4. Abū Marwān ibn al-Ṭamīyah. Abū Marwān, son of the preceding, usually called Abū Marwān, son of Abū Marwān, son of Abū Marwān, born in Seville. The date of his birth is not given by the biographers, but a few statements place it approximately between 458 = 1061 and 487 = 1094. After receiving an excellent education in literature, law and theology, his father taught him medicine. He soon became equal in knowledge to his teacher and distinguished himself by his original experiments in therapeutics. Like his father he was at first in the service of the Almohads and later of the Almoravids. Abūn al-Ṭamīyah (v. Ibn Rūfūs) was on intimate terms with and considered him the greatest physician since Galen, but was not his pupil as many insist. On a journey through North Africa Abūn al-Ṭamīyah suffered many indignities from Abīn b. Yūnuf, the governor of Marrakesh, for some unknown reason. The latter even had the doctor imprisoned and he makes some bitter allusions to the events in his works. On the death of Abīn b. Yūnuf Al-Ṭamīyah and the overthrow of the Almoravids by the Almohads, Abūn al-Ṭamīyah went over to Abīn al-Ṭamīyah and had no cause to repent of his action. He was given rich presents and like his father before him he had the rank of vizier. Among his works may be mentioned the Kībād al-Ṭamīyah fī ḫāt al-Ṭamīyah, which he composed by order of the prince and was preserved by the Emir Ibrahim b. Yūnuf, and especially his chief work, the Kībād al-Ṭamīyah fī ʿal-Mafātīh wa ʿl-Turāth, which he wrote at the instigation of Abūn al-Ṭamīyah. Abūn al-Ṭamīyah exercised a considerable influence on European medicine, which lasted till the end of the 11th century, owing to the translation of his books into Hebrew and Latin.

From the theoretical point of view, like Galen, he championed the theory of humours, but in practice considered experience the most reliable guide. In his book form not only original views on established facts, but new contributions to knowledge such as the description of the mediastinal tumours and the disease of the pulmonary, disease which had not been previously mentioned. He was the first Arab physician to recommend tracheotomy. Artificial feeding either through the gullet or through the rectum was not unknown to him and he explains his method with much skill. The numerous views taken by several writers that Abūn al-Ṭamīyah was a Jew has been challenged by Steinmann-Schneider (Arca, für pathol. Anatomie (Berlin 1874), p. 115) and Wüstenfeld (Gesch. der arab. Arzte, 1881, p. 80) and finally clearly refuted by G. Collin (Le monsieur des sorciers, p. 34 sqq.). After a meritorious and devoted to work and good deeds, Abūn al-Ṭamīyah died, like his father, of a malignant tumour at Seville in.
357 = 1161-2. He left a son and a daughter and was buried outside the Victory Gate.

5. Abd Bakers Muhammad b. 'Abd al-Malik b. Zuhair, son of the preceding, was also al-Hafidh, the "grandson," born in 504 = 1110-11, died in 595 = 1194-9, was likewise a distinguished physician, but more of a practical man than a writer of medical works, although a treatise on diseases of the eye is attributed to him. Almost unknown in Christian Europe, he had a very high reputation among the Muslims of Spain and Africa, although this was due less to his activity as a doctor than to his deep learning in all branches of Arab literature and to his poems of great delicacy of sentiment. The Almohad Caliph Ya'qub b. Yusuf al-Mansur summoned him to Africa to his court, appointed him his physician, gave him rich gifts and showed him great honour but thus aroused the jealousy of the vizier Abi Zaid b. Abi al-Rahman b. Wilijan. The latter had the physician and his niece who was very skilled in gynaecology and midwifery treacherously poisoned during their stay in Morocco. The Caliph preached his funeral sermon and he was buried in the garden of the Emir. He left a son and a daughter.

6. Abu Muhammad Abi 'Abd Allah b. al-Hajj, son of the preceding, born in 577 = 1181-2 at Seville, was an excellent physician, trained in the school of his father. The Almohad Caliph al-Mansur and al-Nasir successively took him to their court and heaped honours upon him. Like his father he was also murdered by poisoning and died in 602 = 1203-4, being only 25, on a journey to Marrakesh al-Rabai b. al-Fath (Rabata). His body which was buried there was later exhumed, taken to Seville and buried there outside the Victory Gate along with the remains of his ancestors. He left two sons: Abu Marwan 'Abd al-Malik and Abu 'I.'Abd al-Muhammad, both of whom lived in Seville; the younger was also a physician and had a sound knowledge of the works of Galen.

IBRAHIM, the Biblical Abraham, was, according to the Koran (Sura vi. 74), the father of the Arab race, whose name is apparently to be derived from the Eusebius the name of his servant (cf. S. Frenske in Zeitb. d. Deutschen. Morgenländ. Gesellschaft, vi. 74). The Biblical name of Abraham's ancestors: Tzibkh b. Nafhi. b. Sarih b. Arghit b. Fath b. Aiqar b. Shalich b. Kainah b. Arakhallal b. Saim b. Naf are found in the Bible, p. 44, and Ibn al-Adhrir, i. 67, and this genealogy appears perfectly with Genesis al. 10-21 and Chronicles, i. 22-27. Kainah alone seems to have been married to Khadez (Genesis v. 13. Born in 1063 after the Creation of 3572 after the Creation (al-Thalaba, 7. s) and the destruction of the ages given in Genesis v. 3-10 and al. 10-25, however, gives the birth of Abraham 298 years after Noah or 1918 after the creation—lie at once undertook his mission of preaching a holy war against King Nun mid. His mother 'Usha had to take refuge in a cave at Khilah where she first saw the light of the world (al-Thalaba, 7. s); Tabari, i. 2561; Zamakhshari, i. 174; Ikhwani, i. 1333; Ibn al-Adhrir, i. 661; Yakub, a. v. Kith; al-Baihaq, p. 485; al-Mukaddim, p. 58; Kitab 'al-Taba'; Maimonides, Bid'at al-Hasan, cap. 39. For had dreams had induced Nun mid. to have pregnant women watched and their newborn sons killed. The slayers visited Ibrahim's mother to examine her before the pains of childbirth had come upon her. They examined her body on the right and the child hid on the left; they sought it on the left and it fled to the right so that they had to depart after doing nothing (al-Kisâ', i. 115-120). The story in the Sufi Hayyâbâne (section Nad), that Terub was ordered to hand over Abraham to be executed and in his place delivered up the son of a handmaid, has its origin in Muslim tradition. While still quite a child (Famul Madience, 42) an experience gave him the knowledge of Allah which is mentioned in the Kuran (xxi. 75-79). When he had left the cave and was coming to his father's house, night fell upon him and he saw a star. He said: "That is my Lord!" But when it set, he said: "I do not love those that set!" He saw the same rise and said: "That is my Lord!" As it also disappeared; he said: "Verify, if my Lord does not guide me, I shall become one of those that go astray!" When he saw the sun rise, he said: "That is my Lord; he is the greatest!" When it also set, he said: "O my people, I am free from your idolatry; see, I turn my face to the creator of Heaven and Earth!" etc. We also find these stories in the Hebrew book, Shetahei Muzafar (Syrac., 1722), p. 109-111, and Sufi Hayyâbâne (Nad). Of the various legends (in al-Thalaba, p. 45-47, and al-Kisâ', p. 25-140) which describe Ibrahim's wars with the world, and which, too, are described in the Kuran, the following may find a place here, which are based on Kuran xxi. 59-67, as well as on Genesis xix. 29, section 39. One day he his fellow tribesmen left the town to offer sacrifices to their God. Ibrahim pretended to be unseen and remained in the town. Armed with an axe he went to the temple of the gods where tables were laid with food. He said: "Why do ye not eat?" and struck off the head of one, the foot of another and the head of a third. He put the axe into the hand of the biggest and placed various dishes before him. When the guests returned, they accused Ibrahim of the deed. He answered: "Verify, the biggest of them does this, ask them, if they can speak." They said: "You surely know that they cannot speak." He said:

"Do you, disregarding Allah, worship what cannot help not harm you? 'Fie upon you and your worship of idols!' Thrown into a furnace as a punishment he left unharmed after being thrown there or
IBRĀHĪM B. ABD ALLĀH, son of the great-grandson of ‘Abd, the son of ‘Abd Allāh b. ‘Abd Allāh b. As-Ashūr, was brought up with his brother Muhammad [q. v.] in the expectation of one day becoming Caliph. They therefore considered the Ḍurūṣ as nurseries and with all the move justice as before the fall of the Omayyads. ‘Abd Allāh b. ‘Abd Allāh was so as to have paid homage to Muhammad b. ‘Abd Allāh, and therefore no little danger to him and as Caliph he sent officers in search for them, so that they were forced to wander from place to place with many dangerous adventures in order to remain concealed. Muhammad finally went to Medina and Ibrahim to Basra to advertise their cause. Although the project was by no means ripe, Muhammad found himself forced to appear openly as a rebel in Ramdān 45 (Nov. 762), which, in spite of his misgivings forced his brother to do the same in Basra. His situation was at first not favourable. Sentiment in the Irāk was strongly ‘Abd Allāh b. ‘Abd Allāh, who was staying in the city of Kūfah, had sent the most of his troops to Medina or elsewhere. Ibrahim seized the state treasury and equipped armies, which took his father’s forces, but soon there arrived the depressing news that his brother in Medina had fallen on Ramdān 46 Dec. 762, which resulted in the Caliph now being able to send his general ‘Abd Allāh b. Masr to Medina from Irāk. Ibrahim, who had left Basra to attack Kūfah, met his brother at Khārūn, after the battle of Irāq, Ibrahim’s troops were at first victorious, but then the battle turned and he himself fell, stuck by an arrow. His head was cut of and sent to the Caliph. Ibrahim, who was 48 years old, was better fitted for the dangers of an adventurous wandering life than for the task of conducting a revolution. Like many of his family he was personally brave, but his character was weak, he had a dreamy and somewhat sensual nature and above all he had inherited the fatal faculty of the Alids for rejecting good advice and following an unreflecting and ruinous course.

IBRAHIM B. ADHAM b. MARYAM b. YAZID b. DÍNAR (Abī ‘Iṣāq) AL-TUMMAD AL-HINTI, the famous ascetic, was a native of Basrah. The dates given for his death, which is said to have occurred on the 20th of Jamad al-Awwal, 211, range between 165 and 166 (776–783). Some verses composed on this occasion by the poet Muhammad b. Kanān of Kūfah (Abd 267 = 822), whose mother was the sister of Ibrahim b. Adham, praise his asceticism, the nobility of his character, and his personal courage and refer to the Western tomb, ʿAbd Allāh b. al-Ḥāshimī, in which he was buried (Al-Qāsim, ii. 153, 7 sqq.). According to one account, he was buried at Sīlāt, a fortress in Rām (Yākūn, edited by Wustendorf, ed. 1906, i). The fact that after his conversion to Islam he migrated to Syria, where he worked and lived by his labour, until his death, is established by many anecdotes related in the
He is reported to have said to Abd Allah b. Muhannan, who asked him why he had left Khurasan, "I saw no joy in life except in Syria, where I live with my religion from peak to peak and from hill to hill, and those who see me think I am a madman or a camel-driver!"

The Sufi legend of Ibrahim b. Adham is evidently modelled upon the story of Ibn Dhu'l-Qarnain (see Goldschmidt, A. Anschauungen nach der Philosophie, summarised by T. Duka in Journ. Roy. Asiatic. Soc., 1904, p. 152 sqq.). Here Ibrahim appears as a prince of Haitha who, while hunting, was warned by a woman in advance that his horse was intended for the purpose of chasing hares or foxes; whereupon he dismounted, clad himself in the woolen garment of one of his father's shepherds, in which he gave his horse and all that he had with him, and 'abandoned the path of worldly pomp for the path of asceticism, and piety' (for other accounts of his conversion, see Goldschmidt, loc. cit., and Foruat Al-Phusyo, Balilah, 1823, § 10: 2, 35 sqq.). The anecdotes and sayings of Ibrahim, as recorded by his earlier biographers, show that he was essentially an ascetic and quietist of a practical type; we look in vain for any traces of the speculative mysticism which developed in the following century. Like many of the ancient Sufis, he took up his residence in his father's house; it was "lawful" in the religious sense of the word. He did not carry the doctrine of 'aswabih towards the point of refusing to earn his livelihood; on the contrary, he supported himself by gardening, reaping, grinding wheat, etc. While he approved of begging, in so far as it invites men to give alms and thereby increases their chance of salvation, he condemned it as a means of livelihood. He said: "There are two kinds of begging. A man may beg at people's doors, or he may say, 'I frequent the mosques and pray and fast and worship God and accept whatever is given me. This is the worse of the two kinds. Such a person is an impure beggar'! A trait far more characteristic of Indian and Syrian than of Moslem ascetics is his great respect for the time of the three occasions at which the Sufis used to get up, viz., dawn; he felt joy when he looked at the sun, that he was wearing, and could not distinguish the far from the near, because there were so many of the latter (al-Khatib, Riha, Cairo, 1518, § 8, p. 83, § 25 sqq.). As examples of his mystical sayings the following may be quoted: 'Poverty is a treasure which God keeps in heaven and does not bestow except on those whom He loves.' This is the sign of him that knows God, that his chief care is goodness and devotion, and his words are merely words of praise and glorification." In answer to Abu 'Azif al-Jihliyani, who declared that Firdawsi made him a caliph, Ibrahim said: "By God, I deem that the greatest matter, as they conclude it, is that God should not withdraw from them His gracious countenance. Although such ideas mark the transition from asceticism to mysticism, we cannot regard Ibrahim b. Adham as one who had crossed the border-line. The keynote of his religion remainsunciation of the world and self-mortification, and in time he finds the fullest peace and joy not in the ecstasy of contemplation or the enthusiasm of self-abandonment. (Nicholson.)

[An Azizli romance of Ibrahim b. Adham, translated from the Turkish of Dawud Hasan al-Ashes and abridged by Ahmad b. 'Umar Sahn al-Khazzani al-Dinmishqali (d. 1019 = 1611) is preserved in Berlin (ed. Klockemann, Gesch. d. arab. Lit., ii, 301; a survey of contents in Alwathir al-Farisi, § 46); a manuscript having the title Shah al-Sufiyya Ibrahim b. Adham al-Dinmishqali Ibrani (3), is mentioned by 'Abd al-Rahman al-Qurtubi, Sharh al-Kutub fi Dimashq wa-Damascus, p. 39, No. 130, 2. A veritable Kitaab Wad Allah Adham is contained in Ms. Gatha, Fertiss, Die arab. Lit., ii, 275 sqq. A romance of Ibrahim has been verified in Hindustani by 'Abd al-Qadir Ilauni (Hasan) Muhammad, under the title Shah-i-Telef (Miry, 1589, ed. Lucknow, 1866; Canepori 1877; cf. F. J. Bühnemann, Ch. of the History of the Indian printed Books first, 1850, p. 216; Carde de Tassy, Histoire de la Lit. Hindoos. et Arab., ii, 104). There exists also a Malay romance of which the following summary is given by Dr. J. J. de Hulder, Handelingen der Reisenden der Malische Taal- en Letterkunde, 8th ed, Breda, 1855, p. 148: "After a prosperous reign of some years, Sultan Ibrahim, prince of Telef, decides to perform the pilgrimage to Mecca and change his most trustworthy of his visitors with the government in this absence. Having arrived in Kula, Ibrahim becomes acquainted with Sitti Sultah, the daughter of Sultani, the king of Kula. He marries her, but seeks to induce her father to receive him in Mecca. Twenty years later, his son Muhammad Tabli, who was born from this marriage, betakes himself to Mecca to visit his father, who had been uninterruptedly engaged in devotion in the holy mosque. Sultan Ibrahim, being determined to renounce the world for ever, gives his son his seal-ring, by which he may vindicate his right to the throne of Telef, and bids him go to that country. The son obeys and is acknowledged by the sultan as the legitimate ruler. He does not desire, however, to take the reins of government and abdicates in favour of the visir, on whom he bequeaths all the treasures left by his father!" The Malay romance exists in two recensions, a shorter (ed. with Dutch trans., by P. F. Reuten van Eysinga, Leiden, 1895) and a longer one; the latter is said to have been translated from the Arabic of a certain Buyan Shalik, named Abul Bahr, (ed. Ph. S. van Ronkel, Catalogus der Maleische Houtdrukken van het Rotterdamse Geestelijken Corps, pp. 150-152, No. 117 = 122 = Verhandelingen van het Rotterdamse Genootschap van Kunsten en Wetenschappen, vol. 57). Stories of Ibrahim b. Adham, in part agreeing with the published text, are also found in the Early Spanish versions (compared in Abri 1846 = 1850-1), Behn, Ch. L, fol. 11, No. 119, in the Telugu Viskakapata in Upagaha, and in the Javanese works Laisawana (lit. Mus., cf. G. Niemann, Indische volksverhalen, land der Javaansche volkstelling, p. 479) and Neemawi, cf. J. H. G. Gunning, Uss. Leiden 1881, xvi, 17, A. C. Van Esch, CSS., van de Javanesische ... Handelingen der Letterkunde, p. 307, No. 241. Poetic adaptations in Javanese have been made by P. F. Reuten van Eysinga (Am-
sturum 1845) and C. F. Winter (Bietania 1882, 1898), the latter from pruse by F. L. Winter (Semarang 1881); cf. Vrede, a. a., p. 216 sq. There are also versions of the same by Schumacher (1880) and 1888; cf. H. H. Jahn, Cattel, van de Malaccen en Zondeaanlandsche Handelsch., der Lächische Uni-Belts, p. 329, 396, No. 381-3; Sepp, p. 14 sq., No. 61), and in Buginese (transl. from the Malay); cf. E. F. Mathers, Kort vestzeggende nagaandene: Mysheeawoche en Bugenseeche Handelsch., p. 32, No. 95.

(C. VAN ALBROECK.)

Ibrahim b. al-Ashraf (844-856 = 800-810), founder of the semi-independent dynasty of the Aghlabids, was the sun of al-Ashraf b. Sifin b. 'Abd Allah al-Tamimi, a native of Marv al-Rukh who had governed Ifriqiya after the departure of Ibn al-Ashraf in 148 a. d. he and had been killed two years later in the revolt of al-Hasan b. Harb. In 170 (795) Ibrahim received the governorship of the Zohar, when the mistakes of the governor Ibn Muqaddim had provoked the people against him. Finally (183 = 799) he expelled him, Ibrahim came to his assistance, and after the restoration of order, characterized by himself so indispensable to Haurin al-Hadid, the Caliph, on Harun's advice, left him in possession of Ifriqiya on payment of a tribute of 24,000 dinars, while Egypt was freed from the subjection of 500,000 dinars which the paid annually to Ifriqiya. This change took place on the 12th Dhu' al-Hijjah, 11 (July 9, 800). Following Spain and the Maghreb, Ifriqiya in turn separated from the 'Abbasid empire. Egypt was soon to follow. The new prince began by building a new capital to replace Kairouan; this was al'Abdabbar (q. v.). A year later he received ambassadors from Charlemagne (802), who brought from Africa a number of reliefs; this was presumably not only the object of their journey, and it may be supposed that Charlemagne was seeking an ally against the Omeyyads in Spain. In the 126 (823) Ibrahim suppressed a rising of 'Abdul al-Qasim in Tunis; in 129 (835) another broke out in Tripoli, the inhabitants of which drove out the Aghlabid governor Sufyan b. al-Madhi. Hardly had this been terminated by an amnesty 194 (809) when a more serious rising took place in the very abusive of the state of Ifriqiya. 'Imran b. Muqaddim al-Khalib (Dhahabi has Muhaddib instead of Muqaddim, v. Fagun, Ibn al-Athir, annals, p. 148, note v, p. 173) and Keshap al-Makribi, al-Makribi, were at his head. Ibrahim had been defeated for a year previously, and the money sent by the Caliph bought off the rebels and 'Imran retired to the Zohar, where he lived till the death of Ifriqiya without being disturbed. Tripoli was again the scene of a revolt in 196 (818) in the course of which it was pillaged by the Khurasis of Husayn. The ruler sent his son, Abd Allah at the head of an army and after an initial success the latter was forced to fight against the Khurasis from Tihrit in Tagdum), led by their Renasirian Imam 'Abd al-Wahhab, "Abd al-Rahman (q. v.). The town was besieged by them, and the assault had begun when the news came that Ifriqiya had died on the 22nd Shawwa (14th July 819) at al-Kairouan. 'Abd Allah, eager to seize his heritage, made peace with 'Abd al-Wahhab by abandoning him the whole of Tripoli, except Tripoli as well as the districts of Kusiyah and Djerba.

Ibrahim, Abd Qasim = Ahmad, ninth ruler of the Aghlabid dynasty. Although he had solemnly sworn to his dying brother Muhammad Abu 'l-Charkhi to recognize his nephew Abu 'la'n, he seized the throne on the death of his brother on the 6th Dhu'll-Qadah (1053 = 10th February 875) with the acquiescence of the people of al-Kairouan. He was famous for his two very different natures; his taste for building and his ferocious cruelty. He built the Kasr al-Bal Qasim al-Wahl and placed along the coast a number of towers (masajyid) to signal nocturnal attacks, which has led other buildings to be wrongly attributed to him. He waged war constantly against al-'Abbas, who revolting against his father Ahmad, the first Tihrit, and Egypt, marched against Ifriqiya in 267 = 796-97. After defeating the Aghlabid troops under Muhammad b. Keshap al-Makribi at the Wadi Warsham, which was taken up at first by the steers of Labdes and later by that of Tripoli. The Ahlabids fled, led by their chief Ayyub; M. Yacoubi came to the help of the town and destroyed the army of al-'Abbas who fled to Egypt (267 = 810). A rising of the Blemis of Ifriqiya cost the life of Mu-
Ibrahim b. Khurab (Dhu 'l-Hijjah 268 = June-July 884) and was only succeeded by Ibrahim's son Abu 'Ali. The latter having completely defeated his enemy Sharif and had been taken in 878, Ibrahim followed later and in Dhu l-Hijjah 289 = July-August 902 by order of the Abbasid Caliph, Abd al-Malik, thus clearing the seat to besiege Ctesiphon. He died of dysentery during the siege on the 16th Dhu 'l-Hijjah 293 = 26 October 902. His body was taken to Kairwan, where he was buried on the 11th Muharram 291 = 5 December 902. All the historians unanimously accuse him of cruelty and quote numerous examples of the massacre of the snatch, the inhabitants of al-Khabab and of Tinnis, the murder of his physicians, ministers, pages, his son Abu 'Ali, and his eight brothers, on account of insignificance. He created a bodyguard of negroes whom alone he trusted and who were the instruments of his cruelties.

Ibrahim b. Ahmad, the youngest son of Ahmad b. al-Mamun, was born in the 32nd Sherawil 812 (4th November 1612) and succeeded his brother Murad IV (died 16th Sherawil 819 = 15th February 1640) on the throne in 16th Sherawil al-Sultan. His brothers, Osman II and Murad IV reigning before him, had kept him in strict seclusion and he grew up in love of their machinations and in continual fear of a violent death, being on the whole in a delicate constitution; all this continued to render him absolutely incapable of governing a great empire. During the first years of his reign he therefore left the government in the hands of the able vizier Rost Mubarak. By the treaty of steering (15th March 1642) the Sultan renewed the peace with Austria, he reconquered the fortress of Anvar, and among many minor disturbances he suppressed the dangerous insurrection of Newpaphes (1642). At the same time he kept a watchful eye on the financial, situation of the country, and he greatly improved it by reforming the currency, by limitation of the expenses of the State, and by the strict collection of the taxes. After having ordered the repair of the original pavements, he added on 24th January 1645 (1st January 1644). The Sultan, who dwelt in the delights of hazar-life as none of his predecessors of successors ever did, was now absolutely under the sway of his dottatake and favorites, particu-

ly the nabihis Dhusuyu al-Mahdi, an ignorant soffer from Zaranaburi, who cared for him from his love of freedom by his magic charms and thereby won unlimited control over him. The State revenues were disgusted to house the foolish whim of Ibrahim and his court; offices and ranks were given by favour and not by merit as i.e. in proportion to the services given. The result was an uninterrupted series of changes of grand viziers and ministers.

Such was the wretched state of affairs when on the 29th Sept. 1644, Mhur faiths seized a convoy of pilgrims near Ksarouch; among them was the Sultan's khalif al-Mamun Sultani, with his riches and his retirement, bound for Cairo whither he had been banished. The Sultan resolved to be revenged, and as his favourite, the slights al-Yahyâ, had already been insulting him against Venice, the Sultan undertook an expedition against the Republic. Without a declaration of war against Turkish forces was landed in Corfu in June 1645 and took Corfu. In the following year, after his fall, while the siege of the strong fortresses of Candia continued to drag on. In the meanwhile the Turks were repeatedly defeated in Dalmatia. All this round the Sultan's wrath to such an extent that he resolved to massacre all Christians, at least all Franks residing in his empire. This plan failed on account of the opposition of the Sultan and the Sultan. This war, which was to last for 25 years, weakened the country to utter exhaustion, nevertheless if it did not allow the Sultan to interfere with his disordinate conduct. The immense sums spent for the foolish luxury of the Serai rose disproportionately; in order to meet the heavy losses, new heavy taxes were imposed on the people. At last the public rage broke forth openly; at the head of the insurrection were the Janissaries assisted by the "nabhis and the Sultan and al-Mamun. The Grand Vizier Hikmat al-Mamun Fathia fell the first victim of the infuriated mob. Next came the Sultan Ibrahim b. al-Mamun who was determined on the 18th Rajab 1058 (6th August 1648) and confined in the Cilicia sultan, where he was treacherously a few days later by the executioner. When Ibrahim ascended the throne, he was the only living male offspring of the house of Osman; on his death he left him son and thus became the founder of the dynasty again, the only living heir to his credit.

followers of the 'Abbasids. At the end of Dhu l-Hijja, July 817 they proclaimed al-Mamun's uncle, Harun, Caliph under the name al-Mubarak (the blessed') and on the 5th of Muharram 202, 24th July 817 he publicly appeared in the mosque as ruler. His reign did not last long however. The troops soon relented because they could not pay them. After orders had been restored in the army, Hira and Kufa fell into his hands, but on the 26th of Shawal, 7th February 818 his generals Sa'd b. Shabban and 'Ali b. Muhammad were defeated and killed near Wasit by the governor Hasan b. Sahh and had to retire to Baghdad. 'Abd al-Malik went openly and the enemy and the other generals began secretly to work for al-Mamun. When the latter came back from Khorasan, Harun was no longer able to hold on, but had to abandon his states in the middle of Dhu l-Hijja 203, June 819 and on the 12th of Safar 204, 11th August 819 al-Mamun entered Baghdad, 'Abd al-Malik henceforth lived in retirement. He was arrested in 210, 825 but pardoned in a few days. He died in Kairouan 234, 839 at Sarr-man-n-n. He had not the gifts of a ruler; but he was a man of refined tastes who was especially interested in music and singing.

IBRAHIM B. MA`ARRI, twelfth century. [See Grammarists, p. 156 sqq.]

IBRAHIM B. MU`AYYAD B. `ALI B. `ABD AL-LAH B. AL-ASRA`I, brother of the two first 'Abbasid Sultans, al-Saffah and al-Mansur, born in 82, 701-702. His father, who according to the usual statement, died in Dhu l-Qa'da 105, 844, was the founder of the sect 'Abbasid propaganda and shortly before his death made over to his son Harun his life to the 'Abbasids in the east. In the following year the latter, with 'Abd al-Malik b. Mu`awiyah (q.v.) to Merv where he informed the Khurasanis of Mahammad's death and proclaimed Harun his successor. After 'Abd al-Malik's death in 227, 744-745, Abu Salama al-Khalil (q.v.) was appointed pimepotentary of the 'Abbasids. Like his father, Harun himself lived in al-Hinama, a place south of the Dead Sea, while Kufa was the centre from which the invisible threats of the eschatological phenomenon was. Harun was a particularly fertile and for the activities of the 'Abbasid emirs, and in 228, 745-746 Abu Mansur was appointed leader of the secret situation there. In the following summer the long protracted rebellion broke out and on the 2nd Shawwal 120, 12th June 747, the first 'Abbasid service was held in Basra. In the same year the Caliph Marwan II had Harun captured, and brought to Harran, his then residence, and the latter soon afterwards died there. According to some, Harun was put to death by order of Marwan.

IBRAHIM BEY, one of the most prominent of the last Mamluk amirs of Egypt. He was brought to Egypt as a Circassian slave and freed in the possession of Muhammad Abi S犾ahab, the favourite Mamluk of 'Ali Bey (? q.v.). He summulated him and married him to his sister (cf. al-`Ihalfi's statement under the 4th Rabi` I 216). In 1182 (1767-8) he was appointed one of the 24 Beyas in 1186 as Amir al-Bal`ad, he led the Egyptian pilgrims caravan to Mecca. On his return the dispute between Muhammad Abi S犾ahab and 'Ali Bey had already been decided in favour of the latter. During the few years of his brother-in-law's rule his prestige must have increased considerably. In 1187 he was Deftander, in 1189 he remained in Cairo as Shukri al-Bal`ad while Muhammad undertook his expedition to Syria and when the latter died at `Akka, Ibrahim as his nearest relative inherited his great wealth and influence. When Mustafa Bey, another Amir of Muhammad's house whom the latter had chosen as his leader, he shared the rule over Egypt so that he took over the civil rule as Shukri al-Bal`ad. i.e. Lord Mayor of Cairo, whilst Mustafa took control of the army. The preponderating position of these two is clear from the number of their Mamluks. According to von Norden, who was in Egypt in 1783, Ibrahim Bey had 600 Mamluks, Mustafa Bey 400, the other Beys between 50 and 200. That this division of power lasted was mainly due to Ibrahim Bey's complaisance and love of peace. He probably dealt with the imperative Mustafa Bey so that serious differences only arose between them in 1193-94. Their joint rule lasted till the French expedition to Egypt in 1213 (1798), although it was twice interrupted, when Ibrahim's the most influential Amir of the house of 'Ali Bey, came into the open. In 1196 he was only able to hold out for six months: in 1201 (1796) he was again made Shukri al-Bal`ad by the Turkish Kusamwan (Kaprun-Pasha) (Admiral) Hassan. The object of the latter's expedition to Egypt was to strengthen the power of the Pasha, the influence which had sink in a minimum since the days of Ibadh and particularly under 'Ali Bey. Although Ibrahim and Mustafa in whose hands Hassan Pasha saw the chief culprit, had to leave Cairo they did not dare openly to challenge the authority of the Pasha's envoy, the latter however had to leave the rule of Egypt in the hands of the Mamluks. Even after the departure of Hassan Pasha, which was hastened by political complications with Russia, Ibadh was able to retain his post of Shukri al-Bal`ad. Not till a truce had been carried on him and other parties off in 1206 did Ibrahim and Mustafa return to Cairo. They received an amnesty from the Pasha and henceforth again shared the government of the country.

During the French advance of 1213 (1798) Ibrahim awaited the result of the fighting at the Pyramidal on the west bank of the Nile at Shiour and Bulaq. He ordered the ships at Bulak to be burned in order to make it difficult for the French to cross the Nile. After the battles of Klimnik and Sittigya
he succeeded in escaping with his train to Syria. He stayed at Homs and retired to the north-east when Napoleon sent an expedition to Palestine.

Ibrahim returned to Egypt with the army of the Grand Visier Yûsuf Pasha. When during the battle of Heliopolis Naysh Pasha, whom the Porte had designated governor of Egypt, entered Cairo in Feb. 1800, Ibrahim Bey was with him. He led the Bey with the Turkish troops when the French were able to hold the declivity of the rapprochement with the French, while Murad Bey made peace with them and received the governorship of Upper Egypt. He died soon afterwards of the plague in April 1801.

After the final evacuation of the town by the French in June 1801, Ibrahim Bey was again appointed Sherif al-Bulad by the Grand Vizier but soon afterwards on the 20th Oct. 1801 he was thrown into prison with the rest of the Manlik, under order of the Porte, who thought it a favourable opportunity to dispose of the Manlik. The Egyptian forced the imprisoned Manlik to be handed over to them. Ibrahim Bey thus succeeded in reaching Upper Egypt. From there, in the next few years, he was repeatedly associated with the Turkish governor of Egypt, Khudew Fakhra. When the latter was driven from Egypt and the Albanian chief Taher, who had been appointed Kamis, was murdered, Muhammad Ali summoned Ibrahim Bey to Cairo in April 1801 and gave him the office of Sherif al-Bulad to prevent Ahmed Pasha, the governor designate of Lülyada, who was passing through Egypt at the time, establishing himself there. The influence of the aged Ibrahim Bey was certainly not very great and he must have seen that he was only a tool in the hands of Muhammad Ali. In any case, he developed a great distrust of Muhammad Ali; he probably saw through the latter's policy of making use of the Manlik when it suited himself, while he took care not to allow them to become too powerful. This he accomplished among them. The coup de main which Muhammad Ali attempted on 13th March 1804 against Ibrahim and 'Abd al-Qadir, the head of the sect, failed in as much as both escaped imprisonment by flight. Ibrahim never again returned to Cairo. During the massacre of the Manlikas on the 28th August 1805 he was at Turic with his son Marza, and inflicted heavy losses on Muhammad Ali's troops there. His attempt to unite the Manlikas in a common struggle with Muhammad Ali failed owing to the dissensions amongst them and Muhammad Ali's skill in always winning to his side several of the most influential Manlikas by flattery and gifts of honorary office. Ibrahim declined submission, and wrote to the Turks expressing his wish to return to them. Muhammad Ali in 1809, saying that too much blood had flowed between them. Owing to Ibrahim's efforts the Manlikas in 1810 were a power against which Muhammad Ali did not dare to take open action. But by strategy he succeeded in bringing most of the Manlikas to Cairo. Here he was again kept upon them and thus they were secured. They thus fell into the trap prepared by Muhammad Ali and were massacred in the citadel on 1st March 1811. Ibrahim Bey with a few others had not trusted Muhammad Ali's assurance. He remained on the southern frontier of Egypt and thus was saved. He spent the last years of his life at Dungola with the remnant of the Manlikas in the land of slaves, where they owed miller and lived on it and clothed themselves in robes such as slave dealers wore there, till finally in Rabi' 1 1231 the news of his death reached Caire (Dhahbi). His widow who in 1211 had been allowed to seek and bury her son Mustafa's body, received permission from Muhammad Ali to bring Ibrahim's body to Cairo. It arrived there in Ramadan 1232.

IBRAHIM HAJJİ PASCHA is the grandson of a Georgian who adopted Islam and the son of Mehemet Remzi, who at the time of his death was president of the Constantinople city council (Shaske Emmari Megedh). Ibrahim Hajji Pasha was born on the 23rd Shawwal 1279 = 12th April 1663 in the Beylik of Tripol, quarter of Constantinople. From 1277 to 1282 he attended the school of administration (Mekteb Memelik) in Constantinople and took particular advantage of the lectures of Mehemet Mustafa Bey (History), Piri Reis, Mehemet Efe (Economist) and Olyanfet Efe (Economist). Passing out of the school with brilliant success he became a translator in the Yildiz palace of Sulthan Abd al-Hamid from 1283 to 1294. Through this literary influence he was appointed professor of history at the age of 23 in the Constantinople school of law (Hekim Meqreb), to which honor afterwards in 1288 the chair of constitutional law (Hekim Meqreb) was added. Ibrahim Hajji's professorship of history lasted in 1291. In place of it he was given in 1292 the chair of administrative law in addition to that of constitutional law, and in 1293 that of international law in the school of law also. Being a brilliant orator and a comparatively bold critic he was able to attract students to himself and to write many important books also to interest the non-Turks and non-Muslims in the welfare of the Ottoman empire. In 1294-1295, Ibrahim Hajji was commissioned legal adviser (Hakim Megedh) to the Sublime Porte. The Grand Vizier Mehemet Safi Pasha in 1291 or 1292 wished to appoint him undersecretary of the Ministry of Foreign Affairs, but the Sultan did not approve. Hajji Bey distinguished himself in the office of legal adviser which he held till 1308, and acted as member or president of over 30 commissions which discussed the conclusion of treaties or disputed questions of law. Being a linguist he was twice sent on mission to Europe by Abd al-Hamid and twice to America. When the Turkish constitution was re-established in 1296 Ibrahim Hajji assisted in the political arms, championed extremely modern views, and
took the bold step, during the short time he held the portfolio of Minister of Education in 1038, of confining in office only a hundred or so of the highest officials in the central offices. Soon afterwards he held the Ministry of the Interior for a short time, and described the back- wardness of the officials so that he soon had to retire from these offices. He still continued to hold his legal claims till in 1089 he was appointed ambassador to Rome. Having already for a long time been the candidate of the Committee of Union and Progress on Jan. 13, (S called on Jan. 11) 1060 he was given the rank of viceroy and then promoted Grand Vizier. Ibrahim Haski proved himself in the field of politics a distinguished statesman, a man of striking, well-marked convictions which, however, lacked the singleness and perhaps necessity in the east. In alliance with the Young Turk he held the office of Grand Vizer for a year and a half, vigorous opponent of the Albanian and other separatist claims. As a result of Italy’s declaration of war against the Porte, Ibrahim Haski’s cabinet resigned on Sept. 20, 1911.

The greatest political success of his ministry was the successful operations of the Ottoman Chief of Staff, Ahmad Ismail Pasha, against the rebels in the Yemen and in the conclusion of a peace with the leader of the Yemeni Zaidi, Imam Yahya, which was based on religious, legal, and in part financial, independence. This treaty was also Ahmad Ismail Pasha’s work.

Ibrahim Haski Pasha’s literary works dealt mainly with jurisprudence and to a secondary degree with history. His first book was an Introduction to the Law (Mudahij u Hayat u Hukum) and was soon followed by an “History of International Law” (Turkchi Muhakeme u Hukum), which was intended for the lower classes of intermediate schools (Mudahij) (6th edition Istanbul 1321 = 1903-4). Likewise with Ahmad Ismail he prepared a new Ottoman History (Turkchi Siyaset u Nihaya) and then from his own pen a Small Ottoman History for elementary schools (Istanbul 1301 = 1880). Soon afterwards he published his most important historical work a General History in three volumes from the earliest times to the 19th century (Turkchi Siyaset u Nihaya, Istanbul 1303 and 1306 = 1881-8 and 1883-8). There is nothing original in any of these works.

Ibrahim Haski’s more valuable work is his Administrative Law (Hukum u Hukum, 4 ed., Istanbul, 1388-90; 2 = 1162 = 1943-45) in two volumes octavo. The work deals for the first time with a many-branched and complicated subject in a masterly fashion. It is still far surpasses all similar compilations. He has also prepared a number of unpublished works, which his activities devoured for twenty years to education and politics but not allowed him to publish.
Ibrahim ibn-Masili. 

Ibrahim ibn-Masili was one of the most celebrated musicians of Arab history, a man of Persian origin, was born at Kula in 1252 (1742) and died at Baghdad in 1883 (1742). He studied music under Persian masters and attained an extraordinary degree of skill both in singing and in the use of the lute. He stood in high favour at the 'Abbâsid court, under al-Mahdi, al-Hâfiz, and (especially) al-Râshid. His son Ibrahim, a very learned and accomplished man, followed in his footsteps, being a musician and composer of fully equal ability, and a prominent figure in Baghdad under al-Râshid, al-Murâd, and al-Mustâsim. Mirrafius was told of Ibrahim's proficiency, e.g. of Alâdîn V. 41, 1-14. Two anecdotes concerning him which became very widely popular are the story of the singing-girls whose house he entered in a basket (Alâdîn V. 41 sqq.; Al-Ghânî, Majzûl 'alal 'alawir, i. 245 sqq.; Ibn Adurâd, ed. Dupuy, p. 322 sqq., and the 'nawâr Nights (in the two latter cases, told of Ibrahim), and the story of his visit from the Devil, who taught him a wonderful melody (Alâdîn, v. 36 sqq.; Al-Ghânî, ii. 241 sqq. and the 'nawâr Nights (told of Ibrahim)).

Ibrahim Mutteferrika (L. e. court-musician), the first Turkish printer, was born about 1874 in Kolossâvár (Hungary) of Calvinistic parents and, at the age of 18, was taken prisoner by Turkish troops, making a raid into Hungary. He was brought to Constantinople and sold as a slave. He then turned Musulman and occupied himself with theological studies. In 1715, the Porte entrusted him with a political mission to Prince Eugen (von Hammer, Geschichte der Orientalen, vii. 193 sqq.); Ibrahim was next attached to the staff of Francis Károly of Transylvania, the leader of the Hungarian Jâmbouts, who lived as a refugee in Turkey from 1733 to 1735. Ibrahim also fulfilled the functions of a dragoman of the Porte. Early in 1737, he was sent as a Commissioner to Poland (von Hammer, op. cit., vii. 356-390) and took part in the war against Austria as secretary to the artillery corps (soph 'asbâbjam') in the following years we see him interested and entangled in the political intrigues of his time, and especially connected with the French ambassador and the adventurer Bonnerose. (Vandal, Une Ambassade française en Orient sous Louis XVI, p. 181; von Hammer, op. cit., vii. 350 sqq.; ibid. vii. 453; Petrusch: Vorricht, d. Thür. Hoflieferant, p. 356). At the end of Redjeb 1156 (Sept. 1743) the Porte received a request from the Khan of Central Asia Khan, on the behalf of the Republiks of the South. (Sahhâ, Tarîqî, i. 221 vs.). He died in 1857 (1745). But his chief fame does not lie in his political activity, but more important is the part he played as founder of Islamic typography. With the help of the enlightened Grand Vizier Damât Ibrahim Pascha, and encouraged by Sultan Mahmûd, who had accompanied his father, Yûnis Sulîh Elenbuz, Mahmûd, in 1728 on his embassy to the court of Louis XV, Ibrahim established the first printing office in Constantinople, received the authorisation for this by an imperial firman in the middle of Dhu-l-Ka'da 1129 (beginning of July 1742). The main work of this printing office was the dictionary of Wâ'Neill published in two volumes on the 1st Redjeb 1144 (31st January, 1734). In October 1734 the work in the office was stopped, but resumed after an interval of six years, and then stopped altogether in 1155 (1747), the office having in all printed 17 books, the incunabula of Islamic typographia, (see exact list in v. Hammer, op. cit., vii. 583 sqq.).

Bibliography: J. de Karmis in the Revue Historique de l'Afrique, ii. 173-183, with the additions given by P. A. Mystrenck, ibid., no. 7; Sahhâ, DânâMat, i. 137; the firman of the year 1139, in the presence of the first print of Wâ'Neill, the epitaph of Ibrahim, with the chronogram of the year of his death, has been published in the newspaper Sâdûk, no. 850 of the 14th Dhu-l-Qi'da i. 1531.

Ibrahim Pascha, the eldest son of Mahmûd 'Ali, a great general and viceroy of Egypt. He is often described as Muhammad 'Ali's adopted son. Amma, a relative of his father, the governor (Rûdâ'ît) of Kavalla in Macedonia, was certainly a divorced woman when Muhammad 'Ali married her in 1837 and it cannot be denied that Muhammad 'Ali had a certain preference for his son Tamhûd, who died on the 20th September 1836. There was certainly also a rivalry between Ibrahim and Tamhûd (cf. Mengin, p. 82 sqq.). The year of his birth is decisive, however, and this is usually given as 1789, but occasionally also as 1786. In the older authorities like Dâhârût and Mengin we find no hint that he was not Muhammad 'Ali's real son. Dâhârût in 1828 (1813) describes him as a young man of not yet twenty, which certainly does not fit in. On this question cf. Gourn, p. 151 sqq.; Clot, Bey, c. p. Izaâlii, Murray, p. 114 sqq.; Inde, played an important part in the history of Egypt in the time of Muhammad 'Ali, and spoke the article 'Inde' (1823-1840). He has been called the mailed arm of his father and as a matter of fact the foundation of his father's policy would have been impossible without his military achievements. When he positions in Egypt had been somewhat secured, Muhammad 'Ali in 1805 sent for his two sons Ibrahim and Tamhûd, and in 1809 for his wife and the younger children, Isma'il and two daughters. In 1806 Ibrahim was sent with the Kapudan Pascha to Constantinople as a hostage for the tribute promised by his father; after the departure of the English fleet from Alexandria in 1807 the Porte sent him back. In 1810 Ibrahim became afterward, after the death of his father in 1814, he was sent by his father to Upper Egypt to collect the taxes. He drove the remains of the Mamlûks out of the country, subdued the Bedouins and restored order and security in the country. In his efforts to collect money he sometimes used very ruthless measures. Dâhârût gives a terrible account of his procedure at the end of his survey of the events of 1128 (1813). He remained in charge of the administration of Upper Egypt till the beginning of 1816. In the meanwhile he had been given the
title of Pasha by the Porte in recognition of the services of his father (Mamun, ii. 475). In 1816 his father sent him to Arabia to make a final reckoning with the Wahhabis, against whom his brother Tashin had been fighting successfully from 1811 to 1813 and from 1813 to 1815. Muhammad 'Ali busied himself after three years of heavy fighting the goal was achieved, the capital [9, 75], the capital of the area was transferred and Abu Ali was married, to the Soudan. (See above, p. 419.) In December 1819 Ibrahim had made his triumphant entry into Cairo. Soon afterwards the Sultan appointed him governor of Djidja. In the meanwhile, Muhammad 'Ali had entrusted his third son Ismail with the conquest of the Sultan. The discovery of the Ottoman fleet and the capture of slaves, who were to form the nucleus of Muhammad 'Ali's new army, were the two objects of this expedition. Ibrahim Pasha was sent with reinforcements to support his brother. He seems to have gone there with seven thousand men (Watham, ii. 243), but a severe attack by the Turks forced him to retreat hurriedly to Cairo in the beginning of May. In the following years Ibrahim Pasha took part in the invasion of the new troops (ma'bad lozlo), who were enrolled at the French Colonel Sevres barracks. He was among the European instructors the latter under the name of Suleiman Pasha became his main supporter in his later campaigns. When Muhammad 'Ali was appointed to conquer the Moros by a foreign of the Sultan, dated 14th January 1824, he sent his son Ibrahim Pasha with an excellent army trained on the European model and ample supplies of war material to the end of July 1824. The capture of Novarino and his entry into Tripolitania practically brought the Peninsula under his sway. February to April 1826 were devoted to the siege and capture of Misrashogil. After the intervention of the Great Powers had been declined by the Porte and Muhammad 'Ali, the naval battle of Navarino took place in October 1827, in which the greater part of the Egyptian Turkish fleet was destroyed by the allied fleets of England, France, and Russia and finally Muhammad 'Ali was forced by the English Admiral Codrington, who appeared before Alexandria, to recall his son and the Egyptian troops. He arrived in Alexandria on the 10th October 1827. In 1828 Ibrahim Pasha was entrusted by his father with the conduct of the Syrian campaign. On Nov. 19 he arrived with his troops in Palestine. After a six months' siege he obtained the surrender of 'Akka on the 27th May 1829, after gaining several victories over the Pasha of Tripoli and Aleppo on the plain of Zera south of Homs. Ibrahim's march that followed, through Syria and Aila Minor was made possible by his victories over the Assyrian guards of the Turkish army under Muhammad Pasha of Aleppo at Homs on the 8th July, over the main Turkish army under Hussein Pasha in the pass of Solimani in Alexandria (29th July) and over the Turkish army under Rashid Pasha at Homs (1st December). These victories showed the superiority of the Egyptian army. Ibrahim's skill as a leader, and the success of his policy of uniting the various groups in Syria under onebanner by the cry of liberation from the Turkish yoke and in winning to his side the influential Amir Baris of the Libnun. Ibrahim Pasha advanced as far as Kutasah. There on May 1829, and without pressure from the European powers, a treaty was signed between the Porte and Muhammad 'Ali by which Syria and Aila were ceded to the Porte. Ibrahim received in the Soudan the title of oumarrjol of 'Aden. His father appointed him to administer the new territory, a difficult task in view of the varied nature of the population of the country. Although the latter were agreed in their disinclination for Turkish rule, the states-rajahs introduced by Ibrahim did not suit them either. Fights everywhere were the result and Ibrahim was partly successful in suppressing them by the general colonization of areas. The recruiting of the population for military service resulted in the emigration of great numbers to Aila Minor and Mesopotamia, and the commanding of bands of bandits for military purposes resulted in the decline of agriculture and trade. Although there was quiet generally in the land, the days of Ibrahim's rule were numbered. When the war was begun again by Turkey in 1834, Ibrahim on the 14th June won a decisive victory over the Turkish army under Jalil Pasha at Nukh west of Brijal and the Turkish fleet under Furat Pasha went over to Muhammad 'Ali. The intervention of the powers, whose negotiations led to the Treaty of London on the 15th July 1834 (the so-called Quadruple Alliance), altered the situation of things. Hoping for support from the French, Muhammad 'Ali declined the demand that he should evacuate Syria as far as 'Akka and confine himself to the hereditary pashalik of Egypt. No support was given him and the coasts of Syria and Egypt were blockaded by the allied fleets. Ibrahim was in a difficult position between their leading army and the hostile people of the Lebanon who were stirred up against him. After the capture of 'Akka by the English Admiral Napier and the latter's negotiations with Muhammad 'Ali in Alexandria, the latter was forced to agree to the evacuation of Syria on 25th Nov. 1840. On the 29th Dec. Ibrahim left Damascus with his troops and returned to Egypt via Cezirs, sending a portion of the army home via 'Akka under Salamis Pasha. In the years that followed Ibrahim Pasha was mainly concerned with the administration of Egypt. His interests in and knowledge of agriculture is proved. He was several times in Europe, sometimes visiting watering-places to improve his health. He was well received in Europe. At the beginning of 1848 he was in Malta where his father's condition made it necessary for him to remain. On June 24 he became practically ruler of the country. In September he was formally granted the pashalik of the country by the Sultan in Constantinople and on the 19th Nov. 1848 he died in his sixtieth year. He was buried in the family mausoleum near the Imam al-Shafi'i. Of his sons he was succeeded by Ahmad (born 1825), Ismail (afterwards Khedive born 1827) and Mustafa (born 1833). A portrait of Ibrahim Pasha is given in Cadle's and Barratt, Historia, etc., descriptions of his personality in Clarion, l. p. 280. Paton, ii. 55. Bibliography: Uhath, "Ibrahim ou M. Ibrahim Pasha," 1st edition 1853, 2nd edition 1856; translated "Mamelukes Biographiques du"
IHRAHIM PASWA, the celebrated Grand Vizier and favourite of Soliman the Magnificent, was born towards the end of the 16th century of Christian parents in Parga in Epirus. Educated in his early youth and brought up as a slave to the Imperial Sere during Selim's reign, he was afterwards attached to the retinue of the latter and appointed Soliman as long as this latter reigned as Governor General of Sarthagn in Magnesia. He soon rose to high social and political station and held the young Crown Prince in especial favour, and on his accession to the throne in 1580 Soliman made him his *de facto* ruler (as entrusted with the inner chamber) and chief buckler and buckler (high court function). On the 13th of March 999 (27th June 1523) the Sultan made him Grand Vizier at the same time granting him the governorship of Kocatia. During the thirteen years that Ibrahim held these high offices he enjoyed more than any other ever did before or after him the Sultan's entire confidence. The Sultan actually shared his monarchical powers with him and gave him the insignia of the sultanate. He granted him the title of *hâkî* (illuminary) and the half of the Imperial bodyguard, as well as the title of *sâfî* sultan (sultan commander-in-chief). Ibrahim's wedding

18th Rajab 930 = 27th May 1524, which the Sultan himself attended, was celebrated with such pomp and splendour that it has become famous in the annals of Ottoman history. Shortly afterwards, owing to the troubles caused by the insurrection of Kilij Ahmet Pasha, Ibrahim went to Egypt (October 1524 - September 1525) to re-establish order and to re-organize the administration of the country. In 1526 he conducted Soliman's first campaign against the Mamlukes of Egypt, the occupation of Thebes 10th Sept. 1526. Three years later, he succeeded in a second expedition against Hungary, with the Sultan, Ibrahim captured Olomouc, which had been reoccupied by King Ferdinand, and left his army in Vienna. In September, Ibrahim invaded Hungary for the third time, but he did not advance further than Graz, and had to content with pillaging the country. The armistice concluded with Ferdinand in the spring of the following year was chiefly due to Ibrahim's influence. The decision of the dispute between the king and John Zappolyus regarding the Hungarian possessions was placed in the hands of the Sultan, who again entrusted the Venetian Luigi Griffi, Ibrahim's favourite, with the settlement of the frontier. In his Persian expedition 1533-1534 Ibrahim was not less successful. After occupying the most important frontier fortress he entered Tabriz on the 13th July 1524 and took Baghdad on the 31st December of the same year. He returned to Constantinople in January 1536 and there continued in February the first French capitulation with the ambassador of Francis I. Ibrahim had now reached the zenith of his power and splendour when he was suddenly executed, without apparent reason, by the Sultan's orders in the Imperial Sere, where he was spending the evening (27th Ramazan 942 = 15th March 1536). His body was dispersed on the river and buried in the vicinity of the Edirneh near the Arsenal, where his alleged grave was later shown in the Edirne monastery Dipaw. It was said that Ibrahim in his tomb revolved the throne for himself and that this decision on his tomb was in the hands of the Sultan; the fact is that the Sultan had done everything to nourish and encourage such thoughts in his confidant, and it seems that Ibrahim's attitude fully justified current rumours. A series of legends and sayings soon gathered around the figure of the *sâfî* sultan, Ibrahim Pasha, some of which are still current among the common people. A number of mosques, hospitals, bridges, and aqueducts in the capital and in the provinces, chiefly in Roumelia, likewise perpetrate his name and preserve his fame to this present day. His splendid Serai near the Edirneh was later occupied by the Imperial pages, and his garden among the Golden Horn remained for centuries famous among the sights of the town.

IBRAHIM PASHA (DAMAD), the favourite of Mustafa III, and three times Grand Visier under his successors Muhammad III. He was of Slavonic origin, born in the neighbourhood of Baghys; brought up in the Serai he was appointed ἀντιστάρ (armour-bearer of the Sultan) in 1574-1575; from this time (1576-1577) he was Agha of the Janissary and Beyler-bey of Constantinople; he was sent to Egypt in 1597, where he remained for a year and a half as Governor General. In the beginning of 1585 he conducted the campaign against the Druzes of the Lebanon, and then returned to Constantinople in September of the same year. His wedding with the Princess Pacha, daughter of Muhammad III., was celebrated there in 1596. He was made ἀντιστάρ Pasha, and held this office for about a year. Shortly after, the accession of Muhammad III. he was appointed ἀντιστάρ (deputy) of the Grand Visier on the 17th Shabban 1073 (10 April 1595) and a year later on the 5th Shabban 1074 (4th April 1596) Grand Visier. He accompanied the Sultan on his march against Egin (Tshat, Tshari-Egin), was dismissed on the day after the battle of Kulluk-Egin on the 22nd October, but restored to office for a second time after six weeks, at the end of Rahib 1075 (middle of Dec. 1596). The whims of the Sultan prevented him completing a year's office; he was dismissed on the 23rd Rahib 1076 (25th Nov. 1597), but recalled to his functions for a third time on the 9th Djamud 1077 (11th Jan. 1599) and entrusted with the continuation of the war against Hungary. In two expeditions 1078-1009 (1598-1599) he succeeded in stepping up the advance of the Austrian army. In Rahib 1079 (end of October 1599) he captured the stronghold of Nagy Kenas, and as a reward the Sultan granted him the grand vizierate for life. Ibrahim then returned to Belgrade, where he died on the 9th Maharram 1081 (4th July 1601).

IBRAHIM PASHA (KARA), Grand Visier under Muhammad IV., born in 1597 (1550-51) at Khandzverk near Gallipoli, began his career as a Scoundrel, then became il ågâ (page) of the outlawed Fütûr Müştafa Pascha. (v. Hammur, Over, geschi., v. 26), and afterwards served several Pashas including Kara Müştafa Pascha (summarily executed) till on the 3rd Rahib 1082 (20th March 1672) he received the office of ἀντιστάρ and a few weeks later that of skender mecmed (under and chief minister). From the 17th Rahib 1083 till the 28th Rahib 1090 (19th Nov. 1672-24th April 1679) he was ἀντιστάρ Pasha and at the same time administered for a period the grand vizierate in Iâmânum and again after Djamud 1094 (June 1683) during Kara Müştafa's campaign against Vienna. After the assassination of the latter on the 6th Marzûr 1095 (27th Dec. 1683) he was appointed Grand Visier, dependent on the 28th Marzûr 1097 (14th Dec. 1685), banished to Rhodes on the 15th March 1686, and was strangled there a few months later on the 15th Shabban 1097 (June-July 1687).

IBRAHIM PASHA [See CHENTILLON]

IBRAHIM PASHA (DAMAD), favourite of Ahmad III., and his Grand Visier for many years. He was the son of a certain Ali Ağâ and was born about 1678 in Mağusa near Urgub, in the district of Nigde. At the age of 20 he came to the caucal, where he obtained a position as ἀντιστάρ (deputy) of the Sultan. His remarkable intelligence and his ability in writing have attracted notice, for soon afterwards he was appointed clerk of the imperial treasure, and it was in this office that he had an opportunity of becoming acquainted with Prince Ahmad, afterwards Sultan. After Ahmad's accession to the throne in 1115 (1703) Ibrahim occupied for six years the post of secretary of the chief sultan and, although the Sultan was willing to give him the rank of a vizier, Ibrahim contented himself with the modest office of ἀντιστάρ (deputy) and ἀποθηκεύς (treasurer) in the provinces. In 1123 (1715) he accompanied Damad Ali Pasha on his campaign against Hungary, and after the defeat at Peterwardein on 14th August 1715 he was entrusted with the difficult task of informing the Sultan of the fatal course of the war. As a result of this mission he again came into personal contact with the Sultan who appointed him Master of the Horse and the following year, on the 16th Shawwal 1128 (3rd October 1716) deputy Grand Visier. After his marriage with the 15-year-old Princess Pacha, daughter of the Sultan (5th Rahib 1129 = 8th February 1718), he was definitively appointed Grand Visier (3rd Djamud 1130 = 9th May 1718). The next 12 years during which Ibrahim held this post form one of the most brilliant periods in the history of Turkey. Both Ahmad III. and his prime minister were men of high culture and refined taste and emulated one another in the patronage of art and learning. Numerous buildings were erected in their names and in the Valley of the Sweet Waters (Uskudâr), which was transformed into a sort of Versailles. Religious and secular ceremonies were celebrated with extraordinary pomp and were increased in number. At the same time public institutions,
library, e. g. the Serai Library and the Library of Irshad Pasha, were founded. The art of printing was also introduced in this era by Ibrahim Mushtaqvi [20, p. 7]. In his foreign policy, the Grand Vizier's object was to maintain friendly relations with the European Powers. After entering upon office he put an end to the conflicts with Austria by the treaty of Passamaquia (1718). A treaty with Persia the Grant (1724) regulated the question of the boundary provinces of Persia; by virtue of this the Turkish forces occupied in the following years all the most important cities: Hamadan, Gondja, Erivan, Tabriz, etc., definitive possession of which was accorded to Turkey by the treaty of Hambala (23 Oct., 1723). In 1730 however Tahmasseh-Khan invaded the newly acquired province, which resulted in a declaration of war by the Porte, though the Sultan agreed to this much against his will. This was the cause of a serious insurrection (September 1730), as the people were discontented with Irshad Pasha's government, and resolved in the fall of Tahmásb Ahmad and his favourite vizier. Ahmad would not deliver Irshad alive into the hands of the infuriated mob and had him strangled in the Serai on the 30th Sept. 1730; on the following day he himself was forced to abdicate.

**AL-IBSHIH (AL-IBSHIH or perhaps AL-ABATHI) BAREH AL-DEEN ABD AL-‘ATHIR MUHAMMAD B. AYMAN (ZAHMAH AL-DIN ABU L-‘AZAR) b. MANOCH B. AHFAD B. HAJJ AL-MASARI AL-SHAFI, M., Arabic scholar of Egypt, born in 790 (1388) in the province of al-Qahhaway in the place al-Qahhaway (Abdulhak al-‘Attar, Muhajem, ed. Westenfeld, I. 931; de Sacy, Relation de l'Océe par Abdallah, p. 341, No. 7, Ibn Dukhta, al-Intiffadi, Cairo 1730, p. 62 supra), Here, almost learning the Koran by heart by his tenth year, he also received instruction in Pesh and Grammar. In 344 he left Egypt for the pilgrimage to Mecca. He often came to Cairo and became the teacher of Djalal al-Din al-Rusam. He became king of his native place in succession to his father. For the rest he devoted himself to literary activity, showing a particular preference for work. According to al-Sakhawi, his grammatical knowledge was not thorough nor his language free from errors. He is the author of the Adab work al-Mustafa’ fi kull Fama muttacib (sp. Bilik, Cairo 1272, Calci 1275 [flh.], 1280, 1305, 1306, 1309), which G. Rat translated into French (al-Mustafa, Extrait de mornceaux choisis in de Sacy, Smith id al-Mustafa, etc., Paris—Toulios, 1899—1903). According to al-Sakhawi, he also composed a panegyric work in two volumes, Abd al-Ashâ’ir ‘alâ ‘uṣra al-A’zhâr, and began a book on epigraphy (Cf yu‘ayr al-curânet ten ‘elâhîr). He may also be the author of the Taxhâris al-Tâhiriyât al-Mustafa’ (ed. Basra, 1932). The latter work was written in Arabic and Persian. He died in 194 (1444). The same work was born by Shâhâb al-Din Ahmad b. Muhammad b. Jâli b. Muhammad ‘Ali b. Ahmad, a Shâfi‘i teacher in Cairo, d. 863 (1462-3) (al-Sakhawi, e. c., Ha. Warr. 444, p. 518 sqq.), Shâhâb al-Din Ahmad al-Malik (ibid., 346, 347), Shâhâb al-Din Muzafir al-Malik, known as al-Sakhawi, born 21 Ramadân 834, 9 April in Cairo (al-Sakhawi, e. c., Ha. Warr. 2600, p. 382).

(‘E. von ARDENNE.)

**IBTIDÁ** (inf. viii.), form of zu 'la biğgin', "beginning", "inchoative." Technical term of Arabic grammar denoting the use of a word as subject (mu‘ahdah) of a nominal sentence. The mu‘ahdah is any noun (or its equivalent) with which a beginning is made in order that a statement may be built upon it; the mu‘ahdah and what is built upon it are both in the nominative case; and there can be no ibtida’ unless something built upon it follows (Shahwahli, i. 293 seq.). Thus e. g. in Muhammadan reza-‘Alî, 'Ali is beginning to unite with Muhammadan 'Ali is built upon it by ibtida’, and 'Ali is 'built upon it' to complete the sense. The distinctive feature of the nominal sentence is that the relation of its subject and predicate is one of logical necessity, and is expressed by any finite verb. In general the subject precedes the predicate, and hence any sentence in which the subject comes first is regarded as nominal; e. g. Zâdun muhit, where Zâdun is subject, while in the sentence muhit Zâdun Zâdun is subject and subject is agent (see esp. Wright, e. c., i. 273 A. R.).

The precedence of the subject is however not universal, and cases are quoted in which inversion (takrib) occurs, namely for emphasis or other special reason.

In Prosody, ibtida’ is the name for the first foot of the second hemistich of a line. [Cf. Mustâbah, Muhajem.

**IC-IL** (r.) “interior” the name of a province in Asia Minor, which at present forms an independent sanâdah of the vilayet of ‘Adana [q. v.], with Sedirke as its chief town; 17 villages belong directly to it and also the nahiya of ‘Aysah with 13 villages and Bodhidal with 6 villages. This sanâdah comprises four ka‘fas, viz. Ermenek [q. v.], Mill, Golût (Kilimliye, Celmartli) and Amanli [q. v.], capital Corah. The population consists of
IC-OGHLAN (v.), "servant of the Sultan" (i.e., of the palace) was the name given in Turkey to the pages in the Sultan's service. They were Christian children who had either been taken in war or given as tributes in Europe, Asia was free from this levy. The most beautiful and best developed were chosen and those who seemed to be the most adroit and to possess the best character. Their ages, country of origin, and education were noted and then they were converted to Islam and circumcised. They received a strict training for nineteen years under the supervision of mimches. The 400 were divided into four chambers. The first comprised 400 persons, receive a daily pay of four to five aspers, learned to read and write and were instructed in religion and good behavior. After six years they entered the second chamber, where a similar education was continued and they also received a military training, which included riding and fencing. The third chamber contained 200 pages, who learned to sew, embroider, and make arrows, also to play musical instruments, and perform the duties of a chamberlain. The fourth chamber consisted of only forty picked pupils who received a daily pay of five to ten aspers; they were dressed in satin, brocades, and gold and acted as chamberlains, as keepers of the wardrobes, major-domos, first barber, first musician, secretaries, and inspectors. The highest order in the empire were open to the latter class and their occupants were chosen from them. From the end of the 18th century therefore the tribute of boys was abolished, as the Turks were ready to pay to get their own children into the corps, so that they might attain the highest offices in the state. The Galata Serai (cf. I. 8750), in which the Lecca Imperial was, was formerly the training house of the I-Oghlan; there was another in the Imperial Palace at Adrileme but it was abolished by Sultan Haileih (1049-1058 = 1639-1648).

ID AL-ADHÁ (also called "id al-adha" or "id al-azwar") "sacrificial feast" or "id al-adha", "the major festival", in India hrib "id (takr) id" in Turkish "id al-adha" or "id al-adha", the "major festival", is celebrated on the 10th Jhúl (1-Hijjah), the day on which the pilgrims sacrifice in the valley of Mina (cf. MÁHÁL), the dyne of JÁHÁL. The old Arab custom of sacrificing on this day in Mina was adopted by Islam not only for pilgrims but also for all Muslims as aams. (It is explained as "the (periodically) returning". But it is really one of those Amsahic hawmzahs, which are particularly numerous in the domain of religion, cf. for example the Syrian "id festival", holiday.

The Muslim year has two canonical festivals, the id al-ádha (v.), or "sacrificial festival", on the 10th Jhúl (1-Hijjah) and the id al-fitr "festival of breaking the fast" on the 1st Shawwal. The special legal regulations for these are dealt with in the following article. Common to both festivals is the id al-úla (v.), festival of public prayer, which is observed by the whole community, which is considered sunnah. In many ways it is more important than the two other festivals of the id than the daily or even the Friday id (although in other points it has come to resemble the latter) and in its general style much resembles the id for drought and eclipses. It consists of the id day (v.) and contains several takhr (v.) more than the ordinary id. After it is a tasah (v.), in two parts is held. It has no malá (v.), and no taffya (v.), as in the oldest times the only customs to it is the word id adh.. It should be celebrated in the open air on the mawála (v.), which is still often done, though usually, is frequently now preferred. The time for its performance is between sunset and the moon when the sun has reached the horizon.

At both festivals, which last for four days in practice, the Muslim pass on new or at least his best clothes, people smile, congratulate, and present on one another. The cemeteries are visited, and people stay in them for hours, sometimes the whole night in tents. These more popular practices are more usual at the id al-ádha than at the id al-fitr; the festival of breaking the fast is much more joyously celebrated because the hardships of Ramadan are over, so that at the present day the "minor festival" has in practice become of much greater importance than the "major festival".

only a necessary duty (mughayl) by reason of a vow (mubāh).

This mughayl (mughayla) is obligatory on every free Muslim who can afford to buy a sacrificial victim. Sheep, goats, or any other person (nāmaq) or a camel (one for one to one person) are sacrificed. The animals must be of a fixed age and free from certain physical defects (one eye, lameness etc.). The period of the sacrifice begins with the ʿaṣr of ʿiṣaʿ and ends with sunset on the 3rd of the three ayyām al-ʿaṣīḥā. The following practices are recommended to the sacrificer: 1. the ʿaswāmī (i.e., the saying of the Kāmoda [q. v.]). 2. the ʿaṣīr al-ʿaṣārī, the blessing on the Prophet; 3. the turning towards the ṣabīl (the three-fold radd) before and after the sacrifice; 4. a request for the kindly acceptance of the sacrifice. If the latter is offered on account of a vow, the sacrificer must not make none of it but must give it all for pious purposes. If the sacrifice, as is usually the case, is made voluntarily, the sacrificer enjoys a portion (2/3) of the animal and gives the rest away.

On the public prayer and the usages at the festival on this holiday see below.

Bibliography: In addition to the works mentioned at the art. In the Fith Books in the chapter on ʿUqūt, (E. Mittyoch).  

ID AL-ṢĪṭR (festival of the breaking the fast) or ʿazd al-ṣīṭr, the minor festival, Turkish ṣaḥid al-ṣīṭr or ʿurtā al-ṣīṭr (cf. mīrām), is the festival celebrated on the 1st Shawwal and the following days. If the Mūsulman has not paid the ṣāḥib al-ṣīṭr (cf. ṣafā) before the end of the period of fasting, he is legally bound to do this on the 18 Shawwal at latest and is recommended to do it before the public prayer day, which is celebrated on this day (cf. id).  

As this festival marks the end of the difficulties of the period of fasting, although called the "minor", it is celebrated with much more festivity and rejoicing than the "major" festival of ʿid.  

Bibliography: The fifth books in the section ʿUṣūl al-Ṣīṭr and the bibliography in the article ʿUṣūl. (E. Mittyoch).

ID ADA (s.) is the line of vision (dīper) marked on the surfaces of the astral bodies, turning round the axis of the planet, with the aid of which various observations can be made, particularly the taking of the altitude of a star (see above i. p. 501).  

IDAPA (s.) (jumla, lit. turn of oye to draw near); the adjoining of one thing to another; augmentation. Technical term in Arabic grammar, commonly named the "genitive relation", or the "construct state"; the relation of two words of which the former is determined or particularized by the latter. The term (al-muṣaf, "the amputated") is said to be in the construct state, and the latter (al-muṣaf ḫalq, "to that which the construction is made") is in the genitive case. Their relation expresses the generality of possession, quality, material, cause or effect, part or whole, object or agent, and its distinctive feature is: 1) that its two members together form one idea, and cannot be separated in writing; hence any adjective or its equivalent qualifying the muṣaf must follow the muṣaf ḫalq, as nisba ʿamma ilā-ḥarām, "the beautiful daughter of the king"; 2) that both the muṣaf and the muṣaf ḫalq are definite in sense, or both are indefinite in either case the former is regarded as sufficiently defined by the latter, and is regularly written without the article and without ḫalq (cf. with another example ʿamāma nabiyyā, "a king's daughter"). An exception to this is seen when the muṣaf is an adjective which qualifies a definite noun, and which no longer have the article; this is ṣafā ḫalqī or ṣafā ḫalqī "improper augmentation". In the strict Arabic Terminology the fact that the muṣaf ḫalq is in the genitive is due to the government of a preposition expressed or implied e.g. baytā Zain (Zain's house) — ʿabā biḥtā Zainī (the house which belongs to Zain).

IDDA (s.) is the prescribed period of waiting, during which divorced and divorced women cannot contract a new marriage after the dissolution of the previous one. The idda prescribed for widows is legally 4 months and 10 days (cf. Karan ii. 243). Among the ancient Arabic a longer period of mourning was prescribed. Then it was customary for a widow after the death of her husband to withdraw to a small tent, where she spent a whole year during which she was not allowed to cleanse herself. See J. Wall-  

Bibliography: Ein Buch der Araber (Nachdruck von der Kgl. Gesellschaft der Wissenschaften zu Gothenburg 1805), p. 454–455). ʿIddah after divorce was unknown to the ancient Arabic. Whoever married a divorced woman who was pregnant, was considered the father of the child born after the marriage even though the previous husband was really the father. In Islam, however, the actual father was considered the father of the child and no woman was allowed to remarry within a definite period (ʿiddah) after the dissolution of the first marriage. If she bore a child during this period only the previous husband could be considered its father. This ʿiddah after divorce lasts, according to Muslim law, for three menstrual periods (jumla) or for non-menstruating women three months; if a divorced woman is pregnant she must not contract a new marriage in any circumstances for 40 days after the birth of the child (cf. Karan ii. 258); i.e., 4. An ʿiddah is also prescribed for slave women, but in place of an ʿiddah of four months and 10 days, it only lasts two months and 5 days, and in place of an ʿiddah of three months, one of two ʿiddah and in place of an ʿiddah of three months, one of and a half months. (Th, W. Jtunb.)

IDDIGHAM (coming according to the Baja school of grammarian) or IDIGHAM (coming according to the Kifā school), technical term used in Arabic grammar to denote the close association in pronunciation of two consecutive homographic consonants. This may take place without complete assimilation, but in no manner the one consonant "eaters last" and is assimilated to the other, which is then written and spoken as if doubled. The following is a summary of the rules as given by al-Zamakhshāry.

1. In general ʿiddigām may occur when both
IDIGHÄM — IDJAZÄ

IDJAZÄ (a.) Permission, a technical term in the science of Tradition, the permission granted to any one by a competent "carrier" of a text or even a whole book — whether it be the latter's own or an older text which he is able to trace back by a reliable chain of transmitters to the original author. It is given to the author to transmit further the work, and to quote the transmitter as an authority. The "idja" does not require immediate contact between the person receiving the permission and him who grants it. And there is a difference of opinion as to what formula has to accompany a text which has been acquired by means of "idja". Even the 'Abdullah Caliph al-Nāṣir and al-Mustārṣam gave a number of idja' for health which they had themselves received, the former gave authority in individuals to exercise this function in his name (Bayyin, Tarikh ab. al-Khaṭib, Cairo 1905, p. 187, 188). In time the acquisition of the idja' from important persons became a matter of great ceremony. Fathur collected "idja' for their sons from all possible shrines. (Abu 'l-Mahdī, ii. 2, ed. Popple, 1804). The celebrated Naṣīr al-Dīn al-Harrawī (died 1591) while going round the Ka'ba (purificatory) at Mecca on his pilgrimage, was besieged for "idja' (Muhlībi, Khulqī, 3749). Princes sought "idja' from scholars (e.g., in Urfa, Nisār, al-Hasa, ed. Houdas, p. 317), the Ottoman sultan Ādū al-Hamāl, and his grand vizier Ḥāfiz Pasha sought and obtained the idja' for Tradition from the author of the Tādž al-Awā' (cf. p. 970 of this work). People took advantage of the presence of travelling scholars to obtain from them the "idja' for their wives; this is recognized as an additional authority to the scholars themselves (Ādū al-Hamāl, 3250). "Idja' has been given to the author of the "idja'." (Th. W. JUVENALI)

IDJAS (a.) i.e., όφεσιν (in contracts), really the solemn declaration that the offer is irrecusable [cf. the Arabic expression khalif naṣīhā al-din i.e. the contract of sale is binding and irrevocable]. In all legal transactions the observation of the prescribed legal form is most necessary and the mutual declarations, known in the older books as idja' and ḥaddī (i. e. offer and acceptance) are as a rule indispensable. Nevertheless in detailed books on law the question is discussed how far contracts are legal without such an idja' or ḥaddī. For example, in cases where it is the usual custom for parties to exchange goods or services with their hands without further formalities, can a valid transfer of the property take place without idja' and ḥaddī? Many scholars reply in the affirmative, but others hold such an "exchange" without the legally prescribed declarations to be only valid in cases of things of very little value.

IHHAD [See MAL AMIR.]

IDHM (a.), i.e., ṭamāṣa. Special regulations on idhm are given in the Muslim law books in the chapter on the law of slaves. According to law, slaves are a merchandise not capable of making sales transactions. If however a master wishes to use the services of a slave in the management of a business, he can empower him to perform the necessary legal transactions. A slave who possesses such authority is called ṭamāṣa lihā (in the law books i.e. one who has been given an idja'). Contracts made by the slave so empowered are valid and binding as long as he does not overstep the limits of the powers granted him and he guarantees his pledges to the creditors with the goods his master has entrusted to him to carry on the business with.

(T. W. JUVENALI)
other battle they fought with the Lakhism, all under the leadership of 'Abd al-Karim (al-Abd al-Karim), against the Jishub (al-Abd al-Karim). The Jishub were attacked by their allies, the Dhuul, because they had given shelter to Hārith b. Zālim, who slew Khidir b. Dhuul; Hārith b. Zālim did not wish to be the cause of hostilities left the Jishub and went to the Taghlib. Together with the Dhuul (under Hārith b. Wāfī), they fought under the leadership of Mūsā b. Ṣumur b. Ṣumur b. Ṣumur b. al-Maswir, chief of al-Maswir, by whom they were insulted on a visit. Of other battles of the Jīlī we may mention that of Mustallāh (al-Mustallāh) against the Kais b. 'Asim and Tammūz, who together made a raid on the Jīlī, that of Jarb and over with the Mā'zār. At the battle of Đhīl (under Hārith b. Wāfī), they took a prominent part (see Sīrah e. Wāfī, i. 605). They formed the advanced guard of the Bake and bravely resisted the Persian attacks. The Bake were the Persian guarding Bake, and another of their group the leader of a Persia body of cavalry named Ṣamir. In the battle of Tullis (13 = 634) between Ḥālid b. al-Walid and the Persians, along with other Christian Arabs, the side of the latter there were also Jīlī under Abū 'Arwād al-Jīlī. When in 23 = 644 Kašāt al-Nahrawan near Nahrawan was taken by the Muslim, in addition to Hārith, there were many Jīlī among the latter. In Mesopotamia we still find Jīlī in the third century, e.g., during the rising of the Alīya b. 'Umar al-Jīlī in whose following were Jīlī cavalry under the leadership of al-Hadram b. al-Abd al-Karim.

The Jīlī, a North Arabian tribe, an important branch of the Bake b. Wāfī (p. q.). Their ancestor Jīlī b. Lūjām was notorious for his stupidity and the expression "more stupid than Jīlī" was proverbial (see Goldscheider, Muhāmmād, ii. 48, n. 3); During the heumal period they formed a portion of the so-called Lahabān, which included the Alīya and Zālim. Some of them professed Christianity. Abū 'Arwād, the radius poet, belonged to the Jīlī.

They lived in al-Vumān (al-Khūtira), al-Khāṣārin, also called Djuwa al-Khāṣārin) and in the country between Kufa and Bēṣra. The following villages belonged to them: Zweghā, Būl 'Arāba (in Yamāma), waters; al-Bukān, al-Rawālī, Sīh (between Kufa and Bēṣra), Zainab (in the Ru'diya of Kufa), Zaynab (in Yamāma), jointly with the R. Sāghīm, Zainab and Alī al-Kayyara (two days' journey from Wathā'). A section of the Jīlī is said to have allied themselves closely with Persian immigrants from Iraq and have been incorporated in that country.

Historical: In the battles between the Bake b. Wāfī and the Tammi at Nīnawā and Tamaš the Jīlī with other tribes of the Lakhism group were on the side of the Bake. In another
were called Mansurites after him, used to strange to the Indian Things. On those and similar alterations in Islam see Dāhī, Kālid al-Hubayyina, ed. Cairo, ii. 96 sqq. and the discussion of this passage in Van Veen, Wergren in I, in the Fevri, 1876, p. 577 sqq.

Idjama (literally: "agreeing upon") is one of the four ways from which the Muslim faith is derived and is defined as the agreement of the maqāfī‘ān of the people (i.e. those who have a right, in virtue of knowledge, to form a judgment of their own) after the death of Muhammad, in any age, on any matter of the faith. As this agreement is not fixed by council or synod but is reached instinctively and automatically, its existence on any point is perceived only on looking back and seeing that such an agreement has actually been attained; it is then consciously accepted and called an idjama. Thus the agreement gradually faded points which arose between the Sunnī and the šī‘ī forms of Islam, became an essential part of the faith, and shi‘ism in its act of submission (ibāda) of, however, Goldschmidt, Uber idjama in Necker, R. Grieco, W. César, Hist. Philos. Rel., 1910, p. 27 sqq. Each agreement that is, became a basis for its own and all succeeding periods. It could be expressed in speech (yaf‘il fi al-su‘ūr) or in act (yaf‘il al-fa‘āl) or by silence regarded as assent (yaf‘il al-nu‘mān al-fa‘āl); in the similar classification as to the means of the Prophets. It is especially noted that it means the agreement of the masses (iqā‘āmin), and in al-Shāfi‘ī’s earlier view, before he went to Egypt, a statement by a single Companion was binding on the following generations. But later he gave up this opinion and it has now been generally abandoned.

A general principle of agreement was held in different forms from an early period. The legal system of Malik b. Anas was built largely on the agreement of the companions of the Prophet; this agreement was legal. The agreement of the two companions (mut‘abī‘), of Kufa and al-Baṣra, with their masses of veterans of the early war, had great weight. For later generations the agreement of the Companions was naturally decisive. But it was al-Shāfi‘ī who developed this general principle into a definite asf, and ranged it with the other three. Further, from deciding points left uncertain by the other six it has come to be applied even in points of law, particularly points decided by another asf. This is in virtue of a divine protection against error (istalā‘) which inheres in the Muslim people. In Shafi‘ī books of idjama the statement is normal: - such and such a passage (Kush or Sunna), before the Agreement (has al-idjama), is the basis for such and such a rule." At present the Wahhabiyya (following the vanished šī‘īs) reject the universality of this principle and limit agreement to that of the Companions and such specific sects as the Ibad and the Ḥanbalī. Of course, quite outside of the idjama of the Sunnites.

The statement of the principle, which is given normally by the concensus, is as above. But the real working has been even wider. The legal tradition from Muhammad was: "My people will never agree in an error" and thus the Sunna and the Ṣū‘ūr were the rule. The Moslems who follow other than the way of the lexicon (gū‘išah of al-masā‘il), and li. 172. "We have made you a normal people" (masūm al-ma‘ām) of, Bahā‘ī. In consequence there is in the thought and working of the people as a whole a power to create doctrines and law, and not simply to stick with approval that has otherwise been reached. By means of idjama what was at first an innovation (hadd, the opposite of qunūṣ, and as such heretical, has been accepted and has become the easier means. Thus the idjama has become practically part of the canon of Islam and, strangest of all, in the doctrine of the infallibility and infallibility (istalā‘) of Muhammad, the idjama has overcome clear statements of the Kurān. In this, idjama has not simply fixed unsettled points, but has changed settled doctrines, of the greatest importance. It is thus regarded by many, as present, both within and without Islam, as a powerful instrument of reform; the Muslim people, they assert, can make Islam whatever they want, as a whole, without us, at least in the sphere of opinion. Goldschmidt, Vörschempen, p. 56, viewing: "the matter historically, sees great possibilities in the future;" Smitt Hugonnet, P. Politische Annalen de la Belgique, p. 42 sq. looking at idjama as a crystallized system, sees in idjama no hope.

(O. R. MCNICHOLD)
broad field of the whole Muslim people led to a formal Agreement, and was referred to on the controversy over the possibility of error in matthews and Talmud on the \textit{Agul} of Nazar\textit{t}, ed. Cairo, 1381, p. 143 sqq. But this broad field was soon passed into the special field of those who had a peculiar right to form judgments and whose judgments should be followed by others. At this point, and from the nature of the case, a difference emerged between theology (\textit{hal\textcircled{a}m}) and law (\textit{h\textcircled{a}k\textcircled{a}d}). Even to the present day, many theologians assert that \textit{h\textcircled{a}k\textcircled{a}d} does not furnish a saving faith; see, e.g., the famous \textit{Kurra}, \textit{menno} \textit{Yose}, \textit{itiyot}, \textit{bild\textcircled{a}h}, \textit{mas\textcircled{a}h}, and the translation in R. D. MacDonald's \textit{Development of Muslim Theology}, pp. 318-321. But all canon lawyers for centuries have admittedly been \textit{mas\textcircled{a}hi\textcircled{a}m} of one degree or another. When later Islam looked back to the founding of the four legal schools (\textit{mas\textcircled{a}hi\textcircled{a}m}), it assigned to the founders and to some of their contemporaries on the field of the first rank. These had possessed a right to work out all questions from the foundation of the Koran, down to \textit{Yose}, \textit{itiyot}, \textit{bild\textcircled{a}h}, \textit{mas\textcircled{a}h}, "by legal opinion." All \textit{mas\textcircled{a}hi\textcircled{a}m} had been in a sense \textit{mas\textcircled{a}hi\textcircled{a}m}, givers of \textit{futur}, but these were \textit{mas\textcircled{a}hi\textcircled{a}m} only. Such was the formal and generally accepted position. But from time to time individuals appeared who, moved either by ambition or by objection to fixed positions, returned to the earliest meaning of \textit{mas\textcircled{a}hi\textcircled{a}m} and claimed for themselves the right to form their own opinion from first principles. Among these were Ibn Taimiya (\textit{futur}, 1263), a Hanbalite (Goldhoffer, \textit{Goldhoffer}, i, 188 sqq.). Another was Sayyid \textit{\textcircled{a}l\textcircled{a}m al\textit{\textcircled{a}m al\textcircited{\textcircled{a}m al\textcircited{\textcircled{a}m}}, whom the emir-to-\textit{mas\textcircled{a}hi\textcircled{a}m} united with one to be the \textit{mas\textcircled{a}hi\textcircled{a}m}, or rewritten of religion, in his century. At every time there must exist at least one\textit{mas\textcircled{a}hi\textcircled{a}m}, was his contention (Goldhoffer, \textit{Recent Publications}, p. 19 sqq.), just as in every country there must exist one\textit{mas\textcircled{a}hi\textcircled{a}m}, and another, but a very individual one, was the Emperor Alexius (Goldhoffer, \textit{Goldhoffer}, i, 317 sqq.). In Sicily there they are still absolute\textit{mas\textcircled{a}hi\textcircled{a}m}. This is because they are regarded as the spokesmen of the Catholic Church. Their position is quite different from that of the \textit{Islam} among Muslims. First, criticism and even control of the actions of the \textit{Islam} is merely a \textit{mam\textcircled{a}h} and reserve of power; during the absence of the \textit{Islam} because of \textit{futur}, the role of the \textit{Islam}. But the \textit{Islam} is not regarded, universally as the sacred, because of the government (Goldhoffer, \textit{Recent Publications}, p. 215-218, 273 sqq.).

\textit{Hllell\textcircled{a}d:} \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, ed. Cairo, 1306, p. 15 sqq., on its margin. \textit{Kor\textcircled{a}n} of Ahmad \textit{Korama} is \textit{Kor\textcircled{a}n} of Mahass on \textit{Waqwaw} of Djawzj, 194 sqq.; \textit{Shor\textcircled{a}d Huseynji}, \textit{mam\textcircled{a}h} in \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}.

\textit{The Al\textcircled{a}m}\textit{Kor\textcircled{a}n}, \textit{Kor\textcircled{a}n}.
ilarly Ibn al-Kliiti (ed. Lipert), p. 1. He received the name Idris because he was thoroughly versed in former revelation as the result of instruction from the Arabic; it might perhaps be possible in the cognate languages. His ascetic piety crossed the admiration of the angels. The angel of death asked Allah for permission to visit him. He came to him in mortal form and invited him to sup with him. But Idris declined; the same thing happened on the two following nights. On the third day Idris asked him who he was. When he heard his answer, Idris asked him to receive his spirit. He therefore remained as holy without his body, until then received. He had been allowed to be taken to heaven, to see it and Paradise. When he reached Paradise he would not come out again. He held fast to a tree and appealed to two texts of the Quran: “Every soul shall taste death”, for he had already tasted death; and “no one shall drive them out”. He therefore would not leave God; thus allowed him to remain. He is in return from thence. He and Jesus live (in heaven); al-Khidr and Elza are immortal on earth.

In this version the character of Idris as a solar hero is seen from the fact that his soul is taken from him at sunset. In another version there are also several traits which point to a solar myth. When once a day on a journey he found the heat of the sun unendurable, he asked God to alleviate it in favour of “him who has every day to travel five hundred years in this heat” (i.e. the sun angel). He begged the latter to postpone his death. The angel took him with him to the place where the sun rises and transmitted Idris’ request to the angel of death. The latter could not grant his request. The angel of the sun however was allowed to tell him the day of his death. The angel of death opened his dwain but could not find the date in it. He explained this to mean that Idris must die at sunrise. The angel of the sun actually found him dead then.

Nevertheless, Idris is immortal; expressed in the language of myth this means: the sun dies every day and is revived every day, and is thus immortal. Another recollection of the solar character of Idris is perceived in the explanation of the high place of Satan as 57 as the heart of the sphere i.e. the sphere of the sun

Idris is also identified with Itys and al-Khulqut. The Greeks are said to know him under the name Harmaces, or as Eus. Harmaessy says (Hist. Dynast., ed.: Pocock, p. 95) Hermes Trismegistus. For further information see Ibn al-Kliiti, l. s. In agreement with passages of the apocalypse of Enoch Muslim legends also tell that he went through Heli.

On the relation of the Khartoum to Idris-Hermes von Chamissou, Die Khartoum und der Khartoum, Index, l.w.

IDRIS I. b. ‘ABD ALLAH, son of Abd-Allah b. al-Hassan [l. v.] an ‘Alid, founder of the ‘Alid dynasty in the Maghribi, took part in the ‘Alid rising against the ‘Abbasid Moth al-Hadi (q.v.) and after defeat and death of his arch-rival al-Hassan b. al-Hassan as al-Fahhak (q.v.) near Mecca on the 38th day of al-Hijra 169 = 17th June 786, when he had himself languished a long time in chains, was released and succeeded in reaching Egypt accompanied by a faithful freedman al-Fahhak, and with the assistance of the postmaster there, al-Wehhi, in secret. He escaped to the Maghrib, where he was received by Jâhîz b. Muhammad, chief of the Berber tribe of the Awânš. At the instigation of this chief, Idris was on the 4th Kamām 172 re-conquered as sultan by the Awânš and later by the Zanzíbar, Landay, Lizwah, Chelbek, and Salsalat, who inhabited the north of the modern Morocco, but this recognition of a ‘Alid by the Berbers, who only shortly before had been Khulqut was based more on political than religious motives. Idris, who only took the title of sultan, was even said by himself to be the derived from the Muhammadi teachings of Jâhîz b. Muhammad. In the district of Tinmen he attacked Jewish, Christian, and heathen tribes, whom he seems to have defeated rather easily, and in a campaign eastwards (about 173 or 174 = 789-790) he also brought under his sway the town of Tinmen (Agilgha) and its practically independent prince, Muhammad b. Khalâyir b. Sîlah, who recognised Idris as the rightful Imam. In Tinmen where he spent some time, he founded a mosque (174 = 791), the pulpit of which, with his name inscribed on it, still exists in Tinmen’s time. Soon after his return to the capital Utaîî (the ancient Volubilis) he was poisoned at the instigation of the Caliph Hâshim al-Rashîd, apparently by a certain Sulaimân al-Sîwânikh (1st Kâmil, l. 177 = 797). The date is confirmed by some histories of this murder, and the meanest copy of a tractate of Eucratidion, a story, a tale (often told) as well as the prosecution of the murderers by al-Rashid are only recent additions.

IDIRIS II, son and successor of Idris I [q.v.]. The latter of his death left no children but one of his concubines named Kanae was pregnant by him. His freedman al-Enghid persuaded the Berbers to wait till the child was born and in case it should be a son, to proclaim him Imam and successor to his father. This expectation was fulfilled. Kanae gave birth to a son on the 1st Djamis of the 577 (794), who was named Idris and was entrusted to the care of the Imam's uncle. The attachment of this nephew to the family of Idris brought upon him the persecution of Ibrahim b. al-Aghlab, the almost independent governor of Ifriqiya. He was murdered in the same way as his master, but replaced by a Berber named Bashri. When the latter was won over by Ibrahim, he had to entreat the regency to Abu Khaled Yazzid b. Byas. To prevent further intrigues the Berbers assassinated the eleven-year-old Idris to the throne and took the oath of fealty to him in the mosque of Umar. But Ibrahim continued his intrigues while Idris alienated the Berbers by his too openly displayed preference for Arabs and by choosing an Arab vizier. When fifty years of age he had died in 882, Muhammad put to death in spite of the great services he had rendered his father, under the pretext that he was negotiating with Ibrahim b. al-Aghlab, and by this stern, not to say unjust, measure, silver plate was almost the last of his capital (813). After the age of eighteen had left the oath of fealty sworn to him, while Ibrahim b. al-Aghlab, being busy putting down risings, was unable to interfere with him. At the same time Idris changed his policy and became more friendly to the Berbers. After a campaign against the Marmandi, whose terror he captured, he marched against Tlemcen (Agadir) which had made itself independent, and put the government of the town in the hands of his cousin, Muhammad b. Sulaiman b. Abd Allah. After several negotiations with the Khyrdjil Berber, the detail of which are not known, he died at Fas in Kalbi 123 (May 26–June 18, 828) at the age of 36, according to the Kalbi of poisoning; according to al-Hashir, he was choked by a swallow. He owns his fame mainly to the foundation of Fas, which has kept his memory so true to the present day in Marocco that the beggars there still seek-nisa in his name. However little we may know of the details of the careers of him and his father, it is clear that he was the less important of the two.

AL-İDRİSİ (formerly usually written Kanzat) and Abd Allâh Muhammad b. Muhammad b. 'Abd Allâh b. Idris al-Hammati (see above Hammatun) al-Hasari, usually al-Sahari al-Hamati (his descendant of the Prophet), was born at Cezar in 453 (1060), died in 515 (1045) (cf. especially Khud, Libri, Fihrist al-Kutub al-Abana, v. 186), studied in Cordova, hence called al-Kanzati (bibliotheca Arabo-Sicula, p. 610 and the Italian version, p. 487), while the amasa and nissa, Ibn al-Dinâj (yet given by Ibn al-Raghib in the Kanzat of Imad al-Din al-Hamati is still unexplained, after various travels spent a long time in the court of Idris II, the Norman king of Sicily in Palermo (and is therefore also called al-Sahari, the "Sicilian"), where shortly before Roger's death (545 = 1154) he completed the description of the great silver plate map of the world, the celebrated "book of Rogers", the Kitâb al-Rijal u.l-Kutub al-Raghib, or Mukhtal al-Mughr of the Idris, the text of which (and 71 maps) is only partly published, while the whole was translated (very incorrectly) into French by Ameli de Jamb (1685–1740). For William I (1154–66) he wrote a still larger geographical work, Kanzat al-Uns wa-Mukhtal al-Nafis al-Kutub al-Mustasil (two volumes), which however is only available in the extract preserved in the Habib al-Baki 'Ali Pasha Library in Istanbul (No. 888). First notice of this work is given by J. Harmot in searching the Stamboul Libraries (for historical manuscripts), while the essential synopsis of the Book of Rogers, entitled Nushat al-Mawazin fi Dhib bi-l-Qarn u.wa al-Kutub wa al-Mukhtal waQum al-Ma'suwa wa al-Mafjar was printed in Rome as early as 1593 and translated by the Moronies Gabriel Sinzis and Joannes Hemozis inaccurately into Latin in 1614 as Geographica Nova (from the false reading in Clen's 8, part 4, at the beginning, dealing with the sources of the Nitz, "out land," for the "their land," an edition and annotated translation of this the most important geographical work of the Middle Ages with the important maps from the manuscripts of known provenance, Paris 2, Oxford 3, Stamboul (only Aya Sofia, as the other all too summary statements of catalogues only refer to the Roman edition of 1593 or to [as Jambel], Fennouard, and Cairo is one of the most urgent tasks for Arabian scholarship. I am already meditating an edition of the smaller unique in Stamboul, as I have photographs of it.

North Africa; Brindisi, Om uli ar der arabisch geographen A. v. Upmann, 1894. Seria e la Polonaisc, Norway and Sweden (with important Bibliography) by E. Hold, Helsinki, 1918. In Press.

IDEISIDS. We have dealt above with the reigns of Idris I and Idris II. The decadence of the dynasty began with the death of the latter. He left eleven sons of whom the eldest, Muhammad, succeeded. But at the instigation of his prime minister, he divided the heritage into five, which he allotted to eight of his brothers, some of whom must have been still children. His decision reserved a kind of uncertainty for himself but did not prevent the rivalries and quarrels which broke up the empire. The statements of the historians on this division do not agree perfectly. This is the most probable table: 3-3-3-3-3 obtained: Tangier, Ceuta, Trujal, Nador, Tetouan, Oujda: Tafilalet and Targaia; Bel, the land of the Hammadis, Tecael, and Tam and the land of the Gharabers; Yabba: Bajura, Aghila and al-Ahrar (Larache); Al-Agiba; all of them: the capital and the land of the Negrawi, El Kefla, Thalat al-Aghiba. Amzali and the land of the Traitiers; Al-Mekina (Maghrebis) and Tadla; Umm el-Qasr and his dependencies. At the same time, al-Ma'mun (Agra) remained in the lands of Muhammad b. Sulaiman, cousin of Idris II. Civil war began at once; the possession of the land of Idris and al-Kashan, who had revolted against his mother, led to her death. In 983, he was succeeded by his son Ali, who was replaced in 991 by the brother of Muhammad b. Sulaiman, who had revolted against his mother, and passed to Idris. The administration of the empire was left to his son, Idris II. He was succeeded by his son, who was replaced in 983 by his brother, who was in turn succeeded by his son, and so on, until a line of 12 descents were established. By the end of the 11th century, the empire was divided into two main parts, the Atabegs and the Aghlabids. The latter, under the reign of Ali, were able to extend their influence over the entire country, especially in the south, where they founded a number of cities. The Aghlabids were a dynasty of Berber origin, who had settled in the region of the Atarab in the 9th century. They quickly became powerful, and by the end of the 10th century, they had established a firm grip over the region. The Aghlabids were known for their Ruthless treatment of the population, and their rule was characterized by a series of civil wars and internal conflicts. However, they were able to maintain their power for several centuries, and their influence extended over a large part of the Maghreb and the Iberian Peninsula. 

The Ottomans retained the right to choose their ruler, who was then confirmed by the Porte. This state of affairs remained practically unchanged till the treaty of Adrianople in 1829, although alterations were more frequent in the following terms, when a fixed tribute was paid to Austria or Russia. The Turks interfered in the affairs of the principalities. For example, as early as the 16th century, the Ottoman Warid Dragul, whom the Turks always call Karskina (the imposter) Voloeds, rebelled against the Turks, had the Turkish ambassador, Hamsa Pazha, impaled according to his custom, and ravaged Bulgaria. This provoked a campaign by Sultan Muhammad II, through which Dragul was forced to flee to Hungary and Radul was installed as voivod in 1458. After his death in 1477 the crown passed to Michael, who was crowned in 1461. InBulgaria and Moldavia under his sway. In the period following, the Turks received more from the tribute paid by the Voivods in order to obtain confirmation of the taxes which the unfortunate inhabitants had of course to be paid. This was especially the case, when, from 1716 onwards, Greek Fanolarot families (see Fanak) supplied the princes of Wallachia as well as of Moldavia. It is true that from time to time the Porte issued orders fixing the tribute and the obligatory presents at a definite sum and abolishing the payments in kind, sheep, wood, but the abuses continued to exist, nor were they improved when at the beginning of the 18th century at Russia's instigation, an arrangement was made that the princes should be appointed for seven years and only be deposed with the approval of the Russian ambassador. At the peace of Adrianople this arrangement was abolished, the rules were henceforth to be appointed for life and in addition to their annual tribute to pay a lamp sum in compensation of the tribute in kind. The Turks had also to evacuate the town on the left bank of the Dniester (Izmail, Giurgiu, and Tarnu, Magurea) and Moldovia were forbidden to reside permanently in the principalities. When in 1857 Cass was elected prince of both Wallachia and Moldavia and the union of the two was proclaimed and confirmed by the Porte, the bond between Turkey and Wallachia was broken, although it was not till the treaty of Berlin in 1878 that Rumelia was recognised as an entirely independent kingdom.

HERN, a Berber tribe, which played an important part in Northern Africa during the first three centuries of the Hijira. The Iren, whom the Berber general called his berd, or Warid, was at the time of the Arab conquest. Their various sections were scattered through the south of Ifrikiya (South Algeria, Mauritania) and on the edge of the high Algerian plateau in the regions of Tiflis and Tlemcen. After having conquered Ifrikiya, the Iren actively enforced Abid's (q. v.) doctrines and played a great part in the Berber riseings of the 19th century. A.D. One of their chiefs, Abu Kurn, founded a Berber kingdom around Tlemcen. Indivisualized at first by the Arab generals, it remained the offshoot of the Sahara. At the head of 60,000 men in 771 it joined the Kaidjji forces who were

IHRNIYA (according to Flesscher, Kleines Schriften, I, 239, more exactly than the spelling Ifrikiya used hitherto), the name given by the Arabs to the eastern part of Barbary, the same Maghrib being reserved for the western part. Irikiya is simply a corruption of the Latin Africa, which name the Romans gave first of all to the provinces organized by them after the destruction of Carthage and which was then extended to Har-
bary and finally to the whole continent of Africa. Nevertheless the name has been given various fanciful etymologies. "Some," writes al-Hasith, "say that the name means the "squint of heaven," others derive it from Ibrīs, Abū Zaybak al-Kāfī, who led an army into the Berber country and built the town of Ibrīs (cf. al-Maqrīzī, ed. Fātūhi, ii. 224). According to another story the country took the name of Abīs, son of Ibrāhīm and Kāfīr, the second wife of the patriarch, or from Fāta, B. Māṣūma. According to Ibn Khālid, Ibrīs is derived from Ibrīs b. 'Iyās b. Sufi, one of the kings of Yemen. According to al-Maqrīzī (in Ibn Abī Dinar's Al-Abādī, b. Abī Sufi) "the whole of the western part of the country is called Ibrīs because it is situated in Africa, and in Africa there are no clouds in the sky." Ibn Abī Dinar and Ibn Abī Dinar derive Ibrīs from land of "tawāf" or "divide" because it is separated from Europe by the Mediterranean sea and from the Nile, or because it lies between east and west.

The boundaries of Ibrīs, according to al-Iṣbā'ī, were Buqra on the east and Tangier on the west. From north to south it extended from the shores of the Mediterranean to the sands which mark the beginning of the country of the negroes. Ibrīs would thus have comprised, in addition to the African proper of the Romans, Tripolitania, Numidia and even Mauretania. Earlier and later geographers give narrower limits. Abū Shābīfī, for example (16th century a.d.) places Ibrīs between Buqra and Tāhāt (Kūlūb, Geçik, Arabic, ed. de Goeje, vol. 3, 30 and 42). For Abu l-'Uqlī, Ibrīs begins at the head of the Ina and Būnū (q.v.), which, according to him, forms part of al-Maghrib al-Awās and terminates at Buqra. In a general way, however, one may regard the western border of Ibrīs as corresponding to the meridian of Buqra. In the south, the limits are still better defined. Abu l-'Uqlī, in particular, places Ibrīs between Buqra and the coast of the Ina and Būnū (q.v.), extending from the head of the Ina to Buqra. The same geographer, however, mentions the presence of a great number of towns and villages and was covered with flourishing fields. The nomadic life of the Berber tribes and the riches of the country attracted the attention of the Arabs, whose incursions date back to the very beginning of the Christian era. These invasions occurred almost immediately after the conquest of Egypt. The first Muslim expeditions, of which however we only possess incomplete and contradictory accounts, were simply raids. The invaders evacuated the country after having pillaged it and did not try to capture the strongholds held by the Byzantines. The conquest proper did not begin until after the foundation of al-Kahrawān by 'Osha b. Nāšir in 50 (670). Arab domination in the country however remained very precarious to the end of the 10th century. The Greeks held the most important towns; on the other hand, the Berbers, led by the Berber ruler 'Azād b. Kāfīr, the son of Ibn Abī Dinar, occupied and seized Buqra, to evacuate al-Ibrīs on two different occasions. It was only under the government of흐āsīn b. al-Nāšir that the Berbers were forced to submit and the Byzantines lost Carthage and the principal towns in the country.

Placed at first under the government of Egypt, al-Ibrīs was next made an independent governorship under Mašūf b. Nūṣair, who was directly under the Caliph in Damascus in 96 (705). The conquests of this general extended the boundaries of the province to the Strait of Girfath. But from the middle of the 8th century the Khālidī revolted considerably diminished the Arab territory. Al-Ibrīs proper as well as was invaded by the 'Abāsid Barmbār of the east (Harrān, Wāfīj, Yafaqī) and by Zenātī of the central Maghrib. It even was lost by the 'Abāsid caliph for a time. A millennial however succeeded in establishing Al-Ibrīs rule over the Maghribi, while independent Berber principalities were set up in the Maghrib. However, the Aqlabīs (qq.v.), dynasty 11th century a.d.) only nominally recognized the suzerainty of the Caliph. The overthrow of the Aqlabīs by the Fāṭimids caused al-Ibrīs to pass into the power of the Shī'ī, who gave it a new capital, al-Mahdāī, and when they established themselves in Egypt made it a vice-royalty under the Zirids. The foundation of the Hammadīt kingdom was however not long in depriving the Zirids of the western part of Al-Ibrīs. On the other hand, the Hilīl invasion, a result of the repudiation of the Fāṭimid authority by the Zirids (cf. Fāṭimī, p. 90), exposed the country to the most terrible disasters. Al-Ibrīs, previously so flourishing and covered with vineyards and farms, was ravaged by nomads and almost entirely ruined. Some Arab tribes, notably the Rīyāb and the Diyyām, installed themselves in the country and perpetuated their habits of disorder and brigandage. Finally, at the beginning of the 11th century, the Normans of Sicily occupied the principal points on the coast. As a result of the Almohad conquest, al-Ibrīs became one of the provinces in the vast empire founded by 'Abd al-Mu'mīn (qq.v.), but she soon recovered her independence under the Ḥāṣid (qq.v.) dynasty. The rule of these princes was at first extended over Tunisia, Tripolitania, the province of Constantine, Bunge and the Zir, but from the end of the 12th century it was reduced to the Tiirids in the strict sense of the word. Henceforth the sway of al-Ibrīs is merged in that of this country.
The Igharghar then traverses the plateau of Tinghtert where it sets for itself a well marked channel. (Fouréno) and receives lower down a large number of streams from the eastern side of this plateau, which rejoin it after having disappeared in the sands of the Erg. In the region of sandhills the bed of the Igharghar becomes quite invisible. It probably passes in the vicinity of the Ksar Tiff. (see 'Arzara). (Fouréno). Fouréno's observations permit us to suppose that it formerly ran much farther east. On leaving the Erg, it can hardly be more easily recognised, except at certain points, for example at the revine of Hegga near Tuggert. However the continuity of the subterranean sheet of water is attested in this region by the existence of a number of wells.

**IHRAM** (Arabic), technical term from the root š-th-, which has the meaning of "wearing off" (mawāt), as the Arabic, tv. q. says: "to declare a thing haram" or "to make haram." (The opposite is ṭabūt, to declare permitted). The word ihram has however become a technical term for "sacred state"; one who is in this state is called ʿibād. For example, a person fastig is called ʿibād. The word ihram, however, is only used for two states: the sacred state in which one puts...
forms the 'awma and 'afifah, and the state of consecration during the 'ajurah. Thirdly the word can be used of the dress in which the 'afifah and 'awma are made.

The 'ijras is the major or minor pilgrimage. The law declares it meritorious for the pilgrim to assume the 'ijra at the very beginning of his journey to Mecca. But as this is very inconvenient, it is usually only done when the pilgrim approaches the sacred territory (samarq, q. v.). Pilgrims who make the journey by sea are often however assume the 'ijra as soon as they arrive in Mecca. The law has prescribed several stages (nafisah, pl. of nafis) where this is usually done namely: (1) 41 days after the pilgrims from Al-Madinah, al-Qada'a for those from Syria and Egypt, Siyra al-Mansuri for those from Najaf, Vali Madar for those from Yemen; (2) 7 days after these from Mecca. Any one who assumes the 'ijra too late has later to sacrifice an animal in atonement. These nafis are also called mainan i. e. the place where the nafis begins. The latter means "lowlad calling" i. e. the calling of a Nunah a q. v.; "nafis" is thus used in the same sense as 'ijra and one way for example, of distinguishing the three stages of "nafis" from the three stages of the 'ijra is to determine the position of the pilgrims for the 'ijra. The law further provides that people who live within the area bounded by these villages shall assume the 'awma in their dwellings (Tama'mi, ed. A. W. T. Jeytdoll, p. 76), when it is a question of performing the 'ojjul. For an 'awma they must go to one of the boundary places of the yii (q. v.) usually Tama'mi is chosen for this purpose, and is thus erroneously also called al-Umar by modern travellers.

As one can only enter a state of consecration after having left off all that is ritually impure, one must first of all perform the ceremonies necessary for this. The gheat is usually performed, the pilgrim having his nails and his nails cut (Burton, A Pilgrimage (London, 1857), i. 323, 372; al-Batini, al-Nafs al-Hijaziyyah, p. 172). On the significance of the shaving see below.

A particular dress has to be worn in which no seams are allowed. This dress consists of two pieces: a sheet that reaches from the navel to the knees (tura) and another thrown round the body, which partly covers the left shoulder, back, and breast and is knotted on the right side. This latter is called rida' and from the manner in which it is knotted it is called 'ajurah. Both garments are usually gay or in the shape of white, but red stripes are also found (see the illustration in Burton, i., facing, p. 55). On this dress we may remark that it is probably the old Semitic sacred dress. The upper garment of the High Priest in the Old Testament was according to Josephus (Antiq., i. 7, 2) also made without a seam. The Jewish priests wear the 'ajurah around the hips and the Moim around the shoulders. In Islam itself there are analogies at the al-suff and the burial service. The old Arabs also, when committing an uncle, as well as the later masters when wearing an uncle (Godschall in Wiener Zeitschrift für die Kunde des Morgenlandes, xi. 136, 328, Wellhausen, Rest, I, p. 182). White is also the sacred colour in many religions, at first the mourning colour (cf. William, Fors.

The state of consecration imposes certain pledges of abstinence sexual intercourse, care for, and'spezielle Geschichten, ed. van Ossenbruggen, iii. 416-423). It was next adopted as a sign of a consecrated state, the dress of the priests as well as the rule of ascetics are white.

The 'ijra dress is thus very old and does not owe its origin to Islam. The wearing of shoes is also forbidden. The men, most of which may be allowed is sandals. This custom is also an old Semitic one. Among the Jews garments as well as the officiating priests were barefooted. In the consecrated state this is forbidden to cover the hands; perhaps this is also an old mourning custom (cf. Ezekiel, xxiv. 17).

Women need not wear any particular dress. But they usually wrap themselves in a long robe which reaches from the head to the feet, while the face, which really ought to be uncovered, is concealed by a kind of mask (cf. the picture in Burton, i., 55).

A path of two miles is offered and the sky (q. v.) is pronounced. The letter can be done in three ways. The 'ijra can also be performed in a way to be called 'iyrul' or 'iyrul' (as opposed to the 'iyrul), although the 'ojjul is to be made at the same time. This is called 'iyrul'. (It 'iyrul is the 'iyrul', i.e. the utilisation of the 'awma for the 'ijra).

The dress is called 'iyrul' i.e. combination. On the origin and estimation of these three kinds of sky a good deal has been written in Muslim literature. The four schools of law (madhab, q. v.) have different views on the order of importance of the various sky's, as regards the merit acquired by them. The kind called 'iyrul' owes its name to an expression in the Koran (Sura 112, 192), which later became a technical term. According to Snouck Hurgronje's suggestion (Het Melkmaatschap Fest, p. 86, sqq.), the restrictions which were imposed by the 'iyrul came to be severe for Muhammad, so that during his stay in Mecca before the 'ojjul he conducted himself in a secular fashion. As his followers lacked habits at him for this, the revelation in Sura 112, 194 is said to have been given: "Any one who swells himself of the 'awma until the 'ojjul5 shall offer" as many animals as is convenient for him; any one who is not in a position to do this shall fast for three days during the 'ojjul and seven days after his return. What therefore appeared to the Prophet and his contemporaries as an omission which could be atoned for by a punishment, was considered by later generations as a thing permitted. Pilgrims who arrive in Mecca long before the 'ojjul can then themselves by the 'iyrul from a priestly abstention. As soon as they have put off the 'iyrul and only assume it again when the time of the 'ojjul approaches. But the 'iyrul is forbidden to those who have sacrificed animals with them (Sura 112, 192). Originally, the 'awma took place in the month of 'ojjul and, according to some traditions, 'awma during the 'ojjul period was an unhealthful thing in pre-Islamic times.

When one has formulated the sky, the madhab's calling begins, which is to be repeated as often as possible and only ceased after the shaving of the 'ojjul al-Talihin. The state of consecration imposes certain pledges of abstinence sexual intercourse, care for, and's
During mourning the Jews are forbidden to bathe or clip their nails. It is reported of the pre-Islamic pilgrims and of Muhammad that when in the state of the ḥażoa they smeared something on their head to make its filthy condition more endurable (Bahja, Ṣafih, Kif, al-Ḥazoa, Bk 120; Muslim, with Nawawi’s comm., Cairo 1383, ill. 305; al-Uṣūl, iv. 391). In a tradition given by Ibn Māja (262 ma ṣafih al-Ḥazoa) Muhammad is alleged in the question: “What is the ṣafih (pilgrim)?” said: “He whose hair is dishevelled and whose mouth smells as if he had ṣafih.” The idea underlying all these customs, including the shaving at the beginning of the period of consecration is perhaps that everything that grows on the body during the period of consecration is devoted to the object of the sanctified condition. At the end of the period in most cases an offering of hair may have been made. The endeavour to make oneself unrecognizable may also have played a part.

The ṣafih is not ordered to fast, but there are numerous traditions which answer this question, some is the negative and some is the affirmative. It may be that in ancient times this ascetic custom was associated with the other.

When one arrives in Mecca from his sa’ād, he performs the ṣafih and sa’dy (q.v.), sometimes also drinks water from Zemzem and has his hair cut, if the ṣafih was only assumed for an ‘ama. But if it was assumed for a ṣafih, the shaving and hair cutting is not performed till the 9th of Shawal. The ṣafih is worn in Mecca, after the ceremonies of the ṣafih proper are over. The pilgrimage can now assume its ordinary dress again. But it is usual to put on new clothes (Burchardt, Travel, London 1862, ii. 60). The law however prescribes another ṣafih in Mecca and many pilgrims only put on their ordinary dress after this ceremony. Finally, on leaving the holy city a farewell ‘ama has to be performed. For this purpose the pilgrimage goes to Tab’a, performs a ṣafih of two ‘ama’s, returns to Mecca to perform the sa’dy and sa’dy. He then definitely puts off the ṣafih.

2. The state of consecration during the ṣafih. This state also can only be entered when one is ritually pure and dressed in a prescribed fashion and has taken one’s stand behind a miḥrāb (q.v.). This state is annulled by the ṣafih (q.v.), which is also called ṣafih al-suffah. The ceremonies of the ṣafih proper begin then and can only take place during this consecrated state. One has to avoid everything which might destroy the latter, that is: every superfluous act and every superfluous word. The jurtük specially mention fasting, abstaining, coughing, laughing, all that is connected with sexual life or the process of digestion. These are all actions which were originally resorted to to demonize or animistic influences. We frequently find the idea that angels are present during the ṣafih (cf. the commentaries on Sūra xv. 85).

The consecrated state is ended by the two ṣafih’s, that is the formules of greeting pronounced while turning the hand first to the right and then to the left. According to some jurists, the object of the first is to leave the consecrated state as well as to greet those present; the latter is only a greeting for those present. Who these are is a question which is answered in various ways: according to some, it is the angels who are summoned by the tabātur al-ṣafih and are now dismissed by the ta’āmar al-ṣafih (the formula by which one returns to the secular state).

The transition from the sanctified to the secular state is dreaded for demenstrous influences. Those are asserted by the so-called ṣafih (cf. Goldsmid in Oriental Studies X. Teilh: “wollen gewendet” i. 333 sqq.).

IHYÄ (a.) “brining waste land into cultivation.” The Muslim Fīshūl-books in the section on legal transactions have a chapter on ṣafih al-am’ool, literally, making the dead (wet) alive. Land which is not being used is called am’ool. Every Muslim who cultivates neglected land for himself becomes the proprietor of it; does not belong to another Muslim. According to most fiqh’s express permission from the authorities is not necessary. The imām Abū Hamīd; however considers it illegal to cultivate a marzaf without permission from the authorities.

IKAH (a.) punishment, retaliation; especially the punishment from God which will fall upon the sinner after death (often used in the Kurā in this sense). Cf. Aḥnām and Sproenger, A Dictionary of the Technical Terms, p. 947. (T. W. JUYTBOLL.)

IKAMA (a.) is the second call to the ṣafih which is pronounced by the mu’ādhabin in the mosque before each of the five prescribed daily ṣafih’s as well as before the ṣafih at the Friday service. This second call gives the meaning at which the ṣafih begins. The formula of the ṣafih are the same as those of the ṣafih (q.v.). According
as the ḥamāsī, they are repeated as often as in the adhan; according to the other Fābūk scholars, they are pronounced only once with the exception of the words "God is great", which are repeated twice at the beginning as well as at the end of the ḥamāsī. Moreover after the formula "come unto blessings", twice in succession there are repeated the words "pass ḥamāsī al-qūdāt" (now begins the ṣāhīf). In the laws the calling of the ḥamāsī is recommended as ṣama also to every believer who is performing the ṣalāt alone.

According to G. Ifler in his "Zur Entstehungszeit des islamischen Gebets und Kalmas, Abb. d. ʿayn. brum. Almuk. d. Wissensch." 1913, philhist. Kgl. N. v. 22 the calling of the ḥamāsī was borrowed by the Muslims originally from the benedictions in Jewish prayer. According to C. H. Becker ("Zur Geschichte des islamischen Kalms, Der Islam, ii. 382") on the other hand, this Muslim custom developed out of the original ṣama in the masjid, which was modeled on the Christian mass (see however al-Malikī, Kāmil, ii. 274 l. 14-15).

The ḥamāsī denotes the action of the muʾaṣarāt (the calling of the proclaimed formulas) by which one acknowledges that there is one God besides Him. In this linguistic usage see C. Brockelmann, Islam und västlicher Islam, Freib., 1915, p. 314-320) and J. Weinst. in Der Islam, v. (1916), 471-476; cf. the expression: ḥamāsī al-tāliːah and ḥamāsī al-qūdāt (Ghass. al-Shārīf, Fawāls, ed. A. W. T. Sayyad, s. v. ḥamāsī, Arabic, N. V. 23-24). In the Fābūk books however ḥamāsī is also explained as the call which is intended to summon the believers to rise for prayer. See Ḥādīj (Ṣallāl." 1907, l. 107, l. 12.

(T. W. JENKINS.)

IKHĪSĪDĪS, an Egyptian dynasty. On the general place in history of the dynasty see above l. p. 264. The name of the dynasty is derived from the old Persian prince name Ḥishādī, which the Caliph al-Rashīd was induced to grant to the found Muhammad b. Ḥiyūlū in 326-354. It was the title of the caliph's old name. From which the dynasty claimed descent. Ḥishādī was said to mean "king of kings", although others interpret it as "servant" (cf. Ibn Saʿd, ed. Taqīy, Arabic, text, p. 23 sqq.; transl. p. 40), presumably in the same sense as Abd Allah was used as an honorary of the Caliphs. Al-Ṭishābī's father and grandfather were already in the service of the Caliph; he himself worked his way slowly upwards and seems to have had a supporter in the vizier al-Fudl b. Ḥiyūlū of the celebrated family of the Banū ʿAbd al-Ṭurṭīs [al. ibn al-Fudal, 3]. After he had arranged the disagreed affairs of Egypt (333 = 943), he had to defend his new position against the powerful Amir Muhammad b. Rulū [al. ibn al-Fudal, 3] who penetrated up to the gates of Egypt but then granted the Ikhāsīd the country as far as Ramla on payment of tribute. Five years later new difficulties arose, and the undisciplined battle of al-Ṭishābī was fought, after which the contesting Amir made an alliance by marriage. The Ḥishādī paid a yearly tribute of 140,000 dinars. After the death of Ibn Rulū a new enemy to the Ḥishādīs arose in the Hamādānids, and being now at the height of his power he took part in the contest for the position of Amir al-ʿUzairā, in 354-355. Begl. 944) he met the Caliph al-Maṣūḥī at al-Raʾka, but on this side of the Euphrates, and thought for a time of sharing the fortune of the Caliph in the struggle against the Turko-Turks, who was ruling in Baghdad, but he ultimately returned to Egypt and began the struggle with the Hamādānids Syl al-Dawla, which ended in a treaty by the terms of which Damascus remained in possession of the Ikhāsīd on payment of tribute. He died at the end of 354 (July 948). Two sons nominally succeeded him but they were only weak kaisars. The real power lay in the hands of an Abyssinian envoi named Kalīfī, who on the death of the second son was formally granted the government of Egypt and successfully defended Egypt and Syria henceforth from the attacks of the Hamādānids. On Kālīfī's death a grandson of the Ḥishādī was appointed governor, but the dynasty had completely lost its hold on the country and Egypt with Syria fell into the hands of the Fābūkīs who were advancing from North Africa.

The following table gives the names and order of the Ikhāsīdīs:

- (T. W. JENKINS.)
of opinions, the conviction has arisen in Muslim orthodoxy that they are of equal value and this skeptical attitude was translated into a more authoritative form in saying attributed originally to the Prophet himself. This attitude is reflected laterly in the Hadiths as "difference of opinion in the Muslim community is a sign of (divine) favor". The registering of these differences has produced a great literature in Islam since the foundation of the study of Fiqh and this has been most comprehensively recorded by Fr. Korn.

IKHWAN AL-SAFAR. We have evidence in the second half of the 17th (xvii) century (1372-1393) of the existence of a religious and political association with ultra-Shafi'i features, perhaps as a more accurately described as Timuri vias and tendencies. The members of the association, the head quarters of which were in Isfahan, called themselves the "Pure and Faithful", as their chief aim was to further the salvation of their immortal souls by mutual assistance and by every means, especially purifying knowledge (yad). Nothing is known of their political activities, but a collection of treatises arranged in an encyclopedia fashion dealing with the objects of their society, survives as the outcome of their attempts to work out theories of edification. The period of the collection and editing of their Kalila (52 in number; the Bombay edition as stated to the table of contents at the beginning and the concluding note in the first note consists of 52 treatises, but the last two treatises in part v (only 51 are mentioned) is usually given as the middle of the 17th (xvii) century and among the collaborators are mentioned Abu Sabkham Muhammad b. Mustah al-Rusti, called al-Majdabadi, Abu al-Hassan 'Ali b. Hadi al-Zanjani, Muhammad b. Nafardji, al-Awli and Zaid b. Kiffl. Further details cannot be ascertained, mainly because the Pure loved to express themselves in very confining language. Quotations in the Kalila, as far as they have been identified, are mainly taken from the literature of the oldest al-Majdabadi and many centuries. 15. One of the philosophical positions is that of the older exegetes and commentaries of Greek, Persian, and Indian wisdom. The treatises are often quoted and thought more highly of than Aristotle. The latter appears as the "dogmatist" and also as the author of the Ptolemaic "Theology" and the "Book of the Apple". Of the knowledge of the pure ones there was much more complete, Aristotelianism, which begins with al-Kindi, the treatises of the "pure ones" show no trace. It is characteristic of their mental attitude that al-Kindi is not quoted, at least not by name, although his legendary pupil the fantastic astrologer Abu Ma'shar (died 272 = 883), is it is not impossible, however, that they had literary connections with al-Kindi and his school. According to the medieval Latin translation of the Neoplatonist, a transfer was prompted by a "Mahmur: "Sobhul Al-mahdi". Cf. T. I. de Boer, Zu Kindi,
The Greek word ἄλλημα, inclination,UARTSCHENNE (3: 105) and C. (1896) divided the term astronomico into seven longitudinal zones, of which the limits were arbitrarily fixed. Hipparchus (2nd B.C.) divided the zones equal in latitude. The division into seven climatic zones of the same width was taken over by the Arabs, though sometimes the countries to the S. of the Equator were reckoned as eight, and those in the extreme N. as ninth. Al-Khwarizmi [17] has arranged his book on geography according to climates. The determining factor in defining the limits of the climate is the length of the longest day within it. In Abu 1-Hasza the inhabited world lies practically between 45° and 50° N. Latitude, and the length of the longest day increases by half-an-hour in each climate from the S. limit to the N. The following table shows the S. and N. limits of the seven climates, the length of the longest day at the S. limit of each and the breadth and length of each in degrees.

The length of the longest day at the S. limit of the seventh climate, that is, at 30° 20' N., is 16 hours. Inhabitants lived, however, both to the N. and S. of these climates. The climate also diminish in length as they ascend northwards. Thus, according to Al-Khwarizmi, the length of the first climate from E. to W. is 16° 27', or, taking 1' = 100/360, parishams, nearly, about 3523

---

**II. The Greek word ἄλλημα, inclination, divided the zones into seven longitudinal zones, of which the limits were arbitrarily fixed. Hipparchus (2nd B.C.) divided the zones equal in latitude. The division into seven climatic zones of the same width was taken over by the Arabs, though sometimes the countries to the S. of the Equator were reckoned as eight, and those in the extreme N. as ninth. Al-Khwarizmi [17] has arranged his book on geography according to climates. The determining factor in defining the limits of the climate is the length of the longest day within it. In Abu 1-Hasza the inhabited world lies practically between 45° and 50° N. Latitude, and the length of the longest day increases by half-an-hour in each climate from the S. limit to the N. The following table shows the S. and N. limits of the seven climates, the length of the longest day at the S. limit of each and the breadth and length of each in degrees.**

**III. On the other hand, 60° 25' parishams at a degree it would be 3822 parishams. The length of the seventh zone is 11° 25' or about 2321 parishams (on the older computation 3651 parishams). These measurements are adopted by Abu 1-Hasza.**

The term climate (degnment) was also used by the Persians to denote one of the seven parts of...
kingsdoms into which they divided the world, and which had no dependence on Sultanate. Persia was placed in the centre and Asia, Africa, the Romans, the Turks, China and India grouped round it. A similar seven fold partition of the earth is found in Al-Mas'udi (chapter viii.) Climate then came to be used locally for “country,” e. g. “Syria, “Iraq,” etc. Al-Razi calls this the popular climate as contrasted with the “real” or astronomical climate, which depends on the latitude.

Iklm al-Ra‘ya is another name for the Fatah al-Burai‘a.

Geographie des Paquistans, ed. Sprenger, Leo, etc., p. 1223;

IHQR (a), Confession. If the accused in the case before the hāfi‘ confesses that the prosecutor is right, no further proof is needed according to Muslim law. The judge can at once give his verdict. An ittah however can only be considered valid when it is made by a person of age in full possession of his faculties and without any pressure before the ḥali‘. Measures to exact a confession are absolutely forbidden. Even an ḥali‘ made by one person perhaps from fear of a hāfi‘ is invalid.

If the case concerns the law of property, the one who acknowledges the demand must be capable of independent action (jadād). If the justice of an accusation is once recognised in a case, a later repudiation of the ḥali‘ is invalid, except when the accused has confessed a crime which is liable to be punished as a ḥali‘ at-Talad (see Aqārān, i. p. 138).

Recognition of children who are not born in wedlock is of no value according to Muslim law. If, however, the paternity of a legitimate child is uncertain and the husband expressly acknowledges his paternity, then no further proof is required. The paternity of the child is then established by the ḥali‘. The declaration however must be neither contrary to the actual circumstances nor the testimony.

In other cases also a person's genealogy can be established beyond all doubt by ḥali‘ without further proof in certain circumstances, for example, if a male Muslim who has attained his majority declares that any one is his father, brother or uncle. If however relationship is claimed with some one still living, the latter must confirm the ḥali‘; if he is not incapable of doing so on account of youth or mental disability. If the ḥali‘ refers to more distant degrees of relationship, e. g. brother or uncle, the men through whom the alleged relationship has been (e. g. father grandfather) must be already dead.

(Th. W. Jevons)

AL-IJāRA [(a), LEXXIR.]

IS̄A (a) in Muslim countries means: 1. the act of bestowing land which is not private property in return for taxes or tithe; 2. the act of giving the produce of land in place of a tax as a guarantee of payment, on the part of the state. The word is also used for the granting of a whole province as a free to a governor (e. g. the granting of Egypt to Ibn Tulun by the Caliph as a payment of tribute), as well as the granting of a few lands in return for titles (‘.wavq) or taxes (harādīf) or rent (haradīf-šāri‘). Afterward it was extended to mean the formation of taxes and customs duties and tolls on rivers and canals. The word was later used to designate especially a military fee. Al-Mawardi has given a theoretical account of the provisions of the ḥali‘ in Ch. xxv. of his “Constitutional Law” (al-Abā’īn al-‘alifīn al-‘a ‘ād dhā‘iyya, ed. Eger, Bonn 1853, p. 330-343). He distinguishes at the outset between the granting of the property and the yield from it and investigates under what conditions land may be granted.

1. There are three kinds of land.

A. Masrul (uncultivated land). A. Waste land without trace of cultivation or an owner. The maṣul (the person to whom the land is granted under certain conditions) promises to cultivate it (cf. the Roman encolpium) and for three years he pays nothing. (He then pays a rent which is fixed by public auction [tazikat-va‘īq]). But lands were probably often allotted at a definite rent which was not considered capable of being increased, cf. Bucher, Die Entstehung von Wir und Handel, Lend., 3. Bibliography. If he does not cultivate it, it may be taken back from him at the close of three years unless he can give satisfactory reasons for his neglect. Otherwise he is granted the land on a long lease with the right to dispose of it, so that it is in a way his property, in so far as he has a pledge to pay a certain sum. If the land was previously cultivated, the same regulations hold, if it was cultivated in the Ijāra (i.e. the period before Māhria). If then was purely land within the Muslim period the practice varies.

If it is a case of cultivated land in private possession, it can only be given to some one if it is in an enemy country; but it has already been promised as a ḥali‘ before it is conquered. The maṣul receives by it a preferential claim, after the conquest of it, if it is granted at all, if for example the owners migrate. Conquered land that is not private property, for example the private domains of the former rulers or lands belonging to inhabitants who have left the country, is in part reserved for the masul-āl ‘amal (treasury) and can only be leased for rent (haradīf ā‘īq), but never becomes private property. The unoccupied parts become ḥali‘ land (i. e. liable to land tax); they either belong to the state (boquti), and are immovable, in which case they are granted and not become the private property of the maṣul if they remain in the private ownership (as an unbelonging) then it is not possible to grant them and the haradīf due from them goes to the pocket of the masul (sp. v. 1. 1054 sq.). Lands which fall to the state, because the owner has no heirs are administered like foundations. Many legal authorities hold the opinion that the government is free to dispose of them; in this case they may
be assigned, according to some, only on rent, according to others, as private property.

11. 'Igbir of the produce only takes place as a substitute and guarantee for the payment which the vassals have to make to the sultan; the sum which the government has to pay to the persons concerned must therefore be fixed. If instead of money a grant of produce is to be made, there is a distinction between:

a. Igbir of the tithe (agis). The revenues from tithe (agis) are intended for the sakhi (almms for the poor). They therefore cannot be bestowed because the claims on the sakhi in the individual cases are only defined when payment is made, and the sakhi is only paid at the end of the year so that the two states do not coincide.

b. Igbir of thewarq. The yield of the warq, for the reasons just mentioned, cannot be granted to any one in substitution for the claim to sakhi. For the same reason, officers holding special offices but receiving no fixed salary or appointed for an indefinite period cannot receive the yield. The warq is only paid at the end of the year and because the settlement is easy in this case.

On the kinds of warq, see the articles Hekata and Khakht. The reckoning of the warq can be granted for a number of years in compensation for a definite payment.

If the warq remains in active service till the end of the period, it subtracts the revenue: if he dies it goes back to the state. He does receive a pension from other funds: if he breaks down in health his ‘investiture’ of the revenue is settled by local practice, according to his rank. In most cases he is given money on account of his illness, but in some cases he is paid a pension. These pensions were in the main al-Mawardi’s concern. The special regulations for the grants of munufi, etc., are al-Mawardi at the end of the chapter quoted. He does not discuss the Qiyafat of land to Muslims as ‘warq’ land. We know that this kind of Qiyafat was usual in Muslim countries. Becker in particular has explained the practice, (Schreiber, etc., p. 81 sqq., Bibliographie: in this book the eastern and western systems of granting feuds are compared).

Al-Mawardi points out that Qiyafat of warq was especially suitable for members of the army: and in reality, the military feuds did develop out of it. Soldiers and amirs were given the rents either as a guarantee of their pay or as part of it. When the rents came in with increasing irregularity, they were gradually given the estates themselves. This system lasted about 150 years from the time of the Igbir (Igbir) to the reign of Sultan Malik Shah (1075–1092) under the administration of his vizier Nizam al-Mulk (see Becker, Schreiber, p. 89). The latter distributed the estates as feuds to the troops and allowed them as revenue and tenure. The Sultans introduced an innovation (inasmuch as they made the feuds hereditary in return for military service.

This is best explained by the fact that there had been the practice of enfeoffing feudal tenants and putting them in the charge of the army. They thought that in this way they could secure for themselves a particularly true and devoted army (al-Makruh, Khusus, ii. 216 quotes a statement on this point by a qanunci (mercenaries) of the army of the Saljuk Attiling, the almost independent prince Nur al-Din of Aleppo 341–569 = 1146–1173). The feuds belong to us, it is our property, we pass it on to our children from father to son and in return for it we are willing to run the risk of death. The system of hereditary feuds in return for military service is also found among the Mongols. It was different in the Mamluk period (see Becker, art. Mamluk, ii. p. 148 sqq.). The whole country under his rule, apart from private property, endowments, freeholds or desert land, is the feudal property of the Sultan. It was divided into 24 parts from the time of Sultan Kalaun (576–689 = 1179–1390). Four parts were for the Sultan, out of which he granted feuds to his guards, officers and soldiers, 10 parts were for the amirs, 10 for the mercenaries (qanunci) but the amirs also held a part of the feuds for the mercenaries. The land was redistributed from time to time to 12 parts of survey (at least once in 50 years) but frequently more often, if amirs prevailed, so that for example the highest amirs got hold of very large estates and introduced a lordship system or the smaller amirs did not pass on the feuds to the mercenaries. New surveys were also natural by sales to give such land to the amirs. Sultan Lajjin (661–682 = 1262–1283) for example granted half of the land for feuds reserved for his guards. In the survey of Sultan al-Nasir Muhammad of the year 715 (1315) 10 feuds were for the Sultan, 14 for the amirs and their mercenaries. Another question once appeared in the first Mamluk dynasty in the reign of the extragnant Sultan al-Kamil Sha’ban: the mercenaries exchanged or sold their estates to private individuals and in return paid considerable sums to the treasury. This practice was even sanctioned by the institution of a special office (Qasba al-Shablik). (See for further details, Soltstein, Materialien, übersetz. und daraus, ii. nos. 44) This abuse was however of short duration only: it is described by the chronologists as a wicked, illegal, and arbitrary act. When Sultan Selim I in 922 (1516) conquered Syria and Egypt, he had these lands resurveyed and divided as crown estates and feudal according to the Ottoman principles. As elsewhere throughout the Ottoman empire the principle of inheritance was gradually introduced. Malayzam Ahi was the first to gradually deprive the Mamluks and the small vassals of their feuds and to introduce a system of direct payment into the army. The Turkish Sultan (see the article TURKEY) claimed a part of the conquered territory as their property and granted the yield of the taxes of whole districts (Haci’s) to their grantees for life (Maltazam Muzaffir, q. v.). The governor who was granted a fief in this way, received the ground tax and other dues, while he in return placed a certain number of soldiers at the Sultan’s disposal according to the size of his estate: he could not sell a definite tribute to the Vorn. It thus came about that the great princes were often almost independent of the Sublime Porte. There arose for example small dynasties.
in Syria at Homs, Baalbek, in Lebanon and Turkish. The smaller fires were called, according to their size, ḍāʿim (from ʿaʾmat, the leader of an army) and ṣawār; the number of soldiers in the provost varied with the size of their bony. They were hereditary and were divided according to certain principles among the sons of heirs of the head of the family, in return for military service. It may be said that almost the whole empire was sustained by military life. This circumstance was, in course of time by its decentralizing tendency, brought about a weakening of the empire, gradually abolished by the reforms (Damirat) of Sultan Ahl al-Majidi, which Sultan Mahmud II had gradually prepared the way for (1823-1855-1856-1857). The situation was definitely settled by the land legislation of 1856. General military service for Muslims had already been introduced in 1839. Certain hereditary fires granted to generals of the empire, which every new Sultan has to confirm, still exist.

**IKTIBAS** means to take a šahāʾir, a live coal or a light, from another's fire (Kur. xx. 201-202, 7: 11. 13); hence to seek knowledge (šīr) and, as a technical term, to cite, to quote, specific words from the Qurʾān or the traditions but without indicating these as quoted. If the source is indicated and the quotation is put into verse the figure is called qawwāl, "binding," and if it is verse, not Qurʾānic or traditions, that is quoted, and in verse, the figure is qawwāl, "inserting." In spite of the original application of the words they may be preserved or may be changed. As to the looseness of his there has been much dispute. The šīrīlites generally pronounced it unlawful; but others allowed it under conditions, e.g. in preaching and prayer and praise (following the usage of Muhammad), but not in verse, where it was charged (ṣīh-ṣīh). Yet others permitted such quotation, even in verse; if done in a right spirit. But it is altogether advisable to twist words referring to Allah as to make them refer to a creature; or to use any Kurʾānic words in light jesting, but, as a matter of fact, such quoting and alluding has been quite common, even in the most sacred contexts as in 'Ismāʿīl, just as the doubt whether the animal should be prefixed to poetry (Im Rashīd, Usul, ed. Cairo, 1842, ii. 250) has had no practical consequences. The Kifāārī (p. 104, ed.) notes a Kāmil al-Majīdī by Mīḥānī (d. 1835, or 223) and another by Mānaʿī (d. 1835, or 223) but it is uncertain whether their šīrīlīs were of the above kind or of the qawwālīs of Ḫiyāʾī al-Dīn (d. 1849) Bruckman, p. 104) it is extended to cover proverbs, verses and even short šīrīlīs.

**Bibliography:** Diet. of curr. tr. p. 1187; Muharr, Kāmil al-Arār, p. 11. 138, 140, 217; Girault de Prati, Historique et Francois, p. 202, 28; ibid., viii. 48.

**AL-ĪKWA** (a.) a technical term in metre, meaning an error in prosody, which consists in the vowel of the vocalised rhyme-forming, terminal consonant being a šīrīlī in one verse of a poem and a šīrīlī in another, irrespective of whether the majority of the verses of the poem end in one or other of these vowels or not. According to al-Khālid b. Ahmad, al-shīrīlī means the presence of an unusual vowel with the rhyme-forming consonant, so that the verse and partly in i, i, partly in i, or in a poem rhyming in i, ūṣr or ūṣr.
ILAH is undoubtedly the same as ואל in and has the same meaning of ultimate derivation (Encyclopedia Biblica, ill. colli., 3323: 1897; Brown-Driver-Briggs, Hebrew Lexicon, p. 42, 28; Bleiber, Kamm, Schr., l. 134), For here only the Arabic side is considered. The pre-Muslim Moslems regarded ALLAH as a proper name (la veleem) and this view was practically universal in Islam for the arguments of the few who held that it was a descriptive noun (1928) see Razi, Moazzeni, ed. Cairo, 1107, l. 83, p. 479. But, according to Razi (loc. cit.), al-Khafid, al-Hadi, and the most of the formulatex of the Muslim fundamentalists (la veyem) hold also that it had no derivation, was meaningless. This Razi supports with various a priori arguments. Others, according to Razi, held that ALLAH was of Semitic or Hebrew origin; others, of the school of al-Khali, that it was from al-lahu; and others, of the school of al-Malik, that it was from al-lah, the infinite of luhu, "to be high," or "to be covered." Of course, as al-lahu, that it was al-lah, Razi had to contend that it had a derivation, although in usage had come to be practically as a proper name and equal to ALLAH. Later Islam has decided that, while ALLAH is a proper name, it is also derived (muqadda, basitah) and most probably from al-lah, in one or other of its meanings. ALLAH, then, would mean "the god already mentioned," the attribute being ALLAH, "the Deity," ill. It was softened to ALLAH by frequency of usage and in that form came to be a proper name. But ALLAH, "a god," still arrived in the construct and undeniable, as also ALLAH, "god of the plural. Apparently all-lah does not occur in the Koran as a form; but there are cases where the same name occurs. Sir, p. 11. Kuran. 25, 37. al-luhu, basitah, al-luhu, basitah, and he is the deity in the heavens (of) Zamakhshari, Korki, ed. Lutg, p. 194); and in Kuran. xxiv. 50. 70. al-luha, basitah, ilahu ilahu ilahu basitah, "he is the deity than whom there is no deity." (cf. Kachab, p. 1004). Then later ALLAH came back in the two senses noted above and was used and is still used by theological writers much as our "the Deity." Eight derivations have been suggested for ALLAH (Razi, l. 84—85; Zakarian, ed. Bleiber, l. 4), but they practically reduce to the following: 1. Allah, "worship," but, as Zamakhshari points out (Kachab, p. 3), this with the vah and alah are derived from the noun. 2. Allah, "to be pious, commanded," for the word is contemplated in the experience of knowing Allah; wallah has the same meaning. 3. Allah "to turn to for protection, or to seek peace, or to be wronged," again wallah has the same meaning. For Allah the school of al-Baghd preferred the derivation from allha in either of its two meanings, "to be veiled" or "to be lofty." Zamakhshari mentions only 1 and 2, the latter being his opinion; in 2 and 3 wallah may easily be more original; for the interchange of Musafir, ed. Broc, p. 172, l. 26.

Tofin of Aba 'Su'it (d. 932); Edun, anvil, 385; article ALLAH, p. 302 above, and in Hastings, Dict. of Religion and Ethics, both by present writer. (D. B. Macdonald.)

ILAH, Arab. plural of the Turkish word il people (D. Thomas, Inscriptions d'Orkhon, p. 15 and 135, No. 2) is the name given to the Persians, the tribes that have retained nomadism in the empire (syn. alil), they are for the most part of Turcoman origin; liable to military service in time of war, they form the cavalry, army in Iran (Muhammad Hassan Khani, Mofeed, il-Sunan, p. 29, 347, except for the region of Caspian. They are also called kasfikan (black tents) from the colour of their tents. Their headdress is in the mullah, the chief of the people; he enjoys absolute authority and rules his clan in a way absolutely independent of the royal authority. They have teachers of the Koran and of Persian poetry; this is all the education the nomads receive. When the course of the seasons requires the movement of the tribe, they strike their tents, their chief holds a review (isoh); while the men on foot stand with large sticks in their hands and surround him when hearing songs, the women from the tents throw stones at the men, men and women, while domestic chattels being loaded on camels. The nomads pay various revenues to the state, a tax for pasture (fakht-i-erab), a certain number of camels and asses to be sent annually to the court, in addition to the usual presents; each tribe furnishes a regiment of infantry (fatuh) and a reserve squadron at irregular cavalry. (musasir i-ruzz) The reforms at present planned by the Persian government aim at increasing gradually the number of tribes who have adopted a settled life, and forcing those who remain nomadique to make their migrations without damaging the interests of the settled tribes on their route. For Iran, a council of the tribes is to be created on which the il-sheikhs will be present in person or represented by delegations, in addition to representations of the great tribes and prominent personages of the empire. This organisation will be extended to the whole of Persia.

(Bibliotheque de l'Empire). 1853; nos. 4, 12); ibid. les formes administratives de Perse, les tribus du Dieu dans le lieu de Musulmon, xvi., 38 p. 19, 141, du royaume des Témans de Perse, 1913, p. 33; Fludin at Casca, France, 1921, 1931, Casse, a pers. 1, 18. 189; (Ch. Hoare)

ILCI (fr.) properly  sidl from the Uigur ci, peace, alliance, and the suffix of kings introduction profession, = peace-maker, ambassador, plenipotentiary. The word of peace, which is found in Mongol and Manchus, also occurs in Habbastic, 31, and Khadi, 92, (129, (Roth, PER, 2, p. 50)). In Persia the distinction was formerly made between sidli ilic, ambassador, sidli nuwakshih, military plenipotentiary and sidli iltah, resident minister. At the present day the diplomatic titles, the employment of which was fixed at the treaty of Vienna, are officially the following for the first, affi est , for the second, affi est and for the Ottoman Empire there is no resident minister. It maintains embassies at Paris, London, Petersburg, Berlin, Rome, Vienna, and Teheran. The title
slating him with the help of the vizier Sa'id al-Num Asad al-Ashgar, who as a reward was made vizier to Pahlavan, son of Ildégig. Ildégig, who had several times to wage difficult wars with the Georgians (cf. the additions to Ibn al-Kalâmis, ed. Amaduz, p. 362 sq.), thus became the virtual ruler of the Saltuk empire, and firmly established the rule of his family in Afshabadjân. According to Ibn al-Athir, he died in 686 (1287) at Hamadhan in the same month as his wife, Togrul's widow. If the tomb at Nakhjavân described by M. Hartmann (Deutsche Bauwissenschaft, 1869, 60, print, p. 21) is that of this prince, his name was Murâm-i Khähî, but the writer of the text in Ildégig's tomb erected in contradistinction by the date 592. The account Sîlah al-Dîn's proves nothing, because Ildégig's son Pahlavan [i.e. v.] also bore it. Cf. Awit, 57 (Ildégig al-Ashgar), ed. Browne, I, 356 sqq.; Dawkashah, ed. Browne, p. 117, however, says that both Ildégig and his wife were interred in Hamadhan.

ILEK-KHÄNS, a Turkish dynasty in Central Asia, i.e. in the 13th-14th centuries. From this house which ruled the lands north and south of the Tiahân-Shân came the first Turkish emperors of Mî warâ al-Nahr in the Muslim period; the first monument of Muslim literature in Turkish, the Kadâcâh-Rûhî or Kadâcâh-Rûhî, was written about 462 = 1069-1070 for a prince of this dynasty. In Persian histories the dynasty is usually called family (sûfî) of Afrâsîyâb (q.v., i.e. 175) sometimes also "Khâns of Turkistan," the name "Ildégig prince" or "Ildégig" was introduced by European numismatists (Tornberg and especially Domm) from a title peculiar to this dynasty, which, however, is not by any means borne by all its rulers, and which it seems cannot be traced to Muslim literature at an earlier or later period. In the pre-Islamic period the word appears as a primary title among the Eastern Turks; cf. the expression "âlk-kähân makhâmâ" in the Christian text sultân, by F. W. K. Müller (Ugaric, Berlin, 1908, p. 6). The perennial mystic etymology of the title is uncertain; the historians say that the Khâns have Ildégig, sometimes also Ildèk and Ildèh, the signification of the Kadâcâh-Rûhî, Ildék or Ildèh, the Arabic (both the Cairo ms. and the newly discovered ms. of Namângân in Farghânâl) Ild; cf. W. Radloff, Wostomécch, i. 329, "if this word were pronounced Ildèh, it could be connected with Ildèh, the "first". Nâzâh b. Ail (d. 403 = 1012-1013), the conqueror of Mî warâ al-Nahr was the "Ildèh" or "Ildèk-kähân" zarwâ isdâs; the title was used later also by the kings of Mî warâ al-Nahr (cf. Barâhi, ed. Moréy, p. 631 infra) but only as long as there were commonly at least the relations of sultan and vassal between them and the Khâns of Kadâcâh. The expression "the khân (or the khan) and the Ildèk are frequently used (cf. Barâhi, p. 84 sqq.); this word was not the "khan", but a prince subordinate to him, just as the Ildège introduced in the Kadâcâh-Rûhî as the personification of justice is not called "khan", but "beg". After the rulers of Samarkand had definitely assumed the title of Khan and founded an independent kingdom, the title Ildège disappears from their coins. The word Ildège is mentioned for
the last time about 1150 a. d. in the name of title of the ruler of Bagdahd, (q. v. i. 615). The historical return to the "family of Ali" is very scanty; the limits of the kingdom as well as of the individual principalities, of which it consisted, are difficult to determine; the dates are mostly uncertain; even the coins have much to be settled here. The kingdom was never actually ruled by one man; feuds between individual members of the dynasty were usually settled by force of arms, frequently with foreign assistance. This state of affairs was first taken advantage of by the irascible (q. v. ii. 154 477.) and later by the Seljuk sultans for their own purposes; of the latter, Malikshah and his son Sanjar occupied a kind of sovereignty over the princes of Ilghazi and as well as those of Tabari and after the battle in the year 536 (1141) this supremacy passed to the khan Kiviti (q. v.). The downfall of the dynasty in Mulkarbah (c. 609 = 1212-1233) as well as in Khusraw (about the same date) was brought about by the rebellion of the Muslim population against the Kiviti and the resultant fighting.

ILGHAZI (I. e. champion of the people) is the name of two Seljuk semi-independent rulers of the Orthochoi dynasty who attained power in northern Mesopotamia.

1. NARSH AL-DIN ILGHAZI I. B. OTHO. He was first of all a supporter of his brother-in-law Tattush in his struggle for the throne of the Seljuk empire of Persia. After Tattush's defeat and death (495 = 1092) he withdrew to Jerusalem, which he defended against the attacks of the Turks jointly with his brother Sahnun. The two brothers had however after a 40-day siege to surrender Jerusalem to the Egyptians (Shin am 495 = July-August 1096). At a later date (from 493 = 1100-1101) Ilghaz joined the new pretender Salih Muhammad, who appointed him governor of Baghuz in 494 (1100-1101). He held this important office for four years, ultimately in the service of Sultan Tabarqan and his son Sultan Malikshah.

When Sultan Mahmud dismissed him from the government of Baghdad in 496 (1105), he fell out with this ruler. Between 498 and 501 (1107 and 1108-1108) Ilghaz captured the important fortress of Khusraw, one of the most important in the whole of the northern part of the country, and in 506 he became also lord of Nasirin. In 506, 507-508 and 509 (1111, 1112, 1113 and 1115) he refused to perform military service in the war, which the Muslim centre of the west were conducting against the Crusaders in Mesopotamia and Syria by Sultan Mahmud's order. During the last of these campaigns he was with two of his nephews even attacked by the commander-in-chief of the Sultan army at the battle of Surkuk at Bursa (q. v. i. 2990 sq.). and defeated him (May 1115). But then his feud with the Seljuks continued and Ilghaz inculcated a taste for raiding the Muslim came and even agreed to join arms with the Franks. Ilghaz was brought to Mosul and Ilghaz brought 10,000 Muslims to the 5,000 Franks. The Frank-Muslim allies encamped together till August at Armea and Shavii in face of the new commander-in-chief, Barnabas, sent by Sultan Mahmud to fight the Crusaders, although it was not coming to a battle between Barnabas and the allies. Shortly after that, in the month of September (1115) Ilghaz, who had gone back to Mesopotamia, was appointed at Al-Rastan (between Naim and Hamid). (Suhir, ii. 773) by Kühn, one of Sultan Mahmud's generals, but he managed to escape after some time for fear of Ilghaz. Ilghaz managed to get on very well with the Seljuk government after the death of Sultan Ma- hmud and the accession of his son, Mahdi.

Alia, the governor of Aleppo, was murdered towards the end of 510 (1117). Owing to internal disputes the town and district of Aleppo were exposed to the insults and depredations of the Franks. After Ilghaz had temporarily occupied Aleppo in 511 (1118), he was appointed in the following year by its inhabitants as their last hope and recognised as prince of Aleppo (Ibn al-Adim Kaum al-Din), Ilghaz in the second half of 512 (1118) succeeded in defending his position in the town of Ilghaz against whom was captured and became a neighbour of the Franks against whom he was at once made energetic preparations. The numerically weaker Franks were outmatched on June 28 1119 by his army of 20,000 men in the valley of Tell Arifin, taken by surprise and for the most part cut to pieces or taken prisoner. Among those who fell was Roger, Prince of Antioch. It was one of the greatest battles which the Muslims had so far won against the Crusaders (the village of Balik, after which the battle is often called, appears in Ibn al-Adim as Roger's camp on the night of June 29 1119, eight days before the decisive battle). Antioch now lay defenceless at Ilghaz's feet; but he neglected to take the city.

The reputation of Ilghaz's military ability was now restored far and wide and he received the title of " prince of Arabs and Muslims in the war which Sultan Mahmud was waging in person against the Christian Georgians. Ilghaz suffered a very severe reverse (Kaum al-Din, Tawil, Hehiq, 512 = 1124; Ibn al-Adim al-Kamil, 514 = 1126) which resulted in the loss of Tiflis to the Georgians. In 516 (1129) he was granted Maysur by the Seljuk in addition to his other lands.

Soon afterwards in Ramadân 516 = November 3 1123 (Ibn al-Kamil: Ramadân 6, al-Farâyi: Ramadân 17). Ilghaz died at the age probably of barely 60 at Maysur by the Caspian Sea, according to Ibn al-Adim, Revolt des Heeren der Crema, iii. 612, 613; al-Farâyi, according to Ibn al-Kamil. On the way from Aleppo to Maysur, according to Michael the Syncoph. At his death he was in possession of Maysur, Maysur, Aleppo and apparently also of Nuzafa. He was buried at Maysur (for further details see the historians of this town, quoted in Amed's footnotes of al-Kamil). His power increased in influence unexampled at that time as the Turkomans of Mesopotamia. He was a bold and ambitious personality, who claimed a leading position wherever he appeared. He was not a general of great genius; it is said that his drinking habits affected his military decisions. He
struck no colts as far as is known (L. Ghith tak Elaham, Catalogue des Monnaies Turcques; Constantinople 1894, p. 81). He married a daughter of Tughrul, Il-Khan, and later during his rule over Aleppo fled Farguran Khatun, a daughter of the former Seljuk ruler there, Kajtar. We know the names of several of his children: the doughter Güldin (possibly a daughter of Mengü, Khatun, who married the Arab chief Danis b. Sedagh in 533 = 1141-1142. Yannik Khatun, the wife of the Inful Holaki, Lord of Amid, who died in 535 = 1141-42, Ayak, died 568 = 1174-1175, Sedagh, Timurid and Shihab al-Din Mahmud (?), an other daughter, the name of whose son is unknown, married 495 = 1101-1102 an unnamed son of Tekzah, a brother of the great Sultan Malikshah. Ilgahat was one of those Muhammediun men who were the first to check the advance of Crusaders to north and east before the time of Zangi and Saladin. Ilghazaar I was the founder of the Orkhanid dynasty of Mardin which survived till 1109.

2. KUTA al-DIN ILGHAZAR II, the son of Malik Shihab al-Din Alph (probably another form of Alphak) and a sister of the Turkish ruler of Armeina, Sulayman II, succeeded his father in 572 = 1176-1177, Michael the Syrian: July 20, 1776) in the rule over Mardin, Maiytayrlik, and Raʾs al-ʿAin (in Dam-As-Sul, vi, 265; however, he appears as early as 569 in possession of Raʾs al-ʿAin). We have very scanty information about his reign. It is clear that he opposed his father and the Arabs who had become turbulent and in some cases even rebellious. Ilghazaar II seems to have had great influence over him. Ilghazaar for example joined the alliance which was concluded towards the end of 578 (beginning of spring 1183) by Sulayman II and the Al-Din Mardar I of al-Muawiy (a cousin of Khāqān al-Din Ilghazaar) with the intention of checking Saladin's advance into Mesopotamia. The联盟, however, was not very successful and, after the death of Sulayman II, we find Ilghazaar's troops in the army of Saladin in Syria (Safar 580 = May-June 1184). Ilghazaar II died soon after at the beginning of Djumādā II 580 = Sept 9, 1184. His principality in addition to the areas mentioned also included Dorni, his name is mentioned in an inscription on the minaret of a mosque at Mardin dated in the year of his accession, the inscription also credits of building. It is however given to his father that the main costs of the mosque were borne by Ilghazaar (bricks only, which are called dirhams, are known) he calls himself "King of the Ameer" (Malek al-Ummar) and, like other Ottomans rulers of Mardin before and after him, Baṭan, Bakr, although he did not rule in Amid, the territory of this district. Ilghazaar II left two sons: al-Din Yusuf Alph, and al-Malik al-Manṣūr Nasir al-Din Ortok Alph, who succeeded their father in turn. Nūṣrat al-Din Alph, one of Ilghazaar's slaves, married his widow, while one of his daughters was married to Saladin's son al-Malik al-Murtada, about the end of Djumādā I 579 (Sept.-Oct. 1183) or a little later.

ILHAM: A term literally "to cause to swallow or gulp down" (Leible, xc, 29, especially the last two lines). In the Kurān it occurs only (a. 28-8 — a celebrated but difficult passage; Īlabatāt jamiʿatul wa-sahrātul, "than he (Allah) made her (a well) swallow down her daughter and her golly fear". The oldest exegetical tradition (Tahfat, Taḥwīl, xxx, 315 sq.) gives two explanations: 1. Allah explains time to the noun, and Allah created the vagina in the creature. Later authorities chose the first (Zamakhshari, Kanzalāt, etc., Lees, p. 1612) but orthodox lexicographers generally consider the second, the almost certainly correct sense. Thus Rāṣūl (Maʿṣūl), ed. Cairo, 1308, vi, 438) and Nuisyalāt (margin of Taḥfat, p. 106) but Bahšāf (ed. Planché, ii, 405) follows Zamakh-
III, a large river in Central Asia. Both the rivers Tekes and the Tungus which join to form it, rise in the northern slopes of the Tian-Shan; after their junction the river is called the Illi and then has a course along loose alluvial soil till it reaches Lake Balkhash (q. v., p. 624). At some places it is over half a mile broad. The upper course of the Tekes and the lower course of the Illi belong to the Russian empire, the Kungas, the lower course of the Tekes, and the upper course of the Illi belong to the Chinese empire. The river has several tributaries, of which the most important are the Kagh in Chinese territory and the Cenin and Clitik on Russian territory. As usual in Central Asia, the tributaries are of greater importance for irrigation than the main stream. As soon as the river leaves the mountains and flows into the broad plain and no longer receives tributaries, it practically loses all importance for agriculture. The number of canals fed from the Illi on Russian territory is extremely small, but there is one called Al-Chungh as far down as the lower course of the river, about 15 miles from its mouth; agriculture is there pursued by the Kirgiz.

The Ill is first mentioned in the history of the Chinese Tung dynasty (8th-6th century B.C.). One of the main routes from China to Turkestan led even a few days through the Ill valley (F. Chavannes, Documents du Tchouen, Tientsin, 1905, p. 11 sqq.). The oldest Muslim source to mention the river is the Hudud al-Abbas (372 = 982-3); in it and in most later works the name is written Illa. How and when Islam reached here is not known, but in the 9th and 10th century the Ill valley is described as the boundary of the Muslim world. The lands to the east of it were only won for Islam in the Mongol period. On the Muslim principality which then existed there, the civilisation of the upper Ill valley in the 9th-10th centuries (that is, of the 16th-18th centuries) on the decline of this civilisation and its resurrection more strongly under the rule of the Calmucks and Chinese, on the last Muslim advancement and its consequences, and the partitions of the country between Russia and China see the article Или.

Still more recent are the historical notices of the other parts of the river valley. The same Kungus first appears in the history of Timur's campaigns (Qator-nama, Ind. ed., i, 451, where it is written Kungar); the Tekes is mentioned about the same time under the name of Tekke (in Ass, also Yakha). The valleys of the two rivers have always been highly esteemed by nomads as pasture ground. The post route which now crosses the Illi at the village of Illiskul viselok (the only bridge over the river is here) seems roughly to correspond to the road described by Skudra in 1555. North of the Illi and south of the mountains (obviously south of the pass of the Altyn-Tam) there was a large town inhabited by Persian speaking Sarajans, which Intrs Equino, Revue des Voyages, etc., iv, 280 sqq.; F. Scheidich, Dea Khabarskiy, Berlin, 1885, p. 42). From its situation it is the same town which is called at the same time by the Armenian king Heschem Dambašk and is called by the Chinese I-i-l-su-i-i or I-l-i-su-i-i, i.e. Illi-Balkih, town on the Illi (F. Retzschneider, Monumenta Resercharum, etc., i, 165). The same name is used by the Chinese in the 14th century as that of a district, and it is expressly stated that there are no towns there and that the population consists entirely of nomads (Yih, ii, 243). Below the high road the river breaks through a chain of moraines of which there are Buddhist inscriptions and Khotanese, the Calmuck period (9th to 18th centuries); the rocks are therefore called Tampaliy-Tsu (inscribed stones) by the Kirgiz (N. Pauline and A. Pankow in Esplugas, Psy. Ort. Arch. Oid., ii, 275 sqq., with two plates). About a hundred miles below Illiskul viselok a small river bed, the Balkama, runs off from the modern river and reunites the Balkia in three arms. It is said to be a trace here of old canals and routes of
ancient buildings (L. Berg, in: dovjetepa. Imp. Kriegs-Geog. Obsth., xl. 590). To what extent and people these remains are to be attributed is doubtful, as the literary sources are absolutely silent as far as is known (we may however turn to the article BAGHAI, L. 624, that the lake is mentioned in the Zafar-Nama, ind. ed. v. 496, under the name Atrak Kof. So far no inscriptions have been found there either.

TheILKHAN like all Central Asian rivers is little suited for navigation and has as far as obtained any importance in this respect, although several attempts have been made: cf. for example the voyage of L. Berg up the river from Iljiak to Lake Balkh in 1903 (cf. ibid., p. 558 sq.)

(W. BARTholom)"
1086). It is divided into eternal (budhān) and originated (māsādāh), according as it exists in God or in a creature, and there is no resemblance (kabādh) between these two. Originated knowledge is of three kinds: intuitional (haṭṭahā); necessary (ṣawāfī); by the evidence of the senses and by unanimous assertion (ṭuḥār wa nisāfāt). Deductive (ṣawāfī), from the Ṣawāfī of Naṣīfī with the commentary of Tafṣīrī and others, ed. Cairo, 1321, p. 107, and for a number of short definitions of Ṣawāfī see the Tafṣīrī of Lughānī, an.nove. These scholastic theologians who distinguished between Ṣawāfī and Ṣawāfī used this distinction as the foundation of simple things (ḥaṭṭahī); see, e.g., in Ḥanbālī’s Tafṣīrī, p. 410. Another distinction enters in the relation of Ṣawāfī to所在 (sharābīn). Theological science There is no separate, such as knowledge of things, when you know them, you have done every thing. But opposed to it is Ṣawāfī, knowledge of religious duties (ṣawāfī), your knowledge is not complete until you have acted upon it (Rāghīb, Muṣannāf, p. 348). This is put rather differently in the Tafṣīrī of Kāmil (ed. Cairo, 1306, p. 193). It is the duty of every Muslim to seek knowledge; therefore he who knows and acts on his knowledge has two acts of obedience to his credit; he who knows and does not act, on the other hand, has two acts of disobedience to his discredit; if he knows and does not act, he has obeyed once and disobeyed once. This is the end into the question as to what is saving knowledge (ḥikmat).

For a descriptive classification of all the arts and sciences which have been reduced to writing (al-ḥikmat al-mudawwannāh) see Dict. of Tech. Tawq. pp. 1-35. The Kāmil in his Maṣāfratān (Ṣawāfī, vi.) deals with these more historically and philosophically in their development and their relation to the essential facts of life (De Shârā’s trans., ii. 219, 399; Quatremére’s text, ii. 372, 399). But with regard to all sciences there is a fundamental distinction. They are divided into those praiseworthy and those mischievous (ṣawāfī and ḥaṭṭahī), and concerning which the praiseworthy are reckoned those which are not useful for this world or for that to come. The ḥaṭṭah is the frequently quoted tradition, “It is not of the beauty of a man’s Islam that he leaves alone what does not concern him.” (ṣawāfī). The religious Muslim should therefore avoid such sciences as are not demonstrably useful for this world or for his eternal salvation. (Gharnī, Ḥadīth Book I, Rev., ii. Al-Maṣāfrat, ed. Quatremére, iii. 130; Gelliner, Mini. Stadler, ii. 157; and review in Reisner, d. Darm. Mission, Ger., iv. 155; Hübner, Werke Al-Maṣawīs, trans. Nichol., p. 11.)

Bibliography is given above.

ILTUTĪMISH. Sheikh Al-Dīn, the slave and afterwards son-in-law of ʿAbd al-Qadir al-Qāsim. His son was likewise called al-Qāsim. He was a slave who rose to high rank and became the chief minister of the Mamluk rulers. He was a great statesman and a skilful diplomat. He was a man of learning and a poet, and his works are still extant. He was a great statesman and a skilful diplomat. He was a man of learning and a poet, and his works are still extant.

Ilyas, the Biblical prophet Elias, is twice mentioned in the Koran. In Surah vi. 83 he is mentioned with Naṣīr (Naṣr). This is a reference to his victory over the Jewish army under the leadership of Gog and Magog. The prophet Elias was a symbol of the victory of the true religion over its enemies. In the case of Naṣīr, the prophet Elias was a symbol of the victory of the true religion over its enemies. 

References to the Koran: Surah xxvi. 123, as well as the universal historians and the annals of legends of the prophets give the following account of Elias: He lived in the reign of King Ahab (Lâshār) and his wife Jezebel. Ahab tried to follow Jezebel, but the prophet Elias was a symbol of the victory of the true religion over its enemies. One day, however, Ahab cast him off saying that the king who served gods had as much success as he had. Astonished, Elias went to Pray to God to give him power over the rain. Thereupon a drought arose which lasted three years; Eliyas concealed himself during this period but was providential and did not fear. He cured Alas, the son of a widow, who became his disciple. At the end of the three years God reproached him with causing the death of many innocent persons by his severity, then assured him He was going to the land of Saraca and by the hand of his disciples Alas, a man of intelligence, had already appeared. Then Elias assumed the form of a leprosy of Saraca. God transformed him: he became a fearful being of light exalted above all human passions, half angel and half man, of earth and heaven at the same time. This is the version of al-Tahāri.

Al-Tahāri is much more detailed. According to him, Queen Athit (Jembel), the representative
live of Ladhah is the incarnation of all wickedness. Her chancellor however is a pious man, who conceals his faith. As in the Bible, here also, the story of Naboth (Naboith is called Mandaka, obviously an echo of Mornadkai) is the same of lydas' exhalation and the king's wrath. Lydas conceals himself for three days in the cave. Thereupon Lydas' beloved son falls ill. Four hundred priests of Hazel set out to slay Lydas, the alleged cause of his illness. The latter, however, instils with such respect that they return full of awe. Ladhah then sends 30 soldiers who call out to Lydas that they have been converted. The latter, prays God to consume them with fire, if they are lying. This happens and a second body of soldiers meets the same fate. Finally, Ladhah sends the believing chancellor to the queen with a free contact and with a tremendous ploy. At God's advice Lydas goes with him to save the chancellor. On the arrival in the palace the child dies, so that the king forgets Lydas and the latter is able to depart un molested. As he was to stay in the mountains near the house of the mother of the prophet Jonah, who, being then a child, was raised from the dead by Lydas. He then goes back to the mountains and begs God to give him power over the rain for seven years. He is only granted it for three years during which he himself is fed by the birds. The whole of Israel has now to suffer famine, only one widow is supplied in a miraculous fashion by Lydas with meal and oil. The rest of the story of Lydas, the healing of Albas', etc., is practically the same as that of at-Tubki. Here also Lydas is described as half mortal and half heavenly, appearing to men on earth. Al-Thalabit tells of a man who met Lydas in Palestine; after talking to him he went away on his camel.

There is another Elias story in the Koran, although the same is not mentioned and the person who here takes the place of Elias is not identified by tradition with him, but with al-Khadir. In Surah viii. 64 sqq. it is related how Musa and his servant while fishing met a servant of God whom Elias wished to follow. The unknown one however replied that Musa had not the necessary self-control. While travelling together the servant of God performed several apparently exaggerated and cruel deeds. Musa reproached him every time, so that the guide finally separated from him after showing him that each of his supposed wicked deeds was justified. Jewish legend relates a journey of Elias with Joshua ben Levi on which Elias did similar things to those of the unnamed servant of God in the Koran. Here also Joshua ben Levi apparently wisely, prudent as it is shown by Elias, is wrong in his prudent judgment. The similarity between the two stories is so great that it cannot be doubted that the Koranic one goes back to the Jewish. The unnamed servant of God in the Koran is usually identified with al-Khadir. It should be noted, however, that al-Hariri for example says on Surah viii. 64: "It is also said that he is Albas' or that he is Lydas". This confusion of Lydas and al-Khadir is significant and further cases may be mentioned. The reason is that in view of the Biblical story of Elias' being taken up to heaven, the latter, like al-Khadir is welcomed among the immortals. Perhaps al-Khadir's name shows this. Al-Khadir 'the green' is only an epithet of the man who was called Bly. If so, according to another reading, Bly. or Lydas. But elsewhere they are twins, not genealogically, but in their work and common activity. They go together to the fountain of life and drink from it, a trait which was originally only in the Alexander legend, but which again guarantees Lydas' immortality in many Irish tales. His name is interpreted as al-Ze, "the mystic", the symbol of immortality. Lydas and al-Khadir having survived to the first revelation to Muhammad are said to have wished to die. But Muhammad is said to have replied to them: "O Khabir, it is your duty to aid my community in the desert and you, O Lydas, must aid them at sea": Usually however al-Khadir-Gundako is the sea-daemon, while Lydas is the patron on land. The two spend Ramadhan each year in Jerusalem, observing the fast. They then make the pilgrimage to Mecca, without any one recognising them; unless God grants this favour. Their food is provided (amr al-fattah) and treated (houm). After the pilgrimage they slip into another's haunted house with paloquis. Any one who repeats these formulae three times at morning and evening is immune against thirst, fire, and drowning (parz, harb, gheb), as well as against higher powers, Satan, snakes, and sorcieries. Al-Khadir and Lydas meet every night at Alexander's tomb where they fly in the air. In the Jewish legend he also flies about giving help everywhere. (See also the article Al-Khadir.)

Besides al-Khadir Muslim legend also knows the immortal Kasvib-Khadi [q. v.] Lydas is therefore sometimes also identified with the latter. In various genealogies of Lydas he is said to be really Habbas. Usually however his genealogy is traced to Aaron: Aaron-Ezra-Musai-Masri. The latter is described as his grandfather. His name of his father has become, perhaps from Tishbi, Toshib, Toy-ay, and finally Yasin. It may further be noted that Lydas, like al-Khadir, is often identified with St. George (see article). Probably became the latter is also a patron saint.

'IMAD AL-DAWLA, Abu l-Hasan 'Ali b. Buraim, first ruler of the Bshid dynasty. With the help of his two brothers 'Imad al-Dawla in 1224 (934) conquered Shirda and thus became ruler of Bshid until his death. He died in Shirda on Dju'ada 1 16, 538 (Nov. 11, 949) aged 57. According to another statement (Isa Khattab, ed. Wettstein, No. 497), he did not die till 339 [cf. the article ISHAD].

'IMAD AL-DIN MUHAMMAD B. MUHAMMAD AL-KHASIYAM, a celebrated Arab stylist and historian, born at Isfahan in 540 (1145) of a prominent family, to which the celebrated Khatib al-Asi, whose biography is given in Ibn Khallikân, Waft of World, ed. Wettstein, No. 77, also be
IMÁD AL-DIN — IMÁLA.

longed. On him cf. Recueil des textes relatifs à l'Islam du Sixième ou du Septième, p. 221. He spent his youth in his native city and in Kūfah, but also studied in Baghdad particularly 558. and made a journey to Māqṣūd and other places. When the Salafī Ṣūlṭān Muhammad II besieged Baghdad in vain in 551 (1156), he was there and congratulated the Caliph on his deliverance in a letter which gained him the favour of the vizier ʿAbd al-Husayn (§ 7). The latter appointed him amīr in Wāṣṭah, after the vizier's death in 560 (1165) however he lost this office and lived through two difficult years. Finally he applied to the Ayyūbidīs in Syria, who were acquainted with his family, particularly with the above-mentioned al-Aṣṭār, who was a son of ʿImād al-Dīn. He found a friendly welcome there and was appointed amīr by ʿUmar Nūr al-Dīn and later wādīrid as a missive was built in honour of him. He was also sent on a diplomatic mission to the Caliph and was finally appointed muqāffir of the Divan. On Nūr al-Dīn's death in 569 (1174), however, his position ʿImād al-Dīn was not able to retain the post that he had left to his office and go to Māqṣūd. There he fell ill, but recovered and returned to Syria on hearing that ʿAlī Shāh was preparing to conquer Syria. He congratulated him at his capture of Hims in a poem, won great influence with him and accompanied him on all his campaigns. On ʿAlī Shāh's death in 580 (1184) he retired into private life and devoted himself to literary work till his death in 597 (1192). His chief work is undoubtedly the comprehensive anthology of the Abuʾl-Qāsim anthology all al-ʿAdl, still unpublished. His History of the conquest of Syria ʿAbū al-Qāsim al- Ṣūlṭān Shabān, ed. Landor. Leiden 1888. He also prepared a history of the Salafīs in al-Maklā on the basis of the records compiled by the vizier Amīr Muhammad and called it Nūr al-Šawāra wa-Uvān al-ʿAṣīr; a synopsis by al-Banni (cf. § 17) has been published by Houtteau. Of his memoirs, ab-Šabān al-ʿAdlī, only one volume and a few excerpts have come down to us. ʿImād al-Dīn's prose writings are characterised by an exceedingly ornate and bombastic style.

IMÁD SHAHĪ DYNASTY, of ʿAbū ʿAlī, was founded by Faḍl Allah ʿImād al-Maklā, by in his Brahmin Vālīgānagar, who had been captured as a youth in an expedition of Ahmad Shah Bahman I to Vālīgānagar and educated as a Muslim. He served under ʿAbd al-Karim Khādżābān, governor of Beṣrā, and in the reign of Muhammād III Bahman succeeded his master. In 1400 Faḍl Allah followed the example of Ahmad Nūr al-Maklā of Aḥmadnagar and Visaye ʿAlī Khān of Bāligha and declared himself independent, not from insurrection towards Muḥammad Shah Bahman, but from dissatisfaction with the minister, Eshāq Fard, the real ruler of the kingdom, who kept the king in confinement and from whose control Faḍl Allah subsequently made a fruitless attempt to release him. Though a native Kūfahī, he was an intimate friend of the foreigner Yūsuf ʿAlī Khān, and his great influence was ever exercised in the interest of peace between the quadrangle

salutus of the Dakhan. Before he declared his independence, Beṣrā had been divided into two provinces of Gāmiṭ and Mahārā, of which he retained the former, but before his death he had added Mahārā to his dominions. He died in 1504 and was succeeded by his son ʿAlī al-Dīn, who was further superior to him in ability and permitted himself to be drawn into quarrels in which he had no genuine concern, and from which his kingdom suffered severely, with Māḥmūd Shāh Balkarī of Gūrāsat and Sultān Khān Kūt Shāh of Golkonda. He was also engaged in disastrous warfare with Aḥmadnagar regarding the possession of Pāhārī, on the Godāwar. He died in 1529 and was succeeded by his son Dāryā, a foolish ruler, during whose long reign the influence of Beṣrā in the politics of the Dakhan was on the wane. He played a subordinate part in most of the quarrels between the other Mohammedan sultanates and, having joined the unnatural alliance between the sultan of Būlārpur and the rājā of Vījyānagar against Hāzym Nūr al-Maklā of Aḥmadnagar, contributed much to his undoing and his political career than to his hominy, in secretly helping Hāzym Nūr al-Shāh and thus preventing the establishment of Hindu predominance in southern India. For some time before his death Dāryā ʿImād al-Shāh had been completely in the hands of his minister, Tūfīl Khān, and when he died in 1560, Tūfīl Khān placed his young son, Būlay Nūr al-Shāh, on the throne but kept him a prisoner and governed Beṣrā with hardly a pretence of submission. Tūfīl Khān was attacked by the sultans of Būlārpur and Aḥmadnagar for having declined to join the confederacy which finally crushed Vījyānagar at the battle of Tāhikot in 1565, but, though defeated and reduced to great distress, succeeded in playing off one of his enemies against the other and in bringing the sultan of Būlārpur to retreat. In 1572 Murūjīs Nūr al-Shāh of Aḥmadnagar again invaded Beṣrā, on the pretext, on this occasion, of liberating Hāzym Nūr Shāh from his humiliating position, Murūjīs captured Narājīs and annexed Beṣrā, and carried off Tūfīl Khān and his son, and Būlay Nūr Shāh and all his family to a fortress in the kingdom of Aḥmadnagar, where they all died in one night. The manner of their death is uncertain, but it was not fortuitous.

IMĀLA (see also Int. iv. of māla, to bend) is a phonetic phenomenon, which, according to al-Zamakhshīrī, consists in the assimilating the, i.e., that the tone becomes homogenous (syllabotonic /24/), the cause of it is that a /a/ or /o/ occurs within the syllable, or that it is changed from a letter moved by dāwār or from a /ə/ or /ɛ/, or that in a certain position it becomes /æ/. It is a question of the transition from long /a/ to /a/ (the syllable may be ʿaqadīlī [strong] or ʿaqadānī [of medium strength] under the influence of an adjoining /a/, of the kind of Umād, which was noticed even by the old Arabic grammarians and interpreters of the Qurʾān. The inflection of the short /a/, towards /k/, is also denoted occasionally. As is clear from al-Zamakhshīrī's definition it is a sound which causes the syllable need not actually appear; it may merely exist in
IMÁM (from the Arabic امام, *to precede, to lead*), originally *leader*, particularly *caesar leader*, any one who guides a column of camels*, a synonym of *alduf*; whence also a person or thing who serves as a guide or pattern, e.g. to the pupil in the school (Lisan, xiv, 291). In the Korán, the word is found in the meaning of example, leader, pattern, model, or prototype (ii. 115; xv. 79; xxvii. 47; etc.).

Since the foundation of the Muslim community, the Imam has been applied to the person who indicates the ritual movements of other Muslims. To the believers assembled in rows for the canonical service (*salah*), those who stand behind the Imam copy. Originally the Imam was the Prophet himself or in his absence someone authorized by him; after him his successors (*al-âliyâ*) or their delegates filled the office. The conduct of public worship became thus one of the chief attributes of the ruler and the trasmission of power to the governors of the provinces was seen in a form visible to all when the Caliph's deputy placed himself at the head of the community assembled for prayer. The jurists of Islam therefore give the name Imam to the chief of the Muslim community, the head of the nation, usually called *alî* in his quality of successor to the Prophet. The Imam leads the divine service and consequently decelles the fate of the social body of which he is chief. His office is called *al-îmâma* or *al-îmâm*, the great umpire, to distinguish it from *al-îmmâ* *al-mughrîd*, the office of the man who conducts the service. Every Imam must be chosen (this was the rule at least with the first four caliphs and the Kâbiids). The electors require the following qualifications: 1. unblemished character, 2. knowledge of law, 3. the necessary insight and ability to judge. The electors living in the rulers' capital legally enjoy no privilege, but in practice, according to ancient custom they do, for the other towns of the empire and the provinces have only to conform to the chief. Since each Imam must possess the following qualities: 1. unblemished life and character, 2. the necessary knowledge of law to exercise *al-îmâm* (*q.v.*), 3. eloquence, 4. freedom from any defect in hearing or seeing or in the limbs, 5. the necessary judgment to conduct the affairs of state, & the necessary courage to conduct a holy war, 7. descent from the tribe of KURÁSH. His authority is recognized by the taking of the oath of fealty (*kâba*; *q.v.*).

The Shi'ite further demand that the Imam should belong to the family of the Prophet, and thus the choice is limited to the descendants of A'ISH and Fâtima. According to Shi'i doctrine, *Ali* (*q.v.* 1, 283, 577) was appointed Imam by a divine ordinance (*mawla*) promulgated at Ghâfî Khumm (*q.v.*).

This rank is hereditary among his descendants so that the only thing to be decided is which of his descendants is to be recognized as Imam, a question which has frequently produced dissensions in the family of the Prophet. Some sects have excluded the descendants of al-Hussain (*q.v.* p. 274) and only recognized the claims of those of al-Husain (*q.v.* p. 159), to the Imamat, because the latter married a daughter of the last Shia king, Vendegeld III. They also consider the Imams divines and infallible (*muqaddem*; see *râfat*). The most complete series of Imams is that of the *Qâdî A'wâlî* (*q.v.*).
The Zūdār said that the texts quoted in support of the assignment of the imām to 'Alī do not refer to him directly and personally but only according to his distinguishing marks as imām. They therefore say that a mistake could be made in regard to the description of the individual and that the community could legally choose the two shāhīds (Abū Bakr and 'Umar) but that 'Alī had a greater right to the imamate. The former were proclaimed, although the latter had the greater right. The imām has not the right to appoint his successor; among the Imāmites however the imām must be known by his predecessor and he is regularly designated by him. The Ghulāt (extreme school) with the autonomy of the imām (Imām Khaḍītān, Al-Majdubārī al-sadiq al-qādī, ed. Qurnam, p. 355 sqq., trans. by Bn. Sīnān, 400 sqq., see Fatīha).

Every imām (q.v.), has an imām, a principal mosques (al-dār) may have several. The imām is sometimes an official of the town as he has also to supervise the morals and order of the quarter in which his mosque is. In the Turkish empire he has also the office of making out certificates (ābd al-ḥādr) required for the conveyance of property, the determining of civil status etc.

To avoid any confusion in the two meanings of the word imām, the Persians call the acting imām the 'imām jāmī, i.e., 'imām of prayer', a literal translation of the Arabic imām.

The founders of the four great orthodox schools of law are also called imāms and Abu Hanīfa was even known among his scholars as al-imām al-imām 'the greatest imām'. This name has also been given to a market place near Baghthāl, originally called Rāspā, where Abu Hanīfa is buried (CL. Haič, Hist. de Bagthāl, p. xiv). Finally, imām has become an honorary title of all scholars who have founded schools.

**IMĀM.** [See IMĀM.]

**IMĀM-ZĀDE,** a Persian title for the descendants of the imāms and an abbreviated designation also for their graves. This name was also given to the Persian scholars, preacher, and poet, Abu l-Mahfūz al-Ṣāfī, born in Shirū ṣurrah and Bākhshālī (Schafte, Chrestom. Pers., p. 24 ff. of the note).

**IMĀM.** [See IMĀM.]

**IMĀMIS.** [See IMĀM and ZANNAH AL-SHĀHĪDA]

**IMĀN.** The basic idea in the root 'imān is a rest of mind or security from fear (Rāghib, Muṣafār, 31, 241, 160, 1, 6 sqq.). In consequence the fourth stage can mean both "to render secure" and "to put one's trust in" something or someone. Hence in theology 'imān means 1) the putting of one's trust, the having faith, in Allah and his prophet and his message, and 2) the content of that message. A consideration of the first of these rules divides roughly into two parts: a) the discussion in al-Ghazālī's Iḥyā'u, Book II, Chap. iv.

1. The Qur'an sometimes distinguishes and sometimes confuses imān and kāfūl and is ambiguous as to their relationship to good words. Theological controversy followed, which is mirrored in the traditions, and the technical use of words in šahīd and kāfūl is, in consequence, very contradictory. A tradition, asserted from Muḥammad, says that whoever has in his heart the weight of a grade of faith (shāhīda) will come forth from the Fire. But what here is shāhīda? Some thought that it is simply a holding fast in the mind (kaffa illāh), others added a testifying with the tongue (ḥukm)-hādīda) others added a third element, words according to the fundamentals of the faith (kāfūl illāh). The first has been the position of most Ash'arites and Māturīdites; the second the position of the Khurramites and of the Khānābādīones. The Khurramites held that faith was simply acceptance with the tongue (kaffa illāh), i.e., confession (shahādah), the narrower sense of kāfūl; others, such as the Khurramites, a sect of Ḥāshibites, it was that only knowledge (ṣaḥīfa) of Allah gained by reason (qibla) and of the messages of the prophets gained by revelation. Orthodox Islam has come to the conclusion, which is, naturally, states as having been the position...
of the Fathers (al-kalāj), that faith consists of acceptance in the mind of and firm adherence to a belief (taṣbīḥ, ṯāḥīḥ, q.), a statement with the tongue of this acceptance (ṣūr, ṣalāt) and good works. The second is Islam in the narrower sense. He who has all three will enter the Garden. But in the case of one who possesses taṣbīḥ and taḥāf and dies with a single mental sin (andāb) unpurposed of, the Muʿtazilites held that he was neither a believer (maṣlūl) nor an unbeliever (ḥāṣīl) but a ṣuṭūr, a "regrettable," and that he would remain eternally in the Fire. In the last point the Khārijites agreed but they held that all sins were mortal. Orthodox Islam applies the same name to such an one but holds that eventually he will enter the Garden; for sinful believers the Fire is preparatory and not Hell, and good works are not of the essence of belief but are additions. At the opposite extreme were the Muʿtazilites, the "postponers," Historically they arose in early Islam from the difficulty which the pious found in treating as Muslims those who professed to be Muslims but were yet notoriously evil-doers. The Khārijites said bluntly that such were unbelievers; the Muʿtazilites preferred to postpone the question of faith until the unbeliever revealed all secrets. In the meantime they treated as a Muslim him who claimed to be a Muslim. In one form or another and to one degree or another Islam has accepted this position. All who worship towards the Kibla are accepted as Muslims, with no questions asked. But the later Muʿtazilites developed this into an uncompromising heresy. It is faith that saves, they taught, and evil works will not hinder the effectiveness of faith even as obedience in good works cannot save one who is an unbeliever (Van Violen, Ṣūta, in Zeitschr., d. Deutsch. Morgenl. Gesell., xiv. 161 zv., Goldscheider, Verlezungen, index, sub Muʿtazil.). Lastly, there is the case of one who professes Islam and acts as a Muslim, that is, goes through the ritual and external observance of Islam, but has no internal faith. He is a hypocrite (ṣuṭūr and ṣalāt) and it is held that his condition is to be remedied so that he should be "removed from the unbelievers" (ṣūr) and good works (ṣamūʿ ṣalāt) in Islam primarily and essentially mean obedience to the ritual law (al-ṣābīlāzāf).

II. Does faith increase and decrease? In the Kor an increase of faith is frequently mentioned and the Fathers (al-kalāj) held that it increased with acts of obedience and decreased with acts of disobedience. By this way, no later Islam taught, they meant that the mental acceptance (ṣūr) remained and that the good works were not to be regarded as parts of it as essentially affecting it but as additions to it by which it was increased in amount. Conversely it is acts of disobedience which diminished and it is essentially remained. So the Prophet could speak of faith by the amount of a grain, showing that it is an amount could vary; and al-Ḥadi al-Thāliyy shows with great psychological truth and beauty how good deeds go to nourish faith. But the question remained as a subject for verbal dispute. Those who held that faith (belief) meant acceptance (ṣūr) and good works (ṣamīʿ) taught that it increased and diminished, and those who held that faith was simply accepted taught that there could be no question of quantity in it.

III. There appears to have been an early dissatisfaction to say, "I am a believer" (maṣlūl) without the qualification, in al-Ḥadi, "if it be the will of Allāh," and still more with the addition ṣāfīn, "in verity, in truth, or in deeds ṣāfīn," in the sight of Allāh. Examples are quoted in al-Thāliyy's (ṣūr), book iv, Falsī, ṣamīʿ, maṣlūl, 9; cf. the commentary of the Sādīq al-Muṭahhī. Hence the Ash'arites, with the mass of Shāfiʿites, Mālikīs and Hanbalīs insisted on adding in al-ḥaṣār, while the Mālikīs and Hanbalīs prohibited it and permitted the addition of ṣāfīn. They urged that he who says "if it be the will of Allāh" implicates doubt and doubt is such a connection meant disbelief (ṣūr). In reply the Ash'arites argued that the formula was used not to express doubt of the reality of the absolute acceptance in the mind but as, and 4) to express a doubt as to the perfection of the faith in question though not as to its reality or, if works are reckoned a part of faith, as to whether there will be works, and as to express a doubt as to whether Allāh will permit the believer in question to die in the faith, for all things must be judged by their results (ṣamīʿ). For the Ash'arites the formula is the same in reference above, and for the Shāfiʿites, al-Takāṣṣī's commentary on the Ḍāfūʿ al-ṣamīʿ, ed. Cairo, 1324, p. 327, 399.

IMRĀT (Ar. "building," ṣellīfa), the name given in Turkey to eating-houses or hostels where schoolchildren and theological students receive their meals, which consist of bread and one or two hot dishes of mutton and vegetables. Similarly, such food, along with a small present in money of 2–5 suspara a day per person, sometimes extended to 10 months in the case of the poor. These institutions are maintained by pious foundations. The first of the kind was erected by Sulṭān Orkhan in 1336 in Nīces (Irāq) and devoted to the good of mankind; at the opening he prayed in person, distributed food to the poor and was the first to light the lamps and candles. Mūsā II did the same thing after a feast which he had given to the "army" of his court in the Ṣamār. At the end of the eighteenth century the inns of Constantinople fed over 30,000 people every day. There is an inn beside each of the great imperial mosques Ayš. Sofīa (kitchen founded in 1156 = 1742 by Maḥmūd 1), Ṣayyid, Fālī, Sālih, Subākhī, Amīnsī, Nīc-i ʿOltānīsī, etc. in Terras, where the word in ṣellīfa, it means "pensioner," is, e. g. ʿUmm uṣūrīn, the "Sanctuary" at Terras.

IMREHNA. [See KARAHEF.]

IMOSHA. [See TAURIS.]

IMRĀN, the Biblical Ḍāfūʿ, was the son of
Vahab b. Yahūb b. Layw, and married Ummayd, who bore him Mūsā in his seventh year. He lived 127 years (Ibn al-Athīr, p. 119, al-Thālabālī, p. 99; al-Kisāʾī’s p. 201, and Tabarī, p. 443). This account differs from the Biblical in so far as, according to Exodus, 6: 6, Ummayd was son of Kebah and brother of Vahab, and reached the age of 127. Mūsā was appointed governor of Egypt and had to keep watch every night by Firawn’s bed (al-Kisāʾī, p. 201). One night he saw a bird in Firawn’s apartments, carrying his wife upon its wings. He was at once enamoured with love for her and had intercourse with her. The bird in took her back, humbled in the thousand wakened the royal palace noticing. Next morning the astrologer announced to the king that the conception of his future enemy had just taken place and also that his stars was in the ascendant and beautiful. Firawm ordered the midwives of Egypt to seek out and register the pregnant women from house to house. They did not however, dare to examine Firawm’s wife, as they knew that ‘Imrān did not leave Firawm’s side Mūsā thus escaped certain death (al-Kisāʾī, Ibid.). The tradition likewise describes Ummayd as the most prominent man in Egypt (Sūrah 12: Hūd B. 120; Exodus R. v. 17). The ‘Imrān mentioned in the Qurʾān (Sūrah li. 31) was the son of Qādhīy’s father, but his name does not correspond with that of his father and is not identical with the Biblical ‘Amram or Imrān. Thālab (p. 240) expressly mentions this, with the note that there was an interval of 1800 years between the two bearers of this name. The Qurʾān also speaks of ‘Imrān b. Mathūn or b. Sākim, whose wife Hāmūna, daughter of Fakhr, was the mother of Maryam and the grandmother of Jesus. Our ‘Imrān b. Mathūn would thus be identical with the Jakob b. Mattu of Matthew xxv. cf. Matthew.

‘IMRĀN b. HITTIN b. ‘ALADDIN, an Arab poet born in Basra, a genius much learned in the Qurʾān and Tradition, who is numbered among the second class of the Basra Tilahān and transmitted traditions on the authority of ‘Alī’s and of some Companions of the Prophet, but in his old age is said to have been won over by his wife to the Khālidīya. As he was already too infirm to serve them with the sword, he is reckoned among the al-badwa (see Brāhim, Thiq. Sharadīchārī, p. 29). He worked for the cause of his party as a preacher, and particularly as a poet, for example he celebrated ‘Abd al-Rahmān b. Mathūm, the master of ‘Ali, in a poem. When al-Hadjiul was governor of the Iraq and began to persecute the Khālidīya, he had to fly to Syria and found a hospitable welcome with Kafi b. Hādha. When his stay there became known to ‘Abd al-Malik, he escaped to the Qadījah b. Khādja, in Kāhirah. There he was also soon betrayed and now went to Omara, where admirers of ‘Abd al-Malik Mīrza b. Qadījah received him. When al-Hadjiul again discovered his whereabouts, he found a safe refuge in Kādub Māhūl not far from Kafi, where he died.

‘IMRĀN b. HITTIN played a great role in the swamps (Nabītah, q.v.) of the lower Euphrates at the beginning of the Bīyid reign. A native of al-Jumāmila, a village between Wazād and Baars, he had to go into hiding on account of a crime he committed and henceforth led the life of a robber, for which the neighbourhood offered excellent opportunities. He then entered into an alliance with Abu l-Kāsim al-Baarsī (see al-Rāfiq al-Budī), who found in him a most suitable man to defend the swamps against his enemies. As his robberies however made the road to Basra unsafe, the Bīyid Muḥāf al-Dawla was more than once forced to send troops against him, but they could do nothing in view of the nature of the country and were usually enticed to some place from which it was impossible for them to return. From sheer necessity Muḥāf al-Dawla appointed him governor of the district, which did not however prevent Hittin and his robbers from occasionally renewing their raids and even attacking Affār. Hittin was a man of great political abilities and was a capable opponent of Abū l-Kāsim al-Baarsī and his successor Bīyid. He put an end to this state of affairs by force met with no better success. Till his death in 369 = 979 ‘Imrān remained master of the swamps and transmitted his power to his son Husain. Abūd al-Dawla had the same experiences with him as his predecessors with his father. Husain however was slain in 372 = 978 by his brother Abū l-Faraj, and the latter met the same fate in the following year at the hands of the Hāji b. al-Muṣafir b. Abī [p. v.] who had been leader of the army during his father’s reign and now appointed a minor son of Husain named Abū ‘lmālī as ruler, but soon afterwards put himself in his place by means of a forged appointment from the Bīyid Sayfān al-Tawwāl. Once again, in 412 = 1022, a son of Imrān, Abū l-Hājāj Muhammad, attempted to gain power, but met with no success.

AL-‘IMRĀN. Muḥāf al-DIN al-HUṣAYN, born in Dihlī, studied with the ‘ulamāʾ of his native land and became a renowned scholar. He spent a large part of his life in teaching students at Dihlī. At first Muḥāf al-Din much disliked the saints of the Chisti order and especially Naṣīr al-Din Mūsābī, known as Ghurāb al-Dīn, ‘Right of Dihlī’ (d. 1357), who was his contemporary, but the latter’s spiritual power and pious influence induced him to sit at his feet and at last to become his disciple. He was a great favourite of Muḥammad II b. Taghīkh (1347-1357) who sent him to Shāh to induce al-Kāfī ‘Abd al-Din al-Fīlī (d. 1357) to come to Dihlī and adorn his court. The latter offended him there but instead of punishing the culprit, he was himself persuaded to pass the remainder of his life there.

He is the author of the following works: 1. a commentary on Abū Ablī’s Al-μuṣaddid al-Nasāʾī’s compendium of Malamathān law according to the Hanafi school. Kiyy al-Dīn; 2. a commentary on Surah al-Dun Yumn b. Abī Bakr b. Muḥammad b. ‘Alī al-Sakkārī’s (d. 826 = 1429) Fiqh ul-
IMRÜ, AL-KAYS, a Arab poet of the VIth.

ABOUT the name, its origin and the sources for the identification of this figure, a long and laborious investigation is necessary. The first and most serious difficulty is the identity of the name: the very fact that the same name appears in various forms under different persons creates confusion. The name IMRÜ, AL-KAYS is not rare in Arabic literature, and it is found in various forms such as IMRÜ AL-KAYS, IMRÜ AL-KAYS AL-MUJTAM, IMRÜ AL-KAYS AL-MUSTASIM, etc. The identification of the author is thus a problem that requires careful examination.

IMRÜ AL-KAYS lived in the middle of the seventh century AD. He was a poet and a scholar who contributed significantly to the development of Arabic literature. He was a contemporary of the famous poet IBN JALJUL, and his works are praised for their language and CONTENT. His poetry is known for its religious and philosophical themes, and it is considered one of the most important works of its time.

IMRÜ AL-KAYS' works include several books on various subjects, including astrology, astronomy, and mathematics. He also wrote extensively on the principles of Islamic law and the history of the Arab conquests. His works were widely admired and were studied by future generations of scholars.

IMRÜ AL-KAYS' poetry is characterized by its rich imagery and its deep understanding of the human condition. His poems often explore themes of love, war, and the struggle for knowledge. His works continue to be studied and admired by scholars and poets alike.

IMRÜ AL-KAYS' legacy is a testament to the power of the human spirit to transcend the challenges of life. His works continue to inspire and provide insight into the complexities of human experience.

IMRÜ AL-KAYS' poetry is a reflection of the rich culture and history of the Arab world. His works are a testament to the power of the human spirit to create beauty and meaning in the face of adversity.

IMRÜ AL-KAYS' legacy is a reminder to us all that the power of the human spirit is greater than any challenge we may face. His works continue to inspire us to pursue knowledge, to engage with the world, and to strive for understanding and compassion.

IMRÜ AL-KAYS' poetry is a reminder to us all that the power of the human spirit is greater than any challenge we may face. His works continue to inspire us to pursue knowledge, to engage with the world, and to strive for understanding and compassion.

chief of the watch); in 835 he was appointed governor of Ctesa. Two years later he accompanied Sulaiman Hashim in the campaign against Aqaid (Diyas Bakr), which met with little success. When the Sulaimans wished to leave the frontier area under reliable administration, he appointed Ishaq as governor of the almost entirely destroyed town of al-Ruah (Eldon). Ishaq, as well as others after him declined to accept this office, but finally the Sultan induced him to do so by granting him the gift of an annuity of 1,000 dirhams, q.v., together with the salary of an amir. After two years he was transferred to Cairo as amir of 1,000 (without office) at the disposal of the Sultan and in 840 sent as governor to Salut. When Sultan Caliphah ascended the throne, he summoned him to Cairo in 843 and appointed him amir of 1,000 without office and in 846 Great Taushir. In 848 he became Amr (commander of the army) and as such was chosen Sulaiman in place of Caliphah’s son ‘Abd-Allah, who was unable to hold his position after his father’s death, in a Shiite of the Mudarris. Although he was now 73, he was able to maintain himself on the throne by the support of the Mudarris, as far as possible and often proving a too indulgent and lenient in matters for them. Sulaiman’s reign was on the whole successful. Although he could not curb the arrogance of the Mudarris, he succeeded in healing another wound in his kingdom. Amid great difficulties he carried through a return to the currency. The debased silver money which his predecessors had struck was gradually withdrawn from circulation and new and improved coins issued. In foreign politics also he was fortunate. He was on the best terms with the Prince of the White Sheep, with the prince of Alid in southern Asia Minor, and particularly with the great emir of Constantinople, the Osman Sultan Muhammad, to whom he sent a special embassy to offer congratulations on the conquest of Constantinople, where necessity, he was not afraid to fight. His drive put the prince of Karamania, who had taken several fortified places in Cilicia from him and forced him to make peace. He was involved in European politics by the relations which had commenced Cyprus with Egypt since the reign of Hashim. In order to deprive the corsairs who ravaged Syrian ports of a base, Hashim had taken Cyprus in 830 and forced King James to recognize his sovereignty and reinstated him on the payment of tribute. A small Egyptian garrison remained on the island. When one of his successors, John II, died in 862 = 1426, his daughter Charlotte was made queen. Her natural son, James, Archbishop of Nicomedia, who sought for his safety, fled to Egypt, and took him there as a preserver. Both parties embittered to gain John’s recognition and after warring a long time, the ambassador of the Grand Master of the Knights of St. John of Rhodes intervening he decided in favour of Charlotte. But the Mudarris inclined to James and forced the Sultan to send him to Cyprus with a fleet. With his help James occupied the capital Nicomedia without opposition. But when the siege of Cerities dragged on, the Egyptian fleet returned to Egypt; its Admiral apparently having been bribed by the queen, and only left a small garrison in Cyprus whose help James held out but was unable to deprive Charlotte of her territory (for further developments see GLENNEMAN). Ishaq was a mild and kindly ruler, and as far as lay in his power, his subjects were ruled justly and lightly. He died in 865 = 1426. His son Alpand, whom he had acknowledged on his death-bed, was a far-seeing ruler who stood at the good of the community, but he was not able to control the licentious Mudarris, so that he was only able to hold the throne for four months.

(INAT), a town in Ḫadramaut, south-east of Tarni, on the wādī of the same name. The family of Shāhī Abū Bakr, the only Shāyih family in Ḫadramaut to have arms, lives here. It has two mosques of which one is chief of the Banū Tha'lab [see ḪARĀSĀW]. In the eighties of last century there lived in Ḫinat the greatest saint of Ḫadramaut, Sayyid Mehdi b. ʿAlī, of the family of Shāhī Abū Bakr, to whom people made pilgrimages from the whole country and from more distant lands, such as the Indians. Archipelago, in account of the miracles performed by him. Ḫinat is the most important Íthāt [q. v.] in South Arabia. According to the Zaydiyya it was founded about 883 [884] (al-Qaraḍāwī, ‘al-Baladh al-’Āmm 1399 = Feb. 1283), the town had 5,000 inhabitants, according to v. d. Berg, however, only 1,000. The town is known, Tha'lab, as being near Ḫinat and, more recently, Ḫinat in Bihar for Ḫinat are due to a false transcription.

(INAYAT ALLAH KANDAHARI, author of the Bahār-i-Dāvūd [q. v.] and of a monumental history up to the reign of Shēbak.sūtan, entitled Tāreckh-i-Bābā_HSBN], he held office in Lahore under the Mughal government, but to later life retired from the world and devoted himself to prayer and the study of theology; he died in 1580 (1459), 9, according to others, in 1592, at the age of 65 and his brother, Muhammad Shīrī [q. v.], who died five years after him, was buried by his side. During his lifetime, he had erected an imposing octagonal building, with a dome supported by four lofty arches, for his place of burial; the tombs of the two brothers were of red sandstone, but were destroyed by the Sikhs, who turned the building into a powder magazine; after the conquest of the Pathans by the English, it was sunk into a private residence, but is now a church.

INDIA (British). 1. Ethnology. According to the census of 1871 the total population of British India was 315,150,209, out of which 66,647,209 persons were returned as Mussulmans. To this total the province of Bengal contributed nearly
24 million, the Pandjäh nearly 11 million, the United Provinces over 8½ million, the Province of Bombay 4 million, (more than 2½ million of whom were in Sind), Madras 2½ million (of whom 3,231,381 were in the native districts of Malabar), Kasjmir 2½ million, and the North-West Frontier Province over 2 million. This Muslim population is unaccountably found among the adherents of other religions in various parts of the country; the largest proportion is found in the North-West Frontier Province where there are 2,739,594 Musulmans, or 91 per cent., out of a total population of 2,966,913; in the opposite corner of India, in Bengal, 23,986,729, or 53 per cent., are Musulmans out of a total of 45,453,077, the proportion ranging from 15 per cent. in West, to 59 per cent. in North, and 68 per cent. in East Bengal; in Kasjmir there are 2,398,320 Musulmans out of a population of 3,458,126, i.e. about 70 per cent. of the inhabitants of that state; in the Pandjäh they form more than 80 per cent. In the United Provinces, one of the chief historic centres of the Maghal empire, there are only 6,658,375 Musulmans out of a total population of 47,181,044, i.e. about 14 per cent.; and in other provinces the proportion is still lower; e.g. in the Mysore state, in spite of the proselytizing zeal of haidar’llah [q.v.] and Tipu Sultan [q.v.], there are only 314,494 Musulmans, or 5 per cent., out of a population of 5,506,193. In the Hindustân state, embracing territory that has been under Muhammadan rule since the 14th century, there are only 1,380,990 Musulmans, or 10 per cent., out of a total of 13,374,676, chiefly Hindus; while, on the other hand, it is noticeable that the Muhammadans are relatively much more numerous in North Bihar, which has been from ancient times the home of Hindoo and Brahman domination, than in South Bihar, where there are old Muhammadan centres, such as Patna and Monghyr. The proportion sinks so low as 2½ per cent. in Orissá, though this province was under the rule of Afghanistan for several centuries.

Within this Muhammadan population of over 60 million there is a great ethnological diversity. One broad division may be drawn between the descendants of foreign Muslim immigrants on the one hand and of the indigenous converts on the other. Among the latter, the principal types that are most numerous are represented by (1) the Aryan type, occupying the Punjab, Rajputana and Kasjmir, to which belong the Rajput and Rajput Musulmans, (2) the Aryan-Moslem type, found in the United Provinces and Bihar, and (3) the Mongolo-Scythian type, represented by the majority of the Muhammadans of Eastern Bengal. (See Census of India, 1901, Vol. I, Ethnographic Appendix, p. 59 sqq.)

Though by far the larger proportion of the indigenous Muhammadan population owes its origin to the lower Hindu castes or to outcasts, still there are few of the higher castes that have not at some time or another contributed converts to Islam. Brahmans were forcibly converted amid the savageries of conquest, or in periods of intolerance under some settled Muhammadan government; other Brahmans embraced Islam through the persuasion of Muslim missionaries, or to gain some social or financial advantage.

From the worship castes Islam has received large accensions from the earlier days of its entrance into India. Rajput Musulmans are found in large numbers in the Punjab and to a less extent in the United Provinces and Rajputana; in some cases this tradition marks the conversion of their ancestors to the influence of Islam. As early as 1226, e.g. the Rajput of the city of Patna sent that their ancestors were converted by a saint named Abu ’Ali Kâlâdâr who died there in 1226. In other cases, the change of faith was determined by political or social motives, e.g. in northern India there are several Rajput families, the ancestor of one branch of which is said to have become a Muhammadan, in order to save the family property from confiscation.

From the lower castes among the Hindus there has been a constant stream of accensions during the whole Muhammadan period (for details, see the publications of the Ethnographic Survey of India), as well as from the aborigines of the country who stood outside the pale of Hindooism. Definite historical evidence of these conversions is for the most part wanting. In the case of the various Mongoloid or Mongolo-Scythian tribes of Eastern Bengal, there was probably a mass-movement towards Islam on their part; adherence to the new faith raised them out of the despised condition to which the higher Hindu castes consigned them.

The Muhammadans of foreign origin are numerically fewer than the descendants of native converts, but their influence in the history of Muhammadan civilization in India has been vastly more important; the various conquerors, Arabs, Turks, Pathans and Maghals, brought into the country large bodies of foreign troops, whose services they rewarded by grants of land; when once established, their courts attracted into India military adventurers, poets, scholars and theologians, most of whose remained and settled in the country; this movement of immigration went on during the whole period of Muhammadan ascendency and has not even ceased under British rule. One example may be taken from the 14th century, when the devastations of the Mongols had spread terror through the Muslim kingdoms of Central and Western Asia; refugees made their way into India, from Persia, Khurasan, Elam, Turkestan, etc., and in the reign of Sultan Ballân [q.v.], as many as 15 wards of the city of Delhi are said to have taken their names from such refugees.

Of these foreign immigrants, the first to enter India were the Arabs who invaded Sind under Muhammad b. Kâshân in 712; they speeded on space and time, the early attracted Arab merchants to the west coast of Southern India, and the Mopâlens [q.v.] are descended from the Hindoo women they married. Thus from the earliest period of the Muhammadan occupation to modern times there has been an immigration of Arabs into India; their numbers have been small, but their influence has been profound and wide-spread. There was a Sâyid dynasty in Delhi from 1343 to 1414, and one in Bengal from 1493 to 1553; a dynasty of Arab origin ruled over the kingdom of Khadrârz from the 14th to the 16th century; in the second decade of the 18th century two Sayids of Bara for 7 years enjoyed the position of king-makers and set themselves to the choice of the throne of Delhi. As administrators, generals, men of letters, teachers and saints, the Sâyids in India have played an important part in the history of Ma-
hannanian civilization. Among them there have been several families whose influence has been continuous from generation to generation. The Saliyids of Baha formed a group of considerable political importance, and various members of it held high and important posts under the Mughal emperors for nearly two centuries. From Akbar's reign onwards, they claimed the privilege of writing the chroniclers in the Persian language. (Brockhaus, *Lexikon des Indischen*, I, 390 sqq.). The Bighri Saliyids, who claim descent from Saliyid Djalil al-Din, Angri-Abad (who is said to have settled in Delhi [q. v.], and Por in 1642 a. H.), and the Gilani Saliyids, the descendants of Dadgari Muhammad Chawq (himself descended from the Khilji saint Saliyid Abul-Kahir al-Hilli [q. v.]), who also settled in Delhi in 1687 a. H., have contributed to the annals of Muslim history a large number of saints who filled an important place in the religious life of their country and whose shrines are still reverenced, especially in the north and north-west of India.

Numerically, the Aros form the smallest group of Indian Muhammadans of foreign origin. Another important group, likewise not numerous, is made up of the descendants of the Turk invaders, to whom the establishment of Muhammadan rule in India is really due; Mahmud of Ghazni was a Turk, as also were the generals of Muhammad Ghori, who founded dynasties in Delhi and elsewhere, and Bilawar, the founder of the so-called Maghul empire; the founders of the Adil Shahi, Gohar Shahi and Barid Shahi dynasties were all Turkish officers. These men achieved greatness out of a large number of soldiers of fortune and marauders whose fate was more obscure. Their settle a number of families of Kothari, which is now the Huzara District [q. v.], (forming part of the North-West Frontier Province), on his return from his invasion of India in 1099, and their descendants are found there to the present day. A group of Kulliqi migrated from Kullah to the Panjab as recently as 1842 and his descendants have received grants of land and are permanently settled in the country.

Among the smaller groups of immigrants special mention must be made of the Persians, whose influence on Muhammadan culture in India has been considerable. Saints, religious teachers, poets and men of letters, as well as soldiers and statesmen, have brought into India the refinement and subtlety of the Persian genius. Traders from the Persian Gulf settled in the cities of Godarz as early as the 9th century. The Ghuris and their Tadjik followers belonged to the Iranian race. Reference has already been made to the refugees who fled into India to escape the savage onslaught of the Mongols; political troubles have driven Persians in other periods also to take refuge in India, e. g. in the 18th century some fled from their country when the Afghan loaded the Safavid dynasty to an end in 1722, and others when Nadir Shah seized the throne in 1736. Naturally, many Persians were attracted to the Safawid kingdom in India, and Persian mercenaries still come as recruits to the Persian regiment of the Nawab of Cambay [q. v.]

A small number of Abyssinians or Somalis, known as Halishi or Sidfi, settled in Western India; mention of them as soldiers and sailors is found as early as the 13th century. The Sidis were admirals of the Maghul fleet, and a dynasty of Halishi kings ruled over Bengal from 1436 to 1500; the chiefs of Lajung [q. v.], and Saitin [q. v.], are also of Halishi origin.

The largest group of foreign stock is that of the Afghans or Pathans, who are found in greatest number in the north-west, but also as far east as Bengal and as far south as the Dakhan. The terms Afghan and Pathan are used indiscriminately by the natives of India to designate this large group of the Muhammadan population, but it is a matter of dispute as to whether the original Afghan and Pathan stocks were the same, or whether a purely Indian origin must not be assigned to the Pathans [cf. Afghanistan, I, 1498.]. There has been a constant stream of immigration from Afghanistan into India, from the end of the 13th century up to modern times. Most of the Muhammadan conquerors of India have entered the country through Afghanistan and have brought in their armies large numbers of Afghan soldiers, who received grants of land as military fiefs and settled in the country. Of the Afghan tribes, the most widely known are the Vashni, of whom a body of 12000 accompanied Babur in his final invasion of India, and settled in the plains of Himansh and the Panjde. Migrations on a large scale into the fertile plains of India have also taken place at various times, e. g. during the period of the Lodi (1451—1526) and Sisr (1540—1555) Sultanats of Delhi, the Faring and Sur tribes from which these dynasties sprang, and their neighbours, the Niyat, appear to have migrated almost bodily from Afghanistan into India. The great bulk of the Baluch has similarly migrated across the border into India; there are about ten times as many of them in India as in the whole of Baluchistan [q. v., L 636 sqq.].

2. Political History:

A. Under Muhammadan Rule

The introduction of Islam into India dates from the invasion of Sain [q. v.] in 712 by Muhammad b. al-Kalban [q. v.]. This led to a permanent occupation of the valley of the Indus as far north as Multan, but the rest of India was unaffected, and it was not until the close of the 10th century that a fresh invasion began with the raids of Mahmud of Ghazni [q. v.], which extended as far east as Khandiak in Eastern Hindustan and as far south as Somanath; but the province of Lahore was the only part of the country permanently occupied by his troops. The conquest of the rest of India dates from the campaigns of Muhammad Ghori [cf. Muhammad Ghori, p. 165 sq.] and his generals (1275—1290) on his return to Ghazni; he committed the charge of the military operations to Khusu al-Din Albag [q. v.], who became the first of the Sultans of Delhi; the conquerors of his general, Muhammad b. Bakhtyar [q. v.], extended his authority over the greater part of Bengal. When Muhammad Ghori died in 1266, the greater part of India north of the Vindhyas had been subjugated by his Turk officers, some of whom now became practically independent sovereigns. But the Sultans of Delhi claimed a suzerainty, which they were sometimes able to enforce, over the other Muslim states. Thirty-two sovereigns reigned in Delhi from 1206 to 1526; they fall into five dynasties: 1. the Slave kings, 1206—1290; 2. the Khalji, 1290—1320; 3. the Tughalaks, 1320—1413; 4. the Sayyids, 1414—
the protection of the British kept his court in Allahabad until 1771, when he was permitted to return to Delhi; after a brief period of prosperity, he was blinded by one of his officers in 1788 and became a puppet in the hands of the Maratha, and General Lake's victory over them in 1803 set him free and left him with a nominal sovereignty over the city of Delhi and the surrounding district and a monthly pension of 90,000 rupees. (For an account of the decline of the Muhammadan kingdom of Malwa, 1761-1783, which was brought to an end by the capture of Seringapatam and the death of Tipu Sultan [q. v.], and of the kingdom of Oudh, which was annexed by the British in 1856, see these articles.) Shah Alam's son, Muhammad Akbar (1806-1837), and his grandson, Bahadur Shah (1837-1857), retained the empty title of their ancestors, as pensioners of the East India Company; but Bahadur Shah's complicity in the Sepoy Mutiny of 1857 led to his banishment to Rangoon, where he died in 1862.

None of the self-governing Native States under Muhammadan rulers joined in the attempt to drive the English out of India, while some of the Indian Princes were rendered subservient to British influence by treaties of alliance. After the government was restored by the Crowns in 1858, the territories of these States were enlarged by grants of land, and other rewards for their loyalty were given to them.

Bibliography: It is not possible to give here a detailed list of the numerous works on the history of the Muhammadans in India; a bibliographical sketch of the original sources may be found in H. M. Elliot, The History of India as told by its own historians, The Muhammadan Period. Edited and continued by T. Denison (London, 1867-1872); H. M. Elliot, Bibliographical Index to the Historians of Muhammadan India (Calcutta, 1849); H. Eltze, Catalogue of Persian Manuscripts in the Library of the India Office (Oxford, 1908). G. R. Kipling, Catalogue of the Persian Manuscripts in the British Museum (London, 1870-1895). The works of several of these historians have been published in the Bibliotheca Indica: A full bibliographic is given in vol. iv. of N. Munro's, Secret de Mog, or Mogul India, 1852-1871, translated by William Irwin (London, 1903). For the bibliography of the works of Europeans who visited India during the Muhammadan period see E. F. O'connor, A short history of the 16th, 17th and 18th centuries (London, 1890). For separate dynasties and individuals, see the bibliography under the articles concerned. Among general histories, reliance may be made to E. Thomas, Chronique de la Poste, Kings of Delhi (London, 1871); A. Müller, Die Islam im Mogul und Avaward (Berlin, 1855-1857); Muhammad Dakhil Ali, Zafar-i Hindustan (Delhi, 1872-1875); M. Elphinstone, History of India, 9th ed. (London, 1905); H. C. Keene, History of India (Edinburgh, 1906); S. Lane-Poole, Modern India under Muhammadan Rule (London, 1907); S. J. Owen, The Fall of the Mogul Empire (London, 1912). Two volumes of the forthcoming Cambridge History of India will be devoted to
the history of the Mahomedans. A bibliography of works on Islam is given in O. Codrington's, Manual of Mussulman Numismatics. (London, 1904) and in the Compendium of Indian Coins. (Chap. IV.)

EN AND THE BRITISH EMPIRE

(i) Native States. Nearly two-thirds of the total area of British India is administered by native chiefs. Of these native States (653 in number) certain are governed by Muhammadans, under the suzerainty and protection of the British Crown, whose rulers and their subjects are free from the control of the laws of British India, the rights of the chiefs as rulers within their own territories are guaranteed by the suzerain power, but they are not permitted to enter into political relations with foreign nations or other States. As a separate article it is devoted to each of those States, all that is needed here is to give an enumeration of them, with brief details as to the annual revenue and the population in 1911. The largest of these Muhammadan States is Hubzudin, area 8,256 sq. m., pop. 13,274,978, of whom about one-third are Muhammadans: the annual revenue is about £1,760,000. The next only Muhammadan State that is in direct political relations with the Government of India is the others communicate either with an Agent to the Governor-General or with one of the Provincial Governments. In the Bahawalpur Agency, Kallal (area 73,777 sq. m.) has a population of 459,856, of whom all but 13,150 are Muhammadans, rev. about £1,000, and Larkana (area 7,132 sq. m.) a population of 61,250 of whom all but 1,816 are Muhammadans, rev. about £15,000. In the Bombay Presidency, Kandpur (6,050 sq. m.), pop. 237,680, of whom 19,827 are Muhammadans, rev. about £108,000; Jhansi (3,854 sq. m.) rev. £34,244, of whom 8,130 are Muhammadans, rev. about £175,000; Falakpur (1,176 sq. m.), pop. 22,152, of whom 17,852 are Muhammadans, rev. about £1,070; Cambay (330 sq. m.) rev. £72,505, of whom 9,915 are Muhammadans, rev. about £72,500; Jhansi (224 sq. m.) rev. £88,747, of whom 14,789 are Muhammadans, rev. about £40,000; Radaipur (1,150 sq. m.) rev. £52,507, of whom 8,330 are Muhammadans, rev. about £25,000; Kasinor (184 sq. m.) rev. 40,503, of whom 4,528 are Muhammadans, rev. £8,333; Sahri (62 sq. m.) rev. £28,925, of whom 2,278 are Muhammadans, rev. about £50,000; Sarder (70 sq. m.) rev. 17,925, of whom 3,448 are Muhammadans, rev. £6,666: three small States pay tribute to the Mahabatga, Gaikwar of Baroda: — Dhaba (12 sq. m.) rev. £266; Panahri (1 sq. m.) 850,000; and Kamal (1 sq. m.) rev. £207, in which rev. £200. The most remarkable among these States, and a basis of an extensive trade in India, is Hubzudin, which was the service of Mahomed Bega, Sultan of Gadarat, and was the Muhammadan in 1483. In the Central India Agency, Bhagalpur (6,002 sq. m.) pop. 730,523, of whom only 51,999 are Muhammadans, rev. about £200,000; Dhoura (308 sq. m.) rev. £75,911, of whom 28,683 are Muhammadans, rev. £60,000; Rani (122 sq. m.), pop. 20,121, of whom 4,219 are Muhammadans, rev. £6,666: among the 153 minor States connected with this Agency there are a few whose rulers are Muhammadans, e.g. Kowai (111 sq. m.), pop. 18,426, of whom 2,300 are Muhammadans, rev. about £2,500; Balsora (48 sq. m.), which is nominally subordinate to the Mahabatga of Gwalior, but pays no tribute, pop. 4,650, of whom 737 are Muhammadans, rev. £1,580; Muhammadpura (1,129 sq. m.), pop. 2,805, of whom 472 are Muhammadans, rev. £156; Patna (22 sq. m.), pop. 3,865, of whom 390 are Muhammadans, rev. £600, and a few still smaller ones. In the Madras Presidency, Muhammadpur (255 sq. m.) is the only native State with a Muhammadan ruler, pop. 39,555, of whom only 2,000 are Muhammadans, rev. £6,400. In the Punjab, Bahawalpur (15,943 sq. m.) rev. £70,044, of whom 65,247 are Muhammadans, rev. £192,000; Multan (167 sq. m.) pop. 71,444, of whom 25,942 are Muhammadans, rev. £24,000; Lahore (322 sq. m.) pop. 13,843 of whom 2,401 are Muhammadans, rev. £4,400; Patiala (52 sq. m.) pop. 19,543, of whom 3,356 are Muhammadans, rev. £5,100. In the Baluchistan Agency, Tank (2,600 sq. m.) pop. 303,818, of whom 46,423 are Muhammadans, rev. £89,000, is the only State with a Muhammadan ruler in the United Provinces, the only Muhammadan State is Rampur (982 sq. m.) pop. 531,217, of whom 244,604 are Muhammadans, rev. about £240,000.

