alaqa, which in Saladin's time was levied at 5-6 places at the rate of 1/2%, each time. This made a total customs duty of 15% of the value. In the last year of Fatimid rule alaqa rose to the value of 500,000 dinars passed through Cairo. This probably did not increase in the later period. As long as Baghdad flourished, Indian trade went via that city; the Jewish 'Rabbites', who at this time traded between the Mediterranean and the Red Sea did not touch the Nile valley at all. It was only with the decline of Baghdad and especially after its fall that Egypt became the great centre of exchange until this trade lost its importance with the discovery of the sea-route to the East and America.

We have abundant material for the study of the Mediterranean trade of Egypt in western sources and in the commercial treaties published by Amari (Diplomata Arabica). There are two excellent works covering the whole field: Heyd, Geschichte der Konstantinische Welt, Schaar, Handelsgeschichte der Konstantinische Welt der Mittelalter-
EGYPT.

10 publizes. De Groen has recently published a short study entitled, *Internationaal Handelsverkeer in de Middellandse Zee en Middelhoorn, Op. Academie van Wetenschappen, 4th Series, Deel 41.* We further propose to give here a few notes on the tariff policy of Egypt and the state trade with its monopolies carried on through the customshouses of which a clear picture is given by Arabic sources hitherto neglected. It is only for the Fatimid and post-Fatimid period that we have any detailed information, naturally enough as intercourse with Europe only began with the Crusades. Commerce with the Italian cities must have been more important than the trade with Byzantium and the west in the pre-Fatimid period. Customs duties were levied by importing to the value of the goods. In the early period the basis of the tax was one tenth, in Saladin's time a fifth of the value, but it varied between 10% or less and 33% or more according to the nature and place of origin of the goods. The tenth became the favourite levy; for example Pisa paid it on wood, iron and pitch i.e. entirely on articles which Egypt required to import. Precious metals were for brief periods duty-free, but as a rule the tax on them was 2½%. 10% was the policy of the Egyptian tariff system was to attract, to the country, certain raw products which it could not produce without and were not produced in it. These were principally wood and iron from all the articles required for shipbuilding and the armaments of war. Wood, iron and pitch reoccur continually in all commercial treaties; the Egyptians did everything they could to encourage such imports. On the other hand Europeans knew that Egypt required these articles to maintain its military efficiency. The Poles of the Crusading period therefore repeatedly declared those to be contraband of war. The re-export of these articles was also forbidden; for the dogana i.e. the divan, the government customs houses, bought them up at the current price. We thus find the state acting not only as an intermediary but as the purchaser and the process was as follows: when a merchant imported a number of goods, including wood or iron, he paid first of all to pay the duties on his wood and iron. If he had still a fair quantity of the latter left then the government bought it from him, but he did not receive the whole price in gold but only a third while he had to take two thirds in alum. Side by side with the buying up of all imported wood all furs were government property, and on them we have full details (Ali Bahgai, Le Ferro in Egitto, Institute Egypte 1900, p. 141 et seq.). Wood, iron, pitch, cedar, etc. were state monopolies because they were not produced in the country and were necessities. To keep the price as low as possible the government had also a monopoly of such valuable native products as were much desired by foreign countries, notably alum, natron and emeralds, to use them for exchange. Alum was dug up in the Libyan desert and the oasis by Bedouins and brought to certain harbours on the Nile, notably Kâb, Akhmûm, Assûf and Bahmiis. The government purchased it at these places at 30 dinars the cwt, or even cheaper. Private trade was forbidden and strictly punished. The average amount exported by the state through the dogana was 50,000 cwt; it sometimes rose to 150,000 cwt. The market price varied from 4-6 dinars per cwt. Only a small proportion of the alum remained in the country, the chief importers being the dyers as alum is used for red dye; but the total disposed of in Cairo was only 80 cwt. The Egyptians had to pay a higher price than foreigners, viz. 5½-7½ dinars a cwt. The nónot was obtained in Wâli Nâjîn, on the western borders of the Delta. Here the Bedouins only acted as carriers. The large industry itself was in the hands of a staff of officials and workmen appointed by the state. A cwt cost the state about 2 dirhams at the mines and was sold in Cairo and Alexandria for 70 dirhams, which showed a considerable profit in spite of the high cost of transport. The latter was not exorbitant as the Arabs had to carry on one third of every export fre. In the working of the emerald mines of the Arabian desert the state again appears as a monopoliast. The deposits were in cavities which were entered with ladders and ropes. While private enterprise was allowed a free hand in the gold washing industry of the Cûdîk country, the state maintained full control over the emerald mines. The workers were paid by the government, which also supplied them with tools. The workers were only allowed to leave the mines naked so that they could not conceal any stones. The stones obtained went to the Sultan's treasury. On the whole monopolies were a characteristic of the later period. In the Manûlîk period the state claimed first right to everything. This practice, which was however known previously, was called farâ; i.e. the state claimed for itself exclusively the past of middleman. This subject has as yet been but little investigated. M. Sabourin's *Das Zuckermonopol unter Sultan Barsch (*Zeitschr. fur Assyriol., xxvii., 75 et seq.) is a excellent study of one branch of it.*

The above material will shortly appear in an extended form with full references and illustrative passages in Riebrügg, *ii.* Preliminary articles are to be found in Hâlê, *ix., 2, p. 1 et seq., and Der Islam, *191, 93 et seq.* Ibn al-Ajdâjî, *Manûlî et seq.* gives an unrivalled account of the details of trade and industry. With the exception of the works of the French expedition no preliminary work has been done on the economic conditions of the Ottoman period.

4. INTELLECTUAL ACTIVITY AND ART.

It is quite impossible to give a full appreciation of the intellectual activities of Egypt in the Muslim period in the space at our disposal here. We can only emphasise the fact that in Egypt we have an unbroken literary development from the beginnings of Islam to the present day. The bazaars of famous names, who held appointments in mosques and madrasahs, libraries and hospitals as well as in the divans are unnumberable, not to speak of popular intellectual movements, the puritan romancers, and the shadow plays. The architecture and art are to whom the golden age of Egypt owed its splendid edifices are mostly nameless and it is as yet hardly possible to comprehend their influence and inter-connection. Certain it is that we have here a true amount of mental energy to which the whole of medieval Egypt owes its soul. With this wealth of material all that can be investigated here is what are the essential and what the special features of the intellectual culture of Muslim Egypt. Egypt was in the first place the cradle of important schools of Shâfî and Mâlikî Law. Secondly Sinan was elsewhere here
left its special character on external forms of organization. In the third place a love for the Nile valley and the splendour of its ancient history had created a historical tradition, which was unequalled by that of any other Muslim country and lastly Egypt was the home of the Oriental popular tale.

The beginnings of intellectual activity in Egypt are quite obscure. It is clear that the inhabitants of the Nile valley played no part in the decisive controversies of the earliest days of Islam; Egypt was only a province and occupied with other affairs. Maktab as-Salafiyya at Cairo, 352, tells us that the various ruminants followed the teachings of the Commentaries and Tafsir among them. Thus the Egyptians attached themselves to "Abd Allah b. Amr, the son of the conqueror and in a later generation, to Ikhlas b. Sa'id. "Abd Allah is said to have espoused decisions of the Prophets and eschatology. Now there has actually survived a poem by a Shafi'i of "Abdalrahma b. Amr passing under the name of Ibn Laith, with traditions which deal with the last judgment (Eppert Schott-Reinhard, 1. 9). Ibn Laith's is one of the best known traditions of Egypt of the first half of the second century. He and Laith are the principal authorities of the jurists, Al-Kindi, ed. Gueael, provides us with an excellent source on studying how the great religious wars of the East, the development of ritual and of the Fiqh have left their traces in Egyptian practice also. A certain Mawliyat, Zaid b. Abi Habib, in the time of 'Omar II, appears to have been the first actual teacher of Fiqh, who discussed fudūm and nafs. The Mawliyat on the whole played a considerable part in Egypt. The Maliki mulla al-Abbas in 198 = 813 al-Jahili came to Egypt and soon attracted a large following. He worked here till his death in 204 = 820 and his tomb is revered to this day. The Hamani rite was officially represented by a Hamani judge sent from Baghdad, but its first representative at once met with a vigorous opposition, led by Laith b. Sa'id, because he wished to abolish the `id al-Kindi, 371 et seq.; Eshel, ii. 334 et seq.; also ib. ii. 294 et seq.). The Maliki and Shafi'I schools thus remained predominant till the coming of the Fatimids, who organized everything after the Shi'a-Tangs'fi fashion. It is not generally known that the Shi'ite creed was not something new or unheard of in Egypt; in Eshel, ii. 334 et seq. we have not only the background of the beginnings of the Shi'ite but a more particular account of its development in Egypt. Even before the Fatimids period there were sanguinary street-battles and the fanatical orthodox negro militia used to ask the people for their creed: *ma'sa 'alimikum*? Whence they had to answer *'alimun* (ib. 346) — a proceeding which can only be explained by the presence of a strong Shi'ite opposition. The greatest part of the population was, nevertheless, always orthodox and therefore felt it deeply when with the Fatimids the Shi'as at Isma'ili type was declared the only valid madhhab. The well-known addition was at once made to the *qiyas*, the *qiya* was paralleled over *Ali*, Fatimis and their children, the *hakim* had to be altered aloud, certain prescriptions of the *fara'id* were altered, the

ru'yah and the fara'id abolished in Kairoh, the sale of melahdaria, Mu'awiyah's favourite vegetable, forbidden and many other changes made. Under Abu'l-`Abbas they even went so far as to introduce the public execution of the orthodox Caliphs but popular opinion opposed against this and other Shi'a prescriptions also were from time to time replaced by orthodox. During the brief interregnum in 325-326 = 1033-1034, during which the khalif was read for the Imam Musa, there were 4 Kufis; an Imam, as Amma, al-Muwallid, al-Muwallid, and a Murtuz. The old principal orthodox ruminants had thus survived and at once developed combinations which, when Saladin restored the orthodox creed to the land which was his, had a hard time of it.

Even under the Fatimids intellectual pursuits flourished. The vizier Ibn Kilis gathered jurists and dogmaticians, poets and grammarians around him and made great efforts to propagate an Imamite Fiqh in Egypt. The Banu 'Ibn Ma`an, a celebrated family of Kufis during the golden age of the Fatimids, worked with similar aims. (R. Gotthelf in the *Journ. Asoc. As., xxvii. 297—299). Endowments began to be set aside for scholars, the Fārūq al-Dawla, the first Muslim university was founded (Khitif, ii. 344, et seq.), and Khairun, jurists, grammarians and physicians appointed to it. When it was closed, the Fārūq al-Dawla of Fadlullah was opened (ib. i. 442). A staff of 35 lecturers was maintained at the Athar Masque (q. v., i. 552 et seq.) (ib. ii. 547 et seq.). The illness of the Fatimids Caliphs (ibid., i. 407 et seq.) testify to their active interest in intellectual pursuits. This activity did not, however, reach its zenith till the Saladin religious reaction entered Egypt with Saladin. It is a peculiar feature of these warlike times that not only the Ayubids but also the great Mamalis, who were all simple soldiers, took the greatest pleasure in and richly endowed intellectual pursuits, more particularly those connected with religion. Madrassas and Khātāb-s sprung up like mushrooms. The material foundations were now prepared on which the study of the Fiqh and Shi'ism could flourish. Naturally the Khātāb-s were at first built only for the Mālikis and Shafi`i, but even by this period Abu `Umar's school had entered Egypt. The number of Mālikis madrassas was in proportionately great. This is explained by the fact that the Mālikis were an enthusiastic Hamani (ib. ii. 343, et seq.). The appointment of khitifs for the three principal ritualists also dates from this period; Rihabars al-Rumān was the first to add the Hadzalih as a fourth but this ritual never attained great influence in Egypt (Vogel, op. cit., i. 374). The internal arrangements of the madrassas presented features peculiar to Egypt. Each ritual seems originally to have had its own madrasa; Saladin for example, founded madrasa for the three principal rituals. It soon became common for two rituals to unite in one madrasa and in no particular combination. There were frequently separate chairs for Hadzalih and Khātāb reading in addition to the Fiqh. But by 641 = 1244 we find also four madrassas combined in one madrassa (Khitif, ii. 374, et seq.) in large madrassas musalsahs were established, being the sole secular subject (ib. ii. 380, et seq.). It appears particularly remarkable to any one acquainted with the later relation of the Fiqh to Islam that, from the 10th or 11th century on, a Fiqh and a Sunna school were frequently conducted
alongside of one another in the same madrasa and sometimes even the same Sheik had charge of both (ib. ii. 394; al i. 394, al ii. 398, al iii. 399). It is readily understood how, after Saladin, the teachings of 'Ash'ari in dogmatism were regarded as indispensable by all the teachers. This showed itself in the rejection of Ibn Taimiya. With the decline of the madrasa and the mismanagement of the late Mamluk and Ottoman periods the Sheik has more and more become the focus of the intellectual life of Egypt.

In spite of the official patronage of the Hanafi school, it was the old established schools of Maliki and Shafi'i that made the most remarkable development. Even in the early period of Ilkhanid times, we find here among the Sheikh's al-Mursiy and al-Nasiri, one of the six canonical traditionalists, who spent a long time in Egypt; of the later period we may mention the Shafi'i, Bokhtiyar, Zakariya al-Ansari, Ibn 'Abd al-Asghar, Suyuti down to Sharabi and Shabranib. The most important of the Shafi'i scholars, however, were the two great Shafi'i authorities al-Ramli (Alida), and Ibn 'Abd al-Haitham (Tufayl), of whom the first was an Egyptian, while the second began his career elsewhere. The period gives a long list of names of Egyptian Shafi'i scholars of the early period. It was from Egypt that the whole of North Africa and Spain was won for the Maliki school. For the later period special mention should be made of Ibn al-Haidari, the author of the Madhhab, and later still, Lakani, Uqbari and Za'aruni. While all later writers were merely copies of older authorities it was nevertheless true that they kept alive the intellectual interests before the coming of European influence. Their activities were chiefly directed to the Fatwa, through which alone a certain development was possible. Nevertheless a gradual deadening of the intellectual life was going on always.

No preparatory studies have as yet been made for the history of Shafi'i in Egypt; nevertheless, as has always played an important part from the time of the Ayyubids and Mamluks to the present day. One of the earliest mosques in Egypt is the mosque of al-Fajr in the city of Cairo, which was built during the period of the Ayyubids by the master-mason al-Fasih. The mosque is of great importance because it contains the tomb of the famous Sheikh al-Sabri. The mosque was built during the reign of Sultan al-Malik al-Mustansir (1180-1187), and was completed by the Sheik himself. The mosque was later enlarged by his successor, Sultan al-Malik al-Mustansir (1187-1192), and was finally completed by Sultan al-Malik al-Mustansir (1192-1193).

The most important intellectual contribution made by Egypt is its historical literature. There is no country in the world which through its historical monuments has such a stimulus to the study of history as Egypt. Nevertheless the Muslims never succeeded in getting beyond fulness as regards the pre-Islamic history of the country. The fullest survey of this literature (cf. above p. 141) is given by Ibn al-Maqqar. In this early period, however, an interest in the Muslim period itself arose which followed three lines: political
history, biography of scholars and studies in topography and archaeology, the so-called Khitat literature. The same author frequently cultivated all three fields. The origins are very obscure. A. R. Goetz has collected all that is to be known about the early history of the historical literature that has survived in the brilliant introduction to his Al-Khidr, pp. 251–272. Little survived to us, the later subdivision into the above-mentioned branch is not yet found. In Al-Khidr (d. 350 = 951), however, we find them treated in separate sections. In the field of the history of scholarship it was most difficult to preserve local charadters. Here two interests combined, that of the criticism of tradition and the biographies necessary for it and that of pride in local celebrities, among whom were early reknowned scholars who had made a temporary sojourn in Egypt. From Al-Khidr to Ibn Husayn al-Ashtulat, from Ibn al-Umda to Sayyid and Makhtal's Mu'jaz there run unbroken lines. But in Egypt, just as in Spain, these inconstant rules are such that the principle of selection is the connection with Egypt. We likewise only referring here to those who specialized on Egypt among writers of political history, for people like Suhbi for the history of scholars and Nawwak for the historical encyclopaedia belong to another field. What delightful collections of details we owe to the gossip Ibn al-Daula for the Fatimid period, the versatile Ibn Zu'lit, and the diffuse chronicler Musabbihi for the Fatimid period. An appreciation of the whole work of the Fatimid historians is given in Buldaji, 1. A characteristic feature is that the treatise from the earlier period, which becomes gradually less from the Fatimid period on, is the preponderance of the (Hizal) who were historians. Musabbihi gives a wealth of official documents and this becomes the rule with Ibn al-Ma'anih and Kadi Fajjal. The very minute descriptions of etiquette at the Fatimid court in Ibn Taywis seem to be copied from a book of court ceremonial. Ibn Mununis gives from personal knowledge details for the Dbawis and later al-Omari a chancery manual, the most perfect work on the latter's model being Khusrawshadi. In his Tarikh al-Fatimiyin al-Nahalbisi publishes an official memorial and in his Luma'a a thinly veiled justification for reinstatement in office. Finally writers like Ibn Dujun and Ibn Djafar use or reproduce bodily records of official surveys. Of course concurrently with this we have the discussion of history proper, we used only mention Ibn Iyad and the numerous authors in Syria who at that time embraced both Egypt and Syria in their histories of the Empire. There is no Muslim country that can point to so perfect a historical tradition — on its political institutions also — as Egypt.

Lastly the Khitat literature is quite unique. In other countries the rudiments of it may, it is true, be found but nowhere has this style of literature attained such a development as in Egypt. Although according to his Al-Khidr, al-Khidr's and al-Khidr's was a Pisanian, no account of Oriental ideas they maintained a high level of secrecy. An unbroken chain runs from the above-mentioned authors of this literature through Ibn Abi Tahir al-Khatib, Ibn Ma'anih, Ibn al-Daula to Ibn al-Ma'anih, al-Mu'tazzam and al-Mu'tazami, down to Makhtal, an invaluable work in spite of its faults. It is true that Makhtal mentions relatively little of the credit for the book is really the work of contemporaries. If it be taken with the same author's Ma'jaz and the Sufi, we get a fairly good idea of the pre-Ottoman period's contribution to the history of Egypt.

Our sketch of the intellectual life of Egypt would be incomplete without a brief reference to the popular literature, whose home was in Egypt or at least received its final form there. For the tales of the 10th century the reader may be referred to the article AL-FATIMI, MUS'AB ALI, WADILAYS (L. 257E et seq.). The great romances of Antar, Zahir Badrus, Sulay b. Dhu-Yazan and the Baal Shalki have been much less studied (Bibliography in Brocklau, Gesch. d. Arab. Lit., 117, 472, on the significance of the Saff romance, in Der Islam, 1, 272 et seq.). The character of the eccentric Fatimid Hakim early became the subject of a romance (Du Sacy, Exposé de la Religion des Daceurs, 1). Of a more burlesque nature is the Egyptian pseudo-play, on the earliest representative of which, Ibn Dünayj, G. Jacobs has published numerous studies (Geschichte der Schauspieler, p. 36 et seq.; extracts from Ibn Dünayj's sufficiently). Of great importance for the study of the culture depicted in these pieces is G. Jacobs's Einige griechische Lautermarke im XIII. Jahrhundert (Bayer. Abh. d. Wiss. Sitz. Ber., 1910, 19). However difficult it may be to draw a distinction between what is common to Islam in general and what is peculiar to Egypt in the fields of literature and science, in art it is almost impossible, for the development of art and culture in Egypt is indissolubly connected with that of the whole Eastern Mediterranean and the buildings of Cairo are only so often quoted as examples because they are easy of access and as well preserved owing to favourable historical circumstances. As mentioned above, some critics have gone so far as to deny any Egyptian character to this art of Cairo. Art and science were international possessions in Islam. But in spite of all international influences Egyptian art and architecture retained a certain indigenous character; it is more as much at home there as the doctrines of a Malik or a Sha'ti. In the beginnings of Islam Coptic architecture enjoyed a great reputation, for in many foreign buildings we find Coptic appearing as an element provided by the Contra (cf. Der Islam, 1, 407). The earliest buildings of Islam in Egypt must therefore have had a Coptic character although even in the oldest mosques the tradition which the Arabs brought with them decided their general plan and disposition. We know very little about the early centuries. The history of Muslim art in Egypt begins with the Fatimid, on the ornamental and architectural principles of which very little difference of opinion exists (cf. the articles by Herrfeld and Strewig on Der Islam, 1, 396, with the literature given there). More recently Herrfeld, Erster von Bisägur. Berichte über die Ausgrabungen von Sawmiyya, Berlin 1912, have been the ornament, in the principle of pillar and arch construction, the peculiar form of minaret indigenous or imported from Sawmiyya? These are the questions the settlement of which must be left to the historians of art. The general character of the Fatimid culture is in favour of the theory of importation but it is also quite possible that only the external and obvious elements were brought from the east.
and thus initiated in native architecture and art. We meet with similar questions in the Fatimid period with its new and strange art prevailing art, where Persian character cannot be denied (painted arches, immeasurable patterns, exuberant Kufic). Here also Herzfeld sees in the ornamentation continuations from the Fatimid period, while S. Th. von Branca makes this development "Beschreibung der Kunst Moslems in der Zeit der Fatimiden" (St. Petersburg, 1893). Von Branca is the first to discuss Fatimid art in the *Jahres-
zeit," 1900, p. 411 et seq., and Strengowski has more recently dealt with it in *Mäzane und Dschida*. The most important architectural monuments are described in the article *calo*, i.e., *zakat* et seq. A new period begins with Salah-Adin. It is in keeping with the reactionary character of his epoch that the art of the period also shows a new spirit, which finds an external expression in the substitution of Naqsh-i as an decorative script in architecture in place of the previous exuberant Kufic. With the new requirements of the period, new kinds of buildings like the madrasa, or the khāqānā, above, continue to develop under the Mamluk. This style of building was created under the Fatimids, gradually became prevalent and assumed more and more, more markedly eastern forms and we have already seen that the whole Mamluk period was characterised by Persian influence. The use of stalactites as a means of transition from the quadrangular base to the springing of the dome, underwent a constant and richer development. Another borrowing from the East is probably the accentuation of the façade, unknown at an earlier period, which we first find in the Almohad Mosque of the late Fatimid period and attains its artistic zenith in the dome-like domes of the Sultan Hassan-Mosque. For further details see the articles *calo*, *baraqex*, *maram-, *al-mass* as well as the literature given above and the following works, Pierre Pasche, *Cairo*; Saladin-Mounir, *Manuel d'Art Médiéval*; Stanley Lam-Poole, *The Art of the Saracens in Egypt*; E. G. K. Brey, *La Musique nationale de l'Art arabe* (Catalogue); *Egypt, L'Art arabe Fouquet, Contribution à l'Étude de la Cinématographie scientifique (Paris 1909)*; Arm Jauquard, *Contribution à l'Étude du Blason en Orient*. The really scientific study of Egyptian architecture and decorative art is still in its infancy, it has not yet even been satisfactorily explained when by peculiarly Egyptian in it.

A civilization, which excludes foreign influence, is as a rule the result of the establishment of political boundaries. Egypt as a state has only from time to time been limited to the valley of the Nile. Egypt was at first a province of the Caliphs and then the centre of Syria, including Syria and other countries. Thus far-ranging is the composition of Muslim civilization and the migratory tendency of Muslim science, to be brief the picture given above is, at least in the fields of intellectual life and art not exclusively Egyptian but is characteristic of the Muslim civilization of the whole of the Western Asia. Egypt, as we have seen, certainly has indigenous characteristics but it was its intellectual productive power mainly to the continual immigration of powerful intellects, who were attracted by the splendours of Cairo, the city of the Caliphs and Sultans. Medieval Egypt offers a brilliant picture but the Muslim military constitution already contained the seeds of decay. It was an exhausted, impoverished and damned land that the French expedition found on its arrival. The new Egypt is a work of the Khedives and of Europe. As to how a modern advancing Egypt has been developed from the mediæval darkness of the Mamluks, cf. the articles devoted to the Khedives, Mahommed 'Ali and his successors.

**Bibliography:** P. Born, *Geschichte der türkischen Medizin*, p. 57.  (C. H. Bicker.)

**ELIAS.** [See Ilyas.]

**ELISA.** [See Ilyas.] P. 300[?]

**ELIKIR.** A synonym also 'like khalafkhat, the scower means by which the alchemists believed base metals could be transmuted into silver and gold, synonymous with "the philosopher's stone." Although it has not yet been found in the older Greek alchemical works, it can hardly be doubted that the word is derived from the Greek *kalos* "powder for wounds." It is frequently mentioned in the writings of A. H. H. L. H. edited by Brinmolt. It enters the metals and permeates them like poison in a body, a small quantity will transmute a million times its weight in metal to gold. It can only be kept in vessels of gold, silver or rock-crust as it attacks glass. According to the definition in the *MesUfi al-Ulum*, the *elikir* is the drug which transforms metal into gold or silver when it is boiled with it. In excess it causes circles, however, it was also called *mutlib ilajin, mel'mi al-qibli*, famous in some but of unknown composition. The word *elikir* is also considered a means of prolonging life, for once it has made perfect the baser metals and hastened their development, it merely could remove the imperfections of the body, keep it sound and prolong life. Such "elikir of life" were prepared for mortals and are still made out of all sorts of ingredients.
ELUL, Arabic Auli, the name of the twelfth month in the Syriac Calendar; see TAMRISH.

ELVIRA, from the Arabic Iltira (rarely Lezinta and Yitzira); this should be read in Yatiri, l. 348 with Fiechter, v. 40 instead of Beitha from old Beitham, Ilteri, also Elibari, Ilbiri etc. = New Town: in town ferri Belver, (Munich) Florentinum Iltirietum of the Romans), was in the later period of the Arab conquest and under the Unusids the name of the province afterwards called Granada, whose Arab capital was at that time Kasftiya or Medinat Ilbira, only incorrectly called ilbira alone, and lay 111 miles N.W. of Granada, N. of the Genil between the modern Atarfe (Arab al-Tarif) and Pina Puente at the foot of the southern slopes of the Sierra de Elvira which still bears its name; the name once so celebrated is still preserved in the Pozos de Elvira, the "Well of Elvira" and in Granada in the Petra and Calle de Elvira in the N.W. like the ancient Castilla in the hamplace sarre, Castilla, Kasftiya. — Madinar Ilbira was once the rich and flourishing capital of the province of the Arabs from Syria who settled here, but it began to decline strongly in 800 = 1000-1010, when as a result of the great Berber revolution in Cordoba and the provinces the inhabitants migrated to the adjoining town of Granada so that the town in time fell completely into ruins. Its ruins were still considerable in the 14th century when they were visited by Ibn al-Khattab [q.v.]. The question whether the ancient Iberian Roman Ilbiri (of the first known Spanish Council at Elvira in 304 or 305) and the Gothic see lay on the site of the modern Granada [q.v.] or on the site now occupied by the ruins of the Arab Elvira, is probably to be decided in favour of Granada. The Arabs then, following their usual aversion to the capitals of their predecessors, must have in this case also moved the site of the capital of the province and at first retained the old name for the province on Kasftiya Ilbira with the capital Medinat Ilbira = Kasftiya.

ELMALU (Turk. *Attepevi*), a market-town in Asia Minor, the capital of a Kasf of the Sandjak of Tekke in the Vilayet of Konya, S.W. of Adana, between this town and Delvard, at the east end of Lake Van, with about 6000 inhabitants, mostly Moslem peasants (the Christians are merchants and artisans), twenty mosques, three Greek and one Armenian church and five Turkish baths. The climate is healthy and the temperature low. The Kasf has about 20,000 inhabitants of whom several thousand are Jews and includes 73 villages and two Nahiyas, Fenikie and Engerd-Kardul. Fenikie, the name of which reminds one of the Phoenicians, 40 miles south of Elmalu, is a small resort with 3000 inhabitants mainly Greek Orthodox; near it are Lybian tombs and a Phoenician inscription. The country is mountainous and rich in forests and pasture, wine, olives, oranges and building-wood.

There are also three villages of this name in Asia Minor, Turkey, of which one is in the Kasf of Urfa in the Vilayet of Trabzon, the second is on the shores of Lake Van, and the third is in the Sandjak of Malatia, in the Vilayet of Malatia T-Armin.

ELWEND, Arwina in the Arab authors and gazetted as Oronz with classical writers (Achæmenid inscription, Semitic legend), still called Elwend or Naxwend in the district, a lofty granite mountain mass, about 17,560 feet high, a spur of the Zagros system, S.W. of Hama.
which owes the fertility of its gardens to its wealth in water and snow. The scanty accounts of the
Arab geographers are mainly confined to in part fantastic stories of a well on the top of the moun-
tain, which Muslim tradition declares to be one of the wells of Paradise no doubt with reference to
older religious ideas which cling to the spot, cf. Juncoson, Ferin Post and Present, p. 146, 170-173.

(R. Hartmann.)

EMIN. [See Amis. l. 243-]

EMIN PASHA, a distinguished German
explorer and colonizer of Africa. Emin whose
real name was Eduard Schnitter was
born in Oppeln (Schlesia) on the 25th
March 1840. From 1858-1864 he studied medicine
and science in Breslau, Berlin and Konigberg, taking
his Dr. Med. degree in March 1865. In autumn
1864 he went to Antwerp which at that time was
still a Turkish possession. Here he began to practice
medicine privately. But in the following summer
he was sent as a resident quarter master for the
district. Schnitter became a particular
favourite of Ismail Paşa, the governor of
northern Albania, who resided in Scutari and his
wife, a native of Transylvania. After Ismail's
death in 1873 he lived for two years with his
wife, whom he left towards the end of 1875 to
return to Konigberg. In the middle of April Gordon,
then governor of the Equatorial Provinces appointed
him governor medical officer in Lado, Schnitter
took up his duties here on the 7th May 1876 and
adopted the name Emin Efendi, professing to be
a Turk educated in Germany. On the 3rd June he
was sent as Gordon's diplomatic agent to king
Mwata of Uganda and in 1877-1878 to Kalunga
of Unyoro and a second time to Mtesa. At the
end of June 1878 Gordon, who had meanwhile
became Governor-General of the Soudan, appointed
Emin governor of the Equatorial Province on the
invitation of the Russian-German explorer Junker.
Emin, who was now received the title Bey, and later
Pascha, displayed a wonderful activity in the ad-
vent of civilization in his new office. He
controlled the Danakil (a kind of irregular soldier)
who were always inclined to raid, furthered trade,
agriculture and civilisation in general and
extended his territory. When he took over the
government, the province showed a deficit of
50,000 annually, but after three years a surplus
of £2000 (cf. G. Schwetscher, Emin Pascha, p. 220
et seq.), which was later perished. When Emin was
cut off by the Mahdists from Egypt was stored in
the form of ivory. When Gordon left the province the number of stations in it was 15;
Emin raised it to 50. At the beginning of the
Mahdits rising (1881-1882) Emin's territory stretched 400 miles from E. to W. and 500 from N.
S. From the middle of April 1883, Emin in consequence of the Mahdist rising was cut off from
any connection with the Egyptian government. In the spring of 1884 Kussim Pasha, the
leader of the Mahdist army which had conquer-
conquered the province of Bahir al-Gumal, demanded
his submission. He refused to surrender and
Dally his position became more difficult. He therefore
left Lado at the end of April 1885 and transferred his headquarters further north to.
Wad Selai. On the 2nd January 1886, Junker who had
been with Emin since January 1884, set out for the east coast of Africa, which he reached on the 14th
December 1886. Another explorer, the Italian Cesati remained with Emin from January 1885 till he was
relieved. Early in 1887 Lado, where a garrison had up till then been maintained, had to be entirely abandoned. Emin took up his
quarters for a brief while in 1886 and for a long period in 1887 at Kubah, his station on the east
shore of the Albert Nyanza. Meanwhile at the instigation of the Royal Scottish Geographical Society a committee of Scottish
commercial gentlemen, perhaps attracted also by the possibilities of the country had equipped an expedition to
relieve Emin. Stanley was appointed to lead it. He
reached Emin (but not the Equatorial Province proper) in the spring of 1888. Stanley's caravans
had suffered so much on the route that its arrival was more of humiliation than use to Emin; nor was the attitude of Stanley calsu-
culated to strengthen Emin's position. When Emin announced to his officers the orders of the
Egyptian government that they should withdraw, the most of them remained behind and kept
Emin a prisoner in Dubbe from the middle of August to the middle of November 1888. On the
17th February 1889 Emin, who had resolved to
depart, joined Stanley on the western shore of the
Albert Nyanza. Their joint expedition reached the
coast at Bagamoyo in the beginning of December 1889. Here Emin was received with the
greatest honour but owing to an unfortunate accident was confined to bed for three months. On his recovery
Emin (at first provisionally) entered the foreign
service of the German Empire. On the 26th April
he left the east coast with two officers (Stuhmann
and Langholtz), 3 Sergeants, 100 soldiers and 592
braziers. His object was to secure the upper
lands south of the Victoria Nyanza. The most im-
portant events of the expedition were the hoisting
of the German flag in Tabora and the foundation of
the station of Bukoba on the west coast of the
Victoria Nyanza. Both these measures were contrary to the will of von Wissemborn the governor of
German East Africa, but approved by Karl Peters
who had been sent by a German committee to
relieve Emin but did not meet him till June 1890
in Moupon. Throughout this expedition Emin showed
himself a bitter enemy to the Arabs, not only in his letters to Wissemborn, but also in the measures
he took to suppress the slave-trade. In the
second half of March 1894 vague rumours of the
death of Emin of fighting between the people he had left in the equatorial province and the surrounding
negroes. Although forbidden by Wissemborn, he now crossed the northern boundary of the German
protectorate to attract his old officers and soldiers
to his side and march with them wherever possible
westwards via Mushaunu and occupy the hinter-
lands of Kamerun. This plan proved quite impracticable. On the 29th September the retreat
was begun from Andebuli (on the upper course of the Ituri or Aruwimi). An epidemic of smallpox
reduced the expedition to a very small state. On the
7th December, Emin sent Stuhmann with the
squad more to Lukondo, while he remained be-
hind with the invalids. In the absence of any
other possible route of retreat he decided to march westwards; he began his journey on the 8th March 1892, first to 1000 near Kilungo-longa on the Aruwimi. He next went up the Aruwimi, then in a southwesterly direction right across the primate forest with the object of reaching Kiloeng, a station on the upper Congo, 100 miles from his base. On the 27th October 1892 by command of the king of Kiloeng, the Belgian Captain Densina found one half of Emir's last diary on entering Nyaswe, the capital of the land of Manyensa, in February 1893 and the other half after the taking of Kiaoosgo, the capital of the notorious slave-trader Tippa Tippa, on the 24th April 1893. Kiloeng, the assassin of Emir's murder, was court-martialed and shot on the 9th January 1894.

While yet in Turkey Emir had completely adopted the externals at least of a Muslim and Turk and resumed this attitude after he had entered the service of Egypt also. (G. Schweritzer, Emir Pasha.) This was the best explanation of the fact that he was so long able to maintain his authority in the Equatorial Province. We have already seen that he was not therefore the less an enemy to the slave-traders. Although he tolerated slavery in his own province, it was only because he could do nothing without slave-labour. At a later period, when in German service, he plotted for a complete separation of the land of the negroes from the Arab territory and for the expulsion of all Arabs without a fixed abode. He thought most highly of Roman Catholic among Christian missions (although himself a Protestant!) because they alone built up pretty stations and made the negroes useful as labourers (Schweritzer, p. 100). Emir was on the whole rather pessimistic about the possibility of cultivating the negro mind also.

(G. Schweritzer, p. 143.) As an administrator Emir was a skillful organiser but hardly a conqueror—a man who made the most of his opportunities but took no risks. In science he achieved a reputation more particularly in oceanoLOGY and ethnography; he was also a brilliant linguist.

(A. Schrader.)

EMIR [SOS ANQ. 1. 3395.]

EMIR SULTAN, i. e. SIRHAH AL-DIN MJEHEM-MEK, R. ALI AL-HUSAINI AL-HURIAK, also called Sayyid Muhammad Talghi, Sayyid Emir Sultan, Emir Sayyid (Ashkaphadzade, p. 148, Hanseball's Chronicle in Lancer, Hist. Mem., p. 541, 545, whence Magazines in Kanonem), the great patron saint of Brasa, born about 770 A. H. migrated to Asia Minor from Bukhaid and settled in Brasa, where he died in the plague in the month of October in 832 A. H. According to tradition Emir Sultan was in high esteem by Rustom L. Vedderim, whose daughter, Khudisi Sultan, he married; when the Sultan took the field, he had his sword graven on by him, and the saint's admonitions persuaded him to give up the drinking of wine (cf. the anecdote in Kwyly, Tvaroth etc., p. 24, = Tawhidie of, p. 32 et seq.), when Bayad sought to slay Timur's envoy, Emir Sultan successfully opposed this breach of international law (Ali, Kitab, v. 53 et seq.). On the capture of Brasa by an advance party of Timur's army in 850 he was taken prisoner and brought to Timur's court. Timur set him free and wanted him to come to Samarkand; but Emir Sultan preferred to return to Brasa (Said al-Din, i. 188 et seq.; Sheref al-Din, i. 28, v. 51). Legend, however, knows nothing of this but says that the saint brought about the withdrawal of Timur's troops from Brasa by a miracle (Said al-Din, iii. 427; Kwyly, ii. 483). When Maral II. succeeded to the throne in 827 A. H., he had his sword graven on by Emir Sultan and the saint is said to have hastened by his prayers the death of the false Muntak, who challenged Maral II.'s claim to the throne (Ali, i. p. 190 et seq.; Lampel, Hist, p. 493 et seq.). In the following year he took part in the siege of Constantiopolis with a train of 500 devils but the fall of the city prophesied by him did not take place. The Byzantine emperor refers to a person who was present at the siege, given in an old and vivid description of Mirastaad the "Protarch of the Turks" as he calls Emir Sultan (p. 466 et seq.; 477 et seq. ed. Honn); while the Ottoman historians say not a word about this mishap.

After his death a splendid mausoleum was erected over his grave which became one of the most popular places of pilgrimage of Selan (Tashkoycendi, i. 76, 377; Said al-Din, i. 188; Lampel, Hist, p. 371 et seq.; v. Hammer, Umphild uss, p. 52 et seq.); and legend begins to tell of the miracles (Mirastaad) of the saint.

Bibliography: Tashkoycendi, i. 76 et seq.; Said al-Din, ii. 425—427; Ali Khan, v. 110; Gildthie of Brasa, p. 69—79.

(7. von der Helm.)

ENNIF, i.e. AT-AZ-ZE, v. "the nave", is the name of one of the second to third magnitude in Pegase or as it is called by the Arabs the larger Horse. Kaswini and Hilgh Beg call this star ennif al-Fareis (= the horse's mouth), the latter also calls it Dafaif al-Fareis (= the horse's lip). Al-Battani has no special name for it, he calls it *the star which is in its (i.e. the horse's) mouth*. The name Eal probably passed from the works of western astronomers into the Latin translations of the middle ages.

Bibliography: al-Battani, Opus astronomicum (ed. Snellius), ii. 144; iii. 254; Al-Kazwini, Knoephilus (ed. Westenfeld), i. 34—35; Lo. Ideler, Untersuchungen über den Ursprung der Sterneamen (Berlin 1809), p. 171.

(H. Sulzer.)

ENNAYER (usually نَيْعَرَ in Arabic text, Benner, the name of the first month of the Julian calendar, among the natives of North Africa who reckon by solar month, and have retained the Latin names of the months (cf. Arzawa, i. 531), also the name of the New Year festival celebrated at the beginning of that month by Christians and Muslims in North Africa; for the Muslims there is a rule take part in different Christian feasts, for example, the feast of the summer solstice or the Aqurra feast (see ANZARA,
A portion of the meal prepared for the day before the Ennayer festival is kept under a dish.

In some districts it is the custom to stew green twigs on the flat roofs of the houses, on the sashes and on the floors of the tents, on the day before Ennayer, so that the new year may be "green," i.e., lucky. In Laghza and Geryznil and among many Berber tribes, the ashes are swept from the hearth, new stones placed in it and sometimes a new salin is dug in another place in the room; it is further the custom to replace an old article of furniture by a new one and put it in another position.

People in some districts collect offerings, such as the figs, and the apples at Nedroum, the @en Ennayan@ at Teiemen and the @en Rughana@ in western Tunisia; a hen (henjel abjalt) in western Tunisia, a camel, etc., are among the disguises adopted.

The day following the first of January, is a day of rejoicing; it is then the custom, in the towns of Morocco, to eat the melon or firu (seven vegetables). It is an almost universal custom to kill a fowl; rich people kill a young goat or a sheep in Kabylia, it is sometimes the occasion of a fiesta; in some places sheeps' heads are eaten instead of fowls.

The condition in which a man is at the Ennayer festival, decides his condition for the whole year. On this day one ought to be happy, amiable, generous and rich. People meeting with one another good luck; parents, engaged couple, landlords and tenants, Muslims and Jews exchange presents and show little attentions to one another. Alms and presents are given and guests entertained. No borrowed articles are allowed in the house and any that have been lent are asked back so that there may be as much good fortune in the house as possible. The house is not swept throughout the whole length of the festival nor are clothes or linen changed nor the fingers-nails trimmed; in Kabylia, however, this is the day chosen for shaving off the first growth of hair on boys.

The country people examine the corn of the barley left over at this festival on the blood of the fowls killed for the feast to find out what sort of weather will prevail during the next months of the year.

Just as used to be the custom in France at Christmas time the Kabils at the Ennayer festival talk to their own and goods.

The housewife places a scorpion beneath the vessel in which the milk is to curdle in order to obtain as much butter as possible. To be able to see clearly they smear the edges of the eyehole with collyrium.

During the festival all work ceases and no journeys are undertaken; mats, carpets or hangings in process of manufacture are wound round the beams of the loom or put out of the way during the festival.

Orthodox Muslims naturally try to restrain their co-religionists from the celebration of this festival as much as possible and the teachers in the Koran schools for the same reason do not grant their pupils holidays for Ennayer. Among the Moslem population of the Senegal and Upper Niger, whose conversion to Islam is comparatively recent and who take great pride in their Moslem festivals, Ennayer and Amara are unknown.

Bibliography: Dottin, Meshech (Paris
and my article Ennayer in the Neue Afrcolais, n. 256, 1st quarter, 1905 (Algiers).

ENOCH. [See 1928.]

ENVERI, AT-HERALI, SADULLAH, Enendi, a native of Trebizond, entered the higher Turkish civil service as Khidja (superintendent of a diwana) and successively filled the office of Teshrifati (1887-1890), Ijebioguler Kurlisi (1897-1900), Teshrifati (1900-1902) and Teshrifati (1902-1905). Bilyuk Teskereli (1901) and from 1902 to his death seven years later an Anahota Mahjasebedjati. At the end of 1882 he was also given the post of Historiographer Royal (Firaki Nwiri), which he held till the end of 1907, with an interval of 12 months (28th Apr. 1908-1909), during which the post was held by Rehdz and Sultanin Molla (cf. Djewdel, II, 133); in 1902, however, when his successor Pascha Enendi went as ambassador to Spain, he was again given the office of official historian and attached to the army. He died in the field during the war with Austria and Russia, while Edik Efendi remained in the capitol in the same capacity (Djewdel, III, 435, 438; iv. 2 et seq.), and still retained the post after his return to the capital in 1905. He died on the 11th or 13th Rabet 1329 (6th or 8th October 1914) at the age of 53 years.

Ennaw left a history of the country in 3 parts, which he presented the first three to the sultan in 194 (Djewdel II, 12); they cover the years 1884-1193, and the following parts cover the period to 1200. The first two volumes of Ennaw's chronicle (1385-1188) were recast by Waff Effendi as the second part of his history (cf. Waffi Pafika, i. 315 and i. 3; ed. Constantinople 1215). Ismail Khalafi (cf. Perach, Ver. d. Tur. Histore, vii, 260) undertook a second recension. Ennaw's original work, which is considered rare, is to be found complete in the Imperial Library in Vienna (no. 1172-1189 of Filgat's Catalogue); the Egyptian printed edition of Ennaw's chronicle referred to by Rehdz and following him, Zockler, no. 940 does not exist.

ENZELL, the harbour of Reykjavík, the capital of Iceland in Persia. Enendi lies on a narrow tongue of land, which has been cut by a channel, between the Caspian Sea and a fresh-water lake called Maradh. From Enendi goes by boat to Peri Bazar on the south side of the Mardish, thence by land to Reykjavík, whence the high road runs via Kars to Teheran. In the Russian wars with Persia Enendi played a considerable part. In 1722 Russian troops landed in Peri Bazar. A Russian demonstration at Enendi in 1804 failed completely on account of the impossibility of penetrating the hinterland. In spite of its unsheltered roadstead Enendi is the most important harbour in the Caspian provinces of Persia (1905-1909: 497; 1905-1906: 320 steamships). The town owes its name to its attained particular importance in the latter half of the 19th century. While it had only 300-400 houses in the early decades of last century according to contemporary accounts, the latest English Consular reports estimate its population at 9000.

ERBIL, the ancient Arbil, celebrated for Alexander's battle there (See Pauly-Wissowa, li, 407 and v, 856 et seq.), situated between the two Zilis on the road from Mosul to Bagdad at the place where it is joined by two roads from the Iranian highlands (cf. Hising, Der Zagros, p. 35 et seq.), the capital of a Kazakh in the Sandjak of Shehri Zor in the Wilayet of Mosul. In the earlier Arab geographers the town is described as a position of the city of Ruyan in the same (cf. Bivac, Geogr. Arab., vi. 6 and 255). Erbil attained its greatest prosperity about 1300 on the capital of the Beggiadjn (cf. v. l, 688 et seq.) and is described as having a high, strong citadel below which lay an extensive market which was the great market for the surrounding country. Erbil today, that is the population of the district Kurda predominated. In the second half of the 6th century under the Mongols we found Erbil in the possession of Kurd Ender of the tribe of Mardkhaj (Notizie ed Esdrastz, xiii, 311 et seq.). Even down to the most recent times the affairs of the town were more often managed by the Kurds of the adjoining mountains than by Turkish officials. Although Erbil was still able to offer considerable resistance to Nadir Shah in 1732, it had no importance of its own for a long time and is now a small country town with 3737 inhabitants (Cinnet).

(R. Hartmann.)

ERDEL, Hungarian Erédely, the old Turkish name for Transylvania or Siebenburgen. After the battle of Mohacs (1526) the boundaries of this country became to a certain extent vassals of Turkey until the Peace of Castlevie (1699), Siebenburgen passed to Austria.

EREGLI, the province of Heraclea, the Theophanees, p. 483, 400; 4 V. Herakleia Komnena of Michael Attaliata, p. 156 (ed. Boman), Theophanes or Egev of Heraclea in the epic of Huges Arcitan, the Hryala of the Arab (Asia), ed. Houton, Knecht, etc. etc. iii. 18, 5, 249, 260. Turk. (R. Freih.)

and occasionally archaeised, Heraclea, Froula, by the
Kroick, Phraeal of the Crusaders (Tarnarach, Zerbistor, Topographer von Meinachem, p. 84, 89, 92), Archeol in Bertrandou de la Boquiere, p. 194 et seq. Ed. Ch. Scheler, was a forrest in the Byzantine frontier on the road from Cipedia to Leonan and was repeatedly taken by the Arabs, notably by Haiin in September 506 (Tafuri, iii, 710 et seq. = Theophanes, i.e.), but remained a Byzantine possession till it was taken from them.
by the Sabellite of Konya (in 484 = 1094, according to Ewliya, iii. 20). At a later period it belonged to the kingdom of the Karmanoghis and with the rest of territory passed to the Ottomans in 1466. The population (about 5000) is almost exclusively Muslim; there is a small Armenian community. 50 years ago there were 10 large and 11 small mosques. Among the larger mosques there is one which according to the Diboumoun was founded by the Karmanoghis Hatunbeg (according to the Merslik al-Husafi by Hilal Arslan); the caravanserai built by the architect Sinan in the 16th century for Constantine Pasha is also mentioned. Legend says that the spring at Hamyani were miraculously produced by the Prophet, in which account the title of the district were a wa'af of Melitina (Liouibouna), Ewliya, cf. Sa'd al-Din, ii. 516. Eregli was formerly a station on the route followed by pilgrims and since 1908 it has been an important station on the Baghdad railway from Konya; the town is the capital of a kafig in the sandjak of Konya.

J. H. MORETTMANN.

EREITREA. The population of the Italian colony of Eritrea may be divided into nomadic, semi-nomadic and settled tribes. In certain cases one section of a tribe leads a nomadic life, a second is semi-nomadic and the third settled. According to a tradition generally believed the earliest settlers in Eritrea were eight tribes who came one after the other, but any definite, reliable reference to their origin or order is quite wanting. This tradition certainly shows that the population of Eritrea has always been numerous and undergoing radical transformation, passing from a nomadic to a settled and from a pastoral to an agricultural life. This was the case in times of peace; in time of war, however, the divisions among the people which resulted thereby, led to confusion which lasted for centuries, now centres gradually arose in other sites out of the rule and step by step became linked up with the mosque or less permanent settlements.

The present population of Eritrea is for the most part of the Hamitic type, which probably showed pure features, in many parts of the area now forming the Italian colony, in the period of Egyptian civilization, but which suffered many changes for the reasons above mentioned. In any case the traditional number, eight, of the peoples in it has now been raised by its learned men in ten or fifteen, or even more. At the present day there are certainly very marked differences in language and customs among the inhabitants of Eritrea whether they are descended from a common ancestor or not.

The Abyssinians, who inhabit the plateau and are quite identical with the Tigritas on the other side of the frontier in the Ethiopian kingdom preponderate. The Abyssinians of the colony number not quite 110,000 and show traces of a culture well organized on a patriarchal system. They all, moreover, as well as agriculturists, form settled communities and live in villages, which usually adjoin one another and are therefore small; this is due to the poverty of the districts inhabited by them. The average number of people in each Abyssinian settlement is about 125. Dainelli and Mari

neli point out that, although small and very small villages preponderate, some have quite a considerable population, apart from those whose development is due to the Italian occupation. At any rate it is improbable that any one has more than 1000 inhabitants. A similar state of affairs probably exists in the Abyssinian provinces, which border on the colony of Eritrea.

Two other settled agricultural peoples, who live in villages, are the Canama (somewhat over 13,000) and the Baris (about 700). Tradition says that these people to the Hamtic stocks and are among the oldest in the colony. They mix to some extent with the Sidamoze. While the Abyssinians are Christians, the Canama and Baris are heathen.

The other peoples in Eritrea are for the most part nomadic and pastoral tribes and the majority profess Islam. Among the most noteworthy are the Bari 'Amur, who have arisen through the fusion and superposition of other peoples; they live by cattle-rearing and alternately their abode between the mountains and the sea. As a rule they speak Bedawy (cf. the art. Bajawa) and form a community of about 40,000 souls. Next come the Habab and other allied tribes who live between the Bari 'Amur and the sea numbering about 24,000 in all, they are wandering herdsmen and speak Tigre; next come the Mena, the Mofia or Marea, the Saldeter, the Tsita, the Hasa, the Danakil, the Dabakali, the Euga, etc., all very ancient peoples, originally coming from the highlands of Ethiopia but intermingled with Egyptian and Greek colonists who made their way inland from the sea. The Bilad, in the valley of Gheren, form an interesting section of this group; they are divided into Copts, Roman Catholics, and Muslims and do not lead quite such a nomadic life as the preceding.

The Bel Taku (4000), the Begina (1000) and the Menas are neighbours of the Bilad. The Abo (900), the Minilimi (5000) and the Hasa (1500) are nomads who rear cattle and devote some attention to agriculture; they profess Islam.

The inhabitants of the Danakil district belong to the Alar type and number about 15,000 in Italian territory. In all probability they are tribes who are mixed with Greek and Egyptian colonists; the majority are nomads and practically all are Muslims.

The islands are only partially inhabited; their total population is about 2500 of various origins, who live chiefly by fishing and pearl trade. About 10,000 people of Scislit origin live on the coast of Massaw in impounding villages.

According to the census of 1905, the Italian colony of Eritrea has a total population of 74,944, of whom 192,177 are Muslims, 208,553 Copts, 12,362 pagans, 7235 Roman Catholics and 297 Protestants. The figures do not include the white population or the Danakil group who live within the boundaries defined in 1908. If these be included, we get a total of 282,000 and not 500,000 or more as has been given in certain unofficial works compiled before the census.

The religious representation in the colony are in the order of importance and number of followers: Islam (in the four sects of the Hablab, Eghida, Malikite, Habbale) Coptic Christianity, Roman Catholic, Evangelical and Greek Christianity, Judaism and Buddhism. Islam is spreading most rapidly and is the most attractive.

The authority of the government is enforced on
the natives by commissioners and residents. For this purpose the colony is divided into five commissionerships to which the central area belongs and five residencies in the frontier districts.

As regards the administration of justice the canons of civil law is that established by royal decree on the 14th May 1908. Until the publication of the code of civil law, any one was considered a subject of the colony, as regards the administration of justice, who was not an Italian or citizen of a recognised foreign power who had been in the colony or belonged to a tribe or race of the colony. Any member of an African or other nation of the Red Sea, who regularly fulfilled or has fulfilled his obligations to the authorities, or lastly has lived for two years continuously in the colony, is also considered a subject of the colony. A foreigner who belongs to a people that does not possess a civilization similar to the European, is regarded in the same light.

Among the natives justice is administered in the first instance by their princes, the assembly of elders, the chiefs of provinces and tribes, the Kadi in the commissionerships and residents, who in cases of appeal deal with the controversies of the Kadi, heads of provinces, tribes and the princes, with the exception of those that come within the jurisdiction of the courts. The government of the colony is always endeavouring to extend further the authority of the ordinary officials of the colony on the basis of a criminal regard for the ethnic and religious distinctions among the various coloured peoples who live in the colony. Italian statutes are applied to the colony with such modifications and alterations as are rendered necessary by the economic conditions, law, everyday life, customs and requirements of the land. Italian law recognizes with limitations the most important and fundamental customs of coloured peoples in the matter of religion also. In the case of the Muslims, as far as it is possible to conform with the spirit of Italian legislation, they approximate to the traditional law as contained in the Koran and expanded by the authorities recognized by each tribe. Italian law is administered in criminal cases and customary law in civil, but particularly in the case of the Muslims and more especially in matrimonial cases, in the Koran, hadith and suna. The exercise of the Muslim religion is freely allowed.

ERIWAN, Armenian Erebuni, the capital of a government in Russian Transcaucasia, in 40° 15' N. Lat. and 44° 38' E. Long. (Greece), about 3000 feet above sea-level on the left bank of the Zangik, a tributary of the Araxes with a population of about (1827) 50,000, according to the authorities 14,000, but a history dating back to remote antiquity according to the Armenian sources (see St. Martin, Memorie sur l'Arménie, i 116). It is only since the begin-

ning of the Turkish period that the town, written Kewon by the authorities, has obtained any considerable importance in the history of Islam. The tradition given by Evliya places the foundation of Eriwan as late as the 12th or 13th century and that of the crusades about 1000 years later under Shah Ismail. In the reign of Musul Kim, Eriwan which at first belonged to the Safawids, was won for the Turks by Ferhad Pasha and fortified. Shah Abbas I regarrisoned it in 1664. After a series of battles with varying result it was taken by Ferhad IV in 1685, but soon afterwards fell again into the hands of the Persians. A brief survey of the history of the town may be gained from the article ARMENIA I. 442. In 1727 it was taken by the Russian general Pakhnevytsch, who received the title Ekremkawl in honour of its capture. Since the peace of 1829 Eriwan has belonged to Russia. The mosques, celebrated for their fairness and other important buildings, date from the 16th century.

ERTOGRUL, surnamed Sultan and father of 'Otthman II, the founder of the dynasty and empire of the Ottomans. According to the oldest tradition, which is preserved in Eski clsy, he migrated with 400 nomadic Turkish families from the area of Ovey and Suvetil. Atias at Aissa Minor where Sulaiman was born, he found himself in the district of Boghd between Karakash and Adelstickh as winter pastures (Adelstickh) and the hills of Ermenk and Demnuth as summer pastures (gajita). Karakash and Mednicik still belonged to the Byzantine but they paid tribute to 'Ali al-Din 'Aluddin, the father of the Genoese rulers of the district of Amiri Karshehr, Ertogrul settled in Boghd and was buried there; he never engaged in a war. He had three sons, 'Othman, Gahidit and Samsudin (also called Sarath and Sarath), of whom 'Othman succeeded him. According to Nesbit (Zeitschr. d. D. Morgen. Gesellschaft, xii. 188—196) Ertogrul ins-
EROTCHRII — ERZINDJAN.

The town has only borne its modern name since the 16th century. In 1049 the Seljuk's destroyed the town of Arzan, not far east of Karen, and its population moved to Tshedoblopolis = Kaliqal and gave the town the name of Arzan al-Krum "Arzan of the Komans" which became corrupted to Arz-al-Krum and Ard al-Krum "land of the Komans". Shortly afterwards, the Seljuk's finally destroyed Byzantine rule in Armenia. From 588 — 627 (1192 — 1230) Arzan al-Krum formed an independent Seljuk kingdom (cf. Tushnajian).

In 1241 Erzerum was swept by the Mongol invasion. Muzaffar (in the first half of the 13th century) speaks of the numerous churches in the town: it must therefore have been the most part inhabited by Armencians. On the other hand Bajfida found Turkmen tribes preponderating and their doings brought about the ruin of the town. The district of Erzurum from this time on was one of the strongholds of the Ak-Kuyufali; after the wars with the Kara-Kuyufali that followed Timur's invasion, Uzun Hasan, the greatest of the Ak-Kuyufali, built the citadel of Erzerum, but lost it before his death to the Ottoman Mohammed II after the disastrous battle of Torojas in 878 = 1472. Erzerum then became the centre of one of the most important pashaliks in the Ottoman dominions, an outpost whose possession was often disputed by their Persian rivals, but which was always successfully retained by the Turks. It was the capital of the Erzurum Eyalet and was finally assigned for the rebellion of Ahmet Pasha (q.v. v. 1. 6), which was put down in 1627. Since the 12th century the fortress has had to defend, with little success it must be confessed, the Turkish frontier against Russia. After the battle of Dzowi Bayan (q.v. v. 1. 641 et seq.) in 1627 Erzerum was irretrievably lost, but was only surrendered to the Russians after the truce.

If we may believe the various estimates, the population of Erzurum has considerably declined in the last century. Although the lack of any railway or of a good system of roads militates against the importance of Erzerum, the town, which Gaunt credits with 38,906 inhabitants, is still of importance on strategic grounds as it is better fortified with modern, hardly strong enough forts, and is an important commercial centre as the centre of trade for the wilayat (annual exports about £400,000 — mainly products of cattle-rearing; imported £400,000 — £450,000) and its hinterland and as a centre for trade with Turkey.

(ERZINCAN.

The capital of a sanjak, with about 25,000 inhabitants in the wilayet of Erzurum, lying in a fertile plain on the north bank of the Karas-St between Erzurum and Siwa, it is said by the Armencians to date back to pre-Christian times. We first obtain definite facts about the town in the Saldjak period (cf. the article Saldjak). According to Yakut it was inhabited mainly by Armencians. In 627 (1230) the Kayseri-Shah established a rule (q.v. l. 1004) was defeated here by the Seljuk's Al-Adil-Ke-
ES'A'D EFENDI, MÜHAMMAD, a Turkish official and historian, son of Mustafa Ağa İlahi İsmail, born in İbu 'l-Ka'da 1096 (Oct. 1685), filled several judicial offices in the lifetime of his father, accompanied the Turkish army to Belgrade in 1152 (1739), became Kâğız-ağa of Rûmîli in Muhammed I 1157 (Feb. 1744) and succeeded Mustafa Ağa-Muhammed-Zade in office on the 24th Rûdabi 1161 (20th July 1748). He was the author of 'Aṣṣâb al-Türk (Arabic-Turkish Dictionaries), printed in Constantinople 1211 (= 1795), 'Aṣḳānî's Kâğız-ağa ("Book of the Nightingale") and a Tâbrîzî Kâğız-ağa ("Collections of biographies of singers"), and Arabian and Persian poems; he also wrote a Tâhirî in four celebrated poems in praise of the Prophet (Bûsûl, Hamayûn, Yünişeh and Aṭâk-ehbâk). He was a good musician and founded several schools and mosques.

After being deprived of his office for no reason on the accusation of 'Abd Allah Paşa, Sultan Muhammed I's great vizier, in Şevval 1162 (July 1749) he went to Gallipoll and then to İnğilî-Kü, near Constantinople, where he died on the 10th Shawwal 1180 (22nd Aug. 1763).

ES'A'D EFENDI, MUHAMMAD, nicknamed Hândî-Âlî, a Turkish official, son of Şahîkh al-Islâm 'Abd Allah Wâşâtîn, born in 1119 (1707), was imprisoned in Brazil with his father in 1168 (1754-1755), became Kâğız-ağa of Anatolia in 1182 (1772-1775), of Rûmîli in 1186 (1772) and 1190 (1776) Shahîkh al-Islâm, but was deposed eight months later and died in 1194 (1788).

Bibliography: Şems-bey, Kasım al-Fatâmî, ii. 908.

ES'A'D EFENDI, SA'dîD MUHAMMAD, called ŞAMâ'î-Zade ("son of the bookseller"), a Turkish official and historian, son of 'Abdul-Hadîl Âhmâd, who was Muhammed and at the same time a bookseller and later Kâğız of Jerusalem and Cairo, born in Constantinople near the Ayâ Şehâna on the 15th Rabi' I 1204 (6th Dec. 1790), adopted his father's profession and received the position of a judge in Adrianople and Scutari in Albania without actually filling the offices. On the death of Şahî Zade in 1221 (1805) he was appointed Historiographer Royal. He held this office for thirteen years, and in addition in 1247 (1831) he was appointed editor of an official gazette, the "Hâfizî". In 1250 (1834) he was sent to Persia as representative Muhammad Shîh, son of 'Abd Allâh Shi'ah, on his accession to the throne. He died in 1263 (1847) while holding the office of President of the Upper Council of Public Instruction.

He composed numerous orations (Tâbûnîs) on various occasions and wrote a brief account of the dissolution of the corps of Janissaries by Sultan Muhammed II, entitled 'Uṣûl-e Safar ("foundation of victory") which has been translated into French by Cansin de Pencrêl (Paris 1833).

(ÇL. HUÆT.)
ESKI (Er) "old"; frequent in place-names like Eski Sehir "Old-town" [q.v.], Eski Hıjar "Oldcitadel", a name borne by the ancient Daskyleia (see Tomashuk in Studia, ser. II, 2001, p. 5), and Laodicea al-Numan (see 222-232, p. 232) amongst others. Following a very common custom, the Turks usually call ancient ruined sites by the name of some adjacent large town with the prefix Eski, e.g. Eski Shems "Old Damascus", Eski Saray (q.v., p. 75), Eski Meydán, the ancient Balus (see Le Strange, Eastern Cities, p. 99); c.f. Eski Baghāh, see 1. 504 and 920b.

ESKİŞEHİR, on the Fırat-eşi, the capital of the same name in the sanjak of Kınahan, in the province of Rûm, with about 25,000 inhabitants, chiefly Muslims, is celebrated for its hot springs and the morcellon plant near it (see Riehl in Ferevan, 16/7/1851), and has been recently attained considerable importance as a junction on the Constantinople-Kınahan and Constantinople-Ankara railways, of which the main one dates from the Seljuk period, and another was built by Kara Müjaffar Pasha. Eskişehir is the successor of the Byzantine Dorylaion (the Τάραχα) of the Arabs) while the ancient town of that name was two miles to the north at the modern Şarşar-Çuk. In the Byzantine period the Emperor's armies assembled in the plain of Dorylaion before the eastern campaign against the Arabs and Seljuks (see Ibn Khordadbeh, ed. de Goeje, p. 199). In 897-908 al-ʿAbdū b. al-Walid conquered Dorylaion (Tabari, ii. 110); cf. Theophanes, i. 376, ed. de Boor) and Hazau b. Khütab advanced as far as this town in 162-172 (Tabari, iii. 492-493, Theophanes, p. 457). The Emperor Manuel Komnenus in 1173 again fortified the town which had been destroyed by the Seljuks and drove out the Yörüks who led a nomadic life in the neighbourhood (Kınana, p. 294, 297; Niketas, p. 236 et seq., 240), but a few years after the unsuccessful war against Killiyyet in 1188, he had to agree to destroy the fortifications and a short time afterwards the town must have been definitely occupied by the Seljuks. In the 13th century Erteşir settled near Eskişehir in the district of Selçuk uygay (Selçuk uye), Neşat, Zeirbek, A. D. Mecpez, Gaz., stii. 1928, in the sparkly letter of investiture (magg）、of "Alm" al-Din b. Faraj's, the head of the family of Bawazir 688 for Oğün 1 (Varislā, i. 56 of the second edition) the district of Eskişehir is granted to Oğün as a sandjak (cf. Lencel, Hist. Murt., p. 125, 126 et seq.); at a later period it was the residence of the Seljuks of İoanina and a station on the pilgrims' route.

ESME (Egyptian Tawaret, Coptic Snc, Arabic Esni, Greek Latapolis from the Esn Latoth skolith there) a town in Upper Egypt, lying on the left bank of the Nile halfway between Luxor and Esna. It was for a time the capital of a Mamluks, who Markaz in the Mamluks of Kanaw, with 19,105 inhabitants, celebrated for the ruins of the temple of God, Anam, which dates from the Ptolemaic period, in which a number of Roman emperors are depicted in the garb of the Pharaohs. In the Muslim period Esna was a flourish- ing provincial town. According to Edlitter quoted by Mahr, the town had 10,000 houses, and produced annually 40,000 irshads of dates and 10,000 irshads of sahadeh. Bibliography: Yalçin, i. 265 et seq.; Mayer, Khilat, i. 237; Anseline, Gazetteer of Egypt, ii. 172; A. Bonnat Bey, Dictionnaire géographique de l'Egypte (Cairo 1899), p. 183. The most detailed account and one which takes account of economic conditions also is: "All Maharashtra, Khilat Hedale, vili, 59; Bardeker, Egypt." (H. Ritter.)

EUPHRATES, [See Al-Furat.] EUTYCHIUS, Patriarch of Alexandria 321-343 (323-340) known in Arabic as ʿAbd al-Ṭayyib, born at Fustat in 203 (876) was the author of several medical and historical works. The best known is his Arabic chronicle, ناقد al-Hamshar, published by Pococke at Oxford in 1658-1659, which was afterwards continued by Yaḥya b. Saʿīd al-ʿAntaki (c.f. 3-353). The fragment of a history of Sicily contained in a famous Cambridge manuscript (c.f. Browne, History of Makkah, Misc., p. 27, N°. 1697) used to be wrongly ascribed to Eutychius (on this point see Vasiliev, Vostok i Arab., ii, 79 et seq. in the work cited by him). In the same library at Cambridge (Browne, op. cit., p. 281, N°. 1317) there is also a theological pamphlet against Eutychius written by Severus b. al-Makarna.

EWLIYA ÇELEBİ, or as he repeatedly calls himself, EWLIYA MEHMETEEM 1725-1776, the "globe-trotter" Seydihi Abu), was born in Constantinople 1515-16 (1614-1615), and died soon after 1685. For the course of forty years he made a series of long journeys within the borders of the Turkish empire, and took part in the campaigns against Cretae, Hungary, Austria etc., under Defend and Mehmed IV and published his observations and experiences in war and peace under the title Tarih-i Seydi, the Traveller's Chronicon (Vienna 1754, Flügel, N°. 1281; the Stanbul printed edition has Seydi-i-nâm), an elaborate work in ten parts. For information about himself and the life we are limited to his own statements. According to him his father Derwish Mehmed (I. 218; ii. 440-443 of the Stanbul ed., i. 440) had gone with Sultan Suleiman I to Belgrade, Rhodes, Bukov, Stahlwelskens and Sinzig (i. 166, ii. 444) and had been present at the siege of Cyprus (II. 443) and taken part in Mahomed III's campaign against Ertas (iii. 443; he was also "court-jeweller" (Zetev dergâhî ʿâli, or Kamer-i-i-nâm) and had served under Sultan Süleyman I to Hazine (ii. 443; i. 450); he died in 1567 A.H. (i. 443), at the age of 177 (iii. 444). His paternal grandfather, Defend, was the captain of the Karşımea, Mehmed I. His maternal-brother, had taken part in the capture of Constantinople and attained the age of 145 (iii. 444); his maternal-grandfather, Yavuz,
Ewlyy Čelebi was an imaginative writer with a decided fancy for the marvellous and adventurous; he prefers legend to dry historical facts, delights in exaggeration and does not hesitate at times to draw the long bow. Apart from this, his work is a perfect treasure-house of information on points of social life, folklore and geography, whose value is still further increased by simple and unaffected style in which they are vividly described. He rarely quotes from literary sources although a few are referred to (e.g. the chronicles of Mubjy 'I-Din and 'I-Djewiz); he himself has been much used by later writers, unfortunately - as e.g. by von Hammer - usually without any attempt at criticism.

Only the first six parts of Ewlyy's works have yet been printed, Stanboli 1516-1518; the Muhsinbâdh Ewlyy Čelebi (Constantinople 1529 a. ut. 1843) contains extracts from Parts I to v. Hammer translated Parts I to III under the title: Narrative of Travels in Europe, Asia and Africa by Ewlyy Efendi (London 1846-1850, Vol. I and II), after giving in the second volume of his Der Osman. Kolonialstaatsführung etc., p. 455-470 a detailed account of the contents of the first three parts. The only manuscripts of the Zübchâli Cehâbât in Europe are in Vienna and in the British Museum (J. H. Mordtmann).

Ewrenos, the descendent of Ewrenos (Ioqerh), in Achphresbathe and Nesloq (عورومیه) "Aḥṣaf in Dukas, Bâspâr in Manuel Palaiołou, Θραγμα πρωτοχρηματίων, Αθηναίων in Bablon, form with the Miletologist, Malekoghlija and the sons of Tarbâkol the four ancient families of the Ottoman nobility. (Ramberti, Con de Turchi, Bl. 153 f., ed. 1533; c. of Leclerc, Poëte, c. 279.)

Tradition mentions Ghazi Ewrenos among the boys of the Karaleghlija who on the disposition of this dynasty by Sultan Orqhan in 1235 c. ii., entered the service of Saladin as a warrior of Orqhan. He crossed the Hellespont with Saladin Pasha (in 759o or 760i) and was installed by Murâd I as afgânija (frontier-beg) in the Rasielid territory. In this capacity he conquered Kusht, Ispal, Gumuldine (703) Foros (774), Port, Xanthi, Morcone (773), Serefe (784 or 787), Mounastir, Venizelos Waseral and laid the foundations of Ottoman power in western Thrace and Macedonia. After making the pilgrimage he took part in the battle of Kosovo (June 1389), vanquished Kittos and Wodana, and repeatedly led Turkish armies against Albania (1398 and beginning of 1396) and the Mora (1391 and 1395). He then fought in the battle of Nisopolis (Sept. 1396) against the Hungarians and accompanied Bayezid II on his campaign to Wallachia. Finally he fought in the battle of Angora in the war against the Mameluke, under Mîn Sultanmîn he took part in the war against the Karamanoğlus and besieged the
latter in Al-Sharai. He afterwards went over to Muzā Cālebi (in 813 A.H.) and finally in 816 A.H. to Mehemmed I. and fought on the latter’s side in the battle of Camnatt. He seems to have died some time afterwards (according to Iblīsh’s Ḍawāriḵ in 819 or 820 A.H.). If, as the Ottoman historians say, Ewrenos had been a beg under the last Ka-""
under Muhammad ibn al-Fadlan; but the name according to the Arab, 4. f, is as above.

(2. H. Macdonnells)

FADDAN (A.), an Arabic word derived from the Aramaic (cf. Franklin, Die Aram. Formenwelt, p. 129), properly a yoke of oxen for ploughing a piece of ground, an Egyptian measure of area, varying in size with time and place. According to Lane the faddan a few years before his stay in Egypt (1835-1838) measured about 4.1 acres; while during his stay it was increased an equal area was divided into 24许可 and contained 333 1/4 square كيلو, the كيلو being first reckoned at 34 and later at 32 كيلو. In the time of the French expedition there were three different faddans in use; the faddan in use on the banks of the Nile (1,356 square), that in use away from the Nile (2,375 square), and the faddan of Damiette (2,072 square); Upper Egypt (1,670 square) = 5724 square metres, and the Coptic (2,375 square) had each their own faddan besides.

Decondermanchac estimates the ancient faddan of 460 square كيلو (the كيلو being reckoned at the length fixed by al-Hariri; مساحة كيلو of 6 long أهر (Egyptian ell)), at 583.9 square metres, and the modern faddan of 333 1/4 كيلو at 400.53 square metres.

In Syria the faddan also means a single box; as a measure of area it is 333 square كيلو.

fiddhara (A.), "sum, total" from faddhala "and this makes", at the end of an addition.

fadir (See fiddhara.)

fadir (A.) "daybreak", the title al-Sura LXIII.

al-Fadl b. al-Rafi', al-A'mu's vizier.

A descendant of a Syrian slave manumitted by the Caliph Othma; al-Fadl proved himself thoroughly Arab in his attitude and constantly championed the Arab spirit in opposition to the numerous Iranian elements in the 'Abbasid empire. His father al-Rafi' b. Yama had played a part in history as vizier to the two Caliphs al-Mani' and al-Mahdi. When Harun on his accession gave the Barmeclides preference, al-Fadl felt himself slighted and became filled with hatred and jealousy of them. On Khairun's death in 173 (792-793) he was appointed vizier by Harun and filled this office till 178 (794-795) when Vahby b. Kholid b. Barma became the real ruler. Al-Fadl thus did his best to bring about the fall of the Barmeclides and succeeded in once more obtaining the vizierate which he retained under Harun's son and successor al-A'mu. Just as his namesake al-Fadl b. Sahl ruled al-A'mu's brother, afterwards Caliph al-Ma'mun, almost absolutely, al-Fadl exercised an extraordinary influence over al-A'mu. When Harun died suddenly in Kharkhan in June 176 (March 803), while on a campaign against the rebel Rafi' b. Lailat, al-Fadl ordered the whole army destined for Kharkhan back to Baghdad. He succeeded of, al-Fadl then in violation of the death Caliph's last wish, a proceeding which al-A'mu, who was then governor of Kharkhan and was once paid homage to his brother, could not prevent. As al-Fadl feared al-A'mu's vengeance, if the latter should ever become Caliph, he exerted all his influence to induce al-A'mu against his brother. As early as the year 194 (809-810) at the instigation of al-Fadl and Al b. Idr. Is. a former officer of Khir- rasan, the Caliph had his son Must mentioned in public, which was clear evidence of his intention to declare him his successor. In consequence al-Ma'mun broke off all relations with his brother; in Rashid 196 (March-April 812) the latter was taken prisoner and declared deposed, and although he was soon set free and raised to the throne again, al-Fadl thought it advisable to retire.

In 201 (818-819) he came south again from his retirement. The troops in the capital rose against al-Ma'mun's governor, al-Hassan b. Sahl. The commander there, Muhammad b. Abi Khalid, was successful at first; but when he quarrelled with al-Ma'mun's other generals, he was over the rebels by al-Fadl. Now took Muhammad's side; the latter attacked Hassan b. Sahl but was defeated and died of his wounds. Al-Fadl then lived in retirement till his death. On the intercession of Tahir b. al-Hassan, governor of Khurasan he was pardoned by al-Ma'mun. He died in Hadi II, or in Dhul-Hija 208 (843-844).

(2. K. Zettler)

al-Fadl b. Sahil, al-Ma'mun's vizier.

Al-Fadl was a native of Persia and did not adopt Islam till 192 (805-806). His family had been strongly recommended to Harun by the Barmeclides and al-Fadl b. al-Rafi', their implacable opponent, therefore became a personal enemy of Ibn Sahil. At the former was of Arab origin, the latter was also opposed to him as the representative of the Iranian element, and just as Ibn al-Rafi' controlled the one brother, al-A'mu, the other, al-Ma'mun, was simply a tool in the hands of Ibn Sahil. The struggle that ensued between the two sons of Harun was thus also a struggle between their visions or between Arab and Persian culture. As al-Fadl b. al-Rafi', feared that al-A'mu would on Harun's death disregard the arrangements for the succession made by the latter, he persuaded al-Ma'mun to try to accompany Harun to Khorassan in 193 (808). In the following year the Caliph died and when al-A'mu recalled the army sent against Khorassan and al-Ma'mun was thinking of hurrying after the troops and reinforcing them of their duty, Ibn Sahil persuaded him against this. Instead of al-Ma'mun's army was sent to the army; but he could do nothing with them and was received with insults and the army continued its march to Bagdad. In the period following al-Fadl remained the prince's faithful friend and adviser and constantly urged him in all things to insist on his own rights against his brother. It was due to the constant intrigues of Ibn Sahil that al-A'mu allowed himself to be led into granting the command of the army, which he was sending against al-Ma'mun in 195 (811) to the incapable 'Ali b. 'Ali. 'Ali was defeated by Tahir b. al-Hassan; he
himself fell in the battle and his troops were scattered in flight. After this success Al-Ma'mun gave Ibn Sahl the government of the eastern provinces and at the same time gave him the title Dīn al-Qaṣāʾ al-ʿAṣlāmī (Lord of the two highest offices, i.e. of vizier and commander in chief). When the aged general Hartghan b. Ayyad, who had rendered such services to Hārūn, was appointed governor of Arabia and Syria, he decided to go to Ma'mūn in Marw to give him an account of the condition of various parts of the empire. The Caliph commanded him to go to Damascus; but when Hartghan in spite of this appeared in Khurāsān, he was represented by Ibn Sahl as a rebel. The Caliph therefore had him thrown into prison where he was put to death a few days later by Ibn Sahl. Al-Ma'mūn, however, finally found out that the latter did not always tell him the truth and therefore had his former favourite murdered in the bath in Sarāqqān in 202 (818) or 203 (819).

(K. V. Zettersten)

AL-FADIL b. YASSĪNA, a Barmakī, born in Dīn Dīnī (February 766) governor of Dār al-Aziz, Tabaristan, Kūfah etc. 766–178 (792–797) and of Kūfah 778–779(794–795–796–797). On the fall of the Barmakīs in 237 (850) he was thrown into prison. He was released in confinement in al-Raḥil in Ramdān 122 or Muḥarram 103 (605). For further details see above a, 665 (article ARAMAKIDES).

(K. V. Zettersten)

FAĐIL ALLĀH, a family of officials in Cairo under the Mamluks who traced their descent from the Caliph ‘Omar I, so that the individual members are also known by the title al-Qurānī. The founder of the family was Fađil Allāh Dīmān al-Dīn, Abu l-Maṣāḥih b. Izz al-Dīn; one of his sons, Sharaf al-Dīn Abū al-Walāh (died 777 = 1377), was private secretary to Külwīn, another son, Mûsâlî dīn Yāsīn (died 778 = 1378), was likewise private secretary under l-Nâṣir in Damascus, but moved to Cairo in 333 (1332–1333). The latter had a son, Shihāb al-Dīn Abu l-Abbas Ahmed (b. 1301), who first became fađil, then secretary of state, but is best known for his literary works. He compiled a comprehensive, encyclopaedic work entitled Masūd Allāh al-Maṣāḥih fi Masūd al-Maṣāḥih as well as an official letter-writing manual, al-Maṣāḥih al-‘Aṣaṣ, which, however contains much valuable material and was printed in Cairo in 1512 (1602–1603). Other works by the same author are detailed by Brocklänum, Géogr. ar., LIII, II, 121. Shihāb al-Dīn, or as he is usually called, al-Fādīl, died of the plague in Damascus in 748 (1348).

Bibliography: in Brocklänum, pp. 64–67, to which may be added that Thesiger gives extracts from both the above works in his Rescues of Maltravers and of the Ministry of the Lizard, p. 264–271. Cl. also Mathes, Khalīf, 56–67 sp.

FAĐIL ALLĀH, surnamed Hūṣayn, founder of the Hūṣaynid, born in Asṭād in 742 (1330), was a dervish who shared the religious opinions of the Karmağams. He actually seems to have borrowed the system, which develops a whole theology out of the calculation of the numerical value of the Arabic letters, to which he added the four additional letters of the Persian alphabet (cf. Bektash, L, 601 et seq.) from the Jomātians. He was executed in Shirwān in 796 (1393) by Mir-šāhīn, son of Turān. One of his pupils, ‘Alī al-‘Alā, went to Asia Minor, was received into the Jomātian monastery and began to preach Fadil Allâh’s doctrines, which he gave out to be the teaching of Hājiḍ al-Bekāštī. Fađil Allâh considered himself an incarnation of the Deity and impressed belief in this on his pupils; cf. his teaching of the article ‘ahbarī. He is the author of Siyarun-Nabi, composed half in Persian and half in the dialect of Asṭād, also of a religious poem, which was probably called ‘Arsul-nafaʾil, of another poem called ‘Arqul-nafaʾil, "book of the throne" and of a treatise called Muhṣir-nafaʾil, "book of love".

FAĐIL ALLĀH. [See RAGHĪ-AL-DIN]

FAĐIL (Foyd, Puthal), the dynastic name of a group of tribes in South Arabia. Besides this name we also find ‘Osmānī (Ulema), as the founder of the dynasty, Fadil, is said to have been of Turkish origin. They are a branch of the ‘Yābī and formerly bore their same also.

The land of the Fadil lies between 45° 10' and 46° 30' E. Lat. (Greenw.) and has a breadth of 20–30 miles. It is bounded on the south by the Arabian Sea, in the west by Lajdul, in the north by Yari and in the east by the land of the ‘Awādullāh and Dārjānī. In the west there is the large valley of Abyan; with the Wāli’s Baha (Baz, Baha) and Haṣān, both of fair size, which are filled with water during the summer rains. The district in the east of the W. Sāhā may be mentioned among the hills in the east. The soil is fertile only in the west (district of Abyan). The chief product here is cotton. The soil is mainly steppe-country, the capital of the country and residence of the Sultan is the town of Satīs, five miles from the coast, with about 400 inhabitants, a large mosque and the fortresslike palace of the Sultan. The only seaport or commercial town is Shagre (Shaker), with about 100 inhabitants and a palace of the Sultan, who lives here two months of the year. Jews live here only during the trading season, which lasts only a few months in the year. Among the towns in Abyan we may mention: Aja, with about 500 inhabitants (a fifth of whom are Jews, who have a large synagogue here), at one time a flourishing seaport, now much declined, Ma’t on the W. Haṣān, with about 300 inhabitants (including many Jews), a large mosque and a hereditary governor, known as the ‘Ulema dynasty, and Yabu with about 300 inhabitants (including many families of Jews) and a hereditary governor, who bears the title Sultan.

The people of the Fadil country are Sufis.
and devout Muslims. They strictly observe fasting in Ramadan, the prescribed prayers, the prohibition of wine and other prescriptions of the Koran. The Murâbiša and Ask Ela are the most important of the tribes who inhabit the country. They are as a rule free and independent (gadiyâ). The people of Ahwaz and the Jews are on the other hand subject to the Sultan (ra's гар). He levies taxes on them at will and administers justice. If a man commits a murder he is stabbed to death with the knives of the Sultan's soldiers at the murdered man's grave. When a thief is caught for a first offence he is beaten before the Sultan and forced to give back the stolen article, on a second offence his hand is cut off; if he commits the offence again he is thrown into the sea in a loaded sack. Religious transgressions such as the breaking of a fast are punished by imprisonment in chains. Adultery is held equal to murder. If a murderer cannot be found, the so-called "test by fire" is tried (ordal). This is carried out in the presence of the Sultan by the "fire-judge" who places a red-hot knife on the tongue of the suspect. The decision then rests with the fire-judge.

The Fâhîl at one time belonged to the Yâbî and passed with them under the rule of the emirs of Vehuz from whence they afterwards made themselves independent. They later became enemies of the Yâbî and in the fourth decade of last century took from him the fertile district of Ahvaz. They live at hereditary enmity with the so-called "Abasîl of Jasâni and the "Awâlîk, to which latter their district of Dalhán became tributary. On the other hand they are on friendly terms with the Khalbîl, Râshî and Aqârî. Their relations with England down to 1865 were strained. In this year England made war on them and inflicted a severe defeat on them at "Asâra, whereupon they made peace. Since that time they have been on friendly relations with England.

The dynasty of Fâhîl is of great physiological interest because of its possession of six fingers. The Sultan as well as his nearest relatives have a fingerlike growth beside the little finger of each hand and the little toe of each foot, which is regarded as a sign of extraordinary strength among the Southern Arabs as among the Semites generally.

FAGHUR (arabic fâghur, "son of fire") an expression brought by the Arabic theoforms. Fâghur (V. Horn, "Annals of the Seljûq Turks," p. 50) is the designation of the Emperor of China and the translation of the Chinese ti-tu-"Son of heaven" (Ibn-al-Alîq, vii. 224, ult.). The Arabs have preserved the form fâghur, which is more a western form, but fâghur is also found notably in the Arabic inscription in the cemetery at Zaitoun (Tevân-shan), of the year 723 (1323) which has been discussed by M. van Berchem: in Marco Polo (ed. Vyle and Coudière, ii. 145) the name is applied to the last Song Emperor; and as the Mongol Emperors bore the title shâ de (šihâda) it is probable that the title fâghur refers to Chinese sovereigns of native dynasties before the conquest of the country by foreigners.

FAHIL, among the Jews, Pîsâl, called Pîsâl by the Greeks in allusion to the name of the Macedonian town, at the present day ruins of Fâhîl on the western slopes of the land east of Jordan. It belonged to the Decapolis and in particular celebrated because the Christians went thither on leaving Jerusalem before its destruction; it afterwards belonged to Palæstina Secunda and was the seat of a bishop. About six months after the battle of Adhâjiden in Dhu-l-Khâdîya of the year 83 (January 653) the Muslims attacked the Byzantines who had assembled in the land east of Jordan, at Fâhîl. The Byzantines had broken the dams at Basân and turned the water into a marsh but the Muslims crossed the Jordan without mishap and put the enemy to flight whereupon the town surrendered. The battle is also called "the Day of the Swamps".

The geographers mention Fâhîl among the towns of the province of 'Adımı, According to Ya'bî the population as usual in this part of the world was half Arab and half Greek.

FAHIL. By this word Muslim scholars in general understand all things which may be taken from the unbelievers "without fighting," and further very often the lands in conquered territories. The name "fâghur" is explained from the peculiar expression in the Koran, li. 6 and 7, "What God has allowed to return to his apostle" (makhlukun idol-akâbūt). The possession of the unbelievers which are "returned" to the Caliphate.

Verses li., 6, 3 and 10 of the Koran were revealed, according to Muslim tradition when Muhammad had resolved not to divide the fields and orchards left by the Banu 'Abd-al-Nasir, who had been driven out of the country, as hostile of war among those who had taken part in the siege, but to give them to the Muhâjirûn exclusively. He justified this action by arguing that these were really obtained not by fighting but in a peaceful fashion, by surrender.

After the conquest of Ethiopia and Fâhîl also the lands of the Jews there were not wholly divided among the troops as booty but in part placed at the Prophet's disposal. It was probably on this occasion that Koran li. 7 was revealed:
What God hath granted his apostle as far from the people of the town, belongs to God. To his apostle, to his family, to the orphan, to the poor and to the traveller—what the apostle of God gives you, accept; but what he forbids you, abstain from. What would not properly be regarded as booty, was to be managed by the Prophet himself as state property, and the proceeds therefrom as well as the fifth of the Sabaqiyas [q.v.] were to be applied to the general good.

At a later period 'Umar b. al-Khattab, in consequence with the view of his advisers of the Sabaqiyas thought that this principle should be applied to the newly conquered territories also. He ordered that only movable property captured should be divided among the Arab conquerors but not the land. The land was to be applied not for the advantage of the generation then living but as far belonging to all time to the whole community for the benefit of all future generations of Muslims also. It was also feared at that time that if the Arabs devoted themselves to agriculture they would become less capable fighters. As a rule therefore, only the native population was given the choice of converting to Islam and deliver a certain part of the yield as tribute to the Muslim community. This payment (khair badd) was to be bound up with the possession of the land for all time. It was therefore decreted that the inhabitants who cultivated far estates, even if they adopted Islam, should continue to be bound to pay the khair badd. As the payment of khair badd was regarded as a sign of subscription, the Arabs at first felt themselves prevented from acquiring land from an estate that was far. For they would thus have put themselves in a position where they would have to pay khair badd themselves. The only exception was those districts, whose inhabitants had voluntarily surrendered on the approach of the Arab army on condition that they were allowed to retain possession of their lands. In each district (the so-called far al-Sabi q. 9, s. 290) the land did not belong to the far.

When in the course of the first century, the people of the conquered lands adopted Islam, they began, in spite of all measures of the Muslim authorities, to avoid the payment of khair badd and only gave the stubble of the yield of their fields like the Arab Muslims. The land in the conquered provinces thus gradually ceased to be regarded as far.

The views of later Muslim scholars on this point differ; the lands and estates in recently conquered provinces are, according to the scholars, always to be divided among the conquerors as far. According to the Muslims in the far, both, the majority of all Muslims, i.e. as far, while the Hanafis would place them at the estate's disposal so that he may administer them either as far for the common good or divide them as far among the troops according to the cause of Islam may be best advanced.

Besides the land, the khair badd, the faraya and all other tribute to be paid by unbelievers, as for example the duties they have to pay on their goods in order to be allowed to trade in Muslim countries, are included in far. According to Shafi'i teaching a fifth part of the far must be made sale, and applied in face equal portions to the same five purposes as the fifth part of the alms: the other four fifths of the far are, according to the same school, to be used for the payment of the regular troops, the maintenance of mosques, roads and bridges and for other objects of general utility to Muslims. On the other hand the other Farshe schools hold that the faraya should always apply the far in its entirety for the good of the Muslim community as circumstances require it.

Fara (k. a. "proper agent", a technical term in Arabic grammar) is the subject of the verbal sentence, but only of the active verb (like Zulm in the sentence Zulm es-Sabii was committed), while that of the passive verb (like Zulm es-Sabii was committed) is called farawal, i.e. al- Khaili lam yuruma farawal, = the "patient" whose agent is not mentioned) (in Shafi'i, Ch. 8 and 9; other expressions are also given).

The far can be a word only, not a sentence (this is given as a teaching of Shafi'i, in Almabdaad, Kamil i, 289, 13, 14). It must follow its fara (verbs) and is placed by it in the nominative.

In the older grammarians, as, for example, several times in Shafi'i and Kamil (i, 624), the word far also means the active participle, which is later called tam al-fara.

Bibliography: al-Zamakhshari, Musannaf, II. 10; 35; Muhammad Ali, Dictionary of Arabic Terms (ed. Spranger etc.), ii. 1446 ss.; Vieth, Kleine Schriften, I. 80.

Falsaaf, philosopher: he who studies falsafat [q.v., p. 48 et seq.]; frequently used as an epithet for deep thinkers. The Arab philosophos know the literal meaning of this word as anbikth al-khina (lover of wisdom). Al-Kindi (q.v.) was particularly known as the falsafat al- Arab (philosopher of the Arabs), presumably because he was a philosopher of genuine Arab origin in contrast to most Muslim philosophers who belonged to non-Arab nations. (Cf. the correct explanation of this name given to Al-Kindi by T. J. de Buer, in the Archiv für Geschichte der Philosophie, 1899, xi. 156 et seq.); al-Dhikli in quoting a wise saying of Al'ali b. Ali Talib describes him as Falsafat al- Arab (in Mawardi, Manthir al-Balsh, ms. Landberg, now in the Yale University, fol. 45); Dhikli's work from which the quotation is taken is not named). This is quite in keeping with the character which his doctrines give Al'ali in philosophical (or rather halal) matters (Zeitschr. d. Deutsch. Morgenl. Göttingen, Gr. iii. 359). The accuracy of Mawardi's quotation is standards suspicious because in it Dhikli speaks of himself as keeper of Hārūn al-Rashīd's library.

In modern times the Turks have given the name Falsafat [q.v.] to the eminent Stambul scholar Risālı Tewfik, who has published a study of the Hārūn al-Rashīd (Gold Memorial Series, Vol. i.), an account of his work on philosophical literature. In popular language falsafat is applied in
When in later centuries the influx of water to the lake began to diminish for unknown reasons and with the increasing desiccation its shore retreated further to the north, it had finally ceased to act as a regulator of the water supply. When this took place it had not yet been ascertainment, possibly in the Persian or perhaps not till the beginning of the Ptolemaic period (Finders Petrie, Hauver, Bichara and Arriano). At this period the dry land had extended as far as the railway line from Alexandria to Sartines. A further contraction in the lake took place in the Greek period under Ptolemy II Philadelphus in the middle of the third century B.C. C. Whether it reached its present dimensions as early as this must be doubted, for in the deepest parts (140 feet below sealevel) no traces of buildings of the Greek period are found; Keq Kérûn is at a depth of only 65 feet.

It is not absolutely impossible that the deepest parts at least did not emerge from the water till after the beginning of the Christian era; and investigation of the tombs on the south side of the island in the lake might possibly throw light on this point. It was not till then that the lake assumed the form and dimensions that it has at present, a length of 25 miles with a maximum breadth of about 6 miles and an area of 400 square miles. Its greatest known depth which is at the centre, is hardly 16 feet but there are said to be deeper places in the western part. Its transformation from a freshwater lake to a salt has likewise most probably only taken place in the last period of its formation. In spite of the strong and recent venoms increased influx of water no permanent rise in the level may be noticed although there is a slight fluctuation. The great evaporation of the surface on account of its lowly position is, however, not sufficient to explain the disappearance of such vast quantities of water. It is not improbable the water escapes by one or more subterranean passages, naturally to the N. and not to the S. into the Wadi Faiyum. The currents which are sometimes apparent in it would be thus explained. Besides, this has been suggested by Petrie (Tell el Fanaq, 489), who suggests that the lake was drained and re-established to Siwa (Sanctuary). The great wealth in fish, notably in the two kinds salti and uqlaq with eels and large sheet-fish in smaller numbers, which the lake possessed in ancient times, still remains, although it will soon diminish with the vast amount of fishing in which hundreds of boats are engaged.

When the channel that fed the Faiyum ceased to act as an aqueduct when Lake Moeris ceased to be a reservoir, it was divided into a number (8) of canals at its head near the capital Crocodilopolis, which spread over the country principally to the N. W., after three had been led off to the N. and two to the S. Before it reached the capital. In addition three other canals were led off from the aqueduct immediately after its entrance into the Faiyum, probably even in ancient times, one to the S. to irrigate the basin of Charak (Al-Suliq) and two to the north, that of Sula (or Sûla, written syûla or syûla or sula in Arabic) and that of al-Bayy (originally perhaps Bûlah) the latter, which is cut through the limestone for a considerable stretch in rising ground about 100 yards broad and 40 feet deep, shows the scientific skill of the engineers of those days.
The superficial water not required for irrigation, from these canals flowed into the lake. It was this irrigation of the ancient lakes-bed, of which course was not equally productive all over, which gained the Fayyum the prosperity for which it was at all times celebrated, which, combined with the climate, made the district the most valuable province in Egypt.

The waterworks of the Fayyum were at quite an early period described by Muslim tradition, probably under Jewish influence, in the Joseph section of the Bible, but only as a later period, called after him. When vizier of king Rihayt he caused the channel which brought the water to the Fayyum to be dug, the Fayyum which had previously been called al-Djoub, was a basin into which were drained the superficial waters of the Nile from Upper Egypt. Throughout the whole middle period the stream was called al-Rihayt al-Baladn (not montibi); it is only in modern times (first in Djebart) that the name Dyunus appears. The sluices of al-Djoub, which tradition also credits to him, were called al-Rihayt al-Talakht in the middle ages, and only towards their close, do we find the name al-Rihayt al-Djendj. Smaller sluices were called al-Djendj al-Talakht, and finally, founded the town of Fayyum in which there was a Dyunus al-Djendj in the 16th century A. D.

A further personage in the Koran, the fabulously wealthy Khair (Sura xxviii. 76) was likewise formalized by tradition in the Fayyum and held to be the builder of the temple in the late Greek town of Dicymaia at the western end of the lake. As early as the 13th century these ruins were called Kair Khair and were highly esteemed by treasure-seekers (Khitab al-dur al-makhtab by Ahmad Kunafi p. 244—248). The name Kair was only transferred from them to the lake at recent times, for so late as the end of the middle ages it was still called simply al-Djendj al-Djendj al-Djendj (Makhtur, Nahj, l. 240).

The Fayyum has never played any great role in the political history of Egypt. The transition from the old Oriental rule, Egyptian or Persian, to the Europeans of the Greeks and Romans brought the land the greatest material and intellectual prosperity that it ever attained in antiquity. The capital of the district had then over 100,000 inhabitants, the modern town has nothing like half that number. In 639 followed the Muslim invasion and a decline set in, which lasted over a thousand years and reached its lowest level under Turkish rule. This decline was the whole name in all other Muslim lands, notably in the very similar country of Babylonia. It is true that the Fayyum was less affected by the civil wars that ruined Babylonia, but the religious fanaticism of the new rulers which increased as time went on and the oppression of the Christian populace, of which the papyri give a detailed account for the early centuries and which is testified to by the wholesale destruction of Christian churches and monasteries by the Muhammadan, must for the later period (vii—ixth centuries A. D.)—there were still 35 monasteries in the Fayyum in 1216 (Abu Salih, p. 52), and only 13 in 1545 (Othman, Fayyum, p. 24)—were always worse in Egypt than in other countries. But particularly it was the incapability of all the Muslim dynasties to manage the internal affairs of the country in an orderly fashion, notably the finances, of which attempts were made in this direction the incapability of maintaining good government for any length of time. Lastly as in Babylonia there was the immigration of Bedouin tribes, a plague which the rulers of Egypt had been striving to ward off for thousands of years, but in which the gates were now open. The influx and passage through of Arab, afterwards also of Berber tribes and the fighting with them lasted down to the Fatimid period (al-Kindu, K. al-Walid ibn Abi Fadl, ed. Gneuss), which favored the immigration of the Berbers. One Berber tribe, the Luzzat, settled in the Fayyum. In the vii—xii th century its population was predominantly Bedouin; the remnants of the ancient agricultural population had to place themselves under the protection of the immigrants. According to the account of Emir Othman (p. 12—14) these Bedouins belonged to three great tribes:

1. The largest in numbers of gunnali Arab descend the "saint of the dog", Rann El-Khedig, held the largest portion of the land, was settled first, and centred to Taftun (also written Taftun, the Greek Teptum) in the south.

2. The Ranni Kefel, likewise Amals, inhabited the eastern part as far as Sanares; the modern place-name Hawara Kefel near Ilahino shows that they settled there also.

3. The Berber Luzzats in the S. E., as far as the province of Bahmas (Makhtur).

These Bedouin tribes in course of time became settled and have amalgamated with the remanents of the ancient population. But to the present day the inhabitants of many villages still call themselves Bedouins although they may have been peasants or fishermen for generations, possibly only to escape military service.

The decline of the Fayyum in the Muslim period may be best illustrated by the rapid diminution in the yield from taxation. It seems that the land was still tolerably prosperous in the Umayyad and early 'Abbasid period in spite of the manifold administration which began in the second century A. D., although we have no definite figures at our disposal. Our earliest figure date from the ivth century A. D., in the time of Kifur al-Fadl (135 Abu Salih, 336 Makhtur, following Ibn Thalith); Ibn Tahir who was governor then was still able to raise 630,000 dinars in taxes. Under the Fatimids, however, probably especially in the reign of al-Mustansir which unfortunately for the quantity basis half a century, it must have rapidly declined. At the end of the Fatimid period the revenue had sunk to 145,162 dinars in the year 575 (Abu Salih); for 585 152,703 is given (Makhtur, following K. al-Walid's K. Muntakhab al-Djendj al-Djendj) Solaini's gearing of the villages of the Fayyum in far to his Turkish enemies, deserve to be contributed to the prosperity of the district. How the administration of the provinces was conducted under him may be judged from the following example: When the Emir Zirin al-Durr Khudr was sent as governor to the Fayyum in 577, he found nothing better to do than to take all the harvest of the country. He was then recalled and the Fayyum placed under the Minister of Mullet [Munc al-Djendj] (Makhtur, Historia de l'Egypte)
ed. Blochet, p. 142, 144, where Khoutenbourgha should be read for Khoutenbouch. Two years later Saladin granted the Faiyum with Bish and al-Ayyub, not ‘Ankal. Blochet’ to his nephew Taqi al-Din Qumar Shamsah, who usually resided in Hanou.

In the last quarter of this century severe famines raged several times on account of the drouthiness of the Nile, and in each of these there was great loss of life, estimated for three years, 596–598.

We have a touching lament on the decline of the land in the ‘Ayubi period in the book of Elar ‘Othman, who was appointed governor in 547 A.D. In consequence of the settling up of the Belj al-Munhah water could only flow into the Faiyum during four months of the year when the Nile was at its height. The smaller canals in the country were also neglected so that parts of it became swamps and infested with miasma. The population was insiduous without any intellectual interest; even the upper classes had abominable notions of cleanliness.

But its condition was to become much worse. As long as the sheiks had rules, who lived in the country itself, they still took some interest in the maintenance of the irrigation works. Thus we are told of al-Makki al-Najir in 741 that he built a Ghar (dam or sluices). Makki is the time of his time (beginning of the 10th = xv century) to give a detailed account of the canals and their work in the different months of the agricultural year. Sulim ‘Ali Rau (end of this century) visited the Faiyum and saw no less than three times and built a mosque in the capital; he also had access to three and a half square miles of which 800 are under cultivation (Beadholl, The Topography of the Faiyum Province, p. 14). In spite of the advance made by agriculture in the last 30 years, however, the area under cultivation is not yet as large as in the Greek and Roman periods. Large tracts of land in the west and notably in the north are still covered with sand but it is only a question of time till they are regained for the plough.

According to the last census (1907), not very reliable, it must be confessed, the population was 377,000; the capital had 33,000 inhabitants but has probably 40,000 by now, aiming then the Greek element is beginning to play an important part. There were 85 towns and large villages and 1931 small villages.

Very few memorials, and less of all buildings, have survived from the long history of the Faiyum. The most celebrated work of antiquity, which however lay only on the edge of the district, the Labyrinth, has utterly disappeared. From the ancient Egyptian period there have only survived a small pyramidal in the S. It, a tomb ‘of Badrijj; in the middle ages Balutur, 1576 feet long, and the temples, now also demolished, of the two colonnades of Amunahb at Biahom, which were still in existence with their inscriptions in the xvi century. From the Greek period there have survived the ruins of the towns and temples on the borders of the district, Ksar Kari, Dimé, Ksar al-Siga etc., but nothing in the lowlying parts. Practically nothing has survived from the Arab period. The mosque of Kait Rau in Madaine which dates from the end of the middle ages has been absolutely rebuilt in the usual process of conservation. The few churches and monasteries that survive have not yet been investigated, it is hoped that valuable finds, particularly of manuscripts may be found in them; but many are unfortunately been destroyed for ever with the incessant influx under agricultural conditions.

Manuscript. As regards the records of the past we have; however, come to light in much greater quantities with the finds of papyri, which were first made in the winter of 1877-1878 and next from 1884 on in the ruined mounds several miles wide of the ancient capital, and later in other parts of the country. As these cover a period of almost 3000 years
and are written in about ten different alphabets and almost as many languages, they form a hard
some compensation to the study of antiquity for the monuments that have disappeared. The Arabic
papyri, which have come principally to Vienna but also to Heidelberg and Cape Town, contain a consid-
erable number of them, but from their historical value, are the oldest documents of the Arabic language and
alphabet. It is safe to suppose that these treasures are not yet by any means exhausted and fur-
ther finds may be expected with certainty.

FAIZABAD, properly Faizabad, the name of two modern towns in Central Asia:

1. On Faizabad in Bokhara: cf. the article Faiz-Darya, i. 340. and faizabad in Badakhshan, see
this article. ii. 535 et seq. (where it is erroneously called Faizahdad); Faizabad in Bokhara, lying in
a fertile valley with green pastures throughout the year, is now a town with about 3000 inhabi-
tants, the residence of the tax-collector (molkadari) of the Beg of Bokhara; the citadel is in this
town. Faizabad in Badakhshan lies on the right bank of the Kokha, which is here crossed by a wooden
bridge; the town is a mile or two long and only a quarter of a mile broad. Cf. L. Kostentso, Turk-
omanic, tr. von 1. 149, 204 et seq. D. Logofet, Bokhara’s History, 1. 186 and 248. J. Minajew,
Syzjediniya i stranam po cestavam Amu-Darya (St. Petersburg 1879). Index Faizabad is also the
name of a village near Bokhara, at the tomb of Khodja Baha’ al-Din Nabi Shabd.

(W. BARTHOLOM.

FAIZABAD (FYZABAD), a town, division and district in Oudh (Bihar India). The town of Faizabad lies on the left bank of the river Gogra near Ayodhya, the ancient capital of Oudh, and with this town has a population of
75,088 of whom 17,574 are Musulins (1901). The town was founded by Sa’d-ud-Dawla, son of Sa’d-ud-Dawla (1753–1773), was the first to make it his headquarters after his defeat by the English at Bunar in 1764 and erected a number of buildings there. His tomb still stands there as well as the larger and more beautiful one of his widow Bahi Begum. The division of Faizabad comprises the districts of Faizabad, Bahraich, Gonda, Sultanpur, Patiyah, and Bara Banki and has an area of 11,711 square miles and a population of 6,685,591 inhabitants of whom 14.5% are Musulmans.

FAIZFI NAGHSH ALIHU, FAIZFI Calligraph. Born in 544 (1150), he was the son of the Calligraph
al-Zahr and his real name was Abu ‘1-Kasim Ibn Ajab. After the assassination of his father (30th Mahras
549 = 16th April 1154) he was carried by the visier ‘Abbas out on his horse and placed on the throne before the boy’s father was killed. The gruesome scenes of those days, particularly the sight of his uncle Yusuf and DJhafi slain by the orders of ‘Abbas, are said to have so worked on the mind of the unfortunate boy that he was constantly afflicted with his till his early death. During the six years of his Caliphate the govern-
ment was in the hands of ‘Abbas b. Rustam [q.v.]. Within this period fell the death of ‘Abbas and the execution of his son Naghi, the actual assassin of al-Zahr, and the visitation of Damascus, Tinnus, Rousset and Alexandria by a Sicilian fleet (1550;
Juma 11. 520 = August 1555). al-Fahfi died on the 37th Rajabah 555 = 23rd July 1560 at the
age of 115.

Lowde's translation, p. 420). There is a long notice of him in the Darb-i Ābār, (Lahore 1898), p. 359, and in another in the Maqālib-i Umrān, ii. 584. He was a voluminous writer and is said to have written 101 books. He formed an extensive library which was taken possession of by Akbar.

**Bibliography:** Faqīr's Letters are in MS. in the British Museum: Rumi, Cal., pp. 572 and 984. His version of Bhāshā, Libnān, was published at Callama in 1625, whereas his Sūṣkūr original was published in 1632. An English translation of his Ādāb was published at Bombay in 1715 by John Taylor. There is also one by Coldicott. (One of these translations is quoted by Longfellow in his Kānaṇghā.) Faqīr's best known poem, the Nāl Dauān, was published at Callama in 1631, and there is a later edition by the Newel Kishpur Press, Lucknow. For notices of Faqīr's poems, see Haman, Rektheek, Vienna, 1838; Ouseley, Biography. Nieüer, Bönemann, Ābār Ābār, Aga Almed, Haji Amīr (Callama 1873, the Markaz Adwār only); Besant, On Dict. and The Dictionaries of Rien and Elbe. (BEVERIDGE)

**FAIZULLAH ERENg (AL-SAYID MUHAMMAD), son of Shāhī Muhammad, Mutti of Erzurum, came to the court of the celebrated Shāhi al-Islām Wāli Erefād, introduced by his father-in-law to the court of Sultan Muhammad IV. He was appointed tutor to Prince Mehmed in 1680 and to Prince Ahmed in 1689 and filled this office till 1697. On the deposition of Mehmed IV he became Shāhi al-Islām under his successor Selim II, on the 12th Rabī' I. 1095 (16th January 1689) but was deposed on the 28th Jumādā I. 1098 (30th April) and banished to Erzurum. When Mehmed IV came to the throne he recalled his former tutor from exile and appointed him Shāhi al-Islām on the 18th Shawwāl 1665 (25th May 1665); in this capacity he completely ruled the weak Sultan, and among other things saw to it that the officers of Nakhl al-Aghsaf and the Karṣakkar of Rumelia and of Anatolia were given to his son and further that the eldest of them was designated his successor. He became universally hated for his love of power and as a ḍīkākūsh — he traced his descent from Shams al-Dīn Tahbīrist — and finally fell a victim to the rising against the Sultan in 1115 A.H. (1703 A.D.); he was deposed on the 13th Rabī' I. (27th July) and afterwards handed over to the rebels who tortured him for several days before putting him to death (10th Rabī' II. = 24th Aug.). His body was dragged through the streets and left on the road of Adaspal, where these events took place, and thrown into the Tuniţa; a Greek priest was forced to officiate in full canonicals as part of the proceedings.

(J. H. MORTKOFF.)

**FAKHĪH, the name of an Arab not far from Mecca, where Hamza b. 'All b. al-Hasan with many others 'Alih met their death on the 9th Dhu al-Hijja 169 (11th June 566), wherefore the death of Fakhi, like that of Kethb, was observed by the Shi'as as a day of mourning and it was the custom among them to talk of the martyrs of Fakhi. Hamza b. al-Hasan was chief of the 'Abhārān troopers, who scattered his little body of followers and slew him. The place where he and his men fell and were buried, now called al-Shukhni, is regarded as sacred by the people of Mecca, who hold an annual festival there on the 14th Safar. Among those who escaped the massacre was the 'Alih Idris b. 'Abd Allāḥ b. Hasan, who fled to the Maghrib and became the ancestor of the Ifrīdīs.

**Bibliography:** Yāḥṣib, al-Ma'ādān, iii. 354; Tabārī (ed. de Goeje), iii. 532 et seq.; al-Ya'zūbī (ed. Houtte), ii. 488; Wāstendorf, Chrestomathia d. Stati. Māhān, iii. 212; Snouck Hurgronje, Mahān, i. 43, ii. 33 et seq.

**FAKHĪL (al-), "glory," a frequent component of titles of honour: Fakhr al-Dīn "glory of the dynasty," the name of a Bāyṣid (see below) and of Ibn Dājīr (q.v.); Fakhr al-Dīn "glory of the faith," a name of al-Riṣāq (q.v.) and of the Drāze chief mentioned below: Fakhr al-Mālik "glory of the kingdom," a name of Ibn Amīr (q.v.), of Muhammad b. "Abū (q.v.) and of Tūnāh's vises (see below p. 45).

**FAKHĪR AL-DAWLA ABU l-Ḥasan ABD al-RUKN AL-DAWLA, a Buṭṭūth governor. After the death of his father in Mecca 356 (September 1257), Fakhīr al-Dawla, who was then about 25 years old, succeeded the government of Mecca in the shadowy capacity of Shāhi al-Islām. He was a member of the family of his elder brother 'Aṣīr al-Dawla with the exception of 'Isāfūn and all that went with it, which went to a third brother Mu'ayyid al-Dawla. But while the latter was following out terms of his father's will, Fakhīr al-Dawla wished to set himself up as an independent ruler and allowed himself to be tempted by his cousin Bakhshāyīr b. Mu'tāz to intrigue against 'Aṣīr al-Dawla. Bakhshāyīr was slain however and in 369 (1272-73) 'Aṣīr al-Dawla sent several bodies of troops against his brother. When he entered Damascus, the latter had to go to flight and seek help in 'Umarī from his father-in-law al-Zubayr b. Wāghūrāh, who the whole of his province fell into the hands of Mu'ayyid al-Dawla. The latter was appointed governor of them and consecrated the war with great success. In 373 (1276) he defeated al-Zubayr at Kūtābā, whereupon Shāhīr and Fakhīr al-Dawla fled to Husān al-Dawla, the Samāndī governor of Khorāsān. An expedition against Dūrūlīn, undertaken by the Khurāsānīs under Husān al-Dawla, al-Zubayr and Fakhīr al-Dawla, was unavailing. Mu'ayyid al-Dawla was, it is true, surrounded; but when he had fought a way through the enemy, one section of the Khurāsān army, which he had previously won over to his side, took to flight and the allies had to return to Khorāsān without accomplishing their object. On the death of Mu'ayyid al-Dawla in 373 (1276-78) Fakhīr al-Dawla was recalled from Syria and remained in possession of the provinces of Mecca, Iraq and Dūrūlīn till his death. 'Aṣīr al-Dawla had died in 372 (1278) and after his death hostilities broke out among his sons. From the war that ensued Bahāt al-Dawla b. 'Aṣīr al-Dawla emerged victorious; but when in 379 (1280-81) he was recognised as Amir al-Umān,
his uncle Fakhr al-Din attempted to seize the whole of the 'Iraq and with this object in view made an alliance with the Kurdish chief Khud- dib, Hansawati. The allies advanced on Bagdad by different routes; but when Haidar al-Dawla sent an army against them and Fakhr al-Dawla's troops were disheartened by an inundation, the plan had to be given up. According to the usual statement Fakhr al-Dawla died in Shaban 597 (August 997); according to others he died earlier, in 583 (993).

Bibliography: Ibn al-Athir (ed. Tumbar), viii, 3, 71, 72, 75, 42, 54; al-Manasir of Hamd Allah Mustawfi, Kasrati, 65 A, 417-426; Wiliken, Gesch. der Sultane in d. Gesch. Osth. Reich nach Mitte, 200, 308, 317; K. V. Zettekten, Fakhr al-Din, a. Kordum, the chief of the DRUSIANS, called FSACADN, FECHERDIN, FECHERMIN or, by European authors, the tribe of Banu Ma'n (or an), born in 980 (1572), was recognized by the Sultanate of the Druze on the death of his father in 994 (1586). In the beginning of his reign the government of affairs was in the hands of his uncle 'Uzayr and his mother, called Sitt ummar (Sitt Nasira) by Marzili, who as long as she lived till 1033 exceeded a great influence over the son. As soon as he had taken the reins of government into his own hands, he devoted his energies to strengthening his power, collected a numerous corps of Sigians around him and rebuilt and fortified Barid, the Suraq residence of his father, which had suffered considerably in the wars with Ibrahim Pasha. He particularly endeavoured to attract European merchants thither and through them to enter into alliances with the Christian rulers of Europe who could be of use to him in the struggle with the Turkish government. At first he remained quiet, paid the tribute demanded by the Porte regularly and meanwhile was gradually extending his authority over all the lands from Damascus to Mount Carmel. But his ambitions soared higher; he hoped with the help of the Christians in Syria and Palestine to found an independent dynasty and thereby made an alliance in 1017 (1608) with Ferdinand I, Grand Duke of Tuscany. When the growing power of the Druze Emir began to arouse the Porte's suspicions, Ahmad Pasha Haidar, governor of Damascus, was ordered to bring him to terms. The latter could do little in these almost inaccessible mountains with their numerous fortresses but, when in 1042 (1635) a Turkish fleet appeared in the Syrian coast, Fakhr al-Din escaped to Livorno in a ship and was received by the Grand Duke Cosma II with great honour. But his hopes of soon returning reinforced by Christian troops and putting an end to the Turkish rule in Syria was not fulfilled. Not even his claims that the Druze were descended from a Christian Comte de Druze and that he himself was a descendant of Godfrey de Bouillon, moved the Christians to a new Crusade. In the meanwhile Fakhr al-Din's son, Ali, whom he had left as his representative in Syria and the other members of his family had been successfully forced by Ahmad Pasha to submit to the Porte and it was not till 1057 (1655) when Ahmad Pasha was recalled from Damascus, that Fakhr al-Din dared return to Syria. But he did not return as Emir, for this rank had passed to Ali, but managed the government business of the latter, notably military affairs. He fought fierce wars with the Banu Siddi (Siddi) governors of Tripolis, his followers captured Mouteinin Fakhr, then governor of Damascus, but he was soon set free again by Fakhr al-Din as he did not wish to bring about an open breach with the Porte; on the contrary he endeavoured to influence the government in his favour by bribing influential Turks. He did this successfully for a period, but finally the eyes of the Porte were opened and they sent Khodjeh Ahmed Pasha with numerous troops to Damascus to put an end to the power of Fakhr al-Din. Ali met his death soon after in 1043 (1635) in an encounter at the Sa'dan and Fakhr al-Din after some unsuccessful fighting in the neighbourhood of Joppa had to take flight. He went first to Sa'dan, then to Balid, but he could not remain there owing to the presence of a Turkish fleet. He therefore retired to the mountains, was captured in Lecce (Casale di Gentile), and brought to Constantinople in chains. There he died in 1055 by the hand of the executioner. His sons and brother were taken prisoners and to death with the exception of a son of Fakhr al-Din and a son of Yosuf, who escaped by flight. The latter, named Muhidin, afterwards became Emir of the Druze.

Fakhr al-Mulk Abru l-Muhammad Ali b. Nisam al-Mulk, a vizier. Fakhr al-Mulk was the eldest son of the celebrated vizier Nisam al-Mulk who was assassinated in Ramaḍan 483 (October 1055). After the death of Sultan Malik Shah in the same year his son Bârkiyân was proclaimed Sultan but had to defend his throne and kingdom against his rebellious uncles. Fakhr al-Mulk was then in Khorasan but when he tried to go to Bârkiyân to offer him his services, he was attacked by the followers of the latter's younger brother, Muhundid al-Mulk, who, as was also set up as a claimant to the throne, and had to flee to Hamadân which in the meanwhile was occupied by Bârkiyân's uncle Tâhtân. The latter was about to slay him but on the intercession of Vâghl Barath spared his life and even made him his vizier. After a short time Fakhr al-Mulk was thrown into prison and only released after Bârkiyân's victory, in which Tâhtân was slain, in Safar 488 (February 1055). In the same year Bârkiyân dismissed Muhyid al-Mulk, Fakhr al-Mulk's brother, and appointed Fakhr al-Mulk his vizier. But Fakhr al-Mulk soon afterwards left Bârkiyân and went to his brother Bârkiyân, who as governor of Khorasan lived in Nishâr, and was taken into his service. Here he was murdered in 502 (1106) at the age of 66 by an Assassin.

AL-FAKHRI, the title of an Arabic historical work, composed by Ibn al-Mu'tah (q. v.).

FAKHRI, Shams al-Din Muhammad ibn Mansur, a Persian philologist. His greatest work the 4th part of which was published in 1857 by G. Salem (Shams i Fakhri Irvani). Khorasan, ed. 1853, Berlin, 1857. The translation of this edition contains a Latin edition of the Persian edition of the book, which was published in 1853. According to Salem, he also is the author of a mystic poem Marghaz-i Khulad. Nothing else is known of him.

FAKHRI, a native of Cus, the most celebrated silhouett-cutter in Turkey. This art was brought from Persia to Turkey in the 18th century and to the west in the 19th century, where it is still highly popular. The works of this man are specimens of great art. Fakhri's work - the cut-out specimens of calligraphy, flowers and gardens - in the album prepared for Muzaffer, 1911, in the Viennese Hofbibliothek, for Ahmed I. He cut out a Gillian which did not however survive his artist; a Muriel IV in the other hand thought very highly of the artist. He died 1918 and is buried in Constantinople near the Adrianople gate. Cf. Figli, Gilchil (Bruss 1913, 2, p. 532-534; Oulah, Kafkat (Constantinople 1909), pp. 361; J. von Kambeck, Zur orientalischen Alteerumwelt, 4 v., 46, 45, in Silbergeschichte, 4. bd., Abhandl. d. Wiss. Wien, Bd. 172; G. Jacob, Die Herkunft der Silhouettentzarten aus Persien (Berlin 1913). (G. JACOB.)

FAL, a feast, in the first instance, one who possesses knowledge of or understanding about a thing (syn. alim, fakhi). Then as fakih (q. v.) passed from being synonymous with ilm (as in jahil-al-ilm) and became limited to religious knowledge (ilm al-ilm) than the religious law (al-khadiq) and finally to the derivative details of the last (al-fakih) as fakih passed from meaning an intelligent, understanding person to meaning a theologian, then a canon-lawyer, and finally a casuist (Lihra, vol. vii. p. 410). The text attached to Abu Hamid al-Ala al-Kalbi's "The Greater Fakih," i.e. "Ibn al-Kalbi," is on the border-line of the development, and in it (ed. Alhazay, p. 2) fakih is used in a paring general sense. This restriction of meaning was gradually brought about by the employment of the word to translate the (fakir's) pradna of Roman law (cf. Fakhr and Goluzide in Kultur der Go- gen, iii, p. 102). On the distinction between fakih and muqaddikit, see the latter and Dict. of tech. terms, p. 30 et seq., 110 et seq., 1157. In Egypt the word, in the corrupted form faki, has come to mean a schoolmaster or a professional reciter of the Koran, just as khatib in Syria now means a schoolmaster (Lane, Modern Egyptians, chaps. ii.).

Bibliography: under Fakih.
(D. R. MACDONALD.)

FAL, or 'Abd Allah Muhammad. B. 1858 or 1860. Al-A'mir, an Arab historian, wrote at Mecce in 1277 = 875 a chronicle of the city, extracts from which are given by Winsten in the second volume of his Chroniques des Stutt Mekka (Leipzig 1850).

2. 'Abd Allah, a Shami al-Makki. Al-Sheikh al-Nabat, born in 1492, died 1554, wrote the al-Hadid al-Nabat, printed etc., 1509. (C. BROCKENBURG.)

FAKRIR. One who is in need, either physical or spiritual. Thus opposed to ghani, one who is independent, rich, and commonly contrasted with miskin, one who is in a miserable state. A beggar is al-miskin, an asker. Thus in the Kor. xxi, 36, "We are the needy (jumurqin) and Allâh, but Allâh is the Self-sufficient (ghani)." Fakhrir has in consequence come to indicate need in relation to Allâh and dependence (imânur) of every kind upon Allâh, and is used in Arabic-speaking countries for a mendicant dervish (q. v.; cf. also Goldscheider, Periostungen, p. 154). The meaning "to be self-sufficient" or "the self-sufficient" is not translated by Ghani and Fakhrir.
open to Muslims. Fat' in consequence, has good associations, though it may be used of an evil one, while jihād is always had (Laud., XIV. p. 27 as in Dist. of tech. terms, p. 907). But modern usage is confused. Thus Morgen (Niddhe Perché, II, p. 433) gives the usage in the Maghūrib and Kullamān (Turkish Lexicon) in Turkish, as of a happy passage; but Winternitz (Zeitsehr. d. Deutsch. Morgenl. Ges., xil. 154) of the Syrian Desert, and Späth (Arabic-English Lexicon) of Egypt, as the opposite. Further, Fat' has developed from meaning an item which comes of itself unawares, to cover the custom of seeking the items in various artificial ways. Even the most pious Moslems approach the matter of first the eyes, then the ears, counting seven pages back and then reading the first passage on which the eyes fall (Malden, Sketches of Persia, introduction); Laud, Arabic Names, note 15 to chap. 1). Or, among Persians, a copy of the Diwan of Hafiz may be used. There are other more elaborate devices by means of tables to which the term has come to be applied. An untitled Cairo Latin of 54 pages, Qa'ar al-tuyr wey- kalafayat wakhr yi'ahir al' folk, mixture (but not in the original sense) and Fat' and jihād as synonymous. Such tables form an appendix to every calendar. Finally, al-Qazzā'ī uses lālī yādīfat al-Hāj as equivalent to sayā'id. The heart of the Hāj, on the mercy of Allah, he logs in with a statement that he so closes his book that it may be an omen of a happy close to our lives from Allah.

(D. H. MacDOUGALd.)

FALĀK (A.), Daybreak, the title of Sīra CXII.

FALĀKA (see FELAE).

AL-FALAKI, MAHMUD PASHA, an Egyptian geographer, born in 1826 in the province of al-A rad, was educated at Alexandria, then went to the polytechnic (Mahmud Khan) founded by Muhammad 'Ali and was next (1835) sent to Paris, where he continued his studies for nine years. His principal work is a map of Egypt, prepared by order of the Khedive Said Pasha. Other works in Arabic and French are detailed by G. Zaidan (see Rote, i. He represented the Egyptian government at the Geographical Congresses in Paris and Venice. He afterwards received the office of viceroy, but lost his office during the troubled times of 'Abbas Pasha; but again received office, however, as Minister of Public Instruction (al-Maktu', II. 19), and was also (1835) appointed Viceregal Viceroy of Egypt. He was appointed on the 28th Nov. 1855.

FALS (pl. FALAS), the copper coin of early Sālim. The name is derived from the late Greek δαράκ (which in its turn comes from the Latin sālia), the name of the Byzantine copper coin of 20 units in the coinage organized by the Emperor Anastasia I. (491–518 A.D.). The Byzantine sālia therefore bore the mark of value M 40 on its reverse. Its weight was originally to have been an ounce (about 30 grammes), but it decreased rapidly; by the time of the conquest of Syria by the Arabs it had sunk to 6 grammes; the smaller Byzantine copper coins marked K ( = 20), I ( = 10) and € ( = 5 nummi) were in a state of absolute confusion in the 8th century A.D. and were not adopted by the Arabs.

After the conquest of Syria the Arabs continued to strike the Byzantine solidi but with the weight considerably reduced. While before the conquest the copper money for the whole of Syria was struck in the one mint of Antioch, the Arabs established numerous mints. Hulbeke, Halieh, Himya, Damascen, al-Rah', Tabariya, 'Amman, Madinah, liyā-Filisya, al-Qayrawan and many others. The earliest fals was at first of the Byzantine type, with figures of the Emperor Heraclius I, Constans II and later they bore the figure of the Caliphs on the obverse, so the reverse at first the mark of value M, later the cross with steps while Arab legends became more and more common.

The oldest Muhammadan copper coin which is also the oldest dated coin of Falas is a fals of Damascus with the date Anno xvii ( = 638). Abd al-Malik's mint enforces (completed in 72 = 696) do not seem to have been concerned with the fals but only to have made the use of the Arabic language on the copper coins also compulsory. The fals was not considered as a standard coin but only as a token currency; its coinage was not a prerogative of the sovereign but were left entirely to the discretion of governors and local authorities. The fals therefore varies between great extremes from town to town in weight and value and also in type, and could not therefore like the dinar and dirham be current throughout the caliphate.

It seems that no legal relationship between silver and copper coins ever existed although there are some grounds for thinking that 48 fals were to be current to a legal dirham; the relationship between the two metals must have been to be re-adjusted from time to time. The Egyptians glass weights for copper coins clearly show that the fals could be any considerable size; we have glass weights of 1, 2, 3, 4 up to 30 yari (farsh) and above, which were used for weighing a certain number of fals.

The fals underwent a peculiar development in Persia; since the beginning of the 19th century it the striking of copper coins has been a privilege of the larger towns; these so-called autonomous coins usually have on the obverse a figure (an animal, a plant or an astrological sign), on the reverse the name of the town but not that of the ruler. These coppers circulated during quite recent times in Transoxiana, Afghanistan, Algharabat, Persia, and in the Bandarb (Cf. S. Prevot, Catalogue of Coins of the Shah of Persia in the British Museum, London 1887; W. H. Valentine, Copper Coins of Modern Muhammadan States, London 1911).
FALSIFA.

**Falsafa.** *Falsafa* is the term applied to the Muslim philosophy as developed under Greek influence. In addition to it other tendencies have to be considered, which constitute a conception of the universe according to the views on scientific methods prevailing in their time at least concern themselves with the general views of the universe and therefore must be considered as philosophical. This is primarily true of the current of speculative theology. Its aim is to raise to a higher intellectual level the dogma of Islam (which presents a noble positive view of Him), and bring them into agreement with the demands of contemporary knowledge. The latter are naturally broadened as regards new ideas, i.e. adopt in a liberal fashion, the former narrow-minded, rejecting them, the ortodos. The former hastily adopt at random and without thorough mental training the new i.e. Greek, Persian, Indian and even Christian and Jewish doctrines, so that they frequently throw aside their Islamic premises almost entirely. Naqshab. c. 845 (Zohak and O. Morgenst. Ges. 188, 724) is the demonstrator for himself a very mixed system which in the main recalls Anaxagoras. Mammar. c. 850 (Arch. F. Systematische Philos. xx. 409 et seq.) follows Indian ideas. Abu Nasir, died 933 (Zaidieh, O. Morgenst. Ges. bii, 301 et seq.) develops his theory of modes, possibly likewise after Indian ideas (cf. Vlastal's *Crítica philos.* philos., xxiv. 360 et seq.). The Samanu. (Arch. F. Systematische Philos. xxiv. 44 et seq.) spread the knowledge of Indian speculation and of Indian scepticism in Persia. The Sufi tendency of heterodox doctrines was immediately followed until about 900, then arose the spirituality of Kauyandi (died 920). 925 there a glowering light on the situation, like a flash of lightning from a cloudless sky. The cry now was: "Back to Orthodoxy!" Ashtari (died 935) dissociated himself from the already more prudent Djibba. He again assumed real qualities in addition to being in God, and further a direct activity and creation by God in regard to all that is not God (dualism of natural causation as it limits the power of God), even human action (predetermination, denial of human freedom). A creature can affect nothing real (occasionalism). This tendency, still too liberal (in the eyes of the old orthodox school), became in course of time identified with orthodoxy. It produced Sayyabini (died 1012), Isfaranji (died 1027), Djawari (died 1085) and Ghazali. Later scholars like Jaf (died 1355), Hujandji et seq. considered that they belonged to it. — Riza defended the homogeneity of things (Hoevte, Die Philosophie des Ahu Ragadj, and Die Lebenswissenschaft des Ahu Ragadj in the Archiv f. Gesch. d. Philosophie, xxiv. 433 and seq.) against Bagshad, where Kauzat brought the diversity of things, an Indian thesis. The influences of these schools were at work for a considerable time after (Goldziher in Der Islam, iii. 213 et seq.; Hoevte, Die Philosophische Problematik, 1910; die Philosophische Systeme der orientalischen Theol. im Islam, 1913).

I appreciate the importance of Muslim philosophy. The Muslims must set out from the defects of the Aristotelian system. The Stagirite is unequalled in this precision of his concepts. But he did not succeed in giving a comprehensive view of the whole universe under some nominal concept. The universe is not traced to a single origin. Matter is eternal and opposed to God in a dualistic system. There are attributes at a critical theory of knowledge, which are, however, interpreted by strong realistic assumptions and put forward in a tame fashion. Who can form some God is all intelligence. He has no voluntary activity. He moves the whole universe as an object of love, not as an end effusively. He further takes no notice of individual things — an anthropophorous deism. It is here that the first philosophy begins, following the Neo-platonic model. The great notion of contingency brings a unity to the whole. It is the light that explains the individual problems and allows them to be examined under the widest points of view. In the things of the world, being and existence are quite different. The two are not materially and necessarily connected. Existence is not the same in things by a self-existent Being and must be permanently maintained by them. The universe is a stream of being which, emanating from an inscrutable source, leads to all that is not God. This idea, which in the whole history of Muslim philosophy down to modern times, is again and again formulated anew more clearly and developed. Only one has not understood it Averroes.

Another aspect of Muslim philosophy is given by the religious beliefs of its representatives. These are stubbornly convinced that Islam is the most perfect revelation of God. The Prophet in supernaturals, enlightenment and vision perceives divine truths unattainable to the natural intelligence (mysteries) and communicates them to man. The philosopher recognizes a part of these truths, with his weak natural intelligence and does so in perfect harmony with the Koranic revelation. Philosophers thus appear as apologists of Islam.

The way for Greek influence within Muslim philosophy was prepared by the translators of the original authorities in question (notably Hunin b. al-Hasib and his son al-Hasib b. Hunin b. 970-990) and a beginning was made by al-Kifl (died 973) and Fakhr (died 956). Both represent an encyclopaedic knowledge but are mainly celebrated as logicians. In Fakhr we already find the main lines on which Aschenna (died 1057) afterwards carried out his great system. This fundamental concept of the whole of Muslim philosophy and suggests the reduction of the totality of the actual under one all-embracing idea. Is the notion of contingency i.e. all things which are not God, being is substantially distinct from existence (distinctius esse inter se et existentiam; cf. Horst, *Kritik der Forhri*, 1060, p. 10 et passim). If there are thus to attain to being they must receive existence, as reality and that, too, from such an agent as possesses it by reason of his very being (esse at et a se). God is thus the self-existent and necessary being, the source of being for the universe, from which the empirical world flows like a stream of being. How important this conception may be seen from the fact that mystic intuition was developed from it. It is only in the whole philosophical process of pantheistic exaggeation is emphasized, modifications of the one substantial being, God. (Hörr, *Mystische Texte aus dem Islam*, Bourn 1912, p. 5). The doctrine of the momentariness of accidental being (the accidents lose their existence such moment to receive it at once again from God, the source of being) which originated under Indian influence and dominates the whole of Muslim theology.
and, of the "restorability" or "non-restorability" (an idea in liberal theology) of beings, is further connected with this. These three in the second rank from the highest magnitude, each reveals existence from the way of being. Through this, the whole universe thereby ran a law of motion which dominated every thing and has no exceptions, it determines every potency when it becomes an actuality, including the so-called free will of man. Everything is thus necessary, the figure of a, the contingent or created, is not. The human mind develops from a purely material to a materia prima principium, actually thinking and possessing knowledge (intellektum acquisitum), which requires actions from the act of active mind, which controls the spheres of the moon. In this there is already contained the doctrine of the universale essentia rerum (in the heavenly world), in re; in things of sense) and par rerum (in our mind) which Avicenna further developed. The human mind attains the level of the prophet's mind, which is unsatisfiable by natural faculties, through a special divine inspiration and connection with the higher world of the angels and the book of fate. The prophet's mind perceives mysteries which surpass the intelli- gence of man, and recognizes them, being free from error, although he communicates them to men in the Koran in forms intelligible to the senses. The Koran thus contains the highest intelligible wisdom in a material form. The dominion of de ex natura are not only distinct in degree but in their essence, and according to the order of being, faith and reason are the two most perfect harmonies, whilst fallible human knowledge is subordinate to the divine knowledge contained in the Koran (philosophia et soli theologien). — The Rabbis al-Basili of Basira (c. 970) formed a school of popular philosophy which develops in many points from these lines in favour of Pythagorean speculations.

After Avicenna has placed the sum total of Greek wisdom at the disposal of the educated Muslim world in a steadily intelligible fashion with his own ingenious developments of it, it was possible for the Arab culture to modify this system in details and to make it a whole capable of being incorporated into Islam. To understand this further development we must keep in mind the faults of Avicenna's system viz.: 1. There is a lack of clearness in the most essential fundamental idea in it. The contingency of things is conceived as something substantial, distinct from being and existence. Existence is said to advance to being "from outside." But being without existence is not real and thus cannot serve as the bearer or host principle of a real. These speculations which create cleanness here and brings over the dualism without dropping the idea of contingency, and regarded as essential developments of the system as they are concerned with the very heart of it. (Suhrawardi, Shirazi, dead 1649). 2. The God of Avicenna works with almost physical necessity and without freedom. The God of the Koran on the other hand creates with unlimited freedom and indeed arbitrarily. A serious cellulism might thus be expected between the two systems. Averroes also took a serious step backwards. He frequently describes God as possessing free choice, but without attaching to him any of the imperfections of human choice. If a philosopher could succeed in defending God's free will in unsuitable logik, he would have made an important advance in the philosophic conception of the universe. This was reserved for Ibn Rushd and later theologians. 3. The theory of Platonic spheres was also satisfactorily proved, and was probably regarded even by Avicenna as not proved. 4. There was a serious gap in the theory of knowledge. He did not succeed in reconciling Aristotelian abstraction with Platonic intuition and emanation. A concept, which we have already obtained from the active intellect by the emanation from the form of knowledge, is to be again acquired by abstraction. The middle course, that the abstraction prepared the mind for the reception of the forms, is rather impracticable. There is still another great problem how properly to fit together the functions of secondary causes in the all-embracing activity of the primary (God) and so avoid the occasionalism of Aristotle on the one hand and the excessive independence of the powers of nature in reference to God, i.e. Deism and Naturalism, on the other (as in Avicenna).

The attacks of the opponents of the system, in the first place Ghazali (died 1111) gave the natural stimuli to the further development of the problems still to be settled. — In his youth he had gone through the school of the philosophers and adapted their teachings in the form given by Averroes. Such a view of the universe, however, could only satisfy an intellectualist. But Ghazali was a voluntarist and sentimentalist. The struggle with the philosophers was thus not without its human cost. It drove him to attack his former friends, the philosophers, and ultimately to seek peace in mysticism. He propounded twenty theses against the philosophers: some seek to prove that the teachings of philosophy are wrong — here we have an attempt at a further development — others to show that the correct teachings belong to the domain of faith, i.e. as mysteries, which cannot penetrate the natural intelligence. The former are mainly concerned with 1. the eternal crystallinity of the world, which is denied: 2. God's knowledge which cannot be called universal, otherwise the knowledge of individual things on God's part cannot be univocal: 3. God as a prime cause operating through necessity: 4. God's free will must be recognized; 5. the resurrection of the body — a purely spiritual conception in the next world, does not satisfy the words in the Koran: 6. the law of causation: this should not be understood as a combination of creative powers and acts, as internally necessary and independent of God. Such a combination cannot be proved to exist on critical investigation. Esotericism points only to the contemporaneity of a series of facts. But no essential dependence of the one on the other can be deduced (cf. Husseini). Averroes gives way to Ghazali in these points, with the exception on the last and, with regard to the fourth, goes so far as to teach that it is a very acceptable doctrine that man receives a transfigured body after death.

The Spanish branch of philosophy became specially well known to the Christian philosophers of the middle ages and for this reason is emphasized in European works as being particularly important, although it remained without influence on the development of philosophy within Islam. Ibn Badis (died 1328) teaches that the gradual perfection of the human spirit to union with the
divine is the object of philosophy. Ibn Tulun's (died 1185) "Philosophus antiquus" became a world classic. He shows that the knowledge obtained by natural means is to the most perfect harmony with the supernatural revelation of the Koran. This conviction is formulated even more elegantly by Averroes (died 1198). He had a difficult time with an inkling for details, and was therefore pre-eminently qualified to be a commentator on Aristotle. He lacked the great gift of speculation and the ability to think concretely bearing all aspects of the question in mind. His cry is "back to Aristotle", a demand as reactionary as if some one were to say at the present day "back to Kaut." Averroes himself fortunately did not follow this strictly, although in reason of it he rejected the idea of an absolute contingency of things; he can only imagine a relative one (cf. Horeau, Die Hauptlehrer des Averroes, p. 67 etc.). In order to fit in with this, he maintains the idea of a creation in the sense that God transfers the world from a pure potentiality, non-being, to existence. This notion of actualisation provides Averroes with a monistic principle of the universe (cf. Horeau, Die Metaphysik des A., preface). In every category of being there exists a per as, which actually possesses the content of that category and can therefore communicate it to all other things, which only possess it potentially and per accidents. 

God perceives all individual things in himself. He is the totality of things existent in him. Pantheistic ideas are more than once sequenced in. The substance of soul is one for all men. Reincarnation in the next world is not thereby impossible. It is a spiritual reincarnation in that substance.

Averroes tried above all to mitigate certain crudities in Avicenna's teaching. In the thesis of the eternity of the world he points out to the theologians that he is at bottom in agreement with them; God created the world out of nothing. He is the all-knowing and all-powerful lord of creation. Whether this creative activity had a beginning in time (theological thesis) or not (philosophical doctrine) is a matter of indifference for the Muslim faith. Besides there was no real time before the world. 2. God does not work with physical necessity, but with necessity, which is the power of freedom, which can also do evil. God can only do what is best (optimism, cf. Leibniz), and this "must" is not an imperfection, for the capability of evil is not a virtue. God's action is above the designation of free or not free. 3. God perceives all individual things as the common teaching of the philosophers shows. Nevertheless his perception cannot be called universal (Avicenna); for the idea of an imperfection might be associated with this. His knowledge, which guides all worldly things in unison, with the divine will in the wisest providence, is raised above the predicates of the universal and particular. 4. The philosophical principle of the "universals" does not make the plenitude of things by God the One (doctrine of creation through the intermediary of the spirits of the spheres) is dropped by Averroes; God directly creates the plenitude of things. The exaggeration of the importance of Averroes, who was called the most important philosopher of Islam, and the erroneous opinion that he was an enemy of religion is a fabrication of the European middle age and is probably based in part at least on errors in translation in the Latin version of his works and on the circumstances that the other philosophers of Islam were not known. Averroes is of no importance for the further development of philosophic thought in the East. The fruitful stimulus to speculation given by Ghazal in was eagerly followed up in the period following him. The great stream of speculative thought and activity begins after Ghazal and is due to him, he made philosophy palatable to Islam and the orthodox school of theologians. It was no longer possible for any one to discuss science and even speculative theology, who had not had a thorough education in Greek philosophy. The two great protagonists were Razi (died 1209) and Tusi (died 1274). The former moves entirely in a world of Greek ideas, which he developed principally in his "mystic investigations" (al-Mukhtab al-Ma'mun, ch. 3 here means Platonic intuition and thus is a hit at Avicenna) with vigorous attacks on separate Aristotelian doctrines. Greek logic is developed by him in an elaborate fashion and almost becomes a model. This is particularly apparent in the technical use of objection — he was known as al-Mushakkhib, the "objector." This followed up the questions posed by Razi, to which were added those of Ibn Kamān (died 1277). The struggle centered around the theses (al-Shat) of Avicenna and lasted down to the sixteenth century; Tusi (c. 1300), Lisān (died 1345) and Razi (Kūth al-Dīn, died 1364) joined in it defending the doctrines of Avicenna and going more deeply into them. Tusi victoriously carried off an unimportant attack by Ṣahāratān 1153 ("the slayer of the Greek philosophers") al-Mufāriq (al-Mufarrīq) in his "The slayer of the slayer," al-Muṭaffeq al-Muṭaffīq.

Under the insinuating influence of such attacks and discussions, philosophy was able to develop to a greater height. Ibn Malka (Abū ʿAbd Allāh, died 1155) wrote his oft-quoted and highly esteemed work: "The worthy of consideration" (al-Muṭṭāhib). Zamakhschārī (died 1143) was at the same time discussing many questions of philosophy with great acuteness. Schussendorf (died 1195) builds up an entirely new system and forms an independent form for later developments. His development begins where Avicenna had left off at questions of great difficulty. Being unable to advance any resistance from outside, he is identical with it. The dualism, which according to Avicenna divides the innermost state of things, is thus overcome. Things are units of reality, in conscious assimilation to the ancient Persian doctrine of light: different forms of the light, which emanating from God lose their perfection and approach the matter of darkness. Light is identical with spiritual substance. In the theory of knowledge also he does away with the well-known dilemma in Avicenna. Knowledge is, as Plato teaches, a perception, in which the true essence of things, which exist for themselves in the heavenly world, illuminates our understanding. He therefore calls it a perception, the philosophy of Illumination (cf. Horeau, Die Philosophie der Erkenntnis nach Suhrawardi, Halle 1912). The best known of the later philosophers is also inspired by these ideas and wrote commentaries on Suhrawardi's teaching, e.g. Shabadi (c. 1250), Shīrāzī (c. 1311), Hāravi (Nūrī al-Dīn, c. 1300), Ibn Kamān (died 1277), Dawdānī (c. 1301) and Ṣūrūrī (died 1640).
A very important work in philosophy is Ami-dari (died 1323). *First-fruits of Thoughts* (Abhār-al-kāfûr) — an authoritv work on logic was the first in the circle of Idā's (died 1359). For Avicenna's major works on logic were the *Guide to Wisdom*, *Logics* (1236), *Hikmatiyya* (die. 1224) — he also compiled an encyclopaedia of philosophy which became celebrated under the title *The Guide to Wisdom*. — Kašī's *logic* (1356) — it survived to see over a score of commentaries from the pens of philosophers of the first rank, the *Rising-places of Luminaries*, a work by Ibn-Hashim (died 1230), Nasif's (died 1238) *Dialectics* and Šamārānšāy's (died 1231) authoritative work which was very frequently commented on, may be mentioned here. The *Leaves* of Šamārānšāy and *The Philosophy of the Intellectual* of Kašī and his commentary on it, the epitome *Šatrā al-Malākāt* exercised a great influence.

Tūs (died 1273) forms an important centre for further development. In his *Dogmatik* (1293), he brought Greek philosophy into the theological speculations of Islam. The fundamental questions of philosophy were lucidly discussed by him. The problem of being and existence was further developed and lucidly discussed particularly by his numerous commentators. With Ǧāli (died 1326), Qādārī (died 1338) we may here give Kubṭū (died 1474) the place of honour. He discussed the most fundamental questions of philosophy in the most thorough and methodical manner. He advanced the problems connected with Avicenna's teachings. It is clear from his exceedingly well-developed terminology that the systematic study of philosophy was in a flourishing condition in his time. The scruples once raised by Ghazzāl against philosophers have for him been long overcome and become negligible. He is particularly attached to Avicenna. But his main work, *The Philosophy of Being* (1315), *Šahārak*, *Šahārdi*, etc., he attempts to utilise the most divergent views of his conception of the universe.

Apart from the works of Ǧāli (died 1340) and Kubṭū (1350) (commentary on Kubṭū), those of Ǧīd (died 1355), especially his *STATO* (1343), and his *Dialectic* form a new and important current of philosophical discussion. In the former work Ǧīd intended to write a speculative theology and the result was an encyclopaedia of philosophy. So thoroughly had Greek science penetrated the minds of educated Muslims that they had imperceptibly identified it with theology. We do not mean to say that they approved all the doctrines of Avicenna. It was rather the development after Avicenna's time that was made most use of, but his teachings were universally defended against his opponents by Ǧīd himself. The name of Ǧīd was confined as much as his own name. Ǧīd's concise and acute formulations stimulated great activity among the commentators. In the same way Ǧīd's *Dogmatik* was the most important at this period. Besides problems of philosophy he discussed the theological questions of the school of Ǧāhār, of which he was the president himself a member. In the meanwhile Tašqārani (1329) appeared and vigorously criticized Avicenna's system in his commentary on Ghazzāl's *The Intentions of the Philosophers*. Ǧīd's circle took up the cudgels on behalf of the old master. We thus find Ǧīd's commentators thoroughly discussing Tašqārani's objections and deriving advantage from them, e.g. Ǧalār (Saif al-Dīn, c. 1400), Fanārī (died 1411), Tūs (died 1423) and notably the extremely well-read Šiyālākī (died 1525). He is well acquainted with the vast philosophical literature of the Muslins, quoting from hundreds of works, is perfectly at home and gives an independent judgment in all philosophical questions.

Kašī (Kājī al-Dīn, died 1364) displayed a great literary activity which considerably advanced the development of philosophy. Although he belonged to none of the above mentioned groups he is quoted by them and regarded as an authority of the first rank. The form which literary activity took was that of commentaries. It must now be inferred that the form of a commentary, which was attached to some standard work, that the thought advanced in it are not quite original. Entirely new ideas are frequently developed in these commentaries and acute criticism exercised; this is true for example of Šafākarī's numerous works, of which the glasses on Ǧīd's *Dogmatik* at one became a centre of new development. In a Logic Tašqārani's work *The Elaboration of Logic* built up a great school with which the greatest names in philosophy are associated. We have now come down to the time of Dādīwāk, the "glory of the true investigators", (died 1501). He approached this school from the most diverse directions while he wrote commentaries on the original works. His commentary on Šafākarī's *The Temple of Light* is as highly esteemed as the numerous glasses on Ǧīd in which he discusses and develops philosophical problems with the greatest acuteness. His peculiar position may be compared with that of his contemporary Cæsarean amongst scholastics. Fārsāni, the commentator on Šafākarī (cf. Horren, *Das Buch der Richtigkeit*), Ǧuršāni (1900) was one of his pupils. Ibn Khalfa (died 1466) propounded questions of the theory of knowledge in a critical fashion. Ǧurshāni (1480), Ǧuršāni (1505) left their mark particularly in the field of logic, Ǧuhrān (died 1525) maintained connection through his *Stephodr* which had commentaries frequently written on it down to last century.

Šuhrān (Ṣadr al-Dīn, died 1327) seems to have been an outstanding thinker of this period. He is quoted by later writers as the "great scholar," Ghiyāth al-Dīn Šuhrān (died 1452) is also mentioned along with him as an authority; like the preceding he wrote a commentary on Tūs. Taḏbīrīzāy (died 1354) was a comprehensive writer on philosophical subjects. Šuhrān (Ṣadr al-Dīn) (died 1460) developed quite a new theory of the universe. Stimulated by Šafākarī Ǧuršāni explained the notion of contingency not as a dualism between being and existence but as a participation in being. Individual things are manifest individuals as a phenomenon. He then developed step by step to more and more perfect beings. His proof of the existence of God is a combination of the proof of contingency with the Platonic from the stage
of perfection (Hurren, "Die Gottheitskunst bei Sühän"). Luhijj (c. 1670) likewise is entirely under the influence of Greek thought (cf. Der Islam, ili, 91—113). Haraw (1695), Mauwé (1625), Tdém (c. 1590) were also regarded as great teachers. (Alquini) Bihari, died 1705, composed the "Stephalder der Werken's", which was frequently annotated. (Pârâî) (1745) incorporated a vast amount of philosophical knowledge in his terminological vocabulary. (Steinbrüke) (1737) was an encyclopedist.

FANÀ, an important technical term of Sühän, meaning "annihilation, dissolution"). The Sühän who attains perfection must be in a kind of state of annihilation. The authors of treatises on Muslim mysticism have often compared the "annihilation" of Sühän with the Buddhist nirvana; but this comparison is not a particularly fitting one. Now we know that the Muslim writers had only a very slight knowledge of Indian philosophy and could not comprehend the notion of nirvana which presupposes a fairly intimate acquaintance with that philosophy. Besides, the Buddhist idea of annihilation is independent of the idea of God and includes the idea of the transmigration of souls, to which nirvana puts an end. To attain this, the desire for existence must be suppressed in the individual; it is only after this desire has been extinguished that one no longer has to return to the cycle of existence. In Muslim mysticism on the other hand there is no question of metempsychosis and the notion of a personal and all-present God is throughout predominant.

The origin of the Muslim conception of fana' has rather to be sought in Christianity from which it seems to be borrowed. This conception simply means the annihilation of the individual human will before the will of God, an idea which forms the entire of all Christian mystician. The conception thus belongs to the domain of ethics and not in the slightest degree to that of metaphysics like the nirvana of the Hindus.

The oldest systematic exposition of pantheistic Sühän Monism is of Muhammed al-Dinwallah ("Revolution: of concealed Matters") gives all the explanation that could be desired of fana'.

The virtue of poverty understood in the mystic sense consists in averting the gaze from all created things, and, in complete annihilation, seeing only the All-One, he hastens towards the fullness of eternal life" (p. 28).— Mystic poverty, we are further told, consists in the annihilation of the human attributes (jedâil), which dwells in the Ego, but that one is now only rich in God and through God. "The Sühän is he that has nothing in his possession nor is himself possessed by anything. This denotes the essence of annihilation (fana')."

When this feeling has attained its perfection it is called fana' al-islâm "absolute annihilation."

The expression fana' is often interchanged with fa'idah "purify"; this word means that the Sühän should keep his soul pure from all attachment to any creature. Fana' is further often associated with kâmilah "substantiality": the man, who has destroyed his own will, henceforth lives in God; the human will is transitory while God's will is eternal.

The author of the Kanîf al-Mahdî (expresses) states (p. 243) that fana' does not mean loss of essence and destruction of personality as some ignorant Sühän think. It is not the essence but the human attributes, which are a danger to the perfection of being, that are destroyed (p. 28). "In India", says the author, "I had a dispute with a man who claimed to be versed in Kâmilat wâliyya and theology. When I examined his pretensions, I found that he knew nothing of annihilation... (p. 243), i.e. he had understood the word fana' in a metaphysical sense.

Bibliography: The Kanîf al-Mahdî by Abû Al'Ukhâb al-Mujâhid BI-Abû (transl. by Nicholson, London 1911); Carre de Vaux, Genâl (Paris 1902), Lâdâs, (Sühän monist); cf. also the Khât al-Mukaddim of Dînîlîâdî, etc. (R. Carre de Vaux).

FANAM, a South Indian coin. [See Yale and Buxton, Hand-book of India, p. 348].

FANAR, the name of the Greek quarter of Stamboul in which the Oecumenical Patriarch took up his residence after the conquest of the town by Mehmed II. Down to 1587 the patriarchate was in the ancient Byzantine church of the Panamartariotes: when this was transformed into a mosque (Fethiye) in that year, the Patriarch moved his see to the little church of St. George. At quite an early period there settled round the see, in addition to the ecclesiastical and secular officials of the patriarchate, the few old Byzantine families that had remained in Constantinople and other distinguished and prosperous members of the community (the so-called beyzâ). In the Patriarchal school (âneakâmîye-i èmîrîye-i beyzâ) conducted by the clergy, which is still flourishing, the ancient-classical studies were cultivated and the Fanarists exalted their claim to be in this respect also the nobrest of the nation. It was from their circles that the Porte used to choose its Christian officials (Dragomans of the Sublime Porte, and of the Arsenal, Hospitades of Moldavia and Wallachia, contractors for the supply of fire and meat to the Serai, etc.). The better known families are the Kantakian, Shahiato, Maurogordato, Ghika, Karatza, S expr., Handjel, Mara, Ippolito, Mara, Kallimachi, Musuro, Aristarchi, etc. In the second half of the eighteenth century many Fanarists went to Kurtz-belgium on the Bosporus. Since the beginning of the Greek War of Liberation the old Fanarist families have been gradually disappearing from public life; many of them migrated.
to Greece. According to tradition Mohammed II granted the Fārābī a number of privileges, but the Greek noble families have never enjoyed any special privileges as such.

**FANUS** (fanes), a folding lantern, made of wire rings surrounded by waxed cloth with the wax inside, and covered with a crown of foil. It is carried by night in the hands to light the way for a body of men on the march, a wedding procession or a personage of high rank in the dark streets.

**Bibliography:** Lane, *Modern Egypt*, 1, 207 (picture on p. 208).

**FAO**, a telegraph station and Turkish fortress at the mouth of the Shatt al-Arab on the right bank. The place, which is not mentioned by Niebuhr, is the capital of a sūfiya which contains about 22 villages with 4000—5000 inhabitants.

**FAR**. [See under Phaen.]

**FĀRĀBĪ, also written Fārāb (e.g. in Ḥāfiz, Mughaddas and most Persian authorities) and Fārāb (e.g. in *Huṣūl al-Adām*, sect. Tausamkī, f. 97); the latter seems to be the original pronunciation, a district (in Ḥāfiz and Ibn Hawkal), in Mughaddas *warzī*, in Yūsūfol-Dawā'ir, in the valley of the Sir-Daryā, lying on both sides of the main stream, which here receives the waters of the Aras on its right bank. According to Ibn Hawkal (p. 211) the district measured less than a day's journey in length and breadth; the soil was in places monotonous and salted; it is marked by long, dry fields, with two small towns, one near the river and the other on the left bank. The capital (p. 211) was called Kādūr and according to Ḥāfiz (p. 330) lies east of the Sir-Daryā half a farsch from the river; it is therefore to be located in the west of the ruins of the later ʿOtrār; the distance between the ruins and the river is about 7 miles on the Russian maps and according to Ḥāfiz-Nāmeh also (Indian ed. II., 167) it was two farsch from ʿOtrār to the Sir-Daryā. On the western bank of the Sir-Daryā, 2 farsch below Kādūr, lay Wastār, which Ibn Hawkal says was the native town of the philosopher Abū Nasr al-ʿAbārī. According to Mughaddas (p. 271) the capital bore the same name as the district; this town of ʿAbārī is described as a large town with a male population of about 70,000, a Friday-Mosque, a cattle and a market; only a few bazaars of the latter were within the walls of the town, the majority being in the suburbia (qānūn). Mughaddas says that Wastār was a small fortified town where a "powerful ruler" lived, with a chief mosque on the market-place, Kādūr recently founded town with an abdul-burād population, where Ḥāfiz's predominated; it was only after " wars" (probably after the suppression of opposition by the capital) that a minaret was erected. There is probably an error here and ʿAbārī, which is mentioned by Ḥāfiz and Ibn Hawkal, is to be regarded as the new and Kādūr the old town; the later ʿOtrār also is constantly identified with the town of ʿAbārī (mentioned by Samʿān, MS. of the *Arabian Nights*, 343, f. 314) and not with Kādūr.

In the histories ʿAbārī is seldom mentioned, only once in ʿAlī, (II. 1604 a) the foot for example in ʿAlī (739) the ruler of Sirāq (Tashkent) at the command of the governor Nūr b. Sāliyār had to wage ʿAbārī b. Sumād who had sought refuge at his court and sent him to ʿAbārī. ʿAbārī was apparently only brought to ʿAbārī for the first time in the ʿAbārī period, after the submission of Asbālād (or ʿAbārī) by Ṣāl, b. Abū Asad in 285 = 893-830 (cf. ʿAbārī, *Al-Ghāri*, p. 327; ʿAbārī, *Fī Manṣūrī* et., c. 58 below), Wastār is again mentioned by Samʿān as a fortress (in *Abū Karīf* et al., c. 93); Abū Muhammad Abū al-Sayyābī Abū Muhammad al-ʿAbārī was summoned Saʿd al-Mulk died there in exile "in the land of the Turks" in *Majārī* 514 = April 1120 for the later history of the district cf. the article OTAR."}

**FAHR, MUHAMMAD B. MUHAMMAD B. TARIKH AL-NABÎ, THE GREATEST PHILOSOPHER OF ISLAM BEFORE AVICENNA, was born in a Turkish family towards the end of the 10th century A. D. at Wastār, a small fortified town in the district of ʿAbārī (ʿOtrār) in Transoxiana. His father is said to have been a general. He studied in Baghdad under the Christian physician ʿOmar b. ʿAbū ʿAbī ʿAbī Matta, a Nestorian Christian, who was a translator of Greek works. He then went to Ḥalab to the court of the Ḥamdānī Sultān al-Dawwār, under whose protection he spent the latter part of his life. In 339 (950) at the age of about 80, in Damascus, whether he had accompanied his king on a campaign.

ʿAbārī was particularly celebrated as a commentator on Aristotle. His works on this field have won him the name *al-ʿallām al-fātih*, "the second teacher" i.e. successor to the first teacher, Aristotle. He commented on the *Categories*, *Hermeneutics*, the *First and Second Analytics*, the *Sophistic*, *Rhetoric* and *Politics* i.e. the whole group of treatises which form branches of logic in the widest sense. To this collection of the *Organon* he prefixed a commentary on the *Regnum* of Porphyry.

He wrote commentaries on the following Greek works on ethics, psychology and science, the *Nicomachean Ethics*, Alexander of Aphrodisias *On the Soul*, Aristotle's *Physics*, *Meteorology* and his writings on the *Heaven* and the *Universe* and lastly on the *Anabasis* of Ptolemy.

His literary activity was by no means confined to the exposition of Greek texts; on the contrary he wrote a large number of original works. Among the latter are his psychological and metaphysical treatises, on the *Intelligence* (sālām) and the *Intelligibility*, on the *Soul* (nafs); the *Formation of the*
Soul, the One and the Unity, Substance, Time, Empty Space, Space and Measure.

Farabi professed the view, which now seems strange and even absurd, but which is explained by the leaning of Oriental philosophers towards mysticism, that ancient philosophy must be understood as two great representative systems: Plato and Aristotle should not contradict one another; their systems ought not to be more than different forms of expressions of one truth. According to this conception the great philosophers of antiquity appear as real prophets and are given the title saints like religious teachers, and their teaching is a kind of revelation which ought not to contain any contradiction or error. Farabi wrote several treatises on the basis of this view. The Agreement between Plato and Aristotle, The Intimacy between Aristotle and Galen, Kilāz al-aqallān bāna ya'na ilājārān āfātīrān āzsāhā bi āfātīrān, The Intimacy of Plato and Aristotle. It should be noted that our philosophy believed in the authenticity of the work entitled Theology of Aristotle (Oktābwiya Ārifwiya), an apocryphal neo-Platonic treatise based on the Similions of Plotinus. This error was such as to falsify in a remarkable fashion the idea that was formed of the Peripatetic system.

Dieterici has edited nine minor treatises by Farabi of which the most celebrated is the epistle entitled The Gnomon of the Sciences (Kilāz fi al-aqallān); this work, which contains many ideas in a very concise form, passed into use in all the schools of the East; there is a commentary on it by Farabi's grandson Farabiz, a writer of the 12th century, which has been printed in the al-Amira press (1291 A.D.) and made the subject of a study by M. Horren.

Besides this group of treatises, Dieterici has published Farabi's *Medici City* (Fiṣīla fī ʿīl al-Madīna al-Fālūjā) an important work in 34 chapters in which the Muslim philosopher, inspired by Plato, explains his conception of the organization of the perfect city. It should be governed by its wise men; its size should be so that here below the perfection of the heavenly city and to prepare its members to obtain felicity in the latter. This theory is of little practical interest, but is of some importance for metaphysics.

Farabi's intention like that of other philosophers of the same school was to extricate the whole cycle of the sciences. He seems to have been quite a good mathematician and a fair physician; he wrote on occult sciences and was also a distinguished musician; it is to his pen that we owe the most important treatise on the theory of music. He was himself a versatile and composer; his talent excited the admiration of Sahl al-Dawla and the Mawlawis cherish still the ancient chants that are attributed to him. Farabi's system is that of the school of philosophers in the proper sense of the word (falsafa); i.e. Muslim Neo-Platonic philosophy. It is the system which al-Khazini had begun to organise before him and which after him found its most complete expression in the works of Avicenna (q.v. and also ibid.) It is fairly probable that Farabi differs from al-Khazini and Avicenna on some points; but it is difficult to define these points. It is better to reserve, if not to suspect, in interpreting the details of his system. Indeed we do not possess his work in its entirety; we are only acquainted with a small part of it; Farabi's style also is somewhat obscure, several of the treatises that have survived are composed in the form of very brief aphorisms placed one after the other in no sort of order. Lastly it is impossible to be certain that there is no contradiction in a work so vast, in which the influence of Plato, Aristotle or Plotinus alternately predominates. The most idea of the system, which is to make a synthesis on one side of Aristotle and Plato and on the other hand of the syncretic philosophy thus obtained with the religious faith of Islam, cannot but be somewhat contradictory in itself.

T. J. de Boer believes he can see a very marked opposition between Farabi and the other members of the school of "Philosophers" notably the celebrated Kātīr (Kātir); Farabi sometimes polemicises against Kātīr who was his contemporary. According to de Boer this opposition consists in that, while Farabi's system is deductive, rational and built up entirely on abstract logic, Kātīr's philosophy is experimental, inductive and is more especially concerned with the concrete. But I do not think that there are really two systems opposed to one another; there are two sides or two aspects of a more general system. Kātīr, who was a physician and distinguished naturalist, emphasizes the concrete aspects of the system while Farabi, who had a more inclination for logic, mathematics and mystic speculation, presents the abstract side of it. In Avicenna we find the two aspects reunited.

I have pointed to a difference between Farabi and Avicenna as regards the position of Mysticism; in Avicenna mysticism appears only at the end of the system to crown his work as it were; it is quite distinct from the other parts of it and Avicenna treats mysticism—very little and with very slight—almost as a chapter in philosophy which he would study in an objective fashion. On the contrary in Farabi mysticism penetrates everything; the terms of Sufism are scattered throughout his works and one can truly say that with him mysticism is not a theory but a subjective state. This point of view further contributes to make his system somewhat obscure.

It has been said that Avicenna is clearer, better arranged and more methodical than Farabi; Muslim scholasticism has clearly a more finished form in Avicenna. On one important point, the question of the personal immortality of the soul, this difference in lucidity between the two philosophers makes itself felt. The rational soul or reason, illuminated by the world of the mind, the world of ideas, or active intellect, is the real man; it is also what remains of man after death. But does the reason of the individual man have itself in the active intellect or does it preserve its own consciousness and individuality? Certain passages in Farabi are written in such a way as to make it credible that he admits the first view. There is, however, no room for doubt that Farabi believed in the personal immortality of the soul; in his treatise on the Medici City there is a passage, where he shews the good souls arriving in the celestial city and each of them enjoying a pleasure so great as the number of the souls, and Tafazzal, who seems to have had no love for Farabi, also says that he had doubts on the personal immortality of the soul (see S. Munk, article Fārābī in the Geschicht der Philosophie); this charge must refer to passages, the language of which is obscure or which are incomplete.
T. J. de Boer has also pointed out as a difference between Farabi and the other philosophers of his school that Avicenna does not, like him, derive matter from God. According to this writer, Farabi conceived matter as having emanated from God by passing through several spiritual intermediaries. I do not think that this statement is quite correct. It is in the treatise on "the principles of the elements of which we possess a Hebrew translation by Moses ben Idlibon (Al-Farabi: ed. by Philippowski in the compilation of Leipagu 1850-1851) that Farabi gives the chain of principles in a way which makes it resemble an emanation; the primary intelligence as first cause comes from God; from it come in their order the intelligences of the spheres; the last is the active intelligence; above it are placed the universal soul, then form and lastly matter. Avicenna's metaphysics are really quite comparable to this system.

The matter which is in question here is the substratum of the world which contains its possibility. The creation is produced by coming from this matter, not created directly from nothing. The celestial spheres, animated by their respective souls, are put into motion by the prime mover, the latter is not God himself but rather the primary intelligence which emanates from him.

Farabi attempts to reconcile Aristotle and Plato on the question of the eternity of the world. In his treatise on the Agreement of the Philosophy of Plato and Aristotle, he claims that Aristotle did not believe in an eternal world. The creator made it spring into existence at once without time, the prime mover, then put it into motion and from the motion of the spheres time was produced. In other words time is logically posterior to the actual creation of the world. "The school of the philosophers has however admitted the possibility of the infinite series retracing into the past: according to Avicenna a real infinite series is impossible; but an infinite series, the terms of which do not actually exist together, is possible. It may be admitted that the celestial spheres have accomplished an infinite number of revolutions in the past and that time accordingly is eternal. One difficulty against this view arises from the fact that the souls of men who have lived in the past continue to exist in reality as they are immortal; there would then be an infinite number of souls actually co-existing. In his treatise on the "Model City", Farabi however speaks of the souls in the other world as if they were finite in number. We cannot really be quite certain that these philosophers do not sometimes contradict one another; they comment with equal confidence on teachers whose doctrines often disagree and their necessarily results a certain amount of hesitation and uncertainty in their systems.

the town surrendered and was given over to plunder by the soldiers, the citadel, however, only fell after a siege of a month. Timur left Damascus, in the spring of 784 = 1400 to make war on the Sultan Suwayd. — The remainder of Faraj’s reign is occupied with the struggles of the Emirs for influence with the Sultan. The Emirs, who were overthrown in the course of these feuds, were usually imprisoned in Alexandria and executed if they did not succeed in escaping to Syria and collect new followers there. In 788 = 1405 the discontent among the Mamluks reached such a height that Faraj abdicated the throne and went into retirement for a period. The Emirs raised his brother 'Abd al-Askar to the throne under the name al-Malik al-Munif, fortified Aleppo and defended Syria against foreign foes. He went to war with Kharis Yelek, the chief of the white Turkomans, and fell in battle. The most faithful adherent of the Sultan was the above-mentioned Emir Taghribard, his bitter opponent, Sallah al-Din (q.v.), who afterwards became Sultan under the name al-Malik al-Mansur. The war dragged on in Syria with varying success until in 783 a.d. Faraj went there for the seventh time. Against the advice of the dying Emir Taghribard, governor of Damascus, he went to meet the foe, regardless of the exhausted condition of his troops. He was defeated and retired to Damascus. As the Emirs there gave him a hostile reception, the Sultan had to submit; he was deposed, imprisoned, and put to death in prison. His lands had been terribly devastated during his reign by Timur’s invasions and the constant civil wars, while famine and plague ravaged the country. His mortuary edict was made for his extravagant and luxurious mode of life and these he exerted from his subjects in Cairo.

**Bibliography:** Reis, Geschichte der Chaldaer, v. 72-105 and 108-123; his biography is given in detail in the Mabkhah al-Safi, Cairo MS. 1111, Part III. (M. Sohmerheim).

**Al-Farafa (Al-Farathir), an oasis in the Lybian desert, belonging to the Egyptian province of Minyat. It lies between the Wadaiq Bohri and the Wadiq Kild, see the article Wadiq, 530° and 530°, and is about 8 days journey by camel from Minyat. Among the earlier Arab geographers the name al-Farathir appears, for example in al-Bakir, who mentions its great wealth in date-palms, and the numerous villages inhabited by Christian Copts; he also knows of the lake and the ruins which he found there and mentions the hot springs of the oasis. We have no other direct notices of al-Farathir, probably because it was usually reckoned with Desheh (50°, 509° et seq.), as it is clear from Yakhuti (p. 322), for example. It was not till Chalhuch and Letvere’s journey in 1820 that new light was thrown on the oasis and later by G. Kohl’s expedition in 1873-1874. Farathir was then only very loosely connected with Egypt; the only bond was the annual tribute of 10,000 plasters. The land was exceedingly fertile and rich in palms, olives, fruits of all kinds, vegetables and cereals; there was also some cotton, but only oil and dates were exported. Nevertheless the inhabitants were in great poverty as they lost the greater portion of their harvests, as in ancient times, through the constant raids of the Egyptian and Barqa Bedouins as well as of the Arabs of the Nile Valley. Besides this the finest estates were in the possession of members of the Sanaiti, who sent the produce to Tripoli, which was then their headquarters. They had been acquiring a firm footing in the oasis since 1860 and it is to their influence that the great fannism of the population is ascribed. The number of inhabitants was still small at that date but it has been continually increasing since then; Bouchet estimates the population at 345 and the latest figures at 632. The only village is Kafr Farathir.

**Farah,** a town of Afghanistan in the Herat province, situated on the bank of the Farah-rod river, which flows in a south-westerly direction into the Sistan. Farah, although decayed, is still a place of some importance and is the stopping-place of several caravan routes and the centre of a fertile district. It was formerly the capital of Desht, and was included in the medieval province of Sijistan, but is not included in modern Sistan. It has never quite recovered from its devastation by the Mongols under Chinghiz Khan.

The Farah-rod is one of the rivers mentioned in the Zend Avesta (Fradatha) and is the Dhatop of Piles, and the town is the Prophethood of Alexander’s historians and Strabo (Prophethood.being a Greek rendering of ‘Fradatha’ or ‘progress’) as also no doubt the Pab of Justice of Chars. Alexander here detected the plot of Philitas, and from hence, Holbich considers, he made his way up the valley of the Farah-rod to the Maiman pass. In modern times it has been described by Forster and Holbich.

**Bibliography:** A. Stein in The Academy, May 16th 1885; Holbich, The Gates of India, (London 1910); Forster, German Journeyman, (London 1857), Ch. 26: Strache, Book 5, Ch. 5, 8.

(M. Loomisworth, Dames)

He also assisted in Afghanistan in 1842 the celebrated compendium of law al-Shafi‘i and Seyyid, written by al-Shafi‘i, q.v. C. Holbich, Strecker, ed. Plinge, ii. 559.

**Farata** is the name given in the expressly called fixed share in an estate (Va. Vo. Vo. Vo.)
At first glance, it seems to be discussing the distribution of inheritance among the sons and daughters of a deceased individual. It mentions that the Koran and the traditions of Muhammad, as understood by scholars, have provided the basis for these distributions. The text seems to delve into the complexities of Islamic inheritance law, particularly focusing on the rights and obligations of various family members in the event of a death. It appears to be a legal and religious discussion, possibly aimed at clarifying who is entitled to what under Islamic law.
looking back, however, at his career there is much which amply repays an inquiry. That he came of obscure parentage amid the swamps of Eastern Bengal, and should be the first preacher to denounce the superstitions and corrupt beliefs, which long contact with Hindu polytheism had developed, is remarkable enough; but that the aphorism he addressed to his brother should have produced into enthusiasm is still more so. To effect this required a sincere and sym pathetic preacher; and no one ever appealed more strongly to the sympathies of a people than Shahür Allah whose blameless and exemplary life was admired by his countrymen, who generated him as a father able to advise them in times of adversity, and give consolation in cases of affliction.

He is described as a man of middle height, of fair complexion, and with a long, shapely beard.

A very different person was his son, Muhammad Mīyān, better known as Dūdhī Mīyān, who, though of ordinary abilities, exerted an influence far more the equal of his father. His is the household word through the districts of Thrushpur, Perua, Bakarganj, Dhaka, and Nonsalih, and the number of his followers at the present day testifies to the thoroughness of the method with which he and his father fulfilled their mission.

Dūdhī Mīyān was born in 1819, and, while still young, visited Mecca, where, as he asserted and made his followers believe, visions and revelations of a nature tending to his future greatness, were vouchsafed to him. On his return he devoted himself to the spread of his father's doctrines, as well as many more which he himself introduced afresh. For instance, he insisted upon his disciples eating the common grasshopper (plagaga), which they detested because the local (ddhū) was used as food in Arabia, and vigorously contended that there was no greater difference between the two insects than between a great of their villages and one from the banks of the Dhumna.

The most remarkable advance made during Dūdhī Mīyān's lifetime was the organization of the society. Following the example of the Faiznahmā, he divided Eastern Bengal into districts, and appointed a khātīf, or agent, to each, with power to collect contributions for the furtherance of the objects of the central association. They further kept Duṭhī Mīyān's unusually styled, the Ṭhānī, or simply Mawri, acquainted with everything occurring within their jurisdiction, and whenever a zamindar tried to enforce his legal rights against any one member of the sect, funds were provided to run him in the court, or, if it could be safely done, men with clubs were sent to plunder his property and to harass his servants. During his father's lifetime the sect was never opposed to, nor collided with, the law of the land; but the measures adopted by the āmīr united the zamindars and the indigo planters against him. He tried to make all Muhammadan ryots join his sect, and on refusal caused them to be beaten, and excommunicated from the society of the faithful, and destroyed their crops. The zamindars were emboldened to prevent their tenants from joining, and, it is said, often punished them for refusing to be converted. A mode of torture intensely intense, but which left marks to implicate any one, is said to have been adopted on both sides. The bands of recalcitrant ryots were tied together, and red-chili powder given as small. Sorrow, however, filled, and the landholders did little to check the further spread of a similar disturbance.

It was among the cultivators and village workman that Dūthī Mīyān made the largest number of converts. He asserted the divinity of his own soul, and taught that the welfare of the lowly and poor was an object of interest as that of the high and the rich. When a brother fell in distress it was, he taught, the duty of his neighbours to assist him, and nothing, he affirmed, was criminal, or unjustifiable, which might be used as a means to that end. Their enemies, however, alleged, that these names were paid for out of the funds of the association.

Dūthī Mīyān and the Kazi, as his followers were originally called, became objects of dread to the Hindus, old Muhammadans, and European landholders. Evidence to convict a prisoner could not be got. It was, however, against the levying of illegal cesses by landlords that Dūthī Mīyān made his most determined stand. That a Muhammadan man should be obliged to contribute towards the decoration of the image of Durgā, or towards the support of any of the rites of his Hindu landlord, were regarded as intolerable acts of oppression. In this he was certainly right, as the only apology for their continuance was their antiquity, and adaptation to the feelings of the people. But, he advanced a step further; when he proclaimed that the earth is God's, and that no one has a right to occupy it as an inheritance, or levy taxes upon it. The peasants were, therefore, persuaded to settle in Khān Māhāl lands, managed directly by the Government, and thus escape the payment of any taxes, but that of the land revenues, claimed by the State. His rapid success, however, excited the jealousy of the contemporary landlords and many false suits were brought against him. In 1833 he was charged with abetting the plunder of several houses; in 1834 he was committed to the sessions on a charge of murder but was acquitted; in 1844 he was tried for trespass and forming an unlawful assembly, and in 1846 for abduction and plunder. The riot of 1838 assumed at one time a very threatening aspect, and a detachment of Sepoys was sent from Dūthī to check any disturbance. It was, however, impossible to induce witnesses to give evidence, and on each occasion he was acquitted. At Bhabāndār, where he generally resided, every Muhammadan stranger was fed, while Eastern Bengal was frequented by his spies, and the interests of the whole neighbourhood were in keeping. He settled disputes, administered summary justice, and published any Hindu, Muhammadan or Christian who without first referring matters to him dared to bring suits, as for recovery of debt, in the adjoining Muhammadan's courts. Emigrants carried his orders to distant villages, and his letters signed Ahmad mān antânāhin. (Ahmad of unknown name) often had the ordinary Hindu superscription to all suspected. He taught that there was no sin in persecuting those who refused to embrace his doctrines, or who appealed to Government courts against the orders of the society and its acknowledged leaders. Dūthī Mīyān is described as having been a tall handsome man, with a dark flowing beard, and a large turban wound round his head. He died at Bhābāndār 24th September, 1860, and was buried there, but
the Arael Khan river has, within the last few years, washed away every trace of his house and tomb.

Three sons survive, of whom none have as yet exhibited any of the energy, or abilities, of their father and hence the sect is consequently diminishing in number.

The seat of which he was the leader is generally known as the Faras{\textsuperscript{a}} Sek (or sect); and those who purchase his doctrines have been enjoined to say the Zafr (mid-day) Faras (or compulsory) prayer on Fridays instead of the usual Djuma or Farah prayer, which is customary with the majority of the Mussalmans.

(M. Imamet Haidari.)

Al-FARAS, the horse, whether stallion (far\textsuperscript{a}) or mare; as a collective al-kha\textsuperscript{a}l. The horse is considered the most beautiful and noblest creature next to man. The fine proportions of its limbs, the purity of its colour, its swiftness, its obedience to the rider, whether in battle, in pursuit or in flight, its courage and strength, its intelligence and standard of good manners are renowned. A horse is, in the latter, the fact that a well-bred horse discharges neither urine nor excrement while its rider is on its back. This is of great use that no one else is allowed to mount it. It is not before beside him when he is asleep, and wakens him with its foot when danger threatens from the enemy or wild beasts. The horses used in the game of polo (jams\textsuperscript{a}t from the Pers. jang\textsuperscript{a}g\textsuperscript{a}l), watch the ball with the eye and follow it without the rider's needing to guide them. One of the most noteworthy habits of the horse is that it will only drink turbid water; it is afraid of its reflection in clear still water and makes it turbid and frothy with its hoofs.

The following story is told of the creation of the horse. When God wished to create the horse, he said to the south wind: 'I will make a living being out of thee, collect thyself.' He then caused Gabriel to take a handful of wind and from this he created a reddish brown (hamm\textsuperscript{a}t) horse. God said to it: I have created thee the horse and made thee for the Arabic and distinguished thee above all other beasts by swiftness for the gaining of food and booty, thou shalt be ridden on the back and may fortune be attached to thy forehead. Thereupon, he dismissed it and it neighed. Then God said: Blessed be ye neighing, terrify the worshippers of idols and fill their ears and make your feet tremble. He then marked it with spots on the forehead and legs. After the creation of Adam it was led before him and preferred by him to Hur\textsuperscript{a}l (v. 94-95).

According to another tradition the first to ride a horse was Isha\textsuperscript{a}a, the son of Abraham. Others again say that the Arabian horses are descended from those of Solomon. The latter inherited rocco horses from David; when they were being led before him, he forgot the afternoon prayer, enraged at this omission he had them all hamstring except a few that he spared because they had not yet been brought before him. When after this people of the tribe of 'Aax came to visit Solomon and asked for a present on taking leave of him, he gave them one of the steeds to which they gave the name ad-d\textsuperscript{a}l\textsuperscript{a}r; from it are descended all the Arabian horses.

The ancient manuscript literature on the horse (of, e.g., the Catalogues of Blem and Vienna) has as yet hardly been touched; apart from Ferozn's work cited below, Von Hammer-Purgstall gave a preliminary survey of the material in his essay 'Das Pferd bei den Arabern' (Bibliothek der philologischen, kulturhistorischen, und geographischen Wissenschaften, ii. 1851). The English translation of the best part of this study is to be found in the third number of the series 'The Pferd bei den Arabern' (Bibliothek der philologischen, kulturhistorischen, und geographischen Wissenschaften, ii. 1851).

The name al-Far\textsuperscript{a}as al-d\textsuperscript{a}s\textsuperscript{a}m, the great horse, is given to the constellation Pegasi, Nilf al-Far\textsuperscript{a}as to the constellation of the foal, al-Far\textsuperscript{a}as al-Thawr or "complete horse" to a group of stars near Pegasis. "It is not quite clear how the Arab astronomers, who have elsewhere retained the Greek constellations as completely, have come to add a third and complete one to the two incomplete horses." (Ideler, Strommata, p. 1060.)

FAR\textsuperscript{a}S\textsuperscript{a}N (Fars\textsuperscript{a}n), a group of islands in the S.W. of Cape Boj\textsuperscript{a}l\textsuperscript{a}n, opposite the harbour of Al\textsuperscript{a}a Ash\textsuperscript{a} in Tih\textsuperscript{a}ma. The largest of these islands, also known as Far\textsuperscript{a}n, is Far\textsuperscript{a}n\textsuperscript{a}r with the harbour of Kh\textsuperscript{a}r Fars\textsuperscript{a}n and the village Sag\textsuperscript{a}l. Harb and Seyd\textsuperscript{a} are other places worthy of mention besides Kh\textsuperscript{a}r. The inhabitants fish for pearls and catch turtles, which brings them great wealth. Ehrenberg, who discovered the islands, saw many date-groves and fields growing et\textsuperscript{a}l\textsuperscript{a} with melons. Arab antelopes, numerous gazelles and goats there.

Ham\textsuperscript{a}d\textsuperscript{a}t was acquainted with these islands. Their inhabitants, who take their name from the island, are, according to him descended from the great North Arabian tribe of Tag\textsuperscript{a}ll\textsuperscript{a} (q. v.). Like the latter they were once Christians and had many churches on their islands, which had already been destroyed by Ham\textsuperscript{a}d\textsuperscript{a}t's time. They carried on a busy trade with the Abyssinians. According to South Arabian genealogists they are chim\textsuperscript{a}n.

Al-FARAZDĀK (the *lump of dough*: *Ağlabi*, v. 3), whose real name was *Hamzah b. Qāhil b. Ṣafā'a*, was one of the three great Arab *satrātā* of the Arab period [cf. *qātab* and *al-ʾAkhbār*]. He belonged to the Tamimi Ṣafā'ī b. Dārin. He was probably born about the year 20 (640-641) [cf. *Nabīḥa*, ed. Bevan, p. xvii]. We know nothing certain of his early life. It may, however, be true that his father sent him to *ʿAlī* after the *battle of the Camel* (*Aṭba*, v. 6, 46), although tradition gives him an even later date, the 12th year of the *kalimah* in the life of the poet [cf. *Nabīḥa*, op. cit., in opposition to *Hell, Farazdak* *LaVerdure* et al., Munich dissertation, 1900, p. 2 et seq.]. There is more foundation for the statement that he (presumably when about 30 years of age) induced the Caliph *Muḥammad* by threatening poems to deliver up the inheritance of *Hittah*, a fellow tribe of the *Farazdak*, which he had illegally confiscated (*Nabīḥa*, p. 688, 689, et seq., further references are given there notably to ʿĀzurī, v. 96-103). This incident is said to have provoked the eminence of *Ziyād*, *Muḥammad*’s extremely energetic half-brother, against him. *Ziyād*, who was governor in the *Irāq* from 43 to 53 (665-674), in the *Irāq* from 43 to 53 (665-674), was governor of *Khaṭb* on behalf of the *Khaṭbī* b. *ʿAbd Allāh b. Khaṭbī who was badly treated, the poet dedicated laudatory verses to him (*Aḡlabi*, xix. 17). Al-Farazdāk is said to have already been on bad terms with *Khaṭbī* owing to a previous incident (*Aḡlabi*, xix. 60 et seq.). He satisfied him as a *S̄ūr* and son of a *Christian* woman and afterward also his administrative measures. How this affected him has already been told in the article *Ghazāl*.

Al-Farazdāk’s relations with the *ʿUmayyād* were, as we have seen, not good at first. The first Caliph on whom he wrote panegyrics was *ʿAbd al-Malik*. It was not till Sulaimān’s reign (Buṣair, No. 21), that he came to court and he seems to have been in particular favour with the latter. He also dedicated laudatory verses to the other Caliphs from *ʿAbd al-Malik* to *Yazīd II* as an opportunity arose. This was no longer the case with *ʿOmār II* (for details see *Hell, Farazdak* *LaVerdure*, p. 29). He hurled most bitter lumps against *Ḥishām b. ʿAbd al-Malik*, the last Caliph, whom he tried to see, and jeered at him for his surcease and also for his physical incontinences (Buṣair, No. 63 and 133, *Nabīḥa*, p. 984, commentary on verse 10); quite a number of panegyrics on *Ḥishām* have, however, also survived from al-Farazdāk’s pen.

Al-Farazdāk seems to have died in 114 (732-733) of plague, and was buried in *Bāṣr* in the curacy of the *Ṭamīm* (*Aḡlabi*, xix. 44 et seq.; cf. the article *Ṭarḥ*).

After what has been said above there is little need to add much on the *character* of Al-Farazdāk. His most prominent qualities were undoubted bravado, cowardice, cruelty and caprice. The latter seems towards the end of his life to have overcome even his cowardice; cf. his prevaricative attitude against *Ḥishām b. ʿAbd al-Malik* (*Aḡlabi*, xix. 29 et seq.). Apparently chivalrous actions also such as his intercession on behalf of a widow (*Aḡlabi*, xix. 36, 50) on the numerous cases in which he took the blood guilt of a stranger upon himself are really to be explained from his unbounded vanity. His cruelty was proved at the massacre of Greek prisoners...
which Sulaiman once ordered in Medina (cf. 11:116). Some of the stories of his cowardice are most startling (Agáhi, xiv. 35 and particularly 36) as well as those of his lasciviousness. He plays a role in obscene stories in Arabic literature similar to that of Aíya Núrî at a later period. Agáhi, xiv. 35 et seq. is peculiarly characteristic of his lack of scruple in sexual matters. This defect in his character gave his rival Líjar a many an opportunity for well-motivated scorn (Nádhîh, p. 394 et seq.). In his favour it has been urged that he was all his life a faithful supporter of the house of Aíy, but he really only showed this on one occasion, when Prince Húdáid (for details see Agáhi, xiv, 78 and Beucler, op. cit.) was usually content with showing his sympathy in a rather un-conspicuous fashion (Agáhi, xiv. 34, 47 et seq.; Ibn Khallikán, iii. 620). Nor must it be forgotten that on other occasions he shows sympathy which seem to be Khrádji (cf. Hel, in the Zeitsehr. d. Deutsch. Morgenl. Gesellschaft, lix. 593), and which certainly can hardly be reconciled with real attachment to the Alid cause. How deeply he really was still sunk in Béloudi vagabondism may be seen from the fact that he buried in Málúkh the reprobate that his ancestors had never worshiped Yaghâch and that he could not have found on earth a pen to write the pious fäza (Zeitsehr. d. Deutsch. Morgenl. Gesellschaft, lix. 600). Similarly he had little hesitation in weaving passages from the Korâan into an obscene passage (cf. Boucher, No. 188, p. 539 = ext., p. 180, et seq.) from below). The only verses that really came from his heart are those in which he expresses his terror of Ziyâd. In Agáhi, xiv. 12 et seq., he gives a touching elegy on the death of one of his sons and afterwards says that the deceased was not worth his Álîsh. That he appropriated verses by other poets (Agáhi, xiv. 32) without hesitation may be excused from the practice of the times. The Alids make him die a kind of martyr (cf. al-Ashâr, 44). He expresses his sense of piety towards the end of his life and expressed lively fear of the next world in certain verses (Kumil, p. 71, 5, 50). Although al-Farázídah particularly cultivated the satire and its opposite the panegyrical and barmig-poem, other kinds of poems are also found from his pen: Kumil, p. 208 and Boucher, No. 119 as well as Hel, (Dmitre) No. 366 = (Tabari, ii. 103, 110), are epic fragments while Boucher, No. 47 is a song on wine; the verses given in Agáhi, xiv. 35 et seq. from below are simply obscene without personal reference, his haunts have already been mentioned. Al-Farázídah was particularly fond of making short proverbs as these are more effective and neatly preserved (Agáhi, xiv. 53). We may further add as regards the appreciation of Farazídah's poetry by the Arabs that he was particularly esteemed by the Tâtimi, while the Kâts preferred Djàrî. His opponents do not seem to have ever seriously attempted his life, although they often treated him badly. Philologists in later times esteemed him on account of his immense vocabulary (Agáhi, xiv. 45, et seq. from below). A large number of his verses have become proverbial (Agáhi, xiv. 13 et seq.).

(A. Schaad.)

Fard (a. perfect, fardā'-i is singular, unique, without an equal, etc.) The word is a technical term in various branches of knowledge. In theology it designates God as the One, whom there is none like. In the Korâan and in the sayings of Muhammad that have been transmitted in tradition * fard does not appear as an attribute of God. Al-Ashâr on this account disapproves of the application of the word to Allah. But it is possibly simply a paraphrase of the Korâanic hawan Allahâ (i.e. which has the meaning "unique" in this passage only if at all.

In poetry fard means an isolated verse.

In tradition fard is synonymous with chahrab maqâma. This is the term applied to a tradition, whose chain of transmitters is broken, but which is in the second link only by one of the Tabâni (members of the first generation after Muhammad).

In Arabic grammar fard (with wafrad and wahd) is a name for singular.

Bibliography: Muhammed Aâli, Dictionary of Technical Terms, ii. 1087, 1107; Lâne, a. v.

(A. Schaad.)

Fard means that which is strictly prescribed and obligatory. The omission of which will be punished while the execution will be rewarded. According to the Hanif school fard means that which is regarded as duty on the basis of negat arguments; which i.e. necessary or obligatory, which is considered a duty by the Akhbari and the schools of Fath, as well as the other Fath schools, fard and wahd are synonyms. The law distinguishes fard-al-wa'id, to which every one is bound and fard al-khîlâyis (i.e. God's), in which it is only demanded that a sufficient number of Muslims should fulfill the religious duties concerned (as, for example, the performance of the common idhâf in the mosque and the wailing of the holy war). Cf. also the article wahd.

Farghâna. This Farghâna oder, a territory in Russian Turkestan, is the valley of the Sir-Darya. The name strictly is only applicable to the valley itself, bounded in the north by the Cokul range, in the east by the mountains of Farghâna, in the south by the Alai range; in the west the boundary is less sharply defined by the approach of the mountain chains to the river bank, which causes the river to slacken its course, which in Farghâna is predominantly southwesterly, first to a western then to a north-
western direction. Between the mountains and the stream there is here, particularly on the south bank, an open space. It is only on this side that the Farghana valley is connected by a natural road with other lands, and therefore, as Babur notes, only accessible to hostile attacks all the year round at this point. On the sources of the river and their junction in Farghana cf. the article ASEN-DARYA. Under Russian rule, the mountain valleys of the north, northeast, and south, isolated almost exclusively by nomads, have been united with Farghana valley to form one administrative district, just as in the 14th-18th centuries when the Arab geographers reckoned the Oxus valley (Arab. Jirdjildjil) as belonging to Farghana. The administrative district of Farghana has an area of 40,500 square miles of which only 10,000 belong to the valley proper and of these again only 4000 belong to the land irrigated by the river. In 1897, the population was 1,353,238 (now nearly two million) of whom by far the greater number live on the land irrigated by the river. Unlike all other lands of Russian Central Asia, Farghana suffers on this account from want of land and over-population; there are only about 1.8 acres of irrigated land to each inhabitant and about 10 acres to each landlord.

Our oldest notices of Farghana are due to the Chinese envoy Chang-k’ien (c. 128 B.C.). In these and the other early Chinese accounts the country is usually called Ta-yi’an; the name Farghana (the oldest Chinese transliteration is P’o-k’an, later P’o-kan, P’o-k’an, and Fei-k’an) only appears in the fifth century A.D. Even the Chinese found an agricultural population here; it numbered only 50,000 families (about 300,000 people); there were 70 towns (apparently villages). The Chinese claim to have brought their iron industry, as well as the art of making articles of gold and silver, to Farghana; as Hirth suggests, the ironware mentioned by Ptolomy was possibly exported from Farghana. On the other hand the Chinese first became acquainted with the vine and the lucerne (as horse-fodder) in Farghana. It has been suggested by several Sinologists, including Hirth, that the cultivation of the vine was first introduced into Central Asia by the Greeks and that the Chinese p’o-kan is derived from the Greek βελανία. The name, however, could only have reached China through the intermediary of Persia, which seems out of the question, as no similar Iranian word has yet been shown to exist and besides Strabo (Chap. 72) expressly says that the Greeks had found the vine cultivated everywhere in Central Asia from the Indus to the Euphrates. Farghana was little affected by Greek-Bactrian culture, which is evident from the fact that the use of coins was still unknown there in the second century B.C., a fact that other state of affairs existed later and whether coin was struck at all in Farghana in the pre-Ma’munnid period as they were in Samarkand, Balkh, and Khstat, is not yet definitely known. Central Asia owed to the Graeco-Roman West, apart from the undeniable influence of Greek art, its glass industry which was still fairly important in the early centuries of the Hijsjan; the progress of this industry from the west through Iran and Central Asia may also be traced in the language (Greek Bbαλας, Pers. šīlūr, and šuš, Chin. 西螺 and 西胡), no mention is made of the development of this industry in Farghana in the authorities, but its products at least were common in Farghana also at a later period as the excavations conducted in Aksblija in 1885 have shown. Farghana is not mentioned by the classical geographers; very little of what they tell us about the upper course of the Jaxartes can be reconciled with the later and more accurate accounts of the Arabs; the name Arslan of the people mentioned by Ptolemy seems, for example, to correspond to the name of the river and district of Urans in Osh (cf. below) (W. Tomasek, Sogdiana, p. 48).

As early as 104 and 101 B.C. the Chinese undertook campaigns against Farghana but only the history of the centuries immediately preceding Islam is that known with some certainty from Chinese sources. According to the Fei-shih, the statements in which refer mainly to the 7th century A.D., the capital of the country had a circumference of only 4 km (about 2 miles); the king’s throne was in the shape of a golden camel; his army was several thousands strong. According to the T’ang-shih (which comes down to 754 A.D.) there were 6 large and about 100 small towns in the country; the same authority says that the same dynasty ruled the country without interruption from the 7th to the 8th century A.D. The king of the country was slain between 627 and 649 in a battle with the Turks whom on a Turkish dynasty seized Farghana. But the power of the late king was only able to hold out in a portion of the country. The town of Kāns (Chin. 良安) is mentioned as the residence of the Turkish ruler; the native rulers lived in the town of Hu-Men (P). When after the collapse of the great Western Turkish empire (658) the country was organized as a Chinese province for a brief period, Kāns was the capital of the whole country; at a later period the native dynasty seems to have been utterly uprooted by the Turks, for a Turkish ruler (Araban Turbuk) is mentioned in 1739 as ruler of all Farghana. The native dynasty seems to have lost its importance long before this for in 650 Han-Cheng found no single ruler of Farghana but several who were fighting with one another; the land had been for some decades previously in the condition in which this traveller found it. In the latest Chinese source, the T’ang-shih, Aksblija (Chin. 阿史軼) appears as the capital of Farghana as in Baktu Buri (ed. de Groot, p. 420); on the other hand the majority of the accounts of the Arabic campaigns of conquest regard Kāns as the capital (Yu’kqin, Geyler, p. 304; Ido, Ibi, iv. 478; Tabari, ii. 1257, 15). At the present day the same Kāns is borne by two towns adjacent to one another, Yakari-Kāns (Upper Kāns) with about 4700 inhabitants and Karsu-Kāns with about 8000; somewhat in the north of Yakari-Kāns lie the ruins of an old fortress (only about 61/4 acres in area), which are called Sheg-Gorghān (the fortress of the fire-worshippers) by the natives (see the ruins of A. Iravani in the Projects Turc, brahala Leifel, 142 at no. 466).

The Arabs seem practically to have been the same conditions existing in Farghana as in the other parts of Mu’ta wās’ al-Nahār. The landowners or knights (dabkān, Arab. plu. dabkān) formed the ruling class; the king was no more than the first knight in his country and was called like them dabkān (Haddoul al-Nahār, ed. Tumanski, P. 105); he also bore the Iranian regal title shahid (cf. particularly Tabari, ii. 1342, N. 8.).
The rulers of Farghânâ offered a stubborn resistance to the Arab conquerors; more than a century was to pass between the first campaign under Kusâba b. Muslim (96 = 712–713) and the final submission of the country. In the year 96 = 713 Kusâba rebelled in Farghânâ against the Caliph Sulaimân and was slain by his own soldiers; according to Tâbrîzî (ed. Schefer, p. 377) he was in the village of Kâlâb, according to Djamâl al-Kâmil (in Barthold, Turkestan etc., i. 148) in the village of Kûlîf (the two names seem to be identical and the difference is due to corruption in the manuscript). At the present day the tomb of the "Imâm Shâhî Kâtalî" is still pointed out in Tacîl-Kâtalî, a community (qawwâl) now belonging to the circle of Andšâmî, and formerly to that of Osh (Protopl. Turk. Khvâr. etc., iii. 3, etc.) but as far as is known it has never been described or reproduced. According to the opinion of the Arabs this district was "in China" (cf. the verses by the poet Ibn Lujûnîn al-Bailî in Bahdârî, p. 204).

Nasr b. Sâliûr had probably in 94 a. H. left Išâm (Abû Allîf b. Abî Êlibî) behind in Farghânâ (Tabîrî, i. 1440, 2); a route was called behind from Išâm; it lay on the road from Farghânâ to Kâlâbî (Tabîrî, ii. 1276, 3) and in the region (qâalîb) of Isfâm (Tabîrî, i. 1440, 1). After Kusâba's death the Arabs seem to have driven out of Farghânâ, for the ruler of Farghânâ was able in 103 = 722 to offer the "râvîn of Išâm" to immigrants from Sogd (Tabîrî, i. 1440); but no mention is made in the historians of the defeat and expulsion of the Arabs. According to a later story (first given by al-Kurâshî, in Barthold, Turkestan etc., i. 148), Muhammad b. Ḭâfîr fell at the head of 3000 "companions and their followers" (sâqîâû wa râvînâû) in battle against the inhabitants of Sâliû b. Abî Êlibî (possibly Kâmâbû or Isfâm) in Farghânâ (in the neighbourhood of Kâlâbî) under the Caliph Óthâmân; the same story is told with some alterations in a work popular throughout Central Asia, presumably translated from the Arabic into Persian and thence into Türkî (Protopl. Türk. etc., iv. 149 ff. etc.).

Nasr b. Sâliûr was the first to be able to send a government to Farghânâ again (121 = 739, cf. Tabîrî, ii. 1604, 3); but on this occasion again Arab rule did not last long. From Yaâbûlî (ii. 465) it may be assumed that the rulers of Farghânâ had returned to Kâlâbî; even there they were defeated in the reign of Ḥâdî (136 = 158 = 734–737), had to flee for peace and stay a large man. His name was thrown into prison for a firm refusal to adopt Islam and only released in the reign of al-Mahdi (153–169 = 775–785). An army was sent by al-Mahdi against Farghânâ under Abû Ḥâsîm b. Abâd; Kâtalî is again mentioned in connection with this expedition as the residence of the king, who apparently had been back his country in the interval (Yaâbûlî, i. 418). In the time of Ḥâdî al-Râshîd, during the governorship of Ḥâsam b. Aiî (175–176 = 792–793), "Amr b. Iṣâam al-Aṣîr was ordered to drive the army of the Dâghûkân (probably the successor of the Türkî Kâtalî) out of Farghânâ (Gardet, in Barthold, Turkestan etc., ii. 207). Under al-Mu'âsir (192 = 818–833) an army had once more to face against the rebellious inhabitants of Farghânâ; at the command of this Caliph the administration of certain parts of Murâd was entrusted by the governor Ibmân b. Aḥsîb (203–205 = 819–821) to the Sûmâdî family. The Sûmâdîs Nûh b. Aḥsîb (184 = 844) was the last governor under whom Farghânâ (Kâtalî and Órâs) had to be reconquered on account of the hostility tier inhabitants from Ólâmî (Bahdârî, p. 450). When the native dynasty was finally overthrown it is not related. In the reign of Mu'âsir (218 = 827 = 833–843) there were seen from Farghânâ (Farghânâ) in the Caliph's bodyguard (Bahdârî, p. 431). In 224 = 838–839 Farghânâ was visited by a severe earthquake (Gardet in Barthold, Turkestan etc., i. 3).

The Farghânâ of the Samanî period is described in great detail by the Arab geographers. The focus of the industrial and commercial life of the country seems at this time to have been transferred to the lands south of the Sir-Darya. The oldest Arab geographers, like Ibn Khûshâlîbîh (d. de Goeje, p. 30), make the high road from Western Asia to the eastern boundaries of the Caliph's dominions cross the Sir-Darya at Khârâz, thence follow the right bank as far as Akhâshkât, thence across the river to Kâtalî, Osh and Órgân. On the other hand Išâkî regards the road through the lands lying south of the Sir-Darya as the main route; on this route lays Kund (in Hârâr, ed. Beveridge, t. 4, p. 5, Kand-ı Bâdûn, the modern Küni-ı Küstâmî; Sâká (the modern Sar-Kâshû); Sîkîb is now the name of a certain village on the same river but considerably farther south). Rîshân (still bears the same name), Zandûrânûm and Kûbel (the modern Küvâ; there was only a by-road from Sâká via Khojû (the former capital) to Akhâshkât. Akhâshkât was still considered the capital (yâyâbû). Kâtalî only the second town (Išâkî, p. 333); but Mîkâladût (p. 274) says that Kâtalî is larger and more beautiful than Akhâshkât; and ought really to have considered the capital. The third town in importance was Osh on the frontier; there was a large kâbîf (fortified military station) there, into which warriors of the faith poured from all sides (Mûsâdît, loc. cit.), the movement of the Tâzûnûs were watched from the hill near Osh. Úrgân was about 1/4 smaller than Osh; it is called the "town of the Diğîân Dir-Ṭeqûnîn" (this is the proper reading) by Ibn Khûshâlîbîh (p. 30) and Kûltûm (p. 208), so that it was probably the residence of a Turkish prince; Dir-Ṭeqûnî is the modern name of a district east of the Yezî pûn (Petruwski in Enplikî vez. ed. Resûl, an. 191, 192). The towns of Bûkandû and Salût were also regarded as "gateways to the Turks" by which came the regular tribute of the district of Miyan-Râshûm (between the Norin and the Sir-Darya; the modern Bi-šâhr-arâb) and the district was named Miyan-Râshûm in the "seven villages") and had, as Ibn Ḥâwî (p. 367) says, been taken from the Turks only a short time before; it is apparently the same district as was later called Vîtîkand (or Alţîkand) (Turkî-REC. KÂH. transplant, E. D. Ross, p. 180).

The land was divided into several districts (ašrâr, or ašwar); besides Miyan-Râshûn, Bûkandû and Salût, Ibn Ḥâwî (p. 365, 366, 367) mentions the following districts, Upper Nûṣî with Sâká, Kûbûl and Zandûdidn, Lower Nûṣî (to the east) with Marâgûn, Zandûrânûm and Anûlûk (the modern Anûlûk), Sûmâdû (Isfâm) in the plain and in the mountains, Nûṣîb in the mountains, with the town of Miskûn (q. asrâr from Kâtalî,
Djidighi (in the valley of Cotkal, with the town of Ardbulakhat and Urs [near Osih]; several smaller districts are also mentioned. Akkad-Abbasi, who was the head of this district and makes the whole of Farghana one kirah, divides the country into three parts, viz., the land between the Nahr and the Kan-Derya, the land south of the Sir-Derya and the land to the north of the Juttah river; it is apparently on this that the name of the town of Farghana is derived from the three parts mentioned.

Miyanta-Urgiya, Naukt (near Nauky), and Wughitya is named, although some towns south of the Sir-Derya are erroneously reckoned by Akkad-Abbasi among the Miyanta-Urgiya (e.g., Zumbartshah) or the Wughitya (e.g., Anwul and Miakhekh-Khalat in the Sir-Derya, and was the chief town in Miyam-Rudil), it lay on the Nahr (the river itself is called Ruhil-Khalat in the Sir-Derya), and was the birthplace of the Samanids. Abu I-Fasa's Naq, the eldest son of Ahmad b. Asad (possibly a king, probably the same Ahmad b. Asad of Naur), and the chief of the Samband Naq, and Akkad-Abbasi, is named. According to Akkad-Abbasi there were in all 40 places in Farghana with Friday mosques. As Iskakhri (p. 533) notes the villages in Mor war al-Nahr were nowhere as large as in Farghana; it sometimes happened that a village stretched for a whole day's journey on account of the number of its inhabitants and extent of their fields and pastures.

The mountains of Farghana yielded gold, silver, mercury, according to Akkad-Abbasi (p. 376, at Kuld), petroleum, turquoises (at Kohskand, cf. Muhammad Bakr of Buxhold, Turkestan, i. 81), iron, copper, lead, and sal-ammoniac (at Uzgend, cf. Iskakhri), the Hawal (p. 506, 1) mentions tarragon as a special feature of Farghana, the seed of which was exported to all countries and an article called khalta or halila (cf. Bibl. Grecq-Arab. le. 344); according to the passage there quoted from Vallier's Lexicon it was a black wood, which was used as a remedy for certain diseases, notably worms in the intestines. There were deposits of coal at Iskabad, the price of coal even in those days was as high as in Khiva, was Iskakhri, p. 334), 1 dhamm for three anfounds (what, plur. anfoud): as an anfoud contained at least 60 kg, this was very cheap; at the time of the Russian conquest one pod (16.38 kg) was being sold at 32 kopecks (about 1/12 dirhems) and even today the price of coal is incommensurably higher than in the Samanid period. The manufacture of iron, which had been introduced by the Chinese, no longer existed; according to Akkad-Abbasi (p. 345, vs), Turkish slaves, white clothes, shawls, and swords, copper and iron were exported from Farghana and Isfandikh, the last four articles must refer not to Isfandikh but to Farghana only. Under Samanid rule the land developed considerably: according to Ibn Ekorizilik (p. 38, 12) the revenue from taxes in Farghana was only 250,000 dirhems, in the Hawala (p. 345, 5) he states it had risen to 4 million. It seems by this time to have had undisputed sway; whether there were Christians, Manichaeans and fire-worshippers here,
FARGHANA.

65

appropriated the treasures (khudai) of Aighih and Ughanh (cf. CAGHATAI, p. 824 et seq.).

Several buildings in addition to a considerable number of tombs have survived in Ugananz from the period vii—the eighth century at least. Among them is the gateway of a beautiful domed mosque with an inscription where the date of the death of the individual buried there is given as 388 = 1121; beside it there is a second mausoleum and a minaret whose height is about 60 feet. These tombs have survived among the present-day inhabitants regarding the origin of these tombs, according to some, the saint Barhat al-Khuzi is buried here. This place is also mentioned by Ljami al-Karashi in Barthold, Turkestan, l. 149 others say there are the tombs of two brothers, the kings of Aighih and Sadauld Mrad; in reality the latter's (died 552 = 1157) tomb is in Merw; *Likad Mrad* was Nasr b. Ali (died 403 = 1012-1013) the conqueror of Aighih al-Nahr according to the historians was actually buried in Ugananz, although his tomb has not survived.

Kuhistan is not mentioned after the 16th-18th century, the prosperity of the town of was of such short duration is not known: the story of the famous Khan of Kuhistan in the 19th century by Manzur, Kajaran, and the Turkic of Uzbekistan, by Ildefonso (ed. Brown, 174 et seq.), with reference to Nusrat al-Din al-Khizari, is certainly legendary. Besides Ugananz, Marghanj, had attained considerable importance. The town was of incomparably greater importance in the 16th-17th century, now appears as a mere village in the districts of Marghanj (Yaqut, II, 751); the author of the Hitay, for example, (died 593 = 1197) called himself Marghanj, although he was really born in Kuhistan. Towards the end of the 15th—16th century Farghannah was given a new capital, Aighih, founded by Khurshid and Dawat, which corresponded to the Andakhan of the Arab geographers; the new form appears first in Djamul al-Karashi (in Barthold, Turkestan, l. 149 et seq.) although the old is still found in the Zafar-Nama (false ed., I, 283 et seq.); in Saltan Omor Shakh's Uighur document of the year 1472 = 1546 (published by Mileranski in the Zafar-Nama, Oid. Arsh. Oqt. v. 109 et seq.) the town is called Aighih.

An Arabic inscription of the Karakhanid period dated 29th December 1041 in three short, the Muhammad, Sultan of Persia and the Khwarazmians, are written in Persian, and the region in the southern part of Farghannah in the Terkistan of Khwarazm (south of Isfahan) (Preston: Turk. Khwarizm Litt. Arsh. v. 45 et seq.).

Tinuz and the Timrids had often to fight for the possession of Farghannah with the rulers of the modern Chinese Turkestan; it is evidence of the close connection between Farghannah and Chinese Turkestan that amongst other things in both countries the smallest division for purposes of taxation (which as communities corresponded roughly to the subcaste of the older period) was called *smez* (cf. Nasrani, ed. Beveridge, I, 1511), while in the other parts of Aighih al-Nahr the word *smez* was never used. In Persia, Omor Shakh, a descendant of Timur, called Farghannah an independent kingdom from 873-999 = 1400-1494.

On his successor and the conquest of Farghannah by the Uzbeks cf. Uzam (I, 540 et seq.). In Bakhor's time there were eight cities in Farghannah (exclusive of Khudaijan, which is also included in Farghannah); of these two (Aighih — the name Akhshar Kistew?) was only known to Bakhor from local — and Kahan, north of the Six Darya and six to the south of it; of the latter he describes Andijan, Ogh, Marghanj and Isfahan; Sjsham is nowhere mentioned by Bakhor as a town although Ljami al-Karashi (in Barthold, Turkestan, l. 148 et seq.) says that the tomb of a Muslim saint, the Imam Abul Ahmad b. Ali, a brother of the Imam Muhammad b. Khairkhan, was there. The name itself is written Kahan by Bakhor (l. 103 et seq.) as the name of a district (kahan): in the 18th century (e.g. in the Tadjfar al-Khwarizm of Muhammad Wafi Karimnag, MS. of the Asiatic Museum, x 381, l. 576) the term Kahan appears and in the other Kuhistan notices Kahan: the form Kahan, Russian Kakan, only returned in the 18th century through literary tradition. In the capital Andijan the Turc language was already predominant in Bakhor's time; there was no one in the city or in the marketplace who did not understand it; Bakhor even says that the dialect of Andijan was identical with the Eastern Turkish of the Dagestanis, as described by Mir Ali Shirk Nora. On the other hand "Sarkish" was still spoken in Marghanj, i.e., according to the Usbeks of the time, Persian. Of the products of Farghannah Bakhor particularly extols various kinds of fruits; besides orchards there were flower gardens, which stretched along both sides of the river from Andijan up to Ogh. The Khulji Sultan's mountain in Ogh is mentioned by Ljami al-Karashi under the name Barakta, by Bakhor (l. 360) as Barakht; Bakhor makes no mention of the localisation here of Solomonic legends (he only mentions that there were many mythological advantages of Ogh), but this localisation must have taken place by his time. Bakhor says that the tomb of the victor Aqil b. Barakhta (9 v., I, 476 et seq.) was not far from the mountain. During the last years of the reign of Omor Shakh a rock of a red and white colour was discovered on this mountain, from which mine-handles and other articles were made; a tree called *shipi* (Sperma armena) also grew in the mountains which Bakhor (l. 533) thought was found nowhere else (in reality it also grows in South Russia), the wood of which was used for making bird-cages, quivers etc. As to the mines and mining we are only told that tin and copper and iron are found in the mountains: no mention is now made of the manufacture of arms and other ironwork; the term of the country "with good government" was sufficient to maintain an army of 30000-40000 men.

Farghannah from the 18th—19th century belonged to the Uzbeks kingdom. Andijan is sometimes mentioned as the residence of one of the many minor rulers of the Skhantian dynasty; in the 17th-18th century the land was for the most part in the possession of Khirshul Sultan. *Farghannah* had even been replaced by *Andijan* as the name of the country in the deck al-Mutawakkil of Abu Muhammad b. Walli (Cod. India Office, 572, I, 102 et seq.) the following note on main Farghannah, is only the Andijan must be used. Towards the end of this century, after the collapse
of the Uzbek kingdom, authority in Farghānā, as in Chinese Turkestan and at a later period in Tajikistan, passed to a number of Khudzas who lived in Čakar north of the Sir-Daryā; this place is mentioned as early as the 17th century (Maḥmūdī, p. 262, 6), where Čakar must be a mistake for an unknown town. From the 13th century the region was destroyed by Shahrūkh Bū who succeeded in founding an independent Uzbek kingdom in Farghānā with Khudzand as capital; according to Mulla Niyās Maḥmūdī (Tāʾrīḵ-i Shahrūkhī, ed. Fandusov, p. 21) this took place in 1123 = 1700-1710. On this kingdom, which lasted till its overthrow by the Russians in 1876, cf. the article Shahrūkh. During this period also the name "Farghānā" seems only to have been known to people with a literary education: "Abū al-Kurān Ḥabštārī (ed. Schefer, p. 43 et seq.) for example says that the kingdom of Khudzand in earlier times (daw awrūd) was called "Farghānā." The same historian mentions "Farghānā and Taḵt-i Sukanāt" as the seventh town in the kingdom (after Khudzand, Taqhisht, Khudzand, Amlībān, Namangān, and Marghīān (Marghabīn) which shows that the name Farghānā was chiefly applied to the town of Čakar. Since the establishment of Russian rule a complete transformation in the economic conditions has been effected in Farghānā, particularly through the rapid development of the cultivation of cotton. Previously the land was only able to export a very small quantity of raw material after supplying its own needs; since the introduction of American varieties this article has become of importance for the Russian market; about 15 million kg. are annually exported, which supply one third of the amount required by the Russian cotton mills. The cultivation of cotton now brings the country an income of about 40 million rubles; this influx of money was naturally followed by a rise in all prices and a severe economic crisis, which has not been without evil results to the people; the rising in 1898 was undeniably influenced by this crisis. The silk trade is next in importance; it is not mentioned by the geographers of the middle ages and seems only to have developed in Farghānā in the 18th century under the influence of China, as in Samarkand under the influence of Persia. In 1896 about 245,000 kg. of raw silk were exported, valued at 3 million rubles; the amount produced is now about 242,400 kg., but prices have sunk so that this industry now yields only about 2 million rubles. The growth of cereals has declined with the development of cotton so that the country can now only meet its requirements by imports from the district of Samarkand. Little has yet been done to develop other branches of industry or the mines and the deposits of coal. Means of communication are still very unsatisfactory; although since 1899 the country has been traversed by a railway as far as Amlībān; in 1912 a branch line from Khudzand to Namangān was also opened; there is an almost endless lack of good roads and strong bridges are particularly scarce. The former capital Khudzand still forms the focus of transport and commercial life of the country; it is now a city with about 110,000 inhabitants; Namangān, first mentioned as a village in the 16th century, is now the second town in the country with over 70,000 inhabitants. The town of "New Margelan" was called Skoblew, founded by the Russians, the residence of the military governor, has a population of only 12,000. This relatively thickly populated territory is of less consideration for purposes of colonization than the other parts of Russian Turkestan. 17 Russian villages of which six are in the Farghānā valley proper, have been founded in Farghānā.

tial at Ferrara in 1491; Nuremberg 1457 and Paris 1516. Jakob Christmann made a Latin translation from Ansbach’s Hebrew version, which was published at Frankfurt a/M. in 1590. Jacobus Golius published the Arabic text with a Latin translation and a full commentary in 1699 at Amsterdam under the title: Muhammad an, Kitab Farghānī, qui vulgo Farghānīc, seu vulgo Ozraghānīc Roberto, Bibliotheca orientalis, Arabia et Libyca. Besides this work, which attracted a greater circulation in the west before, Regionsschütz and that of any other Arab astronomer because it was fairly short and in a form readily intelligible, al-Farghānī wrote two works on the astrolabe, al-Khāmil al-Lezvākī and al’-Janab’ al-Lezvākī, which still exist in Arabic in Berlin and Paris.