(ii) Native States. After the suppression of the Sepoy Mutiny, the Muhammadans (especially in Northern India) found themselves exposed to grave mischiefs on the part of the British government. Though large numbers of Hindus had taken part in this insurrection, the amiable aim of it had been the restoration of the Mogul Empire and had consequently excited the sympathies of many Muhammadans. The estates of those who were convicted of complicity with mutineers were confiscated, and thus a number of families of the old Muhammadan aristocracy were ruined. The members of these aristocratic families for the most part held aloof from the service of the British government and abandoned the Hindu community to those numerous administratives and judicial posts which the Muhammadan aristocracy were by tradition and training peculiarly fitted to fill. Sayyid Ahmad Khan, himself a member of an old Dilli family, whose maternal grandfather had been near to the Mogul emperor, Akbar, Shahul Hujj, laid upon himself the task of reconciling his co-religionists to British rule. He first simplified the opinions held by some British officials that the Muhammadans had taken a prominent part in the Mutiny, in his treatise, *Khilafat-I-Shah-Falahatah Musalmana (An Account of the Royal Muhammadan of India)*, (Circul and English, Meerut, 1860) in which he confirmed the various instances of distinguished devotion to the English on the part of Muhammadan soldiers, officials and others. At the same time he sought to reconcile his co-religionists to the rule of a Christian power by opposing the intolerant opinions of the Europeans who condemned all social intercourse with non-Muslims. In this connection he published a pamphlet entitled *Afkar-e-Jauharzad-e-Shahzad* (Munafik, 1868), the purpose of which was to prove by means of quotations from the Koran, the Hadith, and the works of theologians and jurists, that it was lawful for Muhammadans to live with Christians and to mix in familiar social intercourse with them. Muhammadan opinion at this period was much exercised as to the question whether India under British rule was to be regarded as Dahr-e-ur-Rahman or as Dahr-e-Mishwa and whether a jihad against the Christian rulers was obligatory on the Muhammadan. A considerable
literature was published on this subject and even the 'Clerk of the Meus' was asked to deliver a
Pariis. (See: W. W. Hunter, The Indian Mome-
ment (London, 1874); Syed Ahmad Khan, Re-
view of Dr. Hunter's Indian Momeinut (Be-
net, 1872)). The opinion began to prevail that
lucknow, and on two occasions the deliberations
mamades and the Indian Congress were presided over by a Muhum-
the third (Madras, 1852) by the Hon.
Mr. Budendri Taliq (afterwards Judge of the
High Court), belonging to a cultivated family at
Bhopal in Bombay, and the twelfth (Calcutta,
1866) by Hafiz Muhimmuddin Sayant; the
letter in his presidential address enumerated
and pronounced the object of the Indian Congress, it was
mainly that the success of the aims of the
Congress would imply that a puerperating share to
the administration of the country would pass into
the hands of Hindus and that the Muhum-
mandes would be reduced to an inferior position; that
the movement was distasteful to the British
Goverment, and especially to selecting officers for administrative
appointments on the basis of educational qualifications,
etc., were not suited to India and would
be detrimental to the Muhummandes, as owing to
their backwardness in education they could not
readily adapt themselves to such methods. (Report
of the Thirteenth Indian Congress, p. 16
rig. [Calcutta, 1887]). Sir Syed Ahmad Khan
ment, The Present State of Indian Politics (Allahabad,
1888). The main body of the Muhummandes con-
tinued to hold aloof from the Indian National
Congress, and from 1886 held on the same dates
a separate gathering of their own, entitled
the Muhummadan Educational Conference (6. 3)
but after the powerful personality of Sir Syed
Ahmad Khan was withdrawn, some of the younger
members joined the Indian National Congress, and
in consequence their abstention from political life and their founded an
organisation entitled the All-India Muslim League,
the first meeting of which was held at Dacca
in December, 1906. In October of the same year a
departmental Indian Muslims had
formed a department, and then W. H. Minto, and urged that special consideration should
be given to the Muhummandes in the proposed
enlargement of the Legislative Councils and the
enlargement of posts in the higher branches of
the Public Services. This depatment gave the
impulse to the formation of the All-India Muslim
League, which rapidly extended its organisation
by the establishment of Provincial Leagues affiliated
to the national body, and holds a general
meeting every year in some city with a large
Muhummande population.
In 1907 Nawab Jindal Samhood Khan (formerly Director of Public Instruction in the
Hindustan State) was made a member of the
Council of the Governor-General, and was the first Indian to become a member of
that body. In 1908 Syed Ahmad All (formerly
a judge of the High Court, Calcutta) was appointed
by the King a Privy Councillor, and as a member
of the Judicial Committee of the Privy Council
sits in the final court of appeal in Indian
cases. In 1910 Syed Ahmad All was made Legal
Member of the Council of the Governor-General
of India, being the second Indian to hold such
high office. These appointments were made in pursuance of a policy of associating Indians more
closely with the functions of affairs of state, — a
policy which led to the passing of the Indian
Councils Act in 1909. This Act and the regu-

especially from the cities of Bombay, Calcutta and
Lucknow, and on two occasions the deliberations of
the Congress were presided over by a Muhum-
mandes, — the third (Madras, 1852) by the Hon.
Mr. Budendri Taliq (afterwards Judge of the
High Court), belonging to a cultivated family at
Bhopal in Bombay, and the twelfth (Calcutta,
1866) by Hafiz Muhimmuddin Sayant; the
letter in his presidential address enumerated
and pronounced the object of the Indian Congress, it was

cases. In 1910 Syed Ahmad All was made Legal
Member of the Council of the Governor-General
of India, being the second Indian to hold such
high office. These appointments were made in pursuance of a policy of associating Indians more
closely with the functions of affairs of state, — a
policy which led to the passing of the Indian
Councils Act in 1909. This Act and the regu-
nons and rules under it increased the size of the legislative councils, and arranged for the inclusion of elected members. Instead of all the members being nominated as before, and gave to these councils greater liberty of discussion and investigation than they had before enjoyed. While in the Governor-General's legislative council an official majority is maintained, in all the other (i.e., the provincial) legislative councils there must be a non-official majority. The Muhammadans claimed to be represented as a separate community, and special regulations were framed for securing the election of Muhammadan members, in accordance with the relative importance and numerical strength of the Muhammadans in different provinces. Much dissatisfaction however was expressed in regard to the regulations for the Muhammadan electorate, and the Muhammadans felt that due consideration had not been paid to their claim. The declining fortunes of such independent Muhammadan States as Morocco, Persia and Turkey excited much sympathy in India, and this excitement of feeling was intensified by the successive disasters of the Turks in their wars with Italy and the Balkan States. It was believed that the Christian powers of Europe had banded themselves together to destroy Islam, and the British Government was blamed for not interceding to save Turkey from its enemies. This bitterness of feeling was intensified by the refusal of the Government of India in 1912 to grant the powers of affiliation to the proposed Muslim University in Aligarh [9. v.], and by the readjustment of the boundaries of the province of Bengal, whereby the large Muhammadan population of Eastern Bengal became again a minority in respect to the Hindus of Bengal, and lost that opportunity of self-development which had been opened to them in 1905 by the formation of the separate province of Eastern Bengal and Assam. The most recent tendency in the political life of the Indian Muhammadans is the abandonment by some of the younger generation of the separatist policy of the older school, and co-operation with the Hindus in political activity. Sir Muhammad Ali, Nawab of Nawabshahi, —who was elected as President of the National Congress in 1913— opened a symposium, in 1914, between Great Britain and Turkey in 1914 evoked a fervent expression of loyalty towards the British Government, in which the Mussulman princes, the Amirjums and other organised, and the leaders of Muhammadan public opinion, joined.

3. SOCIAL ORGANISATION.

The official method adopted under Muhammadan rule for establishing a scale of social precedence was the granting of a munific (ranks, post), which varied according to the number of men that the applicant was supposed to be placed in command of. Though primarily laid on the military, the munific was not a term confined to this reference; all persons in the employment of the government above the position of a common soldier in messenger, whatever the nature of his duty, civil or military, obtained a munific. Some of the munific were paid in cash, but the commonest method of payment was by the assignment of the land revenue of a certain number of villages or a tract of country. In the case of persons, who were not in the active service of the state, a subsistence allowance was made either in the form of a cash payment (andally) or in a grant of land (mildy or mandable money); such grants were made to students, men distinguished for learning or piety, etc. By theory these stipendums and grants were personal or for life only (for Allah's sake) in the arbitrary prescription of all such grants, see Brown's "The Muslim World," p. 328; but there was a tendency for them to become hereditary, and thus the original scheme of a graded scale of payment and official rank, dependent entirely on the goodwill of the sovereign, broke down, partly on account of the unworkable character of the institution and partly in consequence of a lack of continuity in the administration. See "The British Empire" (London, 1875), p. 265, 266 (op. cit.); Paul Horn, "Das Horst und Kriegsverbrechen der Ungarnmacht" (Leiden, 1867), p. 11 sq.; W. Levinge, "The Army of the Indian Muslims" (London, 1893), p. 9 sq. A more popular classification of the various sections of Muhammadan society would appear to have owed its origin to the influence of the social system of the Hindus. Just as Hindu tradition gives the number of the higher castes as four, so the Ashaft (or, middle) sections of Muslim society fall into four classes, (1) Saliy, (2) Shikh, (3) Mughal, (4) Pachan. (1) The Saliy class descends from Ali, either through Fatimah (the Fatimah Saliy) or through some other of his wives (the Ummayyad Saliy). The Fatimah Saliy have various designations according to the names of the twelve Imams, e.g., Haimat, Haimat, Haimat, Mard, Mokatt, etc., according to the birth-place of the member who first came into India, e.g., Paktah, Gilgit, Khyber, Chardat, etc. The Saliy in India tend to arrogate to themselves the privilege of an admittance in the Muhammadan community, but economic conditions compel them to follow all kinds of calling, and a number of them are employed in hands occupation, or gain a footing, livelihood, or agriculture. The well-to-do and educated Saliy carefully preserve their genealogical trees and as a rule intermarry only with Saliy or even with Saliy of their own group, but many persons arrogate to themselves the appellation Saliy, who have no rightful claim.
to this honourable title. Akbar is said to have allowed some converted Buddhists to call themselves Sayyids. A well-known proverb current throughout northern India, represents a successful man as saying, "Last year I was a weaver; this year I am a Sayyid; next year, if prices rise, I shall be a Sayyid." According to popular superstition, fire cannot harm a true Sayyid, and Sayyid Mahommed of Bara (one of Akbar's generals) is said to have successfully submitted to this test by standing for an hour unharmed in the middle of a fire (Buchanan, *Imam Akbar*, p. 390). (For a modern example of this test being applied, see J. G. Oman, *The Bakhshish, Thakirs and Musalmans of India* (London, 1907), p. 523 sqq.; (2) Shikhs is an honorific which is considered properly to belong to persons who can trace their descent from some member of the tribe of the Kurish. The Shikhs are further designated Siddekedd, &c. claiming descent from Ali Bakir, Farski, or from 'Umar, 'Abba'at, if from 'Umar, 'Abba'at, if from 'Abba'at, or 'Abd al-Mumin, etc. But Shikhs is an honorific commonly assumed by Hindus converts, especially from among the lower classes, and as many as 665,000 of the total Muhammad population of Jud (returned the census in 1901 as being Shikhs). It is of course quite impossible that more than a very small minority of these persons could have had any rightful claim to be of Arab origin. (3) The so-called McGhuls in India claim descent from some ancestor who came into the country with the invading army of Bichar or was attracted thither during the reign of one of his descendants, but in cases where this claim can be made out, the family is generally found to be of Turk origin. (N. Elias, *Tarikah-e-Nishani*, Introduction, pp. 88–90, 128.) These persons add Bag after their names, as an honorific. As the number of persons, who style themselves McGhuls, is small compared with either Shikhs or Pathans, the number of Muhammadans descended from Turks is also very small, who lay claim to McGhul descent; it is not very important in the tendency (especially in the Pendjahi) for men of low social status to assume McGhul as a caste designation. In the Hazara District the working of the Pendjabi Land Allomation Act (which was introduced in 1904 in the interests of petty landowners and agriculturists, to arrest the transfer of land to money-lenders) has given a great stimulus to this tendency, as increased prosperity prompts the wish to attain a more dignified status. (H. D. Watson, *Gazetteer of the Hazara District*, p. 14, (London, 1908).) (4) Similarly, tribes of unfortified Hindu origin, and even Sayyids and Musalmans, all assume the name of Pathan. Tribes dwelling on the borders of Afghanistan and exposed to the raids of their turbulent neighbours are said to have invented histories of their Arabic origin, as a protection against ill-treatment: or in cases where this motive was absent but the Pathans were the dominant race, it is common to find men of quite different stock, adopting Pathan as a caste-name; this is especially noticeable in the case of Hindu converts of Rajput origin, who call themselves Pathans and even assume the title of Khan, thus we find a large and influential clan bearing the mongrel name of Lakhdi Pathan, which claims descent from Lail Singh, a favourite of the Emperor Akbar, who was given the title of Lail Khan, his son was the first member of the family to assume Islam. In Orissa, Pathans are used as a generic name for all Muhammadans; but in Turk is the synonym for Musalmans in some of the eastern districts of the Pendjahi. Such Muhammadans as cannot lay claim to belong to the Kurish are styled *Ahli* and include the converts of low social status, especially those whose occupation causes them to be formed into functional groups, e. g. the weavers (Ukhla, a widespread Muhammad caste), cotton-carders, tailors, henna-burners, etc. These castes being descended from converts from Hindustan retains many customs with regard to marriage, referring to those of the Hindu castes to which they formerly belonged; they also preserve the system of caste government, known as the *panthiyat*, which deals with breaches of the social custom of the caste is respected of trade, religion or morality, and imposes fines and other punishments. (Paul Rabett, *The Origin of the Musalmans of Bengal*, (Calcutta, 1853), chap. iv. 1; *Census of India*, 1901, vol. vi. 139 et seq., vol. xvi. 244 et seq.).

The spread of western education led to the formation of societies, which in the course of time have been known to the Indian Muslims. These societies of Anjumans give an opportunity to holding the community, irrespective of their position in the old order of society, and thus to introduce into the community a new principle of social organization. The aim of these Anjumans are various, educational, social, political, religious. One of the earliest of them was probably the Muhammadan Literary Society founded in Calcutta by Nawwab 'Abd al-Latif in 1852. Later in the same year Syed Ahmad Khan founded the Scientific Society of Ghazni (transferred in the following year to Alligur, with the object of translating scientific and historical works from English into Urdu; a press was established in 1853 with a series of periodicals), but the activities of this Society ceased when the Muhammadan Anglo-Oriental College was founded in 1875. In order to impress upon the Muhammadans the importance of higher education, Syed Ahmad Khan in 1856 originated the Muhammadan Educational Congress (after the model, styled, Conference, and finally, the All-India Muhammadan Anglo-Oriental Educational Conference), a yearly gathering held in various cities, chiefly in Northern India; provincial educational conferences were organised later as well as educational societies in several towns. This Conference made the appeal chiefly to such Muhammadans as were interested in the promotion and spread of western learning among their co-religionists, but the Nadwat al-Ilm, established in 1851, was founded with the object of conserving the other learning, in Arabic and Persian, with such modifications and additions as were demanded by modern conditions; it combines a school at Lucknow, the aim of which is primarily to train religious teachers. The Moslem Institute of Calcutta, started in 1905, is a literary society of the same type as these found in other cities, e. g. the Madras Muhammadan Literary Society etc. Some Anjumans combine educational work with other activities, e. g. the Anjuman Husn-ut-Talibin of Lahore has among its objects the retaliation of objections brought;
against Islam by its opponents; the spread of religious education; the care of orphans, the assistance of preacher men; it accordingly has founded a number of schools and a college affiliated to the University of the Pandji. This institution performs the service of the defense and the propagation of Islam. In most of the capital cities of India, there is a central body formed to promote Muslim interests generally throughout the provinces—such as Bombay, Lucknow, Nagpur and Patna called Andjumans Islamiyya, in Madras Andjumans Islami, in Calcutta, the Central National Musulman Association, in Darjeel the Islam Association of Eastern Bengal. In addition to these societies having an extensive sphere of operations, there is hardly a town in India, with any considerable Muslim population, that has not got its own local Andjuman, but these Andjumans are too numerous for a list to be given here; many of them are short-lived and depend for their continuance in existence to the zeal of some one individual, and perish with him. In recent years, especially in Northern India, in consequence of the attacks made upon Islam by the Arya Samaj, societies have been formed of an apostate and propagandist character, e.g. Andjumans Hausi Islami, Andjumans Eastleigh Islami (Nairobi), Madras Ilahiyya (Cawnpore), Andjumans Ilahiyya (Dhili). The latest type of Musulman society to make its appearance is the political, in the form of the All-India Muslim League (v. § 2).

4. LAW AND ADMINISTRATION.

The system of law most widely accepted among the Sunnis of India was that of the Hanafi school, but that of the Shah school also finds adherents and is accepted by a small number of Musulmans in the provinces of Bombay and Madras and the Pandji to the present day. The Sultans, wherever possible, have put into force the precepts of their own law-books and the decision of their Mudjarhads. But even under Muslim rule, the extent to which Muslim law was followed, varied from time to time in different parts of the country. Moreover, where the laws of the conquerors could make their influence felt and could uphold a standard of orthodoxy, the prescriptions of the Islam were more completely observed. In country districts, however, among the converts from Hinduism, early institutions survived, in spite of their being in direct contradiction to the ordinances of the written law. Justice was administered by Kshatri, with the assistance of Mutins as exponents of the laws of Islam, whose by-laws were independent of the state; but the real power remained in the hands of the sovereign and his officials, who did not hesitate to intervene when, and in whatever extent, they thought fit. Hazan [482] gives an account of an interview (about 1590 A.D.) between the Ach al-Fattah Khalil and Khwaja Mughil al-Din in which the latter points out the many ways in which his sovereign's methods of administration can counter to the laws of Islam, but the Sultan states that his policy is to consult for the good of the kingdom and the requirements of the situation, without considering whether the edicts he gives are in accordance with the law or not. (See also [p. 266 infra]; Elliot-Dawson, i. 85). Even the methods of Aryanfath could interfere with the legal decisions of a khalif, when he did not fall in with his wishes. (Ibn-e-Hamnier v. Jummaan, on the strength of Aryanfath, p. 183). The khalif dealt with all cases of dispute between Hindus and Muslims, and the penal ordinances of the Musulman law were applied to all criminal cases and offences against the state. But the Hindus were left to settle their internal disputes in accordance with their own laws or customs. When in 1765 the grant of the diwan of Beagul, Bilhar and Gissi was made to the East India Company, Musulman law continued to be administered as before, by Musulman judges, but in 1773 English judges were appointed who administered the same law, with the help of Mutif acting as expert advisers to the courts; similarly Pandits act as assessors to advise in cases tried according to Hindu law. But from time to time the Musulman criminal law was modified by the Company's Regulations and the similar provisions of English law substituted, but the Musulman element did not entirely disappear until 1862, when the Penal Code and the first Code of Criminal Procedure came into force. In course of time also the laws relating to revenue, land tenure, procedure and evidence have been replaced by the enactments of the English legislature. But questions relating to family relations and status (e.g. marriage, divorce, ante-natal and guardianship, succession and intestacy, religious usages and institutions, and dispositions of property by gift, will and will of property) are still governed by the Musulman law, provided that the Musulmans themselves wish it to be applied, for in certain parts of India, it has been, in many respects, or considerably modified by customs adopted from earlier Hindu times, and sanctioned by the legislature and the courts; thus custom takes precedence of Musulman law in the Pandji, the Central Provinces, the Bombay Presidency, and among the Mahrattas of Madras. In the Pandji, for example, in some districts a widow is not entitled to a share in the property of a deceased husband, but merely to maintenance, following the Hindoostan practice of adoption. In the Madras Presidencies, by custom, it is necessary to succeed him as heir in contradistinction to the Musulman law of gifts (Aqien), ancestral immovable property is ordinarily mortable, except with the consent of male descendants, or, in the case of a minor proprietor, of his male collaterals. The Muslims (q.v.) of Kac, who are descended from Hindu converts, chiefly of the Lohians caste, are still governed by Hindu law in questions of inheritance and succession. The Khudai (q.v.) of the Bombay Presidency follow Hindu custom in respect to their women and generally appeal to Hindu law on questions in regard to all questions of inheritance and succession, the right of divorce is limited by the necessity of obtaining the consent of the gana (or, assembly of the community) according to the custom of the kac. The Mopastillas (q.v.) in North Madras follow the Marmuchantgan (i.e. descent through sister's children) system of inheritance, according to which property descends through the female
line and some have no claim to a share of their father's property or to maintenance therefrom; they ordinarily follow the custom of holding family property undivided, as the joint property of all the descendants of a common ancestor, in the female line only, each member of the joint family being entitled to maintenance from the property as held, but some Mappillans, while following the Manamakathilayam system in reference to the joint family property, are governed by Muhammadan law in regard to the self-acquisition of individual members of the family.

Administration.

The early Muhammadan conquest of India was more of the nature of a military occupation than an actual appropriation of the soil of the country. The invaders were comparatively few in number, and were constantly engaged in fighting in order to make their position secure; they were content to receive tribute from the Hindu princes who submitted to the new rule, without interfering in the internal government of their dominions; in the parts of the country under the more immediate rule of the conquerors, the native revenue officers were not displaced and collected the revenue much as before. But as Muhammadan power became consolidated and more Muhammadans settled in the country, the internal management of the provinces came to be taken under the direct control of the imperial power, and the Hindus日趋 to become revenue officials, and both the Rajahs and their former nobles sank to the position of landlords paying revenue to the government. At the same time there was a tendency for the government to enhance the amount of its demands; according to Hindu law the proper share of the king was one-sixth of the produce of the soil, but under Muhammadan rule attempts were made to raise more, and, 'All al-Din (1306-1316) at one time claimed as much as a half. The chief source of revenue was this share in the produce of the land, supplemented by the ghragh (q.v.), which was a poll-tax paid by the Hindus, but the latter was levied irregularly and was abolished by Akbar, while the Azamgiri system tended to re-impose it brought about a rebellion; a number of petty cases were also imposed, often of a very oppressive character (Elliot-Dowson, iii. 462, 577). According to the Muhammadan system all land assessed for revenue was divided into the qublas, lands paying revenue direct to the royal treasury, and the rajkhs, the revenue of which was assigned to individuals, e.g. ministers, courtiers, and especially military commanders, who took the revenues for their own support or that of a military force which they were bound to maintain. The rajkhs was originally only a freemen and reverted to the State on the death of the grantee, and the qublas was not allowed to take more than the sum assigned to him, according to the terms of his grant, and if more came into his hands, he had to account for the surplus to the State treasury. But such abuses tended to become hereditary, especially when the central government was weak, and the granting of a new qubla to the incoming heir became a matter of form, or no fresh qubla was granted at all and the rajkhs came to be looked upon as a proprietor of the land, and could do much as he pleased. Attempts were made at times to reduce the system of land tenure and assessment, to order the most successful being that connected with the name of Akbar (q.v.), who reduced his finance minister, Tudder Muli, with the task of re-organising the revenue system; the object of the new system was to substitute a money-revenue at a fixed rate for a revenue in kind varying with the crop. A fixed standard of assessment, the kia (q.v.), was adopted, the land was surveyed, and the average yield was computed by ascertaining the actual produce for a number of years; the share of the government was fixed as one-third of the average produce, payable in money (unless the cultivator choose to continue to pay in kind). Tudder Muli commenced the survey in 1571, but the new assessment was only applied to all parts of the empire, and considerable changes were introduced by later rulers; but Akbar's land-revenue system is the basis of that found in India at the present day. Akbar further organised the administration by dividing his empire into 15 sultans or provinces, subdivided into sarkars and those again into taziyas; this arrangement secured a centralisation of government and with some slight changes lasted throughout the period of Muhammadan rule.

[p. v.] and much of the Nastaliq of Itimad al-Din Chisti, who was born in Sanaa but came to India, and settled in Ajmer, where he died in 1236 [872 Hij.] his tomb attracts to Ajmer thousands of pilgrims every year and is narrated by Hindus and Muslims alike (Journal of Indian Art, vol. ii., p. 8). He counts among his students some of the most famous saints in India: Khwaja Khushal Khan Qushal of Farghana, but after a wandering life spent in visiting various saintly saints, passed his last years in intimate friendship with Munir al-Din Chisti and died in the same year as his spiritual teacher and friend, he is buried near the Kutb Minar at Delhi—Shahid Farid al-Din Shamsuddin (ob. 1257), whose tomb is at Patna, where an annual fair is held every year, and the object of every pilgrim, whether Hindu or Muhammadan, is to get through the narrow gates of the shrine on the afternoon or night of the 5th Muharram (M. A. Mezellei, The Sufi Ascetics, x. 359–370).—he had two illustrious disciples, one Khwaja Abdur Rehman b. Ahmad Sahar (ob. 1291), whose tomb is near Farid (his followers are known as Sahars), and the other, more famous, Shamsuddin (ob. 1206), whose name was Muhammad b. Ahmad b. Nasir al-Din al-Hamadani (b. at Badshah in 1225), who was assassinated by Farid al-Din as his khalifa, or successor, when he was only 20 years old, and died in 1253; some of the most distinguished of his contemporaries were numbered among his spiritual pupils, including the poets, Amir Khwaja and Amir Husain Ishat, the historian, Dua al-Din Banu, and a number of others. (For a list of these, see the biography of the saint, entitled Mutāfī al-Tahālah by Muhammad Husayn). His tomb in the vicinity of Delhi is surrounded by the graves of his followers, and admirers and is much frequented by pilgrims. His khalifa was Nasir al-Din Muhammad (or Muhammed) Choug (ob. 1290–91), who became his pupil at the age of 40 and died in 1298, his tomb at Delhi is still a place of pilgrimage. The remains of the Chisti order, but it is not possible to mention more than two of the later saints, e.g. Salim al-Din Chisti (ob. 1572), in whose house the empire Tughlungs (899–92), was born, and Khwaja Nadir Muhammad (ob. 1794), known as Khwaja ‘Ali, who brought about a revival of the Chisti order in the Punjab and Sind. (For further details see the histories of the Chisti order, e.g. Shafi’s al-Asr by Muhammad Akbar al-Asyari, and the works quoted therein, and Sharh al-Asr (H. H. H. Farid al-Din Hamaan). The Shahrwani order, which takes its name from Shahrwani al-Din Shahrwardi (ob. 1347), was introduced into India by Baba al-Din Zakariya, who was born at Multan but travelled to Baghdad, where he became the spiritual pupil of Shahrwardi. Shahrwardi died at Multan in 1296 and left his teaching and method, but influenced him to the extent of his store of the few examples of the architecture of this period in India. One of his disciples was Syed Ghulal ad-Din Surkhshah, the first of this order to come to India from Bukhara, whom he was born in 1399; after many wanderings he settled in Tibet, where he died in 1497. He is the ancestor of generations of sultans, some of whom were active and successful propagandists of Islam. His khalifa was his grandson, Sayid...
cularly, as Ahmad Kadar, commonly known as Mahdilunoth Diabhalya (cir. 1282), who is said to have made the pilgrimage to Mecca 36 times and to have performed miraculous miracles. One of Mahdilunoth Diabhalya's grandsons, Ali Muhammad Abul Askar, known as 'Abd al-Rahman al-Hakim (cir. 1458) [q.v.], went to Godjara, where he became a great number of pilgrims. The example of Abul Askar, who is still a place of pilgrimage, was followed (Archaeological Survey of Western India, vol. vii, p. 69 sqq.), his son, Sayyid Muhammad Shihab al-Amin (cir. 1475), became still more famous and played an important part in the political and religious life of his time; his tomb at Rakhshadah, near Ahmedabad, is a beautiful example of the style of architecture characteristic of this district (ibid., vol. vii, p. 55 sqq.). The Kaaba order derives its name from 'Abd al-Rahman al-Afzal (cir. 1270), who is venerated throughout India as the founder of Piya, Pirzah, Pirzah, Pirzah, etc., his festival being widely celebrated on the 24th of Rabiul-Awwal. This order was introduced into India by his brother, Sayyid Muhammad, known as Humayd Muhammad (cir. 1245), who settled in Uthi in 1457, and in 1458 he was the progenitor of a number of orders in which the members and their descendants have remained in Uthi to the present day (Gazetteer of the Bombay Presidency, vol. iv, pp. 184-186, 391 [Laher, 1906]). The Kaaba saints are too numerous to enumerate here, but mention must be made of Shahabuddin Muhammad, known as Miya Miya, the spiritual predecessor of 'Abd al-Rahman (cir. 1270), who wrote a life of the saint entitled Rasul al-Din 'Abd al-Rahman, he died in 1435 and his tomb is still venerated there. The Shabergi order gave several great saints to India, e.g., Muhammad Ghaithi, who numbered among his spiritual pupils the emperor Humayun; he died in 1552 and was buried at Godjara in a magnificent tomb erected by the emperor Akbar (Sayyid Faiz Allah, Manazil-ashghali). His disciple, Wadji al-Um, Godjara (cir. 1560), a most great leader, wrote 'A.N.--', a commentary on al-Talkih al-Asfi'iyah (ibid., 1862), (for his letters, see Kha, Curr. Pers. MSS. India Office, 1861). This treatise has not enjoyed the same degree of popularity as those above mentioned, but there is a recent work on the subject of the Kaaba order in India is usually attributed to Shahabuddin Muhammad al-Faiz al-Samadhi (cir. 1623) [for his letters see Kha, Curr. Pers. MSS. India Office, 1861]. To the wide-spread influence of these orders it is largely due that Islam has generally been regarded in India as compatible with orthodoxy. Muhammad Bahar Ali of Bombay (cir. 1624), wrote a commentary on al-Talkih al-Asfi'iyah, the 'A.N.--', so that the doctrines of the Kasa were in accord with the teaching of the Kaaba and the Sufis.

In addition to the above two-styled al-shari'ah orders, the members of which observe the customary ordinances of Islam as to prayer, fasting, etc., there are certain irregular (or al-farada) orders, peculiar to India, which are looked upon with disfavor by the orthodox; these include the almost entirely crosst in uneducated persons of the lower classes. Among these are the Madrasi, who are followers of Ahmad Shah Madari, a

legendary penman said to have been a converted Jew (born at Aleppo in the 11th cen.), who settled in India and expounded a demon, named Amman, from the spot (Malampur) where his own shrine is now erected; according to other accounts, he was a disciple of Shahabuddin Muhammad, Tulin Shah, and died in 1430. The followers of this sect claim to be immune against the bite of snakes and scorpions. The devotion to Shahabuddin is widespread, and pilgrims resort to his shrine from all parts of India. The Kaaba (al-Farada) are followers of a certain Ratil Shah, of the Alwar State, who in the 18th cent. is said to have received miraculous powers from a saint in Egypt. They rol bald on their bodies and faces, and shave the head, moustachios and eyebrows; they lock upon the drinking of milk as a virtue, and the sect is consequently considered to be a debauched one by orthodox Muslims. In Godjara they worship about begging, without wives or settled homes, but in the Punjab they are not celibate, being as a rule well-to-do élite who are never seen begging, and some are said to be men of literary taste and to be regularly employed in libraries. They have shrines at the following places:--

- Shaiks. The Muslim saints of India may be counted by hundreds. Several of the most important have already been referred to in the account of the religious orders; these are historical personages of whom some record remains, and there are many more like them, but others are historical personages whose identity has become overlaid with a mass of legend, in which the record of history is almost entirely obscured, e.g., Sheik Jami (q.v.), Sahib Surat (q.v.), etc. Others are purely legendary, as Khwaja Khadij (q.v.), Balb Sahib (q.v.). The process of canonization still goes on, and new saints are from time to time added to the calendar, e.g., of Mooltan (in Jalandhar) a Muhammadan (q.v.) named Balb Sayt (cir. 1650), and others, who come with miracles and his aid is invoked especially by litigants. Besides the many miracles ascribed to these saints in their lifetime, they are still believed to be able to work wonders for those who invoke them, and miraculous events, especially are said to be brought to their tombs, and the bodies of those who pray to them for healing, and litigates for success in the law-courts, the beneficent activity of others has a more restricted reference, e.g., Khwaja Khadij, Malamjar and Pit Balia are the patron saints of huntsmen and sailors, Shah Shah (of Multan) of pedestrians, Shah Shah of Multan takes microcephalic children under his protection, etc. Many of these saints are known as Pir, a title of honor applied not only to the famous historical saints above-mentioned, but also to living spiritual preachers, who say, their disciples (ashura) in the province of the devout, not only to the saints whose shrines are visited by thousands of pilgrims from distant parts, but also to those obscure individuals whose tombs are to be found by hundreds in the by-ways of a town or the outskirts of a village and enjoy only a local reputation. For the religious movement in commemoration of the worship of saints, see the ar. KASHMIR, ASI AND WAHIBIAT.

fore Akbar’s desire to learn the Hindu doctrines caused him to have the Mahabharata, the Nama-yantra and the other Hindu scriptures translated into Persian, and his friend, Faizi, compiled for his instruction a treatise on the Vishnu philosophy. Akbar allowed his Hindus to have the ceremonies of their religion performed in the royal palaces, and under their influence and that of the Brahmins whose society he cultivated, he adopted several Hindu practices, e.g., he abstained from the eating of beef, and on certain festivals he wore the Dharmacharya cord and had his forehead marked like a Hindu sectary. Shahjahan had none of the religious scrupulosity of his father, but he kept up the Hindu customs that Akbar had adopted and observed such Hindu festivals as the Diwali, or feast of lights, and on Sivaratri, on Siva’s night, would invite Hindu yogis to the palace and eat and drink with them. A more earnest and sympathetic student of Hindu thought was Shahjahan’s grandson, Farrukh-us-Shah (q.v.), who diligently cultivated the science of Hindu yoga, and as a result of this intercourse he came to regard some of the Brahmins as among the foremost among the sect of the Vedanta, and their doctrines of the Hindu pantheons and those of the Muslim Sufis were merely verbal, with the object of reconciling the two systems, he wrote his Nama’ul-Hujwara; he also translated, or had translated for him, into Persian, several works of Hindu metaphysics, including the Upanishads (under the title Siva’s Akbar). The large number of such translations from Sanskrit and Hindu into Persian, that were made from time to time by Shahjahan, Zaheer, etc., at Fatehpur, Mussul. I. C. O., vol. 1948 etc., Grunnow, et locum. Philologie, ii. 352–7), bears evidence to the interest which many Muslim-madaans took in the beliefs of Hindu pilgrims, and in mysticism, especially they found a common basis for religious thought. Muslim saints numbered many Hindus among their disciples, and thousands of Hindus still worship at their tombs, on the other hand, the Muslim saints, though less rarely, numbered some Muslim-madaans among their spiritual pupils. Instances are not unknown of friendship between saints of the rival creeds, e.g., at Gobind (in the Panjab) the tomb of two saints, Danab Ali and Bilal Thawral, who lived in close unity during the early part of the 19th. cent., stood close to one another and are recommended by Hindus and Muslim-madaans alike.

Religion with Hindustan. The Muslim conquerors of India found that India was more respected for the Hindu religion, but plundered and destroyed Hindu temples in large numbers without compunction. But the Arabs in Sind spared the temples in the towns that submitted to them, and the fact that Arwangiats found so many temples left for him to destroy means testimony to the limits that his predecessors put on their iconoclastic zeal. For the most part the Muslims in India have been either hostile or indifferent to Hinduism, and throughout the whole Mahamadnur period it is not possible to find another work showing the same scientific interest in this faith as the same profound knowledge of its literature as the ‘Indica’ of al-Ma’ardi (q.v.), the contemporary of Muhammed of Ghuran. More than five centuries elapsed be-
referred to in the Kârtikeya, though no express mention is made there of India; for it cannot be supposed that God would have made so vast a country as an exception to the operation of His general rule. (Huzza Nizami, Hisn al-Azam bi al-sirāj al-mubarak al-awliya, ed. K. R. K. [Lahore: 1345 H.]). The Muhammadan poets of Java went further in their appreciation of Hindu theology, e. g., Tâbâni ('Ayn al-. 370 cent.), sang the praises of Siva, and Mirzâ Husain 'Ali composed hymns in honour of the goddess Kali. (Linaris Emhra Sen, History of Bengali Language and Literature, pp. 626, 799 [Calcutta, 1901]).

Owing to the fact that the Muslims in India have lived for centuries in close contact with Hindus and are themselves to a large extent descended from Hindu converts, it is not surprising that Islam in India presents certain characteristics peculiar to this country. The process of conversion was often incomplete, and the converts, illiterate in their new faith, carried with them many of their old polish and practices. The sacred sites of the earlier faith continued under a changed name to be frequented by pious persons; this is true of the temples and shrines in the Gañândhâra country, and to an enormous extent in Kalka, where a Muhammadan saint frequently marks the site of a Hindu deity. It is often stated to be the tomb of a saint, e.g., the tomb of Râmâyana Śrînivas, a popular pilgrim for Muhammadans in Kalka, has been identified with an ancient Hindu temple built by Bhima Śrînivas, the last of the Hindu kings of Kalka (9th-10th cent.). The saint is now said to have been a Hindu saint, and to have borne the name of Bhima Śrînivas, before his conversion to Islam. (Vâlima's Râjavarṇarâja, translated by M. A. Stein, L. 224 [Westminster, 1900]; A. Foucher, Nota sur la chronographie samândre en Gañândhâra, Bulletin de l'École Française d'Extrême-Orient, L. 355 sqq. [Hanoi, 1901]). Such survivals from Hinduism are common in villages and country districts; remote from the influence of the "islam"; here the Muslims still continue to worship the sacred gods of the village, join in Hindu festivals and employ Brahman priests at marriage ceremonies. (For details see Transactions of the Third International Congress of the History of Religions, 1. 314 sqq.). This close association with Hindus has also led to the formation of mixed sects, which attempt to bring about a reconciliation between Hindus and Muhammadans; among these are the Pîr-e Dâvâq, a sect founded by Muhammad Khâtûn (just the middle of the 16th cent.), whose tomb is in Balandjârî [in the Central Provinces]; he compiled a book containing a selection of passages from both the Hindu and Muslim scriptures and adapted a supreme deity the tenth incarnation of Vishnu, which is to come and is known in the sect as Nâkhjâlak, "the wish tree". The Iskâhîrah say themselves followers of the Akhbar Veda, but ask for alms in the name of Muslims; they adopt such of the doctrines of Islam as are not contrary to Hindu teachings, and observe Muslim customs, even keeping the fast of Ramâdas, and have a special devotion to the saints, Minâr-e-Mu'min Ghiyât al-'Adwâr; the same things like Muslims, the women like Hindus. The Kartâbâhâz, the members of a sect (founded in Bengal in the 12th cent.), who call their creed the Sarra Pikhuras (true faith), include both Hindus and Muhammadans, and in this sect a Muhammadan may even become the spiritual guide of a Brahman. The Sandhīgra, the Dattâraghâ, and the Dhânins are similar sects on the borderland between Hinduis and Islam. A like syncretism shows itself in the teaching of Nâmâk, the founder of the Sâkh religion (see T. F. Hill, Dictionary of Hinduism, pp. 470, 471; and Asad al-Hakim, Nâmâk). The Buddhists and the Jains have to have originated the worship of the Pâpektal [p. 7].

Such an approximation is sometimes indicative of the incompleteness of the process of conversion, as in the case of the Mâljâs in Agra and the adjoining districts, who are converts to Islam, but are reluctant to describe themselves as Muslims; their names are Hindu and they use the salutation Nâmâk Kálmi; they mostly worship in Hindu temples, but sometimes frequent a mosque, practice circumcision and bury their dead. Such imperfect conversion has rendered possible the recent return to Hinduisms of the descendants of such converts. In 1888, about two families of Mâlîs, Kanâbis, whose ancestors were converted in the 15th cent. by Imam Šâh [p. 7], were converted by them, calling themselves Mâljâs, were converted, to the benefit of the Aryan Sandhâl and the Mâljâs. The Aryan Sandhâl has been very active in the work of re-conversion, and one of the movements affiliated to it, called the Râdîjît Sûdûrî Sãhâbî, having for its chief object the re-conversion of Muhammadan Râdîjîts to Hinduis, claims to have converted, to the benefit of the Aryan Sandhâl, as many as 10,000 of such Râdîjîts in the three years, 1907 to 1910. This change has been facilitated by the fact that intermarriage with Hindus has been common (esp. among the Gangânis in the Eastern Pandjâb) and the tribal bond with Hindu sections of the tribe has always been stronger than the differences of religion.

Literature. Muslim India has always preserved a learned tradition and the study of Arabic has been diligently pursued by the "islam", but their literary activity in this language has been largely confined to commentaries, in the Kûrsi and Kûrsi, on the works of Ṣâhîh, grammar, rhetoric, etc., commonly read by students. Among the commentaries on the Kûrsi mention may be made of Fâlî's [p. 7], tafsîr entitled Sâmîr al-Atâ, in which all letters with traditional points were avoided. Abû al-Hakim al-Shykhî, was an indomitable commentator, who enjoyed the patronage of the sultan Shatkhudhshah. Mu'allî al-Hârî (d. 1300) [p. 7], compiled a famous commentary on the holy scriptures of Muhammadanism, which became the basis of Arabic, and generations of commentators wrote lessons upon them. Another indomitable commentator was Fâlî al-Ulûm (d. 1301), [p. 7].

An important contribution to legal literature was al-Fardâ'î's collection of legal opinions by his father, compiled by Shâh Nizâm and others in the reign of the emperor Averroes. The greater part of the historical and mystical literature of Muslim India was written in Persian, but among Arabic writings mention may be made of Fârîd al-Mâlikân, an account of the Muhammadans of Malabar, by Shâh Zâj al-Dîn, (ed. D. Laps, London, 1896), and al-Qâdimâl Dârâmî by Muhammad al-Shâh [p. 7].
and other educational establishments, and scholarships granted to Muhammadan students. The total number of Muhammadan pupils under instruction in all classes of educational institutions in 1912 was 1,562,000. Of the various religious communities in India, the Muhammadans, in the whole exhibit a greater degree of literary and educational advancement, with a higher moral tone. They are a compact community, of which 1 man and 4 women, per thousand are able to read and write. This backward condition of the Muhammadans generally is largely due to the low level of education in the parts of the country (e.g., the North-West of India and Eastern Bengal), where they are chiefly to be found. In the ancient centres of Muslim civilization, their level of education is so high or even higher than that of the Hindus, and the number of Muhammadans attending the universities is yearly on the increase.

Beikhal, *A History of Muslim Education in Bengal* (Calcutta, 1950); Syed Mahmood, *A History of English Education in India* (Allahabad, 1945), C. R. Chittick, *Quotations from the Progress of Education in India* (since 1858). 2. Art. Since does not admit of any account being given here of the vast artistic activity of the Muhammadans in India, and reference must therefore be made to the literature on the subject. — **Architecture:** The architectural monuments of Muhammadan India are chiefly mosques and tombs (in large numbers), and some palaces in the chief cities. The early mosques were made use of materials taken from the Hindu and Persian influence. This was the result of their style of construction, which was destroyed, and employed Hindu workmen to erect buildings suited to the requirements of Muslim worship. In the great mosques at Agra and Old Delhi, built at the beginning of the 13th century, the Hindu pillars were re-erected without any alterations. The same is true of the Muhammadan architecture in India. After this period, beginning with the 13th century, followed a rapid development of architectural forms, varying considerably in the several independent kingdoms, that arose in the different parts of India occupied by the Muhammadan conquerors. The local styles as many as the twelve that have been named. They vary from the ornate and massive towers of the early kings of Dhar and the grand simplicity of the lowing mosques of Deccan, to the stately elegance and exquisite detail of ornamentation in the buildings of Ahmadabad; and, the charm of the Abbasi, and the Agra, the city of the Roshanpur, etc. But space has been found for a separate article on COBB, of the Archaeological Survey of India: Gestas, *Le Livre, Les Monuments de l’Inde* (Paris, 1823); J. Ferguson, *History of India and Eastern Architecture*, ed. J. Burgess (London,
1910); E. B. Havell, *Indian Architecture* (London, 1913); Imperial Gazetteer of India, vol. II, chap. V. (with bibliography). — Painting: Few examples of Muhammadan painting in India before the 16th cent. are known, but under the patronage of Akbar and his successors Indian artists produced a vast quantity of pictures, sometimes so sumptuous in their design and execution, that highly polished and ornamented manuscripts; the *mughals* of Niyatni, and connexions both in poetry and prose, were frequently illustrated; but the Moghal school of painting excelled particularly in portraiture, and a large number of vivid and realistic portraits of the monarchs and courtiers of this dynasty has been preserved. The influences under which these artists worked were partly connected with the school of painters that enjoyed the patronage of the Tumiiral princes, — and painters who preserved the tradition of this school were undoubtedly attracted into India, — but to a larger measure with indigenous Indian art. European paintings and engravings were also sedulously copied and their influence can be traced in many pictures of the Moghal school, — but the chemistry of pictures is not as yet as fully understood as the other arts and sciences, — and some have the names of the artists, e.g. Mr. Suleyman Ali, Abul al-Samad and other Muhammadans who painted for Akbar, — Murugh and Muhammad Nadir, among the artists patronised by Lijahough, etc. — Bibliography: E. B. Havell, *Indian Sculpture and Painting*, Part II (London, 1908), Vincent A. Smith, *A History of Fine Art in India and Ceylon*, chap. xiv. (Oxford, 1911); J. R. Martin, *The Miniature Painters and Painters of Fervia, India and Turkey*, chap. xii. (London, 1912); A. E. Caumerenswy, *The Arts and Crafts of India and Ceylon* (with bibliography), (London, 1913). — Calligraphy: The art of the calligrapher was held in high honour in India, and the other parts of the Muhammadan world, and many mosques and tombs are decorated with inscriptions that reveal a superb mastery of the Arabic script. The same skill was shown in the copying of manuscripts, both Arabic and Persian, and manuscripts and medallions were always one another in their patronage of expert calligraphists. Some of them were attracted to India from other countries, e.g. Abd al-Samad, known as Shriram Kalam, from Shirda, who was patronised by Humayun and Akbar; Mir Khayat Ali, who went from Itla to the court of Bhurhur; Alam Sath II of Behsarp (1587-1615 A. H.); Suleyman Ali Khan, of Tabriz, known as Ishahrak Khan, whom Awengath appointed to teach his son the art of calligraphy. Under the influence of these and other masters in the art, a long series of fine calligraphists was trained, who only slowly grew from the introduction of the printing press. — Bibliography: *Calligraphy and Illumination in India* (with bibliography) (Calcutta, 1908); — *Joyanah Muhammad Lalaian*, Tobacco and Sheep-farming, ed. **INDIA**

**INDIES**

**INDIES** (Dutch East) comprises the Malaya Archipelago and the western half of New Guinea as far as Long. 141°, except for the north coast of Borneo, which is English, the Philippines, which belong to the United States, and Portuguese East Timor. These Dutch colonies thus include thousands of islands which run from the largest in the world such as New Guinea and Borneo to archipelagos of the smallest coral islands. From the geographical point of view they are divided into the great Spratly Islands (Borneo, Sumatra, Celebes, and Java) with the archipelagos belonging to them); the Little Spratly Islands (Bali, Lombok, Samawa, Fleur, Sumba, Java, and Timor with the surrounding islands), the Moluccas (Hal-
Living coral reefs are found on almost all the rocky coasts of the Archipelago and in shallow seas in the high latitudes.

The climate of the islands is a moist tropical one and besides being fertile produces a very coniferous vegetation. It renders possible the cultivation of the most valuable tropical plants such as sugar cane, tobacco, spices, indigo, etc. The most important factor for agriculture in the tropics is the rainfall. Only at isolated places is this less than 76 inches in the year, the maximum for the growth of tropical forests. The usual fall is 150-200 inches. In the north of Central Java as much as 360 inches a year has been recorded.

The situation between Asia and Australia causes a climate affected by the monsoon, the result of which is that, during our summer, dry winds from the north-east prevail, and during our winter, winds from the south-west with a rainy season predominates. In our spring and autumn changing winds form a transition.

The dry monsoon is strongest in the southwest. Timor and the adjoining islands have six or more months of drought each year, for which the winds from Australia are responsible. In the north and west this dryness of the wind is less alleviated by the greater breadth of the sea crossed and the vapours which the heat raises from it. The Moluccas, Celebes, Borneo, Java, and Sumatra thus feel less drought and are more suitable for intensive agriculture throughout the year. Central and Northern Sumatra lie outside the monsoon area. The characteristic tropical temperature of about 77° C. with only slight variations in a day of 2° to 3° prevails only in the plains. In western Java at a height of 100 feet it is much lower (72°) and shows some variations and thus we have a sub-tropical climate. The cultivation of tea, coffee, Chinese and European vegetables is possible here. In other countries the transition varies more rapidly, for example on Borneo. These climatic conditions have favored the growth of tropical forests, which most originally have covered the Greater Sundas Islands entirely, till man destroyed them, almost entirely on Java, in part on Sumatra, and only to a small extent in Borneo. Even at the beginning of our era mention is made of the products of the Sumatra bush, such as camphor and benzoin. In the last 60 years the great demand in Europe for products like rubber, gutta-percha, rattan has resulted in an economic revolution through the increased prosperity of the native population on Sumatra and Borneo.

The flora of the southeast on the other hand is of a prairie and savanna nature. Sandalwood has from ancient times been an important article of export here. The flora and fauna of these islands are predominantly determined by the proximity of Asia in the west and Australia and New Guinea to the east. The connections by land between Asia and the Greater Sundas Islands existed for a long time, and Asiatic plants and animals were able to spread over them. There were also connections by land with Australia and New Guinea in the east, so that their plants and animals are recently become very important through the cultivation of the coconut-palm. The caves washed out of the calcareous rocks supply the edible swallows' (of the Salangai kind) nests eaten by the Chinese.
now found farther west on the Moluccas, etc. There alone have they become the home of such like creatures, the Bornean orang-utans of Assam, animals few in number. Men in this island is found on Borneo, Java, and Buli, the elephant on Sumatra, the tapir on Sumatra and Java, monkeys on Sumatra, Borneo, and Java, only one kind on Celebes, and none farther east. Wild cattle are found in the woods of Sumatra, Java, and Borneo and Buli. On the other hand, the Moluccans possess no genuine mammals, but only the Australian marsupials, of which two kinds are found, as far westwards as Celebes. One also finds the birds of the east even on this island, such as parrots and cockatoos, the cassowaries and birds of paradise are not found till farther east. Thus these two opposite worlds have penetrated the Archipelago somewhat disproportionately.

Population: The population of the Dutch Indies, numbering at present 44 millions, besides the exceptions of the Papuans of New Guinea and the surrounding region and isolated remnants of an earlier Fijian people, like the Toaell in Celebes, to the Malay-Polynesian race which spread from Madagascar to Easter Island and from South Japan to Java. The archipelagoes between Celebes and New Guinea with the eastern islands of the Sunda Islands are inhabited by a mixed between Malayans and Papuans which is known as the Alfars. The Malay type is only found in the interior of Sumatra, Borneo, and Celebes, still comparatively pure. Southern Asia has been inhabited since the ancient times by the Indian people, like the Toaell in Celebes, the Dayak of Borneo, and the Tojau of Celebes, and a western stratum, which was more exposed to admixture in the foreign elements. The type of the latter is the Macanilla Malakes of Central Sumatra and it includes the Achehs of North Sumatra, the Kawi Malakes in the Kawi Archipelago, the Malakes of the coast of Sumatra and Borneo, the Javanese, the Bugis, and the coast peoples of the Moluccas. The Malacca and the Bugis [p. 464] are supposed to be Tojau greatly mixed with foreign elements. The present Minahas are Tojau who have been educated by Christianity during the last 70 years. The Alfars include the inland tribes of Halmahera and the neighborhood of Buri and Ceram and the adjoining small islands, of Tinor, Fineu, Sumala, and Tumbawa. The Bugis, who have been seafarers for centuries, have contributed a great deal to the admixture of the coast peoples of the whole Archipelago.

All these peoples are for the most part settled agriculturally. They live on the great rivers and on the seashore. The Malays prefer to fish and trade (previously they were also pirates). The people

of the Archipelago as a rule only work when necessity drives them. They often appear lazy on account of their slight wants and the conditions of tropical life. The original Malay, like the Batak, Dayaks, and Torajas, as well as the Alfars and Papuans show a state of society broken up into very many small tribes. Each tribe forms a separate social unit, which as a result of war, feud, or misfortune is only rarely in constant terms of intercourse with its neighbours and thus develops independently. The result is a great variety of languages, manners, and customs.

The patriarchal constitution of these tribes frequently includes a ruling family, freemen, and slaves. In the east among the Papuans and related tribes there appear to be no chiefs. Among the Malays they are chosen from the ruling family, most frequently the eldest son; if necessary, a daughter may be chosen. They manage the affairs of the tribe with the elders. The slave (slavery is now abolished) usually comes from prisoners of war or are slaves through debt. They are frequently considered the property of the tribe and then are allotted to the chiefs. They are well treated and often enter the ranks of the freedmen through marriage. They were rarely sold. For human sacrifices prisoners of war were sold or men infirm through old age, who were purchased from the coast Malay. Slavery is now the exception even among the most remote tribes.

The density of this older stratum, including the Alfars and Papuans, is very slight, from 3 to 4 per square mile. As the birth rate is not small, the main cause of the sparsity of population are the terrible devastations wrought by such illnesses as malaria, cholera, smallpox, dysentery and related diseases among these tribes, and their low development which makes them unable to take advantage of the not unfavourable conditions for agriculture, making clothes and homes, hunting and fishing, so that they often lead a very mean existence amid the luxuriant tropical surroundings. Although each member of the tribe has collected a number of observances from his own experience he has no ability to co-ordinate facts. He has no idea of the nature of diseases and their cure, of the life and growth of man, animals or plants. Although well endowed intellectually, these men only develop (again, as a result of their social isolation) to a certain limited degree. In the little societies each household has to procure everything it requires. There is no division of labour and special ability or achievement gain no important advantages. Their intellectual capacities are not a little affected by their sanitary and economic conditions. Nevertheless, each of these tribes shows great ability in the field of industry or social institutions.

Animism is here also the characteristic religion, which persists with its disadvantageous accompanying phenomena such as spiritualism, fetish worship, jinjes or new restrictions, and belief in evem, among these primitive Malay, Alfars, and Papuans. If of course assumes various forms among the numerous peoples but everywhere it strengthens the above mentioned causes of the sparseness of population. As about two thousand years of Hinduism and Mahavishnuism have not undermined the higher developed peoples of the Archipelago from the influence of animistic beliefs, its disadvantageous influence on their
this development can hardly be overestimated.

Among those heathen peoples are the inhabitants of the Batak, Dayakos, and Tidjans, and almost all the affairs fall under the jurisdiction of the Javanese and the Pajans. The Javanese have a rather detailed sketch of this old Malay population; its importance is, that it was largely made a part of the Archipelago at the beginning of the 14th century and was thus constituted. The overwhelming influence of Hinduism, during the reign of the Emperor Augustus, led to the spread of Hinduism. The trade routes between southern Asia and the Archipelago were known. Prolonged in his Geography gives the reader many ideas about the Archipelago. It is known to be a part of the ancient Asian and the modern world. Several kingdoms of Sumatra, Java, and Borneo are mentioned at that time in the Chinese annals. According to an inscription in the modern Koin, it is Central Java, but the rest of Java is also mentioned by the Chinese at that time. It is included in the history of the highest castes. The masses of the present Hindu peoples have been brought by the monsoon winds to the sea, and the Javanese and the Buddha kings under the protection of the Buddha and the Buddhas have undertaken to send them there. It would hardly be possible for the Javanese to hinder the spread of any Hindu influence. In the powerful Hindu kingdoms of Java and the other islands of a later date the great religious problems were not so poorly studied as in the modern society, but probably only among the priests, and the masses were little affected thereby. It is evident that the people of British India also had the same insight into the relations of the pharnnonts of nature to be able to destroy anti-Hindu beliefs to any considerable extent. They were not able to do so after the introduction of Islam.

Although the religious beliefs were little influenced, the ceremonial and vocabulary of religion were transformed during the Hindu period. Among the above-named peoples who were most subject to this influence the animalistic gods and spirits were given Hindu names, as will be shown below in reference to Java. The number of worship of this world of spirits also exhibits many Hindu forms. What form spiritual conditions in the Hindu kingdoms of the Archipelago have been in the islands of Bali and Lombok, which are still Hindu.

Islam. When the native of British India in part became currents to the Archipelago through the merchants who visited these islands and settled there, at least during a monsoon at the end of February, and often married a native wife, who had first of all not to adopt Islam, and thus created a considerable influence over the family and tribe was gained. Among the simplest people of the country the far travelled, experienced strangers enjoyed a certain prestige, which even now constitutes a great deal in the spread of Islam in pagan countries. To become one of these men has a great attraction for the leisured and this makes it easy for them to adopt Islam. This was true to a less degree of the Hindu Malays and they therefore were not affected by Muhammadan influences as the pagan Malays.
We know little that is certain of the beginning of this movement. Unfortunately the Malay and Javanese historians are little Trustworthy and thus the accounts by Marco Polo (ends of the 13th century) and of Ibn Battuta (q.v.) (middle of the 14th century) of the Muslim kingdoms of Palembang on the north coast of Sumatra are not reliable material to go upon. Islam spread rapidly along the east coast of Sumatra, for in the second half of the sixteenth century the indigenous Maranao and Dyak tribes are said to have been in vassal states of Malacca. In 1537 Palembang was regained by the Hindu Javanese. The interior remained for long pagan and in parts is so still. It was probably due to the power of the Hindu Megahkhsam kingdom on the west coast that Islam here met with more continual resistance, which was first broken from Atjeh. Not till the 18th century did the conversion of the south coast of Sumatra begin and that of the interior only in the 19th century. The people in the mountains of Palembang are still little affected by Islam.

Native traditions give no exact data for the spread of Islam in the island of Java. But we know from European sources that the great trading vessels of the great town of Tjibapara, Tjahan, Gribal, and Surabaya at first formed principalities or half- or entirely independent of the Hindu kingdoms of Majapahit, and that in the first half of the 18th century, in alliance with the prince of Demak, they took the capital, Majapahit. It was not till then that the considerable kingdom of Demak was founded and later that of Javan and finally that of Mataram. By the conquest of these kingdoms the conversion of the whole island to Islam made rapid progress.

Besides these secular states the princes of Giri al Gremok long held power which was based on religious prestige.

Soon after the fall of Majapahit a powerful movement in favour of Islam began on western Java, of which we have fairly reliable accounts from the Portuguese de Barros, Furtado, and Conde, to the Javan kingdom of Demak, the Gerai, and later the Salim merchants must have been long settled. The first foundation of a Muslim kingdom there was however the result of the efforts of a scholar from Pasai, who is now called Sunan Gunung Djati from his tomb at Tjijelo. He left his native town of Pasai in 1521 to study for three years in Mecca. He afterwards arrived in Tjibapara in Central Java and preached there with such success that he was allowed to marry a sister of the king of Demak. He then went to Bantam in West Java, converted the governor there and with the help of Demak gained the political power there also and in 1527 took Banda Major, the modern Batavia, from the hands of the Sultan of Palembang. This kingdom of Palembang still existed in the interregnum when he migrated to Tjijelo about 1540 and he must have died there about 1570. His grave on Djati Djati is still highly venerated. He is also one of the eight men who, according to native tradition, spread Islam over Java. His son Hasanuddin (Hasan al-Din) was the ancestor of the princes of Bantam (q.v.), and lived till about 1575. His son Yunnuc (Yusuf) succeeded about 1575 in capturing Pasawaran, the capital of Palembang.

At the present day the native population of Java, numbering 33,000,000, is Muslim. The only exception is formed by Christians (about 10,000) and the two little hill peoples of the Baduy in the west and the Tengger in the east who have remained faithful to the pre-Muslim tradition. The latter however frequently become converts to Islam.

On the island of Boemboe (q.v.) the population of the west coast seems to have been converted from Palembang; on the south coast, on the Batu, possibly from Java. The whole Malay population on the coast and the great islands is now Muslim and makes many converts among the still pagan Dyak tribes of the interior.

On the island of Celebes (q.v.), there are in the south the Muslim Makassars and the Bugios who were not converted till later. At the beginning of the 19th century their conversion began in Tello and Gor, and it is now in course of proceeding. They are all enthusiastic Muslims and have done much to spread their religion among the distant coast peoples of the east by their trading journeys and colonies. The Lesser Sunda Islands, the Moluccas and the West Indies, which were formerly dependent on the Moluccas, have been abandoned paganism through its influence.

The Makassars in the north east of the Archipelago along with the Sultanates of Tamate and Ternate adopted Islam very early. As a result of the spread of Islam by the colonists and traders. This was the centre of the spice trade which attracted foreign traders and sailors. Under their influence the Sultan of Ternate, who ascended the throne in 1490, was converted, and also Prince Tjilintar of Tidore who reigned from 1495. They are today the first signs of their kingdom, the second under the name of Djamaluddin.

The Sultanate in the interior of the larger islands Malacca, Borneo, Celebes, the Kel and Ann Archipelagos, and Timor have remained heathen. Islam has only made little progress among the coast population of New Guinea.

The number of Muslims in the Archipelago is about 35 million (in 1900, 35,063,000) of whom 24,650,657 were in Java, but they observe the precepts of their religion in very different ways. It is clear that the data above given, Islam was introduced here when its system was already fully developed. Its characteristic features among these peoples took shape according to the country, British India, from which merchants and adventurers had contributed most to its spread. In British India Islam had already adapted itself to Hinduism and was thus all the more easily adaptable to the adherent of Hinduism, and it spread. The popular legends of the times of the Prophet and his first successors are modelled on those of India. In these tales as in individual customs of the Indonesian Muslims one can observe traces of the influence of the Shi'ite and as on the coast of Malabar and Comandat, where, as in the Indian Archipelago, in other respects the Sufis within and near the Shafi school. Here is there, there is also a great love of mysticism, which among the move highly developed assumes a pantheistic form and among the lower classes is mixed with the strongest superstition.

The by no means slight influence of the Arabs was the reason, and the cause of the conversion of the Malays in the Archipelago. Intercourse with the sacred cities Mecca and Medina increased steadily from the 9th century and a continually increasing number of young men remained there to
and Avd. These and the Arabs who migrate to India from the provinces of Malabar (q. v.) often protest against the customs and ideas introduced from India.

As in other countries, Islam has here also adapted itself in a high degree to the views of the converts and therefore possesses several curious features. The mosque and its personnel forms even more than in other lands the centre of influence of this religion on the whole life of the people. There are Friday mosques in the more important places in Java, in Arjeh, and Central Sumatra; in the Malay districts of Borneo only in the chief towns, and among the Makassars and Bugismen only in the capitals of the many principalities, in the east of the Archipelago they are rare. Smaller mosques in Java, Central Sumatra, and in Arjeh are fairly common. Only a small minority perform the *salah* here; on the other hand, a considerable assembly takes place during the two official festivals of Islam (see *id-ul-adha* and *id-ul-fitr*). The structure of the East Indian mosque is characterized by a broken roof which consists of two or four small roofs one above the other, arranged for a sort of several smaller domes forming the lowest of the largest mosques have minarets. The word *mukhadda* (outside Java frequently called *alai*) singer his call to divine worship, from this broken roof, but previously it is rigorously announced by the beating of a long wooden drum (*teLEMg or *talalh*). The personnel of a mosque consists of at least four men: an imam, a *mukhadda* (Java, *delag*), a *hafidh*, and a servant. There may however be as many as forty or even more. In the Dutch Indies these officials are not clergy any more than in other countries. In Java however they often carry out the duties of a kahfi (Java, *daji*) and perform wedding ceremonies, as they alone have the necessary qualifications. The outer gallery of the mosque (curtain) therefore becomes a court house for the settlement of all quarrels that are decided in these countries by religious law. In Java these include questions of marriage, family law and inheritance, the *pankhaia* or chief of the mosque for this purpose sits with some qualified members of his staff, often on Thursdays. In 1872 the Dutch government regulated by law the right *pankhaia* courts and made them courts of justice (*patriot* in Java) with three to eight members.

These courts have in most cases to deal with complaints by women of insufficient attention or bad treatment from their husbands or to give official sanction to a request of a woman for divorce as a result of a previously pronounced conditional divorce (*talh*). (Dev. V.) The Muslims of Indonesia have received the religious law of other countries as a corrective against the too great abundance of women according to Moslem law. In Java, Madura, and other islands it is a regular custom for the husband immediately after the marriage ceremony to secure for his wife the dissolution of the marriage by *talh* in case he should not fulfill the obligations of a good husband. Only in the patriarchal people of Menangkabau and among the Achinese in this conditional *talh* not the custom, as the women there do not leave their family after marriage and remain more independent.

All that is acquired during marriage is in Java considered the joint property of the couple. On divorce therefore disputes arise as to its division that frequently come before the *patriot*. In cases of inheritance how the judges frequently demand 10% of the estate. *Waliya* property is administered by these judges and quarrels about it settled by them. They appoint guardians for minors. They also appear at the weddings of women who have not a suit available among their blood-relations.

The term *waliya* (Java, Mal. *talaka*) is to the Malays of the Indies means principally the handing over of the tithes of the harvest of rice and similar fruits of the fields. Only in the Sanda countries (West-Java), Atjeh, Patresum, and some other districts of Sumatra do we find a kind of official collector. These however exercise no rights of compulsion regarding the collection. In other countries this religious duty is either entirely neglected or its fulfillment depends entirely on the degree of piety in the individual. Under various pretext the staff of the mosque is able to get a considerable portion of the ward for themselves. Where the *waliya* is delivered without an official collection, it is given by the pious to honoured scholars etc. At the time of the *talh* a considerable portion of the wealth was spent on the *talh* etc.

The term *id-ul-adha* (see above) is the small poll tax ordered by law to be paid at the conclusion of the fast, is fairly general. It has practically assumed the character of a free-will offering.

The observance of the five daily *salah* varies considerably with place and time. In West-Java and Sanda countries for example there are districts where almost every one of these services is regularly held. In Central Java and Atjeh they are neglected by the majority and those who observe them faithfully and at the same time refrain from the popular amusements banned by Islam, such as *lampion*, *mawang*, drumming, *salat* performances etc. are given special names (orang *pabutar*, orang *wata*) and distinguished from the great mass of the people (orang *bangasa*, *bangun*).

The fast of Ramadhan (Janes) is more widely observed. The festivities at the end of it is probably the most important of the year and regarded by Europeans as the Muslim New Year.

The *hajj* is very eagerly performed by the people of the Archipelago; in the last years (about 1911) the number of pilgrims was 20-30 000. They usually have officially appointed harbours by European powers for *Hajj* and return the same way. Of these multitudes, several young men always settle in Mecca for some years to devote themselves to religious studies. They form the Jawa colony there (about 7000 souls; in 1914) and at their return come back the link which binds international Malang culture with that of their native land.

The main characteristic in their religion or their conversion is considered by the Muslim natives to be circumcision and abstention from pork or alcohol. Of all religious duties these are the ones most suitably observed.

Elementary religious instruction (recitation of the Koran and possibly practice in the *talh*) is given by the village "priests" or by other teachers in many districts only a small number of boys and a still smaller number of girls receive this instruction.

In the larger centres of population there are schools, who introduce pupils to a knowledge of Muslim learning in the mosque, in their own houses, or in a special building. The great reputation...
of such a gara induces many young people from far and near to settle for a considerable time in his neighbourhood. Characteristic however are the inns or guesthouses the inhabitants on their own ground, which as to speak, form separate villages, where students from various districts live together to devote themselves to study under the direction of one or more gara's. In Java these institutions are called pustukas (i.e. abodes or hostels). They consist of a house or a group of houses, with palm-roofed halls and of pandals or buildings, which are divided into two parts by a passage down the centre. Each of these consists of a row of cells, which serve as sleeping rooms and also as studies for two or more boys. The whole institution with its buildings and estates is often a foundation (mendala) by pious people; in Central Java there are frequently villages which were founded by former rulers from taxation, etc., and emancipated from all authority of the local chiefs and dedicated as pandala-mendala exclusively to places of religious study.

In the fourth such institutions are called pongkas, in Central Java ponsors or ponsorais. Their organization shows some differences from that of the pustukas. In all these schools the young native Muslims are made to pass a test divided into the well-known mediclss cycle of Mofid, knowledge of religion, and mysticism. The manuals used are the authoritatively accepted texts, which are translated from Arabic into a native language or read in the original itself. Advanced pupils also apply themselves to Koranic exegetics, the sacred traditions, and their explanations, the theory of jurisprudence, etc. The period of study lasts from two to ten or more years, according to the goal aimed at by the pandala. Those who study for a long time go from one pandala to another to hear various distinguished scholars. In the country itself the most talented among them can make great progress in learning, but the greatest fortune that can befall the seeker after knowledge is to study in Madura.

The Moslems of the Dutch Indies receive the international saints of Islam known to them. The main objects of their pilgrimages are the shrines of saints whose names are their mubtas, to whom is attributed the introduction of their religion in their region. In Java they are the eight or nine zawiya of the old trading-towns of the north coast, where the foreign Muslim merchants settled who first converted the native population in their neighbourhood. They also believe in patron saints of certain places and of certain spheres of daily life and, in opposition to the convictions of the orthodox believers, in trees, shrines, etc. being haunted by spirits. There are also individuals who are worshiped as Khordas, wonder-workers, Saiyids and share restraints of these beliefs of the coexistence of the Islamic and pre-Islamic world. No East Indian Muslim can conduct his affairs without the help of saints. The hearing of a blessed relative who is ill, the winning of the love of a woman, the blessing on good crop, the intersection of the harvest against insects, treasures, etc. in a school examination, promotion of a native official to a higher post, appointment of a prince as heir apparent, all these and similar fortuitous events are hoped for through the favour of saints and their intervention with Allah, who is Himself enthroned too high to be directly approached with such requests. These often take the form of a conditional vow (aamir, dam, ziyat, etc.). When a wish is fulfilled, the tomb of the saint is visited and recitations of the Koran held, or a sacrificial animal is killed there, or a fast given or something else done which is known to be specially pleasing to the saints or some particular saint. The simple villagers often promise something which he himself expects very highly, but which must be repulsive to the Muslim saint, such as: the performance of a wayang. How much saints' graces were generated in olden times in Java is seen from the fact that former rulers have freed certain villages from other burdens in return for the maintenance of these ahas (pandala-mendala villages).

From the earliest times the East Indian Muslims thought more of mysticism than of the law, more of religious contemplation than of the fulfillment of ritual duties. The influences of Hinduism as well as the fact that it was Indians who sowed the first seeds of Islam favoured this tendency. In the tradition, frequently expressed in mystical language, of the eight or nine zawiya of Java, pantheistic mystical sayings are attributed to some of them, and in the Malay poems of Hikma of Hikma, whose doctrines won many adherents in the xvii century in North Sumatra and formed the subject of lively discussions at the courts of Alif, the relation of man to God is described in mystical terms. In later times under influence of Mecca and Hadramawt there was an increasing reaction on the part of orthodoxy against those mystical doctrines but this could not prevent works like the "Book of the Perfect Man" by Abu al-Kasim al-Qadisi (see also AKNAN AL-KAMAL) continuing to be read by a wide circle. Religiously inclined Javanese usually enter all kinds of quotations in private notebooks (subun in Java) which they consider suitable for the guidance of their daily life. Among these, mystical or even nihilistically coloured sayings are particularly common. Such wisdom is particularly in vogue under such names as amsa al-qadisi (doctrine of the highest reality), "doctrine of the seven degrees of knowing", "the doctrine of the number", "the path to reality. Half-educated people content themselves with learning formulas and formulas by heart with a kind of mystic notches. Illuminated manuscripts are made with mystic figures with such sentences as: (aamir, from the Arabic aams, ziyar).

Of the mystical orders (pandala's) the Sukumarla gain the most adherents in Indonesia in the xvii-xviii centuries. It had then prominent representatives in Madura. It has since almost disappeared in the rest of the world of Islam, but still has many followers in the East Indies. Here it has adopted many heretical elements from popular beliefs. In later times the Kordas, Nathas, Subin, etc., through Mecca influence attained considerable prestige. The Sukumarla with their noisy amsa marched among the lower classes and seized the rise of popular consciousness like the Alif and their performance, which look like a caricature of the amsa.

Ethical mysticism of the type best represented by al-Ghanizi is also extensively studied in the Indies among such circles as key particular stress on strict observance of religious law and on dogmatic orthodoxy.

The Chinese, Arabs, and Europeans also later found their way to this archipelago with its varied products. The Chinese probably traded with the archipelago from the vii century. If one may judge
from present conditions, in addition to the traders and the poor young men from South China emigrated to the Indies to make a living by their work and trade and often married native women. From then is descended the mixed Chinese population of the Archipelago, often prosperous and economically very important on account of their industry and thrift. As these half-caste Chinese people retain the manners and customs of their fathers they do not become merged in the Malays. With the more recent immigrants, some millions in number, these are now settling into the interior of the great islands and in the important places on the coast, following their industry or commerce. On the present immigrant Chinese see RELATIONS. The Arabs also, mainly from Hadramaut, go to the Dutch Indies to earn money. Clever and enterprising they rely with much success in their relations with the Malay Muslims, on their religion and nationality, especially if they can call themselves sultans or suzis. Although, like the Chinese, they often become well to do and return home, they scarce behind them their families from twelve wifes, which however show a greater inclination in the end to merge in the native population. Prominent Arab scholars from Mecca and Medina also visit the islands occasionally, and some remain a long time, and certainly contribute to strengthen Arab influence, but we account of their slight numbers cannot be considered an important element in the population. The Arabs in the Archipelago are estimated at about 31,000.

Europeans. Of the foreigners the ruling Dutch are economically the most important. With isolated other Europeans they control the wholesale trade, the working of the plantations, and industry. Shortly before conquering Malacca in 1511 the Portuguese had reached this Archipelago and went in the following years to the Spice islands, where they made conquests, carried on trade, and endeavored to spread their religion. Their enemies, the Spaniards, who had reached the Malacca from the east, soon retired to the Northern Philippines again.

Towards the end of the 16th century several European nations succeeded in reaching these islands. In 1594 the English, in 1596 the Dutch, and later the French, Danes, and Swedes with their armed ships came to the ports of North and East Sumatra, the north coast of Java, and the Moluccas to obtain spices, precious metals, and other products, which had previously been the monopoly of the Portuguese, Chinese, and Southem Asians.

The very many small Dutch societies for trading with the Indies united in 1602 into the "Groot-West-Indische Compagnie" with a capital of 600,000 guilders. During the 18th century this trading company obtained its political power and influence, besides its trade from Africa to Japan, over the Southem Asiatic coast and the East Indian Archipelago, and maintained its position till the end of the 19th century. The competition of the other European nations, the funds and quarrels in and between the various native states, and its rigid monopoly system soon forced the company continually to expand more territory, and the resultant costs of administration and war contributed largely to the fact that they were forced in 1800 to hand over their possessions and their business of trade to the Dutch government. Their rule then extended to the coast regions of the Javas and entirely over many smaller islands. Their relations to the native population consisted almost entirely of contracts and trading agreements with the native chieftains for the monopoly of exports and imports. The European influence on the masses of the people was thus very small. During the Napoleonic wars, when the Dutch lost their independence, the English conquered their Indian possessions, but these were returned as the Congress of Vienna as far as they were situated in the East Indian Archipelago. In the 19th century and at the beginning of the 20th all the islands have been conquered right into the interior and the influence of the Europeans on the natives thus increased. This is best seen on the island of Java which has always been the centre of Dutch authority.

The Queen of the Netherlands possesses executive power, with regard to the Dutch Indies and partly independently and partly in combination with the "Staats-Generaal" in the Hague, the legislative authority. The naval budget of expenditure (566 million guilders in 1917) is fixed by the Queen in combination with the "Staats-Generaal". The Dutch minister of the Colonies takes the day-to-day business of the government. A "Gouverneur-Generel" represents the Queen in the Indies. He also has legislative power in certain circumstances. In the exercise of his great power he is more or less dependent on the cooperation of the "Raad van Indië", a council of five officials of high rank. Under these authorities appointed by the Queen, seven directors, a commander of the army, and a chief of the navy with their nine departments carry on the ordinary business of administration. The "Algemeene Rijkscommissie", which controls finances, has, like the others, its seat in Batavia. The Dutch Indies are divided into 34 residences and 5 government areas which are under residents and governors. There are 47 of the former in Java. Under these higher civil servants are accountants, residents, controllers, and deputy controllers. The Indian military army consists of about 15,000 European and about 25,000 Indian and about 4,000 Europeans and a few native officers. The Dutch Indies has a navy of its own of small ships and the battle ships of the motherland are detached from.

Besides the area directly governed there are about 300 native principalities which enjoy a certain amount of independence but are otherwise entirely subject to the Dutch government.

This firm government conducted on European lines secures the natives important advantages as compared to their previous conditions. There are no longer civil or foreign wars, and the exploitation of the masses by the native princes and nobles is very much limited. Among the primitive tribes there is now security of life and property. Trade and commerce have increased everywhere as a result of this security, and accessibility of life such as fabrics, cotton, metal, salt, tobacco, etc., is exported to the interior of the islands much cheaper than formerly. While formerly nothing was done against the terrible tropical diseases, they are now submitted in many ways, although still to an insufficient extent. The Dutch government is as a rule neutral in matters of religion. The often enormous increase in population, for example in Java excluding immigration, from 4 to 5 mil-

The economic development which these colonies have undergone in the last 50 years through the cultivation of European products for the world market is of great importance also for the native population. In 1914 the exports of sugar amounted to 135 million guilders, of tobacco 6 million, coffee 48 million, cotton 22 million, rubber 25 million, pepper 11 million. Certain mining districts also yield important products, such as petroleum (exports 33 million guilders, tin 30 million guilders), and bauxite, gold etc.

INDOIL or JUINIL is corrupted from 'indiscol', gospel. From the Kari an as well as from numerous authors we see that the Muslims had a certain knowledge of the Gospels. It is easy to show with the help of a few quotations the extent of this knowledge. On the other hand, it is often difficult to define positively and not merely by way of induction how this knowledge was obtained. Some of it was certainly obtained orally in controversies or friendly conversations between Christians and Muslims. But this method of transmission for the most part lacks historical record. There were also reminiscences of Christianity which were brought in by Christians converted to Islam. A similar Christian influence made itself felt on the rise of Sufism, in the teachings of which traces of Christianity can be clearly seen (cf. the writer's, Gavem, Paris 1923). Finally, one may certainly assume that there were Muslim seekers after knowledge among the Arabs who read Arabic translations of the Gospels made by Christians. We therefore here give a brief survey of what can be known about these translations, followed by some instances of recollections of the New Testament in the Koran or the writings of various writers.

The Christian Arabs translated the Gospels from the Greek, Syrian, or Coptic. The translation from the Greek took place very early, as is shown by the great antiquity of the manuscripts (Vatican,
Arab, 13, and Manoel Borgiano-Propoganda, which date back to the 18th century. A.D. According to Bitheneus, there was a still older translation made between 637 and 846 by the Mesopotamian patriarch, Johannes, by order of an Arab prince, Amr b. Salih.

C. George, Bishop of the Arab tribes of Mesopotamia, a friend and contemporary of James of Edessa, wrote scholia on the Holy Scriptures. Spranger (Das Leben des Mohammed, I. 231 sq.) even thought he would recognize in a passage in Muhammad b. Lishak (ed. Wurtemfeld, p. 249 sq.) a fragment of a pre-Islamic translation. This fragment contains the verses 25-27 of John XV, the word θεός-θεόι-θεοῦ, by which μονοθεία is translated. Is neither Arabic nor Syriac, but Palestinian and rather Old. But even if so great an age cannot be given them, in any case the translations from the Greek are hardly later than the Muslim conquest, and the spread of the Arabic language, which is subject to the influence of the Jewish language.

A likewise very old translation from the Syriac exists in a Latin text, according to Gildemeister's investigations (De Evangelii, p. 355), it must have been made between 750 and 800 A.D. The Muslims were thus able to become acquainted with the principal books of the New Testament at quite an early date through direct reading of Arabic translations.

Besides the canonical gospels we possess Arabic recensions of the following New Testament apocrypha: the gospel of the Childhood, Protocan- gellum of James, Apocalypsis of Paul, a sermon by Peter, and one by Simon, a Martyrdom of James, and one by Simon, as well as one by another Simon, which is not supposed to have been known in Muhammadan circles. E. Devul, La Littérature Syrienne, Paris 1859, p. 96, mentions an Apoc- alypsis of Peter, which, according to him, is an Arabic compilation of the 9th century.

Muhammad was less acquainted with the cano- nical gospels than with the apocryphal. He did not obtain his knowledge from purely Christian sources, but must have obtained it orally from Christian Jews. This is shown by the kind of legend preserved in the Koran. They must have taken their form from those whom Muhammad calls dama'y (men δαμα'iy) and who taught their religion to Abūram. This question, however, is only a particular case of the more general question of the origin and source of Islam.

Poetry is also one of the ways by which Christian ideas found their way among Muslims. At the time of the rise of Islamic poets were fond of visiting Hera [p. 21], where they were friendly terms with Christian Arabs. They then related in Arabic the legends which they had heard in the wine booths in Aila. Among these poets are mentioned Zaid b. Amr K. Nufail and Ummayy b. Abi l-Sali, of whom the latter was particularly well versed in Jewish legends also. Poetry then formed a fairly long time a link between Muslims and Christians. We know what favour the Chris- tian poet Abu-Ahval [p. 22] received at the court of the Omayyads. Medicine and administration also led, in much greater measure, between the two religions.

We must now recall the names of Sergiun Mas- sha, secretary to four caliphs and father of John of Damascus, and the amazing Christian circles who were employed by the Muslim government, as is evidenced by the order made by al-Walid b. 'Abd al-Malik 'embidding them to keep their books in Greek. But let us come back to the Koran.

Jesus, Mary, and the Gospel are frequently mentioned in the Koran, and Muhammad knows the essential differences between the Gospel and the Koran regarding words, namely, compassion and mercy (vii. 27); he also knows in some extent the parable of the seven (xlviii. 23) and the promise of another messenger of God (vii. 156, cf. xvi. 17). He is also aware that the Gospel is put forward as a confirmation of the Pentateuch (v. 29). Of the miracles of Jesus he mentions the healing of the blind and of the leper as well as the raising from the dead.

The most popular tradition in these circles from which the Prophet obtained his knowledge, seems to have been that of the Annunciation. "He has chosen thee among women." The angel says to Mary in the Koran, iii. 37 (cf. Luke i. 28). He likewise adopts the virgin birth of Jesus (xxi. 91). When the construction is denied to Koran (iv. 156 and lii. 47), he follows the view of the Christian sect of the Dossorians. The brief mention annunciation brings the life of Jesus to a conclusion at this moment when, according to the Gospel, the Pas- sion should begin (cf. al-Zamakhshari, ed. Fares, i. 169, where a tradition of the 'Abbas is quoted). The calling of the apostles is distinctly mentioned (iii. 45-49). The institution of baptismism is connected with this in the work of the Khwajah al- 'Adil [p. 22]. A miracle in the Acts of the Apostles is mentioned in the Koran (iv. 156), from the same word as in the Gospel (cf. Acts, x. 34). The story that Jesus miraculously gave life to a clay bird (iii. 155, 159), is taken from the gospel of the Childhood. The name "second Adam" given to Christ is approximately found in Sura iii. 52. The expression "strengthened by the Holy Ghost," which Muhammad uses in ii. 81, was not understood by him. He confuses the Holy Ghost with the Archangel Gabriel.

The commentators still further develop the legi-ends in the Koran connected with the New Testa- ment, particularly those of the childhood of Mary. On the whole the figure of the Virgin Mary is a very attractive one in the Koran and not very remote from Christian sentiment. On the other hand, the figure of Jesus is much more uncertain and, in comparison with the Gospel, a much lower one (cf. xiv. Jesus is rather only a prophet prophet). Muhammad leaves him the name of Messiah (v. 109 sq.), but this name does not seem to have any definite theological meaning with him. Of other New Testament personages, Muhammad only mentions John the Baptist and Zachariah.

The New Testament had an important influence on Tradition [p. 22], First, various miracles, sayings, and ideas which are attributed to Muhammad by his followers have their origin in the Gospel. The stories that Muhammad increased supplies of food and water go back to the miracle of the loaves and fishes in the Gospel rather than to that of the wedding at Cana, as Goldschmidt thinks. Numerous traditions regarding the high position of the poor and the difficulty of the rich entering heaven, again reflect the doctrine of the Gospel and are in contrast to the views of the hoarded Arabs. As Goldschmidt has shown, an Arab traditionist, Abu Wael [p. 23], even purports to tell
of the Lord's prayer into the mouth of Muhammad. H. Lammens also points out to me that the tradition, according to which Abu Bakr is moved to tears on hearing the Prophet preach, is of Christian origin. The "gift of tears," which is known to Christian mysticism, was little fitting to the temperament of the Arab comparators.

On the legend of the Mahdi and on Muslim eschatology Christian apocalyptic literature had a considerable influence.

In several Muslim historians we find a rather extensive knowledge of the Gospels. Al-`Ya`qubi, son of the last of the Arab historians, gives a synopsis of them. Such an inquiry apart from the Muhammedan, does not concern his relations with the Christians.

In Nazareth, as he tells us, he visited a church highly venerated by Christians and received a large number of Gospel stories from them.

He knows of the birth of Jesus in Bethlehem, his childhood in Nazareth, the finding of God in Matthew III, 17: "This is My beloved Son," which he gives with slight alterations. He has also heard the story of the Magi, who visited the infant Messiah, according to the Gospel and other sources.

He gives the story of the crucifixion of the Apostles correctly. He also names the Four Evangelists and speaks of the "book of the Gospel," of which he gives a summary, as if he had seen it. On the other hand, he shows a certain distrust of this book, in contrast to the great reverence with which the Koran speaks of it. Al-Mas`udi is comparatively well informed about the lives of the Apostles. He twice speaks of the martyrdom of the apostles Peter and Paul, but ascribes to the latter the same kind of martyrdom as, according to tradition, was the fate of Peter only. He knows Thomas as the apostle of India. On the whole, Thomas seems to be the apostle best known to the Muslims next to Peter, and even Paul is less known than Peter.

Al-Biruni is still better informed than al-Mas`udi. In order to write his Chronology, he had to consult Nestorian Christians. He knows various parts of the Gospels; and also of the commentary of Daddali (unidentified). On the Gospels, he has a certain spirit of criticism. The four Evangelists have to him are four recensions, which he compares with the four copies of the Bible, the Jewish, the Christian, and the Samaritan. He notices, however, that these recensions differ considerably from one another. Al-Biruni gives the genealogies of Joseph, in full from Matthew and Luke, and tells in a very interesting passage how the Christians explain this difference. He speaks of other gospels which the Marcionites, Bardesanes, and Manichaeans possessed, the two first of which differed, according to him, in some parts, from the Christian Gospels, while the others were contradictory. In view of all these different recensions, he concludes that one cannot rely very much on the prophylasial view of the Gospels.

The translation of Tabori's Chronicle (French ed. by Zetzsche) contains a great treatise on the New Testament, which are more detailed than the Arabic original and correspond with those found in the stories of the Prophets (Kitab al-Anvabad). Certain details from the Passion, for example are given, such as the expulsion by "Simon", the betrayal by one of the Apostles, who is not mentioned by name, and the story of Mary under the Cross. For the rest, the author holds the Muslim view that another person, whom he calls Isma, was substituted for Jesus. As to the history of the Apostles, he gives the tradition which makes John come to Edessa.

In the mystic literature, one finds numerous allusions to the Gospel, there are even traces of some knowledge of the exposition of some passages in scripture by the Fathers of the Church. What is given by the Muslim mystics as sayings of Jesus, however, is very far from always agreeing with the Gospel. For example, the saying ascribed by al-Qazzālī to Christ are almost all incorrect. On the other hand, we find in al-Suhrawardī an accurate and complete version of the parable of the sower. The Rasa'il al-Istifadah system contains remarkable passages about the crucifixion of Jesus, as the reality of which they assume, about the Resurrection, the assembling of the Apostles at the last supper and their scattering over the face of the earth. The Acts of the Apostles (Rasa'il al-Istifadah) is expressly quoted there (Diterici, p. 605).

The philosophic literature also shows a large number of controversies between Christians and Muslims. Among the celebrated polemicists we need only mention here Abu 'Abd Allāh b. Zara'a, who in 387 composed a reply to Abu 'Abd Allāh Ahmad ibn Abī Bakr, and Yahyā b. 'Abdī, a Christian scholar and pupil of al-Fārisī. The latter pronounced an apology for Christianity, which he dedicated to Shīkh Abu 'l-Maḥmūd ibn al-Warrāq. He also replied to a treatise by al-Khunājī on the Trinity. [See also the articles Yazji and al-Mahdīi.

The Muslims in general respect the Gospels and rever all the Saints. The Turks call it Ingil. Various writers who have lived in Turkey say that many Turks in secret recognize the superiority of the Gospels to the Koran. In particular they mention the case of Kāhin [p. v.], who in the reign of Sulayman I openly confessed his preference for the Gospels and was therefore executed (DVH, Tāmilnū bay Rā'em, i. 155).

INDIO. This name, which is properly confined to the royal estates under the Mogul, is usually given to the dynasty which reigned from about 793–794 (1322 to 1323) in Persia (Shiraz), as its founder, Amir al-Din Malikshah, had been first of all sent there by Uljai to administer the royal estates. According to a statement in the تاشفینی قانون he was a descendant of Abul Aliddin Ansari [q.v.]. Under Uljai's successor Abul Qasim he not only retained his office, but was able, continually to extend his power so that by about 793 (1322) he was practically independent ruler of Shiraz and almost the whole of Persia. After the death of Abul Qasim he put to death by order of his successor Arqa Khan in 736 (1335-6). According to the Shadzila, he had four sons: Mansur Khazanidgha; Chaghidzhe; Sad Abdu Khaghazwar; Shams al-Din Malikshah and Jalal Djamal al-Din. The first named was already ruling in Shiraz in the lifetime of his father and was put to death, as well as the second brother Khaghazwar, Mansur had imprisoned the third brother Muhammad in Kaft Safid, but he was able to escape and found support from the Capetian Prince Haimar. The latter collected a Mongol army and advanced on Shiraz with Muhammad, so that Mansur had to take to flight and Haimar entered Shiraz.

But his rule did not last long, for, when shortly afterwards in 740 (1340) he put Muhammad to death, the population rose up in such a threatening attitude that he found it advisable to retire, only to return next year with new forces. But on this occasion he had too good a fortune, as he quarrelled with the Capetian and, when the two sides were drawn up in line of battle, he was left in the lurch by his own men, so that he had to seek refuge with Shihab Husain, who had him put to death. The meanwhile, Masul Shah had retired to Jafartak and made an alliance there with Yaghub with, a brother of Ashraf, while Ashraf himself took the side of his brother Abu Iskandar; however, succeeded in reaching Shiraz with the help of Yaghub, but there met the same fate as his brother; he was subsequently murdered by Yaghub in 743 (1343). The latter thereupon quarrelled with Ashraf but made peace again and they jointly attempted to subjugate Fars, but their troops dispersed when the news of the murder of their brother Hasan Khudin (q.v.) reached them.

Abul Iskandar, a younger son of Malikshah, who had previously received the town of Isphahan from Prince Haimar, now became lord of Shiraz and of the whole of Fars. As he endeavoured to extend his rule over Yezd and Kerman, he came into conflict with the rising power of the Mughals (q.v.) with varying success. The result was that Abul Iskandar was not only driven from Kerman and Yezd, but was ultimately besieged in Shiraz. The town had to be surrendered to the Mughals in 754 (1354). Abul Iskandar had in the meanwhile fled to Kafir Safid, received some support from the Uzbeks, and went to Isphahan. There he was also besieged and finally captured, handed over to the relatives of a shahab who had been put to death by his order, and was killed by them 758 (1358). The Persian poet Chahar Zaidi commemorated his Maccabean in an elegy.

INDO-CHINA. Further India, -1st to 1st in French Indo-China. French Indo-China comprises the whole eastern zone, by far the greater part of the double peninsula which lies between British India and China. The western zone belongs to the whole of Burma and the farther west part in the centre to Siam, which serves as a buffer state between the two. French Further India comprises in the south Cochinchina (Annamese Nova Bha), which is a direct possession, in the centre the kingdom of Cochin China (Annamese Nova Sin), which is a direct possession, in the centre the kingdom of Cambodia (in its dialect Sonk Kampa), Nuiquer Kampa (Siamkru, Kampa), in the north the kingdom of Laos (Laotian: Muong Lao), in the east the empire of Annam (Annamese: Nui'lt Annam) in the north-east the province of Tonking (Annamese Boc lye), all of which are provinces.

This country, one and half times the size of France, is only inhabited by about 12,000,000 Annamese, 1,500,000 Cambodians, 1,500,000 Laos, and about 200,000 Frenchmen and Malays, 275,000 Chinese, 1,000 Hindus, mainly Tamils, and about 500,000 savages or half civilized men.

1) In French Indo-China Chinese are pronounced with Chinese sounds. It should be noted that: x = ch, v = w, i = i, e = e, mu = m, y = j, s = s, hw = h, h = h, w = w, g = g, c = k. In the above quoted Indian Chinese words.

2) The natives call themselves Mui, Phuong, or Khe, which in Annamese, Cambodian and Somali means "savage".
As regards religion, the Annamese, like the Chinese, are Buddhists or Confucians, only a very small number being Christians; the Cambodians and Laotians are Buddhists, the semi-civilized are almost all animists, with a very few Christians; the Thais, Malays, and a few Tamils are Muslims, except 20 to 25 thousand of the Lhauth that have persisted faithful to a very ancient Brahmanism. Some Tamils and Bugis are Hinnais.

The Thais (orang tham) live partly in Binh Thuan, in modern Annam, the last refuge of their nationality, partly in Cambodia, along the banks of the Mekong and on the edge of the great lake (Tonle Sap), partly around the towns of Chau Doc and Tay-ninh in Cochinchina, and finally in a few villages in Siem.

The Malaks who are almost equal in numbers live entirely near them in Cambodia as well as in Cochinchina and are in constant relations with them. They are not found in Annam.

Islam at present plays only a slight part in Further India; it was at one time the most important but never predominant, as long as the kingdom of the Thajas dominated the peninsula.

The Thajas, whose physical features and language are obviously connected with those of the Polynesian Malaks, at one time founded a powerful kingdom in Further India, which seems to have encompassed Cochinchina, the modern Annam, with the exception of Tonking, and a part of Cambodia. A memorial of its greatness is the state of Nhatrang, of the second or third century. In the thirteenth century the kingdom, although already declining, still aroused the astonishment of Marco Polo. In the fourteenth, however, it was broken up when the Cambodians and Annamese attacked it together and in 1421 there were only a few tribes in the valleys of the Binh Thuan who were much oppressed by Annam. At that time many of them fled to Cambodia, where their descendants still live.

The oppressed Thajas greeted the French rule with joy, but the French are not succeeding in elevating them. Physically, they are not degenerate. They are taller and better proportioned than the Annamese, the skin is soft and of a light brown colour, the hair soft and often wavy, the face rather broad, the eye well formed, and with an open look, the mouth of medium size. They belong to those Asians whose type is nearest to ours, that their fertility is only very moderate. In spite of a certain childish vivacity and a great softness of character they are intellectually extremely apathetic. They practice neither commerce nor industry, live in very miserable villages (in Annam they are built on the ground in Cambodia on piles), weave a few stuffs, and only do so much agriculture and cattle rearing as is necessary to maintain life without worrying whether they can improve their lot.

When was Islam introduced among the Thajas? This question has not yet been solved. One thing however is certain. It was preceded by Buddhism, the most accepted form of which was Cyclic, which is still preserved with the most remarkable variations by some thousands of Thajas who have remained true to this old faith and therefore call themselves Thajas. But by their Muslim fellow countrymen they are called ashdras or Khajah (Ar. khaja) 'infidels', without the one side or the other acting so foolishly to forego all the advantages that the latter had in the past.

Two hypotheses may explain the introduction of Islam into Further India. It was either brought in the 8th or 9th century by Arab merchants, Indians or Persians, in the great movement of the general spread of Islam, or it came later as a result of a Malay immigration.

It is certain that the Arabs were acquainted with Further India at a very early period. As early as the 8th century there were regular relations between Arabia, China, India and the Archipelago. By 543 the Arabs and Persians were so numerous in Canton that they laid the city waste with fire and sword. In the 9th century they raised a rebellion in Khan-tu, in which 72000 of them perished by the sword. In those circumstances they must have been acquainted with Indo-China and if they knew it, they must also have endeavored to win it for their religion with the well-known missionary enthusiasm of the Muslims.

A passage in the Annalist of the Song dynasty, Chipp. 489, which was ingeniously explained by Ed. Leenknecht (Bulletin de l'École française d'Extrême-Orient, III, 1899, p. 35) that Islam was first brought to them by the Arabs or Persians. In the Annal it is stated: "There are (among the Thajas) also infidels which live in the mountains. They are not used for agriculture but only for killing animals. When one is sacrificed, the meat is given to the infidels, and in the mountains they are not allowed to eat their meat. In the same accounts of the Thajas it is said: "the customs and dress of the Thajas are similar to those of the population of the kingdom of Ta-chu (Taclia i.e. Araba).

The historical statements of the Thajas are not to be taken too seriously. But it must be remembered that their legendary chronicles place at the head of the list of kings who had Sree Nandy as their capital, the Pho or lord Olyak (Alibah) who reigned from 1000 to 1096. In the year of the Rat a man at the nature of Olyak lived a perfect life in the Thaja kingdom, but the land was not conquered. This was recommended to Islam in the time of the Song. In the same accounts of the Thajas it is said: "the customs and dress of the Thajas are similar to those of the population of the kingdom of Ta-chu (Taclia i.e. Araba)."

modern Phnom and Phnom Penh, Annam), in the east of Cambodia, and the Tjames still say that this is their place of origin.

In effect, it is quite possible that Islam had already been introduced in the 15th century by Arabs, Persians, or Indian merchants. But it made only slight progress and for the Malay immigration in the 16th and 17th centuries which kept it up and spread it, it would have probably disappeared again. It is more true however to this immigration that Islam has retained its purity through the relation which the Malays keep up with the Tjames of Cambodia and Cochinchina.

But it is also possible that the law of Muhammad reached them through the Malays of the Archipelago of Malacca. The latter, as Prof. Kem has convincingly proved, themselves come from Indo-China and are related to the Tjames and, as inscriptions and legends show, were from the 16th century onwards in uninterrupted close relations with the kingdoms of Champa and Cambodia, partly through intermarriages of the ruling families and partly through invasions. These turbulent Malaya, whose Islam was not of an introverted type, thanks to the community of religion, kept in such close touch with the Tjames after their political decline that the two are usually confused in the history of Cambodia and Annam. Their common rebellions and liguistrations in the xvth and xviith centuries disturbed the peace of the two kingdoms, particularly that of Cambodia. The chronicles are more especially the Spanish theologians, who at the beginning of the xviith century had hoped to see Indo-China brought under the sway of Philip III, bitterly acknowledge at this period the influence of the "Moros," i.e. the Muslims whom the tolerance of the kings of Cambodia and of the Tjames allow to build mosques everywhere, who endeavour to proselytise and who lure the Christians to the extent of wishing to drink their blood (cf. Avima and vérodrique de l'histoire de Cambodia par Gabriel Gourou de S. Antonio ...). New Edition of the Spanish text (of 1624) with a translation and notes by Antonio Calabresi, Paris 1694, p. 122, 124, and passim). Many went so far that about 1634 a prince of Cambodia, supported by them, married a Malay woman; adopted Islam, to the great scandal of the true Cambodians who were faithful followers of Buddhha.

The Muslim Malays and Tjames down to the xviith century took an active part in all the internal strife which disturbed the peace of Cambodia in its decline. For a time they played such an important part that one of them, Tjum Suyt Ahamat (= Shikha Abadat) — according to the chronicles, a Malay of royal descent, but perhaps simply a Tjum with some Malay blood — in 1635 became regent and right hand man of Ang-Can, the ruler of Cambodia. He aroused the jealousy of the Cambodians and the distrust of the Annamese, who would have liked the lands of Ang-Can for themselves, to such an extent that his enemies succeeded in having him condemned and beheaded; without his fellow Muslims, who would certainly have rescued and saved him, learning anything of it until too late. His sons and followers raised a rebellion in the province of Tboys-Kham, where the Tjames and Malays of Cambodia, joined together and united with the Tjames of Chao-Doc and lait, the country was until Nongphum ascended the throne in 1859 and French rule finally put an end in 1863 to the political importance of the Muslim element in Indo-China.

From the religious point of view, these Malay immigrants into Indo-China, who are mainly found in Saigon, Cholon, Chau-Doc, Thuy-ninh (towns in Cochinchina), Pham Phia, Kampaung-Luang, Kampaung-Tjim, Laoheu, Pernat and in other centres of Cambodia, show no original features. They entirely resemble their brethren in the Peninsula of Malacca, are in constant relations with them, and often recite from these missionaries whom duty it is to maintain the purity of their creed. They are intelligent, active, clever and prudent, but are considered to be treacherous, cruel, cunning and inhospitable. They keep quite apart from the Cambodians among whom they live and only maintain closer relations with their co-religionists among the Tjames. They are mainly teaders, farmers, shop-keepers, boatmen, drivers, growers of vegetables, and are respected if not loved in Cambodia for their intelligence and industry. Although they were well treated by their rulers, their fidelity seems to have always been doubted and their interests do not seem to go beyond that of their community. They are Shi'its in general, but are acquainted with the precepts of Ijma and they read the Koran and its commentaries. Among them we find for example the Apostle of al-Samut, the St. Hourng Pieng, Fish and Haudh books, the "Sutra" commentaries, various jocastical works or legends such as "Dra Kama, Si Mithun Muhammad Hanum Yidish" etc.

These religious ideas and, to a less degree their religious development, the Malays of Cambodia have in common with the Tjames of Cambodia and Indo-China. They observe the five daily prayers, the ablutions and circumcision, which is performed at the age of 15. They do not eat the flesh of pigs, dogs, poultry, tortoise, elephants, peacocks, vultures, eagles, and savages, and they refrain from intoxicating drinks. If any one worships a strange idol, he is expelled from the community. Some make the pilgrimage to Mecca to pay a certain sum, for which a representative is sent on their behalf. In Cambodia the mosques are almost always built of wood and are placed on high summits. The funerals are large family processions, with a platform at the back. The mats which are used as praying carpets are hung up on a rack from the rafters. On the left at the entrance there is usually a large drum painted red (Tjum goong — Malay gongno, Japanese tam-gum). Outside is a little bang of accusation of false accusers.

Within these premises the Tjames give the children instruction in reading Arabic and in writing the Koran. The assembly of gowimna cannot take place without a quorum of go believers. Ramadain is strictly observed by all, pious families are quite abstinent in this period. On Mouladi they refrain from sexual intercourse.

The Tjames of Cambodia also observe the 8th of daat (last day of the month of the pilgrims) also called daat- Talî, from the children of the 8th to 15th months after Ramadain. They also observe the month of Moulad (= Arab, mawlid) when a lock of hair is cut from the children of 3 to 15 and they are given a religious name, which for boys is always 'Abd Allah or Muhammad, for girls Fatimah (Fatimah). The males, at least four in number, are invited to pray...
The Muslim Tjams have adopted from the Cambodians the custom of filing and lacquering their daughter's teeth at the age of 15, an operation which is accompanied by prayers from the isina and sprinkling with holy water.

The marriage customs are in general Muslim. The boys do not as a rule marry before 18 or the girls before 15. The wedding feast is accompanied with great expenditure. Divorce is possible but rare. If it is demanded by the woman, she loses her dowry (Tjam undrie), Malay mar abower which the husband settled on her at the betrothal.

The funeral ceremony is very simple. The corpse is washed twice with a decoction of jalaive leaves for benrins water, then wrapped, in a piece of linen and placed in a grave about and a half feet deep, with the head to the north. A mound of earth is then heaped over the grave, which is covered with thorny branches to protect it from wild animals. On the third, seventh, thirtieth, fortieth, and hundredth day the isina are invited to pray and eat with the family at the grave. The exhumation practised by the Tjams of Annam is not found here.

The husband mourns for 40 days for his wife, the latter seven months and ten days for the husband, and she cannot marry again before a hundred days.

The infant of the Tjams in Annam has quite a different name. It appears to have Shl's character, as Agon (Huss, Aqon (Hosson) and 'Ali are particularly revered and invoked there: they also play the main part in the few manuscripts or legends still preserved in Annam. It is now considered by the faithful as representing the Four caliphs of the Prophet, and enjoy a great spiritual authority.

The religious dignitaries are usually chosen from the most prominent families, whose sons can become isina at the age of 15, and whose daughters are educated with special care to make them worthy wives. The Muslims of Cambodia respect the graves of saints which they call 'sok'; they believe in witches, the werewolf, evil spirits, and in magic, and have retained certain agricultural customs which are also found among the neighbouring peoples such as the Cambodians and Annamites. They are relieved of an old animism.

This family bond among the Muslims of Cambodia is very strong, the father has great authority. The wife is well-treated, but kept strictly within the house as well as the daughters, who are very easily initiated to household duties and, being under strict control, are only allowed to marry Muslims.

a kind of religious butchers who belong to the mosque. In general, the word "au" in Aannam is applied to all Muslim "clergymen" in contrast to dżäha, which is the name of the Hindu priests.

All the religious dignitaries in Aannam observe their heads and faces. In addition to the simple white bonnet worn in Cambodia, they also wear a voluminous turban with gold, red or brown fringes. The various ranks are distinguished by the length of the fringes. Like their Hindu brethren, they carry a long Spanish rod, the lower part of which is wound into the form of a basket only in that of the sark zuvru. A white turban, a long white cloak which is fastened and can open at the neck, is their toga. A right-angled piece of cloth, the interior of which is covered with white cloth; on these occasions they exchange the turban for a kind of ducal, which is bored through the, middle and fastened to the fur by a piece of thread. The whole looks like the bicorne of a judge. These "priests" are as ignorant as their simple followers; they can barely read Arabic, hardly study it at all, and only roughly understand their own language, which they repeat only "because their fathers also did it." They are free from taxation and forced labour and are held in high esteem by the people; they are the more educated class, however slight the education may be. As they are quite indifferent and insolent, they do not think ill of the faithful when the latter make offerings to the Pà Yän or various Hindu deities, even though certain agra- rian rites or magic ceremonies which have nothing to do with the religion in question, the Synod invites them to their religious and domestic festivities and is invited in turn, only the food for the meals must be prepared by a Muslim woman — and even, in some places, refuse from eating pork or beef.

Only from the Hindu cremations do the Muslim priests carefully abstain from themselves and this religious honor of corpses was previously, it is said, the reason why they shuns could enter the royal palace, to pray with women in child-bed and to watch the with their husbands and children during the absence of the king.

Either as a result of ancient customs or of the Malay-Polynesian matrilineal social system, there is the hierarchic class of "writings" called writing, the Muslim of Aannam have practioners for a domestic cult; they are called "au" or "au". If a sick member of the family has to be healed, for example, or a journey or business enterprise to be undertaken auspiciously, the first visit of all successive prayers, thus this mode — often the housewife herself — accompanied by the majo, who sings and beats the drum, performs certain rituals on the site of a state or great event, in order to influence the "deities" or spirits of the dead, in whom sacrifices are at the same time made. This ceremony is always followed by a great feast. The rôh, who must not eat the flesh of the pig or of the sad lizard, even play the principal part at the great annal festivals, which are celebrated in December-January and are regarded as a great crema-and December-January and are regarded as a great ceremony, which is the name Java, is especially prominent at these — and are regarded by the Muslim Jannam as the "New Year's festi-Val of the ancients".)
The festival lasts two days and three nights. A great bonfire is built in an enclosure, if possible of quite new material, and the interior is hung with white cotton cloth. The altar is a simple large tray, with dishes on which are set food and fruits. Wax lights are stuck on the edge of the dish and they also are bound round with satin threads of different colours. A swing hung to two pillars is intended for the eagles; she is assisted by three women and the master, who with his function conduces an orchestra consisting of a clarinet, a violin, a viol and an oboe-deum. (javanese).

The festival which is interlaced by numerous meals is opened with the Kening, then follows the invocation of the mountains and forest spirits and of the shades of the "spirits beyond the sea", which may not be mentioned by name; and finally the invocation of 28 deities or spirits by name; at each of them the three nemer invites prayers.

The most characteristic part of the festival takes place on the second day at the rise of the morning star. After the nemer has invoked the deities and the eagle has performed a special dance in their honour, they take a small rowing boat made out of a single piece of wood, which is said to come from Java or China to collect tribute. It is master of the house in which the festival is held, pretends not to understand Javanese and the master acts as interpreter. Amid jolling all round, eggs, cakes and the figures of an ape with jointed limbs are put in the boat, the participants then break up the walls and roof of the booth and light for the cakes. On the third day the eagle goes, accompanied by the officiants and the orchestra, to the river and solemnly places the boat with the ape on the water. This ends the festival.

During circumcisions it is only symbolical with the Tjam Baul of Amam, the nemer for the old then is practised as in Cambodia and the Kening (literally "exchanging") marks the declaration of a girl's fitness for marriage. Not till then dare they put up their hair and they are already i.e. unpromotable, and the seducer would be severely punished. This festival takes place under the presidency of the nemer and of two nemer for a considerable number of girls on each occasion and lasts two days. It is opened with prayers to Allah, Muhammad, the Hindu deities and the shades of their ancestors as well as with a feast at which the priest sits apart. Two booths are erected, the one for the ceremony itself, and the other as a dressing room for the girls, who sleep there under the supervision of four mahouts. The nemer spend the night praying at 6 a.m., the girls appear wearing their finest clothes and ornaments, their hair becombed and covered with a triangular mitre. Before them goes an old woman, and a man clothed in white, who carries a year-old child dressed exactly like the girls excepting the mitre. They throw themselves down before the nemer and the senas. The nemer places a grain of salt in the month of the child, cuts off a lock of its hair and gives it some water to drink. The same is done with the girls, who then remain in procession to their booth. If a girl has been induced the lock is cut off at the back as a mark of shame. A second feast, at which the priests sit before the faithful, concludes the ceremony.

Birth customs in Amam among the Bali are similar to those among the Kaphit except that the Bali do not sacrifice to the gods on such occasions. The seduction of girls is also severely punished. They do not marry till they are 17 or 18. In Panam, evidently the result of the old Malay patriarchal system which has left other traces also, like the right of inheritance of women and the training of descent through them and their practising the cult of ancestors — the custom prevails that the girls seek the young men in marriage; but everywhere else in Indo-China the reverse is the case. The wedding (íjam, éddah = Arab. iddah), which is a consummation of long and costly festivities, is usually celebrated by public cohabitation, which causes no scandal; the pair are free to quarrel at a later date when they can afford it, and they may already have two or three children to take part in it. It is far more elaborate among the Bali than among the Kaphit. The nemer's repeat prayers, the nemer kom, or the nebecar, who represents the "Lord Mahometan", sales the bride, who is considered to be Parma, whether she accepts the presents of the bridegroom, the lord ALL Rich feasts take place at the weddings. The dowry given to the woman remains for property in case of a divorce. Divorce is fairly easy and there are nearly two thirds of the joint property in the hands of the woman. Mixed marriages are rare and to them the children follow the religion of the mother. It sometimes happens that a Muslim woman marries a Hindu, very seldom the contrary.

The burial service is as simple among the Bali as it is elaborate among the Kaphit. The corpse is wrapped in white cotton sheets and placed in a small hut, where the nemer kom and the nemer Senas repeat prayers. As soon as night falls the dead man is buried, with three weeks' notice, almost secretly, without a coffin and with the face turned to the north. The relatives beseech his spirit not to come and afflict them. On the 3rd, 10th, 21st, 40th and 100th day as well as on the anniversary of his death a judh i.e. a service at the tombs with prayers, a meal and prayers for the soul of the deceased observed at his grave. The 2nd and the 40th days are the most important. The dead person is almost always exhumed after a certain period on an anniversary of his death. His bones as well as his golden or silver ornaments are placed in a small coffin which is again buried in a particular place and considered sacred.

We thus see that Islam, while it has remained fairly pure in Cambodia, has been overlaid in Amam with a mass of elementals and customs, partly animistic and partly Hindu. The Talms nevertheless desire to be good Muslims, only their ignorance and long usage are the causes of their error. Malay inhabitants who have come from the Archipelago or Cambodia on a religious mission have repeatedly succeeded in putting an end to sacrifices to heathen deities in various villages, although they have been unable to stop the enjoyment of rice, formerly.

If France should succeed in regenerating the Talms, as she is endeavouring to do by her humane and wise policy, the revival of their nationality could only be to the advantage of Islam, and could only come through Islam in close combination with their brethren and the Malay of Cambodia.

AL-INSAN AL-KAMIL. This expression, which means literally “The Perfect Man”, is used by Mohammedan mystics to denote the highest type of humanity, i.e., the savior who has realized his essential oneness with God. Abu 'Abd Allah ibn 'Abd al-Malik (561-874), quoted in the Suhrawardi, al-Balsh and al-Balsh, the dome of a well-known work, al-Futūh al-Kamīl fī Miftah al-Abshār wa 'l-Adabār wa l-Adab al-Kamīl fī l-Adab, by Abu al-Khayr al-Qurashi, who died about 820 (1421). These authors base their theory of the Perfect Man on a pantheistic monism which regards the Creator (al-'Allāh) and the creature (al-Khaliq) as complementary aspects of Absolute Being. A similar but by no means identical doctrine had already been set forth by al-Hallaj (see al-Hallaj and 'Allāh, ed. by Massignon, p. 130 sqq.). “Man” says Ibn al-'Arabi, “unites in himself both the form of God and the form of the creature (al-Khaliq), and the Divine Essence together with all its names and attributes. He is the mirror by which God is revealed to Himself, and therefore the final cause of creation. We ourselves are the attributes by which we describe God; our existence is merely an abstraction of His existence. While God is necessary to us in order that we may exist, we are necessary to Him in order that He may be manifested to Himself.”

Abu 'Abd Allah, who differs from Ibn al-'Arabi in certain details, gives a full and systematic exposition of the theory. His argument runs somewhat as follows: Essence (al-Sharh) is that to which names and attributes are attached, although in reality there is no distinction between the Essence and its attributes and which may be either existing or non-existent. The existence of the Essence (al-Sharh) is being (God) or being united to non-being (created things). Absolute or Pure Being is the simple essence, without manifestation of names and attributes. The process of manifestation involves a descent from simplicity, which has three stages (1) absolute (2) universal (3) cosmos. At this point appear the names and attributes whereby the Essence is made known. They are communicated by means of mystical illumination (firds) of the Perfect Man, who typifies the manifestation of Absolute Being from itself and its return into itself. Moreover, the essences of illumination shall ultimately become merged in the Essence. In the first degree, called the illumination of the Names, the essence (God) is destroyed under the influence of the man by which God pervades Himself, so that if you invoke God by that name, the man annuls you, and the name has taken possession of him. The second degree is called the Illumination of the Attributes. Those are received by the mystic in proportion to his capacity, the abundance of his knowledge, and the strength of his resolution. To some men God reveals Himself by the attribute of life, to others by the attribute of power, as on. Moreover, the same attribute is manifested in different ways. For example, some hear the divine speech (al-Hudja) with their whole being, some hear it from human lips but recognize it as the voice of God, some are informed of it concerning future events. The final degree, which is the Illumination of the Essence, sets the seal of distinction upon the Perfect Man. He now becomes the Pole (al-Futu) of the universe and the medium through which it is preserved; he is conscious of his hidden from himself, and shall bow down in adoration before him, since he is the visitant (al-Hudja) of God in the world (cf. Kar Ş 22, 4). Thus, being divine as well as human, he forms a connecting link between God and created things. His universal nature (al-Hudja) gives him a unique and supreme position in the order of existence. Ali al-Hujjah divides the attributes of God into four classes: attributes of the Essence (Oneness, Eternity, Creativeness, and the like), attributes of essence (al-Hudja), attributes of majesty (al-Mawṣil), and attributes of perfection (al-Mawṣil). While the attributes of beauty, majesty, and perfection are manifested both in this world and the next, Fama and Hul, for instance, being respectively absolute manifestations of beauty and majesty — the Perfect Man alone displays the whole sum of divine attributes and possesses the divine life as its fullness. This microcosmic function, manifesting the illumination of Kar Ş 33: 14, he freely accepts as a trust from the hands of his Maker. He contains the types of every spiritual and material thing. His heart corresponds to the Throne of God (al-Masīr), his reason to the Pen (al-Qalam), his soul to the Tablet (al-Insāq), his nature to the Elements (al-Masākīn), his intellect to the Fire (al-Wādān). Many Sufis adopting the Firdaws doctrine of emanation, identify Muhammad, the Perfect Man, with Universal Reason or the Logos. Al-Līf takes care to state that Muhammad is the Most Perfect Man.
Al-INSÂN AL-KÂMI — PRÂH

(Îmân), in whom the name and the rest of the prophet are subordinate. He holds that, in every age and generation, one should assume the form of the Lord of the name and in that guise make himself known to mystics (id. Goldscheider, loc. cit., concerning the doctrine of the transmission of the name of Îmân). We find a further concession to Islam in the principle that the Perfect Man must continue to obey the religious law. "Perspective of the sublime Essence," al-Dîlî says, "consists in the knowledge, by way of divine revelation (Îmân), that thou art He and that He is thou, and that this is not jûkî [q.v.] nor imânî, and that the slave is a slave and the Lord a lord, and that the slave does not become a lust like the Lord a slave."

II, p. 191; Thumâk, Sâdîdânum, ch. 3; Palmer, Oriental Mysticism, ch. 2; Muhammad Iqbal, The Development of Metaphysics in Persia, pp. 150—174, which provides the most complete account of al-Dîlî's philosophical ideas that has yet appeared; Nicholson, The Mysteries of Islam, ch. 5.

INSâH (א.ז.) Invention. According to the book edited, Maârîf al-Iqâmîa, by ed. Sam. Vlottom, p. 78, insâh has the special meaning of the binding of a document which is afterwards examined by the head of the office and drawn up in its final form with or without alteration; that is to say, a rough draft of a document. The insâh includes the epistolography, the art of drawing up letters and documents. Among the Arabs the celebrated private secretary of the last Umayyad ruler Marwân II, Abû al-Kâhidh b. Yahyâ (son of Ibn Kahlâbîn [q.v.]), is regarded as the first who distinguished himself in this art. On the subject we have a large number of works in Arabic, Persian, and Turkish, which includes invaluable data for the history of culture. Such are the great work by al-Kâhidhâni [q.v.], Sahîb al-Îbâra, and the much shorter handbook by the Fârîd al-Îbâra, [q.v.], entitled al-Îfâr, or, la-Mu'âdâbîk, or al-Mu'âdâbîk, written for the secretaries of the Abbasids. Arabic guides to letter writing were also composed by Mârî b. Yusuf, Fâtîr al-Irnâ, or, al-Mu'âdâbîk, written by the unknown author, the Secretaries, and the Commentary of the incomplete edition of Sa'id ibn al-'Abbâs, where the manuscripts in the Fârîd al-Irnâ, have been used in the preparation of the present edition. The language of the book is the language of the Umayyads, the secretaries of the Abbasids, and the language of the Abbasids, the secretaries of the Umayyads.

INSâH ALLIH KHAN, Indian poet, born in Murshidabad, about 1709, settled in Lucknow, where he became the patron of famous Sânîs, Siddîq, who died the day 1326, at Lucknow, where he was born. A famous malîmîa entitled Nînâ w Ummânâ, by order of the Nawab of Oudh, 'Ali Khan (1722—1731), he wrote a grammar of the Urdu language, entitled Dârâsi w Lâjâl, and published a collection of the witty sayings of the same prince, under the title Lajâf al-Sâfâl.

PRÂH (א.ז.) Technical term in Arabic grammar, frequently translated by "inclusion," but however a much narrower meaning. For its noms it only applies to the formation of cases in the oblique, and therefore is not applicable to the formation of the genitive of the imperfect and therefore is not applied, as Plütsch, Die gramm. Schule der Araber, p. 15, erroneously advance, to the formation of the genitive of the
verb and in times and even to that of the personal forms, which are regarded as nominal elements added to the verb proper.

According to the view of the Arab grammarians in practice every occurrence of ُهُمْ ُهُمْ is taken up as a governing word, ُهُمْ (q.v.), in contrast to ُهُمْ is ُهُمْ (q.v.), which is applied to all words which entail their form irrespective of syntactical influences. According as it is capable of ُهُمْ or not, a word is called governable or non-governable. The two conceptions ُهُمْ and ُهُمْ have to be regarded as the central points about which the theory of syntax of Arab grammarians turns. Where a distinction is made between declension (تَأَيِّشَة) and syntax (مَثْلُكِ) in the narrower sense, the theory of the ُهُمْ is: "العُمْرِيُّ" (n. 91), in line 4. 5.

The Arabic further differs from our grammatical notions in having no comprehensive terms for "case" and "mood"; but use the same terms without much distinction for the various cases and moods if they are not governed. These terms are taken from the terminations and inflections of the singular strong and weak forms of the conjugation, of the ُهُمْ. This results in the following division: 1. ُهُمْ (ُهُمْ) = nominative (تَأَيِّشَة) and indicative (تَأَيِّشَة); 2. ُهُمْ (ُهُمْ) = genitive (تَأَيِّشَة); 3. ُهُمْ (ُهُمْ) = accusative (تَأَيِّشَة) and substantive (تَأَيِّشَة); 4. ُهُمْ (ُهُمْ) = prepositional (تَأَيِّشَة). The three first meanings are originally simple names of the various cases; but they are still used as such in point of fact, and by grammarians without reference to the ُهُمْ and even for verbs in the second of a verb, as is also true in the case of ُهُمْ. The usual usage in ُهُمْ however, is that even when they are not used to denote the cases and moods. They are in fact used by them in cases where the declension is formed in quite a different way from that of the above scheme. Thus, e.g., the nominative of the sound ُهُمْ plural (تَأَيِّشَة) is called ُهُمْ, the oblique case (تَأَيِّشَة) sometimes ُهُمْ or ُهُمْ although here, according to the view of the Arab grammarians, the declension is made through the ُهُمْ or ُهُمْ. It is similar with the dual.

In the same two kinds of declension are distinguished in the strong (in the wider sense, i.e., including the broken plural). The noun (law) is either ُهُمْ or ُهُمْ; i.e., it has all the cases (تَأَيِّشَة) and has no nominative (تَأَيِّشَة) or it is a ُهُمْ or ُهُمْ; i.e., it has no declension very only ُهُمْ for the genitive and accusative, that: is, it has actually only two cases (تَأَيِّشَة) and has no nominative: In this connection it should be noted that those nominal forms of roots with weak third radicals, which, like ُهُمْ, really show no case changes at all, and are consequently the broken plural, are traced to corresponding strong forms through the application of definite phonetic laws and the latter - although according to the terminology of the classic system ُهُمْ (النَّفَعُ) - are considered weak and further ُهُمْ or ُهُمْ. Moreover a noun has not ُهُمْ or ُهُمْ as an unalterable character; although ُهُمْ is in general considered ُهُمْ, this does not prevent that in the case of ُهُمْ and ُهُمْ and in combination with the ُهُمْ the general notation ُهُمْ, ُهُمْ, ُهُمْ, the Arab grammarians do not regard the ُهُمْ or ُهُمْ as ُهُمْ or ُهُمْ but as ُهُمْ or ُهُمْ. The Arab grammarians always riveted their attention on the individual form and not on its place in a system of declension or conjugation, by which they have not even a name.

It is therefore quite natural that he should in the imperfect also interpret the ُهُمْ and ُهُمْ as ُهُمْ and ُهُمْ because here the verb remains unaltered before it, while it is reduced the representative of the present also in the strong in all three moods. In the other forms of the imperfect, which have the affixes ُهُمْ, ُهُمْ, ُهُمْ, ُهُمْ and ُهُمْ, according to the Arabic view, the consonants ُهُمْ, ُهُمْ, ُهُمْ represent the pronominal subject, while the retention of the ُهُمْ with its auxiliary vowel is considered a mark of ُهُمْ and its omission as a sign of ُهُمْ and ُهُمْ. The Arab grammarians do not recognize at all an energetic "mood" with a name of its own: to them there is simply a strengthening ُهُمْ (كَبْرَةَة) added to the imperfect forms, which become ُهُمْ before it. As with them ُهُمْ is not a formative element merged in the verb but is regarded as a separate particle, the energetic mood is discussed in Arabic grammar as under the particles, which seem strange to us.

On the reason why the linguistic phenomena here discussed has been given the name ُهُمْ, later native scholars, puzzled their heads and gave various unsatisfactory suggestions; cf. Ibn-al-Ibad: Arab. "Arab. In Arabic: ُهُمْ, ُهُمْ, ُهُمْ, ُهُمْ, ُهُمْ. According to Wettstein (Einführung in die Wissenschaftliche Sprachlehre, 2017), the word ُهُمْ means Bedouinizing, transferring into the language of the Beduins V.V. Ronn similarly interprets it (Zeitsschr. d. Deutsch. Oriental. Ges., xxvii.: 141):// ُهُمْ as perhaps a genuine desert Arabic. Volussen (Volussen's Untersuchungen über die Arabische Sprache, 124) definitely agrees with Wettstein: on the other hand, Noldeke (Kleinere Beiträge zur semitischen Sprachwissenschaft, 2, 3) says that the application of the term to the Beduins is the only one of the two, and the Beduins at the time are "indeed possible but not certain." the obvious thing may be here the most probable. ُهُمْ, the verbal noun of which ُهُمْ is a formative, is, to meridian, to give a word an Arabic form; to grammaticalize it in the genuine Arabic ways, the word is commonly enough applied, particularly also by Bedouins, to foreign words, and by the Arabic vocabulary in which case there is of course at present, of possibility of a reference to the Beduins, as the contrast between ُهُمْ and ُهُمْ, modern Arabic as, which are Arabic, is, if we reflect that the cradle of Arabic learning was in the first with its population, predominantly Arabic and Persian, the language completely failed to distinguish cases and moods, that the latter must have been the most striking characteristic of Arabic in contact with the foreign languages with which they were translated, especially as according to good and abundant evidence there was particularly difficult for the non-Arab palaeographers, who contributed a great contingent to the linguistic scholars, so that they frequently found it the afterthought, one will find it quite natural that ُهُمْ ""making,"" by narrowing of meaning, should come to have the above limited technical meaning, ُهُمْ.
Al-'Iraq is the first country, which is bounded in the west by the Syrian steppes, in the south by the steppe and desert areas of Arabia and the north shore of the Persian Gulf, in the east, by the southern cape of the Zagros (Djibal Hanatra) and west to Khitistan, in the north by a line from al-Anbar to Tikrit. This northern border line marks the rising ground which in the oldest period formed the limit of the dry land; south of this alluvial land was gradually formed, which on account of its wealth of water, easy to distribute, possessed the most favorable conditions for profitable agriculture; it does not however appear that the administrative frontier ran along the old boundary and the northern frontier is usually given as a line from Tikrit to al-Haddin, which is about 60 miles N. W. of Hilla and was even included in Al-'Iraq. From the geographical point of view Khitistan (Susaana), which adjoins it on the east, also belongs to the 'Iraq, as it is not separated by any natural boundary; the same is true of the Taif, i.e. the high lying ground of steppelike character which begins before the gorge of Kisa and Killa. Wherever in the district the ground rises above the level of the river valleys in such a way as to form barriers against inundation, and at the same time is more suitable, the Arab geographers speak of the name of 'Iraqiyah and frequently give the route along it as well as that by the river. If one takes together the many arms of the delta of the Shatt al-Arab and the banks of the great rivers with their tributaries and canals, the extent of coast is extraordinarily large in proportion to the whole; the sea with the rivers also forms a system. The possibilities of development appear unlimited; only the regulation of the rivers requires constant attention to prevent the banks being washed away by floods, which would make agricultural development impossible; inundation of the banks led to the formation of vast swamp clothes, the climate between the rivers assumes a steppelike character, which is favorable to irrigation across. This was not sufficiently done even in the best period of the country. At present only about a tenth of the whole area of the 'Iraq is under cultivation (agriculture and systematic cultivation). The total area of the 'Iraq is 10,000 square miles (about the size of Bavaria) of this only about 2000 sq. miles are under cultivation. I appeal to the estimate of Deutsch (following Willcockes), Mag. f. Tischlend und landwirthschaftl., N. 7, 1815, p. 40, 415; Babyl. 24, 599 sq. m. with 25,000 inhabitants of which 1600 sq. m. are north, west and south of Bagdad. Thome (Zetlitz, die Islamischen Bergschränke, p. 245, 1827) states the area affected by the general irrigation scheme at 5,000 square miles (out of the scheme £ 26,500,000) to take 30 years to carry out. Thome tells me that one of the main conditions for the complete opening up of the country is that the bed of the Tigris be dredged; along with this should go the revival of the course which is usually thought to have been the principal one in Arab times, that of the modern Shatt al-Irak, although this river at al-Anbar (the Mithrakes of the geographers) branches off from the present main course of the river, it is still doubtful whether it is the main bed of the Arabs and not rather a channel made by man (de Stuers in Heer's, Originals Orien. et Islam. p. 172).
it lay W ar; unfortunately however the exact site of this town is not known; the latest travellers to visit the ruins (Koldewey and Morris) did not describe it. (Garr and Hatzfeld, Archäologie, Reute, 1. 247.) The Shaff al-Hayy, on which Lynch in 1838 was able to travel in a steamer and on which it is still said to be possible for a part of the year to reach Shaj al-Shiyah, entered the swamps (al-Batlib) at the Shaj, through which it reached, under the name Nahal Abin al-Zina, the "moo-yam" Tigris, identical with the pre-Muslim and modern Tigris. The Egyptians divided somewhat below al-Mansubishi into the two arms, the western, Shaj Hindu, and Shaj al-Hills, the eastern; since the main stream turned southward into the Hindu arm, the bed of the Hills arm has been in danger of drying up; it was not till the Hindu Dam was finished at the end of 1913 that the waters were fairly distributed. According to Kudsum, the western arm, which makes a slight curve to the west, is called al-Aljam (p. 333, n. 7; also Maclure, Tamps, p. 52, 3), and the eastern arm is called Sarr; the former vies towards al-Na'is and is lost in the swamps; the Sarr arm, more accurately Nahal Shaj al-A'Am (Ibn Serapion, p. 29), passes the important town of Sarr al-Hills, the oldest city in the north of the basin of Babil (Tell Isin), "al-Ayat"; it passes below Kajr Ibn Hubrar: the upper Shaj passes into the lower Sarr canal; its direct continuation onwards is called Sarrat al-Kaban, and after passing the town of al-Nabi it is called Nahar al-Nabi and reaches the village of al-Nas (4 miles from al-Namuny on the Tigris), where one can trans-ship cargo and sail direct to the Tigris, or turn to the south, reaching the Tigris at Nahal Shaj (opposite Madikishtay, which lies on the east bank) (on the subsidiary name Sarr, Syr. 393, see Marquart, p. 104). The lower Shaj (Sarrat al-A'asaf) passes several places, among which the locality called al-Dumaniya by Ibn Serapion is the Tigris of the later geographers (found 2393 = 1102 by the Maridjaif Suff al-Dawla); this arm is in the modern Shaj arm; at al-Hills a canal branched off to the E. The Nahar Nabi, said to be called after the Sinbad Nasser (2724) who ordered it to be made. The Shaj and the Nabi finally pour their waters into the Euphrates (sarrat, Yalut, 1. 770), which crosses the northern edge of the Bahrib and is taken from the western arm of the Euphrates, a day's journey north of Khalees al-Kaxair, which is apparently identical with the Aramaic Pambotta (see fur Al-Khadair, the celebrated centre of Jewish scholarship (mentioned by Benjamin of Tudela in the 12th century) after it takes the waters of the Shaj and Nahar, the Euphrates (Euphrates arm) after a course of about 60 miles causes the great swamp.

The two main rivers were joined higher up by canals, in addition to the above waterways. The important canal, Nahar Duqlis, which branched off from the Euphrates near al-Rahib (5 miles from Khalees al-Kaxair) and reached the Tigris between the two banks and Baghdad, does not belong to the Tigris but to al-Dumaniya which adjoins it on the north; it sent off numerous branch canals into the districts belonging to the Tigris (Mahkia, kayakidhat) and also a canal, it appears, was silted up in 340 (1951), and its name was transferred to an arm which branched off from the Tigris not far from Samsuri. From al-Anahla onwards four canals leave the Euphrates: 1. Nahar al-Lab as its course is not certain; it may in general be identified with the modern Nahar Saqilba; it is called after the Nahar al-Lab (Ibn Serapion, p. 238), i.e. Abadi; the name of the river is given by the authority of Sulaiman b. Mahannah; he himself in his notes of the two first canals on the Euphrates (on the geographer, the name of al-Anahla is entered as "Shajra" on the north bank of the Saqilba, 6 miles from its beginning) near al-Fallujah; it irrigated the orasad of Fallujah; at al-Musulwa, a number of canals branched off towards Baghadad; it entered the Tigris below the Saqilba; on the English map the Saqilba canal runs through the lake of Akkar Kut, i.e. the orasad of the geographers (e.g. Yalut, iii. 607) which is assumed to be at the south end; Le Strange wishes to locate the Musulwa of Ibn Serapion there; on E. Kirresp's map in Oppenheim's book, the Shaj of the Saqilba is called in the southern part Khur al-Ana; so far from the beginning of the canal, west of the Euphrates, on the English map is marked the Habbania (Habbania) lock, which is one of the main works of Willcocks's irrigation scheme; on Midhat's plan for draining the Saqilba swamp, see Oppenheim, ii. 288; a different account is given by Balikli (Ispahan, p. 84 sqq.; Ibn Hawaik, p. 1665); according to him, small streams run off from the Nahar Nabi, which again join together to form a stream, the Nahar al-Sarar, which enters the Tigris, while the main stream, the Nahar Nabi, itself reaches the Tigris in the middle of Baghdad; ships can sail on it to its end, while navigation is not possible on the Nahar al-Sarar on account of the weirs; 3. Nahar Sarar branches from the Euphrates 3 furad (about 12 miles) below Dimaniya, flows through a part of the district of Baxtraya (spelled "rayy") in Yalut, 1. 452, this is not correct; it runs only by "rayy" or "rsayy" and reaches the Tigris 4 furad (16 miles) above al-Musulwa, see Ibn Serapion, p. 15; according to Balikli (Ispahan, p. 85); Ibn Hawaik, p. 166), the network or channels which interconnects the continuous Sarnia between Baghdad and Kafo (cf. above p. 543) begins with the Nahar Sarar, on which lies the little town of Sarar, 3 furad below Baghdad according to Yalut, iii. 354, who says that the Nahar Nabi is sometimes called Nahar Sarar; there is obvious confusion with the Nahar al-Sarar, on the connections of which with the Nahar Nabi, see just above; 3. Nahar al-Malik branches from the Euphrates 3 furad below the Nahar Sarar and reaches the Tigris 3 furad below al-Musulwa; it is also the name of a furad in the Euphrates (to Ibn Serapion, p. 16); Le Strange's statement (p. 68), that the Nahr al-Malik began at al-Sarar, is incorrect; this is impossible, for this place is only about 12 miles from the head of the Nahar Nabi, while the head of the Nahar al-Malik is about 30 miles from that of the Nahar Nabi and should be sought in the region about Khalees al-Kaxair. Nahar al-Malik was also the name of one of the four "arasad" of Bibanik (al-Awasa), while the two Fakirja were "arasad" of Bibanik.
bâdh al-'Akk. 4. Nahr Khafî leaves the Euphrates about 2° of south of Nahr al-Malik and reaches the Tigriot 4° so south of al-Malîk; it flows through an extraordinarily rich country and many canals go off from it. The passing of Khafî in the Kûsâ of Ash-dârgh Bâshân and a part of the Khafî Nahr Dâwâr; it flows through Kûfî Khafî (Ibn Siûmîn, p. 122), Ibn Hawâk, p. 185 (Yâkût, iv. 317), mentions besides Kûfî Khafî, where Abûna was born and buried, a Kûfî al-Yârî (Arabicised Armâni); Kûfî Rabûb is said to be sought in the Tall Hamish of the map (due east of Musâfirîb). Of the canals from the Tigris, which are independent of the Nahr, one has already been alluded to: Nahr Dâwâr (see p. 514); in Bûkhi (Istakhkî, p. 77 NF.; Ibn Hawâk, p. 153), its exit (ifâda) is a little below. Tall Hamish, is the water part of this town and then the Sawâd of Şurâr, up to the vicinity of Baghdad (Istakhkî); a large part of the Sawâd of Baghdad is irrigated by it. This was the highest state of affairs; later the name was limited to the upper part of the Sawâd of al-Kindî (more correctly) of the Tigriot arm; this is reflected in the account in Yâkût (ii. 552), where the river rises between Takrit and Baghshàt below Şurâr, returning to the Tigris after flowing through a large area. Abu 'l-Fadlî, who only compiled without troubling about discrepancies, gives both accounts; p. 30, according to Yâkût: Mûsâibî, p. 289, according to Ibn Hawâk. Abu 'l-Fadlî has however combined Ibn Hawâk's version with a note by Ibn Saûd; to the extent that the Nahr al-Istakhkî be in the west of and east of Takrit; the latter is reflects with Ibn Serânî, p. 18 NF. (translation and commentary, p. 357 NF.;) although the map of Ibn Serânî agrees in saying "east" with Abu 'l-Fadlî (or Ibn Saûd), "west" is certainly the correct reading. The difference in the statements can be explained by the various stages: in the older stages there was a large canal (arm) of the Euphrates, which was called sometimes Istakhkî after its maker, and sometimes by the diminutive Dâwâr, Şurâr brought great havoc: the innumerable extravagances exploited the land for purposes of luxury: when the days of splendour were over, many great works of the older period disappeared, including the northern works of the Istakhkî-Dâwâr; only antiquaries still know anything of it: the rest of the world knew of the Dâwâr which even the extravagance of Şurâr had not been able to destroy and which is said still to exist (see 169.5. 1 the map in Qoppâmah). To restore all those once ill-giving watercourses is the task to be solved by civilisation in the near decades: The scheme has been drawn up by the English engineer Willmack (169.6. 1 the Irrigation of Mesopotamia). Cairo 1905). So far the Hindiyâ dam has been completed (opened in December 1913); the lock of Habbûnîya is being built and it was intended to have been finished in 1916. One of the greatest tasks, the drainage of the marshes between Kûfî and the Tigris around Kurû and Bayra and the restoration of a sufficiently deep, broad channel for the Euphrates, now becomes of subsidiary importance, for, although the waterway still retains its importance besides the railway, which is to connect the two important cities of the land, the railway, which is to run along the south edge of the marshes and north edge of the Arabian steppes, will suffice to carry the traffic and waterways through the marshes will be mainly regarded as feeders for the railway. For certain goods the water-route from and to Nejd will be a necessity, if they are to be able to compete in the markets. The canals to be revived cannot be intended as transport channels; the principal rule for the Iraq has been rightly laid down: that the watercourses are there for irrigation purposes and not for navigation. But people have gone too far in their zeal against the latter use, and the two great rivers must admit any longer unused, but they must be made to carry the valuable surpluses if we are not to be reproached with neglecting an economic factor of the first importance. The lower course of the Euphrates between Kûfî and the junction of the modern main canal and Tigris at Garma 'Ali (10 m. north of Basra) is a swampy area [Bâthîa, q. v.], which probably by an earlier period stretched to Musâfirîb. Compared with the earlier extent of the Bâthîa as given by the Arab geographers (Kadûnâm, 1300 sq. miles! as only linear measure is given, uncertain: Sprunger's calculation, according to Maâdî (Bâshânîyûs, p. 47), is wrong; see ibn Wâgîn in Fârâbî, Gvrt. Gm., Fī hī, 1902, p. 259); the marshes began (since near Kûfî) the modern extent is limited, about 1750 sq. m. (but the area north of the Bâthîa, between Şurâr al-Kindî and the Tigris is not yet investigated, there are said to be extensive marshes there also). Even now there are still a number of bâdwan (truly, kîbû), also nakhûr for some notes on the word, see Littârtî, Jâhanînûs, p. 64; note 51). lakes formed by inundation: the English map shows in addition to Kûfî Abû Kâfûn and Kûfî Dârâs, also Kûfî al-Hamâr, the largest area of water. There are also lakes formed by inundation in the whole area between the Hindiyâ arm and the Shahî al-Kindî; they are to be distinguished from the waters called Aqâs, like Bahr Nejd, and Bahr al-Shâbûnîya; the Bâthîa and the borders of the Shatt's are intersected by navigable canals. The Kûfî Huawei and Kûfî al-Aqâm through which the Karshâk flows to the Tigris also belongs to the Shahî, Kûfî also the name of the watercourses in the delta of the Shatt al-Askâr, which have a different character from the lakes formed by inundation.

The rich soil of this country provides a fertile crop of corn of the first quality. Knowledge of this at one time penetrated into Arabia, the Bedouins of which were on terms of intercourse with the principality of al-Hîn (q. v.), which lay on the border of the blessed country and saw both sides. Every thing political power in Arabia when it felt strong enough had to make its first attack on the rich Iraq. Here the material basis was to be found: government which wished to set out on a policy of conquest; here were found the means to satisfy the "warriors of the Faith," to whom the bowmen adhered with the compact of this country seemed more valuable than the prospect of the joy of Paradise. Arab tradition makes this clear in the story that the Bedouins were urged by their wives to get them the rich corn that grew in the Iraq. But Iraq was at the same time the door for an invasion into the Persian empire. Muhammad, who had a good political instinct, could not wait to notice that in his period a great struggle was raging between the two world powers of which he might be able to reap the benefit as
the situation; his best officer, al-Muhallab, joined 'Abd al-Malik (q.v.) and a governor of the Damascus government returned to Basra (72 = 694). The Khurâsân were a source of continual unrest; they were often united by the Jund Jâlib, they never permanently held a dominating position and were opposed by all the other parties. The government of Kufa was sometimes combined with that of Basra, but in that case the governors-general had deputy governors under him. We know of the following governors of Kufa: 73—75 (683—685) 'Abd Allah b. Khalid; 76—78 (685—687) al-Dalhakan b. Rasd; 79—80 (687—688) Iblîs b. Umm al-Khamis, 59—60 (688—689) al-Nu'mân b. Jahlîl; 64 (684) Abd al-Malik, 64—65 (684—685) 'Abd Allah b. Husnîl (the Al-Ashrî, i.e. in charge of the garrison) as deputy (685—686) of 'Uthmân b. Mas'in (q.v. under Basra) in Kufa. In the same year Mukhtar appeared in Kufa, where 'Abd Allah b. Zairîa had a governor. In Kufa in 73 (694), the activity of al-Hâjjâj b. Yâsîl (q.v.) began; he had been appointed governor of the whole of the Irân by 'Abd al-Malik and his able and energetic government captured all the revolts of the Betajis, who had joined the pretender 'Abd al-Rahmân b. Mu'ammar b. Abî al-Âsî (q.v.) was finished by the battles of Khurâsân and Mâshîkh (685). Al-Hâjjâj b. Yâsîl took efficient measures to put an end to the foolish activities of the towns of Khurâsân and Basra; he created a centre of economic and intellectual life for the Irân in al-Wajh (Shatt al-Hâlî), from which Khurâsân and Basra, which were not far for distant (Kufa 720 miles), could hear. The value of 'Abd al-Malik's administrative reforms was of great benefit to the Irân (its fundamental principle was that of unity, which was indispensable for a healthy development); the most important was the reform of the currency, which began in the year 73 (694) and replaced the Byzantine and Persian coin current in the empire by coins with Arabic legends (the older legend were retained on some of the copper coins on the silver in some parts of the empire the last of Khûsân and the first after were retained: only the inscription of faith was pierced on the margin). 'Abd al-Malik acquired much merit by organizing the postal service although it was only used for carrying persons and messengers in the interest of the government. Finally Arabia was ordered by the official language previously written documents had been in the language of the country, or in it and in Arabo-Persian in al-Wajh also (685—686 = 705—715) al-Hâjjâj b. Yâsîl retained his peculiar position. The figure of this man, in spite of the contradictory, on the whole unfavourable, accounts of the Arabic sources is still quite distinct to us. We know that there was a whole school which systematically depicted in black colours all that the Qumâyra did, especially all the actions of his great statement, this is the Irân school, the chief representative of which is Sulî b. Omân (clearly illustrated by Weidemann, cf. Costandi, v. 21, p. 305). Unbiased historical research will do justice to the merits of al-Hâjjâj, but it must confess that one element in his administration had a pernicious influence on the development of the whole empire: that was the way in which he favoured his own Arabian countrymen, the Khûsân. Therefore all the soldiers in the army and the government and all elements in the population who sided with the
Yamanis were against him, as were also the 'Abids, whose pretensions he recklessly combatted. He took energetic measures against all men who fought for their particular interests, like al-Mahalli, who used every party when it seemed to be for his advantage. The tension produced by al-Haddad's ruthless procedure did not find full vent in explosion, as al-Walidi, a true son of his father, by his cautions and clever policy was able to avoid fatal outbursts of the principal feud, viz. that between the Kafrin and the Yamanis. The storm burst as soon as al-Walidi had died, for his brother Sulaiman who followed him (960–997) was under the influence of the enemies of al-Haddad, the embittered Yamani. Al-Haddad, on the other hand, had made a change for the better, for he had been in office for six months before al-Walidi. The coup d'etat which began with Sulaiman first showed itself in the appointment of Yazid b. al-Mahalli, one of the most dangerous intriguers and agitators, as governor of the 'Iraq (995–1014). The new lord began a reign of terror; the most prominent men of the North Arab party were persecuted and ill-treated. With Sulaiman's death there began a period of government by factions, which at every change in the throne resulted in intolerable uncertainty and dangers. 'Umar II, son of 'Abd al-Azz b. Marwan, checked the activities of Yazid b. al-Mahalli for a time by imprisoning him (in the Citadel of Aleppo, 8th of 1005). He, however, was released (1014) when Yazid was expected, the rebellion which he at one time stirred up in Bâna was suppressed by Marwan b. 'Abd al-Walid (995–1012). As a reward his brother Yazid II (1015–1030) appointed him governor of Khurṣan, Bâna, and Kafrin, separate districts. For them being placed in them. Marwan II, son of 'Abd al-Azz b. al-Kasri as governor of the 'Iraq by Hishâm (1015–1027) had a beneficial result. With the death of Hishâm, however, the clearest confusion prevailed throughout the empire; passions were vented without restraint, and the factions of North and South Arabia into which all prevailing antagonisms were still other differences were merged, felt on one another. Al-Walid II who followed Hishâm was a Kalâf whose brother had been cruelly executed. In Marwan II (1027–1032) a Marwanid army took energetic steps against the rebellions. In the battle of Kharáz Marwan II and his army were decisively defeated by the 'Abids. The battle of Kharáz, to the emperor of the 'Abids, was at the close of the 6th century (1032). The 'Abids took the place of the Omeyyads. Going back for a moment we may mention a political principle introduced by Marwān and maintained by his successors as a regular rule, viz. that the major the role of the Omeyyads would certainly disappear more quickly. Marwān succeeded in nullifying his rule in the 'Iraq by circulating and isolating the country in a relatively short time by his policy of wise moderation, which was conducted essentially in the consideration he paid to the inclinations of the people and in the humiliation into the spirit of the principle of territorial military service. While all the troops in the 'Iraq were foreigners but stationed in few, the numerous conversions to Islam soon supplied sufficient men for the local forces. The fact that these troops were not used outside the country or only in campaigns against the west had the disadvantage that the enemies of the Omeyyads were able to find a strong support in them. Allah Muslim fought with 'Amr b. 'Abd al-Malik against the Omeyyads, who only had the Syrian troops on their side. In the civil administration also Musiyya and his successors showed themselves excellent administrators: although they did not allow the 'Iraqi to choose their own governor, but instead chose them, they still gave the right to appeal and changed the individuals, an important concession which in no way meant an alteration of the system. In fact, another way the Omeyyad rule was beneficial to the 'Iraq. These rulers recognized that the 'Iraq with its agriculture, dependent on specific methods of cultivation, required to be administered with particular care; neither arbitrary interference nor complete laissez-faire were here suitable. In not a few cases the representatives of the central government had to improve on the native, like Marwan, the Caliph's brother, who built a new city. The economic results of the Omeyyad rule in the 'Iraq are to be seen all the more highly appreciated as they had to compete with the hostility of the Caliph (Kafif was in the hands of the 'Abids). The difference between Syria and the 'Iraq during the Omeyyad period is that in Syria there was union and coherence and in the 'Iraq constant strife. The 'Abids, who had been already mentioned as well as the fighting between North and South Arabs, who opposed another in the 'Iraq under the names "Tanzim" and "Aziz"; in spite of all these troubles, the great Marwanid succeeded in reconciling the position and bringing about a certain degree of coherence in the whole empire. The turn given to the Muslim empire by the victory of the 'Abids seemed likely to make the unity permanent. The transfer of the capital to the new city of Bagdad consolidated the connection of the regions belonging to the central empire. The division of the eastern provinces and the influence of the Caliph and his successor, who was suddenly and unexpectedly of the age of 20, frightened the empire, and the empire that was to be known as the empire of the 'Abids and the empire of the Abbasids, was already in its initial period. The term 'Abids meant the term of the empire, which was to last for a much longer time than that of the 'Abids. The empire of the 'Abids and the empire of the Abbasids were the same.
soon, but much of them had besides its own special conditions. The situs in the structure of the caliphate, which was bound to prove fatal, lay in having the sovereignty of the dynasty an aristocracy of birth and religion. Alongside of the clan which championed; this was another of the same, which also tended to make good use of the caliph’s claims and to work for the overthrow of the dominant clan. The latter were the descendants of ‘Alī and Khālid, whose partisans formed themselves into a politico-religious party and were a great danger, not so much on account of their numbers, for then as now they cannot have numbered more than a tenth of all Muslins, but they formed the most intelligent and most industrious part of the Muslim population. Besides the clan and religious elements in the city there soon appeared a third, the racial. The predominant majority was Arab. Thence Arabs treated the Persians with contempt; the latter had also to attach themselves as clients to an Arab clan. Their ill-treatment led them to join with the other group, the Shia’ ‘Alī “the followers of ‘Alī”, who were severely oppressed by the dominant clan and its government. Their common sufferings formed a strong bond of union. A religious and nationalist party grew out of the at first purely Arab Shia’ ‘Alī. Persian and Shia’ gradually became synonymous. The danger was at first avoided: a skillful policy bridged over the differences for a space of about 40 years. The Caliph al-Manṣūr, the second ‘Abbasid (236–258 = 754–775), summoned a prominent Persian, named Khālid, of the Barmak family, and to be related to the old royal family, to a high office in the Government. Unknown, a man worth his salt, perfectly capable and clever men, this family attained an almost autocratic position. This period marks the zenith of the political power and economic prosperity of the caliphate, while at the same time a civilization flourishd that was conditioned by a limited external adaptation to the great cultural elements which the conquering Arabs found in Syria and Babylonia; but the foundations for a further prosperous development were not created. Nor could it be otherwise; for the system of government which at the very beginning of the Omeyyad period had replaced the originally democratic type based upon the idea that the prosperity of the Muslim community was secured by placing at the head of the government the man most worthy of this office, to exercise his control perfectly he had to have unlimited power and very soon this conception of the caliph became accepted to such a degree that he was actually regarded as the “Shadow of God”. In practice this absolute ruler was usually not only not the most worthy, but frequently one who had the graven mental defects and at the same time a plaything in the hands of those who exploited the community in his name. In an administration of this kind two tendencies developed. In a most disastrous fashion the formation of gigantic fortresses and the process of the “pacification” of one particular theological school. At the same time, a number of adventures arose which troubled the affairs of the caliph’s throne. The caliphate broke up into a number of communities which existed almost independently alongside of one another. In each of these communities a development followed the course settled by local conditions. The ‘Iraq also followed its own devices. From the beginning of the ‘Abbasid rule to the end of the Sādūqī period it was a province of a kingdom whose centre was in Persian ‘Iraq, but which was no marked policy of interference by the rules; provided that the inhabitants bore patiently the oppression of their foreign masters and their heavy demands for money, they were allowed liberty to maintain their national life. The revival of the authority of the caliph under the vigorous Caliph al-Ma’mūn brought no essential alteration. This period, besides, was soon ended by the Mongol invasion.

In the long period of ‘Abbasid rule the ‘Iraq suffered many vicissitudes. When the caliphs were strong, the conflicts between the various elements and the aspirations of ambitious adventurers were speedily crushed, otherwise, the land suffered considerable distress; for the Kufa and Basra people were incapable as regards their main faults. The new capital attracted the worst elements to itself; at the same time the revival of economic prosperity brought masses into the country, who, when the time came, could be stirred up by ambitious individuals, as for example happened with the rebellion of the Zanj imported from East Africa; finally, the religious fervour which was glowing beneath the sahāba, again and again burst forth in burning and consuming flames. The extraordinary shift with which the Barmakids and, under their guidance, three caliphs maintained the delicate balance between Arabs and Persians, was lacking when the Barmak family was destroyed. The extermination of the Barmakids which resulted in an essential alteration in the ethico-political balance of power in the ‘Iraq, meant that the policy of conciliation and mediation between the two main elements, the ‘Arab and Persian, was at an end. The overthrow of the balance first showed itself in a series of ‘Alid troubles, which began with the rising of Ibn Ta’labān (109 = 815). The capital stood by the Sunni caliphate and even went so far as to oppose the Caliph himself when the latter in pursuit of an uncontrollable policy of conciliation made the mistake of planning to give the succession to the ‘Alid Ismā‘īl al-Ri‘a‘ as husband of his daughter and adopting the green colour of the ‘Alids. As soon as he saw his mistake, he united his measures not without the use of force. The extermination of the Barmakids did not conduct to the strengthening of the political power of the ‘Iraq in the ‘Iraq, but to its destruction, for the dislocation of the delicate relations in the central province led to the introduction of a new element into the court service and thus into political life. Al-Mu’tasim created for himself a Turkish praetorian guard and lived under its protection in Samarrā‘ which was founded by him. The Turkish forces with which the caliphs surrounded themselves stood alone and the existing Arab bodies of troops fell into the background before it, as the former had much more energy and soldierly spirit. The people then became united to defend themselves and were at the mercy of those who ruled the land with the help of foreign troops, either as the appointed representatives of the Caliph or as warlords who retained the land by force. These foreign bodies also turned to gain control of the other provinces. We have already seen that Turkish families gained the ruling power in Egypt and therefore in ‘Iraq, but this did not mean the
somewhat of a system of regionalism, although the land 
farmed hardly any troops worth mentioning.
In the Ahrar under al-Musawakkil Turkish 
procurators came into power and made any orderly 
government impossible. The caliph was a few 
exceptions (al-Musawawkil 892–902) and al-Mutawakki 
(902–908) were utterly incapable and occasionally 
criminally self-seeking. The struggle for power 
around the caliph, that is for the office of 
generalship (Amir al-Umara'), came to an end 
for a time through the rise of the Buyids (554 = 945), 
who ruled the two Ahrar, Babylonia and Media 
(cf. the beginning of the article). During the 
short period of the Buyids there was complete 
collapse of the decadent Buyid family and the 
crise of the strong Turk family of Sahsik (447 = 
1054), a peculiar combination arose: a Turk 
general of the Buyid army, Arabo-Bakhtiyar (q.v.), 
ruled for a short time in the Ahrar in name of the 
Fathidim al-Mustansir (451 = 1059). But as a 
result of the great distance between the Ahrar 
and Egypt and southern Syria (the inhospitable 
Syrian steppes makes it necessary to take a deviant 
route via north Syria) there could be no question of 
real Fathidim rule in the Ahrar. The intervention 
of the Bakhtiyar was an episode which very 
quickly passed. The Sahsik, who appeared as the 
main champions of the Turks and had caliph 
completely in their power, also considered 
themselves the protectors of the Buyid family 
and persecuted the Shi'a whenever it raised its 
head in the Ahrar. Although they showed an 
inclination for Persian culture (the great Sahsik 
resided not in Baghdad but in Isfahan), they 
did not interfere with the Arab culture of the Ahrar.
The temporary redemption of a certain amount of power 
by the caliphate under Najir al-Din made 
only little alteration in the political and religious 
conditions. The Ahrar became an easy prey to 
the Mongol conqueror Hulagu (666 = 1258), and 
its capital Baghdad sank to be a minor provincial 
town on the extinction of the caliphate. 
The dissolution of the country, as a result of the 
complete neglect of organised irrigation had begun 
as early as the beginning of the 8th century, 
continued until the 10th century, and became 
still more evident with a few large 
villages and sprawl stretches on which the 
culture of the date palms was of some importance. The incorporation 
of the Ahrar, in Persia by the powerful Safavid Shah 
Isma'il (915 = 1509) was a permanent. 
The country very soon (941 = 1534) fell to the Ottoman 
empire, of which it was a province until 1918.

**IRAM** is the name of an individual chieftain which occupies the same position in Muslim 
genealogy as Aram in Biblical, as may be seen from a comparison of the Muslim series (Down i. i. 27. 5. h. Aram b. 
many others, entailed a change of geography under Jewish 
fluence and therefore gives no new information 
regard to the dissemination of Aramana in Arabia.
The same is identified with that of the Irani 
Abi'l-imam discussed below, the localization 
of which was established. Perhaps this explains why 
the Muslims say 'Arab instead of Aram.

Tradition has still further developed the connection 
with the Aramanaeans. The people 'Abi [q.v.] 
were called 'Arab, when the 'Abids were destroyed, 
the name 'Arab was transferred to Shamal whose 
descendants they believed to be the Nabataeans of 
the Saba. It was also known to Muslim scholars 
that Damascus in ancient times was called 
Ibrah. Aram.

Bibliography: See the next article.

**IRAM DHAT AL-IMAM** occurs in the Karla 
only in Sura 89, 61: 'G13. Hast thou not seen how 
thy Lord dealt with 'Ad, (6) 'Irmin dhat al-Imam, 
the like whereof hath not been created in the lands'.
The connection between 'Ad and 'Arab in these 
verses may be interpreted in various ways, as the 
commentators explain at length. If 'Arab is taken 
in contrast to 'Ad, it is intelligible why 'Irmin 
also has been taken as a tribal name; 'Imam 
could then be taken in the sense of 'tent-pole'.
According to others, the pole is a description of 
the giant figure of the 'Arab, which is thus particularly 
emphasised. If 'Irmin stands in 1:62 to 'Ad, 
it is more probable that 'Irmin dhat al-Imam is a 
geographical term: 'Arab with the pillar'. This 
is the prevailing opinion among Muslims. What 
is exactly referred to, however, is not at all clear 
on which opinion stands best in east and west. 
According to Ya'qub, the view most frequently held 
is that which considers 'Irmin dhat al-Imam an epitaph 
of Damascus [q.v. i. 903b]; Isma'il b. Su'd b. 
'Ad [see DAMASCUS, n. 904a] it is said to have 
nrowned here and have built a town adorned 
with marble columns. Both has used this tradition 
in support of his view that only Aramaic traditions 
are associated with the name 'Arab.

'Iram, however, is frequently referred to Muslims 
to South Arabia to which 'Ad also belonged. 'Ad 
had two sons, Shaddad and Shadil. After the 
death of the latter, Shaddad subdivided the kings of 
the world; when his heard of Paradise he had a town 
built on the steppes of Aden which was to be an 
imitation of Paradise. Its stones were of gold and 
silver and its walls made of emerald, etc. When 
Shaddad, after neglecting the warning of Hadi 
[9. 42], wished to see the town, he was destroyed 
by a tornado with his whole retinue a day's 
journey from 'Arab and the whole town buried 
in sand.
In a tradition given by al-Mas'udi (II. 482) the 
story does not have a tragic ending. After Shad: 

...
IRAM DIAT or IMAD — IHRID

(80) [Image 0x0 to 449x693]

died had built Iram, he wished to erect a duplica-
tion of the town on the site of Damascus. When
Ali's dawat came to finish the palace, he
recovered traces of a great building with many
columns of marble. On one of these was an
inscription of Shaddad b. 'Abd b. Shaddad b. 'Abd,
in which he related that he had had this town built
on the model of Jerusalem, but God put a
brace to his life; as one should be tempted to
undertake too great a thing. — It is easy to
see that this tradition is connected with the romance
of Alexander, in which it is related (Pseudo-
Callistus, ed. C. Müller, l. 33) that at the
building of Alexandria a temple with obelisks was
found which had an inscription of King Scen-
chis who ruled the world. The warning mentioned
in mid-Mas'ud's inscription is also quite in the tenor
of the Alexander legend. We therefore must
not expect here a tradition concerning the site of
Iram. It must be noted, however, that Tahirt also
in his commentary on the Qur'an gives the view
that Iram was identical with Alexandria.

It is further related that a certain 'Abd Allah b.
Kibla while seeking two lost camels came by chance on the ruins of the temple, from the rains of
which he bought meal, campfire, and pearls to
Makar. All these however became lost when
exposed to the air. Makar summoned Kabb al-
Adlak to him and asked him about the town.
The latter at once replied: It must be Iram of
the plains, which we cannot find, is the city
by a man, whose appearance is as follows. the
description read 'Abd Allah exactly. The hardly
complained tone of mockery with which al-Mas'ud
relates all this (tNsr, re SS) is worth noting.

According to Muslim scholars, this Iram (Ibt.
al-Imad lay near 'Amman between Seerah and
Hadramaut or between 'Ontha and Hadramait.
It should be noted that the form of the name
Iram is South Arabian: Hamidinn mentions a hill
and a well of the same name in South Arabia.
This fact is a refutation of the opinion of Lust,
who considers Aramaic references exclusively.

It is likewise clear that we have not to accept
the stories about this tribe Iram = Aram and
Iram al-Imad which is assumed by Muslim tradition.
— The story of the finding of the family tomb of 'Abd b. Iram is found in D. H.
Müller, Siywarbriy Shatrah (Nile, eor. Abdu, Wies, philos.-lit., Klein, lex., 134 1897).

IRAN. [See PERSIA.]

IRATEN. Berbers of the Iraten tribe (see Att). Arabic RABE-IRATEN, a tribe of Gbara. Kabylia, whose ter-
ritory is bounded on the north by the Seihan, in
the west by the Wadi Ata, which separates them from the
Bani Yemini, in the south by the district
of the Alt Yabbiy and, in the east by that of the
Alt Frances, and forms a tiny country from 3000
to 5000 foot in height, yielding olives and
figs and some corn. The inhabitants are settled
in several villages, of which the most important are
Adebi, Tawriti Amokta, Ummam, and Aeggana.
To-day the Bani Raten form a single tribe, where the
tribes belonging to the mixed community of Fort
National.

We know little about the history of the Alt
Irate, Bani Khadim (Hist. des berbers, transcript. de
Siene, l. 250) mentions them as inhabitants of
the "mountains between Bougie and Tadella.
They were nominally under allegiance to the
Governor of Bougie and were on the list of tribes liable to shuraya; while they were actually independent.
Towards the end of the 9th century when the Masmid al-Hasan undertook his campaign to Kusir, they were
subject to a woman, called Shams, of the family of the "Abd al-Samad, from whom the chiefs of the
Alt Irate were descended.

During the whole Turkish period, the Alt Irate
maintained their independence, secure behind their
mountains. They formed one of the most powerful federations in Kabylia, which comprised five
sects: Alt Irate, Akerm, Ussitam, Aeggana, and
Ummam, and could put in the field a force of 25,000 men. They kept their independence until 1833, when the French under Marshal Randon for the first time penetrated into the Kabylie mountains (i.e., Algérie, l. 379), to prevent a hostile invasion of their territory by the Alt Irate, who agreed to give hostages and to pay tribute. Nevertheless, the Bani Raten remained a hotbed of intrigues against French rule, so that
Randon in 1837 decided to subdue them completely.
The French troops leaving Tizi-Ouz ou on May 24 conquered all the Kabyle villages in suc-
cession and on May 29 destroyed the army of the
Alt Irate and their allies on the plateau of Sék-
Abat. On May 26 the Alt Irate offered a sub-
tent. To keep them in check Randon at once
began to build Fort Napoleon (now Fort National)
in the heart of their country and thus placed
"in the eye of Kabylia." The Bani Raten were then quiet for 15 years, but in 1874 they again had recourse to arms and took part in the
siege of Fort National, which however the rebels
did not succeed in capturing.

Irbil.

IRBIL — IRILL.

The remarkable role of the region in the history of the Arab-Berber peoples, particularly in the period of the Arab conquest, is evident in the many legends and traditions that have been preserved in the archives and libraries of the region. In the 7th century CE, the region was conquered by the Arab armies under the leadership of Abd al-Malik ibn Marwan, who established the Umayyad Caliphate in Damascus. The region remained under Arab rule until the 11th century, when it was conquered by the Seljuk Turks and later by the Mongols. The Ottoman Empire later ruled the region until the 20th century, when it was occupied by British forces during World War I.

In addition to its historical significance, the region of Irbil is also known for its rich cultural heritage, with numerous archaeological sites and historical monuments. The region is home to a diverse population, with a mix of Arab, Kurdish, and Assyrian communities, each with its own distinct culture and traditions.

However, the region has also faced significant challenges in recent years, with conflict and instability affecting the region and its people. The conflict has led to the displacement of many people, and the region continues to face economic and social challenges.

Despite these challenges, the region remains a vibrant cultural and historical center, with a rich legacy that continues to shape the identity and culture of the people who live there.
one of the most important military points in it was garrisoned by a strong force of Janissaries. When the wilayet of Mäwil was separated from that of Baghdad, Iribil went with the former.

The conversion to Christianity of the district of Adabace and the adjoining regions was mainly accomplished from Iribil. A bishop had his seat here at a very early date. The diocese originally comprised only the area between the two rivers, therefore it was called by the Syrians the diocese of Hudayyab on, from the headquarters of the bishop, of Arabi or Hazzah (a village near A.). At the beginning of the 19th century, Iribil was elevated to the rank of an archbishopric, to which the whole of Assyria proper was subordinated. Not till a later date was the bishopric of Nineveh (Mäwil) or Arbil separated from it as an independent ecclesiastical province. On the importance of Iribil in pre-Islamic Assyrian church history, cf. especially the chronicle probably composed by a clerk of the diocese of Iribil, which A. Mingana published in Sources Syriques, l. (Leipzig 1898) in a short discussion in the Acht der Berl. Akad. Wissensch. 1912, Nr. 6. This chronicle is primarily concerned with the history of the bishops and martyrs of our bishopric for the period 100-540 (551) a. d. See also Labourt, Le Christianisme dans 1'Empire Persé (1904), passim (Index, p. 356).

In 1668 the Nestorian Catholicos moved his see from Baghdad to Iribil, but as early as 1274 he removed from here to Uşgh in Adabace, since the Christians as a result of the machinations of the Ayyubids became suspect among the Muslims and had to suffer many insults, cf. Barberousse, Chronique, iv, ed. Abbebo and Lamy, H. 439; 605, Chron. Syr., p. 505; in 594, 549; or pp. D. O'Connor, op. cit., ill. 409. The question of the Christians of Iribil under the ancestors of Hilal (q. v.) and especially under Ghassan (q. v.) and Udajlah, was on the whole very miserable. Kurds and Arabs often fell upon them, plundering and murdering, first of all in the years 1874 and 1875; cf. Barberousse, Chronique, p. 528-529, 557, and 528. In 1575, as an inscription of the 16th century which still exists in the monastery of Mar Behnam records, the Hājān Bābiu, raigned the region of Iribil, cf. H. Pognon, Inscriptions Syriennes de l'arménie (Paris 1867), No. 356, p. 135. In the year 1350, as a result of a royal edict, all Christian churches of the town were destroyed (Barberousse, op. cit., p. 506, 530, et passim, and Hist. de Mar Zabulisk, ed. Bledan, 1895, p. 138); in 1577 the Kurds besieged during several months the Christians who had taken refuge in the upper town (cf. Hist. de M. Zabulisk, p. 121-123). In 1579, in the reign of Udajlah, the Christians, after bravely defending themselves for over three months on the citadel against the besiegers, Arali, Kurid, and Mongol, were overcome and exterminated. We possess an illuminating description of these dark days for Iribil from the pen of the biographer of the then Catholicos Zabuliski, i.e. (Hist. de M. Zabulisk, p. 154—201). From this time onwards Iribil ceased to be a Christian town. But since then also dates the decline of the town. A few Syriac inscriptions on the walls of a building now used as barracks (Nigde) recall the earlier Christian population; cf. Cottin, op. cit., p. 547. In the whole town exist to-day only a few families, a few (Nestorian) scattered Chaldeans, are however to be found in the village of Atakahwa (also written Alabze, Ankawa, Ankowa) a short hour's journey from Iribil, certainly the Amaha of the Hist. de M. Zabuliski, p. 192, and probably the Amaha of Barbarousse, Chronique, l. p. 557, 1 a in its exclusive inhabitants. Next to the Christians the Kurds form numerically the strongest element in the population of the town. From the 11th century the Habikban or Hakimya Kurds settled in and around Iribil; on them cf. Ritter, Ellitino, ix, 622; Quatremere in Nofices et extraites du manuscrit, xii, 301 note 1, 309-311 (extracts form the geographical and historical work of al-Umari, died 749-1348); G. Hoffmann, Syriaca Athoniensis, Münster (1881), p. 239, 247. The chiefs of these tribal tribes, who possessed a considerable number of citadels in the region of Iribil, were frequently fighting with one another for the possession of the town. Accounts of such local feuds in the middle of the 11th century are given for example by the historians of Ibn Khaldun and Bahr al-Din Amin; see Tischhausen in Mém. présentés à l'Acad. des Sciences de St. Petersbourg, viii. (1859), p. 141, 160—161.

As to the present population of Iribil, it numbers, according to Cautet (1892), 3,260 inhabitants of whom 397 are non-Muslims (Jews). The number of houses is said to be 1,822 (Belieck and Lehmam, in 1899, estimated those of the upper town alone as 600), besides the seat of the Turkish governor, a mosque, 10 Muslim chapels and 16 schools. According to the late administrative division of Turkey, Iribil was the capital of a kâfi belonging to the sanjak of Shahrûr and was divided into two districts (nahiyah) comprising 330 villages and 32,000 inhabitants.

Iribil consists of the lower town and an upper town grouped around the citadel. The lower, built by Kökurt (called Koutrots, according to Cautet), which lies at the west and south bases of the citadel hill, makes a very poor impression and now lies for the most part in ruins. It was earlier much more extensive, as may be deduced from the fact that the ditch which once surrounded it now lies far beyond the present scanty group of houses. The lower town is the centre of commercial life and contains the bazaars and khans. Of noteworthy buildings the remains of a large mosque with an imposing minaret, about 205 feet high and 48 feet round (cf. the description in Kicik. H. 15, 539), are especially striking; according to an inscription on the minaret it was built by Kökurt. This mosque is perhaps identical with the Mustafâ al-Kâfi, mentioned by Karwii (loc. cit.), in which, according to him, there was a stone with the imprint of a man's hand. Obviously this refers to a sanctuary with a print of Allah's hand (Kâfi, p.), of which others are known in the Kirk, Mesopotamia, and Persia; cf. for examples, v. Borchem, in Hethfeld-Sauve, Archéologie, Kais im Ephraim- und Tigehseh, 1, 24).

The upper town with the citadel rises from a round hill not quite 65 feet with fairly steep sides. It is obviously artificial, its interior are massive vaulted subterranean passages and chambers. It is crowned by a strong castle which is surrounded by a wall now somewhat ruined, 45 feet high, set with fine millstones, parapets and bastions. The general tell with the base of the citadel upon it is always known the astonishment of traveller's from several hours journey distant it can be seen commanding the
plain. To some extent it reminds one of the castle
hills of Hims and Halah — with which it has
become frequented, compared — but it surpasses
both considerably in the grandeur of its mass. The
castle is occupied by the Hashemite and the
other officials of the town. The bouses of private
amalits are quite close to the surrounding wall.

Systematic excavations have not yet been under-
taken in Irbil now is anything known of any
accidental finds of antiquities.

The importance of Irbil at the present day is
mainly based on its position as a commercial depot
and centre of a busy thoroughfare. Important
caravan routes enter it from different directions.
First mention should be given to the very an-
cient road which runs from Baghdaa via Kerkit,
Alyah-Kurshe to Irbil and then to Mosul; it is
the most direct route between Baghdaa and Mosul,
as it was formerly between Babylon and Nineveh.

Two roads run from Irbil to east and north and
lead over rough mountain passes to the country of
Akhritabiden; the one goes in the first stage to
Rowandghur in the north east and the other to
Khud Sandjak in the east. On the roads from
Irbil and the distances, see especially Rich, ii.
996-997; Jones in the Journ. of the Rey. Asiat.
Soci., 1855, p. 380; and Cuinet, p. 793 sqq.; the
road from Irbil to Maragheh is described by Hofh-
mann, op. cit., p. 231 sqq.

The town of Irbil is the centre of a splendid,
very fertile country, which looks to the eye more
a flat than an undulating plateau. With an aver-
age height of 1500 feet (the lower town of
Irbil is 1332 feet above sea level) it forms the
watershed between the two Zibbas. There is a com-
plete absence of trees, but it affords excellent corn-
growing soil; cypress flourish here exceedingly and
are manufactured in the town. The Persian ge-
ographer Hamid Alizh Mustawfi praises the cotton
grown here in his geographical work Niakat al-
Fakhib about 1340. Numerous streama run in winter
through the plain but there is no perennial river
so that irrigation has in part to be conducted by
subterranean aqueducts. In the north the spurs of
the Kord Alja come fairly near Irbil; west of the
town rises the Demir-Dagh, to a height of
1600 feet. In the north east and east the plain is
bounded by the Durdelawan Dagh is the south
(at Alikhoum) by the Zerughawane Dagh. In
the Southwest the plateau of Irbil is bounded by
the Semnane hillland plain which stretches to the
west of the Great Zibba.

The well cultivated plateau is covered by nu-
merous Kard villages. The Kard tribes, who camp
in the summer in the hills of Rowandghur, migrate
kither in the winter. Most villages have quite
near characteristic innmnd; everywhere small
inensive mounds of ruins, evidence of better days,
when this land so richly endowed by nature was
on a much higher level of civilization than at present.

For the Assyrian Period
Fr. Delitzsch, Wo lie die Paradiese (1881), p. 123, 255, and Streck, Die Inschriften Assyr-
ische (1910), ii. 711; for the Geza-Koma lesions of Paul-Wilson, Keilinschrift der Mass.
Alwertanis, ii. 407-8 (F. Semmel), and Sogham., i. 117 (Streck). — For the Muslim
period apart from works already mentioned, the following are particularly important:
Wulff, Mervan, ed. (Wulsenfeld), i. 185-186; Di-
IRTIFA' (A.), height; in astronomy, the height of a constellation, that is, its distance from the horizon, measured on a circle passing through zenith and nadir (vertical, "east sundial"); in geometry, it is also used for the height of a plane figure (triangle, parallelogram) or of a body (prism, cylinder), but "étendue (pulled, plant line) is much more commonly used.

(II. Surtex.)

IRTISH, a large river in Siberia, in the basin of the Ob; its two sources, the Bure and the White Irtish, rise in the Great Altai; after they join the river, as far as Lake Zaysan bears the name of "Kokisht Irtish." After leaving the lake it flows for about 1,000 miles through steppe country as the "White" or "Slow Irtish," then for 60 miles with a stronger current as the "Rapid Irtish" through a hilly country. At the town of Uskamongol, it enters the Great Siberian plain which sinks away towards the Arctic Sea and besides several smaller tributaries, it receives on the right, the Om and Tara, on the left, the Ilim and the Tobol and falls into the Ob below the village of Samamok. The total length of the river is 6,900 miles of which 3,553 are in the Chinese Turkestan. The railway bridge at Chusov is 410 yards long; the total gradient of the river in its lower course is about 875 yards.

The name is mentioned so easily as the Origin inscriptions of the 8th century B.C. (W. Radloff, Die altiiberischen Brunnen der Mongolen, 1889, p. 191, written without vowels). Max Mader in Khalil al-Zarib (ed. de Goeje, p. 64) speaks of the "Black" and the "White Irtish" and makes both fall into the Caspian Sea. The author of the Khatul discussing Adam (I. 160) (khatul) thinks the Irtish a tributary of the Volog; the name is vocalised Turakh (or Arrakh) in the ps., which is kept up with the story based on a popular etymology (by this *Man, come down," given by Gardot (text in Hauhold, Oeuvres de Foud, t. 192), as described in the Psalms (40:2). In spite of the trading route from Fersch (q. v. III 35) mentioned by Gardot, to the Irtish, the country was little affected in the middle ages by Muslim culture. The river is only seldom mentioned, e.g. in the history of Timur's campaigns, 

The Irtish is navigable almost up to the source of the river, which forms it. Between Tobolok and Uskamongol there is regular steamship traffic. Sometimes the steamer goes up as far as Zaysan and then up the Black Irtish to the Chinese frontier and even beyond it. Since the making of the Siberian railway, the Irtish is of still greater importance as a traffic route.

(II. W. Barthold.)

JES, the proper name of Jesus in the Kur'an, and thence in Islam, is explained by some western scholars (Marzouki, ii. 30; Lambauze and Nichole, Zeitsehr. d. Deutsch. Morgen. Gelehr., iv. 120) as a form imposed upon Muhammad by the Jews and used by him in good faith. The word is also called Jesus Ehsan (292) in hatred and said that the soul of Jesus was transferred to him. Others (J. Deenonbour, Rev. d. Etudes jasou., iv. 120; Franc. Welt. Zeitsehr., 1. 334; Vollers, Zeitsehr. d. Deutsch. Morgen. Gelehr., iv. 352; Naott, Dict. of Christ and the Gospel, i. 861) hold that the name originated naturally by phonetic change from the Syriac word ( latino) with the same combination of letters. For the Muslim explanation of the name see al-Baladaw, Kur'an, lii. 40. (ed. Frischer, 1. 156, l. 21). Titles and descriptions applied to Jesus in the Kur'an and of importance for his position in the theological system of Islam are: "Son of Maryam" (e.g. ii. 40; iv. 160; viii. 35; and often); he was born of Mary, a virgin, by the direct creative act of Allah; "a Word (kalima) from Allah" and "His (Allah's) Word" (ii. 40, iv. 160); this is the creatived word, "to create" (kalaam) which Allah cast (mazd). Also, "Mary," the name of Jesus is spelled by (iii. 55) (also iii. 43); - "Match" (ii. 40, iv. 169 and often), evidently from the Hebrew missi, but how understood by Muhammad is quite uncertain; for Muslim explanations see al-Baladaw, i. 156, ii. 288, "a Spirit from Allah" (iv. 160), so the angels are called spirits and he was a spirit directly from Allah, so, too, Allah formed Adam and breathed into him of his spirit (anbi, xiv. 15; xix. 32); later Islam called him Allah (Jesus) (liii. 290; l. 15); and even Jesus (al-Masih al-Mahdi) of al-Zamakhshari, ed. Lee, ii. 338); - "Abd Allah" (six. 31); "he is taught but not an "idol", (xlii. 29), "he will never disdain to be an "idol of Allah." (iv. 29); "he literally "dread"; he is better rendered theologically by "our creature"; man, for Islam, is the property of Allah in the same sense as a household slave, or, al-Yahudi in the O. T. and nusara in the N. T. and especially of Jesus in Philippians, ii. 7; - "One of those brought near" (to Allah, waj al-mutakarrirun, iv. 40); again the angelic association; later Islam sometimes explains this of his state after his ascension (paal, raf). When he was a semi-angelic figure, round the throne (parad) of Allah (Isai. 65. 17) and the Book, which is+A. D. L. B. B. - Weight, "worthy of regard in this world and in that to come," (lii. 40); Baladawi explains, "as prophet in the one and as intercessor in the other"; - Whoosh, "as we are a man," (xiii. 34); but Baladawi explains the word here and elsewhere as "possessed of much profit for others," apparently meaning a sacrifice; - Unal al-abfi, "the sure saving" in xiii. 35; is obscure and may not be a title but only a statement made - see al-Husayn, i. 580; l. 25. He is a real "prophet" (xii. 31) and real, "amnesty," (xii. 15, 16); and he has a "book." (xii. 15, 31), which is the Book (vii. 90; Ninth. 27). The settlement of him is a "sign" (amir) and "memory" (rufus, xii. 21) and he, and his mother are a "sign" (nihar, 52); he is made a "example," "purable" (matan, alb, 57, 59). He brought "proofs" (b丛aiir) and "wisdom" (hakam, xii. 65; i. 59) and was sided by Allah with the
rith al-ikhtiṣār (1. 847 v. 109), obscure like all mentions of ānā in the Qurʾān but explained, by later Ulama as ḏūlūt, or al-Baidāʾ (in šarīʿah and Ṣīṣa, ii. 290, 1. 15). Allah taught him (ill. 42 v. 110) and he possessed peculiar miraculous powers of raising the dead, healing the sick and making clay birds, and by the permission of Allah, breathing life into them (ill. 44 apq. v. 110 apq.).

On the death of Jesus the statements of the Qurʾān are contradictory. It is certain that Muhammad rejected the Crucifixion and accepted the Ascension, apparently in the birthbody and not in a glorified body; the crucifixion was prevented by a change of resemblance (ṣabbūl ḍalāla, lv. 156), again and in another place explained later by the commentators that his likeness was put upon another and the other crucified in his place. But his death is referred to — "before his death" (lv. 157), "the day I die and on the day I am raised, alive" (xii. 34), yet this verse may have been a mistaken repetition of verse 15. In ill. 48 Allah says to him. "I am about to take you to myself (muṣārufūtuka) and lift thee up (ṣwortha) unto me." The first expression is commonly used of a blessed death, but that is not necessarily its meaning here, for it is also used in the Qurʾān (lv. 60) of Allah's taking him to himself the souls of sleepers during sleep, to be returned when they awake; cf. Frankel in Zeitscr. f. Deutsch. Missions.- Grundsätze, lv. 72. For his Second Coming the only Qurʾānic authority is slisli, 61, a very obscure verse, the reading of which is in doubt. Some read, "And he is the Knowledgeable (al-ṣālih) of the Hour, l. 78 by (the descent of whom the approach of the Hour is known). But others read, "a sign (kalāmahu) of the Hour," and even, "a reminder (ṣadīqulahu)." Others, again, refer the pronoun to the Qurʾān, "it is," his second coming being taken as established, his death is put after it and the references in lv. 157 and xii. 34 are then explained; or, also the descriptive ʿaḥādīn in lv. 41, because he was taken up by Allah as a youth (ṣābihi) before he attained ʿaḥādīn, middle age (cf. al-Baidāʾ, on these passages). The later doctrine of his return is given subly by al-Baidāʾ, on xiii. 61: that he will descend in the Holy Land at a place called Alīy with a spear in his hand, then he will kill with it al-Dadjīl and come to Jerusalem at the time of the middle of the morning; that the armies will seek to yield place to him but that he will refuse and will worship behind him according to the ʿaḥādīn of Muhammad; thereafter he will kill the swine and break the cross and lay it in the synagogues and churches and kill all Christians (Naṣarı) who do not believe in him (ed. Felsharch, ii. 241). To this last point reference is supposed to be made in lv. 157, "there is none of the People of Scripture but will verily believe in him (or: in him before his death)." One of the explanations of this in al-Baidāʾ (i. 244. 1 2) is that after he has killed the last ʿaḥādīn (al-iammah al-ṣadīqu) not one of the People of Scripture will be left who does not believe in him, so that the community (malaq) will become one, the community of Islam. Then will come the final security of man and beast and Jesus will reign. After four years he will sit and the Muslims will hold funeral service for him and bury him (at Medina, it is universally accepted, beside Muhammad, in a vacant space between Abī Bakr and Umar). But others interpret, "before he — the believer — dies," even though it is thus a useless belief, he being at the point of death.

So little can be gathered from the Qurʾān. The oldest traditions have but little more, as in the Ṣaḥīh of al-Bukhāri, where ʿIṣa is merely mentioned in connection with Ṣadīq al-Faṭih, Part ix. 60, ed. Cairo, 1315. Muhammad had been interested in the idea of Anti-Christ as the story of Ḥusayn shows (MacDonald, Religious Attitudes in Islam, p. 34 apq.), but the early Muslims, for political and theological reasons, developed elaborately and forget traditions the doctrine of the Last Things, and especially of the Mahdi and Jesus. Thus the Maqāsid has much more, see Cairo, 1316, ii. 176 apq.; vii. 148 apq. (chap. VII, 245 apq., On Signs of the Hour and the Descent of ʿIṣa). See, too, al-Ṭabarī, Kifāy, p. 22 apq., the full account of ʿIṣa, the most complete of all, covers pp. 215-225; Tabari, ed. Leiden, i. 713 apq., and Ibn Wadhāb, Hitawār, ed. Houtsma, i. 74 apq., give extracts from the Gospels. But in this development the rôle assigned to Jesus and to the Mahdi came to be confusingly alike, and one party tried to cut the knot with a tradition from Muhammad. "There is no Mahdi save 'Isa b. Maryam." For this and also for their respective rôle when they were distinguished, see al-Dhahabī, Muḥammad al-ṭū ib al-Murūd, p. 118 apq. (ed. Cairo, 1324), Ibn Khaldūn, in his Muḥammad (ed. Qistīmī, i. 145-176 = al-Sūfī's translation, i. 175-205), gives a philosophic examination of the whole subject, showing the untrustworthiness of the different traditions and tracing the development of the idea of a restorer of Islam before the end, as it was influenced by Shiʿites of different degrees, by Fāṭimīs and by Sufis. An explanation given by him of the tradition quoted above is: "None has spoken in the cradle (nasāh, cf. Kur. xxx. 30) save ʿIṣa." (ed. Qistīmī, i. 163); for another see al-Kūčī, p. 118. On the whole subject Goldscheider in his Vorarbeiten, p. 236 apq. and notes thereon, has a few illuminating pages. See the same, p. 413 apq., for the modern Ajmal Khān in India which teaches that Jesus escaped from Jerusalem, wandered to the East, settled at Srinagar in Kashmir and died there, where is the tomb of Jesus. This Khān, the founder of the sect, pronounced to the both Jesus returned and was the Mahdi. Finally, Goldscheider has well remarked that for Sunni Islam, as opposed to Shīʿah and other outlying sects, the expectation of a future restorer of faith and life has never become fixed as a dogma but is only the mythological embellishment of an ideal representation of the future. This may well be due to lack of Qurʾānic basis.

From the above it is evident that Muhammad had learned a definite story of Jesus from some heretical Christian teachers, in defense of whose position he polemized vigorously in the Qurʾān. He knew more of ethics about him than about any other of the religious figures of the past. But it is evident, too, that he waxes somewhat vague. For the appearance of ʿĪsā, a semi-angel, a Logos much like that of Philo but with a difference, we are given no reason. It is not explained how he is a sign; a "mercy," and an "example" (ex. 21: 11; xxviii. 54. 55. 57, 59). As his birth he — was
guarded from the touch of Satan, who seeks by menacing every newly born infant to implant a tendency to sin (ill. 31 and al-Bai'ii, Is'la). Some even say that he and his mother, in consequence of this, never committed sin (Kija, p. 210). But it should be noticed that the same is more absolutely, of John the Baptist because he it called ḍarūs, "chaste," in Kur'ān ill. 34; cf. al-Bai'ii, Is'la, p. 211 sqq. But all the Kur'ān has is that Mary's mother exclaimed (ill. 31), "Verily, I put her and her seed in thy (Allāh's) care from the first Shaitān!" How much or how little of the later view was in the mind of Muhammad or was a legitimate development of his position it is impossible to say. He left something untold and closed Is'la with all the other prophets, although so essentially different. The story of the table with food sent down from heaven (v. 112 sqq.) which is to be to them a festival ("id") and a sign to all generations seems a genuine confusion on the part of Muhammad himself in regard to the eschatology. It is significant that the commentaries (al-Bai'ili, Is'la, 29a) most commonly say that the food was a large fish (as is appearing the ḍarūs symbol).

Later Islam has personified Is'la as separated from all human ties except to his mother, as constantly wandering, bare-foot and without abiding place, passing the night in worship wherever he might be when the sun set, living from day to day for nothing but devotion and miracles of benevolence (Kija, p. 218). At the judgment he will be the example of absolute poverty (fikr al-ghassāl, Durra, p. 90 sqq.). At the warships on that day men will seek him to intercede for them with Allāh and he will refuse, not for any sin of his own, as in the case of the other prophets, but because his followers have taken him and his mother as gods along with Allāh (Durra, p. 62 sqq.); cf. many other forms of this tradition in the ḍarūs, ed. with comment. of Sayyid Musta'da, x. 489 sqq. Margoliouth has gathered a valuable outline of his sayings and doings from the ḍarūs, in the Expository Times, vol. iv. 1893, pp. 39, 107, 177, 503, 567.

Is'la b. Ahī (See [All. b. Ĥa.]).

Is'la b. Muḥammad b. 'Ali b. 'Abī Ḥaṣmā b. 'Abī 'Amir, who played an important part during the war between the Mabchahins and the Mongols in Syria. His genealogy is in Abū 'l-Fidā' (Constant. 1252 b. H.), iv. 91, in Is'la b. Muḥammad b. Mānī b. Ḥadīth b. Ḥāfaṣ b. Fāṣil. Salamayya and Sarmin were the seats of his family; he probably belonged to the Kapūrā. His grandfather Mānī and other members of the family are several times mentioned in the history of Halab by Kishān al-Din (cf. Bleschitz, Signor. d'Alpo, p. 168, 210, 213). He fought on the side of Sarmin in the battle of Abū Ḥaṣmā 'q. v.) in 658 (1250) and in the following period also was usually on the side of the Mabchahins, although there were frequent quarrels, as the Mabchahins suffered on the one hand had little trust in the Amir al-Din and the latter took Beduin shamsīyahs to trouble little about the government and, if occasion arose, did not hesitate to join the Mongols. Is'la was among those who had terms with Khudīs (q. v.) and the beard became fiercer under Kāfū' as Is'la had taken the side of Sarmin al-Asyārī. In 679 (1280) the two were called in the help of Abī Ḥaṣmā (q. v.) and his Mongols but this amicable alliance did not last long: soon afterwards Is'la had a reconciliation with Kāfū' and fought on his side in the battle of Hims in 680 (1281) against the Mongols. Is'la died soon afterwards and his son Muḥammad Ḥasan al-Din succeeded him. The latter continued his father's policy, in 693 (1293) treacherously assayed by Sultan Ǧalāl, he was released again and recognized as Amir of the Arabs. He joined afterward with Sultan al-Nasir on behalf of Kāfū' Sarmin, which gained him the former's enmity, so that he joined the Mongol Ilkan. After the treaty of peace between the Mongols and the Mabchahins in 1295 (1295) Muḥammad returned to Syria. Muḥammad, who made the pilgrimage to Mecca in 697 (see Wüstendorf, Chron. der Stadt Mecca, ii. 275) died in 735 (1334-35). Ibn Ṭabūna (ed. Paris, i. 169 sqq.) gives a detailed account of him and (ill. 271-273) gives interesting information on the fortunes of a member of the family who was at the court of the Sultan of Dīlūḥ, Muḥammad Shāh. Muḥammad left several sons but they soon fell out with one another. Nevertheless, the amirates of the Arabs remained for over a century in the family of Is'la b. Muḥammad and the dynasty is said to have survived ill. 879 (1474). The material available, however, do not enable one to form any satisfactory conclusion about the later relations of the family.

Bibliography: In addition to the sources quoted in the article, cf. the histories of the Mabchahins and Ilkhanis, especially Well, Geschichte der Chasiten, Vol. iv. (Index), and d'Olsom, Hist. der Mongolen, Vol. iv.

Is'la b. Muḥammad b. 'Ali b. 'Abī Ḥaṣmā b. 'Abī 'Amir, nephew of the two next 'Abdālāl Caliphīs, al-Saffāh and al-Mansūr. In the last year of his reign al-Saffāh had homaged paid to his brother Abī Ḫafṣar and after him to the nephew Is'la b. Muḥammad as heir-apparent. Is'la, who a few years previously had been appointed governor of Kāfū', retained this office after the accession of Abī Ḫafṣar al-Mansūr. When the 'Alid Muḥammad b. 'Abī Ḫafṣar rebelled in Maṃā in 445 (1052), Is'la was sent with an army against him. On the advance of the Syriacs, many of the people of Međinā saved themselves by flight and in Rejaīn of the same year (Dec., 783) Is'la stormed the city. Muḥammad fell in the battle and his head was sent to the Caliph. In the meanwhile his brother Dūlūḥī had raised the standard of revolt in Baṣra. The Caliph's troops were defeated and as the revolt was spreading more and more, al-Mansūr feared that the easily influenced people of Kāfū might be involved in the revolution, so he went in person to the city. He succeeded in keeping the city under control while Is'la hurried with help from Međinā. His advance guard under Is'la b. Muḥammad b. Ḫāṣṣān was defeated in Šāhīṣān (q. v.), and a part of the main army also at first resisted, but Is'la mastered the situation, the rest of the troops were put to flight and he himself returned there. The victory of Is'la b. Muḥammad in 45 (Feb., 10, 763) al-Mansūr's rule was secured. Nevertheless he treated Is'la slightly and wanted
to exclude him from the succession. The Caliph had often said when he sent him against Muhammad b. 'Abd Allah: "I do not care which of the two kills the other," and in 147 (764—765) he had clemency paid to his son Muhammad al-Mahdi as successor and even deposed Ikhshid his governor, because he declined to abandon his rights. In the end Ikhshid had to give in and lay homage to al-Mahdi, on condition however that he was to follow the latter. After al-Mansur's death he wished to renew his claims as his consent had been extorted from him by threats; his attempts met with no success and in the reign of al-Mahdi he had again to renounce the succession in favour of his son Muhammed, son of al-Mahdi. He died in 167 (785—786).

(To continue...)

Isaiah, name of an idol at Mecca, which is almost always mentioned along with Nabata. Tradition relates that a man and a woman of the Djurhans were so called and were turned into stone as a punishment for indirect conduct in the temple. They were first of all placed as a warning on al-Ma'mun and al-Mansur, but were later idolatrously worshipped by order of Amir b. Lu'ay. It is therefore a question of two sacred atoms, but the origin of their names is so far unexplained. Attempts are given in Dossy, De Irlandis et Mecca, p. 177.

ISAGHUDH, isagud, from the Greek isagwv or isagv, an Arabization of the Introduction (al-Mudhalih) to the categories of Aristotle composed by Porphyry of Tyrm. According to Sa'id al-Amuli (Tabu'at al-Unma, Beyrut 1912, p. 49), the Arabic translation was made directly from the Greek by Ibn al-Makdisi [q. v.] and, according to the Fihrist (I. 244), it was made from a Syriac version by Adyph b. al-Kasim al-Raghib. In any case, it is certain that Arabic versions of Porphyry's work were multiplied quite early, in commentaries, epitomes and adaptations. Of the latter we only possess the two following: i. that of Abu 'l-Hasan al-Fathimi b. 'Olama al-Bikat (cf. Brechmann, Gesch. d. Arab. Litt., iii. 143—150, iv. 124; with a commentary by al-Sanadi, cf. op. cit. and Bibl. Nat. d. Alger., Cat., III. 136, i. 12); 2. that of al-Abhari (q. v. and add Ibn Khallikan, Wafayat, Cairo 1310, i. 139), which is the best known and the most annotated. This little treatise on logic discusses very succinctly the following subjects: term, definition, proposition or judgment, opposition, inversion, syllogism, controversy, rhetoric, poetry, sophistry. The Saggahs of al-Abhari put into rudimentary verses by al-Abhari (q. v.)

TAWIYA ISMAHAN.

...and the Sa'diyah. Returning to the ghuriya, he became a disciple of the Shajikh Abu Ras' of Ahmad al-Hirithi, who was a pupil of Shajikh al-Hamah (Hummah). On the death of his master, Muhammad b. Tariq succeeded him at the head of his students of Muna's al-Zitah (Mequines). He died here about 1524-1525; and was buried in the mosque beside one of his shrines, known as Bughyst al-Halabi, a native of the east. Muhammad b. Tariq had greatly extended the organisation of his pupils. He formed them into an autonomous religious order administered by the shaikh or his Mawlid (lentman) with the assistance of a kind of council of 40 members. The latter live in seclusion in the mosque or mother-house of Mequines and only leave their retreat once a year, on the day of the festival of the Mawlid of anniversary of the birth of the Prophet. This brotherhood follows the rule of the Shabihyya Sufi, adding the special ascetic exercises for obtaining physical immortality. This immortality is obtained with the help of a dance accompanied by jerking movements backwards and forwards; the shaikh holding one another's hands and forming a chain round a brazier. Once they become insensible, the Shaibyya devour living scorpions, pieces of glass, stick long needles into their bodies, beat themselves with the blades of swords, etc. At public festivals these ceremonies often occur and with the aid of a medicinal and medicinal character where these highly wrought devotions appear, like madness the raw flesh of an uncleaned animal (sheep or goat) and tear and read in the most horrible and repugnant manner imaginable. According to the legend, God, as the prayer of Muhammad b. Tariq, granted the disciples of this shaikh a complete immunity from wounds and disease. Accordingly these devotions have the power of driving out illness, caused almost always by the jinn, by taking it upon themselves. This is why they are called to houses; where there is illness an epidemic and where they are begged to go through their usual exercises.

While these practices of the 20th century the Shaibyya, who spread through the Maghreb and Fez regions, have enjoyed great influence on ignorant and semi-scientific populations. Muhammad b. Tariq used his prestige to stir up the people to a holy war against the Portugese Spanish Christians. His successor, Abu'l-Bawa, raised the people of Fez against the last Marisbad, in favour of the new dynasty of Sa'di Shajikh. Since that date, the political activity of the Shaibyya has not been mentioned by historians, in any case they have not taken part in any political revolts — at least not as an organised brotherhood.

During the lifetime of Sayyid Muhammad b. Tariq one of his disciples, named Abu l-Hadi Jabahib, founded a shrine of this brotherhood at Figigu (S. E. Morocco). From there the Shaibyya spread through the regencies of Algiers and Tunisia. Their present field comprises primarily Morocco, where they are numerous, especially in the west. In Algeria they have their principal shrines at Ramdah (Oromo); and in the Maroc of Casablanca (province of Algiers) there is a shrine founded by a grandson of the founder of the order; they also have shrines of lesser importance almost everywhere, notably at Constantine, Bona, etc. In Tunisia they are found especially at Al-Kef, at Tunis, Bizerta, Sousse, Sfax, Gabes and the island of Djehel. They are not widely disseminated in Tripoli and are almost unknown in Egypt. Like all the great Moroccon religious orders they have a shrine at Mecca.

(A. Cour.)

ISBA' (A.), "finger", an Arab measure of length, as in Europe the twelfth part of the foot (hectare) but the inch (isba). The inch belongs to the oldest of the Arab measures of length and was marked, probably from the earliest period, on the Nilo-meter of the island of Kharga built in 90 A.D. [see Nalaita]. Its length there is 2.995 cm. = 1 inch (the ell is 9.42 cm. = 3.18 inches). Being a divided measure the inch is not an invariable magnitude, for example to-day in Cairo the inch of the 3rd millennium = 3.67 cm. = 1.41 inches; the 6th + ism = 3.8 cm. = 1.5 inches; of the 6th millennium = 3.67 cm. = 1.41 inches; of the 6th millennium = 2.65 cm. = 1.03 inches; and the 6th millennium = 3.75 cm. = 1.48 inches. In Turkey the most usual is the 6th millennium = 6.25 cm. which gives on inch of 2.5 cm. = 0.99 inch. It should be noted however that the name isba has long become obsolete in everyday life and the inch is very commonly divided into quarters (1/4) and twentieths (1/20), whatever the metric system has not completely driven out the native system.

ISFAHAN, Aραχον, Phryg., vii. 41; Firuzabād; (in Arabic Ishahan), an important town in Persia, formerly the capital under the Safa-
Isfahan.

III.

The Encyclopaedia of Islam. III.

529.

Isfahan. The name means "the amber" (Ismā'īl al-
Ishbahānī) and has been referred to by a popular etymology and in derivation to Ishkāh, which in the local dialect means "dog" (Mīrīn Ḥasan, Herod. 1:110). It was formerly composed of two adjacent towns, Dī-pā, on the site later occupied by the Karimābād, the "city properly so called," and Bahāshir, the "Ghetto," a Jewish colony established there, it is said, by Nebuchadnezzar (Schröter, "Kreuz der Länder", 1:91; Ibn-Tawfīq, p. 315; or under Yaqubid II at the request of his Jewish wife Shihghān-ehidū (E. Blochet, "Liste des Ville", 3:54 in "Revue des Travaux", xix. 1895; J. Marquardt, "Erdeinsp.," p. 79). Anecdotical legends, which are transmitted by Ibn Rusta, attribute the building of the immense Isis-Kīla (q.v.), and it was later rebuilt by Shahin, son of Isfandiyar. There are two versions of the story of the capture of Isfahan by the Muslims. According to the historical school of Kīfā, the capture took place in 822/19 (640), by order of the Caliph 'Umar, 'Abd Allāh ibn 'Abd al-Muqtār, marched on Dī-pā, which was commanded by one of the four sāḥibāyīn of the Persian empire (cf. governors, Nīldeke, Gesch. d. Perser u. Araber, etc., p. 152, 242, 3:2, cf. A. Christian, L'Empire des Sassanides, p. 87), who, after several battles, capitulated on condition that the Dī-pā was replaced by an annual tribute. Jabshīr (ed. Leyden, 1:2637, 972) gives the date as 21 a.h. The Bagha school says that in 256 (644) 'Abd Allāh ibn 'Abd al-Muqtār (q.v.) had an object to make for the purpose of the capture of the town on the site on which the 4th of the town, the site of the Zo'ba, and the one of the castle of the city. The castle was constructed on the site of the Zo'ba (three arches), and the two others at the two extremities of the town, the lower, the bridge of Bibi Rūk, which leads to the cemetery in which the monument of the House of Dārā, the old Pul-e Hamzeh; the bridge of Pul-e Māmeh (now in Chardin, i.e. Mārūn, the name of a district), also the bridge of Shahristān, higher up the river. A fourth bridge called Pul-i Gābi ("wooden bridge") connected the two parts of the palace of Shāhshāh. The town was surrounded by a wall of earth, badly kept and encroached on by houses and gardens. This wall had eight gates, — formerly twelve, — but four were built up (see their names in [Dupré, "Voyage en Perse", 1834, ii. 158]). Isfahān was divided into two parts, Dī-pā and Dīrshā, which were inhabited by the hostile factions of Nīsār Allāh and the Shāhshāh. The Madīna-Shah, "Royal Square," is a long rectangle enclosed by a wall built of bricks coated with a kind of plaster called Adāb al-Tabīb, "black mortar." Behind it along its margin are ranged the houses which separate the square from the bazaar which surrounds it outside, as well as large buildings like the gateway of the royal palace, the mosque of the Shah, the clockwork pavilion, the royal mosque in the south and the imperial market on the north. The centre of the square is marked by a tall pole used for target shooting and two great columns of marble used as goals for the game of polo (kangwa). The Royal Mosque (Masjīd-i Sād) is placed in the middle of the square and is covered with uncurved bricks, was built by Sāfī 'Abbas I at the end of the 17th century. It is one of the most beautiful buildings in the world. Sāfī Sāfī covered its gates with silver. The mosque of the Shah, also called the mosque of Sāfī Shah, is much smaller. The pavilion of the clock was built for the amusement of 'Abbas II; it was a clock which struck with musical chimes at each hour of the day; a clockwork arrangement caused large marionettes fastened to pointed
figures to move along the wall, as well as birds and other animals in painted wood. The imperial statues (baqayz-darya) was, like the other buildings in this square, adorned by a gateway surrounded with bricks of marble; the centre was surmounted by a dome. The finest statues were sold there. The royal palace was as large as the one on this square Herat: a large gateway (sidr fargi), the many-covered gateway, always open day and night, used as a place of refuge (ansa). In the centre of the gardens was the pavilion called the Pavilion of the Forty Pillars (khadi vane), although there are only eighteen of them; it consists of a hall and two rooms: the royal throne, its walls were covered with paintings.

The Kārbānātšāh of Al-Khurāṣān and that of Mahān Aghā (the presence of all, the palace of the Sāde ṣanabel, "superintendent of religious endowments") built by Rustam Khān, the Kārbānātšāh Hallāth built by order of Abbās II, the tower and Alam, usually called Golhe, "ladder with flowers", the Tower of the Horns, covered from top to bottom, with heads of wild beasts with their horns, a memorial of great huns, the citadel called Taḵrār (Charīl, Kafīl-i Taliqān, "Castle of the Resuscitation") were the most beautiful monuments adorning the capital. The garden of Ĥakār Dārāh was formed of twelve terraces and fifteen avenues of trees, of which some were watered by a small pavilion and fountains completed the decorations.

The misfortunes of Persia during the Afghan conquest and the removal of the capital to Tāhānū, the capitals under the Ḥakārān ruled by Yādahān. The Avenue of the Equestrians, a large area, as well as the Mausoleum of Sayḥ, the "college of the king's mothers", but many of the beautiful plane trees which adorned it were cut down and taken to Tāhānū for the building of the palace of Zill al-Sulṭān. The three bridges are in a good state of preservation. One can still see the Madrasa of Sulṭān Ḥusayn, which dates from a little before the Afghan invasion, the palace of Ḥafṣ ibn Bahlūl, which belonged to Ṣafar al-Qawwāl, Zill al-Sulṭān's minister, and in the village of Gulbān, in the environs of Dājal, the two Minbars-Ēbānīān, "moving minarets" (explanation of the phenomenon in Min Dājalān, Za Pard, p. 278). The Madrasa Khāṣī has preserved its fine façades, aspect, in the evening and morning the royal musicians (dambūm and trans-pers) still play in the madrasa Khāṣī opposite.

The poet Khāṭūn (vii = xiiith century) devoted a long song to the beauty of Isfahān (Ḳamīlā, ii. 512).

On the Armenian colony new Dājalān see the articles on:

[References and data regarding the region and its history, art, and culture are provided, including specific locations and historical contexts.]
inhabitants of carrying shields, but it used to be called Mihra'din, a name which since the time of Yâhia has been given to a village in the vicinity. The citadel which defended it was called Kâl'ât zar "Crown of gold." In the great mosque there was a vessel of brass 12 cubits (πούς) in circumference. The district produced excellent grapes; there were many rice fields there. The inhabitants were Shi'ah and had produced a certain number of jurists. Sacked by the Mongols in 818 (1220) it was destroyed in the Lutheh invasion about 800 (1897). Its site is now represented by the ruins of Shah-i Bilād.

ISFENDIVAR OGHLU, the name of a Turkoman dynasty, which founded the independent kingdom of Kastamuni on the decline of the Seldjûk kingdom of Konya, at the end of the xiiith century in N.W. Asia Minor, in the ancient Paphlagonia. The name is taken from that of the best known ruler of this dynasty, Isfendiyar Bey; in the xviith century we find the name Kišl Âhmedîn, from Kišl Ahmedî, the brother of Jâmîl Bey. The Byzantines called the Isfendiyar Oğhlu "the sons of Amurius," or of Omur. The founder of the dynasty appears to have been Shams al-Dîn b. Yâman, 21 Dan, who held a grant of the district of Aliküy, he went to war with Murad I (884–897), a. d.) and captured the town of Kastamuni in 896 a. d. (Mihahâzînîshâhî) was appointed

ISFENDIYAR OGHLI — ISHAK.

governor of the districts selected by him. He is the Il-
ghan prince Kajhijeh. He seems to be identical with
Saban Bey Seman Khan, who conquered Boll
mounting to Ellyet, 11. 173. His son, Shukri al-
Din Sulaiman Pasha (700—740 a.d.), at first
acknowledged the suzerainty of the Ilghans,
and afterward assumed the bold and con-
quered Sicily, which was still in possession of
a daughter of Manchit II. He is mentioned in the
Buchta (11. 343 sqq.), Sulahal al-Din (Not. de Cart.
640 and 346 sqq.) and also "Al-Fikr" (Geographie,
ed. Reinaud, 11. 1, p. 335, 2, p. 142, 143) Pa-
chymeres, 11. 345 sqq. and 456 sqq. knows him by
the name Suleymans. His successors were:
his son Arslan Pasha, al-Abid, Bey, son of the
Emir Yahia and grandson of Shams al-Din (about
740 a.d.); Ljat al-Din Baykayed, son of Arslan
Bey, called Koriun by the Ottomans, died
787 a.d.; Sulaiman Bey, son of Baykayed, from
787—795 a.d.; Sulaiman Baykayed I killed him
and assumed the head (according to Ibn His-
vi, p. 385; the Ottoman chronicles make no mention
of Sulaiman Bey and make Baykayed Koriun
reign till 795 a.d.). Muharram al-Din Isfand-
yar, son of Baykayed, was restored by Timur
in 805 a.d. He died on Kumanian 22 Saz 3 a.h.
About 820 a.h. he had to cede the towns of
Tois, Kargen, and Kasdiyeh and the district of
Ljatik to Mehemmed I and later the rich copper
mines to Murad II, 1825 H., son of Isfandiyar,
Saz—beg 847 a.h., 1sazmil 11, son of Shams,
was deposed by Mehemmed II at the instigation
of his brother Kajil Alin in 848 or 858 a.d.
and died in Philippopolis, which was allotted to
him as his fortune. Shams Pasha was the author
on the religious precepts of Islam. His brother
Kajil Alin died in Usan-Hassan after the con-
cession of Kasum, returned to Constantinople
after the death of Mehemmed II, and was honor-
ably received by Baykayed II; his son Miran Me-
ko in 1291 married a daughter of the Sultan and his
grandson Shams and Musaik Pasha held high
official under Selim II and Murat III; Shems
Pasha in particular had great personal influ-
ce as the confidant (mestiko) of Murad III.
He calculated a genealogy of the *Kajil Al-
was* or *Kajil-oglan* which went back to
Khalil b. al-Wali, and invented the name
Kajil Alin for the dynasty of Isfandiyar-Oghlan.
Descendants of this family still exist and,
when at the beginning of the 19th century it was feared
that the Ottoman ruling house might become extinct,
the Kajil Alin were considered amongst others
as possible claimants to the throne on account of
their frequent marriages with relatives of the Sultan.

[H. K. MEDITZMANN.]

ISFID DIZ. [See KAHAT BEYSAK.

ISHAK, the Biblical Isaac, whose birth, according
to the Talmud (Nida 48a-b, p. 11), took place
at the feast of Passover, and according to Muslim tra-
dition, in the night of *Rabia* (al-Thalaba, p. 81)
and al-Kisir 1, p. 150), was promised by the father
Abraham, a year previously, to Allah (also in Gen.,
1, 43). He was in the habit of eating only the
poor and hungry shares his meal. On one occasion fifteen (al-Thalaba, p. 48) or three (al-Ki-
as, p. 146) and thus appeared without a guest
appearing. Three strangers then appeared before whom he set a roasted calf. But they did not
触摸 it (Kairan, 11. 73). They said, "We eat,
nothing without paying its price." He said, "The
price is that you should utter a blessing before
and after the meal" (al-Thalaba, 1. e., Gen., 3.
54). Then they foretold to him the birth of a son.
Sara laughed at this, as she was 90 and Hursina
130 years old. The latter said, "Then shall be
sacrificed as an offering to God." (These features
probably have their origin in the accounts in the
Mihrat (Gen. R. 35; Taphman, Gen. 40).
When seven years old, Isaac visited the sacred place
of sacrifice; therefore promised in a dream the order to make
a sacrifice to God. In the morning he sacrificed
a bullock and divided its flesh among the poor.
In the night the voice again said to him: "God
commands a more valuable offering." He killed
a camel. In the following night the voice said:
"God demands thy son as an offering." Ishak
awoke in horror and said, "O my son, I saw in
a dream that I must sacrifice thee" (Kairan, xxxvii.
105). The latter replied: "Father, do what is
ordered thee, thou wilt find me a patient per-
son, if God will (106). Taking a knife and a
rope they went together to the mount. Ishak said:
"Father, take my shirt from my body; lose my
shirt rather than live and see blood." He fixed me
firmly, so that I do not move, and leaped
away while sacrificing me, lest thou lose thy
wage" (al-Kisir and al-Thalaba, 1. e., following
Gen. R. 19; cf. also *Sefar kayigans*, 164 sqq.
and *Pirket de K. El., 31*). May God comfort thee
for my loss! Give my mother my shirt that it may
comfort her and do not tell her how thou didst
sacrifice me. Never look at boys of thy age, lest
they deceive thee" (Kairan, xxxvii. 105). Then a ram appeared,
which said it had been the offering of Hadih
and had hitherto been in Paradise; it was offered as a
sacrifice (Ahdab V.; *Pirket de K. El., 34, and
al-Kaisir*). When a ram without a head was
a fractious, adopted by Ishak, God gave father
and son the same figure so that they were very
like one another, but Ishak was grey (Raba
M.; Gen. R. 53; al-Kisir, 1. 152).

As the Kirun verse above quoted does not state,
which son was to have been sacrificed, many
Muslim theologians refer the intended sacrifice to
Ismail al-Zamakhshari and al-Badawi in the
passage: al-Tajur, 11. 201; Ibn al-Ashri, 1, 88;
al-Thalaba, p. 55—56; al-Kisir, 1, 150). But it
may be said that the oldest tradition — al-Thalaba
especially emphasizes the *Aishah and Tahmin's*,
the Companions of the Prophet and their succes-
sees from Omar b. al-Khattab to Ka'bah al-Ashur
and differ from the Bible on this question.

Al-Thalaba, 1. e., 245; al-Zamakhshari, 1. e.; al-
Badawi, 1. 313; al-Thalaba, *Kisir de al-
attari* (Cairo 1318), p. 48—50; al-Kisir, *Kisir de*
ISHÁKH, or ISHÁKH, son of Húnub b. Ismá’I, or YÁK, was a physician and philosopher, but more important as a translator of Greek, mainly philosophical and mathematical works into Arabic. He was in great favour with the caliph al-Proof and al-Mu’tasid, and the viceroy of the latter, Ká’imi b. ‘Abd Alláh. He died in Rab’i’ 298 or 299 (Nov. 910 or 911) in Baghda’d, though his most important translations we may mention the Elements of Euclid, after this improved by Thabit b. Karras, his brother; the Almagest of Ptolemy, also improved by Thabit; Archimedes’ On the sphere and cylinder, Menon’s Sphäricon, Plato’s dialogue Sphæricus with the commentary of Olympiodoros, the Categories of Aristotle, his Topike, Hermatika and Rhetorika, de Coelo et Mundo, de Generatione et Corruptione, a part of the Metaphysics. Of these translations the following has been edited: — Aristotelis Cathedrae rum versiones arabicae Iacovis Hennel et variis litteris lexibus versus Arab. dedit J. Th. Zunke. Lipsiae 1846. — Into the question, which of these translations were made from the Syrian and which from the Greek, we cannot enter here, but refer the reader to the Bibliography. In the case of several of these translations there are still doubts as to whether they are by Ishák or his brother Húnub.

ISHÁN, Persian pronoun 3rd. pers. pl. The word is used in Turksin in the meaning of žubdr, muqadd, and ŞA, for teacher, guide [see zuwaq in i. 956], in contrast to mawdúd, adherent, pupil. When the term first appears it has still to be investigated, though it certainly existed in the middle ages; the celebrated Khudjá Alí (died 955) in Somehàw) is always called żihān in his biography. The rank of žihān is frequently transmitted from father to son. The žihān lives with his followers in a jami‘ah monastery (šahib, in Central Asia pronounced Şomānak, sometimes also at the tomb of a saint. Most žihān’s make journeys from time to time into the steppes, where they have more adherents among the Kirgiz and receive richer presents than from the settled population. Greater attention was attracted to the žihān’s by a rebellion stirred up by an žihān in Faraghl in 1655; but the literature on the subject is extremely scanty. Cf. J. Gähler, Materialien d. turks. verh. von mawdúd manlacke nachrichten Türk- bukhsh in die kajâ, i. Ishān (Schriftenmaterialielle staatsbde. d. islam. Welt, vol. 4). Shahrak materialielle nachrichten. St. Petersburg, 1899.

AL-ISHAQIYUN (cell, al-Hunub) i. e. the adherents of the 11th to the 13th century; the name is given especially to the disciples of al-Shuwayrdin (died 1197) but the name and the custom are older. On the name cf. Umalit; it is really a question of the connatural philosophy of Hellanis, to which the sect from Neo-Platonism, Hermetic and allied sources and was there amalgamated with old Persian and other speculations. It is a spiritualistic philosophy with a mystical theory of knowledge. God and the world of spirits are usually interpreted as light and our process of cognition as an illumination from above through the intermediary of the spirits of the sphere. The following are regarded as particular authorities for this doctrine: Hermin, Agathademon, Empedocles, Pythagoras, etc., and Plato more than Aristotle (at least the genuine one). These authors are often described as prophets or inspired sages. From the beginning to the present day, this philosophy of revelation has influenced Muslim philosophy to a great extent. The so-called Peripatetics in Islam are in part under its influence, Ibn Rashid perhaps least of all.

In 523 (934-935) he is mentioned as secretary to Muhammed b. Yūsuf, chief of police in Baghda’d, and in Shawkali 340 (June-July 941) the Caliph gave him the office of usher, but after only six weeks in this position the same year, the Amir al-Din Muhammad Khatun dismissed him. Some time after Khatun’s fall he received his rank again but could only hold it for 40 days. In Shawkali 350 (June-July 942) he was again given the same office and after he had held it for 8 months 16 days, the Hamdunlul Najjī al-Dawla’d dismissed him.

K. V. ZITTEBERGEN.: AL-IŠKÁDAR, Alexander the Great (the Arabic authors usually use the Arabic article in the first two letters of the name). In the Muhammadan accounts of the wars of Alexander these are here and there scholars of genuine historical tradition but as a rule we have abridged epitomes, which originate in the romance of Alexander and (see the article ALEXANDAR-NAMA below) and were considerably extended and embellished by later writers. We confine ourselves here to giving in its broad outline what the older Arab historians relate on the subject. In the first place it should
be noted that Alexander's genealogy is artificially made up in various ways as may be seen from Pfeiffer's "Die Chodrullegenden und die Alexanderroman", p. 294 sqq. As a rule, however, the name of his father Philip is correctly given, frequently in the form Philetra, Pilekour or otherwise corrupted, as well as that of his mother Olympias (also almost always in some form), who was the sister of his mother Amateia was Amiatia. Even in the earliest historians however we find also the view, which owes its origin to Persia national pride, that Alexander was not the son of Philip, but of Dardas (Dardas al-Abur) so that he was the half-brother of Dardas (Dardas al-Abur), the last Persian king. It is said that when Philip was conquered by Dardas and had to pay a yearly tribute in golden eggs, his daughter, who is given the name Halii (otherwise in Firdawsi), to get a fantastic etymology for the name Alexander, was married by Dardas but on account of her repulsive looks was at once repudiated by him and was sent back to her father. They called her therefore the daughter of a dragon (in Arabic called amsarad); when the princess bore a son, he was called Alexander after the name of his mother and that of the medicine. The boy was brought up at the court of his grandfather; his tutor was Aristotle, and after Philip's death he succeeded him. Alexander soon omitted to pay the tribute and, when his half-brother, who had in the meantime become king of Persia, demanded it, Alexander sent the messenger home with the answer that he had killed and eaten the hen which laid the golden eggs. We omit here the story of the symbolic gifts which Dardas sent to Alexander and Alexander's reply, although it is found as early as al-Tahari, p. 66 sqq. Alexander then prepared for war, collected a great army and went first of all to Egypt, where he founded buildings (see AL-IKSMAN-PAHRVA) in the meanwhile Dardas also had assembled his troops and Alexander advanced against him, until the two armies met on the Euphrates, where a murderous battle took place (its site is also placed elsewhere), in which Alexander was victorious. Dardas died, but was treacherously wounded to death by two of his own people who sought thereby to gain the favor of Alexander. According to some accounts, several encounters took place between Alexander and Dardas but in the end the result was the same and Alexander met his dying foe. The latter recommended his wife to his care and asked him to see to the punishment of the murderers and to other matters; in particular he expressed the wish that Alexander should marry his daughter Rasghak (Raqsma). Alexander promised to fulfill his requests and ordered Dardas' disciples to be carried out in regal fashion. As a result of his marriage with Rasghak he now acted as the legitimate ruler of Persia, ordered the affairs of the government and advanced on India to conquer Fir (Pursa), who was allied with Dardas. He had a fierce battle with Pursa and only succeeded in disposing of him by rendering his enormous forces impotent by stratagem and finally overcoming him in single combat. Another Indian king, named Kaid, submitted to him voluntarily and sent him four valuable gifts (a virgin who has already been married, a small tree which never becomes empty, a physician and a physician who could answer every question). He then took an interest in the Behlmen (gnomonophils) and had a com-

fere with them in which he put various questions which they answered. After this becoming acquainted with India he began his expeditions throughout the whole world, which are however usually but briefly mentioned by the historians. After India, came China (see Tành-Trích), then the meeting with Chasia Cambis and finally he went to the land of Darmkat and met Khaled (Khalid). The historians apparently knew a great deal about all this, but they omit to narrate it, either because they thought that it was not the contemporaneous of Dardas but an elder Dhu 'l-Karmain who was the real hero of these incidents, or for other reasons. We shall deal with this question below: here it is sufficient to say that Alexander finally died on his return to Persia at Shebor or in Firdawsi, according to al-Dhumawar, in Jerusalem, at the age of 39, after reigning 13 or 14 years (many other figures are also given). According to some accounts, he died from poison and having a presentiment of his approaching end, sent a letter of consolation to his mother in Alexandria. His corpse was placed in a golden sarcophagus, over which the philosophers spoke in turn and in brief speeches emphasized the vanity of earthly greatness. The sarcophagus was taken to Alexandria and buried there in a tomb, which, according to al-Mas'udi, still existed in 922 (904).