FARHAD Va SHIRIN, a celebrated pair of Persian lovers, and hence the title of a romantic poem; several poets (e.g. Æsch, Grundriss der Iran. Phil., II, 246 et seq.) have written poems with this title. Farrād, the architect, was the unfortunate rival of Kusurā — there are also several poems called Kusurā o Shirin; Nūrān (q. v.) was the first to write on this latter subject, — who had almost horded through the mountain Buzād in the hand of his beloved, when he fell dead on hasting falsely told that Shirin was dead. Turkish poets, notably Mir ‘Ali Shīr have also dealt with the same subject.

FARHANG, Farghān (Pahl. farghān, education, instruction), the name given by the Persians to dictionaries of their language. The four principal ones are the Farghān’s Dājanghā (1505) by order of Akbar by Dharmal al-Dīn Husain Iṣfī, an ‘Alī, and Shiraz; and finished in 1517 (1658) in the reign of Dājanghā; the Farghān’s Rūghī of Abū ‘Abd Allāh, an ‘Alī of Tabriz, who was still alive in 1609 (1618); the Farghān’s Shāfī, printed at Constantinople in 1515 = 1702; the Khāmil Nūrī of Muntakhab us-Sufī of Kāh Kūhil Khāmil, historical at Tehran in 1228 = 1774. — Farhang was the name of a Persian poet, Mirzâ-Farhang (Abu ‘Abd al-Kawām) who lived at Shiraz and died about 1802; he was the fourth son of Wāzīr (Mirzâ Kūhil) and was 31 years old in 1825 (1798). He was made poet-laureate to Muḥammad al-Tawla Tāhmasp Mirzâ, governor of Fars.

PARIS AL-SHIDyOK, an epitaph of Allah, [24 v. 5] 213° et seq. and of Shimag Gondi [7 v.]

FARIDA (24 v.), Firda, Fardā, q. v., p. 36° et seq. and also the article Zendah.

FARIDKOT, a town and state in the Ranjhi surrounded almost entirely by the British district of Ferozepur. The town was founded about 400 years ago and is named after the saint Bāghirī Fārid Shah Bahārānī, whose shrine is at Fakruddin near by. He died in 1264 (1855). A state was founded here by a Sūhī Īṣā family in Akbar’s time, and the Rajās adopted the Sūhī religion, which is now prevalent among the cultivating classes. The Muhammadan population mainly Rajputs, Īṣās and Arains, is about one fourth of the whole. Area 1,245 sq. m. Population 42,471, in 1901. The state was saved from absorption by Ranjhit Singh through the assistance of the British power in the early 19th century, and it has since been maintained as a Jumilary area. The present Rajī is a minor.

PARIDPUR district of India in Eastern Bengal, lying in the delta of the Ganges. Pop. (1911), 2,127,014, of whom 52%, are Muhammadans. Here was the birthplace of Hasāī Shāh ‘Alī, the founder of the reforming sect of Fāridiyya (q. v.) of Farsi, and of his son Dūdī Mīyān, who caused some trouble to the British Government in the middle of the 19th century. The town is still numerous in Faridpur. The town (pop. 11, 649) takes its name from a saint, Farsi Shāh, who is buried there.

FARIKH, in Arabic, a "large body of men" also a "section of a caravan" thus in Turkish, since the reforms (Tutvik), the general of a division in the army and vice-admiral in the fleet. This rank corresponds to that of Tundebeg under the hierarchy of the 'Ulama', Rathofli ali (Sirf-i awam) in the civil service and beylerbeyi of Rumi in the civil administrative organizations: there are also Bihatīh Fartī (of the first class), whose rank is somewhat inferior to that of "civil). The latter have the right to be called "Qutl-i qadim" (honorable) while the former have to be content with the title Schott-i fortunaten; both titles are followed by the expression Hazziddes which is translated "His Excellency" in the Turkish diplomatic service.

PARIS AL-SHIDYOK, Ahmad e. Vühe, an Arabic journalist and author, born in Isfahan, is the son of a Maronite parent, was educated at a Maronite school in Cairo and then for some time collaborated with Shiah al-Dīn on the Egyptian official gazette al-Wasā’il al-Muhammadiyya. He next resided in Malta where he worked as a teacher of Arabic. While he was in this position in Malta, he wrote his Kitāb al-Muhammadiyya, Arabic and English grammatical exercises and familiar Dialogues (Malta 1840). He gave an account of his experiences in Malta and his first contact with the results of European civilisation in his Kitāb al-Maṣla al-Muhammadiyya bi ‘l-Wasā’il lil-Muṣaffa wa al-Maṣla al-Muhammadiyya an Fakru ‘l-walid, which was first published in Tunis in 1285 = 1866 and in a second edition at Stambul 1299 = 1884. In the beginning of the titles he made a journey to
Paris where he composed his *Grammaire française de l'usage des Arabes de l'Algérie, de l'Égypte et de la Syrie* (Paris 1854) with G. Dugat, and to London. He gave an account of his journey, which suggested to him many critical observations on the Arabs and other peoples. In his *Kitāb al-Sāḥīf ilā Tābi'īn* (ed. by W. F. Salmons, London 1854) appeared at the same time. From London he went to Stamboul and there he became a convert to Islam. At the end of July 1860 he founded the Arabic weekly *al-Diwan* there, which, established by the Turkish government, took up the cause of Islam but also gave Muslims a knowledge of Europe. At the beginning of the eighties his papers enjoyed the greatest prestige throughout the whole Muslim world, but his son Safi, who undertook the editorship on the death of his father in 1905 - 1884, was unable to maintain the same level. He published selections from this newspaper in seven volumes (Stambl 1888 - 1928) entitled *Kanz al-Ruhānī fi Munāqashat al-Diwan* containing essays on literary subjects, a history of the Frangophones in Arabic, poems on panegyric on himself and in the last three volumes a history of the Ottoman Empire to 1298. He also found time for serious philological studies. Besides an Arabic primer he published studies in Arabic etymology entitled *Sīr al-Lugāy 2.6.6* (ed. Abu al-Abīd, Stambl 1884); a grammar, *Shuygat al-Tābi'ī* (ed. Abu al-Masyūd al-Qādī al-Bahrām, Stambl 1890); a Persian-Turk-Arab Dictionary, *Kanz al-Ruhānī*, Batuni 1876 and critical contributions to Arabic lexicography in *al-Diwan* (ed. Abu al-Abīd, Stambl 1399).

**Fāris al-Shawk**

FARIS al-Shawk, as he was usually called, lived in Holwān and other places in the neighbourhood 401 - 437 (1010 - 1046). He inherited his power from his father, Abu l-Fath Muhammad b. Ammiq, who had held away for about twenty years in Dakhil, Holwān, etc. Abu l-Shawk was at war during almost the whole period of his rule with neighbouring rulers and with his own family. His first fight was with al-Masyūd of al-Hilla, but it ended in peace by a marriage between his son and al-Masyūd and a sister (or daughter) of Abu l-Shawk. His next quarrel, with Tahir b. Hilla, a descendant of Isār b. Hamawih, (q.v.) was at first unsuccessful, as his brother Sa’di was also by Tahir and he himself had to take to flight in spite of the help given him by al-Masyūd, who was now his ally, but it also ended with a marriage. When peace had actually been concluded, Abu l-Shawk killed Tahir to revenge his brother (406 = 1015 - 1016). In 431 (1030) he regained possession of Dakhil which he had lost in the interval by the *Sāhil al-Ma‘ālik b. Hadda*; he won Karoun and Khulānjīn in 430 = 1039. In the following year, however, a war broke out between his son Abu l-Fath, who governed Dinawar for him, and his brother Mahdī, to whom he had ceded Shahtūrī. The uncle was victorious and took his nephew prisoner and gave him a sound thrashing. Abu l-Shawk felt himself thereby forced to bestow his brother in Shahtūrī but did not attain his object because Mahdī invited 'Ali al-Dawāsir b. Kākāya (see the article *Mujaddam u. Daghmadanīya*) against him and another brother called Surūjī also seized the opportunity to take the field against Abu l-Shawk. Although he succeeded in forcing 'Ali al-Dawāsir to retreat, he had to settle Dinawar to him. He did not dispose of his brother so readily; it was only when a much more dangerous enemy, the Sulayhī Frithshāb, appeared against him, Abu l-Shawk deprived him of a considerable portion of his territory and even plundered and burned the capital Holwān in 437 (1046), that he made peace with his brother, the more readily as his son had in the meanwhile died in prison. But his day was done, for he died a few weeks later. His brother Mahdī took possession of Karoun and Dinawar and his son Sa’di, whom the Kurds treacherously left in the lurch, sought and found refuge with Tahir b. Hilla. The conflict with Mahdī thereupon broke out again but, although even the measures of the Sulayhī Frithshāb (442 = 1050) bought no lasting peace, the further course of this family feud is not of sufficient historical interest to be detailed here.

**Farṣ, [See Mayāfarṣ.]**

**Farkān, [See Farkān.]**

**Farnūl, a mountainous district in Afghanistan lying to the west of Kūhāl, inhabited by a race of Tajik origin known as Farnūlīs.** (M. *Lodge and Sharif*.)

**Farrukhābād.** The name of a district and town in the United Provinces of British India. It is one of the districts of the Allāhpūra division and situated in the eastern part of the Doāth between the Ganges and Jumna between 36° 46' and 27° 43' N. and 80° 8' and 80° 17' E. The area is 1685 sq. m. and the population (in 1901) 925,812. The proportion of Muhammadans is larger than in most of the neighbouring districts, chiefly owing to the extensive Afghan immigration in the thirteenth and fourteenth centuries. The principal town is Farrukhābād which is joined as a municipality with the civil and military station at Patighar close by. Pop. 67,328. Another important town is Khānāgūr; Pop. 18,522.

There are several ancient sites of importance in the district the principal of which are Sāntānī, which is mentioned by the Chinese pilgrim Hsien Thang, Kampālīs the capital of the kingdom of Farnūlīs, and Khānāgūr plays a great part in early Indian history. It was Harshā's capital in the fifth cent. a.d., and afterwards the centre of the powerful empire of the Pratihāras. It was plundered by Muhammad b. Sūr's invasion.
in 589 (1193). The conqueror himself struck coins there in the Indian style, and it was afterwards a temporary capital of Muhammad III, b. Tughluk. In the xvii century a semi-independent state was founded by Muhammad Khan Bangash, a member of the Afghan colony which had settled in the neighborhood during the reign of Awrangzeb. He founded a new town on the banks of the Ganges which he named Farrukhabad after the Emperor Farrukshiyar in 1126 (1714), and it soon attained great prosperity, and became an imperial mint. Muhammad Khan died in 1146 (1745) and was succeeded by his son Khair Khan who was killed in 1161 (1748) in a battle against the Rohilla. A large part of the territory of the Nawabs of Farrukhabad was lost, and the state seemed to have come to an end, the Emperor (Ahmad Shah) being hostile to the Bangash family. But its fortunes were revived by Ahmad Khan, a younger brother of Khair Khan, who defeated the Wazir Safdar Jung and recovered Farrukhabad 1163 (1750). From him the town derived its second name of Ahamdunagar Farrukhabad, which appears on the coins of Ahamd II., Shah Dahan III. and Shah Alam II. the earliest being dated 1170. After many vicissitudes and the temporary loss of his dominions Ahmad Khan finally succeeded in recovering a great part of them and lived till 1285 (1771); the state however remained subordinate to Oudh. The first British occupation of Farrukhabad took place in 1777 when a body of troops and a Resident were posted there by Warren Hastings, but the Nawab continued to hold it till 1802 when it was incorporated in the British Dominions. Nasir Jung being then Nawab. In 1804 the Mahrattas were defeated close to Farrukhabad in 1804 by Lord Lake. The Nawabs retained their private estates, but lost the last of them, Tafazal Husain, joined the mutinous Bengal army in 1857 and obtained possession of Farrukhabad which he held till Jan. 1858. He was expelled and went to Mecca in 1859. After the British occupation Farrukhabad, which had been one of Shah Alam's principal mints, became a mint of the East India Company who continued to issue coins bearing the name of Shah Alam and the reign year 45, up to 1825, although Shah Alam had died in 1221 (1805). These coins were in Persia and followed Shah Alam's inscriptions. They were known as the Farrukhabsi Sixes rupees, from the word 'shikla' with which the Persian legend commenced. 

of his reign is largely a record of his abortive plots against the brothers. In 1719 Hassau, 'Ali Khat, hastened from the Dakhmash, his viceroyalty, to support his brother at court and on March 1, the emperor was dragged from the women's apartments of his palace, where he had taken refuge, and thrown into prison, the Saiyids raising to the throne, under the title of Ræf al-Darraghil, a puppet prince, cousin to Farrukhsiyar who was murdered or committed suicide in prison two months later. His reign is memorable in the annals of British India for the famous feran, exemplifying the English Company's policy of purchase and trade. The feran was annually, from customs duties throughout the sub-continent, the chief source of revenue for the British government. The influent of Indian emperors, such as Farrukhsiyar, who had accompanied a mission to Delhi and earned Farrukhsiyar's gratitude by curing him of an obstruction disease.

FARSAKH (from the Old Persian Ferş or Persia in the narrowest sense, the national home of the Persians, a province of Persia in the E. of the modern Iran, with its capital Sâtrak, bounded in the N. by Irau, Adjunt, in the S. by the Persian Gulf, in the E. by Kermán and in the W. by Kâbulistan. It was divided into three states in the middle ages: Ispahan, Ardestâk-Hamadân, and Zâhah, the former being a mountainous country and the latter a lowland plain. The feran was used from the middle ages in the Bazar of the Feran is an inch, equivalent to the distance covered in an hour by a horse walking. This feran contained 100,000 drachmas or Piastra cori (83 and 126 decins), and the S, C. of Persia, 1930, A. Meillet in the Mémorial de la Soc. de Linguistique, viii. (1914), 427.

FARSÍSTÁN. [See PERSIA.]

AL-FARUKH. [See 'OMAR B. AL-KHAJÁ.]

AL-FARUKH, an Arab poet born at al-Mawjil in 1254 (790), took pride in being a descendant of the Prophet, and therefore bore the nickname al-Farukh and al-'Omar. Little is known of his life; we only know that he accompanied his cousin, 'Abd al-Rahman, when the latter was sent by the Sufi Sain Liber to Baghdad to destroy the power of the Manduks there, and when this expedition was unsuccessful he went with the next expedition for the same purpose under 'Ali Riza. Farkh was the last to put into the rule of the world and the Manduks, and al-Farukh remained with him in Baghdad as Sekhâr of the wilayet till his death in 1258 (1862). 'Olamu of al-Mawjil published in Cairo in 1510 (1859) at-Tavqul al-Farukhān wa Manqīdat al-Farukhāt of his poetry. Besides this, Farukh composed another entitled Akhilat al-Masha'ir, and compiled a number of the works known as 'Nashr al-Duhâ' and 'Tahrîr al-Fushû' al-A'zam.

Bibliography: G. Zandeh, Maghâr al-Shâb, ii. 197; id. al-Sarâ'af. AL-FARUKH, MULK MAHMUD B. MUHAMMAD was born 933=1535 at Dzsampir. He received his early education from his grandfather and father, Ali al-Mulk, Muhammad Afjal al-Dzsampiri and after completing his course at the age of 17, began to deliver lectures in the students who then thronged in Dzsampir from all parts of India. His literary fame and scholarly attainments soon became known to the Emperor Suleiman the Magnificent, who wrote against him the Magnific (offer) of Suleiman (three hundred cases per month) and showered royal favours upon him. He was one of the most eminent scholars, not only in India, but in the whole Islamic world of his time. When he went with the Emperor to Lahore and visited 'Abdul-Mir' al-Shafi'i, the saint reprimanded him for being too much engrossed in worldly affairs and advised him to abandon the Emperor's
service. Accordingly he resigned the royal service and went to his native land where he passed his last days in delivering lectures to Muslim students and writing books. As a scholar in philosophy and rhetoric, it may be said that Mahmud was one of the most distinguished scholars in the Islamic world and his works on these subjects have been adopted in the final courses in all the Indian Universities, and certificates of competency are awarded to only those students who are found proficient in his works. He died 1062 = 1651.

He is the author of the following works:

II. Al-Farawi fi Sharh al-Farangi, a commentary on 'Abd al-Rahman b. Ahmad al-Mil's work on rhetoric entitled al-Farangi al-Ghazawiyya. Printed, Cawnpore.

III. Qida fi Usn al-Hayrili, a treatise on the first matter (Hayrili). Ind. Off. 561.

FARUKI DYNASTY. This dynasty was founded by Malik Raza, son of Khaudzlan Faruki, who claimed descent from the second Khaufi, 'Umar al-Faruki ('the Discriminator') and was one of the sources of 'Ala al-Din Khalji and Muhammad b. Taghib. First Taghib gave Malik Raza a gharar in Khudes and afterwards made him governor of that province. On the dissolution of the empire after the death of Fira in 1388 he became virtually independent and his eldest son Naseer Khan, who succeeded him in his seat (April 9, 1396), formally proclaimed his independence. Having established his authority throughout his small principality by capturing baggage from a Hindustan chieftain he gave to his dominions the name of Khudes, derived from his own title of Khan, and founded, as his capital, the city of Bahu. From 1430 to 1447 Naseer Khan invaded the dominions of his son-in-law, 'Ala al-Din Ahmad II (Bahmani) of the Deccan, but was defeated, and Khaudzlan was laid waste. He died in Oct. 1, 1437, and was succeeded by his eldest son, Mirza Afdal Khan I. who was murdered on April 30, 1441, and was succeeded by his son Mirza Muhammad Khan II, who died, after a peaceful reign, on June 5, 1457. His son, Malik Alam (or Ghani) succeeded him in 1457, and was one of the most powerful of the Faruki emperors, attempted to keep his state from its condition of semi-independence on Ghurjan, but was compelled by Mahammi to purchase pacan by payment of annexes of tribute. He died on Jan. 15, 1492, and was succeeded by his brother, Daud Khan, who died on Aug. 29, 1505. After a civil war Daud's cousin, 'Adil Khan III, was placed on the throne (April 4, 1506) by his maternal grandfather, Mahmud I, of Gujrat. 'Adil Khan III died on Aug. 24, 1520, and was succeeded by Mirza Muhammad Shah, his son by a princess of Gujrat. After an eventful reign in Khandes Mirza Muhammad was raised to the throne of Gujrat, on the death of his natural uncle, Bahadur Shah, but died (May 4, 1536) before he could make his will effective, and was succeeded in Khandes by his brother, Mirza Mubarak Shah. On Dec. 10, 1566, Mubarak died and was succeeded by his eldest son Mirza Muhammad II, on whose death in 1576 his infant son Hukain was proclaimed Shah, but Muhammad's younger brother Raja Ali, who had escaped Akbar's service, hastened from Agra to Khandes, deposed his nephew, and ascended the throne as Akbar's vassal, Hospying the title of Shah, which had been in use since the elevation of Muhammad I to the throne of Gujrat. His policy of preventing, by means of conciliation, imperial intervention in the Khandes was followed by one detachment in Ahmadnagar, and the appeal of one party to Delhi. He resisted Akbar's first act of aggression but was compelled to support the emperor in the campaign which ended in the annexation of Berar and lost his life in the battle of Sonipat (1566) fighting on the imperial side against the sultan Shalil Khan, who was attempting to recover Berar for Ahmadnagar. His son and successor Bahadur Khan, a dissolute and foible ruler, revered his father's wise policy and measured his strength with that of the emperor. Asaigah fell (1599-1600) after a siege of ten months, Khandes was annexed and Bahadur died, a state prisoner in Lahir, in 1623-1624.

Khandes never enjoyed complete independence under the Faruki dynasty but was always tributary either to Gujrat or Mauza, usually to the former, and owed its existence as a separate state to the mutual jealousy of these two Kingdoms and their common fear of the Kingdom of the Deccan.

Bibliography: Tour in British India, II. (T. W. Hahn.)

FARWAN or FARWAN, a small town on the Pendiaht River north of Kish and south of a range bearing the same name which crosses the Hindo-Kush range into Afghan Turkestan at a height of 14,000 ft.

Farwan was a mint of the Ghaznavids, coins having been struck there by Alp.)-_z, Shiahuddin, Jami-ul and Mahamud. It seems to have been in Alpini's possession as early as 355 when he struck coins in the name of Mucouz b. Nuh his Sh transactions. It is mentioned also by 'Abd al-Salih (as Karvan), Tithihi and Abu 'l-Fida'. Bahmar calls it by its modern name of Farwan, which is used by all recent travellers such as Lord, Masson and Holbach. In 1448 'Abd al-Din Manjirani Khudrii Shah inflicted a defeat at Farwan or Farwana on the Mongol forces.

FARWÂN—FARWARDIN.

The visitors, a pavilion for the Sultan, etc., the principal which form the Sultan's private residence recognisable by its roofs of green tiles, the pavilion reserved for the reception of foreign envoys, the imperial menagerie, the Arsenal, the new Medrassa, the gardens of Latha Amina and Agnadjal. The town which is traversed from N. to S. by a street of shops, is rather watched in appearance. The houses often half in ruins, are a ruin, only one story and their interiors lack the luxurious adornment which characterises the houses of Fas al-Bali. Several mosques rise from among the lowels; the most notable are the "Great Mosque", the "Red Mosque" and the "Green Mosque" so called from the colour of their minarets, all three built by the Marinids, and lastly the mosque of Milly "Aïd Allah built in the xviith century by the sultans which is used as a mausoleum for the Sultans of the ruling family. The population (numbering 10000—7000) consists for the most part of soldiers who live in the town with their families in the intervals of military expeditions so that Fas al-Ljuddi is half empty when the Sultan and the Damghans are away. Finally, separated from the Muslim town and surrounding the palace there is the Jewish quarter or "Mellah" which is overcrowded, numbering perhaps a third more than the population of the Muslim town, is crowded together in narrow streets with houses several stories high and forms a striking contrast by its animation to the quiet of the Moorish quarters.

Fas al-Ljuddi is really only an annex of Fas al-Bali, which the inhabitants call "Medmas" ("the city"). Its site is much more irregular and picturesque than that of the new town. The difference in level between highest and lowest points is 900 ft. The town lies along the narrow valley of the Wadi Fas; its houses, mosques and gardens rise up the steep slopes of the hills that enclose the Wadi from its bed to the walls that crown the ridges. A wall of which the oldest parts date from the Amourids, completely surrounds the town; it is flanked at some distance to the north and south by two stone bastions, called Berjil el-Qua and Berjil Fathú from the names of the adjoining gates. Built in 1583 by Ahmed el-Mansur el model of European fortifications by Christian slaves, these forts command the whole town. In spite of the illadvised condition of these defences they suffice to protect the inhabitants from the attacks of the Berbers of the neighbourhood, of which they live in constant fear; they have even on many occasions enabled them to resist the Sultan himself. Access to the town is obtained through the gates into the massive walls. These are in the north, Bab al-Gna, in the N. E., Bab al-Mahroufi (the "Gate of the Burnt Marsh") so called in memory of a Berber chief whose body was burned there when the building was completed, and where since then the heads of rebels slain in combat of the Sultan's expeditions are exposed; in the S. E., Bab al-Fathú, in the S. Bab al-Ljuddi below which runs the main arm of the river, in the S. E. Bab al-Hadid.

The space marked out by the walls is divided into three quarters (corama or faras) el-Lemdiùin, el-Audalis and "Adras. The quarter of the Lemdiùin takes its name from the Lemdiùin Berber tribe of the neighbourhood who peopled it originally.
It occupies the southern part of Fás and corresponds to the Alcázar de la Almudaina of the Almohad period. In it is the Kasbah of the Filalas, a fortress built by the Almohad Amir Muhammad al-Nasir and allotted by him to the Maghribi. In the 12th century to his companions from Tâbil as a residence. The whole of this quarter, which is principally inhabited by members of tribes who have settled in Fás, is well provided with gardens. The Andalus quarter comprises the part of the town that adjoins the river and a zone of gardens stretching between Bâh al-Djâdîd and Bâh al-Hacîd. It is the heart of the city and contains the principal mosques (Karawiyîn, Milâyât Elîrîs); it includes the network of alleys of the Ksar ayt Charif, occupied by all kinds of merchants and tradesmen, noisy and animated during the day but deserted and silent at night and the soukâ or warehouses of the merchants. Lastly the Aasan quarter which corresponds to the Amâns de Alandalus of the Idrisids lies all along the right bank of the Wâdi Fás. It is a quiet and thinly populated district, its Mosques are old and peaceful mosquitias that give a sense of peace and serenity to the place." writes Gaillard. "Its quiet and picturesque streets are sought by "tâlûm" and religious believers who come to the house to pray or to the mosque to meditate. The streets of the different quarters are as a rule very narrow and shut in by houses which almost meet overhead and shut out the sun. The majority are on slopes and, as they are not paved, after rain become regular sewers. Still narrower alleys branch off from each street.

The abundance of running water is one of the features of Fás. The Wâdi Fás never dries up even in summer, and the situation of the city enables its water to be used for all domestic purposes. The Wâdi, which rises half a day's journey to the west, flows undiminished into Fás al-Djâdîd; it then sends off on the right a number of arms which fall in cascades into the Wâdi al-Zîrûn to reunite again, flow into Fás al-Bâlî under the name Wâdi al-Kâchîr and feed an artificial channel called the Mgâmita. The Wâdi Fás itself, on leaving Fás al-Djâdîd, divides into two streams which in their turn break up into an infinite number of small brooks which after flowing through the various quarters reunite beyond the walls. Special conduits supply the inhabitants with drinking water; other brooks irrigate the gardens, drive the mills, flush the sewers and clean the streets. This last is a very ancient practice for it is mentioned by Ibn Hâçîf: "In summer water from the river is allowed to run through the city to clean the ground and refresh the air" (Description de l'Algérie, trad. du Slane, Journal Asiatique, 1842, p. 256). The richness of Fás in running water is one of the themes on which the Arab authors delight to dwell; they even claim that the water of the Wâdi has medicinal properties. According to the author of the Book of the land, it cures in stone in the bladders and dispels foul odours; it softens the skin and destroys foul smells; it makes the pleasures of the senses more agreeable, etc.

Fás is celebrated throughout the Maghrib not only for the beauty of its site but also for the number and importance of its religious monuments. The various dynasties that have succeeded one another there, have devoted great attention to enriching it with monuments of this kind so that there are no less than 850 religious edifices of all orders and of all sizes in the city, mosques, madrasas, mausoleas, and zawiyas or chapels built on the tomb of some holy person. The mosques all present the same general arrangement, an outer court with a fountain for ablutions, opening on to a central court surrounded by arcades forming one or more naves. They differ in size, in the form of the minarets which flank them and in the details of the ornamentation. The type of minaret, for example, has sensibly changed in the course of centuries. At first squat and without ornament, such as may be seen in the mosque of the Kasbah, it becomes more slender and elegant in the Almohad period. In imitation of the Moorish minarets of Spain, it attains a quadrangular form and terminates in a capron. The sides have majorca borders and the pannels are decorated with designs in relief forming trilises. This type was retained under the Almohads and Marmânos. From the 13th century, the trilises in relief disappear; the borders of finance of many colours give place to others in green and gold; sometimes even the panels are inlaid entirely with enamelled jockets of one colour. At the same time the porches of carved wood which sheltered the doors were abandoned and replaced by plaster moldings which were more easily worked. Nevertheless, the general principles of architecture (arcades, arches etc.) the process of construction and decoration which were handed down from generation to generation remained the same as in the Middle Ages.

The chief mosques in Fás al-Bâlî are the mosque of the Madrasa Bî Aïnûn, the mosque of the Kasbah of the Filalas, those of Sînî Alâmad al-Shâwa, Sînî Alâmad al-Fakîrî, of Bâh al-Gâsa and lastly in the Kasbah quarter, the Dûrân al-Newârî, the most ancient sanctuary in Fás, also called the mosque of the Sheîhs and built near the wall of the city. The present day says that Mûsîb Elîrîs used to come and sit with his Shaikh to watch the building of the city. Three mosques are much more celebrated than any of the others, viz.: the mosques of the Andalusians, of Karawiyîn and the greatest of all that of Mûsîb Elîrîs. At the first a simple oratory in the time of the Idrisids the mosque of the Andalusian was made a Zâwa of a mosque in 531 A. H. (935 A. D.) by the Zanîtî Innàb Alâmad al-Hamadânî, provided with a minaret by the Emir Alâmad b. Bâlî Râkî, then enlarged by the Almohad al-Nasir to its present dimensions. The Mosque of Karawiyîn (of the people of Karawiyîn) dates the preceding from the Idrisid period. Begun in 248 A. H. (861-863) it was enlarged by the Emir Alâmad b. Bâlî Râkî, who built its minaret and finally greatly altered in the reign of Alâmad al-Nasir. The author of the Zàwa says that at that time covered a whole quarter of the city and contained 120 pillars forming 16 naves. Al-Karawiyîn is the largest mosque in the whole of the Maghrib. It is also the oldest mosque in which the people are accustomed to hear the Sultân's proclamations. But if al-Karawiyîn is the most important mosque in Fás, the Zawiyah of Mûsîb Elîrîs is certainly the most venerated, for it is built on the tomb of the founder of Fás. As the original sanctuary had fallen into ruins, it was rebuilt in 1308 A. D. on the same site and restored in 1720 by Mîsîb Elîrîs. Finally in 1660 Mîsîb Alî al-Râkî built a new mosque beside the old one. The Zawiyah of Mîsîb Elîrîs thus comprises the Kasbah or tomb of the saint, two mosques, with various
buildings attached to them; among them one to lodge persons who seek refuge within the bounds of the Zawiya. Like the majority of the religious buildings of Fès, the Zawiya of ‘Ali ‘Abd al-Malik is well screened and even the quarters surrounding it are enclosed or walled, and there is a provision for small and private latrines. The Zawiya is besides an inevitable sanctuary where individuals passed by the Mahdis, free from their creditors and a safe asylum. ‘Ali ‘Abd al-Malik has a position apart, among all the saints of Fès. As the patron saint of the city, ‘Ali ‘Abd al-Malik is the object of a veritable cult on the part of its inhabitants. He is "the very genius of Fès, the supernatural power which makes it a city unique in the world and its inhabitants superior to all other men." This cult is relatively modern; it hardly dates from the Marinid period and seems to have been particularly developed by the descendants of the Jews who became converts to Islam at that time. The reputation of the tombs of ‘Ali ‘Abd al-Malik attires pilgrims both from all parts of Morocco andparticles the ‘Ifrisid ‘Abd al-Malik who share amongst themselves the gifts in money and kind brought about by the faithful. The Zawiya possesses in addition considerable fame, the revenue from which is exclusively used for the upkeep of the sanctuary. Other saints also invite the piety of the faithful, who come to visit their sanctuaries on fixed days and often purchase very dearly the privilege of being interred near their tombs. Their Zawiya is scattered up and down the city or in the suburbs or both. In all, ‘Ali ‘Abd al-Malik and Sidi al-Gha’i, These saints or ‘‘Abd al-Malik are the glory of Fès. Their number is so considerable that entire works like the Zawiya al-Badri of Ibn al-Kajj (sixteenth century A.D.) and in our days the Zawiya al-Musa of Sharif Muhammad el-Katirini are consecrated in recording their names and virtues. Among those most celebrated may be mentioned, Abu Bakr al-Arabi al-Mahfi (died 543 A.D.), Sidi Mas‘ud al-Filali, Sidi ‘Abd Allâh al-Tawil, Sidi Muhammad b. al-Hajj (died 595 A.H.), Sidi Bughad (Bâ Ghati), a native of Andalusia (died 578 A.H.), whose tombs are visited by women and sick persons; Sidi Hanan (Harranli), a famous professor in law; Sidi Ahmad al-Safawi who divines spirits away; Sidi Ahmad al-Safawi, Sidi al-Ejji, Sidi al-Barmak, etc. whose tombs are a valuable asset to the Sharif families.

The population of Fès focuses, as regards its natives, a typical badawiya, i.e., a settled city population, comprising merchants, scholars, officials, which has long ago attained a fairly advanced level of civilization. It is composed of various elements which in the long run have mingled with one another to form a new type, the Fési. In the first place from its geographical situation and secondly by its fame as a city of culture and sanctity, Fès has at all times been a centre of attraction for the Muslims of Morocco and the adjoining countries. "Since its foundation" it has been "always friendly to the strangers who have settled in it." The possessions of its founder were joined by the Reisins of the neighbourhood (Garbala, Făwara, Awriba and Maingwa) whose descendants in time have mingled with those of families who came originally from Cordova and Kairawan. For centuries political, economic and intellectual relations were maintained between the north of Morocco and Spain and contributed to introduce and maintain the civilization of Andalusia at Fès. After the fall of Granada numbers of Christians came to settle in the Moorish capital where they soon attained a prominent position. It was the same with the Jews, who were converted in the time of Ya‘qûb b. ‘Abd al-Malik, whose descendants, the Benl Shaklan, the Cohen, the Bensal etc. are numbered among the richest citizens at the present day. In the sixteenth century the oppugnare by the Turks followed by the French occupation forced numbers of Algerians to move to Fès. The Temchiris, for example, form a body of 2,500 in Fès at the present day. To these diverse elements must still be added isolated individuals who have come from all parts of Morocco, Filaga, Bishara, Lâhdir, others who form the population of cereals and gardeners. Finally, in a class by themselves are the Shari, some belong to various branches of the ‘Ifrisid family, others came with the present dynasty from Tafiltel ('Aliw Sharif) and others again came from other countries long ago, like the Siqal and the ‘Ifrisid, the former hailing from Sicily originally and the latter from Mesopotamia. These Sharif are organized in corporations each of which is governed by a chief or ‘almari. There is nothing to distinguish them from the other inhabitants except the appellation Sidi or ‘Ali ‘Abd al-Malik that is usually given them. They may practice all manner of trades but not all public offices except those of adil (notaries) or secretaries to the mahquis. In addition, to the gifts which they receive from the piety of the faithful or the generosity of the Sultans, they possess certain privileges of which the chief is exemption from all taxation — even from the market dues on the produce of their lands — when they possess property or estates.

The Fesi are celebrated throughout the Maghreb for their piety and also for their fondness for a life of elegance and self-indulgences. Their religious feelings express themselves not only in the rigorous observance of the ordinances of the Koran but also in countless acts such as visiting the tombs of saints and joining religious orders. Ordinary people prefer to join the ‘Ajwâwa or Hammâda, the comfortable middle classes rather adopt the rule of the Dawla, Talhiani, Tâjiana or Kadiyya. These religious preoccupations are not, however, made their neglect more worthily. The Fési are fond of luxury in dress and at table, receptacles of music adorned by revelations of poetry or songs by celebrated artists, known as shiffa or ashiffa. The homes of rich citizens are remarkable for the sumptuousness of their interior decorations, their pavements of enameled bricks, their panels of plaster mouldings in arabesques, theirceilings of carved and gilded wood, their marble fountains sometimes inlaid with mosaics. The homes of merchant princes or of certain officials of the mahquis have thus, the appearance of veritable palaces. A much appreciated luxury is that of gardens, planted with orange, citron or henna trees. These gardens are very numerous in the higher parts of the city and sometimes extend pastures in which the owner takes up his abode for the summer. In politics the people of Fès frequently show themselves ready to rebel to authority; the history of the city since the sixteenth century is a series of rebellions. Public opinion, very often inspired by the Sharif or the 'Ulama'.
There are two schools, however, founded by this association which have about 300 pupils.

As to Europeans, they have long been banished from Fas by the fanaticism of the Muslim populace. According to Châtelier (Recherches sur les Maures, Vol. III, p. 643), it was required in his time the express permission of the Sultan in Fas that they were allowed to enter the city. In the course of the last fifty years several Europeans, diplomatists or merchants have made stays of some length in Fas. Some even took up their abode there. American and English religious missions were established there in 1887 and in 1896 but without exercising any influence on the inhabitants. Vice-consulships filled by Europeans were created there by England in 1854, France in 1853, and by Germany in 1862; French and English military instructors were placed at the disposal of the mahkzen and a number of Italians commissioned to organize an arsenal. In the reign of Abd al-'Aziz, the European colony comprised about thirty individuals (officers, diplomatists, doctors and merchants). The establishment of the French protectorate will probably soon alter this state of affairs.

Fas is not only a holy city, it is also a commercial city where trade is held in no less honour than piety. Goods manufactured in Europe or in Fas itself are here exchanged for the products of the south notably the hides and hides of Tafilalet. The trade with Europe is carried on via Tangier and the harbours of the Atlantic coast, with Algeria by the road through Tann et Ujda, at least when communication is not cut off by rebel tribes. This traffic is in the hands of Muslims and not Jews as is the case in the towns of the coast. The merchants of Fas are energetic, prudent and enterprising men; they have put themselves in direct communication with Europe; they have offices in Manchester for the purchase of cotton goods; others have founded establishments at Genoa and Marseilles. They are to be found in Oran, Algiers, Toulon and even on the Senegal. Some are bankers as well as merchants, like the Christian merchants of the middle ages. Some of them make large fortunes and as soon as they do this, hasten to build themselves luxurious houses. This commercial middle class enjoys great influence and forms with the 'ulama' the controlling class in the state. Local industries also are quite prosperous; besides the articles of every-day requirements they furnish several things famous throughout Morocco, which are even exported beyond the limits of the Sharif emirate. The most flourishing industries are the manufacture of pottery, of the enamelled tins used in the interior decoration of houses, the weaving of silk and wool, dyeing, leather-working (tanning and shoemaking), which occupies over 2,000 work people andLastly the mills, which use the waters of the Wad Fas and its various branches as motive power. The mills which belong to the Java but are let to private individuals number 160. This industry is very old and Guilhard is wrong in attributing its introduction to the Almohad Yusuf 5. This fact is a matter of fact and it is already mentioned in the Hafsi's description of the city in the 13th century.

A city of sanctity and commerce, Fas is also a city of learning. Its reputation on this score is very old. "Since its foundation" we read in the Al-Fasi. *Fas has been a great centre where angels,
They should not hesitate, if occasion demands it, to give their thrones to just protoestates. The moral influence of this small body of some seven or eight hundred scholars, for the most part members of Moorish families in Fez, is thus considerable and sufficient to form a check on the Sultan's authority.

The students live in "madrasas," buildings erected to house the pupils, somewhat analogous to the colleges of the middle ages. Originally, certain courses of instruction were sometimes given in them, but this practice has almost entirely disappeared. The poor pupils receive a daily allowance of bread furnished by the "fakirs" and also benefit from presents sent by people of importance or pious individuals; if necessary they solicit the charity of the public. The period of their stay in the madrasas, which was at one time ten years, is now reduced to three. The oldest madrasas were built by the Marinids; others were built by the Almohads. The madrasas which are now inhabited number 9, viz., al-Saffa' (built in 1233), by Abi Sa'id al-Omna; al-Ajalun (built in the same year), by al-Mahataba; built by Abu T-Hanun (751-753 A.D.); a professor named Abu T-Daykhi, on the last two; and was built by Abu Naimun in 753-755 A.D.; al-Schecheri, which is now in the charge of a French missionary, was built by the Almohads in 638 A.H. and was restored by Europeans.

The foundations of the madrasas were 350-400 students. The student lives in a small cell, with a bed, a table, and a lamp; he has a small garden, a minaret, and a mosque. The students are supported by the "fakirs" and the Sultan. The students are selected by the Sultan, who receives the names of the candidates, and a list is made known to the "fakirs." The students are then examined by the Sultan, and the students who are approved are admitted. The students are then given a uniform and a purse.

at a spot called Karmuda; he was buried in the latter. The new town received the name of Fis, the origin of which is still very uncertain, in spite of the explanations which Arabs written have attempted to give. Some say the word is derived from *fad*, a piece, in allusion to the instrument used by Idries to trace the line of the walls; others say that it is the name of an old walled town which was inverted, the ruins of which then existed in the neighbourhood. Another story is that the city took its name from the first person met by Idries. He was called Fades, a word which, in consequence of a defect in his speech, was understood as Fis.

In any case, Fis was populated rapidly. The Arab companions of Idries were joined by Berbers from the neighbouring tribes, Awabs, Haouras and Lellputs and immigrants came from Spain and Idfruya. For example, 300 families from Cordova settled there, as a result of the suppression of a revolt against the Caliph al-Hakam b. Hadiun. Three hundred families of Kairawaïs who had left their native land for similar reasons also settled there. Most of these groups looked up to the right bank of the Wadi Fis, which then took the name of Adawi al-Andalun (bank or district of the Andalusians) and the second on the left bank which was henceforth called Adawi al-Karawiyine. Each of these quarters was endowed with a mosque by Yalqub b. Muhammad, grandson of Idris II.

The history of Fis during the early centuries of its existence was a very troubled one. On the death of Idris, Fis fell to Muhammad his eldest son; but his possession was disputed among the descendants of this prince and the representatives of other Idrisid families. At the beginning of the third century A.D., we find the inhabitants of the quarter of the Andalusians expelling Yalqub II and placing 'Ali b. Idris b. Omar, ruler of the Rif, in his stead, while the people of Adawi al-Karawiyine proclaimed Yalqub b. Kasum b. Idris who in the end was victorious. In the next century Fis suffered much from the rivalry of the Idrisids and Fajûnaids. In 258 = 920, Yalqub b. Idris b. Omar, successor of Yalqub b. al-Kasum, besieged by Figûla, chief of the Miknâes, found himself forced to recognize the suzerainty of 'Ubayd Allah al-Madhi. In 305 = 913, Fis was definitively occupied by the Fajûnaid army, Yalqub exiled to Arrar and a Kairawaïi governor placed on his throne. The people of the Andalusian quarter, however, remained faithful to the Idrisids. One of them, al-Hanan, regained (313 = 925) possession of this part of the town for a period and remained there till 314 = 926, when an ally of the Fajûnaids, Mibr b. Abi 'Ali, Ayta, succeeded in taking it. His revolt in favour of the Omayyads brought the Kairawaïi force to Fis. The Jazira counter-attack which was expelled and authority in the city again passed to an Idrisid; this ruler having then recognized the suzerainty of the Omayyad Caliph, a Spanish governor was set over the city (318 = 930). Ten years later the Fajûnaids took the offensive; their general Djafar seized Fis (347 = 958) and sent the Omayyad governor prisoner to Kairawaïi. The triumph of the Fajûnaids was not of long duration, for in 352 = 953, Fis was replaced under Omayyad rule by Ghâlib b. 'Abd al-Rahman the Caliph al-Hakam II, general. Two Spanish officers were appointed to rule the town, one to each quarter.

The rivalry between the Omayyads and Fajûnaids was followed by a struggle between the Omayyads and the Zenitids. Ziri b. Ayta, chief of the Maghribi tribes, governor of Fis on behalf of the Omayyads (since 381 = 991) rose against the regent al-Mansur but was defeated at Tangier by the latter's son, Abû al-Malik, in 388 (998) and driven from Fis. Ziri's son, Abû al-Malik, was however permitted to govern Fis by Abû al-Malik in 397 (1005) and bequeathed it to his son Hammâm in 416 (1025). Soon afterwards the Maghribi tribes refused to defend themselves against another Berber tribe, the Banû Ifran, whose chief Tamir seized Fis (403 A.D.) He plundered the town and wrought particular devastation in the Jewish quarter. He was expelled in turn by Hammâm in 408. Ziri's descendants held out in Fis till the Almoravid invasion, in spite of the brief occupation of the town by the Hammâmids in 416. After a first attempt in 443 = 1055, which failed, Yûsuf b. Tâdžiun succeeded in taking Fis in 452 (1060-1070). The city was sacked by the conquerors. The Maghribi tribes, Banû Ifran and Zenitids were massacred; 3000 persons were, as we are told, slaughtered in the mosque of the Andalusians and in that of al-Karawiyin.

In spite of these troubled times, Fis developed rapidly under the Idrisids and Zenitids. At the end of the 16th century the Hawâli says that "in the abundance of its fruits, vegetables, and provisions, in the quantity of merchandise and other articles to be found there and in the considerable revenue, which it yields to the sovereign, Fis surpasses all other towns of the land of al-Hassan". Al-Bâhî, a century later, mentions that it contains 300 mills, which presuppose a considerable population. The "town, large and rich, is more numerous than in any town of the Maghrib". The two quarters of the Andalusians and the Kairawâni became at that time two separate towns, each surrounded by a wall; their inhabitants were often at daggers drawn with one another. On the death of the Zenitid prince, Daqsar, we find, for example, the Andalusians proclaiming one of his sons, al-Fâhî, Sultan, while another son, al-'Adîs, reigned over al-Adawi al-Karawiyin. The people of the two towns moreover had different customs and occupations. The people of al-Adawi al-Andalus, writes the author of the Kûfî, were very brave and for the most part engaged in various trades and agriculture; those of al-Adawi al-Karawiyin, on the contrary, loved luxury and maintained their houses, their dress and their table; they were occupied only with commerce and the arts. Under the Almoravids, the aspect of Fis began to be modified. Yûsuf b. Tâdžiun built the walls which separate the two "Adawi (452 = 1060) and the space between gradually became filled up with buildings. The mosque al-Karawiyin was enlarged and a fortress built on the site of the present kasbah of el-Djezzar. This transformation continued under the Almohads whose leader Abû 'Abd al-Mu'min had captured Fis after a very arduous siege (340 = 1145-1146). To overcome the resistance of the inhabitants he was forced to build a dam across the Wadi Fis which enabled him to deflect the waters and flood the town. When in possession of the town, Abû al-Mu'min's first task was to destroy the houses of the Almoravids as well as a portion of the ramparts. Fis could not, however, remain without defenders. Yalqub b. 'Abd al-Mansur entered the walls which his grandfather had destroyed to be
rebuilt, a work which was finished in the reign of his son al-Nasir b. al-Mansur in 600 = 1204. Al-Nasir also rebuilt the citadel. The period of the Almohads seems on the whole to have been a prospeous one for Fés. According to the Nihāya, there were at that time 715 mosques or chapels, 93 public baths and 472 stalls in the city. In the reign of al-Nasir there were 90,226 houses, 9082 shops, 2 bazars and 5004 workshops. Houses were small, and gardens disappeared to make room for buildings. Industries flourished, copper and leather were the chief manufactures, and paper was also made. The population probably numbered more than it does at the present day.

The succession of the Marinids to the Almohads made no alteration in this state of affairs. It was in 940 = 1538 that the Marinid Abu Yahya took possession of Fés and received the oath of fealty from its inhabitants. The latter, however, were not long in rising against him and were so successful that he had to lay siege to the town for seven months before he could enter it again. The execution of a Spanish priest, the last object of this rebellion, caused the people of Fés of any desire to offer further resistance to their new master. For the three centuries that the Marinid dynasty lasted, Fés had a less troubled history than in the previous period. Fés was for a few days in 1309 however in the power of the Christian militia whose chief Gonvalves rose against the Sultan; in 1316 Abu 'All went for a time from his father Abu Said. Later, after the death of Abu Alauddin, the pretender al-Mansur succeeded in taking Fés al-Bahri and Abu al-Said b. Abu Alauddin and the regent al-Hassan closely up in Fés al-Djaffal. They were able to hold out long enough for Abu Said, brother of the late Sultan, to come and relieve them. In 1374 the pretender Abu l-'Abd b. Ahmad al-Mahboub with the help of the king of Granada occupied Fés. He was driven out of it in 1384 by another pretender, Minal, but entered into permanent possession of it again in 1387.

The period of the Marinids is none the less the most brilliant in history of Fés. The city then regained the position of capital, which it had lost under the Almohads and Almoravids in favour of Marrakesh. It was further embellished with new buildings of all kinds, which have perpetuated among the people the memory of the rulers who built them. They built a new town, Fés al-Djaffal to house their soldiers and government officials. The first stanza was laid on the 3rd Shawwal 674 = 1276 by Ya'qūb b. 'Abd al-Haqq. He built a mosque there, a palace, a mint and an aqueduct; he allotted a special quarter to the Jews who were forced to leave the ancient city where they had hitherto lived unless they would become Muslims. The new town, was first called Madinat al-Balī, the "white city", because of the colour of its buildings, but afterwards received the name of Fés al-Djaffal in opposition to Fés al-Bahri. The ancient town was not, however, neglected by the Marinids, who delighted in avoiding it with religious buildings. 5% of the madrasas are present existing dating from this period and five of them are in Fés al-Bahri. The immigration of Andalusian Moors also helped to increase the prosperity of Fés.

We must obtain a good idea of it from the description given in the beginning of the xvith century by Leo Africanus. According to him the population was 125,000 including 10,000 Jews. Among the sights of the city were "500 temples and churches, of which 50 were very beautifully built, ornamented with columns of marble and fountains in mosaic", 600 public fountains, 100 baths, 200 schools for children, 200 hostellers, of which many were disorderly houses, an asylum for lepers which is still carried on practically as Leo describes it. Private houses attainted attention by their decoration of "mosaics and bricks of ancient type, dappled and variegated in colours". Commerce and industry flourished if we may judge by the interminable lists of workshops and shops which filled the fifteen sections of the Kairuany and the environment of the mosque al-Karaouiyin. Industry on a large scale was represented by the textile factories, employing 10,000 hands, the tanneries, bleaching works for the spun wool, mills etc. Among the merchants frequenting the city of Fés, there must certainly have been Christians, Marmol says a special quarter was reserved for them in Fés al-Djaffal. Around the city were suburbs that have now disappeared, such as al-Habib, much as from the Bah al-Ghās, near groves in which they used to be interned by order of "Abd al-Haqq"; they were in the suburbs of Fés al-Djaffal, of Mars 'l-Kudin and al-Qaswín, peopled by pastors. In the north, on the spur now called Kolla, rose the Kay or castle of the Banū Mūrim, of which traces still remain with the tombs of four princes of this dynasty, "Abd al-'Azz b. Abū l-'Hasan; (879 = 1239), "Abu l-'Abid b. Abu Sufiyan (909 = 1309), "Abd al-'Azz b. Abū l-'Abid (709 = 1307) and "Abd al-Haqq b. Abu Said. Gardens, where the rich people spent the summer from April to September, occupied large areas in the south of the town and beyond the walls attached other orchards which formed a public park for the citizens. Whatever Leo Africanus may have exaggerated, Fés none the less appears to have been in the xvith century the metropolis of western Morocco and the heir to the civilisation of the Moors of Spain.

Descended set in with the coming of the Sa'di Sharifs. In 1550 Muhammad Al-Mahdi took Fés from the Marinids. The city had been valiantly defended by Bu Hassain, brother of Sultan Ajjun, but a section of the Sa'dis were won over by the Sharif by bribery and persuaded the inhabitants to capitulate. Bu Hassain having succeeded in interesting the Turks of Algeria in his cause, attempted to regain Fés. Sihâl Râ'is's army defeated Muhammad Al-Mahdi at Tîlî on the banks of the Bouhâr and again under the walls of Fés. On the 6th January 1554 Bu Hassain re-entered Fés which the Sa'dis did not even attempt to defend. The Turks sacked the city and then withdrew leaving Bu Hassain with his own troops only. The Marinid restoration was thus of short duration. On the 25th August 1554 Muhammad Al-Mahdi regained possession of Fés after a short battle in which the Marinid prince was slain. The Sa'di, finding himself of the partisans of Bu Hassain in the female executions, then abandoned the city, contenting himself with leaving his son Milītīy 'Abd Alhīs as governor there.

The people of Fés bore this change of government with a bad grace and their discontent found vent in their participation in the disorders which in the first half of the xvith century ruined the
So'din power. We find them alternately proclaiming and disowning Zitun, until recognizing him, then fighting against his son al-Mansur. Two competitors Sa'd and Sinnah al-Mardiyah disputed the power until Siman was assassinated by his rival. In the meanwhile 'Abd Allah b. al-Mansur had entrenched himself in Fas al-Djadd and was blockading Fas al-Bili. In the end the Fas opened the gates to 'Abd Allah al-Mardiyah, who with the help of his fellow tribesmen, the Lente, had tried to somnolent disorders, was out but to draw. 'Abd Allah, however, could not long hold out in Fas al-Bili; he was driven from it but held Fas al-Djadd till his death in 1624. In the same year, 'Abd al-Malik, another son of Zitun, set himself up in Fas al-Bili but was dislodged by his brother Abu Ahmad.

Since Fas itself passed completely from the hands of Muhammad al-Mujjidi, the marabouts of Dilla, succeeded in making himself master of it and placed a governor in it in his name. Illuminated by this situation, the Fas revolted (1649) and called in the help of Mullah Muhammad Sharif of Sun. But this move was defeated by Muhammad al-Mardiyah and had to evacuate Fas, the evacuate of which sound threatened once more to reconquer the authority of the Lente. On re-entering Fas, Muhammad ordered his soldiers to sack the Kouna of Mullah Idris and scatter the remainders of the al-Mansuri clan who were buried in the tombs of the Idrisids. He remained master of the town undisturbed till 1662, when a certain Didi succeeded in taking it for a time. Vicious over this rival, Muhammad was however forced soon after to retire to Fas al-Djadd, while Fas al-Bili acknowledged B. Salah, chief of the Asiri quarter and A. Saghiri, chief of the Lente quarter.

The occupation of Fas by Mullah al-Rajabli put an end to these disorders. He had previously tried in 1662 to gain the city, but it was not till 1667 that after two months' siege he took Fas al-Djadd. The two chiefs of Fas al-Bili fled: the people opened the gates to the Sharif and swore fealty to him. Al-Rajabli built the Kasbah of Khonim (now the Kasbah al-Shennara) for his troops. To him also the city owes the Mada'mus al-Shennara and the bridge over the Sehla, which facilitates access to Fas to caravans coming from the Taiz district. The inhabitants did not yet resign themselves to submit to the rule of the Alawi Sharifs and never missed an opportunity to show their discontent. Thus, on the death of al-Rajabli, they refused to recognize Mullah Ismail as his successor and proclaimed his nephew 'Abd al-Malik b. Mahran Ismaili b. Ahmad as Mullah Ismail, and forced to moderate a regular siege. The operations, conducted by the Sharif under the command of Pinto, lasted a year. At the end of their resources the Fas opened the gates while the pretenders fled to the south. Mullah Ismaili retained a grudge to the end of his life against the Fas for their hostile attitude and, while adorning his favourite residence Mekhins with magnificent buildings, all that he did in Fas was to restore the Zawaya of Mullah Idris. Reinstated in the path of duty by the energy of the Salmas, the Fas lost no time after his death in satisfying their instincts for independence and opposition. They refused obeisance to 'Abd al-Malik and recognized as chief another son of the late Sultan, 'Abd al-Malik, as their sovereign. 'Abd al-Malik was only able to force an armistice to Fas after five months' bombardment (1728). Ismail's successor, Mullah 'Abd Allah, was not more fortunate and had to entrust the city to the hands of his brother from May to October 1729. While these operations were going on, he established his camp at a place called Dar Ummah (the house of the little banner). He afterwards built a palace surrounded by gardens here and made his usual residence till his death there in 1735. The rebellion of Fas was severely punished; the fortifications were dismantled and the citizens suffered a great deal from the extortions and cruelties of the governors appointed by the Sultan. Many of them emigrated to Algeria, Tunisia, Egypt, and even to the Sudan. It is therefore not surprising that they rose again in 1735 and that in 1736 they proclaimed a brother of the Sultan, Muhammad b. Ali, as the ruler of Fas. Soon they dropped him in favour of another son of Mullah Ismail al-marjadji. Tired of the latter they drove him out and restored Mullah 'Abd Allah al-Marjadji in revenge laid siege to Fas; at the head of an army furnished by the Berber tribes of the neighbourhood, and was repulsed in 1740. As to 'Abd Allah, the people of Fas al-Bili refused to receive his son and even suppressed his name, Mullah Muhammad against whom they had rebelled, put his father, the support of the Alawi. The revolution of father and son brought peace to Fas again. Mullah Muhammad restored order by expelling the Ulama, who had made themselves notorious by their turmoils and replaced them by the 'Abdis.

Mullah Muhammad's reign was peaceful but some troubles broke out in the reign of Mullah Siman. In 1734 A. H. the people rose in rebellion to obtain the dismissal of the governor; in 1735 the Ulama took advantage of the absence of the Sultan in Marrakesh to rise and sack the Mekhins. In 1736, dissatisfied with the recall of the Mui, the Fas took up arms once more and proclaimed two pretenders in succession. Mullah Siman was forced to besiege Fas al-Bili for ten months but he could reduce them. The beginning of the reign of 'Abd al-Rajman (cf. this article, 1-34 et seq.) was marked by the rebellion of the Ulama who held Fas al-Djadd for ten months (1747 = 1751). In the second half of the sixteenth century a rebellion not less serious broke out on the accession of Mullah Hayan (1590 = 1753). The people of Fas al-Bili led by the Ulama and the prophecies of a 'blind Sharif' refused to take the oath of obedience to the new Sultan and closed the city gates against him. Old Fas was once more besieged but Mullah Hayan did not dare to proceed. Standard the capital for feet of injuring the mosque of Mullah Idris and for having removed the turban of the citizens to boiling-point. The blockade dragged on till the imperial troops succeeded in making a breach in the Kasbah of the Fasala and thus entering the town. After Mullah Hayan had regained his capital he carried out considerable improvements there (erection of the palaces of Diqiat and Lalla Amina and the new Meshwesh, connection of New with Old Fas, etc.; cf. ii. p. 72).

The improvements attempted by Mullah Hayan's successor, 'Abd al-Ata, aroused great excitement among the people of Fas. In December 1607 troubles again broke out and while the Sultan was away to Kabil on a journey, Mullah Hufe
had risen in rebellion against his brother soon afterwards, the Fāsī at once decided to take his side. On the 18th November 1908 the "Ummī" and notables declared that "Abd al-"Azīz had forfeited his authority by selling himself to the unbelievers; they then proclaimed Muḥammad ibn aḥyā as the new Caliph. The Abbasids were unable to enforce their authority; the town was declared independent, and the Caliph founded the "Ummī"...
that expression is relevant in the passage in question.

(A. Schaab)

FASIDJDA, the former name of a large province and its capital on the west bank of the White Nile in the Anglo-Egyptian Sudan, in 32° 30' E. Long. and 10° 8' N. Lat., 469 miles from Khartoum.

The district of Fasidjda had been reached as early as the thirteenth century by Syrian expeditions of the Khedive Muhammad 'Ali Pasha but it is not until since the period of the great explorers of the Nile, from about 1860 onwards, that our more accurate knowledge of it dates.

Fasidjda was then, as it still is, the centre of the great Shilluk people, who inhabit the banks of the White Nile for a stretch of 200 miles from Kaka in the N. to the mouth of the Barh al-Ghazali and Sobat in the S.; their territory measures 50-60 hours' journey in breadth. Their submission to Egyptian rule took place in the fifth century, but although it cost no battles of importance could hardly be said to be completed till 1871. The number of their villages was estimated at 3000 with a population of 1,200,000. To secure the possession of the conquered territory the fortified station of Fasidjda was built at the time of Th. v. Hauglin's visit in March 1864 and made the administrative centre of the newly constituted province (mulukjda). The name Fasidjda is believed to have been given by the Arabs while the Shilluk called the new town Denab after their last king. The new province was divided into four large districts: 1. Dukdai, N. of Fasidjda with 14 nubiahs, 2. Fashoda itself with 31, 3. Roldai, in the south on both banks of the Nile, with 15, 4. al-Danakia on the east bank of the river with 5 nubiahs.

After the expansion of Egyptian power southwards, the importance of Fasidjda lay mainly in its position, as it formed the connecting link between the Sudan proper and its capital Khartoum with the European Provinces and Barh al-Ghazali. When Fasidjda fell into the hands of the Mahdists in 1884, these two provinces were cut off from Egypt and lost. In the Mahdist period Fasidjda was of great importance for the provisioning of Omdurman (Omdurman) as the agricultural population was almost entirely transported to other parts of the Sudan; it was, however, only in 1889 that the Mahdists succeeded in completely subjugating the Shilluk.

After Egypt had officially and formally given up all claims to the Sudan provinces, Fasidjda was occupied as uma mulukjda on the 10th July 1898 by a French expedition which had reached it from the west under Major Marchand; a number of attempts by the Mahdists to dislodge them were easily repulsed. On the 16th September Khader appeared before Fasidjda after his victory over the Mahdists. The ultimate possession of the place was only decided after long diplomatic negotiations in Europe; on the 11th December 1898 the French had to vacate Fasidjda which now became a province again, this time of the new Anglo-Egyptian Sudan. After Khader had left the Sudan and the revolts had been concluded between England and France, the name of the town of Fasidjda was changed to Kodak which had previously been the name of a group of Shilluk villages in the north. Since 1904 the name Fasidjda, officially at least, has ceased to exist.

The modern town lies about 1000 yards from the Nile; its chief building is the Mulliyana house which has been built in the Egyptian fortress, which was restored by Major Marchand. The town is hardly destined to a great future, on account of its low situation within the area of high water. On the other hand, when agriculture has been further developed, the province may attain considerable prosperity, if the Shilluk can be persuaded to work regularly; but this has not been brought about by the efforts of the town.

AL-FAS†I. [See ISN AS- SAB.] AL-FASÌ, MUHAMMAD b. ABU MUSA b. 'Ali b. 'Umar. 'AºL-TAªºR b. DIb b. MAªºK b. MAººK b. AL-Hajjāºº, an Arab historian born on the 10th Rajab 1277 = 31st August 1373 at Mecca, where his early life, with the exception of six years in Madinah, was spent. In 797 = 1395 he began to travel for purposes of study and visited Cairo, Damascus, Jerusalem, Alexandria and Yemen. In 807 = 1405 he became maªºl of Mecca and in 812 = 1417 received a maªºl chair in addition. He was twice deprived of these offices for brief periods in 817 = 1414 and 819 = 1417 and had to resign the judicial office in 828 = 1425 through illness, but the Maªºl Muªºl in Cairo at his personal request granted him a certificate that he was capable of exercising his judicial duties. Nevertheless, two years later he was deposed and died on Wednesday 5th Shawwal 832 = 7th July 1429. His literary activity was almost entirely devoted to the history of his native city. His first work on this subject was the Kitâb al-Râºººl al- Privit 1, 2; Toªºrâººl al-Dulal al-Masâººº, with special reference to tenography and biography, printed Mecca, 1354 A. H. ; on the margin is his Kitâb al-Râºººl al-Privit 1, 2; Toªºrâººl al-Masâººº, with Toªºrâººl al-Râºººl. He made two epitomations of it. Of the second edition of the second epitomized Kitâb al-Charîb aªºl-Akhab aªºl-Dulal al-Hurman several chapters are given by Wustenfeld in his Chronik des Sud al-Mekka, ii. 55 et sqq.

He made five further abridgments of the Kitâb al-Nawami, Kitâb al-Rumâººº al-Afrî, cod. Wettstein i, Nr. 289 (Ahmed, Ver. i, Nr. 9828), fol. 2157; Suyûtí, Taªººººl al-Huffî, ii, 6; Wustenfeld, Geschichtschreiber der Araber, p. 423; Brockelmann, Geschichte der Araber, ii, 172.

(F. Brockelmann)

FASIK (i.e. slander) means not only one who has committed a gross sin but also one who has been guilty of everyday telling others against the law. In the latter respect, in the enormous number of the fakes almost every Muslim is to be considered a faksik.

The testimony of a faksik has no legal weight; only the irreproachable Muslim (âld) is a credible witness. This is the origin of the custom of having certain persons of good reputation to act as professional witnesses at the conclusion of all contracts (of marriage also). Such persons are often called alld or xâldjâld, of the literature quoted by
FASIL — AL-FATHI

Marriage is also invalid, according to the Shafi`i (and some Hanbali), if the nearest relative (ma`ful), who gives the bride in marriage, is faṣlah at the conclusion of the marriage contract; it is therefore the custom in some Shafi`i districts to precede the conclusion of the contract by the "convention" of a ma`ul or even a slave who is transferred from his to a better way of life is again a considered "ma`ul.

Ch. Henry, "Hunting in the Indian Gables", 1834, p. 170 (et seq.).

FAŠILA (s.), "interval", a term in a seismology applied to a group of three or four vocalized consonants followed by a quiescent consonant. There are two kinds of fašila, the buhū, the greater and ḍhaghā, the lesser. The former is composed of five consonants, four of which are vocalized and the fifth quiescent e.g., tamākwara (w. fish), thilāmwa (with a quill), ḍhargha ḍhaghama- ṣan ṭarab (Ahmad went out of his town). The latter consists of four consonants, of which the three are vocalized and the fourth is quiescent, e.g., ṭuwra ṭušíʕa ṭušíʕa ṭušíʕa (a bull was there with bent sticks).

MOUL BEN CHERKAL

FAṢKH means in general the amnulling of a contract, e.g., of a sale on the ground of hidden defects which the buyer discovers in the article, after he has bought it, or of a political treaty which is declared void by one or both parties. In the first case one speaks of faṣkh in the second of misfaṣkh. Cf. the Fațil Allah al-ʿQurashi, al- ʿIstifār, in "Maṣlaḥat al-Shafi`i", p. 170 (et seq.). A marriage contract in particular can be declared null and void, if after the completion of the ceremony it transpires that one or other of the parties does not fulfill certain conditions. Legal grounds for faṣkh in the latter case are, e.g., by Shafi`i law the inability of the man, to keep his wife in sufficient fashion or to pay her the dower; according to most maḥāriḍi, certain diseases and physical defects, also valid grounds. The views of the Ḥanbalis on various questions of detail faṣkh differ in many respects.

As a rule the grounds which justify the amnulling of a marriage are not numerous and are besides mostly difficult of proof. A married woman can thus seldom obtain a dissolution of her marriage by faṣkh and therewith the possibility of entering into a new marriage if she is neglected or ill-treated by her husband. Thence arises the custom of some countries (a large part of the Dutch East Indies) which makes the woman pronounce a certain fath (repudiation) over her wife immediately after the marriage contract is signed. He must, for example, say: "If I do not maintain my wife" (or "if I beat her", etc.) "she is repudiated by me".

HISTORY: Besides the chapter on marriage in the collection on Tractation and the first books: Dimitri, "Raʾis al-ʿUmmama al-ʿIṣail wa-mamāma al-ʿIṣail" (1200), p. 187; N. von Tannen, "Das Mecklenburg-Recht" (Leipzig, 1855), p. 77 (et seq.); A. Querry, "Droit musulman" (Paris, 1837), p. 708 (et seq.); M. Perron, "Précis de jurisprudence musulmane" (Paris, 1838), translated, De Alfaqi, "L'explication de l'Algérie", Paris 1849, p. 80 (et seq.) (in French), v. 80 (et seq.) (in Persian). - A. Shams, "Die Heirat", in "The Arabisches", 1849, vol. 2, p. 267 and "Das Handbuch des Islamischen Gewissens" by the author of this article (Leiden, 1850), p. 226 (et seq.); 333 (et seq.). - Al-Fath (AL-FATHI), literally "opening", a term in Arabic grammar for the pronunciation of a consonant with the vowel a, the sign is therefore called faštah. In Shiʿawi (e.g. ed. Dhahaballa, p. 125) faštah is still accustomed to the pronunciation of the fricative without a vocal, i.e., the opposite of inwa. - Iṣrail's faštah means the place of a number. There are other technical uses of the word for which see Muhammad b. Al-Fatihi, "Die Heirat", in "The Arabisches", 1849, vol. 2, p. 267 and "Das Handbuch des Islamischen Gewissens" by the author of this article (Leiden, 1850), p. 226 (et seq.); 333 (et seq.). - A. Schadel.

AL-FATHI, "victory", title of the 8th century and one of the titles of Sūra xxv, usually called al-Nāṣr,

AL-FATHI, ABD AL-MAJID b. LABBĀS b. RĀDI b. ZARJAM b. AL-FATIHI b. YĀ,:), better known as AL-FATHI IDRĪS AL-FATIHI, for the biographers do not agree as to his genealogy, was born at Sīkāri al-Walid, a village near Alkālī in Real (Alkālī Yakhūb), a district in Greece.

Among his teachers are mentioned Abū ʿIyān b. al-Suʿūdī, Abū ʿIyān b. Zārjām, Abū ʿAbd Allāh Muhammad b. ʿAbdān, Ibn Dārād al-Kālītī, the celebrated scholar Abū Muhammad Abū Aḥmad b. Muhammad b. Sūd al-Habībāyy, etc.

In his youth he was a shameless vagabond, almost always half asleep; till he obtained a position as secretary to the governor of Granada, Abū ʿAbd Allāh Tāfuṭī b. Āli. He went to Marrakesh, and was assassinated there in a fanduk on the 10th of Rabī' al-Awwal 122 (20th July 1314) or Sunday 22nd of Moharram 1229 (13th November 1314) or according to others again, in 1226 (17th August 1314-18th August 1314) by order, it seems, of Abū al-Qasim b. al-Ṭāsim b. Tāfuṭī b. al-Ṭāsim, friar of Abī ʿAbd Allāh Ṭāfuṭī b. Āli, to whom he had dedicated his "Nabāʾīn". He was buried in the cemetery of liš al-Mālikīyyah. He composed the following works: ʿIṣril al-Nabāʾīn wa al-Mālikīyyah, a kind of biographical anthology of those who had lived some time before him and particularly of his contemporaries who had returned with him (orally) Ibn Bīḍār, with whom he planned at the end of the work, divided into four parts: 1. kings and princes, 2. visitors, 3. šaʾīʿa and scholars, 4. men of letters and poets (publ. at Paris in 1277 by Malik al-Hāriri, in the journal al-Dhāfī, at ʿAbdīn, 1284). A commentary was written on the ʿIṣril al-Nabāʾīn by Muḥammad b. Kāsim Ibn Bīḍār (died 20th Moharam 1220) entitled Tafsir ʿIṣril al-Nabāʾīn bi Fard al-Suwāqīyy bi ʿIṣril al-Nabāʾīn (there is a copy in a private library in Algiers, the French translation appears by L'Abbé E. Bourdage in 1885). It has never appeared, in spite of the statements by Deneburg, Brockelmann and Hurdi. - A. Majmūʿ al-ṣawāhīl wa ʿIṣril al-Tawāwul al-Mālikīyyah bi ʿIṣril al-Nabāʾīn, a kind of appendix to the preceding work; there were, it seems, two or three editions or rather recensions of it, a large and a small or a large, a medium and a small, of which the
small was published at Constantinople in 1305 (al-Dimārī) and at Cairo in 1523. — 3. A biography of his teacher, 'Abd al-Allah b. Muhammad b. al-Sūd al-Baytuwī (differently from him died in 1299), in the third part of his Tābih al-Dīn, which was published in the Esquaire (Dresd., Les Mna. de l'Esquaire, 448). This biography is followed by a kind of anthropology containing letters and poems by Ibn al-Sūd and other scholars, the majority of his contemporaries. — 4. Maktaba' on Ibn al-Sūd al-Baytuwī, preserved in the Esquaire (Dresd., Les Mna. de l'Esquaire, 558). — 5. Bhidīya' al-Maghafir (On the power of the Maghafir), thought to be lost. — 6. Maktaba' Kāmilī, also attributed to him.

Al-Fath has Kālidī more often written in rhyme prose, in which he is usually excellent, and also a verse which is mediocre. He seems to have plagiarised his contemporaries or even appropriated their works bodily; they did not dare accuse the thief for fear of losing his position, which showed itself as much in his everyday life as in his literary works. In any case, we must not look in his Kālidī al-Maghafir for historical facts, the value of the work lies rather in the elegance of its style.

(M. BEN CHENEH)

FATH-ALI ARBUZKUR (Bak. Arbusov), an Azar-Turk dramatist, was the son of a village schoolmaster, took service in the Russian army and attained the rank of captain. When the governor-general, Wazemoff, of the Caucasian territory built a theatre in Tiflis in 1860—1850, the Turkish officer wrote 6 comedies for it, besides a historical dialogue in the Turkic dialect of Adiguheids, which he dedicated to Field-Marshal Prince Bariemski and which were printed in 1796—1850 at Tiflis under the title Tschelkus. They have been translated into Persian by Muhammad Di'ir al-Manṣūr. The following is a list of them:

3. Kherzā Khudār-Khan (1873), translated into French by Berlitz in Meynad (l'œuvre de Fezels, extract from the Knauss de Textes et de Productions, Paris 1860).
4. Wibrā Khaṣṣā Satr (presented at Tiflis, for the first time on the 13th November 1903).

(C. Huart)

FATH-ALI-SHAH, a Persian Shah of the Qajār dynasty, was born in 1825 (1271), succeeded his uncle Aqā Muhammad-Shah in 1272 (1857) on the throne and died in 1850 (1254) after a reign of 38 years and five months (which won him the title Shāh Shāh) and was buried in Konī. He was at first known as Bihār-Khan. The Murder of Aqā Muhammad had thrown the army into the greatest confusion, Mirzā Muhammad-Khan Sa'dī, the eldest son of Bihār-Khan, seized the gates of Tshardan till the arrival of Bihār-Khan who was then in South Russia. He was at once proclaimed king but only enthroned at the beginning of the following year. After his victory over his brother Hussein-Kuli-Khan, Muhammad-Khan Zand and Sultan-Khan Shāhī, he succeeded in winning recognition from the chief of Khorāsān. After a long war with the Russians he lost Georgia, which was finally ceded by the peace of Galița in Oct. 1823. He had fought the support of Napoleon I, who sent Kominci and Jabber on a mission to him and later General Garnier with the title Ambassador (1805), but thinking that Ferezi could not be of any help to him at that time, he sought the friendship of England, who sent Sir John Malcolm, Sir Harford Jones Bridges and Sir Gore Ousley to his court. The rebellion in Khurasan, fomented by Maimund-Shah of Afghanistan, gave Fath 'Ali an opportunity to seize Herat (1813), but he could not keep it. A war with the Porte (1821—1824)
long, to the earnestness of the building; the top of this capital is thus connected with a gallery, running round the upper part of the room and communicating by staircases (made in the thickness of the wall) both with the roof and the courtyard below. It is not possible to enumerate here all the other buildings connected with the emperor and his court, but special mention must be made of the great mosque, which is one of the finest monuments of Mogul architecture. It covers an area of 438 ft. by 542 ft., having a central court (360 ft. by 439 ft.) enclosed by cloisters, except at the three gateways, of which the Balinad Darwaza (facing the South), erected in 1452, to commemorate his victories in the Dakhana ranks as one of the noblest gateways in India. In the court of the mosque stands the tomb of Shaikh Salim Cright, a single-storied building, raised in white marble and surmounted by a dome; the marble lattice screens which enclose the veranda of this building are of extraordinary dexterity and intricacy of geometrical pattern; over the cenotaph is a wooden canopy, inlaid with mother-of-pearl arranged in beautiful geometrical designs.

FATIHA, THE FLOWER AND MOST POPULAR SURA IN THE KORAN. Its name means the "opener" (i.e. of the Koran). This short Sura which only contains seven verses has a certain number of peculiar features; it is at the beginning of the book, while all the other short Suras are at the end; it is in the form of a prayer while the others are in the form of a sermon or lecture; in reciting the seven words (amir) is added to it, which is not done in any of the other Suras.

In Sura xxv, 37 there is an allusion to the Fatihah under the name of the seven (i.e. verses) which ought to be constantly repeated (Sahih al-Muslimat); and these seven verses occupy a special position, with reference to the parable of the Koran revealed at that time. "We have already given thee the seven verses which ought to be constantly repeated as well as the great Koran." At the period then, when Sura xxv, which is Meccan, was revealed, the Fatihah was already the favourite prayer of the little community of believers.

It has been said that this Sura is the oldest or one of the oldest in the Koran. Noldeke has urged against this view that it contains expressions which are not found in the Suras of the first period; probably certain epithets of Attila, "the merciless, the compassionless, of Korham, of Kohin" appear there for the first time. Nevertheless the Fatihah is relatively old and should be placed at the end of the first Meccan period. It is, as we have just mentioned, quoted in Sura xxv, which belongs to the second period; and its first verse "glory be to God, the Lord of the worlds"
is repeated at the end of Sura xxxvii. (verse 482) which also belongs to the second period.

The words al-Muqaddimah alhithim “those against whom God is enraged”, and al-Dawla, those who err, in verse 7 of the Sura; refer respectively to the Jews and Christians.

The Fatima forms part of the daily prayer (Namaz) of the Muslim; its recitation is a divine ordinance (hukm), while Abu Hamid says it is only suggestive (hikmah). Various scholars have written on the virtues of this Sura.

(R. Carrera de Vacs.)

Fatima, the name of three rulers of the Muhayl dynasty. [q.v.]

Fatima, the daughter of Muhammad and the aged Khaadija, born in Mecca. Unlike the other children of the Prophet, we have solid grounds for believing in her existence, not so reliable and solid in the case of her descendents. She is one of the few persons of her own, in which however historical facts are rather scarce, a slight but appreciable advantage over her sisters, notably Ruqayya and Umm Kulthum, always associated as sisters and confused even in the most thrilling incidents of their lives. The poetry of the first century is, however, entirely unshaded to mention her. The date of her birth still remains to be settled. This question implies another, also still unsolved,—the place in order among the four daughters of the Prophet occupied by Fatima. All except Umm Kulthum have been claimed to be the eldest. In this controversy the compilers of the Sira and of Tradition thought that the advanced age of Khaadija ought to be taken into account. On the other hand, they wished to avoid too great an age for Fatima at the time of her marriage with ‘Ali. According to the degree of importance accorded to these two considerations, so difficult to reconcile, the various writers have sometimes brought forward and sometimes set back the date of her birth. It is principally among the Shiites, who endow Fatima with all physical graces and all mental gifts and virtues, that it has been looked upon as more suitable to make her the youngest. Her sisters are suppressed by the Sira to have been married before Fatima, for “as a good-joint family”, so they reason “the Prophet must have settled the elder daughters first”. This insistence on the youth of Fatima is quite natural; otherwise it would have to be admitted that Muhammad was indifferent to his daughter, that the companions showed a shocking lack of enthusiasm to enter the Prophet’s family and finally that Fatima was a blemish if she remained unmarried for a period too long for the ordinary period of celibacy, so dreaded by Arab women.

In this chronological discussion, in the absence of any direct information — it is useless to suppose with Sprunger that traditions have been lost — the starting-point is furnished by the death of Fatima, which all agree in placing in the year 44. To the 44 years thus obtained are added the three, separating the Hijira from the death of Khaadija. Above all, there is no agreement among our authors. But represented Fatima as the eldest or as the eldest of her sisters, it is because they wished to avoid the objection arising from the advanced years of her mother. Others, thinking only of the laicness of her marriage to ‘Ali, have sought to place the birth of Fatima about the period of the “prophetic calling” of her father, shortly before or shortly after. The boldest supporters of this view are the writers devoted to the house of ‘Ali. ‘Abd al-Malik places the birth of Fatima “eight years before the Hijira”, i.e. at a date when her mother would have been at least 60 years of age. This isolated view, which is followed by the statement in the Sira that ‘Aisha was married at the tender age of nine, is an attempt to give Fatima the same advantage. In more than one respect Fatima is the Shi’ite counterpart of the very prominent figure of ‘Aisha.

The oldest historians and the early Sira such as that of Ibn Hisham devote relatively little attention to Fatima. In Ibn Hisham’s compilation, the Musnad of Fatima only occupies a page against the 350 devoted to ‘Aisha. The Tabaqat of Ibn Sa’d manage to give an account of ‘Ali without even mentioning the name of his wife. She hardly appears at all in the first帐, al-A’zam, in spite of the pronounced “Ali” sympathies of the compilation. We know nothing of Fatima for the pre-Hijira period except her biography “Umm Abiha” and her grief at the death of Khaadija. No one among the persons in the Sira speaks as much as Fatima except perhaps Abu Bakr; tears are a manifestation of physical pain in the daughter of the Prophet and of religious fervour, a veritable ‘azimah, in the rough Khaadija trade. Fatima seems to have had a melancholy temperament always wrapped as it were in gloom. Physically she was no better endowed; her weak constitution, her thinness, her frequent illnesses made her unfit for the hard tasks allotted to Arab women. Unlike her sister Ruqayya, there is hardly any allusion to Fatima’s beauty and nowhere does Mahomed declare, as he does for Zainab, that she is “the most capable (azza) of his daughters”. All this explains why she waited so long before finding a husband. One asks, without being able to explain, why this mistress of “the wealthy merchant Khaadija” had no dowry. Tradition would attribute all the delay to the absence but to the number and exceptional qualities of her suitors, Abu Bakr, ‘Omar etc. Mahomed, in anticipation of a divine command, decided on ‘Ali. She is usually said to have been 15 years of age then; others speak of “15 years or more”. As a matter of fact this last figure must have been exceeded if she was about thirty at her death, but it is a very probable one. As for a writer this is according to this reason of the strictness for girls in Arabia usually married between 9 and 12. Hence again there is an allusion to ‘Aisha, who was married at the age of nine.

After the Hijira, ‘Ali or rather Zaid b. Harithah undertook to bring her to Medina, while her sister Zainab remained in Mecca. As to her marriage, it is as rule not placed before the battle of Badr; others place it after ‘Uhad. If Abu l-Kaisam settled his daughters in the order of seniority, Fatima, supposed to be the youngest, could not marry before her sister Umm Kulthum who was married to ‘Umar in the period between the two battles. Other authors claim to reconcile all discrepancies by distinguishing, as in the case of ‘Aisha, between the conclusion of the marriage before flight and its consummation after ‘Uhad but this is again
an artifice to tone down the lack of expression for the marriage on both sides. Ali at first declined the match on the ground of his poverty. Muhammad, had to remind him of the beautiful cousin, now at Bayt; this has been made an argument for placing the marriage immediately after this victory. Fatima on her side showed no more enthusiasm. Although a brave soldier, Ali was poor and was even said not to be particularly intelligent.

A union concluded under such auspices could hardly promise to be happy ever. Discount soon followed. The married pair, a beautiful scene in the home. Muhammad settled the newly married pair near him, Ali quarrels with Ali caused him a great deal of pain. Muhammad had continually to intervene without succeeding in restoring peace. The birth of Hassan and Husain, one born a year after the other, probably in 5 and 6 A.H., did not mark any turn for the better. Their mother did not feel strong enough to nurse her children herself and Tradition has turned this fact to the advantage of the Caliphs of Baghdad, by saying they were nursed by one of the wives of Aisha, who had remained in Mecca with all his family till the surrender of the latter (62.6-7). The marriage of Ali and Fatima, whom Ali did not marry, is problematic; it is affirmed principally by the Shi'ites. There were also two daughters, Zainab and Umm Kuthaym, the latter born in the last year of Fatima's life.

No outstanding event interrupts the course of this monotonous and obscure life. Fatima had little influence with her father and was thrown into the background far behind the entertaining and Formidable Aisha and even the other female members of the Prophet's household. Her relations with the former were particularly strained. For the sake of peace, Muhammad fixed for them a date to separate. Tired of monagamy and the trying temperament of Fatima, Ali mediated doing her the grave wrong of marrying a Mahomet's and a daughter of Ali Luhah, Muhammad was very indignant and offensive to his cousin by the alliance between Fatima or divorce; she "he added a portion of my flesh". Other details given by Tradition and obviously blessed show us the poverty and weak health of Fatima, forced to do the hardest tasks with her father or husband, offering to assist her. Creel and harsh is his wife and exasperated by her constant recriminations, Ali is said to have so far forgotten himself as to maltreat his invalid wife, forcing her to take refuge with her father. On his part he began to avoid the conjugal domicile preferring to sleep in the mosque.

The period of the greatest foreign activity in the Prophet, now head of the state, begins with the fifth year A.H., in the interval between the defeat of Uhud and the siege of Medina by the Arab confederates of Najd. The period coincides with the married life of Fatima, Absorbed in his wars and his great schemes of political organisation, he began to neglect his daughter, so poorly endowed by nature and constantly worrying him with her troubles and appeals to his generosity. Not finding the help expected from her husband, a brave soldier, but unceasingly for intelligence, he turned to the circle of Abi Bakr and Omer; this was to put himself completely under Aisha's influence, openly hostile to Ali and Fatima. The Sibli and the Masa'id do their best to clear away this unfavourable impression. Thus we are told that the Prophet, when he had finished his talk, would go to announce the hour of prayer at Fatima's door. These collections are full of insisting on the affection shown by him to his granddaughters. A whole cycle of traditions of the Prophet's family life has thus arisen, in which Muhammad in deshabille plays even at prayer with the "two Haumun". The Sibli on the other hand emphasizes the marks of tenderness lavished by Abu Talib's son on the children of his daughter Zainab, on those of Zaid ibn Harithah, of Djasir, and even of Zubair ibn al-Awwam, not to mention the little. Al-Ash'ab: orthodox tactics to neutralise the dangerous exaggerations of the Shi'ites. The son of Fatima does seem nevertheless to have won back his grandfather's affection, particularly when he saw all his children taken from him, and his modesty and perseverance well have expressed from him the disinterested words: "Ali shall perpetuate my line."

A passage in the Koran (iii. 60) has furnished the framework of an anecdote which has been cleverly exploited; it is Muhammad's interview with the Christian envoy from Najd. Wishing to test the effect of his impressionable (mushakhab) against them, he arrived, surrounded by Fatima and her family. This scene has inspired another, still more celebrated in Shi'ite literature, that of the Aisha of Jawf ("privileged sons of the cloaks"). He is said to have called out one day while conversing "Ali and Fatima and the two Haumun under his cloak: These are the members of my family, since then that group of live persons has been known to Tradition as the "people of the cloak". We can see the object of this, to associate the Ali's with the Prophet, vindicate them for the privilege of forming, to the exclusion of all others, the "people of the house" (Abd ul-taha), and the sole possession of the special purity, as announced in the Koran (xxxi. 33): "Ali will cleanse you, people of the house, and purify you", a verse that is directly addressed to the wives of Muhammad, and not to the Ali's and Fatimas who are nowhere mentioned in the Koran.

When he became owner of the rich oasis of the northern Hijaz, Muhammad decided to allot to Fatima an annual allowance of 5,000 loads of wheat, as she had done for his wives. Ali Salih arrived in Mecca to renew the treaty of Hudaybiya. Fatima is mentioned among the people whom the Usayyad chief sought to interrogate in the conclusion of this treaty: the first act of a comedy which was to end in the treaty, the surrender of Mecca. She accompanied her father on the military outing, in which, without striking a blow, he became master of the Ka'bah capital. She is also said to have been present at the farewell pilgrimage. Towards the end of 41 A.H., the Prophet was overthrown, by his last illness. Fatima made her way to the bedside of her dying father over whom Aisha was jealously watching, to hear the prediction that she would be the first of the family to rejoin him.
The number of her devotees increases as Islam begins to feel the need of a theology for the use of the weaker sex. Her story, being vague, lends itself much better to edifying amplification than the too well-known story of the romantic daughter of Abū Bakr. On the day of the resurrection Fāṭima will be on the same level as her father and the two will form a group. When she passes, an angel will say: “Lower your eyes, ye virgins!” The Mahdi will be born from her posterity. The above is a mode of translating the drivel of the specifically Fāṭimid literature, cultivated by later orthodox writers; it will give an idea of the rest. The real and only importance of Fāṭima consists entirely in the fact that through her Muhammad’s line has been perpetuated. She participates in the inerrancy accorded by Islam to its founder. Veneration for Fāṭima cannot be earlier than the tragedy at Karbala (61). This cult developed fabulously. Ancient orthodoxy rightly detected in it a danger to the unity of Islam and the Arab empire; the Caliphs of Baghdad, after having exploited it, endeavoured to turn the veneration for her into a weapon which might be as useful to the descendants of ‘Abdullāh as it is difficult to explain why the descendants of Muhammad’s other daughters did not participate in this veneration to the same degree as the Fāṭimids, a name frequently given to the descendants of Fāṭima.

Fāṭima is a name that covers a real personality but one that eludes the investigations of the critic. Around this inconstant figure the struggle between Shī‘ites and Sunnis has centred; it has been an irregular battle with underhand stratagems and parallel tactics, in which the details conceal and distort our view of the whole conflict. This strife, lacking in sincerity and grandeur, a regular farce, a war fought in surpluses, utterly distorts the eye of the historian, who desires to fix his attention on this fleeting figure, the lightly painted portrait of the heroine, the cause of and the stake in the struggle. When the two great Muslim parties had taken the field, the dispute was further complicated by the quarrels of the schools, by particular sentiments, each claiming to be authenticated by the example of this daughter of the Prophet, to make a dogma, a rule of conduct, or moral or ritual prescriptions prevail. Under pressure of the Shī‘ites, the school of ‘Abbāsids, the rival to that of Medina, developed the exaltation of Fāṭima, in opposition to the glorification of ‘Abdullāh, elaborated in the Ḥijāj, just as it transformed the brief history of her husband ‘Alī into an answer to the Medinan legend of Abū Bakr. Relying on the precautions, which it believed itself to be secured by, orthodoxy seems to have set its mind at rest by thinking of the honour, which would be reflected from the cult on the Prophet and his family. While filling up a lacuna in the Seerah, they at the same time freed him from the reproach of indifference to his family. Even the ‘Abdallāhis found it opportune to abandon their hostile neutrality; this was not a disinterested change of attitude but one in which their crafty policy is quite apparent. The scientist henceforth has tolerated the glorification of ‘Abī and Fāṭima among the authors, who worked under their supervision, on condition that they emphasised the obligations of the ‘Alīis to their powerful Fāṭimī descendants, and depicted them as
FATIMIDS.

The origin of the Fatimid movement is to be sought among the Ismailis, whose centre was about from the middle of the third century A. D. the small town of Salамyia between Hamilt and Hims. Among the abus [q. v. l. 895 of opr], who went forth from here to the various Muslim countries, particularly to Morocco, Persia and the Yemen, to engage in very successful missionary work, Abú 'Abd Allâh [q. v. l. 84], who became famous under the name al-Ásî, was the first to gain a firm footing in Maghrib, among the Berber tribe of Kázam (from the rest of 832 = 897) and gradually undermined the power of the Aglabids. This incident the turn of the Ismaili sect, 'Ubaydallâh (who seems originally to have been called Sâ'd) went first to Egypt about 854 = 915, and thence to the west when he found himself subject to constant persecution, naming himself the 'Abdallâh; hence, however, he was thrown into prison in Sitjîlima by order of 'Abd al-Malik. Al-Ásî's brilliant and victorious campaign which after the capture of Tálibîn and Rakkâd, made an end of Aglabid rule, led to his release and, on the 26th Rabi' II. 292 (15th January 902), he was able to make his ceremonial entry into Rakkâd and to take the name of al-Mahdi and the title Ansâr al-Mu'minîn. They at once set to work in the most earnest fashion with the introduction of the Shi'ah creed but they never succeeded in overcoming the Malikite of the natives for more than a brief period. Al-Mahdiyya (on the coast not far from Rakkâd), which received its name from that of the Caliph, was made the capital in 848 = 902. The next two years were devoted to the resettlement of their own—Abî 'l-Ásî (Muhammad al-Ásî), while still a prince, built al-Muhâmmadiyya, while al-Munâf built al-Mansûriyya—but these never attained any particular importance.

Such was the origin of the Fatimid. Their name refers to the descent, which they claimed from 'Ali and Fātimâ, a claim the justice of which cannot even now be decided with certainty, although there are abundantly grave reasons against it, so that 'Ubaydallâh's descent from Mâinûn, a Persian sculler, which is upheld by the other side, is not improbable. In any case, it appears that suspicion of the dynasty only appears at a comparatively late period in literature; the unlikelihood of certain important authorities like Abû Muhammad (see C. H. Beckers, Geschichte des Islam, p. 304) is likewise demonstrable: It is obvious also that any means must have seemed legitimate to the 'Abdallâh, to overcome their dangerous and superior rivals but it is held that this was done by the defenders of the legitimacy of the Fatimids, among whom Makrizi and Ibn Khaldûn are prominent, that 'Ubaydallâh would never have had to suffer from the plots and persecution of the Caliph of Bagdad already referred to, if the latter had not feared him as an 'Ali, it can be said in reply to this argument that 'Ubaydallâh was at that time no obscure or utterly unknown personality, but well known as the grand-mother of the Ismailis and that this might be the reason why he was suspected. Nor is the objection quite conclusive that, with the great number and wide distribution of the 'Alids at this time, it would have been impossible for their adherents to attach themselves to the descendants of a Magus (the sculler Mâinûn) or Jew. This latter assertion that 'Ubaydallâh was of Jewish descent, is certainly to be referred to the hatred of his enemies (cf. I. Goldziher, Muharramnnadah, Studien, l. 895), but it must not be forgotten that the 'Alids themselves have repeatedly attacked the genuineness of the Fatimid pedigree with great vigour and have also taken up a directly hostile attitude to them. What is particularly surprising, however, is the absolute uncertainty of tradition everywhere regarding the genealogy of the Fatimids (cf. Wustenfeld, p. 32 of opr.). August Müller (l. 897) has already shown
how their genuineness is shaken by the contradictions with the view of the Druze, who simply make Maimoun an 'Alid.

The energies of the new ruling house were for the next two generations constantly occupied with an unceasing series of domestic troubles. 'Ubaydallah's treacherous murder only a year after his accession of the strongest supporter of his rule, al-Shu'ri, who was desiring to obtain by force the recognition of his son, was severely avenged. The principal trouble was the rebellion of the Zenata and of the Kharitun with them. The war with the former was only brought to an end with the coming of their king, the Tihri, by_Majalla in 239 = 954, the latter then surrendered. While the Tihri but Fas was left to a prince of this house; soon afterwards he conquered Sijilmassa also. His power thus formed a bulwark of the Fatimid interests in the west till his death in 312 = 924. But his successor, Ibn Abi'l-'Ala, although at first able to win even more brilliant successes by subduing the whole of the Maghrib as far as Ceuta, where a few Istidrlis still held out, thought it better to submit to 'Abd al-Rahman III, who had occupied Ceuta, in view of his threatening proximity. It was only in the reign of 'Ubaidallah that some of these Istidrlis were subdued, but not by force. Ibn al-Ka'im (334-341 = 946-953) led an expedition into the interior of the north, and the conquered territory restored to the Fatimid rule. But all these troubles paled into insignificance before the rebellion of Abu Yazid (q.v., L. 117 et seq.), which broke out in 322 = 933-934 and threatened to be the greatest danger to which Fatimid power had yet been exposed. He was able to win considerable support, particularly among the Qarawiyyin tribes in the Awdas and the greatest cities of the empire fell one by one before the onslaught of his Berber hosts. He was so successful that he laid siege to the Caliph in al-Mahdiya. Although he was forced to raise the siege after blockading the city for a year, al-Ka'im was again besieged from the outside in Ma'mun, where he succeeded in the hardishns of his enemies. His son al-Mansur (334-341 = 946-953) finally succeeded in putting an end to the civil war after severe fighting in which Abu Yazid was slain. The always uncertain attitude of the Idrisids and Zenata in the West also became rather more settled about this time so that for once the empire could find a breathing space after a long period of internal convulsions.

These decades of unrest, to which were added earthquakes, plague and famine, naturally impeded to a considerable degree the efforts of the early Fatimids to expand their power. From the beginning they devoted most of their energies to advancing eastwards towards Egypt, but the attempts to conquer the country in this period all ended in failure. In the reign of 'Ubaidallah his son Abu 'l-Khurasan twice (301-302 = 913-915 and 307-309 = 918-921) invaded the Nile valley; in both cases initial successes were followed by severe defeats, in the second campaign as well. Banka Bene was retained as a permanent conquest. When he became Caliph, Abu 'l-Khurasan sent a third expedition against Egypt in 323 = 935, but this was unable to bridge the vicious resistance of the Khurasan. Much less attention was devoted to Sicily (q.v.), where a Fatimid governor had been installed immediately after the overthrow of the Aghlabids. Although after his expulsion the island made itself independent under Ibn Kurbub the Caliph did nothing to regain it and it was only when the rebel was driven up to him by his own people (354 = 965), that he finally came into possession of Sicily. The corsairs from Sicily on the coasts of Southern Italy and France, the capture of Genoa (343 = 955) and the devastation of Santalina and Corsesi had no permanent results. From the end of 336 or beginning of 337 = 948 Sicily won practical independence through the skill of the Khari insan b. 'Ali. For the further vicissitudes of this western outpost of the empire to its conquest by the Normans in 450-454 = 1050-1051, the reader may be referred to the article Sicily, as they do not concern Fatimid history.

It was only under al-Mansur's successor al-Mu'izz (341-356 = 953-967) that the empire found the internal peace and security, which allowed it to make a fresh start with a powerful policy of conquest, through the sober diplomacy of this Caliph and the great military skill of his general Ladhwar [q.v., l. 1023], who succeeded in definitely conquering the far west, after an aggressive war in 344-345 = 955-956 by 'Abd al-Rahman III, which threatened to be dangerous, had been continued. The goal of this policy was naturally Egypt which had hitherto been attacked in vain. The country, utterly disorganized, could not resist a qawwar and on the 26th Shawwal 353 = 6th July 966 al-Fatimid general made his victorious entry into Fustat. Egypt, formally at least, thus became a Shi'ite country for two centuries. The conqueror at once set about with great prudence the introduction of measures to alleviate the famine raging among the people and personally saw to the restoration of law and order. At the same time he began the building of a new quarter, the modern Cairo (q.v., L. 821 et seq.), and the foundations of the Azhar Mosque also dates from his time. He also endeavoured to extend Fatimid power beyond the frontiers of the land of the Nile. Mecca and Medina, where the way had been cleverly prepared for the advance, submitted without delay to Mu'taz and Fatimid suzerainty, and the Muslim cities listed till the end of the dynasty in spite of frequent interruptions — for the recognition of a successor was largely a question of money with the covetous Sharifs (for details of, Snouck Hurgronje, Mecca, l. 53 et seq.). It was more difficult to gain a firm footing in Syria. The Karajans (q.v.) proved the chief obstacle, although they originally sprang from the same movement as the Sammita. Ladhwar's second-in-command, Ladhur b. Falahi, who had occupied Damascus for a brief period, soon fell before them, readily supported by the Bajuris of Bagdad. But when they appeared before the gates of Cairo they could not resist the military genius of Ladhur nor to a certain extent his gold. Jaffa also was now recaptured; but further progress remained impossible. Mu'izz himself, who had saturated the affaire of the west, which had been pacified by Balshka's (q.v., l. 704) strong arm, to this devoted Shafi'ite chief, and moved his residence to Egypt in 352 = 963, had to ward off a new invasion by the tenacious Karajans in the following year. Following up his victory, which was won by Jaffa, he succeeded in again takingDamascus through disembarrassment among the Karajans; but it was soon lost to the Turk Af takush in the troubled times that followed. In 367 =
of the vizier al-Djardjara and the rapid downfall of Fatimid power could no longer be averted. Palestine rebelled again under Hassân, Aleppo at once fell to the Mirdâd Mûtâa. The Egyptians, twice, in 546 = 1046 and 547 = 1047, sought in vain to regain it; although the prince above mentioned submitted again in 549 = 1051, the town was lost to Fatimid hands——this time forever. In 552 = 1062 the apparent success, which will be recorded elsewhere, such as the submission of Hašanî in Bagdad (550 = 1058), the surrender of al-Sulabi, who was able to enforce the resignation of their Caliphate in the Hijâz and Dâera from Mecca to Hadrâm, went but a little way to balance the loss of their power in Syria; for a new danger was already steadily advancing from the east in the rising might of the Seljuks. In 563 = 1071 Jerusalem fell to them, in 568 = 1076 Damascus and after this date it is impossible to speak of Fatimid power in Syria; although there was an attempt to restore it and numerous battles on Syrian soil, of which more will be said below.

Egypt was therefore the only land left of which the Fatimids could really maintain a permanent hold, in which they impressed the stamp of their race. By the end of 574 = 1082 the Nile valley will only be dealt with in its main outlines here; for the details the reader is referred to the separate articles and to the articles Azyr [ii. 4th ed.]. Their power was placed on a sound basis by the cautious and deliberate policy of the two first Egyptian Caliphs al-Muzâ'ir and al-'Azz, as well as by the careful organization of the mechanism of administration and finance in which they found a most valuable adviser in Ibn Khallîn in spite of many faults. Under the second of these rulers he received the rank of vizier, an office which in course of further developments became of the highest importance. He was a Jew by descent, although a convert to Islam; one of his immediate successors, 'Abd b. Nanturia, was a Christian; the same Canaan was appointed to govern Syria, so that nearly as this remarkable fact show how the Christians, which is characteristic of the Fatimids. By the time of Azz, however, we find a rather strong reaction from the Muslim side, but even under his successor al-Hâkim, the son of a Christian mother, whose tyrannical mood periodically found expression in savage oppression of Christians and Jews, we find Christians in the highest offices. The reign of this Caliph forms in other points also a marked contrast to those of his two predecessors. Although many luxurious institutions and important foundations such as the House of Sciences are due to him, his cruel despotic rule on the whole a great misfortune for the land as he led to the utter disintegration in the country. This showed itself from the rebellion of the Spanish Omarî Abu Ra'yà, which was only suppressed with difficulty. The danger from the mercenary troops of Turks and nestorians in the north became visible; they had first been employed in addition to the Berber troops by al-Azz, and their insubordination and constant quarrelling among themseves became the chief reason for the gradual collapse of the kingdom. After the rule, following the extreme development of the Isma'ili system had claimed to be a duty, and conditions in the capital had become unbearable, he disappeared in the night of the 27th Shawwal 574.
puppet in the hands of the all-powerful vizier. The rebellion of his elder brother, Nizar, was suppressed. Al-Afdal resumed his father's attempts to regain Syria, but now there was a further anxiety to be faced, the Crusaders, whose importance he does not seem to have recognized in time, till the capture of Jerusalem (982 = 1099), which he had won from the Franks only a short time before, by the Christian knights opened his eyes to this new danger. The next two decades were filled with battles with varying results between the Egyptians and the Crusaders, but finally only Tyre and Ascalon remained in the hands of the Fatimids, when the vizier was murdered in 1121 at the instigation of the Caliph al-Manṣūr (997–1101–1153) who wished to escape from his tutelage. His by no means incapable successor, Ibn al-Balṭikhi, was not able to replace him; al-Qāmid, a malignant despot, then sought to govern alone, to the country's misfortune till he perished at the hands of the Assassins in 1124. After a brief interregnum by a son of al-Afdal, who had prayed said in name of the "expected Imām", his cousin al-Hāfiz, a man of mature years, ascended the throne, for the first time by a break in the direct line of succession, as the murdered Caliph had left no son. He also attempted to govern independently for a time, but after poisoning his brilliant vizier Yānīs, Resulīs of the turban and constant humiliations of the powerless ruler marked the beginning of the end and the attrition, which history relates of the brief reign of his young son al-Zafar (1154–1158) makes it clear how far the degeneration and decline of the dynasty had proceeded by this time. Once more, however, a strong personality took over the reins of government in the courtly Ṭallāt b. Razīk, whom the panic-stricken women of the palace called upon after al-Zafar's tragic end. The country had need of such a man. Al-Fārsī, a sickly child of five, chosen Caliph by his father's murderers, sat on the throne; to Palestine Ascalon, the great fortress against the Franks, had fallen in 1158 = 1155; the Egyptian Egyptian expedition cost in 1155 = 1155 by a Sicilian fleet. The new dictator first of all won that law and order were successfully restored in the land and his general Dirghānī (cf. p. 978) was a great victory over the Franks at Ghazzā in 1158. Shortly after the accession of the last Fatimid, al-ʿAḍl, ʿṬalāt also was all too soon, treacherously murdered, his son and successor soon afterwards met the same fate. Egypt now became a pawn in the game between the two great Syrian powers, Damascus, where the Zārjī, Nūr al-Dīn now ruled, and Jerusalem, with whose policy of aggression the quarrel developing between the two most powerful cities in the declining state, Shiraz and Damascus, coincided. The young Caliph, one of the few figures among the later Fatimids that awakened sympathy, was too weak to avert the approaching downfall of his house and the appointment of the Damascene general Shābkī as vizier, with which the independence of the dynasty practically ceased, put an end to all these protracted wars and turmoil. Shābkī's successor, Shāblān, formally put an end to the dynasty when, in the beginning of 1171, he reintroduced the prayer for the "Abūlānī. A few days later the unfortunate al-ʿAḍl died and with him the Fatimid family disappears from history.
'Usbuddīdd's successors, although not very successful in their foreign policy after their conquest of Egypt, nevertheless were able for long to maintain a position of splendour and power. This they owed in large measure to Lord Poole's support to their foreign guards, who on the completion thereof soon showed themselves a source of danger, but to the administrative ability of the two first great Caliphs in Cairo, to the mild rule of most of their successors, as well as to the energy of great viziers and generals, of whom more than one raised the kingdom to a new prosperity after grave periods of depression. Traces of the Shi'i fanaticism of the early decades are only rarely noticed in the Egyptian period. The great endeavour of the dynasty, whose legitimacy was always disputed, was, after it settled in Cairo, to create a pantheistically regulated ceremonial and carefully graduated categories of officers and officials, as well as to develop an unを集ted luxury of living and an extraordinary splendour at court. In this respect, as William of Tyre's accounts even in the days of al-ʿAdil show, they have been equalled by few Muslim rulers, and to this day the Arch, Ḥakim, Aḥmar and Ǧurjūṣī Monasteries, as well as the great gates, Bīb al-Nasr, Bīb al-Ṭahār, and Bīb Zuwayla testify to the grandeur of the buildings erected by them.

**Bibliography:** The most important Oriental sources are collected in Wüstenfeld, Geschiche des Fatimid-Charifs, in the preface; C. H. Becker, Beiträge zur Geschichte Ägyptens aus den Jahren 1870, Part 1 and 2, 1885; and G. von Effendi, Geschichte der Elfen bei den Arabern, in the 2nd vol of 1886; and F. Low, A History of Egypt, p. 22 et seq.; Inostrebčický, Prosvětění východních Fatimidů v Champelově Zápisníku, 2 vols., 1842; and E. Haenisch, Ders. in the Cambridge History of Islam, i, 1894.

**Fatān.** Poros, a minor official (khuṭṭi) at the sublime Porte, died at the end of the sixties of the last century, wrote the biographies of the Ottoman poets and vernacular poets from 1125 to his own time under the title Tārīkh-i ʿAkbarī, published as a continuation of the Tārīkh-e Moṣṭafā Saʿda (1132 ʿA. H.) and of ʿAbdollāh Tāhir (1134 ʿA. H.) at the request of several patrons of high rank. The work, which the author completed in 1366, was lithographed in 1271 (1858-1859) in Constantinople and deserves notice for its biographical data concerning contemporary writers.

**Fatān.** Rahim, Feisalunn, and Hanunmuns, the interval between the revelation of Suras 83 and 70 of the Korān. Feeling that inspiration had forsaken him, the Prophet suffered great mental depression. He began to wander about, and his mind was, as it were, "possessed" (mujaffar), and meditated suicide by casting himself from mount Hirāʾ, but a mysterious power is said to have restrained him and the suspension of "intermission" lasted 2½ to 3 years.

(A. S. FELTON)

**Fatān.** "The Opener," one of the names of God (cf. L. 304).

**Fatān.** Qaytṣ ʿAbdu, a Persian poet, died 859 (1448-1449) or 853 (1449-1530), but at first the same Tāfāfi (in allusion to Societ in Socot a "little apple"); he also took the names, Khamira and Arārij. He wrote a great work entitled Hādīn u Dīl, "Beauty and Heart," a romance full of allegory, allegorical and symbolical expressions, trans. into English by A. Brown (Dublin 1807) and W. Price (London 1825), into German by R. Drotč (Vienna 1880) and imitated in Turkish by Ğabi and Walī his Shudin-i K̄ar (in the London and Paris Mss. Nikāb). "Abode of Fancy," is a collection of tales, stories and jeux d'esprit in rhyme and prose, of which the first chapter has been published and translated by H. Eṣṭē (Leipzig 1868).

**Fatāwā.** A fatāwā is a formal legal opinion given by a mufti or canon lawyer of standing, in answer to a question submitted to him either by a judge or by a private individual. On the basis of such an "opinion," a judge may decide a case, or an individual may regulate his personal life. It must be rendered in precise accordance with fixed precedent; a mufti cannot now follow his own judgment. But inasmuch as these opinions deal with actual cases, as opposed to the abstractions of treatises on the law, published collections of them, which are numerous, are valuable as exhibits of real situations. In the ideal Muslim state, where canon law would rule absolutely, all these decisions would be equally backed by state authority, and would be the law of the land. But as the case is, in practically all Muslim states, a distinction has entered, and the canon law, expressed in these fatāwās, rules only in matters of marriage, inheritance and divorce. All other legal questions are decided by other codes or by the will of the sovereign. And fatāwās on the side of canon law, which regulates the details of the personal religious life, have validity only for the plea. Further, there is a tendency in some Muslim states to favor some one or other of the four legal schools. Thus Turkey everywhere upholds the Hanafite school and appoints Hanafite judges only. It may appoint muftis of all four schools but only the fatāwās of Hanafite muftis are admitted in the law courts. The others are purely for the private convenience of the followers of the other schools.
FAWQIDAR was the title of the chief military and police officers of a zāwir (revenue district) under Muḥammadan rule in India. His duties were the maintenance of order, the punishment of rebels and rioters, and, frequently, the collection of the revenue. Though subordinate to the provincial authorities, the fawqidar enjoyed the privilege of direct correspondence with the imperial court and the appointment was often a stepping-stone to the highest offices.

The title of fawqidar was also given, under the house of Timur, to subordinate officers in the elephant stables.

History: — The Fażara under Ḫadīsh b. Ḫul and his son Ǧumayl b. Ḫul played a prominent part. In the war which lasted for decades between the Abī and the Dāḥūshīn, the so-called Dāḥīn war. They took part in the battles of Dān al-Maṣfūlī, Khuzīra, Hula'a, Raqīm etc. In the early years of Dānīn they gave a good deal of trouble to the Prophet, and members of their chief, Ḫul had visited the Prophet, he bought his first horse, which he rode as Khud from one of the Fażara. In the year 6 (562) under Uṣayn b. Ḫul they besieged Medina in alliance with other tribes of the Gharifān and the Jews of Khuzār (the so-called "Battle of the Ditch"). In the following year a number of the Fażara raised a herd of camels belonging to the Prophet at al-Qulbī, a few miles from Medina, plundered a caravan from Medina and wounded its tender Zafl
Ottoman poet. The son of a saddler, born in Constantiopyle, he devoted himself to the study of mysticism as a pupil of Zarif and, according to "Abdi, entered the Khatibu under. He soon showed himself a poet of talent. His teacher, Zarif, himself celebrated as a poet, succeeded in drawing Sultan Sulayman's attention to him in 1552, and found him the circumcision of Prince Mejmed, Musta'ai and Sultan. The Sultan liked him and appointed him secretary to the divan to his son Mejmed who was going off as governor of Magnesia. He remained in this office after Mejmed's death, with Prince Musta'ai till the latter's execution in 1552, when prince Selim, afterwards Sultan, took him into his service as secretary of the divan. Faṣṭl died in 1570 (1552-1553). Unpretentious and ascetic in his life, he displayed a glowing passion as a poet. Faṣṭl is one of the more important poets of the reign of Sultan Sulayman, not unjustly called the golden age of Ottoman poetry. He wrote a Dosān, as seems to be the unwritten rule, with all Ottoman poets, with ghazals, kahfas and quatrains (vaz'āt) and a wahibī (plainsong), a mixture, a prose and a verse, closely modeled on Şāhī's Gūlībān. But his greatest importance as a poet lies in his Me'mar, the history of love-affairs in 5000 verses entitled, Hūma'īn u Maumū, in the style of Kāravān u Sārim, is probably an imitation or reproduction of the poem of the same name by the Persian poet, Kāravān of Kirmān. Faṣṭl's most celebrated work is the romantic allegorical Me'mar, Gūl u Bāshīl (the Rose and the Nightingale), in the style of the Gūl u Nevel, the allegorical story of the love of the nightingale for the rose. Written in 963 (1553-1554) the poem is dedicated to Prince Musta'ai. The work is one of the most beautiful of its kind, although Faṣṭl cannot entirely be credited with originality in the subject. It is ingeniously treated and its language is particularly brilliant. It has become known in Europe also through Hammar's translation and translation. But he no longer suits the modern taste with his frankness for soluble allegory.

Rīhābīyat: ʿAbduʾr Rāḥīm, p. 245; Meşhed Tufiyya, Şūfuṭi u ʿAlauddīn, iv. 33; Hammar, Gezic, d. esmai. Dīcēk, ii, 300; and Gūl u Bāshīl, as stated above, with an introduction by Gūlībān, 1884; ʿElī, Dīv anā, m. s. m. Khān, d. h. 2, Ḥazābīhū in Wien (1895-1896), I. 679; Ghib, A History of Ottoman Poetry, iii. 108. (TIL MENCZL)

FALZULLAH, Turkish pronunciation of Faṣṭl.

AŻLĀR.

FĀZŪĞHĪ, a mountainous district in the Angle-.tell-Gianuha Sudān situated between lat. 10° and 11° N. and extending from the Blue Nile to the Asyrian frontier and beyond. The chief places are Fāzūghī and Šamāna on the Blue Nile. The district is inhabited by the Negroid tribes among whom Islam and the Arabic language have spread to a certain extent since the time of the Fung conquest; their ethnological position has not yet been determined, the principal tribes are Barīn, Barta, Hamud (Hameg) and Hejdasana. The Fung who once ruled the country have now almost completely died out. There are also a certain number of Arabs who immigrated into the district from other parts of the Sudān.

Since an early period Fāzūghī was famous for its export of slaves and gold. A certain quantity of the latter is still obtained, but the principal gold-producing district, that of Band Shanqilī (Shangil) is in Abyssinian territory.

In the time prior to the Egyptian conquest Fāzūghī was a naval state of the Fung kingdom of Senārawa. The Fung are stated to have conquered it under their king Unu, the son of Nāṣir who reigned at the close of the 17th century. The European Bruce who visited Senāraw and Abyssinia in the 18th century states that the Fung left the old ruling family in possession, only forcing them to acknowledge their sovereignty and to pay tribute. This is contradicted by the French traveller Cailliaud (quoted by Shāhīr) according to whom the kings of Fāzūghī belonged to a branch of the royal family of the Fung. A list of the kings extending over 815 years prior to the Egyptian conquest is given by Cailliaud (quoted by Naʾūm Shāhīr).

Fāzūghī was occupied by the Egyptians under Ismaʿīl Pāshā in 1822. Ismaʿīl visited the gold district of Band Shanqilī, which disappointed his expectations. Since then the district shared in the history of the Egyptian Sudān, but during the time of the Mahdi and his successor Fāzūghī was independent of the Sudanese government and part of it became subject to Abyssinia.

Under the present administration the greater part of Fāzūghī belongs to the Sundar province of the Angle-geführt-Gianuha Sudān.

(S. HILLERSON).

FEDŪ. [See FEŽA.]

FEHİM, an Ottoman poet and scholar; his full name was FEHİM SULAYMAN EVREN. He is also known as ḤUṉA FEHİM. Born in 1203 (1787-1788) in Constantinople, he first of all became an official, in the Divan, in the Mint and Customs service, and ultimately a kātib-in-crem in Rumelia. He retired from office and obtained a reputation as a teacher of Persian in Constantinople. He died in 1262 (1845-1846). Fehım principally composed ghazals and his Divan has been published. He wrote a commentary (ṣadrī Shāqī) on selected ghazals of the Persian poet, Ẓalīb al-Iṣfahānī, translated the "Biographies of Poets" (Taḥkīrāt) of Dawla-Sîṭh under the title Safat al-Shārīa into Turkish (also printed).

Bibliography: M. Naṭīb, Mejīmāt u Muḥāʾīm (Constantinople 1504), No. 74; Mejīmūh Tufiyya, Şūfuṭi u ʿAlauddīn (1588-1615), iv. 301; Şūm, Ẓalīb al-Iṣfahānī (1666-1683), ii. 3436. (TIL MENCZL)

FEHİM, UNGU-ZAHM MĪŠĀPA CECERI, known in literature as Fehım of Constantinople, an Ottoman poet of the late classical period (under Murad IV. and Idrisîh 1622-1648), and one of the few more important representatives of
the period. A simple scholar, without any proper teaching, he attached himself to men of note. He came to Cairo in the train of Eivdsh Pasha who had been appointed governor of Egypt. But he could not accommodate himself to life here, as the litter verses, veritable Trizba, which he wrote there against Egypt, show. When he lost the favour of the Pasha, absolutely penniless, he had to appeal to a prominent citizen of Cairo who sent him home with the annual caravan bearing the Egyptian tribute. But he was doomed never to see it again, for he died at Elhün near Konya in the plague. It is said, in 1654 (1644) or 1658 (1648), that he was on a journey through Thrace.

Felek's works are throughout lyrical. He compiled his Diván at the early age of 18. The spirit of the new school is already active in Felek, who lived at the beginning of the struggle between the Persian and Turkish schools. He sought the subjects of his glories in the trivial events of everyday life. His influence, down to the most recent times, is undisputed. Kamil, for example, began his career as a poet with verses in imitation of Felek's.

FELEKE, properly fâlûqû, an instrument of torture, consisting of a wooden pole to which two extremities of which a cord is attached to form a bow; the legs of the victim are passed between the pole and the cord; the instrument is then turned round several times to bind them tightly and make criminal motionless. In this position he is beaten with a stick on the soles of the feet. Schoolmasters and hands of workshops use it to punish children and apprentices in Turkey, when the Agha of Janissaries and to make them take a tour of inspection in the capital, he was always accompanied by soldiers carrying the falûqû, called falûqû sâhib. The word of latter was at the service of the Porte in the time of the grand vizier. It had to see to the execution of the punishments ordered by this minister.

FELLANI. [See VIII.]

FELATTA. [See PERHAT.]

FERIDÂN U DHÎRîN. [See FERDÎN'DEH.]

FERIDÜN Ahmed. bey, Nîshânî. (Keeper of the Great Seal) and Keeper of the State Archives. We know nothing of his birthplace or his ancestors. He was educated in the house of the Deatrâh Câevâd-ibn Ahmed Câevâd and entered the service of Mohammed-Sokollû Pasha as Secretary in 960 = 1552-1553. He afterwards became Secretary to the Privy Council (Dârân-ü Khâtîr), took part in the campaign against Naqshbandî (1544) and particularly distinguished himself at the siege of Suîr (1565). On the 27th Mabarrâm 978 (10th June 1568) he became Ra's al-Kattash and Nîshânî on the 3rd Ramazân 987 (24th Dec.

1577). When, after Selim II. 's death, his successor Murad III. was hastening from Mâzâd to the capital, he crossed from Mâzâd to Constantinople on a galley belonging to Ferîdân, which happened to be lying ready to sail in Mâzâd. (2nd Ramazân 982 = 21st Dec. 1574). A month later on the 9th Shawâwî (22nd Jan. 1575) Ferîdân laid his life's work, the Mâzâhîr el-Salâmah before the Sultan.

Only a year later he lost the Sultan's favour and was dismissed on the 10th April 1576 (Gerâch, Tagebuch, p. 175). In August 1577 he went as ambassador to Semândiâr where he arrived at the end of the year (Gerâch, p. 375; Schâwager, Geschichte der osman. Dichter, p. 30); from there he was transferred to Kastoria and afterwards to Hammer, Geschichte der osman. Dichter, iv. 32 note e). In Moharram 989 (February 1581) the Sultan recalled him to the capital and restored him the office of NÎshânî. On the 12th Rabî' I. 990 (6th April 1582), he married Âğe Nîshânî, daughter of Rustâm Pasha and the princess Milîmedî, and he died on the 21st Safar 991 (16th March 1583).

The Mâzâhîr el-Salâmah (chronogram for the year of its compilation, 982 a. 1575), according to Selimî, (p. 137), contained 1880 historical documents in 11 volumes from the foundation of the Ottoman Empire to the accession of Murad III. The work has been twice printed in Constantinople in 1828 (1828:1849) and 1845 (1845). The first edition contains 753 documents, including 43 from the beginnings of Islam, the second a number of translations of Arabic and Persian documents, 100 more than the first edition. If Selimî's figures are correct, the two editions contain much less than the original work; on the other hand they contain a large number of documents of a later period, which have apparently been added by later writers in continuation of the work. The book is preserved by an ethnomusicologist Mîsrefîl Demir (chronogram for the year 982 a. 1575); an appendix there is a long essay on agrarian affairs in Egypt, written in the reign of Murad III. in which he defends his theory of the race, Neçahâr el-Salâmah, in his preface, the translation of which is on the history of France, which Ferîdân ordered to be prepared while Ra's al-Kattash, exists in manuscript in Dresden.

Bibliography: Our chief authorities are Ferîdân himself in the preface to the Mâzâhîr el-Salâmah; they are the authorities used by the bibliographers ALTERMÖLLER, L. 330 et seq., and Ahmed Resîmi, Sevket el-Kâtch, p. 12 et seq.; v. Hammer, Gesch. d. osman. Dichter, iv. passim; on the Mâzâhîr el-Salâmah and its MSS. cf. Langhans in Not et Extraits, v. 668 et seq.; v. Hammer, op. cit., i. 41, 536 et seq., ii. viii. 161; iii. 197 et seq.; Flügel, Geschichte der osman. Dichter, x. 383 et seq., 293 et seq.; Krafft, ibid., i. 85; Rieu, Cilt Bital. Munz., p. 80 et seq.

FERMÂN (faaz; Old Pers. farnâmâ, Pahl. fraîmān, properly a command (hence "written order", "letter's patent" or "diploma"); the word has passed from Turkist into French and English with the pronunciation famân. Such documents were always written in the chancelleries in a special hand and to this day the osmanî is used in Persia for this purpose and the dansâli in Turkey.

Several princes of the Persian Royal Family,
e.g. Fethi All Şah's eldest son who was governor of Fez for 40 years, beautified Fez with the garden Bahia-i Naw and wrote several works, have borne the title Ferma-of-regency ("issuing orders").

FEROZ. [See Fez.]

FEROZKHAN. [See Fez.]

FEROZPUR. [See Fez.]

FEROZSHAH. [See Fez.]

FES (written Fas in Spanish), a red cap word by the Turks, taking its name from the city of Fes (Fasa) where it was first manufactured. The introduction of reforms (sunit) in Turkey was marked in dress by the abolition of the turban, which was only retained by the Ulama. All civil and military officers and private individuals in the capital now wear the fez; in the provinces, however, the turban has to a great extent survived, so that a distinction is made between fesli (wearer of a fez) and sari (wearer of a turban). In 1847 (1852) a decree of Sultan Mahmut II. declared the fes to be the Turkish national head-dress, which was to be worn by all religious communities alike to abolish all external distinction between Muslems and non-Muslems. These caps came from Tunisia and France, although Austria carried on the greater part of the import trade. To put a stop to this foreign competition Mahmut II. founded a factory, called ferghareh, which still exists in combination with a cotton-mill, and with the latter is under the supervision of the Minister of War.

PETWÁ. [See FETWA.]

FEZ. [See FES.]

FEZZAN is the name of the largest group of oases in the Central Sahara. While Tripoli is the name given to the country that slopes from the Sahara to the Gulf of Syrtès, Fezzan is a part of the Sahara plateau itself; it has an average height of 600–1500 feet above sea-level. It is bounded on the north by the table-lands of Djerba el-Sa'dé, Djerba Sharqiyah and Harratul-Awwad, in the south by the eastern arm of the Tesli of the Alger Tafilalet and by the Tamaris or War mountains. The eastern and western frontiers are undefined, but may be said to be approximately delineated by the Accras range in the southeast in the northwest by the sources of the Waddi el-Sabi, and the east by Wad el-Saghur (area 136,000 sq. miles). The country consists almost entirely of horizontal deposits of palagonite, sandstone and limestone, which are in part bare stony deserts (asseditar), but in other districts (south and northwest of Marsa) covered by extensive areas of sandhills. In many places there are deep初次 of cactuslike bushes in the ground, which form ditches and depressions in which the surface water can collect and form soft crumhled earth (kahal, califorous alluvial sand). It is here that agriculture is pursued as in these places alone is there any possibility of a permanent settlement being made. But Fezzan is almost entirely (c. 95%) of the area) bare desert which does nor even yield enough vegetation for the inhabitants who have to find their cattle to Tripoli to pasture there. — The climate is only known in its main outlines, for meteorological observations have not yet been systematically made. On account of its central position in the midst of the Sahara its cool winters are followed by long hot summers, the nights in which are sometimes quite cool; however, great drought-characterizes both seasons (there are no genes or bugs) and the annual rainfall must be under four inches. There is therefore practically no wild vegetal. At the same time the wild fauna is exceedingly scanty and is limited to a few hares, snakes, and lizards and the venomous snakes. The inhabitants of Fezzan first appear under the name Faramante and the land as Phanomites, with the capiltal Garama (the modern Djurra in the Waddi T-jfarbi), which Cornalides Balbus was for Rome in 19 B.C. About 100 A.D. Fezzan utterly disappears from our knowledge and does not reappear till 643 A.D., when 'Ukba Ibn Nāfi', the successor of the Il-hand, won it over for Islam on an expedition from Barq, so that Arab blood was thus introduced among the Garamantes. In the beginning of the 7th century the power of the al-Khatibi family of the tribe of the Hārara was in the ascendant, they made Zawila (east of Murzuk) their capital and reigned till the end of the 9th century, when the first Turk sovereigns Sharaf al-Dīn Kāizi entered the country and overpowered the old dynasty. After a few decades later the kings of Kāizi extended their sway over Fezzan, which was governed for them by a governor who lived in Trigilem and afterwards became very independent. It is probably since then that there has been a large infusion of negro blood. The family of Kermanî, who also chose Zawila as their capital, next (when is unknown) ruled Fezzan. In the beginning of the 17th century they were followed by the Awlad MuÎammad dynasty, whose capital was Murzuk and in the seventies of the 18th century history sheds a brighter light on Fezzan, for it sought to defend its independence in battle with the rulers of Tripoli. Peace reigned after the first invasion from Tripoli (1577–1577) as long as the rulers of Fezzan paid the tribute which the Awlad MuÎammad always followed their refusal which happened irregularly every few years. It was not till 1714 that the suzerainty of Tripoli was definitely recognised and peace reigned for half a century. But in 1804 the rule of the Awlad MuÎammad came to an violent end at the hands of the Al-Mukri. During his rule he led many campaigns against the lands of Tripoli and as far as Bagrem [q.v. i 5700 sq. miles] and also destroyed the prosperity of the Arab Bedouin tribe of Awlad Solaiman. A member of the latter, Abd al-Galîl, seized Fezzan about 1814 and fought bitterly against the Turks who had conquered Tripoli and were trying to conquer Fezzan also. In 1847, he, the last ruler of Fezzan fell in the destructive battle of al-Baghdâ. Henceforth till 1912, Fezzan was a Turkish Musulûnik until it was ceded to the Italians at the end of that year. — These events have strongly influenced the constitution of the present population of Fezzan. In the south there are pure black Todda, in the west light coloured Tufreg and pure Lhûn Barbas in the north and east with negroes from the central Sudán. In the larger area it is almost only these readily recognisable races that are to be seen side by side with types which are the results of intermarriage among them. In consequence of its situation which commands the caravan route from Tripoli to Lake Chad, so important only twenty years ago, the population of
Fezzan is readily exposed to modification by immigrants and people passing through the country. Nevertheless, remnants of the ancient Caramanites seem to have survived in the more remote oases (e.g. of Wadi T-shair), the inhabitants of which are large-boned, black-brown and fairly honest (cf. the similar Barbaras of Nubia). Their mother-tongue is Arabic, they call themselves Fazzānīs (sing. Fazzāni). The population of Fazzān is about 40,000 of whom about a fifth are nomads. The average density of population is thus about one square mile.

The scarcity of soil (only 2% of the whole surface) and of pasture (3%), as well as its remoteness in desert wastes, prevents any considerable development of agriculture. Cultivation is still carried on entirely by the spade (without the plough), is limited to the oases and is only possible by artificial irrigation. The chief wealth of Fazzān is in date-palms among which grow wheat, barley, diaries, doblis, vegetables, lucerne, clover and fig-trees. The only domestic animals are the indigenous camel, poultry and pigeons, while cattle and a few horses have been imported from Tripolitania and sheep from the Tuareg and Ténéré countries. Industries are very few, in keeping with lamentable level of civilization generally. Trade with the Mediterranean lands and the Sudan gave Fazzān quite an important position from ancient times to the beginning of the last decade of the sixteenth century, while the traffic in goatskins, ostrich feathers, ivory, cotton goods, indigo, dates, tamarinds, horn and negro-slates passed through it from the Sudan to the north. Since the opening of new waterways and railroads in the Sudan, however, by far the greater part of this trade has been diverted to the Guina coast and the roads across the Sahara, always very insecure, are now deserted. — None of the settlements has attained to any size on account of the way in which the small patches of arable land are scattered. Murzuk [q.v.] in the centre of a series of oases running from Murzuk to east and west has become the capital with a population of 8,000—10,000 and it lies at the intersection of the roads from Tripoli to Lake Chad and to Ghāt and Cyrenaica. The only villages with 1,500 inhabitants are Song and Jumild in the north and Kāţrīn in the south, which all lie on the main line of traffic from north to south.

FIDAI (A.), "rassam". — According to Lane, Masters and Customs, i. 110 et seq., the sacrifice offered at Minā is called "rassam", as it is performed in commemoration of the rassam (cf. Ṣaḥra, xxvii, 107) of Iṣma'il by the sacrifice of a ram.

FIDAI (in vulgar Arabic Ḩidā'a), he who offers up his life, a name given to the Ismā'īlīs, particularly to the assassins appointed to murder their victims (Jim Burgo, i. 167; v. Hammer, Feuereuren des Orient, iii. 284, n. 2, Anm. 293, p. 38); but the word has frequently also a good sense, "paladin, knightly, courageous, brave, unhampered" (Quatremerie, Mongols, 124; cf. v. Oppenheim, Fons Monumentorum Persicorum, ii. 100). In Algeria Ḥidā'a means a narrator of heroic deeds and Ḥidāa, a tale or song of heroic deeds. During the Persian revolution Ḥidāā was applied in the first place to the adherents of the republican party and then to the defenders of liberal ideas and the constitution.

Fītā or Fīţa was also the pen-name of Shāh Ḩabīl-ullāh, who was sent by the Saih-e Shāh Ismā'īl as ambassador to Muhammad Khan Shāhī and afterwards returned to Shiraz, where he died (Raja Khān Khan, Majmū' al-Faṣūṣ, ii. 127). It was also the pen-name of Sāyi'd Mirza Ṣa'īd of Ardĭstān, who lived in 17th century and was the favourite poet of Muhammad Khan Shāhī (Raja Khān Khan, ii. 383).

AL-FINDA. silver. It is nearly pure gold in composition and would have become gold, if it had not been affected by cold during its formation in the interior of the earth; it is cold and dry in equal proportions. It cannot be alloyed with copper and rāqīs (lead or tin) but is easily separated from them. It is consumed by fire if long exposed to its action, and is also decomposed in the earth in course of time. If it is affected by quick-silver vapour, it becomes brittle and breaks under the hammer. Sulphur vapour blackens it; and if sulphur is thrown on molten silver, it is consumed, becomes black and breaks like glass. But if some borax is put on it, it returns to its former condition, only its mass is at the same time diminished. Borax also facilitates the smelting of silver.

These are practically the statements of the Ikhwān al-Safā, they are nearer or less expanded or corrupted in the "Petrology of Aristotle" and are also found in Rawandi. Rawandi frequently talks of lead and quicksilver vapours; lead and tin do not make silver invisible, as it is stated in Witenfeld's text, but "destroy" or "alter" it (read ṣabbūn or ṣabū'hān fī ṣabā'īn), That...
dent and crittall are contained in silver seems to be a late addtion to Aristotle’s Psychology.

Mas’udi, on the authority of a Copit, says that in consequence of the heat and drought in Jahanzi the silver in the land is transformed into gold. Numerous silver-mines are mentioned by the geographers and cosmographers. The medical application of silver in the form of filings, which are mixed with drugs, is based on the belief that it dries up the pus and also said to be of great palpation of the heart.

Bibliography: Khwān al-Safā (ed. Bahnhay), II. 703; Steinbuch des Arabisten (ed. Ruskov), p. 58; Kazenw (ed. Wassenfeld), II. 206; Mas’udi, Mottu al-Tabrīz (278; Dimilight, Cosmographer (ed. Muthes), cf. the Index s.v.

(J. Ruskav)

FIQDĀR. The Fiqdar days, which are said to be so called because they fell in the holy months during which the Koran could not be waged (wherefore the participants said fiqdar, “we have sinned”), are discussed in the literature of the Aṣīrān al-ʿArabī (see above I. 218; s.v. “’es). There were a few days at the end of the year, and the people fasted as well.

The last of these days was fought between the Kaurakhs and their allies, the Kınınum and the Hanın (s.v. “‘). Tradition varies as to the date; according to one, it was 20th of age at the time. Cf. Im Sa`d, Ḥibbāl, ed. Mithnway, IV. 574; Aḥār, ed. Vâkāt, Malunim, III. 579.

Bibliography: See under the article Aṣīrān al-ʿArabī and also Āṣif al-Da’er, I. 296–318.

FIDYA (i.e., “reward”). Sura II. 180, 192, demands a ḥidya on the omission of certain religious duties (see Kitab al-bidgam). The same passage indicates what it should consist and further details are given in the commentaries. Cf. Juyjobi, Handbuch des Hijāj, Geetz, p. 122; on the ḥidya: ḥidya in Jābus and Sama’at, for salat counted in a lifetime, cf. Sonick Hurgross, The Asbarran, I. 453 et seq. — See also the article KARABA.

The people of Syria and the country east of Jordan give the name ḥidya or ṣallah to a bloody sacrifice, by which it is hoped to protect children or property (house or cattle) from misfortune or destruction, or which is offered for (to) the dead, cf. S. I. Curtiss, Greek- Syrian Religion, Index s.v. ṣallah, ḥidya, Hamann, Church of the Arab, p. 357 et seq. and 365 et seq. — Mission arche, in Arabic, I. 474.

In Morocco ḥidya is the name of a peculiar ceremony, also performed in several parts of Algeria under the name ṣallah, at which a man, in the hope of securing freedom from punishment in the next world, has all the preparations for his burial made, after which a number of qibla recite the sections of the Qur’an used at burials, cf. W. Maspalla, Feziti arabian de Tangier (Dict. de l’Ecole des Langues Orient. Pers., Vol. I, p. 400 (glossary).

FIGHÁN (Jada), a Peralan poet, the son of a butcher in Sijrā, whose first pen-name Şahāki, the creator of a new style, which was imitated by his successors, but did not meet the taste of his contemporaries. He left ten and the court of Sultan Husain to go to Tabriz, to enter the service of Sultan Wāṣi of the Aṣ-Ṣanyak dynasty (883–896 = 1472–1491), who gave him the title Rabiib Şขนาด, “father of poets.” After the death of the Sultan he went to Shiraz in Khorāsān and died in 923 (1519) or 925 (1519) at Meshed. His Dhawān contains ghazals of which ten have been published by Bland in his Century IV. 34–57, 68– and a💵 (quarters and dinars).

Fīgīšāt is also the pen-name of a Turkish poet Ramādān of Trebizond, who became by studying medicine and then devoted himself to literature. His propatome composed by him on the grand visit of Sultan Padha on the transporting of three statues from Buda-Pest brought about his excommunication by the bow-stringing (935 = 1526). Cf. von Karstal, Zur Orient, Alterthumskunde, I. 98 (Sufik, o. C. Abad. d. Wild. in Wien, Vol. 172). He left ghazals and šiḥbān.

Fīgahān was further the pen-name of an older poet, Fīgahān, secretary to prince Abal-Ilāh, son of Ilyasul II., who composed an Ṣahāiur-Name amongst other works.

FIGUGI (Figuig), an oasis in Morocco, 76 miles S. of Afn Sefra and 3 miles W. of the French station of Gela Unit (39° 18’. 54” N. Lat. and 1° 26’. 54” W. Long, Greenwich). For long closed to Europeans, it was visited only by the two travellers, Kohls and Scandi; the district was practically only known from information collected by the Service des Affaires Indigènes and remained somewhat mysterious down to the beginning of the 20th century. Since then the program of the French occupation of the Sahara, the conclusion of the Moroccan agreements and lastly the building of a railway have dispelled this mystery and rendered access to Figugi possible even to tourists.

The group of oases known by the general name of Figugi, lies at a height of about 3000 feet in a mountainous hollow surrounded by serrated peaks separated from one another by rather narrow passes. On the north rise the Djebel Guar, the Djebel Hamed and the Djebel Ejame Tlil. On the south the hollow is bounded by the Djebel Melala and the Djebel Madjādab, between which runs the Tnet (pass) Ma’tah, then, above the Par of the Jebrar, the Djebel Zenaga (3490 feet), the Djebel Taghd (3730 feet), cut off from the preceding Par of Zenaga, and lastly above the town of Mapaza, the Djebel Sidī Yūnus. All this town is, if it were, surrounded by a natural ramp which protects it from the incursions of the tribes of the Sahara or of the high plateaus of Morocco. The bottoms of the hollow are thus marked out by, with the exception of a denuded zone called the plain of Tabaghat (a name given throughout South Morocco in general to flat areas devoid of vegetation), covered with palm-groves which cover a space of about 4 miles by 2 and enclose about 500,000 palms. Their irrigation is secured by two wells, the Wāṭi Sheggaqat al-Abild and the Wāṭi al-Arjī, and also by a subterranean spring of water which rises to numerous springs. The water is led through the palm-groves by a system of canals, some above ground (sijya, qanat) and some subterranean (figugiy, plur. figugiy). They also fill reservoirs, the contents of which are used in
the dry season (July to October). As in all the same the water-supply is administered by an ancient and complicated system of laws. The kharāba, or perpetual right of disposing of two-thirds of the water furnished by a spring, twice a month, for one hour, costs about £24. Disputes over the water-supply have on several occasions provoked bloody conflicts between the inhabitants of different oases, who had sought to divert the course of the water to appropriate it to the detriment of their neighbours. The gardens thus watered are planted with fruit trees and vegetables; a few poor patches of barley and wheat are scattered over the plain of Baghdad. The gardens are worked either by the owners with the help of labourers, or by cameliers, who receive one-tenth of the produce, or by slaves alone, who in this case receive a seventh of the yield.

The population is distributed among seven villages of the forming five groups: 1. Udağhit and al-'Aqd in the N.W.— 2. al-Ma'âz. 3. Ulaâ al-Mââz. 4. al-Hamâmah al-Fâshâni. 5. al-Hamâmah al-Tâlibânî in the N.E.— 6. Zenâzâg. 7. Zenâzâq. All these are fertile, large oases; they receive water from the waters of 'Atâ Taddert, which springs up between their village and that of Udağhit; its ownership has been the cause of frequent quarrels between the two. Each of these townships is surrounded by walls, within which the houses of unbricked brick are huddled together, sometimes several stories high and forming a labyrinth of narrow, tortuous streets often washed over by the houses. The most important of these village is that of Zenâzâg, which is divided into five quarters, Râbi Dârî, Udaâ al-Mudââ or Tidit, Ulaâ al-Maâz or Maamâm, Atamana, and Udaâ al-Ktil. Udaâ al-Ma'âz is the best in importance to Zenâzâq. The others are much smaller, that of al-'Aqd being almost entirely in ruins. It may be added that the inhabitants of Figûig, notably those of Zenâzâg, possess a certain number of small oases in the neighbourhood, such as al-Atâfâ, Tadit, Meqâbâr, Tarîa, Mezin, Tâkâmân, Mââzâ, and Bingâl and Beni Unif.

The total population of Figûig is about 15,000, the great majority of Berber origin, among whom the Gnaouâ, a section of the Udaâ al-Ma'âz or Maamâm, according to tradition, represents the oldest established element in the country. Among the inhabitants we find many berbètes (cl. the ar. bâbâ) reduced, as in all the Berber regions of Morocco, to a condition of social inferiority. They are particularly numerous at Zenâzâq, where they live in a separate quarter, called al-Brik. The slaves owned by the people of the village used at one time to come from Tâtir but since the occupation of this country by French troops, they are now bought in Tafiltel.

Finally may be mentioned various nomadic tribes who come regularly to encamp in the neighbourhood of the village: such are the Amâr, the Udaâ al-'Abdalidh, the Beni Gafir and the Udaâ al-Masâr al-Qubârâ.

The Jews number about 5000 and live in separate quarters or well tribes at Udaâghit and Zenâzâq. They are all Moslems, and are said to have a master to whom they pay tribute. They live, however, not such a hard one as that of their co-religionists in Southern Morocco. They are for the most part engaged in various industries, particularly goldsmith's work in which they have a practical monopoly. The other industries practised by the people of the village are the weaving of burlap and carpets ornamented with geometrical designs, the manufacture of pottery, and embroidery on leather, which is dying out. On the other hand, from its geographical situation at the intersection of the routes from the High Plateaus to the Sahara oases on the one side and from Tafiltel to the central Maghreb on the other, and also on account of its proximity to the railway, which facilitates the importation of European goods, Figûig is still a commercial centre of considerable importance.

Although the mosque of Udaâghit contains the tombs of three rather celebrated saints, Sidi 'Abd (Tas), Sidi Muhammad or al-Maâz, Sidi 'Abd al-Wâl, and although the instruction given in the mosque of al-'Aqd attracts a certain number of pupils, the religious influences that predominate in Figûig are foreign.

Marabouts calling themselves Sharâbî, but rapidly marrying the daughters of the férobans and others less numerous but more exclusive, attached to the Udaâ al-Shâib Gheriba, forms a religious aristocracy. The brotherhoods of the Talibânî, governed by the Shâib of Wazzân, the Kerbâ, which is under the influence of Kerâz, of the Zayyânî attached to the Zaibâ of Krenissi and lastly of the Najâ, attached to the Zaibâ of Sidi Ahmad al-Nâsir in Tinguéré, number among their members the great majority of the people of the village. The other brotherhoods, Tâlîbânî, Kudrâ, Askâr and Alâtîr only find a very few adherents.

The languages in use at Figûig are Berber and Arabic. Besides the learned men, a certain number of men have some knowledge of the latter but practically all the women are ignorant of it. The language in common use is a dialect of Shafîa mixed with Zantita elements and with Arabic, sufficiently allied to the dialect of 'Atâ Seura and of Morocco. For these reasons the inhabitants of these regions understand the people of Figûig with greater facility, but on the other hand quite unintelligible to the Berber. This language says Mr. Rüssl, is very poor. It seems to be a kind of patois strongly mixed with Arabic, but, nevertheless, is one of the most interesting, as under this seeming primitiveness it is the sole relic of the dialect spoken on the high plateaus and in the Sahara of Algeria, Oued and Morocco before the invasion of the Beni Hidîl and the emigration of the Hagha, which was spoken for a time also at Tlemçen at the court of Yaghmuris and the Beni Zîyan, who originally belonged to the Wâsitan tribe of Abîl al-Wâl.

The history of Figûig is very obscure. For ancient times, the only evidence we have of the existence in these regions of a settled population is contained in rock inscriptions. The country was perhaps peopled by Berbers of the Senhadj tribe. At the time of the Arab conquest, all the land between the Atlas, the Lâhreal, 'Amâm and Figûig, was occupied by the Beni Badis, a branch of the Beni Whânâ. The name Figûig itself only appears in the 16th century A.D., when this district seems to have inherited the commercial prosperity of Sûhîmah. It was then governed by the Beni Sidi al-Mââz al-Qubârâ, from the Maghreb family, a section of the Beni Fârîn. Figûig says Ibn Khaldûn, to whom we owe this information, consists of several town-
ships quite close to one another and forming a large town into which flew the products of the desert and, owing to its distance from the Tell, it enjoyed complete independence (Histoire des Berbères, trans. de Sianay, Vol. I. 240). In the 17th century, Leo Africanus mentions "the three castles of Figuig built in the desert" (Leo Africanus, ed. Scheffer, Vol. III. 240). In the 18th century, the pilgrim al-Ashyghi, who visited Figuig in 1774 (1653 A.D.), describes the district as prosperous and possessing celebrated libraries (Berbruger, Voyage de la Soudan et des Eaux du Nord, Paris, 1846, p. 159). About this time, Figuig fell into the hands of the Sultan of Morocco, who were seeking to extend their power over the oases of the Sahara. According to the Fouxsy (transl. Rouads, p. 59), Mûlay Ismâîl conquered Figuig in 1679. He established a negro garrison there. The name al-Abdí born by one of the kâgr a this day is perhaps connected with this event. Moroccan rule, in any case, was established in the oasis in the beginning of the 18th century A.D., for a Sharif kâgr, named Muhammad al-Saghir al-Djazari, was in command there in 1708. And in 1713, the kâgr of the oasis was succeeded in recovering their independence, however, no doubt favoured by the troubles that followed the death of Mûlay Ismâîl. They retained it throughout the whole of the 18th century. A second expedition was sent against them in 1806 by Mûlay Shânûn, who had taken up the plans and policy of his ancestor. A third expedition was perhaps sent in 1839. These various attempts had no effect on the country however, and Figuig remained independent. Each of the kâgs of the gnaouas lived on the proceeds of his own land and did not cultivate the land of his subjects. The gnaouas remained independent of one another; they could unite however in case of a common danger, but did not elect a chief.

The agreement of Lalla Maghnia (18th March 1845) which divided the kâgr of South Sahara between France and Morocco granted Figuig, without any real reason, to Morocco. The sovereignty of the Sharif, however, remained purely nominal. The Makhzen could not insist a permanent representative in the oasis; it did not succeed in obtaining regular payment of tribute; it proved utterly incapable of repressing the excesses of the kâgrs. The latter, indeed, on every occasion, sent their agents to Algerian mintmasons (Ukhd Ou Sidi Yahia, Hil. Ait Amâna) and encouraged the immigration of the Zegouts or mussulmans bâchi, who, after being organised in Figuig, raised the Algerian forced service and returned to get rid of their booty in the kâgr. The French government, although the treaty of Lalla Maghnia conferred on it the right of pursuit on Moroccan territory, declined an audience of international policy to punish the people of the kâgr. Napoleon III. in 1867 refused to authorize General Deligny to conquer Figuig and, in 1870 at the time of the Napoleonic expedition, forbade General de Wimpffen to go near the oasis. Demonstrations were made but without effect. In 1886, for example, Colonel de Coloma's troops advanced as far as al-Arij. In 1888, Colonel Colonies's encamped at Taghit, a mile from Zenegu. Encouraged by their impunity, the kâgrs continued their misdeeds, until the French government and the Sharif Makhzen decided to come to an agreement to put an end to the state of affairs. By the protocol of Paris of the 20th July 1907, the two governments resolved that the necessary measures be taken "to establish peace and security on a more solid basis and initiate a commercial scheme destined to render the border regions of Algeria and Morocco richer and more populous. Two commissions, one French and the other Moroccan were appointed to find the practical means of obtaining this result. Their labours ended in the agreement of the 20th April 1903 which decided on the installation of Figuig of a Moroccan "servis" supported by a Sharif garrison and of a French commissioner in Beji Oualil, the establishment of outposts to guard the different passes and the method of collecting the customs dues etc. Difficulties still continued however. The "servis" did not succeed in enforcing his authority and remained blocked with his garrison in the kâgr of Wadigh. Finally, in 1905, the governor-general of Algeria, M. Journira having come to examine the situation on the spot and confer with the "servis", was attacked by the kâgrs near the Zenegu pass and lost several of his escort. This attack was severely punished. A French colonial under General O'Connor appeared before the walls of Zenegu, the kâgr was bombarded in June 1903 and the gnaouas sued for peace. They had to hand over to the French the culprits who had taken refuge in the kâgr, to deliver hostages and pay an indemnity of 2,400 francs. The memory of this punishment, above all the progress and consolidation of the French occupation in the whole region, and the advantages which the kâgrs themselves have reaped in being able to trade freely with the French established in their neighbourhood, have since then assured perfect tranquillity to Figuig.

PIHL. [See FAHIL]

AL-FIHRI, AND ISLAM IN EHZELTE M. AND YA-
SAN ALLA B. AHMAD, compiled in 632 = 1234 a selec-
FIRHIST. (x. 111) is particularly a catalogue of books; hence the title of several bibliographical works, e. al-Safadi, 1160, 1661.

FIKIH (Intelligence, knowledge) is the name given to jurisprudence in Islam. It is, like the jurisprudence of some ancient nations, a science without metilla and in its widest sense covers all aspects of religious, political and civil life. In addition to the laws regulating ritual and religious observances (Shari'a), as far as concerns performance and abstinence, it includes the whole field of family law, the law of inheritance of property and of contracts, in a word provisions for all the legal questions that arise in social life (mu'awadah); it also includes criminal law and procedure and finally constitutional law and laws regulating the administration of the state and the conduct of war.

All aspects of public and private life and business should be regulated by laws recognized by religion; the science of these laws is Fiqh.

In older theological language the word had not the same meaning: it was rather used in opposition to 'ilm. While the latter denotes, besides the Kor'an and its exposition, the accurate knowledge of the legal decisions handed down from the Prophet and his companions (Ibn Sa'd, II. ii. 327, 330 al-rajulat wa al-ilm, synonymously), the term Fiqh is applied to the independant exercise of the intelligence, the decision of legal points by one's own judgment in the absence or ignorance of tradition bearing on the case in question. The result of such independent consideration is 'a'ra'ay (opinion, opinio praeconitium), with which it is also sometimes used synonymously. In this sense Fiqh and Fiqh are regarded as distinct qualities of the theologians (in Nawawi, Tusi, ed. Wustenfeld, 1867, 368, 369 as wa-ismu' al-ilm, synonymously) (Ibn Sa'd, v. 327, 329).

The sum total of all wisdom is defined by Mosaddeq (in explanation of Sura, ii. 270, men yu'ud bin bikan) as composed of the following elements: al-ilmun wa al-ṣabab wa al-ṣli (Tahari, Tahrir, iii. 56). Even the Jewish Karaitic expositors of the Bible, Sephard, b. Al (1040 - 980 a. D.) has adopted this distinction for he translates ḥaqq in Daniel, ii. 3, 34; Margoliouth, Anenda Comm., 1889, p. 43, 44; ibid. al-ṣabab wa al-ṣli. Ĥarim al-Rashidi instructs his governor Hashtami to consult the al-ṣabab fi din al-ṣabab and the al-ṣabab bi-din al-ṣabab in doubtful cases (Tahari, Asma, ii. 717). Further passages are quoted in Mod. Stud., ii. 176, note 6.

In this sense the 'a'ra'ay (plural 'a'ra'ayi) is distinguished from the 'a'ra'ay (plural, 'a'ra'ayi) or the combination of both sciences in one individual is expressed by the combination of these two epithets or their synonyms. Ibn Umar was distinctly 'a'ra'ayi but not 'a'ra'ay al-'a'ra'ay (Ibn Sa'd, II. ii. 425); on the other hand Ibn 'Abbas was 'a'ra'ay with reference to decisions handed down by Tradition and at the same time 'a'ra'ay (or 'a'ra'ayi) in new cases that arose, for which no precedent could be found in Tradition and in which it was necessary to use one's own judgment (Ibn. 425, 424, 424); the same is true of Zaid b. Tahir (Tahari, ii. 331). Ygl. 'a'ra'ay b. 'Abdul 'Aziz ibn Umar is 'a'ra'ayi (Ibn. iii. 158). So Ibn al-'Abbas in 'a'ra'ay al-'a'ra'ay in such cases and 'a'ra'ay al-'a'ra'ay' in others (Ibn. ii. 129, 130, 139, 140, 140) on the other. Among the Tahari there were 'a'ra'ayi men 'a'ra'ay on the one hand and 'a'ra'ayi men 'a'ra'ay on the other (Ibn. ii. 129, 130, 139, 140, 140).
that: commendendum aut eram perpetuo civilis juxta lex erit secto b: no legi (nandem) 2. unde; auscultatione autem legis obtineri deboet; sed, non diurna, et non consequens attentionis comprehari leges inimica.

It was quite natural from the changed conditions after the conquests that the distinction of the law, not only in its special provisions, but particularly in its method of view and its method of deductive operation. (Mus. Synod., 1. 75) as laid down in Fihā, was greatly influenced by what the authorities on the development of law in Syria and Mesopotamia were able to learn of Roman law, sometimes of the special laws for the particular provinces. It was obvious that a quite uncultured people coming from a land in a primitive stage of social development into countries with an ancient civilization, where they established themselves as rulers, would adopt from among their new surroundings as much of the customary law of the conquered lands as could be fitted in with the conditions created by the conquest and by a combination with the demand of new religious ideas. The detailed investigation of this fact in the history of law, which, although emphasised and established in its main outlines long ago, has only been sporadically investigated within a limited field, is one of the most attractive problems of this branch of the study of Islam. Santillana has collected much material for the investigation of this subject in his plan for a Code Civil et Commercial France (Paris, 1899). The comparative study of one code of private law has yielded the most conclusive proofs of the thorough-going adoption of Roman law by the jurists of Islam (Franz Frederich Schmidt, Die Oecumens von Islamic in its Civil and Commercial Law [Paris, 1928], 190). The present writer had previously in his essay made the suggestion that even the names of legal operations (fikā: intelligence) and of its students fakāha (intelligent) have been influenced by the Latin terms (jus: prudence) and (jus: prudence) in their special application to the study of law and teachers of law. An analogous example in support of the influence of Roman Law is the use of the words dhakāna and chakānā among the Jews of Palestine (Kudrak 8. Gegenwart, Vol. I. Part. III. 15th half, p. 103, Zeit. d. Deutsch. Morgenl. Ges., XXXII, 318).

Roman Law, however, does not exhaust the sources drawn upon in the development of Muslim Law. The exception-character which marks the formation and development of Islam also found expression, naturally first of all in matters of ritual (Wensinck in Der Islam, I. 107) in borrowings from Jewish Law (cf. Recueil des Études Juives, xxviii: 78, 8). E. Mitre, Zur Entstehungsgeschichte der islamischen Gebote, in: Kultur und Weisheit der frühen Islam, Hamelin 1913). According to Kremer (Calcuttaag, 8. Orient, j. 535) even many of the provisions of Roman Law that have been adopted by Islam only found a place in Fihā through the intermediacy of the Jews. — It still remains to be investigated, however, if and in what degree Persian influence can be traced in the development of many details of Muslim Law.

We thus have four "roots" in operation for the deduction of law, as methodical principles from which legal provisions may be legitimately laid down, viz.: 1. Korān, 2. Sunna, 3. Fikāh, 4. Qiyās. With the gradual recognition of the sources of legal knowledge the terms fikāh and fakāh gradually lost their original limitation to deductions not based on tradition. Fikāh next became the science which co-ordinated and included all the branches of knowledge derived from the four sources, and in so doing it was called fikāh i. e. jurisprudence. Fikāh was also used as the result of deduction from the positive sources of law, the sum total of the deductions derived from them, e.g. the qiyās. Fikāh or jurisprudence (Munir, The Fiqh, 529, 71, 83). Fikāh was used in opposition to the study of poetry, Aqīdah, v. 55: "Ali ibn Abī Thalib asked the question: "What is fikāh?" Fikāh was applied to students of religion, theologians (not only students of law) e.g. jābhar, Tafsir, xii. 73: "fikāh, was-un-muqaddimāt-Kuwait, jihāla, 118, 0, where Abū Ubaid al-Kindī b. Sulaman says with his man: "I have been teaching fikāh to the students of religion, the theologians (not only the students of law)." Abūa. Ma'mar of a word in the Korān contradictory to the traditional explanation: fikāh, dā'ir al-'lā-mil mimah, "the fikāh are more convergent with exigesis than he", (who is not a theologian but only a philologist); c. also Zabihī, p. 19. In eastern and western dialects of spoken Arabic the word fīthā, fīth, fīth (fall from fikāh) has come to mean an elementary school.
the state was, theoretically at least, to be brought into absolute harmony with canon law. The starting-point was naturally always the azam, but in spite of a most generous recognition of apocalyptic traditions there was a necessity to some extent for the use of sīlah, particularly if the amount of freedom was even allowed to individual opinion in base of methodological analogy (fikhr) by allowing practical considerations also to be taken into account. This is expressed in the term šiffrūn (holding for better). The legal authority is justified in deviating from a ruling suggested by the šiffrūn, if due consideration showed him that another procedure was more suitable to the conditions in question. (Early examples of šiffrūn are given in Abu Yusef, Kitāb al-Khārijī [Cairo 1325], p. 191, 181; Abu Yusef, Kitāb al-Khārijī [Cairo 1325], p. 191, 181.

The most vivid efforts to create a code of law were made in the Iṣṭak, where about the same time the other schools (philosophy, philosophy, exact sciences and dogmatism) were being industriously pursued. Although the Hāfiz school recognized the validity of rā'y without restriction and made free use of it in establishing legal principles, the Iṣṭak school excelled them in many ways in their use of this source of law. Hāfiz ʿAbū Bakr Abū ʿAbd Allāh Abū al-ʿAṣrāb (died 157 = 774; 'Abd Allāh, 524) was teaching a system of Fikh which remained in force even in the Middle Ages. The ed. Codex, N.8751, till the Medina system was introduced there by disciples of Malik and became supreme. The most vigorous efforts to create a code of law were made in the Iṣṭak, where about the same time the other schools (philosophy, philosophy, exact sciences and dogmatism) were being industriously pursued. Although the Hāfiz school recognized the validity of rā'y without restriction and made free use of it in establishing legal principles, the Iṣṭak school excelled them in many ways in their use of this source of law. Hāfiz ʿAbdu ʿl-Walī Abū ʿAbd Allāh Muḥammad Abū Ṭabbr (died 162 = 779), whose system remained for long authoritative even among the Muslims of the Maghrib (Abū ʿl-Maghrīb, ed. Popper, p. 130, 131); his system has, however, like that of the above mentioned ʿAbd Allāh, not survived in its entirety but is only known in its application to isolated cases, particularly in points where it differed from other schools (fikhrūn).

Although the foundations of Muslim jurisprudence as outlined above met with the approval of authoritative circles in the Muslim world, from the very beginning of its development it had, in content with a hostile minority who refused to recognize rā'y as a proper basis for the definition of laws. This opposition was largely due to the little casuist (Zāʾīʿad Allāh ʿAbd Allāh Muḥammad Karawī, ed. Wüstenfeld, ii. 134–153; 211, at the foot) which the Iṣṭak jurists exercised in a mostosophical fashion in their use of rā'y (cf. the author's Verstehungen über den Iṣṭak, p. 67, 68). A reason, "what do you think (i.e. of what is presupposed in a sophistical fashion)?" in the formulae with which such tests of ingenuity were introduced (early examples in the Kitāb al-Khārijī, 361; Muṣnaḥi, l. 37; 330; iii. 19) and therefore the wrath of those, who regarded this legal skill as idle abuse of the law, was roused against this formula (cf. Zebânibân, p. 173 f. Bū Ṣalāh, vi. 68, 132 maḥfīl al-ṣīlah arbaʿa wāḥidāh "and a single word has been bestowed on the principle of the Simon al-Durriyya, p. 37, Abū Ṣalāḥ, 37). Although the Hāfiz school did not entirely decline the use of rā'y, it made a moderate use of it in comparison with the Iṣṭak school, from which it differs in many ways (its results, and the Hāfiz school had many objections to the application of Hāfiz by
the jurist of Iraq (e. Mub. Studien, ii. 78-83). This distinction is due to a time when it did not yet exist to the earliest of the Iraqi school; even the Calliph Abulf-Malik is made to eulogise against the eastern school in favour of Mecca. (Iibr Si'd, v. 460, 1. 173; 1, 658.)

There can be no doubt that he did not agree to recognize the opinion of any mortal (unless the Prophet himself) as a deciding factor in legislation. It was not conceivable, they said, that God and his Prophet had not provided legislation for all contingencies that might arise. "We have omitted nothing in the scripture" (Sirr, vi. 38) and if a point is not expressly provided for in the KorAn, Muhammad has certainly expounded it in a hadith by God's command. They quoted in this connection the combination al-hadith wa al-Qur'an (cf. Zeititch, ii. 276. Morgenst. Gelehrte, 1, 869 et seq.), which appear in so many passages in the KorAn, which the silencer to this view explained as referring to the KorAn and Sunna (in Tabari, Ta'hib, ii. 275, xxii. 7). With the vast number of hadiths that had been forged, it was quite easy to quote a hadith on any point and then readily to dispense with ra'y and fiqh. To be able to give a ruling from hadiths on all cases that arose, one had, however, to refrain from the exercise of strict criticism and be ready to use blindly authenticated, interrupted and isolated traditions. To be correct, in form at least, an opinion, which was hitherto admitted to be ra'y, was clothed in the form of a hadith, given a pious sound, and traced back to the Prophet, and thus the main distinction between Aqīdah al-Maliki and Aqīdah al-Khudhi, a mediator between the two extremes now appeared in the person of Muhammad b. Ismaîl al-Shafiî (died 204-850). His great claim to fame is that he systematised the method of deduction of laws from the sources of law (Uṣûl al-Fiqh) and laid down the exact limits within which each might be used. In his NihaI (two editions, Cairo, ed. Kâmilî, 1326; Mâsha'a 'l-Ilyâ, 1318), he created the science of the aṣb, which could be made of speculative disputation without losing the undisputed principles of Scripturo and Tradition; he regulated their application and limited their arbitrary use by strict rules. For example, he did not approve the subjective iṣbah (q. v.); on the other hand, with the principle of iṣbah (q. v.), he opened up a fruitful source for juridical prosecution. His school might be said to belong to the Aqīdah al-Maliki as readily as to the Aqīdah al-Khudhi, but out of it, through preponderating attachment to the latter, there again developed a tendency to overemphasize hadith which was based on traditional sources, first of all in the school of Ahmad b. Hanbal (died 241 = 855; v. i. 158 et seq.), and this tendency was even more marked in the Zahiriyâ school founded by Dâwûd b. 'Ali al-Zahirî (died 270 = 883; v. i. 156), which used speculative elements and carried the limitation for the deduction of law traditional sources to extremes, but had soon to confess that it would soon be at a standstill without a moderate use of iṣbah.

Among the opponents of iṣbah at this time is mentioned Yahyâ b. 'Askânî (died 223 = 836), an old contemporary of Dâwûd and celebrated Shâfi'î and Khâfî of Baghdad under Ma'mûn; he wrote a work (KhaH al-Tambîkh), which is wholly devoted to an attack on the 'Iraq school; he constantly exchanged ideas with Dâwûd b. 'Ali (ibn al-Hallâq, Nî, 503, ed. Wissmîrî, 1. 44). Such attacks, however, were only of theoretical importance; they were quite without influence on the practical administration of law.

Down to the beginning of the third century, the historical development of the study of law had produced two divisions of the science of Fiqh, viz.: 1. the science of the Uṣûl al-Fiqh, i.e., the doctrine of the "roots", the sources of law and the methodology of their application; 2. that of the Furu' al-Fiqh, the doctrine of the branches, i.e., applied Fiqh, the systematic elaboration of positive law under its separate heads. The latter can show authoritative works even from the period of the founders of the schools; its important Furu' works were published by immediate pupils or edited and handed down to them as lectures of their teachers (see the separate articles).

In the present day Fiqh has developed in four directions within orthodox Sunna Islam, each of which goes back to codifications of the last differing in little details, by the independently developing schools of the above mentioned founders of the second and third centuries A. D., and which in course of time were considerably developed along these lines. These four schools (nawâdibrânsh, sing. iṣbah; only after ignorance can they call them sects) have survived to the present day and prevail in different parts of the Muslim world are called after the Imams on whose teachings they are founded: 1. the Hanafi, which is followed in by far the greater part of the Muslim world (the Turkish empire, Central Asia and the Indian subcontinent); 2. the Shafi'i (Egypt, South Arabia, the Indian Archipelago, East Africa and Syria after it had supplanted the Awzâ', mağhīlî there in 284 = 897; cf. Sahîk, Zâhib, al-Shafi'i, ii. 174) at the foot, 214, and the extremely important data given, i. v. 134 et seq. and 214 et seq.; 3. the Maliki (the Maghribi, to a great extent in Upper Egypt also, German and English West Africa) and the 4. Hanbali, strongly represented (down to the viii. = eighth century) in the 'Iraq, Egypt, Syria and Palestine (cf. the article 'Ałmâr b. Manâbi), now limited to Arabia (Najd) (cf. the article waRâbî; the Hanâfî madhab has become the only authoritative code of law in the public life and official administration of justice in all the provinces of the Ottoman empire. All the other once prominent schools of Fiqh have disappeared from the field after a brief existence; for example, at a very early period the school of Awzâ' (see above), that of Sufyâni al-Dhawî (in 403 = 1014 the last maftî taught according to this madhab, cf. Abu 'l-Malâbî, ed. Poppes, p. 150, in), that of the Zahirîtes already mentioned and the school founded by the celebrated historian Fârâbî (q. v.) called anâbirânsh, which scholar expended in numerous works which no longer exist (Wies, Zeitschr. f. d. Kunde des Moslems, ii. 564). The teachings of these obsolete schools are not taken account of in the Nihâyah of Sunna Islam; the four madhabîn above mentioned are considered equally orthodox elements of it; they differ from one another only in details of Furu' which according to the orthodox conception do not form fundamental differences. In the Ashur mosque (q. v., i. 532 et seq.), the most impor-
tant. Muslim university of the present day, all four schools are still represented by teachers and pupils just as before the coming of Ottoman supremacy, whereby the Hanafi masābīḥ became supreme, all four systems were represented in the great centres of Islam by judicial functionaries, who gave their decisions in important cases at a joint conference. Each of these four masābīḥ has produced an enormous literature of codices, commentaries and commentaries in the schools of the lands in which its adherents are found.

Cases not provided for in such codices, as well as new points of law that crop up, are decided by professional jurists in fatwā (decisions) of which considerable collections have been and are still being made. Since various European countries have extended their authority over Muslims, in their possessions and protectorates in the east, handbooks of Fikh of the masābīḥ prevailing in the respective countries have been published in western languages also, and in this connection editions and translations of the best known works on Fikh have been prepared by European scholars.

The dissenting sects of the Khārijīt and Shi'ahs have developed the legal system along lines parallel to the Fikh of the Sunni. The most fundamental differences between these systems and that of the Sunnis are naturally to be found in questions of constitutional law (Khilafat). The Shi'ahs also show differences in their law of marriage (wuzū'; marriage with women of the Abī Al-Kāhidh) and are more rigid in their laws regulating intercourse with unbelievers. In their liturgy (ṣalāt) their devotions diverge from the usage of the Sunnis may also be noted; in their calendar of feasts also there are certain feast days peculiar to them. Otherwise the differences in law between these sects and the Sunnis are scarcely more considerable than those of the different orthodox masābīḥ within Sunni Islam from one another (cf. Forster, Geschichte der islamischen Jurisprudenz, p. 237—239). Among the Shi'ahs, behind the Imámī "Twelvers" the sect of Zaidī (particularly strong in South Arabia) has developed a very rich Fikh literature, of which M. K. Strohmüller has lately given a very thorough account (Jahrb. Gesch., I. 354—356; II. 49—78; Der Staat des Zaiditen (Strassburg 1912); Der Kultur der Zaiditen (ibid. 1912).

In giving an appreciation of Fikh one must not forget to mention the fact that the codifications from a very early period for the most part represent an academic code of law, a system given ideal validity, a doctrine of duties, as Snouck Hurgronje, the creator of the historical criticism of Fikh, so admirably described it, which the theologians represent as alone corresponding to the ideal demands of religion. History teaches us that, as is the case at the present day, even in the oldest period of Islam, the actual practice adopted in many instances a different form from that required by the demands of the law (Siṣhah). Certain parts of Fikh have been quite obsolete for centuries; on the other hand in many distant districts customary law (aṣā'ir, aδο), which for the most part can be traced back to pre-Muslim Medinan times, has retained its validity (cf. the article Aṣā'ir, l. 1721 et seq.). Modern conditions have also produced many reforms of legal practice in Muslim countries and have produced a system of civil law different from the

religious law (aṣā'ir) alongside of the latter. This dualism in the administration of justice can be traced back to an earlier period in which it also existed. (Zähler, p. 205, note 3, a collection from Egypt, 15th century A. H.; Ibn Kajīm Al-Djangirī, al-Jamī al-Bayānī, f. 4b, Shāfi'i al-Shāfī'i [Cairo 1337], p. 318, dual system of law in Syria; Massinger, Mission en Mésopotamie, ii. [Cairo 1913], p. 30, the Shāfī'i carāwānī were in operation in the 'Iraq under Mongol rule alongside of the Shāfī'i Shāfī'; Ibn Binjūt, Paris, lib. 11, from Kādirī.)

Islamic literature on Fikh according to the different Madhhabīs and the European editions see Jaynboili, i.e., p. 350—363 and the pertinent sections in Blockslamn, Geschichte der westlichen Literatur.

(1. GROßNER.)

FIKR, ABD ALLAH PASHA, Egyptian statesman and man of letters, born in Mecca in 1250 (1834), where his father, Muhammad Efendi Baligh, who had chosen the profession of arms and reached the rank of naṣibīl, was stationed at the time of his son's birth. His grandfather, 'Abd Allah b. Muhammad, however, was professor at the Aqmar university at the time of the French occupation and had to give up his studies in his steps. As he lost his father in 1261 (1845), when only eleven years of age, he was brought up by a relative, studied at the Aqmar and at the same time studied Turkish industriously to qualify for a place in the Twain. In 1267 (1851) he entered the civil service, held positions in various districts and accompanied Ismail Pasha to Stamml in 1279 (1862) when the latter went
there to receive his investiture from the Sultan. He often returned there and in 1284 (1866) was appointed tutor to the princes Mohammed Tewfiq, Hassan and Hassam. In 1286 he was transferred to the Ministry of Finance and commissioned to organise the Egyptian Library. In 1288 (1870) he was appointed wakil in the Ministry of Public Instruction under 'Abd Pasha Mubarak [q.v.] and finally became Minister, although for a brief period only on account of the political turmoil of the time [cf. the article 'Abd-al-Rahim Mubarak, 1866]. He was even imprisoned after the rebellion had been put down, but finally released. He then lived the life of a private citizen, making pilgrimages to Mecca in 1292 (1875) and visiting the Syriac lands the following year and visited Stockholm in 1306 (1889) as delegate of the Egyptian government to the Oriental Congress. On his return to Egypt he occupied himself with an account of this journey but death overtook him on the 11th Dhu 'l-Hijjja 1307 (27th July 1890) when he had only finished the opening chapters.

'Abd Allâh Pasha Elfiri was a good stylist and wrote several works, some of which were only printed after his death by his son 'Abdul 'Aziz Pasha Elfiri, who had accompanied him to Stockholm. This son, born in Cairo 1272 (1856), also wrote an 'Akhyâr fi Sâlihiyya and the Shâdât (Cairo 1290), and died young (January 1295). He published a collection of his father's poems, letters, etc. entitled: 'Abd-al-Rahim al-Shâbîyâ (Cairo 1315), and the above mentioned account of his journey: 'Abd-al-Rahim al-Shâbîyâ wa Mas'ûda' ur-Ra'idh, Cairo 1287. Other works by his father: 'Abd-al-Rahim al-Shâbîyâ wa Shâbîyâ al-Mas'ûda, Cairo 1304 (Elementary grammar for schools); Nasir El-Adl wa Fî-Ilkâm wa Shâbîyâ, Cairo 1308; Mas'ûda' ur-Ra'idh, Cairo 1289 and often reprinted.

Biography: 'Abd Pasha Mubarak, Köhler's Lexicon, ii. 45 et seq.; G. Zaidan, Muzakka, ii. 316 et seq. (cf. also ibid., p. 177 et seq.; Maghârib, 1891, p. 752 et seq.; Brockeimann, Geschichte der Arab., Lett., ii. 474 et seq.).

AL-FIL, the elephant, also called al-Zobîbâl, which latter name is applied to the smaller animals or according to some writers the females. In spite of its bulk and heavy figure it is one of the swiftest and most mobile of animals. As its neck is very short it has a long trunk of cartilage, flesh and sinew, which is of the same use to it as hands to man. With it it carries food and water to its mouth; it can move it round its whole body and fights with it. Its two ears are like shields; it flaps them constantly to drive away flies and mosquitoes from its mouth, which is always open. Its powerful tusks, each of a weight of 200 or even 500 sonn, its tongue is covered; that is, it is attached to the front of the mouth, if this were not so, according to the view of the Indians, it would learn to speak like a man. Its cry is like that of a boy and is weak in comparison to its size. It only has joints in the shoulders and in the thighs; it therefore sleeps standing or leaning against a tree. When it falls on its side it cannot get on its feet again; the other elephants help it up, while a large elephant throws its trunk under the side of the fallen one and the others help till it is up again. When it wants to tear up a tree, it twists its trunk around it and uproots it with ease.

The elephant becomes reproductive in its fifth year. Its testicles are inside its body near the kidneys. When the animal has conceived it is no longer covered by the male. After two years the young one is born and one every seven years afterwards. As the female brings forth in a standing position and has no joints, it goes into a river with an abundant flow of water, it drops the young one into it to avoid letting it fall on the hard ground. The male elephant watches by it and protects it and the young one from snakes, which it tramples upon with its feet. It also eats snakes when it is ill. The elephants exported to India do not lose their numbers and so not die out; in India they may live to be several hundred years old.

The elephant cannot bear the rhinoceros and lives from its neighbourhood; when they fight with each other both are often killed. But its most deadly enemy is the sukkâr, an animal smaller than the lynx, of reddish-yellow colour with fiery eyes, exceedingly agile in jumping; it sprays its urine on elephants and men so that they fall dead if it touches them. The elephant is also afraid of the sun; it is said that the kings of Persia when fighting with the Indians used to let cats loose on the elephants to put them to flight; a similar stratagem is related by the poet and freedman Harûn b. Miskâl. This stratagem tells us how wild elephants are caught: a long pit with steep sides is dug, which slopes gradually downwards to a depth equal to the height of the elephant and so narrow that, though it can easily go in, it cannot turn round or come out. Rice and other fodder is then scattered round this pit, most thickly around the entrance and in the pit itself. When a young elephant comes along, it follows the fodder in its greed until it reaches the deep end of the pit and then does not know what to do. The hunters then come dressed in dull-coloured red, blue and yellow and beat it with sticks; the elephant tries to trample those who attack it with its fore foot but cannot get out of the narrow pit. A man dressed in white then comes to its help, drives away its tormentors, brings food and water and remains near it to accustom the elephant to him. After a time he goes away and the others return and again the elephant still more unconsciously wills and the man in white appears for the second time and repeats the process of driving off the tormentors and feeding the elephant. This alternation is continued till the elephant has such confidence in the watcher that it allows him to touch it and mount it. When the elephant has become sufficiently used to him, the earth in front of the elephant is dug out so that it can come out of the pit. The elephant-driver (fâyâd) sits on the elephant's back and has a crooked stick (mâshfûw) in his hand, with which he touches the elephant's head when he wants it to do anything.

Numerous stories are told of the vivacity of elephants. It is said to be as great as that of the camel. For example, a fâyâd had beaten an elephant severely; the latter was so ill on one occasion he was bound to a tree while the driver lay down to sleep a little distance off. The elephant broke a branch off, twisted it through the driver's bushy hair till it was quite entangled, then pulled him towards itself and crushed him.

Its docility, patience and tractability are, however,
by the Arabs to the Roman Province of Palæstina Prima, practically Judæa and Samaria, with Caesarea ad Mare as capital. De Goeje, Wellhausen and Cautley have brought order into the confused accounts of the conquest of this district by the Muslims, notably by disputing and correcting Sunn's account, although various details still remain uncertain; for example, the date of the outbreak of hostilities. While the Arab historians do not make Abū Bakr send an army to Western Palestine via Alla under 'Amr b. al-Asi till the year 13 (begun 7th March 654), according to a Syrian authority published by Land, the first conflict between Greek and Muslim arms took place as early as February 634 at a place about three hours east of al-Jaffa [v. c.]. Although this source is not very reliable otherwise, in favour of its accuracy, on this point it may be urged that it gives more time for the operations of the Arabs before the battle of Ḍaḥilā [v. c. i. 141] and that Ḥāfīz, who had been summoned from Syria to assist, could thus have actually arrived during Easter in April in Marjū ṭabī in Tadmor, year 1,170 [although in contradiction of l. 27 xiv]. The Greeks were defeated in this battle and their leader slain whilst retreating. 'Amr was now able to take Ḍaḥilā and then advanced on Caesarea with his troops and began to besiege it in July 634 (Qumrān 1. 13). He was, however, forced to retire to Arabia by the approach of a larger Greek force; here he was joined by the troops coming from the district east of the Jordan and thereupon advanced against the Greeks who were utterly defeated at Ḍaḥilā at the end of July or in August. It was probably immediately after this victory that 'Amr conquered the towns in Filastin, detailed by Bāšāh, Samūs, Sīdān, Lydda, Jaffa, 'Ayn al-Bī‘, Bait Dāmūs, and Ṭabhā. After joining the main army and taking part in the deciding battles, he was able to return in Autumn 636 after the battle of Yarmuk and proceeded to the siege of Jerusalem which finally surrendered in 16 or 17 (637 or 638). Caesarea, which was strongly fortified, now alone remained. 'Amr began the siege anew, but was called to Egypt in 640 and had to leave the conduct of the siege in the hands of Ya'qūb b. Abl Sufyān, the commander-in-chief in Syria; but it was only after the latter's death that his brother Maš'ūkī succeeded in taking the town with the help of a traitor (according to Wādīdār and others in 19, according to Ibn Ṭabīb not till 20). The conquest of Filastin was finally completed by Maš'ūkī's capture of Aškalūn.

The Arabs, as they usually did elsewhere, here retained the organisation they found there and Palæstina Prima remained a separate province under the name Ḥimṣ (military district) Filastin, although its centre was shifted from Caesarea to Lydāt. At a later period the place of Lydāt was taken by the new foundation of Ramla which Schumacher b. Abī al-Mallik had built while governor of Filastin and where he was laid of living even after he became Caliph.

As to the extent of the conquered provinces, Tadmor (l. 21460,) northern Elath as the northeastern limit, and at 3150, 'Arabu is described as a part of Filastin. Iṣkākār defines its length from the frontier towns of Ṭabhā and Lydūn and the breadth by Yāḥū and Jezīzah, Zibād and, at a later period Khālid al-Ḫārīt, give similar state-
men's, although the latter, like the author of the *Muṣtafa* ('middle of the eleventh century'), gives a emplotment. In this point, Iskandy gives the following details of Fālāṣtīn, the southern part of al-Ghawār ('v. v'), al-Dūbāl and al-Sharāṭ as far as Alīa. In Mūkaddas on the other hand al-Sharāṭ is given as an independent *šarāf* alongside of Fālāṣtīn with Zoghar as its capital, while in compensation, as it were, it recovers Amānūk, the capital of al-Balqā', to Fālāṣtīn. Iskandy says that Ramla is the largest town in the province, with Jerusalem second, which in Yākūt is the capital.

Iskandy describes Fālāṣtīn as one of the most fertile parts of Syria and emphasizes the fact that it depends for its irrigation entirely on the rain-fall; there is running water only at Sichem. Yākūt remarks on the generally mountainous character of the land. Mūkaddas knows the following exports of Fālāṣtīn: olive oil, small figs, raisins, cucumbers, and various sorts of textiles, and soap of Jerusalem especially cheese, fine sorts of raisins, apples, pomegranates, looking-glasses, lamps, and needles from Jērūshām (cf. al-Ma'ālik).

He also mentions the quarries of white stone and the marble quarries at Fālāṣtīn.

The statements on the public revenues of this province in the *Abādī* period are of special interest. Ibn Khālidin gives a list from the second half of the ninth century A.D., according to which the annual revenue of Fālāṣtīn was 310,000 dinars besides a payment in kind of 300,000 ma'ṣ of olive oil. In Hārūn al-Rāshīd's time, 310,000 dinars with a payment in kind of 300,000 ma'ṣ of olive oil, according to 'Alī al-Kāshānī. In the reign of Yūsuf, according to the same author, 310,000 dinars. According to Ibn Khudābdī in 864, 300,000 dinars and the same figure is given by Ibn al-Fākhr for 903, while Yākūt, who flourished in the interval only gives 500,000 dinars.

The old provincial division was abolished during the Crusades and from the *Abādī* period onwards replaced by a division into *shābān* which we find in Mūkaddas and Khwālī al-'Azhar. The lands of the Greek practically corresponded to the ancient Fālāṣtīn.

The following is given by the commentaries on Surah 46 of the Korān; it is a longer or shorter orion of the Amalakite kings, like Karkh and Kish, of the Kings of the Persians and Romans. The verb *tāfṣīr* means "to be arrogant and tyrannical", hence the Korānic *Fārān* is called *al-Dīdibot* the "tyrant" by al-Yaḥṣūbī (ed. Houtsma), p. 33.

A number of *Fārans* are mentioned in Arabic literature; their number is very differently given. In the Korān, however, *Fārān* is always the king with whom Mūsā and Hārūn had to deal; the word is here clearly understood as a proper name.

The Korānic data concerning *Fārans* are on some points fuller than the Biblical. The most important are the following: in place of his daughter's husband, his sons, *aylām* (v. 4, p. 457), is mentioned; a certain Fārans is also mentioned who (Surā xxviii, 38, 38) is commissioned to build a tower (ṣayfā'ī).
which shall reach to heaven, by which Fir'awn will ascend to Mīṣ'ē's God. There are obviously several confusions here; Hūmān is an echo of the
visier of this name in the Book of Esther; the
tower; and its description recall the Tower of Babel.
It is probably the Biblical account of the building of the
*terrace cities, Rāmas and Pitom*, that has
given rise to the confusion last mentioned.

Another member of Fir'awn's suite who appears
is the Kūrān is not mentioned by name. When
Fir'awn wanted to slay Mīṣ'ē, then a believer and
Fir'awn's people, who had concealed his faith
said: Will ye slay a man because he says: My
Lord is Allah, when he has come to you with
manifest signs from your Lord? If he be a liar,
against him is his lie; but if he speaks the truth,
there will befall you something of that with which
he threatens you" etc. (Sūra xl. 29 et seq.).

Fir'awn is twice called "he of the pegs" in
the Kūrān (Qūra 'A-srā'ā, Sūra xxxviii. 11, lxxxvi. 9). This expression is variously explained by the
commentators; some say that it means; that his dynasty is
firmly established as by tent pegs, while others say that
the pegs are the armies mounted by the pegs. Others
again say that he bound people to be punished hand and
foot, to pegs driven into the ground.

A further addition to the Biblical narrative is the statement that the magicians were threatened
with dreadful punishment by Fir'awn when they
became converts (Sūra vii. 111 et seq.; xxvii. 45 et seq.). Finally Fir'awn himself is said to have become
converted the moment he was being drowned;
but God did not accept his conversion and caused his
body to be cast upon land: as an example for
others (Sūra ii. 90 et seq.).

It is said of him that he had himself worshipped
as a God (Sūra xxvii. 53). On the day of the
resurrection he will go into Hell at the head of his
people (Sūra xl. 100). The Kūrān makes
no distinction between the Pharaoh of the Bondage
and of the Exodus. This is clear from the fact
that when Mīṣ'ē and Hūmān come to him Fir'awn
recognises the former (Sūra xxvi. 17).

Muslim Tradition gives the following account
of the Fir'awn. In contrast to the Kūrānic account,
Fir'awn are mentioned as early as the stories of
Abraham and Joseph and some even tell us that
Joseph's first Fir'awn was called al-Ra'ayā b. al-Walid
and his successor Kūhūs b. Muṣ'īlā. According
to another Joseph was the visier of al-Walid (or Hūmān)
and al-Ra'ayān. Tradition is not unanimous with
regard to the Fir'awn between Joseph and Mīṣ'ē.
The sources which are less directly influenced by the
Rūmī say that the above mentioned Kūhūs b.
Muṣ'īlā was the first husband of Amīna and Mīṣ'ē's foster-father. When Mīṣ'ē received the
divine mission, Kūhūs was already dead, and his
successor was his brother Walid b. Muṣ'īlā ("Ibn
barī's Taqqār and Bājdāw on Sūra ii. 16; Tuhairi
ed. de Goesb, L. 443 et seq.).

Ibn Hājjī in Tuhairi (ed. de Goesb), L. 444 et seq.,
closely follows Exodus, L. 8: when Joseph
and his Pharaoh, al-Ra'ayā b. al-Walid, had died,
the throne was occupied by Amālikītia Fir'awn to
the time when al-Walid b. Muṣ'īlā ascended it;
Mīṣ'ē was sent to him; he was the most arrogant
and tyrannical of all and reigned for the longest period.

In the 8th century! According to Ibn 'Abī Hāṣīn (121)
and Mas'ūdī (R. 397) there were two kings be-
tween Joseph's Pharaoh and Mīṣ'ē's foster-father.
Zamakhsharī (1207) on Sūra vii. 10 says that
400 years passed between Joseph's arrival in Egypt
and Mīṣ'ē's return from Midian; this agrees very
well with Exodus xii. 40.

The other Egyptian kings who are mentioned in
connection with the history of the kings of
Israel, are also called Fir'awn in Tradition, often
with an attribute like al-`Arā'īd etc.

The Kūrānic accounts of Fir'awn assume the
following form in Tradition. Fir'awn had enslaved
the Israelites and instituted forced labour. When his
astrologers or priests one day told him or, as
others say, when he heard that an Israelite
would be born who was destined to rob him of
his power, he commanded that every newborn
Israelite boy should henceforth be slain. When a
want of servants thus began to be felt, he altered
the edict so that they were preserved in alternate
years. This explains how Hūmān, who was older
than Mīṣ'ē, was saved.

Concerning the member of his suite who, ac-
ccording to the Kūrān, was a convert, we are told
that he was called Kahtūs, Shī'ān or Hūmān.
According to some he was a nephew of Fir'awn,
according to others his treasurer, or an Israelite car-
ner who had made the box for Mīṣ'ē's mother
in which the child was exposed. He is said to
have been slain by Fir'awn with the magicians,
along with his wife, the prisoner's maid, who
shared the beliefs of her husband; but it is also
said that he was present at the passage of the
Red Sea.

Tradition also gives further details of the building
of the tower. The object of building it was to
strengthen Fir'awn's position because he feared
that his subjects would follow Mīṣ'ē. He also
wished to reach the God of Mīṣ'ē. The tower
was the highest that had ever been built. When
the sun was rising its shadow darkened the west
and when it was setting, the east. When it was
completed Fir'awn climbed up and shot an arrow
upwards to strike Mīṣ'ē's God. Then God tested
him; he caused the arrow to fall down blood-
red. Fir'awn then thought he had achieved his
purpose. But Gabriel came and broke the
tower into three pieces with his wings; one of
them fell in India, one into the Ocean and a
third in the Maghrib, so high was the tower.
According to Zamakhsharī on Sūra xxviii. 38, a
piece fell on Fir'awn's army and slew many of
his soldiers.

At the passage of the Red Sea Hūmān com-
manded Fir'awn's vanguard. When no one dared
to enter the sea, Gabriel rode in front on a mare;
attracted by the mare the stallions of the Egyptians
could not be restrained and the whole host rode
in and was drowned. When Fir'awn uttered the
words professing conversion given in the Kūrān,
Gabriel descended and closed his mouth with a
piece of mud so that he might not be able to obtain
the mercy of God by repeating the words. God
then caused Fir'awn's body to be cast up so that
the Israelites might believe that he was really
dead. — Fantastic details of Fir'awn's person
and reign are further given by Waistfeld in Oriente
Orientalis, L. 338 et seq. In Makḥrit also many data
are given which are not in agreement with the
Kūrān and Muslim Tradition as such. Cf. also
the article Mīṣ'ē.

Bibliography: The Kūrān commentaries
FIRDAWSI

FIRDAWSI or Firdawsi was an artificially formed singular to firdado which was taken by the Arabs from firdāwār and understood by them as a plural (G. Hoffmann in Zeitschr. d. Deutsch. Morgenl. Ges., xxxii, p. 764). The true measure Fahūm (Lumadun, Arabic Grammar, p. 365, 368) was probably chosen to distinguish it from a form (perhaps firdaw) derived from the genuinely Arabic root jardas (Lamb., vii, p. 43; Lane, s.v.). Firdaws occurs in old Arabic poetry in the sense of a fertile hollow of land (Becht. Geseh. Wüstenf., Wildenfied, p. 314; Yeah, iii, p. 570 et seq.; and twice in the Korāi (xiv., 187; xxii. 11)) and was evidently for Muhammad a synonym for ḍāmūn in the ordinary sense, "garden". Firdaws occurs as a proper name at Damascus and Aleppo (Yahsy, iii, p. 562 et seq.). it is curious that the fundamental sense of the Zend paete-dah, "a place walled in", survives even in the remote derivative Arabic, and a firdaws is defined by the lexicons more narrowly as ḍāmūn. It also suggests grapevines and palm trees (Bail., in Kor. xviii. 107). In Firdawi (xvi, pp. 25-27) are given the senses of the earliest translators, only two points having any basis—that is a rīf word and indicates a vineyard. Otherwise they say that it is the lordliest, finest, widest and loftiest part of the Garden, the abode of those who in life commanded kindliness and falsehood disdained actions. To Muhammad himself tales are traceable back that it is the uppermost portion of the Heaven, that forms the four rivers of Paradise divide, etc. On this point are more details in the abbreviation by al-Shārāni of the Taufik of al-Kurtubi (Cairo ed. 1324), p. 83, and on al-Firdawisi generally on p. 84 and 86. But the Salīf Murshidi in his commentary on the Sūfī (vol. 3, p. 525) says that it is the second story of Paradise below the ayg of Allah, and that above it comes ḍamān ḍa. Others, again, held that ḍa is the loftiest; see a long discussion, involving the doctrine of the vision of Allah and the presence of Muhammad with his people in the Garden, in the Jānā of Ahmad b. al-Malikab, p. 277 et seq. of Cairo 1389.

Bibliography is given above.

(D. B. Macdonald)

FIRDAWSI (Abū’l-Kārim), a Persian poet, whose proper is uncertain (Mansūr, of Ahmad, or Hasan), probably born in 320 (932) at Tabrīz, one of the quarters of the town of Tus (Khurasān). His father left him a small estate on which he lived in a modest way. He received his education from his compatriot Asaf. A šahīb or landed proprietor, who was a friend of his, gave him a Book of Kings to put into verse; it was thus that, at his request, the Shahnameh (book of kings), an epic of about 50,000 lines in which he incorporated the traditions already extant by the end of the 9th century, was completed. The composition of this gigantic work lasted thirty-five years and was completed on the 25th February 1010 (400 A.H.) when the poet was nearly eighty years of age; it must therefore have been begun when he had reached a fairly mature age. The poem was dedicated to Sultan Mahommed of Ghur, who had conquered Khurasan in 328 (999), and presented to him by his minister Hasu-i Ahmad; the Sultan ordered a present of twenty thousand dirhams to be given to the poet but the latter, who expected a much more munificent reward, gave half of it to a bath attendant and the other half to a seller of figs (a kind of beer). Threatened with being tranquelled to death by elephants, Firdawsi in revenge composed a scathing satire and took refuge with the Ispahbād Shahriyar i-i Shara, ruler of Tabrīz, after remaining six months in concealment at Herat. This prince purchased the entire from him for 100,000 dirhams, at the rate of 1000 for each line, and had it destroyed; nevertheless, the text has survived and is usually published with editions of the Shahnameh.

After writing the poem Firdawis o Zalikhi (pub. by Eth., Anecdota Orientis, Arcanum Series: II; German trans. by O. Schlechter-Wassilieff, Vienna 1889) for the Bijuyāsh al-Dowla or his son Sultan al-Dowla, he returned to his native town where he died; he was buried near Tus in a piece of ground that belonged to him; as he was looked upon as a heretic, he could not rest in the Muslim cathedral. It is said that, while his funeral cortège was passing through the gate of Sanayn (the name of a neighbouring village) a caravanserai by that of Rūdawahr bringing the 60,000 dirhams that the poet had hoped for. His daughter refused to accept this sum and the Sultan devoted it to purses works (the ribāt ofCalah). Dastār-Shīh gives the date of his death as 421 (1030-1031).

The Shahnameh, which comprises the whole mythical and legendary history of Persia down to the Arab conquest, is a national epic which has rendered its author immortal. Firdawsi possessed the epic sense in a high degree; his descriptions of battle show an extraordinary vigour and movement; he felt the heart of his native land beating within him. The poet Yūnus, u. Zalikhi written to show auspicious the epics of ancient Persia was not his only love, is no whit inferior to his predecessor in spite of the advanced age at which it was written by the author.

The Shahnameh has been several times published; Lumadun's edition, The Shah Nameh (Calcutta, 1811), only contains the first volume; T. Nant's edition (Calcutta 1829) and Mohi's (Paris 1878) are complete while that of Vallars (Leiden 1877-1884) lacks the fourth volume. There have also been lithographed editions published in the East.

Translations: Arabic (ed. the ark. At-bahā'is, Ein Firdaws, published at Tunkent 1326; Gjallaturated by J. E. Monat, Bombay 1857-1864; French by J. Mohl, opposite his text and separately at Paris in 1857-1861; Italian by Friz, Turin 1886-1888; English by Aitken opposite his edition of the text and separately, London 1832 (several times reprinted), by Warner, London 1905-1910,
and Rogers, London 1907; German by Von Schack, Berlin 1853—1856 and by F. Rückert, Berlin 1890—1895. For further bibliography we may refer the reader to the works quoted below.

**FIRDAWSI** (Firdawsi), an Ottoman poet of Rum in the time of Sultan Bayezîd II (1481—1512), to distinguish him from the great Persian poet Firdawsi, called Firdawsi Rûmî or more frequently Usân Firdawsi or Firdawsi Târîf (2958). (27 Firdawsi) were celebrated. His masterpiece is the *Sâlânîn Namah*, composed for Sultan Bayezid by his command, in 360 or 380 volumes, in prose and poetry, a complete encyclopedia in which he included all the knowledge of his time in philosophy, astrology, genealogy, history, etc. The Sultan, however, only chose 160, or, according to others, 99 volumes and had the others burned. Firdawsi was deeply hurt, and like his Persian namesake, is said to haveendowed himself by lumps and went to Persia, where he died.

**FIRKE** (from *farkh* "to impose", so pronounced in the Egyptian dialect, while in the middle ages *farkh* and more usually *firdaâ* was used) is an extraordinary imposition usually levied for some special purpose. Lane in his *Manners and Customs* (see below) says that Muhammad Ali Pasha (1801—1848) in the first half of the 19th century levied a *farkh* of one-twelfth of the income of each subject, without distinction of religion. When this expenditure diminished, the tax was abolished. A similar *farkh* was at the same time levied on prostitutes. As already mentioned *farkh* (plur. *farkâh*) is almost always used with the sense of *farkh* in the historians and inscriptions of the middle ages.

**FIRKISHA** (Fr. Malak).

**FIRKISHA, Muhammad Zâhid Hîndî, Shah**, known as *Firdawsi* (born 909—1052, died after 1053—1058), of Amidzâd in northern Persia, was brought to Almasnag as a child in the reign of 'Abbas Nâshî Shah I and, while yet a youth, entered the service of Murtza 'Abdallah Shah I. The persecution of foreign scholars, which followed the murder of 'Abbas II drove him to Bâlîlûner where, in January 1356, he entered the service of 'Abdallah 'Adîl Shah II. Shortly afterwards he wrote *Îbahâ'îs ûlîn* (Parsi), a work on medicine, and Firdawsi, pleased with its style and aware of Firdawsi's devotion to historical studies, urged him to undertake a comprehensive history of the Mughal rule in India. Firdawsi at first declined the task as being beyond his powers, but eventually offered to submit for approval a few chapters of such a work as he could undertake. Among the specimen passages thus presented was an account of the disgraceful circumstances of the death of 'Ali 'Adîl Shah I, Ibrahim's father. Ibrahim correctly interpreted the selection of this subject as a hint that the historian demanded unfettered liberty in the relation of facts, and gave him permission to proceed with his work.

Firdawsi, who was an industrious compiler, mentions in the preface to his history no less than thirty-two books which he had collected and consulted, and adds to some others in the body of his work. The *epistola novâ* of his authorities are so often found in his pages that he has been atagiminated, with scant justice, as a mere copyist. He was, however, utterly devoid of the critical faculty and has made several glaring errors even in the annals of the Tabâris, which were his own peculiar province. The value of his work is further impaired by his gross ignorance of geography, and it is unsafe to follow the example of Brigg, his best known translator, in accepting it as a thoroughly satisfactory account of the rise and progress of the Muhammadan power in India. The history, which was begun in 1606 and finished in 1611, consists of an introduction, twelve sections dealing with the Ghânawid kings of Lâhor, the emperors of Dîlî, the independent Muhammadan dynasties of the Dâkhan, 'Gâdîrâs, Mâhâ, Khozâisâ, Bangul (including Djarâq), Mâlîk, Gâdîr, Kâshân and Mâlâdâs, and the vallies of India, and a conclusion, and embraces the whole history of the Muhammadan rule in India, excepting that of the Arab conquerors of Sând, to the beginning of the seventeenth century. Firdawsi complained with truth that until his time the only work which pretended to deal comprehensively with the subject was Nişam al-Dîn 'Abdallah Abuâîbîy, which was too brief and conducd to be of much value to the student of history, and boasted with justice that he had produced a work the like of which had not previously appeared in India. His History (ed. Bombay, 1831;Lucknow, 1281 = 1865) despite its many defects, is valuable not only as a summary of known authorities, but also because it embodies fragments of works of which the originals have been lost. A critical translation (those existent in English are enumerated Morley, Catal. E. A. Soc., p. 67) is the best of that of Brigg, London 1829; or, at least, a careful and intelligent edition of the text is much to be desired.

FIRISHTÉ-ZÁDE, AND AL-MALIK IBN AL-DIN, in Turkish also called Firishté-zade and in Arabic Abi Al Noum (from the phrase "the principal disciples of Pauls Allah [i.e., 37] the founder of the Huriyéh sect, died in 787 (1450). In 1333 (1430) he wrote a book on the doctrines of the sect in Turkish, entitled 'Abd al-Malik ibn Ali the Prophet's Stepfather' (Book of Conduct) in Turkish and an Al-Hadith-nome (Book of Future Life). The Ikhf-nome has been lithographed at Constantinople (1828 = 1511).

FIRMAN. [See Ferrara.]

FIRÓZA, Arab. "farangiz," the turquoise, a well-known precious stone of a bright green or "mountain green" to sky-blue colour with a glass-like wax; in composition it is a hydrated clay phosphate with a small but essential proportion of copper and iron. The colour is not permanent in all stones, and is said to be particularly affected by perspiration. It is almost always cut in an octagonal or cabochon i.e., with a convex upper surface, and when an inscription is given, a flat upper surface. The provenance of serviceable stones is limited to a few places whose history may be traced back for thousands of years. Turquoise mines were worked by the kings of Egypt in the peninsula of Sinai. Major Macdonald discovered them again in 1845 in the Wadi Mughra and its neighbourhood and worked them again for a number of years. The hieroglyphic inscriptions on the stones date, according to H. Brugsch, from King Sneferu of the third dynasty to Kames II. Brugsch takes the word "variegated" to be the same name of the mineral. No mention of the stone or the mines has survived from the Hellenistic period on the other hand in addition to wonderful data of the method of procuring the pale green called "Turquoise," Pliny knows a good deal about its properties, which can only refer to our turquoise for the statement that the "Turquoise" loses its colour when affected by oil or ointment is found in al-Kindi in the "Farangiz" and in all later mineralogical works. It can hardly be doubted that the turquoise was obtained in the Sinai period and even earlier in the mines around Nishabur. Tiftakh says of the kings of Persia that they adorned their hands and necks with turquoise, because they avowed danger of death by land or water; but we often meet with the assertion that the turquoise derives from the majesty of kings. It was considered to contain copper and to be formed in the vicinity of copper mines. Different kinds are distinguished according to the different colours (sky-blue, milk-blue, green, spotted); the best kind is considered to be the "Turquoise" (i.e., Ali festival) and the finest variety of this is the sky-blue "kert." Large pieces are very rare and are correspondingly costly, small pieces on the other hand are very common. The best specimens retain their colour, apart from the influences detailed below; after 10-12 years many lose their colour entirely and the stone is then said to be dead. All stones, however, show a certain variation in colour. They are brilliant in a clear sky, and dim when the sky is overcast. They alter their colour with the state of health of the wearer, and when affected by sweat, oil or sand; fat restores the colour again. Taken internally it is a poison, but in collyrium it is useful for clearing the sight, also if it is smeared at some time. Gold takes away its beauty (unlike lapis lazuli), i.e., probably, the greenish-blue colour does not harmonise as well with the yellow of the gold as the dark blue of the lapis lazuli. Akkuri explains the name "farangiz" as "stone of victory," whence it is also called "gulşar al-adhab." The word "farangiz" is found in many corrupt forms in the Latin translations of the middle ages (ferrugine, ferugiana, ferangiz, etc.), but none of these can be considered the original of the word "turquoise" for as early as the 13th century we find the term "turcoza" in Arabic and "turquise," and it may safely be assumed, that this was also the name given to the stone from the land of its origin, the ancient home of the Turks; cf. Arnoldus Saxo, "Thucydi," etc., 15. The value of the exports varies from £10,000—£15,000 annually, which is believed to be about a third of the total yield.

Brugsch states, that according to present day belief, the alteration in the stone presented indicates increase or decrease in the friendship of the donor. The large, quadrilateral turquoise, polished flat, which were at one time engraved with inscriptions and arabesques in gold and worn on the upper arm, are no longer held in such estimation. Stones for rings are always mounted in silver or tin, not in gold; Brugsch connects this with the Muslim prohibition of the wearing of the most precious metal or with very ancient notions of the demonic meaning of gold. He was rather inclined to believe that the real reason is good taste, as has been mentioned above, for religious prohibitions are not mentioned by any writers; besides diamonds also are only mounted in silver.

originally wrote in Persian (e. Pedrich, Doc. pers.

(F. ROER) (C. BROCKELMANN)

FIRUZKOH (FERGOSI), A MOUNTAIN FORTRESS IN THE COUNTRY OF GHOR, now the HAYA 
HIGHLANDS OF AFGHANISTAN. It was founded by 
Kutb al-Din Muhammad (known as the Malik ab-
Ghidsh or mountain king), in a territory known as 
Warghah, and continued by his brother Shah al-
Din Sami who succeeded in 1344. It remained 
capital of Ghor as long as that kingdom lasted, and 
was much embellished during the victorious reign of 
Mu'tasim al-Din Muhammad b. Sami from the spoils 
of India. The Cidcnel or Qan' is described as of 
great magnificence. It was taken by Ali al-
Din Khwairam Shah in 607, and finally destroyed 
during the Mongol invasions under Ogontu son of 
Chinggis Khan in 619-620. The exact position of 
Firuzkoh is doubtful. It was on the bank of a 
river which may have been the upper Marghah 
or the upper Hari-rud, or one of its tributaries. 
Raverty favours the latter view, but Holdich, who 
surveyed the country in 1844-1855, could find no 
site corresponding with it in these valleys, and 
identifies it with the extensive ruins of Tawar-y 
on an alluvial of the Farah-rud, still locally known 
by the name of Ghor. The tribe bearing the name of 
Firuzkoh now inhabits the Marghah valley, but 
that it was a separate valley is not therefore necessary 
to suppose. This Firuzkoh is not the Firuzkoh valley, 
Tawar-y is in the country of the kindred Tajmeh 
tribe, and has communications with Herat, 
Farah and the upper Hari-rud valley. It may 
therefore be considered as the actual site of 
Firuzkoh.

(M. LONGWORTH DAVIS)

FIRUZPUR (FIRGHOR). A district in the 
Punjab which takes its name from the prin-
cipal town. It forms part of the Dalhousie 
division, lying between 29° 52' and 31° 9' N. and 
73° 7' and 73° 27' E. Area 4,502 sq. m. Popu-
lacion 958,073 of which 457,015 are Muhammadan. The principal Muhammadan tribes are 
Rajputs, Apan, Dogars and Wattus; there is also 
an ascetic tribe known as Bedla, who are 
believed to possess powers of incantation. The 
ancient site of Janzer, supposed to be the Ha-
Sib of Balsah, was the capital of the Fauwa 
Rajputs. Soon after the Muhammadan invasion 
the Raja Rajputs adopted Islam and invaded the 
district from the south. The Gid, Dilluwall and 
other Dogar tribes entered it later. The Dogars, 
a wild and predatory tribe, are more recent 
immigrants. The town of Firuzpur was founded in 
the time of Salt of Forts Shird IV of Delhi and 
was named after him. In Akbar's time it was part of the 
Sindh of Malik and of Sindh, and probably lay on the right bank of the river Sat-
Jal, and not on the left as at present. The Singh 
Djas appear towards the end of Akbar's reign 
and soon adopted the Sikh religion. It was in 
this tract that Guru Govind was destined after a 
three days flight by Awrangzeb's army; the site 
is now held sacred and the tank ('Mahal-sar' = Tank of Salvation) has become a place of pil-
gimage, where a 3-days' festival is held in January.

After the retirement of Ahmad Shah Durrani, 
the Bhangi Misri under Gadar Singh took the 
principal part in the conquest. Ranjit Singh threatened 
this country with the minor Sikh states, and this 
move (1808) led to British intervention. Firuzpur 
was occupied, and annexed in 1835, thus inter-
vening between Ranjit Singh's kingdom and the 
minor states, which have been preserved to 
the present day. The Munshi Khan Nawab of Kamar 
also found a refuge at their estate of Mandot 
near Firuzpur in 1807, and were recognized as 
ruling chiefs. Their territory was annexed owing 
to mismanagement in 1835, but was afterwards 
restored and is still held by the Nawabs. It is 
a large and wealthy estate. The present Nawab 
Ghulam Shah al-Din Khan is a minor.

The first Sikh war between the British and the 
Khalsa army was fought in this tract. The Sikh 
army crossed the Satlaj in Dec. 1845. The battles 
of Mandot and Pakhu-shahr (often wrongly 
called Fergosha or Fergush) were fought soon 
after. The Sikh army was repulsed but not 
destroyed, and recrossed the Satlaj, only to invade 
British territory again higher up the river near 
Ludhiana. The decisive battle of Atwal was fought 
outside the district of Fergosha, but the desperate struggle 
of Subhaw (Sobaman) which ended the war, 
was fought within its limits.

In more recent times the district was enlarged 
by the addition of the Tahsil of Fateh in the 
Punjab from the former district of Sirsa (1884).

The sand dunes in the semi-desert south of the 
district have been rendered fertile by the irri-
cation from the Sirhind canal, and the inundation-
canals constructed by Col. Grey in the rivulet 
tract have also added greatly to its productiv-
ess. The Singh Djas are excellent farmers and 
take full advantage of these conditions; the Mu-
hammadan tribes in this part are inferior cultivation.

There is at present a large export of wheat 
from the Firuzpur district.

(M. LONGWORTH DAVIS)

FIRUZ SHAH KHILJI (DILKHAH-AL-DIN), 
the twelfth Muhammadan emperor of Delhi, 
wrested for a time the Khilji or Chilhah tribe 
which first rose to eminence in Delhi's reign 
and later became governor of Sambhar. When 
Muhammad al-Din Kaikhsuh fell sick, he was 
summoned to Delhi to assume the direction of 
able, but encountered much opposition from the Khilji 
party, who, as the emperor grew feeble, pro-
claimed his infant son, Shah Muhammad.
Firuz acknowledged the child but removed him from the custody of the Turks and ascended the palace of Kullugh, where, with his concubine, Kai'ub Hadji was assassinated. The child disappeared shortly afterwards and, on June 13, 1290, Firuz ascended the throne. His chief difficulties were the dissipation of the people of Dili, who resented the rule of an Afghan, and a rebellion headed by Malik Chahj, a nephew of Balban, who claimed his uncle's throne. The prejudices of the citizens were confirmed by wildness and the rebellion was crushed, but the old emperor's culpable leniency both to rebels and robbers was much resented by his successors, who refused to accept his plea of conscience. A conspiracy of the dastardly assassins was detected and punished, but more severity was shown towards Seljuk, an influential opponent suspected of plotting the emperor's assassination, who was put to death. Firuz had appointed his nephew and son-in-law, Ali, sultan of Kurr, and this adventurous prince, hearing of the great wealth of Devaragir in the Dakhan, led a daring raid into that kingdom and returned laden with plunder, but declined to visit his uncle at Dili, taunting apprehension of punishment for having undertaken such an enterprise without permission. The dying old emperor was at length persuaded, against the advice of his counsellors, to visit his nephew in Kurr, and on July 19, 1290, was stabbed to death on the bank of the Ganges before the eyes of the empress and under the orders of Ali al-Din, who immediately caused himself to be proclaimed emperor.

**FIRUZ SHAH TAGHLAK**, son of Malik Rājjal, brother of Ghiyāh, sultan of Muhammad, son of Taghlaq, on whose death near Thātha on March 30, 1351, he was induced to ascend the throne. He extremity the army then employed in India from its difficulty and led it back to Dīl, where he died. Ayas Khudājī-yi Dāshān, whom Muḥammad had left in charge of the capital, too hastily crediting a report that Firuz had been slain in an encounter with the Moghuls, had placed on the throne a supposititious son of Mūhammad. Firuz would have pardoned and reinstated Ahmad, but was overruled by his advisers, who caused the aged minister to be put to death. The wars of Firuz Shah's reign were two expeditions into Bengal in 1353 and 1359, one into Ujāt in the latter year, one against Navgarh in 1362, and one to Thātha in 1364. A certain measure of success attended all these campaigns, but Firuz's generalship in each was hampers and stampa, and after the submission of the Emirate of Thātha in 1350 he devoted the rest of his reign to military glory. The rest of his long reign was passed, if the suppression of one or two minor uprisings be excepted, in the indulgence of his passion for architecture and the chase. His public works included cities, palaces, tanks, irrigation works, mosques and colleges, but he devoted his activity as such to the neglect of all other public business and tolerance of corruption and inefficiency in others. He had to little of the jealousy which is a usual attribute of sovereignty that at different times he associated two of his sons to himself in the imperial dignity. He was endeared to his people by his abolition of many vexations imposed by the general levity of his rule, which contrasted strongly with that of his predecessor. He died, at the age of more than 80 years, in the latter half of January, 1388, and was succeeded by Taghlaq II, the son of his deceased eldest son, Fath Khān. The remote cause of the ruin of his empire was Timur's invasion, but the insufficiency of his own administration contributed largely to its disruption.

**FITNET.** A Persian poetess, whose real name was Zobida, the daughter of the Shāhih al-Ilādār Muḥammad Es-sud Esfand, died (894) (1480). Of her life we only know that she made an unfortunate marriage with Dervish Esfand, Kābi' of Rumelia under Selim III. Her Divān (printed Stamnul 1238 = 1880 and often since) contains chiefly of lyric poems, ghazals, Outa, and a few ridfis; some poems show a philosophic strain, which according to Gibb, is due to the influence of her friend Ḥājjī Pahlī [q. v.]. Her total writings were of small bulk.

**Bibliography:** Gibb, A History of Ottoman Poetry, W. 151 et seq. (the Turkish sources are also given there).

**FITRA.** [See 'ID AL-FITRA.]

**FITRA** is a "word of kind" (Wright, L. 125) to the infinitle jat and means (an Ethiopic loan-meaning, Schurro in Zelts, der Dichter, Berlin, 1899, 159 et seq.; Nichtek, New Berlin, p. 49), "a kind or way of creating or being created." It occurs in Kur. xxx. 29 (shī'ah, Bāb) and other forms of its verb in the same meaning occur 14 times. But though Muḥammad uses derived forms freely, it was obscure to his hearers. The 'Abbasids did not understand it. They wrote in Arabic it, and the Bedawin probably cannot the generics. The sense of kātib (Levi, vi. p. 362, l. 29). Its theologically important usage is in the saying of Muḥammad, "Every infant is born according to the jāt (also jirt); i.e. Allah's kind or way of creating; "on God's plan", cf. Macdonald, Religious Attitude in Islam, p. 243). This is one of several contradictory traditions on the similarity of the infants of unbelievers. On the whole question the theologians were uncertain and in disagreement. This text evidently means that every child is born naturally a Muslim; but it is preserved after birth by his environment. But on this as that of the Mu'tassites (q. art. Taqīkay, ed. Leron, ii. p. 1094)—there were found serious theological and legal difficulties. (1) It interferes with the sovereign will (natā'ay) and guidance (abdāy) of Allah. Orthodox Islam, therefore, holds that the parents could be only a secondary cause (nabāha) and that the guiding sight and leading strait must come from Allah himself. (2) This view, and indeed
almost any view of the tradition, would involve that such an infant, if his parents died before he reached years of discretion, could not inherit from them, and that if he died before years of discretion, his parents could not inherit from him. For this presupposes that he is a Muslim up to years of discretion, and canon law lays down that a Muslim cannot inherit from a non-Muslim or vice versa (Khāṣaṣ of al-Balātīrī on the sharh of Ibn Khaldun on the wacaw of Aḥad al-Shārī, ed. Cairo 1397, vol. ii. p. 74 et seq. and Sachau, Muhāsinātān Kitāb, p. 186, 204, 206 — a favorite subject for law-splitting). Two attempts have been made to escape this. (a) To suggest that a Muslim named by Muhammad is to be regarded as a decision (fāsah) and was abrogated by the later decision as to inheritance. But it is pointed out that it is not really a decision, but a narrative (Khāṣaṣ) and that narratives are not abrogated. (b.) The being made a Jew, Christian or Magian is to be regarded as not actual, but figurative, and takes place in this figurative sense from the point of birth; the legal religion of the infant is automatically that of his parents, although he comes actually to embrace that religion only with maturity of mind. Another view was that being created according to the fāsah meant only being created in a healthy condition, like a sick animal with a capacity of either belief or unbelief when the time should come. Another was that fāsah meant only "beginning" (bāsah). Still another was that it referred to Allah's creating man with a capacity of either belief or unbelief and then laying on them the covenant of the "Day of A-flat" (Kāfūr, vii. 171). Finally it was that it is to which Allah turns the hearts of men.