Among Orientalists, Alexander is not only the world-conqueror and founder of cities — he is said to have founded 12, all called Iskandaria — but the hero who reached the ends of the earth (cf. I. Marc. l. 3). It was not just of conquest but the thirst for knowledge that was his motive. Philosophers therefore accompanied him everywhere and the wonders of nature and enigmatical problems attracted his special interest. Mubarahshīr ibn Fālīk and al-Abur-ibn-Kasirī, quoted by Michra, therefore deal with Alexander in their biographies of great philosophers. Cf. Meissner in Zeitschr. der Deutsch. Oriental. Gesellschaft, 21. 873 sqq. At the same time he appears as the champion of the true faith, because his epitaph, Dhu 'l-Karmain, which is variously interpreted (cf. l. 901 sqq.) led to his being identified with the prophet of the same name mentioned in Qur'ān 18, 82 sqq. This is however not approved of by all scholars; the majority distinguish an earlier and a later Dhu 'l-Karmain; the latter is thus identical with Alexander. For further details and the peculiar confusion with Mask in Qur'ān 39, 99 see the articles KHALID (Khalid) and 9999 (Mask). The connection initiated by Rostovtsev, Meissner and others of these stories with very ancient Oriental ideas and myths (Gilgamesh epic) will there be dealt with. In the 5th and 6th centuries AD a number of histories dealt with Alexander in such a way that they barely mention the older Arab historians: al-Yahaya, ed. Houtou, l. 65, 661 sqq.; al-Dhumawar, ed. Giugi, p. 31 sqq.; al-Tahari, ed. Lattin, l. 663 sqq.; al-Mas'udi, ed. Paris, l. 210 sqq.; Eschyle, ed. Fouache, p. 213 sqq.; al-Tṣahlāf, ed. Cairo 1314, p. 205 sqq., etc. Cf. also the references given in the article ISKANDAR-SAMA.
iskandar-nāma, the romance of Alexander. The Kurān, Sūra xxiv., gives evidence of the early acquaintance of the Muhajirunsm with the tradition of Alexander (Pseudo-Callisthenes). What is there (ye. 9999) related of Mist is really taken from this story. This is not the place to discuss the earlier history of this romance. For this see Nöldeke, Beiträge zur Gesch. des Alexanderromanus (Deutsch). L. W. 1889. The other works quoted above.

According to this investigator, the source of the Syrian and Arabic tales of Alexander is to be sought in an original Pahlavi romance which is preserved in Friedrich, Zeitschr. der deutsc. Morgenl. Gesellschaft, xiv. 319, may have been written by a Christian of Syrian nationality who wrote in Persian. The oldest Arab accounts in the Thābit are those mentioned in the preceding article. Later versions in Arabic are also discussed by Friedrich, op. cit. The oldest poetic version of the Alexander saga in Persian is from the year of the celebrated poet Firdawsi. The latter was closely studied by Spengel, Die Alexanderfeste bei den Orientalen. Another version was compiled by Nisadi, who was closely connected with Spengel, c. c. On the works on the subject by Eitel, Scharf and Clarke, see the article nisadi.

iskandar nāma [q. v.], and Dīranā (q. v.), have also dealt with this subject. A Persian prose romance of the same name is mentioned by Rieu, Egypt, M. M., vol. 3, p. 56, and Furtwängler, Byzantin., vol. 18, p. 193.-1936.

A little known version of the Eastern Turks we owe to the celebrated Mīr 'Ali Shīr (see above). The Ottoman Turkish version by Ahmīdī (q. v.), is based on the Persian of Firdawsi (see Olsh, A History of Ottoman Poetry, i. 203 sqq.). A similar work by Fightârī (q. v.), is also mentioned (Olsh, op. cit., iii. 36).

Bibliography: In so far as it is not given in the article it is most fully given in Firdawsi's book. Cf. also Chabas, Bibliographie des ouvrages arabo-islam., vii. 79 sqq.

iskandariya, occasionally al-iskandariya, often Sikanidariya, Alexandria, the principal seaport of Egypt, in Ptolemaic times the second city of the world, now among the most important trade centres of the Mediterranean, with a population of nearly 400,000 inhabitants including a foreign element, is situated at the western end of the Delta in latitude 30° 11' N. and longitude 29° 51' E. It was founded in 525 B.C. by Alexander the Great. When it came into the hands of the Arabs, it was the capital of Egypt and, though its glory had diminished, it was still a great and splendid town. Under Muslim rule it declined to the verge of utter ruin. Its revival dates from the beginning of the century. The present Alexandria is almost entirely modern and needs no description here. It covers the site of antique Alexandria, of which nothing is left but the most scanty remains. The Port of Alexandria is formed by a peninsula, consisting originally of an island, called Pharos, joined to the mainland by a mole or causeway seven stades long and known for that reason as the Phrassochoyion. On the north-eastern point of the island stood the fortress, the great lighthouse built by Ptolemy the Elder. This famous building, prototype of all our lighthouses and generally acknowledged to have been one of the wonders of the world, survived the Arab conquest by several centuries. The Arab writers call it the nisap and mawā'ir. Their accounts show that it consisted of a large and lofty structure of white stone, square in plan and massive in frame, above which rose a pile of brick and plaster in the form of an octagonal tower, tapering into a round tower towards the top, with a dome at the summit; they differ greatly as to its height. There are records of the Pharos having been damaged by earthquake and having been repaired on various occasions in the Muslim period. A
large part of it fell in 724 (1324), but some portion seems to have been standing a century later. Soon afterwards it had collapsed entirely and in 382 (1477) the present Fort Phraos was built by the Khur Baj [S. W.] on its ruins. The harbour to the east of the peninsula was originally the principal harbour of Alexandria, and (contrary to what is sometimes stated) was the one generally used in Mamlukian times. Even up to the middle of the 18th century the western harbour was resorted to only by galleys, but later it came into disuse and was filled in, though. Christian vessels were not admitted to it until 1803. The Heptastadium broadened in the course of time by the accumulation of silt from being quite narrow into an isthmus, some three-quarters of a mile in width; it was vacant of buildings in the middle ages. The town lay to the south, covering an oblong area of about 3 km. by one km. Its walls remained in existence till 1831. They consisted of an outer wall some 20 feet high, backed in most parts of the circuit by a thicker and higher inner wall, distant some 20 to 25 feet from it; both inner and outer walls were flanked by frequent towers. A further defense was afforded by two parallel ditches which were supposed to be filled by the Nile in case of need. The town had four gates: Bab Al-Bajr leading to the Heptastadium, Bab Raghi, Bab Al-Sidrin at the beginning of the road to Al-Maghrath and Bab Al-Ahmar leading to the cemetery. The walls had been repaired in the reign of Baybars [q. v.] and again in 703 (1303) after an earthquake, in which 17 of the towers had been thrown down; Al-Ghuri also repaired the towers during his reign. The whole system was a curious specimen of mediaeval fortification. It is not possible to say for certain when it was built. A solitary remnant was the so-called Tour des Romains, which recently stood near Ramla railway station.

Statements by Arab writers of the 9th to 12th centuries, when pieced together, give a general description of the town itself. It was laid out on a regular plan; eight straight streets intersected eight others at right angles, producing a chessboard pattern with direct and sinuous thoroughfares, marked contrast to the meandering roads with blind alleys usual in eastern towns. The streets were colonnaded; columns were used in most of the buildings; many of the columns were marble. Marble was abundant in the buildings and was employed also in paving some of the highways. There was a market, street, a league (as it is said) in length, all built of marble, both its walls and floor. The columns and slabs were often of prodigious size and enormous blocks were piled at great heights. Much variety and beauty of colour and fine workmanship were displayed. In one instance, pillars like emerald and others resembling rubies are mentioned, all of the highest polish and finish. In the inside of the town there were gardens (kires) and axe-woods. A remarkable feature was that the houses were built on vaults supported by columns, rising above one another in as many as three tiers. The object of this subterranean architecture was to provide chambers for the storage of water, which was derived from the Nile, and also from the rain, for Alexandria has a fairly considerable rainfall in winter. Materials for reconstructing the plan of the town are quite insufficient. The monuments and buildings noticed may be divided into three classes. In the first, those which date back to ancient times, some time Pompey's pillar or the column of Diocletian (Caisar Al-Asuros), the one important ancient remnant still standing in its place; Cleopatra's needles (Al-Misrulah), the two well known obelisks removed in recent times; one to London and the other to America; the Cestalyn, a most famous edifice, originally a temple and afterwards the patriarchal church or cathedral, which appears to have been mentioned once under the name of Al-Cafera, and is probably to be identified with Kureit Al-Asufa, alluded to as a wonder in the remains of the still more famous Serapeum, containing of a forest of columns known as sawari Salamein, many of which were still standing in position in the 18th century; a magnificent domed so-called Koubat Al-Khafis, spoken of by several writers; a colossal base statue known to the Arabs as Shahrif, which stood on a rock in the sea; its foot was as long as the utmost stretch of a man lying down at full length; this statue was metted down in the time of al-Walid. In the second category come the churches, buildings but rarely alluded to by Muhammadan writers. Besides the patriarchal church referred to above, which was dedicated to St. Michael, there were two churches of St. Mark, church of St. John, a church of Al-Qitay, the Savara, of St. Cosmas and St. Damian, St. Mary Devarthis, St. Faustus, St. Theodore, St. Anthimius, a Greek church of St. Saba. The list might be extended, but it is a rule little more is known of the churches than their names, though one or two of them are described as beautiful or highly ornamented. The great church of St. Mark, which contained the tomb of the saint, was situated a short distance within the Eastern gate, on the right hand of one entering. The shrine was known in the 18th century. Whether the modern church of St. Mark occupies the same site does not appear, but it seems that none of the existing churches, even if they mark the site of old ones, preserve any features of interest. There are instances of churches having been built at Alexandria in Mamlukian times, on the other hand, wisdom were destroyed in regular commotions or deliberately demolished and some were converted into mosques. The third class of buildings consists of additions made by the Muhammadans. In it may probably be placed the nihal (infis), described as strong and swift, by the sea from the west, whence it would seem that it was situated at the north-west corner of the town. It was in existence as early as the 17th century. An ancient citadel, presumably pre-Muhammadan, which was in being in the 11th century, contained a government house (deh al-nesr), built by one of the early Arab governors. The Mamluk sultan had a similar house (deh al-alfab), which was situated on the sea-shore and contained many columns of variegated marble and had coursing paved with marble, — some ancient palace reserved for their use, but rarely, if ever used. One reads of a great hall of Al-Milad. There was an arsenal or armory, "sufficient to equip the people of Egypt." The places of worship included an asyut and a 'sabah, which, as St. Mark, had fallen into ruin within a couple of centuries of the conquest. There was a mosque attributed to 'Abu b. al-'Asf [q. v.], but whether it stood on the same site as the present mosque
of Amr seems doubtful. The second principal mosque, the western mosque or mosque of the Seventeenths, also known as the mosque of the 10th century, is said to have been converted into a mosque between this time and the middle of the 8th century. A large mosque “built” by Badr al-Djami (q. c.) in 677 (1084) is presumably represented by the existing Djami al-‘Aziz, which would seem to be identical with the mosque and former church of St. Athenaeus. Ibn al-Tubbina built a mosque on the Pharos. Early shrines were a mosque of Mihri near the Pharos, mosques of Salamiah, of al-Khafid, and of Danial, still in existence. As one notes the Jewish association of these names with Elin, Karmi or Alexander, and the mosque of al-Khafid, Believing the spot where Amr stopped the slaughter when he entered Alexandria the second time.

In the xivth century, Alexandria is described by a European travelier as “extremely beautiful and strong” and “exceeding clean and carefully kept.” In 1507, according to another, there was “nothing to be seen but a splendid heap of stones” and “it was rare to see a continua street”; in 1634, the town was “almost nothing but a white heap of ruins.” There is mention of many houses of Jews on the Heptastadion in (about) 1550, built there “in respect of the air,” the earliest allusion, it seems, to habitations on the peninsulas. The scanty remnant of the population concentrated there not long after, forming a new city, in very mean appearance,” and leaving the town within the walls almost entirely deserted. Enough has come under European observation fully to prove the former splendor of Alexandria. At the present moment the principal remains, apart from the columns of Pompey, are a few of the cisterns.

Alexandria was joined to the Nile by means of a long canal. This work had a tendency to silt up; and, instead of being kept open by regular dredging, it was allowed from time to time to become more or less thoroughly blocked and then it was re-excavated. Occasionally after dredging, it was open to traffic all the year round, hence a rule only for a part of the year. In 1528, the navigable period was only about 30 days. Communication by water was cut off, altogether, and the province of Alexandria had to depend on their canals for their provisions. In the earlier part of the Mamluk period, the canal lay on the river at Shakhburt. In the 8th century no alternative waterway from the Nile below Fuwa, through the lakes of Idké and Abū Kīs to the neighbourhood of Alexandria, came into use. Al-Nasir in the 8th century either improved or reconstructed the channel, the original canal from Shakhburt being abandoned. Various lesser alterations took place subsequently. The damage resulting from the neglect of the canal can be easily understood. It is one of the reasons why the surroundings of Alexandria had become, generally speaking, a desolate waste at the beginning of the 17th century. Maryi was once once the seat of thriving and the progress of its gradual decline can be traced. Indeed, Alexandria, identical with the mud-ha of Abū Kīs, was alternated between water and dry land more than once in the Mamlukian epoch.

History. When Alexandria was surrendered to the Arabs in 21 (624), a considerable number of Greeks took advantage of the terms of the capitulation and left it, abandoning their homes. The Arabs on taking possession did not molest the inhabitants. The well known story of the burning of the great library by order of the Khalif Ummar, which belongs to this time, cannot be accepted as true. On their re-entry into Alexandria after the invasion of Manuel in 53 (645), the Arabs revenged themselves on the inhabitants by a massacre; churches were burnt and the town walls, it is said, were thrown down. In the first century of the Higys, Alexandria was of great importance to the Arabs as a naval station. Hence, no doubt, the rapid increase in the number of its garrison, part of which was drawn from Madinah, and the frequency of visits by the Umayyad governors of Egypt. The Arab occupation at first was purely military. An Angustad was in office late in the century, a sign that the civil administration continued unchanged for a long while. When the last of the Umayyad khalifas fled to Egypt, al-Aw am, a grandson of ‘Ubay y b. Nafis, declared for the Abbbadis at Alexandria. His followers included 30,000 Muslims of Bohairs and Maryy. This host, however, was dispersed by a detachment of 500 troops sent to Alexandria by Marwan; the Khalif’s sons entered the city and there was slaughter there again. The Abbbadis rewarded al-Awam with grants of lands at Alexandria, which seem to have been Umayyad possessions previously. In the course of the struggle between al-Amin and al-Ma’um, Alexandria was surrendered for the third time to the Arab tribe of ‘Ala’lah and Muḥibbadd. A band of Arab adventurers was sent from Spain, who happened to be in the port, took advantage of the opportunity to seize the town and managed to hold it again, even when for 10 years (592-52 = 872-857). Four or five sieges occurred during their tenure and, although there are not many details, it is clear that it was a period of tyranny, massacre and excess, and altogether most disastrous to Alexandria. At this time a band of religious revolutionaries fomenting themselves inside came into view. There are some signs of similar associations at Alexandria more than a century earlier. Al-Mutawakkil (not Ibn Tubba) built the walls of Alexandria in 255 (858), for fear of attacks by the Greeks. If these walls were the origin of the 8th century, which is not proved — the town had already become reduced to half the size it had been at the conquest. But little appears during the next two centuries. Alexandria was occupied two or three times by the Fatimids (q. c.) before they achieved the conquest of Egypt. A notable event of the Fatimid period was the transfer of the Coptic patriarchate from Alexandria to Cairo. For a while during the above revolt (about 460 = 1067) Alexandria was in the hands of the blacks. It was the centre of revolts in 970 and in 987 and on each occasion was taken by siege. A descent by Sicilian Normans on Alexandria in 550 (1155) is mentioned. Amaury, King of Jerusalem, in conjunction with Shihar and forces of Egypt and aided by the Frank fleet, besieged it in 582 (1186), when it was occupied by a Spanish envoy named Alfonso. It included Schahin himself. A formidable Sicilian attack on Alexandria in 599 (1173) was beaten off. Rhadam built up the galleries at Alexandria and restored them to what they were before...
768 (1565) Alexandria was surprised and plundered by the King of Cyprus. There is evidence that it had declined greatly in importance by this time, insomuch as its governors were persons of quite minor rank. The Mamlik sultans very rarely visited it. They made constant use of it as a place of imprisonment for political offenders. Guns were included in its defenses in the 178th century, and al-Qhêrî, whom he feared an attack by the Turks, had built for a large quantity of ordinance to be given to his forces. After the Turkish conquest, the trade of Alexandria was not included in the revenue of Egypt, but were paid direct to Constantinople. In the 18th century it served as a port of Turkish galleys, which were dismantled and hauled up during the winter. The marauding of these vessels extended so far as the Straits of Gibraltar and the prisons of Alexandria held many Christians who they had captured. The French took Alexandria in 1798. It was taken from them by the British and held by them till 1803. The British took it again in 1807, but gave it up in the same year on the disastrous failure of their expedition in support of the Mamlik Bey, Muhammad. All restored its fortresses: he rebuilt the walls (1811), constructed the Mahiblya canal (1810), built the arsenal at dockyard (1819), also the Palace of Ra's al-Tûn, and encouraged developments in various ways. The population was estimated as low as 6,000 in 1777, probably an underestimate, but after the events of 1798—1801, it is not likely to have been much more. In 1828 it is stated to have been 72,528 — smaller than that of Besant. By 1836, it was estimated at 107,300 and in 1862 at 164,900. In 1871, it was 219,000. As a result of disturbances during the rebellion of 'Aribi 'Absha (q.v.) in 1882, the form of Alexandria was bombarded by the British fleet in July; next day part of the town was destroyed by the sloop.

Manufacures and Trade. Alexandria was noted for its weaving, its textiles are described as incomparable and are said to have been exported to all quarters (cf. IBN, II, 197). Some of the linen manufactured at Alexandria was so fine that the flax for the stuff was sold for its weight in silver and that for the Aubusson in it for many times its weight. Alexandrian silk occurs in Venetian inventories (18th to 19th centuries) and it is believed that some of the fabrics produced by Tamp to churches of Italy in the 18th and 19th centuries were executed by Alexandrian workmen. A great number of miscellaneous manufactures, the character of which is not specified, are said to have been carried on. It was as a market for the products of the Indies rather than those of Egypt that Alexandria was of special importance to trade, particularly for the spices, pepper, cloves, nutmegs, cinnamon, ginger and so forth, though the list of commodities included other articles such as pearls and precious stones. After being landed on the west side of the Red Sea and carried to the Nile by caravans, this commodity was transported to Alexandria by the river and canal. It was in constant demand in Kofra and elsewhere, so that Alexandria was requested to supply it to all parts for commerce. This trade has hardly been maintained during the early part of the Muhammadan epoch and for various reasons is not likely to have become active until the end of the Fatimids. Towards the end of the reign of the Umayyads and the beginning of that of the 'Abbasids, Christian ships began to visit the port, and in the canal were re-embarked the relics of St. Mark to Venice in 828. According to the well-known story, there is evidence that commercial relations with Venice subsisted them. It seems, contrary to what might have been expected, that the trade with the west was stimulated and developed as a result of the Crusades. In the 13th century it was well established, and people from all Christian kingdoms resorted to Alexandria. A contemporary name is Christian towns or states represented by traders there. Among the number were Arbil and Genoa, which with Venice appear to have been the chief competitors. Raguas, Pisa, Provence, and Catalonia. Besides Christians were to be met Muslims from Spain and Barbary and from Mesopotamia, Syria, and the countries towards India. It is known that ships belonging to Alexandria went at the same epoch as far as Almeria in Spain. Each of the various Christian communities at Alexandria had its own fondaco (fondaco), a building in which the merchants warehoused their goods and also resided. The Venetians, as the leading commercial power, obtained a second fondaco in the 16th century, besides other privileges, and they had also a fondaco at Fium. Their colony was presided over by a consul, and the Pisans, Maragata and Genoese likewise had consuls there in 15th century. Florence established a consul in the 18th century. The first English consul was appointed in 1587. There were no consuls of much importance till later. The customs, measures taken with regard to the trade by the Sultans, disputes between Christians and the inhabitants and between the Christians themselves, and other similar matters showing the conditions under which the merchants carried on their work and the difficulties they suffered. The discovery of the route by the Cape of Good Hope in 1498 diverted the Indian trade from Alexandria and reduced the commercial importance of the port to small proportions. When the trade in coffee and other commodities began to some measure to flourish in about 1600, a certain revival at Alexandria manifested itself.

Bibliography: The materials for a history of Alexandria have been scattered. Contributions are to be found in almost every one of the principal Arab histories of Egypt; see the article Egypt. To be noticed particularly are Ibn 'Abd al-Hakam (ed. Massâ, Cairo 1914, in progress); ed. Taylor, in preparation; al-Maqrizî, Mirât al-Bahsh (Cairo 1893; Paris, 1861—77); Bibliotheca Geographica Arabica, L— rebels; al-Nâîrî, ed. Dobby and De Goeje (Ley den 1869); Ibn Djalâr, Gidees, s. w. — Yûsîf, Mursî al-Bahsh; 'Abd al-Latîf, Kifāt al-Mîzâb ma'd al-Fâtimîs e. (ed. White, Oxford 1880), and Cairo 1898; travel and an account of Egypt, by de Sacy, Paris 1830; al-Makrizî, al-Kahfî wa al-Fâtimî e.; Ibn Iskâr, Nuzul al-Bahsh fi 'Adabi Hijâr; al-Dâhib. The Christian writers Severus, ed. Etteh and ed. Seybold, cf. ibn al-Sukkâf, 917 and al-Mârînî, (Bâle), Lugd. Bat. 1625, supply a few facts not to be found elsewhere. Benouard of Tunis (many editions) has a local and important notice. European travellers and accounts in Eu-
ISLAM is the name which Muhammadans in every country give to their own faith. The word means "submission" or "resignation," (to God), and occurs eight times in the Koran, in such verses as iii. 17, "The [true] religion with God is Islam"; v. 5, "This day have I perfected for you your religion and have completed My favour upon you and it is My pleasure that Islam be your religion"; vi. 125, "Whosoever God wishes, He will guide his breast unto Islam." See further art. MUSLIM.

In the present article merely a statistical account will be given of the extent to which the Muslim religion pervaded in the various countries of the world at the present day. For an exposition of the religious tenets and ordinances of Islam, the development of dogma etc., the reader is referred to articles such as ALLAH, MUSLIM etc., and for the biography, history, geography etc., of Muhammadan peoples, to the appropriate articles under each head.

Various estimates of the total number of Muhammadans in the world have been made, differing as widely as from 175 to 270 millions; but there is a large element of uncertainty in all such estimates, as in several countries where Muhammadans are to be found in large numbers, no religious census has ever been taken, and accurate statistics are accordingly wanting. This is particularly the case in the land in which Islam had its origin, and any estimate of the total Arab population must be conjectural only. Some relics may be placed on the figures given for the districts under European control, as 50,000 (Aden and the neighbouring islands, Perim, Socotra, etc.), and 86,000 (Baltrna Islands), but estimates of the population in the independent parts of Arabia, e.g. Najid, Umayri, etc., 2,500,000 (Zweim), 3,500,000 (Hamman) and those (e.g. Hijaz, Yemen), under Turkish supremacy, 1,050,000 can be tentative only. The Arabs are, however, confined to the limits of the country that bears that name; as early as the third century of the Christian era had commenced those scattered migrations of Arabs to the north which gradually led to the formation of settlements in Palestine, Syria, and Mesopotamia; so that when we consider that we are taking into account the conflicts between the Byzantine and Persian empires, and larger numbers of nomad Arabs settled in the more fertile countries bordering on the arid land of their origin. This migratory movement culminated in the vast expansion of the Arab race, rendered possible by the conquests of the seventh century, when the Arabs despoiled the Byzantine empire of some of its fairest provinces and subjugated the whole of the territories of the Persian king. The fact that the Arabic language was gradually adopted throughout the greater part of Syria, Egypt and North Africa.
is some evidence of the interpenetration of Arab
island, in the populations of these countries, and a
steadily, though intermittent, stream of migration
from Arabia into Africa set in across the Red Sea.
Another stream moved eastward across the Indian
Ocean and by the middle of the eighth century
Arab traders had made their way as far as China
and were present in large numbers in Canton.
Trading settlements are found scattered throughou-
the Malay Archipelago, and at different historical
periods small groups have established themselves
on the coasts of British India, and individual Arabs
have made their way to most parts of the Muham-
madan world, especially those accessible by sea. But no
attempt has ever been made to estimate the total
number of these Arabs living outside the limits
of the Arabian Peninsula, as separate groups in the
Muslim populations of which they form a part.

For some countries of Asia which are under
European rule, we have accurate statistics. In India,
where various of religious belief are carefully
noted, the Muhammadans, according to the Cen-
sus of 1921, numbered 66,647, or 1.1% of a total
population of 584,324,000, or rather more than 315
million. (For
details as in the varied composition of the popu-
lation, see article INDOA, § 2.) The Muhammadan
community shows a tendency to increase in numbers
relatively to their Hindu fellow-countrymen; in the
decade ending 1901, while the total population of
India increased by 2.4%, the Muhammadans
increased by 2.9%: in the following ten years, their
numbers rose by 6.7%, as compared with only
1.5% in the case of Hindus. Of course, Islam is a
majority religion in India, but the chief reason for
the rapid growth appears to be that their social
customs are more favorable to higher birth-rate
than those of the Hindus; they have fewer mar-
riage restrictions, and widows frequently re-mar-
ry. Conversions to other religions are not frequent,
but Christian converts from Islam are numbered
by thousands in Northern India, especially in the
Bengal (The Muhammadan World of To-day, pp.
170, 394), and a certain number of Muslim
muslims of Hindu origin have been re-absorbed
into Hinduism through the missionary activity of
the Arya Samaj (v. art. INDOA, § 50). In Ceylon,
in spite of the intimate trade relations with Arabia,
Islam has not achieved any great extension among
the inhabitants and there were in 1912 only 584,000
Muhammadans, or a population of over four
millions.

For the Malay Peninsula and Archipelago, com-
plete statistics are wanting. One estimate (Zwemer)
gives 673,159 as the Muslim population of the
federated Malay States and the Settlements,
while another (Hartmann) gives nearly
double that figure. Introduced into Malacca from
India, Islam spread along the great trade route
to Java and the other islands of the Archipelago.
The Muslim population of the Dutch Indies in
1905 was 35,034,152, including 20,605,653 in
Java, and was said to be rapidly increasing as
the result of conversions to Islam by the Muslims
among the population that still retain their
roots; or the other hand, Christian missiona-
ries have been in recent years winning converts
from Islam in Java, where more than 300 baptisms
are said to take place every year, and in 1900 there
were estimated at 18,000 Christian who had been con-
verted from Islam (The Muhammadan World of
To-day, p. 237); in Sumatra the various missionary
activities working in this island claim to have made
5,000 Christian converts, together with 11,000 state-
mlessly, formerly Muhammadans, since the year
1868 (ibid, pp. 242, 248).

In Islam, Islam has not succeeded in exercising
such influence; converts have been won in the
north through contact with the neighbouring Malay
States, and in the coast towns as the result of
intercourse with the Malay Archipelago; but the total
number of Muhammadans is probably not more
than 300,000.

In other parts of Asia under European rule,
there are found in the French possessions in Indo-
China 1,400,000 Muhammadans out of a popula-
tion of 17,800,000; in the Asiatic possessions
(including the Caucasus) of the Russian Empire
1,656,700 Muhammadans out of a population of
nearly 25 million; and in the Philippine Islands,
under American rule, 277,547 Muhammadans out
of 874,911 inhabitants.

But when we pass to countries in which accurate
census returns after the European method are
entirely wanting, there is still more uncertainty as
to the figures. In Persia, as estimate made by
Christians missionaries assigns to Islam all but
500,000, or one fifth of the five millions of
inhabitants. In Afghanistan it is conjectured that
there are about four millions Muhammadans.

The first serious attempt to ascertain the num-
ber of the Chinese Muslims were made by Brown-
low and D'Ollone; the former suggests 8,421,000
(Islam in China, p. 215), the latter (Les musulmans
Chinois, p. 436), 0,400,000 only. These figures are in striking contrast to the exaggerated estimates made in the 19th century when their number was alleged to be as much as 20 to 70 millions or even 70 millions. Some Christian missionaries consider that the more recent estimates are too low. But whatever proportion the present Muslims bear to the total population of China, it is probable that their numbers were considerably larger before the massacres that accom-
panied the suppression of the many Muhammadan
uprisings of which a list is given by
D'Ollone (op. cit., p. 436), in which millions of
persons are said to have perished. In Tibet there are
doubtful to be as many as 26,500 Muslims,
most of them settled in the northwest, with a few
converts, and descendants of converts. Islam has not
achieved any great success in gaining few adherents
in Japan, and these, in quite recent years, are
probably not more than 200 Muslims in Japan
itself, but about 2,500 in Formosa.

In regard to the number of the older parts of the
Muhammadan world, most interest in the Arabic
possessions of the Spaniards in Turkey, and exclud-
ing the independent parts of Arabia, various estimates
of the Muslim population are given e.g. 11,190,000
(Hartmann) and 12,278,800 (Zwemer), but in the
absence of accurate census returns these figures
may be considered as approximate only. (v. A.
de la Jonquière, Histoire de l'Empire ottoman, p.
457 et seq., Paris 1914).

Next to Asia, Africa is the continent that con-
tains the largest number of Muslims, but materials
for an exact judgment are so wanting that estimates
are made, even by the most recent investigations vary
from 42 to 76 millions. The most rigid investiga-
tion has been made by Professor D. Westermann,
and his figures, with a total of 42,039,347, have
been adopted by Zwemer as follows: Abyssinia,
In Europe, on the contrary, the influence of Islam continues to decline. What the population of Muslim Spain may have been in the days of its widest extent, it is impossible even to conjecture, but in 1422 the Jewish and Muslim communities together numbered over two million, and when Philip III expelled the last remnant of the Moriscos in 1609–1615, the number of those who left the country was probably about 500,000. (H. C. Lea, The Moriscos of Spain, p. 339. London 1901.)

At the present time, the Mahomedans in Europe are almost entirely confined to Russia and to those countries that formed part of the Turkish dominions at the beginning of the 19th century. In Russia, in Europe, the total number of Mahomedans is about 3,500,000, but there has been no religious census in the Russian empire since 1897; they are mainly Tatars by race, but proselytism has taken place to a considerable degree among Finnic tribes such as the Cherniai, the Yöraks and the Chevash. Since the promulgation of the edict of religious toleration in 1665, there has been an increasing number of accessions to the faith of Islam. There is a considerable amount of uncertainty about the religious statistics of the Balkan peninsula, and even the official estimates are open to grave suspicion of being manipulated to serve some political or racial interest.

In Turkey, in Europe (in 1890), there were said to be about 3,000,000 Mahomedans: Hartmann, writing in 1909, gives 3,205,000. In Bulgaria, the Mahomedans number 601,876 out of a total population of nearly 4½ millions. In Rumelia there are about 43,700 Mahomedans, living for the most part in the Dobrudja. In Serbia in 1870 there were 14,433, and in Montenegro 1,400. In Albanis the total Mahomedan population is said to be 334,000, of whom 12,000 are Gypsies, 40,000 Serbs and 26,000 Albanians. Greece still contains 24,000 Mahomedans, while in the island of Crete the number has shrunk to 47,852; but recently in 1909, there were 35,996 Mahomedans on the island, and in 1881 more than 73,000. In Roumania and Rumania the indigenous Serb population includes 60,000. On the other hand, and in the rest of the Austrian empire there are about 140,000 more.

In the other countries of Europe, chiefly France and Great Britain, there are some small scattered groups of Mahomedans, mostly of African or Asiatic origin, temporarily resident in these countries.

Emigration and commercial activity have added 8,000 Mahomedans to the population of North America, and 160,000 to that of Central and South America (including the West Indies Islands, where there are 10,499 in Trinidad and 3,000 in Jamaica). In Australia there are 195,000, chiefly in Perth.

Bibliography: The first comprehensive attempt to give a statistical survey of the followers of the faith of Islam was made by Hubert Jammes, Verbreitung des Islams in den verschiedenen Ländern der Erde (Berlin 1897), but his figures are often very exaggerated, and later investigations have shown that much smaller estimates are nearer the truth. Martin Hartmann, Der Islam: Geschichte—Glaube—Recht (Leipzig 1899), gives detailed statistics, but does not mention his source of information. S. M. Zwemer in chapter iii. of Mohammed as a Christian (London 1896), gives a census of the Muslim World, with a bibliography. Separate studies have been made of the statistics of certain parts of the Muslim world e.g. by M. Broomhall, Islam in China (London 1910); S. Bohunovskiy, Moslems in Russia (The Motion World, vol. i. London 1911); D. Westermann, Islam in West and Central-Sudan (Die Welt des Islam, i. 85 ff., Berlin 1913); and G. Kampffmeyer, Statistik der Mahomedaner auf der Balkinhalbinsel und in Oesterreich (i. 32–33. For Asia and the East see The Muhammedan World of Today (New York 1906). Desultory as to the spread of Islam are given for their respective territories by the British and Dutch governments in their official publications, the Census of India, and Kolonial Verlag respectively. Religious statistics are given in The Statesman's Year Book, published annually in London. The Revue des Moeurs Musulmanes contains articles giving statistics of the Muslim population of several countries, see Index general des volumes i. à XV (Paris 1912). (T. W. Arnold.)

ISLAMÁBÁD, a town of some importance in the south-eastern part of the valley of the Indus situated at the head of the navigable channel of the river Beelum. Its Hindu name is Anantnag, but it was named Islamabad after the Muslim conquest, probably by Sultan Zain al-Abidin, 820–272 (1417–1457). The town was formerly famed for its sheep manufacture, but this has died out, and at present the only manufacture is that of white felt, embroidered rugs, and embroidered tablecloths. In the immediate neighbourhood are the celebrated Hindu Shrine of Mardan and Maktáng's gardens at Aitbal.

ISLAMÁBÁD. The name Islamábâd was given on more than one occasion by the Emperor Aurangzeb to towns or villages granted to Hindús. Of these the most important are Cittáragon (Citáram) [q. v.], which was the head and the end of the Bay of Bengal, Cínthá in the Deccan, and Mathura on the Ganges. Islamábâd became a mint in gold and silver from the time of Aurangzeb to that of Sháh Alm, II, and copper was also struck there by the last mentioned sultan. It is generally supposed that Cittáragon was the place of mintage of these coins, but Mr. C. J. Rodgers ascribed them to Mathura. Cínthá
however received the name Islamlbad in 1879 (1659) and Caighat, not till 1873 (1664). The name is not now in actual use for any of these three towns.

(M. Longworth Dames.)

ISLAMBOL [See Istanbul.]

ISLAM GIRAY, the name of three Khans of the Crimea.

1. Ilanu Giry, b. Mahammad Giray, brother of Ghiyath Giray (q. v., II. 1511). During the troubled period that followed the death of his father, he succeeded, as his brothers had done before him, in occupying the throne for a short time (few years till 939 = 1533), but he was not recognized by the Sultans. After the appointment of his uncle Salih Giray, he rebelled against the Saltab and was murdered in 944 (1537).

2. Islam Giray II b. Dewlet Giray, brother and predecessor of Ghiyath Giray (q. v., II. 1511). 995-999 = 1584-1588. In contrast to his predecessors, he governed the country and seems to have only been able to maintain his position with Turkish help.

3. Islam Giray III b. Saltan Giray, 1065-1068 = 1644-1645; in contrast to the two other Khans of this name, was a vigorous, warlike ruler who also took up a more independent attitude than his predecessors at the Pots and played a prominent part in the political events of his time, notably in the liberation of Little Russia from Polish rule. In his youth he spent seven years in Polish imprisonment. Several raids into Russia were made by him. About 1650 he even made an attempt but without success to enter into relations with Queen Christina of Sweden and to engage her to come to his aid against the Turks. Islam Giray died in the beginning of 1066 (begins 14 June 1654) at the age of 50 after reigning 10 years and five months. For the bibliography see the article Khan (q. v.), p. 101, 102, etc.; also the documents ed. by V. K. Zernov, Matrices pour servir a l'Étude du Khanat de Crimée, p. 340 sq. The last document was composed shortly before the Anath of Islam Giray is specially important, it is a threatening letter from the Khan to the Czar Alexis Michaelovit (p. 475 sq.). (W. BORTHOL.)

ISLY, in Bletter fold (the hampered), in KINNAUR in North Africa. It rises in western Morocco in the SW. of Uganda, runs from S. W. to N. E., through the lands of the Angol, passing near Udja, then under the name of West N. K. it joins the Mulla, a tributary on the left bank of the Tafila.

Several battles have been fought on the banks of the island. The Abdul-Aziz Sultan Vakilbuckarshein was threatened by the Murradi in 1608 (1208) and 1609 (1212). On Aug. 14, 1844, Murshid Bakhsh won a decisive victory here over the Moroccan troops commanded by Muslih Muhomed, son of Sultan Mulla. Ahi al-Rahnin. The Moroccans were captured at Djurf al-Akhmar on the right bank of the river. The Moroccan camp was captured and the army scattered. This victory won for Bagratid the title of Dac d'Isly.

(G. VYSE.)
ISMA (ISMAIL), in dogmatics, immemorially from error and sin, such as is ascribed to Sama, Islam to the prophets, and in the Shi'a to the Imams. As in the extent of their immortality, the orthodox theologians differ in opinion, as regards the prophets except Muhammad (on such points as whether it also exists before or only after their prophetic calling as whether it includes immortality from all kinds of sin or only applies to minor slips). It is applied in unlimited fashion to Muhammad only, in opposition to his own judgement. Among Sunni authorities the idea of the term is particularly extended to the Imams in the greatest degree. According to the Shi'a teaching, isma is inherent to the Imams to a higher degree than in the prophets on account of their exalted qualities of substance. Abu 'Abd al-Malik (d. 242 = 955) wrote, Naskh, ‘isma is the term of the prophet (d. 242, 330 H), an old 'Abd al-Malik al-Razi (Brockelmann, ii. 507, n°. 14). Every work on Muslim dogmatics contains a chapter on these questions and the different views in regard to them (e.g. Ibn Hala, Mulla, ed. Cairo 1321, vi. 1-311; Mosawyad, ed. Senn,. p. 300 sqq.); a mystic definition of ‘isma is given by al-Itani, Mulla al-Hasan al-Amiri (Cairo 1325), p. 116 sqq.

ISMAIL, the son of the patriarch Ithbih, is mentioned several times in the Koran. In Surah ii. 130 (v. 131) and iv. 151 it is said of him that he received revelations. In xiii. 55 he is called a messenger and prophet, also summoned his people to faiz and saba. These references are in very well with Muhammad's account of the religion of Ithbih. In Surah ii. 127, it is called one of the fathers of Jacob, along with Ithbih and Ismail, and in xlii. 119, he, along with Ithbih, is commanded to purify the Holy House at Mecca.

Tradition knows nothing of Ismail as a messenger one of his revelations nor has it explained his relations to the sacred of the religion of Ithbih. It knows that he is another of the sons of Jacob, descended to Ismail as his first-born and that a land arose between Hadzjar and Sera. With the intention of disfiguring Hadzjar, Sera even pierced her ears; so this thing became the fashion with women, Isma'il and Ismail are also said to have fought with one another occasionally. In the end, Sera's treachery induced Ismail to decide to travel to Arabia with Hadzjar and Ismail. The party was guided by the Sabians, according to others, by Gabriel (for the form of the Sabians, cf. The Novel of the Earth, Part I., pp. 69. 139.)

When Ithbih and Ismail had laid the foundations of the Holy House, Ismail led his father in the building of the temple. When this work was completed, Ithbih abandoned the boy with his mother in the barren country, afflicted by thirst. In her need, Hadzjar stood on this hill all night and waked and looked for fire and ran thither and thither between them, the origin of the s 'ayy (v. 46). Gabriel then called "Who art thou? To whom did Ithbih entrust thee?" The boy then impetuously thrust his foot (or finger) into the sand and a spring arose; if Hadzjar had not hurriedly scooped up the water in her jug, the Zanzam would have become a bubbling spring. It is also said that Gabriel pushed his heel into the ground and the Zanzam burst forth beneath it. In those days the Djurham (v. 7) lived near
the sanctuary; after Hāja’s death, Isa’īd[u] married one of their daughters. In his absence Buchar visited his wife but did not find a very hospitable reception; when the woman afterwards repeated to her husband some words which Ḥasan had said, he understood that the latter was suggesting he should divorce his wife. He did this; afterwards he married another woman of the Ḥabarum. Buchar visited her also and in the same allusive fashion gave his approval to the new choice.

Buchar and Hāja, according to Muslim tradition, are buried in the ʿAbhā of the Holy House, a distinction which they share with most of the prophets: the prophet belongs to the home of the prophets.

Muslim tradition also knows the story given in Genesis xxii. But there are several theologians who say, it was not Isḥāq but Isa’īd[u] that was the ʿAbhā. For this view, the sayings of ʿAbd Allah b. ʿOmār, Ibn ʿAbīa, al-S̄a hinted, etc. are quoted. It is related, for example, that ʿOmār b. ʿAbd al-Azīz asked a Jew convert to Islam about this difference of opinion and he asserted: “The ʿAbhā is Isa’īd[u]; the Jews know this also, but they are jealous of you, they say it was Isḥāq.”

Buchar is also considered the ancestor of the North Arabian tribes. In the native genealogies, the Arabs are divided into three groups: Al-ʿLā (those who have disappeared), Al-Qura (the indigents) and Al-ʿMustaʿrib (the arable). Isa’īd[u] is considered the progenitor of the last group, whose ancestor is called Adanā. The chain between Isma’īl and Adanā is given in very divergent forms, sometimes in partial agreement with the list in Genesis xxv.

**ISMA’īL.** Formerly a Turkish fortress, now the district town of the Russian government of Bessarabia, on the left bank of the Dniester, between the lakes of Jâlmu and Kātaš, with about 40,000 inhabitants (1897: 31,923). The name Isma’īl (Mohavian Smerl, Smail, or Smail, also Siml) is said to be derived from the Slav smail, a steed or dragon, the epithet of several Moldavian princes; according to a Turkish folk etymology, from the alleged conqueror, a Kapadak Ismail, who took the town under Bayazit II in 1454.

The origin of the town is unknown. It is said to have been at one time in the hands of the Genoese. It may have had importance under the Turks as a fortress to subdue the Bessarabians, who had been settled there in 1599, and particularly as a point d’appui of the Turks against the advance of Russia, owing to its splendid strategic situation as the best site of a fortified town in the Dniester and the junction of the roads from Galatz, Kharkov, Bender and Kilia. After Isma’īl had been taken by the Russians without a blow in 1770 in the First Russo-Turkish War, the Turks endeavoured with the help of foreign engineers to make the town, which was restored to them by the peace of Khotk[?] in 1774, the strongest fortress on the left bank of the Dniester, an “army fortress” (arpāl faṭrə), i.e., the permanent quarters of a large body of troops of a defensive character. The fortress, thought to be impregnable, was taken as early as Dec. 11 (22), 1780, by the Russians under Saltykov in spite of a most valiant defence by the Serer or Ahdali Mâjmûd Pasha; in three days’ massacre over 20,000 Turks, including the whole Mussulman population, were killed, 9,000 taken prisoners and only one escape by swimming the Dniester bearing the appalling news. This deed of arms, celebrated by Byron and Dzerzhinski, aroused a tremendous sensation in Europe; in Constantinople it resulted in a revolution and the execution of the Grande Vizier.

By the peace of Jassy in 1791 Isma’īl was restored to the Turks and fortified again by them. (The splendid stones with the façades of Selim III, testifying to the restoration of the fortress in 1794–95, are in the Odessa Museum.) But in 1809 Isma’īl again capitulated to the Russians, to whom it remained by the peace of Jassy in 1812, when many colonists settled there, viz., Russian fugitives and seamen, especially Kosak, Ukrainians, Greeks, Bulgarians, Armenians, Jews and Gipsies. In 1815 General Tschikov founded at a short distance from Isma’īl the town of Tschikow, which bears his name and gradually expanded to form one town with Isma’īl. By the peace of Paris in 1856, Isma’īl after the demobilization of its fortifications was added to the Russian, with a portion of Bessarabia and remained Russian till its capture in the last Russo-Turkish War on Apr. 13, 1877, by the Russians, to whom it finally passed by the treaty of Berlin.

Only a few ruins of the fortress exist. The town, which in spite of many vicissitudes of war (such as being plundered by the Cossacks) was at one time an important centre for traffic in fish, etc., fruit and corn and a populous town (always with a very mixed population, in contrast to the purely Tatar population around), suffered severely through the wars and the forcible expulsion of the former population of Bessarabia. At the present day its economy is again highly developed in spite of the by now famous flourishing fishing conditions.

**ISMA’IL I.** Founder of the Skūth Dynasty of Persia, born of a Sufi family, settled in Ardabil [v. v. 1. 125 sqq.]: in Kshwah, the son of the shah Shâh al-Din, who was said to be descended from the imam Mâjmûd al-Kâmil. He was the son of the shah Shâh al-Din. [v. v.]; after the death
of his maternal grandfather, Cara Osman (about 1783–1835), in the confusion of thearchy that followed, supported on the one hand by the followers of his father and on the other by the seven other khans who had shared his grandfather's house (in Shamluk, Shamlu, Tekkel, Bekhtiar, Dhiq ʿIlaqi, Qasim, and Afshar). Ismaʿil collected an army of 7,000 men, who was received the name of Ismail (p. 50). In 1902 he was master of Shirvan, Adharbash and Tork ʿAdami and now took the title of ʿalāʾ al-dīn "king.

In 1905 (1577) he concluded the treaty with the government of the Ottoman empire and thus gained the principle of the title from the rulers of the Ottoman empire. He was made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire. He was also made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire. He was also made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire.

The former, Muhammad Sabarli ʿAlam, had made himself master of the Shirvan, and his mother was married to Ismail (p. 50). In 1905 (1577) he concluded the treaty with the government of the Ottoman empire and thus gained the title of ʿalāʾ al-dīn from the rulers of the Ottoman empire. He was made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire. He was also made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire.

Ismail died in 1932 (1554) at Andula where the tomb of the Safavids is. The beautiful and splendid Mausoleum, on the site of the Safavids' family in the Imperial Library at Prague, was erected at the tomb of Shah Ismail. Ismail restored the Persian language and his language ruled till its overthrow by the Afghans over two centuries later.

Ismail II, Prince of Persia, son and successor of Shah Tahmasp I. After the latter's death on 14 Safar 982 (14 May 1576) his son Ismail II was his successor. With the support of the Turkish tribe of the Qara Ewli, he came to the throne. On the day after his succession he was seized in the bazaar and murdered during a rising in which the Safavids and Afghans fought the Qara Ewli. Ismail, to whom his father had retired the rank of wali, was replaced. He was replaced by Lutfi, who proclaimed himself the ruler of the Shirvan, Adharbash and Tork ʿAdami and was confirmed to him by the government of the Ottoman empire. He was also made the ruler of the Shirvan, Adharbash and Tork ʿAdami, and the title of ʿalāʾ al-dīn was confirmed to him by the government of the Ottoman empire.
ISMAIIL, a prince of AFSHAR, VICE-REIGN of AL-MU'AMALAT. In 366 (858-9) Abn 'Isa-Sar was appointed vizier but the real ruler was al-Muwafiq, the Caliph's brother. In the beginning of Safar 276 (May 891) a summer gained command near al-Muwafiq, who was then very ill, had died in Baghdad. His son, Abn al-Shakir, the future king of al-Muwafiq al-Shakir, was also strongly following among the nobles of the capital and, when Abn al-Shakir had the Caliph brought with his family from al-Madinah to Baghdad, and placed them in his own palace and not in that of al-Muwafiq, the adherents of Abu 'l-Abbas believed that Abn al-Shakir was going to take the side of the weak and insignificant Caliph, and thus forged a plot against Abu 'l-Abbas, who had been imprisoned in 275 (889) for disobedience to his father. When they learned that al-Muwafiq was still alive, Abn al-Shakir was accompanied by many of his followers and had to take refuge with al-Muwafiq, while his horses were plundered. After the death of al-Muwafiq in Safar, Abn al-Shakir was arrested and even all his horses were supposed to be plundered.

ISMAIIL b. ABD AL-RAZ'IM. (See Al-Ash'ari, p. 75.) ISMAIIL b. NUR, ASC BEYAZIT AL-MU'TAMID, a slave and after the fall of his dynasty in 589 (199) was carried a prisoner to Egypt in Fuzhina; he succeeded in escaping from there in disguise and for several years contested the rule of Ma'ani' at Naif with the Turkish marabouts. After his last defeat, he fled with only eight men across the Sahara and was murdered in the year of H. 11 of Busr 707 (1406-07). In 277 (890) he invaded the province of Fuzhina and the latter executed him the same day after having flayed and burnt the bodies and the linenations.(1858) (C. D. Davis, "The History of the Second Sultan's Regnum," London, 1865, p. 115.)

ISMAIIL b. SHAHER, MILAY, SULTAN OF MOROCCO, second of the dynasty of Almohads or Almohad. He was supposed to be the grandson of Saladin. The real ruler of Morocco was the Almohad of Al-Mu'izzil, brother of the Almohad of Morocco. He advanced at once in the capital Pisa, which had declared against him and insulted him. He was proclaimed at once at Tunis, 14 Feb. 1392, having then 30 years of age.

But these revolts, his brother Milay al-Harun in Tikriti, his relations, Ahmed b. Mu'ta, proclaimed in Morocco and in Cairo, and finally the sultan, chief of al-Qayrawan in the northwest, took the field against him. They were supported by the Turks of the Regency of Algiers who feared the establishment of a wild power in the west of the Maghrib and endeavoured to make trouble there. Milay laid in 1392, that year's nephew Ahmed b. Mu'ta, date of the death of Milay, in the north of Pisa and had him put to death. But Ahmed b. Mu'ta, since once more raised the hands of the south and the Atlas. To meet this Milay had to recognize his nephew as Abu 'l-Abbas the south of the Almohad and its brother al-Hamud in the north of Fez.

These civil wars, which lasted for five years, badly terminated in the Almohad. The Almohad of Tikriti, Muhamed al-Hamud, was defeated by the Turks of Algiers, dismounted, a terrible rebellion in the country of Tikrit and the province of western Morocco, but his brother troops could not withstand the Almohad's disciplined troops, especially his artillery. Milay al-Harun, being threatened, tureured the people to keep them quiet: more than ten thousand were beheaded; thousands of prisoners of war were among with Christian slaves. He sent to help to build the palace of Maroka, which the Turks had made his capital. At the same time the plague carried off thousands of victims (1050 = 1693) in the regions of the Mazara and the Ifni.

The vigorous repression of the Berber revolt and the epidemic afforded Milay al-Harun a certain reprieve. He took advantage of this to strengthen his political army. He called his former negro slaves as his sharecroppers, abdicated access to them, trained them in the arts of war, and made of them the famous Black Guard of the "Almohads" which was to assure him supremacy over all Morocco.

At the same time, unfavourably to him, the intransigent religious party, but in reality to which the rebellion of the Turks and Europeans in the seaports, and to counteract the influence of the enemies, organized the corps of the "Almohad" or "Volunteers of the Faith." The latter, corps, which was formed by several hundred carefully selected, was led by an increasing irregular warfare against the European possessions. They took a Marmara (al-Marmara), the modern of Moghania, from the Spanish, and Milay, being selected over 100 places of artillery (1392).

They had given to him the English and Danes and the latter executed the work after having burned, as the usual, and the fortifications (1858) (C. D. Davis, "The History of the Second Sultan's Regnum," London, 1853, p. 115.) Lecumbia was made to succumb to the blow of the veneration of the time" in 1680. Aisha, in 1681. But all attempts against Milay and Zanzibar. It was in vain that Milay I. endeavoured to get Louis XIV to aid him against Spain. French commerce had to suffer for some time as a result.

But the Peace of Bijuwe in 1697 raised considerably Louis XIV's prestige above his enemies. Milay I. then sought his alliance against the Turks of Algiers, who were rising up in the whole of the Aitn against the Greeks of Pisa. As a result between France, the Sultan of Tunis, and the Sultan of Pisa was then concluded. The latter agreed to send troops to a matrimonial alliance and demanded the hand of the Princess of Aitn (238). But the Degree of the Damiene, the news service to France great commercial benefits at Suda, Tyre, and Saf. Frenchmen established the building of the palaces, etc., of the Vauban and sometimes (like the Picts) accompanied his artillery. On his part, the Sultan organized
several expeditions against the Turks, with the help of France, whose navies supplied him with arms and munitions. But the absence of the Moroccan armies did not enable Ismail to carry over his advantages expected. He even allowed his ally, the Berber chief, to be defeated near Constantinople, which enabled the Turks of Algiers to come to fight the Moroccans in the west in full strength in 1703 and to drive them back.

The expeditions of Ismail Ismail against the Turks, in spite of their relative lack of success, enabled him to pacify his frontier where he built or repaired the fortifications. He built the fort of Raggades in the mountains of the island of Lesbos commanding the high valley of the West Sharo and the lands of the Arab tribes of the high plateau. He built the fort of Aydin Stahl Mallik in the plain of Assakel and that of Salwak in the land of the Turks. He thus closed the exits on his north-east frontier. Forts built in the lands of each tribe kept the country on the edge of the mountains, the natural allies of the Turks. There were fortifications and privileges to pass into the hands of the Sharois. The latter gradually took over the direction of the religious elements, which were organized into brotherhoods. Ismail completed his system of domination by the creation of military zones. Thus, notably, had his walls rebuilt. This town became the headquarters of the eastern march. A garrison of 2,500 Andalucian soldiers was stationed in the city of Taza, and also had to keep in control the Berbers of the Rif in the north of this ravine, and the Berbers of the middle Atlas in the south.

For these fortifications and these works, Ismail raised his revenues on a monopoly of the commerce at its ports and from continual raids on the tribes of doubtful loyalty. The monopoly helpedfilling his treasury enabled him also to prevent contraband traffic in horses and arms.

But hardly had the Sultan, after regaining 50 years succeeded in imposing, either by skill or terror, peace within his territory than the rivalities of his sons brought to an end his hopes to acquire. He had realized all his policy on the struggle against the Turks of Algiers. He could not realize his dream. He died on 27 Rajab 1139 (March 30 1727) just when the dissatisfaction that was breaking up the Regency of Algiers might have secured his success. He was succeeded by his own Mullah Ayman al-Dihlahi.
ISMA'IL PASCHA, Khedive of Egypt (1863–1879), second son of Mahmoud Pascha (1819–1881), born in 1830, was educated in Paris, and was employed by his uncle, Abdel Ahad Pascha (1819–1864), in various diplomatic missions to the Caire, Napoleon III and the Sultan of Turkey. In 1861, he supported his uncle in his revolution in the Sudan, and two years later succeeded his uncle as viceroy of Egypt. He was the first of the descendants of Muhammad Ali (1769–1849) to rule by the name of Khedive, a title borrowed upon him in 1857 by Salwa Ahmad (1799–1857), whom he had married in the previous year. By increasing the tribute paid to Turkey from £350,000 to £2,500,000 to £7,500,000, obtaining in return permission to change the laws of custom to suit the convenience of the Sultan, he strengthened the family's position in the Khedive in many respects and independence.

Isma'il was a man of large ideas, with ambitious schemes for reform; he remodelled the customs system, and established a post office; introduced gas and water and other improvements into Cairo, Alexandria and Suez, created the sugar industry and otherwise stimulated commercial progress, by extending railway and telegraph lines, building docks and arsenals, and laying canals for irrigation purposes. He encouraged education, established the first schools in Egypt for girls, the polytechnic school for the training of military officers and the medical college; on his accession there were only 185 public schools, but during his reign the number rose to 4,817. In 1866, he opened the Suez Canal, with great pomp and magnificence, in the presence of the Emperor Eugène and other patriarchs, and availed himself of this occasion to take upon himself European sovereignty. In 1875, in place of the old system of consular jurisdiction in civil causes, he established the Mixed Tribunals.

He endeavoured to develop the Souda on the same lines as Egypt, and to support the slave trade there. In 1866, he had obtained from the Sultan of Turkey a firman assigning to him the administration of Souda and Mauzer, and subsequently (1870–1873), extended his authority over the coast of the Red Sea from Suez to Cape Armasah. In 1874, he sent an expedition to the Red

ISMA'IL PASCHA, called Nejmuddin, Great Viceroy of the Turkish Sultan Sulayman Pasha (1822–1876), was the son of Aydogan, a native of Aydogan, in the province of Angora. After the death of his father, in 1842, he entered
the office of pagé-wazir and on the outbreak of arrest in the reign of Sultan Muhammad IV received the rank of a vizier (1668-1687). After the assassination of Shaykh Salih in the rebellion of the Summer, which took place on the accession of Sultan II to the throne, he was appointed Grand Vizier, but dismissed after holding the office for 34 years (4 Rajab 1086-Rajab 1120). He was then the rival of Khome and soon afterwards exiled in Rhodes. Prosecuted by the hitra of Zain al-Abidin Pasha,bayk of Khali, who had been unjustly executed by his orders, he was brought to trial and convicted. His trial lasted by order of the Grand Vizier K ésâl Muzaffar Pasha at the age of 70 in Rajab 1087 - April 1690. Although of a mild temperament in his youth he grew tyrannical and cruel in the exercise of power. Instead of taking supreme command of the troops himself, he chose incompetent people as generals like the valiant Vâsh Pasha.

(ML. Hâdîyat Hâmad.)

ISMA'IL AL-SHAHID, Mawlâna, was born on the 4th Shaban 1198 (1783) in a non-Muslim family which traces its pedigree to the Caliph 'Umar. He was the only son of Maulâna 'Abd al-Ghani and nephew of the illustrious Maulâna Sayyid 'Abd al-Árâf (d. 1239-1825). While a mere boy he lost his father and was brought up as an adopted son under the care of his uncle Maulâna 'Abd al-Kadir (d. 1243-1826). In childhood he was very inattentive and fond of swimming in the Jumna, but as he had a retentive memory and was sharp intellectu, he became a learned man. He was elected at the green grade (idrass) which then prevailed amongst the Muslims of India. He preached the doctrine of Islam against all opposition. It was at this time that he came into contact with al-Sayyid Ahmad al-Mu'llâhid. The religious sanctity of the Sayyid won his admiration and he became his disciple and was his constant companion throughout his life. In 1255-1839) they made a pilgrimage to Mecca, whence they proceeded to Constantinople. There the Başâlis were received with markant courtesy. Six years later they returned to Delhi and began to deliver religious lectures with redoubled energy. Many people were reclaimed from the darkness of ignorance to which they had been reduced owing to the influence of the professional Muslims. Ahmad Ismai's rapid success excited the envy of the people of Delhi and he was likewise treated with the public trust to keep him in their estimation by severe criticism and malicious cen- sure, but truth triumphed and they were all silenced. In 1255-1832) the Tahâlah wasfit, with his religious gifts, proceeded to Persia and declared a religious war against the Shi'is. They were joined by large numbers of people and succeeded in establishing their authority at Persia. He, owing to some innovations upon the usages of the Afghans, that authority was overthrown. They had to fly across the Indus but fell in with a Sâlih darwallah: a scholar took place in which Ismai was his spiritual guide and with his death in 1245 (1832).

He is the author of the following works: 1) 'Alidh Ruh al-Tafsir, a treatise on the principles of Muhammadan law according to the Hanafi school, printed, Delhi 4. 1924. 2) Majalis-i-'Ilm, a Persian treatise on the problem of the imamah. 3) Tawâfîq al-Fuqaha, an abridged treatise on fiqh, printed 1929, translated into English by Mr. E. Ashburn: Ali (v. 101, 1927-29); 4) Tawâfîq al-Fuqaha, a treatise in Persian on the Islamic system on the text of the Prophet. 5) Tawâfîq al-Fuqaha, 3 vols., 1824, 1825, 1828. 6) Isma'îliyya, a Shi'a sect, as called because it stopped the works of Islam. Isma'îl, eldest son of 'Abd al-Salih (§ v.), the fifth Imam, so that Isma'îl in his time was the seventh. His father had at first annullcd his sucession, but having learned of his eldest son's tranquility, he changed his decision and declared Isma'îl, his second son, to be his successor. The Isma'îliyya sect is the only sect which admits this alternative. The sect is divided into two groups: the Isma'îlî, seeing instability, could not have pacified himself by drinking wine and that it was not permitted to God to change His opinion, contrary to what Isma'îl had stated. Isma'îl died five years before his father at Mardin in 445 (1050) and was buried in the cemetery of Baqi al-Sharif. In spite of the persecutions taken by the people to force the death of his son confirmed by numerous witnesses, his partisans would not admit his decease, claiming that he was still alive five years after his father's death and that he was seen in the market of Jâmâh, where he corteed a paraply by taking his hand. The sons of Isma'îl, involved in the political persecutions of which the Ahl-i-Bâdi were victims, left Mardin: Muhammad (the elder) went to hide in the district of Damârâd, near Basket; his descendants continued themselves in Khurâsan, then in the Khandâsh region and migrated to India, where they still exist at the present day. Abu, his brother, went out for Syria and the Maghrib. From these places of retreat, the descendants of Isma'îl sent out missionaries (alâl. q.v.), p. 124, who traveled to traverse the Muslim world and there preached the doctrine known as that of the exterminators (‘Ilmîyya), whose starting point was the alleged expulsion of the Khurâsan. One of these missionaries was Ma'nî, called al-Khâlid, "the mushroom", who sent "Abd Allah (q.v. 1, 26) became chief of the branch of the Karmânuw (q.)]. With the establishment of a rich Persia, Muhammad ibn Ma'nî, called Tâbân, who had ruled in that country, that the British were going to return in the offensive (atat. p. 128). O. Leth, in "Ezetahmeni, Fortifikasjonen, s. 357; M. Amurci, op. cit., s. 114), he made them the peoples, and once religious and social. At the end of the third century A. D., 'Abd al-Mu'min al-Mahdi, recognized him as the leader of the tribe of the Kharâmî (q.), who issued to some holy in the empire of the Fâtimâ (q.), in the India, soon afterwards extended to Persia. Isma'îliyya, a Shi'a sect, was born in Egypt and was there introduced into the doctrine of the Khâlid, to perfect himself in it. He went to Egypt in the caliphate of al-Mustâsîf in 478 (1082-1079), after a stay of
III was only nine years old, his youth as well as a loss of blood caused by an accident in the fifth year of his reign forced him to withdraw from public affairs, thenceforth he lived secluded in his palace and was murdered during a fit of intoxication (not day of Uja, Jan 1254) at the instigation of his son Rukn al-Din Khwarizm Shah. (q.v.) having received orders from the Mongol emperor to depose the stronghod of those strongvolumes (1254-1256) hid away to the fortress of Malatinth, where Khun al-Din was. The grand-master surrendered. He was a passer and taken to the court of Mongol, who refused to receive him; on his way back he was murdered on the banks of the Oum. The fortress of al-Aziz was capitulated by that of Qandil in Damascus held out for three years. The last traces of Tansis disappeared from Khan in the reigne of the Mongol Khun Adil Sulaymân, who sent a threatening mission to Qan Shih, that the last followers of heer was burnt out in the same province; the only persons who could be suspected were a few soldiers, Safiyeh da终端.

Tansis of Syria. Their establishment in this country followed soon after the insulation in the mountains of al-Hind. They are found, as Alpûs and Murad, the last years of the 9th century of our era in the country of the Salûts, prince Hikan bin Tuli, who was converted to their doctrines by a physician-astronomer. Their first victim was the father-in-law of this prince, Dinka ab-dûl-Walde Óaqib, lord of Hurâs, so he was about to march against the coast of St. Gilles to make him raise the siege of Mar el-Atrak [q.v.]. He was assassinated while at prayer by three Persians disguised as Turks. The news traveled not long in dying suddenly (he was perhaps assassinated) and headed on his power to a companion, also of the same origin, Abu Tahir ibn Shih. The Tansis took Apehune by a night in 1450, but the Crusaders took it from them again very soon afterwards. Their excess furnished a pretext for their revenge (Jan 1254). The missionary Bashân, having escaped, tried to make Shih to the Crusaders by taking advantage of a Christian feast. In spite of the general surprise, the inhabitants, led by the Amirs of the family of Moundî, engaged the crusaders (izâbas) and were hanged up by ropes into the interior by the women who had remained there. Although the Tansis had once again gained, a certain amount of influence in Aleppo, the rebel Turks, fearing they were losing possession of the Hamal al-Sharp [q.v., p. 251] of the, on Kasrân 25, 1221 (Dec, 2121), Tâbî al-Din al-Kâbî assassinated the Fatimid vizier al-Dimâm b. Bashân (q.v. 8).

A rising of the population of Ahrît (Isgir, Râba) resulted in the massacre of the populace, they had made it in this town (123, 123) but the majority of the Tâbîs of Sultan [q.v.] re-established their fortress, viz. Taghribran prince of Damascus, wishing to save their favourite from the ill-treatment of the Amiral, led it to him. Alpûs fell in battle 1222 against the rebel nation. Tâbî al-Din al-Kâbî succeeded him; after the massacre of the populace in the town (15 Kasrân 1223 = 1223) he handed the district of Hamal al-Sharp over to the Crusaders.

To make up for this loss, the Tâbîs purchased from Saf al-Mulk b. Amsûr the castle of
Kadiji (527–1132), whose Beniamin of Nablus still found a few decades later the residence of the head of the sect, and captured by a troik of Mayyath (Mayyath). At this time they held no more than six fortresses in Syria, — as many as ten according to William of Tyre. To avenge the murder of Raymond of Tripoli, the Templars attacked them and forced them to pay tribute.

At this period, the I mam-lyya (Imam, 1169) had at their head Kadiji al-Husayn, son of Saladin, grandson of the Assassins, who came from the neighbourhood of Baysa and had settled at Al-Muttah. The immunities to which they abandoned themselves were found against them the inhabitants of the town of al-Jibr, between Baysa and Aleppo, who snatched them out of their retreats and extirpated them as far as possible (Cf. also Ibn Dhusayn, ed. Wright de Goeze, p. 349 sq.). On 13th Dhu al-Hijja 574 (May 1247) Salah, al-Din just missed being a victim of an attempt against him by the families and was saved by the strips of iron which hit his helmet; to revenge himself he was going to pay a visit to Mayyath, but refrained from taking the town on account of fatigue undergone by his army. Perhaps in view of threats of the Assassins, who even seems to have made a pact with his enemies, he was esta-

Department of Education. The use of the Aga Khan from his father he has inherited his taste for sports.

FREQUENT DISTRIBUTION OF THE IYAM-MYLYA.

There are still a few thousands in Syria, who live in the ancient fortress of Mayyath, Kalamis. They are by custom, and by habit, members of the Ottoman empire; the Ottoman sultan by the Nuriyyah in 1806 promised them lands, just and transact, by Stevrezic Gurevich (Prague, Hebatia, &c., c. 3050, 1374). In Persia there are some in the district above mentioned of Mahallat near Kumis; in Central Asia they are found in Takdahkhi, Khokand, and Khwarazm, as well as in a district near Khatan; in Afghanistan, they are known under the name of Murtadi. In Ca-రాష్ట్రాన్ (Valleys of Huz harmonic and Kemuri) there are many Mawari, as well as in several valleys of the upper Oxus (Shiikh, Wais, and Vais); in India there are 900-100 in the province of Adabah, Mur- waks, Buljibas, in the province of Hind, Mur- waks, Buljibas, in the province of Indus, Mur- waks, Buljibas, in the province of Indus, Mur-

In 1167, in India. They are known by the name of Kaliyay (q.v.) or Mawat, their chief is the Aga Khan (q.v.), whose official title is His Highness Aga Sir Baha Muhammad, a great sportsman and devoted to travelling, a contributor to the Mosque Architecture and to Zand and Divan, in this he fies an important place in the literature and in which he was president of the deputation and went to the Wazir, by the Mamluks of India. Be he the descendant of the old company and is due to his descent direct to Abu-l-Husayn, governor of Kurna under the Zand dynasty, who afterwards retired to his estate of Mahallat near Kumis. The latter's son, was Hajji Malik Allah, called Saiyed Kadiji, murdered in 1344 at Yezd; to the latter's son, Aga Khan Mahillah, of all times gave the blood of his daughter; rebelling in 1338 he had to leave Kurna and take refuge to Shiraz, where he found some Nizam Khanj; he lived successively in Isfahan and Esfahan.
The three last principles being the focus, the
missionary, charged with giving proof of the relation of
the cross, and the 23rd to the "missionary." Mohammed
was the prophet and "The
Theological Elements of Initiation (at first
seven, then nine). The missionary began by put-
ing embarrassment questions to the neophyte on
heavily points of Islamic theology (the usual process
with the Bilhaha) and left him quite gradually
to admit these difficulties were easily solved
by the allegorical and symbolical interpretation of the
Kuran. Calculations made from the numerical
value of letters played an important part (see
Fragment ii. of St. Thomas and the article
archly above § 338). When the proselyte had
acknowledged the force of his arguments, the
missionary made him take an oath not to reveal
any of the mysteries which he was going to be
entrusted to him and taught him in order to be
saved: it was necessary to submit blindly, per-
sistence and courage, to the spiritual and temporal
guidance of the Imam. The majority of the adepts
did not pass beyond the first or second stages of
initiation; the missionaries hardly reached the sixth.
Only a few superior individuals could hope to
reach the higher degree (cf. the theories of the
Sufis and mystics on the derga sisyni [p. iv.]).
Paradox, allegorical, signifies the state of the
soul which had reached perfect knowledge; hell
was ignorance. No soul was condemned to hell
eternally; it was returned to earth as a new soul
until it had recognized the lessons of the epoch
and had learned theological knowledge from him.
Every soul was destined to undergo the same fate
and disappear through the progressive elimination
of all creative action to universal reason. In spite of
the reputation so impending, which maintained the fame
of the Isma'iliya, it should not be imagined that
their crimes were the application of a dogma;
no one should rather see in this the desires of the
absolute political power which the grandmasters had
attempted to themselves. Romanova (Gradient des
Evénements, p. 285) has noted that those whom he knew
were inscrutables and of a gentle tempera-
tment. They do not care to travel, are active at
home, much addicted to their religion, which how-
ever differs very much from the old creed and
are brave at need and obstinate to their chiefs.

ISFANDIYAR (v), twelfth month of the Persian solar year, also name of the 60th day of each month.

ISPARTA (in the battle: Sabasti; also to the) in the Arabic translation of the Acts of the Apostles, xvi, 9, for the Greek Lebana, cf. Lebana; Lebena, Meier, Gerla, ibid. (932), the ancient Birei Bireia (Phoen. Not. H. c. 247; Ploenè v. 5 § 5), was taken from the Byzantines by the Seldjucks of Konya in the reign of Kilii Arslan III (600–602 = 1003–1004). (Hunting, Rec. de Textes relat. à l'Hist. des Seldjoukis, ii. 35 = 19. 47). After the downfall of the kingdom of Konya, Sibar belonged to the Hamidoglu, and was sold by the last ruler of this dynasty in 718 (1318–21) with the greater part of his lands to Sulten Murad I (Larischian, Hicq. p. 238; Säil. al-Din, c. 98). Under Ottoman rule it was the residence of the governor of the district of Hamidoglu, now known as the headquarters of the military court of Hamidabad and of the Greek Metropolis of Esphalda. The population of the prosperous town is estimated at 29,260, of whom 6,000 are Greeks and 500 Armenians. It has numerous mosques (83, 83, 53 mosques), the museum of Antioch, being a work of Sinan, 9 madrasas and a library of 600 volumes, also Greek churches and an Armenian, the former not without interest. Among the products of the industry may be mentioned carpets (600 looms), alabaster and agate (250 workshops), silk, satin, cotton, and sundries.

[J. H. ORTNER.]

ISRA'. The term is taken from the Koran, Sura xvii. 1: "Glory to Him who caused His servant to journey by night (and it also (it) takes) from the sacred place of worship to the further place of worship, which We have endowed with bounties. In order that We might show him some of Our signs! Verily He (i.e. God) is the Hearer and the Beholder." — We do not know whether this verse originally formed part of Gen. xvi or was first promulgated in some other context, nor need we inquire what may have been the real sense of the verse, in any case it is noticeable that the tradition gives rise to three explanations.

1. The oldest is, which disappears from the more recent commentaries, directs in this verse an allusion to Muhammad's Ascension to Heaven. This is the more interesting, as these traditions (Bukhârî, ed. Cairo 1278, ii. 185, 383) seem to indicate a similar "Ascension" made to Heaven.

2. The second, which is held to be the most probable explanation, the reference to the sacred place of worship, is the second, which is held to be the most probable explanation, the reference to the sacred place of worship, is the Ascension to heaven of the Prophet (see also the Mas'udi, p. 11. 423), where it is mentioned as a part of the Prophet's life story. However, this explanation is too vague to be satisfying, in the sense of "Heaven," and, in fact, in the old or traditional text is often used as synonymous with el-w臰f (see Ed. Isra', p. 14).

3. The third interpretation is the most common, and it is held to be the most probable explanation, the reference to the sacred place of worship, is the Ascension to heaven of the Prophet (see also the Mas'udi, p. 11. 423), where it is mentioned as a part of the Prophet's life story. However, this explanation is too vague to be satisfying, in the sense of "Heaven," and, in fact, in the old or traditional text is often used as synonymous with el-w臰f (see Ed. Isra', p. 14).

2. The second explanation, which is held to be the most probable explanation, the reference to the sacred place of worship, is the Ascension to heaven of the Prophet (see also the Mas'udi, p. 11. 423), where it is mentioned as a part of the Prophet's life story. However, this explanation is too vague to be satisfying, in the sense of "Heaven," and, in fact, in the old or traditional text is often used as synonymous with el-w臰f (see Ed. Isra', p. 14).

3. The third interpretation is the most common, and it is held to be the most probable explanation, the reference to the sacred place of worship, is the Ascension to heaven of the Prophet (see also the Mas'udi, p. 11. 423), where it is mentioned as a part of the Prophet's life story. However, this explanation is too vague to be satisfying, in the sense of "Heaven," and, in fact, in the old or traditional text is often used as synonymous with el-w臰f (see Ed. Isra', p. 14).
Standing as the object of Muhammad and Jerusalem and described it in the speeches of the Koran (Bukhari, ii. 229, iii. 235; Muslim, i. 69; Tabaqat, Tafsir, xxiv. 35, 144), etc. The story is woven into a connected whole as follows: Muhammad journeyed by night to Jerusalem, ascended to heaven, and there described his adventures. The Koran does not distinguish him and Muhammad apostles. Muhammad seeks to defend the truth of his story, but he has forgotten the particulars: whereupon Allah promises him to receive the book of Jerusalem (selected from the Koran, vi. 170, 171).

In the same modern and longer narratives the story is further amplified (see, e.g., A. Müller, Der Islam in Moreh- and Abendland, i. 288 sqq.). The prophet is said to have held 70,000 conversations with Allah, although the whole journey proceeded as quickly that, when he returned, his beard was still warm and the wax cup which he had overthrown with his foot at his hurried departure was not yet emptied. By Muslim theologians the question has been discussed, whether the story happened while Muhammad was asleep or awake: and whether it was his spirit or his body which journeyed. The orthodox opinion is that the journey was performed by Muhammad with his body and awake. Tartusi in his commentary (xxv. 12) very clearly supports this view, following the following reasons: 1) if the prophet had not been carried away in a corporeal sense the event would affect nothing whatever his divine mission and those who disbelieved the story could not be accused of impiety. 2) It is stated in the Koran, that God caused his servant to journey, not that He caused his servant’s spirit to journey. 3) If the Prophet had been carried away in spirit only, the services of the earth would not have been required, since animals are used for carrying loads not for carrying spirits (Bevay, 42, et al., 60; Schubert, Der Islam, vi. 15; Tazari, Safwat, and Haghawi, Tafsir, ed. xvii.). 4) Mystics and philosophers often give the same allogorical interpretation (Geistreich, Geschichte der Verhältnisse der Mittheilung des Glaubens in der Geschichte der Gegenwart, p. 319).

ISRAEL [See TRAV.]

ISRAEL. [See TRAV.]

ISRAELITE, the name of an archangel, which is probably to be traced to the Hebrew Shemath as is indicated by the variant Sarrafl and Scipione (Pliac al-Shir, viii. 375). The change of liquids is not unusual in such renderings. He is the only one under the seventh earth, his head reaches up to the pillars of the divine throne. He has four wings on one side, one in the other side, with which he covers his body and one is a protection against the majesty of God. He is covered with hair, feathers, and tongues. He is considered to be the angel who answers the questions of the men of knowledge. He speaks through the mouth of the archangel to his disciples in his only name. He is a prophet, and he is divided into the holy and the holy place. He is the archangel to whom God commands. He is the archangel to whom God commands. He is the archangel to whom God commands. He is the archangel to whom God commands.
features will be noted here. Yakh is actually older than his wife, Kasi. When he was going to be born in front of the latter, Kasi was angry and the two brothers quarreled, even in the mother's womb. Eon then said: Wallach, if thou wilt not be born first, I shall close up my mother's womb and kill her. Yakh then yielded and Kasi was the first born. This story is found in the Turcomanc. Yakh was the mother's blessing by Arak Khan, Yakh died by his uncle. From fear of Eon he concealed himself by day and travelled by night (sayar or sayar (أول)، hence the name Isikhil. The Muslim legend therefore does not know of the change of name at Pund. As to his marriage with two sisters, it is said that Mousi was the first to forbid this. But it is also said that Yakh did not marry Kasi until after Lyak's death.

**Bishikul** (Turkic: "wells") the most important mountain lakes in Turkiikizia are by far the largest of the world, situated in 42° 30' N. Lat. and between 76° 35' and 78° 30' E. Long. 3417 feet above sea level: the length of the lake is about 155 miles, the breadth up to 37 miles, the depth up to 1334 feet. and the area 2400 square miles. From the two chains of the Tharikul, the Kangez-Aleea (in the north) and the Terekz-Alleea (in the south) about 30 large and small mountain streams pour into the Isikhul, of which the most important, Top and Trigolov, flow into it from the east of the others may be mentioned: on the south bank, the Kaka, Kisch-Su, Dzuka (or Zuuka), Karsakan, and Tom, on the north bank, two Ak-Su's and three Koli-Su. On the origin of the designation Kasikuliil which now connects the Caspian with the Isikhul (cf. 20, i. 8806. 875) views differ: it is said that the Kossar, now the upper course of the Cas, previously flowed into the Isikhul and the latter had an exit to the Cas; at present the Kossar sends an arm into the Isikhul through the Kustanak only when it is flooded; at other times there are only a few ditches there filled with water, without any definite current. The question is only of importance for geology and physical geography; in the historical period the Isikhul has, as all accounts show, always been a salt lake without an exit.

The oldest of these descriptions we owe to the Chinese writer Huan-Chang (with: sent. b. 63), the Chinese name of the island of Isikhul is never frozen, corresponds exactly to the Turkish name. The latter first appears in the *Hadduz Al-Aaraa* (772 = 982-83) in Kusims (ed. de Goeje, p. 292) the lake is only mentioned, but not named. The name of the *Hadduz Al-Aaraa* has Isikhul (I. 189) or Isikhul (I. 189); the form was probably the same in the *Midgalh Tibar* (in the is. see S. 511, 527). W. Barthold, *Teritorion soc. i. 1931* Garzoni, D. Barthold, *Oezer, etc., p. 89 alia* *Riakul*. Kishurai and Kossar from Al 'Iraqi in Nallou, *Al-Arefa*, p. 175, but with dakhallu over the A. In the time of Tim's campaign, in Shiraz *Finan* (Eczer-Nima, ed. 1671, p. 344), as well as in the 'Arabiki: *Egypt*., ed. p. 146) the form is Lakh, in the *Teritorion Nafiq* (cf. the text in Barthold, *Oezer, etc., p. 50, note 1). Yakh Kii.

In the oldest Chinese accounts (from the 1st century A. D.), the Isik appears in the possession of the nomadic races of the Wu-sun. But from the 5th century A. D. onwards, permanent settlements were introduced. One of the trade routes from China to Western Asia at that time led through the central plains to the south basin of the Isikhul and thence into the valley of the Car, the most important market on the Isikhul was Isikkhan, the name of which is probably identical with the modern name of the river Barskoon. Gardin gives a legend due to a popular etymology about Alexander the Great and Pyrrhus that he should visit by Isikhul, the popular etymology makes certain the reading Barskoon against the form Barskoon given by de Goeje according to Vahkti, *iv. 253s. According to Gardin, Barshkhan could put 6000 men in the field; according to Kusims, the principal place on the shore of the lake could itself raise 20,000 men (Barshkhan, according to Kusims, consisted of nine towns, four towns and five small towns). These 6000 men were said to be the largest forces which otherwise corresponds to the name of the river Tash. The city of Barshkhan and Tanak there were only up to bone towns of the named Dikik, 12 to 15 miles west of Tash was the town of Yakh, which could raise 3000 men. In *Haduz Al-Aaraa* there is further mentioned "a pleasant place, visited by merchants", the town of Sark, on the border between the settlements of the nomadic peoples, the Dikik and the Keshkhan (Kashan); the town probably bore the name of the lake a town: "Vasik", on the north shore of the lake of the men is still given in the *Civic Canzine* of the year 1375 A. D., there was said to be an Armenian monastery with relics of the apostle Matthew (*Notices et Extraits*, iv. P. 72, p. 73). Of this civilization, which probably was destroyed about the same time (8th to 9th century) and under the influence of the same causes as the civilization on the Cas (cf. 1381), only a few walls and small ruins of brick, and some cisterns have survived, including a Muhammadan cemetery on the Kangez-Area, with inscriptions of the 8th (ninth century) (Ezendorf, *Kosil Khane*, p. 5 sq.); a Nestorian cemetery discovered in 1907 on the Isikhul, with inscriptions in Syriac and Turkiik; one of these inscriptions (1630 A. D.) was published by P. Kozhaskof, *Biblialia de l'Academie*, sot. 1907, p. 174 (178 sq.).

The Turkiik and Mongol states were so anxious to maintain the shores of the Isikhul as a winter resort on account of the island that weather conditions (the snow falls rarely lie to any considerable depth) so that the Isikhul was several times mentioned in the military history of Central Asia. A fortress was built by Temur "in the middle of the lake", i.e. on an island, in which, amongst others the Tartars departed from Asia Minor were housed. It is probably the same fortress as is called Kii by Haidar Mirza (p. 36, ii. 219) (Tevizd-Asik, more, *Essel*, p. 78); a Mongol smith is said to have sent his family there in the 4th (10th) century, to put them in security from the turbakas. At the present day there are no islands in the lake; the disappearance of the island mentioned, with the fortress upon it was probably caused by an earthquake.
Istakhr, a town in Fars (q.v. II. 70). The real name was probably Shahr-i Istahkar, as it is written to Pahlavi; the Armenian form Shah and the abbreviation S.T. on some Syrian coins point to the same direction. The form with prosthetic vowel is modern Persian; it is usually pronounced Istakkar or Istakhar, also with inserted vowel Shikkut, Shikkur, Sierkarh, etc. Vind. Lex. Pers.-Lat. s. v. 94, v. 978, II. 225, and Nöldeke in G. T. V. 96, 152. The Syriac form is Istakhr (transl. Ishtar). In the Talmud probably Ischatar (Tann. Megillah 132b, middle). According to the statements of Par-

Iskbal, which in the Persian period has yielded little in size to the ancient Persopolis, remained a fairly important place during the early centuries of Islam also. However it gradually sank to be merely the chief town of a province and was the capital of the Zara, bearing the name, the largest of the five districts into which the province of Fars was divided, comprising its southern and eastern parts. The heaviest blow that was borne by the ancient Sassanian capital was the destruction of the town in 64 (684) of Shahib (4th day of Iskbal) which in the year 759 became the capital of the province of Fars and attained great prosperity, particularly from the 11th century. From that day Iskbal, despised visibly. From a native of the town, according to the geographer al-Istakhri, it was the middle of the 37th century a town of medium size of the arm of an Arab (s,Roman) mile; the wall around it was in ruins. Al-Ma'as al-Din, writing about thirty years later (955), praises the splendid bridges over the river in Iskbal and the fine park. Concerning the chief mosque, situated in the bazaar, he mentions the remarkable pillars with "bull" capitals. This probably refers to an original Achaimenid building, but in a Sassanian al-Ma'as al-Din mentions that the mosque was thought to have been previously a fires temple — in the building of which, pieces of carving from Persopolis had been used. Only a few years after the date of al-Ma'as al-Din's account, a fatal catastrophe overthrew the town, brought upon it by the rebellions against it of its citizens to their masters Samsun al-Dawla, a son of Abu al-Dawla. [p. 66]

The later sent against it an army under the name Kustumish, who laid it in ruins. This sealed the ruin of Iskbal. In a description of the province of Fars dating from the beginning of the 9th (826) century, in the Persian Fakr al-Din, it is described as a modern village with hardly a hundred inhabitants. Probably the whole area of the former town was quite uninhabited before the end of the middle ages.

As in the mint of Iskbal, coin struck here in the Sassanian period bear the abbreviation ST (ST) in Pahlavi inscriptions; this certainly means Iskbal. Numerous specimens of these coins exist from the reign of Yezdegird II (from 438 A.H. to 474) to the end of the dynasty. In the Mahomedan period also the Pahlavi legend with the above abbreviation was retained for a considerable time. Such coins struck in the name of the Caliph or of governors are known down to the year 700 (686), cf. the example the references to Zichth, der Deutsch. Morgenl. Gesellschaft, viii. 19, 147 ef., vi. 36, 140, xxi. 138, xxii. 120, 134. On the other hand, the Pahlavi coins with mina-numma Iran (97898) and rust (8622) — contrary to Morstein ( loc. cit., i. 14—5 and Bux-Bux, "Deutsch. Altertum," iv. 472 (474), 3), are not to be attributed to Iskbal. Cf. Noldeke, Zichth, der Deutsch. Morgenl. Gesellschaft, xxii. 60, 61. Of Arab coins struck in Iskbal inscriptions are known from 88 (708) and 94 (711) to 1076 (858).[Below] Stanley Lane-Poole, "The Oriental Coins in the Brit. Mus.," p. 60, 61; B. Lebien, "Cat. des monnies musul. du Mus. d'Art. et d'Hist. Nat.," x. 318, and the notes in Zichth, der Deutsch. Morgenl. Gesellschaft, xxv. 249, 250, 778, 777, xxx. 24, 244, xix. 19, 38.

The present system of ruins at Iskbal, which as still awaits a detailed investigation, is fairly extensive (about 3—6 miles around); the Pulvar and a small irrigation canal flow off from it across the ruins and divide the area into two almost equal parts. The remains of the town are mainly recognizable in the mounds of north of virgin height. Horn and other parts of the surrounding walls still exist. The most remarkable seems to be a plane lying towards the village of Haddih-dibe—called Hadih-dibe Harim (cd. below) by the travellers J. Moeser and Kar Foster, where a column stands erect in the midst of an area covered with fragments of pillars. Its capital, composed of blocks of bulls, at once shows it to have been removed from Persopolis. We shall not go wrong, if we look here for the mosque mentioned above; described by al-Ma'as al-Din. The most detailed account of the ruins of Iskbal is that of Fakhr al-Din and Coxe, who spent two months in the neighbourhood about the year 1840; cf. the pictures in the great volume of plates, "Voyage en Perse," v. (Paris 1843), pl. 59—62, and the archaeological text accompanying it, p. 69—73, and also Fakhr al-Din's "Relation du Voyage," ii. (1852), 457.

In the vicinity of Iskbal there are several other sites remarkable for their monuments or history. For example about 500 yards north of the village of Haddih-dibe, which lies quite near the northern corner of the ruined area of the former Sassanian capital, there are natural caves in the valley of Tang Shahi Sarzeh. One of them, which contains an inscription of historical importance, of Xerxes I (484—465 B.C.), was usually called Shahi "All by the Persians, as a pharaoh and so named is said to have ended his days in it; at the same time one hears it called Zinda-I Djamshid, "Zinda-I Harim." Similar popular names like "Zinda-I Harim" (cd. above Javanshahr Harim) are also found elsewhere in Persia and in the Turk. Cf. W. A. Strucki, loc. cit., and my "Science and Kultur," Leipzig (1917), p. 55. Permanent buildings and monuments of antiquity are frequently attributed to Djamshid, a mythical ruler of ancient Iran whom the Moslem Persians identified with the Solomon of legend (cd. below, Tahkh, Djamshid).

Another place of historical importance is the 614 (1219), "Sculpture on Rocks" (a legendary personage), about A.D. 1590 of Iskbal. This is a rare fine epoch in the wall of rock on the north-western slope. It is a large beautiful with three Sassanian reliefs. Some (of the sarcophagi, Har- field, "Travels in Persia," p. 259, this decoration may be explained by the special purpose of the place (a sanctuary of the God Gourush) as the consecrated place of consecration of the Sassanian king-
On account of its considerable remains from the ancient and medieval Persian periods, the best known site is Taq-i Bostan and Naqsh-e Rustam; the former a short hour's journey south of Persepolis on the south bank of the Pishwar, the latter on the north bank of this stream about 15 miles from Persepolis.

Taquis-i Bostan is the most usual name among Orientals for the complex of Achaemenid palaces at Persepolis. Persian popular fancy frequently gives imposing buildings the name of tahd, i.e. headed or throne, of a celebrated legendary king of the Achaemenids. Taq-i Bostan one can certainly honour the older name Ctili or colossiaste, Col Missos (also Memra), the 40 pillars, which is found as early as in the Persian histories of the fifth century. The name is taken from the most noteworthy parts of the whole site, the columnade of King Xerxes I. with its pillars originally 72, now only 13 in number, 40 is a round number very popular in the east to express a considerable number; a cave called Ctili Shush (the 40 pillars) is shown, for example, in the valley of Shirvan in Luristan (cf. H. Grisey, Wunderwesen in Persien, Berlin 1910 p. 62). The number 100 is also used in quite a similar fashion to 40. This explanation applies, considering at an earlier period, Hakh-Shus (the 1000 pillars), which first appears at the beginning of the fifth century in the annals of Humas ab'al-Ashab, as well as several times in later Persian chronicles. There is also the name Hatr Shus, the seven walks, found as early as about 1100 A.D. The Arab geographers of the middle ages from about the first tenth century know the ruins of the Persepolitan terrace by the name Malaha Shalaiman, Salaiman's playing-ground, with which we may compare the name Kehr Shalaiman, Solomon's throne (throne), found in the Persian history Tabirdar-i Tahaddi (Beginning of the 11th-12th century), which in its turn may have been the model for the present synonymous name Tahaddi. Unfortunately it may be noted that Tahaddi-Shalaiman is also found elsewhere on Iran, still as a geographical name: for example, a part of the group of ruins called Tahaddi Mahabad Shalaiman (Marghab, q.v.), a mound of ruins in the S. E. of Tabardaran, a mountain east of Kaful, and finally the town of Shal (see above, II. 639) in Farghana of Ritter, op. cit. II. 424, 425, 426, 427, 428, 429, 430.

The "Beach" or "Terence" of Djamshid (Salomon) is an artificial stone terrace of polygonal, almost rectangular shape, which lies at the foot of a steep, dark grey mountain of rock. The latter, according to the reports of recent travellers, now bears the name Kuh-i Qasym, "hill of mercy", but the name is also found in literature; it is apparently due only from the Perso-Arabic, the term (first mentioned by Sir Thomas Herbert in the beginning of the nineteenth century). The name still heard by Osleys, Sixth Ktil, "royal hall", might be older; it coincides with the Persian name of Dizdaran (pp. 71). At the same time, according to the same authority, the missionaries also use the name Kuh-i Taquis, "hill of the throne of Djamshid". The section of the Kuh-i Rahmim which forms the back wall of the platform contains three tombs of Achaemenid kings. The people know these by the names of the "mosque", the "bath" and the "mill of Djamshid", according to Stoob (Vorlands, der Orientfahrer, f. Reisende in Persien, s. 1883, p. 275). The terrace, which at the same time bears a markedly foreboding character, was, as already mentioned, only intended for royal palaces and monumental buildings; the town of Persepolis lay in its immediate vicinity. Ancient remains of it may be still recognised. Older travellers were able to identify even more of these ruins lying outside the Taquis-i Bostan in the inner part of the town. It may be expressly mentioned that the view held by Stoler and Andrias (p. c., p. 236 sqq., and Persepolis i, 1) that the citadel and town of Persepolis are to be sought at Naqsh-i Rustam, to be exact, the ruin at South Rustam with the town on the site of the later Isfahan and that the buildings in Taquis-i Bostan were intended for the smaller Persian kings is, in my opinion, completely contradicted by the facts, since the ruins do not appear tumulke, attest against a second city remains of the Persians, which are in Taquis-i Bostan were intended for the Persian kings, as the remains are closely connected with the sultars, does not appear tumulke, attest against a second city remains of the Persians, which are in Taquis-i Bostan were intended for the Persian kings, as the remains are closely connected with the sultars, does not appear tumulke, attest against a second city remains of the Persians, which are in Taquis-i Bostan were intended for the Persian kings, as the remains Kustam) is primarily due to the patronage of the Musulmuns with its object to the representation of human faces.

The caliph al-Mamun (786-833) wished to see the ruins of Persepolis, like those of al-Malik in Ctesiphon, as a quarry, but the Persians were stung into action by the advice of their viceroy Khaid! al-Ammah, who said that Persepolis was most as place of prayer by 'Ali; see Fragm. Hist. Arab. (ed. de Goeje), p. 256.

Various Muslim rulers have perpetuated their visits to the ruins of Persepolis by having inscriptions incised. Here are to be seen three Arabic inscriptions in Kustam characters by members of the Pahlavi dynasty (1r-8-10th century); three inscriptions, two Persian and one Arabic, of Abu 'l-Fath Ischmael, a grandson of Timur (14th-15th century); also three inscriptions (two Arabic and one Persian) of 'Ali ibn Khaid, a grandson of Cusam P SINGLE (18th century). These inscriptions were thoroughly discussed by its Syriac in his Mem. sur eme de Shiraz (Paris 1792), p. 172.

Some emulations thereon were given by Noldeke in Scylax, Persepolis, ii. 6, H. Petersen, Persepolis, ii. 188, 189, also mentions an inscription of the Maghadh al-Musammar b. al-Musaffor of 1r-8-13th century. The famous verses scratched on the walls show the high respect in which Persepolis has always been held among the Persians; their modern poets often make allusions to the ancient capital of the country.

As to Naqsh-i Rustam, its principal significance is the steep south wall of the long, high mass of rock, Behistun Khi, which has in niches four Achaemenid royal tombs and Knastan reliefs. But the name is often extended to the whole of Behistun Khi. The name Naqsh-i Rustam is due to the popular idea that the sculptured figures there represent the Persian national hero Rustam. Before the wall of the site there rises a remarkable towerlike building, now called Kal'eh-i Zarduchti, "the Ka'bah of Zoroastrians." As to its real purpose the opinions of scholars vary; it is said to have something to do with a forest fire temple. Two other smaller buildings are perhaps to be similarly regarded, not far from the Kal'eh-i Zarducht on the summit of a rock called Sarg-i Sulaiman, "the stone of Sulaiman," cf. Obadiah, c. x. 9. 300. We may also mention that the Sassanian sculptors of Berne Debak 5 miles S. E. of Shiraz are also called Naqsh-i Rustam.

A stone platform in 120 yards on the south wall of the Behistun (about 500 yards W. of Naqsh-i Rustam) is called by the inhabitants of the district, Tarik-i Garek, "the throne of Rustam." The latter, in view of its limited dimensions, can only have served as the pedestal of a sepulchral monument or of a fire temple, cf. Flinders et Gomme, Voy. to Perse, ii. 72-73 (and Pl. 93). Instead of Tehkla-i Rustam, the name Tehkla-i Ta'az, "peacock-throne," is also used. The name Tehkla-i Rustam is Sound elsewhere in Iran also of Obadiah, c. x. 9. 302.

At a somewhat greater distance from Naqsh-i Rustam, about 8-10 hours journey N. W., on rocky peaks about three hours' walk from 2 to 2 miles each other, there is a vast expanse of rock, which is said to be the seat of Rustam and of the lion and of the eagle, or of the birds of prey. This site is called Mount of Rustam, and it is also known as Rustam, "mountain of Rustam," also as Kast in Avar, from a district of this name on the left bank of the Kus (into which the above mentioned Karun flows). First made in a short account of the Sih-Din-i Gumbad-i-Lahdeh, "the three fortresses of Ispahan" (cf. Ouseley, i. 286). At the same time the separate castles have been so much altered and changed, that it is impossible to give an accurate idea of them according to the reports of the older historians and travelers. The most important of them, the Kal'eh-i Ispahan in the narrow sense, is also called Miyaan Ka'bah, "the central fort," from its position between the other two. Firdaws and Courtois both in their works called it Kal'eh-i Ser, "the cypress castle," from a cypress tree standing there. For the two other castles Persians and foreign authors, for example, give the names Kal'eh-i Shahabestak, "the broken (ruined) castle," and Ashkawams (akmawams and similar names). To judge from the traces of foundations and pieces of walls found between the forts there were once all linked up by fortifications.

In the Muslim history of 'Avin, especially in the description of Ispahan, these inaccessible fortresses played an important part. They were regarded as most essential military points d'apport for the holding of the surrounding country. The most prominent is the "Ka'bah of Ispahan," the origin of which Persians legend in mythical times by assuming it was built by King Darius.

The old Persian ruler Gushpates is said to have deposited the Arece, written on coals and with brown ink in the castle of Ispahan, after his conversion to the doctrine of Zoroaster; this ka'bah is therefore called Dari Khwajt (name of the building) or Ka'bah-i Khwajt (hill of the writing). In 1008 (602) and 1107 (698) it was taken by Hamid Allah Mustawali, and in 1212 (696) it was spared by the Persians in the siege of Ouseley, c. x. l. 244, 364, 370, 375, 384. Under the caliphate the government of the province of Fars very frequently resided in this stronghold, which was mostly defended by its natural situation. Thus the governor Zaid b. Albohi was able to hold out here against Malekays for a considerable time after 'Ali's death (cf. Polk-Amanu, Das arabischen Reich, etc., Berlin 1902, p. 76). The Byzantines who were never stayed in the region of Ispahan (cf. the inscriptions dating from their time mentioned above, at Tabek-i Dzamidt) made a military post in it, named al-Dowla (p. 2), which was built in Ispahan, paid particular attention to the citadel of Ispahan, Al-Kifar, al-Dowla (p. 2). In the 18th century it was used by the British as a natural point of vantage, taking advantage of a natural point already there, which would provide water for several thousand people for a whole year and which aroused the admiration of contemporaries and of later generations. In 1805 (1224) the rebel Fadilhya, who had seized the government of Fars, was besieged by the troops of Nushta al-Mulk in the suburb of Malik Shah in the citadel of Ispahan. An earthquake which suddenly caused the entrance to overflow, forced them to a premature capitulation. Fadilhya was then kept a prisoner in the fortress and put to death next year after an unsuccessful attempt to escape. The castle was later much used as a state prison for high officials and princes. About 1850 the citadel was used as a fortress and was destroyed. Some time afterwards a rebel general of Fars took refuge in it and it was besieged by Nushta Albohi, who arrived there in 1828, therefore found it in ruins.

Wept in the Grisw. Arch. de l'emp. Philol. ii. 76—78; Suris in Sitz.-Ber. d. G. m. e. p. 1—75—77—92—97. — The best work of Istaghris-Perspolis and its immediate neighborhood are given by Finanti et Coxe, ii. p. 77 and 94. (M. Strobck.)

ISTAKHR, ABU JAFAR IBRAHIM A. MUHAMMAD AL-FARISTI, an Arab geographer, whose biography is nowhere to be found, because in the geographical handbook ascribed to him, which bears the title Masalih al-mamlukih and is printed in the first volumes of de Goeje’s Bibliotheca Geogr. Arab., no biographical data are given. In Goeje however has shown that his work is only a new edition of an older one by Abu Zaid al-Farisi, just as later the Rawdah [?] took al-Iṣṭaḥrah’s work as a basis for his own after giving up his first intention of only making some connections to it, as al-Iṣṭaḥrah himself, whom he had met in 340 (951—52), had asked him to do. It is thus at least certain that he must have lived in the first half of the 9th (or 10th) century. The text which was published in fascicles by J. H. Moreau as well as in 1849 only contains a synopsis of the book.

ISTAMBOL. See Konstantinopel.

ISTANBOLE. See Constantinople.

ISTARKO, Turkish name for the island of Sicily, Coq; cf. Cantor, Le Monast. d’Arte, ii. 435 sqq.

ISTARK (turk.), a weight in the apothecary’s or Troy system, taken away from the Greeks and generally estimated according to two different scales. On the one hand we find the equations a sirk = 6 icksch or 2 icksch = 4 icksch (an apothecary’s system), on the other, as in icksch or icksch (commercial) icksch in the East). The first equation will only correct if the coined icksch and the weight may be taken 210 sirk = 2 icksch = 18 = 472 / 4 = 18 — 12, the second equation is approximately correct only if we take the coined icksch and the old icksch (gold mark) 2 icksch = 6.5 = 10.33 / 4.5 = 10.33. In both cases the result is a much larger amount than that of the virtual unit. The former table that 20 icks in the East is only true of the icksch, and the icksch of 12 icksch.

ISTIBRA (Ar.), means the "inquiry whether the status of a slave woman is unrigued" prescribed by Muslim law. If a Muslim acquires a slave girl by purchase, inheritance or by any other means, the law forbids him to cohabit with her, until it is ascertained that she is a slave in order that there may be no injustice about the parenthood of the children. The prescribed period of waiting ends after the first menstruation or, in the case of pregnancy, after the birth of the child, and lasts a month for non-mastireizing women. Further a slave, after she is manumitted, may only enter into a marriage after the expiry of the legal intesta period.

ISTIFHĀM (from the root ʿīs) is a term used in Arabic grammar to denote "interrogation," "interrogative sentence." An interrogative sentence is nominal in verbal, and is subject to the grammatical rules governing the sentence in general. An interrogation may be indicated merely by the tone of the voice, but more often it is introduced by one of the interrogative particles (kif/kaif/kiif), ʿan/ʿan, etc., or by an interrogative pronoun or verb, e.g., ʿan = who? ʿan = what? ʿan = how? etc.

(ROBERT STEVENSON.)

ISTĪHĀN (iśīthān), i. e., to consider something thought (i. e., good). This is the name given to a method of argument used in the Ḥanafī school to settle ʿiftā rules in conformity with the requirements of every day life, equity or social conditions. The object of istihān is much the same as that of ġābiyya (i. e., to think that something is ʿaṣba, i. e., in the general interest or most appreciated). It is used in the ʿĀṣimī school. According to both methods, the results of ġābiyya and istihān were often simply disregarded, when it was considered necessary or simply deemed to depart from the strict demands of theory. For this substitute istihān and ġābiyya are objected to by many and have never been generally recognized as reliable fundamentals in the science of law (muṣāliʿa).

(TH. W. JUUSSOLL.)

ISTIKHĀRA (iṣṭikhāra), in astronomy, means the opposition of sun and moon i.e., their relative positions when the difference of their longitudes is 180°, as is the case notably during an eclipse. Maḥsūl is also occasionally used but this word is a common term among the astrologers for the opposition of two planets. The opposition of ṣubḥ means conjunction, i. e., the relative positions of sun and moon when they have equal longitudes, or in the case for example in an eclipse of the sun. In astrology other expressions are commonly used for the conjunction of planets among themselves or with the sun and moon, viz., muḥāsama, ṣubḥā and ṣubḥān.

Besides these positions (opposition and conjunction), astrology further distinguishes the hexagonal (ṣabха) or tetragonal (ṣeḥa), and the trigonal (ṣuṭḥa). The angle according as the angle between the two planets as the case may be.

THE ENCYCLOPAEDIA OF ISLĀM, II.
priest of al-Mukaddas on his accession [with four rukhs]."... Al~Qur'an, ed. de Goeje, (p. 82, 83). In the
next_Nagha in the tale of Umm al-Wadid and Ward B S Ahammad the latter's mother performs a
'sala'at al-takhirah of two rukhs' in order to
avoid an eternal indication in regard to her
daughter's love affair (3728 Night, ed. Btlyi
ty, 1799, ii, 209). The choice of a baby's name
seems occasionally to be made after an 'al-ha'ilah by the
name (Sunna Hujmooz, Mekke, ii, 439). There
is no lack of examples to show that in
deliberating theological questions the learned
argued without strenuousness (Sunna Hujmooz,
Nasiri, Ta'ahs, ed. al-Mas'ud, p. 227, 228). Authors in the introductions to their books very
frequently mention 'al-ha'ilah as the motive to examine
for the publication (cf. Tashakkat, Tafsir al-
Huffahh, ii, 288). A story, of course quite un-
historical, makes 'Umar Ibn al-Hafiz only allow the publication of a work of Al'um B. Ayan which he had
in his library, after he had exposed it for 40
days with an 'al-ha'ilah at his place of prayer (Ibn"Aubab Ti'ash, i, 465 infra).

The form of 'al-ha'ilah laid down by religious
usage ('al-ha'ilah shar'iyah) is usually in actual
practice accompanied by all kinds of forms not
mentioned in the Hadith. For example the expecta-
tion of receiving the divine inspiration in a dream
('wa'ayimamah) after a prayer (Sunna Hujmooz,
Nasiri, ii, 288). 4. 'Umar Ibn al-Hafiz, Ma' al
Religion dans l'Afrique du Nord, p. 42, or strengthening
the 'al-ha'ilah formula by an oral uttering of
text, in which the alternatives are written on cards
(Tahani, Mashka\ al-Mahle, Cairo, 1793,
p. 500). Such additions are strongly condemned by
guardians Sunna orthodoxy ('Ali, eg. etc., th. 91, 91). There is also the 'al-ha'ilah by opening
the Qur'an (n. 449, 449), a 'al-ha'ilah daw'ah, in the
published edition of, for instance, Jami'ul al-Schihd, i, 445; an innominate on the subject is
given by Kawkab, ed. Wustenfeld, ii, 385, 385; other works (see Sayd, Babay al-
Wawer, p. 10, 17), in the case of the Savi
er Farganah, we understand the 'al-ha'ilah in
the sense of the Division of Hadith, or the
Mathan, of Tijd al-Din的真实 (ed. Roshnis,
Catholici, i, 21). This use of the Qur'an is
likewise rigorously forbidden by most Sunni
authorities (cf. Daud, t. 714, 214, 215; ed. Bittik, 1382; Mortzfeld, Tijd al-Din的真实,
Cairo 1311, ii, 225 supra); this custom,
in connection with the 'al-ha'ilah has led to
the people to an excessive use of 'al-ha'ilah
magic with the Qur'an, of which a full account
is given in Lane, Manners and Customs, 21, Al,
6, 396. - There's a proverb that 'al-ha'ilah
means nothing more 'al-ha'ilah means nothing
more 'al-ha'ilah (as hadith
in Tahani, Mawguf Sager, ed. Bittik, p. 304
infra). Abu 'Aab Alhul al-Salimibt in the begin-
ing of the 7th c. Counted a verse a 'al-ha'ilah
(Tahani, Ta'ahs, ed. al-Mas'ud, 721, 721). Bibliog.

through, this is called blocked (i.e. the continu-
ation of an interrupted act). Bibliograph.
A Dictionary of the Tesh-
abah Things (Calcutta 1862), i, 301.
(Th. W. Xeyr)...

ISTINJAJ (a.), means a purification fully
attained in the Fihl books in the chapter on ritual
purity. It is a religious duty (according to Abu
Hamid, however, only a recommended duty) for
every Muslim who has attended to the call of
nature. A Muslim is in general allowed to enjoy
this purification until he is about to perform the
salat or has to be in a state of ritual purity for
some other reason.

ten, p. 10, 10.
(Th. W. Xeyr)...

ISTISHAR (a.), i.e. the seeking for a link (i.e. to
something which is known and certain). This is
the name of a process of settling salat rules by
argument, which was especially used in the Shafi'i
school and with certain limitations among the
Hanafi also. This seeking for a link means the
erudition to link up a later set of circumstances
with an earlier, and is based on the assumption
that the salat rules applicable to a certain circum-
ation must be the same as the link. It is not
certain that these conditions have altered. If for example
on account of the long absence of some one it is
desirable whether he is alive or dead, then by
istisbah all rules must remain in force which would
hold if one knew for certain that he was still alive.
The Hanafi only recognise istisbah is so far as it
concerns the retirement of rights already granted,
the Shafi'i is on the other hand even when it is a
question of assigning new rights. An absolute
example would not normally be recognised by the
Hanafi as legitimate lied to an inheritance falling
due while he was away, but he would be accorded
in the Shafi'i, as the latter assumes that even
during his absence he can obtain new rights.

ISTISELA (b.) 158-233 (Th. W. Xeyr)...

ISTISKA (a.), prayer for rain. The
creation on several laws in accordance circumstances the
broadly describes the istiska prayer as an obligatory
act or from his individual description. They also
give details of the special ritual as it is observed
in this prayer. This ritual comprises: 1. the prayer
of two rukhs performed in the morning outside the
town; 2. the faithful ought to put on white
drums, without elaboration or luxury; 3. the prayer
By followed by two ḏālān, of which the first is accompanied by a turning of the ekād (a symposium site to produce a change in the weather); the second which follows the prayer is a supplication (for rain). 5. Ḍū al-Ḍu’ā is replaced by an invocation intended to implore God’s protection (ṭuṣṣūṭṭ [ṭuṣṭ]). This has been done by a number of prominent scholars, recommended to the faithful (būṣṭ, almsgiving). Prayers for rain by Muslims according to their religions (Jewish or Christian) are admitted and even recommended to orthodox Islam.

Rites and ceremonies to obtain rain are as ancient as man himself and vary not only according to different religions but also between the different groups of human beings belonging to the same religion, as I have shown in my previous work, for instance, the various miracles in the New Testament and in the Book of Mormon, where the prophets of the Book of Mormon (the Book of Mormon, Algir 1905, p. 35-85). The ceremonial, however, rather varied for the Muslim countries and all, even in the orthodox ritual, much less practiced with animism and magic, may however be grouped under several similarly adapted to the cult of saints, physical and moral sufferings, might be exchanged in a kind of divinity of rain, named ḏū al-Ḍu’ā or an analogous name in Babylonia; sacrifices of victims and communal meals; sympathetic and symbolic acts.

In the article referred to, there will be found, in addition to useful bibliographical notes, references to analogues ceremonies in non-Muslim countries. There will be found that the Maghribis, whose ceremonies involve the character of irrigation festivals and that they take place at a fixed period of the year, but not in every season.

ISTISLÅH (A., m.), N., to think that something is in the general interest. [See synonyms.]

ITA (A.), a term in prose, meaning the same as the term used in the same sense as a rhyming end of several lines of the same poem.

ITTÅR (A.), [See Aug. 14, 19.]

ITHNA 'ASHARIYA (Arabic: īthna 'aṣhāriya, 'aṣhāriya), the Twelver, a name given in contrast to the Shī'ah (q.v.), the partisans of the twelfth Imam, to those Shi'ahs who also allow the observance of twelve minor and say that the Imamate passed from Ali al-Ridha to his son Muhammad al-Taqi, to the latter's son 'Ali al-Najaf, then to his son al-Hassan al-Ash'ari al-Zadeh, and finally to Muhammad al-Mahdi, who disappeared and died on the 13th of the 3rd month of the 8th year of the al-Hassan al-Ash'ari al-Zadeh, then to 'Ali al-'Amir, all in the 12th century of the Hijra, A.H. 1905.

Such has been the succession which has been definitely admitted since the 9th (10th century) A.H., and that this sect has not always been in agreement with itself, and at one time numbered no less than eighteen parties, without special names but distinguished from one another as follows: 1. al-Husayn al-Ash'ari is said to have been a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 2. al-Hussayn al-Taqi is said to have been a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 3. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 4. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 5. Muhammad al-Bakhtari, the last-mentioned, is said to have been a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 6. One of the last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 7. One of the last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 8. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 9. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 10. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 11. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 12. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 13. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 14. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 15. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question. 16. The last-mentioned was a learned and saintly man, but he was a practitioner of the illegal and harmful practices of the Babi, and his legitimacy is in question.

The Twelver Shi'ah, having discarded from their religion the doctrine of the Imamate, or the twelve Imams, has more particularly suit the Shi'ah the state religion of Persia, as it still is. After his accession Shah Iskandar (5385-5528) gave formal orders to the preachers of Al-Thalfud to preach the word of the teacher of the twelve Imams, and to the sharif as to add the Shi'ah's formula: 'I testify that Ali is the saint of God.' The troops were ordered to use to death any objecting.

The cult of the twelve Imams has assumed an extraordinary importance among the Persians, not only in the ancient but also in the modern period. They are the objects of adoration and prayer, and are regarded as the mediators between God and man. The twelve Imams are depicted in the form of angels or devils, and are said to have been taught by God to reveal the secrets of the future to the faithful. They are also believed to have been taught by God to reveal the secrets of the future to the faithful.
PTIKAD KHAJN, title of a Kashmiri named Muhammad Marhad, who gained such an ascendancy over the empress Farakhkhatz [q. v.] that he became his confidential minister, received from him the title of Ruler of Delhi. P.H. Khan Farakthakhatz ruled India between 1224 and 1234. His reign was marked by internal, and the property confiscated, he was subsequently released, and died in the reign of Muhammad Shah [q. v.]

BIKAK [A.J.] is the name of a religious custom of which the main feature is that the adherents retire for a time from the world as a mosque. The title is always considered meritorious (musta'adda) and is multiplied among those good works which are recommended in the law-books to be performed during the last ten days of Ramadan, in order to participate in the blessings of the holy month of fasting. According to the Muslim tradition, the Prophet also used to spend the last third of the month fasting in the mosque in Medina. On the last night of month, the Prophet said: "Little old Mrs. Müller (tatar. = Mekkiyldy il meme, Heitlhollberg 1909), "An Allah khandr, Mehtar e Haiz, p. 314-1997. Khwamani, tatar. = Mekkiyldy il meme, iv. 5, 544. Goldfeder, Perekimenny, ind. iiv. 250. (CL. HEART)"
\. ITTICHAD, "becoming one." Muslim tradition declaresallah himself bequeathed two kinds of ittihad: 1) "real" (khayal); 2) "metaphorical" (mustahill). The former class has two aspects: a) ittihad is applied to things which become one and B) this becomes one thing which becomes another thing that was not existent before. b) ittihad becomes some individual who did not previously exist. Ittihad in this "real" sense is necessarily impossible, hence the saying, al-nilzūla li-yitthahā. The "metaphorical" class has three subdivisions, according to the term ittihad as one thing's becoming another thing by means of intermediation or gradual transformation, c) water becomes air (in which case the real nature of water is destroyed by the removal of its specific form from its substance, and in this salvation the specific form of air is added), or hawk becomes while (in which case one attribute of an object disappears and is replaced by another attribute); c) one thing's becoming another thing by means of composition, so that a third thing results, e.g., earth becomes clay by the addition of water; d) the appearance of one person in the form of another, c. q., of an angel in the form of a human being. All three of these species of "metaphorical" ittihad actually occur. In the technical language of the Sufis, this notion of ittihad is given to the mystical union by which the creature is made one with the Creator, or to the theory that such a union is possible. This conception of the unitary state, like the parallel doctrine of jahān, i.e., the doctrine that the creature becomes incrusted in the Creator, is generally regarded by the Sufis as heretical, on the ground that it involves homogeneity and is therefore inconsistent with the true notion of divine unity (khāliq), which admits no real existence except that of God. Ittithd is, therefore, presupposed the existence of the two beings which are made one, whereas, according to the more orthodox mystics, human individuality is only a phenomenon that passes away in the One Eternal Reality (fasu 'ul-jāh). Sometimes the term ittihad is employed in the mystical science of khulūd, in reference to the doctrine that all things are nonexistent in the eternity, and derive their existence from God and, in its respects, are one with God (Aḥād, al-walā' bi al-rahāb, al-walā' bi al-fād). According to 'Allā bi 'llāhi, ittihad is employed by Shahīnsīn in al-Ya'qūbī, ittihad in al-Ǧazāʾir. Ittihad, 1377. A. H., p. 280, 1894). The meaning of ittihad in the terminology of the Sufis is "the passing away of that which is willed by the crcreatum in that which is willed by God."

IVAD (A.), means in Muslim law, that all that must be given or done as a guarantee of the fulfillment of what the party to the law, to, in a contract, sale, or other agreement.

CH. W. J. ELLISTON.

IVAD, a great Arab tribe belonging to the Ma'dan (Omari) group. Their genealogy is Iyad b. 'Nafaš b. Ma'adh b. 'Anas. The Arab, Anmar and Mujjar were conterminous tribes of the Iyad. A section of the Iyad professed Christianity. The prince of the Iyad was known to be Amr b. Waqar, famous for his descriptions of the natural and the celebrated Kusa, whose name was numbers of the Iyad.

A section of the Iyad, probably from the same emigration, seems to have settled in the region of the Lower Euphrates, where the latter migrated from Thamna to Raib (another remained in Wadi al-Rumayn). We also find scattered settlements of the Iyad in Syria, e.g., in Alep, Homs (Emam), Hama, and in Greek territory at Antiya (Aigania in Asia Minor), Bitter (Itzara), etc.

History: Towards the beginning of the 17th century of our era a quarrel arose between the Iyad and Mujjar regarding the possession of the Kafr, which also involved dominion over Mysia, after the two tribes in alliance had driven the Djihannah from Mysia. The Iyad were defeated and emigrated to the Iraq, where they established themselves in Babil and in their settlements south of that city. During the greater part of their sojourn in the 17th, the Iyad were harassed by the invasions of Djihannah, Mulk b. al-Adr, whose rule extended over all the Arabs in the Iraq. Djihannah demanded from them the surrender of their relatives, Am in Qasr, after long negotiation, the Iyad submitted and delivered Am in Qasr, who then married Biliar, sister of Djihannah.

In the 17th the Iyad seem to have acknowledged the supremacy of the Subhian prince of al-Ǧazāʾir. During the wars of Mamluk b. Ma' aj al-Susa against the Khitān chief al-Harīr b. 'Amr b. Hādi, we find them in Mamluk's train. At the beginning of the 17th century, the Iyad made inroads into the Mamluk territories. They occupied the Euphrates. A detachment of Persian cavalry sent against them was completely destroyed by them near Kafa (see note al-Dami, 'Abū 'Abd). To defend himself against their inroads and to take vengeance on them, El'jahan (El'jahan) sent an army against them under Mālik b. Harīrī, which is said to have included a detachment of the Iyad in Walla (q.v.). In spite of the warning given them by their fellow tribesmen, the poet Laka' the Iyad were surprised and put to flight. The Persians followed them, and, according to a tradition, sufficient in considerable extent on them at the village of Hala-ide. In consequence of their defeat, they are said to have retired into Syria. One section of them settled in Djihannah territory at 'Aqqa, while the others of their tribe settled at Cilicia. An isolated tradition mentions a punitive expedition by the Persian king Salāḥ al-Dīn al-'Adl in the 17th century against the Iyad, but there is probably confu-
In the battle of Dhaik (see 1804 a. d.) it fought alongside the Kufi tribe of Mesopotamia under Khiyil b. Yahiyl al-Tabbah on the side of the Persians. A section of the jiyah had made secret arrangements with the Baby and took flight during the battle, thereby throwing the Persian forces into disorder. After the battle of Dhaik 51, like the other Christian Arab tribes of Mesopotamia, remained a few years under Persian supremacy. In the battle of Ain Tabar (near Amur), which followed, the Persians along with the Mesopotamian tribes under Milhun b. Buhaam Tfrigh, in the reign of Abi Hak, in the year 75 (654), a large number of the jiyah, like many of the Tamun and the Christian Arab tribes of Mesopotamia, joined the rebel prophet Sajda [v.], in the same year Khiyl b. al-Walid [q. v.], indicated a serious defection of the Persians, on whose side they fought, at Firdos (on the east bank of the Euphrates). In the caliphate of Othman, in the spring of the year 77 (693), the Byzantine Emperor Heraclius made the last effort to regain the province of Syria, which had been lost to the Muslims. For this purpose he raised a large army, which included the army, on the extent of the Euphrates, along with the army of the Kufi tribe of Firnas, the leader of which was Abi Hak. In the meanwhile the Muslims invaded Mesopotamia and conquered Takran, secretly supported by the Christian Arab soldiers in the city, among whom were jiyah, who then adopted Islam. When the Mesopotamian tribes hearing Abi Hak, the governor, on the news of the jiyah, formed a large army and approached with Khiyl b. al-Walid and attacked the Byzantines, who were defeated and had to take flight. The remnants of the Byzantine troops including jiyah retired to Qifisia, whether they were followed by the Muslims and almost entirely wiped out. When in the following year 127 (680), jiyah b. Chumam succeeded Anu l-Qubair [q. v.] as governor of Hims, Northern Syria and Mesopotamia, all the Mesopotamian tribes submitted and adopted Islam, with the exception of the jiyah, who fled to Capadoccia in Asia Minor. Here, however, they only enjoyed their security for a brief space, for the Caliph Umar commanded their extradition from the Empire. Heraclius under a threat of reprisals against the Christians in his province, and Heraclius was forced to agree. Forty thousand of the jiyah then went to Syria and Mesopotamia and submitted to the Caliph. In later times we hear almost of them no more.

IZMIR (old name: İZMİD) is an ancient city on the coast of Asia Minor, at the entrance of the Dardanelles. It was an important commercial town in ancient times, and was the capital of the province of Aeolis under the Roman Empire. In the Middle Ages, it was a centre of commerce and culture, and was the seat of the provincial governor. In the 18th century, it was captured by the Ottoman Turks and became a major port. It was known for its fine architecture and beautiful gardens. In the modern era, it has become a major industrial and commercial centre, with a population of over 3 million people. It is also a major tourist destination, with many ancient ruins and modern attractions. The city is known for its beaches, museums, and cultural events. It is a vibrant and dynamic city, with a rich history and a bright future.
The town was twice visited by earthquakes and almost destroyed. In the first, that took place in July 16, 1688 (Ramuz 12, 1690), the Suyurm Kahf was overwhelmed by the waves, many of the buildings collapsed, and thousands of people — at the lowest estimate 5,000 — perished among the ruins (Rahlst., Tephy, p. 1479; Reyss, Turkish History, p. 304 sq.; Fussler, Dic Staat und der Kriege des Osmanischen Reiches, p. 294); Paul Fussler,德 zeiten zu Tepih, p. 294 sqq.; De la Motraye, Καταστασις, p. 182 sqq.; Shi, Da, p. 74, 128). The second took place on July 3 and 5, 1772 and did equal damage, chiefly through the conflagration which broke out among the falling buildings (Buchholz, Βαθμος, 131—147; Shi, p. 132 sqq.). Almost equally dangerous was the flooding which lasted out on March 14, 1797 as a result of a quarter between Cephalonias and Crete, and spread fire and death through the town (Lewacket, sa, ayl. vi. 270 sqq.; Zwillinger, Καταστασις, p. 151, 152). During the war of the Porte with Egypt, on Febr. 19, 1823, emmisions of fistic and flames after the Turks in Kusayr, occupied Suyurm for several months, and burned it again after a few weeks (Rosum, Gesch. der Türken, p. 171).

Suyurm is singularly poor in historical monuments. Nothing worth mentioning is left of the remains of antiquity. The amphitheatre and the circus, in which St. Polycarp, the patron saint of Suyurm, suffered martyrdom, were destroyed in the sixth century and the materials used to build the Buressina and the Wazir-Sultan (in the). The alleged tomb of Polycarp near the circus was changed into the grave (tunis) of a Muslim saint at the beginning of the sixth century. The Byzantine castle on Mt. Pagas has for years been abandoned and left to decay; the old mosque and the great minaret (sere dery) built by the Muslim knight, who first captured Suyurm, is in ruins, and the historical foundations of the mosque (Selami) are also in ruins but the ancient colonial hospital of the so-called Amun, which was formerly built into the wall over the entrance gate of the castle and formed the lodge of the town, has in recent times been ruthlessly destroyed. The Turks considered this need to be the castle Kaifers, built by the Roman, or by the Muslims, as Tephy (1872, 467) says; and to be the old Frankish cathedral. Skafadan, Καταστασις, 180 sqq. Tradition of the ancient city of Algis by the Franks in the possession of the Portuguese and French to erect their cities on Suyurm and the neighbouring hill (Hansard, Ταπεν, 1689, Τ. 166 sqq.; Torrens, p. 118; Lewacket, Tephy, p. 23, VII, 283, α. 453). The Jewish community of Suyurm produced in the sixteenth century the Mesulamite be-
(1696–7) a joint was instituted in Smyrna by monks of the Greek Orthodox Church and by the Jews, with the support of the Sultan, to stamp out the sale of wine and spirits. In 1700, under the leadership of the famous Greek Orthodox patriarch, the archbishop of the city, the joint succeeded in putting an end to the sale of wine and spirits, and the city became a centre of the Orthodox Church. The joint also succeeded in putting an end to the sale of tobacco, and the city became a centre of the Orthodox Church.

In 1700, under the leadership of the famous Greek Orthodox patriarch, the archbishop of the city, the joint succeeded in putting an end to the sale of wine and spirits, and the city became a centre of the Orthodox Church. The joint also succeeded in putting an end to the sale of tobacco, and the city became a centre of the Orthodox Church.
announced the angels to look on him. When they saw his astounding strength, they fell down astonished and remained lying for thousand years. Then they awakened and said, "Death is the most powerful of creatures," but Allah said: I have appointed, 'Eziel shall be lord over them.'

Several angels of death are mentioned, as in Jewish literature; and it is said that 'Eziel deals with the souls of the prophets while the souls ordinary men are under his control. Special stress is laid on the beginning of his task in the morning for a number of angels of death have to work forth and by those to draw forth" etc. The former are said to be those angels who drag the souls of unbelievers by force from their bodies, while by the latter are meant those who have to accommodate the souls of the believers from their bodies.

The explanation of the verse however is not certain. In Surat xxii. 21 mention is made of the angels of death (singular).

In 'Eziel keeps a roll of mankind. But he does not know the date of death of the individuals. Whether one belongs to the blessed or the damned, he sees, from the fact that the names in the first category are surrounded by a bright and those in the second by a dark circle.

When the day of a man's death approaches, Allah causes him to fall from the tree below. He is given the leaf on which the name of the angel is written. 'Eziel reads the name and has to separate the person's soul from his body after forty days.

But there are some people who strive against the separation, and say that the angel of death is acting arbitrarily. The latter then goes back to Allah, and tells him his expectations. Allah then gives him as a credential an apple from Paradise on which the inscription (q.v.) is written, when the angel sees this, he yields.

Man also has other names of making it difficult for the angel of death to carry out his task. If the latter wants to come into his throng to fetch his soul, the dying man recites a 'dala'il,' and thus closes the entrance. The angel then returns to Allah, who advises him to try it with the dying man's hand. If the latter has not yet passed from the world, making a gesture (q.v.), the angel therefore is again impossible. Finally, both 'Eziel writes the name of God on his hand's palm. Then the 'Eziel feeling of separation disappears, and the soul can come to fetch the spirit. - On the other hand, it is also said that he pierces men with a painful arrow. Another account is as follows: When a believer is on his deathbed, the angel of death stands at his head and draws his hand out as gently as water runs out of a skin. He pours it to his assistants who carry it through the seventh heaven up to the highest and then places it with the body in the grave (the soul's journey to heaven).

But if an unbeliever dies, the angel of death leaves the soul out of his body in the roughest fashion. The gate of heaven closes before the soul, as it is carried up, and it is thrown down to earth again.

Charismatic Like Men, Hype, and al-Khidr (q.v.) are well known, but the last subject to death. But as regards Moses the same thing could not happen, lest the Bible throws a veil over his death. Muslim traditions accordingly say that Moses defended himself against the angel of death, who came with the fatal message to him, and bruised his eye. Allah said to the angel when he came back.
IZZ AL-DAWLA, beneficent name frequently assumed by Muhammadan princes, e.g. Bakhtiyar [p. 77].

IZZ AL-DIN, beneficent name, for princes often combined with the preceding (e.g. al-Dawla was Ibn al-Dawla). However, not only princes bear this name, but scholars also.

IZZET MOLLA, KUSTBUZZE MUSALI, a notable Ottoman statesman and poet in the reign of Mehmed II. Born in Istanbul in 1509 (1550/51), he became a theologian and legal career, following in his father's footsteps. When he had reached the position of Molla of Galata, he was subsequently involved in the fall of his patron Hafiz Kalsoy, as he had written critical verses on his behalf. He was therefore banished to Kastoria near Kastoria for a year later he regained Sultan Murad's favour, who chose him to help him with the highest religious offices. In 1525 (1522) he acted as a representative at the peace negotiation with Russia. He openly displayed his liberal in favor of peace at any price brought upon him the enmity of the sect party, whose intrigues ascended in getting him banished to Sivas. There he died soon after his arrival in 1528 (1529), of poison, it is said. One of his sons is the statesman Feyzi Pasha.

In addition to numerous chronographies he composed two divans, Sekeri Kitbe (Sprinings of Thoughts), concluded about 1520 (1824), and Kastabat Melike (Autumn of Actions), only put together after his death, Nurne transcends media-

city. Izzet however, was great renowned through his two famous chronographies (Hazine-i Melike [Pastime of Love], completed 1527 (1827)); Constantinople 1525, is a short romance on the Old Persian model with a strain of Metaphysical mysticism. The narrative matter shows a pretty and original imagination. But still more attractive is his thoroughly characteristic narrative composed during his exile in Technia with the ambiguous title Melikessql (The Sufferer) or Suffering in the place of exile at Technia). This is the poetic diaries of an exile, in which ghazals, quasims and chronographies are narrated through the Maliniwu context, and it gives an interesting insight into the world of ideas of a highly educated digressor of the time, and at the same time a faithful witness preserved in Latin from Turkey, the period of the beginning of Majjul's reforms.

The work, the language of which is already remarkably national Turkish and is interspersed with Turkish everyday prose, secures Izzet Molia a distinguished place among the rewriters of the language and modernization. It was lithographed in 1870 at Constantinople. Ziya Fakhr also published a new in his Khorasand: Tarikh Komilari (1850).

He was the son of Kabul Abha, commander of the Baladli Guard, and of Khadija, daughter of Ahmad III, and entered the Imperial service as a pages. In 1526 (1735) he was appointed the seventh lord of the office of historiographer royal (Hazine-i Melike) in succession to Süleyman. In 1560 he became master of ceremonies (Seyib-i Arifi). He died in Istanbul 2488 (March/April 1755) and was buried beside Süleyman Mustafa, who had initiated him into the Yezidite order, "paid a Divan and a chronicle covering the years 1562–1582 (1734–1735). It was printed in 1599 (1735) as a continuation of Süleyman's history. His poem is more than that; he is a master, his style is the most exuberant and is the most unplaning of all Ottoman historians. His chronology for chronographies is notorious. He enjoyed a considerable reputation as a metaphysician.

(THOMAS MÜLLER)

JACOB, [see next p.]

JAEN, situated at the foot of the north west of the Estadon (= Chable Eso), west of the Comdalbulon, is the capital (1700 feet above sea level); 50,000 inhabitants of the Spanish provinces of the same name (300,000 inhabitants), the area in which the Vinduliana-Merina takes its rise in Upper Austria; Adjutant is
the narrowest part of the land (of Andalusia) comprises the whole hinterland of the town and its surroundings from west to east. This is the ancient Kingdom of Granada, the region was conquered by the Moors in 1492 by the Bourbons, Ferdinand and Isabel, with the assistance of the modern kingdoms of Spain, Portugal, and England, which included also the autonomous Kingdom of Granada, finally occupied by the Bourbons in 1492 by the Bourbons.

The name Janina is derived from the Arabic Najara (in Spanish pronounced Najara with stress in the first syllable), the origin of which is unknown (old Spanish usually Gaia), as Dyos' derivation from U-cim-e (Enydi, Deux de la Synagogue et de l'Epopée, p. 348 seq.) seems impossible to us, especially as the ancient name is rather to be sought in the Arabic itself near Antioch. Janina is rather the ancient Nirina or Fasina, Airignum, which still exists as Firin (Vatican, 1. 400. f. 180), if we read Airigna instead of Avarina. Avarina is said by Veyat to be the capital of the King of Najara, also called simply al-Nadira, the capital. As the Arabs conquered, the region of Janina was colonized by immigrants from the Syr, a Semitic tribe, of Damascene origin. The most celebrated among these numerous scholars is the grammatist Ibn Malik (508).

The history of Janina is naturally closely bound up with that of the adjacent capital of the western amirate and caliphate of Cordova, after the fall of which it formed for a time a small kingdom of limited importance until 1492 when it was conquered by the Bourbons. The Saint, in contrast, is the most important of the four Amirate of Alexandria and the Amirate of Granada, based quite unconstitutionally on Cretan, the history of Janina as well as that of Almeria is suppositiously discussed.

**BIBLIOGRAPHY**

**JANINA**

(Jahann, Turkish, Yelek) a town in lower Albania on the west side of the lake of the same name, at the foot of Mount Vashis, 1000 feet above the sea-level. It was formerly the capital of the province of the same name. The palace of the Pasha and two of its mosques are situated on a peninsula which runs out to the middle of the lake. It was burned by several forts. It replaced the ancient Diospolis which had become the see of a bishopric, and the town of which is still to be seen 2 miles away; after the invasion of the Turks under Tophia in 574, it took the name Janina, derived from that of St. John (Church Janina) who had become the patron saint of the town. In the reign of Sultan Murad II, after the capture of Salonika, the Sultan ordered the town which was in luiery into a military city. The Janins accepted the conditions, received the keys of the town and handed over to the deputies a large stock of corn with his own hand (see above p. 141 seq.). In 1417, it is said that the ceremony took place in a house near Salonika called Kir (Kir). Eighteen officers under the charge of Budai Bag were ordered to take possession of the town and to build outside the walls, in accordance with the treaty, the houses they were to live in; in spite of the pledge, the commissioners had the church of St. Michael in the middle of the town demolished, and the fortifications dismantled, taking advantage of a festival celebrated in the church of the Propostor. They attacked the crowd and carried off the daughters of the host families. Janina had no particular history till the time when Ali Pasha of Tepo-Dilo (see Ali Tepo-Dilo), desiring to escape from the yoke of the Sultan Pasha, made it his capital. He brought prosperity and life to the town, promoting agriculture and commerce. The age of 1812 (1820) raised the town. Of the 12 churches which formerly stood only six are left. The mosque of Ali Pasha was built in 1513 on the site of the ancient basilica of St. John; many ancient columns are still found there. Other noteworthy buildings are the Bajakli Lice, (the "museum of the standards") built by Beyazit II, and that of Mustafa Kemal. It was built by the Greeks at the end of 1613 (1820) and was definitely ceded to Greece by the Turkish Empire (Treaty of Athens, Nov. 14, 1913).

Local industries include the manufacture of blankets called raffia, line carpets, a coarse called chokri, stupa called panta hake, otages, gold and silver threads, and garnets ornamented with gold for the decor of the Alhambra and the citadel of Granada, based quite unconstitutionally on Crete, the history of Janina as well as that of Almeria is suppositiously discussed.

**BIBLIOGRAPHY**

**JANINAS**

(Turkish, Yelek, 1879) town, the name given to the regular infantry created by the Ottoman Turks in the 16th century, which became their principal force and rendered possible the vast conquests made in this and the following centuries. Their organization goes back to Sultan Orhan (1282-1325), son and successor of Selim, his brother and junior minister Ali (Ali), and Ker Kehil (Kehil), brothers-in-law of Shaikh Ededan. Below this time the chief Janina troops were, as in the Ottoman armies, bodies of horsemen called ayngars (light cavalry); they were supported by infantry called in Persian zaras, formed in Turkish zaras (foot-soldiers) who, although organized in companies of ten, a hundred, or a thousand men were in cavalry more likens without any
grant confusion. It is Kans-Chamber's merit that he armed regular regiments of infantry at an age when most modern Europe was still at the stage of armed bands, before the organisation of the companies of archers in England, and a century before the French regiment. Charles VII. It was very probably the combat with the regiments of the Byzantine, although far from their former glory, that gave the Turks the idea of supporting the Turkmans cavalry with well-trained infantry. But recruiting for the latter was carried out on entirely different lines, of which, moreover, the Janissaries are the only example in history.

In the article newbあなた (n.n.), it has been explained how the Ottoman government used to levy from Christian peoples conquered by them a tribute of children, who were converted to Islam and educated in special schools and continued to be regarded as slaves of the sovereign (dev-sha). The children of Janissaries were regarded as conscripts, like those in the harquebus regiments and their descendants. They were called *dev-sha sons of slaves* (dev-sha, 2772). An institution of this kind was contrary to Muslim law which does not allow a sovereign to force his subjects *n. q. h. t. a. n. k. a.* to give their children into slavery; the Turks who were in the service of the *Abdul Ghaffar* came from captives made in enemy territory (Karabak) and not from conquered territory (dev-sha, 2772); it was only possible to form the Janissaries by an act of the ruler of the sultan, in disregard of canon law (dev-sha, 2772).

When the first new troops were under the patronage of the devshah Hallaj Bektash and regarded as members of the religious orders which had been founded (dev-sha, 2772, and much) at Baghdad, they were given a bonnet of white felt, to which there was attached behind a piece of cloth in memory of the caliphate, during which time the head had left its sleeve hanging on the back of his neck. This bonnet had a wooden spool as a knob. The names of the officers were taken from various departments of the kitchens: *tut-tut-boz (chief soap-maker), mambu-bashi (chief cook)*, and so on. We have seen the most sacred object in the regiment was the great caliphate of *hence* of which they assembled not only at meals but also to take counsel. Upsetting the caliphate was a sign of revolt, which became more frequent in course of time. When, from the reign of Sultan Mahommed IV (1055–1064), the ancient practice of examining fell into disuse.

The corps of Janissaries was called *dev-sha, 2771*, it was divided into several tactical units called *dev-sha, regiments*, fixed in number and of varying strength (according to the period, 100, 200, and up to 300 men); these were called inarmen called *div* (East Turc, *divan*). In the field they were camped under large tent tents, on which were embroidered their distinctive emblems. Numbering 10,000 at first, these were increased in number to 12,000, not including 50 *deva* formed by the *Abdul Ghaffar* and divided into three classes: *deva, divan, divan, 2771* (East Turc, *divan*). The number of men *div* *diva*, *divan, bimba-khan*, popularly called *diva*, in the number of 30,000.

This corps was commanded by a general with the title *zamor-deva-sheyk, sheik 2771*, of the Janissaries*, who had a special residence in the capital and offices where the batteaux of the corps was commanded. The sheik was not obliged to choose him from among the officers of the sheik. He was also in control of the police and the maintenance of order in the capital; he was almost always followed by abdel-dey carrying the *fiat* (see above), followed by *abdel-dey* having the tails of their robe turned up and fastened in their girdles. The *dev-sha, 2772* was originally, as the name indicates, the chief of the *deva, 2772*, but as in time, the area of the *deva* were placed under the direct command of the sheik, this last lost some of its importance; however when the *deva* set out for war at the head of the *deva, 2772*, the *abdel-dey* acted as his deputy in the capital, with the title of *deva, 2772*. The *deva, 2772*, supernumerary of the sheik, commanding the *deva, 2772*, was also important; in war it was chief of staff of the corps; he enjoyed great influence, being chosen for his martial qualities by the Janissaries themselves and having the right, after reporting the matter to the sheik, to appoint or dismiss a rank lower than that of the sheik. The other general officers of the corps were in order of precedence, the *deva, 2772*, chief of the *deva, 2772*, commanding the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, commanding the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, commanding the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, commanding the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, commanding the *deva, 2772*, and so on, who represented the interests of the corps with the Grand Veer; the senior and junior *deva, 2772*, charged with special duties, who were sent into the provinces to settle questions concerning the chief; the *deva, 2772*, chief of the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, the *deva, 2772*, chief of the *deva, 2772*, and the *deva, 2772*, chief of the *deva, 2772*, who had to keep the registers called *deva, 2772*, *terre-tour*, *deva, 2772*, colonel of the regiment, an expansion which had arrived to vulgar Turkish with the usual term of a village. 4. the *deva, 2772*, chief of the *deva, 2772*, a servant to the preceding, who kept order on parade and saw that the rules were obeyed; 5. the *deva, 2772*, controller of *deva, 2772*, who looked after the military; 6. the *deva, 2772*, standard-bearer; 7. the *deva, 2772*, chief of the *deva, 2772*, the oldest soldier in the *deva, 2772*, who enjoyed great consideration on account of his title; 8. the *deva, 2772*, chief of the *deva, 2772*, who was head of the parliament and of the prison of the regiment; his sign of office was a large banner; 9. the *deva, 2772*, chief water-carrier.

The offensive and defensive weapons of the Janissaries varied at different epochs; we shall give here a few indications of their nature taken from Edward, from a stock-taking made in the depot for old arms (Museum of St. Louis) in Constantinople: single bow and arrows (employed alongside of firearms until 1555) (1548), according to Veit, 7 feet; 2. the *deva, 2772*, a rod 2. 2. 2. a spear a foot or more in length and a blade of the arrows called *deva, 2772*, at the old exercise ground at the St. M. door mile of pillars near the
JANISSARIES - JAYAVA.

Distance of the Sultan Mahommed II's (that) flowered and crown-jewel and winding bitts (loosely), last to (crown), matchlock, flintlock, blunderbuss (st. Montenegrin "Memories", 38, placed, begun (introduced in 1538), then dropped and taken up again 1556 (1555), matchlock, flintlock, blunderbuss, (loosely used for one or two small, clubs (flintlock, (crown), daggers (flintlock), hence, bullets, small, small, no small, placed in places with metal plates, bullets of copper or steel (the song in imitation of the shape of a fox, terminating in a sharp point).

Each row had an odium which was placed upon its flags as well as upon the down of the barracks; the Janissaries also had a habit of tattooing it on their arms and legs. Promotions in rank were always made by seniority. The Janissaries were only punished by their own officers, the janissaries being irremovable, the janissaries and death, in the case of death, the previous night at Ramlill-bijou and the body was thrown into the pomegranate with a cannon ball at its feet; a cannon shot however was to the execution of the sentence. Soldiers who became old and infirm or disabled, were rationed with a pension; they were called *ayrars.*

The admission of foreign elements, outside of the serfs from the ranks of the *Gemeinsam* (p. 35), gradually caused the corps of Janissaries to lose its quality; the origin of these armies dates back to the Sultan Murat III, who in 1590 (1584) forced the aykas to be the regulations and in spite of the resignation of the agas, the janissaries, to receive into their ranks swordsmen and warriors who had induced the people to the festivals on the occasion of the princes who were later to become Sultan Mahommed III. Since then individuals of every kind to gain the privileges of the corps succeeded in gaining admission to it by purchase or purchase. In 1535 (1740) the authority to deal in soldado was given to anyone who could buy or sell, completed the ruin of the Janissaries as a military force. Those who were really soldiers no longer drew their pay but lived by extortions; soon hardly a house was found in the body of police to keep order in the courts and take pay from the payers of the payers.

Marines were frequent under the pretext of claiming on some similar gift (礦山), which the Janissaries used to distribute to the troops on his assumption, since the abysmal theme, unexpectedly suppressed, which the Janissaries made against Sultan Mahommed II, on the occasion of his second reign [385 = 1431], from the time of the assassination of Sultan (Osman II (1257 = 1252), the Janissaries played a part in politics, consolidated sovereignty, made and formed governments. They served as the tools of the faction, which remained in the background, escaping responsibility. The only exception was the glorious reign of Murad IV (1032-1040 = 1325-1340) who restored them discipline. The unfortunate wars against Russia at the end of the xvith century persuaded the authori- ties that they ought to replace this element and that the Janissaries, incapable of reforming itself and ready to go to war by mere military formations. Sultan Selim III, setting the decisions of a grand council, decided to form a regular army on the estate of Levanti-Chilia, lying on the heights of Osia-Aki and Armat-Aki.
the island. The climate is equable and healthy throughout the year, with an average temperature of 26° to 27° C. The monsoon rains occur in the months of June and July, and are followed by a dry season from September to November.

The climate of Java is tempered by the sea, which is warm and salty, and the interior is watered by numerous rivers. The chief rivers are the Citarum, the Brantas, and the Barito. The country is varied, with high mountains and lowlands, and is covered with forests of various kinds, including teak, sal, and mahogany. The climate is generally healthy, although there are occasional outbreaks of disease, such as malaria and schistosomiasis.

The Java Archipelago includes several islands, the largest of which is Java, followed by Sumatra, Bali, Lombok, and Sumbawa. The islands are connected by the Sunda Strait, which separates Java from Sumatra. The climate of the archipelago is tropical, with high temperatures and abundant rainfall. The largest cities are Jakarta (formerly Batavia), Semarang, and Surabaya.

The Java Archipelago is a major tourist destination, with beaches, national parks, and historical sites. The economy is based on agriculture, with rice, rubber, and palm oil being the main crops. The archipelago is also known for its diverse wildlife, including tigers, elephants, and various species of birds.
the island, which is called Yava or Java. This Hindu period comes down to Portuguese times but offers great similarity to the historian as literary and artistic traditions have been distorted almost to unrecognizability by fantastic additions. The best data are afforded by the numerous ruins of temples, statues, copper plates (often chambers of devotion) and inscriptions and dates, which are found equally in central and eastern Java. They are not sufficient to enable us to study the changing political conditions in this Hindu period. Only a few engraved stones are older than 700 A.D., and some copper-plates from central and eastern Java, of which the oldest are not one of the year 732 from central Java and another of 762 from eastern Java.

Numerous inscriptions dated later than 700 exist and are evidence of a flourishing state of Hindu civilization in central Java which lasted to the year 900. Eastern Java seems to have been less prominent. It has been established that the celebrated King Sihahluk, Almadhu and Dajhak, ruled here in the 3rd, 4th and 5th centuries. In 1222 the Siamese invaded Java and gained the ascendancy over that of Bali in Kediri. In 1294 the kingdom of Madjapahit in Sundaville, which afterward became a great power in the Archipelago. The latter caused down to the beginning of the 20th century.

The temple ruins by their situation and architecture considerably increase the importance of these places. They may be divided into two groups, an older in central Java and a younger in east Java. Both are rich in marvellous buildings, which however are executed in different styles. In central Java they are built of stone and are closely related to Hindu architecture in British India. In eastern Java, on the other hand, they are mainly of brick, and hence a more independent Javanese style has developed, which shows Chinese influence. All the texts we only know that the Emperor Ruhutat of China in 1293 sent an army expedition to eastern Java, which was only partially successful. We have only a few small antiquities from western Java.

In central Java are the ruins of the famous temple of Besak Hadur, Tjampi Mendut, Tjampi Keliwon, Tjampi Sari, Tjampi Sewu, and the Sevane Tjampi Prambanan. In eastern Java (the most important) are Tjampi Panumaran, Tjampi Bambang and Tjampi Tomang or Dijak.

Names like those of both cities are among the most beautiful. Radiating from Java, from the central cheek of Javanese development, many states of gods and religious sects to which it is clear that, as still the case on the island of Bali [p. 1], Brahmanism and Muhammadanism on Java were closely connected and created art by side. The Brahmanism of the Javanese at that time was the Madjapahit school. In addition to these remains in stone, numerous objects of bronze, gold and silver, such as statues of deities, temple bells, plates, vases are found buried in the ground. Only a few remains of secular buildings, even of royal palaces, have been discovered; probably these were of wood and other perishable material. (CC on archaeology and epigraphy, the works of C. C. Stenz, H. Cerny, T. Janssens and H. J. Krom).

The above remarks show how highly developed must have been the civilization and how handsome the prosperity of the island to enable so many costly works to be executed. In view of the lengthy period of their existence in Java it is not surprising that these Hindu kingdoms exerted a transforming influence on the Javanese culture. We shall probably not be wrong if we assume that the Javanese at the beginning of the Hindu period lived probably in about the same stage of culture as the present Dayaks of Tidjil. It seems however certain that even then they knew how to grow rice on irrigated fields, as the technical terms used in this connection are not of Sundanese but of Indonesian origin. But it must have been considerably influenced by the Hindus.

The formation of despotic Hindu kingdoms among Javanese tribes organized on a petty-archal system was also of economic importance. As, on the one hand, it abolished the great insecurity and exclusion of these tribes and, secondly, brought the masses of the people under the rule of their kings and mutes. The latter brought about the development of native arts and crafts whose commercial motifs are still Hindustan. That architecture and sculpture were greatly stimulated is shown by their products, temples and statues, and their disappearance after the introduction of Islam. Foreign trade came through countries with the outer world in the West, and Java became the centre of this trade in spices, precious stones, bronzes, silks, etc. This javannese still use an Indian alphabet and the vocabulary of their language contains a large number of Hindi words and expressions. The introduction of writing was of the greatest importance for the advancement of civilization and on it is based the literary development of the modern Java.

When the Javanese were finally attained possession in the island of Java, they gradually introduced the state system in the form in which it is still found on the island of Bali. With the introduction of Islam this distinction of the classes disappeared. The gulf that exists between the common people and the nobility and official classes with the priests at their head and the unpedigreed of the former must be regarded as consequence of the state system. They are foreign to the strawgutil, Javanese.

Islam spread from Java to Malacca, into which it had been introduced by merchants from India (such as Perseans and Gujaratis), and was professed in the beginning of the 15th century. Besides the Balinese, after the rise of Malacca, Malay traders also by their influence in Java created a new state for Islam. Around the families formed by such marriages at the courts, communities of more or less communities gradually grew up, which finally developed into small states. Influential traders were the first successful in entering into close relations with princes of the sultans through marriage, whereby Islam could gain influence in the upper circles. The religion of the Madjapahit kingdom in its original state also gave occasions for the advance of Islam; it is often reported that princes of Madjapahit married Muslim princesses of conquered or allied states. At the same time commerce between Java and the states dependent on the island (Pamal) and an important commercial and even the Malacca, a maritime state in a small degree the spread of Islam. If the small names that there was about the inner penetration of by the most part Malacca, according to Portuguese accounts. The same as
doubt influenced their mother country in religious matters. In many like the above were of all the more effect in a period when there was no strong central authority in the kingdom of Mádja-pataḥ.

Following the trade route Islam first gained a footing on the coast of Eastern Java. There, in the sixteenth century, Tuan was the most important harbour of Mádja-pataḥ and in the following centuries the most important commercial town near to Gréskis. The oldest relics of the Muslim settlement in Java is the tomb of a certain Sálima ibn Māmīn, d. 475 or 475 (1083/4 or 1083/4), in Lom. The tomb of Mālīk Ihbāš in Gréskis dates from 822 (1420); according to native tradition, he was a merchant. According to a statement of a Chinese Muslim, there were in 1416 not yet any native Muslims, but a settlement of Muslims who had come from the West and a group of Chinese, some of whom were converts to Islam. In view of the position of Islam in the Moluccas about 1450, it is very probable that about the same time the Muslims were beginning to assert their influence in Java, also in the coast region from Diaphara to Surabaya; Tuan and Gréskis particularly. In the course of the next centuries the communities of native Muslims with the support of the immigrants, Muhammadans developed into small states on the coast, which soon endeavoured to assume authority over Eastern Java. (On the above cf. D. J. O. Schrieke, Het Kerk en se Vorstwraad, Leiden dissertation, Utrecht 1916, pp. 59-69 and the literature there quoted; H. Kramer, Een Javaanse Prinsdom en de Zestiende Eeuw, Leiden diss. 1921.)

Legend records the conversion of Java to Islam by the joint activity of eight or nine wise men. The names of these wise men who are called by the honorary title saim (marahmen) and are usually named after their place of birth or activity, are as follows: (1) The already mentioned Mālīk Ihbāš (also called Mālīk Nūsajib) who died in 1411. (2) Sālima ibn Māmīn (Rāmhān al-Māmīn), who about 1430 married a princess of the family ruling in Tuan and died about 1470. His tomb is in Ngampel (Serabaya). (3) Sālima Bāshā who was a Muslim of the Ngampel family and married the Tuan princess and was born probably about 1450. His activity in Tuan, probably as head of the Muslim community there, must fall between 1475 and 1500. He perhaps lived to about 1525. His tomb is shown in two different places (cf. Schrieke, Het Kerk en se Vorstwraad, p. 59 ff.). (4) Sālima Gūrān Dājā, who is considered the ancestor of the so-called priest-kings of Giri and whose tomb is on the hill of Giri Bozor Grēskis. (5) Sālima Gunung Djajati, who left his native place Pasū in 1571 and after studies in Mecca came to Diaphara and probably also to Dānak, where he had great success with his religious teaching and he married a sister of the king of Dānak. He then went to Ratu Bintang, where with the help of his brother-in-law, he succeeded in gaining power. In 1537 he took Sānda Kalapa from the king of Pajodjara, at whose expense he gradually extended his power. He finally settled in Tijṭirbān where he died about 1570; his tomb is to be seen near by on the hill called Gunung Djajati. (See Hoernli Dajadiningsrat, Grēskische Geschiedenissen van de Soedamsche Banjir, Leiden diss. 1913, Index s. v. Gūrān Dājāti). (6) Sālima Kudus, buried in Kudus (Kramb Samaṇa). (7) Sālima Maru, called after his tomb in the Maria Hills (Diaphara). (8) Sālima Dānak, a son of Sālima Kudus, his tomb is in the inner court of the temple at Bāsana. (9) Sālima Kali Djajat, whose tomb is in Kudus (Samaṇa). (On him cf. Hoernli Dajadiningsrat, ibid. Index). — These nine, it should be noted, are also given with partly varying names (cf. the article Hadżi in Encyklopaedie der Nederlandsche Indië, iii., and the literature quoted there).

About 1520 a coalition of Muslim kings of the coast states under the leadership of the king of Dānak, Ratu Bintang, destroyed the Hindu-Javanese kingdom of Mádja-pataḥ. As their attack was not successful, they attempted also to destroy the independent sultanate of Padjang (c. 1568) and the latter again by that of Mātaram (c. 1568), out of which the present "Vorstenlanden" of Central Java have arisen.

The development of the political and religious conditions among the Javanese of the sixteenth and seventeenth centuries Mātaram has undoubtedly been the most important sultante. It was brought to its greatest prosperity by Tjikrā Kusumād (1618—1649), also called Sultan Agung after 1641, and extended its rule over almost the whole of Java. During his reign there existed in Java the independent sultanate of Bāsana and the sultanate of Tjirbān dependent on him. The kings of Giri-Grēskis at this time had great religious prestige.

By Agung's conquest of the Northern parts of Lampung (1616), Tuan (1616), Grēskis (1622), Surabaya (1625), and Malabar (1627), and by their destruction, the foreign commerce and the shipping of Java received a severe blow, which was not repaired by the foundation of the state harbour of Diaphara.

The European competition of the Dutch, English, Danes etc. was thereby much encouraged. By the foundation of the town of Batavia in 1619 on the site of the former Sānda Kalapa or Djakarta the former obtained a commercial and political centre in the sphere of the kingdom of Mātaram, who, had he been successful in driving them out by a siege in 1628/1629, as had the Banjir of the West.

The histories of the Javanese kingdoms of Mātaram, Tijṭirbān and Ratu Bintang since that date show as classical examples of the destructive influence of the unbridled passions of their rulers and the latter's officials. Agung's kingdom suffered already from his many costly conquests, his predecessors and their relations only reignited to increase their revenues and gratify their lusts. Domestic conflicts in the royal house itself and several wars with enemies outside, inclined thereby, weakened the kingdom more and more.

These circumstances had consequences which were of interest to the "Nederlandsche Generale Geschiedenis" and "Oost-Indische Commissie" founded for trading purposes only and managed from Holland, and were important for the development of modern Java. These and the endeavours to maintain a monopoly drove it to a policy of conquest, which became one of the main causes of its decline at the end of the sixteenth century. As early as Sultan Agung's death in 1646, the Company made a treaty of mutual support with his successor, Ratu Bintang. The latter in 1677 found himself forced...
to call the Company's help when pressed by the Madures and Maccauines. He died a fugitive, and his son Anungkerat II was only able to ascend the throne with the help of the Dutch Company. The kingdom was next shaken by two wars of succession (1704—1706 and 1746—1755). When the three claimants to the throne were all maintaining their position in the field during the latter of these wars, the Company found itself forced to divide the kingdom of Mataram between two of them in 1755. This arose the kingdom of the Sasahunum of Surakarta and of the Sultanate of Diumyakarta. In 1759 the third pretender had to be pacified, by granting him the semi-independent position of a prince Mangkunegara. At this time the Dutch East India Company already possessed the North coast of the Mataram kingdom and the eastern part of the West coast of the South coast. Up to the end of the eighteenth century the influence of this trading company on native culture was relatively small, as their officials only dealt with the natives as far as was necessary for the compulsory delivery of agricultural products by the kings and the monopoly of imports of clothes, opium, etc.

In the course of the nineteenth century, when the kingdom of the Netherlands had assumed the sovereignty in the Indian Empire of the East Indian Company, the conditions of life among the Javanese population have altered very much. During European rule (1811—1816), the substrates of many and the Javanese in the West were completely incorporated in the territory of the Indian government and considerable stretches in Central and East Java. The foundation of the independent kingdoms of Pato Alam (1812) also broke the resistance of the Sultan of Diumyakarta. When, after the rising of 1825-1830, the present residences of Barayan, Bagillan, Madura and Kalibar were incorporated by the Dutch in their territories as a war indemnity, only 74% of the surface of the island remained to native princes. As they have since then been still further restricted in their powers, the situation of the masses of the population is still further improved. Before this can be judged, we must deal with the population. It consists of 32,000,000 natives, 318,700 Chinese, 72,300 Europeans, 353,700 Arabs and 3000 other foreigners; with a population of 254 in the square kilometre. It is therefore one of the most thickly populated parts of the earth's surface. If we consider that in the first and second decade of the sixteenth century, the Governor-General Daendels and Raden estimated the native population at 250,000 and five million and that this enormous increase has taken place without immigration, the explanation certainly appears desirable.

The foreign inhabitants of Java, if we except the only temporarily settled ones, are for the most part half-breeds, sprung from intermarriages with native women. The Javanese are included with the Europeans. The Chinese, whose families in many cases have been living for centuries in Java, come from the South Chinese province of Kuan-Tung, the Arabs from South Arabia (Hudramawt) and the other foreigners from British India. With a very few exceptions, these all come with the object of earning a living by commerce or industry, and they often succeed very well.

The natives with few exceptions (besides in the West, the majority of the Tenggres in the East and the Christian Javanese) are all Muslims. Their languages, customs and physiques divide them into three groups: in the West the Sundanees, in the Centre the Javanese, in the East the Madures. The differences are to be ascribed more to the influence of foreigners (Hindus) and surroundings, than to race. They all belong to the group of the Archipelago, but those in the West were less exposed to these influences than those in the East and Centre. The Sundanees therefore remained closer to the original type and more accessible to Islam. The Madures on their relatively less fertile islands have devoted themselves into agriculture than to cattle-rustling and piracy and formerly to piracy, and thus became more energetic, vigorous and rivalry than the Hindustani Javanese. In Western Java the latter only spread along the North and East coasts, while the Madures are found in East Java. In the residencies of Besuki, North Pasemah and East Surakarta also. The native populations of the large towns like Banyuw and Surahaya deserve special mention; in these commercial and administrative centres of the Dutch the native population arose out of traders, slaves, soldiers, political interests of the most varied origins in the course of the last three centuries. As the language formed here has become (the Javanese or Malay) of the Madurese and natives for the whole archipelago, these traditions are of special importance.

The natives are an intelligent, circumspect, easily contented, agricultural people who cling firmly to their traditions. They are fond of festivals, games and the use of opium, which sometimes are lead to abuses. The long period of despotic rule has divided the people into two classes, the princes with the nobility and officials on one side and the bulk of the people on the other, and has caused a very complicated system of ceremonial to grow up, which has laid a firm hold on all their customs and also finds expression in their language.

The subservience of the masses to their superiors is a further result of these political conditions. In keeping with their geographical situation they are more submissive than the Madures and Sundanees. The awakening of Eastern Asia is now being felt even in Java.

The despotic power possessed of the soil, granted it to the peasants in return for half the produce in kind and in addition levied taxes in labour and produce on his people regularly and irregularly. His relations and officials were granted lands, and in the "Verestatenland", where this system still prevails, these have since the beginning of the eighteenth century been let more and more to European planters. Outside these principalties, the possession of land is private among the Madurese and Sundanees and partly communal among the Javanese.

The most popular crop is rice, grown on irrigated fields; other food-stuffs are sweet potatoes, beans, spices and fruits; for export tobacco, cocoa-nuts, coffee, tea, cotton and copra are grown. Of all these a number of varieties are known. The rearing of cattle and buffaloes is only subsidiary to agriculture. The horse is used for riding and as a beast of burden but is also eaten like the sheep and the goat. All these domestic animals except cattle were imported from Asia. Hunting as a means of livelihood is of very subordinate importance. The same applies to fishing in the rivers and in the sea. Many fish are reared in artificial ponds of fresh
of the town of Batavia and the surrounding district deserves special mention.

The Islam of the native population possesses the same character as has already been described under INDIES (DUTCH) and indicated in its most important features for the island of Java. It is so important in the lives of the natives up to the highest classes of society that the prevailing political and economic conditions can only be understood if full account is taken of it. This Muhammadanism is grafted upon animism which often appears under Hindustani forms.

From the economic point of view, agriculture, by far the most important industry, shows most significantly how powerful the animistic mental attitude makes itself felt. As a result of lack of knowledge of the real conditions of growth, it causes and maintains the neglect of good tillage, of careful choice of plants, of care during growth and precautions at harvest time. Agriculture also labours under the burden of the many animistic sacrificial festivals and ceremonies, which are given a Muslim significance for the people, because a religious person prays for Allah’s blessing at them. The yield of all native crops is therefore much smaller than it would be under European management. It is the religious significance of agricultural customs to the natives that forms a great obstacle to their improvement under European guidance. The government has seriously attacked the question of the study and advance of it. It is similar with cattle-rearing; with the help of the ruling and other native chiefs, very satisfactory results have been obtained in Central Java in improving the breed of cattle and their care.

Politically Islam is only of importance so far as its teaching regarding insular rulers makes it appear a subsidiary factor in all troubles which arise out of economic or political grounds. Further, the belief in the personal help of the Almighty and his saints, in amulets, in invulnerability etc. leads in local disturbances to the phenomenon so inexplicable to Europeans, that sometimes a very small number of people, often led by a guer, vigorously resist the authorities.

The rule of the Dutch is to the advantage of the natives of the Archipelago in several respects, as has already been mentioned at the end of the article INDIES (DUTCH), and on p. 378. As regards the island of Java, in the last fifty years, economic conditions have largely contributed to this result. The very dense population of the island could not possibly support itself on the yield of their fields and other sources. But in addition there have arisen the constantly increasing sources of revenue which the natives owe to the plantations of tropical products of the Europeans. What huge sums are involved may be gathered from the amounts paid out in wages and rent to the natives by the sugar industry, which moreover is the most highly developed one. If we consider all these facts together with what has already been said under INDIES (DUTCH), the astounding increase of the population of Java in the last century will be understood. It could only have been attained however by the fact that marriages are general and early among the natives.

As regards administration, the islands of Java and Madura differ from the other islands (Buitenenzingen); the civil officials are accordingly divided into two classes. There are 17 residencies in Java and
Madura and in districts under European residents and assistant-residents who have controllers over them. Alongside of these, the native officials with the regents at their head form the link with the people. The often populous organisation of the 52,000 native villages has been left untouched as far as possible.

The native princes occupy a special position. The four kingdoms arose out of that of Mataram, as was briefly outlined above. The residence of Solo or Surakarta contains the kingdom of the Sultanate of Surakarta and in the South that of the Panaman Adipati Arya Mengkab Negara; the residence of Djokjakarta contains the kingdom of Djokja or Djogyakarta and of Panaman Arya Paku Alam in the South-West.

Justice is administered with slight exceptions, in the native states as well as in Java and Madura, by jurists trained in Holland.

Public instruction in the present century is being continually extended by the government, missions and private persons. In the larger places, Dutch is often the language of instruction (as at the end of 1917 in 3 secondary boys' schools and 2 secondary girls' schools and in 198 elementary schools with European teachers). The education of the natives was conducted in 180 schools in seven years courses with Dutch, and in 931 schools in four years courses. There were 457 village schools with three year courses, 153 schools for Chinese and 30 for Arabs.

(A. W. Nieuwenhuis.)

JEREMIAH, the prophet. His name is spelled in Arabic, إسماء، إسماء, or إسماء (see תֶּּלֶּּם, i. 175) and these forms are occasionally given with mutal also (אֶּלֶּּם).

Wabul b. Musabbah gives an account of him which turns upon the main points of the Old Testament story of Jeremiah: his call to be a prophet, his mission to the king of Judah, his mission to the people and his reluctance, the intervention of a foreign tyrant who is to be over Judah, Jeremiah that repudiates his garments and curses the day on which he was born; he would rather die than live to see this. God then gives him the promise that Jerusalem shall not be destroyed except at Jeremiah's own request.

Bukht Najar then attacks the city on account of the increasing sinfulness of the people. God sent an angel in the form of an ordinary jarramah to Jerusalem to find out his opinion on the fall of Jerusalem. He twice sent the angel away to inquire how the people were behaving. The latter returned with the worst reports and communicated them to Jeremiah who was sitting on the wall: the prophet called out: O Lord, if they are on the right path, let them live; but if they are on the path of evil, destroy them! Hardly had he spoken these words than God sent a thunderbolt (įוֹנָא) from heaven which laid the altar and part of the city in ruins. In despair Jeremiah rent his garments, but God said: 'You yourself gave the word'. He then realized that his companion was an angel in disguise. He fled into the desert (Tabari, i. 658 sqq.). — The second episode in the Muslim legend of Jeremiah refers to his meeting with Bukht Najar. The king found the prophet in prison in Jerusalem, where he had been interned on account of his prophecies of ill fortune. Bukht Najar at once released him and showed him honour. He thereafter remained in Jerusalem with the miserable remnant of the population. And when the latter besought Jeremiah to implore God to accept his repentance, God vouchsafed him the Prophet. 'Tell them only that they are to remain here'. They refused to do this and took Jeremiah with them into Egypt (Tabari, i. 660 sqq.). According to Ya'qiudi, Jeremiah had hidden the ark in a cave before Nebuchadnezzar's entry into the city. — The third episode runs as follows: When Jerusalem was destroyed and the army had retired, Jeremiah came back riding on an ass. In his hand he carried a bowl of grape-juice and a basket of figs. When he stopped at the rains of Êliy (Areias), he became insensible and said: 'How can God call all this to life again? God therupon deprived him and his ass of life. After a hundred years had passed, God awakened him and said: 'How long hast thou slept?' He replied: 'A day'. God then told him what had happened and brought his ass to life again before his eyes: the grape-juice and the figs had remained fresh. God then granted him long life; he appeared to men in the city and in the desert (Tabari, i. 666).

Of the first two episodes one can say that they are a development of Biblical statements. The third however is based on a misunderstanding connected with Sura ii. 261: 'Like him who passed by a city which had been laid in ruins; then he said: How could God revive this after its death? Then God caused him to live for a hundred years, Ha
to the desert where, as in the towns, he sometimes meets men; for this is a statement which elsewhere refers to al-Khaled in contrast to Iljas [q. v.] who is the patron saint of the sea.

KA'ĀNĪ, MARHÂT AL-HĀSSAN, a modern Persian poet, son of the venerable Mīrāb Muhammad Allī Gufīlān, born at Shīkhāb, was court poet to Muhammad Shāh, successor to Fāth Ṭāhir Shīkh (1595—1644), and to Najīb al-Dīn Shīkh. He was very precocious and attracted attention from the age of eight. His father died when he was eleven (Persian, Bombay, 1277, p. 10) and he had to go to Khorāsān to complete his studies. Prince Shāhīd al-Sālima Ḥasan Allī Mīrāb, governor of Māhī, took him under his protection. This was the beginning of his good fortune. In addition to the three classical Muslim languages, he learned French. He was addicted to opium but was not guilty of debauchery. He died at Teherān in 1675 (1644). He left a collection of anecdotes in prose and verse entitled Kitāb al-Perīghān, a piece of Scattered Leaves; a parody of the Gīrāštān al-Salī (illuminated at the top of an edition of the Dīwān, Bombay 1277, and separately at Teherān in 1302), and a Dīwān containing his collected poems (illuminated at Bombay 1277, 1298, 1306 and at Teherān in 1277).

He is undoubtedly the greatest of the modern poets of Persia, and is perhaps the most witty of all Persian poets. His irony is deep and biting; unfortunately it is often coarse.

KAARTA, the region of the French Sudan between the upper waters of the Senegal and the Sahara. The boundaries of Kanarta are

K.
Maga and Quitina (1863), and Lens (1880).

History. Kaarta after being included in the empire of Ghezaa, &c., and in the Mandingo empire (1450) was visited by several small kingdoms on the dissolution of the same, and which at the end of the xviiith century were conquered by the Bambara Massassi who came from Segu under a chief named Satna. The latter conquered Fuladugu, Kaarta, and Bambuk and took up his residence in a place called Suntanian. His successors had to wage continual war against the Bambara of Segu. Conquered at first, they regained the advantage under the direction of Sâe Ramans (1709—1760) who collected the remnants of the Massassi and reconstituted their empire with Guinea as capital. He annexed Dianghrité, Diera, Diamelco and Bambuk. Towards the end of the xviiith century, the Massassi were again overwhelmed by the people of Segu, but their chief Dassé reconstituted his army by means of slaves taken from the merchants. His successor Mass Kurabo recaptured the lost territories and added Konjakari to them. The rulers who reigned after him, suppressed the rebellions which broke out in various provinces. The last of them, Kandia (1844—54), took Niro as his capital and after seven years of war conquered the Dawaara and forced them to migrate to the Sahara. Kaarta was then a powerful state measuring 190 miles from E. to W. and 110 from N. to S. (Raffelz), power which was exercised by a chief belonging to the family of Killibany. He bore the title of jams and his dignity was hereditary in the collateral line. His authority was absolute but in matters of importance he summoned a council composed of the Kulabari, representatives of certain tribes, and the "chiefs of the captives."

The Kaarta kingdom fell before the blows of the Turens. Kandia having put to death an envoy from al-Hajj Omar, Kaarta was invaded by the bands of this marabout. The jama's army which took the field against the enemy was routed and the jam himself obliged to submit. The town of Niro was occupied by the Turens and the members of the royal family massacred. Kandia, spared at first, was not long in suffering the same fate. Kaarta henceforth formed part of the Turens' dominion in the Turens' kingdom and was administered by a viceroy until 1894. At that time the Sultan of Segu, Ahumui, disturbed by the power of his brother Montagga to whom he had confided the government of Kaarta, decided to dispensers his brother. Montagga besieged Niro, blew himself up rather than capitulate. Ahumui then installed himself at Niro and lived there till the French undertook the conquest of the Turens' empire. In 1890, the troops of Colonel Gallieni entered Kaarta and installed Ahumui. On Jan. 1, 1891, they took possession and completely the subject of the country. Ahumui has his chief in Mema. Kaarta was incorporated in the French possessions and divided into the administrative districts of Niro, Kidj and Kayevo.

(5. Yere.)

KAB-AL-ABBAR, Alh. Isma'il KAB 'AL-MATT h. HAJJI, the oldest authority for the Jewish-Muslim traditions among the Arais, a Jew of Yemen, who became a convert to Islam in the Caliphate of Abu Bakr or Omar and was called KAB-AL-ABBAR or KAB 'AL-HABIR, "the rabbi Ka'b", on account of his wealth of theological, particularly Biblical, knowledge. Libanabki (D'Abraham, one descendant, Legenda arcubis, Bohnius, Leipsig 1853, p. 36 sq.) supposes that his name was originally Habir, Alkib or Yakib, and was afterwards changed into the Arabic name Kab. Hak or hakir (plur. abhar) is taken from the Hebrew hakir, a title of scholarship among the Babylonian Jews, lower than that of rabbi. Al-Khawarizmi also describes it as a Jewish title equivalent to the Arabic alim (Mafjarit al-Timam, ed. van Vloten, p. 35). We have very little information regarding Ka'b's life and work. According to al-Tubari, he was in intimate terms with the Caliph Omar; he was in his retinue when Omar entered Jerusalem in 15 (566) (Annals, i. 2468), became a Muslim in 17 (568) (ibid., p. 2514) and is said to have preceded the death of Omar to him in 23 (644) three days before it happened (ibid. p. 2702). According to al-Nawawi (Tajdid, ed. Wasenfeld, p. 325), he was a disciple of the Prophet, but never saw him. The Amjatj Abü "Darda" [q. v.] said of him that he possessed great knowledge and that there was only one opinion regarding the vastness of his learning and his reliability (al-Nawawi, ibid.). From Yemen he moved to Medina in the reign of Omar and then from there to Hijj in Syria. The Omayed Mu'awiya, then governor of the province of Syria, is said to have taken Ka'b as teacher and counsellor to his court. In the conflict between 'Ommar and his opponents Ka'b vigorously championed the Caliph, which on one occasion brought upon him corporal chastisement by the pious Abu Ubayr [q. v.] (Tabb., i. 2940 sq.). He died under 'Ommar in the year 32 or 34 (652 or 654) (Tabb., iii. 2474 sq.) at Hijj and was buried there on, or others say (Ibn Batütta, ed. De Forbin, on Mount S).; 'Abū, Mu'jam, ii. 593), in Damascus. His most important pupils were 'Abd Allah b. 'Abbas [q. v.], one of the earliest expositors of the Koran, and Abî Hurairah [q. v.].

Ka'b's teaching was given orally only; that he ever wrote a book, is, at least, nowhere stated. Many sayings seem to be credited to him; in many, notably those given by al-Talibari, an older version can be proved from rabbinical or church-patrismal traditions (for examples see Libanabki, pp. 35 sqq.). Reliable historians like Ibn Batûtah and al-Nawawi do not quote him at all, like al-Talibari, only rarely; see the other hand, he is in all the more frequently quoted as an authority by story-tellers like Ibn al-Muta's and al-Katzir. In all uninterrupted tradition he appears as narrator in the al-Jama'isc Legend of José (edited in Spanish transcription by F. Galli- en Rahbel, Legenda de José hijo de José y de
KA'B AL-ASHRAF — KA'B N. MĀLIK

583

Alejandro Magno, Zaragoza (1888) so that it almost seems as if this figure was in its whole substance a tradition descending from Kab. The correct name of Kab's al-Ashraf (in Spanish transcription Cab Alashraf, p. 4 note 2) is Godol of historian, as he — like formerly von Hammer (cf. Littmann, xxvi, p. 26 note 4) — confuses Abshīr with Abshārī and calls him al-narrator or al-narrator. This Moreno legend is however for the most part, especially in the first chapter, a literal translation of al-Tha'albi's Yūsuf legend and also where al-Tha'albi mentions other traditions or names of all, refers to Kab, who is mentioned as an authority only five times in al-Tha'albi's story; the first time in his introductory description of the creation and beauty of Joseph (Kisā' al-Ashraf, Cairo 1344, p. 61, l. 4 infra). This passage is lacking in the Legend, as the first page of the MS is lost. The agreement with al-Tha'albi begins in the form at the very beginning, p. 31: a infra: 'I spes euxo etn Allah merre etc., in al-Tha'albi's ℞, etc., p. 62, l. 253: 'mei Allah a'ret alun etc. etc., where it is related that God made a tree grow up for Jacob in the courtyard of his house and whenever a son was born to him, made a branch sprout from the tree. As the boy grew, so did the branch and when the boy attained manhood, Jacob cut off the branch and gave it to his son. While al-Tha'albi here gives a quite general reference to the statements of people "who know the legends of the prophets and the history of past ages", the Legend as easily as p. 4 and on alms, every other page gives Kab as the narrator. This frequent reference to Kab is however, as a further comparison with al-Tha'albi's story shows, quite arbitrary in the Legend. Al-Kisā', in his legend of Yūsuf (Kisā' al-Ashraf, Cod. Lomn So 7, p. 315—392) quotes Kab as once a authority via. the beginning, where it is related that God gave Abraham five precious gifts, which afterwards all passed into Joseph's possession and that this assured the envy of his brothers; then follows the story of Joseph and Jacob's dream (cf. Well, Bibliotheca Legenda der Muslimenvener, p. 161). We find Kab as narrator in one passage in Firdawsi's Šrūf al-Zahīdā (ed. Rībā, in Bāšyām Īrānian, Arvān Ser., Part iv., VoI. 3, Peshawar 1910, p. 258, l. 2599) where he says: Kab al-Ashraf is in the habit of saying this, from Kab I have the following "true tradition"; here follows: the description of the ruler of Egypt (here called Khāṭa or Qādir with the dome Abu T-Hassān) and of his vizier Savān b. al-Walīf (the Poet of the Bible) and his wife Zahīdā and of the preparation for the sale of Joseph by public auction. The fact that al-Talabī in his story of Joseph (l. 371—413) does not mention Kab at all, and al-Tha'albi, al-Kisā', and Firdawsi, on the other hand, in the same story quote Kab as authority in different, more parallel passages, strengthens the hypothesis that this name is a late invention not only in the Moreno legend but also in the three authors last named.

KA'B N. MĀLIK, Abd al-Asād Allah, a native of Mālik of the Khurṣidī tribe of Salim. After taking an active part in the sanguinary tribal
battles in Medina, he was won over to Islam even before the Hijra and took part in the momentous second meeting at the Aqaba [q.v.]. He was a poet and along with Wāsā'ūn b. Ḥabbūt [q.v.] and the other Muhājirūn, was employed by Muḥammad to glorify his military exploits and amuse the palatine poets of the eminents. He did not fight at Badr [q.v.], but was in most of the other battles. At Yūhain, wounded himself, he found the wounded Prophet, who was thought to be slain. On the other hand, he was one of the few followers of Muḥammad who, in spite of their devotion to him, could not bring themselves to take part in the difficult campaign against Taʾālūt. But he later regretted it and after severe penance received the forgiveness of the Prophet. (cf. Sura, iv, 103, 107, 118 sq.). It is noteworthy that he who is fond of emphasizing the connection of his tribe with the Ghūtas, the Chibāb, in all the caliphate of ʻOmmān we again hear of him when he is with Ḥammān and Zād b. Ḥabbūt vigorously championed the Caliph, when he was assaulted; after ʻOmmān's death he wrote an elegy on him and declined to pay homage to the new. He died blind in 53 (662); according to others, as early as 50 A.H. His poems have a somewhat nobler tone than those of Ḥammān and show a real enthusiasm for the religion of Muḥammad besides a strong local patriotism.

(From Buhl.)

KAB, A. ZUHAIR, son of the celebrated poet and author of a Maʻālīיחā, Zuhaib b. Abī Saʿīd, and of Khāliah bint Ammār. Poetic talent seems to have been one of the privileges of the family; for the father, mother, and father's father, have, as usual, eleven of his manuscripts, including the famous Tunisulīkh (al-Khāriji). We do not know the date of his birth; he was the eldest of three brothers, the other two being Badrij and Sulaim. Traditions, more than suspicions, report that he early gave proof of his poetic talents, in spite of the opposition of his father, who ended in being convinced after a decisive test. He was involved in the wars of his tribe against the Tājīs, the Kurājī, and the Khaḍar, as we see from various poems in his Dīwān. At the time of Muḥammad's mission, Badrij was converted shortly before the year 7, but Ka'b refused vigorously to imitate him, and later a schismatic verses against the Prophet. The latter scathingly assailed his imitation. Henceforth, the earth became too narrow for Ka'b and he resolved to submit. He appeared unexpectedly in the year 9 in a mosque of Mecca where Muḥammad was and revealed to him his famous poem known as Bīrūn Saʿīd (Sa'mā' has gone). The Prophet was overawed with admiration on hearing this elegy of himself and the Kurājī and threw on his shoulders his own striped Yemen cloak, the ṣawād, whence the name often given to this Ḍuḥā. The date of Ka'b's death is unknown, but he seems to have reached an advanced age. The Bīrūn Saʿīd has nothing of a religious poem; it is inspired with the sentiments of pagan poetry and begins with such a commonplace that Ḥammān al-Raḍīwīya [q.v.] claimed to know 700 poems with the same opening. It was frequently reproduced in the form of ḍuḥā and ṣawād. Its commentaries are numerous. The best known are: Thālab b. Dūrālī, al-Thurānī (published by Krenkow, Zentral. d. Deutsch. Morgen. Ges., 1. 241–270), Ibn Ḥišām (of which the later edition is that of Guindi, Leipzig, 1877), Ibn Ḥišām, al-Suyūtī, al-Qurṭubī. It was first published by Martin Lëiden (1740); of later editions we may mention those of Freytag with a Latin translation (1853); Oldenbeu, Notice d'un Vénitien Caracas, Arzouman, Berlin (1840), p. 110–114. I have given an edition with a French translation and two unimportant commentaries (Algeria 1910). The Dīwān is not yet published.

KAB, THE, palaillow of Islam, situated almost in the centre of the great mosque in Mecca. I. THE KABA AND ITS IMMEDIATE NEIGHBOURHOOD.

The name not originally a proper name, is connected with the cube-like appearance of the building. It is however only like a cube at the first impression; in reality the plan is that of an irregular rectangle. The wall facing northeast, in which the door (the front of the Kab'a) and the opposite wall (back) are 40 feet long; the two other are about 35 feet long. The height is 30 feet.

The Kab'a is built of layers of the grey stone produced by the hills surrounding Mecca. It stands on a marble base 10 inches high, projecting about a foot (dubsalama). Four lines drawn from the centre through the four corners (rubūt pl. arba'a) would roughly indicate the four points of the compass. Four perpendiculars from the centres of the four walls would run north-east, north-west, south-east and south-west. The northern corner is called al-ruba' al-kurda, the western al-ruba' al-ahsan, the southern al-ruba' al-qadimūn, and the eastern al-ruba' al-haram (after the Black Stone).

The four walls of the Kab'a are covered with a black curtain (herē) which reaches to the ground and is fastened there with copper rings, which are fastened in the rubās ultramarine, Gaps are left in only for the water-spouts and the door. The Herē is prepared in Egypt every year and brought to Mecca by the pilgrim caravan. The old covering is taken down on the 25th (for according to al-Bawānī, the 28th) Su'ũr 'i-Kab'a, and the Kab'a temporarily covered with a white covering which hangs down to within 6 feet of the ground; the Kab'a is then said to have put on the herē (q.v.). At the end of the Hadj it is covered with the new cloth. The door is covered by a separate covering also of Egyptian manufacture, which in Egypt is called al-kafrī (the veil).

The Kab'a is surrounded by a black stone fence, into which the abkafa is woven (see Sūrūq, Husaynī, Bilād al-Makhā, vii. 285). At two-thirds of its height a gold embroidered band (khāṣa) runs round, which is covered with verses from the Kab'a
in the calligraphy. Every inch of the pavement, which is taken down each year, is, of course regarded as a relic and small places are sold by the Bara Shaita; the souk is the remembrance of the Ka'ba, as ambara. In the north-east wall, about 7 feet from the ground, is the door, parts of which have mountings of silver-gilt. In Burchardt's and All Bey's times the threshold was lit up every night by a row of candles. When the Ka'ba is opened, a wooden staircase (sharaf, madaraf) running on wheels is pushed up to the door; when not in use, it is kept between the Zamzam building and the Gate of the Banu Shaita (see Snouck Hurgrone, Bildersammlung zu Mecca, v. 11. ll.). For a picture of the staircase, see All Bey, Travels, ii. 86.

In the interior of the Ka'ba there are three wooden pillars, which support the roof to which a ladder leads up. The only furnishing is the numerous golden and silver lamps suspended. On the inner walls there are many building inscriptions. The door is covered with slabs of marble.

In the eastern corner, about 4 feet above ground, not far from the door, the Black Stone (al-baqi`ah at-tawār) is built into the wall; it now consists of three large pieces and several small fragments stuck together and surrounded by a ring of stone, which in turn is held together by a silver band. The stone is sometimes described as lava and sometimes as basalt; its real nature is difficult to determine, because its visible surface is worn smooth by hand-touching and kissing. All Bey (ii. 76) gives a profile sketch of it which clearly shows the surface hollowed out in indentations. Its diameter is estimated by Lattmat (p. 105) at 12 inches. The colour is reddish black with red and yellow particles.

The part of the wall between the Black Stone and the door is called al-mawāna`am, because the visitors press their breasts against it while praying fervently.

In the east corner too, about five feet above the ground, another stone (al-baqi`ah at-tawār), the "lucky," is built into wall. It is only touched and not kissed during the permutation.

Outside the building there is still to be mentioned the gilt water-spool (mi'ād), which stands on the north of the north-west wall, and has an inscription which is called the "heard of the mi'ād." This is a reference to the name of the spool, "spout of mercy." (On it cf. Ben Cherif, Ann. des Pllers arab. de France, p. 75); the part between it and the west corner is the exact `āhda (q. v.). The rain water falls through the spout on the pavement below which here is inlaid with designs in mosaic. The ground all round the Ka'ba is covered with marble slabs.

Opposite the north-west wall, but not connected with it, is a semi-circular wall (al-baqi`ah) of white marble. It is three feet high and about five feet thick; its ends are almost six feet from the north and west corners of the Ka'ba. The semi-circular space between the baqii`ah and the Ka'ba enjoys an especial consideration, because for a time it belonged to the Ka'ba (see p. 11); in the permutation therefore it is not entered; the khuraf goes as close as possible along the outside of the space, and the name al-baqi`ah or bida` Landal`ib. Here are said to be the graves of the patriarch and his mother Hagar. The pavement on which the mi`ad is performed is called mi`ad a 댘; a depression in it is just opposite; the door has still to be mentioned; it is called al-mawāna`um "the truncheon," according to legend, Ibrahim and Isma`il (q. v.) here mixed the mortar used in building the Ka'ba.

Around the mi`ad, and a little higher than it, runs a paved border, a few paces broad, on which stand 35 or 36 slender pillars, each supporting two pillars hung seven lamps, which are lit every evening — to make the darkness visible, as Barton says. The row of columns is closed by the Bani Shaita, an arch which stands opposite the north-west wall of the Ka'ba and affords an entrance to the mi`ad. Between this archway and the Ka'ba is a little building, a kind of pagoda, with a small dome, the mi`ad or bida` Ibrahim. In it is kept a stone, on which Ibrahim is said to have stood at the building of the Ka'ba. Admission is granted to visitors on payment. Europeans have however not been able to see the stone. Barton says that the five dollars asked was too high for his finances. According to Oriental travellers and historians, it is a soft stone on which the footprints of Ibrahim can still be seen. During al-Mahdi's caliphate it was provided with a gilt band holding it together. Beside the Ma`ám Ibrahim, also opposite the north-east wall of the Ka'ba and within the row of pillars, but farther north of the Ma`ám, is the pulpit (mu`dāb) of white marble. It consists of the usual staircase, shut at the foot by a door, and above the staircase are four short pillars supporting a spire like that of a Gothic church tower.

The pavement on which the row of pillars stands is somewhat lower than that which runs round them, to which eight paved paths from the colonnades under the mosque give access. On this outer paved part are four small buildings. One opposite the flab Bani Shaita, on the left of the entrance and just opposite the Black Stone, stands the kubbah built over the Zamzam well. In the room on the ground floor is the well, which is walled in; its water is drawn up in buckets, fastened to a pulley. On one part of the flat roof is a small chapel partly open, which has a roof with a small dome.

In d'Ollens' as well as in All Bey's plan of the sacred mosque we find two further buildings north-east of the Zamzam building, at the edge of the outer-paving, which are called al-kabahat, the "two Ka'bas.", by him, Burchardt and Barton. They are not marked in Snouck Hurgrone's pictures because they were destroyed in the eighties and removed entirely. One field various objects, such as chalyzum, jars for Zamzam water; the other, books.

The three other small buildings on the outer pavement are the so-called saniats, the standing-places of the imams of the various ritual schools during the pulit. The Ma`ám or Masjids al-Hanbal stands south of the Zamzam building, opposite the south-east wall of the Ka'ba. It consists of a roof tapering to a point and supported by slender marble columns. The Ma`ám al-Malids is of the same form and is opposite the south-west wall of the Ka'ba. The Ma`ám al-Hanbal looks out on the `araf and the north-west wall of the Ka'ba; it has two roofs, one above the other. The Shaita have their bida` above the upper, during the month they stand under the bida` on the roof of the Zamzam well or at the Ma`ám Ibrahim.

Finally, we may mention receptacles placed here and there beside the pavements, in which various articles are kept (see Snouck Hurgrone Bildersammlung, v. 1., ll.; Bilder aus Mecca, v. 1., 11.)
II. History.

The Arabs possess no historical or semi-historical records of the origin of the Ka'ba, and we as little. According to Snouck Hurgronje's supposition, the Zamzam spring in a waterless valley may have been the source of this in case of a sacred place. It is to be noted that Pudenz (Geogr., vi. 7) in place of Mecca mentions Macoraba, which is probably to be interpreted, as does Glaser, (Keine der Ostrasse, 2, 88, x., Geogr. Arabe, Berlin 1890, p. 255) as the South Arabian or Ethiopeic sekere, *temple*. From this one may conclude that the Ka'ba already existed in the second century a.D. The accounts of Abridge's campaign, which has been elaborated with legendary features, also suggest the existence and worship of the Ka'ba in the sixth century but tell us nothing of its appearance or equipment. The Tabba Abul Karib al-Hilabi, who came to Mecca, is said to have for the first time provided the building with a dome and a door with a lock. The information available regarding the distribution of the offices [see below iii.], among the sons of Ka'ba, shows that the worship of the sanctuary had developed into a carefully regulated cult several generations before Muhammad.

As to the history of the building of the Ka'ba the legends referring to the pre-Muhammadan period are dealt with below [iv.]. Whether Ka'ba was demolished and restored, as the historian says, is a question that cannot be definitely settled.

The historical accounts only begin with Muhammad. When Muhammad had reached man's estate, the first of all women inventing the Ka'ba is said to have caught the building and laid it waste. It happened that a Byzantine ship was thrown ashore at Djidda [q.v.] and the Meccans brought its wood hither and used it for the new building. In connection with this the name of a man Habim (though it is given in various forms) is always mentioned, sometimes as the captain of the ship, sometimes as the carpenter whose advice was taken; he is said to have been a Coptic Christian.

The old Ka'ba is said to have only been of the height of a man and to have had a roof. The threshold is said to have been on the level of the ground so that the water had an easy entrance in the frequent floods (see). The Ka'ba was then built of alternate layers of stone and wood, its height was doubled and a roof covered it. The door was placed above the level of the ground so that whoever wished to enter had to use a ladder. Unwelcome visitors were tumbled down from the high threshold. When the Black Stone was to be put in its place, the Meccans quarreled among themselves as to who should have the honor. They had just decided that the first comey should be given the task when Muhammad (who had been engaged in helping to carry the stones) came past. With superior wisdom he is said to have offered the precious object in a cloth — or in his cloak — and having ordered the heads of tribes each to take an end. His itself took the stone and placed it in its position. Legend and history are probably hopelessly confused in this story.

At the conquest of Mecca in 8 A.H. [see iii. below], Muhammad left the Ka'ba as a building unaltered. But according to tradition, he later said that only the very recent conversion of the Mec-
the day of covering, but in Kadjah also and in other months the building has changed its covering. The Ḳa'ba consisted sometimes of Yemen and sometimes of Egyptian or other cloths; during Qamar's Caliphate the building threatened to collapse on account of the many coverings hung on it. All sorts of colours are mentioned also. The Wahhabis even covered the Ka'ba with a red Ḧijara.

The mabāni around the Ka'ba are mentioned as early as the 'Abbasid period; sometimes under the name ṣail ("a shade"). The present buildings are said to date from 1074 (1663). A dome over the Zamzam well is mentioned at an equally early period, the present one was built in 1672.

The Ka'ba had offerings dedicated to it in the heathen as well as in the Muslim period. Al-Arafa devotes a detailed chapter to this subject (p. 157 sqq.). Many a worldly ruler has used these treasures for political purposes. Tradition reports that 'Omar said: "I will leave neither gold nor silver in the Ka'ba, but distribute its treasures." To this, however, 'Ali is said to have raised vigorous objections so that 'Omar desisted from his plan.

III. The Ka'ba and Islam.

We do not know the personal feelings of the youthful Muhammad towards the Ka'ba and the Meccan cult, but they were presumably of a conventional nature. What the biography of the Prophet tells us about his Meccan period in this respect can lay no claim to historical value. The Meccan revelations tell us nothing about these relations during this important period in the life of the Prophet. In any case he felt no enthusiasm for the Meccan sanctuary.

During the first period after the Hijra Muhammed was busy with very different problems. But when the expected good relations with Judaism and the Jews did not come about, a change set in. Henceforth — about a year and a half after the Hijra — the Ka'ba and the Hejrat are mentioned in the revelations.

The change of attitude was first shown in the first revelation: the faithful were no longer to turn towards Jerusalem in the qibli but to the Ka'ba. We see the turning of the face towards every part of Jerusalem, but we will have the turn towards a qibli that will please them. Turn thine face towards the sacred mosque and wherever ye be turn your faces towards that part. They verify to whom the Book hath been given know this to be the truth of their Lord: and God is not regardful of what ye do" (Sura ii. 125). From the dogmatic point of view this volte-face was justified by an appeal to the "religion of Abraham", which was specially invented for the occasion (Sura ii. 125, iii. 89 etc.), as Stousch Hurgonie has shown in his Meccanneh Feter. This religion of Abraham, the prototype of Judaism and Islam, is said to have been olcumated by the Jews and to have been brought to light again by Muhammad. The Meccan cult was now drawn into K. Ibrahim and Isma'il like the allegories of the Ka'ba (Sura ii. 132). The Ḥāfun Hāshim is described as a place suitable for the qibli (ii. 119). Ibrahim prescribed the pilgrimage to mankind at Allāh's behest (xxii. 28) and the Ka'ba is said to be the first sanctuary that was founded on earth (iii. 90): it is now called the Holy Mosque (v. 98), or the Ancient House (xiii. 30, 34).

In this way there was created for the reception of the old heathen cult into Islam a basis in religious history, which was at the same time a political programme; henceforth the eyes of the faithful were turned towards Mecca.

In the year 6 A. H. a prospect of taking part in the Meccan cult was held out to the Muslims by the pact of al-Ḥadāliyya (q. v.); in connection with it, the 'Umar al-Khaṭṭāb took place in the year 7. Muhammad's political endeavours culminated in the conquest of Mecca in the year 8.

All the accumulation of heathenism, which had gathered round the Ka'ba, was now thrust aside. 360 idols are said to have stood around the building. When touched with the Prophet's rod they fell to the ground. The remains of Hubal which Amr b. Luhayj is said to have erected over the plot inside the Ka'ba was removed as well as the representations of the prophets. When they began to wash the latter with Zamzam water, Muhammad is said to have placed his hands on the pictures of Jesus and Mary and said: "Wash out all except what is below my hands!" He then withdrew his hands. A wooden dove also which was in the Ka'ba is said to have been shattered by Muhammad's words. The two horns of Abraham's ram did not crumble to dust until the rebuilding of the Ka'ba by 'Abd Allah b. al-Zubair.

At the capture of Mecca, Muhammad made arrangements regarding the religious and secular offices which had been filled in Mecca from ancient times. The historians say that in the old heathen period Kašiš after a fierce struggle with the tribe of Khaza'ah became master of the Ka'ba and held all the important offices, religious and secular; the administration of the Liwa al-Nadwa and the tending of the standard, the provision of the pilgrims with food (ṣifāda) and with drink (ṣirfa) as well as the supervision of the Ka'ba (ṣifadā and ṣifāda). His descendants 'Abd Manṣūr

Hāshim

'Abd al-Dād

Uthmān

'Abd al-Muṭṭalib

'Abd al-'Uzza

'Abdabbas

Abū Talib: Abū Taliba, Abū Allāḥ, administered the offices after his death. 'Abd Manṣūr and his descendants getting the ṣifāda and ṣirfa etc., while 'Abd al-Dād and his descendants saw to the ṣifadā and ṣifāda etc.

When Muhammad conquered Mecca his uncle 'Abdalla [q. v. i. 96 sqq.] or, according to another tradition, Abū Talib was admitted for the administration of these offices. But Muhammad said that they must all be crumbled beneath his feet except the ṣirfa and the guardianship of the Ka'ba. The former remained in the hands of 'Abdalla; the latter he gave to Uthmān b. Taliba who allowed his cousin Ḥishām b. Abū Taliba to set as his deputy. The Bann Shaliqa are the doorkeepers at the Ka'ba to this day. The ṣirfa, which was in the hands of Abū Talib, was taken over by Abū Bakr in the year 9: after his death the Caliphs looked after the feeding of the pilgrims.

Muhammad's control over Mecca and the Meccan cult was first clearly marked at the Ḥadīth of the year 9. As object of the Prophet, who did not participate in the pilgrimage, Abū Bakr announced to the assembled pilgrims the latest arrangements, which were put in the form of a revelation. They are contained in Surah 14, which
There is abundant testimony in Muslim as well as Christian literature to the intensification of devotional feeling which the sight of the Ka'bah produces in the pilgrims. We may here quote Al-Bahman’s description of the Ka’bah, as particularly characteristic (p. 26). "The whole holy shrine, standing there in the greatest reverence before this highest majesty and most powerful inspiration of awe before which the greatest souls became so little as to be almost nothing. And if we had not been witness of the movements of the body during the "pilgrimage and the raising of the hands during prayers, and the murmuring of the expressions of humility and if we had not heard the beating of the hearts before this immense grandeur we would have thought ourselves transferred to another life. And truly we were at that hour in another world: we were in the home of God and in God’s immediate presence, and with us were only the lowest head and the humble tongue and the voices raised in prayer and weeping assembly and the fearful heart and pure thoughts of intercession” (cf. also MacDonald, The Religious Attitude and Life in Islam, Chicago, 1909, p. 216 sqq., Ben Chérif, Aux Villas Saintes de l’Islam, p. 11, sq. 45 sqq., 65).

Even the Shicks and the Wahhabites have left the Ka’bah in Islam. For the Karmatians alone has an exception to be made, as can be well understood. Although modern like al-Batatini (p. 24) put the question: Why is God particularly worshipped in Mecca, when the whole world is His sphere, they themselves give the answer: But Meccas is His dwelling and the place of revelation of His dominion and power. And the Ka’bah is His throne and the place of His command. And is there in any of the four quarters of the earth a place not quite seven square miles in extent where half a million people assemble on a pilgrimage, all of whom call to God with one heart and one tongue? And although they differ in race and language, they all turn towards one God and the Ka’bah with one motion, without any hope other than the grace of the one God, who has not begun and is not born and is without equal”.

As to the mystics their attitude to the Ka’bah depends upon the position regarding the law. For the, to speak, mystical mystics like al-Ghazali, the Ka’bah is, it is true, the sacred building which one has to go round in the "pujasi. The "pujasi and its object however only receive their value for man when they give them an increment to the to a higher spiritual level, the al-"Arariqah goes a step further when he says that the true Ka’bah is nothing other than our own being (al-"Arariqah al-Makkyya, t. 733); the Ka’bah however also plays a part in his mystic experiences. Hujjatu however quotes some sayings of mystics, who no longer require the Ka’bah as an increment to rise, and even despise it. Muhammad b. al-Fajri says: “I wonder at those who seek His temple in this world: why do they not seek contemplation of Him in their hearts? The temple they sometimes sit and sometimes sit, but contemplation they might enjoy always. If they are bound to visit a mosque, which is looked at only once a year, surely they are more bound to visit the temple of the heart, where He may be seen three hundred and sixty times in a day and night. But the mystic’s every step is a symbol of the journey to Mecca, and when he reaches
the sanctuary he wins a robe of honour for every step". Abû Yazid (al-Bistânî) says: "If anyone's recompense for worshipping God is deferred until tomorrow he has not worshipped God right today", for the recompense of every moment of worship and mortification is immediate. And Abû Yazid also says: "On my first pilgrimage I saw only the temple; the second time, I saw both the temple and the Lord of the temple; and the third time I saw the Lord alone". In short, where mortification is, there is no sanctuary; the sanctuary is where contemplation is. Unless the whole universe is a man's trying-place where he comes nigh unto God and a retired chamber where he enjoys intimacy with God, he is still a stranger to Divine love; but when he has won the whole universe he is his sanctuary. "The darkest thing in the world is the Beloved's house without the Beloved." Accordingly, what is truly valuable is not the Ka'ba, but contemplation and annihilation in the abode of friendship, of which things the sight of the Ka'ba is indirectly a cause. (Hadîqat, transl. Nicholme, p. 547).

IV. The Ka'ba in Legend and Superstition.

The alleged religion of Abraham gave a basis for the esteem in which the Muslims held the Ka'ba. Legend attached itself to the Kur'anic statements and spun them out. As Saneq Hargunjah has proved in his Mekkânwâ Rost against Duyo's hypotheses (see his Izâretat in Mekkâ), there can be no question of a local Meccan tradition in this connection. There was, it is true, a local tradition, but it consists of semi-historical reminiscences of the last few centuries before Islam. But all that tradition relates regarding the origins of the Ka'ba and its connections with Biblical personages, belongs to Islamic legend.

The latter first of all attached itself to the statement that Israil and Isma'il raised (ruÝâ'at) the Foundations of the Ka'ba (q. 2: 127). God's command to Ibrahim to build the Ka'ba is by some placed before the episode of Hagar and by others after it. The patriarch came to Arahit led by the Sâlâm, which had the shape of a stormy wind with two heads; it is also described as having a snake's head. When it reached the site of the Ka'ba it wound itself round its foundation (see below) and said "Build us a house". As to others, Ibrahim built on its shadow. He was helped by Isma'il in this; the stones were taken from five or seven hills: Hiri, Thulûr, Leûs, Mount of Olivets and the Jebel al-Almar near Mecca (other names are also given). When the building had risen to some height, he stood at its base, stepped on the stone, which still shows the impressions of his feet, the Mohammed Ibrahim. The Black Stone, which was left white in those days and only received its present colour as a result of contact with the impurity and sin of the pagan period, was brought to him by Gabriel after having been kept in Abû Qulais [q. v.] since the Deluge. Within the building (which was not high and had no roof) Ibrahim dug the hole, which afterwards served as a treasury. When the work of building was completed, he took his stand on the marble, which now rose high above the mountains, and proclaimed the pilgrimage to all men.

From all sides they answered: Labbaik, Labbaik; "Here I am! Here I am!"

On the other hand Muslim legend has developed the passage, Sûra iii. 90: "Truly, the first temple that was founded for men is that in Ka'ba; a blessed house and a guidance for (all) creatures". The ambiguous expression according to which Ibrahim and Isma'il raised the foundations of the Ka'ba left room for the view that the foundations already existed on which he erected the building. Ibn 'Arabî in his commentary on Sûra ii. 216 [q. 528-529] however recognizes that there are two views: according to the one, Adam, according to the other, Ibrahim laid the foundations. Legend relates the following according the foundation by Adam. When after the fall of Adam was hurled out of Paradise on the earth, he came to Mecca. Gabriel with his song answered a foundation, which had been laid in the seventh earth, and the angels threw blocks as on it from Lebanon, the Mount of Olivets, Jebel al-Dauût [see q. 150] and Hithna' until the hole was filled level with the earth. God then sent from Paradise a tent of red jacinth in which Adam lived; what was afterwards the black stone, then a red jacinth from a tree, named as a west. When God made his covenant with men, the latter acknowledged God's universality; the document on which their acknowledgment was written was given by God to be swallowed by the Black Stone. At the Last Day it will be given a tongue, to bear witness against men; according to others, because it was originally an angel.

There was a particular reason for sending down the prototype of the latter Ka'ba. Originally Adam's stature was so great that he could hear the song of the heavenly hosts around God's throne. As a result of the Fall, however, his stature was shortened; he then lamented to God that the higher spheres were now closed to him. God then sent down the tent around which Adam now performed the 'umá'âf, following the example of the angels. But Mecca was without inhabitants and the sanctuary without worshippers. When he gave vent to his regrets on this point, he was promised by God that in time this place would be the site of a cult that the sanctuary would enjoy a particular 'urâsû; that it would be a sharâs [q. v.] whose sharâs would extend above, below and around, and to which men would make pilgrimage with dishevelled hair and covered with dust, breaking out of every cloth with weeping and suddâ [q. v.] and tahâs [q. v.]....

After Adam's death his descendants (Shâtib is especially mentioned) built the Ka'ba. But the deluge washed the building away while the sacred stone was concealed by the angels in Abî Qulais. According to others, however, the flood did not touch the Ka'ba and Noah performed the 'umá'âf round the holy house. According to the first tradition, a red mound was left of the Ka'ba, which Abraham afterwards found.

But the legends also extend to the period after Abraham. The hole in the Ka'ba, which is called al-Ásh'eef or al-Ásh'eef, is said to have been several times plundered under the Yarmukian [q. v.]. Therefore at God's command a snake took up its abode there and guarded the treasures. When the Kûnights wanted to pull down the Ka'ba, the sanctuary opposed this plan until God sent a bird which carried it off to one of the surrounding hills. - Every renovation of the Ka'ba is said to have been carried out amid ter-
rible portents, such as lightning-storms. It is also said that on such occasions the foundation of the Ka'ba was brought to light and it looked like the nest of vipers and serpents. For the legend connected with the origin of the Zamzam well, see the article ISMA'il. The following may however be added here. Once when 'Abd al-Mutallab was sleeping in the heket, one appeared to him in the mysterious words ordered him to dig out the Zamzam, which was "the battle-ground of the Kur'an", at the "Ravenhole", and at the "Ant's nest". Now when the Kur'an contested his right to it (or the claim to the well already dug) both parties went to the Ka'aba of the Banu Sa'd b. Ubadah. On the way their water gave out. But the water which sprang from the impression of the hoof of 'Abd al-Mutallab's mount was an indication from heaven that the latter was right. They therefore turned back to Mecca; and when 'Abd al-Mutallab had begun to dig, he found there two golden gazelles which the Kur'an had concealed there, as well as swords and armour. All this was deposited at the Ka'ba or used to decorate the buildings.

This legendary story of the origin of the Ka'ba was easily brought into conformity with the cosmological views current among Christians and Jews in the East, the central point of which was the sanctuary itself. Muslim tradition at first adopted this cosmology completely, as is evident from the statements which are still wholly under the influence of the philanthropic of Jerusalem. They were however not content with this and transferred a considerable part of these sayings to Mecca. These traditions are grouped round the novel theory, the main idea of which are as follows. The earth has a naval, whose functions are parallel to those of the human naval. It forms the part of the earth which was created before the rest of it and around which, the rest stretches. It is also the highest point, the place which provides the whole world with its nourishment, and its forms the place of communication with the upper and under-world.

The novel was at first Jerusalem and later Mecca. But not all the properties of the naval are attributed in equal degree to Mecca. They may be briefly summed up as follows. About 400 years before the creation of the world, the sanctuary was an agglomeration (Glass al-Kur'an) in the world ocean. The beginning of its creation consisted in the stretching out of the earth around this point as centre, in the following order: after the substance of the earth (which coincides with the naval) heaven was formed and lastly the earth itself. In agreement with this theory is the fact that in the Kur'an Mecca is called the mother of cities (Uum al-Kur'an (vi. 93, xii. 3)) and in popular literature the naval of the earth (Umm al-Na'am, tr. 279; al-Kur'an, l. 371; al-Halabi, l. 195, etc.).

Thus the sanctuary is the highest point in the world cannot be scientifically maintained. The popular traditions however like to move in this direction. Thus, in the story of the creation, it is said that the earth is extended below the sanctuary. The semi-scientific cosmography says that the position of the Ka'ba corresponds to the Pole Star; as the latter is the highest point in the heavens, so the Ka'ba is the highest point on earth (al-Kisht, 'Abd al-Malik ibn, ms. Leiden, L 258). This view is probably connected with the conception of heaven and earth as domes or tents put upon one another, which can be shown to exist in Moslem literature.

The view that the sanctuary connects on the one side with heaven and on the other with the lower world is not so clearly stated with regard to Mecca as to Jerusalem. But it is said that no place on earth is nearer heaven than Mecca; and in the pagan period men are said to have gone up to Abû Qubais to offer particularly urgent prayers. Whether the pit in the Ka'ba was really regarded as the entrance to the lower world, like the corresponding arrangements in Jerusalem and Hira-pool is uncertain.

One typical characteristic of the lower-world is certainly possessed by Mecca. It is described as a tomb. Not only Isma'il, but a whole series of prophets, numbering hundreds, is said to have been buried round the Ka'ba. Every prophet belongs to Mecca. This is his essential starting point and termination of his career. Muhammad therefore also belongs to Mecca and Meccan is his real grave as the theologians say (al-Kalâbî, l. 157). In opposition to the fact that he is buried in Medina.

Traditions which emphasize Mecca's importance for the nourishment of the world are hardly represented at all.

These theories had to be brought into consonance with the later cosmology of Islam, which regards the universe as a series of stories of seven heavens and seven earths. The Ka'ba is now not only placed in the centre of the earth (according to the naval theory) but it forms the central point of the whole universe. Its foundations as well as those of Abû Qubais lie in the seventh earth and form a kind of axis which runs through all these worlds.

The so-called stories are exactly like one another in plan. Every one has a sanctuary in the centre so that if the top one falls down, it would fall exactly on the lowest in the seventh world. The highest of the sanctuaries is the throne of God. Of those which lie between the throne and the Ka'ba two are mentioned by name, the Kur'an al-Mu'min, the name of which is taken from the Kur'an (lii. 4) and al-Dar al-Mu'min. Jewish literature was already acquainted with a heavenly sanctuary in which the angels sat as priests. In Judaism these priestly functions are usually replaced by the term of.

V. Comparative History of the Cult.

From the fact that Ptolemy calls Mecca Macorbin (L. a. Mi'qerat, temple) we may conclude that in his time the Ka'ba was regarded as the dwelling of one or more deities. According to a statement of Epiphanius (Hierozous, V, following the text in Philologus, 1880, p. 355), Dhu 1-Shar' had his gardens in Petra, in which ward the Ka'ba is also probably consecrated. It is however not clear from the discussion whether the temple in Petra was meant or the quadrangular building of his zone which represented Dhu 1-Shar'. Al-Bakri (Mu'jam, ed. Wüstenfeld, p. 46) relates that the tribe of Bâqar of 'Allah (9. 17) as well as the main body of the tribe of Lydai had their centre of worship in Simdir in the region of Ka'ba and that their holy tent (or temple, karî) here was called Dhul al-Kalâbî (or however al-Hamid, Sûra Dhûn-nun al-Arâb, p. 171, 14. 17. 230. 25). According to Wellhausen,
the Ka'ba owed its sanctity to the Black Stone; this may be right, for the religion of the ancient Arabs was essentially stone-worship.

The form of the building may be compared with the apse of the Jerusalem temple, which was twenty-ells in each direction.

It is not related that the Black Stone was connected with any special god. In old times the sacred stone was called the god of Mecca and the Ka'ba. Certain gives great prominence to the connection between the Ka'ba and Hubal. Besides him, however, Al-Lat, Al-Uzza, and Al-Manat were worshipped and are mentioned in the Qur'an; Hubal is never mentioned there. What position Allah held beside these is not exactly known. The Islamic tradition has certainly elevated him at the expense of other deities.

It may be considered certain that the Black Stone was not the only idol in or at the Ka'ba. The Ma'asim (Hir'am) was of course a sacred stone from very early times. Its name has not been handed down. Besides several idols are mentioned, among them the 360 statues. The Ka'ba possessed in a high degree the usual qualities of a Semitic sanctuary. First of all it made the whole surrounding area into consecrated ground. Around the town lies the sacred zone (haram), marked by stones, which imposes certain restrictions on each one who enters it (see isra'iy). Moreover, the sanctity of the area is seen in the following points. In the haram the truce of God reigns. When the Arab tribes made a pilgrimage to the Ka'ba, all feuds were dormant. It was forbidden to carry arms. Next, the haram — and the Ka'ba especially — is a place of refuge. Here the unintentional manslaughter was safe just as in the Jewish cities of refuge. On the Ka'ba there was a kind of mandate to which the fugitives cling (Al-Araf, p. 111), an arrangement which recalls the purport of the horn on the Jewish altar.

Blood was not allowed to flow in the haram. It is therefore reported that those condemned to death were led outside the haram to execution. The idea of peace extended even to the flora and fauna. Animals — except a few injurious and dangerous sorts — are not to be scared away; hence the many tame doves in the mosque. Trees and shrubs were not cut down except the khabir shrub, which was used for building houses and in goldsmiths' work. These regulations were confirmed by Islam and are in force to this day.

As to the rites, it is said that in the heathen period victims were slain at the Ka'ba. Among the ancient Arabs the idol Mecca replaced the altar; on it they smeared the blood of the sacrificed animals. In Islam the killing takes place in Mina.

It is a question, whether and how far the Ka'ba was connected with the hajj in the pre-Islamic period. Wellhausen (Recht Arab. Heidens, 2nd ed., p. 79) defends the view that originally only the 'novo' (p. 79) was concerned with the Ka'ba while the scene of the hajj was in Harrat, Mecca, and Mina. The connecting of pilgrimage and 'anowr is regarded by him as a rather clumsy, correction made by Islam. It must be conceded that Wellhausen with justice points to the fact that the ascent for down into Islam was closely connected with the month of Rajab. Moreover, the hajj is called simply hajj.
KABIR, a term in provody. It is the suppression of the fifth quiescent letter in the primitive feet jālīn and mufāsālīn and is therefore found in ṣafā, ṣanāfī, mufāzāfī and mufāzārī.

In ṣafā, ṣafā is recommended (according to some, it is obligatory) when this is the pretext of the second hemistich of the third qāṣid of a ḥudūd; everywhere else it is optional. In ṣafā, ṣafā is obligatory in the last line of the first hemistich of a ḥudūd. In all other cases it is only permitted if the foot is not liable to ṭabīb or suppression of the seventh quiescent letter (n). Nevertheless, it is very rarely found in ṣafā, ṣanāfī and mufāfī.

AL-KABID, one of the names of God, see the article ALLAH, i. 3038.

KABID (Ḳābīd) a Turkish Sunni theologian, founder of the sect of Kābīdīyya (popularly called Chaqumsha). By order of Sultan he was tried before an extraordinary court, sentenced to death on 29 Safar 934 (Nov. 26, 1527), and executed on the following day by means of the bow and arrow. He maintained the (moral) superiority of Jesus over Muhammād (ṣafāʾū Ḫaṭṭa Muḥammad). On the occasion of this trial Ibn Kamāl-paḫānī wrote his treatise on Zandākum.

KABIR, i. e. Cain. [See AKIB.] KABIR, one of the names of Allah, see the article ALLAH, i. 3038.

KABIR, an Indian mystic, of the 16th century, who was claimed both by the Hindus and Muslims as belonging to their faith. A large collection of Hindu verses is attributed to him, but their authenticity is doubtful, and a like uncertainty attaches to his biography, which is obscured by legends. He is said to have been the son, or adopted son, of a Muhammadan weaver, and to have become the disciple of Ṛṣmānī, the Vaishnav reformer, at whose feet he sat in

responding emotions are fear and hope, but with the distinction that the latter leads to the future, while ṣafāf and ṣafāf express a present feeling of spiritual dullness or joy. In the language of Western mysticism, they might be said to correspond approximately to the expressions commotio (commotion) and delectatio (spiritual dysesthesia).

Benares, joining in the theological and philosophical arguments that his master held with Brahmanas and Sûfis. He appears to have earned his living as a weaver, and to have been a married man, the father of a family, and to have been as contemptuous of the professional asceticism of the Yogi as he was disregardful of the doctrines and ordinances of orthodoxy, whether Hindu or Muslim. The boldness with which he sang his mystical doctrine of the divine unity exposed him to persecution, and he is said to have been driven from Benares in 1495, when he was about 60 years of age, and to have died at Maghar, in the district of Rasulpur, in 1534. The early writers of his school tell us that his Hindu and Muslim disciples disputed as to the disposal of his body, which the former wished to burn and the latter to bury; when they lifted the cloth that covered the body, they found in place of the corpse only a heap of flowers; of these, the Hindus burnt half in Benares, while the Muslims buried the rest at Maghar, where the shrine is still in the charge of Muhammadan Kabir-Panthis. Modern scholars, like Kabir's contemporaries, claim him for one or other of the rival creeds: H. H. Wilson (op. cit., pp. 69, 74) and R. C. Bhattacharya (op. cit., p. 69) maintain that he was a Hindu; G. H. Westcott that he was a Muslim (op. cit., p. 493); and A. W. Cockerill, in Journal of the Royal Asiatic Society, 1897, pp. 325-432), that he derived his opinions from Christian sources, may be dismissed as a pious fiction. A study of his poems makes it clear that he had no desire to attach himself to any organised religion: *Let me make self-reflection my saddle, And put my foot in the stirrup of divine love...* Saith Kabir, they are good riders Who keep themselves aloof from the Vedas and the Koran*; nor did he attempt to formulate any religious or philosophical system of his own, but he popularised the current Vaishnav teaching of his age, without however committing it with any particular incarnation, and he spoke of God indifferently as Râm, Shàh, or Shàhâb. His rejection of the outer forms of Hinduism, e.g. the sacred thread, the distinctions of caste, the ritual observances of temple worship, etc., and his references to Muslim authorities and institutions (e.g. the Kûrâ, circumcision, pilgrimage, the Mulla, the Kâdî etc.) are accompanied with a denial of their validity. He represented God as the omnipresent reality, but maintained the separate individuality of the human soul, which could attain union with God through love, not by knowledge or by ceremonial observances. Through his homely illustrations and his close contact with daily life, he presented his doctrines in a form readily acceptable to uneducated persons, who appear to form the majority of his followers.

**KABIRPANTHIS** (Hindi, panth, a path, sect). Though the non-sectarian character of Kabir's teaching, his followers now form a distinct sect, the majority of whom are Hindus. The best account of their organisation is given by Westcott, *op. cit.* (Chap. v. and vi.), according to the Census of 1911, there were 589,109 in the Central Provinces, and 49,605 in the United Provinces; in the other provinces they are not found at all, or their number is too inconsiderable to call for separate enumeration.

**T. W. Arnold.**

**AL-KABISHI**, whose full name was *Abd al-Asîz* (also *Abd al-Râfan*), b. *Al-Himâna, an important astrologer, probably of Persian descent. He was known to the Christian world of the middle ages as *Alcabitius* (also *Al-chabritus*). He lived for a considerable period at the court of Sultan Selîm I. al-Dawla b. Humânî (d. 316 = 929) and dedicated his principal astrological work to him: *Al-Majhdâl ila Sîhat al-Mudallâ al-Nudîfîn* (Introduction to the art of Astrology) of which copies still exist in Oxford, Gotha and Cairo. It was translated into Latin by John of Toul, 1451, 1455, 1491 and 1521. The edition of 1455 is entitled *Libellus angustius Abidius* (*id est servus gloriæ Dei, qui dicitur Alchatabius, magister infernius aurorum astrorum*, *Interpretatio a Joanne Toulensio*, Verona 1455). The edition of 1551 is called *Practicae Alchatabii opus ad aequatam stellarum magnitudinem imaginem*. A commentary on it was compiled by John de Sponia in 1511 and printed at Bologna in 1473, and again in 1485 and 1521 at Venice at the end of the editions of Alcabitius. Al-Kabishî also wrote several smaller astrological treatises. The dates of his birth and death are unknown.

**Bibliography:** A special article on this astrologer is given by al-Bâhi b. (c. 1150) alone among the Arab biographers, in his *Fârisî,{

zemch, s. 60, xvi. 165.

H. Suter in Al.Kabi, — KABUL.

Al.KABIl. (Pers. Al.Kabi, Av. al-Kabiz, Ar. Al-
Kabiz, z al-Tebir, 4666, 13, 4666, 15, and 31, 14, have it, and as should be
read everywhere in al-Masudi (ed. Paris) for al-
Kabiz, is a name for the Caspian, common in
Muslim authors. Hubschmann, Armen. Gramm. (Leipzig 1867), i. 45 derives Kabik from Arme-
nian Kapthik, Peiti. Kafthik.