(1. D. B. MacInally)

POMHALTAW (also Pomhalteh and Pomhalte) = sam al-taw ("the fish's mouth") is the star of first second magnitude in the Southern Pisces. Pimela and following him al-Battālī, however, reckon it in Aquarius, but add that it also lies in the month of the Southern Pisces. According to Kāfūr and Ghardīnī, it was called al-taw = the first frog, according to Arab nomenclature, to distinguish it from a star of the Whale. It is also called al-taw = the ostrich by Khawāsīnī.

(H. SUTER)

FU'AĐ PASHA (Muhammad Kādir Zīk), an Ottoman statesman, born in 1230—1230. in Constantinople, the son of the poet Izzet Mūlla [v.]. who mentions him in his Miḥāsinātān, studied medicine after leaving the school of Galata—Serai and entered the army medical service with the rank of yāsīfīgī (captain) and was sent to Tripoli in North Africa. Returning in 1253—1257 to Constantinople, he entered the service of the Porte as interpreter, was sent to London in 1256—1256 as its secretary to the embassy and in 1261—1265 attended the coronation of Queen Isabella of Spain as Envoy Extraordinary. In 1265—1267 he became Dragoman of the Imperial Dignitaries, in 1265—1267 envoy extraordinary, then he was sent on a special mission in Wallachia and Moldavia and finally appointed ambassador in St. Petersburg. In 1266—1265 he was under-secretary of state to the Grand Vizier, in 1265—1268 on a mission to Egypt and on his return from these became Minister of Foreign Affairs, but in the following year resigned in consequence of the intrigues of Mutschikoff. In 1270—1275 he was entrusted with the task of suppressing the unrest provoked by Greek landladies in Janina and Veliš-Keşhev, and succeeded in restoring order. As a member of the Grand Council for Reforms he drew up a series of laws and regulations and on his appointment for the second time to the Ministry of Foreign Affairs, became, as at the same time President of this body. He was imprisoned in both offices in 1273—1276, but was given them again in the following year. He attended the Paris congress as the delegate of Turkey and after the massacres of Christians in Lebanon (1276—1286) he was sent to see him extraordinary with civil and military powers. In this capacity he had Mas'ūdī Pasha shot to remove any pretext for General Beauport d'Antoul to march on Damascus with the troops under his command. After the accession of Sultan Abū l-'Aṣrāf (1276—1276) he became President of the High Court of Justice (maqālīd al-dhātī, or dhātī, Minister of Foreign Affairs for the fourth time and Grand Vizier in the same year. After filling this office for fourteen months he was dismissed in 1279—1276, but was afterwards appointed Scarpeljet, and Adjecten-general, retaining this title, Grand Vizier for the second time in 1273—1276. He retained this position for nearly three years and introduced reforms during his tenure of office. On his dismissal he retired to his palace on the Bosporus (Yalı). He accompanied the Sultan on his journey to the Paris Exhibition of (1287—1284) and remained in Europe for his health and died at Nice in Shawaq 1285 (Feb. 1659) at the age of 55. His remains were interred in Constantinople in a mausoleum beside the small mosque built by him in the Gedik-Pasha quarter. Pasha played an important part in the history of modern Turkey; with "Al-Pasha he is to be numbered among those who were men for reforms. With Jezewitz and Efendi (afterwards Paşa) he compiled the first grammar of Ottoman Turkish that was ever printed (Koalleh khānsārān, 1257; transl. into German by H. Kellgren, Helsingfors, 1875). The political testament of the last named was addressed to Sultan 'Abd al-Aziz, sworn to him in a literary skill probably from the pen of the Persian envoy Malcolm-Khān.

Turkey (London 1866), with Fudal's Formas on the title-page, p. 121 sq. & seq.  

(C. Huart.)

AL-FUDAIL. [See al-Fudal.]

AL-FUDAYIL. [See al-Fudal.]

FUDHIL. [See FUDAYIL.]

FULDE. [See FUL.]

FULK. [See FUL.]

The usual name for a ship in the Koran (safa is only found four times). Navigation seems to have made a profound impression on Muhammad's mind, as various passages in the Koran (Sura iv. 37; 11. 14; vii. 33; xx. 33; 33; xxxv. 73; etc.) - the fact that God has given men power over the waters (nahr kamawm), so that they may build ships, is quoted by Muhammad as a special proof of God's grace.

FULK is more particularly Noah's Ark. The Koran does so in some extent but it is rather the histories of the Prophets that give all sorts of interesting details of the building and equipment of the ark. By God's command Noah had first to plant the trees necessary for the building of the ark and he planted plant-trees (al-sa'af). During the forty years that these were growing, no children were born on earth. Being asked what form the ark was to assume, God answered: 'that the upper part and the back were to be like that of a cock and the hull also to be like the body of a bird, and that it was to have three stories (al-safala)'. The dimensions are variously given; according to the "posse of a scripture" it was 50 (sic) ells long, 30 broad and 30 high; according to other statements the dimensions were 600, 350 and 35 ells. The ark was lined in the ordinary way (al-fudha al-dawri), Sura liv. 35 and covered with pitch internally and externally; God caused a spring of pitch to well forth for this special purpose. On one occasion the disciples of Jesus asked their master to raise a man from the dead who would tell them what the ark was like. Jesus raised up 50 men according to Tabari, i. 107 (sic) of the Koran, the son of Nuh, from a piece of earth, and told them that the ark was 1,000 ells long, 600 broad and had three stories, one for quadrupeds, one for birds and the third for human beings. When the accumulation of terrors became a nuisance, Nuh seized the tail of an elephant and from it was produced a pair of swine which troubled the excrement; the mice became a plague, so he struck the lion on the forehead and a pair of cats came forth from its nose and destroyed the mice. According to the Koran (Sura xli. 46), the landing-place of the Ark was the mountain Gafni. (Cf. this article i. 1059 & seq.).

(H. Baier.)

FUNCAM. [See ar-Fudal.]

FUNDOK. [See Fudal.] The funduk is the fruit of a tree, round like a nut, enclosing a kernel like the pistachio-nut (Lilium). Also (in the dialect of Syria and Morocco) a house at which travellers alight, by the way side or in a town; an inn or hostel, corresponding to the Persian khana. The derivation is probably from the Greek xaldeos.

(A. S. Fulton.)

FUNDUKLY or FUNDUQLY, the name of the old gold coin of Turkey, said to be derived from the pearl border, which was likened to grains of corn (funduk) (Isma'il Ghalib, Takwint, p. 274). This name only came into general use when two different gold coins began to be struck. The Turkish gold coin that had been in use till then, usually called simply  Aviv based its weight on that of the dastuk. Down to the conquest of Constantinople, European, usually of Venetian origin and later Hungarian and Dutch dastuka, circulated almost exclusively in the Ottoman dominions. To make them pass current in Turkey they were countermarked 'pakh' by the authorities. The oldest native gold coin dates from 883 (1478) and was struck in Constantinople. These gold coins were of the same value as European dastuka and are therefore of about 23½ carat fine, and weigh 3.49 grammes (Hungarian dastuk 3.491 grammes, Dutch, 3.494), but well preserved specimens run from 3.43 downwards. This coin bore the most distinctive names: Alivin, Zelin (Zecchin), Florino, or Filère (Florence), Shahr (in the province bordering on Persia), Ashgir (in Egypt), Safin (in the Barbary States), Zenghi, Zedeliv, from the omnification etc.

A second gold coin was introduced alongside of the dastuk in the reign of Sulaym Anwari III. (1145-1345) = 1703-1730), of the weight of 2.6 grammes, and was called nephud (q.v.), and the old gold coin received the name fundukly. The latter has not been struck since the reign of Mahmud II.

FUNG (Fungi), a tribe or mixture of tribes in the Anglo-Egyptian Sudan. The name is said to be derived from a Shilluk word denoting "stranger" and is originally applied to a negroid race related to or identical with the Shilluk on the White Nile. They became prominent at the end of the 19th century a.d. by conquering an extensive portion of the eastern Sudan where they founded the famous kingdom of Sevatis. At the time of its conquest and subsequently to it their kings and notable intermarried with Sudan Arabs and ultimately claimed Arab descent, which for the most part genealogists traced back to the Mahdi in Mahal Khassala. It is noteworthy that the names borne by their kings a considerate proportion are non-Arabic and non-Muslim.

The Fung dynasty or Sevatis was founded by "Amrul Dunka" (Amara, the son of Dunka), who reigned from A.D. 1505 to 1534. In alliance with "Abd Allah Domba", the chief of the "Abdalik tribe, he conquered the country between the White and Blue Niles and established himself at Sevati, while "Abd Allah founded a semi-independent dynasty at Khartoum. The Fung dynasty lasted down to 1789 in which year the throne was usurped by the Mahdi, who reigned until the time of the Egyptian conquest.

This was the fall of the Fung kingdom, the last of the many. The Sonner family then replaced the Fung kings, who were in reality the Fung.

The Fung rise is a matter of the special interest to the Fung people, whilst the present Sudan has its own tribal rulers who were tributary to the Fung.

The present Sevati are a negro people in the Sudan province. Their district, called Dar Fung, extends south of North Lat. 12, from the Abyssinian frontier to the White Nile. Their head (shali) is a direct descendant of the old Fung king, but his tribe is small in numbers and unimportant. Even at its most flourishing period it seems to have made little advance in civilization, and their kings cultivated Muslim sciences only to the extent of occasionally attracting Arab scholars in their service.

Bibliography: There are several Media histories of the Fung kingdom, e.g. the Br. Mission. Or. 2745 (1885); others were used by Na'Im Shawk, but their mutual relationships have not been studied.

Cf. further: Na'Im Bey Shawk, "Twelfth Section of the Sudan" (Caire, 1905), chap. II.; J. Bruce, "Journey to the Source of the Nile in the Years 1768-1773" (London and Edinburgh, 1813), vol. II.; C. F. Wallis, "Seventeenth and Eighteenth Century" (Paris, 1876-1878); K. H. F. Wallis, "Le Sevati" (Paris, 1876); E. H. K. Schulte, "Islam in the Land of the Fung and the Sevati" (Berlin, 1893).
which flow the Nahar Kar fists and the Nahar al-Zarb, which irrigates by a branch Mitlat, is crossed by the celebrated caravan track of Khabur, the modern Khabur-l-Azad (see Von der Gabelentz, ‘Die Statuen der zweiten K.u.K. Expedition’ in the Zeitschrift für Assyriologie, viii., 1896, p. 328 et seq.; Lehmann-Haupt, ‘Assyriologie’ 1901, p. 486). On the west bank the Euphrates receives the Nahar Hanfis (Boyuk-Cal) which still preserves the name of the capital of the old district of Amtais and then enters the cataract district, which it does not leave till it reaches Gergar (see von Moitke, ‘Briefe über die Züchtung der Reis 1898’, p. 305—310; E. Huntington in ‘Zeitschrift für Assyriologie’, 1901, p. 183—204).

Leaving the mountainous country the Euphrates divides the flat tableland into two, and forms the boundary between Syria and al-Jazirah below Samasat. At first the river continues as before to receive important tributaries from the west only. Of these the most important is the Nahar Sudjar or Nahar al-Azir which crossed by the famous Kordiye Bridge, which, like the Singas of the ancients (cf. Kiepert, ‘Pommae Orbis Antiqui’, text to sheet 5, p. 1), is certainly to be identified with the Gok- 

Sü and not with the Bollam-Sü, on account of the Roman bridge that still survives in the latter (see Humann and Puchstein, ‘Reisen’, p. 303 et seq.). Below the rocky caisles of Kafur al-Koña and the crossing of al-Bina, of particular importance since the Crusading period (cf. al-Makrizi, l. 723 et seq.), there is still the Nahar Sudjar to be mentioned. In the early middle ages (12th—13th cent.), the later Kafur al-Najim, and al-Raaka were the main places where the Euphrates could be crossed. Below the last named place the al-Balq, rising in the neighborhood of Harran, joins the main stream at Raaka al-Sawwa, the modern ruins of al-Suruk (see Herzfeld, ‘Archiv fü r Orientforschung und Tigris-Gesell’, l. 160). It is true that the modern very important crossing at Der al-Zor [q.v., l. 936] seems to have had a predecessor in an ancient birtha (see above l. 724 et seq.), and is probably mentioned by Yakeh, ii. 662 as Dair Rumein, but it has only become of any considerable importance in modern times. The place of Der al-Zor at the present day was held in ancient times by Caracaces, the Kirkisya of the Arabs at the mouth of the Khabur, which flowing from Ra’s al-Abi, according to the repeated statements of the Arab authors, formed with its tributary the Karimis, from Tibr-Abi, a navigable connection between the Euphrates and the Tigris in the Nahar al-Thalathin, but, according to the recent investigations of Steck and Herzfeld, ‘Al-Makrizi’, l. 197, this must be regarded as more than doubtful. The place of the ancient Caracaces, the modern Der al-Zor, was filled, particularly in the later middle ages, by the double village of Ruhis, and the ‘Dullah of Malik b. Tawk, a little south of the former, the lands of which were watered by the Nahar al-Sahr, which began before Kirkisya, and was called after Sahn b. Abd al-Malik b. Marwan (see Peters, ‘Nippar’, l. 127 and 129 et seq.; A. Musil, ‘In Nordost-Turchien und Südstan- gastrophy’in p. 10 of the reprint from the ‘Archiv der phil.-hist. Kl. der Wiener Akad. 1913, u.

While modern geographers make Southern Mesopotamia begin at ‘Ana [q.v., l. 344 et seq.], already celebrated in the middle ages for its palms, where the cultivation of the date-palms in the Euphrates valley begins, the sitiof the middle ages as a rule place the boundary between al-Djestin and al-Tham much farther south on the Euphrates. The Chari Sable, which was led out of the Euphrates downstream from Harran, could be traced almost as far as Nadjid (see Peters, ‘Nippar’, l. 313 et seq.; but cf. L. Meisner, ‘ Von Babylon nach den Quellen von Ilirs und Hyrana’ in the ‘Archiv für Orientforschung und Tigris-Gesell’, 1913, p. 153), has unfortunately not yet been sufficiently explored for its real importance and relation to Khandak Sajib (see Nödeke, ‘Sammlung’, p. 57); G. Le Strange, ‘Eastern Caliphate’, p. 65 and to the Wadi ‘Ali al-Tamur (see Musil, ‘op. cit., p. 11), which, according to Ibn Serefan, flowed from the Euphrates at al-Rabb, far inside from al-Anbar, 12 from Harran possibly the Yam al-Ra’im in Peters, ‘Nippar’, in this part to the Tigre near Bakur (see Steck, ‘Die alte Land- schaft der Babylonier’, p. 24), but it seems to have been silent since, as the later geographers give this name only to a Tigre canal perhaps originally connected with the ancient Djudjail (see Steck, ‘op. cit., p. 33 and 220 et seq.).

Only a little further down at al-Anbar [q.v., l. 348], begins the great network of the Babylonian canal system which dates back to remob antiquity, although only the remains survive to-day. The main identification of the four main canals, Nahar al-Dahr, Nahar al-Sharar, Nahar al-Makass and Nahar Tujid, led from the Euphrates, is given in the article IBLA, l. 969 et seq. (for details see Steck, ‘op. cit., p. 25 et seq.); but in the present state of our knowledge of the country it can only be regarded as highly hypothetical. Shortly after they branch off, the Euphrates divides into two arms. The western arm, according to the Arabs, the river proper, which flows past Kifia and is finally lost in the Bathyra [q.v., l. 675 et seq.], west of Wasi, is also called al-Akbam, which Musil (‘op. cit., p. 11) has found E.N.E. of Kerteba as the name of an ancient canal, perhaps forming the northern continuation of the modern Hindyeh arm. The eastern arm of the Euphrates, which even in Ibn Serefan’s time held a greater stream of water, for the first part of it corresponded to the bed of the modern Euphrates proper, until about 1880 the river began to pour the greater part of its water into the Hindyeh arm (see Peters, ‘Nippar’, in this part to the modern Hindyeh, p. 38 and 37), again divided near Bakur. In its eastern arm, which flows to the Tigris under the modern name al-Makass, Sartah al-Khafir, Nahar al-Khafir, in Nahar al-Sarha via the town of al-Nil, the modern Nillie, has been thoroughly explored by Steck and Herzfeld (‘Archiv für Orientforschung und Tigris-Gesell’, 1914, p. 344—347) except for its eastern extremity. How far the western branch, the Nahar Surt al-Asaf, corresponds to the modern course of the Euphrates or the canal Shajal al-Nil, Shajal al-Kar which flow to the southeast, cannot yet be exactly determined. This arm likewise ends in the great swampy area of the Bathyra, the outflow from which, Nahar Abi ‘Ammal, which runs into the Djudjail al-Azwir, may in a way be described as the lowest course of the Euphrates. This is in its main outline the picture drawn by the Arab geographers, particularly Ibn Serefan. That the details, which these writers give us, are not always intelligible, is remarkable considering the limitations in our knowledge of the country; but contradictions seem to be found in them, not least to surprise, when we consider how much the river has changed its course, of which the
shifting to the south in quite recent times in its
conference with the Tigris— a striking example
(see Gage, Journal, xxxv. 11 with map). The
Arabs themselves knew of considerable changes
in the course of the Euphrates; for example, Maserati
(Marq. 1, 216) says, that in the period of Mura’s
prosperity sea-going ships came up as far as Nodjef
in the old river (al-Aff). A detailed account has already
been given [1, 575 et seq.] of the Arabi’s knowledge of the history of the Euphrates. It is
perhaps evidence of the gradual alteration in this
area of arroyos that, according to certain
authors (see Bibl. Gage, Ar. iv. 200, note 1; also Yaqut, S. 5), an arm of the Euphrates—
which can probably only be that of the NafrSah al-Asil— entered the Tigris at Waith. Not only
is the history of the Euphrates in antiquity and the
middle ages still very obscure, but we have only
very meager information regarding the changes
in its course in recent times. For what is
known on this subject we can only here refer the
reader to the general textbooks on geography
and the encyclopedias as well as for the
important role of the river.

Bibliography: The Arabic geographers and
the more important western writers are given
under NABATA: we may here mention the
compendium of C. F. Kreger’s excellent Nava nar
Athabata (1, 400,000). Important monographs are
mentioned in the text. For further details
of the separate articles. (R. HARTMANN.)

FURKAN (â‘), Discrimination, revelation,
salvation. The word is found in Arabic
literature as an original Arabic word and also as
one borrowed from the Aramaic. The meaning
of the word in various passages in the Koran
cannot always be exactly determined. Muhammad
made a wide use of it; he was fond of words with a long vowel in the last syllable on account
of their solemn sound.

The Arabic word means separation, designation, proof. Probably, however, this meaning is
not found in the Koran, although the commentators
sometimes explain it as having the theological sense of meaning of “discrimination
between true and false”. It is not impossible that Muhammad came by this means to use it in the
meaning of

2. Revelation, as this meaning of the word is
not found in the Arabic. Thus it is applied in the Koran in pre-Muslim revelations, e. g.
Sura xx. 95, iii. 2, where, according to Zamakhshari, it is a name for the whole class of heavenly
books. But it is used of the Koran in Sura xx. 1, which is a description of the Bible. It is thus that
sent the Sura to his servants that “he might be a warner to the creatures”, and naming its
writers it has become a synonym for Koran.

3. In the meaning “salvation” the word is certainly an Aramaic loanword. Thus in Sura viii. 42
“... and what we have revealed to our servant
on the day of the Sura, on the day when the
twelve beasts met”, Here the battle of Badr is called the “day of the Sura”, Some of the commentators
on this passage give the meaning “day of victory”. But this is the Arabic furkân, synonymous with the Hebrew yâsîr “salvation”.

FURU’ (See above, P. 104).

FURUDD (See Yark and Yark, ii. 119 and 119).

FURQAN (Abu ’l-Kasim Khun), a Persian
poet, born in Khusn, descendant of Fath-Allah Khun, the prince of princes, lived for long in Khorasan,
then settled in Tehran, where he lived a retired life only associating with mystics. He lived in the six
century; we do not know the dates of his birth or death. Among his poems he wrote verses on
the death of Muhammad Shah and the accession of Nasir al-Din.

Bibliography: Reih Kuhl Khan, Modinjma

FURQAN AL-DIN (Muhammad Mahaou), a
Persian poet, born in Tabris in 1323 (1508); an
aristocratic student from the age of seven, he entered the service of various individuals of high
rank, among them Perudin Mirzâ, a prince of the
royal family, who had written poems under the name Yarrâkh (a name of the hero Ferdinand)
Ferdowsi). Yarhâz, from whom he took the
title Furqan; Farehzi. In Tehran he held a
high position in the office of the chancellor.
He collected his Arabic and Persian poems in
His Thanhâr al-Shâh ("Memoirs of Youth"), which
forms a kind of autobiography.

Bibliography: Reih Kuhl Khan, Modinjma
al-Furqan, ii. ii. p. 396–400.

FURQANI, i. Surname of the Persian poet
Muhammad of Isfahan, who had studied the
Al-Quran of Falsafi and became poet laureate to
Tondor Shah Durrani after spending his youth in
travel.

2. The surname of a janissary of Ahwaz in the
time of Sultan Shâhân, skilled in music and the
composition of melodies.

3. The surname of Mirzâ Muhammad Hassain Jafar Khan Zaki al-Mulk, a Persian poet and editor of
the Farhâz, who died in 1695.

des isma. Dieckhaus, ii. 491; Browne, The
Persian Revolution, p. 404.

FUSTAT. [See Cairo, i. 310 et seq.]

FUTA DJALLO, a district in West Africa,
the N.W. of French Guinea, to which it is
politically attached. It consists of a
mountainous area, the most important in West Africa
with an average height of 3000, 3500 feet. These
highlands border on the E. on the mountains of
the Mandingo territory; in the S. they slope in
a series of sloping spurs to the level of the
Atlantic Ocean, while in the N. they gradually
slope down to the latter. The geographical
and orographical conditions of the land are slightly
known at present. The most recent journeys of
exploration have mainly established that the south
and west borders are formed of sandstone plateaus,
while the other kinds of stone, granite and gneiss,
occupy the centre. The structure of the mountains
is rather irregular; the general picture is of a
plateau from which rise peaks 600 to 1000 feet
high, bordered by a sandstone range deeply cut
by erosion.
The average elevation of Futa assures the land a more moderate and healthy climate than the coast lands. The temperature is lower than on the coast and the thermometer shows considerable variations at all seasons of the year. During the dry season (December to June) differences of 25, 30 and 35° C. may be noticed in the course of a single day; during the winter or rainy season (May to November) the nights are always fresh. Nor does rain ever entirely stop during the dry season, but falls very heavily in winter, and reaches its maximum in spring when the winds laden with moisture from the Atlantic Ocean set in. Although Futa Djallon has a smaller rainfall than the coast, it has a better supply than the neighbouring lands on the Upper Senegal and the Upper Niger.

Futa Djallon is one of the most important hydrographic centres of Africa. We may distinguish two great watersheds, one in the S. in the district of Timbo, where the Balato (Bafing), the Teme, the Kinkosso, a tributary of the Niger, and the Konkoune, which flows into the Atlantic Ocean, are, and another in the N., in the neighbourhood of Labé, from which flow the Gmaila and the Salla (Komm, also known as the Konkoune; Béagnou). To go beyond the boundaries of Futa the rivers with a S. or S.W. course have to cross the mountain wall, which they do in numerous falls, rapids and deep ravines, usually running from N. E. to S. W. Although the slope of the country is much more gradual in the N., the valleys here are quite as narrow and often overhung by steep cliffs.

Futa has long been regarded as a country with a rich and luxuriant vegetation, but it does not seem to deserve this reputation, at least not everywhere. The most frequent feature in the structure of the country is the "bovalo," a rocky plateau covered with ferruginous boulders, sometimes overgrown with thorn scrub, but sometimes so bare and stony that some travellers compare it with the desert of the Sahara. During the rainy season the ground is covered with grass and a kind of grassy vegetation which varies in thickness with the nature of the country and lasts for longer or shorter periods. Trees are lacking except in the immediate neighbourhood of the water-courses; nevertheless, the valleys are very well wooded; on the slopes and in the ravines which collect the necessary soil, little wooded islands (dambien) are formed which, where they are found in large numbers, seem to form an extensive continuous forest. The villages are surrounded by orchards of oranges, melon, kola and mango trees. The kurite or butter tree and various kinds of bamboo are widely diffused, but the palms are small and few in number. Finally in some granite districts we find meadows, cultivated fields and plantations beside one another which give the country a certain similarity to parts of Switzerland and the Aveyron. But this is the exception.

The fauna is not so rich as in the Soudan; it is represented by antelopes, gazelles and especially monkeys, the latter being so numerous that the inhabitants have to institute "drives" to protect their crops from being ruined by them. The scarcity of large carnivores has favoured the development of cattle-raising, so that at the present day there are three kinds of sheep and four of cattle in Futa, of which one, the buffalo, used as a beast of burden, was introduced into the country by the pastoral Fulbe.

The number of inhabitants is unknown; it is roughly estimated at 500,000 - 700,000. The principal settlements are Timbo, the residence of the Aimow (9000 inhabitants), Lake (5000), Medina, Kade and Fugumba (10,000), the holy city, where the rulers are consecrated. The population is composed of various elements, among which the Mande predominate. We find representatives of the different branches of this race here, Fulbe, Senoufou, Wolof and Bantche breeds like the Kassawenke and notably the Fulbe, who are the result of a mixture of the Mande and Fulbe and during the last 150 years have become supreme over the other groups. There also are Feulh or Fulbe, but they are less numerous in Futa proper than in the surrounding territories and follow the pastoral life of their forefathers, although there is a marked tendency among them to exchange a nomadic for a settled life.

The social divisions of the people correspond to some extent to this diversity of origin. The highest class consists of an ecclesiastical and military aristocracy, the former composed of marabouts, the latter of professional Fulbe, the descendants of Muslim immigrants or native chiefs who have become converted. The former have special titles (alpha, cheikh etc.) are grouped in families like the Roman "civitas" and take an active part in the political life of the country; they have seats in the assemblies and supply the Almanys with their civil and military officers. Next to them are the negros and the Muslim Fulbe; they attend the assemblies as vassals of the nobles but as a rule take no part in their deliberations; they live in villages which are called ger. A third class comprises the non-Muslim freemen. These are usually artisans (weavers, carpenters, shoemakers) and live in separate groups in the ger or near them. They are endogamous and are excluded from any share in political life. Lastly slaves are very numerous, because the conquerors of the Soudan, e.g. Al-Hadjj Omar and Sanah by importing there to exchange their kind of grain for the powerful vegetation which varies in thickness with the nature of the country and lasts for longer or shorter periods. Trees are lacking except in the immediate neighbourhood of the water-courses; nevertheless, the valleys are very well wooded; on the slopes and in the ravines which collect the necessary soil, little wooded islands (dambien) are formed which, where they are found in large numbers, seem to form an extensive continuous forest. The villages are surrounded by orchards of oranges, melon, kola and mango trees. The kurite or butter tree and various kinds of bamboo are widely diffused, but the palms are small and few in number. Finally in some granite districts we find meadows, cultivated fields and plantations beside one another which give the country a certain similarity to parts of Switzerland and the Aveyron. But this is the exception.

The fauna is not so rich as in the Soudan; it is represented by antelopes, gazelles and especially monkeys, the latter being so numerous that the inhabitants have to institute "drives" to protect their crops from being ruined by them. The scarcity of large carnivores has favoured the development of cattle-raising, so that at the present day there are three kinds of sheep and four of cattle in Futa, of which one, the buffalo, used as a beast of burden, was introduced into the country by the pastoral Fulbe.
important social position. They form a kind of hierarchy; at the top are the *fula* who have often studied among the Moors of Tangier, next come the *fanis* or heads of mosques, then the *terss* and the *sok* who have charge of the schools.

The government is a kind of aristocratic republic with an elected sovereign. The executive power is in the hands of a *sultan* (*salamone*) who is at once head of the army, judge and high priest. Before the establishment of the protectorate the sultan was chosen by the Council of Elders, acclaimed by the assembly of freemen, and received the turban of investiture in the town of Fagua. He was chosen from among the descendants of the two founders of the Fula state, the *Allaya* (descendants of Karamoko Affa) and the *Soroy* (descendants of Ibrahim Sor). In principle the elected sovereign ruled for two years, after which he retired for two years in favour of a representative of the rival family. Devoted to prevent rivalry and civil war, this rule of alternation was not always regularly observed. The Council of the Elders which chose the sovereign, could also on occasion dispose of him; in normal times it decided, under the presidency of the sultan, all questions of any importance of politics, law and religion.

Futa was divided into provinces or *sarrac* (9 in the 18th century, 13 in 1831, 11 in 1847), in which tributary regions were attached, whose numbers varied with the success of Fula expansion. Each *sarrac* was administered by a governor (*sambo*), appointed by the sultan and assisted by a council of notables. The villages obeyed the authority of chiefs, who likewise were assisted by a council. In this organisation, which some European travellers have compared to that of the Carolingian Empire, the central power was very weak. Some governors, those of Labé for example, were masters of territory more extensive than that of the sovereign and had at their disposal resources greater than his. Rivalry between the larger needed to secure his election, impoverished by the necessity of keeping open tables for his adepts, the sultan, and in general incapable of imposing his authority respected.

The history of Futa Djallon down to the 18th century is obscure. About this time we find the Djallonke in the land, who had driven out the original inhabitants, besides them a body of Fulb strewed by the extensive pastures, and finally the Fula already in such numbers that their name was applied by Europeans to this part of Africa (the name *Fons Gueram, land of the Fula*, is found in a map by d'Avrille of the year 1717). Among the Fula were many Mubbalians, who undertook the conversion of the fetish-worshipping tribes to Islam under the leadership of *sarracenas*. They overcame and formed small communities of their own, whose chiefs recognised the authority of the Djallonke. In the second half of the 18th century the Fula succeeded in liberating themselves and founding an independent state. This transformation was the work of two men, the慕三舍 Basham Sanbego, who claimed to be of Arab and Sherif origin, and his cousin Sor for his energy and bravery. A holy war was proclaimed against the infidels and the lands to be conquered promised as spoil to all the chiefs who took part. The Fulbe adopted Islam as sacred, but the Djallonke resisted and were conquered. Their lives were respected, but a third of their lands and cattle divided among the conquerors. An assembly at Timbo then chose Ibrahim as sultan, and he took the name Karamoko Affa. The new sovereign received the turban of investiture at Fagua from the heads of Fula Othama Seriakhe, governor of the town; he made the Fula chief swear fealty to him and gave Sory command of the army. The conquered country was divided into provinces or *sarrac* to the number of 9 in memory of the companions of the Prophet.

Karamoko became sultan in 1791 and was replaced by his son, son of Karamoko (1801). This youth of fifteen proved incapable of securing order in the interior and could not prevent the invasion of Futa by the Wasoojunka. Sory had to be recalled; he drove out the enemy and ruled the country without opposition till his death (1814). Power passed to his son, Nadu, but Fula Sultan protested and was supported by a party of nobles. Two rival off-springs were thus formed, the Affas and the Soroy, whose rivalry steeped Futa in blood for fifty years. An agreement was finally reached between Abdullaye Badumbu, chief of the Affas, and Alfa I-Ganfei (*Abd al-Allah*), chief of the Soroy, it was decided that each of the two chiefs should govern alternately for periods of two years each. This arrangement was violated almost as soon as it was concluded. Abduljadeii lahad his colleague assassinated and remained sole master of Futa for 15 years.

On his death (1847) disorder again broke out. The Soroy and Affas each chose an alim, and flew to arms. Al-Hadjii Oumt attempted without great success to bring about a truce between the two parties; it was only after 1856 that peace was finally established in the country. For 26 years, Affas and Soroy lived on good terms and governed almamy by turn. This was the most brilliant epoch in the history of Futa. The almamy succeeded in restraining the turbulent spirits of the nobles and subjected the lands adjoining Futa to their authority.

The collapse of Djallonke, the fetish-worshippers of the upper Casamance, the Gambia and the Rio Nuces had to become tributary to Futa.

Europeans had for long been trying to enter into relations with Futa. During the first half of the 19th century French and English travellers were sent out from the 'factories' of Gambia and Sierra Leone penetrated into the interior. Such were the Frenchmen Moliere (1819) and René Cuillé (1827), and the Englishman Cooper Thompson as well as various missionaries. In 1850 Hecqard spent a year there, taking and collecting valuable information on the history and civilization of the country. Lambart explored it in 1859. From 1850 on French missions began to increase in number. Olivier de Sendeval, Gabin and Amadou endeavoured to find accessible routes to Futa and entered into commercial relations with the natives and made preliminary surveys for the building of a railway into the interior. In 1881 Doctor Bayol signed a treaty with the almamy giving the French the exclusive right of establishing commercial depots in Futa and its dependencies.

The disorders that again broke out about this time facilitated the task of the French agents.
The asylum Ibrahim Sory, having to give up his powers after his two years of office, was abandoned by every one, but, armed with slaves, he overcame his adversaries and resigned alone till 1887. On his death two Surya rivals, Aliu Mamadou and Bokar Mamadou, disputed the title of asylum. Bokar won and, feeling the need of support against his enemies, fell back on the French. He therefore gave a good reception to the mission under Flat and Fria and concluded with them a treaty which placed Futa Djallon under the protection of France. For several years he remained faithful to his agreement, but thus adopted a hostile attitude and tried to impede the passage of caravans through his country. Wishing to get rid of the Council of Elders, he aroused the discontent of the nobles, who deserted him and proclaimed his brother Abdalaye in his stead. Bokar triumphed over the rebels, took Abdalaye prisoner and put him to death; but some of the people took advantage of the occasion to demand the release of Bokar’s prisoners, invaded Futa, Bokar tried without success to offer resistance; he was conquered and slain (November 1896). The French chose a new asylum, the province of Timbo, Baris and Kalen were left to him while the other “divels” were declared independent. A French resident was installed in Timbo. Since then the geographical and economic survey of the country has been pursued by several expeditions of which the most important have been those of Dr. Maclean (1868-1899), while a railway, which has now reached Timbo, was begun to connect the Upper Niger and French Guinea through Futa.

**Bibliography:** Bérenger-Féraud, Les Peuples de la Mandingue, Paris 1871; Dr. Bayol, Voyage dans la Casamance, Paris 1886; René Caillié, Jour de Fét à Terang, Paris 1878; Brijd, Reisboek van Nederlandsch Zuid, 1873, ii. 292 et seq. L. isthe related of the Caliph al-Nasir ibn Muhammad (577-663) who died 1180-1182, who according to the Khiriat al-Maghrib, was an Imam, that he granted several princes and nobles the rank of fatwâ, with which he associated the privilege of rayw al-adilin. Installation consisted in the ceremonial putting on of a pair of trousers, called salwar al-fatwa or livha al-fatwa, and drinking the knight’s cup (bah al-fatwa). The knight, whose rank was hereditary, had the right to depel the cup or trousers or both on his arm. — According to the Khiriat al-Talib, the ‘Aid family of the Al Muriya had from the time of al-Nasir the right to grant fatwâ. The Al-Maghrib al-Din Muhammad, who belonged to this family, also granted the al-Maghrib al-adilin. Ibn Djalal, 28th ed., p. 260, where on l. 11 the reading خيرات (in Arabic) is to be retained mentions a brotherhood in Syria who proved their fatwah by ruthlessly attacking the Ruspiy, an oath sworn by them at the fatwah was kept in all circumstances.

In Asia Minor the Bajjita found brotherhoods whose members (ahsuf) had for the most part the same trade and lived together in a monastery (ahlasya) under a superior called alif on the earnings of which they did outside. After dining together they spent the evening in song and dances. The dress consisted of a cloak (qaf), a white woolen cup (fahsa), and a position of which was a strip of cloth an ell. long, and shoes (ahl sa). In the girdle they wore a knife two ells long. They were hospitable to strangers and were ruthless in their opposition to the.servers (in the same governor) and their followers (ed. Paris, ii. 260 et seq.). — In Kansya the same traveller stayed in the alyasi of the hajj the Kalam pupils, whose inmates (ahl sa) wore alif and traced their fatwah rule to “All. They were distinguished for their hospitality (ed. Paris, ii. 358 et seq.). — During his travels Ibn Bajjita frequently found hospitality in such Chiyasi monasteries (cf. ed., 270-275 passim).

In the language of the Sufi fatwah is the expression for a disposition which is manifested in dif-
FUTUWA — GABES.

GABAN, properly GANNOUAT (cf. Abr. 1-Fa-
ma, Omans. Soyr, ed. Brune, p. 359 and Karloviczy,
Spets, Claschnitt, I, 8), an Armenian moun-
tain stronghold on the Taber-Sou, a tributary of the Tchajun, now called Gecem and belonging to the Tchajun and the
banks of the midland of Taber-Sou.

Gabes (Kasba), a town in Southern Tu-

ants, in 33° 52' 28" N. Lat. 10° 4' 6" E. Long. (Georgiev), 60 miles south of Sfax and 250 south of Tunis, on the west coast of the Gulf of Gabes or Leke Ortiz, on the site of a rocky lth-

the sea from Shott el-Fedjed. It is the capital of the district of Gabes.

Gabes includes three settlements, the town of Gabes, a European suburb with 12000 inhabitants of whom 500 are French, and the native villages of Diars (4000 inhabitants), Chenini (1000) and Mensli (3500). The European town lies on the right bank of the Wadi Gabes about half a mile from the sea. The mouth of the river has been made into'a harbour which ships of small draught can enter. Larger ships have to anchor in the open sea in an insecure roadstead, full of shallows where the

side rises 9 feet. The traffic in the harbour is not very considerable as the total exports and imports scarcely exceeded 25,000 tons. The native settlements lie in groups on the river along the Wadi Gabes. This stream, which rises about 8 miles from the sea, assumes the vegetation of a beautiful oasis in the verdure of which forms a striking contrast to the barrenness of the surrounding country. The gardens which contain 150,000 palms and about 200000 olive trees, cover an area of 7000 acres of which 3000 are watered by the Wadi itself. This area is about 4 miles long by 5 to 6 broad. The distribution of the water is regulated by mechanical means, some ancient and some modern. The palms are of very fine quality but the dates are only mediocre. Fruit-trees on the other hand grow in a marvellous fashion, whereas the orange and olive trees have always been the submission of visitors. It has been said and with reason", writes the Sheikh el-Tidjani in the sixt century, that Gabes is an earthly paradise and a little Damascus". The soil, it is true, is extremely unhealthy, and the dwell-
inghouses have had to be built outside the gardens in which only a few negroes live regularly. Beyond the palm-groves lie areas which are at present practically desert but might be fertilised by irrigation works. Gabes deserves the description of a "town which is both maritaine and Saharan" given it by el-Tidjani, from its geographical situation and appearance.

In ancient times the town of Tangier stood on the site of Gabes. Founded by the Phoenicians it was one of the most flourishing seaports
of the "Syrte", it passed to the Carthaginians, then to the Romans and under the empire was raised to the status of a colony. Nothing else is known of the town however; some of its ruins were still standing in Shaw's time (1793 - Ch. iv.), and were used in the building of Gabes. We are equally ignorant of the circumstances under which Gabes fell into the power of the Arab. After the triumph of the Fatimids the town was placed under the governorship of the Kedans Lokman, whose descendants still exercised their authority in al-Bakri's time. Under the rule of the Fatimids and Zirids Gabes seems to have enjoyed great prosperity, Ibn Hawkal extols the fertility of the oasis, the excellence of the silk and wool manufactured in it, the activity of its trade and the number of the merchants who frequented the port. A century later al-Bakri adds a few details to this picture, the main outlines of which are unchanged. "The town", he says, "is surrounded by a wall of large stone from ancient debris, possesses a magnificent mosque, and numerous houms and caravanserais." The gardens included, besides innumerable fruit-trees, mulberries and also plantations of sugar-cane which is no longer found there. The population was composed of Arabs and Alifri, i.e. the descendants of Labinis Berbera. The environs of the town were occupied by sections of the great Berber tribes of Lebdia, Nefisa, Zogha etc. These natives, who were rude and uncultured, had most probably retained Abid doctrines. Ibn Hawkal indeed describes them as "people, inclined to evil and professing a religion which is corrupted by an admixture of heresy".

The Hīfīl invasion introduced new Arab elements to Gabes and its neighbourhood. According to Ibn Khaldun (Barberia, transl. de Szoe, p. 33, 34 and li. 21) the Caliph al-Mustanṣir granted the district of Gabes to the tribe of Zogha when he sent the Hīfīl against the Zirid Sultan. Whatever be the truth of this statement, it is a fact that the Zogha, after inflicting a severe defeat on the help of the Kedans and the Alifri the Zirid al-Mustanṣir on the plateau of Haidereen, settled in Gabes. On the plains the Zogha established a little state there, which remained independent down to the middle of the 15th century. After the capture of Madîna by the Sicilian fleet Gabes recognized the authority of the king of Sicily for several years (1488-1559 A.D.) until in 553 (1559-1660) it was taken by "Abd al-Mu'min and the last representative of the Beni Djam" in Morocco.

The Almohads, however, had great difficulty in enforcing their sovereignty on the people of Gabes. From the end of the 14th century they constantly tried to throw off the yoke and took an active part in the struggle of the Bani Ghibiyan against "Abd al-Mu'min's successors. Ali ibn Ghibiyan and his ally Karakabî became masters of the town (551 = 1159 A.D.). The defeat of this adventurer and the Almohads' arms enabled the Almohad Caliph al-Mu'azzam to regain possession of Gabes (584 = 1187 A.D.), but Karakabî was not long in re-entering it again. He was again driven out in 591 (1195) but Yahya ibn Ghibiyan installed himself there in his turn and it was only in 601 (1204-1205) that the Almohad al-Nijm definitively recovered the town. The allegiance of the people of Gabes nevertheless remained very uncertain; throughout the 13th and 14th centuries they showed themselves as independent of the Hīfīlī as they had been of the Almohads. From 1288-1344 the Beni-Mekki who ruled at Gabes freed themselves of their allegiance to the sovereign of Tunes. Hīfīlī authority had hardly been re-established when the Mamluk expedition into Ifriqiya gave the people of Gabes an opportunity to rebel once more. Revolts again broke out in 1379 and 1387, stirred up by a certain "Abd al-Wahhab, a descendant of the Beni Mekki. To put an end to this state of affairs Abu 'l-Abbas had to lay waste the oasis and cut down the palms, but a century later in 1469 a rebellion again gave evidence of the turbulent spirit of the inhabitants.

The constant turmoil seriously affected the prosperity of Gabes without however destroying it. The Hīfīl invasion does not seem, however, to have produced in Gabes the disastrous results that it did in the rest of Tunisia. Idriit is still able to describe Gabes as a considerable town with a large quantity of merchandise in its bazaars. He notes, however, the disappearance of the silk industry; but trade by sea was still active and remained so throughout the middle ages. It attracted to Gabes merchants from all parts of the Muslim world and even Christians such as the Phoons were allowed to trade there. The tomb of one of the companions of the Prophet, "Ab al-Bakr al-Anṣarî, was also a much frequented place of pilgrimage. Nevertheless, from the beginning of the 18th century a.d. manifest signs of decline may be noted in Sheikh al-Tijani's account. A number of buildings had fallen into ruins, for example the palace al-Arbaiss, built in the Khaṣba by Rashid ib. Djemâ' and the al-Mennâr tower mentioned by al-Bakri. In the 18th century it was still worse. "This city", writes Los Aficamans, "has much diminished in honesty and good manners since it was sacked by the Arabs..." The inhabitants are negroes, poor labourers and fishermen who are much oppressed by the kings of Tunis and of the Arabs.

The lot of Gabes hardly changed under Turkish rule, although the harbour continued to export the products of the Siidân which were brought thither in caravans.

Gabes was occupied by the French in 1831. After the conclusion of the treaty of Ksar Schla, great unrest was manifested in the south of Tunisia. Immediately after the bombardment of Sfax, therefore, the French troops were sent to Gabes, the inhabitants of which had taken arms. Djemâ' and Mezidi surrendered almost without resistance on the 23rd July. A. camp was pitched at Râs al-Wâlî to command the river on whose waters the existence of the oasis depended. When peace was established a European town was built between the oasis and the sea. Since then Gabes has become the headquarters of a military command which extends over the whole of Southern Tunisia and is the residence of the civil commissioner. But the attempts made to bring back to this part of the caravans which, since the French occupation, have been deflected to Tripoli and have restored the town its former economic importance have in yet produced magnificent results.

to provision Kairawän. The surrounding country was dotted with equally prosperous villages. Over 200 could be counted which were called the "Kuûs of Gafsa". The general wealth was attested by the amount of taxation which annually reached 50,000 dinars (£ 25,000), Idrisi confides. As-Bakri's account. "The inhabitants" he adds "have become Barbers, the majority of them speak African Latin". Many of them had still remained faithful to Abd-al-Dar's doctrines. As-Bakri in fact mentions their custom of fattening dogs for food, as was the custom in various regions, particularly Sidjilmasa. Cynophagy is still practised by the Abdis of Djerba.

The Ifhili invasion introduced a new element into the population of the country round Gafsa. The Almohad tribe settled near the town. With the help of these nomads, who after devastating the country remained and entered the service of local chiefs to be enabled to live, a certain 'Abd 'Abd b. Muhammad b. al-Rand founded a kingdom in 449 (1053-1054) which comprised in addition to Gafsa the greater part of Ksíyila and lasted for over a century. The territory of the Banû Rand, although overthrown by 'Abd-al-Mu'in in 524 (1130-1131) and restored on his death, did not finally disappear till 576 (1180). The rule of the Almohads and Hafsid was, however, never solidly established in Gafsa. The inhabitants of the town, like those of the Djebel, were distinguished for their turbulence and their rebellions. In the course of the wars between the Banû Ghânîya and the Almohads Kârâjîlly installed a garrison there under the Kadi Kârâjîlly. The Almohad Caliph after retaking the town destroyed its walls, but took the town again. In 1522 Gafsa fell into the power of the pretender Ibn 'Abd Amara; in 1538 a new rebellion broke out under Abu Bekr b. Yemân. At the time of Hasan's invasion of Ifhiliya, the people of Gafsa hastened to recognise the authority of the Marinid sovereign. At a later period the Hafsid Abu 'L-Absâd had to suppress several rebellions but he only put an end to them by pouring down the palm-trees. During the second half of the 17th century Gafsa finally made itself independent under princesses of the Banû Khaif family. The town suffered considerably from these disorders. "The town", says Leo Africanus at the beginning of the 16th century, "is inhabited but the buildings are ugly except the temple and some other small mosques..... The inhabitants are courteous but very poor because they are much oppressed by the king of Tunis". Turkish rule was not of such a nature as to restore Gafsa its former prosperity. It was a very wretched little town when it was occupied by French troops under the command of General Freycinet on the 29th November 1841.

GAGAUSES, a people of Turkish origin speaking a pure Turkish language but professing the orthodox faith; their numbers are small. They live in isolated colonies and at the present day are found chiefly scattered over Bessarabia (mainly within the triangle formed by joining Iasi-Sofia-Kagul, in the district of Trajan's wall and also at Bender and Akkerman), on the west coast of the Black Sea from the mouth of the Danube and Sislaw to Cape Emine, in the Dobrudja in Romania (Nicolae and Taita) and in Bulgaria, also in the wilayet of Adrianople particularly in the kazas of Haya, in the mandjas of Seres (Sinni and Selhovo) and in Kazan Karabagh. In the Balkan Peninsula they seem to call themselves Sırğed or Sérğ; in preference to 'Gagauzes' which is, however, also used there.

The origin of the Gagauzes is somewhat obscure. As in the East it is not linguistic or ethnological features that are considered essential but religion alone, they were classed by the Ottomans as Christians with the Christian Bulgars. It seems remarkable that in Russia also, even in Bessarabia, where the great mass of the Gagauzes now reside, their proper name is little known and it is only at a comparatively late period that the name Gagauzes appears in Russian authors. They were officially and usually are simply identified with the Bulgars and in all statistics classed with them. In consequence of this confusion, accurate figures cannot be obtained. In popular language on the other hand they are correctly called frausnemego turki (Orthodox Turks).

The Gagauzes are certainly Turks and probably the descendants of the so-called Kara Kâplak and therefore, like the Ottomans, descended from the Oghuzs or Uzes, as is already suggested by their name Gagues, in which case there is a contraction for *ek-* while gey (probably equal to gah or goh) is a distinguishing mark of the clan. The Oghuz horde while still hitherto separated on their westward migration. While one section, the Saldajks and later after them the Kungly, the present Ottomans, went through Persia to Asia Minor and adopted Islam, other sections went to the steppes of South Russia, where they led a nomadic life; first the Polcenaghi who were next pressed westward by the Uzes or Torks, who were related to them, till finally the Rumans or Polowzes, who came last in the middle of the 18th century, forced the main body of the Polceneghi and Uzes over the Danube, where they settled in Byzantine territory, the majority in the Balkan Peninsula. One section, however, which settled in Russian territory, was comprised by the Russians and at the same time, it seems, converted to Christianity, and served like the Cossacks as frontier guards against the Polceneghi, Turks, Kuyes and Berendeyers under the collective name of Kara Kâplak (Cerugio Klohashi "Black-caps"). But before the Slavifying process which began with the conversion to Christianity had been completed, the great Mongol invasion took place in the 13th century, which forced the tribes already Christian to migrate to the Balkan Peninsula, Hungary, the Caspian and even to Asia Minor (Phrygia) and Egypt. The remnants that settled in the Balkans retained their language and religion even under Ottoman rule, while their relatives who had settled there as pagans in the 13th century became Muslims and were merged in the Ottomans; the other branches that had broken off also lost their identity.

From 1750 to 1846 an interesting migration took place of the Gagauzes of the Balkans — along with a similar movement among the Bulgars — back to Russia over the Danube (till 1760 into the New Russian district, 1787—1791 in the Duma district); in larger numbers in 1801—1812 in Bessarabia, this seems to have taken place without the co-operation of the Russian government, which did not till a later period begin to allot lands and provide for their administration systematically. The reason for this emigration was presumably the persecutions, still commemorated in Gagauz songs by the robber bands (the Dogly and Kyry (yaly) of Pawzandoglu (Pascha oglyh 'Ottoman') the notorious Pascha of Widdea and Kara Füzi.

In the sixteenth century the Gagauzes numbered about 24 Gagauz colonies in Bessarabia numbering over 26,000 souls (38% of the total population), which has now grown to over 70,000 according to Moghkov's estimate, but this is certainly exaggerated. Romania contains about 3,500 Gagauz to which may be now added 1,747 Gagauzes in the recently ceded district of Sislawia. The figures for Bulgaria and Turkey are unknown to me. In any case the total number of Gagauzes including the Sırğedi does not exceed 100,000. As they live in isolated groups and have no common intellectual bond they are destined to be slowly but certainly merged in the peoples among whom they dwell.

The administration of the Gagauzes of Bessarabia still enjoys certain colonial privileges (according to the colonial statute of 1819) and certain liberal institutions which date from the period of Romanian rule in Bessarabia.

On the whole they are comparatively poor and are almost entirely engaged in cultivating vegetables and the vine. At an earlier period they were also shepherds and cattle-rearers. They are no longer distinguished in dress or manner of life from their neighbours. The position of women among them is a relatively low one.

The most striking features in the character of the Gagauzes are frugality, an extraordinary avarice and want of hospitality. To these are added cunning and a certain pride and independence of spirit, which prevents even the poorest from entering a position of servitude among the neighbouring peoples. They seem to have displayed very little intellectual activity. They are accused of being stupid and among the Rumans the name "Gagauz" is used as a synonym for "blockhead" and it is said to be used as an epithet of contempt among the Albanians, like 'Tob' among the Ottomans. The Russian Gagauzes therefore are said of calling themselves Bulgars after the official example. The Gagauzes have a great contempt for the Ottomans. Numerous popular etymologies attempt to explain the remarkable phenomenon of the combination of the Christian religion and Turkish language by former despotist measures on the part of the Ottomans.

The language employed in the home is exclusively Turkish. The women as a rule under-
stand no other language, while the men are forced to know several languages. The divine service of the Gagauziis is still in Greek after the Greek rite and that of those in Russia Slavonic. The people of both often communicate with his congregation through the medium of Russian which is unintelligible to the majority of them. The Russifying process has, however, made great progress by the foundation of the school in Kishlak, the compulsory use of Russian as the language to be used in all church and country schools and above all by military service.

The language of the Bessarabian Gagauzi is as well as that of those across the Danube is, apart from Christian elements, practically identical with primitive Ottoman Turkish, which is explained by their common origin. The vowel harmony is very strictly carried out except in loanwords. One peculiarity is the tendency to weakening. With weak vowels all consonants are weakened, even when the latter are weak already. The numerous peculiarities of pronunciation in the different colonies are explained by their isolation from one another. The language is not a rich one: a certain lacunae and a certain poverty, particularly in synonyms, is noticeable in it. There appears to be no written literature, although there is no lack of tales and songs handed down by oral tradition.

GAIKHATU, a Mongol prince (Dilghits) of Persia (690-944 = 1291-1345), brother and successor of Arghun (qv. b. 1236-1241), he received the name Tugdan Dungii (In Wengii Tugrii) *most powerful prince*, which he bore on his coins; after his accession from his Buddhist priests (according to Tungus from Chinese): the same name was, according to Wengii, also placed on the currency notes issued in Gaikhatu’s reign. Before his accession he was governor of Asia Minor. Musulmans were particularly favoured in his reign unlike that of his predecessor Kai al-Din Ahmad al-Khaqani (also called Zanjani from his birthplace, and al-Chau after his unfortunate experiment with paper money, who was appointed minister (Gaihk-Divansh) on the 8th Divan 951 = 13 November 1292, received the title Zauk-Dilghits and the military rank of a commander of 10,000. His brother Kuhb al-Din Ahmad as chief of the title Alghit-Dilghits. The Mongol Emirs were completely excluded from any share in the administration of the empire by Saua-Lihuan; no distinction was made between the revenues of the royal estates (kuhau) and the state revenues proper (chakul). All attempts of the Emir to overthrow the minister failed; the downfall of the minister at the hands of the minister by Gaikhatu’s orders was pardoned by him; he was strictly forbidden to bring such complaints in future. Unlike all other rulers of this dynasty, particularly his predecessor Arghun, Gaikhatu did not stain his brief reign by any atrocities; on the other hand he plunged the land into a critical condition by his extravagances and excesses; matters were made worse by a severe murrain (1247); the treasury had to borrow large sums to meet the expenses of the court and was not in a position to repay them. In these circumstances the first and last attempt in Western Asia was made to force a paper currency (chakul) after the Chinese model into circulation (934 = 1294); but the crisis was only intensified by this measure and the prestige of the ruler and his minister undermined. After only two months the note had to be withdrawn; as Dura (Grande, d. dieu, ii. 575) has pointed out not even the word chakul has survived in Persian; European paper-money is always known by the Arabic name fattan; but chakul is still found in Persian literature of Central Asia in the xiii-xiv century with the meaning “dissolved coin”. (V. Teitel, Quellenstudien zur neueren Geschichte der Chakul, p. 74).

On the deposition and murder of Gaikhatu cf. Krito, 1. 591.

a suburb of Constantinople [p.p., l. 573c et seq.].

GAMROON, also written GAMRON, see above 1. 0544 infra sqq., a seaport on the Persian Gulf called Bandar 'Abbas since the reign of 'Abbás I. To the Bibliography given above 1. 0655 may be added, Vule and Brunell, Babvun-
Zobol, s.v. Gamron.

GANDAPUR, the name of an Afghan tribe living in the Dūmān of the Dūmān-i-Khan District [see Art. DĀNAX]. The tribe is said to be of Sāyīd descent, and like the Bāghārīs who also claim the same origin, was originally attached to the Bāghārī tribe. In the time of the Dūmān kings they descended into the plain and settled in the Dūmān. Their country extends from Dūmān in the south to Pashtūn in the north. Kānōn is the principal town, and the residence of the chief. The country is barren but receives some irrigation from mountain torrents, especially from branches of the Gānūlī River. The name Gandapūr is accounted for by a legend that Tārus son of Stūrā (eponymous founder of the Sāz̨ān tribe) married without his father's consent a girl of the Sāz̨ān tribe, and hence was called by him Gandā pu or 'evil son'. This story does not point to the fact that the tribe is of mixed descent. The Gandapūr, though formerly turbulent, are now a peaceable tribe living entirely in British territory. Their language is the Kandoz̨āri variety of Pashto.

(M. LONGWORTH DAVIS.)

GANDJA, Arab. Dzandha, Russian Jelisawetpol since 1864, (the old name alone is still used by the native population), a town in the Cauca-
sus. The town was first founded under Arab rule, according to the Armenian Moses Kalankatna (transl. by Petrosian, p. 270; cf. I. Marquart, Osmans̨įc̨iskįe und osmanischen Sprachen, p. 462) about 843, according to I. Hoard, Allah Qawam (in Scherian, Saz̨ān Nahād, supplement, p. 227) in the year 39 (535). The town is not noted as the wealthiest, and is no longer as important as it was in the days of its former glory. It was visited by, Marco Polo, the Venetian traveller, and by, Ibn Khordadbeh, the Persian geographer, and by, Abu Ali al- Ḥusain ibn Abi Shāhīb, the Persian geographer, and by, Abu Ali al- Ḥusain ibn Abi Shāhīb, the Persian geographer, and by, Abu Ali al- Ḥusain ibn Abi Shāhīb, the Persian geographer, and by, Abu Ali al-

(B. LONGWORTH DAVIS.)
GANDJA — GARDZIE

Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. Tudal al-Din says that the Georgians built a new town in their country, gave it the name Jumma, and set up the gate they had carried off there; soon afterwards Kard-Samok destroyed the new town and brought the gate back to Gandja. The latter statement does not agree with the facts; the gate that was carried off still exists in the Tbilisí monastery of the Virgin. A Georgian inscription given in an account of its removal: and there has also survived on the gate itself an Arabic inscription of the year 435 = 1043 (the year of its erection) which has been deciphered by Futala (Mém., v. 1820, etc. see). Kard-Samok died in 533 = 1140-1141, his successor Qawwál in Djamhad 1, 534; 23 Oct.-7 Nov. 1146). Qawwál was next mentioned as ruler of Arna (Q asthma, etc., I. 253); but a few years later we find Afsaka again united with Arabo-Ghurids under the rule of the Timurids. The town of Gandja is said to have been rebuilt by Kard-Samok. In the 17th century it was considered one of the most beautiful cities of Western Asia (cf. the verses in Haalul Alí Khwájál (i.e. the poet Nizám Gandjí: Arna (et al. 251) calls Gandja 'mother of the cities of Arna'). When the Mongols appeared before Gandja in 618 = 1221, they fired not attack the strongly fortified town, the inhabitants of which had proved their courage in frequent battles with the Georgians, but the retreat of the army had to be purchased with money and cloth. In 622 = 1225, the inhabitants, under their leader Sultán Khán, had saved from capture, was taken by Dzhik Al-Din Khorasání. A few years later all the Khánis were massacred in a rebellion of the inhabitants; nevertheless, after suppressing this rising Dzhik Al-Din refused to allow his troops to sack the town and only had the rough-skinned 36 in all, executed (625 = 1228). Four years later (1230) the town was captured and burned by the Mongols. On this occasion again the town was soon rebuilt but does not seem to have attained great importance again. After the foundation of a Mogul empire in Persia, Arna with Gandja as capital became the most powerful of the provinces in it and the blood of the Timurids was said to be the most prominent of the Khánis and from Isfán Shah Safáis' reign was imparted a portion of the Persian kingdom; under Persia the governor of Gandja bore the title Khan. In 1553 Khan Ismail Khán was defeated by the Turk, the town itself taken in 1558 by Khan Ismail Khalís. In 1559 the Persians, under Shah Abbas, again after a six months' siege, Shah Abbas transferred the town to another site about 4 ̆oshóh higher, i.e. to the southwest. The new town and was taken by Nadir Shah in 1724, remaining till his death under the rule of Khatun, who was eventually succeeded by her son and his power ended. The town was destroyed in the 20th century, was stormed on the 3rd (15th) January 1856, by the Russians under Prince Czitnowski and definitively ceded to Russia by the Peace of Gulistan (p. e.). On the 17th (30th) Sept. 1826, Paskevitch defeated a Persian army under Absály Mirzá in the neighborhood of Gandja (about 5 miles from it). As a Russian town Jemstevkof had, according to Ritter's Geography of the Ottoman Empire (3rd ed. 1869), only 13,109 inhabitants, in 1861, 20,794, while, according to the census of 1876, the number had risen to 33,149.

The modern town (the writer visited it in 1908) lies on both banks of the Gandja, a tributary of the Kura (also called by the Russians (Gandalj), which is connected by a bridge. The western part of the town is inhabited by 'Tatars' (Achardjids) and Persians, the eastern mainly by Russians and Armenians; the government offices and the garrison are in the latter; in the former remains of fortifications (Illustrated in Faschiet, Persia Past and Present, p. 3) and the so-called 'Tatar' mosque have survived from the time of 'Abd 'Abbas; the 'Persian' mosque belongs to a later period. Only the ruins remain (2-3 miles east of the town; illustrated in Zef. Vest. Obi. Arch. Okhak., ed. 1877, p. 94-105, of the mosque (bas/d) of the poet Nizám, mentioned by Iskandar Münzur (77 Pers. ed. 1857, p. 192). South of the town (5-6 miles) on the right bank of the Gandja, are the flourishing German colonies of Heilbronn and. The climate of Jemstevkof is regarded as unhealthy and unhealthy; on the other hand the climatic conditions favour the development of vegetation, particularly the horticulture: the town garden (now the nearest to the) is one of the best in South Russia; wines, tobacco and silk are also produced. (V. HARKHÓK.)

GANDJA, the kingdom of the Fulbe in the Western Sudan (cf. the article Villes.)

GAC. (See also Gac.)

GARDZIE, a Tartar town in Chazak, near the Persian frontier. Nothing is known of his life. As his name shows he was born in Chazak (usually written Kázd in Arabic, n. g. Yezid, ir. 258, but sometimes also Djazir as throughout 'Abdul-Táhir to which the spelling with 'A, a day's journey from Ghara on the road to India (Mulzim, ed. of Grant, p. 349). His work (Zain al-Din-i-Muhammad) was written in the reign of 'Abd al-Rasid the Gharaanan (444-455 = 1049-1055). It contains a history of the kings of Persia, of Muhammad and the Caliphs in the year 425-1032 a detailed history of Khwarazm from the Arab conquest to 452-1051; included are in all essays on Arabic sciences (Djor Muhabbaté Rûmsian), on chronology and the religious festivals of various peoples. The last chapters deal with genealogies (historical and sciences (cuff) and the title of the Turkestan of great value for the geography of Central Asia and one on India. No historical sources are quoted by Gardzie; in the chapter on the Turks he relates the story of the Khan Khudîshá, Dádsí and Hn Münzir. He says he received information about Indian festivals from Allâmâ, so that he referred to a pupil of the latter. Gardzie exerted little influence on historical tradition in the East and is seldom quoted (cf. Rez., Catalogué, p. 221-2); the manuscript in the Bodleian (Ouseley 240) of the year 1442 = 1786 is the only one that has been generally used by European scholars and is frequently printed in the German, e. Jumul. PF N. 356 (3) described as unique; from MS, the chapter on the Turks has twice been printed (W. Hartfeld, Oge, u. gr. w. Geschichte Asiens, St. Petersburg 1897, p. 38 et seq.; Géza Kunde, Relié Kázd,
The history of the Muhammadan kings of Bengal, and some account of Gaur will be found in his Saladin’s Reis’-el Salifin, translated by Abd al-Salam, Callarina, 1522, and in Stewart’s History of Bengal.

(G. E. Leveridge)

GAYOS, a tribe in Atjesh (q.v.). [p. 506]

GAZA. [See GHAZA.]

GAZULI. [See GAZULI.]

GEBA. [See GEBA.]

GEBA (or Geba), the name of the Persian Zar-dastian, the origin of which is not quite certain. The word is usually considered to be the Arabic jafsa (unbeliever; Turk. jasir). For other etymologies see the Genealogies, in, from, Philia, xi, 597. Cf. art. KASHAN.

GEBA, an Albanian tribe, i, p. 459.

GEORGIA (Russ. GRUSIA, Pers.-Turk. GURUSTAN, GURUSTAN, Georg. SAKMARTVELI). In the wider sense an area in Western and Central Transcaucasia, inhabited by people who speak Kharthwelian languages, stretching from the Black Sea to somewhat over 60 miles N.E. of Tiflis, in the narrower sense practically the government of Tiflis. From the time of historical geography, which is still to some extent valid, it comprises the provinces and districts of Kakhetia with the mountain districts of Tusheti, Paeawia and Khoszvar, Karthia, Imeruthia, Swanetia, Guria, Mingrelia and Meshika. The Kharthwelian languages include the Georgian, Mingrel, Avarian (the latter only spoken in the extreme southwest corner on the Turkish frontier while the majority of the Lazes, also called Taus, live in Turkey) and Swabian; the latter spoken in Swanetia and Mingrel in Mingrelia. Georgian is spoken in all the other provinces. The greater proportion of the Kharthwelian peoples profess Christianity in the Greek Orthodox form; only in a few places have they adopted Islam, namely in the extreme east, in the district of Sakheliti, the Englemans (Georgian language), also entirely in the southwest, in the Batum circle, the Adjars (the Lazes are likewise Muslims). Georgians have lost a considerable number of adherents in the Circassian district and on the upper courses of the Kizil, i.e. in the Adjarian district and in the districts of Akhalbhukti (q.v. i. 237) and Alghakhelaki, where Georgian was still spoken two hundred years ago and now has been supplanted by Turkish. The people have forgotten their language and origin and call themselves Turks.

The beginnings of Georgian history are wrapped in obscurity. Kartlia and Kakhetia formed the nucleus for the formation of a new state. The western Kharthwelian country had by then already passed under Byzantine suzerainty in its Eastern Roman form spread over the Western Transcaucasia. Saint Nino is regarded as the bringer of Christianity. She is said to have converted King Mirius in the beginning of the fourth century (the dates given vary). The Georgian church was granted its independence in the sixth council in 680 at Constantinople.

As Georgia lay in the centre of a circle on the circumference of which powerful states had grown up, it suffered terrible vicissitudes till it became Russian territory in 1801. Down to the seventh century Byzantium and Persia were fighting for its possession; soon after 627 (Mamman’s victory over the Sclavians) the Arabs advanced on Georgia. From the end of the eighth century

GAREBEK, a Javanese name for the Muslim festivals: garebein = 'Id al-Adha' (v. g.), garebek = 'Id al-Fitr (q.v.), and garebek manado on the 15th of Ramadhan.

GAUR. The old capital of Bengal, situated in the district of Middia, Eastern Bengal and Assam. Lat. 24° 34’ N., Long. 88° 8’ E. It lies east of the Ganges, on a narrow and deserted channel of that river, and is twelve miles from the town of Middia. The same Gaur is old, and according to Firishta it was founded many centuries ago by a Hindu named Shanku. In later times it was known by the name of Lakshmiwati, an abridgment of Lakshminavatiti, a name derived from the Hindu king of Bengal. It was captured by the Mahommedans in 1197 or 1198. In 1243-1244 it was visited by Mislah ad-din who gives a short description of it in his Jami‘-la‘il Kiya (Kavvavry’s translation i. 584). It was then time to move the capital of the Mahommedan empire to Bengal, though they also resided at the town of Pamlis about 20 m. to the N.W. of Gaur. In 1553 Humayun visited Gaur and changed its name to Nimishatuli, as he regarded the same Gaur as supersitious on account of its resemblance to the Persian gur, a sepulchre. Akbar’s general Mun’un Khum occupied it, but had to abandon it in 1572 on account of the outbreak of a pestilence. It was last inhabited by a prince whose Saliche, Shadil was there in the middle of the 17th century. It is now in utter ruin, but possesses a magnificent tank, the Sagar Dighi. The remains of the mosques etc. are preserved by Government. There is a good account of Gaur in the Imperial Gazetteer of India, vol. xxi. It was visited by the Portingals in the 17th century, and in 1665 Sir William Hedges was there and gave an account of it in his Diary (Hakluyt Society, 1857-1869). The earliest detailed account of it is in Henry Crefifton’s Relation of Gaur described, London, 1817, but J. H. Ravenshaw’s Gaur, edited by his widow, is more accurate (London, 1828). It is also described in the Archaeological Reports of India, vol. xvi. See also Dr. Buchanan’s Eastern India, and a Note on Major-Franches’ art, Description of Gaur, Jour., As. Soc. Beng., Vol. i.iii. Part 1, p. 85 & sqq., and the review of H. W. Bohn’s Itinerario Dutchmens in the same Journal, Vol. iv. Part 1, p. 194.
the power of the Bagratid dynasty in Lower (with Byzantine help) in South Georgia. In the 12th century the Shahs of Persia conquered the land. It was only after the Crusaders had entered Jerusalem that David the Remover drove out the Turks in 1106. Under this king (1083–1125) a period of prosperity for Georgia began, which lasted until after the death of Titus (1124–1132). A great decline in the fortunes of the land set in from the 13th–18th centuries, the Mongol invasions (Timur’s stone was the first in the country between 1567 and 1495) had most disastrous consequences. Scarcely had the country been united under the Bagratids, than it broke up in the 18th century into three kingdoms, Kartli, Kakheti, and Georgia. The principalities and henceforth its history is that of a single country. After the fall of the Byzantine empire, Georgia was left without a protector and the armies of the Tatars, Turks, Persians, and Georgians were more frequent. Persian influence, in particular, became very strong, and in the 18th century the kings of Kartli and Kakheti became a mere vassals for the Shah of Persia.

Kakheti was the only hope and to it Georgia had turned at quite an early period. In 1538, Lawam, the Shah of Persia, besought the King of Kakheti to assist him against the Persians; in 1540, the Shah of Persia returned to Persia, and the King of Kakheti lent him to the Persian Emperor. In 1569, Tushen ended an embassy to the court of the Shah of Persia, who was the Janicul of the Tatars of the Turkish and Persian troops. But Georgia was not yet within the sphere of Russian interests and the old state of affairs continued. It was only in the 18th century that Georgia regained strength or more under King Vakhtang VI. (1673–1708) was once more able to assert the independence of Persia and the Turkish and Persian dominion, temporarily at least, but when he died the country had been weakened by domestic troubles, the plague (1709), the destruction of Tbilisi by Agha Muhammad Khan (1758) and other enemies. General XI, the son of Heraclius, resolved to place his kingdom under Russian protection (1801). A few years later (1809), Curtiss also became a Russian province; and after the last Russian-Turkish war, the Muscovian-Southwestern districts of the Eleniy, Khegkhan, Arzogtin, Alti, Arzogtin, and Kura also passed under Russian rule. (cf. Armenia: p. 443).

GERMEŠIR (K.) Garmir is the name given to the hot coast region of Fars and Kirseh, in opposition to the cooler highlands (Pirast). These words have been mistranslided by the Arab geographers in the forms Luristan and Sorkh or Sorkh.

GERMANOGLU, the name of a Turcoman dynasty, which made itself independent on the fall of the Seljuk empire in Asia Minor and made Kushtah, the ancient Cysten, its capital; German was originally the name of a tribe and afterwards was applied to the dynasty (of Hormuz, Ismail, Iv. 229, 232, 252, et seq.; 232, et seq.; and the expression "Arystan er Kushtah") in Pachymeres, II. 49, as well as the titles of Seljuk and Garman (in Salamantha’s inscription). The pronunciation is German or Kreman (to be compared with Germany and Kurdistan). Schiller, in his Historical, p. 64, Garman, Sarman (through confusion with Karaman). Schiller’s (II. 49, et seq.) on the other hand, Almohad, Wechsel, Lehrl, 640, writes German (cf. burhj, transcribed German throughout). The term German is, however, not by Ibn Battuta, 271, also seems to be in favour of German. At the end of the 13th century the beginning of the 14th century (written "Arystan, "Arystan, "Arystan; by the Byzantines, "Arystan, or the court of Cysten") is mentioned with Osman, Sarbik, Mechtish, etc. as one of the invaded by Byzantine lands in Asia Minor; amongst other places, he had seized Kushtah and Tripoli on the Maccabees and attempted to take Philadelphus (Alaghdir) but was severely defeated in battle with the Kushtahans and Almahavec (1304–1356) according to Murad (see Pachymeres, II. 421 et seq.; Montaut, et. 205). According to Turkish sources, in the time of Ertogol "Arystan, father of German" was reigning over Aflun Kushtah (Neghch, and the copyist). Shahsad, in his history of the dynasty of the Kushtahans, knows of German, son of "Arystan, as lord of Kushtah, and Ibn al-Saleh, the seafarers and vezir of Kushtah, as lord of Kushtah. This agrees with a coin of German Khan of the year 707 (1307), struck at Shah sad German (unique, described by ibn al-Saleh in the Catalogue of his collection of Shah sad, coins, No. 1751. Our knowledge of the history of the dynasty of German from the end of the 13th century is lamentably small. Amadzadababur, II. 49 et seq., gives the following list of rulers: German, "Arystan, "Arystan, etc. This cannot be reconciled with other statements of contemporary historians, and even these are not always consistent. We learn from an inscription of Kushtah of the year 759 (1377) that Shah sadan, son of "Arystan, and grandson of "Arystan, ruled over German about this time. According to Halm and Edhem, this Shah sad is identical with the "great Emir" in the Cysten of "Arystan’s father, "Arystan, might thus be the lord of German of this same name, mentioned by the Byzantines and Ottoman historians and can hardly be identified with Karim (A. S.) and Toghel (Houtman, evol. II. 199), who was slain in the! reign of Keis. Armenia IV (565–567). According to the Abyssinian account of his grandson "Arystan (1. Muhammad), conqueror of Kushtah and Cairo; in his reign or that of his successor, the districts of Kushtah and Demari were incorporated into the kingdom of German. Selman (in the Turkish historians usually called Germanuroghlu) married his daughter, Khadeja, to Sultan in 789 (1381) to prince Bayrakd (1381–1390), son of Murad L, and granted her as dowry the most important towns in his land, including the capital, his son "Arystan (2) who succeeded him (1385), was taken prisoner by Bayrakd in 790 (1390), interned in Iskand and his land confiscated in 792 (1392). "Arystan escaped from Iskand to Timur and, after the battle
of Angora was restored by Timur like the other petty rulers who had been dispossessed by Bâyazid. When Timur left Anatolia he gave Yavâlû the task of guarding the province of Bâyazid I, and his captive son, Mişâr Celâbî. Yavâlû then handed both over to Mehmed Celâbî. He was on friendly terms with the latter and with Murâd II, and remained in undisturbed possession of his lands till his death. When he died without male heirs in 832 (1428-1429) the land of German was acquired by Murâd II. A pretender, who rose in rebellion in 1453 on the accession of Mehmed II, supported by the Kamânonâgî, was quickly disposed of. The Germania country has since then been divided into two sub-divisions, Germania and Karâkâhâri Salahî; Kusâkhis in 1453 became the seat of the Beylerbîy of Anatolia. The following dynasty table is based on the material available:

<table>
<thead>
<tr>
<th>Alâîbî (about 792 A.H.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mehmed</td>
</tr>
<tr>
<td>Suleimângî (about 779 A.H.)</td>
</tr>
<tr>
<td>Yavâlû II (790-793; 805-812)</td>
</tr>
</tbody>
</table>

The chief critical authority is Halîd Edhem in the Encyclopædia Biblica et Historica Ottomanica, p. 172 et seq.; the preceding rare copy of Suleimângî and Yavâlû II, is described by Ahmed Tekbîlî in the fourth part of the Catalogue of the Books in the Ottoman Museum, p. 294 et seq. (J. H. Murgmann).

**GHADAMES.** A town and oasis in the Sahara, 450 miles S.W. of Tripoli and 430 miles S.S.W. of Caïbar, in 30° 11' 48'' N. Lat. and 28° 48' E. Long. (Greens), with 5000-6000 inhabitants.

The town occupies the southwestern part of the oasis. It forms a Kan of about 1300 houses surrounded by a dilapidated wall and intersected by narrow streets which are vaulted over almost their whole length. The only architectural monuments are the mosque (44 in number) of unpretending exterior. According to al-Hâfîz, the tomb of two companions of the Prophet, Sulî al-Hasîr and Sulî 'Uthmân, was venerated there. The town, which is protected by a wall about 1 mile in circumference, 1/2 mile broad and has an area of 400 acres of which not more than 100 are planted with palms. Water procured from an artesian well and two warm and seven or eight ordinary springs assure the irrigation of the gardens, each of which contains five or six palms. The total number of trees estimated by Duveyrier in 1860 at 63,000 seems in reality to exceed 35,000.

The free inhabitants fall into four groups: (1) the Berber Beni Wazîr and Beni 'Ullâ, who consider themselves the descendants of the founders of the town; (2) the Arab 'Uulâ Belîlî; (3) the Atriya, i.e. negroes or inhabitants descended from seminomadic slaves; (4) Tunis Moors, who are partly slaves and the remainder are caravans traders or bandits and "proctectors" of the traders.

The pidgin languages in Ghadames are first, Arabic as the language of commerce, second Hausa spoken by a number of slaves and lastly a Berber dialect, the language of everyday life, which is between the dialect of the Djebel Nefous and the Tamacheq, but is more closely connected with the former. The women only know the last of these.

The indigenous industries are of little importance although Ghadames has always been celebrated for its basket work (Spanish pandanus). The situation of the town however between the sandhills of the Eastern Erg (cf. AREN, I, 428) and those of the Desert has made it a great centre of exchange for the traffic of the Sahara; but its importance from this point of view has considerably decreased since the abolition of the slave trade and the estimates of Duveyrier and Largeau, who put the annual value of the business of Ghadames at 12 million francs (£ 48,000), were much exaggerated. According to most recent investigations the annual value of the goods sold in the city barely reaches £ 1000. The inhabitants nevertheless are very busy and clever tradesmen. We find them not only in Tripoli and Tunis, where the young men serve their apprenticeship, but in all the trading centres of the Stâf from the shores of Lake Chad to the banks of the Niger.

Ghadames is the Cydames of the ancients. Native legends ascribe its foundation sometimes to Nimrod and sometimes to Yûm 'I-Karamân (Alexander). According to Pliny (Hist. Nat., v. v.) Cydames was inhabited by Egyptians from Libya. Possibly it was one of the building centres of the Libyans, which Duveyrier regards as evidence of a civilisation which he calls Caramantine. In the year 19 A.D. Cydames was occupied by Cornelius Balbus, under the empire it was garrisoned by a detachment of the Legio Aegyptia, stationed in Lamiunscus, and under the Byzantines it was the see of a bishop. Ibn Khaldîn is therefore wrong when (Hist. des Berbères, trad. de Slane, in p. 535) he ascribes the foundation of the town to the Banû Wâlî, a branch of the Beni Marni, who built Ghadames in the early days of Islam.

In the year 46 (866-867) 'Uthmân b. Na'îr sent a detachment from his army to occupy Ghadames. In the following century, however, the inhabitants greatly adopted the Arab customs introduced by their countrymen. Abu 'l-Munâfîn Mu'amîr b. Darar. This ford was one of the five "transmitters of knowledge" who spread heretical doctrines in Africa. When Ghadames returned to Christianity it was not known, but the Abyssinian sees it seems to have disappeared during al-Hasîr's time as this author describes the inhabitants of Ghadames as Muslim Berbers (Moor, de l'AFRIQUE SÉPULTE, trad. de Slane, p. 597).

During the centuries that followed, Ghadames seems to have retained its independence, as the few historical statements that we possess of this period concerning the town refer to attempts made by the rulers of Feisâya to take the town. For example in 609 (1213-1214) Abu 'l-Ule-Idris occupied Ghadames for a brief period and in 809 (1406-1407) the Mâlid Abuî Paris forced the inhabitants to pay him tribute. The latter seems to have feared themselves of this burden, as in the second half of the 18th century we find the princes of Tunis undertaking their campaigns against Ghadames. Leo Alcâtaneus (ed. Schefer, Vol. iii., p. 565) in the beginning of the 18th century mentions that the people of Ghadames were independent. The Turks of Naples in spite of several campaigns undertaken by Durward Fer
(1962) and Ramadan Bey (1609) were, like the Hafids before them, not able to enforce their authority on Ghadames. During the 17th and early 18th centuries Ghadames was an independent republic, but in 1830 the inhabitants had to recognize the supremacy of the last Libertarian Bey of Tripoli. After the expulsion of the Karamani Bey of Ghadames, Ali Mefid, the northern frontier of the Turks and a maude who was afterwards (1862) replaced by a "Crida" was appointed to govern it and a small garrison was attached there.

The increasing importance of the place attracted the attention of Europeans to it in the 18th century. The following travellers visited it, failing (1845), Richardion (1845), Dacken (1852), M. Capellini de Bourbon (1856) and Duveyrier (1862), [M. Micher, V. de Vaudnay and P. Polignac] concluded a commercial treaty with the Tuaregs; they were followed by the travellers Rohoff (1864-1865), Commes-Dupont, J. Langans (1875) and Pater Richard (1875); since then, however, Ghadames has remained closed to Europeans owing to the jealousy of the Tuaregs. The French have vigorously disputed that for many years, the troops of the protectorate in Tripolitania. The Anglo-French treaty of 1899 decided that Ghadames must be withdrawn from Turkish territory and the Franco-Turkish agreement of 19th May 1910 regarding the delimitation of the frontier between Tunisia and Tripolitania laid it down that the frontier should be 50 miles west of Ghadames. Thecession of Tripolitania to Italy, made Ghadames an Italian possession.

is also found among Sunnis, viz., the Prophet on journey back from Huldibiyah (according to others from the farewell pilgrimage) here said of 'Abd: Whosoever I am lord of, his lord is 'Ali abdel. In memory of this in later times a feast was observed by the Shi'is.

(A. HAHN.)

GAFFAR (A.), "Pardoning", one of the beautiful names of Allah, cf. 1. 304.

GAFFARI (Abdul w. Musaamad), a Persian man of letters, a descendant of the Shi'i jurist 'Ali Nadjm al-Din 'Abd al-Gaffar al-Karawi, who died in 666 A.D. His father, who was Kafi of Ra'y, wrote poetry under the pseudonym Wasti and died in 973 or 1027. Ahmad al-Ghaffar was likewise a Kafi and lived in 975-1027. Saadi (Najd) on the return journey from Mekkah in his book, entitled his Nastirasah ("picture-gallery"), completed in 979 or 1052, to Tahmasb I; it is a collection of anecdotes collected from works of various periods (Muh. Boushy 1245 and 1275 and also Calecuti; he also wrote a history of the world in two books entitled Nusabhi Qurban-Ari (972 = 1563).

(C. HAHN.)

GAFFIR (A.), one of the titles of al-Sura.

GAFUR (A.), "Pardoning", one of the beautiful names of Allah, cf. YADAH.

GAHIB (Arabic alphabet, numerical value 1000; cf. the article ānaa'ī), the character ga-fa-h is a variant of umma. In most modern dialects it is pronounced as a post-velar fricative, which is similar to the velar pharyngeal, described as a guttural, but seems very doubtful if ever really pronounced as a post-velar fricative. The character ga-fa-h is used in many modern dialects. For details see the article ARABS.

GAHIB (GAHIB), an Arab musical instrument, very popular in North Africa and some districts of Southern Europe, a kind of cylindrical bagpipe with a movable wooden mouthpiece (yafaq) and rather wide bell-mouth. The cylindrical portion has seven holes on the upper side. The first hole below the mouthpiece is called yafaq, the second yazzah, the third yalluf, the fourth jaldh, the fifth nada, the sixth nada, and the seventh nada. On the lower side midway between the yafaq and the shaddah is an eighth hole called libzayn. The names of these holes are used by native musicians to denote the fingers required in playing the instrument and also to denote the key of a piece or a scale. In playing, the player puts the mouthpiece in his mouth as far as a kind of a catch (rubab) in the form of a disc 1/4 inches across. The compass of the instrument is about an octave.
The ghâfi is used by the Arabs particularly as a military musical instrument; it is almost always accompanied by the jâdû, a kind of drum, which is beaten with two sticks, and the samârâ, a large drum, which is beaten with the bone of an animal.

The jâdû is often called samârâ; in the south of Tunisia and the province of Constantine it is also called sâmâ, whence the Turkish word sahâda, jâdû-player. Ibn Khaldûn describes it under the name sâmâ, perhaps a metathesis of samâra (Ferlig, ii. 333; ed. Quatremœur, Paris 1854). But the name jâdû was well known to the writers of the middle ages, as well as to those of Muslim Spain (cf. Dom. Suppl. aux Dict. Arab., ii. 235; Simonet, Grammaire de la langue monarchique, Madrid 1885, p. 239).

This instrument still exists in modern Spain under the same name or name, in lands where Turkish is spoken; it is fairly common and is called jâdû (cf. Barthe de Meynaud, Diction. Turkofrançais, ii. 93).

**GHALAPIKA** (Ghalifa, Akka, the Divi Sabasorum of St. Pity). At this time a flourishing seaport in Yemen, near Bait al-Fahm (q.v., 157 et seq.). It was an important emporium and was known as the harbour of Zabid. About a century before Nirolha’s journey in Yemen the harbour of Ghalifa became inaccessible through coral reefs, whereupon the rich traders of this country went to Bait al-Fahm, which rapidly became a flourishing commercial town. During his stay in Yemen, Nirolha saw only a few walls, a mosque and several tombs, remains of this once prosperous town.

**GHALCA.** The name Ghalca is applied by the Tarkhi-speaking population to the group of tribes of Iranian origin inhabiting the country near the sources of the Ousso, the Fisna, and even on the east of the Serrideli, the upper Varzand, and (in the case of the Eminah) the southern slope of the Hindu-Kush. These seem to belong to a type differing from that of the ordinary Tadjiks of Badakhshan, etc.; they are called by anthropologists as a branch of the branchyphalii, Alpana race and known as Highland Tadjiks (cf. Armeenvia, 1, 1541). The word Ghulca is Persian, and according to Vullers means a mound or moundful. However, and fig. Ghulca suggests a possible connection with the old form of the name Ghuljak, as Geiger suggests that the original meaning may be 'mountaineer' from the word *ghul* 'mountain' used in these languages and also in Pashto. They are Skh by creed and therefore sharply separated from their orthodox neighbours, and speak a number of distinct dialects of an Iranian language, each valley having its own speech. These dialects are as follows: Wakhán on the upper Panj river, under Afghan rule. The language and people are called Wakhís. A distinct dialect of Wakhí is that spoken in Ishkham, lower down the Panj river, known as Ishkhamí. The valleys of the Wartaj and its tributary the Kóká are occupied by the people of Sanghí, speaking Sanghí and of Mundín speaking Mundín. These territories lie under Afghan rule. The upper Wartaj valley leads to the Dírúz Pass, the principal route through the Hindu-Kush into Cirít, and on the southern side of this pass dwells the Yuldísh tribe, speaking the Yuldísh language which comes within the British sphere. Where the Panjí joins with the main streams of the Oxus are the territories of Shorásán and Koshán (in the Russian sphere) in which the Shorásán language spoken in an area related to it is the Saráshí spoken by the Saráshí on the Eastern slope of the Pamír. Still farther south, lies the valley of Yaghúkh on one of the upper affluents of the Zarásan, where the Yaghúkh language is spoken (cf. AZARBAJIAN, i. 156). Little is known of the history of this inaccessible region and its inhabitants, but it is probable that they formerly extended farther into Badakhshan and gradually retreated from the open country as the time of the Muslim conquest. In fact, spread among them, in its Shorásán form at a later date, a variant of the language which populated Badakhshan with Kuchis. In a second century B.C. was also found in the neighbourhood, and to the north of the river Laki was settled the Wakhán on the western side of the Yaghúkh, under Afghan rule.

Bibliography on the Ghalîca languages see Geiger, supra. (M. Longworth Jones.)

GHALÍ (a.), plus. ghalît, "one who exaggerates or goes beyond all bounds", perhaps derived from the names of individual persons, possibly Ali and the Allâdîs, and considers them incarnations of the Deity. What results in the case of a poet being called ghalît, depends on the point of the view of the writer, but as a rule those who have adopted such notions, originally foreign to Islam, assimilated (ghalît), metamorphosised (cessîrî, etc.); are considered to be ghalît. Cf. Frieslander in the Journal of the Amer. Oriental, Sec. xxii. 12.

GHALİD, the poetical name of NAQĪM AB-DAWLÂ DÂRÎ, AL-MULK MIHÂR AZÂD ALLÂH KHÂN, a distinguished Persian and Urdu scholar and poet, famous for his excellent and polished style of composition. In his Persian poems he has occasionally taken the pseudonym Azâd, and is also called Mîhâr Nâşîgh.

Ghalîd was of Turanian descent. His grandfather left his ancestral home and came to Dîlî during the reign of Shâh 'Alâm. His father, 'Abd Allâh Beg Khân, lived for some time at Lucknow, and went thence to Hyderabad in the service of Nawwâb Nâşîgh 'Alî Khân. After a time he went to Agra and served under Râjâ Khîber Singh, where he was killed in battle. His son, Azâd Allâh Khân, then only 5 years of age, was adopted by his uncle Nâşîgh Beg Khân, Sîbadar of Agra. In a.d. 1806, when the district of Agra was made into a Commissionership under General Lake, his niece was pensioned off, and, on her death, Ghalîd, then 9 years old, received a sum of Rs. of the estate to the amount of Rs. 1,530. After the accession to the throne of Wâdîd 'Ali Shâh in a.d. 1847, Ghalîd received a yearly allowance of Rs. 500 in recognition of his poetical abilities. The Nawwâb of Rampur, hearing of his fame as a poet, sent him own poetic compositions to Ghalîd, for correction, and in a.d. 1859 assigned him an allowance of Rs. 1,500 a month. After living some time at Rampur, Ghalîd returned to Dîlî, where he died in a.d. 1869, at the age of 73.

J. F. Blumhânedt.

GHALÎD DEDÉ, after Fâqîh, Nâşîgh and Nâsrîn, the last of the four great poets of the old school of Ottoman literature, his real name was NAQĪM MUHAMMAD EDâD, but he is best known by his pen-name SHAHIKH GHALÎD or SHAIKH GHALÎD. Born in 1715. 1772 left as a youth of 57 years at the service of the secretary Mustâfî Rashîd Efendi in Constantinople and went easily connected with the Mevlevi order in whose monastery, in Yenî Kapu, his father is also said to have acted as battle-drummer. Following his father's example he first entered the service of the sultan but soon left it to devote himself wholly to the order. He began his novitiate in the parent monastery of the order in Kôruss. Having afterwards driven back, however, to Constantinople, where he remained in the Yenî Kapu monastery till in 1795 (1790-1791) he was appointed Shakil of the Mevlevi monastery in Galatta, which is probably the best known to Europeans of all the monasteries of the dancing dervishes. The fame of which is due to him, held by Seljuk Selim III., the Sultan-Mother and other high personages, greatly benefited this monastery, which was entirely rebuilt at his request in 1795.

Ghalîd died at the era, age of 44 on the 26th Râdîjah 1215 (9th Jan. 1799). He is buried in the Galatta monastery in a separate mausoleum. (Ghalîd who numbered among the excellent scholars, who were connected with the great Ghalî, the Châhid, was himself not unknown as a poet, composed the work which has given him an abiding place among the poets of first rank in his nation, at the era, age of 20 (in 1897) — the figures as seems to be wrong —; this is the romantic and allégorical poem Muṣâr wa 'Abbâs (the pronunciation Hess is foreign to Turkish), "Beauty and Love". It was written as a kind of protest against Nâsir's Mevlevih, Aibâb-i-Nâsir which was extraordinarily Persian in style, and stands alone on a level never attained before or after in an Ottoman Mevlevih through its originality of thought, so rare in Ottoman poets, its inspiration which recalls the Divan Evrenos, and the loveliness of its verse, the beauty and relative simplicity of its language. In the struggle between the Persians and the Nationalist schools Ghalîd unhesitatingly took the side of the latter and developed a simple yet dignified language more fitting the Ottoman spirit in the happiest way than the artificial language which was then as much in vogue. The influence of this Mevlevih on Turkish literature to the present day has been enormous; the number of Ghalîd's admirers is still large; according to them the Hüsân a 'Abbâs is the noblest work not only of the romantic school but of all that Ottoman poetry which draws its inspiration from Asia.

Ghalîd's Divân which contains a large number of ghâzâls, āstâns and râbis is on the other hand relatively unimportant, that is to say, in a number of anonymous divans of his time; it has, however, a certain historical value as an account of its era's evolution.

From writings also exist from Ghalîd's pen: he translated and wrote a commentary on Shâhâb Kâmil Alâeddâd's (who is buried in Konya) work, al-Tâfi al-hâbîbât wa l-Turh al-Mekâniyât, entitled al-Šâhâb al-Mekâniyât. He also wrote a commentary on the Divan-i-Mevlevih of Yûsuf Sinî-i-Cir, and a collection of biographies (Tâbîyât) of Mevlevi poets, which was continued by al-Sa'îdî. His Divân with the āstâns, râbis and ñuânûs and the ñuânûs a 'Abbâs was printed at Bâlî, in three parts in 1252; the Mevlevih has often been printed in Constantinople e.g. in 1704, the greater part of it is also given in Farâh Panah's anthology of Mevlevih, Aibâb-i-Nâsir, Tâbîyât-i-Ghalî, 1791. A biography of Ghalîd is given by his contemporary Khâlid Nâzîr Bey, the poet and historian, in his history.

GHALÎD, Fatîh, one of the celebrated Ottoman Ministers Edârî Efendi, born at Constantinople on the 25th Djuhâb 1285 (15th November 1479), entered the service of the Sultans in 1447, became a member of the Privy Council and ultimately became amanuensis (counselor) for the province of Greece; he died in Constantinople on the 15th December 1603. Ghalîd
Hey was the founder of the scientific study of manuscripts among the Ottomans and enormously advanced this science by his standard works on the coins of the Ottomans (Tekniz Melihettin Dinsoy, Constantinople, 1607) and of the Seldjuk (Tekniz Melihettin Seçilie, ibid., 1620); also in French under the title Essai de Numismatique d'Empire Seldjoukide, Constantinople 1654). Of great importance are his catalogues of the Urdjildi-coiners of the city of Mardin and coins of the Caliphate in the Ottomans: Mecen (Melihettin Pardevan) Istanbul, Constantinople, 1632, also in French, Catalogue des monnaies Turcomanes, Constantinople, 1634; and Melihettin Kedisir Sofanlı, ibid., 1634. Finally, several smaller writings may be mentioned (Quelques mots sur les monnaies maurescques ou mone-
gennes parissiennes, Constantinople, 1648. Sur une monnaie Mounnsina, Constantinople, 1649; Une monnaie d'Alaeddin Çelebi III in Revue monétaire, July 1653). Ghali's works and collections were purchased by the government after his death for the Imperial Mint Collection (pari-
semble monétaires, ed. 1856). [J. H. MONTENDERS]

GHALIL PASHA, Member (1672) of the Grand Vizir of Turkey under Mehmed I, 12th Dec. 1652—15th Sept. 1654. Ghali was born in Constantinople in 1617 (1673-1674) and entered the service of the state in 1625 (1678-1679). In 1678 (1680) he went to Paris to conduct the peace negotiations with France. He also conducted the negotiations with Russia which ended in the Peace of Bucharest, 25 May 1812. Soon afterwards he was disgraced and dismissed to Asia. He spent the same fat years some years later when he was deprived of the grand viziership, but afterwards served as governor of Ere-
sum and commander of the eastern troops. In 1644 (1685-1689) Ghali died at Balikcem.

GHALILZAI, a large and important Afghan tribe with numerous subdivisions which occupies the country nearillaume and eastward as far as Quast and Waziristan, also the upper valley of the Tarbuk, Arghandab and Aqhi (cf. arghanda,

This is largely nomadic, and migrates a small number annually at the commencement of the cold weather usually via the Gen-

The Tarbuk valley is the most prominent tributary of the

The origin of Ghali is obscure, and is at the present day one of the most important elements is the Afghan race, and speak the Pushto language, but there is good ground for be-

Believing that they are of mixed blood, and have abandoned both Tajiks and Turkmens. Attempts have been made to identify them with the Khalil Turks who entered Afghanistan and took service with the Ghaznavid monarchs; this rests solely on the similarity of the name Khalil (sometimes written Khlil) with Ghali. (sometimes written Ghalil in 1824). But there is no evidence of this, though the appearance of the Ghalils favors the idea that there is a Turkish element in the race, which is historically probable, considering the large bodies of (Sten, 1840) and other tribes which entered their country from the 12th to the 14th centuries, many of whom fought as mercenaries under the Ghaznavid and Ghurids. According to the legend in the Mohmandi Atfiyat (the Ghazis are descendent from Maisa daughter of Sultan who had an illicit connection, afterwards legitimized by marriage, with Shah Hussain a refugee prince of Ghilzai. Owing to the clandestine nature of his birth the son who was born there was called Ghali-one the thief's son', whence the name Ghali. The great Lodi tribe (including the Satt and Lohan) was of the same descent (cf. Afghanistan, l. 152). This legend no doubt conceals the mixed Afghan and Tajik origin of these tribes. The Ghalils proper do not emerge from obscurity until after the Lodi and Satt who founded dynasties in India in the 16th and 10th centuries. They came into notice during the 19th century, when their power and influence in the Baluchistan increased owing to the transportation of a large section of the Baluchi to the Khorassan province by Shah 'Ali Khan (1645), and at the commencement of the 18th century under Shah 'Ali Khan. Khudabander. When in 1800 the Emperor of Ghilzai, Mir Waiz was arrested and taken prisoner to Ispahan, while the Ghalils were very severely treated by the Georgian governor Gurgin Khan. Mir Waiz, however, obtained the clemency of Shah Husain, and was allowed to go on a pilgrimage to Mecca. On his return he obtained permission to return to Kandahar. Gurgin Khan, to humiliate him, demanded his daughter from him. Mir Waiz pretended to submit and substituted another woman, for his daughter, but murdered Gurgin Khan and his followers at a banquet to which he had invited him. The Ghali-

Ghali now openly rebelled, drove out the Persian garrisons and took possession of Kandahar. Mir Waiz became master of the province, but died shortly after in 1775 (1755). His brothers 'Abd al-Aziz succeeded but was soon murdered by Maimud al-din son of Mir Waiz, who became ruler himself, and gathered strength during the next few years. He was encouraged by the weakness of the Persian government and the success of the Afghans who rebelled successfully in 1729 (1727).

In 1734 (1732) Maimud ventured to invade Persia itself, and occupied Kandahar almost without opposition, but was soon expelled by 'Ali Khân, and retired to Kandahar. Next year, however, he again invaded Persia, assisted by large bodies of Afghanis and Baluchis, took Kandahar and Yezd and arrived into Ispahan in 1735 (March 1722) and overthrew the Persian army at the battle of Gahilzai. He did not obtain possession of Ispahan, however, and was in October, when Shah Husain died, and Maimud became Shah of Persia being invested by Shah Husain, himself, in 1135 (1722). The Ghali rule in Persia lasted for seven years, 1135 to 1142 (1722 to 1729). Timur Khan II, however, set his claim to the throne throughout this period, and was ultimately restored through Nadir Shah's help. Maimud began his rule well, but soon showed himself a tyrannical tyrant. The invasions of the Turks and Russians apparently deprived him of all self-control, and wholesale massacres in Ispahan followed. He seems to have lost his reason and died (as was killed) whilst insane. He was succeeded by Aghaef, son of his uncle 'Abd Allah, during whose reign the war with Turkey and Russian continued, Persia losing many provinces. Aghaef ended peace with the Turks by appealing
to their sympathy as a Samni who was restoring the true faith among the Persian Shi'ite. Kandahar had meanwhile fallen into the possession of Mahdi bin Shabthi, who seized a division among the Ghilzais in their own country and weakened them in Persia. Nadir's victory at Tundhak in 1728 (1735), and at Murz-Abad the same year put an end to the Ghilzai rule. Ashraf fled; his army mutinied and was attacked everywhere by the local tribes, and finally Ashraf himself was slain by 'Abd Allah Khan Batal. He was a brave warrior but unfitted by nature for the rule of a great country. Very few of the Ghilzais ever found their way back to their native land. The tribe dispersed into obscurity and has never since produced a ruler with the exception of Azad Khan, a Salimkhan Khoi Ghilzai who obtained ephemeral power at Tehra between 1766 and 1767 (1770-1772) and disputed the supremacy with Karim Khan Zand, by whom he was defeated and captured, but well treated. In Afghanistan, after the time of Nadir Shah, the power fell into the hands of the Dururrns and the Ghilzais have been obliged to submit to their rule from the time of Ahmad Shah to the present day. Nadir Shah took the Dururrns into favor and expelled the Ghilzais from the lands which they had occupied near Kandahar. They were nominally banished to the Herat country; but seem in reality to have turned to their old homes near Ghuristan, and many settled in the Khost province, still part of the Mughal Empire of India. It was this settlement which led to Nadir Shah's invasion of Khost, which was followed by that of India itself. In the disputes which took place between the members of the Sadat family after Nadir Shah's death the Ghilzais took the side of Shah Shujah against Maljumn and assisted him to take Kandahar in 1728 (1805). The celebrated Babarkazi chief 'Abd Allah Khan, father of Dost Mohammad, married a Ghilzai wife among others, and has sons Khoondi, Perdii, Shiridi and Mirfot hold possession of Kandahar and had great influence with the Ghilzai tribe. In more modern times the principal incidents in their history are the flight of Ahmad Khan (1880) when a Ghilzai force attacked and was defeated by the Persian forces under Shirwani which was marching from Kandahar to Tehra, and the rebellion against the Emir 'Abd al-Rahman in 1886 (see A. B. PIRZABAD, KAZAS., I, 60).

The Ghilzais have a very democratic constitution and pay little obedience to their nominal chiefs. They are divided into two main sections known as Turan and Burjan (or Bahrizan). Possibly some alliance with a Turkic origin is implied by the name Tuzun. Each of these sections comprises several important clans, among the Turan the principal are Hazak (from which the Persian invaders sprang) and the Tazghe. The Naudas and Khoondi are sometimes included, but they are generally considered not to be Ghilzais at all. Among the Burjan the principal are the Salinan, Khoi and the most important of all Ghilzai clans the Turuksh, the Awdar, the Khoi, and others of minor importance.

GHANA, an ancient town in the Western Sudan which has now disappeared. According to Barth it lay in 15° 11' N., Lat. and 8° 8' W., Long. (Gren.) not far from Waktiag. M. Delafosse however, relying on certain statements by Arab geographers, notably Al-Bakri, places Ghana in the Arkah district within the triangle Waktiag, Nema, Basaltam, i.e. about 250 miles north of the Niger on the meridian of Samaria. Martin Hartmann (and this is also Desbois-Goudry's opinion) thinks that Ghana must have been nearer the Niger, not far from Timbuktu. In addition J. Miquart, Die Benin-Sammlung der Niederl. Kolonialverwaltungen, f. Aulard (Berlin, 1912), where this question is fully discussed, particularly pages 232 et seq., and calls et seq.; Editors.

Bork and Delafosse agree in placing the foundation of Ghana about 300 A.D., and assume it to have been a white race. Barth suggests that Falpa, Delafosse on the other hand makes the bold suggestion that immigrant Jewish-Syrian tribes from Egypt were the founders. One of the leaders of these immigrants named Kaka settled in Akka and founded a state there which maintained, under the rule of its descendants till about the end of the eighth century. This dynasty was succeeded by another of Sohneke negroes whose first ruler was called Kaya-Maghian. His successors, the Slave Tunkara extended their kingdom in the east as far as the Niger, in the west to the Atlantic Ocean, in the south to Tekrur and in the north to the Sahara. In the 19th century these kings had to wage long wars with the Pobars who had settled in Toguarta, notably the Lomumu, the lords of Awdaghoss (1790, i. 516), but they finally won the upper hand, took the town of Awdaghoss in 1900 A.D. and installed a negro as governor for them. During the next fifty years the kingdom of Ghana was the most powerful state in the Sudan.

According to Al-Bakri's description (written in 470 = 1067-1068) Ghana consisted of two towns lying in a plain. One of these was inhabited by Muslims, contained twelve mosques and numbered males and other scholars among its inhabitants. The other town six miles distant was the royal residence. The king's palace consisted of a palace and about four hundred houses, was well enclosed with walls. Near the royal court of justice was a mosque allotted to the king who appeared on special missions before the king. The houses were built of stone, probably the only one of its size in the Sudan, or of the wood of the agave tree. The royal residence had received the name ghinah (the wood) from the wood around it. In these woods were the dwellings of the magistrates and priests whose duty it was to guard the idols. These also were the royal tombs and the priests. The people like their rulers were named mash'-mallatib, but the latter thought highly of Muslims and therefore chose his interpreters, his treasurer, and the majority of his ministers from among them.

In situation between the Sudan and Sahara made Ghana an important trading centre at an early period. Copper and abalms were imported from
the Maghribi, while carravaux laden with salt came from the Sahara. The most important article of commerce however was the gold obtained in the mines of Wagga (the area drained by the Upper Senegal and the Falémé), which the merchants obtained in Gao.-day, eight days' journey from Ghana. The gold and ivory were transported to the Sénégal, and although Abu Bakr says that the king commanded 200,000 soldiers, including 40,000 archers, Ghana could not resist the attacks of the Almoravides. 'Abd Allah b. Yäsin (634-685) seized the town of Awdaghoout in 646 (1054-1055). While one section of the Almoravides were conquering the Maghribi, other troops invaded the Sahelunder Abu Bakr. After fifteen years of war Abu Bakr finally succeeded in taking Ghana in 776. The inhabitants in part were forced, in part massacred. The king had to pay tribute.

The death of Abu Bakr gained the kings of Ghana independence once more but did not restore their former power. The tributary lands regained their independence, one by one, so that at the end of the 11th century A.D. the state of Ghana only consisted of Askar and Bassar. It left a bare existence for a century more until, in the year 1023, Sumbagirin-Kanete, chief of the Shilk conquered Ghana and incorporated it into his dominions. Soon afterwards a number of the inhabitants, led by a Shilk named Isma'il, left the town and founded Wallata at some distance to the northeast. Finally in the year 1240 the Mali chief Sundiata overthrew the kingdom of the Sunn and invaded Ghana (Mali) the ground.

514/1217, 1274, 1281 and 1290. Description de l'Afrique, trad. de Sane to the Generals. v. 1842, p. 240. (Abu Bakr, Description de l'Afrique septentrionale, trad. de Sane, 1281; 276.)

Ghanaian sources, apparatus
descriptions, and the rest. The texts were

GHANI (q.v.). *The self-sufficient*, one of the beautiful names of God. Cf. Allah, i. 309.

GHANI. A tribe in North Africa. A tribe in the Kifs b. 'Alla and related to the Ghana (p. 1244 and 729) who lived around Hissi Parti in the Mali and were neighbours of the Tály with whom they were constantly in contact. In the time of the Dáhili they were shipped to the Arabs in the Láit, Manar and the Láit, all of whom are mentioned in the Korán (Sura xxv, 62). The great pre-Islamic poet Tafat b. 'Aww, called Tafit al-Khalif (the chief of his khalif in heaving the bow) belonged to the Ghana. Among the settlements of the Ghana were: Abyab, Abyub, Al-Adr, Abyub, Beja, 'Ali, Al-Adr, Abyub, Beja, 'Ali. Among the mountains that belonged to them are: l-dakh (a large mountain), Kabil, Kalah, La-
Unbelievers, who are taken prisoners of war by Muslim's—women and children as well as men—are divided into three groups: the first is treated as prisoners of war; the second is treated as captives; the third is treated as slaves. The first group is allowed to retain their property but are not allowed to trade or own land. The second group is allowed to retain their property but are not allowed to trade or own land. The third group is allowed to retain their property but are not allowed to trade or own land.

The rules regulating the division of prisoners were established by the Islamic law. The division of prisoners was based on the Islamic principles of justice and fairness. The prisoners were treated according to their status and their treatment was based on the Islamic law.

Bibliography: The commentaries on the Koran and the Hadith are the primary sources for understanding the Islamic law. The Koran is the holy book of the Muslims and the Hadith are the sayings and practices of the Prophet Muhammad. These sources are used to interpret the Islamic law and the interpretation of these sources varies from one school of thought to another.

Gisiz, Gharib (G. G. I., 1960). The Islamic law allows the state to make laws and regulations for the benefit of the society. The state is allowed to make laws that are in the interest of the society. The Islamic law also allows the state to make laws that are in the interest of the state.

Ghuristán (Gharistán, Ghariztan) is a tract on the upper valley of the Murghab in Afghanistan. It seems to have corresponded with the country now occupied by the Fronkans, although a passage in the manuscript of Mamluk speaks of the town of Buzayn being on a mountain beneath which flows the river which passes through Ghuristán. It seems to have been the site of a town which was probably called Ghuristán in the Murghab valley. The town was probably called Ghuristán in the Murghab valley. The town was probably called Ghuristán in the Murghab valley. The town was probably called Ghuristán in the Murghab valley. The town was probably called Ghuristán in the Murghab valley.
to a new list of rulers and land accounts which are full of contradictions, e.g. Hamza and Abu 'l-Fidas give thirty-one rulers of this dynasty, while Ibn Khallab and Mas'udi only give ten of them. Hamza makes long 'Abdallah b. 'Ujaih (q.v.) about whom we are fairly well informed by the contemporary Byzantine chronicler, Malchus, 'Abd al-Fas. 'Abd al-Fas reigns only six years, while no account of his reign can be found in any other source. Reverting to the usual Arab tradition the 'Abdallahs were descended from the South Arabian tribe of Asd. The latter is said to have left the Yemen after the breaking of the dawr at Marib and to have gone to Mecca (al-Mas'ar near Mecca). At a later period one section of the Asd led by 'Amr b. 'Umar Masmikah went to Syria; they are said to have received the name 'Abdallah from a stay of some considerable time at the pond of Ghatmus in the Syrian desert. (This name however had already been borne by a tribe of the same name.) According to 'Abdallah and Ibn 'Abd al-Malik, it was 'Abdallah b. 'Amr, a great-grandson of 'Abd al-Malik, who led them to Syria. 'Abdallah b. 'Amr and his sons is the one considered the founder of the dynasty. In Syria they had laid down an annual tribute to the Byzantine pharaoh therein for the 'Abdallahs of the tribe of Sallab, probably descendants of the Christian pharaoh Zezqas, mentioned by the ecclesiastical historian Suraqunius. Ultimately they refused to pay this, conquered the 'Abdallahs and took their place, in which they were recognized by the Byzantine emperor Anastasius (probably about the end of the fifth century A.D.), who made use of them as frontier guards against the Lakhmids of Hira.

The most important and the first ruler of this dynasty, whose existence is certain, was 'Abd al-Fas b. 'Uajah (Greek: 'Apostas ref. 'Abdallah). He is said to have been born about 419-420 A.D. From 422 to 424 he ruled over all the Arab tribes in Syria by the Emperor Justinian and received the titles Pharaoh and Patriarch, the highest rank next to the Emperor in Byzantium at that time. In the same year he took part in the suppression of the rebellion of the Samarians on the side of the Byzantines. The greater part of his reign was occupied with wars with al-Mundhir III. of Hira. In 428 he was victorious over his opponent. About two years later he again quarrelled with al-Mundhir and was called "Scarcity", the land on both sides of the military road from Damascus to Palmyra as far as Syriopolis, to which he laid claim. In 424 'Abd al-Fas fought in the Byzantine army under Justinian in Mesopotamia. But when he returned home to Syria by a different route from the Byzantine army without having won any success in the course of his march, he was accused of treachery to the imperial cause. In a later war between al-'Hajjaj and al-Mundhir (about 444) the latter took prisoner a son of the former and married him to the daughter of al-'Uzza, the Arab Aphrodite. In 454 al-'Hajjaj won a decisive victory over al-Mundhir, who fell in battle in the districts of Sammarin (Chalea), probably at al-'Uzza. This battle is perhaps identical with that celebrated by the Arab
as the "Day of Halima" (according to the common Arab tradition, so called because Halima, daughter of al-Harith, maltreated the warriors with her own hands with molotai, a perfumed ointment), but it is very possible a phenomenon of the after-effects of grief was afterwards wrought to avenge al-Mundhir’s death and make a raid into Syria. In 593 al-Harith went to Constantineople to give an account of these doings to the Emperor and to advise what measures should be taken. He also took advantage of his stay there to discuss the appointment of his successor with the Emperor. He died in 599 or 570. We may have mention the Arab tradition according to which al-Harith bequeathed the Jaf al-Sama’al b. Adiya in his stead to Akhla in Tadm and slew his son because al-Sama’al would have not the emirates left with him by the poet Imru’r-Ru’ūs b. Kay (v.).

Before his journey to Constantineople.

Al-Mundhir was succeeded by his son al-Mundhir (Greek Thummilaeus). Soon after his accession the Persian Arabs invaded the Ghassân territory. Al-Mundhir defeated their king Rabban, apparently in the battle of "Ain Uqhab so often celebrated by Arab poets. The Emperor Zeno mistrusted the Arab amir, so far as his father, was an ardent protector of the Monophysite, and tried to have him assassinated by unknown means. After the attempt on him had failed, al-Mundhir rebelled and refused allegiance to the Emperor for three years. On account of the renewed incursions of Persian Arabs into Byzantine territory, the Byzantines were forced to make peace with al-Mundhir and a treaty was concluded after several unsuccessful overtures at the tomb of St. Sergius in Rumeiya (Somaliland) by a special envoy from Constantineople. Two years after Justin’s death (568) al-Mundhir came with two of his sons to Constantineople and was received with great honour by Tiberius from whom he received the actual crown (δυνάμις) in place of the previous diadem (διαδήματος). In Constantineople he also held an assembly of his co-religionists and endeavoured to smooth over the disputes among them. In the same year al-Mundhir raised his son, burnt the town and brought back rich booty. This success did not serve to dissipate the general mistrust of him of the suspicion that he had had a treacherous understanding with the enemy on a raid into Persian territory undertaken with Murthinos, Comes of Anastasii, and the Syrian Magnus was commissioned to make him prisoner. Magnus was early able to attain his end at the dedication of a church in the village of Harwîm (between Damascen and Palmyra), to which al-Mundhir had come as a guest, and he was taken prisoner to Constantinople (581).

The surrender of al-Mundhir and the cessation of the payment of subsidies (cometes) at the same time to his family provoked his four sons under the leadership of the eldest, al-Nu’man (Greek Nauonos), to raid Byzantine territory which they had wasted in a terrible fashion. The Emperor Tiberius therefore equipped an expedition against them under the leadership of the above-mentioned Syrian Magnus. The last success is recorded in capturing al-Nu’man who was likewise brought to Constantinople.

After the capture of al-Mundhir and al-Nu’man speedily broke out in the Syrian desert, the various tribes chose their own chiefs and some went over to the Persians. With the capture of Jerusalem and Damascus (613-614) by the Sassanian Khazar

raw Parthia, the power of the Ghassânids seems also to have collapsed. Whether the phylarchate was restored on the reconquest of Syria by the Byzantine (629) is uncertain. According to the usual Arab tradition, Tiberius killed the last king of the house of Ghassân. In the battle on the Tadmak (635-636) he fought on the side of the emperor Heraclius against the Muslims. When the defeated Emperor then retired to Constanteople, Djabala is said to have submitted to the Caliph ‘Umar and adopted Islam but to have afterwards taken refuge with the Byzantines in Constantineople and adopted Christianity again.

GHĀT, a town in the Sahara of Tripolitania, belonging to the sandy frontier of Fezzan, 400 miles S.E. of Ghadammas and 250 W.S.W. of Murzuk; in 24° 57’ N. lat. and 17° 2’-30’ E. long. (Greenwich), at the intersection of the caravan routes which lead to the Sudan via Fezzan and Ghadammas. This exceptional position at the intersection of important commercial routes has caused it to become one of the busiest trade centres in the Sahara. It is one of the starting points for trade with Central Africa.

Its toponymy is known, but is far from certain. The accounts of the European explorers who have visited it, notably Dəvergén and Erwin von Bary, there is nothing remarkable in it. Like all towns in the Sahara it is surrounded by a wall with six gates which winds around it. The three of these bear the name Tamelgagh in common, a fourth is the gate of Tafelghat, a fifth Fezzan, and the sixth the Wall of Al-Khair. The streets are narrow,
tortuous and full of sand. The houses are very
primitive. Among the public buildings are a school
and a mosque with a minaret. In the center of the
town is a broad square called Tiflis, from which
radiate six streets to the six gates, cutting the
town into six sections.

Ghât owes its importance entirely to the caravan
traffic. The town itself has barely 600 houses and
4000 inhabitants, its suburbs are the two little
villages al-Tashkant and Tîmûn, about half a mile
beyond the town wall.
The ground between these villages and Ghât is a
scene of great animation when the caravans
arrive from the Sûdân. Dates, skins, cotton-stuffs,
salt and musk are the principal articles traded here.
Industry is limited to local needs. The chief
manufactures are bars, wooden vessels, trappings
and cases for weapons.

The population of Ghât consists of about equal
elements of Berber, Arab and Sûdânese. It in-
cludes: a. The Kil Ghât or Ghâtians proper,
grouped into 8 sections: A’imam-Assam, Kil Kheïsa,
Yâdjaoun, Kil Talâj, Kil Yann, Kil Tanougdît, Kil
Térit, Kil Tarâj; b. Colonies of foreign trad-
ers, chiefly from Ghâtudine; c. Transitory bodies of
Türük, who are caravan traders and lastly;
d. Harâtîn, negroes who fill the soil.

The Ghâtians speak Arabic and Hausa in their
business transactions with foreigners. Among them-
selves they use a peculiar Berber dialect called
Túrükchî, which is not connected with the groups
of Túrük dialects.

For the history of Ghât there is an absolute
absence of documents. Its origins are obscure.
Durvyser (Touareg du Nôd, p. 267) proposes to
identify it with the oppidum of Rupis mentioned
by Pliny, the Eldar among the centres conquered
by the Roman general Cornelius Balbus about
the year 19 a. d., but his hypothesis, which is not
based on any certain facts, has still to be verified.
Nor can any more be made of the local legends
which attribute the foundation of the town to the
Turkish tribe of Yâdjaoun with the help of the
Kil Kheïsa, the Kil Tarâj, the Kil Talâj and the
Imam-Assam. There are no historical texts to
support this tradition.

Ghât: in fact only began to play a part in the
history of the Sahara about the middle of the
sixth century, at the time of the great expeditions
of exploration in the Sahara. The majority of the
travellers who have attempted to reach Central
Africa from Tripoli have chosen it as the centre
of their negotiations with the Tûrêg, from whom it
was necessary to obtain permission to traverse
the Sûdân.

From 1845 to 1876 it was successively visited
by Richardson (1845), Barrâ, Richardson and Over-
weg (1850), Janui ‘Ull Debris (1853), Durvyser
(1856) and Erwan von Bâry (1876-1877). Before
this it was ruled by the Tûrêg to Italy, it was ruled
by a Berber chief whose power was hereditary,
according to the Tûrêg custom.

In 1873 the Turks took advantage of a war
which broke out between the Aqjâl and Hoqgar,
two Tûrêg tribes, to install their authority in
Ghât. It passed from them for a brief period in
1886 as a result of a rebellion of the Aqjâl,
asquashed by a sherif named Sâli ‘Ull Bâkri. Ghât
fell into the hands of the Tûrêg and a portion of
the garrison was massacred. In the end: the
Aqjâl made peace with the Turks and the town
was again occupied by Ottoman troops. It was
governed by a ‘Umâmah for civil matters and
by a Pasha for military affairs.

Ghâtâfân, thought by Laizac to be a kind of
bird, apparently in error (Lamr), the
name of two Arab tribes, Ghâtân in S. d. d. d.
Malik b. Ḥārum b. Dūhâm, a south Arabian tribe,
and Ghâtân in S. d. d. b. Kāśî ‘Allân. The latter
alone is important. The pasturing-grounds of
the Kāšî Ghâtân extended eastwards from Kīhārah
and the borders of the Ḥajja to Adiql and Shām
the mountains of the Bāntu ‘Utbâ. (For their camp-
ing-places see Wüstenfeld, Geograph. Tafeln,
Regesten, p. 171). Ghâtân was divided into two
large branches, Ashhâjî, which inhabited his country in
the neighbourhood of Yalîhan, and Baghîl, sub-
divided into Baghîl and Dûbûyûn, whose territory
lay round about Shārah and Bâbanîn. Their
neighbours were the tribes of Kāšîs b. Kāśî ‘Allân,
the most important being Sinaim on their south
boundary, and further south Hâwâstân, brother-
tribe to Shâlam.

History: The history of the tribes of Kāshâs
and Ghâtân commences from the middle of the
sixth century, when the dominion of the Yemen
over the Ma‘ālûd tribes came to an end. The
chief of all (ḥutafât at this time was Zuhâr b.
Dīghâlûn of ‘Ābā [q. v. l. 73]. He held the title of
king (malik), and received tribute from Hāwâstân
also. He was assassinated by a Ḥawâstân, who
became independent chief of that tribe. Zuhâr
was succeeded by his son Kâd, as chief of ‘Ābā
only. His eldest son, ‘Ull Dīghâlûn of ‘Ābā,
was sent away by Zuhâr, who wished to avoid
the capital punishment of the Hâwâstân, which would
have been incurred. The waves of the Hâwâstân
passed between the tribes of ‘Ābâ and Dûbûyûn (see art.
‘Ābâ). During the war Kâfîd who had killed
Zahair was himself slain by Harith b. Zalim al-Dhubaythi, whilst 'both of them were guests of the Lakhmid prince. Harith took refuge with Ghatafan who refused him protection; but after some wanderings he returned secretly to them, but brought upon them the vengeance of Bahsha whose son he had wrongfully killed. Owing to the insurrection of Hulafai and other chiefs by Aba, all the remaining clans of Ghatafan became united against 'Abbas, who migrated and after many wanderings became guests of 'Amir b. Sa'd who were at war with Tantis. Dhuylbin joined Tantis. Thus two tribal wars became merged in one and the situation may have been further complicated by the outbreak of a third war between Hulafai and Khutha (see art. 12348). 'Aba having quarrelled with each of their hosts in turn became reconciled to the rest of Ghatafan.

No sooner had Ghatafan become reunited than they were involved in a war with Khattab (Hawra and Sulaim), which consisted largely of skirmishes and assassinations rather than pitched battles and ended only with the rise of the power of Muhammad. A principal figure in the early stages of this war is that of Durani b. al-Simma. [q.v. l. 10582] of Hulafai [q.v.]. At that time the opponents of Ghatafan were chiefly Hulafai, but in the later stages, Durani growing old, Sulaim took the lead under Mu'awiyah and 'Sakhr, the brothers of the poetess al-Khansh. [q.v.]

When this war had burned itself out (Ghatafan joined with Sulaim against the rising power of Muhammad. Year after year mutual raiding took place between these two opposing powers. In the second year of the Hijra Ghatafan and Sulaim joined in an attack upon Mada'in, but Muhammad, marching out to Ka'bah al-Mukarrar, dispersed them. In the following year occurred the expedition to 'Uqayr, which had a similar result, Ghatafan again retiring into their mountains. And again in the fourth or beginning of the fifth year the raid of 'Uqayr al-Ruj'ah produced the same result. In the fifth year also Ghatafan was amongst the tribes which took part in the investment of Madina known as the battle of the Trench. In the following year 'Uqayr, the chieftain of Fazaran, raided the canals of Muhammad close to the city. Muhammad pursued the robbers as far as 'Uqayr al-Karim. In the seventh year Ghatafan set out to the relief of 'Uqayr but finding Muhammad stationed between them and the town they fell back. Muhammad's guide in this expedition was an Aqaba who also divulged the whereabouts of a party of Khatabi against whom Beirih b. Sa'd was sent. At last in the year six, Sulaim threw in their lot with the Muslims and was followed by Ghatafan, and the wisdom of their action was shown by the conquest of Madina shortly afterwards.

That their faith was not very deep is also shown by the celerity with which they fell away upon the death of Muhammad, and the leading part played by 'Uqayr b. Hujayj, the Fazaran chief, together with 'Aba and Dhubaythi in threatening Madina, the Aqabah threat alone holding back. Their attack on the city was twice repulsed by Abu Bakr. In retaliation they put to death those of theirubby number who were Muslims. As soon as reinforcements had reached Abu Bakr (through the return of the cavalry from Syria), he again attacked them; and drove them out of the district of Rihlah, in which they had congregated. They be- took themselves to Tabitha, the prophet of the Arab tribe, and when the latter was defeated by Khattab b. al-Walid in the battle of Badr, Ghatafan, and especially Fazaran under 'Uqayr, bore the brunt of the fighting: Ghatafan, further troops became Muslims and those who had put to death the faithful believers of their tribe having been executed, were pardoned.

In the year 14 A.H., we find the tribesmen of Ghatafan swelling the forces of Sada b. Abi Waqas. They took part in the battle of the Camel in the year 15 and sided with the Umayyahs as against the 'Abshairah, being present at the battle of the Zab in 132.

GHAZANI (a), Par. of Ghaza, [p. v.]

AL-GHAWAR, AL-GHOZR, "depression", "low lying ground among hills", it is often found as an Arab geographical term.

1. The best known is Ghawar in Palestine, the Akba of the Greeks, i.e. the deep hollow through which the Jordan flows, the south end of which forms the Dead Sea. The Arab geographers define its boundaries as Tiberias in the north and Geshur in the south. The portion north of Beisan belonged to the province of al-Urdum, the remainder to Filastin (q.v., l. 107 et seq.)

It is described as a very hot, unhealthy district with bad water, but there were a number of springs, rivers, palm-groves and villages in it. Yafiz says that its principal product was sugar-cane, Idhrt indigo. Besides Jericho, the capital, the following towns are mentioned, Tiberiades, Beisan, Amaziah and Geshur. Al-Asarat in the Ghawar of Filastin, whose, according to Ibn Ishaq (Tabari, l. 1105; on the other hand 2105, q. Ghawar al-Asarat), 'Amr b. al-A'asi joined the army which came east of Jordan before the battle of Badr, is probably to be sought for at the south end of the Dead Sea.

2. Another Ghawar is Ghawar Thammat al-Yaman or Ghawar Thammat (Farasakh, ed. Bocher, p. 20, 10), also as dual: Ghawar Thammat (Tabari, l. 210, et seq.). The statements by the geographers regarding it are very vague, for it is sometimes identified with Thammat and sometimes described as a district adjoining it or for example, according to Kudum b. 'Umayr it stretched from Najad to the extreme borders of Tiberias; according to a passage in al-Razi it lay between Thammat (the district from 'Uqayr 'irk to 'Asa') journey beyond Mecca and al-Sarah.

GHAZI (from the nose, "defilement") an epithet of the Kutha [q.v.], the head of the Shi'ah hierarchy of saints. It is used of him only when he is thought of as one whose help is sought; but that, from the nature of the Kutha, is practically always. Thus it is a normal request to Kutha. Others say that the Ghazi is immediately below the Kutha in the hierarchy.

THE ENCYCLOPAEDIA OF ISLAM, II
GHAZAL (A.S.), a short poem or more than four but less than fifteen lines. The first two have the same rhyme, which is repeated at the end of the fourth, sixth etc. lines; the poet usually mentions his own name (rabdanmi) in the last line. The matter is usually erotic, but other subjects, wise, spring, fate etc. are not excluded. The form should be the most perfect possible, especially from the point of view of language: vulgar and kakhophones words are to be most rigorously avoided. The ghazal is the kind of poem most favoured in Persian and the Indian and Turkish literature influenced by it.

AL-GHAZALI (For the evidence at present available on this name see the Journal of the Royal Asiatic Soc., 1902, pp. 13-22. Apparently Ibn al-San'ani preferred the double Z). Abū HAMĪD MUHAMMAD IBN MUHAMMAD AL-FARĀ'Ī AL-GHAZALI was the most original thinker that Islam has produced and its greatest theologian.

I. Life. He was born at Tus in A.D. 450 (A.H. 1058) and was educated there and at Naisibin, especially under the Imām al-Harāmīn with whom he remained until the Imām's death in 478. A sceptical attitude showed itself in him from the first. Although a Sufi environment and the Sufi exercises, as impression was made on him by these, and he preferred to investigate theological and legal subtleties. This began when he was under twenty; with ṣafiah (acceptance of religious dogmas as an authority) he had broken from his earliest youth. From Naisibin he went to the court of Nīqān al-Mulk, the ṣulṭān, and formed part of his retinue of канonists and theologians until 483, when he was appointed to teach in the Nīqānite madrasa at Baghdad. During this time he became an absolute sceptic, not only to religion but also to the possibility of any certain knowledge. This scepticism he never overcame as far as philosophy was concerned. At Baghdad he taught and wrote on canon law; he wrote also controversial books against the Ta'limites (Iṣāma, Iṣāma, Iṣāma al-Mulk and Malik Shīh were assassinated by them in 484. For himself he laboured to recover a possible intellectual and theological position and from 483 to 487 studied diligently the different schools of thought around him, especially philosophy. Finally he turned seriously to Sufism. Intellectualism had failed him; what of religious experience? He had returned to belief in God, prophecy and the last judgment — or, as he put it, God had restored to him those beliefs and fear of that Day of Woe, which had been with him. From Kadhji to Dhus l-Ka'da he was in the throes of a conversion wrought by terror; and under it he suffered physically and mentally. Finally, in Dhus l-Ka'da he put behind him his brilliant position and worldly ambitions and fled from Baghdad as a wandering dervish. By giving himself to the ascetic and contemplative life he sought peace for his soul and certainty for his mind. And these he gained. From that time his position was pragmatic and he taught that the intellect should only be used to destroy trust in itself and that the only trustworthy knowledge was that gained through experience. A purely philosophical structure could have no base. On that his dialectic was as inexcusable as that of Hume. Even the systems of the speculative theologians had no true intellectual certainty, although their doctrines were correct. By speculative methods they could not be proved; but only by the direct knowledge with which God fills the heart of the believer. By that personal experience (ma-rja) the fact of prophetic revelation is established and the truth of the theological structure assured. Yet there can be no question that his thinking had been indefinitely clarified by his philosophical studies and that with him the forms of Greek dialectic made their final entry into Muslim thought. What al-Kahtân half consciously began, al-Ghazālī willingly finished. Further, that he used the forms of Greek dialectic to found a pragmatic system is its originality and distinction. The later theologians did not always understand or follow him in this, but modern Islam seems to be receding from his method. That the account which he himself gives of all this in the Muḥīth min al-falā'il is true cannot be doubted; the philosophical necessity, both for al-Ghazālī, as an individual, and for the development of Muslim thought, both of which had gone into a iṣlāh, is plain. As in al-Kahtân's case only a great emotional experience could break the fetters of tradition and give the personal force needed to turn the current of the age. Political complications may have helped to bring on his nervous breakdown. Barkiyārā, became Great Seljuq and killed his uncle Turash immediately before the flight of al-Ghazālī, and the khilafah at whose court al-Ghazālī held important place declared for Turash. Similarily his return to active life in 499 followed the death of Barkiyārā in 498. About two years he passed in strict retirement at Našīfūr; finally pilgrimaging the end of 499. Then came two years of retreat in different places, and then, from time to time, periods of return to his family and the world. The Ḥiyā and other books were written, and he preached at Našīfūr and taught the Ḥiyā there and at Damascus. Finally "the Sultan of the time" (Muḥāmmed, sult. of 1 · 3 0 35, p. 4·20) compelled him to become a teacher in the Niṣāfīte madrasa at Naṣīfūr, and he consented in Dhus l-Ka'da 499. The times called for some strong reforming influence. That he had himself recognized and also that there was need of a powerful and religious-minded ruler who would crush heresy and unbelief. Such a ruler was apparently found in Naṣīfūr, the brother of Barkiyārā, who became Great Seljuq in 498, and to whom he addressed the original Persian form of his Tāh al-iṣlāh, a manual of ethical guidance for kings. The immediate influence in reality, however, Fakhr al-Mulk, the son of his old patron, Niṣāfī al-Mulk, who was wise Naṣīfūr to Sandjar, the governor of Khorāsān. But he did not long stay in public life. His yearnings to quiet and contemplation continually drew him and there are stories, too, of friction. He returned to Tūs and lived there in retirement with some personal disciples, having charge of a madrasa and a khānah or Sufi monastery.
there he died on the 13th of Djamâd II 505 (Dec. 19th 1116).

2. Doctrine and influence. Although a formative canon lawyer of a rank short only of the first, he yet despised Fähef from the position it had usurped, lashed its casuistry and refused it a place as a part of religion. He dealt similarly with the intellectual subtleties of Kâfir and especially denounced the tendency to make the faith of the masses a structure of logically demonstrated articles (šamâl). In this he followed the foundations of his maqâmâd, el-Sânâ. He opposed the Mâlikâli also in the definiteness which they had despised. All, he taught, who agreed in the broad principles of Islam were believers. He lays down in his Tafsîh; but he taught also in the Itzâm (ed. of 1305, pp. 33, 34, 38, 62) and the Musâfi'id (ed. of 1305, p. 47) that the religion of the unlearned should be protected by the secular arm of the state. These reforms his high rank as a scholar and popularity as a preacher carried through. They have been accepted by the Agreement of the Muslim people (al-âdâbî) and he himself is reckoned as not only the mughâllâc (remover) of his century, but as the great restorer of the faith. Of course both canon lawyers and speculative theologians continued and still continue to attack their systems and to try to enforce them. He also brought philosophy into the open and dissipated the glamour of mystery which had surrounded it. It was simply "thinking", and the philosophers and their systems could be understood by any intelligent man. Further, by philosophy the ultimate and unconditioned could not be reached; there could be no metaphysics on a basis of pure thought. This agnosticism was a development into more perfect form of the system of the later Ashâ'iris. On the positive side he combined the work of al-Kâshâî and gave Shâfiin a firm standing in Muslim orthodoxy. In this al-Ghazâlî marked the second great epoch of development as Ashâ'iris with his applying of logical argument to the defence of orthodoxies he marked the first. Thus in al-Ghazâlî the basis of all religious certainty was ecstatic experience. By it he and all Shâfiis (those who have direct experiential knowledge; perhaps a translation of "gnostic", v. Baur, Dogmârêt al-Ghazâlîyî, p. 351) learn that the theological positions of the Fathers (al-sâlihî) are true, and how these should be interpreted. To that age of simple faith he looked back with longing. This led him to what might be called a Biblical theologically-study of the Kâbir and of the record of the teachings of Mahânâm. Practically he endeavoured to arouse men to religion and lead them back to the old ways by preaching the Wreath to come at the second judgment. His own conversion had been under the prevalence of fear, strongly exercised and forming the paradox of his position in the emphasis which he laid on the love of Allâh. It is part of the contrast between the emotional life of the salutes with Allâh which he had known, and the inhuman dogmatism of the theological system which he felt compelled to accept. In spite of the ecumenically tolerant passage to the faith of the masses referred to above, his influence has been and is for charity, the stimulation of free inquiry and intellectual life. His immediate influence on European thought, even the most modest, has also been marked. It flowed through the Purgi Fîlhi of Ramîn Marti and affected, first, Thomas Aquinas and, later. Pasch. For his alleged relationship to the Alâids and to the book Alâfî, see Arabic above (vol. 6, p. 995) and references there and for his real relationship to magic, see Nûrî above (vol. 6, p. 770) and Dece. of A. and Thob. MSS. in Newberry Library, Chicago, pp. 6 et seq.

3. Sincerity. Even by his contemporaries the reality of his conversion was doubted; the change, it was said, was so great, the ascetic and sceptical canonist to the ecstatic saint with his sermons on the fear of God. Later, the philosopher, hard hit by his dialectic, and unable to believe that a man who knew philosophy so well should not be, at least secretly, a philosopher, sought in his writings proofs of an ecstatic teaching. Two things aided them in that. He had openly preached an economy of teaching and had written a book with that publically as its title, al-Mâqâmât bâliî al-gâtî qâlitî bâšîî — "That which is to be concealed from those who are not worthy of it" — a book, however, in which there is no heretical doctrine. In his Dâwây, an answer to attacks upon his Iftâî, he bitterly defends, with the examples of the Prophet and the Companions, the practice of keeping certain theological speculations and developments secret from those who are not in a position to understand them and who might thereby be led astray either in faith or in practice (ed. on margin of Tāfârîs al-Âbdî, Cairo 1311, pp. 45, 55—164, 225 et seq. 247 et seq.). There are other references to the same practice in the Ahrâm (ed. of 1224, pp. 35 et seq.); the Dâwây (ed. of 1229, pp. 25 et seq. exp. 30 et seq.) all very important passages on the order in which his books were written; the Mizâjî (ed. of 1324, pp. 54 et seq.) and the Mizâjî al-ânâm (ed. of 1326, pp. 212 et seq.) of mukhâbâts, and what a man has a right to keep to himself. And this had really been the practice of Islam from the beginning. Even al-Shâ'î, while denouncing kalâm, had admitted that some should study it for the defence of the faith. The position of Ibn-Kâshîr, at the extreme end of the development, was similar, only in his day the need had passed (ed. Nâhir, li. 433; al-Shâ, li. 653). It was always a fait accompli and not a fait fini and had a similar origin with the hikâya of al-Ashâ'î. Thus the advanced doctrine did not contradict, but only developed, based and deepened the simper faith, and knowledge of it was open to all who would fit themselves for it. In the end, this led most irrationally to the Averroistic doctrine of the two-fold truth. That was only a special case of the multiform truth which Islam has always admitted. 2. Those direct perceptions of religious truths which al-Ghazâlî had reached in ecstasy he was compelled to express in language by means of metaphor and symbol. He teaches consistently that there are ideas which language cannot render in exact terms and the concept of which can be suggested only by pictures. When, then, such expressions were examined and held to account as intellectually exact statements, misunderstanding was certain to follow. Thus Ibn-Kâshîr is led by the metaphor of the sun in the Mizâjî (p. 55) to believe that al-Ghazâlî was thus teaching the Neoplatonic doctrine of emanation (wa'ir). But the context is on the truth of such an explanation, and the metaphor is one frequently used by al-Ghazâlî to suggest the relationship
between God and the world. On this point and on the Mişkât generally I would refer to a paper by W. H. T. Gairdner of Cairo, shortly to be published. I am indebted to him also for several chronological and bibliographical suggestions.

4. Works. Our knowledge of al-Ghazzâlî's works is still incomplete both as to extent and relative order, not to speak of dating. For lists approximately complete reference can be made to the introduction by the Siyâsit al-Murtadâ (based on al-Suhâkî) prefixed to his İhya‘ al-Îtîbât, a commentary on the İhya‘ (ed. Cairo, 1351, vol. ii., p. 419; also published in German, ed. C. W. Schubert, Berlin, 1894, pp. 421–438). The following is an attempt at a classified list of the works which have been printed and are accessible. The İhya‘ al-İrâm al-din (the title expresses al-Ghazzâlî's consciousness of the part the book was to play, cf. Bauer in Der Islam, iv. 159 et seq.) as a compendium of his whole system stands by itself, although it does not go into the ultimate details, either on philosophy, kalâm or Şî’ism. On its date see above. It divides into two parts, each consisting of two quaterns (187); the first is on external acts of devotion and religious usage, the second upon the inner spiritual acts of devotion and religious consciousness. It covers the period from the middle of the 11th to the middle of the 12th century. The four quaterns are Rûb‘ al-İrâm (Acts of a creature towards his Lord); Rûb‘ al-İlâm (usages of life); Rûb‘ al-mukkât (Defensive matter in life); Rûb‘ al-munżifât (Saving matters). Each contains ten Books; the first of the forty is on İhsân, the second on kalâm and the last on exegology. Otherwise all is expiastic, traditional and practical. The present writer has translated Book vii. in Rûb‘ li., on the relation of music and singing (sânâ‘î) to the Şî’î sect, in the Journal of the Royal Asiatic Soc., for 1903–1905; he has analyzed with extracts Book ii. Rûb‘ li., on the marvels of the human heart, in the Archive vi. xx., of his Religious Attitudes, and Book vi. of Rûb‘ li., on the love of Allah, in Hastings’ Dict. of Religion, vol. ii., pp. 677–680. A great part of the İhya‘ is also analyzed by Miguel Asín in his İhtîfâl; a translation of the whole work is being prepared by H. Bauer. Another compend of introduction on İhsân in general is his Fîlîhât al-İhliyât, it resembles the first book of the İhya‘. His remaining printed works may be classified as follows:

1. İbn-i-i Sûrî: Kitâb al-râjîf – the smallest of his general treatises on İhsân; al-Murtadâ, the smallest of his general treatises on İhsân; İyâ‘ al-İhsân, written after his return (ed. of 1322, pp. 3 et seq.).

2. Logic and books against the philosophers: Kitâb al--Islâm, an elemental treatise on logic; Kitâb al-İkhtiyâr, a smaller book; Kitâb al-İsfâhânî, statement of their teachings on all subjects save the absolutely demonstrable, professes to be a Kitâb only partly ed. by C. Seznec, diss. 1888; Tahâfût al-İsfâhânî, demonstration that they could not by reason prove their system (ed. of De Boor, Wissenschaftliche Bibliothek; there are translations also in Asin’s İhtîfâl, pp. 735–880; also a translation begun by Carra de Vaux in Mémions, vol. xviii.), 5. Contra Râfî‘îyat: al-Kutub al-musafihûn, 4. Speculative theology: Kitâb al-İslâm, incorporated in İhya‘ as Kitâb al-İrâm, an abridgment of his book by H. Bauer, Die Dogmatik al-Ghazzâlî, Halle, 1899; İyâ‘ al-İhsân, an expansion of the preceding and his most elaborate treatise on İhsân, 5. Books to be kept from those unfitted for them: al-Mujâhid bîni’ al-İsfâhânî, on İhsân and his creation — on angels, djinn etc. — on prophets and miracles — on exegology; al-Mujâhid bîni’ al-İlsâhî, on the mystical meaning of İhsân as Light and on the guidance of the Inner Light to İhsân — a book of the end of his life. 6. Expositions of the Faith of the Şî‘ahs on the basis of the Korân and traditions: İyâ‘ al-İrâm, a second part of preceding; al-Muradî, fi ‘ismî İhsân İhsân al-İhsân (exhortation to imitation of the divine qualities); al-İhâla fi mutâhâfî‘î İhsân, evidence of creation for the wisdom of İhsân; al-Daraw al-darawî, exegology (text and transl. by L. Gautier), al-Nafdh wa-tarîqah fi ‘ismî İhsân İhsân al-İhsân, how all mankind have strayed from obedience; İyâ‘ al-İhliyât, on İhsân as ṭâbî‘ (see above); İhliyât al-munção, mother İhliyât, 7. Books of religious experience and edification, personal and systematizing: al-Mu‘izzî, al-İslâm, on knowledge which is gained immediately from İhsân; İhliyât al-İhâla, origin in Persian traditions of the Doctrine of Three (trans. by A. Homann), İyâ‘ al-İhâla, on the need of works besides knowledge (text and transl. by C. Seznec), 1890, on saving works: İhliyât al-ta‘lîf fi ‘ismî İhsân, what is worth while in religion — from the Persian and, if genuine, of the very end of his life; İhliyât al-ta‘lîf, his last book, dictated (the preface is translated by Asin in his İhtîfâl, pp. 881–899). 8. Defences of himself: İhsân al-İhsân, a small treatise, margin of İhsân al-İhsân, vol. i., pp. 41–252; al-Tawâf al-darawî, on principles of dream interpretation; on a Kashida of al-Ghazzâlî and Mâzûrî, min al-İhsân, written after 500 (trans. by C. Seznec in Asin’s İhtîfâl, vol. iv. 1890).
GHAZAN, MAMULKHU KHANS, in the Mongol empire of the 13th century. Born in Persia (604-703 = 1205-1204) and in the year 670 = 1271. On the accession of his father Arghun (q.v., i. 450) he was appointed governor of Khurasan, Maranjab and Ray; he administered these provinces in the reign of Ghiyath also (cf. above p. 128). Ghiyath had however brought up as a Buddhist and, while governor, ordered a Buddhist temple to be built in the town of Kashan; shortly before his accession, during the war with Buld (q.v. i. 591), his general Nasr, persuaded him to adopt Islam. In his reign Islam was recognised as the State religion, the Mongol empire organised on a basis of Muslim culture, splendid buildings erected in and around the new capital Tabriz, notably charitable endowments, mosques, theological schools, etc., the descendants of the Prophet sometimes mentioned in the first place in the state records, before the princes and princesses of the ruling house, and lastly the turban introduced as the court headgear. But Ghiyath was more a Mongol than a Muslim; as a ruler and law-giver he displayed great activity entirely free from biased prejudice, of which his physician and actual minister Ragbeg al-Din (the famous Soltan al-Din, al-Smiri filled this office) in name only and had in reality, no say in the government, gives a detailed account. Particular attention was devoted to the finances of the country, the currency, etc. Ghiyath no longer appears on his coins (the inscriptions on which are in three languages Arabic, Mongol and Tibetan), like his predecessors, as representative of the Great Khan who lived in Pekin, but as ruler "by the grace of God" (Mongod Temgir Khanjüber) by the power of heaven. Ghiyath carried out his plans with vigour and bloodshed in the teeth of the opposition of the Mongol Emirs and even against the princes of the ruling house; every one whom he believed to be dangerous to the peace of the country or his autocratic rule, was dis-
posed of with ruthless cruelty; among these were the Emir Nawruz himself, to whom he owed his throne. On the other hand Ghazi's measures increased the prosperity of the country and in particular protected the country people from oppression and extortion. The revenues of the state rose and in Ghazi's reign amounted to 2,000,000 dinars a year, i.e., about £2,000,000. Like other Mongoi rulers Ghazi particularly esteemed those arts and sciences which might be useful to the State; he is himself said to have been conversant with natural history, medicine, astronomy, chemistry, and even with several trades; an observatory was built by his orders in Tabris with a school for secular sciences (bibliobyd) in connection with it. Ghazi is said to have known several languages in addition to Mongol, his mother-tongue, and to have been acquainted with the history of many lands and peoples. He devoted particular attention to the history of his own people and had all that could be learned about it collected by Rashid al-Din in a great work to which this passage in a Ghazi biography was given; the author says that he received much of this information embodied in the work from his royal master Ghazi's activity abroad was less successful; he did not succeed in effectively defending the eastern frontier from invasion from Central Asia nor in conquering Syria.

The section of the *Tawhid Gha'ul* dealing with Ghazi's activities as a ruler and law-giver has not yet been published in the original; in the *Germanische Forschungen*, p. 576, Ghazi's legal code is quoted according to the extract from Khodzhatr translated by G. Kirkpatrick (*New Asiatic Miscellany*, i. p. 149 et seq.; Calculus, 1789). On Persia under Ghazi see Khattri, a. al., W. Barbara, *Parsiartena nöbjet orto xeoon Anzhi-kei wotzii Mazand*, St. Petersburg, 1911 (Anzhi-kei service, No. 5) and in *Iraniana*, l. 76 et seq. (W. Barbara).

**GHAZAT or GHAZWA (π.), Raids against unbelievers.**

**GHAZI (γ.),** plural *Ghazari*, one who undertakes a *ghara*, particularly the leader of one; hence an honorary title for one who distinguishes himself in war against the unbelievers. For other meanings of the word see the Supplement, s.v.

**GHAZI, Sultan al-Din, son of Zangi, born 500 (1406-1107), was the first Mowjil (al-Mawsl) 541—544 (1446-1449). When the *Azbeg* Zangi was murdered by his own men in 544 (1446), the most prominent of his followers, including the vizier al-Djawad al-Jahani [q.v., p. 1039?], attempted to persuade the troops to recognize the authority of the Salluq Alp Arslan b. Muhazzar. But they were only successful with a section of them; another section went to Syria with Zangi [s.v., p. 544] the son of Zangi, afterwards so famous. Those who paid homage to Alp Arslan took the road to al-Mawsl where Zain al-Din, the Khud, was in command as Zangi's representative. But because Alp Arslan did not show the courage to play the part allotted to him, it was decided to recognize instead the authority of another of Zangi's sons named Ghazi, to whom the Saljuq Masul had granted Shahrizur in Sef. The latter accepted the call, went to al-Mawsl, took Alp Arslan prisoner and henceforth ruled over this town and Dyzor Rafa. There is not much to be told of his short reign — he died in 544 (1149). The inhabitants of Damascus besieged by the Crusaders called him to their help and he went thither with his brother Nuz al-Din, but no fighting resulted as in the meanwhile the people of Damascus had succeeded in forcing the Crusaders to retire. Ghazi is further celebrated because he was a friend to learning and founded a madrasa in al-Mawsl, which was called at-Telek and became his last resting-place. Among his pupils was the poet Husayn Bajr. He was succeeded as Azbeg al-Mawsl by his son, who was brought up by his uncle Nuz al-Din and died young, but by his brother 'Abd al-Din Mowdud [q.v.].

**GHAZI, Sayf al-Din, son of Kutb al-Din Mowdud [q.v., p. 576] , was the first Mowjil (al-Mawsil) 545—576 (1149-1170). On Mowdud's death: it was not his eldest son 'Imad al-Din, who was recognized as his successor, but Ghazi, through the influence of his mother, a daughter of Tughril, who had the powerful support of Pahlavi al-Din 'Abd al-Ma'mu, who held the reins of government in Mowdud's reign. 'Imad al-Din had spent almost all his life with his uncle Nuz al-Din and married the latter's daughter and for this very reason was hated by 'Abd al-Ma'mu, apparently a Christian by birth. But 'Imad al-Din appealed to the powerful Nuz al-Din and the latter at once marched against al-Mawsl, conquered Rakka, Nisibis and Sinjar, but made peace with Ghazi, when he reached al-Mawsl, by the terms of which Ghazi was left in power and Sinjar alone given to 'Imad al-Din. When Nuz al-Din died in 599 (1174), Ghazi seized the towns of Harran, Nisibis, Kalkin, Edessa, Khirbat and Sinjar but had to come into conflict with 'Abd al-Din al-Mowdud as a result of this. The latter came to Syria in the following year and agreed as far as he had dealt with the Syrians and the Christians, he put the Muslims to flight near Hamah (10th Ramadhan 570 = 13th April 1775). Ghazi had in the meanwhile besieged his brother 'Imad al-Din, who naturally had not taken part in the campaign against 'Abd al-Din, in Sinjar, but, when he heard of the defeat at Hamah, he raised the siege and retired to al-Mawsl. In the following year (571) he again set out against Nishabur to fight 'Abd al-Din again in company with the Syrian rulers who were his allies, but he had again to take refuge in al-Mawsl after the battle of Tell el-Salibin (between Hamuh and Halab). He held out here till his death on the 3rd Safar 572 = 13th Aug. 1176. His brother 'Abd al-Din Mawdud [q.v., p. 576] succeeded him.

**GHAZI, see [ad-Malik] al-Zahir.**

**GHAZI 'ALI PASHA, see 'Ali Pasha, s.v., p. 294 et seq., (2nd ed.).**
GHÂZI GIRÂY, name of three Khân of the Crimea. Ghâzi Girây I reigned only about six months in the year 1029—1521; Ghâzi Girây II, twenty years (1053—1573); the Ghâzi Girây III, three years (1116—1119=1704—1707). Only the reign of the Ghâzi Girây II, is of importance; he was known as Eran = storm from his impetuous bravery and was the son of Dewlet Girây I. and reigned after his brothers Muhammed Girây and Safâr Girây. Before his accession he had taken part with the Turkish army in the campaigns against Persia and spent seven years as a prisoner in the Persian fortress of Kalpahan; he afterwards came to Constantinople and enjoyed the favour of Sultan Mahomed III. (984—1003 = 1574—1595). As Khân he undertook a campaign in 1591 against Moscow, was defeated and wounded; in the following year he sent his brother, the heir-apparent (Fâth) Fath Girây, to lay waste the Russian frontiers and on this occasion a larger number of prisoners were taken than had ever been taken before. At a later period Ghâzi Girây took part in the campaigns against Hungary. About 1005 = 1596—1597 he lost the favour of Sultan Mahomed III. (1003—1012 = 1595—1605) for a short time, when deposed in favour of Fath Girây, went to Sinope, while there received a grant of confirmation from the Sultan, returned to the Crimea and was recognised as Khân by the people. He was succeeded by his son Toktamish, but the latter was not confirmed by the Porte and could not hold out against his uncle Selim Girây. In Ghâzi Girây II's reign, Gdalis (the modern Enguri) was made capital for a short time in place of Hâghe-Sen. [q.v.]. 522 et seq., C. V. Smirnov, Krimsky Khrust (St.-Petersburg 1887, p. 443 et seq.); O. Godovozov, Die Maimen der Ghâzi, Moscow 1902, p. 100 et seq. (W. Baring).
GHĀZĪ MIYĀN. This celebrated personage is venerated by both Hindus and Muhammadans, and his *āshūr* or *wird* is a popular institution among the people throughout Hindustan. In the northwestern parts of India he is identified with Sālār Masʿūd, the nephew of Mahmūd of Ghazna, who was born at Ardjūn a. h. 405 (1014) and after performing prodigies of valour in battle against the infidels, and capturing Dihlī and Ayodhā, settled at Bahārī in Oudh. Here he was attacked by the Hindus under Rādī Sharh Daul and Hus Daul, and in the battle that ensued he was killed and his army destroyed. This occurrence took place on the 14th of Rajab, a. h. 433 (1043).

Around this, the myth of his name structure and incredible stories have accumulated. It is believed in Oudh that only the bones of the hero were discovered in the 14th century, and that, whilst being exhumed, many miraculous events occurred; but a native historian informs us that Sikandra Lālī in the 15th century abolished throughout his dominions the annual procession the banner of Sālār Masʿūd because of its being contrary to orthodox belief. No legislation, however, could stop such a popular festival as this has always been.

It is impossible to explain the meaning of the ritual performed by persons while celebrating the *āshūr* of Ghāzī Miyān.

At Gagārī in the Bāndā district, a fair is annually held in the month of Baisakh (April–May) in honour of Ghāzī Miyān, at which *Darfīl faḵīrī* (madrassī beggars who sing and dance to the accompaniment of a drum) the coloured rags, and henna hair on the top of a long bamboo, round which they sing and often burn incense.

In some parts of India Ghāzī Miyān is described as the son of a famous general who served under the King of Dihlī, and who subsequently adopted the garb of a faḵīr (madrassī), retired from the world, and shortly afterwards died, whereupon the son, Mādur, joined the troops of a Pathān leader, and distinguished himself by his bravery and hatred for the Hindus. Hence his name has come to be regarded as a symbol of warlike prowess, and is used up to present times as a battle-cry by Hindustani soldiers. While his nāqurl ceremonies were being celebrated, the enemy appeared, and in his attempt to drive them back he was himself slain. The present day celebrations in honour of Ghāzī Miyān are hence supposed to represent the incident of his untimely death and the capture of his nāqurl banners and emblems by the enemy.

On the first Sunday of Dūsh (May–June), a great fair is held at the tomb of Sālār Masʿūd, at Bahārī when crowds of pilgrims make liberal offerings at the shrine; at Monir also, near the junction of the Sone and the Ganges, the anniversary of the death of Ghāzī Miyān is celebrated. The history of this fair is interesting as showing how legends about one holy man come to be absorbed in another quite different from him.

Van Graft, sailing up the Ganges in 1669, stopped at Monir. The inhabitants were poor cultivators and the country was formerly a desert until a very holy man, "His Monier" (Vāyūk Unnār, a famous saint who is the author of the *Shāhān Nnān* and died a. h. 782, see Kān, *Cat. of Persian Ms.,* vol. 1, p. 492) struck by the general features of the place, fixed his abode there; and after having exterminated the wild beasts, erected a small chapel where he performed many miracles. At his death he left much money, with which, his village built a mosque and a tank, frequented by faithfuls who were more interested in working miracles. The mosque still stands, but the tank, finding the worship of Ghāzī Miyān more profitable, established a fair in his honour instead.

The festival of Ghāzī Miyān is not popular in Eastern Bengal, but few villages are without a shrine dedicated to Ghāzī Shāhī. This spot is usually a diminutive *Darfīl* (shrine), with a raised mound of earth in the middle, before which every Muhammadan and Hindu makes obeisance as he passes, and, whenever his family is attacked with any malady, the villagers make votive offerings of flowers, milk and sweetmeats, along the banks of the Lakhnūt, on the outskirts of the village, a mound of earth, stands beneath a grass thatch. This mound has generally two knobs on the top, said to represent the tombs of Ghāzī Miyān and his younger brother Kān. On the 22nd day after a cow has calved, the first milk drawn is poured over the mound as a libation, and in time of sickness rice, plants, and sweetmeats are offered.

(M. HUDAYT HOSAIN.)

GHĀZĪ MUHAMMAD, called KĀN-MULLA (the Russian, a Muslim leader in the war of liberation in the Caucasus. [See the article IMAMAT.]"

GHĀZIPUR, district of India in the United Provinces, lying on both sides of the Ganges below Benaras. Pop. (1911), 339,725, of whom 10% are Muslims. It includes the site of the battle-field where Shah Shāh decisively defeated Humayun in 1539. The town of Ghāzipur stands on the N. bank of the Ganges, length. (1911), 39,449. Before the opening of railways, it was a considerable centre for river traffic. It contains the Government opium factory, for the poppy products of the United Provinces, and is also famous for rose water and ottu of roses, made from roses grown in the neighbourhood. The name is traditionally derived from a Sāyid named Māmūd Malik al-Salātī Ghāzī, who is said to have defeated the Hindīs near it and founded the city about 1530.

The most notable buildings are the tomb and tank of Bahārī Shāhī, governor in 1530; and the Chālī Sattīn, or tank of forty pillars," the palace of 'Abd Allah Khan, governor in the 18th cent., which is still owned by his descendants.

(J. S. COTTON.)
GHAZNA (otherwise known as GHAZNA, GHANZ) is an ancient town in Afghanistan situated in lat. 68° 18' E. long. 33° 44' N. on Jolly ground 7280 ft. above sea-level on the watershed of the Arghandab and Tarnah rivers. It is now an insignificant town, its place as the northern capital of the country having been taken by Kabul, but has some importance still as a centre of the Ghaznavi traders who proceed annually from British India by the Toor and Ghazni routes. It is still hallowed and the ruins and monu-ments to the north and east testify to its former extent.

Its early history is obscure. Suggestions have been made of its identity with Phokomy's Gazaca and with the Greek Gazas, but there is little to support these conjectures. On the other hand the 6th-zeit of Huan Thang (which V. d. St. Martin first identified with Ghazna), seems to correspond with it accurately. He approached it from India either by the Gunal via Wans or by the Toor via Band. Either of these names might represent Varana, which is designated by the Buddhist pilgrim. It was the capital of the kingdom of Taxo-kin-to and of great extent. Buddhism still flourished there at that period (the 7th cent. A. D.). It is not however till the rise of the Ghaznavi dynasty which took its name from the town that Ghazna became famous. It is doubtful whether Ghazna was included in the S maintain dominions. It was certainly not one of their mint-towns. Alp-Tagh conquered it from a certain lawl which position is uncertain. After his death his son Ishák was driven out of Ghazna by Lawl, but recovered it with the aid of Manjir b. Nahl Simnand. Balkhtighe his slave succeeded him in Ghazna, and was himself succeeded by Pri who allied himself with Lawl and the Hindu Shah of Kabul, but Sabukkhan another servant of Alp Tagh attacked them and became master of Ghazna in 356 (966). It was the head quarters of Sabukkhan in his Indian expeditions and here in 380 (990) he imprisoned his son Mamlút for some time. After Mamlút had become an independent sovereign in 389 (998), Ghazna rose in importance owing to its commanding position towards India, although the actual residence of Alp Tagh was in Ghazna. He took the idol from the Samadhi temple, part of it being thrown in front of the great mosque and part in front of his palace. It was one of his mints, although the coinages of Nahrpí, Herat and Balkh are more important. Farwán, his father's only mint, was quite given up. Mamlút I does not seem to have existed at Ghazna, but after his time the Ghaznavids were occupied by the rise of the Saljúq monarchy and the growing strength of the Ghurids in the eastern part of Afghanistan, and Ghazna became the actual capital and the principal mint-town. During the reign of the later kings of this dynasty the town underwent a series of misfortunes. In the time of Añán there was a destructive fire said to have been caused by lightning, and in the same reign it was taken by Sultan Sanjar (Saljúq) and made over to Bahárdin Shah. In the wars between Bahárdin Shah and the Ghurids it was more than once taken, and in 544 (1149) 'Ali al-Din Husain attacked and destroyed the town, thereby earning the name of Džáhán-é-št. It is stated by chroniclers to have been utterly destroyed, nevertheless it continued to be an important capital under the Ghurids, Mu¿izz al-Din Mu¿ammad b. Sám became governor here under his brother in 568 (1173), and began his expeditions into India. It was to Ghazna he brought the first Ghaznavid king (Khusrau Malik before sending him to Fars-Lib. and here in later years he accumulated the treasure which came to his Indian conquests, although all his accounts are given. After Mu¿ammad b. Sám's death in 607 (1209) Ghazna again became an object of dispute. Yábud held it for several years and after his death in 618 (1221) Ibn Badis who visited it, says it fell into the hands of 'Ali al-Din Khánran Shah, who in his turn was driven out by the Mongols. All these events are marked in the coinage of the Ghurids, Yábud and 'Ali al-Din are found on the Ghazna mint, but after their time it relapses into obscurity. Djalal al-Din Mangubarti held it till driven out by Cingis Khán. The great conqueror sent his son Qoqal who took the city, massacred the greater part of its inhabitants and carried the remainder away as prisoners, and from this calamity Ghazna never recovered. This occurred in 618 (1221). Ibn Batúta who visited it, says it was more than a hundred years after found it still a heap of ruins, 733 (1333). In the succeeding period we hear little of Ghazna. In Ibn Batúta's time it had been taken by the Amir Husain Kúrt after his defeat of Tármághrán, 727 (1326), and in Búq (1401) Thábit granted it to his grandson Pir Mu¿ammad, but on obtaining possession of it in 1500 (908) and in his autobiography gives an interesting description. He found it a poor place, and expressed his astonishment that former kings should have made it their capital in preference to Khoúsán. He also mentions the tomb of Sultan Mu¿ammad (EÁWÁY) and that of Mas'úd and Ibrahim as existing in Ghazna. The Misáre or columns of victory erected by Mu¿ammad and Mas'úd III are still standing. Mu¿ammad's tomb also exists and was described by Vigne. The outer gate superseded to be the main entrance to Shám Shám in Dághzín according to Mu¿ammad, and brought to India by the Governor General Lord Eltenborough in 1842, are now considered to be the original gates of the tomb, as they show no sign of Indian style. Under the rule of the Moghul Emperor of India, and afterwards under the Duráns and Bakhtráns, Ghazna, or rather Gházna as it is now called, played no important part. It was however a strong fortress, and had the popular reputation of impregnable. At the commencement of the war of 1839-42 it was stormed by a British force under K. R. Rawlinson, and captured, and the great buildings, including the mosque and the tomb of the Emperor, and other places of interest, were much damaged. The city is now a ruin, and has been deserted for many years.
since Forster in 1783 described it as maintained only by a few traders. Vigné's description in 1836 was more favorable. It was garrisoned by a small force of sepoyes under British officers and was besieged from Nov. 1858 to May 1859 when it was taken by a Bābakī force. Nott re-took it in September the same year, and in returning to India brought away, by Lord Elgin's orders, the supposed gates of Sīvānā. In more recent times Gāzān was the scene of the imprisonment of Afrād Khan by Shaṭ Ali and his rescue by 'Abd al-Rahmān after defeating Shaṭ Ali at Sāfshān close by. In 1866 however Gāzān was again the scene of fighting when Qāsem and 'Abd al-Rahmān were defeated by Shaṭ Ali's forces. In 1880-81 Gāzān was traversed by Stewart's force marching from Kābul to Kābul and by Roberts from Kābul to Kandahār.

The name Gāzān is found on coins and in Arabic chronicles. The form Ghazne is used in the Tāhāfūt Nāṣrī and other Persian chronicles such as Firīūz, up to modern times. The final ə has been dropped and the form Ghaznī is now generally used.

GHAZNAVIDS. The rise of the dynasty known as Ghaznavid or Ghaznavi (from the capital Ghazna) is connected with the struggle between the Iranian and Turkish races for the mastery of the borderland of Persia in the 9th century. The Samanids, an Iranian stock from Sughdī, had risen to power at the commencement of the 9th century, becoming practically independent of the authority of the Khalifs. After the year 300, however, Turkish names begin to appear among their governors and generals; these were the so-called Turkish slaves, who distinguished themselves in war, and, gradually rising to positions of importance, paved the way for the Turkish and Mongol invasions which swept away the independence of the Iranian races of Persia, Mas'ud al-Nahr, Tugāfbūt and the regions now included in Afghanistan. The most important of the many Alp-togs [q.v.], 321], who became Khudgil or chamberlain, and in 344 (955) governor of Bābur. At the accession of Manṣūr ib. Nūh he fell out of favor and betook himself to the eastern border of the kingdom, where he not only resisted all attempts to subdue him but himself conquered Ghazna, where he died in 352 (963). There is no evidence that Ghazna had previously formed part of the Samanid kingdom. It had been overrun, with the whole of Zahālistan and Kābul, by the Saffāris by 280 (893), but it is doubtful how far their power was permanent, and even when the Samanids became paramount there is no evidence that Kābul and Ghazna were under them. The ruler of Ghazna, as described Dādghāzān was allied to the Hindu Ghaznavīs of Kābul. These titles were not as yet used by Muḥammadan caliphs. The Dādghāzān Lawat was probably a Hindu Chief, even though some Māl. of the Tāhāfūt Nāṣrī give him the name of Abu Bakr or Abu 'Ali. Alp-tog was succeeded by his son Iṣhāq, but the power fell into the hands of other Turkish slaves Bābakāt and Subserkī. Bābakāt-tog was the first to obtain the power. He was an old servant of the Samanids, and had struck coins in his own name under their supremacy at Bābakāt as far back as 324 = 935 (very much as Alp-tog had done at Amurīd). But his coinage of 339 (999) at Ghazna is that town's first appearance as a mint-town. The capital of Fārān in the Hindukush was also used as a mint by Alp-tog and Bābakāt-tog. Bābakāt-tog was succeeded by Pārī, who was perhaps a local man, as he allied himself with Lāwthī, the former ruler of Ghazna, and with the Hindu Śāhīs. Subserkī, who had perhaps remained at Fārān, attacked the allies and routed them, obtaining possession of Ghazna in 367 (1077). He continued to issue coins (which are still abundant) at Fārān in his own name with that of Nīb b. Manṣūr. Subserkī rapidly spread his power through Tocharistan, Zabul, Kandahār and Ghūz, and even Kunār (now in Balfudz), and then turned his arms against the Hindu Śāhī Djīpālī who is described as Fādghāzān of Hind. This title may be due to confusion of Hind (India) with his capital Ghādīr, now well known as Ghādīr. This expedition against Dājīrī marks the commencement of the wars which ended in the destruction of the powerful Hindu kingdom of Bābakāt. The Marāmás, now spoken of as the Hindu kings of Kābul, Kābul, however, had at this time passed out of their possessions, though they still held the lower Kābul valley and the territory between the Indus and Dīlūshân. Their dominions in India extended far beyond these bounds to the east, along the line of the Hinduās, as far as Kārān, and through the northern and central Punjab to Māhrjū on the Hārā river (now dry owing to the diversion of the Suchā) to join the Ṣindī. It has been held by some writers (see Kroyer, Notes on Afghan, p. 370, followed by Sotīll, Early History of India, 3rd Ed., p. 353) that the kingdom of Kābul, with its capital at Māhrjū, was distinct from that of Kābul, and that Elliott and Downes were mistaken in treating them as one. Nevertheless there seems to be no good evidence in support of this theory, which involves the supposition that there were two Dājīrī reigning side by side, both of whom were simultaneously at war with the Ghaznavīs, and both of whom were succeeded by sons named Amrudī. Kroyer himself says that Dājīrī of Māhrjū lost both Lāhūīn and Khurāb to Subserkī, yet these territories were an integral part of the Śāhī kingdom, the last part of the Hindu valley held by them after the loss of Kābul itself. It is seen that it is probable that the first Hindu kingdom of Kābul was distinct from that of the central Punjab, but that the earlier kings whose names end in dāva had been replaced (by succession or conquest) by the Rādjiīs, dynasty of the central Punjab who adopted the ancient Kusān title of Śāhī. Their names all end in dāva like those of other Rudjar sovereigns of the tiga. Dājīrī appears to have succeeded to Bāgha Dāva and to have been allied to the kings of Kāshīnān who had married into the Bāgha Dāva's family and afterwards assisted Tolūšān Pālī (Dājīrī's grandson) in his war with Mānīūrī. It is evident therefore that the wars of Subserkī and Mānīūrī with Dājīrī
and his successors were directed against the most powerful kingdom of northwestern India. In 382 (993) Sulukhtig defeated Djaidu and plundered Langah which was taken again in 378 (988) when Djaidu seems to have been the aggressor. He was defeated, possibly in the Kurnu valley, and forced to surrender some forts in the neighbourhood of Ghazna. Malamud first came prominently forward during these wars, and was more inclined to extreme measures than his father. There was some disagreement between them, and Malamud was imprisoned for some time in 380 (993) in the fort of Ghazna. During this period Sulukhtig, although practically independent, administered the ascendancy of the Samanid kings and fought their battles for them, especially in 382 (993) and 385 (995) against Abul 'Ali Sunnab. He was made governor of Khorasan with the title of Najar al-Dayn, and Malamud was at the same time given the military command, with the title of Sult al-Dawla, which is commemorated in a coin struck by him at Nishapur in 385 (995). Sulukhtig died in 387 (997) leaving by his conquests and firm character laid the foundation for the wider empire of his son Malamud.

In 391, Sulukhtig was succeeded by his younger son Lamurid who, however, was speedily put out of the way by his envious brother.

Malamud succeeded in 380 (993) at the time when the Samanid kingdom had been dethroned by a rebellion. Malamud ostensibly sided with his suzerain, but utilized the opportunity to assume the title of Avest and to obtain investiture from the Khalifs al-Kadhir Billah as Vana al-dawla and Avest al-milada, and these titles henceforth appear on his coins.

Malamud finding himself now an independent ruler, and the once powerful Samanid monarchy having vanished, proceeded to consolidate his authority over the greater part of the dominions of that monarchy, and in addition to carry out a systematic series of invasions of India which had been beyond its scope. The position of his new and rising capital of Ghazna on the crest of the high plateau overlooking the plains of Northern India with which it possessed easy communications by the valleys of the Kabul, Kizil, Tock and Gomal rivers, gave him peculiar advantages for such expeditions. Nevertheless he did not at first make Ghazna his capital. He chose rather the ancient centre of Takhristan, Balakhi, and issued his coinage there, as well as at Walawila in the same province, and Bent and Nishapur in Khorasan. Expeditions against Ilk Khokht in Takhristan, who had captured the last Samanid prince, and also against the Malika of Sulji and Ghur consolidated his home power and left him free for his almost annual cold weather raids into India. For further details of these expeditions which occupied the greater part of his reign see also.Ststabes.

At the end of his life a danger which was soon to threaten the security of his successors made its first appearance. The Seljuk Turks crossed the Oxus and invaded Takhristan. Malamud hastened northwards and defeated them, and then turned westwards to Itrah where also his arms were triumphant over the Byzantines till then the dominant family and masters of the caliphate, and Shafis by creed. After annexing Persian Itrah Malamud re-established the Sunni faith and made his son Muhammad governor over Lythak and Rayy. He returned to Balakh and afterwards to Ghazna but was attacked by a severe illness and died soon after his arrival in 421 (1030).

Malamud's dominions at the end of his reign comprised the whole of Khorasan and Persian Itrak in the west, Takhristan and part of Miwash al-Nahr in the north, Sidjistan, Zanadjarab and Kjarak in the south, and the Pansh and Multan and part of Sind in the east, with an admitted suzerainty over the Hindu kingdoms of the Ganges valley and the south coast. His authority was admitted too by the chiefs of Ghur and Ghuristan and the mountain Afghans. From the beginning of his accession he had recognized the nominal authority of the Khalifs al-Kadhir Billah instead of the deposed Khalif al-Dawla Billah whom the Sunnites and Sulukhtig had acknowledged. The only part of his Indian conquests which was permanent was the establishment of a strong kingdom with its capital at Lahore, which now first becomes known in history as a centre of government. The Ghaznavid rule in the Panjshir outlasted that in the northern and western provinces of the empire, which fell into the hands of the Khalifs of Turkestane or the Great Shakhis of Persia; or in the centre, where the growing power of the chiefs of Ghur gradually overshadowed that of Malamud's descendants; and Lahore was the last refuge of the kings of the dynasty. Malamud's fame is mainly based on his Indian conquests, and probably also on the actual realization of his projects they had the effect of showing that, in spite of the bravery of the Pansh, India lay open to a resolute invader from the north-west, who, himself screen by an impregnable mountain barrier, was able to strike the divided tribes of the plains with weather and opportunism served; and thus they led to the final overthrow of the Hindu states of northern India by Mutas al-Din two hundred years later. The weakness of the Ghiznavid monarchy was the want of a strong central body of supporters of their own race. They were themselves intruders, and were obliged to recruit their army from various sources, wild Ghur and Afghan tribesmen, Khorasani Turks, and even Indians from the new Panjshir dominions. Such a rule could only be held together by a strong central influence, and no king after Malamud was able to exercise such influence. In religion Malamud was a strong Sunnite. He admitted the authority and sought the recognition of the Khalifs al-Kadhir Billah, even when he was a powerful tool in the hands of the Shafis by creed, and when he himself occupied the Hindu territory in Persian Itrak he put down the Shafis creed with severity. In the same way he acted towards the Sunnites, whom he found still powerful in Multan and Ghuristan. In the eyes of his contemporaries his greatest glory was the spreading of the light of Islam in pagan India and the destruction and plunder of celebrated shrines like Mathura and Sunamith. His name is a household word in the east to the present day, and innumerable tales of a folklore type are told about him and his faithful servant Ayyub, some of which began to find their way at an early period into chronicles like the Ishan at-Ishani. His ill-treatment of the poet Firdausi is not mentioned by early writers, but some probability is lent to the story by Firdausi's fierce denunciation of Malamud in the ode.

Muhammad. On Malamud's death the process of disintegration soon began. Muhammad was ab-
sent in his government of Dederi and Mas'ud (his twin brother) in his government of Isfahan. The sympathizers of the former called him to Ghazna and he was declared Amir, but he was rejected by the army, whereas Mas'ud as a bold leader was popular. Mas'ud sent 'Amir an invitation to return; proceeding towards Ghazna; a deputation went to meet him and Muhammad sent a force to stop them headed by a Hindu commander named Siwadud (Siwana Nandali) but he failed to do so. The deputation met Mas'ud at Hazrat and offered him the crown. Muhammad was soon de-throned, blinded and imprisoned.

Mas'ud I. Mas'ud was declared king in Shawkal 424 (1030). His history is related in considerable detail by al-Baladhuri. He was of a bold and generous but rash disposition, a brave warrior but given to excess in drinking. He attempted to rival his father's fame both to the east and west, but was more successful in India than in Makkah where he was opposed by the rising power of the Seljuk Turks under Tughril Beg. For details of his Indian wars see art. MAHMOOD. Mas'ud engaged in various warlike adventures in the west in the intervals of his Indian expeditions. He took Kirmansh from the Bayids in 424 (1032) but lost it again soon afterwards. In 425 (1033) he had invaded Makkah with a force containing a large Indian element, but without effecting much. Now the Seljuk invasion was in greater force and Mas'ud made a desperate effort to arrest it. He met Tughril Beg at Damghanjan 431 (1050) and, after a hard-fought battle which lasted three days, met with a disastrous defeat. He retired on Ghazna through the hilly country of Gharjistia, and immediately collecting his family and treasures marched into India, leaving his son Mas'ud to defend Balkh, while Mas'ud was sent to Lahore. His blinded brother Muhammad accompanied the march, and a conspiracy was formed to dethrone Mas'ud in favour of Muhammad. On reaching the Margalla Pass between the Indus and the Jhelum, Mas'ud was seized and bound. [See art. MAHMOOD.]

Muhammad (2nd reign). Muhammad became Amir a second time, and his son Ahmad killed Mas'ud in prison at Ghazna in 433 (1041). Mas'ud on hearing the news marched from Balkh to Ghazna and thence to the Bābul valley where he met Muhammad's army and defeated it at Naghrahār in 434 (1042), and afterwards took vengeance on all his father's murderers, "both Turk and Tadjik". Fathabad, near Dschaidabad, was founded by Mas'ud in honour of this victory.

Mas'ud II. 433-441 (1041-1058). Mas'ud now succeeded to the throne, but displayed no qualities calculated to delay the disintegration of his kingdom. His brother Mas'ud immediately rebelled and seized on the Səwailak province, lately annexed by Mas'ud, but he died suddenly not without suspicion of poison. The Hindus were not slow to take advantage of the discord, and the ruler of Delhi (a town recently founded) took not only Hind and Thānās, but recovered the strong fortresses of Naghrahār, Kāshgār, and thus advanced on Lahore which he then took without much difficulty. Three Rājās are said to have joined in this attack. Mas'ud made no move to assist his harassed subjects. On the western side the Seljuk invasions continued, Mas'ud sent one general after another against them, but did not take the field himself. In 434 (1043) Tekhiristan was invaded and the Haiji Arslan who was sent against the enemy failed to save Balkh, and was disgraced and beheaded. In 436 (1045) we hear of the Seljuks as far south as Ipsula, and the next year they plundered both Balkh and Mehrabān. In 439 (1052) Mas'ud sent an invasion of his own but the Seljuks did not return to Ghazna. The general sent against them was named Tughril Beg. He inflicted a defeat upon them, but himself joined in traitorous plots and fled. The Ghori Malik subsequently took advantage of the Seljuk invasions to throw off the Ghaznavid yoke. The general who succeeded Tughril Beg was named Bāstīgene. He obtained the alliance of one of the Ghori Malik named Yabys and attacked the other, Abi 'Ali, who possessed a strong mountain fort. After this the fort was taken and Yabys was executed as well as Abi 'Ali. The Seljuks under Emir All was defeated by Bāstīgene near Bunt, and he also put down a rising in Kajest. The chief to the Seljuks was only temporary and Mas'ud at length marched against them in person, but was taken ill after starting and returned to Ghazna where he died in 441 (1059).

Mas'ud II. An infant son of Mas'ud named Mas'ud was enthroned through a palace intrigue, but quickly disposed of by Abi 'Ali, a son of Mas'ud I.

Abi 'Ali. "Abi 'Ali only reigned for two years, during which the process of decay continued, and the mountain Afghans, regarding whom we hear nothing since their punishment by Mahmu, now began to take part in the internal discord. In 441 (1058) a successful rebellion was headed by Abi al-Kasidi.

Abi al-Kasidi. He was a son of Mahmu and was with Mas'ud I at the battle of Damghanjan. He was declared Amir with the assistance of Nosh-i Qalchi who became one of his generals and recovered the fort of Naghrahār from the Hindus who had taken it in Mas'ud's reign. Tughril Beg in spite of his treacherous conduct under Mas'ud is found still in command of the western army, as on the former occasion he inflicted a fruitless defeat on the Seljuks and put down a rebellion in Siwijest, but immediately his treacherous plot into execution, took possession of Ghazna, murdered 'Abd al-Kasidi and declared himself Amir."

The invasion of Tughril of Nosh-i Qalchi on hearing of these events marched from India towards Ghazna. Tughril was killed before his arrival, and he installed Farruhkānd, a son of Mas'ud I, who with his brother Ibrahim had long been imprisoned. Farruhkānd. This prince ruled mainly on Nosh-i Qalchi who successfully repelled an invasion of Caghri Beg (Dawud) Seljuk and his son Alp Avshin. (The Tschěbuk Nosh-i Qalchi.) Nothing of this invasion which is recorded by Firdausi. Farruhkānd is also said to have earned popularity by remitting the taxes of Zabulista reduced by frequent invasions. Farruhkānd died in 454 (1062), like Mas'ud from a disease which seems to have been cholera.

Ibrahim, Ibrahim, his brother, succeeded to the throne peacefully. About the same time Alp-Avshin succeeded his father Caghri Beg (Dawud) as governor of Khurasan, and, in 455 (1063), he succeeded Caghri as Sultan of the whole Seljuk empire. Khurasan and Transoxiana were now permanently lost to the Ghaznavid kingdom, which seemed on the point of extinction. Ibrahim's long reign however restored some measure of prosperity. He
made peace with the Sahljiks, and married his son Ma’sud (afterwards Ma’sud III) to a daughter of Malik Shah who succeeded Alp-Arslan in 465 (1072). This marriage had a great influence on subsequent history. He pursued the arts of peace with success and also strengthened his position in the Qarakhanid. He took the fort of Aqshkan on the Bysam, now known as Pathanistan, and celebrated for the shrine of Baha Fasili (Shukarganj). Fireights undertaken two other strong places which he took, the Kura and Dura. The latter was situated in a mountainous country, and may be Dura Diin, Ibrahim was the first Ghazi-Afghan monarch to use the title Sultan on his coins in imitation of Tughjil Sahljik. He died in 492 (1099) after a reign of forty-one years.

Ma’sud III. His son Ma’sud succeeded and reigned for sixteen years. The conditions of his reign were similar to those of the preceding one. He enjoyed peace at home, and sent expeditions into India, one of which under Tughjil-Din Hajiq of Lahore penetrated beyond the Ganges and brought back great spoil. The rise of the Ghori Malikis became noticeable in this reign. I’tim al-Din Husain received the government of Ghori in 499 (1099). Ma’sud III died in 508 (1115).

Shirazid. His son Shirazid who succeeded him was killed next year by his brother Arslan.

Arslan assumed the crown in the Garmsar ruins of Arslan in 505 (1116) and the remaining another. Shirazid, died in the court of the Sahljiks at the hands of SS. Malik, the latter ascended to power. The Ghori Malikis became a threat to the Sahljiks. Shirazid was set up in Ghora, but Arslan returned and drove him out as soon as the Sahljiks had departed. Shirazid returned and again took Ghora. This time Arslan was captured, and appears to have been put to death. Cf. i. 463.

Bahrám Shah. [4, v, 1, 586] Bahrám Shah’s reign began in 511 (1117) and lasted till 547 (1153) but the independent monarchy of Ghara was now at an end. Sahljid was his successor, and his name was placed on Bahrám Shah’s coins below that of the Khitai (except on the coins of Indian type struck at Lahore). The Indian dominions were in fact the only part of the monarchy free from the Sahljiks power. Bahrám Shah’s dominions were however due not to his Sahljik suzerain but to the rapid rise of the chiefs of Ghor. In the beginning of his reign he had to deal with the rebellions of Muhammad Bahlam, who had been governor of the Indian provinces. He attempted to assert his independence and built a fort at Nagor in the most remote part of the Sahljik dominions, a province which had been conquered by Ma’sud I, but by Mawddi, and apparently reoccupied afterwards, although of this there is no record. (For the importance of Nagor see Cunningham, Épigraphies, in Transactions 9th Oriental Congress, p. 34 and Thoms, Chronicles of Fatham King of Delhi, p. 47.) Bahrám Shah reorganized the Ghori dominions near Multan and defeated him, returning to Ghora in 532 (1128). The rebellion of the Ghori chiefs was due to the murder of Kuli al-Din who was a refugee at Ghora by Bahrám Khin’s orders. His brother Sahlj, the principal mamluk, after driving Bahrám Shah out of Ghora for a time, was himself driven out by the latter who collected a force of Afghans and Khitai Turks in the Kujan valley. Sahlj was himself captured and executed with great ignominy, 534 (1143). Then Sahlj’s successor Sa’d with his brother Husain advanced towards Ghora, and Sahlj having died, Husain (Ali al-Din Husain, nicknamed ‘Al-Hakim’) took Ghora and ravaged it in a merciless manner, hence earning his nickname. Bahlam Shah probably recovered possession of Ghora for a short time after his departure, but accounts are contradictory. Husain, on his return march through Zamin, destroyed the celebrated city of Rust, capital of that province. It has lain in ruins ever since, and Khwarizm soon took its place as the capital. Bahlam Shah died in 547 (1153).

Khwarazm Shah. His son Khwarazm Shah succeeded and would not doubt have received the support of his suzerain Sundar who had been at war with Husain, but had not Sundar himself been defeated and taken prisoner by the Ghori, moreover in 548 (1153). He died soon after his release four months later. The Ghori rapidly overran the whole country, the Bahlams in their mountains alone being untouched. Khwarazm Shah was not in a position to resist them. He abandoned Ghora for the last time and the Ghori Afghans henceforward held only the Indian territory. Khwarazm Shah died at Lahore in 555 (1160).

Khwarazm Shah. He was succeeded by his son Khwarazm Malik. (There is a good deal of discrepancy as to dates in the chronicles but the date 555 is fixed as being the year of the death of the Khitai al-Mulk who bears the name appearing on the coins of Bahlam Khin Shah and Khwarazm Malik). He was the last of the Ghori Afghans of Ghous, and ruled the Punjab till 582 (1187). The Ghori Sultan Mu’ass al-Din b. Sahlj, who recovered Ghora from the Ghori in 509 (1173), almost immediately began his invasions of India, but did not attack the Lahore kingdom till after his expeditions to the south. After the campaigns of Mu’ass, Na’um and Dhaib he made his first attack on Pavaharar which belonged to Khwara, and threatened Lahore. He occupied and strengthened the fort of Syakht in the country of the Khokhar, a powerful tribe, and made it an outpost of his rule. Khwarazm Malik tried to retake it with the help of the Khokhar, and the Sahljis of Dariqan, who considered the Khokhar his own subjects, turned against Khwarazm Malik and took the side of Mu’ass al-Din. The latter finally entraped Khwarazm Malik by pretended negotiations, surrounded him, and took him prisoner. Lahore and the Pandja fell into the hands of the conqueror. The unfortunate Ghori Afghans were sent first to Ghora, then to Ghori al-Din at Ferzik and lastly to the fort of Balarwa in Ghuristan, where he and his son Bahlam Shah were put to death in 587 (1191).

Thus the great Ghori Afghans empire came to an inglorious end. Had it not perished when it did, it must inevitably have been swept away, like its successors, by the Mughal flood, for it had no stability. It was a purely military rent with no national force behind it, and to such a weakness and domestic feuds must be attributed. Its fate is due to its having come to the Mu’assalman conquest of Northern India, and established a firm foothold in the Pandja which made Mu’ass al-Din’s future conquests possible.
The coinage of the Ghurids was full, and although it is an enigmatic record of the principal events from Alp Arslan’s rise to Khusraw Malik’s fall. Particularly noteworthy are the small issues of Baluch-tirgan at Farwana, imitation bullions of metal, and the coinage of the Hind Shihab, followed by Muhammad and Marjul I who adopted the house's type used by the same kings, with their own names above the horoscope in Kufic letters. Later kings adopted the bull of Siva from the same coinage and even borrowed the title of the 'Sama-AbdAllah Deen in Namsung letters from the Shahid coinage. Very remarkable also is Mahmud's bullion coins in Arabic, and Sanskrit struck at Mahmudpur (Lahore). Side by side with these Indian coins the regular series of shams and dinars, following the models of the 'Abbasid Caliphs, went on. Mahmud's early assumption (during his father's life) of the title of Saff al-Dawla under the Samanids is illustrated by a shrift struck at Nushapur in 383, which bears the figure of a sword and the title Saff al-Dawla Mahmud ben Shams al-Tirgan. The extensive coinage of Khorasan and Turkamanis issued from the mints of Herat, Ni- shapur, Balkh and Balkhistan comes to an end in the reign of Mas'ud I; as these pieces fell into the hands of the Saljuqs. This title Saff was the only one used at first. The coiners give Mahmud and his immediate successors the title of Saff, but it does not appear on the coins till Ithnashir's reign.

GHAZZA: the ancient Azizi, Greek Fazze, an important commercial town in south-western Judea, near the coast at the intersection of the chief route to Egypt and several caravan routes from Arabia. The town belonged to the Philistines and was not taken by the Jews till the time of Alexander Jannaeus who had it destroyed. It was rebuilt by Gabinius somewhat farther south than the ancient town the ruins of which were still visible in the 5th century. The harbour of Malteses (cf. Maltahausen in Nachfahren de Deutsch. Pal. Verein, 1901, p. 62) was 2-3 miles away. Under Roman rule it belonged to the province of Syria Palestina and later to Palestine. Prima in Mahmud's time it is described by Antoninus Martyr as a splendid and luxurious city, whose inhabitants were kindly welcome to foreign visitors. The town was of great importance to the merchants of Mecca who sent their great caravans to Syria every year. According to the Tradition the Prophet's great grandfather Ishaq (q.v.) died in Ghaza and is buried there, which gave 'Ishaq's Ghaza', as it was called, a particular sanctity in the eyes of Musliims; Omar also is said to have won his wealth there. When Abu Bakr sent a mission of the Arabos to troops to Palestine, the Patriarch of Ghaza was deposed at Dib简称 (Balshadi, p. 109; cf. Thirgai, 107), where this battle is confused with one in al-Ain with the Tigris (Kutayb, Annals, ed. Pococke, ii. 275), about three hours east of Ghaza (cf. the article Maima), which was won afterwards by 'Amr b. al-Ajij. Whether Suli's account of the siege of Ghaza by 'Aljama b. Mahjum has any historical value, remains to be proved; at any rate its details are a repetition of what is related of 'Amr himself. In 767 the celebrated jurist al-Shafi'i was born in Ghaza. Towards the end of the 9th century the town, like several others in the neighbourhood, was devastated by the bloody seefs of several Arab tribes. It recovered, however, for in the 10th century the Bagdadis and Mahjumta described it as a large and wealthy city with a beautiful chief mosque. It must, however, have been laid waste again, when the Crusaders came there, it was in ruins. In 1152 it was rebuilt by the Christians and a fortress built in it, which was granted to the Templars and garnished by them. It is from this period that Idris's brief mention of the city dates. The unfortified part of the town had been sacked with great cruelty by Salaf al-Din in 1170 but it was only after the battle of Haftin in 1187 that the garrison fell into his hands. Richard L. Cotter de Llos succeeded for a while in holding it again, but it was finally lost by the Muslims again who held it henceforth. On the division of the country into mandate, Ghaza became the capital of one of them. In the 12th century Abu'l-Fida describes it as a town of medium size, with a small fort and flourishing orchards which were separated by sandhills from the sea; Ibn Hawqa on the other hand calls it a large, thickly populated town without walls and with many mosques, including one newly built by Amir Bawwâl, which had taken the place of the old chief mosque (perhaps the present chief mosque, which it may be added, was originally a Jumâ mosque of the 16th century). In the 16th century Khâtî al-Ghazzî speaks of Ghaza as the capital of an extensive amanns and calls it a beautiful town, in a flat country, rich in fruit and having houses, schools and other fine buildings worthy of admiration.

At the present day Ghaza is very prosperous (about 40,000 inhabitants); the surrounding orchards yield a rich harvest and the market is a very busy one. Many pieces of marble from the ancient buildings are built into the houses but otherwise the town is not rich in relics of antiquity. The above mentioned harbour of Maltese is certainly mentioned by Mahadda, al-Hakiri and Idrisi as "Maima", or some similar name. The last named, however, says that the harbour of Ghaza is Tell, which al-Hakiri merely mentions along with Maima; it is the ancient Antipatris, the site of which Cott has discovered an hour's journey N.W. of the town.

ThESBA. A Moslem tribe of Kādījīt, living associated with the Dāhī tribe, and occupying a considerable part of the Fātīh District, Tāhjīn, though not a large tribe they have a good social position. They are a branch of the Fātih Kādījīt and related to the Tāhjīn and Syāl tribes. Legend provides them with three founders, sons of Rāt Shāhār, named Tāhjīn, Sāfī, and Ghālib, the first ancestor of the Tāhjīn tribe, the second of the Syāl tribe, and the third of the Khawās tribe. The Thēsba were nearly independent till subdued by Rāmūnī Shawsh. The period of their conversion to Islam is not known.

M. LONGWORTH DAME.

GHIFAR, an Aabah tribe, belonging to the Mu'adh (Hamālī) group. Their genealogy as Ghifār, b. Malaik, b. Qa'wa, b. Bakh b. Abū Mālah b. Kūtābi; they were closely allied to the Hamālī.

They lived in the Hājīl. The following place belonged to them: Alkhāla (near Mecca), Marīf (near Talfin, also given as a hill), Shadakh (to common with the Ulūm), Gūhāla, Wāddhāl (both on the latter between Mecca and Medina), al-Tanīdāl and the hill of Mustah.

In the year 8 (590) the Ghifār adopted Islam. In the same year they took part in the conquest of Mecca along with the Mūsulmaan, Dhu'al-Hamāl, Sūrām, Aswād, Kala and other tribes under Khālid b. al-Wallī. After the death of the Prophet, they recognized the Caliph Abū Bakr and fought for his party against the rebel tribes.

CHILZAI. (See CHILZAI.)

CHIRKH. [See CHIRKH.]

CHIYAR (A.), a distinctive mark or strip of cloth which the Dhimma (Christians, Jews, Maganans), fasten on their shoulders, the colour of which is different from that of their clothes. The obligation to wear such a badge as well as that of subscribing the wearing of the sambūr and forbad ing riding on horseback, is said to date from 'Amar b. Ḥassān, but no such edict was expressly proclaimed till the reign of Ḥusain b. ʿAbd al-Rahmān in 759 (807) (Tahāt, ed. de Gejze, i. 712 et seq.). The edict in question was repeatedly followed by caliphs from time to time and made more strict, namely by al-Mansūrī in 235 (849-850), by Tahāt, i. 1359 et seq., al-Mu'tadī (Ibn Tharghār, ed. Jaynhīd), ii. 175, al-Mu'tadī (Ibn al-Aswūj, ed. Tornberg), x. 123. The same is related to the Fātīhīn caliph al-Ḥusayn in 935 (1005), cf. de Sacy, Études de l'histoire des Druzes, introd., xvii. 1 et seq., and of the Mandāk-Sulṭān al-Nāṣir in 700 (1054), cf. Lamsa-Poole, A History of Egypt, p. 301. These laws were enforced with particular rigour in the Maghūl, especially with reference to the Jews. The term used there is (Canadah) alshahāb; cf. Fugān in Recueil des textes juifs, 1894, p. 274 et seq. As is well-known, this example was followed in various Christian countries.

As to the colour of the γιayı, it is said in the Fātīhīn books that it should be blue (for Christians, yellow for Jews, and black or red for a Magian, but in the regulations of the various caliphs and Muslim rulers mentioned above we meet with arbitrary deviations from this rule. A honey-coloured piece of cloth, for example, is almost always prescribed, so that 'arai' is used for γιayı without further qualification. It is clear that the regulations were usually allowed to be forgotten, or exemption from them could be obtained by a payment of a certain sum, so that they had repeated to be enforced, once set up, especially if they fell utterly into desuetude. Nevertheless, Muslims still hesitate to wear a European hat and tie, because they regard these to some extent as mockery and γιayı.

GHAYTH AL-DIN TAJGHĀL, eighteenth Mūsulman emperor of Dīhil, was born a Kārshāhī Turk, but of Indian descent through his mother. He began his career as a private soldier under the brother of Ali al-Dīhil Khālid but early in the reign of Kāmil al-Dīhil Muhārak Khālid was in command of the frontier district of Dīhil. Here, by his services against the Maghūl, when he encountered no less than twenty-nine times, he earned the title of Ghāzī Mahāl, and when Mahārak's vise favourable, Khawsī al-Dīhil, slew his master and usurped his throne. Tajghāl's eldest son, Fakhr al-Dīhil Dīhil, set

GHAYTH AL-DIN TAJGHĀL, eighteenth Mūsulman emperor of Dīhil, was born a Kārshāhī Turk, but of Indian descent through his mother. He began his career as a private soldier under the brother of Ali al-Dīhil Khālid but early in the reign of Kāmil al-Dīhil Muhārak Khālid was in command of the frontier district of Dīhil. Here, by his services against the Maghūl, when he encountered no less than twenty-nine times, he earned the title of Ghāzī Mahāl, and when Mahārak’s vise favourable, Khawsī al-Dīhil, slew his master and usurped his throne. Tajghāl’s eldest son, Fakhr al-Dīhil Dīhil, set
from Dihli and persuaded his father to take up arms against the outcast. Khurram was defeated on Sept. 5th 1620, and on the following day Taghlaq was proclaimed emperor. The restoration of order in the capital occupied him but one week, and, after modifying the harsh laws of the Khudji and founding his new capital of Taghlaqabad, he dispatched his son, Asim, to his other sons, Khudji, Khan, with the Dehghan. Details of Ullugh Khán’s campaigns cannot be given here but he carried his arms to the extreme south of the Indian Peninsula. The defeat of an expedition against Wazangal has been variously attributed by historians to a military mutiny and to the failure of Ullugh Khan to persuade the whole army to join him in a rebellion against his father, but he had no difficulty in convincing Taghlaq of his innocence, and in 1624 was summoned from Telingana to act as regent during the absence of Taghlaq, who had resolved to lead an expedition into Bengal, where two brothers, Jalal al-Din Baghur and Ghivath al-Din Bakhilur, were contending for sovereignty. The former submitted and the latter was captured, and on his return towards Dihli Taghlaq was received with great pomp in a temporary pavilion which had been erected by his son at Aghädar, six miles from Taghlaqabad. The building fell and crushed its occupants, and Ullugh Khan has been accused by some historians of having contrived the disaster, but many circumstances, besides the clumsiness of the artifices, combine to render his guilt doubtful. Taghlaq died in February or March 1625.

**GHIYATH AL-DIN TAGHLAK II, fourth emperor of Dihli of the Taghlaq dynasty, was the son of Fateh Khân, eldest son of Firuz Shah Taghlaq. On the death of Firuz in Sept. 1625, his second son, Muhammad, was in rebellion, and Ghiyath was placed on the throne. In accordance with his grandfather’s will, he attempted without success, to crush his uncle’s rebellion, and, after he had reigned five months, he and his minister Malik Firuz Khadijuddin were put to death (Feb. 10th 1626) by Malik Kulk al-Din Cauha, and his cousin Abul Bajar was raised to the throne.

**Ghomara (Gomara in Leo Africanus), a Ber., is located in the western Maghrib. Ibn Khalidin numbers it among the Maghribi tribes and traces it back to Ghomara, a son of Musaid, or, according to another tradition, son of Mezzof b. Meizz b. Maghid. The Ghomara are divided into a large number of clans (Bent Hamid, Mattwa, Bent Nif, Aghastwa, Bent Wazarell, Medjaiz, etc), names which are still to be found at the present day among a number of Rif tribes. It is rather difficult to define exactly the territory occupied by the Ghomara. According to Ibn Khalidin, it was five days’ journey in length (from the plains of Maghrib) to Tangier and about the same in breadth (from Ksar Ketana to the Wadi Wregha). It ran along the Atlantic coast between Agilli and Anfi and bore the lands of the Berghawda. Al-Bakri no longer reckons the district of Tangier and Casa, to the Ghomara and gives Nukar in the east and Karshihat in the west as their boundaries.

The Ghomara were settled in this part of the Maghrib long before Islam was introduced into those regions. Conquered by Must b. Naqiriy, they became vassals in the first period of Islam, but in the second century A.H. they adopted Kharidi doctrine and took part in the rebellion of the Maliks. Even after the defeat of the Kharidjian they still showed themselves disposed to heretical doctrine. They believe in the gudsh, “the greater,” (cf. the art. A’sim). He belonged to the tribe of the Medjaiez, appeared in the district of Tetouan in 313 (1915), and fell in 315 (1922-23) in battle against the Maghrib. Hasm all gave his followers civil and religious laws, limited the cost of Kunda to three days, abolished the command to make the pilgrimage and composed a Kuran in the Berber language, from which al-Bakri and Ibn Khaldun quote a few passages. At a later period another prophet named Asim b. Djenaf al-Yandadjiam appeared in 325 (1927). A rebellion broke out instigated by a certain Abn L-Tawjudia, who claimed to be a prophet and magician. The Ghomara have always had a particular fondness for magic. Al-Bakri makes a number of references to it and Ibn Khaldun says that the black art was particularly practised by young women.

As to the political history of the Ghomara, they have undergone many changes. From the 11th-16th (with 16th-19th) centuries the eastern part of their lands belonged to the kingdom of Nukar. One of their chiefs named Sopjen attempted in 144 (761) to seize the reins of government then held by the Bent Selli, the descendants of the founder of the Nukar kingdom, but failed. On the division of the Maghrib kingdom, the eastern tribes passed under Oumar b. Idra and his descendants. They remained loyal to them even after the Maghrib had been driven from the west by the Almoravids and stood by them to the last in their wars with the Spanish Umayyads. After the disappearance of the Almoravids from the scene (264 = 974), the Ghomara first recognized the sovereignty of the Umayyads, then that of the Hammudids of Casa until the coming of the Almoravids. On the rise of the Almoravids the Ghomara returned to adopt the new teaching and assisted Abn al-Murri in his expedition against Casa (541 = 1146). But this loyalty, which had won them the particular favour of the Calif, did not last long. Abn Ya’qub in 562 (1166-1167) had to take the field in person to suppress a rising led by a Gomara chief named Sebna b. Menaghi. The rebel was defeated in battle, slain and Abn Ya’qub appointed his brother to govern Casa and watch the Rif.

The Almoravids also found it difficult to conquer the unruly Ghomara. They only succeeded in subduing them by taking advantage of the feud between the various rif. But this conquest was by no means permanent. "At the present day," writes Ibn Khaldun (trans. the Same, i. 157 et seq.), "the Gomara have become powerful and numerous; they pay homage and tribute however to the Marhrid government as far as the latter
can exist from them; but as soon as the government once shows itself weak, ... it has to order troops from the capital to bring the tribes back to their allegiance. Protected by inaccessible mountains, they do not hesitate to offer an asylum to members of the royal family and to all rebels who seek refuge with them. From the 4th century onwards details of the history of the Ghurids are entirely lacking; their name is still mentioned by Leo Africanus, however, in the 5th century and it is still borne by a powerful tribe of Dzhala.

GHOR, a mountainous country now included in Afghanistan [q. v., i. 149] occupying the country between the Helmand valley and Herat, and corresponding roughly with the modern Huzistan, occupied by the Ghurids and the Kharizm, tribes. The country gave its name to the Ghurids [q. v.] who succeeded the Ghurids in power, and was part of the kingdom of the Samanids and the Ghurids. The Ghurids themselves were conquered by the Sultans of Khurasan and shortly afterwards, in the 1st part of the 5th thirteenth century, the country came under Mongol rule, and in the 15th century it was captured by a Turkic tribe. The name Ghur gradually disappears from history, and has not been in use in modern times.

(M. LONGWORTH DAMES.)

GHORIDS. The family of the Malikzad of Ghur claimed an illustrious Iranian descent, and took the name of Shamshābāt from Shamshān a supposed descendant of Zuhair, but nothing is known of their actual history before the time of the Saffarids, when Ya'qūb ibn Lakhū invade Hamidāwar and Bārū. At that time the mountain region of Ghur (sometimes called Mandīša) was under the rule of a Malik named Shīrī, and the population were not yet converted to Islam. His son Muḥammad who was attacked by Mamūn Ghurwālī was also stated in the Ramān al-Shişī to have been still a pagan, in spite of his name, and al-Abbas called him a Hindū. Muḥammad took his stronghold in the year 400 (1009) and carried the chief into captivity, where he is said to have poisoned himself. His son Abū ʿAlī, who was put in his place by Muḥammad, no doubt had embraced Islam, and is said to have built mamluks. Nevertheless he was seized and imprisoned by his nephews Alī and ʿAbd Allāh, who had succeeded to the throne of Ghur. Abū ʿAlī was the most powerful ruler and built himself a strong castle in the mountains of Mandīša. Maḥmūd himself is stated by ʿAbd Allāh to have conducted warlike operations in the Ghur country against Ghurids named Abū l-Ḥasan and Wārbāh, but no allusion is made to Muḥammad, Abū ʿAlī or ʿAbd Allāh. It is probable that there were at that period several tribes in Ghur under separate chiefs, and that there was no central government. Abū ʿAlī seems to have continued in power under Ghurid suzerainty until he was deposed by Sulaymān, who put his own grandson in his place. Through this comparatively peaceful period, when the raids of the Saljuqs were suspended, the power of the Ghurids must have been sufficiently strong to exact obedience from the hill tribes. The mamluks who succeeded Muḥammad were Khāqān al-Dīn Ḥusayn and ʿAbd Allāh (1059-1073). The latter came into collision with Sulaymān, who then ruled in Ghur, in 651 (1253), and was taken prisoner but released again in 1255. After this his allegiance appears to have been divided between the Saljuqs on the east and the Ghurids on the west. Maḥmūd III confirmed him as chief in 695 (1299). After his time the family divided into the two branches of the Ghurids and Bānīyān. ʿAbd Allāh al-Dīn is said to have died in 752 (1350), but this is evidently a late date. His son, Saʿd al-Dīn Shīrī, succeeded as principal chief, being the eldest of the sons of a mother of high rank, and they had been given the title of mamlūk by Muḥammad al-Dīn, the son of a Turkish woman, and another, the son of a serving woman, named Khāqān al-Dīn Muḥammad. Shīrī made a division of his father's dominions awarding a part of the mountain tract of Ghur called Warshā (perhaps corresponding to the Taimani county of to-day) to Khāqān al-Dīn, who founded there the fortress of Firmān, and was known as Malik al-Dīnah. ʿAbd Allāh al-Dīnah (or al-Dīnah) received the northern territory of Bānīyān with Ṭahkhrīṣīt and, according to the Taḏkera (see Ṭahkhrīṣīt), was given the title of Bānīyān and the country up to the boundary of Ṭūbāh. But it is clear that his authority over the more remote parts of this region must have been very slight. The later history of the Bānīyān may be here briefly given before continuing that of the main Ghurid family. ʿAbd Allāh al-Dīnah was succeeded by Shams al-Dīn Muḥammad, who is said to have extended his power to Bālḵsh and Badakhshān, and to have subdued Ṭūbāh, which evidently had not been really subdued before. He took the title of Sultan with the consent of his uncle of Ghurids, who had held the same title. He was able to keep this position as a sort of power in the north, but his title ran to great power as will be seen. His son Hāfez al-Dīn Shīrī succeeded him in 588 (1193) and reigned till 602 (1205) when he died (soon after the murder of Muʿāwīya al-Dīn Muḥammad al-Sūn). His son Ṭalāq al-Dīn ʿAllāt who held power after him, assisted his brother Alī al-Dīnah in seizing the throne of Ghur, and himself obtained great power. Alī al-Dīnah having being expelled from Ghur by Valdūn, Ṭalāq al-Dīnah again assembled a force said to consist of Ghurids, Ghurids and Belqū (or Eastern Turks), but met with a successful resistance and was himself taken prisoner by Valdūn, but was released and recovered possession of Bānīyān which he kept, and at the same time was somewhat kept by his uncle Alī al-Dīnah. Alī al-Dīnah continued to reign till the invasion of Alī al-Dīnah Khurram-Shah, when he was defeated and put to death 612 (1215). Belqū al-Dīnah and Ṭalāq al-Dīnah were rulers of great importance and the last of the Shamsānids race to enjoy real power. Cédès of both of them are known. It is necessary now to return to Saʿd al-Dīnah Shīrī and carry on the story of the main line.

The origin of the Choraz in the Encyclopedia of Islam, II.
Maliks is not very clear, but apparently the Malik al-Djibbil quarelled with his half-brothers and took refuge with Bahram Shah in Ghazna. It is probable that this was connected with the enmity between Bahram Shah and Sulayh Sanjih, who had been making overtures to the Ghori Maliks. Whatever the cause, Bahram Shah became suspicious of the Malik al-Djibbil and put him to death by poison 554 (1446). Shur, on hearing this news, marched on Ghazna which he took. Bahram Shah retired to Kasa and there assembled an army of Aftabans and Khitai. Meanwhile Shur had declared himself Sulayh at Ghazna and made over Ghor to his brother Bahar al-Din Sam, but on the approach of Bahram Shah the leading men of Ghura rose against him. He attempted to return to Ghur, but was surrounded, captured and executed.

His brother Bahar al-Din Sam who succeeded him in 544 (1149) had already taken charge of Ghur in his absence and compiled the annals of his two forerunners. Fitrjiksh abandoned by the Malik al-Djibbil when he went to Ghazna, on hearing of the death of Shur he collected an army and marched towards Ghazna, but died at Kid-rak on the way in the year of his accession. His brother 'Ali al-Din Husayn succeeded him, and took up the work of avenging his brothers. Bahram Shah's army met him near Tjoghul Khánh in the plain country of Zambulawar but was defeated at Inwai Shah, son of Bahram Shah, being killed. The chronicles enlarge upon the various deeds of these two champions in 'Ali al-Din's army both around Karmal, who fought with Bahram Shah's war-elephants. Nearer to Ghur Bahram Shah's troops tried repeated resistance, but 'Ali al-Din defeated them and took Ghur by storm. His revenge was terrible. The city was fired and its inhabitants slaughtered; and the remains of the later Ghurav monarchs were dug up and burned. The name of Djaljut was given to 'Ali al-Din on account of this terrible event. He did not attempt to hold Ghur, but retired upon the west of his kingdom by land Sanjih Schupik. Shur's chroniclers attempt to show that Bahram Shah was dead, and had been succeeded by Shurkaw Shah before the fall of Ghur but this is improbable.

The author of the Tabakat-i Nafis states that he recovered Ghur from 'Ali al-Din's departure. The latter, after leaving Ghur, marched by way of Kust, which he utterly destroyed so that it has been a ruin ever since, and then spent some time in his capital Fitrjiksh till ravaged by Sanjih's advance. The army met at Sal in the valley of the Gari-rak, 'Ali al-Din was beset by his Turkish, Kishai and Ghizer troops. The Ghoris were defeated and 'Ali al-Din takes prisoner. After a time he found favour with Sanjih who restored him to the throne of Ghur. He re-established his power and extended it northwards, getting possession of the Moghoth valley (Ghuristan) and the strong fort of Tijab. The defeat and capture of Sanjih by the Ghurs probably made this development possible, and 'Ali al-Din was himself at Harrat at the time of his death in 555 (1156). His son Sald al-Din Muhammed succeeded at Fitrjiksh. The two sons of Shur, Shurkaw and Mezur al-Din, who had been exterminated by his father he set as kings, and also began a persecution of the Maliks who had obtained influence to 'Ali al-Din's time. He was soon recalled by the incursions of the Ghurs who were rapidly increasing in power, and was defeated and killed in a battle with them near Marv in 558 (1162). From this time it appears that his brother Warnaq whom Sald al-Din had killed during his absence, Ghur's al-Din, was with him at the time, and he brought back and raised to the throne by the army at Firsitksh. Mezur al-Din who had been at Bamiyan with Fakhr al-Din joined his brother and became his principal support. They soon killed Abu l-'Abbas, and then had to meet an attack from their uncle Fakhr al-Din assisted by Tadj al-Din Valdus of Harrat. Fakhr al-Din considered that the Ghori territories should belong to him and not to his nephew, and obtained the support of the Khans (Valdus) and Bakht (Kinchil), no doubt Turksh clerks. The Ghori chiefs met their army at Raghjzari in the Hari-rud valley and defeated them. Both Valdus and Kinchil were killed and the latter's head was sent to Fakhr al-Din. The defeated uncle was received with imperial courtesy by his nephews, who however released him and restored him to his own territory of Bamiyan in 559 (1163). Ghursh al-Din then proceeded to finish with other parts of his territory. He made the intriguing Ghur al-Din, who had taken possession of Ghara and the land of Sald al-Din Muhammad the year before, and retained it till 560 (1173) when Mezur al-Din conquered him and got possession of the old Ghuravide capital. The last Ghuravide kings had abandoned it and made Lahore their capital. Ghursh al-Din then installed his brother Mezur al-Din as Sulayh at Ghara, himself retaining the suzerainty over that kingdom and the actual rule over Ghur, as may be seen from the coins, on which Ghursh al-Din appears as al-Salsh al-Din maar and Mezur al-Din as al-Muzzir al-Din ammur. Ghursh al-Din himself operated against Harrat which had fallen into the possession of one of Sulayh al-Din's Turkish slaves named Tughril, and obtained possession of the city in 572 (1175), but no doubt it was recovered by Tughril who was not finally disposed of till 588 (1192). Ghursh al-Din also received the allegiance of Tadj al-Din Harib, Malik of Sujistan, who accepted his suzerainty, though it is not the case as stated by Raverty in a note on p. 192 of his translation of the Tabakat-i Nafis that the name of Sulayh Ghursh al-Din was put on the coins (see A. H. C. 'Orient, Coin, Additions, vol. 1, s. v. p. 268). Mezur al-Din after consolidating his authority at Ghara then began to conduct expeditions into India, where the Ghuravide king Khusraw Maliks was still reigning at Lahore, while Maliks had fallen back into the hands of the Karmahans who had been expelled by Mahayun. He took Multih in 570 (1174) and Urch soon after. The latter place was held by a khalif of the Bajj tribe, and according to Firdaws Mezur al-Din obtained possession of it through an irrogation with the Khalif's wife. In 574 he marched to attack Dinh-Din's king of Niruwala (Anhillawa on the Ghor valley coast), but was defeated and forced to retreat. In 575 (1176) he took Peshawar and advanced to Multih, where Mezur al-Din and Mezur al-Din al-Muzzir at Lahore, in 578 (1182) he turned south again and took Dinh-Din on the western coast. In 582 (1186) or perhaps the following year he defeated Khusraw Maliks and obtained possession of Lahore and Multih, and from that time onwards the Ghori kings,
having destroyed the last remnants of the dynasty of Mahmud, considered themselves his heirs and all his conquests. In 558 (1162) Mu'izz al-Din joined his brother in battle and was killed in an attack of Sultan Shâh, son of the Khwarizm-Shah, who was finally defeated at Khîlah on the Murghâb River. Taghriir of Hârât, who had joined Sultan Shâh, was killed in this battle, and the unfortunate Khawûs Malik was put to death the same year. Mubârak was taken from the Khwarizm-Shah in 556 (1160) or perhaps the year after, but was not held for long, and the rising power of Ala' al-Dîn ibn Tâhâkân, the Khwarizm-Shah, soon became predominant in Khurasan, although Ghîyâsh al-Dîn and Mubârak al-Dîn were able to hold him at bay as long as they lived, and Mu'izz al-Dîn was able to prosecute his Indian conquests.

Ghîyâsh al-Dîn died in 559 (1202) at Herât leaving a very wide-spread empire. His brother Mâ'izz al-Dîn was at that time in Khurasan. On succeeding to the throne he bestowed the government of Ghur on his cousin Ziyâd al-Dîn, who took the name of Ala' al-Dîn Muhammad. Mâ'izz al-Dîn during his brother's life had been pursuing his schemes of Indian empire since his conquest of the last of the Ghâ-finids. Immediately after his occupation of Lahore, in 557 (1161), he began the struggle for the Bihâris on the Bhatjoda and leaving Ziyâd al-Dîn in charge advanced towards the Djamant to attack the Kâhidjib of Dihl. (It may be noted that in many histories of this period Mu'izz al-Dîn is alluded to by his earlier name Shihât al-Dîn).

Since Mahmud's invasion the great kingdom of Kânamih had recovered some of its former prosperity under the Ghâfinid dynasty which had succeeded to the Frâhârin. Dihl, a recent foundation, had been taken a short time before from the Tâmar or Tawar tribe by the Chamahs whose capital was at Adînûl. The Caliâh Jâdî on the time of Mu'izz al-Dîn's invasion was Frâhârib Râšî, popularly called Râj Fîrûzib, who was married to the daughter of the Râj of Kânamih with whom he had eloped. He was a bold and successful warrior, and is still famous in folklore. The kingdom of Adînûl and Dihl stood in the way of a conqueror from the north-west, and must first be subdued before the more eastern regions could be attacked. It was therefore against this kingdom that Mu'izz al-Dîn's efforts were directed, and in Frâhârib Râshî he met a worthy antagonist. Frâhârib Râshî met him at Fitârîrî, accompanied by his brother Ghâlid Râj for Kânâmih Râj, governor of Dihl. A desperate battle ensued in which Mu'izz al-Dîn was wounded by Ghâlid Râj, and saved with difficulty by one of his Khâljî following. His army met with a defeat and was forced to retire on Lahore. Frâhârib Râshî advanced on Bhatjoda to which he laid siege, but Mu'izz al-Dîn appeared in the field again in 558 (1162). Frâhârib Râshî had just gained possession of Bhatjoda, when they fell back to his former position at Fitârîrî. (The name Ghâfan is given to the Chamahs by the Turtwârt by rivers, but Turtwârt is the actual name and was so in Fitârîrî's time. It is situated between Kermâ and Tûhilûn). Here he was again attacked by Mu'izz al-Dîn, this time with complete success. Ghâlid Râj was killed in the battle and Frâhârib Râshî in the pursuit. This battle destroyed all power of resistance. The whole territory of Sâvâlakh southwards to Adînûl, including Hamâd and Singat (now Sima) fell into the conqueror's hands. The Sultan returned to Ghaizâ leaving his general Kâhâ ibn Ašhâk to prosecute his conquests. Mirâfiz was soon taken by this commander and Dihl the next year. In 559 (1163) Mu'izz al-Dîn again took the field and advanced against Kânâmih. He was met by the Kâhidjib of Kânâmih at Aqshân near Yâhun not far from Kânâmih and on the banks of the Bhatjoda which was killed in the battle and over 500 elephants taken. Next year he took Thâfâr (now Bûhâr) and Ghîyâshileh soon followed. Kâtâr al-Dîn, son of the conquerors, arrived from the Islamic kingdom and advanced towards Fitârîrî and Anbûlûz (Yâhun) where Thâfâr Dîn who had once expelled Mu'izz al-Dîn was now defeated. Another general Ghîyâsh al-Dîn, Khalîl carried the war into Bihâr, which he subdued, destroying Hindu and Buddhists shrines in great numbers. He also took Nunâ (Nînà) and drove out its king Râj Laktumân, who took refuge in Bang (Bengal) Lasakhân to which movement of the Muhammadan seat of government, Kâhidjib was also taken by Kâtâr al-Dîn in 559 (1163).

In these later conquests Mu'izz al-Dîn does not seem to have taken part personally. He was in fact occupied jointly with his brother Ghîyâsh al-Dîn, in the affairs of Khurasan and in resisting the growing power of the Khwârizm-Shahs. He was in Khurasan when his brother died in 559 (1203) and succeeded to his supreme government. In 561 (1264) he organized a powerful army to invade Khwârizm and put an end to the Ala' al-Dîn Muhammad's depredations, but was unsuccessful and had to retire followed by the enemy. He was despatched by his al-Dîn Atâbâh, one of his principal ministers, and was for a time in great danger. He escaped to Ghâzin with the wreck of his army. An outbreak then took place among some of the Pândâb tribes, especially the Khôlkhâs near Lahore. The same tribe that had turned against Khwârizm Malik in favour of Mu'izz al-Dîn. The Sultan marched into the Pândâb and punished this tribe. On his return march when encamped at Dânyâsh on the banks of the Indus he was assassinated by a fanatic of the Maîlûkî tribe who he had persecuted at an earlier time. The Khôlkhâs have also been named in the act, and by evidence of names its responsibility has been placed on the Gakharis but the Tuhârbâr Nîghân, by far the best authority, supports the account here given.

The death of Mu'izz al-Dîn broke up the Ghâfinid empire. The power in India passed to the Türkish khan and generals. Kâhidjib al-Dîn remained at Dihl and Taqû al-Dîn Yâhun who was in Kânuh (the Kûran valley) took possession of Ghaizâ, defeating the Ghâfinid maliks of Bûhâr. Ghîyâsh al-Dîn Muhammad, son of Ghîyâsh al-Dîn Muhammad, was slain in the battle of Aqshân which culminated in the reduction of Ghâzin to something like its original importance, and despoiled and imprisoned Ala' al-Dîn Muhammad who had been installed by Mu'izz al-Dîn. Sultan Mahmud emigrated to rule at Fitârîrî, and at the request of the Khwârizm-Shah imprisoned there the latter's brother 'All Shâh. He was assassinated by 'All Shâh's followers in 569 (1173). His son 'Abd al-Dîn succeeded and 'All Shâh was set at liberty, apparently as a defection to the Khwârizmians. The latter then attacked and took Khwârizm. His son 'Abd al-Dîn, a son of 'Abd al-Dîn, became nominal Sultan under Khwârizmian suver-
siety; he was attacked by the Ghurids by order of Valdus in 644 (1241) and killed. Ata al-Din Muhammad who had been imprisoned in 622 was again made nominal sultan by Yalalan, but after the latter's death next year he surrendered to the Khwarizm-Shahs who took him. In 642 (1245) to Khwarizm where he died some time after. The same year, as already related, the last of the Bilqis branch of the Ghurid family were swept away by the Khwarizm-Shah, and the dynasty was now extinct.

The territories in Ghur, Gharana and Khorasan now formed part of the Khwarizm kingdom, soon to disappear before the advancing Maghabs. The Indian conquests although they passed away from the family were more permanent. The Turkih slave generals maintained their traditions, and took from Malza al-Din their title of Malza Sultan. The most faithful of these slaves Taki al-Din Val-b

Bibliography: The only valuable contemporary authority is the Tahsila: Nairi of Minhajuddin Siyai (Raverty's text, London 1881); also see Thomas, Chronicles of Farkh in the Gulf of Dubai, London 1872; Defrémery, Histories du Sultanat de Byblos, extraites de Mir-khan, Paris 1864; Hurlou, Almk-ustana, Fartashast (ed. Brown), I. 466-471; Elliot and Dowson, Hist. of India, London, 1869; Firtha's History (text of Lucknow). For coins, see B. M. GHORI DYNASTY, the, of Malza, was founded by Jinain, entitled Dilwar Khan, an aover of Farkh Shah Taghiali of Dihl, claiming descent from Syah al-Din Munammad b. Sh. Iltukar Khan, having been appointed governor of Malza by Muhammad Shah; son of Farkh, became independent in 1421, after the overthrow of the empire of Dihl by Timur. He died in A.D. 1408-1409, and was succeeded by his son Hulagha, who was suspected of having poisoned him. Hulagha, who built the fortress of Mashal, was chiefly occupied during his reign in incessant warfare with Gudjarat. In 1420 he reduced the Gulf kingdom of Khuras to the condition of a tributary state, and in 1422 led a raid into the distant Hindu kingdom of Hindustan and returned with much plunder. In 1423, he besieged Gwalior without result, and in 1428, having forced Ahmad Sagh Shahmani I to raise the siege of Khuras, pursued him, but was himself defeated in 1432 he was captured. The reign of his were embittered by disputes between his sons, the eldest of whom, Gharin Khan, was, not without opposition, raised to the throne under the title of

Muhammad Shah on Hulagha's death in July 1432. Muhammad Shah's debauchery and his cruelty towards his brothers and their sons alienated the affection of his subjects, and he foolishly quarreled with his powerful cousin and brother-in-law, Mahmud Khan Khalifz, to whom he owed the throne. Mahmud Khan caused him to be poisoned and the latter's proclaimed Mahmud Khan's elder son, Mas'ud, a boy of thirteen years of age, king; but Mas'ud and his brother 'Umar Khan fled and the throne, after having been declined by Muhk Mughliz, the father of 'Umar, was usurped by Mahmud, and the kingdom of the Ghurids passed, i.e. A.D. 1436, to the Khalifz.
GHRUSHI — GHUL.

Leen, p. 431, and in Cod. Leid. 1025 (2). The Nabh-Cardi had their peculiar reverence, whereby his name appears in the name of this order. Further materials for his biography may perhaps be found in the manuscripts described by Persbusch (which exist elsewhere however also but are not accessible for publication): Cod. Gothanus, Cat., p. 124 and Cod. Bertol., Cat., no. 266. Cf. also Rhup, Cat. of Parisian Miss. (Brit. Museum), 804 and Hierol. Bibliotheca orient., v. v. Agmân.

GHUBRAN (A.), pardon of sins.

GHUL. For the ancient Arabs the ghill (temp. ghost and ghillia) was a particularly blest animal, and of the varieties of the animals which attracted them from their path, by assuming different forms, then fell upon them unsuspected, destitute, and devoured them. In the root seem to lie two ideas: (a) changing into different appearances and (b) treacherously assailing and destroying. There are many references to them in the early poets. According to the Agha'it (vol. xxiv, 209 if torx.) Tabbuha-Scharrin spoke frequently in his verses of them. See especially his description of one (ibid., p. 212 note) and his boastful and his boastful_up with them as a wanderer of deserts (ibid., p. 210 note). It was said to be the same as the sákh (pl. súkhíy) which had a similar power of transforming itself, and which was called on that account the sorceress (álhála) of the ghill. The masculine of the ghill was said to be the ghilli. It is plain that the word ghull is a descriptive, for it can be used, and not apparently as a metaphor, of any destruction which comes upon a man: so even of spiritual things in the Tawmat al-Ighdšt, and here and Here, Zohar, p. 335.

Otherwise a man could hardly have been called Abu l-Ghull (Afsúra, ed. Frytag), p. 34.) and Ka'b, in his Barla-pooem could not have compared Su'ad, even in her chastenedness, to a ghill. For some reason Muhammad disliked the word, and only one derivative from the root occurs in the Kur'an (xxvii, 46) ghilli, "insidious destruction," used of the effects of wine (cf. Mufaddálat al-Khulý, p. 372). In a tradition, also, he declares that there is no such thing as a ghill (Linda, iv, p. 31, II, 10 estc.). This has justified Muslims, especially Mentalists, in denying the existence of the ghill altogether, e. v. Zanád, p. 261, and Kur, xxxiii, 46 (ed. Calcutta, p. 1305. But others held that it was only the changing of appearance (kâhamu), which the Prophet declared, and they quoted traditions from him telling how to drive away the ghill by reciting the agall. For the mediatorial system in which the ghill is fully accepted, see Dami and once, also under agall and su'ad; Suyúr; Jaykar's trad., vol. ii, 47 if teq. Ka'uni classifies the ghill among the diabolical (mushabihat) spirit (ed. Whittenfeld, i, 370) and that is overwhelmingly the later attitude. The popular mind ghill (also ghibl; similarly su'ard) was an ordinary word for zanádul, whether human or demonic, and thus became equivalent to the European age, and the standard Méraubes told elsewhere of ogres are connected with them. For Persia see Sir John Malcolm's Sketches of Persia, chap. xxii; for Egypt, Spitta's Centur, arabs, by, and for North Africa, Stammme, Mêrëns und Tophši, palm; for Turkey, Künes, Türkische Volksbiren, by index under Derv and Dervis and palmum. See also in Arabic.
Bengal. This work, entitled *Firdaw al-Salāf*, was completed in 1768, and is the fullest account in Persian of the Muhammadan history of Bengal. It was published in the Bibliotheca Indica, (1860-1891). Ghulam Husain died in 1733 A.D. (1777 A.D.).

**Ghumdán**, a castle in 534 in the Vaman, famous for its size and splendor. Humdán and other contemporary geographers give very full descriptions of it, but by this time it had long been merely a gigantic ruin. It is said to have been already destroyed when the Ayyubid s overcame the Vaman in 525 A.H. It was then rebuilt, however, for according to an old quoted verse, which is inscribed by the father of the celebrated Umeyy b. Ali b. Talib, it was the abode of Ubn Yazan's sons, after the Persians had conquered South Arabia about 570. Several authors say that it was the Caliph 'Obaidullah who finally destroyed it, but D. H. Muller considers this to be probably a malicious invention. In any case its destruction was connected with the Muslim conquest of the country. From several poems, whose South Arabian origin is confirmed in an interesting way by a number of technical expressions which are also found in Sabæan inscriptions, it is clear that the castle was built on a rock and that the lower part was built of freestone and the upper part of brick masonry. According to Humdán, the ruins of the two first stories of the chief mosque, he was still able to see a stronghold on the top, where the Karmania and had encamped in 908. E. Charle has actually discovered, northeast of the chief mosque, a large mound of ruins in the lower part of which were many beautiful freestone blocks; the large mosque has been built on the site of the ancient castle as the style and size of the stones show.

GHUMDAN — AL-GHZULI.

of the Anti-Lebanon, to its disappearance in the Lake of 'Atbara, the ancient Sea of Damascus, a number of lakebeds only intermittently filled with water. The Ghul is protected by this network of ponds with their reedbeds from the advance of the desert. The area reclaimed on the east looks like a green mountain spur thrust boldly into the sea of sand. (Masayb). The same Ghul, as found in the Umayyad poets, Ibn Qais al-Rakaybi, Akhmad ibn al-Raf'a, and in Hadith, where it is designated by the Prophet as the scene of a future great battle (Maraj Rabi'l), it is the most wonderful oasis (but Damascus) just as the glory of sinking is one of the four paradises on earth. Tradition says that Abraham was born here and points out the site which served him and his mother as a refuge (Qorin, xxvii, 52). Its greatest distance is from west to east. The statements of the authorities as to its area vary; 18 square miles or 2 days journey (mar's) in length and sea in breadth, it is entirely covered with gardens and plantations particularly olives, from which one celebrates the fruits of Damascus, especially apricots, which are exported great distances with villages buried among them, quite recalling the 'Abdi al-Afrin or 'Abidil of Imn Kala al-Rakaybi (ed. Rokokomakia, p. 209). Several of these villages, says Salibi, possess the impregnancy of towns, such as al-Mura, Djami'a, Huraiti and Dabaa. Others have disappeared like Dair Murrin (q.v.) or 958, Bait Lihay, which Salibi prefers to its likeness with a quarter in Damascus. The same writer also mentions the Draai, Payama'a (if these places come from the word Tell, on the western slope of Hermon) as already mentioned. According to the old geographers, the Ghul was occupied chiefly by the Banat Ghassan (cf. Ablam) and the Banat Kalleh and various groups of the Kais. Salibi counts 2854 beatin or estates and 550 vineyards in its day (7th century A.D.). He interested the monograph which he has devoted in the Ghul: Darom al-Fa'id wa 'ala ghulta (ms. in Laden, no. 18662; section on cosmography. Rikabi, 34, 35; Ibn Rostuq, 22 (ed. Ghibli), p. 205), editor of Ghibli, Geography (ed. De Goeje), p. 91, Ibn al-Fakhr, Damiqa (ed. De Goeje), p. 103, 140; Mabrut, Aswa' al-Sa'duti (ed. De Goeje), p. 33, 444, 160; Bokhor, Mabrut, Geography (ed. De Goeje), p. 59, 103; Abul Fadhl, Geography (ed. De Goeje), p. 214, 315; Bakr, Meqam, p. 703; Ghibli, tr. R.; xvii, 55; von Kerssenbrock, Mitteleuropa und Damaskus, p. 109 et seq.; Weismann in Zeitschrift, der Deutschen Morgenl. Ges., xi, 475 et seq.; Le Strange, Palestine under the Moslems, t. i. (LAMMERS).

AL-GHZULI, A.D. 1212 A.D. AND ALLAH-AL-DIN AL-DIMASHQI, AN ARAB AUCTOR, of Berber origin, who died in 515 = 1125, according to the title Hul al-Din fi Masalih al-Sfur, he composed an anthology after the model of the Aflat books but which, as the author in his preface rightly points himself, is favourably distinguished from the mass of these books by its contents. He deals with the history and its parts, with all the pleasures of life and sport and the accidents required for them. He illustrates these subjects by anecdotes and verses; from the later poetry, thereby giving to the work a very rich touch of material, which is still far from being exhausted, for the study of the history of Muslim culture, similar to the Kith al-Masakin, to which it is superior.
however in the greater area covered by its subject matter. The book was printed in two volumes in Cairo in 1239-40 A.D. (C. Buckelmann).

GHUZZ, the Arabic name for the Oghuz branch of the Turkish people. This seems to have been the name of the great people who ruled all the tribes from China to the Black Sea into one nomad-empire in the eighth century A.D.; in the Oryqhon inscriptions of the ninth century they are also called Tokuz-Oghuz ("the nine Oghuz") so that they were divided into nine tribes. On the linguistic and ethnological relationship of the Oghuz to other Turkish peoples opinions differ. Ramstedt (in his article on the Oghuz in the *Zentralblatt fur Kaffirwissenschaft*, Vol. LIII, 23-26) and with him A.F. Schmitz (in his work *Les races semi-durcissantes*, *ibid.*, p. 374 et seq.) prove that Oghuz is to be identified with the Mongol *Ogut* (properly *Oqut* or *Oquut*) which has no support, any more than the equation to Ughur and Uighur proposed on the same philological grounds by different scholars (H. Münkast, et al.).

The Tokuz-Oghuz (called Taghluq-ghuz by the Arabs) are mentioned for the last time in the west in 205 = 209-210, when they are said to have invaded the land of the Tabar-tagh (Talgar) (Din burkh, 1804). The Mongol era in the 13th-14th century call the people living in the west Ghuz alone without the addition of a numeral. These Ghuz were the immediate neighbours of the Dür al-Islam from Djarqan on the Caspian Sea to Firdh and Ashtiz in the Firdawr territory; in the west their territory was bounded by the lands of the Khazar and Bulghar, in the east by the lands of the Kharli, in the north by the lands of the Kaimik (in Turkish probably Kaimik), cf. *Ishqart*, ed. de Goeje, p. 9, on the other hand to reach the land of the Taghluqghuz from the Dür al-Islam, one had to traverse the whole of the broad territory of the Kharli, more than 20 days' journey, sitting out from the eastern frontier of Firdawr (Ibn Hawāl, p. 21). The boundary between the Ghuz and the Kaimik was formed by the upper course of the river Jih, i.e. the Kama (Ishqart, p. 244). In the same century a section of the Ghuz had separated from its fellow-tribesmen and migrated to the previously uninhabited peninsula of Siyleftright (Mangbeleik) (ebd., p. 219). The headquarters of these people were on the lower course of the Sir Darya (Ibn Hawāl, p. 393). According to Ibn al-Atîr (ed. Tornerh, li, 117) these Ghuz had separated from the Taghluqghuz in the time of the Caliph al-Mahdi 153-169 = 775-785 and even at this early period practised Islam; in reality Islam only began to spread among the Ghuz in the 15th-16th century; one section of them had adopted Christianity perhaps even earlier (Kazant, ed. Wästensfeld, li, 394). The Muslim Ghuz were also called Turkman (Turkomen); this name (of uncertain origin), which was later to supersede the name Ghuz entirely, first appears in Makanadis (ed. de Goeje, p. 274 et seq.).

The migration of the Ghuz to Muslim territory began at the end of the 13th century and at the beginning of the 14th; they first settled at Nur in Bulghur; as an earlier period Constantinople Porphyrogenitos mentions the advance of another branch of the Ghuz (Oghuz), called Tokri in the Russian annals, westwards over the Volga against the Pechenegs. In the 14th-15th century considerable bodies migrated in both directions; in Western Asia the Ghuz or Turkomans, sometimes as robber bands and sometimes under the leadership of their chiefs, penetrated all the civilised lands up to the Mediterranean; in the west the Uz crossed the Danube in 1065 and ravaged the Balkan peninsula as far as Thessalonica and Hélia; but were soon afterwards almost exterminated by the Pechenegs and Bulghurs; the remainder entered Byzantine service and seem afterwards to have become merged in other peoples. The campaigns of conquest of the Ghuz did not destroy, nevertheless, great influence in the ethnographic condition of Western Asia. The Seljuk dynasty which arose from among the Ghuz gradually succeeded in subduing all the lands from Chinese Turkestan to the frontiers of Egypt and the Byzantine empire. The Seljuk seem to have been a bond of setting their numerically relatively on the western frontier of their empire and thus Asia Minor and the northern provinces of Iran received their Turkish population. Only one movement of the Ghuz in the east of any importance is mentioned; in 549 = 1153 the tribes settled around Bulghur rose against Sultan Sanjar, rising which resulted in the taking prize of the Sultan and the devastation of Khwarizm and several other provinces, but these events only affected political conditions for a brief period and the ethnographic not at all, as far as can be seen. The lands abandoned by the Ghuz in the Sir-Darya and north of the Caspian Sea and Sea of Aral were occupied by the Kipchak, also written Kipchak, a branch of the Kaimik (so Gardi in Barnhold, Odebro in Padmore's *Savvymuy Aşık*, p. 83). As early as 481 = 1030 we find the Kipchak mentioned as neighbours of Khwarizm (Bulhar, ed. Murady, p. 91 at the foot); Najir Khanwar (in Brown, *A Literary History of Persia*, ii, 237) already uses the term "desert" (mkhār) of the Kipchak," afterwards adopted by the Muslim geographers, in the same sense as iskand (p. 217 et seq.) at an earlier period uses the term "desert of the Ghuz" (mughūz al-Ghuzzak).

Ibn al-Atîr, (xi, 54) mentions the division of the Ghuz into two groups of tribes, the Uçuk and the Ruzuk; we do not learn further details of this division, or of the 24 tribes of the Oghuz and their common ancestor, the eponymous hero Oghuz Khan till the *Turkshā Gāhehāt* of Rashid al-Din (cf. the article Oghuz, li, 149 et seq.); the same authority gives the totem (annemat) and seal (takhtat) of each tribe. Oghuz Khan appears as early as this as a Muslim hero; geographically also the saga is for the main part localised in Western Asia, Egypt and Europe (even the Franks are subdued by Oghuz Khan). Another version of the same saga, still free from Muslim colouring, in the Uighur text, but composed in a dialect differing from Uighur (such Persian words as dūz and ashūjan are also found in it), has been published by W. Radloff; nothing is known of the origin of this version or the date of its composition. The geographical proper names mentioned in it refer mostly to Eastern Asia and unite the Mongol period; a similar saga was utilized by Rashid al-Din in another section of his work (in the section on the Turks; *al-Buran Rasan in Collections Scienctifiques*, iii, 97 et seq.) and by Abu-T-Ghazal. All that is given by later Muslim writers of Oghuz Khan and the 24 tribes of the Oghuz may be traced to the *Turkshā Gāhehāt*; this is particularly true of the *Turshā Gāhehāt* and simply substituted Oghuz for.
Khan for Çingà Khan. Led satay by this falsification, a Turkish scholar has recently propounded the thesis that we have the foundations of the celebrated Čësàk of Çingà Khan in the book of laws of the Oghuz Turks (cf. M. Hartmann, Der Fragebrei, iii. 57 et seq.). As late as the sixteenth century the Turkomans of the Caspian Sea still considered Čësà Khan (for Oghuz Khan) as the ancestor of their people (Gailhans, Einige vergessene \v soteriache materielle \re genus Arabi in Ortsnamen
den, St. Petersburg 1886, p. 51); popular legends of his life and deeds are not yet known.

In Arabs Minor even in the Ottoman period the "times of the Oghuz" (Oghûns-nâmâs) were of long literary; every saga handed down by the bard (mâna) about the past was called an Oghûns-
nâmâ; a collection of such legends is contained in the *Arâbî Sûrî Dëlköf. Kurşû* which is preserved in a unique manuscript in Dresden (Fleischer, N.°, 86). The Kurshû or Kuršû, who appears in this book, is also known on the Sir-Daryâ (the erewhithe abode of the Oghûz) and in the Turko- man steppes as a saint, bard and sage; similar legends were also current at one time in Alt teżêk. In these "Oghûns-nâmâs" (cf. E. Grisar, L'âge du sultanat, p. 184) and in Asia Minor. The view propounded by Fontanarresta (Zapiski vost. etd. arkh. otd., xx. 100 et seq.) that this Kurshû may be identical with the Korshû b. 'Abd al-Hamîd, mentioned by Imad al-Dîn Isfahânî (ed. Houtsma, p. 281 et seq.) and by Ibn al-'Azîr (xi. 54), will hardly hold; the sagas certainly be older and have been known to the Oghûz even at the beginning of their wanderings; their wide dissemination cannot be otherwise explained.

\smallskip

\textit{Gâaur (v.)} : Gaisar, q.v., i. 754.

\textit{Gâaur Dagh.} The Turkish name for the Amuus mountains, to be more accurate, for the northern part of the range (cf. i. 314).

\textit{Gibraltar, a rocky limestone peninsula belonging to Great Britain in the S.E. of the Spanish province of Cádiz (q. v., i. 516) almost the most southerly point in Spain (5 miles from N. to S., greatest breadth one mile with an area of 2 square miles and greatest height 1450 feet) with a town and harbour of the same name lying along the gentler western slope, with 18,000 Spanish, English, Jewish and Moroccan inhabitants (including a garrison of 7000 men). Being the key of the Mediterranean, it is very strongly fortified and honeycombed with batteries; in the Bay of Gibraltar or Algiers (q.v., opposite it to the west) there was in ancient times the European pillar of Hercules (Herakles — Phoenician-Punic Melqart from Mallìqart = king of the city) also called Calpe or Byba. Mouns, opposite (15 miles) the African Column Abyla or atena, the modern Canta (q.v., p. 335 et seq.), with Castillio and Monte del Año (600 feet high) and Puente de las Almás, but not along the strait like the whole chain of the Sierra Bullones [as Boksercik still has it] or of the Dulce Mar (called after Muss b. Nasir). The very ancient Caria (Carthia) on the most northerly point of the Bay of Gibraltar, east of the mouth of the Guadalronque, seems to have been of Iberian origin in spite of the Phoenician name, and played a part in history under the Carthaginians as a seaport in 171 B.C. It received the first Roman colony on the peninsula and under the Romans it was called Carthago Nova (Cartagena); in the middle centuries its name was still called Cartaja or Cartagena, the modern Torre del Roscalillo on the Farm el Roscalillo with low mounds of ruins. Gibraltar from the north-east commands the whole of the strait between Europe and Africa; between the Atlantic and Mediterranean usually called the strait of Gibraltar, Stratus von Gibraltar, Estrecho de Gibraltar, in ancient times the *Purastrum* of Hâwân, Fratua Gadirum (from Gadara, Cidês or Herculea, Arabic (Rasul) al-Zahéb, (canal of) the street (cf. *îmârât al-Musulûmîn*) After 711 Gibraltar was taken by 'Abd al-Mu'âmîn strengthened the fortifications of the rock; in 1309 Gibraltar was taken by Alfonso Pérez Guminu el Bueno for Ferdinand IV of Castile, but in 1333 it passed to the Makhins of Morocco from whom it was taken in 1412 by the Peirlh Tuncis. Abu 'I'abî (p. 516) of Granada, and finally on the 20th August 1462 it was won for Henry IV of Castile by Don Guinam of Medina Sidonia. From 1462 it was with the whole mountainous Campo de Gibraltar, in the N.W. of Gibraltar (previously the whole Sierra de las Garzas) the hereditary fief of
the Guarnina de Madrid sold to 1502, when it passed to the crown. In 1540 Gibraltar was plundered by the Algerian corsairs Ghazi al-Din, and in 1578 by Captain Alonso de Vara under the command of don Juan de Mendonza. The fortress was captured from the Moors in 1612 that Admiral Don Juan de Mendonza shipped the banished Moriscos back to Africa. During the war of the Spanish Succession Gibraltar was taken by the English in 1704 and had subsequently to suffer severe sieges, notably in 1779-1783 under General Elliot against the French and Spanish.

GILAN (province of the Gila, Gheila, 1840), a province of Persia, north of the Caspian Sea and south of the Elburz chain. It is bounded in the east by Taurusistan or Mazandaran, and its northern limit is marked by the junction of the Kar and the Amsos; its political boundary with Russia, however, is marked by the Amsos stream. The chief town is Reft. The interior is swampy (whence the popular etymology of the name from gil, mosil) and covered with woods and marshy groves; the mountainous part bears the name Dalan; the natives call themselves Gilák. The Safá River flows into the sea near Lahijan. The silk industry and the cultivation of rice flourish in it.

The perpetual moisture of the climate has a relaxing effect; the mild and wet winter is broken by the dry gurâ (warm wind). Seen from the forest, the appearance of the vast sea of green, to them a kind of tiger, resembling that of India, is found.

According to the recent reforms Gilân forms an independent wilayet of the first class with Reft as capital and its sub-province Esnilî (q.v., v. 48) ranks among its principal towns. The population numbers about 250,000 and increases annually at 25,278 families. The province is divided into four districts: Tawilâgh (chief town Kergân-Rud), Lâhindjan, Langè-Rud (with Rádiar and Kâshik) and Mandîji (with Kâhchîhâñ). It was formerly divided into two districts: Kâsañ, Lâhindjan, Reft, Fâmân and Gerzî. Fâmân was once considered the capital and the most important places were Tâlen, Lâhindjan, Binañeh, Kâsañ, Safá and Dânâjan. The natives, however, only recognize the geographical division of the province into two districts of the Safá-Rud: Bây-xan (district of Reft) and Bây-xan (district of Lâhindjan); in the dialect of the country the word Safá River is rendered hâlêh, Halêh, quoted by Scherer, Christ, Pers., II. 187; cf. Mêljanâd, p. 250, note: Dorn, Caspia, p. 49). After remaining for long independent Gilân was conquered by Hâlêh, who raised the fortifications of Shahrizor to the ground in 1227, and was finally incorporated in Persia by the Safawids; under

'Alâdîr, I. the capital was Reft. Tahbîn in the north was separated from it and the greater part added to Russia by the Treaty of Gulista (1873).

Vâhî mentions a tribe named Lâjšân, which emigrated from Iškâhîn to Bây-xan; according to a verse by Irâk, al-Kaîs they entered the service of the rulers as miners and masons (Van Vloten, Wiss. Zeitschr., f. d. Kultur, Morgen., vol. 1984, p. 61); it is probably Gêls that are referred to.

[Go. HEARE]

AL-GILDÁK (Gilâk or Gilâk) "All, b. Adhamâh & el, is a city, according to other authorities, in the 'Al-Dim 'Aliân b. 'All. author of a number of works dealing with occult sciences, notably alchemy which are detailed by Brockelmann, Gesch. der arab. Litteratur, II. 139, who gives the following as print: al-Mâjdânî fi Arâb (in Al-Mâjdânî, Bombay 1902, and Nâšijî al-Fâlî fi Aškâl al-Mâjdânî, Bây-xan, 1340 a.d.). Almost nothing is known of his life; all we are certain of is that he composed one of his works in 740 (1340) in Damascus and another in 742 (1342) in the Gilân and Shahrizor. The work in 743 (1343) is usually given as the date of his death; Brockelmann, however, also gives 746 (1350). See Brockelmann, Gesch. der arab. Litteratur, II. 139.

GILGIT. A province in the extreme N.W. of the Indian empire, the capital of which is the small town of Gilgit, situated on a valley 4,800 feet above sea-level, on the Gilgit, which is a tributary of the Indus. It is surrounded by great mountain ranges, and is opposite to the gap leading to Himâ, beyond which the northeastern Hindû Kush separates it from Wâkhto and the Mânshûr from Chinese territory. The population consists of the Shina race, and the Shina language, one of the Pashtû groups, is spoken. This race is probably nearly pure Aryan, the people being good cultivators and fond of sport, light-hearted and cheerful, but with a reputation for treachery. The route by which Gilgit is approached from India leads down the Gilgit towards the town with the Indus near Budjil, and hence to Keybuzh, via the Träglük and Buzfall passes or to Abottâbândé by Gilgit, the Dihbar pass and the Kâghtâh valley. In Gilgit the whole population is Mohammedan, mostly Shî, and not fanatical. Little is known of the earlier history. In Furtânis lists the cities of the Shinâ region (Shinâ) and mentioned the Padâla. Al-Biton mentions Gilîk and says that the people speak Turkish and that their king is called Bûlar. It is improbable that Turkish was actually spoken, but the Shinâ still claim relationship with the...
Mughals of India. Till recently Gírít was under kings of the Trukhkí family, from a former king Trukhí, who reigned in the 15th cent. and established the Muhammadan faith. The title of the kings before that period was Khán, but since then it has been Chál-ván. The country is also said to have been formerly called Sriyán, and afterwards Gírít.

In 1844 the last of the legitimate rulers Karim Khán was expelled by Gáhára Ráman (or Gáhára Amin), a member of the Khánchákí family of Yasan who made himself master of the country, and proved to be a cruel tyrant. The expelled ruler took refuge with the Síkhs, government of Kanhí, who invaded Gírít and set up Karim Khán again in 1845. He ruled under Sikh suzerainty, and when Gáhára Singh Dégí became Márádára of Kanhí in 1846, Gírít passed to him with the other Sikh possessions. In 1852 however, Gáhára Ráman attacked and routed the Dégíras while they were invading Hánza, and Karim Khán was killed. The Dégíras recovered possession in 1860, and shortly afterwards 'Abdul Khán, an infant, was installed by them as Khán. He was a son of the late Sháh Súri, and was considered the representative of the Trukhkí family. The Gírítí agency under Bidálahí was first established in 1877, and renewed afterwards under Dúrám in 1889. In 1895, at the time of the Círát, Gírít was occupied by a small force which advanced on Círát via the Biáríd Phus. (See art. Círát.)

The country has continued to form part of the Kanhí kingdom, but the relations with the local chiefs are controlled by the Ittihási agent at Gírít.

**Gímbrí, Gímbrí.** [See Gímbrí.]

**Gíráy, a Tátar dynasty, which ruled the Círmán peninsula for three centuries (1200–1400).** The accounts of the beginnings of the dynasty and the deeds of its founder Hadílúr Gíráy b. Gíyásh al-Ibn b. Tațh-Tímír, a prince of the kingdom of the Golden Horde, are very uncertain. His oldest known name of the year 845 = 1445 is Hán-Ráshidí. He founded the foundations of his power at a considerably earlier period with the help of the rulers of Múháng and Perán, on whom he afterwards continued to rely till his death (871 = 1465). We have no reliable information on the origin of the name Gíráy. According to local tradition the tutar (melkà) of the prince is said to have belonged to the tribe of Gíráy (this tribal name is still known in Central Asia where it is pronounced "Kíráy"); according to the West, Pérsus says in his Díctionári (p. 194), without giving authorities, that Gíráy is a Mongol word, pronounced "Giray" in Mongol and used with the meaning "servitor, worthy, qualified" (šaúzdušš, šábölì, šáhì). Hadílúr does not seem to have intended to transmit this name to his descendants; only one of his sons, Mengíl, and his wife, the eldest or the immediate successor of his father, bore the name Gíráy; on the other hand, this name was given to every prince of the ruling house from Mengíl's time onwards. After the conquest of Káfí by the Tátares (880 = 1475) the Círmán peninsula was added to the Tátar empire. The southern coast passed directly under Turkish rule while the Gíráy retained possession of the remainder as vassals of the Porte; but, whether the relations of the Tátares continued to Káfí to the Khán or the relations of the Khán himself to the Porte were accurately defined it was only after the reign of Isámí Gíráy II (924–925 = 1526–1528) that the Sultan's name was mentioned before the Khán's name in the Friday services; the coins were afterwards struck in the name of the Khán only. The earliest Khán (Hadílúr Gíráy, Náy Dávíd and Mengíl-Gíráy before the Tátar conquest) bore the title "Súlán" on their coins, the latter afterwards contented themselves with the title Khán; the word "Súlán" denoted, among the Tátares and Káfí, a prince of the reigning house, who was not actually ruling. The seal (nasq) of a characteristic of the coins and documents of the Gíráy. Several Khání extended their power far beyond the bounds of the peninsula, sometimes independently and sometimes by authority of the Sultan of Turkey; northwards to Mosłém or Central Asia, southwards to the Indus and the Mexican Sea. In 1526 the peninsula was occupied successively for the first time by the Russian and in 1531 it was permanently conquered and has never been vacated since then, although, according to the terms of the peace of Káfí-Kindarán (1574) and of the treaty of Ósmán-Kaşw (1779), the Khán was to be chosen freely by the Tátar population and was to rule his land as an independent prince, free of the Porte and Russia alike. In 1763 the Círmán was incorporated in the Russian empire on condition that the rule of the Khán, came to an end; the last Gíráy to bear the title Khán, Márádára Khán, died 1913 = January 6th on the island of Myrítí. Cf. also article Khán (E.-SÁRNI, 1. 562 et seq., where Bibliography is given).

(W. BARTHOLD.)

**Gíríg, a province (múndjúdž), district (múndjúdž), and town in Upper Egypt.** The etymology is uncertain. The name of Súnt Gíríz (Georgio) is presumably concealed in Gíráy. "Al-Máhárí" mentions it with a cognate of Dúrím known in the same district (the latter place is also mentioned by Ibn Dívání, p. 99 and Ibn Dhírámí, s. 477). The river Egyptian, agrees to the extent of being designated with Gíráy so that it is not mentioned in Khúyán's list of rivers; it is given by Yáhúd however. The name first appears so as that of a province in the Msúpón (270) = 1708); it is not yet found in the Nák Núyúú of 715 = 1315. The province of Gíríz is therefore probably first arose in the Ottoman period. In the Mohammedan period Súnt became capital of the province of Gíríz, while Gíráy itself declined to the level of the chief town of a district. The town was celebrated for its industries in wood and leather, which, like all Egyptian industries, were in the hands of Christians. Its large Christian population is evidence of this age. The town flourished as long as the pilgrims' caravans went via Kyur, as its inhabitants provided the pilgrims with provisions, particularly breakfast (Sec. 22). With the exception of the little house of Mişirá (210) under Múhántí, all the towns, which was well built, suffered from the inundations of the Nile, but it was saved from destruction by protective works under Sáhú Kúhí. At the present day
the population of the town is 19,843, of whom 5,443 are Copts, and that of the province about 4,1 of a million.

GIZEH (Djeh), town in Egypt. [C. I. 821° infra. 3°.]

GOGO and MAGOG. [See VOGOG, VOGOG.]

GOGO, a town in the Sudan on the left bank of the Niger, about 280 miles east of Timbuktu in 16° 12’ 4° N. Lat. and 4° 53’ E. (Green.) The name Gogo (کوگو) has been written in various ways by the European translators of the Arab geographers; we find the following forms, Kasgo, Kocant, Kankko, Kocuri, and Gogo in Leo Africanus. Barth writes Gao or Gogo. The etymology of the name gommi is obscure. Al-Bakri (Cartesie de l’Afrique, transal. de Sane, p. 590) gives a fantastic explanation of it. ‘The title of the name Gogó is not known, nor to which tribe it belongs, but it is said to be a town because the town made a sacrifice, of which sacrifice the town itself bears witness very distinctly.’ According to Houbas, (Turkik o-Soudan, transal., p. 6, Note 3), these various forms are corruptions of Kabuy Koyba ‘the king’s town’, the first of these two names having been taken for a place-name.

Gogo was the capital of the Songhai empire (cf. the articles SUDAN, SONGHAI). It was founded in the 10th century A.D. When Daf (28) al-Ma’mun had settled at Gugoi (Kukuy of the Arab authors), on the right bank of the Niger, a section of the Songhai, the Sorco-Farko, who lived in these regions, had to go northward and build a new town Gogo, about 100 miles up the river on its left bank. About 900, according to Barth, the sovereigns or Dafs of Gugoi seized Gogo. Even at this time Gogo was an important commercial centre to which the caravans from Tripolitania and Ifrīqiya docked. This is how (according to Ibn Khaldun, Hist. des Berblcs, transal. of Sane, iii. 201), Abd Yahl, the alderman of the Fātimids, came to be born in this town during a business journey which his father had taken him to the Sudan. The presence of these merchants from the north made Gogo a centre of Muslim propaganda. The fifteenth prince of the dynasty of the Daf, Daf Kuser, became a convert to Islam, perhaps during a journey to Gogo, about 1000 = 1409-1010 and moved his capital to the latter town. M. Delafosse thinks that this change of residence was brought about at the request of Arab and Berber merchants, whose caravans ran the risk of being pillaged between Gogo and Gugoi by the Sorco or by the Taheg of Awelmedin and for whom the presence of the sovereign was a guarantee of security.

In any case, we find Gogo one of the most prosperous cities in the Sudan in al-Bakri’s time. It consisted of two parts, the native and the foreign inhabited by indigents in the midst of which rose the government palace and the merchants’ quarter occupied by Muslim traders. The population consisted of negroes, Berbers, and Arabs. The Arabs called the natives Banu ‘Jama, a word which Sl tsunami (t. c.) connected with the Persian word bawursh (the great) or baskin (merchants). Although the rulers had adopted Islam, the mass of the people had retained pagan and never abandoned their ancient beliefs. Commerce was active but money was unknown; its place was taken by salt, which came from the mines of Tantuk in the middle of the Sahara, 6 days’ journey beyond Tadmokka (see Sikk). J. d’Héricet also emphasizes the economic importance of Gogo and describes the port taken by the natives in the trade. ‘Persons of importance and the notables (transal., p. 132) far from keeping apart from the merchant class, visit them, associate on equal terms with them and supply them with means for their commercial undertakings by entrusting them with merchandise and money from them in return for a share of the profit’. Ibn Khaldun says that a man who spent some time at Gogo in 1552 (1335) says that it is ‘one of the largest and richest cities of the land of the negroes and the hot supplied with provisions’.

About 1335 A.D., the king Daf Assahi had to acknowledge himself a vassal of the empire of Malli (Mele), but by 1339 his son, Ali Keder, escaping from the court of Malli where he had been kept as a hostage, recaptured Gogo and restored its independence. Ali Keder was the founder of the Songhi dynasty, of which 19 successors reigned under the names of Dafins (1335-1595) until the last of the dynasty, Dafin Ali (1494-1498), who conquered Timbuktu (1465) and Djenné (1473). Under the Askia dynasty whose founder was the Songhi Muhammed Turi (Muhammad Askia) Gogo became the capital of a vast empire comprising the greater part of the country enclosed in the northern part of the bend of the Niger. The description of Gogo given by Leo Africanus gives a very clear idea of the great city of the Sudan. ‘Gogo’, he says, ‘is a very large city, like the above-mentioned (Kalana) i.e. without walls and about 400 miles south of Timbuktu. The great majority of the houses are ugly in appearance; however, it does contain a certain number of buildings of considerable beauty and convenience, in which the king and his court live. The inhabitants are rich merchants, who spend their time on the marketplace, selling their merchandise and trading in all directions. A vast number of negroes come to this city, who being gold in immense quantities to buy and carry away the goods brought from Europe and Barbary, but they cannot find sufficient goods, so great is the sum of dinars that they bring with them, so that they are forced to return home taking a half or a third of their money with them. The other towns of the negroes cannot equal it in culture’. The slave-trade was a busy one, the negroes sold, particularly salt and European goods, fetched very high prices.

Gogo’s reputation for wealth attracted the attention and covetousness of the Sherifs of Morocco. Profiting by the dissensions in the second half of the 18th century, which were embroiling the power of the Askia, Ahmad al-Mansur al-Dhahabi appointed Djidjar Pasha to conquer the Sudan. The Askia Ismail II’s army was routed on the 25th April 1591 at Tawangdaba, about 35 miles N. of Gogo. With their ruler’s orders, the inhabitants then evacuated the town and retired to the opposite bank of the Niger. The Moroccos entered the capital without resistance and only found, among those left, an aged khitib, several students and foreign merchants. Djidjar Pasha was then able to confirm how exaggerated was the reputation of the Sudanese capital.
The palace of the Askia" he wrote to the Sherif "is not equal to the home of the chief mutleter of Marrakouch".

Djibouti's expedition put an end to the Gogo empire. The Askia of the north who continued to reside in this town till the war contrary were now subordinated to the Montevideo pasha of Timbuktu. A garrison was installed in the town to protect it against the attacks of the Askia of the south who had succeeded in maintaining their independence in the region of Say and against the insurrections of the Tuaregs. The Tuaregs ultimately however succeeded in taking Gogo from which they expelled the Moorish garrison in 1680. The Peula Mandjir Seiholder retore the town in 1688 but did not leave a garrison in it. After 1770 (according to Barthold) all trace of Moorish domination disappeared and the Melillitmen were henceforth masters of Gogo.

The town continued to decline more and more. When the expedition passed through it in 1854 it was only a village of 500-600 huts, built on the edge of a dry arm of the Niger and inhabited by Songhai, Tuaregs and Ruma, degraded descendants of the Moorish conquerors. Of the monuments of architecture praised by Leo Africanus there only survived a tower about 60 feet high and some traces of the great mosque (Djumma) where Muhammad Askia was buried. Much, however, claims to have recognition the site of the ancient town, the circumference of which must have been about 4 miles. At the present day Gogo is "a collection of large villages of straw huts" (Hocart). As a result of the occupation of the Timbuktu region by the French, a station was established at Gogo (1868) which has become the centre of a region and of a military circle in the Soudan.

Marquart, Beiträge-Sammlung, p. cix, observes that no fewer than seven places in the Soudan are to be distinguished which have names written in the same or similar ways and proceeds to discuss them in detail.

GOKCAY, Torkhah, Gokcay-tengin ("blue sea"); Armenian Sengwa (Seng-wank = "black chateau"); a freshwater lake in Russian Armenia (governement of Erivan), 7000 feet above sea-level, covering an area of 60 square miles and drained by one stream, the Zagha, which descends into the Azeres, At La Strada "Les Lands of the Eastern California", p. 153, points out, the same first appears in Hamil Allah Karzini; in the Melillitmen sources of the pre-Mongol period the lake is not mentioned at all. The monastery from which the lake has received its Armenian name lies on an island near the northwestern shore. At the present day the Gokcay is best known for its wealth in fishes (troat, Turk. ışkhan, Armen. gokcay). Cl. E. Weidenbaumen, Patrociulul ye Karanov, p. (W. BARTHOLO).

GOKLAN, a Turkoman tribe who dwell in the mountainous country, between the upper course of the Gogens and Artek [42° 15' E. 68° 0' N.], in Persia (territory), but some are said to live in Russian territory in Khiva, Karakul and Candirn. They are divided into the following clans: Cakur, Kirkir, Bayandi, Kaly, Yangaq, Saghir, Kari, Belkha, Ayerdewill, Arkadi and Salich Kibichi. The total number of the Goklans cannot be accurately ascertained; Schuyler gives 5000 akh-meor, or 15,000 souls, in which Vambrny agrees. While Yate gives only 2000 akh-mor (10,000); in other accounts quoted by Vambrny high figures are given, which is perhaps explained by the fact that these records date from an earlier period and the numbers have meanwhile decreased. The Goklans are nomads but follow agriculture and grow silks. They are fairly prosperous and pay the Subah a fixed annual tribute. It cannot be ascertained how long they have been in these lands, but probably they were there as early as the Seljuk period. The Goklans used to live with their neighbours to the west, the Yomud, and with the Khars of Kandah. The Goklans seem to be rather lax Muslims but hold their religious feasts (khidjas) in great respect.

Bibliography: Vambrny, Das Turkistan, p. 305 et seq.; Schuyler, Turkistan, li. 584; Yate, Khurasan and Sistan, p. 218 et seq.; Sykes, Ten thousand miles in Persia etc., p. 18, Note (varying statements).

GOKSUN or GOKSUN (the ancient Cucumo) a village in Turkey in Asia, the capital of a noshia of the hazi of Andrin in the sanjek of Mari, in the province of Askud. It lies in a low, swampy plain, surrounded by rugged hills and consists only of huts built on log-trunks. On the heights there still stand the ruins of several Armenian castles; the land around is almost entirely desert. St. Chrysostom spent some time here in
Gök Tepe ("Blue Hill"), a Turkoman stronghold, was captured by Skelcher's campaign (1880-1881). The name properly belongs to a stronghold afterwards called Kuhu-Gök Tepe (Old Gök Tepe), abandoned by the Turkomans in 1875; and a wider sense the same name was given to the whole capital, in which the Tóke tribe had collected their forces on the approach of the Russians. The strongest fortress was Divriq-Gök Tepe (vicinity about 3 miles, about 5 miles S. of Old Gök Tepe) which was successfully defended in 1879. Shortly before Skelcher's arrival defences had been erected. It is said, under the direction of the English officer Butler, to give the stronghold, greater power of resistance; but the besieged (about 12,000 men not under a single leader) had only one cannon at their disposal, captured from the Persians in 1868; two light guns were captured from the Russians during the siege but the Turkomans could do nothing with them. The Russian troops numbered 8,000 with 70 guns. On the 24th January 1881 Gök Tepe was stormed after a twenty days' siege and garrison is believed to have perished by the soldiers for four days; the number of Turkomans who fell during the siege and storming of the fortress was 3,000-5,000; the Russians won their success at greater sacrifice than all their other victories in Central Asia, the total loss in killed and wounded being over 1,000 men; the battle before Gök Tepe was moreover the only one in which the Russian troops in Turkestan had casualties and guns captured from them. Cf. the latest and fullest account of these battles in M. Termeuou, Interiya zanevyaznanyh Sredstv Avii, ill. 137 at 290.

The name Gök Tepe is now borne by the station on the Trans-Caspian Railway (30 miles W. of Askhabad), built close beside Daqiqi Tepe; there also is a museum of the campaign of 1880-1881, which is visited by the passengers during the wait made by the train at the station (10-15 min.).

W. BARTHOLOMEW

GOL, a large assemblage of stagnant water, lake or pond, also the name of two oases in Asiatic Turkey at which the Kais is in the Khas of Kopta (sandak of Amuabulak, wilayet of Sivas) and contains 45 villages, and the second attached to the capital of the vilayet of Kastamuni and including 61 villages.

GOLDEN HORDE. [See the articles TCHAK and TCHAKANS]

AL-GOLEA (Al-Kulafa), a keyar and oasis in the Algerian Sahara, 166 miles south of Sbeitla, 240 southeast of Wadgha and 245 north of Tebessa, 20° 50' E. long., 36° 7' 30" E. (Greenw.), population 2,500.

Al-golea, the name of which means "the little fortress", called in Berber Taiss, consists of two parts, the k粑 proper built on the northern flank of a "canal" which serves as a watercourse for the nomads and a lower part occupied by the settled population. The latter is composed of Zengias, who came from Gazaria and of ammaliated negroes who cultivate the gardens of the oasis. A subterranean water supply fed by the Wadi Seguier, Zerga, Mehdiugen and Losu assures the irrigation of the palmyrene containing about 7,000 date palms. It would also suffice to put a valley 7 miles long and 2 broad under cultivation. The water brought to the surface by arせずal, would give rise to a small lake called Jed Aid, the neighbourhood of which renders the oasis very unhealthy. The Shabo Mouri led a nomadic life around al-Golea and are divided into five sections.

Little is known of the history of al-Golea. This k粑 seems to have been first occupied by Zenerat Berbers and to have enjoyed a fair amount of prosperity, owing no doubt, to its situation between the eastern and western Fig on the road leading from the Maus to Valti and Talibalti. In the 18th century, according to the traveller ab'Aligye, al-Golea belonged to the Sultan of Wadgha who maintained a governor there. In the 19th century the k粑 was visited in the first time by a European, Duvieret, in 1839. In 1842 a French column reached it under General de Galliffet and a permanent garrison was established in 1848. With its purpose, Fort Mirebel and Fort Macdon (Hass Shetbe), al-Golea was the most advanced French station in the Saharan until the occupation of the Saharan masses in 1900.

GOLETTA, the harbour of Tunisia.

GOLKONDA, a city and fortress in the Deccan, formerly the capital of the Mughal emperors of Telingana. Its site was originally occupied by a small fort built by the Hindu rulers of the country and the primitive structure was strengthened and improved by the Bahman kings of the Deccan. Sultan Kutt Kublub, who appointed governor of western Telingana in 1495 by Mohammed Shah Bahman, made Golconda the headquarters of his administration, rebuilt the fortifications with stone, and called his city Mahommeda, a name which he never replaced the earlier appellation. In 1552 this city became independent and made Golconda its capital. It became the capital of the Kutt Shah kings until 1557, when Muhammad Kutt Kublub, fifth king of the dynasty, built Hyderabad, afterwards called Hasiradish, at a distance of seven bulles from the old fortress, and moved his court thither. Golconda afterward, however, the capital, and the court moved thither when danger threatened. Abd Allah Kutt Shah, seventh king of the dynasty, was besieged there in 1656 by Awrangzeb, when victory of the Moghal provinces of the Deccan, but the
prince was obliged by his father's orders to raise the siege. Awangarth, after his accession to the throne, set himself in the course to extinguish the two remaining independent dynasties of the Dakhun and, having captured Bighjar, in 1687 besiegèd Abd'l-Hamid Kitti Shah, sithgh of the last king of the Kitti dynasty, the ruler of Golconda. The latter fell after a siege of eight months, and the king was sent captive to Dwayitesth, where he ended his days twelve years later.

Golconda was famous as the diamond mart of southern India, most of the mines being situated in the kingdom of which it was the capital.

(T. W. HAGL.)

**GORDOS,** the capital of the king of the same name in the sandak of Sirkhand, in the willage of Adin, important for its manufactures of carpets (particularly the so-called prayer-carpet), originally belonged to the territory of the Kernaughts and passed with the rest under Ottoman rule in 1540; the modern town has about 5000 inhabitants of whom 4000 are Muhammadans and 1000 Greeks (Mincjddjiminhagh, iii. 39; Esliim- sunn, p. 633; Cutner, Truste d'Asie, ii. 536 et seq.).

(J. H. MOOREMANN.)

**GOUM** (in written Arabic كوم), the form and pronunciation usual in the Arab lands of North Africa, is the name given to the body of armed horsemen or of fighting men of a tribe. Its derivative goes means "a levy of gooms, or troupes, or a bold raid, rebellion, or revolt." The singular Arabic form goes is also found in the dialects of North Africa, with the meaning of "people, nation, tribe, etc." (Beaugeois, Dict. franc. arabe-français des dialectes parlés en Algérie et en Tunisie). It should, however, be noted that goes in written Arabic may also mean "camels" or a "body of men going out to plunder." (Dony, Supplement, ii. 424).

The Gooms, the old Barbary corsairs of Algiers and Tunis, received their official position in the service of the Turks, who based on them their system of military occupation of the country. All the tribes were divided by them into merkou or auxiliaries, exempted from most of the taxes and rents, who were subject to all taxation. When one or more tribes of the latter class refused to pay taxes or for any cause rose in rebellion the Turkish army speedily moved to the territory of the rebels. This army supplemented its small numbers by exceedingly mobile bodies of horsemen of the Gooms, as soon as the enemy was aligned, the Gooms of the merkous tribes, under the leadership of the chief of the tribe or khan, charged straight upon them in front of them and continued the pursuit till they had overtaken the. The regular army followed as quickly as possible in the direction of the Gooms to assist them to form a position where these horsemen could reform if they were driven back by the rebels; as a rule, however, the little body of Turkish regular troops only arrived in time to be present at the triumph of the Gooms of the merkous.

After the occupation of the regency of Algiers the French saw the advantage to be derived from these Gooms. But since the country was purified the merkous or auxiliary troops disappeared. The organisation of Gooms was thus extended to all tribes without exception. The Gooms under the command of chiefs, had either or again invested with authority by France, had to render accounts with the military police in the maintenance of security in the country, to protect them from plunder and to maintain the peace in the provinces of trading caravans.

In military territory the number of Gooms as members of a goom varies with the requirements of the district from time to time. The Gooms draw a monthly allowance and encamp on the state lands, which are at their disposal, but they must pay the cost of maintenance of their equipment and horses. (On service they have also a claim on the muqadda, a special allowance for services).

In civil territory the Gooms are free and mount themselves and their horses at their own expense. They receive no pay but when they are called upon for service they receive the special allowance for services. The gooms of civil territory are only called up in case of rebellion or a European war. It is a regular territorial militia under the command of the chief of the tribes and receiving its orders from the government. The gooms of each mixed or native commune contains 700 horsemen. The gooms have the right to carry arms. Their discipline has never been as strict as the gendarmerie and the gendarmerie is exempted from the war-tax and the gooms themselves are exempted from the aduicate, or castle-tax. The natives consider it an honour to be a member of a goom and any condemnation for a serious crime or habitual evil living causes their exclusion from the body.

The French government has been encouraged by the warlike nature of the gooms to use their services in case of war on the Algerian frontier or in Morocco. It was the gooms of the military circle of Mahdina under their Commandant Pelu took the Udaia by surprise in 1697. Other gooms have successfully co-operated in the campaign of Western Morocco with the regular French troops. When in this latter case the government calls upon the horsemen of the gooms, service is voluntary and the period does not exceed six months, the expenses of the march and of any sickness being paid by the state. The men are subjected to medical examination before their departure. On the other hand, the gooms were usually employed as auxiliaries and retain their own organisation. On an expedition they camp apart from the regular troops and bring their own provisions and maintain themselves on the country occupied.

(A. CONK.)

**GRANADA,** capital of the former Spanish province and of the former kingdom of Granada, which, besides the present province, included in addition the province of Malaga in the west and that of Almeria in the east, has at the
present day 80,000 inhabitants, while at the end of the Moorish period it sheltered half a millium within its walls. It lies 1,300 feet above sea-level at the foot of the north-east terraces of the Sierra Nevada (Cerro de Mulhacén, 11,000 feet high), called after 'Ali Abi ul-Hasan (1464—1485) on the right (north) bank of the Guadalquivir (Guadi, Latin Susitius, Arabic 'Abdul), which rises to the southeast and on both sides of the Darro (Arab.: r, in the older period: Kutarun, or Cauhan, Salom de la, and later called Hadadir), cf. Dory, Averroes, l. 340—344, A tributary from the southeast which flows into the Guadalquivir south of Granada, almost at the east end of the town, and forms a fertile and healthy upper valley of the Vega, (probably from the Arabic, vola'af, and taghia) (Vocabulario, Castilla and Al-Andalus), which runs 33 miles westward to Loja (Arab.: Lilla, the ancient Lusa [Hudza], ibopila major, usually however called at-Taghia, al-Madrig, el-Taghia), by the Andalusian authors; cf. also al-Bik: Coelosyria, the upper valley of the Lomotes, al-Luat (between Lebanon and Anti-Lebanus). Whether the Arabian Guadix or Alghamra (Aghramita, the corresponding nisba of Laghamita and in popular language Laghamita, Granadino), is connected with a Berber place-name Kermita (Idrisi, Description de l'Afrique et de l'Espagne, p. 56, 79) or perhaps merely represents a Roman name (Granata, and is connected with the Hebraic, oT?al-Harama, is pomegranate citadel, the ancient Akanatz, al-Kafzat, al-Taghia, the old narrow settlement in Granada on the hill to the west afterwards and still called Albacete, while the new Akanatz, al-Kafzat, al-Taghia, gradually advanced eastward down to the Darro and became linked up with it (especially in the time of the Zirids 1013—1090, whose residence Dar al-Ma'mar house of the weathercock is perpetuated in the names at least Caille and Casa del Gallo [de la Lora] near Santa Isabel de la Reina, just opposite the corresponding fortress-topped hill of the Alhambra (afterwards the residence of the Nasrids 1332—1413) east of the Darro, which is mentioned occasionally at quite an early date, can no longer be definitely ascertained; the true connection with the Arabic publican and Roman Liberia is also difficult to ascertain, cf. the article ALHAMA, ii. 244. The only certain fact is that Granada has gradually extended itself from the two parallel hills, commanding the Darro and Genil plain (afterwards called) Albacete and Albacete (al-Tabarra) the red forehead) in the north, as it is again doing at the present day, southwards on both sides of the Darro towards the Genil. Besides the Alhambra (q.v., l. 278 et seq.) on the whole well preserved, with the summer residence of the Nasrids to the east of it, the garden palace of Generalife (older Genarifte = Arab. Djamiar, al-Arife, garden of the architect) the relics of the Arab period are very few in number, of the walls which surrounded al-Kafzat al-Taghia and al-Genil, for example, there only remains the northwest side with several gates on the north side of Albacete which at the present day is mainly occupied by piazzas, Biblioteca, Bib-Elvira, Bib-Elvira, and further north the outer wall of the hills which included the western suburbs with the Bib al-Bayyana (the falconers' gate) whence comes the name Albacete (al-Taghia and Rabat al-Taghia is not so called from immigrants from Bassa, which would be al-Taghia with ate [ate] in Arabic) and Bib Falahat, lausa, Fassamass (= Almohad raving gate, Bib Faldal al-Zamara), while gates and walls have entirely disappeared in the south of the town in the Darro-Genil plain and only al-Falalah al-Zamara (Almohad Nueba) in the Casa del Carbon has survived. Of the nine Arab bridges over the Darro the majority of those in the south have been incorporated in the covering of the river, while the old bridge over the Genil, Kastilarr Besi, in the east above the mouth of the Darro, is still in existence (Puente del Genil). The old mosques have mostly been turned into churches, e.g., the great mosque of Granada (with Granadina inside) El-Badri, cf. labi = abda, humut = humousa, etc.) El-Nakhar is represented by the modern cathedral (particularly by the Sagrario); northeast of the great mosque was the high school (madrasa) south east of the great bazaar or market, Almazar (al-Khatira), burned down in 1543 and afterwards rebuilt with the old pillars; the great street of second-hand shops El-Zamala (el-Sagheena) runs southwards; both led westwards to the great Plaza de Hildas (al-Khad), where the Rabat al-Rama, on the upper side of the city wall on the west, with the Bib al-Rama (destroyed in 1873 near the modern Puerta Real) joined the Rambla of the Darro. Of many Arab baths there only survives perhaps the "true bath" Hamman el-Quasa (Baño del Nogal) in the Kanjarat el-Kadi (Puentecito del Alcaldé). As the whole of the little northeast part of Granada is now called Alhambra so is called the southwestern slope called Antequera, so called after the immigration of the Muslim from the town of Antequera (Arab. Anta, the ancient Antigera, S.W. of Granada, north of Malaga, Yebi, l. 370). On the southwestern hill which runs parallel to the Alhambra, the modern Campo de los Mártires there lay also the Jewish quarter with a synagogue (Diyana al-Vidrada) which is also called Guadix or Mashit al-Feidi. On the N.W. spur lay the Hija Murra, the still existing Torre Bermeja of the southwestern fortifications of Greater Granada, while on the slope and in the valley of the Darro there ran Rabata and Rabat el-Mártiri el Azra (Azra-ash-Sharq), Eastgate, Puerta del Sol, the whole range of the Campo de los Mártires is called Monte Moro after these Mahdijfi of Moorish Moron de la Frontera between Sevilla and Ronda. On the history of Granada cf. the articles ALHAMBRA, ELVIRA, ZIRIDS AND NASRID.

Bibliography: Cf. the article ALHAMBRA (where should be added to the bibliography, the large plan (the best) by the Architecto Director de la Alhambra D. Montero Condeyo, 1899], ELVIRA (Cordoba); Idrisi, p. 204 et seq.; Yebi, l. 788; Maritsi-al-Ideh, l. 307; Kawani, l. 193 (Al-Quasa); Abu el-Fadala, l. 107; Ibn Batuta, Index; Bibliotheca Gracae, Accra, Indices Magne, Dictionnaire s.v.; Bourke's Spanish and Portuguese (with good plans); L. Sega de la Ciencia, Guia geografia y artistica de Granada, 1900; Denis, Plan de Granada abreviado (preliminary to a prolong of D. Mariano Gaspar Remura (Director del Centro de Estudios Historicos de Granada and of the map of this Centro) 1909, in which various studies on Moorish Granada are compressed and made clear to the eye on the excellent plan, although there are several errors still in it; as for example when Munat: (Munat. see above)
is explained by del Morano, de los Marranos, Rabín al-Goreva (Calle de Goreva or Goreva) appear wrongly, in the article, compared with the classical Girera, Zeina (cf. however, south of Granada, Alhamar = Kays al-Mundia and S. hand. Hespanh (without article): Doy, Rodr. Verdon). A: 545. The uncritical Historia de Granada, 1843 (altered reprint: Granada 1904—1907), by Miguel Lafuente Alcántara is useless as it is based on Conde's make-believe of 1820. The next best would be a good edition and critical translation of Ibn-al-Khatib's (died 1374) Tába fi Turqi Charaše (Cairo 1315, 1 v. ii. is only the synopsis Merke al-Fatlha, which still lacks Vol. III). (C. F. SEVROLD.)

GUARD ... GUARD ... in a large number of Spanish river-names like Guadalquivir (p. v.), Guadiana (q.v.), from the Arabian guad (water, valley, particularly a river which dries up in summer), which is the case with the majority, especially the smaller rivers of Spain, cf. also rasoul (from the Arabian rasul, a dry sandy bed, which becomes used as a road), cf. La Rambla de Cataluna, the Corn or Barcelona = the Italian lacrara (source) (and so in the west is called, kald, kald (French kald), in Granada kald (Pedro de Alcalá, like fik for fik etc.) (e. g. Guadalquivir also corrupted to Guadalquivir) = kald al-kell, white river = Turia at Valencia and = Segura de Murcia; Guadaltejo from Wild, kald; Guadalhorce, Guadalhorce at Málaga; Guadiana (Alcenda) at Sevilla; Guadiaro (with Guadalquivir rating at Ronda = Arab. Kad al-a'ra or ar, also ar, ar, ar, ar, ar, ar; salmo, a mountain brook east of Huessa, with (f in a solitary instance): Guajara, Guajarcar from Guadalquivir, Guadahacar; Guadarrama, Granadines, a mountain brook east of Linares; it is readily transferred from rivers (valleys) to towns: e.g. Guadalcázar (q. v.), Guadalix (q. v.), Guarrum, contracted from Wedararomnem, pomegranate river, a small town north of Linares; also transferred to mountains, e.g. Guadarramas, from Wedararomnem (mountain-river); still as the same as a river, village and mountain, e.g. Guadalete; from Wedaralhich, font, Spanish font; from arabic al-kad or kald; Wild, while the Spanish salmo, is borrowed from the Arabian kalh meaning in North Africa means not *kald* but *kad*, a mountain and village, while the stream is called Guadalupe and Guadalpago; Guadalix is also the name of a southern tributary of the lower Rio; Guadelpase a mountain at Serpa on the lower Guadalquivir; Guadalin = Alcarache, a stream on the borders of Spain and Portugal south of Badajoz. In Portuguese, Spanish Guadi is (usually) represented by Oid... Oid... e.g. Oidana = Guadias (q. v.), Oidrella, Oideixe, Oidelra, Oileidela, Oidelide, Oidelide, Oidelide, Oideixe, Oidra... Oideixe, Dyer = Oidlle, cf. the Oidle with its tributary Oiderras in the province of Huelva, adjoining South Portugal with the Guadalquivir between Linares and Huelva, Guadalquivir on the upper Tajo, and many others. (C. F. SEVROLD.)

GUADALAJARA, the capital of the Spanish province of the same name, on the Aragón (2,000 feet high), at southeastern Castile, with 12,000 inhabitants, is the ancient Ariana (from arai, Basque *atik*), on the left (eastern) bank of the Henares, the river which the Arabs called Wabi "Hayderi or "Stone-river" (name adopted in modern Toledoan, whence the name Guada-
(Salius Tugimenis and Argentarius Moons), receives on the left bank the Guadiana Minor formed of the Guadal or Barbata (with the Culler), Fardes and Guadalantuma, and after running for a considerable distance between the Sierra Magina and Luna de Ucés is joined by the Guadalimar (with the Guadiana and Guadalantuma) on the right bank; these three together form the source of the Guadalquivir. Of further tributaries there may be mentioned on the right bank the Jándula, the Guadamelete formed of the Matalmeca, Cosma (Arab. Kinena) and Guadalbarbo above Córdoba, the Guadiato below it, the Bembair with the Benjueal, the Viar with the Bembair, the Ribera de Huelva (with the Carla) near Seville, the Guadalimar, which flows through the immense district of Ajafran or Azarate (between Seville and Niebla) rich in olive trees (Arabic al-Sharaf or Sharaf Isháyiya, raised undulating ground, hill-country) and flows into the salt swamps on the coast (the Marismas) formed by the inundations of the sea. On the left the Guadalquivir receives the waters of the Guadullón (from Guadullon) and the Guadijar (Wádat Sháqî), which flows through the fertile Campilión (Arab. Fanníya and Amáníya), south of Córdoba, but its most notable tributary is the Genil (Arab. Shenil [Shenâlî]) from the ancient Singiño) which runs through Granada, Loja and Ecula [q.v.], and next the Corbones and Guadaira (Wâdal Athâr) to Rábate and Kából are the modern Laiz Mayor and Mensa.

Bibliography: Madoz, Diccion. Geogr., p. 27; Aboulela, Geographie, p. 172 = 247. 4, but where it is wrongly said of Mérida (Ar. Ama Edit na na Bahyleh) its "south of Guadiana" for "north" [east and west] often confused, particularly in the Maghrebi script; Crónica de los Reyes (ed. Gayangas 1854), p. 62, where probably Uclés should be read for the puzzling Richein. (C. F. Seymor)

GUADIX, the capital of a district in the northern slopes of the Sierra Nevada (Arab. As-Setir = Al-Qolzâr = Solarion Mons, Oubel al-Thallâd = "snow-mountains"), the ancient Oudis (Colonia Julia Gemella, which was however about 7 miles N.W. (Baedeker wrongly S.E.) of the modern Guadix and is distinguished as Guadix el Viejo), one of the oldest bishoprics in Spain (Sede Avulsa), with 13,000 inhabitants, on the left bank of the river of the same name which rises to the south (Rio de Guadix), with a Moors (Arab. Al-Qalân), in Arabic called Wâdâbak, more rarely Wâdâbak (and Wâdâbak) also in poetry Wâdâbak and Wâdâbak, with suffix in (from in his), wrongly explained by Mirmal as "water of life" (an explanation which is still given everywhere, e.g. Baedeker, Spain and Portugal, 1913, p. 330) and confused with biqâ = life, whereas biqâ, biqâ is of course. = Abû. In the Barris (suburb) of Santiago there are remarkable cave dwellings inhabited by gypsies. West of Guadix on the Fardes (Auchuron) is the ancient Arab bath Gueiros (from the Arabic al-Jâlamah = Juliana), celebrated for its apples, hence called Juliana al-Tâfâl (Yakht, Geogr. Wâdirân, i. 109). Smoking (Geographie, p. 84 = transl. p. 99) speaks of black aman- cowry (Abkhâ al-amín) as "water of el-Qalân," which is obtained near Guadix. The whole of the norther slopes of the Sierra Nevada around Guadix are called in Arabic Sened Wâdâbak = slope of Guadix, which still exists in the Spanish Marquesado del Zenete (cf. Jerónimo de los Marquesados), S.W. of Guadix, N.E. of the highest peaks of the Sierra Nevada and the citadel built in 1510 for Rodrigo de Mendoza, Marqués del Zenete, south of Guadix above Alhúdia (Arab. Aâlûd = hill) de Guadix in the little town of La Calahorra (arabized from the Iberian Caballaria, cf. Gibeis,
GUADIX — GUJJIARAT.

mountains in Hindostan, Jammu, Kângrej and Cindol they are still nomad herdsmen and speak a dialect of their own, known as Gujarati or Gudjîri, in which Gujar was said to be a strong resemblance to the Mowr dialect of eastern Raîjputana. This seems to show that, during the days of Gujjar power, when their headquarters were in Raîjputana, they adopted the language of that country, which has been retained by their less civilized outlying northern branch even now though isolated among speakers of Panjûli and Western Pathâr dialects. In Peshawar the name Gujar is often used as a synonym of herdsman in general. The other settled Gujjars are not numerous in the modern district of Gujût where they are an important element in the population numbering 111,000 in 1901. In Harza (settled and pastoral) they number 91,670, and are found in both districts, as well as in the whole of the North and West of Panjûli they are all Muslims. Further east Gujjars are numerous in Hâsh-yarpur and in the districts along the Jumna both in the Panjûli and the United Province, but here the majority remain Hindus. In the whole Panjûli the Gujjar number 739,622 and in the U.P. 344,000. In the whole of India they number 2,103,000 and are found in most provinces especially (in addition to those already mentioned) Raîjputana, Central India and Bombay.

It is generally believed that most of the pastoral Gujjars of the plains were forced to settle in fixed villages in Akbar's time, and that the Panjûli Gujar got its name at that time. The connection of Islam is attributed to the reign of Aurangzeb, but有种 tradition puts it down to the time of Timur, which is very improbable. In addition to the Northern and Southern Gujjars the tribe has given its name to Gujûrâvâla in the Panjûli (where however Gujjars are not numerous) and to a part of the district of Shabansk Pur named formerly called Gujjûra. The Gujar language derives its name from the Southern Gujarât province, and has no connection with the tribe.

GUJARAT (GUDHAR, GUDJ partisan) The name of a very widely spread tribe in Northern India akin to the Raîjputs and Jats and like them supposed to be descended from Scythian immigrants about the 6th century A.D. Their characteristics show them to be of the purest Indo-Aryan type without Dravidian admixture. It has been shown by V. A. Smith (Journ. Roy. Asi. Soc., 1898) by A. M. T. Jackson (Indian Antiquary, 1896, Vol. I. pt. I.) and by D. R. Bhandarkar (Epigraphi Notes and Quotations, ill.) that the Gujjars entered Northern India about 500 B.C. or soon after the White Huns. The Gujjars are first mentioned in Bâga's Harangâpur which couples them with the Hugas as enemies of Hara's father. They founded a powerful state with its capital at Burtûnâ near M. A. From the southern branch of this kingdom comes the name of the southern Gujjar, while the ruling families of the central part developed into Raîjput tribes especially the Pratihâras or Parāshas clan. But the bulk of the Gujjars are represented by the Gujjars of the present day, and their wide distribution bears witness to the former extent of their rule. The Gujjars were mainly a pastoral tribe given to war and plunder, and the same tendencies are found in many at the present day. They have lost the same reputation as steady cultivators as their near kin, the Delhi, but still they have largely adopted a settled life. In the extreme north-west of India, especially in the outer fringes of the
GUDJARAT — GUDJARAT.

where he died. His successor, Sulajjā Pirās Shāh established his authority in the country, which previously remained under Muhammadan governo-

ness, one of whom was Zafar Khān, because an inde-

pendent ruler of Gudjarat, under the title of Mu-

saddar Khān, after the central power at Dhihli had been crushed by the invasion of Timūr. This ruler was a notable general and in his time destroyed Sūmmār for a third time, and subdued Idar, Dāhār and Mandū. He also saved the Dhihit ruler from the attack of Bāhān Shirāq of Dājānpur. He was suc-

ceeded by his grand-nephew Ahmad I who founded Ahmadābād in 1443 A.D. These rulers attacked at different times Cāmpānīr, Dālūhār, Idar, Cītar and Kāch, and greatly extended their power; but towards the close of the dynasty they became embarrassed by the Turks and Portuguese.

The country was invaded in 1532—1575 by the emperor Akbar, who came in person to Ahmadābād, Barhāla, Cambūr and Sūrā, and from that time forward the Gudjaratis receded to the Musalman viceregy of the Dhihit court until the rise of the Marāṭhs and the advent of the English put an end to the Musalman domination of these parts. The revenue settlement of it was made by the famous Tūdar Māl. Among the best known viceroys were Mīrās Amta Kūkālīg, foster brother of the emperor Akbar, Mīrās Khān, afterwards dignified with the title of Khān Khānān; Prince Khurram, afterwards the emperor Shāh Shāhān, in 1618—1622; Prince Awanīghī in 1634, and his brother Dīnī Shīkhī in 1638—1652, and Murād Bakhshī in 1638—1652. In 1659—1662, Muhammad I Rashādī of Dījānpur was governor. Early in the 18th century the power of the Marāths became more and more aggressive, and the government fell more and more into confusion, Sūrā being marked once by Mālik Mahmūd and twice by Ṣāvādī. An attempt by the Musalman to recover Ahmadābād after the battle of Pānāpūr (1761 A.D.) failed, and the Gudjarāt making terms for himself, apart from the Fīgūl, the British took possession of the Gudjarat country of the mainland in 1818.

(H. C. Fanehaw.)

GUDJARATI, a modern language spoken by a million persons in Western India, and by more than one million persons from Gudjarat who have settled in other parts of the country; it has a distinct character of its own, a modification of the Dwēkāgārī, and its literature extends back to the fourteenth century. It is the chief commercial language of Western India, and, as such, acquires modifications according to the class to which it is used, while most of the Musalman of Gudjarat speak Urdu, those who are descended from Hindu converts speak Gudjarati, and the educated members of this class introduce into the vocabulary of their native language a large number of Urdu (and, through it, Arabic and Persian) words. The Musalman have employed Gudjarati but little

as a medium for literary expression, and have preferred to write either in Persian (in some recent times) in Urdu. The few works written in Gudjarati by Musalman consist mainly of translations from Arabic, Persian and Urdu, or of religious tracts and elementary books of religious instruction.

GUDJARANWALA. A district in the Punjab, 310 sq. miles in extent with a population in 1901 of 890,577 of whom 662,648 are Musalman. The district lies in a level plain between the Gānis and Ravi rivers, but does not extend to the latter river. Like Gudjarat it obtains its name from the Gudjar tribe, but there is not a large Gudjar element in the population apart from their pithis.

The district took its name from the town which was founded by Gudjaras. Ṣafja (especially Bhāta) Dīja and Sam is now the most numerous tribe. There are Buddhist remains at Ṭak which has been identified with the Ta-tūl of the Chinese pilgrimage Hwun Tseng. The ruins of Shākhkot in the south perhaps represent the Sākada of the Han king Mihrakula. Under the Mughal emperors this tract was prosperous, and some of the principal towns were founded. Emmā Ṭaṭī (properly Anmatkhālā) was founded by Muhammad Amin, and Ṣamīfā Ṭaṭī by Ṣafja, both in Akhār's reign, and Shīkhpura (properly Shīkh-purā) by the prince Shāhī Shīkhī, son of Shīkhī Dānī, who made an irrigation channel there while his grandfather Dāhār was still living. In the eighteenth century the country was nearly deserted, and was afterwards colonized by the Sikhs. Rājdī Shīkhī was born at Gudjarānwa and erected there a monument to his father Mahān Singh. The principal towns are Gudjarānwāla (pop. 29,224), and Wāsināshāh (pop. 18,096). The Canal line in the Gāni river irrigates a large tract in the Shīkhpura and Dāhār regio. Wāsināshāh is an important railway junction.

Bibliography: Local Gazetteers and statistical reports (Lahore), Gazetteer of India, Punjab Section (1900).

GUDJRĀT (Punjab). The name of a district in the Punjab in British India, lying between 33° and 35° 3' N. and 72° 17' and 74° 30' E. It contains an area of 2,451 sq. m., and a population of 7,50,458 (in 1901), of which the greater part (87 per cent.) is Musalman. It is a submontane district, lying between the Gāni River to the S.E. and the Dījānī to the N.W. The outer fringe of the Hariāda bounds it to the N.E., and the open waste of Shīkhpūr to the S.W. A great part of the waste land of Gudjrāt and Shīkhpōr is now being brought under cultivation through irrigation from the Dījānī Canal.

The district was traversed by Alexander who crossed the Hydaspes, (Vistab, Vēhār of Diājanī), near the modern town of Dījānī, and skirted the mountains crossing the Aceshāla (Gāni), near the point where it issues into the plain. It seems to have formed the central portion of the kingdom of Pānák, but afterwards formed part of the kingdom of the Mārujas and the Kūhāns, but does
not seem to have been included in the Gupta kingdom nor in that of Harsa. The prevalence of the Gūḍrāj tribe, and of the name Gūḍrāj, makes it probable that the great Gūḍrāj kingdom which had its centre at Bhīmānī in Rājasthān included this tract. But the local princes had no doubt been long separated from the central kingdom, which had its capital at Kannauj when the territory known as Gūḍrāj or corresponding roughly with the Gūḍrāj district was ceded by the king reigning at Jammū to the king of Kashmir in the 9th century. In later times this tract from its position must have been the thoroughfare of every invading army, including those of Malīmūn, Muḥammad b. Śāh Timūr, Bābur, and Nadir Shāh. Its popularity, whether Fīrūz, Rūṣūdūt or Gūḍrāj, was gradually transferred to the Muhammadan faith; the Sikh religion has never made much progress and the country remains mainly a Moslem tract. In modern times a rather less heretical sect known as Diṭṭēśhāhī has arisen in this district. They consider the founder: Diṭṭē Śhāh Arān as to be a true rival and disregard the strict doctrines and ceremonies of Islām.

Although the Sikhs did not spread their religion in Gūḍrāj they obtained possession of the country from the time of the abandonment of the Central Punjab by Ahmad Shāh Durānī. The Bhāngi Mīst occupied the country up to the Jhelum, and in 1768 they went even further, as far as Kīrān Timūr. The dominions of the Bhāngi confederacy were soon absorbed by Ranōljī Śingh. After his death Gūḍrāj continued to be part of the Sikh kingdom till 1849, when it was the scene of the most severe fighting in the second Sikh war. The battles of Sālēhīpur, Cīlānwhālī, and Gūḍrāj took place within the limits of the district, and Gūḍrāj’s victory at the latter place led to the annexation of the whole Punjab to British India.

The town of Gūḍrāj near which the battle took place is now the district headquarters and has a pop. of 19,048. It is well known for its damascened work (ōrā). Here is the shrine of Śhāh Dawān, which is celebrated for its semi-sacred mendicants, with heads artificiously narrowed, known popularly as “Śhāh Dawān’s rats.”

(M. Longworth Damer)

**Guinea,** a land on the west of West Africa. Yākmā, Maqdūm, iv. 307; mentions a land Kūnāwā (Gūnāwā), which, according to him, received its name from its inhabitants; the Gūnāwā are said to have been a Bēthī tribe who had penetrated into the land of the negroes (Sīdān) and became neighbours of Gūnāwā (q.v., li. 139° 20' E. lat. 3. It seems to follow from the fact that this usual derivation of the name of Yākmā (see above 1. 1053° 15' E. lat 10° N.) is incorrect. As far as we know, Marquart was the first to call attention to this passage in Yākmā (Romö, p. clxii).

The penetration of Islam among the people of Guinea, see the article by Weitzenmann in Die Welt des Islam, 1915; and the literature quoted there. For further details, see the article Sudan.

**Gulg** (r.), the tāve. This tree plays a great part in Oriental poetry, whence it sometimes frequently appears in the titles of Persian, Turkish, and Indian books. The relations between the rose and the tulip are already discussed above (art. “Gūr”, 1. 785). There are therefore numerous poems with the title Gūr o Sīlām, but the rose is also associated with other things, e.g., the rose in the Gründert des Taus, Fhil. II, and in Gibb, History of Oriental Poetry, here we will only mention Gūr o Sīlām: “the Rose and the Pome tree,” a subject which has been chosen mainly by writers in India. A Persian version is mentioned by Eīnī in the Gründert des Taus, ii. 321 on the versions in Hindustān and other modern Indian dialects of, for example, Gur o Sīlām. The same author publishes a complete French translation of this poem in the journal Orientalistes, vii. 69-102 on the original editions that have been published in the East, cf. Eīnī, p. 323.

**Gūl-Bābā,** a Bētāshī dārūshā, a native of Marāñān (Marāñān in Asia Minor in the village of Sīlām), took part in several wars waged by the Turks in the reigns of Sūlāmīn Mēhešim Hān, Bāyād Mīst, Sāhīn Hān and Sūlāmīn II and fell during the siege of Būdha (Clīnā) in a skirmish below the walls of the city on the 29th Kāhī 948 = 28th August 1541 (Pezhīr, i. 227). After his death he was buried on the spot where he had fallen, Sūlāmīn II declared him the patron saint of the city (Gūl-Bābā), His name was also borne by a Bētāshī monastery near the hot springs of Welbey outside the Khūrās gate, which was founded for charitable purposes by the descendants of Gūl Mūḥāmād. The tomb of the saint still stands in Būdha in the town of Tūrākent (Tūrākent), and is in form of a domed Magnum, on which is a dome covered with lead plates and wooden tiles, on the top of which is a lantern. Its exterior is covered with creeping plants. Tāla Bāsals discusses this saint in his Sīlāmī Sīhān.

**Bibliography:** Eīnīya Cēlīya, Sīhānān, vi. 225, 244 (his authority is information given him by his father). (Cl. Huart.)

**Gūl-Badān Bēgām,** daughter of the Emperor Rūhān, half-sister of Humāyūn, and aunt of Akbar. Her mother was Dīlībā Bēgām, whose real name, apparently, was Sīlīb Sūlān, and who was daughter of Sūlāmīn Mēhešim. She was the ruler of Samarhān. Gūl-Badān was born in the city of Kīhān, and in her charming Memoirs she tells us that she was eight years old when her father died, i.e. in the last week of December 1526, she must have been born in 1529 (1523). She remained in Kīhān until her father went over to conquer India, and she joined him in 1529 and she was in Agra when he died. She was there also in 1539, when Humāyūn returned, defeated, from Bengal. By this time, apparently, she had been married to Khīsī Khwāja Kīhān, a Cīlānwhī Moghad and a great-grandson of Yūnās Khīlā. Rīv states that the marriage took place in 942 (1545), but I do not know on which authority. By her husband, who was an officer of Humāyūn and of Akbar, and who was at one time governor of the Pāndībā, she had at least one son, Mūḥāmād Yār, and one daughter. When Humāyūn was driven out of India, she did not accompany him to Pāsīla, but remained in Afghānīstān with her brother Khwāja and Humāyūn, and did not see Humāyūn again till 1545. She did not leave Kīhān.
for India till after Humayun's death, arriving there in 1557, the second year of the reign of his nephew. In 1570 she went on pilgrimage to Mecca in company with her niece Salima Sultan Begum and other royal ladies. On her way back, she was shipwrecked at Aden, and did not return till 1581 or 1582 (Radhna, Love's translation, 216). In 1590 she went to Kailun in company with Akbar's mother, in order to visit the emperor. She died at Agra on 6 June 1590 (1030 I.H. the 9th of Dhu l-Hijjah). She was then 82 years of age.

The correct date of her death is given in Rumi's Catalogue, ii. 283. She was greatly respected, and Akbar himself took her upon his shoulders.

The interesting thing about Gulkhan is that she wrote her Memoirs. The work is called the Humayun-nama and has been edited and translated by Mrs. A. Beveridge for the Royal Asiatic Society (London 1902). Unfortunately, the only known MS. is that described by Rumi in his Catalogue of Persian MSS, i. 247, and it is perfect, and breaks off in the middle of a sentence. She wrote the Memoirs at the request of Akbar in order to furnish his secretaries with materials for his history. Probably this was in 1557. Her book is valuable on account of its domestic details, and gives a pleasing picture of the author, and of Court-life in Humayun's time. There are several references to Gulkhan in the third volume of the Akbarnama.

(G. B. Beveridge.)

GULBARGA, spelt Kolbarga in Marathi, was a town of little importance until 'Ali al-Din Bahman Shah made it his capital in 1347 on establishing his independence as sultan of the Bakhtun. It remained the capital of the Bakhtun until 1479, when Ahmad Shah I. with king of the Bahman dynasty. rebuilt it and transferred his court thereto. On the disruption of the Bahman kingdom in 1490, Gulkarga was in the possession of the African success, Dastur Din, but ten years later he was defeated and slain by Yezid Adil Shah and the city and province were absorbed in Belurgur and remained part of that kingdom until it was annexed to the Mogul empire by Agra under Akbar in 1566. The town is famous for its great mosque and for the shrine of Muhammad Zain Dand, a saint who flourished in the early years of the sixteenth century.

Bibliography: Historical Landmarks of the Deccan, by Major T. W. Haig.

GÜLER BOGHAZ: the Turkish name of the celebrated Pudu Pudhers of the Caucases, which have already been often described. The name is derived from a place named Gulek in the neighbourhood which, according to Cramer, has included some other adjoining villages a population of 3000. In the Armenian notices we find Ungul in the Insteades of Gulek, translated as Georgians or Caeconetians, although the latter chroniclers always speak of the Caeconetians. In the Arab chronicles we find simply Daruk or Daruk al-Shihah. For a more detailed description see the works quoted below.

GULISTAN, a place in the Caucasus (in the government of Elizavopol), famous for the palace concluded there (Gulistana) in 1813, designed by Napoleon, which was destroyed by an earthquake in 1814, according to the Russian general Koljashinoff at Aslandur and Lenkina, the treaty of Gulistana was concluded on the 12th (24th) October 1813, by which Russia came into the possession of the town of Kars, Kertch, Shaki, Shirvan, Derbent, Kuba, Baku and Tiflis. The climate of Gulistana (p. 62) had been previously occupied by the Russian general Khvosthin. The town was only visited by a Russian army at the same time Persia pledged herself not to maintain any warships in the Caspian Sea. (A. Dins.)

GULISTANA (Gulistan), also called Gulesbut, a place of the celebrated qadistic work, a mixture of prose and verse, by the Persian poet Sai'di of Shiraz, consisting of a preface, eight chapters (the lives and doings of kings, manners and customs of the dwellers, fragrances, advantages of silence, love and youth, truth and old age, importance of education and rules of conduct) and an epilogue. A number of anecdotes interspersed given information on the personal experiences of the poet. The Gulistan was completed in 656 (1258), one year after the Khamsin; it bears a dedication to the Atabeg of Fars, Abul Fadl Sai'di b. Zanz and his son Sai'di, and has appeared in numerous editions (the best European ones are by E. B. Ewbank, Hertford 1856, Johnson, Ibid., 1863, J. T. Platt, London 1874) and translations of the latter can be mentioned: Latin by G. Gen- tius (Rerum Persicarum Politicarum, 1651, 1655); French by D. Alger (1704), Gaudin (1783) and very recently, 1904, D. Geisser, Paris (with a preface by Comte de Noailles, 1913); German by A. Olearius (Persische Reisebeschreibungen, 1654-1660) and others.

Schummel (1755), R. Dorn (1827), F. Wolf (1841), K. Hoff (1846), K. H. F. Nesselmann (Berlin 1864); English: by Gladwin (Pers. text and tr.) and others, London 1860; D. Naudon (1807), J. Ross (1823), L. T. Platt (London 1773), E. B. Whithotth (Pers. text and tr. and notes, 1806), E. Arnold (1899); French: by C. L. J. D. C. Poulletier (1857); Italian by Giorgio de'Vincenzi (translation, Naples 1893); Arabic by Liqhat b. Yusef al-Makhalli (1861 = 1847); Hindustani by Mir Shoh 'Ali Asaf under the direction of John Gilchrist (Bengal 1803, Calcutta 1802).

GULKHANE, the 'house of roses', in the 'Khaneh Mardan', is the name of a part of the garden, which lie along the Sea of Marmora on the east side of the old imperial Serai at Stamboul; the name is derived from the fact that in olden days the building in which the roses were planted was furnished with a cup which the court were prepared, above there. The name is famous in history because the celebrated 'fahs' of Sultan 'Abd al-Majid, the so-called Khanshatir sharif, comprising the reforms, were publicly proclaimed there on Sunday the 14th December 1829 (30th November 1829). The description in the 'Khaneh Mardan', ii. 44 et seq.; Lattie, T'at'fik, vi. 50 et seq.; on the place itself of White, Three Years in Constantinople, i. 110, and 'Asar, Hist. d'A. O. 291 et seq.
GULPĀYĀGĀN, a town in Persia at the foot of the Zagros range in the Sīlahi valley of the Kūn. The Arab geographers give the form of the name Dārshādālāk, i.e. Gurāshādānāk. Hudžūlā Khālī, *Zājkīmān*, p. 399 still knows both forms for his Darshādānāk is probably only a misprint for Gulpāyāgān. It is only in the modern times that the place is frequently mentioned; the Arab geographers only refer to it as a station on the road from Isfahān to Hamadān. Although Gulpāyān is the capital of a Persian province, which exports opium, tobacco and cotton in addition to agricultural produce satisfying the local requirements, it gives rise to the impression of considerable decay. Among the 12,000—15,000 inhabitants are a few Jews, about 150 families.

GULŞHENI, a Turkish poet, born in Sarukhani (Asia Minor in the wilayet of Adur), a contemporary of Muhammad II, to whom he dedicated his book, led the life of a hermit. His *Mâbāz* consists of series of moralising dialogues in verse illustrated by anecdotes.

GULŞHENI (SHAHRUKH MIRĀM), a celebrated mystic of the Khalīfis, native of Adharbagh, studied in Tabrīz and migrated to Cairo after Shah Jahan had forbidden the Shāh to adhere the state religion of Persia. After the capture of the city by the Turks he was treated with the greatest respect by Sultan Sāhba I. In 1528—1529 he went to Constantinople on Sultan Sulṭān Sāhhaun's invitation, where he was received with unusual distinction. He died in 1534—1535 in Cairo. He wrote a Persian mystical poem of 40,000 distichs entitled *Mawlawi* in answer to the *Ishrāq al-Dīn Rūmī's* *Mawlawi*. Of his numerous pupils particular mention must be made of the poet Sādūl Yūnāsī Wardak; the mystic in Tabrīz is called Shāshī. An order founded by him bears his name Gulsheni, or sometimes it is also called Rūshān after the epithet of his teacher and successor Deda *Omar* Rūshān. This order is distinguished by the form of its turban of eight folds.

GUMAL, A river in Afghanistan formed by the junction of the Gomul, proper which rises near Khārānā in the Khurān, and the Kundar in the Wāk province. It then flows eastward and, after being joined by the Zhob from the south, passes through the Gomul Pass into the plains of the Indus valley. Its water is then diverted into irrigation channels, and does not reach the Indus except during high floods. The Gomul Pass is one of the principal passes from India into Afghanistan, and is more used than any other by the Pumuida or nomadic traders of the Ghilzai and other tribes.

GUMUSH KHĀNE, the "Silver house" (translated into modern Greek as 'Αγκυραντός), capital of a sandjak of the vilayet of Trapanit, and till 1015 one of the Greek Metropolis of Chalida, said to have been founded only 250 years ago and according to Nafplia (p. 345) identical with the capital which is known as a seat of government in antiquity from Seleucia (p. 10). Chalida is the Lignarian, was formerly the centre of the mining industry in the coast lands of Ptolemaic area in antiquity for its silver; in the 18th century (under Mahmut I.), *Akik* (dollars) were struck there for a time. During the war of 1828—1829 the Russians temporarily occupied the district of Gümüşkhâne; after their departure the greater part of the Greek inhabitants, who were mainly engaged in working the mines, migrated, and the mining industry declined. Recently attempts have been made, but without marked success, by European enterprises to set the flooded mines at work; argentiferous lead is exploited there. The present population is about 3000 half of which are Greeks. The rich decorations of the three Greek churches, which date from a time when the Greek population numbered 5000 families, testify to the prosperity of the earlier inhabitants (cf. *Bibl.*, p. 632, 633; Hamilton, *Researches*, p. 234 et sqq.; *Travels* 237; *Travels* 241, 248 et sqq.; *Calvet*, *La Turquie d'Asie*, p. 122, et seq.; view in *Tekker, Decr. d'Istanboul, etc.*, pl. 2.

GURĂN, A Balîc tribe located partly in the plain of the Dîra Dûkhan König, and partly in the adjacent mountains of Mund Mîr and Mount Misr, and the upland plains of Shum and Phîrîksegh. They are of mixed origin, some sections being Dîkîs of Shâh Râgjî extraction, and others being Rûdî Balîc of pure blood. The chief family belongs to one of the Dîkîs castes. The tribe was till lately very turbulent and often at war with its neighbours and with the Shîks. In 1848 they joined the Arâdis against the Shîks. The Lashāt and Gurān sections are mountainous occupying a very difficult hill country.

GURDI, Gurdi, Gurjāntā, [See Gurkha.]

GURGÂND, Arabic *Qurnuqquya*, a town in the northern part of Indo-China, on the southern of the town and the 9th of the Oxus which flows past it, cf. the article A-MâRU BĀHRA, p. 344. Although the town is first mentioned by the Arabs, it was undoubtedly founded in the pre-Muhammadan period; the oldest Chinese name for K'arnam (Wou keh) is apparently to be traced to the same Gurgând. In what condition the Arâdis found the northern part of the country is narrated in the sources dealing with the Arâdis conquest (93 = 713). In the 11th—12th century K'arnam broke up into two independent kingdoms, the land of the K'arnam Subek with 535, the ancient capital of the country, and the land of the Emir of Gurgând. According to al-Mirâd (Chronology, ed. Sachau, p. 35), the dynasty which had its residence in K'arnam only regained the royal title ('zākîya) after the Arâdis conquest; the real power (sultân) was henceforth sometimes in the hands of the sultâns of the dynasty itself, sometimes in the
hands of others, until under its last ruler both (the altär and soliyyā) were finally taken from it. This attempt is interpreted by Sa'dian (Sīnāy. In. XXII. 289), to mean that the old dynasty raised in Kirat and in the Arab satīl in Gurgān, and that the political separation of north from south was brought about by the substitution of dual rule. In the year 385 = 996 the Emir of Gurgān succeeded in conquering Kath, overthrowing the dynasty which had held it since pre-Muhammadan times, uniting Khirāzim once more into a single kingdom and transferring the title Khirāzimalī to his own house.

Gurgān is described as the second-largest town in Khirāzim by the Arab geographers of the 10th = 9th century (cf. W. Barthold, Turkestān, ii. 146 et seq; G. Le Strange, The Lands of the Eastern Caliphate, p. 447 et seq.). In contrast to the ancient city of Kath it was then a rapidly rising city of commerce and industry. After the union of the two kingdoms Kath and Gurgān, are described as the capitals of this kingdom: each enjoying equal privileges under the two rulers and governors. Kath gradually became more important than Gurgān. The period of Gurgān’s greatest prosperity coincides with the rule of Khirāzimalī of the 11th = 10th and 12th = 11th century. Vānār (ib. 54, 486; lv. 260 et seq.;) gives most of the notices, unfortunately however very scanty, of the brilliant and capital of this dynasty. From the capital there was in this period another town called “Little Gurgān”, Dāvūsī’s account of the siege and capture of the city by the Mongols in 618 = 1221 contains much information on the topography of Gurgān in the 13th = 12th century: cf. the text in Schöfer, Christenheit der Persien, ii. 136 et seq., and the comparison with other sources in W. Barthold, Turkestān, ii. 447 et seq. The city is said to have been razed to the ground on this occasion, the gates destroyed and the whole district burned by the Aḥmad-Durrā; on the contrary other sources (Dhīljanda, Tohfas-i Nāvīr, transl. Riverr, p. 281; 1000; cf. also Aḥmad-ul-Karim Bukhari, ed. Schöfer, p. 782), say that several buildings, including the tomb of Sultan Tugrak, escaped destruction. The inscription found in a minaret (cf. the picture in B. Landesdell, Through Russian Central Asia, p. 517) giving the date of erection as 401 = 1011, published by Katanow (Zapiski vost. obshch. xiv. 190, 257; ed. xiv. 190 et seq.), actually shows that some remains of pre-Mongol Gurgān have survived to the present day. On the commercial city built on another site a few years later, unknown. (W. Barthold)

Gūrkhān (G华尔), a title of the rulers of the Kār̡ K̲hādī (9th–14th century). The word is said by the Muslim authorities to mean “King of Khāns” (Aḵ̲h̲ār-ḵ̲hān). This explanation is rejected by Gregorovius (Vestenr. Turkestān, i. 398) and Gūrkhān equated to Mongol Gūrkhān = “own in law”. The founder of the kingdom of the Kār̡ K̲hādī is said by him to have adopted this title himself. He was related to the former Emperors of the house of Ličo (in North China). Documentary authority on which this view might be supported has not yet been found; nor do we know any better how for the language of the Kār̡ K̲hādī was related to Mongol or had adopted Mongol words and whether a form “Gūrkhān” for “Gūrkhān” could be explained by any phonological peculiarities of this language. Indeed the Persian accounts of the Kār̡ K̲hādī show that the Chinese word fūn̡ was used for son-in-law at the Gūrkhāns’ court (cf. Delbrück’s note to his edition of Mirkhalif’s “The Life of the Sultans of the Kār̡ K̲hādī”, p. 124). Gūrkhān’s rival Dāmān (cf. the article Dāmān-Gūrkhān, i. 557 et seq.) adopted the title “Gūrkhān” in the early years of the 13th century, apparently in imitation of the titles of the Kār̡ K̲hādī; the title does not seem to be found later. (W. Barthold)

Gwalior, (G华尔), the capital of a principality (State of Central India), ruled by the Maharāja Sahām, is chiefly famous for its fort. situated on a great rock of Vindhyā sandstone. This rock rises 400 feet above the plain, and stretches two miles from north to south, and is half a mile broad at its widest point. It was threatened by Sultan Mahmud of Ghazni in 1024, and was captured in 1196 by Sultan Shāh al-Dīn Ghūrī, by his Dōhī deputy, Ḵẖān al-Dīn Altāb, from the Tabarids, who had assisted the Kākhabādā Kādījīn. It was recovered by the Padshāh 14 years later, but was reconquered by the emperor Humāyūn in 1532 after a long siege, which ended in the immolation of the women of the defenders at the Dīnārī przeł. On the north end of the fort. After capturing the fort, the empire destroyed the famous Suryā Dīva temple, which stood near the Surānī Kānīt at the north of the tableland. During the confusion caused by the invasion of the empire Tabūrī, the place was seized by the Tābūrī Kādījīn, who held it till 1518, in spite of several sieges by Hāmīn Shāh of Mūrīn, Hāmīn Shāh Shārī of Ajmer and the Lāhūr Kīngs of Dīlī. During this century and a quarter the place rose to high renown, especially under Rādž Mān Singh, who built the famous Mān Mandir (palace), and the principal gate leading into the fort. When the fort surrendered to Bhāṭhīn Lēsī, he carried off from it to Dīlī the famous bronze bull, which afterwards was transferred to Fīṭhpīr Sīhī, and there broken up. The emperor Bābār visited Gwalior in 1536. In 1542 it fell to the Padshāh Sultan Shāh Shāh Sīr, and under him and his son Sultan Shāh Shāh, who died there in 1553, it was practically the capital of India. It was surrendered to Aḥmad soon after his accession, and the site of the Muslim Izmāl Ghāsīl near the foot of the fort is, with the mausoleum of the emperor Humāyūn at Dīlī, one of the earliest important works of Mughal architecture in India. Under the Mughal empress the fort became a state prison, and many inconvenient members of the royal family died in the New Carkīs near the northwest gate of the fort, known as the Dīnārī przeł. The Mughal governor Mūsamād Khān built a small mosque by the Gāntī Gate, and deepened the Nūr Sīgār Tank; he also destroyed the shrine of the hermit Gwallā, from whom the rock is said to derive its name. The Dīmāl Māndārī, a fine-vault, was begun about 1663 and finished 6 years later. The Dīnārī przeł. Mandārī (about 390 by 280 ft.) was built in the reign of the fourth Mughal emperor, north of the palace of Mān Singh, and upon the site of that of the 5th emperor the Shālikhānī przeł. Mandārī (520 x 170 ft.) stands north again of the former on the spot where the palace of the emperor Humāyūn once stood. After the defeat of the emperor Aḥmad
Shish at the battle of Arbela (176 BCE) the forces fell into the hands, first of the Lus and afterwards of the Marathas, captured by the British in 1786, and handed over to the chiefs of Ghud. It was again taken by the Marathas in 1791. After various vicissitudes, it was occupied by British troops from 1857 till 1866, since when it has been in the hands of the Maharajah Nathoba.

H.

HABA, the 26th letter of the Arab alphabet with the numerical value 31, is a syllabic characteristic of the Semitic language, and was employed by the ancients to denote the sound of the letter it. In modern Arabic, it is commonly pronounced as a value of the letter in, but in Hebrew, it has survived in the form of the letter. As a final termination (la in Arabic) with the pronunciations /a/ and /a/ the character receives the two sounds of the letter /a/. In reality, the written form is here based on the ak pronunciation of the final termination of the name, while the pronunciation of the name in Hebrew has survived in combination with a vowel following. The transition from the to /a/ in Arabic did not, however, take place at the same time throughout the whole of the Arabic language wherever spoken, but appeared earlier in the west, where the pronunciation was authoritative for the orthography. In the east (Nolduz, Relig. u. Sem. Sprachwissensch., p. 12), it was observed that the Persians have adopted Arab words with the pronunciation /a/. Arabic itself this /a/ was afterwards dropped everywhere, so that the spelling with /a/ has now only an historical interest.

HABA, the 6th letter of the Arab alphabet with the numerical value 31, is a syllabic characteristic of the Semitic language, approximately corresponding to the sound /a/ in [a-v, t, 217] as it is pronounced in [a], where it is modified in its pronunciation, e.g., in Egyptian Arabism, by assimilation (soudis, 14; from soudis) and in Latin throughout when final (soudis, from soudis). Our knowledge of the nature of this sound is no more complete than that of its related /a/. A discussion of the various views may be found in L. Meissner, Etudes Phonologiques sur le dialecte arabe ancien de la Mésopotamie (1921), p. 41 et seq. In Sta. Africa, the sound approaches to /a/. The Persians and Turks also pronounce /a/ for /a/ in words borrowed from the Arab. -- In various African names, e.g., that of the Ham people, the spelling with /a/ (in Arabic) is simply an abbreviation. It is purely (H. Bauer).

HABAT, the name in South Arabia for a sacred area, which is under the protection of a saint, who is usually buried there, and is a place of refuge. No one who seeks asylum on this holy ground may be slain or attacked there. The word habat in South Arabia means "to hold back," or "to restrain." The most important habat in South Arabia is that of Dibbel Kada, which lies to the south of the village of Lahya on the road to Hadib, in the land of the Wady (v. f). Four saints (fooj) of the tribe of Ell Marb, whom the Lahya fajj, are buried there. This habat is therefore also known as habat al-Ahrâb. It is uninhabited, and the surrounding tribes only allow their cattle to pasture there after the rains. Besides places of refuge which are called habat, there are others which bear the name hajj (v. f).
and the meteorological test books; e.g., F. Nolteck, Mises, Marx, and Greifelbruch; Kelly's Universal Cambium, et al. (E. V. Zambell.)

HABBAN (Arab.), a town in South Arabia, the capital of the territory of the Upper Wabish [q.v.], situated in the sand of the same name. Aml has about 4000 inhabitants, but this figure seems to be too high. The Salta of the Wabish dwells here in the Castle of Musa. Hikir, which is built on a small isolated hill in the midst of the city and surrounded by a wall. The town itself has no walls and only two watchtowers at each end of it. The houses are strongly built like little fortresses and, as usual in the land of the Wabish, often five stories high. In the houses of the better families the second story is used as a lookout (reception-room). Besides one large mosque, Hikir has eight smaller ones and an important library. The town is divided into four quarters: 1. the quarter of the Hadruri and Kutya; 2. that of the Jaws; 3. that of the family of the Fa'aits, Mahmed b. Hassan al-Shafi'i (of the prominent family of Mahmed b. Tamer in al-Jawf and al-Rawla), and 4. that of the carpenters who have a coat and are descended from the ancient great carpenter family of al-Wadl, who came originally from Joshan and are now scattered throughout almost all South Arabia. The Jews (about 200 in number) are mostly goldsmiths and, as usual in South Arabia, are subject to many restrictions; they may not carry arms, nor acquire land and have to pay a kind of poll-tax (juffa) to the Salta. Miles saw many inscriptions, which he describes as Hebrew near Hikir in the little-well of Shogha.

HABESH, see ABBASINIA, P. 119 et seq.

HABIB a. MAMARIA, a Mecene of the class of Banu Fista, one of the Calif's Mutawwiya's greatest generals. He is generally recognised as a companion of the Prophet except by the Middle School, who are infatuated by their anti-Umayyad prejudices. The chronology confirms the correctness of this view. For, as he must have been about 15 years old at Mahomed's death, there is no reason to suppose that he was not personally acquainted with him. He very early took part in the first fighting in Syria and vigorously championed the cause of the Umayyads. Under the governorship and later the Califate of Caliph he be distinguished himself by his numerous incursions into Asia Minor and particularly Armenia. Tradition ascribes to him the conquest of the latter country. He is also known as Habib al-Nam, Habib of Rumayn, on account of his frequent raids into Byzantine territory. He was also a faqih al-wurwaa i.e. he possessed the privilege of having all his prayers and requests answered by God. He must have died at the age of about 55 early in the reign of the Calif Mutawwiya; at least he seems to have played no part in history after this date. (H. Lami.)

HABIB AL-NAFIJIB (the carpenter), the saint of Antiochia, after whom Mount Silpius is called by the Arabs, because a large visitation grave, alleged to be his, is said to be there (cf. above l. 360). This Muslim saint is no other than the Agapetus mentioned in Acts 17. 30 and xxii. 20 et al., the legend, which is related in Sirra xxxvi., 12 et seq., although his name is not mentioned, is consequently of Christian origin. When Allah, as is there related, sent two apostles (according to the expositors, Salarimu and Vittoro) and afterwards a third (Salammu) to convert the inhabitants and the latter threatened them with death if they did not give up preaching, a man came running from the most distant part of the town, who warned his fellow-citizens to believe the messenger and proclaimed himself a believer. The wrath of the people was thereupon turned against him and, when they were putting him to death, they cried in sobbing tones to him: "Enter thou into paradise", but he rejected that he was worthy of the higher honour of martyrdom. Allah thereupon put all the blasphemers to death and without sending an army against them: a single cry (a voice from heaven) was heard and all were dealt.

That man, say the expositors of the Koran, was Habib al-Salafijib, a carpenter who made idols but had become a convert, when he saw the miracles performed by the apostles. As it appears from the Koranic account as if Habib had prised himself in the sight both before and after he had suffered it, we find in al-Dinmuji (ed. Mahren, p. 206) the fantastic story, that Habib took his decapitated head in his left hand and placed it in his right and walked for three days and nights through the city in this fashion, while the head cried with a loud voice out the verses mentioned in the Koran.

Bibliography: The commentaries on Koran, Sirra xxxvi.; also the bibliography to the article ANTIFOYA.

HABIL and KABIL, the names given by Muhammad to the sons of Adam, mentioned, but not by name, in the Koran, who brought an offering to God. Jacobus thus his sacrificer was rejected the one slew his brother. A raven sent by God, which scratched upon the ground, showed him how he could dispose of the body (Sirra, v. 30-34). As this account in the Koran, following the Bible narrative, appears bold and uninteresting, Koranic exegetes, like the Biblical, endeavoured to discover the psychological motives underlying the affair. According to it, the sons of Adam were all born with two sisters; Kabil's (also sometimes called Kain, Kain and Kainu) was called Alphil, a godless; his, who was two years younger, Lapho (the name is given in varying forms). According to one tradition which is traced among scholars 'Kabil al-Afnan' (presumably the book of Omariya is meant), Kabil first saw the light in Paradise and Kabil was born on earth; just as also (Pesh k. E. Editions, 14) Adam demanded that each should marry the other's twin sister; but Kabil wished to marry his own sister who was the fairer. It was to be decided by a sacrifice to which of the two the fairer sister was to go (also Johannes, 65, Gum. F., 22 etc.). According to another tradition, in which the marriage with the sister was abhorrent, Kabil was to have married a "holy" wife, while Kabil had to marry a woman of the Dinas, with which he did not agree. Enraged at the rejection of his sacrifice
(according to Tabari, i. 244 et seq., he had sacrificed fruits of the field of little value, while Kālidād slew his favorite sheep). Kālidād slew his twenty-year old brother, according to one account, following the example of Ibn, who appeared with a hatchet in his hand and struck off its head. (A similar story is given in Sanhābīn, 30). As Ḥathī was the first man that had died, the murderer did not know what to do with the corpse, he therefore carried it for a year on his back in a sack to protect him from the birds and wild beasts. He then noticed a raven fighting with another until his opponent was struck by the bird and he scrutinizing the earth over him. Kālidād did the same with his brother (similarly in Fīrāq al-Rashīd, 22), while according to Ibn, R. 22, the birds and beasts buried Abīl. When God said to him: "The voice of thy brother's blood crieth unto Me from the ground. Wherefore hast thou slain him?" Cain replied: "Where is his blood, if I have slain him?" thereupon God forbade the earth ever again to drink human blood.

**ḤABUS (H.), properly havas, a thin endowment, synonymous with uṣṣ (q. v.).**

**ḤADATH (H.), ritual impurity.** The law recognizes two conditions of ritual impurity which are distinguished from one another: the "major" and "minor" Ḥadath. A Muslim in a condition of Ḥadath can only regain his ritual purity by (jāhārā) the prescribed ritual ablutions, (jāhār al-muḥnā, respectively), cf. Dirāka, Sibā'ī, et al. Not only is a ḥabāth (a person in a condition of Ḥadath) forbidden to perform the jāhār, but also he is not allowed to make the jāhār around the Ka'ba nor to touch a copy of the Koran; further the jāhār and ḥabāth are legally invalid. The same regulations apply to a case of major Ḥadath; but there are a few additional rules applicable to the latter, cf. Dirāka, l. 1019.

**ṬIV. I. (H.), also ḤADATH AL-ḤARĪM, a border fortress often mentioned in the war between the Arabs and the Byzantines. The construction of al-Ḥadath, the "Almara of the Greeks," has not yet been ascertained, because the town (see below) has been utterly deserted for over six centuries, but there can be no doubt that it was to be located not far from Jāmin on the Agile. It is the Almara that Yāqūt (v. 959) means by the Nasir al-Ḥadath, which according to him rises in the Lake of al-Ḥadath and flows into the Diqnahr. Ibn Seṛaj's statement that the river flows through several small lakes, which are now called Ghalāl, Goli, Arabī Goli and Bash Goli, is more accurate, although, as Le Strange points out, this is mere fancy, a word which he that the river is a tributary of the Nahr al-Kabīrī (Makb). In 829/80, the Lūn, once famous for its trade (see J. E. Rehinde, Asia Minor, p. 278, Adana is wrongly placed a short distance to the north of Germanicka (Mar'āb). The fortress was captured by a body of Arab troops under Ḥabbā b. Ghāmī as early as the reign of 'Omar I; in 622 (672) it was destroyed by the Byzantines but rebuilt in the same year by command of the Caliph 'Abd al-Malik. It was then called al-Muṣlam.
According to circumstances, cf. Korâ, v. 37-38.—Although some of the above mentioned branches of the law are considered very serious, the criminal can nevertheless hope for the mercy of God, because he has offended against Him. If he denies the deed and refuses the accusations brought against him, the judges are recommended not to press him further, but to give him every possible opportunity to clear himself; for further details see Jayabh, Handbuch der türkischen Gesetze.

In philosophy hadîd means definition; the qualities that differentiate an object are called tarîfât. The definition is perfect when it gives the name and the differentia specifica of the object, e.g. man is an animal rational. There is a kind of definition, which places the object to be defined between two limits so that it is the end of one and the beginning of the other.

Hadîd is also the name given to the definitions which stand at the beginning of various sciences, e.g. at the beginning of Euclid's geometry; the postulates are called masnaâdatî (Coxâre Lexicon, p. 6, Euclidis Elementa, ed. Bessôn and Hölscher, 1805).

In astronomy hadîd means certain areas under each sign of the zodiac, which are each allotted to one of the five planets.

Among the mystics hadîd and particularly the participle masnaâdatî means the finiteness of creatures in contrast to the infiniteness of God; man is limited and bounded (masnaâdatî) in space and time.

(H. Carrâ de Vaux)

Hadêndoa, a Hamitic tribe in N.E. Africa belonging to the Beleq (q.v.) group and closely allied to the Bahrân, Balansa and Baul tribes. They live in the country between the river Athara and the Red Sea and extend towards the South as far as the borders of Egypt and Abyssinia. Politically nearly the whole tribe belongs to the Red Sea and Kassala provinces of the Anglo-Egyptian Sudan.

They are a nomadic or semi-nomadic tribe of ruminant owners and caravan-guides; in their general characteristics and customs they do not differ materially from the rest of the Beleq tribes with whom they also share the use of the Beleqye language. Their claim to Arab descent must be rejected, but there is little doubt that they have at one time received considerable admixture of Arab blood. Although they have been Muslime for centuries their Islam is of the primitive African type and often only skin-deep. At the same time there are scholars among them who have acquired a certain amount of Islamic learning through intercourse with Egypt and more especially the Hijaz.

Historically the tribe has never played an independent part until the most recent times. Although the Ottoman Turks have held Sukin since the time of Sultan Selimi I, they seem to have exercised little authority in the interior and have left no traces of their influence. During the revolt of Muhammad Aymad, the Mahdi of the Sudan, the Hadendos took a prominent part in the fighting against the British and Egyptian troops and won a reputation for reckless courage and fanaticism. Their adherence to Mahdism was however less inspired by religious motives than by the personal influence of their well-known leader Osmân Dîgna (Otlâmân Dîgna), a man of semi-Turkish descent. Since the occupation of Sukin and Tukar by the Anglo-Egyptian troops and more especially since the defeat and death of the Khalif, the Hadendos have gradually become reconciled to the new regime, under which their material prosperity has increased considerably.

Hadhîf, the act of cutting off, z, g., the tail of a beast, hair, or part of a garment. Then, 1. as a grammatical term, the elision especially of a weak letter (tarif al-štîlî), e.g. yakban from yakhaba, fare from yarhama, yarm from yarba; 2. the omission of part of a sentence; e.g. the subject or predicate, protasis or apodosis (Baidâr on Kor. 14, 81 and passim); 3. in prosody, the cutting off of a final closed syllable (yakhab al-štîlî); so that yâlimma becomes yâlim, and so on.

(T. H. Winâl)

Al-Hadî (A.), the guide, one of the names of God, thrice a favourite epithet of 8âfî rulers, e.g. of the Imams of Sâra and Sâda; it was first adopted by the 'Abbâsid Mâsûd. The full expression is al-Hadî bî 'Râqâ, the guide to truth (God).

Hâdî Sâzawârî (Hâdî Mîlî), son of Hâdî Mâhdi, a Persian philosopher and poet, born in 1212 (1797-1798). He was a pupil of Hâdî Mîlî Husnîn and wrote a treatise on logic when only twelve years old. He then went with his teacher to Mecca and devoted himself for five years there to study and the practice of asceticism. He spent the next seven years in Iphâh studying under Mîlî 'Ali Nîrî, then made the pilgrimage to Mecca and returned via Kirmân to settle in Sâzawârî, where his reputation soon assembled a host of students around him. He delivered two lectures a day, of two hours each. In 1305 (1887) he died suddenly while engaged in teaching. The grand vizier had a mausoleum built over his grave before the gates of Mecca, which is much visited by pilgrims. According to his teaching, the world is an emanation, manifestation or projection of God; it is a mirror in which the Deity regards himself, the source on which he attributes unfold their activities. It is a brilliant ray emanating from the source of light. The further these emanations go from their source, the thinker and courser they become until they finally form the material world. This he calls 'hâmîn al-nâr' (descending arc); the human soul is able to re-assimilate this ladder again in its own different steps of the hâmîn al-nâr (ascending arc). He adopted a system of metaphysics (tâmînî), but only within the world of the uniform (Fârâbî, mîlîshî, in which every one of the human form is suited to his qualities. It was mainly the teaching of Mîlî Husnîn that he continued and who was shown his views in his book Awsâkar al-Mîlî; he took the pen-name (kasâhî) of Amir and under

**HADID**. (A. T. & L.) God sent iron down to earth for the detriment and advantage of man, for weapons and tools are alike made from it. According to the belief of the Sabians, it is allotted to Mars. It is the hardest and strongest of all metals and the most capable of resisting the effects of fire; but it is the quickest to rust. It is corroded by acids; for example, with the fresh fruit of a pomegranate it forms a black fluid, with vinegar a red fluid, and with salt a yellow. Collyrium (al-knâd) burns it and arsenic makes it smooth and white. Karzini distinguishes three kinds of iron, natural iron, al-khâdher — which can only mean dark iron ore such as micaeous ore, magnetic isomomote etc. — and that which is made artificially, which is of two kinds, the weak (paras, nânâdhum) or female, i.e. malleable iron and hard or male i.e. steel (fâjilâh). According to al-Kindi, however, the kind of iron called al-knâd is nearer to both kinds iron; both kinds are called natural iron, while steel on the other hand is not natural. These contradictory statements cannot be reconciled here. Chinese and Indian iron are particularly esteemed. The applications of iron and iron-ware in medicine and magic are fairly numerous and varied.

**HADID** (A.), the lowest part, in astronomy, the perigee of the moon, sun, or planet; its opposite, the apogee, or distance from the earth is usually expressed by the Persian word: awuj (q.v., l. 517) which corresponds to the Sanskrit var (height, highest point). These are the points in the eccentric orbit, i.e. the orbit in which the sun, or in this case of the moon and planets the centre of the epicycle, move, which are least or most distant from the earth, the term of Apis. In the later astronomers, al-Darghânâ, al-Daghâmshâ, several varieties of hadid and awuj are distinguished.

**Bibliography:** al-Karwini, *Cosmographie* (ed. Wustenfeld), l. 17, 227; Masânš al-Uthmân (ed. von Wulstor), p. 241; *Dictionary of the Technical Terms*, etc. (ed. Spengler etc.), s.v. Hadid and Awuj. (H. Sutter.)

**AL-HADIDA** (Ar.) A small independent territory in South Arabia, north of the Wahilât. It is one of the most interesting and most fertile territories in South Arabia. The products of the soil, which is artificially irrigated by canals from the Wali 'Alâdâ, are dates (lulbul, produced in a kind of a date, an forest and 'ababbâ (miller). Al-Hadida is inhabited by the tribe al-Hâdâs, which claims descent from the Hilî (q.v.). On the migration of the Hilî they settled in South Arabia, whence their name Kâthira. They number about 1000 fighting men and are ruled by an 'Aqil whose residence is in the little town of al-Lâhâlah. In case of war they serve under the banner of the Sultan of the Upper Awâlik (q.v.).* A. D. 1541 in Najâh. *Biograph. H. v. Malzahn, Reis nach Südbirutien*, p. 248; *Conte de de Landberg*, *Arab*, IV, p. 57-60. (J. Schiller.)

**AL-HADIRI** (al-Hudairi), a surname of the pre-Islamic poet Ruta b. Awa of the tribe of Thâlab (al-'Ijâb). He is said to have flourished about A.D. 6th. Hâdâr b. Thâlûb knew some of its poems. He exchanged lampons (hâdâ) on several occasions with the poet Zabbâh b. Sâliyar al-Fârâj, who on one occasion had treated his friend contemptuously. His epithet is said to be taken from the verse of the latter in which his form was compared with that of a frog. It is also related of him that he took part in a battle between his tribe and the R. 'Anbâ.

His poems, that have survived, are very few in number; he probably composed very little altogether: it is said that he was majmîl. One of his gâsuids has been incorporated in the Al-Tabâ'î-al-Sâfî (ed. Al-Abû Bakr b. Sinan Daghânshâ al-Madânî, Cairo, 1244, 11, 16-12 = Engelmann's edition, c. 5 et seq.). His *Dîwân* was collected and annotated by the philologist Abû ʿAbd Allah Muhammad b. al-Abbas al-Yazîd (died 310 A.H.).

**Bibliography:** Al-Abî, iii, 81-84; W. H. Engelmann, *Specimen litterarum exstantium al-Hudiri Dâwanus*, Leiden Diss., 1858; Reusselmann, *Stud. u. u. arab. Et.,* I, 26. (C. van Amersfoord.)

**HADITH** (A.). Tradition. The word *hadith* means primarily a communication or narrative in general whether religious or profane, thus it has the particular meaning of a record of actions or sayings of the Prophet and his companions. In the latter sense the whole body of the sacred Tradition of the Muhammadans is called the *Hadith* and its science "ilm al-Hadith.

I. Subject-Matter and Character of Hadith. Even among the heathen Arabs (ver L. Goldscheider, *Muhammad*, St. 1. 41, note 8) it was considered a virtue to follow the *sunna* of one's forefathers (*sunna* is properly the way one is accustomed to go, i.e. use and wont; see tradition). But in Islam the *sunna* could no longer consist in following the customs and usages of heathen ancestors. The Muslim community had to build up a new *sunna*. Every believer had now to take the conduct of the Prophet and his companions as a model for himself in all the affairs of life and every endeavour was made to preserve information regarding it.

At first the *Sahîh* (i.e. people who had lived in the society of the Prophet) were the best authority for a knowledge of the *sunna* of Muhammad. They had themselves listened to the Prophet and witnessed his actions with their own eyes. Later the Muslims had to be content with the communications of the *Tabâ’î* (i.e. "successors", people of the first generation after Muhammad, who had received their information from the *Sahîh* and then, in following generations, with the accounts of the so-called "successors of the successors" (*Tabâ’î al-Tabâ’î*) i.e. people of the second generation after Muhammad, who had mixed with the successors, and so on.
The traditions retained the form of personal statements for several generations; every perfect hadith (also known as the "support") derives, i.e., for the trustworthy of the statement. He who communicates the tradition (A) says, "I have heard from B (or 'A has told me') in the authority of C, and so on, wherever he placed the chain of transmission should follow in ascending order with A, the last authority, and following with the original authority. The second part is the wording or text, the real substance of the report. For details, see Goldscheider, op. cit., li, 6–8.

After Muhammad's death, the original religious ideas and institutions which had prevailed in the earlier community could not remain permanently unaltered. A new period of development set in. The hadith began systematically to develop the doctrine of duties and dogmas in accordance with the new conditions. After the great conquests of Islam, new ideas and institutions were borrowed from peoples conquered, and not only Christianity and Judaism, but Hellenism, Zoroastrianism and Buddhism also influenced the life and thought of the Muslims of the day in many respects.

Nevertheless, the principle was steadfastly adhered to, that in Islam only the word of the Prophet and the original Muslim community could be a rule of conduct for believers. This at necessity soon led to deliberate forgery of Tradition. The transmitters brought forth all kinds and actions of the Prophet into agreement with their views of the later period. Thus enormous numbers of traditions were put into circulation, in which Muhammad was made to say or do something, which was at that time considered the proper view. Christian texts, sayings from the Apostles and the Apocrypha, Jewish views, doctrines of Greek philosophers, etc. which had found favour in certain Musulm circles also appear in the Hadith simply as sayings of Muhammad (Goldscheider, Neutestamentliche Elemente in der Traditionsliteratur des Islam in Origenes Christianismus, 1902, p. 390 et seq.). No scruples were felt in making the Prophet expand in these respects only briefly outlined in the Koran, or proclaiming certain doctrines and dogmas. A very large portion of these sayings were in the Prophet deals with the Arkh (legal provisions), religious obligations, hadith and jarras (i.e., what is "allowed" and "forbidden"), ritual purity, laws regarding food, criminal and civil law and also with questions of good manners. Further they deal with dogmas, and, at the last judgment, Hell and Paradise, angels, creation, revelation, the prophetic tenets, and in a word with everything that concerns the relations between God and man; many traditions also contain edifying sayings and moral teachings in the name of the Prophet.

In course of time the records of Muhammad's words and deeds increased more and more in number and copiousness. In the early centuries of Muhammad's death there reigned great diversity, and much in the Muslim community on many questions the most diverse views. Each party therefore was desirous to support the views as far as possible on sayings and decisions of the Prophet. He who could base his view on there was certainly right and thus arose the immense number of contradictory traditions on the authority of the Prophet. In the great partition struggles arose, both sides used to make an appeal to Muhammad (Goldscheider, Muhammed-Sohn. ii, 83 et seq.). Thus for example the Prophet was said to have proclaimed the foundation of their dominion in the Al-Hashida. In general not only the course of later political events and religious movements but also the new social conditions, that was first arisen out of the great conquests (the increasing luxury), were made to have been prophesied in apocalyptic-sapiential form to justify them in the eyes of the community. A special branch of these prophetic traditions is formed by the sayings ascribed to Muhammad regarding the results of various victories and battles in the lands which were only at a later period to be conquered by the Muslims.

The majority of traditions are now regarded as especially reliable historical accounts of the events of the prophet. On the contrary, they express opinions which have come to be held in later centuries, especially in the early centuries after Muhammad's death and were only then ascribed to the Prophet. Scholasticism is deeply indebted (e.g., Goldscheider see his Muhammed-Sohn. l, 1890 and other works, and C. Schmincke, Frommern [e. g., among others works his 'schriften Deutscher Geschichte und der Zeitgeschichte' (Berlin, 1899) for having first clearly demonstrated the true character and historical importance of the Hadith in this respect.

Although the invention and wanton dissemination of false traditions was condemned by Muslims, revisiting elements were recognized in certain circumstances, particularly when it was a question of edifying sayings and moral teachings in the name of the Prophet. For details see Goldscheider, op. cit., ii, 151 et seq., 253 et seq., 319–320, do. In the Zeitung der Deutsch. Mission. Geschichts. Inst., 1856, 1857, 1862 et seq., were soon overcome. In some cases it is even believed that the actual "word of God" is to be found in the Hadith as well as in the Koran. Such traditions, usually beginning with the words "God said," are designated by the collaborative and the "divine" (by) by Muslim scholars in opposition to the ordinary and the "human" (by) of the Prophet. A list of such holy traditions is given in the Leiden MS. 1274 (Catal. C. E. C., p. 98).

II. Muslim criticism of Tradition. According to the Muslim view, a tradition can only be considered credible when its form as a spoken word is transmitted by a series of reliable authorities. The critical investigation of the Prophet's words has caused the Muslim scholars to undertake thorough researches. They endeavored not only to ascertain the names and circumstances of the authorities (ridâj) in order to investigate when and where they lived, and which of them had been personally acquainted with the other, but also to test their reliability, truthfulness and accuracy in transmitting the texts, to
make certain which of them were "reliable" (sahih). This criticism of the authorities was called al-
ridāf and al-talādīl (wounding and authentication).

(Goldiher, Mukamou. Stid. ii. 145 ff. 149). The
so-called "knowledge of the men (marifat al-
ridāf) was considered indispensable for every
student of Hadith; all the commentaries on the
collections of Tradition therefore contain more or
less copious details concerning the authorities.
Special works are also devoted to this subject,
among them many of the so-called Tabaqat works,
which biographies arranged in "classes" of various
scholars, transmitters of Tradition and other per-
sons. Cf. O. Loth, Ueber die wichtigsten Werke
über die Tabaqat in der Österr. Mittheil., Deutsch.
Morgenl. Gesellschaft, xxii. 593-614), for example the
famous "class book" of Ibn Sa'd (died 250 = 864)
and the Tabaqat al-Nabawi of al-Dhahabi (died
748 = 1347). This class also includes the books on
those wild in transmitting, e.g. Nasir's
Kithā al-Durūs (Goldiher, ii. 141 et seq.) and
the biographies of the Sahib, e.g. al-Iṣba' in
awma' al-Sahabah of Ibn Hadjar (died 832 = 1428)
and 1/2 al-Iṣba' in Marifat al-Sahibah of Ibn
al-Athir (died 630 = 1223).

Now opinions on the reliability of the authorities
might differ very considerably. The same person,
who was commonly considered trustworthy might be implicitly trusted
in the view of one party, was sometimes considered
by others exceedingly "weak" in transmission or
even a liar. Originally even the authority of
many highly respected contemporaries of Muham-
mad was not generally recognized; for example
the truthfulness of Abī Ḥurayra was hotly disputed by
very many. The verdict usually differed with the
standpoint of the party, and this often gave rise
to bitter quarrels. We must, however, remember in
this connection that the substance of the trans-
mitted statements was really always the main thing.
If the truthfulness of the authorities was disputed,
the same was rarely almost always the basis of their
substance that aroused opposition. The ultimate
decision then rested not on the reputation of the
authorities but rather on the substance of the
accounts transmitted by them.

But at a later period, after the ritual, dogma and
the most important political and social in-
stitutions had taken definite shape in the second
and third centuries, there arose a certain "commons
opinion" regarding the reliability of most trans-
smitters of Tradition and the value of their state-
ments. All the main principles of doctrine had
already been established in the writings of MAIKE-
un, al-S̄ā'īna, and the further schools, regarded
as authoritative in different circles, and mainly on
the authority of traditional sayings of Muhammad.
In the long run no one dared to doubt the truth
of these traditions; nor was it any longer possible
to regard men like Abī Ḥurayra, who had put
these accounts into circulation, as liars. Even tradi-
tions which contained the most obvious an-
hedrions were generally considered reliable. Only
such traditions were rejected as could not be brought
into agreement with what had been long regarded
by the majority as well established. But on the
whole, the inclination was to give credence to
such traditions as best suited those who were possible
to explain them in a consistent spirit. The old
quarrel had been in course of time lost all prac-
tical interest for the younger generations and it
was found that the majority of the traditions con-
cluded with them, although sharply opposed to
one another, could very often be reconciled to
one another by skilful interpretation of the con-
tents. The rejection of a tradition thus came to
be considered an extreme measure, only to be
resorted to in desperation (cf. Smuck Hargrove,
"ijtihād"); the many contradictory traditions on
the same subject, which have been adopted side by
side as reliable in the great collections of Tradition
has in fact produced evidence to the historian of
the internal development of Islam. The traditions
were not, however, all considered of equal
value by Muslim scholars, but divided into cate-
gories distinguished by definite technical terms
according to the completeness of their "trans-',
the reliability of their transmitters etc.

III. The classification of Tradition.

a. In the first place the three following categories are distinguished: 1. sahih (sound); this name is
given to the utterly flawless tradition in whose
transmission there is no "tahsil" (weakness) and whose
reliability does not contradict any generally prevalent
belief. 2. If a tradition is not absolutely flawless,
e.g. because its transmission is not quite complete,
or because there is no perfect agreement regarding the
reliability of the authorities, it is called mutālik ("weak",
"incomplete", "abandoned"); 3. On the other hand every
tradition is considered as reliable, against which
doubts can be raised, e.g. by reason of its
cost. Usually one or more of its trans-
mitters is considered unreliable or not quite or-
thodox.

Further it may happen that the value of a
statement is uncertain because some remarks by a
transmitter have been interpolated among the words
of the Prophet and it is impossible accurately to
separate these two components of the text; such
a tradition is called muṣnūf. — If a tradition
is transmitted by only one informant, whose author-
ity besides is considered weak, it is called mutālik
("invented", "abandoned", "no longer considered"). — If a tradition is considered absolutely false, it is called
mansūf ("invented").

b. All traditions do not deal with sayings or
doings of the Prophet; we also find in the Hadith
information regarding the Sahib's and Successors.
In this connection a distinction is made between:
1. maṣnūf: a tradition containing a statement
about the Prophet; 2. maṣnūf: a tradition that
relates only to sayings or doings of the Sahib's;
3. maṣnūf: a tradition which does not at all go
further back than the first generation after
Muhammad and deals only with sayings or doings of the Tabbān.

c. The following distinctions are made according to the completeness of the "imāma". If a traditional
can be traced through an unbroken chain of trust-
worthy authorities to a companion of the Prophet,
it is usually called muṣnūf ("supported"). If it
also contains special observations regarding all
the authorities (e.g. if it is expressly mentioned
that all the authorities were of this or that class
as they handed down the tradition or that they all
gave one another the hand), the tradition is called
maṣnūf in the first case maṣnūf al-hadīf (in the
second maṣnūf al-tafl, etc.). Cf. W. Ahlward, Katal. der Arab. HSS. der Kgl. Bibliothek zu
Berlin, i. 207-232.

If the "imāma", although complete, is comparatively
very short because the last authority only received
the statement from the original authority through
the intermediaries of few persons, the tradition is called "auli. This is considered a great advantage, because the possibility that errors have crept into the tradition is very small in this case. On long-lived transmitters of tradition cf. Goldscha, op. cit., II, 179, 174.

If the name of transmitters is unbroken and unchangeable, it is called munkad in the opposite case munqad (in the general sense), but as a rule munqad in the particular sense means tradition in which the landa the authority in the second generation (the Thāl’s) is wanting. — Murad is the same given to a tradition handed down by a Thāl about the Prophet, when it is not known from what Ṣafāḥ he received his statement. The question whether such traditions were valid was answered in different ways: the older teachers, such as Abu Ḫansāf and Mālik b. Ḥanāf, answered in the affirmative, but the later ones in the negative (cf. among others, Zetische der Deutsch. Morgenl. Gelehrten, x., 187 et seq.; Brockhaus, Geschichte der Arab. Litt., i, 339 ff.; al-Tahāwi, the Judge of al-Nawawī (died 976 = 1277), with its commentary, the Thāl’s of al-Nawawī and al-Sayyī (died 911 = 1503); N. N. e. al-Thāl’s of Ibn Ḥajar (died 852 = 1448) with a commentary by the author himself, published by N. Leis in the Bibl. Indica, N.S. 34, 37 of the second series, Calcutta, 1894.

IV. The Collections of Tradition. Numerous collections of traditions have been prepared by different scholars. Some of these works have obtained almost canonical standing among later Muslims. An official codification of Tradition, which would be exclusively valid, has however never been made.

At first traditions were not arranged according to their contents but only according to their transmitters (al-Thāl’s). Such a collection was called munkad after the traditions with complete landa’s incorporated in it. This name was then transferred from the single tradition to the whole collection. The best known of these works is the Munaww of Ahmad b. Ḥanbal (died 241 = 855). For further details on this collection see Goldscha, Neue Materialien zur Literatur der Überlieferungswesen bei den Muslimen d. Zeit d. d. Deutsch. Morgenl. Gelehrten, I, 405—506.

Such Muwaddas were also formed at a later period, some scholars, for example, arranged the traditions contained in the great collections for greater convenience in alphabetical order, others incorporated the traditions which were mentioned in the Munaww of Mālik b. Ḥanāf in other similar works not planned as proper collections of Tradition in separate collections etc. (see Goldscha, Muwadda Stad.t., 227).

But as a rule the later collections of tradition were almost all arranged according to the content of the traditions. Such a collection arranged "according to chapters" (al-Thāl’s) is called mukammal (i.e. arranged). Six of these Mukammal works were in course of time generally recognised by the orthodox Muslims as authoritative; they all arose in the third century. A.H. They are the collections of 1. al-Buhārī (died 256 = 870), 2. Muslim (died 261 = 875), 3. Abu Dāwūd (died 275 = 888), 4. al-Thāl’s (died 279 = 893), 5. Nawawī (died 303 = 915), and 6. al-Tabbāk (died 273 = 886). These works are usually called briefly the "six books" (al-Saḥab al-Thāl’s) or also the "six Sahab’s" i.e. the "sahabas" (i.e. the correct, reliable collections). They were, so to speak, looked upon as sacred books of second rank next to the Koran, God’s own word. The collections by al-Buhārī and Muslim were held in particularly high esteem. They are known as the "two Sahab’s" (al-Saḥab al-Thāl’s) i.e. the two collections particularly recognised as authoritative. Only traditions which are recognised as absolutely Sahab are included in these works. In this respect, however, the Sahab (i.e. the "sahabas") of Bukhari were not the same as those of Muslim. (Goldscha, op. cit., II,
Al-Bukhari has besides often added fairly copious notes to the headings of his chapters, which are quite lacking in Muslim's Ṣaḥīḥ, both trace the traditions where possible to different places and both collections contain not only traditions relating to "سُنَّةِ الْبَلاَد" and to the "مُحْلَمَة" and "غَرَّابَة" but also many historical, ethical and dogmatic traditions (for details, see Goldziher, op. cit., ii, 254-248).

On the other hand the traditions included in the works of the four other compilers dealt almost exclusively with the Sunnah, i.e., use and wont. Hence their collections are usually put together as "the four Sunna works". They further contain not only the traditions which are considered Ṣaḥīḥ but also the "beautiful" ones and in general all traditions on which the learned have relied in their deduction of the law even if doubts can be raised against their Ṣaḥīḥ. When the collectors think that one of the traditions given by them should be rejected they usually call the reader's attention to the fact. Cf. Goldziher, op. cit., ii, 248 n. 197.

The prestige enjoyed by these six books in Islam is really explainable. In the third century circumstances were peculiarly favorable for the work of the collector of traditions. A certain uncluttered tradition had been built up on all questions of law and doctrine and a definite opinion regarding the value of minor traditions had been formed by the minority of the Muslim community. It was therefore possible to proceed to collect all that was recognized as reliable. The merit of al-Bukhari and the compilers of the other Ṣaḥīḥs therefore lay not so much in the fact that (as is often wrongly stated) they decided for the first time which of the numerous traditions in circulation were genuine and which false, — for the personal opinion of the compilers would have had scarcely any appreciable influence on the prevailing opinion — but rather in the fact that they brought together everything that was recognized as genuine in orthodox circles in their time. (Cf. Smout, Haggard and Pearson).

Although other famous collections arose in the third century, e.g., the Sunan of 'Abd Allah al-Daymi (died 855 = 860), these works were never permanently able to attain such great prestige in the Muslim world as the six Ṣaḥīḥs. Even the general recognition of the latter works themselves was only attained very gradually; the Muslim's collection, in particular, was long viewed with suspicion on account of the many "weak" traditions in it. Besides, in spite of the great authority of the "six books", it was not considered improper to quote freely traditions, which, although included in the great collections, were not universally recognized as Ṣaḥīḥ. 'Ali al-Dimashqi (died 985 = 995) for example compiled a work in which he proved the weakness of 300 traditions given in al-Bukhari and Muslim (cf. Goldziher, op. cit., ii, 257).

Even at a later period new collections were made by many scholars. The work of these later compilers of tradition was limited chiefly, however, to the preparation of more or less comprehensive compilations in which they excerpted the contents of the "six books" (and sometimes at the same time other famous collections like that of Ibn Hanbal) and arranged them in different ways. One of these is Raggawa's (died 1310) collection called Maṣḥūl al-Sunnah (i.e., the lamps of the Sunnah), which, on account of its fullness and convenience, has always been popular among Muḥammadians. It contains a selection of traditions which are taken from earlier collections with the world's omission. The value of this collection by Wali al-Din al-Thirāt is particularly well-known; it bears the title Miṣḥūl al-Maṣḥūl (the name is taken from Raggawa, al-Sunnah, 35 and is usually interpreted as "snuff of the lamps"). Among large collections of the later period we may mention al-Jā’fari (died 1101) who collected all the Ṣaḥīḥs in his work al-Ṣunnah al-Dimashqiyyah and al-Iṣbāḥah. Jā’fari's main object was to give a comprehensive compilation of extant collections (for details see W. Kühnel, Katalog der Arab. Hss. der Kgl. Bibliothek zu Berlin, ii, 455 et seq.; other compilers confined themselves to a definite section of the traditions contained in the larger collections (e.g., to the "moral") or to a definite number of important traditions. Thus more, for example the numerous so-called "Aḥādīth" works (i.e. collections which contain 40 important traditions).

As the substance of the Ḥadīth was in many respects not longer intelligible to the later generations of believers, many scholars felt compelled to prepare commentaries on the collections of Tradition. Obsolete words and expressions required explanation; in particular many contradictions had to be explained, or weighed harmless by artificial explanation. Commentators further dealt with the prescriptions to be deduced from the traditions and the divergent opinions which had been abandoned by different scholars in this connection. Among the best known commentaries we may mention those of Ibn Ḥajar (died 1235 = 1242) and al-Kaṣṣāf (died 1293 = 1302) on the Ṣaḥīḥ of al-Bukhari and of al-Newawī (died 676 = 1277) on the Ṣaḥīḥ of Muslim (cf. C. Brockelmann, Gesch. der Arab. Litte., i, 156 et seq.).

The Shi‘a judges Ḥadīth from their own standpoint and only considered such traditions reliable as were based on the authority of 'Ali and his companions. They have therefore written on this subject and hold the following five books in particular high esteem: 1. al-Kif'ā of Muḥammad b. Ya‘qūb b. Ḥanbal (died 328 = 939); 2. Ma‘ālik al-ʾAṣrār of Muḥammad b. Ḥanbal (died 381 = 991); 3. Tahāfūt al-ʾAḥādīth and 4. al-ʾĀdāmī from Ḥanbal's ʾAḥādīth (extract from the preceding) of Muḥammad b. Ḥanbal (died 359 = 1067) and 5. Nāḥiyyat al-ʾAlbānī (alleged sayings of 'Ali b. Ṭabarī and Ṣa‘īd b. al-Mukhtar) (died 393 = 1094) by his brother Ra‘f al-Dīn al-Baghdādī (cf. C. Brockelmann, Gesch. der Arab. Litte., ii, 575, 576 et seq.; G. A. Totnes, The Faith of Islam, London 1889, 60, no. 2; Goldziher, op. cit., ii, 148, note 4 and Anleitung zur Litteraturgeschichte der Sīhā in Mitt.-Ost. Weinbl. Akad., Phil.-Hist. Cl., Ixxvi. 1874, p. 508.

V. The Transmission of Tradition. The general view of Islam that a knowledge of men long learning could only be obtained through oral instruction from a teacher, who had himself acquired his knowledge in this way (cf. C. Smout, Haggard and Pearson, The Zeitschr. der Deutsch. Men. Gesellschaft, i, 145), was from ancient times onwards to be particularly applicable to Tradition. The traditions had to be "memorized" and students even used to take long journeys to attend the lectures of such
people as were famous as reliable authorities (Rawsīt, i.e. properly "Reswīt") of Tradition. In many ways of the Prophet, travel 53 fi ḥājil al-sīrām (i.e. to search for knowledge) is recommended as work pious to God. For further information regarding these ḥājil journeys and their degeneration (how, for example, vain scholars justified themselves on having travelled through far distant lands to "know" a few almost unknown traditions) see Goldscheider, op. cit., I, 175–193.

In transmission, the traditions were delivered orally by the teacher. It was also very usual for one of the students to read out a copy while the others listened and the teacher whose success improved was read and gave explanatory notes. In this case also it was the custom to say of traditions learned in this way: N.N. (the teacher) told me (baddahan t armorabnam namely άδελφος αμαρτία i.e. while the tradition was read in his presence). One who had learned traditions in this way under the direction of a teacher, could now in his turn again communicate them to others and often received from his teacher a so-called allāfah (i.e. sanction, permission, namely for further transmission of these traditions) for this purpose. The old method of transmitting traditions, however, was not always held in respect. The copying and collection of written texts often became the main object and oral transmission fell quite into disuse. The traditions were then simply copied and podcasts were obtained to transmit them with the usual formula baddahan (i.e. "N.N. told me"), just as in the contracts had been acquired by direct oral intercourse from the teacher. For details of the official customs and the degeneration in Isalm of Goldscheider, op. cit., I, 185–193. A speaker in the Zeitschr. der Deutsch. Mission. Gesellschaft, n. s. 6, 1901, p. 115, on this subject. The Rassāl, Art. Die proph, MSS. der Kgl. Bibliothek in Berlin, I, 54–55.

In certain circles the copying of traditions (Bidār al-farrā) was originally regarded as actually forbidden. Canvass was only given to those traditions which had been preserved in the memories of reliable men and orally transmitted by them, not to texts copied often without sufficient care from unreliable records; cf. Ibn Anbar in waqmat naqaha, the caution: "Shall we pour out traditions and give them to the men themselves, not from written records, lest they be affected by the disease of corruption of the text!" (In Goldscheider, op. cit., I, 200). Nevertheless, scholars, who entirely abstained from paper and books, are always quoted as the exceptions only, and the recording in writing of Tradition seems to have been the general custom even in the most ancient times. At the same time it could of course be acknowledged in this connection that the writing only added to the memory and that the knowledge was really to be preserved "by heart" and not on the paper. For details on the writing down of Hadith and the objection to it, see Goldscheider, op. cit., I, 194–203; do. in the Zeitschr. der Deutsch. Mission. Gesellschaft, L, 475, 489; ibid. 862; A. Spangenberg, op. cit., n. 5, 101; do. in Jason, "The Annual. Society of Bengali", xvi. 303–309.

(The H. RIVOLIOLI.)

HADITHA (X.)—Newtown, the name of several cities.

L. Haditha al-Mawqil, a town on the next bank of the Tigris, on the far side below the mouth of the upper (Great) Zab. Its ruins are to be recognised in the mound of Tall al-Sharī, Various accounts of its origin are given. According to Hijijah b. al-Kalb (ibn al-Zahhāk), p. 129 and Ballāghīah, ed. Mālama, p. 340) Hijijah b. Afnal, after making Mawqil the capital name to Haditha in the reign of 'Omar b. al-Khattāb where he found a village with two chambers in which he settled Arān. Thus this story is authentic (it is also given in Yāʿīn, n. 222) is confirmed by Ta'ār (I. 2207), according to whom in 24 Wālī spent some time in Haditha on his way back from Armenia. Hamae says that Haditha is the translation of the Persian Ḥādīth. If it is not an invention of Shū'īb's bias, the best explanation of the name would be that of Ballāghīah, viz., that inhabitants of the "Newtown" of Anūbē Fabalbūgūla migrated thither and transferred the name to their new abodes. Whatever names and others assign the "foundation" of the town to 'Umar b. Ubaydullāh, and to 'Umar b. Abī al-Aswag, and 'Omar b. al-Khattāb, and 'Omar b. al-Khattāb, these names may have been built there but nevertheless the explanation of the name "Newtown" is "newer" than Mawqil are inventions (cf. Yāʿīn, n. 22, Hoffmann, in der Athen. Forsch., Mālama, p. 178, E. Reitzmüller, Siedlungsgeschichte der Araber, p. 83). The town's period of greatest prosperity falls within the early Abbasid period when the Califát al-Ahdīya stayed there before his mortal illness and when the rebel general 'Abd Allāh bin 'Abbas made it his headquarters in the reign of al-Mukhtar al-Hartūnī, Ill. 378, 1827. The population remained Christian. 'Abī 'Abdu'llāh was bishop of Haditha before he became Bābirithār and Kālidūk (857–858). (Bylde, Theology of Mawqil, no. 103: Assassim, Bô, Gen., Ill, 3, p. 592 note 1).

The town lay on the innermost east bank of the Tigris, in the form of a semicircle. Its mosques are to the river and the buildings, with the exception of the minaret, were of brick. The tomb of 'Abd Allāh bin 'Abbas, and al-Khattāb was shown there but probably wrongly as he died in Medīna (Mahmudī, p. 139, Mālama, p. 292). It is remarkable that Haditha is sometimes described as
Sound in the ancient itineraries, are not marked in modern maps.

The following are the distances according to my itineraries:

- Baghdad—Nukta. 6 hours
- Nukta—Fallinga. 6
- Fallina—Kab al Rundat. 16
- Kab al Rundat—Hit. 18
- Hit—Baghdad. 8½
- Baghdad—Hit. 8½
- The present distance. 9½
- Hit—Faluja. 16½
- Faluja—Anah. 7½
- Anah—Nabata. 7½
- Nabata—Ala'm. 9
- Ala'm—Ala'sh. 9½ (frontier of the desert).
in the death of the Prophet a man named Ghu-"r, a member of the royal family of Banu, raised the standard of revolt in Hijaz, but was overcome by al-Ali. During the Kuraish troubles Abi Sahl conquered the town of Madinah (ex. al-Madina al-Munawara). He was finally captured by the army of the Tameem, shortly before his death, in 93-94. Abi Sahl's son, Abu Talib, was a great and able leader, and the capital of the land, which should be remembered is Eabid (or the ancient al-Hajjar) is very often used as the name of the land itself (instead of Bahrain).

AL-HADJAR AL-ABWAAD. [See AL-WABA.]

HADJAR AL-NAQAB (the eagle's rock), a fortress in the Jift, in the environs of the town of the same name, built in 317 (929-930) by Ibrahim b. Muhammad Saidi b. Ibrahim. The town of Hijazi, called al-Gummar (Jama'an) or Hamadni (al-Muhajir, ed. Goes, p. 120) settled here. When Musa b. al-Abbas had driven the Idhrisids out of all their possessions in the Maghreb, he wished to besiege this fortress also to destroy the survivors of the Idhrisid family who had taken refuge in it; but he was dissuaded from doing so by the remonstrance of the most prominent man in the Maghrib. After Musa b. al-Abbas's fall, one of Gummar's sons founded a kingdom in Hijazi. Later, a king of the same name succeeded him. The Spanish sovereigns and the Almoravids disputed the sovereignty over it in turn, till the latter finally succeeded in destroying all the petty kingdoms of the Idhrisida. Hajar al-NAQB was taken by al-Qasim, the last sultan, and the last king, al-Harran, takes prisoner to Spain. The decline of Hijaz dates from this time (390-975-976).

The fortress lay, three days' journey from Cotta on the top of a steep cliff; it could only be reached by a very narrow way which only allowed access to one person at a time. The surrounding country was very fertile and covered with gardens (Hill Hawkal, ed. Goes, p. 36; al-Idrisi, Descriptive Geography of the African Kingdoms, ed. D'Arzy and de Goes, p. 75 et seq. of the text).

Its situation is not exactly known. An attempt has been made (by Beaune) to identify it with Al-Humur, but without any real evidence. According to the statements collected by Montesquiou (Les Merveilles, ii. 390-391, note), the ruins of the fortress still survive under the name "Hadjir at-Sawati," in the district of Hijazi Madinah (Djamaa Madinah) between al-Brumni, ed-Demol (Tomt), and Sahnadj on the summit of a very high red cliff.

HADJARIN (Hajarun), a town in Hijaz, situated on the jebel of the same name, S.W. of Mecca, called al-Daw'an (Do'an) situated in extremely picturesque country. It is surrounded by extensive palmgroves and reminds one of many Mediterranean castles on the Rhine. As a centre of traffic between the coast and the interior of Hijaz, it is of importance.

The houses of the town are built of bricks and are large but the streets are narrow and dirty. It belongs to the Quraish of Shibam (q.v.), who are represented in it by a member of their family, who bears the title al-Muluk and lives in a splendid palace on the summit of the hill. The town probably has about 1500 inhabitants. There are relics of the ancient Hasmoneic period around Hadjatin, where the trade in frankincense still flourished in this district. Ruins of an ancient town, Haddin, with inscriptions are still to be seen near the valley.

Hadjatin is an old town, now a town far too Hamidati; al-Hajjarin (al-Hajjarin, rival of their "town", as he writes it), consisted in time of two towns of Khawdi and Dammun, lying on opposite sides of the wadi; Khawdi was inhabited by the Safad, Dammun by the Kinda. At the foot of the fortful hill, on which Hadjatin lay, there were palmgroves and fields with ditches (a kind of mazes) and dates (a kind of corn or wheat), which were watered by a cistern running from the top of the hill.

BADJI (A.), the pilgrimage to Mecca, 'Arafat and Mina, the last of the five "pillars" of Islam.

1. THE ISLAMIC BADJI.

a. The journey to Mecca.—According to the law every adult Muslim, of either sex, has to perform the Hadji at least once in the course of his life, provided he is able to perform it (cf. Sunnii, 91). The fulfillment of the last proviso depends on various circumstances. Lamak and slaves are exempted from the obligation; likewise women who have not a husband or a relative (a qasim) to accompany them. The want of the necessary means of subsistence, the inability to provide means of burden, the precariousness of the journey are circumstances which release one of the obligation to perform the pilgrimage. The Shahi (shah) further allows to followers to postpone the pilgrimage beyond the grave provided
a deputy is hired out of the estate of the deceased. This explains how the majority of Muslims die without ever having seen Mecca. Even among Caliphs and Sultans many have remained at home all their lives while others have made the pilgrimage several times; even some, who were not Muslims, have taken part in this. However, their works are invaluable sources for our knowledge of this subject.

Since Muhammad instituted an absolute lunar year, the Hijjat runs in time through all seasons as it is fixed for certain days in the first half of the month Dhu 'l-Hijja. When it falls in summer, the toils of the journey prove fatal to many a pilgrim. Muhammad is therefore said to have said: "The pilgrimage is a sort of punishment," (Sawan ibn Abi Waqqas, Jab al-Khordaj ibn 'l-Hijjat). Those pilgrims suffer most who have to come from their homes to Mecca by land either on foot or on horseback. The steamship traffic from Jeddah to other Muslim lands which was instituted specially for the Hijjat, as well as the Hijjat railway has considerably diminished the number of the pilgrim train. The pilgrimage only survives out of religious consideration. The following may be mentioned.

The Syrian caravan follows the ancient trade-route from Damascus (or Constantinople) through the Trans-Jordan territory, the ancient Maghrib, via Ma'in, Madaba and Ta'lab and al-Madinah. It is the largest of the caravans (in 1876, according to C. M. Doughty's estimate, it contained about 6,000 persons) and is accompanied by a mukhtar (q.v.). Blackhouses are built at the stations where food is kept ready and facilities for refreshment provided. According to Burckhardt (Travels in Arabia, ii. 3), the journey from Damascus to al-Madinah takes 39 days.

The Egyptian caravan is likewise accompanied by a mukhtar; in it is the new kura (q.v.). for the Ka'bah. According to Lane (Manners and Customs, London 1822, p. 409), it usually leaves Cairo in the last week of Shawwal and reaches Mecca in 37 days, following the route along the Red Sea coast. The most famous route from Egypt is the so-called "Mukhtar's journey." (Al-Mukhtar al-Hijjat, p. 27 et seq.).

A caravan from the Mecca makes its way across Arabia. Burckhardt, in his Arabische Reise (vol. i. p. 44), gives the stations of the caravan from Venice as well as further geographical notes. Pilgrims from the Maghrib, Persia and Venice, however, come for the most part by ship, not to speak of those from more distant lands.

The caravans are composed of the most diverse elements; princes, beggars, traders with their wares, Bedouins, travellers on foot and on horseback; find their place there, which is usually settled by their place of origin, so that people from the same town travel together. Most pilgrims make an arrangement with a mukhtar who pays a definite sum for all the necessities of the journey.

The danger of attack by Bedouins has always been an unpleasant feature of the pilgrimage; if the pilgrims submit to being plundered, they usually escape with their lives, but otherwise not always. The Meccan authorities have finally been forced to conclude agreements with the chiefs through whose lands the caravans come, whereby the pilgrims are allowed to travel freely. The authorities have to pay a fixed sum (called pura (q.v.) for this privilege. In the history of the Hijjat there have been many other powers obstructing the pilgrim, e.g., the Karmatians, the Egyptian authorities, pirates and the Wahhabis.

The arrival of the Syrian and Egyptian caravans with the two sayf (swords) is always a great event for the Meccans. Both are received with ceremony; they exclaim on certain spots, the liveliest proper (see the plan of the town in C. Strobeck, Hardouin, No. 3), as a rule they arrive only a few days before the Hijjat.

The caravans of the pilgrims who arrive via Jeddah are fairly well known since the international sanitary commission has instituted a quarantine-station there. As each pilgrim has to pay a certain sum for what passes to be hygienic control, but really is quite superficial, the number of persons arriving is necessarily restricted. We find that in recent years the number has varied from 50,000 to 105,000 and averages 70,000. If Burckhardt could have accompanied the pilgrims again, he would not be able to repeat his observations (Travels, ii. 4) made in 1814 on the number of the pilgrims and the priests sent to the Hijjat.

Most pilgrims arrive shortly before the time of the Hijjat; a considerable number, however, even spend the month of Rajab before the Hijjat, which is considered particularly meritorious. Many Hijjats also remain in Mecca after they have completed the Hijjat, either to pursue sacred studies or to die in the holy city. The number of pilgrims is usually particularly large when it is expected that the principal day of the Hijjat, the 9th day of Dhu 'l-Hijja, will fall on a Friday (hajjat al-akhir). It may further be noted that the Shi'a also take part in the pilgrimage, but it is not always without a peaceful time in the holy city. Interesting data on the Hijjat of the Shi'a are given in Kurré Zaini, Relation d’un voyage à la Mecque dans l’année musulmane, 1912, p. 144 et seq. (has also appeared separately).

6. Arrival in Mecca. The holy ceremonies are performed in a state corresponding only to the law therefore recommends the pilgrim to move as soon as he arrives, without how to maintain the ihram (q.v.). But as in most cases this is not convenient, they generally enter the holy condition when they approach the holy territory. One should enter Mecca as a pilgrim and then perform the "wara" (q.v.). Almost every pilgrim does this as well as the other sacred duties, accompanied by a guide (sahib, dalal, mukhtar, etc.), who on each occasion pronounces the prescribed formulae, which are then repeated by his protege. These guides further do all sorts of business for the pilgrim, who by his ignorance of the language of local customs etc., would be for the most part quite helpless without them.

When the seventh circumambulation (tarawij, q.v.) of the Ka'bah and the seventh walking (mukhtar, q.v.) between Saff and Marwah has been performed the pilgrim may cut his hair and come out of the Ihram, till the Hijjat proper begins. But if the \\u201ctarawij\\u201d has been assumed for "wara and hijjat (wara), this is not allowed for these and related questions of the article Hijjat.

7. The Ceremonies of the Hijjat. On the 7th day of Dhu 'l-Hijja there is usually preaching in
the mosque of the Ka'ba, by which the pilgrims are prepared for the holy ceremonies. In the evening of the same day or on the morning of the next, the pilgrims leave Mecca. The 8th is called 'Arafah (Day of Octaving); because, according to an important magical explanation, all the pilgrims surround themselves with water for the following days. The two mahjuf's units outside the town and load the way; then follows the variegated bathing mass of representatives of different races, on foot and in litters, on horses and camels, perpetually pushing and struggling. The plain of 'Arafah, where a halt is to be made (mehdah), is reached via Mina (now usually pronounced Munt) and Mudalilla (also called 'Umran and al-Maghar al-Marƙan). Here the representative of the ulama used to plant a standard, whose place is now taken by the mukafa' (see AMI, 1.210).

The description of the thickly covered plain in modern travellers agrees in its main features with that of the old Arab mental map of the classical sources. Tent and booth (see C. Snouck Hurgronje, Riders on Mats, No. 15.-16, cf. also 10.-12) are everywhere, in the latter the number renders their exposure as the basis; jugglers and hustles entertain the crowds with their skill. Many pilgrims ascend the sacred mountain (Abraj al-Ka'aba, see the illustration opposite and the article 'Abraj'), and repeat the prescribed formulas at their shrines at the proper places; loud cries of Jabal al-Nubah (q.v.) are heard everywhere. That the time is passed till the evening, at which trillar illuminations take place. From pilgrims spend the night in the repetition of prayers, others assume themselves in worldly fashion.

The meidah proper takes place on the 9th and lasts from the time when the sun has crossed the meridian in its setting. Almost the whole period is filled by two meidah's, celebrated as a rule by the bani of the holy city. The latter takes up to the platform on the holy hill, from which the most prominent monuments are visible all around, and which has a greater area than that of the first, and is usually attended by a larger number of pilgrims. The meidah proper is celebrated by the platform, from which the sun descends at the feet of the sultan, the sipah (or al-fahh, al-fahm, i.e. the running in Mudalilla begins. Amid the greatest confusion the horses are spurred on by the shouting-traders, and continual shouting and din, accompanied by military music, every one rushes to Mudalilla. The saluha (which marks the boundary of the bedroom (q.v.) are passed; the evening darkness soon falls and touches are kindled; firebreaks are discharged and the soldiers keep firing off their guns. In this fashion, rarely without accidents, Mudalilla is reached, where the Mughill and Tali sabih are celebrated together and the night is spent. The mosque here is illuminated. On the morning of the 10th (names al-mehid) meidah is again held at the mosque before sunrise and the last of the Meccans again pronounces a hajja. After the completion of the meidah the morning service the second evening begins.

Here quite different duties have to be performed. Each pilgrim has on this day to throw seven small stones at one of the three so-called qu'wish's here (q.v.), the Zamarat al-A'sha. For this purpose he has previously gathered the stones in Mudalilla. Amid a tremendous rush a rush is made for this Zamarat, which stands at the foot of the peak of the valley of Muh. As a result of it is given in Amur, 2.70., the opposite p. 222. Only the stoning of this Zamarat is prescribed for this day in the law and the turn of the other qu'wish's does not come till the following days. The accounts in 'All Bey and Burton agree very well with this prescription. It should, however, be noted that Burckhardt (Travels, ii. p. 260) and Keon (Six Months in Meccah, p. 164) expressly state that the pilgrims on the 10th (the 'Ha'il successful throw seven stones, which they have brought from Mudalilla, first at the eastern Zamarat (Zamarat al- Hilal, al-jubah, then at the middle one (al-muhaj), see the picture) and finally the western one (al-qab.dk, al-qab.ch, al-qab.hur); perhaps however this is an error of the two last-named travellers.

According to the Muslim interpretation, this stoning is really a stoning of Satan, who is said to have appeared here to the patriarch Abraham and to have been driven away by him to this fashion. After the stoning the ruling of jabalaha ceases and the ka'bah proper is at an end; various ceremonies, however, have still to follow, first that of the sacrifice, which has given this day its name. Thousands of sacrificial victims, chiefly sheep and goats, are kept ready in Mecca by the Beduins and merchants and slit at high prices (many people of high rank slaughter their own. The pilgrim, who does not care to kill the animal himself, may get a butcher to do it for him. Although there is no place specially prescribed by the law in Mudalilla for the sacrifice, a rock at the end of the valley near the A'sha is preferably used for this purpose (Burckhardt, Travels, ii. p. 89., Burton, Pilgrimage, ii. 246). It is considered incitatorius; to give the flesh of the animals sacrificed to the poor, as jabalaha; what they do not use is left lying. The sacrifice, which is celebrated on this day throughout the whole Muslim world, is samma (see the article 12a, no. 20). Its omission may be made good by fasting.

It is usual to have the head shaved after the sacrifice; for this purpose there are quite a number of barbers' booths in Mecca. Both the barbers and the pilgrims observe certain rules during the process, such as turning towards the tomb, etc. Thereafter the Ishan may be discarded and a return made to a secular condition (i.e.); but the pilgrimage is not yet allowed to transact all the business of everyday life. The series above described, stone-throwing, sacrifice, shaving, is described in the law as mawqar (Mawqar, i. 331); but it should be noted that there is no time legally prescribed for the sacrifice and the two or other ceremonies are only limited as to time so far that they must be performed on the 10th day.

It is usual to return to Mecca on the same day to perform a penitence, which, on occasion the Ka'ba is seen for the first time with its new covering. Ordinary garments are donned if this has not been done in Mudalilla already; the pilgrims change and washes, which is usually very desirable after being the previous "holy state." It is usual also to drink from the holy Zamman water or to roll ourselves sprinkled with it; but this may as well be done on any other day.

The following days 12.-15th the 'Ha'ilah are called al-hajah (al-hajah, on the explanation
II. THE ORIGIN OF THE ISLAMIC HAJJ

Muhammad's attitude to the Hajj was not always the same; in his youth he must have often taken part in the ceremonies. After his "call" he paid little attention at first to the festival; in the oldest times it is not mentioned and it does not appear from other sources that he had adopted any definite attitude to this originally heathen custom. If many obviously polytheistic practices had been carried on at it, he would hardly have been so solicitous about it and Tradition would probably have preserved expressions of opinion from which we could ascertain more or less clearly the actual practices.

Muhammad's interest in the Hajj was first aroused in al-Medina. Several causes contributed to this, as Snouck Hurgronje has shown in his Mothambische Feesten. The brilliant success of the battle of Badr had aroused in him thoughts of a conquest of Mecca. The preparations for such a step would naturally be more successful if the city as well as the religious interests of his companions were aroused. Muhammad had been observant in his discussions regarding the Jewish community in Medina and the disagreements with the Jews had made a religious breach which was certainly inevitable. To this period belongs the origin of the doctrine of the religions of Abraham, the alleged original type of Judaism and Islam. The Ka'ba now gradually advanced into the centre of religion; the Ka'ba, the father of Mecca, was built with his own hands and it was to be a "place of assembly for mankind." The ceremonies performed there are traced to the divine command (Sura ii. 128). In this period also the Munkad was made (Sura ii. 135-141) and the Hajj called a duty of man to Allah (iii. 91). Thus it is possible an account in the year 2 of the Hijra. It was only after the announced siege of al-Medina by the Meccans in the year 5 that Muhammad was able to attempt to carry out his plans. The first effort was made in the —
He was therefore invited to drink and he drank. The ascetic character of the Hadjdjī days is clear from the ḥusna prohibitions. That these were once extended to include food and drink is clear from Muḥammad's explanation. "The Taḥlīl days (11th—13th Ḥūr 'l-Muḥājirūn) are days of fasting, drinking and sensual pleasure'. In early-Jewish asceticism disposed persons therefore chose the Hadjdjī as the special time for their self-sacrifice. (cf. Onan in the Targums of the LXX, 37: 320 et seq.)

The ḫūṣna lasts in Islam from the moment after midday till sunset. Tradition records that Muḥammad ordered that 'Arafaī should not be left till after vespers, while it had previously been usual to begin the īfāfā even before sunset. But the Prophet is said not only to have shifted the time, but even to have suppressed the whole rite by forbidding the running to Makkah and to have ordered that it should be slowly approached, but how tensions the old custom is, is clear from the above description of the īfāfā. Snouck Hurgronje thinks that the text in the latter, a view which has been more definitely formulated by Houtsma in connection with the character of the Hadjdjī (see below), viz. that it was originally considered a persecution of the dying sun.

The god of Makkah was Ka'ba, the thunder-god. A fire was kindled at the sacred hill also called Ka'ba. Here a halt was made and this īfāfā has a still greater similarity to that on Sinai, as in both cases the thunder-god is revealed in the fire. It may further be presumed that the traditional custom of making as much noise as possible and of shouting was originally a sympathetic charm to call forth the thunder.

As soon as the sun was visible, the īfāfā to Mina had to begin in pre-Islamic times. Muḥammad therefore ordained that this should begin before sunrise; here again we have the attempt to destroy a solar rite. In ancient times they are said to have sung during the īfāfā, ʿalāb kāfarun āfāfā. The explanation of these words is uncertain: it is sometimes translated: "Enter into the light of morning, Thabit, so that we may hasten'.

When they arrived in Mina, it seems that the first thing they did was sacrifice; the 10th Ḥūr 'l-Muḥājirūn is still called ṭamūsāt-āfāfā, "day of the morning sacrifices", in ancient times the camels to be sacrificed were distinguished by special marks (rāfāfā) even on the journey to the īfāfā; for example two sandals were hung around their necks. Mention is also made of the īfāfā, the custom of making an incision in the side of the hump and letting blood flow from it; wounds were made in the animal's skin. It is frequently mentioned also that a special covering was laid on the animals.

According to a statement in Ibn Ḥishām (ed. Windisch v. 76 et seq.), the stone throwing only began after the sun had crossed the meridian. Houtsma has made it probable that the stoning was originally directed at the sun, and although important support is found for this view, it is not clear that the Hadjdjī originally associated with the astral-solar; similar customs are found all over the world at the beginning of the four seasons.

With the expulsion of the sun-demon, whose harsh rule comes to an end with summer, worship of the thunder-god who brings fertility and life in
vacation may easily be connected, as we have seen above at the festival in Mandalîfa. The name barwâna "moistening," also may be explained in this connection as a sympathetic sun-charm, traces of which survive in the libation of Zanjîn water. These are again parallel to the feast of hooûtas (or day of atonement); the goat, which was thrown from a cliff for Azazel, is not difficult to identify as the type of the sun-demon; and the libation of water from the holy well of Silwan was also a rain-charm, for the connection between the feast of hooûtas and rain is expressly recognised (Zach. xxvii. 17). The former call attention to the illumination of the temple on the feast of hooûtas, which has its counterpart in the illumination of the mosques in 'Arrâf and Mandalîfa, as well as the important part which music plays at both feasts.

Quite other explanations of the stone-throwing are given by van Vloten (Terraantand...; van Pref. M. J. de Goeje aangeboden, 1894, p. 33 et seq.) and Chardin (Annales de l'Acad. Royale d'Arabie et d'Asie, 5th Ser., Vol. iv. p. 272 et seq.). The former connects the stoning of Sunan and the Koranic expression al-sha'tûn, al-ar-rûdûn with the Greek myth, which was indigenous to the 'Abbasî. The latter finds no satisfactory explanation; the object of covering the 'Hadîjî ground with stones thrown on it was to prevent the cultivation of it by the Meccees. Both these theories have been satisfactorily refuted by Houtman. Cf. also Douâté, Magic and Religion, p. 430 et seq. — On the significance of the shaving in connection with the history of religions, cf. the article above.

On the Târîkh days some of the pilgrims dry the flesh of the animals sacrificed in the sun to take it with them on the return journey. This custom agrees with the meaning of the word taghû, given by the Arab lexicographers, i.e. "to dry strips of meat in the sun"; but it may be doubted whether this is the original meaning of the word. A satisfactory explanation has not yet been given. Cf. however Th. W. Janyhullu, Über die heilige Art der Wolkenfasch (Zeitschr. f. Ethn., xxvii. 1 et seq.). It must also be noted that Douâté in his book De Tariikhien el Mekess, traces the words bâhûs and tûnûs as well as the whole 'Hadîji to a Jewish origin; but his thesis may be considered definitely refuted by Smoock Hurgronje's Het Moskische Feset.

HADDÚ, Haddû, one who has performed the pilgrimages to Mecca. (See Al-HADDÚ.)

AL-HADDÚ HAMMUDA (R. Ahmad Al-Aziz), an Arab historian of Tunis, accompanied Allâh ibn Al-Husain into exile in Algiers, during the reign of 'Ali ibn Muhammad (1749) and became his first secretary when this prince succeeded to power (1783-1799). He retained this office also under 'Ali Bey's son, Hammûdoûr Bey (1782-1814), under whom he was garrisoned. He composed a history entitled Kithâ al-Masâhir, in which he surveyed the history of the Hâdîjis and of the Turkish governors of Tunis and many details of the reigns of 'Ali Bey and Husain ibn 'Ali. The text, which is still unpublished, exists in numerous copies in the Great Mosque of Tunis. A section dealing with the wars of Khair al-Dîn and of 'Arûz was published by Houcine in his Chronique maghribine (Paris 1861), p. 44-96: another section dealing with the French expedition against Tunis in 1770 was translated by Rousseau (Algiers 1854), and a third dealing with Murad Bey's campaign against Constantine by Charlimont (Tunis 1858).

(Rene Ramet.)

AHADIDJ 'OMAR, A religious fanatic and conqueror in the Sudan, founder of the Tumbler Kingdoms (1797-1864). Born at Almas in Fezzan in Mauretania, 'Omar Sauth Yal began his theological studies under the direction of his father, a celebrated marabout, and joined them in Whatar among the Means (Tagant) and made the pilgrimage to Mecca about 1820. During his stay in the holy city he attached himself to Shâli at Muhammad al-Ghâfi, a pupil of Tâfu'n and entered the Tidjân order. On his return to Africa he spent some time in Bornel and Sokoto and posed as a reformer of Islam there, showing himself particularly hostile to the members of the Khallïtia order, converting them severely for their laxness and toleration. He was kindly received by the sultans of both kingdoms and was presented by them with wives and slaves; on the other hand, on continuing his journey to Segu he was kept prisoner for a long time by the ruler of Banûura. He then went to Fask Dallon (q.v., p. 120 et seq.), where he won the sympathies of the inhabitants. At Lérta he sent an army under the command of the Prince of Yal and attacked the Berbers of the Fajl near the palace, taking the yoke of the Fajl (Yulun) and the bonya section. The akhsa's founded by him in Diengunu was much visited and he himself was soon recognised throughout the country as its spiritual leader.
From 1846 to 1848 al-Hajjaj 'Omar undertook a missionary journey in the lands bordering on Futa and won a great number of the tribes dwelling within the curve of the Niger and on its coast, among whom the Sevengel and the Juliamut were prominent. Disturbed by his continually growing influence, the Alkasa-Amanu forbade him to enter the land of Futa whereupon al-Hajjaj 'Omar settled in Dungu. There he built a fortress, collected weapons and munitions and began to preach a holy war among the unbelievers. At this time he had at his disposal about 700 guns and a small body of men composed of his juttal (Arabic: جُتَالٍ *جُتَالَ) and jaf (staleness); the latter were young slaves, converts to Islam, who began their military training by looking after the baggage of the warriors. This small body was continually increased by new converts who were attracted by the hope of booty.

In less than fifteen years al-Hajjaj 'Omar was lord of an extensive territory. In 1849 he conquered the districts of Bureh, Bamarak and Hellinga, then turned against the Mamassai of Kassola and invaded their land after annihilating their forces. Their ruler Kassoli was forced to submit, with the principal chiefs of his land after a vain resistance, and in 1851 the capital Nwo was occupied. Thus Al-Hajjaj had annihilated the inhabitants of the land to adopt Islam, forbade them to keep more than four wives and divided the remainder among his soldiers. It was only after five years' hard fighting, however, that Kassola was completely subdued. Rising broke out in many places, while the Pol of Massina besieged Nwo. Al-Hajjaj 'Omar had further to defend himself from the attacks of the Mousa and against Alamin, Sultan of Segu, and finally came into conflict with the French on the upper Senegal. The military station of Medina defeated by Paul Holt withstood his attacks from the 20th April to the 18th July, 1847, till his whole army was put to flight by Colonel Faidherbe.

When he had finally become undisputed lord of Kassola, al-Hajjaj turned against the Banatul of Segu and the Pol of Massina, whose rulers formed an alliance against him. He occupied Samassandé, defeated the allied forces of his opponents at Tio (January 1861) and entered the city of Segu on the 26th March 1867 and invested it. After another victory over Alamin, Sultan of Segu, and All Sellaha of Massina, Hamadoulah, the captain of Massina, fell into the hands of the Timbalan. Alamin was overthrown, while Mousa crossed the Niger and slain, and Alamin Shaykhiy, son of al-Hajjaj, 'Omar, appointed ruler of Segu.

Al-Hajjaj 'Omar then undertook a campaign against Timbuktu, which he gave over to plunder. Soon afterwards, however, a general rebellion broke out in Massina, instigated by several Pol chiefs, who were supported by Ahmad Bakkai, chief of the Kanta. A second attack by al-Hajjaj 'Omar on Timbuktu failed and the army of his general Abas 'Omar, which was to revenge al-Hajjaj's defeat, was destroyed by the son of Ahmad Bakkai, whom Alamin Shaykhiy had appointed himself, and of whom he cut off the head. The Timbalan had been deserted by the Mousa and the Pol. Alamin was executed at Timbuktu in 1869. Al-Hajjaj 'Omar succeeded in sapping after eight months' siege by setting the town on fire. Pursued by his enemies he fell into a cave where he committed suicide rather than fall into their hands alive. According to another story he was suffocated by them with smoke (Sept. 1864).

The kingdom founded by al-Hajjaj 'Omar soon after his death broke up into the independent states of Segu, Kanta and Massina. Al-Hajjaj 'Omar's influence had been so great that even after his death his memory was kept alive by the Mosques. The chief town of Timbuktu was Alamin Shaykhiy's tombstone, and there was a Pilgrimage to it. In 1885 and 1894 the French occupied Segu and in 1894 they took Kanta and in 1895 Massina.

G. Veen.

HADIDIJA b. YUVIS, an Omryya b. sallam-dar, was born at Timbuktu in 1861. Her grandfather was the Timbalan Shaykh 'Ubayd Allah b. Muhammad, and her mother was a member of the 'Ali b. Al-Hajjaj family. Al-Hajjaj was a powerful ruler, but his power was greatly increased by the continual rebellions of the Kifijis. The story of his entry into Kada and his proclamation of his policy in the mosque there has become famous in literature. The threat which he renewed in Futa that he would cut off the heads of the enemies becoming the soldiers flocking to troops to the camp of his grand Mahallab. The latter soon succeeded in inflicting a series of defeats on the Kifijis, in which the ring leaders perished. To dispose of the unstable and notorious Kifijis Sho-
Hajj [q.v.]. Hajdżdż [q.v.] had to call in the help of
Syrian troops, as those of the 'Irak refused to act. Šahāb then, upon the advice of Hajdżdż in Bagdād to advance against Kūra. The victory only reached was a few hours before him and step by step he fought his way into the capital; after several days of fierce fighting Šahāb had to vacate the field and being pursued by the 'Irak cavalry was drowned in crossing the Ḫudjajj. In the same year (77-78=666) Hajdżdż succeeded in putting down the rebellion of a provincial governor, Muḥarrīr, son of Muḥīr b. Shīrāz. He had just begun to recuperate a little after his heavy task when suddenly a rebellion broke out which was immensely more serious than all the earlier risings. It was forestalled by the janīl arbīl of the Ḫudjajj and was directed not only against the victory but against the Umayyād dynasty; it was decided a separatist movement against the preferential position of Syria in the Caliph's empire. After the overthrow and death of Šahāb, the Syrian troops had remained in the country and were overwhelmed with tokens of Hajdżdż's favour. The Ḳūtrs (i.e. 'the excitors') made common cause with the political malcontents. A leader for the dissatisfied arose in the person of Abī al-Ḥālīm, a grandson of Abī Ṣaḥīh b. Ḳayyāb, habīl of Šahāb, who fled to Phūlūl, was at the head of 40,000 men, rebelled against the victory, returned and soon had 100,000 men under him. With these he drove back the troops sent against him and captured the cities of Kūfah and Rašā. Hajdżdż had once more to appeal to Syria. Besieged in a suburb of Rašā, he held out for a month against the onslaught of the rebels. In the early days of March 701 he succeeded in inflicting a serious defeat upon them, which was crowned by his victories at Dihr al-Qunmūn and Maskin (q.v.). The Ḫurāb was now utterly exhausted and lay at the feet of the powerful amir; his tenacity had crushed the spirit of rebellion.

Thereupon (83-86) the tireless governor proceeded to found a new capital, Walīj (q.v.). Situated almost halfway (whence its name) between Kūfah and Rašā it was to speak a detached camp of the Syrian troops garrisoning the country. From the year 78 he united to his government the 'Irak that of Kūfah and the whole Arab east, a territory which had been considerably increased by the conquests of the famous general Muḥallab (q.v.). He finally incorporated Omān on the Arabian peninsula to the empire, which thus hitherto been independent. His generals penetrated even into the valley of the Indus. Hajdżdż prepared the way for the brilliant career of Walīj by these extensive territories abroad and the restoration of peace in the 'Irak. In spite of his autocratic rule he actively supported such important generals as Muḥallab and Muslim b. Kūţā Bahār. As a statesman his activities were not confined to reforms but were creative also. "His administrative regulations on the currency, measures and taxes and in the improvement of agriculture were epoch-making" (Wellhausen, p. 155). He has been reproached with corruption the Ḳūts. In his time was introduced to the system which was to lead to a critical revision and the introduction of orthographical signs which were to prevent incorrect readings in the recitation of the sacred text. He also endeavoured to use Arabic in place of the local dialect which had hitherto been in use in the chancellory of the 'Irak. After putting down the rebellion, it was his first care to "to heal the wounds, which a twenty years' war had inflicted on the prosperity of the country" (Wellhausen, p. 157). He dug new canals and restored the old ones.

His fidelity to the Umayyāds knew no bounds, the grotesque manifestations of it related of him are inventions of historians writing in the service of the 'Abbasīd. The Marwānīds rewarded it by their constant favour. Hajdżdż has therefore also been numbered among the "sons of Abī al-Malik". His influence continued to increase under Walīj I. Hajdżdż had energetically supported the candidature of the young prince to the detriment of his uncle Abī al-ʿArīf (q.v. l. 56), the successor designate of Abī al-Malik. Walīj delighted in seeking the advice of his lieutenant; on his death he received official expressions of condolence as if a member of the ruling house had died. Matrimonial alliances further attached the family of the powerful governor to that of the Umayyāds.

Hajdżdż's influence has become celebrated. The historians and literary collections have preserved numerous specimens. He laid great weight on purity of language and smiled at a kind of Arabic Arabic Arabi; thus in the realm of religious he impressed one as being a sincere Muslim. He protested however against the exaggerations of the extreme parties and against the disproportionate importance which even then was being accorded to Tradition. "In his life and in his death he showed a good conscience" (Wellhausen, p. 156). Did he deserve the reproach of cruelty? We read of 150,000 victims handed over to the executioner; at his death his prisons are said to have held 50,000 men and 30,000 women. Such enormous figures are their own refutation. In this period of political anarchy, of incessant risings, nothing authorizes us to say that his repressive measures passed the limits of severity. "The kindness of men to good citizens, he showed himself partial to the rebellion" (al-Dīnārī). But even in these cases a frank confession or a show of spirit frequently sufficient to dissuade in the moment, this office of justice, who "dominated the majority of his contemporaries by the breadth of his intellectual outlook" (al-Dīnārī). On the other hand, his excessive veneration renders him liable to be important with his best friends (al-Muṭṭalam): his great general Muḥallab in particular had to learn this. The whole character of Hajdżdżbehaved a pronounced tendency — he was the first to introduce a tendency to concentrate all authority in his own strong hands; it resulted in his showing himself too soft, sometimes harsh, but never cruel, still less meek or narrow" (Wellhausen, p. 155). He has been often compared with Ziyād b. Abītīr, minister of the Umayyād, a Thaqafi like himself and his most famous predecessor in the 'Irak. His excess of vigour, his fervent nervousness and his craving and provocative eloquence were not to Hajdżdż's advantage. He lacked the smiling and somewhat sceptical air, which characterized the statesmanship of the school of Mecca, whence arose complications which a more pliant nature might have avoided.

If Hajdżdż at the end of a long period of political anarchy applied himself to the amelioration of the material situation of his vast vice-
royalty, his character, emblazoned by family hagiographies, showed by the injustice of an unthinking opposition, and his zeal for the moral wounds and to work efficaciously for the pacification of the minds of men.

The interests of the state had forced him to take harsh measures against Yazid, son of the celebrated Mehmed. This gained him the enmity of Sulaiman (q.v.), the guardian of Yazid and successor designate of Walid I. Hâdidji had turned the blame of inducing this rebellion to his brother from the inscription in favour of his own son; the knave therefore vowed not to survive Walid. He had just completed his 35th year, prematurely aged and worn out by the labours and disappointments of his tumultuous life when he died of a fever in the stomach in the month of Ramazan 85 = June 714. He was buried at Wadi and to prevent posthumous vengeance all traces of his grave were removed. Fears in his lifetime the inexorable officers of justice were opposed by the worst and most of his contemporaries were enemies. The caliph Musa B. Khathir (q.v.) and Khalid al-Kaşî (q.v.). The latter in which later tradition holds him testing to the important part he played in his lifetime; holding him up to approbation as the greatest supporter of the subsequent succession which it places him with Yazid I among the few Muslims, for whom it believes eternal damnation to be assured. "It is always a moral sentence of death for a governor, if he is compared to Hâdidji even in the remotest features" (Döckerfs, Scharf-Kramers, Vol. I, 178). Unhappily, history gives him his place beside Ziyâd b. Abd Allah and demands him as an argument that the period of those who have deserved most of their country.

**Abd al-Malik** (S. de Goeje).
bibliography: the autobiography of the author at the end of xx, very incorrectly edited by wickemann, waynecook etc., p. 59—
76, and the autobiographical note at the end of the first part of the sultans al-sayyid, no. 6; the mughal's kadi, celent (1928), which precedes the print of the tasneh (no. 4); the second biography in the lahvi, d'shahar, [see von hammer, oron, grisch, vi. 47]; stigliani, domenico, v. 395; kadi celent by dominic mo-
hamed tahir b. rifat, samhail 1330 h.; the older europeans authors who treat of hadji khalifa and his works are quoted from el-khalili, homed, der, k. k. hebschutkh, b. 49 and rieu, c., p. 33; see also watenfield, die geschichtskunde der arabe, no. 570, and roedelmann, grisch, der arab. ltt. ii. 428.
(j. h. moestmann)

hadji pasha (alignand hadji pasha), whose real name was khair b. ali b. khattab, was a contemporary of sultan hayam yahia, as ottoman jurist and student of medicine. he went to study in cairo, where he studied under shahabuddin shah muhammad and was later through his theological and legal courses in company with shahabuddin ibn trun and shahabuddin ibn shah. an illness, which he went through, earned his attention to the study of medicine and he soon attained fame in it. he was later named chief physician at the cairo hospital (al-musrif). returning to aldin he settled in cairo on the invitation of abbas oghlan mehmend b. boy and died there in 1470. he is given all his place at the disposal of the conqueror timur and is said to have instructed his physicians. he also spent some time at the court of prince sa-fat in his service.
in his early years he wrote theological and legal works, e.g. ta'rif fi mas'lih al-dawla wa 'ilm ad-dawla in two volumes, a commentary on balighi's commentary on the qur'an dedicated to ibn boy, one of the sons of abdin, entitled tasunw al-a'mara wa jihada, and marginal notes on tahir b. trun's commentary on the methli (al-trun) and the jihada of khalil b. trun mahmud al-trun. his medical works are more numerous and have maintained their authority down to modern times. the largest is the majma' li wajihat al-tib, a work on therapeutics in turkish written, abbas oghlan mehmend b. boy which is divided into three sections treating respectively of physics and dietetics, k. food and medicines and k. causes, diagnosis and cure of diseases. a brief similarly divided handbook for the layman by his tafsir al-tib (the facilitation of medicine). these works are said to have been translated into several languages. k. known are his: 1) majma' fi wajhab al-
tib (care of diseases and alleviation of pain), 2) jihada of the sultans, 3) tasunw al-a'mara, 4) jihada of the sultans, 5) tasunw al-a'mara wa jihada of the sultans, 6) tasunw al-a'mara wa jihada.
HADR.)

HADR., the ancient Hafr.b, 'Arab on the Wali faut " in the desert: three short days' journey. S.W. of Makkah, now in ruins, on which of the path of the bad. In the Bibliography. The town's claim to be mentioned here is that the Arabic historians give a certain amount of information about its former extent and rapid decline. Hafr. says Yahyā, Ma'dhun, 114, 284, was built entirely of stone; there were sixty strong forts there and 9 smaller ones between every two; there were a palace and a bath near every fort. During the reign of the Sufi Khalif Shihāb I (210-217) a man of the name of Sūfīrān (according to Nudlā, = Sanūsī) ruled here; the Arabs called him Qa'ba. As the latter had made a raid on Persia, Sūfīrān resolved to bring him to his complete subjection. After long negotiations until Qa'ba's daughter fell in love with him and betrayed to him the secret by which he could make him powerless, the sultan, who protected the castle. He thus succeeded in taking the town and utterly destroying it. He took Qa'ba's daughter with him to marry her, and from then he became as despoiled with her ingratitude to his father, who had certainly treated her most tenderly, that he had her bound to the tail of a wild horse so that she died a terrible death. Firdaws and 250 and 252. ARAB. historians wrongly ascribe to it. Shihāb III, who destroyed Hafr, for it is certain that the town existed in 365.

HADR., "presence," is used broadly by mystics as a synonym of hafr, "being in the presence of Allāh." Its correlative is qālī (q.v.), with its reference to Allāh alone except Allāh. On the controversy as to whether in expressing this relation to Allāh hafr or qālī is to be preferred—that is, which is the more perfect, final state—we see especially Nicholas, Kinjā, pp. 248 et seq. This term was later extended by Ibn 'Arabī, in working out his monistic scheme, to the Five Divine Hāfrānīs, stages or orders of being in the Neoplatonic chain (cf. above, vol. I, pp. 62 et seq. 686). There is a short state-

HADJMAW.—HADR. (the הדר of the South Arabian inscriptions), now pronounced Hadramut, a land in Arabia in the east of Yemen between 47° and 55° East Long. and 15° and 19° North Lat. It is bounded on the south by the sea, on the southeast by the land of Mahra, in the N.E. by N. and N.W. by the great country of the Ḥudayr, and in the S.W. by the land of the 'Awdlī [p.v.] and of the Ḥūdīt [q.v.]. The name Hadramut is according to Arabic tradition derived from Hadramut b. Ḥumyar, b. Yā'rub b. Ḫabīr (Ḥammarwēth, the son of Voctam in Ġomtā x, 20). In ancient times Hadramut was celebrated as a land of frankincense and was greater in extent than it now is. The Ḥudayr (Ḥudayr) of Shāh (Atriamī in Pliny) were one of the most powerful tribes of the great South Arabian kingdom; their metropolis was Sabatha (Ṣabatha). According to the statement of the frankincense tree was actually and the valley in which it grew was therefore called the "land of death." The Arabic lexicographers also connect the name Hadramut with the word "land of death," for they explain it as a combination of Ḥudayr "town, land" and watir "death," but, apart from the fact that the land has only borne the name Hadramut in modern times, the climatic of Hadramut has always been regarded as healthy. In the pre-Muhammadan period Hadramut was inhabited by the Sādīt, and was of Sādīt. To the Sādīt, Kiīf [p.v.] attached themselves, who must have come from Sana, and the number of 30,000 men about the time of the birth of Muḥammad; their most important clan at this time was the Ṭuḥi, who numbered 1500 men in Hamdān's time. In the time of the Prophet princes with the title Ḥudayr ruled in Hadramut; the Kiīf, prince Ṭuḥi a assistant. The land is now under Turkish sovereignty, but this is merely nominal for the Porte keeps no garrisons in the country and does not levy any tax.

Hadramut is a mountainous land traversed by a great valley, with several walls of considerable size branching off from it. Along the coast there are hills. These are followed by a high chain of mountains, of which the highest is the Ḥudayr (a vast plateau). A second chain of mountains adjoins the main valley on the north and this runs up to the great desert. The two chains consist mainly of limestone and are as a rule barren; only here and there do we find small slate (alabaster) rocks, thorn-bushes and pastures.
The main wadi runs west to east and then to the south where it flows into the sea near the fishing-villages of Sabtah, which belongs to the land of the Ma'at. The most western town in the main valley is Shihwa. From Shihwa the road runs through a sandy and sparsely populated district to the isolated mountain al-Karm. To the left of this road, al-Karm rises to the hill of Dhaban (well cultivated) and Ste., and at the right the wadis Itras, Dihar and Rakhyah (the latter with the important town of Sabtah [Shihwa in Wrede]). To this wadi also belongs the Bahah ar-Rafid mentioned by Wrede, where in the midst of the desert, according to the observations of this explorer, all that is thrown in the sand; in the S. of the W. Dihar and Rakhyah begins the bend of the Awliblik. S.E. of al-Karm rise the two towns, al-Jall and Hamin (Hainan, Hailun or Niehlu), on the wadi of the same name, in Hamdan's time a large village with houses and inhabitants by the Tadjji. South of the Sabtah rise (on the right of the main wadi) the three wadis Amid (formed by the union of the two wadis Wur and Haredh, Amid in the town of 'Amid, Dawan-an and al-Ain (in Hamdan also called 'Alih). The important Wadi Dawan (a town of Dawan, mentioned by Hamdan [Bassoul in Prolemy], no longer exists) has a right (western) arm Dawan-an al-Amin and a left (eastern) arm (Dawan-an al-Ainan and Dawan-an al-Amar); the northern part of the Wadi bears the name Hajarin after the isolated mountain Hajarin which is the town of the same name near it. [v. n.]. The wadi is thickly populated. The most important place in this wadi are: al-Kharmat (the most southern town in the wadi), Sib (Sib, Sibit in Wrede), Dibha, Qadnun (Qadnun in Niehlu and Wrede) with the town of the greatest mint of Hajarmat, Abum (t. h., called 'Abid al-Dau), and Mehadh Ali with the so-called tombs of the kings: we may further mention of the other localities: al-Karratim, Aunan, Hoddun, Hobsin, Rahn and Arnawa, Not far from the confluence of the W. 'Amid and W. Dawan, lie the villages of 'Azad (in Hamdan the town Hadsaib), the town of the sultan), Raja (in Hamdan Raja al-Asbikhe), and Addhunai (called a large town by Hamdan). On the Wadi 'Amid is the important town of Hawra [v. n.]. From the town of Hamin up to the ancient and still important town of Shihwa [v. n.] the main valley is called Wadi al-Kast (in Hamdan also Wadi Kast Rasbika or Rasabika after the town of this name built on the top of a hill), to Shihwa Wadi bin Rashik or Wadi al-Akkur (also in Hamdan), also briefly al-Wadi (Hajarmat) or Wadi Ma'at. The most important town in Wadi al-Kast is Shihwa or Shihwa; Ghrufah, Tarin (Tir in Niehlu, Tyrane in Wrede, in Hamdan's time a large town), Sabtah, now the largest town and chief centre of learning, the very ancient town of Maryane, Bier, Taribah (Taribah in Niehlu, Tyrbah in Wrede), the ancient capital Tamir. [v. n.], Tatt (Tatt, on the Wadi of this name) and al-Kqarm. From al-Kassim Karim Hill is reached, the tomb of the prophet Hid on the Wadi Bishah [v. n., 653e 370]. West of Shihwa is the main valley we must further mention the important town of al-Kast. From Hawra to al-Kast the valley is thickly populated and covered with date-groves, gardens, fields, and many villages, from al-Kast to Karim Hill it is less populated and from Karim Hill to Sabtah the population is very small. Of side-wadis of the great valley there are still to be mentioned: (in the north) Wadi Farah (with Karim Shihab), al-Qasim, al-Qasimi (north of the latter east of Shihwa), Masa (east of Sa'ibun), Thubab (Thubab), al-Abid (the tomb of the saint Abid), and the west of Tarim, and al-Chobah (east of Tarim). In the south (the two important wadis) are: al-Abid (east of Shihwa) and Adam (Odam in Wrede, not far from Tarim). The more important localities on the coast in addition to the two great harbours al-Makib (q. v.) and al-Shirah (q. v.) are: Borkas (Birain, Berima, with a magnificent harbour, according to Springer identical with the Prinomos of Prolemy), Fujus (with 50 houses including a few of same size), Qalain (Hawratah with very fine tobacco plantations), al-Haim, al-Shihans and Kaskir. Of wadis on the coast may be mentioned: Dibha, Haimat and al-Ma'at. The chief wadi and the side-wadis are mainly dry and only swollen with floods in the rainy season.

Among mountains in Hadramawt we may mention Hawara (on the wadi of the same name), 'Abid al-Ainal Gharib, al-Fiyah, the Mutam al-Arabi already mentioned, Tamia (all in the south near the coast), al-Raja al-Majit (in the south of the Wadi 'Amid and Dawan), Haysib, al-Gib (north of Masa), al-Ma'at (in the south of the Wadi 'Amid), Salwa (with Hiz al-Ka' in the south of the Wadi 'Amid), Lijsan, 'Hamdan, al-Chub (in the north of the Wadi 'Amid and Dawan), 'Abid al-Ainal, Wadi Lijsan and Hamin, Dibha (with Bin Azab, ibid.), Dibha (both south of Sa'ib), Way (in the north of Tarim), al-Munufa (south of Tarim), (Qalain, see New, N.W. of Karim Hill). In the west of the northern mountain chain rises a large plateau, the plateau of the Sabat, whose name was born in Hamdan' time (by a fire breed of camel), to which a larger plateau Nadjin (Najib, Nadjin al-Kasir and Nadjin al-Awstam is linked up, both bound on the great Central Arabian desert in the north. In neither of these mountain ranges there is any place of the slightest importance.

The climate of Hadramawt is dry and hot, it summer it is very warm and winter very cold; even in summer it freezes on the high mountains. The rainy period starts from October to February, in which however it hardly rains four times; in many years there is absolutely no rain; in the coast the rainfall is more abundant. The products of the soil are: cereals, dhura, (a kind of maize), jokha (a kind of oats), dates, grapes, figs, peaches, apricots, Indigo, sesame and tobacco. The irrigation of the soil is artificially performed by irrigation wells. The houses are built of bricks, sometimes in the style of a haja; they are from two to four stories high and are loopholed. The Beduinit live in tents of canvas; there are some inhabitants in Hadramawt; not are there well-founded (famous) here, such as are found everywhere else in Arabia.

The ruling class in Hadramawt is the tribe (al-Ain). The chief of the tribes called (al-Ain) live in fortified palaces and maintain small garrisons. The wise citizens of the towns, who control the trade and industries of the town are called the (al-Ain), who levy oppressive taxes on them. The most powerful prince on the coast of Hadramawt is the ruler of al-Chib, ...
whom the towns of al-Makallat, Ghail Bawatin, al-Hajjarah, Hwaa, al-Ka're and Shibam also belong. IV. the interior of the mountains is called Kalash, who bears the title Sultan and owns the towns of Turain, Tarts and al-Ghutra. Hadramawt is inhabited by the following tribes: I. Banu, Bedouins with the hereditary title Shaikh in the country round Shabwa (a portion belongs to al-Shijy); II. al 'Amir, in the wadis of Tima and Dhub; III. Ban Kinds, Bedouins, divided into: Al-Safar (in the Raids al-Safar and the mountains around) and 2. al-Mahfuth (formerly in Hadjarah, now scattered over the adjoining mountains); IV. al-Karabih, Bedouins around Rakban on the Wadi Dibl, and al-Nab (on the lower part of the wadi Rakban and in the main valley as far as Khutha and Hainin (with ten subdivisions, of whom the Hukum is the most important; the chief of the Hukum, who lives in Khutha, is in command of the entire tribe); V. al-Balhaj and VII, al-Haidara (both Bedouins on the upper part of the Wadi Rakbi); VIII. the tribe of the Wadi Armaid, almost all Bedouins, on the Wadi 'Amid; IX. al-'Amid or Banu Ta'is (called after Shaikh Ahmad ibn 'Isa, 'Amid al-Dum) with the hereditary title Shaikh, on the Wadi Daw'an and on the Raids al-Dajeyn (with 22 subdivisions; the most important of which is the chief tribe in Sibha); X. al-Dhuwayrida (singing, dhaheir, and XI. al-B. Sa'id (both Bedouins, on the Wadi 'Amid and in the surrounding mountains), XII. al-Yaf', on the coast and in the towns of al-Haydar, Hwaa, al-Ka're and Shibam, divided into: 1. Al-Thobai (with 8 minor divisions); 2. Al-Liba'is (singing, al-Liba', with 4 minor divisions); 3. Al-Mubaid (with 8 minor divisions, of which the most important is the Ka' (singing, al-Ka'il), whose chief is head of the entire tribe); XIII. Shaibain, a large Bedouin tribe, divided into: 1. Saibain proper in the north and northwest of the Dhaheli Hawain; 2. al-Akbani (singing, al-Akbani), in the south and S.W. of the mountains mentioned; 3. al-Awliyaha (singing, al-Awliyaha), in the S.E. of the Wadi Daw'an; 4. al-Bahasa (singing, al-Bahasa), on the Wadi Dibl and the surrounding mountains; XIV. al-Humain, Bedouins in the mountains of 'Abd Allah Cherib, al-Fayh, al-Asha, Tamba; XV. al-Sharif, descendants of Shamsuf al-Humaini (according to the legend the first prince of Hadramawt), a large tribe, divided into: 1. al-Kathiri (Kathiri), between Shibam and Sa'iqin (with five large subdivisions, among them the Ab 'Abd al-Wadud, around Katab); 2. al-Awami (al-'Amiri), in the large valley between Sa'iqin and Tarts and the mountains to the north; 3. al-Dhbir, Bedouin tribe, in the mountains of Dibl and Diblina and the Wadi Bin 'Ali and 'Adin; the chief of the Shi'khana is the Sultan of Sa'iqin; XVI. al-Haijar in the N.E. of Sa'iqin between the Khair and Awami; XVII. Banu Thama (see al-Thama), divided into: 1. al-Tamun, in the large valley between al-Kaem and Khar Hid (their chief resides in al-Kam); 2. al-Mahdhi (Minhadi), a Bedouin tribe (the Wadi Masila between Khar Hid and Saibain and the mountains to the sea) and west (their chief lives in Tarts); 3. al-Simhi (singing, al-Simhi), a Bedouin tribe in the hills to the north of Wadi Ti'is.

Besides the jatun and jawjaa there is in Hadramawt another separate class of society, the Saiyida, who represent the religious aristocracy of the land. They are very numerous and enjoy a great prestige among the people, surpassing in number all the other inhabitants; they bear the distinction of being a strictly conservative and adherent to any innovation; they bear the title jatun and are divided into families whose hereditary superior bears the honorific title mawla. Many of the Saiyids are reverenced as saints and possess the divines on them, many are still alive and enjoy a great reputation as religious scholars. They bear no arms and as a rule pay no taxes. They consider themselves the highest nobility in Arabia. They trace their descent from the Shaikh Ahmad b. Ta'is mentioned above, who in his turn is said to have been a descendant of the seventh generation from Muhammad's grandson Husain. According to tradition, Ahmad b. Ta'is came several centuries ago from Bayda to Hadramawt with eighty men, who became the ancestors of the Saiyids.

The number of inhabitants of Hadramawt is not accurately known. According to Van den Berg's investigations, the total population is not more than 150,000, viz., from the Wadi Dhub to the Wadi Rakhi, 20,000, in the Wadi 'Amid, Daw'an and al-'Ain 25,000, from Shibam to Turain 20,000, from Tarts to the south of the great valley up to the Central Arabian desert 15,000, south of the great valley to the sea, 16,000, Shijy and the neighbourhood 12,000, Makallat and the neighbourhood 6000.

The trade is of importance on the coast particularly in the towns of Shijy and Makallat. It extends to the east coast of Africa, British India, the Red Sea, the south coast of Arabia (particularly Aden, Muscat and Zafar) and the Persian Gulf. The exports are: fish-fins (to British India and China), dates, cloths dyed with indigo, gunpowder and resin. Imports are: cottons, cotton, coffee, sugar, rice, cotton, iron, petroleum etc. The trade by caravans with the interior is slight. It stretches on the west as far as Yemen on the one side and on the other eastwards as far as Oman. In the larger towns there is a market every day and on the further days. The cardinals and representatives of the market of the larger localities, called shaitib (q.v., from the Arabs), called bila'il al-mas' [market-goys] by the people, who are appointed to sell their goods and who form a separate guild under an ashir (superior). The chief industry is the textile, which is now on the decline on account of the competition of cheaper European products; its great centre used to be Tarts. Besides the textile industry we may mention the manufacture of indigo and shipbuilding on the coast. Agriculture is in the hands of the Khabal' and the Saiyida, who have their fields tilled by slaves. The latter are as a rule Somalis or Nubians and are usually Muslims; they bear special names, which are distinct from the usual Arab names, e.g. Makarl, Mudaji etc.

The Haqami are an able, industrious people devoted to their native land. On account of the increasing poverty of the country many are forced to leave home and seek their fortune in foreign lands; many of Hadrami are to be found at the present day in the trading centres of Arabia where they earn a living as porters and petty traders, in Egypt and particularly in the English and Dutch Indies. As soon as they have acquired a modest
fortime, they return home after an absence of twenty to thirty years. They are ḫiḥāf and are exceedingly fanatical and superstitious; they believe in spirits, which haunt places where treasure is buried. Christians and Jews may not even make their graves on their land, which they have named Batul al-tawālum ("land of knowledge and of faith"). Their women, who (even those of the ḫiḥāf) are as a rule ignorant of reading and writing, enjoy a better fate than their kinswomen in other parts of Arabia. Divorces are exceedingly rare, and polygamy practiced among these Bedouins.

Ḫadūr was first visited in 1853 by Adolph v. Wedel, who could only explore a part of the land, as he was recognized as a European in the town of Sīf and only managed to escape the death that threatened him by a hurried flight. Fifty years later Leo Hirsch and Mr and Mrs Th. Bent visited the country but could not explore the land to its full extent.

**ḪADŪR (ḪADŪR NABĪ [NEḤĪR] ṢHUṬI), a mountain in South Arabia, belonging to the Sāhid group of Alhāk, in the west of San'a [q.v.], between the Ḩālī Sahám and the Wādí Sūr. The mountain is separated in Ḫamād's time by the Ḫabūl al-Makbūs (now Ḫamād), a branch of the Ḫamād, from the Sāhid (q.v.) inhabited by the Sāhidū (a branch of the Ḫamādū). The Ḫadūr is derived from Ḫadūr b. Abī b. Ṣanā'ī', an ancestor of the prophet Ṣuṭaḥ b. Ḥilāl, mentioned in the Qur'an (Surah viii. 83 of esv. and al. 85 esv.) who was sent to preach and to warn his people on Mount Ḫadūr and was thereafter slain by them.

The mountain is about 4500 feet high; according to Arabic tradition, Ḫadūr Ṣuṭaḥ was the highest of the three mountains (the other two were Ḫaydūlal Shārāb [Ḫiḥāf] and Kusīn al-Khāzār in Ḫamād [q.v.]), which stand above the waves during the late period. The highest peak of Ḫadūr is the Ḫabūl al-Makbūs, also called Ḫabīb Bait Khwāṣīṭa, which is the celebrated tomb (with mosque) of the prophet Ṣuṭaḥ, which is always much visited (particularly by young women who have to be crowned of sesame here); on the last day of Ramaḍān and on the festival of Al-Arāf, great festivities are arranged here. From the terrace of the mosque a splendid view is obtained over the whole Yemen, 500 yards W. by N. of Ḫabīb al-Makbūs, towards which are the mountain of Ḫabīb, Ḫamād al-Manjīr and Ḫamād al-Dabāyn (with the village of the same name and ancient ruins). Ḫabīb al-Makbūs lies to the south of Ḫamād.

To the east of Ḫadūr lies the Kā'ba Sahám, with the villages of Maṭyūn (Mā'ītun in Niebuhr), called Ḫān Sīnāb by the Turks (8000 feet above sea-level), with a mosque (ishtarhouse) and to have been built by Sinān Panha, who is open free to all travellers), Sahám (also called Marīy), Bait Maḥṣūm, Bait Rādīm, Dī'ah, Masayb (Masayb), but Kūhān, which now belong to the so-called Bedu al-Māṣrūn.

The following localities in Ḫadūr may also be mentioned: al-Kūhā ("the village"), Rukh or Rukab (north of Kūhā), Ḫaḍīl (in the N.W. of Ḫadūr), the Sūq (Ḫīla-[village] Zuhr or Debrū in the south. The range is traversed by numerous wādīs (among them the W. Bīrūr and W. Jāsāıl, which latter is often mentioned in the South Arabian inscriptions), which flow into the large wallas Kūhā, Sūrūd and Saham. In the valleys of the range excellent mines are found in addition to various fruit-trees; in the deeper parts of the Ḫadūr the caves particularly known are dulka (a kind of millar), barley and hay (a kind of wheat or corn).

On the Ḫadūr Shar'tī it mounts almost every winter and the snow often lies for days several feet deep so that the inhabitants cannot leave their houses.

In the time of the Mūkhaṭṣṣf Ḫadūr comprised amongst others the districts of al-Māṣrūn (see Müller, Ḫaḍīl, in several—passages, which he equates with the Ḫaḍīl of the South Arabian inscriptions, for Glaser's Ḫaḍīl, consisting of Wādī Ḫaḍīl Sahám and al-Māṣrūn proper [Ḫaḍīl], Sinān Shāfīn (including the 'two gardens of Yemen', Kūhā and Sahám), Kūhā and Ḫaḍīl, Shām (lower part), Māṣrūn, Wādī, Aglayma, Barāṣā, Masayb, al-Šayb. The hard white honey of Ḫadūr was famous in Arabia; it is even mentioned by Ibn 'aṭ-Ṭabi in one of his poems. The people of Ḫadūr according to Ḫamād spoke bad and clumsy Arabic (Mityāri.)

The Ḫabūl of the Banū ʿAzīz, called Ḫabūl al-Makbūs, is distinct from Ḫadūr Ṣuṭaḥ and is the largest mountain of the Sāhid group al-Maṣjīd (al-Šaibānī's). It is about 9000 feet high.

The Ḫadūr Ṣuṭaḥ and that of the Banū ʿAzīz have been visited and explored in modern times by the archaeologist Eduard Glaser.

**ḪAFIZ (n.):** the guardian, the protector, one of the names of God, cf. t. 303. When used of one Ḧafiz is one who knows the Korān by heart, literally "preserves it". In the memory.