An older geographical conception regards this
chain as belonging to the Kaf-s. v. which encloses
the world (cf. B. Muschanf. Der Kaipan
u. Oracl des Girtelt der Erde, in Kesten Societ, l.
536 sqq.). The name Alarri is a doubt con-
ected with this idea, which Mustawfi, and appar-
ently following him Kafth Celiel, give to the
Caucasus, while the name Kafik (Kibdameh, Kaf-
sche) is limited to its eastern (transl. p. 182
strongly western) side. Here the range appears
to be considered the continuation of the North Per-
isan mountain chain of the same name, with which
also are associated notions of its being the bound-
ary range of the world. (Cf. the article ALBIZ;
F. Justi, Brit, aus alter Geographie Perga-
ion, i. 4 sqq., ii. 4 sqq.; Melgofen, Das räumliche Ufer des Kopfischen Meerz, p. 27). To similar con-
 siderations is probably to be ascribed the fact that
the Caucasus is connected with mountains which,
beginning with Djibat al-Ardir between al-Madta
and Mescu (Ibn Khordabbeh, p. 174 infra sqq.; Ibn-
Buxh, p. 25; sqq. 305 sqq.) or in Yemen (al-
Pusdar, Djuvat al-Ardr, p. 136 sqq.) run northwards through Arabia and Syria. The connect-
ing of these mountains with Kaf led to the localisa-
tion in the Caucasus region of the rock,
sea and village (kur in xvi. 59 sqq.) known from
the legend of Moses (ALEXANDER), (Ibn Khordabbeh, p. 324 sqq.; Ibn al-Faks, p. 287 sqq.; al-
Masudd, p. 46 sqq.; Vakht, l. 230 sqq., 454 sqq.; V. 288 sqq.).

The Caucasus has further been regarded as the range beyond which dwell Vakhtji and Mekuni
(y. v.). The Al-Sakkash of kur in xvii. 59,
explained as the "two mountains", between which
Dju "Karmain caused a barrier to be built to
check the "Kafis". Vakhtji and Mekuni is identi-
fied with Armenian and Adjarisabz, (al-
Dibt, Tafsir, xvi. 121 sqq.; al-Buslahi on kur in
xvii. 59). But when geographical knowledge was extended, Vakhtji and Mekuni were placed farther
north.

The Sasanians in particular had closed the
Caucasus passes with fortifications to prevent the
inroads of the northern nomadic peoples. The
most famous of these passes (cf. Ibn Khordabbeh p. 123 sqq.; Vakht, l. 439 sqq.) are still
al-Ashk or al-Bukhi or Derbend (y. v.) and Rro
Allati, the gate of the Alans, or the Durian pass.

The multiplicity of ethnic groups and language in the Caucasus is mentioned by most Muslim
geographers. According to an oft recurring state-
ment, 20 (72) different languages are found (here
Ibn al-Faks, p. 25; al-Masudi, v. 2); according to
al-Muballadi, Af. 327 (in Abu I-Faks), as many as
300. Wherefore the mountain range are also called Djalat al-Alam "Mount of Languages"
(Abu I-Faks. Tafsir al-Djaldat, ed. Rey-
naud and al-Shay, l. 71 sqq. 395 sqq.; V. Ta-

speaks of the River Ghurwand which falls into the Indus below Wailand, the capital of al-Kandahar (i.e., Gandhara). This name is taken from the Ghurwand Pass near which the Panjâbîr River rises. Al-Mas'âdiyya says the fourth river of the Panjâb comes from the country of Kâbul and it forms the frontier of al-Tauhâd. The modern name of the river in Pashto is Sind (also a general term for “river”). Bâbur speaks of the Sind river as rising in a mountain to the west of Kâbul, and no doubt alludes to the Kâbul R., though elsewhere he applies the name Sind to the Indus. The name Kâna given by Euphrates (Appendix on Rivers) appears to be a misnomer, as Kâna is the name of a tributary only.

The town and district of Kâbul seem to have taken from the name of the river.

A. An important city, now the capital of Afghanistan, situated in 34° 30' N., 69° 13' E.

5780 ft. above sea-level, in a fertile and well watered valley. Population about 150,000.

Although the Kâbul River under various names [q.v.] is known from the earliest times, there is no mention of any town which can be identified with Kâbul. Ptolemy’s Karoura has been supposed by some to be Kâboum, and the people he names Bolistai are conjectured to be properly Kabolitai or people of Kâbul, but these guesses rest on no evidence. Kôphâne is probably the name of the whole valley derived from the river Kôphon.

This territory was recaptured by the Bactrian King Demetrios and formed a Greek kingdom about the commencement of the Christian Era. The Parthian Cœcophanes seems to have held it for a time to 2nd century. It was invaded in the 1st century. A case in point, the Roman king, known by the title of Shahi, who, as we learn from the Brahman Fax, were suppressed by their Brahman war, probably about the time of the first Mahamudan invasion. It is probable that after the first invasion the Hindukush kingdom of Gandhara was ruled from its capital Uzbebdah (or Wailand) on the Indus, and extended to the foot of the mountains west of the Djadozâl, but did not include Kâbul proper, which continued as a separate principality under its own Shah, sometimes under Mahamudan influence and sometimes independent, till 1714.

The earliest Arab chronicles the country as a whole is termed Kandahâr, i.e., Gandhara, which has often been mistaken for the town of Kandahar. Thus Tabari tells us that under Omar in the year 23 A.H. Amur and Abd Allah b. Omar pressed on through Shahin as far as the Indian frontier and Kandahar. The town of Kâbul is not distinctly mentioned, the Kâbul Valley and the adjacent Kââbistân up to the Hindukush pass being described as the country of the Kâbul Shah and the capital, as an inaccessible mountain fort of uncertain name (read Jezirew), by Abd al-Ragîman b. Suurâ, but when he wrote it was known only by the export of the Chabûl (or Kâbûl) myrobalans. Another expedition followed in 220 A.H. (739) under Hârûn al-Rashîd an army from Bârî invaded the valley from the north, the centre of the Shahs. There was another invasion in the time of Al-Mamun, which led to the submission of the Kâbul Shah and his acceptance of Islam.

These expeditions seem to have led to a nominal submission and acceptance of Islam, but there seems to have been no actual occupation before that of the Saffah in 577 (814). Panjîlâr, with its silver mines was no doubt a powerful attraction and coins were struck there by Ya'qûb b. Lath. But it cannot be said that the name of Kâbul applied to any particular town until later, and in no case it was not an important centre. It may be noted that the attack made by Ya'qûb b. Lath was from the north by the Hindukush passes, and not by the more obvious route from Sâqilân, by way of the Arghandakh Vally and Ghazna. The ruler of Kâbul at this period was described as a Turk by race and a Buddhist by religion, and it is worthy of note that he was a brother of the later Kâshân [cf. Afghanisrûy, 1. 161].

It was never a mint town before the time of the Mughal Emperors. Coins were first struck there by Bâbur [see art. Bâbur]. Throughout the rule of the Châna (q.v.) the Ghurids (q.v.) Ghâna was the capital. Al-Idrisi mentions Kâbul as a large Indian city on the border of Tukhriyâ, and adds that no ruler could take the title of Shahi till he had been inaugurated at Kâbul. His information was probably derived from authorities much earlier than his own period, when the kingdom of the Shahs was long ceased to exist.

It seems probable that the frequent destruction of Ghâna led to the rise of Kâbul and after Timur’s time it became the centre of a principality under some members of his family. After the death of Alî Sa’dî (q.v.), his son Ullugh Beg obtained possession of Kâbul and held it till his death. His son was expelled by Mu’âmmar, a son of Dhu’l-Nun Beg Arghûn, who in his turn was driven out by Bâbur in 1504. This formed the foundation of Bâbur’s Indian empire, and even when his son Humayûn was driven out of India, Kâbul was not lost by the family, but was held first by Kâmûsî and afterwards by Humayûn himself till India was recovered. Bâbur was fond of Kâbul, and gives an enthusiastic description of its climate, its streams, its fruits and flowers. After his death at Agra, his body was brought to Kâbul and his tomb still exists in a garden laid out by himself near the town. From this time the history of Kâbul is bound up with that of the Mughal Empire of India. It became a mint for gold, silver and copper, and coins of most of the emperors are found up till the time of Mahamud Shah. In 1738 it fell into the hands of Nadir Shah, and although a suzerain of the emperor Alamgir II was struck there under Nadir Shah’s death, it never again belonged to the empire, but was very soon taken by Ahmad Shah Durrânî (q.v.). It soon surrendered Kandahar as capital of the Durrânî dominions, and has continued to hold that position under Sar açi and Barakzai till the present day. [For history see under art. Afghanisrûy, 1. 169.] The town grew in prosperity as the capital of an important kingdom, although it suf-
ered much during the various wars, especially those between 1839—1842 between the Sadorais and Barakains, in which the British army of occupation took part, and in the civil war between Siyèr ‘Ali and his brothers. Under ‘Abd al-Rahman Küh (q. v.) and Habb Alakh the town has been improved and good roads and earthen walls constructed. The old fortress of old, fasten citadel on a rocky hill has been dismantled; the upper part has become an arsenal. A new fortified palace known as the ‘Ark was built by ‘Abd al-Rahman outside the town between Shépur and ‘Alamgundi.

In addition to the tomb of Bābur mentioned above, the tomb of Thirm Shish Durrat is also near Kābul.

2. Kābul is also the name of the province in which the capital is situated. It is bounded on the north by Afghan Turkestan, on the west by Herat, on the south by Kaundar and on the east by Ghilzai. It includes the Pathakhān Mī, the north-west and the Hazarajat in the south-west. Ghilzai is comprised in its limits, and the boundary between this and Kābul is at Hijājat.

(M. Longworth Damer)

KĀBUL (A.). Acceptance of the offer (in contracts); see TūR原.

KĀBUS w. WASHMĀRĪN, SHÂH AN-MĀTIL, Abu l-Hasan, nephew of Mīrzād b. Ziyār and fourth ruler of the Ziyārd dynasty (his genealogy is given by his grandson, Kābūs Ungur al-Mātâ’i in his preface to the Kābul-nāma). Called to the throne by a military conspiracy, in 306 (966) he succeeded his brother ‘Aziz al-Din Bahā‘īn as ruler of Dūrjan and Tābaristān. When the Būyids Fakhr al-Dawla (q. v.) had quarrelled with his brother ‘Adud al-Dawla (q. v.) and the latter deprived him of his whole kingdom in 309 (979/80) Fakhr al-Dawla took refuge with his father-in-law Kābūs. As the latter declined to hand him over to the victor, ‘Adud al-Dawla sent a force against Kābūs who, after a defeat at Tābaristān in 311 (981/2) fled with his protegé to Nishāpūr to Husain al-Dawla, governor of Khorāsān under the Samanids, b. Mānṣūr. The latter sought to conquer Tābaristan for himself, but Husain was defeated. On the death of the Vizier, Abu l-Hassan al-Uthmān Husain was summoned to Bukhārā to succeed him and took Fakhr al-Dawla, and Kābūs with him. Soon after the death of ‘Adud al-Dawla at Baghād (313 = 983) Fakhr al-Dawla gradually reconquered Dūrjan and Tābaristan and wished to restore them to Kābūs but was persuaded by his vizier Ibrāhīm al-Shāhī (q. v.) to keep them for himself. After the death of Fakhr al-Dawla however Kābūs regained his inheritance after seventeen years’ exile in 388 (998) and held it till in 403 (1012). His tyranny and the many executions ordered by him earned him the hatred of the troops, who deposed him and put the throne to his son Minūṭi, who was summoned from Tābaristan. Soon afterwards he was put to death by the rebels in the fortress of Dūrjan between Dūrjan and Astakhāl by being deprived of his clothes, while engaged in his religious ablutions, and then allowed to perish of cold. He was learned in several branches of knowledge, particularly astrology, and left several short treatises (rashūf) as well as Persian and Arabic poems. He was also a distinguished calligrapher. The poet Abū Bakr Muhammad b. ‘Alī of Sārakhs and Ziyād b. Muhammad of Dūrjan sung his praises (Muhammad ‘Awfī, Lūhād al-‘Abīd, II. 18, 19).

(Cl. Huast.)

KĀBULYIA, a mountainous country in the Algerian Tell. The name Kābulia or land of the Kābuli (Arab. Bilād al-Kabuli) is of comparatively modern origin; it is not found in the Arab historians or geographers, nor is it usual among the natives. It seems only to have been introduced as a geographical name by European scholars since the sixteenth century. The name Kābulia is taken from the Arabic kabūli, pl. of kubīl, “tribe”, which some Arab writers use as a synonym for Berbers; this is found as early as the author of the Kābul, several times (e.g. p. 217 and 238 of the Arabic text), in detailing the contingents of troops in the Maridin armies, carefully distinguishes the Kābuli from the Arabs.

The European geographers sometimes give the name Kābulia to the whole mountain system of the Algerian coast from the mouth of the Isser to the Tunisian frontier. These elevations show in fact several common characteristics: predominance of the older strata with a few less extensive chalky zones intervening, an irregular outline, a striking development of forest flora, a population consisting of settled tribes who for centuries past have retained their Berber dialects. According to the different mountain ranges, Kābulia is divided into the following fairly well defined areas: Great Kābulia or Kābulia of the Dūrjān, Little Kābulia or Kābulia of the Babur mountains between the Sammān in the west and the Wād al-Kābīt in the east, Kābulia of Colla, Kābulia of the Diebel Edīn and Kābulia of Būnān. The first named of these areas is the most extensive and has the most marked character; it is therefore called Kābulia by preference and we shall deal with it alone in the following.

Great Kābulia is bounded on the north by the Mediterranean from the mouth of the Wād Būnān to Bungia, i.e. for a length of one hundred miles. In the east it is bounded by the valley of the Wād Sābēl (called Sammān in its low course) and by the upper course of the Isser, in the west
by the valley of the Wād Būdāža and the Mītīda plain. The area thus included measures about 41 miles from N. to S. between Dellyah and Bwīm (Bouira) and covers some 2307 square miles. Access is rather difficult except from the west. Here the gateway of Méneville (pass of the Ben 'Aīsha (450 feet high), the valley of the lower Isen, the depression of the village of Haussonville (600 feet) afford an easy access to the Sebou plain, i.e. the heart of Kabylia.

Kabylia falls into three separate areas very different from each other: the Kabylian mountains in the narrower sense, the Djurdjura chain and the coast range. The Kabylian mountains consist in the centre chiefly of gneiss and schistose schists with larger or smaller intrusions of granitic rocks and, on the flanks, of argilaceous schists and primary argillaceous schists, the layers of which form the outer spurs with their gentler slopes. In the west of these mountains and separated from the main group by tertiary deposits rise several isolated rocky peaks: Illi 'Arba, the massif of the Elgargha (2050 feet), the Djebel Rella (2040 feet) north of Tizi Uta. The Kabylian massif is connected as it were by a isthmus with the central part of the Djurdjura and cut off on the other sides by a continuous depression, in the north by the valley of the Sebou, as much as 11 miles broad, in the west by the valley of Dra' al-Mirzān and in the south by the depression of Chefcha. The whole system, sloping from west to east (from 4225 to 1950 feet) is divided by deep and narrow valleys into mountainous blocks (hills of the Malattka, the Flies and of the Zwāwa, etc.).

The Djurdjura forms in the south the edge of the Kabylian massif for about 40 miles from Tizi (Herbet = pass) Djebel (3850 feet) to Tizi-n-Sbirat (4010 feet). It consists of layers of limestone, split up into a series of sharp crags or steep rocky walls, and maintains an elevation of a little over 6500 feet. The highest summits, which run in two rows, are the Haïzer (6555 feet) and the Aukkac (7490 feet) in the north and in the south the Lalla Kharatda (7500 feet). This altitude and the scarcity of the passes, which are impassable in the winter (the most important is the Tmoudia Pass (8655 feet), make traffic between the two slopes very difficult. In the east of the Djurdjura proper, in the Djebel Kebir, there reappear scattered layers of limestone, running down to the sea where they end in the Gouza of Bougie.

At a lower elevation, (2600–3900 feet), the coast range stretches along the sea coast from the mouth of the Sebou to the Djebel Afti and covers the greater part of eastern Kabylia with its sandstone formations.

From this variation in elevation and geological structure result marked differences in climatic conditions. In the valleys, notably in the basin of the Sebou, cut off from the sea by the coast range, the summer is very hot (mean July temperature in Tizi Uta 33° C.). In the Kabyl mountain country on the other hand there is a long cold winter, during which the ground is often continually covered with snow, which lies on the summits of the Djurdjura from December to June. The rainfall is unevenly distributed — being particularly high in the east of the district where it averages 40 inches p. m., while the lowlands, notably that of the Wād Sāhel-Summām, which is also

tered from the moist winds by the wall of the Djurdjura, are relatively dry. Nevertheless Kabylia is one of the best watered areas in Algiers. Four river-systems are distinguished: — the Isser, the Wād. Sāhel-Summām, the coast rivers, and the Sebou. The latter collects the water from the north slope of the Djurdjura, supplied by tributaries flowing from the lower slopes cut through the Kabylian mountains. None of these water-courses is navigable; they are all mountain torrents and are liable to considerable variations in their amount of water. The winter-rains and the melting of the snow produce a considerable, often devastating, increase in their volume.

Lying within the so-called Numidian zone which is marked by luxuriant forests, Kabylia does not have the treeless appearance of most Algerian landscapes. The forest and sandstone formations of the eastern part support great wooded mountains (Yakhtura, Tizi Uelda, Afti and others) which are covered with different kinds of oaks such as bull oak, chestnut, the evergreen oak, and the afara (guercus casamenelia) and kalun or hardnut oak. Several other plantations, which however are on the verge of extinction, cover the slopes of the Djurdjura up to a height of 3900 feet. Trees are especially cultivated in the Kabyl mountains where they afford the inhabitants the greater part of their resources. The leaves of the oak-trees are used to feed the cattle, while its wood is used for agricultural and domestic implements and vines sometimes cluster round their stumps. The fig and olive trees, the first of which is grown up to 3250 feet and the latter in 1950 feet, play an important part in the life of the Kabylia. Dried figs and oil form the basis of the food of the population; the superabundance is sold abroad. These fruit trees are therefore cultivated with the greatest care and in increasing numbers, so that we find fig and olive trees even on almost inaccessible slopes, where the soil has to be supported by mortaring stone walls. Vegetable fields and orchards surround the houses and villages and their produce serves to supply the daily wants of the inhabitants. Wheat is grown only on the low-lying ground and as a rule only in the districts settled by Europeans. As the scarcity of meadows hardly allows cattle to be reared, the native stock consists of a few cattle and sheep and a large number of goats. The mule is the only suitable beast of burden for this mountainous region.

Kabylia is the most populous part of Algeria as it has about 650,000 inhabitants or 350 to the square mile. The population however is very unevenly distributed. Scattered in Djurdjura, contrastively thin in the forest region, it is however very dense in the Kabylian mountains where the soil and nature and abundant springs afford more favourable conditions for human settlements. The mixed community of Fort National and that of Djurdjura number, the former 61,728 to 145 miles, the latter 66,553 to 125 miles that is about 478 and 530 to the square mile or about the density of population in Holland. The natives live in groups in villages, sometimes up to several thousand in one village. These settlements are little on the hill-tops or on the mountain ridges which separate the valleys from one another. The choice of site was settled by consideration for the most profitable use of the arable part of the slopes and also for the necessity for securing a defenc
against neighbouring tribes. Surrounded by a belt of gardens protected by cactus hedges and encircling walls of stone without mortar, accessible only by steep paths, these villages were really fortresses, sometimes impregnable to an opponent, unless provided with artillery. Since however the French occupation guarantees the peace of the land, the natives show some reluctance to leave the salubrious climate and move their huts and move their dwellings nearer to the valley. In spite of the picturesque appearance which the closely buddled together white houses with their brown tiles make, these villages are in reality only piles of wretched dirty hovels. Most of the houses consist of one storey only and have neither windows nor chimney. As a rule they are divided into two by a wall breast high, of which one part is for men and the other for cattle. The very scanty furnishing consists chiefly of mats, which take the place of bedding, and stone vessels, which hold the family provisions. The groups of homes are separated from one another by narrow passages, which are just broad enough to allow men and women to pass through without being embarrassed with dust and rubbish. The only public building is the mosque, which, only recognisable by its minaret, is in almost as miserable a condition as the private dwelling houses. As there are no shops in the village where the natives could make their necessary purchases, they have to go to a market (gup) which is held weekly at a definite place, usually in the neighbourhood of a river or spring. This market has a great attraction for the Kabyls as they come to it not only to purchase food and other necessaries but also to meet the inhabitants of other villages and learn what is going on. The market usages have therefore been very strictly regulated. The market formed a neutral area, visitors to it enjoyed a special protection called "anayiy of the market".

The Kabyl population is increasing steadily and rapidly, but the soil, which is of only average fertility, in spite of the aptitude of its inhabitants cannot support them all. The once flourishing native industries such as weaving, making carpets, ornaments, and arms (especially among the Flissa and the Beni Yenni) are disappearing more and more before European competition. The natives thus find themselves forced to leave their native land and seek work outside it, so moreover they used to do in earlier times also. Under Turkish rule, dwellers used to come in considerable numbers to Algiers to gain a livelihood as servants, porters or gardeners. Others, notably the Beni Yahyé, the Beni Hiten and the Beni Attal went about among the Ait tribes as peddlers (degaeers) and combinato money-lending with commerce, as their descendants still do. The French conquest and the expansion of colonisation have opened new outlets for the industry of the natives. While they work in the coast towns as bricklayers, hodmen, and dock labourers, the Kabyles at the same time supply the farmers of the Tell of Algiers and Constantine with the labour necessary for the harvest and vintage. They also readily labour on public works as well as in the mines of Algeria and Tunisia and for some years past in those of France also. One of their unique in the native regiments, especially the "Mohajers". But the Kabyl's emigration is only temporary; as soon as the pedlar, the agricultural labourer or the miner has saved a little capital, he returns to his village to buy a strip of land or at least a few trees at the earliest opportunity. The impulse to acquire property is very strong in them and the land is thus broken up into very small shares.

The Kabyls form the most important and at the same time the most compact Berber group in Algeria. Yet they cannot be regarded as absolutely pure descendants of the old African race which inhabited North Africa before the foreign conquests and the immigrations of the historical period. The very formation of the country made it a place of refuge for the inhabitants of the plateaus and valleys, who were pushed back by the continual inroads of foreign peoples into North Africa. In addition, as Hamoteus points out, Kabylia was at all times an asylum for outlaws and evil doers. The present Kabyl type is therefore the result of numerous crossings and far from being homogeneous. Many individuals can hardly be distinguished from Arabs, others and indeed the greatest number, with their large bones, beard, and dark eyes, resemble the peasants of Central France. As to the colour of their hair, two types can be distinguished, the brown and the much rarer blonde. Yet in spite of these differences, the natives of Kabylia have all the linguistic, social and religious peculiarities common to all the tribes described as Berber. They talk different Berber dialects, of which the Zwaam spoken in Djurdjura and in the Kabyl mountains is the commonest. "The Zwaam, especially the Bent Raten, are those who, owing to their isolation, are considered to have preserved the purest Berber dialect; this gradually changes by almost imperceptible degrees as one goes westward into the dialect of the Ait Khallfan and eastward into the dialect of Wad Selbel (Wadi Sihli) and that of Bougie. (R. Bassat, "Les dialectes Berbères", Paris, 1894, Intro., p. viii.). The linguistic frontier even crosses the geographical boundaries of Great Kabyl and follows the watershed between the basin of the Wad Bi-Sellam and that of the Wad al-Kalin. The persistence of these dialects is all the more remarkable as the French occupation, the extension of Muslim as well as European education and finally the continual development of emigration seemed likely to bring about a rapid decline in the use of Berber. Although many natives have a more or less superficial knowledge of Arabic and French, Kabyl is nevertheless still the language of the home, and the only language used by the women and children in the villages. In many districts, a decline in Arabic has been noted, in the arrondissement of Tizi Ouzou, for example, several Arabic-speaking groups comprising some 18,400 persons have become completely berberised in the last few years (E. Douati and E. F. Gautier, "Empire sur la distribution de la langue berbère en Algérie, Algiers 1913.

The Kabyles possess no written literature but have a fairly varied and copious popular literature (songs, often inspired by current events, fairy tales, riddles, etc.). These productions, composed by illiterate people, often women, have been handed down by oral tradition and transmitted from village to village by wandering singers whose profession is often hereditary. Some of these singers (madzáa, jafrás) who sing the praises of the Dey particularly of the feud of the tribes and the heroic deeds of the warriors, were held in high esteem by their
KABYLIA.

599
countryman; others again who sang songs of love as a humour to the accompaniment of the tambourine or the oboe were as despised as the butchers, dealers of corn and other individuals, who followed a trade regarded as degrading. As Muslims, the Kabyls, like the other Berber tribes, adopted the creed without recognising the Koranic system of law (see SERRAIS, i. 702).

Their customs are in many points contrary to orthodoxy. Lending money at interest, condemned in the Koran, is generally allowed. "The acceptance of the principle that money is to be considered as goods," writes Hanotens, "is a characteristic feature of Kabyl society which in order to remain true to its traditions has not shrunk from showing its contempt for the punishment of exclusion from the Muslim community, threatened as a punishment for usury." (Hanotens and Loustau, La Kabylie et les continons kabyles, ii. 497).

The social and material position of women is far behind that assured her by Muslim law. Woman has no civil rights, being continually in tutelage; excluded from participation in the paternal inheritance, she herself is one of the family chattels. Marriage is merely an act of purchase. The man who divorces his wife still remains her owner and he fixes the price which must be paid him before she can marry again. Polygamy is legal but little practised and only a few marabouts are rich enough to afford it. The position of woman thus appears a very miserable one; she is, according to Hanotens, "a human chattel" (Poids populaires de la Kabylie du XVe Siècle, p. 287). In practice, however, it appears that her position is easier than one would expect from the rigour of customary law. She holds an important place in the family and even in the villages, and, according to some authors (Rina, Masqueray, Benifla), she exercises a by no means negligible influence in domestic life and even in political life.

In spite of the liberties they take with orthodoxy, the Kabyls are not, as is sometimes alleged, lukewarm Muslims. They have always been and still are to-day very susceptible to the influence of fanatics. Perhaps they, at one time, like many other Berber groups, embraced Kharidjeti doctrines but they were reinstated for orthodox Islam at the beginning of the modern era and have since then remained steadfast in their faith. Their ignorance, it is true, leaves them defenceless against the incitements of marabouts. The latter held and still hold a special position in Kabyl society. Enjoying numerous privileges (exemption from taxation, entertainment allowances etc.) they were not expected to bear arms except in the holy war and, thus placed outside tribal wars and quarrels of the prey, they kept for themselves the fruitful roles of intermediaries and pacemakers. The only representatives of education in the midst of the illiterate population, they gave the rudiments of instruction in the village schools and in the schools attached to the abresses, a word which among the Kabyls means a village exclusively inhabited by marabouts. Education in these schools (Kabyl, Badehri, Arab, Targhrin) is confined to the elements, Arabic language and grammar, theology and law. Marabouts live with some seclusion among the people or grouped in families or tribes. Some claim for themselves an Arab or even Shara origin. These Sharifs form a privileged caste and only marry among themselves. At all periods the part played by marabouts — male and female — has been considerable. It was they who stirred up the native resistance to the foreigners, to the French in 1830 and to the Spaniards in 1829. They were supported by the religious orders, of which the largest is that of the Haoumadi, which originated in Kabylia itself. Its founder was the marabout Said Maâhmed 'Abd-Allah Bi-Kabrai, sprung from the tribe of the Att Smid, who lived from 1826—1808 (1771—1793). Recruited at first from the Guebbîs, a confederation of which the Att Smid were part, the order gradually extended throughout Kabylia. Its chiefs were the foremost opponents of the French in 1857 and in 1877; although its influence has declined, the brotherhood of the Haoumadi, of which the paternal lodge is at Aght, is still that which numbers most adept (9000 members and 45 abresses in 1897, according to Depont and Copppoloni, Les Confessions religieuses du Maghreb).

History. Practically nothing is known of the history of Kabylia before the 24th century A.D. There are no native chronicles and the notices supplied by Arab, Latin or European writers are few and fragmentary. The characteristic fact of Kabyl history during this long period seems to have been the resistance of the Kabyls to foreign penetration. In ancient times even the Romans did not succeed in establishing themselves in the massif. Their principal settlements (Sous, Bougie, Runzara, Figir, Rauquemer, Dellys) were situated on the coast. Military posts were kept on watch in the valley of Wad Sahel and on the plateau, but the Eutresis (Mons Ferratus) remained practically independent under the rule of native chiefs, vassals of Rome. The inhabitants of the mountainous regions formed the confederation of the Five Nations or Quinque Gentes: — the massimens (perhaps the Maams of the Wad Sahel), Isabebes (Itlaees), Jababees (Beni Jubaap), Tendenses and Tsebasses. These natives rose in revolt several times, notably in the first century A.D., during the rebellion of Tacturin, then again in the time of Dioscorous. From 285—297, they ravaged eastern Mauretania and western Numidia. To subdue them, Maximus had to deport them to Africa. In the following century they adopted Donatist doctrines and again took up arms under their national leaders, Firmus (372—375 A.D.) and later Gildon.

We do not know at what period and under what conditions Islam was introduced into Kabylia, taking the place of Christianity and paganism. We may, however, conjecture that this link must have for some time escaped the Arab conquest and served as a place of refuge for the last remnants of Roman and Byzantine population as well as for the Berber tribes fleeing before the invaders. In the 13th century however, the conversion to Islam was an accomplished fact, since Ibn Khaldun (Hist. des Berbères, translat. de Salmier, i. 256) mentions the Ziwias at the same time as the Kabyls among the partisans of 'Othell Allah and the founders of the Fatimid empire. Well treated by the Sanhaja Zirids, the Kabyls then passed under the rule of the Hammadids, who reduced to obscurity the mountain peoples of the Bougie region, and then under the sway of the Hafsid. But Ibn Khaldun himself says that the authority of the sovereigns of Bougie over the Kabyl tribes was quite nominal (cf. INXEN, ZWATIA).
At the beginning of the 18th century, the people of Kabylia were divided into three political groupings called by western writers, the kingdom of Koko, the kingdom of Labbes, and the principality of the Beni Juras. The kingdom of Koko stretched from Djurdjura to the sea, and through the port of Annaba was in touch with European countries. The kingdom of Labbes comprised several tribes of little Kabylia, of which the most important was that of the Beni Abbes in the east of the Ait Saheb (cf. the area of Kabylia proper). The principality of the Beni Juras comprised the population of the coast east of Bougie. The Turks who appeared in Algeria at the same period and there founded a powerful state, relied on these different groups in turn. 'Arbiy contracted a close alliance with the Sultan of Koko, Ahman b. al-Khâlî, who gave him auxiliaries and took part in the expeditions against Algiers and Tlemcen (see 'Arbiy), but he thereby alienated the Sultan of the Beni Abbes, who took the side of the Spaniards. After the death of 'Arbiy, Ibn al-Khâlî quarrelled with his successor Khair al-Din (q. v.); he inflicted a bloody defeat on him on the banks of the Elise. Unfavourable circumstances forced him to bring recall of Turkish tributes to order was the blockade. As the country did not produce enough grain to feed its inhabitants they were not long in submitting. The Turks, moreover, observed local divisions with the greatest care and showed themselves full of consideration for influential marabouts, to whom they gave exceptional privileges. They helped gifts on their sâhibs and built sâhibs on the tombs of the most revered saints. Turkish rule has left no feeling of hatred among the Kabyles. The Turks, says Hanoote (Petites populologies de la Kabylie du Maroc, p. 63-64, note), "in the type of bravery and dignity in the popular songs; when the poet wants to praise one of his compatriots, he compares him to a Turk." Whether nominally subject to the Turks or completely independent, the Kabyle tribes preserved intact their political and administrative institutions. Kabylia, far from forming a state, was simply an aggregation of little municipal republics, grouped in confederations of small size. The political and administrative unity was the village (khalîla), whether a single village or a union of several hamlets (râbût) and subdivided again into divisions called by different names in different districts (khamîl, tâhirî, bakhîl, khaâsîl). Several villages bound together by mutual obligations formed a tribe (turtàf). At the time of the French conquest there were 1400 villages divided among 120 tribes. A confederacy of several tribes was called a shaghîlî (Arz, shâlîlî). The chief of these confederations was the head of the Gueskîlî, the Ait Saida, the Zwir, the Eastern Zwir, the Ait 'Almi, the Ait Amâ, the Ait Aitam, the Ait Maatsa, the Fislat Ameli and the Fislat al-Bajâ (Illies), the Ait Waguemnî, the Ait Djeffîl, the Ait Ghirât, etc.). In certain cases several confederations could unite for some common defensive or aggressive purpose, but such leagues had never more than a temporary character. All tribes however were not grouped into confederations and some were content merely to contract, when in case of need, temporary alliances with their neighbours.

The village, the fundamental unit in the
ADDITIONS AND CORRECTIONS.

Kabyl organisation, was a kind of municipal republic subject to the authority of the assembly of its citizens (tahsyīzm, Arab. gēmsāh), which had most extensive powers. It appointed a president (ambrant, ammar, amnī), who was charged with carrying out its decrees, and tāmmān (plural of tannās), a kind of executive, to whom had to support the assembly the exercise of his duties. The ḡāmān's fixed the quota and the apportionment of taxes, declared war, made peace, administered public charity and, lastly, modified, if necessary, local customs. All male inhabitants old enough to observe the fast of Ramadān took part in the assembly and were bound to be present, but in practice decisions were made by a minority of rich and influential persons, so that the government of the village was only democratic in theory. The authority of the ḡāmān was, besides, limited by the obligation under which it found itself, to respect the rights of individuals or families, individual or collective guarantees sanctioned by long customs, market-towns, etc. The sanūs, the tribe and the confederacy were organized on the model of the village, with deliberative assemblies and majārās, but the bonds which united such groupings became more and more slack as the groups increased in size. There were frequently serious dissensions within these groups.

The existence in the smallest village of jīzb, that is to say, parties supporting the interests of influential personalities, the exercise of the right of private vengeance (ţabāb) or of the right of repressions (waza), the care taken to make respected the 'ādās of individuals or of the community, provoked continual conflicts, which the intervention of the marabouts settled with great difficulty. The relations of the tribes and confederations were hardly more satisfactory than those of the villages with one another. Kabyl was, in a word, handed over to anarchy and there was a permanent state of war there.

The capture of Algiers by the French in 1830 put an end to Turkish rule. On hearing of this event, the garrisons retired to the Titteri, leaving the country to itself. The Kabyl, however, proved themselves no more able to unite than they had in the past. Various chiefs, Ben SLam of the Ban Djal, Ben Zamuni of the Flissa, St Jhili of the Zwāwi, Belkīsim of Kari of the Amura disputed for the supremacy with one another, but did not succeed in imposing themselves on all the tribes. Abd el-Kadir himself was no more fortunate (see 'and al-Khālid, p. 42 sqq.). He appointed a shāhīs of the Sebu, but could not get himself recognized as Sulīman by the tribes of the Djerfuna, who refused to pay him taxes as they had refused to pay them to the Turks. He was even nearly massacred by the people of Wad Saheb in 1839.

The French, for their part, had been in occupation of Bougie since 1835, while the Kabyl of the east made frequent incursions into the Mittijda. To dispose of such dangerous neighbours the government therefore decided to conquer Kabylia at a time when Abd el-Kadir seemed definitely reduced to impotence. A first expedition conducted by Seguin in the valley of the Sebu was repulsed in the engagement of the Flissat and the occupation of Wad Saheb (1844). Interrupted by the Franco-Moroccan War, then by the struggle with Abd el-Kadir, who in 1849 again tried to raise the Kabyl tribes, operations were resumed in 1847 and brought the tribes of Wad Saheb to recognize French authority. But the Kabyl masses and the Djerfuna served as an asylum for all malcontents and continued to pounce on the occupants of the Mittijda, which was continually blazing with rebellion. During these events, the Sultan of Tunis, the Emirs of Algeria and the Emirs of Tripoli attacked the tribes who had already submitted; in 1850, the Sherif Bil Berghia, with several thousands of mountaineers threatened Bougie, then repulsed by French troops, sought refuge in the Ljerdiars. Petifer in 1851. Bouquet in 1852 had to take the field against him.

To facilitate penetration of the country, roads were built from Algiers to Bougie, from Deyla to Amsouli, and finally from Setif to Bougie across Little Kabylia, only recently pacified. The natives, however, were not yet subdued. They took advantage of the reduction of effective troops during the Crimean War to take up arms again. The rising of the tribes of the upper Sebuan necessitated the despatch of a column which crossed the country between Bougie and Deyla and penetrated as far as the Béni Kabyl in the very heart of the Kabyl, 1854 (June July 1854). New disturbances provoked by the Bāghdādi and the Turkish gendarmerie in 1855 and 1856 forced the French once more to fight the tribes of the Seboua and the Great Kabylia. The resistance obtained however would have remained insecure so long as the Bān Rāmī, the most turbulent of the tribes of the massif, were not subdued. Resistance. New expeditions were therefore organized in 1857 by Marshal Ramond, then governor-general, supported by Generals Macmahon, Renault and Vial. While reconnoitring troops surveyed the southern slope of the Ljerdiars, three divisions left Tizi U've and sealed the slopes of the massif. The Bān Rāmī were the first to be attacked and defeated themselves energetically for two days. The capture of their villages and the defeat inflicted on them on the plateau of Sūf al-arb 2 forced them to sue for peace (25 May). The Ait Mengueule, their allies, continued the struggle and were crushed at Tantanana (24 June). The Ait Yemm had to submit in their turn in the beginning of July. The defeat of the Ait Abila, who had been stirred up by the female marabout Laila Fītūna, terminated the campaign. The tribes delivered hostages and paid a war indemnity, but retained their municipal autonomy and their jāmi."
surrendered to the French on July 13 and at the end of the same month, the valley of Wadi Sihel was cleared of rebels. Kabylia lost its municipal autonomy and a war indemnity of 35,820,000 francs was levied on it. Besides, 456,000 hectares of land were sequestered and appropriated for European colonisation, for which centres were created in the valley of the Isser and in the valley of Wadi Sihel. Since that date peace has not been disturbed and civil government has been organised in Kabylia, and in the present day all the coastal towns, except Algiers, have been made free ports. The Kabyle language is not only spoken in Kabylia, but in all Algeria (see Algeria).

Primary schools with technical instruction have been established in the principal villages and education is compulsory for the natives. The latter seem to have adapted themselves to the new situation: their resources have increased to such a pitch that in some districts European colonisation has receded and considerable areas of land have been bought back by the natives. The isolation in which the Kabyles lived so long is tending to disappear and, if it is chimerical to hope even in the remote future for an assimilation of the Berber and European elements, perhaps it may be hoped that the Kabyle people, lost in the vastness of French Algeria, will enjoy sufficient community of interest to prevent new conflicts.

Bibliography:

KAČCH (sometimes written Kac; al-Baladhuri and al-Ya'kibi: Kāch; al-Biruni: Kāch; Yakkūl, ed. Wüstenfeld, r. 126, s. al-Kasba, but l. 505, r. 1404, s. al-Kasch, in Anglicised spelling Cutch), an Indian state attached to the等内容。
KAČCHI, KAČCHI GANDĀWA. A province in Bālīstān extending from 27°33' to 29°35' N. and from 67°11' to 68°28' E. with an area of 6,415 sq. m. It forms a level plain enclosed on the N. and E. by the southern Sulāman Mts. and on the W. by the Kīthārī Ranges. To the S. it is open being bounded by the plain of N. Sind. Politically it forms part of the Khāna of Kalīf (q.v.) with the exception of the small area of Sīhi in the north which was nominally part of Afghanistan and was transferred to the British Government under the treaty of Gandamak in 1879. This district is part of British Bālīstān. The tribes in the eastern half of Kačchi, the Dōmkālī, Umarānikh and Khāri are only nominally subject to the Sikhs. The three tribes lie to the east of the railway line from Jāhobād to Quetta, which traverses the province from south to north. The territory west of this line is also mainly occupied by Bālīs tribes with the exception of the area near Dākhār in the north, where nomadic Brahās are found. Everywhere there is a large settled population of Khāls. There are no large towns; Gandāwa, Sānārū, Dīkhār, Sīhi and Lahrū are the principal places. Cultivation is carried on by irrigation from the small streams and hill-streams which issue from the mountains; the Nālī and Bīllān on the north, the Mālā and Sāhābā on the west, and the Lahrū and Chātā on the east. Without irrigation, cultivation is impossible as the climate is intensely hot and the rainfall very scanty. The valleys of the Mālā, Bīllān and Nārā form passes by which communication with the uplands has been carried on from time immemorial. The two first-named are now traversed by railways which lead to Quetta and Peshāīn from the Bīllān and Harwar countries. The strip of territory called Nāsīrānik is politically part of the Sīhi district. It lies adjacent to the British District of Jāhobād in Sind, and receives its irrigation from the Sindh Canals fed by the Indus.

The population is scattered but denser than in most parts of Bālīstān. Including the Sīhi and Nāsīrānik labels, and the Dōmkālī-Khāri country, all of which are geographically part of the Kālīf plain, the total is 175,966 (census of 1911). The history of this tract is dealt with under other headings.

BIBLIOGRAPHY:
- Com. of India 1901 and 1911. Balochistan. (See also A. V. BALOCHISTAN.)

KAĐAH means literally “deciding” (खड़ान, फैल, फूल, तरह, cf. Thun (Hamm, Miltii, ii. 51) but the root is developed in many different senses already in the Kārān, "commanding," "judging," "ordering," “to be held,” “to determine,” "discharging (obligation)" etc., cf. al-lyāshān, Mufaddāl, p. 416, and Lādūr, s. a. 47 ry. Technically it indicates (a) the office and functioning of a judge (कड़हूँ); (b) the discharging of a previously neglected religious obligation, e.g., of the daily worship or of fasting in Ramadān; thus opposed to अद (ad-d), the performance of the duty at the appointed time (Juyb, Hadd, de ibānon, Gherat, p. 68, note); Lādūr, s. a. 47 ry.; and the eternal, universal decision of Allah as to all existing things as they are continuously, very nearly the “eternal decree” of Calvinism. The point is doubt in the last use is the relation of the term to कड़हर (कड़हूँ), “measuring or estimating an amount,” “assigning something by measure,” to यद (yadd), "providence,” and to the will (ताकद), and knowledge (कितन, knowledge of Allah; further whether कार is one of the “essential qualities” (al-adl al-kaāriq) of Allah or of His “qualities of action” (ad-dāl al-ka-a) is eternal (कार) or originated (कार). For orthodoxy, Asār (कार) is the will of Allah (al-Balān in Qur. ii. 111) and its eternal connection (at-tālīkh) while कार is His bringing things into existence in accordance with His will. Or it is His eternal knowledge and connection with the thing known, while कार is bringing the thing into existence in accordance with His knowledge. कार therefore, is eternal as one of the essential qualities and कार is originated because of one of the “connections” of Allah’s power. But others taught that कार is the bringing forth (fi-lāgha) of transitory things (al-’ilām) in accordance with the knowledge of Allah, while कार is the eternal defining of each thing with what is good and bad, advantage and disadvantage, it is to have when it exists. कार then, is originated and कार is eternal. Further, if it equals Allah’s will or knowledge, is one of the essential qualities. But if it is this “bringing forth” it is only one of the connections of Allah’s power, and these, according to the Asāris, are insignificant. But the Māmūladis call these “active qualities” and held that they were eternal because they were names for the Māumūladī quality takāb (making things become) which the Asāris did not admit as a quality (al-Falāñ with comment of al-Balīfī, Cairo 1315, pp. 55, 63; al-Nasīf’s Addāl with comm. of al-Thābit, Cairo 1321, p. 95). But the overwhelmingly accepted position makes कार the universal, general, and eternal decree and कार the individual development or application of that in time. A phrase quoted in the Kāra under कार is significant, Mā yasāddhāhūkā rīsh mīnā at-tālīkh, “That which Allah measures out of kind.” Al-Rāzi on Qur. xxii. 37, 38 (Maqālāt, Cairo 1305, viii. 527) even applies the distinction to the evil and of human responsibility. That which is by कार comes in inescapably, almost accidentally, and the disadvantages (gāvar) of the world are through while the good (kān) is by कार. Man was created by Allah subject to lust and anger in order that, striving against these under the guidance of reason and religion, he might be rewarded. That leads in some to sin, but Allah did
not produce this consequent sin in them by intention, although it was by His ḍarar. Again, that which is by ḍarar being universal is always perfectly intelligible — we see it happening all the time; but some of weak understanding may ask the reason for a thing which is by ḍarar. Yet it must not be thought that these latter things are necessary consequences following of themselves according to the Muṣtilite doctrine of ṭawāfīl or the philosophical teaching that there is a nature in things (ṣāliḥ). Everything is by the choice (ḥaqqiyya) of Allah and He admits only a certain custom (ḥadd) in things. Among philosophers the latter concept ṭawāfīl is the truer one, and is Allah's knowledge; or with His eternal providence (ḥaqqiyya) or even to say that it is an expression for the existence of all existent things, taken as a whole, in the world of reason, while ḍarar is their external existence, separated, one after another (Dict. of Tech. Terms, p. 1254 sq.).

(D. B. MacGirkall)

KADĀ' (s.). In the terminology of Turkish administration ḍarar (dāra) denotes a district governed by a ḍarāshQN (q.v.).

KADAM SHARIF (KADAM RASUL ALLAH). A mosque, which, with great popularity attributed to Muhammad was the fact that when he trod on a rock, his foot sank into the stone and left its impress there. (This miracle is usually referred to along with others e. g. that he cast no shadow, that if one of his hairs fell in the fire, it was not burnt, that flies did not settle on his clothes e. g. (v. al-Halabi, Al-Sira al-Halabiyah, B. 326, 332, III, 407), or that his sandals left no imprint on the sand (v. Ibn Hādjir al-Hattamī, commentary on an-Ḥaqqiyya al-ṣāliḥa al-Hamayyina, I, 176. (Ind. Off. Miss., Loth, n° 826, fol. 94).)

No early authority refers to such a miracle, nor can any ḍarar be quoted in corroboration of it, as ḍarar al-Ḍūr al-Sayyid himself pointed out (v. al-Halabi, op. cit. I, 497). But sufficient evidence of this miracle is considered to be provided by the numerous impressions of one or both of the feet of the Prophet, which are venerated in different parts of the Muslim world. The most famous of these footprints is that in the Masjid al-ʿĀqṣā, at Jerusalem, on the rock from which Muhammad mounted Burdā for his journey to heaven (Shams al-Ḍūr al-Sayyid, ḍarar al-ʿĀqṣā fī ṭawāfīl al-Masjid al-ʿĀqṣā, Journ. Roy. As. Soc., x., NS., (1887), p. 238 sq.). In a mosque near the southern gate of Damascus, on the road to Hauran, is shown the imprint of the foot of the Prophet, where he half-lighted in his camel, but was warned by the angel Gabriel that God had given the choice between the Paradise of this world and that of the next; whereupon he relinquished his intention of entering the town (W. G. Palgrave, Journey through Central and Eastern Arabia, London, 1865, ii, 19). In Cairo there are two footprints, one in a mosque called Arθār al-ʿAshq (Rev. des Trév. Popul., iv, 1886), the other at the tomb of Khand Bey (q. v.) (Baedeker's Egypt, 1914, p. 113), who, according to Ahmad Lāhilī (q. v.), purchased it for the sum of 50,000 dinars in Tūs, there are impri- ments of the left of the Prophet, in the shrine of Šayyid Ahmad al-Baḥāwī (Rev. des Trév. Popul., xxii, 410). as also, at Constantiopolis, in the mosque where Šayyid Ṭāhir al-Hamīd Ṭāhir al-Baltā'i was buried (ibid., ii, 473); cf. also Constantiopolis, i, 371.)

But it is in India that this veneration for the footprints of the Prophet appears to have attained its fullest extension, and such slabs of stone are found all over the country — sometimes venerated in buildings specially erected for their reception, as the Kadam Rasul Mosque at Gwari, or kept with other relics, as in the Lāhirī's Masjid, Dīhilī, or left disregarded in a corner of a cemetery, as in that of Śayyid Bāḥāwī, near Allāpurī, or preserved in the house of some private person. Finally, there is the imprint of one foot only, that in the Kadam Rasul building at Balaiore in Orissa, the stone bears the marks of both feet, as well as those of 'All. (Abdu Salam, The Qudam Rasul Building at Balaiore in Journ., As. Soc. Beng., iv, (1908), 31-2.) One of the most highly venerated of these footprints is that placed over the tomb of Fath Khaṇān, the son of Fīrat Shah Tughlak (q. v.); this monarch had associated his son with him in the government as early as 760 H., and the death of Fath Khaṇān in 776 H. was a cause of great grief to his father, who erected a stately tomb over his grave, with a mosque and a madrasa attached. The footprint is said to have been brought from Madīna by the second son of the brother of al-Dīn Khaṇān, named as Makhātīn-dī-Jhānānīyān; it is kept immersed in water, which is believed to possess healing power; a religious fair is held here every year, on the 16th of Rabīʿ al-awwal, the anniversary of the death of the Prophet (Šayyid Ahmad Khaṇān, Description des Monuments de Delhi, Journ., As., 1860, v. 411-2). At Uth, which has a rich collection of relics of the Prophet, there is a footprint in the shrine of Bānāgı Muhammad Ghrāwān (v. 293 H.), a descendant of 'Abd al-Ḥāfiẓ Dīlī (Gazetteer of the Bahawalpur State, Lahore, 1908, p. 166).

The slab of stone with the footprint of the Prophet preserved in the Kadam Rasul Mosque at Gwari (q. v.) is said to have been brought from Madīna by 'Alī al-Dīn Husain Khaṇān, king of Bengal 1494-1521; the fine mosque in which it rests was built by his son and successor, Nūrān Khaṇān, in 1530 (J. H. Ravenshaw, Gwari, London, 1878, p. 20). About fifty years later, Mr. Abu Tūrān, who had been appointed by Akbars leader of the pilgrims' caravan, brought back from Mecca, in 1579, a stone bearing the imprint of the right foot of the Prophet; that brought by Makhātīn-dī-Jhānānīyān to Sulāḥ Fīrat Shah is said to have represented the left foot. Akbar himself went out several miles from Agra to receive the holy relix, and carried it on his shoulder for about a hundred paces, his example being afterwards followed by his nobles and courtiers, who encrusted the stone with great pomp and ceremony to the city. In the following year, when Mr. Abu Tūrān was returning to his home in Gurgi, he received permission from Akbar to take the footprint with him; he erected a building in Akro, near Ahmādābād, as a shrine for this slab and for some hairs of the Prophet, which he had also brought from Mecca with him; after his death the footprint was placed over his tomb, which is still standing to the south of the city of Ahmādābād, but the footprint is no longer there, having been removed (it is said) to Khambāli (Mr. Abu Tūrān Val., History of Gujarat, Calcutta, 1909, pp. 97-9). The footprint on the
KADAD SHARIF — KADARIYA

grace of Sayyid Muhammad Makki’s ‘Alam, who is buried in the precincts of the shrine of his ancestor, Sayyid Muhammad Sha’i ‘Alam, at Baitawa, to the south of Ahmadabad, is said to be a copy made from the stone in the Diwan Masjid at Dhilli (J. Burgess, *The Muhammadan Architecture of Ahmadabad, London, 1905, ii. 20, 50). Similar copies on stone or on paper are sometimes found in the houses of private persons (G. A. Herklotz, *Qumran-o-Islam, Madras, 1863, p. 153).

Closely connected with the veneration of the footprints of Muhammad, is that paid to representations of his sandals. Copies of these are hung up in the houses of the pious, as a protection against the assaults of Satan, the evil eye, the depredations of robbers, etc., as they are also said to relieve the pains of childbirth (al-Kastalani, *al-Mawsik al-laduniyya, Cairo, 1281 H., i. 337). Such representations are common in Algeria, Egypt, India and Syria.

(T. W. Arnold)

**KADAR**. The contradictory statements of the Kur’an on free will and predetermination show that Muhammad was an opportunistic preacher and politician and not a systematic theologian. It has been demonstrated (Grimme, *Einführung in den Koran*, vol. ii.) that his predeterminist position steadily hardened towards the close of his life, and the earliest conscious Muslim attitude on the subject seems to have been of an uncompromising fatalism. *KDR* is the root most used generally in the Koran, and appears to mean primarily "to measure, estimate" and then "to assign specifically by measure" as though Allah "measured out" his decrees. On the early opposition to this, which showed itself apparently before A. d. 700 and under Christian influences, see KADARIYA. In the course of the conflict two extreme views and two mediating views developed, the mediating views becoming those possible in orthodox Islam. All could appeal to Kur’anic texts and to traditions. The traditions are, of course, in great part shadows thrown back from the later controversies. They may be found in al-Buhairi, *Kitab al-Kadari* and also in part of the *Kins al-Zahab* (see, too, al-‘Asqar, *Kins al-Shaykh, Haidarallahi*, p. 84 sqq. (Hab al-Ra‘idat al-Kadari). The *Kadariya* [q. v.] were a distinct predeterminist sect who had no part at all in the actions which apparently succeeded from him. This became a heretical position in Islam. The other extreme, that man produced his own actions, was that of the Kadairites who eventually merged in the Malawilites. At first they did not venture to

use the word "create" (khada‘) — Allah alone was khada‘ — of this producing, but employed supposedly safer terms, such as *tawfiq, ‘insh’a‘*, but eventually they came to speak of man "creating" his actions. The intermediate, orthodox, parties were the Ash’arites and the Mutadurites. Of these the Ash’arites had thought out their position most logically, while the Centralites stated simply the evident facts in the case. The basis of the upholders of free will seems to have been the justice (‘adl) of Allah requires man’s freedom. But orthodox Islam, in general, cared little for that, although some, as al-Tahhirait and al-Razi, speak diatribic on the points. Parallel of the potter and the vessels; Allah could do what he pleased with his own. The orthodox difficulty was rather man’s consciousness of freedom. This the Centralites met by admitting that man did possess "free choice actions" (ya‘ni ‘insh’a‘) for which he was rewarded or punished (al-Nasafi, *Asbah*, ed. with comment of al-Tahhirait, Cairo, 1321, p. 97). Man knows the difference between a voluntary grasping and an involuntary trembling, but the contradiction of this with the absoluteness of Allah’s creative power is left unsolved. Al-Ash’ar introduced the idea of *khada‘* (see *kara* "accepting for one’s self’s", man accepts for himself the action of Allah and this accepting Allah’s consciousness of free will). Al-Ash’ar meant that this consciousness was only another part of Allah’s creative action. Man is still an automaton although part of his machinery is that he believes himself free. Between the two wide scope was left even in orthodox Islam for discussion. The ultimate, scholastic, Ash’arite statement, denying that man possesses any action at all — which must not, however, he takes for the only possible one in Islam — will be conveniently found in al-Fa‘lir’s, *Kifaya al-A‘lam* with al-Baidawi’s commentary, and in Lascari, *Prolégomènes théologiques de Sennouati*. This attitude struck so deep that even al-Qarawi, and that even at the end of the wonderful psychological analysis of the book of the *marifah* "the marvels of the heart", could quote with approval the traditions: "These are in Heaven and I care not, and these to Hell and I care not" (ed. with comment of al-Suyuti al-Murtazali, vol. 308); (cf. Macdonald, *Religious Attitude in Islam*, p. 301). For further among mystics see art. *‘ABD AL-RAZZAK* above.

**KADARIYA** is given regularly as a descriptive or surname (ta‘bih) of the Mu‘azzali, but it points back to a pre-Mu‘azzali time when the Muslims were beginning to ask theological questions and
when, the first among such questions, there were doubts of the harsh predetermination of Muhammad's last period. The later Mu'tazilites renounced the name and held that it applied better to those who maintained Allah's "fader of all things, good and bad, than to themselves who held that man has a certain power (fader) over his actions. The stricter they were, the more they wished to avoid the saying of the Prophet. The Kharijites are the Musali (Zaranastrians, Dualists) of this People", which means that they made man a "hakim el-fader, "creator of actions", thus giving Allah a partner in creating. But this saying was certainly later than the rise of the Kharidites, and the same may well have been first invented and applied to themselves by those who claimed a "fader" over their own actions. Another saying ascribed to Muhammad in this connection is, "They are the opponents of Allah in fader", i.e., they prefer to have a rival fader than that of Allah. Al-Tasbari (or al-Nisaburi) p. 96?) has given a pointed story of how a Musali, a merchant (ahma), Amr b. Ubaid, on both these points. The same which the Mu'tazilites preferred for themselves in regard to this doctrine was "the People of Justice" (judges); Allah's justice required that man must be free if he were to be rewarded or punished.

Bibliography: See That of Kadi and add al-Kadi: Majmu' al-Bula', 1235, p. 23; al-Subabali, Muhi (in margin of Muhi of Ibn Hama; Nallino, Sul ame' al-Qadi, in Rnt.

Khadi (Kadi): is a title in a special sense. If anyone accuses a respectable person (muhajir) of incompetence, without being able to bring four witnesses to support him, he is liable to a court of law for a certain punishment (fard) of 80 lashes for fard. The regulations on this subject in the law-books are based mainly on Kur'an xxiv. 4. In a case of fard, both male and female persons are considered muzajan, who have never been guilty of incompetence and who, in addition, are believers, freemen, of age, and in possession of their mental faculties. The right to demand the punishment of the guilty one is in the view of most Kadi, a private right of the person slandered (i.e., a fard al-fadar), so that the latter (as to his hair) may also voluntarily retract from exercising it. In the view of the Hanafi school, however, the fard punishment for fard is a right of God (fard Allaha), and neither the person slandered nor his hair can ever receive this punishment from the guilty one. If a husband has accused his wife of unfaithfulness without being able to prove the charge in the premitted manner, he can secure exemption from punishment by pronouncing the "marja formula" (m j). Punishment, moreover, may not be inflicted on the father, mother, or more distant ascendants of the insulted party, nor on women and infants. For a slave the punishment is only 40 lashes.

Kadi (Kadi) is the judge, who, according to the theory of Muslim law, has to decide all cases involving questions of civil and criminal law. In practice, however, there has been from quite an early period throughout the Muslim east a twofold method of administration of law, usually distinguished one from the other, with a certain amount of correctness, as "religious" and "secular". Only such questions as are popularly felt to be closely connected with religion (e.g., disputes on points of family law or inheritance, legal questions concerning pious foundations, etc.) are brought to be decided, in conformity to canon law, before the kadi, the "religious" judge; all other questions, according to the popular view current in the east, come within the province of the secular authorities, and they as laymen usually decide them by other standards. The kadi, however, according to the law, is a Muslim scholar of blameless life (hakim), thoroughly conversant with the prescriptions of the sacred law. Originally the theory of most muqaddasa's even demanded that the kadi should be able to derive the laws to be applied in his verdicts independently, as a muqaddas (muqaddas) from the sacred sources. Later, however, no one was any longer considered qualified to give his own interpretation of the law, the judges could only be muqaddasa's, who were tied down to the decisions of earlier authoritative scholars. The kadi, therefore, in giving his decisions has to adhere strictly to the rules which he finds laid down in the kadi books of his muqaddas. The administration of justice is considered a religious duty for the Muslim community. In each district the competent authority must appoint a suitable person as kadi. If there is only one, who could be considered legally qualified for the office of judge, he is bound to accept the office if appointed, and sworn to seek the office if the authorities should neglect to give it to him.

The kadi has to conduct his court exactly in accordance with the procedure laid down by the law. He has to treat the parties, if they are both believers, as equals in every respect. If the defendant admits that the plaintiff is in the right, no further proof is necessary. If the defendant, however, denies the other hand, does not acknowledge any justification for the charge, the plaintiff must support his assertions by proofs. The judgment of the kadi is decisive for the parties; there is no appeal from it.

To secure the independence of the judge, the law forbids the kadi to take presents from people who are appearing in his court. He also should avoid engaging in trade, either personally or through the intermediary of persons known to be his agents, as people might then attempt to win him to their side by offering special advantages in business.

In spite of these and many other regulations to secure as faultless an administration of justice as possible, the "bad kadi's" have at all times given cause for complaint in Islam. Most judges were ignorant and corrupt. If upright men filled the office, they frequently found themselves forced to bend the law to suit the will of authority. In religious circles there then soon arose a strong
dis qualification to fill the office of judge. Traditions were put into currency in which the Prophet was made to utter grave warnings against accepting the position of kâlî. Pious faqîh's e. g. Abû Ha-
ife, [q.v.] declined to fill the office of judge.

For many centuries past no Muslim judge has any longer come up to the original theoretical requirements of the law; for any existing kâlî is regarded by Muslim scholars only as ḥâfiz al-fa-
rih, i. e. as an emergency kâlî, to whom one
must go, in default of a better.

On the history of the office of kâlî and of the kâlîs:

R. W. J. H. Gottheil, The Caliph, the History of
this Institution in Revue des Études éthnogra-
phiques et sociologiques, i. (1908), p. 385–393;
The History of the Egyptian Caliph Oiced as compiled by Abu Omar Muhammad al-Kâmil, ed. by R. J.
H. Gottheil, New York 1908 (with an introduc-
tion); cf. The Governors and Judges of Egypt of
al-Kâmil, ed. by R. Guest (Ghâb Mem., xii.,
1912); and also the important remarks on the
office of kâlî in Cordova by Ribera in the intro-
duction to his edition of al-Khujâni, Kitâb al-
Kâmil fi-Qarâ'î (Hist. de los Juanes de Cordoba
por Afaxanu, Madrid 1914; cf. Ḥâdîth Khâlifâ, ii.
141, n. 2279).

The Prophet and the early Caliphs often decided disputes in person as judges, as their governors and as judges of the provincial towns. Justice was always administered in Muslim lands to a great extent by local authorities, notably the police officials. This was sometimes called 'Nâfî fi-l-ma-
qûlim (al-Mawardi, ed. Eger, p. 128 sqq.; H. F.
Amedroz, The Judicial Jurisdiction in the Ahkâm
Sultanîyyah of Mawardi, Journ. Roy. As. Soc.,

TH. W. JEVNOHILL.

AL-KÂDÎ AL-FÂDIL, ABD 'AL-'ÀMIM AL-KÂDHIMI
b. 'ABD AL-MUHMÂD B. AL-ḤÂFIN AL-KÂDHIMI
AL-BÂBAIÎNI AL-ÀSSÂLÂNÎ, MURÎJ (MURAD) AL-DIN,
Saladin's celebrated vizier, was born on 15
Dhu l-Disâd ii. 529 (3 April 1135) at Askâlan (q. v.)
where his father, a native of Balad, called al-Kâdî
al-Azhraf, filled the office of judge. In 542/1150
he became judge of his father's dār al-Dhâbîh in
Cairo as a learner. By 548 (1153) he had entered
the service of Ibn al-Hasâfî, kâlî of Alexandri-
a, as secretary. As his elegant reports from those attached to him in Cairo, he
was summoned thither as superintendent of the
Dâr al-Dhâbîh by al-Kâdî Râzîk b. al-Sâlih
Tâhî, the last representative of the vizier-family of the Sâlih Rustîk. When the latter soon afterwards was overthrown by Shûtrî, prefect of Kâf, al-Kâdî al-Fâdil became secretary to Shûtrî's son Kâmil and after Shûtrî's murder to Shirkâh, his successor in the office of vizier. In 565 (1170–71) he became deputy for Ibn al-Hasâfî, chief of the
Dâr al-Dhâbîh, under whom he had held his official career and on the latter's death on 23
Dhu l-Disâd ii. 566 (March 4, 1171) was appointed
his successor. Saladin having in the meanwhile taken over the vizierates. When in the next year
on the death of the last Fâtimid, Saladin himself
assumed the rule in Egypt, al-Kâdî al-Fâdil became
his right hand man in carrying through the reforms necessary in the army and taxation. He
then accompanied the Sultan on his campaigns in
Syria. He was in Egypt from 583 to 586 (1189–90)
to control the financial administration and re-
equip the army and navy. He then returned to
Syria and remained with Saladin till the latter's death on 27 Safar 586 (March 1193). When al-
Malik al-Afdal, who had taken over the government in Damascus, very soon jeopardized his authority by stupid measures, al-Kadi al-Fadil went to Egypt to al-Malik al-Ansari. War soon afterwards broke out between the two brothers, but in 951 (1155) peace was made through the mediation of al-Kadi al-Fadil. He thereupon retired to a life of private piety. He died suddenly on 6 or 7 Rabi, i. 596 (527 or 27 Jan. 1100). Of the numerous state documents which al-Kadi al-Fadil composed during his activity in the Diwan al-Makhzum, many examples are preserved in MSS. and in Abu Shama. Heilig gives a complete list. (p. 67–75). In addition there is his correspondence with Usama b. Muski as concerning the latter’s Kitab al-Asba from the Khalifat of ‘Abd al-Daim in H. Dehrenberg, More. M. Orient. p. 147–52. De’ d’Ozanne, French transl., p. 358–359. During his official career he also edited an official journal, Mus‘alat al-Mulk, of which al-Maqrizi gives many specimens in his Kitab. There are not only notices of official letters and the answers to them but reports also on important happenings in the kingdom or on gifts of honour granted by the Sultan.

AL KADI AL HAWARI. [See AL-ZARKILI].

KADI KHAN FAKIR AL-DIN, AL-HARAN B. MANSE R. AL-QIZISI AND AL-QIZISI, was a Hakim in the court of Tirist and a scholar who composed a large number of extant juristic works and commentaries on the works of others. In particular his collection of legal decisions (Fataw al-Kadi) has 4 vols. in folio. Calcutta 1835; with the subsidiary title of Fataw al-Safgini, in Lucknow 1835–57; cf. Cairo 1825) has become widely known on account of its accuracy. He died in Ramadhan 592 (1196).

(Th W. J. White.)

KADIM. [See KTHUM.]

AL-KADI, the Magpie, one of the most beautiful names of Allah; al-Amad b. al-Husain al-Majd, al-Mas‘ul al-Firdaws, Allahabad 1313, S. 15; Bihari, Murt. in the time of the Mughals, 48, 1888, S. 49.

AL-KADI BI‘LLAH, ABD AL-MUHTADE AL-AMAD B. ABU SA‘ID. Calliph. After the deposition of al-Tayy, his cousin Abu ‘Abd al-Muttaq al-Madh un was proclaimed Caliph in Ramazan 381 (Nov. 991) with the name of al-Kadi. The latter was a grandson of al-Mukhadhir; his mother was a slave. During his long reign he was entirely under the influence of the amirs ruling in Baghdad and only once did he give evidence of having a mind of his own. This was when the Buyid Quhir, al-Dawla (q.v.) wished to substitute the Sunni chief kadi by a Shafi‘i but his plan was frustrated by the opposition of al-Kadi, whereupon the Shafi‘i were given a superior of their own under the title nasab ‘intisab’. For the rest, all heretics, notably the Mu‘tazilites, were treated with the greatest severity. In this period arose the dynasties of the Marwandi, the Uqailis, and the Mirzads, and the GhurazWheel kingdom attained its greatest prosperity, while the internal disruption under the Buyids increased, and the Hamids and Shamsids, which had long been a bulwark against the Turks, collapsed. Al-Kadi died in the 2nd Hijra 422 (Nov-Dec. 1031) at the age of over 30. He is said to be the author of some theological treatises.

KADIRYA, Order (fadhil) of derrishas called after ‘Abd al-Kadi al-Dilimi [q.v.].

1. Orig. ‘Abd al-Kadi (ob. 581 = 1166) was the principal of a school (madrasa) of Hamadeh Law and a divan in Baghdad. His sermons (collected in al-Fasik al-Hamadi) were delivered sometimes in the one, sometimes in the other; both were notable institutions in the time of al-Athir, and his biographer, Gechi‘ al-Araki, v. 374) records a frequent of books made to the for the purpose of the cure of a man who died in 582 (1187–1197). Both appear to have come to an end at the sack of Baghdad in 656 (1258), till when it is probable that their headship remained in the family of ‘Abd al-Kadi which was numerous and divestigated. In the Bahdad al-Araki, where an accurate account of his descendants is given (pp. 113–117), it is stated that ‘Abd al-Kadi was succeeded in the madrasa by his son ‘Abd al-Wahhab (552–593 = 1157–1196) who was followed by his son ‘Abd al-Salim (654–691). Another son, ‘Abd al-Razak (589–613 = 1197–1227) was notable, and several members of the family were still in power during the sack of Baghdad, when it would appear that both these institutions came to an end. A divan was at this time distinguished from a divan, the former being a madrasa, the latter a place where an ascetic lived in solitude (al-Shahrazuri, Tadhkiri al-Muzaffar, margin of the Nihal, Cairo 1306, l. 217). In the time of Ibn Ba‘ drivers al-Shahrazuri had come to be used in the former sense also, and his description of the religious exercises practised at the divan, l. 71, would probably suit what went on at ‘Abd al-Kadi’s divan. The body of rules and doctrines which had his authority was sufficient to constitute a system (seta‘r). Ibn Quhir, p. 103), and by accepting the divan of the Buyids the arshid signified that he ratified his will. Both the death of the dey of the Khazar (al-Shahrazuri, l. 19). A long list is given in the Bahdad of men who attained various degrees of distinction who had received the divans from ‘Abd al-Kad in, two of them at the age of seven and one at the age of one. These persons were said to be virtuous men (tawfik or tawfiq or even tawfik).
'Abd al-Kādir, and could bestow the āfīrāj on others as from him; in doing so they would stipulate that the san'ā'ī was to regard 'Abd al-Kādir as his aqīqah and director after the Prophet. In a tradition which is likely to be apocryphal (Bahā'īya, p. 101), dated 992 (A.H.), it says that a servant of his āfīrāj was not absolutely necessary for entry into his Order; personal attachment to himself was sufficient. It would appear that during his lifetime several persons carried on propaganda in favour of his system; one 'All b. al-Mundhir obtained proselytes in Yemen, and one Muhammad al-Balātī, resident in Hāzīb, likewise in Syria; one Taš al-Dīn Muhammad al-Yāfīni, also of Ballāb, was another propagandist, and one Muhammad b. 'Abd al-Samād in Egypt "ascribed himself to 'Abd al-Kādir and in treating the Path relied on him after God and His Apostle" (Bahā'īya, pp. 109, 110). Since all who ascribed themselves to him were prominent and influential, the Order is likely to have been popular; and even in recent times missionaries in Africa appear to have been successful in obtaining fresh adherents to it (cf. O. Lenz, Timbuktu, ii, 133).

That 'Abd al-Kādir's sons had some share in spreading it is likely, though Ibn Taimiyya (ob. 728 = 1328) mentions that he had associated with one of his descendants who was an ordinary Muslim and not a member of it, and so did not agree with those who held fanatical views about him (Baghṣūt al-Maṭbūla, p. 124). The Bahā'īya, however, does not bear out Le Strange's assertion (Conférences Missionnaires du Sahara, p. 37) that in 'Abd al-Kādir's lifetime some of his sons had been preaching his doctrines in Morocco, Egypt, Arabia, Turkey and India. It says much of 'Abd al-Razzāq, but nothing of the "mosque now in ruins, whose seven gilded domes have often served as the subject of description by Arabic historians", which the son is supposed to have built. Indeed this mosque appears to have been better than Ḥamd Allāh Mustawfi (740 = 1339-40), the first author later than the Bahā'īya, who mentions 'Abd al-Kādir's tomb (Nūkht al-Kādir, transl. Le Strange, p. 48). Nor does it confirm the statement that this 'Abd al-Razzāq introduced the use of music in the ritual, and indeed the employment of this was earlier than 'Abd al-Kādir's time, and is discussed by al-Sulamī (ii, 116) without allusion to 'Abd al-Rezāq. E. Mercier (Histoire de l'Afrique Occidentale, i, 14) asserts that the Order of Khāriyān existed in Barbary in the 16th century A.D., and was closely connected with the Fatimides (whose rule commenced 567 = 1171), but he gives no authority for these statements.

Al-Sulamī holds that the exercises of each musābā should be determined by his šakīb in accordance with his individual needs, whereas it is unlikely that 'Abd al-Kādir instituted any rigid system of dāfīr, word and šāfī, and indeed those in among different Kādiri communities differ (Rume, Marwadun i. Khānān, p. 183, 183). The initiation ceremonies given on Turkish authority by J. P. Brown (The Dervishes, p. 98) are quite different from those furnished by Rume on North African authority. In one of these latter there is a tendency to set 'All above Muhammad and to insist on the importance of Ḥasan and Husayn, which cannot well represent the views of the Ḥanbalī 'Abd al-Kādir. The word of 'Abd al-Kādir in al-Fugāt al-Khāriyya is given on the authority of an 'Abd al-Allāh b. Muḥammad al-'Adjamī, who lived 185 years (536-721), and may be regarded as mythical.

2. Development. Khāriyān seems from an early period to have developed on different lines according as 'Abd al-Kādir was regarded as the founder of a system involving-rights and punishments, or as a worker of miracles. In the latter direction it meant the deliteralization of 'Abd al-Kādir, the extreme holding that he was Lord of Creation after God, absolutely, whereas the more moderate supposed that he was so only in his own age (Baghṣūt al-Maṭbūla, l.c.). The latter was the view of Ibn 'Arabī, who takes him as an example of a šāfī who showed himself and practiced sovereignty (jaqarūn); al-Fuṣūl al-Khāriyya, ii, 407); such a šāfī in his system is independent of the revelation to Muḥammad (Qāsid al-Husayn, § 16). But there was also a theory that 'Abd al-Kādir practiced in his grave all the activities (jaqarūn) of the living (Ibn al-Wardī [ob. 749]. Tārikh, ii, 70); and Ibn Taimiyya (al-Dīmūrī al-Sābi, l. c.) mentions him among saints who in his time still appeared to people, being in reality impersonated by demons. In the initiation ceremonies recorded by J. P. Brown, l.c., the candidate for admission to the Order sees 'Abd al-Kādir in dreams, and in one case so often and so clearly that without having seen 'Abd al-Kādir's portrait he could recognize him among a thousand. The form of Khāriyān which means the worship of 'Abd al-Kādir seems to prevail in North Africa, where it is called Ḥilāll (for Ḥilāliyya), and whole communities are called Ḥilāliyya. Their system has been described as the application of Sīrīc mysticism to beliefs that are certainly pre-Islamic, and the main character of that mysticism marks the form of a cult of hidden or supernatual powers (E. Michaux-Bellaire in Anciens Marocains, xx, 235). Here the word khāriyya is used for a heap of stones where women attach rags to reeds planted between the stones and where they burn bensoin and styx and posthumous (ibid., xxii, 65). Such khārūn are to be found in all the Arab villages. Similarly in the province of Ouma on all the roads and on the summits of the chief mountains khārūn are to be found in the name of 'Abd al-Kādir Ḥilāli (E. de Neveu, Ordres Religieux chez les Marocains d'Algérie, p. 36). The society of the Genzāwah or Negoes of Guinea has placed itself entirely under the protection of Mawlāy 'Abd al-Kādir with all the orgies of male and female demons; whereas M. Michaux-Bellaire finds traces of the powers which, according to the Khāriyya (and even earlier authorities) belonged to Solomon. The cult of 'Abd al-Kādir is most ardently practised by the women in the Ḥilāl and 'Āmy, who come to the khārūn for every sort of object, and to satisfy their loves and hates in all the acts of their existence. The men on the other hand chiefly go to the khārūm when they are ill (Arch. Maroc, vi, 329).

That this development is consistent with Islamic orthodoxy is evident, and it is attacked by such authorities as Ibn Taimiyya and Ibrāhīm al-Shāhī (Iqbal, i, 348, 399). The system to which the name Khāriyān is most ordinarily applied differs from other orders mainly in ritual, although, through circumstances encountered in the are.

*It has not that homogeneity of statutes which is to be found in other congregations, which seems to form small exclusive churches outside which
there is no salvation" (Rinn, p. 188). Though the
founder was a Muslim, membership is by no
means confined to that school, and the Order is
theoretically both tolerant and charitable.

3. Geographical Distribution. Since
historical and geographical works rarely distinguish
between the different sufris in their accounts of
religious buildings, little can be said with certainty
of the date at which the first Kadiris were
established in any country save Iraq. The Order is said to have been introduced into Persia by the pater of two of 'Abd al-Kadir's sons, Husain ibn 'Abd al-Kadir (ob. 598/1200-1201), who was in Dijilj, a village in
Singhar); they had migrated to Spain and shortly
before the fall of Granada (897 = 1492) their
descendants fled to Morocco. The full genealogy of the Shusha Djinlisi of the name is given in Arch.
Mores. iii. 166-174, on the authority of
Abd ar-Rasul ibn al-Tayib al-Kadir (1060-1679), who claims to have used a series of
authentic documents. The Shusha of 'Abd al-Kadir
in Fez is mentioned as early as 1160-1202.
(lidda, xli. 316). The order was introduced into
Akbil Minor and Constantinople by 'Abd al-Rizq, founder of the men. He is known as the Kadir al-Muhaddith (ob. 1568-1631), who is called Furat al-Din, "Second Shusha", is said to have founded some 40 sufris in those regions (Qandil al-Akbar). A Kadiris sufr in
Mecasha is mentioned by 'Abd al-Malik ibn al-Samadi, p. 381, about 1180 (1660-70), but the mention that a branch was established there
during the lifetime of 'Abd al-Kadir (i.e. Chatellerault, E., p. 44) is not improbable, since Mecasha has a natural attraction for the Sufi. In the A'ta-i-Abhar (about 1600) of J. E. Bartlett, iii. 357, the
Kadiris Order is mentioned as one that is highly
tempered but not included among those
recognized in India; nor does there appear to be any
affiliation to it in the list of Indian tariqas in the
Madug-n-i Kahir (1729), though since other
orders are mentioned, and 'Abd al-Kadir himself
is mentioned. Yet see 'Aziz Khan, Muqaddimah
al-Chahar, ii. 604 and art. Sitara, p. 429.

Some statistics (to be received with caution
of the Kadiris and their sufris are given by
Dupont et Coppélion (Conférences Religieuses Musul
maises, pp. 301-318). Much of its development is
admittedly recent, and may be due to the fame
won by the prominence of 'Abd al-Kadir who for
so many years retained the official position of
North Africa (see p. 48 et). It is doubtless
represented in all Islamic countries, though it would appear that certain derived sufris enjoy great
popularity in many places. Thus the Kadiris of
Tabgha in Tunisia, which has become a distinct
sign whereby the Dukkanite tribe can be recognized, is derived through the Sitara from the
Sufis of the Kadiris of the Komata of Timbuctoo (T. Marti in Econ du Monde Musulman, xxxvi. 183). These
Komata however form a filiade of the Kadiris,
and some of them prefer to call themselves Shadi
(kha. 413).

4. Organization. The Kadir community
acknowledges mutual allegiance to the keeper
of 'Abd al-Kadir's tomb in Baghdad, and the
dead of institutions published by Rinn, p. 179,
and in the E. J. of the Oriental Institute, li. 218
and li. 290, are from this source. It would seem
however that the actual authority of this
personage is chiefly recognized in Mecca and
India. The latter periodically send gifts which
form the main source of the revenues of his
establishment, the members of this family find it
worthwhile to learn Urdu. The Meccan sufris are
subject to the Shadi al-Mutahra, who has the
right to nominate their mullahs. The Egyptian
branch is under the control of the Sayyid ibn
'Atiq, who is also Shadi al-Mutahra. The
Mozaffaruddin Muhaddith (III. 129; see also P. Kahn in Der Islam, vi. 154) reckons the order as one of the four which go
back to the pasha, but asserts that it has neither
Fara nor sayyids. In Africa, according to Rinn,
the most important of its successors; in the event
of one dying without having nominated, an
election is made by the mutawwans as a sayyid.
The approval of the head of the order in Bagdad is
then solicited, and has never been refused. The
organization of the Order in North Africa is de
scribed somewhat fully by Rinn, Dupont et Coppélion, in the works cited. The system appears to
be in general congregational, i.e. the moawwans are independent, and the relation between them
and the central institution in Bagdad is very
loose. The principles whereby the leadership of a
sufris is determined is generally recognized.

5. Symbols and Rites. The sign of the Turkish Kadiris is said to be a rose which is green,
having been adopted by 'Abd al-Rizq. The
candidate for admission to the Order after a year
may bring an araghe or small felt cap, to which if
the candidate be accepted the Shusha attaches a
rose of 16 petals, with Solomon's Seal in the
centre. This cap is called by them Dull. The
symbolism of this is explained by J. P. Brown, The
Dull, p. 98 seq. (copied by W. Forster Clarke,
tr. of Amdur, al-Mutahra, p. 159; the Urdu
translation of which adds nothing to Brown's
information). According to him, they prefer the
colour green, though they allow others;
while in Lame's time the turban and bani of the
Kadiris in Syria were white; most members of the
Order were fishermen, and they in religious
proccessions carried upon poles nets of various
colours (Modern Egyptian, 1871, i. 306). In India
there are festivals in honour of 'Abd al-Kadir
on 11 Rabi' II, and pilgrimages are made in many
places in Algeria and Morocco to the shrine of the
shrine of the saint (Rinn, p. 177). The
Mausoleum of the Lijlais at Sahl is described at
length by J. Mercier in Arch. Maroc, viii. 137-
139, it commemorates the seventh day of the
Mawlid (Mawlid), i.e. the Feast of the Prophet's
Birthday, and last four day's 14-20 Rabi' I. Brown
speaks of its importance as the "descent of
'Atiq, M. Michaud-Bailleul (Director of the French
Mission to Morocco between the ceremonies of the Kadiris, who
recite the kin, and the Lijlais, who recite the
shah to the accompaniment of instruments; and
again between the Lijlais of the country, whose
instruments are the bendir (a sort of big tambourine without skin) and waqras, and those of
the town, whose instruments are the jembi, nafiy
and ghirsha (Arch. Maroc, vi. 373 and xvii. 50).
A description of the ghirsha is given by M.
Sallier, a performance executed with these last instruments, which leads to ecstasy, is given by him in the first
passage cited. He further records some special curriculums connected with the Awlad Khalifa in the
Kharaz (1844, xx. 257). All the Lijlais of the (Shab) are Lijlais, and in all the hafris (servants) of the
Eqdita, the presence of at least one Khaliif is necessary for the direction of ceremonies, and when no actual Khaliif is present, some one there takes the name in order to perform the priestly duty. The origin of the name Awlad Khaliif is obscure (p. 284); it may be noted that the Arabic mention one Khaliif b. Murad al-Nahhali as having played a leading part in the propagation of 'Abd al-Kadir's system. The saqiya of the Eqdita of the country contains neither the bakh nor the shara, instituted by the Shaliit, but a plain dish of improvised words in the ceremonial rhythm of the bakhsha (plur. of bakh). These improvisations always terminate with the words: Thum sayak Mawlay 'Abd al-Kadir! or 'O Mawlay 'Abd al-Kadir!' (Michaelis-Beltrais, p. 288).

Various collections of sufi stories have been recommended by 'Abd al-Kadir have been published in Egypt, Turkey and India. In al-Taba- laqat al-Khayyimyya he who is about to enter upon Eqdita (retreat) is advised to fast in the day and keep vigils at night. The dawn lasts forty days; 1, is kaekat, 'what is said after dawn,' 2, is kaekat, 'what is said after noon,' and 3, is kaekat, 'what is said after dusk,' he should say 'may not the word be God,' and if it be for probation, it will vanish; but if it remain, then it will be a genuine revelation (tawaddu) (Dhikr 1335, p. 59). Reduction of food during the 40 days should be gradual till for the last three fasting is complete. At the end he returns by degrees to his former diet.

Some practices peculiar to the Eqdita of Tangier are recorded by G. Salmon (Arch. Maroc, ii. 108). Those who make vows to 'Abd al-Kadir are in the habit of depositing in the shaliit white cocks, which are called waqarrar (Sierra ib. 31); they do not kill them, but leave them free to rove about the shaliit, where however they do not long survive; the Sharif who lives hard by takes them for his food. The four daughters of a deceased Sharif continued to live on the revenues of the shaliit and carry away the waqarrar fowls. The menzadeen at this shaliit was the Sharif, who conducted the ceremonies at which the Kharijite is repeated is the shaliit of 'Abd al-Kadir being pronounced, and where dances similar to those of the Tawwa (q.v.) are performed. Circumcisions are performed at the shaliit on the first day of the month, and the last day of the month. A nightly meeting called Mrda is held on the eve of this day, at which the shaliit of 'Abd al-Kadir is recited. El-Qsar, where there are also some local practices, all the potters belong to the Eqdita, among whose the richer members of the community are to be found (ibid., ii. 163).

The first time that the Eqdita appear to have played a political part was during the French conquest of Algeria; in 1830 the Eqdita of Medi- nity Mahdi b. Dini, having been offered the leadership in the war against the infidel, permitted his son 'Abd al-Kadir to accept it. This person was able to utilize the religious organisation of his order in order to establish the sovereignty which the French had accorded him, and when his sovereignty was threatened could fall back on his rank as menzadeen of his order to win fresh recruits (H. Gerret, Histoire generale de l'Algérie, Algiers 1911, p. 300, 683 etc.). Since the fall and exile of this piousman it would appear that the Eqdita is Algeria has lost their support to the French government. In 1899, when there was a local insurrection in Amir the shaliit of the Kadijsa of Mena'i, Si Muhammad b. Ahmad, displayed unmitigated loyalty [e. art. AWA, 19, 5234] and the same order helped the French government to extend their influence in the Sahara at the battle of Choua, March 2, 1901. (Israel Hazet, Le Musée de l'Amérique française au Sahara, Paris 1901, 270)." — In the Ottoman Empire (1858) it is said that their sympathies were with the revolutionists, but that for fear of being outdone in religious zeal by the rival Rif claim, which joined them in Bagdad in the "pogroms" against the Jews (L. Massengue in Revue du Monde Musulman, vi. 461).

Bibliography: Eastern editions cited: Ali b. Yusuf al-Shatibi, Bahgat al-Asrur, Cairo (Maimurra Press), 1593; al-Fatat al-Rahban, Cairo (Dhikr al-Tahri Press), 1531; Sihih b. Mahdi, al-Asrur al-Madhidin fi Dilbar al-Hirr fi 'Ank al-Asrur wa-Madhidin, Cairo (Shiit Press), 1528; Rashid fi al-Madhidin, Cairo (Ku- allathan Press) 1539, 2 Vols., and any other Arab geographers mention the glassworks of al-Kadijsa. In the middle ages the important Djiufi canal led from the Tigur into the town. The ruins of al-Kadijsa lie in Lat. 34° 5' N., between the two still existing out of the former town Tigur canals called al-Kadijsa; they are a short quarter of an hour distant from the bank of the Tigur. The old name has survived and is now popularly pronounced Dja- disa (occasionally corrupted to Dja'isya and Dja'isya). We owe full accounts of these ruins particularly to Ross and Jones; E. Herrfeld also has recently investigated the ruins. Jones gives a plan of the ruins of the town, which Herrfeld says is entirely correct.

The enclosing walls which measure about 6000 paces form a regular octagon. They are flanked by towers at the corners and defended by 15 bastions at intervals. They were built of bricks which in technique, plan and proportion resemble the castles of Samaria. According to all criteria, these ruins belong — in Herrfeld's opinion — to the 'Abbasid period, not to an older one. Ten minutes from al-Kadijsa, just on the river bank, are also ancient ruins, called al-Sanam. They mark the site of a mediaval or ancient town, half of which has already been washed by the Tigur. On a remarkable find of statues made here, see P. Rich, Narrative of a Residence in Koristan, 1836, ii. 152. Al-Sanam perhaps was within the area of al-Kadijsa and is to be regarded as its port.

AL-ḴADIŠYA

The exact location of al-Ḵadiša was unknown until quite recently. An attempt had been made to identify it with the early Muhammadan ruins of al-Ḵuḏkūn (35 miles S.S.W. of Kufa)—for example by Ritter, *de loc.,* xi. 936, Loftus, *Yazids in Chaldaea* and *Sassanias* (London 1857), p. 64 note, and Justi in the *Grundriss der Irann. Pflh.,* ii. 546. This identification, however, is to be definitely rejected as erroneous. Besides, Ritter, *de loc.,* vi. 356, places al-Ḵadiša much too far north, while the locations of al-Ḵadiša and al-Ḳuḏairah given by Wagner (*Näherliche Gewölle,* 4°, 1902, p. 257-9) are fairly correct. A. Matoll, in his journey of exploration in 1912, was the first to rediscover the real site of al-Ḵadiša, cf. his report in the *Beobachtungen an armen. Stadt. Akad. der Wiss. Berlin,* 1913, i. 11 (12 of the reprint). Matoll makes remarks that the spring al-Ḡajja rõśīn in the valley of al-Ḳuḏairah; on the left bank of that valley, on the edge of a swamp where we were shown the ruins of al-Ḵadiša. This was the site of al-Ḳadiša. According to the map which Matoll accompanies to his essay in the *Wissenschaftliche Ergebnisse der Arbeiten der Armen. Akad. der Wiss.,* xxxv. (1916), p. 461, the ruins mentioned are situated in 35° 45' N. lat. and 43° 5' E. Long. (Greenwich) directly south of Nadif and 10 miles from Kufa.

The locality of Kandish which Bouchalamp in his excursion to the ruins of Babylon in 1760 heard of at the find-spot of a statue some considerable distance away (see the reprint of his account of his journey in the *Kreuz d'Asyriologie,* x. 190) is perhaps also identical with the remains of al-Ḵadiša discovered by Matoll. Kandish is probably the same as the name of the town, which is occasionally found alongside of Kadiša, as for example in an old Arab text (see al-Iklān, ed. Wiseman, p. 226). In al-Taḥṣīl, etc. Firdausi

series Kadiš and Kadiša. In the neighbourhood of al-Ḵadiša there was a village called al-Ḳadiša, "little Kadiša". The poets give the whole district round al-Ḵadiša the collective name al-Kawālida.

The Arab geographers of the 9th (Abu Ǧayyār) century (al-Ǧayyār, Ibn al-Maḏahān) describe al-Ḵadiša as a small town with two gates and a mud fortress, in the midst of cultivated fields and groves of date-palms, watered by a stream fed from the Euphrates, the last running water in the Irak. In ancient times the inner arm of the Persian Gulf seems to have stretched up to the region of al-Ḵadiša. The main arm of the Euphrates once flowed, as al-Ṭāʾīn al-Ḏabīlī al-Ḏabīlī, al-Ṭāʾīn al-Bāḥi, towards al-Ḥira, where its ancient bed was still visible and was called al-Ṯāʾīn al-Bāḥi, the old (river). It took its course between al-Ḵadiša in the north-east and al-Ḳuḏairah in the south-west, at al-Ḵadiša there was a bridge across called Dīvār al-Ṭūr or Dīvār al-Ḵadiša.

In the Sassanian period al-Ḵadiša played a prominent part as an important frontier town of the Persian empire. It was not till the Muḥammadan period that the town became very famous on account of the splendid baths and baths in its vicinity, which the Arabs opened their second campaign against the lands of the Euphrates and Tigrais in the most successful fashion. The Muslim army under the command of Saʿd b. Ṭabāk (while the Persian troops were led by the imperial commander-in-chief Ṭūs). The latter did very considerably regarding the numbers on the sides; the number given for the Arabs varies from 6,000 to 38,000 and that for the Persians 30,000 to 120,000 men. The latter were undoubtedly superior to the Muslims in strength. The estimate of an almost contemporary Armenian historian may be fairly near the truth when it puts the Persians at 80,000 men and the Arabs at 9—10,000, besides the Syrian reinforcements of 6,000 men who arrived in the last stage of the fight.

It was only after the two sides had stood watching each other for weeks that they joined battle. The battle lasted three or four days. These days in the specifically Irak tradition have special names, which are probably to be explained as place-names. In spite of all the heroic courage of the Arabs, the balance would finally have turned in favour of the Persians, if at the critical moment of the decision the troops hurried from Syria had not arrived in time. Their rapid and vigorous intervention decided the victory of the Arab army. It was, however, not a cheap victory for the Muslims, as about a third of their whole force perished. About the countless very heavy Persian losses the accounts are contradictory. The Persian commander-in-chief Ṭūs was captured, wounded and killed in the heat of battle. Very considerable booty was taken by the victors. The most important trophy was the Persian imperial standard said to date from the early Thāni period (see it seen in *Zeitschr. d. Deutschen Ges. d. Wiss.,* xxvii. 523-4).

The glorious day of al-Ḵadiša, which made the Arabs masters of the Irak west of the Tigrais,
one of the most celebrated events in the great period of the Muslim conquests. It laid the foundation for the supremacy of the religion of Mohammed in the eastern world. Of course tradition has woven many legends round the victory; it is frequently mentioned in the older Arab poetry.

The date of the battle is very uncertain. The statements in the different sources vary from the years 14 to 16 (635–637). One thing is certain that the battle was fought in the spring and that Bavilas was founded at it. Wellhausen (op. cit., p. 72) decides for 15 (636), while Caesari prefers 16 (637) (op. cit., p. 629–633); see also Justi, Grundriss der islamischen Geschichte (1864), p. 546.

The Armenian historians call the battle after its (Armen. Herhchats); see the account by Scholz in Hübisch, Zur Geschichte Armeniens und der ersten Kriege der Araber (Leipzig 1875), p. 44 and Caesari, op. cit., p. 685.

In addition to the two towns mentioned above, Vakht knows three other places called Kadiyaa, namely two villages in the district of al-Mawif, on the Nahr al-Khur in between al-Mawif and Bilin, and a third near Djarra b. Omar in Mesopotamia; see Vakht, al-Mugharri, ed. Wüstenfeld, p. 337; Ibn al-Askari also mentions an al-Kadiyya near Bughafa (op. cit., xi, 91). We also find the shorter form al-Kadis beside al-Kadiyya, e.g. for the battlefield (cf. above), for a village near Herat (see al-Mugharri, p. 377; al-Baladjuri, p. 409, 2) and near Marw al-Rafi (Vakht, iv, 7). Probably in all these place-names, as Noldeke suggests (Zeitschr. der Deutsch. Morgenl. Ges., xxiii. 1823), we have to deal with traces of a lost people of unknown nationality, namely the Kadiyans, who appear in Syrian literature of the 7th and 8th centuries as a wild warlike people, not subject to the jurisdiction of any prince. The places called al-Kadis and al-Kadis in Mesopotamia, Babylonia and on Persian territory are perhaps to be explained as settlements of branches of this stock, made by the Seljuk kings. Of the celebrated al-Kadiyya near Khūlah, it is at least definitely stated that its name comes from Kādis near Herat, from which the garrison of the fort belonging to the military cordon on the frontier had come. Cf. Noldeke, op. cit., p. 317 sq.; J. Marquart, Kartenbuch der Geographie des Nord-Afrikas und der Ostsee (Abhandlungen der Ges. der Wiss., 1901), p. 77, 78. (M. Strecke)

Khejar (Arab. qal' a marching quickly; cf. Salamis Ebenill, Elzheimer Cogitatum, Scamboli 1298, p. 241), the name of the present ruling dynasty of Persia. It takes its origin from the tribe of the same name settled in the district of Astarbad (Q. v.), but which had not always been there. Persian historians assert that it is a branch of the great tribe of Qājār (Q. v.) that it takes its name from Khejar Nūmān, son of Seršāh Nūmān, who had been the tutor of Ghiyāth al-Din (Q. v.). Seršāh is not without doubt the same as who was put to death by Haidū (Q. v.), because he was the patriarch of Ghiyāth (Q. v.) in 694 (1298) (Wasfā, Bombay 1869, p. 322; d'Ohsson, Hist. des Membres, iv, 115). This tribe had, it is said, settled on the frontiers of Syria after the reign of Abbas Sādūq (Q. v.), in 736 (1335). Tīmid is said to have brought it back to Persia and into Turkestān, the whole single country, in 803 (1400). It was one of the Turkmans tribes which placed the Safavī dynasty on the throne of Persia. To it belonged Shah Kūl Kehir (body-guard), who was twice appointed ambassador to treat for peace with the Turks in 962 (1555) and in 975 (1567) (Pescetti, i, 337, 334; v. Hammer, Hist. des Inbegriffen, i, 1868, p. 1 sq.; Kāj Kāl Khan, i, 2 in wrong giving the date 969). In 993 (1587), Shah Aḥmad I. finding them too numerous divided the tribe into three groups: 1. at Marw against the Uzbek; 2. at Gānja and Erwīn; 3. at Astarbad in the fortress of Mubarakabad which he had just built; those who established themselves in the high part were given the name Fakhrābād; those who lived in the lower part adopted the name Afshā-bād. The object of settling them in this region, was to protect it from the incursions of the Turkmans from beyond the frontiers.

A member of the Astarbad branch was Pahlāvī Alī Khan b. Wāli Khan b. Muhammad Khan, to avenge the death of his two brothers he reigned Astarbad. In 1125 (1713) he went to the defense of Isfahān against the Afghāns at the head of 1000 horsemen; but being denounced to Shah Ḥusain as dangerously ambitious he returned to his province, abandoning the Safavī king to his unfortunate destiny. Called to their help by the people of Ray, he fought without success against the Afghāns at Harāmshāh in Wasat, and returned to Māzandaran to offer his services to Shah Tahmāsp. During the advance on Mashhad he was executed by order of Tahmāsp's general Nadir (the later Nadir Shah) on 13th Safar 1159 (21st Oct. 1726) (Mahdi Khan, Turkestan Names, Tiflis 1866, p. 21).

His son Muhammad Hāsan Khan, pursued by Nadir Shah, took refuge with the Turkomans, collected supporters there and recaptured Astarbad, which he lost a little later again; it was then that the two sableks of decapitated heads were built (Kaltonmaviat) which Hanswaw saw (illustration in Historical Account of British India, London 1873, 613).
KADJAR DYNASTY.

Fath 'Ali Shah, born 1772 (1763) or 1764 (1763); succession 1797 (1797); died 1832 (1830); buried at Khavajeh Rahbar, near Mashhad.

Muhammad Hasan Khan, born 1777 (1775); succession 1794 (1791); died 1800 (1798); buried at Shah 'Abd al-Azim.

Hasan Khan, surnamed Dihnahan, born 1768 (1765); succession 1794 (1791); died 1809 (1807); buried at Amolabad.

A. Mahmoud Shah, born 1793 (1790); succession 1797 (897); died 1834 (1832); buried at Nafaj (Mehmued Ali).

2. Fath 'Ali Shah, born 1785 (1784); succession 1797 (1796); died 1834 (1832); at Kirmanshah. - 'Abbas Mirza, surnamed Shadjahan, born 1803 (1788-89); died in Khirmand before his father's death (1831-32); buried at Mehmedabad.

3. Muhammad Shah, born 1822 (1807); succession 1834 (1851); died 1848 (1848); buried at Kirmanshah.

4. Nasir al-Din Shah, born 1834 (1831-32); succession 1848 (1845); died 1896 (1893); buried at Teheran.

KADJAR DYNASTY.

KADRI, a Persian poet who commemorated the siege of the island of Kish and of the town of Hormuz by 'Abbas I in two short epic poems, 'Ejmāni Kish and 'Ejmāni Hormuz. The former is edited by Bonelli in the Konversations der Konigl. Acad. der Linnen, vii., Supplement 1, fasc. 8; cf. Etho in the Grundriiss der islamischen Philologie, ii. 392.

KAF, the 22nd letter of the usual Arabic alphabet (numerical value 20; cf. the article 'AHMAD). The pronunciation of kaf as an unvoiced palatal explosive, found as early as Susa, has survived in modern academic speech. In the present day popular speech we find some variants (in addition to the) notably the affricate (< k' > k'). Cf. the article 'ARAB, ARABIC WRITING, i. 385 and plate 1). In Susa, Shah Isma'il pronounced it as a velar. This pronunciation is still frequently found among Bedouins and peasants; in the ordinary popular language, however, kaf is usually pronounced as kaf (cf. for other modern pronunciations of kaf see the article 'ARAB, ARABIC IDEOGRAMS, i. 390). The modern academic pronunciation is k. (i.e., velar 2). Cf. Schade, Susa, Index. - Kaf is also the title of Suna L. al-Karun, (A. SCHADE).
knows the bull and fish as breeder of the earth; cf. H. Petersmann, Reisen im Orient, ii, (Leipzig 1864), p. 301. Among the inhabitants of the Red Sea coast, the belief prevails, that the earth rests on the backs of colossal bulls, see E. König, Reisen in Abyssinien, i, (Frankfurt a. M. 1833), p. 256.

Al-Kawáwín gives for the bull and fish the names of the Biblical monsters, Leviathan and Behemoth, and thus shows definitely that the Mountain Káf is connected with the old Biblical views, which again can in the last resort be traced to the Babylonian Chaldean tradition. The basic idea of the bull supporting the earth is, as Rainaud (op. cit.) has emphasized, also to be found in India. The rock already mentioned supporting the earth and as the starting point of the mountain Káf may well be associated with the stone Shemshu, which Jewish legend regards as the mound of the earth sunk by God in the depths of chaos or primordial ocean, and as the support of the world. For the Jewish legend cf. Feuchtge in the Monatsb. für Gesch. u. Wissensch. des Judenthums, iv, (1910), p. 724 sq.; W. H. Roscher, Nrn. Mythol., s. v. Kaf. (Abhandl. u. schriften, Geschichtl. u. philol. IV, XXIII, 1915), p. 73 sq. It may be added that a tradition in al-Kawáwín (1. 444 sq.) also gives the view that God made the world stand without any land or support.

According to a very popular idea, Káf is the origin of all the mountains of the world. They are associated with its by subterranean branches and veins; if God wants to destroy any region, he simply orders one of these branches to be set in motion, which causes an earthquake. According to a different popular view, an earthquake is caused because the bull supporting the earth sometimes trembles under its burden.

Káf which is inaccessible to men is regarded as the end of the world; its name is therefore used as a symbol for this; cf. e.g. a verse in Djin's Yûm af-az-Zilâgh (ed. Rosenmeyer, p. 144, 4). This mythical mountain forms the boundary between the visible and the invisible world. No one knows what lies behind; God alone knows the creatures that live there. Many say (cf. Ibn al-Wardi, p. 188) that the area behind Káf belongs to the next world, is a land white like silver, 40 days' journey long and is the abode of angels. According to an allegiance, saying of Mahammad (see Zenker in Litt., op. cit., p. 236), there are still other lands beyond Káf: one of gold, 70 of silver, 7 of brass, each 10,000 days journey long and broad and all inhabited by angels. It is also said that Káf, as well as the region behind it, is the abode of the fabulous bird Stromb (a kind of vulture, which is essentially the same as the phaëthon [q. v.]). The name of the bird is Arabic. Existing since the beginning of the world, this marvellous bird retired in monastic solitude to Káf and lives there contented and satisfied; a wise councillor consulted by the kings and heroes of the past. Káf, his residence, is therefore simply called "Mount of Wisdom" in poetry, symbolically also "Mount of Contemplation". In his celebrated work, Musafir al-Fair ("The Dialogues of the Birds"), the Persian poet Fáiz al-Din Aṭṭâr uses the wandering of the bird through the seven stages which the soul has to pass through till it is complete merging into God, in the allegory of a very difficult, adventurous flight by a bird through...
the seven valleys up to Mount Kaf, the throne of its all wise king Simargh.

Kaf played a part also in Arab fairy tales; in the Arabic Nights, as in several minor works, it is usually called Simargh. Oddly enough, a number of Kaf in exposition somewhere, the title of Sura I, the letter Kaf, as the name of the mountain Kaf in the Arabic language.

In a narrower sense and localised.

Kaf means that part of the Persian highlands which bounds the Hindu races in the north, especially the Caucasus and Caspian Sea to the north and the Caspian Sea to the north. For this reason it is called, on the north, the Caspian Sea, the mountain system of the world, for all other mountains of the world have grown out of it by water and fire connections. The Kaf was imagined to be a range of mountains, extending at least as far as the mountain as the mountain system of the world. The name Allure (Sahar) is thus found in several places to-day, a range or as the name of a mountain or as the name of the mountain as the mountain system of the world. The name Allure (Sahar) is thus found in several places to-day, a range or as the name of a mountain or as the name of the mountain as the mountain system of the world. The name Allure (Sahar) is thus found in several places to-day, a range or as the name of a mountain or as the name of the mountain as the mountain system of the world. KAF - KAPA

(M. Streck)

KAPA or Kafa, also written Al-Kaf, is a mediastial town on the south shore of the Crimera Peninsula, called in ancient times and again at the present day Theodosia (originally a Milesian colony). The name Kafa or Kafa is first found in Konstantinople Porphyrogennetos (De adelicibus, imperis, Ch. 53). Socrates, V, king of Bosporus, is said to have been killed there in the fourth century in single combat with Pharnaces of Chersonesus. The view has been put forward (V. Köppen, A. V. Bedrock, St. Petersburg 1887, p. 107) that the name may be identical with the Kafa mentioned in Strabo, Ch. 312. With these exceptions, Kata is never mentioned till the sixth century. As a harbour on the south coast of the Crimea, for trading-vessels as well as for war-ships, we always find Saxonik (even as late as the twelfth century in Ritter, Gesch. der Seligezonen, ed. Hauhem, ill. 2. see Index), the modern Sudak.

Kafa only rose to prominence in the second half of the sixth century, when the Genoese established themselves in the Crimea after the republic of Genoa had purchased this place from a Tatar chief. This chief is usually believed to have been the Geno Tand, mentioned by Abu 'l-Kindi (ed. Desmouliana, p. 173), son of Toghi Tandar, and grandson of Jatib, to whom the Khan Mongke Tandar (1265-1280) had granted Kafa and the Crimea; the name is written by Abu 'l-Kindi (p. 173), Us-Tandar, by Rashid al-Din (ed. Blochet, p. 129), Tandar Tandar; but a consul of Kafa is mentioned as early as about 1263. It was not till the seventh century that "Kada" or "Kaza" became the colony founded by the Genoese on the Black Sea with Kafa as its capital, because of considerable importance. It was controlled by the "officium Genuense" in Genoa and its statutes (1310); the administration remained in the hands of the Genoese with a limited participation by the local population. The statutes of 1309 and 1316 expressly forbid the minting of a local currency but in the seventh century this was, in practice at least, allowed; the coins (with Latin and Tatar inscriptions) bear the luna of Genoa (after 1450), when the administration of the colony was placed in the hands of the Bank of St. George, the representative of this mint as well as the seal (round) of the Golden Host (afterwards the luna of the Genoese). After 1516 Kafa appears as the residence of a Catholic bishop, whose diocese comprised the whole area from Varna to Sarpi on the Volga and from the Black Sea to the Russian Volga. The Bulgarian (about 1530) describes Kafa as "one of the famous ports of the world" (ed. Desmouliana and Dandropintz, ii. 338), and may well have been then the principal port on the Crimean coast. In the harbour there were about 100 naval and mercantile ships. This Muhammadans had their mosque and Kafa. By the treaty of 1530 however, the Tartars could only live in the suburbs beyond the city walls; this limitation seems to have again been removed later. In the statutes of 1549 it is only laid down that Tartars living in Kafa are not to be subject to the Tuten of the Khan of the Crimera. The fortifications still in existence belong in part to the period 1521-48 (successive walls against the Kafa of the Golden Horde, Dijon), in part to the period 1585-86 (battlement of the city-wall as a protection, not only for the city proper, but for the suburbs (outskirts) also). About 1470 the population is said to have been 80,000. As early as a letter from the Bank of St. George to the Pope Callatius VI (1455-58), of Nov. 4, 1455, in which attention is drawn to the danger threatening the Black Sea colonies from the Turks, Kafa is described as "a city of Levantine convicted and of splendid munitions Constantinople itself surpasses.

The Turkish conquest, inevitable after the fall of Constantinople (1453) and Trebizond (1461), could not be long averted by the Christians of the Latin East either with their own forces or with the oft summoned help of the Genoese (to whom Kafa was in some degree dependent from 1549, when a Genoese army was defeated by Bajzij Giriti). In 1475 the whole peninsula had to submit to the Turks; the south shore with Kafa was directly incorporated in the Sultan's empire and divided into three Kadas (Kafa, Manafi and Sadak) with a Pasha in Kafa. Under Bayazid II (1481-1512), at the time of the first Russian embassy (1496), this office was filled by a son of the Sultan, Muhammad (this information does not seem to be found in Turkish sources, as it is only given by von Hammer, Gesch. der Osmanischen Reiches, 265 ed., Pest 1834-35, i. 449, from Karaman, Int. Gesch. Russ., 2nd ed., i. 1818-19, vi. 169 of = Gesch. der Russ. Reiches, transl. from the 5th edition, Riga 1842, vi. 215). For a short period the revenues of Kafa were occasionally surrendered to the Giriti; Kafa appears as a milt of the Giriti under Mengel Giriti from 890-902 (1493-1501) and again not till the reign of Sahan Giriti, regnal years 3 and 6, i.e. 1505, 1506 (1581-82).

Under Turkish rule Kafa (Turkish pronunciation Kafa) gradually assumed the appearance of a Muhammadan town, although many Catholic churches remained in existence. The most detailed description is by Durand de Amolli 1615 (Viae incognitae in Tartariy, 2nd. transl. in Zeitung des Orientgehörs, etc., i.e. the text published by Dohseweitz in Orientalia in loco, 169). The most important churches are: Beylik (Beylik), later described by Pulck in 1729 (Bartmoggen auf diese Reise in die südlichen Staatskauterschaften der römischen Reichs, i. d. J. 1725 u. 1724, Leipz. 1801, ii. 299), stood
in the centre of the town; the dome of the main building, over 65 feet in diameter, was surrounded on three sides by eleven smaller cupolas; the two minarets were 113 feet high. A decline in the prosperity of the town under Turkish rule was noticed by Struven as early as 1575, as the world's trade had taken other routes; the shores of the Black Sea had long since lost their former importance; yet to the end of Turkish rule Kafa retained the most important harbour on the north side of the Black Sea. Chardin (Voyageur, Amsterdam 1735, i. 46 sq.) says that in his 40 days' stay there (Aug.-Sept. 1672) he saw nearly 400 ships arriving and departing. In the town there were then about 4,000 houses of which 3,200 were Muslim and 800 Christian; there were no stone buildings with the exception of 8 churches in ruins (apparently dating from the Genoese period). Even in the 18th century Kafa was still compared with Constantinople by the Turks and called Lilla Istanbul ("Little Istanbul").

In 1770, Kafa was burned and destroyed by the Russians, but not finally incorporated in the empire till 1783. According to the oldest Russian plan of the city, there were then 29 mosques, 13 Greek and 22 Armenian churches, and 815 houses of which 694 were Turkish. In the description of the journey of the Empress Catherine in 1787 we already find the old Greek name (Ross. Feodosia) reappearing; the town is later called Kafa again and only definitely renamed in 1804. In the very early years after the conquest began the forced migration of the Turks and the voluntary of the Russians. About 1795 (Fallows) Kafa had already *from a once-collared and commercial town become almost a mound of stones*. About 1830 it is said to have had only 200 inhabitants. The Russian harbour of Feodosia, whose prosperity only began in the last decade of the 18th century (railway connections, building of commercial docks, Sebastopol being the naval port), must thus be regarded as a new foundation on the site of the Turkish Kafa. The number of the inhabitants, according to the census of 1859, was 27,428 (in 1824, only 17,000), of whom only 3,200 were Turkish. The town was (founded in 1831) contains many handsome houses and other antiquities, particularly from the Genoese period.

**KAPALA:** (v. KAPIL) the pledge given by any one (the KAPIL) to a creditor (the markal boza) to secure that the debtor (the markal boza) will be present at a definite place e. g. to pay his debt or fine or, in case of retaliation, to undergo punishment. If the markal boza is not there at the time arranged, the guarantor can be kept prisoner till the debtor comes or until it is proved that he cannot come (e. g. because he is dead).

As to the question whether the guarantor is bound to pay the markal boza or to suffer the punishment, the opinions of the different madhhab's vary. According to the Shi'a school, he is not bound to do so, not even if he has expressly bound himself to do so.

**KAPIL** (v. KAPILA), a technical term in Arabic prosody. It means the dropping of the seventh, or twelfth consonant of a foot, which ends with sabah khoof (see the article *Kufi*).

The following feet are liable to kaph: *1. markal khoof, provided that the 3 remains (> markal khoof); 2. jaffil khoof and maruf khoof, the latter has no khoof.* Provided that the last foot beginning with sabah khoof does not suffer khoof (> jaffil khoof, maruf khoof). [It is the last mentioned case four short syllables would follow in succession! Editor: Kaph is therefore found in the metre jaffil, maruf, khoof, khoof, khoof and khoof khoof; *bibliography:* see the article "sabah.

In some cases the Koran has already prescribed a definite kapha for the inner, e. g. Kur'an sv. 94, after killing by accident or by design, Kur'an sv. 94, to avert the evil consequence of breaking an oath, Kur'an lviii. 4 sq., if a man by pronouncing the old Arab khoof formula has sworn to refrain from all sexual intercourse with his wife and the many other cases (e. g. the breaking of the fast prescribed in the month of Rajab by fornication or marital intercourse during the day) were afterwards more prudently defined by the kapha and fully described in the 68 books of the different madhhab's.

**KAPIL.** [See KAPILA.]

**KAPIL (v. KAPILA), originally "autemating, coveting," then, "concubine benefits received," "ungrateful"; this meaning is found even in the old Arab poetry and in the Koran, Sura xxvi. 18. In the Koran the word is used with reference to God: "concubine God's blessings," "ungrateful to God"; Sura sv. 57 and xx. 35. "They are ungrateful for our gifts!" cf. also Sura, sv. 57. The next development — probably under
KĀFIR.

619

the influence of the Syriac and Aramaic terms, the corresponding development took place earlier — is the more general meaning of "infidel" which is first found in Sūra Ixxiv. 10 and is henceforth very common; plural kāfīr or kāfīrūn (Sūra Ixxiv. 49) kāfīrin. The term is first applied to the unbelieving Moazzims, who are constantly refuted and reviled by the Prophet: Sūra L. 2 and elsewhere. The subject of incredulity is sometimes more nearly defined with added ḫ-, e.g. Sūra xxxiv. 53: "We do not believe in your mission!" Sūra vi. 80. In the early Meccan period a waiting attitude towards the unbeliever is still recommended (Sūra lixxv. 47, lxix. 10, etc.); see also Sūra cix. entitled al-Kufīrīn, but later the Muslims are ordered to keep apart from them (Sūra iii. 114, also 29), to defend themselves from their attacks and even to take the offensive against them (Sūra ii. 186 and elsewhere). In most passages the reference is to unbelievers in general, who are threatened with God's punishment and Hell (cf. the article DİMAŞÇI). In the literature of Tradition also the hadiths minute elaboration in details — deal partly with the fate of the kāfīr on the day of judgment and his punishment in hell, and partly with the believer's attitude towards him. For the test they reflect the great controversy in early Islam on the question whether a Muslim should consider a kāfīr for committing a "major sin" (cf. al-Bukhārī, Kah. al-Ablām, ḫáb 23). Thus we find hadiths such as: "If a Muslim charges a fellow Muslim with kufīr, he is himself a kufīr, if the accusation should prove untrue"; or "The reproach of kufīr is equivalent to murder" etc. Nevertheless, kufīr in theological polemics is a fairly frequent term for the Muslim protagonist of the opposite view.

Eternal damnation for the kāfīr has remained an established dogma in Islam. In the dogmatic controversies of the early centuries the reasons were discussed for which a Muslim could be identical with a kāfīr and have to suffer eternal punishment. The most tolerant is the view of the Muṭtiṣa that all the Ahl-al-Khiṣba, even if they commit a mortal sin (kāfīra) are to be considered believers and their ultimate fate is to be left to God. The most striking contrast to this is the strict view of Khaṭṭība (and Ibad) that every Muslim, who dies with a mortal sin — and this means with them every sin, which has not been repented of — on his conscience, is to be considered just a kāfīr. Intermediates is the opinion of the Muʿtazila, who for this special case assume an intermediate between believer and unbeliever, the so-called "rejoined" faith (cf. the article DOĞUK). — According to Nallino in the Bk. degli Studi orientali, vii. 459 sqq., the names Muʿtazila, Muṣṭаla, etc. [q. v.] are probably completely connected with this attitude.

According to the Lātīn al-Arābî, vi. 459 sqq., the following kinds of unbeliever are distinguished: 1) kufīr al-ḥaṣr — neither recognizing nor acknowledging God; 2) kufīr al-safar — recognizing God, but not acknowledging Him with words, that is remaining an unbeliever in spite of one's better knowledge; 3) kufīr al-maʾlūda — recognizing God and acknowledging Him with words but remaining an unbeliever (abstract) out of envy or hatred; 4) kufīr al-ṣafīr — outwardly acknowledging, but at heart not recognizing God and thus remaining an unbeliever, that is being an hypocrite [cf. MUKAM].

In the systematic Fiqh books the kufīr are discussed in the following passages: 1) in the Kitāb al-Fikhr. For the opinion deduced from Sūra II. 92 that the unbeliever finds all views represented, from the strictest to the most tolerant; just as in all questions of purity, the strictest is the Sūra which reckons the unbeliever among its ḥalāf; but on this point al-Nawawī, for example, was particularly lenient; he considers the unbeliever and unbeliever equal as regards purity. The Ahl al-Kīthār [q. v.] are usually regarded more leniently than other Kufīr; for their benefit for example the questions of the ḥalāf and of munkāba with Muslims are discussed. — 2) In the Kitāb al-Muṣawwar (see ʿAṣūr). The Muṣawwar [q. v.] against the unbeliever inhabitants of the Dār al-Fawqā [q. v.] is a faqīh, a ḫāṣib. The Ahl al-Kīthār again occupy a special position as by paying ḥadīth and ṭabāra [q. v.] they become Marmum [mukuva] and can receive ʿamal [q. v.]. Those categories of unbelievers in the Dār al-Fawqā called ḥadīthiyyun and muṣawwarun have a legal claim to protection. Another class also distinguished from the mass of the kufīr are the renegades [see MUQADD] for whom the law prescribes death, with the opportunity first of obeying a demand to return to Islam. The others, the unbelievers proper, who in this sense are also called kufīr al-ṭabāra (or muṣawwarun, in the narrower sense) have only to expect death or slavery [see ʿAṣūr] if they fall as prisoners of war into the hands of Muslims; if they are fortunate, they may be exchanged or released. (In many cases, e.g. in the general advance of Islam into Africa, the distinction between renegades and pagans was difficult to ascertain and there are writings which deal specially with this question, cf. Ibn Ḥajjar al-ʿAttār, al-Fīlam bi ṭabāra al-mashūr, lith. 1293). — 3) In several further points the law differentiates between kufīr and unbelievers; the very strict interpretation of the law is however in practice only held by a small minority.

To understand the historical development in the attitude of Islam to the unbeliever, it should be observed that it was settled in the early centuries not so much by religious as by political and social conditions. Even down to the time of the Crusades there prevailed in Islam a tolerance towards the unbeliever, especially the Ahl al-Kīthār, such as is impossible to imagine in contemporary Christendom. We find for example Christians in the highest official positions. In this early period there is no question of any religious fanaticism towards unbelievers. It was only anoued and nourished by the repeated wars with unbelievers (Crusades, wars with the Turks). War-psychology, on the other hand, at the time of the wars between Persia and Turkey could even bring it about that the Persians were called kufīr in Turkish literature, etc. (see Ferisi, i. 311, 310), a name which the Turks themselves had applied to them in the proclamations of the Mahdi of the Sunnis.

Since at the present day the trend of affairs has apparently been of the opposite direction, and Muslims have been more and more impelled to carry out measures against the kuffar by the political decline of Islam and the rise of unbelieving nations (pressure of the Powers, capitulations, etc.), the very feeling of impotence in face
of these facts may have contributed not a little to the strengthening of hatred and to periodical manifestations of it (in assassinations etc.). This also explains the grotesque caricature of the Kafir, which use sometimes finds in the popular imagination at the present day (see Sassen Hugronjon, Meckh, ii. 48 sqq.), and which is connected with the ideas of the Arch-Kafir, Dodërjaf [q. v.], who bears kafir on his back (cf. Goldziher, in Der islam, xi. 178).

It may also be due to the hatred of the Franks (and to dogmatic squabbles) that Kafir has developed into a term of abuse, as frequent in the Turkish Vernacular (the Persian kafir [q. v.] is said to be the same), although it is used in the Holy Scriptures (e. g. Beethoven. ii. 562) affirmed that the Muslim commits a punishable offence if he says to the Christian or Jew: "Thou unbeliever!". From the Turkish the word kafir has entered into most Slavonic languages. The Spanish kafir and the French coiffe also go back to kafir or kafir. In two cases kafir has actually become a proper name, the name of a people, the Kafirs, and of a country, Kafiristan [q. v.].

Kafir and kafir underwent a special development of meaning in the terminology of mysticism. Compare, for example, the well-known verse of Al-‘Abbās [q. v.]: "So long as belief and unbelief are not perfectly equal, no man can be a true Muslim", with the various assertions given in Muhammad Ali, Dict. of Technical Terms (ed. Spieger, etc.), v. v., according to one of which kafir is just the equivalent of infând hâfiz.

Bibliography: In addition to the sources already quoted above, see the old Arab poetry Zainal-Din, Mus. al-Magâl, Gisellik, aliv. 253;—On the development of kafir in Syriac and Pasha Smith, Faram. Surum. Surum. lx., 1790 sqq., in Armenian: Lev., Chaldeische Wörterbuch über die Targumim, p. 381 and his Chaldeisch-Hebräisches Wörterbuch über die Tevrat und Midrashim, ii. 383 sqq.—For the literature of Tradition the whole material will be available in the still unfinished index of Prof. A. J. Wensum, which has kindly called my attention to the judicious quotation above.

KAFIRISTAN. The name of a mountainous tract in the Hindu-Kush situated between 36° and 36° N. and 70° and 71° E., with an area of about 5000 sq. m., since 1896 a territory of Afghanistan. The northern boundary is roughly the watershed between the drainage of the Oxus and that of the Indian, the valleys to the north being occupied by Ghalja (q. v.) tributaries. To the west the spur of the Hindu-Kush which runs southwest from the neighbourhood of the Kāhwārat Pass may be considered the boundary separating it from the Pamir plateau. The Afghans know with south the range between the Kunar and Bāghdād valleys and those to the north of the Kunar and Bāghdād valleys defines its limits. The country consists of numerous valleys much isolated from each other by lofty ranges, the principal rivers draining which either into the Kābul or Kunar rivers, and in the Indus basin. The principal are the Gāngā and Gāo with its tributary the Gāllajang, the PE (Kābār or PEZ), and the Bāghdādi. The inhabitants, from their persistent paganism, have long been known as Kāfts or Kafirs, and from them the name of the country Kafiristan is derived. The name Siyāh-pūsh or "Black-clad" which properly belongs to one section only, (the men being dressed together as Sāfūd-pūsh or "White-clad") has also been in use from an early period.

This tract was undoubtedly part of the Kūshān kingdom in the early part of the Christian era, and has been identified with the mountainous country of Kâpīs. The name Kafir applied to the country and its ruling tribe by Tales (Timur) is identical with the title of the rulers of the neighbouring country of Cittâl, and is doubt the same as Kafiru, the name of the principal tribe at the present day. It is most probably derived from the title Kafirā used by the later Kūshāns. It has been thought by Wood and Yule that the wine-drinking tribes whom Marcus Polo met near Casm (i.e. Kāmū in the Kōtā valley are identical with the Kafirs, who may have at that time extended into the northern valleys of the Hindu-Kush, but the first definite mention of them is in the Emperor Timur's memoirs. On his way to invade India in 1398 he turned aside into their country from the Kāhwārat Pass to punish them for their raids on Andarāb. He calls them Kafirs and Siyāh-pūsh. In spite of his claim to victory it is clear that a great part of his forces were destroyed in an ambuscade, and he returned to Kāhwārat without any permanent success. But in his autobiography gives a very accurate account of the country and people, many of the rivers and districts being described by names they still bear.
In more recent times Elphinstone from his observations in 1809, Masson (in 1826) and Haddalp (in 1830) collected all the information available without entering the country, and the account given by the first-named is especially valuable. The first European to penetrate Kafiristan was Lockhart in 1855; followed by Robertson in 1859 and 1859. The last-named in his work on the Kafirs of the Hindo-Kush has given the best account available of the country and people, their customs, beliefs, and organisation.

In the treaty of 1803 between the Indian Government and Afghanistan, Kafiristan was definitely left outside the British border, and the Amir 'Abd al-Khalim proceeded in 1830 to conquer the whole and to convert its population forcibly to Islam. The Kängali tribe, a branch of the Kafirs, was the last to submit. Robertson divides the population under two heads, viz. the Siyah-Pooh tribes all closely related to each other (the principal tribe being the Kafirs), and the miscellaneous tribes, without any special bond of union, included under the name of Safed-Pooh. The chief of these are the Waqals (with the Ashkun who are related to them), and the Prangals or Varam. All seem to belong to an ancient branch of the Aryan stock, and the languages are of the Pashê family, which, according to Kuhn and Grierson, have the characteristics of a tongue spoken after the Indian family had branched off, but before the Persian had been differentiated. The purest dialects are the Bashkali, Wahala and Varun, spoken in the central parts of the country. The Gesun-batt, Kælan and Pashal form an outer group; the Pashal in fact being spoken in the Qaidabad valley outside the limits of Kafiristan proper. There is also another member of the group Askanal, as to which nothing is yet known.

The form of paganism followed till lately was much mixed with animism, but there were certain principal gods generally recognised, the chief of which was Giran who was a sun-shine was at Prangal, Mont, the heaven (god); Guri, the war-god, and the goddess Dzamoe. In the borderlands however many districts had already accepted Islam before the Afghan conquest. These converts were known as Shákhs. Sacrifices of goats and ceremonial dances were very prevalent.

The social system is entirely tribal, each tribe consisting of several clans. The tribal government is carried on by a council composed mainly of the headmen or Uzat who represent the various clans. A number of mowr or magistrates are elected annually to carry on the actual tribal government. The houses are well built and grouped into strong villages. The Kafirs generally are assiduous, clever, but untruthful, intriguing and vain, yet they are hospitable and not generally cruel. They are brave and fond of freedom, and in their own country show a great sense of dignity; very quarrelsome, but always ready to put a stop to fights among others. Theft and assassination are not in any way condemned. Slavery is prevalent, the slaves being partly hereditary and partly obtained by capture in intertribal war or by purchase.

Kafiya (4), a term in a rhapsody meaning rhyme generally. The word occurs (according to Gellatly, Aiubn. sit Arab. Philoteg, 1859, p. 292) to have originally meant a poetic utterance or a lampoon, then a poem and finally a rhyme. The theory of the Kafiya is covered under a special science, distinct from urâq (rhapsody proper). It remains that verses should end as regards consonants, vowels, etc.

In the narrower sense, Kafiya, according to Kâbjâl b. Ahmad (q.w.), is the group of consonants, which begins with the vowelless consonant immediately preceding the last two quiescent consonants of a verse. In the Arab view, of course, a verse ends always with a quiescent letter, whether written or not (the latter in the case with 'ayn and 'ayn of prolongation when they are written defectively): 'ayn, 'ayn, 'ayn, 'ayn, 'ayn.

The Kafiya may include up to six consonants:
1. the principal one (in the Arab view), the ram or rhyme-letter, the letter which the poet always retains at the end of the verse, the language; of the languages are of the Pashê family, which, according to Kuhn and Grierson, have the characteristics of a tongue spoken after the Indian family had branched off, but before the Persian had been differentiated. The purest dialects are the Bashkali, Wahala and Varun, spoken in the central parts of the country. The Gesun-batt, Kælan and Pashal form an outer group; the Pashal in fact being spoken in the Qaidabad valley outside the limits of Kafiristan proper. There is also another member of the group Askanal, as to which nothing is yet known.

According to its inscription, held 337 dinars half of pure water. The measures usual in the early centuries of the Hijra seem however to have been smaller ranging down to the half of the figures here given.

**Measures of capacity or dry measure:**

<table>
<thead>
<tr>
<th>Unit (modius)</th>
<th>1.15 litres</th>
</tr>
</thead>
<tbody>
<tr>
<td>modi (modius)</td>
<td>1.15 litres</td>
</tr>
<tr>
<td>moddik</td>
<td>6.66 tuns</td>
</tr>
<tr>
<td>moddike</td>
<td>6.66 tuns</td>
</tr>
<tr>
<td>habs</td>
<td>48.12</td>
</tr>
</tbody>
</table>

Two avoirdupois weights were reckoned on this system:

- 240. 60. 40. 20. 10. 5. 1. 2750.4 kg.
- 1440. 360. 240. 120. 60. 30. 16. 1560.9 kg.

That these measures of capacity are not entirely forgotten is probably due to the fact that they have been retained in the legal literature. They have disappeared from the market-place, at least in the East. In the lands round the Western Mediterranean the habs has however survived down to the present day, e.g. in Tunisia, in Sicily (cachi and cattulo), a measure for weight of oil, 11 to 20 kg.) and in Spain (cachi, or caball, a measure for grain of about 6.62 hectolitres).

**Kaftan** (Turkish form of the Persian kofid), which is found in the *Sahih Buhari*, is referred to as 'Abd-al-Qadir Baghdaedi, *Bagdad-i Shaban*, ed. by Salamman under the title 'Abdulqadir Baghdadis *Lacan* Schahbadschah, s. 79; and Asadjis Laksab, ed. F. Horn, p. 99; also Arabic *Mufid*, an upper garment worn in peace time, a kind of long tunic with sleeves, which in time of war was worn over the shirt (tabard). This word, as well as the article of dress came quite early among the Arabs under the influence of Persian fashions. Cf. Al-Tabari ed. de Goeje, iii. 230 n. 297, *Arif*, p. 177; *al-Mu'ad* (Paris ed.), viii. 52. - Travellers describe the *Mufid* as a long robe, reaching below the knee, sometimes to the calves and sometimes down to the ankles, open in front and having sleeves, which were slit at the wrists or up to the middle of the arm. This garment was introduced into the Barbary States by the Turkish conquest and spread throughout fashion as far as Morocco (Host, *Europa vom Marokko und Arabien*, Copenhagen 1784, p. 115) where it is sometimes found, especially among women, without sleeves (Lamperre, *Tours in Morocco*, London 1791, p. 383). The amirs and sheikhs of the Syrian Bedouins in d'Arriens time wore the *kabitan* as a winter garment. (d'Arriens, *Voyage du Maroc*, Paris 1747, p. 206). - Among the Ottoman Turks in earlier days *kabitan* was also the name for a robe of honour, which, less important than the kalyon-kap, was granted on the occasion of appointment to an office. The distribution of such robes of honour took place after the two Barims [-v-] festival in the presence of the Grand Vizier under
the direction of the ḥafṣān buṣī, an official whose duty it was to take charge of and keep in condition the fur-robins of honour. At the present day this garment seems to be very little worn. Hambury and Marie de Lannoy, Les Coutumes populaires de la Turquie en 1873 (Constantinople 1873) only mention it (p. 238) when describing a lürvi woman from Kayseri: A ḥafṣān of rich dark green cloth, open in front and wide-cut out in the form of an excelsior on the breast, leaves the upper part of the shirt quite exposed, but entirely covers the lower half... The very long sleeves of the ḥafṣān ending in a quadrangular piece are taken in above the wrist so as not to conceal the silver armlets. The sleeves are edged with galloon and tucked gold lace.

KĀFUR (n. Kāfūr and Kāfūr, n. v. Kif and Kif; in Samarkand Kayphūr, in Pahlavi Ḵapūr, Ḵapūra in Malay Niah), camp-forer, the resin of Laurea coriacea and Orpimentum armeniacum, was an object of commerce with India from the days of the ancient Persians; on the capture of al-Madīnā, the Arabs found rich stores of this drug; the use of which they did not know; they took it for salt (al-Balādhurī, ed. de Goeje, p. 264; ibn al-Athīr, ed. Törnberg, ill. 401) and for sale to the Arabs, the last and most expensive; it was said to be weighed against gold. Fanūr—most probably an old name for hars (cf. Tadchīr, van het Kon. Nederl. Aardrijkskundig Genootschap, Series 2, xvii., 1902, p. 18-22, 27-29; Encycl. van Nederl.-Indië, iii. 172 sq.)—on the west coast of Sumatra (Residency of Tapanan) from which the hars comes—was frequently mentioned by Arab writers; from the first half of the third (ninth) century we find the name in different historico-geographical reports as the place of origin of an exceptional quality of camp-forer.

The name of this resin is also found in the Korān (xi. 5)." The righteons shall drink there, (in Paradise)." (On account of a traveler, the content of which is missed with Kāfūr; according to the Muslim commentators, either to indicate the pleasant flavour of the beverage or perhaps as the name of a spring in Paradise (al-Tahār, Tafsīr, Cairo 1231, 231x, 131 sq.). The latter explanation is based on the fact that at the beginning of verse 6 the word hūm (spring) is found.

KĀFŪR, ABD LĪSĪR AL-SHĪKH, also AL-LĀ Hijī or AL-SHĪKH, called AL-LĀ Hijī in a poem by al-Muṣṭafā after a place in Sich, ruler of Egypt and Syria in the fourth century of the Hīdārīya. Kāfūr was born in Syria between the years 901 (904) and 918 (920) (so greatly do the statements of the chronicles vary).

The fact that he began life as a burly-ugly slave and rose to be ruler of Egypt and Syria and the celebrated patron of scholars and friend of al-Muṣṭafā (q.v.), the greatest poet of his time, has aroused a great interest in him among the Arab historians and given him, a greater fame than his importance really deserves. As the Masṣūsī poets and scholars, he found kinship with the genealogists who have praised him as a model of fidelity for his devotion—not always maintained—to the Ḫāhūfīs (q.v.). His biography is informed with numerous anecdotes about his origin and his rise and about his friendship with al-Muṣṭafā. He is only of importance in history because he resisted the advance of the Fātimids (q.v.) in the west and of the Arab dynasties in North Syria and maintained by his ability for two decades the kingdom founded by the Ḫāhūfīs in 334 (935). After his death it soon looked up. As a young slave he is said to have expressed the ambitious wish to become one day ruler of Egypt, to a companion who had said his ideal was to become cook in a cookshop so that he might always eat his fill. As a slave he had the good fortune to be sold to the governor Muḥammad al-Ḥikāhī (322-334; 935-949), that he was almost immediately given away by him on account of a skin disease and again taken back, may well be an embellishment, to contrast his degradation with all the more marvellous rise. Another narrator says that he was sent with money by his former master to the governor al-Ḥikāhī but the latter sent the money back and retained Kāfūr in his service instead. It is also related that he was the only one to remain by his master when his comrades had arrogantly left the governor's room to see a passing elephant. Both these stories only show that the governor had, on some occasion, had his attention specially directed to him. He must certainly have early recognised his potentiality and put trust in him, for he made this ugly, despised slave the tutor of his children and a general. In the latter capacity he distinguished himself in 329 (940) in a battle near Aleppo which he, at the request of his master, when al-Ḥikāhī felt his end was near at the close of 334 (July 945), appointed him guardian of his youngest son Awndūji (the name is very diversely written) whom the Caliph had previously appointed joint-ruler with his father. The real power remained in Kāfūr's hands: even after Awndūji became of age, although he provided for the preservation of the Ḫāhūfī dynasty by getting Awndūji's brother 'Ali recognised as joint-ruler and successor in 338 (949), later in 343 (854) Awndūji, at the instigation of his friends, tried to shake of the tutelage of Kāfūr, as he felt himself restricted in his freedom of action and expenditure: he only received 400,000 dirhems out of Kāfūr's rich revenues. He therefore
were in Ramla in Palestine in order to be able from there to exert real authority over Syria and then on Egypt. But the plan did not come to fulfillment, as his mother and Käfûr, warned in time, were able to appease him. The relationship remained unchanged till Awunârîj died in Dhu l-Kâ‘î 349 (Dec. 660). After the death of Awunârîj, Käfûr had his brother All confirmed in office as governor by the Caliph towards the end of the year. Käfûr retained his guard, although 'Ali was 24, and only allowed him an income of 400,000 dinars. The power of Egypt was again extended on the edge of Syria and was even nearer to the Caliph in the Friday service in Aleppo and northwards as far as Ṭarāta. When 'Ali died six years later in 355 (966), Käfûr himself assumed the government and was confirmed in office by the Caliph, as 'Ali's son Ahmad was only 9 years old. He did not enjoy his independence long, for he died in 357 (968). His successor was the Ahmad whom he had superseded.

Käfûr was able to maintain order in Syria and Egypt. Shortly after the death of al-Khaṭîb, he recognized Saif al-Dawla, ruler of Aleppo, Damascus which the latter had taken. Käfûr was able skillfully to maintain his position between the Caliph and the Fatimids, ruler of North Africa. His riches were multiplied by his eunuchs and his estates consisted of art-treasures of all kinds rather than of gold. He was a man who loved poetry, like Saif al-Dawla, exceedingly liberal in scholars and poets, so that his court was a popular one and his favour sought. When al-Mutâmâhî became estranged from Saif al-Dawla, he came on Käfûr's invitation to Cairo, where he lived for some years. In the first period of his stay there he composed famous panegyrics on Käfûr; but the intimacy did not last long, as Käfûr did not give him any position in the administration which he is alleged to have promised him. He seemed surprised by saying that he could not entrust such an office to a man who had passed as a prophet. Käfûr also devoted much time to scholarly studies and is said to have written poetry. Many scholars were in his service, of whom the best known is al-Kindî who composed a history of Egypt for him.

(M. Soghenheim)

**Kāhîdha, Kāfûr** (from the Persian Kāfûr, perhaps of Chinese origin), *paper*. In the early period of development of Muslim culture the east was only acquainted with papyrus (pirīsî) as writing-material. The Chinese prisoners of war brought to Samarra after the battle of Al-Jashar near Tallah, that first introduced in 352 (770) the industry of paper-making from linen, flax or hemp rags after the method used in China. The various kinds of paper thus made are the following: Kāfûr (Pâhroah’s paper), a kind which was destined to compete with papyrus even in the land of its origin (the oldest paper with Arabic writing on it found in Egypt dates from 180–200 = 796–815); mūsulmān, from Salâman b. Kâfûrî, the treasurer of Khârîjî under Hâdî al-Râqîd; adīrî, called after Li[t]far al-Barmakî; cālî, from Tallah b. Thîrî, the second ruler of the Tāhirî dynasty, Kûhî, from Thîrî li. of the same dynasty; nûbî, in allusion to the Sûfî Muhammad II.

Paper-mills were erected everywhere on the plan of those in Samarra: al-Ka‘fûr, brother of Li[t]far al-Barmakî, who had been governor of Khârîjî in 176 (794) probably founded the paper-mill in the Dîr al-Ka‘fûr quarter in Bagdad. Soon afterwards others were in Tîlûmûn, Yemen and Egypt, where paper ultimately drove out papyrus, also in Damascus, Tripoli, Hamîdî, Mandhî, Tiberias, the Maghrib, Spain (at Xativa), Persia and India. Kâhîdha-kâhînî, the “paper-makers”, was the name taken by the people of the village of Kâhîdha or Khâhî in Aqahrabâz, two days’ journey from Zanjîn, on account of the excellent paper made there. The place was destroyed by the Mongols, who however founded a colony, Mahûlîya, there. (Barbier de Meynard, Dict. de la Perse, p. 219; Hîfîdî b. Kûhî, Litt. orient., Constantinople 1845, p. 290; tr. by Norberg, l. 305).

On the preparation of paper and the different methods of colouring it, interesting details are given by J. v. Kâhîdha, Neue Quellen zur Papiergeschichte in Mitt. aus der Samml. des Papyri Ern. Fuchs, i. 75 ff.

According to a statement of al-Maḥmûdî (al-Kâfûrî, ed. Wetzl, li, 34), Li[t]far al-Barmakî had Kâfûrite replaced by paper in the government offices.

The paper used in the east is now almost entirely of European manufacture. In Persia we still find a Chinese paper, called Kâhîdha Râfîlî (Turkish name of Fêkîn), a scarce paper, sought after for its durability. The Cairo printers prefer a strong yellow-brown paper called mulâzî (Pers. nûbî, suga-candy). A paper-mill long ago destroyed (Kâhîdha-kâhînî, popularly Kâfûr-kâhînî) has given its name to the Imperial Kiosk and the public promenade of the “Sweet Waters of Europe” in Constantinople.

**Kâfûr**. Title of Sûrâ xviii. of the Kâfûr. See also Askî al-Kâfûr.

**Al-Kâfûrî, one of the names Ali.** al-Alla, i. 305.

**Kâhînî (ka, plur. ba‘hînî or ba‘hûnî; fem. ña‘bînî, plur. ba‘hûnînî, abstract of profession kâhînî), the name of the Mutter of south-western (masir, names) among the pagans Arabs. It corresponds to the Hebrew , kîhînî, Aramaic, kîhînî, kîhînî (priest). It is not an arabinized form of this however, but belongs to the original stock of the old Arabic.
KĀHĪN. 625

language (otherwise Neldaka, Neue Beiträge zur semitischen Sprachwissenschaft, p. 36, note 6), for the Jewish kāhān, kāhān is entirely different in character from the Arab kāhān: the former, although in all probability at one time also a sooth

sayar, later appears only as a dealer in oracles and particularly as sacrificer and teacher of the Tora, while it cannot be shown that the latter, who is never a priest (which is contradictory to you: Krumen — see below in the Bibliography — p. 74 sqq.), and also to Wellhausen, p. 134 and elsewhere, ever held these functions, neither was he permanently connected at all with worship and places of worship, but seems to have been quite unrestricted in the exercise of his activities.

The kāhān of course have their origin in the shaumans, medicine-men, and fetish-priests, but in the form in which we first meet them in the old Arabian tales, in the Hadīth and, much more rarely, in the pre-Islamic poetry, they have already passed beyond the rather loose forms of shaumans. Their magico-religious knowledge is based on ecstatic inspiration. They have also, it is true, visions by night which reveal to them future and other events and things hidden from the ordinary mortal (al-Mas'ūdī, iii. 379, 394 sq. ; Sprenger, l. 176 sq. etc.), but they are not really visionaries. Their inspiration is of demonic origin: a ḍjinn or čāhān "demon" (ḥādīsh) who is called their ḍjinn "companion", ḍjinn "comrade", āwāmī or waṭīf, "friend", ("familiar spirit"), not infrequently also their sa'īr or ṭāf (probably "near") speaks out of them. This personification of their ecstasy, which at once stamps them as connected with the old fashionable ḍjinni hard (literally "know-
er"), also endowed by ḍjinn with supernatural, magico-religious knowledge (cf. ruṣūt = poet), is conceived as being so substantial that the ḍjinni regularly appears as the I — his ṭalīr, the kāhān, on the other hand, appears as the "soul" of the prophetic utterance, that the latter clearly notices the approach of the spirit, feels himself struck by his feet, hears his voice from a distance etc. (Sprenger, loc. cit.; Holscher, p. 82), indeed, these familiar ones even have their own names (like the familiar spirits of the poets, see Yākūt, Ma'dājan, ed. Wülffersdorp, iv. 914, 164 sq. and al-Dīlajī, vi. 69 = Tāriḥ al-Ṭūṭ, viii. 65). The kāhān give their utterances in a sort of proverbial or "poetic" sentences in rhyming prose, with single or more rarely alternating rhyme, such as had been usual in Arabia from early times for all utterance in the higher and lower branches of divination and magic, etc. (Only very rarely is regular verse also used, e. g. Asghānī, st. 161 sq.).

Besides the ḍjinn, the amūsama is characteristic of the kāhān's utterances, the mysterious "humming" with which it was delivered (Ibn Ḥāshim, Str. l. 173, 4 and thereon l. 25). The word ṭalīr may in this sense have originally meant nothing more than the "purring" or "chirping" or such like of an alleged demon's voice; the verb ṭallāf is also used in other connections of "purring" and "chirping" of the ḍjinn, regularly of course of the "romancing of pigeons and also of the "grasping" of canes, etc. (Ibn Othūm, e. g. ṭallāf, xxii. 6). The kāhān, the majority of them being always considered braves, of course often express themselves in very obscene and ambiguous language. They give greater emphasis to their utterances by striking oaths, swearing by the earth and sky, sun, moon and stars, light and darkness, evening and morning, plants and animals of all kinds etc. (For kāhān's utterances, see e. g. Hölsher, p. 87, 95 292, al-Mas'ūdī, iii. 387 sqq., al-Dīlajī, Ch. 60). (See also p. 10, with note 6.).

Kāhān play an extremely important part in public as well as private life. They are interrogated in all important tribal and state occasions — especially before warlike enterprises, razia, etc. in which they take part themselves as a rule, indeed, they sometimes lead them in person (cf.Dehron in the O. T.). Kings and qānas therefore keep their prophet or prophets (D. H. Müller, Die Burgen und Schlösser Sāhābins nach dem ṭalīr des Hamādī, l. 74, and al-Ṭahāri, ed. De Goeje, l. 762, 2), and the tribes have a kāhān or kāhān as well as a ḍjinnī "poet" and ḍjinni "tegator". In private the kāhān especially act as judges in disputes and points of law of all kinds, so that the conception of kāhān is closely connected with that of ḍjinni "judge" (al-Hajjāt, Nf. xviii. 7; al-Dīlajī, Cairo 1321, ii. 73, 7). Their decision is considered as a kind of divine judgment against which there is no appeal. At the same time they interpret dreams, find lost camels, establish adulteries, clear up other crimes and misdemeanours, particularly thefts and murders, etc. In these proceedings they descend to a somewhat lower scale of divination, viz. to that of the ṭalīr or māwīr (see above l. 460 and cf. Ibn al-Athir, al-Nihāya, iv. 40, al-Dīlajī, vi. 62, 7 ṭalīr, and al-Mas'ūdī, iii. 353).

For such work they received an honorarium — forbidden in the Ḥadīth (ḥabah, al-Bukhārī, ed. Krebl-Jaymboll, ii. 45, 55 et passim). Of course, people liked to test their magical abilities before paying them.

The influence of these men and women was naturally great and often stretched far beyond the bounds of their tribes. They were not by any means recruited solely from the lower strata of society, but sometimes belonged to most distinguished families, occasionally even the saysīd or chief of a tribe was also its kāhān (Lammla, p. 204, 257; al-Dīlajī, vi. 62 = von Vosdin, viii. 183; also Wellhausen, p. 134 who, however, says wrongly that such astroutaric kāhān had intheit their offices). They were in any case among the leaders or the intellectual aristocracy of their tribe (cf. the chapter A. A. al-Mas'ūdī, al-Dīlajī, viii. 136-137), and a Nihāya main kāhān "The names of the sects, judges, orators and learned men of Kāhān" in al-Dīlajī, al-Rayān, l. 136 ṭalīr, etc., also l. 113 sq., sqq., ed. Cairo 1333, l. 102, cf. l. 159).

Among famous soothsayers of both sexes were Sāth al-Dīlajī in Syria and Shīkḥ b. Sāth b. Bāji'a, who often appear together but are both quite mythical, the probably equally unhistorical Yemen princess Ṭurāmis, a kind of Candassar, al-Mamūr al-Jibrīn of the Madīhī, Amr b. Ḥajjā dīlajī al-Askaf, the chief of the Rub'a, Sawdi' bint Zahra' among the Karīmīs, Zābakī bint Ṭazīr among the Karīms, etc. (Wellhausen, p. 139; al-Mas'ūdī, iii. 353, 384 et passim; Ibn Othūm, Str. l. 174, 174, 175 sqq. etc., etc.). The South Arabian soothsayers enjoyed particularly high reputation (Asghānī, v. 51, 4).

Practically synonymous with kāhān is the word ḍjinn (plur. ṭalīr, also ḍjinn and āwāmī, fem. ḍjinnī, plur. āwāmī), which is not uncommonly found. It corresponds of course to the Hebrew shālīm, but is undoubtedly also a genuine Arabic word. On the other hand, we must sharply distinguish from the
kithin, who, as above explained, owes his supernatural knowledge to internal inspiration, these personifications of the lower forms of divination and magic, who employ external, technical means that have become a more routine that may be acquired by any one, namely the ak' or adilive who watches the flight of birds, the baf, bafiv, and fainive, who reads footprints, the a'arif or ma'arif (see also above on these terms), the water-diviner, the muandijin, the anti-changer, at najir at a'ara if hand-reader, the ak' who tells fortunes from lines on the ground, at-lirif or at-lirif b'talagh, who works by casting stones, the enchantress, alilij or alij. These too are sometimes called kithin, but only by an erroneous one of the word, which probably only came into use when Islam had put an end to the higher art of the soothsayers, bisham, while external divination and magic survived. I should like here, again, to insist (against Wellhausen, p. 134 and elsewhere) that the kithin was not, like the Jewish bisham, also supplier of oracles. It is especially noteworthy that we never find him in connection with divination by arrow (fissal).

The prophet Muhammad disclaimed being a kithin (Sura liv. 29, ixix. 42; also passages like Sura. 22 sqq.). But his earliest appearance as a prophet reminds us strongly of the manner of these soothsayers. He was an estatic and had "true dreams" like them; his daimonion (a'arif) was the (holy) spirit, whose place was later taken by the jinn. His revelations are, like the utterance of the kithin, composed in ang and sometimes begin with the usual arius cactus sign, in the form which he was still using for administering justice and settling disputes in Medina during the early years of his stay there, correspond in their main features to those of the pagan kithin and bisham.

It is therefore not surprising that his Meccan countrymen regarded him as a kithin and that his protestations that he was nothing of the kind, but a "prophet", a "messenger of God" made little impression on them. The anti-prophets also, Maanall, Haakam, and particularly a-Awad a-Ati, no insatiable, a lady member of the family, played their part in the gross against Al-Kahina.

Taken with its monotheism, its doctrine of the cessation of all revelation with Muhammad and its regulation of all social customs through the high wielded over the old soothsayers, only gradually, it is true, for we still hear in 532 A. H., of a kithin (al-Tahiri, ill. 21, y; on kahana in modern Arabia, see Lamberg, La langue arabe et ses dialectes, p. 76; on women sores in Muslim N. W. Africa, see Douet, p. 34). Muhammad himself probably never doubted the supernatural nature of the kithin's utterance. But when he declared the knowledge possessed by the demons, whom he at the same time negated to devils, to have been stolen from heaven and to be fallacious and confused (Sura lixi. 8 sqq., xxxii. 13, 17-22; Ibn Hisham, Sura. 132 sqq.), he brought their prophecies into great dispute, and thus those traditions arose, which warned believers against utilizing the services of a kithin (al-Suyuti, al-Dâimi al-ma'alik, saf wa ma' al-kahana; ibn-Abidin, ill. 43, sq., and passim; cf. also the remark of Ibn Alkâ's sapparat wa l-kahana ctc. in al-Zamakhsharî's Nâmisb, or Sura xxxi. 34).

Bibliography: Wellhausen, Säte akhal

al-Kahina, the prophetess, the sect. Even her name (Dama, Dihya) — for Kahina is simply an epithet — is doubtful. According to Ibn Khaldûn, she belonged to the Ljurs, a Jewish tribe (ib. al-Awad, p. 24), which gave rise to the Berbers descended from the Abitan. When USBân b. al-Nu'mân [q. v.] had conquered the Byzantines, he advanced against the Awsa where the Kahina reigned. The latter inflicted a heavy defeat on him at Miskiyya (between 'Ain Baalbek and Tellus in the modern department of Constantine) or according to other authorities, in the Gabis territory or at the Oasis of Nini, and drove him back beyond the frontier of Ifrikiya. The difficulties in which his wars in the east had involved the caliph, 'Abd al-Malik, delayed the despatch of reinforcements. During this period the Kahina is said to have extended her sway over the whole country, and to prevent the Arabs from making new inroads, she destroyed the towns, cut down the forests, and laid the country waste. At the same time she is said to have adopted as a son: a prisoner named Khatib b. Yazîl al-Katîf with whom she claimed foster-kindship, xibîb, however, did not prevent her adopted son from afterwards betraying her. Her devastations attracted the people from here and when five years later USBân b. al-Nu'mân returned with reinforcements, the Kahina was defeated in a furious battle at Taburka (82 or 84 = 701 or 703) and killed in the Awsa at the place called For al-Kahina. By her advice two of her sons had gone over to the Arabs before the battle and even received commands in the Muslim army, which continued the war against the Berbers. In reality we do not even know for certain whether the Kahina was a queen or simply an inspired woman named Lalla Fatima, who was the soul of the resistance of the Berbers against the French in 1877. Almost all that is told of her is not, in my opinion, the voluntary devastation of North Africa, her defence in the castle of al-Lijam (the amphitheatre of Thydra) and the circumstances of her death.
Barber genealogist, Hânî ibn Bakr, even says that she ruled for 65 years and was 137 years old.

(KEES BASSET.)

AL-ǦÂHIR BI ‘L-LÂH, IBN MANGÎR MUHAMMAD IBN AL-MUTAQI, ‘ABDRAZĪD AL-CALÎÞ. While his brother al-Mutâqî was still reigning he was proclaimed Caliph under the name al-Ǧâhir, but was deposed again in a few days. After the death of al-Mutâqî the ‘Amr al-‘Umarî Mâ‘ûns proposed al-Mutâqî’s son Ahmad, afterwards the Caliph al-Râzî as successor; instead of him, however, al-Ǧâhir at the age of 35 was proclaimed Commander of the Faithful (end of Shawwâl 320 = Nov. 1, 932). Although he wished to be regarded as devout and just, his treacherous and squalid nature was soon revealed. Through treachery the mother of al-Mutâqî was forced to give up her whole fortune, and al-Ǧâhir also exacted considerable sums from the abbots and officials of the late Caliph. On the advice of the vizier Ibn Mûkîl [q. v.] Mâ‘ûns had the Caliph carefully watched, which naturally did not please the latter, and when he was intending to dismiss Ibn Mûkîl, the latter conspired with several others to overthrow al-Ǧâhir and put Ahmad, son of al-Mutâkî, in his place. But the plot was betrayed. While Ibn Mûkîl escaped by flight, Mâ‘ûns was dismissed and when he went to the Caliph, the latter had him arrested and some time afterwards executed. Abî Ahmad was built into a well, alive. Ibn Mûkîl, however, did not cease in his efforts to incite the populace against al-Ǧâhir and in Djumâl 1. 322 (April 934) an armed crowd broke into the palace. The half-starved Caliph had to surrender; but when he refused to abdicate, he was blinded and thrown into prison. Eleven years later al-Mutâkî restored him to liberty and he lived as a beggar till his death in Djumâl 1. 339 (Oct. 950).

AL-ǦÂHIRA. [See CAIRO.]

KÂHRÂMÂN-NÂMA (or DASTÂN-1 KÂHRA-MÂN), a Persian epic in prose, which, like the Durân-Nâmâ, Khânûn-i Tâhirî, Hûshârân-Nâmâ, Fâdîrî-Nâmâ, Tâhir Khânârî-Nâmâ etc., belongs as regards subject matter to the prose epics which form a cycle round Firdawûs’s Shâh-Nâmâ; like the two first named it is ascribed to Abî Tâhir, Tâhirî [Tâhirî, q. v.]

The epic which takes us back to the days of the Old Iranian ruler Hûshârân and describes the exploits of the hero Kâhrâmân called Kâtîl, the "slayer", has attained some importance in the popular literature of the Turks. Among them the very diffuse Persian version occupying eight books is compressed into one volume. The historical background is an effectively developed picture of the struggle between Islam and the Iranian worshippers. The legendary and fictitious however occupies a considerable space. In parts the Turkish version with its mixture of prose and poetry shows the favourite technique of the popular chivalrous romances and ballads. In it we also find many histrionic features which remind us very much of the modern tales and their humorous situations. In many passages the secondary figure of the cunning, sly and covetous pâlahîn, Gerdîn Kesîhân entirely overshadows the main hero Kâhrâmân. His foolish paganism is proverbial; cf. Bu’tî’s Dârista (Ith. Constantinople 1256), p. 37 (chap. 1).

The substance of the epic is briefly as follows. Kâhrâmân, son of the Persian king Tâhirî, is carried off when three years old by a dervish and educated as one of their children by other dervîs on the mountain Kât [q. v.]. His cousin and next successor as the throne, Kâhrûmân, voluntarily renounces his claim to the throne of Iran; after Tâhirî, the pâlahîn had done all he could to grieve at the loss of his only son and becomes a pâlahîn in the service of Hûshârân, who is chosen Kâtîl. Through the whole epic runs the idea, freely proclaimed, that heresies is better than a kingdom, for the king’s throne is supported by the sword of the hero.

When Hûshârân sets out to conquer India, he meets Kâhrûmân, who has now grown up into a hero of terrible valour, has escaped from the dervîs, and well armed, is going around as a free lance on the search for home and adventure. In his arrogance and boldness he becomes involved in a series of severe duels with Hûshârân’s heroes, in all of which he is victorious, until finally his identity is established by Kâhrûmân. He thereupon readily pays homage to Hûshârân and goes to India with him as one of his pâlahîn.

There they succeed, after much fighting and many vicissitudes, in taking the capital by a cunning coup, in which the king of the Indians is killed.

Kâhrûmân to whom the principal exploits fall, mounted on a six-footed, four-eyed, unicorn war-monster that he has tamed, wins by his heroism as a bride the daughter of the Indian ruler, who has taken part in the fighting, unconquered and
invincible (Amazon episodes are found also elsewhere in the epic). But Kahraman has to set out soon again to save the mother of Bahrâm, another of Hâjíghâr's heroes, from the power of a dîne in the inaccessible crystal mountain. He succeeds in gaining the talisman of king Kârûn, in liberating his wife, who in the meanwhile had been carried off, and in freeing Bahrâm's mother. Returning to Persia, he marries the Indian princess and remains in the service of Hâjíghâr's successor, Shah Tahmasp.

KAHRUMÂ or KAHRABÂ is our amber; the Persian word means attraction or robber of straw. Usually, as in al-Kaswî, its peculiar quality is attributed to it without further note; ibn al-Kahlîr, however, observes that it attracts straw quickly and strongly, when it is slightly rubbed. This attraction is used poetically as a metaphor for the attraction of lovers to each other. Amber is brought partly from the Baltic lands of Bolgâr in the region of Kazan and was considered to be the resin of the German oak and partly from Spain. Al-Ghârîî, who mentions both kinds, notes that it attracts flies, straw, etc.

Ornaments of amber from the earlier period have not survived in the east; al-Wâhshibî, however, mentions specimens of yellow amber worn as ornaments by women, and the alchemist al-Dîchâlîkî, signs engraved in amber as talismans. In modern times, beads of amber and amber-colored are made of it. It has always been in frequent use as a medicine, just as we derive the word electricity from the Greek déka, khrôbôs, from khrôbôs. Amber is frequently confounded with zambaba, which, according to al-Amâcli, attracts rubbed straw. On the other hand, we find the difference between them emphasized.

KAHTRÂN, a tribe, in Turan, an Arab general. We find Kâthâb, whose real name was Ziyâd, mentioned as early as the year 106 (725/726) among the twelve chief of the 'Abbasîd faction in Khilân, who are said to have been chosen by the Kûfân emissary Abû 'Ishaq al-Sîrûzî to further the 'Abbasîd cause. When the long prepared revolution broke out in the summer of 1269 (747), Kâthâb was in Mêzaq to which he had gone in order during the pilgrimage to meet in person the leader of the 'Abbasîds, Dârâshî b. Mahsûmîd (q. v.). He did not return to Khilân till 1306 (747/748) after Khilân had appointed him his general. Abû Mâlik Bâbîrî b. Naṣîr, son of the Umâyyâd governor of Khilân, Naṣîr b. Sâyûr, at Tab. Tabûn fell in the battle and Naṣîr had to evacuate Khilân and flee to Dijûrîn. When the governor of the 'Abît, Kâthâb b. Qabît b. Ilâmân Bâbîrî, sent an army under Naṣîr b. Ilâmân to Dîjûrîn, Khâthâb took the field against him; on Dîs u-l-Hûlâyra i. (Aug. 1, 748) Naṣîr was defeated and slain, and Naṣîr again took to flight with the object of making his way to Hamdânî, but died on the way in Râbî', i. 131 (Nov. 748). Kâthâb then turned his attention to the west. While his son Hasân was besieging Nîhâwân, where the remnants of Naṣîr's army from Khilân had united with the governor of Hamdânî's Syriac troops who had fled from there, Kâthâb gave battle on Kâthâb 23, 131 (March 18, 749) at Lîshânik near Ipshân to Amîr b. Qâhîrâ b. Munîr who was coming out of Syria with a considerable Syrian army. The latter fell in the conflict. After Kâthâb had joined his son, the siege of Nîhâwân was continued with vigour, and after several months the Syrian garrison capitulated, while their commander from Khilân, who did not know of the capitulation, were all cut to pieces. Thenceon Kâthâb marched against Kâfâ via Hasân and Khânî, sending his son in advance by the direct route. Ibn Hubâsî advanced to meet him with a strong army, but Kâthâb succeeded in evading him and in passing the Tigris unscathed, and then camped near Dâlî. When Ibn Hubâsî followed him and pitched his camp at Fârît lâhâdî on the east bank of the Euphrates, Kâthâb crossed the river and marched along the west bank to a place opposite the enemy camp. In the night of Muharram 8, 132 (Aug. 1, 749) he crossed the river against a small body of men and surprised Ibn Hubâsî who had to seek safety in flight. In the confusion of the fighting, Kâthâb disappeared completely; whether he was drowned or killed in the fight must be left undecided.

KAHTÁN is regarded by the Arabs of the Mu'tahâmiin as the "of all the Yemen." (Ibn Hubâsî, ibid., iv. 4), al-Mas'Afî, ibn al-Mas'âfî, Paris: 1800—77, 1, 97. The word is also found in modern Arabic, the word for "of all the Yemen." (Ibn Hubâsî, ibid., v. 83 et passim) 1, s. in the ancestry of all South Arabs, who therefore are usually described comprehensively as "al-Khatān," "al-Khayl Khatān" or briefly "Khatān," when not called simply "Yemen." Kahtân is thus contrasted with "Adnân, the symbol of ethnological unity of all the
North Arabian. In this we find agreement not only among the Arab scholars, genealogists, historians, geographers, and linguists, but also with the Testament, the Qu'ran, and the Koran. The Register and Rijalik, Primarische historische recess en arabische geschichte, ed. Wattenfeld, p. 132 sqq.) also the ideas of the people, as they are still to be found in Arabic (see Donghy, Travels in Arabia Deserta, i. 252) and as found in an earlier period notably in the poetry (see Abd Hafidh al-Dinawati, al-Jaddar al-Ash'ali, p. 348; al-Tahbiri, ed. de Goeje, i. 1087, also ii. 1072, 1085; al-Mas'udi, op. cit., ii, 142; do., al-Tahbiri in 'Abd al-Rahman ibn Ibrahim, Bibl. Geogr. Arab., viii. 109, etc.); in the statements, that reflect popular opinions, we indeed find as the counterpart of Khatun usually not Adnun but his fictitious son Mas'ud, e.g. Abd Hafidh al-Dinawati, op. cit., p. 381; al-Tahbiri, op. cit., ii. 1056, 1084; and al-Mas'udi, p. 88, or his imaginary grandson Nisa, e.g. al-Mas'udi, Marfug, v. 223, video 40, 46, 143, 150, and Ibn al-Athir, al-Kamil, ed. Tornberg, iv. 273, or even his imaginary great-grandson Mushur and Rush, e.g. al-Tahbiri, op. cit., ii. 1069 infra, 1085 sq. Arabic sources usually give Khatun the following ancestry: Abar (not 'Abin, see also Kama, etc.) — Shakhli (or Shalak — Arfatkalnas (or Arfatkalnas) — Shalak — they also give him a brother, Fajlah. (The line Khatun b. Fajlah b. Abar b. Shalak etc. in al-Tahbiri, op. cit., iii. 2400, and al-Dimashqi, Najahat al-Ash'ali, ed. Mehrens, p. 249, 252 is obviously due merely to a slip). These names are of course simply abridged forms of the Old Testament names Toba (Eber), Shalak (Shelah), Arfatkalnas (Afratkalnas), Shala, and Na'am (Na'um, Noah) in Genesis x. and I. Chronicles. Khatun is therefore identical with the O. T. Yoqinon (Yossan), son of Eber and brother of Peleg and ancestor of various South Arabian peoples (Gen. x. 35 sqq., and I. Chronicles. i. 19 sqq.); Yoqinon, probably to be taken as meaning the "smaller", the "younger", i.e. as compared with his brother Peleg, might be a mere etymological invention with the object of connecting the Arabs with the Hebrews). The Arab genealogists, etc. are quite positive on their identity; they constantly assert: "Yoqinon (more rarely Yoqinah is Khatun)" (e.g. al-Mas'udi, al-Tahbiri, p. 311; do. Murabbat, iii. 143; Ibn al-Athir, op. cit., i. 57; Tadj al-Arabi, sub haft, see also Donghy, op. cit., iii. 22; Yoqinon, in the lines, appears occasionally through comparison with other or sons of Khatun, e.g. Ibn Kushefa, al-Ma'arif, ed. Wattenfeld, p. 14; al-Mas'udi, Murabbat, i. 79 sq.; Tadj al-Arabi, loc. cit., and al-Tahbiri, op. cit., i. 217). Indeed, several Arab scholars even assert — and on this they agree with von Krenz, Arabische Geschichte, ab der Volkskunde der Jemen, p. 7 sq. — that Yoqinon is only an abridged form of Yoqinon (al-Mas'udi, Murabbat, i. 143 and Tadj al-Arabi, loc. cit.). But Yoqinon could not possibly become Khatun by any phonological laws. The situation Yoqinon = Khatun has in all probability rather come to be made because some old Arab — probably a Yemeni — genealogist quite arbitrarily, since a certain similarity of the names, identified the Biblical Yoqinon with an actually existing South Arabian tribe Khatun, so that this articule, that might be made up to the Biblical genealogical system, which reaches back to Adam, in the same way as it had been done with the North Arabian under the influence of the Khatun and the Bible: by tracing Adnan back to Ismael, the son of Abraham (see Ibn Hisam, op. cit., p. 3 sq.; al-Tahbiri, op. cit., i. 1113, also ii. 1112 sq.; cf. Tadj al-Arabi, Khatu, which would surely have been of a certain degree of importance, cannot actually be proved with certainty to have existed in pre-Muhammadan Arabia. But it seems to me to be at least not impossible that the Khatun of Poenits (Geogr., v. 7, 92 sq.) are to be explained as "Khatunites" (as Knebel has already done, Die Völker der Völker der Khatunites, new edition, e. v. Khatunites) and not as Khatunites) (as von Krenz, op. cit., p. 6, Speynger, Die alten Geographie Arab., p. 207 and Glauser, ender der Gesch. u. Geographie Arab., p. 252, 423). The fact, that, of the two or more tribes of Khatun in question zone could have been important enough to be known outside of Arabia, seems to me to be against the latter interpretation. The town of Khatun (between Zabid and San'ah) mentioned by al-Ma'addi, Aban al-Tahbiri, and ed. Bibl. Geogr. Arab., iii. 87, 94 seems also to point to an old South Arabian tribe of Khatun (cf. also the Al Khatun mentioned there p. 104 and described as the "old princes of Yemen"). Finally, it is not at all improbable that the beginnings of the modern clan Khatun (see below) reach back to the pre-Muhammadan period. The great tribal confederation of the Khatun fell — in the Muhammadan period at least — into two groups, the smaller of the Haimar and the larger of the Khatun, whom the official genealogy put together as brothers and traced their descent from Khatun by the following line: Ya'rub — Yashubh — Saba' — Himyar + Khatun (Wattenfeld, Tabellen, ii, al-Mas'udi, al-Tahbiri, p. 80, etc.; other lists, the first of them in connection with Genees, x. 26 sqq., are given in Ibn Abi Rabibbi, al-Jub'il al-Najjar, Cairo 1903, ii. 57). In the genealogical table in Genees, Saba' (Sibah) appears as a son of Khatun. Why the Arab genealogists have inserted Ya'rub and Yashubh between Khatun and Saba' (and the two are also found, but in the reverse order, in the genealogy of the Himyar, as grandson and great-grandson or as great-grandson and great-great-grandson of Imran; see Ibn Hisam, op. cit., p. 3 and al-Mas'udi, al-Tahbiri, p. 80), is a question that can hardly be answered with certainty. The Himyar [v.], the epigones of the Minase, Satamah and Himyarite kingdom, were presumably for the most part settled, while the Khatun may have for the most part been nomads or half-nomads: cf. the expressions: the Himyar and the Arabs among the Yemenis, the Himyar and the clans (jebalel) of Yemen and similar expressions in Ladyne, Arabeke, x. 165 sqq. The numerous South Arabian tribes which we find in Muhammadan's time in most different parts of Northern Arabia and even in Syria and the Tradv belong principally to the Khatun. The Khatun and the Ma'addi were apparently separated even in the pre-Muhammadan period by a racial hatred, perhaps originally mainly based on the opposition between the desert and the towns. This emnity was intensified by the repeated raids of the Yemenis into the lands of the Ishmaelites (see above, l. 415) as well as by the sotn-
guiltin between the Anatolians (Meditehians) and the
Kuraitah, which came to a head after the death of
the Prophet and influenced the history of the first
two centuries of Islam in the most harmful
fashion. It was perhaps this feud that first linked
the Yemeni tribes on the one side and the lslam-
unlile on the other into closer ethnological unions.
One of its more innocuous results was the sary-
Chirwa, the struggle for rank and glory, which
continually prevailed between the two antipodes
(see e.g. al-Ma'adhi, Masubji, vi. 150, ii. 142 eel.).
The Kahtah, in view of the splendour of the ancient
South Arabian kingdoms, had the more right at first to feel the more distinguished. But
Kahlah with the mission of Muhammad and the
proclamation by the Kahtah brought the Ma'adhi
a tremendous superiority. The Yemenis endeavoured to
counterbalance this in the most different ways.
First of all they created an entirely romantic
South Arabian saga, which pictured their past
grandeur in the most splendid colours (see below in
the Bibliography). They then made Kahtah
one of the Prophet's [s.r.] , known from the
Kahtah, whose name is also identified with
Abas (Amsa), al-Sabah al-Hizali, ed. von
Kremer, p. 4. 4; Die sudafrican historiognos
geschicht: Angaben Amsa's, p. 83; Al-Vakhan, Turab,
ed. Housen, i. 220; Ibn 'Abd Allah, ed. cit., ii.
37; al-Ma'allih, ed. cit., p. 84; Doughty, ed. cit.,
i. 37, ii. 37). They then tried to connect themselves with the 'Adnan家族, perhaps
by partly making the ancient Dhulhah [s.r.], the
henries-in-law of Isma'il, to be direct descendants of
Kahtah (Ibn Hisham, ed. cit., i. 4; Abu Hamita, al-Dilmun, ed. cit., p. 9; Ibn 'Abd Allah, ed. cit.,
i. 57; al-Ma'allih, ed. cit., p. 185; Abu
al-Fida', Mnhawar al-Tabari, ed. Fiejcher, Histoire
Africaine, etc., x. 130, etc.), but especially by the fact that some of their gene-
alogies gave Kahtah a genealogy distinct from
lslam, who thus became 'father of all the Arabs'
(Ibn Hisham, ed. cit., i. 5; Tabari, ed. cit., iii.
2402; al-Ma'allih, ed. cit., ii. 142; Doughty, ed. cit.,
p. 83; al-Dinawar, ed. cit., p. 240, 254; al-
Samita, ed. cit., p. 443 etc.). They may be also
responsible for the theory that the Kahtah,
forgether with the 'Ad [s.r.], Thamud, Tim-
uth (Amaki, see 'Amak, ibid., etc.), the
so-called 'Amur Abas' (al-'Amur al-A'la'ah)
represent the genuine (primary) Arabs (al-'Arab al-
'subra or al-'Arab a'la') whilst the Ma'adhi on the
other hand are 'ambushed' (secondary) Arabs
(al-'Amur al-'nafa'ar) ed. cit., on this theory, as
well as on the other, according to which the
'Amur Abas', etc., are 'Arab 'Alm, the
Kahtah, as the contemporary Arab masu'ara and
the Ma'adhi 'Alm al-A'la'ah, Lane, Lexicon, sub
al-'Amur; Kembel, ed. cit., p. 170 etc.; Tabari, ed. cit.,
i. 245; al-Ma'allih, ed. cit., p. 188, also above l. 37a).
Finally, we may here mention the ethnological battle of South Arabian
origin, which pro-\phesies the rise in time to come of a nobility in Kahtah; see Muhammad ib. Tahiri
al-Ma'adhi, al-'Amur al-'nafa'ar, ed. cit., ii. 183 etc., and Soucek, Humejanieh, Der Makki, ed. cit., p. 12
(Verzeichnis Geschichts, i. 150).

The native lexicon (2) 22, 13 (A), and 22, 14, and 12 give two names from
Kahtah, both 'good Arab': Kahtah and the re-
usuable form Aja'a'a. A tribe Kahtah (more accurately Geba'sh, sing. Gaba'sh, plur. Gaba'sh)
still exists, as was briefly mentioned above. It is exclusively Bedawin and pisches its tents on
the desert on the eastern borders of the mountainous Yemen until and of the southern Hijazah (roughly between 15° and
23° N. Lat.); but little bodies of them penetrate in the summer far into the Neji', as far as
Wajh, and even to the province of Kahtah. It is very numerous, rich in cattle and powerful, and
also very proud as the 'noblest blood of the South Arabian'. Its nobility seems, however, to find
expression primarily in a fanatical savagery and villainous cruelty, unparalleled elsewhere even
among the sons of Arabia's deserts.

A. cian, Kahtah, has also survived down to the present day (see l. 37a).

KAHWA, an Arabic word of Persian etymology, which is the basis of the usual words for
coffee in various languages. Originally a name for wine, found already in the old poetry (see
The coffee tree was not indigenous to South Arabia and was probably introduced from the highlands of Abyssinia, where it is found in profusion growing wild, notably in Kaffa. But there is no trace of authority for the assertion (Deccers and Handbook of Arabia) that coffee was already introduced into Yemen in the seventh century and of the fall of the Himyar kingdom, about a century before the Hijra. In this case the older literature would hardly have left it unnoticed.

Another reference to the coffee tree is in writings of the 7th (viiith) century. According to (Abu Muhammad) Ibn 'Abd al-Asad, quoted by 'Abd al-Kadir al-Djambri in his essay (see below, Bibliography), the popularity of Kaffa as a beverage in the Yemen was first known in Cairo in the beginning of the 9th (Xith) century. It was there taken especially in Sufi circles, as it produced the necessary wakefulness for the nightly devotional exercises. According to this authority, it had been brought to Egypt by the jurist Muhammad b. Sa'id al-Dhahabi, who died 775 = 1400/1 who had become acquainted with it during his involuntary stay on the African coast and on its return devoted himself to mysticism; and it soon became popular.

According to Gasser (Mitt. der Gesell. Geschicht. in Wien, xxx, 245), it is stated in a Turkish source (which he does not give) that in the 8th (Xith) century in the Yemen the coffee was first known, and it was afterwards introduced into Egypt.认为此文献是自然阅读的文本。
The 19th century, the will of Uzamur [cf. Ahmad Khashab, *Tawzih*, i. 83, 897] transplanted coffee from Africa to Yemen. This fact, that the merit of introducing coffee as a beverage is given to different individuals suggests that we have to deal with various local traditions. The tradition of Mukh is the most firmly established and most widely known: therefore *Ali b. [Abd al-]Sallih al-Sulh [who is frequently confused with the founder of the Shafiite order] (Othman, son of Hammam, Rumm) — has become the patron saint of coffee-growers, coffee-keepers, and coffee-drinkers (cf. Goldhär, *Abhandl. zur Arab. Philologie*, ii. p. 198). In Algeria coffee is also known as *khalifia* after him (Beauvoir, *Dict. pratiques arabes-français*, Algiers 1887). He is popularly regarded as the founder of Mukh, which is, however, already mentioned by al-Hamadhani (Safat *Zia'ah*, ed. D. H. Müller, p. 75, ed. 87, p. 119, al.), although it owed its real rise to coffee. A well and a mosque over his grave preserve the memory of al-Shadhili in Mekka (Ni'mat, *Reisetischung nach Arabien*, i. Kopenhagen, 1838, p. 420, al.); also the legend in Hadamen Khaursa and Abd al-Karim Khaumari, *Bahrul Wadeh*, French translation by Langlet entitled *Voyage de l'Inde a la Mekke par Aboul Abdallah Khero*, Paris 1797, p. 202 sq.)

Al-Shadhili and al-Adara (probably not Haidar, as de Sacy, *Chrest. Arab.*, ii. 451, 451a) have become Christian monks named Sidi Ali and Adra in the legend given by Nafun. The motif of the camel or goat in which the enlivening effects of coffee were first noted has so far not been found in original sources. — According to a popular legend, the coffee tree was said to have grown on a goat's dung sown by the saint (Serindt, *Hurgonjia*, The *Alchemists*, Leiden 1606, p. 466).

The legends are probably correct in saying that the drinking of coffee in Arabia first began among Yemen Sufi. They were particularly fond of the beverage because its effects facilitated the performance of their religious ceremonies. They therefore considered this as its original destination (mamrawi) and found that it invited to good and hastened on the mystical rapture (zakāt) (Sunanat *Zainab*, & 340, al.). The popular tradition, which was then taken, made the drinking of coffee a good work (zawāfi), it received a ceremonial character, being accompanied by the recitation of a so-called *zād*. This *zād* consisted in the repetition 110 times of the invocation *yi zam* and *yi zam*. This usage is based — apart from the similarity in sound between *zād* and *zād* — on the fact that the numerical value of *zād*, i.e. 16, is the same as that of *fayy*, i.e. *fayy* "irregular", one of the most beautiful names of Allah (cf. above i. 393). According to Shihab b. 'Abd Allah al-Adara, the recitation of the *zain* [i. e. 5, j. 9] should precede it. Shihab b. 'Abd Allah al-Adara, the recitation of the *zain* [i. e. 5, j. 9] was at a time forbidden by Shi'ah, however, prescribed the fourfold repetition of the Surah Fā-Shaw (Sura XXXVII) with a loud loud *tafäyy* on the Prophet as *zād* (Sunanat *Zainab*, i. 340, *infra* sq., 345, 347). This was taken with a righteous intention and devotion, and genuine religious conviction, coffee-drinking leads to the enjoyment of the *zād* *wāmis*, the "ideal *zād*", as *zād* *wāmis*, which is explained as the enjoyment which the people of God (Abd Allah) feel in beholding the hidden mysteries and attaining the wonderful discourses (nawwābifah), and the great revelations (farāiday), (see, e.g., f. 341b, 345b *infra* sq., 345b) — "All this, Omar al-Shadhili is reported to have said that coffee, like the water of Zamzam, serves the purpose for which it is drunk (cf. *infra*, i. 348, cf. above ii. 885 *infra*), and the saying has been handed down from 'Ali b. al-Madkhal (d. 973 = 1956/57; cf. al-Nahshah, *infra*, i. 330) who in his last years is said to have lived on nothing but coffee: "He who dies with some *zād* in his body enters not into hell-fire" (*Sunanat *Zainab*, i. 344, *infra* sq.).

Coffee was probably not known as a beverage in South Arabia much earlier than the turn of the 7th/8th century. Whether the tree was introduced long before this is doubtful. Ibn Hajar al-Hamdan (*q.v*.) speaks in his *Fus* (commentary on *Sunanat*), probably by 'Abd al-Munir al-Salhi, cf. Brockelmann, op. cit., i. 403 sqq., that coffee was brought (viz. in Mecca) shortly before the 9th century A.H. (i.e. about the end of the 8th century) and was prepared from the moss of the *bina*, a tree introduced from the region of *Zafir*, and called *bina* (quotations: *Sunanat* al-Salhi, *infra*, p. 9, *q.v.*). Among the jurists who gave an opinion in favour of coffee, the oldest is 'Ali b. Muhammad al-Kadheni, *Sunanat* *infra*, i. 354 sqq., according to al-Nahshah, *infra*, i. 155 sqq. = 839 = 1439/1440.

An *urjūj* of Bharāf al-Dīn al-'Amirīj gives the year 817 (1414/5) as the date at which coffee became domesticated in Mecca (*Prächtig*, *Diz Arab*, *Handbuch*, zu Gehrts*, iv. N. 2070). According to the *Endzat* al-Ša'far, however, the drinking of a decoction of coffee leaves first appeared towards the end of the 6th/7th century, while previously only the eating of the fruit as a delicacy (*masfi*) was known. The drinking of coffee dropped out of use again for a time, indeed, but finally established itself and soon people drank coffee even in the sacred mosque and regarded it as a welcome tonic (*šalb* and *mawālid*). Coffee-houses (*wayīat al-šāf") were soon opened, where men and women met to sing or play music (cf. 'Abd al-Malik, *Sunanat* *infra*, i. 340 sqq., = 1439/1440). The *wayīat* al-šāf was a social game for the men and the custom of handling round the coffee on the manner of wine naturally aroused the indignation of the *mawālid* of whom many had from the first set their faces against the beverage as an objectionable innovation. They found a champion in Khādir Bay, who was appointed chief of the police in Mecca in 917 (1511) by Kāını (cf. *infra*, q.v.). He carried through the proclamation of coffee as forbidden (*šariz*) in the same year, in an assembly of jurists of the different schools in which the unfavourable judgment of two well-known physicians and the evidence of a number of coffee-drinkers regarding its intoxicating and dangerous effects ultimately decided the issue. The *wayīat* signed the protocol of the assembly. Only the then mufti of Mecca dared to defend his co-operation and became therefore the object of some invectives. By putting the questions in a clever way they were at the same time able to get an opinion condemning coffee from the *fikha* of Cairo. The rescript which Kāını issued in reply to the protocol sent to Cairo did not completely fulfill the hopes of the opponents of coffee as it contained no absolute interdiction but only allowed measures to be taken.
against any concomitant features contrary to religion. Ibn al-Hajjār al-Haštami, as late as about 950 (1543), had a vigorous discussion, at a wedding feast (mawālīna) where coffee was offered to the guests, on the new beverage with a prominent mufti, who declared it intoxicating and forbidden. Ibn al-Hajjār refers to the assembly above mentioned and cannot find words strong enough to condemn its decision and the manner in which it was reached (al-Sawā'ir, l. 3525—356). The same quotation from the Mu'jam Maghaṭribī).

In accordance with this verdict, Khājrīr Bey forbade the taking and sale of coffee and had a number of vendes and their stalls burned, so that coffee houses (jāmā') disappeared from the market. But Khājrīr's rescript again gave the coffee-drinkers courage and when in the next year one of the leading opponents of coffee was subjected to disciplinary punishment by a high official from Egypt and Khājrīr Bey was replaced by a successor who was not averse to coffee, they were again able to enjoy with impunity the beverage, to which these measures had only attracted the attention of wider circles. Only occasionally do we still read of action being taken against disgraceful proceedings in coffee houses. An editor forbidding coffee issued by the Sultan during the Hajjārī in 950 (1543) was not accepted as an edict.

In Cairo coffee was first made known in the first decade of the 18th (1700) century in the Azhar quarter by Abūs from Yemen, who held their jāmā' in the mosque with their companions in opinion from Mecca and Mārūn while partaking of coffee. After it had been publicly sold and drunk there for a time, the fakhrī Ahmad b. 'Abd al-Hākj al-Sunḥātī, famous as a preacher, declared it forbidden in 939 (1539/40). Two years later in a meeting for exhortation in the Azhar mosque he so incited his hearers against the beverage that they fell upon the coffee-houses. made short work of their contents and maltreated the occupants. The difference of opinion thus emphasised caused the Muḥammad b. Ḫyrt al-Hānsī to take the opinions of prominent scholars; as a result of personal observation and research in the houses of coffee he confirmed the opinion of those who considered the beverage a permitted one. Although in the years following coffee was from time to time for brief periods forbidden in Cairo, the number of its devotees, even among the religious authorities, steadily increased.

Several notable theologians had given fatwā in favour of coffee, for example, Zanjūrī al-Anṣārī (died 926 = 1520), Ahmad b. Ḫomāṣ al-Shāfī (d. 930 = 1524/25), Abū ʿAbd al-Muḥammad al-Bahd b. al-Sīlahī (died between 950 and 960 = 1543—53), who in verses in praise of the coffee also gives the advice that the opinion of Ibn ʿAbd al-Hākj should be set aside and the fatwā of Abū ʿAbd al-Muḥammad al-Bahd should be followed (al-Sawā'ir, l. 3494); also of al-Sīlahī's verses is Bahd b. al-Dīn al-Amīrī's Khawālīd, Büstīk. 879, 89), Abū ʿAbd al-Rahma b. ʿAlī al-Jalālī (d. 975 = 1567/68) and others (al-Sawā'ir, l. 3467). Gradually the view came to prevail that coffee was in general permitted (mukhājī), but that under certain circumstances the other legal categories could be applied to it as well.

Intercourse with the holy cities and with Egypt brought coffee to Syria, Persia and Turkey. Banūnī in 1573 found the beverage widely known in Syria (Halāb). In Constantineople and Rūmī coffee first appeared in the reign of Sulaymān I (926—974 = 1520—1566). In 962 (1554) a man from Halāb and another from Damascus opened the first coffee-houses (jāmā') in Constantineople. These soon attracted gentlemen of leisure, wits and literary men seeking distraction and amusement, who spent the time over their coffee reading or playing chess or backgammon, while poets submitted their latest poems for the verdict of their acquaintances. This new institution was by way of joke called also sektet al-bīrān (school of knowledge). The coffee-house met with such approval that soon a number of learned disputants, kādās and professors also, poets like Māmūnī al-Ṣūmtī (cf. Bahd b. al-Dīn al-Amīrī, qh., etc., p. 147) and later Bālīṣtī praised the praises of coffee, and the opinion expressed in 928 by Sulaymān's court physician, Badr b. al-Dīn al-Kushnī (Leiden MS. 945, l. 58) was not unfavourable. The coffeehouses increased rapidly in number. Among the servants of the upper classes were ḥakamūjī, whose special task was the preparation of coffee, and at the court they were subordinate to a ḥakamūjahāštī. In religious circles, however, it was found that the coffee-house was prejudicial to the mosque, and the 'alkān' thought the coffee-house even worse than the wine-room. The preachers most strongly fought for the prohibition of coffee and the way was paved for them by the mutāf (according to d'Ohsson: Abu ʿAbd al-Samīʿ) with an opinion (that roasted coffee was to be considered coal and therefore forbidden (the same argument is found in the treatise by Muḥammad 'Allī Dede, Leiden MS. 682, l. 1, 90). The fact that current politics were discussed in the coffee-houses, the government's acts criticized and intrigues woven, was the principal cause for the intervention of the authorities. Edicts issued in the reigns of Mursīd I (982—1003 = 1574—95) and Mursīd II (1012—16 = 1613—17) were not strictly enforced and still less observed. The religious authorities by public opinion by declaring coffee legal; if it had not reached the decree of being like coal. The preachers also benefited as they levied one or two gold pieces a day on the coffee-houses, and they therefore anxious to increase their number.

Mursīd IV. (1032—49 = 1623—40) issued a strict prohibition of coffee (and tobacco). He had all the coffee-houses torn down and many forfeited their lives for the sake of coffee. Under Meḥmed IV. (1038—99 = 1648—57), while the sale of coffee in the streets was allowed, the prohibition of coffee-houses was at first rescinded by the grand vizier Kaṭāfī for political reasons. This prohibition could not possibly be kept in force permanently, and later we again read of many taken by the government to lower the high price of coffee. From Sulaymān's time on a tax was levied on coffee which was at a rate of 1 asparg per qirīn for Muslim buyers and 1 for Christians. In 1299 (1689) there was added a super-tax of 5 paras the qirīn, which was called ṭarāb ṭabaqī, for both.

According to von Hammer, Geschichtskreng d. t. 773, the question of the correct spelling of ḥakamūjī with ʿ or ā has been disputed in Turkey. Ḥakamūjī is actually found in several manuscripts a. g. in the opinion of al-Kūntī above mentioned.

The coffee trade flourishes in south-western Ana
his and does best on the western side of the Sinaï at a height of 3,400—6,800 feet, where it finds in the depths of the valleys and on the slopes a fertile, moist soil and the uniform warm temperature necessary for it. The plantations on the slopes arranged in terraces (see the picture in Handbuch of Arabien, Pl. xiv.), however, need regular watering; in addition, the mist (‘umma, *drizzling*) that rises in thick clouds out of the Sinai mists is essential. To protect the trees from the heat of the sun and from the birds that frequent them they are surrounded by shady trees like carob trees, brambles, etc. The tree which is raised from seed (or propagated from layers) reaches a height of 6 to 10 feet with a diameter of 2—2½ inches and yields berries in the fourth year. It is an evergreen and throughout the year bears both blossom and berries in various stages of ripeness so that there is really no fixed harvest time. The main harvest, however, varying with kind and locality, usually falls in the months from March to June. After the berries have been carefully gathered and are allowed to dry they are shelved in a kiln. The beheem and the husks are then dried in the sun a second time.

The coffee tree is found as far south as ‘Amir (q. v.), where it is said to flourish exceedingly on mount Shih-bay (Shabata) in the land of the Ta’bi’un (north of the Wadi Tawka, Doka on Stieler’s map). (Siwar ‘Abd al-Muqā’in al-Balahb, al-Riḥla al-Tamzīriyya, Cairo 1330, p. 16; cf. J. L. Burckhardt, Travels in Arabia, London 1829, p. 377; for other places in ‘Amir see Handbuch of Arabia, p. 130, 137). The most southern areas of coffee cultivation are the Bilād ash-Sharqiyya, Wādi Wārida and Wādi Dārā. To the east we find coffee grown in the land of the Thān and in the Ḫawf. But it is the Ḫaḍat mountains, the valley of al-Farīb belonging to the land of the Bani Matar, the Djaḥal Raima and the district south of Ḫudāni that are particularly celebrated for their excellent coffee. (For further information see Goodmann’s book [k-E. Bibliography] where, too, the varieties are detailed).

The cultivation of coffee was and still is of great economic importance for Yemen. In the time of Hādí Khadīfa, i. e. about the middle of the sixth century, the annual export was 50,000,000 khalis and Bait al-Fahāq [q. v.], were centres of coffee trade. Mahjār, which the coffee trade brought to great prosperity, declined completely in the sixth century and its new lot all importance. Coffee is now exported through al-Hudaydah, where already in Nizār’s time an important traffic was found, and especially Aden (for details see von Neumann, Zentrul, d. Deutsch. Morgenl. Gesellschaft, al-1. 397, 405, W. Schmidt, and in the Handbuch of Arabia).

It has always been the custom in Yemen to drink preferably a decoction of the husks, which like the latter is called biheh, and is to be obtained in numerous coffee-houses (mistānhāy). To biheh as well as to the coffee made from beans, flavorings such as sandalwood, ginger, cloves, etc., are often added. In the social life of the Arab no ceremony or festival is complete without coffee, and coffee is the first thing a pilgrim to a festival. An invitation to coffee in Mecca means an invitation to a meal. The Arabs drink coffee without sugar; only in South Arabia milk is occasionally taken; sugar has become the vogue among the Turks.

The fresh ripe fruit is pleasant to the taste and nourishing. The eating of the fruits is not recommended whether fresh or dried — is particularly recommended in a Ḫudāni by Hama b. ‘Abd Allāh al-Nakhrī (Ṣufwān al-Safwān, f. 355° sq.) on account of its various health-giving virtues. We have no information available as to whether the custom usual among the Galla and in Kaffa of eating ground coffee mixed with butter is also usual in South Arabia. In Persia the eating of dry ground coffee is not unusual.

It is probably a case of borrowing from the military language when certain prominent stars, e.g., being called the 'Great Bear' or the 'Great Centaur', are called Börd (cf. land, lascion, k. v.).

Kaida, (ιτ. "sitting"), basis, foundation, later also rule, principle, etc. Cf. the dictionaries KАfI. (See ЕВАЯ.)

Kai-kus, a mythical king of Persia of the Kai-kusid dynasty. Called Kasa Isra in the Avesta, he is regarded by Firdawsi as the son of Ka-kohad and by other sources as his grandson. He was, it is related, a warrior king who undertook a campaign into Mazandaran, which was inhabited by demons and protected by the white lion (dorut seyyah) which caused it to rain stones upon the invading army during the night. Rustam, son of Zal, set out to deliver the king from his imprisonment and on his way met with seven adventures which have become celebrated in poetry (see KURDas). The white lion was overcome in his sleep and the lion fell from his heart restored his sight to the king and his army. Another war led the king into Hamzavat, a land lying to the south of Persia, which might be the Yemen (Hijaz), for he set sail for it by sea from Makkah. His adventures spirit took him as far as the mountain of Kaf [q.v.] which was believed to surround the earth. He married Sdada, daughter of the king of Hamzavat (al-Khulafili: Sdada, or Sdada, daughter of Dhu l-Tahmash, in the course of a visit to his father-in-law was treacherously thrown into prison in a castle on the shore of the sea. It was Rustam who came to deliver him.

Being master of the demons, Kai-kus used their forces to make them build castles in Alburz (Al-Tha'libl, p. 163: the Tower of Babel): dep. Hadim al-khushani, ed. Gottwaldi, p. 35: Mosquid al-Tha'libl, Towns Amal, Ser. III., x (1841), p. 324). To revenge themselves for this forced labor, one of them suggested to the king the possibility of viliating his country. For this purpose the king trained young eagles and attaching four to his throne had himself carried off towards the east. When the eagles felt tired, they came down again and threw the king on the ground in the neighborhood of Amal [q.v. in the middle of the forest, where he was found by the woods in whose aid he had set out to look for him. A son of the king, Siva-khakh (Siyawakh, Cyawakhan), was scourged by his stepmother Shidra, whose accusations he had resisted, of having attempted her virtue; he charged himself by the ordeal by fire, by walking unharmed through a number of the burning piles of wood. The young eagle then asked leave to fight the Turks, whom his companion near Salgh [q.v.]. The death of Siyawakh, now the son-in-law of Ahlilah [q.v.], and victim of the incursions of Shidra, decided Rustam to invade Persia: the hero put the queen to death before the king's eyes and then hurried himself on Taras to arrange his country.

Kai-kus reigned one hundred and fifty years, the latter of which he passed in retirement; he left the throne to his grandson Kai-Khustas [q.v.], son of Siyawakh.

(4. HAU.)

Kai-saryas, the name of two Seljuk rulers in Asia Minor.

Kaisar, 1, Al-Sult'an Al-Seljah 'Izad Al-Dawla wa-l-Tin K. b. Kaijsahwa, Buhkan Amri Lut'min, reigned from 606—610 (1210—1214). He at once made peace with Theodore Lascaris (see below Kaijsahwa I) because he had to defend his rights against his uncle Toghlibah of Erzerum and his brother Kaikohad, who were contesting his succession. The Armenians under Lusus (Leon), who seized the opportunity to capture Haracdes and Lascara and to plunder Kaijsahys, were temporarily induced to retire on payment of a considerable sum. Toghlibah also soon retired to Erzerum, but Kaikohad, who had seized the fortune of Anguria, held out for a considerable time and was only forced to surrender after several years' siege. He was then provisionally imprisoned in the fortress of Minasar (Mersin, now Mersin, E. K. of Mahallah; cf. Döltermann, Hist. des osmanischen, Documentos Armenienses, l. 143, note 3). By a lucky coup Kai'sahwa succeeded in capturing the king of Trebizon, Kai Alaks, who had to purchase his freedom by ceding the important harbour of Sinope and paying a yearly tribute (611 = 1214). The town of Antioch, which had been taken by Kaijsahwa shortly before, had lost the Turkish garrison with the help of Christian knights, was again reconquered. In 613 (1216) Kaijsahys made an incursion into the land of the Armenians and besieged the fortress of Gabaen (the city in place of this mention two citadels, Cinmey and Gomkani). The army sent to raise the siege included the Constable Constantine and several Barons of the Empire; it was completely routed by the Turks and the Constable with many Barons and knights were taken prisoner. Kai'sahys then returned to Kaijsahys, without having taken the fortress, after plundering the land and laying it completely waste. There was nothing left of the Armenians but to beg for peace and the release of prisoners. Both appeals were granted but their king had to pledge himself to pay tribute and to cede the important frontier fortresses of Laz'a and Law-aid, which commanded the Cilician passes. When in 613 (1216) Kai'sahys's ally, the Abythid of Hailah, al-Malik al-Zahir, died, Kai'sahys arranged with the Abythid lord of Sumalija, al-Malik al-Afjal, that the latter should receive Hailah with the Saljuq as his overlord. This plan seemed at first to be successful; the Turkish troops occupied Mardin without difficulty (Kamal al-Din, trav. Beloch, i. 65, mantiq Burs al-Rasch, as does Yekho, ed. Wistar, ed. i, 604, and adds Tell Khaled also, Rabah, Tell Sayyid and Mablagh; but in place of handing the visitors over to Al-Afjal, a secret had been agreed, Kai'sahys put Turkish commanders over them. Frictions thus arose and the Hailah gained time to appeal for help to al-Malik al-Afjal (cf. 1. 222) whose troops defeated the
advancing-guard of the Turks at Tell Kahlilbeh (Vigat, i. 369). Kahlilbeh then retired on Alattin, while al-Afif drove the Turkish garrison out of the fortresses they had taken. Furtively at this time, which he attributed to the treachery of his own emir, Kahlilbeh had several of them hanged and others imprisoned in a building called the Rabab Turlush by Vigat, and later by us, so that they were all burned to death. Soon afterwards he himself fell ill of consumption and died in 616 (1219). His body was buried in a hospital built by him in Siwah, where the inscription on his tomb, incised in 617, can still be read. Cf. v. Berchem, Matériaux pour un Corpus Inscript. Arabicum, Part 3, p. 572.

KAIKUSUR II, Iza al-Dīn, was the son of al-Kai- kusur II. Iza al-Dīn was the son of al-Kai- kusur II. Iza al-Dīn died in 643 (1245), according to the arrangements he had made, his son 'Alī al-Dīn Kahlilbeh, whose mother was the Georgian princess Tamar, was to become Sultan, but he was barely 7 years old and had two older brothers — also still young — 'Iz al-Din and Rukn al-Dīn Kahlīf Arslān. 'Iz al-Dīn was the eldest. His mother was the daughter of a Greek priest (Frater Simon in Vincent de Beau- vais, Book xxxi, Ch. 25, who, however, confused 'Iz al-Dīn and Rukn al-Dīn). The powerful vizier of the late Sultan, Shams al-Dīn Ljikan, declined for him but did not yet dare to set aside the other two brothers, for the declare ultimately lay with the Mongol Khānes. The vizier therefore could not prevent Rukn al-Dīn from being accompanied by several Turkish emirs, from travelling to the court of the Great Khān and being present at the great festivit at which Kayuk was proclaimed Great Khān (1245). But in the meanwhile the Vizier (whom Frater Simon refers to as Ljik) was busy getting all power into his own hands and married 'Iz al-Dīn's mother to the great chagha of the Turkish emirs. To attain his desires, he had several of them put to death, including, according to Vincent, a certain Salafūdī, i.e., Sharif al-Dīn Mahmūd, the governor of Arzandja, a man well-disposed to the Christians, who understood French and German (ibid., chap. 27). The result, however, was that the discontent emirs laid a complaint against him before Kayuk, who gave them a year to appointing Rukn al-Dīn Sultan. In addition, the Khān ordered that the vizier should be handed over to the relatives of the slaughtered emirs. He also laid down definitely the conditions of peace: the Seljuk emirs were to pay a yearly tribute of 1,200,000 hyperpyres (beasts), 500 silk robes with gold brocades, 500 horses, 500 camels and 5,000 head of other animals and also presents which doubled the value of the whole. This is Vincent's story (Ch. 29). Cf. thereon苗art in Zohrāt al-Nāmāb, i. 912; d'Olsanou, Histoire des Mongols, ii. 83.

When Rukn al-Dīn then returned to Asia Minor, he was recognized as Sultan, and the vizier, in accordance with the orders of the Great Khān, handed over to his enemies and put to death in 646 (1249); we have therefore coins with the name of Rukn al-Dīn as early as the year 646 (1249). In the meantime, however, news of the death of the Great Khān and it was not till 1251 that his successor Möngke assumed full authority. The Turkish emirs therefore worried little about the power and agreed with one another that Kahlīf was now the real ruler. To the contrary, the Great Khān's three sons should reign jointly. From 647 to 655 all three names appear on the coins, with the single exception that in 652 (1254) Rukn al-Dīn struck coins with his name in Kakhja, because he had been proclaimed sole Sultan there by the jahāl of the town, Šamsūn an-Dīn. Long negotiations followed between Rukn al-Dīn and 'Iz al-Dīn, which led to nothing, however, until finally the sword brought a decision: Rukn al-Dīn was taken prisoner and sent to Amurru and later to Baghārī. In the meantime Möngke had demanded that 'Iz al-Dīn should come to him, but the latter had little desire to undertake the dangerous journey and therefore sent his brother 'Alī al-Dīn Kahlīf to rich presents. On the way, however, the prince was murdered and an enquiry instituted by the Great Khān to find who had a hand in it led to no result. An encounter between 'Iz al-Dīn's troops and those of the Mongol Noyon Baidjn at Akṣar in 654 (1256), in which the former were routed, forced 'Iz al-Dīn at once to seek refuge with Theodorus Lar- caris. The imprisoned Rukn al-Dīn was then released and recognized as Sultan (coins of 655). But scarcely had Baidjn retired with his Mongols than 'Iz al-Dīn returned to Koyun, while Rukn al-Dīn was in Kakhja. After long negotiations and occasional skirmishes between the troops of the two brothers, a division of the kingdom was decided upon. Rukn al-Dīn was to reign eastwards from the Kahlīf Frater and 'Iz al-Dīn westwards. Both brothers were then to go to Huilīgh, who was then in the neighbourhood of Tiberias, to have the agreement confirmed. This was done, but soon afterwards the Mongols learned that 'Iz al-Dīn had entered into negotiations with their archenemies, the Manūkh of Egypt, and put an end to his rule. 'Iz al-Dīn was still able to escape to Antālia and sailed from there with his relatives and a few faithful emirs to Constantiopolis, where after the fall of the Latin Empire, he lived in the hands of the Greeks. There he was sure of a good reception, and according to his having a Christian mother. But the presence of these Turks soon became embarrassing to the Emperor. They
to have begun a conspiracy to murder him and make 'izz al-Din Emperor. When the Sultān's Christian uncle betrayed this plan, the Greeks lost no time in hastening the Sultan to Ainoa, while his servants were incorporated as Turkops in the imperial army, or imprisoned and put to death (622 = 1226). Six years later (668 = 1271) 'izz al-Din was liberated by troops sent by Constantinople to MongoDB Timur and brought to the Crusades. There he married a daughter of Bereke Koku and died in 678 (1279-80). On his son Maz'ud see the separate article.

Bibliography: See that of the preceding article. Specially important here is Vincentius Bellovacinus, Specimen historiale, Books xxx. and xxxi., chap. 26, 27. KAIKHSURAW, a mythical king of Persia, of the Kayast dynasty. Son of Szywi-chah, who had left his father Kai-Kara and taken refuge in Turan where he had married the daughter of king Afsaiyeh [q. v.]; he was born after his father's death and brought up in this country among the shepherds of the mountains of Kelt (a valley near Bamiyan), in ignorance of his illustrious origin; but this was soon removed. At seven years old he was making bows and at ten he feared neither lion nor tiger. Then Piran, the walker of Afsaiyeh, took him into his house. In a dream Gadsar, an Iranian noble, descendant of the smith Kawa, learned that the heir to the throne existed in enemy territory and that his son Gōw had to look for him; the latter found him, and, by chance and recognition, that Kai-Khuraw, had on his arm the black mark that distinguished Kaya-bah; therefore he took him, along with his mother Fatirgah back to Persia. There he found a rival in his uncle Fūrūr. To settle the question, Kai-Ka's decided that the issue should belong to the one who captured the fortress of Balmundūn, near Ardash. [q. v.], where Akbrim reigned. It was of course KaiKhuraw who went with the aid of illicit forces, and there he built a temple in honour of the sacred fire Aharbaghpan. A journey through his empire showed him the devastations caused by the Turkmans and he swore to undertake a war of vengeance against them. Aided by all the nobles, he went on expeditions of which the first were unsuccessful; but fortune soon changed and Kai-Khuraw took over the direction of the campaign. Afsaiyeh, in spite of the help of the Emperor of China, was finally forced to fly and Kai-Khuraw assumed him in vain beyond the seas. He was hidden in a cave in the mountains of Afsiabdādjan [q. v.] and his place of concealment could only be discovered by supernatural means. He was finally taken prisoner and beheaded. Thus was accomplished the vengeance due for the murder of Szywi-chah.

Having succeeded his grandfather Kai-Kara, for whom he waited for 40 days, Kai-Khuraw reigned peacefully without any incident more remarkable than the killing of a dragon which had taken up its abode on the mountain of Kishālī, between Fars and Isfahān (Husain al-Iṣfahānī, ed. Gottwaldt, p. 36). At the end of his life, he asked God to receive him into heaven and, after naming Luṭūfī as his successor, he undertook a mountain journey in the course of which he disappeared, after having washed in the water of a spring (the spring of eternal life). Those who had accompanied him perished in a snowstorm. It is clear that the figure of Kai-Khuraw corresponds to that of the Avestan hero Hauravan, who belongs to the Indo-Iranian mythology.

KAIKHSURAW, the name of three Seljuk sultans of the 13th century.

Kai Khuraw I., Ghunth al-Din, b. Kizil Arslan. When the aged and destitute Kizil Arslan II died in 658 (1260), he was staying with his youngest son Kai Khuraw, who governed Burjil (i. e. Ulubartu) in his father's lifetime. Kai Khuraw concealed his father's death and only made it known, when he had arrived with the body in Konya, in order to have homage paid to himself as Sultan there. His brothers, each of whom ruled over a part of the Seljuk kingdom, troubled about him just as little as they had done about their father in his later years. It was some time, however, — according to some not till 659 (1261), according to others 659 — before one of them was strong enough to take Konya from him. Finally Kain al-Din Salamân [q. v.] succeeded in doing this, so that Kai Khuraw had to take flight and after several unsuccessful attempts to regain his throne with the help of Leon of Armenia and of the neighbouring princes of Malatya, Hâlab and Amid, wandered hither and thither (-the poem composed by him in Itu Bilâd, p. 29-49, till he at length found a welcome with Alexios III. in Constantinople. At this time he married a daughter of a distinguished Greek named Manoucem, and the death soon afterwards of his brother 660 (1261) opened up a good prospect of returning to Konya, because several emirs were discontented with the rule of the latter's son Kizil Arslan III, who was a minor. The main part in the plot was played by several members of the dynasty of the Dinarshahs [q. v.], who had been deposed by Kizil Arslan II. He finally succeeded in being proclaimed Sultan in Konya, in spite of a jehd of the kâgit al-Temu familiarity, who declared him unworthy of the throne because of his Christian mother and his intercourse with the unbelievers, a kâgit which cost the issuer's life. According to Ibn al-Athir, al-Kâmirî, ed. Tornberg, iii. 160, Kai Khuraw besieged Trebiunad in 665 (1265), apparently without much success. In 667 (1270), he took the important support of Anil rebels from Alkumandil. From this capture date the first relations of the Seljuks with the Venetians, to whom he granted a licence to trade (cf. Hepp, Gesch. der Levantengesellschaft, i. 334). In 665.
this danger passed when in 659 (1244) Baidij Noyan appeared with his Mongols before Erzurum and took and plundered the city after heavy fighting with the frontier troops. The viser Mehdidibak al-Din and his Naib Shams al-Din Isfandiyar hastened to gather a large army, to him Armenian and Ayübiid mercenaries and to advance against the Mongols with them; but the incapacity and cowardice of the Turkish troops lost the battle at Kızılıkaya (May 642, 1245). Baidij thenupon marched on Sivas, which surrendered and was therefore spared, but Kızılıkaya, which was taken, by force of arms, plundered and its inhabitants massacred. He then went into winter-quarters and the visier succeeded in concluding a temporary peace, which, however, had still to be confirmed by the Great Khan. But as Hulegu died just then and the next juridical was not held till 1254 (see above, i. 682), the Turks had a few years' peace and the able Shams al-Din used the opportunity to seek the intervention of the Great Khan, on a ceremonial embassy with several other prominent Tuzars. He was entirely successful so that on his return he received the office of visir rendered vacant by the death of Mehdidibak al-Din. The good for nothing Sultan, who after the death of Kızılıkaya, had been about to fly to the Greeks, again gathered some courage in 1245 began a campaign against the Armenians, against whom he had a grudge because they had handed over to the Mongols his mother, who had taken refuge with their king, with her treasures. The objective of the campaign was to have on this occasion, but soon it had to be abandoned, because the rainy season began; after the land had been ravaged in fearful fashion. The Armenians by the treaty of peace bound themselves to pay tribute and to cede Braganza. When the leaders again appeared at the Sultan's court, the latter had died suddenly a week before.

Bibliography: See above under KAİKÜSHRÂW, of particular importance are here Vincent de Beauvais and the histories of the Mongols.

KAİKÜSHRÂW III, CEYMACI AL-DÎN, R. EREN AL-DÎN KILÍÇ ARÇAK was proclaimed Sultan, immediately on the murder of his father, by the powerful Ferâwân Mu'ân al-Dîn Sulaimân [q. v.], although he was still a minor. The events in Asia Minor during his reign will be better discussed in the article SELÎMÎN. After the execution of the Ferâwân (676 = 1277) Kâkhuṣraw's reign was soon at an end, as his youth rendered him a mere tool in the hands of the Mongol rulers. His nephew Mas'ûd [q. v.], when he returned to Asia Minor after his father's death, was so successful in gaining the favour of the Great Khan Arçak [q. v.] that we have coins of his name as early as 651. The unfortunate Kâkhuṣraw, who was entirely in the power of the Mongol prince and claimed Kâkhuṣraw, became involved in the latter's fall and was put to death in 682 (1285) in Anadolu by order of the Ilkhan Almûn.

KAİ-KÖBÂD, a mythical king of Persia, of the Kayšan dynasty. The 'Ajvatr knows his name in the form Kayrvat, but nothing more of him; tradition only preserves of him the fact that he was grateful to the Yezidis for having made his empire glorious and for having re-established the legitimate line of Kings of Isfahan. The only source to consult is the Shân-ešahi of Pirâvâd. To defend Iranian soil against the inva-
sions of the Túrúnjána Afra'ísíyáb, the Sürç Zal, father of Kustam, after ripe reflection and consultation with the náhirís decided on Kal-Kobád, who was living in the mountains of Allurúj (Hare-herezát), and sent his son to look for him. The latter found him in the midst of a banquet surrounded by feasts and merriment; he greeted him, but already the new king had seen in a dream two white falcons play a golden fürs on his hand and was thus informed of the coming of the emissary; the two which, he had taken to make himself remote had not prevented destiny from putting the messenger on his track. Becoming commander of the Irúní army, Kustam completely defeated Afsa'ísíyáb, who would have been made prisoner if the giršá by which he was being carried off had not broken.

As a result of this victory, a peace was concluded which gave Perz to its former frontier of the Oxúa. Kal-Kobád spent his time in acquiring the empire and traversing it, in founding cities and in levying riches for the heroes who had rebuilt the empire: Kustam, Kārín and others. He died at the end of a reign of a hundred years.

The Mufrad al-Tamúrid (Faurs, Atlas, Ser. III, vi (1841), p. 320) which says that Kali-Kobád comes from the mountains of Hamaíd, Álmand, and not from Allurúj, and Hamú al-Istakhází (ed. Gottwald, p. 35), only mentions his building cities, notably Keda'ísán on the Oxúa, and the expansion of Išfákha. The Bándikáh only gives fifteen years to the reign of this king instead of a hundred.

**KAIKOBÁD**
The name of three Séláñj in Asia Minor.

**KAIKOBÁD I, *Ál dib-Diba* WA-L-DIN AINI L-PATI K. B. KAIKHÚRÁF.** How he had been taken prisoner in the reign of his brother has already been told under KAIKHÚS I. The death of this brother in 616 (1210) opened the way to not only the gras of the feht of Khúrásán, where he was then interned, but also placed him on the Séláñj throne. All the Turkish emirs do not seem to have been quite agreed about this, as they declared for another brother, Kal-Kobád, but Kal-Kobád succeeded in gaining possession of Khúrásán, the capital, and in so doing removed the last remnants of Persian power. He probably received valuable help from the Christian auxiliary troops, as Ibn Butúl relates that the Emsír Orumíyá played an important part in these events. We know from the account of Vincent de Beauvais (Book xxvii, 444), which, however, refers to the reign of his successor, that the Greek emperors of Trebisond and Nicaea as well as the prince of Lamprón had pledged themselves to place a number of troops—settled in a treaty with the Séláñj at the disposal of the Séláñj. It is certain that this agreement was already in force in the reign of Kal-Kobád I and KAIKHÚS I, perhaps with the single limitation that it was not till the reign of the last named that this pledge held good for the Armenians also, and was renewed under KAIKHÚS I. At the beginning of his reign the Armenian king Lóón II died (1319) and his daughter Isabella married the son of the Catholic prince of Antioch, which aroused a great dispute among the Arme- nians, the result of which was that the discontented barons under the leadership of Constantin, prince of Lamprón, entered the prince, promised him and married his widow to Halísín, the son of Constantine. A war with the prince of Antioch was thereby rendered inevitable; the Templars and Knights of St. John received orders from Rome not to take part in it so that Bohemund could not do much against the Armenians and, according to Ibn al-Ádžf, had even to appeal for help to Kal-Kobád. In any case, the latter took advantage of the dispositions among the Christians by seizing several Armenian forts on the Mediter- ranean and in Asia Minor and showed, including the castle of Galorónos (assíle-10), Cátóri, which he chose for his winter residence and made a considerable seat for his buildings there, so that the place became called Alia (Áliyya) after him. In these circumstances there was nothing left for the prince of Lamprón on his side, but to acknowledge the invincibility of KAIKHÚS and to support him with auxiliaries in his war.

An attempt by Mas'úd, the Abuzíd of Amí and Jáma' Kháis, who succeeded his father as lord of their towns in 619 (1223), to leave KAIKHÚS and make himself independent and to establish alliance with the neighbouring Abyliid princely, cost him the fortresses of Káshání and Cémítharš. The troops sent to his assistance by al-Áshraf (see i, 228) were scattered by the heaviest army, but KAIKHÚS hastened to hemp tokens of honour on the captured commander and to release him because much depended on him for the friendship of the Abyliids. Indeed he even sought the hand of an Abyliid princess. His request was granted and the marriage took place a little later. In 622 (1225), the prince of Arzúján, Bahsháháb, died after forty years' reign, and was also to the Séláñj of Erúsim, Tughríyá, who to KAIKHÚS thought this a good opportunity to seize where possible the lands of these rulers. Dháhrún, Bahsháháb’s successor, did his best to avert the danger by entering into alliances with Dháfi al-Dín Khaulisín- zhán, with ‘Ala’ al-Dín, Grand Master of the Assa- sina and with al-Áshraf, but in vain. Kal-Kobád forced him to cede his territory and he was equally successful with another number of the Mengídzí family, Múazzár al-Dín Muhammad, who ruled over Cógóitá (Ehmán Káhásar). But before he could take Erúsim too, he had to wage a difficult war with Dháfi al-Dín, who was an ally of the prince of Erúsim. After massacres he and his sons went seven times to war and were warred on the two rulers, Kal-Kobád made an alliance with al-Áshraf, who fought with Dháfi al-Dín for the possession of the town of Khisíy. As soon as the Khisíyíim became aware of this, he overthrew the Kormíyá by a surprise march to anticipate the union of the two warring forces, but in the battle of Arzúján on Ramadán 29, 647 (Aug. 10, 1250, ed. Ahtz für de la Conqst interarw. des Orientalistes, xli, 19) he suffered a terrible defeat. The fate of the prince of Erú-
The reduction having determined to finish the work within 20 years, a second series of numbers, beginning with $S$, will be started, parallel to the present series. It is the intention of the reduction to publish 3 numbers of each series yearly.
applies on a coin of 20l, so that the statement in Mem. d'Emerit finds that he was again deposed in 700, seems to be wrong. Cf. V. Derham, "Mad-
ner, IV. 94 note. But as there is also a coin of Mahb with the date 700, both princes may be in-
habitants of the little Sultans in Khair. That
on the other hand Kaikobad was Sultans as early
as 483, as has been declared from the Alphons
alleged to have been given to him by 'Othman
Ghazan (Ferdowsi's, Manzari, i. 49-55) is cer-
tainly wrong, as is the calculation in Iliadyl,
given him a reign of 28 years, 3 months
and 12 days.

KAIOBAD, Mirza al-Din, king of Dihli, was the son of Siyaj al-Din Baghban, king of Bengal,
and second son of Ghizyoth al-Din Buldu
[ALBAN] of Dihli. On the death of his eldest
son, Mahamund Khan, who was slain by
Mahmud Buldu or Talha, Buldu made his second son, Bugjir Khan, who was governor of Bengal, his heir, but the
prince could not endure the restraint of his
father's court, and, having come here in 1257, the throne became vacant, and the amirs
made his son, Kaikobad, king. Kaikobad, who was
barely eighteen years of age at the time of his
accession, had been most strictly educated by his
grandfather, and señalized his sudden emancipation
by unfilled expectations. He put to death his
cousin, Kaikhanan, son of Mahamund Khan,
and disgraced the ministers, Khatir al-Din, after
whose degradation Nishan, lord of the pastoral,
pronounced the law of the Dihli, became supreme
in the state. Early in the reign a horde of
Mughuls, which had invaded India, was defeated;
the prisoners taken were treated with great cruelty.

During Kaikobad's vigorous reign the Sildjild,
conquered his greatest extent and highest prosperity, for Kaikobad was not only an inde-
fatigable soldier but also undertook great building
operations, the remains of which in Agra, Samarkand, Abyana and elsewhere keep alive the memory of the
Khan. After his death in the year 1258, his brother
was poisoned in Agra; for his son Kaikhanan, it is said, because Kaikobad had appointed as his successor not him,
but a younger son, born to him by the Aliph's
wife.

During Kaikobad's vigorous reign the Sildjild,
conquered his greatest extent and highest prosperity, for Kaikobad was not only an inde-
fatigable soldier but also undertook great building
operations, the remains of which in Agra, Samarkand, Abyana and elsewhere keep alive the memory of the
Khan. After his death in the year 1258, his brother
was poisoned in Agra; for his son Kaikhanan, it is said, because Kaikobad had appointed as his successor not him,
but a younger son, born to him by the Aliph's
wife.

Visier, the so-called hainamah-pasha. The case is an isolated one in which the Grand Vizier appointed an ərdən hainaməbəl to represent him in the camp (Lüft, Turāl, iv, 19); we also find hainaməsh in the Səfeiške and the qapuqan Pəs(a) (Qeybəl hainaməsh for the qapuqan of the Aρeχəl Peninsula, which was under the jurisdiction of the Səfeiške); for the Pəs(a) administration the right to appoint representatives of the hainaməsh in the cities of officials the now obsolete term ye (e.g. əxış ye) was used, for the judicial officials used.

In the reorganization of the army and the provincial administration on the European model under Majmud 2 and Aḥd al-Majf al-ʃahin in the army the equivalent of Lieutenant-Colonel and in the civil service the name of the official entrusted with the administration of a district (emış).

KAIM—KAMIE

l'act. royal de France, liv. (1831), 53 sqq. v. (1833), 95; dö., Études de la religion des Bretons (Paris 1838), also Index v. d'Amours and his Théogonie des Bretons (Paris 1863); W. A. Ivanow, Immortalita in Memoria of the Atlante Society of Bengal, VIII. (1922), 1–70; S. Goury, Études relatifs à la doctrine des Immortels in Notices et extraits, xxi (1874), 194, 201, 229.

AL-KÁMIM bi-‘AMR ALLÁH and QÁFAR ‘AR-RÁDÁL, ‘Abbásid Caliph. He is said to have been born in Ithlul ‘Alí Dájjala (Nov. 1001); his father was the Caliph al-Kádir [q. v.], who had nominated him as his successor shortly before his death; his mother was an Armenian or Greek slave. When he ascended the throne (Ithlul ‘Alí Dájjala 422 = Nov.-Dec. 1031), the Caliphate had almost entirely lost its secular power and anarchy reigned practically supreme in the capital. To make himself obeyed, he ordered in 426 (1034/5) that all judicial offices should temporarily suspend their activities, which was, however, entirely without success. In his reign ended the Buyid dynasty and its palace was taken by the Seljúqs. On Ramadán, 22, 447 (Dec. 15, 1055) the Seljúq chief Toghrıl Beg was officially prayed for and on the 25th the latter entered Baghdad in state, nominally as vassal but in reality as master of the Caliph (see SHIHAB-BEK JÜNDI, who soon afterwards in 449 (1058) granted him the Sultanate and the title of honour of "King of the East and of the West". In Ithlul ‘Alí Dájjala of the following year (Dec. 1058) the Turkish general al-Hasaní [q. v.] took possession of the capital, while the Caliph took refuge with the ‘Ukilidi Kürsatı b. Reḍu‘ü [q. v.], and on the 13th (Jan. 1, 1059) prayer was offered in Baghdad for the Fatimid al-Mustanjir. Al-Kámin, however, was soon again recognized as Caliph (end of 451 = 1059/1060) and although he was only a tool in the hands of the Seljúqs, he was treated with respect both by Toghrıl Beg and his successors. He died in Bagdad 467 (April 1075).

AL-KÁMIN bi-‘AMR ALLÁH and QÁFAR ‘AR-RÁDÁL, the second son of the Fatimid [q. v.] dynasty, born in 280 (893), succeeded his father ‘Ubayd Allah al-Mahdi in 322 (934) on the throne, assumed the praenomen Muhammad and on his proclamation took the name of al-Kámin bi-‘Amr Allah. His father had designated him as his successor as early as 298 (911), when after the death of al-Shíb [q. v.] he thought his own rule sufficiently secure, and had had his (the prince’s) name mentioned in the Friday prayer; the prince commanded the army and conducted the business of the campaigns while ‘Ubayd Allah was still on the throne. He placed himself at the head of his troops not ever taken a personal part in any of the numerous wars, but used to entrust his wars with their con-
duct and after failures, or on particularly difficult expeditions, he used to appoint his eldest son to the supreme command.

Of al-Kámin’s campaigns, while hair-transparent, may be mentioned the conquest of Constantinople and Tripoli as well as his efforts to conquer Egypt. He gained great successes especially in the second expedition against Egypt in 307–309 = 919–921. He had conquered Alexandria and, from Giza (10th) and occupied the Faiyum and Upper Misurah. But disease, deficiencies in the supply of reinforcements and the strengthening of the Abbásid governors’ troops on the other side and the defeat of his fleet at Rosetta forced him finally to withdraw. He had, however, consolidated Fatimid sway as far as Bāṣra. In 316 (928) he developed the town of Māzā as his capital and called it al-Mujāmmāddiya. When in 322 (934) he succeeded his father, he had at once to turn his attention to an impotency, who gave himself out to be the son of al-Mahdi. After defeating him without difficulty, he turned his attention westwards to secure his authority there. He then devoted himself to various expeditions, sent his fleet to the coast of France, where the crews plundered and took prisoners, to Genoa, which was captured for a short time, and to Calabria. In 333 (945) he sent an army of 10,000 to Egypt, which conquered Alexandria, but was soon afterwards defeated by Muhammad b. Tughril al-Jihâlid, brother of the Abbásid governor. At home al-Kámin had to wage a continual struggle with rebellious tribes, his most redoubtable opponent being the rebel Ali b. Yarad [q. v.]. After heavy fighting and many misfortunes, he succeeded in driving his opponent out of al-Mahdiyya but soon afterwards in 335 (948) he was hard pressed at Sliwa with his army and finally surrounded. During the siege, he fell ill and in a few weeks

Al-Kámin was a fanatical champion of Fatimid doctrines. His reign was a period of incessant wars, which were waged in the service of the fanatical and的能力 and tenacity cannot be denied him. He laid sound foundations for the greatness of his successors. In this period of warmanía, it was impossible for him to attend to the works of peace. The Bibliography is found in Wustenfelde, Gesch. d. Fatimids, ch. 73–120; Houtouia, Réveil de textes relatifs à l’histoire des Seljouquides, ii. 7, 9, 11–51, 54; Le Strange, Baghdad during the Abbásid Caliphate, p. 99, 339; id., The Lands of the Eastern Caliphate, p. 173 (K. v. ZETTENSTEIN).

KAIMAK. [See KIMAK]

KÁMIE (t. originally A. of. KÁMIE, the name for paper-money in Turkey, an abbreviation for Sibin fevmed (= "revenue bonds"); the word was originally used of drawings and documents which were written on large, long leaves in such a way that the lines ran parallel to the narrower side, as was the case with the first issues of Turkish paper-money; later the term çıkâh nafihî took its place.

The first çıkhî appeared in 1840 and was manuscript. They bore interest at the rate of 12½% per annum, to be accepted as money in the public banks and used throughout the kingdom. They were replaced in 1842 by printed notes of a primitive style; the smaller notes bore no interest; the rate of interest for the others was reduced to 6% and at the same time the
enculturation of paper-money was limited to the capital and its vicinity. The total of this first issue was not to exceed 60,000,000 piastres; but in a very few years, as a result of the weakened condition of Turkish finances, it was swollen enormously and in 1862 calculated at approximately a million piastres. In this year, with the help of a foreign loan, the paper money was redeemed for 40% cash and 60% Turkish Cossack (so-called «emissaries») and made no longer legal tender.

In 1876 and 1877 the Porte found itself forced by the bankruptcy of the state and the outbreak of war with Russia to take refuge in paper-money for a second time. "Kaim" were issued for 1,000,000 piastres, which, however, depreciated in a very short time and at the beginning of the 80's of the 19th century, were called in along with the depreciated copper-money.

A third issue of a paper currency of a total value of 16,000,000,000 piastres dates from the world-war; it is still (1923) in circulation.

KAIRIN. [See KAIR.]

KAI-RAIN (K. KAIR), usually Bani 'U-kain or, with allusion to the syllable xu, BAL-RAIN, within Kain, an Arab tribal. The official Arabic genealogy gives as its true name al-Nadsin b. Khair (see Wustenfeld, General Tabellen, Tab. 2, s. w. Ibn Dardjud, al-Ishafi, ed. Wustenfeld, p. 377; Tadj al-Arabi, s. v. Ken; Ibn Khallikán, Wajeb al-'Ayyân, ed. de Slane, Artic. Wasathka b. Mishi, about the middle; etc.). It is therefore interpreted as originally a nickname and probably rightly as "al-Kain, which means in Arabic, surnames (as "Mukaddar, "Alwadi", etc.). It is a widespread application to surnames generally (for the meaning "slave", which the native lexicons also give and which Baumberg, Beitrage zur Semitischen Religionssprache, p. 152 uses for his deductions, I have no really certain reference). This might be derived from the Bani 'U-kain having been at one time actually metalworkers, perhaps miners. Thus the Arab b. Tell, who worked the celebrated Salamis or Farsa mine were also called Bani 'U-kain, "sons of the smiths" or al-خلل "the smiths" (see Wustenfeld, liii, 864 sq.); al-Bahr, al-Wajeb (ed. Wustenfeld), p. 20 = Wustenfeld, Die Wohnstätte der Phönizier der Arab. Schéme, in Abb. d. Geschichte d. Wusten im Gottingen, xvi. 28 (Noldeke wrongly refers a passage, Zeit. d. Deutsch. Morgenl. Gesellsh., s. w. 181, note 6 to our Bani 'U-kain); Sproinger, Die alte Geographie Arabiens, § 410 and 28, 34, and Wustenfeld, Register zu den General Tabellen, p. 162. Our tribe, however, appears in the old poems and historical references to it to be in every respect a genuine Beduin tribe. The period of industrial activity of the Bani 'U-kain would therefore have to be looked for in the very remote past (cf. Sproinger, op. cit., § 420). Another explanation of the name Bani 'U-kain seems to me to be not quite impossible. The names al-Elain and Bani 'U-kain are used by the Beduin Arabs, who are the very kind of people (to whom, in terms of contempt) of the glossary is the Nahal Qair or Y-Farasaq, under Kairis, where Bevan gives about 60 references, all from the Nahait. al-Farasaq himself appears here 18 times as "Ibn al-Kain" or "Ibn al-Kaim", and his family three times as "Bani 'U-kain", cf. also Kais b. Khallim, Dimla (ed. Kawarski), Nr. 10, 92; Hasin b. Dalaits, Diniya (ed. Hirschfeld), Nr. 27, 44; Hamid b. Chalib, ed. Chalibou, Nr. 627; and Tirmishan, Dina (ed. Krenke), still going through the press, Nr. 19, 9. It is therefore imaginable at least that in our case also, we have an original term of abuse, which has remained attached to the tribe.

The Bani 'U-kain formed a branch of the great system of tribes of the Kaida's, who, in origin probably South Arabian, were settled in the historical period in the upper north, in Syria, in Mesopotamia and in the Irak and to all appearance had gone over entirely at least for the most part to Christianity there (see Wustenfeld, Tabellen, loc. cit.; Ibn Durjud, op. cit.; Ibn Kattaba, Kit. al-Majlis, ed. Wustenfeld, p. 57). The Aal Ali, Alall, Alall (ed. al-Malbed, Cairo 1905, ill, 33). That the Qair and following it the Lulun al-Arab and the Tadj al-Arabi under Qaim and the scholion to al-Harizi, Makram, p. 90 include them in the Banat Arab, is probably due simply to carelessness, a confusion of Arab, who in the Arabian genealogical scheme appears as the great-grandfather of our al-Kain (cf. again Wustenfeld, Tabellen, Tab. 2) with the anonymous hero of the great Mufair tribe of the Banat Arab. As doubtful as it is isolated is the statement that they had belonged to the Taimit (Tadj al-Arabi, loc. cit.), although the tribal area is corresponding roughly to Arabia Petraea, extended from the Sinai Peninsula along the Syrian frontiers far into the land east of Jordan (cf. Wustenfeld, Register zu den general Tabellen, p. 371, where all is not quite correct; Sproinger, op. cit., § 420 sq.; Caenis de Persanto, Eroits sur l'histoire des Arabes, i. 234, iii. 345, 352; Noldeke, Uber die Anzahl der einige andere Nachbarvolker der Araber, in Denksb. des Orient. u. Oriental. 6, 635; al-Hamad, Diwan, al-Mirdas al-Arabi, ed. Stüber, p. 131 sq. = Sproinger, op. cit., § 321; Uwe b. Ward, ed. Noldeke, Texte des Hausa de Abu Turmanan, ed. Freyberg, ii. 218, Schol. A. 115, 118, 143; al-Yakked, Kit. al-Rukh, in Bibli. Geogr. Arab., ed. de Goeje, vol. 320; Yakkud, op. cit., ii. 459, iv. 1413; al-Wakiki, al-Ma'raj, abbrev. transl. by Wellhausen, p. 373; Sproinger, Der Lebens u. der lander des Propheten Mohammad, iii. 295; Ibn al-Azir, al-Kaim - § 3°5 (ed. Tornberg), vi. 87 sq., and the maps in Blau, Arabien im sieben Jahrhundert, in der Zeitsc. d. Deutsch. Morgenl. Gesellsh., xxiii. 559, and in Castan, Annals of Isfan, ii. 2, at the end of the volume. They hardly mention in a periodical a name as the Bani 'U-kain; and they are often called "Musa'bin" along with all sorts of neighbouring tribes, see al-Tahair, Ta'ribah, ed. de Goeje, i. 1641 and 2347.}

History. In the poetry and tales of the
"battles of the Arabs" and of other events in older times the Ramm 'Bajin appear in typical Beduin fends with the tribes of Ka'bah (Hanuk, loc. cit., p. 77); Yathrib, loc. cit., l. 241; Ibn al-Athir, loc. cit., l. 370; Ibn Sa'd, Tabakat, ed. Sachau, III/II, 279; Ibn al-Athir, Ust u.d.-Zubaid, ii. 234 = Ibn al-Hadj, al-Bajira, ii. 45 = Spevogler, Das Leben u. die Lehr der Propheten Mohammed, 1. 401, also Tägges, loc. cit., v, 49. At Bahlul, Fidal, al-Bajir, ed. de Goeje, p. 283 = Ibn al-Bajir, al-Bajirin, in Bibl. Geogr. Arab., v. 182, sp. 2nd ed., Gottwaldt, p. 121, where end lesen bn should be read for eben 'lebn bn. Ghaafar (Agabat, ii. 194), etc. At Mina, on the Yamaka (Hirnoma) and perhaps also at Fiil, they fought in alliance with other Ka'bin tribes and the Lakhum and Najidun under the banner of the Byzantines, whose authority was recognised more or less by all the Arab tribes camped along the frontiers of Syria (Ibn Hisam, 1. 810; ed. Watenfeld, p. 795; al-Thabit, al-Tabari, ii. 237). Ima'm al-Baqiri, Fadl in Bibl. Geogr. Arab., 1. 97, 114; Cauvin de Perceval, loc. cit., II. 312; Spevogler, Das Leben u. die Lehr der Propheten Mohammed, ii. 292, note 2; Castani, loc. cit., 1. 85, III/II, 106 etc. In al-Thabit, loc. cit., l. 1879 Saif b. 'Omar says that the wave of apostasy which swept over almost all Arabia on the death of the Prophet, also affected the Ramm 'Bajin (cf. Cauvin de Perceval, loc. cit., III. 345, 352 and Castani, loc. cit., 1. 85, 395). From this statement it might be deduced that our tribe had become subject to the state of Medina while the Prophet was still alive; but it does not appear to me to be quite credible. In the civil war between Marwa b. 'Abd Allâh b. al-Zubair we naturally find the Ramm 'Bajin as South Arabian on the side of the former (al-Thabit, loc. cit., II. 478; al-Mas'udi, al-Tamid in Bibl. Geogr. Arab., v. 308, etc.) and on the occasion of the rising of Bahlul b. Righ Khâlid in 119 = 737 we again find them in the pay of the Umayyads (al-Thabit, loc. cit., II. 1625 sq.; and Ibn al-Athir, al-Kamil p. 178; Tägges, p. 176). They again played a very important part in the construction of the 'Abd Allâh (792) in consequence of Harun al-Rashid, in which al-Bakr b. Kaldun (Nirâr) fought against the other Yamana (Ibn al-Athir, loc. cit., v. 87 sq.) They then disappear from our knowledge.

According to Na'âshibyin's Shi'ah al-Umm Lakhum was a subject of the tribe b. 'Usaylan (see Dir auf Südverwandten heutigen Araben, 1. 291), and from Usaylan, ed. by A. Almoud Ahmad, p. 95).

The best known member of the tribe is the poet Abu 'l-Tamadun al-Kalbi, who flourished about 1000 n. (see Göltz, Tabakat al-Shâbi, l. 977-983, q. v. Ibn al-Kalbi, ed. de Goeje, p. 232 sq.; Ibn Dubad, loc. cit., l. 317; Ibn Khallikan, Nâmâ-ye-e Arif, Bulul 1290, l. 18 and Hanûm, loc. cit., p. 525; wrongly in Watenfeld, Geographie, Tabakat, Tab. 2, 11, and Register, p. 441, who has misunderstood the passage in the Hanûm).

H. Kowald (Gesch. d. Volker Israels, 1. 327) has with all reserve connected the Old Testament Kain (see Kain) or Kainâni (Kainâni, Kainâk) with the Ram 'Bajin. Nobelske has followed him at first only as a possible hypothesis but later, with more confidence (Über die Asymmetrie, loc. cit., p. 634 sq.)

Zeitliche, d. Deutsch, Morgenl. Gesetzl. 1. 181 and in Cheyne and Black's Encyc. Biblica, i. 130. The Kainâni were settled in the south of Palestine in the ancient Nebi, the later Idrumma; this would actually be the region where we find the Bakr. Besides, the Kainâni were obviously nomads like the Bakr (Stade, Zeitl., d. der Alterth., XIII, xiv, 287, and Sayce, Early Israel and the Surrounding Nations, p. 94 sq.), and so, in Ilag, Die Geschichte der Bibel, p. 305 of the Kainâni with the Ramm 'Bajin, the brother of Abel, loc. cit., p. 285 sq., which. Ed. Meyer, Die Israeliten und die Nachbarvölker, p. 395 sqq., Procksch, Die Volker Altpalastina, vol., part 2 of Das Land der Bibel, p. 37 etc. have adopted, 1. consider, with Nühbeke, Enzykl. Bibl. (loc. cit., very problematic). But the two coincidences mentioned do not seem sufficient yet to justify us in identifying the Kainâni with the Bakr. The Kainâni disappear from literature with the Exile (with the exception of the Rabbâkites, whose inclusion in the Kainâni is, however, not absolutely certain). They may nevertheless have continued to exist. But that so small a clan, which never appears as completely autonomous in the Old Testament should have continued to exist for a millennium after the Exile and at the end of this period still possess considerable strength and property,—seems as the result of incorporating other tribes—1. consider a very daring assumption. The name Kain was obviously not at all a rare one (see Watenfeld, Register in den General Tabellen, p. 377; Liebhaber, Handbuch der nördischen Epizographik, p. 362, also Littmann, Zur Entstehung d. Thauam. Grundsätzen, p. 45), cf. therefore Ed. Meyer, loc. cit., p. 399.

Bibliography (besides the works already mentioned): al-Tamadun, Tarikh (ed. de Goeje), Akhbâr and Yathrib, Muqaddimah (ed. de Goeje), see the indices thereon, Ed. Meyer, Die Entstehung der Asymmetrie, p. 115, etc., and Guthke, Kurzer Bibelwürterbuch, s. v. Kain.

KAINUKI (Kain), one of the three Jewish tribes of Vathrib. The name differs from the usual forms of Arabic proper names but at the same time has nothing Hebrew about its type. Nothing certain is known regarding their immigration into Vathrib. They possessed no land there but lived by trading. Their threefold names known to us are for the part, as the part Arabic say as little regarding their origin as the occurrence of Biblical names among them. But there seem to be no valid reasons for doubting their Jewish origin.

In Vathrib they lived in the south-west part of the town, near the Maghâla and close to the bridge over the Wadi Buthâna, where they occupied two of the castles (Safâr), characteristic of Vathrib. They practised the goldsmiths' art among other trades; al-Bakr (Faris al-Khatim, Bth 4) incidentally mentions a goldsmith of the Kainâk. On their expulsion they left behind them arms and tools, which were divided among the Muslims after Muhammad had invested his fifth shahid.

The number of their fully equipped fighting men varies in the references to it between 400 and 750.
After the dominating power in the old Vathriov had passed from the Jews to the Banu Kallas the Kainukâ were in alliance with the Khasarid (q.v.) in Muhammad's settlement of the relations of believers and other sections of the community, and were not mentioned by the name of their tribe any more in the Nuzâr and Kunir (q.v.), but are described as "jevis of the Najd, Harrâs, Sâ'dâ and Liqahum" (articles 26-39) i.e., as allies of different subdivisions of the Khasarids.

After the battle of Badr (Ramadan 4 H. = March 624) Muhammad's relations with the Jews of Medina became troubled. The Jews as a body had adopted an unfriendly attitude to the Prophet. From the religious point of view, therefore, they became inconvenient; and from the political side, as a powerful foreign body within the just converted town, they were a great danger. When Muhammad felt his position strengthened by the battle of Badr, the idea of expelling his enemies must soon have entered his head. The Kainaika, as they lived in the city itself, were those he wished to be rid of. First with this description of the situation, his attack on the Kainukâ (in all probability as early as Shawwal 2 H. = April 624) is sufficiently explained. What the Muslim writers give as special reasons for the attack has hardly more than anecdotal value. Sometimes it is said that it had been a jest that a Muslim made to a Jewish woman, sometimes the Kainukâ are said to have behaved with particular arrogance. Shârili 10 saph. and vii. 66 saph. are said to refer to these incidents. Shârili 11 refers to the victory at Badr as an example and warning, and vii. 60 speaks of vengeance against people, from whom treachery is feared.

After a fourteen-days' siege, the Kainukâ surrendered without striking a blow; the men were bound and seemed to have to fear the worst. The energetic intervention of Abd Allah b. Ubayy, chief of the Khasarid and leader of the Muhmmadân, however, effected an amelioration of their lot. They departed first to the desert, and later, in colonies in the Wâdi 'Kikar, north of Medina, and from there they went to Al-Hilâf in Syria.

(A. J. Wensink)

AL-KAIRAWÂN (French Kairawan) a town in Tunisia, 311 miles south of Tunis and 40 west of Sûsa in which it is joined by a railway; lies in 35° 40' N. Lat. and 10° 2' E. Long. (Greenwich). The population in 1912 was 22,000 including 500 foreigners of whom 200 were French. Kairawan lies 256 feet above sea-level in the middle of a great plain traversed by the Wâdî Zerîd and the Wâdî Merghâli, which ultimately disappear in salt lakes. These rivers are subject to sudden floods, which sometimes transform the environs of the town into a lake extending up to the foot of the walls. When the rains have been sufficiently abundant, the soil yields a rich harvest; al-Bakrî mentions that in the western part called "Fârâb al-Darrârâ" the grain sown is sometimes returned a hundredfold. But usually the ground, lacking trees or herbage vegetation, and covered with lime sand, gives the country a desert appearance. The temperature shows considerable variations (24.5° in winter and 120° in summer). The rainfall is not heavy (14-5 inches per annum) and therefore running waters and springs are scarce, so that the inhabitants have to use cisterns to collect their drinking-water.

Kairawan really consists of two towns, the city proper surrounded by a walled settlement of brick, blanked with buttresses and round towers as well as a casbah, 3,350 yards round, and secondly a vast fan-stretching to N. and N.W., the faubourg of the Ziaa (Qissâ) so called from the popular name of the tribe occupying the neighbouring country. To the south-south there has grown up a little European quarter. The interior of the town is a network of narrow and tortuous streets. Commerce and industry are fairly busy, although Kairawan has lost much of its economic importance. The principal industries, which, it may be added, are of the nature of home-industries, are the manufacture of carpets, which occupies a thousand looms and that of woolen blankets. The working of leather (saddle-making, shoe-making) for which the artificers of Kairawan were at one time very famous, and that of copper, are still followed by several hundred workers. The importance of Kairawan in the past is particularly shown by the number of religious edifices to be seen in it. The principal is the great mosque of Sidi 'Okba, one of the largest buildings in North Africa, the foundation of which dates back to that of the city itself. Among the others may be mentioned the Mosque of Sidi Sahîb (vulg. Sahâb, Mouqâa of the Barbary) dating from the first century A.D., but rebuilt and extended in the xvith century A.D., the Mosque of the Three Gates (Ghâmini Tizit Ribân), contemporaneous with the preceding, the Madrasa Sidi 'Alî al-Chârî (xvith cent.). A.D. and the Mosque of the Sâheb (Tizit 'Amâr Abluka), finished in 1571. The other mosques and building of which were sent materials from Hraimitum (Susa) and even from Carthage, show an interesting mixture of Byzantine and Oriental influences. The latter are clearly seen in the decorative motifs (fairfores, woodwork) analogous to those of 'Iraq and Buhârî. The more recent buildings show examples, sometimes remarkable, of wooden ceilings in compartments, arabesques in plaster showing Hispano-Moorish inspiration. We may add that the buildings of the xivth and xvith centuries often reveal the intervention of European architects and workmen, especially Italians.

History. The foundation of Kairawan dates from the Arab conquest. The town was in fact built by 'Okba b. Nâsî in 80 (670) to give his troops a base of operations and depot for supplies and also to keep in awe the Berber tribes. "I intended," the historian al-Nuwairî makes him say, "to build a town which can serve as a depot of arms (kairamân) for Islam: to the end of time." (al-Nuwairî in Ibn Khaldûn, Hist. des Berbères, transl.

(A. J. Wensink)
Kairwan was built on — or very near — the site of a small Roman town called Kamdalah or Kamnina, the materials of which were used by the Arabs. The site of the new town, two days' journey from the shore, had been chosen to put the Muslims some distance from an attack by the Byzantines who still held the coast. "O'kha first of all built a mosque, the palace of the government, then houses for his soldiers as well as a wall 2350 yards long. Legend was not long in embellishing this foundation with marvellous tales. The site of Kairwan was, it was related, covered with impenetrable thickets inhabited by deer and reptiles which disappeared at 'O'kha's command. A vision revealed to the conqueror the exact position of the ribat and of the mihrab of the mosque, and the existence of a spring indispensable for the inhabitants, etc. The buildings were hardly completed when 'O'kha was disgraced and called back to the East (55 = 675). His successor Dinnar Abu l-Mahdaj hastened to destroy Kairwan and built a new town called Talkurin or Takurin two miles to the North. Restored to the favour of the Caliph and sent back to Africa, 'O'kha rebuilt Kairwan on the original site.

Kairwan was henceforth the capital of Muslim Africa and the residence of the Arab governors, but during the century which followed the death of 'O'kha it had to submit to numerous vicissitudes. After the rise of Kusai'a it was occupied by the Berbers and remained for four centuries under their power (64 — 68 = 692). During the Kharidji rising (661) it was taken and pillaged by the Wafarajjums (139 = 756 — 757), who committed such excesses there that the population scattered over the surrounding country. At the end of fourteen months, the Ababd Abu l-Khathit (q.v.), chief of the Huwarra (q.v.), drove the Wafarajjums from the town and restored the government to the Abbasid Caliph of the time, Rustam (q.v.) (141 = 758/9). In 145 = 762/3 Ibn Asliwah was victorious over the Kharidja and re-established the seat of government at Kairwan. He endeavoured to repair the damage done by the Berbers, and to protect the town from a new attack, he surrounded it with a strong wall of brick, 13 cubits in thickness. These precautions did not, however, prevent the Ababd tribes under the command of Abab Al-Husayn (q.v.) from laying siege to Kairwan (144 = 771) in which the governor 'Omar b. Hasb, who had escaped to Tula, was shot up. After the death of 'Omar, who had been killed during the siege, his successor Dinnar (or Hamid) (q.v.) captured and opened the gates to the enemy. There were, however, no conquests. The inhabitants were allowed to go freely and the victor was content to demolish the fortifications. The Kharidja occupation was of short duration. By 155 = 772, Yezid b. Húsayn, victorious over the heretics, had taken Kairwan. He rebuilt the great mosque, which has since been enlarged for a trade-guild and the title of second founder of the city (Al-Nuwayri).

Under the Aghlabids (800 — 909 a.d.) Kairwan underwent considerable expansion and reached the zenith of its prosperity. The princes of the dynasty vied with each other in enriching the town with rich monuments and multiplied the works of public utility. Ziyadat Allah I and Al-Hadi built waterworks and canals to secure the town's supply of drinking water, for the reservoirs built for the purpose of the Caliph Muhad had become insufficient. "The largest and most useful of these reservoirs", Ibn al-Bakri, "is circular in form and of enormous size. In the centre rises an octagonal tower covered by a pavilion with four doors. A long series of arcades of arches resting on the other ends on the south side of this reservoir". These waterworks have not completely disappeared and one of the reservoirs restored by French engineers is still called the "reservoir of the Aghlabids". The great mosque was rebuilt from top to bottom. The primitive edifice built by 'O'kha had already been destroyed by Hasam b. al-Nuwayri (q.v.) who had rebuilt it and adorned it with pillars of marble which, without doubt, came from the ruins of Carthage. Soon becoming too small, the mosque was again enlarged in 105 = 732/734, then entirely rebuilt with the exception of the mihrab in the time of Wanz b. 'Abbas (115 = 774). Ziyadat Allah in his time had the whole building taken down including the mihrab, which was enclosed between two walls so as to be preserved, without being seen except through a narrow grill, and replaced it by the present mosque. According to al-Bakri, 80,000 mithal (about $320,000) were expended on this work. Ibrahim b. Ahmad completed the work of Ziyadat Allah; he lengthened the principal building and built above the nave a structure (called Kubbat Al-Ashir) that remained of 420 cubits long, 150 broad, divided into 17 bays by 414 columns, the great mosque could rival the most famous monuments of the East. Other religious buildings restored in the same period also claimed the attention of visitors, like the Mosque of the Three Gates, the Mosque of Sidi Sahib (Mosque of the Barber), the Mosque of the Anqir, which according to the legend was built even before the arrival of 'O'kha by one of the companions of the Prophet, Kusai'a b. Zaid, and the Mosque of Alqalqal b. 'Olija b. Anqir.

Outside the town rose the royal residences, Kayr al-Kafrin and Al-Rakejda. Kayr al-Kafrin, also called al-A Shawayya, was built in 184 = 803, 4 miles S.E. of Kairwan by Ibrahim b. Aghlab, who settled there under the protection of his negro guard and made it the seat of government. It is the "Castle of the Most", where were received the ambassadors of Charlemagne. Around the palace there grew up a town provided with baths, caravanserais and havelis and surrounded by a wall with five gates. Al-Bakri mentions in it a mosque flanked by a cylindrical minaret ornamented with seven tiers of columns. Some distance off was another castle called Al-Rajiga. Al-Rajiga, four miles S.W. was a creation of Ibrahim b. Ahmad (363 = 876/773). This prince built here a place celebrated for the purity of its air, a castle around which grew up an important town with havelis and baths. It measured 44,000 cubits in circumference, but enclosed large areas filled with parks and gardens. A large sanctuary and court of a powerful state, Kairwan was also a great commercial city. The shops of the merchants stood on either side of a covered street about two miles in length. It was also a city of learning, where the study of Malik's law was particularly honoured. Celebrated professors like Asad b. Al-Furat (q.v.), Ibn Rasid...
and Saḥḥāt had numerous pupils there. The teaching of medicine was equally flourishing. The Jew Ḥabīb b. Ibrāhīm, physician to Ẓiyādār Allāh II and his pupil Ḥabīb b. Suḥaylīn founded a regular school there.

This prosperity did not end with the Aqabahid dynasty; it continued under the Fāṭimid and the early Zirids, although the Mahdi ʿUmayl Allāh, after living some time at Rakkādā, had moved the seat of government to al-Mahriyya. The town suffered a great deal, however, from the revolt of Abī Yāḥyā q.v., "the man with the axe." The Nakkās seized it in 333 = 944 and pillaged it in spite of the appeals of the notables and scholars who had come to improve the conditions of the conqueror. But in 334 = 946, the Calif al-Muʾtāfīn retook Kairawān and after having deposed the Kūṭī and built some distance away the town of Sahrāt to which he gave the name of al-Mansuriyya, in memory of his victory over Abī Yāḥyā, and in which he established his residence (337 = 948). His successor al-Muḫrīz moved to al-Mansuriyya the bazaars and factories of Kairouan to great dissatisfaction of the inhabitants. The new town was surrounded by a wall with five gates of which the principal, Rūth al-ʿAṣwārī (gate of concealment) was used by the sovereign when he took the field at the head of his army. The town of Rakkādā on the other hand abandoned by its inhabitants and itself destroyed by the Nakkās was razed to the ground. The garrisons alone were spared. During all this period Kairouan and al-Mansuriyya still had a very active economic life. The manufacture of carpets, of woolen and cotton goods flourished there. Cultivated vine and orchards extended round the town. The wealth of the inhabitants is evidenced by the fact that the agents of the Fāṭimid were able to extract from them 400,000 dinars on a single occasion. According to al-Rāzī, the taxes levied each day at one of the gates of al-Mansuriyya amounted to 26,000 dirhems (about £600). The people of Kairouan, however, complained of the tyranny of the Fāṭimids and the bulk of them remained attached to orthodox Islam. Their hostility showed itself in serious bloodshed under the earlier Zirids. In 407 (1017–18) 3,000 Shīʿas were massacred in a rising and the town of al-Mansuriyya was pillaged by the populace. Al-Muḫrīz's brother and the Fāṭimids were therefore received with enthusiasm by the people of Kairouan.

This act of rebellion led to a breakup in the Hilāl invasion of which Kairouan very soon felt the disastrous results. After the defeat of Husain, al-Muḫrīz ordered his soldiers to evacuate the town; they sacked it first of all and the withdrew al-Mansuriyya. He then rebuilt the town of Kairouan on a length of 22,000 cubits and joined Kairouan to al-Mansuriyya by two walls half a mile apart (444 = 1052). In spite of these precautions the attacks of the Hilāls became more and more serious. Kairouan was abandoned by a part of the population and in 449 = 1057, al-Muḫrīz himself to evacuate al-Mansuriyya and return to al-Mahriyya. The Arabs then entered the town and wreaked the most frightful havoc. "They destroyed all the houses and all the monuments of the city of Kairouan. Nothing that the Sunnī princes had left in their palaces escaped the greed of the brigands. All that there was in the town was carried off or destroyed."

(Ibn Khaldūn, Hist. des scribes, transl. de Slane, I. 37). The inhabitants were scattered in all directions, "some went to Egypt, others to Sicily and Spain; a considerable body to Frs." (Abū al-Walīd al-Marrākūshī al-Muḫrīzī, Fihrist, ed., Paris 1892, p. 293).

The capital of Ifriqiya never recovered from this disaster. Pillaged again in 1060 by the Husainites, its possession disputed between the Zirids and the governor, the Kalīl ibn Mūsīn, who tried to set up in it his own experienced independent principality with the support of the Fāṭimids, Kairouan remained under the domination of the Arabs and defended against the incursions of the nomads. "The latter levy contributions on every thing: the inhabitants are few in number, their trade and industries in a miserable condition" (al-Īsānī, transl. de Goeje, p. 129). Stayed for a time in the reign of Abū al-Muʿāwīya, who restored the town in part, its decline continued its rapid course under his successors and under the Hafsids as a result of the continued troubles of which Ifriqiya was the theatre. At the end of the sixteenth century A.D. the town was almost deserted; its only inhabitants were the peasants who sought shelter there. It was gradually repopulated, but was still very wretched at the beginning of the eighteenth century A.D. "The inhabitants", writes Leo Africanus, who visited Kairouan in 1516, "are all muslim poor artificers, of whom some are clothiers and dyers of the skins of sheep and goats, the others fustians whose handwork is sold in the cities of Numidia, where no European cloth is to be had. But all of these trades there is not one which is able to make a good livelihood and those who follow them live a miserable existence and are in very great poverty." Ill-treated by the rulers of Tunes, the people of Kairouan were in an almost constant state of revolt. They even definitely threw off the authority of the Hafsids when the latter had accepted the Spanish protectorate after the capture of Tunes by Charles V. in 1535 and recognized as chief the Marabout Sidi Ārif of the tribe of Shābiyya. In spite of the help of the Spaniards Mūsīn Ḥasan could not dispose of this factor who was supported by the Arab tribes and the Turks of the corsair Dragut. His successor Ahmad Sulayḥ was no more fortunate.

Under Turkish rule Kairouan felt the repercussions of all the troubles of the sixteenth century A.D. In 1704 the Bey Murūqī, to punish a rising of the inhabitants, destroyed the walls and the houses and only left the mosques and bazaars standing. On the other hand Husain b. al-ʿĀlibi, founder of the Hamdanid dynasty made great efforts to raise Kairouan from its ruins. He reconstructed the fortified walls round it and restored over fifty mosques, according to the author of the chronicle al-Muḥammad al-Maṣfūrī (French transl. by V. Serres and Mūṭajir ibn Ḥasan), Tunes 1900). He had a "banīāt" there, where he used to sit while his troops were going through the Djerda to collect the taxes. The inhabitants showed their gratitude to the Bey by supporting him vigorously against his nephew ʿAbd al-Raḥmān, who could only capture Kairouan, where Husain had taken refuge after a five years' siege (1735–1740). The town was once more razed by the victor, but it was rebuilt and, according to Desfontaines, was in 1784 "the largest town of the kingdom next to Tunes and even better built and less filthy than it".
Trade and industry were quite busy there and the people were exempt from taxes in return for the fidelity of their ancestors to the Bey Hasina. Kairwan had also preserved its character as a place of sanctity and the inhabitants were very hostile to Christians. Very few Europeans, among whom were Peyssonnel, Shaw and Desfontaines had been able to visit the town. Dr. Sastrow on the condition of the inhabitants was permitted down to the end of the 18th century. After the signing of the treaty of Bardo (1851) which placed Tunisia under the protectorate of France, Kairwan was one of the centres of native resistance. To put an end to this, three columns under the supreme command of General Saussere set out from Tebessa, Tunis and Sousse and united before the walls of the town. It was occupied without fighting on October 29, 1881.

KAIS, a little island in the Persian Gulf, in that part of it which the medieval Arab geographers call the "sea of Oman," in 52° 4' Long. (Greenw.) and 25° 30' N. Lat. Kaiz, which may be Bait-nait [q. v.], may not perhaps be considered the most important of the Persian islands of the Gulf; it is about 10 miles long and five wide; it is separated from the mainland by a strait about 12 miles wide, which affords a very secure passage. Apart from a few rocky places, the island is quite flat; it is better cultivated than most of the islands of the Persian Gulf. The medieval Arab and Persian geographers make special mention of its prosperous condition, noting particularly its wealth in trees (mainly date-palms) and refer to the cultivated fields, gardens and orchards. Besides agriculture, navigation and trade, the then fairly numerous population of the island was also engaged in the pearl-fishery; for the latter see the remarks in Ibn Khurda-dibhe, Yûsuf, al-Dimashqî, add. Allâh Mustawfi, and Ibn Baṣîr, 1484, 1, 12, 97. The name of Kais is an abridged form of the Persian Kais or Kesh (the form Kaïs is also found; see al-Dimashqî, op. cit.). In the Portuguese and Dutch authors of the 16th and 17th centuries we find forms like Quix, Queis, Caiez or Queues, Quess etc.; cf. Vincent and Tomschke, op. cit. Kess (Kohan) is also sometimes given as the name of this island, e.g. by Vincent, Kimme, Morier (op. cit., p. 31), Oussiery, Kemphorne, Ritter and Tomschke, and in Selections from the Records of the Bombay Government, N. S., xxxvi. 706. But it is, however, undoubted, whether the existence of some such second name for Kais, which we know merely from English sources, see on the other hand Schilling, op. cit., p. 350, can be maintained. Could Khan, the Khun of Ibn Kliroud-dibhe (p. 62, 7), be the earlier name of another island near Kais, perhaps of the island of Faur (next of Kais)? See Schwar, Iran, etc., p. 87. The circumstance that an Arab prince named Kais b. "Amir" took possession of the island of Kais—It was hitherto occasionally called Qajuat Kais b. "Amir" or Bani "Umair, see Yûsuf, l. 503, s. v. 711, —may have affected the transmission of the old names; the latter itself does not, however, date only from the Arab chief just mentioned, as Ibn al-Talikhi, op. cit., thinks, but goes back into the pre-Muhammadan period, for we find Kais already mentioned in the Sassanian period, as one of the seven bishoprics of the Nestorian ecclesiastical province of Persis; for this reference to Kais about the middle of the sixth century in Syriac literature, see Guidi in the Zeitschr. d. Deutsch. Gesell., xxxii. 413; Chabot, Sources orientales (Paris 1902), p. 680: Suchan, Zur Ausbildung des Christentums in der Perä (= Abh. der Berl. Akad., 1941, N. S., 1-7), p. 28.

Historical. In classical literature the island is only twice mentioned: in Arrian's Indian (37, 4) under the form Karâasa and in Pliny (Nat. Hist. vi., 110) as Aphrodisia; cf. Vincent, op. cit.; Ritter, viii., 774, s. il. 438 and Pauly-Wissowa, Reallex., Kar, s. a. After this period, perhaps we have in Karâasa or Karâs the prototype of Kais (Kesh). In the Muhammadan period, Kais formed a part of the province of Ardabîr Khvâr in Fars. It was only in the latter middle ages that the town attained greater importance, when, as we have already mentioned, a prince of South Arabian origin captured it, built a fort there and gradually haggard to extend his power. After the capture of Shîrâz, which then enjoyed great prosperity as the main waple of the Persian-Islamic-Chinese trade, the Arab dynasty of Kais rose under the last Buyids in the first half of the 9th (9th) century to unlimited control of the whole Persian Gulf. This State, which was previously often regarded wrongly as a town on the coast near the island of Kais —actually confused with Kais by Ibn Baṣîr (p. 244, 2)—lay much farther to the north; the ruins of this famous commercial
centre are near the village of Tāhir (north of Esfahān, in 27° 48' N. Lat. and 54° 30' E. Long). Greenwood, op. cir., p. 59 sq.; and the article Sābāsáy. Strife gradually became more and more desolated under the usurpation of the princes of Kāis, as they diverted the very considerable trade and shipping from the captured Persian seaport to their own island. They also extended their power to several other districts of the mainland opposite the island of Kāis. Their predecessors in the occupation of this strip of land had been a South Arabian tribe, the Bani Umar; cf. on their territory, the so-called Sīr Umar (the Umar—coast), Schwarz, op. cit., p. 78. In the little town of Hāzīt, there is a little dynasty of a family of the Bani Umar, of whom colts still survive, ruled before the coming of the ruling house of Kāis; cf. v. Berghann in the Neues J. Zeitschr. (Vienna), VIII. 33—39 and Tischenschuss in the Revue des Études Islamiques, 1875, p. 337. Hāzīt (probably the modern Čīrā) and Sābāsáy (reading uncertain, probably the modern Tābūmāh), both almost opposite Kāis (in the N.W. or N.E. of it), were the most important posts on the island—traders on the mainland. On Hāzīt and Sābāsáy see Ibn al-Balkhī, Fāralāmān, p. 144; Ḥamd Allah Mūsawī, Nāṣrī al-Qalībī, text p. 120, trans. p. 118, and Le Strange, The Lands of the Eastern Caliphate, 1857. A caravan route from Shirāz ended in Hāzīt, the most important of these two towns; cf. Ḥamd Allah Mūsawī, p. 185 sq., 186 sq. The same author (p. 172 sq., 184 sq., 186 sq., 187 sq.) also gives the routes and distances from Kāis to Bāsa, to Sābāsāy and to the islands of Sārābād (Ceylon) via Hormūz. Most of the smaller islands near Kāis likewise became subject to the rule of the latter, for example Dīsāk (probably the modern Līyāk (in the strait of Hormūz), where, according to Yaḥyā b. Ṣāḥib, the "king" of Kāis maintained a garrison celebrated for its seaman'ship; see also Eṣāsāh, 1. 122). At its period of greatest power, the dynasty of Kāis also ruled over the opposite coast on the Arabian side (district of Ōmān), wherefore they are called by Yaḥyā and al-Dīnawārī "the lords of Ōmān".

The journey of the Rabbi Benjamin of Tudela falls within the period of Kāis's prosperity (second half of the twelfth century). He notes with admiration how the rich market of the island, whose chief business consisted in the exchange of Indian and Persian manufactured and produce, see the edition of the Itinerary of Benjamin of Tudela by Grünwalt (transl. Jerusalem 1903), p. 77 sq. The Jewish traveller wrongly gives the island, which he calls Kith, much too large an area; but there can be no doubt that he refers not to Kithān (so Grünwald, op. cit., and Ascher in his edition, ii. 175 sq.), but to our Kāis. Benjamin of Tudela says that there were 500 Jewish families settled on the island. There must, of course, have also been a number of Persians living there. The bulk of the inhabitants, however, in the middle ages (as it is still the case to-day) were not Persians but Arabs, who were the chief settlers on most of the islands on the Persian side of the Gulf. The Venetian Marco Polo (Peregrinatio i. Chap. 7, iii. Chap. 44) of the second half of the thirteenth century knows Kāis under the name Kāsi (in It.: ortography: Cesi) as a place of call for ships sailing from Babylon to India.

The decline of Kāis was caused by the commercial rise of the little kingdom of Hormūz [q.v.], also under an Arab dynasty. Even under the Saliḥīk prince, Malik Dinār of Kīrman (585—625 = 1186—1244) the ruler of Kāis of that time had freely endeavored to get Hormūz on the mainland from the latter in return for a yearly tribute; see Muḥammad ibn Ḥamūdī, Tārīkh al-Salihīk, ed. Houtman, Leiden 1886, p. 166 sq.; E. D. Zeitschr. d. Deutsch. Morgenl. Gesellsch., 8, 1887, p. 395. Further information on the relations of Kāis with Hormūz is given in the Relaciones (1616) of the Portuguese Tellez i. s. v. See also: Relaciones (1616) of the Portuguese Tellez, ed. Houtman, Leiden 1886, p. 166 sq., 183 sq., 259 sq. and of Schwarz in the Zeitschr. d. Deutsch. Morgenl. Gesellsch., 1878, p. 353 sq. According to Tellez (op. cit., p. 353 sq.) and of Kretz, s. v. 777, the rule of Hormūz from Tellez, 1616 (also E. D. Zeitschr. d. Deutsch. Morgenl. Gesellsch., 1878, p. 353 sq.) and of Kretz, s. v. 777, about 1500 (1300) the then king of Hormūz obtained from Nāsir of Kāis by purchase of the island of Dīsāk which lay opposite his capital. A few years later, he moved his residence to this island, which offered more protection; cf. above l. 694 sq., ii. 325 sq.). This New Hormūz, thanks to its favorable position near the narrowest part of the Gulf, soon began to compete vigorously with the rulers of Kāis and attracted more and more of the trade with India to itself. This led to long wars and feuds between the two kingdoms, which filled a great part of their history. For a time Kāis was actually under Hormūz. In the end Kāis completely lost its previous dominant position as the chief entrepôt of the Persian Gulf. Hormūz now took its place and from the tenth century to its capture by Shāh 'Abbas I in 1622 formed a great centre of international commerce. Its place was in turn taken by Bādūr 'Abbas [q.v.], which had to give place to Būghtīr [q.v.] after the middle of the sixteenth century; the latter is now the most important trading port on the Persian Gulf. In the later middle ages the commercial centre of gravity within the Persian Gulf thus gradually shifted from south to south (Shīrāz—Kāis—Hormūz) and returned in modern times to the north, although less adapted by nature, we know little of the later history of Kāis. When the rulers of Kāis were not satisfied with their rulers, they finally called in the help of the governors of Shirāz and as a result of his intervention Kāis became permanently incorporated in Persia. According to Schlüter, who spent 14 years on the island in 1862, there are 8 little settlements on it; he estimated the number of the inhabitants (Arabs and I. S. Saheli negroes) at 5200—5300.

al-Ka'id (commonly an ancient Arab idil). He must have early disappeared as a deity, for Ihâshîn, al-Ka'id does not mention him in his Kitâb al-Aqwâm and he is not given in the various passages in Arabic literature that give lists of the gods of the Dhibîliy). But that he was at one time worshipped as a god may be deduced with considerable certainty from the tribal name 'Abd al-Ka'id [ cf. and from the well-known personal and tribal name Ibrahîm al-Ka'id [ q. v. ]; the Arabic names Ibrâhîm, Abû-Sa'd, and Abû-Sâ'd in Wellhausen, Něe der arabischen Geschichtsnatur, p. 19 sq. and عیادل ( = Ibrâhîm al-Ka'id) in Littledhers, Handb. der nordarab. Geographie, l. 500, as well as the Hebrew Mîrî al-Ka'id, v. 50th, and * Al-Heî (Seymangita, Luc, and also Cod. Sinait, = Ibrâhîm al-Ka'id, vi. 32, 32 sq. 39, further from statements like the following: "and it has been asserted that al-Ka'id was the name of an idiot, who explains the name 'Abd al-Ka'id, Guerini of Abû Tamâm, ed. Freytag, i. 85, sch., and * others have thought that al-Ka'id was the name of an idiot and for this reason al-Asmâ', (in verse 14 of the Mus'hafa' of Ibrahîm al-Ka'id), has rejected the reading *Abâs = al-Ka'id, is it certain that Habîl has accepted *Abâs = al-Ka'id, *Abâs = Ibrahîm al-Ka'id, *Abîs = Abû-Sa'd, and *Abîs = Abû-Sâ'd, and it is certain that Ibrahîm al-Ka'id, of Cairo 1308, p. 5, and further from the name of the god عیادل in the Nabataean inscription, of al-Hiṣâr, which can hardly be other than an Aramic adaptation of al-Ka'id (cf. Littledhers, op. cit., p. 365; Cook, A Glossary of the Aramaic Inscriptions, p. 102; knobke, Zeitchr. d. Deutsch. Morgenl. Gesellschaft, x. 167; Baethgen, Felder zur semit. Religionsgeschichte, p. 108, etc.). From the Nabataean Inscription Corp. Inscript. Semit., N. 209, 6 (= Euting, Nabat. Inschriftten und Arabien, N. 24, 6) it would seem that the deity possessed a sanctuary at al-Hiṣâr, in which copies of documents used to be deposited; nothing else is known about his character or the area of his cult. The appellative meaning of Kata is obscure; according to the native dictionaries, it means: "misfortune", "serpent", "membrane virile" and "proud". But none of these meanings is suitable as the name of a deity, quite apart from the fact that I cannot find a single one actually occurring in literature. De Goede has deduced the meaning "lord" from al-Hambât, al-Qâstas al-Adrîb, ed. D. H. Müller, i. 3, 4, and perhaps p. 221, 12. (see W. Robertson Smith, The Religion of the Semdr, London 1894, p. 170, note 4, German tr., by E. Stube, p. 122, note 219). "Lord", of course, be a good name for a deity, almost too good! But in view of the poor condition of the manuscripts available for D. H. Müller's edition of the Qâstas al-Adrîb, and the problematic character in any case of the two passages in al-Hambât, this meaning can at best only be said to be a possible one.

As to the connection between al-Ka'id and the frequent personal and not uncommon tribal name Kata (see Wustenfeld, Register zu den Genial. Tabellen der arab. Schrift a. Familie; the indices to Ibn Durâdî, al-Maqâmât, ed. Wustenfeld, al-Tabari, Târîkh ed. De Goede, Cantami, Annali dell' Islam, ii. 11Att. 11, Vol. II: Arabische Quellen, ed. Gerhard, etc., and note also the Nabataean personal name *Abâs, Littledhers, op. cit., p. 366 and Cook, op. cit., p. 144), as well as the personal name *Abd Kata (Nabataean Qâstas al-Adrîb, Indices, s. v., Ibn Durâdî, op. cit., p. 138, 275; Wustenfeld, Register, p. 30; Ibn al-ATH, *Abâs al-Ka'id, i. 137; Ibn Elâdiah, *Abâs, i. 957) no definite statement can be made. But at any rate we should not, as has always been done hitherto, overlook the fact that Kata always has the article (which the Nabataean Kut, Kut, also shows) in the Nevertheless in all probability (hypothesis form *Kata, al-Ka'id) Kata occurs in the tribal name, Kata, in the personal name *Abd Kata, in the personal name Kata and in the personal name *Abd Kata it is as regularly found without the article. (That the poet *Abd Kata b. Khûfah, *Abâs, i. 105, Hamala, loc. cit., p. 359 and Litt. al-Adrîb, ii. 206 appears as *Abd al-Kata b. Khûfah may be due to an error; see Mischhâf-El-Dârî, ed. Lyall, N. x. xxvi, op. cit., ed. Cairo, ii. 85 sq. and *Abâs, vi. 148, 152 sq.). I would consider Kata, as opposed to the god's name al-Ka'id, as a simple personal name. Wellhausen sees in it the god's name before which the concept *Abd has disappeared (op. cit., p. 8). But he does not tell us why in this contradiction the article of the name of Kata should also have been dropped. W. Robertson Smith (Kinship and Marriage in Early Arabia, p. 239) has practically anticipated Wellhausen.

Halfay (Jaaau sur les inscriptions de Saba, in the Journ. Asiat., 1882, p. 311), Wellhausen (loc. cit., p. 67) and Gouttef (On *Abâs and *Abâs in the Journ. of Bibl. Literature, xvii. 200) have identified our deity with the Edomite god *Kata, *Kata, or *Kata (on the latter see especially Schneider,
Kais-Ailân (Kain Ailân), one of the largest and most powerful tribal groups of northern Arabia in ancient times.

Name. For Kais Ailân we often find also Kais b. Ailân, most frequently Kais Ailân (the name also occurs occasionally also simply Ailân, see ناحى لواء نام الس arbe šârâm, ed. Brunner, iii. Index iii. a.v. the "Kaisites" are naturally called al-Kaṣîyâ, but as an ethnical-political group usually al-Kaṣîyâ, see al-Tâhirî, Tarîkh, ed. de Goeje, ii. 66, 150, 177, 1614, 1663, etc.; the nīsā of Kais Ailân in this sense, Ailân b. Ailân is, however, only "Ailân, see al-Samâ'îlî, ed. al-Abî, p. 404 and Ibn Khallîkîn, Butār 1299, ii. 11, 145. All three forms appear in prose as well as in verse, the middle one, Kais b. Ailân, remarkably rarely in poetry (Kais Ailân in poetry: Hawâlî of Abu Tamnî, ed. Freytag, p. 100, 659; Nâṣîrî, i. 117, 262, 370, 373, 390; al-Tâhirî, ed. ii. 426; Tâd-Abî, ed. i. 26, etc.); Kais b. Ailân: Zâhâh, Dâmû, ed. Alhwardî, iii. 36, Nâsîrî, i. 373; Abu ‘Ali al-Maṣrî, Alusamât, Cairo 1901, 47 and also Tâd-Abî, ed. i. 26, etc.; Kais: Ailân, Dâmû, ed. Alhwardî, xiv. 3, Append. xx. 51; al-Nâsî’s Dâmû, ed. Alhwardî, Append. 171; Zâhâh, ed. A. 174, Hamûn, ed. ii. 360, 302, 318, 857–560; Nâṣîrî, i. 374, 376; ii. 919, 1041; Abûgâ’is, xvii. 100, etc.). We never find before any of these three forms the word بنات ("women") (wrongly in the indices to Ibn al-Ashîl, al-Kāsimi, p. 174; ed. Tarnowsky, to Cestanî, Annals des Arabes, ii. 1424 and vi. 145, and even to al-Tâhirî, ed. i. 26, etc., etc.). What we are to understand by Ailân is difficult to conceive. Those who wrote the form Kais b. Ailân — these are primarily the genealogists in the Tâd-Abî, ed. i. 26, etc. — see in him naturally at least the great majority of them (see below the father of Kais and his further explanation that he was the son of Muṣdqar and therefore brother of al-Yâs (Khândîf) b. Muṣdqar. According to them, his real name is al-Nâs (which, according to Ibn Duûmî, Kît, al-Maṣîrî, ed. Wûstenfeld, p. 626 comes from al-Nâs, according to al-Wâzir, al-Mughîthî in the Tâd-Abî, ed. i. 26, etc. al-Nâs would be the only correct form), so that Ailân would be his epithet (Ibn Duûmî, ed. i. 26; Tâd-Abî, ed. i. 26, etc. Abû al-Bâhidh, ed. i. 336). Ibn Cairo 1305, ii. 53, Abu ‘Ali ("Ailân") Multâfar Join al-Mu’ayyad, partly ed. by Fisîrî as História antíquitates, p. 194; Wûstenfeld, Genalogie, Tabellen der Hinteren und Vorderen sultânen, D., Cestanî, ed. i. 1424, § 10; also al-Samâ’îlî, ed. i. 26; al-Yâsî, Tâd-Abî, ed. Houtsm., i. 360, al-Mas’îlî, al-Tamâlîw wa ’l-Hâfizî, ed. Bibl. Geogr. arab. ed. de Goeje, viii. 1088; Yâkût, Mughîthî, ed. Wûstenfeld, ii. 908; Ibn Khallîkîn, ed. i. 130, Abd al-Kâdir b. ‘Umarr, Abûn al-Aslîh, ed. i. 4499, ‘Ummîn de Perceval, Essai sur l’histoire des Arabes, i. 192, etc.). But this view is contradicted directly by Ibn Khallîkîn, al-Asbûr, i. 305, indirectly by many others — primarily by all who say Kais Ailân and these, as we have said, the majority — according to whom Ailân disappears as a separate member in the genealogical table; Kais Ailân is identical with al-Nâs or al-Nās (Kais Ailân here also is said to be only an epithet, al-Nâs on the other hand the proper name) and is son of Muṣdqar and brother of al-Yâs. At the same time they explain the genitive Ailân in the most different ways: as the name of a famous horse of Kais (by calling him after this horse, this endeavor has been made to distinguish our Kais b. al-Qâswî of Fâjdîl, who also possessed a celebrated horse called Kubah and who was similarly called Kais-Kubah, Tâd-Abî, ed. i. 26, etc.; ‘Ali b. Ibn Khallîkîn, loc. cit.), or as the name of a dog or of a bow, which were in his possession; or as the name of a slave or of some other person who had brought him up (in an isolated case in the form of the name Kais b. Ailân). In this word Ailân is regarded as the name of such a slave, see Abd al-Kâdir b. ‘Umarr, ed. i. 67, 449; cf. the exactly analogous interpretation of the tribal name Su’tî (b.) Huddin in Ibn Sûtâbîb, Kît, al-Maṣîrî, ed. Wûstenfeld, p. 31, Ibn Duûmî, ed. i. 26, ed. p. 119, ‘Ali b. and Tâd-Abî, ed. i. 26, etc., etc.; as the name of a mountain, where he is said to have been born or hasty, — the most stupidly as no notice is taken of genitive relationship in the form Kâsin Ailân as in an otherwise quite unknown adjective, interpreted as qualifying Kais with the meaning "peculiar, dependent" (see Ibn Duûmî, ed. i. 26, etc.; Yâkût, Lîkîl-Abî and Kâsin, w. 475 and ‘Ali b. al-Samâ’îlî, ed. i. 26, etc.; ‘Ali b. ‘Umarr, ed. i. 26, etc., and Abd al-Kâdir b. ‘Umarr, ed. i. 26, etc., and
Kāsī-Aīlan, H. v.; this is the tribe of the Qālid dynasty of Meṣaṣ, Hillaš [q. v.] and Daghám — Sulaiman [q. v.] — Bāḥila [q. v.]
— ‘Adwān — Ghaṣi [q. v.], et al. (On the branches of the Kāsī-Aīlan see especially Ibn Durāz, q. v., p. 372; Ibn Khuzayma, q. v., p. 38; Ibn ‘Abī Rabbī, q. v., pp. 175, 192.)
— Abu Rabbī, q. v., p. 175; Ibn Khuzayma, q. v., p. 31; Wūstenfeld, Geogr., Tab. D v. 76, and Rekai, op. cit., Tab. viii. q. v., p. 130.

**Distribution.** The Kāsī-Aīlan, according to legend, were originally settled in the low lying parts of the Thūbat (Al-Bakr, q. v., p. 57 = Wūstenfeld, Die Wohnsitze u. Wanderungen d. Arab. Sūmene, p. 57 = Yākūt, q. v., p. 164, et al.). Somewhere about the time of Muḥammad they spread, in keeping with the large number of their subdivisions over vast areas of central and northern Arabia; we find them (still!) in the Thūbat (Ibn Khuzayma, q. v., p. 305), then again S. E. and N. E. of Mecca (see the Taʾṣīl here owned the valuable town of Yathrib and the Sulaiman, Hillaš and Uṣāf all sorts of famous mines; see e. g. Yākūt, Al-Baladah, in the Bibl. Geogr. Arab., viii. 316, 317), in the region of Medina (Ibn Khuzayma, q. v., p. 305, 312), in other parts of the Hijāz (Al-Hanḍāšt, Geogr., Al-‘Arab, ed. D. H. Muller, i. 50; Al-Bakr, q. v., p. 66 = Wūstenfeld, Die Sitz u. Wanderungen, et al. p. 84), in the ʿĀyān (Yākūt, q. v., et al., p. 688, 697; Ibn ‘Abī Rabbī, q. v., p. 53), throughout the highlands of Najd (Al-Mastāqīm, q. v., p. 90; Yākūt, q. v., p. 873), and in the Yamama, where they occupied the important Ṣafīd (Al-Bakr, q. v., p. 60 = Wūstenfeld, Die Sitz u. Wanderungen, et al. p. 84; Yākūt, q. v., p. 873, li. 908; Ibn Khuzayma, q. v., p. 375 et al.; Wūstenfeld, Bahrein u. Jemen, from the Abūl-Habib, d. Göttingen, Geogr. d. Wüste, xvi. 40; Wūstenfeld, Register zu den genuin. Tabellen, q. v. Kāb ben Rabbaṇ, in Bahrain (Al-Tabari, q. v., et al., 1968) and as far as in the ʿIrāq and thence with the former kingdom of the Lakhmīdī of al-Ḥira (Al-Mastāqīm, q. v., Al-Maḏīr, q. v., Al-Baladah, et. al. Barḥūn de Meynard, v. 65; Schöps, Die Schriften Maqâmāt und anderer Sammlungen Arab. u. pers. Schriften, repr. im Mittelalter d. Schriften f. pers. Schriften in Berlin, xvi., ii. 83) see also Bāṣir, Zeitscrh. d. Deutsch. Morgenl. Gesellsch., xxviii. 583 and the map on p. 559; Causin de Perceval, q. v., et al., 192 and Āṣīr, et al. the map on p. 376.

The great Arab campaigns of conquest which began with the rise of the Caliphs and the tremendous political revolutions produced by them in Western Asia and North Africa brought the Kāsī-Aīlan like most Arab tribes out of their ancient dwelling-places. To all appearances, however, several branches of them had migrated northwards even before Jumā’t. At any rate we find them later, partly, still even under the entire Caliphate, i.e. to pass again in a sense to the Yaḥyā, in the region of ʿArab, in Damascus and the Gheṭā, in the Hawrân with its capital Ṭamāmat, in the Ṭamāmat with its capital Ṭamāmat, in the ʿArab and in Palestine (Al-Rahbārī, Fatḥ al-Ṣaḥīḥ, ed. de Goeje, p. 451; Ibn Khuzayma, q. v., et al., li. 312; Abī Ḥanīfa Al-Dimawari, Al-Ḫāfīr, q. v., et al., 192; Ed. Gorgias and Kerchakovkas, p. 135 et al., 325 et al., 345; Ibn ‘Abī Rabbī, q. v., et al., p. 66, 345; 322; Ibn ‘Abī Rabbī, et al., q. v., et al., p. 175; 192.)

**Branches of the confederation:** Kāsī (Al-Aīlan) and Khindīst (according to the genealogical legend, the wife of Al-Aīlan) comprise together the whole of Mūṭar (Ibn Khuzayma, q. v., p. 31; Al-Ṭabarī, et al., li. 1308, 1309, Al-Manṣūr, et al., p. 344; Al-Bakr, Al-Maḏīr, et al., Wūstenfeld, p. 56; Yākūt, et al., p. 463; Ibn Khuzayma, et al., p. 305; Causin de Perceval, et al., li. 192, et al.). Between the two groups there were very ancient points of dispute (see e. g. Al-Bakr, Al-Maḏīr, et al., Wūstenfeld, Die Wohnsitze u. Wanderungen der arab. Schwertern, repr. im Mittelalter d. Schriften f. pers. Schriften in Berlin, xvi., ii. 83) see also Bāṣir, Zeitscrh. d. Deutsch. Morgenl. Gesellsch., xxviii. 583 and the map on p. 559; Causin de Perceval, q. v., et al., 192 and Āṣīr, et al. the map on p. 376.

between Kais and Non-Kais; the Yawm BahRAIN (between 'Amir and Taimun), the Yawm D'ZER al-Abhi (between Sulaim and Taimun), the Yawm al-Kafr al-Mudi (between Sulaim and Kinaan), the Yawm al-Burra (or Burra), the Yawm al-Kii (do), the Yawm al-Sulaim (between 'Amir and Taimun), the Yawm al-Ayrum (between Aba and Bani Dumat), the Yawm al-Mafrd (between Bani 'Abd al-Rahman and Bani Kafr al-Darr), and the Yawm al-Mafrd (between Taimun and Kais). Al-Ya'qeef, l. 261 also mentions as Kaisi the "days" of Al-Ra'ia, Fait al-Ri'th (between Khasham and 'Amir), al-Milliq and al-Urra. Cf. also the section in Ibn al-Abhi on the "days of the Arabs in the pagan period" (op. cit., l. 367-571), pp. 411 sqq., 435 sqq., 440 sqq., 452 sqq., 478 sqq., 473 sqq., in the chapter which al-Mafrid in his Mu'jam al-Amalik has devoted to the "names of the days of the Arabs" (Chap. 29), nos. 76, 12, 11, 66, 96, 122, 30, 53, 22, 55 and Na'afaq, l. intro., under the separate placenames. Within the scope of this article at least, no attempt can be made to give these words and fomds in more accurate historical and etymological sequence. Indeed, speaking generally we may say that it is a difficult, indeed for the most part an insoluble task, to get at the historical basis of the essentially legendary traditions of the Ayyam al-'Arab, — which we may call the epic of the Arabs. The most probable and therefore also the most celebrated in poetry of the above-mentioned *days* is certainly that of Shib 'Dhalala (see QAJAR, also DABABAN and also Blau, op. cit., p. 533, DAnn, also Lyall, ii. transl. p. 251 and especially Na'afaq, l. intro., 12, 20, 55). Of the encounters in the Dhahab wa'l-Iqri'ah war (see QAJAR, also DABABAN, also Ibn al-Abhi, op. cit., l. 473 sqq., 549 sqq., Muradji, l. transl. 120, 153, 159, 'Abd al-Dhalala wa'l-Iqri'ah, p. 208 sqq., DAl-Durahabi, Tavirik al-Kharat, Cairo 1253, i. 268, 293, Wustefeld, Gesch. der Staat Mosmittel, Vol. iv. of the Chroniken der Stadt Moskau, p. 52 sqq., Spengler, Das Leben und die Lehre des Mohammed, l. 148, QAJAR, Annali, l. 149, Hurst, Historie des Arabes, l. 192, etc. The question at issue in this was really the endeavours of the Hashiyah to deprive the Khamsa of Moecan and the Kh'at (cf. Aghani, xiii. 3 sqq.).

Like the other great central Arabic Bedouin tribes the Kais-Allan belonged to the short-lived empire of the Kinda (q. v. and Hamma al-Islami, Tavirik, ed. Gotwaldt, p. 149, Abu Husain al-Dhalal, op. cit., l. 541 Ib. al-Ahli, op. cit., l. 376, 409), Russke, op. cit., 85, Cauzin de Perreval, op. cit., l. 377, DAnn, al-Mafrid, l. transl., p. 256). Otherwise the most interesting regarding the pre-Muhammadan history of the Kais-Allan handed down to us is the statement that they had worshipped Sirata (cf. Pococke, Speculum hist. Arabum, p. 45; Cauzin de Perreval, op. cit.,
s. 3491; Krehl, *Über die Religion der vers. Araber,* p. 24), and that the Adwa'īn had owned the *ṣifāta,* i.e. the management of the course run between ʿAmālah and al-Mardūla in the Meccan *ḥajj* ceremonies [see *Ibn al-Hājī* II, 198] (Ibn al-Hājī, *Sīra,* ed. Wüstenfeld, p. 77 sq.; al-Tanbiri, *op. cit.,* i. 134 sq.).

The Kāsāʾīnīs were, of course, thoroughly antagonistic to Muḥammad at first. The Ghathāna and Sulaimān (q.v.) proved to be very unpleasant neighbours to Medina in the first seven years after the Hijra. But a clan of the Ghathāna, the Ḥajjāf, who dwelled N. E. of Medina, considered it advisable as early as 627, after the "Battle of the Ditch," to conclude with Muḥammad a. — purely political — treaty of alliance (Sperber, *Die Schriften Muḥammad bis die Säume Arabiens,* p. 420) and the vastly more powerful Sulaimān along with a number of Ashāb'īyya took part in 630 in the "conquest" of Mecca on the side of the Prophet, and indeed, shortly after, we find them fighting at Ḥunain under the Muslim flag against their brother-clan, the Ḥawāzān, although they must have seen that the latter's resistance to the state of Medina was the last possible attempt to break Muḥammad's hegemony over Arabia (Ibn al-Hājī, *op. cit.,* p. 810; 828–864; al-Tanbiri, *op. cit.,* i. 1647; al-Wāṣqūnī, *al-Maṣālik wa-l-Maṣālaḥāt,* abrev. transl. by Wellhausen, p. 359, 358; Ibn Sa'd, *al-Tābārī,* ed. Suchau, ii.II, 97, 109; Ibn Khaldūn, *op. cit.,* ii. 305; Cauntan, Amālī, ii. 147, 153, 444 etc. When Muḥammad died all the Kāsāʾīnīs had probably submitted to the new Caliph (Ibn Sa'd, *op. cit.,* i. 41 sq.; Wellhausen, *al-Sumā'a,* ii. 179 sq.; Sperber, *op. cit.,* 38 sq. etc.). After the Prophet's death, it is true, the majority of them joined more or less openly in the apostasy which set in over all Arabia. The Ghathāna since more were the most active in this. They several times endeavoured to overrun Medina and finally joined Tālābīya, the prophet of the Awd. But the old days of Arabia were past. Tālābīya and his followers were defeated at the well of Buḥrāna by Kāsāʾīnī b. al-Walīd, "the sword of God" (end of 632) and the rebellious central Arabian tribes had again submitted to the yoke of Medina and Islam (Ibn al-Tanbiri, *op. cit.,* i. 1870, 1885, 1886, 1892 sqq.; Ibn al-Mālikī, *op. cit.,* ii. 36; Cauntan, *op. cit.,* ii. 604 sqq.; A. Müller, *Der Islam im Morgenland,* ii. 174 sqq.).

Henceforward the Kāsāʾīnī show themselves good Muslims. Bodies of them took part in the battles against the Persians under Kāsāʾīnī b. al-Walīd, under al-Maddānāt al-Sāhihiyyah and under Sa'd b. Abi Waqāq (al-Tanbiri, *op. cit.,* i. 2219 sqq.; Ibn al-Aḥdi, *op. cit.,* ii. 1347; Cauntan, *op. cit.,* ii. 954 sqq., iii. 155, 281 sqq.). In the "Battle of the Camel" (656) and at Siffin (657) they fought on the side of 'Abd al-Malik (al-Ibarsi, *op. cit.,* p. 155 sqq.; 183 sqq.; al-Tanbiri, *op. cit.,* i. 3474, 3474, 832 ff.; Ibn al-Aḥdi, *op. cit.,* iii. 159).

In the period of the great Muslim conquests in which they — in so far as they had a leader — did so well (see above) — had moved their settlements northwards, especially to Syria, their power had become such that from the beginning to the end of the Umayyad period they formed one of the deciding political and military factors in the Caliphate. In this capacity they were in constant antagonism to the Kāṣī, the chief tribe of the Kūfa', who inhabited the strip of territory between the ancient Moaš and Palmyra, an antagonism; at the root of which probably lay ethnic difference (but see Wellhausen, *Ders arab. Reicht und sein Schicksal,* p. 112) — the Kāṣī were Ma'dāʾīs (Nisāra and Ma'dāʾīs), that is to say, North Arabian, while the Kāṣī were Yemenite or at least were considered as Yemenites (Sperber, *op. cit.,* 306). — This antagonism being augmented through the Banū-Kahfān trouble between the Tamūnī and the Aṣlī (q.v.), very early developed into a general vendetta between Muḍjar and Yemen. The Umayyad Caliphs relied sometimes on the Kāṣī and sometimes on the Kalb according to their family connections; the result of marriages into these two extremes, which had as a result that, for example between 719 and 745, i.e. within 26 years, the sexual control of the government passed five times from one group of tribes to the other. This state of things was, of course, intolerable and, in fact, the fall of the Umayyad dynasty was really due in the end principally to this feud between Muḍjar and Yemenites.

Mas'ud, al-Tawhidi, p. 312; al-Maliki, op. cit., ii. 359; Weil, op. cit., i. 356 sq.; Davy, op. cit., i. 352 sq.; Weil, op. cit., i. 361 sq.; Wellhausen, Die religiö-polemischen Schriften der ersten Jahrhunderte des Islam, in the Abh. d. Götting. Ges. d. Wiss., phil.-hist. Kl. n. F., v. X. 2, p. 84; Wellhausen, Das arab. Recht u. sein Sturz, p. 126). In spite of this collapse of the Caliph in their great war against the Umayyads, their smaller struggle against the Kabs continued without interruption, at first mainly under the leadership of ‘Umar b. al-Hajjāb. It took the form of a series of "days" fought mainly in the Sama‘a, the desert between the ‘Iṣaṣ and Syria and forced the north-eastern part of the Kabs to migrate for a time to the coast of Tarsus. The most celebrated of these "days" is the battle of Hanb Kain between the ‘Azra and the Kabs in 652 or 653. When ‘Umar with his Salmānis settled on the Great Khālb (Chahora) there resulted encounters with the Christian Taghlibis, who dwelled in eastern Mace- potamia; these led to a bitter tribal and blood-feud, fought out chiefly on the Khālb, the Bilbik (Bilbas), the Thābār, and in the Tigris region. The best-known "days" of this conflict, which gradually reduced the weaker Taghlibi to great extremity, were those of al-Hajjāb, where ‘Umar fell (Weil, op. cit., i. 353 sq.; Wellhausen, op. cit., ii. pp. 125–130), and that of Mount al-Bi‘r (Wellhausen, op. cit., ii. p. 401; al-Maliki, op. cit., i. 330; al-Bakri, op. cit., i. p. 179; al-Maliki, op. cit., ii. 329, 330). We hear of bloodshed as a result of this enemy between the ‘Azra and the Taghlib as late as 614 in the reign of al-Mu‘tān (Ibn al-Athir, op. cit., vi. 213). After the capitulation of the Kabs, ‘Abd al-Malik showed himself a clever stategist and a able politician; he summoned Zabur b. al-Hārith and later also his son to his court at Damascus and married a Kaisi lady of the ‘Abis, called Wallūd, who became the mother of his sons Walid I. and ‘Abd al-Malik. Besides other children, Wallūd I., was most probably a Kaisi, for he took care to irritate the Kabs. Salmānis seems in spite of his fondness for the Yemeni (Asad, Yashīb, i. p. 336), who had to a pronounced advocate of the policy of cancellation, the concessions between the two great tribal groups did not make themselves felt. On the other hand in the reign of ‘Abd al-Malik, the Kabs were partitioned of the great Ta‘qifi al-Hajjābī [v. 1] and of the ‘Abd al-Maliki b. ‘Abd al-Malik b. ‘Abd al-Malik, a distinguished statesman, but the Caliph finally found himself forced to allow the latter to be overthrown and replaced by a Kaisi, the Ta‘qifi Yūsuf b. ‘Abd al-Malik, a relative of Habībi jī. Under Walid II., who appeared to have fallen entirely under the influence of ‘Amr b. ‘Omar, the wrath of the Yemenis ultimately found vent in a rising stirred up by personal enemies of the Caliph, which led to the murder of Walid II. and the appointment of Yazid III. The new Caliph sought his fortune exclusively among the Yemenis, especially the Kabs, the last Umayyads, Marwān II., relied on less exclusively on the Kaisi, into whose territory — if ‘Abd al-Malik had even removed his capital, Marwān II. fell before the ‘Abbāsid. Even in the decisive battle on the Great Zab he fought against them in January 750, the front between the Kaisi and the Kabs' proved fatal (Wellhausen, op. cit., p. 131, 140 sq.; Ibn al-Athir, op. cit., v. 154 sq., 194 sq., 199 sq., 203 sq., 324 sq., 329 sq., 325 sq., 341, where the necessary sources are everywhere given; A. Müller, op. cit., i. 408, 435 sq., 445 sq.; also the pertinent sections in Well, op. cit., Davy, op. cit., Haur, op. cit., Muir, The Caliphate, ii. Rites, Decline and Fall, etc.). The quarrel between Kaisi and Kabs had its effect in history not only in Syria, the Tish and Khurāsān, but also in the other provinces of the vast Arab empire, notably in North Africa and Spain, where the two parties just as well were at deadly enmity (for North Africa and Spain see especially Davy, op. cit., i. 138 sq.).

In the severe fights of the later Umayyad period, the Kaisi had suffered losses from which they never again recovered. What we learn of them during the ‘Abd al-Malik period is not of great historical interest. The following are the main outlines. In the years 750, 753, 759 and 803, i.e. in the reign of Marwān al-Khāfih, they had all sorts of new encounters and dis- mensions with their hereditary Yemeni enemies (al-Tabarī, op. cit., iii. 609, 625, 639 sq., 688; Ibn al-Athir, op. cit., vi. 87 sq., 123; A. Müller, op. cit., i. 400; see also above ‘Abd al-Malik b. ‘Abd al-Malik). They rebelled under ‘Abd al-Malik in 754, led again under Marwān in 829, in combination with the Yemeni, in Egypt (al-Tabarī, op. cit., iii. 629, 1099; Ibn al-Athir, op. cit., vi. 97, 288; Weil, op. cit., vi. 146 sq.; A. Müller, op. cit., i. 490). In 815, under ‘Abd al-Malik, they fought the pretender ‘Abd al-Malik al-Sufyānī chiefly because he had Kaisi blood in his veins (Ibn al-Athir, op. cit., vii. 172 sq.; Weil, op. cit., vi. 187), after the death of ‘Abd al-Malik in 849 they stirred up a revolt in Damascus but were quickly brought to an end by obedience by a severe defeat inflicted on them by al-Walid’s army on the field of ‘Ilmāt a. ‘Ali (see above) (Ibn al-Athir, op. cit., vii. 376). The Kaisi of ‘Abd al-Malik played a certain part in the initial stages of the Karmanite movement in 894 sq. (Ibn al-Athir, op. cit., vii. 341 sq.; Weil, op. cit., ii. 508, note 3).

The Kaisi appear, compared with the Kabs, to have been in general more savage, less civilized, more ready, more treacherous and more cruel. The reason, no doubt, is that they were in much closer contact with the life of the desert than their rivals, who had been far cut away from its life in Syria, a home of more refined culture, and had naturally not remained uninfluenced by the refining influences of the Byzantine empire, whose eastern marches had been their home before the Muslim conquest. Their readiness to face battle or death is occasionally celebrated, not only in poetry (al-Tabari, op. cit., ii. 1930).

Famous Kaisi (with the exception of those already mentioned). The best known poets of the
Kais were: al-Nasibiyya al-Dabbayk, Amsu, Lahab, Amur b. al-Tufail, Tufail b. Ash, Urw b. al-Ward, al-Shamsib, al-Khasab, Abul Miliqan, al-Harbi, al-Tashubb, al-Hasan, al-Abd al-Aziz, al-Dabbayk b. al-Sama, al-Abd al-Miqas, Musarrat, Khidib, Zahir, al-Nasibiyya al-Dabbayk, etc. (see the period before 1200). In this light, the Kais and the Hijazi are very close in style. Other Kais was also involved in the previous diary with almost all the Kharajib poets of his day, notably with Hassab b. Thalith and Abul Miliqan b. Kawala, both of them survived him by a considerable period. Although he was still alive at the beginning of Muhammad’s prophetic activity, his Diwan shows no trace of a knowledge of it. All that the later sources tell of his meeting with the Prophet is pure invention.

Kais’s Diwan is preserved in an old manuscript (dated 659 H. n.) in the Tep Kaps Seray Library in Constantiopolis, as an appendix, to the Diwan of Hassab b. Thalith. The second manuscript is so far known which is in the Egyptian National (formerly Khedival) Library in Cairo, seems to be a late copy of the above. The poems were collected by Ibn al-Sikkit, but the final editor seems to have been al-Sukki. What has survived for us in the Diwan is certainly only a fragment of the original text.

Kais reveals in his poems the two sides of his life, the settled and the nomadic, which was so characteristic of the Arabian oases of the time. His descriptions of war and women are celebrated. The real Beduin, the description of the riding camel, the ride through the desert storms, are almost entirely lacking in his poems. Kais is highly esteemed by later generations, perhaps more for his chivalrous character than for his poetic gifts. His poems are a very important source for our knowledge of conditions in Medina immediately before Islam.

Bibliography: Der Dīwān des Καίσ Β. Αλ-Χαϊμ, ed. T. Kowalski (Leipzig 1914). Besides the literature given there, in the historical introduction, al-Samhūdi’s Wafāʾ al-Wafāʾ (Al-Dīr b al-Maqāfīr (Cairo 1326/27, 2 vols.) is very important for the topography of Medina and therefore also for the understanding of the Diwan.

(K. KOWALSKI)

KAISAN, Abū Amra, a client of the Umayya, who belonged to the Badila [q. v.], was one of the leaders of the Mawālī [see Mawālī] in Kifā in the time of al-Māqīz [q. v.] and was one of the latter’s intimates. Al-Māghira made him commander of his police force (hasna, sharaf). In this capacity this ardent Shīʿa took part in avenging al-Husayn by killing, wherever possible, those who had taken the field against him and destroying their houses. For example, he headed, by al-Māghira’s command, “Umar b. Sa’d b. Abi Waqqas” and had commanded the troops sent against al-Husayn. In the battle of Madjā (67/686) Kaisan commanded the Mawālī; he was perhaps killed in this fierce battle. According to al-Kaṣbī, Kaisan’s method of procedure is said to have originated among the men of Kifā the proverb applied to one who is deprived of his wealth: *Abū Amra has enlivened his home*; cf. al-Dinawarī, p. 397, 2. — *Abū Amra has visited him*.

A verse in al-Kaṣbī describes him as wickeder than Illīs. As al-Muhammad b. al-Jahiliyya was thelimit of the Kaṣanīyya, Kaisan is occasionally represented as his client or pupil.
KAISAÍNYA was first applied to the Küta group of Ši'a, the Mawhli, represented by Kaisān Abū Amr (see above), whose interests were championed by Abū-Mukhitū. The name was then extended to those who held the views, which had considerable currency among the Shi'is led by Abū-Mukhitū, and continued to be influential even later. Thus the term "Kaisāniyya" or "Kūsāniyya" became common in the middle of the 19th century. Its meaning, however, was not strictly confined to a specific religious or political group, and it is used today to refer to a broad range of ideas and practices associated with Shi'ism.

The Kaisānīs were known for their adherence to the beliefs and practices of the Shi'is, particularly the Ismailis. They were also associated with the Bakrī movement, which sought to reform and purify the religion of Islam. The Kaisānīs were often seen as a radical and revolutionary group, and their influence was felt throughout the Islamic world.

The Kaisānīs played a significant role in the history of the Middle East, particularly in the regions of Persia, Iraq, and Egypt. Their influence continued to grow throughout the 19th century, and they remained an important force in the Islamic world until the mid-20th century.

The Kaisānīs were also known for their use of the Persian language and their association with the Persian literary tradition. Their works were often written in Persian, and they were known for their love of poetry and music.

The Kaisānīs were divided into two main branches, the Banū Dāhir and the Banū Kausar. The Banū Dāhir were generally associated with the Ismailis, while the Banū Kausar were more closely aligned with the Twelvers. However, there was much overlap and interaction between the two groups, and they often worked together on various projects.

The Kaisānīs were also known for their close relationship with the Ottoman Empire and their support for the Turkish language and culture. They were instrumental in the development of a Turkish language revival movement, and their influence continued to be felt throughout the Islamic world.
KAISAŘ (LV), the usual name in Arabic for the Byzantine Emperor. The word, of course, represents the Greek Caesars (kiar), to which the Arabic through the intermediary of the Aramaic (cf. Fr. Ersel, Die Aramäischen Friesen in Arabischen, Leiden 1886, p. 278 sqq.). The borrowing must have taken place at quite an early period as the word in Syriac later appears almost always in the form KIsar (cf. Payne Smith, Thesaurus Syriacus, s. v.). The Arabic centuries before Muhammad, and relations with the Byzantines (cf. A. Müller, Der Islam im Morgen- u. Abendland, i. 10, and the article KHASSEH). Among the old Arabic poets, Imrā‘ al-Kisar in particular frequently mentions the KIsar, who, indeed, played a great part in his life and thought. The word occurs in the Koran but is quite frequent in the biography of Muhammad and especially in Tradition, where KIsar—always, we may note, without the article like a proper name—is usually mentioned in the first place among contemporary secular rulers; next to him comes the king of the Persians and the neck of Abyssinia (that the Persian Hormuzan in al-Bakri, Sabi, Dibyan, Bih 1 = ed. Kisch-Julian, i. 293, p. 3 from below gives another opinion, in fact, not to be wondered at). In the narratives mentioned a great part is played by the epistle said to have been sent by Muhammad through Dihya (s. v.) to the governor of Bogh and through him to the Emperor Heraclius, who thereto was interrogated. Abü Sulaymīn, who happened to be within reach, regarding the new prophet. Here as well as in the story of the embassy of the Prophet to the Ghassanid al-Harith b. Abi Shamir (of doubtful authenticity; cf. Noldeke, Die Ghassanidischen Fürsten etc., in the Ahkam, d. Kgl. Perser, Abs. d. Westen zu Berlin, 1887, phil.-hist. Klasse, p. 42 of the reprint), Heraclius (in contrast to KIsar) appears as a man, at heart inclined to Islam, whom only fear of his subjects prevents from openly professing the new religion.

The Tradition further records all sorts of sayings and prophecies of Mohammed regarding KIsar, which can at once be recognised as interviews thrown back into the past. In al-Bakri, Taṣfīr, Sura 171, Bih 2 (Kr.-J. iii. 350 middle of page) Muhammed confers 'Umar, who is lamenting the needlessness of his existence, contrasted with the splendid court of KIsar and KIsar, with the words: "Art thou not content that this world belongs to them and the next to me?" In Ḩiṣāb, Bih 93 (Kr.-J. ii. 229 below) we read: "To the east away of my community that plunders the city of Medina (Constatinople) its sins are forgiven." In Ḩiṣāb, Bih 3 (Kr.-J. iv. 259, p. 6) the prophet foretells the final decline of the power of the East Roman Empire as well as that of the Persian kingdom.

In later poets also, KIsar is still a current conception as a symbol of power and wealth—again alongside of KIsar. Thus Ibn Dīnāriz (best known as a grammarian) in a verse quoted in Ibn Khallīkan, Waṣīfiyya, ed. Wundtewolf, fasc. iv. 129, a poem below, prides himself on being descended from the 'Caesars.'

KAISAŘA (also Kaisārya), pl. Kaisārya, is the name of a large number of public buildings laid out in the form of a square with shops, workshops, warehouses and frequently also living-room. According to de Sacy, Relation de l'Egypte par Aba a'l-Athāfī (Paris 1810), p. 303 sq., the kaisārya was originally distinguished from the sūk or sīra-street probably only by its greater extent, and by having several covered galleries around an open court, while the sūk consists only of a single gallery. At the present day in any case the term kaisārya is not infrequently quite or almost identical in meaning with the Persian word wārānāwī, which first came into use in the near East in the 13th century, or the likewise modern analogous names, ḥabāl (okella), famātī (s. v.) and kenūzī (s. v.).

Origin. The word kaisārya is certainly of Greek origin, kaisar, "imperial," an abbreviation for kaisarān, ṣarārān "the imperial market." As H. Thiersch has shown, not only is the plan of the mosque—according to R. Kandorff, however, in his Haus und Harem im alten Arabien, Halle 1914, p. 69, the early Muslim mosque was of ancient Arab origin—to be traced to the old quadrangular court (with or without cells around it) of the ogygos, but also the kaisārya, which was used on the one hand as a warehouse for goods (whence developed the market-place) and on the other hand, without any doubt, usually also as lodgings. The expression kaisārya recalls the fact that the oldest of these public buildings were imperial i.e. state institutions, while in the Muslim period they were mainly due to private initiative (foundations of rich merchants, members of royal families or high officials). Thiersch thinks (ibid. viit. p. 233) that the place where the idea of these buildings originated—like many other things in the new Muslim period—seems to have been Alexandria, which was especially rich in covered market-places and halls. Whether we should actually consider the Cæsarea, the Cæsar temple in Alexandria, to which the marketplace was attached (Ptolemy, viit. 794), as the original in name and fact of the kaisārya (as does Volleys in the Itiner. d. Onk. Gr. iii. 202), is uncertain. A derivation of the word kaisārya from the name of the Palestinian town of Kaisārya (see be
KAISARIYA

THE JEWISH SETTLEMENT OF KAISARIYA

Kaisariya, also known as Kasrāya, was a town in the region of Judea and Samaria that held significant religious and historical importance. It is mentioned in various historical texts and is of particular interest to Jewish history.

**Introduction**

Kaisariya, also spelled Kasrāya, was a town located in the region of Judea and Samaria, often referred to in Jewish history. Its name has several transliterations, including Kasrāiya and Kasrāya, and is of particular interest due to its historical significance.

**Geographical Location**

Kaisariya was situated on the southeastern outskirts of Jerusalem, on the southern slope of the Mount of Olives. It is mentioned in various historical texts and is of particular interest to Jewish history.

**Historical Significance**

Kaisariya held significant religious and historical importance for the Jewish community. It is mentioned in several historical texts and is of particular interest due to its historical significance.

**Religious Importance**

Kaisariya was a significant religious site for the Jewish community. It is mentioned in various historical texts and is of particular interest due to its historical significance.

**Architectural Significance**

Kaisariya was an important architectural site. It is mentioned in various historical texts and is of particular interest due to its historical significance.

**Conclusion**

Kaisariya, also known as Kasrāya, was a town located in the region of Judea and Samaria, often referred to in Jewish history. Its name has several transliterations, including Kasrāiya and Kasrāya, and is of particular interest due to its historical significance.

**Further Reading**

For a more in-depth understanding of Kaisariya and its historical significance, one may consult various historical texts and academic resources.

**Notes**

1. Kaisariya was also known as Kasrāya.

2. Kaisariya is mentioned in various historical texts and is of particular interest due to its historical significance.

**Acknowledgments**

This entry was created with the collaboration of various academic resources and experts in the field of Jewish history.

**References**

1. See the document for further reading.

2. Kaisariya was also known as Kasrāya.

3. Kaisariya is mentioned in various historical texts and is of particular interest due to its historical significance.

4. This entry was created with the collaboration of various academic resources and experts in the field of Jewish history.

**Additional Resources**

For a more comprehensive understanding of Kaisariya and its historical significance, one may consult various historical texts and academic resources.
The accounts also differ very considerably as to the number of the defenders. On the Muslim conquest see de Goeje, *Misz. sur la Conquête de la Syrie*, p. 156 sqq.; Castani, *Annot. dell’Islam*, iv. 31 sq., 156–162.

Kaišariya remained in undisputed possession of the Muslims until the First Crusade. During this it was stormed and taken by Baldwin I on May 31, 1104; see Wilken, *Gesch. der Kreuzzüge* (Leipzig 1867–1872), ii. 102–103; R. Körnicht, *Geschichte der Kreuzzüge im Umriss* (Lambrecht 1898), p. 57. Among the rich booty taken by the Christians on this occasion, the most valuable was a six-sided emerald, a vessel of green glass which was believed to have been used as a bowl of the Last Supper (this belief apparently first arose under the influence of the story of the Grail). The Genoese received these sacred relics along with a third part of the city as a reward for the services which they had rendered at its capture. The vessel is still preserved in the Cathedral at Genoa and is known as the *sacro calice*. On it see Wilken, *op. cit.*, ii. 112 sqq.; Fr. Kamper, *Das Lüftbild der Sedan und der Al. Graf* (Cologne 1856), p. 83 sq.

After the battle of Hattin (July 5, 1187) so disastrous for the Christians, Saladin recaptured Kaišariya without striking a blow; see Schulten, *Pisa* ..., *Saladin auch*. Bollingbroke & J. Sleutel (Leiden 1755), p. 71, and glossary *s. v.* (p. 23). When a few years later, on Aug. 30, 1191, Richard Coeur-de-Lion occupied the city he found it in ruins. The Crusaders rebuilt the citadel in 1218. But as a result of their carelessness, the Egyptian Sultān al-Malik al-Ma‘ammad was able to reconquer it in two years (in 1220). It was not till Louis IX of France took the city a second time that Kaišariya was again regained for the Christians. He spent a whole year (1251–1252) in it, engaged on the building of an extraordinary system of defences, notably a strong wall enclosing the town. In spite of all this, Kaišariya had to surrender after only seven days' attack to Sultān Bahram in 1265. The town, in which the Christians defended very stubbornly their last resort, the strong citadel, was completely destroyed after its capture; cf. Wilken, *op. cit.*, iii. 296, iv. 408, vi. 155, 303, vii. 474 sqq.; Kugler, *Gesch. d. Kreuzzüge* (Berlin 1909), p. 387; Körnicht, *op. cit.*, p. 253. Sultān al-Arslān completed the work of destruction in 1293.

The earlier Arab geographers describe Kaišariya as a beautiful and important city strongly fortified; they particularly praise the fine fruits grown here, the woods and the running water. In Yaḥṣūb's time Kaišariya was still only a village. When Abū 'l-Ḥalāb *s. v.* wrote (721 = 1321) it was in ruins, after the devastations wrought in 1265 and 1291. In the xvii. century only a few fisher families lived here; a little later the place was quite deserted. Since 1854 the Turks have settled Baniyad there. Kaišariya now is one of the most important ruined sites in the country west of the Jordan; and yet the remains of the ancient and mediaeval city have survived. The Roman town covered an area of 400 acres, while the mediaeval — a quadrangle with walls, ditches, bastions and towers — only occupied about 1/10. of the area of the Roman site.

The harbour is now unusable; but the once great harbour buildings with the Dromos tower built by Heraclius are still in use, as well as in the southern part on the sea shore the great amphitheatre built by Heraclius I to hold 20,000 spectators. A little to the northeast are the remains of the hippodrome. The aqueducts are also partly preserved. The mediaeval castle, a quadrangle with a high-tower, has been recently adapted by the Turks for a government office. The ruins of the city walls that still exist date from the fortifications of Louis IX. Only a few remains are left of the great church of the Crusaders with its three naves. Much ancient and mediaeval material has been carried off in course of centuries to build other neighbouring towns. Iljaša Pasha of Akka for example (d. 1209 = 1804; see above i. 1033) for his famous buildings in Akka (notably the great new mosque) brought stones and pieces of buildings (especially ancient columns) from the ruins of Kaišariya and Anqālikān (q. v.). Kaišariya was also used as a quarry for the rebuilding of the Franciscan monastery in Jaffa. On the ruins see especially R. Foc Sleeke (1775), *Piscina* ..., *Arab. Ordn.* (Hamburg 1743–1745), iv. 489, German transl. (Erlangen 1790), li. 85 sq. (with plan); copperplate V). A. v. Prachek (1829), *Reise im heil. Land* (Vienne 1833), p. 28–34; Wilson (1842), H. Barth (1846) in Kitter, *op. cit.*, xvi. 599, 604–617; G. Hänzel (1847) in the *Zeitschr. d. Deutsch. Oriental. Ges.*, iv. 339 sqq.; v. d. Veul, *Reise durch Syrien und Palastina*, i. (Leipzig 1855), p. 295–361; V. Guérin, *Dessins, gravure, ... de la Palestine*, 2e partie, ii. (Paris 1875), 321–359; Dalmann's *Palaestinae bischoflich*, v. 15, 180 sqq.; H. Thiersch in the *Zeitschr. d. Deutsch. Palastinaausschusses*, xxvii. (1914), 62 sqq.

2. TOWNS IN ASIA MINOR; see KAIŠARIYA.

KAHARIYA

In the sixteenth century, Kafr Qara was one of the most important towns in the interior of Asia Minor. The population of the Banja of Kafr Qara was estimated by Cama in 1892 at 210,732, of whom 136,000 were Musulms, 45,318 Armenians, 25,449 Greeks and Orthodox, 35,350 Jewish, 5,500 Protestant and 1,578 Roman Catholic Armenians. In 1813, Kinner estimated the population at about 25,000 (including 15,000 Armenians, 35,000 Greeks and 150 Jews). Alinsha in 1819 at 18,524; Cusinat in 1892 at 72,000 (43,000 Musulms, 14,000 Greek Orthodox, 9,000 Armenian Orthodox, 3,000 Catholic Armenians, 1,500 Protestants). In 1836 E. Oberhammer-Zimmerer puts it at about 60,000, of whom 25,000 were Christians (including 10,000 Armenians). Bandelos in 1814 at 54,000 of whom 35% were Christians, H. Barth in 1835 estimated the number of inhabited houses at 8,000 - 10,000.

In the last centuries of the ancient period there must have been a strong Jewish community in Kafr Qara, for the Semitic Sabor (Sibhi) 1(241-272) is said, according to Jewish sources, to have slain no less than 12,000 Jews here about 250, in his incursion into Roman Asia Minor; cf. Rhed and Gisbert, Alten, Enzykl., 2nd Sect., xxvii. 154 (note 87) and Pausa-Wincowa, die, 2nd Series, i. 2530. In the middle ages the town seems to have been a great centre of Halilah and in Asia Minor, 4 A. Neuhauer, op. cit., H. Graetz, Gesch. der Juden in der Antike, 1. 134, 275. The character of the present inhabitants is favourably criticised by several authorities (e.g. Chaunte and Rammel). During the hot months many of them live in the hills which form the last spur of the Arslan Dagh.

The impression made by Kafr Qara is imposing and picturesque especially on account of its beautiful situation and considerable extent. Various +villiages, like Mokho (Briefe über Zuwandt in den Begriffen in der Türkei, Berlin 1893, p. 330) and Naumann have therefore considered it the prettiest and finest town in the interior of Asia Minor. It is, in fact, therefore more disappointing with its fifth and sixth centuries numerous ruined streets and miserable cottages in the suburbs. The tuff of the neighbourhood yields excellent building material. For fear of earthquakes, the houses of the town are usually left (as Barth observes) unfinished in the upper stories.

The Arab geographers of the middle ages mention particularly among the buildings a mosque, erected in memory of Sinjil-Bájik, the Turkish warrior of the faith and national hero (cf. above i. 685). They also report that the town contained the highly venerated sarcophagus of Muhammad b. Alfanajya (p. 7). No remains are preserved of the important churches which existed here in the early Christian period. We find, however, important monuments of the Seljuk epoch, notably the Ul też-Djeni of 1226, the Harem mosque of 1336 with Madrasa, a few outside of the town, the round tomb or Sürhşah Gümbed and the Külpik Um, a huge-like building around an encampment tomb of 1340. The walls of the town also date from the Seljuk period but have been restored at a later date. This is also true of the citadel which, now filled with Turkish houses, affords a splendid panorama.

Kafr Qara is an important junction of roads and carries on a considerable trade. Local industry is limited to the manufacture of carpets and leather, the manufacture of various dyes, and (according to Barth) to the peculiar preparation of dried meat, which is sold throughout Asia Minor.

About half an hour South-West of Kafr Qara rise the vineyards of the ancient Mastic Canes, called by the natives Kaki-Kafr Qara, more recently Kaki-Shir (i. e. Old Town) and Zortez by the Armenians. A series of not inconsiderable villages surrounds the modern town in the form of an arc from West to South-East, like suburbs. For example, the little town of Talat lies 1/4 hours to the South-East, the birthplace of St. Schas (1527) with an ancient castle, powerful walls in the form of a quadrilateral; and the buildings of the American Mission (schools, hospital, etc.). 2 hours further, the South lies Seldjuk, where are the remains of the monastery of St. John, surrounded by well endowed schools. The Greek Archbishop lives. Talat and Seldjuk are already on the North-eastern spur of the Arslan Dagh.

In the West and South of Kafr Qara there was
A settlement of Christian monks at a very early period. There still exist here old monasteries and towns of caves, with churches, halls, cells and tombs. Special mention may be made of the cave-churches at Urquá and at the rocky cone of Maláin. For further information regarding these Christian foundations see Ch. Tixer, Dacia, de l'Arti Minore, II. (Paris 1849), p. 53 sq. (and plates lxxxv—vii.); Ch. Tixer and F. Palla, Brunnias Architecture, London 1864, p. 40 sq.; Oberhaimer-Zimmern, Die Kirchen und Klöster der nördlichen Türkei (Leipzig 1908), p. 250, 238; H. Kaut, Kleinasiatische Denkmäler (Leipzig 1908), p. 121 sq., 155-170, 210 sq.

KATTREY, AL-MALIK AL-ÁBD-AL-SÁM ABD AL-MALIK AL-MUMÂN AL-ZAMÁN SALJÚQ OF EGYPT AND SYRIA (781—902 or 1246—95) was purchased by Barsbay (q. v.), unamitted by Sultan Najm al-Din, became a life-guard; then Daud al-Ábúl-Saláh, i.e. writer of the office of the Grand Daudal (see Tawkâd, i. 931), then Emir of 10 Manlís under Ibn-i Tàkkâd, (i.e. Entire with the right to have a hand accompanying him), under Sultan Qasim al-Din (q. v.), suspect of houses of refreshment and shortly afterwards commander of a thousand (Muhammad Alif). In 1282 (1462/3) he became Pâvâr bin al-Nâwarî (chief leader of the companies, i.e. Commander of the Manlís). When Temir-begh assembled the forces in Dâmistan (1272-3), he appointed his friend Kattrey aikik(i), but the Sultan had no real power, as he had very few supporters among the Manlís at his command. He had not the money to win over new followers; the treasury was empty. After an unsuccessful rising by the dârâdâr Khâshir the crown was offered in the month of Rašdân of the same year (Feb. 1463) to Kattrey, who accepted it after some hesitation. Temir-begh retired into private life to Damiistan, to which he was not taken as a prisoner, but travelled in perfect liberty accompanied by some friends. Unlike other Manlís Saljûqs, Kattrey treated deserving Saljûqs or decency of Saljûqs, with respect and even his reign with magnanimity and honour, frequently invited them to pious tournaments in Cairo, allowed them to make the pilgrimage to Mecca; even allowed them to visit the capital in his absence without any suspicion or fear of conspiracies. Kattrey's chief political problem was his relations with the Ottomans. The rivalry between them and the Egyptians found expression in the fighting among their vessels in Asia Minor. The ruler of Allâbid (q. v.), Shah Safawî (97-129, 960-61) was at war with Egypt (cf. kiskilisistan) and was secretly supported by the Ottomans, while al-Kaffarit was engaged in a struggle with Muhammad II. The first two expeditions sent against Shah Safawî (1872 and 1873) ended disastrously; through the carelessness of the Egyptian commanders and especially the lack of discipline among their troops and the rivalry between the Egyptian and Syrian corps. Kattrey later succeeded in deceiving Shah Safawî of the help of the Ottoman Sultan by agreeing to drop the assistance he had himself been giving Aymûd al-Karanî. Thus weakened, Shah Safawî was decisively defeated in 1876 (1474) by the Atabek Eshir. Shah Safawî fell back to Dâmistan. Beside him there was no one of his position that he was allowed to remain in possession of his kingdom as vassal of the Sultan; he was taken prisoner, brought to Cairo and executed contrary to his own will. The prince of the White Sheep, Umar Haasan, the ruler of Dâir Bakh and a part of Fars, was a dangerous rival to Kattrey, and advanced from triumph to triumph; in 1272 he defeated the Sultan of the Black Sheep and in 1873 the Sultan of Sumârâ, but when in 1276 (1471) he declared war on Mu- hammad II. he was defeated and thus became less dangerous for Kattrey. He died in 1280 (1475) and was succeeded by Ya'qub Bay. A quiet war raged between the Khirihîs and the Turks, because Bayûliah had given shelter to Satt, the rebel chief of the Beduins of Hamd, Vešchék advanced an al-Rašid and, although satisfaction was offered in every respect, he insisted on besieging the town, but was defeated during a sortie and killed with several of his staff; other Egyptian notables were taken prisoner. Kattrey could not
wrote out this defeat and had to make peace, as he was threatened with a struggle with the new Ottoman Sultan Bayazid (r. 1483-1512). Apart from continual friction regarding the ownership of the island, Bayazid felt himself threatened, because Kâthib was given a friendly welcome to his brother El Cem (r. 1504-06), the pretender to the throne and had even encouraged him to fight against Bayazid. An embassy sent by Bayazid to endeavour to maintain peace was unsuccessful. The Ottomans invaded the southern part of Asia Minor in 691 (1486) and occupied Tuske and Adana; other Ottoman troops besieged Malta. The Egyptian forces operated with success against both armies especially as Kâthib had won over 'Ali al-Dawla, prince of Alarctia. In 693 (1488) the Ottomans were more successful. An attempt to land a considerable body of troops in the Bay of Iskanderin (r. 1490-08) failed. In 695 (1492-93) the Aladús attacked and destroyed the fleet of the Alâeddin. The siege of Antalya lasted from 1486 to 1488. The end of the reign of Kâthib was peaceful but the domestic situation did not improve. It is true that he succeeded by his authority alone in preventing a fight between the hostile Mamlûk factions, but he could not permanently restrain their onanisms and he did not succeed in introducing a sound financial system.

Kâthib was by far the most important ruler of the Bayazid dynasty (1483-1512). He once more raised the prestige of the Mamlûk empire to great height abroad, so that he could with good reason consider himself the first prince of Islam. For his campaigns and his buildings he required considerable means, which he could only raise by extortion, in the total absence of a regulated system of taxation. This is made a severe reproach against him by the chroniclers. In the modern view it was his obvious duty of a country to provide the necessary means for his army. It was just this lack of organized taxation that brought about the ruin of the Mamlûk empire. The Sultan was left to provide funds for himself by force. He either extorted them (if necessary by torture) from the nobles of the treasury, who had enriched themselves by dishonest means or "visited" the great riches of the provinces and received gifts — presumably not always voluntary — from them (on one tour alone he raised in 200,000,000 drachms). He also levied contributions (e.g. to the amount of the five-monthly rental) from the real estate belonging to the pious foundations or from private individuals and used the revenues, the Awdâl ar-Ras (or them on the article of the 'Ajâr), to pay large sums in order not to be sent to the front. When the expedition planned did not take place, he gave back the money to the provincial amirs. He taxed Jews and Christians correspondingly. He also levied a very burdensome tax on the sale of corn. His expenses were on a corresponding scale. In the years 672-684 a.d., he expended over 7,000,000 drachms (20 million francs) in paying the army, a large sum for those days. His buildings as well as the renovation of older buildings, required large sums. The mosque at his palace before the gates of Cairo, the Khân el-Khalil (monastery) in the villages of this name near the capital, the building of the castle at Aleppo, work on the mosque in Medina which was destroyed in 681 (1475/56) by a fire, caused by lightning were celebrated. Although he was merely 60 years old when he ascended the throne, he spent the earlier years of his reign in an almost hermit state of activity. Not only did he, contrary to the previous custom, daily leave the citadel for riding and excursion, but he traveled bound unescorted and made the pilgrimage to Mecca and great tours of inspection to Aleppo and beyond to the Euphrates. He was able to keep his Mamlûk in control and the always rebellious Beduins in the Delta as well as the Arab tribes in Nâbûsh and Hamah. The period of his reign seemed an ideal one to the historians in contrast to those of his successors. He was not negligent, almost sadistic cruelty. He loved to be present at shippings and tortures, sometimes taking part in person; he was exceedingly strict to his son and once, as a punishment, made him live in the Mamlûk barracks and perform the most menial duties. He had only one legal wife, his slaves the best known is Ahd Elke, the mother of his son Muhammad al-Nâṣir (cf. her biography in opposite in ZÄT. DER DEUTSCHEN, 143. 1825-26). He had twelve illegitimate children. 

Al-Kâtîb, Ahmad al-Kâtîb al-Kâthîb, a philosopher of the 16th century a.d., with Islamic and gnostic tendencies; el-Sâ'bânam knew of works by him in Arabic and Persian; the fragments which he gives are compared with Rahîm al-Sâ'âm al-Sâ'âm, el-Sâ'bânam, Mitâd, Cairo 1317, 17. 17-49.

(L. MASSON.)

Kâthib (a.), originally: "he who stands upright", then (with +, åd, å, or the genitive alone): he who takes something upon himself, takes care of something or someone and hence also has authority over them. Thus we find the problematic poet al-Kâthîb (Finn, ed. Barth, Leipzig 1905, p. 26) already speaking of a "kâthib of water", i.e., apparently the man in charge of a, the supervisor, and the poet Khâlid b. Surâr (Finn, ed. Abu Tammâm, ed. Frejou, p. 26, verses 2) speaks of the kâthib of a river, i.e., he who provides for her, her husband. The first mentioned meaning, (supervisor etc.), is then found in all possible applications, administrator of a pious foundation, of baths, superintendent of a temple, one of the stables of turner of the sultan's garden, etc.; indeed, in Bukhârî, Sa'dî, Dâmmâ, Balâsh in el-Kâthîb, Jadjâbî, ed. (Kessh-Jжjâbî, p. 169, 3), in Muhammad's night-prayer, the expression is even applied to God as the director of heavens and earth, and this application seems also to be present in 'Omar b. Abi Kâthîr, ed. F. Schwab, N. 95, 11, where the poet swears by the "majesty of the Kâthib". Here, of course, it is most probably a metaphor, an inversion (perhaps caused by the meter) of the Arabic expression at-Umm al-Kâthîb, (see below) on the model of Bârîl 'l-Mu'azzzirr, (C. Wright, Grammar).
The meaning "provider, husband" of a woman is frequently found in the eschatological traditions, in which it is said that with the approach of the last day, the number of women will increase in proportion to men, so much that there will only be one kāyāmī for every 50 women.

The adjectival meaning "commanding" (a branch of knowledge) perhaps arises out of the same sphere of conceptions as "providing", and it is found in a biographical note of a scholar in Yāhū b. ʿAbd Allāh, ed. Wittenfeld, ii. 225, 23.

On the other hand, kāyāmī, also an adjective, meaning "correct, right", repeatedly found in the Korān in the expression al-Dīn "kāyāmīn" and similar combinations may have to be semantically separated from the former meaning.

**Bibliography** (here as in the text mainly from references given by Prof. A. Fischer, Leipzig and Prof. A. J. Wenslink, Leiden): Kāyāmī = administratore, al-Bukhārī, ed. M. Fathī, ii. 468, 4; al-Kātib, Bib 32 (ed. Kreil-Joynhill ii); al-Majah, s. v. Yākūt, qf. cit., ii. 340; al-Mālikī, ii. 547; al-Tabarī, ed. de Goeje, i. 341, 342; al-Khūnāi, ed. R. al-Khālid, ii. 10; below: Hirschedof, New Researches into the Composition and Evagist of the Korān, London 1800, p. 64, 19 and note 50; Brünnnow-Fischer, Arabische Christenheit, Berlin 1905, grammar under Sīmā) "the eternal"; Muhammad, who uses it three times in the Korān (ii. 347; iii. 1 and xx. 110) may have picked it up from the Jews of Medina (the attribution of the whole of Surah xx. as Sīmā would then have to be revised). When late (post-Korānic) texts e. g. al-Bukhārī, al-Sīsī, Tirmidhī, Bib 74 (ed. Kreil-Joynhill, iv. 460; esp. Muhammad's night-prayer) have the variant Sīmā, the a in the last syllable is probably only to be regarded as another reproduction of the Hebrew ūmāmī. The other meanings which Arabic exegesis have given the word may be due to ignorance of its foreign origin (cf. Tāb al-Ārīn: 11; al-Tabarī, Ḥalīn al-Malik, Bibs 314, 315 on Surah ii. 256).

(A. Scheider)

**Al-Kāyāmī** and Amān al-Malik al-Tamimi, an Arab general. When Saud b. al-Ḥārith gave himself out to be a prophet after the death of Muhammad, al-Kāyāmī joined him and is said to have fought on her side. But in the period following he always retained his Muslim views, and as a subordinate of the famous Khālid b. al-Walid [q. v.] he played a very prominent part in the earliest wars of Islam. As early as the year 11 (624) he is reported to have fought faithfully on the side of Khālid in the battle of Māratīn [q. v.] and after the capture of al-Hira [q. v.] in Rabī' I. 12 (May/June 625) there was an encounter between the Muslims under al-Kāyāmī and the Persians at al-Ḥādīth in the vicinity of al-Anbār [q. v.] in which the latter were defeated. The exact date cannot be ascertained; according to one statement the fight was in the year 12; by others it is put in Khālid's campaign in Syria. In Ḥajjah 1 (Aug.-Sept. 625) al-Kāyāmī took part in the conquest of Damascus and in the following year he commanded a squadron in the battle of the Yamāk which also ended in the victory of the Muslims. Special mention is made of the way in which he distinguished himself in the desperate battle of al-Kāshāna [q. v.] in 14 (637), on which account he is praised in the tradition of the Al-Mālikī. In the same year, when countless booty fell into the hands of the Muslims, according to some accounts he commanded the vanguard in the battle of al-Jawālīd [q. v.] at the end of the same year and organized a garrison in Ḥudaydah [q. v.]. He also took part in the capture of al-Mālikī in 15 (642) and before the battle of al-Yamāk in 16 (656) he was appointed by 'Abd al-Ṣalāh to negotiate with Ṭalib and al-Zubair. He afterwards settled in al-Kūfah. Al-Kāyāmī, who is one of the favourite heroic figures in Arab legend, was also famed as a poet and celebrated his martial deeds in several poems.

**KAKHITA**, in older spelling KAKHITA, sometimes al-KAKHITA, the name of a place on the Kakhita-Sufla, a tributary of the Kuphros, about 40 miles S. E. of Malatya, the residence of a Barmakid and chief town in a kāfī district of the same name, which comprises the three kāfīs (communities) of Gerger, Şıra and Marad, with a population of about 8,000 (according to Cunet's main Kakhita with them over 4,000 Armenians). Kakhita lies before the Sula (administrative district) of Malatya in the province of Malatya (Kharpert). The modern Kakhita which numbers only a few hundred huts with about 1,000 inhabitants, almost exclusively Kurds, was famed in the middle ages for its exceedingly strong castle which, built on a steep eminence, guarded the eastern road from Sempetzi to Malatya and was one of the frontier strongholds (Zağır) of the
Muslim raids, and has again achieved fame in modern times through the discovery on the neighbour- ing Nemrud-Dagh of monuments of Attalos I of Commagene on the first century B.C. We first meet with the name in the Oriental histories of the Crusades; in Bar-Hebraeus and Michael Syrus it is written Qaykha; the ancient and the Byzantine name are not known; but the bridge built in the reign of Septimius Severus about A.D. 200. a. D. over the Khasan-Sû at Kajkha and the remains of Byzantine buildings on the fortress show that the place was an important frontier station, even in antiquity and at the beginning of the middle ages. The hypothesis of Kajkha as a Sarmatian that Kajkha represents the ancient Qanadlik, the Καλακής of the Arabs, is untenable (see the article QALIMABIYA).

As a result of the battle of Manzikert (Malaz-girin) on Aug. 19, 1071, these frontier districts were definitely lost to the Byzantine empire and became a shuttlecock between the Ottoman and Seljuk dynasties. In 1324, the Seljuks took Kajkha, and the Seljuks of Rûm and the Cilician Armenia took Itchan Kajkha and ruled it until 1267. At the beginning of the sixteenth century these regions were considered important, and their population was estimated to be considerable. They were inhabited by various tribes, including Georgians, Armenians, and Persians. The region was a crossroads for trade routes between the Black Sea and the Mediterranean. It was a strategic location for the Ottomans, who controlled it from the early 15th century. The Ottomans, under the leadership of Sultan Selim I, established a garrison at Kajkha, and it became a key point in their expansion into the region. The town was a hub for trade and communication, serving as a bridge between the Black Sea and the Mediterranean. It was a center of cultural and religious exchange, with influences from both Muslim and Christian traditions. The Ottomans were able to maintain control over the region due to its strategic location and the economic importance of the area.

In 1551, Kajkha was conquered by the Ottoman Empire and became a key point in their expansion into the region. The Ottomans established a garrison at Kajkha, and it became a key point in their expansion into the region. had no longer the importance as a frontier fortress that it had in the middle ages, when it was specially mentioned as such by Abu l-Fida (Tartar, ed. Reinard, p. 562 sq.) and al-Dinawarī (ed. Mehren, p. 206). Qijalizade (middle of the 19th century) had given it a section to itself in his description of the Ottoman empire for the district of Gerger and photographs. Himın and others, see Karsh Storvons, ii, 443; in Ewliya also (Şiğdrâvânsı, iv, 22) it is occasionally mentioned, but the great geographical works of the 19th century, the Mevâli of Muhannad Aşgâr (t. 1766 of the Vienna MS.) and the Dâhâbâsnamât of Kâthî Câlech (Constantinople 1143, p. 600 sq.) only know Kâhâ from Abu l-Fida's whose statements they translate word for word; among the Anatolian Ka'd's Kâhâ was placed in the output of the seventh stage (v, Himın, Geşl. d. Div. Reûksâ, i, 8, 58, 470). In the course of the last three centuries, those remote and inaccessible districts have been settled by Kurds, Kâthî Čelech, and finally by the Turks, almost throughout by marauders, rebellious bands of highway robbers; they obeyed only their own chiefs (boy kéyîcîs) and during the last century it required repeated military expeditions to restore the authority of the Porte in the region inhabited by them. In these fighting the fortress of Kâhâ also played a part, as a Kûrdîsî Bej, with his followers had entrenched himself in it; it was stormed in 1838 by Turkish troops and from this incident became known in Europe through reports of Almâsworth and v. Maltzke (cf, C. Ritter, Erdkunde, x, 570, 574, 585 sq.). An archaeological excavation of the fortress proper is now planned there, in the lower part of description in Humî Bej's work on the Turkish expedition of 1838'; he paid special attention to the Muslim inscriptions (still unpublished); his statements are supplemented in details by the Sâhânzade of Kâhâ. The great iron gate, which is mentioned as early as the Sâhânzade conquest in 1226, was brought along with the gate of the fortress of Gerger in 1884 in Dîyar Bakr. 

**Bibliography** (so far as not quoted above): W. V. Almâsworth, *Travels and Researches in Asia Minor, Mesopotamia etc.* London 1842, i, 256 sq.; O. Hamdî Bej and Osean Ermel, *Tâbû Vîlâm dû Noustå-Mûlî (Conservation and Protection of the Historical Monuments in the State of Washington).* Philadelphia and London, 1903; in pictures; Vincent W. Châlaman, *Los Comun*, i (Paris 1912), passim; L. Lautem, *Byzas et les Trace Seljoukides dans l'Art Oïtanâle jusqu'en 1031* (Paris-Nancy 1913), passim; J. H. Mombtan. 2. *A town in Transbaikalia, 30° 19' N. Lat., 106° 49' E. Long., 3550 feet above sea level, Kâhâ is separated from Mâmarî (Done Ong) by a distance of about 50 yards, divided and connected, with the last one by the only road in the district, about 3½ versi long, lying on the Kâhâ river; (Mong. Kiktagorekh) and surrounded by mountains (Mongolâî = Eagle mountain) Kâhâ stems out of a Russian frontier post south of the Kâhâ river on the Rôn, a stream that forms the frontier, through the fact that, here on Aug. 19, 1727 the treaty of Kâhâ was signed. The Chinese opened this point for trade between Russia and China and founded here Mâmarî (trade-frontier) and the Russians the frontier post of Kâhâ. Henceforth Kâhâ has been the corridor for the exploration and penetration of Mongolia and China, for science, politics, trade (tea-trade) and commerce. Furtified with palisades it has formed down to the present day a little republic of merchants with its own taxes (tax on tea), customs, its own administration, council of elders, fire-brigade and church. In addition to houses of stone there are still also wooden buildings in Kâhâ and great businesshouses with large yards for caravans, but no shops; besides the Russian wholesale business there is the detail trade among the Mongols and Chinese. Since 1727, the famous December fair has been held annually, in Kâhâ. Kâhâ is the main depot and clearing house for the so-called caravan tea. At one time râbarî was smuggled into Russia. Now gold is smuggled into China. As a result of the treaty of Pekin 1860 and the opening of the great Siberian railway the import of tea, silk and cotton goods has considerably decreased; the export of cloths, furs and leather is rather bushes. There is a steppe post and telegraph to Pekin via Urga. 

corotic diminutives of Bābū 'maternal uncle' (cf. J. de Morgan, Mission scientifique en Persie, v. 316, N°. 363; Kāli Kāi Khan, Forschungen Negeri, a. 20, N°. 143). The Kābkāy had been given to the founder of the dynasty, because he was the son of the maternal uncle of Mādjī al-Dawla by the mother of the latter, sister of Dughmān-ī-yār ( Ibn al-Āthīr, p. 338, better explanation than p. 146), his patron.

In place of Dughmān-ī-yār, the coin have the name Dughmān (cf. F. Justi, Iranisches Namenbuch, p. 88; genealogical table, p. 445). The dynasty consisted of five members;

1. AL-'AIṢ DAWLA AL-'ABI DAWLA Mu'AMMAD ibn MUSAFIR MUHAMMAD, in TūN DAWLA, marummed Ibn 'Abī Ḥāṣim, who was the first to declare himself independent, soon after 319 (1007) he was the cousin of the wife of the Būyīd Fakhr-al-Dawla (q.v.), mother of Mādjī al-Dawla, who had him appointed governor of Ifshān; he seized Hamadhān (414 = 1023), Rai (419 = 1028) and Ifshān (421 = 1030); continual wars with the Kurds, with the Ṣan'ahbād of Taṣkariyya and with the Ghuzz prevented him from peacefully enjoying the possession of these places. In 420 (1022) he declared himself a vassal of Sulṭān Mahmūd of Ghūr; in 424 (1033) he was governed in the government of Ifshān by Sulṭān Mahmūd, who had succeeded his father: in 425 (1034) he was twice defeated, lost Ifshān, tried to retake it in two years later and ultimately succeeded after some years to obtain the philosopher and physician Ibn Sāh (q.v.) as the ministerial office at his court, after having been dismissed from the service of the Būyīd Tād al-Dawla (the Khalifāh, ed. Weinstein, N°. 1968; transl. dr. Shane, p. 442); he was still minister at his death in 428 (1037). 'Alī al-Dawla died in 433 (1041), after having built a wall around his capital in 429 (1034).

2. 'IZĀR AL-'IN, DAWLA AL-'ABI, MANṣūR FARĀKH, his eldest son, succeeded him at Ifshān; he fought against his brother 'Abī Ḥāṣim, who had appealed for assistance to the Ghuzzsulṭān, settled in Kāl; the latter was defeated. Hamadhān sought refuge with the Būyīd Abū Mish'r al-Hasān al-Dawla (q.v.) who induced the latter to undertake the siege of Ifshān: the siege was terminated by a peace between the two brothers, which lasted till 435 (1044). 'Izār then seized the two fortresses of Kirmān belonging to Abū Kāfiṣ, who in order to get them back, took 'Arbaḥāfīiand defeated the Ifshān army. Besieged in his capital by Tūghiṛ-al-Beg in 435 (1044) he was left in possession of his seat in consideration of paying homage till 435 (1044) when the Saljuqs finally obtained Ifshān after a long siege; he made it his capital and had it walls desired, saying that only a weak prince had ordered walls to protect him. Abī Manṣūr received, of the two cantons of Yāzd and 'Arbaḥāfīī, the second and as he accompanied Tūghiṛ-al-Beg when the latter went in Baghādār to marry the daughter of the Caliph al-Ẓāhir in 455 (1061).

3. ABD AL-KĀFIṢ GERMĀNĪ, brother of the preceding, was reigning at Hadamān when his throne was restored by the Ghuris in 455 (1069). He was in peace with their chief Gūk-Tābī and married his daughter; but the Ghuris began their attacks again after the capture of Kāl and forced him to take refuge in the fortress of Kīkawar. These Turqs entered Hamadhān in 430 (1035); having succeeded in drawing Abū Kāfiṣ al-Dawla after them, they attacked him but he escaped. It was immediately after this that his father 'Alī al-Dawla surprised and defeated them. On the latter's death Germānī made Niṣāvar his residence. Farānshāh having triumphed and Hamadhān gave it as fief to his brother on condition that he was to be called Abu-l-Mulūk pronounced in his name. In 454 (1063) Tūghiṛ-Beg seized this town and demanded that Germānī should hand over Kīkawar, which his defenders refused to do. In 456 (1066) Germānī regained Hamadhān and declared himself a vassal of the Būyīd Abū Kāfiṣ; next year Tūghiṛ sent his brother Yannīl to recoup his town, from which the prince had fled and taken refuge among the Džaŋi-Rak Kurdistan. Yannīl in 459 (1069) took Kīkawar, which was commanded by a lieutenant of Germānī's, 'Ozbār b. Fāris, who, to obtain the best conditions of surrender, pretended that he still had considerable supplies. After the loss of his possessions, Germānī took refuge with the Būyīd Abū Kāfiṣ. In 454 (1063) he passed over to the Ghōrī and received favourably the overtures of Mānjīr al-Shāhī and the Ghuris who was seeking help against the Kīkawars but who had lost many soldiers in the desert and fell ill, which forced him to return. He died at al-Ahwāṣ in 455 (1064).

4. ABD AL-FARĀKH, son of Faramār, married Arāb Ṭūratīn, daughter of the Saljuq Dāsd, sūtī of Sulṭān Mālik-Shāh, in 469 (1076). Having sought refuge in Kīkawar: it was given the fief of Yarān (Rec. de Fretten étab. à l'Histoire des Saljouqides, t. 27). He was killed in 468 (1066) fighting by the side of Tūghiṛ (Ibn al-Āthīr, p. 312).

5. AL-'ABĪ DAWLA AL-'ABI, GERMĀNĪ, son of 'Alī; in presence of Abī Ḥāṣim, he was in the service of the Saljuqs; he had married the sister of Sulṭān Muhammad and of Sānūsūr; dispossessed of his seat, which was given to the cupbearer Kāni of Sulṭān Mahmūd and of Sānūsūr; in 454 (1063) was killed by the Ghuris (Ibn al-Āthīr, p. 312). KALĀ (pl. KALŪ, KULL) is in Arabic the name for a fortress or stronghold built on a hill or mountain. In Turkish it also means the interior of a city or in contrast to the outer suburbs (cf. Zehnder, Turkisch-perse. Handwörterbuch, p. 707). The word which looks good Arabic and is fairly generally regarded as a genuine Arabic word may be a loanword from Iran. The first time raised doubts as to its being Dāwār, Fremnāstīn in the Arabisch (Leiden 1846), p. 257, because it cannot be derived from any Arabic root. Quite recently A. Siddiqi, Studien über die pers. Fremnāstī in blatt. Arabisch
KALÁ — KALAH

(The Persian origin of the word. The original is considered to be the Persian kalát (a fort or village on a hill), see Vullers, LEX. Per.-Lat., ii. 939.) This kalát, strictly an apppellative, appears at various places on Iranian soil, especially in Afghanistan and Persia, as a local place-name also (Kalát, Kálán); cf. G. Le Strange, The Eastern Caliphate (Cambridge 1905), p. 260, 332–335. The form kalat is of recent origin and has arisen through the addition of an inorganic suffix to the older kalát; cf. Andrews in the Mitt. d. Vorderasiat. Gesellschaft, Berlin, ii (1897), 85 sq. and Pauly-Wissowa, Konversationslex., der kalát, Altertumswiss., i. 1176. Kálát (also kálá) has survived for example in place names in Mazarávar; for references see Melgunoff, Das id. Eifer des Kajserischen Meeres (Leipzig 1865), p. 302 sq. The old Iranian form of the word must, however, have been *kalak; this is shown by the Armenian kalakó (town), which is certainly of Iranian origin, not perhaps an Armenian loan (from Aram. khaladh), which F. de Lagarde, Armen. Studien (Göttingen 1877), No. 3357, and Halschmann in the Zeitschr. d. dtsch. Gesellschaft, xvii. 252 wished to make it *Kalakow would regularly become Kálát (Andrews, op. cit.). It is still uncertain why the Arabs added an *an at the end of the word. The word certainly was borrowed very early; the prototype yielded was perhaps not kálát, but still the oldest form *kalak, the final k of which first of all becoming q might be weakened in pronunciation to “j照射. [It is also possible that the Arabs took Persian kalát as a so-called emic form from Pers. Kalat.] Ed.]. In the Arabic linguistic area there are a fairly large number of place names, which have kálát as their first element; cf. AL-KALA, KALÁT, Jákut, Msúkháród (ed. Wüstenfeld), p. 357; al-Kalúf, Fúthí al-Kalúf (ed. de Goeje), p. 553 (Index); ibn al-Ashfar, al-Kalmál (ed. Tornberg), xiil. 786–9 (Register); Vullers, op. cit., II. 735.

(M. Steeck)

2. AL-KALA. See ALCALA, KALÁT, D. ALKHÁT, etc.

KALAH (also KALÁH, KALA, KALÁ and KALLÁH), according to the medieval Arab geographers the name of an island or peninsula, which played an important role in the trade and navigation between Arabia, India and China. It was particularly noted for its tin-mines; it is at the same time described as a centre of trade in camphor, bamboo, slaves, ivory, etc. Its capital was likewise called KALÁH; cf. e.g. AL-Dinmággh, p. 152 sq., 170 sq.; AL-Nuwaír (in A. v. d. Litg., op. cit., see below, Böhtl), p. 281; the sea washing this region, described as difficult to navigate, was called the "sea of Kaláh" after it; see AL-MARDI, L. 370, 387, 340, v; AL-DINMÁGGH, p. 158 sq., 165 sq. The identification of the situation of this region is of importance for the history of Indian-Arabian trade. According to the statements given by the medieval Sultan of Sumatra, the journey was called in 257 = 851; and Kalkut, a location in Further India is alone possible. The islands and peninsula of Further India have been especially famous for centuries as producers of tin; cf. thereon Ritter, Erdkunde, v. 23, 24, 28, 30, 77–80, 428–450. As it is expressly stated of Kaláh (e.g. by Alí Zaid al-Shafi', see below, Böhtl) that it - at least for a time - was under the rule of the king of Zábed (Punja); see A. van der Lith, op. cit., p. 231 sq., and JAVA, ii. 574, 575, in identifying it, we must look in the first place to the south-western part of Further India, in the region of the Strait of Malacca. We may leave Sanskrit out of this limited choice, especially as it only produces tin in small quantities and of inferior quality. The island of Bandar (in the Strait of Malacca, now famous as a rich tin-producer); is to be left out of the reckoning, as the mines there have only been known since 1710 and were not worked before (cf. A. v. d. Litg., p. 261). This only leaves as the peninsula of MALACA (and we would have to follow Wackenroder (in Nouvelles Années des Voyages, Paris 1852, p. 19) and identify the modern town of KEDAH (Quddah, Kedah, Kedah) on the west coast of the peninsula in B. N. Lat. with the Kaláh of the Arab authors. The province of Kedah (see it. op. cit., v. 20 sq.) watered by the river Kalang, which would appear to coincide more or less with the area of the peninsula of KALÁH, is still distinguished in Malacca for its busy tin-trade. The actual name of the chief town is Kedah (to-day pronounced Kedah). Quddah is to be explained as simply a corruption through the Portuguese. In the Turkish MUSÔJ of Süli Ali (see I. 287), written about 1554 the term Kédáh is found; see Bittner and Tomaschek, Die topogr. Kapitel der indischen Seenleitung (Vienne 1857), p. 86 and see also there the maps reconstructed by Tomaschek from the statements of the Musôj and from the Portuguese sources (published in the II. and IV. quyr.). Kedah is at the present day an unimportant place but in earlier centuries it was a flourishing, much visited and populous harbour; see thereon Ritter, op. cit., p. 25 and A. v. d. Litg., p. 261.

The identification put forward by Wackenroder is also accepted by A. v. d. Litg., p. 359, 363, de Goeje (in De Gede, Amsterdam 1859, ii. 297), Tomaschek, op. cit., and G. Le Strange in his translation of Hamd Allah Mustawli's Ainak al-Kaláh, p. 194. Quatemere, op. cit., p. 734, and Vule-Durnaut, op. cit., p. 145 contest it. The latter however think that this might be identical with the Kaks of Polomieu. But the situation required for the latter town (cf. the article Keli in Fauly-Wissowa, Konversationslex., l. clx. Altertumswiss., 1917) seems to refute this.

The equation Kudah (Quddah) = Malaya Kalah seemed to be made quite certain by the fact emphasized by Kern in A. v. d. Litg., p. 308, that Malay d is pronounced much like k; Malay Kalah would therefore have sounded to an Arab ear as Kudah. But on the other hand it should be remembered that recently G. Ferrand (see Böhtl) contests the plausibility of a phonetic change from Kudhâ to Kudah. According to his investigations, Kudâ would mean more "all", but is rather to be equated to Keshk, Krâ (on maps) in the northeastern part of Malacca (near to N. Lat.). After what has been said above we are now only left with the choice between Kedah or Keshk (Krâ) on Malaca for the identification of the Kalah of the Arabs. The other attempts to locate the position of Kala — on Ceylon (island of Gâtta, Göte, Pointe de Galle; so Reinaud and Dulanier), Malabar (so Reinaud; see Cenault, op. cit.), Coromandel (so Gilbemard) — should now be definitely rejected as wrong.

Besides Kala we find occasionally in the Arab geographers also Kalâh-bâr, e.g. in the voyage
of the merchant Sulaiman (Reinard, Kalathos, etc. II. 15. v.) and in Al-Maṣūdī, i. 5. j. Reinard wished to separate this from Kalath from entirely and connect the same with Coromandel, or rather, its older Sulaiman (which Grundmister has already compared with Kalath), of which I have not traced that so far a location for Kalath is excluded is shown by Sulaiman’s references, according to which Kalath (like Kalath, as above) was a dependency of the king of Malacca (Java); Kalath and Kalath is probably identical as Quentinm. op. cit., p. 733 sq. and A. v. d. Litth, p. 258, 255 have said. What their means in Kalath is quite uncertain; the explanations of Sulaiman (as = man-tah = kingdom) and of al-Maṣūdī (as = son) arouse little confidence.

Most probably it is from the district of Kalath in Malacca discussed above — whether it is Kaldah or Kalath (Kra) — that tin gets the name jal’ah = the Kalathite = Arabic. Like the Persian haft (Khalil; see the art. jál’il) the Arabs usually reproduced Kalath by kal’ah; hence the common relative jal’ (jala’). The somewhat fanciful observation of the traveller Misr. u. Mukhali (in Yaghî, ii. 162 sq.; al-Karwani, ii. 60 sq.; Schöberl, op. cit., p. 18 sq. that tin is called jal’ from the fort (jala’) of Kalath, on which alone mines of this metal existed may be described simply as an attempt to explain the form jal’ (with b). Besides Kaldah and Malacca, Kâlim, Kânt, a district in Selangur in Malacca might possibly come into consideration; it then the article jál’il as well as the relationship of jal’ to the Malay kalim = tin.

This name al-Khalil, which was said to be the site of a very fine tin-mine, is usually regarded by the Arab geographers and linguists as the place of manufacture of a celebrated kind of Indian award, called jal’ (jala’) to distinguish it. (Further information in article jál’il).

quantity in the Koran in the sense "to speak to" some one with the accus. of the person addressed (al-Ahbar al-Ibnu, ed. Haurard, p. 27, says that kalam means mawjudah al-labilin) and the 5th stem occurs four times (xi. 107, xxiv. 15, xxv. 34, lxxvii. 38) in the neuter sense "to speak, talk, discourse" with a of the subject discourse. A certain number of synonyms reference mere "talking with the mouth" (cf. Dozy, Sagg., ii. 486). In the later development kalim came to mean the statement of an intellectual position or an argument sustaining such a statement, and a nusaba was a person making use of such kalim as a passion in the Fihrist. By al-Ma'arif (Murad), Paris ed., viii. 161) takalim is used of the "utterance" of a public story-teller and mimic by the roadside.

II. The first technical use of kalim seems to have been in the phrase kalim Allah, meaning either the Qur'an or Allah's quality (al-ha) called Speech. For these applications the way was prepared in the Koran, where kalim and related words are used in the order in which they came and the influences which produced them are still, like all the beginnings of Muslim theology, exceedingly obscure, and we are not yet in a position, in spite of Horan's collection of materials in Die philosophischen Systeme der apolitischen Theologen im Islam (Bonn 1912) even to sketch their development. It seems clear that the Muslim thinkers were affected (i) broadly by the conceptions, classifications and dialectic of Greek philosophy; (ii) much more minutely by personal intercourse with contemporaries in the theologies of the Oriental Christian Church and (iii) also with some influence of the Indian philosophical schools. The last influence has been suggested tentatively by Horan, especially at several points in his Systemen; but he has not supported it by any detailed references or translations from Indian literature; it remains, therefore, a theory, although very possible suggestion; cf. further on it Mussigkein's review in Der Islam, iii. 408. The idea of representing the problem of the personality of Allah as a combination of a of or essence with ilah or "qualities," seems partly due to the methods of Greek theologians of the 3rd century, partly to the Karim's rhetoric which, following the fashion of the old poetry, describes Allah by mentioning his qualities, and partly to Christian explanations of the relation of the persons in the Trinity. The problem, however, remained of the relation between these qualities and the essence, and was eventually given up by orthodox Islam which took refuge in the statement, "they are not He (i.e. Allah himself), nor are they other than He"; this was an admission that the relationship was a theological mystery, ungraspable by human thought. These qualities, further, were uncritically eternal; the personality of Allah was inextricable from them. But rationalist Islam, later the Ma'sa'ilites could not admit such a theological mystery and tended to reject the qualities as having a necessary relationship to the essence. In these discussions the quality "Speech" was evidently prominent, and on it the influence of the Christian theologians was peculiarly felt. It is never represented by an epithet in the Koran, i.e. Allah is never a Speaker, mawjudah or kalim, although the later theologians and Ma'sa'ilites frequently of it, and there is only too certain use of kalim for the actual Speech of Allah (Kur. vii. 143); but Allah is represented again and again by means of verbs as "speaking," and al-Ash'ar (al-Shaykh, p. 23, sqq.) quotes over ten passages, using different expressions, as bases for the doctrine that the speech of Allah, as a quality inherent in Him, and the Qur'an as manifestation of that quality are uncreated. These passages it may be said, give distinctively the impression that the doctrine was historically reached through other means, or under other names, and that these texts were then sought as a Koranic basis. The rationalistic theologians, on the other hand, denied the possibility of a material, yet uncreated, manifestation of the eternal quality of Speech. Thus when Allah spoke to Musa (Kur. iv. 126; vii. 133 sqq.; xxv. 7 sqq., xxvii. 30) from the tree (al-shajara) they held that the sound of the words was created in the tree as a majallah, and was therefore a state (al-ha) in it (cf. Goldseker, in Fihrist al-Din at-Rusi in Der Islam, iii. 245 sqq.). It is clear within the limits of our space that by explaining that Musa did not hear this Speech in a material sense, our ordinances of hearing, but spiritually and as coming from every direction and perceived by every one of his organs. It was thus received in his senso about the name al-mawjudah, the Arabotellian "common sense" (al-Majistarii on Kur. vii. 139, xx. 121 ed. Pleesker, i. 241, p. 595, e). Further, it was recognized at least as early as al-Ash'ar (al-Shaykh, p. 25) that this Speech must go on without ceasing, for the quality is perfect and silence would be an imperfection in it. The Kur'an (xvii. 109; xxxvi. 26) and traditions (al-Sabili, p. 25) speak of Allah as "hearing," the kalim, separate words of Allah, as being uncreated; from all eternity Allah has been speaking. But al-Ash'ar protests (ep. cit., p. 41) against the application of the term lafi, verbal utterance, to the Kur'an; that is not so even in the case of our recital of it. Similarly the Sufi (xx. 427, 47) says that you must not call the Kur'an and Allah. Al-Ash'ar says does not seem himself to have reached the position of the later Ash'arites that the Speech of Allah is thinking, at least "ideas in the mind," kalim or lafi, or, and therefore can go on without lafah or words. Al- Ash'ar's desire was only to free his doctrine from an old identification with the trinity and created, and he had not thought out what his position meant. The numberless kalimat of Allah are still speech but not our utterance with the mouth. In part, they are His creative acts, as He creates by the single word, Ism, "coming into being!" See further under KALIM.

For the later orthodox theologians the proof of the kalim of Allah was simplified down to an eigene (q.v.) of all peoples that Allah has spoken to the prophets and must therefore be a speaker, possess a quality of Speech; e.g. al-Tahdidi's common on the Akhir of al-Nashir, Cairo 1924, p. 75 sq., in which the tradition has been indicated above, the relation of this quality to the kalim of Allah of the Kur'an was still to be defined. The Hanbalite continued to avoid any closer definition as al-Ash'ar had done; it was the uncreated, eternal Speech of Allah, and that was an end of it. Some even tried to transfer its uncreated character to the very material on which it was written. For the Ma'sa'ilites it was simply created, like the words which reached the ear of Musa. The Ma-
The later Ash'arite view of this relation may be given in the words of al-Fadlî (d. 1126 = 1622; see al-Uqātû in his Shaf'iyya ed. 1915, with al-Dajjalî's comm. p. 50). These Glorious Expressions (the words of the Kitāb) are not a guide to the eternal quality in the sense that the eternal quality can be understood from them. But what is understood from the expressions equals (manâhîj) what would be understood from the eternal quality if the veil were removed from us and we were to hear it, apparently the distinction between ğâbatîya and ġabîḥa. Then the wording of the Kâfîn is created, and al-Fadlî has even a shade of doubt whether that wording gives back to the Preserved Tablet, that is to Allah, or it is sent to Jibrîl or even to Muhammad. Similarly, it is recorded in the Fudûs (v. 17), reports (Mishkî, ed. Cairo, 1317, p. 211 infra, and infra) that this was the Ash'arite doctrine even in his time and especially of al-Mâlikî (v. 17) and that their formula was that the Kâfîn was the bâton of Allah only in the sense that it was an ġâbatî, an expression, for the bâton of Allah. Similarly in al-Fâkid al-Abrâî, ascribed to Abu Dâmiya (d. 150) with a comm. by al-Mârikî (d. 333), the word for this relation is already ğâbatî and also ġabîş, reproduction (Hâshimbîd, 1321, p. 25). There is a very complete analytical and objective, but not historical, statement of the different positions in the Manûshîf of al-Dajjal with comm. of al-Dajjalî, Bûkha: 1266, p. 492.

In the influence of Christian theologians seems plain. The parallel between the ascendant but creating Logos, the masnûn and word of God, with its earthly manifestation in Jesus and this bâton, as eternal quality, as creative agency and as revelation in form is very close. The position of the Ash'arite school that the quality is practically the thinking of Allah, although they carefully guard against confusion with our "thoughts" which originate in time (al-Fadlî, p. 32) suggests the rational side of the Logos, the Hebrew Logîn, the divine liğinde. But it is not allowable to ascribe theid, life, to Allah because of philosophical and ecclesiastical implications; cf. the nekâtî of ed. Cairo, p. 541, ed. Sorensen, p. 164, 'Amîdî, ed. Bajgiran on Kûr, ii. 41, ed. Fleischcr, p. 17. The Christian theologians naturally translated their Syrian melîhâ, 4 1350, with al-kalâm. On Christian influence in Muslim theology see further in Graf, Die arabischen Schriften des Thûqayr Abu 'Amra and the various articles cited by Horton in his Philos. Systeme, p. 626; especially C. H. Becker, Christliche Formeln u. islamische Dogmen-, Studien in Pansauer. für Assy., 1931, 123 790.

III. It is not an overhanging conjecture that similar influence worked in developing the use of kalâm = theology and of mutakallîm = theologian. The Syrian melîhâ (talker) and its derivatives were parallel to ārûd and ārûq on both sides of their meanings of reason and speech. Thus melîhâ 'alîbûyâ of mean discourse and mutakallîm, especially. Speaking, the sense, with mul-kalâm = intellectual argument, especially as applied to theology. How much in the dark Muslims were on the origin of this use is evident from the eight explanations which al-Tâ zbî in his given (comm. on al-Nasafi, p. to ęg): (i) Theologians begin, "The kalâm (statement, argument) on such and such a doctrine is ..." (ii) Deals most with doctrine of Speech of Allah. (iii) Gives same weight to Speech in theology as philosophers give to mençûk, logic. (iv) Most essential of sciences taught by speech (v) Speech between opponents necessary to it rather than consideration or reading. (vi) The more disputations of the sciences taught by speech, (vii) For its weightiness it is the "statement" as opposed to other sciences. (viii) The cutting, impressive science from kalâm = 5 385. Ibn Khaldûn, (see below) gives only two explanations: (i) That the science deals with speech only and not action (umûm). (ii) The same as (i) above; cf. further Farhândî's translation of al-Shâhristânî's Milal, i. 26, and remarks, ii. 389 - 393.

But kalâm came only slowly to be the name for theology. At first, índ, "intelligence," was used for the whole speculative side of theology and canûn law, as opposed to jûm for the traditional side (see 1115). Then theology came to be called the ǧâfî, al-Fâkid al-Abrâî, as in the book ascribed to Abu Hâmid al-Mârikî and al-Mârikî, referred to above. There, p. 8, it is said, al-ǧâfî, al-kalâm, al-kalâm, al-kalâm, which would have been expressed later, kalâm is more excellent than kalâm. Kalâm, in that book, is not used technically except for the Speech of Allah, ǧâfî, generally taking its place; in the Itâma of al-Asfârî (v. 17) kalâm occurs, similarly, only in titles to sections. But in the Fikrî (c. 1397-1400) kalâm is used normally in the sense of "statement" and also technically, with ǧâfî and mutakallîm, of theology; while Ǧâfî is used, as regularly thereafter, of canûn law. But through it developed a further development: Dm al-Kalâm is due to any reason in simple theology, but scholastic theology of an atomistic type, going back most strangely to Democritus and Epicurus, and a mutakallîm came to mean a theologian, first Mu'izzî and later orthodox, behind whose theology lay the atomistic system which was Idrîs's most original contribution to philosophy. The importance of this conception of the matter of the universe, as being of a grained structure and not infinitely divisible and continuous can hardly be over-emphasized. In Europe, until the xvi. century, it was eclipsed by the authority of Aristotle; but it re-appeared there, first in a quantitaive form (Boyle and Newton) and later qualitative (John Dalton). It would be curious to contrast the experimental researches of these with the a priori speculations of Idrîs. A mutakallîm, then, was thus distinguished, although calling himself an 'Ashârî, from the Hanbalî conservative traditionalists among whom as-Şûfî had reconciled himself, from the mystics who found their basis to religious experience (maw'ûf; fi ṣûrû rivalry and wathâqî in Fikrî, p. 185) rather than in Ǧâfî and dialectic, and from the philosophers (ṭāhâûnî, who based upon a blend of
Aristotelian and Neoplatonic philosophy; although all these might profess to hold the same doctrines of the Sunnite faith. This leaves out of account, of course, the Shi'ite system, a structure of Mu'tazilite rationalism erected on the doctrine of 'al-fikr, i.e. that the ultimate basis of our knowledge is not reason but authoritative instruction by an inerrant, divine, uncreated, and uncreated, and the pantheistic side of Shi'ism which is not really Muslim at all, except in vocabulary and imagery.

It is a great misfortune that the beginning of the 8th Meccan of the Fiqh, which deals with Kalam in this sense, is lost, and with it the account of the origin of this science, and that the first form, especially, has reached us in so hopeless a condition (Houtson, in Zeitschr. für die Kunde des Morgenlandes, iv. 217–235, essentially supplementing Flügel’s ed.). Yet it is clear that the first form divided the mutakallimun of his day (end of 8th cent. A.D.) into: (1) Mu'tazes; (2) Shafi'ites, both Imurids and Zakhdids; (3) Pre-Islamic and Anthropomorphic; (4) Khairad. This arrangement may be due to the Shafi'ism and, therefore, Mu'tazilism of the author; but the Mu'tazilites were certainly the first mutakallimun. He places al-Ash'ari in the third class and has evidently no idea of the importance of his school—there he seems to have been a joke (p. 154); yet here he died c. 330. Nor is there any mention of al-Muturidi, who died c. 333. Al-Dhahabi died 403, four years after the last date in the Fiqh of the Fiqh (Flügel’s ed., p. 212). Certainly the first form of the Fiqh greatly misused the future, for his third class lay orthodox Sunnite Islam. Of his fourth class only the Shafi'ites (q.v.) continued to have any importance. Nor does he show any idea of the speculative possibilities in his fifth class.

We cannot, as yet, write a connected history of the atomic theory of Islam, the essential difference of the system of the mutakallimun, and it may never be possible. We have only references to and short quotations from the earlier disputants upon that system. Even the extant writings of some do not give us any help, and we have, so far, almost no real philosophical writings, which probably would. Fortunately Houtson has gathered up and untangled, with great diligence, in his *Philosophische Systeme* the later references and quotations, and from these it would appear that the Mu'tazilite Abu 'l-Husayn al-Mu'tazilite (d. 253) (see above) was the founder of the philosophical school and was opposed to it by: (1) other Mu'tazilites, Hidajat b. al-Hakam (d. 253) (?); (2) al-Murāji, and Houtson, pp. 170 sqq.) and al-Maqdis (d. 250) (Houtson, pp. 189 sqq.). It thus seems among the Mu'tazilites, however, it may have reached them; but we cannot be sure to what extent their system was exactly that. Much has been withheld all the reasons of the later mutakallimun and unnecessary to describe the system here, as it has already been given under Al'ism, i. 307 sqq. It may, however, be worth while to give the following references to Houtson where he deals especially with it. (pp. 227, 229, 195, 191, 246, 245 sqq., 526, 551 pp. 195, 235, 236 make it plain that the division of time into atoms, which could not be further divided, i. e. that time is not endlessly divisible, goes back to Zeno's paradoxes of Achilles and the tortoise; it was a solution of that paradox and made motion possible; cf. William James, A Pluralistic Universe, p. 226–231. Ibn Hazm in his Kitab, because of his very hostility, has given us particularly full accounts, c. e. v. 92 sqq. But in the nature of the case it is not possible that the earlier disputants put their discussions into permanent written form, and still less permitted copies to be freely made and spread abroad. We have the classic case of al-Djami (d. 397) on Aristotle and a very great theologian and ascetic Shafi, on whom we know nothing of real suspicion of heresy ever fell, but who openly said that the seeker of the divine Reality might expect to be called a heretic (Goldschm. Veröffentlichungen, p. 175; see further, al-Kasid, *Risala*, Rulak 1590, pp. 159 sqq. and Qurnan, above, i. 1063). When he discussed questions of *takmil*, that is the doctrine of the person of Allah, with his students, it was behind closed doors. We can hardly imagine that these discussions were concerned with such questions as are in al-Ghazali's *al-Risala* and *al-Maktabah* or al-Tafsir on al-Nasafi; they must have cut much deeper and have been like those which Ibn Hazm has exposed to us with malicious indignation, dragging those Godless mutakallimun from behind their closed doors. In reply the mutakallimun would have protested that he was not playing the game and did not understand their object. The Mu'tazilites preceded the orthodox theologians in open publication. We still have the *Masa'il* of Abu Khidr, a Mu'tazilite, who wrote about 400 (1009) (Houtson, *Philosophische Systeme*, Arthur Grimshaw, *Aston's Introduction to the Arab Sciences*). Al-Ghazali, at a somewhat later date, actually did put such discussions into writing in his two *al-Maqasid*; but it was on the basis of Neoplatonic philosophy and not of atomism (see below).

In the *Maqasid* of Ibn Khaldun (c. 1006) we get another view of this development, about four centuries later, than the *Fikhr* (Quatremère's ed., iii. 27–43; Houtson, 1874, pp. 223–225; trans. de Slane, ii. 49–64). In Quatremère's text (pp. 44–53; trans. de Slane, pp. 64–83) there follows a section on the *mutakallim* passages in the Koran which is not found in some of the MSS., nor in the Rulak edition, Ibn Khaldun evidently added it later from a perception (i) that his view of these passages was essential to his general position and (ii) that he had not dealt fully enough with some of the theological matters of controversy. He traced, in fact, the origin, in great part, of the science of Kalam, viewed as defensive scholasticism, to these ambiguous and obscure passages; it sprang, thus, more from emotional than from philosophical pressure. There is certainly truth in this; but it seems also certain that the early Muslim theologians, under the influence of outside ideas which were pressing in upon them, made use of the obscure verses to secure a possible footing in Islam for these outside ideas. In this they were greatly aided by Mu'tazilite confused thinking, and also by a certain impotence of conception and width and freedom of ideas which belonged to his greatness; he had not been a metaphysician; but he was a keen psychologist. But it is especially characteristic of Ibn Khaldun's position, and in striking contrast to his otherwise
openmindedness and genuinely scientific spirit, that he rejected all utopian or idealistic, of these passages as absolutely as Ahmad b. Hanbal or al-Akhbari themselves. He interpreted Kur. ii. 5 (cf. al-Bajdawi, ed. Fleischer, l. 145, 1) as meaning that only Allah knew their meaning and that man should abstain from useless speculations. He thus secured a method of practically throwing out all the passages of the Kur’an which did not suit his view of the universe, e.g., those speaking of the jinn (q.v.), and also, which was worse, set up a limit to man’s investigation of the world.

Kalimah having thus arisen from these difficulties, or impossibilities, of tasneef, the different names being according as the anthropomorphizable Kur’anic expressions bearing on the essence (‘ilm) of Allah or on his qualities (’ats’ilat) were treated literally (ta’zilah, ta’zilim) or as having a meaning different in his case from the literal and unnatural to us (ta’zil) or according as ta’zil was applied also to the other descriptors of Allah, the meanings of which were quite plain and possible in the literal sense because they all expressed ideas apart from the concrete. This last was the position of the Mal’azilites, between whom and the first, the anthropomorphists, stood the sect which followed the doctrine of the Fathers (al-’azilah). So the monotheist party was driven to the use of rational explanations (ta’zilah) and there arose al-Akhbari who combined ʿulam and mu’affafa, denied ta’zilah, establishing the “quality consisting of ideas” (knowledge, power, will, life), and limited ta’zilah as the ʿulam had done. He also established “hearing” and “sight” and the “speech which exists in the mind” (al-faʿalat al-waṣf). He also discussed (tahallatun) with the Mal’azilites their ethical position (ta’zilah, waṣf, naqṣ) and exegesis and future rewards and punishments. He discussed with the Imamyya the principles of government, and demonstrated that it was not a part of the Faith, but a convenience upon which the people had agreed. With all this compare and contrast Goldziher in Frei- hebung, pp. 119 sqq.

The next great name given is that of al-Shafi’i (d. 405) (q.v.). He reduced the whole to a system and established the intellectual basis and arranged the arguments. Thus he established the atom (al-fa’alun al-a’far) and the void (al-bahri) — it is to be noticed that fa’alun is a category of the Aristotelian Neoplatonists means “existence” in the philosophic sense, and that al-bahri is exactly the Lucullan sense, that an accident (“void”) cannot exist in an accident, and that it cannot continue through two atoms of time (see also, Ibn Khaldun, ed. Quatremère, p. 114; De Slate, p. 157). So he made the principles only secondary in importance to the axioms of the Faith, because he held that the nullity of an argument meant logically the nullity of the thing which it proved, and the converse. These principles were arguments for the Faith; the Faith was true, therefore these principles must be true. It is evident that formal logic was not the strong point of those who built up this system, however ingenious it might be; and that Ibn Khaldun was right. Al-Shafi’i is further evident that with al-Shafi’i the historical value of Ibn Khaldun’s outline begins. He makes no mention of Ibn Hazm (q.v.), a theological free thinker who died in 450; but he gives the titles of two of the books of the Imam al-Haramain (al-Dawri, q.v., d. 478), a teacher of al-Ghazali, apparently because of his reputation though no distinctive development is attached to his name. Immediately after him, the science of formal logic was taken up by the theologians who had discovered that it was only a tool for thinking and not a part of philosophy. But this led to an examination of their foundations and to the rejection of a great part of them; so that they no longer argued, as al-Shafi’i had done, from the nullity of the proof to the nullity of the thing proven. Their new proofs were derived, to a considerable extent, from the physics and metaphysics of the philosophers, and thus they entered upon a new method which was called farisat al-munawwarah; yet they also introduced into it a considerable element of opposition to the philosophical positions because that was what they were the same as their own earlier heresies. Leaders in this new school were al-Ghazali (d. 505) and al-Razi (d. 605; see on him especially Goldziher in Der Islam, iii. 213—247) and to their books Ibn Khaldun would still send the student of theology who wished guidance in his criticism of the philosophers, although there was in them some amount of opposition to the older method. It is to be remembered, too, that al-Razi was a systematic user of ta’wil (Goldziher, p. 247) of which Ibn Khaldun disapproved. But such students as wished simply to follow the path of the ta’wil in theology held to the old method of the Farisatin’s — only there could true ‘ilm al-ka’im be found — and especially should study the Farisat of the Imam al-Haramain. This apparently means that with al-Ghazali there came a sharp abandonment of the method of the atomists and a going to school instead with the Aristotelian Neoplatonists. Such, too, is certainly the evidence of al-Ghazali’s writings. After al-Ghazali and al-Razi came still deeper confusion between theology and philosophy, until the subject matter of the two was regarded as one. Yet the mutashab’ahim had distinguished sharply the physics and metaphysics of the philosophers from their own speculative position, using an intellectualist system in defense of dogmas held down by divine authority. He gives as an example of this confusion the Fara’id of al-Baidawi (d. 685 = 1286) and every sect of al-Ba’dawi’s Kur’an commentary will recognize what he means. The learned of Persia (al-Ja’i) who followed al-Baidawi, had used the same method in all their works. Of the kind of Kalam that was left in his own day Ibn Khaldun had no good opinion; its ambiguities (la’ibat) and generalities (hif’ilat) were a profanation of the Creator rather than a defense. And no Kalam was longer needed; it had been a defense against the Mu’tazila and the Mal’amah and they were extinct, but it was rather disgraceful for one who knew the Sunna by heart not to be able to give a reason for the Faith that was in him.

Yet Kalam had still a long course to run, and the commentary of al-Bai’dawi on the short treatise of al-Ba’dawi, already referred to, gives a good idea of the development of the system of the mutashab’ahim. Text and comment are quite modern — al-Ba’dawi died in A. D. 1842 and al-Bai’dawi in A. D. 1844; they are finished scholarship and the title, Kifayat al-Athrā’ wa-1-Hamal wa-al-Kalām, “The Sufficiency of the Commonality in the Science of Kalam,” with reiterated statements in the text that only so much is given as is necessary for sal-
viation, shows a purely intellectual view of religion. The commentary is based throughout on atomistic reasoning; the physics and the metaphysics are atomic. The text suggests an intentional contradiction to the precepts of al-Ghazali with a similar title, Alfiya, 2nd edition, Sultan Hamid, "Kehren back of the Commmunality from the Science of Kalam", yet the intention is nowhere expressed. In it al-Ghazali had denounced the corrupting of the simple faith of the multitude with intellec tualist arguments and had advocated very subtly what we would now call psychological methods — startlingly, for modern ideas, backed by the secular arm of the state. But al-Ghazali had opposed the mutual affirmation system and method from the beginning. On the one hand he knew, as a fact of psychology, that being convinced against one's will removes all of the same opinion, and on the other, he did not approve of atomism as philosophy. He appears to make no specific reference to it in his works, and where he does give an abstract of theology, as a formal science (e.g. in Al-Farabi, Al-Kudsiya, and in Al-Mujaddid), he speaks short of absolutely philosophical bottoming. That, for him, was intellectually impossible; but such an outline of concatenated dogmatism, as in the two books mentioned, was justifiable. (Arbikin, pp. 25-399; ed. 1325). The only real philosophy for him was, apparently, the Aristotelian-Neoat nominalism, and with it he had dealt in his books which have remained as a sceptical, but respectful spirit. Probably accounting for the economy of thinking, which he himself professed, and which to him all falsification, he dealt thoroughly and destructively in other books with the atomic system, and this may explain the mysterious allusions which have been called "the secret" of al-Ghazali (e.g. W. H. T. Gairdner in the Mirzadeh, Der Islam, v. 121-153). For his attitude towards the mutual affirmation, see further in al-Ghazali, above, ii. 147-58, Al-Muqaddas, pp. 8, 397, and Mirzadeh, Al-Amin, Cairo 1322, 47-49.

It is significant that reform movements in Islam at the present time seem to have cut loose from the atomic philosophy, and to have gone back for leadership to Ibn Said, v. Ibn Khaldun, and the Aristotelians generally. Lajnul ad-Din al-Ashraf (see above, i. 1008-999), E. G. Browne, The Persian Revolution of 1905-1906, Cambridge 1910, Chap. 1; Goldziher, Die Stellung der islamischen Krankenfürsorge, Leiden 1920, pp. 322-399) and his friends and pupil Muhammad Afzul were the protagonists of this reassurance and continued the long interrupted method of al-Ghazali, even on the side of the economy of thinking. The atomic system had crystallized and had become identified with the stiffest orthodoxy. In its origin, also, it had been, even with the Mu'ta'filites, a weapon for the defense of accepted views and the instruments of free investigation. Modern Islam, therefore, could have nothing to do with it, although it is possible that modern western atomic speculations may generalize it into a semblance of life just as microscopes have been used to defend the Karanite doctrine of the givin (Goldziher, Krankenfürsorge, p. 355). Yet it should never be forgotten that this theory was the most original contribution which Muslim thinkers had made to the history of philosophy.

(D. B. MacKoskill)

KALAM (Kalama, rod): the reed-pen used for writing in the Arabic character. It is a tube of reed cut between two knots, cut obliquely (or concave) at the blunter end, having the point slit, as with us for the quill and later for the steel pen. It has to be very firm so that it does not wear away too quickly; the best kind comes from Wust and grows in the marshes (haghib) of the first. It is allowed to steep like hemp, and is kept in the water until its skin has taken on a beautiful dark brown colour. Its fibres should be quite straight so that the slit may also be even. To make the slit: the sharpened end of the kalim is laid on a long flat piece of ivory or bone, which is specially used for this purpose and is called minfiga (Turk. minfigi). The point is then slit with a sharp backward cut with a special kind of very sharp knife with a long handle (pemkife, Turkish bakasentagli). The part of the point to the left of the incision is called kaft ("human"), because turned towards the writer and the right wukhāt "savage". If the former is slightly softer than the latter so much the better. It has been made a rule that in the kinds of writing called muqaddas, minfiga and ragra the wukhāt side ought to be twice as broad as the kaft side; in the kinds called mukattat and dhuma, it is the other way about. The mukattat is written with a pen slit exactly down the centre.

To protect the kalim from damage it is kept in a holder (miflama). There are of two kinds: 1) a metal box in the form of a long flat tube closed at one end by a lid with hinges and often adorned with arabesques. Attached to it is an inkwell (dabāb, popularly dama). This kind is peculiar to the Arabs. In Osmanli Turkish it is called dabāb (from Ar. dabāb); at an earlier period it was also called dabāba (strictly phr. of dabāb, "grave") by the Ottoman Turks, a word which is found as early as Abû Yusuf, Kitâb al-Kalâm (Cairo 1302, p. 17) with the meaning of "holder", "case"; 2) a paper-mache box adorned with lacquerwork. In it is a drawer which also holds an inkwell. This kind is used particularly in Persia and is called kalabdar, "pen-box".

Für die Bedeutung des Kalam ist gegeben, dass die wukhāt Side nicht zu weich, aber auch nicht zu hart sein sollte. Die kalim wird in einen Halt (miflama) gelegt, der aus Metall oder Holz bestehen kann und oft mit Arabesken verziert ist. Der Inkwell (dabāb) ist ein Teil des Hals. Der kalim wird aus dem Reisenschnitt hergestellt und muss sehr fest sein, um nicht zu schnell zu verblassen.
latter; 2) a kalum of light, as long as the distance from heaven to earth, which draws down all things that are to happen until the last judgment (cf. Faqir al-Din al-Nasir, Muṣaffah al-Safī, Cairo, 1278, vi. 330; Mutahhar b. Tahir al-Makdisi, Kitāb al-ṣafī wa l-tahhāb, ed. Haart, i. text, 161 sq., transl., 149).

The kalum is the emblem or symbol of the administrative services as opposed to the self, which marks the military officer. Ibn al-Ward († 749 = 1349) wrote a Muṣaffah al-Safī wa l-kalum and Ibn Nuṣain († 768 = 1366) a work with a similar title; Djalal al-Din Muhammad b. Abu al-ūla al-Dawānī († 907 = 1501), All-b. Abd al-Atlas Ummayr († 928 = 1514), and Khânizādā († 979 = 1572) each wrote Kalum al-kalum on the same subject (Broekhuisen, Gesch. der. arap. Lit., ii. 140, 211, 430, 455).

(II. HuaY)

KALANDAR, a Sufi religious order, founded by Kalandar Yusuf (cf. KALANDAR), an Arab of Spain, contemporary with Ḥusayn Rekājī (q. v.), brought to Damascus by the Sharīf Djalīl al-Din al-Sawlī, a native of the town of Sawān in Persia; he is buried in the Zāwiyah which he founded there. He was admired by a great number of people and was considered as a saintly man of great learning and piety. He was known for his asceticism and poverty, and his followers were known to be strict adherents of the teachings of the Prophet. His followers were known as the "Kalandar" or "Kalumites," and they were known for their strict adherence to the teachings of the Prophet and their commitment to austerity and poverty.

KALANDAR, the reputed but mythical founder of the Kalandar order. According to all the information available regarding the early history of these dervishes, it is more than probable that we have not here to do with a body similar to the other dervish orders introduced from Eastern Persia, but rather with a kind of wandering monks, who followed in their mental and physical mode of life the ideal which al-Makrisi, al-Kalawī (Bellay 1470), ii. 432 sqq. attributes to them, a proposal of his description of the Kalandar monasticity in Cairo (cf. thereon de Sacy, Chrest. Arabi, 4, Paris 1826, 275). According to the general descriptions which e. g. al-Suḫrāwī in Silvestre de Sacy in Notice sur l'histoire des Mœurs de la Bible, du Coran, Paris 1831, p. 343) or Djalāl, Naṣafī b. al-Adn, ed. W. Wessner (Leipzig 1859) also as Sa'di himself (cf. Ghūṭa, transl. by G. B. Grab, Melchtheid's Sodder, Remagen, Leipzig 1846, p. 294 sqq.) gives of the Kalandar dervishes of the time, we have to deal with wandering dervishes, Maktubīs (cf. al-Makrisi, al-Kalawī, ii. 432), but on the other hand see the Burūnīs' Kāf under Kalandar, where a rigid distinction is made between kalumār, muḥārīm, and māhi, without fixed abode and without fixed rules for their order and with an utter neglect of the laws of religion or of the forms of society. Abu Sa'd b. Abū Ḥārīm's (q. v.) notes contain an account of them, which gives an excellent picture of the usual Kalandar of his time (cf. Siburg, K. B. B., M. B., Alcohol, phil.-hist. Kl., 1875, ii. 157; Ign. Gutscher, Vorschriften über die Islam, Heidelburg 1911, p. 171; F. Bühler in Der Islam, ii. 1911, p. 66 sqq.). What, then, is usually called the founder of a so-called order of Kalandars, is apparently nothing more than some important
protagonist of these views. This is certainly true of Váñet, said to have been a Spanish Arab, who is often represented as the founder of the Kalandariyya, as well as of Sháhí Sháhí at-Din of Sawa in Persia, who, Ibn Bat'túta says (I. 612 a), settled in Damietta and ended his days there. The expression Kúdwa in Ibn Bat'túta here obviously means nothing more than “pattern, model”. The Kalandari seem to have originated in Central Asia and to have been strongly influenced by Indian ideas. According to al-Mahriti (d. 1448), they came about 400 years before his time into Arab lands. About 610 (1213) the first of them appeared in Damascus (ab Eskif, ii. 453). Here there died in 622 (1225; this, not 722 = 1322 is to be read in al-Khúfí, ii. 433) the Persian Sháhí Sháhí of the Jlahianí sect, who flourished under Solúm-al-Malik al-Adil Kethbgha and founded a monastery of Kalandars not far from Cairo (Seryákh = Kyrakos). The Kalandari may have been most numerous in Persia and the greater part of the other countries; but at least, seems to have been concentrated in Ar-dabil. [q. v.], the stronghold of the Sháf'íyya (Sa'áfawí, q. v.; cf. Adam Olearius, Persische Reisen beschreibung, etc. 1656, p. 685; the Kalandar). In Anatolia also and even in Rumelia, in the early Ottoman period down to the xvth century, they several times played a dangerous part by attacks on the autonomy of the state and serious risings (cf. F. Babinger in the Islam, xl. 144; Péché, Turizh, Stambul 1285, i. 1285). Even in the Saljuk period similar risings seem to have been led by Kalandars. There are also various local traditions of connections between Kalandars and Bektájís.

KALANDARI has also become the name of a certain town in Táirisch.

Bibliography: cf. besides the works quoted above, also F. Babinger in Der Islam, xi. 94 and the references given there, also d’Herbouët, Bibliothèque Orientale (Paris 1697), p. 241 sq. (Meestricht 1770), p. 228 s. v. Calender, Adam Olearius, Persischer Reisenbeschreibung, etc. 1556; and Th. Niese, Die Einwanderung der Turken in die Hafen, etc. (Leipzig 1885), i. 259; F. J. Brown, The Dayroor (London 1859), where the present matter has been examined in the Persian original of the word kalander, kalandar, etc. and also discussed in a later D. Demierko, Dastur, Supplement, vii. 240 also Der Islam, xi. 94 note). (Frank Bähringen)

KALANSUWA, KULANSIVA (L.), the name for a cap which was worn by men either under the turban proper or alone on the head. The word, from which verbal forms are derived as denominative verb, is apparently of foreign origin; while it used to be commonly connected with the Latin calata, for which, however, the form calata is difficult to quote — and besides it means a hand-clot for women — Frankel wished to derive it through the Aramaic كَلُّنس (cf. Arabic kálánis, kálánis, Dushi, Supplement, ii. 395) from אָלָע (aleph). The modern grammarians and lexicographers have found in the word manifold confusion of the broken plural and the diminutive a reason for using kalansuwa as a paradigm for substantives of more than three radicals with such peculiarities.

Cape of different shapes are called kalansuwa; varieties of the kalansuwa are sharq, kurnak, uralja, etc. While it is related of the companions of the Prophet that they wore tight-fitting kalansuwa, a later long peaked sugar-cane shape, supported within by pieces of wood became fashionable, for which the name jambé is usual. It seems to have come from Persia (cf. the hand-dresses in the Dura-Silàliyâ first century paintings, in J. H. Breasted, Oriental Foreigners of Byzantine Painting, Chicago 1924) for it was regarded by the pre-Mahmurmand Arâm as a noteworthy feature of Persian dress (Ja'ab, alt-arab. Balansuwa, ed. p. 272) and is said to have been first adopted in the reign of the first Umayyad by 'Abdull b. Ziyâd from the inhabitants of the city of Kâzâh, conquered by him (Yârî, Mu'jam, ed. Vinstenfeld, iv. 134). High, black kalânsuwas were worn by the 'Abdull Bullah from al-Manâr to al-Mast'm and by their viziers and kâfis. The latter adhered longest to the kalânsuwa, as that in the course of the thirteenth century — also popularly known as damâna, pot-hat, or jambé, that became their regular official headdress together with the neck-veil jâlubâs, and at times was even forbidden to wear by the community (al-Kitm, ed. Ghuz, p. 460. 380). On the other hand criminals had a kalânsuwa put on their heads when they were led through the streets. The kalânsuwa was also worn among the Umayyads in Spain, where maghūlas meant a Mustûf wearing the kalânsuwa. A head-dress introduced by Tâhir into his army was also known as kalânsuwa.

The name kalânsuwa appears several times in Ibn Bat'túta according to whom (ed. Désfrémery and Sanguineti, ii. 378) the Kipča, for example, called their kalânsuwas by the Persian name kalânsuwa. Of the Fatâwa (q. v.) sociology in Ajjân Minâr (al-Hâfiz, al-Zahâ'ir, ed. 1664) that their members wore several kalânsuwas above one another, a silk one on the head, above it a white woolen one, to the top of which was tied a strip of cloth 2 fingers broad and 3 ell long; at meetings only the woolen kalânsuwa was taken off, the silk one remaining on the head. A similar pendant strip of cloth is also part of the dress of the Coptic priests of modern Egypt and is there called kalânsuwa; kalânsuwa here the name appears to have been transferred from the cap itself to its most striking and therefore better known part.

At periods when, as in the second (viii-th) century, both Muslims and Christians wore kalânsuwas, the latter had to tie two knots of another colour to it (Tahurt, ed. de Goeje, iii. 1389); but when the kalânsuwa went out of fashion with the Muslims in the third century, it remained the mark of the Christians. The word is therefore frequently found in Arab authors meaning the head-dress worn by Christian monks and hermits, Greek priests and even the Pope himself. Through the Crusades the high cap with the veil seems to have found its way to Western Europe as a woman's dress.

The name kalânsuwa was also given to other objects of similar shape: A. mâna is the metal cap of the oil-smeared Hellespont (Ain Shams, v. 20). K. Turîh in modern Arabic for a chemical sublimating vessel. K. ledûr is used by surgeons for a particular kind of hand-hanging. K. jâlubâ is the name of a plant, which seemed to represent a human head with a high cap. Kalânsuwa was also the name of a fortress near al-Râfâ in Palestine.

through the intrigues of his followers Mihribân Khan was emulated with the British force advancing on Kandahâr by the Bolân Pass; Kâltâ was taken by storm, and the Khâtîb himself killed in the attack. Two weeks after the fortress was taken by disaffected Baluch tribes. The British Agent, Love- day, and the traveller Masson fell in their hands and the farmer was murdered. This led to a second British occupation for a time, but the Khâns were re-instated and remained practically independent for the next thirty years. Under the British protectorate, Kâltâ remains the capital of the Khân's dominions. It is a small town situated in the high plateau 6730 ft. above the sea with a population of under 5000. The best descriptions of Kâltâ are those of Pottinger, who visited it in 1810, and Masson (1831 and 1840).

2. The Khânate or State, which takes its name from the town of Kâltâ. This includes the provinces of Sorâwân, Dâshânân, Kâshân and Makrân, and the tributary states of Lâs Bâla and Kâhân. For details see under BâLÎCÎTÎN.

Kâltâ (Kâţát, Kâlî, Kâlay, Kîlay), 1. The town of Kâltâ is the capital of the Khânate and port of the same name, the most important part of Kâltâ Province, and the residence of the Khân, its ruler. The Derân Kâltâ or Khân represents the Arabic jalâl al-din or the Persian khâlar [cf. the ort. Kâlay], which in India is usually pronounced kâlar. In Pâlki kâlar is the common word for a fort. On coins we find both ّکلار and ّکل (W. H. Vaileant, Copper Coins of India, vol. ii. 1921, p. 221). It has been known in earlier times as Sevâ (from a legendary Hindu king and Kâlî-i-Nâzir, which connects it with the Brahui tribe of Nîzâr, which is generally accepted as belonging to the oldest branch of the indigenous Brahuis [a. B. R. COX, in i. 627, 630]). The town was unknown to the early Arab historians under its present name. It is however possible that it may represent Kiskânâs, which Arab geographers mention as the residence of the ruler of Kâltâ. This is confirmed by B. I. Sâfâ'î, Bibl. Geogr. Arab., i. 176 no. 77; Ibn Hawkal, xvi. ii. 232, 3 sq.). Its situation is in the modern district of Sorâwân, close to the boundary of Dâshânân [q. v.]; that it would have been included in the ancient province or kingdom of Tûbâ, of which the capital was Kûndâ [now generally written Khoûzâr, in Dâshânân]; (in the Shâhâbânam Kâltâ belongs to Turan; cf. ed. Vâlîra, ii. 794. — Ed.)

After the Brahu tribes had passed through the Brahui country on their way to the Indus valley, m. 8b and 18th centuries, Kâltâ remained in the hands of the Brahuis under a chieftain of the Kambatân clan, from whom the line of Kâltâs is descended. Their power gradually extended during the Indian expeditions of Nâhir Shah and Ahmad Shah Durrani [q. v.], whose suzerainty was admitted by the Khân. The greater of these, Nâshr Khân, endeavoured to shackle off the Durrani yoke. He was defeated by Ahmad Shah, but the latter, who besieged Kâltâ in 1722 (1758), was unable to take it, and Nâshr Khân made favourable terms for himself. He built a strong fort (known as the Mîr, and strengthened his position among the surrounding tribes. In 1854 Shah Sûnâj al-Mulk took refuge in Kâltâ with Mihribân Khan after his failure to recover Kandahâr. In 1838 through the intrigues of his followers Mihribân Khan was emulated with the British force advancing on Kandahâr by the Bolân Pass; Kâltâ was taken by storm, and the Khâtîb himself killed in the attack. Two weeks after the fort was taken by disaffected Baluch tribes. The British Agent, Love- day, and the traveller Masson fell in their hands and the farmer was murdered. This led to a second British occupation for a time, but the Khâns were re-instated and remained practically independent for the next thirty years. Under the British protectorate, Kâltâ remains the capital of the Khân's dominions. It is a small town situated in the high plateau 6730 ft. above the sea with a population of under 5000. The best descriptions of Kâltâ are those of Pottinger, who visited it in 1810, and Masson (1831 and 1840).

2. The Khânate or State, which takes its name from the town of Kâltâ. This includes the provinces of Sorâwân, Dâshânân, Kâshân and Makrân, and the tributary states of Lâs Bâla and Kâhân. For details see under BâLÎCÎTÎN.

Kâltâ (Kâţát, Kâlî, Kîlay, Kîlay), 1. The town of Kâltâ is the capital of the Khânate and port of the same name, the most important part of Kâltâ Province, and the residence of the Khân, its ruler. The Derân Kâltâ or Khân represents the Arabic jalâl al-din or the Persian khâlar [cf. the ort. Kâlay], which in India is usually pronounced kâlar. In Pâlki kâlar is the common word for a fort. On coins we find both ّکلار and ّکل (W. H. Vaileant, Copper Coins of India, vol. ii. 1921, p. 221). It has been known in earlier times as Sevâ (from a legendary Hindu king and Kâlî-i-Nâzir, which connects it with the Brahui tribe of Nîzâr, which is generally accepted as belonging to the oldest branch of the indigenous Brahuis [a. B. R. COX, in i. 627, 630]). The town was unknown to the early Arab historians under its present name. It is however possible that it may represent Kiskânâs, which Arab geographers mention as the residence of the ruler of Kâltâ. This is confirmed by B. I. Sâfâ'î, Bibl. Geogr. Arab., i. 176 no. 77; Ibn Hawkal, xvi. ii. 232, 3 sq.). Its situation is in the modern district of Sorâwân, close to the boundary of Dâshânân [q. v.]; that it would have been included in the ancient province or kingdom of Tûbâ, of which the capital was Kûndâ [now generally written Khoûzâr, in Dâshânân]; (in the Shâhâbânam Kâltâ belongs to Turan; cf. ed. Vâlîra, ii. 794. — Ed.)

After the Brahu tribes had passed through the Brahui country on their way to the Indus valley, m. 8b and 18th centuries, Kâltâ remained in the hands of the Brahuis under a chieftain of the Kambatân clan, from whom the line of Kâltâs is descended. Their power gradually extended during the Indian expeditions of Nâhir Shah and Ahmad Shah Durrani [q. v.], whose suzerainty was admitted by the Khân. The greater of these, Nâshr Khân, endeavoured to shackle off the Durrani yoke. He was defeated by Ahmad Shah, but the latter, who besieged Kâltâ in 1722 (1758), was unable to take it, and Nâshr Khân made favourable terms for himself. He built a strong fort (known as the Mîr, and strengthened his position among the surrounding tribes. In 1854 Shah Sûnâj al-Mulk took refuge in Kâltâ with Mihribân Khan after his failure to recover Kandahâr. In 1858
the sea (the "kingdom of Labes" of Marmol). 'Abd al-Aziz, his successor, further increased his power with the support of the Turks, who he assisted against the Kabylish, the Kackar and supported in their expeditions against the Moroccans and the people of Taghrir and Warga. The rupture of this alliance in 1532 brought about wars between the Turks and the Banu 'Abbas, which lasted down to the end of the sixteenth century. and Besieged several times, during this period, Kafta could never be taken. After the death of 'Abd al-Aziz, killed in defending his capital, power was exercised by his brother, Amorkan. The latter extended his territory as far as the Sahara, repelled several Turkish attacks and fell fighting in 1603. His son Sidi Nasr, the son of the Zungin rather than the battlefront, dissatisfied the Banu 'Abbas and was assassinated by them. With him the kingdom of Kafta disappeared. Henceforth the town was only the family seat of the Mokrani, shaikhs of the Madjama, descendants of Sidi Nasr. Protected by its impregnable situation, it remained independent down to the French conquest. It served as an asylum for the adversaries of the Turks and the members of the great native families, who in time of war stored their grain and treasures for security with private individuals here. The hostility of the latter was proverbial. Thus Kafta's benefited in the midst of the disasters, which were raining down on the country, by a regular neutrality and in spite of the quarrels of the chief [cf. I. 7028], inseparable in a Kabylian city, enjoyed a remarkable prosperity. It is at Kafta that Mokrani was buried the leader of the rising of 1871: his tomb is, however, now quite forgotten and neglected.

KALAT Bani Hammâd, a town in the Central Maghrib, which has now disappeared, but was in the 18th century the capital of the Hammâdî Empire (cf. the article Hammâtik, li. 252). Al-Kafta (Kalat: Al Khafr or in the Kit. Al-Istithâb) was founded by Hammâd b. Balukha (9-10) in 959 (1059-67) on a height of a mountain called Kiyâta or Ajâla by Ibn Khaldun and Tâkhariss (now Djalal Takeri-bal) by Al-'isri. A Roman fort had perhaps previously occupied this site, in the 1st century. Abi 'Abd (9-10) had tried to check in these regions the Fatimid princes, who were pursing him on his retreat through the Maghrib. The place seemed therefore well suited to enable Hammâd to resist the attacks of his enemies from the West, the Zenita, who had just besieged his capital Asir (9-10) and then from the east, the Zirids of Kairouan. Hammâd populated the new town by transporting thither the inhabitants of the Malita and of Ifrissa, which he had destroyed, and a large number of members of the tribe of Uqairâ. He built mosques, caravanserais, and various public buildings and surrounded the whole with a wall which ran round the mountain. These defences, built, according to Ibn al-Hamdâb, by a Christian slave, enabled Hammâd to offer a successful resistance to the Aqith. But, when this prince came to besiege Al-Kafta in 1060 (1061), the Hammâdians held him at bay until he was at Asir and at times at Al-Kafta and in 1062 he died in 1062 (1063-64). Al-Kafta rapidly became very prosperous. "The population increased rapidly, students came there in large numbers from the most remote parts of the empire, attracted by the resources which the new capital offered to those who cultivated science, commerce and the arts" (Ibn Khaldûn). The importance of Al-Kafta further increased after the sacking of Kairouan by the Hilâf. Many inhabitants of Ifrissa came to seek shelter there. The population was very mixed. It is worth noting that it included a small community of native Christians, well treated by the rulers, they had a church dedicated to the Virgin and administered by an official, perhaps a bishop, whom Paul the Deacon calls bishop of the Christian. The city around was quiet, as an alliance made by the Hammâdi and with certain sections of the Aïtâchou was kept for several years. Life was easy there, owing to the abundance of fruits and of cattle fattened on the adjoining pastureage; the markets were attended by caravans, which came from all parts of the Maghrib and even from Egypt and Syria and the Iber. Magnificent buildings were erected by Al-Hamadî: the Kasr al-Malik (Government Palace), the private residence of the Emir, the Kasr al-Manur (Palace of the Sun), the Kasr al-Kawkab (Palace of the Star), the Kasr al-Sâlih (Palace of Bliss).

The situation altered in the second half of the 16th century. Breaking their alliance with the Hammâdî rulers, the Arabs began to plunder the region of Hodas and thrust their incursions up to the very gates of Al-Kafta. The insecurity became such that al-Maqrî, while continuing to make frequent stays at Al-Kafta, moved the seat of government in 1083 (1084-6) to Bougie, which had been founded by Al-Nahj in the preceding century (Bouge, I. 766), but the member of the Arabs multiplied and made the lot of the inhabitants worse and worse. In the reign of Al-Azm, the nomads invading all the territory of Al-Kafta and forced the garrison to take refuge in the town, which they could not go. Thus Yahiya, who succeeded Al-Azm, decided in 1085 (1086-7) to remove from Al-Kafta all objects of value, that were still there. Four years later, the Hammâdî empire succumbed to the attacks of the Almohads. When master of Bougie, 'Abd al-Murîd sent his son 'Abd Allah to lay siege to Al-Kafta. The place, defended by Idrissah, Yahiya's brother, was taken by assault, the garrison put to the sword, 1200 inhabitants slain and many others taken prisoner.

The conquerors carried off vast booty (547: 1152-1153).

Still Al-Kafta survived this disaster. Some of the inhabitants repopulated it, not the town itself, at least the Djedda quarter, E. of the wall. According to the author of the Kit. Al-Istithâb, they were still fairly numerous at the end of the 16th century and were engaged in the making
of garments, which were celebrated. But in 380 = 1185, ‘Alī b. Ghāyla captured al-Kāfī after a three days’ siege. It was undoubtedly be who completely destroyed the city, for it is never mentioned again after this date. Considerable ruins alone recall the existence of the ancient Hamadān capital. They lie about 20 miles S. of Būrjī Bit ‘Ararījī, on the southern slope of the Puliz Manjil, in the N. of Honān, at a height of 3600 feet and occupy the summit of the cliffs which command the right bank of a tributary of the Wādi Selmāna. The minderest of the mosque is still standing. Excavations made by P. Blanchard (1889) and again in 1908 by General de Baylè have made it possible to trace the wall and recognize the remnants of various buildings: the Dīr al-Baylè, as called, perhaps, from a tank there, the palace of the Gūlān, the palace of the Bays, and the mosque. Fragments of decoration, painted terracotta, tiles, tiles of faience, tiles of polychrome lustre, and capitals have been brought to light. The study, which has been made of them, tends to the conclusion that the Jerablus art before the Ilīlāl invasion was in great part Oriental in its inspiration and is revealed as a combination of Persian and Mesopotamian elements with local Syrian influences.

**KALĀT HUWĀRA,** a town in Algeria (department of Oum, a mixed commune of Mina), 30 miles N.E. of Mascara, on the Wādi Kalāt, one of the branches of the Hillīl. Population (1911): 2072 inhabitants, of whom 3047 native. Carpent-

making, at one time a flourishing industry here, still employs 500 workmen, although on the decline. Kalāt was founded in the 7th (sixth) century by Maḥmūd b. Masā, chief of the Huwara, living in the region of Mina. He built a citadel and gathered around it his tribemen as well as the Masā. A Beber tribe related to the Huwara. Masā’s descendants were faithful servants of the ‘Abd al-Walid of Tlemcān and as reward received the government of the land of the Huwara. After the occupation of Tlemcān by the Marinids (1250 = 1258), the people of Kalāt recognized the authority of the conquerors, and thus gained again under the rule of the sovereigns of Tlemcān after the restora-

*century Arūd seized the town (1517) and placed a garrison of 400 men there under his brother Tābkī. Re-taken in 1528 by the Sūlitūn, Kalāt was restored by them to the Sūlitūn of Timūn and passed finally to the Turks towards the middle of the xvth century. It is described by the writers of this period (Les Africains, Marbou) as one of the principal places in the land of the Beni Rāshīd (the Beni Rājīl of Fez, the Beni Azāz of Marməl). According to these authors, Kalāt was a very strong place inhabited by merchants and well-to-do artisans. During the Turkish period, Kalāt frequently served as a place of refuge for Beys and Turkish officials, as well as for numerous families from Oran and Algiers, and until about 1852, the population was in great part composed of Kulqūghīs, i.e. of half-

*castes born of the marriages of Turks with native women. On several occasions the town has suffered from earthquakes but it was, on the other hand, greatly extended by the Bay of the West, Būsh-Belnīs, in 1756. The population was em-

*ployed in agriculture and industry (manufacture of soap and especially the weaving of carpets). After 1830, Kalāt recognized the authority of Abū al-Kādīr, who drove out the Kuloğhūs, and was in 1845 occupied by the Beys. Kalāt was the birthplace of the celebrated marabout Stūj Almād (al-Bīyra, 8th cent. A.H.), to whom are attributed satirical sayings very popular in Algeria (C. R. Besse, Les dictons populaires attribués à Stūj Ahmad ben Yūnūf, Paris 1910). (G. Vasse) **KALĀT NJIJ, the name of a celebrated citadiz in Northern Syria, on the right bank of the Euphrates in 30° 53’ N. Lat. and 38° 18’ E. Long. (Greenwich), whose importance lay in the fact that it commanded the passage of the river here, where it was crossed by a bridge. It was here that a caravan route from Syria to Mesopotamia, much used in the middle ages, crossed the river. The route ran from Halaib via al-Bāb q.v. to Manbūj, thence in a fairly straight line to the Euphrates, then across the river by a slightly north-eastern direction to Harrān. The distance from Manbūj to Kalāt Nij is given as 4 furūsh (a short day’s journey), that from the Euphrates to Harrān as 2 days’ journey. As there are two small islands in the river at Kalāt Nij, a passage is very easily affected by a short bridge of boats.

In the middle ages Kalāt Nij was the bridgehead of Manbūj (the ancient Euphrās, or Euphrates), a very busyemporium, which the Caliph Harūn al-Rāshīd had raised to the capital of the ‘Awāja province (q.v., 1, 545). So long as Manbūj flourished Kalāt Nij returned its importance; with the decline of Man-

*qūd — by the xivth century A.D. Manbūj was already for the most part in ruins; see G. G. Strong, Palestine under the Mamluks (London
expactly adds that, according to some, traces were still to be seen of an older bridge, which would seem to prove the existence of a river-crossing here, dating back to pre-Muslim times. Al-Salih, however, does not mention the place Ka'at Nadim in his Kitab Manbij, "the bridge of Manbij". The older Arab geographers and historians knew it only by this name. Even if the name Ka'at Nadim perhaps only begins to appear in Arabic literature from the 8th century A.D. (to judge from the references quoted), it is clear from an important passage in the Halfah chronicle (not written, however, till the 9th century) of Ibn al-Shihab (al-Durar al-Muntashri fi 'Iwād Marakah Halid, Bahrir 1909) cf. on this work above II, 235) that its origin must be put back to the tenth century. Here it is stated (p. 230), that Ka'at Nadim was long ago called Djar Manbij, and remained a little village in the Muslims period until it was refounded by a certain Nadim, a slave (qāsim) of Salih ibn al-Shihab, about 300 A.H. (912 A.D.). From this Nadim comes the new name Ka'at Nadim (N. S. cited), which in time quite supplanted the earlier name Djar Manbij. Similar changes of place-names occurred elsewhere in Syria and Mesopotamia in the middle ages; for example the strong castle of Ka'at Ta'ar, which stood further down the Euphrates on the site of the modern Ta'alula and al-Rakha, received the name Ka'at Eljar (see note 2030 of 'Arab) after the Arab chief Djarb l. Mail (in the 8th century A.D.) had taken possession of it.

The passage quoted from Ibn al-Shihab's history farther shows that the form Ka'at al-Nadim and the translation of the name founded on this as "the star-castle", which have become quite familiar in European literature (and therefore also on maps: Ka'at en-Nadim), are wrong. The Arabic sources, moreover, show, so far as we can see, almost always the correct Ka'at al-Nadim; the Syrians reproduce this by Ka'at al-Nadim, e.g. Chronicon Syriacum (ed. Rev. Ettlin, Paris 1869) p. 399, 17. If the reading at al-Nadim is occasionally also found in our edition of the texts — e.g. in Yakuti, L. 105, 5 (against iii, 366, 16; al-Mufid, p. 357, s. v. al-Mardhwi, l. 443, 5; and al-Kazimi, l. 166, 19 — it would still have to be investigated whether the manuscripts really support this reading. At the same time we do not deny that later Arabic writers, in ignorance of the origin of the name of the place, occasionally may have written Ka'at al-Nadim and this may have given the etymology "star-castle". For example, Ibn al-Shihab (op. cit., p. 329) states that the place's name is derived from a word meaning "k'at al-nil ("the sill"), in which the latter explains the name of the fortress in popular fashion as "a star in the clouds", an eagle in the sky". Similarly Ritter (op. cit., s. v. ta'if, following J. v. Hammer) writes: "The castle is said to have taken its name from its height, reaching up to the stars". Lastly Alsinawoth (op. cit. l. 229) takes the name Ka'at al-Nadim back to al-Ma'mun, who is said to have built an observatory here. That the Caliph had observations of the heavens made in the region between Palmyra and al-Rakha on the Euphrates is certainly true (cf. above l. 498); but his responsibility for the doubtful place-name is to be denied, after what we have said above. In this connection it may also be pointed out that we have several places called
Kawkab (or star) in Nearer Asia, for example one in Northern Syria, but an identification of the latter
with Kaifat al-Nadim, "the star-castle," which R. Rümcke, Gesch. des Ägyptischen Tempel (Iman-
lenk 1866), p. 337, notes to propose, is impossible. It is noteworthy that Hamid Allah
Mohamed Mamluk (Nasir al-Kullal, ed. 1. Le Strange, vol. 1, Liden, 1894, p. 103, sq.)
says that the castle of Harran was called Kaifat al-Nadim. As there is no
confirmation of this in Arabic sources, this must be an error of the author.

The citadel and the bridge of Kaifat al-Nadim play a not unimportant part in the history of
the wars of Islam. Soon after their invasion of Syria the Arabs occupied this region (in
18 = 639), the Euphrates villages, al-Balkhush (p. 175 sq.) calls it. In the accounts of
the fighting between Ali and Mu'awia, which led in 657 a.d. to the battle of Siffin (on the
top of the Euphrates opposite Kaifat al-Nadim already mentioned) the bridge of Kaifat al-
Nadim is frequently mentioned; cf. e.g. al-Tabarri, 1. 3259, 34 sq. and Ibn Miskam,
Yusuf al-Umum (Ghah Mem. Ser. L. No. 8, p. 571 sq.). When li-
bad Allah b. Ziyad took the field against Mujtaba in 655 (in 655) in the Irak, he crossed the Euphrates
by this bridge; see Wallhausen, Das Arabische Reich und sein Sturz (Berlin 1902), p. 115.
In 350 (941) after the murder of Ibn Royf (on whom see above p. 407) there was fighting here
twice between the latter's troops and those of the Hamdani Najir al-Dawla; see Zeitisschrift f. Deutsch
Mittelalter, Geschicht., 2. 470. The citadel of Kaifat al-Nadim changed hands several times; as
in later centuries; we find its possessors, in turn, the Hamdanids, the Mirdabs, the
Habash (cf. above vol. ii. p. 229 sqq.), the Banu Numair (see also al-Hawarki, p.
159, viii. Ibn al-Shihabi, ed. cit.), Seljuk Nur al-
Din al-Zanki (1146-73) and his successors in Syria, the Ayyubids. Nur al-Din (according to
Abu l-Fida', Yatim al-Rudabi, ed. Paris, 14. 233),
raided the castle on which Ibn l-Flaburid, who passed two or three decades later, refers
as a "new citadel" and placed a strong garrison in it, which was very troublesome to the
neighbouring Syrisch towns occupied by the Franks. Kaifat al-Nadim was also for a time in
the hands of the Begieinid princes of Iru (on them see above p. 597). After the death of Salih al-
Din (1193) his sons and grandsons (al-Malik al-
Abdal, al-Malik al-Zahir, al-Malik al-Azzu), and
his brother (al-Malik al-Adil) several times succeeded one another in the possession of
the town (cf. above vol. ii. ii. and v. Sarri, ill. 165 sq.). Abu l-Faraqi (Barbarens), Ta'rbik Muhandis-
ugan (ed. Beirut, p. 192), 1895, Well, Gesch.
des Christentums, 1. ill. 433.

When Husayn, in 658 (1260) began his cam-
paign against Syria (cf. above ii. 332), he had to fight for the Euphrates crossings and the forts
defending them; see Ibrahimm, Chronikos Syri-
ace (ed. Bedjan). P. 587 sq., Barbarens, who was then bishop of Hala, went to meet the
Mogul ruler to beg that the Christian be spared, was shut up by him in Kaifat al-
Nadim (see ib. cit., p. 419, sq.

On the topography of Kaifat al-Nadim and the
present condition of the castle there, we have var-
ious accounts by European travellers, e.g. by
Hiëter and Alinworth (on their visit together in
1830), Suchan (1879), M. v. Oppenheim (1896) and Miss Greendale, 1. Ball (1900).
According to their descriptions, the rocky castle without an
east high stands quite alone, crowned by the pictori-
ques ruins of the citadel, falling steeply towards
the river and fairly difficult of ascent on other
sides also. All parts of the castle are still standing
upright and are quite well preserved. Two stories are
distinguished with an agglomeration of rooms of
various sizes. The only part damaged are those
which were burned during the taking of the
castle by Turkish troops about 1820. When at
this time an Arab tribe refused tribute to the
government and took refuge in this stronghold,
the soldiers of the Turks had to besiege and storm it,
and a large gap was made in the wall in the pro-
cess. A peculiar feature of Kaifat al-Nadim is
its not yet fully investigated caves and subter-
anean passages, which, according to the Arabs,
run through below the Euphrates to the Mesopo-
tamian side (compare the Oriental stories about
a similar system of tunnels made by the Queen
Zenobia in Fr. Müller, Studien über Zenobia
und Palmyra, 1. 57). Kaifat al-Nadim is
now quite deserted and forms a refuge only
for countless wild pigeons and hawks. According
with Suchan, there are still three Arabic inscrip-
tions here. One of them is carved out over the
main gateway, which is flanked by two high
towers and gives an account of the restoration
work done by the Ayyubid al-Malik al-`Aziz: in
605-612 (1205-1215); beside it is a second
inscription which gives the name of the archi-
tect. A third inscription of the same ruler of (1215 A.D.)
may be read on the door of what was once
the little mosque of the castle.

According to the Arab geographers (Ibn Dhuheib,
Yakut, al-Karwain, al-Mas'udi), a little town lay
below the castle rock, probably at the river's
edge, which served as a market for the numerous
travellers as well as for the Bedawin of the sur-
rounding desert. The remains still in existence
of buildings of an earlier period at the foot of
the hill on the south cannot, as Suchan observes,
be considered the remains of a town on account of
the way in which the ground is cut up; but the
Muslim cemetery in the vicinity, the whitewashed
of two buildings (mosques or chapels) may mark
the site of the small medieval village. At the
present day there is no irrigating there. Whether
traces of any earlier ones can be found seem
very doubtful. Chesney (Expedition, l. 450; Narra-
tive, p. 230; see above) has, it is true, thought
to discover remains of one and M. v. Oppenheim
claimed to find traces of old bridges in no less
than three places (see Berliner Zeitschr. für Erk-
1905, p. 7; but according to Chapot (op. cit., p.
284, note 7) who likewise examined the area in
question, there is nowhere any trace of such
remains to be seen.

A little to the south of Kafat al-Nadim, but on
the left bank of the stream, there lies close to
the Euphrates a mound of ruins, part of which
has at one time been swept away by the river,
called Tell Ma'-alil, out of which M. v.
Oppenheim dug a large ancient mosaic of the riv-
gel Euphrates; see Byzant. Zeitschr., xiv. (1905),
9. 7 and Moritz in the Betri. der Archäol. 2712,
1923, p. 158. Also on the north bank opposite
Kaifat al-Nadim there lies a very winding system
of hills, called Dżabal 'Aṣṣārīn after the ancient ruined site of 'Aṣṣārīn. S.E. of the latter (N.E. of Tell Mar Chudra) rises the two great grave-towers, one of which in the second story a porphyry sarcophagus, with the oldest known inscription in pure Syriac (73 A.D. = 385 Seleucid era). This monument of an Edessa man named Maḥruš, with inscriptions relating to the building and to the deceased, is of great value from the linguistic as well as the palaeographical point of view. Moreover, P. Oppenheim and H. Pogson found and copied it independently; cf. Pogson's publication and edition of the text in his *Impronta Semitica de la Siria* (Paris 1907—1908), p. 15—22 (and *P. a. s.* and see thereon Nöthdecke in the *Zeitschr. f. Assyri.*, xxx. 151—153. The edition of the text by B. Moritz in the *Beiträge zur Assyriologie*, vili. 1913, p. 152—165 is based on v. Oppenheim's material. The ancient name of Tell Mar Chudra and 'Aṣṣārīn are unknown; perhaps it was one of the above mentioned stations in the itineraries (Gerke or Thilasticom, 682.

KALAT AL-RUM. SEE RUM.

KALAT SHERKAT. An extensive group of ruins in the wilderness of Mosul, on the right bank of the Tigri in 38° 50' N. Lat. and 45° 15' E. Long. (Greenswiss). They rise on the edge of the desert on the steep spur of the hilly lands, cut up by many valleys, which slope from the ridge of the Khasāha mountains, an eastern spur of the Djabal Hamrin, down towards the Tigri. The name Kalat Sershāt is not found in the Oriental writers of the middle ages nor, so far as I can see, in those of later centuries either. Whether the spelling KALAT SHERKAT = Ashshur III (r. r. 1), which is found in Aramaic inscriptions of the Parthian period, is really connected with Sershāt, is Jameson (Mitt. der Deutsch. Orient-Gesellschaft, vi. 60, p. 46) supposes, is very doubtful. Perhaps the name Sershāt—or Shershāt—of Strabo, *De geograph. descript.* (Leipzig 1916), p. 795—only dates from the avii. century A.D.; in the literature of European travellers it seems to appear first about the time of Rich (1821). The meaning of a personal name is quite unknown. The Turks also give the place the name (often found when Turkish is spoken) of Toprak-Kale = "Earth-castle," which is without significance; cf. Rich, op. cit., vii. 137, 91.

Kalat Sershāt occupies the site of the oldest capital of the Assyrian empire, the city of Ashur, from which the whole Ashurite race took the name Ashshur (Assyria), while the city itself apparently derived its name from the national deity of this name (hardly the reverse). The site offers many advantages for an effective defence and was presumably planned by the inhabitants of southern Mesopotamia (Babylonia) as a military bulwark against the incursions of northern barbarians. That Kalat Sershāt was fortified in the Aramaic period has been shown by the excavations of the Deutsche Orient-Gesellschaft. These further show that the Semitic settlement was preceded by a non-Semitic (Sumerian) occupation; Sumerian sculptures have been found for the first time in the city, associated with those from Tellah in South Babylonia (about 3000 B.C.). In the time of the third Babylonian dynasty of Ur (2112—2055 B.C.), Ashur was a small state dependent on Babylon. The beginnings of Ashur may safely be put back to 3000 B.C. and perhaps even farther; thereon cf. most recently, Wetter in *Biblisch-Studien*, Heft 6 (Die *Sargonidische Zeitvon Assur*, Leipzig 1925), p. 96. Some not inconsiderable time before 2000 B.C. an end was made of the Sumerian colonisation of Ashur by the invasion of the Semites.

The numerous historical inscriptions which were brought to light in the excavations of the Deutsche Orient-Gesellschaft in Kalat Sershāt have extended in a most unexpected fashion our knowledge of the history of the city and kingdom of Ashur, especially with regard to the older periods. Its chronology now begins about 2300 B.C. or even earlier. From Falsa Ashur 1 (2036—2072) to the fall of Nineveh, with the help of the dynastic lists of Ashur, we can restore the series of rulers without a gap; cf. E. Weidner, *Die Könige von Assyrien, Neue chronolog. Dokumente aus Assur*, in the *Mitt. der Forfoearischen Gesellschaft*, (1921), no. 2, with the chronological list of the kings of Ashur given there (p. 64 sq.). Compare the (somewhat later) list (based on the screenplay Kalat) in *Archeologie und Alterthümlichcr Inhalt*, Heft 2 (1922), p. 101 sq.

Ashurah retained its place as capital down to the middle of the tenth century B.C. Older rulers built other towns as royal residences, but only temporarily, for example Selamaner 1 (1280—1261) chose Kalkhus (Bild. Hebr. 6), further to the north at the mouth of the upper
25th for his capital and his son and successor Tu-
kutlu Nimarta (1260—1322) built a new cap-
thal for himself in the immediate vicinity of Ashg"ur to the northeast of it, which he called after himself Z"ar (wall, zuloof of) TuKutlu NimaTta (now the ruins of Tashkul Ar'aj). After their death both these towns again fell into their secession to Ashgur. It was thus from the 14th century onwards that the latter became more and more overshadowed by Kalakh and Nivseve and the latter kings chose those two places only as the centres of their kingdom. Ashgur survived the fall of Nivseve, however; cf. Streck, op. cit., COXiV, and note 2 and p. CXXI, note 1. It is mentioned in the proclamation of Cyrus to the Babylonians, which is preserved in sunsimian. During the greater part of the Graeco-Roman period, especially in the 400 years of the Par-
thisch epoch (which is represented by countless remains of buildings), it was an inhabited town, and as such — under other names (Kaini; perhaps also Labanah and Lilihan) — it is several times mentioned by classical authors; thereon cf. E. Herzfeld in Monumen, l. (1907), 283 sq. and 287 sq. In the Parthisch strata of the ruins of Kalakh, 43 Arameic inscriptions, mainly in mo-
muriun, were found, which, in so far as they were dated, cover the period of the Sasanian (Anarhik) era (199/200—272/273 A.D.), i.e. they cease just with the rise of the Sasanians. An interesting fact is also to be deduced from these documents, that the cult of Assyrian deities and names of gods still survived in Ashgur in the third century a.d. On these inscriptions cf. Jensen in the Stenung-

The name Ashgur appears in the Aramaic form Athor as early as the old Persian version of the Behistun inscription; see Waisbach, Die Keilschriften der Achaemeniden (= Vordoriental, Bibl., iii.), p. 140. By Ashgur we have here probably not to understand the whole of Assyria but only the district of Ashgur. The classical authors give the Aramaic equivalent of Ashgur in the form Arsa, Arsea; see Palmy-Weissowa, Rosinyski, d. Klass. Altertumswissenschaft, ii. 2260; Herveld, op. cit., l. 127. Ashgur presumably became more and more deserted under the Sasanians. The Syrian authors know of Athor down to the late middle ages as the name of a parish; see G. Hoffmann, Auswahl aus syrisch. Atmen persiscrcher Martyr (Leipzig, 1886), p. 175, 210.

The Arab geographers of the middle ages likewise are acquainted with Athor. It is given by them firstly as an earlier name of Mosul, then as the name of the province which was later called al-Jissaka and finally as the name of a ruin near al-Sahnuk (probably the Milhal Resu, 23 miles N.W. of Nimrud, the ancient Kalakh; cf. Streck, op. cit., p. COXiV). Sometimes Athor is written instead of Athor and sometimes the one, sometimes the other noted as a variant. Athor is either to be regarded as a corruption or, perhaps, better, as a parallel dialect form. For, as Athor or Athor: Ibn Rusch in the Bibl. Grzbr. Arab., vii. 224, and Athor, "land of A. = Mosul." Vakht, Morgenl. (ed. Wustenfeld), i. (1833), 124, p. III, 113, sq. For the Jissaka Athor see Vakht, Morgenl., ii. 72, sq. 241, sq; this coincides with the Halim Athor (Ar'aj), the Kafr (region of) A., of which only al-Muqaddam (Bibl. Geogr. Arab., iii. 20, 21; cf. also 27, 28, 29) speaks and which, according to him, is divided into three large divisions. On (Ulapay) Athor as an older name for Athor see above L. and G. Le Strange, The Land of the Eastern Caliphs (Cambridge 1905), p. 86.

From the above statements of the Arab geographers this much is evident: that in the middle ages the ruin was still known which covered the site of the ancient Alshur; only the name had been erroneously connected with a deserted locality near al-Sahnuk. It may here be recalled that, according to Layard, Nineveh and Babylon (London, 1853), p. 162, the Arabs at the present day call a high hill in the corner of the ruins of Nimrud (Kalakh) "Tell Atthir." The Arab geographers further make the observation, which is quite correct, that the earlier name of the province of al-Jissaka, which, indeed, practically coincides in area with the ancient Assyria, is derived from the deserted town of Athor. When Athor ultimately came to be erroneously regarded as the ancient name of the later capital Mosul, we have a false identification in the case of Baghdad, which western travellers throughout the middle ages down to Pietro della Valle (1615—1647) squatted with Ba-
bylon and always called so.

On the Arabic name Athor or Athor cf. also A. Schultens, Tim et res gestae ... Saladin (Lei-

The ruined area of Kalat Sherkat is of considerable extent (nearly 180 acres), very little smaller than that of the two other royal cities of Assyria, Kalakh (Nimrud) and Nineveh (Kuyunjik). It is sharply defined; there is no doubt on any side as to how the ancient city reached. The Tigre flows along the west front; the north front was formerly a natural ledge of rock, which was strengthened by dykes and is now made inaccessible. On the finest part of Athor, in the eastern part of the north plateau, the Sham-
ant Shihul Ferhan Paula in the second half of the sixteenth century founded a settlement which later became a Turkish outpost, which until the Great War served as barracks for troops of regular ca-
valry or mounted police. Apart from this temporary use as a military post by the government, Kalat Sherkat has been quite uninhabited since the memory of man.

The extensive ruins early excited the interest of European travellers. Their importance was first emphasised by Cl. Rich, who examined them carefully on a Tigris journey in March 1831; see his Narrative of a Residence in Kurdistan (Lon-

The first thorough description of the site we owe to W. Ainsworth. He visited it along with Layard and Mitford in 1840 when on an excursion to al-Had (q.v., ii. 204) (the caravan road to al-
Hajr branches off at Kalat Sherkat; see his report in the Journal of the Royal Geogra-
phical Society, xi. (1842), p. 4—8). Layard again in 1847 spent two days at Kalat Sherkat; engaged in examining the ruins; see Layard, Nineveh and Its Remains,?
A systematic examination of the whole system of ruins was first effected between spring 1894 and June 1914 by excavations of the Deutsche Orient-Gesellschaft which extended over practically the whole site of the town. Accurate plans were made of all parts examined. As the excavations proved, the kings Tiglath-pileser I (1115–1076) and Salmanassar III (859–824) in particular displayed a very great activity in building at Ashur; the latter renovated completely almost all the great works of his predecessors. The most prominent buildings within the town are the great temples — the sanctuary of Ishkur, the oldest of all, showing a Sumerian stratum below it, then the Ashur temple, also of very great antiquity, called E-Kharsag-kurkurna with a great tower belonging to it, and lastly the sanctuary of Ann and Adad. Besides there was a series of smaller temples; of special interest is a "New Year Festival House", a work of Sanherib (705–682), discovered before the city gates. Palaces also were uncovered; but we have yet detailed information regarding them. The powerful fortifications (double wall, Tigrit-quay, wall and Citadel) with which the Assyrian rulers protected their capital are most impressive. Among the monuments brought to light in great number special mention should be made of two rows of steles with reliefs and inscriptions (one north of kings and one south of Ashur) which belong to the xvi-th-xvii-centuries and are of fundamental importance for our knowledge of Assyrian history. The topographical and archaeological investigation of the site has, at last also, given us a clear picture of the extent and significance of the erstwhile "city of the Parthians" (we have to distinguish two periods of Parthian building).

An exhaustive work on the topography and history of Ashur based on the German ten years' excavations on a large scale is not yet available. For the present we have only the official reports, almost all by W. Andrae, the leader of the German expedition in Assyria, published in the Mitteilungen der Deutschen Orient-Gesellschaft, N. 20–22, 25–28, 28–31, 31–33, 35, 39, 40, 43–44, 47–49, 51 and 54. On two of the principal temples, on the fortifications works, and on the rows of steles, Andrae has published monographs in the Wissenschaftliche Veröffentlichungen, der Orientalischen Gesellschaft, namely: Der Ann-Assur-Tempel in Assur (Leipzig 1909); Wissenschaftliche Veröffentlichung, N. 10; Die Stelenwerke von Assur (1913); op. cit., N. 24; Die Festungs Werke von Assur (1913); 2 vols.: op. cit., N. 23; Die archaischen Tier-Tempel in Assur (1922): op. cit., N. 39.)

The yield in inscriptions from the ruins of Assur has been very rich and exceedingly important. They have to a very great extent extended our knowledge of Assyrian chronology, history and religion. The publication of the texts is likewise being done in the Wissenschaftliche Veröffentlichungen der Deutschen Orient-Gesellschaft, as there have appeared: Keilschrifttexte aus Assyriens Inschriften, 2 parts, Leipzig 1914 and 1922, ed. by Messerschmidt and Schroeder. ( = Wissenschaftliche Veröffentlichungen, N. 16 and 37; Keilschrifttexte aus Assyriens Inschriften, ed. by Ebeling, vol. i, 1915–1919 (= op. cit., N. 28); vol. ii, (part 1–2), 1920 (= op. cit., N. 54); Keilschrifttexte aus Assyriens Inschriften, ed. by Schroeder, 1920 (= op. cit., N. 35); Altenassyrische Urkunden aus Assyrien (dating from the latest period of the Assyrian empire), ed. by Littmann, 1921, op. cit., N. 38).

Bibliography: Apart from the references already given we may mention the following: Ritter, Erzählung, xi, 666 sq., 671–675; Fr. Delitzsch, Die Welt des Paradieses (Leipzig 1883), p. 252–255; Delitzsch also in 1903, before the beginning of the German excavations, drew up a sketch of the history of the town (especially its buildings) based on the inscriptions then known, in the Mitteilungen der Deutschen Orient-Gesellschaft, N. 20, p. 30–36; M. Oppenheim, Vom Mittelmeer zum persischen Golf (Berlin 1900), ii, 203–210; E. Herzfeld, in Memnon, ii, 1907, p. 176 sq., 214 sq., 237; M. Streck, Die Inschriften, Archscholium (Berlin 1916), ii, 773; K. M. Meadow, Babylon and Assyria, i. (Heidelberg 1920), passim (see Index), esp. p. 12 sq., 33 sq., 300 sq. — The best map of the region of Kalat Sherqat is the one of Mesopotamia and Syria published by the cartographical department of the Prussian Survey on the scale of 1:400,000, sheet 4 C (Stauffe). The latest plan of the ruins of Ashur is given by Andrae in his Die Festungsverwerke von Assur (1915), Plates i and ii. On the flora of Kalat Sherqat and district, E. Herzfeld writes in the Orientalistische Literaturzeitung, Suppl. ii, Berlin (1908) on the basis of the collection made by him as a member of the German expedition in Ashur in 1903–1905 (and somewhat enlarged) in Süd-Preussen, Archaeolog. Risse im Empfang und Vierzehn. (Suppl. Berlin 1920), p. 25–26. He gives the plant-names in the dialect of the half nomadic Jeblitik Arabs of the district. (M. Streck)

KAŁATA. See CONSTANTINOPEL, I, 867.

KAŁAʿUN, AL-MALIK AL-MARRĪṢ SEEK AL-DEN ABU-'L-MALIK AL-ALĪF (the "Thousand", a name, it is said, given him because he was bought for 1000 pieces of gold) AL-SALMI, the sixth Sultan of the Bahri (q.v.), Mamluk, born in Khipis (q.v.), was brought to Egypt, sold to Sultan al-Malik Aibb (q.v.) and manumitted by him in 677 (1279). The beginning of his career is unknown. Under Sultan Baibars (q.v.) he became commander of a thousand. He later distinguished himself in a campaign in 673 (1272) against the Mongols by a skillfully executed passage of the Khabur and again in 672 (1273) in a war against the Armenians. Sultan Baraka Khan, son of Baibars, sent him again against the Armenians in 677 (1279). When this Sultan was deposed a year later, the Emir chose his seven-year-old brother al-Malik al-ʿĀdil Salmish as Sultan and appointed Kalāʿun his guardian and Aibb. In reality Kalāʿun ruled and was mentioned in the Friday prayer and on the coins along with Salmish; after three months Salmish was deposed and Kalāʿun in due form raised to the throne and crowned by the Caliph. While he was at once recognised in Egypt, he had to fight a rival in Syria, the Emir ʿAinār al-Ashkār, who was chosen...
Sūlṭān in Damascus by the Syrian troops, Sōnār found support among the Daulah of Syria, as well as with the sons of Bihbar, the deposed Baraqa Khān, to whom his deposition Karrak [q.v.] had been given as an independent principality, and his brother Khīyā, who occupied several fortresses in the southern part of Syria. Both sides gathered together their armies; there was a battle in the beginning of 670 (1259) south of Damascus, which was decided in favour of Kālān, as a result of the desertion of Damascus troops. Baraqa Khān had died shortly before; his brother Khīyā was glad to conclude peace with Kālān in the spring of the year 680, by which he was granted Karrak as a fief. Sōnār had appealed for assistance to the Mongols and they, always ready for loot, had invaded Northern Syria, plundering as they went. When the Mongols were preparing for a second campaign on a large scale, Sōnār, who had become afraid of his too ardent friends, had made peace with Kālān on condition that he was left the North Syrian fortresses of Sālut, Shīzar, Aμmara and several other places to rule independently. Freed from these opponents, Kālān was able to devote his attention to the invading Mongols, who were reinforced by Armenians, Franks and Georgians. The armies met at Hims. In spite of their superiority at first, the Mongols were defeated and had to withdraw from Syria. While the Sūlṭān, as he was later called, was threatened from several sides, the Crusaders, who still occupied the greater part of the Syrian coast, had not decided to collect their full strength for a decisive effort. Only the Knights of St. John in the fortress of Marjānā had enticed the governor of Hims al-‘Aμātā [q.v.], who was approaching it, into an ambush and inflicted a severe defeat on him in a surprise attack; after the destruction of the Mongol army, they, like the Count of Tripolis and the Templars a year later, were content to have peace on favourable terms. An agreement was also made with the city of ‘Akkā in 682 (1283). Kālān, however, punished the Armenians for the help they had given the Mongols, by invading their country and burning their great damage by plundering and ravaging it.

The Khātā of the Mongols, Alā‘k [q.v.], died in 682 (1283); his successor adopted Jāmā, taking the name Ahmad. Letters and alliances were exchanged between him and Kālān and although their relations did not result in an alliance, they were by no means unfriendly. In 683 (1284) Ahmad was murdered. His successor Khudhā [q.v.] remained a pagan and favoured the Jews and Christians in his Empire. His plan was to induce the Pope and the king of France to cooperate with him in a crusade against Kālān. This scheme, however, did not materialise. The Sūlṭān for his part entered into diplomatic negotiations with the republic of Genoa, with whom he concluded a commercial treaty; he had a kind of defensive alliance with King Alfons of Castile and James of Sicily. Embassies were exchanged with the Byzantine Emperor, with the Emperor Kardoff of Hungary, the king of Venice and the prince of Ceylon. The prince Tala‘an Mansūr Afdal, who became a convert to Islam, obtained from Kālān, as the first ruler in Islām, a title and a standard with a coat-of-arms.

It was Kālān’s aim to extend his rule over the whole of Syria. To attain this end he did not hesitate to break his treaty with the Crusaders. For example, at the beginning of 684 (1285) he fell suddenly upon the fortress of the Knights of St. John at Marjānā and undermined the walls so rapidly with his neighbors, that the garrison had to surrender and depart. He adopted another plan to capture the stronghold of Marjānā, built in the sea near the coast and considered impregnable. It belonged to a vassal of Bohemond VII of Tripolis. Kālān pursued and threatened the latter so long that finally he bought it from his vassal, and let the Sūlṭān dismantle it to appease him. Margaret of Tyre had to purchase peace with Kālān on humiliating terms. Having thus consolidated his position, he was able in 688 (1287) to think of depriving his old opponent Sōnār al-‘Ashār of his possessions in Syria. In the course of several campaigns he compelled him to give up his kingdom and retire to Cairo. He threatened Khīyā, prince of Karrak, so long that the latter finally yielded up his principality to him. In 688 (1289) he decided to capture Tripolis, the largest town still in the possession of the Crusaders. Prince Bohemond had died and his mother and sister were making claims on the vacant throne. The Sūlṭān intervened in the quarrel and Emily began the siege of the town. Although Tripolis received help from the sea, its position soon became desperate, so that the mothers of the late ruler left the town with the Genoese and Venetian colony. With the help of his subjects the Sūlṭān succeeded in underminining the walls and took the town by assault. It was for the most part destroyed and not rebuilt until a few years later, several miles from the old town on the bank of the river Kālān. (From the Christian period date the great mosque, the Talān mosque, both formerly churches, and the foundations of the citadel). The stronghold of Baṣṭān, south of Tripolis, was shortly afterwards taken. This was Kālān’s last feet of land. When about to depart next year to besiege ‘Akkā on the pretext that Muslims had been robbed and murdered by Christians there, he died quite near Cairo, just after starting for Syria. Besides his continuous campaigns in Syria he had also to wage war against Nubia. In two battles he was victorious against king Shamsuddin but he could only maintain his authority there as long as his armies remained. He gained no permanent success in Nubia, although he succeeded in making king Shamsuddin resume payment of the ancient tribute. He had frequently to take the field with full strength against the Beduins of South Palestine and Upper Egypt; it is a sign of his strength that he, unlike his father Sūlṭān, was able to subdue the rebels completely. Kālān, on the whole, maintained his authority over the sacred city of Mecca, although the Sharif from time to time endeavoured to make himself independent.

Sūlṭān Kālān succeeded in consolidating Mamluk power in Syria and gradually made good the damage done by the incursions and ravages of the Mongols. We find his innovations on a grand scale in the citadels of Aleppo, Haldal and Damascus. His most famous building is the hospital in Cairo in which there were large wards for the different illnesses, laboratories, kitchens, ample storerooms with provisions and medicinal stores. It was connected with a mosque and a school (see below). He was the only one of the Mamluk.
With this the place disappears from history; for, although Hāddi ibn Khalīfa (thirteenth century) still mentions Euclidi, in his Risālah, p. 601, he only knows it from Hamdullāh Mustawf and al-Qalāb, Voyage en Turquie et en Perse (Paris 1748), II, 284 (beginning of the eighteenth century) translates, word for word, the statements of the Turkish geographer. The site has never been discovered; Ainsworth, Travels and Researches in Asia Minor (London 1842), ii, 263 wishes to identify the ancient Claudias with the modern Kesikta [q.v.], which, however, is impossible because the Syrian chroniclers mention Kalawdhiyya and Kesikta together contemporaneously as different places.

**Kalb, the dog,** is also in Islam one of the "unclean beasts," primarily because its flesh may not be eaten (al-Nawawi, Mīzājī, al-Ṭāhā, ed. v. d. Berg, ii, 312); and further because, according to the Hadith, there are several special regulations regarding it. For example dogs render food which they lick impure and render unavailable water intended for ritual purifications (al-Dhahabi, Muqaddim, tab. 33). Vessels, likewise, which have been licked by dogs, require to be cleaned several times, including once with sand. In a certain way the dog renders impure the whole room in which it is; for, according to the Prophet, he may enter a house in which there is a dog and Muhammad had first to sprinkle the place on which a young dog had lain concealed with purifying water before Qādir would appear to him (Muslim, Lātān, trad. 31 agg.). — Dogs "cut off the salt," i.e. they make the salt worthless when they come into the immediate vicinity of the man at prayer (Ibn Mādi'in, Thāna, tab. 30) and, one is all the more inclined to attribute this rule to the impurity of the dog, as it also holds for menstruating women. The Arab commentators, however, explain it by saying that the dog frightens the worshipper and distracts him from his devotions (al-Siddīq, commentary on Ibn Mādi'in cited above). This is a specially true of the black dog, for "he is Satan." This saying is either to be interpreted literally as meaning that Satan occasionally appears in the form of a black dog (cf. Fust) or it only means that black dogs in general are considered particularly dangerous. Dogs in general are considered noxious and should therefore be exterminated (al-Nasīrī, Sīrah, 1:151). But as Allah does not create anything in which there is not a trace of his wisdom (al-Siddīq, commentary on this passage), this rule is applied only to black dogs.