**ḪAFIZH (m.):** a Persian 17th cent. poet. His real name with Ḫafiz was Shams al-Din Muḥammad.
He seems to have been born in Shiristan, not earlier than 1320 A.D. Practically nothing is known of his parents or other relatives; he never explicitly mentions them in a way that is free from ambiguity (a sister and her children are referred to without mention of names over two centuries later in Ferishta's History, ed. Briggs, Bombay 1871, Vol. I, p. 577). In his youth he learned the Kuran by heart (jaff), devoted himself to the study of theology and allied subjects and obtained an excellent knowledge of the Arabic language and literature. In later years he mentions (Ferishta, ed. Brockett, No. 570) as a reminiscence of the reign of the Turk Shahi, Abū Nāṣer-bi Jughi, the king of Fars, four notables of Shiristan, whom he had apparently known personally: ‘Abd al-Din Abū al-Ra'ūs bi Jughi, died 1315; (cf. Brockelmann, Gesch. der Arab. Litt., ii, p. 208-209), probably his tutor; the chief judge of Shiristan, Mas'ud al-Din 'Imād bi Mūhammad b. Khudaitiz (died 17th July 1355), Divān, ed. Brockhaus, N° 549; (cf. Ibn Rujū'ī, ed. Tūsinwī, ii, 54-59), a jurist, otherwise unknown, Shah of Khorasan, who had a considerable influence on the political and religious conditions of Shiristan's more liberal outlook; and lastly Haftāg Kiwan al-Din Hāfiz (died 11th May 1353), a high favourite at the court, a noble spirit, philanthropist, to whom Hāfiz seems to have been indebted for material support, either directly or indirectly (Brockhaus, N° 610; Mīrkhwând, Kamāl al-Ṣafâ, Bombay 1891, ii, p. 144).

In 1353 the vigorous Sultan Mulṣūr al-Din Muhammad (q.v.) of the Muqaffarid dynasty conquered the province of Fars and fatefully took Shiristan also (2nd Nov. 1353) to his greatest misfortune of his citizenship; Hāfiz himself was unable long to put up with the changed conditions. Mulṣūr al-Din was a strict ruler who forbade the people of Shiristan the enjoyment of wine. There was also a religious ground for discomfort in his reign. He was a Shi'a (Divan-i Hāfiz, ed. Calcutta 1791, text fol. x-2v), although no fanatic. 'Ali al-Ridā is celebrated by him as Shāh-Sultan of Khorasan; Hāfiz belonged to the Shī'ite sect of the Twelver (Akhūn 'Aṣṣariyyah, cf. the kāfī in Cod. Pers. Monemmati, No. 69, fol. 9-10v; Cod. Pers. Monemmati, No. 86, fol. 63-64v) and in one passage his belief in the Kuran having existed from eternity (kudān) appears (Brockhaus No. 689, Bait 119, which belongs to the last two years of the poet's life). Hāfiz breathed more freely when the relentless Mulṣūr al-Din was deposed by his son Dijāl al-Din Shīh Shadlī (1358), and the new government again allowed greater freedom for the free enjoyment of life. Hāfiz by this time was a notable literary figure. He had previously sung the praises of Mulṣūr al-Din's vizier, the sultan's father, Barbaḍ al-Din Fadl Allah and now lamented the death of the vizier Abū Nāṣer Lutf Allah (died 29th Oct. 1358, Cod. Pers. Monemmati, No. 67, fol. 125-9). It is therefore a surprise and a fallacy that among Hāfiz's friends was the new vizier and former master of the mint Khwāja Kiwan al-Din Muhammad. Hāfiz (Ali 1355-1359-26th August 1365), a man who steered the ship of state with dignity and great authority. When the minister was ultimately executed with great barbarity by his sovereign, he was lamented by Hāfiz (Brockhaus N° 605) although the latter is careful to avoid the wrath of the tyrant. Hāfiz was professor of Kuran exegesis in a madrasa in Shiristan (Dīwān-i Hāfiz, ed. Calcutta 1791, 2nd Intro., p. S, L 5) and need of patrons of high rank; for his property had long since slipped away from him, and too many, who professed to be his friends, did not hesitate to enslave him. It is said that when Samū'ī bowed down to him (Brockhaus N° 629, N° 412, Bait 16). In 1791 (1239), perhaps however not till 1733 (Hein. 20th Dec. 1389), Hāfiz died in Shiristan.
Hafiz is the greatest writer of ghazals and the finest lyric poet that Persia has produced. He is restrained in his love-songs and avoids the obscene. As a singer of the joys of wine he is unequalled by his predecessors or successors in the East. Of contemporary authors Hafiz only mentions the panegyricist Salmau (Brockhaus, No. 612) and of the older poets Firdawsi. The general line of thought in his poems raises the question whether Hafiz's untried praise of love and wine is to be interpreted in the Sufi fashion as a profession of Muslim Pantheism. Apart from occasional exceptions, the answer is in the negative. It is also said that Hafiz belonged to a Dervish order (which?); but we have no reliable literary authority on this point.

A number of Hafiz's poems particularly of the earlier period have certainly been lost. After his death, his friend Muhammad God-and-Don collected the scattered poems, arranged them in the original Dinâm and gave the whole a praise. This fact of the posthumous arrangement of the Dinâm by a strange hand explains the numerous variations in the number, the order as well as the text of the poems in the manuscripts, a circumstance which moreover is of importance for selecting the contents of the original Dinâm of the year 770 and completing the poet's biography. Relatively the most complete is the printed edition of Abbâ Tâlib Kâne (Calcatta 1797: 725 poems) but it is full of errors. The most carefully prepared from the point of view of textual criticism is that of Hermann Brockhaus, based on Sudi's manuscrit (Leipzig 1854-1863: 604 poems). Of commentaries four Persian and three Turkish are known with their authors' names (Ehâd, Grundr. d. iran. Phil., ii. 303, 304: cf. also Nos. 1142 and 1143 of the Catalogue of the Hamidiye Library. in Constantinople, 1300 A. H.). The best of all the commentaries on Hafiz is the Turkish of Sudi (died 1561-1562), which has been often printed; he however omitted the few short poems of Hafiz.

We possess three complete translations of the works of Hafiz: two in German: 1 by Joseph von Hammer-Pargdoll (2 vols., Stuttgart and Tübingen, 1812-1813) and 2 by Vincent Ritter von Rosenweig-Schwannau (in 3 vols., Vienna 1858-1864) as well as 3 an English one by H. Wilberforce Clarke with valuable notes (3 vols., Calcutta 1891). Hafiz has inspired Western literature in Goethe's Westlicher Dindam (1819) and in Friedrich Rückert's Die Dindam der Mickschafi. Besides his poetical works Hafiz left glosses on Zamakhshari's Kâshf-l, and on the Mishkât (von Dinâm, ed. Calcutta, 1791, p. 8).

Hafiz Ahmad Pasha was the son of a mu'addhin native of Philippopolis. Owing to his rare accomplishments as a musician and a poet, he was employed at the imperial Serai and became the confident (mu'addin) of the Sultan. After quitting the court service he was appointed daghanligi bakhshi and appointed Grand Admiral (begunlar bakhshi) 25th Shawwal 1018 = 12th December 1609, but he was dismissed in 1019. As Governor-General (begarkedig) of Damascus and remained there till 1027 (1618). While he was there the first insurrection of the Druzes headed by Bekir al-Dün broke out and Hafiz Ahmad Pasha, specially distinguished himself at this period. He remained governor of several more Anatolian provinces, till we finally find him governor of Diyarbekir. In this office he managed to suppress the revolution headed by Bekir Şahbaz, who had seized Baghdad, but he could not prevent Shah Abbas from entering the city on the 28th November 1025. After the death of Cereis Muhammad Pasha (died 18th Rabı II 1034 = 28th January 1625) Hafiz Ahmad Pasha became his successor as Grand Vizier; he was at the same time commander in chief of the Ottoman Army at war against Persia. In the following year he besieged Baghdad for 8 months (from the 14th Safar to the beginning of Shawwal 1035 = 13th November 1025—beginning of July 1626) but without success. Owing to his lack of success he was relieved of his functions and returned to Constantinople where he was made second Vizier of the Caliphas. Though 60 years of age he now married a sister of the Sultan.
A few months after having been appointed Grand Vizier for a second time (22nd Rabii' 1 1044 = 23rd October 1637) he was put to death in a most atrocious manner by mutinous Siyâhs (10th Rejâb 1044 = 10th February 1632) in the presence of the Sultan himself, who had in vain tried to rescue him. Historians and men of his time specially note his strength of will, his upright and generous character, qualities that raise him far above the other statement of his era; it must be confessed however that both as Grand Admiral and commander-in-chief he had nothing but defeats to report.

**Bibliography:** Besides the short biographical notices in Hâfiz Khalifa, Fâlîkhi, li. 148 et seq. (on which Mâneel-i-imtâz b. 1626 et seq.), Osmâniye-i Tâhir, Hâfizâl-i Amireddâr, p. 73 et seq. is based) and in the Siyâhs' *Wasâlât,* li. 98 (inexact in its dates), there should also be consulted the passages relating to the history of this period in the chronicles of Poço, Hâfizâl Khalifa (Fâlîkhi, Hâfizâl-i Amireddâr, p. 73 et seq. is based) and in the Siyâhs' *Wasâlât,* li. 98 (inexact in its dates).

**Hâfiz al-Dîn** (q.v.), **Hâfiz al-Mulk.** (See Hâfiz Rahmat Khan.)

**Hâfiz Rahmat Khan.** During the latter part of the 17th century, and the first part of the 18th, extensive settlements of Afghans were made in the fertile lands of the Ganges valley. In the troubled times which followed the death of Awrangzeb, and especially after the invasion of Nadir Shah, these brave and turbulent settlers began to form states under successful leaders of their own race and were generally known by the name Rohilla (properly Rohillah) or Highlanders, a western Panjâb adjective from roh, a "hilly country," and the territory lying between the Ganges and the Himalayas, now comprised mainly in the Bareilly Division of the United Provinces, obtained the name of Rohilkhand, although the intruders spread beyond its limits. Three families in particular stand out among these chiefs, the Baroz of Amda and Bareilly, the Bangash of Farrukhabad, and Nadir Khan of Bijnor who was also connected with the Baroz. Among these Hafiz Rahmat Khan Baroz was perhaps the most important. He was the son of Shah Khan, a Baroz whose family originally from Shikarpur (now included in British Baluchistan) had settled first in Cachar on the Indus, and afterwards in Hindustan. A slave of Shah Khan (his son according to some writers) named Khâlil rose to a position of importance in the court of Khâtîr (afterwards Rohilkhand), and was succeeded by his son (or adopted son). "All Muhammad, commonly believed to be by birth a Hindu Dîj. Shah Alamin followed. "It is to his new country and three Rahmat Khan was born about 1150 (1708). Four years afterwards, probably at the beginning of Farrukhabd's reign, Shah Alamin was murdered by Dîj's orders, and Dîj himself was killed soon afterwards. All Muhammad attempted to develop the new state, and after his success against the fallen Sayyids of Bâzâr at the siege of Djamath in 1150 (1723) he received the title of sârazmî. Rahmat Khan was now associated with him and by his ability and courage contributed to the increase of his dominions especially after Nadir Shah's invasion. "All Muhammad was soon at enmity with Saftar Dîj, Nawab of Awadh, whose influence in the Empire was now paramount, and in 1155 (1746) he was defeated and taken as a prisoner to Dîj. Rahmat Khan however by a bold stroke suddenly appeared at the capital with all his forces at a moment when it was destitute of troops, and not only obtained the release of "All Muhammad but his appointment as Governor of Sirhind, so that when Ahmad Shah Durrani invaded India in the following year he was in a position to recover his lost dominions. After the accession of the Emperor Ahmad Shah to the throne of Dîj in 1163 (1748), "All Muhammad made peace with Saftar Dîj to whom Rahmat Khan rendered important services in obtaining the post of Wazir of the Empire. In this year "All Muhammad died having appointed Rahmat Khan to be Hâfiz or Guardian of his sons, Daud Khan his cousin to be commander of the troops and other relations to other important posts. The elder son A'ib Allah, the younger Shah Abd Allah were bishops of Ahmad Shah Durrani, and the others were minors. Hâfiz Rahmat Khan became the actual ruler, and continued as throughout his life, his recognition of the claims of "All Muhammad's family being of little more than nominal. Saftar Dîj soon resented hostilities, as the Rohilla states stood in the way of his ambitions. After failing in a direct attack on Hâfiz Rahmat Khan he induced Kâms Khan the Bangash Nawab of Farrukhabad to attack him, offering him the Sâbâ of Kathe to a reward. Kâms Khan however was defeated and slain at Balûtan, and Hâfiz Rahmat Khan annexed that part of his dominions which lay north of the Ganges. Saftar Dîj without any scruple immediately began to insult and plunder the family of his late ally, and the Rohilla chiefs incensed at this (being mainly connected with the Bangash Pathans) joined in the war. Hâfiz Rahmat Khan himself was at first unwilling to take part in it, but did so after a force under Sa'd Allah (a son of "All Muhammad) had been defeated. The Wazir Saftar Dîj was supported by a powerful Malhât army and by the Dîjas, and the forces of the two Pathan States could not make head against them. Hâfiz Rahmat Khan lost Kûl on and Mokhîl and was forced back to Lâlâbâd on the Taz in the heart of the Himalayas. The advance of Ahmad Shah Durrani however in 1166 (1752) induced the Wazir to make terms with Hâfiz Rahmat Khan agreeing to pay tribute to him as ruler of Awadh, and also giving a bond for 50 lacs of cash to be paid to the Malhât. Ahmad Shah insisted on the recognition of the rights of "All Muhammad's sons who were with him, and a partition of the territory was made, an arrangement which did not last long. Hâfiz Rahmat Khan extended his rule over Pilibhit (renamed Hâfâsîâbâd, by him), and this town with Bareilly becomes his principal residences. After his unfortunate he soon became more powerful than before. His adversary, Saftar Dîj, who had lost the post of Wazir, retired to his dominions in Awadh and died there in 1167 (1754). His sons Fadja and Na'liwâ were at this time allied with Hâfiz Rahmat Khan, and the two combined to resist the Malhât army which had been bâ
stigated by the new Wazir Ghazi al-Din to attack the powerful Shafata leader, Nadir al-Dawla, in Bihār. After the murder of the Emperor Alamgir II, by Ghazi al-Din, the Durrānī king again marched into India, calling upon all Muhammadan chiefs to combine in resisting the growing power of the Marathas. Häfiz Rahmat Khan contributed a force, and his son 'Ubayd Khan and his cousin Daud Khan took part in the battle of Parnāt in 1774 (1776). In reward the conqueror assigned the Eua district in the Doab to Häfiz Rahmat Khan, but it was still held by the Marathas and he had to conquer it for himself. The Awadh attacks on the Bhangah chiefs of Farrukhabad soon recommenced, and Nadir al-Dawla, now Wazir, was allied with Shujā' al-Dawla in this enterprise, but Häfiz Rahmat Khan took the side of Farrukhabad, and was able to prevent its accomplishment. In the following year however he allied himself with Shujā' and attacked 'Ali Khan of Benga against the English, taking part in the attack on Patna and the battle of Buxar (Bārsar). After his defeat the Nawab of Awadh found a refuge with Häfiz Rahmat Khan at Bareilly, and after his further defeat at Kāthā he made terms with the English, but no attempt was made to interfere with Häfiz Rahmat Khan whose prosperity continued for some years longer, although the Marathas danger was never absent. His administration was good and he was especially praised for his abolition of transit duties. His position was however precarious, and no reliance could be placed on any treaty or alliance among the rulers of that period. Nadir al-Dawla in 1771 joined with the Marathas in attacking him, the Farrukhabad State, and Häfiz Rahmat Khan was not able to retain his late acquisition of Eua. His son 'Ubayd Khan rebelled against him at this period, and died soon after.

The death of his comin Daud Khan was a blow to him, and the death of Nadir al-Dawla made matters worse, as his son 'Abdul Khan soon himself became an agent of the all-powerful Marathas. To understand the events that followed, the universal terror inspired by the Maratha power must be realized. The English East India Company, late that year, determined to prevent the whole of Northern India falling into the hands of this race was to establish a strong Muhammadan State capable of resisting their perpetual raids, the Empire of Delhi having ceased to fulfill this function, and the State of Awadh under the Nawab Shujā' al-Dawla was the only one likely to develop the necessary power. Häfiz Rahmat Khan, to promote this object bound himself to pay 40 lakhs of rupees to the Nawab to be used against the Marathas. His agreement was made in the presence of the British General, and by the joint efforts of the allies the Marathas were for the time repelled. Häfiz Rahmat Khan, however, did not pay the stipulated sum, and the dispute speedily developed into war in which the Awadh army was assisted by a British force. Some of the British condemned their leader's action, especially Fāiz ʿAlī Khan, son of 'Ali Muhammad, and the son of Daud Khan took no part in the war. The Awadh army and the British forces after expelling the Marathas from Eua invaded Rohilkhand. Häfiz Rahmat Khan met them at Mārtiapāt Kārā, but was defeated and killed in the battle of 1183 (1774). His territories with the exception of Rūmpur were annexed to Awadh, and Rūmpur was given to Fāiz ʿAlī Khan, and continued to the present day to be ruled by his descendants. The story of wholesale depopulation of the province which were circulated at the time by the opponents of the Governor General, Warren Hastings, are void of foundation; the mass of the population was unarrested by the change of masters, and Mubābud Khan, son of Häfiz Rahmat Khan, in the Gallutānī Raḥmat, was given countenance to such charges. The whole subject has been fully dealt with by Strachey.

**Bibliography:** Gallutānī Raḥmat by Mubābud Khan (trans. C. Elliot, Life of Häfiz Rahmat Khan, O. L. F., London 1834); Nāsib Vār Khan, Guft Raḥmat (trans. in Elliot and Dowson, Hist. of India, London 1877, vol. VIII); Franklins, Reign of Shāh Aḥmad (London 1796); Mill and Wilson, Hist. of India, 3rd ed. (London 1856), vol. III; Keene, Fall of the Mogul Empire (London 1887); Nevill, Gazetteer of Khartoum (Allahabad 1911); Imperial Gazetteer of India, Calcutta (Provincial Series, United Provinces and Oudh, vol. I); Strachey, Hastings and the Rebellious War (Oxford 1862); Hamilton, History of the Rebellious Afghans (London 1878).

**HAFIZĀBĀD.** Town in the District of Gajjarwala, Pandjāb 32° 41' N., 73° 41' E. Founded by Hāfiz, a favourite of Akbar, and mentioned in the A’im-i-Abbārī, as the chief town of a Mahāli. Formerly the Taqāl of Hāfizābad was entirely in Gajjarwala, now partly in Jhelum. The dry tracks are irrigated from the Sināh canal, and there is also a fertile marsh near the river.

**Bibliography:** Ahmad Abbāsī, trans. Blochmann (Calcutta 1873); Imperial Gaz. of India, vol. XIII.

**HAFRAK.** A district in Fāra, in the plain at the conference of the Pulwar Rā ḍ and the Kār. It is only mentioned by Ibn ʿAlī Muhammad (in Strange, p. 66 and 113) and seems to be unknown to the older Arab geographers. At one time it was sought to recognize in the "Hafirak," the name of a district derived from the name of the Elamite people Ha-piri. This was in the first place geographically very unsuitable, but it is now quite untenable, since V. Scheïl has shown that the character "ś" in the name Ha-piri is also transliterated "ṣ-am" and the Elamite name of the Elamites is to be read "Hašami" and not "Hapiri," cf. Scheïl, Qu. Lit. Zeit., viii. (1905), 203 and 230 et seq.; Dīlīy, in Revue Énôscr., Vol. ii. n. xiii. and xvii. (1913); Weisbach, Kölnnas, d. Akadems., in Fors. Ak. Bīt. (1911), p. 143; Ziehers, d. Deutsch. Morgenl. Ges. xvi. (1913), 292 et seq.; Nöldeke in Grundriss d. Iran. Phil., ii. 340. Hafark is not identical with the district and town of the same name of Kārūn, the modern Khur (south of Sarawat, west of Faqīh) on the same compelled by Nadir Mīrāf Shīyāh Ḥasan al-Shirāzī. From the Arabic Khārā and the modern Khārā and the name may be supposed to have been Khārā. The etymology of the name may therefore be connected with Hafarā.

(E. HEBREW)

**HAFS A. ABDULLĀH,** [see also SALAMA, 1. 106].

**HAFS A.-FARD.** Abdʾumr or Abdʾyi, an Arab theologian, according to the Fihrist, p. 180, was a native of Egypt and went to Baghdad.
where he became a pupil of the Mu'tazili theologian Abū Ḥāfīẓ ibn al-Ṭayyibah (q.v.). According to another account he met and stayed with the son of Abū Ḥāfīẓ ibn al-Ṭayyibah and afterwards went over to the Mu'tazilis. He had many disputes with the Imām al-Shāhīd, but had little good to say of his and called him Mustafarīd ("isolated, solitary") instead of Fārd. (See H. Bauer, Die Dogmatik des Ġamīlī, p. 190.) But he is said to have afterwards returned to orthodox, as did al-Ṭaḥṣilah after him, and to have professed the shahīd al-ṭafṣil (that man's actions are caused by God). The Fārīdīs and the Shāhristānīs also numbers him with Fādīrī and the Maghāribīs (school of absolute determinism) and quote six works by him, including one against the Mu'tazilis and another against the Christians. Cf. also Hurton, Die phil. Systeme der spät. Theologen, p. 499, and the literature given there. (H. Baur.)

Hafsa, daughter of the Caliph 'Omar and wife of the Prophet. She was first in her tribe the Karajjih Makkah b. Ḥudayfah, who had died childless in Medina soon after the battle of Badr. She must then have been about 20 years of age. Muhammad, who wished to secure 'Omar's co-operation, married her after the "day" of 'Uhud. She was once repudiated, it is not known on what grounds, but was restored to favour by divine command in consideration of her Muslim virtues, i.e. her devotion to prayer and fasting. In reality the Prophet feared to estrange 'Omar. In Muhammad's harim Hafsa took the side of 'A'isha against his other wives and threw her whole influence into the hands of the "mother of the faith," but she was party, which was endeavouring to secure the succession to Muhammad for Abū Bakr and 'Omar. Like the other wives she received her share in the booty of Khallaj and on Muhammad's death an annual revenue which was entered in the Diwan and amounted to about 10,000 dirhems. On the whole, even in her father's Caliphate, she played a very modest part in striking contrast to the versatile 'A'isha. On the occasion of the saḥima, of the "judgment" of Adhirah (q.v.), Hafsa induced her brother, the insignificant Abū Ali, to appear as a claimant to the Caliphate. She was agreed to be the mother of his 45 in the register of Marwān b. 'Abd al-Hamid aged about 60. Her marriage with Muhammad was a childless one.

Hafsids, a Berber dynasty of northern Africa, which ruled in Ifrythia for over three centuries (626–681 = 1228–1574). It took its name from Shakh, Abū Ḥāfīz, son of the Caliph 'Abd al-Mumin, chief of the Hisāta, one of the first of the families of the Tuaregs and one of 'Abd al-Mumin's most faithful lieutenants. [Cf. the article AMMAHIN, l. 370.] His descendants enjoyed such esteem that, according to Ibn Khaldūn, they alternated with the descendants of 'Abd al-Mumin as governors of Spain, the Maghrib, and Ifrythia. It thus came about that Abū Mu-
This brilliant epoch was followed by one of disorder and anarchy. Al-Walīd ibn Muḥammad's successor, was disposed by his uncle Aḥmad ibn Aḥmad (678 = 1279); the latter driven from his capital by the usurper, Ibn Aḥmad 'Amara, was slain near Bougie in 682 = 1283. The 'Hafṣids' empire itself soon became the object of the rivalry of the 'Alids', both of Tunis and Algiers, where Aḥmad Haṣan ruled, and of that of Bougie (q.v.). The succession (696) held by Aḥmad Zakariya (693 = 1294). After twenty-three years of intermittent warfare, in which the Arab tribes of Ḥirīya, and the Central Maghribi, and the 'Abd al-Wadīl of Tlemcen joined, peace was finally restored. An agreement concluded between the king of Tunis, Aḥmad 'Abd al-Muḥammad, b. al-Walīd, and Aḥmad ibn Haṣan, Sultan of Bougie, stipulated that the whole empire should fall to one of them on the decease of the other. Aḥmad ibn Haṣan was thus able to restore 'Hafṣid unity to his own advantage but only for a short time, for in 1311, Aḥmad Zakariya b. al-Lihyānī, a 'Hafṣid prince, seized Tunis and left Aḥmad ibn Haṣan without a claimant, Aḥmad Yahya, set himself up in Bougie. In 728 = 1328, however, Aḥmad Yahya succeeded in regaining Tunis and reunited Ḥirīya and Central Maghribi under his sway. His position still remained very precarious however. Forced to fight the Kāwīb and other Sulaymī tribes allied with the 'Abd al-Wadīl, as well as Aḥmad Dora, the ex-Sultan of Tunis, Aḥmad Yahya was driven from his capital on four occasions. He finally overcame his adversaries with the support of the Marinids, with whom he contracted a close alliance. A 'Hafṣid princess married Aḥmad ibn Haṣan, son of al-Sāḥib, Sultan of Fṣa. By the end of his reign, Aḥmad Yahya had succeeded in restoring order in Ḥirīya; he had reduced to obedience the towns of the Djarīd, which, taking advantage of the disorder, had constituted themselves independent principalities, and, although Tripoli was ceded to him, he at least succeeded in regaining Djarīb, which the Christians had seized at the end of the preceding century (cf. Djarīb, sukkūl al-djarīb).

On his death in 747 = 1346, disorder broke out once more. The massacre of the 'Hafṣids' princes by Aḥmad Haṣan, who had usurped the power to the detriment of the legitimate heir Aḥmad ibn Aḥmad, provoked Marinid intervention. Sultan al-Haṣan advanced on Ḥirīya, occupied Constantine and Bougie and entered Tunis, which had been abandoned by Aḥmad Haṣan (747 = 1347). But being defeated in the following year near Kairouan by rebel Arabs, and recalled to his own country by the rebellion of his son Aḥmad Yuhanna, the Marinid Sultan could not retain his conquests. 'Hafṣid princes re-established themselves in Bougie, Būne and Constantine. One of them, al-Full, even re-entered Tunis, but fell a victim to a plot led by his vizier, al-Tāfarādīn. The Marinids besides were again able to invade the 'Hafṣid kingdom. Aḥmad Yuhanna besieged Bougie in 1353; Constantine, Būne and Tunis in 1357 (758); but when he attempted to check the excesses of the Arabs, who only saw in these facts a pretext for devastation and plunder, he found himself abandoned by his army and had to evacuate Ḥirīya. The 'Hafṣid Aḥmad Yuhanna seized the opportunity to re-enter Tunis.

The situation of the kingdom nevertheless was still deplorable; anarchy continued. Three princes were reigning simultaneously, Aḥmad Yuhanna, Aḥmad Alī at Tunis, Abū 'Abd al-Muḥammad at Bougie, Abū 'Abd al-Muḥammad at Constantines. The latter finally remained sole ruler (770 = 1368-1369). He, endeavouring during his reign to restore peace and order, placed a curb on the turbulence of the Arabs, forced the Shāhid of the Djarīd, Gafa and Goufe, to submit to him. This restoration of 'Hafṣid power continued in the reign of Abū 'Abd al-Muḥammad (792 = 1393-1394), who held the balance of power in the Maghrib. He was thus able to intervene at Tunis, first in favour of the pretender Abū 'Abd Allāh against the Sulṭān Abū 'Abd al-Muḥammad, and again in favour of Abū 'Abd al-Muḥammad himself. After the death of this king he seized Tunis and placed a Zayyān prince on the throne, who recognized the suzerainty of Tunis (1431). Reviving the tradition of his ancestors, Abū 'Abd Allāh was a literary ruler and friend of the arts. Al-Kairawān gives a long list of all kinds of buildings (mosques, madrasa, schools, libraries and hospitals), built under his auspices.

His successor Abū 'Oẓūr Qāḍīm (1434-1494), Abū Zakariya Yuhanna (692 = 1494-1495), Abū 'Abd al-Muḥammad (699 = 1495-1526), patrons of literature but lacking vigour, allowed the 'Hafṣid power once more to decline. By the end of the xvth century Constantine, Būne and Tunis had regained their independence; Tripoli, Goufe and the townships of the Djarīd had constituted themselves republics, and the Arab tribes of the interior refused allegiance to the Sulṭāns of Tunis.

During this period the 'Hafṣid sovereigns observed a policy towards Christians identical with that of their predecessors. The trade of commerce continued in the xiiiith century with the Genoese and Plautus, were renewed in the xivth, others were concluded with Aragon, Majorca, Montpellier, Venice and Florence. Tunis, Būne, Bougie, Sfax, Goufe and Djarīb had already (q.v., ii. 1177) where Christians merchants stored their goods. But the acts of aggression committed by Christian powers (occupation of Djarīb, attack on Mehdīya etc.), on the one hand, and the increase of piracy on the African coast from the last years of the xivth century on the other, rendered friendly relations more and more difficult to maintain. The ports of the 'Hafṣid kingdom became the regular refuge of the corsairs; the kingdom itself was exposed to the reprisals of the Spaniards, when they thought of establishing themselves on the most important points of the African coast.

They were, however, anticipated by the Turks. In 1534 Khair-ad-Dīn [v. KHĀİR AL-DĪN], in response to an appeal by a 'Hafṣid prince, who had escaped the massacre of his brothers by Muḥammad Hassan, successor of Abū 'Abd al-Muḥammad, seized Tunis. Muḥammad Hassan was able, however, through the support of Charles V., who took Tunis in 1535, to retain possession of his kingdom, but he had to pay tribute to Spain; he was moreover only able to maintain his position, in his capital with the help of the sultan of La Goulette. With the exception of a narrow strip of land between Tunis and Bizerta, the whole of Tunisia slipped from his rule. He was finally deposed in 1560, when Kuli [II] took Tunis to prevent the Spaniards using the town as a base of operations against the Turks. As a result of the victorious expedition of Don John of Austria, the
Hafsid regained the throne for the last time in 1523, but the next year Sufiya Pasha took Tunis and La Goulette (1528 = 1574). The last representative of the Hafsid, Muiyid Muhammad, was not captive to Constantiopolis and the Turks definitely established themselves in Tunisia. 

HAIDAR (x) manifestation. Even in pre-Muhammedan times, the demonizing of the other term in the Westmay of Wallhayan, Ra's al-Mahdiyya, p. 160, note 6) could not shake the facts and sacrifices and this remained the case in Islam. During this period a woman is ritually impure; may not perform the qarya nor the jawz, may not fast, nor touch a ka'bah, nor weep a tawzi. Cf. Yuwamull, Handbuch der Islam. Gesetze, p. 174 et seq. Shi'a only became ritually pure again on the completion of her courses after a major ablution (ghazal, p. 37, II. 167). According to Qur'an, ii. 222, sexual intercourse with her during this period is forbidden, but it does not reverse the legal law (Lev. xx. 19 et seq.), prescribing only three days.

HAIDAR, one of the names of the i'lu in Arabic, which was given him on account of the strength of his neck and strongjaw (Liwa al-'Arab, p. 249). Ali's mother first of all gave him the name 'Ali after her father; she herself was called Fatima bint Asad; but when Ali Talib returned from his journey he gave him the name 'Ali. In some poems ascribed to him he gives himself the name Haidar, but Ibn Makuruz thinks this is only to suit the metre; nevertheless Haidar is supported by a poem, which the Abi Malak al-Margid, of the same tribe as his murderer, composed on the occasion of his death (Tabari, Anwara'at, p. 318, 319) (C. Heurtel.)

HAIDAR (Shahid Haidar), son of the Safa- wi Shikht Jumail al-Abdal (grandfather of Isma'il Shah) and of Khulduj Begum, Umm Hasan's sister. On the death of his father, who was killed by an arrow in a battle against Khilaf. Sultan of Shirwan (shortly before 890 = 1456) he was recognised as his successor by his followers. His uncle Umm Hasan gave him his daughter Halfia Begum, who was called 'Alian Shah, as wife. She became the mother of Sultan 'Ali, Sayid Thabit and Shah Isma'il. When Umm Hasan died, Haidar collected his retainers ostensibly for a raid into Georgia, in reality however to wreak vengeance on Shirdak; but the ruler of this land, Furrukh Yusuf, supported by his son-in-law, Yev'bug, offered a stubborn defence. Haidar fell in battle at the head of his army in 989 = 1488. The account is confirmed by a tradition according to the story, on account of an appearance of Ali to him in a dream, wherein the name Ta'pir b. Haidar, which was given to this head- groom, which he also prescribed for his followers, it is from this that the Turkish term hasil layouts (redhead), applied to the Persians of the Safavid period, is derived. This story, however, may be entirely an invention to give the name hasil layouts an honourable origin (Nöldke).

(H. Huart)

HAIDAR b. Ali Husain Razi, a Persian historian, author of the Tarikh-i Haidar, began in 1620 = 1661-1662 and concluded in 1628 = 1662-1669, when the author was 35 years of age; cf. Persits, Persistan etc., Berlin, N. 418 (p. 408 et seq.); Ch. Riem, Supplement to the Persian Catalogue, p. 20 et seq. The author himself gave no title to the work and did not dedicate it to any ruler or person; as to its history and its conclusions, etc. The author here does not complete the "Prophets, Caliphs and Sultanu", was to be followed by a second on "philosophers, scholars and poets". Riem's assertion that the work contains "no original matter", can only be described as a "comprehensive and useful compilation of standard historical work", does not quite agree with the facts; the narrative is frequently brought down to the author's time and therefore contains much information which could not have been taken from written sources. The preface was published by Wilken (Mirochida Historia Compendiosa, p. viv. et seq.). The three chapters given by Ch. Schefer as an appendix to his edition of the Tarikh-i Naurashak (p. 230 et seq. from what he calls an anonymous "Ma'd announcing towards the end of the 16th century" are in reality taken from the Tarikh-i Haidar. No details of the MS. are given by Schefer; it is therefore not known whether it is identical with one of the two mentioned by Bloch (Catalogue des documents et des Collections ... énuméré par Ch. Schefer, p. 69, no. 1432-1433) Ma'd al-Tarikh (128), which are said to contain a "history of the Mongols down to Sultan Isma'il" (128) or with a manuscript in the British Museum; in the latter the author's name is certain and the work has been given the title Ma'd al-Tarikh by the first owner of the
HAIDAR ‘ALI KHAN BAHADUR, founder of the short-lived Muhammadan dynasty of Māisār, was born in 1722, the son of Shāh Muhammād Khan, a soldier of fortune, and a Nawab lady. He first distinguished himself at the siege of Dera Bahānī, captured in 1740 for the Mughals by his minister, Naṣr-ud-din, and was rewarded with the command of 50,000 horse and 200 foot. His advancement was rapid and he soon became governor of Dihānpur and qādir of Hangurpur. He gained great credit by the success of his operations against the Marathas in 1758, and was saluted as Fath Haidar Bahadur. He enriched himself by indiscriminate plunder and peculation and by the enforcement of the most extravagant demands against the state which he served. He was instrumental in degrading his former patrataire, Naṣr-ud-din, and after this service added four districts to his seigniorial area, which already included more than half of the Māisār state. In 1760, when Haidar had sent most of his troops to assist the French against the British, the rebellious party made a determined attempt to rid the state of a minister who had become its master. Haidar was defeated by the rebels who had succeeded Naṣr-ud-din as minister, and reduced to great straits, but by means of some overtures and an expedition, of saluting the assistance of Naṣr-ud-din, whom he afterwards ignored, succeeded in making himself stronger than ever, and imprisoned Khādīja Kāwā in an iron cage. Haidar was now the real ruler of the state of Māisār and it was only from policy that he retained the title of a pāmīrān. On his death he formally acknowledged his son, but kept him in subjugation. Haidar now coined money in his own name and extorted his dominions westward to the coast, where he established an arsenal, but, having encroached on some districts claimed by the Nāwīs and the Mähārājas, was involved in hostilities. Thereafter, being himself worse off, he contrived to retain his conquests, and when the rebels invaded his territory he bribed the Nāwīs to join him against the British. He and the Nāwīs were defeated and the British compelled the latter to enter into an alliance with them. In 1760 the British made peace with Haidar but during the next thirteen years he was frequently at war with them, in alliance with the French, and died in camp near Arābī in Dec. 7, 1772, while invading British territory. He was succeeded by his son Tipū.

M. Wilks, *History of Afghanistan*, p. 371; *Haidar; Sīvar al-Muluk* (check this title); *The Rise of the Sub大陸*.

HAIDAR-MIIRZĀ, a Persian historian, author of the *Tūrisikh Khāzīdah*, born in 905 = 1499-1500, died in 958 = 1551. On his descent cf. the article DILGHAI (I. 1079 et seq.); through his mother he was a grandson of the Caghat Khān Yūnus and a cousin of Bābur. Most of our knowledge of his life is gleaned from his own work; Belevicht (p. 11) devotes a few lines to him; the Indian historians Aḥmad bin Fard and Frighe give some information about his later years. His real name was Muḥammad Haidar; as he himself says, he was known as Mīrī Haidar; Bābur calls him Haidar Mirzā.

After the assassination of his father (914 = 1508), he had to flee from Bābur to Badshāhkhānī and then to Kābul, which he reached in 915 = 1509. Received like a son by Bābur, he took part in the victorious campaigns against the Uzbeks and in the reconquest of Bābur and Samarkand, but abandoned his benefactor in the black year 918 = 1512, besought himself to Farghānā to the Mongol prince Sa'id Khān, received from him the titles Garjān (son-in-law) and went with him to Khāshgar and Yarkand. In the Mongol empire as restored by Sa'id Khān he held a prominent position; by the Khān's orders he carried out several campaigns to distant lands like Badakshān, Kāfīrīnā, Līdak and Tibet. On the Khān's death in 933 = 1533 and the accession of his successor 'Abd al-Qādir, who was no friend of the house of Dīghīs, Haidar Mirzā had to leave the country and go over to the Timūrids, against whom he had fought as recently as 935 = 1539-1540 in Badakshān. In 948 = 1551 he succeeded in conquering Kāshgar and founding a practically independent kingdom for himself there, although his coins were struck first in the name of the native prince Nāẓūk Shāh and later in the name of the Emperor Humayūn; in 958 = 1553 he was slain during a rising of the native population.

It was while ruler of Kāshgar that Haidar composed his works, of which a few are after his former sovereign 'Abd al-Qādir. The second part, which describes the vicissitudes of the author's life and the events of his time, was written as early as 948-950 = 1548-1544, the first (history of the house of Caghatāi from the ascension of Khān Tughlūk Timūr in 748 = 1347-1348) not till later (951 = 1553 = 1544-1544). As Ḭābūr testifies, the author had received a good literary training, and this is also apparent in his work; the book had a great success not only among Haidar's compatriots (it was twice translated into Eastern Turki) but in other countries also (India, Turkistan and Persia) and was used as an authority by all later geographers and historians who have written about the events of the xii.-xvii. century. The historical narrative is as well as the geographical sections inserted in it (descriptions of various provinces, towns etc.) give a wonderful picture of the conditions of his time. In Russia extensive excerpts from the *Tūrisikh Khāzīdah* have been published, in particular by Weisgum-Verenov (*Beschreibungen in kaschmirischer und urduischer Sprache*. 130 et seq.) and Salezhanov (*Mīzāng Gorāl*). An excellent English edition has been prepared by N. Ellis (The *Tūrisikh Khāzīdah* of Mīr-Muhammad Bahādur Dīghīz, an English version edited by N. Ellis, the translation by E. Denison Ross, London 1871) and by W. Barthold in *Zapiski* (vol. 4; vol. 5, part 2). No complete edition of the text has yet been published. Cf. also Elliot, *History of India*, v. 1. 127 et seq.

HAIDARĀBĀD, now the capital of the Nizam's dominions in the Deccan, was founded in 1590 by Muhammad Kull Kuch Shāh, fifth king of the Kuch Shāhī dynasty of Golkonda, who at first named it Bhāngāgar after his favourite Hindu mistress Bhāngārī, but afterwards, regretting his infatuation, changed its name to Haidarābād, the city of Haidar, or 'Ali. In 1591 he made it his capital and it remained the capital of the kingdom until the extinction of his dynasty in 1687.
Haidarabad then became the chief town of a sultanate of the Mughal empire and in 1724 passed into the possession of Col. Killig Khan and afterwards to Ničán al-Mulk, who made himself viceroy of the Deccan and established his virtual independence of Delhi by defeating Maharaj Khair at Shikarikhana, renamed Fatekhkhana by the victor, in 1731. The principal buildings in Haidarabad are the Car Namur, a large building originally designed as a college but now a central police station, the Iqbal Masjid, built by the last ruler of Sindh, Ahmad Khan, the Car Kamal, a market place, and the Miani Masjid, a magnificent mosque founded by Muhammad, sixth king of the Kajt Shahi dynasty, but left unfinished until after the capture of the city in 1687 by Aurangzeb, who completed it.

Bibliography: Hisar, 1869.

HAIR (Ha'ir), a place of call for steamers and terminus of the railway. The modern town does not occupy the site of the ancient Ha'ir but lies to the west of it.

HAIR, a piece of cloth of rectangular form, on the average about ten yards long and three broad, which is worn as a garment by men and women in South Africa. Doons distinguish it in four pieces of cloth or garment:

1. The over-garment of silk or wool, which townpeople wear over their other garments; it is worn more for decorative purposes and is likewise often called the 'black';

3. The over-garment of linen or cotton, which forms the usual dress of Bedouin women in North Africa; it is called in general women's clothes, and is known as the 'black';

4. The over-garment of wool, which townpeople wear over their other garments; it is worn more for decorative purposes and is likewise often called the 'black';

The 'blanket' is woven in North Africa itself by men on the looms with low warp by women with high warp, but in Lyons also by a highly prized blanket (of silk and wool) is manufactured, which is destined only for North Africa, and sold nowhere else, not even in Lyons itself.

On the manner in which the 'blanket' is put on and worn, etc., see A. Bel and F. Ricard, Le Tour du Monde à Théano (Algiers 1813), p. 107.

There is an excellent treatise on the 'blanket' in the above mentioned work of Duquotte (p. 248-252). On the manufacture of the 'blanket' by native weavers, etc., see Louis, Bibliographie de l'Algérie, Vol. vi. p. 210 and passim.

On the manner in which the 'blanket' is put on and worn, etc., see A. Bel and F. Ricard, Le Tour du Monde à Théano (Algiers 1813), p. 107.

There is an excellent treatise on the 'blanket' in the above mentioned work of Duquotte (p. 248-252). On the manufacture of the 'blanket' by native weavers, etc., see Louis, Bibliographie de l'Algérie, Vol. vi. p. 210 and passim. This book as well as Archéologie Marocaine (Vol. xx, part 1) is now to be added to the excellent bibliography given by Duquotte (ALFRED BEL.)

HAIMA AL-KHARIDJYA ("Outer-Haima"), in Niebuhr, Heine Al-Ashil "Lower-Haima"), also called Hafir, a district in South Arabia, between the Hafrs (q.v.) and Haima Sinžā (q.v.). It is an inhāl (small district) of the ḥafr (large district) of Manakhā (q.v.), and stretches from Bow-kān (probably Wāb in Niebuhr, Baw’ān above mentioned, with a market) to Haima al-Mahdā. The capital is Mafṣūk al-Khaima, a spur of the Karān al-Walā ("deer-saddle"). It is an inhāl (small district) of the ḥafr (large district) of Manakhā (q.v.), and stretches from Bow-kān (probably Wāb in Niebuhr, Baw’ān above mentioned, with a market) to Haima al-Mahdā. The capital is Mafṣūk al-Khaima, a spur of the Karān al-Walā ("deer-saddle").

Haima (al-Ashil) "Upper-Haima") adjoins Haima al-
HAIMA AL-KHARIDJIIYA — HAISA BAISA

Kharidjiiya, with the villages of Yamii and Urr (Urra).

Haime al-Kharidjiiya corresponds to Balad al-
Akhridjii in Hamdanii. It belonged to the Sarit
Almar, but lay near the Wadi Saham between
the Hadjar and Hawran (Haraz). It took the
name Akhridjii from Akhridjii b. al-Jawsh b.
Sa'ud. The Balad was inhabited by the Sulay-
kh, a clan of the Hamdanii, who still live in
Kumul. Dukht Djerdiin (which E. Glaser propo-
ses to identify with Med-
ha) lay in the centre of their land. Besides Dukht
Djerdiin, Hamdanii mentions the villages of
ship, mentioned in al-Lejraliidi, 'Ala'isi and Yama
(he reckons the two latter to Lower Hadjur).
The language of the people of Kharidjiiya was
intermediate between good and bad Arabic.

Tafel 1.

Hair or Hair, originally a place-name; for
example the sacred district of Hebron
(Haburin or Hairi), which contains the graves of
the Jewish patriarchs (Yahud, ii. 195), wrongly
polated hair; Muhamad, p. 172-176; also the
whole sacred to Husain in Karbala (Yakhi, ii.
188; Marj, p. 228; Tabari, iii. 752). The place in
Tabari is also historically important as it testifies
to the existence of so early a period of the cult
of Karbala with official priests, who were sup-
pported by endowments founded by Umm Maha,
mother of the Caliph al-Ma'ad. A large quarter
of Samarras was also called Hair; it included
the whole hinterland of the central town and consisted
of lands which had originally formed part
of Mu'min's great zoological garden. The latter bore
the peculiar double name of 'Hairi-al-Hair (cf. Tabari
and Yakhni, passim; Yakhi, s. v. Hair), Hair is also
found as the name of a park in the 'Udayn al-
Taberzii of Mahmud b. Sufi (in Sauvare,
Asiar, 1866, May-June, p. 377), where a
park, Hairi Suran, belonging to Suran b. Mansur
al-Rumii, Muhamad's secretary is mentioned; it lay
at the gates of Damascus and was afterwards
called Baitul al-Khit, the "Cat-garden". There was a
Hair al-Hadjali in Bagh, and it is mentioned
this dry, with which fact is probably con-
ected the erroneous meaning "bassin", which was
given to the word (according to Asabi in Yahud,
ii. 188 and Marj, p. 228). There was a "day of
the Arabs" at Hair al-Muhim in Yamal (Yakhi
and Marj, l.c). Lastly Makh.mdani calls the
harbour of Tyre hair (p. 164 Code C), and accord-
ing to Tabari, i. 745, Ibrahim II built a Hair in
Arab as a market for the Arab merchants there.

From these inscriptions it is clear that the
mounting of the word is "enclosed area, temenos",
similar to that of the originally descriptive
name: al-Hira. Hair might therefore also be a
temple. As the case with townsprals, the plural
varies as well as the singular: hair, farah, far.
The lexographers give the meaning "park,
meadow". An etymology goes back to Aqma', ac-
cording to which the word means "a place with a
depression in the centre and higher towards the
edges" (read dura for dura in Yahud, ii. 188).
This etymology must be described as false as well
as that which attempts to explain the word from the
motion of water in it (yqhadaf) or connect
it with the many variants of the word far (cf.
Lam, Forsyting, s. v. de Goeic's glossaries to Bal-
dufr and Bibl. Geogr. Aron., l.c).
Snakes reach the age of 1000 years; they cast their skin every year. They lay 30 eggs after the number of their ribs (i.e., the anti-collect on eggs and destroy them so that only a few are hatched. The eggs of the snake are longish and dirty in brown, or green, black, white or spotted. In copulation the male wind themselves round one another. The female snake remains inside the eggs, till the young ones are hatched, while the male is constantly crawling around disquieted. The tongue is split, so that many people think that a snake has two tongues. The snake swallows its prey without chewing it; to break bones, it winds itself firmly round a tree so that the bones are broken in its stomach. It will under no conditions eat a dead animal; if it can find nothing to eat, it lives on air. It can go for a very long time without food, particularly in old age, when it then becomes lean. It does not require water; but when it has once begun to drink, it takes too much and poisons itself with it so that death often ensues. The eye is fixed and immovable like a nail in the head; if torn out, it grows again, while the fangs if taken out grow again in three days, as does the tail if cut off. When the snake becomes blind or comes blinded out of the ground, it rabs its eyes on sand and regains its sight. Snakes are attracted by fire but flee before naked men. They have extraordinarily strong backs; for although they have neither claws nor limbs with which to hold on, no man is able to draw a snake out of its hole.

According to al-Jahsh, three groups of snakes are to be distinguished according to their poison-ousness. No remedy for treatment can avail against the bite of the first; antidotes and medicines are of use against the second, while the third kills through horror which opens the pores of the body, by which the poison takes effect. There are naturally numerous charms and amulets against snakes.

He who kills a snake performs a work as meritorious as if he had slain an unbeliever. Not all snakes are aggressive, many only bite when aroused or trod upon; others are harmless. The medical applications are numerous.

Snakes play an important part in folklore and superstition, for they are one of the most usual forms in which Djinn appear.

Al-bi‘aw, the snake-charmer, is the Arabic name of the Greek kouros; and al-bi‘aw the name of the snake he holds.

Hakam (Ar. Jadis), one of the names of God.
al-Ak'ab, al-Hajjar, the group of villages of al-Muqarns (watered by the Wa'el Zirra and Sinyar) and beside the Wa'el just mentioned, those of Hajar, Hajar, Hijjaj, Hijjajj, Qamar or Qamar, Hijjaj, al-Hajar, Tahjar, Liya and Shu'ba, most of which flowed from the land of the Hajar and Khwaraj. The chief town of the Hajar was al-Khuzair (usually called Madina al-Hajar); in Himyar its time the coast town of the Baal was Shurayj. Scores of inhabitants Hajar with the same name 'al-Asir (Lijjat or Lijjat), and where their name Al or Bani), 'Abd al-Jallad (Lijjat).

Bibliography: Hamid bin, Index; Yezid (al-Maghribi, Ed. ii. 405; iii. 104, 874; F. Wies- tenfeld, Gen. Tabulatul, Table 7, 12, and Register, p. 197; A. Spranger, Die alte Geographie Arab, p. 64-45 (§ 45), 247 (§ 379), 254 (§ 384).

I. AL-HAKAM, the name of two Spanish Muslims:

1. AL-HAKAM I b. HAMUD, third Omeyyad Caliph of Cordova (186-206 = 706-822), was born in Córdova, the son of a man of that name. From 707 to 711 he was in exile in France, and in 711 he was again in Córdova, where he was given the title of 'Abd al-Rahman I. He was killed in 768 at the Battle of Al-Taghaza, and it was said that he was buried in the Mausoleum of the Prophet in Medina.

2. AL-HAKAM II b. 'ABD AL-RAMIZ III, called AL-HAKAM GRAND TAI (the one who seeks his help in God) was a son of Omeyyad Caliph and second of Córdova (305-366 = 916-976), who fought successfully against the Berbers and the Moors and who was a patron of the arts and literature. He was killed in 976 at the Battle of al-Taghaza, and it was said that he was buried in the Mausoleum of the Prophet in Medina.

The text then describes the invasion of al-Hakam's army in Spain, the capture of Córdova, and the subsequent events leading to the death of al-Hakam II. The text concludes with a brief mention of the invasion of al-Hakam's army in Spain.
indicates (i) a descriptive term or phrase used in a primary or real sense as opposed to a metaphor (madžāb). When, however, the metaphor has been used so often as to have become conventional, the word or phrase may be called madžāb "wifra. (Melchen, Khaszja, pp. 31-78.)

(II. MACDONALD.)

HAKIM (pl. ḥakīmāt) the Arabic name for "physician, doctor." The root-meaning of the word, is "wise, skilled, clever" (cf. the Hebrew particularly the Aramaic meaning of the root ḥ-k-m). From this original meaning ḥakīm ("governor, judge") has developed as well our hākim. (cf. the French sage-ferveur, mildwify, and açhomme, jurist). In the same way the root of the second Arabic word for "doctor" ẓāfī (pl. ḥāfīzī) is ẓāfī "to be wise, to understand," which has been particularly developed in Ethiopic. In the older period ẓāfī is more frequent particularly in the literary language; in the later period and particularly in popular language ḥakīm is preferred, sometimes with the subtle distinction that ḥakīm means a "doctor," ẓāfī rather a "physician." In addition to the general term ḥakīm there are other names for specialities; e.g. ḥakīm al-shūrān ṣāḥib al-sayyid, al-khaṭib, "the oculist," in the modern language it is usual to use compounds of ḥakīm for these, thus ḥakīm al-mayyīn ẓāfī, ḥakīm al-wāḥid ẓāfī, ḥakīm al-muṣāmánt, etc. Turkī ḥakīm is "history of the physician", and several works on the history of medicine, of which the best known is that of Ibrāhīm ibn al-Qāṭī (q. v.), which has been edited by J. Lippert (Leipzig 1903).

E. MITTWOCH.

HAKIM (الهكيم), he who judges, the authority.

AL-HAKIM BI AMRI 'LLAH, sixth Fatimid Caliph, his pre-accession name was Abū ʿAbbās al-Maṣūmak. To get as clear as possible an idea of the character of this enigmatic ruler, three periods in his life must be sharply distinguished; first, the period of his minority, from his accession as an eleven-year-old boy till the secession of Barqūq in 390 = 1000; the second period from this event to 408 = 1017, when he declared his divinity; and the last covers the period to his disappearance in 421 = 1024. The period of the Fatimids' flight from the very day that al-Aziz died in Hilah, his only son al-Maṣūmak (born of a Christian mother in the 27th Rabi' I 375 = 13th August 985) received homage as Caliph; he was then given the title "Al-Hakim bi Amri 'llah." His guardian by the will of his late father was the slave-cum-Calendar Barqūq but he could not maintain his authority against the Maghribī Ibn 'Ammār, amirin-chief of the troops, to whom Ḥikīm had given the rank of Wāḥid and the title "Amm al-Dawla." The way in which the general gave his kinsmen, the Khattā, preference among the troops, led to a most unstable state of affairs. Finally the Turkish troops resorted to force of arms against the aggressions of their Berber comrades-in-arms, conquered them, and thus brought about the fall of Ibn 'Ammār, who although pardoned, was soon afterwards disposed of by assassination. Barqūq was now all-powerful, but becoming overbearing, he allowed his grasp of power to slacken and gave himself carelessly up to the enjoyment of his immense riches neglecting the education of his ward, whose feelings he had deeply hurt by flickering ridicule on him. Only too soon, however, he was to learn the latter's true character; in 390 = 1000 Ḥikīm made a short shift of his guardian and although after this bloody deed he appealed to the people, who had thenceupon rebelled, to stand by him in his helplessness, he soon showed that he no longer required any one to wait on him by actions which showed an alarming independence.

2. 390-408 (1000-1017). The character of the Caliph, in the form in which it developed soon after the death of Barqūq, becomes intelligible perhaps, if we see the motives of his whole attitude in an extraordinary religious hankering, which endeavoured to extort itself not only in the most rigid enforcement to the utmost possible of the law of certain prescriptions of Islam, in general, and even more specially in the interpretation of Shīʿah-Tābiʿī by the affairs of his people, throughout whom Sunnī views still prevailed. If this is the striking feature of his whole attitude, it was completed by a sense of unrestricted power, which grew more and more in this strange personability, and a boundless capriciousness, with which cruel traits were strongly mingled. The first mentioned tendencies may explain the rigorous edicts (such as the prohibition of intoxicating liquors and certain foods, as well as the regulations regarding women etc.) which were published up to 390 = 1008-1009, some obviously directed against the Sunnis; they also explain the harsh and ruthless oppression of the Ḥārā al-Khālīs, e.g. the laws regarding dress passed against the latter and the destruction of their places of worship. That at the same time Christians continued more and more to fill the highest offices, shows how impossible it was ever to do without their ability. To shift the blame into al-Hakim's buildings over their origin: the Rāghīja mosque, the mosque of al-Maṣūmak and the great university called al-Ṭawhīdī (Ṭawhīdī), opened in al-Mansūrah II 395 = March 1005. The Ḥikīm mosque was completed in 393 = 1002 or 401 = 1010, (which had been begun by al-ʿAṣin). — But the Caliph always displayed a tendency to despotic deeds of brutality, of which the highest officials and officers of the kingdom, of whom hardly one died a natural death in this period, were particularly the victims. The dangers of this provocative rule of tyranny soon showed themselves in the rising of the Spanish Omayyad prince known as Abu Bakra who threatened Egypt and the capital itself with a fresh hand. He found ready support from the Bani Kura and Zanīta, driven desperate by Ḥikīm's violence, and later from the Khattā also. It was only with great difficulty that the knotty al-Ḥadīl was finally able to overcome this dangerous enemy (390 = 1000). Probably influenced by these events as well as by the failure of crops for several years in succession, the caliph saw the necessity for moderate measures and for reconciling the Sunnis to a considerable degree, indeed he went further and abolished those customs that were peculiarly Ismāʿīlī and went right over to the Sunnis. We so far have the possibility of suggesting motives
for 'Abd al-Jabbar, it is quite impossible to do so in the years that follow, which show alternately a leaning to Isma'ilism or to the Sunna in the constantly changing stream of edicts issued by the Caliph. Only the persecution of the Christians and Jews remained unchanged and the strict treatment of those in authority without distinction of creed.

III. 408–411 (1017–1021). At all events the Caliph carried Isma'il's secret doctrines to their farthest conclusions when in 408 = 1017, dominated by the influence of al-Akhram, 'Abbas al-Zaid (q.v.) and the Bajjat al-Darazi (q.v.), he agreed to the proclamation of his own divinity. Considering Hākim's psychology, this step is really not very surprising; it should also be remembered that his father and grandfather before him—seen to at least have claimed supernatural powers (see 'Asa'i, 31; see also, and W基站sen, Falsafat al-Charif, p. 160) — It was quite in accordance with the dogmas of the Isma'ilim under whose influence he was, that Hākim finally showed the greatest tolerance in religious matters; the penal enactments were repealed and Christians and Jews were more or less permitted to live in relative freedom. (The Jewish aspect given by Kaufmann in Zeitschr. d. Deutschen, 34, 189, 195, v. 183; v. 195, i. 342, & seq.) is characteristic.

On the other hand the Muslim population rebelled against the heretics openly proclaimed by the heralds of the new teaching, and the result was that the ruler was imprisoned in his palace in which the agitator Darazi was known to be concealed. Hākim, however, facilitated the latter's flight to Lebanon where he founded the sect of the Drusae, who still revere Hākim as an incarnation of God and look forward to his return (see for instance, v. 106, & seq. — The Caliph did not hesitate to wreak terrible vengeance with his inferno troops on the town of Fajr, where the rebellion had originated. Fierce battles between the Turkish and Berber troops on the one side and the arrogant high-soldiers on the other followed; the confusion in the capital was becoming worse and worse, when suddenly deliverance came in the mysterious disappearance of the Caliph in the night of the 27th Shawwal 411 = 21st February 1021. The suggestion, often put forward, that he was murdered at the instigation of his sister 'Aṣma al-Mulk, has not sufficient basis in fact (see 'Asa'i, Drusae, & p. 160, & seq.); on the other hand, considering the whole development of his character, A. Müller's (l. 693) hypothesis, that recognising the impossibility of propagating his views in Egypt, he retired into concealment, is not without probability.

In Hākim, whose final self-distraction prejudiced them before hand for a fair appreciation of his personality grant in any way. Muslim historians and also practically all Christian authors are only a massage and a bloody-thirsty tyrant, around whose strange figure they hastened to gather a mass of stupid anecdotes, which have yet to be carefully investigated. Most European historians also are influenced by the same view; Dory alone, and following him A. Müller, has endeavoured to give a just appreciation of his character; it combined careful religious enthusiasm with truly oriental notions of despotism, yet it is not without its ideal trait. Many of his much abused regulations were clearly intended to check the immorality of his people, to whom he set an excellent example by his own stainless conduct and a contempt for all pomp. Even in the second period of the reign we constantly find edicts in which he orders his name to be mentioned in prayer only in the simplest manner possible and forbids the making of images of respect to his person. His lyricism is nowhere denied and scenes have been preserved from the years of the low Nile for example, in which he is depicted in the midst of his people, accessible to every request and anxiously endeavouring to check the ravages of famine. Nevertheless it cannot be denied that his administration guided as it was solely from his one-sided point of view and subject to his capricious will, particularly in his last years, was on the whole, disastrous to the country.

E. GRAFKE.

HAKIM AṬA, a Turkic saint of Khwarizm, a pupil of Ahmad Vasa'i (cf. l. 204 & seq.) and died in 562 = 1166-1167. His proper name was Sulaiman Bâqirîkhânî and he is also called Sulaiman Aṭa or Hâkim Khâlid. This Hâkim is not identical with the Bâqirîkhânî mentioned by Ma'âshid (ed. de Sacy, p. 254, 1). but lay considerably farther north a little below the modern town of Kungrad; the tomb of Hâkim Aṭa there is still visited by pilgrims; according to a biography of the saint, the name is said to be a corruption of Aspâl Kâzghâ = 'very white fortress'. We find the same place-name in another part of Turkistan; at Khâlid there flows into the Sur-Daryâ, the river Khâlidî-Bâqirîkhânî, on which, as the name shows, the cult of a saint has likewise been preserved. We have only legends of the life of Hâkim Aṭa. The works ascribed to him (besides the collection of hymns called Hâkimîn Kithâb, also Bâqirîkhânî Kithâb, Kalidî Kithâb, etc.) have frequently been misprinted in Kustâi, old manuscripts have, for so is known, not survived.

HAKÈ. The original meaning of the root ḥak has become obscured in Arabic but can be recovered
by reference to the corresponding root in Hebrew with its meanings of "cut in" or "on," thence "prescriptive," "fix by decree" (Brown-Driver-Briggs, Hebrew Lexicon, pp. 349 et seq.). We have thus in Arabic to begin with the primary idea of permanence, fixity (qatā') and next not with at cor-respondence, constancy (maslahah, muqāṣa) which is essentially secondary and a discovery of the rhetoricians (al-muqāṣa al-ḏijjani, Tabīq, p. 61, 119 et seq., cf. of ed. of Cairo 1751). The point is unfortunately confused in Lane (iv. v. pp. 605 et seq.), following some of the native lexicons. Al-kāf, then, means that which is fixed, permanent, real, and is regularly paraphrased in the commentaries on the Qurān as al-kāfītī. Thus Rāzi explains al-kāfītī, meaning Allah, as al-kāfītī rabbu-al-yādyatūn, "he whose lordship is fixed, real" (Kut. x. 33; Ràzî. ed. Fleischer, l. 414, l. 57); similarly al-kāfītī rabbu-al-yādyatūn, "whose divinity is fixed," contrasted with that of false gods which is ǧīf. "false," (ibid. xxii. 20; Ràzî. l. 110, l. 10 et seq.); in Qur. xxii. 13, he ḍāfī in his essence and qualities (cf. Ràzî. l. 667, l. 52); further, on Qur. xxii. 6, Ràzî. explains (l. 628, l. 6): "because he is the ḍāfīr in himself by whose name he became real," bīhi waṭāfīt-li-n-nabūd. On this last passage, Ràzî explains (Maslahah, Vol. vi. p. 144, l. 3 et seq. of ed. of 1308) "he is al-maṣūma ḍāfīr al-kāfītī. The ǧīf (l. 3) contents itself with defining ḍāfī as the opposite of ḍāfī, and that is the fixed usage in the Qurān and elsewhere. It is pre-Islamic as is the well-known verse of Lähād (Huber, Ueber die Lähād, al. 89), alla ḍāfīr shā'ir in naḥāyatu, ḍāfītī lā nīsājā. "Lo, everything is vain except Allah alone." In Arabic psychology, it connects also with Hebrew conceptions of nothingness, vanity, insubstantiality, in contrast with that which is real, real and trustworthy. So ḍāfī stands in Arabic over against ḍāfī and al-kāfī in most naturally a name for Allah, the absolutely real, even as al-ṭāfīrīl, "trustworthy," is said of Yahwē (cf. al-ṭāfīrīl al-dīn of Allah in Qur. lxii. 23). Allah is real of himself and of necessity. This is set forth on Qur. xxii. 61, l. 1 q. 687, l. 153, while others being depend for their reality on him (see Râzî. above on Qur. xxii. 6). The ǧīf, or "The Reality," is therefore the nearest rendering of the word when used as one of the Names (cf. see Allah above) of Allah, and "The Truth," as it is often translated, is misleading. All the native authorities distinguish carefully between ḍāfī and ḍāfī with its opposite, ḍāfī, and lay down the rule that ḍāfī means equivalent to ḍāfī only when used of a judgment (ʿidahum). Thus an event (ʿawāfi) really took place, so it is ṣādākāt or ḍāfī or statement about it is ṣādākāt, though the statement may also be called in this sense a ḍāfī. Used as one of the Names, al-kāfītī is frequently explained as Creator, but for this the only basis seems to be its constant contrast with al-ṭāfīrīl "creation," e. g. in ḍāfīr al-ṭāfīrīl, (al-ṭāfīrīl, al. 2, p. 559, l. 29, al-ṭāfīrīl kāfītī al-ṭāfīrīl ʿān al-ṭāfīrīl. "You poppy, you del!" Yet see another explanation suggested in Manṣūrīn, Kāfīr al-ṭāfīrīl, p. 174. Besides the above meanings of "reality" — used absolutely of Allah and derivatively of his creation — and "truth" used of a statement corresponding to reality, ḍāfī means also "right," "duty," "going back to the idea of prescription. Thus ḍāfī, it is right due to me and ḍāfī-i-sharīʿa, "a right obligatory on me." From this comes the hāf of Allah — as distinguished from the hāf kāshū, hāf ʿaṭāh — the punishment for trespasses against Allah by which no man is injured in his rights (see Jayyody, Hunduhk die idānā, Citt., p. 292 and by index). Again, just as al-kāfītī is the last thing reached by the Šīfi on his journey, after even muṣāfa in passed, so ḍāfī-ṣāḥif is that real certainty which comes with the passing away (fāsid) of the creatures in his ḍāfī the Šīfi has had real certainty (ṣāḥif-yadrī) and scientific certainty (ṣāḥif-yadrī). On this see Nicholson, Kaṣāf, pp. 59, et seq. Kanthari, ed. with commentaries of Paris and Zarkariyà, lu. pp. 99 et seq. and Djunjian, loc. cit., the phrase is derived from Qur. iv. 95. Among Šīfis the ḍāfī-ṣāḥif are such things as are necessary for the support and continuance of life as opposed to the ḍāfī of things desired by the ṣafī but not necessary to its existence (Dic. de techn., termes, p. 311, 330 and 417, l. 11 et seq.).

HAKKARI (Hakkârî), now the name of a sandjak in the vilayet of Van on the Persian frontier, which formed an independent vilayet before 1876. According to Cüçen, La Turquie d'Asie, p. 716, it now has an area of about 11,000 sq. miles and about 300,000 inhabitants, most Kurdish or Armenian in origin. We may also mention the Syriac Christians (Nestorians), whose Patriarch resides at Koçam, 11 miles N. E. of İdilamber. The sandjak is mountainous and difficult of access as much on account of the predatory character of its inhabitants as on account of the nature of the country and has therefore been little explored. The Turkish government, which only instituted a certain amount of order here about the middle of last century, has its representative in İdilamber (See. an. l. 1001). With the possible exception of Amadiya (q. v. in l. 324 et seq.) there are no towns of importance.

The name hakkârî is derived from the inhabitants, the hakkârîs, a branch of the Kûtu, who have inhabited the vilayet of Van and the surrounding Turkish and Persian provinces with other Kurdish tribes from ancient times. They are mentioned as early as Ibn Hawâqal and the land is called Hakkârîya after them by Arab geographers and historians. These hakkârîs are a practically independent existence in their almost inaccessible mountain fastnesses. The celebrated Ataşer Zangi was the first to attempt to bring them into subjection and took several of their mountain fortresses, in one of which he gave the name Amadiya (cf. Amadiya). But the country soon returned to its previous status. The all-conquering Timur alone was able to force the Hakkârî to turn his sway, when he besieged their Emir in the fortress of Van in 1385. Later they failed to withstand the Al-aqaytâb, but even after the rise of the Safawîs in Persia and under the rule of the Ottomans they remained the real masters of their country.

Bibliography: Yahyal, Mescudi, p. 727; Al-ʿAwâlî, Manṣūrîth ʿAmûm, Tabîq, ʿAwânî, Lâshîrî, p. 322; Cüçen, op. cit.;...
There is much controversy as to the possibility of the manuscript (Damal) of al-Halāb. It is that "Now" of the present, with its content of presence with or absence from God, and with it alone the self should be occupied. It belongs to the world and is his religious experience under the effect of an ever renewed Now. While the self comes from God and enters that Now, it is in a soul, a body (Nicholson, *Kahlīf*, pp. 397 et seq.; Kühnel, *Kahlīf*, 1834, pp. 86 et seq.)

**HALAB (ALEppo).** A large city in the North of Syria, founded on the N. W. and N. by the wāls of Adam and Sīvē, in the N. E. by the wāls of Aūmārīyāt al-Aṣrāf, in the W. by the wāls of Dār al-Zor, in the S. by the wāls of Damascus and in the W. by the wāls of Bairūt and the Mediterranean Sea. The district presents no marked geographical features; it is divided into three large sand irrigations, with 24,000 square miles, 672,500 inhabitants; 4, Marāsh (q. v.), and 5, Urfa (q. v.); the whole wāls has an area of 36,000 square miles, 9,950,800 inhabitants (792,300 Moslems, 40,000 Armenians, 124,000 Syrian Christians). According to Brunswick's *Kahlīf*, the time when it was first occupied by the Afars (in the N. E. of Asia Minor and for a time included in the South), it was the seat of the province of Antioch and the lands attached to it, which had been ruled by the Crusaders for over a century, were taken from them by Sultan Baybars in 688 and added to the province of Aleppo. We have a certain amount of information collected in A. A. Almansi, *Almansi's *Abhāt al-Dawla wa'l-Dawla*,* Vienne, 1875*, pp. 339, 374, and in *Le Strange, Palestine under the Macedonians*, pp. 43–48 about the total of the taxation, which the province had to pay in the time of the Almāhī governors. The province of Aleppo and al-Awānim paid, according to Ibn Khaldūn's *Kitāb al-Adab*, 400,000 (in another Ms. 420,000) dinar the state (the state may be estimated as the millions following *Le Strange*) in the reign of al-Mamūn (42-479) (151,450) (according to a quotation from *Al-Qāsimī's *Kitāb al-Wani* under the Caliph al-Rashīd (775-809) 360,000 in the year 104, according
to Kandahar, Ahar to Khorassan, 250,000 dinars in 250; according to Ibn Khaḍdālāh and Ibn al-Fakhrī, 360,000 dinars in 571 (al-Mukhtasar). The revenue under Nūr al-Dīn (547–560) was smaller; it is given by Carlyle from the Cambridge MS. of the Tamūlīsh Nārāyat (Mābil) on p. 17, of his notes to the text of the Muḥāfaẓ al-Ẓafīra of Ibn Taḥḥārī. He gives 402,733 dinars as the revenue for the whole kingdom, which includes Syria as far as Damascus and Mesopotamia to Mosul, but did not include the Awādah (for Aleppo) and the immediate neighbourhood 96,186.

... The revenues were considerably higher in the reign of Sulaymān al-Zahirī (Ghāzī), they are given for the year 689 by A. v. Kramers in the Neumünder Welt, 1880, p. 345–348 in the translation of Ibn Tašfin (on authority of Ibn Abī Ṭāṭīr), viz. 689,824,000 dinars = 4353633 dinars for the towns of Aleppo (including its fields and gardens) and at the close of the reign of Sulaymān al-Nāṣir (Yārāf 11 (about 686 a.d.), they approached 8,600,000 dinars = 5333633 dinars.

... As to the administration of the province of Aleppo, four authorities for the Mamlūk period exist. According to the Dār al-Watā' (L. 2040 et seq.), Aleppo was the largest province next to Damascus. At the head of the province was the governor, an Emir of 1000 Mamluks, the representatives of the Sūfiyya, the Tyinds, the tax-gathering officers (vālib), and the office of the public secretary (sāhibi al-zāhīdī), who was assisted by three bashīibs (q.v.) of lower rank. These were almost always chosen from the Turkish corps of Mamluks. A. The religious officials: the chief of the four recognized schools: a Hanāfi and a Shāfi`i military judge, each with a mufti; the administrator of the treasury (bash al-Māl, q.v., l. 598 et seq.), the civil officials: the vizier, who bore the title “inspector of the province” in Aleppo, the private secretary (in Aleppo called “chief of the correspondence office”; these two offices were of lower rank than the corresponding officials in Cairo), the chief of the commissariat, the inspector of offices; the mayor; the postmaster; the inspector of government lands; the inspector of buildings; the chief of police; the military commander of the city. (The last two offices were chosen from among the ecclesiastical officials). A. Medical officers: (min al-tawāf`) the chief physician, the chief oculist and the chief surgeon. — This complicated administration, which was a copy on a small scale of the central government in Cairo, was based as it regards the southwestern Mamluks to some extent on a system of feudalism. It remained; similar in constitution under the Turks, although the titles and the divisions were slightly altered. It was only after the destruction of the Janissaries in the last quarter of the sixteenth century and the introduction of the reforms that the administration was simplified.

The province of Aleppo in the Mamlūk period was governed by sub-governors of different ranks, who were in part directly under the governor, while the more important were appointed by the Sultan. The frontier fortresses were under Emirs of 1000, other towns according to their military importance under Emirs of 400 or under officers of the necessary troops. Two Bedouin tribes, 13 Turkoman tribes and a few tribes of Kurds were ruled by their own chief who were appointed by the Sultan. On the modern administration of the, the article TURKEY.

8. Aleppo, the second largest city in Syria.

I. TOPOGRAPHICAL AND GENERAL.

Aleppo is situated in 37° 5' E. long. (Greenw.), and 36° 11' N., lat. 435 feet above sea-level, on the river Kawaik (Oōk 54) on the border between the areas into which Northern Syria may be divided, mountainous west and the flatter east. The climate is cold in winter (for accurate meteorological observations, see Russell’s Natural History of Aleppo, London 1794, i. 85–95), but the spring begins in February; the heat is very great, especially from July to September; this average temperature for the year 1888 in winter 44°, in summer 87° Fahrenheit. Aleppo’s commercial importance rests on the fact that it lies on the great route from north to south and on the roads from the Mediterranean to Mesopotamia; it thus concentrates upon itself (Karl André’s Geographie der Welthändler, new ed. 1912, ii. 275) the trade of a great part of Northern Syria and Northern Mesopotamia as far as Dyrböes and Mardin and on the Enibrak as far as Amm. Although the commercial importance of Aleppo began to decrease after the discovery of the sea-route to the East Indies, it was still a flourishing centre of trade in the xviith and xviiith centuries. A large number of French, German, Dutch and Venetian merchants traded in exports and imported there under the protection of their consul, chiefly through the intermediary of Jewish ceddlers; the most numerous however were the English who possessed a great factory there from the reign of James I (1603–1625). In 1775, 80 European firms were represented in Aleppo. In the middle of the sixteenth century Aleppo had almost entirely lost its prosperity and trading connections through the insecurity of the Mediterranean during the time of Napoleon I, particularly had government, the mutinies of the Janissaries in 1814 and 1826, the terrible earthquake of 1832 (and smaller ones in 1827 and 1832), the ravages of cholera (1832) and plague (1837), as well as the incredible misgovernment of the Egyptian officials from 1854–1857, which did not affect other parts of Syria. In 1846, Ferrières, Le Sirey consomme, gouvernement de Mehemmed Alî el-Jamâl, (Paris 1842), and the return of the Turkish régime. While in 1775 the imports amounted to about 250 million francs and the exports had risen as high as 6 million, in 1844 the imports had diminished to 2545 million francs and the exports as low as 2½ millions (see Henri Gouy’s instructive work, Enquête de l’état politique et commercial de Suri, Paris 1862). It was not till the eighties of last century that Aleppo began again to revive, the number of inhabitants and the totals of exports and imports are increasing and the favouring railway connections (Aleppo–Rayyân–Damascas–Bairut–Mal Миш–Qalb–Aleppo’s proposed connections as a station on the Bagdad railway; and its future direct connection with the harbour.
of Alexandria) make it certain that the town is destined to have a great future.

At the present day the imports amount to 58,000,000 francs (of which 20 millions is cotton alone); the exports 20,000 francs (sugar, liquoreux, gill-apples, butter, olive-oil, wool, silk, hides etc.). Before the earthquake of 1822 the population was estimated by travellers at 150,000; after 1822 it sank to 30,000. In 1824 (Guidet-Joanne, 1888) it is said to have been only 90,000-100,000; in 1894 it had risen to 50,000 (Meyer's Reiseführer) while in 1912 the figure is estimated (Mackinder, French ed.) at 200,000—150,000, which is probably too high. The old city was a quadrangle (¾ miles round) enclosed by walls but even by the time of the Arab conquest there were suburbs around it (see below). The city and the suburbs had gazas. Of the city-gates several are well preserved, but nothing has remained of the gates of the suburbs except the inscription at the former Bāb al-Malik (Pl. x). The Europeans live in the Azmiyeh quarter (see Pl. 25), the native Christians mostly in the Mushairika (see Pl. 23) and Kuttab quarter (see Pl. 22), the Jews in the Bālāya quarter (Pl. 1; also called Bahshiyeh). The inhabitants are protected from rain and heat by vaulted basins; there are so extensive that a walk of 1½ hours' duration may be taken on their roofs. Aleppo is notorious because its inhabitants are liable to a disease, the Aleppo scab, an ulcer (Baday), which disfigures the skin. The germ of the disease seems to enter the body through slight wounds in the skin. Children are particularly liable to it, while adult Europeans are seldom attacked by it. Cf. v. Linchen, Mittelalterliche die Therapea die Aleppobrer, in Verh. Inst. Wiss. Anvato. Geschichte, siv. 71, Globus, Vol. i, ii.

II. HISTORY OF THE CITY.

1. Before Islam.

Aleppo, one of the oldest cities in existence, perhaps the cradle of the human race, was first mentioned as early as the second millennium B.C. under the name Habbal (Halab, or Halaum) in the documents of Boghaz-ke, among which is a treaty with Aleppo. In the Babylonic texts Aleppo is mentioned in the treaty between Ashurnasirpal and Mato-ili about the year 750 B.C.; and in Assyrian on Salmasasar's membranes inscription of 850 the god Rumun of Halab is mentioned (information supplied by E. Wachtler). In Egyptian texts Aleppo (Al-ih) is mentioned in the viii century B.C. in the biography of the god Amenemheb (Serçe, Gerkanos, iv. p. 990 et seq.) and in the account of the battle with the Hitites at Kadesh in 1288. B.C. (information supplied by Dr. Herrnhand). In the Old Testament Amorite Aleppo seems to correspond to Aleppo. In the Seleucid period it was given the name Berren (Narnis, Hepsiya, Bida etc.) by Seleucus Nikator, who favoured it exceedingly. It suffered severely at Khattis' conquest in 498 B.C. (not Khattis II, as it is wrongly stated in Faizy-Wissem and Rabdeker). In the Byzantine period we find the old name reappearing in the Greek form Ekep.

2. Under Arab Rule.

Aleppo seems to have been predominantly a Syrian town with a strong admixture of immigrant Arabs in contrast to the more cosmopolitan Kim.
meeting any serious resistance he occupied Damascus and Aleppo, where he was hailed as a liberator. His son Khammarwalh [q.v.] appointed Toghtib b. Diitf (father of Muhammad al-Tughtib [q.v.]), governor of Aleppo in 275. Khammarwalh died in 280; he was succeeded by his son Djath, and then by his second son Harun. After protracted hostilities peace was finally made in 286 between the Caliph and Harun; Aleppo remained to the Caliph. In 290 an invasion of the Karmaians [q.v.] took place; they defeated the governor and besieged Aleppo, but were forced to retreat after a battle in which the troops were assisted by the citizens. To reconquer the lost provinces of Damascus and Egypt, the Caliph al-Muktashb sent a strong army under Muhammad b. Sulaiman, which received accessions in Aleppo from the tribes of Kilab and Tamim. He routed the Karmaians in Central Syria, conquered Egypt and also Harun: in 292 4.11. This victory secured the Caliph's hold on Syria for a considerable time. The governors and deputy-governors were changed frequently usually by force of arms. In 325 Syria became dependent on the governor of Egypt, Muhammad al-Ikhublih [q.v.], who appointed Ahmad ibn Sa'd b. al-Khilib, chief of the Banu Sa'id of the tribe of Kilab, to be governor of Aleppo. The Khilibs forced him to large numbers. The Caliph granted Syria to Muhammad b. Ra'ik [q.v.] to rid it of the Ikhublihs who did not recognise his authority. Ibn Ra'ik drove out the Ikhublih governor, Ahmad al-Khilib, and took the field against al-Khilib himself. Muhammad b. Ahmad, al-Khilib's brother, was defeated, surrendered Damascus to Ibn Ra'ik and fled into Egypt. In 329 Muhammad al-Ikhublih sent his general Kafir with a large army into Syria; he defeated Ibn Ra'ik's governor and conquered Aleppo. In the following year peace was made between al-Ikhublih and Ibn Ra'ik, who now received Aleppo and Damas. In the same year Ibn Ra'ik was slain by the Hamdanid Nizar al-Dawla; the latter became Amri al-Din, and his famous brother Ali received the title of honour Saif al-Dawla. The History of Aleppo for the next few years is so closely bound up with his career that we must refer the reader to the article Saif al-Dawla. After the death of Saif al-Dawla in 356 (967) the crown continued to rule there till 406 (1015) if we include the suzerainty of Hamdanid rule under the Hamdanid Manlik Luca' and his son Masis. During this period, the history of which is given in greater detail in the article Hamdanid, Aleppo had developed with the lands attached to it into a practically independent principality and was now the most important city in northern Syria. Its importance in the world's history lies in its successful struggle with the Byzantine empire. By his extraordinary abilities Saif al-Dawla had retained Syria for Muslim culture; in the above mentioned year, however, the city fell directly under Fatimid rule, for which it had already been prepared under the Hamdanids and Lutuk, and Masis, and submitted the tax to the Fatimids of the province which had been so impoverished by continual warfare and appointed 'Aziz al-Dawla Iltak governor of Aleppo and its citadel. The latter built himself a fortified residence connected with the citadel and renovated the walls (see architecture). He was also able to come to good terms with the Byzantines. At this time the Empress Basil had forbidden trade with the Byzantines in Syria and Egypt in reprisal for al-Hakim's cruel treatment of the Christians, but he made an exception in favour of 'Aziz al-Dawla. Relying on his twofold power as governor of the city and its citadel and a friend of the Byzantines, he showed his independence of al-Hakim by striking his own coins and gave up paying revenue to him. The Caliph enraged prepared to take the field against him, but before the preparations were complete he was murdered (see the article Fatimid in 411). 'Aziz al-Dawla is said to have made peace with his successor al-Zahir and Hakim's sister who conducted the government; but it is related that he was murdered in 423 at the order of his command. Others throw the guilt on Baibars, the new commander of the citadel in Aleppo, who wished the power for himself. His plan miscarried however. The enraged drove him out of the city with her troops and as a precaution in 414 appointed two independent governors, one for the city and another for the fortress. But no one in Syria was satisfied with Fatimid rule. We thus came to have in the next year the remarkable phenomenon of the chief of the three great Bedouin tribes of North Syria, the Kilab, the Khalifs (led by Salih b. Mirdas, q.v.), the Kalfis (led by Isma'il and the Khawis (led by Hashim b. Muhammad) uniting for joint action. Salih was to attack Aleppo, Sinjar Damascus and Homs in Palestine, in face of this danger the Caliph's best general, Amrul' Khizn, was sent to Palestine to put down the rebellion. Amrul' Khizn was overcome by superior forces. Salih was thus free to advance on Aleppo and after two months the city was delivered up to him through dissension between the two governors. Salih left a portion of his army behind to capture the citadel, and went southwards with the remainder, again defeating Amrul' Khizn and taking Homs, Ba'albeck and Sidon in 416; Rabbah, Manbij, Edessa and Kafranitty in the last also submitted to him. Syria thus regained its independence. When the situation in Egypt had improved the Caliph al-Zahir in 420 sent a new army to Palestine under Anuul' Khizn, this time successfully, Salih b. Mirdas fell in the battle of Umaym on the Jordan. His sons, who had stayed behind in Aleppo, shared his power; Mutawwakl b. Dawsa Thabit received the citadel, Shidli al-Dawla Rabbah, but in the next year he seized the citadel also and indemnified his brother elsewhere. He again began the famous summer raids on the Byzantines and severely defeated the governor of Antioch. To revenge himself the Emperor Romanus advanced against Aleppo, but his army, which had suffered severely from the great heat of summer and the scarcity of water, was defeated and forced to retreat. The new governor of Antioch was more successful in plundering towns belonging to Aleppo and capturing numerous Muslims. Naysar thus found himself forced to submit; he promised to pay tribute and observe peace. The next few years passed pleasantly enough apart from a few retiring outbreaks. In 427 the new Fatimid Caliph, whom favour he had won by vast gifts taken from Byzantine booty, confirmed his investiture and granted him the highest rank of vizier. Two years later, Anuul' Khizn, who had been governor of Damascus and was sent to take Aleppo with Fatimid troops aided by the temporary Khilafh Naysar advanced to meet him with his followers. In the battle of Lajma' Thabit took to
flight and Nasi was killed. His brother Thimil took his place as ruler of Aleppo, but went off to Mesopotamia leaving representatives in the city and citadel. After his departure anarchy and plun-
ders reigned there until Anushikhtin besieged the town, which surrendered by agreement; the citadel was surrendered shortly afterwards. Anushikhtin placed governors in Aleppo both for the city and citadel and further strengthened his power in Northern Syria. His successors around the minaret of the Fatimid viceroy, who prevented the general's family in Cairo from going to see him. Vigorous protests from Anushikhtin widened the breach, till finally the visitor ordered Anushikhtin's kaheda to leave him and again granted Aleppo to the Mir-
dad Thimil. Abandoned by the kaheda Anushikhtin went with a small following to Aleppo, followed by Thimil; Anushikhtin, despondent and ill, died in 433. His successor handed over Aleppo to Thimil on receipt of the Caliph's firmans; to that effect after fighting several battles with him, He was on good terms not only with the Caliph in Cairo, who in 436 again confirmed the firmans granting him his position, but also with the Emir Theodore, who granted him and his successors titles and presents in return for payment of a yearly tribute. He was also able to avoid war with the powerful Turkish chief al-Burjati, who had fled from Baghdad before the Saladin Sultan Toghrul Beg and retired to Ramla. The demands of the Kilbais continued to cause great difficulties to Thimil and their insistent attacks hurt him so much that he exchanged Aleppo for Damask, Burjat and 'Akka in 449 with the permission of the Fatimid Caliph. The Caliph appointed two governors in Aleppo one for the city and one for the citadel and peace reigned for three years. But in 452 Thimil under Thimil's nephew Mahmud collected their forces to capture Aleppo. After long fighting with varying success (Aleppo on one occasion saw three different masters in three days) Mahmud finally occupied the city and its citadel. But he could not now enjoy his possession; by command of the Caliph Thimil retook it from him in 453 without however having defeated him, as the Shahis of the Kilbais decided that it was improper to support a nephew against his father's brother; Mahmud demanded compensation elsewhere. Towards the close of the reign of Thimil fighting with the Byzantines went on continuously with varying result. About the end of 453 Thimil fell very ill and died; during his long reign he had been able to maintain for Aleppo a fairly independant position between the Byzantine and Fatimid empires. Shortly before his death he appointed his brother 'Atiya his successor, but Mahmud declined to recognize his uncle and revived his old claims to the inheritance as Nasi's son. After four years of fighting Mahmud, who had obtained Turkish mercenaries with Byzantine money, succeeded in taking Aleppo in 457. In 450-462 pestilence and the continual ravages of Turkish hordes brought about destitution, famine and great loss of life in Northern Syria. By this time the power of the Fatimids had declined. The 'Abbadid Caliphate, supported by the forces of the Saladin Seljuk, had won new influence, so that Mahmud himself forced to mention the Caliph al-Ka'im and Seljuk Alp Araban in prayer, hoping for their effective support. While the Shahis understood the changed 'political' situation and put on black (Abbadid) garments, the people rebelled and took the straw mats out of the mosque, saying these were 'Ali's praying carpets, Alp Bahr could use mats for himself. Alp Araban then demanded of Mahmud that he, like the other vassals, should join his army at the time of his following. When Mahmud declined, Alp Araban, although he advanced against Aleppo, contented himself with surrounding the town hoping to take it without storming it, in order not to weaken it unnecessarily so that it might serve him as a bulwark against the Byzantines. At the last moment Mahmud surrendered the city, but received it back at once from the Sultan in 457. He was sent on an expedition against Damascus and had reached Kaffa when he had to return Aleppo to protect his kingdom from the raids of his uncle 'Atiya, who had formed an alliance with the Byzantines. Against the latter Mahmud enlisted the leaders of Turkish mercenaries from Palestine in his service and the Byzantines retreated; 'Atiya went with them to Constantinople where he soon afterwards died. In 466 Mahmud died, in the latter years of his reign he had become avaricious and autocratic; he was succeeded by his eldest son 'Ughal al-Daws Nasi, a cruel tyrant. When he was slain in 468, the Turkish mercenaries chose his brother Sahl as ruler, while soon afterwards the Kilbais took the side of another brother, Wahlahs, and advanced on Kaffa. They did not face the advancing Turks howeyer, and their army was divided in disorder. The Turks took possession of their camp with their women, children and flocks to the joy of war. Wahlahs and his followers then turned for help to the Sultan, who was not himself able to assist them; however he granted Syria as a fief to his brother Tutush and ordered the leaders of the Turkish mercenaries to place themselves under his banner. Tutush entered Syria and made an alliance with the Kilbais and with the Oghalid chief Shatari al-Daws Muslim. The annual forces besieged Aleppo for three months in 471 but the alliance between the Arabs and the Turks was not a close one. The Kilbais and the other chiefs kept aloof from them, Muslims returned homewards with Sahl, took leave of Tutush and advised the other Kilbais chiefs to seek safety. The remaining Shatari went over to Sahl. After further Turkish auxiliaries who were approaching Aleppo had been defeated by the Bedouins, Tutush raised the siege and went to the Ephrates. Next spring he again advanced on Aleppo, but was once more defeated and went to Damascus, which was given him by the Turk 'Ato. From this center he ravaged Northern Syria and plundered the country from Maarrat al-Nur to Aleppo so that many of the inhabitants fled to Mesopotamia. As Sahl felt he could no longer resist, he surrendered Aleppo at the end of 472 to the Oghalid Muslim against his brother's wish. Muslims came with fresh troops and marines and compensated the three brothers by granting them smaller towns. As Arabs accepted the title of Aleppo for the last time in the person of Muslim b. Kurash [q.v.]; after he had fallen in 477 in battle with the Saladin Seljuk, b. Kajulmish [q.v.], the city was henceforth ruled only by dynasties of Turkish origin. Ibn Kudush proceeded to besiege Aleppo, but the inhabitants led by the Shahs al-Husayti (who had built an outer fort at the southern side of the city wall, called Kaffa al-Sharr) refused in the hope of receiving
support from Malik Shah. They then sent for help to Tutush, who hurried at once in their relief; Ibn Kajelnag advanced to meet him. In an encounter near Aleppo his troops were put to flight and he in despair committed suicide. Tutush came up to Aleppo to occupy it as he had been agreed. But when Sharif al-Husain refused to surrender the town, he forced his way into it after several days with the aid of trailers in the town. Selim b. Kurraish, the commander of the citadel, who had been pledged by Muslim to surrender the citadel only to Sultan Malik Shah himself, alone successfully resisted Tutush. Meanwhile Malik Shah was approaching with a large army, subjecting all the strongholds on his route. Tutush retired to Damascus and Malik Shah marched unopposed to the shores of the Mediterranean. In Aleppo he appointed his faithful friend Kajim al-Dawla Amsar (q. v.) its trustee. The founder of the Amsar, the slave of Imam Ahmad ibn Hanbal, the founder of the Shafie sect, was an expert in the science of security reigned and his subjects were mildly treated. Unfortunately he was taken prisoner in battle with Tutush and executed. Aleppo passed to Tutush and, on the latter's death soon after, to his son Rişwan (q. v.).

Periody of the Crusades. For the next few years the fighting raged continuously between the rulers of Syria so that they were unable to resist the invasion of the Franks at the beginning of the Crusades. The Seljuk Sultan of Tarsus captured Antioch, defeated the powerful army sent in its support, and dispersed the Christian army as a result of the massacre of the crusaders. In 1099 the Seljuk Sultan took possession of Antioch, which was razed to the ground. In 1143 the Seljuk Sultan was captured by the Crusaders, and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Seljuk Sultan and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Crusaders, and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Crusaders, and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Crusaders, and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Crusaders, and the town was handed to his son, who died in 1157. In 1168 the town was captured by the Crusaders, and the town was handed to his son, who died in 1157.
Qahir Ghazāl Aleppo, has a few months later he transferred the government of it to his brother al-Malik al-Aḍālī (cf. L. 1358). In 588 Saladin fell ill that his death was hourly expected. On this occasion he became convinced that he could not trust his relatives absolutely and, when he had recovered, decided in 589 on a new division of his lands. Al-ʿAdīl was removed from his Syrian post and sent to Egypt as Aṭīq of Saladin's son; Ghazāl was again granted Aleppo and betrothed to Al-ʿAdīl's daughter ʿUthmān Khatun. Ghazāl, like a faithful vassal, supported his father against the Crusaders and on the latter's death recognized Malik al-ʿAdīl as his suzerain. The aim of his policy was to maintain the balance of power of the Ayyūbīd chiefs by alternating alliances. He strengthened the defences of Aleppo to defend himself against all attacks. Ghazāl died in 615; he had previously designated as his successor his younger son al-Malik al-ʿAziz Muhammad by his marriage with Al-ʿAdīl's daughter, in order to transfer his allegiance to Al-ʿAdīl in his favour. Al-ʿAdīl's son al-Malik al-ʿAdīrī Mūsā took over the command of the troops in Aleppo and was successful in wounding an attack by the Sāliḥī Muslims at Kūshān; the civil administration was in the hands of Ghazāl's trusted lieutenant the Aṭīq Taqīrīr (see discussion) and the famous Khatūn Khatun al-Dīn Isḥāq Shalādī (q.v.), Al-ʿAdīl's wife and son and successor al-Malik al-Kāmil each confirmed al-ʿAdīl in his throne. In 628 he took over the administration himself, appointed new officials in Aleppo and commanders in the fortresses of his vassals to strengthen his position. With the support of al-Kāmil he captured the fortress of Shāizar; he inherited al-Ḥiraya (or the Yūphrata) from his uncle al-Zāhir Isḥāq (a son of Saladin's). Ghazāl and al-ʿAdīl brought great prosperity to Aleppo and extended their territories in Mesopotamia and Syria. Al-ʿAdīl died in 634 and left the throne to his seven-year-old son al-Malik al-Nasir Yaḥyā II (by his marriage with Fatimah, daughter of Sultan al-Kāmil). Yaḥyā's grandmother ʿUthmān Khatun (as above) became regent during a period of political crisis. Misusing al-Kāmil's name, he formed an alliance with al-ʿAdīrī of Damascus. She was unable to defend himself against the Templars who were raiding her territory and her troops under the command of al-Muḥammad, son of Saladin, on several occasions inflicted such losses on them that they were forced to retreat. To strengthen her power the regent made a close alliance with the Sāliḥī Muslims of Kūshān (Asia Minor), recognized himself as a suzerain (in Khūṭa and on coins) and betrothed his youthful grandson to his sister. A great danger was at the time threatening Syria. The wild, warlike people of Khūṭām, driven by Cinghalese (q.v.), 169 of the lands of the Caspian Sea had come to Mesopotamia and occupied the lands of al-Kāmil's son al-Salih Ayūb. Unfortunately the Ayūbīd princes in consequence of their eternal rivalries were not united and when it seemed their interests allied themselves with the Khūṭāmīns. In 628 the armies of Aleppo were severely defeated by much superior forces, their leader al-Muḥammad takes prisoner, all their baggage fell into the hands of the enemy, who laid the whole country waste from the Euphrates to Hamā in their raids up and down the country; finally the Aleppo army reinforced by the king of Hamā and a body of Bedouins, who had deserted from the enemy, fell strong enough to offer battle to the Khūṭāmīn troops. They had to follow the enemy, who escaped them, as far as al-Raḥā, and the army met not far from there. The invaders were utterly routed and retreated via Harrān to Damietta on the Euphrates, where they remained in the Caliph's territory. All the towns in Mesopotamia were taken from them and the captives left in Harrān set free. In 629 the Aleppo troops again utterly defeated the Khūṭāmīs, plundered their camp and took rich booty. A few months later the regent died; his grandson al-Nasir Yaḥyā took over the government and extended his power over almost all Syria, but just when it had reached this height, the end of his kingdom was at hand. The Tartars crossed the Euphrates in 642 and Yūsuf, who had relieved in vain on help from Egypt, died at Damascus and had afterwards to surrender to the Tartars. The latter took Aleppo, which was given over for days in plunder; they conquered the Syrian cities of Hamā, Baʿalbek, Damascus and appointed governor of Aleppo, the son of the Tartars. The so-called later period of the Tartars lasted but a short time. In 650 they were utterly routed by Sultan Kūnūs at 'Ain Ḥamīdī (q.v.) and forced to retreat; Kūnūs placed a governor in Aleppo. Soon afterwards a body of Tartar troops succeeded in taking Aleppo once more and maintained themselves in it for three or four months practising the greatest cruelties. At the end of the year they were defeated at Hamā and had to abandon Syria. Yūsuf Yaḥyā was then said to have been executed by Hulagu (not after the battle of 'Ain Ḥamīdī as is often stated). Aleppo now passed under the sway of the Mamluks. Sultan Qutb as-Salih in 665 it once more suffered terribly from Tūrkiš invasion. It was restored after the retreat of the Mongols and now became a bulwark against the heretical enemy Armenia, against which the garrisons waged countless wars, later against the Turkoman rulers of the Aq and Kēršı Kāmil and of Albid, as well as against the Ottomans. The territory in Asia Minor conquered from time to time by the Mamluks was always added to the province of Aleppo. The town itself was strongly fortified by its garrisons, notably its citadel by Alīrāk, the governor of the second last Mamluk Sultan Ghārī. It passed to the Ottomans in 1516; the citadel was so strongly fortified and the wall of the former, which had not been taken, could not take. In 1526 the Mamluks had a siege of several months. The city was defended by a great fleet from the Ottoman government of the Pasha. From 1822 to 1849 Aleppo was held by the Egyptians. Ibrahim Pasha (q.v.), an enlightened man, although he had the best intentions, oppressed the city by heavy taxes and confiscations as well as by a system of monopolies, which were only beneficial to his officials. Matters became even worse on the return of Turkish rule. Since 1860 however the city has made great steps and will once again regain its ancient importance as a commercial centre.

III. Notes on the Archæological History.

Based on the joint research of
Dr Herzfeld and the writer.

Aleppo is rich in monuments of a military, religious and civil character. The majority are
wall preserved and almost all bear inscriptions defining their date and origin. In addition to these we have the numerous architectural notes in the historians. The buildings of Aleppo thus afford a complete picture of the architectural development, which is authoritative not only for the town itself but for the whole of northern Syria.

4. The City-wall. Aleppo was a strongly fortified town in the Saladin and Byzantine period and it is probable that its walls formed a rough rectangle with a gate in the middle of each side. Khumsar I. captured Aleppo on his campaign of conquest in Syria (430 A. H.) (Procopius, ii. 7, and Nicetas. Kallistus, xiv. 39), and destroyed the walls but spared the citadel. Between the Bab al-Djinn (see plan III) and the Bab Amlikiya (see plan iv. portions of the walls built with Persian bricks, and to date from the restorations by Khumsar, were still to be seen in Ibn Shaddad’s time. The same “The ditch of the ditch” of the ditches, which the walls now follow is the south and east, and does not go back to the line of the citations; however, for it was dug by the Emperor Nicephorus when he besieged Aleppo in 351 A. H. When the Arabs captured Aleppo, Abs d’Ulaidi entered by the Antioch Gate in the year 16 A. H., so that it is evident that the position of the main gate has not been altered. The old line of defence was apparently always followed by the wall in the first four centuries of the Hafiz, for which we have but few notices of it, while architectural remains are entirely absent.

The oldest part of the defences that still survives is the inner wall in the parapet between the two towers of the Antioch gate, built by the governors Azzu al-Dawla in the reign of Caliph al-Hakim (407-413 A. H.). It cannot be ascertained with certainty how much of the wall proper dates from an early period, as inscriptions only exist on the gates and towers. The architectural history of the wall is therefore based on the latter.

Saladin’s son, Sultan al-Zahir Ghazi, in 659 built the north gate of the city of the Bab Najit (Pl. i.), which was called Bab al-Yahud before his time. It has not altered: it consists of two strong towers forming a gate way, the entrance is through one of them by a zigzag path (arbeitkhanah, dervish), cf. van Berchem, Notes d'Arch., p. 42, Note 2). More has survived of the restorations undertaken by Sultan al-Mu’ayyad Shishak after the destruction by the Mongols under Tamer Lane. The Bab Amlikiya (West Gate) in its present form dates from his time (824). Two inscriptions of Sultan’s Sidiql (793) and Farraj (804) replaced on the gate by al-Mu’ayyad bear witness to the restorations carried on between 807 and 824, which had been rendered necessary by earthquake and the Tatars. This gate is from the point of view of architectural technique the most advanced in Aleppo and shows the type in perfection viz. the two-towers, both of which jut out with flattened corners, with lofty vaulting within, a narrow gateway and barbakhana in the right tower, a protected way between the towers. The gateway is defended by loopholes in its three walls and machicolations. The gate had folding gates and draw gates in front of them. In the two of the walls were openings through which a person could be hurled on the enemy from the upper storey if they penetrated as far. There was a sanctuary in one of the gates of the gate way. A portion of the Bab Ijneireh (Pl. v., north gateway) also dates from the time of al-Mu’ayyad, namely the line of the towers south of the Bab al-Djinn (west wall) and the line towers at the southwest corner of the city (south wall). Al-Mu’ayyad intended that his restorations, which were never completed, should cover the whole of the old line of defence. Under Harshy (845-844) this was definitely abandoned and an outer wall which followed the “Greeks’ ditch” was added to the city wall, with (Pl. vii.) in plane of the earlier Bab al-Kamal gates.

About 855 A. H. Sultan Kili Bey built the Bab al-Farraj (Pl. li.) at the south side, on only the southwest gate, now quite built over, remains. Unlike the other gates the entrance was through the courtyard between the two towers. The Bab al-Mahasin also, built on the same principles, may be essentially the work of Kili Bey although it also bears Harshy’s signature. Harsy built the Bab Nejil.

At the close of the Mamluk period Sultan Kiiuqam Ghur in 1415 added a fortified wall to the left side of the Ottoman. From him dates the modern form of the Bab al-Djinn (1441) and the new Bab Kinner (which resembles the Bab Amlikiya) several towers of the east wall, the Bab al-Ajmar (Pl. viii. east gate) and the Bab al-Hadid (Pl. ix.) were entirely removed by him (northwest corner 915). The town soon afterwards passed to the Ottomans through treachery, but they allowed its fortifications to fall into decay. Only one slight tower, the Bab al-Mahasin bears an inscription commemorating repairs by Sultan el Aqmad (1012-1026) and on the Bab Nejil Sultan el Madzik (1143-1168) has perpetuated his name by some immaterial improvements.

As Syrian architecture is essentially medieval in character, avoiding all superfluous ornament and only seeks effect through the solidity of its freestone work and the beauty of its proportions and disposition of its masses, we naturally find these features particularly well marked in defensive works. Apart from the inscriptions and their frames there is hardly the slightest decoration on the walls of Aleppo. A frieze on the Bab al-Naf, may be mentioned as quite unique; it shows an arabesque undergrowth through which a horse is running (see Architecture, i. 365 et seq. Pl. li. 15). There are Mamluk inscriptions on a number of towers, lions or leopards in the rudest relief, which can scarcely claim to be works of art but are only placed on the walls as symbolic emblems (perhaps with talismanic significance).

5. The Citadel. The citadel is a natural mound with its slopes artificially steepened and a deep ditch. Its form is oval, about 300 yards X 150 in area at the top, while the ditch encloses an area of 500 X 350 yards, its height above the bottom of the ditch is 100 feet. The mound does not lie equidistant from the city walls but near the centre of the east wall. The only entrance (Pl. a) is in the south.

The citadel was certainly in existence at a very early period, the period when we find Aleppo mentioned in Syriac and Hatite monuments: from this time date two Mamluk sculptures of this form in bas-relief. It is to be presumed that its sanctuaries also date from this remote age. Although Aleppo
was only a provincial town in the Byzantine period it
was fortified. A relic of this period is a vast
citadel, almost in the center of the citadel built
out of the rock and covered with nine cross
arched vaultings resting on four pillars. The 'Ab-
nissi and early Arab dynasties have left no mu-
numents. The deep well on the north side, around
whose cylindrical shaft a staircase winds, was
built in the Saljuq period as an inscription of Malik-
shah found in a passage below, near the steps,
shows.

The existing fortifications have been re-
paired twice by earthquakes in 565 as Nur al-
Din instituted great works of restoration, of which
several inscriptions have survived on towers on the
west side (565). In the interior Nur al-
Din (503) built the lower sanctuary of Ibrahim
al-Khalil (Pl. 3) (Abraham is said to have visited
Aleppo on his travels) with a splendid mihrab
carved in wood, one of the finest examples of this
branch of art. The celebrated minbar of the
Ayd mosque in Jerusalem was also originally
designed for this sanctuary. The space on which
Sultan Ghazi undertook restorations already showed
the type usual in the Ayyubid period, a rectangle
covered by a cupola supported by two broad girders.

In the reign of al-Zahir Ghazi the citadel was
entirely transformed and to him in the main it
owes its present form. In the years 606—608 he
depressed the moat and repaired the slopes, parts
of which he probably also cemented. He built
the high arched entrance bridge and the great gate
(Pl. 5), which, according to the style of city-gates
then in vogue, consisted of two projecting towers
closed together. A well-known bas-relief
relief of a snake above the gate in the archway
certainly dates from him. The vaulted gateway
is broken into five pieces. The entrance was closed
by three heavy hammered iron gates. This edifice
of Ghazi's is the most perfect example of a for-
tified gate in the east, nor indeed is there anything
like it in the west. Considerable portions of the
outer walls also date from Ghazi, particularly
in the north where there is a small sortie gate with
a hinged iron door. This wall had a vaulted
parapet along it and only rectangular towers pro-
jecting slightly. Inside the citadel in addition
to the restorations of Ma'qan Ibrahim in 620
Ghazi rebuilt the great mosque with its minaret.
It was a very fine minaret and had been a
church down to the time of the Mirdasids. Nur
al-Din had restored it, but in 609 it had been
entirely destroyed by fire. Ghazi's building is a
rate type of mosque: a large central area with a
cupola between every pair of great-vaults, and a
court in front of it surrounded by barrel-vaulted
hall. The minaret, like all old Syrian minarets,
is square in plan and divided by columns into
stories (have three); at the top is a gallery with
a cupola supported by four pillars.

In 659 Hilliya captured and destroyed the
fortress so that it had to be entirely restored under
Sultan al-Ashraf Khalil (inscriptions on the great
gate of 694). By 786 the portions of the wall
repaired by Khalil required restoration, which was
 carried out by Barqut in anticipation of attack
by the Mongols. This building was severely
harmed in 665 by the Mongols under Toghtekin. In
689 the governor al-Djakhma began to rebuild
the walls, when he proclaimed himself Sultan in op-
position to al-Nasir Faraj. He vaulted the gate-
way and above the rectangular area thus obtained
he built a great hall which is still the charac-
teristic feature of the citadel. He further built two
isolated tower-towers connected by the citadel by
potholes in the north (Pl. 2) and south (Pl. 3).

This period of the development of the citadel
was in the reign of al-Mu'ayyad about 820. In
877—880 Khalil Bey began improvements in the
hall and built a square bazaar with comparable
proportion in the centre of the north wall (877).

The period from the construction of the citadel
was a time of continuous struggle between the
Mamluks and the Ottomans. For his defence
Ghazi repaired the citadel and the city walls in a
most thorough fashion. In 910 he re-
paired the hall, deepened the moat in 911—915 and
sleeved its sides anew, repaired the bridge and
built the lofty tower at its head (913). He seems
to have entirely rebuilt al-Djakhma's two tower-
towers (Pl. 2 and 3) (914) and in 915 built a high storey
on Khalil Bey's north bastion. The main object
of these comprehensive additions and restorations
must have been to fill the citadel for the use of the
new artillery.

Although the citadel was built entirely with a
view to defensive operations, the architects of the
various periods expended much art upon it. The
sublime freestone architecture and the imposing
dimensions of the buildings are enhanced by the
many valuable materials used and by the use of
decorative elements marked by excellent taste and
artistic feeling. All things considered, the citadel
is one of the most impressive and important mo-
ments of Syrian architecture.

3. The Great Mosque (Pl. A). — The Great Mosque of
Aleppo, also called the Mosque of Zachariah, after a tomb of it,
lies in the bazarra to the west of the citadel. It was founded in
the reign of the Umayyad Salamun ibn 'Abd al-Malik, and is said
to have been built on the site of the chief church (see Da/awi,). No
traces have survived of this early building, which is said
to have been built after the plan of the Umayyad mosque in
Damascus. According to a tradition (Ibn Abi Tair), partly confirmed by
inscriptions, the present edifice was first begun by the Khalil
Abu l-Hassan ibn al-Khajabil under the Mirdasid
Salih, Ibn Mahmud. In the troubled period that
preceded the taking of Aleppo by Aleppo by Aleppo
by Aleppo, al-Malikshah's governor, little progress seems to have been
made with the building. The lower story of the
minaret bears the date 483, and its inscription
mentions Malikshah and the Khalif ibn al-Khajabilt, that in the upper
calling mentions Malikshah's brother Tushut. The remains of an inscrip-
tion in a medallion, which we found in 1908
during repairs of the east wall of the east
bazaar belongs to the same period (since plastered over
and now invisible). The architecture of the whole
building and the absence of later inscriptions show
that the appearance of the whole mosque has
remained practically unaltered for centuries. Khalid
built its minaret (685), as the old one had been
destroyed during a fire begun by the Armenians
alleged with Hilliya. Sultan al-Nasir Mu'ayyad
built the minaret. Four Mamluk inscriptions, which
were still able to be seen in 1908, have been
removed except the Malikan al-Khajabilt (740)
during the repairs since undertaken. The central door
of the bazaar dates from the early Mamluk period,
in spite of their later inscription (Sultan Murad
III, 996).
The juma consists of a hall of three naves each with 16 columns vaulting on solid quadrilateral pillars. In Malik Shah's time the hall is said to have had marble pillars. The mihrab is a simple, deep, round niche. On the lintel beside it in the south wall is the tomb of Zacharias. Before the juma lies the splendid wide court with colonnade, marble pavement, two roofed wells, a sun Dial, and an open prayer-carpet. Around it are halls similar to the juma. The two-naved east hall belongs to the architectural period of Malik Shah. The north hall with a large water reservoir has also two naves; it was restored by Barbars in 797 but he preserved the old front. The one-naved west hall is a modern building. At the northwest corner of the mosque the first corner stone of five stories rises above the flat roof of the halls. Entirely a work of the fifth century, with its rich classicising ornament and its inscriptions in Kufi and ngành it is quite unique in the whole of Muslim architecture.

A work of the same period, but afterwards essentially altered is the mosque with tomb of "al-Salihin", south of the city built by Ahmed, a younger son of Malik Shah designated as his successor in 1170, with an old and interesting mihrab.

4. The madrasa al-Halawiyah (Pl. W). The Madrasa al-Halawiyah lies to the west of the great mosque from which it is separated only by a narrow bezan street. Before the Arab conquest this was the cathedral church of Aleppo. On its ancient remains Dr. Samuel Gayer writes: "The Madrasa al-Halawiyah contains in its south remains of an ancient Christian ecclesiastical building. The tradition which mentions a church built by Helena, points in this direction and the ciborium-like vaulting borne on pillars adjoining the main cupola in the west, which strikingly recalls similar motives in the central churches of Diyarbekir and Rûmîya, must on account of the form of its pillars etc. be traced to a building of the end of the viith century. According to Hirschfeld's investigations, the cupola itself was built contemporaneously with this ciborium and the same holds of the aisles north of it. We have apparently to recognise in this complex the most ancient mosque of a basilica covered by two or three cupolas, parts of the choir of which stood on the street still running between the madrasa and the chief mosque (cf. Gayer's article in Bulletin de l'Inst. Francais d'Archéologie au Caire, 1144)."

It was not till 1577 that the Qudl Ban al-Khushchih transformed this church into a mosque in revenge for the destruction of Muslim tombs by the Crusaders. In 543 Nûr al-Dîn made it a madrasa. The first Madrasa in Aleppo was the Madrasa al-Zahidiyah built by Sulaiman b. 'Abd al-Halîm b. Cuvîn (510-517) of which no traces have survived (a generation later than the Nûfâs, 517). Almost at the same time in 530 the first khanqah, Khâniqah al-Balâq was built by a freeman of Rjûm's under Âl Aman b. Hûs Rjûm. 5 The Sha'âbiyya. — Close behind the Âl Fiqar gate lie the remains of a building which later writers describe as an ancient arch with a Kufic inscription of later date, called Dîbâj al-Tâm. In reality it is the Madrasa al-Sha'âbiyya built by Nûr al-Dîn in 545, which occupies the site of the oldest mosque in Aleppo built by Âbû 'Abd al-Uzâd (see history). The importance of this building with its luxurious ornament, its architectural features which seem quite archaic, for so late a period and its Kufi inscriptions, lies in the fact that it is one of the chief evidences for the still unexplained radial change, which took place in the reign of Nûr al-Dîn, in the epigraphy and style of its inscriptions and in the style of architecture.

6. Âyubid buildings. — The whole wealth of Âyubid buildings in Aleppo can only be touched on here. But as even Cairo itself, otherwise so rich in monuments, is poor in religious buildings of this period, we may have at least mention the chief buildings viz.: the Marshad (Pl. 99), situated in the west of the city, part of which is older in origin, the sepulchral mausoleum of al-Zâhid Gâhdî, the Balâshiyah (Pl. H.) to the south, at the foot of the citadel, and the Zâhitiyyah in the Maqqâm (Pl. 98), the sepulchral mosque of Firdawsi (Pl. 47) in the same place, the Khânikah in the Farâsî (Pl. 64) and that of Âbû Ridjî in the Kafla (Pl. 24) as well as the sepulchral mosque of Shaikh Fârî in the north of the city in Bibilotik.

7. Mamluk buildings. — A large number of the buildings belong to the period of the Mamluks and Ottomans. In addition to the many mosques, Dîbâj al-Tâm (Pl. I), Aljâmûbâgh (Pl. K), Thawâqî (Pl. M) with their varied minarets, which cause the prospect of Aleppo to remind one of Cairo, a beautiful Mursîn Ârûfî (Pl. 7) of the year 735 and a whole series of large warehouses and shops (Khân) (Pl. 34) — dwellings, baths and public wells have survived.

Röntlogen: No comprehensive modern account of the history and topography of Aleppo has yet been prepared. I have collected the necessary material for the purpose of editing the inscriptions there. Dr. Herzfeld has undertaken the description of the buildings as well as the history of the architecture. The preparatory studies for Aleppo are almost completed and the volume will appear in about two years as a section of Van Berchem's Corpus Inscriptionum Arabicarum in the Mémoire de l'Institut Français d'Archéologie du Caire. The same holds of Damascus and Mina. — On the topography of Aleppo: Muhammad Ban Shâhid al-Halalî (not Sadallah's Khâtîb) about 674 wrote al-Shâb al-Ârûfî, al-Dîwân Dîwân, etc. — On the Khân in the Mistoûfî in Centuries de la Nûfâs et de Mîchâl Amoura, p. 452-463. His history of the rulers of Aleppo has been lost. The works by Ibn Khâtîb al-Nâkîjî and Ibn Shîbîn are based on him. The Khâtîb Abu'l-Yumn al-Bajrûnî, a teacher in the mosque of Khâtaw Pasha in Aleppo, produced a version of Ibn Shîbîn in the 18th century. A. H. (the manuscripts of Ibn Shîbîn in Berlin, Vienna, Constantinople are copies of it); C. Brockelmann, Geschichte der arab. Literatur, ii. 43, printed in Beirut 1909 by the Lemani. A. von Krenner translated several chapters in Sittenbeschreibungen der Wiener Abhandl. Phil. Hist. Klasse, Vol. II. 1854, p. 357-500 and 301-310; the anonymous Ms. 1683 in Paris is also based on an edition of the Shîbîn; Bloch has translated several passages from it in his Geschichte der Ägypten (see below, p. 220-245), and Dr. Röscher, Geschichte von Aleppo (Arabic, written by a Shaikh) an unprinted book without the slightest claims.
to accuracy; the Turkish geography by Diyanet Naimi, Constantinople 1731, p. 359; and Rodtes' detailed account of Aleppo in his Erdkunde, Vol. xviii., part ii. 1733—1777, with the additions appended after 1777, which are quoted and digested. Plan of the city of Aleppo, prepared by Roux in his Recueil des Miss. de la Soc. de Géogr., Paris 1825, ii. p. 194—244, by Niebuhr, published in his Travels and in Russell's above mentioned Natural History of Aleppo; as well as a new plan prepared by the engineers of the wilayet, which is given here. On the geography cf. also M. Hartmann, Das Luba Halâb in Zeitschr. d. Österr. Geogr. Ges., Berlin 1894; Le Strange, Palastina under the Muslims.

On the History of Aleppo: on the history of the conquest by the Arabs: Leone Caetani, Annali dell' Islam, Milan 1910, Vol. iii., which contains a list of the works consulted (the most important are the writings of Wellhausen and de Goeje), as well as a critical investigation of the sources. For the history to 640 Omar b. al-Adin's work is the fullest, of the Arabic text there have been published: the years 626—556 by G. W. Freytag, with Latin translation, introduction and valuable notes (Bonn 1819); Die Regierungen des Salä of Damas (336—262), Arabisch, mit Deutscher Übersetzung und Anmerkungen (Bonn 1820), the text for the reign of Ibn Sald (381—392) and, for the years 534—641 in the Bonn Christentum (424), p. 14—46, the text for the years 577—588 in the Christentum in Asien (Bonn 1841), p. 97—115; the history from the death of Ibn Sald to the end of the Mihribân (349—572) from the same work by N. Müller, Bonn 1830, in Latin translation often abbreviated and inaccurate; the history of the Hamûdieh, in German in extracts by G. W. Freytag, Zeitschr. d. Deutsch. Arab. Ges., x. 437—498; xi. 177—257; the years 488—509 in a French translation by Silvestre de Sacy, printed in Rohricht's Beiträge zu den Kronjüngen, Berlin 1821, Vol. i. 209—246 (see also, Recueil des Historiens orientaux, iii. 577—690); Álbercht's translation of the years 541—640, entitling Histoire d'Alép, Paris 1899; further extracts in Dreux, Mém. des Histoires arabes, i. 35—65; in the edition of Leo Diacron, Bonn 1828, p. 359—391. The Christian Arabic sources (Estyouchel and his son Vahyè d'at Twoq) and the Byzantine are best utilised in Schlumberger, Un Enfance byzantine au royaume Sûle: Niephre Phoca, Paris 1860, I'Epiphanie Byzantine à la fin du sixième siècle, 1896—1905, 1—13. For the Crusading period: Wulken, Geschichte der Kreuzzüge, Remond, Extraits des Historiens arabes, Paris 1859; Kamal des Historiens orientaux, Paris, 1—5; Rohricht, Geschichte des Königreichs Jerusalem, Tübingen 1898; Wüstenfeld, Geschichte der Palästina-Chiffren, Göttingen. Also the standard works of Weil, A. Müller and Clément Hant. — A. T. L. 

Al-Halabi, Imam al-Athir, Rabbanî, Abu 'l-Fida', Ibn Halabi (extract in Osti Antica II by Münzing and Weisert, Amsterdam 1846), Ibn Ilyas (printed in Cairo, except the years 906—922, for this gap cf. Mus. in Paris and Petersburg); Ibn Khaldûn (particularly Vol. iii., History of the separate Dynasties); Mahrâr's Sûlûn (translation from the beginning to 945, by

(M. SOBERLEIN)

al-HALABI, ’Abd-Allah b. Muḥammad, an Arab jurist, author of a handbook on the Islamic law, according to the Hanbal school mainly used in Turkey and often annotated. Its title is Maḥbûb 'al-Dhâhir (printed with Shâhāb’s commentary, Stonålî 1241, 1318, by al-Haskâfî, ibid. 1258, 1287, 1310); French translation by Souvayre, Marseilles 1882; Turkish translation by Hanouf Râqî’, printed in Istanbul 1254; Stonâlî 1269; cf. al-Halâbî, a native of Hâlâb (Aleppo) studied in his native city and in Cairo, came to Constantinople where he filled the offices of preacher and professor and died in 958 (1550) at the age of 90. Besides the textbook already mentioned he composed other works detailed by Brockelmann, Gesch. d. Arab. Lit., ii. 457.

Bibliography c. Brockelmann's.
HALETT | ABBÉE-MUSTÀFA ESENÖ, known as Haleeti, was a famous Ottoman scholar and poet. Born in 1777 on the 15th Shaban (23rd Jan. 1750) in Constantinople, the son of 'Abd al-'Aziz, Mustafa Ercümen, a literary man of some importance, the tutor of Sultan Murad III. He had the good fortune to study under the most distinguished scholars of his time, notably the historian Khodja Sad al-Din. Under their direction he laid the foundations for his later encyclopaedic knowledge of history. He was a multilingual and lived in various places, Damascus, Cairo, Jerusalem, Brusa, Adrianople and Constantinople, and held the highest office viz. iqtid 'alâ' (knight) of Anatolia, and later of Rumelia. He died on the 26th Shaban 1040 (30th March 1631) and was buried in Constantinople near the Stafiler Cemetery.

Haleet was one of the most cultured and best read men of his time, and rivalled 'Ali Cadiji Khatib-asis in encyclopaedic knowledge. He left a library of 3000-4000 volumes, all of which he had annotated in his own hand. As a poet he occupies an honourable place among the Ottoman poets of the second rank. As the first he does not belong, however much he may have been esteemed in his own time. His language is fine and dignified. His poems are pitched on a tender key. They are characterized by a certain pessimism of tone. Haleet's main importance is in poetry lies in his life and even more in his riyāa (epitaphs), composed after Persian models and forming a separate style, in which he successfully imitated Yunus Khayyam and won a special place in Ottoman literature from which he has never been ousted. He also left a number of works, which are his best known (printed Bulak 1458), and a Sahih-Nasir in Matthew's style, which is the best known style of poetry, and a Firdaws-Nasir in Matthew's verses (Arabic). He added a considerable number of new verses to it, although he did not complete the manuscript. His further treatises on the encyclopaedia of the Koran and collections of letters (Macabiyya 'Abd al-'Aziz Ercümen) are another style.

HALF, FALIF [see FALIF].

HALF (Half: Hali), a town in Arabia, lying to the south of Fezulke on the border between the Hālīya and Yemen. On the Wall' Ašır, with the small fortress of Marīt Half and the mountain spur of Hālīya Half (the latter according to Niebuhr: in N. L., iv, 356). Ibn Majria, who visited the town on his journey to Yemen in 1338, does not give its name Half, but only.

TALIH, see de Salver, Col. des Més. des de la Bibli. Nationale, 1875-1876 (Mahbub, iii, 173; 8 mentions instead of this a Hālīya Half Marīt Half).
describes it as a flourishing resort with fine buildings and a splendid mosque. The Seifin, who was at that time ruling the town, belonged to the Kimah [q. v.], and was a gifted poet and a model of Arab hospitality. In Nebiha's time it was a dependency of the Sharif of Mecca, who had a bishop with a garrison here. In 1805 or 1806 the town with the whole coast was taken from the Sharif by the Wahhabis [q. v.]. In 1813 Muhammad 'Ali's Egyptian troops regained it after having been driven out in the preceding year by the neighbouring mountain tribes of 'Atri [q. v.] and in the same year Burchardt during this stay there found the tax-collectors of the Sharif of Mecca again installed in it. In 1823 and 1825, on their campaigns against the tribes of 'Atri, the Egyptian troops passed through Hall. During the Egyptian campaign against 'Atri in 1854 Hall was burnt to the ground by Ahmad Pasha's troops.

HALI, SALIV AL-FIZ UR AIN AN ALHAD, the foremost living Urd. poet, was in his youth a pupil of the poet Ghulam [q. v.], at the age of 40 he came under the influence of Sir Salim Ahmad Khan [q. v.], at whose suggestion he wrote his Munadi, entitled Madsho, qarsh-i-Talhan ("The Flood-side and Ebb of Talhan"), first printed in 1846 (= 1263); this poem embodies the ideals of the Persian geographers of the 13th century and embodies a widespread influence on contemporary thought and activity; it has been frequently reprinted and later editions have been considerably enlarged. In 1893 he published his Dostun, accompanied by a prose introduction on the nature of poetry and the characteristic features of poetic literature in various languages, including Urdu. Among his prose writings are Hayati-i-Safar (1880), Yahya-i-Ghalib (1887), and Hayat-i-Qadri (a life of Sir Salim Ahmad Khan) (1900). He has been living for some time past, in retirement in his native town, Patna.

AL-HALIM (a. the mild, one of the names of God, see l. 304).

HALIMA, a woman of the Banu Su'd; b. Bakr, according to Tradition, Muhammad's nurse. In a year of famine she came to Mecca with other women of her tribe to seek food for children and finally adopted the orphans Mahamad, who soon brought great happiness to her household. During his stay with her, two angels came to him, opened his breast and took out a black clot of blood. Although in the later accounts of Mahamad's wars there are one or two illusions to his foster-kinship with the Haín Su'd, the whole story is simply an exception to infantilism, the motif of which, as the story itself shows, is that every true prophet should have once been a shepherd. The custom of teaching children to Bedouin nurses is occasionally mentioned (Tahari, l. 531; cf. Burchardt's Reisen in Syriken, p. 544 et seq. for the Sharif-families), but was only practised by rich or distinguished people. The evening of the breast, which is placed at a different period in other traditions (Tabari, l. 515 et seq., 517) is apparently only a materialising of Sira 3019, 3.

HALIMA, the name of the daughter of al-Harithe b. Dhiyya, king of the Qawas, celebrated for her remarkable beauty. It was from her (or according to others, from a meadow, called Mardi) Hallima after her — that the Tawee Hallima, one of the most celebrated battles of the pre-Islamic Arabs, the al-Harithe al-Arabi [q. v.], received its name. It was a battle between the Qawas led by the above named king, and the Lakhmide commanded by al-Mundhir b. Mi'a al-Sana. The cause and the course of the battle are differently given in the different accounts. The fray is said to have been so fiercely fought that the drum raised the sun and the stars became visible by day. A well known proverb says: Mas'umum Hallimature "the day of Hallima is no secret". This is said of anything "which every one knows.

AL-HALLAD (the gardener) ABU 'AMIR AL-HARITHI B. MANSEER, B. MAHAMMAD AL-HADHY, a Persian mystic and theologian who wrote in Arabic. He was born about 346 (858) at al-Thur al-Hadhy (Fars), the grandson of a wine-grower, or descendant, it is said, of the Saffah Abi Aytham. From 360 (873) to 884 (967) he lived in retirement (lukawa) with Sufi teachers (Tannait, Ars Makki, l'Sanaa). Then he broke with them and went out into the world to preach ('abhib) asceticism and mysticism, thus assuming the role of a Karmantin, in Khorasan (Tulutikin), Ahwaz, Fars, India (Yamunatir) and Turkistan. Abu his return from Mecca to Baghdad in 206 (920) discipless (Hallajin) rapidly gathered around him. He was then accused of being a heretic by the Murids, excommunicated and imprisoned in the palaces of the Caliphs. Before the visit of Ibn Tahaf and on the advice of al-Mundhir, he was sent away in 214 (928) to the castle of Bishapur, where he arrived on 299 (932) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration. The latter the last of the Saffahs b. Abou 'a'lim. On the 24th Dhu l-Ka'da 300 (263) March 9th, on the spot where the new prison of Baghdad (on the right bank of the Tigris) was inspiration.
HAMÁ (also called Hämät or Ephesus) is built on both sides of the Orontes (Nahr al-Ḳādī), the larger part of the town being on the left bank (cf. Pau), which in places rises as high as 70 ft. above the river. Three bridges connect the two banks. No trace remains of the mediaeval citadel, and only a mound of ruins marks the site of the palace. Its stones are said to have been used to build the palace of the family of 'Abd al-Ḳādī al-Ghālib who immigrated from Hāghezāt; in this palace and also in that of the palace of the 'Abd family there are two fine, fēs (rooms built for the hot season) ornamented with wood carvings. The water of the Orontes is led to the gardens and fields through aqueducts, to which it is raised by water wheels (mawār'a), whose singing noise has a peculiar soothing effect. There are also several mills in use in Antioch. The Crusaders brought them to Germany, where they are still used in a little valley in Franken near Bayreuth. In A.D. 1-Fīlī's time there were 37; now there are about 9 such water wheels. Hamā has 5,000 inhabitants (about 6000 Christians, the remainder Moslems); it is connected by railway with Aleppo, Hims (whence there is a branch line to Tripoli) as well as with Damascus and Beirut. A high road leads to Lattakia via Diyar al-Shaghūr. On the prospect of Hamā see M. Hartmann's Reiseberichte aus Syrien (Berlin 1913), p. 50–57.

Historical. Hamā was first settled by Hitites; it is the most southerly place where Hitite inscriptions have been found. In the wars against Salamisar II in the year 354 and 349 B.C. King Ishkun of Hamā took part as an ally of Hāzīr of Damascus; in 278 king Eni-El paid tribute to Tiglath Pileser. In 720 a rebellion by king Bara-Ḳadi was put down by Sargon and the town incorporated in the Assyrian empire. Hamā called "the great" in the Bible is frequently mentioned there. In the Hellinistic period it received the name Ephesus from Antiochus IV Ephiphanes. In 16 A.D. (unlike Hamā it was a little town of no importance) it was surrendered to the Muslims and remained till the 10th century under the administration of the amir (military district) of Hamā. In the time of the Hamānād Saif al-Dawla (333–356, q. v.) it was incorporated in the administrative district of Aleppo, in which it remained till the death of Riḍwān, in 597. The ruler of Damascus the Astabag Tughitikā (q. v.) seems that he has taken the town. It was taken from him in 599 by the Sahib general Burāq and given to the Khalid ibn Wālid, governor of Damascus (q. v.), who transferred it to his brother Sulaimān ibn Mahran. During his reign the Franks in 541 took advantage of an eclipse of the moon, to penetrate into the suburbs of Hamā but had to retire without taking the town itself. When Tughitikā died in 528, the Franks at once marched his troops into the town and took possession of it. On his death in 622 his son Rām (q. v.) succeeded him. In 524 Fīlī made an alliance
with Zangi and sent the governor of Hama, his son Sewun, to his support. Zangi unceremoniously imprisoned him, entered Hama with Shirkuh and handed the city over to the latter, as he had agreed, but soon afterwards made him a present of the castle. Zangi's galleys Hama, however, were unable to hold the city for a brief period. Nur's son Ismail took possession of it in 527 and held it till 529. Zangi again took it in the latter year and placed a strong garrison there. The ownership of the city next passed to Nūr al-Din and to his son Ismail till Saladin took it in 572. Two years later he granted Hama to his nephew al-Malik al-Muqaffar, whose descendants retained it in its possession and made it their aim to keep on good terms with the great Ayyubid rulers. Recognising their weakness they did not attempt to resist Hilâlîh Khan and after his defeat had to acknowledge the Mamlûk Sultan to be overlords. The main line became extinct in 698: the nephew of the last Sultan was the celebrated author Abu 'l-Fadl Isma'îl[q.v.] who accompanied Sultan Muhammad al-Nâşir on his campaigns and was bound to him by ties of the closest friendship. Al-Nâşir Muhammad granted him Hama with the rank and title of Sultan. Under him the town enjoyed great prosperity. His tomb is still preserved in Hama (see Graf Möllendorf in the Zeitschr. d. Deutsch. Miorgen. Gesellschaft, 1908, p. 657—660). His son al-Malik al-Afsâf al-Muhammad drew the wrath of the Sultan upon himself by his incompetence and was finally banished to Damascus. After his death (745 H.) Hama was ruled by governors of the Mamlûk Sultan. In importance it was overtaken by Tripoli and about 750 was considered a government of the second class. Under Ottoman rule Hama at first continued to be a province under a Pasha. At the present day it is a gândîk under a mufti of the wilayet of Damascus.

The Great Mosque. The Hâram has been evolved from a Christian basilica of unusual form: a nave of different breadth, 8 supports with 5 cupolas in the centre and covered by five cross vaultings on each side. The west wall seems to have been the northern wall of the church. The south wall dates from the pre-Christian period 690, that, as in Damascus, the building is temple, church and mosque. In the east, standing alone is an old four cornered minaret with Kufic inscription, probably of the 8th century.

The beautiful court is surrounded by vaulted halls, an estrade with two Nilahs before the haram, a second with a basin and isolated mihrab at the north wall, a khamsa on 8 ancient pillars. In the east a turbe and a hall of prayer with heavy bronze windows of a Mamlûk period. From the west hall one enters through a room the mausoleum of al-Malik al-Muqaffar III (685—698) with splendid caskets carved in wood; a second minaret rises outside in the centre of the north wall; its form and inscription proclaim it a Mamlûk building. A peculiar feature of the architecture of Hama finds marked allusion in the monument of the walls by mosaic of coloured glass by the alternation of black and white limestone.

The Isâm al-Nâşir is built on the left bank of the Orontes on sloping ground and high substructions. The building was founded by Nūr al-Din and, in spite of the many alterations, still contains considerable portions of the old building, for example, the long wall, the cross-vaultings of which belong to a later period, three cupolas of different forms in the east hall, the substructions of the east and north sides and the north outer wall of the mosque. The lower part of the minaret (40 square white blocks) is perhaps also old. The mosque contains, the beautiful remains of a wooden minbar given by Nūr al-Din, and richly decorated mihrab with decorated marble pillars given by Malik al-Muqaffar Talji al-Din (626—647) and in the eastern ante-room a mihrab of marble columns the capital of which bears an inscription of Abu 'l-Fadl. Ayyârâ in herodoto, Ekbatana in the classical authors, lies in a fertile plain at the foot of Mt. Elsawâng [q.v.]. This is not the place to discuss its pre-Muslim history for which the reader may be referred to Pauly-Wissowa, v. 2155, and Struck in Zeitchr. für Assyrisch., 1887, p. 367; et seq. Persian tradition still knows of the age and ancient greatness of Hama. A Persian author quoted by Yâqût (cf. Mâdâ'ân, IV. 983) says that Djin created Sarî (Star, Sarûk) is the name of the citadel of Hama (Hama). Here surrounded it by a garden, Husain b. Tabândî, completed it, i.e. Djin (Dinâshâh, Yasna) built the citadel (in the old Persian tradition also Yasna is the builder of the castle, Fâra). Djin fortified it with walls, and Husain, the ancestor of the Shâhâbids, completed it. According to another tradition, Djin rebuilt the city, which had been lying in ruins since the time of Bukhârî-Naq'î in order to have a safe asylum for his hammer and treasures during the war with Iskandar. For this purpose a palace was built at the centre of the town with near less than 3000 to others, as many as 1000 treasure-chambers and 8 double tombs sloping up to the north. Whether the palace actually dated back to early times, must remain uncertain; it is certain, however, that it was destroyed by Aghâ Muhammad Khan in 1789 and that the remains, now called al-Muqaffar (the place of prayer) are to be seen outside the town.

Another monument of ancient times, of which the Arabs give an account is the Lion Gate (Thâb al-Ain), which gave entrance to the town from the Elawand site and was adorned by a colossal statue of a lion. The inhabitants looked on this figure as a talisman, which preserved the town from misfortune and ill. That ancient communication was reserved when the Caliph al-Maktauf declared it be brought to Baghdad in a cart ordered to be brought by elephants. Fortunately they were able to convince him of the impossibility of carrying out his plans so that the lion remained in Hama (Hama). Shortly afterwards (819—934) the Thâb al-Ain was destroyed by the rude Dallars warriors of Mekdîrâw and the lion thrown down (Mâdâ'ân, Mâalî, ed. Parâ, 2, 141). The inhabitants, however, to this day adorn a figure of a lion lying outside the town as a talisman against hunger and cold (Carrou, Fâra, 555). Cf. the picture in Jackson, Parsee Past and Present, p. 197.
Other old buildings mentioned by the Arab geographers were not in Hamadhani itself but in the neighbourhood, e.g. the fire-temple of Barithân or Fardaghn, which was destroyed by the Turk Turan in 282 (893) (cf. Yāqūt, op. cit., l. 340, iii. 370); buildings erected by Badr al-Murr al-Murtadha, the famous 9th century poet, are mentioned in Hamadhani, with Persian and Arabic inscriptions and others besides. The fullest account of them is given by the geographer Ibn al-Fakîh, a native of Hamadhan (ed. de Goeje, p. 213 et seq.). Old Persian inscriptions of Anaxarches II have, it need hardly be mentioned, been found in Hamadhan and others of Darius and Xerxes on Mount Elwend.

As the centre of a well-populated district Hamadhan developed at a very early period and is said to have been four parangams in breadth and in breadth to have stretched as far as where later the villages of Zainawwash, Sangalid, Baraghân etc. lay. After the battle of Nathâwan (227-228) the town fell into the hands of the Masîma (cf. ed. al-Balâghirî, ed. de Goeje, 309 et seq.), but continued to be the market of the country round. According to Ibn Hawqal, it was one of four parangams and consisted of the town proper and suburbs (râbîyât). Four gates led into the town. The cold climate and the heavy snowfalls during the long winters did not make it a very inviting residence as that it played the modest part of the chief town of a province until, in the last years of Sâdâtâb, power, it was chosen a residence by those Turks who were used to a cold climate. Royal palaces were built in the city, but it remained a place of temporary residence. They were all apparently destroyed by the Mongols when they took and sacked Hamadhan in 1227 (cf. Ibn al-Athîr, ed. Tornberg, ii. 248 et seq.). The town however afterwards recovered, as is clear from Hamd Allah Mesûtâ’s description, but remained what it had been under the Arabs and still is, the market place of a fertile district. The local industries are leather and metal (gold, silver and copper) work. According to Ker Porter, the population in the beginning of the 19th century was about 40,000, according to Curzon in 1859, there was no more than 20,000. Among these are a considerable number of Jews (1900-2000), who are not enumerated not only by the favourable conditions of trade, but also by the alleged grave of Mardîczâl and Fathâ in the middle of the town, not far from the Masjid-dûnum, to which also many Jews from other countries make a pilgrimage, cf. Jewish Encyclopedia, v. 333; at Hamadhan there is also the tomb of the celebrated philosopher Avicenna who died here in 428 (1037). Cf. the picture in Brugsch, Reise nach Persien, p. 362.

Hamadhan (358-398) Abu Tâ'âr, Amám b. Al-Hârîm b. Jâhîf b. Sa’d b. Aswine, called Dâdî or Zamân, poet and elegant writer. He studied at his native place Hamadhan with the grammarian Alårîn. Later Sa’d and then Alårîn died, but a time the favour of the Sâdâtî is Alårîn, thence to Li-jadîn where he found a patron in Abî Salâm Muhammad b. Manûrî. In 392 he went to Nihâbîr, which he reached destitute, having been attacked by brigands on the way; he was warmly received than he had hoped by Abu Bakr Khârisam, the leading nabi of the time, and was presently invited to compose with this personage in public in the various branches of nabi; in the account which he gives of the match (translated by M. Kermor, Kulturgesch., ii. 471 et seq.) he represents himself as victor; but through this appears doubtful, the affair brought him credit and when Khârisam died in the following year succeeded to his kingdom. He found patrons in the great cities of Khwarzâm and Ghur, and finally settled at Herât, where he married the daughter of Al-Junân b. Muhammad Khânî Khânî. Of the works by which him have some down to us, the Madzâmû would seem to have been dedicated to Khañaf b. Almâd, prince of Sâdûtân, whose honourable treatment of the author is also described in the Letters (n. 173). The word Madison which before his time seems to mean "sermon" (Ibid. Alqâlaân, p. 421) or "discourse" (Ibid. Bûshârî, p. 218, v.) from its employment as the title of Hamadhan’s composition came to mean something like the Greek Mêter, i.e. an entertaining dialogue. Hamadhan’s alâm is written 490 of these, of two alike; this work is not borne out by the surviving collection, which numbers 51 pieces, some of them duplicates. The subject is ordinarily enya, i.e. ingenious devices for obtaining money, under the influence of learning, eloquence or wit; some however might better be described as scenes of contemporary life in Baghîd, where some are placed in the past, e.g. one in which the poet Dhu l-Kurram figures, one which deals with Muhammad b. Isâtîk al-Saîmati (died 753), and one which reproduces a scene in the life of Sayf al-Dawla (died 351). The subjects include theological discussions, sermons, poetical parables, as well as the devices of beggars and thieves. According to Husni (Zahâr al-Adlî, l. 554, 1505) they were suggested by the Archidom of Idrîs Durãdî.

The collection of Letters (233 in number) consists mainly of private communications, written however with sufficient elaboration to justify publication. The persons to whom the letters are addressed were in most cases men of some eminence, though only a few are still remembered, e.g. the historian Ibn Miskiwah, and the nabi Abu Bakr Khârisam. The contents are usually only of private interest, e.g. requests for the loan of books, or complaints of the amount of his alâmilah, i.e. however deal with matters of more general importance, e.g. as to the spread of the 29th bays. Selections from his poems were made by Ibn ‘Abî Hâdî’ (Fustâna, iv. 195-214), and some others are inserted by Yâqût in his biography; the shadow which has been published (Cairo 1905) by Abu al-Walîd Khânâ and Muhammad. Shahzâde illus
HAMĀTIL, talisman. The use of amulets is very widespread in the lands of Islam. In North Africa, they are called cores, among the Arabs in the East sumah, or sumah, and in Turkey, mehmut or mehmut. They are often carried in little bags, lockets or purses, which are worn round the neck or fastened to the arm or turban. Among rich people they are of gold or silver. Children are given these amulets as soon as they are forty days old; the student articles may be used as amulets, such as a shawl, a piece of bone, worn into leather and fastened under the left arm (see Emily Katti, Memoirs of an Arabian Princess, transl. by L. Stanley New York, 1903), p. 68). Bedouin girls have an amulet which they call ahor and prize highly: it is a book of prayers, 7 cm. long and 4.5 cm. broad enclosed in a gold or silver box and is worn as a brooch.

The prayers, signs and figures on these talismans are of very different origin and their investigation offers great difficulties. We find on them divine names, names of angels, verses from the Koran, astrological symbols, Kabbalistic letters, magic squares, signs of geomancy, figures of animals and men (cf. 3358). According to Muslim tradition, God has 99 names, which in reality are only epithets, such as "the Omnipotent", "the Wise", "the Knowing", "the Merciful", some authors like Tirmidhi and other hadiths enumerate them. These are also given in J. Meurer, Der Mohammedaner in der alten Welt, § 1288 (cf. the article allah, 1. 3200 et seq.). These names may be used as one phrases or arranged according to the numerical value of the letters composing them. Besides these, God has a name not to be spoken, which men do not know but which is revealed only to prophets and saints.

The names of the angels are also numerous. The best known are those of four archangels: Michael, Gabriel, Raphael and Judas, which are frequently used in many amulets. Besides these there is a host of others, which are given in the angelological works. There are several works of this kind in Arabic, which are ascribed to authorities such as Abdar or Almazar; they contain a doctrine, which is derived from the notion of the gnostic-akon. There are angels who presides over the plants; others presides over the months of the days of the week. Seven are given for each day; their names, barbaric in their sound, frequently appear in pairs e.g. Jallak and Bath, Kaar and Maraj, Kintah and Yaktanah, a kind of combination such as we find in the Geg and Magog of the Bible and the Yaghiti and Maljaf of Arab Tradition. An angel very prominent in the world of magic, who presides sometimes over the planet Jupiter and sometimes over Mercury, and whom the Arabs seem sometimes to have confused with Miyab, is Maljaf. He is one of the great figures in Kabbalistic literature. We find him also in the Zohar, where he fills the part of a kind of demon. (Cf. Reman, Pe de Tene, p. 268, note 4; Les Alphores, p. 170; Schwa, Vocabulaire de l'Anglais, p. 170).—Two other angels, who have a history of their own, are also mentioned in the Koran, they are the angel of the night, and the angels who are always in the heaven. (Cf. Ibn al-Kebir, q. v., p. 470 et seq.).

Of the verses of the Koran the most efficacious as amulets are the short verses called:—"Say: I take refuge in the Lord of the Hosts;"—and:—"Say: I take refuge in the Lord of men, the king of men etc." These two verses are called al-mu'min wadadatina ("the two who preserve"). In the first the evil women are mentioned who directly come upon the angel, while the second is considered to be more efficacious against the evil of the flesh. The second is also credited with more power against psychic afflictions. Besides these the Sunna is highly esteemed by the Muslim. This is also true of the Fisdes, the Ayn al-Kuraysh (Sunna II, 256) and the tombe verse, Ayn al-Adr (Sunna IX, 136). Other verses, which are not recorded, are also used in special circumstances.

The astrological signs, the signs of the planets and of the constellations are well-known; they are naturally used for talismans. We often find quite popular signs which may be traced to different Kabbalistic alphabets, and are used under different rubrics. These rubrics are called "little moons" or "crowns." According to the Sefet Y context, every letter in a talisman ought to have its crown (Sefet Y, transl. by Mayer von Vegesack). Geomantic figures formed by points arranged in different groups are also sometimes used. Geomancy, Arabic Tim al-Kamal, is divination from points formed in sand. Four lines are drawn in the sand, points marked at regular intervals and some of them wiped out at random. The remainder form definite figures, which are used to interpret the future.

Magic squares (marif, 7, q. v.) are also often used. They consist of 9 or 16 compartments. Usually the same number is added to each compartment. This gives the thing a more learned look. Thus they begin with 9 instead of 1 and run from 9 to 14 instead of 1 to 16. Instead of numbers, letters are often written in the square, e.g. the four letters of the name Allah, and four times in different order. The problem of magic squares has been thoroughly studied by the Arabs, and we see from the books of the first, that squares of 9 columns were known.

Forms of men and animals are rarely found in North Africa on talismans; but in the East we find them on wands and amulets, which have been produced under the influence of Persian art. Looking-glasses, cups, and seals in which magical
power is ascended, are often adored with them. For this purpose figures of angels or animals, particularly griffins with human heads or the signs of the zodiac are used. A talisman, which Reimarus saw, represented a man drawing something out of a wolf; this talisman had the peculiar property of helping to locate hidden treasure. Several other examples are given in Herkles, *The Customs of the Muslims of India*, p. 339 et seq.

The human hand is a very popular symbol among Muslims. It is carried around the neck, cut out of gold or silver or engraved on a medallion; it is said to avert the evil eye. This charm is usually called the *hand of Fatima*. The Shi'as interpret the five fingers as the five points: Muhammad, Ali, Fatima, Hasan and Harun.

To sum up, it may be said that the subjects used, except the verses from the Koran, may for the most part be traced back to Gnostic or Talmudic sources. According to Arab tradition, Adam, himself discovered or rather revealed the talisman. According to the *Abegg des Merveilles* (transl. Lemaire de Vaux, p. 142), *Adam*, the son of Adam, stole from Eve, while she slept, the charms she used to conjure spirits; but he made a bad use of them. Solomon was a great magician, according to Muslim historians; his ring plays a great part in Talmudic legends and Arabic tales. The djinn, who appears in the story of the fisherman in the *Arabian Nights*, was confined in a vase, which had been sealed with Solomon's ring. The talisman, still known as Solomon's seal and worn by Muslims and Jews alike, represents a six pointed star. The Berbers also, according to the *Abegg des Merveilles*, were very skilful in magic and, when they threw their talismans into the Nile, they were able to bring numerous plagues upon Egypt.

In Arabic literature, there are various treatises on the science of talismans. The most celebrated writers on this subject are Al-Salami al-Majlihi (died 1007 A.D.), who brought the Talisman to Spain, the *forger* Ibn al-Walabhi, the author of the *Agriculture of Nobility*, and al-Jahiz (q.t., L. 703). A number of amulets preserved in the Bibliothèque Nationale in Paris are described — certainly wrongly — by the great theologian al-Ghazali.

Muslim theology, which prohibits sorcery, tolerates the use of amulets. They are usually prepared by deviates, who belong to various brotherhoods, and are only of value when they are received from their hands.

(H. Caire de Vaux.)

**AB-HAMAL** (A.), the Ram (Aris), the first constellation of the zodiac, after the Fixed Star. It contains 13 stars which make up the figure and five others outside it. The ram is represented with its body facing the west but its head is turned back. The two bright stars on the horn λ and ν are called *Al-Sharafin*, `the two signs`, because they betoken the approach of the equinoxes; the brightest star outside the ram is called *Al-Nasir*, `the buttress`; sometimes it is included with α and β under the name *Al-Asyfi`, `the signs`. The stars α, ι in the tail, which form an equilateral triangle with θ on the thigh, are called *Al-Rajin*, `the belly`, i.e., of the ram. *Al-Sharafin* and *Al-Asyfi* are on the names of the first two constellations of the moon.

Al-HAMAM (A.), the dove, particularly the ring-dove. A distinction is made between tame doves which live in dovecotes and wild doves. The dove is one of the cleverest of birds, for it can find its way home from the most distant parts. To find its bearings, it flies upwards in spirals like a man climbing a minaret; when it finds the direction of its home, it starts off thither in a straight line and reaches its goal in the shortest possible time. Only demons, which obscure its view, or birds of prey can cause it to lose its way. According to Mathama b. Zuhair, there are no tokens of love between men and women which are also to be observed in doves. The cock knows the brooding-place of the hen and alternates with it in sitting on the eggs; they also build the nest together in proportion to the size of their bodies, by first selecting a hole and filling it with straw and leaves. The dove lays two eggs after fertilization, one containing a cock, the other a hen. The feeding of the young is done primarily by the cock. Even the young ones can distinguish between angels and hawks; if they see a white hawk (ašhām), they die of fright. The worst enemy of the doves is the marten (al-dahj). It enters the dovecotes and leaves not a dove alive, although there be hundreds of them.

Allah sent two wild pigeons to the opening of the cave in which Muhammad was concealed; the pigeons of the sacred area in Mecca are descended from these. Proverbial expressions are *farther than the doves of Mecca* and *farther than the doves of Medina*. The use of pigeons as letter-carriers and as objects of the chase is often mentioned. Hirzā al-Raghaib is said to have been very fond of doves. The medical applications are numerous.

**HAMAN**, the Persian minister hostile to the Jews in the book of Esther, according to the *Koran* (al-25) seized with Zarān (Zorān) on Fir'awn's orders and filled with the office of grand vizier. These two learned the remarkable birth of Mī'āt and advised that the boys should be slain and the girls allowed to live. When Mī'āt appeared as a prophet of God, they called him a liar. Fir'awn said: "O Haman, build me a tower, on which I shall reach the path, the paths to
Hāmān — al-Hamdāla. 245

heaven and ascend to the god of Mithra" (Stru.
§ 38 of Art.). That Muhammad places Hāmān
in this period betrays his confused knowledge of
history, of which many other examples may be
found in this work and in the Silhouette Dissection.
(Stru. § 38 and Māridā. [Evan. V. 18]) contain a
similar anachronism when they make Belshazzar, Job
and Jethro all members of Pharaoh's great council
which advised that Moses should be disposed of.
Another passage in the Midrash (Num. X. 22)
describes Hāmān and Korah as the richest men in
the world. The Korān commentary on the above
passages (xlii. 25 and xxxvii. 38) is interesting;
it gives the following account of the building
of the tower by Hāmān: 50,000 masses worked
for seven years on the building and when it
had reached an extraordinary height Lībiel
overthrew it. In any case it is remarkable that
neither the Korān nor commentary nor the Arab
historians mention anything of the true Hāmān
of the book of Esther. It must be presumed
nevertheless that the story of Hāmān was not quite
unknown in Arabia. This is irresistibly established
from the frequent mention of the name Hāmān.

Hāmāsî (h.), harrassity. Poems, which cele-
brate valor in battle, form a considerable portion
of the ancient Arab poetry and therefore occupy
pride of place in anthologies; the collections by
Abl Tamman (p. v.) and al-Bahūrī (p. v.) are
therefore briefly called Ḥamāsî.

Hāmawand, a notorious tribe of Kurds,
which rendered the banks of the Tigris south of
Mūṣi ashur known by their robberies in the second
half of last century. According to Cainstr, La
Terre d'Ariste, ii. 768 they migrated thither from
Southern Persia; according to Causon, Persia, i.
557, they are a small body of the settled Kurds of
Kermanishā. It was only after several expeditions
that the Turkish authorities succeeded in
putting an end to their depredations.

Hāmad (a. P.). Article on the article Ḥamāla.

Hāmad Allūst Mustawfī. [See al-Asnā-
lim].

At-Ḥamdaḥ means the saying of the for-
mula, Ḥamdaḥ Allāh (for the different vocaliza-
tions — dh, dh, dh — see Zikr, ii. 133 ff. 27 et seq.). “Praise (in its whole genus and of every
species) belongs to Allāh”; for from him all praise,
Commendations proceed and to him all gratitude. Ḥamān
is a place of divine being, being praise for something
dependent on the will of him who is praised and
differs from this in that which is not so limited; it is then
different from, although it may be an expression of žahīd, “gratitude”, the oppo-
site of which is kafīrān; Ḥamān, often rendered
“praise”, more exactly “taking account of”, is
used both of praise and dispaise. The phrase is
formally Ḥamān or Ḥamāl, “narrative”, but in its
use it is bâṣīf, “auscriptive”, for the speaker makes
it an expression of the praise which he at
the moment directs towards God. (Muhammad Abl al-
Tabī‘ī in Ta‘ārīkh al-Fārisī, Cairo, 1323, p. 28; see, too,
the elaborate discussion by Bāhirī in his Ḥadīth
on the Ša’bīnī al-Āṣirā of Fudalī, p. 3 et seq. of
ed. of Cairo, 1315.) In Lane's translation,
“Praise be” (Lexicon, p. 538) he meant an
emphatic affirmation, not a Žahīd; this is plain from
his letter to Flischer on the translation of ḥamā-
la, etc. in the Zeitsch. d. Deutschen. Gesell.
ax. p. 187, but this use of “be” is misleading
and hardly defensible as English. Perhaps the
viewer's force could be indicated by a mark of
exclamation as Palmer does in his translation
of the Korān. As the phrase occurs twenty-four times
in the Korān, besides other forms which are Allū-
stī, it naturally became frequent in Muslim
usage. All things come from Allāh, and for all
things, pleasant or grievous, he is to be praised.
Yet the verb Ḥamdaḥ does not seem to belong to
the classical language and is thus later than
Ḥamdaḥ, which may even be pre-Islamic. In the
Šabī‘ī and the Ḥadīth it does not occur, though
Ḥamdaḥ is in both, in the latter fortified with a
verse of Omar b. Abī Rāḥīf, (Schwarz, Douai,
No. 413, ii. 241, the evidence for the line and
the usage is fullest in the Ta‘ārīkh, v. 6).
The Miṣrī (finished a. d. 734) Ḥamdaḥ is men-
tioned, but only under Ḥamānī: and it has
another. Finally, it is mentioned in its place in
the Kūshī; so slowly did it win recognition as a
word. Besides its broad, dovent usage the phrase
is used a part of the piety and of the sup-
plemental ṭādīb having been repeated thirty-three times
in the latter (Lapic, Modern Egyptians, chap. iii.
Lexicon, 1909). Further, as one of the seven
Muhāmūn, in the sense of the verses of the Fathā,
it has part with the Fathā in various mystical
and magical usages and meanings. Thus it is
the Muḥāmūn assigned to the first of the seven
stages of the Rihāfītī fāṭihah (W. H. T. Gairner,
Way of a Muhammadan Mystic, p. 18, 25). In
the orthodox tradition the Ḥamdaḥ has begun
to have magical value; cf. in Bahāshī (Kūshi al-
Tabī‘ī in the Fāṭihah al-Kabīr) the story of the man
who used it as a charm (ṣaytān) against male-bite,
and the Prophet approved. For later elaborate
developments in magic, see al-Blīnī, Shams al-
Maṣā’hif, Faraz X, and Ahmad al-Zarkūzī,
the modern Egyptian magusian, Muḥāmūn al-
Maṣā’hif, p. 173. But the Ḥamdaḥ does not seem to be
used by itself in magic as the Ḥamdaḥ. Again,
the tendency to use the phrase as an introdutory
formula seen expressed itself as a traduction
from the Prophet: “Whatever speech (or thing of
importance) is not begun with praise of Allāh is
nullified” (al-Ramadān). That the Ḥamdaḥ became
one of the three required things at the beginning
of any Formal writing. But this requirement
was distinctly later for, while the use of the Ḥamdaḥ
in this way held from the earliest times, we do
not find the Ḥamdaḥ prior to the Sirah of Ibn
Hishām nor even to the Algröße. See on this usage
and the traditions supporting it, the commentary of the Sāfīd Murāt on the
Iṣrā‘, i, 52 et seq. On the praise-fulness of this
expression see especially ibid., iv. 15 et seq. (Kūshi al-Ṭabī‘ī).

Bibliography: References as above and
also Bahūrī, cf. Flischer, i, 5, ii. 20 et seq.,

Their tribal center, Balad Hamdan, was a center of civilization in ancient Arabia, with a history dating back thousands of years. It is mentioned in the Bible as the homeland of the Israelites. The tribesmen of Hambdan were known for their military prowess and were often involved in conflicts with other tribes and foreign powers.

HAMDAN KARMATI, an Islamic missionary, the founder of the Karmathian sect, was a priest in the neighborhood of Khīta. His nickname, Ḥarmatī, which belongs to the Kharmatian dialect spoken in that district, means "man with red or fiery eyes" (Tabarī, Annals, ii. 2145). He was converted through meeting Ḥussain ibn-Abū Ḥaytham, Abū ʿAbd Allāh b. Mā'mun, the missionary, whom he succeeded at his death. He settled in Kāhī, near which he could easily keep in touch with the mission in Khorāsān and with the Grand Mufti, who resided in ʿAskar-Mukarram (281 = 873) in Khātūn. He built himself an official residence called Ḥamīd al-Nasrī (place of refuge); this became a centre ground which his followers settled in and from which they undertook their raids (282 = 993). He was a man of keen intellect, who was never known to do any wrong; he was a man of many tongues, very capable and full of ambition. On the death of ʿAbd Allāh he declined to recognize his son ʿAbd as Grand Mufti and remained faithful to the Imam Muhammad b. Ismāʿīl. He went to Syria where he died soon after. His brother-in-law ʿAbdān who composed most of the sacred books of the sect was murdered soon afterwards by Zirkiya, one of ʿAbdān's followers. To obtain funds Karmatī had introduced a series of taxes, such heavier than the preceding, that he had to pay in silver, precious stones, or gold pieces; finally he demanded allīya or community of wives and property.

Bibliography: See the article "KARMAṬIYAH."
year is not given — in Sar'ë and grew up there. He then went on his travels, spent some time in Mecca, afterwards returned to Yemen and settled in Sana'a. He is said to have been thrown into prison there on the accusation of the local poets that he had composed a lampoon on the Prophet. From the Berlin MS. Alhmard, Vorzüge, No. 9664 (fragment of the Commentaries of Most of the Abbasites and the Sunnites), Die Zeitung (1863), No. 1, in the Zaddi, in Der Islam, I, 362 et seq., I, 45th infra, 460 et infr., it is clear that he was in prison in the time of the Zaddi Imam Ahmad al-Nasir (died 3157) and 'Asad b. (Abu) Ya'far al-Hwâli (died 3327) in Sana'a or Sar'ë and that he appended for assistance from his cell to Abu'l-Hasan 'Ali, the son of the Karamân diair 'Abdu'l-Karim al-Husayn al-Mazîgi (the latter died in 3037; cf. al-Djamali in Kay, Yemen, etc., p. 146 et seq. of the text) and indicated panegyrics to him, which are said to be in his Dusuri. From l. 217th infra, 218th infra of the Paris MS. Bibl. Nat. (Hochet, Catal. de la Coll. Schleier, Paris 1804, No. 592) it is clear that he was in prison in the time of the Zaddi, but giving among others a synopsis only of the Berlin fragment, it may be deduced that his imprisonment was connected with the desertion of two of al-Nasir's officers and the rebellion of the people of al-'Absha. A reference here made to a detailed account, which appears no longer to exist.

Al-Hamdânî died in 334 (945-946) in prison in Sar'ë, according to tradition. It is hardly to be supposed, however, that he had been continuously deprived of his freedom since the time of al-Nasir.

Al-Hamdânî crowned himself with honour in several fields of knowledge. He had a reputation as a philologist, poet, historian and geographer (he is also given the name al-Nasir) and had also studied astronomy and geometry. His native land was the focus of his interests and his works are of the utmost importance for the study of the geography and tribal relationships of Arabia and particularly South Arabia. In his Dusuri, the 10 books of which only 8th (ed. and annotated by D. H. Müller in Stuttgart, H. b. b. Akad. d. Wiss. zu Wien, phil. Hist. Abc., xciv. (1879), p. 335 et seq., xcvii. (1889), p. 935 et seq.) and x. have survived, he discussed the ancient history, genealogies of the tribes and antiquities of Yemen (cf. D. H. Müller, Studien und Schriften in Anth., 3rd ed., Vol. 48 (1877), p. 108 et seq.). His Geographie des Arabischen Puntlandes, Siva Dzambala al-Asrâb (ed. D. H. Müller, Leipzig, 1834-1894) was written after the Dusuri and at the earliest in the reign of the al-Nasir already mentioned (cf. p. 30, et seq.).

Al-Hamdânî's poetical works formed a Dusuri in 6 volumes, which was collected and annotated by Ibn Khâûba (died 3700 in al-Dhahâbî, ed. ct). In addition to this there is also mentioned the al-Kalîla al-Dhâmâ (according to Yâkîb, 'a fi dawrial 'Alâ', according to 'Abdu'llah al-Kalîla b. 'Abdu'llah) on which he himself wrote a very full commentary. On astronomy he left tables (Dhîq) for the work Sûr (Sûr-i) al-Hâlûs (Ibn al-Muhtâr, ed. ct) dealing with the science of the heavens. He also wrote a Kitâb al-Abâzâ fi al-Nâfi'ât, al-Nâfi'ât min al-'Alâ' (to which he refers in Dhîq, p. 209, et seq.) and a Sûrâb min al-'Nâfî'ât, el-Hâlûs, Siva Dzambala al-Asrâb, all these works seem to be lost.

(C. VAX AREND.)

HAMDÂNÎ. The Hamdânîs took their name from Hamdân b. Hamdân, a member of the great tribe of Taghlib (cf. his genealogy in Wetstein's Tabellen, C. 43). We find him as early as 272 (885) as a close ally of the Khârijîs Hârîm and a few years later in possession of the fortress of Mâdîn. When in 281 (894) the Caliph al-Muktafi advanced against this town, he found Hamdân no longer there, but the clans of 'Abd Allah b. al-Husayn [q. v.] behind. The latter opened the gates of the fortress of Dair al-Zârâ'as to the Caliph, who soon afterwards captured Hamdân also. Cf. Ibn al-Ma'tâ'as in Lang, Muchadûd âr. Prin. und Regent der Deutschen, Morgen. Geistl. xlii., 234. The Caliph kept Hamdân a prisoner in Bagdad as long as the Khârijîs Hârîm was in the field, but when he was defeated by Hârîm in 283 (896) and rendered harmless, Hamdân was pardoned and honours were heaped on his sons, notably Hârîm. This was the beginning of the future greatness of the Hamdânîs. They distinguished themselves in the battle against the Mâdînîs, but had to become a powerful in the reign of al-Muktafi, as he had taken the part of the unfortunate poet 'Abd Allah b. al-Mu'tâz against the Caliph. Through the intervention of his brother Ibrâhîm, he was pardoned by the Caliph and received the governorship of Kunn and Qâshân, which he had administered by a deputy. In 303 (915) he again quarrelled with the Caliph and ended his days in prison in 306 (918-919).

His brothers Abu'l-Abî Sa'id, Ibrâhîm, Da'in and Abu'l-Abî 'Abd Allah [q. v.] prospered no less than he during the nominal reign of the important Caliph al-Muktafi. Hamdân's sons and important governorships, they did as they pleased and thus occasionally came in conflict with the Caliph, but at once pretended to submit and were left in their offices or received others not less important.

The swan-hunter Abu'l-Hâjî distinguished himself most by 293 (905) he was appointed governor of al-Miṣrî and ruled this important city with short interruptions till his death in 317 (929), although from 308 (920) he entrusted the actual administration to his son Hârîm, Hârîm, who afterwards received the title of hamân, Nâfi' al-Dhâlî [q. v.] was able to keep his position till his death in 358 (968) and to extend his power over the whole of Dyâr Kufa and Dyâr Mu'tah. He was succeeded in al-Miṣrî by his son Abu'l-Abî Taghlib, a fine poet, better known under the name al-Ghâzânî [q. v.], but he became involved in the conflict between the various Khârijîs and was unfortunate in the struggle so that he had to vacate Mesopotamia and soon afterwards met his death in Syria (359 = 970). The rule of the Hamdânîs in al-Miṣrî seemed to have come to an end with him, for al-Ghâzânî's brothers,
Abū Tahīr Bahrām and Abū 'Abd Allah al-Husain entered the service of the Byzants. After Shāh al-Dawla's death, however, they obtained Bahīr al-Dawla's permission (379 = 989) to return to al-Mawjil and, although the Byzants at once saw the false step had made, they succeeded in obtaining the city with the help of its inhabitants. But their rule did not last long, for they had to fight with the Kūdsiyyah and Qal'ulids; in the struggle Abū Tahīr and his sons were taken prisoner by Muhammad b. al-Mu'ayyid and slain in 380 (991). Abū 'Abd Allah had before this been taken prisoner by the Mārumiyyah, but Abū al-Dawla was only reconciled with them by the intervention of the Fātimiyyah, who sent him to Syria. The last we hear of him is that he plundered Tyr in 386 (996); his descendants, however, long occupied high positions at the Fātimiyyah court till in 465 (1072-1073) the last of them, Nāṣir al-Dawla Abū 'Alī and his son Fakhr al-'Arab fell victims to a conspiracy.

The Hamānids did not however rule al-Mawjil and Mesopotamia only; by 333 (944) they had extended their rule over Halab and Northern Syria also. It was 'Ali, the brother of Ha'am, afterwards famous as Saif al-Dawla (q.v.), who won the firstnamed town and Lyons and was made Muhīd of Egypt in this year. But it was some years before the Egyptians under Kāfi left them in peaceful possession of Northern Syria. Saif al-Dawla, however, owed his fame to his wars with the Byzantine unbelievers. Even before 333 he had made raids into Byzantine territory, but it was not till he had made his position secure in Halab that he devoted himself entirely to war on the infidels, with varying success. It is true, as is detailed in the article Saif al-Dawla; here we will only mention further that another member of the Hamānids family, the famous poet Abū Sufa (q.v.), cousin of Saif al-Dawla, also distinguished himself on these campaigns. Saif al-Dawla's claim to fame as a patron of Arabic culture and science is no less great, than as a warrior; but this also is dealt with below. Saif al-Dawla died in 356 (967). (Empire).

His sole surviving son, Abū 'Abd al-Mu'ālī Sharaf, who afterwards received the title of hāshim Sa'id al-Dawla from the Caliph in Baghdad, was at one time recognised by Kārghāyy and the other chieftains, and went from Mālāfārīkī, where he had buried his father in the family tomb, to receive homage in Aleppo. He then advanced against his father's cousin and companion-in-arms Abū Sufa, his rival in 'Iṣan whose subjects had lodged complaints against him. They met at Saqād where the latter was slain; 'Iṣan was then taken by Sa'id al-Dawla's aunt, the renowned 'Aynaban; the Byzantines took place in the second year of his reign. The Byzantine troops attempted to surprise Aleppo; Kārghāyy who went against them was himself captured but managed to escape. Soon afterwards the Emperor Nicephorus, with a large army, took all the towns between Aleppo and 'Iṣan, and conquered Lattakya and Dijlah. In the beginning of 358 he blocked Antioch, occupied Baghār and fortified it as a supporting base for the Byzantine troops. He returned to Constantinople and left Petras. Pleas (in Arabic ma'ruq, Torcaisi or Atrebais, probably derived from Μερακία) in command of the town conquered in Mesopotamia and Michael Burstus in command of Baghār. Sa'id al-Dawla went via Bilād to his mother in Mālāfārīkī, as Kārghāyy prevented him from returning to Aleppo in order to rule there himself and appointed Bakhjūr joint ruler. Sa'id returned to besiege Aleppo with the troops who had remained faithful to him; skirmishes took place between his and Kārghāyy's troops, who had appealed for help to the Byzants. Torcaisi set out for Aleppo with his troops; meanwhile Michael Burstus was summoned by the Christians to Antioch, where he arrived enraged. As he was in danger of being captured by his adversaries who offered him a tower, he sent for Torcaisi and with his help took Antioch at the end of 358. The town remained Byzantine till 377. After this success Torcaisi went to Aleppo, delivered it from Sa'id al-Dawla's siege only in order to besiege it himself. A treaty was made between Kārghāyy and the Byzantines in the beginning of 359 in which the Emperor was recognised as suzerain and the payment of considerable tribute by the towns; in the administrative district of Aleppo was agreed upon. This interesting treaty continues, in addition to the list of towns and villages, detailed regulations for the exchange of prisoners, the treatment of escaped slaves, change of religion, etc. as well as for customs, the guidance of caravans etc. In the manuscript Sa'id al-Dawla's album in Ma'ūrūn al-Walūnd and decided to recognise the treaty. To force him to do so, the Byzantines destroyed Hims. But Sa'id received reinforcements, rebuilt Hims and succeeded in having his name mentioned in the ighth in Aleppo. In spite of the raids and devastations of John Tzimisce no change seems to have taken place in these conditions for a time (it is hardly possible to win certainty from the contradictory accounts), until at the end of 364 Tzimiscé left Syria and the ambitious Bakhjūr imprisoned Kārghāyy in order to exercise power alone. Sa'id, the nominal overlord, would not tolerate this deed of violence but advanced against Aleppo. As the Byzantines, in spite of his entreaties, did not come to Bakhjūr's help, the city of Aleppo fell into the hands of the Danielī hand in 366 (977). Bakhjūr was allowed to march out with all the numbers of war and was granted Hims. In this year Sa'id recognised the real ruler of Baghārī, the Bihād Sultan, in addition to the Caliph and abandoned the annual tribute to the Emperor. The Byzantines tolerated this for a time; but when in 371 the Domestics Dudes Phocas found his hands free after suppressing the rebels in Asia Minor, he advanced on Aleppo. Sa'id at once agreed to renew the treaty recognising Byzantine suzerainty and to pay tribute and, when in 373 Bakhjūr revived the old plan of taking Aleppo with the help of the Fātimiyyah Caliph al-‘Arād, Sa'id received help from Dudes Phocas as soon as he applied for it, for the latter saw the importance of Aleppo as a bulwark against the Fātimiyyah. The Domestics urged Bakhjūr to retreat and took Hims from him to deprive him of his base stronghold. (Kārghāyy al-Dīn's story that the Domestics appeared before Aleppo with a large army after the conquest of Hims is a confusion with the campaign of 372). Presumably to punish Sa'id al-Dawla for a refusal to pay tribute the Domestics took Killia in 375 and then laid siege to 'Aynān, Sa'id, who dared not venture so far with his troops, resolved to divert the Domestics; he sent his tried general Kārghāyy to destroy the celebrated monastery of
of rage went up from the whole Byzantine world. Bardas Phocas at once raised the siege of Amauros and advanced on Aleppo. Sa'id was unable to offer any serious resistance, had to submit and peace was only granted him in 336 on condition that he paid all the arrears of tribute. Bardas Phocas treated him very leniently, as he wished to be allowed to face the war against the Bulgarians. Sa'id had peace for five years, till in 331 (931) Bakhdur, who after a quarrel with the Fātimid Caliph had been living peaceably in Kaška, once more marched on Aleppo, in the vain hope of obtaining the support of the Fātimid Governor. Sa'id and his general Luhūr defeated him with the aid of Byzantine reinforcements at Nahr and had him executed on the spot. Soon afterwards Sa'id in 333 fled sick of a colic. To some extent recovered he held his triumphal entry into Aleppo but died the same night, as he had not taken sufficient care of himself. He was succeeded, by his brother Sa'id al-Dawr, who in the wake of the reparation of Luhūr, whom the Bulgarians afterwards married, his reign was occupied with battles with the Fātimid troops under Mustajībīn (Mangastighin), whom he defeated with the help of the Byzantines. He had to sustain long sieges. When he was hard pressed in 334, he appealed to the emperor Basil, who, although occupied with the Bulgarians, was arrived with incredible rapidity before the walls of Aleppo with 17000 men and this alone was sufficient to disperse the enemy. Although Sa'id could have offered him no serious resistance, the Emperor remained faithful to the treaty and scorned to occupy Aleppo. Sa'id on his side also observed the treaty till his death in 932 (336) as he had his wife poisoned by the latter's father Luhūr, who coveted the throne for himself. At last he ruled in the name of Sa'id's sons, but two years later he sent them with the whole Hamdānīlāh family to Cairo and made his son Mansür his co-regent. When in 339 (1000) Luhūr died at a great age, he was succeeded by Mansür under the name Martaqa al-Dawr, a title granted him by al-Hakim (Youn. A., ix. 100), when he began to mention the latter's name in the ayyām, so that Fātimid rule in Halab may be said to date already from this time, although Mansür afterwards quarrelled with Hakim. A brother of Sa'id rose against him with the help of the Khalīfah but was defeated, when Mansür won the latter to his side with bribes and promises, and had to the Byzantines. To get rid of the Khalīfah, who pressed him to fulfill his promises, Mansür invited their chiefs to a great feast, at which he seized them. Many perished in the noisy, dangerous, half-starved, Sīlīb b. Mirzā alone succeeded in escaping. He then led his Bedouins against Mansür and forced him to make terms favorable to the Khalīfah which he once more did not observe. Through all this he acquired great dissatisfaction; Fithur, the commander of the citadel, abandoned him and by a stratagem made him believe that Sīlīb had entered the town; Mansūr fled to cover to the Byzantines. On the farther height of Halab see: Ywa. in Ywa. in 1378 (v. 229) and 1382 (v. 3).

[End of excerpt]
nition. Hamid is said to have fearlessly withdrawn the designation to Baysid II. It has never been printed but numerous manuscripts exist.

His Leilâ u-Majdûn is the oldest version of this likewise popular motif after Nithân’s Persian model, but it was soon displaced in popularity by Farâh’s work. Copies of the Mathnawî, Mūvâlād-i-Nâîn are very rare. The only one of his works that can lay any claim to originality is the Kâfkat al-Ublâkâh (Present for Lovers) which is distinguished by simplicity of language.

His much praised and popular Kishvat-i-Namâ is also written in simple Turkish muvahheb verse; it is a book on the science of physiognomy for the discernment of character, which seems to be the oldest of its kind. An Ezwâ-i-nâmâ is also ascribed to him.

**Also the Catalogue by Fügül, Perisch, Riem.**

(THOBERG MÆRKE)

HAMID, a coast-town in Haftârî, about 18 miles S.E. of Shîbî [q.v.], near Shatt al-Sâama in a very picturesque and fertile district. Lake Makalla and Shîrû it belongs to the Es-sâjt of Shîbîn [q.v.] and has, as the name shows, thermal wells of the temperature of boiling water. The houses of the little town are low and built of mud; in the centre of the town and on the shore there are two important bânas. The inhabitants are mainly fishermen; and their number was estimated by Capt. Haines at 500 in 1850. Behind the town lie thick palmer groves and fields with luxuriant crops of Indian corn.

( J. SCHÜLEK)

HAMID, AL-SÂBBÎ‘ ABU MUHAMMAD, born in 243 H. (857), died 311 H. (923), according to the attendant Ibn Basînî, in early life a waterseller and vendor of pomegranates, was one of the ablest financiers of the ‘Abârid Caliphate al-Mu’âwaïdûl and al-Mu’âshidâh. He combined the collection of the *Hâfîz* and *Alî* of Wâsih from *Wâsih* (273 H. = 886) with that of *Fâris* (from 287 H. to 900) and Bagûn. In 306 H. (918) he was appointed sâhab and was given the title of ‘Alî b. al-Qasîdî as his wâshî. His financial administration resulted in riots in Baghda and his strong measures with dissenters like the Karmâjâns, Sîfs (execution of al-Hâfîzî [q.v.] and particularly the Imamîya (imprisonment of the Kifî, the Imam’s wife) finally brought about his fall. He was tortured by the new vizier’s son, the al-Fâkî, and put in the pillory; he died in Wâsih soon afterwards, apparently of poison.

The numerous mosques and madrasas in Isparta, Egirdir, Gümülcine, Barçın and the collections of manuscripts in these towns belong to the older period.

(f. H. Mortelea) 

HAMIDI, HAMID AL-DIN ALI BARAK 'UMAR B. MAHMUD BAKHAI, a Persian writer of al-Ghāzān, died in 559 (1164); he wrote his madraseh, some of which are to be considered manuscripts, in 551 (1164) on the model of his Arab predecessors al-Hamadhāni and al-Harīrī. Their number is 25 or 26; printed, Coupres 168 (1852); Lucknow 1890, Teheran 1233 (1877).

HA-MM is MANS ALI ALI B. HARI B. ASM, of the Berber tribe of B. Zerwalki in the Rif, known as al-Ma'āra (the fierce). He attempted to introduce a new religion among the Teshmīrī, which, although not exactly in its practices, at least in its dogmas proceeded from Islam. His period of activity covered the years 513—525. Of the canonical prayers he only retained those muted and soon; he abolished the fast of Raml, which he replaced by fasting on the third (or) last days of this month, on two days in Shawwal and on the Wednesday of the week before the second of the month. The breach of this rule was punished by a fine of 6 head of cattle. He abolished pilgrimage, purification and complete abstinence and allowed the eating of pork; on the other hand, he forbade the eating of fishes, which were not killed in the lawful fashion; the heads of all animals and birds' eggs were likewise forbidden food. To this day the Tashriq and the Berber tribe of Shemū near Tipasa will not eat hens' eggs. He imitated a book which the Muslim historians call a Karšūn. His aunt Tangi (var. Talyah, Tebrin) was supplanted, in the prayers of the faithful and regarded as a prophetess, as was her sister Dātā. He won many adherents and fell in battle with the Mahmūdī near Tangier in 319, according to others, 339. But the religion which he founded did not die out without a trace.

HAMMAD, a Berber ruler, founder of the Hammādī dynasty, son of the Kirda

Balakīnī (r. 618), chief of the Sā'baddā and governor of the Maghreb under the Fatimid Caliph al-Munṣūd, was given the governorship of Azīz (r. 618—619) in 777 (976—978) by his brother al-Mānūs, Balakīnī's successor. For several years he valiantly championed the cause of the Sā'baddā, continued the war against the Zanīt, who had invaded the central Maghreb, with the aid of his brother Saturday, and in 198 (1000—1001) put down the rebellion of his uncle Mīrān, Zara and Halal, whom he besieged in Shemū and forced to submit (cf. Ikki and Minsuk, i. 556 et seq.). In 395 (994—995) he raised the siege of Azīz, which the Zanīt, the allies of the rebels, were trying to take, thus restoring the supremacy of the Sā'baddā throughout Central Maghreb and in 396 (995—996) built himself a strong mountain fortress, al-Šārī (r. v. al-Azīz, i. 285) as a secure place of refuge in case of further hostile invasion. But soon afterwards his feudal lord Ikki Abū Ma'nūs, successor of the Kirda al-Munṣūd, invaded to punish Hammād for sending help to the district of Tāfīz and Constantine in favour of his son al-Marzū, the latter then repudiated Ikki, at the same time revoking his allegiance to the Fatimid and declaring himself a vassal of the Abūsid dynasty, which fought against the rebel and shut him up in al-Šārī, but died during the siege (396—1001). The war continued between Hammād and al-Munṣūd, the son and successor of Ikki, and was concluded by a treaty, which was negotiated by al-Šārī, a son of Hammād (408—1018). It resulted in the dismemberment of the Kirda kingdom: Hammād received Mūsā, Tashriq, the Zār bi-Asīr and all the lands of the central Maghreb, which Ikki had previously promised. From that hour writes Ibn Khaldūn, the two rivals had to take care of their own affairs and allied themselves in marriage, after dividing the kingdom between them. The Sā'baddā dynasty was thus divided into two lines, that of al-Munṣūd in Kairawān and that of Hammād in al-Šārī. Hammād died there in 410 (1018).

Bibliography: Ibn Khaldūn, Henard bi-Abī, trans. de Slane, ii. 160 et seq., 45; Fournel, Les Berbere, ii. (G. Veres)

HAMMAD AL-RĀWIKA, i.e., the transmitter, namely of old Arabic poetry. He was born in 75 (694—695); Ibn Khallīq 93) in Kairawān; his father, whose name is unfortunately not known, was named Aḥmad, Malāna, Sāhīr, and he bore the name Abū Lālā, was a Dāshāni prisoner of war. Hammād's speech also betrayed his origin.

He was great fame for his comprehensive knowledge of pre-Islamic as well as of Islamic poetry, of battles and Berber dialects. It is even said of him that he could recite virtually the entirety of the Rābi'iyas of considerable length, rhyming in each letter of the alphabet, a hundred for each letter, and that he could at once recite whether a poem was old or modern. Great value was placed on his judgment on poets and poetry. He was always able to detect plagiarism among the young. He himself was also most generous in receiving hands and sending his to eminent poets, a proceeding for which al-Madzārī al-Abbās ensured him and for which al-Madzārī took him to task (415, 1—17, 2—16, et seq.).

As Namūzqā has pointed out, Hammād's great merit is that he collected the Ma'ārahī (p. 114).

He was one of the three Hammādī (al-
Hammâd Al-Râwînâ — Hammâdiôs.

Hammâd ‘Adjul and Hammâd b. al-Zubîrînî), who, found by time of closest friendship, manhood and warshipped to the Mune together and won all suspected of zamaâa. Among his friends were also the poets Mu'âb b. Iyâs and Vâqây b. Ziyâd.

He enjoyed the favours of the Caliph Yazîd II, he was afraid of Himâm, but the latter also was said to have once invited him to count and richly rewarded him. This story, however, is doubtful on account of an anachronism and feature similar to those of an anecdote related of Wali b. This last Caliph in particular often entertained himself by listening to Hammâdiôs's recitations. Hammâdiôs expected to get good from the Abkâmâs. He was one of the poets who left Baghdad in the reign of al-Mansûr "to seek a livelihood"; thus went to Kâfi, the Caliph however is said to have invited him back to Baghdad from Bâgya. But the latter's son Kâfi, into whose premises Hammâd allowed himself to be taken by his friend Mu'âb at the latter's solicitation, treated him shamefully, when a verse recited by the poet proved disastrous to his spontaneous notions.

HAMMADIS, a Berber dynasty in Central Maghrib, which was founded in 409 (1014) by Hammâd b. Bulukkân (q.v.) and overthrown in 547 (1152) by the Almohads. They had to wage continual warfare on the Zirids, who threatened them from the west, the Zirids, the former lords of the central Maghrib and Libya from the second half of the 12th century onwards against the Hitli Arânis also. Al-Kâfi, Hammâdiôs's omament (499—546 = 1098-1145), during the deposition of his father, son of Mu'âb b. Zâbîr b. 'Alîya, and forced his cousin, the Zirid Mu'âb b. al-Hîdâb, the ruler of Kairouan, who had besieged him in al-Ma'âtû to sign terms (432 = 1040). To show clearly his independence of his Zirid cousin, when al-Ma'âtû had cast off the suzerainty of the Fatimid Caliph, he had the Khutbah read in the latter's name. Soon afterwards the invasion of the Hitli Arânis by destroying the power of the Zirids of Kairouan in 443 = 1051, assumed the supremacy of the Hammâdiôs in the Maghrib. After Bulukkân b. Mu'âbiddîn, second successor of al-Kâfi, had suppressed the rising of the Ben Komitnû of Idrîs (q.v. i. 574), he penetrated in the extreme Maghrib and seized the town of Fas, the suburbs of which he carried off as hostages. In his return from this campaign he was murdered by his cousin al-Ma'âtû, whose sister Tamsâni he had put to death. The reign of al-Ma'âtû, Al-Mansûr (454—461 = 1062—1069), was especially interesting, as it was in his time that the province of Hammadis was in successively in the control of the españoles of the districts of Kapsîyya, Kairûnâ, Sîs, Sâs and Tûniz. After his defeat at Allalî in 457 = 1065, however, he was forced to leave the districts of Zâbîr and Hudaïn under the Hitli Arânis and their allies, the Maghribians of Tripoli, led by al-Abâsamîr b. Khurâsh. In the end, however, al-Ma'âtû was the upper hand; the Zâbîr was reconquered and Hammâdiôs troops penetrated to the Saharan as far as Wârla. Those successes made him the most powerful ruler in the whole Maghrib. To raise the prosperity of his subjects by increasing trade, he eagerly endeavoured to attract Italian merchants to Bone (q.v., i. 766 et seq.) which had been founded by him. He also corresponded with the Pope Gregory VII through the intermediary of the priest Servandus, afterwards Bishop of Bone.

Al-Ma'âtû, al-Ma'âtû's successor, moved his residence to Bone in 457—460—461, being continually threatened in al-Kâfi by the thorns of the Arab Beduin. He regained the cities of Bôoa and Constantine, which the Hammâdiôs rulers had given over to the Zirids, subdued the Kabylia of the district round Bone and paid particular attention to the defence of his lands against the Almoravids. When the latter had taken Tlemçoun (474 = 1081—1082) they won the Bari. Wommenî, who had till then defended the western Hammâdiôs frontier, to their sides and threatened the central Maghrib. Al-Ma'âtû, who had taken hands of Hammâdiôs mercenaries into his service, took the field
repeatedly against them, till the defeat of the Almoravids in the battle of Tissent at Jbel Fessal and the recapture of Tlemcen by al-Mansur en 1062 checked the progress of the Almoravids. Successful campaigns against the Berbers, who had risen in several districts, finally completed the restoration of order.

Soon afterwards however, the decline of Hamad.sidebar power began. The succession of al-Aziz (948–953 = 1062–1067) and his brother’s ascension to the throne were only temporary. His successor Yahya, devoted to women and the chase, proved utterly inept at coping with the ever-increasing danger that threatened his kingdom from without. In 1066 the Genoese plundered Bougie, the Berbers again became restive, the Hammadids’ power continued their rains, and finally the Almoravids invaded the central Maghrib. On the approach of Abd Al-Mumin the Hammadids fell. Al-Kadi, governor of Algiers, abandoned the city without offering any resistance. Selim, another brother of the Sulaybi, suffered a defeat at Bougie, while Yahya himself fled from his capital, which thereafter was occupied by ‘Abd al-Mumin [v.g. = 544] without opposition. After its fall al-Kadi was killed on the ground by the invaders. Yahya, who fled first of all fled to Bina, and then to Constantine, finally surrendered to the conquerors, without striking a blow (547 = 1062). He was taken a prisoner to Marrakesh and then to Salé, where he died in 556 (1103).

Chronological Survey of the Hammadid Dynasty.

List of the Hammadid Rulers.

Hamadī, b. Sulaiman: 405–419 (1024–1028)
Abd al-Kadi, son of Hamadī: 419–440 (1028–1055)
Mahdi, son of Al-Kadi: 440
Al-Nouri b. Al-Amin: 454–481 (1062–1088)
Al-Mansur, son of Al-Nazi: 481–498 (1088–1104)
Bilal, son of Al-Mansur: 498
Al-Aziz, son of Al-Mansur: 498–515 (1105–1122)
Yahya, son of Al-Aziz: 515–547 (1122–1152)

Hamal (Ar. ‘hamal’ ‘to carry’), Messengers, Porters.

In countries where the roads and means of transit are still very primitive, the porter is indispensable for the transport of all kinds of goods. In Muslim lands the hamāl are therefore numerous and much employed; sometimes the carry burdens, which in other countries would only be dispatched with the help of beasts of burden or conveyances. The simplest equipment used by the hamāl is a fairly thick rope which ties round the object to be carried and thus keeps it firm on his back. But where the hamāl are

summoned into gilds as at Constantinople, they carry on their backs a padded saddle (kumur) covered with leather resting on a piece of leather on the back (urubab). On this last the weight of the burden rests and it takes the place of a mule’s crupper. If however the burden is too heavy for one man, several work together by taking a long plait (jabah) between each run from which the trunk of bales is hung by ropes. When the hamāl are going through a wood, carrying burdens they push and shove the people aside, at the same time calling out in Arabic: ‘Ou rabbi (Adīhan! ‘Mind your hand (or legs),’ or in Turkish: Dostununuz bok onu or scrab ‘Halt, guards.’ In Persia the Europeans were carried in sedan-chairs (tādīg), like those which were used in Europe in the eighteenth century; this service also is in the hands of the hamāl.

(Ch. Harut.)

Hammām (lit. ‘heater’), Ar. ‘hammam’ ‘to heat.’
Heln, jāmān ‘to be warm’), a hot steam-bath. These are isolated buildings, the same size as the street or market place; sometimes covered by a more or less imposing dome; they consist of a number of large rooms surrounded by little chambers and crowned by domes pierced with holes to admit the light, which filters through little glass balls like bottle-bottoms.

The first room to be entered is the majlis (apodyterium, spalatrium), where the clothes are taken off and put up into a baffle which is entrusted to the owner of the bath; in the centre is a basin with a jet of water (fekhī). The bāshī (calidarium, sudatorium) is next entered, a large room filled with steam; to avoid touching the superheated marble floor, wooden shoes or slippers with high backs are worn (fekhī). Here the bather stays till he perspires; the attendant then takes him into one of the little chambers with a basin (madāq, piața), which surrounds the bāshī, or into one of which there are hot and cold taps (ha-naf/tu), and rabs his body, after making all his joints crack, with a horse hair-glove (bel), which removes the epidermis in grey rolls, and covers him entirely with frothy soup, beaten up to a hale by means of a ‘fīl (palm-fibres), till he is quite clean. All that is now to be done is to wash in hot water, dry and wrap oneself up, till, leaning the head in clean linen, and placed to the nose bath to see through smoking and drinking lemonade or coffee. On days, when the bath is reserved for women, a piece of cloth is hung across the outer door. In winter, the clothes are taken off in a room between the madāq and the bāshī, which corresponds to the tepidarium and is called ‘A亩 annal (first room).

In Persia the hammām is called gard-e-shohe, the apodyterium lines (H. Firdows, Journ. Arch. Soc., vii. 391, note 2) and in Turkish ‘otellen (Turk. 0yT:am.k). Bibliography: E. W. Lane, Modern Egyptians, 4. 4t. et seq.; Cudworth, Palæstina et Syria (1860), p. xxvii.

(Hamadīt. Hamadīt. The Hamāddin are the successors of the two sons of the descendant of the Prophet Hamadīt b. Maimūn b. Ahmad b. ‘Abd ‘Uthmān ‘Uthmān b. ‘Umar b. ‘Ibrahim b. ‘Abd Al-lah b. al-Hassān b. ‘Abd b. ‘Abd ‘Allah b. ‘Abd Al-Hassān, who are connected with the kindreds of Merev (492–493 = 788–785) through ‘Ibrahim b. ‘Abd Al-lah (in v.), founder of the dynasty. In the confusion of the civil war that preceded the fall of the Umayyads...
of Cordova, the elder brother, al-Ka'im, obtained the guardianship of Algeciras [q.v.] and his ambitious younger brother Ali that of Tangiers and Ceuta. After conquering Malaga the latter overthrew the feeble Unayza Sahmaina al-Muthab' in (407 = 1016) and made himself Caliph in Cordova. After his assassination the brother al-Ka'im did the same (408 = 1017), in 412-413 = 1021-1022 he was driven from the throne by his nephew, Yahya b. Ali, but regained it in 413-414 = 1022-1023, at the same time ruling Malaga 1019-1021 and 1023-1025. Ali's descendant's (8) maintained themselves in Malaga from 1025 till 1057, when it passed to the Berber Zirid prince Hafid [q.v.] of Granada, while Algeciras remained under the sway of al-Ka'im's son Muhammad al-Mahdi (431 = 1039-1045) and his grandson al-Ka'im al-Walid (440 = 1048-1058), when it was taken by the Almohads [q.v.] of Seville, Ali's son Yahya ruled Malaga 1046-1052 = 1053-1055 and was succeeded by Idris I al-Mutamid (471 = 1055-1059), Hassan al-Mustansir 431 = 1048-1049, Idris II al-Add 434-438 = 1052-1056, Muhammad I al-Mahdi 438-444 = 1056-1057, Idris III al-Muwallad 444-445 = 1055-1057, Idris II (second reign) 445 = 1055, and lastly Muhammad III al-Mutamid 448-449 = 1054-1057.

Just as the half-barbarised early Hamadhanites shared a glory reflected from the dashing Caliphate of Cordova, a century later the dynasty has the darkness into which it was sinking illuminated by the scholarship of the court geographer of the Norman Roger II of Sicily in Palermo, al-Sharif al-Idrisi [q.v.], the grandson of the kindly but feeble Idris II of Malaga.

(C. F. SEVILLA.)

HAMRIN, in Yath (iii. 7). Hamrin, the later name for the older BÁRSTI (q.v.): a chain of low hills (500-1000 feet) about 500 miles long, which begins in Mesopotamia about the latitude of Hadr, separating the Assyrian plains from the Mesopotamian, in the south the plains of Khutristan from those of the Shatt al-Arab, and finally loses its identity in border ranges of South Iran. The remarkable length of this quite-homogeneous range is well known to the Bulohins and fellahin, and has given rise to fanciful notions, e.g. as early as Yath, who speaks of the Qáhid al-maqāl of 'Ar-Ár, as of an ocean surrounding the earth. Besides in Yath the modern name of the range is also found as early as 738 A.H. in the great waqf inscription of the Madras al-Muqaffa' (sur. 5. Mouguenard, Mission en Mesopotamie, Int. Franö. d'Arch. Orient, Cairo 1912, p. 16 and 28). In the Turkish work (not yet printed) Qáhid al-maqsūr of the Ñâm of Safa al-Cherif al-Kadhir al-Néjami al-Damascéna of 1677 A.H. a tomb not yet identified of Mardjil al-Kadiri (died 597) is mentioned on the Hammân as a well known place of pilgrimage (cf. supra, p. 60).

(H. BADER.)

HAMIUN. A name given in E. Persia, Afghanistan and Baluchistan to the tree, Populus euphratica, which sometimes swell into extensive lakes occupying the depressions on the Iranian plateau. The most important of these is the Hamun of Shaf. The northern part of this is a permanent lake which expands towards the south in seasons of flood. The water, when floods are exceptionally high, goes into the Ghinda Zirah, a depression at a still lower level. This then forms a lake which surrounds Shaf, to the south and nearly meets the Helmand River. This overflow occurs on an average once in ten years. The hill on which the fort of Koh-i Khwaja stands is surrounded by the Hamun, and becomes an island at times. The Helmand, Khwadar, Farah-rah and Hardul-rah fall into this Hamun. Other important Hamuns are that of Djeil-Morjan in Persian Baluchistan and that of Mahdi in Baluchistan.

Journ., xxviii.); Moisworth, Sykes, Fourth journey in Persia, des. xix. (M. LONSDALE D'AMES.)

HAMZA (A.), lit. *companionship*, is the name given to the glottal stop or tongue guttural explosive, which is said to be almost equal in value to *nsw* among the Tannús (q.v.), and, indeed the sign for hamza is derived from that for *nsw*. For further details see the articles ALIF and KAMA KAMA and the literature there quoted.

(H. BADER.)

HAMZA, son of 'Abd al-Majdull, uncle of the Prophet, and his fosterbrother, as Tradition adds, in the Prophet's story of his earliest days of Islam, otherwise a little known. Ignorant paragraphts make him at the same time take part in the Fijjar wars [q.v.], but this statement is a fiction, according to the authors of the Kitâb al-Ajqâib. At first, like the other Hâshimites, he adopted a boastful attitude to the new creed. But revolting against the extravagant attitude of 'Ali ibn Abi Talib, he is said to have attached himself to the Prophet two (according to others, six) years after the first revelation. He migrated with him to Medina and at first led an obscure and miserable existence there. One day he so far forgot himself under the influence of intoxication as to make himself insulted on the name of Mu'min with his sword. For this a severe punishment is described to him as a valiant soldier. This quality won him the title of *Lion of God and his Prophet*, which soon found a place in poetry. Muhammad made use of his services by sending him at the head of a small column to hold up a Kharaj caravan. His fame as a soldier is particularly associated with the battle of Badr, where he and 'Ali shared the honor. He also took part in the siege of the Medinan Jewish clan of Qašâm. He met his late
at the battle of Dhu'th Thāriqah, where he was mortally wounded of battle. The sūfar (poet) plucked him with a javelin, tore his breast open and brought forth his still beating heart; in Hildż, his brother of Mādīnā, who held it in his till. So at least says one story hostile to the Alīyātah and without much support. Hāmza is said to have been about 57-59 years old. But if our view is correct, that ten years should be deducted from the 60-65 years usually given to the Prophet, it will be necessary to make Hāmza ten years younger also. None of Hāmza's children left his son. Cfr. also the articles HĀMZAH and HĀMWAH.

HĀMZA b. ʿAbd al-ʿĀl, Abūlam, founder of the theological system of the Druses and author of several treatises, which have obtained a place among the sacred books of the Druses. Little is known of his life with certainty. According to al-ʿAbduq, he belonged to the Banū Zayd b. Zayd in Persia, and was born by trade a maker of felt (āḥāṣ). In 410 (1019) he is said to have first put forward his doctrines, but, according to Hāmza's own statements, this took place two years earlier in 408 (1017), from which year the Druses date the manifestation of the divine incarnation in the person of the ʿAlīm al-mamālīk b. ʿAbd al-Malik b. An-Nasir (q.v. ii. 245) and the beginning of the Druse sect. It is not certain when he came to Egypt, possibly in 405 or 406. But after he publicly proclaimed his doctrines in a mosque in Cairo, a riot broke out and Hāmza had to remain in concealment for a time under the Caliph's protection. What became of him after the latter's disappearance (411 = 1020) is unknown. He plays a still greater rôle in the religious system of the Druses as ʿAlīm al-Zamān, in last incarnation of the universal intelligence (186). According to al-Maḥdī and other authors, he was usually called al-Hāmza b. ʿAbd al-ʿĀl. ʿAlī b. Hāmza, leader of those who obey the divine will.

Bibliography: De Sacy, Exposé de la religion des Druses, Introduction, p. 387 et seq.; ibid., Texte, i. 98 et seq., ii. 2 et seq.; ibid., Leben, Le Mésentierné, p. 94 et seq.

HĀMZA, called the Sīḥiḥār, was born about 1140 in the district of Dewelā Karahāt, the son of a landlord Agha, called Muḥammad; he began his career in 1156 in the Ḥanantāsh (honey-bakery) of the Imperial kitchen (cf. v. Hammer, Nándānī, iv. 31), but soon his gifts won him a position among the pages (côptis-āhās, where he won the favour of Mādīnā. When the latter came to the throne in the 21st Safar 1177, he at once appointed Hāmza his sīḥiḥār (sword-bearer, see v. Hammer, i. 238 note), afterwards granted him the rank of visier and betrothed him to the infant princess Hilmārā, who died however on the 15th 8th 21st 1175. From 1175-1182, he filled in quick succession a number of offices, viz. the governorship in Ramda and Anadolu, in accordance with the system then in force of annual change of office; in this period he fell into disgrace for a few months in 1178 and was banished to Demotika with loss of his rank. As will of Egypt in 1179 he came into conflict with the Mamluks and the celebrated Şāhīr al-Rūṣaydī (Abū ʿAbd Allāh, Abū Hamza, Dāmsch. ed. 352, 352, and was finally driven out of the country by them. When in 1182-1183 the Sultan was eager for a breach with Russia, but found his heliogeous plan opposed by the Grand Vizier Muḥammad, Hāmza and the Sultan, Sahib al-Qādī, formed the plan on the 8th 21st 1182 and appointed him in his place his old favourite, the Sīḥiḥār Hāmza, who was at that time governor of Anadolu. A few days after his arrival in the capital the new grand vizier had the ultimatum to Russia approved at a great council and imprisoned the Russian resident. Ohrakov, who declined to fulfil the demands of the Porte in the Seven Towers (20th and 21st October 1176, see v. Hammer, Dāmsch., viii. 31 and seq.) in consequence the unfortunate war with Russia broke out, which was only concluded by the peace of Kūčk. But in 1177-1184 Hāmza, the Sułtan did not like to see the beginning of hostilities; he was suddenly dismissed from office on the 8th 21st 1182 (20th Oct. 1183), the reason given being insanity, but others say at the instigation of the Khān of the Crimeans and sent to Ctesa as governor of Cæsarea; on his way thither he died at Galatia in the same month.

HAMZA HAMID PASSA — HANAFIS.

This is his "Annals" as well as in his philological works, in which he delights to discuss Persian words that have found their way into Arabic, and Fachi etymology. All his works are marked by a critical attitude, which often expresses itself very pitifully. His criticism, however, may not perhaps expect, one-sided and directed against the Arabs and Hamza cannot be described as a representative of the Hughistic Shufiyya, the "philological reaction against Arabic influence." — Hamza's works soon found approval and have been much copied. In particular, al-Ma'zini has copied almost literally Hamza's collection of "comparative" proverbs in the second section of each chapter of his Majma' al-Mutanabbi.

HANAFIS. The Hanafis are those Sunni Muslims who follow the teaching founded by Abu Hanifa (died 150 = 707, see above i. 960 et seq.) which has been collected and consigned in several authoritative, more or less detailed writings of his pupils. Abu Yusuf (d. 1145) and al-Shahtili (d. 1185) in particular were the direct pupils of Abu Hanifa who developed the system of Fiqh on their master's principles and placed the Hanafi school on a firm basis. Although rival systems arose in opposition to the Hanafi school, at once in the case of the school of Malik and later in that of Shafi, which found some support in certain parts of the Muslim world, it was always able to assert itself in the eastern lands of the Caliphate and finally to attain an unchallenged supremacy in the Ottoman empire. In Central Asia also and in British India the majority of the Sunni belong to it.

The necessary preparatory work for a history of the Hanafi school has not yet been done, so that we will not here attempt to define the relationship of this school to the others. The usual view, however, is certainly wrong, namely that the Hanafis represent more liberal views than the other schools; as regards principles they are on exactly the same ground as the others. For the rest the reader may refer to the articles: "Hanafi," II. 103.

The Arabs have been content to collect biographical and bibliographical data in the so-called Fama (alma-basî), among which the best known is the Kutubigha's (q.v.) compilation by Flügel, C. Die Klassen der Hanafistischen Rechtsgelehrten, by G. Flügel in Abhandl. der Kln. Schil. Gesell. d. Wissensch., vol. 8, Leipzig 1867. For works of the kind of Hadîj Khalîf, q.v. It may therefore be sufficient to mention here a few of the most famous legal commentaries, which are considered authoritative within the madhhab and whose authors are all Arabic in language and in style:

The work of Abu 'Abdulla al-Daraji al-Mahalli, the Hidus of al-Maghribi, the Hidus of the Maghrib and its commentaries notably the Selection of the Opinions of the Hanafi, the Majmu' of al-Shâbani, the Kitab of al-Shâbani, the Kitab al-Majmu' of the
The Assisi di-Strad and the Pilgrim Camp in Italy.

HANAFIYA, a portable waterholder, with a cock, placed upon a stand and used for ritual ablutions; the name comes from the Hanafis, who must not running water for washing or at least water which runs from a receptacle—makkah—be poured in height and breadth. These vessels are usually of copper gilt; after using the water runs into a copper basin. The Turks have similar water-vessels but of marble; they are called mustih. They are also found in baths. As the most important part of them is the water-cock, the word hanafija has also received this meaning.

HANBALIS, the adherents of the school of Imam b. Hanbal (d. 858/968).

HANDASA or the An Handasa is the name given by the Arabs to Geometry, one of the four propedeutic sciences [cf. the article USūl]. The word is derived from the Persian word anhđasht (or anhdasht), to throw, to project, thence also to take the measure, to measure; from this is derived the substantive anhandaste, to measure, to measure, value, which was then used for "geometry" also; the geometrician is called an-muqaddmīn in Arabic.

The Arabs became acquainted with pure (theoretical) geometry through the Elements of Euclid, which were first translated by Ḥadżījja al-Šīrāzi at the end of the 9th century (c. 890), later they came to know most of them through the translation of the Arabic text of Apollonius; for the later geometry they also used the Greek name hōgyalēs. From the Indian Siddhántas and afterwards from the writings of Hero they learned applied (practical) geometry, i.e., the measurement of surfaces and bodies, the elements of trigonometry and astronomy.

Of works on pure geometry by Arabs, i.e., such as call in the aid neither of arithmetic nor algebra and are based purely on Greek and partly on Indian models, we can only mention two: the first is the work of the three brothers, Muḥammad, Mālik, and ʿAbdallāh b. Ṣāliḥ al-Ṣāhī (the al-Dulaymī, al-Thābit, died in 875) entitled: The Book of the Science of Memorization of Plane and Spherical Figures; it was translated into Latin by Gerard of Cremona, from this a German translation was published by M. Curtius (Der über trium frationum de geomefr), in the Nuna acta der kl. Leop. Carol. Akademie d. Naturforsch., vol. xii. No. 2, cf. also H. Suter, über die Geometrie der Sphäre des Mas b. Ṣāliḥ, in Biblioth., mathem., 3rd Series, iii. 259–272. This treatise contains eighteen theses which deal with the estimation of the area of the circle, of the triangle from its three sides, of the surface of the case and the truncated cone, the surface and the contents of the sphere with the problems of two mean proportions and the trisection of an angle. We class this book among the works on pure geometry, because it proceeds exactly according to the method of the classical Greek geometers, i.e., excluding any application of arithmetic and algebra and giving no numerical examples. The second work is the Geometrical of Abu 'l-Walīd al-Bīrūnī [q. v.], which has not survived in a work from his own pen, but in a Persian version by one of his pupils (cf. F. W. Woepcke in Zöllner, xx. 1855, p. 215–238, and 350–359, and F. Reinert, Paris 1855, p. 1–90); it contains a large number of geometrical problems, from the fundamental constructions of plane geometry to the construction of the corners of a regular polygon on the circumference of a circle. Special attention is given to the fact that a number of these problems are solved by a single span of the compasses, a condition which we find for the first time here. In other points many problems show a pronounced Indian influence. In addition to these two treatises however we possess a whole series of smaller works by Arab mathematicians on various branches of geometry e.g., on the construction of regular polygons, particularly the heptagon and icosagon, which lead to equations of the third degree, on various portions of conic sections, of which we may specially mention the estimation of the area of the ellipse and parabola and the essential steps in the parallelogramm of conic sections by means of the "cone circles".

In the use of arithmetic and algebra in geometry and vice versa, the solution of algebraic problems with the aid of geometry, the Arabs far outstripped the Greeks as well as the Indians. To the Arabs is due the honor of having recognized and emphasized as an obstacle the strict distinction between arithmetical (discontinuous) and geometric (continuous) magnitudes, which had so severely impeded the fruitful development of mathematics among the Greeks. Even al-Qhārimi used algebra to solve geometrical problems, when he estimated the height of a mountain by introducing an unknown quantity and building an equation. The great use of this algebraic treatment of geometry is the Egyptian Abū Kamil Shāhī (7th century) who, in his treatise "On the Pentagon and Decagon" (only extant in a Hebrew translation, ed. in Italian by G. Sacerdoti, in Prusskiz. z. So. Geheirz, M. Ronsched, Leipzig 1896, and in German by H. Suter in Veb. Mathem., 3rd Series, v. 47–471), solved twenty problems in geometry with the help of linear, pure and mixed quadratic and reducible bi-quadratic equations, which are almost all incorporated in the Elements of Euclid. As a champion of the use of geometry in the solution of algebraic problems, we may here mention the Persian 'Abū b. Ḏurmak al-Khālīfī [q. v.], whose solution of cubic and bi-quadratic equations with the help of conic sections is probably the most advanced work of Arabic mathematics that has survived to us.

Trigonometry is also to be reckoned among the applications of arithmetic to geometry, in which the Arabs made the greatest advance on the Greek and Indian predecessors, a constant stream of workers from al-Bīrūnī [q. v.] in Nāṣr al-Dīn al-Tha'labī [q. v.] finally built up a system of trigonometry, on which Regimentarius and Copernicus would have been able to make further developments if they had known the works of Nāṣr al-Dīn on this subject. The Arabs became acquainted with the sine, cosine and tangent sine from the Indians, then added the other functions to these, e.g., the sine functions (formulas) between the various functions, completed the trigonometric tables and finally solved
all cases of the plane and spheroidal triangle with the aid of the rules discovered (rule of the four quantities, theorem of tangents; rule of the plane and spherical sines etc.).

On purely practical geometry (mensuration, geometry) the Arab mathematicians as a rule did not write special tracts on it, but discussed such problems in their works on the construction and use of the astrolabe and quadrant, on which cf. E. Wedemann's work quoted below.

**Handas** (i.e. brass or bronze silver), the name of the base small money of the Maghrib is the name of the base small money of the Maghrib in the 9th and 11th centuries, the denoms. copies of the square Almohad silver coins, which had long enjoyed great popularity and were struck by many Christian rulers as monnetae illiberenses, monnetae. — The hânûfîyya are small, irregularly cut little coins of base silver weighing from 7 to 14 grains. As a rule they bear neither ruler's name, mint nor date, but only a religious text (a variant of the Qur'an, xl. 47) and probably owe their origin to the Zirid, Hafsid, Marinid and other rulers of North Africa and the smaller Spanish possessions of this period. They attained a certain importance as a standard coin in the petty commerce of the western Mediterranean and were therefore also imitated by the Christian mints of Spain and southern France.

**Hamzâ b. 'Uwâs**. One of the principal chiefs of the Banû Murâd in Kufa, in the early years of the governorship of 'Ubayd Allah, son of Ziyâd. He was a devoted adherent of the 'Aliya and was numbered among the ùaïba, distinguished reciters of the Qur'an. When Musâm b. 'Ali, the cousin and secret agent of Hussain b. 'Ali, arrived, he received him at his house and gave him a warm welcome. The latter had, although unwillingly, to agree to receive the fugitives for whom the authorities were searching. But he was denounced to 'Ubayd Allah and a few days later hanged beside Muslim b. 'Ali on the public square of Kufa.

sometimes it is practically the equivalent of "to adopt Islam", Kāmil, p. 526; (a poem by Dżāhrī); Līlāt al-ʿArab, x. 404, 5. It is the same with the verb taḥammul, which Hirschfeld and Lyall as previously E. Deutsch, wish to derive from the Hebrew ṭabaʿah, but it perhaps rather derived from taḥammal (cf. Nöldeke, Neue Beiträge zur Semit. Sprachwissenschaft, p. 73); for the latter is explained by Ibn Hāshām p. 152, 3, and Tahārī, l. 1149, 9, by tabarrur, to practice piety, but means here to become Muhammadan, Tahārī, 1. 2827, 1.

The above mentioned passage also (Sīra, xxx. 29) where the word means the innate religion is again found in later Arabic authors: e.g., Kāmil, p. 244; 5. "What is a hānif, to say, ‘I am a hānīf’ ... or Dīyārbakrī, ii. 1717; if I die. ‘I am a ṣafī,’ Ṭūbī. Connected with this, but at the same time remarkably modified is the use of the word by some authors as the designation not of the pure primitive religion but of the old paganism, which preceded the later separate religions. Thus Yāqūtī calls the Philistines, who fought against Saul and David, hānīfī and adds that they worshipped the stars; and particularly Māsūdī in his Tarāmī즈 uses the word as identical with ʿabīdī [q.v.] of the people of Persia and the Roman empire, before they adopted Masdām and Christianity respectively, and distinguishes this step in religious developments as the first hānīfī from the pure hānīfī religion. At the same time he says that the word is an arabicised form of the Syriac hānīf, in which connection it should be remembered that the Syriac hānīf is actually used particularly of the Sabulians (e.g. Barbraeus, Chronic., p. 176).

If we now inquire into the origin and earliest history of the word hānīf, the first thing to do is to look for passages which may possibly contain a use of the word independent of the Korānic usage. But unfortunately most of such passages present great difficulties either because their genuineness is doubtful or because they are so indefinite and uncertain that different interpretations are possible. Scholars have thus arrived at utterly different results, e.g. Wellhausen deduces from such passages, that hānīf originally meant a Christian ascetic, de Goeje explains the word by "heathen", and D. S. Margoliouth thinks the word everywhere means Muslim. This last meaning undoubtedly best fits an oft quoted verse of the first century A. D. (Yāqūt, l. 53; Kitāb al-Aghāni, xvi. 45 etc.), where the hānīf is distinguished from the Christian priest and the Jewish rabbi. On the other hand, it is doubtful if this meaning is also found in the story of the death of the Baktir Christian Beṣām, the scene of which is laid in northeast Arabia (Kāmil, p. 131, 4; Naḥḍaʾ, ed. Behn., i. 314). Beṣām called, when his brother wished to return to him: I shall become a hānīf, if thou wilt return! However, Mubarrad shows, by his remark to the effect that Muhammad had then appeared as a Prophet, that he understood hānīf to mean Muslim; but the same is much more forceful if one translates it by "heathen" (Nöldeke) or "apostate". In Sekhīs verse (Hudhali, Kösegarten, xviii. 11), where the wine-drinking Christians are making a noise around a hānīf, one of the scholiasts suggests Muslim; but the passage would equally fit an ascetic who refrained from wine. The same holds of the hānīf in the verse of ʿAbd Rumma, Līlāt al-ʿArab, xii. 206, who turns to the west when praying, unlike the Christians, cf. the comment.