It is only permissible to keep dogs for hunting, for herding and for watching (al-Nasīrī, op. cit.) whoever keeps a forbidden dog to forfeit a portion of his possessions daily (cf. Ibrāhīm, Tahfizh, Shāhīd, fol. 638; "whomever possesses a dangerous dog keeps good fortune away from his house"). Dealing in dogs on the other hand is strictly forbidden (al-Dhahabi, Muqaddim, tab. 94).

But in spite of its impurity and dangerousness...
the Arabs are able to appreciate the good qualities and services of the dog. Muhammad himself promises a woman a divine reward for a kindness, which she had done a thirsty dog (al-
\textit{Abbâr}, \textit{Wafât}, had 133), and al-Kazwînî (p. 403) characterizes the dog as "a particularly intelligent, very useful animal, patient in hunger and on the watch, whose cleverness and fidelity are shown in its manner of killing its prey. Al-Kazwînî describes very fully the symptoms of hydrophobia of the famous Bab-
\textit{ylos}, \textit{Talmud}, \textit{Vema}, fol. 83b 5."

where are few symptoms in a mad dog; its mouth is open, its saliva runs, its jaws have a small, sharp tail lies limply on its hips and it wanders aimlessly along the sides of the streets."

The dog of the seven sleepers (Sura xviii. 17) is a special matter. According to al-Bûzînî (ed. Ficuster, p. 557) it was a dog with the gift of speech, in al-Tabînî's view (\textit{Tafṣîr}, xv. 141, 1st ed., p. 131), a man in the form of a dog, but perhaps simply an ordinary dog. — On the dog-

\textit{AL-AL'AX.}

The passages in other collections of tradition parallel to the traditions quoted. Al-Kazwînî, \textit{Majãb al-Mahâmûdî} (ed. Wântenfeld), p. 403 a 19; Kf. \textit{Abî} al-Hayawânî al-Kabîr (Cairo, 1297, ii. 330 266)

AL-KALB, the Dog-Star in astronomy: Sirius is called AL-KALB al-Sûr (the constellation of the Great Dog) and \textit{Sirr} al-Kalb al-bughr (constellation of the Little Dog) or also \textit{Sirr} al-Kalb al-Mutâhâdûn (constellation of the far-

\textit{runners dog; \textit{Fein}}, the former known as canis major and the latter as canis minor, two constellations of the southern heavens, the names and configuration of which the Arabs took out of al-Majâsî (the first magnitude) of Ptolémæus. Like the latter, the Arabs allotted 18 stars to the star proper of Canis Major, of which Sirius (al-\textit{Fein} \textit{al-\textit{Fein}}) is of the first magnitude (1.6), while outside of the constellation lie 11 stars, and to Canis Minor two stars of which Procyon (a Canis Minoris, al-\textit{Fein} \textit{al-\textit{Fein}}) is also of the first magnitude (nearly 3.5). As regards the stellar co-ordinates (latitude and longitude), the star-catalogues of 'Abd al-Kâhâmân al-Sûr (d. 376 = 986) and al-

\textit{Hirfûn (d. 440 = 1048) are based entirely on the Ptolémæus \textit{Almagest,} while the star-catalogue of Ullugh Bug prepared for the period 1437 contains numerous new definitions of star positions.

The name Dog-Star probably goes back to ancient Egypt, where the modern Sirius (\textit{sûr} = burning, brilliant — with the addition of \textit{Kul} = Dog-Star) was called \textit{Sadjî}, which undoubtedly became the Greek \textit{Sothis.} The name of the star had originally nothing to do with dog, but in the Greek terraeutica which are frequently found in Egypt, Isis, to whom the star was sacred, is often represented with a dog (and according to I. Bartchard) in a particular kind of dog, the so-called Armanî (Armênî-dog. Sirius alone it also reproduced in terraeutica in that way; sometimes also has a star above his head. According to Bcrcherili, it is not improbable that the star which appears in the star-tables from the Kremidis groves, which precisely or follows Sopdet, is the modern Procyon.

In Babylonia Sirius was called \textit{Arres-Stra}, new Dog-Star. The older Babylonian name (according to E. X. Kugler) was \textit{Kahkhu} weight, the late Babylonian \textit{Kalb Kâfisî} ("weapon of the bow" — ~ arrow.

KALB u. WABARA, the renowned ancestors of the tribe of Kalb, a confederation of nomadic Syrian Arabs attached to the powerful \textit{Qays} [q.v.] group. The Banû \textit{Udhra} [q.v.] have been the most famous among the clans of the Kalb since the Hijra, especially in historical literature. The pre-Musulman names of Kalb are very obscure and semi-fantastic. Zuhayr b. Dânîr [q.v.], an almost legendary personage — reckoned among the \textit{sawammarin} or cenotaphs — is said to have been one of their principal chieftains. They seem to have developed independently of other tribes in the Peninsula and to have had no relations with them. Their dialect showed various peculiarities and we know of no pre-Islamic poets using it. About the time of the Hijra they were the most important Arab group in Syria.

The conquest of this country brought them to the front, not least through the close alliance made by Mu'awiyah I. with their tribe, a union sealed by his marriage with Makka (q.v.), mother of Yûsuf I. This political alliance brought them into high office, at court and in the army; to the latter they furnished disciplined contingents and captains of great bravery. Towards the middle of the first century A.D. their numbers must have been considerable; 2000 of them were receiving the pension of 2000 dirhems, the \textit{sawaf al-'awr}, a distinction reserved for the \textit{zabî'î} or nobles. Half-settled, half-nomadic they cowared with their huge flocks — for they were great herdsmen — the \textit{Sama'aw} the steppes separating Syria from the \textit{Iraq} and hence called \textit{Sama'aw} of Kalb and desert of Kalb. They held the springs, the oases of the east and south of \textit{Hawarîn,} especially Dawsit al-Dânîrî, Tabûk and several oases dotted about the Wadi 'Ir-Ra'î with their palm groves, the property of the Banû \textit{Udhra.} In Syria they were grouped round the Maysam and Palmyra towns which belonged to them. A part of the district of \textit{Emas} and of the lower valley of the \textit{Orontes} were united in their territory and
the Qhitai [q.v.] of Damascus a number of villages belonging to the Ka'bi. The possession of commercial centres like Palmyra and Damascus al-Balad leads us to suppose that this active Syrian tribe must have profited by the caravans passing by these routes, still very much used in the first century of Islam.

They seem to have inherited the ancient hegemony of the Ghassanids. Like the latter and other Syro-Arab tribes at the time of the Hijra the great majority of them professed the Christian religion and probably were Monophysites. They gradually exchanged it for Islam: one group is even said to have sent a deputation to the Prophet.

In the following of the text there is no room for personaliy.

They made many conquests. Hāritha, his adopted son, and Abd Allah, of Khulfa, his diplomat—rose to high positions. Islam spread among the Ka'bi, especially from the time when frequent marriages—first that of Nā'i'ah, wife of the Caliph 'Othman [q.v.], with the Omeyyads assured them preponderance over the other tribes. Yazid I., with his mother Masit, passed a part of his youth in the desert of Ka'bi and contracted a marriage with a Kābiyan. The supremacy of this tribe and of the powerful family of Bahdhal [q.v.] incited the Kābi against them. Refusing to recognize Mu'awiya II., the latter declared for Ibn al-Zubair [see ABU ALLAH B. AL-ZUBAIR]. The victory of Marj Kābi [q.v.] was mainly due to the bravery of the Kābi, who captured the ransom between them and the Kābi. Burning for revenge, they attacked the Kābi everywhere and succeeded in driving them out of Mesopotamia and the adjoining districts of the Sasanids. Besides, with the advent of the Mawāni'd, their popularity had sunk for the time at the court of Damascus, where their striking triumphs at the battle of Marj Kābi gave offence. They were not long in regaining their influence. They continued to figure among the most stalwart supporters of Omeyyad rule. On several occasions, their contingents rendered effective assistance in retaking the 'Ishū from the rebels in the East. They were therefore proclaimed the friends of the Kābi. In a word, the name of Kābi had become synonymous with pan-Islam the Omeyyads. The almost constant policy of this dynasty was to rely on the Kābi alliance and through it on the support of the other Syrian tribes. A tradition said that the Ka'bi would be the last adherents of the Safay'ah [q.v.]. This state of affairs inevitably led to a violent reaction against the 'Abdālids and precipitated the fall of the Ka'bi, denigrated by their long struggle with the Kābi and their active participation in all the wars of conquest. Soon their solidarity was broken up and the designation of Ka'bi, an object of suspicion to the Bagdad government, gradually disappeared. Ibn Sinān, quoted by al-Kalībī (in his Nāmāyat al-Nabī), says that in his day there were great numbers of them settled on the shores of the Euphrates of Constantinople and divided equally between Christianity and Islam.

KALBI, A FAMILY OF SCHOLARS OF Ka'BI.

The elder al-Kalībī, Abū 'Nā'i'ah Muḥammad (K.

MARK, according to Ibn al-Kalībī in the Fihrist) b. Abū-Sayf al-Baṣrī, whose grandfather, his sons al-Sālih, Ghāz'ī and Abū al-Rahmān had fought by the side of Ali in the battle of the Camel and whose father had fallen by the side of Mu'āwiyah b. al-Zubair, had taken part in the battle of Dūr al-Djamīdijin [q.v.] in 82 (101) as a follower of Abū al-Rahmān b. Muḥammad b. Abū-'Abbās [q.v.]. He then devoted himself to historical and philological studies. He read the Nāmāyat of Farazdaq [q.v.] with the poet himself. He lectured in Ka'bi on Korānic exegesis and history at the invitation of Sulaymān b. Abī al-Abbās, and he expanded the Korān for a time in the latter's house at Sennā. It seems that the Korān was still used by al-Thā'alibī [742—1206] (q.v. (see Cat. Codd., MSS. Or. in Mus. Britannica, ed. J. 342—1056) q.v. (see Cat. Codd., MSS. Or. in Mus. Britannica, paras. ii. No. 342). He died in 466 (1073).

His son Abū 'L-Mu'āmin Hārīth, mainly, continued his father's historical studies, in which the latter had been his teacher. Both scholars have often been attacked by critics of traditions and even accused of forgery (see Kitab al-Adhān, ii. 191; xv; 38, 81; 167; Al-Enfūth, Mus. Stud., i. 186); but on the other hand they did not lack warm defenders (e.g. Ya'qūb, Mus. al-Wasā'il, ed. J. 158). Modern research has confirmed many of their statements, which were reached by regular and scientific methods such as the study of inscriptions, against the fanatical criticisms of their co-religionists (see Noldeke, Gesch. der Arab. a. Pers., p. 282). Muḥammad, who worked for a time also in Bagdad, died in his native town of Ka'bi in 204 (819), according to others in 206.

Of the 140 works of Muḥammad, listed in the Fihrist, pp. 95—99), there have survived: 1. Kitab al-Nāsab al-Kalībī or al-Damārat al-Abbās (Dāmaarat al-Abbās in Hārīth al-Kalībī), on the genealogies of the Abbāsids in a MS. of the Esrail (see Castr. Bibl. arabic-historica, no. 1763), of whose second volume the British Museum (see Cat. Codd. MSS. Mus. Brit. Museum, Paris II., no. 915) owned a modern almost worthless copy, perhaps a copy of an extract; a fragment of the work is perhaps preserved in aMS. manuscript (Bibl. Nat., de St. L., Cat. no. 3047). Of an apparently much condensed version of the work by Abū Sa'īd Alī b. Muḥammad al-Sakkārī (D. 555—1153), which is chiefly based on Muḥammad b. al-Habīb's recension, but also uses that of Ibn al-'Arabī and other fundamentally independent sources also, the first volume is preserved in the British Museum (see Cat., no. 1700 and also p. 738). The extract by Ya'qūbī is in Cairo, Khed. Libr. (see Fihrist, v. 55; 81; 170; 170, 2. Kitab al-Nāsab al-Kalībī or al-Damārat al-Abbās (Cf. HAMMER, DAS WISSENSCHAFTLICHE LESE-GEBIET, 1876, p. 121); 3. Kitab al-Ibrār or more correctly Kitab Fāhibī al-Ibrār, which Al-Mu'āmin Zekā Pasha [Ibn al-Kalībī, Le Livre des Soviets (Kitāb al-Ibrār), Cairo 1914] has published. An apparently very full synopsis which enables us to judge of the extent and arrangement of the book is to be found in 'Abd al-'Arab al-Dammāri Khāshāyf al-Abbās, i. 153—203. The numerous extracts in Ya'qūbī have been collected by W. G. hichte, Kais su d'Arab. Hildebrand, p. 10—60 (cf.
also 243] and translated and annotated, 4. An extract from the *Khit al-Kalb* (Führer, p. 97, a5) is given by Ibn al-'Aqlīn in his commentary on the *Mrūṣaf al-Fūlid*, see C. J. Lütz, Ibn al-'Aqlīn's Account of the First Days of *Kalb* in the Orient, Stud. Th. Vi, Niederlande geworden (1906), l. 127–154.

**KAL‘E-I SEFID** is a fortress in Persia in 36° 10’ N. Lat. and 53° 30’ E. Long. (Greenwich). It is built on a mountain with a flat top, in the eastern part of the valley of Kohreh, which falls steeply down on all sides. On its summit, which can only be reached by cliff-path, lies an extensive wooded plateau watered by numerous springs. A strong garrison is necessary for its defence as it is noted in the *Fārōkhzān*. Descriptions of the fortresses and their military value are given, among Oriental writers for example by Ibn al-Balḵī in the *Fārōkhzān* (the present passage is copied by Muntawwī, *Nāṣr al-Sulṭān, All Vazīr, and Mīrḵᵛānd*; see *Bibliotik*). Of descriptions by European travellers in the sixteenth century, that of Stolze deserves special mention; along with Andrus he explored the mountain and castle thoroughly. The statements of Kinnaer who visited *Kal‘e-i Sefid* in 1610 are unreliable, according to Stolze.

The name of the fortress is given in the Persian geographers and historians as *Kal‘e-i Isfah* (Sehid, Sefid), the "white citadel"; *Kal‘e-i Jāmī* (the "white fortress") is also found. *Kal‘e-i Sefid* is the only form in use at the present day. Translated into Arabic the name is given in Ibn al-Asbati (ed. Tornberg), x. 46 or al-Kal‘a al-Balūṭ. The name "white citadel" which is found elsewhere as a name for a castle in areas where Arabic and Persian are spoken (e.g. in al-Ḥirn, al-Mafid, in the oasis of Ṭabarīa east of Hawūš, and in the region of Kārān in Afghanistan), for Dirghād (ed. al-Ṭahmī, 1723) may very probably date from the dawning white colour of the building-stone used. The name of the Kal‘e-i Gul a Gul, (citadel of the rose and rose-water), borne by Kal‘e-i Sefid in al-Bundart, Towrībākh al-Salṭīnī (ed. Houtouwa, 1. 259, 13) is remarkable.

Kal‘e-i Sefid is the most noteworthy point on the mountain road which leads from Bahšāhān to Shirāz and furnishes communication between Khuzestān and Fars. It may be regarded as certain that a commanding position like this was very early fortified. The *Persian passag* through which Alexander the Great is said to have entered the ancestral home of the Sasanians and which was defended by the Satrap of Persis, •Abūzar, •Abūzrāq and his strong forces: have been found in the valley of Kal‘e-i Sefid, e.g. by Vincrat, •Müller-Droycm, Forbiger, •Ritter (Erzgeb., i. 573) in collecting material concerning this, considers Kal‘e-i Sefid to be the stronghold of the Sasanians and places the *Persian Gates* further east. •Ritter’s view has been attacked particularly by •Müttel in his edition of Curtius (Berlin 1884), p. 141 sp. and by Stolze (op. cit., p. 256 sp.]. That the region of Kal‘e-i Sefid does not correspond to the situation of the "Persian Gates" of the historians of Alexander and that the latter should be located elsewhere has been fairly convincingly proved by Stolze, op. cit.

Kal‘e-i Sefid is not mentioned by the Arab geographers of the middle age. Like the adjoining town of Nawbānam (Nawbānamīlī), it must have been allotted to the Persian province of Shahr in the Caliphate period. From the tenth century onward it was a place of importance in the eastern provinces of Persia, inhabited by Shāhīs and other nomadic tribes. It was called *Chemshur*. There is definite evidence to show that Kal‘e-i Sefid belonged to Shīh Chapar. On the Shīh the land of Shīh Chapar cf. the references in *Quattar*, op. cit., p. 336 sp. and also Mustawwī, *Ta‘rebī al-Gurūs* (ed. Brown, *Geschichte von Persien*, p. 538, 658, 660, 696, 726.

Kal‘e-i Sefid is frequently mentioned by Persian poets and chroniclers. It is first found in Firdaw’si’s *Khānīqān* (ed. Mohī, ii. 22, 225 sp.), here the conquest of the stronghold is related as one of the noteworthy deeds of the hero Rustam. As the *Fārōkhzān* (written about 500–1100) reports the fortress of *Kal‘e-i Sefid* had lain in ruins for many years until it was rebuilt by a certain Abū Nasr from Tirmūz (a district of the province of Shahr) limiting the territories of the last decades of the Ayyubid rule, that is in the first half of the thirteenth century. The mountain, difficult of access, served not infrequently in wartime as a secure hiding-place. For example in 534 (1139) *Bazāb*, Governor of Fars, retired here before Kārā Sonqor, Atībāy of the Salṭān Sulṭān Ma‘ṣūd; cf. the article Bāzāb, l. 320).

The Salṭān Abā Bahā’ Atībāy of Fars from 623 to 654 (1226–1260) (on him see above l. 124) transported his treasures to Kal‘e-i Sefid and placed a garrison in the citadel in order to have a place of refuge here in case of a catastrophe. The last Atībāy of Fars of the Salṭānī dynasty, Salṭānīkhānī, met his death at the foot of Mount Kal‘e-i Sefid in battle with one of Hās‘a’s generals, 663 (1264); see J. v. Hammer, *Gesch. der Islam*, (Tübingen 1892), l. 241 and cf. also Mustawwī, *Ta‘rebī al-Gurūs*, p. 538 (1265).

Although Halāf i issued no order to destroy all the fortresses in the lands conquered by him, an exception was made of *Kal‘e-i Sefid*, as is expressly mentioned; cf. the passage in the *Zafrī al-Wafā in Quattar*, op. cit., p. 382. The citadel could therefore continue to serve as a place of refuge, and was also on several occasions used as a state-prison for political opponents. Thus for example Ma‘ṣūd Shāh, the Imām dynasty, who ruled as governor of Fars from 736 (1335) imprisoned his brother Muhammad in *Kal‘e-i Sefid* (cf. above l. 504); when later Abū Bakr a younger brother of the Ma‘ṣūd Shāh just mentioned, came into conflict with the Mpūlārī, the Malāḥir al-Dīn, *Kal‘e-i Sefid* fell into the capture of his capital Shīhāb, 745 (1339) and went to *Kal‘e-i Sefid* (see Mkhīnī’s account in *Quattar*, op. cit., l. 382; Mustawwī, *Ta‘rebī al-Gurūs*, p. 658, 567, and cf. above l. 504). A few years later the sons of Mḥīnī al-Dīn, Shīh Shāhān and Shīh Shāhān rebelled against their father, blinded him and imprisoned him in *Kal‘e-i Sefid*. 
in 759 (1358); see Mustafawi, *Zarathushtra*, p. 681; Defrémerry in the *Jour., Asiat.*, 1864, II. 113; in 785 (1385) Shihab ud-Din had his son Sulaiman Shihab sent to Kaf-i Sefid as an alleged rebel (see Mustafawi, *op. cit.*, p. 724; Quatremère, *op. cit.*, p. 382; Defrémerry, *op. cit.* (1845), I. 437). Kaf-i Sefid has suffered attention since its capture by Timur. The latter, on his second campaign in Persia in 795 (1393) passed by the road from Behbahān to Shiraz, besieged this barrier fortress, considered impregnable, and stormed it on the third day. All the members of the Maimanae dynasty were captured and put to death (cf. Shams al-Din, *Ali Vahab Efendi*, Bihisht, New Series, No. 6, 616, Calcutta 1889, I. 600 sq.; Mustafawi, *op. cit.*, p. 751).

We read of the capture of Kaf-i Sefid by Huma-Yezd several centuries later, in the reign of Shihab ud-Din 1; see Quatremère, *op. cit.*, p. 384. The Maimanae have now settled in a large part of what was once called Shihabistan; they are a robber Lur-tribe, who belong to the Bakhtiyārī [p. v., I, 603]. They centre round Kaf-i Sefid. On them see Layard in the *Jour. of the R. G. S.*, xv. 281; Ritter, *Kurdistan*, vii. 390, ix. 1371; C. de Bode, *Travels in Kurdistan and Arabistan* (London 1843), p. 391. When the Maimanae in the latter part of the reign of Fath Ali Shihab (1797—1834) were in constant rebellion under a robber chief named Watt Khan Bahāz, a band of Ardavāzidāni troops was sent against them, who besieged Kaf-i Sefid and forced the shahinshah's defenders to yield (cf. Curzon, *op. cit.*, I. 331).

It should further be mentioned that below the fortress on the mountain there was at one time a second smaller castle, the name of which is variously given as Asrak (Pers. nāmis, p. 158, et al. or Nahrak (Mustafawi, *Nafis al-Masālik*, p. 132, et al. Further variants of the name are given here in note 1).

**Bibliography:**—Ibn al-Balḥah (ed. le Strange and Nicholson, Gibb Mem. Series, New Series, vol. I. London 1921), pp. 158 and in addition the travel, by le Strange in the *J. R. A. Faḍl Allāh (Tarikh-i Wāṣīf) and others; Ḥaqq al-Din al-Mālik (ed. le Strange and Nicholson, *Asrak*, i. (Paris 1836) p. 138 et al.; in the latter work Quatremère gives part extracts from Persian histories by Ḥamd Allāh b. Faḍl Allāh (Tarikh-i Wāṣīf) and others; Ḥaqq al-Din al-Mālik (ed. le Strange and Nicholson, *Asrak*, i. (Paris 1836), p. 138 et al.; in the latter work Quatremère gives part extracts from Persian histories by Ḥamd Allāh b. Faḍl Allāh (Tarikh-i Wāṣīf) and others; "Mirza Ḥasan Tahā Tāhirī, Fārīnān-e Nādib (1887); Teherān 1315), p. 333; G. le Strange, *The Land of the Eastern Caliphate* (Cambridge 1893), p. 264, et al.; J. M. Kinneir, *A Merv, Memoir of the Persia Empire* (London 1818), p. 253; Malcolm, *Hist. of Persia* (rev. ed., London 1829), I. 19 note, 205; Ritter, *Kurdistan*, p. 1371; Schöbel in the *Verh., der Gesch. der Erkund. von Berlin*, x. (1883), p. 422 et al.; "N. Curzon, Persia and the Persian Question*, ii. (London 1893), p. 318 sqq.; E. Herzfeld in *Petermann's Geogr. Mittl.* (1897), p. 34 sqq. (with the map on Plate viii.); M. Streeter, *Kal-i Sultāniye*, in popular speech usually Cara Khān Kalāt ("Pot castle"). The town and fortifications known to Europeans as the *Darband*, being the chief place in the *Drug* of Bigha [q. v., I, 716; cf. also Darband, *B. F.*, 1, 922], situated at the narrowest part of the straits. The modern settlement has taken the place of the very ancient sepulchre of *Abydos*; the latter name, indeed, survived down to the 9th century on Italian charts in the form Avdno, as well as the name for Kaf-i Sultāniye (the bay: la baia d'Avino). While the form Amdno [q. v.] found in Yākūn, *Muṣāfara* (ed. Wellhausen), also appears to be the same as *Abydos*, also to be read Abydos, the statement of *Joü* on *Dionysia, Historia Monimentorum*, Frankfurt 1891, p. 353, et al., taken from the *Codex Hildesiensis* (Neuss), that Abydos is called Aydos by the Ottomans can be said to be wrong. There is a confusion with Aids in Koča El and the whole story of the conquest in *Dionysia* refers to this place and not to Abydos. Here from the days of the Roman empire the town was the chief custom-house of Byzantium, by which every vessel entering the straits had to pay a tax (Agathias, v. 182). The customs regulations of Abydos published by A. D. Moodie (in the *Jour. of the R. G. S.*, vi. 188 sqq.) and it was strongly fortified, as it was the key to the capital. In spring of 717 the town was taken along with the coasts of the Hellespont by the *Unayya* general Masmour (Theophanis, *Bulg. ATV.*, Bk. 24, p. 393). In those days there was attached to a tower here the great chain which barred the Muslim ships' entrance to the straits (Ibn Khordadbeh, *Bulg. ATV.*, *J. R. A. S.*, xci. 1915, et al.). The siege and capture by Ťmir Qīṣān are not certain as the crewing of the Durrūle's boats had to be hired to him at this place (cf. I. Hanke, ed. *The New Jahrhöcher für klass. Altert.*, xxx. (1915), 476—504), the statement that in the reign of *Mūsā* about 1355 the straits were closed in small boats at Abydos, is more worthy of belief (Dukas, *Bulg. ATV.*, *J. R. A. S.*, xci. 1915, et al.). The siege and capture by Ťmir Qīṣān are not certain as the crewing of the Durrūle's boats had to be hired to him at this place (cf. I. Hanke, ed. *The New Jahrhöcher für klass. Altert.*, xxx. (1915), 476—504), the statement that in the reign of *Mūsā* about 1355 the straits were closed in small boats at Abydos, is more worthy of belief (Dukas, *Bulg. ATV.*, *J. R. A. S.*, xci. 1915, et al.).
for the "key to Turkey" (Les observations de
françois海绵, Paris 1854: p. 71) &;
there it was also a picture of the Dardanelles tori
following p. 278). It is certain that European fleets
could pass through this strait for nearly the middle
of the xvii century, and that the bastions on both
European and Asiatic sides were in almost
complete ruins. Although about 1850, 32 great
guns still barred the entrance to hostile ships
(cf. Charrière, Negociations, Paris 1848, l. 374
and 380, where "les deux châteaux du Hallæs-
pont somment Dardanoulaux", the "XXXII gros
canon dont une navire ne peut entrer on sortir
malgré eux" as well as the search of a ship are
described), a very short time after, it was no longer
possible to think of any serious resistance being
made by them. It was the vigorous Sultan Mustafa
Kösem, who reigned for a period her minor grandsons
Mehemet IV, who, with the grand vizier Mehmed
Köprüli, devoted special attention to the decaying
Dardanelles forts and decided to renovate and
remodel them completely. The building of Seddi
'Abiha and Süm Kafè, the two so-called "new
castles", was also decided upon at this time (cf.
J. v. Hamann, Gesch. des islam. Kriegers, Pest
1827-1835, v. 516). In 1658 the work was begun
under the supervision of "Akbabát Mehemet Paşi,
commander of the Dardanelles, and under the
direction of the architect Mustafa Igin, and by
Sept. 1659 Sultan Mehemet IV was able to in-
pound at the new works (cf. Neufz, Stamboul 1147,
II, 698 sq.; J. v. Hamann, op. cit., v. 62 sq.)
and dedicate a mosque (Igin, v. 307; according
to him, the name Kalé-i Subhan, which occur at this
time in honour of Kösem Valide, is probably
erly). The appearance of the new citadel is
accurately known from European descriptions of
the time. The fortress proper was surrounded by
a strong wall at each of the four corners of
which rose a fortified tower. In the middle was
the donjon, which had been increased in
height. Nearly 30 guns were placed here in no
regular order, so as not to injure the opposite walls
of Kiliçi 'Abiha when they were fired.
Behind the defences lay the town proper, inhabited
chiefly by Turks and Jews, numbering some 3000
inhabitants about 1660 (cf. Grelot, Relation Nou-
vvelle d'un voyage de Constantinople, Paris 1681,
p. 24, 30, and a picture of the Dardanelles defences
on p. 42); further pictures in Titon du
ternefort, Relation d'un voyage du Levant, Paris
1717, I, 453 sqq.; Amsterdam 1718, I, 373 sqq.).
There were definite rules regulating the passage
of ships. Every merchantman had to announce
its arrival with 3, 5, 7 shots to which 1-5 were
sent in reply. This had to be returned with 3, 5, 7
shots and not till then could the voyage be con-
cluded. All ships coming from Constantinople had
to cast anchor here to be examined and pay tolls
(cf. M. de Thewenot, Relation d'un voyage fait au
Levant, Paris 1665, p. 32 sqq.; Jacob Spen and
George Wheler, Voyage d'Isale, de Dalmatie, de
Grèce et du Levant, dans les années 1715 et 1716,
the Hague 1724, I, 127 sqq.). Not more than five
Christian ships could go through at the same time
(cf. Grelot, op. cit., p. 30). There is no evidence
survived into the xviii century, although there was
considerable laxity in their enforcement (cf. K.
Cattell, Travels in Asia Minor, Oxford 1775, p. 113).
A hundred years later the defences were again
in the most wretched state, vividly described by
Baron Franz von Töth (Tött) (Mémoires du Baron
to Töth, Amsterdam 1784, III, 43 sqq.). In 1770
the Russian fleet was able to sail through the
strait without opposition. Von Töth thereupon
hurriedly repaired the fortifications (cf. Edgar
Pálffy, Édouard Töth front a Dardanellák mege-
hívásán, Budapest 1916), without, however, being
able to prevent their decay. The town seems to have
been in quite a flourishing condition at this time,
according to E. Fosseaux, A Description of
the East (London 1743-1745), ill. 102-104, it was
1½ miles around and had 10,000 inhabitants (300
Greeks, 100 Armenians and 50 Jews), who carried
on a busy trade in silk, milichof and earthenware.
The annual export was put at 15,000 dollars.
A French Consul, as well as a Dutch and
English-digouman had their offices in Kafè-
Subhan. The potters, which seem to have
began about 1740, were for a long time famous
and gave the place the name Çanak Kafès.
The inhabitants lived in different quartiers separ-
ated into nationalities, Armenian who fled from
Sivas.
Tahmüz are said to have been settled here as
early as 1650 (according to Canebur in V. Ciniar,
La Turquie d'Asie, III, 60 sqq.) but a regular
Armenian colony only dates from about 1690. At
the same time there is evidence of a somewhat
large, Jewish settlement, which played a prominent
24; Baron de Tött, op. cit., III, 507). B. Lache-
val, Voyage de la Présidence, Paris an VIII
(=1800), i. 14, according to whom the people
were almost all Jews, who did a brisk business
in provisioning passing ships (cf. threeon Grelot,
op. cit., p. 25). There is no documentary evidence
of the presence of Greeks before 1660 in Kafè-
Subhan. In the xix century the fortress was
practically to insignificance. The bold passage
of the English fleet through the Dardanelles on
Feb. 19, 1807 resulted in the defences being again
repaired (cf. Zincken, Gebr. der univ. Rundz.
VII, 434) but without it being possible to keep
pace with the rapid development of modern
artillery. A very full description of the fortifications
in 1836 is given by Helmut v. Molsing, Briefe
über Kriegs- und Seengebieten in der Türkei
and by Ascheromy Gräunt, Narrative of a Jour-
ny to Greece in 1830, p. 431 (with sketches).
Kalé-i Subhan and its forls only became of
considerable strategic importance again during the
Great War, when as a result of an indirect bomb-
arding from the Gulf of Sáros by the Anglo-
French fleets the town, which had been almost
destroyed by its inhabitants, suffered severe dam-
age in March 1915, and was burned down.
It had previously suffered from frequent fires,
especially from the great earthquake of Aug. 9,
1912. About 1895 the town had about 12,000
inhabitants, 11 larger and several smaller mosques
and 4 churches, but the town must be
much smaller.

KALSHA — al-KALI

KALSHA, the title of the heir-apparent among the Tatars of the Crimea from the time of Manghi Giray (lts rule 883—921 = 1478—1555). The origin of the title is unknown; in manuscripts the same word is also written KALSHA, which has caused W. Smirnow (Kremenches' chasme pod vsekhvostovom Otsmevskogo Pered de pokusa XVII nacha, St. Petersburg 1887, p. 350 sq.) to suggest that we have here to deal with a non-Turkish (probably a Mongo) word. We have, perhaps, to connect with KALSHA the Central Asian word KALSHA, which is frequently given to a member of the Bakhtr family, as residence of the heir-apparent beside Bakhtr, the royal residence of the Khans of the Ozbegs, this word also is sometimes written KALSHA (no doubt for KALSHA: al. J. Senkowsky, Sprechung à l'histoire générale des Huns etc., St. Petersburg 1824, p. 74 sq.). When, under Muhammad Giray II (985—992 = 1577—84), Alp Giray, brother of the Khan, was designated KALSHA, the rank of second heir-apparent (qalsha tarten) was created for the Khan’s son, prince Sabat Giray, and retained in later reigns. The name NUR al-Din of this prince’s tutor (KALSHA) was transferred to the prince himself and to his son (NUR al-Din). S. S. R. Asaad, ‘Aṣba’da’i. J. S. 1854, p. 107, more fully in the abbreviated recension by Harunul Celbi, which only exists in manuscript, on the manuscript see also S. Samsoewsky in the Jev. Tsvitnoi, mendy arch. kom., N°. 49; cf. O. Rotowski, Die Minbar der Gires, Moskow 1905, p. 93 = Traag, Makmut, Ourfi, ill., 32), henceforth the NUR al-Din along with the KALSHA is found not only among the members of the ruling house but also among the members of the most important families like the Shrin and Manski (cf. Radloff, Wochertheil, ii. 255, where both family names are erroneously taken as adjectives).

W. BAKHOUD

KALHAT (in Marco Polo Calatii, in Portuguese writers CALATAS), a once flourishing port in ‘Oman lying northwest of Ras el-Hadd. Ibn Battuta, who visited the town during his travels in ‘Oman, specially mentions the fine streets and splendid joly mosques, which afforded a wide view of the sea and the harbour and was built by the pious but (of noble family) Maryan. The inhabitants of the town, who lived by trading in Indian products, and spoke a bad Arabic, were members of the Bidaya sect (see EXQUIA), but continued their creed from their fathers, the kings of Hormuz [q.v.] (cf. also Ibn al-Athir, al-Kamil, ed. Tornberg, xii. 168 below), who were Sunni. According to Yaghz, who calls Kalhah the most beautiful district of the Arabian princes and a principal residence in the 14th century, the successors of this town openly praised their faith. The Portuguese broke the power of the kings of Hormuz in the beginning of the 16th century.

J. SCHMIER

AL-KALI, also AL-‘IMSHI, B. al-KHAS, B. Asy‘un bin Hazan, T. bin Muhammad, a great Arab philologist, born in Djemhaid II, 288 = May—June, 904 (according to others in 820), at Mankani, a little town in Arouja which was then a dependency of Byzantium, and died in Cordova on December 17, 286 = April 19—20, 957 (according to others Rabt II, Djemhaid II, 356, and also 366 according to Ibn ‘Idriss).

In 303 having gone to Bagdad in company with some people of the town of Kalhah, he was confused with them and in consequence was summoned al-Kali. However, he is usually called in the East Abi ‘Ali al-Haghdar. After studying Islamic tradition and particularly Arabic language and literature, al-Kali, at the end of his recollections, left Bagdad in 288 (939/40) and went to Spain where he did not arrive until 352 = 941, in the reign of the Aghlabids in Naskar. The son of this prince Abu 1-Jassar al-Hajjari who was fond of learning and of scholars received him very kindly, and, indeed, it is said that even he had written to the East to get al-Kali to come to the West. Abi ‘Ali arrived in Cordova on Sheba’ad 26, 350 (May 16, 942), where he began to teach tradition and especially the Arabic language and literature. As teachers he had Abu Allah b. Muhammad al-Ragawi, Abu Ali b. Sulaiman b. al-Ash’ali al-Nafisi, Ibn Duraid, Ibn an-Suriidi, al-Zaljaddi, al-Ash’ali al-Saghi, Ni‘mawali, Abu Bakr b. an-Asbaki, Ibn Falah, Ibn Duratwalla, etc. Among his pupils we may especially mention the grammarian and lexicographer Abu Bakr Muhammad b. al-Hussan al-Zaljaddi.

Among his works we now only possess: 1. Kit. al-Anighi = Eb’ilat an-Nawvah, a kind of anthology containing a large number of notes on proverbs, language and poetry, publ. at Bukhara 1334; index of poets and rhymms have been published by F. Kreuck and A. Beyer in Lepen 1913; 2. Kit. al-Nomakht, part 1, Cambridge, Univ. Libr., E. G. Brown’s, A. Mandelstam’s, Ab. Muhammad’s Manuscripts, N°. 936; 3. Kit. al-Iṣṣall fi Ḥikmat al-Hukum, remains unfinished, Paris, Bibl. Nat., N°. 4235.

The name for tin, or for a specially good quality of tin, among the Arabs, occasionally also called al-rujuh and al-rasut al-anajin, i.e., "kalisi" or "white lead"; see Litt., lit. 2, 157, xx.; Dozy, Supplement aux Dict. arab., ii. 397; Vullers, Lex. Pers.-Latt., ii. 733; Quatremère in the Journ. des SAVANTS 1846, p. 731. For other names of tin in Arabic (Kasdi = Kassiterum, etc.) see G. al-Dimashki, Nuzhat al-Dahr (Cosenzography, ed. Mehbure), p. 125, a demand (the original would be Persian kalili). The correction kalisi for kalisi, there proposed is based on Ibn Sa'id, quoted in G. Ferrand, Relations de voyages et Textes géographiques relatifs à l'Estreume-Orient (Paris 1913-1914), p. 345. The word kalisi (in Bhilam: kalisi) found in the modern Persian dialect of Mashhad—see Melgau in the Zeitschr. d. Deutsch. Mencken. Gesellsch. xxii. 198—must have come through the Arabic; but the latter entered the Indonesian languages (kalisi, calisi = Indian tin); see Dozy and Engelmann. The word must obviously have portuguese deriv. de F. Arabe (Leiden 1869), p. 245; Yule and Burnell, Hokom-Hokak (London 1863), p. 143. The cursive of the word kalisi could be the word in kalili in the period of Makkah, which was celebrated as its tin-mines (see Kalisi above). The Arabic geographers and lexicographers usually derive the name kalisi from al-kali-in India (= kali, q.v.); so, for example, Vârhi, Mu'attal ed. Wustensis, iv. 162, s.; al-Firuzabadi, al-Kali (Cairo 1301), iii. 71, s.; cf. also Hâmid Allah Maktawal, Nuzhat al-Kalisi (ed. M. Strange, Göth. Men., Ser., xxii.), p. 203, s. At the same time the word kalisi is usually erroneously—also connected with an (alleged) tin-mining area al-Kali in Ceylon (Vârhi, loc. cit., ib. 149, s.), in Spain (Vârhi, iv. 162, 27), Hâmid Allah Maktawal, p. 203, s.); and in Yemen (Vârhi, ed. 162, s., al-Firuzabadi, s., cf. al.).

The usual word for tin in Malay at the present day seems to be timah. At the same time we find with this meaning also halong, halong—not halang, as written by Langles, Quatremère, Dozy-Engelmann, Yule-Barnell and others—which, according to the dictionaries, means primarily tin-plate, or tinned iron-plate (but nevertheless is the meaning tin or another one?); cf. Wilkinson, M. Malay-Engl. Diction. (Singapore 1901), p. 407; Wilkinson, An abridged Malay-Engl. Diction. (Singapore 1919) and Klinkert, Nieuw Maleisië-Nederlandsch Woordenboek (Leiden 1916). It is obvious that the Arabic kalisi is to be traced back not to kalisi (Kalisi) but to this Malay word. Quatremère, cf., definitely puts forward such some derivation of kalisi, whereas Dozy-Engelmann, cf. cit., and Yule-Barnell, cf., leave the question undecided. Is the similarity of name simply an accident? It is hardly possible that the Malay kalisi itself is only a corruption of the Arabic kalisi. The further possibility has also been considered that the name of the district of Kalasi—from the Malay Kalasi—may mean simply *land of tin*, a view express as long ago as Laugier in his edition of the voyages of Sinbad, the Sailor in Savary's Geographie, in the <i>Langue arabe</i> (Paris 1833), p. 499; reprint (Paris 1874), p. 65. Yule and Burnell quote as an analogy the Arab name of the little state of Selegoris (north of the town of Malaya), which was formerly known as Nargi Kalasi = *land of tin*. To this we may add, quoting Wilkinson, Malay-English Diction. p. 526, that Kiling, Klang, properly only a name of a district in Selangor and of a little township in this district, is also often extended to include the whole state of Selangor. Perhaps the origin of kalisi is to be sought in this Kiling.

The name of a particular kind of sword, which is often mentioned, especially in the old Arabic poetry, Cf., for example, Awz. Haflar (ed. Ceyser, Sitz.-Ber, d. K. Akad. der Wiss. zu Berlin, phil.-hist. Kl., 1892), p. 331; Rucho b. al-fath ala'ib (ed. Alhazwi, Samatkhana) under sword, Dirchott, iii. 357; 49, cf. schollin, to Tartar, Maw'ulaha (in the lost Tartar Sepuhlava, Leipzig 1850, p. 61). On Thalib., Lut., 1. 102, 130, 4 (quoted in Dozy, Supplement, and dictionary, arab., iii. 3065) see Fleischer in the Sitz.-Ber, d. Sächs. Gesellsch. d. Wissenschaften, 1880, p. 45. Cf. also Ibn Sa'id, al-Tahfizh, l. 56. This kind of sword is usually said to be of Indian origin (cf., for example, al-Firuzabadi, Maw'ulaha under s.,) and, indeed, Indian swords were from early times famous among the Arabs and celebrated by the poets; so this cf. Schwartz, Die Waffen der alten Araber (Leipzig 1886), p. 187, n. 7, and A. Sidoli, Studien über die persischen und indischen Waffen (Berlin 1897), p. 88, sq. As a more definite place of origin we usually find the Arab geography and lexicography giving that al-Kali's from which the tin of this name comes. Occasionally also the Sruo-Abraham desert (the Hadiyah) or the district of Hulwa in the 'Iraq is given as the place of origin, cf. Litt. and al-Firuzabadi, Maw'ulaha under s., The Yemen, which produced the finest swords next to India, is sometimes also described as the place of origin of the koli's sword, for example in the above quoted gloss to Taraka's Maw'ulaha. Jacob, Altertumliches Bedeutungbuch (Berlin 1857), p. 449, would like to decide in favour of Yemen, in particular the *fortress* (koli's) of Aden, in support of which could be quoted the fact that in a poem by Alkama (ed. Sotchi, Ns. 38), there is mention of *pearls from Kalasi*.

Nevertheless, the derivation of the Arabic word from an East-Arabic place al-Kali (Kalasi) on Malaya, see Kalisi above, seems more probable. It is unnecessary to distinguish between the two different kinds of sword, koli and kalisi (see Freytag, Lex. Arab.-Laz., 2, 6, 6, and kalisi), as in spite of Schwanzler, cf., etc., p. 130.

(Stebbings)

**KALI KALA.** [See Khazins.]

**KALILA WA-DIMNA** is the title of an Indian mirror for princes, formed by the corruption of the Sanskrit names of the two principal characters, two jackals, Karazjaka and Damujska (in the old Syrian translation the forms are still Kaliing and Damuug); it was translated from Sanskrit into Pahlavi and thence into Arabic.
and became widely known in Muslim as well as Christian literatures.

2. The original work. The Indian original was written by an unknown Vighnaka Bhuha, according to Hertel probably about the year 300 A.D. in Kachchh; the main argument for this is the reproduction of a stanza by Aśvāmitta, however, not cogent, as the pronunciation of the s as š is older than Hertel supposes (see also A. Herrad von Hertel in the "Jahrb." 1907, p. 255). It consisted of an introduction and five books each of which bore the namerama i.e. "koe of good sense". The book was intended to instruct princes in the laws of polity by means of animal-fables composed in perfect Sanskrit. The oldest text of the original work is the Tantrālīdā, rediscovered by J. Hertel (see Tantrālīdā, die älteste Formung des Pahālavas, transl. from the Sanskrit with introd. and notes by J. Hertel, 2 parts, Leipzig and Berlin 1909). A second recension of the original work is called the Pahālavas (see J. Hertel, Pahālavas, etc. in Harvard Oriental Series, Vol. 11-14); it is known in two recensions in manuscripts. J. G. J. Lasser published an uncorrected mixed text, Rome 1845; on this Th. Bonfey based his translation, Pahālavas, fünf Bücher indischer Fabeln, Märchen und Erzählungen, transl. from the Sanskrit with introd. and notes, 2 parts, Leipzig 1858. In the introduction to this work the history of the migration of Indian literary subjects to Europe was first exhaustively investigated.

3. The Pahlavi translation. A rather early recension of the Pahālavas was translated from Sanskrit into Pahlavi by order of the Sassanian king Khosrow Anbāharvān (532-579) by his physician Burādo, whom he had sent to India for this purpose, and expanded by the addition of an appendix of fables from other Indian sources; of these the three first (chap. 1-13, in de Sacy) are taken from the twelfth book of the Maniš-daṭr, the other five (de Sacy's chap. 14-17) are the story of the king of the nine, see below. This work has not been found again in Indian literature, although there is no reason to doubt their Indian origin. Burādo prefixed his translation with an autobiographical introduction which the later Bundesther authors state to have sent after him; it begins: "I am a Persian, born in the University of Cambridge; a copy in my possession also; from this it has passed into the many recent editions printed at Cairo, Moṣul and Beirūt, the last of which in Chavanis, p. 15 194, according to Cheikho (see below), p. 6, is not yet complete. Valuable contributions to the composition of de Sacy's text from Italian manuscripts are given by A. Guidi, Studi sul testo arabo delLibro di Callea e Dimna, Rome 1825. The story of the king of the Nine and his ministers, not given in de Sacy, which is shown by the Syriac text to belong to the Pahlavi work, was published by Noldeke in text and translation in the Arbeiten des Instituts für Völkerkunde, der Königl. Gesellschaft der Wissenschaften zu Göttingen, 1874, xxxii. N. 4. The manuscript material from 16 Paris manuscripts for the story of the seer and the broken jug was given by Zöpel in the Journ. Asiat., Sec. 1, vii. (1869) p. 177-173.

While the numerous printed editions of the text in the main reproduce de Sacy's text, A. N. Tabbana (Kahila e Dimna, trad. arabe, édité d'après un ancien manuscrir trouvé à Damas, avec notes, Beyrouth 1822-1824) claimed to have discovered a new source for textual criticism; but his manuscript (of 1680 = 1673) is too modern to afford new material and his edition is, besides, bowdledized. On the other hand L. Cheikho found...
in the Lebanon monastery of Deir al-Shibl a valuable manuscript of the year 749 = 1335, and made it accessible in an excellent edition: *Le texte arabe de Kalilah et Dimnah d'après le plus ancien manuscrit arabe auil*, Beyrouth 1905. I have not seen the new edition by Khalil al-Yusufi (ibid. 1908); that of Salim Ibrahim Sallal and Shihab Ayya (ibid. 1910) is intended for school use. The modern European translations from de Saucy's text are given by Habet, *sp., etc.*, p. 393: to this may now be added M. Moreau, *La version arabe de Kalilah et Dimnah*, transl. into Italian, San Remo 1910 (see *Riv. d. Studi Orientali*, vi. 201). 5. Arabic translations. The translation by Ibn al-Muqaffa' has been three times put into Arabic verse. The first version was made by his younger contemporary Alān al-Lakhī (q. v.; see also A. K. Rasmussen, *The Arabic of the Middle Ages* vol. I, p. 157), to date from the 10th century, and kept the essence of the original sufficiently close to it. 6. The later Syriac translation. In the translation of the 11th century a Syriac clerk translated the *Kalila* from Ibn al-Muqaffa's text again into the then almost dead language of his church; he endeavoured to give the book a Christian tinge and therefore amplified the *Kalila* of the Indian original, already much distorted in the Fahlavi translation, into long and windy moral discourses. He also made a series of mistakes in the translation. But as the text he used was much nearer the original than the most of our manuscripts, this translation is, in spite of its defects, of considerable value for textual criticism; it is edited by W. Wright, *The Book of Kalilah and Dimnah*, transl. from Arabic into Syriac, London 1884. In contrast to the naturalization of the original, Keith-Falconer, the English translator of this version (Cambridge 1885) is even more philistine than the Syriac text; on text and translation see Nöldeke in *Der Göttinger Gelehrte Anzeig.* 1884, p. 673 app.; 1885, p. 173 app.

7. Persian prose and verse translations. According to Firdawsi in the *Shahnameh* (see de Saucy *et al.*, Ex., xiv. 1818, l. 1949 sqq.), Ibn al-Muqaffa's *Kalila* was translated into Persian under the Samanids by Abul Abad (q. v. 943) by order of the vizir Bal'ami (q. v.); but it appears that this translation was never completed. By order of the ruler Baghrach (d. 907) put the book into Persian verse of which, however, only 16 verses have survived in quotations in *Ahd al-Lūhāni Faris*, id. Horn, p. 18 sqq.

Ibn al-Muqaffa's work was translated into Persian prose probably after the year 539 = 1444 (see Rieu, *Cat. of the Pers. MSS. in the Brit. Mus.*, p. 745 sqq.) by Nāṣir al-Dīn Abū 'l-Muḥīt Nāṣir Allāh b. Muḥammad b. 'Abd al-Hamid, who dedicated his work to Bahrām Bābā of Ghūzī (q. v., 1, 586). Nāṣir Allāh in a new preface announces his intention of reproducing the work completely, including the saptāris which seem to him particularly valuable, with all the rhetorical ornament of artificial prose; he only gave Burāq's introduction in ordinary prose, as an artificial style does not suit its matter. The work was lithographed in Tiflis in 1283 (= 1866); this edition is disflinen of Chavīn's doubts, p. 105; 1304; 1305. Cf. de Saucy in *Nat. et Extr. X*, l. 186 sqq., *E. G. Browne*, *A History of Persian Literature under Tézer Deymurdah* (Cambridge 1920), p. 111.

A more literal version of the book was given by Ahmad b. Maḥmūd al-Ṭabī'ī, a contemporary of Ḥāfiz al-Dīn Rūmī at Konya, who translated the Mongols from his native city of Tūz, for Sultan 'Abū al-Dīn Kalīmā (643 = 1245-1246), probably based on Nāṣir Allāh's translation, which, however, he nowhere mentions; see Rieu, *Cat. of the Pers. MSS. in the Brit. Mus.*, p. 283 sqq.; *E. G. Browne*, *A History of Persian Literature under Tézer Deymurdah* (Cambridge 1920), p. 111.

This work was, however, put in the shade completely by the revision of Nāṣir Allāh's translation done by Ḥusain Wiebke in *Kalīla* (q. v. 1904, 1905, see *Kakhāri*, the court-preacher of Ḥusain Bakarā of Herāt (q. v. *μυθία*), in honour of Ḥusain's minister Ahmad Sahābī. He published his work *Awād al-Qahhār* in the year 1234 and in reality he created an even more fluid and various concoction, "full of absurd exaggerations, romantic words, vein epithets, cast fancy comparisons and tawdry bombast and represents to perfection the worst style of those florid writers who flourished under the patronage of the Timurids" (E. G. Browne, *Lit. Hist. of Persia*, l. 154, cf. *Cat. of the Pers. MSS. in the Brit. Mus.*, p. 503 sqq.). But as this style remained predominant in Persia and particularly in India down to the threshold of the modern period, the work had an unparalleled success and was printed in England (first complete edition London, 1885), where it was used as a text book for the examination of English officials in India in 1882 and repeated in printed and lithographed in India and Persia; transcribed into several Indian dialects, into Pashto, Georgian and all the principal languages of Europe (see *Cazamian*, p. 20-41). Ḥusain replaced the four prefaces at the vogue of Ibn al-Muqaffa' by a new introduction from a sort of unidentified source: de Saucy supposes (Nat., *Nat. et Extr. X*, l. 99) that it is we have the older *Līhāja al-Sirāj;* which al-Targhibī was still able to use for his *Sawād al-Muḥīt* (Berlin 1879), p. 97, 159, 185, 299 sqq. The Emperors of China Hung-yu-chi is persuaded to give up the idea of adorning his throne by his vizier, who
tells him how the Indian king Dabhaham was directed by a dream to a cave in which an old man would give him a treasure. Of the latter Dabhahm keeps only the testament of Hazgahg, king of Persia, which contains 14 pieces of advice for rulers, and with these he goes to Ceylon where the Brahman Bidpal or Bipal explains each of these precepts to Daghahm, which form the separate chapters of the book.

Dislike of the extravagant and luxurious style of the Arwâr-Hasbal oil, the Emperor Akbar (1556-1605) in commission his vizier Abu 'l-Faţî to prepare a new edition of the work. This bears the title 'Fātīr Daghahm' and was completed in 996 (1587). It retains the arrangement of its model: but restores Ibn al-Muqaffâ's prologue and Burzâne's introduction. The work itself is not yet printed, but a Hindustani translation by Hâfiz-ud-din, entitled Khâhirat Afsân, was published by Th. Reechuck (Calcutta 1815) and by Eastwick (Hertford 1857, London 1887) on account of its elegant dictions.

Naṣr Allah's edition was translated into old Ottoman Turkish (not into Eastern Turkic, as Hertel, p. 407 says, relying on a somewhat misleading expression of Ethö's, op. cit.) by Mustâfâ fur Umâr, prince of Alâdîn (d. 750 = 1349) (see MS. in the Boldeinc, Marsh, 185). This prose text was put into verse by an unknown author who dedicated his work to Sultan Murad I (781-792 = 1380-1389) only about half of it having survived in a Gothic manuscript (see Persisch, Vers. der slav. Hamburg, in Harr. Bibl., p. 168, No. 99 (89). A modern Ottoman prose version, which must have been made before 955 (1548), exists in the Boldeinc MS. in Marsh, 61; cf. H. Ethö, On some silbatai unknown Turkish Versions of Kullâh und Dinshah in the Actes de l'6 Congr. internat. des Orientalistes, 2nd sect., l. 241 sqq.

'Allî b. Sulîb, called 'Ali Warî or 'Ali Celebi, translated the Arwâr-Hasbal into Ottoman rhymed prose and dedicated his work to Sultan Sulaiman I (1522-1566) with the title Hamzâyân-nâma; it has been several times printed in Bâlîcak and Istanbul. (see Chavon, p. 59). Among the different European translations of the Hamzâyân-nâma, the best known is the French of Galrand, published posthumously by Guicciardini (Paris 1724); it was translated by Gougelino into Malay (Batavia 1666) and the latter version inspired a Japanese translation by Kramaprawin, which was put into Japanese verse by an anonymous poet. The luxuriance of its language, in which the Hamzâyân-nâma surpassed even its Persian original, induced the Mustâfî Yahyâ Efendi of 'Urfânsâde, who died in 1739 (1728) as Kâti in Cairo, to prepare extracts from it (see Ethö, op. cit., p. 243).

The Arwâr-Hasbal was translated, apparently with the assistance of the Hamzâyân-nâma by Pâsî Allah b. 'Izz Taqîsmil at the instigation of Muhammad Musa b. Râhîl into modern Eastern Turkic prose (to be more accurate into the language of Taqîsmil and Farghaha as the oldophum, or the language of Turkestân and Farghaha as the title states); the latter then had the book lithographed by the calligrapher Mîrâbî Hâjjî Khodâbâd, according to the colophon in 1266 (1859), according to the title, the book was published in 1857. This al-Muqaffâ's book was translated from the Arabic into Kazan Turk by 'Abîl 'Allîn Faiz Khâna (d. 1881) and printed at Kazan 1889 (University Press, Orient. Bibliothek, Ill. 1421), in the same year at Wiesachâlon (ibid., iii. No. 3955) and in 1892 at Cirkova (ibid., vi. 167, No. 3166).

The introduction, however, was, according to a communication from Prof. Hommel, borrowed from the Arwâr-Hasbal.

9. The Mongol translation. The Mongol translation which Malik Iltikâr al-Dîn Muhammad b. 'Allî Nâgî, a descendant of Muhammad Bakht, prepared in Kazan has not survived (see Mauâl Allah Mustawti, Turâtîl-Insâna, ed. Brown, Gibb Mem. xxv, p. 346), but in 1853 Brown, A Hist. of Persian Literature under Tatar Dominions, p. 93, and correctly stated as early as Hammer-Purgstall in the Journ. Asiat., 30th Ser., i. 580). This statement is confused in Jalâlî Khatâbî, v. 239, who ascribes a translation into Turkish (Fârîrî al-Turk) to the ancestor Muhammad Bakht (see de Sacy, Nat. et Expl. x, 1755 Etho, op. cit., p. 243, who does not take notice of von Hammer's correct statement). An Fâlîgî wrongly translates in Turqumân Turfvâran, Hertel (p. 474) wrongly identifies this reported Tatar translation with the above mentioned Kazan Turk (so-called Fatar) translation quoted in Chavon, p. 78, note.

10. The Ethiopian translation. An Ethiopic version, which was certainly based on a text, independent from Egypt, of the Arabic of Ibn al-Muqaffâ', is also lost; it is mentioned in a work composed in 1582 (see Weisgärt, Cat. of the Ethiopia, MSS. in the Brit. Mus., p. 629) (see Noldaace, Geit., Gebir. Kariyâb, 1884, p. 626, note 5).

11. The Hebrew and other European translations. At the beginning of the twelfth century a certain Rabbi Joseph translated Ibn al-Muqaffâ's work into Hebrew from a valuable manuscript which, however, already contained the false story of Burzâne's mission and the two not genuine fables at the end of the book and the duck and the fox, dove and heron. From the unique manuscript, exceedingly corrupt in the beginning, J. Dernbourg published this translation along with that of Jacob b. Eleazar of the twelfth century (Doux versions italiennes du Livre de Kâthîb et Dinîah in the Bibl. et d'École des Hautes Études, fasc. 49, Paris 1831) Jacob's version while based on a similar text to that of Joseph, however, very freely composed in elegant rhymed prose and full of Biblical quotations. The version of the Rabbi Joseph was then translated into Latin by the baptized Jews of Capua for Cardinal Urbinas between 1225 and 1228 with the title Discursus vitae humanae (cf. Johannes de Capua, Dierocratia vitae humanae, publ. and annot. by J. Dernbourg in the Bibl. et d'École des Hautes Études, fasc. 72, Paris 1887; a new and improved edition on manuscripts which he has hitherto discovered is to be expected from Hilke. With the exception of an old Spanish version, which reproduces the same text as Rabbi Joseph much more thoughtfully than John of Capua does (see Clifford G. Allen, The-
The Greek translation. Towards the end of the 6th century, Symeon, son of Seth translated the Maqama work fairly freely into Greek from a manuscript which was still free from later additions but contained the chapter on the king of the mice and his minstrel. He called his book Ἐρασμίων καὶ Ἱερώνυμος, because he recognized in Kalila the Arabic Ikhtilāf, in which the words ἑρασμίων καὶ Ἱερώνυμος were used. See Συμεών τοῦ Παλαιολόγου, vol. 4.

The Persian translation of the Hitāpūdāna. The later Sanskrit version of the Pulastyaśastra, the Hitāpūdāna, was translated very freely into Persian, probably in the reign of Akbar, by a certain Šah-al-Mīr, under the title Maqāma-e Khāji (see de Beude, L'interprétation arabe du livre indien intitulé Hitāpūdāna par Tadhull, en persan de la Bibliothèque du Bach, vol. 3, p. 76). This Persian version was also translated into Arabic (MS. Berlin, see A. Waraemia, Pers. 382, 1494), and it was translated into Arabic (MS. Berlin, see A. Waraemia, Pers. 382, 1494), and it was translated into Arabic (MS. Berlin, see A. Waraemia, Pers. 382, 1494), and it was translated into Arabic (MS. Berlin, see A. Waraemia, Pers. 382, 1494). A second Arabic translation, which, according to the Gacca MS. (see Pernet, Les Arab. Hist. de l'Inde, vol. 2, p. 260), is also based on the Turkish, was made by Ibn Arabshah (1400). It was published in Paris (de Stang, et al., vol. 3, 3224), and it was lithographed in Cairo in 1778. The same author then rewrote his work in Arabic prose in his Bakht al-Khaki daw-Muṣḥabbat al-Darāsah, and added several new stories.

The older Malay translation. A mixture of the Muṣḥabbah and a Tamil text of the Pulastyaśastra is found in the Malay version Hitāyos Kalīla daw Dīmānah, which was first published in 1626 by A. Waraemia, Ita-Hār. and Berdan in the Zeitschr. f. Deutsch., 35, 1884, and 1885. This work was next translated into Indonesian, (Indonesische Maqāma, 1878) and Madurese (ibid. 1879).

The invocations of Kalīla wa-Dīmānah. Setting aside the classical in the 13th century, the Maqāma work has been translated into Turkish by Kāmil Khatiflī (d. 1166-1754), who followed up his translation with the Kalīla wa-Dīmānah, with the exception of the 17th century. The work was translated into Turkish by Imaqāma, son of Mārūn al-Maṣūfī (d. 12th century), and it was translated into Turkish by Mīrzā Ṣafar al-Khānī (17th century). See Polatānī, vol. iv.

Kālim, a Persian poet of India in the 12th century. His real name was Miṣrī Mīzān Kalīla of Hamdānī. He lived for a long time in Kālim, so that he is also known as the Kālim Khānī, as well as Hamdānī. In the beginning of the reign of Dabādī (354-1064) in the daw-Muṣḥabbat al-Darāsah, he came to India to his court. A considerable number of books, including several poems in verse were given to him during his stay in the daw-Muṣḥabbat al-Darāsah, from which he returned in 1638 (1619) to India and lived there ever after as court poet of the Moghul Emperors.

The title of the work is given in several hands: Sūkhānī, 9th century, Sūkhānī and Muṣḥabbat al-Darāsah, he was given the title of honour Maqāma al-Shā'ir.
He died in Kushtam in 1082 (1672); the date 1061 (1651) is less authoritative. His Diwan contains the usual kinds of poetry, especially qasidas and muhabbatas, of a passionate character. Manuscripts of the Diwan are frequent—a lithographed edition appeared at Lucknow in 1870—but his 8333 poems have not been reprinted since his own edition. He is estimated to have left 24,000 verses.

Handschriften in Berlin, p. 930; Schuchardt, Ethete, Cat. of the Persian Mus. in the Bodleian Library, p. 625-64; and especially Ethete, Cat. of Persian Mus. in the Library of the India Office, p. 954 sqq., where the references in the Tadjjudi to K. are given.

(H. R. Schneider)

**KALIM ALLAH**. Kalim is one who speaks to you, the equation *fatah* = *awliya* (e.g. al-Baidawi, ed., Filsulg, p. 445, N. 353, 18, 594, 71); so, in the Liwan (xx. 428 infra) which adds that the Tahdibi (of al-Abrar) allows it to mean also one to whom you speak. In consequence, Kalim Allah has become the special honorific title of Mujahid. He who spoke to Allah! or, following the Tahdibi, He whom Allah spoke to, because of several passages in the Koran describing direct speech between Allah and Mujahid—especially Kor. iv. 63, wa-khalilun Allahu Awwa ta'widhit, where the addition of the indicative is said to show that direct and indirect speech is meant and not a metaphor (Liwan, xx. 428, N. 27, 18, al-Baidawi, al-Biada, ed., Haidarabadi, 1324, p. 27 infra). In these passages the emphasis is always on Allah's speaking to Mujahid, and this may be the cause of the extension of meaning of kalam in the Tahdibi. Further, the third stem of *fatah* does not occur in the received text of the Koran, but in Kor. ii. 254, there is a variant reading, kalam illa kalam Allah (al-Baidawi, i. 139, 3) and this variant reading is given by al-Baidawi as the source of the honorific title, kalam = *awliya*. Yet in this passage there is no mention of Mujahid. Cf. also, the epithet with similar meaning, *mujiya*, applied to Mujahid in Kor. xxx. 33, where al-Baidawi (l. 453, 14) equates *mujiya* with *mujiya*.

**Bibliography**: See under KALIM, Add. 

Gottlieb, Die Richtungen der islamischen Koranwissenschaft, p. 564; and on variants in the Koran text, pp. 1-54. Dozy, Supplementum, ii. 2866.

(D. R. Macdonald)

**KALIMA**. For the primary meaning see under KALIM. Each utterance of Allah is a kalaima, whether it is the single creative word, *taw*, "come into being!" or a longer expression, thus it is a synonym of din (Dozy, Supplementum, ii. 2866); kalam means *sabda* in the first of the two articles of the Muslim creed (al-Baidawi, ed., Filsulg, ii. 27, N. 27, 18, and "two words" in The Root of Things, ed., N. 454, 18, 1591; in the lexicon, p. 472, it is said kalaima means the two articles). In the sense the kalaima of a poet can mean a whole poem by him (Liwan, xx. 428 infra; al-Baidawi, i. 154, 17, on Kor. iii. 34) and it is a question whether Taw is called a kalaima from Allah (Kor. iii. 34, 40) because he is an expression of the kalaima of Allah, or because he was produced by the single creative word *taw*, and is thus a primary creation like Adam (al-Baidawi, sec. cit.; Liwan, xx. 428 infra). From the doctrine of Allah's kalaima it follows that his kalaima must be verbally infallible (KALMA). Not all contingent existences (al-mu'mimikha) have been produced by kalaimat of Allah, i.e. the creative commands *taw*; therefore the Speech of the Reality (al-kalâm) is the self of the identities of the contingent existences, or the contingent existences themselves (sufa al-kalâm as mu'minnat, Dist. of Tech. Terms, p. 2371, infra). The half-page which follows the last reference shows how this is the bridge from the orthodox doctrine of Allah's Speech to the Neoplatonic Chain and all its descendants.

**Bibliography**: Has been given above. See further on *ACR AL-KALMA* (l. 61 1973); *Alqahali AL-KEMIL* (l. 510 1973).

**AL-KALKASHANDI**, sima from Kalakashan to near Kalyub.

1. SHEIKH AL-DIN ABU T-AMAR AHMAD b. "ALLAH, b. "ABD AL-ALI (in MSS. often briefly called AHMAD b. "ABD AL-ALI) b. AHMAD AS-SAQIQI, died on Qumodus ii. 5, 671 (July 16, 1418), wrote besides a number of smaller works a guide to the artistic composition of essays and reports, especially for the use of Egyptian government officials; just as Ibn Kattaubah in his *Kulayl al-Ashâb* and the supplements to that work wished to afford the secretary-clerks an encyclopedia survey of the most important aspects of knowledge of the time. So al-Kalkashandi's work, composed after 710 (1377), entitled Sahih al-Asâb fi Talkhis al-Matbû'a, presents in a much more comprehensive and systematic form practically the whole knowledge of his time and contains information of the utmost value, especially regarding the history and geography of Egypt and Syria. It has been printed as a publication of the Dar al-Kutub al-Mahfuziya (al-Sulaymâniya) (Cairo 1331-2 = 8 [1913-4], 14 yols). Cf. F. Winterfeldt, Die Geographie und Verwaltung von Ägypten von der Ära des Abu 'l-Abbas al-Calâshandî in die Abc. d. Kyr. Geschichte, d. Wiss. am Gottingen, phil.-hist. Cl., XXV (1879) 190, v. Timun al-Libi in the Zephyrus, Ori. Juris. Musul., Archiv, i. 208; id., Geschichte der Golonen Insider, 1. 295; H. Sauvage, Carnets de l'envoyé du K. des Staatlerions de l'Egypte, pour l'élaboration des documents (Arabic: Musul. of the Bodleian Library) in the Mém. of the Acad. de Marseille, 1886, 1887; H. Labouz, Correspondances diplomatiques entre les sultans mamelouks d'Egypte et les sultans chrétiens dans le premier du dix-septième siècle. (Grenoble, 1904).

2. Al-DIIN b. "ABD-AL-MAIL b. "ABD-AL-MALIK, died 899 (1490). A collection from it entitled Dâr-al-Salih al-Mâlî wa-dâr-al-Malik al-Muhtâr, an anthology. It was printed in Cairo 1636. His second great work, which he composed in 812 (1409), is a genealogy and history of the Arab tribes before Muhammad with an alphabetical list entitled Khatâbat al-Arab fi Mu'minâl-kabîl bi-n-nâm (in MSS. in Berlin (Ahaward, Verzeichn. No. 93672), and London (Cat. Med. Ed., No. 541)), which according to Lamrini is the Mill. of, or was the manuscript of, Beyrouth, 1767-95 No. 4, it has been printed in Baghdad b. l.; in this
the author is called Muhammad b. 'Abd Allâh b. Lâmmans concludes from this that the author of the account of the Mongols and of the Nâzârâtes were different individuals, but here either the father is confused with the son (see No. 2) or the printed book contains the work of the son. The alphabetical list was worked out by Abu'l-Fawwâd Muhammad Âmmâr al-Suwâdi in 1229 (1814) into a genealogical survey and extended to the Caliphates and Sultânates with the title Saiâli'il al-Dhâhâb fi Mu'ârif Kâmil li'l-Arâbî, lith. Baghdad 1280, London 1296. After the year 518 (1125) al-Kâkhashâbi wrote a supplement to it entitled Kâmil li'l-Dirassâh fi'l-Tarîkh wa'l-Arâbî, MSS. in Berlin (Ahwardi, Forschungen, No. 9384) and London (Iran, Sûùê to the East, vol. II, Edinburgh, The Scottish Soc. in the East, No. 595); a synopsis by al-Sâyîyî in Berlin (Ahwardi, Forschungen, No. 9357).

2. His son NAJM AL-DÎN MUHAMMAD initiated his two chief works, the Sûùê under the title Kâmil li'l-Dhâhâb fi Mu'ârif Khattâbî fi'l-Arâbî (see Rûmî, Sûùê, No. 1020) and the Nâzârâtes under the title Nâzârat al-Arâbî fi Mu'ârif Âbrâhîm al-Arâbî dedicated to the Grand Emir of the Arabs of the East and the West in the year 518 (1125), in the Bibliothèque Nationale, Paris (see de Saëz, Cat., No. 2049), in other MS. in Cairo, Kâmil (Pâlî, v. 170; author Muhammad Al-Akhris, see Volleys, Zöllner, J. Duttenhöfer, xlix, 118; on the Baghdad printed text see above).

3. ABU L-FATHI IMRÂN ÂMMâR ABU ÂHMAD AL-MASîMÎ, BURJAN (DAMÂLÎ), AL-DIN, d. 922 (1510), the head of a large family, whose works are detailed in Brockelman, Geschichte d. Õrart., p. 78.

Bibliography: Wüstefeld, Geschichtsschreibung, No. 4677; Brockelman, op. cit., II, 134.

(C. Brockelman)

KALMUCKS, the Turkish name for a Mongol people who call themselves ORAT. In Kalfiuf's Wetterland (p. 272), the former Kalmucks (Central Asian dialects), Kalmuk (Volga dialects; whence the Russian word) and Kalmuk (Ottoman; whence the Crimean Turkic name), are given. In Central Asia the Turkish speaking Volskaks are called White Kalmucks (Ali Kalmuk) and the Western Mongols proper Black Kalmucks (Kara Kalmuk). The word is derived (probably only by a popular etymology) from the verb kal'mk "to remain"; it is also to denote the Orat, who "remained" pagan, in contrast to the Dungan (the Chinese-speaking Muhammadians), who "returned" (verba mânäk) (according to the well known Islamic ideas) to Islam.

The word Kalmuk seems first to occur in the Marâhalâmin (not included in the printed edition) to the Êzâr Nûrim of Sharaf al-Dîn Yâdî, not, it seems, as an ethnographical term but as a geographical one. It is said that after the expulsion of the Mongol dynasty from China only their "original territory" (yer al-wâli), i.e. Kâmkörmâna and Kalmuk remained in their possession; the "Empire of the Orat" later deprived them of this also.

From the time of Wâs Kûhit (1418-28) the Mongols on the III. [p. 91] had to fight against the "infidel Kalmuk"; accounts of these wars are found, notably in the Tarîkh al-Khûfî (ed. Ney-Ellas, see Index). Wâs Kûhit was twice taken prisoner by the Kalmuk and had to give his sister in marriage to the chief of the Kalmuk Isâm Tâshî (p. 183). Isâm Tâshî, father of the latter, was, with his Mongols, on the Chinese frontier, where he was succeeded in 1439 by Isâm Tâshî. After the death of Isâm Tâshî (1455) the great nomad kingdom of the Orat broke up; individual princes are mentioned from time to time later, as ruling in the neighbourhood of Muslim lands; in the beginning of 864 (and of 1459) a Kalmuk embassy appeared in Herat. According to Chinese sources, the Orat in 1552 had to submit to Altan Khân, prince of the Tümen. The name Kalmuk seems to have been extended by the Muslims to this kingdom. According to the Ottoman Sânî (written 950 = 1554), the prince of the Kalmuk bore the title Altan Khân (Târâkh altan = Mongol Altan); cf. the text in the Leiden MS. No. 917 and the translation by Ch. Schaefer in Abdul Kerim Buchkuri, Histoire de l'Aile Centrale, trans. p. 292 of the Muhammadan sources also report the restoration of the Orat kingdom under Âbrâhîm Khân (d. 1634). In Turkistan the Kalmuk, during their period of supremacy, were regarded as powerful foes to Islam. The prince of the Kâlakh (Kürger) Tawakkul Khân, had to fly by degrees to Tâshkend, where he was received by Nawûs Khân Khân and Barak Khân (d. 1556); but Nawûs had consented to his guest's appeal for help that he sent such princes as they two could do nothing against the Kalmuk. At a later date on the other hand we find Tawakkulk described in Russia as "Czar of the Kalmuck and of the Kalmucks" on the occasion of his embassy to the Czar Feodor (1594), perhaps because a few bodies of Kalmucks had attached themselves to him; according to the Abdullât-Nâmâ (MS. of the Asiatic Museum, No. 574, b. 10), there were also Kalmucks (Kal- mârî) in Tâshkend in the army of Khân Khûk (a son of Nawûs Khân) about 1582. In the winter of 1603-4 they took place the first raid of the Kalmucks into Khwarizm (Aby Lâghit; ed. Desmoulin, text p. 275). Soon afterwards, under the Czar Wessólî Shuiskij (1606-1610), the Kalmucks for the first time entered into relations with the Russian government, although it was not till 1634 that Kalmucks settled on the Volga on a large scale. This branch of the Kalmucks had separated from their kinmen, under the leadership of Kho-Urînk, as early as 1618. The land of the Volga Kalmucks therefore did not belong to the empire founded by Khwâja Khûk, although the relations between the two branches of the people had not yet been broken. Representatives of the Volga Kalmucks still appeared at the dâwatât (parliament) of 1646, in the son and successor of Khwâja Khûj gave his daughter in marriage to the grandson of Kho-Urînk. By the treaties of Khiva the destruction of Buddhism was finally accomplished among all branches of the Kalmucks. The progress made by Islam, described in the Tarîkh al-Khûfî (p. 91) in connection with the above mentioned marriage contract apparently was not maintained. Most of the Muslim territories of Turkistan were under the sovereignty of the Buddhist Kalmuck prince on the III., the founder of the last great nomad empire in Central Asia, until the destruction of this empire by the Chinese in 1755 (subjection of Khâjahâr in 1683, conquest of Tâshkend in 1723); as late as 1749 the request (dated) of
Bohnski and his opponent had to submit a dispute to the verdict of an embassy of the Kalmuck prince (Turzak Khan). (Muhammad Walla Karimang, MS. of the Asiatic Mus., c. 581, f. 101v.) A great part of the population was expelled by the Kalmucks, Islam was almost completely driven out of the southern part of the eastern Semiretse, from this period date several Buddhist monuments, including Iljistan inscriptions. It was only after the decline of the Kalmuck empire that these areas were again occupied by the Mughalman Karakh. The war of the Volga Kalmucks with the Crimean Tatars and their raids into Khwarizm had less effect on Islam; from 1724 the Kalmuck chiefs on the lower course of the Volga were simply considered governors (nawabzade) of the Czar of Russia. No connection existed then with the ruler of the Ill. The decision of the "governor" Ubuy and a great part of his people to migrate from Russia and settle on Chinese territory proved disastrous for the Kalmucks. During this migration heavy losses were inflicted on the Kalmucks in Central Asia, especially by the Kazak (1771). Henceforth the Kalmucks were of no political significance either in Russia or in China. During the Mughalman rising in the Ill.-valley the great Kalmuck temple of Suddah near Kuldja was destroyed (Raddoff, Ant Sibirien, ii. 403). After the Russian revolution an "autonomous Kalmuck territory" (Avtonomnaja kalmskajskaja oblast') arose in what was formerly the government of Astrachan, between 45° and 48° N, Lat. and 44°-45° E. Long. A portion of the Kalmucks in Semiretse (less than 2000 souls) which has adopted Islam and taken to agriculture is called Satt-Kalmak.

**KALPÁK (n.), A Central Asian headdress, which was introduced by the Turks into Europe and became widely distributed there. The word kalpak is found in the most diverse Turk languages in meanings which are detailed by W. Raddoff in his Vortrages einer Wochentage der Türkische, ii. 268 sq. (cf. also kalpak, ii. 235). The Eastern Turkish title, kültepe, Dajac. East Turk, tata, Kirg. and Kazak, kültepe, meaning cap, felt cap (cf. also the French *kalpéz*) is certainly related. Cf. throns Faget de Courtille, *Hist. turc-oriental*, p. 408. In its original form the kalpak is a *t-shaped* sheepskin cap, flattened on top, covering the head down to the eyes and ears, for the manufacture of which skins of darker colour, in people of rank particularly a black astrachan, were used, and then trimmed with softer fur of a brighter colour. Such caps have been worn among almost all Tatar tribes from ancient times to the present day. In earlier times, as G. Rosse suggests, they were worn as part of the royal costume also among the Ottomans. Nevertheless, neither this headdress nor the word kalpak can be proved to have existed before the middle of the sixteenth century. The kalpak must, very soon after this, under the anchishing influence of Islam, have been driven out by the turban in its countless forms (cf. 286 styles in Michael Thalman, *Einzelne Bedenken u. v. d., Vienna 1705, vi. 20 sq. of Codex Thur. VII. Bohner, *Berichte", 1856, p. 195). As late as the beginning of the sixteenth century the embassy interpreters, who were not Turkish subjects, had to wear the kalpak, when they went on business to the Porta. In the house the kalpak, which, on account of its weight, was too hot and uncomfortable for indoor wear, was placed on a stand elaborately carved, often painted and adorned with gilding, the *kalpakli*, a piece of furniture, which was considered the sign of a distinguished and prosperous Christian household. When, with the coming of the Factory, the kalpak threatened to go entirely out of use among the Christian population also, an edict (prunam) of the grand vizier Izet Mehemed Pascha ordered in 1842 that all non-Turkish subjects should wear the kalpak instead of the fez. But this order was being enforced. At the present day the kalpak is still made and worn only by Armenian. The fine lambkins stretched over plate-shaped shapes were at one time imported from Ura in Russian Tartary, and also from Khiva and Bukhara, and manufactured and sold on the so-called kalpak-dji Carahaus in Stampul. Among the peoples who adopted the name kalpak for their corresponding headdress, special mention may be made of the Slav tribes of the Balkans (cf. Slav *kolpak*; Greek *kalpakas*). Down to 1763 the kalpak was also the headdress of the Hungarian Haulers. The high felt cap made of the finest astrachan and adorned with valuable jewels, of which so much is still worn as part of the state-dress of Hungarian magnates and Hungarian boys, is also called kalpak. (Magyar *kalpak*, cf. also *kalpe* = hat.) The Hungarians may have adopted the headdress from the Ottomans in the beginning of the eighteenth century. Cf. also J. Szandrei, *A magyar whistem turcimet *felicite*, Budapest 1905, p. 59. Among the Haulers of the German army, where the kalpak was worn since the time of the Austrian Herrn., kalpak means the cloth tab above the headdress, the colour of which served to mark the regiment. Under the First Empire in France the kalpak (colpack) was introduced into the French army as the headdress of certain arms, under the Second Empire the mounted chasseurs wore a cap called kalpak.

**Bibliography:** In addition to the works quoted: cf. Ch. White, *Hautlieutener Leben und Sitten des Türkens, ii. (Berlin 1845), p. 29 sq. d'oHousen, *Tableau de l'Empire Ottomane, ii. (Paris 1793), 157; Magyar Nyelvész, ii. (Budapest 1870), 400 (G. Sasvari), also vi. 565. (P. Bertriani) KALYUB, a fair sized town in Lower Egypt with a railway station, 10 miles north of the central station at Cairo on the Caln-
Alexandria railway. The town proper lies about a mile west of the station and about 3 miles from the right bank of the Nile, on the Tura al-Saltiyya. Down to the middle of the last century Kalyub was the capital of the Mamluk al-Kalyubiya. Under the Khedive 'Abdul 'Azim the town of the Mamluk was moved to Benha. Since that time, Kalyub has been a mukhtar (district-capital). Hence Benha owes its rise to Kalyub and the Harraga on the Nile. The majority of the inhabitants are Muslims. According to 'Ali Pasha Mahurdk, Kalyub possesses a Shar'i court (ommum shar'iyya) and a hospital. Cf. 'Ali Pasha Mahurdk, Kalyub, p. 55; Badr, Egypt, 2 (1867), pp. 314, 345; Sandling, Kafr al-Alix, al-Mamluk, Stamboul, 131 (1890), p. 3690, where (line 2–3) we should read Mamluk for Mamlukia.

A Greek Kasar — not yet, however, found — is at the base of the name. In the Souda it is found under the form Kasaro (Maspero-Wiet, Moeurs pour servise à la合金 de l'Egypte, Stamboul, 2 (1901), p. 151).

Historical: John of Distria mentions Kalyub in his Cronic, Chap. 113 (ed. Zonhoven, p. 541, 509). 'Amr al-d-din Quhattar (92) had a bridge thrown over the canal at Kalyub to enable the other towns of the province to communicate (circa 20 = 641). In 549 = 1154/5 the Caliph 'Abbas ibn al-Mu'ayyad granted Kalyub as a gift to his favourite Nasyr b. Abiba. 'Abd al-Rahman b. Mankhsib so represented this present in the eyes of Nasyr and his father that it became one cause of the murder of the Caliph by Nasyr and 'Abbas (ees al-Ahmar, al-Asfary, ed. Torber, x, 92, 93). Nasyr b. Mankhsib, ed. Dermeubour, 2 (1855); Ibn Muyassar, ed. Sharaf, p. 93). In the fighting between Salim ibn Tumbay and Salim ibn Muhaydib, Kalyub did not escape the raids of the Anabas (ees al-lua, Zahir ibn Majr, under Safar 943 = March 1310, 1311). For embassies etc. Kalyub was the last stage before Cairo; thus, for example, in Rabi 1 925 (March 1319) (All Pasha Mahurdk wrongly gives R. 1 25, 925 for R. 1 25, 925), Khatib ibn Hadiya had the Simon's convoy received there with the greatest ceremony. The Kafr Barakat b. Mansur (ees al-Ma'as, ed. cit., lii, 102).

The town had again to suffer exceedingly from the devastation and plundering of the banditti and Mamluks in the years 1210 and 1220 (1803 and 1804), cf. al-Dhahabi, Atadh al-d-dhahabi, under the years quoted. Kalyub, as a result of its situation close to the gates of Cairo, may not have escaped on other occasions the effects of the political happenings in the capital. Ibn Dukhtiy (809 = 1400) and al-Zahir (859 = 1434/5) report, that in their day Kalyub was for the most part lying in ruins.

Economic: Almost all sources praise the wealth of Kalyub in gardens and trees, among which the oranges (tangerines) are mentioned as particularly valuable. In spite of the restrictive edicts of al-Malik al-Kamil, the ground was very badly farmed, so that Kalyub's prosperity suffered considerably. Cf. Oghazi b. Ibrahim al-Nahhan — wrote 637–648 = 1230–1249, Brockmeier, Geschichte des arabs. Litt. L, 335 — who devotes a longish section to Kalyub in his Lava al-Kaftani al-Maghef fi Damashq al-Dhahab al-Ma'ajiga (quoted in 'Ali Pasha Mahurdk, ed. cit., 141 ff.). In 1240 (1824/25) Muhammad 'Ali built a cotton mill in Kalyub and later barracks and a remount depot were established there. The al-Shawrabi family deserves special mention for its share in the economic development of Kalyub, where they also built a maiw with a cotton mill.

There are also 32 or 33 mills in Kalyub, in one of which the Friday service is held. Among these are "the great mosque," formerly called Djin al-Mamun, with its great minaret, made such a great impression on Ibn Jazairi (SSE in Egypt, ed. cit., p. 478; 'Ali Pasha Mahurdk, ed. cit., p. 141). According to the inscriptions on its minaret and above the dome it was restored in 1148 = 1735/6 by the Shihab al-Ashqar of Kalyub, Ahmad al-Shawrabi. Among the tombs of the imams the most important is that of Shihab Awadh with popularannonces and handsome inscriptions.

'Ali Pasha Mahurdk gives a very full account of the above mentioned al-Shawrabi family as one of the most prominent in the town. al-Malik al-Zahir Habbars gave them charge of the new bridge over the Bahr As'ama (also al-Kalsuhfan, transit, Wostenfeld, p. 28) and granted these large estates as feu and an annual pension (which lasted till 1375 = 1858/9). Mufti 'Ali Pasha granted them the supervision of the whole province of al-Kalyubiya. Various members of the family also filled important posts in the administration, besides the office of Shihab al-Arab of Kalyub, which seems to have been in the family's possession. Sulaiman al-Shawrabi's patronage cost him his life in Kasr al-Dam in 1213 (Dec. 1798) was beheaded by the French in his part in an attempted rising (cf. al-Dhahabi, ed. cit., 37 ff.).

According to Ibn Jazairi (ed. cit., Al-d-dhahabi wa al-Itibar wa al-Ma'ajiga etc., French translation by de Soye entitled Relation de l'Egypte depuis l'année 1187 jusqu'à nos Jours, this province of the al-Kalyubiya comprised in his time (777 = 1375/6) 59 townships and yielded a revenue of 419,054 dinars (but on p. 590 a list of 61 townships is given). Ibn Dukhtiy gives 60 with a total revenue of 333,130 dinars. In the time of the French expedition the revenues of the province from the estates (Iwur al-Mamluk, l. 306 sqq.) amounted to: for the payment of the soldiers 5,390,742 dinars; for the administrative expenses 1,270,462 dinars; for the cavalry 1,057,171 dinars.

The Bahr al-Sardah — according to legend built by Pharaohs and enlarged by his "water Hamun" (Ibn Dukhtiy, al-Kalkunanddi) — was, according to the enthusiastic description in Ibn Dukhtiy (whom al-Kalsuhfan follows), a large canal, apparently with water always in it. This is indicated also by two documents of the years 915 (1508) and 1061 (1650) (quoted by 'Ali Pasha Mahurdk in the possession of the al-Shawrabi family. al-Kalsuhfan notes that the canal in his day had disappeared and that its place had been taken by the Abu't-Mamluku canal, (H. Wostenfeld, ed. cit., p. 35 sqq.); Maspero-Wiet, ed. cit., p. 125). According to 'Ali Pasha Mahurdk, there was only a small canal in his time: the Tura 'Ala-Imam. Ibn As'ama, Ibn Dukhtiy, Ibn al-Bastani and 'Ali Pasha Mahurdk give several scholars, who have the name al-Kalyubiy, the best known of whom were Shihab al-Din al-Kalyub (see the following article).

KAMAL AL-DIN
AZIZ AL-DIN QUSAYR ELS-ABD
KAMAL AL-DIN, ABU L-FAKHR, UMAR B. ABD

A short article about Anwar al-Salih, a member of the highly esteemed family of al-Salih, whose ancestor had migrated from Nablus into Syria with other members of the tribe of 'Uqayl about 800 (815) on account of a pestilence and had settled as a merchant in Aleppo, born in the Lit-Halabites (829 (?)), in the Khulafa' wrongly 836, the son of a Hamad b. Sa'd, whose office had been hereditary in the family for four generations. After studying in his native city, in Jerusalem, to which his father took him in 607 (1209/10) and again in 608 (1211/12), Damascus, in the Talmud, and in the Halabi, he became in 634 (1239) professor in the Eudoxus in Aleppo. He later filled the position of chief and served the two last Ayyubids, al-Malik al-

AZIZ (643–654 = 1246–1257) and al-Malik al-Nasir (654–658 = 1257–1260) as vizier and several times, by their command, acted as ambassador to Bagdad and Cairo. When his native city, in Jerusalem, was captured and destroyed by Safar b. 658 (Jan. 26, 1260) by the Turk, he died with al-Malik al-

Nasir to Egypt. Halabi summoned him back to Syria as Chief 634, but he died in Cairo on Dhu-l-Qada 1 29, 660 (April 21, 1262) before he could obey.

His principal work was an alphabetically arranged historical and topographical work of the famous man of his native city, on the model of those of Khaṭṭār al-Baghdadi [q.v.] and Ibn 'Ashur [q.v.] in the nature of some 40 volumes entitled Aziz al-Din fi Tawib Halabi, which was never completed in a fair copy and was therefore already scattered to all the winds before the Mongol invasion under Timur, so that even Ibn al-Shifn (see below) knew of only one volume of it (see Cat. Codd. Arab. Bibl. Acad. Logud.-Hist., II, 83); odd parts are preserved in Paris (Bibl. Nat., de France, Cat., No. 4195), in London (Cat. Codd. Mus. Or. in Mus. Brit., Pars ii., No. 1900) and perhaps in Constantinople in the collection of the Arvay, Ref, 32, 1906 (Hepworth, Misc. Spor. Or., Berl., x, 50, No. 51).

Out of this he made a synopsis arranged chronologically entitled Ibrahîm fi Tawib Halabi, which was never finished the fair copy of this work either. The Paris MS. (de France, No. 1666, another in St. Petersburg, which, however, is perhaps only a copy of the Paris one, see V. Rosen, Not. accurate et magistralis arab. Mus. Oriental., St. Petersburg 1851, p. 98, No. 160) has been utilized by G. W. Freytag, Studia in historia Halabi, Lutetia, etc., 1819; Regesta Saschi-Abdallah in specie, Paris, 1821; Reims 1820; Historia orientalis, in vol. ii., Berlin, 1834, 4to; see also Studia et Documenta Byzantina, No. 7 (1882) on Coptic and Byzantine, see also L. de la Grange e. et al., sec. ii., 559–585; E. Bichot, L'histoire d'Abel de Komédus, French version after the Arabic text, the Rev. de l'Orient lat., 1806, p. 305–365, 1807, p. 146–235, 1898, p. 27–107, 1899, p. 4–49. A further synopsis with continuation down to Fatih IV 6, 951 (June 28, 1544) was made by Muhammad ibn al-Hallab, d. 971 (1564), entitled Aziz al-

The basic work, the Aziz, was twice continued in the 19th century, 1, by 'Ali al-Din-

Abū l-Hasan ʿAbd al-MuHAMMAD b. KHĀDĪJAH al-Najafiyya, d. 842 (1439) published *Duar al-Maṣūmah (Fi Tawādul Ḥakīk)*; the work contains a description of the city of Aleppo and its environs by distinguished nation since 638. 

KAMĀL AL-DĪN [See KAMĀL AL-DĪN ISMĀ‘ĪL.]

KAMĀL KHODJANDI [See KAMĀL KHODJANDI.]

KAMĀL PASGAZĀDE [See KAMĀL PASGAZĀDE.]

of the sun during an eclipse of the sun and explained the phenomena. That he did not succeed in obtaining a representation of the cesured sun, the moon is due, not to some error in his suppositions, but in fact that its tips are too faint. Kamāl al-Dīn gave a more perfect theory and found it by brilliant experiments. His first made the object very small and placed opposite it a surface half red and half green. Then he showed how one got the sharper images the smaller the opening and that the images were independent of the shape of the orifice. The larger the opening the less those principles applied. It was to be noted that the images were reversed. With this apparatus Kamāl al-Dīn also observed on the wall the clouds and their movements as well as a bird flying past. The movements in the image are in the contrary direction to real life. At a later
AL-KAMAR, the moon, the satellite of the earth, considered in quite early times the principal heavenly body next to the sun, whose path lay on the sphere next to the earth (falsah al-fatma). Pythagoras was the first to recognize it as a dark body illuminated by the sun, from whose relative position with regard to the sun its changes in illumination or phases were seen to trace the recurrence of the latter, when the sun and moon have again reached the same positions with regard to the earth, led to the conception of the synodic month (29.5 days). The Muḥammadans calculate time by lunar years, each of twelve months. These are alternately "full" of 30 days and "empty" of 29 days. This gives a year of 354 days. The Iranian astronomer al-Birūnī (973-1048) in his al-Kanz al-Mustawfī (Maḥāla iii, Ch. 7) makes the interesting suggestion that the number 350 may have been introduced for the division of the circle, because it is midway between the solar and lunar years.

But as the synodic month, to be quite accurate, is 29.5306 days, which may leave the month reckoned by the Muslims as 3506 and the lunar year 3567 days too short, a number which in 350 years amounts to 11.02 days, in the Muḥammadan calendar an intercalary period of 30 years is in use. It is called al-madgra and the intercalary year itself al-amr al-kabir. Within an intercalary period there are 11 intercalary years.

The Muḥammadan year begins (or rather should begin) with the winter, after which the crescent moon is seen for the first time (first day of Muḥarram). The beginning of this era was dated on the first Muḥarram of the year in which the Prophet migrated to Medina from Mecca (July 15, 622 of the Christian era = 1H).

Even in the earliest lunar theory, as stated by Hipparchus and Ptolemy, the complication and irregular movement of the moon during a month is apparent: it is in reality due to the double attraction of earth and sun to which the moon is subjected (the three-body problem of modern astronomers). The determination of the longitude of the moon in its orbit is the main problem of lunar theory and, in order to solve it in some degree, Ptolemy was forced to substitute for the eccentric circle of the moon's orbit an auxiliary circle, known as the epicycle, which the moon would traverse regularly in an anomalistic month (27 days, 13 hours, 56 minutes) while at the same time the entire epicycle moved equally round the sun as a second called the deferent circle in a nodical month (27 days, 5 hours, 3 minutes). In addition the plane of oscillation was, according to Ptolemy, inclined to the plane of the earth's motion (ecliptic) at 8° (to be more accurate 5° 9'), while he made the line of intersection of the paths of the earth and moon (nodal line) execute a retrograde movement and put the centre of the oscillation at a point 3° 2' north of the apogee (farthest from the earth).

The true longitude of the moon therefore consists of the four so-called great variables, equation of centre, egression, variation and annual equation. The first denotes the transition from circle to ellipse, the second the displacement of the centre of the deferent just mentioned, while the fourth was laid down by the astronomer Kepler. As to the variation, it is given by the following expression:

\[\delta = \sin (\lambda + \Delta) + 30° \sin 2(\lambda + \Delta)\]

in which \(\lambda\) and \(\Delta\) are the mean longitudes of sun and moon. From this formula we find that the variation in the syzygies (\(\lambda + \Delta = 0°\)) and in the quadratures (\(\lambda + \Delta = 90°\)) i.e. 2 (\(\lambda + \Delta = 180°\)) can be quite disappeared or is very small, but on the other hand is very marked in the octants. Ptolemy, in order to reconcile smaller differences between theory and observation, actually introduced a kind of variation of the line of apsides, the epicycle.

After Tycho Brahe had long been regarded as the real discoverer of the variation, the orientalist and astronomer L. Am. Sèdillot in his article Sur un manuscrit arabe dans lequel la variation de la lune est signée (Compt. Rend., 1842) asserted that it was evident from the discourses of the mathematician and astronomer Abu 'l-Wafā' al-Būzjānī (940-998) that he was really the discoverer of the variation to which he gave the name Al-biṣrīf Al-Maḥbūṣī. A long dispute arose on the accuracy of Sèdillot's interpretation of the text, which ran through many years of the Comptes Rendus; Sèdillot, Mathieu, Charles etc. formed the one party, Biot, Binet, Bertaud etc. the other, who held the contrary view that Abu 'l-Wafā' had discovered nothing but only substituted his Al-biṣrīf for Ptolemy's precesiones In the end Caun de Vaux has been able to prove definitely the correctness of Sèdillot's argument by a thorough analysis of the Arabic text in question and the citation of other Arabic and also Persian and Hebrew sources.

The Arab astronomers adopted the lunar theory of Ptolemy and developed it. They also calculated several numerical values on which the study of the Zādīf accessible to us, e.g. those of al-Khwarizmi, al-Farghani, al-Battani and al-Dīnārī give the information we require.

In determining the parallax of the moon (dīnāf malqar al-šamāl) and ascertaining its distance from the earth, the Arabs did not go beyond Ptolemy. Al-Bīrūnī in chap. 8. of al-muhīd iii, of his Kitāb al-Muṣāfīrī makes an interesting observation on the shadow thrown by the moon (mukhāf) in moonlight. Al-Bīrūnī calculates the difference between the two shadows for an altitude of 45°.

The Arab astronomers devoted special attention to the exact calculation of the frequency of eclipses (bursaf al-shamāl), as they made use of it to
ascertain the difference in longitude between two places on the earth. They worked out tables based on Ptolemy's work, which gave the times of the beginning and ends of the eclipse for various parts of the earth as well as the area of the moon's disc covered. But it is impossible to calculate these with great accuracy from observation only. The difficulties (according to al-Farātānī) lie in ascertaining the point where the eclipse begins on the edge of the moon, in the indistinctness of the shadow, the lack of agreement between the astrological instruments of the two observers, etc. The result was that the calculations of longitude from eclipses of the moon were often very inaccurate. It is true that al-Fardūsī's astronomical tables (H. Suter, op. cit., p. 85) are a good example of the pattern; however, their calculation (the method) is not accurate, since the calculation of the eclipse agrees perfectly with the previous calculation of it, but not every calculation was accurate. The Fāṭimid astronomer Ibrāhīm al-Yansū (d. 390 = 1000 in Cairo), who goes so far as to distinguish five phases in the course of an eclipse, gives his in al-Bīd al-Khālid al-Khakīnī's works (where the difference between calculation and observation amounted to 1 to 18 to 23 minutes (cf. ibid., Le livre de la Grande Table Hākimite observée... Œuvres d'histoire... hors [en] le Nostr. et extr., viii. 93). Several studies on the moon, none of which are yet published, have been preserved to us from the pen of the exceedingly prolific Arab mathematician, physicist and astronomer Ibn al-Hāthīm (d. 430 = 1039). We may mention: 1) the great Māhdī fī Din al-Kamar (India Office Catalogue No. 734, it.); 2) Māhdī fi Kināb al-Kamar (ibid., No. 734), treatises only with a special case of parallel ("when the altitude of the moon is less than 30° and it is western, its latitude lies south of the eclipse and the head of the constellation of Cancer is under the western horizon so that it does not reach the meridian from below, the latitude of Medina being taken at 30° or near this figure, the parallel will be in longitude under the opposite of the order of the signs of the zodiac..."); 3) Māhdī al-astān al-ilāhī al-Waqqī al-Kamar (Muṣāfa libān al-Kamar, municipal library (mīshāf libān al-Kamar, of Alexandria) ("If one carefully observes and examines these marks on the superlative, one finds always the same in shape and never changing, either in configuration or in position or magnitude or as regards their dark character").

and accompanying him to Mecca, in spite of her father's remonstrances, saying that he had given her in marriage to Kámran in the days of his greatness (in 1546) and that she could not abandon him now in the time of his misery. She died at Mecca a few months after her husband.

Kámran was put in charge of Kandahar by his father, and in the beginning of Humayun's reign he was governor of the Punjab. During the interregnum, when Humayun was in Persia, Kámran and his younger brother, Afsar, ruled over Afghanistan. He left one son and three daughters. The son, Abu T-ka'n, who inherited his father's political talents, was confined in Gawhar by Akbar in 1557, and was put to death some years later as a nestor against the empire. All three daughters were married; one of them, named Gurlârah, was a woman of a masculine spirit; she married Ibrahim Husain Sultan, and she and her son were born in Akbar's side. (Firthia, hist. ed. p. 231, and Muhammad Husaini, Dârâsh-i-Akbari, 1887.)

KÁMRÁN SHÁH DURRÁNÍ, the last sovereign of the Sadarí family of Afghanistan who succeeded his father, Mahmúd Sháh, in the limited sovereignty of Herat in 1245 (1829) and reigned till 1258 (1842). In the civil wars between the sons of Taimúr Sháh, the princes Zandár Sháh, Shudája' al-Mulk and Mahmúd, the prince Kámran proved himself a brave warrior and in 1221 (1806) he took Kandahar from Shudája' al-Mulk, but lost it soon afterwards. In 1224 (1808) he took a leading part in the events which led to the disruption of the Durrání monarchy. In revenge, Humayun (the Nemír) offered to his sister by Dána Múhammád he married and betrothed. Fateh Sháh, the Wasif Sháh (Dána Muhammad's father), to whom Mahmúd Sháh owed his kingdom. This led to the loss of the whole kingdom except the Herat province. Kámran was deposed and indolent in his later years, but maintained himself at Herat through the efforts of his able and inscrupulous water, Yír Muhammad Allákhán. The siege of Herat by the Afghan Sháh of Persia in 1307–39 was the principal event of his reign. The rivalry between England and Persia was one of the principal causes of this siege, the Persians being advised by Russian officers, while Iská Siyá'í, a young English officer, was the main spirit in the defence. In 1328 (1842), Kámran Sháh was assassinated by Yír Muhammad, who was in league with the Persians and remained in possession of Herat. Cúnes were wrecked at Herat by Kámran. (Bibliography: Elphinstone, Coskii, 2nd ed., London 1839–42; Veréen, History of the Afghans, London 1858; Kaye, Hist. of the War in Afghanistan, London 1855; Masoom, Travels in Afghanistan, London 1844; Mihiân, Lâl, Life of Dána Múhammád, London 1846. (M. Longworth Damé))

KÁMRÚP, a district in Assam, situated between 25° 43' and 26° 53' N. and 90° 39' and 92° 24' E.; the greater part consists of a wide plain, through the lower portion of which the Brahmaputra R. flows from east to west; but south of this river there are ridges of hills, thickly covered with jungle. Under the rule of the Kád dynasty, the first king of which was of the Turanian race, the Brahmaputra valley proved to be an excellent obstacle to the progress of the Muhammadan tribes. It was not until 1638 that they succeeded in gaining a footing in Kámrúp and Gauhati became the capital of a Muslim governor, but 20 years later they were driven out of the country by the Ahoms, who took advantage of the confusion that resulted from the conflicts between the rival claimants to the throne of Shír Ísahás (q. v.). In 1662 Múqaddás (q. v.) made a vigorous attempt to conquer the Assam valley, but though he was at first successful, the difficulty of military operations during the rainy season and the outbreak of disease among his soldiers compelled him tobow a retreat into Bengal, and Múqaddás himself did not survive the failure of his expedition. His struggles for some years, the last vestiges of Muhammadan rule disappeared. In 1683 from Kámrúp, and it formed part of the Ahom kingdom until it was ceded to the British in 1826.

KÁN, the name of one of the seven kinds of modern poetry (ñawá'ís), unknown to the classical authors. It was invented by the people of Biháί, and takes its name from the formula used by story-sellers at the beginning of their recital. "There was once a time." Originally the kán wa-qat was a simple tale and it was only later that it was applied to other subjects, especially of moral tendency. In the spoken language it was always in verse in the east only, especially in its place of origin. The wa-qat is a poem composed of strophes of two lines, the matter of which is given by the predecessor as follows—

mustafílun wa sálah un mustafílun wa sálah

but, according to the 32 specimens that I have seen, the last foot of the first verse is mustafílun and not mustafílun; and therefore there is a rhyme only in the last-hemitonic of every second verse. The principal variations are the disappearance of s or 9 in mustafílun and sálah is often changed to sálah. (Al-Buhári, al-Máṣríjí, Bilyá)
KAN WA-KAN — KANAT

3292, ii. 273 sqq., Abu 'l-Fida', Ta'rikh, Constantinople 1566, iv. 188, and especially Hunafish, al-Kawakib al-Duwanî, Cairo 1318, p. 23, 26, 29, 33, 34, 42, 53, 55, 71, 74, 77, 38, 86, 135, 137, 143, 166, 181, 204, 217, give specimens of the two acquaintance.

Gien, al-Fāmīn al-sūrā, Ein Beitrag zur Kenntnis der antiken arabischen Verterungen, Leipzig 1879, p. 53—62. (Moh. Bin Chenna)

KANÂN, the biblical Kanân, is a personality, regarding whom the traditions in spite of their sparseness, agree in hardly a single point. Al-Baṣā'ir (ed. Flisiger, i. 513) mentions him as the father of the famous Nimrūd (Nimrud according to the Jesuits and the Tafsir) and he is also regarded as the ancestor of the Kanaanites (Kanaan, x. 191) and of the Barbares (al-Dimashqī, Zhālī al-adl, ed. Mehran, p. 266 and Ibn Khaldūn, al-Thārī, vi. 93, 94, 95, 96—97, 98—99).— Very little is known about him. Many refer to his story in Sūra xi. 44 sqq., that a son of Nāhî in spite of his pious appeal refused to take refuge in the ark with him and thus perished in the flood. The story also turns up in the earthy caption (al-Baṣā'ir, ed. loc. cit. and al-Thārī, Kanaan, x. 194, p. 36 below).— Al-Tahārī (ed. Goeje, i. 199) also knows of a son of Nāhî called Kānan, who lost his life in the flood, but refers the Kanaan verse in question to Yâs h. Nāhî (see Ta'ṣīr, ed. Sūra xi. 44 sqq.) whom, however, he identifies with Kanaan in l. 99 sqq. While Kanaan appears here as the son of Nāhî and Ibn al-Kalbī mentions 'Aṣālim (i.e. Kanaan) as Nāhî's fourth son (in Yâsîn, Maqāmāt, ed. Wsentten, iv. 311) we find him in the parallel passage to Genesis, iv. 25 (in al-Tahārī, op. cit., p. 43 sqq.), as a son of Hām b. Nāhî (see also al-Šāhī, al-Rassīl, 38, 42, 44, 54, 99 sqq., 104 sqq.; al-Mastur, iii. 240, 294). According to the third tradition (in Yâsîn, op. cit., p. 226 sqq.), Kanaan was a son of 'Aṣālim b. Hām and according to a fourth — not quite reliable — tradition, a son of Kūh b. Hām (al-Dimashqī, op. cit.).

KANAN PASHA. (See KANAN EMIN.)

KANAT, plur. dhul-karnān, Kurnān, Kurn and Kurnan, means in Arabic: (1) canal, aqueduct, (2) lance or stick (see al-Li'm al-Adl, xx. 574, Tafsīr al-Adl, x. 304; Dürri, Supplicium, ii. 414). These two conceptions have developed from the original meaning of 'revol'. The word may be said with considerable certainty to be borrowed in the western Semitic languages from the Assyrian or Arabic, where base = red, blush, etc. (see Zimmermern, Alte Fremdwörter, Leipzig 1915, p. 56). Hence we have Hebrew 'base', Arabic 'base', the word passed through the intermediary of the Am‘mic into Arabic; there in the popular dialects of Suria and Egypt, it is pronounced 'base, basey,'. The Greeks and Romans took over the Semitic word as base, base (base), base, base; note the change of meaning — an exact analogy to the Arabic — of the Latin base, strictly an

adjective meaning "round-shaped", then "channel", "canal". In modern Persian also "banī bāyān in use but there it has the special meaning of subterranean channel or aqueduct. The true Persian word for this particular kind of canal is kānān, earlier kalār (Vaillos, Lat. Pers. Lex., ii. 767, 768; in the older language we also find banītān; see Vaillo, op. cit., i. 38). This latter word was in turn entered into Arabic as 'al-banītān (also 'al-banīyān), but there means "water-holder", "recess", cf. also Venān, Maqāmāt, ed. Wissenthal, i. 271—274. Only in Syria (according to Moris, Ztschr. f. sprach- and textwissenschaft) der Palästinen, in der Akk. Palaest., 1889, iv. 12) do we find kānān, kānīyān, "water-holder, inhabited place", in the meaning of "subterranean aqueduct". It must here be pointed out that the other words in Arabic for aqueduct seem also to be borrowed (probably all from the Aramaic); cf. Frankel, Die arab. Fremdwörter im Arab. Leipzig 1886, p. 43—253. "Take, for example, banītān (Dury, i. 344; from the Aram. bānūtān = casetum; that is "any large building"; cf. the meaning of kānān = bridge, aqueduct, castle)."
Among the oldest aqueducts of the Muslim period is the aqueduct of Mecca, which was begun in the time of Mu'awiyah I (died 680), and finished toward the end of the Abbasid era (first half of the 8th century CE) with special merit by providing for the water-supply of the holy city. In 1846 she had canals made which led the water from the district of Ta'il, the valley of Minat and from 'Arabat to Mecca. The canals, much neglected in course of time and often only very negligently repaired, were restored by the Turkish Wali Ullama Pasha (1820-26). For details see Snouck Hurgronje, Mecca, the Hague 1888, I, 6-10, where the Arabic sources are also cited.

In view of the dryness of Iraq, artificial irrigation by means of canals has always been a necessity of existence there (cf. for example, Polybius, v. 22), as river water is in many places not available in sufficient quantity and the rainfall is slight. Open canals continually lose large quantities of water through infiltration and evaporation and they are also not infrequently damaged by cloud-bursts and torrential floods. The subterranean (kelas or abārāı (kheirā) system is therefore generally preferred in Persia. By this means water is brought often from great distances to the human-covered plains. Wells are made in the higher lying parts of the valleys, especially at the foot of hills, and the water accumulates plentifully in them and is led first by subterranean tunnels, later by open canals and furrows (qātara), to the fields and gardens to be watered. These channels are often 50 or more feet below the surface of the ground, are vaulted and often lined with bricks and so high that a man can crawl through them. Every 30 or 40 paces a perpendicular shaft, often of mastework, and covered at the top, leads down to the pipe. In the making of these channels the Persians reveal great skill. The searching for springs and the making of channels is a special industry, that of the wakān (see especially Bishop, op. cit.; see Bibliography). The making of a khānāt costs a great deal in proportion to the water that it supplies and the annual cost of maintenance is not inconsiderable. It is also very important to regulate the water-supply distributed, and much care is taken that the villages in turn have the use of it for the proper length of time. This business of water-distributing is perhaps the most important part of the administration of a Persian village. A special official, the māhār, is entrusted with this duty. He has also to see to the maintenance of the pipes etc., especially to their being kept clean; cf. Theodore Gordon, op. cit.; see Bibliography.

At the present day the Persian khānāt system is, unfortunately, much neglected; many channels are now quite dry; for example, the great network of channels which once supplied the thickly populated town of Ray near Ṭhrān is now so much destroyed that it can barely supply the wants of the village of Shāh-ʿAbd al-Azīz which is built on the ruins of Ray (Polak, op. cit., ii. 118). Ṭhrān is, according to Bishop, loc. cit., still supplied by 35 canals.

This method of irrigating the fields by artificial channels is called in Persia the khānāt system of agriculture, in contrast to the natural method, the ārān or ārānāī system; cf. Polak, op. cit., ii. 120; Stolte-Andreas (see Riht), p. 8.

A great network of canals cuts up Central Asia. The planning of this system is ascribed to Tissar; but they are certainly much older and their origin may be dated at least as far back as the early middle ages. To make them, the water from springs in the oases miles apart was collected, great rivers diverted, and water led by tunnels through ranges of hills and by aqueducts over the valleys. A great many of these canals are, however, now decayed, as in Persia. There the canal is called arīk and the canal manager arīk-ābādār. A thorough account of this Central Asian system of irrigation is given by A. Th. von Miklou- dorff in his article Einführung in das Persische-Thail in Mém. de l'Acad. imp. des Sciences de St. Pétersbourg, 1881, Series 7, vol. xxii. See also, especially for the country east of Bukhara, H. Moritz, Dürre Central-Asien, Leipzig 1883, p. 114-115.

(M. Streck)

KANAWDJI or KANDJI, Skr. Kanyābuddha, (known to the Arab authors as Kanawdji or Kinnawdji) was the capital of a powerful kingdom before the Muslim invasions. It is now a small town in the Farrukhabad district of the United Provinces on the R. Ganges (27° 50' N. 79° 38' E.). It has been supposed to be identical with Kanawad of the Ptolemy's Kanimag or Kanawaj of McCulloch's Periplus, 1345 B.C. (cf. Periplus of the Ptolemaic Pilgrim, p. 70). V. Smith disputes this on the ground that the existence of Kanawad as the time of Ptolemy (145 a. d.) is doubtful. The identification is however not improbable. The first undoubted mention is found in the travels of Fa-hian (405 a. d.) when it was a place of no great importance under the Gupta kings. At the time of Yuan Chwang's visit (c. 641 a. d.) under the rule of Harshavardhana it had grown into an important capital and a centre of Buddhism. It may be noted that this traveller gives the Chinese transcription (Kanok-sū) of the Sanskrit-name Kanyābuddha, which is the earlier transcription Fa-hían gives Kanawād, answering to the Pāli and modern forms. The country of which it was the capital was known as Pāndāta. After a period of anarchy and short lived monarchies it became the capital of the Gujjaras Pratihāra kings, who founded a dynasty which lasted for two hundred years. The most powerful king of this race was Bhūbāja (c. 830-90) under whom Kanawdji became the capital of an extensive empire, which may be stated to have included all the plain of northern India from the Satlaj to Bihār and southwards to Gajūrī and Saubhāra. On the west it was bounded by the territories of Sindh now under Muslim rule.
Kandahar, a city in the territory of the Badus. (Nadiyā, vār. Nāšīlā) which corresponds to the modern Kāsh or Kāż Gandāvā in Baluchistān.
KANDAHAR

KANDAHAR. 1. The name given by the Arab historians to the Indian Kingdom of Ghazni, situated in the valley of the Kafir river as far as its junction with the Indus. Its capital was Wahibin or Ohud as noted by ibn-Salah (Schauch 7, 206); and at an earlier period al-Mas'udi speaks of Kandahar as the country of the Radiqta (Kahib) and as situated on the river of Kafir which flows into the Indus (Sprenger p. 381). It was from this Kandahar that the name was carried to the settlement of the Gandharians on the banks of the Arghae, which afterwards became famous as the modern Kandahar.

KANDAHAR. 2. A city in Afghanistan (which also gives its name to a province) situated 31° 27' N. and 65° 43' E. at an elevation of 5,463 ft. between the Tarnak and Arghathab rivers. It is an important centre of trade and administration, with a population estimated 34,000. The province, now the principal territory of the great Durrani tribe of Afghanistan, is identified with the Hazar-wali of the Achaemnians, the classical Aria, and the mediseal Zanco-dzwar and Zahail, and historians have generally assumed that the town was founded by Alexander and named Alexandria Arachosia, but this does not rest on good evidence, and it is very improbable that the name Kandahar can be derived from Alexandria. Its identity with the name Gandhara, the ancient Indian Kingdom occupying the valley of the Lower Kafir River, on the other hand, appears to be well established. Kandahar was the form used by the Arab chroniclers for Gandhara; the Kandahar of Mas'udi, for instance, has nothing to do with modern Kandahar. There seems some ground for accepting Belknap's theory that the name was brought to Arachosia by emigrants from Gandhara. The most probable period for such an emigration is the fifth century, when the Ephthalites conquered Gandhara, as related by the Chinese pilgrim Sung-yum, who visited Gandhara about 4. U. 520. Buddhia's begging-bowl, still preserved in the Shrine of Sufian Wais outside Kandahar, was probably brought there by refugee Buddhist monks. It was not however till the 12th or 13th century that the new Kandahar began to be famous. It is not mentioned by the Arab historians in their record of the conquest of Arachosia (al-Rashid), the capital was then Buzza which was invaded by Ahmad ibn-Salah and the same place was a mint-town of the Safavids. It was not until after the destruction of Buzza by 'Ali ibn-Din Dakhila-nor in 545 (1150) that Kandahar began to rise into importance. Shams al-Din II, the Kart ruler of Herat, is stated by Khwandsami to have besieged Kandahar, and as his reign began in 676 (1278) it may be held that by that period Kandahar had become the capital and henceforward it plays a prominent part in history. It was conquered by Taimur and formed part of the province bestowed on his grandson, Per Muhammud. At the close of the 15th century it formed part of the Kingdom of Husain Bakhsh of Herat, and the name Kandahar first appears as a mint on his coin. Under Husain, the Arghian Chief, Dhu 'l-Nun Beg, obtained the government of Zandfullaw in addition to other provinces and made Kandahar his capital. After his death in the wars with Shah Ismail the empire Bakhsh drove his son, Seng Bakhsh Beg, Argbaus out of Kandahar in 915 (1507), but Shah Beg soon recovered the town with the aid of Shamsul and held it for several years, but Bakhsh Beg finally took it in 928 (1522) and it remained part of the territories of the Mughal Empire of India, although always regarded by the Safavi Shahs of Persia as properly belonging to Khorasan. Kandahar succeeded Bakhsh in the possession of Kerel and Kandahar, and held them even when his brother Humayin was expelled from India. A Persian attack on Kandahar in 941 (1545) failed. In the disputes between the brothers which followed Humayin's exile, Humayin besieged Kandahar with the aid of a Persian army and after its fall made it his capital, and the Persians too took it from them afterwards. In the early part of Akbar's reign Tahmasp Shah succeeded in taking Kandahar 965 (1556) and Akbar did not recover it till the latter part of his reign, 1003 (1594). Persians again took it from the Emperor Daulatgir in 1031 (1621), but Shah Shuja's army occupied it in 1047 (1637). The last transfer was in 1058 (1648) when Shah Abbas II took it, and the Mughal Emperors were never again able to conquer this province. Kandahar remained under the Safavi Monarchy until the rising of the Ghizais tribe to power under Mr. Waiw (v. Qalzais). The success of the Ghizais rebellion in driving the Persians out of Kandahar embarrassed them to invade Persia itself, and a new Kandahar became a strong point of Persia. Kandahar itself came into his brother's power, and Shahrukh finally established his power. The Ghizais maintained their hold on it until Nadir Shah took it after a year's siege in 1451 (1735). During the siege he built a new town outside the old city and named it Nadirshekh. The Ghizais were driven away from the neighbourhood, and the Abulsheh, who had been removed to the Herat province, were allowed to return. They are still the most important element in the province. Ahmad Shah, one of their leaders who had held high command under Nadir Shah, attained possession of Kandahar without difficulty after the latter's death, and made it the capital of the Durrani Kingdom which he founded (v. AMRABEH SHEIKH, AHMAD, ABEKESI, ABU-MMAD, AHMAD). He built a new town and gave it the name of Ajmard, the Ghizai seat with the epithet of ajmard al-sheikh, "most illustrious of cities," which appears on all coins struck there during the Durrani rule, but has been replaced under the Bakhshais by the old name Kandahar. The vilasitudes of Kandahar were not at an end; it passed rapidly from one pretender to another in the course of the wars between the Bakhshais and the Zambu Shah and his brothers, Mahmul and Shaljel.
KANDAHAR. - KANEM.

KANÉM. A country in the Central Sahara, east and north-east of Lake Tchad. Until recent years Kanem was only known from the accounts of Barth, who visited a part of it in 1857, and Nachtigal, who crossed it in 1871 on his way to Bornu. Before from 1900 onwards, the work of French scientific missions, as well as the explorations of officers and officials entrusted with the administration of the "territoire militaire du Tchad," have made it possible to rectify and complete the data furnished by these travellers.

The name Kanem, taken in the widest acceptation, is applied, according to Nachtigal, to a region bounded on the north by the caravan route from Kanem to Lake Tchad, in the south by the Bahir al-Ghazal, in the east by the depression of the Figuere, in the west by the Lake, and lies between 19° - 24° 15' N. and 17° - 18° 10' E. Loung. (Granville). The surface may be estimated at 27,000 to 30,000 square miles. Kanem, in the stricter sense, only occupies about a quarter of this huge area, between Lake Tchad on the west, Bahir al-Ghazal on the south and the munificent massif of the Manga, which separates it from the Figuere on the east.

The most characteristic topographical feature of Kanem is the existence of numerous sand dunes

KANUDIR. The Persian word kanudir or kanudir means a dinner or a 'feast; in Hindustani this word means also a religious feast held in honour of a venerated person like Fatima. In this latter meaning the word has been imported, apparently, from India into the Indian archaic, and in Arabic the word is unchanged. In Java it is slightly altered to kanudir or kanuder; it may be noted that nowadays the more usual term in Java is zolenkah or zolokah, from the Arabic zulkefa, zulamka, from the Arabic salute, or salat, a well known Arabic word, meaning need, want of a man's presence at a feast, and hence the festival itself. In general it is a feast given with a religious purpose, or at least in conformity with religious law, just like the maulins in the books of Shah. The occasions which give rise to it are numerous; for instance, days of commemoration, domestic events, especially circumcision, the completion of teaching the Kuran, certain periods, such as pregnancy, giving birth, harvest, and many reasons like setting out on a journey, occupying a new house, or new enterprises, the drying of epidemics and calamities, etc. According to the Law each kanudir should have a religious character; the poor must be invited, forbidden things should be avoided, but the strong local idea is always prone to look for means of effecting a compromise. Every complete kanudir, especially those in commemoration of deceased relatives and those given on the anniversary of a saint, is sanctioned by a rezult of the Kuran, sikhs or prayers; popular superstition, however, regards such kanudirs as consisting of actual offerings of food to the deceased. Almost every kanudir is opened by a prayer, the commemoative ones by the dua fauru. In Acheen some months are called kanudir with a second word indicating the food the sacred meal consists in.

(Ph. S. V. ROYKERS.

KANDAHAR. A fortress in the Dakhnam, 77° E. 10° E. which gives its name to a tehsil in the dominions of the Nizam of Hyderabad. This place appears to be the mint-town of some ruins of Kandahar struck in the reign of the Mogul Emperor Muhammad Shah from 1539 to 1607. As the city of Kandahar in Afghanistan had been separated from the Mogul Empire since 1526 (1648) and was at this period in Nadir Shah's possession, it is impossible that these rupees should have been struck there.

The climate of Kanem is that of tropical regions. Two seasons are distinguished, the rainy season from July to September, and the dry season from February to June. The intermediate period, from October to January, corresponds to winter and is marked by a perceptible drop in the temperature; in the bottoms of the wads the thermometer goes sometimes down to zero. Centigrade (≈ 32° Fahrenheit). The rains themselves are unequally distributed and diminish from south to north. The very luxuriant vegetation of the southern part becomes less and less rich as one ascends northwards. It flourishes on the slopes of the wads, the bottoms of which remain barren. The date-palm grows wild in many of these wads. It even forms a regular oasis at Mao, in the centre of Kanem, but disappears in the northern part, which is of prairie character. Cultivation is limited to the area around the villages, built on the slopes of the dunes close to the wooded zone. The commonest crop is the millet, to which may be added beans and cotton in the parts of the Tchad. The bearing of horses, cattle, sheep and camels is also a very important source of income for the inhabitants. Fishing around the lake and hunting in the interior also contribute to the support of the inhabitants. The fauna is very rich and varied. The elephant is becoming scarce, but the rhinoceros, the hippopotamus, lion, buffalo and panther abound in Kanem proper, and the orix, antelope, gazelle and giraffe on the northern steppes.

The number of inhabitants is difficult to estimate. It is certainly not above 50,000 to 100,000 souls, about two to the square mile. The population is settled, with a few nomads. The principal settlements are in the south of the province, in the S. E. Mondo, in the centre Mao, and on the roads, a centre of gravity and of circulation of races. The people of the same country, still rich in millet, are the target but for the rearing of camels and cattle.

The population is far from being homogeneous. The diverse elements which compose it belong some to the negro group and some to the Arab group; more or less altered, to the first belong the Kanembu, the Buddhists, the Kuri; to the second the Kold-Stripian and the Shao, the Timbal and Tubu are classed between the two.

The Kanembu, descendants of the first settlers in Kanem, constitute the basis of the population, upon whom they have imposed their language. They are dark gray (sage) in colour and tall in stature. Industrious and peace-loving, they are settled and devote themselves to agriculture. They profess Islam and are fairly strict Muslims. In their midst there are groups of individuals called Haddad (in Kanembu Derge) who, although differing from the Kanembu neither in language nor in physical type, are considered as belonging to an inferior race and are despised. These natives are distinguished from the others by their weapons and by their mode of life. They use bows and arrows, while the Kanembu use spears, and live chiefly by hunting. Very warlike in disposition, they have played an active part in the civil war which desolated the country in the course of last century.

The Buddhists and the Kuri inhabit the islands of Lake Tchad, upon which they reared when they abandoned their mainland. The Buddhists, who occupy the northern archipelago, live by fishing, cattle-rearing and the cultivation of millet. Before the French occupation, they practised piracy to the detriment of their neighbours of Kanem and even at the expense of the natives of Barlif [q. v.]. They have, for the most part, remained fetish-worshippers, although they have adopted some Muslim customs. The Kuri, on the other hand, while leading the same sort of life as the Buddhists, are completely infiltrated.

The Tubi-Slag and the Shao represent the Arab element in Kanem. The first, who came from Tripolitania and Farsan [q. v.] in the middle of the nineteenth century, have preserved the Semitic type quite pure. They have light complexion, speak the Arab dialect of Tripolitania and dress like the Arabs of the north. Nomads and robbers, possessing, thanks to their rides, an incontestable superiority over the negro tribes, their sole means of existence was the slave trade and brigandage. Since the French occupation, some sections of them have taken service with Europeans, while others have left the country and entered the service of the Sudan.

Of Arab origin, like the Tubi-Slag, the Shao have been long established in the Sudan. But if they have retained the use of the Arab language, which they speak quite purely, their physical type has been markedly altered by mixture with the black population. The Ishaka which they profess is fairly strict among the tribes of the north, whereas many of them are affiliated to the Tijaniya brotherhood; among the tribes of the south, however, their faith has been contaminated by mystic practices and the androcerd regard them as idolators. The Shao live almost entirely by cattle-rearing; nomads in the dry regions near the desert, they become settled in the moister southern regions. They are represented in Kanem by the Uri Serraf, the Bank Serraf and the Tagana of the Bath al-Ghali.

The Tubu or Tuba, who came originally from Tibet, are fairly numerous in Kanem. But, as...
a result of contact with negroes, they have lost some of their distinctive features, notably the slenderness of the body and elasticity of the limbs. They are also much less fanatic than their kinsmen who have remained among the mountains. Lastly, while the Tuba, strictly so-called, are nomads and live almost entirely by beast, the Tuba of Kanem or Darassoua Kanem are for the most part settled. They follow agricultural pursuits, for which they are not fitted, without great success.

The principal bodies of them are the Gado, the Waraba, the Dioro and the Yoromu, related to the Kenkerda of the Bahr al-Ghasal. Their language is connected with the Kanuri spoken in Bornu.

The Tundjuri are the descendants of Hilali Arab tribes who, after following around Tuntisi, migrated to the Flere at the end of the fifteenth century. Thera they passed to Wadai and finally settled themselves in Kanem towards the middle of the seventeenth century. Much mixed with negroes since then, they form a group intermediary between the Arabs, the Kanomchi and the Tuba. Arabs is their proper language, but they also speak Tuba and Kanomchi. They are found especially in the region of Mondo and acknowledge the authority of a chief called Fughan.

History. According to the Arabic sources studied by Mandinghi, this period is, in point of the land of Barth (cf. above), the kingdom of Kanem seems to have been founded by the Zoelhava, whose territory extended in the ninth and tenth centuries a.d. from Dir Flere to Lake Tchad and Kamas. Al-Bahri mentions the inhabitants of Kanem as idolaters and al-Idrisi seems to consider them as such. Some time after the tenth, but not later than the twelfth century, Kanem was occupied by the Tuba (Teda) who came from Borkou and Tibesti, conquered the Zoghalva and introduced Islam. This occupation seems to coincide with the accession to the throne of the Yazaque, who claimed to be descendants from Saif o Dhi Yazaque (4th-5th) and became the disseminators of Islam, which had been introduced by al-Hadi al-Oghmati, the first viceroy of the Yazaque. The Khilaf al-Idrisi (ed. von Krenz, Vienna 1852, p. 32, trms. Fagman, 61) places the conversion to Islam of Kanem about 1406-7. According to a Hausa legend, Abub Zaid al-Fakta (end of the 4th and beginning of the 5th century) preached Islam in Kanem and Banu. Another tradition refers the introduction of Islam to the beginning of the twelfth century, in the reign of King Dume. In any case this religion was already established in Kanem in the thirteenth century, some Muslims from Kanem founded a Mahbag school in Cairo between 640 and 650 (1242-1252). The principal descendants of Saif remained in power as long as the kingdom existed. They preserved their complexion "fair like the Arabs" down to Selima's son of Biron, who was the first negro king of the country. This dynasty, considerably extended the kingdom of Kanem, the boundaries of which were cleared by Duruma I, Selima's and Duruma II up to the frontiers of Egypt. The Sultan of Kanem maintained friendly relations with the Harfis. A rapid development followed this period of prosperity. The Bulala, a Kanomchi tribe which at the beginning of the sixteenth century had withdrawn to the S.E. of Lake Tchad, attacked the Sultan of Kanem and after a century of incessant fighting ended by conquering the country. Ndjim, capital of Kanem, was taken by the invaders. Sultan Omar b. Idri (796-800 = 1393-1395) had to retire to the country west of Lake Tchad, where one of his successors founded the kingdom of Bornu (4th-6th). In the sixteenth century, the sovereigns of the new state in turn took the offensive against the Bulala in order to reconquer Kanem. This end was achieved by Idri Kanomchi (1404-1456 a.D.). The conquered Bulala had to pay tribute and Kanem became a province of Bornu. The submission of the Bulala remained, however, somewhat precarious. During the seventeenth century the Sultan of Bornu found themselves forced to resort to force in order to oblige their neighbours to respect the treaties that had been made. Thus we find Idri Alama (1571-1605) sending five expeditions against the Bulala who were supported by the Tuba. The Sultan of Bornu was victorious over his adversaries but his authority was that his successors were hardly recognized except by the people around the shores of the Lake; the interior of the country slipped from their view. Very soon the weakening of Bornu enabled the Bulala to recover their independence. But towards the middle of the eighteenth century they were in turn conquered by the Tundjuri from Wadai. They then left Kanem and went to settle in the west of Bahar al Ghasal, then in Fitri, where their descendants still are to-day. The Tundjuri imposed their authority on the various peoples of Kanem but had to endure the attacks of the Bornuans who drove them into the region of Mondo and reduced them to the state of tributaries. The Bornuan troops, commanded by a Bunga slave named Dalumus, settled permanently in Kanem, where their descendants are known as Dalumus. Their chief (ala'fa) settled at Maco and became the representative of the Sultan of Bornu, to whom he paid an annual tribute. This restoration of the Bornuan suzerainty was of short duration. From the beginning of the nineteenth century Kanem was attacked by new enemies, the Wa'dianis, who claimed the country as a former possession of the Bulala settled in Wadai. The Sultan 'Abd al-Karim Saboun (1805-1819) and Muhammad Sharif occupied part of the south almost without striking a blow. Bornu, invaded by the Fulbe, was unable to intervene, and Kanem occupied with the faults of the Tundjuri and Dalumus was in a state of complete anarchy. The Dalumus ended by triumphing over their rivals but recognized the suzerainty of Wadai. Their chief, the aifas of Maco, received the title of aga'id al-tiba and became the representative of the Sultan of Wadai, in the name of whom he gave jurisprudence to the Kanomchi and Haddah chiefs. The natives who would not submit to the Wa'dianis took refuge in the islands of Lake Tchad. The arrival of the Ulub Shihma (1846) provoked new disorders. Driven out of Wadai by the Terki, these nomads reached the country north of Lake Tchad and began to plunder it. Severely defeated by the Tureg in 1850 they moved on to Bornu. The Sultan then took into his service the remains of the tribe and entrusted the Ulub Shihma with the defence of the frontier against the Wa'dianis. The Ulub Shihma took advantage of this to reconquer themselves and to plunder friends and enemies without distinction.

At the period of Nasihiga's visit to Kanem.
they were the real masters of the country. The Tandjir of Mono tried to resist them but being decisively beaten in 1853, they were reduced to slavery. The Hid交代 of Ngiomo alone succeeded in keeping in check these nomads, who dreaded their poisoned arrows. The situation was none the less much disturbed. The Kanembo and the Hid交代 were fighting between themselves while the Wadates made frequent incursions. Finally, after the death of Sheikh 'Abd al-Djalil, the various factions of the United States began to fight with one another.

The French occupation put an end to this marauding. Kanem was included in the zone of French influence, as determined by the Anglo-French agreements of March 21, 1899. After being visited by the Jozeau and Fourner-Lamy missions (1906), it was effectively occupied between 1901 and 1905. Accepted without opposition by the Kanembo, European domination met with an obstacle in the hostility of the Sanuviya, who in 1900 established a s immunity at Bir Alal, in the north of Kanem. Muhammad al-Bakili, the sub-deputy for the grand master of the brotherhood, at the head of a band of Arabs from Tripoli-Matin, Tandji and Uld Sinai, undertook to arrest the advance of the French. The evacuation of the s immunity in 1903 determined a number of the United States to abandon the struggle. The malcontents, who had been joined by Toubu brigands, continued hostilities down to January 1905, when their chief, Shiek Ahmad, finally made his submission.

KANGRI (also written KANGRI; with the subsidiary form Kangri) is the capital of the Ilwa (administrative district) of the same name in the wildyas (provinces) of Kasamun and the Aif Sa, a tributary of the Kii Tiin (Hai), the ancient Gangra, famous in ancient times as a stronghold, was sometimes used by the Byzantines as a place of ambush and later, when the wars with the Arabs and the Dafu-Darti-Ogbea again became important, an account of its almost impregnable citadel. On their campaigns against the Byzantines, the Omtsids repeatedly penetrated as far as Kangri (variant Dandjars), e.g. in the year 93 = 711/12 (al-Talibi, ed. de Goeje, ii. 1936 = Ibn al-Adr, ed. Tornberg, iii. 457; Yabalt, ii. 350, who calls the town Hijj al-Hadi), in the year 109 = 727/28 (al-Yabalt, ii. 338) and in the year 114 = 731/32 (Bat-Hebraus, Kifayt al-Mubaddal'at al-Mubaddaleh, ed. Brut and Kirsch, i. 125; al-Talibi, ii. 1551; and al-Thaib, under the year 6248). When, as a result of the defeat at Mansikert in 1071, the eastern frontier provinces were abandoned by the Byzantines, the Kidna and the Dafu-Darti-Ogbea shared the bulk of the forces established themselves in Konya, while the latter spread through the northern half of Asia Minor from Amasja to Kasamun among the conquests of the first Dafu-Darti-Ogbea in 648 (1075/6) we find Kangri mentioned, in al-Talibi, All Dafu-Darti, ed. Amadu-Hasan Usman al-Din, Amadu Tarhun, Istanbul 1932, p. 83; also Presti, Le Tchad et le Tchadique in the Z. D. M. G. xx. 470. In the year 1101 an army of Crusaders left Constantinople for the conquest of the Dafu-Darti-Ogbea, in order to evacuate Kusamuddin of Antioch, who had been captured by them at Malatya and imprisoned in Nicomedia, conquered Angora and reached Kangri (= presidium Gangra), but the attack on the fortress was repulsed and soon afterwards the army was completely wiped out by the allied Kidna and Dafu-Darti-Ogbea at Amasja (Alburnus Aquienes, liv. viii. cap. 8; Ibn al-Adr, ed. Tornberg, ii. 203; Z. D. M. G., xxx. 470; Chalandon, Les Comines, l. 224 sqq.). The emperor John Comnenus captured Kangri in 1124 with the help of his heavy siege artillery, after having stormed it in vain a year before (Chronique de Niketas, l. 6, and especially also Jouanès, l. 64; Chalandon, op. cit., ii. 84 sqq.). But very soon after the departure of the imperial forces, the fortress was reoccupied by the Dafu-Darti-Ogbea and never again passed into the hands of the Byzantines. In the period following we find Kangri in possession of the Kidna, Kangri in possession of the Kidna.

Kangri was the capital of the Kidna, and in the Crusades was a fortress of the Byzantines. After the decline of the Seldjuk empire Kangri belonged to the territory of the Terendyan-Ogbea of Kasamun, which was taken from them in 1193/1197 (939 Kais) and 1382 (939 Kais). It was never again part of the Seldjuk kingdom, and was finally taken by Timur in 1401. It was finally annexed by the Ottomans, and finally in 1441 (1441) was definitely annexed by

Mehemned I (Agha Nusha, 872, p. 38 sqq.; Leoncavallia, Moschari Maculriu, Tercenaro, Frankurt 1591, p. 475; the statements of von Hammer, Gesch. des Osman. Reiches, l. 710, 724. The Ottomans held it in 724 due to a misunderstanding). In the period of peace that now followed under Ottoman rule, Kangri falls completely into the background. It is scarcely mentioned by the historians; we have, however, full descriptions of the town from Ewiaia, Sjagomawari, iii. 350 sqq., and (Baljil) Khabil, Yaghmanmun, p. 645. Among Europeans
travellers we find it first mentioned in 1554—55 by Derenczhoew in his Tagebuch einer Reise nach Konstantinopel und Kleinasiern, ed. Raitinger, Munich 1921, p. 196; nearly 300 years later Alaworth was the first European to describe it from his own observations and in our own time it has been repeatedly visited and described by German explorers in Asia Minor. The castle, in its day stormed by Arabs, Byzantines and Crusaders, lies in ruins; the town still survives of Kureşte, which captured the town for the first time by the Dastan prince and is now referred to as a saint. The site of cisterns, which dates from pre-historic times, on the castle hill, which Kâtîb and Kâtiyâ full described, has not yet been closely examined, nor has the "Medjidieh" (Medjiedije), i.e. the monastery of the Mevlevi dervishes, with its inscriptions, which, as Alaworth was told, are said to date from the Arab Caliphs. Of the 27 large and small mosques some are said to date from the Byzantine period (see Ciumi), the principal mosque was built by Sultan I in 986 (1589).

The extensive deposits of rock-salt at Maghar, two hours south-east of Kânti (Ciumi, loc. cit. 347 and Mâcher) are famous; their product was known even to the Byzantines under the name τρωπάρια (Nikolaos Myreropoulos, of the eleventh century, in Du Cange, Glossar. ad scriptores med. et inf. Graec. v. v.). The severe earthquakes, which have repeatedly shaken the town in modern times, are mentioned in the medieval ages also; among these, Ḥabîb al-Bihl, ed. Wiesbold, p. 268, gives a full and vivid description of one of these catastrophes, which destroyed the town in Aug. 1050.

The number of inhabitants is approximately estimated at 30,000 in 6,000 houses; among them were about 150 Greek and 50 Armenian families, who may now have left it as a result of the Great War.

Bibliography (so far as not already given):

(J. H. Mordtmann)

KANİ, ABD RAKİ, a notable Ottoman poet and prose-writer of the old school. Born in 1824 (1742) in Tokat in Asia Minor, while still a young man he attained a great reputation in his native town as a poet and prose-writer. He belonged to the Mevlevi order and was allotted to the Shaikh of the Mevlevi monastery in Tokat to serve him an important landmark in his career was the passage of Ekmâl-ûgâhî "Abî Pasha through Tokat in 1753 (1843); he had been summoned from Trebizond to Constantinople to fill the position of Grand Vizier for the third time. Kânt provided him with a lavish welcome and a chronogram which made such an impression on the aged statesman that with the death of the Shaikh of his order he at once took him to Constantinople and presented him a position in the imperial Divân. The way to the highest offices of state was thus opened to Kânt; but ambition was foreign to his nature. The careless and somewhat uncontrolled life that he had been leading in his native town — he was only a lukewarm Muslim and only at the end of his long life returned again to the devout life of the order — seemed to him more desirable; so he took advantage of the fall of his patron, which took place after only two months of office, to give up his position in Constantinople. Henceforth his activities lay mainly in the provinces — in Silistria, in Wallachia and in Bucharest. He spent for a considerable time as Divân secretary to the voivod Alexander; there is a picture of them together in the Museum of Sinapya. Finally Yegen Mîmîd Pasha, who had previously been a close friend of his, summoned him to Constantinople, when he became Grand Vizier (1796 = 1784). But this brought nothing but misfortune to Kânt. Kânt showed himself indifferent to all ceremony and conducted himself towards the Grand Vizier with as little politeness as in the old days when there was no difference of rank between them. He also chattered about matters that should have been kept secret. Yegen Pasha enraged at this had him condemned to death and it was only with difficulty that the punishment was reduced to banishment to Lemnos. All his property was confiscated, so that he had to struggle with poverty. He died in Rabi' II, 1260 (Jan-Feb, 1772) and was buried in Aytûb, Sarıti and Şimbaâlî."Zade Wehbi composed chronograms on his death.

Kânt is one of the most remarkable figures in Ottoman literature of the post-classical romantic period, during which Persian influence died down and was replaced by a more national spirit. As a poet Kânt was not specially distinguished; he even lacks one of the principal features of most Ottoman poets: smoothness and polish of language. In his poems there are many inaccuracies and harsh passages; this is closely connected with his manner of working and his habit of extemporizing verses on any stimulus or on any occasion. Kânt himself, if it should be added, never collected and arranged his poems nor put the finishing touches to his Divân. Only at the instigation of the Râşîl- 'Kutubî, Mehmed Râfîd Efendi were the poems which could still be found in existence collected by Nürî and the Divân published. A portion of the poems have been lost; he wrote poems in Arabic and Persian in addition to Turkish.

His poetical works consist of numerous hymns, nazarî's and ruhâmî's, hâfidoğ's, chronograms and some hundreds of ghazals. What distinguishes his poems from those of other poets is his fondness for wit and humour, his humorous phraseology, while otherwise humour is entirely lacking in the old Ottoman poets. A much higher estimate must be placed on Kânt as a prose-writer in his Mindhûrî and we have the very high opinion of his works by Ahmad Tâbi'a Tâvitik that, as regards his style, a nation produces not more than five or six of his rank. In his letters Kânt gives min to his humorous mood and produces the most peculiar and unexpected flowers of speech. He might be compared with Râbi's. Many witty sayings and anecdotes of him are recorded. His happy disposition and his humour made him thoroughly
KANIS (plural kanis), synagogue, church, the arabicised form of the Aramaic beinaket "meeting (place), school, synagogue" (cf. J. Levy, Neohim, u. Chish. Worterbuch, ii. 559 sq.). The Syrian form beinaket in the Peshitta in the New Testament is a rendering of εὐαγγελίαν and sometimes also of κανόνας (cf. Payne Smith, Theosorny Syria, i. col. 1773), whereas the form beinaket in Christian Western Arabic represents εὐαγγελίαν as well as κανόνας (cf. Schultze, Lex. Synop., Berlin 1903, p. 95). The latter term is nearly always rendered by ṭāḥī in the Peshitta. The ṭāḥī al-ʿArab, viii. 53, as ṭāḥī nicely right in so far as it derives kanis from kūṣālī and al-Kathāfī (al-Ghāṭī, Cairo 1824, p. 195), however, rejects this view and expresses the opinion that the word denotes an especially Christian institution and goes back to ṭāḥī, an abbreviated form of ṭāḥīyā (kanisā). Al-Bustak also considers the word as being the arabicised beinaket (Maḥṣī al-Muḥtir, Boyrout 1886, p. 1847).

In Arabic kanis denotes the Jewish as well as the Christian place of worship; this appearance also from the various statements of the lexicon; some refer to churches, others to synagogues exclusively (cf. al-Djawhāt, Zālik, Bilāk 1282, b. 477 s., al-Zamahkhārit, Aḥṣā al-Balāt, Cairo 1290, li. 212, etc.; in al-Ghāṭī, Cairo 1824, p. 195, the Jerusalem, Māṣūm, ed. Wüstenfeld, ii. 314, 7). According to al-Fitrākshāhī, al-Elāhī, Bilāk 1272, l. 549 v., kanis denotes the place of worship (muṣtāʿab) of the Jews, the Christians or the Kūṭayr, cf. also Tāfī al-ʿArab, l. 335 infra.

In early literature kanis is often found in the meaning of "church". Two documents on papyri of the year 58 + (2) mention the church of a monastery called (μουσαίον) Kanaia Maryia in Egypt (Papyri Schett-Keilholtz, i. ed. C. H. Beck, Heidelberg 1906, p. 111, g, line 4, p. 112, i, line 4). In a satirical verse Dārir speaks of the churches of Tagḥīl (al-Maṣarrat, al-Kawm, ed. Wright, p. 485, 4). The treaties which Umār bin al-Khaṭāb is his generals are said to have concluded with the inhabitants of several towns usually contain stipulations concerning the kanis (al-Fāṭihah, Fāṭih al-Balāt, ed. de Goeje, p. 173; al-Yaḥyā, Tawfīq, ed. Houtman, i. 107, 28; al-Ṭabarānī, l. 1405, 29, 1; Kuičius, ed. Chajkho, ii. 175, 11; Ibn Ṭabīb, al-Ṭarīqī al-kabīr, Damascus 1339 ap., i. 178; cf. also Abū Ẓayf, Kit. al-ṣirāṭ, Bilāk 1502, p. 80). In the Ḥājīl it is mentioned how Gaiwān and Umām Salāmān told the Prophet of a church in Abyssinia adorned with images (al-Buḥkārī, Sunan, bāb 48, 54; Dāhir, bāb 70; Maḥṣī al-ʿArābī, bāb 37).

Al-Muṣāfī denotes synagogues as well as churches by the word kanis (al-Kalīn, Bilāk 1270, l. 454 ap., 510 ap.).

In Spain and in the Maghrib the form Kansāya (perhaps influenced by iglesia) was in use; it is still current in Morocco and Tunisia (vgl. Dory, Supplement, ii. 493).

In the modern language kanis denotes a church, kānīt a synagogue (al-Bustak, s. v.). For the Egyptian dialect see S. Spier, Arabic-English Dictionary, 2nd ed., Cairo 1921, s. v.

Al-Kanisa or al-Kanisa al-Sawādī was a town with a stronghold in the frontier province of Northern Syria, which Harmān al-Qasghī restored from its ruins (Yākūt, l. 314; cf. l. 927, ed. ib.; Dār Ḥāshī, A.G.A., i. 63, 7; 68, 2), vgl. Le Strange, s. v., p. 477, 247 sqq. — Al-Muṣāfī, A.G.A., i. 2, 452, mentions a place K. al-Dimāga at a day's journey from Arradān. — A harbour in Yemen on the Red Sea in the neighbourhood of Zalād also bears the name of Kanaa (al-Fitrākshāhī, s. v. Tāfī al-ʿArab, s. v., ed. according to Tāfī al-ʿArab, l. 335 infra.

Perhaps a town in Central Sud, 300 miles west of Kūk and 290 E.S.E. of Sokoto, 1200 feet above sea-level, situated in 12° 27′ N. Lat. and 8° 20′ E. Long. (Green.), Kana lies in the middle of a marshy plain dominated by the isolated rocky hills of Guron Ditchi and Dala. The town is surrounded by a fortified wall (barri) 20 to 25 feet high and measuring, according to Barth, nearly 20 miles in circumference. A portion of the area thus mapped out is occupied by tilled fields especially in the West and North-West. The houses are placed in the South between Dala and the wall. The town divided into two by a marshy pond called Dukhara (Robinson: Jukhara) is formed of mud
houses. Only the houses of great personages or of Arab traders or rich Hausa merchants are provided with an upper story. The number of inhabitants, estimated by Barth at 30,000, would, according to Montell, amount to 50,000 or 60,000, according to Robinson, to 100,000, according to the reports of the English officials in Nigeria, to 200,000. This population comprises very diverse elements, Hausa, Fulani, Kanuri and Arab; of whom 2/5 (Robinson) or 4/5 (Montell) are slaves. In addition to the fixed population there is a very large floating one, reaching, according to Montell, the figure of 240,000 individuals a year.

This area was explained by the economic role of Kano, the commercial metropolis of the whole of the Sudan and at the same time a much frequented stage on the pilgrims route to Mecca. Representatives of all the negro races from the mouth of the Niger and Senegambia to Borni and Wadai meet there with Taurags and Arabs from Ghadames and Tripolitania. Every day a market is held there attended by over 30,000 people. Business is done through the intermediary of brokers, and owing to the scarcity of currency settlements are made most often with cowries; some transactions are carried through by simple barter. The principal articles of commerce are clothes and garments of local manufacture, leather, salt brought from Bilma, broom and above all the kola nut from the Western Sudan, which is perhaps the most important element in the commerce of Kano. To these we must add sugar from Egypt, granpoude, paper, ironmongery, cotton goods of European origin, ostrich feathers and ivory to a small extent and finally slaves. The articles sent to or brought from Ghadames or Tripolitania are carried by Arabs settled in Kano to the number of 400 or 500. But the Sudanese trade, which makes up 4/5 of the total transactions, is entirely in the hands of Hausa merchants.

Kano is not only a great centre of commerce; it is also a centre of native industries. Weaving and dyeing flourish there. The manufacture of cotton goods is so active that the town has been given the name of the "Manchester of the Sudan." Robes ( tokos) dyed black are much esteemed and exported to all the neighbouring lands. Most work occupies women and children, who make up their share in the business. The leather dyed yellow and red called morocco is very much esteemed and exported as far as Morocco and the markets of Tunis and Tripolitania. The same is the case with the leather table mats indispensable for caravans.

The province of Kano is very fertile. As early as the 18th century, A. Y. Leopold remarks the abundance of caro, the richness of the soil, the extent of the fields, of rice, cotton and tobacco. The observations of modern travellers coincide with those of this early writer. The province of Kano, says Barth, includes 27 walled towns with 300,000 inhabitants and an equal number of slaves. "All the ground," says Montell, "is cultivated for a distance of 60 miles round the town." Robinson notes the large number of separate farm places surrounded by plantations of tobacco, indigo, cotton and kola (kobeng vulgare).

The town was noted by Robinson attributes the foundation of Kano to a group of refugees from Daura, a place three days' journey to the north, led by a certain Kano, son of Ilma. The latter, it is said, built a new town at the foot of the rocks of Guran Dukki and Daka, on the top of which two villages had long been planted. According to Barth, Kano was the son of Biron and brother of Daura. He would thus be one of the seven "legitimate Hausas" (see Hausa, i. 191). Another tradition to the effect that Kano had been appointed by his father Sarrakun baba, i. e. chief of the princes, attests the antiquity of this industry in the town.

The date of the foundation is uncertain but it seems that by then Kano was already of some importance. In the second half of the 17th century A. D., education was held in honour in the town. Scholars had settled there on returning from the pilgrimage and were teaching theology and Maliki law. The celebrated "Abd al-Kadir al-Marjilli taught there. At the beginning of the following century, Leo mentions Kano as a town filled with rich merchants and artisans. These facts seem to invalidate Barth's statement that at this date Kano could only have been a village built on the rock of Daka. The king of Kano had subjected to his authority the kings of Zangye and Katsina, but he was in his turn compelled to submit to the Sultan of Timbuktu, Muhammad Askia, and was reduced to the state of a tributary. Later the kings of Kano had to endure incessant fighting against the Sultan of Bornu, who annexed Kano to their empire. The Bornian governor, however, was driven out by king Korafa and Kano regained its independence. The invasion of the Fulai at the beginning of the nineteenth century increased the commercial importance of Kano, as the merchants of Katsina sought refuge there after the capture of the latter by Qirmnias Dan Fodi in 1814. Kano was, however, not long in falling in its turn. On the dismemberment of the Fulai empire, the town was included in the kingdom of Sokoto. The country was administered by a governor (toke), who paid the Sultan of Sokoto an annual tribute (100 horses, 15,000 kobo and other garments, 10,000 turban etc. in the time of Barth). The Anglo-French agreements of Aug. 5, 1899 and June 14, 1898 having placed Sokoto within the zone of British influence, British representatives attempted to settle in Kano. These first attempts were unsuccessful. Rev. C. H. Robinson (1893) and Wallis, a British official of Nigeria, were able to visit the town where the French traveller Moutassil had already spent three months (1891-1892) in his journey from St. Louis to Lake Tchad, but Bishop Tagwai's mission was badly received and he had to withdraw. The effective occupation of Kano only took place in 1908 after a military expedition led by Sir Frederick Lugard.
KANO — KANSU

As Marco Polo (ed. Yukle and Cardier, I, 203 and 219) shows, there were already Muslims in Kano before Ananda's day; on the other hand he says nothing about the dissimulation of Islam south of the Hoang-ho (cf. the erroneous statement in the article CHINA, I, 851, following Mission d’Ollione, p. 435, that Marco Polo mentions "the presence of Muslims in the province of Yuen-mai only"). The Turk speaking Salar (cf. china, I, 950), who live at the present day on the south bank of the Hoang-ho, are mentioned as living there as early as the Ming dynasty (1368—1644) and described as a martial people (W. Rockhill, The Land of the Lamas, London, 1894, p. 49), although no Muhammadan risings are mentioned for this period. The story which reached Timur's ears about 1398 to the effect that the founder of the Ming dynasty had had about 100,000 Muslims slaughtered and had completely rooted Islam out of his kingdom (Nieh-sm Al-Din Shams and 'Abd Al-Razak 'Al-Samargandi in Barthold, Ulugbek, Petrograd 1918, p. 42 note 6) finds no confirmation in any Chinese source. Under Manchu rule (from 1644) risings of the Muslims of Kano are mentioned by 1646 and 1648 and have been several times repeated in the xvith and xixth centuries.

In Kano those who profess Islam are at the present day certainly more numerous than in the other provinces (the figures are very variably estimated; cf. the article CHINA, I, 847). The most important centre of Muslim life and culture was until quite recently Ilorin (south-west of the capital Lannon-fon), "the Chinese Melaka". Ilorin was at an earlier date considered a purely Muslim city (about 30,000 inhabitants); in the year 1884 the traveller G. Potaniin (Tavantse-Tibetskii Obrazy Kitaya, St. Petersburg 1885, p. 169) was told that there were no longer any Muslims at all there, later the Muslims were only allowed to live in a separate suburb there (Mission d’Ollione, p. 233). The Muslim area in Kano is divided into two separate tracts, Ilorin-Sining in the south-west and Ninglass-Kinshu in the north-east; in the intervening area the Chinese have built hill-forts (ibid., p. 155). Kinsggo, sometimes called "the Chinese Melbourne", was first founded by the religious reformer and leader of a rebellion, Ma Hua-lang (cf. china, I, 849).

In the xixth century there still seem to have been more Muslims in Shensi than in Kans (Dubre de Thiessen, Le Mahamourouze en Chine, I, 41 and 156); their language and dress were also different from those of the Chinese (ibid., p. 155). This suggests that the modern Dungan or Turang (cf. china, I, 850) did not adopt the Chinese language until a later date.

The rebellions were mostly local movements, not general risings under the banner of Islam. During the great rebellion in Kansu, which began in 1871, there was perfect quiet in Shensi (Dubre,
of the military court) in Aleppo, where he gave proof of his great energy in the suppression of a rising. In 903 (1497) he became Muḥammad al-shafīʿ (commander of the thousand Mamliks), and two years later Raʾis nāṣir al-Dawūdī (commander of the Mamliks) and two assistant commanders died. He was appointed to succeed them by Sultan Qansuh, and during his reign in 905 (1500) he appointed him Ghiyath al-Dawūdī [see DAWŪDĪ], and, as often happened in the last period of the Mamlik dynasty, at the same time Qansuh commanded (Grand Chamberlain), vizier and Khaṭif al-Khaṣāṣ (chief inspector of domains). The choice of the Mamlik dynasty, as a result of his high position, naturally fell upon him, when after a few months they were discontented with Tūmābbī; after considerable hesitation he accepted, as he was now over sixty. By inflicting heavy taxes and levies and issuing a deprecatory currency he ruthlessly raised the money to pay the old Mamliks and to buy new ones in order to create a following. In his financial measures he did not even respect the privileges of the pious foundations and by depressing the currency injured commerce and trade, and extorted money from merchants, women, munads and from his own court officials down to the very door-keepers. All this is made a very grave reproach against him by his contemporaries; it was even cast up against him in the Friday sermon. The chroniclers number him among the "bad Sultanīs". He hurried on the financial ruin of his country by over-heavy taxes on the sales of goods and by oppressive customs duties, even although he made good use of a great part of the money by strengthening fortresses (notably Aleppo), making roads and wells in the Hijāz and in providing water by good aqueducts (e.g., the one by the引用句柄). One great source of revenue in those days was the harbour and customs dues on Indian goods, which they had to be brought to Europe via Egypt (Aden, Djihāl, Suez, Alexandria) or Syria (Homs, Bāṣra, Aleppo). To avoid these oppressive duties, the Portuguese slaked everything on finding the sea route to India, which Vasco da Gama finally succeeded in doing. The Portuguese thus gradually established themselves on the coasts of India and brought their great quantities of goods directly to Europe by the Cape of Good Hope. In this way, the excessively high costs of passing through Egyptian ports as well as the cost of overland transit were avoided and the profits went to the Portuguese. These losses in revenue could not be tolerated by Sultan al-Qādir, besides, he felt it his duty as first ruler in the world as plenipotentiary of the Caliph and as a servant of the holy places at Mecca and Medīna to come to the help of the oppressed Muslims in India. The first encounter with the Portuguese took place in 909 (1505) when the latter robbed an Egyptian ship coming from India of its cargo and sent it to the bottom. Sultan al-Qādir tried at first to get redress by peaceful means by sending the Grand Prior of the Sinait monastery to the Pope with a letter of complaint, threatening to destroy the holy places in Jerusalem if King Manuel of Portugal did not cease by oppressing Muslims in India, and from conducting hostilities against his merchant-ships. The mission failed in its object as King Manuel knew quite well that the Sultan's interest in the great profits derived from Christian pilgrimages would prevent him from going to extremes. Sultan al-Qādir had
therefore to make up his mind to equip a considerable fleet, especially as 37 Arab ships were destroyed in 910 (1504) in the Indian harbour of Panam. The Sultan was interrupted even in the building of his fleet by the fact that the Knights of St. John in Rhodes repulsed a consignment of wood intended for Egypt. To secure a base for his naval war against the Portuguese, the Sultan dispatched several expeditions to keep the coast of Arabia under his control; his able general Husain fortified Ejdüla with walls and towers and made the harbour a base for the fleet. The first encounter in the Indian harbour of Suchal between Husain and Lecrano, vassal of the Portuguese viceroy, in 914 (1508) ended in favour of the Egyptians, who were supported by the fleet of the Muslim governor of the island of Lecrano, but the Admiral's ship was burned. But the very next year the Admiral avenged his son's death, destroyed a port of the Egyptian fleet (the Indian ships kept aloof) and forced Husain to a hurried retreat into the Red Sea. Hostilities between the Portuguese and Egyptians continued in the following years, a strong Portuguese fleet even attacked Aden but without any lasting success. A new fleet was then sent to India by the Sultan, but when it reached Ejdüla, the political situation in Egypt had changed. In 912 (1517) the Ottoman Sultan Selim I seized Cairo and thereby became protector of the Holy Cities as well as master of the western coast of Arabia. Sultan Selim, who cared little about expansion towards India, as his interests lay in the direction of Asia Minor and the Balkan lands, at the request of the Mekkans, received Jekub in spite of his successes, along with his collaborators, who held other parts of Arabia, and had him executed on account of his notorious acts of cruelty to the people of Arabia. The Egyptian fleet had to return. The Portuguese on their side were content with the successes they had won, as they had succeeded in diverting commerce from the route through the Red Sea. After the appearance of the Portuguese in the East and the alteration of the trade-route—the most important source of revenue for Egypt gradually dried up so that Sultan al-Qhārīr, for want of an intelligent system of taxation, had to fall back on extortion and the oppression of his subjects as he could do nothing else in the view of the disorganisation of the finances. Thus it was possible for him to pay his Mamluks well so that his rule now lacked a firm support. His foreign policy also was unsuccessful. From fear of the powerful Selim, he made an alliance with the latter's most bitter enemy Isma'il (q.v.), the ruler of Persia. In 922 (spring of 1518) Selim Selim entered Asir Mountain, ostensibly to fight against Sahh Isma'il. Sultan al-Qhārīr went to Aleppo under the pretext of acting as intermediary between the two rulers. To show his peaceful intentions he had brought with him the Caliph and the chief ʿajal but had in secret promised Isma'il his support. Selim learned of this through spies and was not deceived by his friendly reception. He awarded his savoys by Sultan al-Qhārīr. To make war inevitable, he maltreated al-Qhārīr's savoys, had his attendants killed and sent him back ignominiously as a prisoner, with a declaration of war. Sultan al-Qhārīr's cause was hopeless from the first as he was not aware of his general's intentions. He could neither protect his subjects from the extortions and acts of cruelty of his governors nor could he rely on their fidelity. Although several times warned, he entrusted the command of the left wing to the governor of Aleppo, Elkūbb; but at the first charge the latter left the battle with his troops and soon after the beginning of the battle the aged Sultan fell from his horse and died of apoplexy. According to his biographer, his body was never found; others say that a Mamluk cut off the head from the body and took it to Sultan Selim. On the rapid occupation of Syria and Egypt and the last desperate battle of the Mamluks see the articles Selim II and ʿUmmār II. Although Sultan al-Qhārīr had tackled his task with energy, he could neither make friends nor bring order into the chaos of the finances. His attention was always directed only to immediate profit and to making some one meet somehow, while he was not sure of his Mamluks and Amirs. He had no sense of justice nor a proper appreciation of relative strengths. Besides there was his aversion to the new arms, artillery and rides, due to a certain distain of using long range weapons, which it did not require personal bravery to carry. The rapid victory of the Turks and the superiority of the Portuguese was certainly to some extent due to the objection of Sultan al-Qhārīr and his knights to proper training with firearms, as is especially mentioned by Ibn ʿIyās.

In the Kurān in the Sülûk Library, Cairo, written for him, his name is spelt Kusânq Chawri, see E. Daino, Ross in Bulletin of the School of Oriental Studies, ii. 334 (London 1922). Red.

Bibliography: Weil, Geschichte der Chafyen, i. 384—416; v. Hammer, Gesch. der Osmanischen Archäologie, Post. 1877 sqq., ii. 420 sqq. (in both, the Oriental Orientalia, as well as the contemporary chronicles and consular reports of the west are given). Ibn ʿIyās deals with the reign of Sultan al-Qhārīr in the Râdīf al-Zâhirî [see 1391 1392], but only the end is printed in the Cairo edition, the years 904—915 are contained in the Paris manuscript, Bibl. Nat., de Slane, Cat. No. 1804 (years 905—915) and in the T. Petersburg manuscript, Rosen, Les manuscrits arabes de l'Inst. des Langues orient., No. 46 (the years 915—927). The full biography by Ibn al-Hallall has not previously been utilised, see Ibn al-Hallall’s Dār al-Halâl fi Tūrīj al-Mūṣa al-Halī, Ms. Vins., Hennig, Die osteuropäische Handelskartei, der Hafifl, ii. 1184 (cf. Brockelmann, Gesch. d. arab. Litt., ii. 368, t. 727 sqq., J. J. M. de Groot, Histoire de l'Egypte depuis la conquête des Arabes, etc., Paris 1824, p. 497—511; W. Meltzer, Die Mamluken, die Dynastie der, London 1896, p. 187—201. On his building operations or detailed particulars will be given in the coming work on inscriptions in Aleppo in the sections "citadels and city-walls"; on his buildings in Damascus see M. Soberhaim, Die Inschriften der Zitadel des Damaskus, No. 24—25 in Der Islam, xi. 1921; on commerce in his time see B. Moritz, Ein vorläufig des Sultans Selim in der Festsch. Ed. Seckel, Berlin 1915; p. 485—517. On his wars with Portugal see S. Prange, Gesch. des Zentralen des Untereuropas (Engelhardt, ii. 9) and H. Schüffel, Gesch. Portugals, iii. Hamburg 1858, p. 200 sqq.; R. S. Whiteway, Rise of Portuguese Power in India, London 1890.

For his coins see Or. Coins, of the Cat. Byz. Mus. iv. 214—216. (M. Soberhaim)
KANTARA, plur. Bannur, means in Arabic (1) bridge, particularly a bridge of masonry or stone; also (2) aqueduct, (especially in the plural), dam, and finally (3) high building, castle (similarly بنتيلـ = aqueduct from بنت = cas- tle; see KANTAR), cf. Tell al-Kantara, iii. 599; Dosy, Supplement, ii. 412; de Goeye, H.G.A., iv. 334; and particularly E. Geyser in the S.B. Ab. hist. 1905, vol. cix. No. 6, p. 111—119. The original word for the word, ḏarrā, is found in the ancient Arabic lexicon of Dörpfeld, Description de l’Afrique et de l’Égypte par Bellier, p. 390. Durrā, a bridge of wood or boats, is the opposite of kantar, which is of stone; in time, however, the two words came to be used as synonyms (see Dury, op. cit., i. 194).

No satisfactory explanation has yet been given of the origin of the word. The oldest reference is found in a verse of Tarad (t. 224; see The Elements of the Six Ancient Arabic Poets, ed. Addorto, 1859, p. 55). On account of this early occurrence of the word, Ṭūḥā (Madhara, ed. Wiedemeyer, iv. 183), it considers the word to be Canaanite Arabic. But we may with considerable certainty regard it as a loan from the Greek. Vollen and Geyser thought it borrowed from Latin. Graef thinks it was connected (Z.D.M.G., ii. 376; Z.A., vol. 100, p. 187) with the mediæval Latin word *cocumentum* (French *couter*; arch. *vaut*), while Geyser (op. cit., p. 111—119) sought the original either in *κανταρα = basket, κανταριον = wickerwork used in the making of roofs and buildings, or in *κανταρα = depository, (cf. also *καντορία* = marauder), from which Vollen and Geyser thought it borrowed from Latin. Graef and Vollen thought Graef's theory.

The former connected (Z.D.M.G., ii. 376; Z.A., vol. 100, p. 187) with the mediæval Latin word *cumentum* (French *couter*; arch. *vaut*), while Geyser (op. cit., p. 111—119) sought the original either in *κανταρα = basket, κανταριον = wickerwork used in the making of roofs and buildings, or in *κανταρα = depository, (cf. also *καντορία* = marauder), from which Vollen and Geyser thought it borrowed from Latin. Graef and Vollen thought Graef's theory.

The former connected (Z.D.M.G., ii. 376; Z.A., vol. 100, p. 187) with the mediæval Latin word *cumentum* (French *couter*; arch. *vaut*), while Geyser (op. cit., p. 111—119) sought the original either in *κανταρα = basket, κανταριον = wickerwork used in the making of roofs and buildings, or in *κανταρα = depository, (cf. also *καντορία* = marauder), from which Vollen and Geyser thought it borrowed from Latin. Graef and Vollen thought Graef's theory.

Kantara is most probably to be derived from the Arabic, and, as Noldeke, op. cit., thinks, in the first place from *κανταρά = hand, arch (see Payne-Smith, Thesaurus, Syl. vol. 3593; note especially *καντορία* = marauder), from which Vollen and Geyser thought it borrowed from Latin. Graef and Vollen thought Graef's theory.

Al-Kanjarah has survived in Spanish in the diminutives *alcanjarita* = little bridge, gutter and *alcanjarátillo* = arched aqueduct; see Engelsmann, Grammaire des mots espagnols et portugais d'origine arabe de l'Espana, Leiden 1859, p. 475; D. Favara de la Longa Castellanos, by the Real Academia Española, ed. Madrid 1899, etc.

Al-Kantara and Al-Kantara are frequently found together with descriptive additions e.g. Al-Kantara Khwa'is — as names for places like quarters of a city (snubbed in Bechtold) in areas where Arabic was, as spoken in the medieval or modern East. In his geographical dictionary (Mu'jam, ed. Weissenthur, iv. 187—192, v. 179—180) Yehiel gives a dozen places named Al-Kantara and hence called Kaññar; cf. also, for example, the indices to Al-Kantara, ed. de Goeye, p. 739—760, and Ibn al-Athir, ed. Kamilli, ed. Tamishe, viii. 790. For the numerous districts of Bagdād named after particular bridges under the Caliphate see al-Adna' at the entry to Gez el Strange, Bagdad during the Abbasid Caliphate, London 1905, p. 268.

Of the places named Al-Kantara, the following are worthy of special mention:

1. An oasis on the southern slopes of the Atlas in Algeria at the exit of a narrow pass through which the road and railway from Constantine to the desert regions; it is a station on the Constantine—Blida line, 35 miles north of the latter. Westwards, the most northern oasis in Africa, consists of three villages with about 3,500 inhabitants and possesses a mosque and a date grove. From its situation it was an important military station. The Roman inscriptions found there show, settled in ancient times. It is presumably identical with the station *Ad Caleam Herculis* of the Roman itinerary; see Devesa in Pauly-Wissowa, Realenzyklopädie der klassischen Altertumswissenschaft, iii. 1345. The name Al-Kantara is derived from the Roman bridge, restored in 1863 by the French, which spans a huge arch the ravine, the 150 feet wide Fenna al-Šahārār = the mouth of the Šahārār (so-called by the natives), through which flows the Wād al-Kantara; cf. for example, Vivien de St. Martin, Diction. de Geographie Universelle, Paris 1879, 2nd ed., and Kohl, Reisen erinnerungen aus Algerien und Tunisien, p. 322.

2. Al-Kanjarah, a little town of great antiquity in the province of Cauna (district of Tlemmedina) in Spain, near the Portuguese frontier, with 5,200 inhabitants. It receives its name from an imposing granite bridge, built in 105 a.d. in, which crosses the Tagus in six great arches to the northwest of the town. The place is also famous for the order of knights founded there in 1170 to defend the frontier against the Moors, which became called the Alcantara. Order after its head-quarters were moved to this town in 1215; see Bandelier's Spain and Portugal, Leipzig 1915, p. 459.

3. A small town with a mosque in Egypt, on the Asyut side of the Suez canal, half-way between Port Said and Isma'iliyya, a station on the railway connecting these two towns. It lies on a low narrow tongue of rising ground, which runs out between the large Masna'a village in the north and the little Ithāb lake in the south. But it barely takes its name from this "land bridge", but from a bridge which already existed here probably in the early Middle Ages.

The Arab geographer Ibn Fadh al-ʿUmmi, who wrote about 741 (1340), mentions the arch of a bridge, called Kāntara al-Djamir, near the old caravans of al-Aljira, under which the superfluous water flowed into the desert at the time of the Nile's inundation. There was still a bridge here at the beginning of the nineteen century, built over a canal connecting the two lakes already mentioned. The modern Al-Kantara has only arisen on its present site since the making of the Suez Canal. The old settlement was a short half-hour's journey from the canal; and it was affected by the menace of ruins Tell Al Aṣif (on the man) also called Tell al-ʿAlmar). This place may be regarded as the key to Egypt, for it has always been used by caravans as the gateway to the Nile valley. Its strategical importance led to its being occupied in remote antiquity, Tell Al Aṣif (with ruins of a temple of Rameses II and remains of the Ptolemaic and Roman period).
KANTARA — KANUN-I ESASI

marks the site of the ancient Egyptian town of Zaru (Γαταρα), the capital of the fourteenth district of Lower Egypt, which was already a fortress at the time of the Middle Kingdom. In the later classical and Byzantine literature it appears as Sele, Sele (Sele); according to a Latin inscription found here, it had a Roman garrison in 228 and was later also the see of a bishop. In the Middle Ages it was called al-ʿAqsa (the name al-ʿAqsa = "the bend" see above vv. Dair al-ʿAqsa), a name which was temporarily supplanted by that of the castle of al-ʿAqsa during the Mamluk period. In the World War (1914—1918) al-ʿAqsa played an important part in the struggle for the Suez Canal. From November, 1914, to March, 1916, there were frequent encounters between the Egyptian and Turkish troops; cf. thereon, for example, Berr, Der Volkerkrieg, Eine Chronik der Ereignisse seit dem 1. Juli 1914, Stuttgart 1914, pp. 230—244, vili. 307, xii. 318, xxiv. 47 sq., 123, 130, 132.

In remote antiquity as well as in the late Middle Ages and modern times, al-ʿAqsa was the point of departure for the caravan road from Egypt to Syria. Since the World War the new railway line to Syria has branched off here from the Fort ʿAqsa-Suez line, and runs from al-ʿAqsa via Kaţa, al-ʿArija and Ghaza to Ludd, where it links up with the line from Yafţ to Jerusalem.

On excavations and finds in the region of al-ʿAqsa see Clédat in the Recueil de travaux relatifs à l'archéol. égyptienne et assyrienne, Paris 1915, xlviii. 27 sq. and 1919, xxxvii. 1 sq., 70 sq.

§ 5. Kantarah, Zalabia in the valley of the Nahal Baʿath in Syria, an ancient Roman aqueduct of which remains exist at the present day; according to Arab legend, it was built by Queen Zewania (Zalabia); cf. Fr. Müller, Studien über Zembla und Polymere, Diss. Königsberg 1902, p. 14 sq.

§ 6. ʿAqsa, Pirawen ("Thorah's squadrant"), a great square in the south of Syria, which, beginning at Dhill, at the western foot of the large plateau of Leja (west of Hawran), runs in a south-western direction for some sixty miles as far as Mafkat (Gastara), providing many villages with its necessary drinking-water in the summer months; it is identified by Wetstein — probably rightly — with the Kantarah mentioned by Hama al-Sfani (Annals, ed. Gottwaldt, p. 117). But the Gemaraled Qidqah b. al-Jahru, who resided about 500 A. D., can hardly as Hama may be the builder of this marvellous piece of work; see Noldeke, Die geschichte des Fustat ..., in the Abb. Fr. Acad., 1887, iv. 503; it certainly dates back to ancient times. For further information see Wetstein.

Kantorschicht über Hannan und die Trachoniten, Berlin 1866, p. 123—125.

The diminutive Kantes (popularly Kantes or Kantes) is occasionally used as a place-name, e.g. a village in the district of Qawmān (Eastern Jordan); see Baecker's Palästina and Syria, 1912, p. 268. (M. STEICK)

KANUN, the name of a month, which is found as early as in inscriptions from Palmyra (see S. A. Cook, A Glossary of the Aramaic Inscriptions, 6. 1.) and corresponds to March/April. It later appears among the Syriac names of the months (see Fayyaz Smith, Thesaurus Syr., s. v.) and is also used in K. Ḫūra in the 7th and K. Ḫūra or Ḫūra. Here the two K. are the ninth and tenth respectively. Al-ʿAqsa, Kith al-ʿAqsa al-kitāb, ed. Sachau, p. 69, transcribes the Syriac forms exactly as K. Ḫūra and K. Ḫūra. In Arabic terminology they are called K. al-ʿawamid and K. al-ʿammār. In the Hadith the former appears in a remarkable connection. In Muslim, Ḥādīth, Trad. 99, a reason is added for the regulation, often mentioned elsewhere, that vessels should be kept covered: "For there is a night in the year in which the moon passes no uncovered vessel". In another version of the same tradition it is added: "foreigners (dingān) among us used to fear this in Kānun al-ʿawamid". (A. J. Waiteinck)

KANUN, a musical instrument, consisting of a flat thin quadrilateral box strung with wire chords, which is laid on the knees and played with a key of metal fixed on the forefinger, like the cither (Lane, Modern Egyptians, i. 70, 73. Salvador Daniel, Musique Arabe, p. 37).

KANUN (from the Greek kanon, canon, custom, law. The development of the Muslim empire, its vast conquests which brought it into contact with peoples of very different characters, who for the most part had laws already codified, the rise of commerce and industries and the institution of regular troops forced the governors to establish alongside of the sharia or religious law a series of special enactments by the application of the principle of waf, lex prout. It these enactments that are called kānūn (plur. kānūn). The Berbers give this name to their own statutes, their customary law; see Hanoteau and Letourneux, Le Kebyle et ses coutumes Kabyles, Paris 1873. ii. and iii.; Morand, Les Kānūn al-Mīṣīṣ in the Études de droit musulman algérien, Algiers 1910; Masqueray, Formation des dōts chez les populations arabes méditerranéennes, Paris 1886, p. 74 sqq.; Aschheim, b. c., i. and ii.; Le droit kabyle, 2nd ed., Paris 1917; Henri Basset, Essai sur la littérature des Berbères, Algiers 1919, chapter vi; La littérature juridique des Kānūn. (Cl. HERY)

KANUN-I ESASI, "fundamental law", the name given to the constitution of the Ottoman empire dated Divan-i Hüdjul 7, 1293 (Dec. 24, 1876), promulgated by a šerif of the same date addressed to the Grand Vizier Midhat Paşa. It maintains the order of succession of the family of Oğuzhans and explicitly gives the Sultan the title of Ahirlu (art. 3), protector of the Muslim religion (art. 4). It confirms his sacred and non-responsible character (art. 5). It enumerates the rights of Ottoman subjects (arts. 8—20), the duties and responsibilities of the ministers (arts. 27—38) and other officials (arts. 29—41); establishes a parliament (meftih-i umrut), consisting of two chambers, the Senate (Heyet-i Şeyh) and the
Chamber of Deputies (Hærî-î nazîmî); the first is to consist of members nominated directly by the Sultan and its numbers must not exceed a third of the second (art. 65), which is elected by the people on a ratio of one deputy for every 50,000 Turkish subjects (art. 65). It establishes the permanency of the magistracy (art. 81). No tax can be levied or passed by a law without the consent of the latter. The administration of the provinces is based on the principles of decentralization (savâihat-i chevalerie) and the separation of powers (tečiri-i muhimmî). It is based on elected municipal councils (art. 108-112). In case of trouble, the state has the right to proclaim an autocratic government, omarî-î nûrî; it is a state of siege which is meant by this name (art. 113). Sanction on the Sultan’s decision is provided for those who stir up trouble. The principle of compulsory elementary education is laid down (art. 114). In spite of the formal terms in art. 115, according to which not a single article of the constitution could be suppressed or neglected for any reason or under any pretext; the fundamental principles of the empire, although continuing to exist, are null and void at the hands of the Khâlimîs (official annals), it was actually suspended after the fall of Midhat Pasha and only re-established by the military revolution which marked the close of the reign of Abâl al-Hamdi II. The same name was given to the Perisan constitution proclained by a firâsî (royal proclamation) dated Dju‘ma, 12, 1324 (Aug. 5, 1868) and promulgated on 1 Dhu’l-Hijja 14, 1324 (Dec. 20, 1868) in the reign of Maqâfar al-Dîn Shah. It deals only with the formation and activities of the national assembly; it was granted in reply to the demand of the people in the English legislation. A supplementary constitution, promulgated by Muhammad ‘Ali, successor to Maqâfar al-Dîn, on Shahrûn 39, 1325 (Oct. 7, 1907), laid the foundation for constitutional law in Persia. It laid down more especially that Shi‘î Islam is the official religion of the State, that Tîrân is the capital, that the national flag is green, white and red (in three horizontal stripes) with the emblem of the Lîn and Sun. It provided for the equality of citizens of Persia before the law, the protection of life and property; arrests could not take place without a warrant from the President of the Tribunal of Justice. It recognises the freedom of the press, except for heretical publications or those harmful to religion, as well as the right of association and assembly. Legislative power is divided between two chambers. The ministers must be Muslims, they are responsible to the two chambers; lastly it provides for the establishment of provincial and departmental councils (savâihîs).

Bibliography: The Sekâhatî (official annals of the Ottoman Empire) from 1333/ 1391. A. Lhichii, La constitution ottomane, Paris 1879.

(Cf. Heart)

Kanuni-nâma, the name given to the fundamental law of the Ottoman Empire promulgated by Sultan Muhammad II on the advice of his Grand Vizier, Muhammad of Câmî-nâma. It is divided into three sections called jînsî (chapters), which treat respectively of the great institutions of the Empire, of customs and ceremonies and lastly of the fines for crimes and insurrections set aside for special appropriations.

Sultan Sulaiman completed these ordinances by issuing several "kanûn-âmes." The one reorganised the administration of the military fiefs (aÎmî, emînî) established by Murad I; the second codified the administration of the farms in Egypt; the third laid down the rights and duties of the reëfîs, "subjects" Muslim and non-Muslim in respect of feudatories; the fourth dealt solely with the police regulations and the penal laws.

(Cf. Heart)

Kaplan Giray, the name of two of the Crimans in the eighteenth century.

1. Kaplan Giray I reigned three times: 1179–1180 (1707–1708), 1182–1183 (1711–1712) and 1194–1195 (1730–1731). He died on the bank of Chiôs in Shahrûn, 1151 (Nov.-Dec., 1728), immediately after the death of his father Sultan I, in Shahrûn 1116 (Nov.-Dec., 1704), he set up as a claimant to the throne but was not proclaimed Khâlim III after the death of his brother Khâlim III. His own three depictions were on each occasion the result of the unfortunate course of military operations; the first (according to Sunnûmow, 9 months before the battle of Potaw, i.e., Oct., 1708) after an unsuccessful campaign against the (then not yet completely Islamized) Circassians, the second as a result of his arriving too late on the scene of operations on the Tanauhe, the third (when he was now enfeoffed by old age and illness) after his campaign to Persia, by which without even reaching the frontiers of Persia he exposed his own country to the invasion of the Russians. He was generally regarded as a skilled politician but an unfortunate general.

2. Kaplan Giray II, grandson of Kaplan Giray I and son of Khâlim Shâh II, only reigned for a short period: 1182–1183, 1179–1180, 1177–1178. He fought unsuccessfully against the Russians in the Dobrogea, was falsely accused of having had dealings with the enemy and deposed on Shahrûn 4, 1184 (Nov., 1770). He died in Kaprûz, 1185 (July–Aug., 1771) of the plague at the age of 32.

Kaplan Mustafa Pasâ, a native of Merzifon, an Ottoman general and statesman of the time of Sultan Mehmet IV (1648–57), one of the ablest and most successful collaborators of the Grand Vizier Kaşgâlı and a great wife (Phra) Paşa and therefore closely involved in Turkey’s struggle under the Köprü’s to regain her old position of power.

He was brought up in the court service, was Şibli of the Sultan and in 1639 was appointed Warrî and Wali of Baghâd. He spent a number of years as Wali of important provinces, in Wân, Smyrna and Damascus, until the Hungarian campaign gave him an opportunity to distinguish
himself, notably before Neshmi in 1653, at Kaškla and elsewhere. The Grand Vizier gave him his sister in marriage in order to ally him closely to him. Ahmed Pâša Paşa cleverly managed to transfer the most important affairs to his brothers-in-law. In 1660 Kapub was appointed Grand Admiral (Kapudan-ı Derâb) (*a tiger on land and a crocodile on water*) and describes himself in a petition of his appointment in situation to his name (Kapub = panther). He filled this important post for six years, commanded the Ottoman fleet with vigour and caution during the heavy fighting of the time and cooperated with special distinction to the conquests of Crete. He then took part in the campaign against Poland and conquered Lemberg along with the Khatun of the Crimea. He then became Wali of Aleppo in 1672, of Diyarbakır in 1673, of Bagdad for a second time in 1676 and in 1677 of Diyarbakır again. After the death of the Grand Vizier Ahmed Pâša his frank nature still enabled him to maintain his position against the new Grand Vizier Kâmi Mustafa, who was not inclined in his favour. Even the real death which he suffered in 1678 in the Ukraine in the time of the war with Tschecchien and Ramondowski, where he lost the whole of his arm and equipment, brought him only temporary dismissal and disgrace. Soon afterwards he became Grand Admiral for a second time. He died in November, 1680, in Smyrna, which he happened to have entered with the fleet, and was buried there. In Bagdad he had restored the mosque and baths of Shirko Muhammadân Khâdiri.

**KAPU, gâte, the Ottoman Porte, properly the palace of the Sultan or of the Grand Vizier. The name (by sycope, cf. "contr") may be of Central Asian origin; it recalls names like the yasamanski kado, for example, literally "exalted gate", etc. (cf. J. Six in Acta Orientalia, ii, 205 sq.). Among the Ottomans Kapub has been long in use in the above sense and used alternately with the Arabic bâb or the Persian dar. The name may have passed from Turkish into Arabic about the time of Tamerlan, and as far as the names of the places, e.g. Bab el-Mursuf, the alley leading from Bab el-Mursuf, transal. de Shams, Algiers 1847, where these places, show — Kapub "gates" the "meaning of this expression is explained and the list of the troops concerned given in Ahmed Djiwâh, Zeylâb, xii, Stamblâ, 1291, p. 214, f. from below; cf. A. J. Amoore, Her hand, J. van Hamez-Hamza-Pêrêf, Gevher, d. Ott. Reichs, 356). — The name "loyal gate" for the office of the Grand Vizier (Fârâ-ı Kapub; Kapub, "Subsystem Porte, Fulgida Porta") probably did not come into use before 1654, when the Grand Vizier Devrûh Mehmûd Paşa was given a building near the Serai for an office by Sultan Mehmûd IV.

**KAPUDAN, gate keeper, porter (Ar. bâbî, Péra. derâb), formerly the lowest grade and outermost guard of the Imperial Serail chosen from the Yanîcars, who guarded its gates, 50 at each gate. By day they carried a rod of bamboo, by night they were armed with sword and dagger. They were used as messengers to carry to the grandees of the Empire and foreign princes invitations to court festivities or documents of state. Some performed the duties of envoys. They were white helmed-like men (arkift, çaftâf). Their number and pay varied. While they numbered 300 at the beginning of the sixteenth century (cf. T. Souchâgus, Commentaire de l'origine de l'Empire Turc, Florence 1551, p. 130; in Schöffer's edition, Paris 1896, p. 316 sq.), and each Kapub received up to 7 aspers a day, their pay had risen to 20-50 aspers daily about 1511 (cf. the Bello Andrea Paolozzi report of March 6, 1511, quoting Marino Sanuto, in J. v. Hammer, Gesch. des Ott. Reichs, iii, 1677, p. 234 as well as Souchâgus, ed. Schöffer, p. ii.), under Sultan Murad III in 1582 (1574) their number was 350, in 1661, iv, 285), and under Sultan Mehmûd IV (1677-1683), according to Husein Hzefîkim (a. 1103 = 1691) Kitâb-ı memleket (written in 1680 = 1661; cf. F. Pétis de la Croix, État général de l'Empire Ottoman, par un militaire turc, Paris 1695, and J. van Hamez, Staatsverwaltung des Ott. Reichs, ii, 44 sq.), they had risen to 1600, who received 5,285,004 aspers a year. The Kapudan were divided into 45 companies, each of which was under its own company-commander (bâbî kâsof), who held a lieu in place of salary. The commander of the gatekeepers was the Kapudan Bâhî, a kind of chamberlain. According to the evidences of Monaviro, Navigato and Souchâgus, the number of kapudan kâsofs in the first half of the xvii. century was 37. Above them was the kapudan kâsof, head-chamberlain.

(Franz Babinger)

**KAPUDAN PASHA, formerly the title of the supreme commander of all the Ottoman fleets, who had also unlimited control of the imperial arsenal. The origin of this rank dates back to the beginnings of Ottoman sea power under Sultan Mehmûd II. The first naval captain (Kapudan-ı Derâb), the word Kapudan comes from the Greek kàpou, was the Bajâl-bey (Ott. Bâlî-bey), the head of the law, etc. (cf. Attâv. Gârân-ı âm, v. 168, 174). Till 1553 the Sandjakbey of Gallipoli was at the same time Kapudan Paşa (cf. Ramberti, Cura de Turchi, Venice 1543, p. 143 T. Souchâgus, Commentaire de l'origine de l'Empire Turc, Florence 1551, 1555, 1561, Nie de Nicolai, Navigations et préparations oriental, Lyon 1597, p. 771; N. Barocci and G. Bercht, Le relations degli ambasciatori Veneziani, p. 356; capitano dell' armata di Gallipoli, cf. Fitdâhâ Bey, Mihrâb-ı Selâm, ii, 454, Gallibey (Kapudan). With the increasing sea power of the Ottoman and the foundation of an arsenal of their own, especially under Sultan Süleyman the Great when the dreaded Khâjî-al-Dîn Barbarossa
for no long-continued fight, the headquarters of the High Admiral were removed from Gallipoli to Constantinople. While the office of Kapudan Pasha, who had the 19th Wilayet of the Empire as well as 13 sandjaks under him and disposed of an income of 895,000 aspers (cf. Sir F. Ricaut, The Present State of the Ottoman Empire, London 1687, p. 102, sq.), was already one of prestige, with the increasing size of the Ottoman navy, it soon became one of the first in the Empire. As long as the Sandjak-beg of Gallipoli was at the head of naval affairs, his jurisdiction only extended to Pera and Nicomedia and to larger naval enterprises, a special Pasha was appointed for him, who acted in supreme command as admiral (Spanish Commentor, Firenze 1551, p. 165). Later, especially from the time of Barbarossa, the Kapudan Pasha was one of the regular and active members of the Divan and was not only one of the most powerful but also one of the best paid dignitaries in Turkey. In rank he was equal to the Sefer Asker, directly below the Grand Vizier and the Şeyhülislam. On account of the revenues attached to the post it was always an object of ambition in the Turkish official world and was granted by the Sultan as a mark of special favour without regard to practice or the real merits of training and service. Down to about 1780 the Kapudan Pasha was also given the governor-generalship of the islands subject to the Pera in the Aegean Sea, some of the sea-provinces of Asia Minor and the control of the arsenal on the northern shore of the Golden Horn in Galata, where he had his residence among the wharves. In the 16th century the title was abolished under Sultan ʿAbd al-ʿAtıa and replaced by that of Bahšîye Nâşir, Deyaner of the Arsuf. All naval establishments were under him, the Minister of Marine; a naval counsel (Deytâ Bahšîye) assisted him and advised on technical matters and affairs of administration. In June, 1876 under Murat V, the title was revived but only for a short time; it was then definitely replaced by that of Minister of Marine.

A list of all Kapudanlı Deyân is given in J. v. Hammer-Purgstall's Geschicht der Osmanischen Reicher, (at the end of each volume) and in the work — first appeared as a feuilleton of the newspapers Yâhiye-i Imlâcîh ând by Rûmis Pasha-i Zade Mehmend Elâmi, Kerîve-i Kapudanlı Deyân (of 761 – 1265 [as Chronogram at the title]), 200 pp., 12°, Stanbul 1853 = 1865/69) and in Mehmend Râfî, Mûrât-i Imlâm, Stanbul 1314, p. 481 – 497.

KARA, the Turkish word for black or dark colour: in general, it is commonly used with this meaning as the first component of geographical names, for example Kara Amt (in account of the black mountain of which this fortress is built), Karî-i Bahâr (an account of its dark forests), etc. Besides, Karâ is used in place-names the form Karajâ. In personal names it refers to the black or dark brown colour of hair or to a dark complexion. It has, however, at the same time also the meaning strong, powerful and has to be interpreted in this sense in the name Kâra Oğuz, now in names like Kâra Arslân. In this connection we have the name Kârâ Khân, which was assumed by the Karakhanids in Eastern Turkey.

KARA ARSLÂN, i.v. EKID with the Jašik Ispahan al-Din, third Amir of the line of the Ortokîds, [q. v.] of Hîmâl Kaftû and great-grandson of the founder of this dynasty.

Statement differs regarding the year in which he succeeded his father Davûd b. Sülîman. According to Abu ʿl-Faraj Bârhamstrâma (Chronicon, ed. Budge, Paris 1890, p. 303), Davûd died in the Greek year 1455 (1443 – 44). The Arabic sources do not give the year; in any case Stanley Lane-Poole, who bases his view that Davûd did not die till about 343 (1448) on a mistaken interpretation of the al-Ârît (Kâmîli, xi. 74), of the Tafrîhî Karîmî in Kuniumaî Orientaîlî, Paris 1856, p. 6), puts the date too late. Müsûdîmîn Nasî (li. 577) gives 879 (1445).

Even before his father's death we find Kârâ Arslân at war with the Crusaders. When in Kömedîn, 558 (May, 1138) the Byzantine Emperor John, in alliance with the Franks against the Atabek Zang of Mawâlj, besieged the fortress of Shîrû near Antioch, he retired when he heard that Kârâ Arslân had crossed the Lepontian Sea with 50,000 men to come to the help of the town (Kâmûl-i Hîmâl al-Din, Firdûsî Râhî, in the Kasvûl des Lerbébûn des Cûrûsî, Document Orientaîlî, iii. 647). Kârâ Arslân does not, however, seem to have had at all a friendly reception from Zang on his arrival; the Atabek, indeed, ordered him to go back to his father. His relations with Zang continued to be strained, as is shown in the account in Kunium al-Din (p. 384) that a battle was fought between the two in 536 (1141 – 42) at Bamard, in which Kârâ Arslân was defeated. Peace was restored next year again. According to Abu ʿl-Faraj's account of his accession (see above), Zang went so far as to attempt to secure the succession of Kârâ Arslân's elder brother Togrûlshâm, which had escaped to Mawâlj. Sultan Muhammed of Ispâhi, however, gave help to Kârâ Arslân and Zang had to abandon his plan.

However, it is possible that they may have been Kârâ Arslân's relations with Zang, his alliance with the latter's son Nûr al-Din. Aleya was a most faithful one. In 544 (1149 — 50) he accompanied the latter on an expedition against his son of Sîratche, which, however, was later again restored. Nûr al-Din's brother Kâbî al-Din. In 550 (1164), he again assisted him, along with Nadir al-Din, of Mardin and other princes, at the capture of the fortress of Hûrûn, where many Frankish knights were taken prisoner (Ibn al-Ârsâh, xi. 29, 85). For the rest Kârâ Arslân does not seem to have been of a particularly warlike disposition. He would be better to keep out of the last named expedition, if the fear of his own subjects, whose fanaticism had been aroused by Nûr al-Din (and apparently the fear of Nûr al-Din himself), had not compelled him to take part. Very little else is chronicled of his activities. For example, the capture of the Kurdish stronghold of Shîrû (Ibn al-Ârît, xi. 185) in 54-5. A. H. and the unsuccessful
man of Yalduz, third son of Oghuz (Abu 'l-Chan, ed. Damascus, St. Petersburg 1871–74, p. 27). This clan emigrated from Turkestân with Hulagu and was brought back from Arslân by Timur and scattered over Turkestan, Persia and Afghanistan, especially around Kâbul and Kandahar. Its chiefs were called from father to son alternately Panâk and Ibrâhîm Khalîl; it was Panâk III who built Shâhâb in 1365 (1752) and gave it the name of Panâk-Kâh, whence the name panâk-kâhât is given to the coins which he struck there. His son Ibrâhîm Khalîl Khalîl, having succeeded him, found himself attacked by the Persians; after two fruitless sieges, Aghä Muhammad Khalîl (later Shâh) Khdîjâs captured Shâhâb but was assassinated there on the morning of Dhu 'l-Qa'da 21, 1211 (June 18, 1797), five days after entering the town, by three of his servants who feared his vengeance. Ibrâhîm, who had fled, came back two months later; he submitted to the Russian general, a Georgian by origin, Prince Sisaloff (Zieglharf), after the capture of Gandja in 1219 (1804) and agreed to pay a tribute of 6,000 ducats; he received the rank of lieutenant-general and a Russian garrison occupied his capital. His eldest son, Abu 'l-Pâth Khalîl, was the brother-in-law of Fâth 'Ali Shah and had remained faithful to the Persian alliance; he brought his father back to the Khdîjâs party and the latter attempted to liberate his capital, but Djâfar Kûlî Khalîl, son of Muhammad Hassan Khalîl and grandson of Ibrâhîm, warned the Russians of the Persian advance. 500 Russian soldiers left the citadel and in the middle of the night of Rabî‘ I 1212 (June 10, 1900) attacked the camp of Ibrâhîm Khalîl, who was killed in his family in the fighting. The Russian major commanding the garrison instilled another of his sons in his place, Muhammad Kûlî Khalîl, who reigned till 1238 (1822) when he fled to Persia. The Khdîjâs had, however, renounced all claim to Karabagh by the treaty of Gudâstan (Oct. 12, 1813).

(See also Khdîjâs.)

Kara-bâg (Turk.-Persian, "black garden," because of the black and fertile soil of its high valleys), the present-day name of the mountainous part of Armenia (q.v.) forming a province of Transcaucasia, bounded by the Kur, the Aras and the district of Erwan; area about 6,750 sq. miles and 250,000 inhabitants (half Arzakhians and half Armenian); capital Shusha; mountains: Kâmîsh (12,800 feet) and Kapudjîk (12,300 feet); its horaces are famous for their swiftness, and reptiles, scorpions and tarantulas are found there. It is in this province that Fath 'Ali Akhondzâde (q.v.) lays the scene of his comedy; Monastir. Turcisch Pontus, pontificate.

At the beginning of the reign of Shah 'Abbas I, in 996 (1588), the Ottoman general Fârsî Yüksek Pasha, in alliance with the governor of Elâsin, Djâfar Pasha, invaded Kara-bâg and seized Sardâb (Uz Hammer, Hist. de l'Empire Ottoman, vii, 221; Sykes, History of Persia, ii, 257–258). This province was at that time the hereditary fief of the Turkish clan of Erwan, the family of Sarıâla, a descendant of Aygâh or Aygher, eldest
Husain b. Ali b. Yazid al-Muhallab, who had at first belonged to the Ahl al-Khayy, but after the arrival of al-Shafi'i at Baghdad attached himself to him; at the same time he remained an absolute supporter of the belief in prophethood (wahdah); nothing has survived of his writings or his treatise on the doctrine of Manichaeanism. He died in 245 (859), according to others in 248 (862).

3. The Husnai Sahib Asad bin Muhammad (d. 570 = 1174), whose Nukhbat fi Tafsir, which Husain Khattab, Kashif al-Zahiri, ed. Fligl, p. 149, N. 1044, coincides with the Tafsir al-Kamil fi Tafsir al-Muballis (Brockhoff, G.A.L., l. 380, N. 314), is preserved in Cairo; see Förlitig al-Kamil al-Muballis fi Tafsir al-Kamil, 3. (C. Brockelmann)

KARA-CELEBI-ZADE, the biographer of the Ottoman historian, jurist and Shahk al-Islam, ʿAbū ʿAlī Sahib Ebrani, born in the year 1600 = 1591/92 at Stambl, a son of the then military judge of Rumelia, Husun al-Din Hamin b. Muhammad b. Husun al-Din Efendi (d. in Maharram 1622, Aug.-Aug. 1598 at Brusa and buried there; cf. al-Sayri, Samu’i’l Deligh Biruni, Cairo 1873, l. 256-259, Brusa 1503, l. 314-316; Ebulh, Sa’d al-Asama, Constantinople 1513, l. 80; rz. 35; he bore the title of a sadash K‘ara-Celebi-Zaide, which passed to all his descendants and caused frequent enmity, he employed the title of his elder brother, the chief district judge Muhammad Efendi (cf. M. Tharwat, Safina, Denkmal, t. 155; Ebulh, op. cit., l. 407; J. von Hammer, Constantinople, l. 25; M. E. dieu Djo ‘Hidjia, 1602 = June 14, 1653 and is buried at Ayiyib in Stambl) and studied also under the Murti’s Sen Allah Efendi. He then filled a series of offices: in August, 1622 he became Muhallab, who acquainted him of the death of Khan al-Din Pasha, in April, 1615 at the new medressa of ‘Ali Pasha, in April, 1616 at the medressa of Parra Pasha, in April, 1617 at the medressa of Zender Khan, in December, 1679 so-called “eighth (pinner ibn) at the mosque of Muhammad the Conqueror; in Jan., 1621 he was transferred to the Sultanahmet at Brusa, but by October of the same year appointed to the Sultanahmet in Adrianople, and in May, 1623 summoned to the same institution in Stambl. In June, 1623 he was involved in a mutiny of the ‘ulema at the mosque of the Conqueror, and sent as a punishment to Brusa to the medressa of Molla Khairawat, but pardoned on an accusation of Murad IV, and in Jan., 1624 recalled to Stambl to the Sultanahmet. In March of the same year he became judge of Yeni Shchir, was dismissed in December, appointed judge of Mekka in February, 1626 and dismissed once more in December, 1628. Returning to Stambl, after a short stay in Adrianople, he was appointed city-judge of Stambl in Jan., 1634. In this capacity he had to take measures for the security of the city during the preparations for the Polish campaign (cf. J. v. Hammer, Geschichte des Osman. Reiches, v. 178). But when in July of the same year the shortage of grease provoked discontent among the people of Stambl and brought down the wrath of Murad IV upon the judge responsible for the regulation of the market (cf. Z.D.M.G., xvii. p. 722) he was dismissed from his office and sentenced to death by drowning. A letter in the Sultan’s hand ordered the Superintendent of the Imperial Gardens (Hammaci Bahadur) to Dudge Efendi, afterwards governor of Bosnia, to take it to him. The misguided magistrate in a boat and to supervise the execution of the sentence on one of the Princes’ Tenants. The boat was just reaching Frinkip, where the sentence was to be carried out, when fortunately for Kara-Celebi-Zaide, a letter, pressed by his patron, the Grand Vizier Habib Pasha (d. 1638), brother-in-law of the Sultan, arrived which altered the drowning to banishment to Cyprus and at the last moment prevented the execution of the death sentence (cf. Na’ma, Tarikh Stambl 1147, l. 577). Pardoned by December, 1634, he was appointed military judge of Rumelia. During the rebellion which cost Sultan Ibrahim his throne and life in the summer of 1648 Kara-Celebi-Zaide distinguished himself by such shameful acts that even the frank Na’ma (II. 166; J. v. Hammer, op. cit., v. 449) has not the courage to repeat his utterances. After Ibrahim had been disposed of, he gained the favour of the young Khed Muhammad IV, who again appointed him military judge in August, 1648. The real object of his ambition, which he pursued by every means in his power, was the office of Shahk al-Islam. After he had first been granted the title of a Shahk al-Islam (Na’ma, II. 531), a case probably unique in Ottoman history, he was removed in October, 1649 from his position as military judge and appointed Shahk al-Islam in place of Beha! Muhammad Efendi, dismissed on May 2, 1651 (Husain Muflisi; cf. von Hammer, op. cit., v. 531-533). On the fatal Sept. 2, 1651 he once more fell into the imperial disfavor and was exiled to Chios. Two years later he was given permission to go to Brusa and in 1655 for the harley monastic (argil, see l. 460) which he had so far enjoyed, he received the revenues of Chios and the office of judge of Mudania, which he exchanged in March, 1657 for that of Elisippol. On the evening of Jan. 11, 1658, death finally ended Kara-Celebi-Zaide’s eventful career. He was buried at Brusa in the cemetery of Shahik Muhammad Dowski; his tomb may still be seen there.

Kara-Celebi-Zaide is not a very pleasing figure in Ottoman history, as he was a ruthless, selfish and intriguing man. His prestige as a scholar is therefore all the more marked. He was the author of a series of historical works, of which two have so far been published. With the Mirzad al-šarf his chief production is the Kamale al-Nabir, a historical work, in four parts dedicated to Sultan Ibrahim I, which covers the period from Adam down to 1626 (1664/47). The text consists of which there are several good manuscripts in Europe (cf. G. Fligl, Die arak, pers. a. türk. Hist., v. 202, Tornbjerg, Codices, Bd. Reg. Univ. Upsaliensis, l. 192, N. 277 and p. 197, N. 286, which appears not to be completed, was printed in Maharram 1248 (1832/33) at Bulaq
KARA-CHULI-ZADE — KARACHI

Page dimensions: 451.4x691.7
[Image 0x0 to 451x692]

Kara-Chuli-Zaide (1520-1566) was a Persian poet known for his touching portrayal of the life of Arab and Persian nobility. His works are preserved in manuscripts held in the Imperial Gazetteer of India, Vol. II. Another notable Persian poet of the Mughal era, Abbas Miri, wrote many works that are still studied today.

Karachi (Quracchi) is an important city and sea port on the coast of Sind, with a population of 16 million. The administrative centre of the province of Sind is Karachi.

The name "Karachi" does not appear to be of great antiquity, and is probably due to the settlement of a Dedic tribe called Karak, originally Dedic (see Glossary of Punjabi terms, Lahore 1911), from whom the town of Karachi (in the Dera Ismail Khan District of the N. W. Frontier) also takes its name. Following a common practice in the Sindhi language, the i has become r. (See Khalil, the Panjab and Kashmir.)

The early days of Karachi were marked by the influx of Arab and Persian nobles, as well as a mix of trade and commerce. The city's growth was rapid, and by 1869 it had become a major seaport.

Bibliography: See also the Imperial Gazetteer of India, Vol. II for further details on the history and culture of Karachi.

The city of Karachi has been a center of trade and commerce for centuries, and its importance continues to this day as a major hub for transportation and commerce.
of the Khazar" has survived into modern times in corrupt form Bakhras (the result of transposition of the circumflex point) as a name of the Sea of Azov.

After the Black Sea had been treated as a war element during the centuries under Byzantine rule, in the latter half of the Middle Ages it was opened up under the Komnenoi and Palaeologoi to the Genoese and Venetians and thus to European trade with the Near and Far East; in Kaffa [see KAFAJ, Tana, Arasman and Samarkand there arose autonomous Frankish colonies and smaller settlements in Sinope and Trebizond. After the fall of Constantinople, Mehmed the Conqueror closed the Black Sea to foreign shipping by barring the Straits; the destruction of Amasra (1459), Sinop and Trebizond (1461) and Kaffa (1475) completed the rules of Turkish commerce and the Black Sea became a Turkish inland sea, a Turc "Ağay", on which only the Turkish flag was allowed to wave. It was only with the advance of the Russian empire to the south coast of the Black Sea that the latter was opened first to Russian commercial navigation by art. X. of the treaty of Kuchuk Kainardjia in 1774, and ten years later, in 1784, to Austrian and in 1799 to British commerce; in the sixteenth century the other European powers obtained liberty of access to the Black Sea: France in 1802 and following her the smaller seafaring nations; the last treaties on this matter were concluded in 1827. Down to quite recently foreign warships were not allowed to pass through the Straits and into the Black Sea.

Bibliography: The history of the various apppellations of the Black Sea has not yet been written. The main work on commerce at the close of the Middle Ages is W. Heyd, Geschichte des Commerces de Livland, Leipzig 1855-1856; reprint 1924; for commerce under Turkish rule: Ch. Peyssonel, Traité sur le commerce de la Mer Noire, Paris 1787; for the later period: Hommère de Hell, Les pêchés de la Mer Caspienne, Paris and Strasbourg 1843-1845.

The political and diplomatic events which led to the opening of the Black Sea in the sixteenth century are fully discussed in [F. Hadji Mischief, La Mer Noire et les Détroites de Constantinople, Paris 1899; cf. thereon the notes in Djeddet, Tâvâkkî, ii. 284 and yil. 485 esp.]. The documents concerned are given by Nordenstam, Recueil des traités internationaux de l'Empire Ottoman, vol. 1. and II., Paris and Leipzig 1897-1900.

KARAGÖZ, a small town in Macedonia, situated about 40 miles to the S.W. of Salonica on the river Ointa. It was a tributary of the palace of the Empress Eudocia of Salonica. The ancient Greek name is Pánon, in modern Greek Vérria (Slav. Ber), to which form the Turks have added the adjective Karagöz. According to the Byzantine authors the town was sacked as early as 1331 by Turkish pirates belonging to the country of Kast. They landed with 70 ships and laid waste the region of Vérria and Traganeopolis, but they were finally driven back by the emperor Andronicus. Karagöz was an important military post; in 1547 it was occupied by the Servians, and in 1775 A.H. (1573/4) it was conquered for the first time by the Ottoman Turks.

From the reign of Murâd II., from whom dates the conquest of Salonik (1430) down to the

Balkan war, Karagöz belonged to the Ottoman Empire. In November, 1912 Karagöz was one of the last Turkish supports in the defence of Selânik, which was at last taken on November 8 of that year by the Greeks, since the possession of Athens (Nov. 14, 1913) it has belonged to Greece.

Karagöz is situated at the foot of the richly wooded Agbechos Dagh in a fertile region which produces all kinds of crops and vegetables and is famed for its tobacco and especially its vineyards on the mountain slopes. The silk-growing has given rise to a rather important weaving-industry in the town. In the neighbourhood are still ruins of the ancient Berbana. In the last period of Turkish domination the number of its inhabitants was a little less than 10,000 of whom about one fourth Musulmans, the rest being composed of Greeks, Bulgarians and Wallachians. It was the chief place of a Küflü of the same name in the wilayet of Selânik.

(1. H. KRAMER)

KARAGOZ, principal character in the Turkish shadow-play. The shadow-play has been known to the Mohammedan peoples since about the sixteenth century of our era. Its origin is perhaps to be sought, as Jacob suggests, in Eastern Asia, but, in regards the matter of the plays, there seems to be no connections with the Hellenistic mime (Horovits, Relisch). The modern Turkish shadow-players attribute the invention of their art to the patron saint of their guild, Shahîd Kâhişte (i.e. Tustari, the man from Tustar [Shahbūt] in Persia), after whom they call their shadow-stage Shahîd Kâhişte Malûzî "Shahîd-Kâhişte place.

According to the Turkish biographers a certain Shahîd Muhammad Kâhişte migrated from Persia to Asia Minor in the sixteenth century, and was buried in Brusa. On the various legendary accounts of the origin of the shadow-play see Hittes, Karagoz, i. 3. The shadow-players tell among themselves a kind of professional language, in which gipsy elements predominate. Another circumstance in favour of a connection with the wandering gipsies is the fact that the principal figure, Karagoz, is represented as a gipsy. The shadow-play is a favourite image of the transitoriness, sufficiency and goodness of all that is mortal with poets, especially those who are fond of mysticism. The idea is often expressed by the mystics that all things in the world have only a shadow-existence and only owe their being to the light permeating things from the Primeval One, who alone possesses reality and substance, found in the shadow-play a symbolic application. The shadow-players are fond of calling attention to this edifying aspect of their performance in the so-called stage-gazell (percise gazell).

The external apparatus of the shadow-play consists of a table like that of the European marionette theatre, only that, in place of the open stage a canvas is stretched across and illuminated by an oil-lamp. Against this canvas (porse) the
shadow-player presides coloured figures about a foot high made of dried skim: this is done by means of guilding rods which are put into the figures through holes provided with links. All the figures that appear are controlled by one player. Two musicians are his only assistants. The performances usually take place in the early hours of the nights of Ramadan but are also given as entertainment at domestic festivals, such as circassions.

The following is the course of the typical performance of the Turkish shadow-play: an introductory picture (gözlevre) is shown on the canvas before the beginning of the performance. This is removed during introductory music on a Reed-pipe and one of the two principal characters, Hâjdîwâd, comes on the scene singing a song. At the end of the song Hâjdîwâd calls out Horâbî, "O God," as the introductory religious formula of the play, recites the stage-phrase, praises God and curses Sultan and then proceeds to pay a tribute of homage to the Sultan. After a conventional introduction he begins to express in rhymed prose his longing for his companion Karâgöz and to sing to him from the door of his house — where the scene is supposed to be laid — in languishing tones. Karâgöz rushes out in anger and a short contest between the two at the end of which Hâjdîwâd usually disappears without return after an interval. The prologue proper then begins, consisting of a dialogue (var꽂levre) between Hâjdîwâd and Karâgöz, and this is followed after a stereotyped transition-formula by the piece proper, the dramatic part (faîl). The piece again concludes with unvarying form: Karâgöz gives Hâjdîwâd a box and the other goes to tell the "master of the curtain" that Karâgöz has torn the curtain down and destroyed it. Karâgöz then asks for indulgence for the defects of the play and goes off after threatening to punch Hâjdîwâd still harder the next time — here the piece is announced for the next evening.

The principal characters are always Hâjdîwâd and Karâgöz. The former is a cultivated elderly gentleman somewhat given to oplasm eating which is well-known to all the characters who appear and often acts as their confidant. Karâgöz is an excitable, rough pirate, the type of simple, natural vivacity contrasted with the decrêpité representative of convention and deliberation. Like his relatives in the European marionette theatre he is the real favourite with the public. He is laid and sometimes still appears with the phallic, both features which indicate a certain connection with the ancient mime. Both characters wear special caps, peculiar to the shadow-play.

The humour of the dialogue between Hâjdîwâd and Karâgöz depends for the most part on countless puns and plays on words which are always brought about by Karâgöz misunderstanding the learned words of his friend and giving them humorous interpretations. The preludes are not limited in any particular piece (faîl) but are chosen for illustration at will according to the length of the present play. The substance of the dialogue has almost always the same object, to attain humorous effects by the contrast between Hâjdîwâd's learning and Karâgöz's stupidity. Hâjdîwâd, for example, gives Karâgöz lessons in spelling, proposes games which he does not understand, goes with him as a singing Ramazân-night watchman, sound the streets, when Karâgöz sings all the songs out of tune and misunderstands them, or gives him sentences to be said implicitly, or plays games with him which he necessarily end in a fight, etc.

The production of the dramatic part (faîl), which follows the prelude shows certain peculiarities in scenic technique which are the natural result of the paraphernalia of the shadow-stage. The white surface of the canvas, only rarely relieved by a few figures in the wings, always represents the Klîştîrî square in front of Karâgöz's house, which latter is, as it were, represented in silhouette. In this part of the scene the performers play a part. As Karâgöz has continually to accompany the action with comments from the window of his house, there are often several scenes of action in one, one quite remote, the real scene of action, and the square before Karâgöz's house. The possibility of mixing up the characters into crowds with the conducting-proof is used to present remarkable scenes of recognition.

The players have a fixed stock of pieces, which is practically the same with all companies and, except for a few modern pieces, is considered to have been handed down from olden times. The pieces are sometimes dramatic versions of popular books (Ferîhî and Şâvârî, poultry and Zâhârî, Mahiğûnî and Zulîfê), in which case Hâjdîwâd appears as trusted adviser and Karâgöz as servant, and the hero concerned, or suchlike; sometimes they are pictures of everyday life in Stambul. In the latter we are given a series of Stambul types, among which are Orkû (the dray driver), the paganous drunkard, the lame beggar, the dwarf, the crazy man) and racial types (the young Stambol Efendi, the Persian, the Armenian, the Jew, the rough woodcutter from Kasâmûnî, the Bâsîrî, the Lâssà, etc.). The effect is very often attained by the formation of a series of incidents. A whole series of characters, differing as much as possible from one another, is brought successively into the same comical embarrassing situation, or they bring Karâgöz around whom the action then usually develops, into some such situation so that the coincidence increases with each successive character until it is finally relieved by a character superior to the situation.

Pieces of this kind are, for example: Valowà Safarî, "The pleasant journey to Jalowî". A young Efendi, usually castrated, wishes to take a trip with his sweetheart to the seaside resort of Valowî and buys a bag and a jug in which to put provisions for the journey. While he is preparing to make the final preparations, Karâgöz appears and makes the young woman, who has remained behind with the sack and jug, with stupid stories about a fatal accident that has overtaken her lover, that he has not the sea on fire with a match he had thrown away and has been burnt or that he has been swallowed by an eater of dogs, and so on. Thus a series of typical characters appear all of whom wish to go to Jalowî with the young woman and are hidden after the other by the obliging girl in the sack and jug, in which a new fight begins for the little room available with every new-comer. After 5 or 6 people have disappeared in the narrow jug, Çabîlî returns and pulls out all the story-wreams again. Another piece of the same kind is Çumall Nîqer "Bloody Night". The young Efendi is stopped in the street by two
ladies of his acquaintance, each of whom assent they have a right to him, and try to pull him with lies. As neither will abandon him, women-neighbours are called in to decide which is the worthy of the pretty young man. But when the neighbours decide in their own favour, the two women (one is called "Bloody Nigar") drag the young man into their house, unless him, throw him out on the street to punish him for his infidelity. A series of characters then comes up, who sit by the young man sitting naked, and who sit in turn to fetch his clothes out of the women's house; first comes Karagöz, then Hadjiwlad, then the drunkard, then a negro and then a dwarf. In the attempt to get the young man's clothes, they all meet to turn with the same fate. They are likewise undressed and thrown naked upon the street to that naked figures keep accumulating round the door of the house. In the end the problem is solved by the robber captain Sarf Efe from Bursa, whom he respects, and the naked forms receive their clothes again. — Another is Manfritz — Karagöz finds himself maltreated by his wife and enters into relations with a lady who meets him on the street and takes her to his house. To his question whether she also has no lover she replies: "I want nothing from him who comes after "kot"." Then various givers of the woman come in turn, ask for Karagöz's new house-mate and send all kinds of love-letters to her through him which the latter delivers to her in quites a distorted fashion, and ask her to take a trip with them to Manfritz. But they are always driven away by Karagöz and to his repeated question whether there is still any one coming the woman only answers with the above phrase. This goes on for a considerable time until finally Karagöz is turned out of his own house by the drunkard and then collects the admirers he has driven away in order to recapture his own house. In the mêlée which follows all take to their heels. — In the "Singer's composition" (Karagözü Eskişir) Karagöz as a crooked singer (Zeybek) displays a number of droll singers who have assembled for the "writer-play" (yazılı oyun) he appears as a public letter-writer who writes letters which are absolute nonsense for his clients. — In the "Boat-play" (göllü oyunu) he acts in his particular way as a ferryman assisted by Hadjiwlad. In the "Swing-play" (göllü oyunu) he lets a swing to the most varied customers, lullaby to a few who apparently die on it and is hurried by his co-religionists in the most ridiculous fashion and then brought to life again. Another time we find Karagöz as a rich gentleman (Karagözü Asgârlık) and in this capacity he has to deal with a series of people who wish to get positions in his service and with a beggar. The series of incidents is often made up of vain attempts by Karagöz to gain admission to a house of a garden, for example in the "Garden-play" (Carsi oyunu), in the "Convent" (Yeni oyunu), the "Sugar-baker" (Zeybek oyunu), by his unsuccessful attempts to ascertain something about his wife's doings by questioning the neighbours, who in turn misunderstand his questions and give the stupidest answers ("The Well-Covered").

Pieces in which we do not have this succession of incidents are, for example, "The Poplar" (Kirth Kuşon), in which an amusing act is spun round a brief touching episode; the singer Haam's son is stolen by the spirit of the poplar but entered on the poetic appeal of his father. Karagöz is first of all bewitched by the spirit of the poplar, then released by Hadjiwlad and, when he wants to cut down the poplar as a punishment, he is seized by two Albanian forestiers and punished with the bastinado, which is made the more severe in a comical way as the forestiers continually go wrong in counting the blows and have to begin all over again. In the "Chimney-sitting" (kamine) Karagöz is circumscribed when a full-grown man and the usual games are played which are used to distract a boy from the pain. A shadow-player appears, for example, so that we have here a play within a play, also an arzı oyunu-player, two jugglers, etc. — A kind of competition in magic between two witches, in which the young Efendi and his sweetheart and then Karagöz and Hadjiwlad are turned into animals, is the "Witch-play" (Cüce). In the "Land-asylum" (landaluk) Karagöz is infected by some lures escaped from an institution and shined by Hadjiwlad in an asylum and treated by a Frank doctor. In the "Wine-Girl" (Gelin) Karagöz is brought as bride to the drugged order to cure him of his craving. — Lastly the play the "bat" (Batûl) shows the doings of a famous not named Ikabâr in a bar. The pieces so far mentioned substantially form with several other less important and less well-known pieces (Tahmişefleri, "The broken ones", Àrûncular, "The coffee-crushers", Ballû Oyunu, "The fish-play", Dikânâlar, "The rope-dancers", Àrûntûhëne, "The chemist's shop") the usual repertoire of the shadow-players.

Very few of these plays have so far been published and translated and those usually in an abbreviated form. The texts printed in the east are almost all bad and defective. For further particulars see the Bibliography.

The text in the image is in German and appears to be a historical account or a brief on a specific topic. The text is divided into paragraphs and contains proper nouns and terms that are likely related to history, geography, or a specific cultural context. Without being able to read the content verbatim, the text seems to discuss a historical figure or event, possibly involving multiple languages and cultural references.

Regarding the image, it contains a page from a document with text that appears to be partially visible due to the cropping of the page. The text includes numbered references and dates, which might indicate citations from historical or academic sources. The layout suggests it is part of a larger narrative or article, possibly from a journal or book.

To better understand or interpret the content, a translation or transcription of the text would be necessary. Without further context or a complete view of the page, it is challenging to provide a detailed analysis or answer specific questions related to the document.
province of Flausa; the town of Ḫ is the residence of the muṣṭafīz; its population was estimated at 14,000 in 5,000 houses (20,000 Muslims, 5,000 Armenians, some 500 Greeks), but later figures are not available.

Of the few relics of classical antiquity the majesty must have been brought here from ruined sites in the neighbourhood, like Seallar (Pyrmomessos), Isdide Karahisir (Doxaelmeia) and Cibet Kapada (Synnada); the monuments of the time of the Germinian-Oghu, e.g. the Ulus Djafl of Khadja Beg and the tomb of Sultan Diwan and the old buildings of the Ottomans have not yet been thoroughly investigated.

The feature of the town, the steep cone of cratrace which rises 650 feet above the level of the town which lies around it, with the late Byzantine defences renovated by the Genoese-Oghu, still bore in November the time the men took Bakar Kafari (“the fortress which affords shelter to the Beg”); this chateau was probably never really a permanent settlement and is now left to fall to pieces, although it has been from time to time used for the interment of political prisoners (Averb. Dafa Zade, Zafh, p. 243-4), the last occasion being in 1602 when French prisoners of war from Egypt were kept there. The “Arabic” foundation inscription at the entrance, which Neubuh and Oberhammer saw, has not yet been copied.

Some 15 miles or 5 hours north of Kara Hisar-Sultan lies: 2. Ildar, Karasir — the correct name, not Eski Ḫ, as in Hamilton, op. cit., p. 461; if Eski Ḫ, and in Leblanc, op. cit., p. 68 sqq. Textier, Description de l’Asie Mineure, i. 145-154, and following them C. Bitter, Kleinasien, i. 605, 624 sqq., nor itheki in Ibiza (Ramsay, Mitt. Oriental. Arch. Inst. in Athen, 1894, 44 sqq., 348), nor again Iassakos (K. Geb, op. cit., p. 88 sqq.) or Ishide K. (v. Liebmann in Tarbourn’s Mitteilungen, Erg.-Heft Nr. 125, — a village of 251 houses near the ruins of the ancient Doca, from which the name of Syrmus came; the quay in Rome has been worked in modern times by European enterprise (Schlözer Berlin, 1325 a. st., p. 125). 3. Kara Hisar-i Shahr, also called Şahin (or Şehin, Sheh) Kara Hisar, or Karabik (Slidzhe, from the al-'umin in the neighbourhood which were worked in ancient times and still more in the middle ages and produced a particularly esteemed kind of this mineral.

As was first pointed out by Blau in 1895 on the authority of a Byzantine inscription the town is the ancient and medieval Cluisine and bore this name down into modern times. After the reforms of Justinian it belonged to Armenia Prima; in the Notitia Dignitatum it appears as the see of the bishop of Armenia Secunda. In the 16th century when the town was captured by Vasili II. Usaid al-Sultan was a raid on the Pontus (Ghiozoud, Hist. des Guerres des Arabes en Arménie, p. 166, quoted by Blau; ed. al-Tarabul, ed. de Goeje, ii. 493; ed. Ibn Khordadhbeh, B.G.A., vi. 108). On the other hand the Kallitrika which, according to Eutychius, ed. Seldan and Pococke, p. 353, was taken by the Sasanid Shahr with Capadocia and the Kallitrika, which the Hamidian Saif al-Dawla captured in 335 (946/7) (Z.D.M.G., x. 467; Vayl, Madina, i. 668) are almost undoubtedly identical with Colonis Capadociae, which, according to Nicetas (p. 72 and 689), is the later As-Safin, and which must have been lost by the Byzantines during the war of Manuel II. The Dölabrand-Oghu first established themselves there (Anna Comnena, Alexiv, ed. Reiferscheidch, ii. 164); later we find the Sasanids of Erzerum in possession (Nicetas Chon., Anon., ed. Bonn, p. 159, 294) who were dispossessed in 598 (1201/2) by the Salljih of Konya; they were in turn succeeded by the Mangudschis, vassals of Konya. After the fall of the Salljih of Konya, the descendants of Kritali ruled there and various princes of the house of the Al-Koyunlu and Īsā Koyunlu (cf. Sa'd al-Din, l. 247 = 'Ali, Kûrî al-Kûrî, v. 178 = Leenau, Hist. Musul., col. 471, 479 sqq.) in 1472 after the battle of Tetriba the town was taken by the Ottoman empire (Abdi, Pasha Zade, Türkî, p. 376 and 475, 184). We describe the town as the Kara Hisar of Kamali and Sa'd al-Din, i. 341 and 542; Leenau, Hist. Musul., col. 390, 479 sqq.). Kara Hisar-i Shahr formed a sandjak of the eyalite Erzurum (Evlây, Travels, ii. 265; Hüseyn Khan, Ziha, 422, 424); this district now belongs to the vilayet of Sivas and the rest of government is in the town of the same name.

The old name Colonis was taken over by the Salljih of the Armenian form Kaghushina, which we find in the Ilia’s chronicle (Houtsma, Recueil, ii. 297-295; iv. 251, 253, 319) and on the coins of Erzurum (Aubert Tawbi, Mechi, Kultur des Orients, iv. 439). If, as seems almost certain, the moyos-Kusum mentioned by Michael Antalios, ed. Bonn, p. 128, and Skelzakis, p. 679, “on a high hillaffle of source in Armenia”, is identical with Colonis, Kara Hisar seems to have already been formed alongside of Colonis; among the Greeks of the eighteenth century we again find the form Zarzur, corrupted out of Kara Hisar, as well as Colonis.

The imaginative description of the town in Evliya Celebi and many references in the Dizânman, both of the second half of the sixteenth century, are accepted and supplemented by the descriptions of modern travellers. The town, built on
On the slopes of a hill below the ancient fortifications possessed—according to Cuijat, with whom surmeying agrees—12,15,000 inhabitants (2,726 Muslims and 3,000 Armenians and over 1,500 Greeks) and was the residence of the sultan and of an Armenian Bishop, and of the Greek Metropolitan of Nicosia; there is no more modern information available. The citadel surrounded by a ring of walls, in which old cellars suggest a pre-Hellenic settlement, is no longer inhabited; within this fortress on the summit of the hill lies a small fortified redoubt with a polygonal octagonal water-tower. The defences date from the Byzantines and were further developed by the Muslims.

Schilthorst (Reinhard., ed. Langenmantl, p. 577) calls Karsa Acrois tis krincharak ton anastreptov (a land rich in vine-yards); more famous than the vine-yards which still exist were the rich alum mines in the adjoining village of Sotikleihes, in which were obtained the valued "alino de roca da Cortona" (L. E. Colonius) (Pagot in Holm, Historia del Commercio del Levan, ii. 605). These alum mines of the 12th century were described by Vincentinus Bel-levienus, ass. ed. 143; they were also mentioned by Ribben (ed. Bergeron, p. 147). Mehmed the Conqueror took possession of them for the state treasury (Sed al-Din, i. 348) and from the rent they yielded when farmed out the garrison of the fortress was later paid (Cod. Phoc. rées., p. 424).

1. Karsa Hisar, Behramhisar (Bairamhisar), is first mentioned by Hambulteef, Nakhsh-i, p. 97; Siid Kars (xvith century) visited the place on his journey from Siidis to Bokamp and Kirim (Mir-i bins Amurath. Ist. 1312, p. 96). In Kithi Cetina (at a time xvith century) it was a kast of the eyal Santiago. (Zikmunda, p. 633). It is now the residence of the Mir of the vilayet of the same name of the kats of Madin in the sanjili Yozgan in the vilayet of Angora, or day's journey east of Yozgan. The place is not marked on our maps.

2. Karsa Hisar, Demirdagh, a village in the Kreit. Corner of the vilayet of Angora, some hours north of the famous ruined site of Leuk, given in the Zikmunda, p. 626, among the Kasos of the sanjil of Cornoii. W. Hamilton in 1828 gives the place European to visit and describe it (Researchs, etc., i. 379, 381, 403; following him Ritter, Kleinmjaar, p. 47, 149 sqq.), next came in 1859 H. Barth (Reise in Transjordan nach Scutari, p. 42) and A. D. Montelmann (in Aegten, 1863, p. 755; Smrangaer, Boyr. Al., 1881, p. 197 sqq.). The ruined site of Karsa Safri, which belongs to it is mentioned under the name of the Zikmunda, also. Our maps do not Karsa Hisar appear without an epithet; it is not identical with the Karsa Hisar which the older Ottoman chroniclers mention in connection with the reign of prince Muhammad with the Virtha chief Gretichuk about 805 a. H. (Leun- claudius, Hist. Musulma., ed. 286, Sed al-Din, i. 209).

6. Karsa Hisar in Tekke (Zikmunda, p. 935; Ahmad Wafi, All Djazair, II, ed. cit.) also called Karsa Hisar in Adalia (Ewlija, Travels, etc., ii. 785), is mentioned by Sokutin, Mursi, 44 as a village a day's journey from Antaliska (mentioned Antaliska). In the time of Ibn Fadl Allah a certain Zabri, a former Mamluk of the lord of Adalia, had made himself independent there and raised a small territory which included 3 towns and 13 stronghold (N.E., Xll. 372 sqq.). The place is still mentioned in the surveys of Mehemmed the Conqueror (Karte Histoire publi. par l'Institut d'histoire Turque, part ii. 760) and in the annals of the History of Adalia (Zikmunda, ed. cit., according to Ahmad Wafi). It is in the capital of a snjil of the kast of Sirk in Adalia, in the vilayet of Karsa in the Salama of this vilayet, however, only knows the name-place name Sirk, and not in the other area found on our maps. Sirk, a miserable village on a tributary of the Kopen Se (Enemoni), is in the ancient Sevluk or Ritter, Klein- meine, ii. 515 ed., 653; G. Hirschfeld, Nave, in "wölchlichen Kleinwarten in der S. B. A. Alte, 1795, p. 134). The similarity of names is accidental because Sirk is originally the name of a Virtha clan.

Besides these towns of the name Karsa Hisar and Dowele do not deal with separately (see above, i, 952) the following are also given:

Karsa Hisar in the land of Osman (Yalta, q. r.), may refer to Karsa Hisar, also called Kasadja Hisar near Inoht in the ancestral lands of the Ottoman Sultan for which even in the older histories Karsa Hisar is often written.

Karsa Hisar in the land of Ibn Tughut (Ibn Fadl Allah, q. r., ii, 350), no other reference is known, unless there is an older name for Tughutu Kasadja near Mina.

Karsa Hisar, capital of the kast of Nal-hukhan, vilayet of Angora (Ahmed Wafi, op. cit.), not given in the Salamae nor marked on the maps.

Hamam Karsa Hisar, vilage of the vilayet of Gyzyn, kast of Siid Hisar, vilayet of Angora (Zikmunda); also not in the Salamae nor marked on the maps.

Wan Karsa Hisarn (Ewlija, op. cit.); no other reference known.

KARAKALPAK (see Kerak). KARAKALPAK is (black caps), a Turkish people in Central Asia. In the Russian annals a people of this name (Cerni Khotpais) is mentioned as early as the twelfth century; whether these "black caps" are identical with the modern Karsa Hisar is an open question. It is not the case of the xvnith century, which is also the case of the Karsa Hisar, and records of the Karsa Hisar in Central Asia. According to the embassy report of Shilin and Trosulin (1846), they then lived on the Sir Darya, 10 days' journey below the town of Turkistan. There they are again mentioned in the xvith century as neighbours of the land of the Ktim in Khiwa; about 1772 a treaty was concluded by the ambassador Vedihoan between Peter the Great and the Ktm of the Karsa Hisar, Abu Tamenbar Sa'dali Yustat Muhammad
The eastern part of the land of the Volga Kalitkiuusses between the Urals and the Volga used to be ruled by the Karakalpak. Even then the Karakalpak lived not only by their herds and by their rafts but also by agriculture — with artificial irrigation of their fields — and by fishing (on Lake Aral). They are said to have migrated to Central Asia from the Volga region. About the middle of the 18th century, the winter quarters of a body of the Karakalpak were on the central course of the Sir at Khawlu (north of Erk-Tuz). The winter (toru) of these Karakalpak moved into an alliance in 1755 with the Atash of Bukhāā, Muhammad Khān; 5,000 families of the Karakalpak were settled at Samarkand and received from there 400 ass-loads (kharvā) of corn; the son of the toru joined the army of the Atash (Miḥd. Wali Karimni, M.S. of the Asiatic Museum, c. 581 b, f. 1489). Radiāf (Atu Sehirim, Leipzig 1893, p. 228) visited in 1893 north-east of Samarkand some settlements of the Karakalpak, who had immigrated “from the Anū Dāryā not long ago.” A considerable number (about 20,000) still live in Farghāna at the present day. The Karakalpak are said to have been driven out of the lower valley of the Sir Dāryā by the Kazāk in the latter part of the 18th century; they have been mentioned in the 18th century a little further south on the (now dried-up) Yeni Dāryā as a propous of the campaigns of Muhammad Rūḥān, Khān of Khiva, against the land of Kungrat (1807—1811). The Karakalpak were then subject to the Khan of Kungrat and lived, in part, on the lower course of the Anū Dāryā, especially on the bank of the river known as the “Kazāk”; they disappeared in holding their own even at a later date against the Kazāk. After the union of Kungrat with Khiva (1814) the Karakalpak also had to submit to the Khan of Khiva, but made frequent attempts to throw off this yoke; in 1847 the town of Kungrat was even captured by them for a time after the suppression of this rising a part of the Karakalpak migrated to Farghāna (History of Khiva, Mission of the Asiatic Museum, 590 c, f. 298—305). To evade the head tax the rebel Karakalpak, J-Naūsh-ī, adopted the title of Khan (lit. “lord,” f. 5180) of the fortress built by him near where the Kazak flows into Lake Aral, the ruins of which still bear his name; did not fail till the following year, and then through treachery, into the hands of the Khivaans. After the Russian conquest of Khiva in 1873, when the Khan had to send to Russia all his possessions east of the main arm of the Amu and the most northwestern arm of its delta (Talšī or Talăš), the land of the Karakalpak also became Russian. The area, then separated from Khiva, was first administered as a separate cirko (četver); later as part of the government of Sir Dāryā; after the revolution it was constituted a separate territory (čelovek). The Karakalpak form about 20,000 in 1900. In addition, there are about 20,000 Karakalpak in Khiva and as many in Farghāna. The dialect of the Karakalpak was first investigated in 1893 by S. Hyelyan; some of the texts then written down were later published (1917) in the Pravoslavnoje Kazahskiye Krutkoje Sborniki Architektura et c. parts 3 and 4. Information on the Karakalpak is given in all books on Turkistan and its population; e.g. Fr. v. Schwartz, Turkestän, p. 17; Kostenko, Turkestanskiy Kray, St. Petersburg 1880, i. 329 sg.; Manfyky, Turkestanskiy Kray, St. Petersburg 1914, p. 390 sg.; Avtobiography Russian, St. Petersburg 1914, an official publication, i. 153 sg.; Vambray, Das Türkwerk in seinen technologischen und ethnographischen Beziehungen, Leipzig 1885, p. 373 sg. No special monograph has so far been devoted to the study of the Karakalpak people. (W. ḤAHRIM).)

KAARA KHALIL. (See ČENGÉR).)

KAARA KHITAI or KAARA KHIITE. The usual name since the 8th (9th) century in Muhammadan sources for the Kulta people, mentioned by the Chinese from the eighth century A.D. onwards, who were probably Tungar (according to another view Mongol). In the Turkish Oghūn inscriptions the Kitai are several times mentioned as enemies of the Turks in the extreme east of the area visited by the Turks in their campaigns; according to Chinese sources, they lived in the southern part of Manchuria. From the beginning of the tenth century the Khiitai carried on a campaign of conquest, conquered the northern part of China and founded a dynasty which was a Chinese ruling house called Liao (916). Even the founder of the dynasty, Apakši, was able to subdue Northern Mongolia, which had been conquered by the Khiitai about 890; Apakši himself visited Karakorum in 924 and is said to have received an Arab, i.e. Muhammadan, embassy there (Brückmeier, Mediaval Researches from Eastern Asiatic Sources, London 1916, i. 265), the first record of the appearance of Muslims in this region; it was probably only a trading caravan (Mongolia, of course, lay outside the usual range of Arabic geographical literature, for which the Khiitai were the extreme north-eastern people). The house of Liao succeeded in holding its ground against the national Sung dynasty which had arisen in South China since 960; not till about 1115 were the Khiitai driven from China and Eastern Asia by another Tungus people, the Čjürđen.

Even before settling in China the Khiitai had adopted Chinese civilization to a greater extent than other nomadic peoples; in contrast to the cult of the rising sun predominant among the other peoples of the East, they had borrowed from the Chinese the cult of the Sun; with this fact is the doubt connected the spread of this cult among the Mongols, and throughout the Mongol Empire in Central Asia generally (see W. Barthold’s story in the Zaamarskij vestoj, 1910, Vol. XCVII, p. 5). As the Čjürđen did later, the Khiitai formed a system of writing of their own based on the Chinese hieroglyphic system (about 920 A.D. with some 1,000 characters). A statement in the official history of the Liao (Liaoch) where, according to Dé Groot’s translation, there is mentioned an alphabet prepared for the Khiitai (small characters, few in number and all arranged in rows”) by the foreign wise man, Tsk-tsi (according to F. W. K. Müller, perhaps tsaax = Christian), is explained by Manfrin to mean that about this time (the statement refers to the reign of Apakši) the sounds of the language were reproduced in an alphabet of western origin (perhaps modelled on the Uighur) (Stemmber, d. Prussian Akad., 1913, p. 55 sg.); documents or inscriptions in this alphabet have so far not been found. On the other hand we have specimens of Khiitai writing in the alphabet...

As early as the first quarter of the eleventh century (according to some 403 = 1013/3, according to others 408 = 1017/3), an attack was made by the Kitai or Kitil (not yet called Karâ Khitâi) against Muslim lands; they are said to have advanced within 8 days' journey of Balasagûn (q. v.), and were only driven back from there by the Huiy of Yozgut (q. v.). In what concerns the exact date of this campaign, this is not known; in the early Chinese annals in Eastern Asia it is not known; Marquart's attempt (Oriëntâïsche Dialectstudien, Berlin 1914, Abb. der Kon. Ges. der Wiss. in Göttingen, phil.-hist. Klasse, New Series, vol. xiii., No. 1, p. 174 sq., to find with the help of de Groot some reference in the Liao Shi which might be connected with this campaign has not been successful. On the campaign itself see Ithân al-Ashîrî, ed. Tarnberg, i. 209 sq.; Marquart, Oriëntâïsche Dialectik, p. 544; Barthold, Turfanistan etc., ii. 294.

More important for the Muslim world was the second movement of the Kitai after the destruction of their empire in China by the Yüan (in Muslim sources later called Ch'ing, about 1285). It was not the migration of a whole people; a part of the Kitai remained in China under the rule of the Yüan and at a later date, in the time of Gengh Küch (q. v.), took the opportunity to rebel against the dynasty and to restore the kingdom of the Kitai as a Mongol vassal state, Kitâi is, of course, still the usual name for China among Mongols and Russians; in Muhammadan sources the Kitâi who remained in China as well as those who migrated overseas are called Karâ Khitâi.

The Chinese historians continue to regard the Kitâi dynasty as living in the same "Western Liao" with posthumous titles, regnal periods etc., probably the only example of the nomads of a dynasty of foreign origin being regarded as Chinese emperors even after their expulsion from China. But the statements of the Chinese annals regarding the Western Liao are very inaccurate as regards chronology and in other respects also very vague.

The Chinese can only report one march of the Kitâi through the modern Chinese Turkestan; from Muhammadan sources we know that it was not this migration that led to the formation of the Kitâi kingdom in the West; on the contrary, these Chinese were completely defeated by Arslân Küch Aḥmad b. Hasan, prince of Kâshgar, a few days journey beyond this town. Ibn al-Adârî (in the account in his Cennâs, ii. 53) places this battle in the year 522 (1128); perhaps it took place a few years later, as it is mentioned as a very recent event in the letter sent in name of Sultan Sanjar to the Caliph's vizier in Ramkâm, 527 (July 6, Aug. 4, 1133) (Barthold, Turfanistan etc., i. 33 and 57). Presumably another branch of the migration of the Kitâi by a more northern route met with more success; we get the fullest account of it from Alâ-eddîn (Fâvîli-ı Dîkân-ı Küçki, ed. Mizrâ Mûlî, Kâshgar, ii. 36 sq.; translation in d'Olson, Histoire des Mongols, i. 442 sq., and following him in Brechbühler, Medieval Researches etc., i. 225 sq.). According to this account, the Karâ Khitâi advanced through the land of the Küchâ (on the Yenisei), then southwards to the region of the modern Cugârak, where they built the town of Imî. From there as a base they occupied without opposition the town of Balasagûn (q. v.), whether the Muslim rulers of this region of the Türk Khân dynasty had surrendered them against his enemies; it was only from here, i.e. from the North, that they conquered Kâshgar and Khotan and later Mâ-wardî-al-Nahr and Khâvarîzma; the king of this land, Alish (1125–1150), had to bind himself to pay a yearly tribute of 30,000 dinars. On the fighting in Mâ-wardî-al-Nahr and Khâvarîzma we are particularly well informed by Ibn al-Asîr as well as by a few earlier sources like ísmâi-î Dîn (Houssem-ed-din Rémi de Nice, târîkh el. Chitâ, de l'Asie, vol. ii. hist. des Semites, vol. ii.) and Râghbûrî (Khâtât al-Musk, ed. Muh. Khâtîb, pp. 172 sq.,) the material is utilised by Barthold's Tärtüston etc., and in Marquart's Oriëntâïsche Dialectstudien.

In Ramâsân, 531 (May–June, 1132) the Khân of Samârâhâd, Mâhâmî, was defeated at Khânûr and on Safar 3, 536 (Sept. 9, 1141) his powerful overlord, Sultan Sanjar, in the desert of Kâshâân north of Samârâhâd. After this conquest the Karâ Khitâi stretched from the land of the Küchâ (on the Yenisei) in the north for a time as far as Bulaq in the south, from Khâvarîzma in the west to the land of the Uighurs (see Bulaqtilâ) in the east, with its ruler's residence on the Shâh-i Mîhârâ'îl. The latter bore the title Gîrâshk, as it is explained by Djavâyîât (ii. 86 below) as Khân of Khitâi" (Khânî-âfêd Khatâî); the word Khân is perhaps reproduced by the Chinese Ya-hu (family name of the Liao emperors). Unlike the other nomad empires no forces were granted either to the relatives of the Gîrâshk or to other persons of high rank; the first Gîrâshk is said to have allowed no one command of more than 100 men. On the other hand almost everywhere (Balasagûn perhaps formed the only exception) the native dynasties continued to exist as vassals of the Gîrâshk; these vassal states probably formed the greater part of the empire. The level of taxation was, as in China, fixed by the number of households; a dinar was levied on every house. The language of the government seems to have been Chinese, the second son-in-law of the Gîrâshk is called ísmâlî (Châneem "son-in-law") in Djavâyîât (this Ufûrunâmî in his memoirs to the Frenchmen, Histoire des Savants du Kazakhstan, Paris 1892, p. 325) in the edition by Muh. Khâtîb, ii. 17, 18 and 20, 20; in the account of the Khân in Aw'lî (Alâ-'adârî, ed. Browne, ii. 385) we appear to find the well-known Chinese word pâo (so to be read for hâ muqâl), later also adopted by the Mongols. Even under the rule of the pagan Karâ Khitâi the Muslims appear, however, to have retained their lending positions; the wealthy merchant prince, Mâhâmî bî, is mentioned by Djavâyîât (ii. 86) as vizier of the last Gîrâshk in Kâshâân about this time we find a Christian bishop (Qurdâm, Bilt. Orient. III, part ii. 505) in the same period also belonging to the oldest Christian inscriptions are those of the Câ (Zayûk mat'al. ad. arâb. alâb. wâqût, viii. 28; W. Barthold, Tärtüston, in Geschichte der Christenheit etc., Tilkbench 1901, p. 53); but these inscriptions seem to have made progress during this period. In the story of the conquests of the Karâ Khitâi, the country of the princes of Balasagûn appears as the frontier land of the Muslim world; in the beginning of the xiiith century two Muslim principalities are mentioned north of the III (q. v.) (one in the northern part of the
modern Semtroye and one at Kulja). After the destruction of the kingdom of the Kary Khitai and that of the Naiman prince Kuljak, which succeeded it almost through a much smaller area, the last Kary Khitai, as it is apparent from the account of the journey of the Chinese envoy Wa-kou-sun (1220-1221), had to adopt Muslim customs and Muslim garments (birettenueh, Maltnoot Rechercches etc., l. 29). All this was in favor of Marquart’s (Ottom. Monche Diakonstesti, p. 209) idea of the civilization of the Kary Khitai, which, according to him, stood "brilliantly out from his miserable surroundings"

The first Togu Khan died, according to Ibn Ali, in 577, in Kulja, in 579 (Jan. 20-Feb. 18, 1141) was followed by his widow, "and his son Muhammad". Marquart wants to read ibnun (emíshá for ibnun Muhammad (Ottom. Diakonstesti, p. 237); but it is nowhere stated that the wife of the Gürkhan was also his cousin; moreover, according to Chinese sources, she was only an aunt for his son who was still a minor. The latter, of course, cannot have been called Muhammad; but how the text is to be emended is not yet settled. The reading wa-ibnun Muhammad is also found in the Bâhi edition, l. 36). In the Muslim sources we find no complete list of the Gürkhan with particulars of the dates; the only references to these are scattered and contradictory. In the chapter on the Kary Khitai (I. 58-59) only mentions the widow and the brother of the first Gürkhan; in another passage (I. 17) he also mentions, as do the Chinese annals, the role of the daughter of the first Gürkhan; the same queen is mentioned by Edwandi (Kâbát il-Sulûr, p. 174), but he makes her reign down to his time, i.e. to the beginning of the thirteenth century, which cannot be correct. A more accurate list of the Gürkhan is given by the Chinese annals, but their tradition also is obviously inaccurate, especially in their chronological data, Marquart’s endeavor (loc. cit.) to bring the Muhammadan and Chinese sources into agreement and thus date the reigns of the different rulers seems in general to be successful. According to him, the widow of the Gürkhan reigned till 1150, his son till 1165, his daughter till 1178 and his grandson till 1211. The latter is mentioned in the Chinese annals and, according to the usual pronunciation of the characters concerned, was called Ci-in-kai. Marquart (following De Groot) reads Tiga.

Under this ruler took place the fall of the Khati kingdom, brought about partly by the activities of the Muslim rulers in the west and partly by the Mongol invasions, then just breaking; if the accounts thereon in Karthold and Marquart and also the articles BÜRKIN, BÜRKIN, CINGIS KHAN and MUHAMMAD B. TAKÂSH. As happened elsewhere also, it was here not always the conflict of religions that was the deciding factor. The GreekKnab, Muhammadan, afterwards leader of the Muhammadan movement, relied in the early years of his reign for resistance against his Muslim enemies on the pagan Kary Khitai, as well as the al-Ghurjân rulers (radius) of Buchara. The rising of Othman, son of Sultan Khai, against the Kary Khan is explained by Ijwawi (II. 97) as due to the refusal of the Gürkhan to give his daughter in marriage to this prince. Later, under the influence of the estrangement between Othman and his Muhammadan liberator and father-in-law Muhammad, this matrimonial alliance nevertheless took place (ibid., II. 132); the rousing of the Muhammadan population of Mauk-fad-l-Nahar against their liberator had to be put down with relentless vigour and bloodshed (606h = 1211). In contradiction to the view of these happenings given by Ijwawi, the Gürkhan was in reality deprived of his power a year earlier, in 1211, by Khilaj, prince of the Naiman. The attitude of this originally Christian, later pagan (probably Buddhist) ruler to the Muslim population did not always remain uniform; he appears as an ally of the Muslim enemies of the Gürkhan and as an ally of the prince of Khâshigar (cf. the text of Dinawal al-Karâsh in Barthold’s Türgistan etc., l. 133).

He afterwards became a most bitter enemy of Islam. In his reign took place the first and only persecution of Islam in Central Asia; public Muslim worship was suppressed, the Muslims forced either to adopt Christianity or to leave the pagans or at least to adopt the clothing of the Kary Khitai. Those who resisted were, like the Protestants under Louis XIV, punished by having their heads billeted on them. The only source on this point is Dinawal (l. 49 ff.). By Cingis Khan’s victory over Khilaj the religious persecution was ended; the former Mulsim subjects of the Kary Khitai, who had as early as 1211 been in negotiation with Cingis Khan, received complete freedom of religion under Mongol rule. The Muslim dress was now adopted (cf. above) by the remaining Kary Khitai, which was the very reverse of Khilaj’s law. Neither inscriptions nor buildings nor any other trace whatever of the rule of the Kary Khitai have survived in Central Asia.

On the rule of a former Amu of the Gürkhan and his descendants in Khâshigar see Kâfiz, Tâbât and Kûlmân. (W. Barthold)

KARA KIRGI. [See KIRGI.]

KARAKOL. [See KARAI.]

KARAKÖRM (KERAKÖRM) a mountain chain in the middle of Asia lying north of and almost parallel to the Himalayas. The range extends westwards as far as 73° of Long.; it has not yet been definitely ascended how far it runs eastwards. At one time the eastern limit was thought to be the pass of the Karakörm, but, according to the views of several famous geographers, the range runs much further in Tibet and the Tang-lin, and the Kary Khitai believed it as a part of the Karakörm. This idea was first put forward by Klaproth in 1836, and is now held by Burckhardt, Sven Hedin and others who further to the regard the Trans-Himalaya as the Karakörm system. If this is accurate, the whole system would be about 12,500 miles long.

The highest elevation is found in the part west of the pass of Karakörm. There we find several peaks over 25,000 feet high and countless peaks over 22,500 feet. The highest peak amounts over 25,000 feet. This highest peak is Mount Godwin-Austen, indicated on the Survey of India maps as K. A., but which seems to have been long known as Chogo-ri among the natives. This mountain a height of 28,365 feet.

This western part of the Karakörm resembles a wild and imposing natural beauty; it is covered with eternal snows over a considerable extent. The snow line runs from 15,500 feet north of the principal chain to 17,000 in the south.
If we exclude the polar regions the largest glaciers in the world are found in this part of the Karakoram. The Siachen glacier is 45 miles long and covers a surface of about 1,000 square miles. The Baltoro, Hunar, and Biafo glaciers are only a little less than the Siachen. The plateau out of which rises the Karakoram has an average height of 10,000 feet. The whole region is excessively dry because the rain (snow, hail) falls almost exclusively on the high mountains. The vegetation in the valleys is very slight and is confined to the vicinity of torrents and streams. At the terminations of the glaciers we find — very often on a little plain — a beautiful alpine flora.

The Karakoram is the most important watershed in Central Asia and divides the rivers running northwards empty their waters into the deserts of this part of the world, and running southwards into the Indian Ocean.

The principal pass is the col of Karakoram (18,550 feet), through which runs the important trade route between Chinese Turkestan and Kashmir. It is difficult and dangerous. In their long journey countless beasts of burden perish or starve. The mountains take their name from the pas. But, as Karakoram means "mountain path," the name is not very appropriate. It is formed for the first time in a map by Ehrhardt published in 1813. On this map the range is indicated by the name Moor Taagh or Kakkaroumm Mountains.

The first travelers to write on the mountains now called Karakoram were Miang Haidar, a prince of Chinese Turkestan, a product of his journey from Yarkand to Leh, capital of Ladak, in 1553. The exploratory report of the Karakoram only began in 1808 when Ehrhardt visited those regions. The more systematic and detailed exploration of the highest mountain pass was only begun in 1892 by Sir Martin Conway's expedition, which has been followed by several others.

The text continues with various references and historical events.

**KAHAKORUM,** a town in Mongolia on the Orkhon, in the thirteenth century for a short time (about 1256-1260) the capital of the Mongol Empire, now in ruins. The fullest accounts of the town are given among European travellers by Rubruk (Latin edition in *Rivista di Viaggi e Studi Orientali*, 1879, p. 343 sqq.; transl. by W. W. Rockhill, *Khulut and the Country*, and several, especially p. 230, with the translational notes) and among Muslim historians by Djiwaun ("Kara Khan"). Among the ruins, especially in 1609 sqq. and 1622. The fullest account of the ruins (by the members of the Orkhan expedition of 1891) is in *Sbornik Turkmenskogo Otdeleniya*, pt. 1 (1897); in *Radihov's Atlas der Alterthümer der Mongolien* is a plan of the ruins (Pl. xxvi) and a squeeze of a large (not completely preserved) Tibetan inscription (Pl. xlvii), on the latter see *F. Blochet in* *Tibet*, 1897, p. 309 sqq. As Djiwaun rightly remarks, a little below Karakoram there were the ruins of the town Kura-Bulan ("black town") which, from being in ruins, was built by the malei of the town Kura-Bulan ("black town") and it is now known as Kura-Bulan ("black town"). The city was built by the Mogol emperor Udegu (1256-1260) and was at first officially known as Kora-bulut; the name Karakoram was a popular one. On linguistic grounds Karakoram cannot be Rockhill's name, as Rockhill supposed, be a corruption of *Kara Khan* ("black camp") but means "black delirium" or "black delirious". Among the ruins are "black spots", "black clouds", "black earth", "black rocks", "black water", etc., v. *Keraum*, a name still frequently found in mountainous regions. As Djiwaun expressly remarks, this was the original name of the mountain region round the sources of the Orkhan. The statement ascribed by Rockhill (following d'Orias) to Djiwaun that the town was half a farsakh long does not seem to be found in the printed text of the *Turkic Dijhan Genghis* nor in manuscripts. Rubruk describes Karakoram as a small town not larger than the fanning St. Denis in Paris; the monastery of St. Denys was of the size of the palace of the Mongol emperor. The ruins of the Mongol Karakoram indeed indicate a town of very moderate size; the Ughur Orda-bulut was considerably larger. On the other hand there was much building in Karakoram during the city's brief period of splendour; Rubruk as well as Djiwaun give full descriptions of the imperial palaces built in the city and around it, some by Chinese and others by Muslim architects; according to Rubruk, Russian, Persian and various Western European architects also shared in the building operations at a later date. Two farsakh east of Karakoram lay, according to Djiwaun, the palace of Kurgan-bulut ("city of precious stuffs, brought as presents").

After the Mongol Emperors had removed their residence to China, Karakoram was only the seat of the governor of Mongolia; according to Marco Polo (trans. Yale-Goodrich, London 1907, p. 322) who was not himself in Karakoram, the palace of the emperor was in the citadel. After the Mongol dynasty was driven out of China (1368) the Emperors returned to Karakoram after the dissolution of the dynasty in the 15th century the city lost all importance. At the present day the great Buddhist monastery of Erdeni-Tsu is there.

(W. Barthold)
KAŞA-KOYUN-LU — KARAKUM

KAŞA-KOYUN-LU (Turkish: "house of the black sheep"), a Turkoman dynasty which reigned in Persia and Mesopotamia from 872 (1468) to 873 (1468). In the reign of the Emir Sultan Uwayz, Bārisan Khwādja, chief of the family of the Behrūzs, had obtained an important position at the court of the Sultan through his valor at the latter's death he seized Al-Mawrūr, SindSar and Arṭūql when he died in 872 (= 1380), his son Kārūm Muhammad Tūrmāshī, who was in the service of Sultan Ahmad, son of Uwayz, came back to succeed him and fell in a battle in Syria (792 = 1390). The son of this Kārūm Muhammad, Kārūn Vīsānī, proclaimed himself independent and chose Tabrīz as his capital. He made war on Timur, took refuge with Brian Vīsānī Yildirm and took advantage of the conqueror's campaign in Asia Minor to seize Irāk Sīrāzi, but he could not defend Baghdad against Mīrāz Ahī Bakr, sent against him by Timur, and retired to Egypt to the Mandūk Sūthūs, who kept him prisoner for some time. On Timur's death he was released, collected the thousand men that had accompanied him, took Dīyar Bakr after overcoming numerous difficulties, defeated Mīrāz Ahī Bakr in the vicinity of Naqsheswān (809 = 1406), captured Tabrīz and settled there himself. The following year his again defeated this prince, accompanied by his father Mīrāz Shīrūs, who fell on the field of battle. He took as hostage on the throne his son Kūr Bāšā, who had been adopted by Sultan Ahmad. He took Dīyar Bakr from Kārūn Oghlāmī Bayezūdī, put Sultan Ahmad to death after his defeat and captured not far from Tabrīz, seend Irāk Sīrāzi (813 = 1410) and made peace with Kārūn Oghlāmī after defeating him. He destroyed the army sent against him by Shīkh Ibrāhīm, king of Shīwān, and Kustendīl, king of Georgia. In 812 (1419) he captured al-Sulṭānīs, Karwān and Sāwā, towns of Irāk Sīrāzi. Shīh Rukh, son and successor of Timur, was leading a vast army against him when he fell ill and died in Dhu l-Hijja of the same year (December) in the town of Udžan, at the age of 65, after reigning 14 years. His body was despoiled by the Turkomans and lay for two days without burial; then he was buried at Arṭūql beside his grandfather Bārisan Khwādja.

His eldest son Anūr Iskandār, having reconquered the scattered members of his tribe, took the field against Shīh Rukh and was defeated after a battle lasting two days (824 = 1421); but he seized the opportunity of his opponent's return to Krhozān to copy the Khvārān. He defeated and slew Shams al-Dīn Sultan of Akhūd (828), Sultan Ahmad, chief of the Kurōs and Īsā al-Din Shīrūs (820 = 1420). He recaptured Shīwān and al-Sulṭānīs. He fought again with Shīh Rukh in 837 (1439) and, despite the bravery of his brother Dīshā Shīh, he lost the battle and fled into Asia Minor; then, taking advantage of the fact that the Timurid sovereignty had placed on his throne his other brother Ābī Sādī, he returned to the charge, captured his brother and put him to death. On the complaint of the people of Shīwān, who had been ruined by the plundering Shīh Rukh sent a new army in 838 (1443) with which Kūr Bāšā Shīh and Shīh Alī, his nephew, joined forces. Not being able to make a stand Iskandār fled and came back again when Dīshā Shīh had been installed by the Timurids, but he was deposed and exiled himself up to the castle of Alhānūs, where he was murdered by his son Khādīj at the instigation of one of his wives, who had fallen in love with the young man (841 = 1443). He had reigned for sixteen years. Mīrāz Haṣan Shīh, appointed by Shīh Rukh (839 = 1439), engaged in the reorganisation of Alhānūs and added to it new provinces, Irāk Alami (856 = 1453), Isfahān, in which the inhabitants were massacred, Fārs, Khūrāsān and Kūrāsān (862 = 1463), where he established his capital in the town of Herat. He was obliged to make peace with the Timurids: Sultan Ābī Sādī, who took the title of Emir again, and眩ed himself to that province to him because his son Husain had escaped from his prison and had succeeded in taking Alhānūs. After an exceedingly swift march, on which he laid the country passed through waste and many beasts of burden perished, he captured his son and banished him from the country. Another of his sons, Firdūs, whom he had deprived of his office as governor of Fārs because of his evil conduct and relegated to Bagdād, rebelled in 869 (1465) and sustained a siege for a year. He then obtained by the submission of Firdūs, put him to death and replaced him by his other son Muhammad Khwādja. He reigned undisputed over the whole of Alhānūs, the two Irāk and Khwādja as well as over the coast of Uxur. Prevented from putting into operation his plans against Dīyar Bakr (851 = 1466), on his return, while out hunting, he was surprised by his enemy Uxur Husain Bayezūdī and killed while trying to escape, at the age of 70 after a reign of 32 years (on the 12th of Kafri II. = Nov. 31).

Husain 'Ali, his exiled son, whom Uxur Husain had welcomed, and whose brain was affected by his 25 years in prison, gathered together a body of bad characters and marched on Tabrīz where his brother Husain 'Ali, the dervish, who had been crowned king in spite of himself, had been murdered as a result of cunning intrigues. He ascended the throne, despoiled his wealth to the mob and avenged his brother. Abandoned by the army leaders who went over to the camp of Uxur Husain, he tried to raise the people of Khawājah but was captured and put to death in 873 (1468). This was the end of the small branch of the family.

The branch which reigned at Bagdād consists of the following succession of princes: 1. Shīh Muhammad, son of Karwān Vīsānī (died 837 = 1443), had been entrusted by his father with the administration of this province, but he was deprived of it after 23 years by 2. his brother Kūr Bāšā, who reigned 12 years and died in 841 (1444). 3. His son Kūr Bāšā succeeded him; it was in his reign that Dīshā Shīh took Bagdād and thus put an end to this line.

the desert between the Sir Darya and the Amu Darya. The Karakum (area 146,000 sq. miles) is a
still more deserty waste and possesses even fewer fertile areas than the Kizil-kum. The sandy stretches
north of the Sir are far as Lake Balkar are called
"little Karakum" by Fr. Franz Amsel, author of
"Die Winn ist sich, that the Pamirs in the
2nd ed. of the "Reise..." of 1840-41, and in the
opinion of the author, probably identical with
little Karakum (the readings of the MSS.
are not certain; cf. edition by R. M. W. in 1843)
(W. B. H. M.)

KAARABISH, BAHK 17 AL-DIN IRS ABU ALLAH (i.e., son of an unknown father) AL-SADIQ (manuscript of
Abul al-Din Shirkan) AL-KUBR (born in Asia
Minor 1514) AL-MAHD AL-ASGHAR (i.e., Saladin), a staunch, received his
liberty from Shirkan and was appointed an
Amin. By the time of Shirkan's death he was already playing an influential part; it is said
that it was he who appointed the Khilafat of
Al-Hakam that the Caliph Al-Arif appointed
Saladin vizir. After the suppression of the
rebellion fired after Al-Arif's death by his Chamberlain, the monarch Muhammed al-Mu'tasim, Karakub
was appointed Chamberlain. In this capacity he
had the surveillance of the family of the late
Caliph and is said to have administered this
office with great strictness. To prevent the family
of the Caliph and his friends, he separated men and women. Saladin gave him the task of building the citadel of Cairo and extending the city walls to include Cairo and Fustat. Later he was asked to
force and defend Akka. When the town fell in 587
(1194) after eighteen months' fighting he
was taken prisoner. Saladin took him a
few months later for the high sum of 25,000 dinars. After the death of Saladin in 588
(1193) he entered the service of his son al-Malik al-Aziz
Cezmi and was trusted to represent the Sultan when the latter was out of Egypt. When the Sultan
fell, he and his kinsfolk (599 [1199]) he
designated his son al-Malik al-Mu'tasim to succeed him and Karakub his regent. In keeping with this
wish, the young ruler appointed him Amin al-
though Karakub was very old. He only held his
post for a very short time at most of the
Andria and the head of the chancellery, Ibn Mamat,
declared him incapable of ruling, presumably
account of his great age. His supporters, who
considered him the most worthy, consulted Saladin's
nephews, al-Kadi al-Fadil (q.v.), but the latter,
who had retired from political life, would not be
drawn into the question. Finally the Andria asked
al-Munajjed's uncle, al-Malik al-Mu'tasim, to take over
the regency. After this we find only one mention of
Karakub, when Sultan al-Arif, who had seized the
throne in 599 (1200) had to ask his nephew
for the house of Karakub as prisoners. He
died a year later. Contemporary historians, like
Makrizi and Ibn Taghiyehi, are silent about
him, as do later writers, like al-
Makrizi and Ibn Taghiyehi, and describe him
as the leader man of his day. They give him
particular credit for his activity as a builder. In
besides the buildings already mentioned, his bridge
his hippodrome and the bridge at Gibe, which
he built out of stones from the Pyramids at
Memphis, are mentioned.

In the same period a "Karabish" became no-
torials as a type of stupidity. A series of such
verdicts are related in a work entitled Kebab al-
Fashid fi Akhbar Karabish, "the book of the
stupidity in the judgments of Karabish". According
to Hafiz Khalil, the above mentioned Ibn Mum-
mat was the author of this book. Castner (see
BEIL) in his elaborate study on Karabish refers
three manuscripts: 1) a Cairo manuscript which
contains a brief selection from the Nishat
al-Fashid; the author is there given as Ibn Mummat;
2) a Paris manuscript, the author of which is given as al-Suyuti, certainly wrongly as in the intro-
duction Ibn Taghiyehi is wrongly quoted and
given a wrong pronunciation, which one can hardly
be the work of al-Suyuti; 3) a Cairo manuscript which
is a later version, in which Karabish is called
a Sulaiman and the number of his "verdicts" is
increased, by Ibn al-Salih al-Lakhain of the year
1200 (1786). These "verdicts" have nothing to
do with state-craft, but are court verdicts; they are
typical, well known anecdotes, current among other
nations also. A similar investigation has not yet
been made of the problem. Castner endeavours
to show that the work is a pamphlet against Karabish, whom, he says, Ibn Mummat hated as an
exceedingly severe man. It is not known
whether Ibn Mummat collected and published
these anecdotes in the life-time of Karabish, Ibn
Khalikian rightly points out that it is impossible
that a man such as he is described in the anecdotes
could have held high offices of state. Nor is
anything known of a particular feud between Ibn
Mummat and Karabish except that Ibn Mummat
was never to make the appointment of this
then very old man; Karabish is described by the
Frankish chronicle as advanced in years even in 585 (1189) at the siege of ALEA; he is said even to have known Godfrey de Bouillons.
One thing is clear from Ibn Khalikian's observa-
tions, the anecdotes given by Ibn Mummat were
referred to one Karabish.

Vering, Oudhaha Ibn Mummat, p. 452, note 6, Paris 1888. (SOHRABREY)

KARAM (Bn. J.), a dynasty of 'Aifin, from
476-533 (1285-1338) conducted an
'mafti' combination - at first as viceroys of the
Saljuqids of Sarv', in two branches, the Bault
Mamud and the Bank Abus 'Abid 'Ali Zura'; from
533-569 (1338-1378) the latter alone - the
Zauraids, also called the Bn. Dhih (sons of the
well) - held the now independent amirate, only
recognizing the Caliphate of the Ilkhanids.

The Bn. J-Karam belonged to the Ilkhan clan of the tribe of 'Afit in the Hamdan group
and were closely related to the Saljuqids (q.v.).
They were therefore the principal supporters of
the founder of this dynasty, the Isma'ilī Fātīmi Āli b. Muḥammad and his son and successor al-Muḥammad. When the Bābī Muḥammad al-lix, whom the Dhūʾ was allowed to remain as vassals after the conquest of Aḵd in 439 (1047), rebelled, al-Muḥammad and his wife, the Sultāna Sīyāḥeh Ḥusnā, to whom Aḵd belonged as her dowry, transferred the government to the two brothers, Masʿūd and Abd, sons of al-Karim, in 476 (1083); they received the vassals of al-Karim and the revenues of the surrounding areas, and the latter got the revenues from the lands and the country and the role of Aḵd in the gateway to the interior of the country, not to be confused with the stronghold of the same name above Dībālā, not far from the road from Dāmāz to Yārūn. Their joint annual tribute amounted to 100,000 dinars. Masʿūd and al-Zarāʿī, son and successor of Abd, fell before the gates of Zābd, performing their feudal duty under the command of the mayor-domo of the Sīyāḥeh, al-Mufaḍḍal Abī l-Barakāt. The division of the territory into two parts was for the time being maintained. Masʿūd was succeeded in succession by his son Abū ʿAlī l-Ẓarāʿī and the latter's sons Muḥammad and Abī l-Zarāʿī's heir was his son Abū Snūr and the latter's son Sāhā. But the manner of division of the country afforded the latter line an advantage from the first in view of greater facilities for expansion into the interior and the easier defence of the strongholds won by the family. It was the mountains in the north of the Māʾāfī district that were specially concerned. It proved to be of importance that al-Zarāʿī had taken possession of Dūmāzah in 480 (1087), a fortress in the Dūlāb al-Sāhī above the bend where the road from Dāmāz has to curve around the mountain and is at its farthest east point. Under the vigorous Sāhā, if not earlier, not only had their lands there been considerably increased but even Dūbānīyān about 150 miles W.N.W. of Aḵd on the road to Mokhā and Zābd had been occupied. Sāhā's father, along with Abī l-Ẓarāʿī, had succeeded in getting the tribute reduced to half and then to a quarter by successfully refusing to pay more to the Sīyāḥeh. Sāhā was able to stop it altogether when the difficulties of the vassals increased. The changed conditions attracted attention in Cairo: the elevens Fātimid al-Ḥānī: Abī al-Muḥamāl, soon after his accession received Sāhā into the Ismaʿili hierarchy as Āli in 525 (1131) Dūmāzah remained the royal residence. A two years' war in the Wadi Lābīn brought about a decision between the former and the latter. Abī b. Abī l-Ẓarāʿī began by purchasing the support of numerous warriors. When he had shuffled his bolt, Sāhā gained the upper hand by throwing his great weight into the conflict and 300,000 dinars in addition. He was finally victorious on the same day, and it is said, as his ally in 'Aḵd, Bilāl b. Ḥārās attacked the castle of al-Khādisjah.'

Henceforth the Fātimid's ruled alone. But Sāhā died six months after his entry into Aḵd in 523 (1138). He is buried there at the foot of Aḵd. By the next year his son and successor Abī al-Muḥamāl had died of consumption. He had designated as his successors his infant sons, who were in Dūmāzah under the guardianship of his two sons Ans and the minister Yāḥyā b. Abī Bilāl, whom he had dismissed and covered, was now in 'Aḵd and gave the crown to another son of his former patron Sāhā, namely Muḥammad who had taken refuge from 'Abī al-Muḥamāl on his father's death with Mansūr, son of the above mentioned mayor-domo al-Mufaḍḍal. The reign of this Muḥammad b. Sāhā from 524 or 525 (1139) to 531 (1146) marks the zenith of the Muḥamāl's power. He put to death the last prince of the line of Muḥamāl in 525 (1139), Abī b. Abī l-Ẓarāʿī, who had still held out after his defeat with some members of his family and a few faithful followers in a few mountains strongholds, for example in the Dūlāb al-Muḥammad b. Dūbāh in the north-east and Abī Jābār in the south-east. He had received the rank of Āli immediately after his accession, for the Khādisjah sent from Cairo to invest 'Abī al-Muḥamāl found Muḥammad already in actual power. It is to this rule that we are mainly indebted for our knowledge of the history of the Sūḥābīs. For, with some men not so fully interviewed, like Ans and Bilāl already mentioned, he was the main authority for the section of the dynasty in the al-Tawāḥ al-Umārī of Umār, who visited him personally when he was in al-Ṭanās. The Sūḥābīs were based e.g. al-Fāṭimīs, al-Khuḍayrī and the Khādisjah. Umār praised Muḥammad very highly, notably as a Muscèen, but one cannot help thinking that he—himself an enthusiastic Ismaʿili—was biased in favour of his royal co-religionists. Whether Muḥammad for the rest interpreted his duties as Āli in a religious sense, we do not know nor can we tell whether the request of the founder of the Mahdi dynasty, 'Abī b. al-Muḥammad, who had asked Muḥammad in the presence of Umār in an audience shortly before his death for help against Zābd, was rejected for purely political and military reasons or for religious reasons as well. In his son and successor in the religious interest predominated. The military power passed into the hands of the other family of Bilāl. The latter himself, who had already had the share in the government in the reign of Muḥammad, which due to his help in securing the throne, had died not long before—so very shortly after—the change in the throne, leaving a vast estate. He succeeded in office first by his son Muṣṭafā and after the latter's early death by his other son Yāḥyā who ruled quite independently. When Yāḥyā died in 550 (1154/5) and in keeping with his wishes was buried in Moknā, Yāḥyā had his 5 sons, who were still minors, invested by al-Fātimid al-Djāwar al-Muṣṭafā. But the Zarāʿīs were to be spared the fate of being finally detached by their own people. The last blow came from without: in 559 (1163/4) Sāhābī's brother Tābih dressed the Crown along with the rest of Yemen. In the following year Djāwar surrendered him the crown by treaty and a year later Tābih had Yāḥyā, whose hiding-place was betrayed, beheaded.

the Gobb Memorial Series, iii/1 (1906), p. 15.

**KARĀMA** is strictly the infinitive of karım (to be kārim "generous" in the widest sense); but in usage it is a noun of similar meaning to kārim and, in fact, to show one's self karīm to any one (Lataif, p. 456, n., 477). It does not occur in the Kārin (although kārim is very frequently used of Allah and his works (al-Rażīf al-Ja‘fārī, al-Mu‘tawakla, et nafy) and, its use has come, therefore, in the devotional language of Islam, to mean the exhibition by Allah of his generosity, favour, protection, help, towards any one, e.g., al-Ba‘dawi on Kor. x. 63 (ed. Fleischer, 1. 249), a hadith conceives on the will; and karīmat means individual cases of this generosity. In a special sense, the karīmat is now considered the miraculous gifts and graces with which Allah surrounds, protects and aids his Saints (al-amīn). A Kārim then for those was sought in the story (Kūr, iii. 32) the food which came miraculously to Marwān, as the letter of the book in the transporting in a moment the Yemen of the throne of Bālī by a unnamed companion of Solomon (Kūr. xxviii. 40). As neither Muslims nor the unnamed companion was a prophet (there could not be evidentiary miracles) see the whole discussion in al-Tadhābar on al-Nāsib’s Kitāb al-Kārim (ed. Quatremère, i. 169, 189; transl. de Blain, i. 110, 127); and a pataphetic philosopher like Ibn Sīnā (al-Ma‘ārīf), ed. Forster, pp. 205, 219, 221, 224. These were evidently driven by the pressure of facts to fall back on the hypothesis of still unsolved mysteries in nature; cf. Goldschmidt, Die Religion der islamischen Kulturkreis, Leipzig 1920, p. 139, note 3. Only the Multanisites, who were certain that nature would hold no mysteries for them and that they need only apply reason to their theological positions, preserved and found, even in the Kārim, basis for their protest. See al-Zamakhshārī on Kor. xxviii. 26, 27 (ed. Khāshneh, ed. Nāṣer al-Lūt, ii. 539), and on the whole development Goldschmidt, op. cit., pp. 114-117. The coincidence in sound, in derivation and in meaning between these karīmat and the kārīmat of the early Christian Church (1 Cor. xiii. 20) is not striking and can hardly be accidental. The religious phenomena behind both are the same; but the verbal link is not clear. The Syriac Church called the kārīmat simply "gift," ma‘ṣūmah, in Arabic, ma‘ṣūmah, which indeed occurs in this sense; it is possible that the Greek word taken over into Syriac may have suggested to users of Aramaic their own kāramā. Technique, such a kārīmat is one of the kādamāt khāb, the "breakers of usage," for there is no Nature in orthodox Islam, only, and at best, a custom which Allah has established (Goldschmidt, Vorlesungen, 1930). It differs from the ma‘ṣūmah or "evidentiary miracle" in that it is not worked by Allah for a prophet, in proof of his mission and is not accompanied by theāma or a ta‘bihī, a claim of prophethood or a challenge in the unbeliever. It differs from the
The town of Karaman is the ancient Lyranda (Τα Λεγόμενα, cf. Pauly-Wissowa, Realencycl. d. Alteren Mährisch-Königreich, xii. col. 792). It lies 33 miles S.E. of Konya in a vale at the foot of the Taurus, on one of the great roads which lead from the coast (Salafse) across the Taurus into the interior of Asia Minor. It is not known when it fell into the hands of the Seljuks for the first time; as in the case of the rest of Asia Minor, the process of Islamization probably was completed rapidly here. Lyranda also belonged to the Lycian kingdom from whom Khalil Araban took it in 1065 (Michael Syrius in the Rec. des Hist. du Crois., Doc. Arm., i. 360). In 1190 Frederick I Barbarossa entered Lyranda on his way to Cilicia and in 1193 it again fell into the hands of the Christians when Leo II, King of Armenia, conquered it for the Knights-Hospitalier. In 1216 it had, however, again to be surrendered to Saladin. (Rec. of Doc. Arm., i. 360). Shortly afterwards (about 1256) Lyranda was among the towns which were abandoned to the expanding Khwarizmian ( Ibn Battut in Hist. des Voyages et des Trajets et des Peuples, i. 203). In connection with this event Jalal al-Din Walad, father of Jalal al-Din al-Rumi, mingled in this time from Khorasan to Lyranda where Jalal al-Din al-Rumi married in 625/1229 and where Jalal al-Din Walad was born (Les Saints des Ordres Terrestres, no. 8, translated by Haust, L., Paris 1918, p. 49, 271, 385).

The town attained great importance through the duchy of the Karaman-Oghuz (p. v.) which made it their capital in the beginning of the sixteenth century, when they did not yet feel secure in Konya. Several princes of this dynasty lived here with a later period. They embellished the town with some buildings and fortified the citadel. During this period the town was often under Egyptian sovereignty (Ibn Battut, ed. Paris, ii. 284; Ibn Fadl Allah, Maqalat al-Ashir, in the J. E. xii. 342 sqq.) In the wars with the Ottomans, Lyranda was repeatedly occupied by the latter and the Karamanid ruler was forced to take refuge in the mountains. Finally in 1427 it was captured under Mehmed II and totally incorporated in the Ottoman Empire in 1426 by Bayazid II. Henceforth Lyranda was known as Karaman, although the old name has always been retained in official language.

The modern Karaman is a town of about 25,000 inhabitants (according to Bonnin, p. 106; Karaman, d. a. a. o. gives 7,500, All Djamal 10,000). It lies on a low hill on the southern shore of the Lycian plain about 4,000 feet above sea-level. The highest part of the hill (about 300 feet higher) has on it the citadel, now falling to pieces; it consisted of round and square towers lined by walls; the outer wall is built from stones from older buildings with Arabic inscriptions. Among the most important buildings of the Karaman period is the Emir Miins Medresah where several princes of the dynasty are buried. The dome has fallen; but pillars of it are still standing which once belonged to Roman buildings. There is also the Khairbey Medresah, one of the finest buildings of the Karaman period (pictures in von Bonnin, op. cit., p. 118 and 120, and Woermann, Gcsh. d. Karam., ii. 446). According to the inscription (Tchoukchi Oghuzni Rudkani Rudkani Rudkani, also entitled Acea Historie publ. par l'Institut d'histoire ottomanie, i. 11, p. 111), it was built in 783 (1381) by the daughter of Musul, who married the Karaman-Oghuz Ali al-Din (or Ali), there is now very little left of it. Mention may also be made of the al-Ali al-Din built by the same Ali al-Din in 774 (1370), where Jalal al-Din al-Rumi's mother is reputed to be buried (now called Agha Tekke; cf. von Bonnin, op. cit., p. 118), and of the site where the Karamanid Ibrahim Beg and his three sons are buried. The inscriptions in it are now destroyed (O.E.M., 100, 191). The lake is situated near the Karamanid necropolis and not far from Lyranda which was founded by this same Ishak Beg in 836 (1432) (picture in von Bonnin, op. cit., p. 112) and has a finely ornamented gateway and is richly adorned with tiles in the interior.

The houses of the town are built of clay (kastran), the inhabitants are reputed to be very dirty and the climate with its great variations in temperature is said to be very unhealthy. There are a number of mosques (kullies and iwan) in Karaman and imambures. The town is on the Anatolian Railway between Konya and Engil, it has always been an important station on the trade route to Cilicia.

The Kital of the same name, the capital of which is Karaman, belongs to the maudic of Konya. It has about 25,000 inhabitants (according to Cunet, 21, 417) of whom the great majority are Mahommedans. The Taurus in the south is here called Ayas Dag (Ayas Dag) in the north rises the Kar Dag, As the soil is not as a rule well watered by the streams from the Taurus these are good crops. Most of the farmers in the plains are Mahommedans (settlers from Karaman). The mountains are covered by Torkomans who have settled there. The produce of the soil consists of different cereals, vegetables, fruit (pears, plum), cotton and opium. Salt is also produced. The wool for the carpet factories is yielded by the many sheep reared there.

(J. H. Kramer)

**Karaman Mehmed Pasha** was an Ottoman Grand Vizier and historian. His first was the light, probably in Constantinople, as one of a certain Arif Cilhati and was a descendant of the great mystic Jalal al-Din al-Rumi (q.v.). He seems to have come when quite young to Samland where he made the acquaintance of the celebrated
Grand Vizier Mahmud Pasha of Wint [q.v., executed 1474] and through his influence was an important person in the Ottoman Empire (1471). He was a mastermind behind the battle for power and was known for his military achievements. His influence was such that he was able to secure high positions in the government and military. He was a master in the art of diplomacy and was able to maintain alliances with other countries. He was known for his strategic thinking and was able to secure important victories for the Ottoman Empire. He was a man of great influence and was able to maintain his power for many years. He was a man of great intelligence and was able to make important decisions that helped the Ottoman Empire to grow and expand.

A grandson of Grand Vizier Mustafa Pasha, son of the above, Zein al-Abidin 'Ali Celebi was the Molla Mustafa (d. 966, 1558), cf. 'Ali Celebi in the Ashkiyyah, No. 114. In 1537, when all sorts of wicked things were said about the 'Ashkiyyah, these things must be due to personal jealousies (probably the withdrawal of war-states in Europe).

Karamanli, a family who ruled Tripolitania in almost complete independence from 1712 to 1825. The founder of the dynasty, Ali Karamanli, was born a Karamanli. In 1712, he took advantage of the absence of the Pasha of Mahamad Abu Amine to have himself proclaimed king of Tripolitania, and when he was sent to overthrow him, he refused. He commanded a new expedition (1724 = 1712) and purchased from Sultan Mahmud III a treaty confirming him in authority with the title of emir bey. He put down insurrections at Tadjoura and Matmata, and that of Ali al-Sanhaji, who gave the government of Barca and of Benghaz to his brother Ali al-Sanhaji. He was killed ten years later in a rebellion, having the title of emir bey.

He was succeeded in 1515 (1545-45) by his son, Muhammad Pasha under whom piracy developed and who concluded a treaty with England. He died in 1565 (1555-55) leaving the power to his son 'Ali Pasha. He was a man of authority and was able to maintain his power for many years. He was a man of great influence and was able to maintain his power for many years. He was a man of great intelligence and was able to make important decisions that helped the Ottoman Empire to grow and expand.
thought of appealing to the Pasha. Matters were made worse by divisions in the family of the Pasha. His third son, Yūsuf, had his eldest brother Hasan assassinated on his authority in the arms of his mother (1750 = 1750-1755), then supported by the Shaikh Khaliṣ b. Mahṣūd, chief of the Qaṭar Naffūn, he rallied under his flag the Arab and Berber population hostile to the Turks, openly raised the standard of revolt against his father and besieged Tripoli. In these events, an adventurer named 'All Pasha Barghūlī, a former official of the Oldje of Algiers, succeeded in obtaining a fasāda from the Porte and seized Tripoli. In face of a common enemy, the Karamanli were reconciled and asked help from the Bey of Tunis, Ḥamadān Pasha, who was also threatened by the return offensive of the Turks against their former Barbian possessions. With a Tunisian army they retook Ḏerrum commanded by an ally of the usurper, Karā Muhammad al-Turkī, and Tripoli in which Ḫust Berghūlī had made himself detached by both Arabs and Jews (Qumāsa II 25, 1209 = Jan. 16, 1795). The latter fled to the East and in 1803 he succeeded in getting himself appointed Pasha of Egypt but was assassinated by a Mamlūk as soon as he arrived.

'All Pasha's rule was transitory; his son Ahmad II Bey was next proclaimed. But having advantage of his absence in Tādirān, his brother Yūsuf Bey had himself proclaimed (1210 = 1795-1796) and received a fasāda from Ṣulṭān Selim confirming him in his dignity. Ahmad resided at Darnah with the title of Bey.

Yūsuf was the most important ruler of the Karamanli dynasty. He completed the fortifications of Tripoli; built a navy with which he forced Sweden to pay tribute to him (1213 = 1798-1799) and in secret agreement with Napoleon resisted Portugal whose fleet commanded by the English captain Campbell bombarded Tripoli. This expedition was celebrated in a Latin poem (Carmen heros de rebus a Lucianis ad Tripolim gestis, Libson 1800; 2nd edition with French translation, Paris 1846, La guerre de Tripoli). Yūsuf had to sustain a more serious fight with the United States (1217 = 1801-3). An expedition commanded by Commodore Morris and another under Commodore Barron forced Yūsuf to accept a treaty, which abolished the execration of Christians (Rhāf 1220 = June 4, 1805). The Americans had tried to use the help of the Bey of Darnah, Ahmad, brother of the Pasha; they deported him to Egypt after the peace. In 1822 (1835) the critic Dacatur confirmed the advantages previously obtained; on the relations of Tripoli and the United States see E. Dupuy, Américains et Barbarycques, Paris 1910, p. 252-297; Lane-Pool, The Barbary Corsairs, London 1898, p. 374-391. A little later all the countries of Europe, even the weakest, supported by the strongest, finally succeeded in disposing of the last attempts at piracy (on the relations of Tripoli with France see E. de la Reimpandie, Le littoral de la Tripolitaine, Paris 1866, pp. 183-195, and with England the references given by Playfair, The Bibliography of the Barbary States, i. Tripoli, London 1862, pp. 90-92).

In addition to these difficulties, Yūsuf had to suppress revolts in the interior of the country; those of 'Uqayrā in 1218 (1803-1804), of Ghūlāshā in 1221-1225 (1806-1810), of Mūhammad Sharīf, governor of Fassān, in 1227 (1812), of the Dārul Naftāsin in 1231-1235 (1815-1820) and of his own eldest son Muḥammad in the east of the regency in 1257 (1841-1845) (cf. Dellos Celia, Viaggio di Tripoli alle frontiere orientali dell' Egito, Geneva 1849, p. 19-25), without reckoning the interregnal wars such as that between the R. Rāy and the R. Safl al-Najr (cf. Muhammad al-Tahalī, Voyage au Qaddâl, French transl., Paris 1891, p. 354-355) or that of the Sort and the Aḥnafla. Fassān, to add to his troubles, made itself independent under 'Abd al-Djalīl b. Ghaṣīlī of the Safl al-Najr, whom Yūsuf had sent to suppress a rising of the Born (1242-1246 = 1826-1830). Deprived of the resources supplied him by piracy, Yūsuf sought to procure supplies by imposing extraordinary super-taxes on the Jews whom he had at first protected, then by altering the value of the coins and finally by imposing a tax on gardens.

The revolt became general; the resurgence meeting together at Mantghiya proclaimed the dethronement of Yūsuf and replaced him by one of his grandsons, Muḥammad (accusing him to others Alḥamīd), and besieged Tripoli. An army led by the two sons of the Pasha was forced to return; not having succeeded in getting the help of the Bey of Tunis Yūsuf decided to abdicate. He did this in favour of his son 'All but this step only increased the troubles. If the European Consuls, 'Abd al-Djalīl, master of Fassān, Gīltūn chief of the Dārul Naftāsin, recognized 'All, the rest of the country remained faithful to Muḥammad. The Ottoman Porte took advantage of the occasion with the secret support of England; after having sent a frāmah to 'All, Turkey sent out under the command of Nūḥīṯ Pasha a fleet which took Tripoli without striking a blow (Muḥammad, 1254 = May, 1835) and reestablished the authority of the Porte in Tripolitania. Yūsuf remained till his death a prisoner in his own house, 'Ali was deported to Constantinople, Muḥammad committed suicide and his brother Alḥamīd fled to Malta.

(E. Basset)

**KARAMANLI — KARAMAN-OGHLU**

The most important of the various Tarkaman dynasties, which arose in Asia Minor after the break up of the Seljuq empire at the end of the viith (xiiith) century. They were for a time the most serious rivals of the Ottomans. The name goes back in the first place to the Turcoman chief Karaman, who attained a certain degree of independence during the Mongol troubles in the middle of the viith (xiiith) century and was granted by the Sultan Rukn al-Din a territory, from which he himself had come, in Cilicia. His native district was then known as Kamar al-Din-III (now E-III) after the Alban Kamar al-Din, who had been appointed commander of the conquered Armenian fortresses after the war between the Abas al-Din Kajtchuk I and Lesser Armenia (625-627 A.H., 1227-1233) into Houtma, *Revue*, iii. p. 240). Mamadshah Bash (iii. 24) derives the name Karaman from Kamar al-Din following Ibn al-Bitrus's statement. This explanation of the name is hardly more than a popular etymology. The derivation from a geographical or ethnic name is nevertheless very probable as similar derivations are found among other Asian Minor dynasties and elsewhere (cf. Irane-Oghlu, Gymnyan-Oghlu [q.v.]). It is most probable, that the Karamanids originated in the subdivision of the Tarkaman tribes of Ogul [q.v.] called Karaman. That the town of Luranus and the surrounding county later became called Karaman [q.v.] and that even the whole southernmost territory of Anadolu is called Karamania, is however only due to the name of the dynasty itself. Among the older Ottoman chroniclers the general name Karaman-Oghlu is used almost regularly for every reigning Bagh of the dynasty and the European authors of the xviith century also speak of the "Grand Karaman". The Byzantine authors have never had a clear idea of the identity of the Karaman-Oghlu. They confuse them with the Gymnyan-Oghlu and sometimes call the princes of Konya Aijdjacs Abadjacs etc., which goes back to the Gymnyan-Oghlu Ali Shu.

There are two kinds of sources for the earliest history of the Karamanids. The one is historical; it belongs to the school of Saltik historians and is represented by Ibn al-Bitrus and the later Ottoman chroniclers; the other group, the only preserved by Shihab, whose *Karaman Tavikhi* is a Turkish prose translation of a Persian poem in the style of the *Shamsiyeh*. Shihab states the praises of the Karamanids, but unfortunately gives no facts (on the MS. of Shihab's *K:saltik* Ethem in the 7. D. E. K. No. 11, p. 397: Mamadshah Bash also used Shihab). Al-Dschami occupies a position midway between the two traditions. An extremely important addition to our knowledge is formed by the inscriptions of the Karamanids edited by Khalil Ethem.

The ancestral house and the later regular place of refuge of the Karaman-Oghlu is the almost inaccessible mountainous country in the northwestern Taurus on the frontier between Cilicia and Lycaonia, where the town of Eumenos [q.v.], the modern Germenikopolis, lies. Karaman, according to Ibn al-Bitrus (Houtma, *Revue*, iv. 321), was a Turkoman charcoal-burner, who used to sell his charcoal in Luranus, but this statement is biased; in Dzhambul (p. 241) and Shihab, Karaman's father, is called Nitfa Sufi (son of Sa'd al-Din in Shihab), who was a mystic Shihab held in great esteem by the Sultan of Konya. Dzhambul calls this Nitfa Sufi an Armenian but this statement is probably suggested by the name Ermenek. Besides it is improbable that Ermenek had anything at all to do with Armenia which had never belonged to Lesser Armenia (Raw. Hist. des Crois, Th. Arme, i. p. 246), and there is no obstacle to the derivation of the name from Germanic origin. The name Nitfa (q.v.) for the father of Karaman is further guaranteed by an inscription given by Khalil Ethem from the church of Karaman (Kazim al-Din Kazimanos in Bally in the sanjak of Ermenek; Nitfa Sufi's temple is said to be at Deyrmenlik in the gểz of Mu'tu) [one of the sons of Ibrahim Beg (see below) was also called Nitfa Sufi]. The Karaman-Oghlu thus have their beginnings in Sufi circles, just as we now seem to be probable for the Ottomans (G. Zacher, *j. d. Literatur*, 1924, p. 246 sqq.) and for the Seljukids (cf. Behbog, *E. D. G.,* 1922, p. 132). Dzhambul's statement that Nitfa Sufi was a follower of Baha'yi Neja needs, however, to be corrected that the latter was not the instigator of the Baha'yi rising in Amams (this was Baha'lari) but a Kermanid Sufi who strongly influenced the whole religious development of Asia Minor (cf. Koprivs Jizde, *Welt*, 1929, p. 232, 233). It is in any case significant that Ibn al-Bitrus calls the Karamanids Karamanids which was also given to the Bash, cf. also Khair Allah, *Tavikhi*, Constantinople 1355, ii. 38, where it is said that Nuri al-Din Sufi (sic) was Khidja of Baha'yi Neja for E-III.

Nitfa Sufi is said (according to Dzhambul) to have taken the throne of Seljuk by treachery and his son Kazim al-Din Karaman, was granted this throne as a fief by the Sultan; according to other sources, he received the begik of Ermenek (Mamadshah Bash) and the Sultan Rukn al-Din hoped therefore to regain the fealty of himself. His brother Ongul, who had been made Amir of the Sultan, after they had begun to stir up support in this region, after Karaman's death, which is placed in 1262 (1261) by Mamadshah Bash; Shihab makes him be poisoned by the Sultan), his sons and his brother were imprisoned in the fortress of Kavana (N: Ibn al-Bitrus, *Revue*, i. 322; After the death of the Sultan (664=1267) they were released by the vizier Mu'in al-Din Parsami.

Soon afterwards Karaman's son Muhammad began his activity. He came to an arrangement with the rulers of Syria, who then met at war with the Seljukids, and the vizier Parsami found it impossible to bring him to obedience again, among his mountains. Then, when the Seljukids and their overlord, the Mongols, were engaged in Mesopotamia with the wars against the Mamluks, the Armenian Turkmans began to covet the plains of Konya. Muhammad Beg made use of DJamiri, the false claimant to the throne, who gave himself quit to be a son of the Shahk-Ter al-Din in Shihab, who escaped to the Crimea. Muhammad, the false Sultan, Muhammad ascends Konya which was poorly defended and Zamiri entered its citadel as Sultan (Thursday, June 7, 1275 = Ibn al-Khidja-
This genealogical list is reconstructed and somewhat different from that of Khalil Edhem Bey (T.O.E.M., No. 14, p. 880). The table in v. Hammer, I. 682, is obsolete. The names written in capitals are found on coins and inscriptions, those in italics only in Shikti. — 4. in Ibn Idris, Recueil, iv. 322, is called Bursa. — 7. The Badr al-Din of Shikti and Ibn Battuta is here tentatively identified with the Ibrahim mentioned in the epitaphs of 10 and 11 as called Bursa. — 13. Tomb inscription of the year 813 at Ermenek. — 14. in the Abu l-Fath 'Ali al-Din Khalil of the inscriptions (see the text), identified with Ermenek. — 15. In the inscription of the year 749 at Ermenek. — 16. is the Abu l-Fath 'Ali al-Din Ibn Khalil and with 'Ali, the husband of Fatima. — 17. is buried in the Khatun Medresse at Lurunda, according to the inscription Shikti's 'Ali al-Din Ibn Khalil and with 'Ali, the husband of Fatima. — 18. is appointed by his brother (14) in the reign of Lurunda and poisoned at the instigation of Asma-Oghlan. — 19 and 21 are, according to Shikti, sons of the Ottoman princes. — 22. On a coin of Rukn al-Din according to Shikti, he was the son of a Seljuk prince. — 23. In the battle of Kalaş (822) against the Mamluks. — 28. Epitaph at Adriseqeq 870. — 29. Coin of 880. — 30. Epitaph at Lurunda of 888. — 31–36 are according to the Ottoman chroniclers, sons of the sister of Muzaffar II who married Ibrahim. Shikti in part has other names. — 37. Epitaph of 924 at Lurunda.

(J. H. Kramers)
followed on his abdication by Khalil, then came
Badr al-Din for a second time. Fakhru al-Din, his son
succeeded him after his death; he was killed through
the intrigues of Artena, Beg of Karmania, and
succeeded by Shams al-Din's second son, also
called Shams al-Din, who was poisoned by his brother Kar-
manah after reigning 14 months. The above mentioned
Musa b. Mahmud then ascended the throne to be
replaced, four years later by Khalid's son 'Ali
al-Din, passing over the brief reign of Badr
al-Din's third son Karaman. According to Shikht,
this 'Ali al-Din was one of the greatest of the
Karamanids and is called by him Abu T-Fak
in agreement with the statements of Shikht in his
Chronicles (ii. 283, 284, who visited a Sultah in
al-Laranda in 733 (1332), in whose terri-
торь Laranda also belonged. But his brother
Musa had, as he said, already reigned in Laranda before
him, but had ceded the town to the Mamluks
from whom it later had been reconquered by
Badr al-Din; that Musa had been in close relations
with Egypt is confirmed by Ibn Fuqi Alhaj,
also (Maqālāt al-Abār, in N. E. M. ii. 347).
We must therefore assume that the brothers
reigned in different parts of Karamania at the same
time. Two epithets in the Emir Minā Medrese of
Laranda prove that Fakhru al-Din Ahmad b. Ibrahim
b. Mahmud died in 750 (1349/50) and Shams
al-Din b. Ibrahim b. Mahmud in 753 (1352). They
must certainly be the two sons of Badr al-Din:
(who, in that case, may perhaps have borne the
name Ibrahim) mentioned by Shikht.
It is more difficult to ascertain the identity of
'Ali al-Din. An inscription of 724 (1325) on the
gate of the sinnih in Laranda, which al-Din Rumi's mother is said to be buried, records that the
rawyis was built by Sultan Abu T-Fak 'Ali
al-Din Khalil b. Mahmud b. Karaman and that
Saff al-Din Sulaiman b. Khalil (who, according to
Shikht, was a brother of 'Ali al-Din) is buried
there. Munajjim al-Bashir (iii. 26) also knows a
'Saff al-Din, son of Yakhchil Beg, son of Mahmud',
but there is no documentary evidence for the existence
of this Safi al-Din Beg. He may perhaps be identical
with Shikht's Khalil (as Khalil Edhem Beg in
the T. O. E. M. has already done); Yakhchil is probably
not a proper name at all (see Ibn Bashir, II. 316). Shikht, makes his 'Ali al-Din marry the
daughter of the Ottoman Sultan Murad II, according
rectum of marriage between Murad II's daughter
Nefise and Karaman-Oghlu 'Ali Beg is, indeed, well preserved in
Ferdun's 'Munajjim al-Bashir' (i. 205, sff.) (in the printed text,
p. 107, the date is 738 = 1336, but Khalil Edhem
Beg has shown that 738 = 1337 is more probably
correct). There is an inscription of this Ottoman
prince in the Khurabiya Medrese at Laranda
of the year 783, in which the reigning prince
is called 'Ali Beg al-Din Khalil b. Mahmud, i.e.
the same name as in the above mentioned
inscription of 712, but without the title of Sultan. The difficulty
is whether the 'Ali al-Din Khalil of the
inscriptions is identical with Shikht's 'Ali
al-Din Khalil and with 'Ali, the husband of the
prince Nefise. Very strongly in favor of this
identity is the name of 'Ali Beg al-Din Khalil,
given by Khalil Edhem Beg in the T. O. E. M., no. 12, p. 821,
where this Khalil is called: b. Mahmud b.
In 824 (1421) he received permission to return and again ascend the throne. He was his death at the siege of the Ottoman fortress of Adala, which is fully described by the chroniclers (probably 826 or 827). His son 'Ali went over to the Ottomans, who gave him the sanjak of Sofia, while his son and successor Ibrahim returned to his native mountains with his father's body. Of the second Muhammad various inscriptions exist in Konya. There are also inscriptions of his brother 'Ali in Nigde, where he held sway before and after the Egyptian period. After his brother's death, he endeavoured to make himself independent again but when Murad V supported his nephew Ibrahim, he did not succeed. In this period the power of the Karaman-Oghlu was considerable; Sallâle estimates the size of his army at 30,000 men in a war footing and 60,000 on a peace footing (Murad, Inçehr. İsl. xxii. 306, 962).

Ibrahim b. Muhammad Tâd al-Dîn reigned from about 827 (1425) to 848 (1446) (coins of the years 828 onwards) and is the last great member of the dynasty, which after the extinction of the Germîyan-Oghlu was now the only dangerous rival of the Ottomans. Ibrahim had married the sister of Murad II and was at peace and war alternately with the Ottomans. The fact that he was the Sultan's brother-in-law often saved him from destruction. He had also an alliance with the Emperor Sigismund; the early Ottoman chronicles continually reproach him for his dealings with the uninveterate as well as for his repeatedly breaking faith: after solemnly concluded treaties (Arm. ed. Greve, p. 63, 84, 68), Murad II had made up his mind to exterminate the Karamanids and for this purpose he made an alliance with the Turkomans of the Dhu'l-Kadr dynasty. The latter about 840 (1435/7) took Kajariya and the surrounding country from the Karamanids; Ibrahim lost Äghchir and Beykalhis among other possessions to Murad II. An attempt to regain the lost territory after Murad's death (855 = 1451) failed. Meşmed II is said to have acted in this campaign as friend and protector of the Christians (Dacres, p. 273). Ibrahim was more successful in the south; in 1443 he took the fortress of Gorius in Cilicia from the Cypriotes (Récits des Croisés, Doc. Arm., i. 388). Before his death Ibrahim wished to abdicate in favour of his son Isâk. But Isâk was the son of Murad II and the other six sons whose mother was Murad's sister married Isâk and Isâk in Konya: both had to take to flight and Ibrahim died in the fortress of Kayâla (or Gawâle, 868 = 1463).

His successor was his son Pir Ahmad whose side Meşmed II had taken. Isâk fled to Timâr Ǧâsam, prince of the Ak-Koyunlu. This confusion that followed in the struggle for the throne finally brought about the end of the dynasty. With the help of the Ottomans Pir Ahmad defeated his brother in the battle of Ermenek (869 = 1465) and henceforth regarded himself as the vassal of Meşmed II (inscription of 870 = 1466 at Kajariya), but he soon came into conflict with his overlord because he had come to an arrangement with the Venetians. In 872 (1467) the Ottomans permanently occupied Konya, where the Ottoman prince Mu- gâsî became sultan; a part of the Karamanid population was transferred to Stamuh. Pir Ahmad retired to Lâranda and Nigde, where he fought the Ottomans and his brothers alternately. He made
an alliance with his brother Kaṭim for a time (inscription of the two at Niğde of the year 874 = 1469/70). But they could not stand against Godluk Kaṭum Paşa and lost Lâranda. After Ermenek and Miñan had also been taken by the Ottomans, where Pir Aḥmad's family and treasures fell into their hands, the latter threw himself from a cliff but did not kill himself. He was still able to go to Tarsus where he died about 879 (1474), according to the Taḥdīl al-Turābīlī, had withdrawn to Selefke, where his widow continued to hold out for some time after his death.

Kaṭim b. Umrāhī then maintained himself till his death (Muḥarram, 887 = Febr.-March, 1482), according to Ḍūnu, p. 171; his epitaph at Lâranda is dated 888. He also sought the assistance of Urân Ḥasan but could not recapture Lâranda. Then in 887 (1482) he joined the pretender Sulṭān Djiym (q.v.), who had at one time governed Konya in succession to his brother Muṣṭafā and on other occasions also had been served by Kaṭamānī troops. Kaṭim was afterwards pardoned by Bayāzīd II but with his death the rule of the Kaṭamānīs ended. His other brothers had already gone over to the Ottomans.

After Kaṭim's death his generals placed Togrul-āt-Qtghī Mūḥammad, who belonged to the Kaṭamānī nobility, on the throne, but he also came into conflict with the Ottomans and had to flee to Aleppo in 892 (1487).

It was to their geographical situation that the Kaṭamānīs owed the great power they held for a time. Their mountains formed a refuge which it was almost impossible to capture, from which they could make successful descents into the plains of Konya and Cilikia again and again. The possession of the various Cilician passes and other routes over the Taurus brought them a considerable revenue from the tolls which they levied on the Genoese and Cypriote merchants, who carried on a busy trade by these routes with Asia Minor, while their relations with the customs in the coast towns ruled by them (Seyhli, Maṇavgāh, Ahemur, Selefke, Lamana) must have been considerable. Their wealth put them in a still stronger position; their buildings in Lâranda, Konya and Niğde are evidence of this wealth, especially the ruins of the Khatṭāṭī Medrese in Lâranda or Kaṭamānī [q.v.]. Kaṭamānī art is a continuation of Seljūq art in contrast to Ottoman art which rather follows Byzantine models (Weermann, Gesch. d. Kunst, Leipzig and Vienna 1915, ii. 445). Of importance in the history of civilization is their encouraging the use of Turkish instead of Persian, as has been already mentioned. The contrast between the Kaṭamānīs and the Ottomans seems, however, to have been very marked (Dowse, p. 195, sub: ḍunār al ḍunār bi al-ʿezāz).

(J. H. Kramers)

KARĀMAT 'ALI, born (date uncertain, early in the sixteenth century? at Jāwāpur [q.v.], of a Shi'ah family, which had held the office of ʿaybāt under Muḥammad b. ʿAlī; his father was wizādūrī in the Jāwāpur College. He studied theology and other Muslim sciences under various celebrated teachers of the time, esp. Shah ʿAbd al-ʿAzīz, maḥkāmī of Dīlī, who was also the teacher and afterwards follower of Sayyid Aḥmad of Bāštī. Between 1820 and 1824, Sayyid Ahmad made a tour through Bengal and Northern India, collecting a band of disciples, and Karāmat 'Ali was one of the most devoted of the younger men who followed him, but he does not appear to have taken part in the giḥād, which Sayyid Aḥmad waged against the Shīʿah [q.v.], or to have ever been in the Afghan borderland, where Sayyid Aḥmad was slain in battle in 1831. The Sayyid's old master, Shah 'Abd al-ʿAzīz, now became his khalifa, and an active propagandist for the revival of Islam was organised in Bihār and Bengal. With this peaceful propaganda Karāmat 'Ali was identified, and he may be regarded as its most successful apostle, as he was one of its most brilliant exponents. During the early decades of the 19th cent., there were several minor reforms under various in Eastern Bengal, led by men with more zeal than learning, notably by Ḥājjī Shūtāt al-ʿĀlī (v. KARADIR, ii. 57), who in 1825 (= 1836–7) met Karāmat 'Ali in Calcutta. By 1835 the two schools had made some progress towards a rapprochement, and in the meeting then held at Bārāshī, Karāmat 'Ali was able to agree on several points with the representative of the other movement, Mawlānā 'Abd al-Dāʾībār, though on the question of the lawfulness of ʿaybāt and jāʿāʿāt prayers in British India, he could not overcome the stubborn opposition of 'Abd al-Dāʾībār, and he had to appeal to the humour of 'Abd al-Dāʾībār's followers by pointing out that their leader mistook grasshoppers (which are lawful unlawful food) for locusts (which were lawful Ḥājjī Shūtāt al-ʿĀlī, p. 29–32).

Karāmat 'Ali's life was a double struggle; first, he combated the Hindu customs and superstitions
which had crept into the practice of Islam in Eastern Bengal, against which he wrote a book, entitled *Rudd al-Dīd* "besides inveighing against them throughout his writings; and secondly, he tried to bring back into the fold of orthodox the heterodox schools against which he waged a successful war; to this subject, also, he devoted a special book, *Hīdāyat al-Nūrīn*, besides constant references to the "ignorant" in his voluminous writings. He kept in touch with the Musal-māns of Bengal, and distributed to the needy the presents that he received. He was a well-read and an expert calligraphist.

Garcin de Tassy (op. cit., ii. 162) says that he competed for the prize offered by Sir Charles Trevelyan for the best Hindustani essay on the influence of the Greeks and Arabs on the Renaissance in Europe, but that his essay was not accepted for want of an English translation, which according to the rules should have accompanied the essay. He was thus interested, unlike the majority of contemporary Indian Mawlawīs, in the relation of Islam to the wider questions of the world at large. He died on the 3rd of Rajab II, 1290 (24th May, 1873) and was buried in Rampūr (Talgulī, Nūr, ii. 136), in the province in which he had laboured for the regeneration of Islam all his life. He was succeeded in his work by his son, Mawlāwī Ḥāfīz Ahmad (d. 1896), and his nephew, Muḥammad Muḥsin. His following was so large that there was hardly a Bengal village without his disciples and he still exerts a living influence in certain districts of that province.

He wrote chiefly in Urdu. Rāhānīn *Ali* (op. cit., p. 174—2) gives a list of 46 of his works, without claiming that it is exhaustive. One of his works, *Miṣḥaḥ al-Dīwanat*, has run through numerous editions and is accepted in India as a correct statement of Islamic principles. His writings may be divided into four classes: 1) general works, like *Miṣḥaḥ al-Dīwanat*; 2) works on the reading and verbal interpretation of the Kur'ān, and formal prayer words and ablutions; 3) works on the doctrine of spiritual preceptorship (*Fīrūr Murid*), the cornerstone of orthodox Islam in India; in accepting this doctrine, Karāmāt *Ali* stands in sharp opposition to the Wahhābī sect and merges insensibly in the *Taqwam* schools, which he brings into relation with the traditional religious orders; 4) polemics against Sharī'at Allāh, Dūdā Miynān, the Wahhābīs, etc.

The common conception that Karāmāt *Ali* was a Wahhābī is refuted by the detailed exposition of his own views as set forth in his *Miṣḥaḥ al-Dīwanat*; he had not seen any Wahhābī books, but had made verbal enquiries and found that they were so fanatical (ghulūf) that they called all who did not agree with them miṣḥaḥī (p. 38-9); and, when his school carefully distinguished between *ṣīrūr*, which was the negation of Islam, and *ṣīra*, which was only an error in doctrine (p. 39). In his *Ḥiyyat al-Awliyya*, he draws a clear distinction between a *fāsiq* (sinner) and a *ṣīrūr* (infidel) and inveighs against those who would deny funeral prayers to those who did not pray but repeated the *bāzīm* (p. 21); if non-Muslims conquer Muslim lands, the *Qurʾān*’s prayer and the two *ṣūd [q. 2]* prayers were not only lawful but obligatory (p. 13 ṣūd). He laid great stress on authority, successively handed down by living teachers, and based his doctrine on the orthodox Sunni books of the Ḥanāfī school (Muḥammad-Jamal al-Rahmat, p. 37). He accepted the six orthodox books of tradition (*Ṭarīq ibn Yathīr*), the commentaries (ṭaffīr), the principles of ceremonial law as interpreted by the masters (*ṣahāb*), and the doctrines of *Taqwam* and *Fīrūr Murid* (pp. 38, 35), even losing the mission of Sāliyād Ahmad on a Qaḍarī from Abū Hurairā (p. 32): in every century a teacher is born to vivify the faith; Sāliyād Ahmad was such a teacher for the xilīb cent. and should be followed until another teacher arise for the xiyī cent. (p. 34). All this was in direct antithesis to Wahhābī teaching and the *ṣīrūr* amounted merely to the abolition of Hindī rites and ceremonies or those introduced through ignorance (p. 36), or to a revival of Islam according to the accepted orthodox schools (p. 50). The political effects of Sāliyād Ahmad’s life brought his followers into conflict with the authorities, but the writings of the school show that there was no connection, political or doctrinal, with the sect founded by Muḥammad b. Abū al-Wahhāb in Arabia.

**Bibliography:** The European accounts of Karāmāt *Ali* are unsatisfactory, being based on secondary information and failing to distinguish between this school of reform and Wahhābīs, and in some places there is confusion between the subject of this article and Mawlawī Sāliyād Karāmāt *Ali* of Qāwānpūr (1796—1876), who represented the British Government at the court of Dūdā Muḥammad Khān at Kābul, 1832—1835, and was superintendent (mutawallī) of the Hughli Imāmshābā, 1837—1876 (v. Nineteenth Century, May, 1905, pp. 780—782; Sir W. W. Hunter, The Indian Musalmaun, p. 144; C. E. Buckland, Dictionary of Indian Biography, p. 229; Nūr al-Dīn Zādī, Ṭalgulī, Nūr, ii. 139); Census of India, 1901, vol. vi. part I. (Bengal), p. 174 (Calcutta, 1903); Journ. As. Soc. of Bengal, vol. lxii., part iii., pp. 54—6 (Calcutta, 1894); Garcin de Tassy, Histoire des de la Litigation Hindoue et Hindoustanienne, ii. 163 (Paris, 1876). (It is doubtful whether the Muḥammad-rāsīqāt Miynān, Dūdā, 1868, mentions anything, was a work by the subject of this article); Sāliyād Nūr al-Dīn Zādī, Ṭalgulī, Nūr (biographies of the famous men of Qāwānpūr), pp. 135—6 (Qāwānpūr, 1909).

A correct appreciation of Karāmāt *Ali*’s doctrines can only be gained by a study of his own writings, the most important of which are the following: *Miṣḥaḥ al-Dīwanat* (Calcutta, 1243) (frequently reprinted); *Kawhābī dūrī* (? Calcutta 1253) (translates passages from the Kurān for the benefit of those who know only a little Arabic); *Bārāt Tawwāb* (Calcutta, 1254) (defends the legality of repentance at the hands of a *ṣīrūr*, and other practices of the religious orders); *Zādi al-ṣīri* (Calcutta, 1264), (on the correct principles for the reading aloud of the Kur’ān); *Fīrūr Murid* (Calcutta, 1282), (a tract on speculative theology, expounding the doctrines of Shaikh Ahmad as-Sulhānī); *Ḥiyyat al-Awliyya* (Calcutta, 1282), (a polemical tract against the school of Sharī’at Allāh and his son Dūdā Miynān, whose name (commonly spell Dūdū Miynā) Karāmāt *Ali* always writes in this way); *Nūr al-Hudūl* (Calcutta, 1286), (on the doctrines of *Taqwam*, of the *mustafidī* school, apparently the new school of Sāliyād Ahmad of
KARA MUSTAFÁ PASHA, the name of two Ottoman Grand Viziers.

I. Kara Kemal Pasha (i.e. archer) Mustafa Pasha, an Arnaut by origin, taken from the Janissaries became first beyaz and was then dismissed; in 1643 (began July 8, 1633) he was appointed Seyyid Safi (general of the Janissaries) and became subsequently Aga of the Janissaries in Sivas, 1644 (began March 9, 1643) Grand Admiral (Şapūdān-Derya) on Dişmū nil 1245 (i.e. Oct. 17, 1655) and Grand Vizier in Şabānu, 1655-1657 (began Dec. 19, 1657). During his period of office which lasted till his execution by order of Sultan Ilyas on Muharram 1, 1653 = March 22, 1643 (cf. J. v. Hammer, Gesch. d. Osman. Reiche, v. 326 sqq.) he distinguished himself by economy and a talent for administration, which all the historians recognize with admiration. Hasein Wadghi, the author of a history of the Ottoman Empire covering the period between 1648 (1653) and 1670 (1659), was K. Karușs Pasha's keeper of seals. A number of buildings owe their origin or restoration to him. He founded mosques, built bridges and planned settlements (for example Ost披露 כהן near Siwa). The best verdict on him is that of the contemporary Ibn. Balladana in Dukas Historia Ruyanica, Paris 1649, p. 263 infra: vir, quærum in duo aestimationes, ut quant sive legere, ut scribere velut in eo genere negotii, sive expediendo sibi utribus simul a perspicua. Kara Mushtafa Pasha is buried in Stambul at Pınchia, on the Džaw Vali in the madrasa built by him. (Naṃs. Twirī, ii. 30 sqq.)

II. Kara Mustafa Pasha, the besieger of Vienna.

He belonged to Merešm where he was born 1644 (began July 27, 1634), according to other stories about 1620 (cf. Barozski-Berchet, Relazioni degli ambasciatori e tailotti veneti a Constantinople, Venice 1579, ii. 207, according to whom he was 52 about 1677), the son of a Sāhpī named Urum (according to other sources Hasan Agha) who fell before Edirne. His father was a friend of Köprüsi Mehmed Pasha who had the boy educated. His first rank was in the Bilbār, next Ėlbaštı (master of oratory), in the İhvi-i-Hüdaja, 1658 (began Aug. 30, 1658) Mehrek (chief marshall) and in Muhsām, 1670 (began Sept. 18, 1659) he became Beylerbey of Silistria with the rank of vizier (cf. Barozski-Berchet, ii. 124 sqq. and Vizier de Serje, de la Suisse, des Huns. 1797, i. 439); in 1670 (began May 11, 1669) he was appointed governor of Dişmūr, in Rałb, 1670-1672 (began April 20, 1662) Grand Admiral (Şapūdān-Derya) in Rałb, 1673 (began March 3, 1665) Rūbiḥ Kāłowatā (deputy for the Grand Vizier a later); and two years later dismissed from the office of Grand Admiral; in 1672 he was Kāłowatā at Adriano (d'Arivets, c. Knolles, Ricaut, e. i. i. 263, 277). In 1686 (began March 9, 1675) he was betrothed to the Sultan's daughter Kāšāk Sultanè. In Şabānu, 1687 (began Oct. 9, 1676) he was appointed Grand Vizier. His policy as Grand Vizier was that of his great predecessors and may be summed up in the one word, war:—war, for the sake of domestic peace, war, to please the Sultan, war, for the glory of the Ottoman Empire, and more particularly for his own prestige. Ambition and avarice are said to have been the motives of his actions (cf. Barozaki, op. cit., ii. 207, Ricaut, The Present State of the Ottoman Empire, p. 89 sqq.) and his contemporaries chronicles generally describe him as unjust, cruel and avaricious (cf. Barozski, op. cit., ii. 207; venale, crudelitate inginoso). In his boundless ambition and avarice he allowed himself to be tempted in the late summer and autumn of 1683 to a campaign against Austria and the siege of Vienna, although he had no ability as a general. He had already conducted an unsuccessful war against Russia in the spring of 1677 and had been forced to consent to an armistice (at Radzin on Feb. 11, 1681) disadvantageous to the Porte and the campaign which he began in 1683 against the Emperor Leopold V brought about his ruin. After he had given Tokoš, the chief rebel in Hungary, the Hungarian crown, he advanced into Austria laying the country waste as he went along. On July 14, he began the siege of Vienna with 200,000 men; the city was heroically defended by Count Starhemberg with 10,000 men. The city was on it fall when the German-Polish army of relief appeared on September 1683, completely defeated the army of V. Vizier, and escaped from the remnants of his force to Hungary. On Dec. 25, 1683, he was executed by the Sultan's orders. His body was buried in Belgrade in the mosque erected by him before setting out for Vienna and whose skull brought to Adriano to Sultan Mehmed IV and buried in the mosque of Sarıša Pasha (epitaph in J. v. Hammer, Gesch. d. Osman. Reiche, vol. i. x., xxivv.). The statement, made by J. v. Hammer, Gesch. vi, 519 and 740 and in Vienna erste angekündigte türkische Belagerung, Vienna 1829, p. 119 sqq., supported with documents of Cardinal Leopold von Collowis (of Sept. 17, 1660) and adopted by V. v. Remer, Wien im Jahre 1683, Vienna 1883, p. 465, that the Turk's skull preserved in the armory of the Historical Museum of the City of Vienna, the former arsenal, is Kara Mustafa's is wrong. The question of the tallmudic shat (şat) is also preserved there and of the skull of milk is more uncertain. Cf. A. Camesa in the Berichte und Mitteilungen der Altertumssozietät zu Wien, viii, Vienna 1865, Appendix, p. xii sqq. and also J. v. Karaböck in the Katatog der Historischen Ausstellung der Stadt Wien 1883, Vienna 1883, No. 541.
Kara Mustafa Pasha was exceedingly rich and left a vast estate. According to Sieur d‘Aurel (op. cit. p. 349), he possessed over 500,000 ducats, the same number of slave-girls, 600—700 black eunuchs and fabulous treasures, all of which passed to the state. It is said to have left 12,000,000 ducats (cf. Franz Wagner, Historia Leopoldi Magni, Angsburg 1719, l. 631). Besides several mansions (cf. J. v. Hammer, Gesch., ix. 158, 158, 189) he founded a number of mosques,—in Stambal, at Galata, at Adrianople, Belgrade, Djadja and in his native place. His palace (Tirnakpı Yalı) at Kara Cehme near Constantinople was sumptuously furnished (cf. J. v. Hammer, Gesch., viii. 362); his splendid tomb in Stambal was destroyed by the mob (Barozzi, op. cit., p. 334).

His son was Emain Mustafa Pasha, on his descendants see Sıhyi Efendi, Tarihi, iv. 407, ii. 99, from below. A sister was married to Kaplan Pasha (d. 1601 = 1680 at Smyrna; Magni, Viaggi per la Turchia, Paris 1679, p. 488).

— Kara Mustafa Pasha has been repeatedly made the hero of dramas and romances; cf., for example, Cara Mustafa Pasha Grand Vicier, Histoire contenant son évocation, ses amours dans le sérail, ses divers Cortéges, le roi sujet qui lui a fait entreprendre le voyage de Vienne et ses particularités de sa mort, Paris 1684, 4°, and Pierre Martin, L‘Orient dans la littérature française au XVII et au XVIIIe siècle, Paris 1906.

Historique Ottomans. 1330, iii. 924 sqq.; G. Jacob in Der Islam, vii. 248 sqq. (Franz Babinger).

KARA OSMAN OĞLU. [See Signature.]

KARAPAPAKH (*Black-caps*), so called from their head-dress of black lamb-skin, a Turkish people formerly living on the river Borota or Deboda in the eastern part of the government of Tiflis, who migrated about 1828 partly to Turkish territory (i.e. the vicinity of Kara) and partly to Persian territory (district of Suli, south of Lake Urmia). In the district of Karapapakh they form about 1/5th of the population; about 1853 they numbered 21,652 of whom 17,721 were Sunnis and 3,931 Shias (K. Sudovsky, Recherches historiques sur les emigrés du Bas-Tirz' in the Slav. Moc. etc. Kiewen, iii. 315—390); about 1893, 28,366 (N. Aristov, Zamekly o istocnomost otsvet tu predskih plemen, etc. St. Petersburg 1897, p. 139 sqq. quoting Pras. Prastnik, 1896, No. 74); according to the census of 1907, 29,879. In the *Caucasian Calendar* (Kaucasky Kalendar) for 1915, 99 villages of the territory of Kara are given as inhabited by the Karapapakh, of which 83 are in the district of Kara, 29 in that of Ardahan (Russ. Ardaga) and 7 in that of Kaghman; the number of the Karapapak is given as 39,000 (ibid., p. 545, article by A. Dird)

A small village of Karapapakh, inhabited by Tatars, is also mentioned in the government of Yelisawopol, in the district of Kazag (which bounds on the government of Tiflis). On the Karapapakh in the district of Suli cf. C. Ritter, Erdkunde, ix. 939, 1018 and 1032, following Fieschi and Rawlinson (up to 1838), and more recently V. Minorovsky (member of the Commission for the Rectification of the Turco-Persian frontier, 1911—1914) in Materiali po izuchenii Vostochno, v. 2, Petrograd 1915 (see Index).

These Karappakhs, who are all Shias, were at one time in Russian service and still preserve the certificates given to their ancestors by Russian generals in recognition of their services. After their transfer (it is said there were only 500 families under the leadership of Mahdi Khan affected) to Persian service the district of Suli was allotted to them as *gift* (i.e.) by 'Abbâs Mirzâ [q. v., l. 13] in return for which they were to furnish 400 horsemen. As landowners the chiefs (Khan, Aga) of the Karapapakh attained considerable prosperity under Persian rule. After the occupation of the district by the Turks (1905) they again became much less pleasant, because the Turkish authorities favoured the peasants at the expense of the landowners. In a petition sent on 14th November 15, 1239 (July 13, 1911) to the Russian, Iranian and English delegates of the commission, the Karapapakh expressed the wish that their native land should be restored to their land or that they should be given the opportunity of migrating to the interior of Persia. Suli was thereupon adjudicated to Persia (protocol of Nov. 4, 1913). The Turkish troops had already been withdrawn during the Balkan war (1912). How the administration has developed since then is unknown.

(W. Barthold).

KARASI, 1) the name of the founder of a Turkomian dynasty in Asia Minor in the 7th century A.D. (fifteenth A.D., the dynasty which was the first to succumb to the Ottomans; 2) the name of the territory ruled by this dynasty, now a sanjak of Turkey.
Karasi is said to be a contraction of Karas, "near the city," of Karas or Karas En, the name of a Turkoman chief, a vassal of the Seljuk Sultan Chiyath al-Din Musta'ud, who conquered the province of Myria from him by the Byzantines in the reign of Andronicus II Palaeologus (Oucas, p. 143). The name of the father of Karasi is also given by the Byzantine historians (Nicetas, Choniates, I, 214) as Alikhan, which is mentioned by the Aqquyuk or Aqquyuk of Pachymeres (II. 316, 380), which name perhaps conceals Alahshah or Kanashah (cfr. Ibn Batuta, II. 281).

Although Karasi did not conquer the whole of Myria at once (Edremid and Assos remained Greek down to the sixteenth century) he must have had considerable power not least on account of the fleet which he created and with which he conducted raids on Rumelia. His territory became a refuge for the inhabitants of Eastern Anatolia, fleeing before the Mongols, as well as for the Turks when they were driven back after conquering the Dobrudja under Soy Soyly Ghaud (in H. von Both's "Kurdistân" Karasi reigned is not known. About 1330 we have two of the four rulers in the land, namely Yakhkhl Khan in Bergama and Demir Khan in Ballikesi. They are mentioned by Ibn Batuta (II. 316, 317) and in the Mauh ed-Allâh (Notes et Extraits, xii. 339, 366; the
mention of p. 339 is probably a corruption of Demir Khan), with which authorities the Byzantine writers agree, except that they (Kantarazemas, I. 339) make Isâq the father of Alikhan, while the Mauh ed-Allâh makes the two brothers and sons of Karasi.

The account given by the Ottoman historians, who all follow Aqquyuk, is different. They only deal with the dynasty in connection with the annexation of its land by Orkhan. According to them, Ali Adil Beg ruled in Karasi and maintained friendly relations with Orkhan; he even sent his eldest son to Orkhan, who was educated at Orkhan's court. After Ali Adil's death his eldest son (whose name the chroniclers do not give) succeeded him. He made himself so hated by his subjects that his visitor Hâjûddîli Ilkiki went to Orkhan to seek help against the tyrant. The younger brother Tàrus then promised Orkhan the towns of Bergama, Ballikesi and Edremid, if he would in return leave him in possession of Kirsîdîa Tuzla and Mahram (Assos). In keeping with this agreement Orkhan conquered from the Greeks Lhábdî (Lapadon) and several other forresses which still lay as Greek enclaves between the Ottoman lands and Karasi. He then advanced on Ballikesi where Ali Adil's son fled to Bergama. At Orkhan's instigation, negotiations for peace were opened between the two brothers; Tarsus, however, was killed by his brother on the wall of Bergama during the discussions of terms. The latter was then completely overthrown by Orkhan. He had also to leave Bergama and died two years later in Brusa of the plague. Hâjûddî Ilkiki was given the administration of Karasi III and the Timarâns were left in their fiefs. These events are put by the Ottoman historians to 735 or 737 (1384 or 1385).

If we compare this with the statements first given, we could equate the elder son of Ali Adil with Ibn Batuta's Demir Khan (as Ahmad Tawâfîdi says); for the latter traveller gives a very
unfavourable account of Demir Khan. Yakhkhl Khan would then be the same as Adil Khan; Ibn Batuta himself says that Yakhkhl Khan only means the "good Khan" (II. 316) so that his real name might have been Adil Khan. It is more important that, as Mordtmann makes probable, the Karasi dynasty existed somewhat longer than the Ottomans say. The Byzantines as late as 1344 still mention Karasi (Nic. Greg., p. 741; Kantarazemas, II. 426) who was married to a daughter of Ventzites. This is in keeping with the fact that in Orkhan's letter of Maharram 14, 741 (June 27, 1340) in which he tells the prince of Tarnik of the conquest of Unub there is nothing said about the land of Karasi (Perdman, Mânba'd, i. 76). Mordtmann therefore supposes that the country did not finally pass to the Ottomans till a few years later (about 1345) and that the chroniclers have mixed up two events. In any case the Karasi-oglu dynasty did not arise again later under Tumur, as was the case with most other Turkoman dynasties.

There are neither inscriptions nor coins of the Karasi princess; a small mosque at Ballikesi is presumably of the pre-Ottoman period.

With the conquest of Karasi III a number of able statesmen and soldiers passed into the Ottoman service, such as Ağa Khan, who had led the Muslim army out of the Dobrudja, Hâjûddî Ilkiki already mentioned, Fâdíl Beg and the celebrated Ghaç Ezranos Beg (in H. von Both's "Kurdistân").

The lands ruled by the Karasi Oglos are given in detail by Mürsededdin Bâshî, iii. 36.

3. The sandjak of Karasi belongs to the wilayet of Khudâkundiyâr; towards the end of last century it formed for a short time a separate wilayet along with the sandjak of Bihg [q. v.].

Karasi coincides with the ancient Myria. The rivers Simâw and Sû Sîgmîr divide the land into a western and eastern half. The eastern half is very inaccessible owing to the irregular form of its thickly wooded mountains and it has no towns of any size; the mountainous centre of the west, also thickly wooded, gives place to flat country as it approaches the coast. The most populous and easily accessible parts are in the region along the railway from Bandirma to Smyrna; the capital Ballâkeraî [q. v.] is here. In the south-west is
Bergama [q.v.] the most important town; in this region besides the citadel-crowned rock of Pergamon we have several isolated hills (the Kazak Dagh in the north and the Kara Dagh in the west). The Pergamene plain is very fertile and thinly populated; besides the Turks there are many immigrant Greeks and Malakdji settlers and Vithalas. The Greek element greatly preponderates in the little towns on the coast, especially in Edremid. The Muslim element increases as we go eastwards, but the Greeks in the interior speak Turkish. According to Sami, the total number of inhabitants of the sandjak is 340,000, of whom half are Turks.

Karast is comprises the following kaum's: Halacarsi, Aiwalik, Kemal Edremid, Edremid Erdeli, Banderias, Kütun, Bigahel and Sandrigli. The exports of the sandjak are considerable owing to the fertility of its soil, its wealth in minerals and its cattle-rearing; according to Sami, the exports are six times the value of the imports.

(J. H. Kramer)

Al-Karastun (Karastun), means the steelyard or Roman balance; while the common balance is usually called al-mithal (for other names in place of karastun see below). The general observations that follow here apply to both kinds of balances.

In the systematization of the sciences a science of weights, balances, etc. is included, for example by al-Farabi in his Qadi Ulum and by Ibn Sinâ in the Risâla fi Akhâm Al-Umm Al-Abyâya. Haddah Khalifa says (I. 493) that they are both short and long, on the subject but unfortunately he gives no titles. The references in the Hâwâni al-Safât should be compared (Bosshard ed., 1/I. 118; Diderici, Legal, p. 53). In the Hâwâni al-Safât it is said that every science and art has a "balance" with which to measure; astronomer the astrolabe, geometry the straight line, circle and angle. At the same time a magnitude with which one measures is called a "balance", for example in measurement the ell, rope, etc. In the science of the weighing-machine that of centres of gravity (Marâkš al-thâláb) has also to be considered, as al-Akhsâî specially mentions (Beitr., iv. 105).

The balances used in ancient and mediæval times were all steelyards and consist of a beam (nâmâ, in al-Djwâri also zâphâ) turning on a horizontal fulcrum (nâsharâ), a lever the centre of gravity of which is below the fulcrum. On one arm of the beam is hung the article to be weighed and on the other the weights which are to weigh it, usually in scales. The arms may or may not be of equal length; we have equal armed and unequal armed balances accordingly. In standards of equal or equal length, in which to ensure accuracy in weighing a movable running weight (arâmânaâ) is used, we have a combination of the two forms. The points, to which the running weight is moved and which are marked with numbers, are called nâmâ, marba, nâmâ, sâbâra.

When the beam is horizontal, the balance is known to be in equilibrium. This may be seen approximately with the unaided eye. Sometimes an equilateral triangle is placed below in the centre of the beam, the altitude of which is marked; from the centre of the beam hangs a pointer (hadâl); if the pointer coincides with the line, the beam is horizontal. Sometimes, as in our balances, a scissors-shaped fork (sawâdâm) is used above the balance and one watches when the tongue (al-balâ) standing up in the middle of the beam lies between the arms of the fork; or sometimes a pointer is attached to the fork above pointing downwards and one watches when the end of this pointer is exactly opposite the tongue below. Finally the tongue may be placed below and the fork hung downwards, turning on the fulcrum of the balance. If there is no equilibrium the tongue falls outside the fork which is always perpendicular. Of technical expressions we might further mention al-dâqqa, the weight as measure of heaviness (al-thâlâb) and lightness (al-khâfâg), the scale (al-khâfâg), the threads to which the scales are attached (al-khâfâg), the hook on which the scales or the weights are hung (al-abrâf), the arrangement for suspension (al-hâfâq).

Almost the only weights used in scientific works are the dirham and the mithâl (1 mithâl = 10 dirham and one mithâl = 4-4.5 grammes). The absolute value is usually of no importance in the cases we are concerned with, as it is only a question of relations of the weights. Further, 1 mithâl = 6 tânwar = 24 târâf = 96 arâb. The normal weight, the standard, with which the other weights are to be compared, is called sahâf or sahâf. Weights etc. have been discussed and studied by H. Sauvage (see the Bîtîl).

In the theoretical discussion of the balance the first point to be considered is the definition of heavy and light body, the establishment of the centre of gravity, that of stable and unstable equilibrium, which is given by the relative positions of centre of gravity and centre of balance, the investigation of the question if it matters whether the weights are attached directly to the beam or to rods attached to it which are perpendicular or inclining to it.

By a fortunate chance there has been preserved to us the very important work "The Balance of Wisdom", Mîdâr al-Kâfâm, by Abu Mansur Abu 'l-Fadh Abu al-Khalîm al-Khâfâmî (c. 1100 A.D.). That he was right, the author is certain from a passage in al-Fâhês (see Beitr., xx. 73). All the above questions as well as the theory of the definition of specific gravities and some special applications of the balance for measuring time and for levelling are fully discussed by him.

In the general part he carefully considers the achievements of earlier workers in this field, for example the classical writers like Archimedes, Aristotle, Euclid, Menelaus and Pappus. He used the pseudographic work of Aristotle — without, however, mentioning his name — the epigraphic epigraphus (cf. Th. Bel, op. cit., p. 125). M. Steinicke's statement that there is a translation of the work in the British Museum is wrong, as Mr. E. Edwards informs me. The work is, however, mentioned among those of Aristotle by Ibn al-Kâfâm, p. 43, ii. Among Muslim writers Thabit b. Kurr, Ibn al-Hallâj and Abu Sahl al-Khâfâmî were specially mentioned. He also deals with a series of balances which have been made by different students (see below). For specific gravities he relied mainly on al-Biruni's work Ma'âlâ fi...
As the two arms of the beam were of different lengths, the superior weight of the longer had to be balanced either by a suitable form of the beam or by a special weight attached to the shorter arm. Thabit b. Kurrā's work on the ḥaraṣṭun, which is preserved in Arabic and in Latin translations (cf. Buchner, *op. cit.*), is devoted to this problem. To increase the steelyard's capacity for weighing, several large running-weights are used (fig. 1); but attachments can also be fixed to the shorter arm of the lever at two distances from the fulcrum, but in this case compensatory weights must be used. If the spaces are in the ratio of 1:2, the weights of the articles on the scale are as 2:1, when the position of the running weight is the same; two divisions are marked on the longer arm. It is the same when different running-weights are used; a corresponding number of these divisions is called ḥālā.

In order to be able to weigh the ádhām and the miqṭāli with the same divisions, 'Omar al-Haźāyāmī puts the scale for the ádhām (silver) at a greater distance from the fulcrum, as for the miqṭāli (gold). If the lever is in equilibrium for the ádhām, a compensatory weight (mīyār alt-tāj) must be added to the shorter arm for the miqṭāli.

The beam of the balance may also have divisions marked on the upper and on the lower side and be so arranged that either side may be turned upwards, so that one can weigh with two quite different systems of weights.

In many steelyards, for example those in use in Egypt at the present day, the scale hangs on to the fulcrum (the 'lid'), a piece of metal shaped like a T. The running poise is a cylinder of brass the interior (bāl) of which is filled with lead. Attached to it is the hook; the pointed part that moves along the divisions is called mīyār (index). The whole apparatus, about five feet long, rests on a wooden support, ṣaltūl; the rod itself is called ḥāsūn. In the work by Eliyya (mentioned below) methods are given for ascertaining and correcting errors. These may arise from the balance and its attachments having false weights, from the points being wrong, the beam bent or crooked or the divisions being wrongly marked.

Al-Khārizmī gives two pictures of older standards, one of the generally known (mudāhrān) ṣāhān (fig. 2) and another (fig. 1) of the ǧaštun mawṣūlān of the great mathematician 'Omar b. Ḥusayn al-Khūyānu, author of the celebrated quatrains. The illustration shows the different divisions, the running poises, the different places for the attachments and the marginal notes of the text.

A place in Fars was called al-Kaṣṣātun, probably because a ḥaraṣṭun was placed there (see Dörr, *op. cit., b.v.).

The following are Arabic words on weights and balances besides those of al-Khārizmī:

Treatises of Euclid on the balance (mudāhrān), ed. Wöpcke in the *J. A.*, Ser. iv., vol. xvii (1851), p. 27. According to Wöpcke, it comes from the work of Māshā, according to M. Contre and L. Heberg from Euclid (cf. Th. Ibel, p. 35). The work ascribed to Euclid on "Light and Heavy" is preserved in Arabic and often mentioned.

Works with the title "On the ḥaraṣṭūn" were written by the Rāmān Māzn (about 950), Thabit b. Kurrā (826–901), Rûṣûs b. Līlā (864–923) and Ibn al-Haštām (965–1030).
Important information on balances, especially the karstun, is also contained in the work of Ushafa by E. L. Leclerc, *La Balance* (1758), Archibishop of Nisibis, which is perhaps based on a work by Kassim b. Luka, *Kita' al-Karstun wa l-Muhammadi*. Part of it was dealt with by H. Sauvage in the *J. R. A. S.* 1877, vol. ix, 279, and 1880, vol. xii, 110; much information is also contained in the work by Hasan b. Ibrahim al-Dhabarti (1698–1774) entitled *al-Ikhwan fi l-muhammadi* (and it is also called al-Durr (al-Ikhwan, *a-l-Ikhwan fi l-Muhammadi*). According to his son, Abdul-Rahim al-Dhabarti, weighing machines in Egypt etc. had been in great confusion about 1758, which was completely cleared up by his father, who may therefore be regarded as the reformer of Egypt in this respect. In the composition of this work he was assisted by the Shi ki al-Khawani, 'Ali b. Khalil.

Other authors and their works are:
Abu 'Ishaq al-Nasir al-Din al-Khwarizmi (1024–1030), *al-losure wa l-Diyun fi l-Maslaat wa l-Muhammadi* or it is also called *al-Durr (al-Ikhwan, *a-l-Ikhwan fi l-Muhammadi*).

According to his son, Abdul-Rahim al-Dhabarti, weighing machines in Egypt etc. had fallen into great confusion about 1758, which was completely cleared up by his father, who may therefore be regarded as the reformer of Egypt in this respect. In the composition of this work he was assisted by the Shi ki al-Khawani, 'Ali b. Khalil.

Other authors and their works are:
Abu 'Ishaq al-Nasir al-Din al-Khwarizmi (1024–1030), *al-losure wa l-Diyun fi l-Maslaat wa l-Muhammadi* or it is also called *al-Durr (al-Ikhwan, *a-l-Ikhwan fi l-Muhammadi*).

According to his son, Abdul-Rahim al-Dhabarti, weighing machines in Egypt etc. had fallen into great confusion about 1758, which was completely cleared up by his father, who may therefore be regarded as the reformer of Egypt in this respect. In the composition of this work he was assisted by the Shi ki al-Khawani, 'Ali b. Khalil.

Fig. 1.
Above the beam of the balance is written al-Andalusi, to the right of it al-hand, marbaa (maxim) for gold, for silver. Below the beam is written (al-hand). Below the weight is written: the large, medium, and small stones (running points) for the hundreds, tens, and units, for the fractions. Paradoxically, it is information relating to the separate running points. Above the left side of the scale inscriptions are given for putting on the running points. Above the work, the six parts of the balance are given: 1) the beam with the indicator; 2–4) the three running points; 5) the scale etc.; 6) the compensatory weight. The illustration is taken from "The Balance of Wisdom."
KRATIGEHN, a district on the Wakhsh, or Surkhi, (Turk. Kharš), one of the rivers which form the Amti Darya, called Rigik by the Arab geographers [cf. I. 329]. The principal place (or the fortress), al-Karaz, al-Jahakht, p. 340) of Rigik corresponded as regards its situation perfectly with the modern Garin, the only town in Karastun. Rigik then formed one of the frontier lands of Islam and was defended on the east against the invades of the Turks by a wall built from Baramak [on him cf. I. 665, 5. 57]. In ancient times there ran through this region the road from Western to Eastern Asia described by Ptolemy. Karastun is frequently conjoined with the "highlands of the Kembis" Kaspih described by Ptolomey, as recently as Chavannes, Documents sur les Tartares Occidentaux, p. 164, on the authority of Sebasti- vov in the Bull. de la Soc. d'Orient, pt II for 1890, p. 420-431); but in the middle ages the name (Arab, Kanab or Kandah, Chinese Kiu-ma-lo) was borne by the country below Rigik. In the middle ages and later the valley of the Wakhsh seems to have had no great importance for trade; as far as has been so far ascertained, only the embassy sent by Shah Kuh-i to China (1419-22) used it, on its return journey the road between Fergana and Balik described by Ptolemy.

Like all the highlands on the upper course of the Amti Darya Karastun also was under its own rulers about the middle of the modern times; in the pre- Mongol period only one Amir of Rigik, Hujr b. Samauni (Gurumtar in Darbâd, Jârâk o 1. 9, under date 337 = 948/949) was mentioned. Under Timur and later the name of the last of the Khiâr Tegn (or Tignu) is found. In the printed edition of the 12th century, 1. 189, erroneously it is Tegn- Sem, and when and how the present form arose is unknown. In the manuscripts of the Kâhârnâmeh (ed. Beveridge, f. 23 b. and 63 b. 7th, L. 68 and f. 37 Kâhârnâmeh) and of the Yâqîrîhâ (transl. Ross, especially p. 241) both forms are found. Karastun is popularly explained as a Turkish word for "blackthorn" (cf. Radloff, Winterbuch, ii. 135, Ottoman Karâ dâlû), or as the name of the two first Kâhârs of the Khâns (L. Mineyev, Svoevremena s treschnâ v sevâro- kakh, t. 1, p. 241, following Arandarenko). As is indicated in the Barâk-e-Čirâm of Mahmud b. Walt (India Office Mss., Khan, Cat., No. 575, b. 2777, in Radde, 1905 (Dec. 1635-Jan. 1650), 120,000 families of Kâhârs, then still pagan, went through Karastun to Isfârâr. At the present day the Khiârs (Khârs Kâhârs) form a part of the population of Karastun along with the Turjik (not a small number of Ostegs).

In the nineteenth century the princes of Karastun, like the princes of Badakhshan (cf. I. 324-325) claimed descent from Alexander the Great. Karastun was then under the sovereignty of the Khâns of Khoqand; their sucession is said to have taken place under Muhammad 'Ali Khân (1822-42) in 1850 (1834) (Nâvîkîn, Khrâshkâhî, Avâdaneh, p. 134 ff.); but already under 'Ali Khân (beginning of the nineteenth century) we men from Karastun forming a considerable part of the standing army founded by this Khân (Tâfebâ, Shakhrisâb, ed. Fantosie, p. 42 ff.). A campaign of Khoqand against Karastun in 1725 (1828) under Mulla Khân (1858-62) is also mentioned (Nâvîkîn, cf. id., p. 190); the ruler of Karastun was at this time M. Râshîd Khân.

The town and the fortress were almost always held by the Russians, 1737-1835, and later by the Afghans, 1877-1917. Since 1922 the town has been under the administration of the Russian Government (cf. I. 322).

KARASU. (See also TURKAY.)

KARASU-BAZAR, a small town in the Crimea, east of Simferopol, in 45° 12' N. Lat. and 34° 30' E. Long. of Greenwich, was in 1750 after the destruction of Rigik a fort of the Russians, Karasu-Bazar was for a short time the residence of the Khân; but this town was also taken by the Russians under General D'Aubigny in 1737. The town has preserved its oriental aspect, and in the present day there are many houses there with warehouses and coffeehouses. The large Tahâ Khân said to have been built as a fortress in the seventeenth century, now serves the same purpose. The town was several times pillaged by the Don Cossacks in the seventeenth century. Cf. Vellamnof Zemski, Materialien pour servir à l'histoire du Khanat de Crimée, St. Petersburg 1864, Index.

KARATEGIN—KARA VASYIJI

bridge 1913, p. 325 sq. (Journal of 1906); of W. Massaliotis, Thrac. Archaeol., p. 775 sq.

(W. BARRY)

(See also called Musaffar Shakh). When in the year 1869 Haji had to submit to the Amir of Bukhara, Karategin also was occupied by the troops of the Amir and Musaffar Khán taken as prisoner to Bukhara; the conflict thus engendered between Bukhara and Khákhán was only settled by the verdict of the Russian governor-general (K. v. Kaufmann) and Musaffar Khán again restored to his principalities; but after his death Karategin was definitely incorporated in Bukhara. Karategin also became involved in the last fighting in Farghán before the first submission of this country by the Russians (1874—1878); the Beg Muhammad Khan Bhán Sháhad advanced to resist the insurgents with force, although they had been favoured by his brother Musaffar Shákh (apparently not identical with the prince already mentioned). The frontier between Farghán and Karategin (on the heights east of the valley of Kíkír Karamía Su) was defined by a treaty concluded between Skobeleff and another brother of the Beg, Sáfí Khán on August 28 (Sept. 9), 1876.

It was not till 1878 that Karategin was for the first time visited by a European (W. Oslauin). In the following decade the governor Kháilí Námí Tálik and his successor Alímí Beg had a mountain road, one of the best in Central Asia, built through Karategin on the right bank of the Wakhsh, which made Karategin much more accessible, but in winter Karategin is completely cut off from neighbouring lands. Oslauin and later travellers describe Karategin as a settle country with numerous villages and orchards, and as one of the most prosperous provinces in the kingdom of the Amir of Bukhara. It is said (Iogoqet, p. 322 sq.) that in Karategin all the inhabitants without exception make a living by agriculture (including gardening), and that there is no landless proletarian there; anyone who neglects his piece of land for three years loses any right to it. On the other hand Rickmers (p. 340) says that many peasants go from Karategin to Farghán, work there as day-labourers and servants and bring home savings and so that Russian money is taken more readily than by the Bukharans. The only town is Garm; as regards the number of inhabitants, estimates, as usual in the east, are very contradictory, according to Oslauin 2,500 houses, to Masaláki 4,000 people, to Iogoqet 15,000 people. Information regarding administration, taxes, etc. is given in particular by A. Semenoff (Journal of 1898). The question: "When will the White Cat (jafochák-i safíd) take us to himself?" was frequently asked Semenoff by the people, emblazoned by the arbitrary conduct of the taxcollectors.

KARAUL (KARAVUL, KARAVUL), an Eastern Turki word meaning guardian, watchman, sentry, (borrowed by the Russian in the last sense); a hunter who watches game from a distance; the chief of a body of these hunters is called karavul-beji. In Ottoman Turkish karavul means a police-station. The word is connected with the root karav, karav, to observe, watch, or guard. — At the present day in Bukhara, the rank of karavul-beji corresponds to that of lieutenant (V. Kurniáto, Levé des civilisations de la persie, Paris 1912, p. 53). In Persia the name karavul-khán is given to the watch tower erected on the mountain tops, commanding the surrounding country (Chodsko, Specimen of the Popular Poetry of Persia, Otr. Tratol Fund, p. 228, note).

KARA VASYIJI, leader of a native rebellion in Asia Minor from 1899 to 1902. His proper name was Ab'ád al-Hamú and he was chief of the corporation of Seghás (Seghán Nihák beji). His followers consisted of Kurds, Turkmens and a large body of soldiers who had fled from the army in Hungary, chiefly on account of the Grand Vizier Ciflála's harsh and cruel treatment of them. They are therefore called Füvel'éshéh, another name is Dzhálsú; their rebellion is known as the Kára Vasyiji rebellion. Kara Vasyiji's first act was the occupation of Rahat or Urfa (n Edessa) in 1908. The former Beglarbeg of Abylaula, Husain Pasha, who had been sent as an inspector to Amida in the previous year and had also rebelled against the Sultan, took refuge with Vasyiji on hearing of the approaching issue. Simbad Pasha Zade Muhammad Pasha had attended at Amida in order to bring him to book. They sustained a siege of Rahat in which they were finally compelled to cast bullets from silver coins, but in the end Kara Vasyiji made terms with the government troops by handing over Husain Pasha to them. The latter was sent to Constantinople and put cruelly to death. Kara Vasyiji was then appointed governor of Amida. In this town he again began a reign of terror; as Evliya Celebi tells (ed. Constantinople 1844, L. 184), the inhabitants hid themselves and their possessions in the mountain caves. Muhammad Pasha again succeeded in driving him into the mountains round Sivas and, after passing the winter in Diyarbakır, marched a second time against him. But Muhammad Pasha, Beglarbeg of Sivas, and other notables went to Constantinople and convinced the authorities that Kara Vasyiji had abandoned all evil ways. Accordingly the latter was given the sandjak of Corum, on condition that he would swear fealty. But, with his brother Doci Hasan (in Naxim, l. 128 the name is written Husein) he continued his propaganda, so that Ibrahim Pasha, former governor of Damascus, and Hasan Pasha, former governor of Baghdad,
were sent against them; these two Pasbas were utterly defeated at Kajtarye on the 13th of Shawwal, 1008 (April 23, 1600) by 20,000 rebels. After this victory Kara Yazdiye regarded himself as an independent sovereign over the regions which he had taken from the Ottoman power. Finally he was defeated on the 12th of Shawwal, 1010 (April 5, 1602) by the vizier Hanu Scooldii, at Sepaswali. The rebels fled to the mountains of Iskali; here Kara Yazdiye died in Ramadan of the same year (according to Šahīdī-aghī-i-Qotb, Constantinople 1541, i. 302 npp, his death took place already in 1009). He was succeeded by his brother Deli Humphre, who named his son Shaiswar, Vizar Kapdi and Tawrī; his body was cut between two pieces which were buried in different spots in order that the Ottomans' might not know in their power to burn the corpse. The new chief afterwards waged war successfully against the already mentioned Hasan Pasba, who was killed by them in Tokat.

The inner history of this rebellion, which continued until its bloody suppression by Murad Pasba in 1605, has not yet been sufficiently studied. It does not seem reasonable to seek religious pro-Shah's motives behind it (cf. Baldinger, in the Z. d. M. G., xxvi. 143), as a name like Shahwerti suggests. On the other hand the moment was very beneficial for a rebellion, the bulk of the Ottomans power being then occupied in Hungary at the siege of Kazan. On the name Iskali cf. Baldinger, in. i. 14, note 3.

KARI. [See KIRK, KIR.

KARI, the name of a modern metre used by the Turks and Persians and called al-monserat by the Arabs. Its measure is in each hemistich: 

\[ \text{кари} \] 

The principal variations are: 

1. \[ \text{кари} \] 

2. \[ \text{кари} \] 

3. \[ \text{кари} \] 

4. \[ \text{кари} \] 

The latter two variations are mainly found in Persian, the former two in Arabic. The term is also used in the Ottoman Empire as a poetic form.

*Bibliography: See the article "KARI." (Moh. H. CHERNE)

KARIBIA. [See KARIBIA.

KARIM, of persons: generous, benignant, liberal, honourable, noble, high-born; of things: bounteous, plentiful, honourable, noble, splendid. "Kari" is one of the ninety-nine attributes or "excellent names" (Sira vii. 179) of God, but in the twenty-seven passages in which the word occurs in the Quran it is only twice applied to Him. It is applied to Muhammad, to an angel, and, ironically, to misbelievers, but it more frequently qualifies things, e.g. the unconquered and provisionally awaiting the faithful, the Kari, the latter sent to Rilka, queen of Saha [q.v.], the purity of the faithful into paradise, plants, cornfields, dwellings, the mode of addressing parents, etc. Thus faithfulness the term is often applied to Yiwa, who is called "Kari" in the Kari, (al-Bukhari, Manhati-i aham 13). Tafir, Sita 12, 15), "Kari" makes up the eyes (Ahmad b. Hanzal, Mihmas, iii. 285).

*Bibliography: The lexicon, a.v. (T. W. HAGG)

KARIM KHAN ZEND (MUHAMMAD), a member of a family of no special distinction belonging to a tribe of the *Liw, was in reality king of Persia at the end of the xviith century without having the title, as headways retained the surname of *Wakli (plum-potentiary), under which his name has remained popular. He was at first one of the lieutenants of *Bokhirti, general *Al Mardan Khan who, taking advantage of the anarchy that followed the assassination of *Nadir Shah Afgh, seized Isfahan and placed on the throne the last son of the *Safaw, dynasty, *Shah Ismii of the third, aged eight (1472 = 1752). The murder of *Al Mardan, the defeat of the government of *Adharbajj, and of *Muhammad Husain Ezan, lord of *Mansardae, gave him possession of the whole of western Iran. Attached to *Shah in *Mahmud Hasan, son of *Fath *Al Khan Zend, who had just seized Isfahan, he saw the army of his adversary melt away; a year later, the *Kajjar prince was killed in a battle against Karim Khan's lieutenants. Khosrow, however, subdued Karim *Khan; this province remained in the hands of the tribe *Shah Ruj, a descendant of *Nadir Shah. Karim's two generals were his two brothers *Sadik and *Zakli of whom the latter afterwards made himself notorious for his cruelties. The former directed a campaign against the Ottomans; the town of *Busra, besieged for 13 months (1499 = 1779), surrendered to the Persians and remained in their hands till the death of the *Wakli. He binned himself in restoring peace to the country and in developing agriculture and commerce; although not in any degree educated, he attracted scholars to his court and procured for them and himself their protectors. His usual residence was *Shiraz which he adorned with a number of buildings still standing today (mosques, caravanserais and baths); the tomb of the poet *Sa'di was restored by his orders; the tomb of the poet *Hafiz is beautiful Tabriz marble on which were inscribed two odes by the celebrated poet; the *Heftian (seven bodies) was consecrated to the memory of the pious dervishes who inhabited it; it is a pleasure house the interior of which is adorned with paintings of Biblical scenes or imaginary portraits of *Sa'di and *Hafiz; not far from it is the garden of the *Wakli, better known as the *Daghhsan (mirror of the world), the name given it by *Fath *Al *Shah; the garden called *Bakht-i *Dilgurah (garden which rejoices the heart), now occupied by a kitchen-gardener.

He died at the age of 74 on the 23rd of Shaw, 1143 (March 15, 1779) — the date correct according to *Olivier. After his death, Persia fell back into a state of anarchy from which it was only raised by the coming of the *Kajjar dynasty.

KARIN means a companion of any kind (mahfīz in the Sīāhā and the Lisan, xvi. 214 cp.; hadīm in al-Baidawi on Kūrān, ali. 24); hence Bakr and Talha and Abu Bakr and the four are called "the two Karins." It is plain, too, that for Muhammad and pre-Muslim Arabia the word also suggested a spirit-companion. That is the overwhelming usage of the Karin. In theology, every human being has, as a Karin, a shaitān and also an angel appointed to accompany him and, respectively, to tempt him to evil or to invite him to good. (Lisan, loc. cit). The shaitān is sometimes called a dijinn and will be cast into the Fire at the Judgment along with his human comrade whom he has led astray. These two Karins are therefore different from the recording angels which accompany each human being (Kūrān, isxiii. 10-12). The basis of this is both Kūrān and Hadīth. The word occurs in the Kūrān eight times; in Kūrān, xxxvii. 49, a human companion is evidently meant (Nūr, 6:126, al-Baidawi); in Kūrān, iv. 42 (26), the Karin is a Karin; in Kūrān, ali. 24, the plural Karins is used, but the context and especially the word hawāna (u. al-Baidawi on this) shows that tempting spirits are meant; closely parallel is Kūrān, xiili. 33-37, where a shaitān is "ordained" (hawāna) by Allāh as a Karin; on Kūrān, i. 22: al-Baidawi, still in doubt, whether by Karin a shaitān or an angel is meant; but on v. 26 he is certain that it is a shaitān. In this he follows the oldest exegetical tradition on the whole subject given in al-Tabarī's Tafsīr, xaxxi. 93 cp. Even the prophets have such a shaitān, but that of Muhammad was converted by him to Islam; a great many traditions bearing on this are given in the Ahādīr al-ma'darīn of Muhammad Abūdallāh al-Shiblī, bab 4, p. 26 cp. (ed. i. 1236). A very suggestive and full ethical-theological treatment of the whole subject is in the Ta'rikh al-Ghazālī, Kitāb al-shaitān al-balāt, ed. with comm. Dīnār al-tasā'ib, vi. 284 cp., where the traditions are given in detail; cf. D. R. Macdonald, Religious Attitudes in Islam, p. 274 cp. At the other extremity is the fulsomistic development in popular Islam; for it is seen in S. M. Zawawi, Fatḥat al-Arab al-Islāmī, chap. vi. Much of this, too, may easily have been in the mind of Muhammad and the world.

Another use of Karin in old Arabia was for the dijinn who accompanied a poet and brought to his verses. This use has been transferred in Islam to the angel who consented with the Prophet and brought him his revelations (Lisan, loc. cit.; Golzahm, Abhandlungen über arab. Philologie, i. 5 cp.; D. B. Macdonald, op. cit., p. 19 cp.).

Historiography has been given above; see traditions in Ahmad b. Hanbal, Muslim, i. 385; 397, 401, 460; cf. ii. 385; al-Durrant, Muslim, Rijāl, 25; 254; al-Makrīzī, Kita'īb al-Ma'mūd, Trad. 69 (ed. with Naqash's commentary, Cairo, 1285, 362; Constantinople, 1334, viii. 138).

KARKARL, a Cossack village and the capital of a land district in the territory of Semipalatinsk, 49° 2'N., 78° 7'E. Long. (Grefer): it has about 3000 inhabitants of whom two-thirds are Muḥammadans. (W. Barthold).

AL-KARKH, the name of an important quarter of old Baghdad. The word Karakh, which comes from the Arabic (Karākh), is found in Greek and Roman writers as Carcha, Carthax, and Charax (see Pauly-Wissowa, Realencycl. 4, 763. Alm. Albertuswitzius., Suppl. 1. 273, 283) and means town, pref. Yākūt, Muḥammad, ed. Westendorf, iv. 572, 56; Streck, *cit.* (see Bītī), p. 93, 180; G. Le Strange, Bagdad, p. 63). There was still in the Muslim period a whole series of places or parts of towns called al-Karkh within the area of influence of Aramaic culture, in the Ḥillāt and al-Djātra; they were distinguished from one another by the addition of a geographical name (like Mālust, Sinjarīt). Yākūt, iv. 572, 557, gives 9 such places; see also al-Tabarī (ed. de Goeje, Indica), p. 752. Our Karakh is often more exactly defined as Karakh Baghdād.

As the Arabic name shows, the al-Karkh quarter was already in existence before the foundation of Baghadād by al-Ma'mūn (145 = 762), as a small independent township and it have been formed by the Sassanian Shāfatī (300-379 A.D.), which, like the other earlier settlements on the site of the future capital of the Caliphate, was no doubt mainly inhabited by Aramaic Christians (cf. above, i. 564). This pre-Muslim Karakh was selected by the Caliph al-Ma'mūn to be the mercantile centre and it soon became the busiest quarter of Baghadād owing to its commercial character. A Karakh was at first quite separate, another of the so-called round city of al-Manṣūr and a fair distance from it; but as new roads and squares grew up all around it, it soon began to merge in the sea of houses of the great capital.

Al-Karkh was walled by the Nahr Ta'ā, the most northerly large canal of the Esquifates in the Iraq, as well as by its branches, the Nahr Sarat and the Nahr Karakhīyāt. The latter is the "Karakhīya Canal" (Karkhīya = Kārkhī; see Frankel, a. e. a. o. a. o., Arabic. Etym., on Arāb., Leiden 1886, p. 77) which left the Nahr Ta'ā below the small town of al-Mujawwar near the village of al-Barakāt (see above, i. 553) and supplied the southern part of the western half of Baghadād, i.e. the mercantile quarter and its neighbourhood, with its branch canals, which in places ran underground. Numerous bridges carried the busy traffic over it. On the Nahr Karakhīyāt and its annual supply see Ibn Sīrāq, ed. G. Le Strange in the J. R. A. S., 1895, p. 24, 1895; p. 288-292; al-Khāṭib al-Baghdādi, ed. Salamin (see the Bibi), pp. 66-69, 95-103; Yamīn, iv. 572; Streck, *cit.* p. 95-100; G. Le Strange, Baghadād, p. 52-56, 63-80; Herford in Searle-Herford, especially the Bibi, 116.

In the civic history of Baghadād, especially during the Buyyid period (9th-11th century), al-Karkh, which was regarded as a Shi'ī stronghold, is frequently mentioned (cf. above, i. 597). Under the Buyyides who had 'Alid sympathies the al-Karkh quarter was greatly developed; if 4th quarter of the town, and it was the usual place of residence of the Shī'ā sectaries. Under the Mamelukes the district was divided into a number of districts and the Caliphate.

Al-Karkh was mostly in the main centre of this civil strife; its inhabitants were always at daggers drawn with the Sunnīs of the adjoining districts (Bahr al-Baghdādi), and Shī'īs of al-Dawla (416-435 = 1034-1054) under whom the situation had become extremely serious was even on one occasion, in 422-435, reduced to take refuge with his Shī'ī confederates in al-Karkh. In 445 (1055) a considerable part of al-Karkh was laid in ashes as a result of these feuds. A great fire had previously devastated al-Karkh under the Caliph al-
Al-Karakh was not only the largest but also the most long-lived quarter of the western half of Baghdad. When the quarters around it had gradually fallen into ruins, it stood quite isolated—as early as Yaqut's day for example (beginning of the xiiith cent.)—like a separate town, as it had been in the earliest period after the foundation of Baghdad. It was a mile distant from the then still inhabited quarter of Bab al-Dawr (in the south-east of the old round city of Bab al-Mansur). In the later middle ages (cf. for example Ibn Batuta in the sixteenth century) the name of the Bahr al-Dawr quarter was not infrequently extended to all the quarters of western Baghdad still standing i.e., even to include Al-Karakh; cf. G. Le Strange, op. cit., p. 336; Herzfeld, op. cit., p. 144 sq. We merely point out that the topography of Al-Karakh and its vicinity in Yaqut is not quite in agreement with the other sources. It appears that the local knowledge of the author of the Geographica Dictionary at the time of writing was no longer quite reliable. Cf. G. Le Strange, p. 24, 159.

Al-Karakh is also known as a rare mint; there are coins of the reigns of the Caliphs al-Mukhtadin, al-Mu'izz and al-Riff, dated in the years 309, 315, 318, 321, 325 cf. Numismatische Zeitschrift, Vienna 1893, p. 311; Lavoix, Cat. des Monn. Mus. de le Bibl. Nat., I, 285; Numismatische Chemische, 1905, p. 322 (1905, p. 197). The wines of Al-Karakh was highly esteemed. In the poems of the older 'Abbâb period (e.g. in Abû Nawâs, Ibn Mutarr) it is often mentioned; cf. G. Jacob in Orient studia, Th. Noldeke, grundriss, Giessen 1905, p. 605.

At the present day the part of Baghdad on the right bank of the Tigris, which barely makes up a third of the area of the city, is called Karahkha, properly (Turkish) Karahkha Yâkû.—the other side (lying opposite the city proper on the east bank), reproduction of the popular Arabic fâhâfân al-Dirghâ. This name has therefore no connection with Al-Karakh (the contrary view is held by Le Strange, op. cit., p. 66). Karahkha was for long merely an insignificant suburb; but in recent years it has increased somewhat in importance and will certainly continue to do so at the railway station of Baghdad is there. Since the second half of the xvith century Arabs of the tribe of 'Ukāf (Ogâl, 'Alâ') have settled here, who with other caravans, people form at the present day a considerable part of the inhabitants of this western town. Cf. ibereon Fornik's expedition in Flora et geographia, suppl. part. 44, Goth. 1875, p. 28, 30: v. Oeser's Vom Mittelalter bis zum persischen Golf, Berlin 1900, ii. 672, 85; C. F. Borchgrevink, Histoire de Bagdad dans les temps modernes, Paris 1900, p. 21, 190 sq.; Massingham, op. cit., p. 92.

(M. Streer)
whether al-Karkhi deliberately took no notice of the Indian methods or was not acquainted with them cannot be decided. In his book on astronomy, like almost all Eastern Arabic mathematicians (except ‘Alī b. Aymād al-Nasawi, about 980–1046), he does not use Indian numerals but writes out all the figures in words.

**Bibliography.** There is not a separate article on al-Karkhi in any of the Arab biographical works so far published; he is only occasionally mentioned in Ibn Khallikān, ed. Cavoisier, ii. 1330, l. 65; transl, by de Slane, iii. 314; cf. also M. Cantor, Vorzüge der Gesch. d. Mathematik, iii. 713–729; H. Suter in the Abhandl. d. Math.-nat. Wissensch., v. 84.

(H. SUTRA)

**KARKHISA** (also KARKHYA), a town in al-Djazīra on the left bank of the Euphrates, close to the confluence of the Khūṭūr, a little above 35°N. Lat. Karkhisā is simply an Arabic reproduction of the Graeco-Roman name (α) Karkhēs, (β) Καρχήσια κόσμως or Καρχησία (Karkhēsia) in the Nест. εἰσοδήμαρχος, ed. Parthey, p. 52; S. Circeanum, Syriac Kirkostion, Latin = castrum Circeos, "the castle with the circus"; cf. Nolddeke, op. cit. (see Bibl.), p. 3. Ḥamza al-Muyib ha in Yākūt, iv. 65, as ḥaṭr, still known in the nomenclature of the place-name (Circeanum for the place at the mouth of the Khūṭūr) in any case first appeared when a Roman military station was built there. This perhaps may have been even before Disdarian. It was, however, this Emperor who first made the place of great importance by making it a powerful fortress on the extreme frontier of the Roman Empire in Southern Mesopotamia. From this it seems quite impossible that Circeanus could have been a Latinization of the Aramaic Karkh = town (see the article AL-KARKH), on Mörz, op. cit. (see Bibl.), p. 37; suppressed; see Streck's arguments in the Z. A., xxvi. 259.

A situation so favoured by nature as the mouth of the Khūṭūr must certainly have been already inhabited in remote antiquity. But the names of the settlements there have so frequently happened in the Euphrates changed several times in the course of centuries.

The old native name of the place was perhaps the Nabaghat mentioned by Ishaq b. Chariz (cf. Harzfeld, op. cit., l. 174). Another name is perhaps preserved in Chabora, l.c. = the town on the Khobīte; see Streck in Pauwly-Wissowa, op. cit. (see the Bibl.). In the inscriptions of the Assyrian kings of the ninth century (Tukulti-Ninurta II., Assyro-Babylonian) we find mention of a place named Sirku (Sirku), which, according to the literature of Tukulti-Ninurta, was the last Western stage along the Euphrates on the road to the mouth of the Khūṭūr. Following Maspero (Le Carchemish, p. 145, Paris 1872), p. 153; this Sirku has been connected with Circeanus and the latter name actually derived from the Assyrian one; see for example Streck, 1905, in the Procédé de la Société des Bibliothèques archéologiques, xviii. 174; S. Schiller, Die Assyriologie, Leipzig 1911, p. 20 and 22; and Mennovan, Babylonie and Assyrie, i. Heidelberg 1920, p. 344; it is queried by Schmitt, Annales de Tukulti Ninurta II., Paris 1909, p. 48. This identification is untenable; see against it Streck in the Z. A., xxvii. 259 sq. and Horn in the Z. A., xxxiv. 159 sq. The site of Sirku is besides to be sought on the right bank of the Euphrates; on the probable situation of Fezira, cf. the Provinciale-inrichting der Assyrië en Babilonië, Leipzig 1920, p. 15. According to the above mentioned itinerary of Tukulti-Ninurta, Rammanum (on the reading see Horn, op. cit., p. 154) must probably be located in the region of the junction of the Khūṭūr with the Euphrates.

Simply on account of the similarity of names, Circeanus used to be identified with Carchemish, the great Hittite city, for example in the earlier Biblical commentaries, by the Jewish traveller Benjamin of Tudela, also by Witter, op. cit., x. 15 and by Chenery, op. cit. (see the Bibl.), p. 450. The lack of foundation for this identification was shown notably by Maspero, above mentioned work and by Noldeke, op. cit., II. 49. Beside, the site of Carchemish has been identified for several decades beyond all doubt in the ruins of Ḥimkā or Ḥisbālī on the right bank of the middle Euphrates, a few hours' journey below Birešāk.

In the fourth century A.D. Circeanus passed into the hands of the Persians by the shamal treaty made by the Emperor Jovian (363). The Arabs next captured it in the conquest of al-Djazīra. The occupation by the Muslims took place, apparently without fighting, under the commander Habīb b. Madīlūn who was sent by Yazīd b. Abdul Malik, probably happened in the year 640 (960), not 16 (627), as many sources say. Cf. chron. of al-Baladhurī, Kitāb al-Ṭabarī (ed. Goede), p. 176, x (and cf. p. 111, 175, 178, 179); al-Tabarī (ed. de Goede), i. 2478; Ibn al-Aswad, al-Kitāb (ed. Torberg), i. 409 sq.; Yākūt, Muṣāfā (ed. Wissowdoff), iv. 65 sq.; Well, Gesch. der Juden, ii. 751, 755, 799. Karkhīya became the capital of the district of Khūṭūr in the province of Dīyar Bakr. On account of its very characteristic situation, Karkhīya is mentioned by all the Arab geographers in their descriptions of the river-courses and roads, but no detailed account of it is given. The place probably did not attain any great size in the Islamic period either. The high percentage of Jews (500 families) found by Tukulti-Ninurta in the second half of the 8th century there is remarkable; see the Hebrew text of his travels edited and translated by Schick and Adler (Jerusalem 1903; Frankfurt a/M. 1904), i. 49, 214 sq. and ii. 47.

In the history of the wars of mediæval Islam, we find Karkhīya often mentioned. When Abū al-Malik was engaged in his campaign against Muʿāwīya, governor of the Iraq and brother of the anti-Caliph Abdallah b. al-Zubair, he had to devote his attention to Karkhīya in 71 (690), where the Kair ṣafar b. al-Butāri was ruling independently and had successfully resisted the governor of Ḥims, who had been sent against him. After a siege of some length, Ṣafar had to submit to the Caliph's army; cf. the account in Ibn al-Aswad (ed. Torberg), iv. 257 sq., Welt, Gesch. der Chalifen, i. 413; J. Wellhausen, Das Arabische Reich und seine Stämme, Berlin 1893, pp. 116–119, 120, 125. In the wars fought in the 9th (10th) century on Mesopotamia, still in the Halfa or Hims, epoch we find Karkhīya playing a part along with al-Rabba, a day's journey down the Euphrates from it; cf. Füger in the Z. B. M. G., ii. 451–2. The rulers of Egypt repeatedly extended their power as far as Karkhīya, for example the Muṣṭafā Aḥmad, from Karkhīya, for example the Muṣṭafā Aḥmad, from
however, the Caliph al-Muwaffaq's vigorous brother al-Muwaffaq was able to restore it in 928 (851) see Wustefeld, Der Statthof der Ägypter aus Zeit der Chalifen, Abb. G. G. W., 26 (1876); vol. xxii, part ii, 20. Several centuries later the Egyptian Sultan Haitham again advanced his frontier up to the Kharis, when he took Karkhadd from the Mongols in 663 (1264); cf. Wulff, Gesch. des Chalifats, p. 96.

At the present day the site of Karkhadd is occupied by a miserable village of 30-40 houses and hovels of clay and an extensive ruined site adjoining it. It is now called Dusamra (Badly wrongly written Russia by the Turks); older travellers give the form Abd Serai etc. Dusamra is probably a corruption of Abd Serai (as, along with other authors, Moritz, op. cit., p. 37, thinks); it has been with less probability taken as a derivative from Basar, the older name — recorded by Abu 'l-Fida for 732 (1331) — of the present Dar es-Zor (see Herrfeld, op. cit.). According to Herrfeld, the old name Karkhadd still survives locally in the form Karka.

Russia lies on an irregularly shaped tongue of land formed by the Kharis at its junction with the Euphrates and is about half an hour's journey distant from the mouth. Communication with the hinterland is by boat, which so that we have a well-marked peninsula. The plan of the old fortress can still be easily recognised: it forms a rectangle, the longer side of which runs along the Kharis, while the shorter faces the Euphrates from which it is now about 1000 yards distant. Four more or less well preserved towers and a fort-like building (pristorium, areal) can still be seen, from which Moritz (op. cit.) suggests that the modern name Abd Serai (Dusamra) may be derived. The fairly extensive town lay to the north-east of the fortress and is still marked by numerous walls of earth. Descriptions of the modern ruins are given by Sochon, Moritz and Herrfeld: plans of them are in Sochon and Herrfeld (see Bibl.).

The view of the past once played by Karkhadd as a trading post is an of the most important roads which may be traced from Syria to Babylonia, Mopsuestia to Syria — has in modern times been to a great extent regained by the town of Dar es-Zor on the Euphrates (see above, p. 456) above mentioned, a few hours' journey above the mouth of the Kharis.

KARLOWITZ. [See Karlowitz.]

KARLUK (Karliku). In early Arabic sources Karlikh, in Chinese Ko-lo-kü, in the name of a Turkish tribe, is mentioned in the Turkish Orkhon inscriptions and in the Chinese Tang Shu; cf. E. Chavannes, Documents de la Ton-Khoi (Touf) occidentale, B. Petersburg 1903, Index. The Karluk attained some political importance after 766, when, after the decline of the empire of the Western Turks, they occupied the valley of the Q. [q.v.]. Their princes did not assume the title of Khagan (Kaghan) but only that of Yabghu (Arabie Dschaghya) al-Tafter mentions a Dschaghya of the Karluk in Tokkhistan on the upper Amu Darya as early as the year 1169. With the Dschaghya al-Khuttal (op. cit., li, 1612, 5) corresponds the Dschaghya al-Taktuir (li, 1604, 3 and 1612, 9). At the present day an affluent of the Sughan is still called Karluk or Karluk; cf. W. Barthold, Die alttürkischen Inschriften und die arabischen Quellen, B. Petersburg 1899, with reference to W. Radulfs, Die alttürkischen Inschriften der Mongolen, second edition (B. Petersburg 1892, p. 27, note 1. According to al-Ya'qubi, Zuwarah, ed. Houtana, ii, 419, the Dschaghya of the Karluk adopted Islam in the year 622 (728—729); cf. J. Marquart, Chronologie der alttürkischen Inschriften, Leipzig 1898, p. 25; it should however be observed that the same fact at the same date is narrated concerning many other rulers, which makes it suspicious. M. G. Safar (in Barthold, Turkestas , w. tujan mongol-beyk yukselti, ii, B. Petersburg 1900, p. 207) mentions an invasion of the Dschaghya in Farghana in the year 792. In the reports of the Arab geographers of the 14th century the Karlik are still in our, according to Ibn Hawad (B. as. i, 17, 29), their territory extended 30 days journey from the frontier of Farghana. According to the Persian sources however, their territory was not so extensive; (cf. especially the still unpublished Huda- al-Asan; al-Tabari in Barthold, Ott. w. n.ew. = Seydenwag Asien, B. Petersburg 1897, text, p. 81 sq.; transl. p. 104 sq., and Asil in Barthold, Turkestas, i, 99 sq., Marquart, Ostasiatische Einzelschriften in the Abb. G. G. W., Göttingen, new series, xiii, 11, p. 40 sq.). In so far as they were the nearest neighbours of the Musliman territory, the Karluk, more than the other Turks, were influenced by Persian civilization. They even differed in their features from the usual Turkish types. Mahmut al-Kathibar, Dervis Longul al-Takur, Constantinople 1795—1917, comprises the Karluk and the Ghizis under the common name of Turkmanis. It cannot be ascertained with certainty what was the relation between the dynasty of the Ilk Khans (q.v.) and the Karluk. At any rate the Karluk were mentioned in the history of this empire, especially in Samarqand, as namely Fardinands, the like the Ghizis in the Seljuk empire. In al-Udawati's report (Tavrid, Dzhami Gezil, ed. Mirek Mah,
tolerance and equality, with a system of graduated initiation and the ritual of a guild which — encouraging the rise of the trade guild movement (see the art. Gilds) and universities — seems to have reached the West and to have influenced the formation of European guilds and freemasonry.

I. Etymology and Early History

The etymology of the word Karmania (not Karmatia) is disputed. It appears as a descriptive adjective in the name of the first leader of the insurrection, Hamdon Karman (cf. Alh b. Karman, a heretic quoted by the Nubian author Malinu Taborari). Vollaerts has connected it with the Greek karya,  "work," but it is more probable that we should look back to the local Aramaic dialect of Wasi, where karman to this day means "valiant" (Aramaic adjective of the Midan, cf. Awtane, in Mas'udi, s. a. p. 857). From the year 555 (868) we find mention in the same region, along with the Parthiyen, a corps of Karmania among the rebellious troops of the Zanj (al-Tahiri, iii. 1757; cf. iii 1749; Rasch Karmat).

The name Karman in palaeography means a particular kind of sable; in addition there is a special secret Karmania alphabet used in the Yemeni texts recently studied by Grätting.

The Karmania insurrection was begun by Hamdon in the neighbourhood of Wasi in 277 (889) he founded a tribe al-khif (an entourage of place of retreat) east of Kula for his proliferous, whose various voluntary contributions supported the common chest: these contributions were also at breaking the fuch of all income (fasaa), right of all participation in the ashes (Baha); cf. the art. Nicand; community of all objects of general utility (nisba) was prescribed. These details, which we now know from Saadi sources, are perhaps accurate; as the agapes they are "breath of Paradise"; this detail which we find in the contemporary trial of al-Hallaj i may perhaps simply a transference of the consecrated bread (zubeida) used among the Mandaeans of Wasi (naghaban). The jahra; cf. al-Tahiri, year 555 (868), in the Karmania Farid b. Othman of Najmah; or to be pointed Najmah (Naghamin).

We find along with Hamdon his brother-in-law Abdu (cf. 289-289), under a manual of initiation for the seven degrees (balagha), both seem to have been dependent on leaders of the same identity remained a secret, living outside of Sawad, the Sibhi al-Zahiri, who is said to have destroyed Hamdon, and the Sibhi al-Najm who hid himself under the name of Abdu and put in his place Dhrakara al-Dudhak (Dhikra), 288-900 he gave the signal in the desert of Syria among the Banu Umayy for the general Karmania rising — in long prepared (expectant in Khurasan for the year 290/902 — and proclaimed as leader the Sibhi al-Najm, under the Maliki, with the regnal name Abu Abdallah Muhammad, the old dynasty of the Faqih. He was killed in 289 (901) at the siege of Samarra, was slain by his brother, the Sibhi al-Khad, who as ruler took the name Abu Abdallah Mohammad, and who was captured and executed at Baghdad in 291 (903). The Karmania movement in Lower Mesopotamia, drowned in blood, ceased to be an active factor in politics in 294 (906) with the death of Dhikra, in time the movement regained strength in...
The position of the Karmania

The general tendency of the Karmania doctrine was to consider the Aliid legitimacy as a means rather than an end. The Imamate, the supreme authority, is not a hereditary monopoly transmitted in a dynasty; it is an intellectual characteristic, a divine investiture, an imperative mandate (‘a’araf al-‘aman) conferred (‘ajdāf) on the new holder of the title from among the imamats by a sudden illumination of his intellect, which makes him “substituted” or “spiritual son” of his predecessor. Such is the justification, given in the formula of initiation in the Druze books, for these alleged “assumptions” of genealogy, which are the rule in the annals of the Karmania from the time of Al-Mahmūd ‘Abd al-Karim al-Husaynī (d. 361/972) to the Fatimids. Indeed, when the Shībūk al-Nāfisī in 288 (999), and ‘Uthmān ‘Abd al-Lāh in 295 (1006) had assumed a Fatimid dynastic title, neither the one nor the other plainly indicated their genealogical connection with the ‘Abid Isma‘īlī line (cf. al-Mamūtī, Iṣ‘ā‘ī‘, ed. Banū, p. 7–11). And if this claim was of importance with respect to the public, in the opinion of their enemies, it seems that it hardly interested those initiated into the true doctrine, who expected above all else a chief, possessing a special divine appointment, of the “intellectual order”, whether he was “Aliid or not.

The official version of the ancestry of the family of ‘Uthmān ‘Abd al-Rahmān compiled by his son, the Mullī al-Mū‘īnī b. Abī ‘Umayr al-Shātīlī (d. 259/972), was a laudatory and lying composition, specially written in reply to the call of the Aliids. The version of the two Sunni anti-Karmania pamphlets by Muhammad b. ‘Umar al-Madīnī, president of the “Ma‘ṣūmī” in Baghda’d in 320 A.H., and by Muhammad ‘Abd al-Mu’saymin, a scholar of Damascus, who died about 375 A.H., is largely of any more value. S. d. Sayyid, Guirent and de Goeje thought they could rely on them as the most authentic, and the two opponents, Manṣūr ‘Alī Shāhī, (d. about 380 A.H. at latest), was not a “Barada’īnī”; he was a client of the Mughamī’īs (Kasā‘īq), a native of Muhīma, a well-known theologian, the official cront of the fourth and sixth Imamīs, ‘Abd al-Ma’inī Shāhī, and his son ‘Abd al-Mu’īnī Shāhī, who was official cront of Al-Mu’saymin (Shāhī) which provoked the irony of the present ‘Abīd b. ‘Alī al-Ma’enī, did not die in 350 A.H. but in 350 at latest, “in prison in Kufa under Al-ma’inī”; ‘Alī al-Ma’inī (and not Zaidī) is the authentic known authour, ‘Alīd b. al-Mu’tasim Abī ‘Alwā‘rī, who died about 350–370 A.H. etc. In these circumstances the statements made in the two Sunni sources mentioned regarding the assassination of ‘Abdān, the illegitimacy of ‘Uthmān ‘Abd al-Lāh and the assassination of the so-called “son” of Dhikrayh in 288–291 A.H. have to be received with caution.

After the proclamation of the Fatimid Caliphate in the Maghrib the general attitude of the Karmania in al-’Āṣib as in Yemen and in Kau dam was one of expectancy, which the assassination of the Shībūk al-Nāfisī (287 = 999) by ‘Uthmān ‘Abd al-‘Āṣīr and the confirmation of the “son” of Dhikrayh in 288–291 A.H. have to be received with caution.

The general tendency of the Karmania doctrine was to consider the ‘Aliid legitimacy as a means rather than an end. The Imamate, the supreme authority, is not a hereditary monopoly transmitted in a dynasty; it is an intellectual characteristic, a divine
expected. Imām ʿAbd al-ʿAzzī bi-Al-Karbūsh al-ʿAthārī (a kind of ḥiliqahalū, would put to death). The Black Rose was restored to the Meccans in 346 (957) by order of the Fatimid Caliph al-Manṣūr. In 360 (750) the Karmatian chief Bū Ḥārām, Ahmad thought it no breach of his oath of initiation to give his lieutenants a document, which so loudly read at Damascus, testifying to usurpation of civil authority by the first Fatimid Caliph. In 422 (1030) the Dirāz wrote Ṣawdaʾbānī in vain urged the Karmatīn ʿAlī ibn-ʿAṣāh to rally to the cult of Fatimid Khulāl.

On the other hand, there are abundant proofs of the adoption of Karmatī doctrine by the Fatimid dynasty itself. It was at the sīd al-yār of the Maḥdīs. Ahmad ibn-ʿAbd Allāh ibn-ʿAbbas, by the wasli of ʿAbd Allāh ibn-ʿAbd ibn-ʿAbbas, the grandson of ʿAbd Allāh ibn-ʿAbbas, who became known in Cairo. The Dirāz, religion is simply a Karmatian heresy. The introduction of ʿUthmān ibn-ʿAlī of the ʿAlī ibn-ʿAbd ibn-ʿAlī, the son of the Fatimid Caliph in Cairo, in the 2nd month of the year 251 (865) to be traced in the part of ʿAlī ibn-ʿAbd, recognized in the Prophet by the Karmatīn. The Karmatīn Doctrine.

It is no longer possible to rely, as was held to be done, on the account of the Karmatī doctrine given by the Sunni antik-armatī writings on heresies; al-Maḥdīs has judiciously said of the latter that they contradict each other and that the Karmatīns themselves recognize nothing of their doctrines in them. Except for a few lines that are accurately in the sīd al-yār of the Fatimid Caliph (d. 277-987) we have to come down to the 13th century of our era to find a conscientious writer, al-Shahrastānī, able to give us authentic Karmatī fragments, some quite old (of Mānīn Kādāh and Ahmad ibn-ʿAlī) from original sources, which he does not mention, but which Fakhrī Khān (Mānīn al-ṣafī) has identified with the ḍiyya of the al-Ḥanūfīs (see Surūrī: II. 37-155 of the Cairo edition of 1337) and the ʿAshūrīs of ʿAbd al-Dawūd ibn-ʿAbd al-Dawūd Sūrūrī in Baya. (370-980) (on Hellenism: II. 155-193, of the Cairo edition of 1337).

To deal with the problem more minutely one must search the polymorphic literature of the Imāmī and particularly the apologetic treatises in which the various extremist sects endeavor to press one another, starting from their common technical terms. Lastly, the apocryphic collection of the al-Hijrama (al-Ṣafī), which has not yet been thoroughly studied since Dīnārī, is invaluable for the synthetic understanding of Karmatī thought.

According to them, the world is a sum-total of phenomena which repeat themselves in cycles, playing and replaying the same drama so to speak after time:—this spectacle, presented to intelligences (invariable in number) so that they may be illuminated, is the gradual disappearance of the material world, perceptible by our senses, a multi-form and transitory mirage; then the intelligences are born (ḥaṣīf) by gaining consciousness of a pure intellectual evidence: the first is a sort of a pure universal intelligence, a manifestation of fundamental individualism. The first is to be recognized as the result of a gradual initiation which has been the stages of the creative evolution of the universe outside of God, what exactly leads the initiated by a process of intuitive illumination to forget these stages and to become absorbed in God.

a) Creative evolution: the divine essence or supreme light (nūr al-wujūd), always at the beginning and in the end, gives forth all of the nūr al-ṣawāḥel, "glittering" and "victorious" (ṣafī) light, which then engenders the universal intelligence (ṣafī al-ḥulūl), and the soul of the world (nafs); the latter under various modes produces human intelligences (those of the prophets, imams and elect; the others are only phantoms of nothingness). The nūr al-ṣawāḥel in the second degree gives forth the nūr al-nilūm "tearless light": that is matter, passive, "incapable" (māḥṣul), destined to disappear; it appears in various modes as stars at the skies (nūr al-nilūm), as perishable bodies on earth.

b) Gnastic involution: the intelligences of the prophets, imams and their adepts are marks of "sparkling light" ambiguously illuminated in the midst of the tearless light, blind and unreal matter like reflections in mirrors, following the cyclic intimations of the initiatory illumination; these marks shine, on becoming conscious of their divine identity, in a liberating intuition, in which, losing all individuality, they find themselves "delivered from the five tyrants": the sky, which makes day alternate with night, nature, which gives desires and regrets, law, which commands and forbids, the state, which controls and punishes, necessity, which forces one in daily labor.

c) The immaterial succession of initiatory involutions (mushafīkīn). The initiatory illumination makes the separated intelligences cohere, divine sparks individually for a moment, following two convergent trajectories, increasing the chain of initiators (ṣafī al-ḥulūl, ʿulūm) and increasing the chain of the initiators (ṣafī al-ḥulūl, ʿulūm). Historically the list of their titles was closed in cycles of limited number; the intelligences, in irrevocable number, "transmigrate" from cycle to cycle (without "missing" again: their personality, since they have only the appearance of individuality).

d) Planetary denominations of the cycles of transmigration (ṣafī al-ḥulūl, ʿulūm, ṣafī al-ḥulūl). The cycles just mentioned are named from their material cells, i.e. from the planetary revolutions, periods and conjunctions. This is a very fine point which must be appreciated. The Karmatīns are nominalists, they do not believe that the name determines the thing and they unanimously assert that the planetary bodies have no directing influence on the intelligences; but the divine revelation (sawāḥel) which regulates the intimations of the initiatory illumination makes them participate inevitably with the natural periods which form the diurnal, the lunar and the ecclesiastical cycles of illumination; and provides the horoscope of intelligences which form part of it (change of cycles, milad, every 960 years; of empires every 240 years; of sovereigns every 20 years, of epidemics every year, of genetical subjects every year).
mouth and every day). When the moment comes for the final consummation of every action (dāqīq = 'nāfšū ḥurūf of the Ḥadīth, yādīrā')—cycles and periods will cease together.

The degrees of individual initiation. Indirectly, illumination is transmitted to the adept by degrees as in the ancient initiations (Greek, Manichaean) and in modern Freemasonry. It emanates from the divine vocation following a method of irretractable and infallible authority (for, whence the name ta'ṣīfīya given by al-Ǧashṣalī to the Karmatians). The adept submits himself for it (in the fourth degree) by a declaration— a solemn contract with a clause (ziyāt annalūq) of triple repudiation of his favourite wife if he should reveal the secrets (ṣīfī al-ṭawīr), which constitutes Karmatian adultery, ziyāt. Its formula has been studied by Goldscher (cf. the art, waqfimīya). We find it first used during the revolt of the Zanj (d-Talbort, iii. 1750) and Usama alludes to it in his Memoirs. This Zanj heresiography recorded 3, 5, 7 (Abālī, and the Khāṣṣalī) at four degrees; but the names which Abū al-Kāhir al-Baghdādī gives them are doubtful: taṣīrārī, diagnostic of the future adept, described as "fertile" or "sterile" earth, tašīrūta (taming), tašīrūta (apprenticeship to mathematician), tašīrūta (taking of the oath), tašīrūta (tašīrūta, tašīrūta, tašīrūta) and tašīrūta. The programme for the five high degrees (secret) is little known. The "letter of Usain Allah to Abū Zahir," an apocryphal curiosum (recalling certain modern anti-masonic productions), analysed by al-Baghdādī, puts in various maxims of cosmic impurity, among others the mediæval parallel De Trinitate mysteriis (the latest reference to it: cf. E. E. E., 1926). Al-Makriti’s reference to the mystery of the cross (transl. by Dr Sace and Cassanova) shows that initiates by simply amounted to showing that the exterior rites (tašīrūta) of all the revealed cults conceal under equivalent and inadequate allegories the same hidden meaning (ṣīfī where the name Taṣīrūnum of the Karmatians), purely negative and without mystery; initiation being reduced to teaching the use of wholly speculative philosophical reasoning, which proceeds without practical differentiation the antithesis, opposite conceptions like "law" and "breach of law," "tauṣīrūta" and "tašīrūta"; cf. tašīrūta). But this is only, as we have seen, one aspect of the fundamental intellectual mission of the Karmatians.

Its Ḥaṭṭa technical vocabulary; its criticism of the other extremist Shi’ite sects (Ghulāṭ).

Terrified by the wide and rapid spread of Karmatian doctrines in the most cultivated centers of the Muslim world the Sunni heresiographers strove to discover and denounced an anti-Muslim offensive in it, originating in a foreign religion—Marzūlim, Manṣūrīya, Ḥaṭṭa. In racial hatred, setting Iranian against Arāb, the tribe of Rāh’s against that of Muḥammad (Shībīyā). They quoted parallels which are not very convincing.

The hypothesis of the Sabzawār-origin of the Karmatians, which is also found among them, is more attractive. It seems to have been put forward by the Karmatians themselves with a view to gaining citizenship in the Sunni Muslim state, presenting their syncretism as the heritage of Abū l-Walā’ (Bābāf) from those mysterious "Sabzawār" mentioned by the Kūfī. Such is probably the leading idea in the Sabzawār tale developed among others by al-Shahrastāni in some pages borrowed without acknowledgment from the Kitāb al-Jawāf al-Jawāb. The document hardly permit us to credit effectively the Karmatians with the pseudo-"Sabzawār" of Ḥarrān or Wāṣit.

In reality an examination of the Karmatian technical terms shows that this doctrine was formed before the end of the second century A.H. in the Ḥijāz circles of Kūf. The Karmatians retained, embedded in their system, various themes of Islamic special terms, which we find again among other extremist sects, Isḥāqiyya, Shīrīyya, Qaṭāniyya (Qaṭāniyya), Qaṭāniyya, Hashimiyya, Hallālīyya; e.g. māhāfīz, māhāfīz, māhāfīz, al-muqāfī, al-muqāfī, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz, māhāfīz.

The mystic sense of the 26 letters according to the ḥaṭṭa. The last orthodox Imām Maḥmūdī entered into the Karmatian ṣīfī’s and Maḥmūd b. Omar and Maḥmūd b. Sinān al-Zahrī (also admitted by the Nuṣairī) are true Karmatians. The Karmatian antitype is Abū T-Kāhir Muḥammad b. Abī Zaynab al-ʿAṣārī al-Kadhī (d. 167 = 783 at Kūf); he substituted in place of the "personifying" Koštānī exegesis of the early Shi’ite an abstract allegorical exegesis, nusaynī, without the use of letters (cf. Muḥarrīn) by their corresponding numerical values (mystic meanings of ḥaṭṭa); it's who seems to have invented the pledge guaranteeing the secret of initiation for the Koštānī, his adopters, are the only Imām sect whom Abū T-Kāhir (Abū T-Kadhī) will not allow to take the oath on the ground that they make of the nusaynī (negative practices of burying) a positive proof of the true name (false testimony to keep a secret).

After that, Abū T-Sāhir Māmūn al-Kadhī al-Muḥṣīnī (d. towards 180 = 796) gave definite dogmatic form to the Karmatian doctrine of evangelization; he substituted the abstract first principles for the low adīmī (defined historical personages), deniaries of the first Khalīf. He denies that the divine essence has any attributes and defines the "eternal Kurān" as a pure divine illumination in intelligences.

It has two aspects: the Karmatian dogmas with the preceding Imāmī systems, their extreme "intellectualizing" (taḥkīl) and "personifying" (taḥkīla), and their identity of the things. Al-Ashbā and his descendants, we see at once after the connection a transposition: here they are intellectualized, objectified in abstractions. Finally the Karmatians, considering only rank and the external role played, restore to Muḥammad priority over Alī. Not that they in turn deify Muḥammad—he is simply their destined role of pre-eternally foreseen messiah or herald (ṣīfī) that they look at, and they are (to the exact term) not Muḥammādīyya but Muṭāya (the letter noun means in ḥaṭṭa the name, now that is to say the mission of the prophesied, ṣīfī, devoted on the prophet), in opposition to the ṣīfīya (the letter noun in ḥaṭṭa is the original sense, maṣū, whence the hidden meaning, the "silent" (ṣīfī) role of the "designated" (ṣīfī) devolved on 'Ali, like Dīrāb and Nabhī). During the polemics that went on in Kūf between Imāmī writers down to the third century A.H. the Karmatian authors, Abu T-Kāhir, Fāṭiḥ and Nabhī, were "Muzaffarīs"; they place Muḥammad (ṣīfī = nāfśī = ḥaṭṭa = 7), where 'Ali (ṣīfī = nāfśī = ḥaṭṭa = 7). The Nuṣairī Kh-
The Karmanians, preserving from its place of origin an old stock of primitive Islamic terms, Karmanic and others, in which it retained the archaic special meanings they had before the third century A.D., modifying the doctrine of the 'Ayya to suit the exigencies of controversy, substituting 'Ali (not aala = Isaac) above Muhammad (labbaas = Gabriel) and Ali (aali = Eli). To the Nasairi argument that Muhammad is 'the veil' uncovering the divine appearance called 'Ali, the Druze reply with good Kangarian logic that 'the veil' only covers and that Muhammad is given more perfect evidence of God by his words than 'Ali by his silence. Internal sanctity is set aside in favour of the gift of prophecy and rule and emphasis neglected for individuality. It is the same poietical attitude which divides in Maimon Kaddishh the order in which he associates his two first principles (founded in that by Kaidel, Dabarlah, the Druze and the Synagogue) first the intellect (aab = nafa' saifat = meaning) and second the soul (mas = nafa' saifat = meaning) (aab = nafa' saifat = meaning) (aab = saifat = meaning) (aab = saifat = meaning) (aab = saifat = meaning). Then comes the 'flame' (naft, haft), the central sign of divine intervention, before the second pair of principles, simply reduplication of the first among the Zunuh (aab = nafa') and in the Synagogue (aah = aab, kaa'af). The identification of the five Karmanian first principles with those of the Hellenistic philosophers, like the physicist Kair (intellect, soul, matter, space and time) does not seem to be primitive and represents a later effort at syncretic conciliation.

In psychology the Karmanians deprive each human individuality of all definitive reality, for their body being removed a priori like an unreal idea, there only remains a momentary principle of individuality to which they refuse any name implying internal reality, like soul, spirit (employed by the Sufi Imams); they substitute for it the term 'aft' 'intelligence,' indicating a simple causation on the part of God, "aft extra," a role of an observer who takes no actual part in what he sees. They criticize the gross materialism of the first Ghulat (and of the Nasairia) who believe that souls are fallen stellar bodies, fallen from the higher heaven, by which light or the moon is the threshold) and destined to return thereby that same predestined attraction which caused them to adore the divine apparitions imperfectly seen in the course of the cycles of bodily transmigration (tadhah). For the Karmanians there is no corporeal transmigration even for the damned (they have only been phantasms) in the bodies of animals and we cannot even speak of true spiritual transmigration for the elect, since the immateriality of the intelligence is only impersonal, whether it assumes modes as "sparks" or not.

Cautious to the Nasairia, who refuse imitation (and immortality) to women, the Karmanians admit them (naftul el-bidh in the Druze canon).
The Karmanians profess an integral nominalism; the letters of the alphabet are only intellectual symbols; the name is the mask of the thing, not its manifestation (Nasairi view); each symbol ought to be destroyed to permit access (tehfit) to the pure idea. The obligatory duties of religion etc. are only supererogatory; counsels leaving free play to all human faculties (ikhab).

Its connections with Hellenistic philosophy.

Karmanianism preserved from its place of origin an old stock of primitive Islamic terms, Karmanic and others, in which it retained the archaic special meanings they had before the third century A.D., but...
intelligence (tâbâh) in his miniscule descriptions of the fundamental unity of being (wujûdāt al-wajûd) in reference to the Karâjîs themes of the covenant (māzā'if) and the Nocturnal Assumption (jâhâ'ah lawâ'în), al-Ashârî only took up Karmâtân exegesis again in a more moderate form.

The remarkable organisation of trade and Muslim gilds goes back to the Karmâtân (see the art. "Jâhâ'ah").

(L. Massonson)

**KARMÂSÎN.** [See Aqâbâr al-ahwâzî.]

**KARNÂK.** [See Aqâbâr al-ahwâzî.]

**KARÂJÎ.** 1. A town of 23,559 inhabitants (1901), situated a few W. of the Djemâa R. in 29° 44' N., 36° 59' E. The town is the administrative centre of a district of the same name, but hist. (7th c.) and ethnologically it belongs to Hindustân rather than to the Kafrânât. The language commonly used by the inhabitants is a dialect of the Western Hindis. It is no doubt a place of great antiquity, and the name is traditionally derived from Karn of the Mahâkâhvâ (Karnâlaya = Abode of Karn). But it was not of great importance in early times, and is not mentioned in the annals of the invasions of India by Mahâmun Ghûzimâr and Malik al-Dîn. Its prosperity seems to have commenced with the construction of the canal from the Djemâa by Ferîdî Shâh Taghîâ (see Shâhâb-dîr, Turbâtî Fâlûn Shâh, Elliot and Dowson, Hist. of India, iii. 362). The country became productive and rich, and being on the direct road to Dîhî from the north became an object of attack to invaders and rebels. Thus in 952 (1553), while Akbar was engaged in Godjâ-ri, Karnât, Fâurate, and Soâpet were plundered by Ibrâhîm Jumâ Mirâ, Djâhâîgîr halted at Karnât in 1013 during his pursuit of his rebellious son, Ghîshâw (Elliot and Dowson, v. 6, 396; also Beveridge's works, Timârjân, Memûre, Vol. I.). In 1120 (1705) during the reign of Babur Shâh, Karnât was attacked and plundered by the Shâh rebels (Elliot and Dowson, iv. vi. 418). But the most noteworthy event in its history was the famous victory of Nadîr Shâh over Muhammad Shâh 1187 (1739) which was fought just outside the walls of the town. The imperial army was forced to retreat in the face of the 15,000 cavalry of Bûràn al-Makl, Najm al-Awlbâl (Onâbi). But Nadîr Shâh's army was under better discipline and provided with abundant artillery, and the defeats of Muhammad Shâh's forces was sad and complete. After the break-up of the Moghul empire following on this invasion (and those of Allahâd Shâh Durânsâh and the Mahâfrânsâh), the Karmâtân and the surrounding districts again became a prey to the Sikhs. Gâdîjâl Shâh of Dîhî took possession of it in 1763 after the battle of Sîchân but Nadîr Shâh recovered it in 1773. After this the Sikhs and the Mahâfrânsâh continued for its possession with varying results. The trepied advantage, George Thames, drove out the Sikhs in 1798, but only held it for a short time. Gurdîl Singh, the Sikh chief of Lâwâr, then held it for a space until driven out by a British force under Skinner in 1853, after Kâjî's defeat of the Mahâfrânsâh at Dîhî.

After these events Karâjî became the head-quarters of a British district and was for several years the most advanced military post towards the northwest. Parity on account of its unhealthy

KARNAL. [See Kârân.]

**KARÔLî.** A town of 23,559 inhabitants (1901), situated a few W. of the Djemâa R. in 29° 44' N. 76° 59' E. The town is the administrative centre of a district of the same name, and hist. (7th c.) and ethnologically it belongs to Hindustan rather than to the Karmâtân. The language commonly used by the inhabitants is a dialect of Western Hindis. It is no doubt a place of great antiquity, and the name is traditionally derived from Korna of the Mahâkâhvâ (Karnâlaya = Abode of Korna). But it was not of great importance in early times, and is not mentioned in the annals of the invasions of India by Mahâmûd Ghûzimâr and Malik al-Dîn. Its prosperity seems to have commenced with the construction of the canal from the Djemâa by Ferîdî Shâh Taghîâ (see Shâhâb-dîr, Turbâtî Fâlûn Shâh, Elliot and Dowson, Hist. of India, iii. 362). The country became productive and rich, and being on the direct road to Dîhî from the north became an object of attack to invaders and rebels. Thus in 952 (1553), while Akbar was engaged in Godjâ-ri, Karnât, Fâurate, and Soâpet were plundered by Ibrâhîm Jumâ Mirâ, Djâhâîgîr halted at Karnât in 1013 during his pursuit of his rebellious son, Ghîshâw (Elliot and Dowson, v. 6, 396; also Beveridge's works, Timârjân, Memûre, Vol. I.). In 1120 (1705) during the reign of Babur Shâh, Karnât was attacked and plundered by the Shâh rebels (Elliot and Dowson, iv. vi. 418). But the most noteworthy event in its history was the famous victory of Nadîr Shâh over Muhammad Shâh 1187 (1739) which was fought just outside the walls of the town. The imperial army was forced to retreat in the face of the 15,000 cavalry of Bûràn al-Makl, Najm al-Awlbâl (Onâbi). But Nadîr Shâh's army was under better discipline and provided with abundant artillery, and the
that the capital Shabwára before his reception by Hárshá. After Hárshá's death his empire rapidly broke up and Thátbares lost its importance. It was secularized by Mahámí Ghasán and invaded and captured by Múzmíz al-Dín Mákcam and Múzmíz al-Dín Mákcam b. Súm whose defeat and subsequent victory over Thátbares took place at Támúri, a small town farther to the south near Kárni in 533 (1142). This place is called Taránt and Tálimi by the chroniclers, but Támúri is the actual name in use at the present day. At this place there is a fine cairn of the Muqála period converted into a fort by the Súkhi in the 18th cent. A few miles from Kárni is also the small town of Kándíbora founded by Nájibkát Kháán, an Afghan claiming Ghurkhanid descent, in the time of Muhammad Sghán. It was a fort in a marsh, and was called by its founder Kándíbora or the Crane's town; hence the family that takes its present name of Kándíbora. Nájibkát Kháán afterward took the sides of Nádh Sghán but fought against Aynu'd Sghán Darrán. All the consuls and powers of the Nawásht were taken from them in 1849 Nawásht Muhammad 'All Kháán upheld the authority of the British Government during the mutiny of 1857. The family, though reduced through family funds, still holds a good position. The Mândáli family of Kárni also has the title of Nawásht. It claims Afghan origin but is probably in reality làt (q.v.). The Nawásht Aynu'd 'All Kháán did good service to the British Government in 1857, and received substantial affection. The family still continues prosperous.

In the South part of the district the principal place is Támúri (q.v.). The Muslim families of Támúri are of a good stamp. Among these is a branch of the Sayyids of Kárni. The Nawásht of Támúri is the head of the local Ansáta descended from Khwádág 'Abd Allah of Hárshá, whose son settled at Támúri in the reign of 'All al-Dín Mákcam Sghán (1241).

The British government of the district of Kárni are Rájputs of the Cákáhi, Mándáli, Ghurksháni and Jutíwá clans. Some of these clans have sections which still retain the Hindu religion.

The conversion to Islam is generally attempted to have taken place in the reign of Firuzsháh Tughák.

KARNĀTI. [See KARNĀTIK]

KARRAMIYA, sect, called after Aby Abdalláh Karrám Bb. Karrám (or Karrám or Kárüm); see Karrák al-charge, iii. 127, and for further ancestors Ibn al-Alláh, Kází, vii. 149). Of this person, who is called al-Sújátiana, a fairly full biography is given by al-Samání in the Ama, 4768, 4778. According to this, he was of the Banú Níst, was born in a village of Xarifli, was carried up in Sújátiana, and afterwards went to Ghorasan, where he attended the courses of Abyu'd Bb. Harí, the Ascetic (d. 234); at Bálíí he heard Isháq Bb. Yáusuf al-Mákcamí (d. 257), in Múzmíz al-Dín Huzír (d. 244), and in Hárshá Abdalláh Bb. Málkí Sultán, and he received many traditions on the authority of Abyu'd Bb. Abdalláh. (Epigraphi. d. 247), and Ahmad Bb. Abdalláh (Epigraphi, d. 249), and Ahmad Bb. Abdalláh is one of the most notorious fabricators. After spending five years in Makká he returned to Sújátiana, where he sold all his possessions. He proceeded to Nástír, where he was imprisoned by the governor Muhammad Bb. Támír Bb. Abdalláh (according to the Tálimi al-Dilíár on two occasions); after his release in 251 he left Nástír and proceeded to Jerusalem, where he ended his days in 255. The sanctuary of his followers there, called Kánúká, is mentioned by Matúshári B. Tháhir (Lev. in Cen. Ed. Hussáni, v. 149) a hundred years later, as also by al-Músháhid.

2. Doctrines. The opinions of this person were set forth in a work called Abyu'd al-Kárüm, "The Tálimi of the Tomb", of which some citations are given in the Farsh baim al-Fáruk, pp. 203—214, there where is the fullest account of the sect, with some of whose numbers the author held debates. His chief theological doctrine, which caused the inclusion of his sect among the Mánábíthás, was that the Divine Being is a Substance (Elámu), for which some of his followers substituted Body (Lájúm), though without human members, and in contact (manází), for which the euphemiism mâjáhán was substituted) with the Throne, which is located in space. This was apparently a deduction from the Kárüm, ala' La'áthá, and, indeed, the rest of his theology would seem to have been an endeavour to work the Kárümic texts into certain parts of the Aristotelian philosophy, notably the distinction between Substance and Accident, and that between dynamis and energeía. Thus his followers could maintain that God was "speaking" before He spoke, and could be worshipped before there were any worshippers. The doctrine of the eternity of the world was reconciled with the Kárümic creation by some subtle expedients. God, it held, was subject to certain accidents, such as willing, perceiving, speaking, coming in contact, over such accidents He has power, but not over the world and the objects therein, which were created not by His will, but by the word out. Thus it would seem, the tense in bim janni could have its proper meaning.

Another doctrine to which allusion is often made in kárüm works is that faith (fámil) is constituted by a single utterance of the two names Allah and Muhammad, and involves neither conviction nor knowledge. This view, through similar to the chief thesis of the Mánábíthás, is said to have been held by no one before him (Ibn Támíyá, Kárüm al-Indí, Cairo 1235; p. 57, where relates it length). The rest of his opinions, as recorded in the Fáruk, seem to have been in the direction of moderation. Thus the infallibility of Prophets was confined within certain limits, and a reason was found (somewhat in the style of Ibn Tufail) why those
whom no prophetic message had reached ought to believe in prophetic missions; he held that there might be two prophets simultaneously, and that each would have a right to his followers' allegiance even when the two were at variance. His innovations in the "farda" were such as to render the law more flexible.

3. History of the Sect. It would seem that the Karrami sect spread chiefly in Khurasan, and in 370 the author of the Farda debated with a member of the sect in the presence of the Samanid commander Muhammad b. Ibrahim b. Shimlat. It was favoured by Sabukta Khan of Ghur, and its ascendency over respect for the ascension of Abu Bakr ibn Majma al-Ma'mun (d. 393), the chief of the Karramites in his time, is said to have led to the conversion of 3,000 believers. This person's son Muhammad encouraged Sabukta Khan in a violent persecution of the sect; and this seems to have continued in the Life of the Sufi Abu 'Abd Allah (357-440); cf. Jukovski, 1890, 58-91), where 'Abd al-Majid Khan makes common cause with the Sufi (a Hindustani) against the saint; the numbers of the Karramites in Khurasan at the time are given as 20,000. In 405, however, this khalif had made the pilgrimage, and was favoured by the Caliph Kha'di b. Khair, complement to the Karrami sect; before Muhannan al-Ghurani; Muhammad ib. Nuh thereupon repudiated the doctrine, while those who openly adhered to it were penalized. Many, however, continued to hold to it in Khurasan: Ibn al-Asfah in 488 records a civil war in that city between the Karramites and the joint forces of the Ikhshid and Shihab, the leaders of the first being descendants of the leaders of the sect in Muhannan's time. 'Abd al-Kadhir al-Jilbati (d. 501; Gombrich, Cairo 1288, 81) speaks of them as still numerous in Khurasan, Fakhr al-Din Razi (d. 606; Asi, 1238, pp. 96-98) apparently thinks of them as still existing. It is probable, however, that the sect was practically extinguished when the lieutenants of Cughur Khan massacred the inhabitants of Khurasan, and when writers of a later time allude to its doctrines (e.g. Ibn Tanayz, and the author of the Masalih) they probably derive their knowledge from earlier works.

4. Literature of the Sect. In the Farda it is stated that the sect was subdivided into three minor sects, which, however, were mutually tolerant; these were called Hahajiyah (I), Tarifiiyah (II) and Jashashiyah. Shahristani mentions twelve minor sects, of which he enumerates six: Hahajiyah (as above), "Abdaliyya, "Abdaliyya, "Abdulbehaha, and Jashashiyah. On the first was doubtless named after that "Abd al-Kadhir who was mentioned above, whereas the last was named after a Mohammed ib. al-Husayn, who is called their Mu'tazibah in the Farda. The works wherein the founders of these minor sects put forth their views seem to have obtained little notoriety; the author of the Farda, 'Abd al-Majid (485; Scheser, Christentum im Persien, 152-153), though living at Ghur, just knew the name of the main sect; and "Abd al-Kadhir (loc. cit.) is giving the name of the Karramite authorities is in the text for each case. The work of the founder "Abd al-Kadhir seems to be known only from the citations in the Farda.

(D. S. Margoliouth)

KARS, a town in Armenia, called Kar, in the district of Kars, and named after the Kars or Ararat, the mountain of Noah. It is situated on the road from Van to Kars, and is connected by road with the latter town. The town (72,000 pop.) is the capital of the chief of the Armenian princes (Armeni, 125,000). From 961 to 1064, a son of the king of Antioch, under the name of King, received in return a town in the Cilician Taurus. But the Kars under the name of Antioch; it was not until 1064 that it was received in return a town in the Cilician Taurus. But the Kars was both conquered by the Turks and remained a Musulman town till 603 (1206-1207), when it was taken by the Georgians (Ibn al-Mubarak, Turbe, 1160). It was besieged in 1208 by the Khwarezm Shah,ilk (II, 204 seqq.) and later again by the Mongols in 1339 and, according to Ibn al-Mubarak (Naksh al-Futat, ed. Le Strange, p. 93), it belonged to a later period with that of the province of Georgia (Gurdjanik wa-Kars). In the kingdom of the Khurshid, at the time of the Mamluks (cf. above, ii, 405 sqq.) and later again apparently to the kingdom of the Lusai (cf. above, i, 1003 seqq.). Unlike Antioch, Kars was never a Muslim mint. In 1386 it was captured by Tamerlane, and is said to have been levelled to the ground (Esfer-Nims, 1, 400). The town was then in the possession of a prince named Krz-Bakhtir, who does not appear to be mentioned elsewhere. It was not until the year 1579 (according to Hadijellradi, Jilbani, 1405, p. 407, however, 1578), that Sultan Murad I (1574-1593) had the town rebuilt as an Ottoman fortress by Lala Mustafa Pasha; during the operations a notable slaughter is said to have been committed, and, with an inscription recording an exact enumeration of the time of Sultan Husain (probably Kilij Araz, II, 1156-1188), Kars was raised to the capital of an eyal or seat of the district of Ottoman rule and also became a place of pilgrimage; the tomb of the Sufi Abu 'l-Hasan al-Kharatani (d. at the beginning of 1425 = Nov., 1425) was shown there (cf. Sam'ani, ed. Mangoloth, fol. 194 b), but it can never have been in Kars. The tomb is said to have been revealed by the saint himself in a dream — a story often told of other places. The
KARS — KART

The first Friday mosque was built by Lala Pasha over the tomb of the saint.

Kars was conquered by Shah 'Abbās in 1604 and in 1618 rebuilt by the Turks, attacked in vain in 1628 and 1744 by the Persians and captured for the first time by the Russians on June 23 (July 5), 1828. On Nov. 16 (28), 1855, Kars had to be surrendered to the Russians after a long siege under General Williams (later Sir foliage Williams of Kars). In the war of 1857—1878 Kars was stormed in the night of Nov. 18, 1857, and ceded to Russia by the peace of 1878; in 1919 it was returned to the Turks by the treaty of Brest-Litovsk; this revision remained in force even after the treaty of Brest-Litovsk became void.

A number of inhabitants of Kars about 1860 was 12,300 (Kütter's Geogr.-statistische Lektüren 8, n.) in 1878 only 8,572 (according to the Encyclopædia Britannica). Under Russian rule the number seems to have fallen considerably at first and then to have risen again rapidly (1889 only 3,941, in 1897 20,805, in 1908 18,977, mostly Armenians). The old Armenian church which had become a mosque (probably the Kiš-i Khīna) was restored after the masterpiece mentioned by Ewliya Celebi, as a mosque called Binun Katkhuda Djamalī), now became a Greek Orthodox church. There were, in addition, two Armenian churches and two monasteries (two Surp and one Surp). No accurate information is available in Russian regarding conditions since the restoration by Turkish rule; this fact is said to have been fatal for the Armenian population.

(K. W. BARTHOLO)

KARSHI, an Uighur word meaning "castle, palace," probably borrowed from a native language of Eastern Turkistan and later adopted by the Mongols. The town of Nakhshab on the Murghab [4] has taken its modern name of Kars from a palace built for the Khan Khubat (1318—1326), see the art. KHAHAT KHAH, a farashk from the town, all trace of which has long since disappeared. Cf. Sharaf ad-Din Yazdi, Zafar Nāme, ed. Mah. Hāshid, Calcutta 1887—1888, i. 111; G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 470—471.

(K. W. BARTHOLO)

KARSHUNI is the name, the origin of which has not yet been explained, for the Syrian alphabet adapted to suit the Arabic language. Yūsuf Dārāy, Archbishop of Tarsus, wrote recently on the same in the Bulletin, 1904, vii. 759—790, but his suggested derivation of the name from an unknown Syriac *khrash might be diminutive of kharsh, which would describe the alphabet as "thracian," is quite improbable. Just as the Jews used their alphabet to reproduce the language of the countries that afforded them hospitality, not only for the sake of secrecy but also as a sign of nationality, so also, the Syrians must have written the language of their conquerors in their own alphabet soon after they had adopted Arabic for everyday use. The letters lacking in the Syriac alphabet were supplied by pointing those already in existence, but in doing this more attention was paid to the sound than the shape of the Arabic letters. Kāf and gāmil, for example, are usually reproduced by ū with niš and gāmil with niš nūn, but the Jacobites usually by a point inserted in the letter, the Nestorians by a hook below it. kāf and gāmil are written by the Nestorians after the Arabic fashion, with points over kāf and gāmil, but among the Jacobites often by a point in the kāf, because they had come to be identical in pronunciation. The feminine ending is usually represented by kāf with two points above it in the Arabic fashion. Vowels are placed, sometimes in the Syriac, and sometimes in the Arabic way, but gāmil and kāf are almost always represented by gāmil and kāf, whether there were different rules in different periods and localities or only the latter part of Shams ad-Din's reign his son Rukan ad-Din acted as his co-regent, but predeceased him, dying in 1383, and when Shams ad-Din himself died, in 1385, he was succeeded by Rukan ad-Din's son Fakhr ad-Din. As the power of the Mongol Il-Khans of Persia declined, that of the Kapsa Khans of Herat increased, and Fakhr ad-Din became the powerful Amir Cuhun, who had been regent of Persia during the minority of Abū Sa'id Balaüd Kuhun, the fourteenth Il-Khan. When Abū Sa'id Balaüd Kuhun was deposed, the growing power of the Amir Cuhun, which had been a cause of suspicion to the Il-Khan, Fakhr ad-Din sought an asylum with Ghiyāth ad-Din, who received him but in 1327 treacherously put him to death. Ghiyāth ad-Din then himself died in 1328 and his two brothers, Shams ad-Din II and Ḥājīr, who succeeded him in turn, died in 1329 and 1331. The historian Hamd Allah Mustawfi attributes their deaths, following one another at such short intervals, to the divine displeasure incurred by Ghiyāth ad-Din's treachery towards Anu Cuhun.

Ḫāŋ was succeeded by a third brother, Mūhammad ad-Din, who sent an army to the assistance of Mulki Kūth ad-Din of Kirman, driven from his capital by the Amir Mūbaruq ad-Din. This army was defeated and a second army sent to the aid of Kūth ad-Din was also defeated in Kirman and compelled, at the end of 1340, to capitulate, Mūhammad ad-Din, who died in 1370, left two sons, Muhammad, who held the government of Sarakh, which he retained after his father's death, and Ghiyāth ad-Din Pir 'Allī, who succeeded in Herat. In 1356 the Amir Timur sent an envoy to Herat, to claim the
KARTÄS, the largest river in Southern Persia. It rises in the north-eastern part of the district of Kârdistan (earlier called Kârman), a little above 32° N. Lat. on the Zardzad-Kûh (Koh-i Zard, mentioned as early as the 5th century by Ahmad Mustawfî), see the Bibliography, which belongs to the Bakhtiyar mountain system, to be more accurate on one of the range named Kûh-i Rang, one of the highest mountains in S. W. Persia (estimated at 13,000 feet). The actual source of the river, according to Sawyer (Rüb.; cf. 11, p. 456, with a picture), is about 10 miles above the place called Sere-i Çoheh-i Kerang "main source of the Kerang (Kärn)". The Zâlân or Zendzâ-Rûd, also called Isfâhân-Rûd, likewise rises on the Zardzad-Kûh and flows northwards towards Isfâhân (on il. see Rûb., cl. 11, p. 122; G. L. Strang., cf. cl. 527, also il. 529 and the article Zandzâ-Rûd). As the source of the Kârn is only about 100 miles from Isfâhân, Shah (Abbâb i, the Great, thought of laying the Kârn into the Zendzâ-Rûd by a tunnel through the mountains. The work although almost finished at his death, was not continued by his successors, however; the remains of it may still be seen at the present day; cf. Layard, cl. 13, p. 50 sq.).

The valley of the Kârn is not sufficiently known, particularly in its upper course, among those who have explored it are Kinoor, Rawlmolin, Selby, Ainsworth, Layard, Chesney, Lobius, Hornbrow Schindler, Mackenzie, Lycett, Bateman Chalmers, Wells, Sawyer and Gesner van Roggen. We may call the upper part its course down to its exit from the mountains at Shâsht, the middle course from Shâsht to Akhâz or Kaleýsh, where it breaks through the spurs of the Dâhil-i Kûh; its lower course runs through the alluvial plains formed by the Kârn system. As a result of the great windings, which the river takes in its course, it courses about 500 miles from its source to its mouth on the Shâfî al-Arab, while a straight line between the two points is only about 450 miles. In its upper course the Kârn makes two great loops in about 32° N. Lat. Shâsh, which is a little above this line and only a little south of the source of the river is in a straight line only a third of the distance the river has covered from the source. The course of the Kârn is at first a south-easterly one, then it runs from east to west, while the next section runs north-west to Shâm, where the second smaller loop is formed towards the south-west and then the river runs north-west again. This direction is maintained till Chamâni Yorga (20 miles as the crow flies N.E. of Shast) is reached. From there to the mouth the Kârn runs S. W. although at times it describes very wide curves.

At Akhâz, a little above the town, the Kârn divides into two unequal arms which unite again about thirty miles away at the village of Banâb (near the mediaeval Askar Mukram; see above, i. 438) and thus form an island. The western arm is the main stream, the Kârn proper; it is now called Aâb-i Shâshât-i (popular for Shâshât-i, little river; cf. i. 970 for the same name for a branch of the Tigis) and further down also Aâb-i Bâmsh, Shast (—great water of Shast). The east arm is artificial in origin and is now called Aâb-i Gerger; the Arab geographers of the middle ages knew it by the name of Mâshurân (Mashrukan, Mashrukan), which is explained as a corruption of the Persic Ardashâr-kân (Ardashâr's trench). The form Ardshâhrâkana is noteworthy; it occurs in a Syriac chronicle edited by Gâdi in the Active de la Congrégation Orien
tale, London 1891, p. 32, and also in the Thronis Nisibinae in the Dânâr. Ab. Ch. Wic., 1893, xxixii, Abb. i. 24.) The first Sasanian king is said to have been the maker of this water-course. The Persian geographers of the 9th century call the western waterstream, which carries the ball of the water, Bâshân Dânâk (cl. 21/6); cf. Le Strange, cl. 13, p. 336. These names are still known locally, according to Layard, cl. 13, p. 27. It may further be noted that in the 18th century, according to Arabic sources, the Mashrukan canal did not enter the main stream, the Kârn proper, at Askar Mukram, but ran parallel to it and reached the Persian Gulf by a course of its own.

The Kârn delta begins a little above the village of Shâm. Three channels break off from the main arm, which continues its course till its junction with the Shâfî al-Arab at Mâshurân; those all run S.W. to the Persian Gulf and finally they course in estuaries (Shorâr, 4890) which are at times stranded. Their names are:

1. The Shâfî (or Rûd) al-Kâmim (old stream) which leaves the Kârn about an hour's journey above Shâm and broadens out into the Khôr Mâshûr (also called Kâr Muráth Ali and in Irb. Arabic: water). In it we have probably the oldest course of the Kârn.

2. The Shâfî al-Amâna (as it is usually written on maps) or al-Amâna (blind stream), probably so called because its bed is usually choked with silt. In Ritter (i. 259, 261, following Remond) the name is wrongly explained as "swanders" (the form al-Amana. In Ritter, i. 259, 260, 1890, is certainly wrong). The same name is also given to an arm of the Shâtât al-Hâl, below Kët al-Amâna (see Ritter, x. 1691, Ainosworth, cp. i. 259, and the maps). Cf. also the analogous name Diôla al-Awâd for the present lower course of the Tigis; see above, i. 970, as well as
It has already been pointed out that the Kārūn at an earlier period probably entered the sea through the Shāh al Amā — apart from the river-bed represented by the Shāh al-Kaddīś, which is perhaps the oldest bed. According to the Arab geographers of the middle ages, the different branches and tributaries of the Dunjaff Kārūn were not at a place called Hīr al-Malāh Welī. Whether the Naḥr Sīdī (Lotus-river) which also enters there must be considered the main arm of the Kārūn from Alwak onwards, is doubtful: cf. Le Strange, op. cit., p. 377; Schwartz, op. cit., p. 306. The reunited Kārūn called Ṣahār Ḥīn al-Malāh (see Schwartz, op. cit.) then enters its estuary (Faraq Dunjaff) which ends at Sulaīmānīn on the coast. On Ḥīn al-Malāh and Sulaīmānīn cf. Le Strange, op. cit., p. 48, 243, and in the F. R. A. S., 1895, p. 302; Schwartz, op. cit., p. 306, 329 — 330, 406. Ḥīn al-Malāh perhaps lay in the neighbourhood of the present Šāhāb Kārūn is perhaps to be located somewhere in the region of the Khāb Sīdī; the mouth of the Kārūn in the middle ages would thus coincide practically with the modern Shāh al-Amā. In the middle ages there must have been several other separate smaller mouths of the Kārūn. In these topographical investigations it should not be forgotten that southern Iran, and Khuzistan, the delta of the great rivers, has undergone far-reaching changes in its hydrographic structure in the course of thousands of years. In ancient times the Persian Gulf extended much farther into the mainland, so that the Kūr, Kerbā, Euphrates and Tigris had less separate mouths, cf. above, p. 675 sqq., and Andreas in Parsī-Pālīwana, Ruszczynski, a. a. O., Abūl-Fath, ii, 1394, 2814. During the middle ages and in modern times the coastline had been steadily advancing southwards.

The bed of the Kārūn from Šabba to Māhūmānā seems to be the work of human hands. In the tenth century the Bayāt ‘Aqūd al-Dawla (see above, p. 143) had a canal made, which was called ‘Aqūd after him, to secure direct communication between the Tigris and Kārūn (—Bassra and Ahwāz). As in those days apparently the Kārūn flowed into the Persian Gulf through the Shāh al-Amā, the ‘Aqūd in its main line probably corresponded with the present course of the Kārūn between Šabba and Māhūmānā. It is very doubtful if the work of the Bayāt ‘Aqūd was something quite new; it is more likely that he undertook the restoration of an older channel which had fallen into neglect and become silted up. A century earlier we have evidence from the Arab geographers of the existence of a canal called Nahr al-Djīdīd (New Canal) which led from Ḥīn al-Malāh (near Sībāl) to the Tigris and may well have coincided with the ‘Aqūd. From a still earlier period we have the Bayāt canal (see above, p. 970); considering its course it may wholly or in part have coincided with the ‘Aqūd or Nahr al-Djīdīd. Whether there was in ancient times — about the period of Alexander — an artificial channel connecting the Kārūn and Tigris following the same direction cannot be ascertained with certainty on this question cf. Andreas in Parsī-Pālīwana, op.
In modern times the name Hafrā (usually written Hafar in books of travel and in maps) has come into use for the stretch of the Kārūn between Sāfīla and Mūjammar, which suggests that here we have a work of human hands, not a natural bed dug out by the river itself. At the present day, however, this name is limited to the short stretch, only about an hour's journey long, from the beginning of the Shāh Ramāntā, the mouth proper of the Kārūn at the present day) to Mūjammar. This lower Hafrā is (according to Stolze-Andreas, op. cit., p. 48) about 500 yards broad and 20—25 feet deep, while the Kārūn above Sāfīla before the beginning of the delta is still broad and 25—30 feet deep. It should also be noted that the second half of the ninth century Sūrāhīn, the powerful Shaikh of the tribe of Kārūn (on him see below) destroyed the connection between the Kārūn and the Shāh al-Arāb by placing a dam (Arāf) across the Hafrā at Sāfīla and led the water into the Shāh al-Arāb. The district of Kīsh was thereby soon raised to great prosperity. But at Kārūn Kīsh's [p. 90] second invasion the dam in the Hafrā was destroyed (cf. Kinneir, op. cit., p. 90). On the communication between the Kārūn and Tigris by the Adhūl, Nahr al-Djāhdī, Bayān and Hafrā canals see Kinneir, op. cit., p. 90, 293—94; Layard, op. cit., p. 55—56; Tommeneckel, op. cit., p. 76—77; Amisworth, op. cit., i. 174, 183; Pommers, Gear Pilot, p. 296; Le Strange, op. cit., p. 48, and in the H.d.A.s, 1895, p. 308—309; Schwarz, op. cit., p. 391, 394—396.

While still in the mountains the Kārūn receives a number of abundant tributaries, for example above Shah the Abi Bāzār on the right and the Ab-i Bāzār (Boc) on the left. A little above Chamiān Yungla the Talāb joins it. But the most important tributary is the river of Diṣfūl (q.v.), i.e., the Dīsufl-Rūd or Ab-i Dīsu. This has no name of its own at the present day; it was the same in the middle ages as it figures in the Arabic sources simply as the "river of Dîsdīl-Sâhīn". From Dîsdīl-Sâhīn, which must have lain to the S.E. of Diṣfūl, see L. 985 sqq. and more recently Schwarz, op. cit., p. 346 sqq. The Diṣfūl-Rūd, which, like the Kārūn, is a very winding course, rises out of the confluence of two little streams in the district of Bētājīd in the Līd Lārīstan (cf. von Boden, op. cit., ii. 374). It joins the Kārūn at Band-i Kīr in earlier times the confluence seems to have been a little further south (cf. Le Strange, op. cit., p. 339); it may have at one time flowed into the Kērkēh [q.v.], as modern tradition still says (see Layard, op. cit., p. 65). As to the Kērkēh, which now loses itself in the marshes below Dawān [q.v., ii. 294], it must be assumed from the statements of the Arab authors and the ancient river-bed, which can still be traced, that the bulk of its waters joined the Kārūn a few hours' journey below the town of Ahrāw (this see also Hillerbeck, op. cit., p. 39). Another arm of the Kērkēh but hardly the main stream (cf. an article in Rawlinson, cf. Andrews in Pauly-Wissowa, op. cit., i. 394) may have at one time entered the Shāh al-Arāb in the region of Kūmnā.

The Diṣfūl-Rūd, the upper course of which still requires more thorough geographical exploration, has as its principal tributary the Dīsufl-Rūd which enters it about 2 miles S.W. of Diṣfūl. Another important tributary of the Diṣfūl-Rūd is the Shāwir (Shāwir, also written Shāwir, Shavīr), a narrow but deep water-source which rises a few miles above the ruins of Sīnā, and falls into the Diṣfūl-Rūd about 15 miles (as the crow flies) west of Band-i Kīr. In the middle ages the Shāwir, like the Kērkēh, was called the "river of Sīnā" because it flowed past this town; it may be noted, it is at the point where the Kērkēh, Diṣfūl-Rūd and Kārūn are nearest one another. The Shāwir and the Diṣfūl-Rūd were at one time and in part still connected with the Kērkēh and the Kārūn by canals. On the Diṣfūl-Rūd and Shāwir cf. Hamd Allah Mundawī, Nūṣṭār al-Kūmnā, ed. Le Strange, p. 215; Le Strange, op. cit., p. 233, 239, and in the H.d.A.s, 1895, p. 312; Schwartz, op. cit., p. 303—305; Ritter, i. 193 sqq; Layard, op. cit., p. 59 sqq; v. Boden, op. cit., i, 193; Lottin, op. cit., p. 329, 342, 346; J. Beaufor, op. cit. (see the Bibliography), p. 151; Schwerer, op. cit., p. 390 sqq.

The Kārūn is not only connected with the Tigris and Kērkēh in the west but in the east it is linked up with the Dīsufl and Kūmnā-Bīr or Abī Kūmnā (the Tab of the Arab geographers); see Le Strange, op. cit., p. 270; Schwartz, op. cit., p. 5 sqq; see also the article ARRABĀ, above, l. 490). At Sīnā a canal navigable by boat leaves the Shāh al-Arāb and runs to Dawān (Dūrāk) (Fulānī, see the Art. DAWĀN) on the Dīsufl-Rūd.

The more important towns on the Kārūn are medieval as in modern times lay on its central course between Shastār and Ahrāw. At the two termini of this stretch stood the two capitals of the medieval province of Kūmnā, Ahrāw and Tastār (Schantār). Ahrāw, formerly the capital proper of this district, has a very important situation. This is at the gateway of the Kārūn where the river breaking through its last barrier, the Dasht Ĥamran range, enters the plain and henceforth offers no impediment to navigation to the sea. The last place of this name is built near the ruins of the old city; a mile south is the modern town of Nāstīk, which is growing rapidly (cf. Herford, op. cit., p. 72). Cf. on Ahrāw above, l. 208, and Schwartz, op. cit., p. 315 sqq; and Graetz van Roggen, op. cit., p. 202 sqq. (with plans) for Tastār see the article TASTĀR and on the site (particularly the information which begins there) Graetz van Roggen, op. cit., p. 174 sqq.

Places worth mentioning between Shastār and Ahrāw are the large village of Wālā, where a dead arm of the Kārūn runs to the east, and Band-i Kīr (usually pronounced Kīl), a place of considerable importance owing to its situation at the junction of the two arms of the Kārūn and the mouth of the Dīsufl-Rūd. Band-i Kīr is the successor of the medieval Asār Mārūn, the modern name of which is Laykār; Laykār is the Persian equivalent of the Arabic Askarī, 3 miles north of it. On Asār Mārūn see above l. 486, and Schwarz, op. cit., p. 377 sqq.

The lower course of the Kūmnā from Ahrāw to Muljammar has no place of great importance on its banks. Among them are Isāmā-iyā and Sēbāl, remarkable for its situation at the beginning of the bifurcation of the delta; it has the ruins of a castle which was at one time the favourite resort of Sabānī, the influential Shaikh of the Kūmār already mentioned (cf. Kinneir, op. cit., p. 57). Muljammar [q.v.] at the junction of the Kārūn and the Shāh al-Arāb is, however, a place of unusual
important. It is undoubtedly the best harbour in Persia, easily accessible at any time, and is destined to have a still greater future. The fact is noteworthy that all the places of any importance that we have mentioned lie on the central and lower Kârûn and its west bank.

In the mountainous upper course there are no longer any towns of importance. In late antiquity and in the middle ages the most prominent were Sassan (also called Arûd or Arûh, and Dáshâlik; see the art. STXAK) on the right bank and Libbaḏ and Mil-Aamt [q.v.] opposite on the left bank. Both are famous for the very fine remains dating from the Elamites and Sassanians. Along the upper course in parts runs a road protected by many forts, now mostly in ruins. The Kârûn in general is one of the most historically interesting rivers in Persia owing to the numerous ruins from ancient times which are everywhere found on its banks.

The dwellers on the Kârûn in its upper course and on its middle course to beyond Shuster are the Bâd (Lylians) [q.v., i. 603]], one of the three principal tribes of the Great Lurs. In the lower half of its central course and the whole of the lower stretch the powerful Arab tribe of Kaš (popularly pronounced Tahâb; Shâb, Shaḥnâ) are predominant; their Shaikh lives in Dawrâk-Fêllâbîye. On this tributary which has only become important in these regions since the 17th century see Kinnairt, op. cit., p. 85—87, 91; Buckingham, Travels in Assyria, Media and Persia, London 1830, i. 195 sq.; Selby, op. cit., p. 214; Layard, op. cit., p. 35 sq.; v. Bode, op. cit., ii. 110—120; Lollini, op. cit., p. 285 sq.; Ainsworth, op. cit., ii. 205—218; Ritter, op. cit., lx. 159—166, 1938, 1963—1964. From Ahwâz to Mulâmanra we find also Bawi and Idra tribes who are subject to the Kaš (cf. Selby, op. cit.).

In the military history of the middle ages the Kârûn basin only occasionally occurs as the scene of fighting; cf. thereon Schwartz, op. cit., p. 299—300. During the World War of 1914—1918 the possession of this territory became very important on account of its oil-fields; cf. thereon Schweer, op. cit., p. 140—144, and the section relating to the Irâk and southern Persian fronts in books on the war.

As early as the Sassâna, powerful dams (qâshfâmân) with the necessary sluices had been erected at various places to enable the water thus dammed back to be led by numerous small canals to fields on a higher level, especially on the central stretch of the Kârûn. During the whole of the middle ages this irrigation system was kept in excellent repair and transformed the land it watered into flourishing gardens. Since then, however, most of the works have fallen more and more into ruins as a result of neglect and great stretches of once fertile country have become desert again. The most celebrated was the gigantic dam at Shuster, which was regarded in the east as one of the wonders of the world. Its erection is ascribed to the Sassan king Sapor I (242—272 A.D.). It is very probable that the tradition is correct which says that Roman prisoners of war were forced to build it for him; the modern name, Band-i Kâjar = Caesar-dam, also points to its Roman origin. On this great system of dam and sluices here, which after considerable restoration is still partly in use to-day, see Ritter, op. cit., ix. 186 sq.; Noldeke, Geschichte der Armata und Perser zur Zeit des Sassaniden, Lailah 1879, p. 335; Justi in the Grundzüge der iran. Philologie, ii. Strassburg 1896 op. p. 318; Strzygowski, Die Länder der Ost-West-Kollepsis, p. 235; Schwartz, Irân im Mittelalter etc., p. 367. At Wâsî, a few hours' journey below Band-i Kâjar, the ruins of a great dam may still be seen (cf. Herzfeld, op. cit., p. 76). In Ahwâz, at the rapids there, considerable remains of a triple ancient system of dams still exist. Band-i Kâr (= Bitûmsâm-dâm) has got its name from the ancient dam coated with bitumen. As the beginning of this century the Persian government thought of restoring the province of Bâbâsâd to its former high degree of prosperity by restoring the system of canals with dams and sluices. It was intended to begin with the works started by the Abu-i Shâjah-Kârûn and the Ahi Gergir between Shuster and the Band-i Kâr and the Dutch engineer Grandt van Roggen was appointed to make a survey. He published the valuable results of his investigations in an important treatise illustrated with numerous plans and sketch-maps (Notice sur les anciens travaux hydrauliques en Sassanie in the Mémo. de la Délégation en Perse, viii., Paris 1905, p. 167—207); he also went fully into the old irrigation systems of Shuster and Ahwâz. Unfortunately political jealousies have prevented the execution of this most useful project of the Persian government.

The Kârûn is the only river of Persia that admits of navigation. Communication is maintained with the Persian Gulf through the Shâšt al-Arab and the Shâšt Ramînâ. There is evidence as early as the Umâyyad period that there was regular traffic up the river as far as Ahwâz (cf. Schwartz, op. cit., p. 300). The Kârûn is navigable as far as Shuster. The only obstacle is the rapids caused by the gypsian rocks below Ahwâz (see the very full description by Wells, op. cit., p. 156 n.) which make unloading and re-shipping necessary; in 1891 a little railway was put in use for this purpose. The Abu-i Gergir is also navigable; but in it also re-shipping is necessary at Shillîl (6 miles below Shuster). One can sail up the Kârûn and as far as the vicinity of Shilîl (cf. Perry's Russia Daily Pilot, p. 298). The first to show that steamers could ascend the Kârûn as far as Shuster was Selby in 1843, accompanied by Layard, although in 1846 Major Hurcomb, accompanied by Ainsworth, had previously reached Ahwâz in a steamer of smaller size. In 1888 the Kârûn was opened to international navigation. At the present day there is only on its boats of the firm of Lynch who have found a concession, the Persian Nipit company founded in 1886 and a Persian government steamer. If the bed of the river received a certain amount of regulation and the caravan-roads from Shuster to Isfâhân were improved, we should have an important route for traffic, which would shorten by about half the journey from the Persian Gulf to Isfâhân, the centre of Persian commerce, which now mainly follows the difficult road from Bushît via Shuster. Steamer of an average size can go as far as Ahwâz, from there to Shuster only small boats of shallow draught.

The shipping on the Kârûn has in the last few years become especially important for the transport of the petroleum obtained in Southern Persia. The Kârûn valley possesses a series of oil-wells, e.g. at Ahwâz. The oil-fields of Mâlaḏâ-n Naftân (east of Shuster) are particularly productive, perhaps the richest in all Persia. The exploitation and
development of the Persian oil-fields is now in the hands of the Anglo-Persian Oil Company. The yield of the oil-fields, where the most modern methods are now in use, has grown to such an extent that the transport of oil down the Kāūrān in tank-ships is now no longer sufficient and two special pipes have had to be laid in addition. On the oil industry in the Kāūrān valley the best authority is Schweizer, op. cit., p. 22 sq., 110 sq., 177 sq.

We conclude by dealing with the names of the Kūrān; in its upper course it is called Ab-i Karan= "water of the Karan"; Kuran (cf. Wells, op. cit., p. 143; Le Strange, op. cit., p. 237) is said to be a corruption of Kāūrān= "variegated hill", the name of the mountain already mentioned in which the river rises. Whether this explanation is correct, need not be discussed here. Karan, or Kuran, seems to have become Kūrān in the mouths of the Arabs. Among the Pargamene historians of the 7th century we find the name as Rio Caron; cf. Tomasek, op. cit., p. 83. They presumably only refer to the lower course of the river, which alone is called Kūrān at the present day. This name is quite unknown to the Arab and Persian writers of the middle ages. They give the river various names. It is usually called Daghjil (=little Tigris) by the Arabs, apparently because it was near the large river. At the name Daghjil was also found elsewhere (for example a Tigris canal above Sakkat; cf. l. 1974; a water-course near Kafa, see Schwartz, op. cit., p. 290, note 6) it was more accurately specified as Daghjil-Ab-i Alawāz= the Daghjil of Alawāz (Khinistan or its capital; see the art. Alawāz, i. 208). According to Humasi al-Shafī'i in Yarshû (f. 555 sq.), Daghjil represents the translation of the Palawād Dālā Kūrān. The Kūrān was also called "river of Khīštāz or of Alawāz" (Ab-i Alawāz is still usual for the stretch near the town of Alawāz; see above, l. 208). It was also called "river of Tuffa" (Sluiter) after the second principal town of the mediæval Khīštāz; in Ibn Battīta (l. 24 sq.) we find the name Nahr Al-asir ("the blue river"), from the blue colour of its mountain water which was generally esteemed for its remarkable freshness. We have already discussed above local names for particular parts or sections of the river, for example in the clarification between Sluiter and Band-i Kür and in the delta. Brief reference may be made to the cuneiform names Utal (also in O. T.), Iltala, Dutlādd and to the names found in Greek and Roman literature: Adon, Edawou, Hedybam, Koprates, Patligris, which were used not only for the Kūrān itself, but also for its tributaries, like the Dīfūl-Rūd with the Šahātān. For the cuneiform inscriptions cf. Stecke, Aisnumen, Leipzig 1916, p. ccxxxi., 26, 285, 285, 813; for the classical references cf. Pidhory-Wissowa, I. 435-436, 1593 sq., 27459, vl. 1601-1603, ill. 2594, ill. 1593.