The Hudhali verse, Līlāt al-ʿArab, vi. 133, where there is a reference to a stay for worship made by a hānīf is quite colourless, Greater value might, on the other hand, be attached to some verses where the verb taḥammul appears in the above mentioned sense of performing acts of worship. One is by a heathen poet Dżāhrī al-Awāl of the Hawazin tribe of Numair in Nadīl (Līlāt al-ʿArab, x. 404, cf. Kāmil, iv. 198), and mentions al-ʿabīd al-muḥaṣṣarī, who observes his prayers (ṣalāt), by which he can only mean an Arab ascetic; Dżāhrī (Naḥḍaʾ, p. 595, 4) must also be thinking of such a one when he says of a tribe, that they have allied themselves with those as the Christians with the religion him who yotakamnaṣa. The poems, which are ascribed to certain contemporaries of Muhammad, would bring us as an essential step forward, if their genuineness were only to some degree certain, but this is unfortunately not the case. This is particularly true of the verses placed in the mouth of the Awt opponent of the Prophet, Aḥt ʿAlī al-Aṣāf, in which he invites the foundation of a din hānīf, a pure faith (Ibn Hāshām, p. 180, 1), and contrasts this primitive religion to Christianity and Judaism (ibid., p. 293). The genuineness of the poem of Umayya b. ʿAbī Ṣalṭ, which speaks of the din al-ḥānasī as the only religion which will survive the resurrection (see Schuller, Beiträge zur Assyriologie, viii. 3, 70 seq.), is to say the least, very doubtful. Even if we set aside these poems, however, the verses quoted above are sufficient to show, what must be considered quite certain, namely that Muhammad in his use of this word was simply following a recognised usage, and it may be suggested as highly probable that hānīf even before his time denoted the people, who, although influenced by Christianity, had refused both Christianity and Judaism in favour of a simpler and more primitive religion. But the historical development of such a movement is wrapped in an obscurity, which cannot be cleared up with the material at present available. That it was connected with the religious movements of South Arabia, as modern scholars suppose, is possible, but by no means certain, as the most reliable of the verses quoted belong to the north.

As to the etymology of the word, as has already been mentioned, even Māsūdī had seen in it an Arabian loanword and his opinion has also a number of champions in modern times, who derive the word from the Canaanite-Aramaic hānīf, "hypocrite, godless, heathen, heretic". That this view would find substantial support, if the meaning "heretic" in the above-mentioned story of Ḥisāf was correct, is illuminating. The word then would be a foreign name for heretic, which those to whom it was applied, had somehow adopted in Arabia in a good sense. In any case, we should have to be content with this derivation from the Aramaic, as the corresponding Ethiopic word to which H. Winckler proposes to substitute it, is a foreign loanword only found in literary manuscripts, but this probably only shows that we must presuppose an intermediate form, and this is supported by the form of the word in Mandaeans, cf. the Syriac abstract noun hānīf, mentioned by Māsūdī. Besides we might, if forced, attain the meaning "ascensionist" from the Arabic hānīf to "break off", which would give a similar development of mean-
ing; and of course the possibility must not be excluded that new South Arabian texts may throw light on the word and its history.

ḤANIFA b. LUTAN, an important tribe of the great North Arabian tribe of Bakr b. Wālīl (q.v.), consanguineous to the Ijīl. During the Lakhushayya they were in part heathen, in part Christian. The pagans honoured an idol in the form of a cake of butter and honey, which they used themselves to consume in time of famine.

They led a settled life in Yamūna, where they built the fortified town of Ḥajjīr, which later became the capital. The Wālīl 'Irāq and among others the following places belonged to them: al-Awak (inhabited by the clan 'Aqd), Fāizrān (belonging to the clan 'Amīr), al-Kir (on the lower Wālīl 'Irāq, inhabited by 'Aqd), Khayrān (a large town with many villages, inhabited by the Sahaim and 'Amīr along with the Ijīl), Qārán (belonging to the clan Saḥaim), al-Malāq (fortified town belonging to the clan 'Amīr), Ṭa'l (inhabited by 'Amīr), al-Ṭābā (so Hamdan, Qaṭa'ir, s. 141, v. 10), Qasr, p. 102, as has al-Nakhr, al-Nakh and al-Ṭābā appear to be identical and there is either a misprint or error in the manuscript; the place belonged to the 'Aqd). Tuqm (in common with the Azd and 'Ašūl al-Kalāb), Uṣūl (a battle took place here between Khālid b. al-Walid and Musaṣayla) and 'Uthmān. There was also a settlement of Hanifs in 'Iṣām, the mines of the Nashār b. Kāf. Historical. In the last years of the Hanifs (see Bakh b. Wāhīf), the Hanifs separated from the Bakr and went over to their opponents, the Taghlibi, on whose side they then fought. Like the Taghlibi, they recognised the sovereignty of the Lakhumrais (q. v.) in Ḥira, the vassals of the Sahaim. In the famous battle of Ḥira, Kāf between the Bakr and the Lakhumrais (see Bakh b. Wāhīf), the Hanifs took no part.

Ḥaneida b. Ḫādī, chief of the Hanifs, resided in Ḥadīr. He had to lead the Persian caravans coming from Ḫira to Yemman to protect them from attack on the way. On one such occasion he was attacked by the Tamīm in the Ḥaṭṭ. This day by no means the only occasion on which the Hanifs had to fight the Tamīm. When the 'Amīr, who migrated to Yamūna to the Hanifs after the battle of Tabā'a (with the Ijīl), quarrelled with the chief of the Hanifs, Ḥa ḫātha b. Maṣlamān, they went to the Saq b. Zalūd, Mantu of the Tamīm and found asylum with them. In the battle of Saq b. Zalūd, Mantu of the Tamīm slew Ḥaraṣ. Of other battles with the Tamīm there may be mentioned that of Khaṣṣa (near Yamūna) and that of al-Ẓahrā.

In Muharram 6 = 628 the chief of the Hanifs, Thamūs b. Uthmān, while on his way to Mekka to visit the holy places (qurra), was surprised by thirty Muslims and taken prisoner. He adopted Islam and was released. Through his influence over the Hanifs, out of friendship for the Prophet, he prevented supplies of provisions reaching the Khūraṣh in Mekka from Yamūna whence they were wont to obtain them. In the "year of the deputations" (9 = 631) the Hanifs appeared before the Prophet under Ḥarrāb b. Habīb, called Musassila, who later appeared as a rival to the Prophet and proclaimed himself a companion and future successor of Muhammad. When he, whom Musassila called al-Ḫāfiq, the "ilār," appeared on the scene in 11 = 633 at the same time as the false prophet Aswad al-Amṣīr and Ṭufila, a large section of the Hanifs followed him, encouraged by their chief Ḥadī, b. Ṣufi, who declared he had heard the Prophet with his own lips in Medina designate Musassila as his colleague and successor. The majority remained faithful to him in the caliphate of Abū Bakr only, "Iṣrā'īli" b. Abi Ḫālīfa, who took the field against Musassila, was defeated. An attack by Sharrābī b. Ḫaṣṣāsa was also repulsed by the Hanifs. Musassila then summoned his forces at ʿAqrabā, a place near Ḥadīr. Here a famous battle was fought with the Muslims under Khālid b. Wālīl, which ended in the utter rout of the Hanifs. Their two leaders, Muḥakkas b. Ṭufil and Ṣayd b. Ḫāfiq b. Ṣufi fell in battle and Musassila was put to death; the Hanifs are said to have lost 10,000—20,000 men on this day. When Khālid b. Wālīl proceeded to besiege Ḥadīr, the Hanifs submitted to the demand of Muhammad and agreed to adopt Islam and deliver up all their movable property, which was divided among the Muslim soldiers.

(See Bibliography.)

HANSAKIHA, plural of hansaliya, the term given to the members of the Ṣāḥib or Ṣāḥib's brotherhood, founded by Shīb Ṣa'd a. Ḫādir al-Hanṣali (known in Morocco as Shīb Ṣa'd al-Aḥmāl). The episcopal frame of a Hansaliya is said to be derived from his birthplace Hansa, a Berber village of the tribe of Ben Mūt (in the Moroccan Atlas).
which produce ecstasy by their effect on the nerves. They also practice flagellation. Their assemblies are secret and only members are admitted. The people credit them with a mysterious power over the jinns. They are therefore often invited to the houses in cases of sickness to drive away the evil spirits, which cause the illness. In Morocco the influence of the head of the zuwia is so great among the Al-Messat, that in the time of the explorer de Foucauld it was sufficient to accord the traveller protection from Marrakesh to Sis.

HANSAŁA. An ancient town situated 20° 7' N. 75° 38' E. in the Hijaz district of the Fezjilj. Population (in 1901) 16,523. It is in the centre of the gulf of the same name, a tract partly under irrigation and partly sandy waste, which has a pop. of 128,783.

Hâshî is possibly a foundation of the Kâshâns, but the Tomara Râdjdût held it when historical information is first available. It was passed into the hands of the Canbânis before it was taken by Massûd I, the Ghassawid invader, in 427 (1036). It was recovered by the Canbânis and restored in importance until its conquest by Muâ'z al-Din in 588 (1192). It was the capital of the country known as Sawâlah, until the rise of Hijaz. It does not play an important part in history until it became the headquarters of the soldier of fortune George Thomas in 1798. Thomas ruled a considerable district and struck coins at Hâshî till defeated by Sindia's army under Perou in 1801. From 1803 till 1857 it was a British military station. Massûd's first conquest is commemorated by the Shadiâ, a long national music.

HANZALA b. Malik, an Arab tribe belonging to the Ma'dal group. Its genealogy is HANSAŁA b. Malik b. Zaid Manif b. Taimam. Among its more important subdivisions were the Hartajm (to which the poet Faranaj belonged), Dârim and Yathrib. The poet Alkâma b. Ahsâd traced his descent from the HANSAŁA.

They dwelled between the two sandhills of Djarid and Marrir near Hâshî in Yâmama. The villages of al-Sammân (with palm woods, cisterns and irrigation works), al-Lâkâmânât, the Wâdis al-Guânân and al-Iri, the lakes al-Kabir (Wistenfeld, Registre, p. 203, probably by error, Djarid) and al-Lawâtîh, and the mountain Kurra belonged to them.

Historical. The HANSAŁA played an important part in the Alfarabi al-Árab. On the second day of Uwara (in the Dâhna near Bahrijn) the Lâjîmân king Amr b. Hishâb had a hundred HANSAŁA of the clan Dârim buried alive, because one of his brothers, who had been emigrated to the guardianship of the chief of the Dârim, Zaitra b. Udâ, was slain by the latter's son-in-law Sa'wâd b. Hala's (Amr's epithet al-Muharrir). "the consumer" dates from this event. When Zaitra's...
tous; the more Somali blood there is in them, the more closely they approach a bright black. The early conquest by Abyssinian kings gave the Amharic language a firm footing in those lands and even when the population had long been Muslim, the Amharic dialect was still retained. This is spoken there to the present day, but it has borrowed more and more from the Galla, the Somali and particularly from the Arabic. It is doomed to decline, as it cannot hold its place against these languages. Quite recently the Showa Amharic, the language of the governing classes and of polite intercourse in modern Abyssinia has penetrated to the town.

In the period in which the power of the Abyssinian empire stretched far to the south, southeast and southwest, Harar also passed under its sway; but we possess no reliable historical accounts of this period. The fact that an Amharic dialect is spoken in Harar and Maykam's statement that Arabic and Abyssinian were spoken in these lands, show that the Abyssinians ruled there in early times; the date may be the sixteenth and seventeenth century; for by the sixteenth century a wave of Islam began to roll westward, and although often repulsed, gradually gained ground till for a time in the sixteenth century it covered all Abyssinia. If we go by tradition, Sheikh Abdurrahman is the earliest figure we meet with in the history of Harar. In reality, however, the name Harar is first found in an Abyssinian annalistic, that of King Amde Siun (1342-1344); there the governors of Harar are mentioned, who had allied themselves with many others against the Christian king of Abyssinia (Perruchon, Histoire des guerres d'Amda Siun, Paris 1880, p. 52 and p. 150). At this time Harar seems to have been as much of a subject of Zalla's as of Emir of Harar also. The first to be mentioned in the chronicles, is Omer-Walshah who may have reigned about 1550. In 1557 Harar appears on Fea Mauro's map, with the same name, corrupted however. In 1571 the Emir: Aba Bakh transferred his official residence from Zalla to Harar; he was probably forced to do this by the advance of the Turks who at that time under Selim I were occupying Yemen and the whole of Africa coast to Cape Guardafui, and who naturally came into conflict with the Portuguese in Zalla also. Meanwhile another man had arisen and soon seized all power for himself. This was Abnae, called Ali. This epithet which means "left-handed" was perhaps given him by the Christian Abyssinians. He was born about 1500; nothing is known of his origin. He served as a horseman in the Emir's army, but then he founded a conspiracy against him, and rebelled. By his victories he made himself independent and forced the Somali to follow his standard. His future greatness is said to have been foretold him by a miracle, with a banner of bees and his ancestry still lives in the popular tales of Abyssinia. He became actual ruler of Harar, but he seems neither to have taken the title Emir nor Selilih, but to have Constantinople and churches and manuscripts plundered and the treasures of the churches and carried off, woman and children into slavery. Many Christians must have then hoped to return, so that later a special ritual had actually to be prepared in the Abyssinian church for the re-baptism of the apostates, who returned to their original faith. In 1543 Greg fell in battle against the Abyssinians, who were supported by the Portuguese under Christopher da Gama. In 1550-1551, Harar was burned by the Abyssinian general Fendi. Several Muslim generals had hostile encounters with the emperor Claudius (1540-1559) and were usually defeated; these battles are celebrated in an old Amharic ballad in praise of the emperor. But Claudius himself fell in battle against Nør, their Emir of Harar. But Nør could make no further progress against the Abyssinians, and at the same time the Galla hordes were pressing forward with all their forces and occupying the lands of Harar. The power of the Emir thus became gradually limited to the town of Harar and the once so mighty kingdom of Zalla. Harar now became an insignificant principality till 1875. In this year Rauf Pasha of Zalla set out against Harar at the instigation of the Egyptian government, while at the same time Prince Izzan operated against Abyssinia in the north and Munsinger Pasha advanced from Tadjura. The two latter expeditions failed in their object, but Rauf left himself securely in Zalla and Harar and began to reorganise the country. The Emir Ahmed, "Abd-al-Shakir was dismissed, but murdered in 1876. In 1878 Rauf was dismissed by Gourdon Pasha (General Gordon), as the latter feared that Rauf might establish himself in Harar independent of Egypt. After several other Pashas had failed there, it was decided in 1884 to name these lands. In 1885 Kidwan Pasha handed over Harar to the Emir Abd Allah. But Menelik II of Shoa soon attacked Harar and in the battle of Tjolanka, west of Harar, "Abd Allah was slain on the 26th January 1887. The correspondence on the occupation of Harar between Menelik II and the king of Italy was published in the Documenti Damon (Rome 1871), p. 251-379. Harar now came once more into the hands of the Abyssinian Christians, who had been driven out of it some 600 to 700 years before. The celebrated Ras Makonnen was installed as governor, a very capable, clever, energetic and cultured man. He died in 1906; a beautiful church-like tomb was built for him inside the walls of Harar.

AL-HARAWI [Son AL-HERULI]

HARAZ (Haras, Haraz, Harraz), a high mountain range in South Africa, lying to the west of St. [q.v.], between the Wadi Heruz and the Wadi Serdat near Hajar Shahr [q.v.]; it is composed of basalt and is over 5400 feet high.

The following mountains belong to the Haraz:
HARB, a powerful Arab tribe of Yemeni origin in the Hadhramaut between Medinah and Medinat al-Salam. They are divided into two great branches, the Bani Salim and Bani Murash. The Bani Salim belong amongst other clans, al-Hamdi, al-Sa'di, the Amur, Mu'ar, Wadih, Salim, Taiman (not the celebrated great tribe of this name), Musa'in, al-Hajjali, al-Hajjali, al-Husain, al-Husain, and others; the Bani Salim, al-Husain, al-Husain (also known as Salim, al-Husain, and others); the Bani Sa'di, Lababba (all robbers of pilgrims), Bi'r, al-Husair, al-Dhahab, Bani Hasey (all Arabs), and Bani Amur.

Doughty, amongst others, gives a list of the villages of the B. Salim (between Medinah and Yanbu') and the great Wadi Feza (probably Ferran), Djeishid, Umm Theyla (Theyla), Kajj, Dar al-Hamdi, al-Khaya, al-Khaya, al-Wahbi, al-Hassan, al-Sa'di, al-Husain with extensive date-plant groves and a large market; besides the chief article of commerce, the date, which is here sold very cheaply and the excellent honey from the adjoining mountains, genuine Mecca Pilgrims are sold here, and are found genuine nowhere else in Arabia except at Harih, al-Ali, al-Dhahab, Reddi, Madina, Salim, Swayok; of Murash: al-Khayebe (near Mecca), Kays, Rabiah (not far from here the traveller Charles Huber was murdered by his servants, the Harb), al-Swaihat. A portion of the Harb also live in the great Wadi al-Oumayr (al-Hamdi near Wadi Rammun), the small harbour of Lulay and the Djifeh Fikhera, or the space between Medina and Yanbu', belonging to the B. Salim). The Harb, who make the pilgrims' route between Medina and Medinah usually by their ambushes and are therefore held in terror by the Syrian pilgrims, came from Yemen to the Hadhramaut clan of the Bani al-Hajjali (p. v.) bearing the same name in the Muslim period. In the beginning of last century they succeeded only after hard fighting in overcoming the Walidh (p. v.). During Falgaroe's stay in Najdhe 1862, the Shayk Mahomed bin Rashid in person and an expedition against the Harb tribes and conquering a portion of them. Falgaroe gives the number of the Harb, who were under the Shayk of the Harb, as 14,000. Doughty on the other hand gives 5000.

In his [cites] Hamdani mentions the Harb as neighbours of the Bani [v. v.] and Laithim [v. v.] in the country between Khairar and Medinah and near Mecca.

Bibliography:
HARBA, (pl. harb). spear. According to the Arab lexicographers, the harba is smaller than the ramm and larger than the 'asas [q.v.]. It has the same function as the latter in Muslim ceremonial; we therefore find it in some traditions that in Muhammad's time as well as in others a harba was used as 'asas [q.v.] (cf. the chapter 'asas al-mu'salim in the different collections of traditions). It has been supposed that the erection of a 'asas at the battle of Uhud originally had a protective object; in agreement with this is the fact that, according to some traditions, when the Prophet and his companions were about to make a冲锋 into the Meccan pennants, the Prophet ordered them to erect 'asas in the rear of the line. The same is stated in the hadiths of the Sahih al-Bukhari and al-Tirmidhi, in which the Prophet is mentioned as ordering the Muslims to erect 'asas in the rear of the line. The same is stated in the hadiths of the Sahih al-Bukhari and al-Tirmidhi, in which the Prophet is mentioned as ordering the Muslims to erect 'asas in the rear of the line.

The spear is the symbol of the commander, the chief of a tribe, etc. It is related that 'Ali, the leader of Fidaiyn's troops, held a harba in his hand (Ibn al-Mubarak, Hujjat 1210, p. 173) Barak (ed. S. ed. De Goeje, p. 1214, 1215, 1215) relates that Usbat b. Husayn was a man of the tribe of the Banu 'Awf al-Abdal who took the harba in his hand and thereby gained the title of 'alif. In another hadith, the harba is taken out of his hand and handed to the commander. The hand holds the spear in the ground in front of the face of the Amur al-Hadji [q.v.]. In Cairo, perhaps also as a sign of his rank (Manners and Customs, London 1839, p. 445).

The story that Muhammad received 'asas of harba from Abyssinia as a present, gains in probability when one reflects that such gifts are used to this day in Abyssinian ceremonial (Sects, The Sacred City of the Christian, p. 60, 64, 68).

Bibliography: Besides the works quoted in the text, cf. the bibliography in "ASA (I. 345).

HARBÂ (with aflf or sib), now Dharah, a ruined town in the Dhamala district, 1/4 hour S. W. of the palmgroves of Balad; on the west bank of the ancient Tigris bed, the Sinjar, in about Lat. 34° N.

The name and the town date from pre-Muslim times. According to Yakhsh (i. 187), an older name was Ukhribneya, which sounds Babylonian. The Shattanis authorities reckoned the northern boundary of Sittata as Til-Ershid, the later Dars al-Madid, from Harba in the east to Maskin (the modern Tall Masakin) and Alah (or Ulah, the modern 'Alah) being opposite it on the east in the Maskin (the Maskin) river. In the north it adjoins the province of Alah. These former names were used in the early Muslim period down to the 'Abbasid, for example in Omar al-Khushâb's survey (cf. Khushâb, p. 14; Yakhsh, p. 104; Makhlâb, Tanbih, p. 58; Yakhsh, ii. 174). Another early mention of the place is found in Tabari, ii. 916, year 76, where the Khushâb king Shahbân on his march against al-Hadâj crosses the Tigris at Harba (an accurate with pen on Harba and harba).

In Harba there were flourishing manufactures of heavy cotton goods, which were exported everywhere (Yakhsh, ii. 235, and Makhlâb, p. 955). This pottery was one of the highly developed manufactures, clear from the quantity of sherd reckoned among the ruins. It is usually a ware, identical with the so-called Balâka-ware and belonging to the xiiith—xvith centuries.

When the great change in the course of the Tigris began in the beginning of the reign of al-Mutâszân b. 'Abdillah and the river left its ancient bed just above Harba and forced a way into the bed of the canal al-Kalîb Abu 'l-Dhâbi, its modern course, the Caliph began to build great irrigation works to irrigate the land rendered waterless. Apart from the fact that at least the whole of the present Dusjail canal is a relic of the same, the ruins of the Musanjiar canal above Harba and the great bridge at Harba, after which the place is now called Dharab Harba are further witnesses of his enterprise. The bridge has already been examined by E. F. Jonas and described in the Selections from the Records of the Buyayy Government, iii. (1857), but I have studied in greater detail. It is solidly built of baked bricks and spans the ancient canal on four arches, 180 feet long and about 40 broad. An inscription about 300 feet long on both sides gives the date of its erection as 629 A. H., and is of particular interest on account of its detail and the unusual, from the orthodoxy point of view, almost blunderbuss manner of the writing. The ruins are rendered conspicuous by the top of the tomb of a Shikh or beyid Seri, visible above the village (cf. E. H. Wrigglesworth).

HARF, the blade or edge of a thing. Hence 1, a letter of the alphabet (being the edge of the syllable or word), e.g. harf al-ala-mâd = alif, waw, and so on; 2, as a grammatical term, one of the three parts of speech, whatever is neither a noun nor a verb (huruf or hârîf), whether consisting of one letter or more, as, al, harf, etc.; 3, in prosody, the letter alif, waw, and so on, by which they may not be employed as râhîb or called harf al-ala-ma; 4, a dialect of the Arabs in the beedh; "The Kur'an was revealed in seven dialects (ahmar)" or this may mean according to seven readings (shifting), cf. Noldeke-Schwell, Geschichte des Korãns, ii. 48 et seq.; 5, as a grammatical term, HB is defined to be the language or the medium through which the Prophet makes to man and the lamp of scholastic potential realities such as that of the palm tree in the date stain; 6, in the substantive sense, al-huruf (harf) means disposing the letters in magic squares, etc.

Bibliography: Zaufaal, Musafiray bi index; Djuhâf, Turâfis, etc., ed. Flugel, p. 90, 203; Fregug, Realistern der arab. Vorsch., ii. 310; Leev, Dictionary of Technical Terms, Pt. i., p. 318 et seq. (T. E. W. Will.)

HARFUSH, a family of Emirs in Baalbek, who profess the doctrines of the Mottawia (q.v.), and during the Ottoman period held the power in their hands there till the Turkish system of administration was organised in the middle of the last century. How and when the Harfûsh gained the influential position has not been made clear; we only possess detailed information for the Emir Mûsâ b. Ali, and are informed who lived in Baalbek in the time of Fakhr al-Dîn. Cf. M. Makhlâb, Kâblisat al-Atar, v. 434; Whiston,
Farther eastwards is the district of Harib, which we have just mentioned. It is about 20 miles long and 15 miles wide, and contains a population of about 10,000 people. The district is divided into two parts: the eastern part, which is inhabited by the Arabs, and the western part, which is inhabited by the Turks. The district is rich in agricultural land and has a good climate. The people of Harib are known for their hospitality and their love of music and dancing. They are also known for their bravery and their courage in battle.

The capital of Harib is called Sharjah, which is located on the coast of the Gulf of Oman. The town is built on a high hill and is surrounded by a wall. The population of Sharjah is about 50,000 people. The town has a port and is an important trading center. The people of Sharjah are mainly Arab and speak Arabic.

The district of Harib is governed by a sheikh, who is elected by the people. The sheikh is responsible for the security and the welfare of the people. The sheikh has a council of elders who assist him in his work. The council is elected by the people and is responsible for the administration of the district.

The district of Harib is known for its fine beaches and its beautiful scenery. The people of Harib are known for their love of the outdoors and their love of the sea. They are also known for their love of music and dancing. The district is rich in agricultural land and has a good climate. The people of Harib are known for their hospitality and their love of music and dancing.

Christians more than once attempted to regain it, but it remained permanently in the hands of the Muslims. In 630 (1234) the Al-Yahsid al-Atrb built a strong castle on an artificial mound there, the ruins of which still exist.

**HARIM** is a forbidden, particularly the women's apartments and their occupants (harem). Certain pieces of ground, which are withdrawn from cultivation or building without the owner's consent, are likewise called **HARIM**, such as the Harim Dār al-Khāliṣah and the Harim al-Tahāri in Baghūd, which included whole stretches of the town.

**HARIRI** (born 444, died 679/680), Abū Muhammad al-Kairamī or ABU' IBN AL-KHARIR, Grammarian and Elegant Writer, was born and brought up as a Māhānī at Basra; he had also studied at Basra, though the name of his teacher seems to have been given by the authorities as Abū Ḥujīf b. Muhammad al-Kashāb, since this personage died 444. At Basra he held the office of ar-Rākib, i.e., head of the intelligence department (cf. Tal'at iii. 1990, 353 in the court, and this office remained with his descendants till the time of Tuhb al-Dīn Isfahāni, who visited Basra in 556. Hariri's house was in the quarter of the Hariri Hariri, and his office at Mathān. He repeatedly visited Baghūd (e.g., in the year 504), and is likely to have performed the pilgrimage. His travels and his death are not recorded. His office brought him into connection with many of the notables of the metropolis.

His most famous work is the Menādīr, a collection of fifty pieces modelled on those of Badr al-Zamān Hamadhānī, wherein the adventures of one Abū Zaid of Saruj are narrated by Al-Aswāt b. Hamanud. The historian Ibn al-Durūjī asserted that this Abū Zaid was a real personage named Abū Muḥammad al-Salātī to whom Hariri addressed verses, but this is doubtless a fiction similar to those which are found in connection with other celebrities of romance. According to one of Hariri's friends and correspondents, Thabit Allah b. Sā'īd b. Thālūlah, the Menādīr were commended in 405 and finished by 504; the first date seems correct since they mention the taking of Saruj by the Franks in 400, but the last seems too early if Ibn al-Ḥāfiz be right in stating that the assault of Saruj was a youth in 503; since this personage is mentioned in the work as a well-known man. Different theories have been held amongst the persons at whose request the tales were composed; the visitors of Mustardad Abū al-'Abī Shābīkā (313), and Abū al-Husayn b. Shāhī (cf. ii. 367) both claim to be the author of this collection.

The Menādīr became classical in the author's lifetime, and he claims to have himself composed 700 copies of it. A complete set of the letters (such as Ibn Duri the son of Al-Kairamī and the author of the Tawhīd) they maintained their position, and an early commentator, Shams al-Haffīl (died 626), told Yahyā that he had been created in order to demonstrate the surpassing excellence of Hariri; for he had found himself unable to rival the Menādīr, after undoing all other monuments of Arabic literature. They fall short of Hariri's in originality, but excel them in facility, command of the Arabic language and poetical ability. Their popularity spread beyond the Muslim community to Jews and Christians who translated and imitated them in Hebrew and Syriac. Some specimens were rendered into Latin in the eighteenth century by Schultens and Relieke, and a monumental edition of the Tawhīd was produced by de Sacy in 1832; this was followed by numerous editions both Oriental and European, and translations have been published in several modern European languages, e.g., in German (Die Verwunderungen des Abu Zaid von Saraj, 1836, etc.) by Chemey and Steingass in English (London, 1858).

Of Hariri's correspondence a selection was made by Ibn al-Durūjī, who is also included in his Al-Abūr; another selection is reproduced by Yahyā in his life of the author (Mugham al-Durūjī, v.). Two of the epistles, called 'Adilīyya and Shāḥīyya, because in one every word contains the form of these letters and in the other the letter alif, are also preserved in Arnold's Christendom. Some of the correspondence preserved by Yahyā deals with the grammatical poem Muqtab al-Fusul, composed at the request of the above-mentioned Ibn al-Durūjī.

His remaining treatise, Durat al-Durūjī, is a collection of strictures on the erroneous use of various expressions; an extract of this treatise was published by de Sacy in his Anthologie Grammétique, and the whole has since been printed in the Constantinople edition of 1825 there is attached the commentary of Shāhī al-Dīn Khashjavī, who disputes many of the author's assertions.

**Bibliography:** Yaqut, Mugham al-Durūjī, vi. 179-181; Ibn Khallīkin, it. de España, iii. 340-344.

(D. S. MAROĐLICHUT)

**HARIYAH**, a sect of the Rifa'is, in the district of Damascus, founded by Abū al-'Abī Hārūn al-Hārūn al-Mārwaḥ who died in 645 (1217) at Basra in Harrân. His extreme pantheism, as ituria expression in his poet Nadim al-Dīn, b. Idrīs, was banned by Ibn Taimiyya in a very important letter (vol. xxvii. no. 2 of the collection Taqīs al-Kawsāl al-Durūjī, formed by Ibn 'Usa, manuscript in Damascus, Tahir, no. 151). Cf. also al-Farāhī (died 904 = 1504) in Abu'l-Husayn, Shāhī b. al-Jārīlū, Manual 1362, p. 326.

(D. S. MAROĐLICHUT)

**AL-HARĪTH, DIZEL** [See ARAKAT.]

**HARITH b. KĀKH, usually called 'Alībādī, an Arab tribe belonging to the Yemen group. Their name is: al-Harith b. Kāk b. A'mar b. 'Ull b. Dālāh b. Mālikāh (Melik).

They lived in the district of Nadīn (q.v.) and were neighbours of the Hamid. The following place amongst others belonged to them: al-Abūl, al-Abūl, Basra al-Durūjī, Da'll-Marrat, El-Furāt, [i.e., between Nadīn and the Dariyā], Ḥālima (Khadima), Ḥayyān, al-Khasiṣ (between the Ḥayyān and the Khālisa), Kārla, Ṣāḥib, Ṣā‘ib or Sawāb, Mutan or Mainān, Shawit Ziyād (belonging to the chief Ziyād), wādī al- 'Awal al-‘Abel and al-'Awal al-alb, al-Nāṣirī, Thadrī, wadro: Aīn, al-Hurā, Dārā, al-Dījāf, al-Harīf, Ḥimā, Ādam, al-Kawākibi, Shāhīn (Kāmīn, a well in the camp), Khālib, al-Maḥāb, Mainān, Shāhī, al-Salihi (belonging to the clan Dī’īr); mountains: Ṭāhlimā,

HARRAN, a desert, "a desert covered with black broken stones, which looks as if it had been burned by fire," Such harras, which owe their origin to subterranean volcanoes which have repeatedly covered the undulating desert with a bank of lava, are found particularly in the east of Harran and stretch from there to Mardin. Sanih, Khalilat al-Wafat' al-Adbh fi al-Mustafka, ed. Mecca, 1316, p. 38 gives a detailed description of a great earthquake at Medfa which began on the 1st Djamadar II 554 (28th June 1256) and lasted several days. Cl. also Wentzel, Geschichte von Mekides. There is perhaps, as Watzinger has suggested, an allusion to these fearful stony wastes in 1492 (xvii, 6 (mumm)). Yaqin, Medfa's, ii, 247 et seq., details no less than 25 of these harras with their names (cf. Zeltsch, d. Deutsch, Morgenl. Ges. xlv, 355 et seq., under which the Harras willkin at Medfa has obtained a place in history on account of the bloody victory won by the Umayyads there over the Medes in 63 (688). An accurate map with an index of names to the whole territory, in which harras are found is published in the Zeitschr. des Deutschen Palastina-Vereines, vol. xi, in the narrative of A. Stähle's journey Directe fl-Turfa and Homs (1882). The same author also discussed the supposed origin of such deserts of stones in Oli Fulhenger von Ercmolda after v. Oppenheim, Von Mittelmeeren von Persien, i, 90, note 5, in his v. Oppenheim's in Peterman's Jahresberichte, 1896. (Zur Routenbärt in meiner Reise von Damaskus nach Bagdad in den Jahren 1887, 88.) Cl. also the literature quoted in the first named work of v. Oppenheim. (end seq.).

HARRAN, a very old town situated in the Littoral land of Mesopotamia, near the sources of the Balikh river, between Edessa and Ra'a' Alat, is well known in the Old Testament as the home of Abraham and Lot, and in the New Testament as the chief seat of the Syrian Jews and of the religion of the Goyim. It was known as Khalis, to the Romans as Carinma, to some Church Fathers as Hell Univs into the lands of the Hellenes and of the Mohammedans as Harran or Arra. In its long history Chaldaea distinguishes five periods, the Biblical, the Greek, the Roman, the Christian and the Muhammadan. The form of the name found on the cuniform inscriptions, Harrama, that is 'route,' points to the importance of the place as a trading emporium; but it is chiefly famous as the seat of the worship of the moon-god Sin, whose temple was adorned with more than one of the Assyrian kings. The overthrow of the Chaldaean supremacy and the rise of Persia brought no change in the circumstances of the city. From the time of Alexander a large Macedonian popular settlement, which became known as Mygdonia, and the débris washed down to Harran received Greek names. Rome, on the other hand, left little trace of her away on Asia. It was the Eastern civilization which influenced the western conquerors. About the beginning of the Christian era the indigenous Syrian population of northern Mesopotamia, was largely mixed with Macedonians and Greeks, as well as Armenians and Arabs. As a frontier town Harran was treated with indulgence by the earlier Emperors, and it was not until Christianity became the religion of the state, that efforts were made to suppress the cult of which Harran was the chief seat. These attempts were not successful in extirpating the cult; and doubts as to the fact that in Harran, as in other places, the people depended for their livelihood upon the temple. Hence the Church-fathers speak of Harran as a heathen city, and, although bishops of Harran were appointed, the place continued a seat of idolatry, even after the country had become a province of the Caliphs. The same commercial necessity may account for the existence of a Roman town of the 6th century of a Monophysite community with a bishop at their head. The majority of the people, however, continued heathen. Harran capitulated to Ilyad b. Gham in the year 639 a. D., at which time it was the chief town of Dybey Maqar. It was the favourite residence of the last Umayyad Caliph (724-750). Ptolemy list the Hebracu, the Arab, as the chief town of a pleasant town, governed by a bent of a fortified castle. When Ibn Qubair visited it in 1183 it acknowledged the sovereignty of Saladin (Salah al-Din), and its people were noted for their hospitality toward strangers. By Ibn 'Abd al-Malik's time (d. 1332), however, it had fallen into decay. At the present day the site is marked by a village of拿出带着 and ruins of ancient buildings of basalt. In addition to the worship carried on there, Harran was noted for its honey and for the preserve called Khalisit, as well as for the purity of the Syrian spoken there. Chaldean scribes that speakable: crops of maize, tobacco and cotton are raised on the plain; but its fame will always rest on the long line of philosophers and men of science who flourished there, of whom Thabit b. Harrar, and his sons and grandsons, and Al-Hasan are the best known.

HARRÁ. [See HARRÁ.]

HARRÚD. A river in Afghanistan which rises in the Siel Kand and flows southwards past Salwaz and Zakûn, discharging itself into the Háran at Lake of Sistan. It has been identified by Tomschak with the Pharanakus of Pliny and the Harrum of the Avesta.

Bibliography: Holdich, The Gates of India (London 1910); Tomschak, Sitz.-Ber. des Wiss. Acad., 1883, A. Stein, Ind. Antiquity, 1886, p. 33; Forde, Caravan Journeys (London 1857); (M. LONGWORTH DAME.)
HARÚN

HARÚN b. Idris, the Arab of the Bible, born 3 years before Mūsā, when Fir'awān's command to slay the male children was given (Iraqab, p. 100; Tabārī, l. 448). When Mūsā received the command of God to effect the deliverance of the Israelites out of Egypt from Fir'awān, he asked for a companion of his own kin (Šura, xx. 30–40). Hārūn, who sat on Fir'awān's council (al-Kūf, p. 211, and Tariqu̲a̲ zam Kāshif) was entrusted with this position. He served Mūsā as spokesman as he had an eloquent tongue (Šura xxviii. 32–33). He took the greatest share in the erection of the golden calf (Šura, vii. 134–136; xx. 90–95 and Kūf, xxviii. 1–7). According to the Tālutmand (Sūnā, 72) he had been forced to do this by fear of the Israelites who would have slain him. But other legends show that the Israelites were particularly attached to Hārūn. For example al-Kūf, p. 236, Thalālī, p. 416 and Tabārī, l. 502 give the following story in almost identical words: Mūsā and Hārūn once noticed a cave from which light streamed. They went in and found there a golden throne with the inscription "designed for him whom it suits". As Mūsā proved too small, Hārūn sat upon it. The angel of death then appeared and received his soul; he was 127 years old. When Mūsā had returned to the Israelites, they asked where Hārūn was. "He is dead", said Mūsā. "Then shall slay him", they answered. Angels then appeared with Hārūn's bier and cried: "Do not suspect Mūsā of such a crime".

According to another tradition (Thalālī, ibid., Tālutmand, p. 505), Mūsā led the Israelites to Hārūn's tomb, where he called him back to life, and Hārūn conveyed the story of his death. Midrasch Jelomeshan, Yevamot, 760, Abibt, & R. Nathanson, 32, Pirke R. El. 12, also give this Arabic legend.

HARÚN al-Raṣūl, the most celebrated of the Ākhasir Caliphs, born in al-Ra’y in Dhu’l-Hijjah 141–March 765—or, according to another, in itself more probable authority, in Muḥarram 142–February 766. His father was the Caliph Muḥammad al-Mahdī, his mother a slave named Khayāl, whom Malhūt set free and married in 159–755–756. After Harūn ascended the throne in Rādī, l. 170–Sept. 786, he appointed the Fatimid Yāhūb b. Khalīf as vizier with unlimited power, and during the following seventeen years the latter is said to have had two sons al-Fadl b. Yāhūb and al-Fadl b. Yāhūb to have been the real rulers of the great empire; the catastrophe of Muḥarram 157=January 803 [cf. BARAKIY and DUA’AKHAN, B. YAHAYA] was thus all the more unexpected. In 178–793, an ‘Abd, named Yāhūb b. ‘Abd Allāh, raised the standard of revolt in al-Dalīl and went among numerous followers, so that the Caliph had to send a great army against him under al-Fadl b. Yāhūb. The latter entered into negotiations and, when he gave Yāhūb rich presents and Harūn promised to pardon him, Yāhūb surrendered. But when he arrived in Baghda‘d, Harūn in spite of his promise had him thrown into prison. About the same time a bitter feud between the North Arabians and the Yemeni in Syria blazed up into open war and Ilī was not till

180=796–797 that Dib‘l b. Yāhūb was able to restore peace. In 178=794–795 the Egyptians rebelled against the governor Iyāh b. Sub‘ailah, but when Harūn sent his eldest uncle Harithmah b. A‘ya against the rebels, the war was routed. Unrest broke out in Kairawan also, but this was quieted by Harithmah, for a time at least, but after his return in 181=797–798 the many rebelled again. Order was restored by the governor Thobīn b. al-Aqabah, who however soon made himself independent, and in 184=800 Harūn had to grant him the country as an hereditary fief on payment of annual tribute. Like so many of his predecessors, Harūn had also much hard fighting with the Byzantines. At the very beginning of his reign he had the frontier towns fortified and almost every year his governors made raids into hostile territory without however winning any permanent advantages. In 181=797–798 the Caliph himself took the field, but soon returned. As usual war again broke out the next year; the Empress Irene, however, on account of internal disturbances in Constantinople had to make peace and pay tribute. Peace only lasted till the accession of the emperor Nicephorus in 182=801, who sent the Caliph a scornful letter and demanded the return of the tribute that had been paid. Harūn at once took the field and forced the emperor to pay a new tribute.

The latter, however, paid no attention to the agreement and the war was continued. In 185=805 Harūn took Heraclea and forced the emperor to pay not only a new tribute but also a kind of poll-tax for himself and his family; in the following year however Yazid b. Makhbīd was defeated by the Byzantines and the efforts of his successor Harithmah proved equally availing.

The years of warfare therefore left the state of the parties in the end practically unchanged. According to western historians, Harūn was on the other hand on terms of friendly intercourse with Charlemagne and mention is often made of embassies from the West to the East. There is however no mention of this in Arabic sources and the truth of these statements has even been extremely doubted [on this point cf. Schmidt, Amt der Großen und Harun al-Raschid in Des Islam, 111, 402–411, Barthold, ibid., l. 333 et seq., and the literature there quoted]. The governor ‘Ali b. ‘Isa had made himself generally hated by his extortions in Khorasan. When the people complained, the Caliph went in person to al-Ra’y in 181=794, but allowed himself to be fooled by ‘Ali and confirmed him in his office again. About the same time Rāfī b. Lāthī rebelled in Samarrah. He was defeated by ‘Ali b. ‘Isa, the complaints of the people of Khorasan about the latter’s boundless greed became louder and louder and Harūn had finally to transfer the governmentship of Khorasan to Harithmah. By this time Rāfī was lord of all Transoxania and as the situation was rapidly becoming more serious, the Caliph resolved to take the field himself and sent his son al-Mansūr in advance to Merw. On reaching Teke, Harūn fell ill and died, according to the usual account, on the 3rd of Ḳumāqī l. 193=24th March 809. He had a long time previously made arrangements to secure the succession for his son al-Amin, but these in the rough proved most unfortunate [cf. the article al-Amin, l. 347 et seq.]. Harūn took a great interest in art and science
and his brilliant court was a centre for all branches of scholarship. In spite of occasional outbursts of Oriental despotism, he was undoubtedly one of the best of the Abāsids; nevertheless it is true his reign that the beginning of the decline of the dynasty dates. In legend and tradition, however he has always been looked upon as the personification of oriental power and splendour and his fame has been spread throughout East and West by the "Arabian Nights".

(K. V. Zettetein.)

AL-HARUNIYAH, a village in al-Tarik near Dārār. Yākub says that an ancient Persian bridge built of stone with linden joints stood here.

2. One of the chief of frontier fortresses (shāmir) between Asia Minor and Syria. The exact position is not known, but it stood one day's march to the north of Marâsh in the hill country between it and Am Zarha. It was founded by the Caliph after whom it was named in the year 183 (799). The fort was ruined by the Byzantines in 348 (959-960), when 1500 Muslims were captured (Yakut, v. 3). In spite of this it was a flourishing town a few years later when Ibn Hawâsh apparently visited it. The town was rebuilt by Saif al-Dawla the Hamadan (d. 356 = 967). Thenceforth it was retaken by the Christians and included in the kingdom of Little Armenia.

HÂRURA, Harawa, the meeting place of the first Khalīs, not far from Réṣîn, where they publicly declared allegiance to Ali and were soon afterwards almost exterminated in the bloody battle of Nahrawan. From it comes the earlier Harura for the Khalīs (p. 3).

**Bibliography:** Yakuti, *Mawqûf*, ed. Watenfeld, iii. 246; Tabari, ed. de Goeje, i. 354; and the other Arabic chronicles in the passages quoted in Brünnow, Die Chronisten, p. 16 et seq., and Weisbach, Die religiösen-philosophischen Zusammenhänge, 4 et 5. Schahrestân, ed. Christiaan, p. 80 et seq., etc.

HÂRUT and MARût, two angels who are mentioned in the Korâne (Sura 2, 30) in the words: "... and it was not Sulaiman that was an unbeliever but the devils, who taught man sorcery and that which had been revealed to the two angels in Israil, Harût and Marût; but they taught me one without saying "we are but a temptation, therefore be not unbelieving." People Ima from them means by which they may separate man and wife etc. A number of stories are attached to this passage, the main outlines being as follows: When the angels, in heaven, saw the sinful children of men, they spoke contemptuously of them before Allah. But He said: "If you had been in the same position, you would not have done any better." They did not agree to this and received permission to send two of their number to earth as an experiment. The name of those two were Harût and Marût, who were ordered to attain free to the highest sins such as idolatry, whoredom, murder and the drinking of wine. But when they are a wonderfully beautiful woman they were wont to sit astray, and when they were discovered, they slew the man who had discovered them. Then Allah asked the angels to look down at their brethren on earth; then they said: "In truth, Thou wast right." The pair were given the choice between punishment in this world or the next. They chose the latter and were incarcerated in Sîlûk, where they have since suffered grievous torments.

A. Geiger has already noted that these elements are in the main also found in a Jewish midrash; and it can now be added: that many are found as early as the New Testament (cf. Matt. i. 16; Acts, vi. 6) and the book of Enoch, in connection with Genesi vi. This is clear from the following:

The incident is said to have taken place, according to a Muslim version, "when men were multiplying and sinning". In the same circumstances the Lord of God desired to earth in Genesi vi.; and they took to themselves wives". The two angels are called Shemhazai and Asamaz in the midrash. These names are found in a corrupt form even in the book of Enoch. The tale gives the following story: Three angels descended, Harût, or Zûhâr, Marût or Nabîl, and Marût or Nabîl, for which reason the latter onto the very first day felt himself too weak for earthly temptations and was at his own request again taken up to heaven. According to one version, Harût and Marût are said to have flown up to heaven at the end of each day; but when they had sinned their wings were disabled. A connected motif is found in the *Schabakith* (cf. Bezdol, 63-69), where the sons of Seth are no longer allowed to climb the holy mountain after their sin. It is also stated that the disabled ones begged their contemporary Idris to intercede with Allah for them. According to Khanâz, (cf. Watenfeld, i. 61), the division of men by Harût and Marût took place while Adam was still alive. As to the name, her name is given as Zuhot, Anâhî (Mēnik) and Bâdîːn; in the midrash, she is called Lezcham, in other Jewish legends Naʿīm (the lovely); this all points to Venus. According to some, she was an ordinary woman who brought a dispute with her husband before Harût and Marût, who had to administer justice among men. When they both tried to adjudicate she begged them to act contrary to the divine command and tell her the word of might (in the midrash the name of God) by virtue of which they were able to ascend and descend. When she had learned it, she made use of it; but when she was in heaven, Allah made her forget it and changed her into a star. Harût and Marût however remained in Batāl and taught sorcery (cf. Enoch, Chap. 8, 9, 9, 7). It is also related that they were kept imprisoned in a well in Deûm-wêd. Their torture are painted in vivid colours: they are kept in chains, as is already related of the fallen angels in the *Book of Enoch* (Chap. 14, 69, v), and the *Jacobites* (v. 7). (cf. also the Syrian Apocrypha of Enoch, ed. Curier, p. 152, coll. a, alt. Chap. 36, v. 13). Water
also is held in front of their mouths but they cannot reach it (cf. Tannina). Mention is even made of several Muslims who have seen them by magic means; the prisoners are said to have rejoiced, when they heard of Muhammad's coming as the end of their torture was believed to be at hand.

In a legendary history of Egypt, translated by Wustenfeld in *Orient and Occident* (1, 329) it is related that Harut and Marut lived in the time of the Egyptian king Aymot.

The names Harut and Marut are connected by de Lagarde with Haurvatāt and Ameratīt, but it is remarkable that the pair of names shows a strong analogy to other such pairs, found in the Korān, such as Yağdūsh and Mağūđū, Tāllīt and Dāllīt. Out of each of these pairs may be traced post-Muslim tradition, the other was formed by Muhammad by altering the first consonant of the former. Harut is quite a common Syriac word for power, it possibly contains a remembrance of *Nub*.

In Persian *barāk* has become a word for magician.

AH-SAN B. 'ABBĀD ALLAH. *See AṣRAF AL-DAWLĀ*.

AH-SAN B. 'ABBĀS B. AL-QABAR. A prominent figure in the first century of the Hijra. During the wars of conquest his father was carried off as a slave from Makkah and brought to Madina. There he became a client of the celebrated Zaid b. Thābit (q.v.) and married a client of Umm Salama (q.v.) named Fāthima. Harut was born of this marriage in 21 (642). Brought up in Wādlān, he afterwards settled in Baṣra. There he won a great reputation for strength of character, piety, learning and eloquence. While other men, who were held in great esteem, such as Ibn Sīnā and al-Shāfi‘ī, were being questioned as远景's successors, he did not dare to give their opinion, Harut frankly expressed his disapproval. He showed the same freedom of speech in his letters to 'Abd al-Malik and al-Hajjāj (q.v.), so that later authors, like al-Shahristānī, wish that they detected a leaning towards the doctrine of fārāhin in them, to prefer to speak of them as Wādlān, 'Ajīb (q.v.). He was considered the equal of his contemporary al-Hajjāj (q.v.) as an orator; he was highly esteemed as a transmitter of tradition, because he was believed to have been personally acquainted with 70 of those who took part in the battle of Badr, although his chief authority was Anas ibn Malik (q.v.). He exerted a lasting influence on the development of šū'ūfī, by his ascetic piety, which shone above all the more by contrast, as by his time a worldly spirit had penetrated all classes in Islam. Numerous pious sayings are placed on his lips and the Sūfīs see in him a predecessor, whom they quote as often, as do the orthodox Sunnis. But the Mu'aṣṣars also openly reckon him one of themselves not only because the first representatives of their doctrine, 'Amr b. Yūsuf and Wādāl b. 'Aj'īb, were among his pupils, but because he himself liked them inclined to the doctrine of free will. That Wādāl b. 'Aj'īb, afterwards separated from him, does not alter the case. In this way almost all religious movements within Islam go back to Harut and we cannot be surprised when we are told that, when he died full of honour on the 1st Rajab 110 (= 125 Oct. 728), the whole city of Basra attended his obsequies.

AL-HASAN b. Ali b. Ali b. Talib, the eldest son of "Ali and Fatima, the daughter of the Prophet. The exact date of his birth (the year 5 or 6) depends on the date still left to be settled of the marriage of his parents. The Sira represents him as a particular favourite of his grandfather. An abundant apocryphal literature has grown up around this subject, taken from the domestic life of Muhammad. Sensuality and a lack of energy and intelligence seem to have been the fundamental features of his character. After the premature death of Fatima, he was not on particularly good terms with his father and brothers. He spent the best part of his youth in making and unmaking marriages; about a hundred are commemorated. These events earned him the title of "Allah's divorcees" and involved "Ali in serious quarrels. Hasan moreover proved a thorough spendthrift, and was allotted such of his wife's wealth as a considerable amount. We can see how the money was scattered during the caliphate of "Ali, already much impoverished. He was present at the battle of the "Sud, without taking an active part in it, he took no further interest in public affairs during the lifetime of his father.

After the accession of "Ali, Hasan was proclaimed Caliph in the "Iraq. His partisans tried to persuade him to wage the war against the "Syrians. Their impatience, upset the plans of the indolent Hasan, and he bent his thoughts only to the task of making his Mu'awiyah. They led to a rupture between himself and the "Abbasids. The latter made use of severely wounding their nominal sovereignty. From this time on, Hasan's main idea was to come to an arrangement with the "Umayyads. Mu'awiyah left to himself the task of fixing the price for the renunciation of the Caliphate. Besides a pension of two million dinars for his brother 'Abd Allah, Hasan asked for himself a sum of five millions and the revenues of a district in "Persia during his lifetime. The "Abbasids later opposed the execution of this last clause. All his demands were granted, and the conclusion of the Prophet had the impartiality to express publicly his regret that he had not asked for double. He left the "Abbasids and the people of the "Hira to Medina.

There he resumed his life of pleasure and foolish dissipation. Mu'awiyah agreed to pay the expense, only stipulating in return that Hasan should not disturb the peace of the "Arabia. At a meeting at "AdhDar (q. v.), he had previously forced him to renew publicly his renunciation of power. Henceforth Mu'awiyah ceased to trouble about him, being reassured by his negligible and indolent personality. Ommayyad continued to reign among the "Abbasids; however, Hasan was not on good terms with 'Abd Allah, while both were in league against him. His first opposition to the "Abbasids (q.v.) and the other children of "Ali. Hasan died at Medina of consumption, probably hastened by his own disposition. An attempt has been made to throw the responsibility for his end on Mu'awiyah; in addition to the public, which would thus be thrown upon the Ommayyads, the object of this charge was to justify the acts of "Abd Allah (martyr) and "Abd al-Malik (martyr) given in complement to Fatima's insignificant son. Only the 'Amerites, or those particularly favorable to the 'Abbasids have openly voiced such grave accusation. If at the same time gave an opportunity to implicated the family of "Abd Allah b. "Ali (q. v., i. 480), denoted by the Shi'a on account of his share in the coup of "Siffin. Mu'awiyah was not the less to commit an unnecessary crime and the firmless Hasan had long become quite inoffensive. His life was a burden only on the treasury of the "Ommayyads, which was beset by his constant appeals. The sight of relief heaped by Mu'awiyah on hearing of his decease can be readily understood. He probably died in July, at the age of about 45. By his death his brother 'Abd Allah became head of the "Abbasids. In the latter half of the seventh century we generally find that the numerous descendants of "Ali have to give way to the men upraising 'Abbasids. The two families did not agree any better than their ancestors had done.

Bibliography: Ibn Khaldun, "Al.
Dixit Abulackher magist Alassarli Ahashri filius by him was translated into Latin by a certain Canonicus Salio[?] in Padua in 1278 and printed at Venice in 1492 and again in 1504, and in 1540 at Nuremberg. The words Alaasalli Ahashri are very probably corrupted out of Alassarli Alfard, indeed a Munich manuscript has Alassarli. It has not yet been established with which of the works mentioned by the Arab biographers this is identical: two works of "Mansur" ("on births") which are in the Escurial (Caetani, no. 935 and 973), ascribed the one to Ibn Aara al-Khafis, and the other ascribed to Ibn al-Khayaj al-Khyl, are perhaps by this astrologer, although the first may be by Abulackher ibn Essa.

[H. Suter.]

AL-HASAN b. MAKHILLAD. [See his MAKHILLAD.]

AL-HASAN b. MUHAMMAD. [See al-Muhammad al-Makhchali al-Maked.]

AL-HASAN MULAY Abd al-HASAN b. MUHAMMAD, Sultan of Morocco, fourteenth of the dynasty still ruling there, the Hassan [n. v.] sheriffs of Sidjilmasa, also called Fathar Sherif or Alawi.

After the death of his father Muhammad b. 'Abd al-Rahman (18th Radjab 1290 = 12th Sept. 1873) Mulay al-Hasan was chosen Sultan by the most prominent members of the Moroccan court, then in Marrakesh. But disturbances at once broke out on all sides. Fasi, the capital of northern Morocco, drove out his governor Hadij Muhammad b. Mansur al-Benni; the people of Azemmur killed their governor Ahmad b. Farajj. Mulay 'Abd al-Kadir b. 'Abd al-Rahman, the Sultan's uncle, supported by the Berber tribes Bani Makkil, 'Ali Vasi and 'Ali Ayyash set up as a claimant to the throne and occupied the town of Makins with the surrounding country. Mulay al-Hasan then set out on his long series of campaigns to subdue the various rebellious elements in his kingdom. He turned his attention first to Azemmur, put down the rising and levied a heavy indemnity on the people. He then marched through the Shweity territory, collected the arrears of taxes and reached Rabat, one of the three most important cities of northern Morocco, where he met with a friendly reception during a festival. Here he visited the most prominent religious leaders and scholars and made them presents. He also gave considerable sums for the benefit of the public libraries and madrasas. This was a clever stroke of policy, to seek the chief supporters among the Sherifli clergy to which his ancestors had belonged and among the educated citizens.

In the meanwhile his uncle 'Abd al-Kadir had been surprised and captured among the Ait Ysf and delivered up to him. The Sultan now suppressed the rebellion of the Arab Banu Hasan who lived in the plains of the lower Shu and then made a pilgrimage to the tomb of Idris I on Mount Zarih. No Moroccan sovereign had previously prepared himself for his campaigns as did Mulay al-Hasan by visiting the tombs of saints in the great shrines, particularly those administered by sherifs. The pilgrimages to the great sanctuaries showed his zeal for religion and thus increased his prestige among the samadi masses and secured him the support of agents, who established peace among the tribes of supplied valuable information. Mulay al-Hasan, for example, began his campaigns in Northern Morocco by visiting the tomb of Shul Abd al-Sultan b. Mahdi (1600 = 1655), those against Tafila and the High Atlas by visiting the mausoleums of It-Tja'd (1507 = 1858), the campaigns against Tafila by visiting the tombs of his ancestors (1510 = 1892) etc.

But it was almost always force alone that enabled him to win the upper hand over tribes little inclined to submit and objecting to the payment of badly distributed taxes. To collect the taxes and keep the tribes under control, Mulay al-Hasan's father, Sultan Muhammad, had tried to create an army on modern lines, on the European model. The wars with France (campaign of July 1844) and with Spain (Tetuan war of 1856) had determined him to this measure by showing him the strategic insufficiency of the Idrisid [n. v., i. 1047 sqq.] contingents. Mulay al-Hasan benefiting by his father's efforts further developed them by entrusting the instruction of his troops to the creation of an arsenal to bodies of English, French or Italian officers. The new army, the Saadi, enabled him with the help of the French to put an end to the interminable rebellions and pursue the collection of taxes. Throughout his reign the Sultan never ceased to march his army or send it up and down his territory. In his twenty-one years reign he made over thirty military expeditions, some of long duration. His army used to encamp in a district and, after cutting off numerous bands, set up the country (to use the Moroccan expression) till the imposts levied had been completely paid. This procedure, more feared than actual battle, was prevalent with the tribes or towns forced to maintain the Sultan's troops during their stay with them.

There were nevertheless times when the Sultan's troops were unfortunate. In 1305 (1887) notably, his army under the command of his uncle Abu Shajir was utterly routed by the marabout 'Ali b. al-Makhliy Mahbub and the Berbers in the High Atlas. This marabout slew the Sultan's uncle with his own hand.

The expeditions against the Berbers in 1294-1295 (1874-1875), those of the Spaniards in the Rif, the settlement of the English at Cape Juby in 1305 (1887) brought the Sultan into negotiations with France and other European powers. Numerous embassies were sent to him to seek all sorts of industrial or commercial concessions in Morocco. Resuming the policy of his most illustrious ancestors, but only after a public consultation, with the official priests (1344-1826) on the possibility of religious grounds to compromise with Christians, he increased the number of ports open to commerce and organised the Sherifli system under them. He thus established a source of revenue more stable and reliable than the taxes on the tribes for the collection of taxes.

This ruler, one of the most remarkable by energy and intelligence that Morocco has known, recalls by more than one side of his character the founder of his dynasty, the great Mulay Ismail. Like the latter he was a great builder. In Fez he
built a palace imitated, according to Muslim writers, from the Alcázar in Seville. He built roads, bridges etc. He devoted all his care to the development of Muslim teaching.

He never would grant to Europeans industrial concessions as he feared that their influence would thereby find opportunity to penetrate into the interior of Morocco. Jealous of his rights and authority, all reforms, all improvements that he made, were carried out in the name of the Mekki-ze [q.v.], even those executed by foreign agents. They were thus as transitory in their effects as the reforms followed them.

Muday al-Hasan died on Thursday, the 3rd Dhu l-Hijja 1311 (9th June 1894), on the way back from a campaign against the Berbers of the High Atlas. He was succeeded by his son Sultan Abd al-Aswani.

(A. COER)

AL-HASAN. AL-SABBI, founder of the Alhassanid dynasty. According to passages in the Lisan al-Tanwir, the Taqribi Geniza and in Mihqawi, based on the Syriac-Saraqib, his genealogy was Hasun b. Ali b. Muhammad b. Khalil b. al-Hassan b. al-Sabbah al-Hisniyati. Hasun claimed to be descended from the ancient Hasmoneite kings, while Mihqawi quotes on this point a statement of Nizam al-Mulk that the people of the Tarsal al-Mulk that the people of Tarsa al-Mulk claimed the contrary and said that his ancestors had been peasants in that country. While Hasun is said to have further alleged that his father migrated from Kufa to Kamsar, we find him simply called Reda, i.e. native of Kaly, in Ibn al-Anbari. The date of his birth is unknown, but he was still a young man when he won over the Fatimid propaganda. The chief person in Persia was then Ibn al-Atta, the latter commissioned him in 464 (1072) to go to Cairo to the Fatimid Caliph al-Mustansir. In 471 = 1080 (Ibn al-Madhzin, 4. 304), giving the date as 479), he arrived there after first travelling through Persia, Mesopotamia and Syria. In the struggle as to who was to succeed the aged Sultan he took the side of Nizar, while others preferred another Mustansir's son, which actually deserted the Egyptian throne on his father's death under the name of al-Mustansir. He then returned to the east and eagerly advocated Nizar's cause in different places. Finally, in 487 (1099-1091), he gained possession of the stronghold of the Fatimid state near Kufa. The same thing happened, although by different means and with other fortresses, probably by Ibn al-Atta's orders, whose son, likewise usually called Ibn al-Atta, himself resided in the fortress of the Berber near Tabaristan. Long as the latter lived, Hasun played no prominent part, although the famous Sahib Nizam al-Mulk has already long suspected him on account of his frequent meetings with Egyptian missionaries. The well-known story of the early friendship of these two men, in which Qumar ibn Khayr appears as a third, even if it appears has been incorporated by Rashid al-Din, also, it however a fair tale. Oft.

Résumé de sujets rev. d'histoire des Schématisme, Introduction, p. 14, note. To make this dangerous opponent harmless, the Assassins reverted to assassination, a means they were often to use. In the years following, Nizam al-Mulk was to be first to fall, being murdered in 485 (1091). It is probably also in this period that the organization of the Assassins as a secret society falls; on their organization and aims, cf. the article Assassins (4. 491 et seq.). It has also been pointed out here that conditions were then favourable to them and that it was only after the death of Barkiyaruk, that Sultan Muhammad could seriously think of putting an end to the Assassins' reign of terror. After Shadhil has been taken in 500 (1107) and Ibn al-Atta exiled, the other robbers' nests fell one by one and finally Almami took the siege. While Shadhil died 511 = 1115, and his troops as a result ran away, Hasun, who after the death of Ibn al-Atta had presumably been recognized as Grand Master of the Assassins, was saved. Seven years later (518 = 1123) he died, after arranging that Kaysa, Zmari, and Shahinshould succeed him.

If Hasun is considered the founder of the Assassins, it must not be supposed that the main object of his life was to secure his personal power by planning assassinations; it is not even proved that he recommended or used this detestable means. Assassination had, as is pointed out in the article Assassins (4. 491) already for long before Hasun's time been commanded as a religious duty by the Sunnis of certain sects, and shortly before Hasun's public appearance it had been practised wholesale, notably in Tabaristan. Cf. also Ibn al-Ahlkh, 2.2. Hasun's importance lies much rather in the fact that he gave the Assassins power central stronger than Almami, so that it maintained itself there even after his death also. He also devoted his activities to authority and composed several works in Persian, which were all unfortunately destroyed at the hands of Almami by the Monguls. The quotations from the time by Shadhil and others go no further than well-known Shii doctrines; the fact expressly emphasized by the authorities that he did not publicly proclaim his teaching to the people, also agree entirely with the Shii's principle of racia, which he called by this.

AL-HASAN B. SAHIL, M. Atta, A. AL-SABBI, one of the Al-Mamun's favorites. Like his brother, al-Fa'il b. Sahil, al-Hasan was originally a fire-worshipper; but the two adopted Islam. In 106 = 511-512, when al-Mamun re-at the administration of the eastern provinces to al-Fa'il with almost unlimited power, he accompanied him minister of finance. After al-
Amān's assassination in 198 = 815, he was appointed governor of Arabia and the 'Iraq through his brother's influence, while the Caliph himself stayed in Merv. But al-Hasan, as a Persian, was unable to win the sympathy of the Arab population and trouble soon broke out. An adherent, named Abu 'l-Sarayah, appeared in Kūfah in 200 = 815, and allied himself with an 'Allī, Ibn Tabātabā, whom he persuaded to set up a pretender. The government troops were defeated; but Ibn Tabātabā died suddenly and al-Hasan turned for help to the tried general Hartham b. A'yan, who blackmailed Abu 'l-Sarayah in Kūfah. When the latter tried to escape he was captured and beheaded in Kūfah. 1 200 = October 815. Soon, however, the mercenaries of Baghdad mutinied, but had to surrender after three days' fighting; but after the murder of Hartham b. A'yan in Kūfah 200 = June 816 the governor of Baghdad, Muhammad b. Abī Khālid joined the rebels and advanced against al-Hasan in Wāṣil. Muhammad was defeated and died soon after the battle. Meanwhile, however, al-Mansūr, a son of the Caliph al- Mahdī, had been recognised as al-Ma'mūn's representative in Baghdad. His troops were defeated however by Ḥumayl b. Tālib and, as he drew his adherents mainly from the lowest classes and the town, a result was given to all possible excesses, the more thoughtful elements of the population sided with al-Hasan and put an end to the rule of the mob. But peace did not last long: When Ma'mūn in Ramadan 201 = March 817 proclaimed the 'Allī b. Abī Bātākh, called al-Riḥālī, as his successor, a rebellion broke out in Baghdad and Dāhilah, another son of al-Mahdī, was proclaimed Caliph. In Rajab 202 = February 818 the rebels attacked al-Hasan in Wāṣil, but were defeated and had to retire to Baghdad. After the murder of his brother al-Ṭayjār in Shaban 202 = Febr. 818, al-Hasan became insane. He recovered however and in Rumişan 210 = 825-826, his daughter Būrān married Ma'mūn. Al-Hasan was much esteemed for his liberality to poets and scholars. He died in Sāzak in the 1st Dhu'l- Ḥijājah 235 (10th June 859) or 236.

AL-ḤASAN b. UTHAMIN: His Atabi Amīr al-ʿAll, the son of Abu Dā'fūr Ustākh Harram, (see l. v. 853), became one in the lifetime of his father, leader of the Dālalīn troops under Samūt al-Dawla. After the murder of the latter in 388 (998), Hasān entered the service of the Buyid Bahl al-Dawla, who sent him as governor to Khūšān in 390 (1000) and gave him the title 'Amm al-Dhābah. He later sent him in the same capacity to the 'Iraq and there waged several wars with his predecessor Abu Dā'fūr Hanjiljī, Abu l-ʿAbdāb b. Wāṣil, who had rebelled in the swamp country (see Khatmā, Bāhīt b. Hasawwah (q. v.) and others. He died before his father at the age of 40 in Baghdad in 401 (1012–1013) and was entombed in the burying-place of the Kurāshī. The famous poet al-Shārīf al-Ṭalūf dedicated an elegy to his memory.

AL-ḤASAN b. YUSEF b. ʿALI b. AL-MUTANABBI: Hūlī al-Shāfiʿī Dālī, ed. Abū l-Muqāwim, known as al-Hūlī, li. 331; lii. 648 (1250) at Hilla, was the greatest Shīʿī jurist of his day. He successfully represented the Shīʿī sect in a discussion which once took place with the Sunnīs in the court of Sultan Qiyāṣ al-Dīn Uthmān Khusraw Mūḥammad (705–719 = 1305–1310); and the Sultan was so impressed with his arguments that he adopted the Shīʿī doctrines in many respects. He died in Hilla in 726 (1326) and his dead body was taken to Mahābūr and buried there.

AL-ḤASAN b. ZAIN b. ʿALĪ, a great-grandson of 'Abd. He was a plucky man, who, following the example of his father and grandfather, abandoned all political aspirations and reconciled himself to 'Abbāsid rule. His daughter became the wife of the Caliph Abū l-ʿAbbās, while he himself lived at the Caliph's court, and is even said to have occasionally communicated the views of his 'Abbāsid relatives and their dependents to al-Mansūr. In 150 = 767 al-Mansūr made him governor of Medina, but in 155 = 772 he aroused the Caliph's wrath and was dismissed, imprisoned and had his property confiscated. But restoration was made to him by al-Mansūr's successor, al-Malik, who gave him back all that he had lost, after al-Mansūr's death. He died in 167 = 782 at al-Qāṣr, while on a pilgrimage to Mecca, and was buried there.

AL-ḤASAN b. ZAIN b. MUḤAMMAD, a great-grandson of the preceding, founder of an 'Abbāsid dynasty in Ṭūhirān. The hard-handed and ruthless rule of the Ťūhirids produced such resentment in this country that a number of men, under the
influence of the strong ‘Aliid’ sentiment in those regions, looked around for a man of ‘Ali’s line to whom they might entrust the government. They therefore turned to Husain who was living in Rayy and had been recommended to them by another ‘Aliid: the choice proved a fortunate one, for Husain possessed an energy and sturdy resolution of purpose rare in an ‘Aliid. He was summoned to power by a section of the Tabariids and a number of Dailamite chiefs; he succeeded in defeating the Tabariid troops and taking the town of Aral and Salihya and, after an unsuccessful attempt, Rayy also. But Husain had to be perpetually on his guard against attacks on all sides and was more than once driven out of the country, on which occasions he found it very useful to have a secure refuge in friendly Dailam. From there he always returned and fortune often favoured him so that in 257 = 871 he was able to take Daulatji and in 259 = 873 Khurasan. In this latter year a new and dangerous enemy arose against him, in the person of Ya’qub [q.v.], the “oppressor”, whom Husain, not without humour, called al-Salih (“the saint”). He succeeded in being commissioned to the Caliph to punish the rebellious ‘Aliid and easily found a pretext when Husain would not deliver up the ‘Abjadite Ali ibn Ali who had sought asylum with him. Husain was strong enough for a powerful opponent and was again forced to retire to Daulatji but was saved by tremendous rains, which in those lands are particularly dangerous, and brought Ya’qub to such a plight that he could only get out of the country with great loss. Husain returned and remained for a period unharmful, till in 266 = 880 a Khunduzi, named Ahmad b. ‘Abd Allah, invaded Daulatji and conquered a part of it. While Husain was fighting with him there, another ‘Aliid, in order to have himself proclaimed ruler, spread the news in Tabaristan that Husain was slain, but on Husain’s return he was defeated and killed. Husain died in 270 = 884 in possession of his territory and his family continued to reside in Tabaristan till 310 = 921. Personally he was a deeply religious man who gave much time to the poetry and the various branches of jurisprudence and allied sciences.

Husain ABDALL. A small town was situated in the district of Atak (still lately part of Ravidh Firdi) in the Panjab. Extensive ruins and Buddhists remains in the neighbourhood were supposed by Cunningham to represent the site of Tanis, but recent discoveries make it probable that Tanis was situated at Kila Sarai, more to the East. The sacred spring of Euphrates visited by the Chinese pilgrim Huiou Tanan in the 7th cent. A.D. is said to resemble the spring at Husain ABDALL and was dedicated to the Saint Bâlat Wâl of Kandahar. It is full of sacred fish which may not be killed. This spring according to Huiou Tanan was 70 m. from Tapin to the north-west. The Sikhs as well as the Mahomedans have a shrine near the spring, named Fateh Sâhib, from the supposed impression of the fingers (pandji) of the Guru Nanak on a stone. Here was a halting place of the Maghul Emperors, from Akbar onwards, in their journeys to Kashmir, and a tomb surrounded by cypress is assigned by tradition to Lalla Rukh, daughter of Awrangzeb. Akbar followed this route certainly and Djalangir on one occasion after news at Husain ABDALL turned back to Kâliâpur and entered Kashmir by the Bimala route. Bernier’s memoirs show that later emperors preferred the Bhimbar and Pat-Pandja route. Yet a tomb at Husain ABDALL is probably assigned to Lalla Rukh, daughter of Akbar, who is the heroine of Moony’s well-known poem, one of the scenes in which takes place at Husain ABDULL. Descriptions will be found in the travels of Elphinstone, Moorscot, Burns and Hûgel, and a notice by Cunningham in the Archæological Survey of India. The name Husain ABDALL is undoubtedly, as supposed by Elphinstone, the true name of the Saint now called Bâlat Wâl, although Cunningham doubled the fact, and said that Bâlat Wâl was a saint from Kandahar, while Husain the Abdal (or religious madman) was a Gujar. The tomb was at the foot of the hill. The mention of Lalla Rukh Husain ABDALL is known to have been born at Salzowlah and accompanied Shah Rukh, son of Timur, to India and afterwards died and was buried near Kandahar, where his tomb became a place of pilgrimage. Mir Muhammad, the author of this history, lived in Akbar’s reign and claimed descent from the great Husain ABDALL. The town bore his name already in Akbar’s time, for the Amâ Bakhari records (p. 446, Blochmann’s trans.) that Shams al-Din built himself a vault there, and that Hakim Abû t-Fath was buried in this vault by Akbar’s order, also that Akbar himself visited the tomb on his return journey from Kandahar.

HASAN AGHA, Khâlif al-Din in Al-Idrîsî. He was born in Sarzinda and had been taken prisoner by Khâlif al-Din al-Mustasîn and enrolled among his emirs. He soon won the confidence of his master who made him bokâr (major-domo) and entrusted him with the government of Algers during his campaign against Tunis (see Khâlif AI-Bihî). When Khâlif al-Din was recalled to Turkey in 1636, he left the government in his hands and Hasan filled his office to the general satisfaction. "To this day", writes Hanzo, it is a question of those who knew him say that there never was a more just Pasha".

Charles V’s attack on Algers fell within the period of his administration (1541). According to Haids, Hasan showed exceptional valour and personally contributed to the defeat of the imperial
troops. According to contemporary historians, on the other hand, Hasan's attitude was rather ambiguous. They say that he had been won over by the proposals of Count d'Alasandra, governor of Oran, and only the resistance of several generals prevented him from handing over the city to Charles V. In any case, after the collapse of the Spanish expedition, Hasan marched against the king of Kúkú, who had made an alliance with the Christians, and forced him to pay tribute and deliver up his son as a hostage (1543). According to Haedo, he undertook a campaign to the West to protect the king of Thlemenc against the Spaniards in Oran, but this campaign is rather uncertain. Soon afterwards, Hasan fell suddenly into disgrace, retired into private life and died unconsulted in 1549 at the age of 58. He was interred in a tomb, which his graves had built near the Bnah al-Wad and the inscription is preserved in the Algiers Museum. (G. Collin, *Corpus des Inscriptions arabes et berbères de l'Algérie*, Paris 1910, p. 202.)

**HASSAN BABA, Dey of Algiers (1685–1688)**, usually called Baba Hasan. He was previously a *qâdis* (consular captain) and took part in the revolution of 1671, which put an end to the rule of the Agchas and replaced it by that of the Deyas. As son-in-law of Hashidji Muhammad, who was the first to fill the office of Dey, he held the actual power in name of his father-in-law. He made many enemies by his arrogance, mistrust, and cruelty but suppressed with a strong arm all attempts at rebellion. In 1680, under the pretext of restoring the order broken by the rivalry of the sons of Murad Bey, he attacked Tunis; in 1681, he fought in the West against Mûlây Isâmîn's troops. When in 1682 Hashidji Muhammad fled to Tripoli on hearing that the French had sent a fleet against him under Dauguesme, Hassan Baba took over the reins of government. During the first bombardment of Algiers (20th Aug. - 12th Sept. 1682) he ruled the town with a rod of iron and executed without mercy every one who dared complain or speak of negotiations. In the following year Dauguesme again appeared before the city. After several days' bombardment (26th - 29th June) the Dey was brought to negotiate with the French admiral. He handed over the chief of the *Ra',* Hashidji Haïm (Meurs Morto), as hostage and released the Christian prisoners. As an agreement could not be reached regarding the indemnity to be paid to the French, Meurs Morto was allowed to go on shore, as he said he would hasten the negotiations. Scarcely had he disembarked however when he called the *Ra's* together, forced an entrance to the Djema, had Hassan Baba murdered, and was thereupon elected Dey (22nd July 1683).

**Hassan Buzurg.** Taïg al-Derya wa-l-Din Hasan Bey or Hasan Bey el-Gharbi, as he was usually called Shâhîd Hasan, the founder of the Jâlîrî dynasty in Baghdaïd after the death of the Khân Abû Sâ'îd. He attained a high position while the latter was still alive, as his mother was a daughter of the Khân Aghân. He was therefore spared when seized, probably falsely, in 1332 (1332) of having designs on the life of the Khân Abû Sâ'îd and the death sentence was commuted to banishment to Kâshâkh. In the following year he received the governorship of Aunu-Mauro. After the death of Abû Sâ'îd, 736 (1335) a struggle for the throne soon broke out; the newly elected Khan Arpa lost his throne and life in battle with 'Alî Pâshâ, governor of Baghidâd, who had paid homage to another descendant of Aghâna, named Mûsâ. Shâhîd Hasan then rose against him and put forward another claimant, Mûsâ-Murad. The two rivals met at Altâgha near Karbalâ on the 14th Dhu 'l-Hijjah 737 (24th July 1336) Shâhîd Hasan was victorious and made Arpa his headquarter, while Mûsâ retired to Baghidâd. But as it was not only a feud between Hasan and Mûsâ but between two Mongol tribes, Dânîlîr and Ulîr, the Emir of Khârâsh showed a new Khan Tughâ Timûr, to whom Mûsâ submitted. But they were defeated by Shâhîd Hasan in a battle near Marâkî in 737 = 1337. Mûsâ was taken prisoner and exiled. In the meanwhile a new rival to Hasan had appeared in "Little" Hassan (see淮安 Khânûkî), who won a battle and even succeeded in capturing and putting to death Muhammad, the Khan recognised by Shâhîd Hasan. Shâhîd Hassan had saved himself in time by fleeing to Turan and was able to come to terms with his rival, while he thought to gain new support by paying homage.
in Togha-Timur. But when the latter proved unreliable, he looked around for another wet fainting and paid homage to Shah Djihansh Timur, a descendant of Ali. He then went to Baghdad (340 = 1339–1340), and establishing himself securely there made away with Shah Djihansh Timur and reigned independently till his death in 1335. We cannot here detail the war which he had still to wage during these years; it is sufficient to remark that he succeeded in maintaining his position and was careful to show due devotion to the 'Ala' by restoring the sanctuary at Neufch. His son Uzun (q. v.) succeeded him.

HASAN CELEBI Kâmil-i Pâgîn, a famous Ottoman scholar and biographer of poets. Born in 1353 (1349–1447), in Iznik, the son of Khân-bâba Mereşâl Ali Celebi b. Emarâz. Famous as a poet and scholar, heedited in the Hâmis-Bey-Medresah of Iznik, like his father, devoted himself to the study of law and theology. After an active and honourable career as minister and kâdî in Brusa, Adrianople, Alâpors, Galipâlî, Eryth and New Zara, he died aged 123 of Rosset in Egypt on the 12th Shawâtî 102 (14th March 1614).

Hasan Celebi was, as is the custom with Turkish scholars, also a poet; although only an imitator. He wrote marginal notes on the Dârâ or Qu'ran, together with additions and notes on some important theological works and certain other writings, but his great work was, as his great collection of books of over 300 biographies of poets, the Tercât-i Şarârî, which is dedicated to the historian Khâvûnî Said al-Din and was completed in 934 (1528). The work is of inestimable value for its biographical details and the numerous quotations. Of the many Ottoman biographies of poets it is considered the best in spite of its voluminous style, its affectation and its soundness for anecdotes. Hasan Celebi discusses the poets from the earliest times until three hundred and a, h, princes and of other naves. His little weakness for enshrining all members of his family in his work as poets is not to be taken too much amiss.

HASAN DİHAÎÎ, Amîn Nâhid al-Dîn, styled the Saîd-î Hindustin (Barat, p. 369), was born in 1251 (1853) at Dîhilî, where his father, Ali al-Dîn Şâhî, known as Ali-i-Sanjâdî, had settled. Together with his friend, the poet Amîn Khamirî, he spent five years in Multan in the service of Muhammad Sulbî, the eldest son of Gâliyîd al-Dîn Hîdîân [q. v.] and subsequently became one of the court-poets of Sultan Ahsen al-Dîn Khâbîrî (1345–1358), in honour of whom most of his panegyrics were written. At the age of 33, he became a mukthîr of Nâhid al-Dîn Ayyûlî [q. v.], in honour of whom he wrote a mawa'izî, and he also wrote down the saint's discourses from day to day during the years 1347–1352 and collected them in a work entitled Fawâ'id al-Sâhilî [K. 1, p. 972].

This was completed in 1347, and is said to contain about 10,000 verses; he also wrote prose works (e.g. Siyâsî al-Ayyûlî), which appear to have been lost. When Muhammad b. Hâshîm moved the population of Dîhilî to Dâwûtîsham and the city was given to the Sultan to his new capital, and it is said that he died there in 1372 (1357); but the date of his death is variously given by different authorities.

HASAN KÜÇÜK, "little Hasan", so-called to distinguish him from his contemporary and rival Shaikh Hassan (cf. Hasân Bûgûr, p. 279) was a son of Timûrâsh b. Coboon (q. v.) and after his father's overthrow remained in hiding in Asia Minor until the struggle for the throne of Abu Said in 1330 (1335) afforded him the opportunity of taking a leading part. He pretended that his father had not perished in Egypt but had escaped from Multan and reached Asia Minor again after long wanderings and made a Turkish slave play the part of his father. The members of the once-powerful Coboon family soon gathered round this false Timûrâsh and also the Mongol princes, who were dissatisfied with the rule of the Delhiids Shaikh Hassan. He thus became powerful enough to challenge Shaikh Hassan and deposed him in 1338 (1332) near Nahaljâwâd. After this victory he nearly fell a victim to his guilt, for his pretended father tried to dispose of his by assassination. He escaped however and sought refuge with the princess Saltabeg, daughter of the IIkhan Uljaytu and widow of Coboon and Arpakshâd, whom he now recognized as Khan, at the same time coming to terms with Shaikh Hassan and disposing of the false Timûrâsh. When Shaikh Hassan soon afterwards had hommage paid to Togha Timur, he began to intrigue with the latter also and promised him the hand of the princess Saltabeg. Togha Timur fell into the网 work was at once betrayed by Hasen himself, so that the only course open to him was to fly as swiftly as possible to Khorasan, but as Shaikh Hassan soon found another wet fainting Shah Djihansh Timur, Hassan Küçük sought to imitate him and paid hommage to another Uljaytu, Saljûk Khan, whom he married Saltabeg. He next waged war, not unconventionally, on Shaikh Hassan and Togha Timur, but was murdered by his own wife Inanî Malik on the 7th Rajab 744 (20th Dec. 1342) on a campaign against Baghdad. His place was taken by his brothers Anfar and Yaghîbî, but they soon quarrelled; Ahsat had his brother slain and ruled alone till his fate overtook him and he met a violent end in 750 = 1355.

Bibliography: See the article HASAN BÛGÛR.
HASAN PASHA, Beylerbey of Algiers.

He was the son of Khair al-Din (q.v.) and a Mooress. His father's influence with the Porte obtained him the office of Pasha of Algiers in 1544, and he was entrusted with the task of restoring Turkish power in western Algeria where it had been considerably weakened. In 1546, Hasan conducted a campaign against the Spaniards in the Tlemcnen district, but just as he had come face to face with the Christian troops near Arbal he had to return to Algiers as his father had died. He succeeded him as Beylerbey and soon afterwards undertook a new western campaign, this time against the Moors, who had occupied Tlemcnen in 1543. An army, composed of Janissaries under the command of Hasan Corso and Kabyls under the Sultan of the Beni 'Abbâs (Sultan of Leb) in the European authorities) defeated the Moors, followed them up to the Mulâyta and regained Tlemcnen (1554). During this time Hasan was carrying on important works in Algiers: he increased the fortifications, built the Berjehi Mahfûz Hasan (Fort l'Empereur), on the Kadiya al-Silah, erected public baths and a hospital for the Janissaries. His hostility to French policy, however, induced the Porte to recall him to Constantinople and replace him by Salih Raïs (1552–1556).

In 1557, he returned to Africa. The disturbances that followed on the death of Salih Raïs, notably the rebellion of Hasan Corso and the murder of Pasha Tekedelik forced the Sultan to send him once more to Algiers as Beylerbey. In the west the Sherif Muhammed al-Mahdi had taken advantage of this unrest to invade the Tlemcnen country again and to occupy the city; in Moghareh alone a Turkish garrison held out under the command of Kaïd-Saffa. After Hasan had restored peace in Algiers he took the field against the Moors who vacated Tlemcnen on his approach. The Turks pursued them up to the walls of Biskra, where they inflicted a disastrous defeat on them. The Beylerbey had however to retire hurriedly lest he should be cut off by the Spaniards in Oran. (1557). When the latter besieged Mostaganem in the following year, Hasan came to its aid and routed the Spaniards (26th Aug. 1558). The Christians had now to content themselves to Oran and ceased to be dangerous to the Turks.

Now that Hasan had peace in this direction, he planned the subjection of the Kabyls. In order to be secure against any insubordination among the Janissaries he organized a force of Spanish mercenaries. By his marriage with the daughter of the Beni 'Abbâs of Kabylie, he secured the assistance of a number of Kabyl tribes and thereupon undertook a campaign against Ajmad b. al-Khéil, the chief of the Beni 'Abbâs. The latter was besieged and killed in an encounter at the Kaïd of the Beni 'Abbâs. His brother Mekhâni continued the war but became a Turkish tributary in 1559.

The intrigues of the Spaniards and the murder of Mekhâni prevented Hasan from completing the subjection of the Kabyls. He therefore resolved to leave the latter opponents alone for the moment. After the destruction of the Spanish fleet under the Duke of Medina Coeli by Pâlî Pâhsî at Elbeba (15th March 1501) the Beylerbey was able to devote his whole energies to the Moors. He was just about to begin the war with them when the Janissaries, who were discontented with the creation of new Kabyl troops, seized him and put him in claim to Constantinople.

It was not difficult for Hasan to clear himself of the charges against him laid before the Porte. He then returned for a short time to Algiers where an envoy of the Sultan had already arrived in order and executed Agha Hasan, the ringleader of the conspiracy against the Beylerbey. Hasan was now determined to drive the Spaniards out of the country and set about the capture of Oran and Mars al-Kahâ, at the head of an army of 30,000 men he began the siege of these two towns, while his fleet blockaded them from the sea (April 1567). After two months of vain essays and repeated assaults, in which the Beylerbey himself risked his life, the arrival of a relieving fleet of Spaniards forced the Turks to retreat. Hasan was not allowed to resume his plan again. Soon afterwards he had to lead the Algerian galleys to Malta which the Turks were besieging. Here he lost a portion of his ships, but the lighting qualities which he showed on this occasion won him the rank of Kapîdan Pasha (1567). He died in 1570 and was buried beside his father Khair al-Din in Rûbyck Dere.

(See also.)

HASAN PASCHA, known as Yeniçhriş, (the greengrocer) was a native of Albania and entering the service of the Serai rose from serîh boğullî (serbština) to eyalet boğullî (chamberlain). His countryman, the grand vizier Sinâh Pasha made him an aga of the Janissaries in the Governorship of Istanbul (Ka'da 1002 (8th July 1594) during the Hungarian war; in Râhi II 1003 (December 1594), he was dismissed, but reinstated in Shavwil 1005 (June 1595); in Dimâmleh 1004 (January 1596) he became wali of Shirvan and on his return from there Wazir of the Divan. In this office he carried out the currency reform of Râhi I 1009.

On the 1st Shavwil 1009 (3rd February 1606) he was appointed deputy (âlîmu l-muhammîdî) for the Grand Vizier Yerîbîbî Pasha during his absence in the field, and appointed his successor when Ishâhînn died on the 9th Maharrâm 1010 (10th July 1606). As Scdrâ he continued the campaign in Hungary (defeat at the Battle of Vrâđenson on the 15th Oct. 1605), relief of Kaniška, recapture of Stuhlwâlân, and at the end of 1606, on 29th August 1606; capture of Pest and siege of Olm. With the Archduke Matthias late in the autumn of 1606) and only returned in January 1605 on hearing of the arrest in the capital caused by the Stipilius. Although he succeeded in suppressing the riots, he was nevertheless dismissed through the intrigues of his enemies on the 27th Râhi II
HASAN PASHA, son of Hassan, governor of the Ameer for nearly a quarter of a century, whom he received the name Venuilli, was a native of Albania and held the office of notarii capitani in Constantinople when Sultan Murad III sent him in Dumlud I 988 (June 1580) to the Yemen in restored Ottoman prestige in this province, the greater part of which had fallen into the hands of the Zaidi Imam Musaphir. In the course of five years he succeeded in subduing the nearly Shafiite party by force and partly by guilt and regained the fortress which they had taken. To prevent further risings he deported the Al Mutalib in Constantinople at the end of 1585 when they were kept in custody in the end of their lives. In the next few years he subdued a number of smaller strongholds and conquered the Zaidi and other districts so that by 1591 the land could be considered pacified. Six years later a more dangerous rebellion broke out among the Zaidis led by the Muhall al-Husayn b. Muhammad; the latter occupied the district of Kaukab and the fortress of Tunis and was only driven out in 1598 after fierce fighting, but continued to hold out for some time in Rabat. At the end of Belgida 1022 (beginning of 1614), Hasan Pasha was recalled at this time request and returned to Constantinople. At the end of Safar 1074 (middle of July 1665) he became governor of Egypt, which he filled till the end of Muharram 1016 (end of May 1667). A few months after his return from there he died in Constantinople on the 9th of 16th Rajab 1016 (October-November 1667).

(J. H. Moortmann.)  

HASAN PASHA. [See VENUSILLI.]  

Hasan Pasha, a native of the district of Kāshab-i 197, entered the Janissaries, in 1724 attained the rank of jādī (jama'i general), took part in the Russian campaigns and in the middle of Rajab I. 1371 (beginning of July 1753) during the war with Austria he was appointed grand vizier on the 4th Sharri 1371 (23rd Sept. 1743) in spite of the fact that he could neither read nor write. The continuance of the war with Nadir Shah, the cessation by the convention of 23rd January 1744 of the burden warfare with Austria, which had been going on intermittently since the Peace of Belgrad (1739), and various diplomatic steps, which were instigated by the celebrated adventurer Demeeral Ahmed Pasha (q.v.) with a view to the occupation of the Porte into the European Concer, all fell within his period of office. A result of Semai intrigues he was dismissed on the 22nd Rajab 1359 (10th Aug. 1740) and banished to Rhodes. In the following year the government of Iskandar a little later that of Diyarbekir was given him, and he died in the latter town at the end of 1161 (1748).  

Bibliography: Tālib, 187, 137; Ḍoṣi, continuation of Doulberliche Omer Efendi, p. 27-82; Sibillī Ḍoṣi, ib. 115-120 (Biography); ib. 150, 35 (Biography); ib. 197, 188; Mubdih, Ta'alī, 188, 197, 249; Venuilli, Geschicinct des Osmanischen Reiches, vol. iv. 40-75, 90.  

HASAN PASHA SHERIF (in Waiz, Celibi Zade al-Šeify 197, Hāsan) was the son of Rasiul Cabli al-Hajdiši Salāmān Agha, who is mentioned in the year 1720 as leader of the troops of Qawāq, Sulibi and al-Hajdiš, who in the war against Russia (1769-1774). He himself joined the war with distinction at the Khan-Gur Cóla's raid into the Crimea in the winter of 1769 which was celebrated in Baron Tott's description (Monitore, III. 201-203), as written by the chief of volunteers. In the course of the campaign he was rewarded for the financial support which he had given the Grand-Vizier Muhammadzade by being granted the rank of ṣāḥib-i 197, and on the 25th Dumlud II. 1187 (11th Aug. 1773) was appointed commander of Russian with the rank of vizier. After the conclusion of peace (1774) he fell into disgrace, lost the rank of vizier and spent a number of years in exile in Philipopolis and Salonica. After the outbreak of war with Russia at the end of 1201 (autumn 1780) he was again given various military commands on the Danube and after the death of Djam'ud Hasan Pasha on the 1st Safar 1204 (16th April 1790), he was appointed Grand-Vizier and generalissimo in his place. While his brother Sereid Mehemmed was able to influence a considerable reversion on the Austrian and their Russian allies on the 25th Ramazan 1204 (6th June 1779), his own campaign against the Russians was most unfortunate; towards the end of the year the latter emerged in rapid succession the fortresses of Kilia, Tulce, Zonguldak and Ismail and, as Sherif Hasan Pasha later brought suspicion upon himself by all kinds of arbitrary actions and the frankness of his reports, he was surprised in the night of 9th Dumlud II. 1205 (12th-17th February 1779) in his quarters in Samsz and shot by the Sultan's order.
from their cousins the Idrisids [q. v.]. These Sherifs, formerly located particularly in the south of Morocco, have played a considerable part in the history of N.-W. Africa. The date and cause of their installation in the country is not known. Legend says that they arrived there at the time of the rise of Marinid dynasty. A number of pious Muslims of Sidjilmasa, a town in the south of the Great Atlas, returning from the pilgrimage to Mecca are said to have stopped at Yamna, a town on the Amran coast, to the west of Medina. Then, they became friends with a Sherif named al-Hassan. Appreciating the spiritual advantages of attending his discourses and the heavenly benefits obtained by his intervention they persuaded him to follow them and settle with them in their own country. This individual was renamed al-
Dra'a, i.e. he who introduces his family (into a country). The expectations of the devout Muslims were fulfilled: al-Hassan and his sons were a source of blessings to their new country.

At this time the people of the Wadi Dra'a found to their grief that their palms were drying and the fruit would not ripen. It was said to them: "If you bring a Sherif to settle among you as the people of Sidjilmasa have done, your fruits will undoubtedly be as good as theirs". The people of Dra'a took this advice and brought from Yamna the Sherif Mulay Zaid b. Ahmad, cousin-german of al-Hassan al-Dikhlil through his father. Al-Hassan's descendants spread throughout Tafilet and formed the stock of "Alawi Sherifs, so called after their ancestor. "Ali al-Manshahi. Those of Zaid lived in the Wadi Dra'a and were the ancestors of the Sidjilmasa, so called after an ethnic group, the Banii Sunna.' They settled the Banii So'd b. Abdi Bakr, among whom the sons of Zaid had settled together.

No less turbulent than the Idrisid Sherifs of northern Morocco, the Sherifs of Sidjilmasa or the Banu So'd had frequently quarrels to settle with the Marinids. Not being farther from the seat of the central government, behind the formidable natural rampart of the High Atlas, they were more easily able to organise themselves either to render themselves independent or to extend their influence. Supported by solidly constituted Arab groups, sided by the religious faction, controlled entirely by the Sherifs of different origins, the Sidjilmasa succeeded in overthrowing the Berber Emir dynasty of Marocco and in guiding the destinies of the country for over a century (1555-1664). Seven years after their disappearance from the centre of turmoil, about 1677, Mulay Limi b. was the true founder of the Sherif dynasty which still rules Morocco.

(See above.)

HASANWAII b. AL-JURAI AL-BARZAK, a Kudi chief, founder of a dynasty which bears his name, which maintained itself for about half a century. Two other chiefs of his tribe, the brothers Wandali and Ghani, were also particularly distinguished. When Wandali died in 349 = 960-961 he was succeeded by his son "Abd al-Wahhab, who had soon to ease his territory in Hassawah. The power of the latter now increased more and more. His rule extended over a great part of Kurdistan and included the town of Dinaar, Hassawah and Nahawand. Although he forced caravans to pay heavy tribute and made the roads unsafe by his raids, Ruka al-Dawla did not trouble about him, as Hassanwaï supported the Dulkans in their wars against the Khurramids. But in Muihirram 359 = Nov.-Dec. 969 Ruka al-Dawla had finally to send an army under the vizier Ibn al-
Amid against him. The latter died on the road and his son had to make peace with Hassanwaï. After the death of Hassanwaï in 360 = 979-980, his son Bahr [q. v.] was recognised as governor of Kurdistan by the Buiyid Ajjad al-Dawla. In 985 = 1014-1015 Bahr was murdered and the dynasty of the Hassawalids disappeared with his grandson Zaki (Tahir) b. Hilli, who succeeded him but was defeated and thrown into prison in the same year by the Buiyid Shams al-Dawla.

(K. V. SUTHERLAND)
HASHID and BAKIL, a large confederation of tribes in South Arabia. The genealogy of the Hashid is given by the Arab of South Arabia at the present day as Hashid al-Aghbar b. Dhaham b. Nafw b. Hashid al-Akbar b. Dhuham b. Hamdan. Bakil is held by them to be the son of Hashid al-Akbar. Their land, called by Niebuhr Bâdî' al-Khabî' "land of the tribes," lies near San'â' [q.v.], and stretches eastwards to Ma'rib [q.v.] and Nafjan [q.v.], and northwards right up to the desert as far as eastwards of San'â'.

The Hashid, whose number 22,000 warriors, are divided into three main groups; al-Khârij (with three subdivisions [alshâb, "three")], Dhijjar, Kalâjîn and al-Sayyâr], Bnîl Surais (north of the Khârij, with nine subdivisions [baflâb "nine" including Khamm and al-Qâsimîm (Usmed in Niebuhr) to the north of the latter up to two days' journey from Sa'â'a with three subdivisions, including the Qâsimîm al-Wâsh). At the present day the Beled Hamdan (north of San'â') and Shubâb (s.w. of San'â') are also reckoned to the Hashid.

The following are included in the lands of the Hashid, the Kâ'a Shams, Kâ'a Hain (with an ancient cistern and Hisâmî cemetery) and the Beled Hâshim (part of them), Dhijjar Dhî Râs (Dhî Râs in Niebuhr), with the Wadi of the same name (a tributary of the Wa'd Shuwa'a [Hirrân]), the villages of Hût, Aribat (in Sayyâr), Khamm (an ancient Hisâmî town, according to Hamdani, the birth-place of A'bad Tuba'), the ruins of Ta'if (on the north bank of the Wa'd Shuwa'a with mosque and tomb of a saint. Near the Bawm al-Dhijjar Tâlim (Thâlîn in al-Hadrî of Hamdani), on the northern peak of which is a very ancient Himyarît mausoleum (with many inscriptions), the tomb of the saint Khârij, to which the Hashid still bring offerings, is the famous ruin of Nâhil (Nâhil, 1215), one of the South Arabian inscriptions (formerly with 20 palaces, among them Mâl Lâ'â'a), which Hamdani calls the most splendid that he had seen among his many visits and meetings with the tribes of the Wa'd Shuwa'a). Sa'â'a (Wâdi a-Wâh, Wadai in Niebuhr, north of Nafjan), Hamdani (different from that al-Sa'â'a), Ayâd Samîya, Wâlîâ (also named by Al-Sami' and Abh Ammar [perhaps identical with the Al-Sami', which Miles [in a letter to Sprenger] mentions among the tribes of the Wa'd Dawrân]). San'â' itself was at one time considered to belong to the Bakil. The Bakil are said to number 8,000 warriors.

Of the tribes mentioned we have detailed accounts in modern times of the Arûbâ' whose land was visited and explored by Glaser in 1883. It is a small territory but rich in ancient monuments. It is bounded on the south by the Balqîthî, on the east by the Nihm, on the north by the Suf'an, Murhîba and Hashid (al-Khârij, the subdivisions Dhijjar and Sayyâr) and in the west by the 'Ayâd Sârî and Hamdani. It is divided into two main groups, Zuhair (with five subdivisions) and Djiujîn (in Niebuhr Daîfân) with Hîmân (with seven subdivisions, among them the Abh Mâshît and Hâkan). In the land of the Zuhair are the following places, Uqabeet, Shammara, Zabdîb (with Himyara ruins, often mentioned in South Arabian inscriptions), Sirwâb (difference from the Al-Muhdîb, "rich in ruins"), in this district at the so-called Hadjar [stone of Arûbâ', the Arûbâ' hold their assemblies on important occasions], Khubbâ (with the ruins of Al-Medîna and Al-Hûjî, near the Northern cone of Darûb), the famous village of Masar (south of Sîfâth), Shira', Durrân, Bâtt Marran, Shâhrî, Jawwa, and Nûlîjî. In the land of the Djiujîn Is the famous ruin of Isâwa (Itwa) and Riyam; in Hîmân is the large village of Himzam (with the tribe of the same name) among the wadd in the land of the Arûbâ', may be mentioned the great Wadi Khârij. The plateau of Arûbâ' is extremely arid in character. The west of the land is studded with small wells like the land of the Hamdani and Ayâd Sârî.

Like the other once flourishing lands of the Hashid and Bakil, Arûbâ' is now poverty-strewn and deserted; in the lower parts poor-crops of cereals (wheat and barley) are found, in the higher, perhaps dhirra (a kind of millet). The once splendid vineyards of this district have long since been utterly ruined. In Hamdani's time Arûbâ' was famous for an excellent breed of cattle.

The Hashid and Bakil belong to the Zaîth sect and are mostly independent (only the Balqîthî, Bâdî' al-Bustân, Khârijî and Ayâd Sârî are under Turkish suzerainty). On account of the increasing depredations of their lands the Hashid and Bakil have been forced to leave their territory; we thus find Hashid in the district of Dhijjar Bâlî in (the south of Khârijî-land [q.v.] and Djiujîn in the land of the Suf'an). They usually enter the armies of the neighbouring rulers (the Imam of San'â', and the Shâhrî of Mecca). Even in India they are sought as mercenaries.

During Glaser's stay in San'â' in 1883, a fierce war was raging between the Bakil and the Hashid. The feuds was caused by the Bakil (Sufîn) who carried off two women of the Hashid, whereupon the latter began massacres in the villages of the Sufîn in Khârijî. The sultan of Mecca, who was then staying in the vicinity, was informed of these events by the governor-general of San'â', Tâ'âr Fâhû, who thereby won a certain influence over these tribes.

Hamdani in his Liwa' gives a detailed account of the Hashid and Bakil. He mentions the most of the above-named tribes. In his time they inhabited the same districts as at the present day. They lived in the "Balqîthî Hamîdî" [q.v.], which year was divided into two parts, the east belonging to the Bakil and the west to the Hashid; in the lands of the Bakil there were a certain number of Hashid and vice versa.

In Hamdani's time the land of the Hashid included Radîbâ' (chiefly inhabited by the Wa'dîs,}
the great plain of al-Dawm (in common with the Bakl), with the villages of Rida (with the citadel of Talafsci), Banaa, 'Abbas, al-Qab, al-Ula, Zora, the latter belonging to the Hadd of al-Khazif, the two towns of Dua and Kiyam, Ukhayt (in which the inscriptions, a large town, in common with the rain of Madar (inhabit by the Bakl), in common with the Bakl), and Yaa, Athal, called Darmi in the Qasqooli; here the poet A'ishah of Himda used to live during the sardah harvest), the Balad al-Sayad (with al-Khazif, Dha"

Bun [227 of the inscriptions] Yama'a or Yanca), al-Khazif (227 of the inscriptions) with the market Hamal or Hamil dating from heathen times, and the villages of A'sassan and al-Hafir or al-Afjar, the Balad el-Wadi (with Xamuk, Himda), [io Qasqool, p. 116, the jinna on the river] the other hand his Himd, [Tom']. Himda and Hamda, Balad Khawas (the largest district of the Haddah, the seat inhabited by the Bakl), Khaim, la' (the beginning of the Haddah in the north with the two mountains Akshu [between the Wadi Li'a and Wadi Surud], and Aheem or Aheem and the villages of Tanj, Nizjar, Shihali, al-Hikr, the markets of A'sassan and al-Afjar), Balad Haddah (with 20,000 inhabitants) with the villages of al-Dajair (large market for Tishma, Mocca, and al-Hamda, which are used to be visited by 20,000), Schub, Haysa, and Djadil, 'Udhar Shams, Hina'wala (a very fertile district, rich in palms and houses) inhabited by the brave and distinguished clan of al-Ahumaid (which numbered 5000 warriors), the two famous hills of al-Ahumaid and Shukk, or Shukk, with the precious stone called Soumak, after Wadi Soumak near San'a', a black stone with white veins), the Ujbel Hasi, Maswak, and the great mountain Sharaf (lower part) (the markets of al-Kahfling, Bir (both belonging to the Lijjar), al-Yafr, Kutiba. The towns of the Bakl included: al-Sama', Hadda, both in the west of the Rajef and San'a', Mecca, Ujbel al-Ujbel Mahz, with numerous large creeks, each flowing into the Khawas, and with many cornfields and oases and flowers), the Ujbel Oflyl, rich in vines inhabited by the brave and illustrious group of tribes, such as the Akshu,Downloaded from https://www.cambridge.org/core. Tufts Univ, on 26 Dec 2020 at 21:28:46, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/CBO9781139084154.023
most as he was an excellent poet. His great strength lies in ingenious imitations and adaptations to the ideas and language of his predecessors, not in original works. In him the characteristic feature of Ottoman poetry in general, great skill in imitation, a parasitical kind of poesy, diminishing only on a foreign growth of amorous reputation, became a veritable genius for adaptation. In his 

HASHR (Al), an assembly, particularly on the day of resurrection (yamun al-Hassh). Cf. the article KHAH. — Title of Sura 6.4.

HASHW, the stuffing of a pillow, cushion, vegetable, etc. Hence: 1. Medall. You say "its all has become medall (hashw)". 2. A relative clause. Thawala calls a phrase a hashw (mustajfi, ed. Broch, p. 57). 3. A parenthesis, with which nothing in the sentence is symmetrically connected, synonymous with alaf (Harrat, Mustafir, ed. De Saucy, p. 75, 86). 4. A redundancy or tautology. The portion of a sentence, as Süah abis (handshake) of the head, which is repeated from the in that the latter always serves to remove Alzub (Harrat, loc. cit.). 5. In prosody, the portion of the verse which contains the rhythmic or metric of a verse between the first and the last foot.

HASHWIYA, also HASHAWIYA or AKHUSHWIYA, a contemptuous term for those among the men of Trabil (Ashab al-Hashwiya, q.v.), who recognized the cosmically anthropomorphic traditions as genuine, without criticism and even with a kind of preference and interpreted them literally. A few names of individuals who regarded themselves notorious in this way and who belongs neither to the Kuraniyya nor to those Sufis who did the same, are mentioned by al-Shahran, ed. Carton, p. 77. The Sallamiya (cf. Goldhoffer in Zeitschr. der Deutsch. Mus.)

god. Gevrea, (w. 79) are among them. The Mut'alis accords the whole of the Ashab al-Hashwiya as Hashwiya because they tolerated anthropomorphic expressions, although without the lack of good taste, on the Hashwiya proper and often with the retention of the "hew" (billa kafir).
HASAN, grandson of the Caliph chief Bahdul b. Umair [q.v.] and uncle of the Caliph Yazid I. These qualifications as well as the prestige of his family and of the powerful tribe of Kuf, procured him the reign of Mu'awiyah and Yazid, the post of governor of Palestine and the Jordan territory. He had previously distinguished himself in battle in the Syrian army at Siffin. He then accompanied the young Yazid, when the latter went to Damascus to ascend the Caliph's throne. During the reign of his nephew he was the most influential person at court. On Yazid's sudden death and the succession soon after of Mu'awiyah II, his grandson nephew, Ibn Bahdul — as he was usually called — became governor of the land of Jordan, the only one which, through his intervention, had remained faithful to the Omeyyad cause. He now advanced against Damascus to be able to follow events on the scene and to champion the interests of the younger son of the Caliph Yazid, who had been entrusted to his guardianship. He took up his abode with them in Idlib. From here he was said, by a series of clever manoeuvres, to have succeeded in assassinating Dzhubak b. Kais [q.v.] who was a traitor to the Omeyyad cause. Another story, however, given by Ibn Sa'id, describes this diplomatic success with more justice as Fr. Bahlil has shown — to the able Ubayy Adil, son of Ziyad. The latter also persuaded Marwan b. al-Hakam to come forward as a claimant to the vacant throne. When Hasan took up the candidature of his grandson Khellid b. Yazid, the Omeyyads and their supporters were found to come to him at Idlib. There an assembly was held under the presidency of the Caliph chief [cf. Tanweer, p. 98-87].

After 40 days' negotiations Marwan b. al-Hakam was chosen Caliph. But before Ibn Bahdul recognized him, he extorted his consent to the succession of the young Khellid after Marwan's death, important privileges for his tribe, and the continuation of all the privileges which his family had enjoyed under the Umayyads. Furthermore his influence began to decline. When Marwan died, he is said to have pleaded him to recognize Abd al-Malik as his successor. On the 23rd of July 69, Abd al-Malik b. Marwan, the third Caliph, ascended the throne of his uncle and was crowned at the Omeyyad palace of the palace of this rebel. After this event the name of this Kufic chief, who had held the fortunes of the Omeyyad dynasty in his hand for a long period, is no longer mentioned.

HASAN, M. TRAITÉ DU TRIBE OF THE CALIPHATE, both on his father's and mother's side, was born at Medina about the year 563, being thus some seven or eight years older than Muhammad. He was the most eminent of the Prophet's companions, and he was the first to receive the revelation of the Koran. He attached himself to the court, and was one of the most influential of the early caliphs. The first he saluted was the Prophet, and he was rewarded with a position. He then received a mission to the king of the Banu Hilal, the sons and grandson of the Ar-Rab al-Aziz, and for his pious works he received a title and a position. He died at Medina in 657, and was buried there. The title remains in the family of his descendants.
the jealousy of the Chashtaib, but Hassanucceeded in allaying his suspicions. On the return of al-Nãhibî to the favour of al-Nâṣīr, Hassan prudently withdrew. At the fall of 'Abbâs his claims to preeminence had been rejected by his father's rival, and his inferiority demonstrated. He is said to have been only sixty years of age when he demanded that prudent to throw in his lot with Muḥammad, who was fast winning his way to the front. This did not alleviate the friendship of the Chashtaib, though Hassan, in view of Muḥammad's raids, did not deem it prudent to visit his old friend. To Muḥammad the services of Hassan were invaluable in replying to the lampoons of the unbelieving poets; and the Prophet showed his appreciation of them by presenting him with an estate and the Egyptian slave Statì, sister of Mary the Capt., and even forgave the part he played in the murder of Aḥmad and Sâfîruss. His most notable service to Islam was perhaps the conversion of Caimun, whose champions he worsted in a contest of verse. He survived not only Muḥammad but also 'Abbâs b. Abû Bakr and 'Umar, upon all of whom he has some fine elegies; but he was especially devoted to 'Uqãmus, who had lived in his brother's house in Madâin after the Hijârâ, and the guilt of whose murder he laid at the door of 'Ali. He is said to have died at the age of 120 years; his family became extinct.

Hassan was the founder of the religious poetry of Ilãm. His verses abound with Kur'anic phrases, but they are also full of the boastings (fâdîk) of the Ignorant. His fate, however, was satire and sarcasm. It was these qualities which made him a useful instrument to Muḥammad. To Europeans his poetry is preferable to that of the desert poets, but its chief value is as a source for the history of Ilãm.

Habitat (Arabic).—Dawlat, Tana, 1864, Bombay, 1885, Lepen 1896 (ed. by Hartwig Hirschfeld; Gibb-Memorial Series); Ibn Ābd-Al-Wahhâb, 1899-1904, Wiesbaden, by index. (T. W. W.)

HATIF (Arabic) means one who cries out, summons, proclaims, with a voice harsh, high, strong. The root is also used to express the ringing sound of a bell, the sounding of a gong, a moaning wind, rolling thunder. For these senses see Lähâa, xi. 259, but hatif in the sense "thunder-cloud" is found only in Isâr al-Ilâjî and is called a kahî a rain (Socin, Dictionnaire Universel de la Langue Arabe, l. 1889, l. 111). More narrowly it is used to describe a voice which comes, while the speaker remains invisible, bringing mysterious information, or warning, or summoning, or inspiring with poetry. The root is common in Persian, e. g. in Najât, etc. W. H. Blumer, Nâṣîhî-i Nâṣrânî, London, i. 1881, p. 11, note 2, p. 44, note 5. It brings tidings of death (Aqâhîn, vi. 116, l. 2), it is used in connection with a family of hatâîn (Aqâhîn, vi. 76, l. 28); by it a serpent-sign (âhâtîn) shows its gratitude (Aqâhîn, xiii. 86, l. 2). It is thus a method by which the gnm manifests itself, and may be contrasted with the râfâ' fâ'â' or râfâ' fâ'â' which is seen, while the hatif is only heard, and which had apparently esoteric associations (Aqâhîn, vi. 131, last l., and Lane, Lexicon, 1904-1906). Yet in Aqâhîn vi. 62, l. 46 a hatif is heard but not seen. The narrative in Aqâhîn, vi. 131, of how a hatif brought to Bahrain news of the death of Ilãm is des-
HATTIN

Hātitī, a knight and poet of the pre-Muhammadan period, who lived from the last half of the sixth century, was a contemporary of the poet al-Nābigha, Bahr b. Abī Khaṭīb, and Abū al-Iḥṣāṣ. He is described in a high degree the virtuous of the Murūjūn [q. v.], particularly hospitality and liberality, in the practice of which he paid no regard to his own needs. This tendency to extravagant generosity, was revealed in him even as a youth; the consequence was that his grandfather, under whose guardianship he had lived since the early death of his father, abandoned him. Legend pictures him as the ideal type of the pre-Muhammadan Arab. (For further particulars of him and his relations with the kings of Hira see Schahūn, op. cit., introduction).

His generosity became proverbial (middad mina Hātitī) and he was called al-Masıṣī or al-İğiyaq. It is often related that after his death he used to attend to those who appealed to his hospitality at his grave (cf. Goldscheider, Muḥ. St. ii. 214). This grave is probably on a mountain (lalā', Yaqūt. p. 740) in Tarrūgh on the Wādli Hīr (in al-Maṣṣūl) and it should be read for Bābqa and Sīn'ī for al-Khulīb following Yaqūt. (l. 830) where he is said to have lived. On the right and on the left of his tomb, according to al-Maṣṣūl (cf. Dimūn, No. 8, and Lane, 271, 1 and 185, new ed. ii. 235 sq.), there were four stone figures representing maidens with dishevelled hair mourning over his grave. At his tomb there was also shown the remains of the large kestrel that once it used to feed his guests. According to Palgrave's Narrative, i. 224 sq., the grave seems still to be known in this district.

His verses are the most part concerned with the praise of generosity, and as a result. His Sab'at poems, which in its present form probably contains a number of stanzas that are not his, was possibly originally much larger (Fikrit, p. 152, note, about six thousand). Hātitī became a very popular figure in Arab literature. In Persia he became the hero of a very popular romance, al-Kipāl Hātitī (also al-Kipāl al-İğiyaq (Seif); see Forbes, op. cit.), translated by D. Forbes (London 1830, O. Y. F.) from a version which differs markedly from the Calcutta editions (ed. J. Atkinson, 1818, and 1837) (see Forbes, op. cit., Preface, p. viii.); the Hātitī (also Hātitī Hātitī) forms a continuation.

A brief account of Hātitī's life and deeds was given by Hasan 'Abd al-Karīm (died 1050 = 1651-1652) in al-Sab'at al-İğiyaq (presumed by Everard). Dr. Schreiber, Chrestomathia Islamica (Paris 1852) ed. ii. 173 sqq. There is also a Turkish version of the romance, Dāwātī Hātitī Tāh (Constantinople 1724). A number of editions of a Hindustānī translation of the Šīrāzī Hātitī, entitled Ārābī al-Maḥkūm, are given in the India Office Catalogue, ii. 2, Hindustānī Romances, by J. F. Blumhardt, p. 235 sqq. Also see G. de Teiss, Histoire de la Littérature Hindu et Hindoustanîe, l. 556 sqq. on a mystical version of the romance in Hindi and Hindustānī, cf. G. de Teiss, op. cit., i. 497, iii. 148.

of the Gulf of Guinea (Togo, Dahomey, Benin and the Cameroons) on the south. It is one of the largest ethnic groups in Africa; according to Robinson it numbers about 15,000,000 souls.

The Hausas are very clearly distinguished in physique from other black races. At a rule they are tall; their hands and feet are small, their features regular and their physiognomy intelligent. They are active and quick-witted and are fond of sport and war. Their physical qualities and their bravery make the Hausa excellent soldiers. Therefore the English in Nigeria and the Germans in Togoland and the Cameroonias recruit their police forces from among them.

The Hausas live by agriculture, industry and commerce. The soil, tilted by the hoe and improved by manuring, produces rice, millet and especially cotton, which is manufactured in the country itself. Industry indeed is well developed and bears witness to the relatively high degree of civilization which the inhabitants have attained. The textile industry is particularly flourishing. The cotton thread spun by the women is dyed in various colours, then woven into long narrow strips, which are used to make different articles of clothing (robes, shirts, trousers and headdresses). These clothes are famous for their fineness and are exported all over the Sudan. Basketwork, tanning, shoemaking and saddlery are equally prosperous, as is goldsmithery and the manufacture of metal goods for domestic use or ornament. In all these walks the Hausa show a well-developed artistic sense.

They are also able and enterprising merchants. Their towns, particularly Kano, have very frequent markets. Every year their caravans make the three months’ journey across the Sahara, carrying to Tripoli the products of the Sudan, clothshirts, leather, ivory and ostrich feathers, and returning laden with European products. Other caravans go to Upper Egypt and the shores of the Red Sea. Lastly the pilgrimage to Mecca, methodically organized, furnishes the Hausas with the opportunity and excuse for lucrative trading operations. They were at one time great slave traders but European intervention has considerably reduced this traffic.

Colonies of Hausa merchants, numbering sometimes as many as 10,000 individuals, are established not only in the principal cities of the Sudan but also at Ghadames, Ghat-Temmili, Tumaci, Cairo, Massawa and in the majority of the towns of the Atlantic coast (Lagos, Alfre, Freetown etc.).

Islam is now the religion of the Hausas. Introduced in the 16th century, it made considerable progress in the sixteenth as a result of the conquest of the country by the Puli (Fulbe) who imposed it by force on the conquered people. Only the tribes of the forest or mountain districts have remained fetish-worshippers. In religious matters however the Hausas show a singular lukewarmness. According to Robinson, mosques are hardly found, except in Sokoto and Kano. In the large towns write the same author, “perhaps half the population are nominally Muslim, whilst the rest are hardly to be said to have any definite form of religion at all” (Humphreys, p. 48). If the idols have disappeared, overthrown by the Fulbe, ancient superstitions have survived, such, for example, as the belief in lucky and unlucky days, the use of talismans to cure diseases, a custom expelled by the Muslims returned from Mecca, who are credited with possessing the power of writing infallible charms. In spite however of the rather unorthodox character of these practices the Hausas are among the last active propagators of Fulbe amulets among their fetish-worshipping neighbours.

At the same time as their religion they spread around them the use of their language, which has become the lingua franca of the Sudan and even of certain parts of the Sahas. The characteristic and classification of this language has been often discussed since Schott made the first specimens of it known to European scholars. Some philologists (e.g. Miller and Lepaul) rely on certain morphological analogies which it presents with the Berber dialects, prepared to class it in the Hamitic family. According to another view put forward by M. Delaissé and supported by M. Lippe, “Hausa is a language of negro origin on account of its very large number of radicals and vocal terminations. This negro language has been profoundly influenced in grammar by the languages of the Hamitic family and has borrowed a considerable number of radicals and roots... Semantic influence on this language has been almost nil; set not more remarkable, in any case, than on any other language spoken by Masalis and equal to the influence of the European languages on the dialects of the coast (importation of foreign words designating new objects). The literature consists of a number of chronicles, tales and popular songs which have been collected and published by Europeans.

History. The origin of the Hausas is very uncertain. Barth identifies them, in a somewhat hypothetical fashion, with the Atrantes of Herodotus. One fact is certain: the Hausas used to live in a more northern region than that which they now occupy, which corresponded to Damergi and the oasis of Air. The Hidall invasion brought into these lands the Tuaregs driven southwards by the Berber tribes of Northern Africa. For some time these two races lived in harmony and their intermarriage produced half-castes, the ancestors of the servile tribes who now live in dependence on the Tuaregs. Then, the resources of the oasis becoming insufficient, the Hausas migrated southwards and founded various states of which the most ancient appears to be that of Birnin. According to a mystical genealogy given by Barth, Birnin is actually considered the ancestor of the Hausas. His descendants, Gobir, Kasa, Rano, Katsina and Segrez (Zaria) were the creators of the kingdoms which still bear these names and which are called the seven legitimate Hausas (Hausa’ boko). The other states, the population of which has been much mixed with foreign elements (Vassar, Nige, Gummi, Yemi, Hausa, Sansei and Keli), were known as bastard Hausas (Hausa hara boko). These kingdoms varied in extent. The oldest, Katsina and Kasa, were not much larger than their capitals, the others attained a considerable development. The Sultan of Gobir and later those of Katsina, Kasa and Zaria conquered vast territories and were able to put in the field armies of 4000 horsemen and 70,000 foot-soldiers.

The earliest mention of a Hausa kingdom appears in Gobir, which is found in Ibn Battuta. When this traveller visited the Sudan (1355), the Hausas were still pugnacious. Although certain legends assert the introduction of Islam in missionaries sent by the Caliph Omar, this religion was in reality brought to the Hausas
at the end of the 19th century by merchants coming from the countries of the central Niger and Bornu, which had long been isolated. Their propaganda was perhaps strengthened by the preaching of the celebrated marabout of Tust, Muhammad b. Ahmad al-Kalbi al-Maghili. In any case, by the end of the 19th century Kano and Katsina had become important centers of intellectual culture. Many marabouts from the two emirates stopped there on their return from the pilgrimage to Mecca and taught theology and Maliki law to the native students. The conversion of the Hausa was not complete however and even in the 20th century the people of Kano remained for a time into paganism.

We know very little about the history of the different Hausa states. Their material prosperity seems however to have been remarkable in spite of the bloody wars they had to wage against their neighbours, notably the Songhai and the people of Bornu. As a result of the Moroccan conquest of 1897, Katsina inherited the economic importance of Gao and, according to Barth, had more than 100,000 inhabitants. Kano became and has remained to the present time the most important market in the whole Sudan.

The political organization of the country was profoundly modified in the beginning of the 20th century. Till then the various states had remained independent of one another. They were now incorporated in the vast empire of the various states which were laid in 1882 by the Fulbe marabout Oghaza dan Fodio (cf. the article FODIO). In fifteen years all the Hausa country was conquered, the local sultans were deposed and replaced by governors sent by the Emir of Sokoto, who was the capital built by Oghaza. On the latter's death the empire was divided into two emirates, one over Sokoto and Kano as capitals and the various provinces were shared between the two sovereigns. The conquests were however in part absorbed in and assimilated to the conquered. The Fulbe established in the towns mixed with the Hausa and gradually lost their own language and civilization by this intercourse. The extension of the conquest was developed by the spirit of initiative and enterprise in the Hausa. They broke their original bounds on all sides and introduced their language and the Muslim religion into the neighbouring countries. This is why the land was settled by great numbers in Togoland, in Adamawa and the Cameroons. Lastly, in the last quarter of the 19th century Europeans, informed by travelers of the richness of the country, have endeavored to submit it to their rule. The French and English disputed access to the Hausa country at the same time as to the lands of the lower Niger. The English were successful and the Anglo-French treaty of 5 August 1890, completed by the agreements of 12 July 1893, the 14th June 1898, and the Anglo-German agreement of 15th November 1893, definitively practically the whole of the Hausa country in the sphere of British influence.

and I (Muhammad) am for my people". Christian influence is also found elsewhere in the account of the "saints' Alphaba", the total number of those present being usually given as 70 or 72, apparently on the analogy of the Evangelical accounts of the 70 or 72 apostles (St. Luke, v. 17).

Of these twelve Hawarinya 9 are said to have belonged to the Khurairi and 3 in the Awa. They were: Sa'd b. Ubada, As'ad b. Zurr, Sa'd b. al-Rabi', Sa'd b. Ali, Khaithuma, Mundhir b. 'Aamir, 'Abd Allah b. Kuwa'a, al-Rabi, Makrun b. Abi 'Umar, Abu al-Muhallab b. al-D Charb, Usaid b. Hujair, 'Abd Allah b. 'Aamir, Ubada b. al-Sunbir, Rabi b. Mufik.

According to an other account however, the Hawarinya belonged exclusively to the tribe of Kurairin, viz., Abu Bakr, 'Umar, Uthman, Ali, Hamza, Abu Jhidar, Abu Ubada b. al-Jidhir, Uthman b. Marwn, 'Abd al-Rahman b. Abi 'Aur, 'Abi Sa'd, Abu Waksha, Talha b. Wardah, 'Abd Allah, Zubair b. Abi 'Anwa'm (cf. Eign. al-Anb), Cairo 1290, p. 344). From these accounts it is again clear how the rivalry between and Muhammad in the circumstances of the Meccan tribes.

The tradition regarding these twelve Muslim apostles has perhaps, like so many traditions, received a deduction from a statement in the Kin'sa, in Sachen 61, in Jesus says: 'Who are My Apostles for God?' and the Hawarinya answered: 'We are the Apostles of God'.

The parallel with Muhammad's own position is here clear enough and it is inferred that Muslim Hawarinya were found to be a necessity alongside of the Muslim Apostles.

There are statements in several Muslim writers regarding the disciples of Jesus, which for the most part go back to passages in the Gospels, cf. the articles THA. and MA'AD.

(A. J. WENZEL.)

HAWAISHI. [See YASHIYA.]

HAWASHI or HAWASHIS is the name given to the people of Mecca, descendants of a Hassan named Abu Hasib Muhammad, who ruled there from 425 (1035) to 597 (1201). Their names are Abu Dukairi Muhammad, till 487 (994), his son Abu Fatima 'Abd al-Mu'min, till 517 or 518 (1124), Fatima b. 'Abd al-Mu'min, till 527 (1133), Hassan b. Fatima, till 540 (1145), according to other statements till 551 (1156), Hassan b. Hassan, till 556 (1161), Isa b. Hassan, till 570 (1174-1175). The latter's sons, Mukhtar and Daud, as well as Mansur and Daud, till disputed the succession, till finally another Hassan named Khama (4-5), took advantage of this family quarrel to seize the town of Mecca and transmitted the sultanate to his descendants. None of these Hawashish did anything remarkable, but at first their ambiguous attitude towards the question, whether the Emir or 'Abd Allah Caliph was to be mentioned in prayer, more than once brought great misfortunes on the Meccans. For further details cf. Wisenburg, Geschicht der Stadt Mecca, p. 224 sqq., and Smucke, Hurgovwe, Mecca, i. 62 sqq., where the native sources are also given.

HAWAZIN, a large North Arabian tribe. Their genealogy is Hawazin b. Maghir b. Ikrima b. Khusaib b. Kha'san b. Khaibar b. Tihama b. Maghir b. Mundhir b. Khazin. Among the important clans of the Hawazin may be mentioned the Khaalif in Tab. Northwest of Mecca where there is still a powerful tribe of them, the 'Amir b. Zay'a', the Khaalif, the Sa'id b. Bakr (Habta b. Abu Dhauwah, the name of the Prophet, was descended from them) and 'Abd. They were of the same stock as the Sulaim. During the al-Qaysiyah they worshipped the al-Dh thigh in 'Ukay, the large and much frequented market of the Tab'il between and Nakhl, where the poets used to recite their poems on the public market-place.

They were scattered through 'Abd (the Yemen border) and the Eastern Hijaz near Mecca. Among places which a certain mention: a-Mal, 'Abd al-Malik, ar-Dal', 'Abd al-Rahman, al-Dib in, Fare al-Kub; among wadi's, Wadd, Wadiya, Taza and Zayd (as Wad Khayyam, ii. 917), Hamdani, Qua'. p. 50 sqq., gives Runiya and Tazal as belonging to the Hijaz but as the Hijaz are a clan of the Hawazin and as in other districts places which had once belonged to the Hawazin or their clans were later inhabited by the Hijaz, e.g. Ta'am, Runiya and Zayd may be identical in which case there is a misunderstanding between the and 1, 2 and 3 among water's, Dhu 'l-Hulafa and Taza (Wustenfeld, Geograph. p. 220, Taza; among and among Musa'ab, al-Musaiq al-Hasa).

Towards the middle of the sixth century, after the collapse of Yemen sovereignty over the Makkan tribes, the Hawazin had to pay tribute to the chief of the Ghatafan, Zayd b. al-Huday-y, chief of the Aba. When the latter was slain on the day of 'Ukay by the Amir b. Zay'a', the Aba's revenge for a massacre which he had instigated among one of their clans, the Ghatafan, it was that Zayd b. al-Huday-y and the Sulaim their allies. Among these tribes were Banu, Nebi and 'Amr, which the Hawazin made peace with. In the sixth decade of the sixth century the 'Uqayr or sarrastals wars began (so-called because they took place chiefly in the sacred month of Dhu 'l-Ka'ba, by which the latter was profaned) between the Hawazin on the one side and the Kurairi and other Kundan tribes on the other. The cause of the first 'Uqayr day, which took place on the market place of 'Ukay, was the aggressive attitude of 'Abd al-Malik b. Ma'dhir of the tribe of Ghatafan, a branch of the Khaalif, towards Abu 'Abd al-Malik of the Hawazin and the insulting of a man and woman of the Hawazin by the Khaalif and Khaalif soon after. After a cessation of hostilities for some time, what was broken out again when 'Ura 'al-Rahib, an important member of the tribe of Khatafa, who was heading a caravan of 'Abd al-Malik, Musaid, 'Abd al-Malik, to the market of 'Ukay, was treacherously murdered by Banu Khaib, a branch of the Khaalif, chief of the Khaalif, in the land of the Ghatafan. The Khaalif, who were in the market of 'Ukay at the time, hearing of the murder, left 'Ukay surreptitiously before the conclusion of the market to return to Mecca. They were pursued by the Hawazin and the battle of Nakhl ensued. The Kurairi, fewer in numbers than their opponents, retired to the sacred district of Mecca (surrounded) and thus escaped being followed up by their pursuers. The Prophet, however, on this day to have been engaged in collecting the arrows shot by his enemies on the battlefield for his reliefs, the Khaalif, being thus approached, bade accordingly to others, 86 years of age, in the month of Dhu 'l-Ka'ba of the following year, the Hawazin, reinforced by the Sulaim,
worn the first to arrive at the market of Uthiq, and took up a position on the hill of Sunna. The Kurfaj, who appeared soon afterwards on the battlefield under Harb b. Umayya, at first won the upper hand over their opponents but had finally to retire. The fortune of war again proved favourable to the Hawazin a few months later in the battle of Ablak (near Uthiq). This was followed by a burning desire to take back the field of Uthiq itself, in order not to be able to run away and to make good former defeats, a number of the Kurfaj had their feet tied together (among them the five sons of Umayya, who then received the name Ablak, "the Israelis"), a strategem repeated in modern times in the war between the Egyptians under Muhammad 'Ali Pasha and the Wahhabis, in which a great many of the Arabs were found dying in this position. They thus subdued the enemy and the Hawazin had to retire. The last battle between the Hawazin and Kurfaj, which was followed by indefinite peace, was that of Husain, in which the Hawazin put their enemies to flight.

When Muhammad conquered Mecca in 8 = 629, the Hawazin decided to march against Mecca under Malik b. Awf. On Malik's advice they were followed by their women, children and cattle. Muhammad warned his spies of the intended attack and went to meet them with an army of 4,000 men. They met in the valley of Husain (q.v.) about 50 miles from Mecca behind Mount Arafat. The Hawazin suddenly fell upon the rear of the Muslims, who began to flee in panic. Inspired by the Prophet, who collected his most intimate companions, including his uncle 'Abdullah, 'Abd Sulayman, 'Abd Bade and 'Uqayr, around him and in the battle of Badr (q.v.), cured his madness by throwing a handful of dust against them with the words "may your face be covered with destruction," the Muslims took courage and attacked the enemy. The Hawazin were put to flight and left many dead upon the field; their women, children and cattle fell into the hands of the Muslims and were brought to Uthiq. A number of the Hawazin then retired to the valley of Awjia. Abu Musa al-Ashari, who went against them, drove them to seek refuge among the hills. They then fortified themselves in their own houses. Muhammad besieged the town but had to raise the siege after twenty days (in account of their women, it is said) and returned to Uthiq. Here the Prophet received a deputation of the Hawazin who offered the submission of the tribe, if their families and possessions were restored to them. Muhammad offered them the choice between their families and their possessions. The Hawazin chose the former and peace was made: Malik b. Awf was then chosen chief of the Hawazin. During the general accession under Abi Bakr, a number of the Hawazin rebelled but submitted after the battle of Bakr in 11 = 39, like the Salim and other tribes.

HAWIZA, earlier HAWAZA (diminutive from Hwaj, a town in the swamp-country abroad al-lugar, east of the Tigris in a very unhealthy situation. The town and its rainforest population had a bad reputation even among the Arabs, as is clear from Abu 'Asha' b. Khathab's words quoted by Ya'qub; he draws a repulsive picture of both in language imitated from Koranic phraseology. The older Arab geographers do not mention Hawiza, because, as Ya'qub says, Dhuib b. 'Aish al-Asad, who died in 366 (979), was the first to build it, while Jami' Allah Mustawfi ascribes the foundation of the town to Shu'ayb b. 'Abdul, according to the latter, in the 13th century it was one of the most flourishing towns in Khurasan. Hawiza is still a centre of the Musahms. Cf. supra, I. 678 supra.

HAWRA, see AL-HAWRA (HUMAY). HAWRA, a town in Hadramaut, N. E. of Hasa' (q.v.) on the Jabel of the same name. The little Wade hills butts it, running for the entire part of its course parallel to the jareel Wasw (see HAMSAW, p. 308) and then joining it. At the upper end of the town there is a large hill with seven stories, flanked by corner towers which command the town. Here the haram resides, he is appointed by the Kurfaj of Shihbun (q.v.) and from whom the town belongs. Hawra possesses a small bazaar and two mosques and is surrounded by gardens and fields, on which corn, indigo and tobacco are grown. The streets of the town are narrow and dirty. Leo Hirsch estimates the population at 2,000. The figure given by Weck for the population of this town, 3,000, is much exaggerated like other figures given by this otherwise very meritorious explorer.

HAWRAN, the name of the Rihla, Hawran of the cuneiform inscriptions, Abraham of Josephus, etc., is a district on the side of the Jordan, which has no well marked boundaries. Hawra proper is the Jabel Hawran with the plain of al-Najra; in the wider sense the name covers the land up to the district of Dasmu, the Nahr al-A'la, a tributary of the Yarmuk, the Wadi al-Shallal and southwards as far as al-Balk (q.v.) and the upkeep al-Hawar. The Turkish province of Hawran however also comprises the district of Dasmu, as well as Dasmu (Yamut), Adjul (Gizzah) and al-Rafa. The governor (emir) of Dasmu is zu'ayb b. Abd al-Hamid, a tributary of the Yarmuk, and the emir of al-Rafa is held by the emir of Dasmu as his subordinate to him. Under the Mamluks of Egypt the province was called al-Mubara and the residence of the wali was at Dasmu. At an earlier period the ancient Bosra (q.v.) was the capital.
Hawran is entirely a lava formation and is exceedingly fertile, the plain of al-Najra being the granary of Syria; on the other hand, the adjoining tracts of al-Lejdj is a dreary desert. The Hawran range (the Asalamas of the ancients, usually called Djebel al-Durti) after its present inhabitants, is the highest elevation of the east Jordan country and attains a height of 6000 feet.

Historical. Hawran is rich in historical associations. In as far as these reach back to remote times of belonging to the Roman and Byzantine periods, they need not be dealt with here. That even before the Arab conquest there was an Arab kingdom here is clear from the Byzantine protection has already been mentioned in the article Hawran [q.v.].

The capital of Beita was the first town to be conquered by the Arabs (634) and after the institution of the sultan [q.v.]. Hawran belonged to the Djead Dimashk; as it has always been, although this military system of division, afterwards fell into disuse, and with the introduction of civil administrative divisions the name Walitat Dimashk appeared. The history of Hawran thus coincides with that of Syria. For a time it attained greater importance during the Crusades, when the Muslims driven out of Palestine migrated here, and were able to make a stand against the Christians here. After the fall of the Kingdom of Jerusalem, these immigrants returned to their old homes and Hawran had only a scattered population of Arab tribes left, who are included under the general name of Urban al-Djebel.

In the 11th century the resettlement of Hawran by the Druzes of Lebanon began. It was brought about by the victory of the Shahishis over their opponents, the Yemenes, in 1071, when on the latter migrated to Hawran. At their head was the Hamid family whose abode was in Suwaidah. These migrations became more and more frequent in the 13th century, when the condition of Lebanon became worse and worse for the Druzes. In Hawran on the other hand, they had an independent existence, paid no taxes, and in consequence of the fertility of the soil soon attained great prosperity. When the Hamid, who had hitherto taken first place among the leading Druze families, became extinct, the Atrash took their place. Finally in 1852, the Pasha decided to send troops thither to bring them into submission, but they were again withdrawn on the outbreak of the Crimean War. Midhat Pasha [q.v.] therefore sought to come to an arrangement with the Druzes peacefully, and appointed one of their officials as a representative of Hawran with his headquarters in Suwaidah; the latter succeeded in arranging the administration of the province on Turkish fashion, but, although the Shahishis were quite satisfied, as they had now the support of the Ottoman government behind them, the peasants were very discontented and became rebellious, so that utter anarchy soon reigned again in Hawran and the Druze in 1855 even besieged the Muslim population of the village of al-Harb in the Nakra, who had taken refuge in the mosque, forced them to surrender and destroyed the mosque. The Ports had again to intervene and bloody battles were fought, which did not however lead to the final pacification of the country, until finally 'Abd al-Latif Pasha's strong measures succeeded in breaking the resistance of the Druzes and introduced a tolerable state of affairs.

HAWSABI (plural Hawassi), a tribe in South Arabia of pure Himyarite descent. Their land has roughly between 45° 45' and 45° 30' east long., (Greenw.) and between 15° 11' and 15° 30' north lat., and is bounded in the south by Lahd [q.v.], in the west by the land of the Sabai (Sobal) [q.v.], and in the north by the land of the Hadi [q.v.]. In the east by the land of the Djeud [q.v.], and in the east by the land of the Yeff. The climate is tropical, the land fertile, producing wheat, coffee and cotton. Among the mountains may be mentioned Djebel Shab (about 6000 feet high). The Wadi Nura and Banne (Bana) bound the land in the west and east. The capital and seat of the Sultan (Shahk, 'Adh) is Raha, with a high and many stone houses. The Sultan receives an annual revenue from England and has to provide 1500 men when called upon. The inhabitants of the country, which is reputed savage, are Kahlil (independent tribes) who only obey the Sultan in case of war. They are Semitic and mainly cattle-renters. They are constantly fighting with their neighbours. In 1870 they went to war with the Yaff, in 1871 with the Sobal. They are said to number 12,000-15,000. Hamid, mentions them as inhabitants of the 'Abdel Salih (Nab).

AL-HAWTA, the name given in South Arabia to a district, which is considered holy and regarded as a place of refuge. The administrative centre of this district is 'Ain, a place surrounded by a wall, then a place under the protection of the Sultan, who is buried there. The most important Hawta in South Arabia is that of 'Inat (Ainat) [q.v.], in Hadrami, where the famous Shahk Musab bin Bakr b. Salim is buried. The speed of importance is the Hawta in the land of the Walihi [q.v.]. The name Hawta is also borne by the capital of the land of the 'Abdel Dahal, Lahd [q.v.], because several saints are buried there. Cf. Landberg, Arabia, v. 205-206. (J. SCHLEIFER.)

AL-HAWTA (Horya), a town in South Arabia in the land of the Upper Widah [q.v.] on the Wadi 'A'main. It has over 1000 inhabitants who belong to the most part to the Maghribi tribe of the family of Malham under 'Umar, who is said to have been converted from 'Abd al-Kadyr al-Quzzi (flourished in the 9th century), about 100 forlorn houses and in addition to a large mosque there are smaller ones, a large market with shops, many looms and a considerable cotton industry. Al-Hawta is a free, independent town and pays no taxes.
important place of refuge in South Arabia. The
spirit of al-Hawwa who is buried in the great-
mosque is the fiqih 'Ali b. Muhammad, a contem-
porary of the famous Sheikh 'Ali ibn Mubarak ibn Qasim ibn Talib. The
fiqih 'Ali said himself to have planted this
town to be a city of refuge and to have laid
out its boundaries. The boundary stones (wad'a,
plus wad'a) still stand upright. On the birthday
of the month of al-Hawwa, which is celebrated on
three days (Monday, Tuesday and Wednesday)
after the appearance of the 'sixth of the moon' at
the beginning of the northeastern monsoon, a
great market is held in the town, which is visited
by people from great distances, e.g. from Harth
(q.v.).

The neighbourhood of al-Hawwa is very ferti-
l, and a mountainous area with some vases rises
above the town, where numerous, which are
removed there, are hunted.

Bibliography: H. v. Malthan, Reise nach
Saudiarabien, v. 130; Landberg, Arabische, v.
180-192. (J. SCHIFF.)

HAWWA, the wife of Adam, created in
Paradise out of a rib from his thigh, and given
to him as a living being, he called her Hawwa
(ibid., also Tahai, 1, 100; Ibn al-Athir, 1, 24, cf. Geosce
2, 3). As Adam was created out of dust and
Hawwa out of a bone, man becomes more beau-
tiful, with increasing years but woman more ugly
(1 Thalal, ibid., agreeing with Dem., K. R. 6, Geosce
4, 14 u. 17, Hawwa [Sura vii. 20] bore the
most guilty of the first sin, as, tempted by Iblis,
she ate of the tree of evil. Tradition relates that
Hawwa offered her husband first wine, than the
forbidden fruit and so became the cause of evil
sin (Thalal and Gen., K. R. 36). Wine is therefore
considered the source of all evil. Another
tradition says that this meal plunged mankind
into eternal grief. (Ibthal and the Malakh, ibid.).
Ten punishments, including menstruation, pregnan-
cy and travel, remind the daughters of Eve of
their mother's transgression. To console her,
Hawwa received the assurance that every pious
woman devoted to her husband would share
Paradise as a recompense for the mortal agonies of
travel. If she died in child-bed, she would be
enrolled in the books of martyrs and united with
her husband in Paradise. Jews and Arabs source
mention in the same words the marriage of
Adam and Hawwa at which God, Gabriel and the
other angels were present (Baha A. 79, Sanha, B.
Eynobin, 11, Gen., K. R. 14, 17, Levit., K. R.
Kohob, K. R. 36 and K. R. 35). After the expulsion
from Paradise Adam and Hawwa made the long
journey to Mecca, observed several ceremonies
and Hawwa had her first menstruation. Then Adam
stayed on the ground while the earth rose up
forth and she used it for a bath of purification.
Hawwa died two years after Adam and was
buried beside him.

installation during the Great Palaces after al-
Hafa (see above ii. 225).

HAYIL (AL-HAYIL, HALI, HAYIL), the cap-
ital of the land of Jbel Shummar [q.v.] in western
Najd in the centre of a long plain called
Shahin al-Khamaisiya, which lies between the
parallel ranges of Aqīkat [q.v.] and Sabia, at
about 3000 feet above the level of the sea.
The town, which is one of the main stations on
the route for Persia, Baghdad and Mecca, is sur-
rounded by walls about 3000 feet high and round
and square towers. It is divided into eight quar-
ters and has a large mosque, a fortified palace
with two towers of imposing height, an important
market with many warehouses and shops, in which
in addition to foodstuffs (rice, meat, spices, coffee
etc.) there are exposed clothing, garments, weap-
ons, tools (spades, crowbars), ores (silver, tin,
lead, lapis lazuli) etc., and large parks and gardens.
Clothstuffs are imported from Manchester and
Bombay, garments from Baghdad and Bagdah, trade
and corn from Europe. The trade of Hayil is im-
portant, but industry (chiefly carried on by women,
embroidery and needlework) is very insignificant.
Artisans (smiths, metalworkers, carpenters) are
few in number in the town. Hayil's houses are well
built and mostly of one storey. The streets are
the streets clean. Outside the town there are many gardens,
palmtrees and single houses which belong to the
chief citizens of the town, some to the
members of the royal family of Shummar. Ac-

HAYIL is a town of Sawafta. About the
year 1867 after a famine a pestilence raged
here which carried off about 200 individuals in
a period of two months. During Doughby's stay
here the houses were almost empty and the
shops and inns abandoned. Waits, a second suburb
of Hayil, was afterwards uninhabited and falling
into ruins as a result of this pestilence, when
Doughby visited it; the palmeries had shrivelled up
and died as a result of this period of neglected
irrigation. In Hayil itself 700-800 are said
to have died of the plague; after the plague an
erabtious fever raged in the town for two years.

Behind Waits is the Ma'atara (cemetery) of Hayil,
the tombs of which after the Bedouin fashion
are devoid of ornament and decoration and usually
contain only the name of the deceased. Between
the Ma'atara and the town is a small colony of
nomads, Shummar Bedouins, some of whom are
related to the ruling family and stay here only
during the spring.

In the beginning of last century the govern-
ment of Hayil was in the hands of the family of
Balt-Ali. Towards the year 1820 Abul Allah R. Bacht, a rich and distinguished chief of the
prominent family of Jbel Shummar, attempted to win
the throne for himself with the help of his numerous
and influential kindred. He was resisted by Balt-
Ali who had to go into exile but after about
ten years he returned to Hayil with the help of
the Wadban chief Fisal, who owed the con-
pact of the province of Hayil [q.v.] to Abul Allah
and was appointed hereditary governor (Fais). The
Jbel Shummar by the Wadban chief out of gratitude
for his service. The Balt Ali were driven out of the town and almost exterminated by
Abul Allah, who had another brother (Abdul, called
the wall'). Abul Allah built the great palace. A
period of prosperity for Hayil began under his
son and successor Fisal, who reigned twenty years,
dying in 1664. Telfil improved the defences of the town, built the great marble and market, and laid-out the beautiful gardens of the town, in order to improve trade and industry. He invited merchants from Bagh, Histot and other towns, artisans from Medina and Yemen, and entered into commercial relations with the other towns of Arabia and Persia. During Doughty's stay in Hadil, Muhammad b. Rajji, then the richest horse-owners in Najd, Doughty estimates the value of his horses at £250,000, was Amir.

Hamidullah mentions a Wali Hadil in Hinda (Dutch), which may be identical with our town. Yaqub mentions a Hadil, wali, between two ranges of the Tal (i.e. Asa and Salma) and as a large district, according to some between Yamaq and the Bilal of the Balala, according to others in Yamaq itself, inhabited either by the Kasbhal on the Namaiq and the Ban Namaq (Namaq) of the Taima. Spinney identifies Hadil with the Afsu Bana in Folklore.

**HAZARD,...**

HAZARD, the sixth month of the prosody of the Arabs, has as its scheme two maftulun (originally, or rather in accordance with the system, three) in each half-verse. It has one 'awwal and two jawr:

\[ \text{maftulun, maftulun, maftulun, maftulun} \]

The suppression of the w (jawr) is, except in the jawr, very usual, while that of the s (sawwal) is rare; but the loss of one necessitates the retention of the other. We also find, though rarely, that s was omitted at the beginning of a poem. This last omission (shown) is called shatar or shatarun, when it is combined with jawr as sawal. In Persian, Hindustani, and Hindustani a sawal is found, which, unaccompanied by jawr, is a is a rarely of only two feet in the half-verse. This metre shows numerous other irregularities, particularly in Persian, but these cannot be discussed here. For the bibliography, consult the article 'azdul.

(From Ben Chinnery)

**HAZARD,** HAZARI (Afghanis). The name Hazard is applied to the race which inhabits the mountainous north and west of the valley of the Helmand and Ternak, extending northwards to the Hindukush and Kafir Bala, and westwardly nearly to Hoti and the Hufid valley, but the most westerly tribes in this area are known as the Afsheen Aimaq and are distinguished from the Hazara proper by dress, language, being Turkispeaking peoples, while the Hazara are Persianspeaking Persians, yet they are nowadays preponderantly of Mongolian blood as their features clearly show, although no doubts mixed with the original Ghilz stock of these mountains from which they acquired the Persian language. They are supposed by some to be the descendants of the army of Mongol, but evidence is lacking as to the actual facts. It cannot be doubted however that after the Mongol invasion which fell with extreme violence on the Ghilz, who offered a determined resistance, the depopulated tracts were occupied by Mongol settlers, and that both strains were represented among the Hazara of the present day. They are still a hardy and industrious race, and often seek employment in the Taima where physical strength is required; they have also shown a desire for military service in British India. They are on bad terms with the Afghans under whose rule they dwell, and in 1894-1895 they rebelled against the Amir Afzal al-Rahman, but were ultimately suppressed.

The name 'Hazard' is no doubt a Persian version of the Turkish word, and refers to the 'thousands,' in which the invading Mongol armies were organized. The whole country is known from its inhabitants as Hazaristan and also as the Hazara or the 'thousands.'

**HAZARA, a district ill-lately included in the Punjab, now part of the north-west Frontier Province of British India. It consists of a number of valleys and mountainous tracts at the base of the western Himalaya between Kashmirt and the Indus from lat. 33° 34' to 35° 0' N. and long. 72° 33' to 76° 6' E. Area 5064 sq. m. Population 288,666, almost entirely Musalmans of the Sunni persuasion. Hindi number only 4 per cent. The most numerous part is the long narrow valley of Kangra, watered by the Kangra, a tributary of the Beas. The remainder of the district is drained by tributaries of the Beas. The Indus is the western boundary in the south, but to the north-west lies a block of mountain country between the district and the Indus. This block known as the Black Mountain is inhabited by independent Pathan tribes. Within the district the population consists partly of Pathan tribes (Drabdir, Tarin, Urimzai, Mughalwar, Swat and Dullchat), and partly of tribes which were at one time Hindus by religion (Gakhars, Takanis, Giiljars, Awan, Kairal, Dand, and some minor tribes). There is also a small tribe known as the Taki, believed to be the descendants of the Karakul or as they are thought by the Imam. The Gakhars, Giiljars and some of the others, are probably descendants of the Scythians (Khusais and Ephesians) or others who entered India between 200 B.C. and 500 A.D. The common language of the country is Hindki, a dialect of the Landa or western Patha, but Faqhi is spoken by the Dullchats and some of the Orumzais, Swatins and Tarkhils. The Giiljars speak a dialect of their own (see Tukche). The ancient name of the country was Uragia (still found in the valley of Kang near Abbottabad). Polomyn mentions it under the name of Ara, its ruler in Alexander's time was called Araka according to Arrnias. It formed part of the dominions of Alexander. The hero of the character is known as Arukama in Harness Thesiger's time (7th cent. A.D.) by whom it is named Wokshke it was dependent on Kashmir, and is frequently mentioned in the Alifmarughi. The town of Pakli on the Indus has been thought to represent the Paklibar of Herodotus, and under the Mughal Emperors according to the Agha Akbar the whole country between Kangra and the Indus
was commenced in Pushkar, invasions from Kshatriya continued till the 12th century. The Mughal invasions do not seem to have affected Hohara directly, but the Karakul Turks who were associated with the Shah of Khytizan and established a principality in Basra and the Karakum valley, seem to have spread into the country along the Indus farther north, and were known in Mughal fashion in the Karakul Minar or Hohara. The name of Hohara seems undoubtedly to be derived from their settlement, as were those of the neighboring towns of del. Hohara and Tafti Hohara in the Atak district from similar settlements of that name elsewhere in the Hindko language. The text below asserts that Tafti led the Mughals as a general in Pushkar (Blochmann's trav., p. 454, but it does not seem that he introduced them into the district. He probably found them already established and made them his garrison, as a base of his own operations. The evidence shows that their first settlement on the Indus was two hundred years before his time. As time went on the Afghan tribes from beyond the Indus, especially the Sattas and Tamils, invaded the country and made important settlements. The power of the Gokharu chiefs and of the Karakul declined in proportion. From 1574, Hohara was part of the Durrani kingdom, and in 1629 was annexed to the empire of Rannaj Poison to the Sikh monarchy. Perpetual war was with the Afghan tribes followed. After the first Sikh war in 1846-1848, it was depopulated by the British Government, to organize the country, and the continued his labors with great success after the annexation in 1849. Abbotsholme, the headquarters of the district, was founded in 1852 and named after him. It is now a town of 8000 inhabitants and the seat of a military station. Since its time the district has continued to prosper, and there have been frequent troubles with the independent tribes of the Black mountain, and expeditions against them were undertaken in the years 1852, 1856, 1888, and 1901 besides some minor operations.

HAZARASP, a town not far from Khiva but nearer the Oxus, with which it is connected by a road. According to al-Malakhdar, the town was on the same side as Khiva and surrounded by a ditch. It was peculiarly suited to be a fortress on account of the tower and the many canals, which cut off the surrounding country and rendered it less difficult. Atta sought refuge here when he rebelled against Sardar but the town was taken by the Sardar sultam after a two-month siege to 342 (1447). In the time of Yalpah, who visited it in 616 (1219), Hohara was a well fortified and rich town. It still exists to-day under the same name.

Bibliography: al-Malakhdar, ed. de Goeje, p. 294; Yalpah, Malakhdar, tr. 471; Harthoorn, Travels in India, l. 45, ii. 332; Le Strange, The Last Days of the Eastern Caliphate, p. 450.
made from rong, an indulgo plant. To preserve the peculiar lustre produced by the hemald the hair is often again treated with hemald, for another quarter of an hour after the application of the rong.

The tails of the royal horses are also dyed with hemald and white horses are turned to dull coloured, or painted with tussis and white with stencils.

The flowers, fruit and leaves of the hemald have of considerable medicinal property.

and his Hungarian-Sicilian work, also preserved in the Persian translation of Mir al-Din 'Abd al-Rahman b. Ahmad al-Qarani (Nasafisheh al-Es'haw wa-Ghashgash al-Khali).

HERI (or HARI) RUD, a large river in the north of Persia which rises in the Koh-i-Budh and flows westwards through a long narrow valley between the Stylyh Bulbul and Suraf Koh Mts. to Heri and Gharizan, where it turns to the North. At Zu-l-Qarnain it leaves Afghan territory and flows by Suslik into the Tizakh south where it finally disappears, the water being mostly used in irrigation. It forms the boundary for part of the Persian territory on the left bank and Afghanistan and Turkestan on the right.

(M. Longworth Damer)

HERSEK a large town, see HURSELY, 235a, 335ii. 409, 410.

HIBAT ALLAH K. MUSLIM B. AL-MU'TAMIR, MABJO a town in the Madinah district of the Khorasan province. Habbat Allah was appointed viceroy in Mardakan in 1801, but dismissed in Kamran at the assassination of the Sultani of Mazar. He left the land and took refuge in the desert, where he was found and forced to go to a place of safety for himself and his family.

Hilltopony: Hiz al-Allah (ed. Tomberg), 235ii.

HIDAD (n.). A widow's mourning garment.

HIDJA (a.), a roup. The hidja is a kind of hood or cape; the word itself, the etymology of which is not quite clear, perhaps means something like incantation. The origin of the hidja are connected with the old idea that words so solemnly uttered by individuals committed to himself, do or must have a permanent effect on the persons or objects to which they refer. The original hidja is a poem, which appears in the same kind of verse, but with a hidden, may be the painted arm.

HIDJAB (a.), a partition which separates two things; woman in medicine, the diaphragm. (Ahn 'Abd Allah al-Khwarizmi, Majma al-Usul, p. 156). F. de Keming, Freude Tracht, 101 (2nd ed.), p. 350, 351. — In the Quran it has the sense of "curtain", "wall", e.g., one should speak from behind a curtain (Suara 29.43). In the next world the arch and the dam will be separated by a curtain (vii. 48); the term here seems to be synonymous with "hidajj" and was therefore early explained as "wall" (Tabari, Ta'dib, viii. 181, Baabatu, ii. 326) in allusion to Kur'an, 13. The unbelievers said to the Prophet: "There is a hidajj between thee and us" (xli. 4). It is not possible for a man to hear God speaking unless by a revelation or from behind a curtain (xli. 39), as was the case with Moses (As�, according to al-Salih, Tahmir, Ta'dib, xxi. 45). Among the mystics a mystic gate means "all that veils the soul", signifies the impression produced on the heart by the phenomena constituting the visible world, which prevents it from accepting the revelation of truth (Dering, Definition, 35, and A. al-Razisi, Technical Terms, p. 35, 26, 116). The passions (nafs) are the main cause of the obscuration: but such a limb has a special passion that gives rise to a particular veil: substances, accidents, elements, bodies, forms, and qualities are as many veils which conceal divine secrets. The higher truth is hidden from all men except saints (nafs) alone. The opposite of hidja is nakl, the condition of soul in the former case is called nakt (contraction) in the second case (expansion). Mystic love (nakt) is assumed on account of the obstacle opposed to it in the first case (occultation), and satisfied by contemplation in the second (manifestation). These expressions are borrowed from the Gnostics (Dervish, 309, 1813, p. 309).

AL-HIJAZ, a territory in Arabia, on the Red Sea, with indefinite boundaries, which is at once understood when we reflect that the word hijaz means "barrier" and is applied in Arab geography to the mountains of Surat, which shut off the highlands (Najd) from the flat country (Thamam). As the name of a district, Hijaz is limited to that part of the west coast, which does not belong to Yemen, to be more exact, to that stretch of land which extends from 'Amm al-Allah on the Red Sea with the corresponding hinterland. Neither the highlands of 'Asir (q.v.) in the south nor the ancient land of Madan and Hamdan in the north belong to the Hijaz proper, although they are often included in it, e.g., above l. 367 infra. In the Turkish administrative system, the Hijaz is a vilayet whose capital is Mecca, and is divided into 3 sandjak, Mecca, Medina and Hijaz. Although this division was never actually carried out in detail and the Turkish institutions and officers existed for the most part by paper only, it is useful as establishing the area of the Hijaz proper. Recently however the Porto has made the sandjak of Medina into an independent municipality which is governed by the Sheikh al-Jumani al-Maliki, the commander of the Turkish troops. For further information see the article WAHAB.

Al-Hijaz consists of two very different parts, the flat, barren and hot coast land (Tihama) and the mountainous hinterland. In Tihama, which is almost void of vegetation — for there are no large wadis in this part of Arabia — the few permanent settlements are on the coast, with the exception of Mecca, which owes its existence to the ancient holy places there (e.g., the Zamzam well). On account of the many coral banks there are no good harbours on the coast, only more or less available anchorage, which in ancient times att
find for small ships and were then more visited than the present day. Some, like Lānkēkoma, which Sprenger has recognized in al-Insīwā, and Dījir (q. v. l. 10160), the ancient harbours of Mecca, are now quite deserted, while on the other hand Yanbu' (q. v.), the present harbour, and particularly Dījirra (q. v. l. 10414), have developed into important towns on account of the pilgrims landing there. The scanty population is in general dependent for its livelihood on fishing.

The mountainous hinterland is in places not sterile, for example in the volcanic district of Medīn and particularly in the beautiful oasis of al-Tawf (q. v.), which from ancient times has been a favorite resort in the course of rich Meccan on account of its wealth of fruit and its cooler climate. The hills themselves, the Džaič al-Kai of Mecca, reach a height of 6000—9000 feet. The highest are the hills of al-Tawf (6268 feet) and Džaič Rājāwa west of Medīn (5900 feet). Only the dates are of any importance; the land would not be able to sustain its inhabitants if imports from Europe, Egypt and India did not come to its help. The exports are insignificant.

The Hijāz owes its real importance to the two holy cities, Mecca and Medina, which occupy quite a special position in the Muslim world and will be dealt with in special articles. In addition to the coastal towns and al-Tawf already mentioned, the Arab geographers give the following, Kūml, Khādir (q. v.), al-Marwān, al-Hawwāl, al-Sayyād, al-Islām, al-Dhūfat, and al-Uqaylā (q. v. i. 10411) of minor importance. Khura, al-Dhījir (q. v.), and al-Shābīra (q. v.) are in the Dunayr region, al-Majāf, al-Safā, al-Khams, al-Inās, Džaiča, and al-Shābīra (q. v. i. 10411). Besides these, there is a fairly long list of names, which owe their fame to the circumstances that Islam has consecrated them — when they were not already sites of primitive cults other than through historical associations or as outposts of the sacred territory of Mecca. It would be useless to detail these here; when they are of sufficient importance for religious reasons they will be found either in the articles MECCA AND MEDINA or in special articles.

The population of al-Hijaz consists of Arab Bedouins except in the large towns where it is more or less mixed, particularly in Džaiča, less in Mecca itself. The old Arab tribal names Tāhmu, (q. v.), Awa (q. v.), and Karmāli (q. v. i. 10411), and Medina, Kūml (q. v.), in Mecca, have their place in history while Mīsīf (q. v.) and Hāshāf (q. v.) are still known as the inhabitants of Tāhmu and the southern Hijāz. We may also mention Bani (q. v.), Džaiča (q. v.), Bani (q. v.), Hāshāf (q. v.), and Hāshāf (q. v.).

The various pilgrim routes which meet in Mecca have lost most of their former importance with the development of steamships, which has caused the majority of pilgrims to travel via Džaiča, and will be still more deserted when the Mecca railway, which now runs from Dummuz to Medīn and reaches the holy city, F. M. Hartmann, Die Mekkabahn in Orient, Literaturzeitung, 1908, p. 1 sqq.

The history of the Hijāz is the history of Mecca and Medina so that the reader may be referred to these articles.

Bibliography: Cf. the notes above l. 3727 on the geographical literature of Arabia and also the bibliographies to the articles on MECCA and MEDINA. Of recent literature we may mention al-Insīwā, al-Ibn al-Džayyāt (q. v.), Cairo 1320.
HIDJRA ( hedja), the migration of the Prophet from Mecca to Medina, the starting point of the Muslim era.

The Prophet, not having succeeded in overcoming the resistance of the Kuraish and on the other hand having already won friends among the people around Medina (then called Yathrib), resolved to remove to the latter town. The Arabic word hidjra should not be translated "flight," for the idea of seeing is not properly expressed by the verb as used here. This term means "to break off relations, to abandon one's tribe, to emigrate." At the moment day in Muslim countries the name Makka further is still given to Muslims who have quitted countries in which Christian powers have become established. The word does not imply that there has been precipitate flight but only difficulty in living or repentance to living in the country abandoned.

Muhammad, according to Ma'mun (Tanbih), had ordered his followers to migrate to Medina; they set out in small parties. Among the first to reach Medina was 'Umar, afterwards Caliph. This migration had certainly been preceded by negotiations with the people of Medina, as Tâhir's Chronicle (Persian synopsis ii. 437 sqq.) relates. The Prophet himself set out accompanied by Abu Bakr. He left 'Ali behind to return some property entrusted to him by their owners. 'Ali remained three days behind in Mecca and then joined the other emigrants.

A very popular legend is associated with the Prophet's migration. The Kuraish wished to slay him and appeared the morning at his house; but they met only Ali who drove them back at the sword's point. They then rushed off to prevent Muhammad on the road to Medina. When the latter heard of this, he bid with Abu Bakr in a cave and God willed that a spider should spin it across the entrance to this cave. When the Kuraish saw the web, they thought it impossible that any soul could be inside and passed by. This story explains the allusion in Sûra iv. 79: "when the two were in the cave and he said to his companion: Do not afraid, see! God is with us." (Cf. H. Brunner, Le Burn de la Chaire au Benou, p. 61-68, and the parallels given there.)

Along the road the Anga came flocking up to the Prophet; they took the reins of his camel and begged him to settle among their tribes. But Muhammad answered: "Let my camel go; it is obeying God's command." (Cf. Mu'aw'ib, Précis d'E., iv. 139.)

The traditions regarding the erection of the first mosque and institution of the Friday service are also connected with this journey. The Prophet is said to have entered, the house of Sa'd b. Khaytham in Makka and to have had a mosque built there. He is said to have performed the solemn Friday service (jâhîd al-Din) for the first time with the Band Salim, whom he chose among them as his vizier. Arriving in Medina he took up his abode with the Anga Abi Aiyub.

Authorities are not agreed on the exact date of the Hijra. According to the most usual account, it took place on the 10th of Rabi' I (20th Sept. 622). But this would not be the date of the departure from Mecca, but of the arrival in Medina. According to other versions, it was the 2nd or the 18th of Rabi' I, Al-Birrâni says that the Jews were just celebrating the Ashur festival (Day of Atonement) when the Muslims arrived in Medina.

The 8th was preferred as it was a Monday. According to a tradition, the Prophet is said to have answered when asked why he observed Monday especially, "on this day was I born, on this day I received my prophetic mission and on this day I migrated!"

The fixing of the Hijra as the beginning of the Musliman era dates from the Caliph Qutb. The traditions which try to trace it to the Prophet himself are devoid of all probability. According to another tradition, A. b. Onas, Abu Bakr's governor in the Yemen, was the first to use it, but the view that it dates from 'Umar is by far the most prevalent.

It is related in various forms that 'Umar after
having regulated the administration of finance and made up the registers and the levies of taxes found himself embarrassed about the dating, as he thought he was reproached for not dating at all. According to a tradition in al-Brutli, Abu Muzaffar al-Ash'ari wrote to him saying: "We are sending no letters undated!"* The Caliph discussed the matter with his officers and after investigating the custom of the Greeks and Persians it was decided to establish an era. Some proposed to date from the birth of the Prophet, but this date was not certain. Ait is then said to have proposed to take the Hijra as the beginning of the era, as it marked the date when the Prophet began to assume sovereign power. This decision was come to in the year 17 or 18, some however say 16, but the general view is the year 17.

Before fixing this date the Muslims gave their year names such as "year of the permission", "year of the earthquake", "year of the farewell", etc. (cf. al-Brutli, Chronology, p. 335). When Muhammad began his preaching, the Arabs were reckoning from the "year of the elephant".

The year of the Hijra was then chosen as the year 1; but as the calendar was already fixed by the Qur'an, the months were retained and Muham- ram was retained as the first month because business is resumed then after the pilgrimage. The era thus began, not with the day of the Hijra but with the 1st day of the month of Muhamram of the Hijra year. This first day fell upon a Friday and corresponded to the 16th Tammuz (July) 933 of the Seleucid era, and 622 of the Julian calendar.

**Hikayat** has had a varied history, of importance not only lexically but also in the development of Arabic literature. In Lane (pp. 618 etc.) the history is unfortunately confused, but when we turn to the native lexicons (e.g. Littain, xviii, 207, 197) we are met with the paradox that the meanings are not those found in the great mass of later Arabic writings and that the component later meaning, "story," "narrative," occurs hardly at all. The root does not come in the Kitâb (there bahash is common as a noun and ibn and nahhal as verbs) and see al-Shibli's al-Bahash, Sperger, Littain, 250 etc. and as used in traditions it means to imitate an action, mostly in a bad sense (Kitâb, loc. cit.). Hikayat is therefore "imitate" and from that all follows. In the first instance it is mimicking for purposes of amusement; the professional shikeet is a mimic. It is an imitation of speech may be reproduction, thus al-Suhayli says: "Hikayat is a reproduction from him the tradition." It can also involve simple resemblance as though one thing reproduced another by being like it; the meaning remains for at least the first four centuries of distinction lasted much longer. In the Kitâb (xiv, cent. 4. d.; quoted in Muhâjir Tobacco, l. 431) it is said of Allah since there is nothing like his speech; but see Balâdî on Kitâb, xxviii, 164 and Ibn Abî, abd al-Shâhâr, Fathâkht al-Hikayat, ed. Freytag, p. 108, l. 25. In the Suhârî (latter part of 14th cent.) narratives are bahash, sometimes qahash, and stories told for entertainment are annâ or buharât or nihâlat but never shikeet; see, for example, the well known passage on the history of The Story (pp. 324 and, cf. p. 313). Annâ, of course, may also be historical, e.g. al-Shibli's al-Bahash (p. 303, l. 9) while buharât has been, in the beginning to end, the broadest word of all, but it is not in the Suhârî means only a reproduction of a statement, a transcript, e.g. p. 275, l. 20: bakas bin shkeff, in other words, a transcript from the handwriting of..." l. 21, and hikayat hikayyân, "of which this is a transcript"—it may often be translated "statement," and is, in ara wa wa ta when there is nothing to the contrary. In House of Daghân (early part of fourth century) the usage of the root is the same, e.g. l. 17, l. 12, l. 64, l. 1, l. 65, l. 13, p. 207, l. 4 of ed. Gottwaldt, in the Aghâni (Abu'l-Furad) d. 356: hikayat, buharât and buharât seem to be used indifferently for narrations, but hikayat as in the Suhârî and in the Sunna, e.g. al-Tabak, l. 4, l. 20: hikayat maa sami ma l-Miskin is the hikayat of the hikayat of the hikayat, "this is a general reproduction of what I heard from Abu Bakr although the expression may not be exactly in his words." Yet the verb hikây occurs in the meaning "imitate." See vol. viii, p. 102, l. 7 and 40, where the verb and hikây come side by side, the latter in the sense "imitation." Apparently the noun retained the original meaning longer. In Mâshâdî's (d. 345-346) well known passage on the Nights (Muhrât), lv. 89 sq.: de Sacy in his Memoire on the origin of the Nights gives the passage in four forms: hikâyat is the word used for such tales; hikâyah does not occur. It may be said generally that the older translations of this word (e.g. by Gottwaldt, Kosegarten, Barbara de Meynard) are misleading. Thus in Mâshâdî, viii. to sq. it is mimicking that is meant and not story-telling. But when we reach Hariri (d. 516) hikây is used at the beginning of the Muhrât indifferently with hikâyah and bahash as the sense "to narrate." But he also (de Sacy, vol. ii, p. 419) uses hikâ in the old sense of "resemble" which later became so archaic that the commentators had to explain it. With Hariri the change of meaning is complete, and when we turn to the oldest Mus of the Nights both the Galland M. and first of the "Story of the Fisherman and the Jinn", t. 4914 cent. A. D., after A. H. 700, we find hikâyah in normal use for a story told for entertainment. See Seybold's Geschichte der von Sult u. Schwant, p. 164, and my "Story of the Fisherman and the Jinn," in the Noldeke-Textuarist, passim. Of the words for such tales used in the Suhârî and by Mâshâdî, annâ has fallen back to its original use of conversation and tales told at night in the desert life, and buharât has developed to mean only ridiculously impossible stories, as opposed to those which are fictitious but pleasant; thus in Dâmiyâ's al-Hikayat al-Rasûliyya, t. 185, l. 31 of ed. of Cairo 1513; buharât al-bahash, and it. 101, l. 25, buharaft fî al-Tripîl, apparently is it still the normal word for "story," see Summa, Mœrchen aus Tripoli.

We are now left with two questions. Can this
change of meaning he in any way bridged and explained it. What must have been the character of the first ḥikayta in the new sense? There have always been stories in Arabic from those told in the Qur’an and the competing translations from Persian by Naṣr b. Yaḥyā (The Hakim, p. 91), to the modern ḥikayta or Märchen, told in colloquial and, as far as reduced to writing and print only by European scholars and some eccentric Egyptians and Syrians. The very multiplicity of names for the different kinds of the story shows how they have been cultivated and how keenly they have been distinguished. Some of these names have been given above. Others are ḥikayta which began by the oral recital of a narrative or a poem, by a ṣāḥib and has now become an ordinary word for “story” and the normal word for a play, comedy or tragedy, with or without sawt, seen (sawt), the story as an example or illustration of some situation or precept, e.g., Kātib ma-ṣūma and all beast-salād (sawat al-khatim al-ṣāfī), verse (sawt), “manner of life” and then “geography”; maṣanid, unconnected anecdotes; ḥikayta, a story of any kind but specialized by ḥikayta usage and that of the professional ḥikayt (see also, Muh. Studien, ii, p. 160, etc.) slight legends of the past and stories about the prophets. To these last the first ḥikayta formed an exact antithesis. They were not stories of the past but pictures of the present. This is made plain by the only example so far preserved, Ḥikayta Aḥ-bā'ān al-Baqi‘id, edited by Adam Men. by the title, Aḥbā‘ān al-baqi‘id. The author, Muhammad Abu ‘l-Mukhtār b. Aḥwad, shows in his prologue that he knows that he is producing a new literary form. It is not to be a poem or a ṣūma or a ṣawāfta (he must have known those of Hannāqī) but a realistic transcript of Baqi‘id manners and phrases in the persons of a, for so very disputable representative of those, however, seems to be regarded by the author as a literary refinement. Story, there is none, but a scene is filled with a dinner, party and with scraps of verse and of oratory prate in the current forms of rhetoric, but all concerns and direct, written not for the sake of playing with words but for producing a picture of life. The use of a single figure to mirror the ideas and ways of a city he defends with a long quotation from Dā‘ūd (Beauz, ed, Cairo, p. 31, l. 14—24) who seems to have been the first to have pleasure in pictures of classes of the people. Yet it is only a new application of the realism of the old story of the desert to the artificial town life, marked, however, with all the coarseness of language and ideas which distinguished the towns from the desert and the new from the old. Of the ḥikayta ḥikayta, modern probably as a contract, which the author says (p. 2, l. 16) he has added, we have no trace left.

But ḥikayta in the quotation from Dā‘ūd is evidently used as a name and not of a literary artist who creates a representative figure. The development which produced so making a literary genre as that of Abu I-Mukhtār calls, therefore, for explanation, and it would suggest that it was the direct influence of the Aristotelian doctrine of πραξις in art (Poetics, i—iv). Ḥikayta first entered into the literary scene of the Mamluks in the 13th century, but it is evident that the Poetics of Aristotle found their way only slowly. There was a Ḥikayta by al-Kindī (d. about 257) (Fīhirī, p. 35, 3 and 257, l. 6) but no full translation until that of Mattī al-Fārisī (d. 328) (Fīhirī, pp. 250 l. 4, 265, last l.) and his pupil Yaḥyā b. ‘Adī (d. 364) wrote a ṣawāfta in it (Fīhirī, pp. 250 l. 4, 264, l. 12). In that translation (ed. by Margoliouth in his Mamluk Orientalist) the word was used for ḥikayta. The conception of literary art as an "illusion" of life may thus, when translated into Arabic forms, easily have resulted in Abu I-Mukhtār's new literary type. The next development into "story" must have come very rapidly for we find that Ḥarīrī (d. 315) has forgotten so completely the earlier idea that he can apply ḥikayta even to such ḥikayta as the apologies in Kātib ma-ṣūma (ed. de Sauny, l. 13). When he applies in the same passage that his own ḥikayta are also ḥikayta he is much nearer the true meaning, for they are certainly renderings of contemporary life though dressed with artificial rhetoric and a playing with words for the sake of word-play. On this able they are the nearest that the Arabic of literature ever reached toward that life of the open road and of living by one's wits that is the mark of the picqueuse novel. But in popular Arabic the same mood was taken up and extended in such tales as the cycle that surrounds the name of 'Ali b. Ḥālī. On the picqueuse side these are true reproductions of life; there is an abbreviated recitation of them in the Nūrān and much longer, independent forms have been printed at Beyrouth and Cairo.

But before ḥikayta reached the possibility of being used for any story, it must have passed through a stage in which it became a fictitious story, not of wonderful happenings in the past or in distant lands or by the agency of the djinn and of talismans, but of such life as its readers themselves knew. Examples would be such as in the root Nūrān known as "The Hungarian" or, very differently, "Ali b. Bākīr and Shīma al-Nāsir." In this way a specifically new thing entered Arabic literature. There is no trace of it in the Fīhirī aspects on there is no trace of the beginnings of the ṣawāfta as developed later by Hannāqī and Ḥarīrī. We have some traces of people of professional entertainers (ṣawāfta, nūrān, pp. 154—155) of wonder tales, love-stories and stories of the djinn (pp. 304 sq.), but nothing which can be identified as belonging to this particular genre. To Abu I-Mukhtār, the author of the ḥikayta, a Märchen, in Wattenfeld's text (iv, 491) describes a "Book of ḥikayta," but this also has a root ḥikayta, tawārīkh, (Koszegarten, Poesie von seinen ed. of Al-Kindī, p. 166, and so, desire, Wright, Chevaliermarch, p. 87, l. 11 from the autograph Ms).

We have thus the appearance, practically at the same time between the fourth and the fifth centuries of the Hijra, of two new forms which in their beginnings were closely akin but which quickly separated into two widely different types. The first was the first practically of a ḥikayta in the original sense, and the second, of Abu I-Mukhtār is practically such a monologue, though not one delivered standing as was the ṣawāfta. But to Abu I-Mukhtār his new form was distinct from the ṣawāfta and was rather a development from the minute ḥikayta. The intention in the two forms was different and the difference is expressed...
sed in the names applied to them by their au-
thores. The ṣahāma was an oration and therefore
ran out in rhetoric; the ḫāsya was a reproduction
and therefore turned to action and life. The
latter transformation must have been aided by the
rapid development in the spirit ḥāf of the mean-
ing "arrange". So ḥāfūn means "public story-teller" and ḫāṣya came to be applicable to
any tale, while still retaining even in the collo-
quial (see Dey, sub voc.) the possibility of the
original meaning. And probably even in the ḥāfūn
there is in some feeling left of the mimicry,
as the oriental story-teller always acts out his
tale. Yet the terms are sometimes curiously con-
 fused. Thus in ʿAznab al-ḥāfar waʾl-mawāniʿ (Al-
ṭabrīzī Khwānaʾ t-Qādī [date?] there is (pp. 52–55
ed. of Cairo, 1305) a short realistic story fi
ṣahm al-nāšīa which is called a ṣahāma.

Only one consideration remains. This develop-
ment has been conditioned and limited by a con-
tant factor. The professed litterateur, at least in
Arabic Islam, has always, with few and individ-
ual exceptions, looked down upon the story and
refused to recognize it. He has never condescended
to a narrative of fictitious facts and events told
for its own sake. Such he left to professional
entertainers, buffoons and the vulgar in general.

The ḥāfūn, therefore, is recognized as forming part of
polite literature have been those with an ulterior
object. They have been apologues, or more cor-
rectly, as in Ḥalil wa-duḥma, Fīḥāt al-ḵāfūf, Sal-
maa al-Maṭāʿ, and the like; or simply vehicles for
poetry and rhetorical prose, like Lūwaṭ al-Shahīd
and the whole range of ṣahāmāt; or collections of
historical and literary anecdotes like Iʿlām al-
Nawāʾ, al-Fawāyih hāʾd al-Shaṭārī and Ṣawārīn
al-Shaṭārī; or stories with ethical or mystical
purpose, as Ṣawāna wa Ṣuḥrat as-Saʿāda and Ṣawān
al-Bayhāqī of Ibn Sinā and the Muḥāfiẓa of Abū
er-Raḍā of Crete. Yet Muslim writers were early in contact with
stories in good literary standing which came
from outside Islam. They had translations of
Greece romances and of Persian and Indian
tales (Fīḥāt, pp. 306 sq.; Ḥamza al-Ṭabīb, p. 41 sq.). In the time of the compiler of the
Fīḥāt, also it was evidently possible for an
author able to write stories; on p. 306, ll. 9 sq.
he gives the names of several. See, too,
(p. 304, ll. 21 sq.) how Ḥusaynīy al-Aṣlahi, a writer
of distinction, could occupy himself with the
completion of a collection similar to The 1000
Nights; and a brother of Shiʿā could transcribe
it. But the popularity of such things under the
Abbasids was so great that the numerous took
to writing them and that naturally affected
their standing (p. 308, ll. 9 91 sq.). The relation also
to the professional jester and entertainer was
too close; see on them pp. 140 sq. and especially
on Abū Bakr al-Anbarsi and his standing, partly as astro-
nomorum and partly as author of al-Mawāzak and
purveyor of ʿād literatūre, p. 151, ll. 23 sq. sq.
So stories tended to be anonymous and to be con-
sidered with dubious subjects — stories of the ʿab-
dān, of Dīṣān, of ṣahm (pp. 311 sq.). This is
well illustrated by The 1000 Nights. We have
there stories showing in their structure a technical
skill beyond any public writer; but they are
as anonymous as Mārīn; their authors did not
dare to own them. Such are "Kūmar al-ʿAzam
and ʿĪsā", "The Three Ladies of Baghdad", "The
Three Apples" and the realistic novels. The
romances of chivalry, on the other hand, in so
far as they professed to be biographies (ṣawārīs)
and not ʿabādan, required the support of the
authority of named authors, but the names given
are usually unknown to us and probably always
false; cf. above ʿAznab, p. 380 sq.;

The above holds of Arabic-speaking Islam. In
Turkish, apparently, and still more in Persian,
stories retained a position of higher literary esti-
mate and were treated with greater care as to style,
although there also they tend to anonymity. Fur-
ther, the Türkī ṣahāma corresponds closely to the
old Arabic ḫāṣya, and in the modern de-
velopment of a new Türkī literature the art of
the ṣahāma is influencing the realistic novel. For
many specimens of ʿabādan-stories — strikingly
resembling in type the ḫāṣya of Abū Ṣaʿīdarr-
— see Georg Jacob's Türkische Bibliothek, passim,
and on the whole subject the introduction to vol.
I, 6 sqq., and Paul Horn, Gesch. d. zuhr. Mod.
äm., pp. 12 sqq.

Bibliography has been given in the course of
the article, but the first reference must always
to be the Einleitung zu Abū al-Qāsim. (D. B. Macdonald.)

The Encyclopedia of Islam, II.
HILĀJ (or HarīlKhājī), a Persian word adopted into Arabic, an astrological aspect, associated with šarmūdith by Ibn al-Kūnī (died 284 = 901) in a celebrated verse. According to the Bahkālī fitrā dī, it is derived from the Greek, meaning "earth of life." By its assimilation to Ḥullāj, the word has given Ṣāhī a title for his Hājdā-Namā, a long Persian poem, which describes the ideal of mystic union in the form of the story of a martyr.

HILĀL, an Arabic tribe belonging to the Ma‘āshid (Jumā’id) group. Its genealogy is Hili al-Abbās, ibn ibn Ómār b. Abu Ubayd b. Mu‘āwiyah b. Abdullah b. Harāz b. A‘īm. According to the Umayyads, they worshipped at Falata the idol Khalaqa, called the Ka‘ba of the Yemen, which was also worshipped by the Badīlī, Ḥādī and the Khāthāmī, who were their neighbors on the Yemen coast.

They lived in Najd on the Yemen border and were neighbors of the Sa‘ūdīs (q.v.). The following places belong to them: al-Abbās, al-Kūnī (with the hawār of the Bani Hili), al-Nufīk, al-Kusaiq (the latter two latter were already ruined by Mas‘ūd’s time), al-Mawār, al-Maz’ā, and al-Nu‘mān (near Mecca, very fertile); also, the Banū ‘Abbās and al-Banū ‘Abbās (al-Maz’ā), and al-Khāla. There were also many Khili at Bahṣ (q.v.). According to Hamdī, they spoke good Arabic.

Historical: In the pre-Mu‘aṣṣamīdd period, ‘Abbās b. Mālik, chief of the Hili, on a raid south of the Asf, the chief of the Asf, the poet Ḥāfṣūn, then made war on them and took many of their horses. On the death of al-Wathīq (al-Watādī) between the ‘Abbās b. Sā‘ī’s and the Tama‘ūn, the Hili fought on the side of the former and lost nearly 300 men. During the Ḥijrī (q.v.) battle between the Kurfān and Khánā, on the one hand, and the Hājdā on the other we find the Hili on the side of their kinsmen, the Hājdā (q.v.). Just before the conclusion of peace between the Hājdā and Kurfì, the tribe of the Hili, a tribe related to the Hājdā, they made a raid upon the Bani ‘Abd al-Qādir, a clan of the Khánā, and stole their cattle, under the leadership of Kafī b. Abī Zayd in conjunction with other tribes of the ‘Abbās b. Sā‘ī’s. When, after the conquest of Mecca by the Prophets, in 9 = 620, the Hājdā and the Hili advanced against Muhammad in Mecca under al-Mu‘āwiyah b. ‘Abd al-Mu‘āwiyah, the Hili also joined them. In the third year of the reign of the Abūhāsīrīn Caliph al-Wathīq (555 = 844-845), his general Būhār b. Khaṭṭār sent an army against the Hili, who were then with the Sa‘ūdīs, creating unrest in Medina, and had three hundred of the malcontents thrown into prison in Medina; they attempted to escape from here along with the Sa‘ūdī prisoners but were prevented by the Medina and, when they resisted, massacred to a man. The Hili tribes migrated to Egypt where they settled at first in the Nile Delta, but were later conquered by the Fatimid Caliph al-Ahmar (515-556 = 925-969) and forced by him to take up their abode in Upper Egypt, where they took the side of the Kharijīs. ‘Asīrī tells us in 797 that they lived in the Awāīn district in the province of al-Sa‘īdī; among their clans in Egypt he mentions the Bani ‘Abbās, ‘Abbās, Ḥūdīr, al-‘Abbās, al-qābā, Qurtāb (see Bibli.) p. 464 erroneously: Cora) and ‘Anis al-‘Abbās. In the year 444 = 1053, at the institution of the Fatimid Caliph al-Mustansir (437-438 = 1043-1044), they migrated to North Africa (Kairouan); after considerable fighting they conquered the ‘Abbās, the former governors of the Fatimid, then the real lords of the country. Many tribes in Africa trace their descent from Hili.

The Hili are a tribe of the Hili, in Africa and the wars which they had to wage during the conquest of the country form the historical background of a collection of heroic tales and love stories, the romance or rather epic, Sirār al-Hilāl (History of the Hili) which exists in two recensions (Sirār al-Qaswāwiyya and Sirār al-Hājdā) containing three cycles.

The first cycle describes the history (the Sirār proper) of the Bani Hili in Bilad al-Sawar wa-‘Ukhād. Two sons, Dībār and Dājbār, are born to al-Mundhir, son of ‘Abbās, by his two wives Hādīs and ‘Addās, on the same night. Dājbār goes off with his mother and afterwards becomes Su‘īr in Najd. — The ‘Imrān Hājdār and Rāhīm of the line of Dājbār rule in Bilad al-Sawar. Kūnī marries al-Kusaiq, the daughter of the Shefīr of Mecca, whom he had sided against the King of Rām. She bears him a son, ‘Abbās, who, after his father’s death, afterwards called ‘Abbās Zād (Zad), Hājdār’s successor in his son Sirhān (Darbār); the latter is succeeded by his son Hassan, who marries Khārīm, queen of the Yemen, after conquering the worshipers in the land of Hārālkhāt, against whose Khārīm he appealed for help. ‘Imrān is conquered with the help of ‘Abbās Zād and Hassan then goes with Khārīm to Bilad al-Sawar wa-‘Ukhād.

The second cycle deals with the migration (ribāt) of the Bani Hili to the land of Najd. A family drove from the Hili in Bilad al-Sawar to Najd, where they received in the most kind manner by King Dībār (Diyāsh, the line of Dībār) and their people, the Banū ‘Abbās, the Hili conquer the king al-Hājdār, who was chief of the seven rulers of Najd; Hassan, who marries al-Na‘īf, sister of ‘Abbās, then rules in Najd with vastal kings. A war breaks out between Dībār, who kills two of Hassan’s brothers, and ‘Abbās; Dībār submits andpeace reigns.

The third cycle deals with the migration of the Hili to the west (Zargārāt) and their wars with the Zanātīn Caliph in Tunisia. In 460 = 1069 ‘Abbās Zād with his retinue goes to Tunisia to seek a more productive dwelling-place on account of the famine reigning in Najd. ‘Abbās, the daughter of the Zanātīn Caliph, who falls deeply in love with
HILAL — HILF.

HILAL AL-SABI [See as-Sabi].

HILAL, the pan-name of BAKIR AL-DIN, of 
CAHALUYI origin and born at Astarniel he was 
educated at Hara\, and was patronised by 'Ali Shih. 
The fullest account of him is by Sin Murad who was a friend of his. (See Silvestre de Sacy in Not. 
et Extracts, ir. 285). The account there gives 
his begging to be put to death by a certain 
young man is not in the B. M. copies of the 
Tafhid Sizi and may be an interpolation. Hilal's 
best known poem is the Sizah al-Darwish (Sizah al-
Gusâi). It often criticises its morality, and 
Rica, II, 456, seems to take the same view, but 
Professor Ebsé claims it to be a spiritual poem, and 
has translated it into German verse: "Morgenland,
Staaten," p. 197-282. See India Off. Cat., No. IV, 785. Hilal was put to death as a Sufi heretic 
by 'Abd Allah (Shahd al-ainu's son) in 839. 
(1523-1533). Bibliography: Sam Margal biographies; 
Spruner's Cat. Libraries of the King of Oudh; 
Bühler's Memorials, trans. Erskine, p. 196, and 
Pavel de Courtenella, L. 414; Sazh al-Siyar, ed. Bouchay, 
Part iii., vol. III, 358, where he is called Mawilin 
Nur ad-Din; Kühn in Geschichte der Iran, Philologie, 
l. 228, 249, 256, 301. (H. Benoit). HILF (Ar.), a league or confederacy, 
originally of tribes or clans, which had previously 
formed more or less closed units. The ceremonial 
act by which the alliance was usually completed 
seems to have had for its object the unification of 
the previously separated groups. Cf. Juhl, Pedersen, 
Den Semitiske færd etc., Copenhagen 1912, p. 20, 
32-33 (German ed., Der Eid bei den Senzen, 
1914, p. 31-34), where it is made probable 
that the idea of "swearing" is not the fundamental 
notion in the act of "Eid," but has developed out 
of the notion of confederacy. The parties by the 
league, become, yu'daf (sing. yu'daf) to one another; a simple individual 
could also enter into a hif with a tribe. In that 
the conception of hif coincides often with 
that of gindol. Some confederacies are worthy of special 
mention, e.g. the Hilaf al-Mutashamun, the league which 
'Abd Manzir formed with several Kurâfîj clans 
against the 'Abd al-Dan, when the latter 
declined to give up their privileges. The same al-Mutashimun 
(but not the perfumed) is said to be derived from the fact 
that the confederates dipped their hands in a 
well of water (peroxide) at the ka'a and then 
rubbed the kaa. The Mutashmim are mentioned in 
a letter of Muhammad to the Kashâm. 
The 'Abd al-Dan on their part formed a league 
with other clans and were called al-Hif (Im 
Hisham, ed. Wustenfeld, p. 34, sq.; Ibn Katibah, 
Kithâ al-Mutawfi, ed. Wustenfeld, p. 394; 
Ya'qobi, ed. Houtouma, p. 287, sq.; al-Mas'udi, Paris 
edition, iii. 120 sq.; Kasem, Amali dell'Italia, 
I, Intro, §§ 25-27, ii. 1, annum 3, §§ 20-21 
and other sources and works given above). 
Hilâf al-Fulat was the name of a league of 
several Kurât clans and others, who banded themselves 
while being on behalf of those who were 
attacked unjustly. At the formation of this 
confederacy Zamaam water, with which the edges 
of the ka'a had previously been washed, was drunk. 
The meaning of al-Fulat is uncertain; the usual 
expanded explanations are given by the Arabic 
authorities. Muhammad is said to have been present 
at the conclusion of this alliance and to have 
expressed it very highly (this is also told of 
the Hilaf al-Mutashamun, e.g. al-Tahir, Tafihar, v. 35 
supra). It is related of al-Husain b. 'Ali that he 
only threatened the Umeyyi governor of Medine 
with the millstone of the Hilaf al-Fulat. (A'lam, 
vi. 65-71; Ibn Hisham, p. 85 sq.; Ibn Katibah, 
i.e., al-Mu'attali, i. 122 sq.; Kasem, o.c., i. 
Intro, §§ 146, 147). Cf. also the Kuhâ (Sing. 
Kuh), Kithâ al-Fulat, i. 1914, x. 2221, 76; Ibn Duraid, 
Kithâ al-Sonshin, ed. Wustenfeld, p. 111; Tledo, 
Casino, xx. 316, 37, cf. 394, § 203; Kasem, 
a.c., i. lib. 4. Ind., "the moudbelkks. (Zakah al-
Iams; Ibn Hisham, p. 133; Agliata, vii. 26, 28; 
Casem, o.c., i. Intro, §§ 150, 170; 
the Ajhikli (al-Ya'a's, ii. 258 sq.; Agliata, viii. 
76 sq.; Casem, o.c., i. Intro, § 305, and passim etc.,
A hereditary right of the halīf confirmed by ʿUmar iv. 37 (according to another view it refers to the brotherhood of the Muḥādhirūn and Aḥbār) was abolished by xxixii. 6, cf. al-Tahāri, Taṣfīḥ, v. 31—35; Th. W. Juynboll, Handbuch der islamischen Gesch., p. 229 note.

In his day, which was to make all its adherents brothers the halīf was condemned; the Prophet is said to have recommended the fulfilment of obligations of alliances contracted in the Dāhilīyya (cf. also al-Tahāri, v. 44, v. 34, v. 315f).

Stud., i. 63—69. (C. van ARNHEM.)

HILL. [See BAKL.]

AL-HILLA a town in the wilayat of Jība, capital of the sanjāj of the same name, with 30,000 inhabitants (Cuban), was founded in 495 (1010—1012) by ʿAbd al-Malik an-Naybī an-Naybī and given the name ʿAbdillah Bū Ṣayf al-Mālikī, after the date of the Bū Ṣayf by the Arabs; the site which has since been occupied by the famous city of Jība, ruins of which still exist some miles up the river. The river, which flows past the town and has since the 6th (vii') century been regarded as Enphrates proper, was regarded by the Arab geographers as an arm of the main stream and was called Nahir ʿāshār al-Asul. Even before the foundation of Jība, there was a flourishing city here named al-Ṣayf, on the left bank, while ʿAbd al-Malik built his town on the opposite side. The bridge of boats, by which communication between the two banks was carried on, soon became the main passage across the river on the road from Baghdad to Kīfī, which had previously led via ʿĀsī. Al-Hilla as a result rapidly began to flourish and down to the present day has always been a centre of great importance, from the military point of view also.

Bibliography: Yūnīs, Mandżīf, ii. 322 sqq.; Ibn ʿAbī, ed. de Goeje, p. 214; Ibn Ḫabībī, ii. 97; Ritter, Erkundungen, i. 783 sqq. (where the older travellers are given); J. Le Strange, The Lands of the East, Caliphat, p. 71; Cucinet, La Turquie d’Asie, i. 106 sqq.

AL-HILLI, ʿABD AL-ḤUSAYN B. SABER, an Arab poet, born on the 5th Rabiʿa II. 677 (28th Aug. 1278) at Jība on the Enphrates, settled at the court of the Urtuqīs of Mārīn and sung their praises. In 726 (1326) he went to Cairo to the court of al-Malik al-Nāṣir, but soon returned to Mārīn and died in 756 (1354) or 753 (1351) in Baghdad. As a rule he only followed in the footsteps of his predecessors in his various poems. Only in popular poetry did he introduce an innovation by inventing a kind of muwaṣṣah, called muwaṣṣah.

The collection entitled Ḥawāf al-Nahl, in which the fame of the Urtuqīs of Mārīn is sung, contains 29 poems each of 29 distichs, all of which begin with the same letter and end with the letters of the alphabet in order. A poem entitled al-ʿAṣhāf al-mukāla is devoted to the praise of the Prophet and was annotated by the author himself. The Kīrāt al-ʿAṣlib al-kabīr is a treatise on the metres of popular poetry called maddال, maddal, hamal, and hamā. Its halo was printed at Damascus (1497—1600) and Bābūt (1500); 8 poems in honour of Mārīn al-Shābī, Abu l-Makārim was translated by E. H. Bousquet into Latin (Leipzig 1816).

HILMEND [See HELMANN.]

HĪMĀL [See HAMAL.]

AL-HIMĀR (A.), the ãšāf Mālīkī and Ṣafwānī. The ãšāf (al-ḥālīf) and (al-ṣafwānī) are distinguished. Some of the same ãšāf are beasts of burden, others are not; many of the latter are very swift. The ass can instantly be raised by a road except that it has only traversed it once before; its hearing is keen and it suffers little from disease. The use of special importance in Persia, Syria and Egypt. Many Arabs will not ride an ass out of pride, and it is not considered proper to mention the ass by its real name in good society. Its bray is exceedingly repulsive; the dog howls with pain when it hears it. When an ass brays, it is said to have a devil; when a cock crow, it has seen an angel. If a stone be tied to an ass's tail, it will not bray. When an ass sees a lion, it stands still or runs at the lion; it is said to be afraid thereby. If a man is bitten by a scorpion, he should sit backwards upon an ass and the pain then passes to the ass. The uses of various parts of the ass in medicine are innumerable.

Wild asses are so like one another that no man can distinguish them. The ass is very jealous; when he sees a young male, he tears his testicles out with his teeth for fear he should cover a she ass, when he grows up. The she ass knows this and therefore shortly before foaling she goes to some inaccessible place and does not return to the herd until her foal has hard hoofs.
and can run swiftly. It is further remarkable that individuals never separate from the herd, even though there are thousands of them. Hunting wild asses is therefore very easy. The hunter hides in a narrow pass and waits till a wild ass comes along and then kills it. The others could escape if they fled back, but as they remain together, the hunter is able to sting as many as he cares. This however does not agree with the descriptions of hunting scenes collected by G. Jacob from the poets.

There is a breed called *Akhdaryán*, called after a stallion of *Klárás Ardashir* which bred with wild asses or those that had run wild. These are the finest and swiftest among wild asses. According to some authors, the wild ass renews his age at 200, according to others, 800 years.

(H. RUSKA.)

**Hims** (pronounced *Hαmμ*), is situated in the great Orontes plain of Central Syria, about a mile to the South of the Orontes (Nahr al-‘Az) on a canal connected with it. The town, which has 50,000 inhabitants (of whom 15,000 are orthodox Greeks), is the capital of a *Liwa* under a *kā‘īmumak̄im* and belongs to the wilayet of Damascus. It is connected by railway with Tripoli, with Hamah and Aleppo, and with Damascus via Rayyak.

Hims (called *Eμessia* by the Greeks and Romans; on the various forms see the article *Eμessia* in Pauly-Wissowa’s *Realement*.) is not one of the towns founded by the Seleucids; the town is first mentioned by Pliny; in the time of Pompey the adjacent Archia (Rostaan) was the seat of an Arab dynasty (see Marquardt, *Romische Staatsverwaltung*, l. 245). Eumess was the birthplace of the Emperor Elagabalus, who rebuilt with great splendour the famous temple of the sun-god here from whom he took his name, and furthered the prosperity of the town in every way by granting it privileges. In the Byzantine period also when we already read the name Xμασι, it was a flourishing city and the see of a bishop.

At the end of the year 13 the inhabitants concluded a treaty with the Arabs by which they paying a sum of money they secured peace to their trade. In the beginning of 14, with the help of a Byzantine garrison, they were able to ward off an attack on the town but it fell to the Arabs at the end of the year after a two months’ siege. They seem to have left the town in fear the next year, at least, it is several times said that it surrendered to Abu ‘Ubayda in 16 and received a grant of protection. On the division of Syria into military districts Hims became the capital of a *Qamid* (q.v.). It rebelled under Marwan II., was taken by storm and severely punished. As a rule the *Qamids* of Hims and Aleppo were administered by the same governor. We possess information on the revenues of Hims for various periods (cf. *Hαλας*). While the figures for Hims are wanting in the *Liýbάn al-Dawla* and in al-Mahdabīt, we still possess on *Yaţkeh* and al-Ishfahān’s figures. The yield of the taxes of Hims (cf. *La Strangue, Potestis under the Maḥdi*, p. 44-48) (recollecting the dinar at 10 millings) was:

a. for the reign of Harun al-Rashid (170-193), according to a quotation from al-Diyābīyān’s *Liýbάn al-Waṣṣā*, 350,000 dinars and 3,000 camelloads of dried grapes (the vineyards of Hims were famous and were only destroyed during the Crusades).

b. for the year 204 (Kudān’s *Kīth al-Shārāʾi‘*), 115,000 dinars (the same sum is given by al-Ishfahān, quoted by Ibn Khurūbūdīhīh).

c. for the year 205, according to Ibn Khurūbūdīhīh, 340,000 dinars.

d. for the year 270, 220,000 dinars (al-Yaţkeh, who wrote about this time,

The low figures given by Kudān, al-Ishfahān and al-Yaţkeh are due to a different method of calculating the revenue; they have perhaps deducted the salaries of the officials or other administrative expenses in their calculation.

Under the Hamādīd Sa‘īd al-Dawla [q.v.] Hims passed under the rule of the kings of Halab and was frequently granted by them as a fief. Among those who took it for the last time was a. Sa’d ibn Sa‘īd al-Dawla, who descended the town in 357, he granted Hims to his general Bakkhīrīr, who governed it. It was highly praised, a monument of architectural interest (with Kifī inscription) dates from his time. During this period Hims suffered from the repeated ravages of the Byzantines. In 473 it belonged to the notorius Belošin chief Khalaf b. Multīh (cf. M. Hartmann, *Zeitschr. d. Deutsch. Pal. Ver.,* xxiv. 46-60), who recognized the Fātimid-caliph as its overlord. Envaged at this and moved by the complaints of Khalaf’s subjects against his cruelty, the Saljūq Sultan ordered the Emir of Syria to take him prisoner. He was besieged in 493, captured and brought in a cage to Isfahān. Hims was granted to Sultan Tutush from whom his son Rūbnbīn inherited it. He granted Hims in 494 to his stepfather Ljāmsh al-Dawla, who was murdered by the Ibn Tūlun’s in 497. Later we find an Emir Karanqī who perhaps identifies his lord of Hārrān, two of Maškūh’s mamlūks. After his death, in 504, his son Kūhkān [see Hαμας] succeeded him and died in 523. His children, wife, still minor, suffered a great deal from Zangi’s efforts to conquer Hims, till their guardian, in 530, exchanged the city for Palmyra and Raيب with Shīhāb al-Dawla Malekīr, king of Damascus. The latter at first granted it to Seljuk to his vassal Onok, but after long negotiations finally transferred it to his stepfather Zhang in 532 (Onok received other towns in compensation). Nīr al-Dawla inherited it from Zhang and his son İsmā‘īl from him, till Saladin received it in 570. Forty years later he appointed his cousin Mālik as governor of it. With one interruption (it was taken by al-Nāṣir Vilāsin II of Aleppo in 646 and ceded to him, but seems only to have remained a short time in his possession), his descendants remained rulers of Hims till 661; they had readily opened their gates to the Mongol Khaṭīr Hūlamī. From 661 it was governed by deputy-governors, sometimes attached to Hams, sometimes to Damasc. In the 7th century on a right of a native family ruled there, independent of the Pağha of Damascus. In the 8th century Hims passed, like Aleppo, under Egyptian rule (631-1269) and it suffered much from the arbitrary conduct of the officials that a rebellion broke out, which was with difficulty suppressed.
Only a few insignificant ruins of the city wall (see plan) and gates survive, while of the citadel, which was destroyed by Ibrahim Pasha, a tower and an inscription of the year 594 of Saladin’s conquest, Masjid b. al-Shafak, and a gate still stand (see plan). The mosque of the great general Khalid b. al-Walid and his wife Fatima (pl. xx) has recently been rebuilt. (The valuable inscriptions were previously copied by van Berchem, Freiherr v. Oppenheim and M. Schorrenbergh.) A number of mills on the Orontes belong to Hims, of which one, as the Arabic inscription shows, belongs to the year 824 a.d. and another with Turkish inscription to the year 975 (N.B. this is the only Turkish inscription of this period in Syria). The most interesting building is the great mosque (pls. xx, xxv), in which half of the cathedral is said to have been incorporated at the beginning of the period of Muslim rule. Hereafter the building on the east side lies in the centre of the basin and is entered from the south of it. The main entrance, on the west side, leads through a vaulted passage into the court, and a side entrance on the east leads directly into the basin. The basin is an oblong space with two nave each with 13 cross-vaultings. There is a small dome above the basin and a small square, in the west is a second, older mihrab with gold mosaic, which seems to belong to the earliest Muslim period. The court facade of the mosque shows that the plan has undergone many alterations. This wall was apparently originally the wall between the main and side nave of a basilica church of quite an unusual type: a large arch alternating with 4 double-storied sections, each of 5 small arches. The columns and capitals of which many lie in the court of the mosque are remains of the ancient building. This court is oblong, surrounded by narrow aisles, quite unknown. An estrade with basin and mihrab almost fill it. Beside it, on the west, is a well with a cupola resting on six antique columns.

**Bibliography:** See the article HILAH, Epi- lography; some inscriptions have been discussed by van Berchem in *Inscriptions de Syrie*, Cairo, 1897, p. 54—60, and in Freiherr v. Oppenheim’s *Enchriften aus Syrien* etc., p. 4—13.

**HIMYAR,** the name of an ancient stock in South Arabia. The term Hemitait, or Qumran, in the classical authors suggests a diminutive form. The Arabic form now usual is found in Theodoros Anagnostos (16th century A.D.), *Hist. orient.,* ii. ch. 30 (cf. Niceronius Callistus, *Hist. orient.,* vi. ch. 37) in the form *Hemyretos,* or *Hemyretos,* who went to Aksum and South Arabia in the second century of Justinian, and following him, Walaids in the form *Arabian,* which goes back to the Ethiopic *Hemret.* The form found in inscriptions is *Hymiaretos,* or *Hymiareto,* and the plural *Hymietai,* which presumably is to be pronounced *Hemirates (an-*Al-) Hemirates.*

According to the Arab authorities, the Himyar, who were divided into a number of smaller tribes, lived around Labd, in the district of Zafar and Rada, and also in the east in Sarh Himyar and Wad Dhu Himyar. The Himyarites are first mentioned in *Adrian Gallus’* account of his expedition to South Arabia, in 45 B.C., preserved in *Pius, Hist. Nat.,* vi. § 161; with the note that they are "the most numerous tribe" (*omnem etiam suos*). According to Strabo, xvi. ch. 4, § 21, at the time of the Roman invasion Maribra, a large city, the capital of Arabia, belonged to Himyar, who ruled over the *Haimanites.* This statement most probably refers to *Teisharja Yahrib,* king of *Saba,* and *Dhu Rainda,* i.e. the Sabaens and Himyarets, who is known from inscriptions. When the anonymous *Peregriones* was written (about 70 A.D.), the Himyarets were the greater part of South Arabia, namely, the coast of the Red Sea and Indian Ocean up to the frontiers of Hadramawt, with the corresponding interior, including the land of the Sabaens; they also held a portion of the East African coast (Amalia). Their king Charsibell, the "legitimate ruler of the Himyarets and Sabaens" resided in *Zafar* (Zeer) in inscriptions; in addition to the form with *T-* *Tais,* *Taiss,* *Taif,* and *Taphra,* the spelling with *S,* *Sapprah,* is also found, in *Pius* and *Floianus*; *Ethiopian Zafar,* not to be confused with the port of the same name on the Indian Ocean, which remained the chief city of South Arabia after the Persian occupation. This ruler was on friendly terms with the Romans. He seems to be identical with the Arab *W-l W-l Yann* king of *Saba* and *Dhu Rainda,* of the inscriptions, names of whom are also known, struck in *Rainda.* The passing of the hegemony of South Arabia from the Sabaens to the Himyaret took place about the end of the second century A.D. and may have been partly brought about by the discovery of the sea-route to India by the admirals of the Ptolemies, whereby *Saba* lost its importance as the centre of the overland trade in South Arabia. Greek and Roman sources are alike silent regarding the further history of the Himyarets down to the 6th century; the inscriptions so far discovered give a series of kings' names but without precise dates. In the reign of the Emperor Constantine II. (337—261) Christianity was introduced by the Indian Theophilos, a native of *Dhu*; he built churches in *Aden* and *Zafar* and other towns; even at this time there were numerous Jewish communities there (Thalassostor, *Hist. orient.,* iii. ch. 4). According to another account in Theodosius Ammianus, *c.e.,* the conversion of the Himyarets did not take place till the reign of Anastasia (491—518). Of the second half of the 6th century the Byzantines, the *B-y-h-h-b.* the inscriptions, i.e. the rulers of *Abyan,* found a firm footing in South Arabia and Aethiopia, the king of Aksum, a contemporary of Constantius II., in his inscriptions included among his titles that of "king of the Himyarets and of Rainda." The Byzantine invasion seems to date back as early as the third century Marcomani (beginning of the 6th century) calls the Himyarets the "tribes of the Haimanites"; this is the usual form; and this description is often repeated in the older Byzantine writers. The Roman emperors were in regular communication with them (see *Zoeckler, Des Reichtums, Gewalt, Gesch.,* xxxv. p. 79): partly in the interests of trade and partly to secure their support against the Sabaens, who were endeavouring to penetrate into South Arabia through *Uman.* About 521 the native prince *Dhu Nuwa* (Dunnas, Dumna, Damanas of the Greek sources) aroused a serious rebellion against the Byzantines, *Dhu Nuwa,* who is said to have professed Judaism and to have organised the persecution of Christians in *Najran,* which has become famous through
the martyrology of St. Arzachs, fell in 536 in battle with Katsb Esh-Azychha, king of Aksum, and the land passed under the sway of an Abyssinian dynasty, whose founder, Ela-Abrahim, made himself independent of Aksum a few years after the withdrawal of Katsb Esh-Azychha. We possess an authentic source for his history and his relations with Byzantium, Persia and Abyssinia, as well as with the Ghasmids and other Arab princes, in the great inscription of Ma‘rib of the year 540, in which he gives an account of the restoration of the great dam. In this period arose the “laws of the Himyarites” and other apocryphal works, which are associated with the name of the 5th-Gen- gont, bishop of Zafir under Ela-Abrahim, and his successor (Migne, Patriæ Graecæ, vol. 86, 1, 326—784). In the reign of the Emperor Justin II, about 570, the Himyarite chiefs invited the Persians into the country. Mār Shônā, the last ruler of the dynasty of Ela-Abraham (corrupted to Smanakus in the Phoenician Byzantines), fell in battle with the Persians, who placed the country under military occupation, leaving the various districts (mubāhāt) under native princes. The Persian governors (marshām) resided in Sūnān. When Muhammad sent his first envoys to the Yemen, the kingdom of the Himyar, which had long ceased to exist and the new religion was adopted without appreciable opposition by the Himyar chiefs, as well as by the descendants of the Persians, the so-called ‘Abūt.

The inscriptions hitherto found in South Arabia in the local alphabet, which we usually call Himyaritic inscriptions, belong to widely varying periods, from about 700 B.C. to about 550 A.D. and only a few fragments among them owe their origin to the Himyar in the narrower sense of the word. Linguistically they fell into two main groups, the Sabaean and Minaean inscriptions; the Himyar texts belong to the former group. The only hitherto discovered — almost all silts — apart from the few of the earlier issues, are on the other hand mainly inscribed to the Himyar. The alphabet (called mawsil by the Arabs, which however in the inscriptions only means inscription), a variety of the Phoenician alphabet adapted to the Ethiopian, contains all the consonants of the Arabic language with the addition of a variant of the sibilant ʿ. The Sabaean-Himyar language is an Arabic dialect which is distinguished from northern Arabic by certain grammatical peculiarities (terminus instead of nomination, replacement of the article by the suffix ʾaḥān, ʾaḥān), in the verb form of the verb) and also in vocabulary. On the other hand the supposition of the Arab philologists that the later South Arabian dialects or even the dialects of Makla and Kāra are offshoots from the ancient language of the Himyar has proved incorrect, although they have preserved in their vocabulary many roots and words, which are not known to Northern Arabic, but which are found in the inscriptions.

Before the discovery of the inscriptions the accounts of the Arabs formed, with the scanty records in ancient and Byzantine authors, our only source for the ancient history of South Arabia. The rubbāt’s of the Yemen are already mentioned in the Qur‘ān and the kings of the Himyar were henceforth known in history by this name; we now know from the inscriptions that the kings of the Sabaeean and Himyar always called themselves markh and that rubbāt is a corruption of the name of the powerful family of Bata at the tribe of Hamelia. The same inscriptions teach us that the statements in the literary sources on the Himyar hāl and nāfi‘ (kings and feudal lords) are for the most part based on misunderstandings. The lists of kings handed down in this way to us, and the doings of individual rubba’t’s, are still more unreliable. In the Qur‘ān we find allusions to the Old Testament story of the queen of Sheba, to persecution of the Christians by Dibl Nuwa in Najd (not certain, see Z. deut. Arch., 132, 1935, 366), and to the expedition of a rubbāt against Mecca. At quite an early period the expositors of the sacred book and the story-tellers at the court of the first caliphs began to devote attention to the ancient history of the country (Hishāb, Kā‘a al-Ashàr, Wab. b. Manahih, Abī b. Shibay); although several of them belonged to Yemen, they made use of genuine popular tradition rather than of foreign legends, e.g. the Alexander romance and Jewish traditions, and added other matter of their own invention.

The last traces of this kind of historical research are popular works still eagerly read like the story of Bilgha b. Dhu ‘l-Karmain, the Siva Safīy b. Dhi ‘l-Fada, etc. The works of three natives of South Arabia are much more serious however: Abū Dhi ‘l-Fadl Himyar of Higlūf, the celebrated biographer of the Prophet, the Dhi ‘l-Fadl bin al-Abī of Najd, and the so-called ‘Abū Dhi ‘l-Fadl of Najd, the lexicographer Shams al-‘Aqna of Najd, (died 573); they relate the ancient mawsil, although their language was no longer entirely comprehensible to them, and used them in their genealogical and historical researches; how far they worked from old native traditions has still to be investigated, but in any case they were also independent of the scholars already mentioned. Only the information regarding the last century before Islam can be used for the writing of hismyr proper.

The Arab traditions have been collected by A. Schulten, Historia Imperii Persicorum, 2nd ed., Berlin 1798, and Caesar de Percy in his Historie des Arabes avant l'Islamisme, etc.

(H. H. M. B.)

HIND, daughter of the Meccan Ötba b. Kahi, of the family of Abi Shama, was related to the Hashimites. She was the wife of Abi Sufya, to whom she bore several children including Mu'awiyah, afterwards Caliph. Tradition seems to take a special delight in drawing an unusually regretful and no doubt caricatured picture of the short, stout woman, who certainly had a very passionate temperament. Her hatred of Muhammad was increased by the fact that Humma killed her father in the battle of Badr. With other women she accompanied the Meccans on their expedition against Medina in the year 3, and was one of the most ardent in urging on the men to battle; when Hamza fell in the conflict on the hill of Uhud, she is said to have mutilated his body and bitten his liver. When the Prophet attacked Mecca in the year 9, she stormed against her cousin and for seeing husband who wished to hand over the city without enduring a blow. According to some narrators, the Prophet on this occasion condemned her and a number of other people to death but afterwards purchased her; this is probably only a malicious invention, as other writers make no mention of it and in some traditions she makes a very stormy appearance at the paying of homage; it is moreover very improbable that Muhammad would have incurred by such an order the feelings of Abi Sufya, who had met his overtures halfway. Besides she had every reason to be mistrustful with the new regime, as her son was made governor of Syria, according to an old story, she took part in the battle of Yamnigh with the Aqaba tribes by urging on the Muslims to circumscribe with their swords their unceasing enemies. In the end Abi Sufya divorced her and she is said to have venglessly revenged herself by various intrigues. Some traditions make her die in the reign of 'Omar, others under 'Uthman.