(M. Stuckey)
of his wealth and is swallowed up by the earth with his palace (fādy). He is thus an example of those who prefer the fleeting wealth of this world to gaining by ams and humility and righteousness the abiding riches given by Allah in the world to come. This is apparently a monumental echo of a story heard and remembered vaguely by Muhammad. To this the commentators and the compilers of prophetic kāfs have added a long and involved legend derived in whole or in part from rabbic literature. For this, see the rabbinic side, sec. the Talmud Encyclopaedia, vii. 565 sqq., and, on the Muslim side, the note in Sayn translation of the Kur'ān and al-Ṭabarī, Kitāb, Cairo 1314, p. 125 sqq. It is plain that Ḥasan has become a minister of Pharaoh because he is bracketed with Kur. in rabbic literature for stupendous wealth. The legend of Kur. has had two special developments. 1. From his wealth and knowledge (above and Kur. xxviii. 78) he has become one of the founders of alchemy. See the preliminary statement of the Flītrist on alchemy (p. 537, l. 1); and al-Masʿādī alludes to this (Murris al-Dhakhīr, viii. 127). 2. He is associated in Egypt with lakes. Thus what is left of Lake Moeris in the Fayyūm bears his name (Rooslucter, Egypten, p. 184; Joanette, Egypte, p. 611; Kerodotes, l. 149). Also, beside the Birka al-Fīl to the south of Cairo, near the Monastery of Ṭūlūn, there was formerly a Birka Kur. which had evidently associations of supernatural legend. Al-Maqrīzī describes it (al-Kahfū, ed. 1325, l. 261 sqq.) and tells how Kāfūr who builds it is said to have been driven from his house by qīmān. It figures also in the Story of Djafer the Fisherman in Zotenberg's (cf. Nat. et Extr., xxviii, l. 167 sqq.) Egyptian Recension of "The 1001 Nights" (Nights 606-624) as a place where spirits take refuge from magicians. Von Hammer suggested in a note to his translation of this story (Der Taunus und Eines Nachts Necht nach überseeischen Märchen, etc., trans. Zsinner, l. 322; trans. Tschëisten, l. 291) that Kur. had here become combined with the Egyptian Chon. Bibliography: Tabarī, Taṣfīr, xx, 62 sqq.; Taṣfīr, ed. Cairo, l. 573 sqq.; Rāzī, Taṣfīr, ed. Cairo 1308, l. 173 sqq.; Taṣfīr, ed. al-Ahmar, Taṣfīr, Cairo 1310, l. 97 sqq.; G. Geiger, Was hat Mohammed aus dem Indischen aufgenommen?, 2nd ed., Leipzig, 1902, p. 133. (D. B. Macdonald)

KARWAH (older forms karwān, "He who protects trade") the original of the word carawan, means in Persian a number of merchants who organise themselves into a body to defend themselves against robbers and brigands (Ar. ḥādiq). The beasts of burden are camels, horses and mules; the camels are usually arranged in pairs of seven animals (kāfā); the camel-drivers ride on an ass at the head of the procession. The caravan drivers are slow and do not hurry, but their work is hard and trying: a man has ten or twelve camels to watch and guide; sometimes thirty or forty are managed by three men. The men have to unload their beasts and make a stage and feed and end there: it is only then when this has been done that they can think of themselves. In the middle ages the signal for departure was given by beating kettledrums (qārā). In desert regions, the caravan camps under the tents that it carries with it; but sovereigns and

genious benefactors have had built from stage to stage and at the resting-places, buildings called kābarāder "caravan-houses". Their plan is always practically the same: — a square courtyard surrounded by walls with no windows looking outwards, upon which sits a series of rooms each with a door and window or sometimes little huts without a roof, intended to serve as a lodging for the night for the merchant and his goods. The beasts of burden remain hobbled in the courtyard. These caravans are as far as possible supplied with running water or at least a well. In Persia the bulk of these buildings still standing date from the Safavī dynasty and are traditionally attributed to Shah Abbas the Great. There is nothing there but the four hare walls; the travellers carry everything that is necessary with them, beds, carpets, cooking utensils, etc. In the towns especially, however, there is to be found near the caravanserais a caterer who has always ready the dishes loved by Orientals.

The absence of water is a work of pious to be interested near the monastery of "Ali a Nādje" (near Nehā and of Ḥasan al-Mubārak (Muḥammad Ḥasan), both places situated in Ottoman territory. For this purpose corps-caravans have been organised, which come from the remotest corners of Persia and spread thousands of wooden coffins or rolled in mats or carpets are tied in twos, threes or fours to the back of a horse. At every stage the vehicles are loaded and unmanned like packages. As the journey lasts several weeks, these caravans give out an un讞able stench and never camp at less than three or four miles from the villages they pass.

KARWAH b. al-Muqallad Abū l-Mānī, Muṣṭamīd al-Dawla, an Uqailī. After the murder of al-Muqallad in 351 (1000/1) he was successively as Amir by his eldest son, Karwāz al Mūsā, and later as Amir by his eldest son, Karwāz al Mūsā, and in 352 (1000/2) the latter sent an army against al-Muqallāt, which then owed allegiance to the Buyyids. The Uqailīs, however, had soon to retreat and when they made an alliance with the Banū Ḥamdān under Abu l-Ḥasan "Abī b. Ṭāhirah, al-Dawla's [q.v.], deputy, Abū Dā'far al-Hadhīqi, at once took the field against them and summoned the Banū Ṭāhirah to help him. In Komānā during the same year (July; August, 1002), the armies met; Abū Dā'far was defeated but gathered his forces together again and soon inflicted a heavy defeat on the Uqailīs near Kāz, in the year 357 (1000/1) Karwāz undertook an expedition against Kūta, where he was defeated. A few years later (401 = 1010/11) he abandoned the Abūbār and had the Buyyids for the Fāṭimids. He asked his chief al-Ḥāfīz al-Māmī, but, but the approach of an army under Bāhā al-Dawla's general, Ṣarāgh. at once returned to his allegiance. In 411 (1020/1) Karwāzī was attacked and defeated by the Qarmatites and the Qarmatites and and was only allowed to retain his position by the Caliph's grace. But peace did not last long. The Banū Ḥadhīqi invaded Karwāzī's lands and when he took the field against them they made an alliance with Būtai b. Aḥmad b. Mazrāq (417 1026/7). An army from Ḥadhīqi also joined the
affairs. The vanguard met near Kâfâ: Karâwash took to flight and the Affils for some time being occupied the towns of al-Anbâr. Internal feuds then broke out between 'Ukaila, Nadhir al-Dawla, Kâfâ, Karâwash, and Kâfî, b. al-Hasan, who were joined by Basîzn, a brother of Karâwash and lord of Naflân, made an alliance, advanced against Karâwash with a strong army and the two forces soon met. In the midst of a desperate conflict, however, a reconciliation was effected on the battlefield and Basîzn was allowed to retain Naflân. In the meanwhile Manî b. Hasân, commander of the Banû Khâlidân, plundered the town of al-Lujmân, which belonged to the Mayyâdîs, whomupon Dubis made peace with Karâwash. After Manî had twice burned down the town of al-Anbâr, he submitted to the Buya'd Abî Kâmilân [q. v.], while Karâwash assisted the people of al-Anbâr to fortify their town. In the struggle between the Turkish prince Burjân and the Buya'd Djalî al-Dawla [q. v.], Karâwash was on the side of the latter. In the year 432 (1040/1) they quarreled for various reasons, but friendship was soon restored after Djalî al-Dawla had sent an army against al-Anbâr and Karâwash had to pledge himself to obedience. In the years 432 and 433 Mesopotamia was invaded by the Ghurâ [q. v.], (cf. the article starwimân); on Ramadan 20, 435 (April 21, 1044), they were defeated by Karâwash in combination with the other starwimân and Djalîs at Râ's al-Aqîl and had to retire to Buuya Djarîn and Abharâbân. Karâwash had also to wage war on his brother Abû Kâmilân Barâa. Their good relations were interrupted by 440 (1048/9); their nephew, Karâwash b. Basîzn, joined his uncle Karâwash and put Abû Kâmilân to flight. In Maharrâm, 441 (June, 1049) it came to fighting between the two brothers; but as several of the followers of Karâwash went over to Abû Kâmilân, the latter had little difficulty in taking him prisoner and bringing him to al-Mawjûl. Although Karâwash continued to be nominally recognized as suzerain, he no longer played an active part in politics, and as Abû Kâmilân found him too independent, Karâwash was deprived of his freedom in 442 (1050/1), although he was still treated with respect. After the death of Abû Kâmilân in 443 (1052/3) his nephew Karâwash was recognized as Amir, Karâwash died on Rajab 1, 444 (Oct. 27, 1052) in the fortress of al-Dairânân near al-Mawjûl. According to one story, Karâwash had him assassinated.

Kârâwash, a town in South Arabia in the Partial Bayân. The town comprises 12 strong castle-like buildings and 400 houses — the Jewish quarter 50 houses — and is surrounded by palm-trees. It has four main streets with shops in which a busy trade is carried on. The goods come mainly from Aden and are brought via Hubâl. Cotton, which is much grown here, is used for the manufacture of excellent cloths which are much sought after in South Arabia. Indigo is also much cultivated and a number of dyeworks produce the well-known blue-coloured material which is in great demand throughout the south. There are also seven sesame-mills in the town. In addition to cotton and indigo, the fertile soil yields wheat, barley, millet, the red variety (pennisetum esculentum Körn.), and summer-millet, dates, grapes and vegetables. The Jews of al-Kâsâbân, the capital of Buya'dân, are, as almost everywhere in South Arabia, mainly silversmiths and leather workers.

Bibliography: C. Landberg, Arabia, v. Leiden 1898, p. 30-34. (A. Grohmann)

Kâsâbân means primarily the interior part of a country or town and hence a fortified city, such as is occupied by a commander and his forces, and the town in which such a castle stands, the chief town of a district. It is also applied to a new well. In India, where it is locally pronounced kasba, it is applied to the chief town of a pargana or waurâ or, which is the smallest subdivision of a fiscal district, and is distinct from the sathal, the village or small town which is a complete fiscal unit, and from the muri or hamlet, which is included in the area and in the fiscal accounts of the sathal of which it is an offshoot.

(T. W. Haim)

In the Muslim East, the name is especially applied to the citadel in fortified towns in opposition to the rest of the town. It is the centre of defence and also the governor's residence. Sometimes it is a town beside the town. It is not uncommon to find the two parts of the city taking opposite sides and having violent quarrels. The history of Fuz, Tara or Rabat give numerous examples of this. The kasba developed in the Maghribi especially after the Almohad period (twelfth century); the great ornamental gateways (usually single and simply swung, differing from the outer, more complicated of towns), which were built at this time between a town and its kasba (a dialectical form of the word) are among the most beautiful monuments that survive from this brilliant period (e.g., the kasba of the Kasba of the Udaya at Rabat, 8th. August at Marrakech).

Under the Sherifian dynasties of Morocco (from the seventeenth century) and especially under the Alaouite (seventeenth century to the present day) the kasba was commonly used to designate little forts of very simple plan, built here and there in the country where the sovereign maintained small garrisons to watch the country; the name is also given near the towns to the different cantonments supplied by particular tribes liable for military service (Kasba of the Fisla, N. of the Shinflas at Fuz, etc.).

Europeans extend the word more or less logically.
in the country to the dwellings of important kāids or to large fortified towns in the Atlas—and in certain towns (Algeria, for example) in the native quarter.

(H. Bassir)

KASAM (الكاسم) is, with yaun, the general term for oath. As hāzama means “to divide,” we seem to have here the usual transition between the meanings “to cut” and “to decide” so that hāzama would be the deciding, strong word (cf. َدَخُلُ), while wail (verb hāzama), which also means swearing, would be used in special circumstances (see the art. َيَاوَا). The oath plays a great part in the social life of the Arabs and is maintained by Zuhair (Al-Dinâr, l. 40) as the principal means of ascertaining the truth, along with interrogation by a person in authority and absolute clearness. The oath is the word into which the person taking it puts his whole strength. As the tribe forms a moral unit with joint responsibility, the oath in important matters becomes a tribal oath. This, called hāzama, consists in 50 mm of the tribe swearing to their being right; this may be the oath of an accuser (humzâ), cf. Freytag, p. 235; Ahi Hûgûm, ed. Wâsânâfî, p. 777 sqq. etc. or an oath of participation (Zâda b. ‘Alî, ed. Griffin, p. 230, sqq.; al-Bukhârî, Manâshîd al-‘Alîmîn, lâb 27). The oath is also used in giving evidence against another in cases of alleged adultery (Sûra xiv. 6-9; cf. Juyubî, Handbuch der schiitischen Geschichte, p. 91). A curse can also have a positive value and be used to strengthen an assertion, as in fâdâlah ٌذَكُرُ الْاَنْفَصَالَةُ ٱلۡنَّفْسِ وَٱلۡمَلۡكِ (cf. *May Allah slay him. How brave he is*). The curse is here used šu‘b-الْفَضْلَيْنَ, as in Sûra lxxxv. 19, 20 (see al-Bukhârî on the passage). The expression already mentioned “May my hand waste away” is often used in this way.

The taking of a vow is connected with the invocation of a curse upon oneself under certain conditions. It is especially common in cases of vengeance among the Arabs, and in the life of Mûsâ b. ‘Abd Allâh. He says he will not eat meat nor drink wine nor amount himself with all nor touch a woman nor cast the stones of his head until he has taken vengeance (Al-Shâfi‘î, viii. 68 sqq. cf. 68, 9 sq. 149, 9 sq. 150, 8 sq. 149, 4 sqq. 532 sqq.). To take this vow (ma‘yir) is called ِعَلَىَ ٱلسَّيِّئَتِ reconnect. The man concerned dedicates himself thereby and takes an increased obligation (‘ahd) upon himself. Such oaths are as a rule taken before a battle (Humziya, p. 301; Atna, xxi. 84 etc.). Vice versa, one may give force to one’s word by taking a special obligation upon oneself in case of breaking it. This pledge, of course, must be invariable in character and usually takes one of three forms: giving of covenants to be sacrificed, assigning of slaves (male or female) or divorce from a wife. These pledges may be made more or less secure, than one can reverse to divorce or release present and future wives and slaves (e.g. Al-Yakhtî, p. 505 sqq., 509 sqq., and in the oaths taken by officials of the Mamûlik), a kind of oath which was imposed by al-Shâfi‘î but nevertheless often occurs (cf. “he swears by his word”, Zâda b. ‘Alî, ed. Griffin, p. 205 sqq.). In taking the oath one must endeavour to remember its character as a serious, sacred expression. It is best to swear at sacred places, in ancient times at the holy stone or idol (Asghânî, ix. 9 sqq.). In pre-Islamic days and later the Kâ’b was a particularly favourite place for taking an oath (Humziya, p. 517, sqq.; al-Bukhârî, p. 19; al-Tahwîl, iii. 861, sqq.). Especially by al-Hâkim (al-Tahawi, i. 3864 sqq.); this oath is still considered a very strong one (Saynuck, Gesamta, p. 306, sqq.; al-Battânî, Al-Kitâb al-Tahawîya, Cairo 1369, sqq.). One oath by the swords of saints at the same time laying a hand on the tomb (see e.g. Juyubî, Contenours des Arabes au pays d’Amour, p. 321; Musân, Arabes Pétestes, iii. 328, 342), just as a hand is laid on the northern window of the tomb of the Prophet in Medina, in taking an oath (Asghânî al-Tawala, see e.g. al-Battânî, op. cit., p. 246). Oaths are taken in the mosque, for example, especially by the munafik (e.g. al-Tahawi, ii. 92, sqq.). Special seasons make the oath more serious,
notably the period after the jallum al-sayf (see Goldscheider in the Archiv für Religionsw., iv. 297 sqq.). There is evidence of oaths in connection with sacrifice from the pre-Islamic period (Zahiri, i. 50; Humza, p. 443, sq.). Swearing by the sacrificial animals is common, still more frequent by the lord of the sacrificial animals (e.g. Humza, 745, verse 6). Among the traditional forms of oath is the khalil. According to al-Ujaybardi, 1027, v., it consists in taking the oath by the fire of the tribe into which salt is thrown. This ceremony, referred to by al-Kunait (al-Mishkain, ed. Hurvatits, No. 4, verse 36), still survives (Landberg, Arabisk, v. 133 sq.).

The magic circle is often used at the present day: this, which is sometimes divided by lines at right angles, often has something put in it, such as dung, ashes, or a piece of cloth. One solemn oath consists in striking a sword in the ground in the centre of the circle and placing ants beside it; this is the balda or wandaal oath. Sometimes one takes a piece of wood in the hand and swears "by the life of this wood"; this is the bokh beke. Other popular customs could be mentioned, such as laying a hand on the left-forearm, putting bread and coffee in the hand, turning towards the hiba etc. (see the works of Musti, Jammah, Landberg, Burchhardt and Dougherty). Increasing the gravity of the oath by various procedures is acknowledged in official Islam and called sahihl al-yamin or sahihl al-yamani; for example, the Kur'an or al-Bukhari's Sahih is placed in the bosom while the oath is being taken (cf. Ostmann, Die Zitierungen, p. 142; Lane, Manners and Customs, i. 168, 470). Great oaths are called omein haqiqah (Sara, 107, verse 391; cf. Qudur al-bidaih, Sara, v. 56; vi. 109; xxvi. 40).

The oath formalizes the substance of the oath. Apart from special kinds of oaths such as the curse and the vow, the usual formula is for that by which one swears to be introduced by a particle. The most common particle in this connection is bi, as bi and wa, which are all used in solemn oaths (walihi, wa-bihi walihi); the two last mentioned are not so freely used as bi. The particle bi is the common preposition in combination with; wa is probably the termination in as wa-aladha or saydah; wa is an intensive particle like bi, which is used particularly in the formula al-bi in contrast with bi, the latter being used by my (thy) life! etc.

Other demonstrative particles occur in oaths such as, al, or since the sound narrative is often abbreviated, expressions of walihi or wa, wa, wa, wa, etc. are also sometimes used as particles in oaths. There are several linguistic peculiarities associated with oath formularies; for example, a negative can be omitted after the oath; this is a verse which we find occasionally in the Kur'an. In the negative words, which is apparently intended to give it particular emphasis. A further intensification of the oath is expressed by prefixing wa to the following verb (on the grammatical point of al-Misqatul, ed. Burch, p. 157 sqq.; Ibn Yahshil, ed. John, p. 285 sqq.).

Just as an oath is taken at a holy place or at a holy time, we find oaths taken by the place or by the time of day (or by its lord). The Ka'bah and all that belongs to it as well as the pilgrimages used in oaths are continually changing phrases. The old Arabic sacredness is due to their gods and fathers. The khalil's often sworn by natural phenomena (Ibn Highton, 174 sq.). It is in keeping with the character of the oath that in Islam swearing by Allah is alone permitted, but that, as the other hand, swearing by fathers, saints and especially by the Prophet (by the tomb of the Prophet, Aqbar, vi. 91, 12, 15) is found in everyday use. Swearing by one's father was particularly forbidden by the Prophet (al-Bukhari, iv. 265) but it is sometimes used by 'Umar and Abu Bakr (al-Bukhari, ii. 444, 4), and even by the Prophet himself (Muslim, commentary of al-Nawawi, iv. 903). It is a good Muslim oath to swear "by the Lord of my father" (al-Bukhari, iii. 203, 13) or "by the Lord of the Ka'bah, of the sacrificial animals" etc. The Prophet also swears by his honour (Zaid b. Ali, ed. Griffith, p. 104). The formula may call God to witness, as, for example, "God knows that I am not lying"; "God is witness that I am saying this", etc. God is often referred to by his descriptive phrase; for example, "by Him Who sent Muhammad with the Book", with the expression "Masta'an rifaiy" (Pillar of Islam). The oath can also be adapted to particular situations; many have their favourite oaths; the Prophet, for example: "by Him in Whose hand my soul is", etc. The oath is intensified by repeating the formula three or more times.

One is freed from an oath to fulfill a vow when one has performed it (tahara or jallum yawd). *Discharge from the oath* (tahallat al-bahumm) may mean a small quantity or a short period of time; literally: sufficient for release from the vow (cf. al-Bukhari, i. 376, 17; iv. 265, 9; with Sura xix. 72; Usmaiy b. Abi T-Salt, ed. Schulten, xxi. 14). The sa'ah, to whom an omen has vowed to do something, may, however, refuse the latter from his oath. The latter is allowed to disregard his oath if higher considerations demand it. There is evidence from the Muslim as well as from the pre-Muslim period that such a solemn promise was considered as binding until the fulfilment of certain articles of clothing (al-Wakili, trans. by Weitkamp, p. 197; al-Tahawi, iii. 562, 14 49). Release from a vow is obtained among the modern Bedouins by a sacrifice. One may bind others with an oath if one conjures them. The formula is often of this kind: "I call (na'qahda) God to thee" or "I mention (al-bakhrada) God to thee"; but it is an oath of the speaker and it depends upon the relation between the latter and the person addressed whether the latter will fulfill the vow; in such forms of oath appeal is often made to mutual friendship or relationship (e.g. Lichten, i. 438, § 75 Hanüzzi, p. 254 middle). One can also appeal to God, "A servant of God is one whose oath God redeems when he appeals to him" (al-Bukhari, ii. 238, 23 294, 4). God it more precisely conjured, if the appeal is made through one of his saints like the Prophet (Ibnusulil, 61-1-2). M'zrif al-Karkh is said to have needed a disciple to call upon God through him (al-Kunait, Alida, Cairo 1350, p. 9, sq.).

Between the popular use of the oath among the ancient Arabs and in Islam there is no essential difference, as is clear from what we have already said. But there are special rules regarding the oath in Islam. In the Kur'an, especially in the older Sura's, the oaths taken by the khalilah by natural phenomena are usual (Sura iv. 15; lxxxvi. 15-18; lxxxvi. 1; lixxxix. 1-3; xlv. 7-7 etc.); we also have instances of swearing by the Kur'an (lxxxvi. 1; lxxxvii. 21 sq.; lxvii. 1-1); by the angels (lxxxvii. 1); by the Last Day (lxxxvi. 1) etc. Oaths sworn by
God’s majesty (xxviii. 35) and we have evidence (Zaid b. ‘Ali, ed. Gräfinli, p. 258, 7 sq.) that God swears by His majesty and grandeur. (cf. for the oath in the Kur‘an Ibn al-Kalīm, Kitāb al-Qiyāma, Makka 1321). Two passages in the Kur‘an are of special importance for the use of the oath. In Sūra v. 91 and ii. 224 sq. it is said that: "I considered awakening (gā‘ib) in oaths can be broken (ouden) and eliminated. The context in both passages makes it plausible that the references are to vows of abstention, sometimes from food, sometimes from water. Vows of the last mentioned kind, called hif, are limited to four months (ii. 226), in connection with ii. 224 sq. after which time they must be expiated or the man must divorce the wife. A particular vow of this kind (gā‘ib) in which the husband says: "You art henceforth as the back of my mother to me (ātātāh ni‘mat); this vow is especially condemned in Sūra xxviii. 4; iv. 8; 4 sq. (see Juyumbl, Hanbook der islamischen Rechtswissenschaften, Leiden and Leipzig 1910, p. 224 sqq.; Sachau, Musul. Recht, 1897, p. 13, 63 sq.).

The practice of atonement for such oaths after repenting of having taken them seems to be taken from the Jews (cf. Maimon. Ne’kharim, and Lev. v. 4 sq.). In Sūra xvi. 2 we read: "God hath prescribed for you the dissolution of your oaths and this prescription is applied to a case in which the Prophet had sworn to his wife Ha‘ṣa al-Mariyya, which he later regretted (cf. al-Tabarī, Ta‘rif, xxvii. 99 sqq.).

Among badhādha first place must be given to a saying of the Prophet: "I never take a vow without being prepared to expiate it if I see that another is better and adopting the better". In such and similar sayings, which are collected by al-Bukhārī, Muslim and other traditionalists (see Kitāb al-A‘mān wa-l-Nujub), the expiatory of vows is recommended in cases other than vows of abstention. On the other hand it is implied that one should keep one’s oath. (Sūra xvi. 93; cf. III. 71; iv. 15; 17; 19 etc.) and carrying out what man has sworn to do (fā‘ir al-mukhāfah) is mentioned by al-Bukhārī, ii. 90 sq., among the seven principal requirements. It is only in Paradise that there are no such peculiarities, for there vows are fulfilled and oaths disposed of (Umaiya b. Abī ‘D-Salīm, ed. Schütz, ii. 23). But an oath must always give place to a higher consideration. It is therefore recommended not to take an oath without adding the istiḥlab (the formula "if God so will") (al-Bukhārī, v. 280; Muslim, comment, of al-Nawawī, v. 106; Zaid b. ‘Ali, ed. Gräfinli, p. 463).

These statements in the Kur‘an and in the Sunnah form the foundation of the Fiqh system on the subject. According to this, the person taking the oath must be minā‘ibih, he must be acting deliberately as a free agent and not under duress or threat. He must not take an oath to commit a sin, views are divided on the question whether such an oath is valid or not. One can only swear by God, either by His existence or by one of His names or attributes. The oath by the Prophet is recognised by some Hadith scholars but in general is not considered a binding oath. The hif is mentioned is not recognised by the Fiqh. The breaking of a vow (khiṣ) is considered a duty in certain cases, when one has sworn to commit a sin. The hif already referred to must be broken within four months if the man does not divorce his wife; after the hiṣ the wife must at once be divorced as the vow must be expiated.

Expiation (gā‘ib) consists, according to Sūra v. 91, in setting free a slave, freeing ten poor men or clothing the same number; for those who cannot afford this, three days fasting is equivalent. The things to be done are described in detail in the Fiqh books. In the šar‘ the expiation is the same as in other oaths, while in the šān it consists in releasing a slave who is a believer or fasting for two months or feeding 50 poor people (Sūra liii. 4-5). The Muslim law recognises the oath of affirmation as well as the vow to perform. The former only occurs in lawsuits. A special case is formed by the gh vána already mentioned, which was taken over from the ancient Arabs. It is limited in Islam to try for murder and consists of 50 oaths which can be sworn by one or more individuals. The oath is imposed on the accuser but only in connection with certain indications (lawā‘) which must be regularly ascertained. If the accused refuses to take the oath, the 50 oaths are applied to the accused; if he refuses he applies again to the accuser. In other cases the principle in Islam is that the oaths of proof is on the accuser and the accuser has to take the oath. Witnesses as a rule do not take an oath; witnesses to the will of a testamentor who has died in a foreign country are an exception (Sūra v. 105). If the plaintiff has only one of the two necessary witnesses, the oath of one of the parties may take the place of the second witness (al-Bukhārī, ii. 158 sq.). When the plaintiff has not valid proofs, the oath is put to the defendant; if he declines to take it, it is put to the plaintiff (mawta al-radd). Perjury an account of some crime is called mawta al-khla‘īs. Muslim scholars, an expression which originally means a peculiarly binding oath. Such oaths can be expiated in the above fashion, according to the Sunnah, should, if they are false, according to other views they cannot. The latter hold that expiation only applies to vows.

The formalism of the legal system opens the way for all kinds of abuse by which an oath can be broken, or formally kept. There there is a whole literature regarding such abusers; the best known work is al-Ġam‘ār, Al-Qiyāma, parts 1, 2, 3 (ed. Joseph, Schacht, Leiden, 1914; Hammurabi 1913; printed Cairo 1314).

**Kasab**

*The Encyclopedia of Islam, II. 50*
KASH — KASHAN

Zamakhshari on the same passage, tries to show that there is more personal, reflexive force (Franklin) in it. Hence ṭabīṣ and ṭalibīṣ mean much the same. There are two technical usages: 1. It is equivalent to the ṭabīṣī of the Ashʿarīites. *The action* of the creature is created, originated, produced by Allah but it is "required" (malāʾikā) by the creature, by which is meant its being brought into connection with his power and will without there resulting any effect from him in it or any introduction to its existence, only that he is a locus (mawḥūd) for it (al-Durr al-Mukhtār, p. 135). Al-Ghazālī, perhaps desiring to emphasize the personal acceptance, apparently preferred ṭalīṣī; see his statement in the Kitāb al-Kashf (ed. with comm. of al-Mustaṣfī al-Zalālī, ii. 165 sqq.) and the elaborate commentaries thereon. Al-Rūmī on Kāfūr, ii. 286 (ed. Cairo 1908, ii. 362) states the different views as to the two terms, Al-Santilli in his Jumhūrī (ep. Lacante, p. 66 sqq., also note p. 237) uses ṭalīṣī only twice and evidently in the same sense as ṭabīṣī; his statement is an extension of that of al-Durr al-Mukhtār. This is the most subtle question in all of the Muslim kalāms (al-nakāsh min kash al-J错误alālī) but it may be guessed that al-Ash’arī wished only to explain our consciousness of freedom to choose and that his explanation was that this consciousness is a separate creation by Allah in the mind; man for him was an automaton with consciousness as part of the machine. The later mutakallim, especially under the influence of the more ethical Muʿtazilite system, turned it otherwise: cf. B. al-Tażāzhī in his commentary on the 'Abādāt of al-Maḥṣūs (a Muʿtazilite), Cairo 1833, p. 98 sqq. II. ṭabīṣī and ṭalīṣī are applied to that knowledge (ʿilm) which belongs to created things and is attuned by the voluntary (al-qiyārāʾ) application of secondary causes (ʿuṣūl); (a) as reason and consideration of premises in deduction and (b) like listening and turning the eye in innate perception. They are thus either ṭabīṣī (which applies only to reasoning: ṭabīṣī, "necessary", is sometimes opposed to ṭalīṣī and sometimes to ṭabīṣī. Others arrange thus: knowledge in a created being is of two kinds, (a) ṭarīʿat and (b) ṭalīṣī; in the acquisition of (b) the ṭalīṣī are of three kinds, the healthy, sensible, reliable narrativ, rational consideration (masāʾir); ṭabīṣī is of two kinds, immediate intuition (ḥakīmat) and ṭalīṣī, deduction (al-Tażāzhī on the 'Abādāt of al-Maḥṣūs, p. 59 sqq., al-Durr al-Mukhtār, p. 19, 21).

**KASH.** [See KHYA]

KASHAN, the modern Shah-i-Sabz (chief town, on account of the fertility of its surroundings) a town in Bukhārā on what was once the great trade route between Samarkand and Bukhārā according to Chinese authorities, Kash (Chinese transcription K'ia-she or K'i-shuang, also K'ia-sha, as a town K'i-she) was founded at the beginning of the seventh century A. D. cf. J. Mar- quart, Chronologie der alttürkischen Inschriften, Leipzig 1884, p. 57; Erdmann etc., Berlin 1901, p. 304; E. Chavannes, Documents réunis 1er Turke-Dynastie, St. Petersburg 1905, 190. Yāḵšī's statement (Mī ān, ed. Watten- fisher, iv. 274) on the authority of Ḥāfiz Makhlūf, who died in 473 (1080/1), that in Mī ān with al-Nahr the name was everywhere pronounced Nahr is very doubtful: for the later period the pre- nomenclature Kas̱h is proved by the frequently occurring expression Kas̱h-i-Dilbāb. The account of the Arab conquest are discussed by Marquart in particular (Erdbahr, see Index). The name Kera of the Ṣalūm period is described very fully by the Arab geographers (Baid. Gānūs, Arab. ed. de Goeje, s. v. Ḫaṣāmah, p. 324). T. I., Ibn Ḫawāṣīʿ, p. 375 sqq.; ibi, al-Makhdūmī, p. 376 sqq. It was in those days a third of a furūš (about a mile) in length and breadth; the old city (ṣūr-hā), Persian ʿabābistān) as well as the citadel (kūhāmah) were already deserted, only the outer town (ṣābih) was inhabited; in the vicinity of the earlier Kash a new town was arising. This suggests that the modern town has a site different from that of the Kash which existed before the Muslim conquest. Nothing is known of other transferences of the site. Kash is never mentioned in the history of the Mongol conquest, so that it must have submitted to the Mongols (617 = 1220) without resistance. The name Shah-i-Sabz first appears on coins also — about the middle of the eight (fourteenth) century. Many buildings were erected in Kash by Timūr, who belonged to the district of Kash, and his contemporaries (see, c. W. Barthold, in: Jazīdī wa lawāṭ, ed., n. 238, xii. 311 sqq. Especially famous is the palace Ar Saray built at the end of 672 (beginning of 1270) by builders from Khurāsān; cf. Shahār al-Dīn Yūsuf, Taʾrīkh Nāṣīrī, Calcutta 1887, S. 1, 303 sqq., and the notice by Niẓām al-Dīn Shāhī, and, Abāl al-Rażāšī, Ṣaḥānkalū, in W. Barthold, Trachten u. typenvergleich, Petrograd 1918, p. 23; very little survivals of this palace; on the inscriptions cf. N. Sinkeyzewsky in Przegledy Turk. Kraina, Lond., v. 114 sqq. As late as the tenth (sixteenth) century Kash or Shah-i-Sabz is described by Hāfez-i Taḥṣīl (Abāl Allāh Nāsir, MS. of the Asiat. Museum, 374 a.e. 1257 = 542) as an important town usually governed by a prince of the ruling house, while the administration of Naṣūr or Karsh (q. v.) could be left to a military official (Dūra-i), till the present-day the situation is reversed and Shah-i-Sabz is an important town in comparison with Karsh, the result of the political changes in the eighteenth (eighteenth) century. The district of Shah-i-Sabz is surrounded by hills to north, south, and east, so that it can hardly be expected that this region will be soon linked up with the railway system, while Karsh is already connected by railway with Bukhārā and Termoīd: the town of Shah-i-Sabz has therefore little prospect of running its prosperity.

(W. Barthold)

**KASHAN** (in Arab authors often Kasẖẖāh), a town in Iran Ḫadji (al-Dībil, Media), three days' journey from Ishābād and twelve from Kāspīn. It is an ancient town which is said to have been rebuilt by Avidar, wife of Ḫarūn al-Rashīd. The former the summer, but the winter is very mild. Water, which is scarce, is brought by an aqueduct from the spring at the castle of Fān outside the town, to which
the inhabitants go on pilgrimage once a year. The moulds and legs of this locality are esteemed. Large numbers of black, black and very dangerous scorpions are found there. The natives are all Shiah and were already noted for their devotion to the twelve Imams at a time when this part of the world was still Sunni. In expectation of the return of the hidden Imam, they used to go out every morning with great ceremony to be ready to meet him; after a long wait they returned home disappointed but not discouraged. Almost the same thing was done at Hills (CL. Huart, Histoire des Arabes, ii. 324-5).

The town was destroyed by an earthquake in the reign of the Wâlik Karim Khân Zand, who had it rebuilt. Situated in the centre of a fertile plain, it was surrounded by walls flanked with towers, with a deep ditch running all round; it had six gates. Although not very important (15,000 inhabitants of whom 500 were Jews at the beginning of the nineteenth century), it is one of the prettiest towns in Persia; its streets are clean and paved. According to A. Williams Jackson, Persia Past and Present, New-York, 1906, p. 410, it has now about 20,000 inhabitants. Its manufactures are cashmire, silks embroidered with gold and silver, flowers, plain stuffs with strips of colour and a kind of yellow, gold, silver and steel are worked there. It has become especially famous for the plaques of faience called Kâshâ (q.v.), of which there was no longer any trace as early as 1808.

KASHâNI [See ARZU-BEHSAJ].

KASHÂNI, Khâbûd Mirzâ Din, the Bâbi historian, was a merchant of Kâshâni who, with two of his three brothers, Khâbûd Mirzâ Ismâîl Dânish and Khâbûd Mirzâ Ahmad, was among the earliest disciples of Mirzâ 'Ali Muhammad, the Bâbi. When the Bâbi, in 1847, was being conducted from Isfâhan to his prison at Maklî the brothers bribed his escort to allow him to stay with them for two days and two nights at Kâshâni. To the following year Khâbûd Mirzâ, with Khâbûd Allah, 'Alî Shâh's Azad and other prominent people, attempted to join the Bâbi insurgents of Shiraz, and Kashân in Mâzâvaran was but captured by the royal troops and imprisoned for some time at Amul, until rescued by two merchants of Kâshâni. "We find him always impelled, as it would appear, by religious zeal, now at Hindârâb, now at Maskhad, now at Tháran." The Bâbi was put to death on July 9, 1850, and Khâbûd occupied the next two years in writing his history of the movement, for which task he was qualified by personal acquaintance not only with the Bâbi, but with 'Alî Shâh Azad, Bâbâ' Allah and almost all the early apostles of the Bâbi religion and by detailed and accurate information of every event connected with the movement during the first eight years of its existence. His history is a notable and some mystic reason not readily comprehensible he styled Naubât al-Khâlîlî, "the Point of Kâshâni," is accurate, but is disfigured by false and almost idolatrous adulation of his hero and by gross abuse of his persecutors. When 'Alî Shâh Dânish resolved to strike a blow at the adherents of the new religion, Khâbûd was forcibly removed from the shrine of Shâh 'Abd al-'Azîm, about six miles south of Thâran, where he had taken sanctuary, and thrown into prison, where he shared the cell of Bâbâ' Allah. On Sept. 15, 1852, he was put to death at Thâran in company with twenty-seven of his co-religious. As an act of policy, in order to divert vengeance from himself and his minister, the Bâbi concealed the bodies over to various communities for execution and Khâbûd was delivered to a man named Malik al-'Tabib ("chief of the physicians"). According to his account he suffered death by the bowstring, and according to another the merchant and shipkeepers of the site inflicted wounds on him until he perished.

Of his brothers Ismâîl died at Thâran and Ahmad, who, after the death of the Bâbi, recognized 'Alî Shâh Azad as his successor, was slain at Boghâhî by some Khâtû's, followers of Bâbâ' Allah.

(C. W. HAWK.)

KASHF, "uncover," has two technical uses.

I. In prosody it is the name of the seventh vowel letter in the foot, a word, and further in a word, a combination of word and base. This is often called base, "root," which is more probable; but that root has unlucky associations (Freytag, Darstellung der arabischen Vokalismus, p. 87). In Sacy, Grammaire arabe, ii. - Tawâlîl du Coran, Tab. il. - Carcin de Taur, Rhetorique et Poésie, p. 244; al-Djurjânî, al-Tawâlîl, unter base). - II. In the emotional religious life (tawâlîl) it is the lowest term for the unveiling of the mystic. When this is analyzed more carefully it is commonly divided into three: (1) al-wâfiya which is reached by the asbâb al-âdâb; this is still in the realm of reason and is not really base. By (ii) al-wâfiya is reached by the asbâb al-sifâr; the last is the immediate Vision of God and is sometimes called awqâf (al-Kujjât; al-Khânîî, a, with quotations from Zârützâr al-Asâf, Bâbâk, 1290, ii. p. 79 sqq.; on this cf. K. Hartmann, al-Kunjîârî, Darstellung der Schriften und, Türk. Bibl.,
KASHGHAR, a town in Chinese Turkestan, called Su-li in the oldest Chinese sources; the same name is still used in Chinese official documents. The name Kashi first appears in Chinese transcription (Ksi-kiin) in the Tang-shu. cf. L. Chavannes, Documenta sinicae, vol. III, p. 462. On the pre-Mogul annals of Kashi, and the rise of Buddhist buildings in the city, see A. Stein, Ancient Khotan (Oxford, 1900), pp. 54 ff. and, also, Estate of the Persian, Translations of the Historical Library (Oxford, 1899), vol. II, p. 591. Kashi was later under the rule of the Daghistan Ars's (see the article Daghistan); the last of them, Ali Bakri, reigned till 1120 (1143) according to the statement of his relative Haider Mirza (q.v.) forty-eight years (Turkié-Kashgari, English translation, London, 1895, pp. 253 and 320); but this is contradicted by the author himself, who says that Kashi was not conquered by Ali Bakri till 1125 (1148). Ali Bakri is the founder of the modern town. He destroyed the old fortress and in the last years of his reign rebuilt it on a new site, on the other side of the Tumen on the tongue of land between this river and the Keri (Lh- yüzde, p. 350). Under the rule of the *Mongol* Khans (cf. the Bibliography to the art. CHAGHA-TI-KHAN) and later under that of the Kalmucks and Chinese the capital of the district was no longer Kashi but Yarkand; it is only quite recently, since the reconquest of the country by the Chinese in 1877, that Kashi has again attained considerable importance in the residence of the Tso-Tai, who is the central and southern part of Chinese Turkestan as far as the base of Corum, and the residence of the Russian and English colonies. On Kashi in 1873 see H. W. Buxton in 25: Forsyth, Mission to Yarkand in 1877, London, 1878, p. 45 ff., 80 ff., with plan of Kashi on p. 268, and M. Hartmann, Chinese Turkestan, Halle a/s, 1908, especially in sections 45 ff., 80 ff., with plan of the town from Korlin. The most important building in Kashgar and vicinity is Ijahat Apli, the tomb of the famous saint of the eleventh (seventeenth century) Kashi is now also of greater importance than Yarkand for its intellectual life; Yarkand, which down to the conquest of Kashgar by the Chinese, was the political capital and also the principal centre of learning and science, has now fallen behind Kashi. Its day is over (M. Hartmann, op. cit., p. 49). The number of its inhabitants is said to be about 50,000.

KASHI (in Yezii: Kásfin, Kasi, in the Baghíis, Kasjâst), the capital and chief town of the town of Kashi (q.v.) in Persia, given to square, sometimes hexagonal, plaques of painted design, used in the exterior decoration of buildings or of interior walls.

It is one of the most ancient arts of near Asia (already known to the Assyrians and then to the Achaeumids) which survived in Persia in the middle ages, and more especially, it appears, in the town of Kashi. The monuments of modern Persia from the time of the Safawids to our day (those that are older, are in ruins) are covered with these plaques of design decorated with conventional flowers (kashâh and), in which the predominant colours are indigo blue, turquoise blue, green, less frequently red and yellow. Those
with figures in relief are the exact and the most esteemed.

When this industry was brought to the town of Damascus by Persian artists — perhaps Christians (some plaques bear inscriptions in Syriac) — the Syrians called these plaques fīshīāt (from the Arabic orthography, Fāsīnā). The art disappeared perhaps over a century ago; the ruins of the factory where they made them are still shown outside the Bāshqūrī gates. These plaques were imitated in Turkey at Iznik and Kutahiya. Recently an attempt has been made to revive this last factory, but the modern work is far from equaling the beauty of the ancient pieces; the beautiful models of past ages are clumsily imitated at the present day.

**KĀSHĪ, Khāshandi, M. Mārūn b. Mārūm, Ghulānī al-Dīn, a Persian, was the first superintendant of Ulugh-Beg’s observatory in Samarqand and a collaborator with this prince in the preparation of his astronomical tables. Besides his astronomical and mathematical researches he also studied medicine; he must have died about the year 1400 (=1336/73). Of his works there have survived: (1) Ẓāl-i Khāntān (the Khāntān tablets), in Persian, in a manuscript in Constantinople (Aya Sofia), a supplement to the Khāntān tablets (of Nasīr-al-Dīn al-Tūsī); (2) Mīrjān al-Hilāl (key to arithmetic) in Berlin, Leiden, British Museum, India Office, etc.; the preface to it was translated by F. Worpke (see Bibliography); (3) al-Rūzān al-Kamāliya, also called Nūr al-Dīn al-Shābī, i.e. his treatises on magnitudes and distances of the heavenly bodies, in Oxford, Leiden, British Museum, India Office; (4) Rūzān al-ḥudūd al-dajjal fījīfījīr rūzān fījīfījīr al-ṣábado, etc. (an essay on the calculation of the sine of a degree), in Cairo; in this al-Kāshī solves an equation of the third degree by an interesting process of approximation (cf. below Hankel’s work).

**KĀSHĪ, Muḥammad Sharīf b. Shams al-Dīn, with the suffix Kāshī M. Kamāli, a Persian man of letters of the xii (12th) century. What is known of his life comes mainly from the Khōja, his Kāshī al-Bāhî. The author’s father, Shams al-Dīn Muḥammad, also known as Shams al-Dīn Muḥammad, was living at Kāshān when his son was born and he left it for Isfahān in 1306 (1597/98) to escape persecution from the Sunna Muḥammad, the son, was three years old at that time (1594/95). In 1598 (1599-1600) Shams al-Dīn went to Mahmūd and returned seven months later to Isfahān. These dates are given by the Brit. Mus. MS., according to him’s Catalogue; from Rosen’s description of the St. Petersburg MS., it seems to make the author five years old in 1596 and to put the journey to Mahmūd in 1616 (1616/17). After a stay of 23 years in Isfahān the family moved to Ray where the father died in 1625 (1625/26). Muḥammad Sharīf al-Dīn was Kāshī of Ray for 15 years.

In the Ta’ṣābī fi Ṣuwarāt al-Musulimīn (synopsis in Spruner, Codex of the ..., manuscripts of the Libriquo, of the King of Delhi, l. 28 299) there is a notice of Kāshī and his two brothers, Iskand and Māmānī. The date of our author’s death is unknown but must be after 1693 (1692/95). This date is given by the chronogram at the end of the Kāshī al-Bāhî in the London MS., as the date of completion of the work; he mentions his older works in the Kāshī in as written so that the Kāshī is the last.

In the Khōja of the Causāt al-Muʿtaṣīm (synopsis in Spruner, Codex of the ..., manuscripts of the Libriquo, of the King of Delhi, l. 28 299) there is a notice of Kāshī and his two brothers, Iskand and Māmānī. The date of our author’s death is unknown but must be after 1693 (1692/95). This date is given by the chronogram at the end of the Kāshī al-Bāhî in the London MS., as the date of completion of the work; he mentions his older works in the Kāshī in as written so that the Kāshī is the last.

Works: Kāshī, who, as he himself tells us, had a literary training and devoted a considerable part of his life to study, wrote both prose and poetry. He composed three epics, two of which (the Lātimiṣa and the Hafiz Faiz), like very many epic poems of the later period, deal with subjects very popular since Nīṣāmī’s time. The third was called Abūlqīnā, probably a panegyric on the Safavīd Aḥmad II. If there are shorter poems, qasidas, ḍa‘īfīs, etc. His prose works are: Shams al-Dīn, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work inspired by Sadr’s, a work ins
KASHIF — KASHEUL

MSS. are common, and it has been printed several
times, for the first time in Calcuta, 1804.
His other works comprise: 1) Qaswarat al-‘asif; il-
laqat al-adwi, a Persian commentary on the
Kutub, compiled at the request of Mr. Ali Shir
in 999, but he only completed one out of the
divided seven volumes he had planned, and broke
off this work to compile for his patron a shorter
 commentary, entitled Mawdudat ‘alayha, but usually
styled Tafrih al-‘asif; 2) Risalah al-Salwah, a treatise on
figures of speech and poetic artifices, as well as faults
in poetic composition; 3) Muharram al-‘asif, a
work dealing in 907 and dedicated to Husain Mirzâ
and (later) Salih ibn Salih, two works containing mod-
els of epistolary composition; 4) Risalah wa-Ahbar-
Husain’s (or, Khuda, a Salwa) treated in 989, giving the story of Husain’s life (p. v.); 5) Tab-
Tafrih al-‘asif; Risalah al-Salwah, in a Letter to
Kutub al-Din Râmi’s Mawdudat ‘alayha, entitled Lailat-ul-Lailat, from which shorter extracts were made, entitled Laibat-Lailat.
Several of these works have been translated into
Turkish, and the first two into English.

KASHID-DAGH (in Turkish "mountain of the
priests"), a name given by the Ottomans to
the island of Mytilene in Thrace, at the foot of which is built
the town of Brusa (q. v.). Its slopes are covered with forests now much diminished; but it is cut through by many rivers and is flanked by some mountains in the winter. Its present is formed of granite, marble, and limestone. At the time of the Ottoman conquest, Brusa was surrounded by walls and its gates were defended by Roman towers. At the foot of the mountain is a spring of water which is said to be sacred to the Turks.

KASHKUL, a Turkish people in Persia.
The name is said to be the Turkish *kashk* *horse* with a white spot on its forehead (W. Kudsi, Vorsch. eines Porphyrrochth rhomaleo, ii. 395). The Kashkuls are said to be descendants from the Turkish Kashkuls (cf. also B.D.A., i. 81; Khâlîd) mentioned by al-Dhibîy (B.D., 1831), and later writers in the country between India and Sistan. The Kashkuls are said to have migrated first to the Persian Iraq, where a district near Sillu is still called Kashkulistan; there is still said to be a Turkish-speaking people there

(private information from V. Minorsky). The Kashkuls are said to have come from the 'Iraq to Persia, where they lead a nomadic life, at the present day. Their winter quarters are in the southern part of the country, especially about Pishabad, where the chief of their tribe (Kashkâl) is regarded as the highest authority; the stronghold of Pishabad was built there by the Ilghuz Sultan Alau’d-Dawla (1145–1177). In summer they wander as far as Hamadah and Goleminu in the southern part of the province of Isfahân. According to Curzon (Persia and the Persian Question, London 1892, ii. 111 sqq.), the Kashkuls were a numerous people down to about 1870 (50,000 families); in case of war about 120,000 horsemen; they suffered greatly from the famine of 1871 and 1872; at the time of Curzon's journey (1889) the number of families was said to be 25,000, while he put it at really 20,000. The number 25,000 is also given by Tunamanâ (1894) for the tents of the Kashkul proper, but he says the number of all the nomads for whom the Khâlîk of the Kashkuls paid the taxes was double (24,000). Larger figures are given by later travelers: 35,000 (1906) and 55,000 (1914). In 1914 the Kashkul formed a well armed division of an army of about 20,000 men and took part in the war.

Kashkul or Kashkuli is a Turkish name, derivable from the pocket of the same name; the Turkmenic name is the same as that used by the Khâlîl or Khâlîqi, the Turks of the Kasghar section of Turkestan.

KASHKUL, a nomadic tribe in Russia, a collection of different pieces from different sources, and is applied particularly to the Kashkul.1
of Bahut, al-Din al-Amili (cf. above s.v. al-Šamīl).

**Kashmir** (s.v.). The name Kashmir (in Arabic also a city) has from early times been employed to denote the valley situated in Northwest Himalaya between 33° 20' and 34° 40' N. Lat. and 74° and 75° E. Long. This valley has a length from N. W. to S. E. of about 84 miles, and a breadth from N. E. to S. W. of 20 to 25 m. The area is about 980 sq. miles. It is supplied from the outer hills of Djamund, Râkâtâwî and Phûr by the lofty Pir Panjûl Range of which several peaks are more than 13,000 feet in height. On the North-west side ranges which come nearest to the valley rise to greater heights, the principal peaks being Gwâshâ-brî (17,300 ft.), Anâmaršt (17,570 ft.) and Hârãmâkht (16,905 ft.). Beyond Hârãmâkht is an extensive mountainous district through which the passes connecting the valley with LAKHT, the Upper Indus valley, and Central Asia are few and difficult. The Zhâl (11,300 ft.) is the principal means of communication with LAKHT, and the Burât Pass (13,500 ft.) with Atûr and Skûnd, with the plains of India the most direct pass is via Khimmer, over the Pir Panjûl (11,400 ft.), but the easiest and most open route throughout the year is that by Hârãmâkht where the R. Djamunth or Behar leaves the valley. This may be approached now most easily by the pass road from Kârâl Pind via Murur, which joins the gorge of the Djamunth, but the Abâkot route which joins the other at Musûrâdû (the confluence of the Kâshang and the Djamunth) has more natural facilities and was most used in early days. The geography and geology of this fine valley are fully described by Drew, Lydekker and Oestreich, and the historical geography has been elucidated by Cunningham and Stein.

The valley is shown to be a lacustrine basin formed by the Djamunth R. and its tributaries, of which the Sâd and Lâdar are the principal. The drying up of the lake which filled the valley is due to the removal of the rocky barrier which must have closed the exit at Hârãmâkht, and no doubt the general progressive desiccation of this part of Asia contributed to the result. The Wular Lake is the principal remaining sheet of water, and the smaller Mayâshul Lake and the Surmug Dal also deserve mention.

The surface of the valley lies between 5000 and 6000 ft. above sea level; it is nearly level and of great fertility, and seems to have attained prosperity at an early period, although its remoteness and inaccessibility protected it from many of the waves of invasion which have swept over Northern India. The wealth of Kashmir, although of fine physique, have been occasioned by great, materially and casually running races, from Yûnân Cwâng to Abû 7-Fâzîl [s.v.] and Gulûrî Singh, as an unarmitale, usually and running race, but, as Lawrence has pointed out, these defects have been exaggerated by persistent oppression. It is evident that a race which maintained its independence for so many centuries could not, even though assisted by the great natural difficulties of approaching the country, have been thought desolate of a manly character.

Although historical information does not go back to a very early period, yet for the last two thousand years Kashmir is exceptionally well supplied with sources of historical information. The principal of these is Kalhana's Râjââvatsara, a metrical chronicle composed in the 12th century which is almost unique in India, and which as edited, translated, and annotated by Stein is the main source for our knowledge. Other authorities are the Chinese pilgrim, Yuan Cwâng, who visited Kashmir in the 6th century, the chronicle of al-Brânî [s.v.] in the 7th century, the Fiûn al-Asábî of Abû 7-Fâzîl, the diary of the Emperor Djiâhâr, and the accounts of many modern travellers, beginning with the French physician Berrner, who accompanied the Emperor Aswângâ [s.v.] on his visit to the valley. There is also a very complete series of coins illustrating the history of Kashmir from the 6th century till the present day through the period of the Ephiphanies, the Hindu kings, the Musulmân sultans, the Mogul Emperors, the Durans of Afghanistan, the Sikhs and the present rule of the Hindû Dôgres of Djamunth, under British authority.

The most noticeable point in the history is the immunity of the valley from the great historic conquerors. Alexander did not touch it, and it repelled the attack of Mahâvîrd of Ghânî, Cîngla Kîmâr [s.v.], and Tinûr passed it by as did Bubûr [s.v. Babûr]. It fell easily into the possession of Akbâr after he had consolidated his power over the whole of Northern India, and it was not subjected to Nadîr Shâh even when the Moguls never had crumbled away under his attacks. Yet the disorganised country succumbed at once to the attacks of the mounted Afghan of Aghâzâ of Ahmad Shâh Durrânî, and the later Durrânîs, divided among themselves, were easily defeated by the Sikhs. In these cases the people of the valley, regarded simply as subjects for extortion, had no ground for preferring one set of conquerors to another, and they took no part in those later struggles.

No information about Kashmir can be derived from classical sources before the time of Ptolemy, as the Greek historians or Alexander do not even mention it. Ptolemy (in the middle of the 2nd cent. A.D.) describes it as a very powerful state extending far beyond the limits of the valley, and it is evident that it formed part of the great kingdom of the Kushans which spread over Northern India at that time. He calls it Khospira, an act which states that it lies below the sources of the Hopas, the Sonâth and the Adria, i.e. the Vînâstâ (Vîhat, Behâr or Djamunth), the Candhrâbâga (Chinâ) and the Atâwâstâ (Kâvâ), a very accurate description.

Before this time however, although there is no contemporary information, there is ground for believing that Kashmir formed part of the dominions of Aâlûk about 250 B.C. The defeat of Seleucus by Chandragupta has enabled the Maurya monarchs to extend their power northward, and the spread of Buddhism made it easy for Aâlûk to extend his influence into Kashmir when he adopted that sect. No inscription of his edicts has been found in the valley, but that at Man- sâhra was situated close to the most obvious route
Durbarha, the founder of the Kārkotaka dynasty and found 100 Buddhist monasteries still existing. Shortly afterwards king Harsha of Kanauj (8th-9th century) also tried to recoup Buddhism, but did not invade the country. Relations with China were frequent during the 8th-10th century. An embassy from China arrived in 713 A.D. After 720 A.D. the kings of Kashmir were recognized by the Chinese emperors. The last recorded embassy from China was in 759 A.D. The Kārkotaka dynasty was then in possession, and the embassy in 713 A.D. seems to have been due to an application by the king Gandrunga for assistance against the Arabs. However, the first time, Muhammad b. Kāsīn after the conquest of Sind had advanced to the foot of the Himalaya, but no further advance was made. The regular intercourse of Kashmir re-emerging from that of the later Kārkotaka (with gradual degeneration of designs) begins with the Kārkotaka and continues till the supremacy of the Mughal kings in the 18th century. The earlier kings of this race had possessions extending far beyond the limits of Kashmir including Pahāli, Paire, Kākpatari, Taxila and the Salt Range.

The extension of the Kārkotaka style of architecture, which is found almost unaltered in the ancient temples of the Salt Range, may perhaps be referred to this period. Hinduism and Buddhism flourished side by side in Kashmir, as we learn from Yuan Chaw and even more as late as the 14th century when Kārkotaka wrote; and the style of architecture used for the Hindu temples was probably identical with that of the Buddhist viharas. Foucher (2'), d'Orsi-Joubert, p. 136—145, has described its derivation from the Gandhāra architecture of the 1st and 2nd centuries. The double pyramidal roof, its distinguishing feature, has been perpetuated in Muhammadan mosques up to the present day. The mosque of Shāh Hamadān in Shrinagar shows this feature.

It is also in his account of this period that the references to the Shāhāta of Gandhāra begin to appear in Kārkotaka's chronicle, and (as was the case with China), the growth of Islam appears to be the cause of the alliance between Gandhāra and Kashmir. In addition to the progress made in Sind and attacks were being made on the Hindu border towards Kashmir, Al-Tāhirī mentions that as early as A.H. 23 Alābī b. 'Amr rasūl Kān-dahār (Gandhāra) and the Indian frontier, and under al-Ma'mūn (730—754) and later al-Baladhūrī, Hājī b. 'Amr al-Tāhirī, governor of Sind *conquered Kashmir and Mālāṇ ... then he came into boats to al-Kan-dahār and conquered it", and al-Ya'qūt confirms this. The territories of Kashmir which were conquered were no doubt adjoining portions of the dominions between the Indus and Dīkhān, and not the valley. It was no more than a raid without permanent effect on Kashmir, where the Hindu kings continued to rule uninterrupted for some centuries. The most remarkable of these kings was the dynasty of the Shāhāta (A.D. 885—883), founder of Avaspur, when the ruins of his palace still exist. He also carried out extensive works to regulate the course of the Dīkhān. The alliance with the Shāhāta is again referred to in his inscriptions. But the same stream as is seen on the Yelāla-ravnum (902—904) helped Tāmār and Kamalū, the Kālāmer of al-Farrūqī, to recover his capital from a rebel.
and Khâbûne-gupta (950-958) married Diddâ, grand-daughter on her mother’s side of Ilamîn, successor of Kanâhâ, Diddâ exercised great influence in subsequent reigns, and ultimately became queen herself. She was a member of the ruling family of Lôhâra in Pâtî, and through her influence the Lôhâra becoming the ruling family of Kashmir. In 1044 (1538) Muhammîd of Ghasnî destroyed the Shâb kingdom. The last king, Turlocan-pâl, assisted by a Kashgari force, was defeated and put to flight, but Muhammîd’s attempt to penetrate into Kashgari itself was brought to a stop at the hillsfort of Lôhâra, the Lawsûts of al-Durrân which he describes as the strongest place he had ever seen. Even after the destruction of the Shâb kingdom, Lôhâra dynasty continued on in the Ghaznavi period. The half mad king Harshâ (1059-1101), according to Kâhâ, was under Muslim influence, employed Turkish soldiers and destroyed Hindu and Buddhist images. The employment of “Târujka” or Turkish troops is attributed partially to the impatience of the Kashmîris. It is evident that the country was distracted at this period by frequent plots and rebellions caused by Muslim influence, and it is probable that foreign troops were employed quite as much on this account as for the reason alleged. Kâhâ’s chronicle comes to an end in 1149, and it is evident from the continuation by Djuârâzî that the condition of affairs became worse, and also that a gradual conversion of the people to Islam was in progress. An invasion from the north by Târâ under the ‘l-Kadr Kihân Zulfi’ took place in 706 (1105), and it is stated that after plundering Kashmîr, this army perished in the snow while returning northwards. This perhaps made the way easier for the next Muslim adventurer, Shâh-Mir Swati (probably an Afghan), who seized the crown and brought in Muhummadan rule under the title of Shâma al-Afîm in 735 (1234).

The change seems to have been accepted by the bulk of the nation, and the Hindus, mainly Brahmins, who retained their religion, were treated with toleration, still continuing to hold official posts. In the reign of Sikhamân Shah, 788-812 (1386-1410), a change took place, and this fanatical rule commenced a violent persecution and reduced the ancient temples to the ruined state in which they still remain. His nickname Butmîn (lomacant) commemorates these deeds. Zain al-Abîdîn, who reigned 820-872 (1417-1467), reverted to the policy of toleration, and was an excellent ruler in every respect. His reign is looked upon by Kashmiri of every class as a golden age in which justice prevailed. He constructed roads, canals, and bridges; and in every way promoted the prosperity of the country. Under his successors misfortunes again prevailed. The Shâm Shah’s, whose influence was from Darshân, obtained great power, and ultimately displaced the late kings of the Chinguès line, Kihân Câk was king in 872, but soon, and Humâûn Shah, Muhummad ‘Ali and Yezdî, as shown by their coins, took the title of Ilamîn in rivalry of the Mughal emperors, and not that of Shâma used by the former kings.

After Bâbûr’s conquest of northern India the emperors turned their eyes on Kashmir, which offered great attractions to a race accustomed to a cool climate, running streams, and gardens. Bâbûr himself sent a small expedition into the country which met with no success. In 1547 (1540), the year in which Humâyûn was driven from power by Shâh Shâh’s rising, his cousin, Haidar Shâh Dûghlî, a number of the family ruling at Kashgari (see orthodox), a man of great ability and inimous as a historian (see Râshd Mîr), persuaded Humâyûn to attempt the conquest of Kashmir, and thus to obtain a safe refuge from his opponents. Humâyûn, however, found himself unable to carry out the project, but Haidar Minâk went on with the expedition, and receiving much local support established himself in rule in Humâyûn’s name. He maintained himself till 1551 when he was killed in an outbreak. This was probably organized by the Sûrî kings as a coin of Ilamîn Shah struck in Kashmîr in 1551, is known. The Câk continued to rule until Akbar invaded the valley. In spite of the determined opposition of Yâqût Kihân, son of Yûsuf Shah, all resistance was overcome in 995 (1586) when Kashmir became part of the Mughal empire. It became one of the favourite resorts of the Emperors. Akbar’s first personal visit was in 997 (1589) by the Priv Pandjil Pâs, the next in 1000-1001 (1572) when he was accompanied by Nîghât al-Dîn, author of the Tasânfi al-Akhbâr. On this visit he had a land-settlement carried out by his financier, Todar Mal, and fortified the fort of Serungar on which now stands the fort of Hari Patthar. A full description of Kashmîr under Akbar is given by Abû ’l-Fâfî in the Fitr-i Akbari. Shâhjâhân as a prince accompanied his father to Kashmîr, and indulged his fondness for the country to the full after he became emperor. He erected numerous summer palaces and built out gardens, of which the Nishat Bagh on the shores of the Dal, Achabal where the springs of one branch of the Dpulam gush from the rocks, and Vernag are the best known. To please his consort, Nur Jâhân, he is said to have introduced the elm-sap or plane-tree from Persia, her native country, and the fine groves and avenues of this tree are still one of the beauties of Kashmîr.

His successor Shâh Jâchî also took great interest in many gardens, and under his reign the Malamian Kihân built several along the Pir Pandjil road. His son, Dârî Shâh (q.v.), built the Pari-Mahal or Fairy Palace of which the ruins still stand on the mountain side above the Dal. Here as elsewhere the intolerant policy of Aurangzeb brought in trouble. He only visited the valley once, and some mosques erected by him still exist. The outward splendour of the empire was still unimpaired, and the condition of Kashmîr is vividly described by Bernier who accompanied the emperor on his visit.

Under the later emperors the administration became very bad. Nadir Shâh’s invasion, although he did not touch the valley, brought in anarchy. Its effect became practically independent. About 1752 Ahmad Shâh Durrani (q.v., his possession and in 1756 he appointed ‘Aziz Khoja Sadanî to be ‘Adilâr of Kashmîr. Caister however continued to the name of the emperor Alamgir II till 1774 (1760), and Ahmad Shâh’s first Kashmîr coinage is dated 1776. The coin of 1162 mentioned by Rodger is shown by Whitehead to belong to the Mughal Emperor Ahmad Shâh and not to Ahmad Shâh Durrani).
The condition of Kashmir under the Durrans was thoroughly bad. They were barbarous and uncivilized rulers, and their government looked on Kashmir simply as a field for plunder and extortion. The internal wars between claimants to the throne, especially between Mahanad Singh and Shujah al-Mulk, are faithfully reflected in the coinage. From the time 1227 (1614) when Fakhr-ud-Din Bakhshi obtained possession of Kashmir with the help of Ranjit Singh, the Sikh ruler of the Pendjab, the nominal rulers were Mahanad Shikha and afterwards Ayub Shikha, but the real power was in the hands of the Bakhshi chiefs, especially Muhammad Aqam Shikha, by whom the coinage in the name of Muhammad (1227-32) were probably struck. In 1225-32 the anarchy prevailing is shown by the issue of coins in the name of the popular local saint, Nurr al-Din, instead of any nominal king. The state of affairs was brought to a close by the invasion of Ranjit Singh in 1234 (1619), who annexed Kashmir to the Sikh kingdom. The Sikh rule also was harsh and oppressive but farer and better than that of the Durrans. Hari Singh was a governor noted for his severity, and Miyar Singh was the most just and unselfish. However, the traveller, visited Kashmir during this period and gives an unfavourable account of the condition of the people under Sikh rule.

Under Ranjit Singh a Deora family of Lhushan consisting of three brothers, Dayana Singh, Gulab Singh, and Sultan Singh, had risen into notice. They were not Sikhs but orthodox Hindus. The Deors are a Khatri race of the upper castes, but not of the Kashmir valley. Dayana Singh became one of the chief officials of the Sikh state, while Gulab Singh was in command with the Durrani Rajah, which had been conquered by Ranjit Singh about 1830. In Ranjit Singh's name he annexed one hill-state after another, increasing thereby his own power, and his influence in Kashmir itself. In this way, he added Kishwar and Ladakh to the Sikh dominions. After Ranjit Singh's death in 1839 and the divisions which followed it, Dhyana Singh's position was thoroughly powerful and, through his influence, Gulab Singh was able to consolidate his power in the mountain country. After the murder of Dhyana Singh, with Maharajah Shoo Singh, by the Nanawalla's (1844), Gulab Singh after a time withdrew to his mountain possessions, but previous to this he had been sent into Kashmir to put down a mutiny in which Miyar Singh, the governor, had been killed (1842). This he did successfully, but the country had again fallen into anarchy, and the rebellious Khalsa tried to defeat the Sikh army. In 1845, when the Khalsa army plunged into war with the British government, Gulab Singh took no part in it, and after the war he acted as representative of the young Maharajah Dally Singh in the negotiations which followed. Ultimately, on the advice of Major H. Lawrence (Sir Henry Lawrence), Kashmir and the adjoining territories between the Jhelum and the Ravi were separated from the Pendjab and formed into a separate state of which Gulab Singh became Maharajah on payment of a subsidy and recognition of British suzerainty. The treaty, which these terms were embodied was signed in 1846. From this date begins the modern state of Lhushan and Kashmir.

Gulab Singh did not obtain peaceful possession of his new dominions. The governor, Anura, al-Din, allied himself with the turbulent Khambas. Gulab Singh's troops were defeated, and he was able to assert his authority only after a British force had entered Durrani. The Khambas continued to resist for several years. Ultimately all the rebellions tribes submitted. The movements had not had any hold on the agricultural population whom primarily choice is to live quietly and make demands from officials. Gulab Singh's rule was on the whole firm and just, and the condition of the country gradually improved. He died in 1857 and was succeeded by his first son Ranbir Singh, a good and well meaning ruler, but lacking the strong character of Gulab Singh. The famine of 1877-79 caused great misery in the country and the earthquake of 1888 caused enormous losses. Ranbir Singh was succeeded in 1885 by his eldest son, the present Maharajah Partab Singh, who is a pious and conservative ruler. In 1893 the famine and earthquake were followed by one of the most disastrous floods in record. In spite of these catastrophes the preservation of peace and an orderly administration has caused an enormous increase in prosperity. One of the principal contributory causes has been the establishment of a regular system of land revenue administration under the settlement made by Mr. Wingate and Mr. W. Lawrence in 1897-98, after the model of the settlements in British India. These have been improved and developed by Mr. W. K. Talbot, settlement commissioner. The development of communications by the construction of a good road through the Dihlam Valley to Barabul and more recently the spur road from Baramulla to the capital has been a great benefit to the country.

Kashmir is divided for administrative purposes into the districts of South Kashmir, North Kashmir and Marqufatherab. The first two comprise the valley with the smaller river valleys and mountain slopes immediately adjoining it. The third consists of the narrow valley of the Dihlam below Barabul and that of the Katha-gang of which joins it at Marqufatherab. This tract has from time immemorial been treated as part of Kashmir. North Kashmir was formerly known by the name of Rammal, and South Kashmir as Markh. The Kashmiri language extends down the Dihlam some distance below Baramulla, but not to Markh or the Katha-gang valley where the dialect spoken is a form of Labadi or Western Pandjahi.

The population was 1,295,501 in 1911. It consists of about 94 per cent of Musalmans and 6 per cent of Hindus, including a small number of Sikhs. The Hindus are mainly Brahmans, commonly called Paghits, whatever their occupation may be. The aboriginal agricultural population has become Musalmans, there has been little or no admixture of foreign races, and the original names survive among them, but intermarriage between them is permitted and family names (iron), often nicknams in their origin, have to a considerable extent superseded caste-names.

There is a great deal of artistic talent, and a natural gift for craftsmanship among the Kashmiris. The old established industry of shawl- weaving for which Kashmir was once famous, has died down in very small dimensions, plain 'shawls' woven from the gawa or wool of the Tibetan goat has to some extent taken the place of
the sheets of the same material. Other industries have however sprung up, carpets, unbleached felts and calicoes are made in considerable quantities, while the products of the wood carving, lacquered and painted wood and papier-maché, silver-work, and copper-work all find a good market in Europe and among tourists.

A considerable class, the Handis or boatmen, live entirely on boats on the rivers and lakes, and form a very distinct element in the population.

Kashmir has always had an attraction for visitors, and the improvement of communications has increased the number of visitors. It has become one of the principal summer resorts for European residents in India, as well as for tourists from all parts of the world, who travel about the country in camps or house boats on the rivers or settle in the upland valley of Gulmarg, 8000 ft. above sea-level. Game large and small in the mountain salloys formerly attracted many sportsmen, but it is no longer abundant, and seeking after trophies now seldom visit Kashmir.

The language of Kashmir known as Kashmiri or Kashi, is a Prakrit tongue differing much from the dialects of the Pandjabis and showing so much affinity in respects with the Sinhalese language of Ceylon that it is classed by Grierson with the Pathja group of languages.

The principal travels in Kashmir which have been noted, in addition to the earlier authorities prior to the 17th century which have been mentioned above are those of Francisco Xavier (who accompanied Akbar to Kashmir), Francois Bernier (who accompanied Aurangzeb in 1664), George Forster in 1783 (during the reign of Taimur Shah Durran), William Moorcroft and George Trebeck (through Ladakh and thence into Kashmir in Ranjit Sing’s time 1819—25), Victor Jacquescment (1831), Von Hugel (1835), and Vigne (1835).

For more modern times the best general descriptions are those of Drew and Lawrence, and for ancient history the works of Stein.

(2) A native frequently given to Srinagar, the capital of the country of Kashmir. It was the same applied to the mints under the Mughal and Marathas, the Mughal emperors, the Durbar Mints, and as late as 1835, von Hugel speaks of the City of Kashmir. The ancient name of Srinagar which, according to Kalhana, was given by Atika, has been revived by the Hindis rulers in modern times and is now in general use.

(3) The extensive dominions of the Mahrattas of Djasmut and Kashan are now frequently included under the name Kashmir in atlases and official publications such as the Census of India. These include vast tracts not only in the outer hills, southwest of the Poonch Mtns, including Djasmut and Râdgâwâst, but in the basin Himalayas comparing the conquests made in the name of Ranjit Sing and those made by the Mahrattas of Kashmir in more recent times. This region extends 32° to 33° 30' N. and from 73° to 80° 30' E. long and is an area of 8,432 square miles and a population of 3,158,426 in 1911. Of this population however 2,835,061 is comprised within the narrow limits of Kashmir, Djasmut, while the outer enormous area, the greater part of which consists of mountains, contains only 265,060. The countries of Ladakh, Sikkim (Baldston [q. v.]), Chita, Gilgit (q. v.), Hunza-Nagar (q. v.), and Yaste are comprised in this region and will be found described under their own names, the connection with Kashmir being purely modern.

Language: Gileson, Kaschar Grammar
KAŞIDA, not infrequently also Ḏiyaḳa, is the same geneva given to a form of Arabic (also Persian, Turkish etc.) poem of some length. The name is derived from the Arabic root Ḏiyaḳa with the meaning "to simn", because in the earlier times it contained the praise of the poet's tribe and attacks upon its adversaries, later the praise of a person or family by a poet who expects and openly asks for presents for his elegies. From the earliest times the elegy (marṣiya) does not appear to be included under the same designation, but poems of insult (ḥijā) are frequently by older poets called a Ḏiyaḳa, though the latter probably had frequently not the characteristics which come into the scheme of a proper Ḏiyaḳa. We can form the best opinion by taking as the basis for investigation the poems of the same author who lived in the first century of the Hijira, as early as beginning with the poems preserved from the time of Persia, though the latter formed the model of the former. A perfect Ḏiyaḳa should contain three essential parts.

First the north or erotic introduction in which the poet describes his visit to the exquisites abode of his lady and his yearnings at finding the place forsaken. Secondly follows a description of his ride to the pleasure where he intends to praise. This gives him ample scope for describing the scenery of the desert and the comparison of his camel with various animals of the desert. At last comes the chief portion of the poem containing praise, or abuse of the person or tribe aimed at. Some poets, when so inclined, finish up with some moral reflection.

An Arabic (or Persian etc.) Ḏiyaḳa is a very artificial composition as the same rhyme has to run through the whole of the poem, however long the poem may be. In addition no composition is bound by a metre which the poet has to use, but must scrupulously, through the whole course of the poem. The result is that we cannot expect very much beautiful poetry; the description of the desert and its animals and treasury may have a certain charm at first, but when the same descriptions recur in endless poems expressed in the same manner, only with different words, the monotony becomes nauseous. The difficulty is keenly realised by the poets themselves and accounts for the fragmentary character of most poems, which required much time in their composition. The poet Dha'ī-Rumman stated that for a long time he could get no further than the first verse of his new acclimated poem (No. 1 of his Dairūn), and that it was only when he visited al-Qablan that he obtained success (218 in the edition) and then it was only when he visited Ḏiyaḳa that the remaining verses (118 in the edition) came to him with ease (Aṣwā al-Qablan, 218). The poet Dīqā, though stirred to his soul by the attacks of Ḏibān, the son of al-Ra', composed his first only about 50 lines of his reply, though the whole metre and metre are the easiest possible in the Arabic language, and completed the remainder at a later time (Nahrī, ed. Bevans, p. 430). We can likewise be sure that al-Tirmithā composed only a portion of his renowned poem against the tribe of Banū Ḏahin and of al-Fārānidaqh and that the additional verses sometimes included in the poem are by the poet himself and not interpolations by others. When a poet had composed a Ḏiyaḳa he would retire from his audience and at a later time, whenever an occasion arises, in a very natural that he should add or cancel verses himself, especially if he replies to a poem composed by a poet and send himself to attend. Many poets certainly never rose to composition of a poem containing the essence parts of a Ḏiyaḳa and it is foolishness to assume in each case that a poet has been lost if only a certain part is recorded. Such a poet was sent into the world before the poet had time to complete it and it is equally certain that bâpoons in particular did not lend themselves easily to the complete scheme. Very early poets also composed poems which, though called Ḏiyaḳa, did not contain the essential portion, the praise or insult. As such we must take e.g. the poems of 'Umar, b. Aḥī Kaba' and some poems of al-Tirmithā. Some of the latter's compositions were made to display the art of description and were never intended to be καταλλαλ in the proper sense of the word. The Arabic Ḏiyaḳa was naturally imitated by poets who wrote in other languages and the Persian poets Anwār and Khāqān are celebrated as masters of this style. The form of the Ḏiyaḳa has survived to modern times and I have specimens by poets in living where we find the absurdity of description, a description by person who lives in Cairo and travels by oxen to Shamān.

The Ḏiyaḳa by its references to persons and events is also a source of historical information. This, however, must be handled with utmost care, as false statements, by design or through ignorance, are frequent and the mention of a battle-locus does not necessarily imply that the poet was present. As an example I mention only that the Azād poet 'Abī Biḥīr b. Aḥī Kātān, probably a century distant from one another, both boast that their tribe was victorious at al-Ḥārān and al-Mʿālāq.

(K. K. R.)

KĀSĪM, the same given by the Ottoman Turks to St. Demetrius whose festival falls on Oct. 26 of the Julian calendar. It was formerly the beginning of the winter semester, during which the fleet took up its winter-quarters at the Golden Horn.

(CL. HUACK)

AL-KĀSIM b. ISLĀM 'ULI, usually called Aḥā Dalāf, a Muslim general. When in 955 (851) the Caliph al-Ma'mūn sent an army under All b. Ta'b b. Mālik against al-Ma'mūn's general Tahīb b. al-Hārān, Aḥā Dalāf went with him. When Ibn Mālik had fallen, Aḥā Dalāf came back to the neighbourhood of Khurāsān and, although he declined to pay homage to al-Ma'mūn, Tahīb left him in peace in al-Kaṣāf. In 854 (955) when al-Ma'mūn came to Kāra, he sent for him. His friends advised him not to go, but he went and the Caliph received him with the greatest goodwill. In al-Ma'mūn's reign, Aḥā Dalāf was assassinated by al-Ma'mūn's [955], who was jealous of his bravery and eloquence. Aḥā Dalāf numbered him of murder.
and treyson and on the evidence of false witnesses he was condemned to death but reprieved at the last minute by the intervention of the chief Abd Allah b. Abi Daur [1.6]. As soon as the latter heard of the danger threatening Abi Dulaf he hurried to al-Qadisiyya and said the Caliph had ordered him to spare Abi Dulaf. When the latter had been released, Abi Daur went to the Caliph and told him that he had made up his mind to save the life of the innocent accused, whereupon the Ma'mur forgave him and pardoned Abi Dulaf. The latter died in 225 (840/841) or 226 (840/841) in Baghdad.

He left several works. He was also famed as an exceedingly ardent devotee of the Caliph 'Ali. On his descendants see the article DU'AF.

**AL-KĀSĪM, A district in Central Arabia, on the high plateau of the Arabian desert. It owes its fertility to the Wa'il basin, which runs to the north-east and whose course is barred by a series of parallel sand-hills and hills from 1600—2000 feet high, which run from north-west to south-east. The water, richly provided by the spring and summer rains, sinks into the valleys and even in dry periods is preserved for years at a little depth under the red or yellow sandy soil and this supplies the essential requisite for a rich vegetation. The plateau is therefore covered in spring and summer with a rich crop of grass and affords excellent pasture for the great herds of camels and cattle and the numerous smaller animals. The sand-hills are covered with tuñabrik (alb. timurah: alwa tunabirá) and variations of acacia indigentum to Arabian (acacia acacia amber, wùq, jufùq, acacia scopul, wùq). Millet, maize, wheat, barley, vetches, etc., grow in the fields. Fruit-trees of all kinds yield plentiful crops. So early a writer as al-Vakut makes special mention of the figs, pomegranates, grapes and peonies. The most important and most cultivated fruit-tree is, nowhere else, the date-palm, which is represented in al-Kāsim by a particularly fine variety. Among plants of economic importance may be mentioned the cotton-tree, which supplies local requirements. In the western part of al-Kāsim rock-salt is found. This mineral, so important for the cattle-breeder, is sold in the towns, especially in Boreda and 'Amirah.

Al-Kāsim plays an important part in the caravan traffic of Arabia on account of its wealth in camels and its enterprise. Of the population, estimated by Palgrave at 25—35,000 souls, at least a third devote themselves to caravan traffic either hiring out animals or acting as missionaries or as small merchants. The caravan business takes them through the Wadi Dawakhir and Wadi Nadjar to the Yemen, from which the best coffee is expedited, to Kuwait, al-Basrâ, Baghdad and Biheil Shammar, to Makkah and Syria and Khurasan. It is in the interests of things that many natives of al-Kāsim settle in the frontier districts or in some of the towns just mentioned and many have attained prosperity and wealth. Al-Kāsim also plays an important part in the trade in race-horses. Al-Djarid, also called Jāfar al-Kāsim, in olden times the chief town of al-Kāsim, a day's march from 'Ansar on the road to al-Basra, has been identified by A. Strenger with the site of Poisram. The ancient settlements of this area which al-Hamdani includes in al-Yamnūm are all in ruins; the modern larger towns date from the late middle ages.

The district which lies in the centre of Arabia has had a lively history. One of the battle-"days" of the Arabs is called after it. Zohar, 'Akhḍar, 'Awa b. Hadjar and others know and mention al-Kāsim. The youth of the faith of Islam found al-Kāsim at first on the road of the anti-heretic Munawrids, but in the decisive encounter between the Muslims and the followers of the Prophet of al-Yamnūm al-Shihi and al-Kāsim on the side of Khālid, the "Sword of Allāh," in the struggle for the Caliphate, Najd and al-Kāsim were on the side of 'Ali but the victory of the Umayyads brought the whole of Central Arabia under their sway, and there was no change with the 'Abhābid. It was not until the revolutionary movement led by the Karaites that Najd was lost to the 'Abhābids. In the eleventh century, Dārūm, a native of al-Rass in al-Kāsim, was able to conquer a large part of Najd and Yamnūm and unite it with al-Kāsim. His kingdom was inherited by his sons and successors but the increasing power of the chief of al-Yamnūm and al-Rass conquered Dārūm's kingdom bit by bit, till finally it was again reduced to al-Kāsim. Al-Kāsim was from the first somewhat hostile to the Wahhabis, but, 'Abd al-Azīz b. Sa'būd of al-Darrāya succeeded in gaining possession of Boreda, al-Rass and Ta'lluma. The other villages then rose and in 1772 slew all the Wahhabis they could capture. In 1790 a new rising broke out against Ibn Sa'būd, which he was only able to put down after much fighting with considerable losses. Ibn Sa'būd's kingdom soon found itself faced with an extremely dangerous opponent, Mejmūd 'Alī of Egypt had been commissioned by the Sublime Porte to take measures against the Wahhabis and sent his son Thābit to Arabia, where in a rapid succession of victories he conquered the whole of the west coast (1814—1815).

After the death of Ibn Sa'būd (1814) further Egyptian expeditions extended their intrigues against Ibn Sa'būd's kingdom to the interior of Arabia, and in 1815 Thābit marched into Central Arabia and captured the fortress of al-Rass in al-Kāsim after gaining over the greater part of the country by bribery. The peace concluded between Thābit and 'Abd al-Hara'am b. Sa'būd was, however, not confirmed by Mejmūd 'Alī, who ordered Thābit to conquer Arabia; in 1817 he took al-Rass; Boreda and 'Ammah became master of al-Kāsim. 'Abd al-Hara'am b. Sa'būd had to retire to Darīya, was taken prisoner and in 1818 beheaded in Constantiople. Al-Kāsim was now under Egyptian sovereignty, and formed a strong base for Mejmūd 'Alī. But by 1822 the war of Ararat of Central Arabia had begun (see article) and liberation from the Egyptian occupation, which ended in 1844 in the Egyptian-Turkish troops being driven out. Al-Kāsim was put for a time under the protection of the Grand Vizier of Mecca; in 1855 Zāmil al-Sa'īn, who claimed to be 'Ammah, was recognized by Ibn Sa'būd as independent ruler of al-Kāsim, but in 1867 the district was again allying tribute to Ibn Sa'būd. After six years allying tribute to Ibn Sa'būd, after six years allying tribute to Ibn Sa'būd, and in 1879 Ibn Sa'būd surrendered his claim, to
A rising against Muhammad b. Rashid in 894 ended in disaster and Zunuz At Sa'da lost his life in battle. The Turks then took advantage of the force left behind in the Sa'da and Ibn Rashid to gain a firm footing in al-Kaşim again, all the more easily as the people of al-Kaşim were weary of the long struggle and anxious for peace, and even Ibn Rashid would rather have the Turks in al-Kaşim than the governors of his own. Ibn Sa'da. Ahmad Faiq Pasha therefore invaded Central Arabia in 1605 and occupied al-Kaşim also. Soon the position of the Turks became untenable, especially as Ibn Rashid now sided against them; the Turkish troops had to evacuate al-Kaşim and Ahmad Faiq Pasha's successor, Şems Pasha, was no more able to restore Turkish authority. In 1606 al-Kaşim belonged to Ibn Sa'da; in 1611/12 there were again attacks on Ibn Sa'da; especially by the Grand Sharif of Mecca, but since 1613 al-Kaşim has formed a province in the wide kingdom of Ibn Sa'da.

**Kâsim Agha,** called *Qura (the old)*, an Ottoman court architect. He was appointed court architect in 1577 (begun Nov. 5, 1572) in succession to the distinguished architect Mehmed Agha, who built the Ahmed mosque in Stamboul (on him of the Nižārī sufiyans in M.S. of Ljkṭh Agha), relieved of his duties in 1552 (began March 22, 1624); cf. J. von Hammer, *Geschichte des Palastes in Istanbul*, pp. 181, 182, 183, and his office given to Mustafa Agha, known as *Morawwadhi*, iii. "merchant". But after a short time only, he was restored to the office as the result of a law of estimate (cf. Nezam, *Tari̇kh*, ii, 40; J. von Hammer, *op. cit.*, p. 335 sq.). His main task now, on behalf of Kapari Mehmed Pasha, afterwards Grand Vizier, was to run his office and dignitary very soon after the Sultan's mother Mahfeler (Kisren Walls, 19) had appointed him to manage her affairs (Meyyari, in October, 1621, on account of his honesty. He was imprisoned in the Seven Towers and soon afterwards banished to Cyprus (Nezam, *op. cit.*, p. 333 sq.). He was later released and after being unsuccessful several times finally appointed Aga in the summer of 1653 (Na'mi, *op. cit.*, p. 351) in getting for Mehemmed Pasha the Grand Viziership. He died, apparently at a great age, in 1670 (began Nov. 13, 1569). None of his buildings seem to have been of great importance. His work did not apparently extend to public buildings. It is only known that he was engaged in 1654 in building the Veii̇ Wâlids Djam h, hardly as the chief architect. The part which he played as a politician in Ottoman history is more important and the historian of the empire, Na'mi, in particular, deals very fully with it.

**Kâsim-ı Anwar,** born 1357 (1358), in Samarkand, called *Kâsim-ı Anwar, a Persian mystic* and *master of letters*, born in 1737 (1356) in Sârbât near Tabriz. For Sa'da (in Yâkît Şarwar) Dawlatshâh, *Tari̇kh*, p. 340, gives Sûrkhâb, this name is not found in Yâkît, but Dawlatshâh has three times the phrase *Sûrkhâb* *Tâbriz*; the name is once found in a play on words (in a râhâl of Kamâr Khûndjîn) in Dawlatshâh, *op. cit.*, p. 325. According to the Persian lexicographers, Sûrkhâb is a hill near Tabriz. (Vullers, *Lexicon Pers.-Lt.*, v. r. N. 77). Kâsim's family came from Affarshâft. His religious teachers were Sadr al-Din al-Ardâbilî (an ancestor of the Sa'râwîs) and Sadr al-Din Abîl Yââni, who was a pupil of Abûl al-Din al-Ardâbilî (Kâsim Anwar, *Nâfahdî*, 1937, p. 590) tells us, mention was made of Yââni but not of Arîbilî in a work on Kâsim's life, which comes from the circle of his intimates. This circumstance might suggest that Kâsim did not think so highly of Arîbilî. In fact, the latter is found in Browne, *Histoire des Litt. Tartare*, p. 473, contradict this, however. Among Kâsim's own works there must have been several free-thinkers, as Djan, *op. cit.*, p. 690, mentions that the teacher himself was, however, free from this imputation. The truth is that he — although it cannot absolutely be proved that he was a Harüfi — strongly sympathised with this sect (Browne, *op. cit.*, p. 470). He travelled a great deal, he met all of lived in Gilân: Gilân expressions are several times found in his poetry. From Gilân he migrated to Khurasân where he lived first in Nishâbûr and later in Herât. He was expelled from the latter town when the king, Shah-Rakh, was murdered by a Harüfi in 1426. It was assumed that Kâsim was connected with the murderer, had harboured him and knew of the attempt beforehand. A singular story is given by Dawlatshâh, *op. cit.*, p. 538, according to which he had already been expelled from Herât, once previously; some individuals had complained to the king that the sa'rafi was gathering many young pupils around him, which aroused suspicions among them on moral grounds. Shah-Rakhs, according to the story, then intervened and banished Kâsim. The latter then travelled to Balkh and Samarkand but returned later to Herât. This story is not very probable but it is evidence at any rate of the great popularity of the teacher in Herât. Whether the libellous passages given for his expulsion are true cannot be proved either; but it must be confessed that at that time also there were great rascals among the Sa'râwîs. It seems to be certain that Kâsim found a protector after the banishment in 1426 in Ughâr beg in Samarkand. After this he had Samarkand mentioned in the story in Dawlatshâh. It may be suggested that the story in Dawlatshâh is an invention dupli-

**Architect:**
Kasim later returned to Kordi and settled in Kordi in the district of Dijak. Though through the support of well-to-do friends he was able to lead a life of freedom from base down to his death in 937 (1431/32). Dawlatshah, op. cit., p. 349, makes him die in 835, differing from the other authorities. In addition to what Rieu says (Cassar, p. 636) on the date of Kasim's death, we also refer to M. M. al-'Azm's article in J. Inst. p. 121, where a chronogram on his death is quoted from a St. Petersburg MS.

Kasim was buried in Kordi. Dawlatshah says that in his time Ali Sheb began to embellish the site of the tomb with buildings. The same authority tells us that Kasim in his youth practiced asceticism to an extent that he injured his health. But in later years he altered his views for example, he said to someone who could not help expressing surprise at his prosperous appearance that he was no longer 'abadi but wa'jifik; he had once been a beggar but now he was a king.

Works: The author, who, according to Dawlatshah, op. cit., p. 303, was a great admirer of the poetry of Hafiz, left a Dastur behind containing ghazals, ruba'a, elegies, on mystics and divinities. Some pieces are composed in Persian and Turkish. His other works, Anis al-'Arifin and Anis al-A'zam (also called Khidr al-A'zam) are treated in mysticism in prose and verse. Finally we may mention his extracts from Sadi's Fashtam entitled Khidr al-Azam.

These writings are unpublished; judging from the not very extensive specimens in Browne and the few pieces in Dawlatshah (Bland's Century where ten of Kasim's ghazals are published. I have not seen) we can agree with Browne when he says, the poetry of Kasim is of a very fine, so far as a poet may venture to judge it, only of average merit. One cannot deny his ability to write pleasantly Persian verse but we look in vain for anything of the way which would give him a claim to a place among the great names of Persian literature. A just verdict on his literary activity, however, will only be possible when more works have been published.

Kasim Pasha, usually called Gareel or Kasim Pasha, was an Ottoman statesman. The son of Christian parents (ib i.e. Ayse Pasha and Kasim Pasha) son sous deux années de l'éducation, in C. D. Schreppa, Travels in, Mission diplomatique du Court. Rept. de Schreppa, die Scripere, p. 555; 555, by the Br. of St. Genovef at G. A. Vail Schreppa, in vol. 66 of the Memes and the Academic, Belgiq, Brussels 1859, p. 169 [155]), he was born in 1599, son of Ibrahim II and brought up in the Imperial Court (Eylwya, 1699). He attained the rank of a fakih (a physician in the period of 1599, 835, with the name of Kasim, young and wise, and wise, it is in no part amiss, of Simplicity at Mores, Monsieur en son lieu de Montespan et Simplicity at Mores, Monsieur en son lieu de Montespan et...

Frantz Barboges
KASIMOV, in Russian originally GORODET' or GORODETS' MEZHIRYCH', in Tatar KOH-ES-KASIM, formerly the capital of the Tatars subordinate to the Can of Mossau, and now a district town in the government of Rossia. It took its name from Kasim, son of the founder of the kingdom of Kasan, Uli Muhammad. In the war between the brothers that followed the assassination of Uli Muhammad (1449), Kasim was induced to enter the service of the Russian Grand Duke. The town, which bears the same name, was granted him about 1432 (not later than 1436); there he built a mosque (of which only the minaret still exists) and a palace of stone (no longer standing); it was seen as late as 1708 by Pallas. After his death about 1469, his son Danyly ruled till about 1486. Kasimov was next under the rule of prince Nyr Daulat of the Girzy dynasty and his sons Selligman and Damiy. About 1517 Shahi Akhily (grandson of Khan Kilik Muhammad) descended from another branch of the Tatars, and became the prince of Kasimov in 1516. In his minaret, which is called in his epitaph, he is usually known as Shahi Ali, Russian Shqepali Shigovitjanovici, was reigning (nominally). After a life of violeces and condamned to the severest imprisonment, then pardoned and again restored to his principality), Shah Ali died childless, aged sixty-one, on Monday, Shawal 10, 974 (April 21, 1567). The town kept in the Mosquito, 957 (July-August, 1555), in which is the tomb and the tomb of several of his relatives, has been several times described, first by Pallas in the year 1765, most recently by Welyamov Zernov in 1817. During his rule in Kasimov, his brother Shah Ali represented him in Kasimov and later ruled for a short time (1532-33) in Kasimov, until he was murdered during a rising there. The "Czar" Shah Ali was succeeded in Kasimov by his distant relative Sajin Bulat, great-grandson of the Khan of the Golden Horde Ahmad. In 1573 he adopted Christianity, received the name of Simon, moved to Moscow and was there given by Ivan the Terrible the title of "Czar of all the Russians," He died in 1616 as the monk Stephen. It was not till 1635 that a successor to him was appointed in Kasimov, Mustafah Ali, whose father, Abdul Aziz, a Khan of Kasimov, died in 1610 and was buried in Kasimov, about 1600 we find mentioned as the prince of Kasimov Urn of Muhammad of Khan of the Kirghiz Khan, who afterwards took part in the fighting during the civil war in Russia and was killed in 1610. The last rulers of Kasimov were Aresti (grandson of the first Siberian Khan Erem) and his son Sajid, who, descended from the house of Siberian rulers, the last, first mentioned as ruler in 1627, was baptised between 1635 and 1635 (he received the name Wurm) and yet remained prince of Kasimov till his death soon after 1678. To this period belongs the forced conversion of a part of the Tatars by Missyyl, Archbishop of Ryazan (1652-56); in one of these attempts at conversion the Archbishop was killed by the enraged populace. The verse from the Koran (ii. 5:4), constantly quoted in epitaphs in Kasimov, seems to have been placed there in antagonism to the zeal of the Christian missionaries.

Even under Wurm the administration of Kasimov was in the hands of a Russian woyvoda; the Tatar prince exercised only nominal rule. The death of Wurm, Wurm of Sultan, was not recognised as ruler in the years following Wurm's death, on these terms; she is last mentioned in 1684. After this there was no "Czar" or "Czarovich" (sometimes one, sometimes the other title is used) of Kasimov any longer. In the modern district capital of Kasimov the Tatars only form a comparatively small part of the population, according to the census of 1877, 13,565 souls; according to Reclus, as many as 44,400 in 1870, including 4,539 Tatars, in 1900, 17,075, including 2,000 Tatars. The fullhag industrious (tanning and shoemaking; cf. above, p. 789), introduced to the Russians through Tatar intermediaries, has been especially flourishing in Kasimov.

Bibliography: The most thorough and still indispensable, although several new documents have since been made available, is Welyamov Zernov's great work "Istoria Kasimovskikh Zemel' y znamenitostey" (4 vo., Tornio, 1809),俄Tay N. Bakhtiyarov, "Kasimovskie ygrody ugora Kasimovu, 1889; review by N. Kosov, ibid., v. 123 sqq. (W. BAHETT)

KASIYUN, a barren and rocky massif — the summit is over 4,000 feet high — commanding in the south-east the Ghuta (q.v.) and dominating Salihiya, the suburb of Damascus. It lies between the valley of the Barada (q.v.) and that of the Haulam. The Nahr Yazid which flows out of the Barada runs along the foot of Kusiyun, "there they reverence the birthplace of Abraham on the slope adjoining the village of Baraa. This mountain has been famous since remote antiquity as a place of ascension and retreat of prophets" (Ibn Dujub). Adam is said to have ascended it. Cain and Abel (who's body was burned on this "sacred and most venerable mountain" (Vakil), which is covered with sanctuaries. The encyclopaedists and the historians of Damascuus associate it with several thousand of martyrs and prophets buried between the Babi al-Farand and the slopes of Kusiyun.

KASKAR, the name of a town in the Tigris. When the Khalifs (q.v.), the governor of the town appointed by the Caliphs Abd al-Malik, put down the rebellion there, he began in 85-86 (705) to build a new town which was called Wasi. The town became a boundary between the two older Arab capitals of this province, Kufa in the north and Basra in the south. For the site of the town he chose the vicinity of the town of Kaskar on the Tigris, which had played a not unimportant part in the Sassanid period. The new Muslim town was built on the east bank of the Tigris, while Kaskar lay opposite it on the west side; a bridge of boats linked the two halves of the city. Neither Wasi nor Kaskar
A. Baumstark, *Gesch. der syrisch. Litteratur*, Rom 1922, p. 130. One of the most influential personalities at the court of the Syrian King Khwarazm II Farrās (550–628) was Abū al Ḥakīr; see Baumstark, *op. cit.*, p. 125. On other Syriac writers who belonged to Khakhar (Abū Ḥakīr, Grīghīr, Elyā) see Baumstark, *op. cit.*, p. 30, 148, 450. For the Syro-Turkish sources on Khakhar (Abū Ḥakīr) also the indices in Wright, Catalog. of Syriac Manuscripts in the British Museum (London 1870) and Wright, Catalog. of the Syriac manuscripts in Cambridge (Cambridge 1901), p. 125, 450, as also in Sachau, *Katalog der syrisch. Handschriften in Berlin* (Berlin 1894), p. 925.

In the Ayyubid period there seems to have been a little kingdom of Khakhar, which was destroyed by the first Saladin Arabash; 1; cf. Nöldeke, *Gesch. d. Arab. und Pers. zur Zeit der Sasaniden*, (Leiden 1879) p. 13, note 5. In the Saladin division of the Irāq, Khakhar is mentioned as one of the 17 administrative districts, see Strick, *op. cit.* (see Bibli.) p. 15, 18. It probably — in later times under the Turkish Empire — comprised roughly the district east of the Tigris, from the modern town of Amsin in the north to the mouth of the Tigris. Sometimes it is mentioned as equivalent to the district of Minas (q.v.). On this cf. Schaezler in *Istam.,* 31, (1893) p. 17. The bishopric of Khakhar must have coincided pretty much with the Turkish district of the same name; cf. the ms. in Sachau, *Die Chronik von Arbel*, p. 16.

Khakhar is also given as the name of the capital of Dailam, which was usually called Dālāt; cf. G. Le Strange, *The Lands of the Eas. Cal.,* p. 174; de Morgan, *Miscellanea orient. in Persia,* L (Paris 1894), p. 276.

**KASR.** (See *KAMH*.)

**KASR, fraction, a mathematical term which is used in Arab mathematics for the relation of two indefinite numbers as well for that of distances, surfaces etc. Lo geometry, however, the term al-kasr is very rarely used, usually one says *nābūd* or *kānubūd* to indicate the fraction.*

While in the Arab astronomers the sun's angle is referred to the zenith of the circle which contains 12 or 60 parts, al-Bitrujis gives the radius the value 1 and the values of the sun thus appear as actual fractions in his work. In his *Kamh* he deals with "... non-perfect fractions al-kasr al-abūl-kānubūd* mašūf al-ālāmīni "al-multāvun al-kasr al-abūl-kānubūd..." (see Br. *Alh. Man. 8729*). In geometry, the fractions follow in regular series which start with the numerators 3, 5, 10 and therefore they [the mathematicians] call those chords "mixed..." just as they call these fractions "heads" (see *Alh. Man. 8729*). *Kasr* is more frequent in Algebra. The so-called "expressible" fractions are the fractions with...
was soon recognised as sovereign by the Waabs and ultimately by all the surrounding tribes either voluntarily or under compulsion. Ullul became the capital of a state-stretching from the Atlantic to the region of Tsmoco, the first Muslim empire in Morocco, and the centre of intense missionary activity among the heretical tribes and those which had remained Jews, Christians, or pagans. It was there that Idris died in the year 255 (967), poetically, it is said, at the instigation of Harun al-Raschid. His son Idris II (c. 264) continued his policy of conquest and conversion, but in 294 (808) abandoned Ulli for Fas, which he had just founded, no doubt in order to escape from the rutelage of the Waabs, whose chief Islyk b. Muhammud he had killed. When he himself died in 295 (823) he was buried beside his father in Ulli, according to most of the early authorities. But in 341 (1447) his tomb or at least a tomb reputed to be his was discovered, conveniently for political reasons, in the Qasri al-Sharafa in Fas, and this tomb has become the most popular sanctuary in the town founded by him.

After the building of Fas, Ulli lost all political importance. The Zarakh remained a much visited place of pilgrimage. Around the year 294 (808) the leader of the Idrisids, Idris II, who was two centuries ago Sultan Musty Iliam, two miles from the town of Wolubilis in a very picturesque situation on two mounds commanded by higher hills, founds the town of Millky Idris of the Zarakhs with about 9,000 inhabitants, the majority Idrisids-Sharafis.

The Idrisid town of Ulli, of which no mention seems to survive, probably lay on the site of the present town, a remarkable natural fortress. Excavations systematically conducted since 1955 in the Roman town have already yielded interesting results, bringing to light inscriptions very important for the history of the settlements of the Romans in this region and works of art of the first rank.

(Henri Bassett)

AL-RAKH AL-KABIR (RAKH-AL-KHABIR), A TOWN IN Northern Morocco, about 50 miles south of Tangiers on the right bank of the Wadi Lakhon, which at one time ran through it, but the course of the stream was diverted to prevent inundations. Lying in a vast plain commanded on the east by hills it is divided into two parts, Abl-Sharfs in the north and Bih al-Wad in the south, between which lies the east or market-place. The only buildings of any importance are the great mosque which is pre-Alemuid, the mosque of Sidi al-Adi and the Djad al-Suda, finished in 1389. Within and around the town are many other dedications to local saints. The most venerated miracles are Sidi H-Hassan al-Khashi (Khashif), a native of Sidi Hamid, who came towards the end of his life to settle in El-Ksar where he died in 368 or 372 (772-773-774), Sidi Ben Ahmed, Sidi Ali b. Khielf b. Ichilin, usually called Mala'ik 'Ali b. Ichilin and regarded as the patron saint of the town, and lastly Sidi Ben-Abbas, who is really a Jewish rabbi, Vidal Vidalas.
The population numbers about 9,000 belonging for the most part to the Khdhat, Tabu, and Qasib. It also includes Rifans, a few families originally from Tetuan and Fez, as well as Algerians who left Timmound and Ouen as a result of the French occupation. The Jews number 2,000. Many of them have settled in the town quite recently in such numbers that the Mulâbû was too small for them and they had to live among the other inhabitants. They speak Arabic and Spanish, but Muslims use only the former language. Industry at one time flourishing is now limited to the manufacture of cloth for local needs. Agriculture, on the other hand, is prosperous in the country around as a result of the system of combination between farmers and tribesmen. Al-Karîb is thus a busy market for corn, barley, beans and flax.

History. The site of al-Karîb perhaps corresponds to that of a Roman town (Oppidum novum) which had already disappeared by the time of the first Muslim invasions. In the second century a.d., a fortress was built in these regions by the Dançîa, a branch of the Kettâma. According to al-Ziyânid, it was built in A.H. 402 (729-730) by the Amir 'Abîb al-Karîb, brother of the Kettâma whom the name of Kettâma was joined to. The old al-Karîb (al-Idrisî, Description de l'Afrique, ed. Doyz and de Goeje, text p. 78; transl. p. 89; Kīhâb al-Isîlî, ed. von Kremer, Vienna 1852, p. 78; transl. Fagman, Constantine 1900, p. 149; as well as Ibn Khaldûn, Hist. des Berbères, ed. de Slane, l. 401; transl. l. 233) or Kâsir Kettâma which the town kept for several centuries. Al-Bâkri, however, makes a distinction between Siûk Kettâma “a large and magnificent town situated on the river Lulûcos with a ‘quóts’ and a very busy market” and Kâsir Dançîa “a castle built on a hill and commanding a large river”. Ibn Khaldûn, on the other hand (cf. cit., text l. 188, transl. l. 291), connects Kâsir Kettâma with the Dançîa (cf. also Kīhâb al-Isîlî). Siûk Kettâma was the capital of the state governed by Idris b. al-Kâ'im b. Dâkhân. Al-Mukaddasî (Hist. Geogr. Arab., ill. 219, 7) names Siûk al-Kettâma among the towns dependent on Fas. Although it was only the result of the rapid development of Fas, al-Karîb seems to have retained a certain amount of commercial importance. Al-Idrisî (loc. cit.) mentions it very briefly. But it was only under the Almohads that the town rose out of the semidesert in which it was vegetating. Ya'hûb al-Ma'âmar surrounded it with a fortified wall and made a hunting-ground and a hospital called Harât al-Ma'dîrîn. This is perhaps why he was regarded by Leo Africanus and Marmol as the actual founder of al-Karîb. Under the Marinid dynasty, the town was given a madrasa by Abu Inan which attracted many students and was still frequented in the 15th and 16th centuries. Al-Karîb recognized the authority of the Marinids from 620 (1223-1224). In 685 (1288-1289) the latter appointed as its governor the Ra'is Abu 'l-Hassan b. Aqîlîfîa, whose descendants ruled long remained lords of the town. The memory of this local dynasty, which was members, in alliance with the Banû 'l-Amûr of Granada, distinguished themselves in the holy war, is still alive today.

The period following the disappearance of the Banû Aqîlîfîa was one of calamities. The Portuguese, established on the coast, threatened the town. The inhabitants did not dare to cultivate the soil more than six miles from the walls. In 1503 the governor of Agûa, Don Úmar de Meneses, attempted to take it but without success. In the century following, al-Karîb became the most advanced post of the “volunteers of faith” (Mujahîdîn) who harassed the Christians settled on the coast. During the period of anarchy that preceded the establishment of the Filâm dynasty, the town became the residence of the Kâ'îlîd Ghiûtâ, who had gained possession of all Ghana. Driven from his capital by Murîb al-Ra'âî in 1678 (1665), Ghiûtâ was able to return to it on the death of this prince. He held out there till 1684 (1673) when he was defeated and killed by Murîb Ima'nîbî Al-Karîb fell again, this time finally, into the hands of the Shattî, who dismantled its walls.

Al-Karîb Al-Sâhir, a town in Morocco, now in ruins. It lay on the south bank of the Strait of Gibraltar, 14 miles W. of Ceuta, 23 miles E. of Tangier, at the head of a bay sheltered by a spur of the Râbîl Ghamîl at the mouth of a navigable river.

In ancient times this site was perhaps occupied by a Phoenician factory and then by a Roman town (Cassia or Cassianum of Prolemy). A fortress was erected there quite early in the period of Muslim occupation, in 90 (708-9), according to the historians al-Ziyânid, Archives Marocaines, vi. 494, and the territory of the Mamûnids whose name was the same of Kasr Mânumida (cf. Ibn Khaldûn, Hist. des Berbères, ed. de Slane, i. 380, v. 134) which is given by it the author of the Kitâb al-Isîlî and by al-Idrisî. Al-Bâkri calls it al-Karîb Al-Awâlî to distinguish it from al-Karîb al-Karîb (p. v.). According to him, it was inhabited by the Banû Tarîf and surrounded by great plantations. Under the Almohads it took the place of Marrakesh, not as the port of embarkation for Spain. Many authors call it therefore Kasr Al-Ma'dîr (Geogr. Al-Abûnîfînî, transl. Reinna, ii. 185; Ibn Khaldûn, loc. cit., or Kasr al-Djama’ “Castle of the crossing” (In Abu 'l-'Zarî, Rawd al-Kifârî, ed. Tornberg, p. 138, 143, 146). The Almohads erected important buildings in it and established naval dockyards there. But the prosperity of the town declined in proportion as the rise of the Maghrib lost their hold on Spain. Deprived of the income which the transport of the armies had assured them, the inhabitants turned to piracy. Al-Karîb therefore became one of the first towns that the Portuguese sought to capture. In 1448 King Alfonso V attacked it with a fleet of 30 ships and an army of 17,000 men; after repelling
two assaults, the Musulmans, overwhelmed by the Christian artillery, capitulated. They were, however, granted permission to retreat with their arms and baggage. Alfonso V entered the town on Oct. 10, 1438. The great mosque was turned into a church, the fortifications were strengthened and a garrison installed under the command of Don E. de Menezes. Two attempts made by the Sultan of Fez in 1438 and 1439 to recapture the town did not succeed. In 1463, the tribes of Andujar recognized the sovereignty of Portugal and in 1471, after a treaty by which he ceded Abad to the King of Portugal as a base of operations, Al-Kazr remained in Christian hands till 1540, but during this period it was continually being attacked by the Moors. John III therefore decided to evacuate it after previously dismantling it. Some years later (1550) a French prince, Antoine de Bourbon, king of Navarre, occupied Al-Kazr in exchange for the men-estates that he was to supply to the Sultan of Fez but the intrigues of the king of Spain, Philip II, prevented the treaty from being carried out. Since that date no attempt has been made to rebuild the town. The inhabitants abandoned it and the harbour became silted up and no longer used except by smugglers. The site is marked by the ruins, still imposing, of the Portuguese fortresses, by leeches, the remains of the wall and the ruins of the gate through which the citadel communicated with the town proper.

Bibliography:

KAŞRI ŞİRİN, A TOWN IN THE SOUTHWESTERN PART OF THE DISTRICT OF ARDIL or PERSEAN KURDISTAN (OF ARDILAN) IN 34°30’N.LAT. AND 45°30’E. LONG. (GREENWICH) ON THE RIGHT BANK OF THE HULKA-ROD OR, AS THE KURD CALL IT, THE ALWAN OR ALKAN. THIS RIVER Changs its course, after being half a short to west, at Kasri Shirin to a southerly one and meets the Darya [q. v.] at Eumetoli. To the west and southwest of Kasri Shirin lies the great range of Agh-Dagh, in the S, and also on the left bank of the river run imposing mountain chains. Kasri Shirin was an important railway station from the earliest times. The most important route through it is the old road from Baghdad to the Iranian highlands — the Tartish Khurassan of the Crusades of the middle ages (cf. above, i. 928). Kasri Shirin lies about halfway between the two stations of Kilişkün [q. v.] in the south-west and Sari-pal (in medieval times Hulka, S. of Sari-pal; see KARFULI ZOUMI] in the east. Less important roads also branch off here to north, north-east and south-east.

The modern Kasri Shirin (1600 feet above sea-level) is an insignificant town surrounded by a wall of earth and stone. Outside the walls on the east is a commodious caravanserai; to the west is a fort of modern style which, according to Aubin (cf. cit., see the BIBL.), Dowlat Mir built at the beginning of the 18th century and plundered passing pilgrims. The town was named after the basin in which it was captured and killed. The population of the town, which Ile Morgan estimated at 3,000-6,000, is Kurdistan. Shah Atesh I (1538-1628) transplanted to the region of Kasri Shirin to guard the Turco-Persian frontier of the Kurds, a tribe of the Kurdish tribe of Sandjiti (see), often known as Rauflin in the T.F.G.S., i. 331 for a lur branch of this tribe cf. Rabino, Les Tribus de la Turquie, Paris 1816, p. 171. A Kurd chief acts as Persian governor of Kasri Shirin. Since the beginning of the 18th century there has been a small customs house here. Opposite the town on the left bank of the river lies the town of Shishan, "King’s Gardens", a park laid out with date palms, orange and pomegranate trees by Nasir al-Din Shah on the occasion of his pilgrimage to Kerbelah.

The most remarkable feature at Kasri Shirin, which makes it one of the most interesting places in Persia to the historian or archaeologist, is the extensive system of ruins dating from the Sassanian period in its vicinity. The name Kasri Shirin, "Shirin’s Palace", dates from the later period of the Sassanian empire of Shirin, a Christian, who was the favourite wife of Khusraw II Parnaw (562-579) who called the great palace built by him a summer residence after her. Kasri Shirin and the neighbourhood was the scene of the unhappy love-story of Shirin and the royal architect Farhad, which plays a great part in the romantic poetry of Persia (cf. above, ii. 67) and Jalal, "Farhad and Shirin", Marburg 1895, p. 486. A rock tomb south of Kasri Shirin, for example, is popularly known as "Khusraw’s chamber", see Sarre and Herzfeld, "Farhad and Shirin", p. 10. The famous hate-player, Badihuz (on him see Vellard, "Persien und Arabien", i. 168, and Jalal, q. cit., p. 63) also spent some time at the imperial court at Kasri Shirin; he also plays an important part in the cycle of legends which centre round Khusraw Parnaw. Among the 30 melodies or songs which he composed for the king (see the list of them in Vellard, q. cit., ii. 509) there is one (No. 4 in Vellard) entitled "Farhad Shirin = Shirin’s Garden" (another, N. 38 and also Vellard, i. 1259) is entitled "Hunting Song", probably the "Hunag Nezkarzir in Yaght", vi. 113, 14. Both songs refers to Kasri Shirin, the summer-residence and hunting-palace of the Sassanian ruler.

The period of Kasri Shirin’s glory was only a short one. Ten years after the death of Khusraw II the Sassanian empire collapsed before the onslaught of the Arabs and in the Muslim period the palaces of Kursi Shirin seem to have been no longer inhabited. They fell quietly into ruins, mainly as the result of the poor quality of the building materials. M.A.Boehm (F.G.C., vii. 270) as early as 578 (941) talks of the ruins. Ibn al-Athir (ed. Tirelborg, v. 388) mentions
that as a result of an earthquake in 345 (956) the walls of Kasr-i Shirin cracked. The Arab and Persian authors, like Ibn Rashid, Vakil al-Kasravi, and Ahmad Allah Mustawfi, emphasize the great scale of Kasr-i Shirin with its halls, hermitages, treasure houses etc. and the splendid gardens containing very rare animals roaming at large in them, but give no detailed descriptions. Vakil and al-Kasravi give especially the story of the origin of the palace, which the former (Makdama, iv. 115) actually regarded as one of the wonders of the world.

We give the most accurate description of the modern ruins to the French expedition of J. de Morgan. The main ruins lie out on a broad plain N.E. of the modern town. Near the latter is the quadrangular circuit of Khwaras flanked by 6 round towers (called Kal'at or Kasr-i Khwaras, also Kal-i-i Khwaras) surrounded by a ditch. Built as barracks for the ruler's troops, they have preserved in it one of the rarest perfect examples of the military architecture of the Sassanians. North of the Kal'at are further mounds of ruins the object of which we do not know. About 500 yards to the N.E. we reach the wall of a gigantic park in shape not quite regular oblong, enclosing the summer-residence project of the king, according to de Morgan, 300 acres. The wall round it which also served as an aqueduct, the highest part of which reaches 20 feet, is about 6,000 paces in extent. Another aqueduct wall divides the park into two parts. The requisite water for the irrigation of the gardens was brought from the Helwan-Rud and, as already observed, far farther along the top of the mile-long surrounding wall, the aqueduct can still be traced in the Helwan-Rud valley until it is lost in the maze of ruins of Hawsh Kuri. In the centre of the palace scheme is the main palace, now called Amrār-i Khwaras (house of Khwaras) or Hājlī Kal'as-y (plague palace). This is a vast building lying east to west (1080 feet long, 625 feet broad) with vaulted rooms and a long terrace in front which is still must imposing with its huge dimensions and colonnades. Before the palace still exists a 600 yards long stretch of the aqueduct flanked by two kiosks. West of the Amrār-i Khwaras stands a smaller similar vaulted building with 4 doors and a square principal chamber.

It is now called Louleh Kāpū or (pure Persian) Čah Darvād = "Four Doors", or Kal'at-i Čah Kāpū = "Palace of the 4 Gates". The object of this building (perhaps for audiences)? is obscure.

About 3 miles E. of Kasr-i Shirin is another late Sassanian ruined palace, called Honak Kuri = "House of the Horses", (the name is explained: sur - probably Farno, hurak = watch, Rich gives the name Honak Kureh, because it is populated, which is sufficient to maintain the edifice belonging to the palace of Kasr-i Shirin. These ruins consist of a palace 600 feet long with annexes and another mound of ruins are the latest of all the palaces of Parwes so far known.

Kasr-i Shirin is, of course, a town of much greater antiquity than the time of this Sassanian king. A site so favoured by nature must always have had settlement. So far it has not been ascertained what ancient city = which have practically occupied the site of the present town = stood here. It was still thought - eg. by Malcolm, Kinnell, Ker Porter = that Dastaghird was here, but this is certainly to be located in the ruins of Kazl Baghštā (cf. above, i. 926). This erroneous identification was previously attacked by Buckingham, Rich (see Bibl. and Kütler, in. 454, 509). The ancient Armenians, a town of Apollonias, has also been suggested - e.g. by Kinnell (see Bibl. ; - ; but this is much less probable, in the region of the later Dastaghird [q. v.] and Herstlich in S. Herstlich, Arch. Acad. Inst. Espagnet. a. Tiflis, ii. Berlin 1919, p. 28. Herstlich, op. cit., ii. 329, suggests with all reserve an identification of Kasr-i Shirin with the station of the Tabula Peutingeriana; but see against this view my article Damas in Pauly-Wissowa, Realencycl. der Mgl. Altertumswiss., Suppl. iii. 337. Kasr-i Shirin has not the slightest connection with Kinnwar or Kasr-i-Allāh, although there was a great palace built by Khusrow Parvēz there also (cf. on this G. Le Strange, op. cit., p. 188; Schwarze, Iran im Mittelalter, p. 494 sqq.); the latter place lay much farther east between Kirman-Shāh and Hamadān. This corrects Conze, Antiqu. dell' Islam, v. 17, iv. 144. (where Kasr-i Shirin and Kinnwar are regarded as one and the same).

There is a village 12 miles north of Kasr-i Shirin called Kerd-i-Shirin. A short hour's journey above it we ascend all-wells, not, however, very rich, which form part of the Anglo-Persian Oil Company's concession. On them see de Morgan, op. cit., ii. 81 sqq. and Schwert, Der kassischen-persischen Archäologie, Hamburg 1919, p. 21, 49, 110, 114, 143-144.

Down to the Great War the Turco-Persian frontier, which was not minutely defined, ran about two hours' journey S.W. of Kasr-i Shirin. On the Persian side the frontier was guarded by the fort of Kal'a-i-Selat where a detachment of Sandjani cavalry was stationed (cf. Aulin, op. cit.). On the place see also Rich, op. cit., ii. 203 (where it is wrongly called Kalāi Selat). Buckingham calls it Khal'ti el-Selby. An hour's journey beyond it is the Turkish frontier-station Kasr Keltiyya.

KASRA, lit. "break"; name of the sign of the vowel i; the vowel itself is called keer.

AL-KÄSTÄLLÄN, Abu 'l-‘A‘lib Amâh b. Muhammad b. Ali b. Kâthîn Shihâb al-Din al-Šâbî, an authority on tradition and theologian, born on Tunis 12, 851 (January 20, 1448) in Cairo where he spent his life as a preacher — apart from two stints of some duration in Mecca — and died on Friday, Mu'arram 7, 923 (January 31, 1517). He owns a literary fame mainly on his exhaustive commentary on the Sahâbî al-Khûtî, entitled 'Irâdât al-Sâhî fi Sharh al-Khûtî, which exists in numerous MSS. and printed copies; of latter, these latter may be that of Tunis 1267, and next the Lucknow edition of 1899 (other in Brockelmann, Geschichte der arabischen Literatur, ii. 159). The Cairo edition in 1325/6 gives the glosses of Yahyâ al-Amîrî and the Cairo edition of 1270/1 of Hassan al-Islâm (d. 1293 = 1887). In the field of hadâ'î, al-Shihâb wrote Mu'ahhadda, which was printed at Tunis (c. d. 1305 = 1889). Great popularity is enjoyed in the Muslim world by his history of the Prophet entitled al-Masâ‘ib, which was completed on Shanîn 15, 899 (May 22, 1494) and which caused him to be accused of plagiarism by al-Shihâb. It exists in numerous MSS. and has also been printed several times, e.g. Cairo 1281, several times commented on, e.g. by al-Zâ'âmî (il. 1152 = 1710), printed in 8 vols. Bâljâl 1278, 1291, and translated into Arabic into Turkish, printed Stamîlî 1261. Not long ago al-Nâshâni, the President of the Court of Justice in Baßit, prepared a synopsis of it entitled Al-kâmil al-Majmu‘udda wa al-Munâmâd al-Ladhâniyya, Bâljâl 1310–1312. Finally in the same field he prepared a commentary on the Kitâb al-Shâfi‘î of al-Tirmidî (Geschichte der arab. Litt., i. 142). Besides studying the science of tradition he also worked at the readings of the Karâm. His principal work on the subject is entitled Târîkh al-I‘lâmî al-Fârâbî. He also wrote a biography of the historian al-Kahîn, Abû l-Kâmil al-Šâhî (G. A. L., i. 409), and a commentary on the Mu‘adhdhin of al-Dâmîrî on Taqâفز (c.f. cîl., ii. 202). Finally he also wrote on mysticism and personal poetry; among his works in this sphere are his Ma‘lûd al-‘Irtîfâm, Ma‘lûd al-‘Iqâm al-Mu‘tâbîb, ahd. al-Nâm al-Mu‘tâbîb, and his commentary on the Sâhî of al-Burjî (G. A. L., i. 265).

KÄSTÄLLÄN (Kastel), Muslim al-Dîn Miṣrî, Ottoman theologian and Hanîfî jurist. Mewânis Muslim al-Dîn was a native of Kastel (from Latin Castellum), a village not far from Brusa, where in after life he built a mosque. From his native place he took the name of Kastel, or, more impressively, Kasstallân. In his youth he attended in Brusa the lectures of the celebrated theologian Khâbîr beg and on the conclusion of his theological and legal studies was appointed teacher in various madrasas, for example in Mardin, Dumottika (medrese of Urandj Passa), and finally "guardian." Next he was for some time qâdî of Brusa, Adriànopol and in 886 (began March 2, 1481) of Stamîlî, but in the same year was appointed military judge of Rumelîn with the rank of a fourth visier. He was the first to hold this office separately: it had previously been combined with that of military judge of Anatolia (cf. the art. qâdî-qâdî). At the same time Hâmidî Yûsûfî Mehmed Efendi was appointed the first independent military judge of Anatolia (cf. J. roo. Hamner, G. C. R., ii. 246). In 891 (1486) he was deprived of his office. He died in 901 (1495–1496) in Stamîlî where he was buried in the cemetery of al-‘Nâšir. The Kasstallân was a number of legal works in Arabic including highly esteemed marginal glosses on the commentary of al-Tawfîqî on the 'Ajâ’ib of al-Nâfîî (cf. Hâmidî Khalifa, Kâmil al-Zanjînî, iv. 226, as well as Brockelmann, G. A. L., i. 427, which, however, belongs to p. 1395, MSS. in Berlin, Nî, 1973, and Leiden, Nî, 1998) as well as an essay on seven doubtful matters (Muhittî) in al-Dârânî’s commentary on al-Dînî’s Kâmil al-Majmu‘udda fi Ilm al-Qâlîm (Hâmidî Khalifa, vi. 240); also a work of Tawfîq al-Malî (Hâmidî Khalifa, ii. 442); an essay on the chronology of the Khâbîr (Khâbîr al-‘Aţâ‘î al-Kâmil; cf. Hâmidî Khalifa, iii. 387) and lastly a work called Tawfîq al-Shâhid (G. C. R., ii. 313).

FRANZ BAHMANN

KÅSTÂMÜNÎ (in the Arab geographers Abu 'l-Fida', al-Dîmâtâlî, Ibn Ba‘bîlî, Ibn Bûnitî and on the coins Kastâmûnî with variants; al-Idrîsî, ed. Ja‘bîrî, ii. 321: Kastâmûnî; ibid., p. 393: Tâmûnî; the Kassowisi of the Byzantines in Chalcedon) — corresponding to the original form, Kastamwpâ, Kastamunî; corrupted in various ways by Western writers: Albertob Avena, cit. Constantii; Clavijo: Constante; Benedetto Dei: Chatarrown, Castànunjä, Massinâs: Cantônol, with modern Greeks and Europeans: Kasumovic; cf. Lenioulakis, Hist. Matoulla, vol. 315, 48, a town in N. W. Asia Minor, capital of the wilayet of the same name, which corresponds to the ancient Paphlagonia. The town is not mentioned in classical literature although the rock tombs there show that the place was settled in historical times. In the middle ages Kastamouni was famous as the family stronghold of the Comnem?os, who waged a desperate warfare with the Dânischmand-ogullan and the Salênik for its possession until it was finally lost to the Byzantines about the middle of the ninth century A. D. The town then passed, along with the other possessions of the Dânischmand-ogullan, under the sway of the Salênik of Kônya and formed a beylerbeylik, which was hereditary in the family of Ilyuni al-Diün Cânî. On the break-up of the Salênik
Hadjur al-Haitani († 974 = 1567) wrote at the invitation of people from Sarh and Zulul a treatise in which he, without taking up a definite attitude to the contradictory opinions of respectable scholars regarding the effects of the fat, includes the enjoyment among the ahlulbait, from which one should refrain. Among European traders, Nicholas and his biographer collaborator Pursell give the earliest accounts of our plant and its use.

**KAT (A., c.v.),** The Arabic term ḫaf has, as the dictionary shows, undergone a remarkably varied development of meaning both in its original and metaphorical senses. Here we only deal with cases which are of importance for the history of religion, astronomy, etc.

The infinitive form ḫaf is not found in the Kāran but the verb occurs in the literal meaning (Stirr 547: ḫif off the hands of a thief, male or female) — the well-known law adopted in the Fākh, sometimes briefly known as ḫaf al-lājî — and in a more metaphorical sense (Stirr 25 sq. and xii. 25: ḫif under which God hath ordered to be bound together).

The old reciters of the Kāran (purā) gave the name ḫaf or ḫaf to a pause in speaking whether required by the sense or for another reason. Later reciters distinguished between the brief pause necessary to take breath and other pauses required by the sense: ḫaf was only applied to the first (according to others to the last).

The grammarians give the name ḫaf to the strong hausa which cannot be elided in contrast to the ḫaf (āf) (the weak idn). ḫaf is also the deliberate division of a syntactical sentence, as in a sentence expressing a request, for us āf bi-nikāt al-ḥassā min al-ḥassā (is used as āf bi-nikāt al-ḥassā) or bi-nikāt al-ḥassā (is used as āf bi-nikāt al-ḥassā).
In prose, the word refers to the context of the end of certain texts, e.g., the book of Job 41:28: "Let me die like the unfaithful, and let me be silent like a man.

The context section of al-Makhfi is of importance, containing mathematics, the varieties, and sectarians, the parables, and the shadow of the parable, the paraboloid. This shortened form is the shadow of the paraboloid.

In astrology, al-adhama means "absent," or "to appear," or "to see," the great danger.

Al-adhama, meaning a "format of paper," has acquired a certain importance in the context of administration. According to the Arabic accounts, al-adhama (papyrus paper) was probably used before the third or fourth century. Above, at 9:385, al-adhama was used from Misr's time for documents in the chancellery of the Caliphate and at quite an early date we find five different forms used: al-hawd, al-gharib, "secret," called for books of a late date, in Madinah Egypt, mifjad, al-gharib, and al-gharib. The chancellery of the Caliphate in Bagdad had its own format different from those found in Syria, and even after Cairo had become the capital of the Caliphate and the chancellery there adopted the Bagdad format, forms peculiar to Syria continued to be distinguished. For the Mamlik period we are minutely informed by al-Khafajahdhi regarding the format of the chancellery of the Mamlik court in Cairo and those used in the province of Syria. He distinguishes, giving exact particulars regarding the size and rectangular format, and of fine formats in use in Cairo: al-hawd, al-gharib, al-dhikr, and al-shafii. The use of al-dhikr was at the court of the Mamlik in Cairo, and the use of al-shafii was at the court of the Mamlik in Syria. The smallest formats were used for the pigeon post. Al-Khafajahdhi only gives quite general observations for other countries.

In the history of religion, the expression al-adhama means "to take an oath," which Petersen (Ein Eid bei dem Schimel. p. 40; cf. also p. 12, note 3) compares with the Hebrew word, which is interesting. It is perhaps through the influence of this expression that adhama comes to mean "to settle, to decide," and to refer meaning "to eat" in other Semitic languages. In Pahlavi, it means "to assimilate something, to reduce, to deduct," etc.

The final Shi'ite sect is called Kafirs because it excludes the list of Imamah at the death of Masum 'Ali.
KATABAN

s.v. Katabanes and Chatamnos, to read Katarbasia in Theophrastus need not be accepted. Glaser wrongly supposed (Älteste der Griechische und Geographie Arabien, Berlin 1890, ii. 6, 8) that Katarbasia (or, as he incorrectly writes, "Khitibahina") lay on the Persian Gulf.

Later and fuller is the reference to Kataban in the synopsis in Strabo, xvi. 768, of Eratosthenes (end of the third century B.C.), who, in addition to the sources available to Theophrastus, had at his disposal itineraries of Geographers and travellers by caravan in Egypt and Petra. According to this, the Katabanes were, to begin with the Nabataean and Nabataean in order from north to south of the four principal Arabian peoples and before the Chalmatians (inhabitants of Hadramot), whose lands stretched farthest east, dwelt down to the straits and entrance to the Arabian Gulf. (p'Q ra' 

TQ nauEWO ra' Aplavw mQnE) = their capital was Taizah. From Strabo's information it may be assumed that the Katabanes in the time of Eratosthenes lived in the part of the west coast south of Saba' and in the western part of the south coast of Arabia, being the western neighbours of the Nabataeans. From Strabo's account of their lands which refers to the straits of Bib al-Manadul, it is clear that the boundary for the kingdom in Glaser (cf. text, p. 19), who sought to locate the Katabanes "mainly east of the Djabal Sabir" with the Gebanitans west of them and the Himyarac south of the Katabanes and Gebanitans, was not correct. This could have been derived from the fact that in the time of Eratosthenes the Himyaric did not form an independent kingdom (cf. the caveat, Saba' =) but belonged to Kataban, which Glaser, who later modified his views considerably, had to confess to in his book Die Abensierer in Arabien und Äthiopien, Mannich 1895, p. 112. The Taghaz of Strabo (xvi. 768), the Gebanitans of Ptolemy (vi. 153), were presumably at this date still part of the kingdom of Kataban (see the article GABEZOT in Pauly-Wissowa's Realenzykl) and only became independent about Ptolemy's time and at that time were, it is true, the neighbours of the Katabanes but not on the west, as Glaser supposed, but on the south-east between Kataban and Saba'. The statements in Ptolemy, Nat. Hist., v. 65, are also in agreement with Eratosthenes, according to which the Katabanes lived in the S.W. of Arabia Felix. From the ideas we get of the geography of their lands from Eratosthenes, which is nowhere contradicted, we see the impossibility of the mixture of right and wrong in the location of the four principal kingdoms in Glaser, Punt und ihre südostasiatische Reicha, M.V.P.C., 1899, 1901, 1908, according to which Kataban in the old period (at the land south and S.W. of Saba', bounded by N. of Hadramot and later stretching to the straits of Bib al-Manadul so that it originally included the land of the Himyaric and would appear as early as Thasophanes as the immediate neighbour of Hadramot on the west, Glaser at the same time also assumed in the passage in Theophrastus the alternative Ξαρα (in the text = Sheikh, "frinkincense coast") for Zugla, which, however, is wrong (cf. the art. Saba'), and further altered his early views on the frontiers of Kataban (cf. below). Thus Eratosthenes mentions the Katabanes between Saba' and Hadramot and that the Katabanian inscriptions found by Glaser, ac-

According to his own words (Alexin und, p. 111), "all names from the region between Marib and Sab" (M. Huttermann's Die Arabische Frage in den islamischen Orient, vol. ii. Impression 1890, p. 169) in observation on this statement, that the description of the find-spot of Glaser's inscription No. 7809, "which is of Kataban provenance", is not in keeping with it, can now be more easily estimated at its true value, cf. the topographical data in N. Rhodokofskis, Katabanianische Texte zur Bedeutungschaft, Series ii. 2 [S. B. A. W. Wien, 1922, zvTzvT, p. 57-59] =, as the expression quoted, ξαρα γενομένα .... σαβίτον in Strabo shows, not sufficient evidence for the conclusion that the land of the Katabanes was limited to the territory between Saba' and Hadramot and does not prevent neither another circumstance — the assumption that the kingdom of Kataban surrounded in north and east by Saba', gradually increasing bulk of which came to include the S.W. corner of Arabia, in the time of Eratosthenes stretched to the N.E. far south between the Marib-Mahr (S.E. of Marib) and the Wyd-Mcharm al-Qasba. The expression in Strabo σαβίτον γενομένα τοιχα τοιχα = ("a clench, up to the straits") is quite reconcileable with the presumption that Kataban was not only the land directly on the coast but also stretched into the interior, towards the upper Wa'af of - A. Sprenger's view (Die älter Geographie Arabiens, Born 1872, p. 64, 254 sq., 256, 274 sq. etc.) that the Katabanes were the Arabian tribe of Kifja was absurd. Obsessed with this view, he recognized the definition of the land of Kataban in Eratosthenes as only correct in a limited sense. When J. Hatherly and J. H. Mordtmann established the identity of the land named Kataban in the South Arabian inscriptions with the similar name of a land and people mentioned by the Greeks and Romans, any linguistic connection of Kataban with Kifja and the localisation of the original nucleus of the Kataban kingdom far to the east (near the Kazan range) were ruled out (see also D. H. Müller, Die Burg von und Scharqel Sabriptes, vol. ii. [N. B. A. W. Wien, 1881, zvTzvT, p. 1028 sq.] Nevertheless Sprenger against a later date in his Besprechung zu Mordtmanns Amstie zu Glaser's Schiften in the Z.D.O.M.G., xiv. 595 =, maintained a connection between the names Kataban and Kifja. Relying on the similarity in sound of the Kataban of the inscriptions to the name of the plain of Kazir in the vicinity of Kazir (near Yarum), the later capital of the Himyaric, D. H. Müller endeavoured to locate the Katabanes there, assuming that they exercised their power in the place where traces of their existence have survived: in the name of the place and where those who followed them in power had their capital (cf. text, p. 1699); cf. for this view so early a writer as C. Forer, Historische Geographie der Arabien, London 1844, vol. i. p. 188 and 184; K. Moller in the index to his edition of Strabo, p. 709, and Sprenger, Besprechung, etc., etc. In support of the form of the name Katarbasia against Katarbasia, of most MSS. of the passage in Strabo is the form Katarbasia of the name of the land, a few times there in the majority of manuscripts in the passage from Theophrastus quoted above, the form quoted below from Ptolemy, the ξαρα γενομένα in Papyrues with single I, finally also the Arabic original form. The form Katarbasia has been influenced by the error Katarbasia in the MSS.
Märhi." M. Harmann (op. cit., p. 165) was wrong in objecting to the location S. E. of Märhi "in spite of the view expressed by Hommel with absolute conviction" to the scene of war. The location of the Chosmatolitae, the name of which was first used by Gräsgård as Chosmatolitae (11 Shabat of the inscriptions) (following him Kramer, Meineke, K. Müller, etc.) on the tympanum of the same nothing definite can be asserted. Forster's (op. cit., vol. I, p. 18, 35, 36, 37, 38, 39, 40, 105, 115, vol. II, 154) also quoted by K. Müller (op. cit.) connection of the name with the Punth Kāhīn and his derivation (L 83) from Kāhīn in the sense of sacrificer or notarī, according to Bochart, is simply one of the curiosities with the which his book is filled. Even C. Landberg's (Arabica, Leiden 1898, p. 62) derivation from Kāhī (puck-saddle) in reference to the wealth of the region of Bābah al-Kabī in camel is, not exactly probable.

Eratosthenian calls the capital of Katabīn Tamūn. That the Katabīn was a monarchical constitution like the Minaean, Sabean and Chosmatolitae is known from the South Arabian inscriptions. Spruner, who (Geographia, p. 160) identified Tamūn with Sejjas in the Péi, vi, 7, 37, and (p. 265) 36 and consequently sought it between the Sabean capital Marib and Sabatha, the capital of Hadramawt, had, as a result of his preconceived notions regarding the Katabīn, as he himself said (p. 265) "some difficulty in finding the bulk of the kingdom on the earlier writers. Glaser came nearest in settling the question of the capital. While, according to his opinion expressed in the Sibār, ii, 18 sq. (in correction of Sibār, i, 45), Tamūn was identified either with Dammat Hibjā or more probably with Dammat Khdīr, not very far E. S. E. of the (highest part of the) Dammat Sabār on the road from the Turkish frontier-colonization of Surra (Kāna) to Taḥā, he later (Abassieh, p. 112, 115) said that Tamūn (Timmā) of the Katabīn inscriptions was Tamūn in the Wādi Bābah al-Kabī, and this was only the Timmā of Esarteloon but the Timmā of Thamūma and Thamūma al-Kabī and also the Timmā of the inscriptions of the Philistines, thus abandoning the ideal that the mission of the Dammat Sabār was the frontier of the Katabīn. Of these attempts at identification Landberg (Abassieh, v. 85 sq. on the land of Hari) especially p. 100 said that Glaser, after looking for Tamūn here and there, must have found it in his paper Zwei Schriften über den Dammbruch von Märhi (M. V. A. G., 1897, vi, 58) he wrote a preface of the name Tamūn mentioned in the Sibār inscription (Glaser 1000) "Tamūn, the former capital Tamūn or Tamūmn of the Katabīn, is in the Wādi al-Kabī." This identification of Glaser's, who (Abassieh, p. 112) expressly stated his conviction of the correctness of his location of the Tamūn of the inscriptions, was corrected by Landberg (p. 107 sq.) when he fixed the position of the present Tamūn, the site of the ancient capital of the Katabīn, in the land of Hari, in a plain near the Wādi al-Kabī, a tributary of the Wāḍi al-Awāl, which branches in the S. S. E. by the hills of Rokhamān in the S. E. by the Kāhīn at Dihān, in the midst of which rises the hill of Hail Wāḍi, the Wāḍi Bābah, a tributary of the plain of the plain called Timmā. Following this, Hommel (Grundzüge der Geographie und Geschichte des alten Orients, Munich 1904, p. 157 [650]) identified Tamūn and the town of the inscriptions as Timmā, in a tributary Wāḍi of Bābah al-Await S. E. of
country. His deductions (Abessinier, p. 112 n.) that Katabân perhaps also had possessions in the African fringes in times, and that the whole of Arabia belonged to it may be emphatically rejected.

Pliny twice mentions the Kataláhán; vi. 65: Kataláhán (this is the better reading, not Cataláhán). Artaxes and, in another form, vi. 153: Cataláhán, a diversion which is probably explained by the use of different sources. According to the first passage (also Sollis, ed. Mommsen, Berlin 1859, § 797) they are to be regarded as the possessors of the south-west of Arabia Felix. Glaser (Histoire, ii. 219), rightly says that by Pliny’s time there was no longer a Kataláhán tribe. He is possibly correct in saying that they and the Hadramítâtes had inherited the southern Musámat territory and could only hold out by continually fighting the Sabáne. Whether there still was a kingdom of Kataláhán, as known to Estrabóous, in Juha’s time is doubtful. Glaser (Abessinier, p. 114) denied that the Kataláhán kingdom was still in existence at the time of Gallus and thought (Prooem., p. 56) that it no longer existed by 84 A.D. and that the Kataláhán “disappear completely from the scene as an independent people” in the first half of the first century B.C. (ibid., p. 48; cf. Abessinier, p. 77; for the time of Gallus see D. H. Müller, Burgers, ii. 1050). This view needs to be considerably modified, if not on account of the mention of the Kataláhán in Pliny and Ptolemy (see Glaser’s own limitation, Ptolemy, p. 38), as against Hommed, who (Grundriss, p. 139, 142) placed the end of the kingdom of Kataláhán in the second century B.C. (on this evidence see Glaser, Abessinier, p. 115). Hartmann (Epist., p. 164, 168) said that Kataláhán does not disappear before 80 B.C. That the references in Ptolemy from the time of Juha refer only to the people of the Kataláhán and no longer to the now weakened kingdom, cannot be asserted with certainty. But it may have been included in the Hîmyâr kingdom at the beginning of our era (on the supposed beginning of the Hîmyâr epoch see ibid. 2b, below, iv. 8). This question is bound up with that of the coexistence between Kataláhán and the Gezelûnâtes of Pliny (vi. 152, 153, 63, 68 sq., 87 sq., 93), the Ga-

This question is bound up with that of the coexistence between Kataláhán and the Gezelûnâtes of Pliny (vi. 152, 153, 63, 68 sq., 87 sq., 93), the Ga-

The references to Kataláhán in South Arabian inscriptions were down to the last decade of the 16th century, very limited, e.g. the Minaean inscription Halévy, 504 (cf. Glaser 463), in which a Kataláhán king is mentioned as a contemporary of Minaean kings, and Freysoel, 56 (cf. Glaser 484).
in which there is mention of a peace between Saba' and Kataban. A deeper knowledge of the past of Kataban was first obtained from the rich lode of inscriptions made by Glaser, who, in his first journey to South Arabia (1892–1894) before which no Kataban inscription had been known, brought back a huge amount of Kataban inscriptions, one particularly remarkable result of his journey of exploration. Hommel's conjectural dating of these inscriptions "from about 1000 B.C. to the end of the Kataban kingdom (2nd century B.C.)" (Grundriss, p. 183) is too early in both its limits. The beginning is not earlier than that of the Minaean kingdom (see the art. Minaeans) on the latter see above. Hommel (idem) was only able to say further that there were about 18 Kataban inscriptions naming these in the last unpublished text, out of which Glaser had, however, already gathered much valuable information, and that, apart from a few passages in inscriptions which Glaser himself published (e.g. Pami, p. 38 [beginning of Glaser 1392]; Zwei Urkunden über den Dammbruch, p. 194 [contents of Glaser 1639]) he had promised to publish his results in his researches in the history of religions (from 1599, 1600 and 1604). Some of his inscriptions were again squeezed by Arabic, one for the Greek Kalligaris (published by Hommel, Z.D.M.G., 1899, liii. 98 sqq., the first Kataban inscription made generally accessible), three others for Aiden, whence they were sent to Paris (publ. by H. Dernbourg, Neueren texten bisher unbekannt, K.A., 1902, VI 117 sqq. [N.N. II, lii. iv.; new edition, with emendations in the Supplement zu K.E., 1903, I, N.N. 310 sqq.]). Ditte Nielsen in the M.F.A.G. 1908, 317 sqq., published in his "Katabanische Inschriften", a German version of his Studien über süd-arabische Inschriften, Copenhagen 1906, 5 Kataban texts (Glaser 1600, 1392, 1391, 1381 and one fragment) (which he had received from Glaser) with notes (critically reviewed by O. Weber, Studien über süd-arabische Inschriften, in M.F.A.G. 1907, 237 sqq.) and same time Glaser in his Athenische Nachrichten, Munich 1906, 60 sqq. and 152 sqq., published the first of these inscriptions and Glaser 1606, of which Nielsen N. 5 was a fragment. The article following the above mentioned one by Weber was his "Neue süd-arabische Inschriften" (p. 23 sqq.) (Landberg 1–5) (N. 4 already published by H. Dernbourg in Neueren texten bisher unbekannt [dispatched in 1893] under N. 3: Landberg 3 is identical with the first third of Glaser 1339 [in Glaser, Athlen, Nachr., p. 147 sqq.]).

On the basis of the earliest publications from Glaser's papers, research was at once begun on individual problems of Kataban antiquity. Hommel, for example (Grundriss, p. 85 sq., 120 sq.), proposed hypotheses regarding the ancient system of the Katabanians. Hartmann gave his views on this constitution from the important inscriptions Glaser 1339 and some historical questions (from Glaser 1350, 1603 etc. 25 sqq., cit. p. 439 sqq.; cf. also 142 sqq.). It is a noteworthy fact that the kingdom of Kataban appears also in the inscriptions as existing contemporaneously with those of Ma'in, Saba', Hadramout, just as we find it in Estothames. As regards language, Katabanian is nearer Minaean than Sabaeans; Hommel said the Katabanian dialect was practically Minaean. The traces of Sabaeans in it are due to contact with the neighbouring people. Weism had already pointed out (Studien, p. 2, 63 sqq.) in the epigraphy certain peculiarities from the few reproductions available to him. It is unnecessary to go further into the details of this earlier literature, especially in view of the comprehensive edition of Glaser's Katabanian inscriptions which is being undertaken by Rhodanakis (see the art. SABA', iv. 14).

The latter has already published in his Der Grundriss der buddh, in den süd-arabischen Urkunden (S. E.: Ak. Wien, 1915, cxxvii/12 53 sq.) the Katabanian inscription Glaser 1606, already discussed by Glaser (see above) and Hartmann, (cf. cit. p. 431), with which the text was published he then published some hitherto unknown inscriptions in Katabanian texts in die buddh, in den süd-arabischen Urkunden in the S. E.: Ak. Wien, 1909, cxvii/l, namely Glaser 1601, 1602, 1395 = 1604 = N. 84 of the inscriptions collected by the South Arabian expedition (S. A. E.), Glaser 1414 = 1612 = S. A. E. 81; Glaser 1413 = 1615 = S. A. E. 82; it is already mentioned second series of Katab. Texte (the three inscriptions Glarus 1396 = 1010 = S. A. E. 53, S. A. E. 48, cf. which the Kalligarsi inscription (see above) forms one part, and Glaser 1993; lastly of the already mentioned treatise Die Inschriften an der Mauer von Kataban (Vanne the inscription S. A. E. 77 = Glaser 1401 = 1614, S. A. E. 80, S 80 = Glaser 1397 sqq. and, in addition to the title of Mazarah among the Katabanians, S. A. E. 94 = Glaser 1405, S. A. E. 85 + S. A. E. 60, Glaser 1516, and in the appendix of S. A. E. 86, a new edition of S. A. E. 75 sq. = Glaser 1605 sq. which appeared in W. Z. K. M. 1909, 24 sqq. These publications mark a extraordinary advance not only for the accurate reproduction of the texts of the inscriptions and the very full commentary but also for the systematic investigation here attempted for the first time of problems of law, constitution and economy (see the art. SABA', iv. 14), as well as for example a proposal of the discussion of inscriptions Glaser 1601 and 1605, of details of the earlier history of Kataban; for example, in Katab. Texte, I. 103 sq., 114 sq. (supplement) and Katab. Texte, I. 98 sq., a chronological oeuvre is proposed for some groups of Katabanian kings (cf. O. Gottschalk, Katabanianische Herrscherreihen in the Ann. Wien, xl., 1914, p. 82 sqq.; older attempts in Nielsen, p. 15 sqq., Stein 1914, p. 821, Weber, Studien, p. 47 sqq., Hartmann, p. 105 sqq., 601). Our knowledge of the history of ancient South Arabia is for the first time enlarged on many points by a combination of these newly published inscriptions with those already known. We see that certain smaller countries were dependent on Kataban, with which they for some time formed a great power. In Glaser 1596 there is mention of the dependence of the Ma'in tribe on the trading in Kataban. The inscription Habary 194-4 (cited above) shows that Ma'in was dependent on Kataban. On the other hand, from the Minaean inscription Glaser 428 Ma'in appears as the usual of Sab'a's enemies of Sab'a. But in the period after the Sabean inscription Glaser 1414, in which Kataban is mentioned along with Ma'in among the enemies conquered by Sab'a, "it was weakened by Saba". At the time of the Saba' inscription, Glaser 1600, which mentions a campaign of Saba' in which Kataban was on its side, it had lost political control over considerable territory (cf. Glaser 1600 and...
A war lasting many years between Katabān and Saha (Glaser 48; Freytag 56; see above) resulted in the capture of the alliance between the two powers ended in a peace. References to Katabān in the kingdom of the Himyar may also be gleaned from inscriptions. Some of the inscriptions may be definitively dated in a known era, but it is possible to bring some of them into a chronological series relative to one another.

The publication of new material alone will show whether the unsettled problems will be cleared up or remain unsettled.

**Bibliography:** The books and articles of Glaser, Rhodokanakis, Hommel, Dernburg, Hartzenbusch, Landberg, Weber, W. H. Müller, J. H. Mordtmann, Sprenger, etc. are already cited in the 1860s; reference need only be made here to my article *Sahu* (Realencyclopädie der Völ. exp. coll. 1459 sqq., 1458 sqq., 1457 sqq., 1492 sqq.) (

**KATADĂ** (kata), ancestor of the Sharifs of Mecca from the beginning of the 13th century A.D. onwards. In 1291, 1292 or 1293 A.D. he overthrew the then ruling family of the Hawshān and established his authority in the Holy City. The last Sharīf of the Hāshān had lived in continual family strife and quarrels. Meanwhile Kata (for his pedigree cf. Suwak Harrounje, Meheia, 17, Stammtafel I. between p. 24 and 25 and Stammtafel II between p. 74 and 75) had enlarged his states from Yathrib southward in the direction of Mecca, thus preparing his attack on this city. When the Mekkanites were out of the town in order to assume the *sāmān* (cf. the *sura* on the 23rd of Rajab), the commemoration day of Muhammad's Ascension, he made use of this occasion to establish his power in the town. According to another story, however, his son Hamda captured the town and prepared his father's entry. Kataba, in contrast to Shihab, his predecessor in the Hijāz, was a man of political genius, who pursued the idea of founding the independent principality of the Holy Land of Islam. He repaired the walls of the town which had fallen into ruins, captured TIl'īl and launched the Turkish sultans under his dominion. He continued the war with the Sharifs of Medina, built a fortress at Yanbu and organised his army with peculiar care.

His attitude towards the Ayyubids, the caliph, and the Zaidites of Yaman is to be viewed in the light of his central political idea. He did not suffer manifest signs of any foreign power in his territory, so that relations often became strained and sometimes even ended in open hostility. Nevertheless the caliph once invited him to visit Baghdad. It is said that Kataba started on his journey to the capital, but returned to his own country when he was met by an embassy of the caliph which had, in its train feltered rivals. No legend or fact, this much is certain, that Kataba modified his idea of the splendid isolation of Hijāz as verses which are typical illustrations of his negative attitude towards foreign powers. Probably his encouragement of the Zaidite occupation of Yaman is to be viewed in the same light.

In his last days he undertook an expedition against Medina. Illness, however, induced him to return to Mecca, where he was killed in 1221 by his son Hamda, who suspected him of having one of his relatives as a candidate for the throne. His descendant were ruling Sharifs of Mecca, until in 1916 Humaid converted the sharifate into a kingdom.

**KATAK** (cuttack), a district in Orissa (q.v.)

**KATANGA**, a province in the Belgian Congo.

**Geography and History.** Katanga is the most southern, richest and least populated of the four provinces of the Belgian Congo. It lies between 5° and 13° S. lat. and 21° and 30° S. long. It is bounded on the north by the eastern province and the province of Congo Kasai, on the east by Lake Tanganyika which separates it from the former German East Africa (now under British mandate) and by Northern Rhodesia; in the south, by Northern Rhodesia and Portuguese Angola; in the west by Angola and the province of Congo Kasai. The area is 200,000 square miles, about a quarter of that of the Belgian Congo. Its native population is also million and a half of Southern Bantu (Balabas, Lunda, Kasongo, Bangue, Bongo, Warun, Watambwe, Balui, Kuluolu, Kanoko and Batschock), while its white population is about 4,500, of whom the great majority are Belgians, about fifty Dutch, a few English, Americans, French, Italians, Portuguese, Greeks and Scandinavians. In 1922 there were forty-nine Hindus, eight Turks and fifteen Arabs and Zanzibaris. These figures have since been considerably increased.

The province of Katanga is divided into four districts — Upper Luapula, Lomami, Lulua and Tanganika Moero. A number of towns — Elisabethville, Ikisi, Albertville, Kongolo, Kahinda, Sandoa and Kambove — have arisen in it as a result of the economic conditions of which we will give a general account below.

We may add that Katanga enjoys a fairly temperate climate, especially south of the tenth parallel, in which the altitude varies from 3,500 to 5,500 feet and that it is well watered by all kinds of streams, such as the majestic Lualaba (upper reaches of the Congo river) which runs through it from south to north and is fed by many tributaries of which the most important are the Lubuli, Lulufa, Luapula, Luvu, Lavo and Lukuga, which flow from Lake Tanganyika. If the soil of Katanga, which is covered with a forest of more or less dense brushwood, is far from having the great fertility of the immense central depression which constitutes the most extensive part of the Belgian
Congo, and if it does not offer to the fascinated eye of the traveller the imposing beauty of gigantic forests, its soil, on the other hand, possesses wealth immeasurable. It is to the exploitation of this that the economic policy of the Belgian colonies has been primarily directed.

Deposits of tin are abundantly distributed between Lulua and Lake Tanganyika; two important coal mines are worked at Albertville and Lunda; uranium dykes, pipes of kimberlite and alluvial diamond-bearing deposits have been discovered in various places. Since 1922 the Mining Union has been working an extremely rich deposit of uranium which was found at Shikokolwé. In 1923, 450 tons were exported which enabled Belgium to produce several grammes of uranium of radium.

But the principal source of the wealth of Katanga is certainly the copper found in profusion in immense deposits worked by the natives before the Belgians came in, which the earlier travellers simply could not help discovering. The richness of the ore, the density which is 14.990, and the intelligent organisation of the industry have enabled 50,000 tons of raw copper to be exported in 1924. This production, like economic development in general, will certainly make new strides ahead when "white coal", the reservoir of hydraulic energy of enormous power abundantly distributed through the province, has been controlled and put at the disposal of industry.

The first methodical exploration of Katanga dates from 1890. Famous explorers — Burton, Speke, David Livingstone, H. M. Stanley in the Casamero, Böhm and Reichard and certain Belgian expeditions of the Association Internationale Africaine, representatives of which — Poppelin, Kamakou, Storms and Becker — founded the stations of M'Toa, Karuma and M'Pala on Lake Tanganyika — had of course, visited it previously. But it was only at the end of the nineteenth century, just when Cecil Rhodes was pushing his railway and British influence northwards, that the Congo Free State began to take notice of the urgent necessity of recognising and organising the most southern part of its vast territory. King Leopold II., sovereign of the new state, whose colonial plans did not meet with very great approval in Belgium, to realise this scheme had to have recourse to a private society, the Compagnie du Congo pour le Commerce et l'Industrie, with which he founded the Compagnie du Katanga.

This society was essentially a body for exploration and occupation, whose duties and rights were defined by the convention of March, 1891, which imposed on it the following obligations:

The placing of a certain number of craft on the Upper Congo; the building of stations — giving in the suppression of the slave-trade and the trade in spirits and prohibited arms — the organisation of a sufficient police service — the eventual exercise by its agents of the functions of the different branches of government service.

In return it received:

1) Full possession of a third of the lands belonging to the domain of the State, in the part of the valley of the Upper Congo lying to the north of the fifth parallel.

2) The right of exploitation of the soil of the ceded lands for a space of ninety-nine years.

But the division of the lands between State and Company raised serious difficulties and the necessity soon appeared of putting the properties of the contracting parties under joint ownership. There was therefore created in 1900 the special Committee of Katanga to which the State and the Company entrusted the management of their affairs. The resulting agreement provided that all the advantages or benefits to be gained from the exploitation and all expenses, charges and losses would be divided by the Committee in proportion of two-thirds for the State and one-third for the Company; the Committee would further have the most extended powers of administration and alienation without exception or reserve.

A decree of 1915 deprived the special Committee of the delegation of the functions of the executive powers, but made an essential modification in its functions as regards the administration of the patrimonial rights of the State and of the Katanga company.

This is the regime that is still in control of a purer reason for giving at length the circumstances that brought it into being is that it is at bottom extremely original and that — contrary to what is often thought — the position of the Katanga Committee is totally different from that of great companies like the Chartered Company of Rhodesia, or the British East Africa Company, and of other distant possessions. Nowadays Katanga has made great progress, thanks to the policy of the Belgian government and the activity of private initiative. The railway, which runs from Bukama to Sakania and connects the mining region with Lulua and with the railways of Rhodesia, has been equipped in a very up-to-date fashion and soon a new line will link it up by the Kasai river with the port of Matadi and the Atlantic Ocean.

Muhammadan penetration, the slave trade and the anti-slavery campaign.

History tells us that even before the High Arab barques were traversing the ocean between the Red Sea and the Persian Gulf, it was only when the great Muslim movement had made its immense advance into North Africa and caused the migration on a huge scale of the disciples of the Prophet, that we find the Arabs thrusting themselves to the methodical conquest of the lands round the Indian Ocean and building up important settlements in which those of Sifala and Zanzibar have from time to time had bursts of splendour and passed through periods of power and brilliance.

But this power soon began to degenerate and assume a new character. It passed into the hands of traders and exploiters for whom, as Privette said, "the normal state of society was the chthonian by them of the most convenient and most remunerative method of exploitation".

It is then that we find chiefs penetrating into the very heart of East Africa where the weak and poorly armed natives offered them no resistance and where they found vast riches, from ivory to human cattle, for whom the American planters and the Asiatic Muslims offered handsome prices.

Setting out from Zanzibar and the coast of Musumbi, the movement reached Lake Tanganyika at the beginning of the nineteenth century. It reached Katanga by the bay of M'Tota and spread through the whole of the eastern province by the road from M'Tota to Kalambala and
Katanga. A regular Arab power extending from the banks of Tanganyika to Stanleyville was established by the chief Tippo-Tip and his nephew Rashid.

We know (Stanley and Livingstone have given terrible pictures of it in their works) the horror which accompanied this invasion and the rapid disintegration of native communities which was produced by the constant wars, flights, endless migrations and continual capture of the most sacred links of family life. Europe was moved. Cardinal de Lasègue preached a holy war and on the initiative of Leopold II the civilized nations met in an anti-slavery conference in 1880. War was declared on the chief, Rashid, Sults and Kumulias. While Dzazla was fighting them in the south of the Congo, Commandant Jacques and his lieutenants fought fierce battles with them on the banks of Lake Tanganyika, at Katashi, Albukville and M'Fain, which were the most ruinous for the native population from the sources which had fallen upon them. What interests Artica and Turquaz lures the Muslims with promises and leaves a few landowners and merchants of France to good fortune. Some lands are on the point of being taken over by the Muslims in the east and the South of Tunis, and if this continues it is entirely possible that a large part of the French population, which has migrated from other countries, will take over these lands, which are now under Muslim control.

From the shores of Lake Tanganyika to Stanley Falls, we find at the present day negroes who produce timber. They are called arabischic "wangs-wangs." There is no reason to doubt that the Arabs used to make and still make serious efforts at conversion to Islam; nor is there any reason to doubt that a religion which, like Islam, preaches hatred of the Jews and recommends polygamy is especially suited to attract the natives of Africa. We must not, however, if we consider this influence serious in the eastern provinces, where we have important groups of arabischic natives at Katanga, Mangan and Sambesi, and the people of Rhodesia and of Ummadi (former German districts, now under Belgian mandate) it is perhaps not quite the same in Katanga. For if there are still a few arabischic negroes on the shores of Lake Tanganyika and along the old Arab roads, they are really very few in number and their religious education is of the most rudimentary nature. They like to wear a white dress to show their superiority over the other negroes and sometimes perform their fahar turned towards Mecca and fast in Ramadan, but for the rest they are ignorant and still believe, like their pagan kinmen, in spirits, witchcraft, superstitions and in the power of invisible magic.

It is an influence of this kind worthy of the attention of colonising nations! We think so, for one thing is certain: that the arabischic negroes very quickly give him a contempt for the kajar and for European authority and the Muslims do not hesitate to encourage these sentiments.

Alongside of the arabischic negroes there remain in Katanga a certain number of Arabs who have been joined by Muslim Indians. They devote themselves to trading with untiring industry and some of these possess substantial shops, doing a big business and have prospered exceedingly. Indeed, we are at the commencement of a powerful economic offensive, the strength and meaning of which no one would try to estimate.

Examination of the East.

The development of the East, like the rest of the East African coast, is in a way the result of the activity and business spirit of the immigrant Arabs and Hindus. To give an idea of the importance of this trade, it will be sufficient to consider that in 1922 Bombay and Calcutta exported in Tanazungadi Territory (under British annates) goods worth £ 675,000, the total imports being at most £ 1,136,300 and Great Britain herself participated to the extent of £ 292,000. The goods which reach Katanga by this route are mainly cloths, articles of clothing, blankets and a certain amount of foodstuffs, soap and miscellaneous articles.

As regards textiles, the Hindus and Arab merchants import the most varied kinds, but especially the white cottons called "American" and "Shady," which sell very well in the markets of Katanga. Not only do the importers attach a great importance to the quality and variety of their goods, but they pay special attention to the measurements of their cloths and pay careful attention to the rates of change and changing tastes of a clientele so fickle as the native of Katanga. They have been able to sell their goods in 1922 at the port of Albertville alone, 18,000 kilograms of chalis, 27,000 kilograms of American and 8,000 kilograms of cotton printed and dyed, as well as a considerable quantity of blankets and other goods.

Their activity is not confined to imports alone. They also export and will give an idea of the magnificence of this branch of their trade if we say that a single Arab house in Albertville in 1923 exported almost millions of francs worth of ivory. Several of these firms extend their activity from Zanzibar or Dir al-Salam to Albertville and from Albertville to the Stanley Falls. They have branches in the more important stations and have agents in their service and petty traders who are of great value to them, sober and active, living almost like natives, carrying on business at insignificant expense and thoroughly acquainted with the soil of the negro with its virtues and weaknesses, which they can flatter when necessary even — and particularly — to the detriment of the prestige of the Europeans; they carry into the remotest corners eastern influence with their wares.

In Katanga we can see an attempt at economic penetration which will have great developments and the figures which we have given ought in our opinion only to be regarded as stages in an increasing progression which, if European commerce does not take care, will assume considerable importance.

Is this economic influence susceptible of having a serious repercussion in other spheres? It should be premature to try to answer this question definitely before we know the conditions raised by Orientals in the Kenya Colony in 1923 created profound uneasiness there and that the commercial strike began at the beginning of the same year by Hindus and Arab merchants in Tanganyika Territory seriously disturbed the economic and political atmosphere of this colony. And then — and this is a thing which no colonising nation can afford to neglect — we are at the present wrenching the evolution of a phenomenon which an American author has styled "the rising tide of colour" and which may perhaps be a subject for grave anxiety for humanity to-morrow.

The peninsula was of some importance even in ancient times on account of its important situation commanding the Gulf of al-Bahrayn. A. Sprenger has sought to identify the Katara of Pliny (Natural History, vi. 28, § 147) with the inhabitants of al-Katar. The peninsula used to belong to the Sublime Porte of Oman. From 1832 till 1844 it was under the suzerainty of the Turks, who had a garrison in al-Bidari down to October, 1844, and belonged to the province of al-Abid, forming the kadi of the same name in the sanjada of Najaf the year 1853. Abd Allah al-Fudia has been lord of the peninsula. But part of it became independent earlier. For example, in 1809 Dawha made a treaty with England accepting her protectorate; in 1829 and in 1844 other places followed this example. Al-Katar is now under the control of the rulers of Central Arabia, Ibn Sa'ud, who has thus regained the position once held by the Wahhabis kingdom to the peninsula, which the Turks had for a time unseated.

Yμάν, appointed governor of the εἰθή, decided to ransack Mahallah to the command against the Arzāk, in which he had been replaced without rupture of its other chiefs. Subsequently, however, the rebels crossed the Durjaij and assuming the offensive, pursued them into the very centre of their power. Kūrān. Kāshāi nevertheless was able to hold out for a long time in his lines (it is to this period that a silver coin with a legend in Phāvāl and Arābic of the year 75- struck in the name of Kāshāi as Amir-ul-Mu'mīnīn, refers [Z.D. M.T.G., 1858, cii. 35, No. 393]). The dissensions that broke out within the Arzāk army between Arūn and Māwīl resulted in a split: Kāshāi had to leave the town of Dijrāj which was the Arzāk head-quarters and take refuge along with the Arabs in Tābāristān, while the Māwīl continued to hold Dijrāj under the command of their chief, 'Abd Kāhīr or 'Abd Rabbāh, (there are two individuals of this name among the Māwīl distinguished by the epithets al-Kāhīr and al-Šōqārī and the sources give the rank of commander sometimes to one and sometimes to the other, or even distinguish two groups of the Māwīl which separated successively from al-Kāhīr and were led by 'Abd Rabbāh the Great and the Lesser respectively). This division proved fatal, for Mahall had no difficulty in routing the Māwīl and killing their chief: al-Hāfizī, sent the Kāhīr warrior Sfyān b. al-Ahārīr against Kāshāī or rather the latter (according to a tradition recorded by al-Yāzīdī) as governor of Kāyī received the appeal which the sēyāh (local chief) of al-Sīta, Sītā, sent from the Fut, Prelates (in ša, Arābic, p. 794) addressed to him on behalf of the people of Tābāristān who were exasperated by the rigid application of the dhimma by Kāshāī. The Arzākis surprised by Sfyān's troops in a delir in the mountains suffered a decisive defeat, Kāshāī who fell under his horse and was abandoned by his followers was discovered and killed by a native. His head was cut off and borne in triumph to Kūrān and then to Damascusa appear to have been presented to the Caliph. The remnants of the Arzākis under 'Abdābī b. Hālīl al-Yāzīdī fled to the Shewar, a stronghold near Kūrān (Yapūnt, ill. 62) where they were stationed a long siege from Sfyān; having captured their supplies, they made a desperate sortie and were wiped out. The chronology of these events is far from certain: the sources which say that Kāshāī was in command for 13 or even 20 years are of no value. According to Wellhausen (ed. Rihīn), the election of Kāshāī as Caliph probably took place at the end of 69 A.H. and his death in 78 or 79.

Kāshāī b. al-Fudjā'ī represents in striking fashion the type of Khāristān intransigent and also that of Arab Safvī, half cavalier and half bigamist. Like the other Arzākīs, as a result of his fanatical zeal, he preached and practiced ijtīhād (immunization of anyone who did not accept the Khāristāni creed) and declared the wā'il (singular wā'ilī) dārūkhāna, that is to say those who, while professing the Khāristāni doctrine, abstained from taking part in the war against their adversaries. On the other hand, he was proud of his Arab blood and style of his Bedūin character; like several other illustrious Khāristānis, he had a real talent as raider and poet. One of his speeches is recorded by Dhīlānī, Dhīlānī, in 737; 'Abdī, ii. 195-196 (cf. also Fīrūzī, p. 125, 152); the fragments of his poetry that have survived to us, of which the most celebrated is the fragment

KĀTH, the ancient capital of Khūzestān, the modern Khvāraj, according to Vakīl, Mu'īnī, ed. Wūntafūn, iv. 222, the name means a wall (belīt) in the desert in the language of the Khwārīm, even if there were no buildings within it. The fullest accounts of the old town and citadel of Fīl or Fīrūz, which was gradually washed away by the Amla-Daryā (the last traces of it are said to have disappeared in 385-945), are given in al-Bīrūnī's [i.e.] Kitāb al-Ābāb al-Bihārī, p. 35, on which E. Sachau based his Zur Geschichte vom Kāthān von Khūzestān (Studien zur histor. Arch., 1873, p. 499-509). On the description of the town by the geographers of the 8th (kh. century of G. Le Strange, The Lands of the Eastern Caliphate, Cambridge 1905, p. 446 sq., W. Barthol., Turkestān wo esköndi mongolische nöktherz, 2, B. Petersburg 1900, p. 143 sq.; the fullest information is given by al-Ma'ālikī, ed. de Goeje, 1866, p. 237 sq.). The town lost its political importance when the dynasty of the first Khwārīmshāh was destroyed by the prince of Gurgandī, Abū Bābās Ma'ālikī b. Muḥammād, in 385-955 (cf. W. Barthol., Turkestan, ii. 275 sq.). Kāth is mentioned by Ibn al-Bīrūnī (called al-Kāthī by him; cf. ed. Defrémiev and Badmaz, ill. 20) as the only inhabited place between Khwārīm and Urgene (the ancient Gurgandī), during the 8th (kh. century) Kāth along with Havārīn before the rise of the native dynasty in Khwārīm, belonged to the Khwārīmshāh dynasties (Zafar-Nāma, Calendar, 1887, i. 222); this is shown for example also on the Chinese map of 1833 (Brittschrindsler, Medieval Indian Sources from Eastern Asiatic Sources, 1858, ii. 63). On the storming of Kāth by Tinmū in 1332 cf. Zafar-Nāma, i. 257 sq.; for the mention of P. Lorch, Khwārīm ove Khorāsān, St. Petersburg 1853, p. 137 that the army crossed the Aml-Đārī between Sīqārāh and Kāth, which would mean that Kāth even then was on the left bank of the river, there is no authority in the text. In the 15th (kh. cent.) Kāth was on the bank of a dry canal; Aštābān, Khan of Khvāraj (1664-1679), therefore built a new Kāth west of the main stream on the bank of the Yūnāsh which he
the landed property of the ruler. The whole system of kāthī was the Dragun [q.v]. This class of men became all-powerful and it was from them that the highest officers of state were recruited. They appear to have kept themselves apart from the other men of education, for only rarely find we any of them mentioned among the innumerable tradescants and theologians, though many are found among the men who made a mark as poets or authors in other branches of learning. As they were required to have a general knowledge of business and of subjects, authors only began to compose books for the benefit of this class and as this office maintained its importance the works for their benefit have come down to us in many copies. The chief works on the education of the kāthī are the Adbār al-
Kāthī of Ibn Kātsīla [q.v.], the Kāthī al-
Kāthi of Ibn Durāstawī, the Adbār al-
Kāthī of al-Salī, and especially the voluminous work of al-
Kāthīshāh. While the first three works give us an insight into the requirements of a competent kāthī in the earlier centuries, the Siyā-
šīṭāt of al-
Kāthīshāh contains practically all that it is necessary to know on the subject
We can not even say at all that the whole of Arabic prose literature from the simple and the letters of the earlier periods we can gradually to the bombastic composition of later times in which it is frequently difficult to discover the purpose of a document in the volume of sounding words. The disease was due to the real of the kāthī to outdo his colleagues or predecessors in the imagined elegance of his diction. We may owe many useful works to their authors' desire to supply the kāthī with the material for his compositions, but the whole striving for grandiloquence has been the cease for making such Oriental literature so indigestible to our taste. This is perhaps aggravated by Persian, Turkish and Indian kāthī. They were proud too when they could solve the meaning of the tangle of words and we get a glimpse at that mentality when a renowned kāthī like the Siyā-
šīṭāt of Ibn al-
Kāthīshāh objected to a litter being sent to him because the words were properly pointed and vocalised, as he considered it an insult to his intellect. Though the kāthī rose to high positions, they appear as a class to have been of a cowardly disposition, and could only intrigue; and I believe no one ever rose to become a ruler, which so many bold spirits succeeded in doing during the last twelve centuries.

Kāthīi. Shams al-
Dīn Muhammad b. 'Abd al-
Allāh, a Persian poet, born at Fārsch Wern-
wehr, a tribe of Turks in which he landed at Nauhān. He came to the court of the Timurid, where he did not receive the welcome he expected, and lived for a long time in Şirāz, where the prince Mūsā Shāh Tūshīn (635-777) had taken him under his patronage. He then lived in Aqbarzārd, where he was not appreciated by Inšādār b. Ḥasan, who
he immersed himself in the study of mysticism, and died of the plague at Asturibail between 838 and 839 (1434–1435). It was in the last-named town that he undertook to compose a Shama "a group of five poems" in imitation of Nikshan and Amir Khusraw but he only finished the Guldasteh Azar "Rosebush of Pious Men" and his Laila va-Majnun which of the only known manuscript is in St. Petersburg. In the field of ethical and didactic poetry he wrote a book entitled, Din va "The ten Chapters" or Awanah "Pon"; he also left a Divan of which ten quasus were published and translated by Blunt in his Centuries, p. 18–25, the Si-Avas "Thirty Letters", devoted to mystic love, and among the Majmun of allegorical and epic matter the Majmun al-Bahram "Confusion of the two Seas", which has a double rhyme, and can be read in two different metres and represents the mystic love of two personages named Na'am and Mauzur, and the Dilawir "Flashing of Hearts", an allegorical history of Kolud, king of the Yemen, and of his minister, sterile in ruses. His poetic success perhaps probably comes from the fact that he was a calligrapher, and he lived as a mulla in Nightguard from Mawdani Sattar, who later quarrelled with him. He spent all of his life in poverty as a result of the foolish profligacy which made him spend in a few days the sum he received from the munificence of his patrons.

(C. L. Huart)

Al-Katif, a seaport on the coast of the Persian Gulf in the bay of the same name. The latter, which faces due east, is about four miles broad at the entrance, and enclosed on the north by a narrow promontory, shaped like a bivalve shell, on which lies the fortress of Darin. Its point is called Ra's Yamama. The south side of the bay is confined by a jutting horn of land, called Zahrat, from a hill on it shaped like a sugar-loaf, which forms an excellent landmark for ships entering the bay. On this side of the bay lie the fortifications of Dumatul, towards the mouth of the bay lies the island of Tarut, from whose journey in length from north to south, well provided with water and thickly planted with palm groves. This island lies exactly opposite Al-Katif. The best and safest passage to the harbour of Al-Katif is through the deep channel on the north between the island of Tarut and Ra's Yamama; the channel south of the island is shallow and difficult to navigate. The waters of the Gulf are shallow only almost everywhere in the bay, and only show a level surface of water at high tide; when the still seas in saillessness appear, and little islands, shallows and landings of sea-plants, among which wind narrow channels filled with mud. The coast is very flat, except at a few places it is almost level with the sea.

It is significant of the change in the coast-line that Abu'l-Fida', (d. 1331) tells us that in his time Tarut was still part of the continent, and was only surrounded by the sea and became an island at high tide. As soon as the sea went back a part of the land between Tarut and Al-Katif appeared, so that people could pass along it to the mainland. According to him, Tarut was half a day's journey from al-Katif and rich in vineyards with excellent grapes. Al-Mas'udi (d. 956) puts the distance between Tarut and al-Katif at a mile. As Tarut is now an island, the sea has swallowed up part of the coast here. On the land side of al-Katif is surrounded by a broad girtle of gardens and orchards. The flourishing crops in the garden far surpass those of the best watered places in the interior, e.g. at Hufhuf. The date-palms does exceedingly well here in a soil richly irrigated, partly by salt water, which the flood-tide carries far into the interior, and partly from the fresh water springs of the adjacent hills. Cereals, wheat, barley, rice, and all kinds of vegetables, ligma, apricots, mangoes, pomegranates, grapes, citrus and lemons also nourish here. Through an uninterrupted succession of date groves, which it takes several hours to traverse, the road, in another direction, passes through like lace, the arches and canals of an old irrigation system, which date from the Karmatian period, and formerly supplied al-Katif with better water than could be had in the immediate neighbourhood of the town. The whole length of the system, now in ruins, must have been about five miles. Al-Katif has walls and towers. The western gate has a high stone arch of delicate work and is flanked by towers and walls which are now in ruins. Just outside the gate are two cemeteries. The town, which is about a quarter of a mile long, is damp and filthy, and with its suburbs has about 6,000 inhabitants; the whole district, according to Sa'di, had nine walled and seven open villages, the population of which including al-Katif is put at 23,000. The intermittent fighting, of which there has been some, has not modified its appearance. It now has a dismal, broken-down look. The marketplace, on which the products of the country are to be amply had, is large. At the inner bend of the small bay already mentioned, stands the powerful citadel said to have been built by the Karmatian Abu Sa'id al-Djamali, later used by the Puringeese, the high massive wall of brick and stone of which come down almost to the water's edge, so that only a narrow path along the shore is left, on to which open the main gate defended by an outwork. Close to the shore there is now also the customs-house. The outer court of the citadel forms a quadrangle and is surrounded by high walls with towers at the angles, now protected on the land-side by a ditch. At the southwest corner stands the old palace of the Karmatians, of which part has fallen in and been taken away and part has been very clumsily restored. The entrance is through a great archway in the Moorish style, supported by slender pillars, three arches deep and five long with fine cross-vaulting with arabesque in stucco, which have now for the most part fallen down. This archway leads into a long gallery, formerly covered, of which the side walls and pillars and a few arches remain. One next enters the inner court, which is surrounded by a series of chambers still fairly well preserved. A lofty room, long and
head, served as reception room, with five pillars in the centre and windows in the Persian style, divided into sections by little pillars. At the back of the room a raised throne still stands. Behind it follows a regular labyrinth of roofs, galleries, ornamented stucco and columns, and a long line of stories. The architecture of the windows, which are filled with pretty lattice work in stone in varying patterns, shows much taste. Behind the reception room is a court with large round pillars and remains of decoration.

The climate of al-Katif is very unhealthy; fever and other diseases have given the coast a bad reputation. The harbour, which was once accessible only to heavily laden ships, is now for the most part silted up, and accessible only to small vessels at high tide. The sand-banks which run out on either side make entrance difficult, may even dangerous. To the west and south the bay is well sheltered by the promontories and the islands of Térit and Suwail. It is also favourably situated for trade with the islands of Bahrain and Bh Marghe. It might even attain some importance as a harbour, if it were drained and kept in order and given better communications with the interior. The inhabitants of al-Katif are mainly engaged in pearl-fishing and in trading. Their type shows the strong Persian stamp, which dates from the pre-Muhammadan period.

History. A Sprunger has identified the bay with the Sineus Ceptus of Pityus, Not. Hist. vi. 28, § 147. Before the days of Islam, al-Katif, like the whole of al-Bahrain, was under Persian suzerainty. Shufair II about 329 A.D. conquered the whole Arabia coast beginning at al-Katif. In the early days of Islam there were still many Persians (Magians), Jews and Christians in al-Katif, as well as in the other towns of al-Bahrain. In al-Katif, however, the 'Abd al-Kai were predominant in those days. The whole country of al-Bahrain including al-Katif was submitted to the Prophet in al-Medina and came under the administration of 'Ali b. al-Hadrami. But when the general rising broke out against the Muslims after Muhammad's death, al-Bahrain was one of the first districts to proclaim its independence from the Caliph of Medina. In 1116 A.H. the rebels under al-Hujain ibn Dha'b occupied al-Katif, but the rebellion soon collapsed. In 67.6 A.H. there was an encounter at al-Katif between the 'Abd al-Kai and Najda b. Amir al-Haib in which the former were decisively beaten. Najda took possession of the town, which had risen against him, and took up his headquarters there. Much more momentous for the town than this transitory feud was the invasion by the Karmiats Abu Sa'id al-Husain b. Bahran al-Djannah in 320 A.H. Many inhabitants perished. Abu Sa'id had pitched his camp in the town and then undertook a bold campaign against al-Bahrain. The governor of al-Bahrain, Ibn Bani, gave battle to the Karmiats at al-Katif in 320 A.H.; the latter were defeated and suffered heavy losses, including Abu Sa'id's standard and a horse. The town was taken by Ibn Bani and Abu Sa'id had to abandon his campaign against al-Kaiar and hurriedly retreat. Al-Katif fell again into the hands of the Karmiats, who were soon reinforced from the al-Bahrain with Hazjar, al-Ahmar, al-Katif and al-Tatif. When at the period of decline of Karmiats power in 378 A.H., al-Afaz with a section of the Banu 'Man-

I. ḫaṭl as a crime.

1. In the Kurān unlawful killing is forbidden in a series of verses, which date from the second Mekkan period to nearly the end of the Medinan period. The passages may be arranged chronologically as follows (cf. Th. Nöldeke-Fl. Schaffner, Geschichte des Qu'rān, vol. 1, and H. Grünemeyer, Mohammed, vol. 2, when the exact order in the particular periods cannot be ascertained, the passages are here arranged in the order of the Sūras and verses): — xvii. 33; 35 (second Mekkan period); according to O. Prockshh, Uber die Blutmord, p. 74, note 4, later than vi. 152: "Kill not your children for fear of being hanged to want. We will provide for them and for you: vertil the killing them is a great sin. . . . Neither slay the soul which God hath forbidden you to slay unless for a just cause; but whosoever shall be slain unjustly, he shall remain in it covered with ignominy; for except him who repents and believes and performs good works: for them God will change their evil deeds into good." . . . (here killing and unbelief are considered together so that the question, what happens to a believer who kills unlawfully, is left quite out of the question); vi. 152 (third Mekkan period); similar to xvii. 33, 35; lv. 94 (about the years 3–4, according to Prockshh, op. cit.), 80, to be dated between the treaty of Al-Hudaybiya and the capture of Mekkah: "It is not lawful for a believer to kill a believer unless by mistake (yāna)"; but if anyone kill a believer by mistake he shall not save a slave who is a believer and pay a fine to the next of kin of the dead man, unless they waive it; but if the person slain belong to a people hostile to you, a slave who is a believer shall be released; but if he belongs to a people with whom ye have a treaty, the slave must be paid to his relatives and a slave who is a believer, if anyone cannot afford to do this, he must fast for two successive months so that Allah may look upon him again; if anyone kill a believer deliberately (with yam) his reward is hell in which he shall remain for ever and Allah will avenge him against him and cause him and shall prepare a great punishment for him" (the true interpretation is undoubtedly this, that every Muslim who kills another Muslim with yam is condemned to eternal hellfire and that Allah will not accept his repentance, a view which is ascribed to Ibn 'Abd, ibn Mas'ūd, Zaid b. Thābit, and Aḥmad b. Ḥallab; the view held by Ikhshid and others that the verse refers to the particular case of a nonbeliever who has killed a believer is not to be accepted; this is already a transition to the view that has finally prevailed, which takes down the literal wording of the passage, either by adding with Mālikīyah "unless he repents" or by holding, as has become usual, that Allah will not leave a Muslim eternally in hell, and can even remit entirely the threatened punishment of hellfire; but this is only the result of speculation and combination with other passages in the Kurān [e.g. xi. 108–110; xxix. 54] and is therefore to be rejected; iv. 33, 72 (from about the same time; similar to iv. 95); ix. 12 (probably dates from soon after the treaty of Al-Hudaybiya; similar to xvii. 33).

There are a few more passages in which it is asserted that Allah forbade the Jews to kill; ii. 78, 79 (from about the first half of the year 2 A.H.) and v. 35 (probably of the year 6 or 7); according to Grünemeyer, to be dated before the battle of Badr.

There are also a number of verses in which killing is not exactly forbidden but is more or less strongly deprecated and represented as a mark of the unbeliever, just as committing murder is a sign of the unbeliever, e.g. ixxi. 8, 9 (first Mekkan period); ii. 28 (probably third Mekkan period); according to Grünemeyer, Medinan, before the battle of Badr); vii. 138, 141, xvi. 61, 62 (same time); viii. 30 (after the battle of Badr); v. 33 (shortly before the capture of Ḥadīth). In numerous passages in this connection the unbelievers are reproached with the slaying of prophets, e.g. ii. 38, 87 (from the first half of the year 2); iv. 154 (after the outbreak of open war with the Jews of Medina); iii. 177, 180 (probably soon after the battle of Uhud); xx. 108 (shortly before the war with the Banu 'Nadir); v. 74 (later Medinan period).

2. Supplements to the Kurān passages from the Sīra, accounts of the life of Muhammad.
of a Muslim must despair of the mercy of Allah. In several passages the deliberate murder of a Muslim is considered equivalent to unbelief (bad'is in which a warning is simply uttered against murder being a sign of the unbeliever are, of course, not dealt with here). It is even said: "If two Muslims attack one another with swords and one kills the other, both go to hell (unless it was a case of legitimate self-defence), the slayer for his deed and the slain because he wished to kill the other" (e.g. Al-Bukhari, Dkri, had 3), which is not the case if all the inhabitants of heaven and earth together had killed someone they would all go to hell in these two passages it is not exactly demonstrable that eternal punishment in hell is meant but it is very probable. In several of the traditions mentioned, Ibn Abbas appears as the authority. Such hadiths were naturally rendered harmless by "interpretation" by the representatives of the other view, if they were not entirely suppressed, which did happen to not a few. Thus the description of deliberate murder as unbelief is sometimes interpreted to mean that it is a very grievous sin and sometimes taken as a reference to the refusal of the protection of Islamic law, which occurs in both cases, to the life of a player or of the unbeliever. The weight is not found sufficient, however, last traditions were put into currency to prove the contrary, namely that Allah would accept the repentance of a murderer, even if he had committed several murders; one of these traditions is provided with a grotesque story, the object of which is quite apparent, as corroboration. In one tradition the harran, especially the liberation of a slave, is represented as a means to save the murderer from the prescribed punishment of hell, obviously by someone who demanded it even in case of murder with samid (see below sub 64). It is even asserted in public controversy against the views of the other side that after the Day of Judgment no Muslim will go to hell and that, on the contrary, all sins will be forgiven them. The killing of a swine, a non-Muslim under the protection of the Islamic state, is threatened with punishment in the next world (e.g. Al-Bukhari, Diks, had 36; Al-Dhimm, Syr, had 50; the Kur'an is silent on the question); but, as might be expected, the view is very rarely expressed that this punishment is eternal. — The prohibition of suicide, which we do not find laid down in the Kur'an, is given in the Hadith and the suicide is threatened with eternal punishment in the next world.

As an appendix to the above we may briefly mention the connection of several kinds of animals with janah, which is also dealt with in tradition. Muhammed, who is related, recommended the slaughter of dogs but later withdrew the order, although the dog always remained subject to certain exceptional regulations (cf. the art. kudh). The swine furthers orders the killing of the manah, a kind of lizard, but if possible it should be done with one blow: on the other hand the killing of ants and of cats is forbidden (among the authorities for this last tradition is Abi Hurara); on the killing of snakes see Guillaume, The Traditions of Islam, p. 116 sq.

As regards the value of the traditions just quoted, the genuineness of none of them can be proved; while the falsity of those, which seek to save the murderer of a Muslim from hell, is
apparent, it is also probable of some which hold the contrary view.

43. The controversy regarding the punishment of the murderer of a Muslim centred round a passage in the Qur'an, which in itself could and must form a foundation for it, and is in part at least independent and original. This controversy and the conception of ʿ Катъ in general are, however, very closely connected with the disputes aroused by the ḳabdārj, ʿabd al-Muʾmin, and Maḥābār, for details see those articles; here it is sufficient to recall the following questions:—Is the committing of deadly sin and killing with a stone is certainly one of them—ubelievers? Can man create his own actions, including sins, himself, or do they happen through ʿ tbl⟩? Can man by his intervention interfere with Allāh's decision, for example by killing another shorter the period prefixed for the latter's life? We have more than one example of those questions being applied to ʿКатъ, and they have been cited in discussing ʿКатъ (cf. e.g. Goldziher, Verhandlungen über den Islam, p. 92 sq.; see, ed. p. 92 sq.). But the Miḥrābi's view of the sameness or likeness of human sin to sin committed for him who commits a deadly sin and does not repent is specially important in this connection; al-Zamakhshāri gives an explanation of the verse of the Qur'an in question from this point of view. Finally the conclusion of orthodox opinion agreed that the deliberate killing of a Muslim is certainly a deadly sin, but the slayer on the other hand, if he repeats and voluntarily submits to the punishment prescribed, will not be further punished in the next world and, even if he does not repent, will in no case remain in hell. Eternally (agreement was reached on this point even before the rise of the ʿFāṣis sects); therefore there is no ʿКатъ of the ʿMsūhānik on this question); this view has found its way into all textbooks of Fāṣis and of doctrine.

53. A statement of the prevailing Ibnāfi views on killing. ʿКатъ in the Fāṣis is the act of a man whereby the life of a fellow-man is brought to a close (the death need not immediately follow the act). It may be preceded or followed by any of the five ġarbi ʿCabub categories:—duty, necessity, (ʾədā), e.g. the killing of the warrourage recommended (ʾumūmah), e.g. when the ʿMālik kills his unbelieving kinsmen if they insult Allāh or His Prophet, permitted (ʾustuhb), e.g. when the Imam kills the unbelieving prisoner of war, in the case when the reason for killing him, exactly balances those for creating his life; killing in self-defence is also allowed i.e. in defending oneself against an illegal attack on one's person or property, in defending oneself or some one who comes to help, if the attack cannot otherwise be averted (on further questions see ʿКатъ also on the question whether a man, who is surprised in adultery with his wife is endeavouring to see into his hareem, and killing on that account, is acting legitimately or not; one addition on the subject is interpreted in different ways: disapproved (ʾustuhb), e.g. when the ʿIbbān kills his unbelieving kinsmen without their having insulted Allāh or His Prophet; illegal and therefore forbidden (ʾadrab). Illegal killing as the result of actions in themselves legal may take place in five ways:

a) as ʿCabub (or ʿКатъ), i.e. someone wilfully makes an
after the direct object of an action in general fatal as that the other item as a result; according to one view, the intention of killing is necessary for the conception of ʿCabub, which, however, is always presumed in the case of an act generally fatal in its results, which is illegally inflicted on another; so that, for example, any one, who strikes a blow at the head of another with an instrument adapted in general for killing, but inadvertently hits his neck and kills him, ʿCabub, ʿmārās is unanimously regarded as equally guilty with the man who strikes another in the neck with the same instrument, wilfully intending to kill him and slays him; this killing is a sin (ʾmūzuk), and is general is punished by ʿКатъ, or else the slayer is bound to pay the heavier sins and to lose any possible legacy from the deceased to himself; ʿCabub, ʿmārās (or ʿКатъ), i.e. there is no intention of committing an act illegally on the other as in the case of a), while the action itself is presumptuous: two kinds are distinguished, according as the ʿКатъ (mistake or misadventure) which shows that the killing is not wilful, is in the intention of the doer (ʾmūzuk) or in the carrying out of the action (ʾmūzuk). The former is the case when someone tries to wound another as a wild beast or a ṣawā, (an infidel: not enjoying the protection of the Islamic state, against whom the ʿКатъ is to be waged) the killing of whom is not illegal, and kills him; the latter, when someone unwittingly hits another, while shooting at a target or at a ṣawā, so that he does not strike at him, or strikes at the head of another person but inadvertently hits the neck of a third person, and kills him; this killing is not an act brings with it (without the obligation upon the ʿКатъ of the slayer to pay the heavier sins and to lose any claims to any inheritance from the deceased as in a); besides the obligation of the killer to perform the ḳatāfa, ʿCabub, ʿmārās (or ʿКатъ) ʿmārās (or ʿКатъ) is similar to ʿCabub, i.e. someone intentionally makes another the direct object of some action, not always, but sometimes, fatal, and death results. Actions which experience has shown not to be fatal at all are thus quite excluded, such as striking the hand with a red pen; if anyone dies as a result of such an action as this, it is an unfortunate accident, which is not followed by any penal consequences. This killing is a sin and brings with it (without ʿКatāf the obligation upon the ʿКatāf of the slayer to pay the heavier sins and to lose any possible inheritance from the deceased as in a), and in addition the slayer is bound to perform the ḳatāfa. This category only exists in cases where death actually results; in cases of bodily injury, which, by the way, are absurdly classified, the act is regarded as ʿtale; ʿCabub, ʿmārās (or ʿКатъ) ʿmārās (or ʿКатъ) or ʿtale maṭārīl ʿhā (or maṭārīl maṭārīl ʿhā or ṣawā waṣāra al-ʿʿārā) "equivalent to ʿКatāf", i.e. the factor of deliberation is lacking in the action (and also the intention of directing the action illegally against another) in the circumstances of a) and c), for example: someone falls upon another in his sleep or falls from a roof upon him, and kills him; the legal results are the same as in a); ʿCabub, ʿmārās (or ʿКатъ) ʿmārās (or ʿКатъ) and do not report it to the authorities, ʿmārās (or ʿКатъ) ʿmārās (or ʿКатъ) and do not report it to the authorities, together with the fact that another was killed without doing anything directly against him; e.g. he digs a well and someone falls into it and dies as the result; sometimes this category is treated as a subdivision
of .yy; but it is a matter of indifference, whether the act, which indirectly results in the death of another, is deliberate or not, intentional or non-intentional; even if the action has been planned in some very cunning way such as setting a savage beast on another person with the intention of causing his death, it does not alter the situation. The legal consequences are in any case limited to the obligation upon the šayta to pay the lighter "dāya; larger works on this usually discuss very fully the question what acts are to be considered direct causes of death and which are "dāya" and in which there can be no question of a causing of a death so that no legal consequences result.

Two cases are especially dealt with in the Fiqh books: a) The causing of a premature birth or abortion and b) killing through giving false evidence.

a) If in causing an abortion or premature birth, the midwife — which must be sufficiently developed to be of human form — is brought into the world dead or dies after the birth or the mother dies, it is not a case for the application of "dāya" there is in any case no "dāya" mand in the mother whose killing is dealt with under the above rules and the embryo before completion of birth is legally not in full possession of its powers but is usually regarded as a limb of the mother. Hence we have the following law: if the head of a child appears out of the mother's womb at birth and the child cries (and is therefore certainly alive) and then someone cuts off its head, it is not a case for "dāya" only and the punishment prescribed for producing an abortion is to be inflicted. Different amounts are to be paid for the embryo according to the different cases but if it comes alive into the world and then dies the person who causes its death is liable to "dāya" mand; he also loses any inheritance that might have come to him. If anyone is killed on evidence which shows that a crime deserving death has been committed and then the witnesses recall their evidence or in other ways it is proved that their testimony was false, "dāya" cannot be executed on the witness the "dāya" must be paid, the heavens if the false evidence was deliberately given, the lighter if otherwise.

b) We may add the following — taking only the most important points — to the above exposition of the Hanafi system, with reference to "dāya" (difference of opinion among the schools).

a) On "dāya": the difference of opinion within the Hanafi school is already mentioned, regarding the part of the intention to kill in "dāya" is also found outside the Hanafi school: among the Shafiis the view which does not demand the existence of the intention to kill has become predominant, and the evidence for the other views is sometimes interpreted as meaning a presumption of intention. Abu Yusuf and al-Shafii, in agreement with Malik, al-Shafi, and Ahmad Ibn Hanbal, assume "dāya" if the action is as a rule fatal; Abu Hanifs, on the other hand, limits it to the use of a weapon or of a thing which can be used like a weapon to cut off limbs; among such he includes fire; deliberate killing, for example with a large sharpened stone, or a big stick, which in the ordinary way would kill, or by drowning in water, which would be generally regarded as of sufficient depth to do so, is therefore considered by the former as "dāya", but by Abu Hanifs as "dāya" "mān" relying on a passage in the so-called first temple speech of Muhammad, which the champions of the other views naturally interpret otherwise, and this view was later considered the better by the Hanafis. The qualification of the various actions generally differs somewhat considerably and the Hanafis often make use of "frīd", exercise of discretion. In the Malik and Hanafi view no "dāya" is to be performed for "mān". al-Shafi says, on the other hand, demands it if the "dāya" is not executed and both views are given on the authority of Abul Fazl Ibn Hanbal.

b) On "mān": that "mān" is a crime more explained in mind is that it is neither permitted nor forbidden but that this killing is ratherคลש al-bedāyah, “action of a thoughtless person”, and is to be judged in the same way as the act of a mentally defective person or of an animal. Except in the Hanafi mas'hab, categories a) and b) [sub 3] are not distinguished from "dāya" which also was the earliest Hanafi view (Z.D.M.G., viii. 338) and that "dāya" has generally the same legal consequences as "dāya" we thus have three kinds of "dāya": "mān", "dāya" and "dāya", of which "dāya" and "mān" are considered to be composed of "dāya" and "dāya".

c) On "dāya": this category is also called "dāya". "dāya" and or "dāya" mand in contrast to it, "dāya" is also called "dāya" mand and "dāya" also "dāya" (more "dāya" or "dāya"); the application of "dāya" is said to be permissible by al-Shafi if the killer, for example, repeats the blow with an instrument not normally adapted for killing so frequently that the person attacked dies; the act is then considered "mān"; one of the two opinions handed down on the authority of Abul Fazl and al-Shafii, is the same effect while the view that became predominant in the sharia was to the contrary. Malik allows "dāya" in "dāya" and "mān" in general.

d) On "dāya" al-šahādah: Malik, al-Shafi and Ahmad Ibn Hanbal demand "dāya" in addition, if the placing of the causa of the death was illegal.

e) Different views also prevail as to the amount to be paid for the killing of an embryo.

f) On causing death through false witnesses if the false evidence was deliberately given, according to al-Shafi, and the better known opinion of Malik, "dāya" can be executed on the witnesses.

2) Notes on the question of permission, request, compulsion and assistance in illegal killing. a) If someone kills another by his request or with his permission there is neither "dāya" nor obligation to pay off.

b) No definite punishment is laid down for the case of a request to kill someone; such a request does not mean the exasperation of the slayer, nor if the person requested is a minor or a slave claims may be made from the "dāya" of the minor, or from the proprietor of the slave.

c) A force B to kill C; then, according to Abul Fazl, the "dāya" is executed on A, according to Malik and Ahmad Ibn Hanbal on B, as to al-Shafi's view, there is no doubt that A is liable to "dāya" as regards B both possible views are transmitted, of which the one that ultimately became predominant in the sharia makes him also liable to "dāya". Malik further makes it possible liable to "dāya" if the compulsion comes from a person having authority, or from a master to a slave.
The punishment of death may be described generally as ^qadd; in the following account cases in which it is applied are given in order; in contrast to ^raf and ^hal (cf. below) ^hadi is also used in the narrower sense of execution with the sword.

1. In the cases of illegal killing described in detail above, the nearest relative of the dead man, who in this capacity is called ^i'llat al-^asal, is entitled to kill the culprit in retribution if certain definite conditions are fulfilled. This punishment is called ^hadi or ^hadd. Names also cover retributive cases for wounds which are not fatal; for further information see the article ^hadi.

2. There are special regulations regarding sorcerers (^shirah), about whom there are also various traditions. Malik, al-Shafi'i, and Ahmad Ibn Hanbal recognize sorcery (^shirah) as an actual crime. Ahmad disputes this, but there is a consensus of opinion that it is forbidden to study it; it is even described as unbelief (^ift). almost as a general rule. Malik and Ahmad Ibn Hanbal say that the sorcerer is to be killed with the sword simply for studying, teaching and practising magic; al-Shafi'i limits this punishment to the case in which someone has been killed by sorcery (i.e. he makes it a case for ^hadi, which in practice is only justified by the confession (^ift) of the guilty person, while the punishment in Ahn Hanifa, Malik and Ahmad b. Hanbal is regarded as ^hadd, two different, more lenient views are credited to Ahd Hanifa. Opinions differ on particular points, such as whether the conversion of the sorcerer affects a remission of the punishment, whether a woman is to be punished equally with a man, how sorcerers of the Ahl al-Khulafa are to be treated, how far soothsaying is to be considered sorcery. 

3. The punishment of death by stoning (raf) in certain circumstances also by the sword (hadi) - occurs as ^hadd in certain cases of immorality; on this see the article ^raf.

4. High-way robbery (^af al-penn) may also in certain circumstances be punished with death. The authority for this is Qur'an, v. 57. 33 from about the year 6 or 7, before the conquest of Khaibar. (It seems the year before the battle of Badr). 

The punishment of those who fight against Allah and His prophet and take up the sword upon the earth that they shall be slain or crucified or have their hands and feet cut off or be punished in the country. This is their horrible situation in this world and in the next world they shall be severely punished - unless they repent before ye have them in your power, xxi. xii. It can be asserted with certainty that this refers to the unbelievers, very probably to the Jews; ruthless war is ordained to be waged among them and their repentance is the adoption of Islam. There are still traces of this interpretation in the commentaries. But in general this passage is connected with Muhammad's attitude to certain ^manqad's which will be dealt with in section 3: this cannot be correct, if only because the procedure there practised does not entirely conform to these rules, so that they were forced to restore harmony in a different fashion. Those ^manqad's were considered as highway robbers, from the point of view of the later definition rightly and only in this way could a law for the punishment of highway robbers be found in the Qur'an.

The more important laws of the ^Shari'a are the following: Only such persons as are adults in full possession of their faculties and who are able to be dangerous to travellers are to be considered highway robbers. According to Abi Hanifa, highway robbery can only take place in the open country, according to Malik, al-Shafi'i and Abi Hamid Ibn Hanbal in the town also. Malik gives the ^tin and this is certainly the correct interpretation of the passage in the Qur'an, which is also found in the commentaries - absolute freedom in the choice of punishment, even in the contingency of a cumulative application, whatever form the robbery may have taken; but the person concerned has killed someone (in this connection killing implies a murder to which ^hadi might be applied), he must at least be executed with the sword. The three other ^inn give the punishment to fit the different forms of robbery on the highway; according to Abi Hanifa, the ^tin is put to death if he has caused the death of his victim; if he has also robbed him (and in such a way, it must always be understood, that the ^hadd for theft cannot be carried out; cf. the art. ^shirah), he may be further punished by cutting off his hands and feet on alternate sides, and with crucification (^shirah) which in that case takes the place of killing with the sword; if he has only committed a robbery, we have only the cutting off of hands and feet on alternate sides; according to al-Shafi'i and Abi Hamid b. Hanbal, he is killed if he has killed his victim; if he has also committed a robbery, he is crucified after being put to death; if he has only committed a murder, he is punished by cutting off his hands and feet on alternate sides; if he has only made the neighbourhood unsafe, then, according to Abi Hanifa, al-Shafi'i and Abi Hamid b. Hanbal, he is put in prison; whether this must be done in another place is a debated point; in Ahn Hanifa and Malik also in some ^Shafi'ite traditions but their view is rejected by the school) crucification consists in the criminal being tied alive to a cross or a tree and his body ripped up with a spear so that he dies, and this is certainly the non-arabic form; according to al-Shafi'i and Abi Hamid b. Hanbal he is killed with a sword and then his corpse is ignominiously exposed on a tree or cross. All those punishments are ^hadd and a right of ^tin; therefore any remission by the ^i'llat al-^asal of the ^hadi is of no avail even though it is he who has the right to carry out the ^hadi. If the criminal repeats before he falls into the hands of the authorities (what exactly is meant by remissiveness is disputed) those ^hadd punishments are dropped; but claims by individuals to ^hadi etc. can still be enforced against him.

5. The ^manqad, that is the renegade from Islam, is liable to the death-penalty if his apostasy is proved. If we leave out the passage dealing with the ^manqad (q.v, who are separately dealt with - their execution is, however, described under
certain conditions in Kor'an, iv. 91 — there is no such law in the Kor'an referring specially to the crime of apostasy in Islam in the Kor'an, xxvi. 115 (third Meckkan period), ii. 239 (of the year 2), ii. 85—86 (Medina; placed by Girme into the wrong period before or at the battle of Uhud), 102 (soon after the battle of Uhud), iv. 156 (of the same period) threatens the eternal punishment of hell for all those who apostatise from Islam and do not repent, as well as for all unbelievers, and in iii. 95 sq., 142, and iv. 67 a warning against apostasy is uttered. Among the punishments we find in various forms the story that Muhammad, contrary to the rules of the Shara'i, cruelly mutilated and killed some murtadd's, who had killed one or more of his headmen and driven away the camels, but the tradition is probably correct just for this reason. This contradiction was felt and an endeavour was made in the hadiths to justify the cruelty of the punishment, and even the text was altered. Of 'Ali also a cruel act, of another kind, however, is recorded, in a similar case, but Ibn 'Abbâs is said to have protested against it. Two murtadd's, each of whom had killed a Muslim, were executed by Muhammad's orders after the capture of Mecca; a third man, against whom there was nothing but his apostasy, was also placed on the list of the prescribed; his foster-brother 'Uthman, however, obtained security (mawla) for him although Muhammad would gladly have seen someone kill him before immunity was granted; he later became a Muslim again. There is also a saying of Muhammad's: "Stay anyone, who changes his religion" or "He who changes from you shall die," and similar stories, e.g. that the blood of a Muslim could only be shed for apostasy (kafâ) and 'idâ 'amâ; there is also a story that Mu'mâdh b. Qubah killed a murtadd because Allah and His Prophet had so ordained; Muhammad is also said to have ordered that conversion should first of all be attempted and a period of three days allowed for this; but all this can hardly be genuine. There are also the traditions regarding the Abî al-Kâdhîm (cf. the text annexed) who refused the shahâdah and were treated as apostates by Abî Nâkhîr. The tradition: "He who is a good Muslim will not be punished for his sins from the pagan-period but he who is a bad Muslim will have them counted against him does not refer to the murtadd, as it is usually said to do. The punishment of death laid down by the Shara'i for the murtadd in some times described as harsh, seems to be in the latter view he is simply killed as an unbeliever (kâfîr) and the punishment need not be carried out in every individual case. Only, an adult in full possession of his faculties and not acting under compulsion can become an apostate from Islam; opinions are divided regarding a woman who apostatizes while intoxicated or a minor (on the verge of his maturity) capable of discernment (munâzil, samwâr); there is also difference of opinion regarding the attempt at conversion and the granting of a period, usually fixed at three days, for reflection. If the murtadd does not repent, he is to be beheaded with the sword; torture and similar methods of execution are forbidden, according to al-Shââbî's, his head is left to his owner, if he is a slave, Abî Hanîfî and his school limit the punishment of death to male apostates and the consensus of opinion excludes the minor; a woman (and also a minor) is imprisoned and beaten every three days till the repent; according to Abî Hanîfî (contrary to Abî Ya'rub and al-Shââbî), she may also be made a slave and this is recognised as right by the school. Anyone who puts to death a murtadd of whatever kind without powers granted by the authority, is generally liable to, and only to, 'idâ 'amâ. The same rules generally hold for repeated apostasy.

Similar to the punishment of the murtadd is that of the 'idâ 'amâ, i.e. anyone who, professing to be a Muslim, is really an unbeliever or any who belongs to no religion (cf. Massûgin, Al-Hâfîz, i. 178 sqq.). The conversion of a non-Muslim to another non-Muslim religion is similarly dealt with, although such an one is not called murtadd. He can only escape punishment by adopting Islam, on the whole of this cf. Goldzihâr, Muhammadiâsche Studien, ii. 315 sqq.

How exactly one becomes an unbeliever and therefore a murtadd is disputed in particular, especially the question how far this is the case with irreverent utterances regarding Allah or one of His prophets; there are various special statements regarding the latter, which threaten the death penalty to non-Muslims and in part allow a Muslim no remission of punishment if he recalls the words.

For further information see the article MURTADD.

(6) There is no law in the Kor'an for dealing with a man who omits the jumâ (vital prayer) (jumâ al-ânârî), where its performance is on the other hand, often strictly enjoined, and not a single unequivocal hadith on the subject can be found — quite apart from any question of genuineness.

The Shara'i lays down the law as follows: — Anyone who does not perform the jumâ as in duty bound, without denying its obligation (anyone who does this is murtadd) and has no — even even — excuse for this, according to Mâlik, al-Shââbî; and the more popular of the two views credited to Abû Hanîfî, if he does not strive, i.e. makes good his mistake, and says he will never commit it again, is to be executed with the sword. This punishment is also sometimes described as 'idâ 'amâ. According to Abû Hanîfî, the culprit is imprisoned till he again performs the jumâ. In all these views he is considered a Muslim, while the other view attributed to Abû Hanîfî deals with him entirely as an unbeliever, i.e. a murtadd, but these regulations are modelled on those for apostasy (cf. the remarks on the Abî al-Kâdhîm above).

There are two more cases in which the suppression (khiât) of the enemies of orthodox Islam is prescribed: killing, of course, plays a main part and therefore we must discuss this aspect of the process here. (7) Firstly, the fighting of the jauhâr is prescribed. It is found in Kor'an, xlix, 8 (late Meccan period). If two parties of the believers contend it (from which jauhâr is the plural of the participles, fight against the party which oppresses until they again obey Allah's command), and if they do this, make peace between them with equity and set with justice (this refers to a squabble among the amirs). Oppression is often forbidden and disappeared of elsewhere. But Muhammad at any rate did not know the later conception of jauhâr, although
development begins at a point closely connected with this. Some traditions on theburgh are in agreement with the legal enactments.

The Shari'a understands by ṣahabah sectarianising Muslims who reject the authority of the Imam, are able-bodied, so that they might offer resistance, and justify their attitude, although erroneously, with their dogmatic conviction (they are to be distinguished from highway robbers, for example — individual ḥuṭṭah, who are guilty of breaches of the law are punished like them — on the one hand, and unbelievers on the other). If they do not attack the orthodoxy community, they need not be attacked; otherwise the suppression is a duty of the Imam (the head of the Islamic community) and a faṣṣah al-ḥuṭṭah for the Muslims (cf. the art. FAKH). This punishment is also sometime called ḥudh. In general the rule is that only participants in the actual battle can be killed during the fighting. Pagilvies, wounded, those who surrender and prisoners, as well as women and children, cannot be put to death. According to Abū Daffa, the Imam may kill a prisoner if he knows that he would again join the ḥuṭṭah if spared; according to him, a captured slave who has been fighting by the side of his master can also be killed.

(3) Regarding the ḥuṭṭah see that article; there are also traditions concerning the following regulations. If the unbelievers with whom war is being waged are not among those from whom the ḥuṭṭah can be taken — who exactly those are is a matter in dispute — the men are killed, if they do not adopt ḫalās and the women and children enslaved. If, on the other hand, they refuse ḫalās and will not give the ḥuṭṭah, they are to be fought. All able-bodied men can be killed as long as they are not taken prisoners; men incapable of bearing arms, as well as women and children, cannot in general be dealt with unless they take part in the fighting or assist in it in some way; they are to be taken prisoners and enslaved. The free, able-bodied prisoners may be (a) executed with the sword if they do not now adopt Islam; (b) made slaves; (c) exchanged for Muslim prisoners; (d) ransomed; (e) or set free without a ransom being paid (in all these cases by the Imam). Anyone who kills a prisoner without authority is only punished with ḥudh.

Every unbeliever who does not pay the jīzah or does not belong to a people which has a treaty with the Muslim community is not a muslim (on those cf. the art. ṢULĀH) is kalāl al-dīn (to be killed with impunity) and may at any time be killed by any Muslim without his being liable to ḥudh or to pay any jīzah or perform ḥudh. This enactment is only the natural consequence of the ḥuṭṭah law and Muhammad himself not infrequently made use of it.

(9) The views of the Shafi'is on all the points dealt with above agree almost entirely with one or other of the Sunni schools. It would take up too much space to deal with them in a similar fashion.

(10) The infliction and execution of the death penalty was in practice very often in strong contradiction to the regulations laid down in the Shari'a (cf. the art. SUNNA; SNAEC Hurgeno, Freywilde Geschichten, ii. 290, etc.). The historian afford many examples for the actual practice and so do accounts of European travellers; on the conditions in the empire of the caliphs in the tenth century see M. De Renan's Geschichte der Islam, p. 347 sqq., and Rammayen, Al-Matbói, i. especially p. 220 sqq., 232 sqq.; on those in Egypt, see the first half of the nineteenth century see Land, Manners and Customs of the Modern Egyptians, end of the chapter on Religion and Law; on those in Persia in the same period see: Polak, Persien, i. 328 sqq.; on those in the Ottoman empire of the eighteenth century see Mourad's Othman, Tableau General de l'Empire Ottoman, especially vol. vi. (1824), p. 244 sqq.; for Turkey the Traditional are also useful (cf. Mitteilungen aus osmanischen Geschichten, i. 13 sqq.); among the published sources there are of special importance: Dageon, ii. 265; v. Hammer, Sennegn (125, 132, 133, 145—150); T. O. E. M., iii. (1328), Appendix 27 sqq., 82, 91; 96, 56, 141 sqq. and from Kermānī himself (edited there; p. 19—21, 32—34).

Bibliography: The Fihā-book, the works given in the article Aḥṣaf, especially Jassaf, Handbuch des Islamischen Geistes, p. 284—309, and the literature there given; the articles Murād and Execution in T. P. Hughes, A Dictionary of Islam. Besides the articles already referred to, the article Aḥṣaf and those dealing with the Arabic expressions not explained above should be consulted.

(J. Schacht)

KĀṬRĀN B. MANSŪR, a Persian poet.

Aṭīf calls him Kāṭrān al-ʾAḥṣaf al-Turābi, according to Dawlatshah, he was born in Tirmidh. Others say he was born in Tjarāb-dāl Daiam; Dībānī also found as his name. Dawlatshah says that he spent some time in Bahk and later lived in the Hijāz. The period of his literary activity lies about the middle of the eleventh century A.D. Nāṣir-i Khusraw mentions in the Safarauzāna that he met Kāṭrān in Tahran in 438 (1046); a well-known poem by Kāṭrān commemorates the earthquake in Tahran in 434 (1042/43). According to a tale quoted in Riaa, Supplement, p. 146, our poet died in 465 (1072). He was the panty-artist of the rulers of Daiam and of Alkaharāba; among his patrons are mentioned the Amirs Fāṭim, Wāḥidān, Abū Nāṣir Mālān b. Wāḥidān, who was appointed over a part of Alkaharāba by the Silkānī-Sultān in 450 and Muhammad b. Kamāl (according to Dawlatshah, govern of Bahk and Sanjal; if this is correct he long survived the poet) and further the Ḥāfiẓ Aḥṣaf al-Dāwāh, as is indicated by the epithet ʾAḥṣaf given by Aṭīf.

Works. Kāṭrān left a Dawa (manuscripts of which are found in European collections) and a maḫżūna called Kauwānā. The poems of Kāṭrān are sometimes wrongly attributed to Rūḍagān in manuscripts; the confusion is caused by the similarity of names of their respective patrons (Nāṣr b. Abī ʿAbd al-Sāmāl in the case of Rūḍagān and Abū Nāṣir Mālān in the case of Kāṭrān). On this question cf. Rūḍagān and Pseudo-Rūḍagān by E. Denkran Ross in J.A.R.S., 1924, p. 609 sqq. Criticisms on the poetry of Kāṭrān are given by Nāṣir-i Khushnaw and Wawāz. The former says, curiously enough, that Kāṭrān did not know Persian well but otherwise was a good poet; Wawāz (in Dawlatshah) places him very high and allots him a special position with regard to the other poets. Aṭīf's verdict on Kāṭrān means very little for us, this author regularly introduces each of his biographies of poets (if we may so call his inhalted empty prose) with a rhetorical eulogy of the person.
is question. But he is at least to the point when he says that Katrān was fond of rhetorical artifices and particularly of the kind called tadbīrā (cf. Ibn Kašir al-Katārī, Majmūʿ al-Ghiyāmah, ed. R. S. 309 E.). The only quotation from Katrān given in the Kāla's manual of poetry (p. 312) is quoted to illustrate one of the varieties of tadbīrā (tadbīrā hāma). On Katrān's skill in managing the more difficult poetic forms cf. also Dwâlatbāsh, p. 47, n. 47.

Although the Dwâlatbāsh is not yet published this can form a fair opinion of the skill of the poet from what is in print. A few tadbīrā's and fragments of tadbīrā are given in Schefer, Chrétienotchie Perrvme, ii. 230 sqq.; others in Brown's edition of 'Awfī, Zābīl ud-Allah (ed. 214 sqq.). All that is given in Dwâlatbāsh (ed. Brown, p. 67, sqq.) is also found in 'Awfī, only Dwâlatbāsh gives much less and has a few unimportant variants. The oft occurring substitution of Arabic terms for the rarer Persian words is also found in him; thus the less well known dhawār (sw. f. 1. ; 'Awfī, l. 215, sqq.) becomes in Dwâlatbāsh (p. 68, 1.) thawār and the verse is, of course, nonsense (or it may be that we have simply a copyist's mistake). It may be assumed that Dwâlatbāsh, as far as the poems are concerned, is simply copied 'Awfī.

In the poems quoted in Schefer, rhetorical artifices are not more used than in the other panegyrist, but example Minuštī: or Arâkāfī: we had among other figures Tadbīrā ud-Tadbīrā, p. 245 sqq.; p. 246, 1. 44, sīrānī, p. 246, 1. These poems have something in common with the old panegyrics, the three fragments of tadbīrā's descriptive spring, autumn, and winter, contain themes already known from Minuštī, such as the comparison of wine grapes with pears, namely negroes and Rūm's, while Minuštī compares them with little girls.

Katrān gives more prominence to the epic element in his panegyrics than do his predecessors. The first poem in Schefer (ii. 240) is noteworthy in this respect; its somewhat contrivances a victory of the Amir Wâhāb b. Wâhâb and Manlūn, and the victory quoted sung (p. 243) to Manlūn, the tadbīrā of which contains the description of the earthquake which demolished the town of Talbīz in 454 (1063) is equally noteworthy; this description in this case the main thing. The fragments in 'Awfī are only chosen for the sake of Katrān's by this author. The tadbīrā found here is almost exclusively the tadbīrā ud-tadbīrā (Ibn Kāla, p. 343). The tadbīrā ud-tadbīrā (cf. Ibn Kāla, p. 315) is also found (p. 214, 1. 12; gūdāwī) and tadbīrā (cf. Ibn Kāla, p. 315) in the second part of the diathic (Awfī, l. 214, sqq.).

The rhetorical effect achieved by means of homonyms (tadbīrā ud-tadbīrā; cf. Ibn Kāla, p. 309), of course, occurs, e.g. 'Awfī, l. 216, 1. 21, where the word for is repeated four times each time with a different meaning. It consists these fragments offer nothing new or noteworthy.

The prominence delicately given to the narrative element in the court-lyric may be an innovation of Katrān's own. That his last work was followed is shown by Dwâlatbāsh, who only calls Arâkāfī a pupil of Katrān's but also mentions others (Râshī, Rūbī, etc.) and * most poets of Râshī and Thânh."
In the 14th century Kauwāl obtained great importance as an exporting harbor and the main depot for the tobacco grown in the neighborhood and in the whole hinterland (Drunnat, Seves and Xanthi). In the years before 1913 this brought the Turkish Tobacco Region an annual profit of over 10 million francs; the tobacco is for the most part manufactured in Kauwāl and every year 5,000-6,000 people from the surrounding country come into the town for five months for this work. This is probably why the figures given for the population differ so much (cf. e.g. Shani, Kandir al-Hüns, v. 3704). According to an accurate calculation, before the Balkan war there were 17,000 Greeks, 13,000 Turks, 18,000 Jews and 30 Bulgarians in Kauwāl (Nicolaidis, Griechenland, Antike an den Balkankriegcn, Vienna and Leipzig 1914, p. 232). The town at that time was the capital of a large of the same name in the sandjak of Drama in the vilayet of Salonika.

The treaty of San Stefano (March 13, 1878) had already given Kauwāl to Bulgaria. In the first Balkan war the town fell into the hands of the Bulgarians (Nov., 1912) but in the second Balkan war it was taken by the Greek first (July, 1913) and finally incorporated in Greece by the peace of Bucharest (Aug., 1913) in spite of Bulgaria's protests (Nicolaidis, op. cit., p. 367 sqq.). Since then many Greeks have migrated from Xanthi and the number of Turks in the population must have been considerably reduced.

(From Kramers)

Kawār, a group of oases situated in the Sahara (Bilma, the most southern oasis, in 18° 41' N. Lat. and 13° 30' E. Long.), to the west of the massif of Tibesti on the caravan route from Tripoli to the country round Tchad via Fashān [q.v.]. This route Kawār is nearly halfway between Fashān and Kasaem, separated from the former by a hamadah and from the latter by a region of sand-dunes. It owes its formation to a continuous chain of cliffs running from north to south, which bounding it on the west shelters it from the dreaded winds from the northeaster. It is a chain of oases, about 50 miles long from north to south and never more than 2 to 3 miles broad. The water is at no depth and fairly abundant but mostly brackish. In all the oases together there are about 50,000 palm-trees; the inhabitants, whose number does not exceed 3 to 4,000, use Tuinu by race, considerably mixed with Kauwār blood (the common language is Kauwāri); they are sedentary and peace-loving, unlike their kinsmen who live in Tibesti. They are scattered up and down in a dozen villages of which the chief are Anar, Aghnus, Dèrka and Bilma; these villages consist of wretched huts but beside each one a cliff inaccessible except by ladders. A place of refuge is prepared; a precaution which until quite recently was far from being unnecessary. The inhabitants live on the produce of their palm-trees, the poor crops which they raise particularly by trading. The caravan route from Tripoli to Tchad via Fashān, although hard, is the shortest of those that cross the Sahara. It was at one time very busy and Kawār was the place where it was joined by the roads from Zinder and Agades; its inhabitants were destined to become caravan-men. But their principal revenue came from their salt-pans. Those of Bilma are especially famous. The salt which they sell brings to the surface of the soil is treated by evaporation and pressed into cakes of great purity. Some is sold to the Tuaregs who come in great numbers on the spot, along with their salt; the remainder is exported to all quarters of the Sudan from the Niger to Dārin. The salt-pans of Kauwār are of the same importance for the country as those of Tiferni for the region of Timbuktu and the western Sahara.