HIND, the general name for India in Arabic and Persian chronicles and geography. The earlier writers generally make a distinction between Sind and Hind; the first being confined to the countries bordering on the Indus and Mahrar, and the other to India beyond the limits of the Mughal dominion. This is the use in Ibn Khordadhbih, Al-Masudi, Ibn Hawqal and Al-Biruni, and is clearest shown in Ibn Hawqal's map (reproduced in Elliot and Douwes, Vol. I., p. 32). In later times the name Hind was extended to embrace the whole of India, the term Hindustan being restricted to the Northern plain of the Ganges and Botiah and such is the modern use. After the invasions of the Chahruwids and Ghurids it became less usual to speak of Hind as a separate country, from Hind. The same Hind is originally identical with Sind, the Skr. hindu, hindu, meaning coming hindu in the Avesta, and having been first applied to the R. Indus was extended to the country adjacent to it.

HINDAL MIRZA, fourth son of Babisr, born early in 1319. His real name was Muhammad Abi Najar, but the name Hindat. "Taker of India" was bestowed upon him by his father who was then mediating the conquest of India. Hindat's mother was Dildar Begam, so that he was the full brother of Gulhammad Begam, the Memorieliterature. He proved unstable and foolish, rebelling against his elder brother Humayun, and had the fate of Ralib, brutally murdered in order to show his adherents that he would always be an irreconcilable rebel. He was killed in eastern Afghanistan in November 1554, in a night-attack made by his brother Khurram on Humayun's camp. By this time, Hindat had become reconciled to Humayun, and died, fighting for him. The good-natured monarch was inclined to lament his death, but Humayun coolly told him that he was revelling his own gain, for now he had one enemy the less (Beyand Baig's Memoirs quoted by Eckholm). Hindat was buried at Kathal, near his father. His daughter Rakhaya Begam was Abas's.
first wife, but had no children. She brought up Shah Jahan, and died in Agra at the age of 84 in January 1626. (Blochmann 309).

(H. Beveridge)

HINDI, a modern Indo-Aryan vernacular, descended from an earlier Prakrit, and comprising two distinct languages, 1. Western Hindi, spoken by more than 40 million of persons inhabiting the Gangetic Distr [o] and the country to the north of it; and 2. Eastern Hindi, spoken by 27 millions in Awadh (and throughout India wherever men from Awadh have wandered in search of employment), Baghelkhand and Chattisgarh. The chief dialects of Western Hindi are Hindumim [o] v. v., Bangari, Bradj Bhasha, Kanawadi and Budduti, and the first of these, under the appellation Urdu [u] v. v. has been extensively used as a literary medium by the Indian Muhammadans. The names of a few Muhammadans are recorded who occasionally wrote verses in Bradj Bhasha. Abu J-Paid (commonly known as Shikku Paidj), the friend of Akbar, and Fana's young brother, Fakhri, and Abu's great general, Khuda Khatun Muzir 'Abd al-Rahman, all wrote Hindi bhasha (see supra), but without the influence of the strong interest which the Persian took in Hindi thought and literature. Less illustrious poets of the same period were Salig Muhammad Ali Bijan (b. 1583), Saligj Bisham (b. 1573), who became a Vaishnav and was known by the name of Bshh Khun, and his pupil, Kadr Bhakhs. Such instances however are rare, and when Muhammadan poets, such as Amat Khurram, are said to have written Hindi verses, the dialect they employed was Urdu rather than any form of Bhasha. (Journ. As. Soc. Ben. XXII, 443). The legend that Sa'id ever wrote verses in Hindi has been shown to be without historical foundation (Journ. As. Soc. Ben. xlii, 513 et seq.)

Eastern Hindi has three chief dialects, Awadh, Baghelkhand and Chattisgarh. Works in Eastern Hindi by Muhammadan writers are rare; the most important is the Pandavmudd of Malk Muhammad Daulat, written in the Awadh dialect about 1442; it is a romantic epic founded on the story of the taking of Cittor by 'Ali al-Din Khilji in 1305; the poet himself explains that the story is an allegory of the search of the soul for true wisdom. Up to the early part of the nineteenth century all Hindi literature was in poetry; Hindi prose first took its rise under the influence of English officials, but the cultivation of it has been almost exclusively confined to Hindu writers and any account of it would therefore be out of place here.

HINDU KUSH, a lofty and extensive range of mountains which forms an extension of the Himalaya to the south-west from the region of the Punjab. It extends from about 75° E. and 37° N. to about 68° E. and 35° N. The continuation of the range farther west bears various names (Koh-i-

Baba, Sityah-Babak etc.) this portion being generally known to modern geographers as the Paropamisus, although the Paropamisus of the ancients did not include the Hindu-Kush. The name Causcasus was also used by the Macedonians, the name according to Arrimin being bestowed upon this range by Alexander's soldiers in his invasion. The north-eastern part of the Hindu-Kush rivals the Himalaya in the height of its peaks and the extent of its glaciers, some peaks being over 25,000 feet in height, among these Rakkipush south of Hunza and Tirinmir west of Cittor are among the best known. The extreme north-east Hindu-Kush at its point of junction with the Pamir forms the boundary between three systems of drainage, those of the Indus, the Oxus and the Turan, while further west it forms the watershed between the Indus and the Oxus, and can be traversed by several passes. From Hunza the Kikli Pass leads to Sirikkol and Yarkand, and also to upper Wakhran. From Yasin and Masttali the Bardphul Pass leads also to Wakhran, and other passes from Cittor into the same country. The most important pass from Cittor is the Dost Pass leading into Badakhshan by the Warduj and Kukha valleys, and the Mandal Pass gives communication also between Kafiristan and the Kukha valley. North of Kafir the best known passes are the Kwaial, Kaukaho, (or Ghurband) and BNmmen passes, by one of which Alexander crossed Bactria from Kafir and back again to that region on his Indian expedition. The central block of the mountains between the Kafir and Kamar rivers to the south and Badakhshan, up to the high range between the Mandal and Kawkaw Passes, is occupied by the wild and inaccessible country of Kafiristan. This has now come under Afghan rule since its conquest by 'Abd al-Rahman, and the countries of Badakhshan and Wakhran to the north are also under the same rule, but in the north-eastern part of the southern slopes Cittor, Ystin, Hunza-Nagar and Gilgit are politically attached to British India, and the Chinese empire embraces the northern slopes from the Pamir to the eastward. The pass of Birmen was traversed in the 7th cent. A.D. by the Chinese pilgrim Hsuen Thang who saw the gigantic Buddha figures on the faces of the mountain. Travellers have found still in existence. Inhabitants of India and Afghanistan have usually preferred the easier route over the pass near Kafir, but the passes near Kafir have been used from time to time. Thumr travelled by Birmen on his return from India. Birmen came from Kandahar to attack Kafir in 910 (1504) probably by the Kandgian Pass, and Humayun followed the same route in 1533 (1547). Shah Jahan's army under Kadjia Mughal, Singh met with disaster in crossing the Hindu-Kush to attack the Urganc in 1056 (1645), and tradition ascribes the same Hindu-Kush "Hinduslayer" to the lovers undergone by his Rajput troops. A few years later, the latter had experienced great hardships in his retreat from the mountains in the same region and lost 5000 men. Birmen gives a fairly minute description of the Hindu-Kush passes in his memoirs. He came into Ghurband from the Achdarus valley, evading the army sent to watch for him in the Pandjshir valley, by which he would have come out of the mountains if he had made use of the Kawkaw Pass. It may be added that Birmen uses the name Hindustan which proves that the legendary ex-
planning of the word mentioned above is without foundation. In more modern times these places have been frequently traversed by Afghan armies. At last, the capital of the kingdom of Kafiristan, was discovered. Accordingly, to Burns the name Hindi-Kash was originally used for one peak only, which is visible from both Kutil and Kunduz.

HINDUJASTAN. [See DETAILE.

HINDUSTANI is the name given by European scholars to that dialect of Western Hindi (q.v.) whose original home is the Upper Gangetic Doab. As this dialect was in general use in the neighborhood of the city of Delhi at the time of the Muhammadan conquest, it came to be adopted by the invaders as a lingua-franca, and was by them carried into all these parts of India to which the Muhammadan rule prevailed. The various forms of this dialect are by native authors called by different names, but as employed by the Muhammadan invaders it was called abdul-urdhi (the language of the camp) or wutu-mūduli al urdu; or, on to the original dialect as they found it. It was used by their Hindus subjects, they gathered a vocabulary which was to a very large extent Persian, with a certain admixture of Arabic and Turkic words. As thus modified this dialect is known to those who speak it and write it only by the appellation Urdu, the (the name Hindustani never being used except under European influence); the reader is therefore referred to the article Urdu for an account of the language and literature.

HINGLĀDI. A shrine of great antiquity situated in the western part of the state of Las-Bela in Balochistan on the river Hingal not far from its mouth. It may possibly be the temple of Mathura mentioned by the Chinese pilgrim Hsian Tsung in the 7th century as existing in the principality of Afsiyastaka (Las-Bela). In modern times it is a Muhammadan shrine and Hindu temple of Durga, the consort of Siva (Mahadeva). The Muhammadan dedication is to Bilal Nās, a female saint who is venerated in other parts of Balochistan, and whose mausoleum, with some probability, identified with the Nara of the Kushtan mentioned in the Asfihats of Babylonia. There are said to be figures carved on the rocks in an inaccessible site.

(M. LONGWORTH DANIEL.)

HIPPOKRATES. (See DEMOCR.)

AL-HIRA, the capital of the Lakhmid kings. 3 Arab miles south of Kafir, an hour’s ride southwest of Nadjar (Meshhed ‘Ali), on the lake of Nadjar, now almost dry, close to the edge of the desert. The name is Aramaic (corresponding to the Syr. ḫirā, and Heb. ḥephy) and means literally a “camp,” but was transferred as a proper name to the permanent camp of the Lakhmid chieftains under Persian sovereignty, from which the city gradually developed. The date of its origin is unknown; it was occupied by the Arabs in the time of Nebuchadnezzar, cannot be accurately fixed; bishops of al-Hira are mentioned at the synods as early as the beginning of the 5th century a.d. For further information see the articles LAKHmidd and MARDIOMMA (now found in inscriptions, see *Pliny* *Egrium de Vetu*, p. 389, 469-479). The situation was a favourable one as the country between Kafir and the Euphrates was intersected by canals and rich in cornfields and date-grounds. The air is also celebrated for its salubrity. Among the inhabitants, as the mention of bishops shows, there were a number of Christians who professed the Nestorian creed. Among them were the family of the Ifra-poet Abd al-Salih. The Lakhmid princes themselves were strongly attached to Christianity and, Hindi, the mother of king Amr (reigned A.D. 550), founded a monastery in the city. Near Hera were a number of strongholds including the “white citadel,” built by a Persian king, Ibn Bukhārā’s citadel and the citadel of the “Abādas of Kafir; cf. also the article AL-BAWANNA. Among the products of the city the sardines of al-Hira are mentioned by the ancient poets (Ibn al-Kais, 4, 5; Nābigh, 5, 13). The town had reached a certain stage of civilization and poets gathered eagerly round the court of the kings. Tradition also relates that the art of writing was well known in Hira and spread from there to Arabia. After the death of Naṣir illness (603) the Persian kings incalculatively abolished the system of Lakhmid vassals and placed Persian governors in the city, to whom the Arab princes were not wedded. This was still the arrangement in 634, when Kifāth attacked Hira at the head of the Muslim army. The town surrendered without a battle and pledged itself to pay a considerable tribute. Its importance henceforth ceased, although it existed till much later and is occasionally mentioned. The “Abādas did not choose it as a residence and the rest of Kafir threw it more and more into the background. The Caliph Hārūn al-Rashīd however made a short stay in Hira and erected buildings there, but this aroused great resentment in Kafir, so that he left the town. Under Mākhtūd (906–932) it suffered like the rest of the ráj from the raids of the Bedouins, so that the government had to send an army thither. In the last half of the 10th century, it is described as extensive but thinly populated. The decline of the whole district afterwards affected Hira severely so that in the end it utterly disappeared from the face of the earth.

Its site is now pastoral land where only a few low mounds and heaps of ashes recall its past.

Hīrā (also written Hurā, and without hārā), a mountain some three Arabian miles from Mecca in a N. E. direction, facing Thābit [q. v.], so that these two are often mentioned together, and sometimes compared to two waves of the sea. Both were without water or vegetation rather than a few thorns. Hīrā is higher than Thābit, and is crowned by a steep and slippery peak, which the Apostle with some companions once climbed. Muhammad was in the habit of staying here with his wife, and it was in a cave of this mountain that he received his first revelation. Hence the present name Djabal Nūr. The cave is still shown. On his return from al-Tāif Muhammad also hid himself here until he could enter Mecca.

HISĀB OR HISSĀB (Arabic) is the name given by the Arabs to the whole field of arithmetic, algebra, also as-hisābī, is the calculator, mathematician. Arithmetic was one of the four preponderant or mathematical sciences (jilīm al-riyāśa or ṭaḥīṣiya), which, as in antiquity, comprised arithmetic, geometry, astronomy and music. It is divided into two parts, theoretic or speculative (nuzari), which was sometimes also given the Greek name arithmētikē, and is essentially based on the vi-s. books of Euclid, and practical (muqaddami), arithmetic proper.

About the year 770 Hindu scholars brought, along with their asthāñcās (astronomical works), arithmetic, etc. to the court of Baghdad, notably the Hindu numeral system with the zero (Sansk. - 'Sunya, Arab. 'ain). It is empty. Recent researches (cf. F. Nau, Notes d'Astronomie syrienne in the Journal Asiatique, 3d. ser., Vol. II, i, 572 sqq.) however make it possible that a knowledge of the Hindu numerals with the zero had reached Syria even earlier, and that the Onayya conquerors of North Africa and Spain perhaps brought the older so-called Chitties figures (as-Arabic = dust, on the counting-board) to the west from Syria, before the newer numerals spread in the east from Baghdad.

But although these Indian numerals were known in certain circles of the learned, the great majority of Arab mathematicians and astronomers were reluctant to have anything to do with this ingenuous Indian invention, just as at a later period in the Christian middle ages the Arab numerals made very slow progress against the Roman. The majority of the authors of Arabic arithmetic in the 9th century still wrote all the numbers out. Among the representatives of this conservative school we may mention al-Kaṭib (Abū Bakr Muhammad, a. 970–1036) with his al-Kaṭib fi-l-Ḥisāb (the essentials of arithmetic); there is a manuscript of it in Gulben, of which A. Hocchheim has published a German translation (Halle 1878–1880). Others, especially the authors of astronomical tables, made use of the old Semitic and Greek practice of using the letters of the alphabet as numerals (Arab. = ḥisāb al-Djumma), cf. the edition of al-Batūnī's treatise by G. A. Nallino, 3 parts, Milan, 1890–

As a champion of the use of Hindu numerals in reckoning we may mention Muḥammad b. Ṭūsī al-Kaṭārī (780–850), the author of the oldest Arabic arithmetic known to us. His work is in translation however as well as of the oldest work on algebra and of the oldest astronomical tables. This arithmetic was translated into Latin, by whom is not known, and this translation edited by R. Boncompagni, Trattati d'Arithmetica, I, Rome 1857. Among these uses of Hindu numerals was a contemporary of al-Kaṭārī, 'All b. Ahmad al-Nahawī (c. 930–1040), who wrote al-Mujaffa fi-l-Ḥisāb 'al-Hindī (the satisfying (account) of Hindu arithmetic); this work has not yet been published in its entirety; on it cf. F. Woepcke in the Journal Asiatique, 1853, 1, 492 sqq. and N. Sturte in Biblioth. Mathemat., 3d. series, Vol. VII (1896), p. 113–119. In these two contemporary works, the KFμfi and the Mufāsir, the two schools of arithmetic were striving for supremacy; it seems that in the east the Hindu arithmetic was for long neglected while in the west it was able to hold its own.

Of arithmetical works by Arabs of the west, we may mention the Kifāh al-Saghir fi-l-Ḥisāb (the little book on arithmetic) by Abū Zakariya Muḥammad al-Ḥaṣāri, who probably lived in the 12th century, of which the present writer has published a translation of the most important sections in Biblioth. Mathemat., 3d. series, Vol. II (1901), p. 13–65, in the Taqrib, synopsis of the proceeding work by Ibn al-Batūnī (c. 991–1037) of which A. Marre has published a French translation (Rome 1865), first appeared in the Atti dell' Acad. regina, de Nuovi Lincei, Vol. XVII (1864); lastly the Kafṣa al-Aʿrābī’i wa-ʾin al-Ḥisāb (revelation of the secrets of the art of the Ghubāri) c. o. of counting with the numbers used by the Arabs of the west) by Abu T-Wahab “Alī al-Kaṣṣārī (died 1346 in Tunis), of which F. Woepcke has published a French translation in the above mentioned Atti etc., Vol. XI (1859); it was published in Arabic in Fez in 1313=1897 and 1898.

We cannot here go into details of the methods of counting as space is limited but shall only emphasize a few points that differ from the procedure. We may first mention that Muḥammad b. Ṭūsī, unlike the Hindus, begins addition and subtraction on the left hand side; the expanse of the left hand figures required for this purpose was facilitated for the Arabs by their custom of counting on the dust-board; al-Ḥaṣāri also still begins subtraction (not however addition) on the left; al-Kaṭārī was the first to begin both operations on the right; it thus required six centuries for the simplest and most natural way entirely to supersede the others, but we do not doubt that in the internal practical arithmeticians had here and there adopted the natural way.

Al-Nasawi still did not use a horizontal line to indicate fractions being content, like the Hindus, simply to place the numerator over the denominator; al-Ḥaṣāri was the first to write fractions in our present form with a horizontal line. — Astronomers in their calculations chiefly used exponential fractions as the Babylonians and the Greeks had done before them; e. g. 35° would be written thus: 3 parts, 37 min. 30 sec. (3°, 37°, 30") L.n. = 3 + 37' + 30"
The square root was extracted in the same way as at present; the Arabs expressed surds approximately in the usual fractional form, as they were not yet acquainted with decimals. A sign for the square root is not found till al-Kalājī, who uses the initial letter of ḥabīr (= root) for it.

The Arabic arithmetics also contain applications of the principal operations to everyday and commercial purposes, and even to geometry also, i.e. calculation of areas and volumes. — To the domain of the theory of arithmetic, that equally included in the practical handbooks besides the treatise of the correctness (proofs by casting out sevens and nines) of calculations, summation of arithmetical and geometrical series, of square, cubic and biquadratic numbers, the theorems regarding perfect and related numbers, etc.

We cannot here go into any details of certain branches of arithmetic like ḥüsūs al-khazānī (regular hexagonal columns), ḥüsūs al-arhab wa la'ānār (calculation of drachmas and dinars) etc., which in any case belong rather to the realm of algebra. Finally, we have still to mention that the Arabs, besides computing on paper or on the dust-board, had a system for doing the four operations with the hands, fingers or "ain" (ḥüsūs al-ayn or al-hand). There are a number of MSS, in existence on this form of computing, cf. Suter, Die Mathemat. a. Astronomie d. Araber, and Nachträge (Abhandlungen u. Gesch. d. Mathemat. Wissenschaft, 3, 203; zur, 181), and the review al-Maghīṣī, ii. 1900, p. 171-174.

(H. Suter.)

**Hīṣār** (a. Hīṣār), castle, fortress, citadel (from the Arabic ṣaqr, to compress, to surround in order to capture; ṣābur to enclose, to besiege).

Anādūlī Hīṣār is the name of the fortress, now in ruins, built by the Ottoman Sultan Bayzāz I Vildır in the Bosphorus between Kanadli and Gök-Sür ("the sweet waters of Asia") to facilitate the siege of Constantinople; in conjunction with Rumeli-Ḥīṣār, which Muhammad II built in 1452 opposite it, it completely commanded the passage and the latter actually earned its name Boğaz-Keşan (throat-cutter), (see Séneb, p. 757).

This is further found as a component of many place-names in Asia Minor: Kar Hīṣār, Sayyāb (the minister's black fortress), official name of Afyûn Kar Hīṣār in the province of Kindsawargyur, Şahîn Kara Hīṣār (black alpine fortress) in the province of Trangepent, Aidun Gözal Hīṣār (the beautiful palace of princes Ahlim) the ancient Tralleis; Aq Hīṣār (white castle), Thaylira in Lydia; Arab Hīṣār (Arab fortress) at Alaham, Kar Hīṣār (Rumi castle), near the salt lake of Turgut, near Aş-Serê, Kilia Hīṣār (Church fortress), both of Nigde on the site of Tyana; Kara Hīṣār, Lüle, a village in the ṣaqṭ of Düzeyit (sandjak Kanişışar, province Augurs) between Nigde and Kaniş; where may still be seen the ruins of an ancient castle, called Zeydeli; Eski Hīṣār (old castle)

is a village with ruins at Gezinc, the ancient Lydian; also the site of the ancient Labida, ad Lycaum, north of Deilisî; Hîşâr aqţî (little castle) is a village in the naghô Aba-tam (ţâbiţe Bitrâ, sandjak Sümûû, province Traperzou); lastly Hîşâr aqţî, in the sandjak Bûrûû, marks the site of Troy.

**Bibliography:** Ali Edwâd, Lughât-i-Isârî, pp. 329, 330, 603. (Cl. Hinter.)

Hīṣār, Russian, Hisar, a district in Bukhârâ. The capital of the same name lies in a fertile and well-tilled, but damp and unhealthy area on the bank of the Khaba which forms a narrow ravine. Cf. the view of Hisar in Fr. x. Schwartz, Turkistan, p. 253. The site of the town approximately corresponds to that of the Shomân of the Arab geographers, cf. Amât-Dârâ (l. 3400). The name Hisâr-şâhîmân or simply "Hisâr" is first found in the history of Timur as the residence of one of the most powerful Turkish-Mongol kings who divided the country among themselves during the troubled times that followed the death of the Emperor Kâshân (759 = 1358) (Zafar-nâmeh, ed. Serêg, i. 188), under the name of the Russian leases (p. 157). Under the Timurids as well as under the Uzbegs Hisar owed its importance to its being a strong fortress and the residence of actually independent kings or chiefs. The area ruled from Hisar attained its greatest extent in the second half of the xi(5) = xvii century under MahmodMirzâ (son of Sultan Ahî Sabî, cf. l. 195 sq.) whose kingdom included all the lands up to the Hindû-Kush (Bûrûûnamûh, ed. Beveridge, fol. 269); yet even in the time of the Timurids Hisar was considered a small and poor country (ibid., fol. 567). On the great misfortunes, which overtook Hisar during the last battles between the Timurids and the Uzbegs (only 60 men are said to have left out of the population of the town) cf. the account of the battle, transcribed by E. D. Ross, p. 262. When the kingdom of the Uzbegs in Mâ warâ al-Nahr had collapsed after the decline of its first dynasty (cf. Kurân al-Allâm, i. 255), Hisar passed under the sway of the Turkoman tribe of Viz. From the beginning of the xvii century till 1659 the rulers of Bukhârâ were only able to enforce the homage of the Beg of Hisar by force of arms and for brief periods at a time only; only under Russian suzerainty did the Emir Muxâfîr succeed in breaking the power of these semi-colonial rulers and permanently unite the district with Bukhârâ (cf. Bukhârâ, i. 255). About the middle of the xvii century the inhabitants of Hisar, as Muhammad Wâs Karmang (Timur-âdâr-i Kâmî, Mu. al Arsik, c. 281), in i. 1665 tells us, began at the village of Mr Şahî (in the valley of Sorkhan: in the xiii century district farther to the west, like Bâsân and Shîrâbâd were also reckoned to Hisar; in the south, besides the ancient Çaghâniyât, p. v. 311) Kâbûlûûyûn and a portion of the ancient Khorštîn with Kurgàh-Tîbû also belonged to Hisar; on account of the great extent of the former Hisar territory, the range, which forms a watershed between the Zarafa and the upper Amu-Darya, is called the Hisar range by the Russians. The Beg of Hisar now only rules the land between the upper Sorkhan and the Wâshâb; this office is usually filled by a son of
the Emir or by another prince of the ruling house. The people still frequently rebel against the government. The cultivation of saffron mentioned by the Arab geographers is no longer pursued; the chief products are cereals and rice and the land is of some economic importance for Bukhara, although the only method of transport is still by beasts of burden; vehicles are quite unknown. The land was first opened to European exploration by the Russian Hissar expedition of 1875 ("Chernozemskoj ekspediciia").

W. Barthold

HIŠÁR, an ancient town in the Rayji, the headquarters of the district of Hissar, is a town of considerable size. It was formerly known as Huzistan, which formed part of the province of Säwälk. The district lies in the dry belt between the Satlaj and Djamná on the northern fringe of the Rádpátán desert. Part of it is sandy waste but part is irrigated by a branch of the Western Djamná Canal. It lies between lat. 28° 30' and 30° N. and long. 74° 30' and 76° 20' E., has an area of 3,271 sq. m. and pop. (in 1901) of 781,917. The western part of the district (Sír) is inhabited by the Hâštát Rádpát, and was formerly known as Huzistan. The town of Sír (formerly Sarsel) derives its name from the river Saraswati. The Ghaggar river, which receives the name of Sarsel Saraswati, still flows near Sír, and its waters have been utilized in modern irrigation works. The Muzumán population (302,009) is mainly of Rádpát origin, and is locally known by the name of Râng. Besides Hissar the capital and Sír the principal towns are Bihwání, a large trading centre, Hânsí (q. v.), and Fathábâd (like Hissar founded by Firdús Síh). Firdús Shíh Taghlish took especial interest in this district, the home of his mother, who was of Hâštát Rádpát descent, and he founded here the town of Hissar Fírnáz, which took its name from him, in the year 1357 (1556), and, to irrigate the dry tract in which it stood, constructed a canal from the Djamná. There was no doubt an older town on the spot, as the fort built by Firdús is to a great extent constructed of fragments of Hindu buildings. Hissar was long a place of importance. It was taken by Bábâr in 1526 and bestowed by him (with the district, which yielded a kror of rupees) on his son Húmáyún. Húmáyún, in his turn assigned it for the maintenance of Akbar, and put the "masterfather" (áhás) Sháma al-Dín in charge. Under Akbar it became the headquarters of a sipáhí, and was a mint for the coinage of copper under Sít Sít Sír, Húmáyún and Akbar. At the end of the 18th century it came into the power of George Thomas (see under Hâsá), who built a fort named Genegagh, now corrupted into Diábá. In 1755 the district fell into anarchy for a time during the mudder. Bibliography: Imperial Geographer of India, xii. 144; v. Panjáb, p. 228; Elliot and Dowson, History of India, Vol. III. (trans. of Táhirí, Firdúsí, History of Sháma-Sír), Thomas, Chronicles of Pathán, Kings of Delhi, p. 274; Eckhina, Bihar's Monuments, p. 302; Blanchmann, Ann. Akbar, trans., p. 231.

M. Longworth Daniel

HIŠBA, a technical term in administrative law, the meaning of which is, act of counting, office of mukhtář. The word then acquired the special meaning of police, and finally the police in charge of the markets and public morals. It is in this latter, the narrowest, meaning that čiba is used by those authors who deal with Muslim law (Mühs, Ibn Khaldun, Maqbuli, etc.), but there can be no doubt that čiba meant something more than the office of mukhtář in the narrower sense. Occasional references in historians (Dār al-Mukhtār wa l-Mawārid or wa l-Murād) show that čiba was the name of the registry office, where deaths and births were registered and estates and the funds for orphans administered. We also find the čiba as office of weights and measures (Dār al-Járā), as well as the supreme audit office, and finally as army commissariat (see also the article MUKHTÁR).

E. W. Zamárat

HIŞÁM b. 'Abd al-Malik, 'Umaiyyid Caliph, son of the Caliph 'Abd al-Malik b. Marwán and 'Alíja, daughter of Hisham b. Ismá'il, governor of Medina. He was proclaimed Caliph in Medina 1050-1051 January 724 and began his reign by dismissing 'Umar b. Huhayra, governor of the 'Iraq. Khalid b. 'Abd al-Láh b. Khattab was appointed his successor and ruled the province for nearly fifteen years and earned the gratitude of the populace by its peaceful development under him. His enemies, however, ultimately succeeded in bringing about his downfall. In Djamád I 120 = May 738 the Caliph dismissed him and gave the vacant office to 'Abd al-Malik. 'Abd al-Thaqafi, Khalid was thrown into prison and only released in Sawwádi 121 = September 739. About the same time, 'Abd al-Malik, a great-grandson of the Caliph 'Ali, set up as a pretender in Khuzistan and readily gained numerous adherents among the fanatic people of that city. But his plans were not destined to succeed. It was about to raise the standard of revolt, he had given way to superior forces and was mortally wounded. In 160 = 724-725 Asad, Khalid's brother, had been appointed governor of Khurasán, where funds between the Arab tribes and the activities of 'Abbasid emperors caused him great trouble. In 169 = 727-728, Asad, who had only held his office under the control of his brother, was replaced by 'Abbas b. 'Abd al-Láh al-Sulami, who became involved in war with the Sogdians and the Turks and could only hold his position for two years. He was succeeded by 'Abd al-Rádž, b. 'Abd al-Kárím b. 'Abd al-Rádž, who continued the energy and activity of his predecessor. During his long reign Hisham continued the wars against the Byzantines vigorously but with varying success. Naval enterprises were undertaken every summer on a large scale, in which 'Abd al-Láh b. 'Ukba and later 'Abd al-Láh b. Abd Maryam commanded the fleet, while the Caliph's two sons Maqúiya and Sulaimán, conducted the land operations. In 122 (740) the Arabs under 'Abd al-Láh al-Bejdi were severely defeated at Akrokios in Phrygia and al-Bejdi himself fell in the battle. But when the Byzantines in the following year attacked the capital of Melitene the Caliph himself hurried to its assistance and they had to
From the Caspian shores the Turkish tribes gave the Caliph’s troops much trouble. In 732–733 the latter were defeated at Ardash, Hisham’s brother, Marwan, then carried out several successful expeditions, but the final triumph of Muslim arms was particularly due to Marwan b. Muham- med, afterwards Caliph. Abd al-Rahman b. Abi Walid was killed then. Pera, governor in Spain, defeated Eudoc Palace of Aquitaine, but was in turn defeated by the Franks under Charles Martel, in Kufa 714–715, between Tours and Poitiers. Further the Berbers were disinherited, because they were not treated by the Arabs as fellow-citizens on equal terms but as vassals paying tribute, and the Kharijite propaganda poured oil on the flames. In the end a great rebellion broke out and in 723–724 Hisham had to send a Syrian army under Kahlid b. Yatid against the Berbers. But the Syrians suffered a fearful defeat. Kahlid fell and his nephew Bahlul b. Bahlul escaped to Spain with only a third of his army.

Hisham died in al-Raq‘a on the 6th Rajab II 122 = 6th February 743. He was an upright and conscientious Muslim. He particularly endeavoured to look after the finances of the state but his economy occasionally degenerated to parsimony. Besides foreign foes, Abbadid emissaries and Kha r rjite aggessions were gradually undermining Umayyad power and in spite of his merits the Caliph could not prevent its increasing decline.

HISHAM II, Abi l-Walid Abi l-Rahman b. Abii ‘Ammat, was the second Umayyad Emir of Cordova (742–788). Although more humane, just and pious than his energetic, cunning father, it was possible to maintain himself against his rebellious brothers and to carry the Muslim arms once more, after an interval of several decades, into the Christian lands to the north and even into southern France, as far as Astorga, Oviedo, Gerona, and Narbonne. It was he who first gave a stimulus to the influence of the stricter school of law and theology of the contemporary Medina teacher Malik b. Anas in Spain and thus prepared the way for the narrow-minded fanatical views of the Spanish fihals. He completed the great mosque of Cordova which had been begun by his father and restored the bridge (Alcántara), built by his governor Al-Samama (q.v.) over the Guadalquivir, which had fallen into ruins. This capable ruler died all too soon at the age of 37 and was succeeded by his son from al-Hisham I (796–822) (q.v.).

HISHAM III, Abi l-Walid Mu‘awiya b. al-Hisham II, was the tenth Umayyad of Cordova (786–799 = 796–809 and again from 800–803 to 810–814). While under his nine predecessors on the throne of Cordova the whole administrative power had been actually in the hands of the sons (Arabs and Caliphs) themselves, Hisham II’s personality falls into the background and disappears as a mere shadow behind the all-powerful chancellor, the Hisham (great visor) ‘Almanzor (cf. al-mansur), the great statesman and general (died 1002) and his son ‘Abd al-Malik al-Mu‘azzar (q.v.), (died 1001), while Al-
HISHÂN II — HISHÂN AL-AKRÂD.

...ion's second and incapable son 'Abd al-Kahmân Sucul was soon overthrown (1009). Hisâm II was placed in usurpation immediately on his accession, when only ten years of age, by his natural mother, the Basque Subh (Al-Aurora), al-Hakam's favourite wife, in conjunction with her favourite and lover Almanzar, educated to bigotry, and finally interned in the new royal residence al-Zahra, west of Cordova, till he became the veriest puppet in their hands, whereby a way was paved for the rapid decline of monarchical power and the speedy fall of the once brilliant caliphate of Cordova. A pseudo-Hishâm, alleged to have reappeared (he was said to have disappeared during the massacre by the Berbers in Cordova in 1013) also served the unscrupulous 'Abdâddîd [q. v.] Abu Bakr Muhammad I b. Isma'il of Seville as a figurehead to deceive the people.

HISHĀM III, al-Mutâ'add, son of the incapable, ephemeral Caliph 'Abd al-Rahmân al-Mutâ'add (408 = 1015) great-grandson of the great 'Abd al-Rahmân III (912-961), was the sixteenth and last feeble Emirâd of Cordova, who could not prevent the breaking up of the great caliphate into smaller and smaller local kingdoms (Span. Reyez de Tiffah, Moors of the Wâdy al-Tiffah) and developing on since the beginning of the 11th century: 418-422 = 1027-1031 (died 1036).

HISHÂN (A.), fortress, citadel.

HISHÂN AL-AKRÂD, originally called HISHÂN al-Sabi, "castle on the slope", see van Berchem, Journal Asiat., 1903, p. 440 sq., now often phonetically called al-Hishân, is situated on the plateau of al-Butafîn which is bounded on the south by the Bâbel Ûdikar and Lehron, on the north by the Nasrî hills. It is the official residence of a ha'timâgâm. It takes its name "castle of the Kursi" from a Kurdish garrison established there by Shihâb al-Dawla Nasr, king of Aleppo, in the first half of the 6th century a. d., who were granted the surrounding lands and forests in fez on condition that they protected the important road between Hama and Hishân, the great towns of the Orontes plain, and Tripolitâ, from the enemy. The castle of the Kursi is said to be identical with one built there by Ramesses II. It was captured during the Crusades by Tancred of Antioch in 1098 (this date is not quite certain) and transferred to the knights of St. John in 127 by Raymond of Tripoli. The knights had more and more cause to felt insecure as the position of the Crusaders in Syria became weaker. This situation was all the more dangerous because they had been excluded from the ten years' truce of 1098 between the Emperor Frederick II and Salûk al-Malik al-Kâmil, as they had not taken the side of the Emperor who had been excommunicated by the Pope. They had therefore every reason to strengthen the defences of the castle more and more. Oner al-Dîn and Salûk had endeavoured to visit in vain to capture al-Hishân al-Akrâd. The citadel is protected by two lines of defences, an outer and an inner. It lies on the top of the hill which slopes to the north and east. On the west it is protected by a ditch which is continued round the south side at a great depth. Thus defined it is approximately a trapèzium, of which the south is the most vulnerable. The strongest defences had therefore to be built there. From the description of the capture of the fortress it appears that further earth- and wood works were raised outside the outer surrounding wall, which would have perhaps become quite gigantic, if the Salûkans had not kept the Knights from increasing them by agreements and threats (the Emperor Frederick II had actually pledged himself to see that the defences of castle of the Kursi were not strengthened). On the north and west it is surrounded by ramparts which at certain distances are strengthened by round towers. The halt in the tower vaulted with pointed arches and lit by great embrasures is built to accommodate ballistas and a gallery runs along the ramparts provided with protruding sentry boxes. Over this gallery is a pinioned parapet with shottooles in the middle. The door of the entrance tower was difficult to take, for in consequence of its low situation it could be defended through the three small rooms projecting over it with openings in the floors. Through the gateway, one enters a covered gallery, which turns to the south but turns again on reaching the north of the corner tower and ascends to the upper entrance at the east tower.

A portion of the west side of the open space between the outer and inner lines of defence is so built as to collect water in it. It is connected with the cisterns which are below the castle. The inner defences rise on the south and west side above a massy escarpment of great strength obviously an escarpment lining the natural rock, while on the north and east side the rock is not escarped. A great open staircase leads from the courtyard to the terrace.

The Knights of St. John were able to maintain a garrison of 2000 men in this strongly fortified castle. With the help they forced the princes of Hîmân and Hanîf to pay tribute in return for freedom of passage for their caravans. They had afterwards to give up this up and their situation became more and more precarious. Salûk Bahâr, who wished to free Syria entirely from the Crusaders, decided to take Hishân al-Akrâd. After taking advantage of a stay in Syria to make reconnoissance in person accompanied only by 40 horsemen, he led a great expedition against the fortress next year in 669. On the first day of the attack, 19th Rajab 669 = 3rd March 1271, he took the outer, defended outer works; next he succeeded in capturing the entrance tower, and later the second tower was taken, on the 29th April Bahâr fought his way into the courtyard and erected ballistas there to attack the donjon. On the 8th April the Knights were reduced to surrender and were granted a safe conduct to Tripolitâ. Salûk Bahâr remained there till the end of the month and conducted the restoration operations in person. Hishân al-Akrâd was selected as the residence of the governor of the Syrian provinces, and it was not till the capture of Tripolitâ in 686 by Salûk Kâhin that the governor's residence was transferred to the latter town. After peace and security had been
restored to Syria with the departure of the last Frankish Hûn al-Akrâd gradually lost its importance. It suffered nothing from Timur Lank's invasion (about 853). The fortress, which is the residence of a kâ'ba muqaddam, is still for the most part well preserved.

**Bibliography:** The architectural history of the castle has been studied in great detail by Baron Ney, to whom we are indebted for a plan and a description in his *Bauwerke von Monumenten de l'Architecture militaire des Croisades en Syrie*, Paris 1841, p. 46 sqq.; extracts from it are contained in A. v. Essewein's *Die Romanische und Gotische Baukunst*, Vol. 1, Military Architecture.

The Arabic inscriptions in the castle (only briefly discussed by Ch. Scheler in Rey) have been fully edited by van Berchem in *Inscriptions arabes de Syrie*, Cairo 1897 (p. 64–69) and in Freyter v. Oppenheim's *Inschriften aus Syrien* etc., with an account of the capture of the castle by the Franks. All the inscriptions of the fortress are also given (with greater liberty from the sources and bibliographic notes) by Sobernheim in the *Corpus Inscriptionum*, ii. 14–35 (with a plan of the mosque and the illustrations).

(M. Sommervogel.)

**Hûn al-Ghûrâb (Raven Castle),** a hill with a fortress upon it in South Arabia, near the harbour of Hîr 'All Mullâjî, in 30° 39' 20" North, Lat. and 45° 24' 30" East. Long. in the land of the Wâlîk (q.v.). The harbour of Hûn al-Ghûrâb in ancient times was the well-known Cana Imperium (κανα Ιμπεριον) of the Periphras Map of Egypt and of Ptolemy, the 337 of the South Arabian inscriptions), an important centre for the frankish trade of the neighbourhood and an intermediate station for the trade between Egypt and India. The same Hûn al-Ghûrâb is derived from the black colour of the hill, which is about 1500 feet high, of volcanic origin and composed of different formations such as basalt, sandstone, trap, and slate. Hûn al-Ghûrâb was probably in very early days an island; now it is connected with the mainland by a isthmus of sand, on which a town used to stand; of which now only the ruins are to be seen in the form of huge pieces of basalt lying scattered at the foot of the hill. Ruins of houses, walls and defensive works are also found towards the top of the hill. On the topmost slope is a quadrangular tower. The hill can only be ascended from one side; the route is by a zigzag way (mawâd) hewn out of the rock. Not far from Hûn al-Ghûrâb is a group of small, uninhabited islands, of which the most important are Simka, also called Kâ'ba, and Bârra. The little island of Hûnîyâ with pearl-seaboard is quite near Hûn al-Ghûrâb on the west side. Opposite Hûn al-Ghûrâb rises the isolated hill of Shawûmân at the foot of which lies a plain, called Mâlahân, covered by hundreds of small black, probably volcanic stones called ghâchî. On the summit of the Jebel Shawûmân is a very deep mild crater called Kâ'ba (Hezîn) of Shawûmân, surrounded by Ghâchîs.

In the rocky face of the hill four South Arabian inscriptions are engraved of which the most important is the well-known ten-line inscription of Hûn al-Ghûrâb, which belongs to the time of the Himyas-Iskâpi kings and was inscribed to commemorate the fortification of Hûn al-Ghûrâb. It is of particular importance, as it is dated (640 = 953 H. c.). From the inscription it seems that Hûn al-Ghûrâb in ancient times was known as 'Umar Mosawiyya.

Hûn al-Ghûrâb was first visited by Capn. Haines and J. Wallisstedt in 1854. Wallisstedt, Creutzend and Hulius made the first copies of inscriptions the same year. In 1879, Hûn al-Ghûrâb was visited by Milde and Mâlinoff, who made more reliable copies. Lastly Comte de Landberg took photographs as well as copies of the inscriptions when he visited Hûn al-Ghûrâb on the 21st February 1896 along with General Cuningham.

**Hûnika (Hîn), a town in the Djezzâr (Mesopotamia), on the right (south or east) bank of the Tigri, in 37° 40' N. Lat. and 41° 30' East. Long. (Geneva), about halfway between Diyar Bakr and Djezzâr Ibn Umar, about 15 days' journey (60–70 miles) from either.**

Hûnîkâ dates from very ancient times. The many ancient caves and groves still in existence belong to the pre-Armenian (Chaldean) period and show that there was a settlement here as early as about 800 B. C. In the border was between Romans and Persians during the later Empire the town (Kess, Carpa) played an important part on account of its commanding fortress. As the seat of a Syrian bishop it is mentioned at the council of Chalcedon (451), Malabás (c. 541–542) and 'Uqiy ('95) particularly notes the numerous churches there. Hûnîkâ during the middle ages also enjoyed no mean strategic and commercial importance. The former was due to its strong citadel, the latter to its position as a centre of trade between Diyar Bakr and Djezzâr Ibn Umar. Since about the 9th century a fine bridge has existed over the Tigri; the traffic over which had probably been busy for centuries.

When the 'Abbadid power gradually declined, the real authority in Mesopotamia as in other provinces of the Caliphate passed into the hands of prominent local dynasties. Hûnîkâ in this way passed in turn to the Hamûkins, Marsïks and Urmîs. Under the latter, who had their
Plan of Hirc al-Akrād according to Rey.

View of Hirc al-Akrād.

Reconstruction of Hirc al-Akrād according to Rey.
capital here 244 (1616), the town reached the zenith of its prosperity. For another century was the political centre of a power which, although it was dependent on the Saldegbir, served for a time auxiliary town of Mosquemania and Armenia, particularly the districts of Dzhia Bage, Khure, Marz (Marmara), Maryopolis, Naplic (Nablus) and Khurfiel. Cz. the article article. 

In the year 1217 the Almodish founded the Cteukdale kingdom of Huns Kafel, on the dynasty of Elia, (See also, N. H. H. 2stl., 123, 22). In 208 (1507) the town was taken and destroyed by the Mongol; after that it has continued to decline, although the Huns Kafel town was still a residence for the town's prince. In 226 (1527) it was burned down by the Turkish. In 238 (1539) the town was already a mere garrison. It seems to have recovered somewhat under the Al-Kaydali (cf. 4. 13), particularly under the name of (Armenac, it is said, we may judge from the buildings still standing. This agrees with the agreement of the Vovan or J. B. Pariser, who visited the town 247 and describes it as being in ruins, (see Buhler, op cit. 2). For the rest, Huns Kafel hereafter shared the vicissitudes and political changes of the town of Mosquemania. According to the Turkish administrative system of the time, Huns Kafel belongs to the khel of Awshak of the kingdom of Mtskheta. In the late Middle Ages, it was known on the border between the khel of Awshak and Mtskheta, cf. Chiril, Le Targie d eden, II. (1951), 519. The present inhabitants of the town are Armenians (the majority) Kurds, Syrians, Christians, and Turks.

Impressive architectural remains still remain testifying to the great prosperity which Huns Kafel repeatedly enjoyed during the Islamic period of the middle ages. They have only recently been studied for the first time by Miss Bell and S. Guyer, but none of the inscriptions and reliiefs still await more detailed study. Of these monuments the following deserve particular mention: 1. the citadel (4a), with remarkable gates which are peculiar to the citadels of the Kurid-Delik, the mosque in the centre of the town with a tall minaret, on which a long and important inscription (a decree) is a mosque, much ruined, near the bank of the Tigris, a fine building, also with a tall, slender minaret and an inscription on its southeastern by Khalil H. Elia, Hamza, the sixth ruler of the Al-Kaydali Dynasty (1663-1479) - the name of an ancient medina near the west end of the lower town. The four buildings mentioned are all on the south (or east) of the Tigris; on the south (or west) bank of the river, see 2. a tower on the Hermon, the ancient fortress of Zeleb, Beg, is a tower near Elia, Hamza, (1663), 6, a magazine built for artillery. Another excellent piece of architecture is 3. the old bridge over the Tigris, now allowed to fall into ruins, which probably owes its origin to the Octophyll Kafel Arslan (or his father). It consists (or rather seems consistent) of a large arch stone above the river and two smaller arches at each side supported by pillars. Yet it describes it as the finest creation of its kind that he had ever seen.

Lastly we may mention the slopes on the south side with their numerous caves and tombs, Uganda back into remote antiquity. The inhabitants of the villages of Kafel have almost all live in these caves. Huns Kafel may without contradiction be described as the negleby city of Mosquemania.

The name Huns Kafel — the formation of Kafel (as in our foregoing) may be taken as the name of a district of a people, Ciprunia, Kupeniani (Azeri) probably Kopan), preserved by old manuscripts to describe the town originally as the centre of the military viceroy of a district of the same name. In Syriac literature, the place is called Hejat (40) Khukak. In place of Huns Kafel, we frequently also find an old region of Huns Kafel as also the place-name Tell Kafel north of Mizdin. At the present day the most usual form of the name of the town seems to be Hamma-Kafel, according to the common tradition, a Pontian named Hama founded the town.

This etymology and explanation of the ancient name Huns Kafel is clearly only the result of a popular etymology. Equally worthless are the Turkish etymologies Hausmäz — Hama's "delight" and Huns (Huns-Kafel as "good (beautiful) hamun".

HUNS MANŞUR, the capital of the khalif of the miskul of Mousà, usually called medium, with about 20,000 inhabitants, the majority of Armenians origin. The name Huns Manşur is derived from the Osmayyad Emir Manşur ib. Isma'ili who was slain in 144 (763) by command of the Abbasid al-Manşur, Harun al-Rashid afterwards had the citadel fortified and placed a garrison in it. Huns Manşur or Adanarius was thus the successor of the miskul of Mousà in the place of which, in turn, is taken by the Seljuks and the Ottomans. (See, for example, P. 29, 290. Yêkîf, Miqdah, 8. 272-33. Al-Diwa l-Nâsir, Tavakl, 262-262, p. 231. Ritter, Erzurum, 2. 99. Humann and Puchstein, Reisen in Kilikien und Syra (1905), p. 270. Le Strange, Palestine under the Mamelukes.
HIT, a town in the most westerly part of the Tigris (Babylonia), situated in about 35°, 36°, N. lat., and 45° 45' E. long (Griew), on the right bank of the Euphrates on an eminence which is perhaps of artificial origin. The medieval Arab itineraries estimate the distance between Hit and Bagdad at 33 parasangs (about 130 miles) or 5½-6 days' journey; cf. Steckel, Babyloniaca nach den Arab. Geograph. (Hist., 1900), p. 8. Some Arab geographers like al-Jahiz and Ibn Hawkal already include Hit in Diarbakr (Mesopotamia); on the whole, however, it has generally been considered a frontier town of Babylonia. In Al-Majaddami's time (12th century) it was of some importance; at the beginning of the 11th century al-Ku'tubi describes it as having a small castle with walls and two gates. Up to the beginning of the 12th century Oliver estimated the number of inhabitants at about 1000 (see Ritter, op. cit., p. 753). Ceramics about 90 years later at 2000; Claymore counted 1500 houses. The situation of Hit is described as picturesque; the walls and two gates have survived; otherwise there is no prominent building. There al-Ku'tubi mentions the tomb of the distinguished jurist Abul 'Abd Allah b. al-Mufizard who died in Hit in 381 = 779 on his way through it; cf. also al-Mas'udi, Muruj al-Dhahab (ed. Paris), vi. 394, 506; and the reference in Yaquti, op. cit., v. 506.

HIT is a very ancient settlement; it is mentioned under the name Ilit as early as at the beginning of the 7th century B. C., in an Assyrian inscription (Annales of Tukulti-Ninurta II); see Scheil, op. cit. Herodotus and apparently also Iostis Garceous knows the town as Ilit in Zosimus it is called ISAR; Hit, the Assyrian form of the name, which has been adopted by the Arabs. The name is apparently derived from its most characteristic product, asphalt (Assyr. itilu, itilu). In 1662 the oil passed into the possession of the Arabs; in 1834 it was taken by the Hamalidhs (see Ran, Gertr. u. Chasen, S. 605).

Hit is a town of considerable commercial and industrial importance. The caravan trading between Babylonia and Syria, particularly between Bagdad and Haliliee crosses the Euphrates here. This circumstance has given rise to a flourishing transport business and a busy trade. Even in ancient times the district of Hit was celebrated as being exceedingly productive of asphalt and mastic; there are a whole series of wells there (where yield this product); even the above quoted Assyrian text commemorates this feature of the town. A place, called 'Atm Kailiya (said of bitumen) near Hit is mentioned, e. g. in Abu Tufik, Annales, ed. Reiske-Adler, iv. 241. A small river which flows into the Euphrates near Hit carries down with its current many blocks of asphalt. Bitumen is used in different ways in Hit; for example ships are caulked with it; or it is burned in kilns for lime. From ancient times asphalt has been used in Babylonia as a cement; cf. also Abu Tufik (Geography, op. cit.). There is a considerable export trade in bituminous products from Hit; they are carried down the river in boats and the busy shipbuilding trade of Hit is also directly due to the asphalt. South of Hit are several quarries which were worked even in ancient times; at the present day there is a line of rails from them to the Emirpahrat (cf. A. Muir in the Arabian Geogr. Abh., 1921, p. 11). Near Hit is a ruined area, called Ulta al-Maghilla ("the transformed silt"), is pointed out; there is a legend attached to it which, as Mec in the Zeitsehe, for Assyrian, xxxiii, 320, points out strikingly the recall of the Frau Hit legend in Inshashthach.

Hit (in pl. qahi'a) means "a party, faction, division". It is probably an Ethiopian loan-word, the original Arabic meaning of the root being "to behold of a mad fortune (qahi'a) and "to be such, coarse" (qahi'a); so formerly Nöldcke (Nouelle Revue, p. 29, note 3). In the Korân the word is used of: confederates and mostly in a bad sense. Thus the Sûrat al-qahi'a (xxxvii) deals with the siege of Mecca by the Jewish tribe confederates with those of Mecce, Nujjair, and Tihimm (Ibn Hisham, pp. 666 sqq. [Abmau al-khawand]. In a good sense it occurs of the site Allah in Kor. v. 61, Ivii. 22. But from a partition, division it soon acquired the same technical meaning as if a set partition of the Korân, or of devotional formulae of any kind, imposed by any one upon himself for recreation; for cases of this use in the traditions see Li-face, ii. 1. 296 sqq. Applied to the Korân this developed in some Muslim countries until there was a normal division of the text into sixty qahi'a, like that into the thirty qahi'a, Su in Egypt; see Lane, Modern Egyptians, shaps xxvii, Arabic Nights, chap. v. note 38. But apparently this did not and does not hold everywhere. Al-Ghazali, in the Fars, in dealing with the recital (sunnas) of the Korân (Book vii of Quaran l. Dilh), ed. with context of Suyf al-Murtaza, p. 470 sqq, speaks of the thirty qahi'a, but of (and only generally) the
number of ásás depends upon the usage of each worshipper. So still in India, for Hughes' Diet. of Islam does not recognize the word; not, apparently, does the Diet. of Tezau. Terms. With the rise of the dawkad fraternities the word became peculiarly associated with them. In Egypt each fraternity is a fás (Lane, Modern Egyptian, chap. xviii) and fás is also used of the "fàs". Each fraternity must have its official garden and vice versa in the amirs or tâbiyya, and consisting of extended selections from the Kurán and of other prayers (see ISHA' above). From this apparently, same a nor was as applied to forms of prayer (wahdāt) drawn up by conspicuous saints and to be recited, either regularly or in special cases of need. Islam has always treasured such forms. The latter part of 10th is of Quarter 1 of the Isha' (Kítb al-grandjī; ed. above, vol. v, pp. 62 sqq.) consists of a collection of such celebrated amirs of authorship from Adam to the Sai saints; see, e.g., Kítb al-Nasir, ed. of Cairo 1315-16. To judge from the book's described by Schuckmann (Greek, index under fás, vol. ii, pp. 546 sqq.) and by Hasjdi Khafî (III, pp. 56-59) the word fás was not applied to such prayers until well on in the sixth century Muslim. Al- Ghassali (d. 555 = 1111) speaks only of dawkad and the first recorded fás is by Abû Khulâyf al-Dârî (d. 541). After that there are many: Ibn 'Arâ'î (d. 638), Ahmad ibn 'Allâh (d. 675), al-Nâwmî (d. 676), etc. The most famous of all is the fás al-ĥasir by al-Shâhidî, called also al- qâhî, etc. It is distinguished by being one longer but less celebrated by the same author. It is a favorite with courtiers, especially those by sea, as it is in great part a "subjecting" (post-hâr) of the sea to them: it was written in 656, the year of his death, by inspiration from the Prophet, and contains the Most Great Name of Allah. That same year Baghdad was taken by the Mongols, and al-Shâhidî is asserted to have said that it could not have been written if his fás had not been recited there. The text is given in full by Ibn 'Anîj (vol. i, pp. 99 sqq.; cf. also Zeitreich, d. Deutsch, Morgenl. Gesch., vol. vii, p. 257). A pronouncedly lasting work, but has many Kâfâ's in references and quotes, especially the mysterious letters which occur at the beginning of certain stanzas. This has given it intrinsic value and ensured its popularity. A plural, which occurs in the Fârâst, p. 507, l. 7 (see also note) with the meaning "spells," but the text is uncertain. The authority for Awdâr's assertion (Forschung, iii, p. 325) that the ásás are as arrs called because the invocations of Allah in them are arranged "in gewissn Gruppen" he does not give.

HIJZKIL (Eßbî) b. Bêt, whose mother when advanced in years prayed to Isul for offspring and her prayer granted, was the successor of Kâfî. He is not mentioned by name in the Kurán but to Sâra ii. 244 ("Óthâl ainsa; not to see those ones who abandoned their dwellings in their thousands from fear of death") and (Dio s.c. ") Then he restored them to life") an allusion to Eschek xxvii, r.-18 is generally recognized.

Of the various traditions in Thâlîth, p. 152 and Tahârî, i. 3, 338, the following, which are of Talmudic origin may have been mentioned. In the days of Hizkîl a plague carried off numerous fanatics. Many corpses could not be buried and became food for birds and beasts. By God's command Hizkîl proclaimed: "Whoever gives me to eat again the flesh that covered you?" At once the boxes choked themselves with flesh and once more had skin, blood, veins, and arteries. Hizkîl continued "0 breath of life, make these bodies live again!" They were breathed upon by the spirit of life and rose in their dead clothes. They returned to their people again, sound families and multiplied (Sehûl, 92, Gen. R., 14, Cant., 7).

According to Thâlîth, p. 101, one of the members of Fârâ's council in Egypt was likewise called Hizkîl, while Kâtî calls him Hizkîl. He was originally a carpenter. Mînî's mother applied to him to make a small box in which to place her new born son and throw him into the sea: but he hurried to the royal police to tell them of it. His tongue then became paralysed and he lost the power of speech. He only regained it after vowing that he would betray nothing. Henceforward he honoured Mînî in secret and protected him from all danger. (Cf. Kurân, 40.)

1. (E. Hornbostel.)

Al-HODAIDA (Hodida, Hadda), a seaport in Arabia, on the Red Sea about 110 miles N.N.W. of Mocha (q. v.), the most important port for the coffee trade in Yemen and a landingplace for pilgrims to Mecca from Central Africa. It is under the protection of a patron saint, Shihab Sadîq, whose festival is celebrated on the fifteenth day of the month Shabí. In the time of Nisâkh and Sasan, al-Hodâida belonged to the kingdom of Shabî. In 635 Pothinus Patha was commander in the town. Since 1899, al-Hodâida, which is previously a part of the great sultanate of Yemen, has been a separate wâliyat. The town is fortified and is surrounded by many palisades and other fruit trees. It has a considerable garrison and possesses a post and telegraph office, a military hospital and a powder magazine. The streets are small and irregular but densely populated. Most of the houses are straw huts, long and narrow and all with a narrow entrance. The houses are small and very dirty but well stocked with all necessaries. In the suburb's live, besides Arals, many Berbers, Somalis, Persians, Jews and Abyssinians. The climate of al-Hodâida is healthy and the town free from fever. The temperature which is always very high reaches its height in April, May, August, and September. Among the articles brought to this port, which are exported are besides the staple coffee, the export of which is however by now considerably diminished particularly on account of the vast export of coffee to the Italian market (B. dir. and saddles (in Europe, American and Australia), milk and milk materials for packing coffee, dried fruits, dates, frankincense, wax, cloth and red peppers, which are obtained among the raids at
Hodaida, were also at one time exported. The imports include English, American, and Indian silk and woollen goods, sugar (from India, China, France and Austria), tobacco (from Egypt, Turkey and Persia), petroleum (at one time mainly from America, now from Batum), rice (from India) rai sins, dates and honey, which are transported hence to other towns, particularly Salāḥ. The trade with al-Hodaida is mainly carried on by British Indian ships; in recent years Greek and particularly Italian ships have had an increasing share in it. Manouel in 1883 estimated the number of inhabitats of al-Hodaida at 20,000; according to other statements the town has nearly 50,000 inhabitants.

AL-HODH, a semi-desert region in Western Africa. It is a plain, lying to the east of the Timbuktu between the Sahel on the south and the Targa on the north, a distance of about 200 miles. A zone of steppe called Mânia (mirror) separates the Hodh from that part of the western Saharan known by the name of al-Dirf. Three well-defined divisions may be distinguished in the Hodh. In the south is a region of sand and thorny brushwood, fairly rich in wells and sustaining quite a numerous population of Ful and Sarako as well as Moorish herdsmen. To the north of this lies a rocky plateau, often ferruginous, separated by valleys with black soil bottoms, which the winter rains turn into impassable marshes. Lastly, the southern part is covered with white sand dunes, separated by lines of black earth. Arab or Arabicized Berber tribes, of whom the chief are the Aghalem, the Uldâ al-Nâqis, the Ida Budjelwan of whom some, like the Namadi, are only Muslims in name, roam freely over the Hodh. Lying outside the main caravan routes, the Hodh is one of the least known parts of the Sahara.

(1906), 148 sq.; Marquart, Reise durch die Sahara, 3. Aufl., 1891, p. 244. See also Schinzer, Les Sables merveilleux et le Hodh, p. 56. There is further information on Hodh in two chroniclers still in existence, recently discovered in the Soudan, the Tarikh of the Knaï au, by Sidi Muḥammad b. Sidi al-Ḥāfī and the chronicle known as the Chronique de l’Arabie,

(G. Yver.)

HODJAILA, a village in South Arabia, at the foot of Ḥaṣra [q.v.] about 1000 feet above the sea level, a border village of the Thāma. It belongs to the Ṣadda of Māshāq [q.v.] and to the wadīlik of Mawâl on Ḥudayl (Hudayr). It has a market and Turkish inn. The low cultivation of the village consists of large uneven stones without mortar. The people of Hodjaila are of a chestnut brown colour and resemble gizzlies; they belong some to the tribe of Ḥaṣra, others to the Ziyyâdīn. Around the village many parishes are found which is its name. Moreover a kind of wild duck called Ḥudayr is found in the waters of the neighbourhood which are then called other kinds of birds. The women of Hodjaila dye their hair in a peculiar fashion; they twine the plain round their ears. Glaser proposes to identify Hodjaila with the Shatt al-Qāṣâyil of Mansūr (Qarṣa), p. 105–106.

AL-HOHRUF, a town in Arabia, capital of the province of al-ʿUsha in Arabia, near the site of the town of Rasīla. This town, which is surrounded by extensive gardens and date-palm groves, is divided into three parts: 1. the Kūt (fortress) in the northeast; 2. the Rasīla (Rasīla, "eminence" so called on account of its rising ground, in the northwest and west; 3. the Nāṭḥ (in the south and west). The Kūt, a large fortress with very high, thick walls and towers (about 16 on each side with winding stairways) is about 500 yards long and 400 broad and surrounded by a deep ditch; it contains 5000–6000 people. The governor of Ḥafṣ (during Palgrave's stay in Hohref he was a negro named Beil) resides in the Kūt and the Nāṭḥ; (the fannical members of the Wahhābi sect) dwell there and in it is the Wahhābi mosque. A comparatively large fortress dating from the eighth century, called Khyām (*muzzle") is situated near the southern gate of the town. The Rasīla quarter is inhabited by old and aristocratic families, bustle to the Wahhābi; its situation is a very healthy one and it contains many fine houses and broad, clean streets. In this quarter is the market place, a long pillared hall with an arch roof, al-Faddaliya, with workshops of shoemakers, smiths and carpenters, and shops containing weapons, clothes, embroderies, gold and silver ornaments and other wares, partly imported from Baghdad, Oman, Persia and India. The Nāṭḥ quarter is the most thickly populated; it occupies about half the town and contains a large mosque: its population is a mixed one, consisting chiefly of merchants, small tradesmen, weavers, artisans and including also strangers from Persia, Oman, Bagháris and Quds [q.v. and Ṣafr; [q.v.]] in the centre of the town opposite the market place is the public square, a long quadrangle about 300 yards by 80, where the stands of the barbers and the workshops of the bookbinders and men who deal in books (the fine khatā; kind, the best in Arabia, which are grown only in Hafṣ), vegetables, dried wood, smoked locusts, etc., are sold in numerous booths. The busy market of Hohref is held on Thursdays on an open space before the north gate of the town. Here coarse woven cloaks, old brass vessels, old swords, swords, canes, Somerset and sashes are sold by the country people, while bracelets and anklets, looking glasses, European drinking glasses, strings of beads, also cereals and fruits (corn, meal, khatā, dates, vegetables), coal, wood, etc., are sold by the regular traders. According to information supplied to W. Schimper by a Wahhābi, in 1856 the town had 40,000 inhabitants; W. Palgrave gives the figure of 25,000–24,000 for the year 1862.

In the sixteenth century Hohref like the rest of Ḥaṣra was the scene of the Karmania wars; it was from here that the Karmania leaders undertook their raids into Syria and Egypt. In the beginning of last century Hohref fell into the power of the Wahhābīs who as elsewhere introduced their views here by force. The rule
of the Wahhabis was a heavy burden on the town and the people of Hofhüf as of the rest of Hasū. Enthusiastically welcomed the Egyptians when Nadīj was conquered by Aḥmad Pāša; the oppressive taxes which the Egyptians levied on them as well as the servile treatment with which the citizens of the town were treated soon brought about a general flight. Hofhüf was taken by the town and throughout the country which put an end to Egyptian rule for ever and restored its independence to Hofhüf, as to the rest of Hasū. After the reconquest of Nadīj by the Wahhabis Hofhüf was only taken after stubborn fighting. The walls of the town, like those of other towns, were partly destroyed, the fortress levelled to the ground, new mosques built and old ones restored.

Before the conquest of Hasū by the Wahhabis, Hofhüf was a flourishing emporium of trade. It had busy relations with Oman, Persia and India on the one side and Baghābād and Damascus on the other. Hardware, cloths of the finest qualities, silk, gold and silver thread, iconomony money, swords, spears, eathenware, and other articles were imported. Besides khālid dates (which still are a lucrative article of export, particularly to India) and sugar-cane, the robes of Hofhüf highly prized on account of their excellent quality and fine make, were exported and brought the merchants rich profits; the copper and silver vessels (coffeespots) manufactured in Hofhüf also used to enjoy a great reputation. On account of the fanatical hatred with which the Wahhabis in the province under their rule put down all that is connected with foreign trade (particularly silk) and adornments of every kind, trade has now quite declined. The people of Hofhüf before Wahhabist rule had been accustomed from ancient times to make excursions, particularly in autumn, often for long periods to the Ujbel-Moghrūj, situated to the northeast of Hasū, where they sought to recuperate themselves, with music, song, and other recreations after their autumnal labours; now Wahhabism forbids them to do this openly, under penalty of fines or even imprisonment.

**HOLWĀN.** [See HULWAH.]

**HORMUZ (HUMBAT, ORMUS),** in the middle ages the most important commercial port in the Persian Gulf and still is situated at the entrance to the Persian Gulf. The port was transferred to a small island opposite the ancient town and is still attached to it. Hormuz was of importance for the ships on the Indian ocean as trade between Western Asia and India passed through its port. The town is built on the mainland. A district of *Arabia* is mentioned by Neurath, who explored the Persian coast from the mouth of the India (Arriurn, *Indica*, 82-85). The place of Hormuz in the *Oxford* is mentioned by Cl. Pococke *Macedoniae et Persiae, 357*; the *Hermopolis of Amenemhat*. *Marco Polo* (XXIII, 6, 49) is probably identical with it. The situation of the town is wrongly given in *Pococke*; Maiden agrees with *Neurath* and is perhaps indirectly dependent on him.

The district of Hormuz, the land of Carmania, was very rich in agricultural produce (wheat, barley, rice and indigo), in minerals (gold, silver, copper, lead, cinnabar, and salt), but it had no importance in the world's commerce. It was the birthplace of a merchant who first opened up this district to foreign trade, whom Hormuz Hormuz retains its great importance in the fourteenth to sixteenth centuries. The medieval accounts, European as well as Oriental, show that Hormuz was a port of world-wide commerce and a place of refuge in the empire of the Sassanians.
fame. The foundation of the town is ascribed to Ardashir Firdausi (232–241), founder of the Sassanian dynasty, but it was only after the Arab conquest that it attained prominence. It soon became a strong harbor, and the site it now occupies was probably known by the Persians as late as the 7th century. The fact that China under the T’ang dynasty (618–907) attained great importance, at the same time as the Arab empire, brought about closer relations between Western Asia and China, in which trade played an important part. The Arabs visited India mainly by the sea route while in return Indian and Chinese ships came to the Persian Gulf to Hira and Hormuz. Hormuz is mentioned by Ibn Khurdadhbih as a resting-place on the route from Basra to China. A Chinese account (circa 785–805) describes the sea-route from Canton to the Persian Gulf and mentions as the most westerly point the “important market of the To-Shi (Arab)" the harbor of Meda, which Rockhill and Hirth take to be Hormuz; while A. Hermann identifies it with Basra.

Of the older Hormuz on the mainland, we learn that it was situated one parasang (four miles) from the sea on a river, which ships ascended to the town. Idrsi, Ispahan and Majhadasi describe the town as the chief market of Kirman. Indigo is mentioned as the most important product of the district. Yet particularly notes that Hormuz had attracted all the trade with India.

HORMUZAN. [See Hormuzan].

HORUK. [See Aroy].

HOSHANGSHAH GHURI, the second king of the Ghurid dynasty of Mughal, ascended the throne in 1345–1405. In 1407 Muhammad I of Gujrat invaded Mughals, defeated and captured Hoshangshah, and imprisoned him on the ground that he had poisoned his father, who had been Gujrat’s friend. Hoshangshah refused to reign his kingdom but throughout his reign was engaged in constant hostilities with Gujrat, from which his kingdom suffered severely. In 1420 Hoshangshah married the Gujurat state of Khera to his kingdom, in a friendly state, and in 1422 led a novel daring raid to Delhigur (perhaps Dehli), in which, captured by the ruler, an artist and...
compelled him to surrender several elephants as the price of his freedom. On returning to his kingdom, he discovered that Ahmad Shah of Gwalior was besieging his capital, Mandu, Hoshangshah, seizing the favorable opportunity, threw himself into Mandu, whereupon Ahmad Shah raised the siege and marched towards Sarsangpur. Hoshang followed and attacked him but was defeated and killed himself in Sarsangpur. He was again defeated when following Ahmad, who retired from Sarsangpur. Later in the same year, Hoshang made a rush and ineffectual attempt to seize the strong fortress of Gwalior. In 1428, Ahmad Shah Bahman of the Tughluq appeared before Kheri, which he claimed as an appanage of Berar, but retreated when heard that Hoshang was marching to relieve the place. Hoshang followed him and forced an action, in which he sustained a severe defeat. In 1432-33, Hoshang marched against Kalpi and Jajnun Shah Sharif of Dwangpur marched to oppose him, but was recalled by the news that Mubarak Shah of Dhilli was advancing on Dwangpur, and Kalpi fell, without a blow, into Hoshang's hands. On his way to Mandu, Hoshang punished some Hindustani masands who had invaded his dominions and then hastened on his way to compose the quarrels between his sons, which embittered his later years. Disputes and intrigues regarding the succession were so violent as to disturb the fortune of the last months and hasten his end. He died on July 6, 1435, and was succeeded by his eldest son, Ghaznavi Khan, entitled Muhammad Shah.

**HOT**, a Baloch tribe, one of the five main divisions of the race. The tribe is still found under this name in Makran, but those who invaded the Punjab in company with the Khans and Daddhis are better known by the name of the tribes formed at a later date, such as part of the Khods tribe and the Balochi section of the Khans. The Khods ruled as Nasirahab at Tota Lashk Khan for two hundred years until they were conquered by Afghans. Hollis are still numerous throughout the South Punjab.

Raverty alludes to them as Huts, but confounds them with the Daddhis, from whom they were distinct.

**HUBAL**, the name of an idol, which was worshiped at Mecca in the Ka'bah but otherwise is only known from a Nabattan inscription (Carp. J. A. Soc. vi. 150 = Joussaum et Savigny, *Mission Archæolog. en Arabie*, i. 159, 170) where it is mentioned along with Damascus and Malatia. It is thus probable that the tradition according to which 'Amr b. Lubuy [q. v.], brought the idol with him from Mecca or Mesopotamia, is correct in retaining a memory of the foreign, to be more accurate Aramaic, origin of Hubal, although the substance of the tradition is otherwise quite legendary. The name cannot be explained from the Arabian for the etymology in Y'hud etc. accedes themselves, but Poole's suggestion that Hubal is equivalent to *Yhwh*, although defended by Durey, is hardly better founded. Another tradition indeed relates that Hubal was an idol of the Band Kinsa', worshipped also by the Kurash, and had been placed in the Ka'bah by the Quraysh. But nowhere where is used to be called Hubal, Kscurus. It is further related that the idol was of red onyx in the form of a man; the Kurash replaced the right-hand which was broken, by a golden one; it was the custom to crown the idol with a crown, this was done for example by 'Abd al-Muttalib with reference to his son 'Abd Allah, etc. We learn nothing further about the cult of this idol and the legends are quite worthless for the comprehension of the real nature of the deity. After the conquest of Mecca Hubal shared the lot of all other idols and the image was removed from the Ka'bah and destroyed.

**HUBD**, the prophet who, according to the Khods, appeared among the *Ad* [q. v.]. He is represented as the son of his kinman Mobed (q. v.) and is gnosology (which is transmitted in various forms, therefore coincides in some way) of that of their founder Ka'bah. He is also identified with *Abu* (the Biblical *Eber*), the ancestor of the Huts, in his number reference he is called the son of *Mab* [q. v.]. His figure is even more shadowy than the picture of his people and like every hero is represented in the same position as Muhammad in Messa, i. e., he found only infidels, and pride among the people and his followers were few. God, therefore, punished the *Ad* with a three years drought, as the later legend tells us. A depression was sent to Mecca to prevent rain there. God made three clouds appear in the sky, one abin, one red and one black. One of the depression, called Khald, was given the choice of one of the three by a voice from heaven. He chose the black one with the result that a terrible storm broke over the *Ad* and destroyed the whole people with the exception of Hubd and his followers (Sura, 69, 4). Hubd is said to have lived 150 years. There are various traditions regarding his grave, but in none is there a Ka'bah Hubd not far from the Baniyneh, [q. v.]. In Ibn Barzah (ed. Furtw., i. 205, 207) it is meant that the grave of Hubd is in the great mosque at Damascus; according to other traditions he is buried near the Ka'bah with 98 other prophets.

In the article *Ad* attention has already been called to the fact that the existence of a tribe of *Ad* is problematic. This is still true of Hubd. The word *Hud* in the Kur'an is a name for the *Ad* as a body (Sura, ii. 105, 126, 134), and the root *hid* is 20 times to denote Judah (q. v., 15-48 eic.). The proper name looks as if it had been derived from the root and the term; the traditio
HÜD — HUDAIBIYA.

terial identification of Hüd with the ancestor of the Hebrews probably points in the same direction. Hirschfeld is perhaps correct when he calls Hüd an allegorical figure (Bitchik a. Erklärung des Koran; Leipzig, 1886, p. 17, note 4). Von Kramer's suggestion (Über die bengische Sage, p. 277, note 4) that the crater of Batn bi: was the immediate cause of the rise of the Hüd legend is worthy of note.

Bibliography: Besides the works mentioned in the text and in the articles 'Hüd' and 'Makkah' the commentators on the Koran, particularly on Sura viii. 64, al. 53, and sura 22, 123, 275, Thalhât, 'Abd al-Halîm (1930), p. 63, and Sale, The Koran, Preliminary Notes, p. 8; Mantei, 'Refutations' (Paris, 1668), p. 262 and the older literature there given; Geiger, Was hat Muhammad aus dem jüdischen und germanischen?, p. 111, n. 3 (Z. J. WENCKE).
Hudhayfah, a large Arab tribe, belonging to the North Arabian group. Their genealogy is Hudhayfah b. Murrika b. al-Yaz b. Mudar. They were a brother tribe of the Khuzayma. They inhabited the mountains of Sa'dah. Hudhayfah, who bear their name, between Mecca and Madina and were neighbours of the Salim [q.v.] and Kinanah [q.v.]. In the time of the Qibla they worshipped the idol Suwai (destroyed by 'Amr b. al-As in 8 = 630) at Rohat and, like the Karakha, Khasa', and tribes, also Manufi (destroyed in 8 = 630 by Sa'd b. Zaid) at Kinda, mentioned in Kinda ii. 19, 20. The Hudhayfah produced a very great many poets, of whom the most important are the contemporaries of the Prophet, Abu Jahl [q.v.] and Abu Khiyash.

The following places are mentioned: with others, are belong to the Hudhayfah: Ath (in Tihamah), Adh, Al-Athab (Wustenfeld, Register p. 233, al-Abkhi), Af'arah, Ain, Al-Anwā', Aty, Alimah, al-Ard (a large town near Tarāb), Badmīn, Hišān, Hāfiz Anf, Bāt Ni'mān, Dajj, al-Dalāl, Hufūs, al-Hurayjā, al-Hikāl, Hiyārat, Dura Farākat, Dabīl, Khajūs, Al-Karn, Al-Lūh, Al-Mu'ajja, Al-Mu'tahdī, Nūr (several villages), Kāsah, Rāji Ṣa'īdī, Rājī, Rāhīm, Rūdūt, Ruhī, Rūdūr, (3 miles from Mecca, also given as a wadi), Al-tīlīn, and Ura: mountains: Arād, Asūr, al-Asām (Umm, in Wustenfeld, Register p. 133, gives Asām as a mountain and a village), Al-Qurayd, Fīfrī (charge a very rich in grain and honey), Haiq, Kākhāb, al-Karak, Khamīlah, Kintīlī, Kurjī, Laḥān, Mādī (Wustenfeld, Register, it c. Marīd), Mākā, Ni'mān, Nābī (also given as a wadi), Salīm, Sa'īdī, Sūdūdī, Shāhīnī, Shāhīnī, al-Wuṣtān, Zārāt; the wādís includes: al-Dabīl, Dīnāk, Haddīn, Hijāyā (Hilās), Sūyayna (according to some, a mountain), Dairīn (all in common with the Kinanah), al-Dabīl (al-Dī'līn), Dā'in, Nekhār, I-Shūmān (two wādís, which unite at Rujin Marr), Ḫalījī, Wāli-b Qayrawān, and Tufālān.

Historical. The Hudhayfah, endeavouring to test the Tribes' Ahi Kāthī to rule the Ka'bah when he came to Mecca, in order that they might thereby incite divine punishment. Ahi Kāthī, warned of this by two Learned Jews, had the insitigators apprehended. When the Abaylahin king 'Abraha (in the 4th year of the elephant's) tried to destroy the Ka'bah, the Hudhayfah, along with the Kinanah, Kūrash, and other neighbouring tribes, took up arms against him unsuccessfuoly; al-Mut'ahib and Khawālij b. Wālīja, the chiefs of the Hudhayfah, and Yā'far b. Na'il, chief of the Bahār b. 'Abd Ṣālih, then offered to cede him the third part of Tihāma, if he would spare the Ka'bah and the country, but Abrahā declined.

After the battle of Uqād in 4 = 626, the Banu Līthān, a clan of the Hudhayfah, assembled at Orm with other tribes round Mecca under Sufyān b. Khattab, to conquer against Muhammad. The Prophet, being told of this, had Sufyān expelled by 'Abd Allah b. Uthew. 'Abd Allah brought his head to the Prophet and was presented by him with a stick which, according to the Prophet, was to serve as a mark of recognition on the day of resurrection. 'Abd Allah is said to have been buried with this stick, which he carried all his life. In the same year a number of Hudhayfah fell upon six companions of the Prophet at the watering-place of Kāfji; they were on their way from Muhammad to the 'Adal and 'Ad to inform them in the principles of Islam. The Hudhayfah were few and brought the other tribes to Mecca, where they sold them to the Kurāsh to the Banu Līthān to the Prophet by the Prophet in 4 = 630, a number of the Khawās fell upon a section of the Hudhayfah and slew one of them; the Prophet, learning of this, during the midday service next day before the Ka'bah made an appeal to the Khawās, urging them to refrain from further bloodshed.

The Hudhayfah still exist on the Dhēbab Kūsa, a number of ranges round Ṭū'is, one of which is the village of Kā'-a-Kūsa, according to Burckhardt, the most beautiful spot in the Hijāz, and far famed for the quality of its water. Here they camp with their numerous herds and grow wheat and barley in the very charming valleys of these hills. Their chief little houses, scattered over the plain in groups of four or five, are built of stone or earth. There are also settlements of the Hudhayfah at Mabed, the southern suburb of Mecca, where they sell dates, corn and cattle. Before their conquest by the Wahhābis, they were only provisionally under Mecca and paid no taxes.

(H. LAMMERS.)

HUDHUD, the houpo or, belonging to the order Scutariaceae and bears a remarkable skill of leathers on its head. It is related concerning its haunts and characteristics of which only a part can be mentioned here. Its plant is particularly emphasized. In Uniusey b. Ahi 'Amr (ed. Schultes, in Botanische assyriologische, will. 26, 84 sq. cf. also Ibn Katafin, Kitab al-Kitāb, ed. de Genève, p. 379.
there is a story that the hoopoe envahed its dead mother and carried the body on its back and, head still it found a resting-place for it; this is why its back is brown. It is also related that the tuft of feathers was a reward for this act.

When its mate dies, the hoopoe does not look for a new wife. — When its parents grow old, it feeds them. It bears different languages in Arabic, e.g. 

Abu 'Abd Allah, Abu 'Abd Allah, after the numerous birds of its tuft as it walks. It makes its nest in dung so that it has an unpleasant smell. Its feathers, heart, etc. are used in various ways. The Prophet is said to have forbidden it to be killed; according to some, its flesh is forbidden, according to others, it is permitted. The hoopoe plays a prominent part in the legend of Solomon and Bilqis. This was apparently already developed by Muhammad’s time as we may conclude from Surah xxvii. 20. In this passage we are told that Solomon assembled the birds and the hoopoe was missing. When he arrived late, he gave an account of the queen of Saba’ and was entranced by Solomon with the hearing of a letter to the Sabaeans.

The later writers as a rule give the whole story as Bilqis. The hoopoe is probably a symbol of the unseen, seeing where it is; through the earth it was therefore used by Solomon on his pilgrimages to Mecca to find water. But on one occasion the hoopoe whom Solomon had appointed for this purpose, named Ya’fur or Yaghfur, while on the journey, took a trip to the south and reached the garden of Bilqis where he made the acquaintance of another hoopoe named ‘Uthur. The latter told him a great deal about the queen of Saba’. In the meanwhile Solomon was looking in vain for water for his army (or according to another version, searching for food, etc.). He sent the vulture (mazay) to assemble the birds and the hoopoe was missing. The eagle (sabhi) was sent to fetch him. But he was already on his way back and was brought by the eagle before Solomon, who talked to him severely but finally, after hearing his account of Bilqis, sent him with a letter to the Sabaeans.

Another version of the beginning of the story relates that Solomon on his pilgrimage was being carried with all his retinue on a carpet by the winds to Arabia. The birds were ordered to fly above the carpet in such a compact mass that those sitting on it should be entirely protected from the sun. But Solomon noticed a little ray of light in one place; so he concluded that one bird was missing. He then held a roll-call and it was found that the hoopoe was absent; the story continues as before.

It is also related that the hoopoe once invited Solomon and his army to a feast on an island. When the guests had arrived, he threw a dead beast into the sea and said: “Now eat, O thou Prophet of God! If the meat be lacking, there is at least plenty of sauce.” Solomon and his soldiers laughed at this joke.

On the relationship of the Jewish hoopoe-legend to the Muslim, see Gibbon, Rome, Religion et Religion dans l’Afrique du Nord, p. 270 sqq.

HUDIJA (See HUDJARA)

HUDJIDJA (haj), proof, document. The word is also used as a title in the science of Tradition for one who has reached the highest stage in it, knows 500 traditions by heart and everything connected with them; hence al-Ghazali’s title, Hudjijal al-Awam. Among the落到am, Hudjija is one who is appointed leader of the propaganda by the Imam of the time”. The number of the Hudjijas is 12. They occupy the same position as the nashiks in the propaganda of the Abbasids, on the model of the 12 disciples of Christ and the 12 sauffa of the Prophet. They are called "sacred" and "sanctified" by them. Among the "Twelve" the twelfth Imam bears the title Hudjija.

HUDJIR, b. ‘Abd al-tribe of Khilaf, the “first martyr” of the Shi’as. The sect would like to give him the title of “companion of the Prophet” but it is denied by the oldest authorities. The Shi’a likewise, with as little ground, makes him take part in the first Syrian campaigns, when he is said to have conquered the district of Mardj al-Hudhir but: the object of this clearly is simply to connect him from the earliest time with this place, which was to be the scene of his martyrdom. At an early period Hudjir threw himself heart and soul into ‘Abd’s cause and fought for him at the battle of the Camel’ and at Siffin. We find him in Egypt with Muhammad, son of the Caliph Abu Bakr, who was governing this province in ‘Abd’s name. After ‘Abd’s son Hassan had given up his claim to the Caliphate, Hudjir became the moving spirit in all the ‘Abid intrigue s in Kufa. The governor Magthar b. Sh’ara had even to offer him money to obtain peace. Maghfar’s successor, Ziyad b. Abihi, endeavoured to bring him to a more reasonable frame of mind, but his efforts failed with this unruly spirit, who always wanted to play an important part. On Hassan’s death, Hudjir entered into negotiations with his brother Hassan the pretender, who had been invited to take command over his followers in Kufa. During Ziyad’s absence in Iraq, Hudjir had attempted to stir up a revolutionary movement. Ziyad hurried back with all possible speed and endeavoured to settle the affair peacefully. But when the negotiations failed through Ziyad’s own it Hudjir arrested along with these leaders of the Shi’a party, who were most deeply compromised. The matter was taken to the courts and an indictment prepared and signed by the most prominent men in Kufa, finaly Hudjir was taken with his companions to Mwiya in Syria. After the Caliph had arranged a new trial and asked the advice of the leading men of Syria, he sentenced Hudjir to death. As he was about to be executed in Marj ‘Abdul near Damascus, in his last moments ‘Abd’s follower utterly lost his courage. His
death opens the martyrology of the Shi'as; hence the importance assigned to this latter everyday episode, which was really nothing more than an incident in the domestic troubles of the Iraq. Khalil, "throughout maintained a correct attitude and Ma'awiyah even inclined to the side of loyalty" (Wellhausen), for his panegyric to the majority of Husayn's accompaniments.

HUDIRA (A.), room, chamber, particularly (with the article) A'isha's room, where the Prophet and his two successors Abu Bakr and Omar were buried, now one of the greatest sanctuaries of Islam. [See the article Medina.]

Hudayra is derived from the same root; it was the term applied in Egypt to the slaves who were quartered in barracks near the royal residence. During the Fatimid period, these were organised by al-Mamun on military lines as a kind of bodyguard under the command of an emir, who bore the title of al-Mawafiq. Their numbers then amounted to 30,000 men. [See Makris, Khalifa, i, 170—171.]

HUDIRIYAH (Hudayriyyah, Hudairiyeh), the name of a tribe in South Arabia. Their land lies to the north of the land of the Sabait (Subashi, v. 65) between 43° 40' and 44° 32' East Longitude, and 13° 5' and 13° 15' North Lat. and is entirely mountainous. The climate is tropical; the principal product is coffee. Among the mountains we may mention Ha'al Sabit (Salit; v. 4), which is described by Hamadani in his Dastak as a very high mountain, among wadis, the well-known Wazan which joins the Wadi Thubab, the river of Luqar (v. 7), Logan, and the Wadi al-Makina (Mhajat); among wadis, Dibah, belonging to the important class of Sherifiyat (Shurfa), which at one time had an independent Sultan, with about 500 inhabitants (of whom about a fifth are Jews), an old Hosayn village, a tamarisk and a Saturday market, Dari Shawwar, the chief place of the powerful clan of Hammad, which has an 'ajal of its own, with about 500 inhabitants (including only a few Jews), several bazaars and a Friday market, Herouta on the wadi of the same name, with about 500 inhabitants (including a few Jews), a small bazaar and a Tuesday market, Dimma, near Tawil (v. 4), with about 600 inhabitants (of whom a tenth are Jews). In the land of the Hammad there is a hot mineral well with a bath, called Birkele Hammat, visited by many Arabs, but access to it is forbidden to Jews.

The Hudayrais claim to be true Hosaynis, and are said to have at one time formed a tribe with the Saba'i. They were earlier under the Intilidat of Saba', but became independent on the decline of its power. Since the middle of the 17th century they have become the most powerful

HUFASH (Hufash), a high mountain in South Arabia, belonging to the al-Masa'il range of the Sahra, group, on the Wali Sharqie near Harit (v. 6). It is often mentioned by Madin in his

AL-HUFIRAT, plur. of Hufirat (v. 7) title of Saba' al-Masa'il.

AL-HUDJIRI (Hudjari), a calm, serene, armistice, in the Al-Hudjari denotes especially the truce made between Muhammad and Kuranah al-Hudjariyah. [See this art.]

HULDUF (Huludeh, Hulud), Plur. of Hudidh (v. 5).

HUELA, the ancient Omonia, Arabic Wallin, a town in the province of Spain of the same name, on the left bank of the Odiel, an important port, accessible at high tides for large ships, for the copper and sulphur mines of Rio Tuerto and Tharsis, which are near it. In the middle ages it was, according to Hulde, a small, thickly populated, walled town with flourishing trade and industries. The present population is 29,000. After the fall of the Omyyad dynasty, Huelva had its own rulers, the Bakar Abd Zaid Muhammad ibn Aliyib and Abu Musa'ib Abd al-Qasim. In 1054 the latter sacked the town to al-Mu'izz of Seville on condition that he was left the little island of Salir (Salset), but when he saw that no tax was to be paid, he sold his ships and assumed the title of Marinid and went to Cordova. Huelva henceforward shared the fortunes of Seville.

HUESCA, the ancient Ocuca, Arabic Wudjib, a town in the Spanish province of the same name, 50 miles E. of Saragossa. The number of inhabitants is now 12,600. Huesca was conquered as early as 656 (732) by the Arabs, and seems during the period of Arab rule to have formed for a time an independent principality under Muhammad b. Abd al-Malik b. Tahsim, died 301 (913—4). Cf. Codres, Estudios críticos de Historia de Españo, p. 234 sqq. In 1096 the rule of the Moors ended, and Huesca became a free priv. city capital of Aragon, till the seat of the government was moved to Saragossa in 1113. Idem. ev. 124, p. 176, only mentions the name of the town.

HULAGU (also written Hulagü) a Mongol

...
barred there. According to Egyptian sources, the tower in Siid was collapsed in 584 = 1282–3 and fell into the lake with all its treasures; and no catastrophe is mentioned in the Persian authorities. (Hult—Afr. cit. above, ii. 243) only says that in the tower the castle was quite uninhabited (cf. Rashid-al-Din, ed. Quatremère, p. 316 sq. Le Strange, The Lands of the Eastern Caliphate, p. 160 sq.). Hululā died on Sunday 10th Rabī' I 685 = 3rd February 1285. According to the Mongol custom, a young maiden was buried with him; this is the last occasion on which his custom is mentioned among the Persians. It was, even in the heathen period.

AL-HULUL AL-MARABIYYA fil DHUKR AL-ABBAR AL-MARRAKUSHYYA, an anonymous work, dealing especially with the history of Marrakush. The author begins his story with the foundation of the city; he deals in detail with the history of the Almoravids and Almohads and their relations with the Marinids, he only gives a summary of the relations of the rulers of this dynasty. We find at the end of the book a list of the masters of Marrakush. The work has been attributed to Ibn Battūta (i) and by its recent editor to Lisān al-Dīn b. al-Khājjī; but the author himself tells us (p. 136) that he compiled (completed?) the work on the 12th Rābi' I 785 (4th May 1384). Dowy's manuscripts are dated 783 and Ibn al-Khājjī was assassinated at the beginning of 776 (1374). The preface and the chapter on Vīṇāt b. Tashīn's expeditions to Spain were published by Dowy, Scriptorum Arabum libri de Abbasītā, ii. 182—205; he has also given the chapters on the Almoravids and Almohads' expeditions in his Historiae de Rodostó et de Littérature et de Pèlerinage (3rd ed., Appendix xxv. pp. ix–xix.). A short extract, given in Amami's Appendice alle Bibliotheca Arabica-Scaletta, [Leipzig, 1875], p. 62—63.

The text has been published very inaccurately at Tunis (ed. d.) with the biography of the supposed author Ibn al-Khājjī. In the 14th century a Spanish translation was made which is now in the Government House at Algiers; it was inserted (without indication of provenance) by Conde in his Historia de la dominación de los Árabes en España, iii. 16—178.

Fons Boiguès, Exposé his-bibliographique, p. 593–595.

(KEN HUSER)

HULUMIYYA, a mystic sect founded in Damascus by Abu Hulami al-Farisi al-Halabi. He appears to have been a disciple of Ibn Sīlīm of Basra. (died 297 = 908); he was admitted to the Sufi Shākhī in the Tawāreb of Kalludārī (s.v. stārah) but not communicated to in the Adābī; he was later maintained the teaching that God is present in the person of man endowed with physical beauty (Sūrat i 2; that everything is allowed (qādah) to him. He also knew the presence of

God in them. This is perhaps a corruption of the Sūrianīyya theory in the divine ḥaqīqat.

HULUL, a philosophical term, derived from hali‘ to loosen, unfold, slight, set in a place (mahall), whence its classical ascensions in Muslim theology, the relation between a body and its place, an accident and its substance. Hulul also has been applied to the substanlial union 1. of the body and the soul, hulul bī‘r-rābī‘ (al-‘ ādam), 2. of a divine spirit with man, hulul bī‘r- nāf (cf. al-Ha‘līyya) the Aristotelian doctrine of kalamismophen, like the Christian doctrine of the incarnation, proposed the union as matter of a spiritual substance, its specific form, it may be compared to a force in its sphere of action. Almost all Muslim theologians (Mu’takallima) reject it; followers of atomism, with al-A’jārī, admitted hulul in case 1., for they saw in the ruḥ a subtle body, even in the angels and demons, but they rejected it in case 2. as admitting the divine essence to a partition (haqīḍat), and to a materialisation (kalamismophen), whence the dispute of both positions both by Sunnī and Shī‘a of the following sects as Hulamiyya on the same grounds as the Christians: (a) the extreme Shī‘a (Ghulātī): Sabītī, Bayānīyya, Dā‘ūdiyya, Khatūpīyya, Nuqairīyya, Mu‘āmmīyya, Rizāyīyya, Sī‘yātīyya, Ariqīyya, Dīwān. b Sunnī Shī‘a: Hulamiyya (q.v.), Fīrīkīyya (cf. al-Ha‘līyya), Shabābīyya, Montābīyya, Imākhīyya, (Ibn Taimiyya calls hulul ‘unṣūr’ their ‘mahall al-‘ahwāl’ cf. ‘rā‘īyāt al-‘ahwāl’ Fīrīkīyya, Montābīyya, Mīnābīyya, (ed. Cairo 1295, ii. 84—86; cf. Ibn al-A‘lam).

HULUN, Greek Λαός, a very ancient town at the entrance of the Zagros passes, Zagri Pyla [Ābāsh Hulun], now utterly deserted. The site of the town is on the left bank of the Hulun River; the name of Sefid Pīl is still recognizable by the remains of a building called Teč-1 Gürn (Illustrated in Flandin and Cossé, Voyage en Persie, i. Pl. 214), which dates from Sasanian times. According to Arab tradition (cf. Tabari) in Nubata, Geschichte der Perser und Araber, p. 130), the town was founded by Kawsh I (480-490) but in reality it is much older and stands on the same name (Khadram) even in the Akkadian period. The surrounding country is very fertile, frontiers being particularly numerous, and the signs of Hulun are celebrated in the east under the
HULWÁN — HUMÁYÚN.

HULWÁN (N), a village in Egypt, on the right bank of the Nile, 3 faraž south of Ýufá, celebrated by the Arab poet Ibn Kiná in Nukayti (ed. Rhödekamp, lvi. 6f.), in a panegyric on Abs-Abáb b. Márwán. It was said to have a pleasure-garden there. The village still exists and has given its name to the health resort of Hulwan, which lies farther inland and is of modern origin; it now has over 5,000 inhabitants and is much visited.

Bibliography: Yaquí, Muqámad, ii. 320.

Humáyún (b. 1508), also styled Humáyún, was the son of Khán Bázáir and after his death, Dájmat-Ádáshá (nesting in Paradise) eldest son of Bábáur and Múhámmed b. Bokáír. He was a good natured and generous prince, and inherited grandmanneredness from his father and from his mother who was of a Persian, snobbish family and related to Shúlám Húsain. He was also a scholar and a mathematician, but he was indolent and addicted to opium. In his youth he was an active soldier, and conquered Gujrat, but he could not control his brothers or his people. He bore the surnames of ‘Iyád b. ‘Abd al-Máhdi and ‘Abd Alláh; but as a boy he was very fengal and lived carelessly at Gange. Twice defeated by Shír Khán he had to fly to Persia. There ‘Iyád helped him to recover his throne.
success in regaining India was chiefly due to his general Bahadur Khan who won for him the victory at Mahabharat and also that over Sikandar Suhar in June 1533. He had a poetical turn and wrote a Dewan. His widow Huldufi Begum erected a massive tomb over him near Dilli.

HUMAYUN-NAMA, the title of the Turkish version of the Sallat al-Idr india [q. v.]

AL-HUMAZA (א), the slanderer; title of Shmu elay.

AL-HUMUS. This is the name traditionally given to the inhabitants of the Khabur of Moesiac, at the time of Muhammad's appearance, as far as they were situated in the special customs duties (zakat) from the other tribes who were together known as al-Hila.

The Humus are said to have cooked or eaten no better when in a conquered state and to have preserved no milk so that they allowed cows, etc. with young to be suckled freely; they are also said to have refused to use muslin (ash-ajf) and saffron and to favor the use of oil and perfumes as well as sexual intercourse. They cut neither their hair nor nails and wore a new robe, which had not been made of wool or silk. It is further said of them that they did not come to Arafat, but marched away in another direction (according to another traditional account in Namis, cf. Sennich Huerongane, c. c. p. 130 spp.) and from there began the Ruba (this is said to be forbidden in Kuran ii. 195 cf. al-Tahari, Toefev, ii. 163 spp.), that they only lived in leather tents, made the circuit of the Ka'ba in sandals and did not enter their dwellings through the usual entrance (but, for example, through an opening in the roof). On the last named action, against which Kuran ii. 185 is directed, there are discrepant traditions, according to which it was the Arabs who practised it (see also al-Talhari, op. cit., ii. 165 spp.). In al-Araji, p. 112 spp., however, it is said that the Arabs and Khamal are included among the Humus.

It is further stated that the clothes of the Hila after they had completed the famous hadiyya were preserved at the sacred place. They were thrown around about the Ka'ba as sa'far (in other circumstances also a garment could become sa'far, cf. al-Araji, p. 118 spp.) and mercantile abandonment under the influence of the weather. One who wished to keep his robe, took it off at the entrance to the sanctuary and made the circuit naked or in a garment borrowed or hired from one of the Huna (cf. Robertson Smith, Lectures on the Religion of the Semites, p. 451). It is also said that the Huna, who came to perform the Hajj or Umra, were not allowed to wear the robe which they brought with them from the hill. They could only eat food given by or purchased from the people of the Kurna. Kuran vii. 27, 29 is said to refer to these last customs (cf. also al-Tahari, op. cit., viii. 104 spp.) 108-111.

The meaning of the word Humus (qg. Aburan; also Aburin) is obscure; the opposite Huna, according to Wallhausen, points to the meaning "consecrated," according to Noldeke (in a private letter), who is inclined to doubt the reality of this contract, al-Huma, like al-Mashura (Qurana, p. 285, v. 1), might mean "the hot" with reference to the corresponding root; the denominative jamu' is used in al-Araji, p. 123, 22, of a mother, who by a vow dedicates her son to be an abhara; cf. 1 Sam. v. 6, sq.

(C. Van Arendonk)

HUNAIN, a deep and irregular valley, with clusters of palm-trees, situated a day's journey from Mecca on one of the roads to Ti'm, the residence of one of the chief scribes of the tribe. Its name is by the Kurna (in 25-26) fought soon after the surrender (jaff) of Mecca. The confederate tribes of the Kurna did not wish to await the result of this last trial of strength, but to disperse among the tribes of Talut. They posted themselves in the defiles commanding the plain of Hunain. Their commander Malik b. Aus brought their families and flocks with them; their presence, he thought, would make his men invincible.

On the course of the battle we have a number of notices, all inspired by the text of the Kurna. The latter relates that — in spite of the great number of Muslim warriors — the nation began with a complete rout of the Prophet's forces. His army owed its safety to the intervention of "invisible troops." Setting out from this statement each author has set about a compilation representing these two phases of the battle, not forgetting to magnify the valour of his own fellow tribesmen or of individuals of special interest for the early history of Islam. For the rest the confusion and the contradictions of these accounts show that at quite an early period the Kurna had been in great difficulties in representing the development of the manoeuvres in the battle.

On leaving the narrow oasis of Hunain the road enters widening gorges, suitable for ambushes. In them Malik b. Aus awaited the Moslems, coming along in no order and not suspecting the presence of the enemy. Surprised by the sudden attack of the Bedouin cavalry, overwhelmed by a hail of arrows, the Prophet's soldiers retired in disorder. In spite of its size, the earth appeared too small for the besiegers (160 spp.) and a moment Muslim, left alone, was in great danger. Tradition has great difficulty in glossing over this cowardly desertion; it throws the responsibility for it on the Bedouin allies of the tribe of Salim and on the jaff or skillful Meccans. The accounts — according to their Kurna or Ansi origin — claim for the Meccans or Moslems respectively the honour of not hustling given way. Those versions which are inspired by the court of Baghdad display no less zeal in favour of the Meccans. All authors, except the Shi'ites, endeavor to protect the reputation of the Caliphs Abd Bakr and Omeira; the biographers of Isma'il it is considered a signal merit, indeed a moral, to have stood firm at Hunain.
Victory finally rested with the Muslims. On this point we have the statement of the Karānī, confirmed by the advance of the Prophet to lay siege to Tīrīf. The access to this town was therefore open. How soon was the advantage reversed to the Muslim arms. Here again the Karānī suggests the answer: "God has made invisible troops on high to chastise the unbelievers", Khālid b. al-Walīd, who commanded the cavalry, was among the few Muslims wounded that day. He must therefore have been risking his life and it seems legitimate to give him the credit of the victory, equally claimed for the Anṣārī by the Medinese school. Hūnain was not a battle, but two routes: first that of the Muslims, then that of the Bedouins of Hūnayn. This accounts for the large number of prisoners — 60,000 women and children and the near to negligible total of the Muslim losses, about twelve killed. The booty captured was enormous, over 24,000 camels. The fleeing Bedouins sought refuge behind the ramparts of Tīrīf.

(H. Lammens)

HUNAIN b. Idrīs. His full name was Aḥmad b. Ḥunayn b. Ibrāhīm Al-Ṭabarī. He was a member of a family belonging to the Christian Arab tribe of Ṭabāl and was born at Ḥira in 194 = 809-810, where his father was an apothecary. He was celebrated as a physician and as the translator of Greek and Latin works into Syrian and Arabic. At a young age he came to Baghdad, where he became a pupil of the physician Yahya b. Miswārah. He completed his education in Athens and became particularly proficient in the Greek language, which qualified him for his later translations. On returning to Baghdad he began his literary activity with the support of the Banu Mūsā, for whom he had collected Greek works, and became physician to the Caliph al-Muqtasim. On account of his attitude to iconoclasm he was suspected of blasphemy and excommunicated by Bishop Theodore; he therefore took poison out of malachite and died in 260 = December 327.

Of his own works there have survived the Kišāf al-Majābī f. 4-Tīrīf, translated into Latin and printed in longo Johannes ad Tenga Galeni de Johannesingen in quinque poesem Galeni; another version of the same work entitled Kišāf al-Majābī f. 4-Tīrīf i. Tustačeli, i. Kišāf al-Majābī f. 4-Tīrīf in Quaestiones; the Kūhīf al-Hilmah f. 4-Tīrīf in Tafṣīl al-Hilmah; several works on physics and astronomy; the "Aphorisms of the Philosophers" in a Hebrew translation; among his translations it is principally those of Platon, Aristotelian or Hippocratic works that are ascribed to him, also that of Dioscorids' Ṣunlā fraṣṣāt, but especially almost all the works of Galen, so that, according to Ibn Abī Usāfī's, "Hardly anything by Galen exists which was not translated or improved by him". In addition, translations of the Quaestiones of Ptolemy etc. are ascribed to him.

There can be no doubt that of the numerous translations ascribed to him a portion are to be traced to his credit, notably those of his works. In the sun islaḥ b. Hūnayn, his nephew Ḥusayn, and others, it may be particularly mentioned that the translation of Galen edited by Mīḥaṣīm is ascribed to Ḥusayn as a result of a critical analysis of its language by G. Bergsträsser. For the details see the Bibliography.

HUNZA—NAGIR. The two districts of Hunza and Nagar, which occupy an isolated valley between 30° and 37° N. and 74° 22' and 75° 53'. They are, however, considered as one country under the joint name of Hunza-Nagar (often written Hunza-Nagri). This valley communicates by difficult gorges with Gilgit, and is drained by the Kandahar River which falls into the Gilgit River a tributary of the Indus. From the north end it can be approached by passes leading on to the Shigar Valley, or by which there is communication with Satikot and Yarkand. On the North-West and South-East the valley is bounded by inaccessible mountains, spurs of the Hindukush and Murghab ranges, some peaks exceeding 25,000 ft. in height, of which Kalki south of Nagar is the best known. The population is Mahommadan, but while the people of Nagar are Shiah those of Hunza, like their neighbours of Wakhan, belong to the Sunnite sect. The Hunza people are more warlike than those of Nagar. They are apparently of the same race. They speak two languages, the local dialect of Gilgit being spoken in Lower Nagar and the Turkmish, a non-Aryan and non-Turkic language of uncertain affinities, being spoken in Hunza and upper Nagar. In the northern districts a branch of the Wakhi race, speaking its own Ghilzai tongue, is found. The early communica
tions with Wakhan by the Kikits-Pass have led to the intrusion of a Ghilzai race south of the Hindukush. The same name made it easy for robbers from Hunza to raid the traffic from Yarkand to India by the Karakoram Pass where the so-called Kandjut robbers inspired great terror until restrained by the extension of British power. The name Kandjut is derived from Kandjut, the name by which Hunza is known in the Pamirs and Satikot, a name which Badshah compiled with Hunza, one joint form of the name Hunza. The people of Nagar took no part in these raids, which were winked at by the Chinese authorities as a reward for assistance given by China in suppressing a rebellion at Yarkand in 1842. The Chinese also paid a subsidy to the ruler of Hunza. The traffic in slaves carried on by the Hunza raiders was a great source to the races under Kandjut rule, especially the people of Ilchikhan.
Hunza and Nagir were and still are governed by separate chiefs, each known by the name of Tum, a word of uncertain origin.

Little is known of the early history of this region. The easy passes leading to the north may have been traversed by Kushan invaders from Badakhshan in the second century B.C., but the routes leading into Cixi were more probably followed. Buddhism was certainly the prevailing creed from the commence ment of the Christian era, and a well preserved tope still exists at Thol in Nagir. The date of the introduction of Islam is not known, but the prevalence of the Shins and Mawlawis seems to point to its having come in by Badakhshan and Wakhan, and not from the south. But few European travellers visited the country before the war of 1894, the principal were Lockhart, Bidlitch, Gronschewsky, Durand and Youngusband. The Sikhs attempted to subdue it after their occupation of Gilgit, in consequence of the perpetual raids from Hunza, but met with a disastrous defeat in 1848. Further unsuccessful attempts were made by the Dogra rulers of Kasha-ni, but in 1860 the Thum of Hunza agreed to pay tribute. No Kashi-ni was however allowed to enter the valley. After the appointment of British agent in 1888, Hunza and Nagir entered into agreement to put an end to the raids, but in 1894 they recommenced and the chiefs threatened to attack the fort of Chalt. A small force of Gurkhas and Dogras under British officers was then sent into the country, and after the brilliant storming of the hill fort of Nith and Thol, the Gorge of the Kunjil River was forced, the Thum of Nagir submitted and the Thum of Hunza fled over the Pamir. Since that time Hunza has been included within the boundary of British India. The internal administration has not been interfered with, but it is traversed by a good road and travellers can pass through it in safety. A body of Kandjilis served under British officers in the Cipfis campaign of 1894. The town of Baltit, at an altitude of 3,200 feet, is the capital of Hunza and the town of Nagir that of Nagir.

The territories of the two countries are separated by the Kunjil River.

**Biography:** March, A trip to the Gilgit valley. J.A.S.B. 1874; Biddulph, Tribes of the Hindoos (Kashmir) (Calcutta, 1880); Knight, Where three Empires Meet (London, 1804). Stein, Semi-nomadic tribes of Khun (London, 1894) (Ch. Ill); Shaw, High Turkestan and Yarkand (London, 1871) (Ch. xii). (M. Longworth Dames)

**HUR** (A.), pluralis haurum, frum, al-afarum, literally "the white ones" i.e. the maidsens in Parsi, the black ills of whose eyes is in strong contrast to the clear white around it. The same unitilas in Persian is haur (also haur-shahrkh, haur, haurshwar). The expression of the word found in Arabic texts "Hars whose aspect is surrounded (haur-eh)" is of course false and is therefore rejected even by other Arab philologists.

These maidsens of Paradise are described in various passages in the Kuran. In Surah II. 23. 40. 57. 49. 60. they are called "parisit wives"; according to the commentators, this means that they are from beyond them in the interior and subject of character. In Surah IV. 58. it is said that their glance is nothing i.e. they look only upon their husbands. Neither man nor djinn has ever touched them"; this is interpreted to mean that there are two classes of them, one like man and the other like the djinns. They are emulated in pavilions (IV. 72). They are compared to junquels and pearls (IV. 50).

Later literature is able to give many more details of their physical beauty; they are created of silver, glass, amber and crystal, and have four colors, white, green, yellow, and red. They are so transparent that the arrows of their bows are visible through seventy silken garments. If they expectantly into the world, their spittles become black. Two names are written on their foreheads, one of the names of Allah and the name of their husband. They wear many jewels and ornaments etc. on their hands and feet. They dwell in splendid palaces surrounded by female attendants and all possible luxury etc.

When the believers enter Paradise, he is welcomed by one of these beings; a large number of them are at his disposal; he cohabits with each of them as often as he has desired days in Kandahar and as often as he has performed good works besides. Yet they remain always virgins (cf. Surah vi. 33). They are equal in age to their husbands (viii. 36), namely 33 years (al-Bukhari).

These are all very sensible ideas; but there are also others of a different kind. In discussing the Kuranic term "haur" (II. 49), it may be that this can be the object of cohabitation in Paradise as there can be no question of its purpose in the world, the preservation of the race. The solution of this difficulty is found in saying that, although heaven food, women, etc. have the same in common with their earthly equivalents, it is only by way of metaphorical indication and comparison, without actual identity, so that what holds good for one may hold for the other also. In another passage (on Surah xiv. 54) al-Bukhari observes that it is not agreed whether the 'haur' are earthly women or not.

Sale (The Koran, London 1821, Preliminary Discourses, p. 134) thinks that Muhammad wrote the idea of the maidsens of Paradise to the Paktis.

**Poly.** (Her (Salamons) and Harland, 1836, p. 107) notes that Sale has confused this view with the observation that Sal's Pahlava source is much younger than the Kuran and the relationship is therefore reversed. In the article "haur" it is suggested that Muhammed misunderstood the Christian picture of Paradise and that the angels in it are the originals of the sinnat and maidsens of the Kuran.

**HURAIMILA (DURAIMILA), A TOWN IN ARABIA, IN THE NORTH OF RYAT [p. v.], the capital of Nijal, in the province of Sade (Qu'ayib) on the northern side of the river between the Sadiya and the other river of the same name, is the birthplace of the Prophet Muhammad, a Bani-Wahab, b. Ahd al-Wahab. It is surrounded by strong fortifications and is about 3,000 bays. According to Palgrave, 10,000 inhabitants. Inside the town an elevation is a large fortified city of architectural importance, which was erected along with the other edifices in Nijal after the conquest of Daraya [q.v.] by the Egyptians under.

**THE ENCYCLOPEDIA OF ISLAM, II.**
HURUFI, a script invented by 'Abd Allah of Antioch at the end of the eighth (eighth) century A.D., introduced into the Ottoman empire by one of his disciples, 'Ali ibn Ali, and adopted by the Bekaa, or Circassians. Their creed, which is embodied in the Bekaa, or Circassian, language, is based on the idea that the universe is eternal and moves with an unceasing motion, which is the cause of the changes observed in it. These changes are divided into cycles, the beginning and end of which are marked by similar phenomena, the appearance of an Adam at the beginning and a last judgment at the end. God is manifested in the person of man, particularly his face, for man was made in the image of God.

This manuscript is produced under the successive forms of the prophet, saint and God: Mohammed was the last of the prophets, then came the saints, from 'Ali to Hamza, the eleventh隐士; Full Allah; the last of the saints is also the first of the divine beings, he is God incarnate. The distinguishing feature of man is speech or language, which is written with the 28 characters of the Arabic alphabet; calculations derived from the numerical values of the letters borrowed from the Landa script (St. Gurry, Fragments of the Landa script, p. 109 sqq.) play a great part in their doctrine, but they also make use of groupings of the alphabet by letters composed of one, two, three or four written characters. The lines in the features number seven (four symbols, two symbols, and the last), or this two halves of the mountaine, two who, himself divided into two, and the north. With the equivalence of the elements, we get 28, the number of letters in Arabic alphabet. Their chief books are the six 'Alif'ana, the 'Alif'ana, 'Alif'ana, 'Alif'ana, 'Alif'ana, and 'Alif'ana, none in Persia mingled with passages from the Avesta dialect, others in Ottoman Turkish (C.E. Taft Almam and Fatima). Unlike other doctrines, they have no error or error; every meaning they use in the home of their spiritual chief, called teacher, and he gives each one by the hand of a servant, a glass of wine, a mark of brand and a piece of bread which present make great woe: the superior takes the glass of wine and gives it to each one present, who takes it respectfully, touches his face and eyes with it and drinks it. They have a kind of communion to the 28th week.
Al-Husain, the second son of Ali and Fatima, born in Medina in the fourth or fifth year of his life. As in the case of his brother al-Hassan [q. v.], the two are known together as al-Hassanieh, the "Two Husainites." Tradition pictures the young Husain, overwhelmed with marks of tenderness by his maternal grandfather, this is when Ali is said to have brought him up. "Husain is a saintly thinking of nothing but the pleasures of the table and entertaining. As to Husain he is mine and I am his." Unfortunately, for the future of his line events were to verify the truth of this judgment of Fatima's husband; they were to prove the existence in the son of the same indolence and the same lack of intelligence that had been the ruin of the father. During the troubled Caliphate of Ali, Husain become involved in theJEHEIJE 5605. and lost his life during the operation, the scheme degenerated into a general massacre. "It did not last long; just time to make a meal or to take a nap." Thus a verbal report delivered to Yazid; it describes the Caliph deposed; this is said he had neither dared nor desired. His instructions were to secure the person of Husain, to prevent him from becoming a dangerous agitation. He treated the "Ahl" some who survived the massacre of Karbalah with hem. provided generously for their needs and gave them an escort to Medina. Husain's descendants maintained their existence in obscurity, at variance with their relatives the Hashemites. They usually left to their cousins the right of enforcing the political privileges of Ali's family in Arabia.

On the significance of the death of Husain in the faith of the Shiites see the article ALEHANIM.

Al-Husain, b. Ali, Bey of Tunis (1292-1355), founder of the Haji family, still reigning there. He was the son of a Greek consul and held the office of an Agala. After the capture of the Day of the Defeated, Husain was elected bey by the Algiers, while Muhammad Al-Rahim was elected Bey on the 20th June 1057 (1497 July 1507). After Husain had driven out the Algerians he took himself of Khatib, Muhammad, who was put to death along with the ex-Day of the Defeated person who should have transmitted to his descendants.

Throughout his reign, Husain, whose candidate was a Frenchman named Raymond, endeavored to live on good terms with European powers. He concluded treaties with France (1772 and 1775), England (1775), Spain (1725), Holland (1725) and Austria (1725). On the other hand, he did not succeed in maintaining peace and the attacks of the corsairs forced France twice (1729 and 1731) to send a fleet to Coetzees.

At first Husain liked to reign in a very peaceful state, but as the people enjoyed peace such as they had not known for long, the "Roads" write Muhammad al-Saghq; b. Vazif "were safe and the land flourished, the country-houses and gardens became populous again and numerous palaces were won over to the site, but had been terrorized by the execution of Husain.

The 16th of May 1631, the (1680 October 630) passed, "Omar b. Shid. 6th. Ali Wazif, [q. v.], had taken command of the 4000 men assembled at Karbalah; Husain was summoned to surrender or disperse. The lieutenant being disarmed, Omar executed the turning movement to envelop the son of Ali. His partisans tried to resist. Husain did not stir; he played some of the heaps of dead bodies as fondly described by the Shias. As engagement resulted in which Husain fell surrounded in many places. His tents were pillaged. At first merely a police operation, the scheme degenerated into a general massacre. "It did not last long; just time to make a meal or to take a nap." Thus a verbal report delivered to Yazid; it describes the Caliph deposed; this is said he had neither dared nor desired. His instructions were to secure the person of Husain, to prevent him from becoming a dangerous agitation. He treated the "Ahl" some who survived the massacre of Karbalah with hem. provided generously for their needs and gave them an escort to Medina. Husain's descendants maintained their existence in obscurity, at variance with their relatives the Hashemites. They usually left to their cousins the right of enforcing the political privileges of Ali's family in Arabia.

On the significance of the death of Husain in the faith of the Shiites see the article ALEHANIM.

built in the country, which had never happened before”. The Bey himself undertook important works; he restored the walls of Kairawan; improved the aqueducts of Tunis, created bridges and reservoirs and finally built mosques and madrasas in Sfax, Gafsa, Sfax, and Tunis. (mosques of Bourdais and al-Madras al-Hamamieh).

From 1729, however, Tunisia suffered from severe disturbances. Ali Pasha, the Bey’s nephew, dispossessed because he was excluded from the government, had fled from Tunis with his son Yunes and invited up a rising of the tribes in the interior. Defeated by Hussein, he fled to Algeria where he was killed by the Dey Karam. The latter’s successor Boribaisi released him and by arrangement with him made an attack on Tunis. Hussein abandoned by a portion of his Arab troops was defeated at Soummaj (4th Sept. 1735) and had to retire to Kairawan while Ali entered Tunis and had himself proclaimed Bey after promising to pay a yearly tribute to Algeria. Hussein was sought to take the offensive again; after defeated ‘Ali’s son Yonus’ on 3rd November 1735 he advanced up to the walls of Tunis but did not dare storm the town. Returning to Kairawan he was betrayed by Yonus’ troops for five years. On the 16th Sadi 1152 (18th May 1740), the town was taken by storm. Hussein, who had escaped in escaping, was brought back by the enemy’s cavalry and Yonus cut off his head.

AL-HUSAIN b. ALI, [See ABU MAKUFA, AL-HAMDAN, AL-TUNISI.]

AL-HUSAIN b. HAMZAH was the son of the founder of the Hamdanid dynasty [q.v.]. At the beginning of 288/899, when the Caliph al-Mu’tadid was reducing the Hamdanid family to obedience, Hussein, who was in the castle of Dar el-Zarqani, surrendered and was with his father carried to Baghdad. In 293 Hussein undertook to capture the fugitive Khalid’s leader Harun on condition that his father should be set free. In this he succeeded and the Caliph kept his promise. From this moment the Hamdanids occupied a high place at the court of the Caliph. Ten years later Hussein was sent in pursuit of Abi Unif, the Casamian (Karmatt), who had invaded Hamman, but failed to overtake him, but in the following year (294 = 905-6) he defeated the followers of Zidawan in Syria.

When the end of the Caliph al-Mu’tadid drew near, Hussein put forward but al-Muktadir as successor. When al-Muktadir, became Caliph (305 = 916), Hussein attacked the palace in order to seize his person. The attempt failed and Hussein and the other conspirators scattered. Hussein fled to Mood, but was captured at Takrit. He was, however, pardoned and made prefect of Kusus and Kasil. From Kusus he in 307 (919) he set out against the Suflun Liath in ‘Abd al-Malik’s army, but met the enemy did not meet. Later he took part in the expedition against Sabak, the opponent of Liath, who was taken prisoner (middle of 308 = 920).

In 309 (913-4) Hussein’s brother ‘Abd Allah b. Hamzah rebelled, but, on the demand of the Caliph’s troops, submitted and was restored to his province.

In the following year Hamzah, who was now governor of Blida Kala’s, having all his allegiance, and ‘Abd Allah was again deposed and imprisoned. The greater part of the Caliphs’ troops were in Egypt, and as soon as they returned, Hussein fled, but he was arrested and his whole family carried to Bagdad. He did not lose heart, as he believed his brothers and himself were indispensible to the Caliph. His brothers were then set at liberty and shortly afterwards restored to office. Hussein alone was put to death (309 = 919).

AL-HUSAIN b. AL-HUSAIN, 1844-1850. Dey of Algiers (1818-1839). Born in Smyrna about 1796. Hussein filled the office of Khedive al-Khalif when the Dey ‘Ali, struck down by the plagues appointed him his successor. Hussein was proclaimed without opposition. He was a well-educated man, moderate in his views, who did not desire power and only accepted it with reluctance. He was considered benevolent and just, and insisted on inaugurating his reign by an amnesty and the abolition of various violent measures taken by his predecessors. Nevertheless, soon after his accession his assassination was twice attempted by the Janissaries. He therefore lived in the harem under the protection of a guard of Zouaves.

The situation in the Regency at this time was a very turbulent one. The province in the east and the west were in full rebellion. The Mamelus, the tribes of the Aft dispos. of the 6th, and the natives of Great Khabia had taken up arms against the Turks. The Dey, and the provinces of Spark and Chabia had formed an insurrection, followed by the Tujurnta, the people of Tunisia, and the Southern Cam. Hussein undertook to restore Turkish authority; in this he succeeded with the help of the Bey of Constantine and Oran and through the military talents of the Agha Vahidy. Peace was restored in the east about 1826 and in the west also in 1823. At the same time the Dey showed his devotion to the Muslim cause by sending a fleet to the Levant, which from 1824 to 1827 took part in the Ottoman fleet in the struggle against the Christians. The great Czar.

Hussein’s relations with the European Powers were also very strained. His refusal to adhere to the decision of the Congress of Aix-la-Chapelle regarding the abolition of privateering provoked a naval demonstration by the English and French, which however was without result (1819). The explosion of Mazarin was the English Consul, had more serious consequences. England sent Admiral Sir Harry Neale to demand reparation; after fruitless negotiations (February—March 1824) the fleet bombarded the town from the 17th to 19th June. The damage done was insignificant however and the Algerians imagined they could leave the Christian powers with impunity.

While the affair of the bankrupt Bakri Bessac was being arranged, the Dey, who felt himself wronged by the French government, made violent recriminations. His discontent made itself manifest in the insult to Consul deval on the 30th April 1827. Not content with refusing all satisfaction for this outrage, Hussein exacted the destruction of the French establishments at La Colle. The French measures resulted in the blockade of the Algerian coast (1827—1839). During this period the French government made several attempts to negotiate with the Dey, but he probably
relying on the support of the British government, refused to come to my arrangement. He secretly disavowed the attack on the ship *Le Provence* which was fired on by the Algerian batteries on the 30th July 1829, although it was protected by a flag of truce. Unable to obtain any redress by diplomatic means Charles X's ministers changed their method. An expedition against Algiers was decided upon the 31st January 1830 and the troops disembarked at Sidi Ferruch on the 14th June. Left to his own resources, and deprived of the best general Vahây Agha, whom he had himself put to death in 1828, Husain was incapable of resisting for long. On the 4th July, after the occupation of Fort l'Empereur by the French, he resigned himself to accepting the terms imposed by General de Bourmont.

Articles 2 and 3 of the capitulation guaranteed the ex-Dey the retention of his private property and the right to retire whither he pleased. The French government, however, objected to his going to Malta and Husain demanded to be conducted to Naples, where he arrived on the 9th August 1830. After a short sojourn in this city he went to Leghorn from where, through Jewish merchants in regular relations with Algiers, he was able to negotiate with the inhabitants of the town and the native chiefs of the interior. Arriving in Paris in 1831 to beg a pension and the restoration of his estates he received an honourable welcome but obtained nothing from the government, now enlightened on his real attitude. On his return to Leghorn he continued his tyranny. Then feeling himself too closely watched, he left Leghorn for Alexandria, where he died in obscurity in 1839.

nephew of the murdered Gurgin Khan, with Georgian and Persians troops in force obedience upon the rebel Afghans, but they were put to flight by Mr. Wav's. Nevertheless, affairs seemed taking a better turn for the Persians when Mr. Wals died in 1735 and his brother Abdallah Khan seemed inclined to make peace with the Persian governor, but the latter was soon after murdered by Malakand, a son of Mr. Wals, who continued the resistance to the Persian troops.

In the meanwhile difficulties had been raised in other parts of the kingdom by the Kurds and Uzbeks, while the Avufs of Tajik were aiding Kham.
The Persians hoped to regain this island with the help of the Portuguese fleet, but the commander-in-chief, Latif Ali Khan, a brother of the prime minister, rightly thought it an urgent necessity to suppress the Ghiznai who, under Malakand, had invaded Kirman. He actually succeeded in defeating the rebels but was prevented from following up his victory by the dis- content in Isfahan at his abandoning the Georgia expedition, and was refused the necessary supplies with which to advance on Kasahar. His army and the Tajik of Isfahan's enemies even took the advantage of the occasion to throw the Shah's wrath against them, with the result that the prime minister was dismissed and Latif Ali Khan, who had retired to Shemak, was thrown into prison. He was then prepared for his own downfall, for Malakand immediately occupied Kirman and advanced with his troops against Isfahan. The Safawids once more collected a considerable army to check the Afghan advance but in the battle of Gihandath, east of Isfahan, the Persians suffered a terrible defeat (1722). Isfahan itself was then taken and besieged and, although it held out for a long time the Afghans lacked any of the necessary siege artillery. Talashan, the Shah's son had in the meanwhile escaped to Kavus and Tiflis and was endeavoring to raise a new army with which to relieve the capital - such a terrible famine at length arose in it that Hassain was forced to capitulate and resign the Persian throne in favor of Malakand. The unfortunate prince was forced to be a spectator, when some time later, after the Persians had thoroughly mastered the Afghan garrison of Kavus, which Malakand had meanwhile captured, Malakand in revenge instigated a terrible massacre in Isfahan and afterwards put to death over a hundred members of the Safawid family. Malakand then went mad and Ashraf, a son of the Abd Allah Khan who had been murdered by him, made it a condition that, if he was to succeed to the throne, his father'sUSBIN AWNI FASHA 1888

HUSAIN AWNI FASHA, four times War Minister and once Grand Vizier under 'Abd al-Aziz, one of the most remarkable personalities of his age, was a native of Isfahan (withet of Knavish), where he was born in 1760, the son of a tax-farmer. When sixteen he came to Constantinople to study theology but entered the military school in which he ultimately became a teacher of military sciences. On the outbreak of the Crimean War (1853) he entered the army with rank of Lieutenant-Colonel and distinguished himself in the fighting at Kalafat and Celeste. At the end of the war he took part in the Murgellen campaign as chief of the general staff of the Serdar-i-fevran Omar Pasha. On the conclusion of the war he became inspector of the military school; during the war with Montenegro (1866) he commanded a division under 'Omar Pasha; for the next two and a half years (August 1868 till the beginning of 1869) he acted as interim War Minister and was in 1867-1868 entrusted with the supervision of the Celeste revolution; on performing this task, he was promoted to be mayor (general commanding). From the beginning of 1869 till September 1871 he was War Minister in 'Ali Pasha's cabinet; a few days after the latter's death (9th Sept. 1871) he was dismissed by his successor, the notorious Mehmet Emin Pasha, and banished to Anatolia, reached from exile; in 1872, and sent to Systmac in November of the same year as well of the province of Aitun. The Grand Vizir Muterji Muhammad Rashed Pasha appointed him the to Ministry of Marine on the 10th January 1873 but he exchanged this for the War once more two weeks on the 15th February, when Esfand Pasha became Grand Vizir. A year later — on the 24th February 1874 — he became Grand Vizir in place of Shigri-Osmanlii Muhammad Rashed, successor of Esfand Pasha, but continued to hold the portfolio of War Minister. On the 25th April 1875 he was dismissed from both offices and a few days later, sent a second time as well to Systmac, by the 25th August of the same year he was back at the War Office for the third time a few days later his successor Midhat Nezim became Grand Vizir a second time and dismissed him on the 2nd October, to be sent afterwards as well to Bruss. After Mehmet Emin Pasha's fall (15th April 1876) he was again summoned to Constantinople as War Minister and in this office along with Midhat Pasha supported by Muterjii Mohammad Rashed and the Sheikh al-Islam, Hasan Shadiri, brought about the deposition of the Sultan 'Abd al-Menh (30th May 1876). On the 22nd June the deposed Sultan committed suicide; Hasan Bey, a German officer devoted to him

rescued to avenge his death and shot Husain. 'Awnî Pasha in the night of 25th—26th June 1836 in Muhall Pasha's koula, where he and the other ministers had assembled at a council.

HUSAIN DHAJÎANSOZ, "ALÎ AL-DIN the GHOST. [See DHAJÎANSOZ, I, 1958.]

HUSAIN HAMADHANI, a Rabâ author, who wrote the history of the ban, edited by E. G. Browne under the title, The Tâhir-Nameh or New History of Mirza 'Ali Muhammad the Bab (Cambridge 1883). In his office of secretary to a minister Mirza Hussein accompanied the Pahlî on his journey to Europe, spent some time in Stamboul, and on his return from Europe in 1843 was thrown into prison but afterwards released. He then entered the service of a Zoroastrian named Mânâkî (or Mânâkî, who asked him to write a history of the Bab. When he had finished this task, he intended to give a full exposition of the Bab's teaching but was prevented by his death in 1259 (1843—1845). The above information is given by Browne, op. cit., Introduction, p. xxvii sq., from Tâhir-Nameh in Zâhibat Vasif, Ord. Arch. Arch. vol. VIII, 35—55. In a later publication entitled Khidr, Manzûm-ut-Khâjeh, compiled by Hâjji Mâdžîkî the Babî (Diehvoed 1307, vol. XVI), P. 610, Baslangiç has given a full account of the relationship between the works of Mirza Hâjîâ and Mirza Dâjîâ of Khâjeh, Introduction, xxxiv sq., and A New History, etc., p. 391 sq.).

HUSAIN MIRZA at MANÅJER DABÇAR (Black Prince), and styled Abu'î Ghâzî. This famous king of Khurasan was born at Herat in Muharram 842 a. h. June 1438, and reigned there, with one interruption, from Radmanish 873 (March 1469) to the last month of 911 (May 1500). He was a distinguished soldier and administrator, and a munificent patron of letters and learning. He also attempted to introduce the Christian church, but it did not appear to have been of much value. According to Timur Mirza, he is also the author of a book called the Manzûm-ut-Khâjeh, which is a mixture of prose and poetry, and contains biographies of a number of mystics and spiritual leaders (Râza's Catalogue, I, 351). But though his name appears on the manuscripts as the author, both Râza in his Memoirs, and Khâjeh in his in-עדיף, vol. VI, Part 4, p. 320 of Bombay ed.), say that the real author is Râza himself. The book was also used as a textbook at the Ashrafia, and there are several editions of it. It seems probable, for if the pride and rashness of the times, he would hardly have put himself at the end of it as one of the mystics, and have described himself. He was of very high birth for he was a direct descendant of Tâhir, both by his father and his mother (Firâz Sangi). His career resembled that of the emperor Fâtih, for he suffered much distress in his early years and afterwards attained to great prosperity. He had contests with Abu'î Salih and his son, and it was not till the death of the former that he got possession of Herat. He was a younger son, and his undistinguished elder brother Hâjîâ moved under him for several years as governor of Balkhi. His court was the most brilliant in Asia, and as Babur says, his age was a wonderful age. The poets Khâjeh, Hâjî, and Hâjî, the painters Hâjîâ and Saiïd, Moqârâ, various musicians, and Hâjîâ of the cappers of past, and the famous calligrapher, Saiïd 'Ali of Mahârân, adorned his court.

One of Sulaiman's greatest feats was his long and rapid march to Herat in August 1670 which resulted in the capture and execution of his competitor 'Abdul Mahamad, a great vassal of Shâh 'Abdul. Sulaiman was a man of passion, and a wine-bibber. He divorced his first wife, although she was the mother of his eldest son, and, according to Babur, he was so indolent that once he saw his son's name on his coin. It is the fact that the words Bibi-Abd appear on his coins, but it is not certain if they refer to the page, whose name and title were Bibi-Abd. Sulaiman Hadji had a large family of sons and daughters, but several of the sons died in his life time, and the others were, for the most part, no credit to him, and only survived him for a year or two. The eldest, 'Abd al-Zârim lived the longest, and dying in 1747, when he succumbed to the plague at Constantinople. One of Sulaiman's most unwilling actions was his allowing his wife Khadija to depart from him, under the influence of Saïd, a warras for the execution of his grandchild. His sons rebelled against him, and he was obliged to take the field against them, and defeat them. In his old age, and when suffering much from ill-health, etc., he marched out against Shâh Rustam and his brother, and died at the village of Bibi-Abd. He was buried at Herat, but according to Câmil Zârim, the king's regent, Tercemán, at the time of Timurlâh's kings, his tomb cannot now be identified. He was the last of the Timurlâh line, and with his death the line of Khurasan ended with the beginning of the Tâhir, and the reign of Khâjeh. In his exaltation of Shâh Rustam, and Moqârâ shortly afterwards died, Mokârâ ordered the two sons of Tâhir, al-Kabir, to join, and the kings of the Lâhâr, to become vassals to the Turks, and Shâh Rustam, eventually went to India, and after vainly trying, with the help of the Portuguese, to succeed Babur as khan, he died in 1525, and was drowned at Câwan, after the battle with Shâh Rustam. (H. BEYERDINCK.)

HUSAIN PASHA, better known under the designation AGHÁ HUSAIN PASHA, or AGHÁ PASHA,
the son of a certain Hadija Muzaffa, was born in Adrianople in 1300 (1879), though popular tradition considers Kustalik to be his birth-place. As his father Kasim had moved to Bander he was enlisted there in the 15th band (hütü) of the Janissaries and came to Constantinople in 1305 (1888-1889). Later on he took part in the Russian War (1877—1878) and soon occupied a prominent position among the şerbes (sergeants) of the Janissaries. After having been promoted to the rank of serbeş-i hütü the Grand Vizier, Silifide Ali Pasha, drew the Sultan's attention to him and his qualities. As the Sultan was just then about to dissolve the Janissary bands and get rid of them in some way, he was on the look-out for a officer of energetic men fit and ready to help him in this difficult enterprise. So Hüsain was made şerbes-i hütü of the 10th Rahi' II 1298 (23rd December 1822) and further adçılı of the Janissaries on the 14th Dümjudz SCIJI (26th February 1823). The importance of his position enabled him within a few months to get rid of the most dangerous leaders of the band, partly by discharging them into the Provinces, or by using more violent means. For these services he was raised to the rank of Vizier and of 1298, and was henceforward known as Ağba Pasha. The Janissaries some knowing him to be their deadly enemy, and in order to protect him against their malcontents, the Sultan had to dismiss him on the 20th Safar 1339 (26th October 1823). He became governor of Brusa and Izmir instead, as well as commands of all the forts of the Bosporus and their garrisons, so that in case of need he could act once he at the Sultan's disposal. During the great Janissary insurrection that broke out three years afterwards it was specially Hüsain's personal bravery and his cool severity that finally broke the backbone of the rebels, so completely that this troop was suppressed (14—16th June 1825). He was rewarded by being promoted and named serbes-i sif-i cadi of the newly organised army (vacli-i meşerû'd-i meşerûhât). In Shawwal 1242 (May 1877) he headed over charge to the famous Khosrow Pasha and retook the command of the Bosporus forts. During the Russian War (1828—1829) he figured as commissaire in chief of the army; he took up his headquarters in the fortified camp of Shemla, and successfully defended this, but could not prevent the Russians from taking the most important forts on the lower Dardanelles. In spring 1829 he was replaced by the Grand Vizier Reshid Mohhammed, and he himself went to Kastoria as commissaire (1829); all the same his military operations remained just as unlucky as they had been hitherto. The war once over, he governed the vilayet of Adrianople, but received orders to land the army against Egypt in 1242. In this campaign his second in command, Mohhammed Pasha, was beaten in the battle of Hamid (9th June), and Hüsain was severely defeated by Ibrahim Pasha in the Pass of Beilin (29th July); owing to this renewed bad military experiences he was discharged from his office as general (12th August), but thanks to the fact of his being personally on very good terms with Milâd-i Sâchina he was sent to假日 in the capacity of governor to take charge of the newly established government there, from the 12th Rahi' II 1048 (14th August 1829) till beginning of Feb'r. 1844. He returned there in the same position beginning of Shawwal 1252 (October 1844) and kept it till he died on the 3rd Dumlau II 1265 (25th April 1849).

Hüsain Pasha, called Ameli-Câde ("Unce's son"); a name given him by his cousin, Pâdi Ahmed Pasha, was the son of Hassan Agba, the younger brother of the great Kasim Ahmed Pasha; he grew up in the golden period of the Ottoman and reached the age of thirty without distinguishing himself further than for his attachment to be delights of a life of careless ease. After the defeat of Kara Muzaffa before Vienna in 1683 and the fall of this grand vizier, who was devoted to the Kospul, he was sent in disgrace from the capital, first of all as governor of Shabriz and a year later as muhafiz (military governor) to Cardak in the Dardanelles, where he spent five years. In Dumlau 1104 (April-May 1689) he received the rank of vizier and was sent as muhafiz to Suda akeleye at the entrance to the Dardanelles. In Shabriz he retired to Constantinople to conduct his as şahs-i muhafiz the affairs of the grand vizier who was absent in the field. He fulfilled the same duties again from Dumlau II till the middle of Shawwal 1105 (end of January till the 9th June 1694) and then went back to his former post on the Dardanelles. On the 14th Dümjudz SCI (31st December 1694) he was appointed beyazid Pasha and entrusted with the recapture of Chios which had been occupied by the Venetians. He succeeded in defeating the Venetian fleet in two battles (9th and 16th February 1695) off the Sarpalos islands in the Bay of Chios, whose support the Venetians abandoned the island without striking a blow. At the end of Ramadan 1106 (middle of May 1695) he resigned his command of the fleet and remained in Chios as muhafiz. In Maharrum 1107 (Aug.—Sept. 1695) he went as wali to Konya and Adana; in the early months of 1108 (Aug.—Sept. 1696) he was transferred to Belgrade as muhafiz. The grand vizier Hüsain Mohhammed Pasha fell in the battle of Zenta on the 7th Rahi' 1109 (11th Sept. 1697); Hüsain was appointed his successor and led the defeated army back to Adrianople. In the following year he concluded the fifteen years' war with Austria and its allies — Venice, Russia and Poland — by the treaty of Carlowitz. After holding the reins of government for five years he resigned on the 9th Rahi' II 1144 (4th Sept. 1702) in consequence of an incurable disease and retired to his estate at Silivri, where he died on the 29th Rahi' of the same year (23rd Sept.). Apart from his attachment to strong waters, with which his countrymen reproached him, and which earned him the nickname of akhla (the drunkard), there were no serious defects in his character. A contemporary (Paul Laca, Leveet de Lit annotated, B. 134) justly says of him: "L'amèl le plus écorché de sa race... fort honnête homme, dont tout le monde parlait bien; le French ambassador Perrin (Bonnier, Mes recollections en Turquie au cours de l'Empire, p. 110) says: "Il a gouverné la Turquie pendant dix ans sous le beun de la sérenissime qu'on doit lui rendre... la morale... qui a eu du succès... il a eu toute sa vie..." He was in fact distinguished not only by his probity and magnanimity but also for a rare stamina.
Husain Pasha, naimed Redžic owing to his diminutive stature, was originally a Greek slave, who had been offered to Sultan Meşrut III by his master, the SIlifeli Bircan Pasha in 1824 (1827-1828). He grew up in the Imperial Sarai together with his foster brother, afterwards the Sultan Selim III. When Selim came to power on the 11th Redžic 1213 (9 April 1796) Husain became his first attendant (bakhshishdar) and a few years later on the 16th Redžic 1213 (10 March 1797) he was appointed (bakhşishdar) with the rank of a governor. In accordance with Selim's plans of reforms and with almost unrestricted authority from him, Husain worked hard for the twelve years during which he occupied this post, at the reorganisation of the imperial navy and the arsenal. He succeeded in reorganising the whole Ottoman navy, the model of the British and the French navies, with the help of foreign technologists, so that he is fully entitled to be called the founder and creator of modern Ottoman naval power. As leader of the fleet he had less occasion to add to his fame, it was difficult to defend the oppressive contributions levied by him on the islands of the Archipelago during his annual expeditions in the Aegean Sea. These were partly the cause of the Greek insurrection. On the other hand he managed more or less to suppress piracy in these districts; on his first cruise, for instance, he destroyed Lambro Karam's (Caraman) pillaging fleet (1792) and even captured this latter's infamous lieutenant, the pirate Karakazanlı. Although he knew little of or nothing of military matters, he was enamored in 1797 with the command of the famous Carabagh corps of Wildiye, Husain Pasha besieged and blockaded him with a fleet of gunboats, but without success, so that he gave up and returned to Constantinople in autumn. In 1803 he spent several months cruising in the waters of Alexandri, and in the following year he united his forces to the British fleet to reconquer Egypt. At the beginning of March he landed in the vicinity of Alexandri at the head of 600 men, mostly Athenians, and joined the British fleet, which was in the campaign against the French. As is well known, this expedition ended with the latter's retreat from Egypt. At the beginning of the 2nd Redžic 1216 (Dec. 1803) he returned to Constantinople, where he was received and celebrated by the people as the reconqueror of Egypt, and honored with honours by the Sultan. On the 23rd Şepā 1218 (7 Oct. 1803) Husain Pasha died in Karabük (Buphronios), not yet 46 years of age, in the summer residence of his wife, the Princess Fath Sultan. His mausoleum in Eşrefti was long considered a curiosity of the capital, and Husain Pasha concept of him by the historian Wolf (cf. Husain Pasha, Contenentumipsi und der Byzantin, Vol. II, p. 11 et passim).
His first independent work devoted to detailing the story of European costume, "Dress of the Moderns," (1887), appeared in the "American Art Journal." The title page of this book is illustrated with a full-page engraving of a woman in a fashionable dress of the period. The book is divided into two parts: "The Dress of the Moderns," and "The Dress of the Ancients." The latter part is devoted to the history of costume from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on costume, including "The History of Costume," "The Costume of the Greeks," and "The Costume of the Romans." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of costume.

In addition to his work on costume, the author has also written a number of other works on art and architecture. One of his most important works is "The History of Architecture," which is divided into four parts: "The History of Architecture," "The History of Architecture," "The History of Architecture," and "The History of Architecture." The latter part is devoted to the history of architecture from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on architecture, including "The History of Architecture," "The History of Architecture," and "The History of Architecture." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of architecture.

The author has also written a number of other works on art and literature. One of his most important works is "The History of Art," which is divided into four parts: "The History of Art," "The History of Art," "The History of Art," and "The History of Art." The latter part is devoted to the history of art from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on art, including "The History of Art," "The History of Art," and "The History of Art." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of art.

The author has also written a number of other works on science and mathematics. One of his most important works is "The History of Science," which is divided into four parts: "The History of Science," "The History of Science," "The History of Science," and "The History of Science." The latter part is devoted to the history of science from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on science, including "The History of Science," "The History of Science," and "The History of Science." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of science.

The author has also written a number of other works on philosophy and religion. One of his most important works is "The History of Philosophy," which is divided into four parts: "The History of Philosophy," "The History of Philosophy," "The History of Philosophy," and "The History of Philosophy." The latter part is devoted to the history of philosophy from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on philosophy, including "The History of Philosophy," "The History of Philosophy," and "The History of Philosophy." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of philosophy.

The author has also written a number of other works on politics and government. One of his most important works is "The History of Politics," which is divided into four parts: "The History of Politics," "The History of Politics," "The History of Politics," and "The History of Politics." The latter part is devoted to the history of politics from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on politics, including "The History of Politics," "The History of Politics," and "The History of Politics." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of politics.

The author has also written a number of other works on economics and business. One of his most important works is "The History of Economics," which is divided into four parts: "The History of Economics," "The History of Economics," "The History of Economics," and "The History of Economics." The latter part is devoted to the history of economics from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on economics, including "The History of Economics," "The History of Economics," and "The History of Economics." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of economics.

The author has also written a number of other works on anthropology and ethnology. One of his most important works is "The History of Anthropology," which is divided into four parts: "The History of Anthropology," "The History of Anthropology," "The History of Anthropology," and "The History of Anthropology." The latter part is devoted to the history of anthropology from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on anthropology, including "The History of Anthropology," "The History of Anthropology," and "The History of Anthropology." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of anthropology.

The author has also written a number of other works on linguistics and philology. One of his most important works is "The History of Language," which is divided into four parts: "The History of Language," "The History of Language," "The History of Language," and "The History of Language." The latter part is devoted to the history of language from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on linguistics, including "The History of Language," "The History of Language," and "The History of Language." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of linguistics.

The author has also written a number of other works on history and biography. One of his most important works is "The History of Biography," which is divided into four parts: "The History of Biography," "The History of Biography," "The History of Biography," and "The History of Biography." The latter part is devoted to the history of biography from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on history, including "The History of Biography," "The History of Biography," and "The History of Biography." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of history.

The author has also written a number of other works on literature and criticism. One of his most important works is "The History of Literature," which is divided into four parts: "The History of Literature," "The History of Literature," "The History of Literature," and "The History of Literature." The latter part is devoted to the history of literature from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on literature, including "The History of Literature," "The History of Literature," and "The History of Literature." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of literature.

The author has also written a number of other works on science and invention. One of his most important works is "The History of Science and Invention," which is divided into four parts: "The History of Science and Invention," "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." The latter part is devoted to the history of science and invention from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on science and invention, including "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of science and invention.

The author has also written a number of other works on art and architecture. One of his most important works is "The History of Art and Architecture," which is divided into four parts: "The History of Art and Architecture," "The History of Art and Architecture," "The History of Art and Architecture," and "The History of Art and Architecture." The latter part is devoted to the history of art and architecture from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on art and architecture, including "The History of Art and Architecture," "The History of Art and Architecture," and "The History of Art and Architecture." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of art and architecture.

The author has also written a number of other works on science and invention. One of his most important works is "The History of Science and Invention," which is divided into four parts: "The History of Science and Invention," "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." The latter part is devoted to the history of science and invention from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on science and invention, including "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of science and invention.

The author has also written a number of other works on science and invention. One of his most important works is "The History of Science and Invention," which is divided into four parts: "The History of Science and Invention," "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." The latter part is devoted to the history of science and invention from ancient times to the present day. The author has drawn upon his extensive knowledge of the subject, and the book is rich in illustration. The author has also written a number of other works on science and invention, including "The History of Science and Invention," "The History of Science and Invention," and "The History of Science and Invention." These works are all illustrated with beautiful engravings and provide a valuable resource for anyone interested in the history of science and invention.
HUSAINI SADAT AMIR, (Reza al-Din Hoseini, "Alim al-Abil" ("Husayn"), born at Shiraz, a village in Guzz, in 671 (1272), was a famous author and renowned Sufi poet. He came to Mamluks and became a disciple of Rukn al-Din Abu l-Hasan 1035 (1628), the grandson and successor of Badi al-Din Zakariyya of Multan (665-726). He succeeded during the reign of Husayn II (1318), according to the most recent estimations. However, not till 720 (1320). Among his works the following may be mentioned: "Nasbat ar-Risalan Sufi" in in English prose and verse, in which the rules of the spiritual life are explained and illustrated by anecdotes and sayings of holy men. Zad al-Ma'dini fi "Provisions for travellers", rules of the religious life, illustrated by anecdotes and fables, and many other treatises such as "Kanz al-a'la". Rukn al-Adwani, "Tarikh manzilatul, Shk al-Khadim, and "Jami al-Masilim", all of them treating of mystical love.

(M. LONGWORTH DAME)

HUSAINI, plur. Husainiyen, a name borne by those ghosts of Morocco who trace their descent from al-Husain, son of 'Ali and Fatima, the daughter of the Prophet. Unlike the Husaini, [q. v.] the Husaini came at a relatively late date to Morocco, where they in numbers at any rate never attained the importance of their cousins. They form two main groups, the wishes and the "Ishak".

The "Ishak" (i.e., those who came from Sicily) were driven from their original home by the Normans. They fled first to Spain and thence to Morocco in the reign of the Marinids 'Abd al-Mu'min. They were driven from the country by the Christian crusaders. They then went to Spain after the conquest of Granada by the Christians and sought refuge in Fes (1429).

Bibliography: al-Khatib, al-Durr al-Dawra, p. 62 sqq.; Fes 1392; Ibn al-Khatib, Qasidat al-Shafi'i, Fes, p. 61; p. 125; al-Kattani, Samir al-Dawra, Fes, 1316, ii. 218. (A. COULI)
HATTA's was published, with an introduction and explanatory notes by the present writer (in vol. 46 and 47 of the Zeitschr., d. Deutsch. Morgenl. Gesellschaft, and reprints, Leipzig, 1893), and later with Suhkär's commentary and glosses by the editor, Ahmad al-Sha'qiti (Cairo, Tahâbînî, press, n. d.). In addition to the edition mentioned in the former edition the "Dilmun" (with Suhkär) also exists in Stambul, Fatîh-Library, 9°, 1802, as a facsimile of it in Cambridge, see E. G. C. Budge, Monuments n°. 384), a portion in the Catalogue 'Atl. Ef. n°. 4777, (according to Rescher)."

"Rescuer of the name al-Hujja're is also found in later times, as Abi 'Abdallah b. al-Hujja's name is quoted by Sayfî, Tâbrîzî l-Sulhîn, n° 244, n. and an Abi al-Hujja's, ibid., 279, 12 (in the half century n. a. 8.)" (I. GOLDSMITH).
HUWA HUWA, literally "he is he", or "it is he", in logic, means what is represented as entirely identical. e.g. *Muhammad" h. "Abd Allah" and "the Prophet". (Term of the modern logician) This is the sign of the identity of the state in the realm whose completed personal unity consists in divine unity in the world.

AL-HUWAJTAT (HUWATA, HUWATAT, HOYATAT, HOYETTAT, HOWETTAT, HOYAUTAT, HOWAUTAT, HOWAYATAT), or HUVAJATT, an Aarab tribe in the northern Maghrib and on the Sinai peninsula. Their settlements in the Maghrib reach as far northward from al-Aljaa to beyond the Djerida. In the Maghrib they are neighbours of the Ball (q.v.) and Djebelina (q.v.) with the latter of whom they are on bad terms. Formerly the Djebelina (q.v.) occupied their settlements.

There is a large settlement of the Huwaitsis on the Wadi Mahlap, where they have many huts and thick palmer groves; they only stay here during the date harvest. Between Ain Tanza and al-Muwaffiq (Molla), a station for pilgrims on the road from Tunis, they have good pastures where they encamp during the rainy season with their numerous flocks of sheep and goats. In summer they live in the oasis of al-Hadjil in the neighbourhood of Djebel Tania, north of Tabuk. In the hot season they go back to Glama; here as well as in the little villages in al-Hamda near al-Aljaa they tend their extensive date orchards and cultivate their fields of qnna. In Yamam and other ports they sell butter, milk, goats and sheep to the pilgrims and travellers along the coast; in Nadif they exchange green dates for cattle. Many of the Huwaits are cart-drivers and camel dealers; some are in Palestine as traders (particularly among the Bedouins). In Burckhardt's time they carried on a busy trade with Cairo; every year a caravan of over 4000 camels went from the Huwaits to the Egyptian market, where they bought wheat, barley and clothing. The Huwaits are considered descendants of the ancient Nahateane; according to a common belief among them, they are descended from two brothers of the Hashem (q.v.). The founder of the tribe is said to have been Huw (Hwajat), a native of Egypt, who came to al-Aljaa on a pilgrimage and is buried at al-Thumam. Of the ten or twelve subdivisions of the Huwaits, which were given to him, Burckhardt mentions the following as the most powerful: the Carma (perhaps identical with the Huwaits), the present northern neighbour of the Huwaits, al-Thalans (the Red Sea), al-Ksaan (al-Dulaim, probably the Huwajn; Ksewaa and Lijat or Huwaits; al-Sama in A. Musil, now the most important group in Arabia Petraea, who live in the town of al-Huwa and the eastern desert and number nearly 500 families), (H. Musil and al-

litan, and the country of Berb. Some even settled in the Sahara desert near the Lamos and took the name Heggar (a contraction of Hwari, Hwari); they would thus be the ancestors of the modern Tureg. Others founded the town of Aghnas in Southern Morocco. They became to be known but afterwards apostatized; they later solemnly adopted the doctrines of the Khalfiyyah and shirked in all their rebellions, in that of Abu Yazid also, particularly those who had settled in Ifittaya, Awaas, and Serab. They became so weakened by the oppression of the Fattish qalipah Imam al-Mansur and later by the Hausul Emir Abu Zakariyya, that they played no part in public affairs afterwards. In the sixh century we find them spread all over north Africa, between Berb and Alexandria, from Tunis to Beja and to the sea, in the valley of the Bhifah where they had founded the town of Al-Bdha, which has now utterly vanished and between Massara and Relloune where they had built the Ka'a of the Hwari, the modern Kutah of the H. Kadhil. One of their families the H. Qanwald had founded a kingdom in Zirat; on its downfall they founded another in Fezca, which was destroyed by the Kudarq, who put the last ruin of this family, Muhammad b. Qanwald, to death by torture, in order to gain possession of his wealth. Of those who occupied the central Maghrib Ibn Khaldun says: (the tribes) grave herds of sheep, but as they are oppressed with taxes they no longer show the pride and independence, which once distinguished them when their armies won bloody victories. Scattered and weakened they are now despised.

HUWWARIN a place on the road from Damascus to Palmyra and Hime, about midway between them. It is celebrated as a nest of Varidat. The district was inhabited in 'Abd al-Malik's time by Nabātī, i.e. native who were Christians and spoke Aramaic. This remained the case down to the time of the Mamluks of Egypt. Varidat died at Huwwarin and was buried there; this is confirmed by contemporary poetry. The inhabitants still point out a ruin called Kasr Yazid, 'Varidat's castle.' This name is probably only an echo of the literary tradition, according to which there were lasting links between Yazid and Huwwarin.

(H. Lannens.)

### I.

**AL-IBAIDIYA, usually called ARAFIA in North Africa, are the followers of 'Abd Allah b. Basq [q. v.]. A few additions may here be made to what has been written in I. p. 3, chiefly with reference to the North African Arefa. The first rising of the Arefa took place in the last years of the reign of Marwan II., and 'Abd Allah b. Yalgha Talib b. al-Hak and Abu Hamza (748 = 747). 'Abd Allah had homaged paid him to his darun, then conquered Sam'a and sent Abu Hamza to Maccas; the latter defeated the caliph's governor at Khsal and brought Musa al-Ulfallah also under his sway. In the following year 749 (748) however, Marwan sent 'Abd al-Malik Ibn al-Ayya against him; Abu Hamza was put to flight in the Wall of Mokhs, took refuge in Maccas, whilst 'Abd al-Malik followed him, and was taken and executed there after a vigorous resistance. A short time afterwards the 749 caliph 'Abd Allah b. Yalgha met the same fate. According to Sheshanès, ed. Caronos, p. 100, 'Abd Allah b. Basq also took part in this rising but this statement seems to be inaccurate, as Ibn Hab, according to more reliable statements, died in the reign of 'Abd al-Malik nearly half a century previously. A second rising under al-Djibadda in 'Omara in 754 (753-2) was put down by the 'Abd Allah genealogist ibn al-Kutamis.

In the same while the 'Abd Allah movement spread to North Africa, and its victiimates there of the article al-Arefa. In Arabia itself it found a hospitable soil in distant 'Omara and in time became the predominant sect there. of the article 'Ummar. From there it was later brought to Zumbulat.

The Arefa form a neutral community in Islam alongside of the 'Ummar and Shi'a and have their own rules of faith and religious laws, which, however, on the whole agree with those of the 'Ummar and only deviate on certain questions. They also recognize the 'Ummar and 'Abd Allah as the source of religious knowledge, but instead of 'Abd Allah they have Yazid [q. v.]. They show their 'Abd Allah origin not only on these points but also on the question of the infallible, although in a different fashion from the 'Arabidis. We cannot here enter into details of their conception of mukadda, sarwa and mazruf, especially as they are not agreed among themselves on this. Al-Sheshanès, al-Hajjallah, etc. mention a schism of the older Arefa into 3 or 4 sects; the Arefa, the Huthiya, the Arefa, and those who admitted of an obedience which has not God as its object. In the later history of the community, notably in North Africa, further differences of opinion revealed themselves. Several theological works of their authors are mentioned in Ibn Habbud, p. 182 sqq.; more about which is given in Bibliography to the art. Arefa. The chief source is the work made known by Schwan, Abrih, ed. de Saint, f. v. 7 sqq. and II. 47 sqq., entitled 'Arafat al-Qibla al-Ma'tris al-Abadi al-Umara.
THE PERSONAL NAME OF THE DEVIL.

The word is probably a corruption of *shaitan*; the native philologers derive it from the root *jdt*, "because Ilia has nothing to expect (nawla) from the agent of evil." He is also called *shaitan* (Satann), *Adanae Alilkh (enemy of God) or *Adamaae. Al-Shaitan however is not a proper name. In the Koran he appears similarly in the early history of the world (I. 32, v. 10; X. 31 sq.; xv. 83; xvm. 48; xx. 151; xxxvii. 74 sq.) as rebellious at the creation of Adam and as the tempter of Eve in Paradise. After Allah had formed Adam [<v.8> out of earth and breathed the breath of life into him, he formed an order to the angels to bow before Adam. (Before Adam was made, and before) to do so was Ilia, because he, being created of fire, thought it beneath his dignity to pay homage to a being made of earth. He was therefore punished and cursed; but he begged postponement of his punishment till the Day of Judgment; he was granted this as well as power to lead astray all those who are not true servants of God. When Adam and Eve were in Paradise, he tempted them to eat of the fruit of the tree. Muhammad has here combined two independent myths, the creation of Adam and the temptation of Eve in Paradise. It is to be noted that in the story of the creation of the devil, the theory is always called Ilia; in the story of Paradise, however, al-Shaitan, at least when not denoted by a pronoun. The story of Ilia is based on Christian tradition. In the *Life of Adam and Eve*, § 15 (Kautzsch, *Apeyrophim*) it is related that Michael had commanded the angels to worship Adam. The Devil objected that Adam was less important and younger than they; he and his hosts refused and were cast down upon the earth. According to the *Scheurkogel* (ed. Böhl, p. 15 sq. of the Syriac-Arabic text), God gave Adam power over all creatures. The angels thenupon revered Adam, except the Devil, who had become jealous and said: He ought to worship me, who am light and air, while he is only earth. He was therefore cast out of heaven with his hosts; then he was called Satan, Dammum, etc.

Muslim tradition has adopted the Koranic account with various features, some well known. The difficulty had first to be overcome that in the Koran Ilia is numbered among the *Lijans* [v. 8] as well as among the angels, and these are mostly considered two different classes of beings. Zamakhshari says that Ilia is only a *Lijan* and that the name *Angels* refers to the Keran angels [Kor. xxv. 217]. But it is also said that Ilia was an archangel. Others say that the Lijans was a division of the angels, who had to guard *Paradise* (<Lijans>) hence their name (Tabari, *Anwali*, i. 80). These Lijans were created of the fire of Satan (Sach, xxv. 27) while the angels are created of light (Tabari, ix. p. 87). In the beginning the Lijans inhabited the earth, but they quarrelled with one another and finally blood was shed. Allah then sent Ilia who, at that time, bore the name of *Ammah* or *Al-Dursh*, with a troop of angels against the atavlers who were driven back into the mountains. According to other accounts however, Ilia was one of the early Lijans and was brought back a prisoner to heaven by the angels sent by Allah to punish the unruly Lijans: he was still quite young at that time (cf. v. 84). The name Al-Dursh is also given to Ilia before his fall, as Allah had enjoined him judge over the Lijans; he filled this office for 1000 years. He then became vain of the name and waited, according to the Lijans which lasted another 1000 years. Allah then sent fire which consumed them; but Ilia took refuge in heaven and remained a faithful servant of Allah till the creation of Adam (ib., p. 85; Masdhi, *Mashadi*, 1. 59 sq.).

But there are other traditions about the pride of Ilia. Tabari (ib., p. 83) relates that he felt himself superior to the other angels, whereupon Allah said: "I will create a *shaitan* on earth:" (Sach, li. 48; Tabari, 1. p. 79 sq.) further says that this was one of the punishments and ruled over the Lijans on earth and in the lowest heaven. He then became rebellious and was called *Shaitan* engager by Allah.

In the discussion of the story of Paradise it is related how Ilia obtained access to Paradise. The view, also found in Christian authors, is generally parochial that he made use of a serpent for this purpose. According to some authorities, he hooded all the animals in vain; according to others, he began with the peacock, which he succeeded in the end, and thus he was supposed to have given him three words which would keep him from death on condition that he let him enter. But the peacock would not and told his experience to the serpent. The latter allowed Satan to sit between its teeth (according to others in its belly) and carried him in. The serpent was on intimate terms with Eve; and Satan now talked out of its mouth. He told the woman of the fruit of the tree which gave immortality, as no angel had told him. When Eve had gone to the tree, Ilia appeared in the form of a snake and promised to bring her among the fruit of the tree himself, with the well-known result: Ilia, Adam, and Eve were banished from Paradise and cursed. (The Keran places the banishment of Ilia after the story of the creation). The serpent, previously a beautiful quadruped was condemned to crawl upon its belly. Ilia was granted postponement of his punishment. Henceforth he had to live in ruins, tombs and filthy places. His food is flesh offered to Idols, his drink wine, his pastime music, dancing and poetry. His descendants are seven times more numerous than those of him.

In the end Ilia shall be thrown into hell-fire with its hosts and the damned among men. Then shall they (the idols) be thrown into it (i.e. into hell), as well as those who have been seduced and the hosts of Ilia" (Sach, xxx. 94 sq.). The parallelism of this verse recalls Matthew, xxv. 41: "Then shall he say unto them on the left hand: Depart from me, ye cursed, into everlasting fire prepared for the devil and his angels."

But in the meanwhile he plays nunne a trick on men, and leads them astray except the believers.
Ibn ABBÁD, Abū 'Umar Ahmad b. Muhammam al-KRUMAWI, Arab born in 443 (1051-1052). Ibn Abari states there should, according to Ibn Djahhish, be attributed to him four works usually attributed to the author of the Tahkima and of the Hailat al-Sayfa (see next art.).

Bibliography: Ibn Khallikân, ed. Margoliouth, ii. 373-343; Ibn Khlâkir (ed. Wüstefeld), ii. 93 (transl. de Steinn. i. 212-1999); Ibn al-Athîr (ed. Tonnerberg), xvi. 264, 254. 454. iv 4. 48, 48, 44. 72, 57. 44. Wilken, Gesch. der Sultane aus dem Geschlecht Idris nach Mochtar, Chap. viii.

K. V. ZETTERSTEDT.
IBN 'ABD AL-HAKAM, 'ABD AL-RABIH B. 'ABD ALLAH B. 'ABD AL-HAKAM B. ATAYA, Abu'l-Kasim, the earliest Arabic historian of Egypt whose work has survived, was a member of a notable Egyptian family. His father, 'Abd Allah (died 214 = 830), was very learned in tradition and jurisprudence, and author of books in these fields; he was the head of the Mālikite school in Egypt, and was also associated with the Kātib as center of writers. His four sons were all men of importance: Muhammad, widely celebrated as a jurist and author, and his father's successor as leader of the Mālikites of Egypt; 'Abd al-Hakam, and Sab'd, also renowned (especially the former) for their learning; and 'Abd al-Rahman. The family suffered in the persecution under the 'Abbasids, refusing to subscribe to the doctrine of the cruaded 'Abd al-Walid, and the doctrine of the emir of the 'Abbasids, there; in the year 237, they became painfully disgraced in the community because of an eschatological element which was proved against them (al-Kashf, ed. Qust, p. 424, 477 = 1. 1797).

'Abd al-Rahman (generally known as the 'Abd al-Hakam) died at al-Faṣṣāt in 257 (871). He was mainly interested in tradition and made extensive collections based on the principal Egyptian authorities, of whom his father was one. His chief work was the Futūḥ Misr, in seven divisions, as follows: 1. Egypt, and its ancient history; 2. The Muslim conquest; 3. The Kātibs of al-Faṣṣāt and al-Diqān, and the Khidīs of Alexandria; 4. Organization and administration of Egypt under 'Amr b. al-As, and the conquest beyond Egypt to the south and west; 5. The conquest of North Africa after the death of 'Amr, and the conquest of Spain; 6. The Kātibs of Egypt, down to the year 246; 7. Egyptian traditions derived from the Companions of the Prophet who came to Egypt. The manner of the whole compilation shows its author to have been an expert collector of traditions and not very critical of his material. His chief interest was in the period of the Companions and their immediate successors; hence in his treatment of the khidīs he gives much space to the earliest, but less to the later ones down to his own day; hence also in his important chapter on the Khidīs the formal tradition holds a subordinate place, and he simply collects whatever information he can find.

The work of Abu 'Abd al-Hakam was extensively used by the early historians of Egypt. Among the later writers, Abu 'Abd al-Malik al-Mustawfi included large part of a transcript of it, and it furnished Maḥrūz with many chapter; in both cases the text quoted is much inferior to the original. Yaqūt cites it in extenso for a considerable part of his Egyptian material. See further the Introduction to the editions of the Futūḥ Misr now (1914) being published in the Gibb Memorial Series, London. There are none of the work in the British Museum, Paris (2), and Leiden (an abridgment). Partial translations have been made by Edward (Zeitschr. f. Kunde d. Morgenl., 1. 3. 1890, p. 58 = 3. 28), de Slane, Karle, J. A. F. Naquet, and Torrey (in: Bibl. and Semit. Stud., New York, 1901, p. 279 = 300; see Broedelmann, Gesch. d. arab. Lit., with the Nachträge.

IBN 'ABD AR-RABIH, ABU MUHAMMAD B. 'AMIR 'ABD AL-QAM, a Spanish Arab author: born 10th Ramadān 246 = 10th Nav. 856. He was a student of Maimonides, teaching in Cordova, the freshness of the Umayyads ruling there; died 18th Djamād I 328 = 10th March 944. His principal work is the anthology al-jaz (the addition of
The Annals which he compiled on the reigns of the three Seljuks above mentioned are of great importance. The biography of Malik (Part 1, in 667; B.K. Mus., No. 1226) was used by Mu'ttaki and al-As'ari, Kihistan (Mehadr, p. 81) and al-Najafi Shafi made an excerpt from it (Camass, p. 499). The history of Kātib is traced from 681 till his death and official documents are given (Camass, p. 503). We only possess a third of the biography of al-Rayy (years 690-691), published by Mehlberg except some epistolar documents (see Bdk.). Of importance are also the errors in the biographies of the same and of Mu'azzam fi al-Ma'āsh al-Ma'sīh (Hadjii. Kātib, ii. 147; iii. 101, 499), which Mehlberg made great use of in his Kātib chiefly for archeology (Becker, Beitriige zur Gesch. Agyptens uber den Islam, p. 23, 30; Gerstn. Rez. d. Sc., 1902, p. 120, 133). His Tabāliun al-İbrāhīm treated of carriage-pigeons (Mehadr, Kātib., ii. 251, Quatremere, t. 2, p. 140, Note 49; Camass, p. 505). For his other works see Brockeimann.

The son of Fatū al-Din b. A'ūl al-İzāhir also mentioned is Kūt al-Sīr and seems to have attained an even higher position than his father in this capacity (Mehadr, Kātib, ii. 411, Camass, p. 497). He died before his father in 691.

Bibliography: Al-Marzuk, Ur. Abd Allah b. Sa'd al-Dīn Abū Muhammad 'Abd al-İzāhir, Mu'ayt al-Dīn Abū l-Fādil, Abū Ali al-Dīn Abū Muhammad 'Abd al-İzāhir b. Al-Kātib on al-İzāhir, in Cairo on the 9th of Muharram 659 = 1223, and died there in 692 = 1293 (Qurt. al-İzāhir, f. 1500, al-İzāhir, Orient. I. ii. 188, f. 285, Walschott, Geschichtschriftner, V. 366). Not much is known about his life but he played an important part under the three Bahri: Manūšī, al-Malik al-Zahrā'īb, al-Mas'ūdī, Kātib and al-İzāhir Ḥafiz as private secretary. Kūt al-Sīr on al-Mīshī:Dīnāb al-Marduk (at this office see Mas'ūdī, Kātib, ii. 242; ii. 225 sqq., Quatremere, Histoire des Selvoum Mountains sous les Marduk, ii. 2, p. 224, note 40, and 317 sqq.). According to some he was the first holder of this office, though others say his son; in other sources the office is said to be much older (see Mehlberg's work quoted below p. xii., 29), and he is said to have held it under Lehmam in 658 in the reign of Kātib (Quatremere, ii. 1, p. 277). In this office he had to read all letters coming in and to compose all important letters and documents; he seems to have performed these tasks even in the reign of Balk, and in 681, when Balkars took the oath of fealty to the Caliph, Ibn 'Abd al-İzāhir was present and composed the caliph's reply (Quatremere, i. 1, p. 150, 183), Camass, p. 498; in 682 he drew up the reply by which al-Malik al-İzāhir was installed as heir-apparent (Quatremere, i. 1, p. 241), and later he drew up the marriage contract between him and Kātib's daughter (op. cit., i. 2, p. 134), he also wrote the edict which declared Kātib's son as heir-apparent (op. cit., ii. 1, p. 28). In 665 he was with an Emir in 'Akka to receive the commandant's oath of fealty, but without success (op. cit., i. 2, p. 57) and he looked after the affairs of state when Kātib's son was governor during his father's journey (Camass, p. 495). He spent some time in Damascus (Mehadr, Kātib, ii. 324.)
that he spent a portion of his life at the court of the Ayyubid Sultan Almohad of al-Andalus in Spain, and that he is mentioned as an astronomer and mathematician in various Arabic manuscripts from the 13th century onward. His work on astrology is also known to have influenced later scholars in the Islamic world, particularly in the Almoravid period in Spain. Ibn Ar-Rajjāl's contributions to astrology and astronomy laid the groundwork for future advancements in these fields.
time came from Nafza whence the ethnic al-Nafz, but he was born in 310 (923-4) at Kairouan, where he died; on Monday 30th Shaban 386 = 14 September 996 and was buried in his house.

He vigorously defended his school both in prose and verse and was perhaps the first who clearly expounded the principles of law. He was called Malik shafi and is still regarded as an authority. His teachers were famous not only in Africa but also in the east on the occasion of his journey to perform the pilgrimage to Mecca. We may mention here his debt to Abü Hāb a Muhammad b. Muhammad b. al-Labib who is his best authority, Abü 'l-Hasan Haan b. Muhammed al-Khawilus, Abü 'l-Arab Muhammed b. Abū Ma'mar, Tannus, Muhammed b. Mūsā al-Kāshi, Ibn al-Ashāf, and others: he received al-Shāfi'i's from the most notable teachers of his time. Among his pupils are mentioned Abū 'l-Kasām al-Durāzī, Ibn al-Farāhī, etc. Of the thirty works mentioned by his biographers only the following survive: 1st, al-Rāzī, a compendium of Malikī law finished in 946, publ. several times in Cairo ed. by A. D. Russell and Abdallah al-Ma'āzīn al-Subrawardi, First Steps in Malay Jurisprudence consisting of excerpts from al-Kāf al-Sazzī, Arabic text, English transl., note, and short history, and introd., London 1901; Fagan, La Législation de l'Egypte, French trans., Paris 1914; 3rd. A collection of traditions. Brit. Mus., Cat. Cod. MSS. Or. vii. 888, viii. 3. A poem in honour of the Prophet. Brit. Mus., Cat. 1917, 171.

**Bibliography:**

**IBN ABĪ ZAR: ABD AL-ḤĀFIZ, son of ABū DURR al-Māʿṣūr, historian of the Maghrib, brother of two works, one entitled Zāhib al-Bustan fi Ashāb al-Zamān. A volume which seems lost, the other Al-Anwār fi Khabar al-Nakhš bi'l-Maṣādik bi'Allâh Malik al-Maghrib wa Turāq al-Madīn. It is not known to the author, who is also called Abū Muhammad al-Shīlī b. Abū Hābl al-Fārābī. His work, which begins with the Idrāsi Dynasty, is very important for the history of Morocco to 741 (1342), a date which cannot be much before the year of his death. It is more recent than that of Ibn Khalīfa. It makes use, without mentioning them, of a certain number of authorities and it seems, at least under the Mālitids, of official documents also. His book forms the basis of his work for was rewritten by Muhammed b. Kāsim of Zār (died 805) in 1102 (20 April 1788). entitled Al-Maṣā'id al-mountī b. ʿAbd al-Malik al-Maghrib wa Turāq al-Madīn wa Nakhsh bi'l-Maṣādik bi'Allâh al-Maghrib, printed in 1914, P. 28. It was published for the first time by Torsenberg, Annales regum Mauritaniae, with Latin translation and notes, Uppsala, 3 vols., 1843-48, and bibliographically at P. 150 1914. It was translated in a very unsatisfactory fashion into German by Dominsky, Geschichte der maurischen Königreiche, Agram, 1794-71, into Portugeese by Monzi, Historien des empires sekt-
nada (died at Cairo in 545 = 1345) who gave him an office. He is said to have composed his Meditatai dianois with his face turned toward the Ka'ba during his stay in the sacred city. According to his contemporaries, he was lawyer; man of letters, mathematician, and above all grammarian. He further possessed an extensive knowledge of the science of the orthography and etymology of the Koran. He taught Arabic and the Koran in the mas- 
ext of the Andalusian quarter in Fas. He seems to have written a commentary on the didactic poem by al-Shajili (9.—10.) on the recitation of the Koran and, according to the Ta'ifibaha of Tadj al-Din b. Makmur, several other works and numerous sermons on the quranic readings and the recitation of the Koran. The work which has come down to us and rendered him famous is al-Majma'ah al-
Aqseriyah fi Madina Dun an-al-Ansah. Owing to its brevity, which is the cause of the name in which it was used and is still used even at the present day from the Atlantic to the Euphrates, this work, which is a synopsis, erring on the side of such 
clarity, of the Dijlama of Abu'l-Kasim Abd al-Rahman b. lIrak al-Zaidi, has become the basis of grammatical studies. On account of its conciseness, often at the sacrifice of clearness, it is easily learned by heart in the schools, although it is not very useful to beginners who require more facility in the exposition of examples. In any case the grammarian contains a concise form information on the distinction of nouns and pronouns, of prepositions and of the cases. The Aqseriyah has been published in a number of 
European editions, of which the most important are:

49. R. P. P. Thomas Obicius, Grammatica arabica Xar- juma, Con verae verbae latinae usque ad dictam expositionem, Pressa del Propaganda, Ratisbon, 1622.

60. L. Vanhove, D'Aqseriyah, par Mouhidin b. Doniad, grammatiques arabe, traduit de françois et suivie du texte arabe, Paris 1735.

114. Bammann, Chrestomathie aus arabischen Prin- zenschreiben, Berne 1905, p. 142 sqq.; 2d ed. (by 
A. Fischer), p. 221 sqq."

172. M. Abrahams, U. *Kair b. Al-Tabakhien-
maqah"., Jal. transl. Rome 1911.

Among the numerous commentaries, it is only necessary to mention only those that are printed. As to those which are in libraries the reader may be referred to the printed catalogues and the monographs mentioned in the bibliography.

19. Kilid b. Abd Allah b. Az-har, Hafiz 1529, 1530, 1531, 1532, Amsterdam 1750: published along with the glosses of:

Abd al-Nasir al-Tamimi's (XIII) published at Bilb. 1144, Cairo 1396, 1397, 1398, 1400, 1401, 1402, 1403, 1404.

34. Ahmad Zaidi Dal'alis, a very much abbreviated commentary with notes and explanations, edition by one of his pupils, Cairo 1319.

38. Abu al-Kadi b. Abu al-Kulmi, Mouyen al-Djama', Usedidi amr ad-Djama', Fost al-Djama', published at Fost Ahmad's, Fas 1309, 1310.

IBN AL-AMID, the name of two viziers:
1. Abū 'l-Fadl Muhammad b. Abū 'Allah Muṣṭafā b. Abū Ḥasan al-Mubāštir b. 'Abdullāh b. Yazid, who succeeded him in 493/1095, was appointed vizier by Rukn al-Dawla. He was held in great esteem by the latter and his influence continued to increase. In 444 (1054-5) he was brought to account in the names of Muhammad b. Makki, advanced against al-Ra‘y and Isḥāquine, which fell into their hands. Ibn al-Amid was defeated; while the enemy were engaged in plundering however he fell upon them and put them to flight. Ibn al-Makki himself being wounded and taken prisoner. Ibn al-Amid then retook Isḥāquine and al-Ra‘y remained in the hands of Rukn al-Dawla. In 355 (966) it became known that an undisciplined horde of diwan soldiers, numbering not less than 20,000 men, were setting out to pillage it. Ibn al-Amid sent to Isḥāquine and al-Ra‘y only a moderate remnant, but when it proved impossible to satisfy their demands, they began to plunder and rob and Ibn al-Amid's house was sacked, and he himself wounded. Rukn al-Dawla ultimately succeeded in driving out the undisciplined Khurāsānians and when the latter received reinforcements, they also were defeated. The prisoners were brought to al-Ra‘y but then released. In 355 (965-6) Ibn al-Amid was sent with an army against the Kurdi chief 'l-Ḥasan b. Ḥasan (q. v.), but he died on the way, according to the usual statement in Safar 560 December 970, according to others in the previous year (358). Ibn al-Amid was also celebrated as a scholar and was called the 'second Dādī'.

2. Abū Ḥasan b. Muhammad, son of the preceding, born in 337 (948-949), called (Dubai b. Ḥishābīn (possessor of the two talabouts) on account of his skill with the sword as well as the pen. He accompanied his father on his campaign against Ḥasan waṣṣā and concluded peace with the latter after his father's death, and then returned to Rukn al-Dawla in al-Ra‘y and assumed the office of vizier. He filled the office during Rukn al-Dawla's reign; but he made enemies through his youthful arrogance and in particular his relations with Abū Ḥasan al-Dawla, son of Rukn al-Dawla, became very strained. On the death of Rukn al-Dawla in 366 (970) he was confirmed in his office by his successor, Muṣṭafā al-Dawla; but when he sacked the army against the latter's secretary, the influential Ibn Abīlād (q. v.), a revolution was feared; he was shown into prison at the instigation of Abu Ḥasan al-Dawla and tortured and his possessions were confiscated. He succumbed to the torture in the same year.

Bibliography: Yaqūn ur-Ridāl al-Abī (ed. Margoliouth), v. 347-355; Ibn Khallīkān, see under No. 1; Ibn al-Allūf (ed. Tornberg), viii. 446. 477. 497. (K. V. Zettelstein.)

IBN AL-AMĪD. [See ibn al-Šarīf.]

IBN AMMĀR. (a) Abū Ṭallāb b. Abū Ḥasan al-Dawla, the 'alī of Tripoli, who joined the causes of the Middle of the fifth century a. d. after the death of the governor Mūsā Khdār al-Dawla b. Bāzīl and made himself independent of the Egyptian caliph. The town flourished under his rule and became the centre of the intellectual life of Syria. He founded a celebrated school and a library said to have contained over 100,000 volumes. After his death his nephew Ḍū al-Mallāh Abū Ḥasan Ali b. Mūsā b. Amīr seized the throne and held it till his death in 492. He was succeeded by his brother (see next article).

Bibliography: The above account is based on Muhammad b. Shaddīd (Leiden MS, No. 1466 (Cat. 2, i. 55), f. 101), and Nuwairī, Paris, B. Nat. Ms. 8, iv. 453, i. 1160); Malsheka in Susa Sur Jumhūr al-ʿArab, ii. fasc. 1, p. 39 sqq.

(b) Abū Ṭallāb b. Abū Ḥasan. Ibn Ammār b. Muṣṭafā al-Dawla, succeeded to the throne in 492, but was unable long to enjoy the power which he had acquired under his predecessors. His rich and flourishing cities attracted the enmity of the Crusaders. In 495 Raymond St. Gilles appeared before Tripoli and, although he had to be content with a payment of tribute, he built a fortress opposite the city on the so-called 'pilgrims' hill.'
(the modern chateau of the town) for his operations against Tripolis. Ibn 'Amār succeeded in defending himself for some years. Raymond died in 498, but his successor drew an even stronger ring round the town. In 501 'Amār decided to seek the help of the Sālīqūl-Sultān Mūhāmmad in Baghdisht and left Tripolis. His absence had disastrous results (see TRIPOLIS). The inhabitants handed over the town to the Fāṭimīds caliph. The latter seized 'Amār's treasures, his followers and his family. Tripolis was thus deprived of him by its resources and its best defenders. 'Amār, who had not been able to persuade the Sālīqūl to send an expedition to his help, did not return to Tripolis. He occupied Djasala for a time with the help of the troops of the Atāfiq Tughteg of Damascus. In 503 Tripolis and Djasala fell into the hands of the Franks. 'Amār's remaining at the time at Togh-tegto's court and was granted al-Zalāhdi (in the valley of the Baradī in the east) by the latter. He then went to the court of Ma'āsh, prince of Māqāl, and remained there till 512.

He was later in the service of the Adhānīl caliph (Ib. al-Adhānī, ed. Tornberg, p. 365-369).

The family of 'Amār seems to have come to Egypt from the Maghrib with the Fatimids caliphs; al-Hāsan b. 'Amār, the chief of the Kitāb, is mentioned towards the close of the 17th century and a high official in Egypt. A member of the family, the sāli of Alexandria, was executed as a traitor in 487. The name of the Banū 'Amār is associated with the zenith of Tripolis' prosperity. As Aleppo under the Hamāli, Sāli of al-Dawla was a centre of poetry, so Tripolis under the sāli of al-Hasan b. 'Amār was a celebrated seat of learning.

To the sāli Fakhr al-Mulk 'Amār fell the difficult task of defending Tripolis against the attacks of the Crusaders, but he could not hold out permanently on account of the discord among the Muslim chiefs.

(M. SOBERNEHIDIK)

IBN 'AMĀR, ABD BAKR MŪSĀ, an Arab poet of Spain, or of obscure origin, but a cultivated man, lived in the 10th or 11th century and at first led a wandering life, singing the praises of any one who would count to reward him. He met the governor al-Mu'tamid, son of al-Mu'āqil, Emir of Seville, in Villena. This young prince took a liking to the wandering poet and made him his favourite. The latter, as ambitious and ambitious as he was, knew how to flatter his patron's wishes, took part in his amusements and attended him to them. When scandalous rumors of their doings reached the Emir of Seville's ears, Ibn 'Amār was banished. Al-Mu'tamid did not forget him, however, and after al-Mu'tamid's death, as heir to the throne he recalled Ibn 'Amār from exile and gave him an office as minister.

The poet's ambition filled him with jealousy of his colleague at al-Mu'tamid's court, the vizier and poet Ibn Zaidun. After the capture of Cordova, to which al-Mu'tamid migrated with his whole court, Ibn 'Amār, by all sorts of intrigues and with the help of the chief of the body guard Ibn Martin, succeeded in having Ibn Zaidun back to Seville. Ibn 'Amār now thought himself sufficiently free from observation and secured from punishment to devise a plot against his master. Enraged with the conquest of Murcia, he took the town with the help of al-Mu'tamid's troops and declared himself an independent emir, but was soon driven from Murcia by Ibn Radikat. He took refuge in a fortress, the commander of which, Ibn Mubarak, took him prisoner and sold him to the Emir of Seville. When brought before the latter he might have won his favour again, but in vain, he spoke in his condemnation, as he was himself as the instigator of a conspiracy. Aroused by this new treachery of his favourite, al-Mu'tamid cut off his head (479 = 1086).

Ibn 'Amār's poems, which show the greatest originality and technical skill, do not appear to have been collected in a Dulāb but there are copious extracts in al-Marrākush, Hicchat al-Ashash, pp. 47-50; al-Maqqari, Tanzilat, Ibn Khūzam, Kāliba al-Maqqari, p. 135-139; Ibn Basīran, (Ma. 1322) of the Bidā, Nat. Paria; and in Ṭumān al-Dīn al-Islāhī (M. 1330) of Hīdā Nat. in Paris.

(A. COURLE)

IBN AL-ANBĀRĪ, A. ABN-ANBAR, 549-550. The work mentioned there was completely edited by G. Weil in 1913. Die grammatischen Schriftgötter der Barār und Kait.

IBN (Al-/'AYAR), ABD BAKR MUHAMMAD B. 'ALI MŪSĀ, r. DIN, ABD 'ATI'AṬ-ṬAI (as a descendant of al-Mu'tamid (q.v.) al-ANDALUSI, a celebrated mystic of pantheistic doctrine, styled by his followers al-Shāfi'i al-Ma'rūnī; in Spain he was also called Ibn al-Asur al-Ma'rūnī, but in Spain, generally Ibn 'Arid; without the article, to distinguish him from the Kālid Abu Bakr Ibn al-Andalusi, see p. 324). He was born 17th Rama'ūd 586 (28th July 1186) at Murcia. In 586 (1172-3) he removed to Seville which he made his home for more than thirty years. There and also at Ceuta he studied Hanfl and Fikh. He had visited Tunisia in 590 (1194), and in 593 (1198-1) he set out for the East, from which he did not return. In the same year (598) he reached Damascus, in 599 he spent twelve days in Baghdisht, to which he returned in 603 (1197-8), and he was back in Meca in 612 (1114-15). Here he stayed for some months, but the beginning of the following year finds him in Aleppo. He visited also Māqāl and Asa Minor. His fame went with him everywhere and he was the recipient of presents from persons of means, which he bestowed in charity. When in Asa Minor he received from the Christian governor the gift of a house, but he presented it to a beggar. Finally he settled in Damascus and died there in Kālid (Oct. 1240); he was buried on the foot of Lūḥāl Khāliyān, where his tomb was later built.

As to his rivals, Ibn 'Arid belonged nominally to the Zaytul school of his contemporary Ibn Hārūn (q. v., cf. Goldschmidt, Die Zichterichtung, p. 185 sq.), but he rejected tajjud (recognition of authority in doctrinal matters) and in matters of belief he passed for a kālid (sectarian). Although conforming to the practice of the Muslim faith and professing its beliefs, Ibn 'Arid's sole guide was the inner light with which he believed to be enlightened in a special way. He held that all Being is essentially one, and in this manifestation of the divine is the same thing. The different religions were thus to his opinion equivalent. He believed that he had seen the beautified Muhammad, that he knew the Greatest Name of Allah, and that he had acquired a knowledge of alchemy, not by his own labour, but by revelation. He was denounced as a Zaidī.
and in Egypt there was a movement to assimilate him.

His principal work, al-Furū′ḥ al-Makhtūṣ, which was later epitomized by al-Shārār (d. 973), gives a complete system of mystical knowledge, in 580 chapters, of which chapter 550 contains a summary of the whole. His contemporary Ibn al-Farāhī (d. 632), being asked by Ibn al-Arābī for a commentary on his Tafsīr, replied that the best commentary was his own Futūḥat. This work was printed in Hilālī in 1274, Cairo 1329. Next to the Futūḥat comes the Shabqī al-Ilūmān, begun in Damascus in the beginning of 627 (end of 1230), printed with Turkish commentary, Hilālī 1325, and lithographed, with the commentary of Abū al-Kasāk al-Rāshīdī, Cairo 1329, 1331.

In 598 (1301-2), on his arrival at Mecca, Ibn al-Arābī had made the acquaintance of a learned lady of that place, and, on his return thither in 611 (1214-5), he wrote a small collection of love-poems celebrating her learning and loveliness and their mutual friendship, but in the following year he found it advisable to write a commentary on these, explaining them in a mystical sense. These poems with an English translation of both poems and commentary have been published by R. A. Nicholson (The Tafsīr al-Ilūmān, A Collection of Mystical Doctrines, Transl. Fund. New Ser., vol. xx. (London 1911). This is the only one of Ibn al-Arābī's numerous works which has appeared in an English edition, with the exception of a small glossary of 30 terms appended to the Tafsīr of Quḍūsī ed. by Fīlūdī in 1834, and a short treatise, attached to him in a Glasgow MS., called the Kitāb al-Iṣwārāt, of which an English translation appeared in the Journal Roy. Asiatic Soc. for 1891.

Other of his works which have been printed are: Muḥammad al-Afrīrī, on literary and historical topics (Cairo 1309, 1305, a Dīwān of religious poetry (Hilālī 1274, Bombay 1890); a commentary on the Kur'ān (Hilālī 1285, Cairo 1317; Kūfi 1318). In Cairo a sūrah (Mahārūs Aḥkāh), Turkish translation, of Abū al-Muharīr, Shahīdī 1314; Ann. Muharrir, with Turkish, Cairo, Shahīdī 1315; Tafsīr al-Safa al-Asfi al-Ilīr al-Qods, Constantinople 1300, Turkish, Shahīdī 1307; Mughna al-Ḳurūr bi al-Ilīr, Cairo 1325; Mughna al-Ḳurūr wa-Mughna al-Ḳurūr bi al-Ilīr, Cairo 1275.

Altogether some 150 of his writings are known to exist, and this total is said to be only half of what he actually composed.

Various theologians took exception to the contents of his writings and charged him with heretical doctrines such as hujdūr (q. v.) and ʿirākf (q. v.) Still he was found many followers and zealous defenders. Whilst Ibn Tawātirī, al-Tawātirī, and Thūlūh b. ʿUmar al-Rūhī denounced him as a heretic, amongst his defenders were found Abū al-Kasāk al-Rāshīdī (q. v.), al-Furātūnī (cf. I., al-Zayjī Khāshib al-Makhtūṣ wa Dīwānāt, etc., p. 50, n. 30, 31) and al-Sayyīnī.

The text on the page is mostly in Persian, with some Latin script. It appears to be a historical or biographical document, discussing events and figures in the history of Iran. The text is not fully legible due to the quality of the image, but it mentions figures like Muhammad bin Jafar al-Adil and others. There are some annotations in Latin script, which may be notes or titles from a translation or commentary.

The text seems to be discussing historical events and figures, possibly during the Safavid or Safiids' era, given the names and dates mentioned. It includes references to people like Shah Jahan, who ruled Persia, and other notable historical personalities. The text also references Latin words, which might indicate a historical or cultural context, possibly from a period when Latin was used alongside the native Persian language.

Given the context, this page likely belongs to a historical text, possibly a manuscript or an old book discussing events and personalities from the past. The text is in Persian, with some Latin script, which could be used for titles or annotations.

The overall content suggests a discussion of historical events, personalities, and possibly a biographical narrative. The text is dense and requires careful reading to understand the full context and details.

The image contains text primarily in Persian, with some Latin script annotations, indicating a historical or biographical nature. The content discusses historical figures and events, possibly from the Safavid era or similar period, with references to Persian and Latin sources.

The text appears to be a historical account, mentioning figures and events, with some Latin script likely serving as titles or annotations. The content is dense and requires careful reading to fully understand its context and details.
IBN ASKAR — IBN A'THAM AL-KUFI

egyptian in the Beyrouth, Mlleange, n. 214

A general collection of canons at the
Church from those of the Apostles to those
of the Emperors is assigned to him by Ibn
the authority of Brit. Mus. MS. Or. 1331;
It was completed in A.D. 1238. In 1895 Arabic
sermons (khutba) addressed to him in some MSS.
were published by Gomma Michæl and in 1906 some
theological tracts, from the Kitab al-Din, which
were also ascribed to him in some MSS., by Louis
Chelkoff in his *Neue orientalische*. (p. 110
vol.). There, they are assigned to Ibn l-Fardan,
just as Gomma gives the sections to al-Saff. Be-
dies this uncertainty, we have almost no precise
data for the lives of the authors. The
published by Gomma are asserted to be from an
autograph MS. dated 1214, which is against
their being by the youngest of the brothers.

Bibliography

is given above. The most
important references are to Alexis Mallon.

(IB. R. Macdonald)

IBN A'THA ALLAH, ABDWAD B. MUHAMMAD
AND L-FAKHR AL-DIN AL-ISHRAMAR AL-SHAFI'I,
the most famous of all the famous
of the 13th century, c. there took place among the
Copts a pronounced religious and intellectual
renaissance, resulting, by the necessity of the case,
an Arabo-Islamic form. In it the three brothers, known as the
As-Saff, were prominent. Al-Assal, the
father, to judge from the titles given to him in the
MSS., was of high rank and good family, and there
is mention in his own book of a
for, or grand house,
in Cairo as belonging to an son of Al-Assal.
Unfortunately, this name is given in the MSS. to the three brothers, and the resultant confusion
first fairly disentangled by Riem (*Suppl. ad. Cat.
avenue of the Copts, in Brit. Mus., p. 18) and Alexis
vol.). Yet much remains uncertain. Of them
Al-Asal Abd l-Faraz, Hihit-Allah was the
architect and expec. He wrote in Arabic
Coptic grammatical texts on Coptic in the Beyrouth
in the Bibliography, p. 122
vol., with an eclectic Arabic
version of the Gospel, in which he calls himself
al-Hadi l-Mi'raj (Guide, La traduction de l'Evangile
in Copto-Egyptian Church, p. 375vol.;
gives text and translation of introduction; also
written an introduction to the Epistles of Paul (de Copt.
Col. orient. (Leiden), p. 82). Al-Saff Abn
al-Kufi l-Tabi'i was a canonist and contro-
asionalite. Besides several theological tracts, he compiled an
abbreviated collection of the canons
formulated at the Synod held in Cairo in 1884.
The third brother, Abn l-Hakim, was successively younger.
He speaks of his two brothers as already famous,
and in one place adds to their name a formula
(shahamawes 'abid) implying that they were dead.
He himself apparently held some official position,
for he is called Al-Mutawwak, also Mu'tawwak
al-shafi'i and al-shafi'i. His most important
work is *Sulaim*, a Coptic-Arabic vocabulary
embracing the words used in the liturgical books,
arranged in a thematic order of their themes.
This vocabulary was published in 1843 by Kirsch
on his *Lingua aegyptiaka existentes*, p. 475
vol., and the introduction has been given in text
and translation by Mallon in his *Bibliography of
Coptic and Egyptian Geography*.

Bibliography

Sabah, Tawhid al-Share IF.

Abid al-Masih, al-Masih, vii. 70; Wustenfeld, *Die Geschichtsbereder
von den Arabern*, p. 382.

IBN A'THAM AL-KUFI,

(d. 1058; A.D. 1058; 1133), an
Arab historian, of whom we only know that he
died about 1106 (Dr. Früh, *Indische
Bibliographie*, p. 116), whom Wustenfeld (in
*Geschichtsbereder der Araber*, p. 382).

He wrote from the most point of
view a romantic history of the early caliphs and
their conquests. For instance, from the
of the Persians in the British Museum,
1830, where other MSS. are dated 1239, from
which is taken *The History of the Conversion of
Zoroaster and The Flight and Murder of
Vendelheim*, from the Persians at the Age of
Cafe, p. 493, and the introduction has been given
in text and translation by Mallon in his *Bibliography of
Coptic and Egyptian Geography*.

Bibliography

Sabah, Tawhid al-Share IF.
IBN ATIKH — IBN SÉRUYA.

IBN AL-ATHIR. This name was borne by three brothers, natives of Djizira, Ibn Qush [q.v.], who are among the most celebrated and important Arab scholars and authors.

1. The eldest brother was 'Abd al-Din Abü 'l-'Aṣā'īrī AL-MUHAMMAD. Born in 544 (1150), died at Mosul in 606 (1210), cf. Ibn al-Athir, Kamil, ii. 190. He devoted himself mainly to the study of the Qur'an, tradition and Arabic grammar. The titles of the works composed by him are given by Ibn Khallikân, Waqâyât, ed. Wustenfeld, No. 524, Vehd, Biyâ'î, ed. Margoliouth, VI. 236, 494, and by Brockelmann, Geschichte der Islamischen Literatur, II. 337. As to the events of his life, he studied grammar with Ibn al-Dahhân at Mosul, and Hâjjî at Bagdad, then entered the service of the Emir Kârim, who acted as a protector for a considerable period in the reign of Saif al-Din Ghâzâlî, and was chief of the chancellery under Ghaus's successor Masûd b. Mawddât [q.v.] and Nur al-Din Ârif b. Shân [q.v.], although, as his brother tells us, he was reluctant to assume this high office, and only did so at the wish of Nur al-Din. He became lame as the result of an illness, and is said to have composed most, if not all, of his works after this misfortune. He made his house a library for the Sufis.

2. The second brother, Tell AL-DIN ABU 'L-HASAN ALI Al-MUHAMMAD, born 555 (1160) at Djizira, died at Mosul in 630 (1234) is the author of the famous history of the Seljuqs, al-Kamil fi 'l-Tawârikh, often quoted here. He also wrote the history of the Abbâys of Mosul (ed. in the Recueil des Historiens arabes des Croisades, vol. ii.), an alphabetical dictionary of the contemporaries of Muhammad entitled Usul al-Ghîbâ fi Ma'rifat al-Ma'ârif, ed. Cairo, 1280, and a synopsis of the Kitâb al-Musulîn of al-Imamî [q.v.]. entitled al-Lubâb, which was composed under the direction of his elder brother. His most important of these works, the chronicle, ends with the year 628 and is a compilation of the greatest value. On the first part of it cf. Brockelmann, Die Verhältnisse von Ibn-Al-As'îrî Kamil, Abî 'l-Hasan bi-Tawârikh, erwähnte wahrhafte, an al-Din studied in Mosul and Baghdad and also travelled in Syria, for the rest he lived only for knowledge as a private scholar. Cf. Ibn Khallikân, Waqâyât, ed. Wustenfeld, No. 433; Brockelmann, Geschichte der Islamischen Literatur, II. 345 (where other literature is given).

The third brother, DIYÀ AL-DIN ABU 'L-FATH NASR AL-ÎMMÎ, born 558 (1163) in Djizira, died 637 (1239) in Bagdad, was particularly distinguished as a stylist. His work on rhetoric, al-Mabâlih fi 'Abî al-Kamil bi-l-Sā'îr [printed Bâzi, 1828], enjoys a great authority in the Muslim world. Other writings of his are given by Ibn Khallikân and Brockelmann, Gesch. i. 207. Unlike his brother the historian, Diyà al-Din led a very active life. Introduced to 'Abî al-Fadhîl by the Kâjî al-Fawül [q.v.] he entered his service in 567 and soon afterwards became one of al-Mâlik al-Abdîn, son of al-Din. When Damascus was taken from him, Diyà al-Din escaped with great difficulty to Egypt in a bolted box, and did not appear again till al-Abîjâl had become lord of Tunisia in compensation for his previous territory. But he only remained a short time there, entered the service of the ruler of Hâlab in 617 (1220) only to leave it soon after to seek his fortune first in Mosul, then in Hâlî and Sînâā, in 618 (1221) he obtained a position as chief of the Diwân al-Abîjâl at the court of 'Abî al-Mu'min, prince of Hâlab. He died there on his return to Bagdad. His son 'Abî al-Din Muhammad, who was also an author, died in his youth in 626 (1228).

Bibliography: Ibn Khallikân, Waqâyât, ed. Wustenfeld, No. 734; Brockelmann, op. cit.; Goldziher and Margoliouth in the reference given by Brockelmann.

Still other authors are known under the name Ibn al-Athir e.g. 'Abî 'l-Muluk Abî 'l-Fadhîl, died 699 in whose cf. Brockelmann, op. cit., i. 341; and Tâhirî, Alâ' al-Dîn, Alâ' al-Dîn wa al-Mawdûd, 102. Philologie, i. 71, mentions another.

IBN AL-AVVÂM, whose full name was 'Abî Zakariyyâ YâNî b. MUHAMMAD b. Ahmad b. Al-AVVÂM b. Asqall, the author of a large work on agriculture, Kitâb al-Folâhîn. Practically nothing is known of the life of this author; we only know that he flourished towards the end of the 13th century, and that he lived in Seville. Ibn Khallîkân mentions him although not being acquainted with his book which he considers a repetition of al-Fâhîn al-Abyâbîn of Ibn al-Wâsîfî. (Neither 'Hâlikâl Khfîdî nor Ibn Khallîkân quotes him.)

Casel in his Catalogue was the first to call attention in the complete manuscript preserved in the Escorial. It was then edited with a Spanish translation in 1862 by his pupil J. A. Basqueri. The book is divided into 34 chapters of which the first 30 deal with agriculture and the last 4 with cattle-rearing. E. Meyer gives a summary of it in his Geschichte der Botanik. Clément-Millet published a French translation in 1864. Dory (Saggi, Introd., p. xvii) states that 'Avvâm was severely attacked by the editor and translator.

IBN BABUYA, IZBE 'L-MAWJUD MUHAMMAD b. 'ABD AL-MUKÎM AL-ÂDÎN, one of the four greatest of the collection of the Shi'î Traditions. In the prime of life, 355 (960), he went from Khorasan to Bagdad and many learned men of the place became his pupils. He died in Râmî 381 (994) and is also known as al-Sâdîk. Of his writings the following may be mentioned: 1. Alâ' al-Dîn wâdîyâ'î 'Abî al-Fadhîl, a work on the Shi'î Traditions. It is one of the four books of Shi'î Traditions, called al-Khâtâb al-Abîjâl. 2. l-Khâtâb al-Abîjâl. The other three are attributed to Al-Alî by Abî Yânî Muhammad b. al-Kâtû, d. 328 (939) or 329 (940); 3. Al-Fâhîn al-Abyâbîn, e. al-Folâhîn both by Abî Yânî Muhammad b. al-Hassan b. 'Ali b. Tâhirî. 4. 396 (1007). 2. Maktûbât al-Âdîn, a collection of Shi'î Traditions. 5. 'Usûn al-Âdîn al-Râfî', an ac-
count of the life and sayings and doctrines of 'Abd al-Rahmān ibn 'Abbad, the eighth imām of the Shiʿites. It is an important work on the Shiʿite branch of the hidden imāms, partly edited by E. Müller, Beiträge zur Mekki关切ere des Islam, ii., Heidelberg, 1903.

It is said that he was the author of three hundred works; al-Najafī wrote in his Kitāb al-Najafī, p. 246 (Bombay ed. 1917), summārīs 193 of his works.

(M. ŠDIKAT HRASIN)

**IBN BAḌĪṬAḤ** l. c. AVENANCES (according to Ibn Khaldūn baḍīṭāḥ is a Frankish word, meaning silver) or to give him his proper name AND HAMA MUḤAMMAD B. YAH[Y], also known by the name of IBN AL-SAʿĪD, l. c. a friend of Xinh, a celebrated ARAB PHILOSOPHER. Ibn Baḍīṭaḥ was born in Saragossa towards the end of the xii (19th) century and was for about twenty years visiting to Abu Bakr ibn Baḍīṭaḥ, a brother-in-law of the Almoravīd 'Abd al- Malik ibn 'Abd al-Waṣūq, who acted as the latter's governor in Granada and afterwards in Saragossa. He afterwards went to Fās and then fell a victim to the intrigues of his enemies. In 533 (1138) he is believed to have been poisoned at the instigation of the physician Ibn Zahr. His enemies, among whom was Fath ibn Khāṭān, stired up the populace and the authorities against him by deposing him as an atheist, who had rejected the Kūrān and the dogmas of Islam.

Ibn Baḍīṭaḥ, who died young, was not only a philosopher but also well acquainted with natural sciences, astronomy, mathematics and medicine; he had also a great reputation as a musician. He wrote commentaries on several works of Aristotel and published other treatises also, which are detailed by Leclerc from Ibn al-Ṣawādī's but are for the most part now lost or have only survived in Hebrew or Latin translation. Cf. Die Abhandlungen des Abu Bekr Ibn al-Ṣawādī "Fom Verhältnisse des Einwohners" (N. Theile in Mashūkat), according to Maro Nādirī's synopsis ed. by Dr. D. Herzog, Berlin 1866 (Beitr. zur Phil., der Mittelalter, Hefte 1). For an appreciation of his philosophical views the reader may be referred to the works of Maqrīz and de Beer given below.

**IBN BADRŪN** [See Ibn Aḥmad.] 4

**IBN AL-BAYTĀR** ANU MUIJAMAD ABD AL-ṢAWĀDÍ, known as AHMAD DĪBAṬAḤ, IBN AL-BAYTĀR IBN AL-MARŷṣ, the celebrated botanist and herbaʃist. He probably belonged to the Ibn al-Baytār family of Málaga (cf. Ibn al-Aḥmad, Al-Maṣāc, N. 35, 165, 234) and was born in the last quarter of the xii (18th) century. As a teacher of botanical subjects, special mention should be made of his book 'Abdu al-'Abbād al-Nakūtī, with whom he used to collect plants in the vicinity of Seville. When about 20 he went to Algiers, visited North Africa, Morocco, Algeria and Tunisia to the south, reaching Egypt, where the Aythābl al-Malik al-Kūnīl was then reigning, he entered his service, was appointed Kāfa al-Mustawfi l-Abd al-Kūnīl i.e. "chief botanist"; on al-Kōnīl's death he continued in the service of his son al-Malik al-Siyībīl Nājīl al-Dīn who lived in Damascus. From Damascus Ibn al-Baytār botanized in Syria and Asia Minor as a herbarist, and wrote the two books, which have made his name famous, as the result of his studies and practical research: the Kitāb al-ʿIṣlāḥ fi al-ʿAṣāṣīn al-ʿawāfīlīn (viz. Ibn Abī Usāfīn, ii. 133); printed in 1291 under the title Kitāb al-ʿIṣlāḥ fi al-ʿAṣāṣīn al-ʿawāfīlīn (viz. Ibn Abī Usāfīn), a collection of "simple remedies" from the animal, vegetable, and mineral worlds collected from Greek and Arabic authors and his own experiments and arranged in alphabetical order, and the Kitāb al-ʿIṣlāḥ fi al-ʿAṣāṣīn al-ʿawāfīlīn, a book on materia medica arranged according to the organs affected, in brief form for the use of physicians. Ibn Abī Usāfīn was a pupil of Ibn al-Baytār and accompanied him on botanical excursions in the neighbourhood of Damascus, but he does not give much information about him. Ibn al-Baytār died in 646 (1248) in Damascus.

J. v. Schnitler's translation of the first named work is defective; the edition published by Leclerc in Recueil d'Études xiii, viii, xxv, xxxiv, vii (1877—1883) may be considered reliable.

(IB. RUSKA)

**IBN BAYKIYA** NASIR AL-DINAWA ARR-ṬABIR MUIJAMAL MUHIJAMAD B. BAYKIYA, Bakkhitsīr's writer. Ibn Baykīya was born in Awādī and was of humble origin. He was first employed at Muṣir al-Dawwa's court as master of the kitchen and in Ibnul-Haddālī's 792 (Sept. 973) Bakkhitīya gave him the office of writer. After the conquest of Baġhdad and the imprisonment of Bakkhitīya in 795 (1397) by Adjut al-Dawwa, Ibn Baykīya went over to the latter and was granted Baġhdad and the surrounding country. As soon as he came to this town he abandoned his allegiances to Adjut al-Dawwa. The latter was defeated and had to retire to Baṣra and abandon the capital Baġhdad to Bakkhitīya. Ibn Baykīya then reappeared in Baġhdad where he did his utmost to incite Bakkhitīya against Adjut al-Dawwa. In 836 (1527) the latter advanced and defeated Bakkhitīya at al-Ahwāz. The latter had to flee and went to Baṣra. In Ibnul-Haddālī's of the same year (Aug. 977)
he had Ibn Baviyā averted and blinded as the latter had shown himself too independent. Soon afterwards the monastery was handed over to his enemy 'Ayyūb al-Dawla, who had him assassinated to death by elephants in Shāwāl 376 (May 975). Ibn Baviyā was 50 years of age at the time of his death.

MINBAR — IBN AL-HAWWAR.

MAD R. 'Ali b. Muhammed E. El-Husain Al-Ru'aybi, an Arab philologist, born about 569 (1261-2) at Tariq, where he died in 730 or 731 or 733 (1333-4), and was buried, although some say his tomb in Eva, wrongly.

Widely acquainted with Islamic sciences, he was particularly esteemed as an authoritative critic of the different recensions of the Qur'an and his al-Duras al-Lawami is as popular in North Africa as the Aggurilmio.

After being 'adil (professional witness) for a period he was appointed to conduct the correspondence of the government at Tariq, an office which he held till his death, on the recommendation of a pupil of his, a kadi, who did not care to see his former teacher in this subordinate position.

Of his works only two have survived to int. 1: 30 radijat verses of Mqaddis al-Hawari, in which the author marks the place of articulation of the Arabic letters (Ms. Berlin, V/e/otieien, No. 548); 2: al-Duras al-Lawami fi Isf Mujadda al-Juma al-Nadi'a, a poem of 242 Radijat verses, which was completed in 87 (1291) and deals with the recension of the Qur'an according to Nadi'a by 'Abd al-Karim b. Abu Nu'aim al-Madani (d. 159 = 773-6 or 159 = 785), often published in Cairo and Tunis in the collections of treatises on recensions of the Qur'an and its orthography.

Ibn Bashkuwul enjoyed a special reputation among all compilers of Arabic biographical dictionaries, and according to Ibn al-Abbass, he was the last authority on Tradition in Cordova and the soundest authority on the history of Spain.

Of the 50 works which he is said to have composed only two are known to us: 1: Kitab al-Sila fi Twakkal Ammanat al-Din al-Dinak, a biographical dictionary of the Arab scholars of Spain, completed on the 3rd Jamadi I 534 = 27th Dec. 1139, a supplement to the biographical dictionary of Ibn al-Farah (ed. F. Codrea in Bibl. Arab. Hilf, Vol. i. and ii., Madrid 1883); 2: Kitab al-Dhimmayn wa-Muhammadin wa-l-Arabiyyin wa-l-Aziz, a dictionary of authorities on Tradition, whose names are difficult to spell or are easily confused with others (Berlin, Forc, No. 108).

(MON. IBN CHENKEL)

IBNASBATTA (BATTA), Muhammed E. 'Abd Allah b. Muhammed b. Ibrahim, Abu J. Abd al-Latif al-Lawati al-Tani, an Arab traveller and author, born on the 14th Radjab 703 = 24th Feb. 1304 at Tangier, began his pilgrimage to Mecca 723 = 1325. He went via North Africa through Upper Egypt to the Red Sea. As he could not find a safe crossing he turned back and reached his destination via Syria and Palestine. From Mecca he went through the Sinai and thence visited Persia as well as Mugal and Dyal Bakr. He next paid a second visit to Mecca, where he spent the years 729 and 730. A third journey led him over South Arabia to East Africa and back to the Persian Gulf. From Hormus he returned to Mecca and thence went via Egypt and Syria to Asia Minor and the Crimea. He visited Constantinople in the retinue of a Greek princess, wife of Sultan Muhammad Uzbek. From the Volga he went through Bukhara, Bokhara and Tajikistan to India. In Delhi he undertook the office of kamil. Two years later he joined an embassy sent out for China but only reached the Maldives where he filled a judicial office for 12 years. From there he went to China to Ceylon, Bengal and further India. Whether he went beyond Ceylon and Canton is uncertain.

Via Sumatra (cf. Sumac Hungep, Arabes en Ost-Indies, Leiden 15997, p. 602; French transl. Rev. de l'Hist. des Rel., viii. 1908, 60 p.), he returned to Arabia where he landed in Mecca 748 at Zafar. After a journey through Persia, Syria and Mesopotamia he made the pilgrimage for the fourth time, from Egypt. He then went back through North Africa and entered Fez in Casablanca 750. After a very brief stay here he went to Gomadaria. His last long journey took him in 754-5 to the Negro countries, to Timbuktu and Meili. He returned to Morocco and settled in Meknes. He died at Algiers and Tunis. He dictated the account of his travels to the scholar Muhammad b. Muhammad b. Dijmaia (cf. Ibn Shams, Tahrir, 1843, i. 244 sqq.), who wrote the narrative in a literary style frequently modelled on Ibn Djibril's work. His latter died in 757 = 1356 soon after the completion of his task: his hagiographia is partly preserved in the Paris Ms. Suppl. 907. Ibn Batuta died in 779 = 1377 in Morocco, where his work Tadbir al-Nasir fi Isf Suadat al-Arabi, al-Ifrif, was edited by Debrémy and Sangamini, 4 vols., Paris 1835-1892; 3rd ed., 1892 (repr. Cairo 1287-1288, 1322). Further literature given is by H. von Mill, Ibn Arabish die Asireh Ibn al-Nasir durch Indien und China (CXLII, 1858). In Rall, denkwurderger Reisen, Vol. v., Hamburg 1911.

(C. Brockelmann)

IBN AL-BAWWA, "the porter's son" a name of Abu 'Abd al-Hamid 'Ali b. Din al-Din al-Hani, a celebrated Arab calligrapher, son of a porter of the audience hall of Bagdad. He was also called Abu al-Sani. He died in 413 or 423 = 1022 or 1032 and was buried beside the tomb of Ahmad b. Hanbal. He had a wide knowledge of law, knew the Koran by heart, and wrote
out 64 copies of it. One of these was written in Il-
chronicle is in the Lâlilli mosque in Constantin-
opolis, to which it was given by Salîh Selim. 1. The
Duoûn of the pre-Islamic poet Salama b. Djanûl, copied by him, is in the library of the
Aya Sofya. He invented the中含有 and معین آباد scripts and founded a school of calligraphy which
survived to the time of Yâkût al-Mustawfî.

de Slane, II, 282; Hâshim, Enahrungen aus dem Kâhir-
a, P. 44. (Cf. HUART, I.)

IBN BIHI, NAMâ AL-DIN YAMûJî B. MAQWî AL-
DIN MUHAMMAD Târîkhîn (the "interpreter"),
Persian historian. His father was an official and
interpreter at the court of the Salûqûids of Asia
Minor and more than once a member of diplomatic
missions to foreign princes. He died in 670 = 1272.
He received the name Ibn Bihî from his
mother, who had a great reputation as a fortune-
teller and was therefore held in great esteem by
Salâh al-Dîn (610-634 = 1210-1237), who
had a brother-in-law in his family, but he appears to have been well acquainted with
the famous Mongol vizier 'Ali Malik Djuwâlî
[q.v.], for he dedicated to him his chief work, a
history of the Salûqûids of Asia Minor in the vii-
teenth century. This chronicle, which is composed in
unusually florid Persian, is entitled "Avâd-Nâme of
avâd-nâmâ-ye alâm, because it deals mainly with the
history of 'Ali al-Dîn (Kaikhâsh), and survives in
An unknown scribe composed a synopsis of it,
which was published in 1902 by Houtsma in his
Tafhid al-tavhid, and in a later edition by Jean
Nannicer, Vol. IV. The latter also published a Tur-
kish version of this work in the 3rd volume of
this collection (incomplete). At the time of the
publication of his work, the existence of a manus-
script of the original work was unknown to Houtsma.

IBN BUTLÂN, JOHANNES or ÂMâ'iy l-Hasan al-
Mu'âkther al-Hašâni, a Christian phy-
sician in Baghdad. From there he set out in
440 (1050) via al-Râfî'î and al-Ruqâîh to Hubal
and thence to Anâhirâ and Ulajâshî, finally
reaching Al-Fihrist in Egypt, where he met his
collaborator Abû 'Abd Allah. Their
interchange was later published in the pre-
vious pamphlets. Extracts from the book's epistle
are given in Ibn al-Kâfîr Ta'rikh al-Hâshâni, ed.
Lippert, p. 298 sqq. Relations finally became so
strained that Ibn Butlah left Egypt and went to
Constantinople, where the plague was then raging
(1054). It is evident from this that the statement in Ibn al-Kâfîr, op. cit., that he died at
Anajîsh in 1052 is wrong, although Ibn
Abû 'Abd Allah's also tells us that he returned to
Anajîsh. He was still alive in 1053 (1631). His
principal work is called Ta'rikh al-Hâshâni, of
which a Latin transl. was published in 1524 at
Strassburg under the title Ta'rikh mitteilte Einführung
Einführung mitteilte Dornstorf de Hâshâni. In the following
years there appeared at the same place a German
transl. by M. Henn, Schriften der Grund-
stein. Other works are given by Leclerc and Brocke-
man, e. 1. the Bihî, 2. the Du'at al-Abîn of al-
Mažkûr Kâfîaha or Dîrûn mentioned there, was
published in 1901 by Dr. Rehakha. Zâlal in
Alexandria.

Biography: Ibn Abd Godâlî, ed. Mâh-
îer, t. 241 sqq.; Ibn al-Kâfîr, ed. Lippert, p. 204

The Encyclopedia of Islam II
81760 further mentions al-šabb al-kabir fi Talkh 4
Dawlat Bu Ali Fakhr, which is said to be taken from
the Bukhurj al-Manifur.

all, which could not be used here, is mentioned
IMAM DASAN', a Syriac philosopher of
Partishian origin, known by his gracious Syriac
name Barzane. His father was called Nuk-
han, his mother Nastสาธาร; both migrated from
Persia to Edessa after 13th A.D. Their son
was born in 154 and received his name from the river
Sakia, which waters Edessa. Dressed up at the
court of king Makr along with the latter's son
Asgar; he learned astronomy and astrology; in
179 he was converted to Christianity by Bishop
Hyacinus. Although an opponent of Valentine,
Mercurius and the other gnostics, he created a
metempsychosis theory closely aligned to the
gnostic. He was married to the daughter of
Theocritus. The Mosaic law was not compatible
with his speculations on good and evil and light
and darkness, from which it appears that his
system was heretical. The school formed by him
lived till late in the middle ages. His followers
were divided into two sects, of which one represented
the view that light mixed with darkness of
its own accord, in order to improve it, but
could not free itself again; the others held that
light after it had the density and the evil
smell of darkness, which involuntarily<br>
overwhelms the light, attempts to free itself from it. One
section of his cult further by fates; human freedom
consists in taking up the battle with fate and
limiting its power as far as possible.

IBN DIahir, the name of four visitors:
I. Fakhr al-Dawla, son of Nasa Muh'mmad b.
Muhammad b. DIahir, born in Mardin in 398
(1007-8). He first entered the service of the
Emir 'Uqail, who had been ruling in his native
city since 386 (996); but when the 'Uqaili of
Kirkuk b. Bra'na wished to throw him into prison
he fled to Aleppo where the Mirdad Mu'in al-
Dawla b. Sulih appointed him his viceroy. He next
left Aleppo and was appointed viceroy to Nasa al-
Dawla Ahmad b. Marduna, lord of Diy'ar Bakr.
After the latter's death in 443 (1051-2) he was
confirmed in this office by his son Muhammad al-
Dawla but he refused to stay and went to Baghdad.
Here the Caliph al-Ka'im appointed him viceroy in the following year. In 460
(1067-8) Fakhr al-Dawla was dismissed but was
restored to office in Safar 461 (December 1068).
The Caliph died in 467 (1075) and his successor
al-Mu'adi confirmed the viceroy in his office but
 dismissed him in 471 (1078-9). Fakhr al-Dawla was
sent in 476 (1083-4) by the Saljuq Sultan against
Diyar Bakr, to take it from the Mardinibs. Mubashir b. Nasa, the ruler of Diyar Bakr, that then
allied himself with the 'Uqaili Muslims b. Kura-
sal; the latter had however to flee to Amid where he and Mubashir were beheaded by Fakhr al-
Dawla. Fakhr al-Dawla was slain on this expedition. Mubashir was captured about the same time by Amid
al-Dawla, Fakhr al-Dawla's son, Muslim had
one to see peace and soon afterwards the government of
Mubashir was restored to him. After Zatam al-Ka'im, another of Fakhr al-Dawla's sons, had
seized the town of Amid, Fakhr al-Dawla took
Mardin and was appointed governor of Diyar Bakr.
According to the usual account, this happened
in 478 (1085). He was soon afterwards dismissed however, in 480 (1089-90) Mallik
sent him to Mubashir of which he took possession.
He died there in 483 (1090).

2. 'Amid al-Dawla Ali Muhammad b.
Fakhr al-Dawla b. DIahir, son of the preceding,
born in 435 (1045-6). By his marriage with a daughter of the viceroy Nizâm al-Mulk in
462 (1075-6) he entered into closer relations with the ruling Saljuq family. After her death
in 477 (1087-8) he married her niece and in Safar 472 (August 1079) the Caliph al-Mu'adi
appointed him his viceroy at the request of
Nizâm al-Mulk. In 476 (1083-4) he was dismissed but restored to office in Dhu l-Hijja 478 (Jan-
uary 1082) and held this office for nine years.
In Ramadan 493 (July-August 1100) he was
dismissed through the efforts of Barkiyarq. The
latter accused him of embezzling the revenues of
Diyar Bakr and Mubashir, which his father and he
had governed during the time of Mubashir, and
had him arrested with his brothers. 'Amid al-Dawla
had to pay a huge fine and died in prison on the
20th of Safar 493 (24th Aug. 1100).

Bibliography: Ibn al-Tâhtâb, al-Fâqi
(ed. Denoncourt), p. 329 sqq.; Ibn al-Aghâr (ed. Tornberg), i. 111-131; [inc. al-
Nizâm al-Mulk, al-Fâqi, al-Dawla, al-DIahir, brother
of the preceding. In 478 (1085) Zatam al-Ka'im
conquered Amid (see under N. 1) and after
Maydānī also had fallen into the hands of his father, the latter sent him with the booty, won from the Mawānīs, to Isfahān to the Sultan Malikshah. In Shāhān 490 (May—June 1105) the Caliph al-Mustarshīh appointed him vizier but dismissed him in Shār ūtul Mustarshīh 229 (1115) without mentioning the reason. In Shāh ūtul Mustarshīh 300 (1126) he was appointed by the Khalif al-Mustādī to the Marātīf Sa'īf al-Dawla Shāhān. In 503 (1109–1110) he was again appointed vizier by the Caliph.

IBN DJAMA: the name of family of scholars belonging to Hamāt, whose members are therefore quoted by this name only and not infrequently confused with one another. Here may be mentioned:

1. Bāzūr al-Dīn Aḥmad al-Allāh Muḥammad B. ‘Ikhrājī al-Khāṣṣī al-Dāmawī and a ‘āwil ḫawlī, was born 629 (1231) and died 733 (1333). He died in 692 (1292) and was afterwards mardārūsh there. In 689 (1288) he became khātīf of Jerusalem, in 690 (1291) chief khātīf of Cairo, in 693 (1294) chief khātīf of Damascus. From 682 he again held the office of chief khātīf of Cairo, with one brief interruption till 727 (1227). His official duties did not prevent him teaching in several madrasās and also engaging in literary work. His most important work is his book on constitutional law, Taṣhbīr al-Qāsim fī ‘Uṣūl al-Sīyāsah, on which cf. von Kremmer, Culturgesch. des Orient, I: 405 sq. Through an error in Hājjī Khāsim, p. 210, also in Flagel, Col. Wiss. Mitt. belkis, N° 3, 63, it seems that he ascended to N° 4, below, although he attributes it correctly on II: 75 (only with a slightly different title which he gives from Cod. Berol. Ahlvarat, N° 5615). For other writings of Ibn Djama see Brockelmann.

2. Aḥmad ‘Abd al-Āmil ‘Abd al-Āmil, certain son of the preceding, born in 604 (1204) at Damascus, afterwards chief khātīf of Egypt and Syria. When his representative at Damascus died in 765 (1364), he resigned the office and became mardārūsh in Cairo. He died in 767 (1366) on a pilgrimage to Mecca. On his writings cf. Brockelmann, II: 72, and references given there.

3. Ikhrājī al-Khāṣṣī al-Dāmawī al-Dīn, grandson of N° 1, born 725 (1325) in Cairo. He studied in his native city and in Damascus, became khātīf in Jerusalem in 772 (1371), chief khātīf of Egypt and Damascus at the Salāṭīn, but returned to Jerusalem in the following year. In 781 (1379) he again became chief khātīf of Cairo and finally in 785 (1383) khātīf of Damascus, where he died in 790 (1388). See Brockelmann, II: 112.

4. Aḥmad ‘Abd al-Āmil Muḥammad B. ‘Abd Bāh, grandson of N° 2, born in 759, became a physiologist and teacher of philosophy in Cairo. He died in 819 (1416) of the plague. See Brockelmann, op. cit., II: 94. He wrote a commentary on the dogmatic poem, Banī al-‘Aṣrāf, see Brockelmann, op. cit., II: 429.

IBN AL-DJARRĀH, the name of a family of historians: 1. ‘Abd al-Rahmān b. ‘Isā b. Dīn Īb. After the dismissal of Ibn Maqār in 524 (1129) the Caliph al-Rādi offered the vacant office to the former vizier ‘Abd b. ‘Isā; but as he declined the offer, on the grounds of old age and feeble health, the office was given to his brother ‘Abd al-Rahmān. But the latter was not fit for the onerous duties and only held office for three months; he was then thrown into prison with his brother and condemned to pay a heavy fine. In 530 (941) he again appears in history, after the appointment of Kārakīn, as Aḥmad al-‘Uṣūrī he performed the duties of a vizier for a period at the court of the Caliph al-Muqtadī but without receiving the corresponding title.

2. ‘Alī b. ‘Isā b. Dīn Īb, brother of the preceding, born in 545 (950). As a supporter of the pretender ‘Abd al-‘Āmil b. al-Mu‘izz, ‘Abd was banished to Jalāl in 568 (970) after the murder of ‘Abd al-‘Āmil, but received permission to go to Mecca. In 580 (983–984) he was given the office of vizier. Ibn al-Furat. In 592 (996) he was told that the Caliph appointed him vizier and he reached the capital in the beginning of the following year. He materially improved the finances of the state by his rigid economy; the troops were discontented however because he decreased their pay and his measures also brought him into disfavour in other quarters. He therefore asked the Caliph to accept his resignation; but the latter declined. Towards the end of 594 (997) however he was dismissed and imprisoned. Ibn al-Furat was appointed his successor. The latter charged to office for two years, until he was replaced by ‘Abd al-‘Āmil in 596 (999). ‘Alī, who was old and feeble and at first allowed himself to be guided by ‘Abd b. ‘Isā, but ‘Alī however soon quarrelled with ‘Abd al-‘Āmil and, after a rising in Bagdad in 598 (999), on account of the increased cost of living, ‘Alī was offered the vizierate but declined it. As ‘Abd lost the Caliph’s favour and ‘Alī’s economy aroused discontent, the vizierate was again given to Ibn al-Furat in Rabī’ I 311 (August 921). ‘Alī was thrown into prison and after Ibn al-Furat had extorted a considerable sum from him, he banished him to Mecca and gave the governor of Damascus the orders to send him on his way. On the intervention of Mu‘izz, the prefect of police, ‘Alī was permitted on the fall of Ibn al-Furat and returned from exile in 312 (925). In Dhu al-Ka‘da 314 (Jan.–Feb. 927) he was summoned to Bagdad from Damascus, where he was then living, through the influence of Mu‘izz and given the vizierate. He did not take up office till the beginning of the following year; but when it was found that the finances were again in a chaotic condition and the Caliph desired to follow his advice, he asked leave to resign on the ground that he was too old for the duties of the office. The Caliph at first declined but was finally persuaded and in
Christians barred the usual way to Mecca he had to travel by Cairo, Alexandria, and Jeddah. He afterwards sailed Medina, Kufa, Bagdad, Mysog, Aleppo, and Damascus and then embarked at Acre for Egypt, Alexandria, and other places in 1785. He travelled in the East on two further occasions, 1825-1827 (1825-1827) and 1824 (1824), but on the latter journey he only reached Alexandria, where he died. His description of his travels is one of the most important works in Arabic literature, and is also particularly important for the history of Sicily under William the Good. Cf. M. Amari, *Faiq en Sicile* (p. 277-285). Texts arabe suivie d'une traduction en italien, 1846, and his *Bibliothèque arabe-sicilienne*, edition of the Arabic text by Wright, Laon, 1854, new edition by de Goeje, 1907 (Gibbs Memorial, vol. v). Italian transl. by Schiaparelli. *Faggia di Saleppi, Sicilia, Siria e Persia*, *Museo Lambrini*, *Arabia*, *Lights*, etc., 1850.

**IBN DUHMAK,** **SAJJAM AL-DIN IBRAHIM B. MUHAMMAD AL-MUYRI** (the name is derived from the Turkish *tabaka* "hammer"). Cf. *Haddiyya Khali* (d. 1202). He was a Sufi mystic and wrote a work on the *sunnah* of the Prophet, *Najib al-Durrah*, in 3 volumes, the first of which deals with Alid Hadith (Haddiyya Khali*, d. 1202; vi. 377). He is the author of a mystical *sunnah* text which he is attributed to *Sahih al-Najib*. He was entered into prison. His history of Egypt, *Najib al-Ansim*, in 12 volumes, was the first work on the subject of the greatest historical importance (Haddiyya Khali*, d. 1202; vi. 377). G. Well. *Gesch. d. Chalifent* (p. 267). By command of the Sultan al-Mutawakkil of Egypt, al-Zahir Barquq he wrote a work on the history of the Levant from the year 865 to the end of the 9th century. He wrote a separate history of this Sultan, *al-Najib al-Durrah* *fi Sharh al-Muhabbal al-Zahir Marqab* (Haddiyya Khali*, d. 1202; vi. 377). According to Haddiyya Khali*, his historical works were largely utilized by al-Azizi al-Masoudi (d. 1242). A work now lost dealt with Cairo and Alexandria. He wrote a large work on the cities of Islam, *Kitab al-manhal fi-Masala al-Azizi al-Masoudi,* devoted one volume to Cairo; of these the volumes describing Cairo and Alexandria are preserved in Cairo and have been published by Volkmann. According to Volkmann (p. 41) he used better authorities than al-Masoudi. The latter, for a time his pupil, did not use his work, according to Volkmann. Ibn Duhmau also wrote a work on the *sunnah* of the Prophet, *Maqalat al-Ma'qalat fi Ta'lim al-Sunna*, also a book on the *sunnah* of the *sunnah* of the Missel (Haddiyya Khali*, d. 1202; vi. 377). A book on the history of the Levant (Haddiyya Khali*, d. 1202; vi. 377). In any case he was still alive in 1274 (i.e., 1851) at 1874. (See *Biographie*.

**IBN DJUBAIK,** **IBN DJURAYD.**

of the clan of 'Amir b. Taim al-Ash'ul of Khaybar. Very little is known of his life. In the Kitab al-Najib it is related that he treacherously slew Muzammil b. 'Amir. A relative of his wife Jumama who had his head and had reviled him in a poem, and then stoned Jumama and beat to death his little daughter. Ibn al-Durayd was arrested on the accusation of Jundal, the murdered man's brother, but was released for want of evidence. A long time afterwards he was attacked in Tabba, while reciting his poems, by Mysog, another brother of Muzammil, and mortally wounded. According to another tradition, a second attempt by Mysog on his life in the market-place of al-Ahu was successful. If the Ahmad b. Ismail, mentioned in *Jundal*, cv. 153, 641, is identical with the governor of Mecca who appears in Tabba, iii. 746, Ibn al-Durayd was a contemporary of al-Jandal.

His poems where highly prized and several were set to music. The Mus. Berl. *Ferr.*, N° 7, 1740, l. and N° 8, 1755, l. are said to contain several of his lyrics by biographical details. al-Durayd b. Bakr wrote a *Kitab al-Durayd al-Durayd* as did Ibn al-Tahir al-Tahir (p. 247).

(C. VAN AERENDONCK)

**IBN DURAYD,** **ABU BAKR MUHAMMAD B. AL-HASSAN B. SATTURA IBN AL-JISRAEL** (on the name Durayd, see *Hama*). Al-Farazdaq, *al-Mazydd*, p. 377 L.m., according to his own account, a native of Khaybar, was born in the reign of al-Ma'tma' in 222-237 in Baja (in the old *Jisr*). He studied in Baja under such teachers as Abu Hadjel al-Hijjali, Abu Rishah, al-Lugani, and Abu al-Aswani. In 252, when the Zanj were massacring in Mosis, he escaped the danger and went with his uncle al-Hassan (other *al-Ishas*), who had undertaken his education, to *Umayy* where he spent 12 years. He then went to Djezair Bin Omart (read this for *Umara*; Ibn Khallikan has *Baja*) and thence to Fes, where he stayed at the court of the *Hindus* at their favorite and was chef of a *Lotus*. He compiled for them a *Kitab al-Mawrid* (ed. Ibn al-Lugasi), which is dedicated to Abu S-'Alah *Jumara* b. 'Abd Allah al-Maski (Haddiyya Khali*, d. 1242). He wrote in Arabic the most important book of his poems, *Masikal*, on the difference between Ibn Haggan, al-Mas'ud, and Ibn Khallikan with regard to the names of the corresponding Misklan. *Al-Arabi* *Al-Mu'jib*, *al-Mazydd*, p. 189 (see *Mozaffar*) (ed. de Goeje, L. 1898). He had older models for this kind of poetry, in which each verse ends in an *alif malik* (see *al-Maski*), *Mozaffar*, vii. 304, and was himself imitated by his successors. His poem has been several times annotated and published. When the *Hindus* were disposed in 298-302 and migrated to Khaybar Ibn Durayd went to Bagdad; here he was recommended by al-Khawar to the Caliph al-Mukทndir and received from him a pension of 56 dinars a month. In spite of the fact that he was a noted spendthrift and spendthrift, he reached a great age. When he was 90 he sat with paralysis; he recovered.
however, and lived two more years in spite of a second shock. He died in 324 - 933 on the same day as al-Jasharī and was buried in the 'Abbasīya cemetery in Baghdad. He is represented as the most learned philologist of his time and the best critic of poetry; he is also called al-lamān 'l-Sā'abīw was-nasabī, 'l-Šuqīmī. Besides the great dictionary al-Lisan al-arabī, he wrote on various special branches of lexicography, e.g. Kitāb al-Sharīf was-ṣā'abī, ed. L. Weight, in Ophiticzka Arabia, Leiden 1859, two books on music, one on war weapons, on clinic and medicine, ambiguous expressions and inflections, to form a whole art (Kitāb al-Muqārāb, ed. T. Ochsenke, Heidelberg 1882). His philology was to him a patriotic duty; against people like the Shābībī he wrote the Kitāb al-Iṣbahānī (ed. Westend, Göttingen 1854) to explain the etymological connections of Arabic names (see Gladis, Muhacirinischer Studien, i. 709). Among his pupils were al-Shāfi'i, al-Malikī, Abu 'l-Faraj, 'All al-Iṣbahānī.

IBN FA'DĀL ALLĀH. [See FA'DĀL, ALLĀH.]

IBN FA'DĀL, properly AYMAN b. FA'DĀL b. ABBĀS, was a KHDAM al-Maṣmād, Arab author, composer of an account (ādāb) of the sabbath sent by the Caliph al-Muktadīr to the king of the Volga Bulgars (cf. al-Wāṣīl, i. 780-783). As he was a client (mazārī) of the Caliph and of the conqueror of Egypt Muhammad b. Sulaymān (see Cairo, i. 384) he seems to have been not of Arab origin. He seems to have taken part in the mission as a theologian and authority on religious matters. The real ambassador appointed by the government was Sūṣan al-Kasātī, a client of Nuhshāf al-Ḥānūn (cf. Arbhān, ed. de Goeje, p. 58). The sabbath left Baghdad on the 11th Safar 709 (21 June 921), went first to Bahlūl, then to Khāṣṣ, Khāṣṣ and Khāṣṣ, capital of which was reached on the 24th Muharram 716 (12 May 922). Nothing is known of the route or time of the return to Baghdad: as little is known of the life of the author of the Rinīh. The latter seems to have been as early as the 11th century by al-Jasharī and al-Maʿādh; it is expressly quoted and extract given by Yūsuf (i. 113, 46) mentions specially that in his time the Rinīh was extant in numerous copies. Cf. C. Brockelmann, Gesch. der arab. Litt., i. 227 sq.].
IBN AL-FARÂT, the name of several persons who filled high offices of state.

2. All belonged to the district of al-Nakharan and was first of all secretary of State in Baghâd. After the unsuccessful attempt to place Ibn al-Mu'tam[5] on the throne, 'Ali was appointed vizier in Rabî' 1, 320 (December 931) by the Caliph al-Ma'thadir and became the real ruler. In Dhul 'l-Hijja 20 (July 717) he was dismissed on the pretext that he had arranged a raid on the capital with the rapacious Bedouins. To make his former favourite harmless, the Caliph had him imprisoned and declared his vast wealth. He managed to regain the Caliph's confidence however and was set free in Dhul 'l-Hijja 30 (August 717) and restored to office. The war and extravagance of the viziers brought the finances of the State into disorder, and this brought about his fall. In Jumâda I 1, 306 (November 918) he was dismissed for a second time, imprisoned and had all his property confiscated. He succeeded in being pardoned again through the influence of his son al-Muhadjir and in Rabî' II 3, 311 (August 925) the Caliph made him vizier for the third time. His aversions and revengeful nature made him so hated however that al-Muhadjir had finally to rid him of his office. In Dhul 'l-Hijja 1, 312 (June 924) 'Ali and al-Muhadjir were arrested and murdered on 17th Rabî' II of the same year (July 498-92).

3. All and Allah (of Abu 'l-Khattâb) Dârâr b. Muhammed, brother of the preceding. After all 'Ali, al-Farât had been appointed vizier in 296 (908), he entrusted his brother with the administration of the finances of the eastern and western provinces. According to the usual date Dârâr died as early as Shawwâl 297 (June/July 910). His office was then divided between the viziers' two sons, al-Faqî and al-Muhadjir, so that the former administered the eastern and the latter the western provinces.

4. Abu 'l-Farât b. al-Fadâr b. Muhammed, the brother of the preceding, born in Shâbîn 270 (November 892), also called Ibn Khallîlîn after his mother Khallîlîs, a Greek slave. In 290 (902) he was appointed vizier by al-Ma'thadir, but absolute anarchy was then reigning in the capital and, as the new vizier was not side to cope with the situation, he had to call in the aid of 'Umaris, the commander of the body guard. When the latter advanced in the town, the Caliph was persuaded to go out against him. Al-Ma'thadir's troops were defeated and he himself slain. Al-Faqî thus lost his office. He was appointed collector of taxes for Egypt and Syria under the sultanate of al-Râfî; the secular ruler however was not the Caliph but the Almoravides' Muhammad b. Yâqût. In 324 (937) or 325 (937), the latter induced the Caliph to make al-Faqî vizier, but he was weak.
and at last for such a post and by the next year we find him begging permission from Ibn Rašid to retire to Syria to attend to the interests of his father and of Egypt. Ibn Muhld ascended the throne as viceroy. Al-İsfdlı died in 527 (1520). Biographies of his predecessors are found in the works of Ibn Sa'd, Nishāt al-Warara (ed. Amerbout), p. 268, 310, 314 sq.; Ibn al-As'tār (ed. Tormos), viii, 111, 134, 176, 211, 245, 257, sqq., 369; Wehl, Gesch. d. Chalifen, ii, 574, 669, 683.

4. Abd al-İaz'ar, Djaş'ar b. 'Abd al-İaz'ar b. 'Abd al-Mu'min, son of the preceding, born in 510 Al-Hajjaj. 308 (April 921). Djaż'ar, who was also called Ibn Hınzás, held the office of viceroy to the Ikhshidids in Egypt. The real ruler however was the Ayyubian Rašid, under whose protection Djaż'ar held office and who was seen recognized as also king. On Raşid's death in 357 (968) the minor 'Abd al-Mu'min became head of the dynasty, while Djaż'ar continued in office. Although the Master-by-us-yans committed to practice all kinds of extortion he was unable to satisfy the claims of the Ikhshidids and the Turkish mercenaries, and had twice to hide while the masters plundered his palace and the houses of some of his followers. The real ruler was now 'Abd al-Mu'min in Al-Hamān b. 'Abd Allah b. Tağhūli, the commander of the Syrian troops. In 358 (969) the latter appeared in Egypt, arrested Djaż'ar and appointed Al-Hamān b. Tağhūli al-Ra'sīt viceroy. Djaż'ar was soon released and when Hamān returned to Syria, he restored him and the government to his hands. In the same year the Ikhshidids were overthrown. Djaż'ar died in 397 (January 1001) or, according to another authority, in 392 (Jan. 1005).

IBN AL-FURĀT, NISĪJ AL-DIN MUHAMMAD b. ABD AL-MIHRL, Arab historian, b. 375 (1354), d. 387 (1405), author of a comprehensive chronicle, Taqā'ī Manāqib al-Sharī'ah, which was published in 1312 by García de Tass, under the title El obispo y las flores (repr. in Alhambra, Libros propios, etc., 1876). German translation by Pfeffer, Sammlung aus den Morgenländischen, Hirschberg, 1850. Other works are detailed by Brockelmann, Geschichte, ii, 450 (ed. ii, 702). Biographical details are lacking. The year 678 (1279) is given as the year of his death.

The same name Ibn Ghāniya: al-Ma'dālī also given to a Husaif jurist, is whom cf. Brockelmann, op. cit., ii, 312.

IBN GHANIYA, YARĪ B. 'ALĪ B. YUSUF AL-MASULI, Governor of Spain under the Amanurids, born in Córdoba, according to Ibn al-Khaṣīh, and died in 543 (1146) at Granada. He is best known as Ibn Ghaniya, after his mother, the sister of the vizier Vastun b. Tağhūli, the real founder of the Almoravids.

Ibn Ghaniya, as well as his brother Muhammad grew up at the Almoravids' court of Marrakesh, where their father seems to have held a high position. In 520 (1126) 'Abd b. Vastun appointed Ibn Ghaniya governor of Western Spain. From 520-538 (1126-1143) he successfully ward off the attacks of the Christians and completely defeated the army of Alfonso, the Victory, King of Aragon in 528 (1132-1134) at Fraga. Beginning about 538 (1143) however, the revolution movement of the Andalusian Muslims (Agarosa) against the Almoravids empire, led by chieftains like Abu l-Kasim Ahmad (Abnacusi), the Kds i Ibn Hamdūn of Cordoba, Abu l-Hamān b. Handir of Malaga, and many others of Saragossa and many others so shattered Almoravids dominion in Spain that it soon fell to pieces.

The governor Ibn Ghaniya, who lived in Seville, performed prodigies of valor and showed great qualities in organizing the resistance. He repulsed Córdoba in 539 (Jan. 1140) from Ibn Hamdūn, who then obtained the support of Alfonso VII of Castile. Ibn Ghaniya had to retire before the latter's army to the citadel of Cordoba in 540 (1140). The arrival in Spain of the first Almohad armies forced Alfonso VII to abandon Cordoba to Ibn Ghaniya, who however became his rival. In face of Alfonso VII's increasing demands, Ibn Ghaniya allied himself with the Almohad general Barīn, governor of Seville, with whom he exchanged Cordoba and Carmona for Jaén in 543 = 1148.

The successes of the Almohads were rapid and soon Granada alone remained to the Almoravids, while Ibn Mardanshā, [q. v.], an independent lord, was master of Murcia, Valencia and the whole of Eastern Spain.

One of Ibn Ghaniya's last acts of loyalty to the Almoravid empire was to send to Céuta the governor al-Saḥrawi at the Kds' iyyāt's request in 543 (1148). He died soon afterwards in Granada on the 10th Sha'ban 543 (December 1148), when the ruin of the Almoravids had been completed in Spain.

Ibn Ghaniya seems to have left no children. If we may believe Ibn al-Khaṣīh in the Ḥaṣā, he early sent away his wife, lest her company might diminish his warlike ardour and his brother Ahmad, appointed governor of the Balearic Islands [q. v., I, 679] in 520 a. d., left alone, who, with his descendants maintained Almoravid rule there till 580 (1183). It was the grandson of Muhammad, who attempted an Almoravids restoration in Barbary, where they fought till 633 (1235-1236) against the Almohads.

Bibliography: See the references in F. Codina, Documentación y comparativa de los Almoravides en España, Saragossa, 1899; A. Bel, Les royaumes Ghaniya, derniers représentants de l'Empire almoravide, leur lutte contre les Almohades, Paris, 1905 (Alfred Bel).

IBN AL-HARBARIYA, NISIJ AL-DIN ABU YUSUF MUHAMMAD B. MUHAMMAD, a celebrated Arab poet, a descendant of the 'Abdalmalik princes.
IBN A-Bahrāniya — IBN Hādīr ibn al-Askālānī

Near Granada: He studied at Elvira and Cordova, then made the pilgrimage to Mecca. And Mecca became acquainted with the Muslim school of law which he introduced into Spain. He died at Cordova in 855 (951). He is said to have published over 1000 writings on different subjects, but only the work with the exception of an unimportant fragment, which has come down to us under his name, is textually extant. Dony, Archd., ii, 28 has pointed out, a later compilation.

Bibliography: Wüstenfeld, Die Geschichtschreiber der Araber, VI, 35; Pons Boisgis, I. suave, brill. p. 89 sqq. (where further references are given); Brockelmann, Geschichte etc., i, 109 sq.

IBN Hābīb, Muhammad, an Arab philologist, a pupil of Kitāb al-Askālānī; died at Sanaa in 885 (950). Of his many works only a summary on the similarities and differences between Arab tribal names has come down to us and was published by Wüstenfeld (Über die Beziehungen der arabischen Stammesnamen, Göttlingen 1850).

Bibliography: P. 166; Flugel, Die grammatischen Schriften der Araber, p. 97; Wüstenfeld, Die Geschichtsschreiber der Araber, vi, 59; Brockelmann, Geschichte der arab. Literatur, i, 100.

IBN HĀBĪB, IBN AL-DIYN ABD MUIYAMMAD AL-HABAN R. 'OMAR AL-DIMASĀJĪ AL-HĀLĀR, an Arab historian and scholar, born at Damascus in 710 (1310). He studied at Halab, where his father filled the office of muhtāb and also taught tradition. In 733 (1333) he made the pilgrimage and again in 739 (1338). During these journeys he stayed in various towns of Egypt and Syria. We afterwards find him now at 'Arrah, now back in Damascus, then in Halab, where he died in 739 (1338). Of his works, which are detailed by Wüstenfeld and Brockelmann, we may here mention his history of the Mamluk Sultanate from 750 (1350) to 777 (1377), Dīwān al-Aslām fi Ma'ṣūm al-Anṣār, of which extracts have been published by Layard and Menzies in Orientalia, ii, 196 sq. Of quite another character is his work in rhymed prose, interspersed with verse, called 'Aṣâb al-Sādāk, and repeatedly printed in the East, e.g. Alexandria, 1280; Constantinople, 1302; Cairo, 1307.

Bibliography: Wüstenfeld, Geschichtsschreiber, vi, 441; Brockelmann, Geschichte etc., ii, 36 sq. (where further references are given).

IBN HADIR, IBN AL-ASKALANI, whose full name was ABU MADWAR ABU AL-MALIK IBN ISHMAEL, AN ARAB JURIST, born at Alqma. The text was revised by Henrique Verge, according to Simonet,
IBN ʿAṢṢALĀNĪ — IBN ʿḤĀṬĀMĪ.

Ibn al-Mušāqīn (d. 804), ʿIrāqī, was a learned and prolific Scholar of Tawāḥīd, a disciple of Ibn ʿAṣṣalānī, and a leading figure in the study of Tawāḥīd. He compiled a comprehensive work on Tawāḥīd, which was later expanded and edited by his pupil, Ibn ʿḤāṭāmī. Ibn ʿḤāṭāmī (d. 972) was a prominent Scholar and was known for his extensive work in Tawāḥīd and other fields of Islamic studies. He was a disciple of Ibn ʿAṣṣalānī and continued his work, expanding it further. His work on Tawāḥīd was widely regarded and influenced later generations of Scholars.

Riṣālah: A collection of works on Tawāḥīd, which was compiled and expanded by Ibn ʿḤāṭāmī. It includes a comprehensive study of the principles of Tawāḥīd, along with detailed discussions on the nature of Divinity and the attributes of God. The work is widely regarded as one of the most significant contributions to the field of Tawāḥīd in Islamic history.

Ibn ʿḤāṭāmī's work on Tawāḥīd was highly regarded and influenced later generations of Scholars. His contributions to the field of Tawāḥīd have been widely acknowledged and his work continues to be studied and applied in Islamic studies.

IBN ʿḤĀṬĀMĪ, whose full name was ʿALĪ b. MUḤAMMAD b. MUḤAMMAD b. ʿĀLI b. MUḤAMMAD b. ʿIRĀQĪ, was a Ḥāṭīrī, and a prominent Scholar of Tawāḥīd, and a leading figure in the study of Tawāḥīd. He was a disciple of Ibn ʿAṣṣalānī, and continued his work, expanding it further. His work on Tawāḥīd was widely regarded and influenced later generations of Scholars.

Ibn ʿḤāṭāmī's work on Tawāḥīd was highly regarded and influenced later generations of Scholars. His contributions to the field of Tawāḥīd have been widely acknowledged and his work continues to be studied and applied in Islamic studies.
His successes when completed filled many volumes; a volume preserved in the British Museum contains 686 leaves and part of those in 20. A selection of the best elements were given by his contemporary and friend the Sharif al-Raqqi called al-Nafi' min al-ikhshid; a selection by a means free from obscenity was made in 380 by Hilal Allah al-Istakhri, in 141 sessions; this is preserved in the Paris MS. 5913, with prefatory note by the grammarian Ibn al-Khawasib. A considerable collection of his verses is also given by Tha'alibi in the Yatima ii. 241-276. Other selections are mentioned by Brockelmann i. 82.

The subject with which the poems chiefly deal is the vice explained by Men, Zin bihahiru limman, p. xxvii: the society in which the poet moved is that which is known from the Yatima, especially vol. iii, i.e. the Sharif al-Raqqi is said to have incurred favor by his services over Ibn al-Hajjadi (Uzair, p. 862-864), who however had earned it by his attacks on the Companions, which the Sharif al-A'la'wi approved.

Bibliography: MSS. cited above, Mi'atin al-Zamana of Shi' Ibn al-Hashimi (MS).

Ibn al-Hadjadi, BEN IAMMÀND A'AMM OTTHAM, O. ACHÈS, AND AHIMI B'ERBE, AND ARAH GRAMMARIA, son of a Kurdish chieftain of the Emir 'Iza al-Din Mi'asbat al-Salih, born in the village of Fans in Upper-Egypt in the closing days of the year 570 - 1175, studied the Kor'an and the sciences connected with the Maliki law and its sources, grammars, and baladies letters, in Cairo. His chief teachers were the Imam al-Shafi'i, the jurist Ahi Munsir al-Abyari, etc. He made a journey to Damascus and after spending a long time there teaching publicly in the Maliki school of the great Ummayyad mosque he went to Cairo and afterwards moved to Alexandria, where he died on the 26th Shawwal 640 = 11 Feb. 1249.

Although he also wrote works on law and prosody, it is as a grammarian that he is especially celebrated and in this field he differs in many points from his predecessors. As a jurist he was the first to compile the Institutes of Egypt with those of the Maghribi Maliki. We owe to him the following works, of which those in prose are so clear in their style that they require no commentary: 1. al-Khaqari, a short manual of Arabic syntax (19th); Rome 1591; Cawpore 1888, 1891; Kazan 1889; Taubert 1321, 1322; Constantinople 1325; Cairo repeatedly; commentary Constantinople 1310); 2. al-Makamat, short treatise on Arabic science (19th); Cawpore 1849; Cawpore 1885; extracts publ. with notes by F. Baha, Sprachlehre und historischen Bildung des Arabers, Bonn, med. und. Arch. Berlin 1797; 3. al-Maghribat al-Maliki fi 'Ilm al-Musulmi, a didactic poem in the daily metre on prosody (Leiden, Cat. i. Nos. 273; Beira, Frankfort, etc. 1 Hack 2, 414).
and Cheikh, *Dix centans tracts de philos., arab. 
Beirut 1908, p. 157*; 6. Kühler & ‘Uthub, a short treatise on the use of the seed, with the 
adjectives avicul and al-’athar (Berlin, N°. 6894); 
7. Mu'arrak *i-Shafi‘i* wa-l’Aqal fi Tsup al-Disti *al-
Lajnat, a handbook of the sources of Maliki 
na-shar al-Munabbih, known as al-Muhayna 
ai-Shafi‘i, a synopsis of the preceding work. (pr. Bilal 
1316–9), with ‘Aqil al-Din al-Jili’s commentary 
and the glosses of al-Tabarkan and al-Lajnat at it 
and imperious by al-Hasan al-Haraw. (cf. 
Lajnat’s *Hidayah*); 9. ‘Uthub & ‘Uthub al-
Khat, or *Lajnat al-Ummamah* or simply *al-Mugharar 
ai-Shafi‘i*, a summary of the sources of Maliki law, 
annotated. (Tunis) and afterwards imitated Shuh K deployal (London 
Cat. Or. ii. N°. 236; Khid. Lib. Cairo, Frib., ii. 1551;

**IBN AL-HAYTHAM**, whose full name was Abi 
‘Ali al–Haram ad-Dimashqi, born 398/998 (he 
in medicine, is called Alhazen, was one of the most important 
mathematicians and physicists of the Arabo, learned 
also in medicine and the other sciences of the 
ancients notably in the philosophy of Aristotle. He 
was born about the year 398/998 in Basra, 
where he is sometimes called Alhazen, moved when fairly old to Egypt, where he 
was for some years in the service of the Fatimid al-Hakim, to whom he had offered to regulate 
the course of the Nile, but soon had to give up this undertaking; on al-Hakim’s death he earned his living by 
抄写 mathematical and other books. 
He died in Cairo towards the end of the year 450/1059 or soon after 22 the authorities note. 
Ibn al-Majthi’s quote about 300 mathematicians 
astronomical, physical, philosophical, and medical 
works and treatises by Ibn al-Haytham, for which 
we may refer the reader to the sources quoted below, 
particularly (besides Ibn al-Majthi’s) F. W. Bopp 
and E. Weidemann. His chief work on physics 
is his *Optics*, Kitab al-Majthi, published in a 
Latin translation in 1572 in Bologna by F. Renier, 
together with his treatise on twilight, entitled 
*Opticae theoriae* Arab. *Anthrop. litter. septem 
ann. prim. edidit. Ebnets libri de experimentis 
diviniit ascensionibus* etc. a. F. Renier. The 
latter treatise was translated into Latin by Gerhard 
Crumb; this is probably true also of the 
Optics but not certain. The *Optics* of Ibn al-
Haytham had a great influence in the middle ages 
on the study of optics in Europe from Roger Bacon 
to Kepler. There still survives also a large Arabic 
edition of the *Optics* by Kamali al-Din al-Ashir 
*al-Asrini* (died 523/530) on this and Ibn al-
Haytham’s *Optics* cf. the works of E. Weidemann 
mentioned below.

Of treatises by Ibn al-Haytham some published 
in Arabic and some available only in translations, 
we have to mention the following in addition to 
those mentioned in the authorities quoted above: 
*Über die Ideenkettel* (translated by F. W. Bopp) 
by E. Weidemann, in an 
abbreviated form, in a German translation in the 
*Zeitschr. für Gesch. d. Naturwissenschaften*, v.*.I (1888), 
p. 226 sqq.; Über physikalische HRP [9-28] 
*Die Machtzwischen den Grenzen* (1891), pubd. 
in a German translation, by J. L. Heidelberg 
and E. Weidemann, in the *Biblioth. Mathem., 3. Ser*, 
vol. 2. (1910), p. 201–217; Über physikalische HRP 
*Die Machtzwischen den Grenzen* (ibid. 1893), 
translated, by E. Weidemann, *ibid.,* p. 390–397; 
*Über die Annahme der Parasiten* (F. Michael 
*Die Machtzwischen den Grenzen*), transl. with commentary, by H. 
Suter in the *Biblioth. Mathem., 5. Ser.*, vol. xii. 
(1914), p. 389–392; Extracts from the treatises 
*Die Machtzwischen den Grenzen* (Ober das Wert (of Colour)), F. Michael 
*Die Machtzwischen den Grenzen* (28–1894), published in German translation by E. Weidemann, 
(Sammlung der phys.-med. Schriftt. in Erlangen, 

**Bibliography**: Ibn al-Majthi, al-Majthi 
165–168; E. Weidemann, *Ibn al-Haytham, ein 
arabischer Gelehrter* (reprint from the *Forschung 
für d. Armeen* 1900), etc.; see, Ibn 
al-Haytham’s *Optica* (Reprint from the *Online 
Gesch. d. Naturwissenschaften*, p. 2–9, 
1910); 20 strips of al-Ashir’s *Alhazen* 
*De visura* etc. (Paris 1851), p. 73–81; Stein-
nerschläger, *Nachweis von einem astronomischen 
knüpfen an Ibn al-Haytham in der *Sahl 
Biblioth. des Weltal* (20), 1893, p. 505 sqq.; Bruck 
man, Gesch. d. arab. Lite. ii. 419; Suter, Al-
91–91, iii. 169–170. 
(II. Suter)

**IBN HAYYAM** b. Khalaf, Abu Marwan 
Hassan al-Kurjut, usually called after his grandfather Ibn Hayyam, one of the earliest and 
most historians of Islamic Spain. Almost 
nothing is known of his biography except that 
the year of his birth is 377 (987–988) and his 
depth about 1076. He was a very prolific writer; the list 
of his works contains no less than 50 titles, 
which include poetical and theological treatises. His 
history al-Malik is said to have comprised no 
more than 60 volumes, but of all his writings only 
the historical work entitled *al-Majthi*, F. Michael 
Alrenda has survived; there is one volume in 
Oxford (Cod. Bodl. in Nicol, ii. 137) and a 
second at Constantinople; there are transcripts 
of both in Madrid.

**Bibliography**: The bibliography on Ibn 
Hayyam is given in Fons Paeezis, *Essayas 
hisbóologicos*, p. 155 sqq. cf. also Bruckmann, *Gesch.). 
literature*. etc. i. 338.

**IBN HAMDIS**, Abu Muhammad *Abd al-
All b. Abu Hakim, an Arab poet, born about 
447 (1055) in Syria and distinguished at an early age as a poet. When the Seljuk 
captured Syria in 471 (1078), he retired to Spain 
and spent some time at the court of the Seljuk 
al-Mu'tamid [9-27] in Sevilla. He followed the
latter in his imprisonment in 484 (1091) and lived at al-Mahdiya after his death (488 = 1095). He spent the last years of his life at Bougie where he died in 527 (1132); according to other accounts, he died on the island of Majorea. He left a Libra of which Amari has published specimens. C.L. G. Monod, Al Dabbir, la poésie Arab. 30; G. Szemerényi, Al Dabbir. Le poème de la poésie ishání publique, Pázmány 1935, and L. Chacté, l'Alm, publi. by C. Schaurer, Rom 1977. According to Haji D. Khalifa, li. 196, he also wrote a History of Algiers.

**Bibliography:** Amari, Bibliotheca Arabica-Scita, s. index; Pena Bologna, Ensayo Hist.-bibliográfico, p. 156-94; Brockelmann, Geschichte etc., i. 259 f.

**IBN HAMDUN, BAHK AL-DIN AHU AL-MALALI MUHAMMAD b. AL-HASAN, an Arab physician, born in 965 (1504) at Baghdad. He held several offices at the court of the Caliph, so that he received the title Khâqân Kâfar. But his frankness aroused the enmity of the Caliph al-Mustamîd who threw him into prison in 962 (1567). Soon afterwards he died in prison. He was the author of a large anthology of philological and historical memoirs entitled Al-Fushûr. (Al-Fushûr: A collection of Official Life from the *Tâhibâtâ* of Ibn Hâdûn, etc. in *Qur'an, Rev. Ar. Soc.*, 1958, p. 409 sqq.)

**Bibliography:** Brockelmann, Geschichte etc., i. 250 sq. (with further references).

**IBN HAMMAD, ABU 'ABD ALLAH MUHAMMAD b. ALL, an Arab historian, author of a history of the Fātimids. Neither the date of his birth nor death is known; we only know that he flourished after the rise of the Almohad dynasty and before Ibn Khaldûn, who quotes a passage from him about the Hamîn Khatzim of Tripolis (Kîthîb al-Dir, vii. 43). The text is still unpublished in a manuscript of the Bibl. Nat. of Paris (no. 1888) and in another of the Bibl. Nat. of Algiers (no. 1988, imperfect). Two fragments, one on Uthâb al-Allah and one on Abu Yaâqûb al-Mahdî, were translated by Chellemann in *Qur'an, Rev. Ar.* 1962, ii. 470 pp.; 1969, i. 199 sqq.

**IBN HANÎ, ABU 'L-QAYRIM (also Abu 'L-QASIM) MUHAMMAD R. HUṢY R. MUḤAMMAD b. SÂDÂN AL-ARIŠ, usually called IBN HANÎ AL-MUGAṣSIL, to distinguish him from Ibn Hânî al-Hakâm [see ABU MUṢSA]. An Arab poet of Spain. His father Hanî was a native of a village near al-Mahdiya in Tunis, who had moved to Elvira in Spain or, according to others, to Cordova. Ibn Hanî was born in one of these two towns. He studied in Cordova and then proceeded to Elvira and Seville. In the latter city his frivolous way of living and too free speech brought upon him the wrath of the people who accused him of being in agreement with the Greek philosophers and of heresy, so that he was finally banished from Seville at the age of 27 by his patron, who was afraid of being accused of being in agreement with him. He then went to Africa to Djerba, afterwards to Tunis, and finally to the Fâtimid al-Mahdî. When he received only 200 dirhams from the latter for a book addressed to him, he went to al-Mahdiya (Malva) in Algiers where his compatriot Djâtâr b. 'All b. Pâlah b. Abu Marwan and Yâhia b. 'All b. Hâmid b. al-Anḍalûs were ruling. Treated with great respect by them he composed some notable poems in their honour. The Fâtimid Caliph al-Mu'tas Abū Tamîm Ma'âd b. Ismâ'îl, son of al-Marwan, summoned the poet to him and attached him to his court, overwhelming him with tokens of esteem. When al-Mu'taz went to Egypt in 351 (962) to take up his residence in Cairo, Ibn Hânî left him and returned to the Maghrib to bring back his family, but was murdered in Marsa in Cyrenaica on his road to Alexandria on Wednesday 29 Rabî' II 562 = 50th April 973, at the age of 35. Accounts of his murder differ. When al-Mu'tas in Egypt heard of the poet's death, he lamented: 'He was a man whom we hoped to rival the poets of the East, but this was not granted to us'.

In spite of the gross exaggerations in some of his panegyrics, which made him suspected of insubordination among the exiles, Ibn Hanî enjoyed as great esteem among the Arabs of the West as his contemporary al-Mutânibî did in the East. Abu 'l-'All al-Mu'arrî, who esteemed the latter highly, used to say of Ibn Hânî: 'he is like a willow, grinding corn, so little sense is there in his verse'. Ibn Dârra arranged in alphabetical order, was published at Bûkhtî in 1274 and at Beyrouth in 1886, 1920. It contains panegyrics of al-Mu'taz, Djâtâr, Yâhia b. 'All b. Pâlah, Muhammad b. 'Omar al-Ṣâlîtî, Djâtâr b. 'All b. Hâhid, 'Abd al-Qâdir b. Hâhin b. al-Mu'âdh b. al-Mu'âdh, Yâhia b. 'Abd al-Mu'âdh b. 'Abd al-Mu'âdh, Yâhia b. 'Abd al-Sâlih. He was against al-Wâhrân, two elegies, one on the mother of Djâtâr and Yâhia b. Yâhia b. 'Abd al-Mu'âdh, the other son of Ibrahim b. Djâtâr, b. All and several impromptu pieces.

(MOH: IBN CHEKHER.)

**IBN HAWKAL, ABU 'L-QAYRIM (MUHAMMAD), an important Arab traveller and geographer. Very little is known of his life. He tells of himself that he left Baghdad in Ramadan 331 (May 943) with the intention of becoming acquainted with other lands and peoples, and making money by commerce. He travelled through the whole Muslim world from east to west, at the same time studying the works of his predecessors, al-Qalîbîn, Ibn Khordhabî and Khîdîm. According to Dârra, he was 25 years in the service of the Fâtimids. On his travels he met al-Jâfârî (4 v.), probably about 340. At the latter's request he made improvements in some of this geographer's maps and revised his work. He afterwards however decided upon revising it and completed the new version under his own name with the title al-Mâlik al-Mu'ammali al-Mâlik al-Mu'ammali not be-
Ino 387 (977): it was published by de Goere in Vol. ii. of the Bibl. Georg. Arab. On earlier editions of separate portions and part translations see the Praesentio to op. ii. and vol. i.

In: Prasch II, 12, p. 19, etc.; D. J. van der Man, Biographie d'Espagne, iii. 17, 181, (C. Van Akeno, Ibn Haukal, whose full name was Abu Muhammed 'Ali b. Ahmad b. Safi f. 292, a versatile Spanish Arab scholar, a notable theologian, historian, and distinguished poet, born on the last day of Ramadhan 284 (29 Nov. 994) at Cordova. His family belonged to the village of Maata Lihiyan (var. M. Lihiyan, according to the Baghd. Arab., v. 88 infra, by farahk from Huévar at the mouth of the Odied, in the district of Niebla, his great-grandfather had been a convert from Christianity to Islam. His father, who died, was a rich man of the eminence of a muqaddam, he received the son of a scholar of the ibn Haukal, in the line Haukal, a high official in the royal court, in which he spent his youth did not prevent his active mind striving to develop in all directions. As his teacher in various branches of knowledge he mentions (Ibnh., p. 110, 118, 227): Abu al-Rahman b. Abu Yaish al-Audh, and in the midst of the political turmoil we find him a student of Habib in Cordova (Ibnh., p. 137, 175). The revolution which overthrew the Emir of Cordova (cf. D. J. van der Man, Biographie d'Espagne, iii. 271 sqq.), considerably affected the position of father and son. Especially after Haukal II. was replaced on the throne (Ibnh. T.Hidjia 400 = July 1010), both had to suffer many mortifications. Ibn Haukal's father died towards the end of Dhu l-Ka'ada 402. In May 404 he left Cordova, which had been sorely tried by the civil war: the beautiful palace of his family at Bait Mughith had been destroyed by the Berbers (Ibnh., p. 104, 39 infra sqq.). He next chose Almeria for his home; there he seems to have been able to live in comparative quiet till 'Ali b. Hamid, in alliance with Khairan, ruler of Almiranda, overthrew the Umairid Sultanate (Marmarid 407). Khairan seduced him of intriguing in favour of the Umairids, imprisoned him for some months with his friend Malhun b. Bahr b. Ishaq, and then handed him over. The two friends went to Higo al-Kebir, whose ruler received them kindly. On learning that Abu al-Rahman IV al-Murtaqa had been appointed Caliph in Valencia, they left his host after a few months and travelled by sea to this town, where Ibn Haukal met other friends (Ibnh., p. 110 sqq.) in the army of al-Murtaqa, whose viceroy he was, and before Granada; he was captured by the enemy, but was released after a while (Cat. Cod. Arab., l. 273). After an absence of six years he returned in Shawwal 409 to Cordova, where al-Kalain b. Hamud was now Caliph (Ibnh., p. 194, 113 sqq.). After the latter's expulsion, the intellec-

IBN HISHAM, AMD ALS-Al-MUHAMAD ABD AL-ALLAH B. YUSUF B. AHMAD; AND AMID AL-HISHAM AL-ASGHAR AL-MUSLEH, was born in Dhu 'AlQa' 706—April-May 1309 in Cairo, where he died in the night of Thursday-Friday, Ujala 11/23 and 12/25 in 1350. A pupil of the Spanish grammarians Abi al-Hajjaj for the study of the Diniya of Zhuhi b. Abi Salih, he also studied with Zuhayr b. Al-Lafi b. Al-Munajjid, etc.

As a Shafi'i doctor, he became professor of Karimi sciences at the Khatib al-Musayri in Cairo; but five years before his death he went over to the Hanbali school to obtain the post of professor at the Hanbali madrasa in Cairo and for this purpose learned by heart the Muta'llif of Al-Kharsh in less than four months.

Ibn Hisham sums up in these words: "Ibn Hisham was profoundly learned in grammar and possessed perfect knowledge of it. He followed in the path of those of the grammarians of Musul who accepted Ibn Uqla's views and followed this scholar's method of teaching. The knowledge displayed by Ibn Hisham is truly remarkable, and shows that he had a perfect mastery of his subject and that he was very clever."

Ibn Hisham has left the following works:

1. Kitab al-Mu'jam wa'l-Madkhaj, a short treatise on syntax, several lines published; 20. Commentary on the preceding, publ. at Tunis in 1281; 2125, 1229, Cairo 1274, trans. into French by Gogger, "Le mot de mots," a modest work, 1257; 3. Dakhilah al-Dababah fi Mursat al-Allah, a short treatise on grammar, less extensive than the preceding; 4. Commentary on the preceding, publ. at Tunis in 1283; Cairo 1255, 1257; 5. Al-Fushshah as-Saj'dah, a work on logical analysis, published; 6. Al-Durar al-Mutafa'ah in 1262; Constantinople in 1269; 7. Aqaid al-Abdali b. Al-Musul, the solution of several difficult points in grammar, Paris 1225, 1215, 1223, 1225;
expedition against the Byzantines in Armenia in 102 (730-731) he was appointed governor of al-Tuj and Khorasan by Vazid II. In the constant feud between northern and western Arabs on account of his language, he always took the side of the former, while his latter were in consequence neglected. In Shawaari 115 (March 724), soon after the ascension of the Caliph Hisham b. 'Abd al-Malik, Ibn Hubaira was dismissed and Khidr b. 'Abd Allah al-Kart appointed his successor. According to another statement, this did not happen till the following year. His son Vazid is also called Ibn Hubaira.

Ibn Khidr Vazid is known as 'Abd al-Malik's son by the preceding, born in 87 (705-706). Vazid was appointed governor of Kufa by the Caliph al-Walid II. In the beginning of 128 (autumn 745) Marwan II appointed his governor of the Tarab and sent him with an army against the Khurshidis in Kaukaz (May-June 747). Vazid invaded Kufa. He next captured Wasit and took 'Abd al-Azz b. 'Abd al-Azar [q. v.] prisoners who had been forced to make peace with the Khurshid chief al-Dahabi b. Nus al-Shabti [q. v.] and had remained in the town as Khurshid governor. The whole of the Tarab was then subdued. Like the other emirates of the Umayyad caliphate the Khurshidae also made an alliance with the 'Abijs rebel 'Abd al-Malik b. Mu'awiya [q. v.], the latter was defeated by Yazid's general Amir b. Dabira and the Khurshidae could no longer hold out in the Tarab. The 'Abisids thus appeared in the field. When their general Kishma b. Shabir advanced against Kufa, Yazid hastened to meet him but was defeated in Mahjarun 132 (August 749) and had to take flight. Kishma lost his life — how it is not known — and his son Hasan undertook the supreme command, while Yazid fell back on Wasit where he was besieged by Hasan. In the same year, the 'Abisid dynasty was formally recognized. Abu Dujair, brother of the Caliph Abu 'Abdullah went to Wasit to the assistance of Hasan b. Kishma and after a siege of several months Yazid found it necessary to surrender. Although the 'Abisids were expressly promised to pardon him, he was soon afterwards put to death. According to Ibn Khaldun Vazid's execution took his place. Ibn Khidr b. Kaukaz [June 750-750, 750]. However, he did not enter into negotiations with the caliph's illegitimates who had received news of the death of the Caliph Marwan II [q. v.]. According to this, Yazid could not have been put to death before the early months of the next year [q. v. 750].

came into conflict with the representatives of religious and legal tradition which dominated public opinion in the town, notably with Malik b. Anas who accused him of being a Shi'a and as being the inventor of many legends and poems transmitted by him. He therefore left his native land and settled at first in Egypt and then in the Trik. The Caliph al-Mahdi induced him to come to Baghdad, where he died in 350-354 or even 352. He seems to have gathered the materials for the history of the Prophet's biography in two books, the Kitaab al-Mahbobiyya (Fikri, p. 92) or Mubtaasa al-Kitaab (Ibn. 'Abd al-Hamid ed. Wustenfeld, ii. p. VIII, l. 43) or Kitaab al-Mahbobiyya wa-Ilays al-Abab (Al-Halabi, ed. ibid., ii. 331), the history of the Prophet in the Hijja, and the Kitaab al-Masriyya. His Kitaab al-Kitaab seems early to have taken a second place before this, his other works. Karabizeh believed he had found a leaf of the original text of the biography of the Prophet in a papymur in the Rainer collection (see Führer durch das Sammlung, no. 665). On the other hand, the alleged Kitab al-Imam of Ibn Isahab in the library of the Koutoubia Madrasa in Tunis (Führer, no. 1140) has been shown to be a copy of Ibn al-Hajj's document (see Horovitz, in Mifl. See. Scic. Orient. Sprachz., xvi. wents. Stud., p. 141). Al-Mawardi, however, does not seem to have had access to the original. His quotes from the Kitab in his al-Imam al-Salihna (ed. Engler, p. 62), II. 364-370, 672-682, 683, stories which are given in an abridged form in Ibn Haldun, p. 674, 561, 443-841. His work is preserved in comprehensive extracts in Tahmid, but independently only in the version of Ibn al-Hashim (ib. v.), who knew the book through a pupil of Ibn Isahab, the Kafi Ziyad b. 'Abd Allah al-Bakri. He combined the two independent parts with occasional considerable abridgments into the Kitaab al-Mahbobiyya al-Azhari. The book received its present form in the fourth century A. H. from al-Wazir al-Maghribi (ib. v.). A commentary was written on it by al-Salabi (died 506-1114) and another, very superficial, by the Moroccan Abu al-Hasan Musa b. Muhammad b. Masud (died 604-1207 in Fta). Bibliography: Ibn Colins, Handbuch der Geschichte, ed. Wustenfeld, p. 241; Tahmid, al-Mahbobiyya al-Azhari, under the year 450, ii. 3, 2312; Ibn Shahili, ed. Wustenfeld, no. 623, ed. Cairo 1599, I. 641, Yaqin, al-Mukhtari I., 399-910; Springer in Zeitsch. d. Oriental. Ges. 29, 488-490; Abu al-Hasamun, ed. Wustenfeld, Gottingen 1853-1860, annualet, reprin Leipzig 1850, reprin Paris 1892 and on the margin of Abu Kamil al-Dilmuny's Edikr, Cairo 1524; P. Briant, Die Commentarim zu den Sammlung und ihre Schriften, Dvan. Halle 1825; Die Kommentar zu den Sammlung und der Kitaab in der Handschriften des Naturhistorischen Institutes, Berlin, 2805, 1998; Lippe, Z. S., Hist. ii. 34, Commentary on the History of Muhammad according to Abu Da'ud's Mas, ed. by Paul Brunner in Monumenta Arabic, Philologue, ii. 5, 1911; H. C. trekten, Die Geschichte der des Islam, 8th ed., Berlin, 1908. Ibn Isahab, in the popular dialect pronounced "Ayab", Muhammad b. Almas, is the most important Arab chronicler of the period of the reign of the Fatimids in Egypt. Born in 852 (1448) he seems to have been near 70 years when he died, for his history comes down to the year 928. His family was of Turkish origin. His paternal grandfather, Isah b. Al-Misr, a Turk slave, called him Luminabi' after his owner, was sold to Sultan Zahir Berberik [q.v.], entombed under his Mounts and reached the rank of second Dowar. His great-grandfather (his father's maternal grandfather) had risen further in the social scale. Edamir al-Khassas, sold into Egypt as a slave, ultimately filled the very highest offices in Cairo under Sultan Husayn and Sultan Agha Shaban and governed successfully Tripoli, Aleppo and Damascus. Ibn Isahab's father belonged to Cairo to the Awdah al-Kas, a kind of military reserve, who were bound to give military service at the Sultan's command, to whom they received a fief or a sum of 1000 dirhams or a yearly allowance (1000 dinars under Kut plain) (see Ibn Isahab, ed. Bilad, ii. 195 et passim). Almas Ibn Isahab was a prominent man, endowed both by birth and marriage with many offices and high officials. Of his 25 children only three boys and three girls survived him; none of them is our author; another was master of ordnance (berdeh). Ibn Isahab's chief work, the only one which can claim lasting importance is a detailed chronicle of Egypt entitled Bula'a al-Zubair fi Wa'idh al-Dhahib. It bears briefly of the early history of Egypt in the end of the Ayyubid period, and even the account of the Mamluk period down to Kian Bey is rather cursory. It is only from the omission of this ruler that he relates events in detail, along with biographies of the high officials and monthly lists of ambassadors. A close study of this work reveals a problem. The chronicle seems to be extant in two versions. The shorter is clearly the author's diary; for the events of the year 921 for example were, according to the text, already completely noted in the "Memorandum of Mahran 922. Further evidence is that the shorter version is written in the vernacular, while the fuller text of the longer version in the London Manuscripts is finished and published (at Voller's concurrence article in the Reise d'Egypt, iii. 555). The description of the years 922-925 is more often fuller than the preceding parts and might, if Ibn Isahab is really the author, belong to the larger manuscript. It is remarkable that the chronicle of Sultan Ghaur, the years 906-917 (Paris MS.) and 916-941 (Perouges MS., is not found in other copies (hence not printed in the Cairo edition). This circumstance brought Voller's article above and concludes that this portion of the chronicle is not by Ibn Isahab. It is just this part that is certainly from his pen; this is proved by the fact that he writes in an eye-witness. For example, he mentions that he was present at
a processum himself, or that he was personally affected by events (e.g. robbery by Maimonides). Further evidence is the accurate account of his family affairs on his father's death as well as the occasional mentions of his brother, Ibn Ilyas' chronicle is an account of the doings of the rulers of the time, at the same time mentioning other events. He cannot be denied a certain critical ability, although his verdict is often too severe. Yet he was conscious that the utterly corrupt financial administration and the neglect, so often emarased by him, of artillery brought about the decline of the empire, although he unjustly gives the whole blame for the worsening financial situation to Saljuq (Ilkhan). The great value of this chronicle consists also in the fact that it is the only Arabic source for the beginning of the 4th century.

Of less importance are his other works: 1. Nafis al-Abbâr fi Sâlihihi al-Abbâr, a cosmography with special reference to Egypt much used and quoted by European scholars of the 18th century. 2. Marâj al-Ahrâm fi Wujûd al-Ahrâm, a popular history, dealing with the patriarchs and prophets, of little value, and perhaps not by our author. 3. Nasah al-Abbâr fi Sâlihihi al-Abbâr, also a work on history, little known, only extant in one Ms. in Cânsalûnûmûhûhû.

Bibliography: See Brockelmann, Genscher a. oev. Litt. ii. 495, and Vollmöller, ib. Ibn Ilyas' chronicle was printed in Cairo (1304—1306), and in the same press of Cairo-Diätürî 1777—1772.

Ibn al-Kâdi, Abu 'l-Abbâr Ahmad b. Musa b. Muhammad b. 'Abd al-Rahmân b. Abu 'l-Abbâr al-Mu'ayyad, was born in Cairo in 1000 (1552—1553). Jurisconsult, man of letters, historian, poet and above all mathematician, he studied with his father, Abu 'l-Abbâr al-Mandhûr, al-Kasîrî, Abu Zâliâ Yâbû' al-Sarrâdî, Ibn Mu‘affir al-Mâzârî, Abu ‘Ali al-Muhammad b. Qâlib, Ahmad b. 'Abd al-Mu'min al-Mu‘ayyad, and many others. He was on intimate terms with the Sâlihi Ibn al-Mââsin al-Fârî, at whose court he spent the first 15 years of his life. He made the pilgrimage to Mecca and heard the lectures of Ishaq al-Albânî, Suhû al-Salihîn, Ya‘qûb b. 'Abdullâh b. 'Alî, Muhammad b. 'Abdullâh b. 'Abdullâh b. ‘Alî, Ibn al-Kâdi, etc. On returning to Cairo in 1174, he was captured by the Crusaders on Thursday 4th Sâhi 934 = 21st July 1174, and his ransom of 20,000 ounces was paid by Sultan Abu 'l-Abbâr al-Mandhûr al-Salîh in the 47th Rajab, 935 = 24th June 1175, i.e. after 11 months' captivity during which he had to suffer, as he tells us himself, all kinds of privations and ill treatment. After occupying the post of Kadi at Sâli (Saîde), he was exiled and settled at Faha, where he devoted himself to teaching in the mosques al-Albâsîr. Among his pupils may be mentioned Abu 'l-Abbâr Ahmad b. al-Kâdi, and notably the authors of 1305—1310, Abu ‘Ali Ahmad b. ‘Abd al-Malik al-Muhannî, who pronounced his funeral oration. He died at Faha on the 6th Shabî 1325 = 3rd August 1314, and was buried near the Ribâ al-Dûn. Of the 13 works enumerated by his biographers, we only know the following: 5. Qâdirât al-
different forms, Türkî, Kastî (Terâş, Hit or Bit) does not sound at all Jewish. Unbekühn Manṣūr was, according to some, Ibn Kâdî Simânwâ's khalîfa when he was kâfî, but in any case, he seems to have been one of his pupils. When the movement started, however, Ibn Kâdî Simânwâ was no longer in Aâzî Minor, as in Europe, there is little reason to believe he had connections there and was seeking a career for himself, or because he feared to be drawn into the movement on account of the relations between him and Manṣûr and therefore retired to Europe. The statement to Kâtî al-Din, Die Chroniken des Staat Mosika, ed. Winternfeld, iii, 255, that he had himself admitted the ahl al-sunna is improbable. In any case, Selîm, Manṣûr, sent troops against Manṣûr and Türkî, who were both taken prisoners and executed. Ibn Kâdî Simânwâ was himself also arrested and executed under a fatwa of Hââfiz Harrâwî at Sâàr in 818 (1415).

Ibn Kâdî Simânwâ composed several legal and mystic works, whose titles are given by Böckh- man, Arabic and mystic writings Ahsâwâr al-Kâdî, al-Wâziirî (extant in Latin with commentary, cf. Cal., v, 23), are not yet investigated.

IBN KAI-S AL-KAI-RAFIYAT. 'Umar Allah, a notable poet of the Umâmiyyâ period. By descent he was a Kûrašî although he did not belong to one of the most distinguished families of this tribe. His life is bound up with the wars and adventures of the Umayyads in Marra and the Umayyads in Damascus. The poet who had lost several relatives in the battle of the Hârs (q. v.) was a passionate champion of the Umayyads; but he seems to have had sufficient political insight to regret profoundly the struggle in which he found himself involved. That the Kûrašî were predestined to rule the Arabs with a firm hand was clear to him; and he made no secret of the fact that, since political convulsions were bound to undermine the power of the Kûrašî, his poet was particularly attached to Manṣûr, the Kâfîrî governor of the Iraq. When the latter was defeated and fell at Makin, the fate of his brother Abd al-Malik, the Meccan amir, was also decided. Ibn Kâdî was Al-Ruṣayyfî. He returned to Damascus in concealment for a considerable time, the story of his disappearance and his reappearance among the Umayyads in Syria has been romantically returned. Just as preposterously Ibn Kâdî had been more attached to Manṣûr than to his brother in Marra, so now he seems to have shown less favour and kindly welcome with Abd al-Malik, the ruler in Damascus, than with Abd al-Awâr, the governor who ruled Egypt in his brother's name. The Umayyad Caliph had, it is true, little reason to love the poet, in whatever moving a way the latter might now beg for grace.

Of his poems a selection made by al-Sûkhî is the third century A.H. has come down to us. From this we receive a direct impression of the events which confused the world of Islam at this time and we reveal in the descriptions and impressions of men concerned in them. The political poems of the Divine may be considered as political pan-

phlets of the time. It also contains numerous amusing and sentimental poems usually quite conventional love poems. Our poet indeed owes his name al-Ruṣayyfî to a lady he addresses, named Roṣâyfî. Even this earlier critics compared Ibn Kâdî al-Ruṣayyfî with Timur Ibn Abî Kâthîr. The latter towers above him — not only as a poet of love but also as a man — but the former may be credited with greater versatility. The maddyn, the strains of high and noble praise, is a favourite form of poetry of his and in his composition he shows much skill. But he wanders all over the well trod paths of post-classic Arabic archaized poetry, although here and there he makes concessions to contemporary style. At least he does not fall into the errors of other singers of this epoch by seeking after unattainable ancient expressions. A freshness and directness of style cannot be denied to some descriptions in his Divine, for example the short but charming description of Jâhâl (Divine, iii, 6 sqq.) and some amorous tribes.

IBN KALĀKĪS, Abū l-Farrūḍy Naṣr Allāh, an Arab poet, born in Alexandria in 532 (1138). He spent the years 564–565 (1168–1169) in Sicily where a certain Kābir Abū l-Kašām Ibn al-Hājār was his patron; to him he dedicated a work entitled al-Zahr al-Subh min al-Abād. He then went to Yemen and died in Adhābah in 567 (1171). His most extensive work is a book written in Cairo in 573 by Khalīf Mārida; this book is in fact the incomplete copy of the manuscript in the Paris Bibliothèque Nationale 3732.

IBN AL-KALĀKISH, Abū Yākūl Ḥasan b. Abū l-Tamīlī, an Arab historian, belonged to a prominent family in Damascus and died there in 555 (1160). He continued the chronicle of Hilāl al-Sabīl, which stops in the year 498, down to 555 and gave to work the simple title: Hilāl. The work was frequently copied by later authors and has been published by F. E. Amelink (1860) from the Oxford Ms., which is defective at the beginning, and starts in the year 556. Cf. the editor's preface.

IBN AL-KALBĪ, [See AL-KALBĪ] IBN KAMIṢ, [See KAMIS, KAMISI] IBN KĀSHI, Abū al-Qāsim, sheikh of the Kutb, set up in Spain about 1140 as a Malikite and took possession of Murcia and other places (1144). He was then delivered up by his followers to the Almoravids and pardoned by Abū l-Mu'allim. He lived a lifetime at the court of these rulers till some of his former followers murdered him. He was also an author and wrote a book called Kāmil al-Jami' al-Zahājān. Cf. Hājibī, Khanīqah, Hil. 171; Cat. Wien (Fligel). III, 261.

IBN KĀSIM, Abū Abū l-Akuṯ, Abū l-Adānī Abū l-Salamah h. Abū l-Kašām al-Maghāribī, was the main Malikite's most prominent pupils. He studied under him for 20 years and after Malik's death was regarded as the greatest Malikite teacher. Through him Malik teaching was disseminated in the Maghrib, where it is still predominant. He died in Cairo in 512 (106).

One of the chief works of the Malikis, the so-called Mawdū'at al-Sabā' was ascribed to Ibn al-Kašām. It was originally put together by Abū l-Farrūḍ and consists of the answers of Ibn al-Kašām to Abū l-Farrūḍ's questions on the doctrine of Malik. It was Amas. Salim Abū Satī al-Tamīlī (died 190 = 554), the sheikh of Kairouan, copied the work. When he went to see Ibn al-Kašām in 185 = 504, the latter gave him many emendations and after his death Salim arranged the whole book. In Ibn al-Kašām's Mawdū'at there are insertions to the doctrines of Malik in Amas. Salim's recension. The recension was printed in vol. at Cairo in 1573 (1905). Various Malikite scholars have written commentaries on the Mawdū'at.

IBN KATHIR, Abū Abī l-Bakr, Abū l-Maṣāb (corrected to Abī ʿAlī) one of seven canonical Arabic readers, born in 45 (665) in Mecca, belonged to a Persian family which had migrated to South Arabia, was a client of Abū ʿAlī al-Ḥakim al-Tabari and from his trade of drugger it was called Abī al-Ḥarīrī; he filled the office of judge (Qādī) in Damascus and died there in 770 = 573. His manner of treating the Koran was transmitted by the two readers al-Qasmi s. Muhammad b. Abū l-Rahim al-Maghāribī (died 291 = 904) and al-Baqari s. Ahmad b. Muhammad b. Banū Zayd (died 270 = 883) and is known to us from the anonymous description in a Berlin Ms. (w. Ahwardi, facsimile, No. 672).

IBN KHAŁAWIH (KHÁLAWIH), also known as ʿAbd Allāh b. ʿAbd Allāh b. Khālid b. Khālid, was an Arab grammarian and lexicographer. He was born around 930 and died around 1024.

Ibn Khašān, the name of three visiers:

1. Abū ʿl-Ḥasan ʿUbras Allāh b. Yaḥya b. Khašān. Appointed secretary of state in 256 (890–901). ʿUbras Allāh was raised to the vizierate by ʿAlī al-Muwakkil and held this office till the latter's assassination in 247 (861). Towards the end of the year 247 (860) he bought the house of ʿAbd Allāh ibn Saʿd in Kāẓim, the minister of finance under the caliph ʿAbd Allāh ibn ʿAbd al-Malik b. ʿAbd al-Malik b. ʿAbd Allāh. After the accession of ʿAlī al-Muwakkil in the year 256 (870) ʿUbras Allāh, in spite of vigorous protest, was again appointed vizier and remained in this office till his death in the 1st ʿAbda of 265 (July 577).

2. Abū ʿAlī Muḥammad b. ʿUbras Allāh b. Yaḥya, son of the preceding. After the fall of ʿAlī al-Fārūq in 299 (912) Muḥammad, who had held several offices since the death of his father, was appointed vizier through the influence of a haram lady, but proved so incapable that the caliph ʿAlī al-Muṭāhir wished to replace him in the following year by Abū ʿAbd Allāh ibn Saʿd, governor of Fāṭima. He succeeded in saving himself by harem intrigues and Abū ʿAbd Allāh ibn Saʿd, who had already arrived in the capital to take over the office, returned to his governorship. Towards the end of the year, however, the caliph had to look round for a more suitable vizier and summoned Abū ʿAlī ibn ʿAbd Allāh b. ʿAbd al-Darrār (q.v.) to Baghda. The latter had entered into office in the beginning of 301 (915). Muḥammad was arrested with his two sons, ʿAbd Allāh b. ʿAbd al-Wāḥid and Abī al-Wajih, and ʿAbd Allāh b. ʿAbd al-Wāḥid in Uqaydān. 231 (Jan. 944) he received his freedom again. He died in 312 (924–925).

Bibliography:

the ambassador of his office to others for a period. At the same time a famine broke out in the capital and as usual the discontent of the people found vent against the vizier. Near finally succeeded in overthrowing him and after ʿAbd Allāh had held the vizierate for about two years, he was dismissed and imprisoned in Ramūsah 313 (Nov. 921) where he remained confined; after some time al-Muṭāhir released him and he died in 314 (926–927).

Bibliography:

IBN KHAĻAWIH (KHÁLAWIH), also known as ʿAbd Allāh b. ʿAbd Allāh b. Khālid b. Khālid, was an Arab grammarian and lexicographer. The year of his birth is not mentioned; he was a native of Hamadhān and came to Baghdad, where he studied under ʿAlī al-Muwakkil and Abū ʿAlī ʿAbd al-Razzāk (d. 942), Abū ʿAlī al-Kindī (d. 947), Abū ʿAlī Muḥammad b. ʿAbd Allāh ibn al-Muṭtahar (d. 935) and others. He afterwards went to Syria and settled in Halab as a teacher. He was in high favour with the Hamadhān Safī al-Dawla, whose son he taught, as a poet he was also appreciated, and he often disputed vigorously with Muḥammad b. Khālid al-Ṭabbā (q.v.) on grammatical points. The grammarian Ibn Duraydī (d. 947) argued against him in his Kitāb al-ʿAṣbahān al-ʿĀbāwiyyān (Ptolomeis, p. 65) on this point and Ibn Khalawayh died in 370 (982) in Halab.

Of his works (detailed in Flügel, c. i.) there we preserved a) Kitaib Lātīn, the first half of which was published by H. Dercum in Heterius, iii. 88–165, Anmerkungen zu Sem. Ling. und Litt. (1895), 81–93, av. 1895–96, 320–341, 345–388, xviii. (1901), 35–51; also, hardly completed, printed at Cairo in 1337 (ed. Abū ʿAlī al-Muḥammad b. ʿAbd Allāh b. al-Shaḥīnī) by Kitāb al-ʿAṣbahān al-ʿĀbāwiyyān (Ptolomeis, p. 561 sqq. and in Flügel, c. i. 1113); d) his recession of the Kitaib al-ʿAṣbahān (q.v.), with an introduction, c) his revision of a grammatical explanation of the grammar of Saʿdī, al-ʿĀbāwiyyān (al-ʿĀbābiyyān) al-Dhīkhānī (Hamadhān 9127), c. 157–160. - The Kitāb al-ʿAṣbahān is addressed to him, as is Nāṭeghār in the preface to his edition (Kitāb al-Ṣafar, Dīn, Zāhir, Kisch- ern 1905), the work of Abū Zayd (q.v.) on which his lectures were based. This is probably also the case w. the Kitāb al-ʿAṣbahān mentioned above, and this is probably his edition of the work of his teacher Abū ʿAlī Muḥammad b. ʿAbd al-Zahīd (Berlin, Ver., No. 704).

the summary of his offices to others for a period. At the same time a famine broke out in the capital, and as usual the discontent of the people found vent against the vizier. Near finally succeeded in overthrowing him and after Abū ʿAbd Allāh had held the vizierate for about two years, he was dismissed and imprisoned in Ramūsah 313 (Nov. 921) where he remained confined; after some time al-Muṭāhir released him and he died in 314 (926–927).
IBN KHALDUN, ABD AL-RAGIM, AND YAVAY, two of the historians, descendants of a Sevillian family, who migrated to Tunis about the middle of the yuð [9th] century and belonged to the Arab tribe of Kinda. Their ancestor Khalid, known as Khalid bin Iman Khaled (whom the name Ibn Khalidin for all members of the family) migrated from the Yemen to Spain in the 8th century. 

There is no evidence that the Khalid family held any administrative or political offices, or were even mentioned in the sources of the period in which they lived. They were, however, known as historians, and it is possible that they may have been the ancestors of the famous historian Ibn Khaldun.

In the 10th century, Ibn Khaldun was born in Tunis. His father, a prominent jurist, was a pupil of the famous jurist Abu Hamid Al-Ma'arrisi. Ibn Khaldun received a thorough education in law and theology, and became a leading figure in the intellectual life of the city. He was a prolific writer, and his works have had a lasting impact on the study of Islamic history.

Ibn Khaldun's works include a history of the Arab world, which he wrote in four parts, and a treatise on the nature of society. His work on the nature of society is particularly important, as it introduced the concept of the 'state of nature' as a fundamental concept in the study of social organization.

Ibn Khaldun's views on the nature of society and history have had a significant influence on modern social theory. His work has been translated into many languages, and his ideas continue to be studied and debated today.
heir to the throne. His works on history, which deals with all aspects of Arab science and culture, remain, as regards the depth of thought, the comprehensiveness of exposition and the correctness of judgment, among the most important works of the age, which are bound to be surpassed by no other work of a Muslim author.

2. YAHYA, ABU ZAKARIYA, born in Tunis about 354 (1356), died at Timmern in Ramadan 378 (Nov.-Dec., 1358), like his brother and probably with him, devoted industriously to study in his native town and was intimate with all the important scholars of his time in the Ḥadīth capital. To judge from his book, which is his best, he seems to have had a special preference for poetry and belles lettres. We know very little of his personality; the references are scattered in various sources, e.g., Abū al-Rahmān's autobiography and that portion of the Sūrat al-Fātih which deals with the history of the Berbers. This last book gives a detailed account of the murder of Yahya in Timmern; Yahya himself also gives a few details of his career in his Buqayn al-Rumayhī.

Yahya's political life did not begin till 757 (1356), when he was with his brother (who was soon afterwards hanged) at the court of Abū Sālim, sultan of Fāṭimids, and the latter sent two Ḥadīth emissaries from Timmern back to Bougie. He accompanied these two princes in his fast to the city and acted as chamberlain to one of them, the emir Abū al-ʿĀlam. As the latter, in spite of a long siege, could not conquer Bougie, he sent Yahya to Abū Hamid II, king of Timmern, to ask for his assistance (354 = 1356). Yahya found a kindly reception in Timmern and his request was granted. After the Mawlid festival, when he remained there and summoned it to a prayer, he went back to his master to bring him to the Abūdawdī court on the 8th Dhūlūlī II (26th March, 1358). Both returned to Bougie with a column of troops sent by Abū Hamid.

In 767 (1365-1366) the Ḥadīth court of Constanti- nople, taking back the possession, banished Yahya in Bona and confiscated his property; he escaped soon afterwards and went to Biskra to the Maim and his brother. It was probably at this time that he made the pilgrimage to the tomb of ʿAlī, which he describes in his Buqayn al-Rumayhī. From Biskra he returned to Timmern at Abū Hamid's request, because he was appointed kāthir al-ʿajāːj. When he learned that Timmern was threatened by the Marīdids, he forgot the kindness shown him by Abū Hamid and left him (772 = 1371) to enter the service of the Marīdids, Sultan Abū al-ʿĀlam and afterwards of his successor Muḥammad al-ʿĀṣid. It was only after the capture of Fāṣ al-Bīdīr by Sultan Abū ʿAlī Alī in 735 (1337) that Yahya returned to Timmern, and Abū Hamid again welcomed him and gave him his former secretarial office. He soon won the king's confidence again but thereby aroused the jealousy of the other court officials, notably Abū Hamid's oldest son and probable successor Abū Tājūn II. The latter with a few bītān massacred some of Yahya's relatives, but Yahya left the palace one night in Ramadan 378 (1358) and marooned himself. When Abū Ḥasan learned that his son had been the instigator of the crime, he had not the courage to take steps against the murderer.

Although Yahya's political career was shorter and less brilliant than that of his brother, yet it gave him the opportunity to write a historical work of great learning, the Buqayn al-Rumayhī; this book, which was much used by De Sennecle and Bourgu in their history of Timmern and also published the Arabic text with translation under the title Historiae de Abū al-ʿĀlam, rec. de Timmern, vol. I., Algiers 1904-1913). His history of the kingdom of Timmern is particularly important for a knowledge of the long and in a very brilliant reign of Abū Ḥasan II, whose secretary and trusted adviser the writer was. In this capacity he was no doubt able to consult political documents and even quotes some of these in his book. Although this book neither covers with the field as his brother Abū al-Rahmān's work nor shows such a lofty point of view or critical spirit, it is far superior in literary value. Yahya reveals in it not only literary but also political skill, his elegant style is often lyrical and his narrative is adorned with quotations from the best Arab writers. He gives us a sketch of the political history of the central Maghrībi kingdom, he has also preserved for us his work poems by contemporary court poets and gives information about scholars of his time and about the poetical meetings at the court of Timmern, all information hard to be found elsewhere and affording a rather accurate glimpse into the intellectual life of the Abūdawdī capital in the 14th century.

IBN KHALILKÂN, AHMAD b. MUHAMMAD b. IMRĀKĪ, SHAMS AL-DīN ABU ʿJABR AL-HARĀBĪ AL-KIRSH AL-SHAWRI, AN ARAB SCHOLAR, born on the 11th Rajab II 685 = 28th Sept. 1221 at Athbīya, studied from 626 under al-Dīwānī and Ibn Shaddādī in Ḥadīth and afterwards in Damascus. In 636 = 1238 he went to Cairo and became deputy of the chief faqih Yūsuf b. Abū al-Qāsim al-Sanjāā. In 659 = 1261 he went as chief faqih to Damascus, but lost his office, the tenure of which after five years was limited to the Shāhīs and after ten years abolished. After spending 7 years in Cairo as professor at the al-Fākhrīyya madrasa, he received his former office again but lost it for the second time in Muḥarram 650 = May 1251 and died on Saturday 16th Rajab 651 = 23rd Oct. 1252 as professor at the Madrasa al-Aminiyah. He began his chief work (Waṣafāt al-waṣafāt wa-l-ṣālah al-zanjūd) in Cairo in 654 = 1256 but had to stop it during his work in Damascus and completed it on 11th Dhūlūlī II 675 = 4th Jul. 1274. His autobiography, Muqaddimah, is in the British Mus. (see Catalogue, no. 231, 305, Nepit., no. 607, cf. Catez., 1644, p. 225). Wustenfeld, Gott. Ge. Amer. 4, 1844, p. 286. For his numerous contributions which are listed in Wustenfeld, Völker der Welt im Sinne Ibn Chaldunns, Wien (German Translation, 1877), it is one of the most important aids to the history of his geography and literary history of the Chaldūnians. See also ibid. 1845, 5e du Somme.
IBN AL-KHAṢĪB. [See AL-KHAṢĪB.]}

IBN AL-KHAṬĪB. Dîn-i-Wâṣîr-i-Khatîb (holder of the two venerated positions: diwan, vizier of the palace, and wali, vizier of the state, called wali al-ʿāmil, vizier of the sword, generalissimo = Grand Vizier, Prime Minister, cf. Deny, Supplement), Lîwân al-Dîn (S교한) and Abî 'Abd Allâh Muḥammad b. 'Abd Allâh b. Saʿd b. Abî Hâmid al-Salârî (from the clan of the Yemeni Mâlûk, Salârî, with a claim to the name of Salârî al-Fârisī [q.v.]), a member of the family, which had migrated from Syria to Spain, Cordova, Toledo, Loja, Granada, and which had formerly been called Bâlûq, Bâzur, and Bâzûq-Khârîf after the elder Saʿd b. al-Khâṭîb. Our Muḥammad is therefore usually only called Lîwân al-Dîn b. al-Khâṭîb or Ibn al-Khâṭîb al-Salârî. He was born on the 25th of Rajab 1433 (15 Nov. 1313) probably in Loja (Arab. Lûzûn, the ancient Bilâpa Tânu) below Granada on the (Shin[ij] = Superb) on the western edge of the Vega (al-Mârâj), but spent his youth in Granada, whence his father had moved as a court official of the Nâṣirîs and where he pursued various studies under able teachers with such success that he became the greatest and the last important author, poet and statesman of Granada, if not of the whole of Arab Spain. After the martyr death of his father in the battle of Tarfîs (Tarîf) on the 7th of Shawwāl 1436 = 29th Oct. 1436, he entered the service and studied under the learned vizier Abî ʿAbd Allâh b. al-Salârî, but the latter died in his youth (the Black Death, al-wâṣîr) on the 23rd of Shawwâl 749 = 14 Jan. 1349 (cf. his biography in al-Mâhkât, Cairo [302], iii. 222–240, iv. 55). Appointed his successor by Sultan Abî ʿAbd Allâh al-Nâṣirī I (1353–1354), he continued in office after Yûsuf's murder under his son and successor Muḥammad V (1354–1359), after his abdication in 1356 was a prisoner in Granada and then went with him into exile in Morocco (Ibn al-Khâṭîb lived in retirement in Salât till 1362, when he returned to Granada as vizier when Muḥammad V was restored by the Marinids (c. 1347), and lived in peace until his death); of his writings he left in 1371 from Qarâbār in Cauca and Tlemcen to Sultan Abî ʿAbd Allâh (1366–1372) (cf. whom A. Muller, Der Islam, ii. 669 sqq., wrongly makes two persons, Abî ʿAbd Allâh and Abî Saʿd), he was condemned as a heretic in Granada and his extradition demanded, but Abî ʿAbd Allâh and his son and successor Muḥammad III al-Sâlih (1372–1374) declined to deliver him up, while the pretender Abî ʿAbd Allâh al-Muwâṣṣît set about it. While the case was being conducted in Fès by his pupil and successor as vizier of Granada, Abî ʿAbd Allâh (Brockmann, p. 224) submitted to Sultan al-Tūmârî (al-Mâṣûrî, 1374–1383), Ibn al-Khâṭîb was strangled in the night by assassins hired by Sulâmann b. Abî Fârîd, the deputy of the vizier Muḥammad b. al-'Uthmân in revenge for a private feud, who broke into his prison, an outrage at which the people were very indignant in the morning.

Of the 60 or so writings of Ibn al-Khâṭîb, chiefly historical, geographical, poetical, belles-lettres, mystical, philosophical or medicinal in subject, about a third have survived, on which see Fons Boege, Enumeratio-Hymnographiae, N. B., p. 341–347; Brockmann, Gesch. der arab. Litt., ii. 326–328; the rest have disappeared, and their sources. The most important work for us is the extensive "history of Granada", al-Hājâj fi l-Tawârikh Ghawriyya, which however consists mainly of biographies of scholars, a critical edition of which from the scattered manuscripts and extracts with a translation is a desideratum. The edition of an abbreviation, Cairo 1319, 2 vols. (the 3rd not yet published) is quite incompatible and very different as regards the Spanish names; on manuscripts cf. also Canad. Arab. Bibl. Acad. Laz. Cat., ii. (1907), pp. 1001 sq. (p. 103 sq.) The historical works of Abî ʿAbd Allâh al-Munâṣîrî and Abî ʿAbd Allâh al-Tawârikhî, Dâra al-Maṭbûʿa, ii. 177–246 and 246–319, also deserve a critical edition and translation (the printed edition Fûns 1515, given by Brockmann, ii. 710, is unknown to the writer; there is perhaps some confusion with the following). Rûmî al-Hâjâj fi l-Nâm al-Dawâl was printed at Tunis in 1316; Khâfîs fi l-Tawârikh fi Râkîs al-Sâlih wa l-Salârî is said by Derlemont (and Cassiri, l.c. 1350) and Brockmann, p. 262, to be a description of his journey to Africa, while the edition by M. J. Muller, Reiter (=, i. 44–45, shows that it is a journey by the prince Abî ʿAbd Allâh al-Munâṣîrî into the eastern provinces of Granada, in which the author Muḥammad b. Saʿd al-Munâṣîrî, in the plague (1375), the Black Death of 749 = 1348–49, has been edited and translated in 1860 in the Sammelb. der Bayer. Akad. d. Wissenschaften (in Cassiri, Pons Böwern, and Brockmann, called Mâṣûrî as al-Sâlih). The Muṣârî al-Munaṣîrî fi l-Dârî al-Munâṣîrî wa l-Munâṣîrî, fully completed published by M. J. Muller in Reiter (=, i. 45–100, was again published in Fûns 1345. Of the great collection of diplomatic documents in the original style, Khâfîs al-Khitb wa Nâṣirî al-Munâṣîrî, Mariam Gaspier Remondi in his periodical Rev. d'Hist. de l'Art et de l'Ecole des Histoires, de l'Architecture et des Sciences Humaines, 1920, Râdîs has given numerous texts and translations since 1912. Muṣârîsfiq (Munâṣîrî, al-Munâṣîrî wa al-Salârî was edited by M. J. Muller, Reiter (=, i. 1–13. Haib al-Munâṣîrî was his Catalogue of Damascene monasteries on p. 53. Râdîs al-Dârî tf al-Hâjâj al-Sâlih fi Dârî al-Munâṣîrî al-Dîn al-Khâṭîb, Munich, N. G. 417, contains a Cata-

The erroneous edition of al-Hâjâj al-Munaṣîrî fi Dârî al-Khâṭîb al-Munâṣîrî, as held by himself, Munich, N. G. 991 sq., contain several copies by M. J. Muller. The medium edition of al-Hâjâj al-Munaṣîrî fi Dârî al-Alâ'î wa al-Munâṣîrî, as held by himself, Munich, N. G. 991 sq.
Of his numerous works, among which historical writings predominate, (a history of Cairo; a history of Venet; a history of the Maghrib; a history of the Saqqahs etc), only one has come down to us and that only in extracts. The original was probably called Kitab babt al-Qahwa al-Maakhir al-Yahshabi, while al-Zayyat's synopsis is called Masalih al-Qahwa al-Muwalladun wa bih Kitab Tarikh al-Muluk, usually quoted briefly as the Tarikh al-Muluk. The work was edited by J. Lippert (see Bibliography; also printed at Cairo in 1226), contains 414 biographies of physicians, astronomers, and philosophers, from the earliest times to the days of the author and is of great value because it forms an inexhaustible mine of information regarding the knowledge possessed by the Arabs of Greek literature and even gives information about Greek antiquity, which is no longer preserved in classical sources.

Bibliography: Ibn al-Kifti's Tarikh al-
Qahwa, edited by Prof. Dr. Julius Lippert. Leipzig 1903, an materials collected by Ang.
Muller (further sources given in the Introduction); Yahya (English ed. Margoliouth, v. 477 seq.
E. Mervyn)

IBN KILLIS, Fatimid Vizier, and 'Abd-al-
Fatih as-Samani. Called Ibn Killis, was a
Baghdad Jew, an excellent bureaucrat, whose
ability raised him to the highest civil post in the
Fatimid empire. Born in 317 (930-1), he came
ey to life with his father in Syria and in 315
(942-3) to Egypt, where he began to play a part
at Karfi's (1051) court and by his financial ability
won an influential position in politics. He
remained a Jew (ilf 356 (967)) when he adopted Islam, as
he saw a chance of becoming vizier. Thanks to
his intellectual ability and power of hard work,
he soon became an authority on Moslem sciences.
His increasing influence aroused the jealousy of
the vizier Ibn al-Faraj, whose enmity caused him to
be sent to the Maghrib. He returned to Egypt
with Idris ibn Muns, the Fatimid government
could find no more capable and expert administrator
of the country's economic policy and thus
he was half of the prosperity of the Nile
valley under the Fatimids is ascribed to his
name. The results of his management are reflected
in the sources, figures quite unknown before. But
at the same time, his stinted and the
gratitude shown him, notably by Abi, was well
deserved. In Ramadan 368 (April 979) he was
given the hestronic title, al-Warr al-Adjali. Many
notable features of Ibn Killis' character are
described, although he is also said to have worked
against his enemies with poison and other means.
He was able to combine the taste of the time
for poetry and literature, in bamboos and in the
splendor of his banquets. In external piety and
learning, he wrote amongst others a work on the
Fatimi rite (Al-Fatimi rite, vi). In any case,
he was a financial genius and organizer of the
first order. The internal administration of the
Fatimid empire is said to have been created
by him. In 371 (983-4) he fell for a time into
disgrace, but was soon restored to his old office and
died at the end of 380 (991), deeply regretted by the
Caliph 'Abd al-Malik and all Egypt.

Bibliography: Isolated data in all the
sources for his history of Karfi and the early
Egyptian Fatimids (l.v.). Longer notices,
based on al-Masabih and al-Sarafi, in al-Makrizi,
IBN KOSMÁN, also called ABLI BAKR b. KOSMÁN (Ibn Khátāb, L. 384; al-Maḥkāmān, Ind. al-Muḥāfīb, Khulūd al-Ṣarāf, i. 108, is of course to be read b. Khátāb or al-Maḥkāmān or al-Ṣarāf in place of Abū Bakr Khátāb or al-Maḥkāmān, in Ibn Khátāb, Khulūd al-Ṣarāf, p. 187, and in Ibn Badrīn with the titles al-Ṭabar al-Ḳurṭubi, as well as in the unique copy of his Dīnām published in facsimile by Ghuraghe, he is called al-Ṭabar al-Nabūdi, al-Ṣarāf, al-Ṭabar al-Ḳurṭubi, Abū Bakr Muhammad b. Abū Bakr Muḥammad b. Abū Bakr al-Muḥāfīb, Taḥṣīl al-Ḳurṭubi (Cairo, 1, 98), and in Ibn al-Khatīb, Tātār (Cairo, 1, 97), more accurately Abū Bakr b. Idrīs, than Abū Bakr al-Muḥāfīb, Khulūd al-Ṣarāf, i. 77). The quotation Catalogus Librorum Sasan., ii, 205, "Abū Bakr al-Muḥāfīb was a member of the Murābāt family," (cf. Ibn Khátāb) shows that in his early youth he had been in the service of the last Aṣfār of Badajoz, al-Murābāt family, who were overtrown by the Almoravids in 488--1094. From his home and family abroad, Cordova, he set out on constant journeys through Spain, chiefly to Sevilla, and by means of which he had come into contact with Yusuf (al-Maḥkāmān, ii, 169). The unfounded objection to the title Wustān, raised by Rosan, Notices sur-avant, 242, 2, 2, and supported by Brockelmann, Geschichtl., ii, 272, n. 2, was refuted by Dory in a letter to Rosan in 1884 (publ. in Günther's epistol.). Ibn Khátāb wrote popular Maqālib (q. v. and M. Hattīmīn, Mawālib, Indes) but has also become the most important representative of another kind of popular poetry, which is based not on quantity but on accent, and occurring in various metres, the muṣaffāt (q. v. and Dory, Supplement, which had previously been used for short improvisations but was raised by him to the higher level of long jāhiya-like pieces. Günther, Ed. Ibn Khátāb, and a second publication in 1890 was followed by many of his prolix researches on the poet and his works. Cordera has published some notes on the name Kosman, which he thought to be Arabic rather than identical with the West Gothic Gossam, in his Discursos sobre la Real Academia Española, 1910, especially important for the study of the vocabularies in the languages of his time is his work Al-Ṭabar, the al-Maḥkāmān or the Muḥāfīb, Al-Ṭabar, 575, p. 15. 43. We may specially note Julián Añez and Tarragó's study in Discursos sobre la Real Academia Española, 1912, particularly on the manuscripts in their collection "Libros de Al-Ṭabar," in which he championed in his more thorough view the tradition as that generally held by Arabic and Romance scholars (p. 54). The "al-Ṭabar" manuscripts are the most important in the Latin tradition of the earlier ms. found in the 14th century manuscripts in the library at the Alcázar, which continued the Alcázar de Almorávides family, and is the more interesting for the figures found in the Arabic and Romance scholars are all the most interesting in the further detailed studies of Ibn Khátāb's exceedingly important muṣaffāt poems. A scholarly edition, translation and annotation of the Dīnām or Qamarī in the biographies of the poet in Ibn Badrīn, Ibn al-Ḳurṭubi and Ibn al-Ḳulībī must also be edited from the scattered manuscripts. Bibliography: See above; cf. also Busch's Encyclopaedia arabica (Dizionario arabo-italiano), i. (1876), 648, which follows Ibn Khátāb except for the closing remark: date of birth and death are not mentioned, cf. also Suny-Beck in Journals d'Arabie, p. 657; Cordera, Descubrimientos de ausencias de los Almorávides en España, p. 134.

IBN KUTABA, Abū Aḥmad Muhammad b. Menahim (often also called Abū Bakr b. Abū Kutaiba al-Qurṭubi), Al-Ḳurṭubi (from his birthplace Al-Ḳurṭubi), from his father's name, AL-KUTABA, an Arab antith. born in 213 = 828 at Kala, was for a time sāḥib of Dimasaw in the province of Dijfaj, then lived as a teacher in Bagdad and died there in 276 = M. 739 (according to others 270 or 271). In literary tradition he is regarded as the representative of the so-called mixed or eclectic Bagdad grammatical school. As a matter of fact however his activities, like those of his contemporaries, Abū Ḥanīfa al-Dimashqī and al-Dijfajī, covered the whole range of his period. He sought to make available the material and indices which had been compiled by the Kala grammarians, as well as oral instructions, for the requirements of the man of the world, particularly the kuttāb, who were then beginning to gain influence in the administration. But he also took part in the theological disputes of his time, and defended the Kurān and Tradition against the attacks of philosophically sceptical, but himself fell under the suspicion of heresy and had to write a book a book against the Muḥammadib to defend himself against the reproach of belonging to them. His two most important philological works are KHYD ABU KURTAIB, ed. M. Grünert, Lédon 1900, Cairo 1909, and the A. Menahim's A. Aḥmad al-Qurṭubi, 12 books, probably the same as Aḥmad al-Qurṭubi, Aya, 30, 4095. In Ed. Ibn, p. 71, he quotes his Gharib al-Muṣaffāt, Vol. I and II, Damascus, Ibni Aḥmad al-Zayāy, Khulūd al-Ḳurṭubi, p. 61, No. 34, 55, the counterpart (al-Kurṭubi, 2, No. 33) to the end of 820. His third work is the KHYD QARIB AL-ḲURTAIB, a model of the the scholastic school in 10 books, often imitated later, 14 ed. by C. Brockelmann, Berlino 1900, Strauburg 1903--1908. According to 479, p. 18, the following are supplementary to the: I. KHYD AL-ḲURTAIB, ed. A. Guy in Muḥammad, (Damascus 1835 = 1047), p. 543--545, 362--362, 509--555, 2: KHYD QARIB QARIB AL-ḲURTAIB, ed. W. Wenehalde, Guttenberg, 1860, Cairo 1760; 3: KHYD QARIB AL-ḲURTAIB, ed. W. Wenehalde, Libri Feciis de Postercum, ed. M. J. de Guiche, Lugd. Bat. 1904, a. KHYD QARIB AL-ḲURTAIB, in. One of his earlier philological works is the KHYD ẒAK NIKRAH-Maṭāla still exists, ed. by Chelkho in BIBLICA, TRATIARIO DE PHILOGRAPHIA ARABICA, Breynt 1903, p. 121--140. His two chief theological works are the KHYD TAWZIḤ MAḤKĀT IṢNAṬ, Cairo 1326 (ed. Goldschmied, Muh. Stud., ii, 173; Hovhannes, De Ẓafrih, etc., p. 15), and KHYD ẒAK AL-ḲURTAIB, ed. in Leiden, Catalogus Codic. Mus. Ar., No. 1650, in Stambul, Kuppel, Draper, No. 901, Theological also (ed. in Al-Maḥkām al-Kurṭubi, ed. of Tractatus, ed. in Arabic, Frasch, Vera, etc. ed. Hish. Der, Leiden, No. 636). The pseudo-historical KHYD AL-JUNAMA wa-Maṣṣīya, Cairo 1523 and 1547, in...
the Dalail al-Hikam "Guidance for those who are confused" (Hebr.: Mårîth Nêbîhîm, Latin: Doctr. Periplocaein), "by which those who have been confused between Remon and Revelation are to be brought back to a conforming harmony".

No contradiction between the revealed scriptures and the principles of metaphysics as laid down by Aristotle and following him al-Fârâbî [q. v.] and Ibn Sînà [q. v.] can or may exist. All the anathemisation of the Bible is interpreted in this light. We may here call attention to the concise summary of the teachings of Muslim theology in this book.

The Dalâlîn soon found enthusiastic admirers but also bitter opponents, to whom it seemed too freethinking, and they used to call it Dalâlîn, tempting, by a slight variation in the name. It has been edited and translated by Salomon Munk as the Gilâl el-Elgârî (3 vol., Paris 1856—1866). Among his other philosophical works we shall only mention the Muhaša fi Sunûat al-Ma'anih (Hebr. Midrash ha-Higgelâk). His medical works in which he chiefly quotes Râzi, Ibn Sînà [q. v.], Ibn Wâdi, and Ibn Zûrî [q. v.], deal with hemorrhoids (f. 37b—38b), asthma (f. 3b—4b), etc. His medical aphorisms, known as Fudûl Mâsiì, are listed on the Ambulatorium of Hippocrates, on which he wrote a commentary. He also wrote a treatise on the computation of the Jewish calendar,

Here we can only touch upon his thorough and fruitful work in the field of Jewish literature; we may mention three works, his commentary (Short) on the Midrash (later known as Sîrût 'lam), his Kifâlah al-Sharî'î (Hebr. Sepher ham-Midrash) in which he gives the orders and prohibitions of Jewish canon law, and particularly his Mi'âkîh Thobân (also called Fud. ha-bâ'atî), a masterpiece of systematisation, in which he arranged for the first time all the vast material of Talmudic tradition—similar to the corresponding Muslim works—according to subjects matter, and discusses it.

Abû al-Kâfî and Ibn Abî 'Ubayd's say that Maimonides adopted Islam in Spain to avoid persecution and proselytised Islam in public but in secret practised Judaism. At a later date a certain Abu 'l-Arâb b. Mâshîh is said to have become a convert to Islam in Egypt of having escaped from Islam and gone back to Judaism. His powerful patron al-Kâfî al-Fâlî was forced however to declare that a forced conversion to Islam was against all at and so saved his life. Ibn Abî 'Ubayd's and Ibn Alî Abî 'Ubayd's accounts— the latter however, as his work shows, gives it up as mere hearsay—have claim to historical accuracy. Quite apart from the fact that the historical notions of Ibn Maimon contains much that is inaccurate, although according to Muslim law a renunciation of Islam to save one's life is judged less severely than a voluntary one, on the other hand a compulsory convert to Islam is a full Muslim and his later accession would meet with the death sentence. The most convincing argument is the following. In the bitter struggle which arose round Ibn Maimon's Dalâlah el-Hikmah in which his enemies did not spare their insults and reproaches, not even his bitterest antagonist made this accusation against him. This would certainly have been the case if his conversion to Islam—which could not have remained concealed—had been in fact.
IBN MĀRŪLĪ, Abb. ṬUṣṣārī Ḥusayn Allāh b. Ṭūṣārī Ḥusayn Allāh b. Ṭūṣārī Allāh b. Ṭūṣārī Allāh, better known as Ibn Mālik, was born in Tunis, the capital of Tunisia, in 1225. He was a prominent scholar and translator in the Islamic world. His most famous work is the "al-Tabī' al-Muʿjam," a manual of grammar that consists of 3,000 rules and verses. It was published in 1222 in Tunis and is considered one of the most important works in Arabic grammar. Ibn Mālik was also a follower of Al-Ṭūṣārī, who was a famous grammarian and poet. He received his education in al-Ṭūṣārī, where he was taught by the renowned scholar Al-Ṭūṣārī himself. After completing his studies, he became a professor of grammar and wrote extensively on the subject. His work was highly regarded and was widely taught in the Islamic world. He also wrote several other works on various topics, including history, philosophy, and religion. His works were translated into many languages and have been influential in the Islamic world and beyond.
IBN MANZUR, THIMI

**IBN MARDANISH, ABI ABD AL-LAH MUHAMMAD B. ABD AL-LAH (the latter usually omitted).** Born in 1350 (1372) and died in the battle of Aljucu in 1380 (1395). A Zaidi philosopher, he is the author of *Zawiya al-Arab*, *Mogol*, etc. (Litt., i. 394). His son, ABD AL-LAH ABD AL-FADL, was a mathematician, and wrote on the subject of astrology.

**IBN MAS'UD, ABI ABD AL-LAH, KHALIL B. ABU ABD AL-LAH, B. M.** (1350-1372), the son of Ali bin al-Ma'n, was a noted philosopher and mathematician. He is the author of *Zawiya al-Arab*, *Mogol*, etc. (Litt., i. 394). His son, ABD AL-LAH ABD AL-FADL, was a mathematician, and wrote on the subject of astrology.

He is the author of *Zawiya al-Arab*, *Mogol*, etc. (Litt., i. 394). His son, ABD AL-LAH ABD AL-FADL, was a mathematician, and wrote on the subject of astrology.

was also one of those to whom Paradise was promised by the Prophet. When Abu Bake during the Kifāya thought it necessary to make Medina capable of defense, 'Abd Allah was one of the men chosen to guard the weak points of the town. He was also present at the battle of the Yamamah.

He was naturally as little fitted to rule as any other representative of the pious of Medina. 'Omar sent him to Kufa as administrator of the public treasury, and as a teacher of religion. He was much consulted on account of his knowledge of the Qur'an and Sunna; he is said to be the authority for Kifāya traditions; it was a peculiar feature of his nature to give information about the Prophet, he trembled at the least event to break out on his forehead and he used to express himself with great caution, lest he should say anything incorrect. His authority is relied upon for a full interpretation of the intimation of the interdict in wine (Goldschitz, Picturesque, p. 65, and 'Alam al-Akbar, ed. Brocquemans, p. 323).

The account of his end are contradictory. It is said that 'Omar deprived him of his office in Kufa. When the news came, the people wished to keep him. He then said: "Leave me: if there must be offenses (tawaf), I will not be the instigator of them." (cf. Matthew, xviii, 7). He is said to have returned to Medina and to have died there in 32 or 33 A.H. after 60 and to have been buried at night on the 7th of Akhadh at Kufa.

When 'Omar visited him on his deathbed and solicitously asked him what he wished and what were his desires he is said to have given answers which are typical of ascetic piety. He appointed al-Zubair his executor and expressed a desire to be buried in a jilba with 200 dirhams.

According to others, however, he died in Kufa and was not dismissed from office before accompanying Sa'd b. Abi Waqqas by 'Omar.

'Abd Allah is best known as a politician and authority on the Qur'an. His traditions are collected in Musnad Ahmad, i. 374–466.

IBN MISKAWAI (properly Miskiwa). Ar. 'Alī Ahmad b. Muhammad b. Yaqub, philosophe and historien; Vaih simply called him Miskawai, without Ibn, and says that he was a Magian converted to Islam, which can hardly be correct in view of the name of his father and grandfather and his mistake is probably due to his wrongly giving the name Miskawai to the philosopher instead of his grandfather. The latter may really have been a converted Magian. Little is known of his career. We know that he was secretary and librarian to the vizier al-Mahallati (q. v.) and afterwards raised to the favour of the vizier Ibn al-Aamir (q. v.) and his son Amin ('Amir) in the reign of the Saffaids. 'Alī al-Dawla and Samini al-Dawla, and held an influential position in al-Raf. At first he seems to have been much occupied with philosophy, medicine, and alchemy; his history called Tazhib al-A'man (a complete edition in a photographic reproduction is appearing in the Girih Memorial Society, vili, under the editorship of L. Castani, ed. Geige, edited a portion in 1871, Fragments Historiques, Archivien, i, 373 sq.), down to 769 (977-80), although Ibn Miskawai lived till 1227 (1820). He had a literary correspondence with Abu Hayyan (q. v.) and al-Hamadhani (q. v.). Ibn al-Khiyam (see Hith) gives the title of his writings on medicine, but he was mainly concerned with ethics and wrote several works on this subject, of which we may here mention the Tazhib al-A'man. See others, ed. Constantino, 1278, 1299, Cairo, 1507, and a collection of ethical aphorisms by Persian, Indian, Arab and Greek sages, the first part of which is based on the Persian Rihvami Khatr ("External Reason"). A Persian bibilography edition was produced in 1246 by Manning; as early as 1250 Ellicott published from the Greek section the Tazhib Rihvami, new edition by Besse, ed. Tazhib Rihvami, ed. by Besse, ed. Tazhib Rihvami, te Bursch, ed. tazhib Rihvami, the first a Spanish translation of La Logica de Sir, and a Spanish translation of Ibn Miskawai's philosophical works, in the first History of Philosophy in Islam, p. 128 sqq.

IBN AL-MUKAF IA. Ar. 'Abd Allah Muhammad b. Muhammad, the "son of the cripple," an Arab and author of Persian origin, whose real name was Rashid b. Dinib, his father, a master of the Qur'an (Firshid), to correct Firshid, l. 118) as Fira (or Fara), who was entrusted with the collection of taxes in Iran and Fars under the government of al-Hajjaj b. Yasar, was accused of treason, in the exercise of his duty, he was put to the torture and his hand remained maimed, whereupon he committed suicide. His son, entering the service of the Caliph 'Abd al-Malik b. Marwan, was converted to Islam and was entrusted with the writing up of the act of ancestry accepted by the second of these Caliphs to his uncle 'Abd Allah, who was accused of having cleverly twisted the language in a way not entirely pleasing to his sovereign, the latter vowed vengeance and sent secret orders to Sofyan b. Mu'awiyah al-Muhallabi, governor of Fars, to put the culprit to death, his limbs were cut off one by one and thrown into a blazing furnace. Ibn al-Mukaffa's orthodox position was suspected and the suspicion was confirmed by the necessity to practise Maimonides in secret contributed to his fall. This event took place about 957.

Ibn al-Mukaffa's translated from Pehlevi into Arabic the book of Avesta, the Zend, brought from India by the physician Boreyse in the reign of the Emirs. Al Asafin Kamas (cf. the article KALAN), and Ibn Khaldun (Book of Lords), a collection of biographies of Persian kings, under the title Avesta Muhib al-Zamani, which was one of the sources of the Shah-Names of Firdawsi (many fragments in Ibn Kutasib, Usul al-Akhbar). He wrote in Arabic al-Dawla al-Yama (f. 1487-1488).
al-taghrib (transl. by O. Röschel, Stuttgart 1915) on morals and other short treatises published at the same time as the Darāz; al-Adab al-kabīr was published by Ahmad Zakī-Pascha (Cairo 1330 = 1912).

Bibliography: Förster, l. c. 135; Ibn Khallikān, N. 386; transl. de Slane, l. c. 315; Kühner, ll. 459; Muhammad Kurd "All, Kadīl al-Rahbārī, 2nd ed. (Cairo 1333 = 1913), p. 4; S. de Sacy, Califs et Dictats (1816), p. 97; Brockemühl, Geschichte der arab. Literatur, l. c. 151; Th. Noldeke, Burdās Einleitung (Strassburg 1912); Cl. Hart, Literaturarb. arab., p. 211, and Journal Asiatique, 18th ann. 18 (1911), p. 554. (Cf. Hayy.)

IBN AL-MUKAFFA, also "l-Dāghīs, the Arab name of Severus, Monophysite bishop of Udhamun, a contemporary of the Coptic patriarch Philotheos (799-803). Nothing is known of his life except that he was authorized by the Byzantine Caliph al-Mu'tasim to dispute with the bishops on religious questions (Hart, Hist. des Arab., l. c. 33). He wrote a history of the dignitaries who had occupied the patriarchal see of Alexandria, which forms the basis of Abbe Renaudot's Historie Patriarchorum Alexandriensis, etc. (Paris 1713). The municipal library of Hamburg possesses the most ancient Mas. (1260) which only contains however, although in a more complete form than the main text, the first part from St. Mark to Michael I (614-767), published in the original text by Chr. V. Seybold (vol. iii. of the Veröffentlichungen aus der Hamburg. Stadtbibliothek, 1912); Brockemühl, Kadīl, d. ordentl. His. der Stadtbiblioth. zu Hamburg, vol. i. p. 211, and 160 passim.; A. v. Gotzschmidt, K. A. Scholten, ll. 311). Seybold had already published an edition of the text in the Corpus Script. Christian. Orientaliwm (Scripta arcaic. orient., iii. Series, Vol. ii. fasc. 1 et 2, Paris and Leipzig, 1904-1910, as had Evetts in the Patrologia Orientalis (Vol. i. fasc. 2, 4, History of the Patriarchs of the Coptic Church of Alexandria). The Ms. Paris, Bibl. Nat., Cat. No. 305, gives the order of the patriarchs from the 9th, Mark II (799-819) to Samothrac (1032-1046). His "History of the four first Councils" has been published in Arabic, Ethiopic and French by L. Lawry and S. Gehrault in Vol. vii. of the Patrologia Orientalis. R. Graffy and J. Nau. It is an apology for the Monophysite doctrine. There are other works by him in Ms. in Paris and the Vatican.

(IBN AL-MA'AN)

IBN MUKRA, also "Ali Muhammad b. Ali b. al-Hassan b. Mukra, an "Abbassid vizier, born in Bagdad in 272 (886). He was first of all collector of taxes in a district of Fars, but in the middle of Kadh 316 (May 938) he was appointed vizier by al-Mahdī. After two years of beneficial activity, he was dismissed by al-Mahdī in 318 (June 940) because he was on intimate terms with Marmis, the chief of the Parthians, whom the Caliph hated, and his enemy the chief of police, Muhammad b. Yafqāt, had him arrested and burned his house. After a considerable sum had been extorted from him, he was banished to Fars. In

Dhu 'l-Hijja 220 (Dec. 932) the Caliph al-Kāhid restored him to office, but Ibn Mukra soon began to intrigue against Ibn Yafqāt and when he also planned the deposition of the Caliph, the plot was betrayed. Ibn Mukra had to save himself by flight and the vizierate was given to his secretary Muhammad b. al-Kāsim. After his fall he conducted a vigorous campaign for the deposition of al-Kāhid and wandered about the country in disguise, stirring up hatred of the Caliph. When al-Kašf ascended the throne in Dhu 'l-Hijja 322 (April 933), Ibn Mukra was appointed by him vizier; the real ruler however was the commander-in-chief of the Caliph, Muhammad b. Yafqāt. Although Ibn Mukra did succeed by his intrigues in overthrowing the popular favor of the Caliph in the following year, as a result of an unfortunate campaign against Mshāl, where the Harāmās b. Abī Ḥaḍīdī Abī l-Ḥāṣim b. al-Adil had set himself up as an aspirant, he was at the same time preparing his own fall. In the middle of Dhu 'l-Hijja 324 (April 936) he was attacked and taken prisoner by al-Mu'ayjar b. Yafqāt, Muhammad's brother. The Caliph was forced to approve and the vizier was dismissed, but he received his freedom on payment of 4,000,000 dirhoms. After a few years, he was appointed vizier, in 326, at least, for the fourth time [see Ibn-Faraj, 1]. But when he began to intrigue against the powerful Amir al-'Uqba Muhammad b. al-Qādī, the latter learned of it and had him sent to Shawwal 326 (Aug. 936) and frightfully mutilated. According to the usual statement, Ibn Mukra died in prison on Shawwal 40th 328 (19th July 940). He was also known as a scholar and as one of the founders of the Arab calligraphy.

IBN AL-MUNDIR, also Baker, chief of the stable and chief veterinary surgeon to Sultan Al-Nasir b. Kāsin, died 741 (1340) author of the Kāmil al-shahrul-Abbas wa-zarāqah (or Kāmil al-Walī fi Amrīrat Amīr al-Mashriq), which is called al-Nāsir in honour of the Sultan and is usually quoted by this name. M. Perron has translated it with a full introduction in a volume entitled Le Nouricier: La protection des deux ans ou traité complet d'hygiène et d'hygiène arabe, traduit de l'arabe par Abū Bake Ibn Barah. The first volume appeared in 1852, it is introductory and contains a wealth of information about the Arab horses, Al-Nasir's particular services to horse breeding in Egypt, and a collection of passages from poets; the second volume (1859) is the translation of the hippology, and the third (1860) of the hippology. J. v. Hammer-Purgstall in his treatise Das Pferd bei den Arabern criticizes the introduction in a very high-handed fashion, but did not live to deal with the others, but it may well be doubted if this critic possessed the necessary, particularly veterinary, knowledge to enable him to surmount Perron's meticulous work. The book.
is a valuable corpus of information and the first collection of widely scattered references to the horse and must form the starting point of any further work on the subject.

**Bibliography:** Brockelmann, *Gesch. d. Arab. Litt.,* ii. 130. (J. Rurke)

**IBN AL-MUSLIMA, the *kawār* of Abū l-ʿAbbas ʿOmar (died in 445 = 1054) which was transmitted to his descendants. Another name for the family is Al-ʿAbbasid. This family, the members of which held the highest office of the state, was known as the family of the ʿAbbasids.

**IBN AL-MUSLIMA, the *kawār* of Abū l-ʿAbbas ʿOmar (died in 445 = 1054) which was transmitted to his descendants. Another name for the family is Al-ʿAbbasid. This family, the members of which held the highest office of the state, was known as the family of the ʿAbbasids.**

He acted for a time (437 = 1045-1058) as visier of the Caliph Al-Kāmil bi-Amr Allāh and it was he who induced the latter to make an alliance with Taqīruddin in order to counteract the machinations of the Fatimids. This policy saved the ʿAbbasid caliphate but was fatal for its originator, for when Taqīruddin, who came to Baghdad in 437 (1045), failed to understand a campaign against Muhammad b. ʿAbd Allāh b. ʿAbd Allāh, Ibn Al-Muslima (as in many other passages) exposed the opportunity to drive the Fatimids out of Baghdad in name of the Fatimid Caliph, Ibn Al-Muslima had the misfortune to fall into his hands and was executed in the cruel fashion in 450 = 1058, as Al-Battani particularly hated him. His son Ibn l-ʿAbdu’l-Muqaddas was visier for a short time in 470 = 1083. The latter's great-grandson, `Abd Al-Din Muhammad b. `Abd Allāh b. ʿAbd Allāh, was the same official under Al-Mutanabbi, and in 550 to 573 (1117-8). The Caliph was at last forced to dismiss him by the Turk, Karmazin, on which occasion the Turk plundered his dwelling thoroughly; it was not till Karmazin had left Baghdad (570 = 1174) that ʿAbd Al-Din was restored to office. He held a few years later at the hands of a Bābūr that about to undertake the pilgrimage to Mecca. Like other members of the family (ʿAbd Al-Din devoted a special chapter to him in his *Sharīda*) he was a man of great erudition and is celebrated in several of Sīra Ibn Al-Thawri's *alrahjīs.*

**IBN AL-MUTAZZ ABU ALLAH, Abū l-ʿAbbas, poet and prince, son of the Khalifa Al-Mutanabbi, was born of a slave mother in the year 343 (954).** From his youth he devoted himself to literary pursuits, studying the Arabic language and literature under al-MaSharzī, Thālab; and other eminent masters with great zeal and success, and compiling works in prose and verse (especially poetry) which attracted even wider attention. At the death of his cousin, the Khalifa Al-Muʿtaṣir (370 = 981-982), he stood at high esteem, and was closely associated with the principal scholars, poets, and literary leaders of Baghdad. He had held himself remote from the intrigues of the *Abūsūrī* court, which during his lifetime had been passing through the worst period of its history; but when, on the death of Al-Muṣṭafā, the dissatisfaction with Al-Muṣṭafi, who he had named as his successor, culminated in a conspiring, Ibn Al-Mutazz was drawn into the conspiracy, and on the 25th of Rabīʿ I 496 (17th Dec. 1006), he was proclaimed khalīfa under the name Al-Mutanabbi. His party remained in power for only one day, however,

and he, having concealed himself in a private house, was discovered after a few days and put to death. (2 Rabīʿ II = 29 Dec.).

Ibn Al-Muṣṭafā was one of the most important poets of the *Abūsūrī* period. To his native talent, which included originality of a high order, he added sound learning and good taste. He did not imitate the ancient Arab poets, but boldly ventured to compare them in elegance of manner and purity of diction. His style, moreover, is remarkably simple and direct. His poems covered the whole range of subjects then generally recognized as belonging to the provinces of poetry (*Dhulq, Cairo, 1302, 2 vols.*). They are premonishing marks of high life, however, reflecting all its luxury and some of its affluence. A field which he cultivated especially was that of songs praising wine and celebrating drinking custom (*Al-ʿAbī ṣhījāt al-ʿdīfāt al-fatāsīr*), a anthology in which his own verses held the principal place; see Göttlicher, *Abūsūrīs,* p. 106 sqq.; Brockelmann, *Gesch. d. Arab. Litte.* i. 30 sqq.; and Orient. Stud., Th. Nöldeke, p. 168 sqq.

**IBN MUṬṬI, ZAIN AL-DIN Al-ḤOBAYB, MARYAMA b. [Abu] Al-Muṭṭi, b. ABU AL-NAṣR Al-ZAMAXWĪ Aṣ-ṢAMARDĪ, known as Ibn Muṭṭi, was born in 564 (1168-9). He studied grammar and law in Algiers with Abu Muḥammad al-Qunawy and then went to the east. He spent a long time in Damascus, where he studied under the traditionalist Ibn Ṭabīb and then taught grammar there. To turn a livelihood, he also acted as a *ḥabib.* When the Ayyubid al-Malik al-Kamil visited the Syrian capital, he invited him to follow him to Egypt and appointed him professor of literature at the Amr mosque in Cairo. Here he died on Monday the 30th Dhū al-Ḥija 642 = 29 Sept. 1241. Ibn Muṭṭi was a Mulkī in the Maghrib, a Shīʿī in Damascus, and a Ḥanīfī in Cairo. He seems to have been the first to compose a poem of 1000 verses (*Alfurūn*) as a grammatical textbook.

Of his works only the following are preserved:

**Bibliography:** *Al-Sayyid, Ḥabīb al-Wardı*
under the suzerainty of the Wahhabi princes of Darya (q.v.) and Riyadh. He was recognized by Faisal, Amir of Riyadh, who according to tradition owed his throne to him, and with the help of his brother 'Abd Allah succeeded in maintaining and extending his rule. In 1838 at the same time as Faisal, Amir of Riyadh, was expelled and replaced by Khalid (cf. Ibn Sa'd, under 1837 and 1838), the Diyalah Shamma was also occupied by Khalid bin Faha and 'Abd Allah banished. After the departure of the Egyptians in 1844, 'Abd Allah regained his kingdom. On his death he was succeeded by his son.

II. Ta'liq b. 'Abd Allah, 1263—1285 (1847—1869); he subdued the states of al-Luj (Dawmat), Khafar, Tsaila and a portion of al-Kasim and was able to keep the predatory Bedouins in check. By these and other clever measures he brought peace and prosperity into the land ruled by him. His dependence on Riyadh, which had become loose even in 'Abd Allah's reign, became limited to occasional military service; payment of tribute was replaced by more or less regular presents of horses. Ta'liq was also on good terms with Egypt, the Punt and Persia; Palgrave (1852—1865) and Gurneau (1864) were able to travel in his country in his reign; he committed suicide according to Huber in Safar 1283 (June—July 1866), according to Euting on the 17 Rabi II 1284 (= 11 March 1866).

III. Mithb, 1285—1295 (1867—1890), Ta'liq's brother, who succeeded him, was treacherously murdered before he had reigned two full years on the 2nd Rabi II 1285 = 4th January 1889 (Huber, according to Euting, 2nd Rabi II 1285 = 23rd July 1868) by his nephews Bandar and Badr, Ta'liq's sons.

IV. Bandar, the usurper, 1286—1295 (1867—1875) was in turn deposed and along with his brothers and nephews by his uncle Muhammad.

V. Muhammad b. 'Abd Allah b. Rashid, 1289—1315 (1873—1897), next to his brother Ta'liq, the most vigorous ruler of the Shammar dynasty, continuing the wise policy of his great predecessor strengthened the rising kingdom at home and abroad. Favored by the Porte, he not only made himself independent of the Amir of Riyadh but in 1884 he occupied Riyadh and combined the two rival kingdoms under his own sway. During his reign European travellers repeatedly visited the Diyalah Shamma (Doughty, Mr. and Lady Anne Blunt, Huber, Euting, and v. Nobbe); he died in the middle of December 1897 without issue and left the kingdom to his nephew.

VI. 'Abd al-‘Azzah b. Mithb, 1315—1324 (1897—1906). The latter came into conflict with the powerful Shihab Tabah of Kuwait, the protector of the princes of Riyadh, dispossessed by Muhammad b. 'Abd Allah and in a fierce battle took place at al-Turfy in 1318 (1903), in which 'Abd al-Rahman b. Faisal and the Muttah Shihab Sallam died on the side of Muharrak. In January 1902 'Abd al-‘Azzah b. 'Abd al-Khaliq, the grandson of Muhammad b. Bandar, took the town of Riyadh and maintained himself there against the attacks of 'Abd al-‘Azzah of Diyalah Shamma. The latter was finally forced to call in the help of the Turks (1324); he fell in a night battle with his enemy on the 15th Safar 1324 (3rd April 1906). His son and successor

VII. Mithb b. 'Abd al-‘Azzah was murdered in Dhu ‘Al-Qa‘da 1324 (Aug.—Oct. 1906—Jan. 1907), according to another account in Sha‘ban 1326 by

VIII. Sulaym b. Hamud, a grandson of ‘Obeid, young brother of 'Abd Allah (I. above); after reigning a few months, Sultan was disposed of in the beginning of 1326 (Feb. 1908) by his brother

IX. Sa‘id b. Hamud, who was in his turn speedily made away with by Hamud bin Solban, who placed the sole surviving son of 'Abd al-‘Azzah (VII),

X. Sulaym b. ‘Abd al-‘Azzah, on the throne on the 17th Sha‘ban 1326 (14th Sept. 1908) and since then Sa‘id has been reigning with full recognition in the Diyalah Shamma.

Notes:

**IBN RASHIK, ABU ‘ALI AL-HASSAN B. KASILK AT-ASIZIL,** whose father was perhaps of Greek origin but a client of the Abl, was born at al-Mahmadia (al-Matla) in Algiers about 1285 (995) or 990 (1000). He studied first in his native town where he learned his father’s trade of a jeweller, but went to Kairouna in 1006 (1013-4) and was appointed court-poet by the Fatimid Caliph al-Mu’izz. This appointment earned him the enmity of his contemporary Abu ‘Ali al-Mahmad b. Abu Sa‘id al-Afjudi, known as Ibn Sharaf al-Kairouni, who was also a poet and man of letters. This quarrel which resulted in the publication of their works finally induced Ibn Sharaf to migrate to Sicily. When Kairouna was plundered in 1290 (1052) of the Arabs, al-Mu’izz died, accompanied by his favourite poet, to al-Mahmadia, where he died in 1093 (1094). Ibn Rashik went in the same year to Mazara in Sicily, where his death in the night of Friday, Saturday 12 Dhu ‘l-Qa‘da 456 (15/16 Oct. 1054), according to others in 465 (1050-1071).

IBN AL-RÂWANDI. [See Al-xwandi.] IBN ROSTA, Abu Ali Ahmad b. Omâr, an Arab Persian scholar of the second half of the 9th (6th-7th) century. Almost nothing is known of his life. He lived in Khâbus, where several persons were known as scholars under the name Rosta. In 900 (599) he visited Medina on the occasion of a pilgrimage. About the same time he wrote his Kitâb al-Tâbi'a al-Mahjûb, of this only the seventh part (ed. by de Goege, Hist. Geogr. Arab., 3, 1, London 1802) has survived; in it after a description of the celestial sphere and the terrestrial globe he proceeds to describe lands and cities. He took his material for the most part from older or contemporary works. Various extracts had previously been published by Chwolson with Russian translation.

Bibliography: de Goege, Pessez to his edition; Brockelmann, Gesch. d. arab. Literatur, 1, 227. (C. van Aanholt.)

IBN RUH, Abu 'l-Hasan Abu-Husayn b. Ruh b. Bâjah al-Bâsît al-Hasbî, third son of the expected fatwa (qâ'id al-âlima) of the Shâfi'i sect of the Ilîm al-'albîn. (q.v.) during the short absence (al-qivi' al-amrîn) of 264-265 (878-895). In his capacity of wakil (synonym, wakil, next to al-anâbî al-lâ-mu'llad) he had to issue bulks (al-muhâkh) in the name of the absent Imam, which had legal authority among the Shâfi'i. He resided in Baghdad, in the Înâk al-I'tilâm. He seems to have been appointed by the previous ruler, Abu 'l-Husayn al-Samârî, before 395 (987). He was so mighty adherents at the Caliph's court that the vizier Abu al-Hassan had him imprisoned. Released in 317 (929) he became in 323-324 (936) the Karmourum viceroy and had a curse upon al-Shâfi'i Khanqah. He died in 323 (937) or 320 (940) after dismissing Abu 'l-Hassan al-Samârî. (See preceding note.) The parents of the great Shi'i theologian Ibn Bâyhas (q.v.) claimed that they owed their birth to the prayers of Ibn Ruh.

IBN AL-RUMI, Abu 'l-Hasan Abu Bâjah al-Durrah (Gennaroni), an Arab poet, born in Baghdad in 759 (1359-1360), as the name Ibn al-Rumi suggests and the name of his grandfather proves, belonged to the land of the Byzantines. He was distinguished for his poetic gifts, but made many enemies by his lampoons, including the sister of al-Munâmî, Abu Bakr b. Ubaid Allah, grandson of Salâmanî b. Wahb (q.v.), who is said to have got rid of him by poisoning him in 283 (896). The date is not quite certain, for the years 284 and 276 are also given. He left a fairly extant Diwan, which was collected and arranged by al-Sîli.

Bibliography: Ibn Khallîkîn, Fawâid, ed. Wâsîlî, No. 432; Brockelmann, Gesch. der arab. Literatur, 1, 227. (M. Ben Chorba.)

IBN RUSHD, Abu 'l-Walî Muhammed b. Ahmad b. Muhammad b. Rushd, celebrated in medieval Europe as Averroes, greatest Arab philosopher of Spain, was born at Cordova in 530 = 1136. His grandfather had been qâ'id of Cordova and had left important works, while his father also held the office of qâ'id. He studied law and medicine in his native town; one of his teachers was Abu 'l-Dînâr al-Rûmî of Farabî. He lived in 848 = 1453 in Marrakesh, whither Ibn Tâfîl (q.v.) had probably induced him to go. The latter introduced him to the Almohads, Abu Ya'qub Yusuf, who became his patron. An account of this interview is preserved (see Hist. des Almohades de Marrakès, transl. by Fargouin). The Caliph asked Ibn Rushd what was the view of the philosophers on heaven (the universe), whether it was an eternal substance or had a beginning. "I was overcome with terror," says Ibn Rushd, "that I could not answer." The Caliph put him at his ease and began to discuss the question himself by exhuming the views of various scholars with an intimacy and learning rare among princes. The Caliph then dismissed him with rich presents.

It was Ibn Tâfîl who advised Ibn Rushd to present an argument and told him that the commander of the faithful often examined the obscure language of the Greek philosophers on rather the available translations and that he (Ibn Rushd) ought to undertake to explain them.

In 1456 = 1156 he became khalîf of Seville and two years later khalîf of Cordova. In spite of the burden of work of this office he composed his most important works in this period. In 978 = 1583, Ibn Yusuf summoned him to Marrakesh as his physician to replace the aged Ibn Tâfîl, but soon afterwards sent him back to Cordova with the rank of chief khalîf. At the beginning of the reign of Yûsuf al-Mansûr, Yusuf's successor, Ibn Rushd was still happy with the Caliph, but he fell into disgrace as the result of the opposition of the theologians to his writings and after being accused of various heresies and tried, he was banished to Lucena near Cordova. At the same time, the Caliph ordered the books of the philosophers to be burnt except those on medicine, mathematics and elementary astronomy (about 1195). Dunstan Macnald observes that these orders of the Almohad ruler who had hitherto encouraged philosophical studies, probably were a concession to the Spanish Muslims, who were much more orthodox than the Berbers. At the time the Caliph was actually saying a religion was against the Christians in Spain. On returning to Marrakesh, he raised the Ban and recalled Ibn Rushd to the court. (D. Macnald, Development of Muslim Theology, New York, 1905, p. 435.)

Ibn Rushd did not long enjoy the restoration of his fortunes for he died soon after his return to Marrakesh (4th Solar 976 = 10th Dec. 1188) and was buried near the town outside the gate of Tagara.

A great part of the Arabic original of Averroes...
works is lost. There have survived in Arabic his Tahafat al-tahafut, the "Collapse of the Collapse," an answer to Ghazali's celebrated Tahafat al-falasifa, "Collapse," or perhaps "Collapse of the philosophers" (cf. Miguel Asin y Palacios, Sur le "Sou du mot Tahafut" dans les œuvres de Ghazali et d'Avicenne, Rennaissance, 1906, No. 261, 262, particularly p. 262), also the medium commentaries on the Physics and Rhetoric of Aristotle (ed. and transl. by Lasinio); the exposition of fragments of Alexander of Aphrodisias on the Metaphysics (cf. J. Frerenfeld and S. Frummer, op. cit.); the large commentary on the Metaphysics in Leiden (Cat. Cod. arimic., No. 3834); small commentaries in Madrid Kitab al-Djamali (Guillaume Robles, Catalogus . . . . . Biblioth. Nation., No. 377, cf. H. Derembourg, Notes sur les man. arab. de Madrid, No. 37, in Homenaje a D. Franc. Cordero, p. 277, ref.) referring in Aristotle's treatises De Physico, De Coelo et Mundo, De Generation et Corruption, De Meteorologia, De Anima, and certain metaphysical questions; cf. also H. Derembourg, Le "Commentaire" d'Averroes sur quelques petits écrits physiques d'Aristote in Arch. für Gesch. der Phil., xviii. (1903), p. 250, and lastly two interesting treatises on the relations between religion and philosophy (discussed by Leon Gauthier and by Miguel Asin). One of these writings is entitled Kitab Fath al-Majalis and vigorously champions the agreement between religion and philosophy, the other is called Kitab Naqdh al-Mashriqi, etc. Both works are edited and translated into German by M. J. Muller (see Biblioth. pers. and printed at Cairo under the joint title Kitab Fath al-Majalis by Averroes 1341, 1358). There also exists in Arabic in several manuscripts, the medium commentaries on De Generatione et Corruptione, De Meteorologia, De Anima, a paraphrase of the Forma Naturalis (Paris, Bibl. Nat., No. 305, 179), the commentaries on De Coelo, De Generatione et De Meteorologia (Budapest, Uni., Cat., 1889, k. 421, p. 86) (Rennan, Averroes, 3rd ed., p. 83).

The celebrated commentaries of Averroes on Aristotle are of three kinds or rather one in three editions, a large, medium and small edition. This threefold arrangement corresponds to the three stages of instruction in the Muslim university; the small commentaries are for the first, the medium for the second and the large for the third year. The exposition of the "Naqdh" is similarly arranged.

We possess in Hebrew and Latin translations the three commentaries of Averroes on the Second Analytica, the Physics and on the treatises of the Universe, the Soul and the Metaphysics, the large commentaries on the other works of Aristotle are lacking and no commentary on the Zoology has survived.

Ibn Rushd also wrote a commentary on Plato's Republic, and criticisms on al-Farabi's logic and his interpretation of Aristotle as well as discussions on certain theories of Avicenna and courses on the "Arist of the Mace" by Ibn Tumart. He also wrote on "esthetic" (Ibn, Bidayat al-Muluk al-Mubayyid as-Nishyut al-Dhaif al-Maghal, Cairo 1329), and astronomical and medical works. His work on the "whole art of medicine," as-Khilqah (ed. Graz., Der Zeitschr. der Deutsch. Mediz. Ges., xxvii. 1852, p. 3432), Petersburg, 1858, No. 132, and probably Madrid, Robles, Cat., No. 132, cf. H. Derembourg, Notes etc., No. 132. Homme,
and for knowledge would thus be impossible. The theologians endeavored to force the philosophers to this conclusion.

But Ibn Rushd's system has more elasticity. He grants that in his own knowledge he knows all the things of the world. But his knowledge is nothing but the sum of all particular and universal knowledge, and therefore cannot be called particular or universal, and is not the reflection of man, but rather of a higher kind of which we cannot form a conception. [Cf. FALSAFA, p. 500].

God's knowledge cannot be the same as that of man, for God would then have 'sharers' in his knowledge and he would no longer be the one God. Moreover, God's knowledge is not like man's knowledge derived from things, nor is it produced by them. On the contrary, it is the cause of all things. Therefore this assertion of the theologians that the system of Averroes denies fore-knowledge is incorrect.

Conceiving his teaching regarding the soul, Ibn Rushd has been reproached with teaching that the individual souls after death pass into the universal soul, and thereby deny the personal immortality of the soul of man. This is not at all correct. The soul must be distinguished from the intellect in Averroes' system as well as in the systems of other philosophers. The intellect is quite abstract and immaterial and only exists in reality when it is associated with the universal or active intellect. What we call intellect in the individual is strictly a faculty for grasping the ideas that come from the active intellect, a faculty which has no existence outside the active intellect, but which is not permanent by itself. It must realize and become the 'accidental intellect' (intellectus accedens).

This is bound up with the active intellect, in which the eternal ideas rest, and merged into this faculty becomes itself eternal.

It is not the same with the soul. This with the philosopher is the driving force which effects the life and growth of organic bodies. It is a kind of energy which gives life to matter and is not from the qualities of matter like the intellect, but on the contrary closely associated with it. It is perhaps may even consist of a kind of half-organic, vital element. These souls are the form of bodies, and are therefore independent of the body, but continue to exist after the death of the body and can remain individual.

The latter according to Averroes is a bare possibility. He does not believe that a convincing proof of the immortality of the soul can be established by purely philosophical means. The task of solving the question is left to revelation. (See Taṣāfī' al-Taṣāfī', p. 152.)

The theologians have further denied Averroes with denying the resurrection of the body, His teaching being: the resurrection of his teaching is a denial of the dogma. The body which we shall have in the next world is according to him not the same as our earthly body, for what has passed away is not restored in its identity, but at least appears again as something similar. Averroes moreover remarks that the future life will be of a higher kind than earthly life, but there will still be a similarity with the present life.

For the rest, he disapproves of the myths and representations which are made of the life in the next world.

As this philosopher was more attacked by orthodoxy than his predecessors, he made more definite pronouncements than they on the relations between philosophical research and religion. He expands his views on this subject in the above mentioned works Fatīh al-Makhlūk and Ruhūf al-Makhlūk. His first principle is that philosophy must agree with religion. This is an axiom of the whole of Arab scholarship. There are in a way two trends of thought, one is the adaptation, the rationalistic philosophy, and the religious truth, both of which must agree. The philosophers are prophets of their time, prophets who appeal by preference to scholars. Their teaching may not contradict the teaching of the prophets in the proper sense, who appeal particularly to the people, it must rather give the same truth in a higher, less material form.

In religion a distinction must be made between the literal sense and its exposition. If for example a passage is found in the Qur'an which appears to contradict the results of philosophy, we must believe that this passage really has another than the apparent sense and seek the true meaning. It is the duty of the multitude to keep to the literal sense; to seek the correct interpretation is the task of the learned. Myths and allegories must be understood by the people as revelation presents them; the philosopher, however, has the right to seek out the deeper and purer meaning concealed in them.

Finally the learned should make it a practice not to communicate their results to the masses.

Averroes has expounded how religion must be taught according to the intellectual standard of the hearer. He distinguished three classes of men according to their mental endowments: the first and most numerous group are those who believe as a result of reading the divine word and are susceptible almost only to ascetical effects. The second class includes those whose beliefs are based on reasoning but only on such as proceed from the premises assumed quite incritically. The third and smallest class finally consists of those whose beliefs are based on proofs which rest on a chain of established premises. This method of canvassing religious instruction to the mental endowment of the hearer is evidence of a keen psychological insight but it may run the risk of not expressing sincerely and it was natural that it should arouse the distrust of professional theologians.

Finally we do not think that Averroes was an infidel, who was trying to protect himself from the attacks of the orthodox with more or less skillful interpretations; we are inclined to think that in general agreement with the attitude of many scholars of the east he was a syncretist, who honestly believed that one and the same truth could be presented under very different aspects and who was able by his great philosophical ingenuity to reconcile doctrines which must have appeared directly contradictory to less elastic minds.

The commentaries of Averroes were translated in the xith and xivth century into Hebrew by Jacob ben Abba Mari Amram of Naples (1324), Judah b. Solomon Cohen of Tel-Adar (1345) and Moses b. Tibbon of Madrid (1362), Samuel b. Tibbon, Shem Tov b. Joseph b. Falasqua and Kalonymus b. Kalonymos (1314). Levi b. Gerson of Naples (Gerondes) wrote a commentary on Averroes just as the latter had commented on Aristotle. In the Christian west, Michael Scott and Hermann, both connected with the House of Hohenstaufen,
IBN RUSHD — IBN SĀDIQ

began in 1230 and 1240 a Latin translation of the Arabic text of Averroes. Towards the end of the 15th century Niphus and Zumara made some improvements in the old translations. New translations based on the Hebrew text were later made by Jacob Maurino of Tortosa, Abraham de Bologna and Giovanni Francesco Baruna of Verona. The two best Latin editions of Averroes are those of Nimphi (1495—1497) and of the Juntas (1553).

CARTA DE VAUX.

IBN AL-SA'ĀTĪ (the son of the clockmaker), FAKHR AL-DIN RUSHD (or KHWJU) B. MUHAMMAD b. 'ABD AL-RASUL AL-KHUSHKHULI was born. In Damascus where his father had migrated from Khordan. The latter was a skilled clockmaker who made the clock at the gate of the great mosque of Damascus, at the request of the Grand-Jalal ad-Din Mustafa Nur al-Din Mahmūd (d. 582/1187). He was also learned in astronomy. Ibn al-Sakātī was a physician but he had also an extensive knowledge of literature, logic and the various branches of philosophy as well as in clockwork. He was first of all called by al-Malik al-Fārî b. al-Malik al-Adil Muhammad b. Aybūs (a nephew of Saladin) and afterwards viceroy and physician to his brother al-Malik al-Mu'āwīya b. al-Malik al-Adīd (d. 542 = 1247). He died in Damascus c. 1236. There still exists a manuscript of a work by him in Latin on the construction of clocks (the Arabic title is lacking) written in Muharram of the year 600 (1203), in which he is mainly concerned with his brother's clock which he repaired and perfected.

His brother BAKR AL-DIN 'ALI AL-ISHĀR was a well known poet who died as early as 604 (1207) at Cairo; on him cf. Ibn al-Khallīkīn, ed. Wustenfeld, ii, 499.

The Hanafi jurist MūQAM AL-DIN 'ABD AL-RAZĪQ, died in 694 (1296), is known by the same name: he was the author of a much used composition of fish, which bears the title Maqṣūr al-Bayān wa-Muḥadd ith Nāyib, because it is a compendium from the Maqṣūr al-Bayān of al-Kindī (cf. v. and the Muḥadd ith of al-Nasā'ī. On him cf. Ibn Khaldūn's Ta'rikh al-Hamayn, ed. Flügel, p. 4, and Brockelmann, s. v., i, 186 sqq.

H. SUVER.

IBN SĀDIQ, Abū MUḤAMMAD 'ABD AL-RAZĪQ, is the chief of the Syrian brotherhood, a native of Mardin, is best known in Europe by his reply to some philosophical questions put by Frederick II to the scholars of Caesarea, where Ibn Sādiq himself lived. Cf. A. F. Mehrsen, "Correspondence des philosophes und Ibn Sādiq und Hatz-Haggy von Cazurra", in Oscar v. R. de Heeren (ed., Janiss. 1903), v. 7. (V. 1, Roll. 344 sq., cf. Lit., Sehr v. 1. 1901, p. 240 sqq.) Ibn Sādiq died in Mardin c. 665 (1269).

Bibliography: Brockelmann, Gesch. der arab. Litt., i, 645 sqq.

IBN SAD, Abī 'ABD ALLAH MUḤAMMAD b. SĀDIQ b. MA'RĪZ AL-BAṢIṢ AL-ZARQA, a client of the Banū Ḥājib known as Kūh al-Wakīl (secretary to al-Wakīl). He studied tradition under Hāsībīn, Sāfīn, b. 'Īyān, Ibn Ulajā, al-Walīd, and notably with Muhammad b. Umar al-Wakīlī (q, v.). Abū Bakr b. Abī l-Dāwūd and other traditionists derived tradition from him. His great work, the Kūh al-Khāṣṣa f. the book of the cloaks, is famous and gives the history of the Prophet, the Companions and Successors down to his own time. Besides the large, Ibn Khallīkīn and 'Aṭāfīī Ḫelīfī mention his smaller book of classes. When the author of the Khāṣṣa speaks of a Kūh al-Khāṣṣa al-Nasīr Ibn Sād, this is probably not a separate work but the second part of the book of classes, which deals with the Sālāt of the Prophet. The whole work is being published under the title: Ibn al-Aslī, Biographie des Musulmans, seine Gelehrsamkeit und der schwere Stieg des Islam. The mace age and the end of his life are only mentioned in. the biographies, ibid., i, 225 sqq., in the text and the Bukālat al-Bāni, H. Horowitz, Lippert, B. Meisner, E. Mitt-

(Ende Mittwoch.)

IBN SADJA, the name of three viziers:
1. Uqayl b. Mansur al-Dawla Abu 'Ali al-Harani b. 'Ali, al-Mastura'i, his vizier. In 513 (1120-21), he was appointed vizier, but in 516 (July-August 1122) the Caliph dismissed him. His house was probationed and his nephew Abu l-Khiddi fled to Mopsul. The office was then given to 'Ali b. Turjan al-Zaidan and in Shawwa (Oct.-Nov.) of the same year, to Ahmad b. Numa al-Ma'tt. When the latter demanded that Ibn Sadja should leave the court, he went to Husayn b. Amr the Abul-Fadlan b. Mahdijah, but in the ensuing year he was restored to the office of vizier. While the Sadja, Toghril b. Muhammad was persuaded by Dadkhah, Sadja [p. v.] to march on Bagdad to subdue the whole of Iraq, the Caliph set out to meet him in Safar 519 (March 1123). Toghril and Dubul encamped at 'Abd Allah, the Caliph and the vizier at al-Darrasah, N. E. of Bagdad. Toghril and Dubul then resolved to reach Bagdad by a circuitous route. The latter was sent ahead with 200 horsemen and occupied the ford of the Diyala near al-Mawareh, but as Toghril was delayed partly by an attack of fever and partly by inundations which made his advance difficult, the Caliph succeeded in anticipating him and took Dubul by surprise. When the latter wished to come to terms with al-Mustarah, the Caliph was willing to make peace but was dissuaded by the vizier, and Toghril and Dubul continued their journey on Khuraim to seek help from the Saljuk Sultán Sanjar. Toghril b. Ibn Sadja b. al-Risa al-Harani was killed on Friday, 21st of July 1122.

2. Uqayl b. al-Din Abu 'l-Riza Muhammad, nephew of the preceding, al-Rahim's vizier. Ibn Sadja was appointed vizier after the accession of al-Rahim in 529 (1135). In the following year, when the Caliph had several high officials arrested, he sought protection with the governor of Mopsul, Zanjik b. Abi Salih, and was able to hold his office till the deposition of al-Rahim in Zhu 'l-Hijja 530 (August 1136). He afterwards filled several high offices. He died in 546 (1150-1).

3. Muhammad al-Dawla Abu l-Kasim 'Ali, al-Maktub's vizier. He is said to have been a very pious and uneducated man, who knew little of the duties of a vizier, although he belonged to a famous family.

(K. V. Zetterskern.)

IBN SA'D, Abu l-Harani 'Ali b. Mina al-
Maqdisi, an Arab philologist, was born in 610 = 1214 (according to others, 605 = 1206) at Khul al-Ya'qubi (Alqāb is Rizā) near Granada and studied with his father. He made the pilgrimage to Mecca but when they returned to his birthplace in Alexandria in 639 (1241-2) his father died there in 650 (1252). He himself remained in Alexandria but travelled in 848 (1250) to Bagdad and from there with Khul al-Din [p. v.] to Falsāgh, then to Damascus, Mopsul, Bagdad, Bajra, and Mecca. He then went to Tarsus and entered the service of Abd al-'Abbas al-Muntasir. In 866 (1467) he went again to the East and reached Arumus via Alexandria and Hazah, then returned to Tarsus and died on returning to Damascus in 869 (1473). According to another statement, he died not till 885 (1296). He wrote a history of the Maghrib entitled al-Maghrib fi Hikayat Maraghah, cf. K. Viller, Fragments aus dem Fihrist des Ibn Sa'd, Semitics, Studien, Heft 1; Ibn Sa'd, Kithâl al-Maghrib, F. Bach, Gesch. der Juden, Tästung, etc., by L. Talqvist, Leiden, 1889. He wrote various other works, the titles of which are detailed by Brockelmann and Pons Boiguex.

Bibliography: Brockelmann, Geschichte, i 380 sqq.; Pons Boiguex, Enzyklopaedie der arabischen Literatur, p. 396 sqq. Cf. also the bibliographical references given by Brockelmann.

IBN SAIYID AL-NAS, Fath al-Din Abu l-Fath Muhammad b. Abu Bakr Muhammad al-Yamani al-Asfanayi, an Arab biographer, born in Cairo in 661 = 1265 (according to others, 674 = 1275), studied there and in Damascus and became a teacher of the Malmac in the Zuhayriyya at Cairo. He compiled a full biography of the Prophet entitled Du'â al-Ahmar fi Fath Muhammad al-Maghrib, al-Shamalân wa l-Tamir (somewhat differently given in Brockelmann, men below). He also wrote a number of khalettes in praise of the Prophet, entitled Mawâqif l-Latîf af fi Dhikr l-Halâl. One of these is published by Kosgarten (Studiaislam 151) and Bouquet (Revue orientale 1856).

Ibn Saiyid al-Nas died in 734 (1334).

Bibliography: cf. the references in Brockelmann, Geschichte etc., ii 72 sqq. and Pons Boiguex, Enzyklopaedie der arabischen Literatur, p. 506 sqq.

IBN SARAFA [See al-Hall].

(IBN SA'AUD, the name of the Wahhabis dynasty of Darîyâ [see p. 156].) al-Riyadh. Muhammad b. Sa'dl, the founder of this dynasty, was a member of the Mu'tah tribe of the tribe of Maudhij of the Wahhabis, who are considered to belong to the great 'Amza genealogy. According to the genealogy of the Ibn Sa'dl, he left 3 sons beside Muhammad b. Sa'dl: Sa'dl b. Muhammad b. Sa'dl, who in 1908 occupied the line of Muhammad b. Sa'dl to this day, the collateral lines
of Ibn Thalafin and Ibn Mughrit produced two narratives (see vii. and a. below): but attained little prominence in the history of the dynasty. Faras and his descendants only figure in the genealogy. The history of the Wahhabite kingdom of Darîyas-Riyadh may be divided into three periods: the first nine months from the foundation to the conquest of the land by the Egyptians in 1260 (Darîyas as capital). The second covers the period from the restoration by Turki and Faisal to the conquest by the Ibn Rashid of Hail in 1386-1387 (Riyadh capital); the third begins with the reoccupation of Riyadh in 1902.

I. Muhammad b. Sâ'id: 1255 (7) - 1276. About 1340 Muhammad b. 'Abd al-Wahhab, the founder of the Wahhabite doctrine, was driven from 'Albridge where he had been active and sheltered with Muhammad b. Sa'id, a friend of his. He two combined in the spread of the new doctrine with preaching and the sword. The fighting with the surrounding towns and tribal districts began in 1259 (begins 24th Jan. 1748) and soon led to the intervention of some powerful neighbours, like the Bani Khalf of Lailat and the Makram of Najrân, who were however unable to check the progress of the Wahhabites. The Wahhabite pilgrims were regarded as secessionists by the Sharifs of Mecca and excluded from visiting the holy places. The Sharifs of Mecca on this occasion in 1259 (begins 23rd Dec. 1749) brought the first news of the new sect to Constantinople. Muhammad b. Sa'id died in 1279 (1765-6) after reigning about 30 years.

II. 'Abd al-Á'la b. Muhammad b. Sa'id: 1279 - 1287 (1766 - 1803). The first decades of his reign were passed in constant fighting with the neighbouring towns and tribes, the Bani Khalf, the Makram, and the Muntah. In 1285 the Wahhabites stormed Lailat and Kays and thus established themselves on the coast of the Persian Gulf; the repeated attempts of the Turkish governors of Basra and Baghdad and their allies the Muntah to oust them from there (1277 the Muntah Sharif Thawr's campaign; 1278 Kays 'Ali Pasha's campaign) were repeatedly and in 1279 was the six-year truce between 'Abd al-Á'la and the Franks of Bagdad. The Sharif Sisur of Mecca had in 1186 (1722-3) granted the Wahhabites' the right of entry to the holy places on payment of a tax; his successor Ghâlib (from 1802) withdrew this concession and undertook unsuccessful campaigns in 1279, 1295, and 1298 to check the advance of the Wahhabites into the Hijaz; he had to make peace with them in 1298 and allow them to make the pilgrimage, and they in return promised not to make further raids into the Sharifs' sphere of influence.

The peaceful relations with Baghdad and the Sharifs were of short duration. To revenge an attack by the Sháî Tha'lî on a Wahhabite caravan, Sa'id, son of 'Abd al-Á'la, fell upon Kaisari, on the 12th (21st April 1802) plundered and laid waste the Sháî's territories there, and massacred most of the inhabitants. In 1294 and 1295 (April 1800 and 1801) Sa'id had made the pilgrimage; about the same time the tribes of Asir and Thána as well as the Bani Harth, who had hitherto been subject to the Sharif Ghâlib joined the Wahhabites, which led to open hostilities. On the 25th Shawwal 1297 (18th Feb. 1803) the Wahhabites stormed Ta'll and on the 9th Muharam 1298 (10th April 1803), Sa'id made his triumphal entry into Mecca. After Sa'id's return the Sharif Ghâlib drove out the Wahhabite garrison in Mecca (12th Rail 1298 = 14th July 1803) but was forced to make further concessions to the Wahhabites.

About 1800 the Wahhabites began to extend their power along the coast of the Persian Gulf where in the course of the next few years they subjected Qatif and the coast tribes, namely the Arab tribes of Ra's al-Khaimah.

On the 19th Rajab 1271 (4th Nov. 1805), 'Abd al-'Ali was stabbed by a Shâî from 'Amul in the mosque of Darîyas.

III. Sa'id b. 'Abd al-Á'la: 1288 - 1299 (1803 - 1814). After several smaller enterprises against Bagdad and Oman, Sa'id resolved to put an end to the rule of the Sharif Ghâlib and occupied Medina in 1290 (1805) and Mecca in Dhu al-Qa'da of the same year (January 1806). To save the remnants of his power Ghâlib submitted absolutely to the Wahhabites, who now introduced their teaching into the Hijaz. The pilgrims came to the Hijaz, equipped by the Turkish governors, with forbiddings admission to the sacred territory, the Sharifs in the name of the Sultan, abolished, Sa'id demanded in a formal letter that not only the governor of Damascus, but the Sultan himself should adopt the Wahhabite creed. To the emphatic refusal of the Franks of Damascus, Sa'id replied by plundering Hawazin in July 1809. Sa'id organised the piracy of the coast tribes on the Persian Gulf on a great scale so that the Indian Government was forced in 1809 to equip an expedition which stormed Ra's al-Khaimah on Nov. 15 of this year and destroyed the pirate fleet.

The Franks unable to defend its own territory from the attacks of the Wahhabites finally commissioned Muhammad al-Á'la, Pacha of Egypt, to reconquer the Hijaz.

The first campaign of the Egyptians under Thaîth Pacha began with the reconquest of Yemn al-Haji and Yemn al-Hamra at the end of Oct. or beginning of Nov. 1811; on his advance on Medina Thaîth Pacha however was defeated on the 7th Dhu al-Qa'da 1292 = 23rd Nov. 1811 in the narrow pass of 'Eneida by 'Abd al-'Ali and Faisal, Sa'id's sons and had to retire to Yemn. It was not until the late autumn of 1812 that he renewed his operations, this time with more success. Medina capitulated in November, Mecca at the end of January 1813 and Ta'll was stormed a few days later; on the other hand the Wahhabites succeeded in checking the further advance of the Egyptians at Tarab (summer 1813). At the end of August Muhammad 'Ali himself landed in Djidda and Sa'id sought in vain to negotiate peace with him. A second attempt of Thaîth Pacha against Ta'raba (the end of 1813) was as unsuccessful as the first and the operation of the Egyptians came to an end till the beginning of 1815. In the meanwhile Sa'id died on the 2nd Dhu al-Qa'da 1292 = 27th April 1814 in Darîyas at the age of 61.

IV. 'Abd al-Á'la: 1297 - 1323 = 1803 - 1832. On 27th April 1814 - 9th Sept. 1818. In the beginning of 1813 Muhammad 'Ali resumed his march against Taraba, defeated the Wahhabites at Taraba on the 25th January and took the town; he next advanced against Asir and returned via Khofda to Mecca. Thaîth Pacha entered Nadîj via Hasakeh in March
and seized the fortified town of al-Rass where 'Abd Allah b. Sa'ud met him. Aănguthunità followed and peace negotiations which lasted till 1816. In Sept. 1816 Ibrahim Yashu, son of Muhammad 'Ali, took over the supreme command in Arabia and led his army amid great privations and fierce fighting for eighteen months up to the gates of Daryaty. (Gest of 'Abd Allah al-Ma'ayyur on 28th May 1817, capture of al-Rass in the 21st Oct. 1817 after a thirteen months siege, storming of Daryaty in March 1818). The siege of the capital defended by 'Abd Allah and his relatives lasted from the beginning of April to the beginning of Sept., after the town had fallen on the 9th Sept. 'Abd Allah held on for a few days longer in the Ka'i Daryaty and surrendered on the 9th Sept. to the victor who sent him to Cairo with his family and the descendants of Muhammad b. 'Abd al-Wahhab. Muhammad 'Ali 'sent 'Abd Allah with his secretary and khamadar to Constantiople, where they were all beheaded on the 17th Dec. 1818.

V. After Ibrahim Pasha had left Najd in the first half of 1817, his brother b. Sa'ud, a brother of the executed 'Abd Allah, succeeded in establishing himself in Daryaty; after a short time he was captured by 'Husain Bey, whom Muhammad 'Ali 'sent against him and deported to Egypt where he died; the Chancery of Rashid al-Husayni listed the years 1355-5 (1838-39) to his reign.

VI. Turki b. 'Abd Allah b. Muhammad b. Sa'ud, 1823-49 (1820-1835). He had fled to Sedir during the Egyptian invasion and endeavoured to establish himself in Riyadh after the death of Muhammad b. Sa'ud (V), but was driven out by the Egyptians. In 1824, however, he succeeded in capturing the weak Egyptian garrison of Riyadh, and after fighting for some years against the governor of the Hadja, he finally agreed to pay tribute to Muhammad 'Ali. In 1830 he seized the district of Lahaj which had been occupied by the Turks in 1813 and subdued Bahrais. Riyadh became the capital of the new Wahhabi kingdom in place of the destroyed Daryaty. He was murdered in 1834 (1842) by

VII. Muhannad b. 'Abd al-Rahman b. Muhammad b. Hasan b. Muhammad b. Sa'ud, but the latter was attacked in Hufuf 40 days later and slain by 'Abd Allah, the son of VI.

VIII. Faisal b. Turki, first reign 1249-55 (1834-8). In 1837 Khalid, a son of Sa'ud (VI), rose against him with Egyptian help, took Daryaty, and defeated Faisal at Riyadh. Khalid Pasha, the commander of the Egyptian troops, defeated Faisal a second time on the 21st Ramadaan 1245 (10th Dec. 1838) at al-Dereem, took his prisoner, and deported him to Egypt.

IX. Khalid b. Sa'ud, 1255-7 (1839-41). After the withdrawal of the Egyptian troops in 1840, he was driven out of Riyadh by 'Abd Allah b. Thunayn, in Dec. 1841 and retired to Djaridha, where he died in 1861.

X. 'Abd Allah b. Thunayn b. Ibrahim b. Thunayn b. Sa'ud, 1257-9 (beginning of 1842 to 1843). After reigning barely a year he was humbled at Riyadh by Faisal (VIII) who had regained his liberty in 1841, and taken prisoner. He died in captivity.

XI. Faisal b. Turki, second reign 1259-62 (beg. 1842 to Dec. 1845). By a wise and peaceful policy he was able to establish the rule of his dynasty in Najd; in his time began the rise of the Ibn Rashid (VII) of Jilab al-Summar, who were his allies. He was on good terms with Egypt and the Ottoman. In his reign Faisal visited the country in 1862-3, and Felly in 1865, he died of cholera on 13th Rajab 1282 (2nd Dec. 1865).

XII. 'Abd Allah b. Faisal b. Turki, first reign 1282-7 (beg. Dec. 1865 to beg. 1871). He was dethroned by his brothers in 1867.

XIII. Sa'ud b. Faisal b. Turki, 1287-92 (1871-76); at the beginning of his reign the Turks, summoned by the banished 'Abd Allah, occupied Lahaj as well as Ka'i and held them in spite of Sultan's repeated attempts to regain them.

XIV. 'Abd Allah b. Faisal b. Turki, second reign, 1291-1301 (1874-84). After Sa'ud's death he regained his throne and held it against his brother Muhammad and Sa'ud's men, who disputed it with him. In 1883 he was involved in war with Muhammad b. Rashid of Haffar and was banished by his nephew, the son of Sa'ud, in the beginning of 1884. As a result,

XV. Muhammad b. Sa'ud came to the throne; his rule was of short duration; he was succeeded by his uncle.

XVI. 'Abd al-Rahman b. Faisal, 1-1886; he was dethroned by Muhammad b. Rashid, who placed on the throne.

XVII. 'Abd Allah b. Faisal (for the third time, 1887-1888). The latter died partly in 1888 and Sa'ud then became a dependency of Haffar in spite of 'Abd al-Rahman's repeated attempts to regain the vacant throne. In 1888 Mu'awiyah b. Rashid conquered Riyadh and in 1892 appointed...

XVIII. Muhammad, the third son of Faisal, Amir of Riyadh. After the death of Muhammad (in 1892) Riyadh seems to have been governed by Ibn Rashid's officials.

XIX. 'Abd al-Aziz b. 'Abd al-Rahman b. Faisal, since the beginning of 1902. With the help of Sheikh Mahfuz of Kuwait, with whom his father had found a refuge, he regained Riyadh in March 1902 by a coup d'etat and successfully held it against the House of Haffar, who finally called on the Turks to help them. Nevertheless, he succeeded in quelling the anarchy prevailing in Haffar, and with the help of the people, who were attached to the house of Sa'ud, in remaining the supremacy of the Kingdom of Riyadh.

Notes:
6. ('Abd al-'Aas) was 82 at his death in 1803 (Mengin, ii. 487) cf. Scott-Waring, p. 177 of the French transl.
8. (Sa'id) 68 at his death (Mengin, ii. 20), Roussan and Burchhardt say 43-50.
9. ('Abd Allâh) in 1815 brought about the truce of al-Kas (Mengin, ii. 430-97) his son Sa'id was killed in 1819 after the capture of Darîya (ib. p. 131; Shafi'da, ii. 385).
10. ('Abd al-Rahman) deported to Egypt in 1818.
11. ('Omar) deported to Cairo with his sons in 1818 or 1820.
12. Mengin gives a portrait of 'Abd Allâh.
13. (Fahd) fell at the siege of Darîya in 1818 (Mengin, ii. 129).
14. ('Najib) fell on a raid against Mancat (Burchhardt, ii. 122).

22. (Turkî) led a raid in 1819 and Syria (Burchhardt, ii. 122).
25. (Sa'id) defended a fort of Darîya in 1818 and was deported to Cairo with his brothers 'Najib and Muhammad in 1818 (Mengin, ii. 330, 133, 158).
28. (Khalid) is only mentioned by Ayyub Sabri, p. 266, probably a confusion with 17.

The Encyclopedia of Islam II.
IBN SINÂ, Aṣ'AL AL-ḤOŠAYN IBN 'ABBÂD AL-ÂLI (Lat. AVECOSIA de HEB. AVEN SENNA), was for centuries and still is in parts of the Muslim east considered the prince of all learning al-Mašâkî, al-Khârîj. His biography, given by Ibn 'Abî Q̄ābi'î (ed. A. Mâlikî, ii. 254) was compiled by his pupil Abî Umar al-Mâshâkî from his own notes. According to it he was born in 370 = 980 at Aṣفânâ near Bukhârî. His father had moved from Balkh to Bukhârî, was appointed governor of the citadel of Kharâjât, and had married in Aṣfânâ. After the birth of two sons he resumed his residence in Bukhârî, where the latter received their education. Up to his tenth year Ibn Sinâ had a tutor in Kârân and Adhâb. He was introduced to secular learning by Ibrâhîmî’s propagandists who had been received in his father’s house, but their speculations on the soul and the intelligence made no great impression on him at first. After studying sīkh he was taught logic, geometry, and astronomy by Abî ‘Abd al-Âllâh al-Nâthîlî. The student who developed essentially physically and mentally soon outstripped his teacher whom he studied by himself, metaphysics and medicine. His practice of medicine soon enabled him to understand it better but metaphysics only became clear: to him after studying one of al-Fârâbî’s works. This decided his philosophical development, al-Fârâbî’s metaphysical and logical speculations which originated in the Neo-Platonic commentaries and paraphrases of Aristotelian works, determined the direction of his thought. He was then 16 or 17 years of age.

At the same time the marvellous joy had the good fortune to cure the sultan of Bukhârî, Nobâ b. Mansûr, and as a result received admission to his library. Endowed with a marvellous memory and rapid power of assimilating knowledge, in a short time he gained here all the knowledge that enabled him to systematise all the learning of his time. He began to write at the age of 21; his style as a rule is clear and comprehensive.

After the death of his father—he was now 22—İbn Sinâ lead an unsettled life, full of work and enjoyment but also of disappointments. When at rest at the courts of Ṭurânîn, Rayy, Hamadân, and Bukhârî, he wrote his great works, of which we may specially mention the philosophical encyclopedia, Kitâb al-Kiftâ (Ṭebûrî, 1313), and his chief book on medicine, al-Fâsînî al-Hânî (Ṭebûrî 1254, Bukhârî 1249); on his travels he wrote synopses of his larger works and treatises of various kinds. Sometimes his activities were scientific, sometimes political, the latter with slight success. He is important as the universal encyclopaedist, who fixed the system of learning for centuries following.

Our philosophy spent the last years of his life under the protection of Abî al-Dawwâr in Isfâhân. On the latter’s campaign against Hamadân in 428 = 1037, Ibn Sinâ fell ill on the way and died in Hamadân where his grave is still shown. His works were much read, unamended, and translated into western languages. He lives in the popular tradition of the east as a magician, a kind of ‘poet-piper’.

İbn Sinâ’s doctrines which still possess great authority in theological, philosophical, and medical circles of the east, in spite of their partial refutation by al-Ghazâlî, cannot be fully expounded here but only briefly indicated and characterized.
In logic and epistemology Ibn Sina closely follows Al-Farabi. This is true also of the question of universals, which is at the heart of metaphysical importances. The universal is said to exist in the mind of God and the angels (spirits of the sphere) independently of the existence of the many particulars. It manifests from the divine spirits communication by multiple interpenetration on the one side to the particulars and on the other to human intelligence in which plurality is raised to a concept of unity and universality. More Neo-Platonic than Aristotelian is the view that the concept is primarily a gift of the super-human spirits rather than a product of the abstractive faculty of the human reason.

Although he expounds it fully, Ibn Sina only considers logic an introductory science. Philosophy proper is either theoretical or practical: the former is divided into physics, mathematics, and metaphysics, with their applications, the latter into ethics, economy, and politics. Ibn Sina gives little attention to the practical parts of philosophical science. The series, physics, mathematics, metaphysics, makes a gradual advance from the material to the abstract. It is true that metaphysics is generally defined as the science of all being, so that material being is the problem and not the direct object of this science, but this problematic becomes the main point in philosophical expulsions.

Ibn Sina's physics is the whole of his Aristotelian tradition, although there are also Neo-Platonic influences here; particularly for example in the doctrine that earthly happenings are reflections to the immaterial, not through their warmth but through the intermediary of light. Neo-Platonic also are the speculations on the intelligences, in which results his otherwise finely developed psychology.

Ibn Sina had most influence through his medicine, in the west down to the XVIIIth century, in the east still now. He is the Arab Galen. How far he incorporated observations of his own into this science, has still to be investigated. In theory at least he gives evidence a large place and discusses the conditions, under which the healing effect of a medicine shows itself.

Ibn Sina's paraphrase of Aristotelian metaphysics (leaving aside his little known mathematics) besides the metaphysical remains contains an attempt at reconciliation with Muslim theology. The division mind and matter (actuality, and potentially), God and world, is more marked in him than in al-Farabi, and the doctrine of the immortality of the individual souls is more clearly laid down. Matter is defined by him as possible being or merely passive possibility and creation is said to consist in granting actual existence to this possible being. Only in the Deity are being and existence one, but in all that is not the Deity, existence is an attribute of being. In theological terminology, the granting of real existence is called creation, but it is an eternal creation. God, the absolutely uncreated and uncreated being, is also a necessary cause, which must work from all eternity, whose effect, the world, is therefore eternal. In itself this is possible (contingent), from the point of view of its divine cause it is necessary. Ibn Sina distinguishes the contingency of this at once possible and necessary being from the contingency of all earthly happenings, that exist for a time, the solar year is the world of the merely possible.

The metaphysical doctrine of the soul in particular induced our philosopher to mystical reflections, some in poetical form. Great danger faced him once to escape his enemies in Cilician exile. It may therefore have been in hours of depression, that there was a necessity for him to use the language of mysticism. It is therefore an occasional mysticism which pervades the building of his system but does not carry or support it.

(T. J. van Egmond)

IBN SIRIN, MUHAMMAD, was a contemporary of Hāfiz al-Baght [q. v.]. His father is said to have been a thinker of Djurdjariyya, who was carried off as a slave by Khalif b. Al-Walid from Ahl al-Tamir. His mother Safiya was a client of Abul Bakr. Muhammad belonged to the second generation of transmitters of tradition; his authorities were Abu Hārira [q. v.], Abu 'Abd b. Omar [q. v.], Anas b. Malik [q. v.], etc. He settled in Basrah, was noted for his ascetic piety like his sister Hafsa (cf. Ibn Sīnā, Ta'lab, viii. 355 sqq.), and was considered an authority on the interpretation of Qur'ān. Treatises on the subject were therefore frequently written by later authors under his name, for example the Mu'tahabah al-Kullin fi Tafseer al-Asbāb, Cairo 1868, and on the margin of
IBN SIRIN — IBN TAIMIYA.

IBN SURAIDJ, Abū l-'Aznām Ahmad b. Umar b. Suraidj, was, according to the Arab biographers, one of the greatest Shī'ī teachers of the third century. Many celebrated Shī'īs were his pupils, and he attained such repute that he was considered by many to be superior to all other Shī'ī students, even al-Maznī. He was 830 in Shī'ī works and wrote treatises refuting the Zhikrīs, etc. The Shī'īs have no historian, but none of them now exists. Only a few of the titles of his works are known. He died at the age of 57 in Baghdad in 906 = 918.

(Christ. W. Juybānī)

IBN SURAIDJ, 'Ubayd Allāh Abū Ya'qūb, a Mecca sinner and composer of the oldest Umayyad period, was the son of a Turkish slave in Mecca and a client of the Banū Nawfal b. 'Abd Mallāh, of the clan 'Abd al-Hārīr b. 'Abd al-Muqāṭalah. He began his career as a musician in the caliphate of 'Abd al-Malik. He is said to have been the first to introduce the Persian flute into Mecca and to have learned its use from the Persian musicians imported by Ibn al-Zubair to rebuild the Ka'ba. When at the height of his fame he was an intimate companion of 'Omar b. 'Abd al-Rahmān (q. v.), whose love poems he set to music, but he also enjoyed a great reputation as a composer of elegies. But as his art could only be transmitted orally, it was soon forgotten after his death; in the time of the sinner Dhu 'ayy's his tunes were only known to a few old people. He died in the reign of 'Abbasid (105-125 = 724-744).

IBN TĀ'-AWIΔHILL [See Al-Tawīlī, D.]

IBN TĀ'AWIΔHILL. [See Al-Tawīlī, D.]

IBN TAIMIYA, Tā'īr, Abī l-Dīn Abū l-'Aznām Abū Naṣr 'Abd al-'Azīz Abū al-Husayn al-Muhammad b. Abī al-'Izm Ar-Rahmayn, Arab theologian and jurist, was born on Monday 10th Rabī' I 661 = 22 January 1263 at Ḥaram, near Damascus. Fleeing from the excesses of the Mongols, his father had taken refuge at Damascus with all his family, in the middle of the year 667 = 1268. In the capital of Syria, the young Abū Naṣr devoted himself to the study of Muslim sciences and followed his father's lectures and those of Ẓāfir al-

Ibn Ahmad b. 'Abd al-Dīn al-Mukhtar, Nadjm al-Dīn b. 'Azzār, Zanadi b. Makkī, etc.

He was not yet 20 when he completed his studies, and at the death of his father in 681 = 1282, he succeeded him as professor of Hanbali law. Each Friday he expounded the Kūfīn al-nahy. Well versed in the Kūfīn sciences, Law, hadith law, theology, and the tradition of the earlier Muslims by arguments which, although taken from the Kūfīn and Hadith, had hitherto been unknown; but the freedom of his polemics made him many enemies among the scholars of the other orthodox schools. In 691 = 1292 he made the pilgrimage to Mecca. In Rabī' I 693 (1293) or 694 at Cairo he gave to a question sent from Hamza on the attributes of God, a "response" which displeased the Shī'ī doctors, aroused public opinion against him, and cost him his post of professor. Nevertheless he was appointed the same year to preach the Holy War against the Mongols and for this purpose went next year to Cairo. He was present in the battle of Shirdah, near Damascus, won over the Mongols. After having in 704 = 1305 fought against the people of Djasud Khamwah in Syria, including Isma'īlīs, Naṣufīs, Ḥikmatīs, who believed in the infallibility of Abī l-Dīn al-Tā'īrī and considered the Kompaniyya unbelievers, neither prayed nor fasted, ate pork etc. (Maṣūḥ, Kāmil, p. 105). He went in 705 = 1306-7 to Cairo along with the Shī'ī kāfīr, where, after five sittings of the council of judges and notables in the Sultan's audience-hall who had accused him of anthropomorphism he was condemned to be interred with his two brothers in the dungeon (gūhāt) of the mountain citadel; he remained there 4 years and a half. In Shawwal 705 (1306), he was exonerated regarding a work which he had written against the Ikhwānīs, i.e., the al-Salāt. But the evidence he gave disarmed his enemies at once. Sent with the post back to Damascus he was forced to return after one stage of the journey and for political reasons was imprisoned in the kāfīr's prison for a year and a half, which he spent in teaching the principles of Islam to those under confinement. But after a few days of liberty he was shut up in the fortress (tard) of Alexandria for eight months. He then returned to Cairo where, although he refused Sultan al-Nasir fīrāsūn allowing him to revenge himself on his enemies, he obtained the post of professor in the school founded by this prince.

In the 'Aṣālīs 712 = Year 713, he was authorized to accompany the army departing for Syria, and after passing through Jerusalem, he encountered Damascus after an absence of seven years and seven weeks. He than resumed his duties as professor, but in Djumāda II 718 = August 1324, he was forbidden by royal order to give fatwās on the oath of reparation (to swear to repudiate a wife for example if something is done or not done), a question on which he had allowed himself several concessions not admitted by the jurists of the other three orthodox schools (Ibn al-Wardī, Ta'īlī, u. 267) that hold that he who takes such an oath, although he is bound to fulfill his contract, is liable to an arbitrary punishment.

Refusing to obey this order he was condemned to imprisonment in the citadel of Damascus. In Shawwal 720 = 721 he was given 4 nights in bed, and 40 days later he was set at liberty by order of the sultan. He resumed his old habits till his enemies learned of his
future regarding the elevation of tombs of saints and prophets, which he had named in 1310 = 1700, and in Shaba't 726 = July 1326 he was by the Sultan's order interned in the citadel of Damascus. He was allotted a room, in which attended by his brother he devoted himself to writing a commentary on the Kuran, pamphlets against his detractors and entire volumes on the questions which had resulted in his imprisonment. But when these works came to the knowledge of his enemies, he was deprived of his books, papers and ink. This was a cruel blow to him, and although he sought relief in prayer and the recitation of the Kuran, he fell ill and died in twenty days in the night of Sunday-Monday 20th Dhu 'l-Qu'dah 728 = 26-27 Sept. 1328. The people of Damascus who held him in great honour, gave him a splendid funeral and it was estimated that 200,000 men and 15,000 women attended his obsequies at the 8th century. Ibn al-Wardi composed his funeral elegy. Although belonging to the Hanbali school, Ibn Taimiya did not follow all his opinions blindly but considered himself a mujaddid of the Kuran (i.e. mujaddid al-Kitab). His biographer Mar'i in Karmatit (p. 214 aya) gives a chapter of praise of him. Ibn Taimiya rejected the hadith [q. v.] and even the qiyas (reasoning) [q. v.]. In the majority of his works he claims to follow the letter of the Kuran and the Sunnah but he does not think it wrong to employ qiyas, reasoning by analogy (notably Mafhuzat al-Kur'al-Dhakhir, i. 207) in his polemics; indeed he devoted a whole chapter (cf. cite, ii. 217) to this method of reasoning.

A bitter enemy of innovations (bid'ah), he attacked the cult of saints and pilgrimages to tombs but he did not the Prophet say: *O you should only journey to three mosques: the sacred mosque of Mecca, that of Jerusalem, and mine* (cf. cite, ii. 93). Even a journey solely undertaken to visit the tombs of the Prophet is an act of disobedience (mujaddid) (Ibn Haajar al-Haythami, Fatwa, p. 87). On the other hand he considered a visit paid to the tomb of a Muslim, an illicit act, following the opinion of al-Shafi'i and Imam al-Nabahinî, only, if it necessitated a journey and if it had to take place on a fixed day. With these restrictions he considered it a traditional duty (Ja'f al-Din al-Haithami, al-Karn al-Dzahali, i. 212 aya).

An inveterate anthropomorphist, Ibn Taimiya interpreted literally all the passages in the Kuran and tradition referring to the Deity. He was so imbued with this belief that, according to Ibn Haajar, he said one day from the pulpit in the mosque of Damascus: "God comes down from heaven to earth, just as I am coming down from the pulpit and he again at the top of the pulpit, staircase" (cf. especially Mafhuzat al-Kur'al-Dhakhir, i. 587 aya).

Both by word and pen he combatted all the Muslim sects: Kharijî, Marja', Isma'ilî, Maliki, Mu'tazili, Druze, Kharramî, Asharî, etc. (cf. Kuran al-Furqan, p. 133, in the Mafhuzat, quoted, i. p. 2). al-Nasir ibn Dastughein, this and is only a fusion of the opinions of the Kharmât, Nadjâhid, Qdiris, etc. He particularly objected to the explanation of the predestinarians (zuhd), the divine attributes (amad) and judgments (ahuw), execution of order (laj' al-ahd), etc. (cf. cite, ii. 77, 445 aya).

In many cases he disagreed with the opinion of the principal jurists. For example I. He rejected the practice of i'tiraf by which a woman definitively divorced by triple repudiation (tala'ah) could be married again by her husband after having contracted a subsequent marriage with another man who had agreed to repudiate her immediately afterwards (mudhaffah, he who makes permissible). 3. Repudiation pronounced during a menstrual period is invalid. The repudiation pronounced by divine order is admissible and if one pays them he is freed from zakhar. 4. To hold an opinion contrary to i'tiraf is neither sinful nor impious.

He also attacked the reputation of men whose authority is recognized in Islam: Omar b. al-Khayyaj made many mistakes, he said, in the pulpit of the mosque of al-Jazirah in al-Salamiyya. Abu al-Talib made three hundred mistakes, was another of his pamphlets. He also violently attacked al-Ghazali, Muhyi 'l-Din Ibn 'Arabi, 'Omar b. al-Faraj and the Shi'ites in general. As to the first, he attacked the philosophical views laid down in his Manzâr, min al-Darâ'is and even in his al-Tahâfus, which contains a large number of speculative philosophies. The Shi'ites, from the same valley (min al-dâ'ir al-madâ'ir), he declared, Greek philosophy and its Muslim representatives, notably Ibn Sina and Ibn Sabîn, were attacked in the great vigour by Ibn Taimiya. "Does not philosophy lead to abusivi; is it not for a great part the cause of the different schisms which have been produced in the bosom of Islam?"

Islam being sent to replace Judaism and Christianity is naturally attacked Ibn Taimiya to attack these both religions. After accusing the Jews and Christians of changing the meaning of a certain number of words in their sacred books (see his works, Ns 35, 45, 46 and 45 below), he wrote pamphlets against the maintenance of buildings of synagogues and particularity of schisms (cf. Ns 46).

Muslim scholars are not agreed on the orthodoxy of Ibn Taimiya. Among those who consider him at the very least a heretic we may name: Ibn Ba'qiyah, Ibn Haajar al-Haythami, Taqi al-Din b. al-Subki and his son 'Abd al-Wahhab, 'Ibn al-Din al-Ibn Jami'a, Abu Hajjaj al-Zahir, al-Muhammadi, etc. However, those who praise are perhaps more numerous than his detractors: his disciple Ibn Kiyam al-Djawazi, al-Dhahabi, Ibn Khattab, al-Sa'arî, Ibn al-Wardi, Ibrahim al-Kurâni, 'Ali al-Kari al-Harewi, Mahbub al-Alisi, etc. This divergence of opinion on Ibn Taimiya exists to this day. Yahya al-Nabâhî does not spare him in his Karmatit al-Furqan, al-Nurâ'l-Dhakhir, Ibn al-Haithami, ou Karâ al-Dhakhir (Cairo 1235), which was reprinted by Abu'l-Murs al-Muhibb al-Nabâhî in his Ghâlî al-Dhakhir, l. 9, Karâ al-Dhakhir (Cairo 1235).

We know that the son of the Waheabiah was connected with the Hanbali scholars of Damascus and it is natural he made use of their works and particularly of Ibn Taimiya's teaching and that of his pupil Ibn Kiyam al-Djawazi (q. v.). The principles of the new doctrine are those for which the great Hanbali theologian struggled all his life. (Cf. WAHIBIYAH.)

Of the 500 works said to have been written by Ibn Taimiya only the following survive: 1. Karmatit al-Furqan ala' al-Hâfiz wâl-Hâfi, 2. Muhibb al-Wasa, 3. Ma'ârif al-Wasa', a refutation of the philosophers and of the Karmânis, who say that the Prophet in certain circumstances may lie, etc.; 3. al-Ta'âruf al-
a sovereign is followed by an account of his ministers. This second part is generally taken literally from Ibn al-`Aţība’s Kitāb al-Tāriqqah but also contains a narrative of lost works such as the medium history and the Annals of al-Ma‘ād; the history of the ministers comes from al-Shāh and from Hādī al-Shāh. Although clearly 50% in tenu-ency, this book is not based on (K. Amar). The date of the text from the MS. of the Bibl. Nat. Paris, 1642, is the only one known, hence it is published by H. Alwahidi (Gotha 1866); some fragments of it had been given by Joulin, Fundaments der Orient, v. 28-47; de Goez, Christi schenheit, 1. 1-48; Hennings, Frag mente archäe, d. 1628, p. 1-204, and Freytag, Christi schenheit, d. 1628, p. 54-96 (the dates given p. iv. are incorrect) and with a French translation by Cherbouneau, Journ. As., 1846, i. 297-359, ii. 316-358, 1847, i. 334-347; the second edition which makes use of a second copy discovered in the same collection (n. 2443), is due to Jastrzybsey, Bibliotheca Christi schen, 1846. It is most likely that W. Darmesteter, Études de Histoire Chrétienne, 1895, and his copy has been translated into French by Ch. Marcolini, XL. xvi, 1910. The word ἰδέα (idea) seems to be omnisopoeic (tiecan) applied to fluent and var-bose speech (Tal. al-Aris, vi, 424, quoted by H. Dersenbour, p. 4). (Ch. Huart.)

**IBN TUFAIL** a celebrated philosopher of the Maghreb, whose full name was Abû Bakr Muhammad ibn Abû al-Malik ibn Muhammad ibn Abû Bakr al-Tufail. He belonged to the prominent Arab tribe of Kays; he was also called al-Mansuri (the Spaniard), al-Kurashi (the Cordovan or the Spaniard the Sevillian). The Christian scholars call him Abūnax, a corruption of Abu Inay.

Ibn Tufail was probably born in the first decade of the 10th century a. d. in Wilad Abu in the modern Graznada, 40 miles n. w. of Granada. We know nothing more about his family. That he had been a pupil of Ibn Badjī [q. v.] as is frequently stated, is incorrect, for in the introduction to his romance he says that he was not acquainted with this philosopher. He first of all practised as a physician in Granada and then became secretary to the governor of the province. In 1134 he became secretary to the governor of Castile and Tangier, a son of Abû Muhammad, the founder of the Almohad dynasty. Finally he received the appointment of court physician to the Almohad Sultan Abû Ya‘qub Yusuf (1115-1134). It has also been thought that he was the better writer, but it is doubtful if he really held this title, as only the title is given to him by L. Godthi points out. Al-Dhahabi (q. v.) says that he was his pupil, simply calls him Abûnax (L. Godthi, Ibn Tufail, p. 6). In any case Ibn Tufail always had great influence with this prince, which he used to attract scholars to the court. For example he introduced the young Averroes to the Sultan. The historian Abû al-Walid al-Marriqani (al-Mas’ûdî, ed. Daur, p. 174 sq. transl. by Fagman, p. 201-210) gives a description of this meeting from Averroes own account. On this occasion the commander of the faithful showed a remarkable intimacy in philo-sophical matters. It was also Ibn Tufail who, at the instigation of the prince, advised Averroes to annotate the works of Aristotle. This is stated by Abû Bakr Bandúlî, a pupil of Ibn Tufail, who says further: “The commander of the faithful was exceedingly attached to him (Ibn Tufail). I am told that he remained whole days and nights in the palace with him without coming out”.

In 378 our philosopher on account of his advanced age was succeeded by Ibn Rushd as court physician to the Caliph. But he continued to retain Abû Ya‘qub’s favour and, after the latter’s death in 380, retained the friendship of his son, Abû Ya‘qub Yusuf. He died in 381 (1185-6) the Caliph leasing attending his obsequies.

Ibn Tufail is the author of the celebrated philosophical novel “Ibn Tufail,” one of the most remarkable books of the middle ages, of which we shall have more to say below. Little else from his pen is known. He also wrote, according to Joulin, some notes on medicine and corresponded with Avempace about the latter’s medical work al-Kutubiyya. According to the astronome al-Bīrūnī and Ibn Rushd in his medium commentary on Aristotle’s Meteorologie (cf. xii), he is said to have had original astronomical ideas. Al-Bīrūnī attempted to refute Ptolemy’s theory of epicycles and eccentric circles and says in his preface that he is following the ideas of Ibn Tufail.

The philosophical romance “Ibn Tufail,” which was published by Peacocke under the title Philosophiæ naturalis, has also the sub-title Avdū-arab-Tablum al-izkalbī “the secrets of illuminative philosophy.” This philosophy is really that of the Neo-Platonie scholasticism in its most mystic form. Ibn Tufail exposes it in a progressive fashion with great skill by taking the case of a well endowed man with an inclination for speculation who is placed alone on an island from childhood and here discovers philosophy from his sheer force of reason and step by step constructs the whole Muslim Neo-Platonie system for himself. This man as the symbol of reason bears the name “Ibn Tufail” (or the living”). Ibn Tufail “son of the wakeful one” i.e., God; at the end of the story Salimain and Abūl appear who also have symbolic meaning.

The names Haus, Sallām and Abāl or Abīl were not new in philosophic literature. Avicenna had already written a mystic allegory entitled “Ibn Tufail and the work,” which was well-known in the middle ages, was also imitated by Ibn Enza al-Djumain, who has given as a list of Avicenna’s writings, also ascribes to him a little work on the story of Sallām and Abāl.

We possess a version of this story by Nasir al-Dīn al-Tūrī, and the celebrated Persian poet Dīmān took it as the subject of one of his best known works. In these Sallām and Abīl play different roles; but they are always symbolical and represent the human reason struggling with the world of objects. In Dīmān’s poem, Sallām is a young prince and Abīl his nurse who becomes his lover. In Nasir al-Dīn al-Tūrī’s form of the myth Abīl is again a woman, and in another version Sallām and Abīl are brothers. In Ibn Tufail’s work they are a king and his wise. One of the versions is said to have been translated from the Greek by Humain b. Ḥaši (q. v.) and it is in fact very probable that this whole cycle of stories has an Alexandrine origin.

The following is a synopsis of Ibn Tufail’s romance. The book begins with an introduction which gives an interesting survey of the history of
begin to reflect on heaven; he asks if it is infinite, which he thinks absurd; he imagines it as spherical, observes the necessity of special spheres for the moon and the planets and imagines the celestial world as a kind of vast animal. He understands the necessity for the production of everything not being a body, the motive power of the world not being involved in it, if it is true. Continuing to develop the reflection of God, he deduces his qualities from the consideration of the beings of nature. God seems to him to have free will, to be wise, knowing, merciful, etc. Coming then to his own soul he decides that it is incorruptible, from which he concludes that he ought to find his happiness in the contemplation of the perfect being. This happiness will be attained by imitating the celestial qualities, that is by saying by practicing ascetic morals. Haiy then devotes himself to a life of contemplation, which he leads till the end of his seventh septenary.

Then Aas in a devout follower of the revealed religion arrives from a neighboring island. After the two men have begun to understand one another, the other reveals religion proves to be at the bottom of the tree as the philosophical belief attained by Haiy. Aas recognizes in the doctrine which the hermit teaches him a transcendent interpretation of his religion and of revealed religions in general. He persuades Haiy to follow him to a neighboring island, where a King named Salamán reigns whose friend and visitor Aas is, in order to expound to him his philosophy. But it is not understood and after several vain efforts, Aas and Haiy return to the desert island to devote themselves to pure contemplation while people continue to live by images and symbols.

This curious myth thus lays down very clearly the position of mystical philosophy with regard to religion (cf. also the article on this question). The novel of Ibn Tufail was much enjoyed by Muslims and translated into various languages. In 1249 the Jew Moses of Narbonne translated it into Hebrew with a commentary. Lactantius praised it in his De Natura deorum.

IBN TUMART, a celebrated Muslim reformer in Morocco, known as the Mahdi of the Almohads. His real name was, according to Ibn Khaldún, Joseph, which in Berber means "chief". Ibn Tumart in this language was called "son of Omar the little". This was his father's name who was also called 'Abd Allah. The names
of his ascendants also are Berbers. The date of his birth is unknown, but it must have been between 470 (1077-78) and 480 (1087-88). He was born at Iflis, in Wanghali, a village of Siih. His family belonged to the Isagaha, a branch of the Ifilihs, one of the most important tribes of the Atlas. Ibn Khaldun tells us that it was distinguished for piety and learning. Ibn Tumart was very fond of learning and studied its various sciences and many sciences that he was called `Arif or %ulimad. What can have driven him to the east? Probably only the desire for knowledge, for it was hardly be assumed that he had already covered the plains which he afterwards carried out, which rather owed its origin to the doctrines he learned there.

The Almoravid dynasty, which ruled in the Maghrib and part of Spain, had then begun to decline. Most of its power had fallen to the footsteps of conquest and the shallowness of intellectual life is shown by the studies which were pursued. The books of the great Madh a and of some of the savants in Islam were the principal ones. Student came to the hands of the book and the master who had taken the place of the Koran and Hadith. In the east, Al-Qashsh is had taken up a vigorous attitude against this in the first book (Kalam ar-Ris al-dhaj al-dal) of his al-Ma'li al-Talhach. This book therefore attacked the hatred of such %ulimad, as the Armenian, etc., and many of the Arab tribes like Al-Tarshi who tolerated no independent minds in their school. Al-Qashshis's words were therefore burned by order of the Almoravid Emirs. The constant antithetismism (al-jadid) was also vivid in the allegorical expressions of the Koran, the constitution, the religion, and God was given a corporeal form.

Ibn Tumart began his travels in Spain and it was there that his views began to be affected by the writings of Ibn Hazm [p. v]. He then went to the east but the chronology of his travels is not certain. If, contrary to Al-Marrakui's statement, he stayed on his first visit to Alexandria the lecture of Atif Hak Al-Tatilt, which in spite of his attitude toward was an opponent of Al-Qashsh, they must have made a lasting impression on him. Then came the pilgrimage to Mecca and stayed in Baghdad and Persia in Damascus. He there acquired Al-Qashshis's ideas and later wrote on this influence. As such, Ibn Tumart had removed at Al-Qashshis's invitation to reform the beliefs of his country. In reality the two were none alike.

These years of study and travel had utterly transformed the Maghribi youth. He had formed his plan, if not in detail at least in its main outlines. On the ship on which he returned he preached to the muslim and non-muslim, who began to realize the Khar as his admission and to offer prayers; it was afterwards related that a miracle related by Al-Marrakui confirmed this report. He continued his preaching in which he espoused Al-Ashna doctrine, Tripoli and al-Mahdiya, where the reigning Sufi al-Idris Thalhim, showed him great favour; when he had heard him defend his cause, and then in Mossaou and finally in Iflis. He there set up an irresistible crib of supporters literally following the ancient commandment: *He of you who see anything %ulimad shall after it with the hand (i.e. by force); if he cannot do this, he shall do it with the tongue (i.e. by preach-

lag) if he cannot do this shall do at least, this is the note that religious demand*. The House of justice was summoned to this munificence on his authority and the people also rose against the refuxers; the latter fled to the Kurdi Fraga, a Berber tribe of the neighbourhood, who took them under their protection. Here it was contary to the view of the Sunn al-Fraga, in which Tumart is given as a preaching on the growth out of the man who was to continue his work, Abd al-Mu'min [*p. vi*], a person well fitted to Tlilas, near of Nador who took himself as going to the east to study. The legend which credits Ibn Tumart with secret knowledge ascribed to the most relates that he was recognized in this young man by certain signs the person he sought, and as Al-Qashsh had recognized himself as the future reformer. We only know that he had a conversation with Abd al-Mu'min, in which he questioned him very slowly and that he finally persuaded him to abandon his journey to the east and follow him. He then came back to the Maghrib, in the region of Wad-END (Wadshend) and Tlemcen, from which he was driven by the government of Ifis and Milikiya where the people received his admonitions with blows; finally he arrived in Marakesh, where more than ever he became an irresistible reformer of doctrines and morals. The women of the Lamtuna went unavailing as those of the Tunes and Kabylie still do. Ibn Tumart insisted on them on this account and even threw the stone of the Almoravid Emirs 'Ali, from her house; the latter was more patient and tolerant than the reformer did not insist on him the chastisement he required but contented himself with sanctioning a beating in which Ibn Tumart had been deprived of Almoravid justice. They discussed such questions as the following: *Are the ways of knowledge limited or not in number? The principles of true and false are four in number: knowledge ignorance, doubt, and respectation*. It was not difficult for Ibn Tumart to win although there was a clever Sufi among them, who was no less liberal than he, called Badi b. Waliya, who is said to have no purpose of God to him to death. The latter spared him because the memory of his father, whom he had other than his own, and that he was in Algiers, where he began his apostolate in a methodical fashion. He first appeared as merely a reformer of customs as far as these were contrary to the Sunra or Tradition; after he had won a certain influence over his circle, he proceeded to extend his own doctrines; he vigorously attacked the dynasty, who following the Sufis continued, and declared every one an idolatry who differed from him. This meant preaching a holy war not only with deadly heats and polytheism but also against Muslims. He chose ten companions, including Abd al-Mu'min and after he had paved the way by describing the characteristics of the Mahdi, he had himself reconstituted as such and fabricated a genealogy, in which he traced his origin from 'Abi b. An{Til}. His doctrine was already no longer purely Ashna but mixed with 28's ideas. The historians report all kinds of cunning tricks by which he endeavoured to justify his claims. He devoted himself to the tribe of the Heqata and a great part of the Maghribi, who had always been hostile to the Lamtuna, instead Thalhim had founded Marakesh for the purpose
of keeping them in Arabia. Ibn Tumarti had prepared for this various treatises in the Berber language, which he spoke remarkably well; one of these, the Fashid, is preserved in an Arabic translation, published at Algiers in 1895. The ignorance of Arabic was such that, in order to enforce obedience of the Berber Maghreb, he called individuals of these by the terms of a slave. From this arose the first, who was called al-fashidi al-latibi (Persian: be to God), the second, abu (the Lord) on the third, Abu-Abdallah (of the World). He told them to give their names in the order in which they placed their hands in getting them to repeat the first line, (or the letter), He regularly organized his followers and divided them into different categories, the first consisted of the men, who had not recognized him; they were the ‘Abwara (community). The second consisted of 30 devoted followers. He called them all ‘Abd Allah, ‘Ali, and ‘Umar bin ‘Abd al-Malik (Abbaka). His authority was such that, according to a very corruptions in the men of Tlemcen (or Tlemcen), he penetrated into the towns by stratagem, gathered 15,000 men and made the women slaves, dividing the houses and estates among his followers, and also built a fortress. Either voluntarily or as a result of pressure, the neighboring tribes became converted, and in 317 a. he sent an army composed by Abu al-Malik against the Almoravids. He suffered a fatal defeat and found himself besieged in Tlemcen. Some of his followers thought of surrendering, but Ibn Tumarti with the aid of Abu al-Ashraf al-Walid, who had brought from the Zenaga had remained in some vicinity and after his arrival was restored, he had these removed and was certain of no more opposition. Ibn Tumarti, 30,000 men were then put to death, a number which is obviously exaggerated. The Almoravids came in strength in proportion as the Almoravid power became daily weaker in Spain and Africa. When in 524 = 1129 (according to others 522 = 1128) the Mahdi died, Abu al-Malik, whom he had designated as his successor, was ready to take up the struggle again. The Tumarti’s grave still exists in Tlemcen, but his name and memory is utterly forgotten. According to the Kham al-Nabati, Ibn Tumarti was a fine looking man, of a light dull brown colour, with squinted eyes, a long nose, a neatly bearded, and a black spot on the hand. He was a clever and able man, learned by few scholars and did not shrink from bloodshed. He knew the traditions of the Prophet by heart, was learned in religious questions, and a perfect master of the art of dissertation.

[BRANN BAGGE]

IBN WARRIYA, Idr. Hakeem Almazi (or Mahrabian) b. Ali al-Kalaifat or al-Nasari is known from numerous writings on alchemy and other secret sciences detailed in the Fihrist. His date is not given in the Fihrist, but lies in the second half of the second century A. H. (about the year 200). As a Nezari he hated the Abbasid and sought by his writings to show that the ancestors of the Nezarites had possessed a high culture. Many of his writings, notably the celebrated “Nezari agriculture,” were alleged to be translations from manuscripts found at Babylon; and, under the corrections of this assertion defended by Cleobulus. Idris the Chechen of the alchemical literature in Arabic, and whose manuscript in Manuscript of the Arabic language by K. F. H. B. K. Andrec, London, 1810, ed. de Sacy in his edition of Al-Mas'udi’s La. 76, 700, p. 356 sqq. (Ibn al-Warrhiya, the Nezari, ed. Fuad, 1358) and Cleobulus, De Chymicis, l. 710, 825, 806 sqq.; Brecklein, Geschichte, etc., ii. 422 sqq.; Goldscheider, Handb. d. Geschichte, p. 1582, and the works quoted in the above.

I. IBN AL-WARDI. ZAIN AL-DIN ABD AL-RAZI Qureshi, Abu al-Mahfiz, the philosophus, liettteur, litterateur, etc., poet, born at Amrani in 959 is 1046 and died of the plague at Aleppo on the 8th Hidjra, 749 = March 13, 1349.

He studied in his native town, at Husain, Damascus, and Aleppo and while still young acted for a short time as deputy for the 320 Muhammad b. al-Nakib (d. 745 = 1345). It seems that as a result of this a claim was advanced to this office to devote himself to scientific work. He left the following works: 1. Dav'at, contains poetry, panegyrics, epistles, discourses, poems, a sot of the plaque, etc., publ. at Constantinople in 1330 (in Mas'udi, al-Dimi, etc.); 2. Khatim al-Maqalat al-Muhammad, moral and religious verses, pub. at Cairo (with comm. of Marun b. Hassan al-Kani), in C. J. Davids, Transl. al-Abdi, etc., Almektub, 1862, and al-Shawart, Nof not al-Yamani, French translator, 4, 501. A. Z. Rezvan, ‘Abd Allah bin ‘Abd al-Aziz, ed. El Ouamy trad. of Thabi, Canon, de Fihrist transcibis, ed. P. de Carthage, Tunis, 1900; A. La Menagh, d’Alhambra, de la Louvain, 111, ab Wardi, etc., texte publ., avec vocables, comment., etc. trad. lit. par A. Haus, Alger, 1905; i. Tafri al-Khatib, i.
IBN YAT'IŠ, whose full name was MÜHAMMED AL-DIN ABDU'L-RA'ÜF YAT'IŠ b. ABD AL-YAT'IŠ AL-H阻力, also known as IBN AL-SAFAD, an Arab grammarian, born at Halaq on the 3rd Muharram 553 (20th Sept. 1158). After studying grammar and Hadith in his native town and in Damascus, he intended to go to Baghdad to study under the grammarian Abu USAMA al-Thirman I, but died on the 23rd Shawwal 555 (20th Sept. 1158). He then returned to Halaq where he devoted himself to teaching. According to Ibn Khallikân (v. 2), who heard him in 529-30, he was considered an authority in the field of Adab. Besides a Nâsîyûq on Ibn Dijâmi’s commentary on the Târîkh of Al-Ma'mun he wrote a very full commentary on al-Zamakhshârî’s al-Ma'ârif on which he extensively opposed his own views; the latter work was edited by G. Jahn (Leyden 1882-1886).

IBN YÂMâN, ABD AL-KARIM AL-DIN MUHAMMAD b. ABD AL-YAMÂN, a Persian poet, was born in Faryabám, Khorasan. His father, an eminent scholar of his time, came to Kharâsân during the reign of Sultan Mu'ámmâd Khândâ Bâbâ (703–716 = 1304–1316) and was fortunate enough to secure the high opinion of the famous ważîr Khândâ "Alâ al-Din Mu'âmmâd. Ibn Yamân was a disciple of Shâh Hâdân. He spent his life as a mystic in the Sufi order of Khâdîjmân (737–782 = 1337–1381) and died in 745 (1344).

Among his compositions his 3217 are well-known. They have been printed in Câlcutta and also translated into German by Schlecht-Wesche under the title of "Ibn Yamân". Vienna, 1852 Stuttgart 1859.

(M. Huleyfar Hâkem.)

IBN YUNUS, whose full name was IBN AL-HARÂM SÚLÁIYAND b. ABD AL-RÂMân b. ABD AL-RÂMân AL-SÂLIH AL-MANDAB, according to al-Battânî and Abu 'l-Wâsh, probably the greatest Arab astronomer. His father, Abd al-Rahim b. Ahmad also called Ibn Yunus, was a notable historian and traditionist, and died in Cairo in 347 (958-9). The year of this astronomer’s birth is not known but he died in Cairo on the 3rd Shawwal 599 (May 31, 1009); he is said to have been skilled in other branches of learning than astronomy and astrology and to have also been a good poet. Ibn Khallâkî quotes several stories from contemporary authors of his peculiarities, which were chiefly manifest in his dress. His principal works in the Hikâm Table of (al-Zaid al-kadim; al-Hâkim) were about 389 (999) by order of the Emir al-Âzâm and completed under his son al-Hikâm shortly before the authors'
which before the invention of logarithms was of great value to astronomers as it transformed the complicated multiplication of trigonometrical functions expressed in sexagesimal fractions into an addition. He also showed great skill in the solution of several difficult exercises in spherical astronomy with the help of orthogonal projection of the celestial sphere on the horizon and the plane of the meridian.

IBN ZAFAR, MUSLIH AS-DIN AND 'ABD 'AL-LAH MUHAMMAD R. ALI 'ALI HUSAYN AL-SAFFAII, AN ARAB SCHOLAR, born in Sicily but brought up in Mecca (according to Suyuti also born there), later returned to Spain and died in 565 (1170) at Alhama. On the model of Kitâb al-Masâ`i he composed the collection of tales called Salâh al-Masâ`i fi `Urdu al-Awâr and dedicated to the ruler of Alhama, Abd Allah Muhammad b. Abi l-Khalifin (pr. Cairo 1378, Tunis 1790, Beirut 1900). Turk. transl. by H. Kahlil in Berlin (Partsch, no. 1453) and Vienna (Vitali, no. 528a), pr. Constantinople 1823, Italy by Anami, Florence 1851, 1882; English from the Italian, London 1852. The author prepared two versions of the book, most miss. editions and translations contain the second of the year 554 (1160). Another less known work, `Abd al-Naba`in al-Sabri, dealt with celebrated children (pr. Cairo 1329) and also exists in a second abbreviated edition.

For his further literary activity, see the authorities mentioned below.

IBN ZAIN, ABU `IBNAWIR, ALI `ALI ABD `AL-LAH MUHAMMAD B. ABU `ALI MUHAMMAD B. JABIR B. ZAINUN, ONE OF THE MOST CELEBRATED POETS OF MUSLIM SPAIN AND MINISTER TO THE ARAB EMIR OF SEVILLE. He belonged to a famous family of the Arab tribe of Makhsûs and was born at Cordova in 594 (=1199). Left early an orphan, he was given the best teachers by his guardians and soon distinguished himself among his fellow pupils. At the age of twenty he already composed poems which made him famous.

Our poet became involved in the politics of his country through the civil wars of the Cordovan pretenders and the attempts of the Cordovans to expel from their city its Berber rulers. His origin, the position of his family, and particularly his ambition induced him to take a part. After the retreat of the Berbers he was therefore to be found in the retinue of Abû `I-Hâmm Ibn Djalwar, the chief of the Cordovan oligarchy.

A violent storm for the poetess Wallâhâ, of a princely family, brought him into conflict with a powerful rival, Ibn `Abdus, the minister of Abû `I-Hâmm Ibn Djalwar. Ibn Zainûn wrote threatening poems against his rival and held him up to ridicule in a letter that has become famous. The latter denounced him as having become too haughty for a refusenik of the Qasimids and he was thrown into prison. From here, he wrote tenderness to Wallâhâ and pressing appeals, in which he defended himself, to his friends. One of the latter, Abû `I-Walî, the son of Abû `I-Hâmm, succeeded in getting him out of prison. But Wallâhâ had finally abandoned him for Ibn `Abdus.

After an involuntary exile in which he summingly poured reproaches upon his lady friend, Ibn Zainûn returned to Cordova on the death of Abû `I-Hâmm Ibn Djalwar and threw in his lot with the latter's son and successor Abû `I-Walî. He served him as ambassador at several Muslim courts in the neighbourhood of Cordova. But his ambition was his downfall. For some unknown reason he was disgraced a second time, had to flee from Cordova, and lived in Denia, Badajoz, and Seville successively.

His fame as a poet, his literary abilities, and his knowledge of Muslim conditions in Spain, which he had acquired during his work as an ambassador, gained him a reception at the court of the Emir of Seville, al-Mu'âzîd. At first he was only secretary to this ruler but later became his first minister. After the death of al-Mu'âzîd, his son and successor, al-Mu'tamid retained the poet in the same office and made use of him for the conquest of Cordova which now became the capital.

But Ibn Zainûn's popularity aroused the envy of several people at the court, particularly the poet Ibn Ammar [q. v.], al-Mu'tamid's favourite. A riot directed against the Jews in Seville gave the poet an opportunity of getting Ibn Zainûn sent there, to restore order. The poet set off to the great disappointment of the Cordovans who were very proud of their fellow-citizen: his family followed him soon after. But the aged Ibn Zainûn was seized by a fever and quickly carried off. He died on Rabbit 15 453 (April 17-18 1073) and was interred in Seville. The news of his death caused great grief in Cordova and the whole town went into mourning.

Ibn Zainûn was not only an excellent poet, but he was also a distinguished letter-writer and it is as much that he is particularly famous in the history of Arabic literature. His letters are not all published. The best known are:

1. The letter to Ibn 'Abdus. It is valuable for
Arabic philology in as much as it contains many allusions to facts, which are only known through it and through the commentary, which Ibn Nuḥata (d. 788 = 1364) wrote on it under the title Sarā' al-Ḍuḥūl fī Sharī' al-Riḥāl, Ibn Zaidūn (Baghāt: 1278, Alexandria 1930, Cairo 1935). This letter was published by Keiser with a Latin translation (Leipzig 1755). The book was a Latin translation by Beethoven (Copenhagen 1889).

Extracts from Ibn Zaidūn’s poems were given by Weijers (Leiden 1831), de Sacy (Jouvenel XII, 508 spp.), al-Makki, Analogies; manuscript extracts and the bibliography of Ibn Zaidūn by Ibn Ṭamīyah (Ms. Bbl. Ndl. Paris, n. 3321) and Ṭamīy al-Din al-Ṭamīyah (ibid. 35, 3320).

IBN ZAIDŪN, the patronymic of a family of Muslim scholars who flourished in Spain from the beginning of the 9th to the beginning of the 11th century. They were all of Arabic origin and had migrated from Andalusia and traced their descent from Abūn Abbās, whose family was of Arabian stock. Their descendants gradually became scattered all over Spain and the Spanish peninsula from the 10th century on.

1. The ancestor of the Spanish line was called Zaidūn. His biographer, Ibn al-AbPakistan, gives him the name al-Yaḥyā, because he traced his descent from Yaḥyā, son of Maḥmūd, son of Abūn, who was regarded as one of the founders of the Arab race. According to Ibn Ḥajibulain, Zaidūn al-yahyā had a son named Marwan, the father of Abū Bakr Muḥammad, who was the first to take a prominent place among his contemporaries. He was a jurist, celebrated for his learning and piety, eloquence and liberality, and died at the age of 86 at Ta’lavar (Talavera) in 422 = 1030-1031.

2. Abū Marwān ibn al-Ṭamīyah. Abū Marwān, son of the preceding, was a celebrated physician, who practised in Kairouan and later for a long time in Cairo. Returning to Spain he settled in Damiya (Demetia) and became a judge. He is reported to have been a great physician and also a learned jurist. Ibn Abī Uṣūl’s reports that he never showed any evidence of his knowledge, but was a great jurist. Ibn Abī Uṣūl’s reports that he lived in Seville, where he died, leaving a considerable fortune. On the other hand Ibn Khallikān, who was an authority, that he died in Damascus, which he had never left.

3. Abū al-Ṭamīyah, Abū Marwān, Abū al-Ṭamīyah. Abū Marwān, son of the preceding, was called Abū al-Ṭamīyah, since the middle ages has been corrupted into the Latin Abūl-Ṭamīyah, and in combination with Zaidūn the forms Abūl-Zaidūn and Abūl-Tamīyah. Abū al-Ṭamīyah adopted a medical career and received an excellent technical training from his father and Abū al-Ṭamīyah. The accuracy of his diagnosis was marvellous. Among his pupils we may note the poet Abū Amir b. Yūsuf. The celebrated court poets Abū al-Ṭamīyah and Abūl-Ṭamīyah, and were a considerable reputation, and admired for his knowledge of the Al-Ṭamīyah, the last Al-Ṭamīyah ruler of Seville. The latter took him to his court, esteemed him with honours, and restored to him his grandfather’s estate which had been confiscated. After al-Ṭamīyah had been deposed by the Almohads, Abū al-Ṭamīyah found an opportunity to show his gratitude to his former patron. But his son went over to Abū al-Ṭamīyah, who gave him the rank of vizier, so that in Latin translations of the middle ages his name is often prefixed by the Spanish form Al-Ṭamīyah. According to Ibn al-AbPakistan, Abū al-Ṭamīyah died in Cordova. His body was taken to Seville and interred there in 558 = 1158-1158. Wüstenfeld mentions, on the authority of Ibn Abī Uṣūl’s, that he died in Seville.
